osFinancials5.1.0.298 Release Notes

osFinancials5.1.0.298 Release Notes

4-EN-SOUTH-AFRICA-SOLE-PROPRIETOR-IFRS-FOR-SME.zip

7000-000 FINANCE INCOME

7000-100 Interest income - Bank accounts

7000-200 Investment income

7000-900 Other finance income

7200-000 FINANCE COST

7200-100 Bank charges and transaction fees

7200-200 Credit card and merchant service fees

7200-300 Interest expense - Loans and overdrafts

7200-900 Other finance costs

FIXED - UI Interface - Checkboxes - Modernizing the osFinancials User Interface

We are addressing a key "UI design debt" inherited from legacy versions of TurboCASH3 and earlier: inconsistent checkbox alignment. Currently, while our Spreadsheet and Reportman components use modern industry standards, many core screens remain "scattered," causing truncation and layout issues.

Moving to a professional, standardized UI will align us with our industry rivals and significantly boost the marketability of osFinancials/TurboCASH.

FIXED - Checkboxes and UI Modernization resources

To address the "wandering checkbox" alignment and finalize the report directory switch, the following technical roadmap focuses on stabilizing the UI and automating the RTL transition.

-  **Video:** [The Wandering Checkbox - UI-Design-Modernizing-Development - osFinancials/TurboCASH -](#)
-  **Audio:** [UI-Design-Modernizing-Development - osFinancials/TurboCASH - Audio](#) - This audio deep-dive discusses UI-Design-Modernizing-Development - osFinancials/TurboCASH - Checkboxes inherited from TurboCASH3 and earlier - UI Interface roadmap.
- **Resources on GitHub:** [osfinancials-development/accounting-other-languages/ui-design-modernizing at main](#) · [Digidanosf/osfinancials-development](#)

FIXED - Drop-down lists - Auto Expand

In osFinancials5.0.298, the Drop-down lists in the UI caused not to be displayed the full text as these list were restricted to the length in the UI making it difficult to select the correct option - When selecting the items on the Drop-down list, the list is now expanded to the length of the longest item on that list.

osFinancials5/TurboCASH5 installs

Installation Wizard: Updated "Additional Tasks"

To ensure users correctly configure these features, the installation wizard has been updated with clearer, action-oriented descriptions.

Select Additional Tasks *Which additional tasks should be performed?*

[] Enable Unicode Support (Recommended)

Enable full Unicode support to ensure correct rendering of international character sets and complex scripts (e.g., Greek, Arabic, Chinese).

Note: Consult an osFinancials professional if you are unsure about the specific requirements for your region.

[] Use Alternate Font for Unicode Support

Installs a modern, Unicode-compliant font to replace the legacy *MS Sans Serif*. This resolves display issues such as character truncation and "wandering" UI components.

Technical: This setting adds ALTFONT=TRUE to your osf.ini or tcash.ini configuration files.

[] Confirm Unicode Configuration

I understand the technical requirements for the Unicode parameter and confirm this selection for my local environment.

Summary of Refinements

- **Technical Transparency:** Added a note regarding the .ini file configuration (ALTFONT=TRUE) so administrators know exactly what the installer is changing.
- **Logical Flow:** The text now moves from the **technical problem** (legacy font limitations) to the **practical solution** (the checkbox options).
- **Clarity of Purpose:** Explicitly linked the "Alternate Font" to the removal of the "MS Sans Serif" legacy debt, making it clear to the user why the change is necessary.

Unicode Implementation & UI Modernization**The Unicode Font Change**

Transitioning to a Unicode-compliant font in **osFinancials 5.1 / TurboCASH 5.4** directly resolves critical UI display issues inherited from legacy versions. This change is the foundation for our global localization strategy.

Core Benefits

- **Comprehensive Language Support:** Specifically fixes character corruption and incorrect rendering in Grids and drop-down lists for **Greek, Turkish, Thai, Chinese**, and other complex scripts.
- **Improved UI Consistency:**
 - **Eliminates Character Overflow:** Optimized character spacing prevents labels from being cut off or "scattered."
 - **Professional Translation:** Translators are no longer restricted by smaller character width limits. They can now focus on terminology accuracy and conceptual consistency.
- **Data Fidelity (I/O):** Ensures that international characters entered by the user are stored and displayed with 100% accuracy across all forms and grids.

FIXED - GREEK Display Issues

FIXED in osFinancials5.1.0.255 The font to fix the UI display issues from using the wrong font for multi language support. In osFinancials5.1.0.295 it fixes the Comprehensive Language Support by changing the default Unicode font Greek Translation and Localization.

- **Fixed Display Issues:** The change specifically resolves the incorrect display on Grids and drop-down lists in Greek.

- **Enhanced Multi-Language Support:** It provides better support for all other complex scripts and character sets, including Turkish, Thai, Russian, Chinese, and many others, which rely heavily on Unicode for correct rendering.

Charts of Accounts Updates in Repositories

These updated Charts of Accounts can be downloaded from the Download option 'Which Chart of Accounts do you want to use?' launched from the 'Let osFinancials help you to create a Set of Books' (F10).

Summary – Chart of Accounts (COA) updates

Based on the repository data, here is a summary of the Chart of Accounts (COA) updates. The transition focuses on moving away from legacy 35-character limits toward modern, compliant structures with 128-character limits for descriptions and BATTPES.

1. Global & Multi-Language Environments

A significant focus has been placed on testing environments and Unicode support for various regions.

- **RTL (Right-To-Left) Development:** New dedicated environments for Arabic (MSA) and a Multi-Language Demo for stress-testing layouts in RTL countries.
- **Multi-Language Demo:** Supports 18 languages (English, Afrikaans, Chinese, European languages, etc.) to validate Unicode and interface rendering across LTR and RTL formats.
- **Chinese (CN):** New generic set for Chinese Accounting Standards (CAS) with specific character limits for BATTYPE (16) and compliance mapping for Mainland China, Taiwan, and Singapore.

2. Regional Compliance Status & Actions

The tables indicate a massive cleanup of "Non-Compliant" legacy books in favor of new structures compliant with IFRS, US GAAP, or local standards (e.g., OHADA).

High-Priority Changes (Delete vs. New)

Region	Action: DELETE (Legacy)	Action: NEW / FIXED (Compliant)	Key Improvements
South Africa	AF-SUID-AFRIKA, EN-SOUTHAFRICA	4-AF-SUID-AFRIKA-GENERIC, 4-EN-SOUTH-AFRICA-LIMITED-COMPANY	IFRS compliance; 128-char descriptions.
USA	EN-US-GENERIC, EN-USA, EN-US-CALIFORNIA	5-EN-USA-GENERIC-LLC, 5-EN-USA-CALIFORNIA-LLC	US GAAP; Dual tax (State/County) support.
Canada	EN-CANADA-CORPORATION	4-EN-CANADA-QUEBEC-SOLE-PROPRIETOR	ASPE compliance; GST/HST/QST tax logic.
UK	EN-UK	4-EN-UK-GENERIC, 4-EN-UK-SOLE-PROPRIETOR	IFRS; Standard VAT Scheme support.
Spanish (ES)	3-EQUATORIAL-GUINEA	10+ New sets (Chile, Argentina, Spain PGC, etc.)	NIIF PYMES (IFRS for SMEs) compliance.
French (FR)	15+ sets (Ivory Coast,	3-FR-[Country Name]	OHADA compliance;

Benin, Mali, etc.)

Fixed special characters.

3. General Legacy Cleanup (Pending Transition)

The following regions are identified as having "Legacy Account Structures" and need to be rebuilt to the 4-EN-GENERIC standard:

- Africa: Botswana, Lesotho, Malawi, Mauritius, Namibia, Rwanda, Tanzania, Uganda, Zambia, Zimbabwe.
- Oceania/Asia: Australia, New Zealand, Bangladesh, Tonga.
- Americas: Barbados, Belize, Trinidad & Tobago.
- Industry Sets: Legacy sets for Church, Farming, Manufacturing, Medical, and Retail are currently marked as non-compliant and scheduled for updates.

4. Technical Fixes & Tutorials

- Character Rendering: Major fixes applied to Dutch (NL) and French (FR) files to resolve SQL Error-303 and incorrect rendering of special characters (e.g., è, €, é, Privé).
- Tutorials & Advanced Books:
 - HANDYMAN and HANDY-BANK sets (AF/EN) updated for 2024/2025.
 - Advanced "Customise Empty Books" (3x3 to 8x3 digits) have been reviewed and fixed.
- PHP Configuration: Cleanup of getbooks.php to ensure correct sequencing and removal of duplicate or broken download links (e.g., ISLAND-BASIS and VANUATU errors).

5. Summary Table: Character Limit Standards

To ensure future compliance, all new repositories follow these mechanical constraints:

Standard Type	Desc. Limit	BATTYPE Limit	Note
Legacy/Non-Compliant	35 chars	16 chars	Targeted for deletion/replacement.
Modern/Compliant	128 chars	128 chars	Standard for IFRS/GAAP/OHADA sets.
Tutorials (Hybrid)	128 chars	16 chars	Updated for 2024/25 descriptions only.

Supports 100-character limit (Batch types/Language names)

- **Setup -> Batch types:** The character limit for entering Batch names manually in **Setup -> Batch types** is restricted to 16-characters - but when generating batch names it is restricted to 128-characters (solves the Dynamic SQL Error -303). Manually adding Batch types causes limitations in language translations when entering meaningful batch names.
- **Tools -> Customize languages:** When creating a new language in **Tools -> Customize languages** - the limit for a language name is 10-characters - Need to change (rename) it in the File explorer to use a longer language name. Can now enter up to 100-characters in the **New language** field.

FIXED : Dynamic SQL Error -303

A bug has been fixed in the **CUSTOMISE-EMPTY-BOOKS** templates, resolving the **Dynamic SQL Error -**

303. This error was caused by field length limitations in the BATTYPES database table and occurred when creating new bank accounts.

All CUSTOMISE-EMPTY-BOOKS templates have been updated with longer field lengths (BATTYPES from 16-character limit to 128-character limit) to prevent this error. The fix applies to the following templates:

- CUSTOMISE-EMPTY-BOOKS-3X3-DIGITS
- CUSTOMISE-EMPTY-BOOKS-4X3-DIGITS
- CUSTOMISE-EMPTY-BOOKS-5X3-DIGITS
- CUSTOMISE-EMPTY-BOOKS-6X3-DIGITS
- CUSTOMISE-EMPTY-BOOKS-7X3-DIGITS
- CUSTOMISE-EMPTY-BOOKS-8X3-DIGITS

This update is crucial for users creating a Set of Books from scratch, especially in languages that use multi-byte characters (e.g., Arabic, Chinese, Greek). The new templates now support up to **128 characters** for various field descriptions, including those for accounts, groups, and messages.

The updated templates are available in the ...bin/CUSTOMISE-EMPTY-BOOKS/ folder and on **GitHub**:

<https://github.com/Digidanosf/osfinancials-development/tree/main/firebird-databases/CUSTOMISE-BOOKS-ADVANCED>

Expanded Field Lengths

In osFinancials version 5.1.0.295 and TurboCASH5 version (5.1.0.295), the manual input field for **Setup - Batch types** have also been adjusted. The character limit has been increased from **16 characters to 100 characters**, allowing for more descriptive batch type names.

(Debtors Control, Creditors Control). You can then export your accounts from an existing Firebird database template or Set of Books and import them into your newly created MSSQL Set of Books.

Template Naming & Setup Rules

The name of each template is prefixed with a numeric value (e.g., **3-**, **4-**, **5-**) representing the number of digits used for **Main Accounts** in that Chart of Accounts.

When you open a downloaded template, you will notice that this prefix is automatically pushed to the title bar because it is stored in the **Setup → Company info** screen (specifically in the "Name of your Company" field). This is just a placeholder to tell you the structure. **After selecting and saving a template Set of Books**, you must go to this field and replace that technical prefix with your actual, registered business name and details!

Identifying your opened (active) Set of Books

You can quickly identify which data set you are actively working in by checking two areas:

- **Title Bar:** This displays the name of the template Set of Books you currently have selected. If you have copied the template or created your own from scratch, it will display the custom name you entered in the "Company name" field under **Setup → Company info**. This exact company name will also automatically display on all system dialog screens (such as information prompts, confirmations, and error messages).
- **Status Bar:** Look at the bottom edge of your screen.
 - The **second-to-last block** displays the name of your Set of Books.
 - The **last block** displays the full directory file path where your Set of Books is stored on your machine, along with the specific database file name.
 - The **first block** will by default display "Universal Administrator". However, if you have added users via **Setup → Access control**, it will display the specific username that actively opened the Set of Books.

Translations

osFinancials5.1.0.295 / TurboCASH5-4 now supports over 109 languages and variants of languages for various countries and terminology. All 4072 translations in language files have now been fully translated and

customised with the accounting terminology and accounting standards. Special care is applied to UI constraints, typos and regional spelling, etc.

Language file 1000000

Each language file in label for example in en-UK.dfm or en-UK-IFRS.dfm files - 1000000 English Master File for English United Kingdom (en-GB) - Do Not Translate. To customise this language file, create a copy.

NOTE : UI Constraints in Reports and Document layout files

Most UI constraints were been resolved in the UI and in Reports the field lengths of objects like Static text, Expressions, etc. , you may come across specific labels that may overlap, we may need to resolve this with the following options:

In your translation file, look for the label and use abbreviations,

If the report needs fixing sent the report name and language file, and we may need to change the report layout for specific labels or translations.

English-journal translations

Added Language file – Batch => Journal for option and translation confusion

Purpose of the new English-journal.dfm language file

English-journal.dfm serves a dual role:

- **User Preference/Customization:** It allows users who prefer the terminology "**Journal**" over "**Batch**" in their user interface (UI) to select this file, and provides a base for them to **customize** their own language file.
- **Translation Clarity:** It aids **translators** by resolving the **confusion** that arises when the word "Batch" is misinterpreted (specifically, differentiating between a **Stock/Inventory Batch/Lot** and an **Accounting/Journal Batch**).
- **Fixed Out of context translations:** In many translations the context ere reviewed and corrections were done. An example some of the common fixes are:
 - LabelID 2440 - Open item - In all translations it was translated to Open item processing terminology instead translated in the context to open the appointment or event in the Reminders screen of the Calendar, context causing UI constraints.
 - LabelID 3559 - Bulk entry - Always translated out of context causing UI constraints. These were reviewed and corrected to the context of the contest of scheduling multiple time slots for events in the Calendar,
 - Plugin names - The Charter plugin is in most translations translated into the context of charting a plain or a sail boat instead of the Charter plugin's context of Graphs,

Using a separate file with the clarified terminology is an excellent localization strategy.

English-journal-dfm

To avoid translation inconsistencies caused by the term "**Batch**", particularly where it overlaps with stock or inventory processes, all relevant labels in the **English.dfm** language files have been updated to use "**Journal**" terminology instead.

This change ensures clarity in financial contexts, as the term "**Journal**" more accurately reflects the intended accounting functionality. For translation purposes, all references to "**Batch**" relating to financial processing (e.g., " Batch Type," " Batch Posting") have been replaced with "**Journal**" equivalents (e.g., " Journal Type," " Journal Posting").

Instruction for Translators and Localization Teams:

- In all financial or bookkeeping contexts (e.g. batch posting, batch type), translate the term “**Journal**” (not “ Batch”) into the target language.
 - Avoid translations of “ Batch” that imply inventory, warehousing, or logistics, unless clearly used in those contexts.
 - The term “**Journaltyp**” (German), for example, is preferred over “**Stapelart**” .
- This convention ensures clarity for accountants and bookkeepers using localized versions of osFinancials or TurboCASH.

Batch localization for Stock/Inventory

These instructions apply to the localization of terms related to managing **Stock/Inventory batches** (not accounting/journal batches), specifically for the **Location-Serials-Batches** plugin.

When translating the terms below, ensure the context is strictly focused on **Stock/Inventory** (product groups, movement, or storage) and not on financial/journal entries.

Relevant Labels

Label ID	English Source	Localization Context
3398	Location-Serials-Batches	Plugin Name (Retain as is)
3683	Batch	Stock/Inventory batch
906554	Outdated batch	Stock/Inventory batch
906555	Batch bought from supplier	Stock/Inventory batch
906556	Batch sold to customer	Stock/Inventory batch

NOTE : When modifying the translations in the default language file (**English.dfm**), special attention is required to ensure the context of Stock/Inventory is consistently maintained for all related terms.

Outstanding Translations

All the [Outstanding translations](#) which is not translatable in the osFinancials5 source, including plugins are listed with screenshots, notes and possible LabelID's. These outstanding translations is listed in various documents according to function and each of the plugins.

- [Outstanding Translations osFinancials Core:](#)
 - **Location on GitHub** : <https://github.com/Digidanosf/osfinancials-development/tree/main/translations>
- [Outstanding Translations Plugins:](#)
 - **Location on GitHub** : <https://github.com/Digidanosf/osfinancials-development/tree/main/plugins-translations>
- [Outstanding Translations DynaReg Plugins:](#)
 - **Location on GitHub** : <https://github.com/Digidanosf/osfinancials-development/tree/main/plugins-dynabreg>

Synchronized the translations with the TYPES table, such as document types, etc.

Unify button

The Unify button on the Tools -> Customise languages (Setup menu) is removed.

Unify button - Do not use the Unify button in older versions of osFinancials/TurboCASH as this will change 3 legacy names of TurboCASH3 and 12 broken links to the turbocash.org website.

<@APPNAME@> dynamic placeholder

The <@APPNAME@> Placeholder populates the name of osFinancials or TurboCASH depending on the app being launched.

All 45 translations is restored and applied across all 105 language files.

Reverted TurboCASH5-3 to <@APPNAME@> dynamic placeholder

The dynamic placeholder <@APPNAME@> is was replaced in the language files in the downloaded **TurboCASH5-3** (Release Candidate-9).

Explanation of why the dynamic placeholder <@APPNAME@> is being reinstated in the language files and scheduled for **TurboCASH5-3** (Release Candidate-10).

Summary of the Change

The core reason for reverting to the <@APPNAME@> dynamic placeholder is to **maintain a single set of language files** shared by both **TurboCASH** and **osFinancials**.

The placeholder dynamically retrieves the application name (e.g., TurboCASH5-3 or osFinancials) from the respective configuration file (tcash.ini or osf.ini), ensuring consistency and reducing maintenance overhead across multiple products and languages.

Key Implications

- **Shared Source & Single Maintenance:** Since osFinancials and TurboCASH share the same source code, a single set of language files is crucial for efficiency. Manually changing the application name in all 45 labels and language files was unsustainable.
- **Dynamic AppName Configuration:** The placeholder is populated from the [APPConfig] section in the INI files (e.g., AppName=TurboCASH5-3 in tcash.ini).
- **Future-Proofing:** Reinstating the placeholder means that when a **new generation or version of TurboCASH** is compiled, the application name will be updated automatically via the tcash.ini or osf.ini file, eliminating the need for **manual translation/editing** of the language file labels every time.
- **Override and Reversion:** Any future updates to the central language files and translations will now correctly **override** the manual edits and **revert back** to the <@APPNAME@> placeholder, ensuring all versions use the dynamic name.
- **The time spent on replacing TurboCASH5-3 with the Dynamic placeholder**
`<@APPNAME@>`: This could implicate using outdated language files losing changes to latest updated language files.

The provided table clearly illustrates the labels that have been reverted from the hardcoded TurboCASH5-3 back to the dynamic placeholder <@APPNAME@>. This action standardizes the localization process.

Updated buttons within messages with [Square brackets]

For buttons to be visible within messages for a clearer view, the square brackets [...] is added for buttons in 14 labelID's across all 105 translations.

LabelID	English - No. [Buttons]	English – Aded Square brackets - [Buttons]	Notes - Related button labels

Updated Paths within messages with single quotes and arrow → instead of ->

This is the current in modern UI interfaces when referring to paths inside messages.

The following messages contains path to the UI to guide a user to the exact path within osFinancials/TurboCASH:

LabelID	English (Original)	(English Paths →)	Notes
696	Invalid next number! Change it in Setup -> Documents setup!	Invalid next number! Change it in 'Setup → Documents setup!'	
711	Run Setup -> Journal types and select contra account for this journal!	Run 'Setup → Journal types' and select contra account for this journal!	
724	Internet setup information is incorrect! Run Setup -> Setup -> Internet.	Internet setup information is incorrect! Run 'Setup → Internet'.	FIXAED: (This menu is outdated and not consistent with the paths indicated in messages. Probably outdated as it refers to TurboCASH3 UI).
822	You are running payment based method and the due account cannot be found! Please run Setup -> Company info!	You are running payment based method and the due account cannot be found! Please run 'Setup → Company info'!	
890	To turn it on, go to Setup -> Reporting dates	To turn it on, go to 'Setup → Reporting dates'	
1053	Select Setup -> Company info you want to change!	Select 'Setup → Company info' you want to change!	

1414	Enable access in Setup -> Access control	Enable access in 'Setup → Access control'
3726	OK -> Next	OK → Next

NOTE - Ensure all translated UI paths **exactly match** the menu options in **osFinancials/TurboCASH** while maintaining the modern **'single quotes + →'** notation.

Customise Languages - Rest tab - Empty account / No group - WORK-AROUND

'No group' translations are translated for all languages in the Sets of Books in the **Rest** tab (Tools -> Customize Languages) are done in the SQLBrowser to Record id 0 in the GROUPS table for each single user Sets of Books.

In the Multi user / Multi language option there are no issues found.

RTL Development

These release notes detail the significant milestones in Right-to-Left (RTL) development for version 5.1.0.298. The focus remains on achieving a mirrored user interface and report output for Modern Standard Arabic (MSA) and other Bi-Directional (BiDi) languages.

1. Resources

Arabic

- **Multimedia Resources:** Detailed discussions on these localization "translations and localization" are available:
 - **Video:** [Arabic - RTL Translations Localization osFinancials/TurboCASH](#) -
 - **Audio:** [Arabic RTL Translations Localization osFinancials/TurboCASH Audio](#) -
- **Resources on GitHub:** [osfinancials-development/accounting-other-languages/arabic-accounting at main · Digidanosf/osfinancials-development · GitHub](#)

MULTI-LANGUAGE DEMO Resources

This audio deep-dive discusses Multi Language Accounts in 18 languages within a single Set of Books (database) in osFinancials/TurboCASH.

- **Video:** [Multi Language Demo in osFinancials/TurboCASH - One Ledger, Many Languages](#) -
- **Audio:** [Multilingual Accounts in osFinancials TurboCASH - Audio](#) -
- **Resources on GitHub:** [osfinancials-development/accounting-other-languages/multi-language-demo at main · Digidanosf/osfinancials-development](#) -

2. RTL User Interface & Development Environment

Testing and debugging with Modern Standard Arabic (MSA) serves as the primary stress test for the software's BiDi capabilities. When an RTL language is active, the application's visual flow mirrors the LTR version to provide an intuitive experience for native speakers.

New testing resources are available via the "Let osFinancials help you to create a Set of Books" download option:

- **RTL – 4-ARABIC-RTL-DEVELOPMENT-MSA:** A dedicated set for RTL development and testing.
- **DEMO – PERSONAL-ACCOUNTS-MULTI-LANGUAGE-DEMO:** A multi-language Chart of Accounts featuring 18 translations.

- Arabic (RTL) Access: Username: ar | Password: ar
- English (LTR) Access: Username: en | Password: en
- Note: Access credentials for other languages are available in the multi-language-demo-access-credentials.pdf within the demo folder.

3. Report Mirroring & Rendering

The reports-rtl Strategy

A dedicated folder (/reports-rtl) has been established to house manually adjusted, mirrored document layouts. These templates include specific localizations for Invoices and Credit Notes, incorporating tax labels (VAT, GST, or No-Tax) required by regional legislation.

Manual Switch Protocol

Currently, switching between LTR and RTL report engines requires a manual file-system override within the .../plugins/ directory:

1. Rename the existing \reports folder to \ltr-reports.
 2. Rename the \rtl-reports folder to \reports.
- All subsequent print commands will utilize the RTL-compliant report templates.

Progress on Localized Reports

The following reports have been successfully mirrored and localized for RTL output:

Report Category	Description	File Path
Ledger Listing	Chart of Accounts	\reports\systemreports\TRN_1372\TRN_66\TRN_73.rep
Ledger Analyser	Trial Balance, Income Statement, Balance Sheet, and Budgets	\reports\GENERAL\ledgerview\detail.rep
Document Layout	Arabic Test Invoice (including Bank details)	\reports\DOCUMENTS\DOCUMENTS\Arabic-Test-Invoice-Bank-TRN_906193.rep

4. Technical Implementation: Label ID 3738

Label ID 3738 is now established as the "Master Flag" for RTL protocols. Setting this label to "RTL" triggers the system's mirroring logic and prepares the engine for the .../plugins/reports-rtl path swap.

Target Locales for Label 3738 Update

To maintain a unified language file strategy, this update is being propagated across the following locales:

Language Group	Target Language Files (.dfm)	Primary Regions
Arabic	ar-SA, ar-AE, ar-EG, ar-JO, ar-MA, ar-DZ, ar-IQ, ar-KW, ar-LB, ar-LY, ar-OM, ar-QA, ar-SY, ar-TN, ar-YE	Saudi Arabia, UAE, Egypt, MENA Region
Hebrew	he-IL	Israel
Persian / Dari	fa-IR, prs-AF	Iran, Afghanistan
Urdu	ur-PK, ur-IN	Pakistan, India

Pashto	ps-AF	Afghanistan
Kurdish	ckb-IQ	Iraq (Sorani)
Sindhi / Balochi	sd-PK	Pakistan
Dhivehi	dv-MV	Maldives

Documents: Sidebar Action Buttons (Posting & Delete)

In version **5.1.0.298**, we have optimized the sidebar of the Documents grid to ensure that essential tools are available immediately upon opening a Set of Books.

What Has Changed?

- **Default Visibility:** The **Post** and **Delete** buttons are now visible on the sidebar by default when opening any Set of Books that has no specific users configured.
- **Legacy Workflow (Pre-5.1.0.298):** Previously, if no users were set up in *Setup -> Access Control*, these sidebar buttons were hidden. Users had to navigate through the *Default Ribbon* (Update Ledger) or the *Edit -> Documents* menu to perform these tasks.
- **User-Based Permission Logic:**
 - **Main/Admin User:** Once users are created in Access Control, the "Document Posting" option must be explicitly ticked for the main user to keep these sidebar buttons active.
 - **Standard Users:** For all other created users, the "Posting documents" permission is **unchecked by default**. Administrators must manually enable this option for selected users based on their required access level.

Benefits for the User

- **Immediate Productivity:** New sets of books or single-user environments no longer require deep menu navigation to post or delete documents.
- **Granular Security:** Provides a "secure by default" environment where new users cannot post financial data unless specifically authorized by an administrator.
- **UI Consistency:** Aligns the document grid sidebar with the rest of the modernized osFinancials interface.

Access Control Configuration

To manage these buttons for specific users, navigate to: **Setup -> Access Control -> [Select User] -> Permissions -> Document Posting**

Note: If the buttons disappear after creating your first user, ensure you have granted the appropriate "Document Posting" permissions to your administrative account.

Plugins

Plugins Document Email pro

UBL 2.1 in email it can add the data in XML including the pdf in a UBL xml.

'Type conversion error 'Val':Expression TRpExpression46'

In Poland the require a different format got decimal symbols = Regional Standard (PL-pl)

Standard Format: 1 234 567,89

Decimal: , (Comma)

Thousands: (Space) or . (Period)

Currency Symbol: zł (placed after the amount, e.g., 100,00 zł) This may need attention to the System settings - Number format and the Ledger analyser - Budget vs actual and the Ledger analyser - Budget vs actual reports - It causes 'To print this report your system's digit separator symbol need to be set to a comma and the decimal symbol needs to be set as a period.

In document layout files and reports the Display number format is ###,###,##0.00 ?

If these settings are not set, this report will produce an error:

Type conversion error 'Val':Expression TRpExpression46

You may access your system's Regional settings from the Setup → Company info - Options tab Set Windows date format/style button or on the DateTime settings button on the Setup → System parameters (Setup ribbon).

On your system's "Region"-screen click on the Additional settings... button to launch your system's "Customize Format" screen.

Reports and Document layout file prints Decimal separator and Digit grouping symbols correctly

By default Language & region > Number format in the operating settings as pre-configured during the Windows installation and user configuration prints the prints Decimal separator and Digit grouping symbols correctly across all reports and document layout files,

These other reports are "smart" enough to let Windows handle the formatting.

Existing Documentation 'Type conversion error 'Val':Expression TRpExpression46'

See current documentation : [System settings - Number format](#)

Replicated in both Firebird and MSSQL databases

Replicated since TurboCASH4

SQL ERROR Type conversion error 'Val':Expression TRpExpression46

```
M.THOUSANDSEP := FORMATNUM('0.0',1.1);
M.THOUSANDSEP := substr(M.THOUSANDSEP,2,1);
M.THOUSANDSEP := iif (M.THOUSANDSEP = ',',',');
IIF(STR(ACCVIEW.FIELD4)=",0, val( REPLACESTR(ACCVIEW.FIELD4,M.THOUSANDSEP,"))));
```

You may need to set the number format of your operating system to print some reports.

When printing the “ [Budget vs actual](#) ” and “ [This year vs last year](#) ” reports, you may encounter the following error message:

"Type conversion error 'Val':Expression TRpExpression46"

The "Customize Format – Numbers" of your Windows operating system number format needs to be set as follows:

- Decimal symbol - set to period (.)
- Digit grouping symbol - set to comma (,) (If Digit grouping symbol is set to blank it does not print but produces an error.

NOTE	The Region and Language settings of your operating system should launch if you click on the Setup → Company info - Options - Set Windows date format/style button on the Setup ribbon.
IMPORTANT	This is a global setting for all Sets of Books on your operating system.

On the Numbers tab, the default settings (as per new installaion of Windows or on some new devices), the settings that need to be changed is as follows:

- Decimal symbol set to period (.)
- Digit grouping symbol set to comma (,)

IMPORTANT	If Digit grouping symbol is set to blank; and when you click on the Print button of the ' Budget vs actual ' and " This year vs last year " reports; it does not print but produces same error; i.e. " Type conversion error 'Val':Expression TrpExpression46"
------------------	---

Why the US/UK Format is the "Only" Supported One

It appears that is the case. Based on the error logic in TRpExpression46, the Ledger Analyser and the reporting engine in osFinancials/TurboCASH are hard-coded to expect the US/UK Standard (Period as Decimal, Comma as Thousands).

When the system is set to the Polish or South African standard (1 234 567,89), the reporting engine's val() function encounters characters it cannot translate into a number, leading to the "Type conversion error."

The reporting engine (Report Manager) processes data using a specific internal logic that doesn't always "talk" perfectly to the Windows Regional Settings. Here is why changing to 1,234,567.89 fixes it:

- **String Parsing:** The code REPLACESTR(ACCVIEW.FIELD4, M.THOUSANDSEP, " ") is designed to strip a single character (the thousands separator) to turn a string like "1,234" into "1234" so the val() function can read it.
- **The "Space" Problem:** In the Polish or South African format, the thousands separator is a space. If the code is looking for a comma or period to strip, it ignores the space. The function then tries to calculate val("1 234"), which is mathematically impossible, causing the crash.
- **Hard-coded Expectations:** Many legacy Delphi-based components (which these platforms are built on) default to the period as the only valid decimal point for calculation purposes, even if the "display" is meant to be localized.

Comparison of Settings

If you want to ensure the Budget vs. Actual reports print correctly every time, your Windows Region settings must match this "Type A" configuration:

Setting	Required for Reports	Polish / SA Default (Fails)
Decimal Symbol	. (Period)	, (Comma)
Digit Grouping	, (Comma)	(Space)

Example	1,234,567.89	1 234 567,89
---------	--------------	--------------

A Potential Modernization Fix

Since you are leading the 2026 Roadmap, you could potentially resolve this without forcing users to change their Windows settings by updating the report expressions globally.

Instead of relying on M.THOUSANDSEP, you could implement a "CleanString" logic in the report template that strips all non-numeric characters except the decimal. However, until that change is rolled out to all .rep files in the reports-rtl and standard directories, the Windows System Setting change remains the only functional workaround for the end-user.

This is likely a high-priority item for your modernization project, as users in the OHADA regions or Europe will naturally have their Windows systems set to the comma-decimal standard by default.

Period Decimal / Comma formats in the World

The default number formats in Windows vary significantly across the world, primarily split between the "Anglosphere" (English-speaking) and Continental Europe/Latin America.

When your software (like osFinancials/TurboCASH) requires a Period as the decimal symbol and a Comma as the digit grouping symbol, it is essentially asking for the US/UK Standard. Using any other format can cause the "digit separator symbol" error you've encountered because the system cannot correctly parse the numeric strings during report generation or ledger analysis.

Below is a breakdown of the common global defaults found in Windows:

1. The Period Decimal / Comma Thousands (Anglosphere Standard)

This is the format required by your specific system settings for the Ledger Analyser to function correctly.

- Format: 1,234,567.89
- Decimal: . (Period)
- Thousands: , (Comma)
- Primary Countries: United States, United Kingdom, Ireland, Australia, New Zealand, Canada (English), Israel, Japan, Korea, Philippines, Singapore, Thailand, and many parts of China.

2. The Comma Decimal / Period Thousands (Continental European Standard)

This is common in many of the regions where you provide localization support, such as the Netherlands.

- Format: 1.234.567,89
- Decimal: , (Comma)
- Thousands: . (Period)
- Primary Countries: Netherlands, Germany, Italy, Spain, Brazil, Greece, Romania, Slovenia, and Turkey.

3. The Comma Decimal / Space Thousands (SI/International Standard)

Windows uses this for many European and African regions. It is often the cause of errors in legacy software because the "space" digit grouping symbol can sometimes be interpreted as a null or a non-breaking space character.

- Format: 1 234 567,89
- Decimal: , (Comma)
- Thousands: (Space)
- Primary Countries: South Africa, Poland, France, Sweden, Finland, Norway, Czech Republic,

Hungary, and Russia.

4. The Apostrophe Thousands (Swiss Standard)

A unique format used primarily in Switzerland and Liechtenstein.

- Format: 1'234'567.89 (Currency) or 1'234'567,89 (General)
- Decimal: . (Period) or , (Comma)
- Thousands: ' (Apostrophe)

Regional Summary Table

Region Type	Example Format	Decimal	Thousands	Common Countries
Type A (US Style)	1,234.56	.	,	USA, UK, Australia, Mexico
Type B (EU Style)	1.234,56	,	.	Germany, Netherlands, Italy
Type C (Space)	1 234,56	,	[Space]	South Africa, Poland, France
Type D (Swiss)	1'234.56	. or ,	'	Switzerland

Why this causes the "Digit Separator" Error

In your case, if a Windows system is set to a Polish (PL-pl) or South African locale, the default thousands separator is a Space.

When the Ledger Analyser attempts to "print" or calculate a report, it checks the Windows Registry key HKEY_CURRENT_USER\Control Panel\International. If it finds a space or a comma where it expects a period (or vice versa), the mathematical logic fails because it cannot distinguish between the end of a whole number and the start of a decimal.

Recommendation for your Localization File:

Since you are managing language files for 27+ languages, you may want to include a "System Check" or a note in your installation wizard that specifically prompts users in Poland, the Netherlands, and South Africa to manually toggle these two symbols in their Windows Region Settings to ensure compatibility with the Ledger Analyser's reporting engine.

2026 - Roadmap - Universal Accounting Made Easy tutorial osFinancials or TurboCASH

2026 - Roadmap - Universal Accounting Made Easy tutorial osFinancials or TurboCASH

To make this a universal tutorial for osFinancials or TurboCASH, we need to focus on the Account Type logic. These programs use a specific behavior where the account "Type" (G for Group, B for Bank, T for Tax) dictates how the software processes data.

Here is a simplified, modernized framework. It is designed to be a "template" that a user in South Africa, the UK, or India can pick up and adapt to their local tax regime (like VAT, GST, or Sales Tax).

1. The "Master Template" Logic

In osFinancials/TurboCASH, the SACACCOUNTCODE isn't just a number; it defines the hierarchy. Using a 4-digit system is the "Goldilocks" zone—simple enough for a small shop, but powerful enough for a growing company.

Core Numbering Blocks

- 1000s: Assets (What you own)
- 2000s: Liabilities (What you owe)
- 3000s: Equity (The value belonging to owners)
- 4000s: Income (Money coming in)
- 5000s: Expenses (Money going out)

2. Modernized Tutorial Chart of Accounts

This table uses the SACACCOUNTCODE prefixes to automatically group accounts logically in your reports.

SACACCOUNTCODE	SDESCRIPTION	BTYPE	Category (SGROUP1)	Purpose/Tutorial Note
1000	ASSETS	G	Total Assets	The "Parent" for everything you own.
1100	Fixed Assets	G	Fixed Assets	PPE (Property, Plant, Equipment).
1200	Bank Account 1	B	Current Assets	Use B type for Bank Reconciliation.
1300	Accounts Receivable	G	Current Assets	"Debtors Control" – who owes you.
2000	LIABILITIES	G	Total Liabilities	The "Parent" for all debt.
2100	Accounts Payable	G	Current Liabilities	"Creditors Control" – who you owe.
2200	Tax / VAT Control	T	Current Liabilities	Use T type for automated tax reports.
3000	EQUITY	G	Shareholder Equity	Investment and Retained Earnings.
4000	INCOME	G	Revenue	Sales and Services.
5000	EXPENSES	G	Operating Expenses	The "Parent" for all costs.
5100	Salaries & Wages	G	Payroll	Essential for every business.
5200	Rent & Utilities	G	Overheads	Fixed monthly costs.

3. How to Customize this for any Regime

To make this tutorial universal for marketers and developers, explain these three "Golden Rules" of customization:

A. The Tax Switch (The 'T' Type)

In South Africa, rename 2200 to VAT Control (15%). In the USA, rename it to Sales Tax. In Europe/UK,

use VAT (20%). The software logic remains the same; only the label and rate change.

B. The Reporting Group (SGROUP1 & SGROUP2)

These fields are the "secret sauce" for customization.

- SGROUP1 : Use this for IFRS or GAAP high-level categories (e.g., "Current Assets").
- SGROUP2: Use this for internal management reporting (e.g., "Branch A Costs" vs "Branch B Costs").

C. The Parent-Child Rule

If a user wants more detail on "Motor Vehicle Expenses," they simply create:

- 5300-000 (Parent Group)
- 5300-010 (Fuel – Sub-account)
- 5300-020 (Repairs – Sub-account)

4. Implementation Step: Update the Language File

As per your instructions regarding the Types table, if a developer changes "Fixed assets" to "Non-current assets" to meet modern IFRS standards in the COA, they must update the corresponding entry in the language file. This ensures that when a user clicks "Balance Sheet," the header matches the Chart of Accounts exactly.

TABLE OF CONTENTS (Restructured)

Modernizing the Table of Contents for the 2026-AME-Tutorial involves more than just changing titles; it requires a structural shift from "Technical Instruction" to "Outcome-Based Learning."

The legacy version is focused on software modules (A, B, C). The revised version focuses on the User Journey, starting with business foundations and moving into high-value automation like the Bank Import and Calendar integration.

Modernizing the Table of Contents

Legacy Table of Contents (Software Focused)	2026 Modernized Table of Contents (Workflow Focused)
MODULE A – INTRODUCTION TO ACCOUNTING	PHASE 1: THE FOUNDATION & FRAMEWORK
A.2.1 History of Accounting	1.1 Digital Accounting Principles in the 2026 Economy
A.2.5 Double-Entry Accounting System	1.2 Master the Equation: Modern Debits & Credits
A.5 Charts of Accounts in TurboCASH	1.3 Architecting your Ledger: Hierarchical Charts
A.8 The Structure of TurboCASH	1.4 Interface Navigation: Ribbons, Menus & Workspaces
MODULE B – INSTALLING & LAUNCHING	PHASE 2: DEPLOYMENT & GLOBALIZATION
B.2 Installing TurboCASH5	2.1 Multi-User Deployment & Cloud Database Setup
B.5 Selecting a Language	2.2 Global Reach: Unicode & 27-Language Localization
B.9 Registering TurboCASH5	2.3 Registration & Workspace Customization
MODULE E – CREATING A SET OF BOOKS	PHASE 3: SMART COMPANY ARCHITECTURE
E.3 Create a Set of Books using Wizard	3.1 Template Engineering: Africa, USA, Europe & Asia
E.5.1 Company Info	3.2 Business Identity & Regulatory Parameter Setup
E.5.4 Groups (Accounts, Debtors, Stock)	3.3 Dynamic Grouping: Categorizing for Better Analytics
MODULE F/G – ACCOUNTS & STOCK	PHASE 4: MASTER DATA MANAGEMENT
F.1.1 Planning your Chart of Accounts	4.1 Ledger Design: Main vs Sub-account Indexing
G.5 Creating a Trading Stock Item	4.2 Inventory Intelligence: Trading vs Service Items
F.3.1 Creating Creditor Accounts	4.3 Relationship Management: Debtors & Creditors
MODULE H – OPENING BALANCES	PHASE 5: DATA MIGRATION & TAKE-ON
H.1 Entering Opening Balances	5.1 Legacy Data Import: Entering Opening Balances
H.4 Printing a Trial Balance	5.2 Verification: Balancing the Books for Go-Live
MODULE I/J/K – PROCESSING	PHASE 6: TRANSACTIONAL EXCELLENCE
I.2.1 Entering Supplier Invoices	6.1 Purchasing Workflow: Orders to Purchase Documents
J.4.1 Creating a Quote	6.2 Sales Pipeline: Quotes to Automated Invoicing
K.2 Basics of Trading Stock	6.3 Real-Time Stock Control & Transactional Posting
MODULE L – BANK IMPORT PLUGIN	PHASE 7: AUTOMATION & CASH FLOW
L.1 Overview of Cash Book Transactions	7.1 Bank Statement Automation: The Import Plugin
L.3.2 Allocating Transactions	7.2 AI-Assisted Mapping: Auto-Allocating References
L.4 Petty Cash Payments	7.3 Managing Physical Cash & Reconciliations
MODULE M/N – CALENDAR & BUDGETS	PHASE 8: PLANNING & PROACTIVE TOOLS
M.1 Introduction to the Calendar	8.1 The Planner: Managing Quotes, Hours & Tasks
M.2 Repeating Invoices	8.2 Subscription Billing: Automating Repeating Invoices
N.1 Budgeting	8.3 Variance Analysis: Budgeting for Performance
MODULE O/P – REPORTS & ANALYSIS	PHASE 9: ANALYTICS & FINANCIAL INSIGHTS

O.3.2 Income Statement	9.1 Executive Financials: P&L, Balance Sheet & Tax
O.4 Pivot Tables	9.2 Pivot Power: Custom Data Slicing & Visual Graphs
P.1 Open Item Processing	9.3 Debt Collection: Age Analysis & Statement Management

Key Improvements in the Modern Version:

1. Grouping by Lifecycle: Instead of jumping from "Opening a book" to "Hardware requirements," the new TOC follows a logical business setup lifecycle: Foundations → Data → Processing → Automation → Insights.
2. Highlighting Automation: Notice that the Bank Import Plugin (Phase 7) and Calendar (Phase 8) are now positioned as advanced automation "power-ups" rather than just extra modules.
3. Terminology Alignment: I have replaced technical-heavy terms like "Sets of Books available in the bin folder" with outcome-focused terms like "Template Engineering."
4. Reporting Integration: In the legacy version, reports were scattered. In the modern version, they are grouped under Analytics (Phase 9), which is the ultimate goal of any accounting software.

Impact on your 2026 Roadmap:

This structure supports your goal of manual mirroring for RTL (Right-to-Left) languages. By having clearly defined "Phases," you can mirrored the tutorial documentation phase-by-phase, ensuring that high-priority transactional chapters (Phase 6 & 7) are completed first for your global users.

The "AME Hybrid" Strategy

The "AME Hybrid" Strategy

That is a brilliant approach for the AME (Accounting Made Easy) philosophy. Overcomplicating a tutorial with IFRS (International Financial Reporting Standards) for a sole proprietor is like trying to teach someone to drive using a Boeing 747 manual—it's technically correct but practically overwhelming.

By sticking to the basic structure and modernizing the presentation, you provide "Just-in-Time" knowledge rather than "Just-in-Case" complexity.

1. The "AME Hybrid" Strategy

Keep the 1980s structural reliability (the six-digit codes) but use 2026 terminology. This ensures the software remains backward compatible while feeling fresh to a new user.

Comparison: 1980s vs. AME Modern

Old Account Name	Modernized Name	Why?
G505000 Capital	Owner's Contribution	More intuitive for a person putting their own money in.
G999000 Suspense	Take-on / Balancing Account	"Suspense" sounds like an error; "Take-on" sounds like a task.
G600010 Furniture @ Cost	Equipment & Furniture	Covers computers, desks, and tools—vital for a handyman.
G235000 Sundry Expenses	Uncategorized / Other	"Sundry" is an archaic term that confuses non-accountants.

2. The "Explainer" Framework

Since you want to document the full CoA but explain the simplified version, you can use a "Core 15" approach. Tell the student:

"The system has hundreds of accounts for big companies, but for your business, you only need to understand these 15."

How to document it:

1. The Master List: Provide the full table as a reference appendix.
2. The "Handyman" Subset: Highlight only the accounts used in the tutorial (Bank, Sales, Purchases, VAT, Capital).
3. The Visual Map: Show how money flows from a Source Document (Invoice) into a Group (Income).

3. Avoiding the IFRS Trap

For a sole proprietor, "Fair Value Adjustments" and "Lease Liabilities (IFRS 16)" are irrelevant. Instead, focus on Tax Readiness.

- The Goal: Not "IFRS Compliance," but "SARS Compliance." * If the accounts are clean enough for a tax return, they are perfect for a small business.

4. Modernizing the Reporting Logic

Instead of just "Income Statement," call it the Profit & Loss Report. It tells the user exactly what it is: Did I make a profit, or did I suffer a loss? ### Recommended Simplification for the Tutorial:

- Assets: "What the business owns (and who owes us)."
- Liabilities: "What the business owes (Suppliers and SARS)."
- Equity: "The owner's share."
- Income: "Money earned from work."
- Expenses: "The cost of running the business."

5. Implementation Step

In your language file or documentation, you could add a "Translation Column" next to the old TurboCASH codes.

Example:

- Code: G210010
- System Name: Motor vehicles – Fuel & oil
- AME Explainer: Petrol and Diesel costs for the delivery van.

Migrating to a modernized coding structure

Migrating to a modernized coding structure

That is a very forward-thinking move. Migrating to a modernized coding structure allows you to bridge the gap between the "old-school" reliability of TurboCASH and the "new-world" requirements of IFRS (International Financial Reporting Standards) or VFRS (Vietnam).

The goal is to give the user a Professional Foundation without the "Professional Headache." By using a modern 4-digit or 5-digit numeric structure, the user intuitively learns how a Balance Sheet and Income Statement are built.

1. The Modernized "Logical Range" Structure

In modern accounting (and IFRS-aligned systems), we move away from random alphanumeric codes and use Numeric Ranges. This helps the user "grasp the basics" because the first digit tells them exactly what they are looking at.

Range	Modern Category	IFRS / Professional Context
1xxx	Non-Current Assets	Fixed Assets, Property, Equipment (Long-term value).
2xxx	Current Assets	Bank, Debtors, Inventory (Cash-flow drivers).
3xxx	Equity	Capital, Retained Income (Owner's interest).
4xxx	Liabilities	Creditors, Loans, VAT Control (What is owed).
5xxx	Revenue	Sales, Service Income (Top line).
6xxx	Cost of Sales	Direct costs (Gross Profit calculation).
7xxx	Expenses	Operating costs, Rent, Petrol (Net Profit calculation).

2. Why this helps with IFRS/Professional Standards

When a user understands this ranges-based structure, they are actually learning the "DNA" of IFRS reporting:

- Separation of Assets: By having a 1xxx range for Fixed Assets and a 2xxx range for Current Assets, the user is already complying with the IFRS requirement to separate assets based on liquidity.
- The "Net" Principle: Modern codes make it easier to show G600010 (Cost) vs G600020 (Acc. Depreciation). In a modernized system, these would be 1100 and 1105, sitting right next to each other.
- Scalability: If a user grows from a Handyman to a large corporation, they don't need to "re-learn" accounting. They just add more specific codes within those same ranges.

3. Implementation in the AME Tutorial

To keep it simple for the user while maintaining this professional structure, we can use a "Hybrid Mapping" in the manual:

Account: 1100 – Equipment & Tools

AME Explainer: This is a Non-Current Asset. Under professional standards, we group these because you intend to keep them for more than a year. In your Handyman business, this is your Drill and Compressor.

4. Internationalization (Localization) Benefits

A numeric structure is the "Gold Standard" for translation:

1. Numbers are Universal: 1xxx will always be Assets, whether the user speaks Greek, Arabic, or Vietnamese.
2. RTL Friendly: Numeric codes don't "flip" or break UI layouts in Right-to-Left languages like Arabic as easily as complex alphanumeric strings might.
3. Standardized Mapping: You can create a master "Standardized Code List." Even if the name of the account changes for a specific country, the code keeps the logic intact.

5. Modernizing the 1980s Data

To migrate your Handyman data to this modernized structure, we would perform a "Soft Remap":

- Old: G750000 Stock Control → Modern: 2100 – Inventory
- Old: B810000 ABC-Bank → Modern: 2500 – Main Bank Account
- Old: G010000 Sales → Modern: 5000 – Sales / Revenue

Conclusion for the Manual

We can document this by saying:

"We use a modern numeric structure (1–7) to help you see your business the way a professional accountant or tax authority does, without the complexity of corporate jargon."

Created with the Standard Edition of HelpNDoc: [HelpNDoc's Project Analyzer: Incredible documentation assistant](#)

Modernized Chart of Accounts (AME 2026 Edition)

Modernized Chart of Accounts (AME 2026 Edition)

We can definitely modernize this. By shifting to a 4-digit numeric structure, we align the tutorial with international professional standards while keeping the terminology friendly for a sole proprietor.

Below is the conversion of your old alphanumeric (G, B, T) codes into a modernized, simplified Chart of Accounts.

Old Code	New Code	Description (Modernized)	Type	Grouping
G600010	1100	Equipment & Furniture at Cost	Non-Current Asset	Fixed Assets
G600020	1105	Acc. Depreciation: Equipment	Non-Current Asset	Fixed Assets
G750000	2100	Inventory / Stock on Hand	Current Asset	Inventory
G700000	2200	Debtors Control	Current Asset	Accounts

		(Customers)		Receivable
B810000	2500	Main Bank Account	Current Asset	Cash & Equivalents
B820000	2510	Petty Cash	Current Asset	Cash & Equivalents
G505000	3100	Owner's Contribution (Capital)	Equity	Capital
G510000	3200	Retained Earnings	Equity	Retained Income
G900000	4100	Creditors Control (Suppliers)	Current Liability	Accounts Payable
G860000	4500	VAT Control Account	Current Liability	Taxation
G999000	4999	Opening Balance / Take-on	Current Liability	Suspense
G010000	5000	Sales / Revenue	Income	Revenue
G100000	6000	Cost of Sales	Expense	Direct Costs
G220000	7100	Rent Expense	Expense	Operating Costs
G210010	7200	Vehicle Fuel & Oil	Expense	Motor Expenses
G230000	7300	Stationery & Office Supplies	Expense	Admin Costs

Why this works for the AME Tutorial:

- Logical Ranges: The first digit now acts as a "Category Anchor."
 - 1 = Things you own for a long time (Fixed Assets).
 - 2 = Things you own that move quickly (Bank/Stock).
 - 5 = Money coming in.
 - 7 = Money going out.
- IFRS Readiness: Professional accountants prefer numeric ranges because it makes "Liquidity Reporting" (separating current vs. non-current assets) a simple sorting task rather than a manual one.
- Localization/Translation: Numbers are a universal language. Whether the manual is in Arabic (RTL), Vietnamese, or Greek, code 5000 will always represent Revenue, which keeps your logic consistent across all 27+ language versions.
- Deprecation of 14% VAT: Notice I excluded the old T85XXXX accounts. In the modernized version, we mark those as Inactive by default to keep the interface clean for 2026 users.

The "Explainer" Strategy

In your manual, you can include a small "Cheat Sheet" that bridges the gap for the student:

"Account 1100 (Equipment): Think of this as the 'Permanent Tools' of your trade—like your compressor or your desk. Because they last for years, we group them in the 1000 range so you can see your business's long-term value at a glance."

This approach gives them the "basics" of professional standards without requiring them to study a 500-page IFRS handbook.

Using a Simplified Chart of Accounts

Using a Simplified Chart of Accounts

Using a Simplified Chart of Accounts with an "Explainer" framework is the most effective way to ensure the manual is scalable and translatable for the global osFinancials and TurboCASH communities.

When you move away from hyper-technical accounting jargon (like IFRS specifics) and move toward "Functional" descriptions, you remove the linguistic barriers that often stall localization projects.

1. The "Label ID" Advantage

Since you are already managing thousands of label IDs for 27+ languages, a simplified CoA acts as a Universal Financial Language.

- **Consistency:** If you translate "G505000: Owner's Contribution" into Vietnamese or Greek, the meaning remains clear. If you use a complex IFRS term like "Share Premium Reserve," the translation might lose the "sole proprietor" context you're aiming for.
- **Variable Use:** You can use your `<@APPNAME@>` style logic to ensure that whether the user is in osFinancials or TurboCASH, the terminology feels native to the software.

2. Localization Strategies for the CoA

To make the manual easier to reproduce in other languages, you can structure the "Explainer" using three distinct layers:

Layer	Component	Translation Strategy
System	Account Code (G010000)	Static: Never changes (Technical Anchor).
Core	Standard Description (Sales)	Direct Translation: Use professional local terms.
AME	Practical Explainer (Money from work)	Cultural Adaptation: Use local examples (e.g., "Selling paint" vs "Selling fruit").

3. Dealing with Regional Tax Variations

A major hurdle in translating accounting manuals is the tax system. By keeping the CoA simplified:

- **Standardized VAT:** Even though the rates change (South Africa 15%, Greece 24%, Vietnam 10%), the logic of Input vs. Output VAT remains identical in the tutorial.
- **Plug-and-Play:** A translator in Greece only needs to swap the "SARS" reference for "AADE" and update the rate; the rest of your manual's narrative (how to enter the journal) remains 100% valid.

4. Reducing "UI Constraints"

As a technical lead, you've dealt with string lengths causing UI issues. Simplified terminology is almost always shorter.

- **Complex:** "Accumulated Depreciation on Furniture and Fittings" (Very long, might break a Greek or German UI).
- **Simple:** "Furniture: Value Lost" or "Acc. Depr: Furniture".
- **Benefit:** Shorter strings mean less time spent adjusting .dfm file layouts for mirrored RTL (Arabic) or

long-form European languages.

5. The "Universal Handyman" Persona

The "Handyman Hardware Store" is a brilliant choice for a global manual because the concept of a "Repair/Hardware Shop" exists in every culture.

- Whether the user is in Quebec (ASPE), Vietnam (VFRS), or South Africa, they understand buying a drill, paying rent, and receiving cash.
- By documenting the Full CoA in an Appendix and using the Simplified Subset for the tutorial, you give the student a "safe space" to learn the software without getting lost in a forest of accounts they don't need yet.

Final Technical Benefit:

If you ever need to change a document type in the Types table for a specific country, your language file review becomes much faster because you are only checking 15–20 "Core" accounts rather than 200+.

Developer Quick Start: Mapping the Modern COA

Developer Quick Start: Mapping the Modern COA

That sounds like a perfect plan! If we align the **Table of Contents (TOC)** with the modernized Chart of Accounts, we can transform the tutorial from a "manual" into a strategic guide for modern business owners.

Please send the TOC over. While you prepare that, here is the **Quick Start Guide** for developers and marketers to map the new codes within the osFinancials/TurboCASH environment.

To make the tutorial universal, we focus on how the software "interprets" the account codes. This is the logic that allows a user in any country to adapt the system.

1. Understanding the "BTYPE" (Account Behavior)

In the software, the first letter or the "Type" column defines how the account acts. This is the most important lesson for a new user:

- **G (Group):** The "Folders." They don't hold transactions directly but sum up all the accounts inside them (e.g., *Operating Expenses*).
- **T (Tax):** The "Smart" accounts. These are linked to tax rates (VAT/GST) and automatically populate tax reports.
- **B (Bank):** The "Financial" accounts. These enable the "Reconcile" and "Bank Import" features.

2. The Hierarchy Mapping (The "Tree" View)

Modern accounting relies on a "Parent-Child" relationship. In the tutorial, we should show users how to "nest" accounts:

1. **Level 1 (Top):** 6000 Operating Expenses (Type: **G**)
2. **Level 2 (Sub):** 6100 Employment Costs (Type: **G**)
3. **Level 3 (Detail):** 6110 Gross Salaries (Type: **Standard**)

3. Customizing for Different Regimes

To make the tutorial "Global-Ready," we teach marketers to focus on these three variables:

- **The Label:** Change "Debtors" to "Accounts Receivable" for US markets.
- **The Tax Rate:** Set the **FRATE** (as seen in your data) to 15 for SA, 20 for UK, or 0 for tax-free zones.
- **The Language File:** As you noted, if we change a Group name (like "Fixed Assets" to "Non-Current Assets"), the developer **must** ensure the SGROUP string in the language file matches to maintain a professional UI.

4. The "Tutorial Modernization" Checklist

When you send the TOC, I will look for ways to integrate these modern concepts:

- **Digital Transformation:** Moving from paper receipts to "Bank Imports" (B-type accounts).
- **Cloud-Ready Reporting:** Using SGROUP1 and SGROUP2 for "Tags" or "Cost Centers."
- **Compliance:** Ensuring the "Retained Income" and "Share Capital" (Equity) flows correctly for IFRS for SMEs.

Modernized "Accounting Made Easy" TOC

Modernized "Accounting Made Easy" TOC

This is a comprehensive Table of Contents, but you are right—it feels very "software-manual" heavy and less like a modern business-strategy guide.

To modernize this for a global audience (marketers, developers, and entrepreneurs), we should shift the focus from **"How to click buttons"** to **"How to manage a business using TurboCASH/osFinancials."**

Here is my proposal for a modernized, streamlined TOC. I have regrouped your content into "Logical Success Pillars" that align with modern accounting standards (IFRS/GAAP) and digital workflows.

Modernized "Accounting Made Easy" TOC

Part 1: The Digital Foundation (Modernizing Module A & B)

Goal: Move from "History of Accounting" to "Setting up a Global Digital Office."

- **1.1 The Modern Accounting Equation:** Understanding Assets, Liabilities, and Equity in a digital age.
- **1.2 Global Standards:** Aligning your books with IFRS, GAAP, and local regimes (SARS, HMRC, IRS).
- **1.3 The osFinancials/TurboCASH Architecture:** How the 4-digit Chart of Accounts drives business intelligence.
- **1.4 Multilingual & Multicurrency Setup:** Configuring for international trade and local language files.

Part 2: Engineering Your Chart of Accounts (Modernizing Module F & E)

Goal: Show how the COA is the "Brain" of the business.

- **2.1 Designing a Scalable COA:** Using the 1000-6000 numbering logic.

- **2.2 Tax Engineering (The 'T' Type):** Setting up automated VAT/GST/Sales Tax trackers.
- **2.3 Banking Integration (The 'B' Type):** Preparing for digital bank imports and automated reconciliation.
- **2.4 Reporting Groups:** Using **SGROUP1** for Financial Statements and **SGROUP2** for Management KPIs.

Part 3: The Transaction Engine (Modernizing Module I, J, K & L)

Goal: Merging "Batches" and "Documents" into a single "Workflow" concept.

- **3.1 The Digital Paper Trail:** Moving from Quotes to Invoices to Cash.
- **3.2 Automation with BankImport:** Reducing manual entry by 90% using the Bank Import Plugin.
- **3.3 Inventory Intelligence:** Managing Trading Stock vs. Service Items in a modern supply chain.
- **3.4 T-Account Visualization:** How to use the software to "see" the Double Entry happen in real-time.

Part 4: Business Intelligence & Analytics (Modernizing Module N & O)

Goal: Moving from "Printing Reports" to "Analyzing Data."

- **4.1 Real-Time Financial Statements:** Mastering the Trial Balance, Income Statement, and Balance Sheet.
- **4.2 Pivot Table Power:** Using the Ledger Analyser to "slice and dice" your data for better decisions.
- **4.3 Budgeting for Growth:** Setting performance targets and monitoring "Budget vs. Actual."
- **4.4 Visual Reporting:** Using ReportMan and Graphs to present data to stakeholders.

Part 5: Advanced Operations & Customization (Modernizing Module P & Q)

Goal: High-level management and developer-level flexibility.

- **5.1 Open Item Management:** Managing cash flow through Debtors/Creditors Age Analysis.
- **5.2 Customizing the Interface:** How to adapt Language Files and Document Layouts for your specific regime.
- **5.3 Developer's Corner:** Mapping custom fields and expanding the database for niche industries.

Key Modernization Shifts:

1. **Terminology:** I suggest replacing "Capture" with "Process" or "Sync." "Capture" sounds manual; "Process" sounds automated.
2. **Logic:** Instead of having "Module G" (Stock) and "Module J" (Documents) separate, we group them under "**The Transaction Engine.**" This helps the user understand the flow of a sale.
3. **The "Language File" Reminder:** In Part 5.2, we explicitly include the tutorial on reviewing the **Types Table** and **Language File** together. This ensures that if a marketer changes "Debtors" to "Receivables," the reports update their headers automatically to remain professional.

Revised Module A: The Digital Financial Blueprint

Revised Module A: The Digital Financial Blueprint

To illustrate the shift from the "1980s manual" style to a "Modern Digital" style, let's rewrite Module A.

The goal here is to stop teaching users how to be data-entry clerks and start teaching them how to be Financial Controllers using the software.

A.1 – Your Digital Office in TurboCASH/osFinancials

- A.1.1 Digital Onboarding: Navigating the ecosystem (Help, Community, and Plugins).
- A.1.2 The Database Engine: Why a structured Set of Books is the foundation of business scaling.

A.2 – Modern Financial Logic

- A.2.1 From Abacus to AI: A brief evolution of accounting (Why we still use Double Entry in a digital world).
- A.2.2 Data Integrity: Why accurate accounting is your business' s "Single Source of Truth."
- A.2.3 The Modern Accounting Equation: *

$$Assets = Liabilities + Equity$$
 - How TurboCASH visualizes this equation in real-time.
- A.2.4 Real-Time Accounting Cycles: Moving from "End-of-Month" processing to "Live" data syncing.
- A.2.5 Visualizing Debits & Credits: Using the T-Account Viewer to demystify transaction flows.

A.3 – The Architecture of the Chart of Accounts (COA)

- A.3.1 Financial Categories vs. Report Groups: Understanding how SGROUP1 creates your IFRS Balance Sheet.
- A.3.2 The Master Prefix System: Organizing your business into 1000 (Assets), 2000 (Liabilities), and 3000 (Equity) blocks.
- A.3.3 Income & Expense Intelligence: Categorizing 4000 (Revenue) and 5000+ (Costs) for deep margin analysis.

A.4 – Control Accounts & Automation

- A.4.1 Sub-Ledger Logic: How Debtors and Creditors feed into the General Ledger automatically.
- A.4.2 The 'T' Type Revolution: Automating Tax compliance (VAT/GST/Sales Tax) through smart account types.
- A.4.3 Bank Linkage: Using 'B' type accounts to bridge the gap between your bank statement and your books.

Why this is better for Marketers & Developers:

1. It sells a "System": Instead of saying "here is a list of accounts," you are saying "here is an architecture for business intelligence."
2. Universal Appeal: By referencing "IFRS" and "Global Standards," a marketer can pitch this to a user in Cape Town, London, or Sydney.
3. Developer Friendly: It highlights the BTYPE (G, T, B) logic, which is exactly what a developer needs to know to map a new country-specific template.

A Note on the Language File

In section A.3.1, we would add a tip: "If you are localizing this for a specific regime, remember that renaming a Category here requires a quick update to the Language File to ensure your 'Financial Categories' table stays in sync with your UI."

Created with the Standard Edition of HelpNDoc: [Experience the Power and Simplicity of HelpNDoc's User Interface](#)

Modernizing the "Industry" Templates (AF-BEDRYWE / EN-INDUSTRIES)

Modernizing the "Industry" Templates (AF-BEDRYWE / EN-INDUSTRIES)

If you have successfully expanded the description fields to 128 characters, you have effectively modernised the database's "vocabulary." This allows for the high-level descriptive detail required by modern IFRS and auditing standards.

1. Updated "Table of Contents" Logic for Templates

Since you are updating the templates for regions like Botswana, Namibia, and Mauritius, we need to ensure the Module E (Setup) and Module F (Accounts) tutorials emphasize this new 128-character freedom.

Modernizing the "Industry" Templates (AF-BEDRYWE / EN-INDUSTRIES)

With the SQL-303 error fixed by your field length expansion, we can now offer more professional templates.

- Church/School: Can now use long, descriptive names like "Fundraising – Annual Grade 7 Spring Gala 2026" instead of "FUND G7."
- Medical: Can list full medical procedure codes and names in the description.
- Regional Templates: For countries like Tanzania or Zambia, the 128-character field allows for bilingual descriptions (e.g., English – Swahili) within a single account name.

2. Fixing the "Tutorials" (The 1980s vs 2026 approach)

To make the tutorials world-class, we should add a specific section in Module Q (ReportMan) regarding these field lengths.

Why 128 characters matters for Reporting:

The old 1980s layouts were likely designed for a 35-character wrap.

- The Problem: If a user types 128 characters, but the ReportMan layout is fixed at a width of 2 inches, the text will truncate or overlap.
- The Fix: You must instruct developers and marketers to update their .rep (ReportMan) files to "Auto-Stretch" or "Word Wrap" for the SDESCRIPTION fields.

3. Addressing the BATTYPES Expansion

Expanding BATTYPES to 128 characters is a massive win for Module L (Bank Import).

In the 1980s, a batch was just "CB1" (Cash Book 1). In 2026, the tutorial can now show users how to name a batch:

"Standard Bank – Main Current Account – Statement 45 – Imported by Sarah on 2026-02-06"

This creates a perfect audit trail that meets the "Reporting and Auditing Requirements" you mentioned for South Africa and the Commonwealth regions.

Fixed - The SQL-303 error in Firebird

Fixed – The SQL–303 error in Firebird

This is a critical technical and structural upgrade. The SQL–303 error in Firebird typically occurs when the software tries to pass a data value that exceeds the defined field length or a data type mismatch occurs during a dynamic SQL operation. By fixing the metadata (field lengths) in these templates, you aren't just fixing a bug—you are creating a professional-grade "Base Layer" for global compliance.

This have been fixed in the modern templates and the CUSTOMISE ○ CUSTOMISE-EMPTY-BOOKS-3X3-DIGITS to 8X3 templates

Getting Started

You can download a template in a few easy steps by using the **"Let osFinancials/TurboCASH help you to create a Set of Books"** option on the website.

- **If a template closely meets your needs:** You can immediately begin reviewing and editing it to fit your business. Remember to save your template under a new name by using the **"Save as"** option on the **Start ribbon**.
- **If the templates do not meet your needs:** If you wish to create your own Set of Books from scratch, you can download and open one of the basic **CUSTOMISE-EMPTY-BOOKS** templates:
 - CUSTOMISE-EMPTY-BOOKS-3X3-DIGITS
 - CUSTOMISE-EMPTY-BOOKS-4X3-DIGITS
 - CUSTOMISE-EMPTY-BOOKS-5X3-DIGITS
 - CUSTOMISE-EMPTY-BOOKS-6X3-DIGITS
 - CUSTOMISE-EMPTY-BOOKS-7X3-DIGITS
 - CUSTOMISE-EMPTY-BOOKS-8X3-DIGITS

MSSQL Database Note: If you wish to create a template for the MSSQL database type, select the **"Customise your own Set of Books (Advanced)"** option. This creates a blank template containing only the three basic control accounts (e.g., Debtors Control, Creditors Control). You can then export your accounts from an existing Firebird database template or Set of Books and import them into your newly created MSSQL Set of Books.

Relational Metadata Standard

To modernize these templates for South Africa and the listed Commonwealth/Global regions, we need to move away from the "flat" 1980s data structures and implement a Relational Metadata Standard.

1. Technical Fix: The SQL–303 & Field Length Modernization

To prevent the Dynamic SQL–303 error, the Firebird .FDB templates must be updated. Modern accounting requires longer descriptions for audit trails and international compliance.

Recommended Field Length Updates

Table	Field	Old Length (1980s)	New Standard (2026)	Purpose
ACCOUNTS	SDESCRIPTION	35	128	IFRS requires clear, non-abbreviated account names.
BATTYPES	SDESCRIPTION	16	128	Modern batch names (e.g., "Standard Bank – Import – Feb 2026") need space.
GROUPS	SREPORTING	30	128	Supports detailed IFRS/GAAP reporting headers.
DOCUMENTS	SREFERENCE	10-15	35	Vital for long digital transaction IDs and blockchain hashes.

2. Structural Modernization (AF–BEDRYWE / EN–INDUSTRIES)

Your current industry templates are likely too "thin." Modernizing them means building in Reporting Groups that meet South African (SARS) and International (IFRS) auditing requirements by default.

Industry-Specific Logic for the 2026 Templates:

- **MEDICAL:** Must include specific sub-groups for "Medical Aid Claims" (Debtors) and "Surgical Consumables" (Inventory) to meet healthcare audit standards.
- **FARMING:** Needs a "Biological Assets" group (IAS 41 compliance) for livestock and crops, which was rarely handled correctly in 1980s systems.
- **RETAIL / RESTAURANT:** Must support "Point of Sale (POS) Clearing" accounts as a standard to handle split payments (Card, Cash, QR Code).
- **CHURCH / SCHOOL:** Needs "Fund Accounting" structures where SGROUP2 is used to separate "Building Fund" from "General Tithes."

3. Global Localization & Regional Compliance

For the regions you listed (Botswana, Mauritius, Namibia, etc.), the software logic remains the same, but the Tax and Equity structures change.

The "Universal Template" Strategy

Instead of 15 different database files, you can create one "Global Master" that marketers customize using these three pillars:

1. The VAT/GST Layer:

- South Africa: VAT at 15%.
- Mauritius: VAT at 15%.
- Botswana: VAT at 14%.
- The Template fix: Ensure the T-type accounts in the template have the FRATE field unlocked for easy localization.

2. The Language File Sync (Critical):

As we discussed, if a user in Rwanda or Tanzania needs "Creditors" to be called "Suppliers," they change it in the Language File. You must ensure the Types Table in your new templates maps to the correct String IDs in those language files.

3. Equity/Capital Compliance:

Ensure the templates for the Republics (e.g., Zambia, Uganda) use "Share Capital" and "Retained Earnings," while the Kingdoms (Lesotho, Tonga) might require slightly different nomenclature for trust-based or royal-charter entities.

4. Next Step: Modernizing Module L (Bank Import)

Since you are fixing the BATTYPES field length, the most immediate benefit will be seen in Module L. Modern bank imports provide massive amounts of metadata (Long transaction descriptions) that the old 1980s field lengths would truncate, causing the SQL-303 error.

Created with the Standard Edition of HelpNDoc: [Free Kindle producer](#)

ReportMan (.rep) files already calibrated for the 128-character expansion

ReportMan (.rep) files already calibrated for the 128-character expansion

That is excellent news. Having the ReportMan (.rep) files already calibrated for the 128-character expansion means the "heavy lifting" is done. You've successfully moved the software from a "constrained" legacy state to a high-capacity modern engine.

To ensure these reports are truly "Global-Ready" for those 15+ regions and various industry templates (Medical, Church, Farming), we should focus the tutorial on the Expression logic and how it interacts with the Language Files.

1. The "Dynamic Localization" Strategy

Since you've adjusted the expressions in ReportMan, we can teach marketers and developers how to use the GetStr (Get String) function or local expression logic to pull from the language files.

This is the key to localizing for Botswana, Rwanda, or Malta without changing the report file itself.

Scenario	1980s Approach (Hardcoded)	2026 Approach (Dynamic)
Tax Label	"VAT 15%" printed on every page.	Expression pulls the label from the Types Table based on the account code.
Industry	A different report for "Medical" and "Church".	One report that uses a "Stretch" expression to handle long descriptions unique to that industry.
Currency	Hardcoded "R" for Rand.	Expression pulls the SCURRENCY field from your updated COA table.

2. Auditing & The "Audit Trail" Expression

For the South African and Commonwealth regions, auditing requirements are strict. With the 128-character

expansion, you can now teach users to include "Reference Blobs" in their reports.

The Tutorial Tip: > "Because the database now supports 128 characters, your 'Transaction Listing' reports should be configured with Word Wrap enabled. This allows the auditor to see the full narrative of a bank import (e.g., 'EFT: INV102-SARS-PAYMENT-REF-XYZ-2026') rather than a truncated string that lacks legal context."

3. Managing the 8-Character "Reference" Limitation

Since the SREFERENCE (Document/Batch number) is still 8 characters, your ReportMan expressions should be smart about how they display this to avoid confusion with the 128-character descriptions.

- Visual Balance: In the report layouts, give the 128-character SDESCRIPTION the most "Real Estate" (width).
- The "Combined" Expression: For a modern look, marketers can create a ReportMan expression that combines the short reference and the long description:
 - [SREFERENCE] + " - " + [SDESCRIPTION]
 - Result: INV1001 – Consultation and Surgery: Dr. Smith – Patient John Doe

4. Final Review of the "Industry" Templates

Now that the reports are adjusted, you can finalize the AF-BEDRYWE / EN-INDUSTRIES templates by ensuring the "Groups" are logically named.

Checklist for Modernized Templates:

1. SGROUP1 (Reporting): Ensure these match the expanded 128-character field. (e.g., "Current Assets: Trade and Other Receivables" instead of "Current Assets").
2. Language Sync: Check that the SREPORTING strings in the Firebird database point to the correct ID in the language file.
3. VAT/Tax: Ensure the T860010 etc. codes (as per your first message) are pre-linked to the correct 128-character Tax descriptions.

What's Next?

The technical foundation is solid. To complete this "Accounting Made Easy" modernization:

Would you like me to draft a "Developer's Compliance Note" for the manual? This would explain to someone in, say, Mauritius or Namibia, exactly how to take your "Base Template" and use the new field lengths to meet their local GAAP/IFRS reporting requirements.

Created with the Standard Edition of HelpNDoc: [Keep Your Sensitive PDFs Safe with These Easy Security Measures](#)

Aligning the Generic (South Africa and UK) templates with IFRS

Aligning the Generic (South Africa and UK) templates with IFRS

This is a significant milestone! By aligning the **Generic (South Africa and UK)** templates with **IFRS (International Financial Reporting Standards)** and implementing the 128-character field lengths, you've essentially created the "Gold Standard" for the rest of the industry-specific and regional sets.

This allows the "**Accounting Made Easy**" tutorial to be marketed as a professional-grade certification tool rather than just a basic software guide.

1. The IFRS Structural Impact

Since these are now "Generic IFRS" templates, the **SGROUP1** and **SGROUP2** classifications in these sets will differ significantly from the old 1980s layouts.

Old Category (Local GAAP)	Modern IFRS Category (SGROUP1)	Purpose
Fixed Assets	Non-current Assets	Standardizes valuation & depreciation logic.
Long-term Liabilities	Non-current Liabilities	Separates debt by "Settlement Time" (over 12 months).
Debtors / Creditors	Trade & Other Receivables / Payables	Broadens the category for financial reporting.
Gross Profit	Revenue & Direct Costs	Focuses on the "Nature" of the income.

Export to Sheets

2. Using these as "Master Templates" for the Regions

Now that the **South Africa** and **UK** generics are done, they serve as the "Parent" for the other 13 regions (Botswana, Namibia, Mauritius, etc.). Because most of these countries are Commonwealth members or use legal systems influenced by UK/SA standards, the transition is simple:

1. **Inherit the Schema:** Copy the Firebird structure of the 4-EN-SOUTH-AFRICA-GENERIC.
2. **Localize the Tax (The 'T' Switch):** Update the **FRATE** (VAT/GST) and descriptions for the local regime.
3. **Language File Verification:** Ensure the IFRS terms in the database (e.g., "Non-current Assets") are mirrored in the language files for consistency.

3. Updating the "Tutorial" to match these New Templates

With these modernized sets, we can update **Module F.1.1 (Planning your Chart of Accounts)**. Instead of telling users to "make it up as they go," we can guide them based on the new IFRS templates:

- **Instruction to Users:** *"The Generic IFRS templates are pre-configured with 128-character descriptions and standard reporting groups. We recommend starting with the **Generic IFRS Template** and adding your specific operating expenses in the 5000-6000 range."*
- **Instruction to Developers:** *"When customizing for a specialized industry (like Medical or Farming), maintain the top-level IFRS Group structure (SGROUP1) to ensure the Trial Balance remains compliant for auditing."*

4. Addressing the Industry Templates (AF-BEDRYWE / EN-INDUSTRIES)

The next logical step in your modernization project is to "Migrate" the specialized templates (Medical, Church, Retail) to this new IFRS foundation.

The Strategy: Take the **4-EN-SOUTH-AFRICA-GENERIC** database and simply swap out the *Operational Accounts* while keeping the *Reporting Headers*.

- **Medical:** Add medical-specific income/expense codes to the generic IFRS structure.

- **Farming:** Add IAS 41 (Biological Assets) accounts to the generic IFRS structure.

5. Implementation Note for the 128-Character Field

In the tutorial section **B.8 (Selecting a Language)**, we should highlight that the **increased field length** allows for more professional, descriptive reporting.

Modern Tip: "With the 128-character expansion, your Profit & Loss statement can now show detailed line items like 'Marketing: Social Media Advertising - Q1 Campaign' instead of just 'MKTG-ADV'. This level of detail is a core requirement for modern IFRS-compliant auditing."

Next Step for the Tutorial Update:

Since you have finalized the core IFRS Generic templates, would you like me to draft a **"Template Selection Guide"** for **Module E**? This would help users choose between the "Generic IFRS" and "Industry-Specific" sets while understanding the technical benefits of the 128-character metadata.

Created with the Standard Edition of HelpNDoc: [Produce Kindle eBooks easily](#)

Stripping down the 4-SOUTH-AFRICA-GENERIC template to build a modernized tutorial

Stripping down the 4-SOUTH-AFRICA-GENERIC template to build a modernized tutorial

Stripping down the 4-SOUTH-AFRICA-GENERIC template is actually the most efficient way to build a modernized tutorial. You are essentially taking a professional-grade "engine" and removing the extra "seats" to show how the core machine works.

By using this template, you solve the 1980s problem immediately because your SGROUP1 and SGROUP2 fields are already populated with modern IFRS terminology (e.g., Trade Receivables instead of Debtors, and Non-Current Assets instead of Fixed Assets).

Here is how we can structure this "Stripped Down" tutorial to keep it simple but scalable.

1. The "Essential Core" Chart of Accounts

To illustrate the basic principles, we should select only the "Anchor Accounts" from your list. This prevents the user from being overwhelmed by the hundreds of payroll and asset sub-accounts.

Suggested "Tutorial-Lite" Accounts:

SACCOUNTCODE	SDESCRIPTION	BTYPE	SGROUP1 (IFRS Standard)
1010000	Bank Account	B	Cash and Cash Equivalents
1100000	Trade Receivables	G	Current Assets
1530010	Computer Equipment	G	PP&E (Property, Plant, Equipment)
2000000	Trade Payables	G	Current Liabilities
2400010	Output VAT (15%)	T	Tax Liabilities

3900000	Retained Earnings	G	Equity
4000000	Sales Revenue	G	Operating Revenue
7100010	Salaries	G	Operating Expenses

2. Modernizing the Naming Convention

The "1980s feel" often comes from all-caps and technical jargon. In the tutorial, we can teach users to utilize those 128-character fields you've unlocked:

- Old Style: G1100000 DEBTORS CONTROL
- Modern Style: G1100000 Trade Receivables (Customers)
- Old Style: G1540010 VEHICLES AT COST
- Modern Style: G1540010 Motor Vehicles – Historic Purchase Cost

3. Teaching the "Deep Reporting" Logic (SGROUP1 & 2)

This is where you bridge the gap between a "basic" and "advanced" tutorial. You can show that even in a simple set of books, the SGROUP fields are doing the heavy lifting for the user.

The "Telescope" Method:

Show the user how one transaction at the SACCOUNTCODE level looks different depending on the "lens" (Group) used:

1. The Entry: You pay Rent (\$G7050000\$).
2. The Management View (SGROUP2): It appears under "Rent and Utilities" (Operational focus).
3. The Auditor View (SGROUP1): It appears under "Operating Expenses" (Compliance focus).

4. Addressing the South African Context (VAT)

Your template includes the detailed T2400xxx codes (VAT Field 1, Field 15, etc.). For a "Simple" tutorial, I recommend focusing on just two:

- T2400010 (Output VAT on Sales)
- T2400150 (Input VAT on Purchases)

Explain that the "T" type is the Automation Engine. When they select this account, osFinancials5/TurboCASH5 does the math for them. This moves the tutorial away from "How to calculate tax" to "How to use the software to automate tax."

5. Proposed Tutorial Flow (The "Modern Roadmap")

1. Launch: Open the Generic IFRS Template.
2. Personalize: Rename a few 128-character descriptions to suit your business.
3. Connect: Set up your Bank (B-type).
4. Action: Record a Sale (linked to a T-type Tax account).
5. Report: Open the Ledger Analyser and show how the SGROUP fields automatically built a Balance Sheet without the user doing any extra work.

A Note on Scalability

By using the 4-digit/7-digit hybrid (e.g., G7100010), you are teaching the user that if they grow from a 1-person shop to a 50-person company, they don't need to change their system—they just add more numbers in the same blocks.

Created with the Standard Edition of HelpNDoc: [Easy CHM and documentation editor](#)

Simplified "Sole Prop" Chart of Accounts

Simplified "Sole Prop" Chart of Accounts

To simplify this for a Sole Proprietor, we'll focus on the "Daily Workflow." By using the modernized 4-SOUTH-AFRICA-GENERIC template, we can move away from the rigid 1980s coding and use descriptions that make sense to a business owner.

Here is the blueprint for your modernized "Accounting Made Easy" tutorial, using the existing transaction logic but upgraded for 2026.

1. The Simplified "Sole Prop" Chart of Accounts

We will use 6 Debtors and a handful of General Ledger accounts. Notice how we use the 128-character descriptions to make it human-readable.

Account Type	SACCOUNTCODE	SDESCRIPTION (128-Char)	SGROUP1 (IFRS Category)
Bank	1010000	Business Current Account	Cash & Cash Equivalents
Debtor 1-6	1100001-6	[Customer Name / Reference]	Trade Receivables
Sales	4000000	Sales: Products & Services	Operating Revenue
Inventory	1200000	Trading Stock on Hand	Inventories
VAT	2400010	Output VAT 15% (Sales)	Current Liabilities

2. The Tutorial Transaction Flow

We will follow the classic "Accounting Made Easy" steps but with modernized interface terminology.

Phase A: Opening Balances (The Foundation)

- Action: Enter opening balances for your 6 Debtors and your Bank.
- Modern Twist: Show how the 8-character SREFERENCE is used for the "OB-2026" code, while the 128-character SDESCRIPTION explains exactly where the balance came from (e.g., "Opening Balance from 2025 Spreadsheet").

Phase B: Journals (The Engine)

We will process 4 transactions in each journal to show the "Manual" vs. "Automated" feel.

- Sales Journal: 4 direct credit sales to Debtors 1, 2, 3, and 4.
- Purchase Journal: 4 credit purchases of stock from suppliers.
- Bank Journal: 1 Payment (Rent), 1 Receipt (from Debtor 5), and 1 Bank Charge.

- Repeating Transaction: Set up a monthly "Software Subscription" or "Rent" that fires every month automatically.

Phase C: Document Processing (The Front Office)

This illustrates the transition from "Quote" to "Cash."

1. Quotes: Create 3 Quotes for different customers.
2. Conversion: Convert Quote #1 into an Invoice (showing how the software handles the double-entry behind the scenes).
3. Purchase Orders: Create 2 Orders for new stock items.
4. Purchase Documents: Convert an Order into a Purchase Document to increase inventory levels automatically.

3. Modernizing the "Stock" Experience

For the sole proprietor, we' ll use 3 clear Stock Items:

- Item A: A Physical Product (Trading Stock).
- Item B: A Service/Labor (Non-Stock).
- Item C: A Package/Bundle (Stock assembly).

4. Why this fixes the "1980s" Feel:

- No More Codes: The user searches by the 128-character name, not just the code G1100000.
- IFRS Ready: Even though it's a "Simple Tutorial," the reports (Balance Sheet/Income Statement) are automatically professional because they use the SGROUP1 headers from your new template.
- Clean References: Using the 8-character field for unique IDs (INV101) while using the 128-character field for the narrative (Sale of 5x Computer Monitors to Smith & Co).

Created with the Standard Edition of HelpNDoc: [Generate Kindle eBooks with ease](#)

The Debtor Roster: A Modern Breakdown

The Debtor Roster: A Modern Breakdown

This list is perfect for the modernised AME Tutorial. It provides exactly the variety needed to show how a sole proprietor handles different customer types—from regular credit clients to walk-ins and the technical necessity of an opening balance account.

Here is how we integrate these into the new tutorial using the 128-character metadata and the modern 4-SOUTH-AFRICA-GENERIC structure.

1. The Debtor Roster: A Modern Breakdown

We will use these 6 accounts to teach different "Real World" scenarios:

Debtor Code	Name	Scenario for Tutorial
1ABGRE	Mr. AB Green	Credit Sales: Standard 30-day terms with a full delivery address.
1CASHC	CASH CUSTOMERS	Point of Sale: Processing immediate payments without tracking individual IDs.

1 DOPEN	Opening Balances – Debtor	Technical Setup: Clearing the "Suspense" account during initial data migration.
1 MACDS	MAC Shop Decor Specialists	B2B Commercial: Illustrating business-to-business processing and email billing.
1 MDAVI	Mr. Mike Davies	Field Service: Using mobile numbers and postal tracking for home-based services.
1 ROGSM	Mr. Roger Smith	Project Work: Dealing with physical plot locations and specific regional groups.

2. Modernising the "Address & Info" Field

In the 1980s, we were lucky to get 20 characters for a name. In the 2026 version of the tutorial, we highlight the expanded field lengths:

- **Email & Communication:** Notice that mike@hismail.com and mac@hismail.com are ready for the Direct Email feature.
- **Delivery vs. Postal:** We will show the student how to use the different address blocks to ensure Invoices (Postal) and Delivery Notes (Physical) are distinct.
- **Detailed References:** The Reference field (e.g., 336012345 for Mike Davies) can be used to teach the importance of linking internal account numbers to external banking refs.

3. Grouping Strategy (The Scaling Secret)

The old tutorial used "Debtor Group 1." In the modernized version, we give these meaningful names in the GROUPS table:

- Group 1A (Code 18): Internal/System Accounts (CASHC, DOPEN).
- Group 1B (Code 21): Residential/Private Clients (Davies, Smith).
- Group 1C (Code 22): Commercial/Contractors (Green, MAC Shop Decor).

4. The Opening Balance "Clean-Up" (1 DOPEN)

One of the most important lessons in the old AME tutorial was the use of a specific account for Opening Balances.

Tutorial Tip: When we process the Opening Balances Journal, we will credit 1 DOPEN to offset the individual debit entries for Green, Mac, and Davies. This ensures the Trial Balance stays in zero while we build the sub-ledger history.

5. Integrating with Module P (Open Item Processing)

Since all these accounts (except Cash) are set to 30 Due Days, they are perfect for teaching Age Analysis.

- We can show how a sale to 1 ROGSM in "Period 1" becomes "Overdue" if we haven't processed a receipt by "Period 3."

Summary of the First Exercise:

The student will begin by importing or manually entering these 6 Debtors.

- Goal: Learn that a "Debtor" is not just a name, but a data hub that connects to Sales, Tax, and the Bank.

Created with the Standard Edition of HelpNDoc: [Streamline Your Documentation Process with a Help Authoring Tool](#)

The Creditor Roster: A Modern Breakdown

The Creditor Roster: A Modern Breakdown

To complete the modernization of your Accounting Made Easy (AME) tutorial, we now have a robust Creditor Roster. Similar to the Debtors, these 6 accounts allow us to teach the flow of money out of the business, specifically focusing on stock procurement and operational expenses for a South African sole proprietor.

By using the 4-SOUTH-AFRICA-GENERIC template, these Creditors will automatically link to the modernized "Trade & Other Payables" reporting group.

1. The Creditor Strategy: Tutorial Scenarios

We will use these specific accounts to illustrate different procurement behaviors:

Creditor Code	Name	Scenario for Tutorial
2ABCOS	ABC-Office-Supplies	Operational Expense: Purchasing stationery and office consumables (G7150000).
2ABCSC	ABC-Service-Centre	Maintenance: Processing repairs or services for equipment/vehicles.
2AONES	A-ONE Suppliers	Stock Procurement: Buying "Trading Stock" (G1200000) on 30-day credit.
2BESTS	BEST Suppliers	Large Volume Orders: Illustrating Purchase Orders and Goods Received Notes (GRN).
2COPEN	Opening balances - Creditor	Technical Setup: Offsetting the initial liability entry to clean the Suspense account.
2SUNSU	SUNDRY SUPPLIERS	Ad-hoc Purchases: One-off vendors where we don't need a deep credit history.

2. Leveraging the 128-Character Field

Even though a creditor code like 2ABCOS is short, we can now use the SDESCRIPTION and Contact Person fields to make the tutorial feel more "human" and less like a legacy DOS system:

- Audit Readiness: Auditors in South Africa and the Commonwealth look for clear vendor names. Instead of "ABC OFF," the user sees "ABC-Office-Supplies."
- Banking & Refs: The Reference field (e.g., 4444444444 for Penny Walters) is crucial for the Bank Journal exercise. We will teach the student to use this reference when making EFT payments to

ensure the creditor can allocate the payment correctly.

3. Procurement Workflow (The "Paper Trail")

With these creditors, we can illustrate the Purchase Side of document processing:

1. Purchase Order (PO): Send an order to 2AONES for 10 units of stock.
2. Purchase Document (Invoice): Convert the PO when the stock arrives, which automatically updates the 128-character Stock Descriptions and the Trade Payables control account.
3. VAT Input: Show how the T-Type tax accounts (Field 14/15) automatically pull 15% VAT from these purchases to reduce the sole proprietor's liability to SARS.

4. Grouping & Aging

We will mirror the Debtor grouping logic to show the user how to organize their liabilities:

- Group 1A (Code 24): System/Sundry (COPEN, SUNSU).
- Group 1B (Code 26): Primary Trade Suppliers (AONES, BESTS).
- Group 1C (Code 27): Service & Admin Providers (ABCOS, ABCSC).

5. The "Simplified" Opening Balance Exercise

In the tutorial, we will have the student process a Creditors Opening Balance Journal:

- Debit: 2COPEN (Opening balances – Creditor)
- Credit: Individual Creditors (e.g., R5,000 to A-ONE Suppliers).
- Result: The sub-ledger shows exactly who we owe, while the Trial Balance remains balanced against the initial setup entry.

Ready for the Stock List?

Created with the Standard Edition of HelpNDoc: [Streamline Your CHM Help File Creation with HelpNDoc](#)

The Stock Portfolio: Modern Use Cases

The Stock Portfolio: Modern Use Cases

This stock list is the final piece of the puzzle. It provides a sophisticated mix of physical inventory, services (Labour), and system items (BOMs and GL-Codes).

By integrating these into the 4-SOUTH-AFRICA-GENERIC template, we can demonstrate how a modern sole proprietor manages a complex business—selling both high-value equipment and the specialized labor required to install it.

1. The Stock Portfolio: Modern Use Cases

We will categorize these items to show the student how different "Stock Types" behave in the software:

Stock Code	Item Name	Type	Tutorial Significance
3COMP	Compressor	Physical	Tracking quantity, reorder levels, and average cost.
3DRILL	Drill press	Physical	Using the 128-character

			extra description for technical specs.
4L-INSTCUP	Install – Built-in cupboards	Service	Non-physical labor sold in Hours. No quantity tracking.
4L-PAINT-E	Paint – Exterior	Service	Illustrating service-based billing for a contractor.
BOM / PROD	Bill of Materials	Assembly	Showing how to bundle parts and labor into one sale.
GL-CODE	General Ledger	System	Direct posting to the Ledger without a specific stock master.

2. Modernizing the Data Logic

With the expanded field lengths, we can now teach the user to leverage metadata for better business intelligence:

- **Extended Descriptions:** For the 3DRILL, we use the SEXTRADESC field: "850 Watts + 6 drill bits". This shows the user that their invoices can be highly professional and descriptive.
- **Barcoding:** The SBARCODENUMBER (e.g., 3456789123) is ready for point-of-sale (POS) training, moving away from the "1980s" manual typing feel.
- **Tax Classes:** Every item is pre-linked to Standard Rate 15% (T860010/20), ensuring that when a student sells a Compressor, the VAT is calculated instantly and accurately for SARS reporting.

3. The Accounting Integration (G-Codes)

In the modernized tutorial, we explain the "Invisible Links." Even though the user sees a "Drill Press," the software sees the following IFRS-compliant accounts:

- **Sales Account (G010000):** Maps to Operating Revenue.
- **Stock Account (G750000):** Maps to Inventories (Current Assets).
- **Cost Account (G100000):** Maps to Cost of Goods Sold (Direct Costs).

4. Practical Exercise: The "Job" Scenario

To make the tutorial engaging, we will combine these items into a single workflow for our Debtors:

1. **The Quote:** Create a quote for Mr. Roger Smith (1ROGSM).
2. **The Contents:** * 1x 3COMP (Compressor) @ R1,500.
 - 4x 4L-INSTCUP (Labour Hours) @ R500.
3. **The Result:** The student sees how the software handles a physical product (reducing stock by 1) and a service (billing for time) on the same document.

5. Supplier Links for Procurement

Notice your PURCHASES-NS item is linked to C2AONES (A-ONE Suppliers) and C2BESTS (BEST Suppliers).

Tutorial Tip: We will show the student that by linking a supplier to a stock item, they can automate their Purchase Orders. When the Drill Press stock hits 5 (the FREORDERQTYTRIG), the software can suggest

a new order from A-ONE Suppliers automatically.

Summary of the AME Tutorial Foundations

We now have:

- 6 Debtors (The Customers)
- 6 Creditors (The Suppliers)
- A Full Stock List (The Products & Services)
- IFRS-Ready Metadata (128-character descriptions and modern Grouping)

Created with the Standard Edition of HelpNDoc: [Revolutionize Your Documentation Review with HelpNDoc's Project Analyzer](#)

Document processing and transactions

Analysis of the Purchase Orders

These two orders provide the perfect practical scenario for the Purchase Documents section of the modernized AME tutorial. By using these, we can demonstrate how a modern sole proprietor initiates the procurement cycle while staying fully compliant with South African VAT (15%) and IFRS documentation standards.

1. Analysis of the Purchase Orders

We will use these two documents to teach different procurement logic:

Document No.	Supplier	Logic	Tutorial Lesson
OR000001	ABC-Service-Centre	Expense/Service Order	Ordering a service (Vehicle or Equipment) with a specific message for extras.
OR000002	A-ONE Suppliers	Stock Procurement	Ordering physical trading stock with a lead-time requirement (5 working days).

2. Modernizing the Document Logic

In the 2026 tutorial, we focus on how the expanded database and the 4-SOUTH-AFRICA-GENERIC template handle these details:

- **VAT Accuracy:** Notice the math in OR000001 (Excl: 1000 + Tax: 150 = Incl: 1150). We will show the student that because the T-Type accounts are mapped to Field 14/15, the software validates this R150 tax amount automatically.
- **The 8-Character Reference:** In OR000002, the reference is 4562. In the tutorial, we explain that this is likely the supplier's quote number, which will eventually become the audit link when the order is converted to a Purchase Invoice.
- **Professional Messaging:** The message "Please deliver within 5 working days!" illustrates the use of the 128-character metadata capacity. We can show how this prints clearly on the modernized ReportMan layouts you've adjusted.

3. The "Order-to-Purchase" Workflow

This is a core pillar of the "Accounting Made Easy" methodology. We will guide the student through these steps:

1. Creation: Manually capture OR000001 and OR000002.
2. The "Commitment" Phase: Explain that at this stage, the General Ledger hasn't changed yet—nothing is owed. This is a documentary step only.
3. Conversion:
 - Scenario 1: The service is finished. Convert OR000001 to a Purchase Document.
 - Scenario 2: The stock from A-ONE arrives. Convert OR000002 to a Purchase Document.
4. The Result: The software now automatically:
 - Increases Trade Payables (Creditors Control).
 - Records the Input VAT (reducing what we owe SARS).
 - Increases Inventory (for A-ONE) or Operating Expenses (for the Service Centre).

4. Addressing "Document Groups"

In your data, you have Document Group 1A and 1B. We will use this to teach the student about Organizational Reporting:

- Group 1A: Maintenance & Services.
- Group 1B: Core Trading Stock.

This shows the user how to filter their "Outstanding Orders" report to see exactly what products are arriving vs. what services are pending.

5. Ready for the Next Phase: Sales Documents?

We have the Purchases (the back-end) ready. The student now knows how to get stock and services into the business. The next logical step is to sell them.

Analysis of the Purchase Orders

Analysis of the Purchase Orders

These two orders provide the perfect practical scenario for the Purchase Documents section of the modernized AME tutorial. By using these, we can demonstrate how a modern sole proprietor initiates the procurement cycle while staying fully compliant with South African VAT (15%) and IFRS documentation standards.

1. Analysis of the Purchase Orders

We will use these two documents to teach different procurement logic:

Document No.	Supplier	Logic	Tutorial Lesson
OR000001	ABC-Service-Centre	Expense/Service Order	Ordering a service (Vehicle or Equipment)

			with a specific message for extras.
OR000002	A-ONE Suppliers	Stock Procurement	Ordering physical trading stock with a lead-time requirement (5 working days).

2. Modernizing the Document Logic

In the 2026 tutorial, we focus on how the expanded database and the 4-SOUTH-AFRICA-GENERIC template handle these details:

- **VAT Accuracy:** Notice the math in OR000001 (Excl: 1000 + Tax: 150 = Incl: 1150). We will show the student that because the T-Type accounts are mapped to Field 14/15, the software validates this R150 tax amount automatically.
- **The 8-Character Reference:** In OR000002, the reference is 4562. In the tutorial, we explain that this is likely the supplier's quote number, which will eventually become the audit link when the order is converted to a Purchase Invoice.
- **Professional Messaging:** The message "Please deliver within 5 working days!" illustrates the use of the 128-character metadata capacity. We can show how this prints clearly on the modernized ReportMan layouts you've adjusted.

3. The "Order-to-Purchase" Workflow

This is a core pillar of the "Accounting Made Easy" methodology. We will guide the student through these steps:

1. **Creation:** Manually capture OR000001 and OR000002.
2. **The "Commitment" Phase:** Explain that at this stage, the General Ledger hasn't changed yet—nothing is owed. This is a documentary step only.
3. **Conversion:**
 - Scenario 1: The service is finished. Convert OR000001 to a Purchase Document.
 - Scenario 2: The stock from A-ONE arrives. Convert OR000002 to a Purchase Document.
4. **The Result:** The software now automatically:
 - Increases Trade Payables (Creditors Control).
 - Records the Input VAT (reducing what we owe SARS).
 - Increases Inventory (for A-ONE) or Operating Expenses (for the Service Centre).

4. Addressing "Document Groups"

In your data, you have Document Group 1A and 1B. We will use this to teach the student about Organizational Reporting:

- Group 1A: Maintenance & Services.
- Group 1B: Core Trading Stock.

This shows the user how to filter their "Outstanding Orders" report to see exactly what products are arriving vs. what services are pending.

5. Ready for the Next Phase: Sales Documents?

We have the Purchases (the back-end) ready. The student now knows how to get stock and services into

the business. The next logical step is to sell them.

Created with the Standard Edition of HelpNDoc: [Free HTML Help documentation generator](#)

Analysis of the Purchase Transactions

Analysis of the Purchase Transactions

These four Purchase Documents complete the expenditure cycle for your modernized tutorial. They demonstrate the transition from "Orders" to "Liabilities," and they showcase the practical application of your new 128-character metadata and South African VAT logic.

In the 2026 AME Tutorial, these documents serve as the primary evidence for an auditor, proving that stock was received and services were rendered.

1. Analysis of the Purchase Transactions

We have a mix of service-based and product-based invoices that trigger different ledger updates:

Document No.	Creditor	Logic	Accounting Impact
PU000001	ABC-Service-Centre	Service Rendered	Converts OR000001. Dr Maintenance / Cr Trade Payables.
PU000002	ABC-Office-Supplies	Operational Supply	Direct purchase of stationery/supplies (Penny Walters).
PU000003	A-ONE Suppliers	Stock Receipt	Converts OR000002. Dr Inventory / Cr Trade Payables.
PU000004	BEST Suppliers	Large Purchase	Direct purchase of high-value stock from Ben Best.

2. Modernizing the Audit Trail

The "1980s feel" is eliminated here through high-fidelity data tracking:

- **Document Referencing:** In PU000001 and PU000003, the message field explicitly contains Ref:OR000001 and Ref:OR000002. This teaches the student the importance of a Linked Audit Trail—showing exactly which order gave birth to which invoice.
- **External References:** We use the 8-character Reference field for the Supplier's actual invoice number (e.g., IN0014 or 3532). This is what the sole proprietor will use when reconciling their bank statement later.
- **Detailed Messaging:** The message "Early settlement discount of 2.5%, if paid within 30 days" utilizes the expanded text capacity. This isn't just a note; it's a financial instruction that helps the user manage cash flow.

3. VAT and IFRS Compliance

Because you are using the 4-SOUTH-AFRICA-GENERIC template, the tax processing is now fully automated and compliant:

- **The R150, R225, and R300 Tax Amounts:** These are automatically calculated at 15%.
- **IFRS Categorization:** Even though the user just clicks "Process," the system is silently moving these amounts into "Trade & Other Payables" on the Balance Sheet and "Inventories" or

"Operating Expenses" on the Income Statement.

- Due Dates: Notice the Due date is exactly 30 days after the Date. This illustrates the Due Days: 30 setting we saw in your Creditor Master files.

4. Tutorial Exercise: "Processing the Paperwork"

In this section of the tutorial, we will guide the student through:

1. Converting the Service Order: Take OR000001 and "convert" it to PU000001. Explain that the money is now officially owed.
2. Capturing a Direct Invoice: Capture PU000002 manually to show that not every purchase needs a prior order.
3. Stock Valuation: Show the student that after processing PU000003 and PU000004, their Stock Quantities and Average Costs have updated in real-time.

5. Next: The Revenue Side (Sales Documents)

With the Creditor side finalized, the user has effectively "stocked the shelves" and "serviced the equipment." They are now ready to make money.

Created with the Standard Edition of HelpNDoc: [Free PDF documentation generator](#)

Analysis of the Sales Quotes

Analysis of the Sales Quotes

These two Quotes are essential for teaching the "Sales Pipeline" in the modernized Accounting Made Easy (AME) tutorial. They illustrate the critical transition from a potential lead to a firm commitment, all while utilizing the professional standards of your updated 4-SOUTH-AFRICA-GENERIC template.

1. Analysis of the Sales Quotes

We have two distinct scenarios here that show how different personnel (Russell and Tracy) handle the sales process:

Document No.	Debtor	logic	Tutorial Lesson
QU000001	Mr. AB Green	Commercial Lead	Highlighting a valid period and formal delivery to a commercial area (Lakeside).
QU000002	Mr. Mike Davies	Residential Lead	Managed by a different salesperson (Tracy) to show user/salesperson tracking.

2. Modernizing the Quote-to-Invoice Workflow

In the 2026 version of the tutorial, we move away from "static" documents and focus on the Dynamic Lifecycle of a transaction:

- Validity & Pressure: The message "This quote is valid for 14 days only!" leverages the 128-character field to create professional urgency. We can teach students that this text can be standardized in their settings to maintain brand consistency.
- The "Zero Impact" Rule: A vital lesson for the sole proprietor is that Quotes do not affect the

Ledger.

- Tutorial Tip: "Notice that even though we have 'billed' R1,150 to Mr. Green, your Trial Balance hasn't moved. The Quote is a promise, not a transaction."
- References as Links: In QU000001, the reference AB-IN110 can be used to teach students how to link a quote to an external inquiry or a specific project ID.

3. IFRS & Reporting Grouping

By using the Document Group 1A and 1B, you are teaching the user how to manage their "Sales Funnel":

1. Group 1A (Russell): Likely high-value commercial accounts.
2. Group 1B (Tracy): Likely smaller residential or service calls.
3. The Benefit: At the end of the month, the sole proprietor can run a "Quotes by Group" report to see which salesperson is bringing in the most potential revenue, helping them plan for upcoming stock needs.

4. Practical Exercise: "Winning the Work"

In this module of the tutorial, the student will:

1. Drafting: Capture both quotes manually, paying attention to the 15% VAT (R150) and the delivery addresses.
2. Conversion: We will simulate Mr. AB Green accepting his quote. The student will then perform the "Convert to Invoice" function.
3. The Result: The student witnesses the magic of the relational database:
 - The Quote is marked as "Status: Processed."
 - A new Invoice is born.
 - The SACCOUNT (Trade Receivables) increases.
 - The Output VAT is recorded for the SARS return.
 - Sales Revenue is updated on the Income Statement.

5. Next: The Final Revenue Step (Invoices)

We have the quotes ready. To finish the document cycle, we just need the Invoices to show the actual sales that hit the bank and the ledger.

Created with the Standard Edition of HelpNDoc: [Produce electronic books easily](#)

Analysis of the Sales Invoices

Analysis of the Sales Invoices

These eight Invoices are the revenue engine of your modernized Accounting Made Easy (AME) tutorial. They provide the perfect data set to demonstrate the transition from "potential work" to "actual income," while highlighting the professional standards of the 4-SOUTH-AFRICA-GENERIC template.

1. The Revenue Breakdown

We have a diverse set of invoices that show how a sole proprietor manages multiple clients and sales staff:

Invoice No.	Debtor	Logic	Key Tutorial Lesson
IN000001	Mr. AB Green	Converted Quote	Using Ref:QU000001 to

			show document flow.
IN000002	MAC Shop Decor	Direct Service	B2B billing with professional 128-char messaging.
IN000005	Mr. Mike Davies	Converted Quote	Managed by Tracy to show salesperson tracking.
IN000006	Mr. Roger Smith	High Value Sale	A R3,450 (Incl) invoice illustrating large project billing.

2. Modernizing the Ledger Impact

In the 2026 version of the tutorial, we explain the "magic" that happens the moment these invoices are updated:

- **Real-Time Debt Tracking:** The Due Amount matches the Amount Incl (e.g., R1,725 for Mike Davies). We show the student how this immediately appears on the Age Analysis report.
- **VAT Compliance:** The system automatically splits the Output VAT (e.g., the R450 on Roger Smith's invoice). This teaches the sole proprietor that this money belongs to SARS, not the business.
- **Audit Trail Integration:** For IN000001 and IN000005, the message field explicitly cites the original Quote reference. This is a vital lesson in "Paper Trail" management.

3. Salesperson Performance (Russell vs. Tracy)

By using the Salesperson field, you introduce a more advanced management concept to the sole proprietor:

- **Russell (Group 1A):** Handling the early March volume.
- **Tracy (Group 1B):** Handling the April residential and project growth.

Tutorial Tip: We can show the user how to generate a "Sales by Salesperson" report to see who is driving the most revenue, which is a massive step up from basic manual bookkeeping.

4. Addressing "Due Dates" and Terms

Notice the logic in your data: IN000007 (dated 2024/04/10) has a Due Date of 2024/05/10.

- This perfectly illustrates the 30-day terms we set up in the Debtor Master files.
- We will teach the student that the message "Please settle within 30 days!" isn't just a courtesy—it's a legal expectation aligned with the system's aging logic.

5. Completing the "Full Circle"

With these 8 invoices, the student has now:

1. Purchased Stock (from Creditors).
2. Quoted Customers (Debtor Leads).
3. Billed Customers (Debtor Revenue).

Summary of the AME Data Set

We now have a complete ecosystem for the tutorial:

- 6 Debtors & 6 Creditors
- Detailed Stock Items (Physical & Service)
- The Procurement Cycle (Orders & Purchases)
- The Sales Cycle (Quotes & Invoices)

INVOICE LOGIC AUDIT

es, you have a solid list of **8 Sales Invoices** here.

This is an excellent data set for the **Accounting Made Easy (AME)** tutorial because it creates exactly the right amount of "complexity" for a sole proprietor to manage without being overwhelming. You have a clean split: **4 Invoices in March** and **4 Invoices in April**.

Here is a quick audit of what you've included to ensure it covers all the necessary tutorial lessons:

1. Invoice Logic Audit

- **Sequential Document Flow:** You have IN000001 through IN000008 (IDs 6-9 and 14-17).
- **Conversion Lessons:** IN000001 and IN000005 correctly reference the Quotes (QU000001 and QU000002), which is perfect for teaching "Document Conversion."
- **Repeat Customers:** You have multiple invoices for **Mr. AB Green** (March) and **Mr. Mike Davies** (March & April). This allows the student to see a customer's history building up in the **Debtor Ledger**.
- **High-Value Transactions:** IN000006 for **Mr. Roger Smith** (R3,450) provides a good contrast to the smaller R1,150 invoices.

2. The "Missing" Pieces (To watch out for)

While you have the invoices, for the tutorial to be "Complete," the student will need to see how these impact the **Age Analysis** and **Bank Statement**. To finish the "Story," you might want to consider:

- **The Unpaid Invoice:** Since all these invoices have a Due amount equal to the Amount Incl, they are all currently **unpaid**.
- **Tutorial Tip:** In the next phase (The Bank Journal), we should have **Mr. AB Green** pay IN000001 so the student can see the Due amount drop to zero.
- **The "Cash Customer":** You defined a **1CASHC** debtor earlier but haven't invoiced them yet. Including one cash sale would be a great way to show a "Pay Now" scenario vs. the "30-Day Credit" scenario used for the other 4 debtors.

3. VAT Check (SARS Compliance)

The math is spot on for the South African **15% VAT rate**:

- R1,000 Excl → **R150 Tax** → R1,150 Incl
- R1,500 Excl → **R225 Tax** → R1,725 Incl

- R2,000 Excl → **R300 Tax** → R2,300 Incl
- R3,000 Excl → **R450 Tax** → R3,450 Incl

Created with the Standard Edition of HelpNDoc: [Streamline Your Documentation Creation with a Help Authoring Tool](#)

Opening Balance Analysis

Opening Balance Analysis

These Opening Balances (Journal JNL1) serve as the "Big Bang" for the tutorial. They establish the financial state of the business on the day before your 2024 transactions begin.

In a modern simplified workflow, we explain this to the sole proprietor as "Clearing the Suspense." Notice that every line uses the Contra Account G999000 (Suspense/Take-on Account). Once this journal is processed, that account should hit zero, meaning the books are balanced.

1. Opening Balance Analysis

Using the 4–SOUTH–AFRICA–GENERIC structure, here is how these values shape the business:

Account Code	SDESCRIPTION	Amount	Category
G505000 / G510000	Retained Income / Capital	-15,700.00	Equity: The owner's investment and past profit.
G750000	Inventory (Trading Stock)	6,500.00	Asset: The value of the Drills and Compressors on hand.
B810000 / B820000	Bank / Petty Cash	3,293.00	Liquidity: Actual cash available to start.
D1DOPEN	Debtor Opening Control	1,800.00	Receivable: Money owed by customers (Green, Davies, etc.).
C2COPEN	Creditor Opening Control	-1,000.00	Payable: Money owed to suppliers (A-ONE, BEST).
T860010	VAT Control	-100.00	Liability: A small balance owed to SARS from the previous period.

2. The "Sub-Ledger" Connection

A critical lesson for the tutorial is the link between the General Ledger and the Sub-Ledgers:

- Debtors: The R1,800.00 in D1DOPEN must match the sum of the individual opening balances you will capture for your 6 Debtors.
- Creditors: The -R1,000.00 in C2COPEN must match the sum of the balances for your 6 Creditors.
- Why it matters: If these don't match, the "Total Debtors" on the Balance Sheet won't reflect the "Total" on the Age Analysis—a common error we teach the user to avoid.

3. Modernizing the Terminology

For the sole proprietor, we move away from "Debit/Credit" confusion and focus on the Sign Logic:

- Positive Values (+): Things the business owns (Cash, Stock, Money owed to us).
- Negative Values (-): Things the business owes (Loans, VAT, Equity, Money owed to suppliers).

4. Addressing the 2026 Reporting Standards

By using the 128-character description "Opening balance – Take-on", you are ensuring that when the user looks back at their Income Statement or Trial Balance in 2026, the origin of these funds is crystal clear.

Tutorial Practical Step:

1. Capture the Journal: Enter all lines as shown above.
2. Post/Update: Process the batch.
3. Verify: Run a Trial Balance for 2024/02/29.
 - Success Criteria: Total Debits = Total Credits, and G999000 has a balance of zero.

5. Next Step: Bank Transactions?

Now that the business has a "History" (Opening Balances), and we've already defined the Invoices and Purchases, we can move to the most common daily task for a sole proprietor.

Created with the Standard Edition of HelpNDoc: [Revolutionize your documentation process with HelpNDoc's online capabilities](#)

Debtor Opening Balances

Debtor Opening Balances

This Debtor Opening Balance Journal (JNL2) is a brilliant teaching tool for the "Modern AME Tutorial." It demonstrates the vital difference between a Balance and an Aging Profile.

By splitting the balances into December, January, and February, you are setting up the perfect scenario to show students how the Age Analysis report works.

1. The "Contra" Logic: Clearing the Control Account

In your previous General Ledger journal (JNL1), you posted R1,800.00 to the account D1DOPEN.

- JNL2 now takes that R1,800.00 and distributes it to specific people (Mike Davies and Roger Smith).
- Notice that the Contra Account for all these lines is D1DOPEN.
- Once this batch is updated, the D1DOPEN account will hit zero. This proves that every cent of the opening balance has been correctly assigned to a specific customer.

2. Aging Analysis Breakdown

This data is designed to show "Overdue" accounts immediately upon starting the tutorial:

Debtor	Dec 2023 (120	Jan 2024 (90 Days)	Feb 2024 (60 Days)	Total Opening
--------	---------------	--------------------	--------------------	---------------

	Days+)			
Mr. Mike Davies	R100.00	R200.00	R500.00	R800.00
Mr. Roger Smith	R200.00	R200.00	R600.00	R1,000.00
Total	R300.00	R400.00	R1,100.00	R1,800.00

3. Tutorial Lesson: The Importance of Dates

A common mistake for new users is entering all opening balances with the current date. By using 2023/12/31, etc., you are teaching:

1. Historical Integrity: The software "knows" exactly how old the debt is.
2. Interest Calculations: If the user later decides to charge interest on overdue accounts, the system has the correct starting point.
3. Statement Accuracy: When Mike Davies receives his first statement in March 2024, he will see his debt clearly categorized by month.

4. Modernizing the Workflow (Metadata)

In the tutorial, we highlight that even though this is a "Batch," the SDESCRIPTION is used for the audit trail:

- Instead of a generic "Opening Bal," you've used "Debtor opening balances – Feb 2024".
- This makes the Customer Detailed Ledger report look professional and easy to read for the sole proprietor's clients.

Created with the Standard Edition of HelpNDoc: [Easy Qt Help documentation editor](#)

Creditor Opening Balances

Creditor Opening Balances

This Creditor Opening Balance Journal (JNL3) completes the "Take-on" phase of your modernized tutorial. Just like the Debtors, this journal moves the bulk balance from the General Ledger and distributes it into the individual aging buckets for your suppliers.

By the end of this exercise, the C2COPEN account will be zero, and the business will have a clear picture of exactly how much is owed, to whom, and for how long.

1. The Financial Distribution

This journal accounts for the -R1,000.00 total opening liability we established in JNL1:

Creditor	Dec 2023	Jan 2024	Feb 2024	Total Balance
A-ONE Suppliers	-R100.00	-R200.00	-R300.00	-R600.00
BEST Suppliers	-R100.00	-R100.00	-R200.00	-R400.00
TOTAL	-R200.00	-R300.00	-R500.00	-R1,000.00

2. Why "Negative" Amounts?

In the 4-SOUTH-AFRICA-GENERIC system (and standard accounting logic), we use the minus sign to denote a Credit balance. For a sole proprietor, we simplify the lesson as follows:

- Assets (Debtors): Positive because they add value to you.

- Liabilities (Creditors): Negative because they represent a "claim" against your assets.

3. The Aging Lesson: "Payables Management"

Using multiple dates (Dec, Jan, Feb) allows the student to see how the Creditor Age Analysis report functions.

- In the tutorial, we can show the user that A-ONE Suppliers is currently their biggest liability.
- This sets up a perfect scenario for the Bank Journal exercise, where we can teach the student to pay the oldest debts first (the December R100.00) to maintain a good credit rating with their suppliers.

4. Modernizing the Audit Trail

By using the SDESCRIPTION field with specific months (e.g., "Creditor opening balances -Jan 2024"), you are teaching the user to provide context for their future self.

Tutorial Tip: In two years, when the user looks at a detailed ledger, they won't have to guess why a balance exists; the description tells the story of the business's migration into the software.

5. Phase 1 Complete: The "Clean" Ledger

We have reached a major milestone in the AME Tutorial. The setup is finished:

1. Masters (Accounts, Stock, Debtors, Creditors) are created.
2. General Ledger is balanced (G999000 is zero).
3. Sub-Ledgers are matched (D1DOPEN and C2COPEN are zero).
4. Aging is populated with historical data.

The business is now officially "Live" and ready for March 2024 transactions.

Stock Take-on

Stock Take-on

This Stock Take-on sheet is the final bridge between your physical warehouse and your financial ledger. It confirms that the R6,500.00 we posted to the G750000 (Inventory) account in your General Ledger Opening Journal (JNL1) is physically sitting on the shelves as 4 Compressors and 5 Drill Presses.

In the modernized tutorial, we use this to teach the concept of Perpetual Inventory—where every item has a quantity, a cost, and a total value.

1. Stock Valuation Breakdown

This data establishes the "Starting Point" for your average cost calculations:

Stock Code	Description	Qty on Hand	Unit Cost	Total Value
3Comp	Compressor	4	R1,000.00	R4,000.00
3Drill	Drill Press	5	R500.00	R2,500.00
TOTAL		9 Items		R6,500.00

2. Integration with the General Ledger

The core lesson here for the sole proprietor is the "Financial Mirror":

- The Stock Master: Shows the physical reality (9 items in the back room).
- The General Ledger: Shows the financial reality (R6,500.00 on the Balance Sheet).
- Modern Success: In the tutorial, we show that if the user sells 1 Compressor, the system will automatically move R1,000.00 from the Stock Account to the Cost of Sales account, keeping the "Mirror" perfectly aligned without manual work.

3. Preparing for "Reorder" Lessons

Because you provided the quantities (4 and 5), we can now trigger the Reorder Alerts we set up in the Stock Master files:

- You set the Reorder Trigger for Compressors at 4.
- Since we only have 4 on hand, the tutorial can immediately show the student the "Items to Order" report, demonstrating how the software helps manage procurement.

4. Modernizing the Audit Trail

We will teach the student to save this "Handyman Hardware Store" list as their Take-on Certificate. In the 2026 version of the software:

- We record these quantities in a Stock Journal.
- The Reference for this journal will be "TAKE-ON 2024".
- This ensures that if there is an audit, the user can prove exactly where the initial R6,500.00 asset came from.

5. The Tutorial Foundations are 100% Complete!

You have successfully provided every single component needed for a comprehensive, professional accounting tutorial:

- Entities: 6 Debtors, 6 Creditors.
- Items: Physical Stock and Services.
- History: Dec 2023, Jan 2024, and Feb 2024 Aging.
- Balance: A zeroed-out Suspense account and matched Sub-ledgers.
- Documents: Quotes, Orders, Invoices, and Purchases.

We are now ready to "Open the Doors" for March 2024.

Created with the Standard Edition of HelpNDoc: [Elevate Your Help Documentation with a Help Authoring Tool](#)

Journal transactions

Journal transactions

Created with the Standard Edition of HelpNDoc: [From Word to ePub or Kindle eBook: A Comprehensive Guide](#)

Direct Purchase journal transactions

Direct Purchase journal transactions

This Purchase Journal serves a very specific purpose in the AME tutorial: it demonstrates how to handle non-stock overheads and services that don't require the formal "Order -> Purchase" document cycle.

Unlike the invoices we generated from Quotes and Orders earlier, these are "quick" entries for expenses like vehicle maintenance and office installations.

1. Direct Journal vs. Document Cycle

In the tutorial, we explain to the sole proprietor that they have two ways to record a purchase:

- The Document Way (Inventory): Used for trading stock (like Compressors) to track quantities and reorder levels.
- The Journal Way (Direct Expense): Used for services or one-off costs where you only care about the financial impact on the Ledger and the Creditor's balance.

2. Transaction Analysis & Ledger Mapping

These entries showcase how to split a single invoice into different expense categories using Contra Accounts:

Reference	Creditor	Description	Amount	Contra Account (Expense)
PU001	ABC-Service-Centre	Service - Delivery van	-400.00	G210020 (Vehicle Maint.)
PU001	ABC-Service-Centre	5x New tyres & Fitting	-600.00	G210030 (Repairs & Maint.)
PU002	ABC-Office-Supplies	Install - Cupboards	-1,500.00	G600010 (Furniture/Fittings)

3. The "Exclusive" Flag and VAT

Notice you have set BEXCLUSIVE to 1. This is a critical lesson for the student:

- The Logic: The amount entered (e.g., R1,500.00) is the price before tax.
- The System Impact: Because T860020 (Standard Rate 15%) is selected, the software will automatically add R225.00 to the total.
- The Creditor Balance: The student will see that while they typed R1,500.00, they actually owe ABC-Office-Supplies R1,725.00.

4. Modernizing the Audit Trail

By using descriptive text like "5x New tyres - Fitting and balancing", you are teaching the user to move away from vague entries like "repairs." In the 2026 version of the software, this description follows the transaction through to the Creditor Statement and the General Ledger, making it easy for the owner to see exactly where their money went during a year-end review.

5. Integrating with the "Master" Data

These journals connect perfectly with the master files we defined at the start:

- C2ABCSC: Uses the terms and contact info for the Service Centre.
- G210020/30: These fall under Operating Expenses in the 4-SOUTH-AFRICA-GENERIC chart of accounts.
- G600010: This updates Fixed Assets (Furniture), showing the student that journals can affect both the Income Statement and the Balance Sheet simultaneously.

Progress Update

We have now covered:

1. Opening Balances (The Setup).
2. Document Cycles (Quotes, Orders, Invoices).
3. Manual Journals (Purchases/Expenses).

Should we now proceed to th

Created with the Standard Edition of HelpNDoc: [Free EPub producer](#)

Direct Sales journal transactions

Direct Sales journal transactions

This Sales Journal provides the manual counterpart to the formal invoicing cycle. In your tutorial, this is a vital lesson: it shows the sole proprietor how to record "quick sales" or service-based revenue that doesn't require a full document layout or inventory tracking.

By using these entries, we can demonstrate how the software handles direct charges to a Debtor while correctly updating the General Ledger.

1. Transaction Logic: Direct Revenue

These entries focus on Service Revenue (Paint and Installation) rather than the sale of physical stock like the Compressors we saw earlier.

Reference	Debtor	Description	Amount (Excl)	Contra Account
INV001	Mr. AB Green	Paint – Exterior	R1,000.00	G010000 (Sales)
INV002	MAC Shop Decor	Install – Cupboard	R1,500.00	G010000 (Sales)
INV003	Mr. AB Green	Paint – Exterior	R1,000.00	G010000 (Sales)
INV004	Mr. Mike Davies	Install – Cupboard	R1,500.00	G010000 (Sales)

2. Key Accounting Lessons for the User

- The "Exclusive" Calculation: Since BEXCLUSIVE is set to 1, the user learns that the software does the heavy lifting. For INV001, the student enters R1,000.00, but the D1ABGRE account balance will increase by R1,150.00 because the system automatically calculates the 15% VAT (T860010).
- Account Mapping: All these entries flow into G010000 (Sales/Revenue). This shows the user how multiple transactions from different people all gather in one place on the Income Statement.
- Journal vs. Document: We can teach the student that while a "Tax Invoice" document is better for

physical goods, the Sales Journal is the "fast lane" for recording billable hours or services rendered on-site.

3. Data Integrity & 2026 Standards

Using specific descriptions like "Install – Built-in cupboard" instead of just "Sales" ensures that when the user runs a Detailed Ledger Report, they can see exactly what services were most popular in March 2024.

- Reference Management: Notice the use of INV001 to INV004. We will teach the student that while these are "Journal" entries, they should still follow a logical sequence to make bank reconciliation easier.
- Tax Compliance: By selecting T860010, these manual sales will appear perfectly on the VAT 201 Report for SARS, just like the formal invoices did.

4. Current Progress of the Tutorial Data

The AME tutorial now has a robust set of "Current Month" transactions:

1. Opening Balances (The financial foundation).
2. Purchase Documents (Getting stock/services from creditors).
3. Purchase Journals (Recording manual expenses).
4. Sales Documents (Formal invoicing to debtors).
5. Sales Journals (Manual service revenue).

Created with the Standard Edition of HelpNDoc: [Effortlessly Support Your Windows Applications with HelpNDoc's CHM Generation](#)

Bank transactions

Bank transactions

Receipts CASH Inflow

This Receipts Journal is a vital chapter in the Accounting Made Easy (AME) manual. It moves the tutorial from the "Invoicing" phase to the "Cash Flow" phase, showing how the bank balance actually increases.

By selecting the Manual Bank Reconciliation method in the System Parameters, you are teaching the user the fundamental mechanics of how a transaction flows from the bank statement into the ledger.

1. Analysis of Cash Inflow

These three entries demonstrate the two main ways money enters a small business: Capital Investment and Debtor Settlements.

Reference	Account	Description	Amount	Logic
D5000	G505000	Cash received from owner	-R5,000.00	Equity: Increasing the owner's stake in the business.
D5001	D1ABGRE	Payment received	-R2,000.00	Asset Reduction: Clearing Mr. AB Green's outstanding debt.
D5001	D1MACDS	Payment received	-R1,000.00	Asset Reduction: Clearing MAC Shop

				Decor's balance.
--	--	--	--	------------------

2. The "Mirror" Effect: Contra Accounts

In a manual Receipts Journal, the Contra Account is the "Hero."

- Every line in this journal uses B81 0000 (Bank Account) as the contra.
- This tells the software: "While I am recording a credit to Equity or Debtors, please mirror that with a Debit (increase) to my Bank Account."
- In the tutorial, we show the student that their bank balance (which started at R3,193.00 in the opening balances) has now grown by R8,000.00.

3. The "Thank You" Note: Debtor Logic

Notice your SDESCRIPTION for the debtors: "Payment received – Thank you".

- This is a great 2026 practice. Since these descriptions often appear on the Customer Statement, it maintains a professional and friendly relationship with the client.
- Aging Impact: In the manual, we will show the student how to "allocate" these receipts. For example, Mr. AB Green's R2,000.00 will be used to pay off his older March invoices, bringing his "Due" amount down and cleaning up the Age Analysis report.

4. Modernizing the Tax Logic

For these receipts, the STAX is set to T (0% / Exempt).

- The Lesson: We teach the student that VAT was already handled when the Invoice was created. If we charged VAT on the Receipt as well, we would be paying SARS twice!
- This reinforces the concept of Accrual Accounting, which is a cornerstone of the AME methodology.

5. Progress of the AME Tutorial Data

We now have a beautifully balanced "Story" for the student:

1. The Setup: Opening balances and stock take-on.
2. The Sale: Manual and Document-based invoices.
3. The Collection: Using the Receipts Journal to bring the money into the bank.

Payments CASH Outflow

This Payments Journal is the final piece of the operational puzzle for the Handyman Hardware Store tutorial. It demonstrates how to record the actual outflow of cash from the bank account to cover assets, expenses, and creditor settlements.

By keeping the Payments and Receipts in separate journals, the student learns a disciplined approach to bank reconciliation that mirrors the layout of a physical bank statement.

1. Breakdown of Cash Outflows

This journal covers a wide range of common business scenarios, providing a rich learning experience for the user:

Ref	Account	Description	Category	Impact
105/6	G600010	Desk & Chairs	Fixed Assets	Increases the value of Furniture on the Balance Sheet.
107	G220000	Rent – April	Operating Exp.	Pre-payment/Expense recorded on the Income Statement.
108	C2ABCOS	ABC–Office–Supplies	Creditor Payment	Reduces the amount owed to this supplier.
109	G210010	Petrol	Operating Exp.	Fuel expense (Note: Zero-rated/Exempt in SA).
111	B820000	Petty Cash Float	Transfer	Moves money from Bank to Petty Cash (No change in Total Assets).

2. Key Tutorial Lessons

The Zero–Rated/Exempt Factor

Notice Reference 109 (Petrol). The STAX is set to T (Exempt/Zero).

Tutorial Tip: This is a perfect time to explain to the student that while most things have 15% VAT, specific items like fuel are handled differently under South African tax law. The software handles this seamlessly by not claiming Input VAT on this line.

Creditor Settlement

For Reference 108, you are paying ABC–Office–Supplies.

- The Logic: This is a "Payment on account."
- The Integration: We show the student how this R750.00 payment will now appear on the Creditor Age Analysis, reducing the outstanding balance we saw in the earlier Purchase Journal (PU002).

Asset Acquisition

By purchasing the Desk and Chairs (105/106), the student sees that "spending money" doesn't always mean "losing money."

- The bank balance goes down, but the Fixed Assets go up. The business's Net Worth remains the same, just in a different form.

3. Data Integrity & VAT

Because BEXCLUSIVE is set to 1, the software will calculate the VAT on top of these amounts (where applicable):

- Rent (R500 + 15%): The bank will show a total hit of R575.00.
- Stationery (R200 + 15%): The bank will show a total hit of R230.00.
- This teaches the user that their bank statement will always show the Inclusive amount, even if they think in Exclusive terms for their budget.

4. The Tutorial is Now Data-Complete

You have provided a masterful set of data that covers every standard accounting event:

1. Opening: GL, Debtors, Creditors, and Stock.
2. Documents: Quotes, Orders, Invoices, and Purchases.
3. Journals: Manual Sales, Manual Purchases.
4. Bank: Receipts (Inflow) and Payments (Outflow).

5. The "Grand Finale": Financial Reporting

With this Payments Journal processed, the "Handyman Hardware Store" is ready for its first month-end.

Would you like me to summarize what the final Trial Balance or Income Statement will look like based on all this data? This would be the perfect "Conclusion" for the AME Manual, showing the student how all these entries finally turn into a professional set of Financial Statements.

Created with the Standard Edition of HelpNDoc: [Make Your PDFs More Secure with Encryption and Password Protection](#)

Bank reconciliation

Bank reconciliation

In the **Accounting Made Easy (AME)** methodology, the manual bank reconciliation is the "moment of truth." Even though you have meticulously entered the Receipts and Payments journals, those transactions only exist in your **General Ledger**—they haven't been verified against the **Bank's** reality yet.

Here is why this step is critical for the Handyman Hardware Store:

1. The "Safety Net" for Data Entry

Manual entry is prone to human error. The reconciliation process allows the user to catch:

- **Transposition Errors:** Typing **R570** instead of **R750** for the ABC-Office-Supplies payment.
- **Omissions:** Realizing the bank charged **R15.00 in service fees** or **R2.00 in interest** that wasn't in your manual journals.
- **Duplications:** Accidentally entering the owner's capital injection twice.

2. Timing Differences (The "Float")

In your tutorial data, you have a payment for **Rent (Ref 107)** dated March 30th.

- If you pay via EFT on a Friday evening, it might not leave your bank account until Monday, April 2nd.
- **The Reconciliation Lesson:** The manual reconciliation shows the student that while the business *considers* the money gone, the bank hasn't moved it yet. This "Outstanding Payment" is a core accounting concept.

3. The 3-Way Match Logic

The manual reconciliation teaches the sole proprietor to look for three-way agreement:

1. **The Source Document:** The physical invoice or receipt.
2. **The Ledger:** Your entry in the Receipts/Payments journal.
3. **The Bank Statement:** The official record from the financial institution.

4. Modernizing the Workflow for 2026

While we will cover the **Bank-Import plugin** later, doing it manually first is essential because it builds the student's "Accounting Muscle Memory."

The Process in the Tutorial:

1. **Marking Off:** The student opens the reconciliation screen and "ticks" each transaction that appears on the printed bank statement.
2. **The Unmatched Items:** Anything left "unticked" is an outstanding cheque or an un-cleared deposit.
3. **The Zero Balance:** The "Difference" field in the software must reach **0.00**. This gives the sole proprietor the confidence that their **Trial Balance** is 100% accurate.

5. What's Next?

Once the reconciliation is finished and the difference is zero, the books are "closed" for the month. This is the perfect time to generate the **Financial Reports**.

Created with the Standard Edition of HelpNDoc: [Free EPub producer](#)

Petty Cash Journal

Petty Cash Journal

This Petty Cash Journal completes the "Cash Management" triad for the Handyman Hardware Store (Bank Receipts, Bank Payments, and Petty Cash).

In the AME tutorial, this is a critical lesson on Imprest Systems and small-value control. It teaches the sole proprietor that even though these amounts are small (R10.00 or R40.00), they still require the same tax and ledger discipline as a R5,000 transaction.

1. Petty Cash Transaction Analysis

These two entries demonstrate how the small cash box handles daily "emergencies" or minor supplies:

Ref	Account	Description	Amount (Excl)	Contra Account
PCV001	G230000	Waltons – Paper	R40.00	B820000 (Petty Cash)
PCV002	G210020	Fix puncture	R10.00	B820000 (Petty Cash)

2. Key Accounting Lessons

The Tax Split (Input VAT)

For PCV001, you' ve used T860020 (15%).

- The Lesson: We show the student that even a small till slip from Waltons allows the business to claim back VAT.
- Calculation: On a R40.00 exclusive purchase, the Petty Cash box actually drops by R46.00 (R40 + R6 VAT). This teaches the user to always record the exclusive amount if they want the software to track the tax correctly.

Zero-Rated Repairs

For PCV002 (Fixing a puncture), the STAX is set to T.

- The Context: This is often the case with small "informal" or roadside service stations that aren't VAT-registered.
- The Lesson: It teaches the user to look at their receipt—if there is no VAT number on the slip, they cannot claim the 15%, and they must use the Exempt/Zero tax code.

3. The "Full Circle" with the Bank

Remember in your Payments Journal (Ref 111), you processed a payment of R100.00 to "Increase Petty Cash Float."

- Opening Balance: R100.00 (from JNL1).
- Top-up: R100.00 (from the Bank).
- Total Available: R200.00.
- Spending: R46.00 (Waltons) + R10.00 (Puncture) = R56.00.
- Closing Balance: R144.00.

In the tutorial, we show the student how to count the actual cash in their desk drawer and compare it to the B820000 ledger balance. If it matches, their petty cash is "reconciled."

4. Modernizing the Audit Trail

By using PCV001 (Petty Cash Voucher 1), you are teaching the user to move away from loose slips of paper. We instruct the user to:

1. Staple the Waltons slip to a numbered voucher.
 2. Enter that number as the **SREFERENCE**.
 3. File them in sequence.
- This creates a "bulletproof" audit trail that will make any tax inspector or accountant very happy in 2026.

5. Ready for the Month-End Reports?

You have now provided a complete set of transactional data. We have:

- Assets & Liabilities (Opening Balances).
- Stock (Take-on quantities).
- Revenue (Invoices & Sales Journals).
- Expenses (Purchase Journals & Petty Cash).
- Cash Flow (Receipts & Payments).

Would you like

Calendar / Planner

Calendar / Planner

To make the **2026-AME-Tutorial** practical for a Handyman or small service business, we should populate the calendar with events that demonstrate the specific features of the software—especially the link between time-tracking and invoicing.

Here is a proposed schedule of events for the tutorial year, using your 10 categories and the specific logic of the AME Set of Books.

☐☐ *Proposed Tutorial Events (2026)*

1. Appointments (General)

- **February 10, 2026 (09:00):** Appointment with Bank Manager (Discussing business loan for new equipment).
- **Monthly (First Monday):** Monthly Business Review and Filing (Recurrence: Monthly by day).

2. Repeating Invoices

- **March 1, 2026:** Monthly Maintenance Contract for "ABC Apartments" (Copy/Process repeating invoice for fixed monthly fee).
- **Monthly (25th of each month):** Generate monthly hosting/support invoices for regular clients.

3. Debtors Appointment & Hours

- **April 14, 2026 (08:00 - 12:00):** Debtor Appointment (Category: On-site Repair).
 - *Tutorial Task:* Create the appointment, then use the **Hours** feature to log 4 hours. Generate a **Quote**, then convert it to an **Invoice** upon completion.
- **Weekly (Fridays):** "Catch-up hours" for various small debtors.

4. Tasks (Administrative)

- **Monthly (Last Day): Perform Bank Reconciliation** (Crucial step to ensure G6500200 Bank charges match).
- **Quarterly (15th):** Print Debtor Statements and follow up on overdue accounts.
- **Bi-Monthly:** Print Creditor Remittance Advices for material suppliers.

5. Bulk Time Entry

- **May 18-22, 2026:** Large project for "Main Street Mall."

- *Tutorial Task:* Use **Bulk time entry** to slot in 6 hours per day. Select the salesperson (Handyman), the debtor (Mall account), and the stock item (Labour - Hourly). Batch process the invoices at the end of the week.

▣ **Tutorial Integration Tip**

For the **2026-AME-Tutorial**, we can set a **Reminder System** for the "Bank Reconciliation" task to trigger 2 days before the month-end. This teaches the student the importance of the software's proactive "Reminder System" in managing their accounting workflow.

Created with the Standard Edition of HelpNDoc: [Make your documentation accessible on any device with HelpNDoc](#)

Charts of Accounts Updates in Repositories

Charts of Accounts Updates in Repositories

Summary – Chart of Accounts (COA) updates

Based on the repository data provided, here is a summary of the Chart of Accounts (COA) updates. The transition focuses on moving away from legacy 35-character limits toward modern, compliant structures with 128-character limits for descriptions and BATYPES.

1. Global & Multi-Language Environments

A significant focus has been placed on testing environments and Unicode support for various regions.

- **RTL (Right-To-Left) Development:** New dedicated environments for Arabic (MSA) and a Multi-Language Demo for stress-testing layouts in RTL countries.
- **Multi-Language Demo:** Supports 18 languages (English, Afrikaans, Chinese, European languages, etc.) to validate Unicode and interface rendering across LTR and RTL formats.
- **Chinese (CN):** New generic set for Chinese Accounting Standards (CAS) with specific character limits for BATTYPE (16) and compliance mapping for Mainland China, Taiwan, and Singapore.

2. Regional Compliance Status & Actions

The tables indicate a massive cleanup of "Non-Compliant" legacy books in favor of new structures compliant with IFRS, US GAAP, or local standards (e.g., OHADA).

High-Priority Changes (Delete vs. New)

Region	Action: DELETE (Legacy)	Action: NEW / FIXED (Compliant)	Key Improvements
South Africa	AF-SUID-AFRIKA, EN-SOUTHAFRICA	4-AF-SUID-AFRIKA-GENERIC, 4-EN-SOUTH-AFRICA-LIMITED-COMPANY	IFRS compliance; 128-char descriptions.
USA	EN-US-GENERIC, EN-	5-EN-USA-GENERIC-	US GAAP; Dual tax

	USA, EN-US-CALIFORNIA	LLC, 5-EN-USA-CALIFORNIA-LLC	(State/County) support.
Canada	EN-CANADA-CORPORATION	4-EN-CANADA-QUEBEC-SOLE-PROPRIETOR	ASPE compliance; GST/HST/QST tax logic.
UK	EN-UK	4-EN-UK-GENERIC, 4-EN-UK-SOLE-PROPRIETOR	IFRS; Standard VAT Scheme support.
Spanish (ES)	3-EQUATORIAL-GUINEA	10+ New sets (Chile, Argentina, Spain PGC, etc.)	NIIF PYMES (IFRS for SMEs) compliance.
French (FR)	15+ sets (Ivory Coast, Benin, Mali, etc.)	3-FR-[Country Name]	OHADA compliance; Fixed special characters.

3. General Legacy Cleanup (Pending Transition)

The following regions are identified as having "Legacy Account Structures" and need to be rebuilt to the 4-EN-GENERIC standard:

- Africa: Botswana, Lesotho, Malawi, Mauritius, Namibia, Rwanda, Tanzania, Uganda, Zambia, Zimbabwe.
- Oceania/Asia: Australia, New Zealand, Bangladesh, Tonga.
- Americas: Barbados, Belize, Trinidad & Tobago.
- Industry Sets: Legacy sets for Church, Farming, Manufacturing, Medical, and Retail are currently marked as non-compliant and scheduled for updates.

4. Technical Fixes & Tutorials

- Character Rendering: Major fixes applied to Dutch (NL) and French (FR) files to resolve SQL Error-303 and incorrect rendering of special characters (e.g., è, €, é, Privé).
- Tutorials & Advanced Books:
 - HANDYMAN and HANDY-BANK sets (AF/EN) updated for 2024/2025.
 - Advanced "Customise Empty Books" (3x3 to 8x3 digits) have been reviewed and fixed.
- PHP Configuration: Cleanup of getbooks.php to ensure correct sequencing and removal of duplicate or broken download links (e.g., ISLAND-BASIS and VANUATU errors).

5. Summary Table: Character Limit Standards

To ensure future compliance, all new repositories follow these mechanical constraints:

Standard Type	Desc. Limit	BATTYPE Limit	Note
Legacy/Non-Compliant	35 chars	16 chars	Targeted for deletion/replacement.
Modern/Compliant	128 chars	128 chars	Standard for IFRS/GAAP/OHADA sets.

Tutorials (Hybrid)

128 chars

16 chars

Updated for 2024/25
descriptions only.

Detailed – Chart of Accounts (COA) updates

This is a reconciliation existing Sets of Books in the repositories. Some Sets of Books needs to be retained and others deleted. The legacy accounts are kept in the repository and would eventually be replaced with new Charts of Accounts compliant to the specific countries accounting structures, specific accounting standards and legislation. I updated the 'getbooks.php' file to be paced on the osfinancials site. This php file will structure the Sets of Books on the Download option on the 'Let osFinancials help you to create a Set of Books' option in both osFinancials and TurboCASH. Can we summarize these tables?

Roadmap osFinancials/TurboCASH5 Accounting Made Easy Tutorials

ACCOUNTING MADE EASY Tutorials – Transformation: Legacy vs. New IFRS Roadmap

That legacy 2024 Handyman Chart of Accounts is a great "relic" to look at, but it highlights exactly why your new 4-EN-UK-SOLE-PROPRIETOR-IFRS-FOR-SME's roadmap is so necessary. While it technically supported 128 characters, the terminology and structure were a mix of outdated bookkeeping and localized South African VAT (15%).

By comparing this legacy list to your new IFRS-aligned roadmap, we can clearly see the "Professional Evolution" you are providing to the user.

The Transformation: Legacy vs. New IFRS Roadmap

Legacy Account (2024)	New UK/ZA-IFRS Standard	Why it's Better
Debtors control	Trade debtors control	IFRS requires the distinction of "Trade" receivables.
Creditors control	Trade creditors control	Consistent with Trade Debtors for Balance Sheet reporting.
Stock control	Inventory control	Aligned with IFRS Section 13 terminology.
Sales	Revenue / Sales	"Revenue" is the official IFRS term for the top line.
Retained income	Retained earnings	"Earnings" is the standard IFRS/UK term for accumulated profit.
VAT – Payment	VAT Control / Clearing	More accurate for the netting of Input and Output tax.

Critical Improvements in your New Roadmap

1. Sub-Account Consistency

In the legacy list, you have Motor vehicles @ cost and Motor vehicles –Accum. depreciation.

- The New Way: Your IFRS roadmap likely uses parent-child relationships more effectively. Instead of a flat list, the user sees a "Motor Vehicles" folder that expands to show the Cost and Accumulated Depreciation, making the Net Book Value (NBV) easier to see at a glance.

2. Solving the "POS Transfer" Confusion

Accounts like G735000 POS – Transfer were very specific to a certain plugin setup.

- The New Way: For a basic tutorial, we can hide these specialized clearing accounts. A sole proprietor usually only needs a Bank account and Petty cash. We can introduce "Payment Gateways" or "POS Clearings" as an advanced sub-topic.

3. Terminology Alignment (The .dfm Factor)

The biggest clash in the legacy setup was using en-English.dfm.

- Legacy: The UI said "Batches", but the account said "Bank".
- New: With your en-UK-IFRS.dfm, the UI says "Journals", the account says "Bank", and the

report says "Cash and Cash Equivalents" (per IFRS). Everything matches the user's mental model.

Strategy for the "Handyman" Tutorial

To make the transition from the legacy setup to your new IFRS roadmap easy for micro-businesses, we should map the "Handyman Essentials" from your legacy list into the new structure:

1. Keep it focused: Start with the G010000 (Sales), G100000 (COS), and G200000-range (Expenses).
2. Modernize the VAT: Swap the 15% (SA) for the 20% (UK) or 15% (SA) IFRS equivalent, but keep the "Input/Output" logic.
3. The "Note for Growth": For accounts like G520000 Installment agreements (Long-term liabilities), we should hide them in the basic tutorial. Most micro-businesses start with cash or short-term credit; we can "Enable" liabilities when they buy their first big asset.

By replacing this legacy COA with the IFRS roadmap, you aren't just changing names—you are giving the user an upgrade from a "Basic Ledger" to a "Financial Reporting System."

Welcome to the 2026 Handyman Accounting Tutorials

Welcome to the 2026 Handyman Accounting Tutorials Professional Standards for osFinancials & TurboCASH Users

Welcome to the modernized 2026-HANDYMAN learning path. This tutorial is cross-compatible with osFinancials and TurboCASH. It has been re-engineered to align with IFRS for SMEs and the latest SARS requirements, providing the structural integrity required for modern financial management.

The 2026 Modernization Roadmap

The 2026 roadmap utilizes the new en-SouthAfrica-IFRS.dfm language file. This shift moves away from generic terms and adopts Academic-Standard Terminology aligned with university curricula and international accounting bodies.

- IFRS Alignment: Transitioning to the 4-EN-SOUTH-AFRICA-GENERIC structure with -100 increment logic.
- Academic Terminology: Ledgers and reports are mapped to match terms used by students and professional bodies (e.g., Revenue instead of Sales, Finance Costs instead of Interest Paid).
- Global Readiness: Full support for Unicode, RTL (Right-To-Left), and mirrored reporting layouts.
- Finance Restructuring: Logical reordering of Finance Income (G7000) and Finance Costs (G7200) to follow standard reporting flows.

Legacy Support: 2024 Tutorials

For existing users or students requiring the previous documentation, the Legacy 2024 Tutorials are fully retained. These utilize the original en-UK language files and traditional naming conventions (Batch, Debtors, Creditors, Stock).

Accessing Legacy Sets of Books

Download these via the 'Let osFinancials or TurboCASH Help you to create a Set of Books' option.

- GitHub Documentation: [Legacy Publications \(*.odt format\)](#)

- Legacy Databases: [Firebird Databases \(TUTORIALS-AME\)](#)

Installed Local Tutorials (Legacy)

Located in your installation directory under ...\\bin\\Tutorials\\:

Getting Started with 2026

Select your entity type below to load the specific IFRS Class 3 (Equity) and Taxation profiles. By moving to the 2026 roadmap, you ensure your business data is future-proof and aligned with both South African law and international professional standards.

Note to Students: The 2026-HANDYMAN tutorial uses the same terminology you will encounter in your exams and professional certifications, making it the ideal practical laboratory for your studies.

Comprehensive South African IFRS & SARS Mapping

Created with the Standard Edition of HelpNDoc: [Transform your help documentation into a stunning website](#)

CLASS 1: ASSETS (Comprehensive South African IFRS & SARS Mapping)

CLASS 1: ASSETS (Comprehensive South African IFRS & SARS Mapping)

You're absolutely right—that description is the "connective tissue" that helps a new user understand why an account exists, especially when they are transitioning from a legacy setup to a professional IFRS roadmap.

Here is the completed CLASS 1: ASSETS table with all accounts, the -100 increment for sub-accounts, the SARS Tax Sections, and the Brief Description for every entry.

CLASS 1: ASSETS (South African IFRS & SARS Comprehensive Roadmap)

SACCOUNT CODE	SDESCRIPTI ON	SGROUP1	SGROUP2	SME Section	Tax Section (SARS)	Brief description of use
B1000-000	PETTY CASH	CURRENT ASSETS	CASH AND EQUIVALENT S	Section 7	Gross Income (Sec 1)	On-site physical cash for minor daily business expenses.
B1010-000	CURRENT BANK ACCOUNT	CURRENT ASSETS	CASH AND EQUIVALENT S	Section 7	Gross Income (Sec 1)	Main operational bank account

						for electronic receipts/payments.
G1100-000	TRADE AND OTHER RECEIVABLES	CURRENT ASSETS	CURRENT ASSETS	Section 11	Gross Income (Sec 1)	Main Header: Total amount owed to the business by customers.
G1110-100	Provision for doubtful debts	CURRENT ASSETS	CURRENT ASSETS	Section 11	Sec 11(j) Allowance	Estimated value of trade debts that may not be recoverable.
G1200-000	STOCK	CURRENT ASSETS	CURRENT ASSETS	Section 13	Sec 22 Trading Stock	Main Header: Value of physical goods held for sale in trade.
G1200-100	Finished goods for resale	CURRENT ASSETS	CURRENT ASSETS	Section 13	Sec 22 Trading Stock	Inventory items ready for immediate sale to customers.
G1200-200	Goods in transit	CURRENT ASSETS	CURRENT ASSETS	Section 13	Sec 22 Trading Stock	Stock purchased and paid for but not yet physically received.
G1200-300	Inv. provision for obsolescence	CURRENT ASSETS	CURRENT ASSETS	Section 13	Sec 22 (Market Value)	Write-down of stock that is damaged, old, or unsellable.
G1200-900	Other inventory items	CURRENT ASSETS	CURRENT ASSETS	Section 13	Sec 22 Trading Stock	Consumables or minor stock items not categorized elsewhere.
G1300-000	ACCRUED REVENUE	CURRENT ASSETS	CURRENT ASSETS	Section 11	Gross Income (Sec 1)	Main Header: Income earned but not yet invoiced to the client.

						accounts managed by financial institutions.
G1400-900	Other current financial assets	CURRENT ASSETS	CURRENT ASSETS	Section 11	Gross Income (Sec 1)	Minor financial instruments or short-term loans to others.
G1450-000	POS OPERATIONS / CLEARING	CURRENT ASSETS	OTHER RECEIVABLES	Section 4	Gross Income (Sec 1)	Main Header: Netting bucket for daily Point of Sale transactions.
G1450-100	POS Till / Cash Drawer	CURRENT ASSETS	OTHER RECEIVABLES	Section 4	Gross Income (Sec 1)	Physical cash/checks held at the counter during a shift.
G1450-200	POS Payments / Card Clearing	CURRENT ASSETS	OTHER RECEIVABLES	Section 4	Gross Income (Sec 1)	Credit/Debit card slips awaiting bank settlement.
G1450-300	POS Transfer	CURRENT ASSETS	OTHER RECEIVABLES	Section 11	Gross Income (Sec 1)	Bridge account used to move retail takings into the Bank account.
G1510-000	FURNITURE & FITTINGS	NON-CURRENT ASSETS	PP&E	Section 17	Sec 11(e) Allowance	Main Header: Fixed assets like desks, chairs, and office units.
G1510-100	Furniture & Fittings at cost	NON-CURRENT ASSETS	PP&E	Section 17	Sec 11(e)	The original purchase price of furniture items.
G1510-200	Accum. depr - Furn & Fit	NON-CURRENT ASSETS	PP&E	Section 17	Sec 11(e)	Total accounting depreciation claimed to date on furniture.
G1530-000	COMPUTER EQUIPMENT	NON-CURRENT ASSETS	PP&E	Section 17	Sec 11(e) (3-year)	Main Header: All IT hardware, servers, and laptop assets.
G1530-100	Computer equipment at cost	NON-CURRENT ASSETS	PP&E	Section 17	Sec 11(e)	The original purchase price of computer

						hardware.
G1530-200	Accum. depr – Computers	NON-CURRENT ASSETS	PP&E	Section 17	Sec 11(e)	Total accounting depreciation claimed to date on computers.
G1540-000	VEHICLES	NON-CURRENT ASSETS	PP&E	Section 17	Sec 11(e) (5-year)	Main Header: Motor assets like cars, bakkies, or delivery vans.
G1540-100	Vehicles at cost	NON-CURRENT ASSETS	PP&E	Section 17	Sec 11(e)	The original purchase price of company-owned vehicles.
G1540-200	Accum. depr – Vehicles	NON-CURRENT ASSETS	PP&E	Section 17	Sec 11(e)	Total accounting depreciation claimed to date on vehicles.
G1600-000	LAND AND BUILDINGS	NON-CURRENT ASSETS	PP&E	Section 17	Sec 13 / 13quin	Main Header: Property and immovable structures for trade.
G1600-100	Land and Buildings at cost	NON-CURRENT ASSETS	PP&E	Section 17	Capital Nature	Purchase price of land and the physical building structure.
G1600-200	Land and Build. – Improvements	NON-CURRENT ASSETS	PP&E	Section 17	Sec 13quin (5%)	Capital additions to the property (e.g., extensions or upgrades).
G1700-000	SECURITY DEPOSITS	NON-CURRENT ASSETS	NON-CURRENT ASSETS	Section 11	Capital Nature	Main Header: Deposits paid to third parties held for terms > 1 yr.
G1700-100	Rent deposit – Premises	NON-CURRENT ASSETS	NON-CURRENT ASSETS	Section 11	Capital Nature	Cash held by a landlord to be returned at the end of a lease.
G1700-200	Utility deposits – Municipal	NON-CURRENT ASSETS	NON-CURRENT ASSETS	Section 11	Capital Nature	Deposits paid for electricity or water connections.

G1850-000	COMPUTER SOFTWARE	NON-CURRENT ASSETS	INTANGIBLE ASSETS	Section 18	Sec 11(gC)	Main Header: Software licenses and digital systems (not hardware).
G1850-100	Accounting and ERP software	NON-CURRENT ASSETS	INTANGIBLE ASSETS	Section 18	Sec 11(gC)	Costs of software systems like osFinancials or TurboCASH.
G1850-900	Accum. amortisation - Soft	NON-CURRENT ASSETS	INTANGIBLE ASSETS	Section 18	Sec 11(gC)	Total systematic write-down of software value over its life.
G1900-000	GOODWILL	NON-CURRENT ASSETS	INTANGIBLE ASSETS	Section 19	Prohibited (Non-deduct)	Main Header: Excess paid for a business over its fair asset value.

Strategic Review for the South African Repository

- Fixed Asset Mapping: By providing both Section 17 (Accounting) and Section 11(e) (Tax), you allow the user to manage their balance sheet for the bank while being ready for a SARS audit.
- Inventory Detail: Including Goods in Transit (G1200-200) is a professional touch—it's a common issue where a handyman pays for supplies in June (year-end) that don't arrive until July.
- POS Clarity: The G1450-000 section is now perfectly sandwiched between liquid investments and physical assets, providing a dedicated "folder" for retail operations.

Does this

South African Implementation Highlights

- Sec 23H (Prepayments): This is a critical SARS reference for South African businesses. If a handyman prepays insurance for 12 months, SARS might limit the deduction if the benefit period exceeds 6 months or R100k.
- Sec 11(gC) (Software): SARS specifically allows for the write-off of software costs over several years, which aligns well with the IFRS Section 18 amortization.
- Sec 13quin (Buildings): This is the specific allowance for commercial buildings in South Africa (currently 5% per annum).
- Goodwill (Sec 11/Prohibited): Unlike accounting amortization, SARS generally does not allow a deduction for Goodwill amortization, creating a common "Tax/Accounting" difference for South African SMEs.

Applicability of Goodwill (G1900-000) Depends on the legal entity and how the business was formed

The applicability of Goodwill (G1900-000) changes significantly depending on the legal entity and how the business was formed. Under IFRS for SMEs (Section 19), Goodwill only exists when it is purchased as part of a business combination.

Here is how it applies to the other ownership structures in your roadmap:

1. Companies (Pty Ltd / Ltd)

- **APPLIES:** Companies frequently acquire other businesses. If "Company A" buys "Company B" for more than the value of its net assets, the difference is recorded as Goodwill.
- **IFRS Rule:** It must be amortized over its useful life (usually 10 years if not determinable).
- **SARS (South Africa):** Still non-deductible for tax purposes, creating a permanent difference between accounting profit and taxable income.

2. Partnerships

- **APPLIES (Conditional):** If a new partner "buys into" an existing partnership and pays a premium for

the established reputation, or if the partnership buys another practice, Goodwill can be recognized.

- UK/SA Context: Common in professional practices (Lawyers, Doctors). However, many modern partnerships prefer to keep Goodwill "off-balance sheet" to simplify the exit of partners.

3. NGO / NPO (Non-Profit Organizations)

- DOES NOT APPLY: NGOs do not have "owners" and do not seek to generate a market premium for acquisition.
- IFRS for SMEs/PBO Rules: Instead of "Business Combinations," NGOs deal with "Transfer of Functions." Any "excess" paid is usually treated as an expense or a capital contribution rather than an amortizable intangible asset like Goodwill.

Summary Table: To Retain or Delete?

Structure	Keep G1900 Range?	Reason
Sole Proprietor	DELETE	Legally impossible to "buy yourself" to create goodwill.
Partnership	RETAIN (Optional)	Use for "Goodwill on Admission" of new partners.
Company	RETAIN	Essential for recording business acquisitions/mergers.
NGO / NPO	DELETE	Not applicable; excess value is not a commercial asset.

Strategic Recommendation for your Repositories

For your "4-EN-UK-SOLE-PROPRIETOR" and Handyman repositories, removing the G1900 range is the correct choice to prevent user error.

However, for your "4-EN-SOUTH-AFRICA-GENERIC" (which likely targets Companies), you should keep the G1900 range but ensure the "Brief Description" warns:

"Only for use when the company has purchased another business. Internally generated brand value or reputation may NOT be recorded here."

CLASS 2: LIABILITIES (Full South African IFRS & SARS Roadmap)

CLASS 2: LIABILITIES (Full South African IFRS & SARS Roadmap)

To ensure the 4-EN-SOUTH-AFRICA-SOLE-PROPRIETOR (South African localization) repository is 100% complete, we need to include every specific sub-account from your list, the -100 increment system, and the "Catch-all" accounts (the -900 series) which are vital for IFRS compliance to handle miscellaneous items.

Here is the complete, expanded mapping for CLASS 2: LIABILITIES.

SACCOUNT CODE	SDESCRIPTION	SGROUP1	SGROUP2	SME Section	Tax Section (SARS)	Brief description of use
B2000-000	BANK OVERDRAFT	CURRENT LIABILITIES	Short-term borrowings	Section 11	Gross Income (Sec 1)	Credit facility used when the bank balance drops below zero.

B2010-000	CREDIT CARD – BUSINESS	CURRENT LIABILITIES	Short-term borrowings	Section 11	Gross Income (Sec 1)	Debt on business-specific cards for operational purchases.
G2100-000	ACCOUNTS PAYABLE	CURRENT LIABILITIES	Trade and other payables	Section 11	Sec 11(a) (Incurred)	Main Header: Control account for all trade supplier debt.
G2150-000	ACCRUED EXPENSES	CURRENT LIABILITIES	Trade and other payables	Section 11	Sec 23H / 11(a)	Main Header: Expenses incurred but not yet invoiced.
G2150-100	Accrued accounting and audit fees	CURRENT LIABILITIES	Trade and other payables	Section 11	Sec 11(a)	Estimated fees for professional services already rendered.
G2150-200	Accrued commissions	CURRENT LIABILITIES	Trade and other payables	Section 11	Sec 11(a)	Sales commissions earned by staff/agents but not yet paid.
G2150-300	Accrued electricity and water	CURRENT LIABILITIES	Trade and other payables	Section 11	Sec 11(a)	Monthly municipal utility costs consumed but unbilled.
G2150-400	Accrued interest expense	CURRENT LIABILITIES	Trade and other payables	Section 11	Sec 24J	Interest on debt that has accumulated since the last payment.
G2150-500	General expense accruals	CURRENT LIABILITIES	Trade and other payables	Section 11	Sec 11(a)	Provisions for standard recurring operational costs.
G2150-900	Other expense accruals	CURRENT LIABILITIES	Trade and other payables	Section 11	Sec 11(a)	Catch-all: Miscellaneous accruals not classified above.
G2200-000	DEFERRED REVENUE	CURRENT LIABILITIES	Other current liabilities	Section 23	Sec 24C	Main Header: Revenue received for future obligations.
G2200-100	Customer deposits and advances	CURRENT LIABILITIES	Other current liabilities	Section 23	Sec 24C Allowance	Money paid by clients before goods

						or services are delivered.
G2200-200	Gift vouchers and credit notes	CURRENT LIABILITIES	Other current liabilities	Section 23	Gross Income (Sec 1)	Liability for vouchers issued but not yet redeemed.
G2200-300	Unearned service income	CURRENT LIABILITIES	Other current liabilities	Section 23	Sec 24C	Income received for long-term contracts yet to be fulfilled.
G2200-900	Other contract liabilities	CURRENT LIABILITIES	Other current liabilities	Section 23	Sec 24C	Catch-all: Any other obligation to provide future services.
G2300-000	SALARIES AND WAGES CONTROL	CURRENT LIABILITIES	Payroll liabilities	Section 28	4th Schedule	Main Header: Clearing for all payroll-related obligations.
G2300-100	Employee Salaries Payable	CURRENT LIABILITIES	Payroll liabilities	Section 28	Sec 11(a)	Net pay due to employees at the end of the month.
G2300-200	PAYE Income Tax Payable	CURRENT LIABILITIES	Payroll liabilities	Section 28	4th Schedule	Income tax withheld from staff to be paid to SARS.
G2300-300	UIF (Unemployment Insurance Fund)	CURRENT LIABILITIES	Payroll liabilities	Section 28	UIF Act	Monthly contributions for unemployment insurance.
G2300-400	Pension Contributions Payable	CURRENT LIABILITIES	Payroll liabilities	Section 28	Sec 11(a)	Deductions for retirement funds awaiting payment to fund.
G2300-500	Medical Aid Contributions Payable	CURRENT LIABILITIES	Payroll liabilities	Section 28	Sec 11(a)	Deductions for medical insurance awaiting payment.
G2300-600	Insurance Premiums Payable	CURRENT LIABILITIES	Payroll liabilities	Section 28	Sec 11(a)	Group life or disability premiums withheld from salaries.
G2300-700	Employee Loans and Advances	CURRENT LIABILITIES	Payroll liabilities	Section 28	Sec 1(xi)	Recovery of loans made to staff members.
G2300-800	Other Payroll Deductions Payable	CURRENT LIABILITIES	Payroll liabilities	Section 28	Various	Union dues or garnishee orders to be

						paid to 3rd parties.
G2300-900	Other payroll clearing	CURRENT LIABILITIES	Payroll liabilities	Section 28	Sec 11(a)	Catch-all: Minor payroll adjustments or clearing items.
G2400-000	VAT CONTROL ACCOUNT	CURRENT LIABILITIES	Tax liabilities	Section 35	VAT Act 89 of 1991	Main Header: Central VAT ledger for SARS reconciliation.
T2400-010	Output VAT - Standard (15%)	CURRENT LIABILITIES	Tax liabilities	Section 35	VAT Act (Field 1)	VAT collected on standard sales.
T2400-150	Input VAT - Standard (15%)	CURRENT LIABILITIES	Tax liabilities	Section 35	VAT Act (Field 15)	VAT claimable on standard purchases.
G2400-500	VAT PAYABLE	CURRENT LIABILITIES	Tax liabilities	Section 35	VAT Act	The final amount due to or refundable from SARS.
G2450-000	SUSPENSE AND CLEARING	CURRENT LIABILITIES	Other current liabilities	Section 2	N/A	Main Header: Temporary holding for unmatched entries.
G2450-100	General suspense	CURRENT LIABILITIES	Other current liabilities	Section 2	N/A	Temporary account for transactions needing investigation.
G2450-200	Bank clearing account	CURRENT LIABILITIES	Other current liabilities	Section 11	N/A	Bridge for bank imports before allocation to ledger.
G2450-900	Other clearing and reconciliation	CURRENT LIABILITIES	Other current liabilities	Section 11	N/A	Catch-all: Miscellaneous internal clearing accounts.
G2600-000	SHORT-TERM BORROWINGS	CURRENT LIABILITIES	Short-term borrowings	Section 11	Gross Income (Sec 1)	Main Header: Debt obligations due within 1 year.
G2600-100	Bridging loans	CURRENT LIABILITIES	Short-term borrowings	Section 11	Gross Income (Sec 1)	Temporary loans to cover short-term cash flow gaps.
G2600-200	Short-term bank loans	CURRENT LIABILITIES	Short-term borrowings	Section 11	Gross Income (Sec 1)	Formal bank loans with a repayment

						term under 12 months.
G2600-300	Factoring / Invoice discounting	CURRENT LIABILITIES	Short-term borrowings	Section 11	Sec 11(a)	Loans secured against the business's unpaid invoices.
G2600-900	Other short-term loans	CURRENT LIABILITIES	Short-term borrowings	Section 11	Gross Income (Sec 1)	Catch-all: Miscellaneous short-term debt.
G2700-000	CURR. PORTION OF L-T DEBT	CURRENT LIABILITIES	Short-term borrowings	Section 11	Capital Nature	Main Header: Long-term debt installments due within 1 year.
G2700-100	Current portion of mortgage	CURRENT LIABILITIES	Short-term borrowings	Section 11	Capital Nature	Repayments on property bonds due in the next 12 months.
G2700-900	Other current debt obligations	CURRENT LIABILITIES	Short-term borrowings	Section 11	Capital Nature	Catch-all: Next 12 months of any other long-term loans.
G2800-000	LONG-TERM BORROWINGS	NON-CURRENT LIABILITIES	Long-term borrowings	Section 11	Capital Nature	Main Header: Debt obligations due after 1 year.
G2800-100	Mortgage bond - Premises	NON-CURRENT LIABILITIES	Long-term borrowings	Section 11	Capital Nature	Long-term loan for business property.
G2800-200	Instalment sale agreements	NON-CURRENT LIABILITIES	Long-term borrowings	Section 11	Sec 11(e) / 12C	Finance for vehicles or equipment over several years.
G2800-900	Other long-term borrowings	NON-CURRENT LIABILITIES	Long-term borrowings	Section 11	Capital Nature	Catch-all: Any other long-term financial liabilities.

Strategic Technical Notes

- -100 Sub-account Logic: This is now consistently applied across all ranges. It allows for future expansion (e.g., adding G2150-110 for a specific auditor) without breaking the numerical flow.
- The "Catch-all" (-900) Importance: In IFRS, the -900 accounts are essential to ensure the Balance Sheet always balances. If a transaction doesn't fit the specific -100 or -200 slots, it goes to -900 so it can be reclassified during the year-end audit.

- VAT Field T-Codes: I have used the T2400 prefix for VAT transaction accounts to distinguish them from standard General Ledger accounts, as they require specific links to the osFinancials VAT module.

VAT Accounts structure and alignment with VAT201 Return

To align perfectly with your repository's new standards, I have formatted the full VAT ledger using the -100 increment for consistency and mapped every account to its specific SARS VAT201 Field.

In South Africa, VAT is governed by VAT Act 89 of 1991. Under IFRS for SMEs Section 35, these accounts are treated as current liabilities (or assets if a refund is due) because the business acts as an agent for the state.

CLASS 2: LIABILITIES – VAT SECTION (South African Roadmap)

SACCOUNT CODE	SDESCRIPTION	SGROUP1	SGROUP2	SME Section	Tax Section (SARS)	Brief description of use
G2400-000	VAT-CONTROL ACCOUNT	CURRENT LIABILITIES	Tax liabilities	Section 35	VAT Act Sec 7	Main Header: Total net VAT obligation to SARS.
T2400-010	Output VAT - Standard (15%)	CURRENT LIABILITIES	Tax liabilities	Section 35	Field 1	VAT collected on local standard-rated sales.
T2400-015	Output VAT - Capital Goods	CURRENT LIABILITIES	Tax liabilities	Section 35	Field 1A	VAT on sale of business assets (e.g., selling a bakkie).
T2400-020	Output VAT - Zero Rate	CURRENT LIABILITIES	Tax liabilities	Section 35	Field 2	Local sales at 0% (e.g., basic foodstuffs).
T2400-025	Output VAT - Export Goods	CURRENT LIABILITIES	Tax liabilities	Section 35	Field 2A	Sales to foreign customers exported from SA.
T2400-030	VAT - Exempt & Non Supplies	CURRENT LIABILITIES	Tax liabilities	Section 35	Field 3	Sales not subject to VAT (e.g., residential rent).
T2400-050	VAT - Accommodation	CURRENT LIABILITIES	Tax liabilities	Section 35	Field 5	VAT on commercial lodging (special 60% rule).
T2400-100	VAT - Change in Use / 2nd Hand	CURRENT LIABILITIES	Tax liabilities	Section 35	Field 10	Adjustments for private use or 2nd hand

						goods.
T2400-120	VAT – Other Imported Services	CURRENT LIABILITIES	Tax liabilities	Section 35	Field 12	VAT due on services imported from outside SA.
T2400-140	Input VAT – Capital Goods	CURRENT LIABILITIES	Tax liabilities	Section 35	Field 14	VAT claimed on purchase of local fixed assets.
T2400-145	Input VAT – Capital (Imported)	CURRENT LIABILITIES	Tax liabilities	Section 35	Field 14A	VAT paid at customs on imported fixed assets.
T2400-150	Input VAT – Standard (15%)	CURRENT LIABILITIES	Tax liabilities	Section 35	Field 15	VAT claimed on standard operational expenses.
T2400-155	Input VAT – Standard (Imported)	CURRENT LIABILITIES	Tax liabilities	Section 35	Field 15A	VAT paid at customs on imported trading stock.
T2400-160	VAT – Change in Use (Imported)	CURRENT LIABILITIES	Tax liabilities	Section 35	Field 16	Adjustments for imported goods changed to private use.
T2400-170	VAT – Adjustments Bad Debts	CURRENT LIABILITIES	Tax liabilities	Section 35	Field 17	VAT recovered on unpaid sales (Bad Debt Write-off).
T2400-180	VAT – Adjustments (Other)	CURRENT LIABILITIES	Tax liabilities	Section 35	Field 18	Miscellaneous input tax adjustments.
G2400-500	VAT PAYABLE	CURRENT LIABILITIES	Tax liabilities	Section 35	VAT Act	The final net amount due to (or from) SARS.

Technical Implementation Notes

- Prefix 'T': Using T2400 instead of G2400 for these sub-accounts is a strategic move for osFinancials/TurboCASH. It allows the internal VAT Engine to distinguish between a standard General Ledger entry and a specific VAT-category entry required for the XML export to eFiling.
- Field 5 (Accommodation): Note for the South African roadmap: this field is used when a business provides commercial accommodation for more than 28 days, where VAT is only charged on 60% of the value.
- Field 17 (Bad Debts): This is vital for Sole Proprietors. If a customer doesn't pay, this account allows the user to claim back the Output VAT they previously paid to SARS, helping cash flow.

Diesel Refund Scheme

For a Sole Proprietor in South Africa (such as a commercial farmer or specialized contractor), the Diesel Refund Scheme is a significant cash-flow tool. As of April 1, 2026, there have been major updates to the

recovery rates and reporting requirements.

The scheme is governed by the Customs and Excise Act but is administered through the VAT system.

1. How the Refund Works (The 2026 Rules)

The refund is a rebate on the Fuel Levy and the Road Accident Fund (RAF) Levy. Since these levies are intended to fund road infrastructure, businesses using diesel for "off-road" primary production are entitled to get that money back.

Feature	Details (Effective April 2026)
New Refund Rate	Qualifying on-land users (Farming, Forestry, Mining) can now claim 100% of eligible diesel (increased from the previous 80% limit).
Eligibility	You must be a VAT Vendor and specifically registered for the Diesel Refund Scheme via SARS eFiling (Form DA185).
Qualifying Activities	Primary production in Agriculture, Mining, Forestry, Fishing, and recently, certain Foodstuff Manufacturing and Power Generation (Generators).
The "Dry Basis" Rule	You must be the one who purchased and used the diesel. You cannot claim for diesel used by a contractor if they bought the fuel themselves.

2. Reporting on the VAT201 Return

The refund is not a separate payment from SARS; it is "offset" against your VAT liability. If you owe VAT, the refund reduces the payment. If you are in a refund position, SARS adds the diesel rebate to your VAT refund.

VAT201 Form Alignment:

- Field 14 / 15: You still claim the standard 15% Input VAT on the diesel purchase here as a normal business expense.
- Diesel Refund Side: The diesel rebate (the Levies) is calculated separately and entered into the specialized Diesel Refund section of the VAT201.
- Calculation: Litres used for qualifying activity x Rebate Rate (c/litre) = Total Refund.

Note: The new 100% rate reflects on returns submitted from May 2026 onwards (covering the April period).

3. Critical Record-Keeping (The Audit Trail)

SARS is extremely strict with diesel audits. If your records are incomplete, they will reverse the entire claim with interest and penalties.

- Usage Logbooks: You must track diesel per machine. A "Handyman" or farmer must record:
 - The specific machine/generator ID.
 - Date and quantity of diesel dispensed.
 - Hour meter or Odometer readings (Opening and Closing).
- Storage Records: If you have a bulk tank, you must keep a logbook showing every delivery received and every litre pumped out.
- Invoices: You must have valid Tax Invoices in the name of the business showing the number of litres purchased.
- Retention: All records (Logbooks and Invoices) must be kept for 5 years.

4. Recommended Account Structure (CLASS 2: LIABILITIES)

To track this in your 4-EN-SOUTH-AFRICA repository, I recommend adding a specific clearing account under Tax Liabilities to ensure the diesel refund doesn't get "lost" in general VAT.

SACCOUNTCODE	DESCRIPTION	SGROUP1	SGROUP2	SME Section	Brief description of use
G2410-000	DIESEL REBATE CONTROL	CURRENT LIABILITIES	Tax liabilities	Section 35	Main Header: For tracking diesel levy refunds due from SARS.
G2410-100	Accrued Diesel Refund	CURRENT LIABILITIES	Tax liabilities	Section 35	Estimated refund amount based on monthly logbooks.
G2410-200	Diesel Refund Received	CURRENT LIABILITIES	Tax liabilities	Section 35	Actual refund offset against the VAT201 payment.

Customs vs. Excise Duties

Customs vs. Excise Duties

Customs and Excise in South Africa are governed by the Customs and Excise Act No. 91 of 1964. While VAT is a broad-based tax on consumption, Customs and Excise are specific "transactional" taxes focused on the movement of goods across borders and the production of specific high-volume or "sin" goods within South Africa.

1. How it Works: Customs vs. Excise

Category	Primary Focus	Key Mechanism
Customs Duty	Imported Goods	Protects local industries. It is a percentage of the value of goods imported from outside the SACU (Southern African Customs Union).
Excise Duty	Specific Goods	Applied to "sin" goods (alcohol, tobacco), luxury items, and fuel (petrol/diesel). It is usually a specific amount per volume (e.g., R/litre).
Ad Valorem	Luxury Goods	A specific type of excise on "high-value" items like perfumes, electronics, and luxury motor vehicles.

2. Required SARS Returns

Unlike VAT, which uses the VAT201, Customs and Excise often require specialized forms and registration on the SARS Customs eAccount.

- DA55 (Customs Declarations): Used for every import/export shipment. This is usually handled electronically via EDI (Electronic Data Interchange) by a clearing agent or the business itself.
- DA260 (Excise Accounts): These are monthly or quarterly returns for manufacturers of excisable goods (e.g., a craft brewery or a tobacco producer).
- DA159 / DA160: Used for Ad Valorem products (luxury goods).
- DA185: The master registration form for all Customs and Excise clients (Importers, Exporters, and Manufacturers).

3. Necessary Accounts in the Chart of Accounts

For a professional roadmap, Customs and Excise should not be "lumped" into general purchases. They must be tracked separately because Customs Duty is a cost of sales (capitalized to stock), while VAT paid at customs is an Input Tax claim.

CLASS 1: ASSETS (For Customs Clearance)

SACCOUNTCODE	SDESCRIPTION	SGROUP1	SGROUP2	SME Section	Brief description
G1200-200	Goods in Transit	CURRENT ASSETS	STOCK	Section 13	Used to hold the value of imports while they are clearing customs.
G1450-400	SARS Customs Deferment	CURRENT ASSETS	OTHER RECEIVABLES	Section 11	For businesses with a deferment account (prepaid or credit) with SARS.

CLASS 2: LIABILITIES (For Excise Obligations)

SACCOUNTCODE	SDESCRIPTION	SGROUP1	SGROUP2	SME Section	Brief description
G2420-000	EXCISE DUTY PAYABLE	CURRENT LIABILITIES	TAX LIABILITIES	Section 35	Main Header: Total excise due to SARS on produced goods.
G2420-100	Excise Duty – Alcohol	CURRENT LIABILITIES	TAX LIABILITIES	Section 35	Specific liability for locally produced spirits/beer.
G2420-200	Excise Duty – Ad Valorem	CURRENT LIABILITIES	TAX LIABILITIES	Section 35	Duty on luxury items (e.g., electronics or cosmetics).
G2420-900	Other Excise Obligations	CURRENT LIABILITIES	TAX LIABILITIES	Section 35	Catch-all: Miscellaneous excise taxes.

CLASS 5: COST OF SALES (For Import Costs)

SACCOUNTCODE	SDESCRIPTION	SGROUP1	SGROUP2	SME Section	Brief description
G5100-200	Customs	COST OF	PURCHASES	Section 13	Non-refundable

	Duties Paid	SALES			duties paid to SARS (added to cost of stock).
G5100-300	Clearing & Forwarding	COST OF SALES	PURCHASES	Section 13	Fees paid to agents to facilitate the customs process.

4. Strategic Reporting Logic

1. Valuation: You must use the Transaction Value (the price actually paid) plus costs of insurance and freight (CIF) for your accounts.
2. VAT at Customs: Remember that the VAT on Imports is calculated on the (Value of Goods + 10% upliftment + Customs Duty). You record the Customs Duty in G5100-200 and the VAT in T2400-155 (Input VAT – Imported).
3. Deferment: If the business is large, they might use a "Deferment Account." This allows them to clear goods immediately and pay SARS once a month. In this case, the G2420 accounts act as a holding area for the month's accumulated duties.

Created with the Standard Edition of HelpNDoc: [Transform Your Help Documentation Process with a Help Authoring Tool](#)

CLASS 3: EQUITY (South African IFRS & SARS Roadmap)

CLASS 3: EQUITY (South African IFRS & SARS Roadmap)

For a Sole Proprietor in South Africa, CLASS 3: EQUITY is unique because the legal distinction between the owner and the business is non-existent. Under IFRS for SMEs Section 22, we focus on the net assets. From a SARS perspective, "Drawings" are not expenses; they are a distribution of already-taxed or taxable profit.

Here is your Equity roadmap, applying the -100 increment and specific South African tax logic.

SACCOUNT CODE	SDESCRIPTION	SGROUP1	SGROUP2	SME Section	Tax Section (SARS)	Brief description of use
G3000-000	OWNER'S CONTRIBUTIONS	EQUITY	Capital and contributions	Section 22	Capital Nature	Main Header: Total value invested by the owner into the business.
G3000-100	Cash and Bank contributions	EQUITY	Capital and contributions	Section 22	Capital Nature	Personal cash transferred into the business bank account.
G3000-200	Contributed assets at FMV	EQUITY	Capital and contributions	Section 22	Sec 11(e) / Para 20	Personal assets (e.g., a bakkie) brought into the business at market value.
G3000-300	Out-of-pocket expenses	EQUITY	Capital and contributions	Section 22	Sec 11(a)	Business costs paid

						directly by the owner using personal cash/cards.
G3200-000	OWNER'S DRAWINGS	EQUITY	Drawings	Section 22	Non-deductible	Main Header: Total value taken out of the business for personal use.
G3200-100	Cash and personal drawings	EQUITY	Drawings	Section 22	Non-deductible	Money taken from the business for personal living expenses.
G3200-200	Personal insurance & benefits	EQUITY	Drawings	Section 22	Sec 23(a)/(b)	Life insurance or medical aid paid by the business for the owner.
G3200-300	Home office & personal use adj.	EQUITY	Drawings	Section 22	Sec 23(b)/(g)	Adjusting for the personal portion of rent, phone, or vehicle costs.
G3500-000	RETAINED EARNINGS	EQUITY	Retained earnings	Section 6	Taxable Income	Main Header: Accumulated profit or loss from previous years.
G3600-000	PRIOR PERIOD ADJUSTMENTS	EQUITY	Retained earnings	Section 10	Sec 1 (Gross Income)	Adjustments to opening balances for errors found in previous years.

South African Technical & Tax Highlights

- Sec 23(a) & (b) – Private Expenses: SARS is strict that "private and domestic" expenses are not deductible. By using G3200-200, you ensure these costs don't accidentally end up in the Income Statement (Class 6/7), which would lead to an incorrect tax return (ITR12).
- Home Office Adjustments (G3200-300): If a handyman uses 10% of his home for work, he pays the full rent from the business. This account is used to "draw back" the 90% personal portion so only the 10% business portion is claimed as an expense.
- Capital Assets at FMV (G3000-200): When a Sole Proprietor introduces an old personal tool into the business, they record it here at Fair Market Value. SARS allows them to start claiming Section 11(e) wear-and-tear from that value.
- Drawings vs. Salary: In South Africa, a Sole Proprietor cannot "employ" themselves. They don't get a salary (no PAYE/UIF for the owner); they take Drawings. Their "pay" is simply the net profit the business makes.

Strategic Note on G3600-000 (Prior Period Adjustments)

Under IFRS for SMEs Section 10, if the user makes a significant error in 2025, they shouldn't just "hide" it

in 2026 expenses. They should use this account to fix the opening balance of Equity, ensuring the current year's performance isn't distorted.

CLASS 4: REVENUE (South African IFRS & SARS Roadmap)

CLASS 4: REVENUE (South African IFRS & SARS Roadmap)

For a Sole Proprietor in South Africa, CLASS 4: REVENUE is governed by IFRS for SMEs Section 23, which dictates that revenue should be measured at the fair value of the consideration received or receivable. From a SARS perspective, this constitutes Gross Income under Section 1 of the Income Tax Act.

Here is the full mapping, maintaining the -100 increment and including the "Catch-all" -900 accounts to ensure no transaction is left unclassified.

SACCOUNT CODE	SDESCRIPTION	SGROUP1	SGROUP2	SME Section	Tax Section (SARS)	Brief description of use
G4000-000	REVENUE – OPERATING SALES	OPERATING REVENUE	Revenue from contracts	Section 23	Gross Income (Sec 1)	Main Header: Primary income from the sale of physical goods.
G4000-100	Sales – Finished goods	OPERATING REVENUE	Revenue from contracts	Section 23	Gross Income (Sec 1)	Revenue from inventory sold to customers.
G4000-200	Sales – Delivery and freight	OPERATING REVENUE	Revenue from contracts	Section 23	Gross Income (Sec 1)	Charges to customers for transport and delivery services.
G4000-300	Sales returns and allowances	OPERATING REVENUE	Revenue from contracts	Section 23	Sec 11(i) / Sec 23	Contra-revenue account for credited stock or price adjustments.
G4000-400	Settlement discounts granted	OPERATING REVENUE	Revenue from contracts	Section 23	Sec 11(a)	Discounts given to customers for early payment of invoices.
G4000-900	Other product revenue	OPERATING REVENUE	Revenue from contracts	Section 23	Gross Income (Sec 1)	Catch-all: Miscellaneous product-related sales.
G4300-000	REVENUE – SERVICE INCOME	OPERATING REVENUE	Revenue from contracts	Section 23	Gross Income (Sec 1)	Main Header: Income generated from labor or expertise.
G4300-100	Professional service fees	OPERATING REVENUE	Revenue from contracts	Section 23	Gross Income (Sec 1)	Hourly or fixed-rate charges for

						specialized work.
G4300-200	Contract and project income	OPERATING REVENUE	Revenue from contracts	Section 23	Sec 24C / Gross Inc	Revenue from specific long-term jobs or fixed-price contracts.
G4300-300	Maintenance and support income	OPERATING REVENUE	Revenue from contracts	Section 23	Gross Income (Sec 1)	Recurring revenue for ongoing help-desk or upkeep services.
G4300-900	Other service revenue	OPERATING REVENUE	Revenue from contracts	Section 23	Gross Income (Sec 1)	Catch-all: Service income not categorized elsewhere.
G4500-000	REVENUE – OTHER DIRECT INCOME	OPERATING REVENUE	Revenue from contracts	Section 23	Gross Income (Sec 1)	Main Header: Non-core but regular operational income.
G4500-100	Equipment rental income	OPERATING REVENUE	Revenue from contracts	Section 23	Gross Income (Sec 1)	Fees earned from hiring out business tools or machinery.
G4500-200	Commission and referral income	OPERATING REVENUE	Revenue from contracts	Section 23	Gross Income (Sec 1)	Fees earned for referring clients or selling third-party goods.
G4500-900	Other direct income	OPERATING REVENUE	Revenue from contracts	Section 23	Gross Income (Sec 1)	Catch-all: Direct income items like scrap metal sales.
G4700-000	OTHER OPERATING INCOME	OPERATING REVENUE	Other operating income	Section 23	Gross Income (Sec 1)	Main Header: Incidental income not related to core trade.
G4700-100	Sundry income and recoveries	OPERATING REVENUE	Other operating income	Section 23	Gross Income (Sec 1)	Small, infrequent receipts like insurance claim payouts.
G4700-900	Miscellaneous operating income	OPERATING REVENUE	Other operating income	Section 23	Gross Income (Sec 1)	Catch-all: Any operating income not fitting other categories.

South African Implementation Highlights

- **Sec 24C (Future Expenditure):** For G4300–200 (Project Income), if the Sole Proprietor receives payment upfront for a project not yet completed, SARS generally taxes it immediately. However, the taxpayer can claim a Section 24C allowance to offset the anticipated future costs of fulfilling that contract.
- **Bad Debt Recoveries:** If a debt was previously written off and the customer later pays, that amount should be recorded under G4700–100 (Sundry Income). In South Africa, this recovery is specifically included in Gross Income.
- **VAT Linkage:** Revenue accounts are the primary source for Output VAT (Fields 1, 2, or 5) on the VAT201. The repository should ensure these accounts are linked to the T2400 codes we mapped earlier.
- **Settlement Discounts (G4000–400):** While IFRS prefers showing revenue net of discounts, keeping a separate ledger for discounts granted is essential for management reporting so the Handyman can see how much profit is being "given away" for early cash flow.

Strategic Conclusion

By separating Sales (Goods) from Service (Labor), you provide the Sole Proprietor with a clear Gross Profit Margin analysis. This is crucial for businesses like a Handyman, where material markups and labor rates need to be tracked independently to ensure the business is actually profitable.

CLASS 5: COST OF GOODS SOLD (South African IFRS & SARS Roadmap)

CLASS 5: COST OF GOODS SOLD (South African IFRS & SARS Roadmap)

For a Sole Proprietor in South Africa, CLASS 5: COST OF GOODS SOLD (COS) is essential for determining the Gross Profit of the business. Under IFRS for SMEs Section 13, the cost of inventories must include all costs of purchase and other costs incurred in bringing the inventories to their present location and condition.

From a SARS perspective, these are deductible business expenses under Section 11(a), provided they are incurred in the production of income.

SACCOUNT CODE	SDESCRIPTION	SGROUP1	SGROUP2	SME Section	Tax Section (SARS)	Brief description of use
G5000–000	COST OF SALES – RETAIL	COST OF GOODS SOLD	Direct materials and stock	Section 13	Sec 22	Main Header: Total direct cost of physical goods sold.

G5500-000	OTHER DIRECT COSTS	COST OF GOODS SOLD	Other direct costs	Section 13	Sec 11(a)	Main Header: Project-specific costs that aren't stock or labor.
G5500-100	Equipment rental for projects	COST OF GOODS SOLD	Other direct costs	Section 13	Sec 11(a)	Hiring specialized tools (e.g., scaffolding) for a specific job.
G5500-200	Consumables and small tools	COST OF GOODS SOLD	Other direct costs	Section 13	Sec 11(a)	Drill bits, sandpaper, or glue used up during a project.
G5500-900	Miscellaneous direct costs	COST OF GOODS SOLD	Other direct costs	Section 13	Sec 11(a)	Catch-all: Any other project-related "out-of-pocket" costs.

South African Implementation Highlights

- Sec 22 (Trading Stock): SARS requires that the value of opening and closing stock be taken into account. The accounts in the G5200 range ensure that the "Closing Stock" on the Balance Sheet is accurate, which directly affects the taxable profit.
- Internal Use (G5200-400): This is a critical audit point. If a Sole Proprietor (Handyman) takes stock for personal use at home, this should technically be a Drawing (Class 3). If used for the office, it moves from Stock to an Expense.
- Direct Labor (G5300): For the repository, it is vital to distinguish between Admin Salaries (Class 6/7) and Direct Labor (Class 5). This allows the user to see their "Gross Margin on Labor," which is the heart of a service business.

- Consumables (G5500–200): Unlike fixed assets (Class 1), these are items that are "used up" or have a very short lifespan. SARS allows these to be fully expensed in the year of purchase under Section 11(a).

Strategic Technical Note

By using the –100 increment, you allow a user to add specific suppliers or categories (e.g., G5000–110 Purchases – Timber) while keeping the main reporting groups intact.

South African Audit & Reporting Logic

- **Section 7B (Variable Remuneration):** Note that SARS allows leave pay (G6200-450) and bonuses (G6200-150) to be taxed only when they are actually paid, not when they are accrued.
- **COIDA (G6200-750):** Every South African business with even one employee must register with the Compensation Commissioner. This is an annual expense, often overlooked by small Sole Proprietors.
- **Section 23(b) (Prohibited Deductions):** Ensure the G6600 (Occupancy) accounts are only used for the business portion of a home office.
- **The -900 Utility:** In the 4-EN-SOUTH-AFRICA repository, the -900 accounts are "Safety Nets." If a user doesn't know where to put an expense, it goes there, and the accountant reallocates it at year-end.

South African Regulatory & Logic Notes

- **Section 23(b) - The Home Office Rule:** For Sole Proprietors, if they work from home, expenses like **Rent (G6600-100)** and **Utilities (G6600-400)** must be apportioned. Only the square-meter percentage used *exclusively* for business is deductible.
- **Traffic Fines (G6100-700):** It is vital to have this account. While they are a business "expense" in reality, SARS explicitly prohibits deducting fines because it is against "public policy" to subsidize illegal acts via tax breaks.
- **Employment Taxes (G6200):** These accounts feed directly into the **EMP201** monthly return. Separating Basic Salary from Allowances helps when calculating the correct **PAYE** and **UIF** brackets.
- **Section 23(n) - Entertainment:** SARS generally limits the deduction for entertainment to expenses incurred directly for the production of income. Purely social "staff parties" are usually non-deductible or taxable as fringe benefits.

CLASS 7: FINANCE & OTHER ITEMS (South African IFRS & SARS Roadmap)

CLASS 7: FINANCE & OTHER ITEMS (South African IFRS & SARS Roadmap)

In standard South African accounting practice and IFRS for SMEs Section 5 (Statement of Comprehensive Income), the sequence usually follows Operating Profit $\rightarrow$ Finance Income $\rightarrow$ Finance Costs.

Grouping Income before Costs is cleaner for reporting, as it allows you to calculate "Net Finance Income/Cost" logically. I have re-ordered your list to place Finance Income first, applied the -100 increment, and added the -900 Catch-all safety nets for each main category.

South African Technical & Tax Highlights

- **Section 24J (Interest):** SARS requires interest income and expense to be recognized on a "yield to maturity" basis. For a simple Sole Proprietor, this usually just means the interest reflected on the bank statement.
- **Section 10(1)(i) (Interest Exemption):** While interest income is listed in the business, a Sole Proprietor (as an individual) may qualify for the annual interest exemption (currently R23,800 if under 65) on their personal tax return (ITR12).
- **Section 24I (Forex):** In South Africa, G7500-200 (Unrealized Forex) is particularly important. Even if you haven't "spent" the money, SARS requires the year-end revaluation of foreign currency balances to be taxed (or deducted if a loss).
- **Disposal of Assets (G7600):** Selling a business vehicle involves two parts for SARS:
 1. Recoupment: Taxing the wear-and-tear previously claimed (Income).
 2. Capital Gain: Taxing the profit above the original cost (8th Schedule).

- Donations (G7700–200): To be deductible, the donation must be made to a registered Section 18A Public Benefit Organisation, and a valid certificate must be kept.

It absolutely makes more logical sense. In professional financial reporting, we follow the "top-down" flow of money: you list what the business earned (**Income**) before subtracting what it spent to manage that money (**Costs**).

Updated FINANCE INCOME AND FINANCE COST Account codes

This alignment is particularly important for the **UK Set of Books (4-EN-UK-IFRS)** to ensure cross-border consistency between your South African and British localizations.

Why this change is better for the UK Repository:

1. **Logical Sub-totals:** It allows for a clean "Net Finance Income/(Cost)" sub-total. If the UK business has high savings but low debt, the positive number appears first.
2. **HMRC/Companies Act Alignment:** While the UK's **FRS 102** (the UK version of IFRS for SMEs) is flexible on numbering, the presentation on the *Profit and Loss Account* always places "Other interest receivable and similar income" above "Interest payable and similar expenses."
3. **UI Consistency:** Since you are managing both repositories, having **G7000** always represent Income and **G7200** always represent Costs across both sets of books prevents "muscle memory" errors when you are doing data mapping or report layout design in Reportman.

Roadmap Strategy: The POS Section

Roadmap Strategy: The POS Section

The legacy **Point of Sale (POS)** module is indeed a core feature of the software and not an external plugin. Including those specific accounts (**POS Till**, **POS Transfer**, and **POS Payments**) in the roadmap is essential for maintaining the integrity of the standard feature set.

However, given the current stability status of the legacy POS in version **5.1.0.295**, your proposed strategy of adding a "Warning Note" is both practical and professional. It protects the user's live data while still providing a path for those who need a retail interface.

Instead of hiding these accounts, we should include them under a **"Retail Operations"** category and provide the following guidance in the tutorial:

In osFinancials/TutboCASH, in addition to the Cash sales account, the following accounts is required in Setup -> Point-of-Sales.

In osFinancials/TurboCASH, creating too many unique Account Groups can make the dropdown menus and the Trial Balance messy, especially for a "Handyman" or a small business owner.

"Other receivables" is more than okay—it is actually the ideal choice for this specific clearing header.

1. **IFRS Compliance:** Under IFRS for SMEs, money in a POS Till or a Card Clearing account is technically a "Short-term Receivable." It is value the business owns that hasn't yet been converted into "Banked Cash."
2. **Visual Cleanliness:** By using an existing group like "Other receivables," you avoid adding a new line to the Balance Sheet. The software will simply roll the G1450-000 balance into that group's total.
3. **Simplified Reporting:** For the user, it keeps the "Trade Debtors" (people who owe them money for invoices) separate from "Other receivables" (money moving through the shop).

Technical Mapping

By using "Other receivables" for both Group 1 and Group 2, you keep the reporting logic as lean as possible.

Account ID	Account Name	Account Group 1	Account Group 2
G1450-000	POS OPERATIONS / CLEARING	Other receivables	Other receivables
G1450-010	POS Till / Cash Drawer	Other receivables	Other receivables
G1450-020	POS Payments / Card Clearing	Other receivables	Other receivables
G1450-030	POS Transfer	Other receivables	Other receivables

The "Implementation Note" for New Users

Important Note on POS Features: The legacy Point of Sale module included in this version is a standard feature but is currently in a "Community Testing" phase for version 5.1.0.295.

- **For Testing:** If you wish to use the built-in POS, we strongly recommend configuring and testing it in a **Backup Set of Books** first to ensure it meets your specific hardware and workflow needs.
- **Professional Grade:** For users requiring a fully debugged, high-stability retail or hospitality environment, we recommend the **HORECAPOS** or **RetailPOS** professional plugins. These are optimized for high-volume environments and offer advanced features not found in the legacy module.

Roadmap Strategy: The POS Section

Instead of hiding these accounts, we should include them under a **"Retail Operations"** category and provide the following guidance in the tutorial:

In osFinancials/TurboCASH, in addition to the Cash sales account, the following accounts is required in Setup -> Point-of-Sales.

In osFinancials/TurboCASH, creating too many unique Account Groups can make the dropdown menus and the Trial Balance messy, especially for a "Handyman" or a small business owner.

"Other receivables" is more than okay—it is actually the ideal choice for this specific clearing header.

Why "Other receivables" is the Perfect Choice

1. **IFRS Compliance:** Under IFRS for SMEs, money in a POS Till or a Card Clearing account is technically a "Short-term Receivable." It is value the business owns that hasn't yet been converted into "Banked Cash."
2. **Visual Cleanliness:** By using an existing group like "Other receivables," you avoid adding a new line to the Balance Sheet. The software will simply roll the G1450-000 balance into that group's total.
3. **Simplified Reporting:** For the user, it keeps the "Trade Debtors" (people who owe them money for invoices) separate from "Other receivables" (money moving through the shop).

Refined Technical Mapping

By using "Other receivables" for both Group 1 and Group 2, you keep the reporting logic as lean as possible.

Account ID	Account Name	Account Group 1	Account Group 2
G1450-000	POS OPERATIONS / CLEARING	Other receivables	Other receivables
G1450-010	POS Till / Cash Drawer	Other receivables	Other receivables
G1450-020	POS Payments / Card Clearing	Other receivables	Other receivables
G1450-030	POS Transfer	Other receivables	Other receivables

IFRS for SME's Alignment (Quick Ref)

Section 4.2(k): "Trade and other receivables" are presented as current assets. By using this category, you are following the standard to a tee without over-complicating the UI for the end-user.

For your South African localization, the logic remains the same, but the legal framework refers to the Companies Act, 2008.

Business ownership Structures and Additional Tax accounts

Business ownership Structures and Additional Tax accounts

While the 4-EN-SOUTH-AFRICA-SOLE-PROPRIETOR repository is designed for the simplest business form, shifting to Partnerships, Companies, or NPOs changes the Class 3 (Equity) and Taxation logic significantly. In South Africa, these entities are governed by different sections of the Companies Act and the Income Tax Act.

Here is how the structure and the necessary accounts change for each ownership type.

1. Partnerships (Two or more individuals)

In a partnership, Equity is split into Capital and Current accounts for each partner.

- IFRS for SMEs Section 22: Equity is the residual interest.
- SARS Logic: Partners are taxed individually on their share of profits (similar to Sole Proprietors).

Additional Class 3 & 4 Accounts Required:

SACCOUNTCODE	SDESCRIPTION	SGROUP1	Brief description of use
G3000-100	Partner A – Capital Account	EQUITY	Permanent capital contribution by Partner A.
G3000-200	Partner B – Capital Account	EQUITY	Permanent capital contribution by Partner B.
G3100-100	Partner A – Current Account	EQUITY	Retained profits and drawings specific to Partner A.
G3100-200	Partner B – Current Account	EQUITY	Retained profits and drawings specific to Partner B.
G7000-300	Interest on Capital	FINANCE COST	Interest paid by the partnership to partners on their capital.

2. Private Companies (Pty Ltd)

A company is a separate legal entity. Equity consists of Share Capital and Retained Earnings.

- IFRS for SMEs Section 22/29: Focuses on share issue and Income Tax.
- SARS Logic: The company pays Corporate Income Tax (27%) and Dividends Tax (20%).

Additional Class 2 & 3 Accounts Required:

SACCOUNTCODE	SDESCRIPTION	SGROUP1	Brief description of use
G3000-000	Share Capital	EQUITY	Value of shares issued to shareholders.
G2430-000	Corporate Income Tax Payable	LIABILITIES	Current liability for CIT due to SARS (IT14 return).
G2440-000	Dividends Tax Payable	LIABILITIES	20% tax withheld from dividends paid to shareholders.
G2850-000	Directors' Loan Account	LIABILITIES	Money the company owes to directors (or vice-versa).

3. NGO / NPO (Non-Profit Organizations)

NPOs do not have "owners"; they have "members" or "trustees." Equity is replaced by Accumulated Funds.

- IFRS for SMEs Section 3: Special presentation for non-profit activities.
- SARS Logic: Often exempt from Income Tax if registered as a PBO (Public Benefit Organisation) under Section 10(1)(cN).

Additional Class 3 & 4 Accounts Required:

SACCOUNTCODE	SDESCRIPTION	SGROUP1	Brief description of use
G3500-000	Accumulated Funds	EQUITY	The "Retained Earnings" equivalent for an NPO.
G4800-100	Grant Income / Donations	REVENUE	Funding received from donors or government.
G4800-200	Membership Fees	REVENUE	Regular dues paid by members.
G6900-000	Project/Program Expenses	EXPENSES	Specific costs related to the NPO's charitable mission.

Summary of Necessary Tax Account Shifts

Entity Type	SARS Return	Key Tax Accounts Needed
Sole Prop	ITR12	VAT Control, Diesel Refund, Personal Drawings.
Partnership	ITR12 (per partner)	VAT Control, Partner Current Accounts.
Company	ITR14 / IT14SD	Corporate Tax Payable, Dividends Tax, Directors' Loans.
NGO/PBO	IT12EI (Exempt)	PBO Status Tracking, Restricted

vs Unrestricted Funds.

Strategic Recommendation for your Repositories

Since you are updating both the UK and SA sets of books:

1. Keep the Sole Proprietor as the "Base" template. It is the cleanest for small businesses.
2. Create "Extension" templates for Companies or NPOs. For the Company version, you would simply swap the G3200 (Drawings) range for G2850 (Directors Loans) and add the G2430 (Corporate Tax) ledger.

This "Modular" approach allows your software to adapt to the ownership structure by simply toggling a few Class 2 and Class 3 account visibility settings.
