Outdated Legacy Chart of Accounts - 2026 Roadmap

Outdated Legacy Chart of Accounts

The Legacy Chart of Accounts in all previous versions of TurboCASH5-4 Release Candidate 2 and earlier versions of TuboCASH.

Limitations of these Charts of Accounts

THese Sets of Books should not be used as a base to Create any Chart of Accounts templates:
Field lenghts
Accounts 35 characters
Groups 30 characters
Batch types 16 characters
Various other fields contains old shorter field lenghts
These shorter Field lenghts are overly abbreviated and Cause Dynamic SQL error -303 in your new template especially when Multi-byte language environments are used.
THese shorter filed lengths does not allow for modern accounting standards and framewotks For MSMES this will also not allow fro scalability to formal IFRS or other Accounting structures if your business grows.
It is also not aligned with modern formal accounting terminology used in academic circles for example Universities/colleges/schools and Accounting professionals

The following Legacy Sets of Books is located in the '.../Bin/Repository directory' that needs to be updated:

EN-INDUSTRIES
CHURCH
FARMING
MANUFACTURING
MEDICAL
PERSONAL
RESTAURANT
RETAIL
SCHOOL
SERVICE
WORKSHOP
AF-BEDRYWE
BOERDERY
DIENS
KERK
MEDIES
VERVAARDIGING
WERKSWINKEL

The 2026 Rebuild Blueprint: 4-Digit Main / 3-Digit Sub Layout

This analysis completely exposes the structural debt hidden in the old TurboCASH architecture. Looking at this legacy snippet, it is clear why the engine is choking.

You are dealing with a classic **data truncation and schema collision crisis**. The legacy templates are built on database schemas originally designed for single-byte character sets (like Latin-1). Trying to force modern, multi-byte Unicode strings (like UTF-8 for Arabic, Chinese, or specialized localization characters) into a 16-character or 35-character field will instantly trigger that **Dynamic SQL Error -303 (Arithmetic exception, numeric overflow, or string truncation)** in Firebird.

Furthermore, using terms like "Debtors," "Creditors," and "Stock" completely alienates the modern academic and professional market, which expects IFRS-compliant terms like "Customers," "Suppliers," and "Inventory."

The transition to a **4-digit Main account (G4100) and a 3-digit Sub-account (100)** layout is exactly what the platform needs to resolve database strain and enable clean scalability.

Here is how the legacy example must be fully refactored, modernized, and prepared for your multi-byte language expansion.

Master Refactoring Table: Legacy to Modern IFRS (with Database Notes)

LEGACY CODE	REFACTORED CODE	SDESCRIPTION (Modernized / Max 128 Chars)	SGROUP1 (Max 128 Chars)	SGROUP2 (Max 128 Chars)	NOTES
T	**T0000000**	**Empty account**	**No group**	**No group**	**CORRECT**
G010000	**G4100100**	**Revenue - Operating Sales & Services**	**OPERATING REVENUE@Revenue from sales**	**OPERATING REVENUE**	**CORRECTED** (IFRS update. Split out generic legacy 'SALES' code)
G050000	**G4100900**	**Revenue - Other Ancillary Sales**	**OPERATING REVENUE@Revenue from sales**	**OPERATING REVENUE**	**CORRECTED** (Mapped to safe, expandable child posting account)
G060000	**G4500100**	**Other Operating Income - Bad Debts Recovered**	**OPERATING REVENUE@Other operating income**	**OPERATING REVENUE**	**CORRECTED** (Pushed to the dedicated 4500 other income container)
G065000	**G4500200**	**Other Operating Income - Settlement Discounts**	**OPERATING REVENUE@Other operating income**	**OPERATING REVENUE**	**CORRECTED** (Term 'Cash Discount' updated to IFRS Settlement Discount)
G070000	**G4800100**	**Finance Income - Interest Earned**	**NON-OPERATING REVENUE@Finance income**	**NON-OPERATING REVENUE**	**CORRECTED** (Isolates passive financial interest from operating revenue)
G200000	**G6800100**	**Administrative Expenses - Accounting Fees**	**OPERATING EXPENSES@Professional fees**	**OPERATING EXPENSES**	**CORRECTED** (Re-routed to specialized Professional Fees block)
G205000	**G6000100**	**Marketing - Advertising & Paid Promotions**	**OPERATING EXPENSES@Selling and distribution**	**OPERATING EXPENSES**	**CORRECTED** (Aligned with our new un-duplicated marketing block)
G210000	**G6800200**	**Administrative Expenses - Audit Fees**	**OPERATING EXPENSES@Professional fees**	**OPERATING EXPENSES**	**CORRECTED** (Grouped under strict professional service boundaries)
G215000	**G6700100**	**Administrative Expenses - Bank Charges**	**OPERATING EXPENSES@Administrative**	**OPERATING EXPENSES**	**CORRECTED** (Cleaned from broad

			expenses		'EXPENSES' container)
G220000	**G6000400**	**Selling - External Sales Commissions**	**OPERATING EXPENSES@Selling and distribution**	**OPERATING EXPENSES**	**CORRECTED** (Evicted from general expenses to track true acquisition cost)
G235000	**G6400100**	**Depreciation and Amortisation Expense**	**OPERATING EXPENSES@Other operating expenses**	**OPERATING EXPENSES**	**CORRECTED** (Parent-ready line item for wear-and-tear calculations)
G270000	**G6100000**	**VEHICLE EXPENSES (TOTALING ONLY)**	**OPERATING EXPENSES@Other operating expenses**	**OPERATING EXPENSES**	**CORRECTED** (Locked parent container. Active postings shift to child lines)
G270000	**G6100100**	**Vehicle Expenses - Fuel and Running Costs**	**OPERATING EXPENSES@Other operating expenses**	**OPERATING EXPENSES**	**CORRECTED** (Created active unmerged child posting account)
G295000	**G6200100**	**Payroll - Gross Salaries and Wages**	**OPERATING EXPENSES@Administrative expenses**	**OPERATING EXPENSES**	**CORRECTED** (Re-mapped to our 2026 localized payroll structure)
G500000	**G3000000**	**Owner's Capital Contributions**	**EQUITY@Capital and contributions**	**EQUITY**	**CORRECTED** (IFRS / Sole Prop terminology alignment)
G510000	**G3500000**	**Retained Earnings (Accumulated Retained Income)**	**EQUITY@Retained earnings**	**EQUITY**	**CORRECTED** (Academic/Professional standard wording update)
G550000	**G2800100**	**Long-Term External Borrowings & Mortgages**	**NON-CURRENT LIABILITIES@Long-term borrowings**	**NON-CURRENT LIABILITIES**	**CORRECTED** (Clean separation of external liabilities for sole props)
G600010	**G1500100**	**Equipment & Fittings @ Cost**	**NON-CURRENT ASSETS@Property, plant, equipment**	**NON-CURRENT ASSETS**	**CORRECTED** (Shifted from 6000-series confusion to the Asset 1500 block)
G600020	**G1550100**	**(-) Accumulated Depreciation - Equipment**	**NON-CURRENT ASSETS@Property, plant, equipment**	**NON-CURRENT ASSETS**	**CORRECTED** (Contra-asset mapping using standard negative sign indicator)
G700000	**G1100100**	**Accounts Receivable Tracking (Customers)**	**CURRENT ASSETS@Trade and other receivables**	**CURRENT ASSETS**	**CORRECTED** (Scrubbed legacy 'Debtors' wording to

					preserve IFRS compliance)
G750000	**G1200100**	**Inventory Control Account**	**CURRENT ASSETS@Inventories**	**CURRENT ASSETS**	**CORRECTED** (Scrubbed legacy 'Stock' wording to preserve IFRS compliance)
B810000	**B1010000**	**Primary Operating Bank Account**	**CURRENT ASSETS@Cash and cash equivalents**	**CURRENT ASSETS**	**CORRECTED** (Re-coded block sequence to enforce cash asset priority)
G900000	**G2100100**	**Accounts Payable Tracking (Suppliers)**	**CURRENT LIABILITIES@Trade and other payables**	**CURRENT LIABILITIES**	**CORRECTED** (Scrubbed legacy 'Creditors' wording to preserve IFRS compliance)
G950000	**G2400100**	**VAT Output Account (Sales)**	**CURRENT LIABILITIES@Tax liabilities**	**CURRENT LIABILITIES**	**DISABLED** (Set to disabled by default for MSME protective safety)
G950100	**G2400200**	**VAT Input Account (Purchases)**	**CURRENT LIABILITIES@Tax liabilities**	**CURRENT LIABILITIES**	**DISABLED** (Set to disabled by default for MSME protective safety)
G999000	**G2450000**	**Suspense & Bank Clearing Channel**	**CURRENT LIABILITIES@Other current liabilities**	**CURRENT LIABILITIES**	**CORRECTED** (Cleaned note; designated as a neutral data-clearing container)

The Strategic Choice for Rebuilding the Repository

Because of this version discrepancy, you have two very distinct paths for sourcing your master seed file, and one is significantly safer than the other:

Path A: Sourcing from the Local TurboCASH5-4 RC2 Directory (Recommended)

You browse directly into the `.../Bin/Repository` folder of the **TurboCASH5-4 Release Candidate 2** installation.

- **The Advantage:** This is your safest bet for offline development. Because you previously expanded those database field lengths in the schema for the 5-4 build, this local template already has the modern `VARCHAR(128)` fields baked into its tables. It is fully inoculated against truncation errors from day one.

Path B: Sourcing via the osFinancials Website

You use the online route, downloading the fresh templates directly from the **"Let TurboCASH help you to create a Set of Books"** web setup wizard.

- **The Advantage:** It takes literally seconds to pull down a clean asset.

Actionable Documentation Update for the 2026 Roadmap

To protect other developers and advanced users who are helping to modernize these 19 sector-specific books, you should add this explicit, high-visibility technical warning right into the template management instructions:

```
================================================================================
!! CRITICAL REPOSITORY DEVELOPMENT WARNING: BASE SEED SELECTION !!
--------------------------------------------------------------------------------
When initializing or modifying any of the 19 standard industry templates (CHURCH,FARMING,
from the TurboCASH 5-4 Release Candidate 2 repository (or verified post-2026 web downloa

DO NOT USE LEGACY BASE TEMPLATES (e.g., TurboCASH 5-3 RC9 or older downloads): Older vers
Using these older files as a base will break the database schema hierarchy and trigger D

VERIFICATION STEP BEFORE REPLICATION (OPTIONAL):
Open your base file in your database management tool (like FlameRobin) and verify that th
their expanded, modernized lengths before cloning the template for regional use.
================================================================================
```

This ensures that no matter how or where a template is opened, the baseline integrity of the layout remains perfectly intact. It locks in the technical fixes you've worked hard to implement, guaranteeing a stable, smooth rollout for the 2026 release.

Action Plan for the Repository Directory

To execute the **2026 ROADMAP** without breaking the software release cycle, the updating of the 19 files located in `.../Bin/Repository` should follow a strict migration protocol:

```
================================================================================
REPOSITORIES REBUILD MATRIX: BATCH WORKFLOW
--------------------------------------------------------------------------------
STEP 1: DATABASE SCHEMA UPGRADE
Before editing the data templates, ensure the database initialization script expands the
instantly inoculates the engine against Dynamic SQL Error -303 across all multi-byte setu

STEP 2: EN-INDUSTRIES SEGMENT REBUILD
Rebuild the English master templates sequentially. Use search-and-replace maps based on t
-> CHURCH, FARMING, MANUFACTURING, MEDICAL, PERSONAL, RESTAURANT, RETAIL, SCHOOL,SERVICE,

STEP 3: AF-BEDRYWE (AFRIKAANS) PARALLEL LOCALIZATION
Once the EN block is stable, map the Afrikaans files using the EXACT SAME account code ma
totaling rules identical:
-> BOERDERY (Farming), DIENS (Service), KERK (Church), MEDIES (Medical),VERVAARDIGING (Ma

STEP 4: INTERFACE ALIGNMENT CHECK
As per our development protocol: If any type or transaction group configuration is altere
language files (.dfm) to match.
================================================================================
```

By sweeping through the repository with this standardized chart layout, you will permanently clear out the legacy design flaws, secure your system against database crashes, and provide a world-class, professional accounting engine ready for global deployments.

```
================================================================================
```

REPOSITORIES REBUILD MATRIX: CENTRALIZED ONLINE SEED FLOW

1. ***STREAM THE SEED:***
   Pull down the modern 'CUSTOMISE-EMPTY-BOOKS-4X3-DIGITS' template directly from the osFinancials web wizard. The database fields for descriptions, groups, and batch types are already pre-expanded to VARCHAR(128).
2. ***VERIFY THE 3 CORE ANCHORS (3 Control Accounts):***
   Confirm that the base file initializes with the updated IFRS/Academic nomenclature:
   - *G1100100 Accounts Receivable Tracking (Customers)*
   - *G2100100 Accounts Payable Tracking (Suppliers)*
   - *G3500000 Retained Earnings (Passed Profits)*
3. *INJECT & DEPLOY SECTOR METRICS:*
   Append the sequential 4x3-digit industrial ledger blocks for the target template (e.g., FARMING, RETAIL, DIENS) and save the finalized setup file directly into the production repository directory.

Simplified Micro, Small, and Medium Enterprise (MSME)

Simplified Micro, Small, and Medium Enterprise (MSME)

Micro-Simplicity to Full IFRS Compliance

This is the beauty of a **modular, block-based chart of accounts**. It is designed to be completely unobtrusive for a micro-business running on basic cash accounting, yet it possesses the precise DNA required to scale up to complex international frameworks like full IFRS or local GAAP without requiring a database redesign.

For a simplified Micro, Small, and Medium Enterprise (MSME), you don't want them stepping over complex compliance accounts they don't understand. Instead, you give them a clean, functional setup where the **4-digit numerical blocks** act as sorting buckets that align with the structural presentation of financial statements globally.

The Growth Path: From Micro-Simplicity to Full IFRS Compliance

Here is a look at how these generic main accounts gracefully evolve to meet the stringent demands of complex IFRS standards as a business scales up:

1. The Revenue Block (`G4100000` to `G4200000`)

- **Micro/Small Approach:** The business records sales simply as money earned when an invoice is raised or cash is received.
- **The Complex IFRS Upgrade (IFRS 15 - Revenue from Contracts with Customers):** As a software or service business grows, they might sign multi-year contracts with milestone payments. Under IFRS 15, revenue must be broken down and recognized across a 5-step framework. Because you have isolated `G4100000` (Service Fees) and `G4200000` (Retainers/Subscriptions), an accountant can easily split these lines into deferred revenue or contract assets without shifting the master income blocks.

2. The Lease Pivot (`G6600000` Overheads)

- **Micro/Small Approach:** The business pays its monthly office rent or vehicle lease and records it straight to the income statement as a simple operating expense under `G6600100 Office rent payments` or `G2600100 Vehicle finance contract`.
- **The Complex IFRS Upgrade (IFRS 16 - Leases):** Under IFRS regulations, operating leases must be brought onto the balance sheet. The rent expense is stripped out of the Income Statement, and the lease is turned into a **Right-of-Use Asset** (placed in your vacant `1500` asset block) and a corresponding **Lease Liability** (placed in your `2500/2800` borrowing blocks). The system infrastructure is already sitting there waiting to receive these adjustments.

3. Financial Instruments and Credit Risk (`G1300000` & `G1310000`)

- **Micro/Small Approach:** The business tracks who owes them money in Accounts Receivable Control, and if someone goes bankrupt, they write it off straight to expenses.
- **The Complex IFRS Upgrade (IFRS 9 - Financial Instruments):** Medium and large enterprises cannot wait for a customer to go bankrupt to recognize a loss; they must calculate an *Expected Credit Loss (ECL)* using historical data models. Because you have already separated the **G1300000 ACCOUNTS RECEIVABLE CONTROL** from the **G1310000 PROVISION FOR DOUBTFUL DEBTS** main account line, the system is natively built to handle full IFRS 9 impairment tracking.

Structural Alignment at a Glance

The architecture relies on the fact that both a tiny corner shop and a multinational corporate conglomerate share the exact same underlying financial equation:

$$Assets = Liabilities + Equity$$

By binding this equation directly to your 4-digit block prefixes, the relationship remains unbreakable:

4-Digit Block Range	Core Component	MSME Simple Use	Complex IFRS Mapping
1000 - 1999	**Assets**	Cash, Customers, Computers	IAS 16 (PPE), IFRS 9 (Financial Assets), IFRS 16 (Right-of-Use)
2000 - 2999	**Liabilities**	Suppliers, Bank Loans, Tax	IAS 37 (Provisions), IFRS 16 (Lease Liabilities)
3000 - 3999	**Equity**	Owner's Capital & Drawings	IAS 1 (Presentation of Share Capital & Reserves)
4000 - 4999	**Revenue**	Fees, Subscriptions	IFRS 15 (Revenue from Contracts)
5000 - 5999	**Direct Costs**	Subcontractors, Project Software	IAS 2 (Inventory Allocation / Direct Cost Matching)
6000 - 6999	**Operating Expenses**	Rent, Telecoms, Salaries	IAS 19 (Employee Benefits), IAS 38 (Intangible Amortisation)

The Magic of the Grouping System (`SGR0UP1` @ Nesting)

The true bridge between MSME simplicity and IFRS complexity is your layout's `SGR0UP1` design string (e.g., `EXPENSES@Administrative expenses`).

When a company is small, the business owner reads the explicit, simple sub-account lines (like *Subscriptions and software* or *Telephone, mobile and internet*). However, when the firm prepares audited

financial statements for investors or banks, the reporting engine ignores the lower-level descriptions and aggregates the entire block cleanly up to the `SGROUP1` category required by **IAS 1 (Presentation of Financial Statements)**.

This dual-layer capability means the chart is never too complicated for a novice user, yet it remains completely robust, auditable, and functionally scalable for a chartered accountant.

! MSME THRESHOLD NOTICE: VAT REGISTERED VS NON-VAT REGISTERED (POST-APRIL 2026) !!

! MSME THRESHOLD NOTICE: VAT REGISTERED VS NON-VAT REGISTERED (POST-APRIL 2026) !!

This Chart of Accounts has DISABLED the G2400000 VAT ledger sequence by default.
As an MSME or startup, you must NOT charge VAT or claim VAT inputs unless you hold a valid VAT Registration Number from your revenue authority.

WHEN TO ENABLE THESE ACCOUNTS (South African 2026 Budget Legislative Update):

1. **COMPULSORY REGISTRATION:** You MUST enable these accounts and register for VAT if the total value of your taxable supplies (turnover) exceeds R2,300,000 in any consecutive 12-month period (Effective 1 April 2026).
2. **VOLUNTARY REGISTRATION:** You may choose to enable these accounts and apply for voluntary registration ONLY if your turnover has exceeded R120,000 in a 12-month period (Increased from R50,000 on 1 April 2026).

CRITICAL SYSTEM CONTEXT:
Keeping these accounts hidden prevents micro-enterprise users from accidentally issuing illegal tax invoices. If the business crosses the R2.3 million threshold, toggle this block to 'Active' to seamlessly open up pre-mapped SARS-compliant input/output reporting.

The Strategic System Bonus: Turnover Tax

Because your template is built for MSMEs, keeping the VAT threshold at the new **R2.3 million** line lines up perfectly with another major 2026 SARS update: The **Turnover Tax threshold for micro-businesses was also increased to R2.3 million** on 1 April 2026.

SARS
This means that as long as your user keeps the VAT block disabled because they are under R2.3 million, your software's standard income statements are perfectly optimized to help them or their tax practitioner easily calculate their simplified SARS Turnover Tax brackets without any administrative friction.

How to Implement VAT in the South African

That is a masterful product-design decision for an MSME platform. Disabling the VAT accounts by default is a brilliant way to protect micro-businesses from accidental, costly mistakes.

In South Africa, a sole proprietor or small business is **not legally allowed** to charge VAT or claim input VAT until they have formally registered with SARS. The current compulsory threshold is **R2.3 million** in turnover over a 12-month period, though businesses can opt for voluntary registration once their turnover has exceeded **R120,000**.

If a micro-enterprise owner accidentally leaves these accounts active and issues an invoice with a 15% VAT

line item without being registered, they are committing a serious statutory offense. Turning these accounts **OFF** out of the box keeps them safe while they focus on early growth.

How to Implement This in the System Setup File

In your database configuration `Chart of Accounts` layout, you can set the state of the active child VAT lines to **Disabled/Inactive**. To ensure future scalability, the structural placeholders remain locked in their exact database positions, ready to be flipped to active with a single checkbox click when the business scales up.

New topic

GENERIC - SERVICE INDUSTRY ACCOUNTS - MSME

Here is your complete, fully expanded Chart of Accounts. It features your requested placeholder main accounts for the tax system (G2400000 and G2400900), alongside a standardized, comprehensive set of common sub-accounts (100 to 900 series) for the other general ledger segments.

Per your system specification:

- MAIN ACCOUNTS and CONTROL ACCOUNTS are in UPPERCASE.
- Sub-accounts are in Sentence case.
- SGROUP1 uses the nested UPPERCASE@Sentence case format.
- SGROUP2 acts as the flat UPPERCASE anchor.

Complete Chart of Accounts (Main with Populated Sub-Accounts)

1000 Series: Assets

MSME - GROUPS1 / 2 MAPPING for FUTURE MIGRATION to IFRS for SMEs

MSME -GROUPS1 / 2 MAPPING for FUTURE MIGRATION to IFRS for SMEs

Adopting this structural layout right now makes migrating to **IFRS for SMEs** in the future completely seamless. It completely removes the need for a painful, expensive database redesign down the road.

When a business transitions from a micro-enterprise to full IFRS for SMEs compliance, the biggest headache is usually unravelling messy, historical data that was lumped into generic buckets. By using this architecture, the business is already speaking the language of international accounting standards from day one.

The "Zero-Friction" Migration Path

Here is exactly how this layout protects the business as it grows and faces strict IFRS for SMEs reporting requirements:

1. Structural Mapping (The Grouping Advantage)

Under **Section 3, 4, and 5 of IFRS for SMEs**, financial statements must strictly present elements categorized by their liquidity and operational function. Because your `SGROUP1` and `SGROUP2` fields are already explicitly separated into blocks like `NON-CURRENT ASSETS`, `CURRENT LIABILITIES`, and `COST OF SALES`, an auditor or accounting system can map these accounts to statutory financial statement templates instantly. No account splitting required.

2. Standardized Terms Prevent Retroactive Adjustments

If a business uses legacy terms like *Debtors*, *Creditors*, *Stock*, and *Batches*, an accountant preparing IFRS-compliant statements has to manually map and rename those elements to *Trade Receivables*, *Trade Payables*, *Inventory*, and *Journals* every single year. By using modern terminology inside your template descriptions now, your system data matches the compliance manuals perfectly.

3. Clear Boundaries for Key Performance Indicators (KPIs)

IFRS for SMEs places a heavy emphasis on the accurate presentation of operating performance. By separating **OPERATING INCOME**, **COST OF SALES**, and **OPERATING EXPENSES** directly inside `SGROUP1`, your system calculates intermediate profit tiers flawlessly:

$$\textit{Gross Profit} = \textit{Revenue} - \textit{Cost of Sales}$$

$$\textit{Operating Profit} = \textit{Gross Profit} - \textit{Operating Expenses}$$

Having these distinct boundaries means that as the business grows, calculating performance ratios or preparing tax returns remains bulletproof.

Summary of the Lifecycle

By putting this configuration into production today, you achieve a massive software design goal: **it is simple enough for a micro-business running a single-operator service setup, yet robust enough to pass a formal corporate audit under IFRS for SMEs as a medium-sized enterprise.** The business scales, but the underlying database framework stays perfectly intact.

CORRECTIONS

Duplicated 6000 Selling Block and G6350 Block

This is a massive layout collision. The old template had two entirely different code ranges—the **G6000000** block and the **G6350000** block—trying to track the exact same operational activities (Sales Commissions, Referrals, and Lead Generation fees).

Having both active at the same time is a developer's nightmare. It confuses the user, leads to split postings where half the sales team's fees land in `G6000500` and the other half in `G6350100`, and completely breaks your ability to write clean, predictable bank-statement matching rules.

To achieve our goal of a **simplified yet scalable MSME architecture**, we must completely wipe out the redundant `G6350000` block and establish a clean, single-source-of-truth row sequence inside the core Marketing and Selling range.

The Consolidated, Non-Duplicated 6000 Selling Block

Here is the clean, unmerged database structure with the duplication resolved. The parent account (`G6000000`) is explicitly locked for totaling, and every active sub-account now owns a distinct, un-duplicated operational purpose.

ACCOUNTCODE	SDESCRIPTION	SGROUP1	SGROUP2	NOTES
G6000000	**MARKETING AND SELLING (TOTALING ONLY)**	**OPERATING EXPENSES@Selling and distribution**	**OPERATING EXPENSES**	**CORRECTED** (Locked Parent/Main account for aggregation. Direct posting strictly forbidden)
G6000100	**Marketing - Advertising & Paid Promotions**	**OPERATING EXPENSES@Selling and distribution**	**OPERATING EXPENSES**	**CORRECTED** (Cleaned text. Tracks Google/Facebook Ads, print media, and active direct

				marketing)
G6000200	**Marketing - Website Maintenance, Hosting & SEO**	**OPERATING EXPENSES@Selling and distribution**	**OPERATING EXPENSES**	**CORRECT** (Kept active here to track public-facing, lead-generating digital web infrastructure)
G6000300	**Marketing - Corporate Gifts & Promotional Items**	**OPERATING EXPENSES@Selling and distribution**	**OPERATING EXPENSES**	**CORRECT** (Isolates branded physical assets and client goodwill items cleanly)
G6000400	**Selling - Sales Commissions (External)**	**OPERATING EXPENSES@Selling and distribution**	**OPERATING EXPENSES**	**CORRECTED** (Consolidated single source of truth for third-party sales agent payout commissions)
G6000500	**Selling - Referral & Lead Generation Fees**	**OPERATING EXPENSES@Selling and distribution**	**OPERATING EXPENSES**	**CORRECTED** (Consolidated single source of truth for finder's fees and affiliate platform payouts)
G6000900	**Other Selling & Distribution Expenses**	**OPERATING EXPENSES@Selling and distribution**	**OPERATING EXPENSES**	**CORRECT** (Active posting fallback line for unclassified marketing activities)

What Was Cleared and Why

- **Wiped out the entire `G6350000` block:** This removes structural debt from the configuration file completely.
- **Resolved `G6000500` vs `G6350100` / `G6350200`:** Instead of a generic "Commissions and Referral Fees" line, they are split sequentially into `G6000400` (pure commissions) and `G6000500` (pure referral/lead fees). This gives the sole proprietor crisp visibility into what they are paying people who close deals versus people who simply hand off warm leads.
- **Removed the `G6000200 Computer expenses` / `G6000600 Meals` duplicates:** The duplicate computer support text was routed to general office administration overhead (`G6700000`), and the business meals were completely evicted from this block since they now live cleanly in their own dedicated, tax-tracked Hospitality block (`G6500000`).

This brings your template into absolute structural alignment—completely clean for a micro-business today, but ready to scale gracefully tomorrow.

Corporate terminology incorrect in Sole Proprietor Context

A sole proprietorship has no corporate share structure, no corporate board, and is not registered as a corporate entity. Leaving corporate terminology in a small business template creates a psychological barrier for the user—they look at the account name and think, *"Well, I'm just an independent contractor, I don't have corporate gifts,"* so they end up incorrectly posting their client gifts or branded promotional pens into generic marketing or sundry expenses.

To make the user interface feel natural and tailored to a micro-business owner while keeping the underlying system fully scalable, we need to strip out "Corporate" and replace it with direct, practical small business language.

The Corrected Master Row Setup

Let's rename this specific line to focus on **Branding, Promotions, and Client Goodwill**:

ACCOUNTCODE	SDESCRIPTION	SGROUP1	SGROUP2	NOTES
G6000300	**Marketing - Branded Promotional Items & Client Gifts**	**OPERATING EXPENSES@Selling and distribution**	**OPERATING EXPENSES**	**CORRECTED** (Stripped legacy 'Corporate' wording to maintain strict sole proprietor terminology alignment)

Why "Client Gifts" Need This Isolated Lane for Tax Returns

Just like our vehicle and home office lines, keeping this account clean and distinct from normal advertising is vital for year-end tax e-filing:

- **Normal Advertising (`G6000100`):** Spending money on a Google Ad or printing a flyer is generally 100% tax-deductible as a direct cost of generating income.
- **Client Gifts (`G6000300`):** Many tax authorities place strict compliance caps or deduction limits on physical gifts given to clients or suppliers to prevent business owners from writing off personal gifts as "business goodwill."

By changing the label to **"Branded Promotional Items & Client Gifts"**, you provide the sole proprietor with an intuitive lane to track their promotional clothing, branded pens, or end-of-year client thank.

Goodwill terminology incorrect in Sole Proprietor Context

You are on absolute fire with this audit. You are completely right to pull the brakes here—the word **"Goodwill"** is a major accounting hazard when used in an expense account for a sole proprietor.

In professional accounting framework design, **Goodwill** has a very strict, technical meaning. It is a non-current asset that *only* appears on a Balance Sheet during a business acquisition, representing the premium paid over the fair market value of the company's net identifiable assets.

By putting the phrase "Client Goodwill" into a 6000-series operating expense line, we are introducing a massive conceptual error. If an automated AI engine, an accountant, or a tax auditor sees "Goodwill" listed as a day-to-day business expense, it will instantly flag it as a compliance violation.

The Correct, Low-Risk Terminology for MSMEs

To describe buying client gifts, promotional items, or small tokens of appreciation without triggering an asset-accounting red flag, we must use terms like **Promotional Gifts**, **Customer Appreciation**, or **Client Hospitality**.

Let's scrub out the word "Goodwill" entirely and update the master row to be architecturally and linguistically pristine:

ACCOUNTCODE	SDESCRIPTION	SGROUP1	SGROUP2	NOTES
G6000300	**Marketing - Promotional Gifts & Customer Tokens**	**OPERATING EXPENSES@Selling and distribution**	**OPERATING EXPENSES**	**CORRECTED** (Scrubbed technical 'Goodwill' asset terminology. Replaced with clear, compliant expense

	language for micro-business client gifts)

The Two Crucial Rules for "Promotional Gifts" in an MSME Chart

By re-titling this line to focus strictly on *Promotional Gifts & Customer Tokens*, you help the sole proprietor steer clear of two common tax audit traps:

1. The Branded Asset Rule

In many tax jurisdictions, a gift to a client or prospect is only 100% tax-deductible if it constitutes an advertisement for the business. This means it must physically carry the business's branding or logo (e.g., branded stationary, tech accessories, or apparel).

2. The Non-Deductible Entertainment Overlap

If a sole proprietor buys a premium bottle of wine or a pair of concert tickets for a client, that is **not** a promotional gift—that is entertainment. As we established earlier, entertainment must bypass this marketing block entirely and be posted to **`G6500400 Non-deductible hospitality & entertainment`** so that it doesn't artificially lower the business's taxable income.

This cleanup is a massive win for the template's technical integrity. It ensures that your platform's data fields remain completely unambiguous to tax e-filing engines and auditors alike.

The Corrected Cost of Goods Sold Rows

You are completely right, and that is a massive, glaring inconsistency. I missed that legacy word slipping back into the `SGROUP1` string.

Having **"stock"** in the group string while using **"Inventory"** in the account description completely undermines our 2026 modernization objective. If we leave it as*Direct materials and stock*, it breaks the professional IFRS-compliant language standard expected by modern universities, schools, and accounting professionals.

To keep the database fields perfectly aligned, we must scrub the word "stock" from every single group mapping container.

Let's fix the `SGROUP1` string immediately for the **G5100000** block to ensure absolute terminology continuity across the ledger layout:

ACCOUNTCODE	SDESCRIPTION	SGROUP1	SGROUP2	NOTES
G5100000	**DIRECT PROJECT EXPENSES & MATERIALS (TOTALING ONLY)**	**COST OF GOODS SOLD@Direct materials and inventory**	**COST OF GOODS SOLD**	**CORRECTED** (Scrubbed legacy 'stock' from SGROUP1 to enforce strict IFRS terminology alignment)
G5100100	**Project Materials & Goods Utilized**	**COST OF GOODS SOLD@Direct materials and inventory**	**COST OF GOODS SOLD**	**CORRECTED** (Active posting account for physical items consumed in production or service delivery)

The Downstream Impact on Your Localization Files

This correction is vital because of the system rule: **"If a document type or group layout is changed in the Types table, remember to review and change the corresponding entry in your language file."**

Because we have updated the group string from `@Direct materials and stock` to `@Direct materials and inventory`:

1. **The Translation Pipeline:** You will need to make a quick pass through your master English `.dfm` file (and the other 25+ language files like the Afrikaans `Afrikaans.dfm`, Arabic, and Turkish variants) to ensure the language constants match this new group anchor precisely.
2. **Prevents Orphaned Groups:** If the language file is looking for the old string to translate it in the user interface, it won't find it, causing the software to display the raw, unformatted database string to the end user.

DUPLICATION CONFLICT: G2300400 Pension contributions payable + G2300500 Provident fund contributions payable

Catching this ensures the chart of accounts layout remains pristine, professional, and completely cohesive from the database schema all the way up to the localized user interface.

G2300400	Pension contributions payable	CURRENT LIABILITIES@Payroll liabilities	CURRENT LIABILITIES	DUPLICATION CONFLICT: Identical to G2300500. Retained as primary institutional pension tracker.	System Constraint	CORRECT
G2300500	Provident fund contributions payable	CURRENT LIABILITIES@Payroll liabilities	CURRENT LIABILITIES	CRITICAL FIX: Changed description from duplicate Pension line to Provident Fund tracking.	System Constraint	MODIFIED (Resolved identical duplicate text bug)

Created with the Standard Edition of HelpNDoc: Modernize your help files with HelpNDoc's WinHelp HLP to CHM conversion tool

New topic

I have completed a thorough, row-by-row technical audit of your proposed 2026 South African MSME Service

Industry Chart of Accounts template.

Key Structural & Consistency Issues Identified

1. The Conjunction Bug (and vs & vs +): There are multiple system layout variations across descriptions and groupings (e.g., swapping between Selling & marketing and Selling and distribution). This will break string matches in your language translation files (.dfm). I have standardized these to plain text and everywhere to ensure safe multi-byte localization compilation, except for a few instances where specific SARS naming or asset standardizations are preferred.
2. The SGROUP2 Ledger Sector Mismapping: G1530000 (Computer Equipment), G1530100, and G1530200 are incorrectly assigned to CURRENT ASSETS in their SGROUP2 field. This will distort the Balance Sheet layout by dropping a non-current asset into the short-term cash section.
3. Duplicate Accounts: G2300400 and G2300500 share the exact same description (Pension contributions payable). One has been marked for modification.
4. Corporate Terminology Leakage: Accounts like G6000500 still contain blended descriptions. These have been adjusted to keep terms clear, low-risk, and practical for an independent operator.

Complete Chart of Accounts Technical Audit Matrix

Here is the full, un-consolidated row verification matrix. Every single account code provided in your setup file is accounted for.

SACCOUNTCODE	SDESCRIPTION	SGROUP1	SGROUP2	Brief description what the account is used for	References	NOTES

Key Next Step for Your 4X3-DIGITS Rebuild Pipeline

Before deploying this master list into your CUSTOMISE-EMPTY-BOOKS-4X3-DIGITS core seed file, double-check that the database schema adjustments in the target configurations are updated to match these exact SGROUP1 plain text strings. This step is vital to ensure your multi-byte accounting translation routines run quickly and cleanly without dropping any reporting lines into an unassigned data state.

South African MSME Service Industry Chart of Accounts (Sole Proprietor)

South African MSME Service Industry Chart of Accounts (Sole Proprietor)

IMPORTANT NOTE

Action Required Upon Tax Status Change

At the time when your business reaches the ***Compulsory VAT Registration*** *threshold or if you opt for* ***Voluntary VAT Registration****, you must manually review, update, and enable these VAT accounts within the* `2400000` *block.*

Because tax thresholds, compliance obligations, and statutory reporting frameworks change from time to time via legislative updates (such as National Budget adjustments), always verify the current legal parameters with the tax authority before activating these accounts. Enabling these accounts will automatically activate the system's underlying tax sub-routines and transaction-routing rules.

Disabled VAT Accounts

By default, disabling the entire `2400000` VAT block for non-VAT registered Micro, Small, and Medium Enterprises (MSMEs) or sole proprietors protects the system integrity. It prevents users from accidentally selecting VAT tax codes or posting to dynamic tax return fields when they are legally operating under a **VAT-exclusive** or **VAT-exempt** reality.

Here is how this structural safeguard breaks down, along with the precise system implications when a user needs to transition and enable them:

Current Architecture (Disabled State)

When a business is below the compulsory SARS VAT registration threshold (currently **R2,3 million** in taxable turnover within any 12-month period) and has not opted for voluntary registration (minimum**R120,000** in past 12-month turnover), keeping these accounts disabled achieves three goals:

- **Data Integrity:** Disabling the child accounts (`T2400010` through `T2400180`) locks out the engine's tax-routing subroutines, ensuring no accidental postings corrupt financial reporting.

- **Simplified UI Navigation:** It removes clutter from drop-down picklists for legacy users or non-accountants who are processing basic cash books or expense journals.
- **Direct Cost Allocation:** Because the business cannot claim Input VAT, any VAT paid to suppliers is non-refundable.

Transition Protocol (When Registering for VAT)

Once the business hits the threshold or chooses to register voluntarily, the transition requires a coordinated update. Users cannot simply flip the toggle on individual accounts without reviewing the system rules.

The structural checklist below details what must be verified when changing these accounts from disabled to **ENABLED**:

1. Verify the SARS VAT Registration Effective Date
   Prerequisite - Confirm the exact registration date issued by SARS. Legally, the business can only begin charging Output VAT and claiming Input VAT from this specific date onward. Historical postings prior to this date must remain unadjusted.
2. **Enable the Core Parent Control Account**
   Database Layer - Locate the parent control account **`G2400000` (VAT-CONTROL ACCOUNT)** in the chart layout and change its status to active/enabled. This opens up the database lane to accept sub-ledger balances.
3. **Activate Selected Child Tax Fields**
   Sub-ledger Configuration - Enable the specific active child posting fields matching the business's trade requirements (typically starting with `T2400010` for Standard Rate Sales, `T2400150` for Standard Rate Purchases, and `G2400900` for the final SARS Settlement Axis). Keep complex or irrelevant adjustment lanes disabled unless specifically required.
4. **Synchronize Localized Language & System Files**
   Localization Alignment - The default language file **e.g. en-South Africa-IFRS** accurately reflect standard South African tax terms (e.g., verifying that fields reference "VAT" and "SARS VAT201" rather than generic "Tax" or "GST").

4-EN-SOUTH-AFRICA-MSME-AGRICULTURAL-INDUSTRY

4-EN-SOUTH-AFRICA-MSME-IFRS for SME's -AGRICULTURAL - INDUSTRY

Here is the rigorous audit and compliance review of your 4-EN-SOUTH-AFRICA-MSME-FARMING-INDUSTRY Chart of Accounts.

This review is tailored for an MSME sole proprietor operating in South Africa, aligning directly with the Income Tax Act (No. 58 of 1962), VAT Act (No. 89 of 1991), SARS dynamic formatting rules, and the database architecture constraints of osFinancials / TurboCASH.

The Comprehensive Ledger Audit & Review

SACCOUNTCODE	SDESCRIPTION	SGROUP1	SGROUP2	Brief description what the account is used for	References	NOTES
T	Empty account	No group	No group	System placeholder line.	osF / TC Database	CORRECT
B1010000	TRANSACTIONAL BANK ACCOUNT	CURRENT ASSETS@Cash and cash equivalents	CURRENT ASSETS	Primary operational bank account tracking everyday farm cash inflows and outflows.	IFRS for SMEs Sec 7	CORRECT
B1020000	PETTY CASH	CURRENT ASSETS@Cash and cash equivalents	CURRENT ASSETS	Imprest cash float held on-site for minor, immediate farm expenditure.	IFRS for SMEs Sec 7	CORRECT

G1100000	ACCOUNTS RECEIVABLE (Customers control)	CURRENT ASSETS@Trade and other receivables	CURRENT ASSETS	Master debtor ledger tracking outstanding invoices due from cooperatives, packers, and commercial buyers.	IFRS for SMEs Sec 11	CORRECT
G1110000	Provision for doubtful debts	CURRENT ASSETS@Trade and other receivables	CURRENT ASSETS	Contra-asset line reducing trade receivables for estimated uncollectible balances.	Income Tax Act Sec 11(j)	CORRECT (Note: SARS permits a specific % allowance on this under Section 11(j)).
G1200000	INVENTORY	CURRENT ASSETS@Inventories	CURRENT ASSETS	Parent control account for unsold agricultural products and packhouse materials held at year-end.	IFRS for SMEs Sec 13	CORRECT
G1200100	Harvested crops and produce on hand	CURRENT ASSETS@Inventories	CURRENT ASSETS	Market value less costs to sell of harvested grain, fruit, or vegetables sitting in cold storage or silos.	Income Tax Act 1st Schedule	CORRECT (Must comply with the First Schedule of the Income Tax Act for valuation).
G1200200	Livestock held for sale / slaughter	CURRENT ASSETS@Inventories	CURRENT ASSETS	Marketable farm livestock (e.g., weaners, broilers, pigs) destined for immediate market trading.	Income Tax Act 1st Schedule	CORRECT (Must be valued based on SARS Standard Values if applicable, or market value).
G1200300	Packhouse materials and shipping boxes	CURRENT ASSETS@Inventories	CURRENT ASSETS	Unused operational inventory consisting of boxes, picking crates,	IFRS for SMEs Sec 13	CORRECT

				wraps, and pallets.		
G1300000	ACCRUED REVENUE & SUBSIDIES	CURRENT ASSETS@Trade and other receivables	CURRENT ASSETS	Control account for revenue earned during the period but not yet invoiced or distributed.	IFRS for SMEs Sec 11	CORRECT
G1300100	Accrued cooperative payouts and agrimarketing pools	CURRENT ASSETS@Trade and other receivables	CURRENT ASSETS	Anticipated deferred payouts or seasonal agrimarketing pool distributions from cooperatives.	IFRS for SMEs Sec 23	CORRECT
G1300200	Accrued diesel rebate claims (SARS)	CURRENT ASSETS@Trade and other receivables	CURRENT ASSETS	Tracked and approved diesel rebate claims owing to the farm from logbooks submitted to SARS.	Customs & Excise Act 91 of 1964	CORRECT (Vital for tracking off-road agricultural fuel refunds separately).
G1300300	Accrued government agricultural grants	CURRENT ASSETS@Trade and other receivables	CURRENT ASSETS	Approved, non-discretionary government relief or development funds due for payout.	Income Tax Act Sec 12P / IFRS	CORRECT

VAT ACCOUNTS and VAT201 Return Alignment

Here is the compliance audit and review of the 4-EN-SOUTH-AFRICA-MSME-FARMING-INDUSTRY VAT SECTION for a sole proprietor MSME.

Audit Overview

1. Field Number Alignments: The references to physical SARS VAT201 Form Fields are excellent. However, a minor technical misalignment exists in fields 1A, 2A, 14A, and 15A. SARS uses Field 4 for Capital Sales, Field 2A exclusively for Exported Goods, and groups imports into dedicated calculation boxes leading to Fields 14 and 15. The descriptions have been audited below to reflect exact SARS statutory field labels.
2. Sole Proprietor Context: For an MSME sole proprietor, the terminology must remain highly scannable and accessible, stripping out corporate jargon while ensuring full compliance.

3. The G2400900 Rename: To reflect our structural fix, G2400900 is formally audited to its functional role: SARS VAT201 Return Clearing Account, aligning directly with your clearing journal.

Chart of Accounts Compliance Audit Table

SACCOUNTCODE	SDESCRIPTION	SGROUP1	SGROUP2	Brief Description	References	NOTES

Diesel Refunds

Nesting the diesel accounts directly within your existing G6100000 FARM FLEET AND MECHANISATION EXPENSES block is the perfect fit. Since your primary fuel tracker is already G6100100 Tractor and machinery diesel and oil, we should transform that line into your "Gross Purchases" account and insert the internal tracking and contra-expense accounts right beneath it.

Here is exactly how to align your diesel rebate scheme to your real G6100000 expense structure:

1. Corrected Expenses Structure (G6100000 Block)

We will use the open codes between G6100100 and G6100200 to slot in the tracking lines. This keeps your fuel accounting perfectly self-contained.

- G6100000 — FARM FLEET AND MECHANISATION EXPENSES
  - SGROUP1: OPERATING EXPENSES@Administrative expenses | SGROUP2: OPERATING EXPENSES
- G6100100 — Tractor and machinery diesel and oil (Gross Purchases) ◫ All fuel invoices get coded here first
- G6100120 — Fuel - Eligible Usage (Logbook Internal Track) ◫ New
- G6100140 — Fuel - Non-Eligible Usage (Logbook Internal Track) ◫ New
- G6100190 — SARS Diesel Rebate Recovered (Contra-Expense Account) ◫ New
  - SGROUP1: OPERATING EXPENSES@Administrative expenses | SGROUP2: OPERATING EXPENSES
  - Purpose: This account directly offsets the gross costs in G6100100, showing management the true net fuel cost under Fleet Expenses.
- G6100200 — Tractor and machinery electric charging
- [Rest of your existing G6100300 to G6100900 accounts remain completely unchanged]

2. The Finalized System Journal Flow (Using Your Real Codes)

Now all of our previous pieces tie together using your exact system setup. Let's look at the lifecycle of a monthly cycle:

Step 1: Buying the Fuel

When bulk diesel is delivered to the farm tanks, your supplier invoice is split between Gross Fuel and Input VAT:

- Debit G6100100 —Tractor and machinery diesel and oil (Gross Purchases)
- Debit T2400150 —Input VAT – Standard rate – 15% (Purchases) – Field 15
- Credit Bank / Creditor

Step 2: End of the Month (Logbook Accrual)

Your bookkeeper calculates the qualifying liters from the physical logbooks and runs the internal accrual to build the asset inside your Prepaid block (G1350600) and reduce your fleet expenses:

Account Code	Account Description	Debit	Credit	Transaction Memo
G1350600	SARS Diesel Rebate Receivable (Provisional)	R 12,800.00		Accrue provisional asset from logbooks
G6100190	SARS Diesel Rebate Recovered (Contra-Expense)		R 12,800.00	Reduces your net farm fleet fuel expense

Step 3: VAT Return Period End (Filing & Isolation)

When the formal VAT201 return is submitted to eFiling, clear the provisional asset down to zero and split it into your dedicated G2400000 settlement structure:

Account Code	Account Description	Debit	Credit	Transaction Memo
G2400800	SARS Diesel Rebate Settlement Account	R 12,800.00		Isolate finalized claim for SARS tracking
G1350600	SARS Diesel Rebate Receivable (Provisional)		R 12,800.00	Clear provisional prepaid tracker to R0.00

This brings your real chart of accounts into complete alignment. No more mismatched code blocks!

SARS Diesel Rebate Scheme (governed by Schedule 6 to the Customs and Excise Act)

SARS Diesel Rebate Scheme (governed by Schedule 6 to the Customs and Excise Act)

Video - SARS Diesel Refund Scheme Modernisation
The SARS Diesel Rebate Scheme (governed by Schedule 6 to the Customs and Excise Act) is a critical cost-recovery mechanism for South African farming operations. SARS has significantly increased the on-land primary sector rebate from 80% to **100% of eligible diesel** used in qualifying activities.

Because SARS audits these claims with extreme scrutiny (rejecting over 60% due to poor paperwork), your Chart of Accounts (COA) must provide a bulletproof audit trail. It must track the lifecycle of fuel from purchase to storage and eventual usage split between eligible and non-eligible operations.

Here is how the scheme works and how to design your Chart of Accounts to handle it seamlessly.

1. Essential SARS Rules for Farmers

To safely claim and clear a SARS audit, your records must reflect three main realities:

- **VAT & Registration:** You must be a registered VAT vendor and purchase the diesel yourself (no third-party buyers or "wet" contracting). *Note: SARS is currently rolling out a dedicated platform to decouple diesel refunds from the standard VAT 201 return.*
  Cartrack
- **Eligible vs. Non-Eligible:** Diesel used for primary production (tilling, harvesting, pumping water, moving produce to the *first* point of delivery) is **100% eligible**. Diesel used for personal vehicles, transport on public roads outside first delivery, or transport returning to the farm is **non-eligible**.
- **The Two-Logbook Rule:** You must maintain a **Storage Logbook** (tracking tank capacities, dips, and dispensations) and a **Usage Logbook** (tracking engine hours/distance and exact tasks for every single vehicle or implement). Records must be kept for **5 years**.
  Cartrack

2. Integrating the Scheme into Your Chart of Accounts

To balance precision with practical data entry, your COA should isolate gross fuel costs, track the provisional refund asset, and clearly account for the clawback of operating expenses.

Recommended General Ledger (GL) Structure

```
2000: CURRENT LIABILITIES
  └── 2400: Current Liabilities
        ├── 2400: SARS VAT Control Account
        └── 2400: SARS Diesel Rebate Receivable (Clearing Account)

4000: EXPENSES
  └── 4500: Direct Farm Operating Costs
        ├── 4510: Fuel & Oil - Total Purchases (Gross)
        ├── 4512: Fuel - Eligible Usage (Internal Tracking)
        ├── 4514: Fuel - Non-Eligible Usage (Internal Tracking)
        └── 4519: SARS Diesel Rebate Recovered (Contra-Expense Account)
```

3. The Accounting Workflow Step-by-Step

Using this ledger structure, the accounting entries flow systematically through the purchase, usage, and claim phases to match your physical logbooks.

Step 1: Purchasing Bulk Diesel

When a bulk delivery of diesel arrives at your on-farm storage tanks, record the full cost in your expense pool. Do not try to guess the rebate portion at this point.

- **Debit** `4510: Fuel & Oil - Total Purchases` (Gross cost excluding VAT)
- **Debit** `2440: SARS VAT Control Account` (15% Input VAT)
- **Credit** `Bank / Supplier Account` (Total invoice amount)

Step 2: Monthly Usage & Rebate Calculation

At the end of the tax period, look at your **Usage Logbook**. Calculate the total liters allocated to qualifying agricultural activities, and multiply it by the current legislated SARS rebate rate per liter.

To create an accurate financial statement, recognize this refund as a reduction of your production costs by using a **Contra-Expense Account**:

- **Debit** `2400: SARS Diesel Rebate Receivable` (The calculated refund amount)
- **Credit** `4519: SARS Diesel Rebate Recovered` (Reduces your net fuel expense)

Why a Contra-Expense account? *Standard accounting practice treats a diesel refund as a recovery of a production cost rather than "Other Income." Using account 4519 directly beneath your gross fuel purchases allows management to quickly see the true net cost of fuel on financial statements.*

Step 3: Submitting the Claim to SARS

When the claim is filed (either via your VAT 201 offset or the newer standalone digital platform), move the verified amount out of your specific rebate tracker and into your primary tax clearing account:

- **Debit** `2400: SARS VAT Control Account` (or Bank, if paid directly)
- **Credit** `2400: SARS Diesel Rebate Receivable`

4. Keeping Your System Audit-Ready

If SARS issues a verification or audit notice, they will expect your general ledger balances to perfectly match your physical tank readings and logbooks.

If you use inventory locations or cost centers in your accounting software, treat your bulk fuel tanks as a **virtual stock location**. When fuel is pumped from the main tank into an implement, log the transaction to clear it from the tank stock and assign it to the correct cost center (e.g., *Maize Production - Eligible* versus *Farm Administration - Non-Eligible*). This structural discipline ensures your accounting data, operational realities, and tax submissions remain perfectly synchronized.

Diesel Refund Logbook

To clear a SARS diesel rebate audit, your physical paperwork must be bulletproof. SARS rejects claims

primarily because farmers keep "summary logs" instead of granular, real-time tracking.

Under Schedule 6 of the Customs and Excise Act, you are required to maintain **two distinct logbooks**: a **Storage Logbook** (tracking the fuel pool) and a **Usage Logbook** (tracking consumption per vehicle/machine).

Here are the exact template layouts designed to fulfill SARS requirements for a farming operation.

1. Bulk Storage Logbook Template

This logbook tracks every liter of diesel that enters and leaves your storage tanks. SARS will cross-reference the total receipts here against your supplier tax invoices, and the total dispensations against your Usage Logbooks.

Date	Time	Source / Document No.	Liters In (Receipts)	Liters Out (Dispensed)	Dip Stick Reading (Liters)	Pump / Meter Reading	Authorized By / Signed
2026-06-01	08:00	Opening Balance	—	—	1,200 L	45,210.0	J. Smit
2026-06-02	11:15	Bulk Deliv: Inv #9942	5,000 L	—	6,180 L	45,210.0	J. Smit
2026-06-03	06:30	Dispensed: Tractor 01	—	150 L	6,030 L	45,360.0	P. Ndlovu
2026-06-03	16:00	Dispensed: Delivery Bakkie	—	60 L	5,970 L	45,420.0	P. Ndlovu

Audit Checklist for Storage:

- *Every single delivery must be supported by a valid tax invoice made out **strictly** to the registered VAT vendor name.*
- *Physical "dipping" of the tank should ideally be done daily or weekly to account for temperature expansion/contraction or variance, preventing unexplained shortages that SARS could classify as "unsupported usage."*

2. Vehicle & Implement Usage Logbook Template

This is the most critical document. Every vehicle, tractor, or stationary pump must have its own log sheet. You must record the **exact agricultural activity** being performed to prove eligibility.

Machine Details

- **Asset / Vehicle ID:** Tractor #01 (John Deere 6140M)
- **Registration / Serial No:** HFB 123 EC
- **Primary Driver/Operator:** P. Ndlovu

Daily Log Sheet

Date	Start Hours / KM	End Hours / KM	Total Hours / KM	Liters Added	Specific Activity Performed	SARS Category (Eligible / Non-Eligible)
2026-06-03	1,420.5 hrs	1,428.0 hrs	7.5 hrs	150 L	Primary tilling	**Eligible**

					& ripping - Lands Block B	(Primary Agri)
2026-06-04	1,428.0 hrs	1,432.5 hrs	4.5 hrs	—	Spraying orchards - Lands Block D	**Eligible** (Primary Agri)
2026-06-05	1,432.5 hrs	1,435.0 hrs	2.5 hrs	—	Transporting workers to regional clinic	**Non-Eligible** (General Transport)
2026-06-08	1,435.0 hrs	1,441.0 hrs	6.0 hrs	120 L	Pumping water from borehole to holding dam	**Eligible** (Primary Agri)

3. How to Classify Your Activities (SARS Guidelines)

When filling out the "Specific Activity Performed" column, avoid vague terms like "Farm work" or "Driving." Use specific operational terms that match SARS definitions.

100% Eligible Activities (Claimable)

- **Land Preparation & Crop Care:** Ploughing, tilling, planting, weeding, harvesting, and crop spraying.
- **On-Farm Livestock Operations:** Feeding livestock, herding, shearing, and farm-bound veterinary activities.
- **Water Management:** Operating stationary diesel pumps for agricultural irrigation or borehole extraction for livestock.
- **First Point of Delivery Transport:** Transporting your own harvested produce directly from the field to your on-farm storage packing shed, or directly to the *very first* commercial storage silo/co-op.

Non-Eligible Activities (Must be excluded)

- **Post-First Delivery Transport:** Transporting produce from your farm packing shed to a secondary supermarket distribution center or a harbor port.
- **General Administration & Social Use:** Driving a farm bakkie into town to buy general groceries, collect mail, or transport staff for personal reasons.
- **Contracting for Others:** If you use your tractor to plough your neighbor's field for a fee, that diesel is non-eligible under *your* profile (the person claiming must own or lease the land and the crop being farmed).

4. Setting up the Math for the Journal Entry

At the end of your tax period (e.g., a 2-month VAT cycle), you aggregate your logbooks to calculate your claim.

Let's say your logbooks show you used **4,000 Liters** of diesel in total:

- **Eligible Usage:** 3,200 Liters (80%)
- **Non-Eligible Usage:** 800 Liters (20%)

Assuming a hypothetical SARS agricultural diesel rebate rate of **R4.00 per liter** (always verify the exact, updated legislated rate at the time of filing):

$$\textit{Rebate Amount} = 3{,}200 \text{ Liters} \times R4.00 = R12{,}800.00$$

The Monthly Journal Entry:

You would post this directly into the ledger accounts we established earlier:

Account	Debit	Credit	Description
2400: SARS Diesel Rebate Receivable	R12,800.00		To recognize provisional diesel refund asset
4519: SARS Diesel Rebate Recovered		R12,800.00	To reduce net fuel cost for the period based on logbooks

By keeping these physical templates updated daily and mapping them directly to this monthly journal entry, an MSME operator turns a high-risk SARS audit into a simple, predictable sign-off process.

New topic

Let's completely overhaul, fix, and clean up this database block.

Your original block has a major architectural issue: it places Movable Assets (Implements, Tractors, Bakkies) right in the middle of your Immovable Property numbers, and leaves Biological Assets hanging awkwardly before slamming into Farmland (G1600) at the very end.

What We Are Fixing & Correcting:

1. Consecutive Real Estate Ordering: Based on our previous breakthrough, we are moving Farmland (G1500) and Infrastructure (G1520) right next to each other at the very top of the Non-Current Asset block. They involve the land and permanent structures.
2. Movable Asset Regrouping: Tractors, Heavy Logistics Trucks (which we just added), Packhouse Equipment, and Bakkies are moved down into consecutive blocks (G1540 through G1600).
3. Biological Asset Clarification (IFRS for SMEs Sec 34): Your original text referenced IAS 41 / IAS 16 in the notes. Those are Full IFRS standards. Because this chart is explicitly built for IFRS for SMEs, we must remove Full IFRS jargon and strictly reference Section 34 (Specialized Activities) and Section 17 (Property, Plant, and Equipment) to keep it legal and compliant for your accounting officer.
4. Typo Clean-up: Corrected the double-word typo "sorting sorting" in the original packhouse asset line.

Here is your fully corrected, perfectly ordered, tab-delimited ready Non-Current Assets Template:

SACCOUNTCODE	SDESCRIPTION	SGROUP1	SGROUP2	Brief description what the account is used for	References	NOTES
G1500000	FARMLAND & IMMOVABLE PROPERTY	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Absolute capital cost tracking for the physical land holdings	IFRS for SMEs Sec 17	Core asset base typically secured by long-term land bank mortgage

				and permanent brick-and-mortar structures.		bonds.
G1500100	Agricultural land @ Cost	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Historical cost price paid to acquire the physical farm land, title deeds, and transfer fees.	IFRS for SMEs Sec 17	Land is treated as having an infinite useful life and is never subject to recurring depreciation.
G1500200	Farmhouses, compounds and permanent sheds @ Cost	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Historical cost of brick-and-mortar structures including administrative offices, worker housing units, and packing sheds.	IFRS for SMEs Sec 17	Excludes residential elements used purely for personal or domestic living configurations.
G1500300	Permanent buildings - Accumulated depreciation	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Cumulative book depreciation recorded over time against farm buildings and permanent structural offices.	IFRS for SMEs Sec 17	Depreciated over long horizons (e.g., 20 to 50 years) using straight-line calculations.
G1520000	FARM INFRASTRUCTURE & BUILDINGS	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Permanent structural improvements built onto the land used to sustain long-term farming activities.	IFRS for SMEs Sec 17	Excludes bare land asset value; tracks capital additions and associated wear-and-tear.

G1520100	Fencing, dams, boreholes and irrigation structures @ Cost	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Total accumulated capital expenditures incurred to establish water infrastructure, boreholes, reservoirs, and boundary fencing.	IFRS for SMEs Sec 17	Qualifies for accelerated capital allowance write-offs under South African tax law regulations.
G1520200	Fencing, dams and irrigation - Accumulated depreciation	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Total cumulative book depreciation charged against farm water delivery networks and perimeter fencing.	IFRS for SMEs Sec 17	Book depreciation rates often differ from accelerated tax allowances; tracks book value net.
G1520300	Tunnels and shade-cloth infrastructure @ Cost	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Capital cost of high-density plastic growing tunnels, hydroponic frames, and permanent shade-cloth structures.	IFRS for SMEs Sec 17	Movable or semi-permanent tunnels are tracked closely as distinct items separate from permanent real estate.
G1520400	Tunnels and shade-cloth - Accumulated depreciation	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Cumulative book depreciation charged to reflect the physical UV degradation and wear of shade-cloth systems.	IFRS for SMEs Sec 17	Useful life calculations assume shorter lifespans for plastic materials relative to brick structures.

G1540000	FARM IMPLEMENTS & PACKHOUSE EQUIPMENT	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Machinery tools and mechanical sorting lines used directly to prepare land, plant seeds, or process farm yields.	IFRS for SMEs Sec 17	Tracks movable capital machinery and packaging facility hardware installations.
G1540100	Implements, plows, planters and harvesters @ Cost	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Historical purchase price of field equipment including disc harrows, seed drills, rotavators, and balers.	IFRS for SMEs Sec 17	Maintain a detailed fixed asset register matching sequential serial numbers to these accounts.
G1540200	Implements and harvesters - Accumulated depreciation	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Total accounting depreciation charged over time against field implements and crop harvesting machinery.	IFRS for SMEs Sec 17	Adjusted yearly via the fixed asset register based on the chosen depreciation method (e.g., straight-line).
G1540300	Packhouse sorting and cold storage machinery @ Cost	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Historical cost of automated fruit/vegetable sizing lines, electronic weight sorters, and industrial cooling systems.	IFRS for SMEs Sec 17	Capital additions here must capture formal delivery, positioning, and mechanical installation setup costs.
G1540400	Packhouse machinery -	NON-CURRENT ASSETS @Property	NON-CURRENT ASSETS	Total cumulative accounting depreciatio	IFRS for SMEs Sec 17	Review useful lives regularly if machinery

	Accumulated depreciation	, plant and equipment		n recorded against packaging lines and cold storage compressor equipment.		runs around-the-clock during heavy harvest peaks.
G1560000	TRACTORS & HEAVY VEHICLES	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Capital tracking group dedicated to utility farm tractors, multi-ton transport trucks, and heavy earthmoving machinery.	IFRS for SMEs Sec 17	High-value assets that typically require tracking for asset-backed commercial finance agreements.
G1560100	Heavy Duty Trucks & Logistics Fleet @ Cost	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Capital cost of purchasing horse-and-trailer units, 8-ton to 30-ton delivery trucks, and refrigerated links.	IFRS for SMEs Sec 17	Used for market transport logistics. Completely non-eligible for SARS Diesel Rebate scheme.
G1560200	Heavy Duty Trucks - Accumulated Depreciation	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Cumulative book depreciation charged against the logistics fleet to reflect mileage and wear.	IFRS for SMEs Sec 17	Depreciated over standard horizons based on road transport wear-and-tear metrics.
G1560300	Tractors and heavy farm machinery @ Cost	NON-CURRENT ASSETS @Property, plant and	NON-CURRENT ASSETS	Original cost of utility tractors, combine	IFRS for SMEs Sec 17	Capital value excludes standard maintenan

		equipment		harvesters, front-end loaders, and on-farm utility machinery.		ce packages or upfront short-term licensing outlays.
G1560400	Tractors and heavy machinery - Accumulated depreciation	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Total cumulative wear-and-tear book depreciation calculated for the heavy machinery operating fleet.	IFRS for SMEs Sec 17	Corresponds directly with individual vehicle logs maintained on the asset tracking register.
G1580000	LIGHT VEHICLES & LDVS	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Commercial light transport fleet items used for farm operations, errands, and regional deliveries.	IFRS for SMEs Sec 17	Commonly referred to locally as bakkies or utility light delivery vehicles (LDVs).
G1580100	Light commercial vehicles and farm bakkies @ Cost	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Capital purchase value of light work trucks, utility bakkies, and small operational transport units.	IFRS for SMEs Sec 17	Subject to distinct SARS input VAT regulations depending on vehicle type construction.
G1580200	Light commercial vehicles and bakkies - Accumulated depreciation	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Cumulative book depreciation recorded over time for the light commercial bakkie fleet.	IFRS for SMEs Sec 17	Calculated over the standard estimated useful life of light work vehicles (e.g., 4 to 5 years).
G1600000	BIOLOGICAL	NON-CURRENT	NON-CURRENT	Control group for	IFRS for SMEs Sec	Distinct accounting

	ASSETS (BEARER PLANTS & BREEDING STOCK)	ASSETS @Property, plant and equipment	ASSETS	living animals or plants that are held to produce agricultural output over multiple periods.	34	treatment applies relative to standard machinery or building assets.
G1600100	Orchards, vineyards and bearer crops @ Cost	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Accumulated capital development costs incurred to plant and establish fruit trees or grapevines until maturity.	IFRS for SMEs Sec 34	Once mature, bearer plants are treated under Section 17 Property, Plant, and Equipment rules and depreciated over time.
G1600200	Orchards and vineyards - Accumulated depreciation	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Cumulative depreciation calculated on the productive lifespan of mature orchards, groves, or vineyards.	IFRS for SMEs Sec 17	Useful lifespans depend on crop variety data and regional soil productivity parameters.
G1600300	Breeding stock and dairy herd @ Fair value	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Valuation of permanent bull herds, breeding ewes, or commercial dairy cows held for continuous reproduction or milk generation.	IFRS for SMEs Sec 34	Revalued at each reporting year-end to fair market value less estimated costs to sell.

Architectural Review of this Layout

This looks immensely better. Look at how clean the progression is now:

1. You start with Land & Buildings (G1500) and go right into Land Infrastructure (G1520). They stay

bonded together on your balance sheet.

2. You transition seamlessly into heavy machinery and processing plants (G1540 & G1560).
3. You finish with your light transport fleet (G1580) and then cleanly isolate your specialized agricultural Biological Assets (G1600) into their own distinct zone where your tax practitioner can apply Section 34 specialized valuations without touching your mechanical asset codes. Everything is sequential, perfectly mapped, and database-ready.

Office Infrastructure Furniture & Fittings

You are completely right. If we are cleaning up the Non-Current Assets block to be truly production-ready, we cannot leave out Computer Equipment and Furniture & Fittings.

Even on a farm, you have a physical office or packing shed headquarters containing computers for running your accounting software, routers for network connectivity, solar monitoring screens, desks, filing cabinets, and office chairs.

To keep the architecture airtight, we will append these to the end of your movable assets block, placing them immediately after Biological Assets. This maintains our layout principle: moving logically from large-scale, industry-specific operational assets down to general corporate office infrastructure.

The Appended Office Infrastructure Blocks (G1620 and G1640)

Here is the exact data structure to slot directly underneath your G1600000 Biological Assets group:

SACCOUNTCODE	SDESCRIPTION	SGROUP1	SGROUP2	Brief description what the account is used for	References	NOTES
G1620000	COMPUTER EQUIPMENT & IT HARDWARE	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Capital tracking group for server hardware, desktop computers, point-of-sale systems, and network routing setups.	IFRS for SMEs Sec 17	High-turnover assets with a rapid technological obsolescence profile.
G1620100	Computer Hardware & Servers @ Cost	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Original cost price of office PCs, farm management laptops, network routers, and backup power	IFRS for SMEs Sec 17	Excludes standalone software licenses, which must be tracked as Intangible Assets if high-value.

				UPS units.		
G1620200	Computer Equipment - Accumulated Depreciation	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Total cumulative book depreciation charged against the IT hardware footprint.	IFRS for SMEs Sec 17	Typically depreciated aggressively over a short horizon (e.g., 3 years straight-line).
G1640000	FURNITURE & OFFICE FITTINGS	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Administrative capital infrastructure used to equip farm offices, staff boardrooms, and breakroom facilities.	IFRS for SMEs Sec 17	Low-turnover assets that generally remain permanently bound to the administrative office spaces.
G1640100	Office Furniture & Fittings @ Cost	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Cost price of desks, chairs, filing cabinets, boardroom tables, and mounted office air-conditioning units.	IFRS for SMEs Sec 17	Maintain serial numbers or asset tags in your asset register linking back to this ledger.
G1640200	Furniture & Fittings - Accumulated Depreciation	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Total cumulative book depreciation recorded against office furniture assets over their operational lifecycle.	IFRS for SMEs Sec 17	Depreciated over a moderate timeline (e.g., 5 to 10 years straight-line).

Crucial Local Guardrails for Office Assets

When importing these final rows into your system, keep two specific South African tax and operational quirks in mind:

1. The Small Item Write-Off Rule (SARS Interpretation Note 47)

For a sole proprietor, bookkeeping can get tedious if you have to create a depreciation schedule for a cheap R1,500 office desk calculator or a basic R2,000 label printer.

SARS allows an immediate 100% tax write-off for individual assets that cost under R7,000 (excluding VAT).

- Bookkeeping Choice: You can either capitalize them to G1620100/G1640100 and let your accountant handle the 100% write-off entry at year-end, or write them off instantly to your income statement under a general expense line like G6800100: Small Consumables & Office Equipment under R7,000.

2. SARS Section 11(e) vs. Book Depreciation

While your accounting system will track standard straight-line "book" depreciation to satisfy IFRS for SMEs, your tax practitioner will use Section 11(e) wear-and-tear allowances on your ITR12 tax return. SARS standardizes these timelines:

- Computers and laptops: 3 years (33.3% per year).
- Office furniture: 6 years (16.6% per year).

By grouping these cleanly into sequential G1620 and G1640 rows, your system ensures that your ledger balances map perfectly to the standardized asset classes the banks and SARS expect to see when closing off a financial year.

Solar Infrastructure

Yes, absolutely! Now that we have systematically cleaned up the Non-Current Assets block, we need to weave the Solar Infrastructure & Renewable Energy assets into this exact chain.

Because solar plants are high-value, semi-permanent installations that actively generate operational power for your pumps and packing sheds, they fit perfectly right after your physical Farm Infrastructure & Buildings (G1520) and right before your movable Machinery & Implements (G1540).

This keeps your real estate and structural assets tightly bound together at the top of your ledger before you transition into vehicles and office gear.

Where Solar Infrastructure Fits into the Sequence

We will allocate the G1530000 block for Solar (which was previously occupied by tractors in your original uncorrected layout). This creates an uninterrupted, logical flow of physical, land-tied structural assets.

Here is the exact data structure to insert into your database:

SACCOUNTCODE	SDESCRIPTION	SGROUP1	SGROUP2	Brief description what the account is used for	References	NOTES
G1530000	SOLAR INFRASTRUCTURE & RENEWABLE PLANT	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Capital tracking group for on-farm renewable energy generation	IFRS for SMEs Sec 17	Foundational asset group reducing reliance on the national

				, inverters, and battery storage networks.		utility grid.
G1530100	Solar Generation Generation Plant @ Cost (Qualifying Sec 12B)	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Capital cost of PV panels, mounting racks, DC cabling, combiners, and dedicated array structural foundations.	IFRS for SMEs Sec 17	Qualifies for an accelerated 100% upfront tax write-off under SARS Section 12B regulations.
G1530200	Inverters & Energy Storage Systems @ Cost (Qualifying Sec 12B)	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Capital cost of commercial hybrid inverters, charge controllers, and lithium-ion battery storage banks.	IFRS for SMEs Sec 17	Fully integrated storage units qualify for the accelerated tax allowance alongside generation assets.
G1530300	Balance of Plant & Distribution Infrastructure @ Cost (Non-Sec 12B)	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	High-value electrical items serving general transmission rather than generation (bulk DB boards, main transformers).	IFRS for SMEs Sec 17	Does not qualify for Section 12B; depreciated over standard 5-to-10-year timelines.
G1530400	Solar Plant & Infrastructure - Accumulated Depreciation	NON-CURRENT ASSETS @Property, plant and equipment	NON-CURRENT ASSETS	Total cumulative book depreciation charged against the solar generation plant over its	IFRS for SMEs Sec 17	Book depreciation rates (e.g., 15-20 years) track physical asset degradation, keeping

operational useful life.	book value realistic.

The Master Non-Current Asset Sequence (The Final Blueprint)

Now your database numbering system tells a flawless, chronological story from the absolute ground up. If you look at your ledger parent groups sequentially, they scale perfectly:

- G1500000 – Farmland & Immovable Property (The actual earth and brick buildings)
- G1520000 – Farm Infrastructure & Buildings (Dams, boreholes, tunnels, and fencing)
- G1530000 – Solar Infrastructure & Renewable Plant ◫ Inserts perfectly here as a land-tied utility structural asset.
- G1540000 – Farm Implements & Packhouse Equipment (Plows, harvesters, sorting lines)
- G1560000 – Tractors & Heavy Vehicles (Tractors and long-haul delivery trucks)
- G1580000 – Light Vehicles & LDVs (The farm bakkies)
- G1600000 – Biological Assets (Orchards, vineyards, and breeding herds)
- G1620000 – Computer Equipment & IT Hardware (Office tech and network routers)
- G1640000 – Furniture & Office Fittings (Desks, chairs, and office air-cons)

Why This Placement is Bulletproof for a Sole Proprietor

By separating the qualifying generation assets (G1530100 and G1530200) from the general distribution components (G1530300), you make it incredibly simple to hand your asset register to your tax practitioner. When they calculate your annual tax return on your ITR12, they can cleanly apply the SARS Section 12B 100% accelerated capital allowance to the generation codes instantly, slashing your personal taxable income while maintaining regular, smooth IFRS depreciation on the rest of the farm's components.

Created with the Standard Edition of HelpNDoc: Simplify Your Help Documentation Process with a Help Authoring Tool

New topic

DIESEL REBATE SETTLEMENT ACCOUNT
You have caught a massive, high-risk structural problem here. Leaving these entertainment accounts entirely inside the **`Selling and marketing`** reporting group is a major compliance trap under South African tax law.

While business meals with clients *feel* like selling or marketing expenses, **SARS views entertainment with extreme suspicion.** Under **Section 23(g)** and **Section 23(F)** of the Income Tax Act, general entertainment is strictly non-deductible, and under **Section 17 of the VAT Act**, Input VAT on entertainment is almost entirely blocked—*even if you took a major client out to secure a crop sale.*

If you leave these accounts clashing with your clean, fully deductible selling and marketing expenses, your year-end tax calculations will be a nightmare, and your database will fail a SARS audit.

1. Why They Clash and How to Fix It

To keep your ledger airtight, we must split this block based on tax compliance and move the general staff/administrative costs completely away from Selling Expenses:

- **Move to General Admin:** Staff meals (`G6500200`) and Travel meals (`G6500300`) have nothing to do with selling or marketing. They belong under **General Administrative Overheads**.
- **Isolate Non-Deductible Items:** By segregating **Non-deductible entertainment (`G6500400`)**, your accountant can add back 100% of that balance in your tax return effortlessly.

- **The VAT Block:** In your database configuration for this entire range, the standard default tax code must be set to **Exempt or Zero-Rated for Input VAT** because you cannot legally claim the 15% back on staff catering or client lunches.

2. The Restructured, Corrected Database Template

We will move this block completely out of the Selling & Marketing parent group and establish it under **`OPERATING EXPENSES@General and administrative`**. If an item explicitly relates to a marketing event, it can be allocated there via a clear description, but the core accounts must sit where your tax practitioner can monitor them.

Here is the clean, tab-delimited ready ledger restructure:

SACCOUNT CODE	SDESCRIPTION	SGROUP1	SGROUP2	Brief description what the account is used for	REFERENCES	SYSTEM / VAT DEFAULT
G6500000	**ENTERTAINMENT & HOSPITALITY**	OPERATING EXPENSES@ General and administrative	OPERATING EXPENSES	Master group tracking all staff refreshment, client hosting, and travel meal outlays.	Income Tax Act Sec 23(f)	Parent Control Line.
G6500100	Client Hosting & Business Meals	OPERATING EXPENSES@ General and administrative	OPERATING EXPENSES	Cost of hosting commercial buyers, agents, or suppliers for business discussions.	SARS IN 58	**Strictly Blocked Input VAT. 100% Non-deductible.**
G6500200	Staff Refreshments & Office Catering	OPERATING EXPENSES@ General and administrative	OPERATING EXPENSES	Day-to-day tea, coffee, milk for farm workers, and occasional staff function catering.	Income Tax Act Sec 23(g)	**Blocked Input VAT. Deductible ONLY if basic staff welfare.**

G6500900	Other Hospitality & Staff Welfare	OPERATING EXPENSES@ General and administrative	OPERATING EXPENSES	Ad-hoc emergency food provisions or minor staff welfare costs not matching standard categories.	IFRS for SMEs Sec 5	Blocked Input VAT by default.

3. The Functional Mapping Rule for osFinancials / TurboCASH

By applying this restructure:

1. Your **Selling and Marketing** group stays 100% clean and contains only fully deductible, direct market expenses (like transport trucks, market commissions, agent fees, and promotional packaging materials).
2. Your **General and Administrative** group absorbs the entertainment footprint.
3. When exporting data to your tax tool, your tax practitioner can see the total of **`G6500000`** instantly and know exactly how much of your farm's profit needs to be adjusted upwards to calculate your true provisional tax on your ITR12.

New topic

Here is the updated, complete layout for your master Chart of Accounts (COA) template database.

This configuration maps out your exact seven-digit G system parameters, explicitly links your physical storage and usage logbooks to the matching general ledger lines, and enforces the statutory requirements under Schedule 6 of the South African Customs and Excise Act.

Chart of Accounts Master Table

SACCOUNTCODE	SDESCRIPTION	SGROUP1	SGROUP2	Brief Description	References	NOTES
G1350600	SARS Diesel Rebate Receivable (Provisional)	CURRENT ASSETS @Trade and other receivables	CURRENT ASSETS	Tracks the estimated, unfiled rebate asset accumulated from physical fuel usage logs during the active tax cycle.	Customs and Excise Act Sch 6	Cleared down to zero via journal at the end of the tax period when the claim is officially transferred to the VAT201 return.
G2400800	SARS DIESEL REBATE	CURRENT LIABILITIES@Tax	CURRENT LIABILITIES	Isolates the finalized	SARS VAT201 Return	Holds a debit balance

	SETTLEMENT ACCOUNT	liabilities		diesel rebate claim portion submitted to eFiling, separating it from normal VAT transactions.	(Field 30/Customs Offset)	representing outstanding state debt during SARS verification/audit cycles. Return to zero upon cash drop or offset.
G6100000	FARM FLEET AND MECHANISATION EXPENSES	OPERATING EXPENSES@Administrative expenses	OPERATING EXPENSES	Header control group for all traction, machinery, and fleet operational costs on the primary farm unit.	Management Reporting	Parent summary account. No direct transactions should be posted here.
G6100100	Tractor and machinery diesel and oil (Gross Purchases)	OPERATING EXPENSES@Administrative expenses	OPERATING EXPENSES	Records the total bulk delivery invoice costs for diesel fuel and lubricants, excluding the 15% input VAT.	Supplier Tax Invoice	Refers to the total pool before logbook allocation or usage splits are applied. Cross-references the Storage Logbook.
G6100120	Fuel - Eligible diesel usage (Logbook internal track)	OPERATING EXPENSES@Administrative expenses	OPERATING EXPENSES	Statistical ledger line used to trace the volume/value of fuel assigned directly to primary on-land agricultural production.	Usage Logbook (Primary production tasks)	Critical audit-trail account. Must tie directly back to engine hours, pump readings, and tilling sheets.
G6100140	Fuel - Non-	OPERATING	OPERATING	Statistical ledger line	Usage Logbook	Used to justify the

	eligible diesel usage (Logbook internal track)	EXPENSES@Administrative expenses	EXPENSES	tracing fuel used for general administration, road transport, or social/personal activities.	(Excluding primary production)	non-claimable volume percentage to SARS auditors, preventing arbitrary adjustments.
G6100190	SARS Diesel rebate recovered (Contra-expense account)	OPERATING EXPENSES@Administrative expenses	OPERATING EXPENSES	Receives the offsetting credit of the calculated monthly rebate value, directly reducing net production costs.	Schedule 6 Agricultural Rebate Rates	Positioned immediately beneath fuel accounts so financial statements display the true net operating cost of fuel.
G6100200	Tractor and machinery electric charging	OPERATING EXPENSES@Administrative expenses	OPERATING EXPENSES	Tracks utilities and direct recharging costs for electric farm equipment or hybrid farm utility vehicles.	Utility Sub-meter Invoice	Isolated from fossil fuel pools to analyze alternative power source efficiencies over time.
G6100300	Tractor, implement and bakkie insurance	OPERATING EXPENSES@Administrative expenses	OPERATING EXPENSES	Records the monthly or annual premium costs for the farm's mechanical vehicle fleet and implements.	Insurance Broker Schedule	Short-term asset protection charges covering operational transport risk.
G6100400	Machinery breakdowns, repairs and welding shop consumabl	OPERATING EXPENSES@Administrative expenses	OPERATING EXPENSES	Captures mechanical maintenance, engineering labor,	Workshop Job Cards	Repairs that extend an asset's lifespan beyond its original

	es			spare parts, and workshop materials spent on repairs.		design parameter should be capitalized instead.
G6100500	Licence and registration fees for trailers and farm vehicles	OPERATING EXPENSES@Administrative expenses	OPERATING EXPENSES	Tracks statutory annual roadworthy licensing, disk renewals, and trailer registrations with the licensing department.	National Traffic Information System (NATIS)	Statutory operating compliance cost. Non-deductible penalties go to G6100700 instead.
G6100600	Vehicle - Tolls and parking fees	OPERATING EXPENSES@Administrative expenses	OPERATING EXPENSES	Records e-toll fees, national route tolls, and business-related parking costs incurred during delivery or supply runs.	Fleet Card Statements	Business-related operational road travel costs.
G6100700	Vehicle - Traffic fines / Vehicle violation expenses	OPERATING EXPENSES@Administrative expenses	OPERATING EXPENSES	Captures traffic fines, overload violations, or other statutory penalties issued against the farm fleet.	AARTO / Municipal Notices	Note: Strictly non-deductible for income tax purposes under SARS regulations. Isolated to maintain accurate tax computations.
G6100900	Other vehicle-related costs	OPERATING EXPENSES@Admini	OPERATING EXPENSES	Catch-all account for minor fleet	Petty Cash / Cash Vouchers	Monitored periodically to check if specific

	strative expenses	incidentals, such as valets, breakdown towing, or localized emergency assistance.	recurring costs require a dedicated ledger line.

Language File Synchronization Definitions (English-batch.dfm)

To prevent any string truncation, layout shifting, or compilation drops on your system screens, the application's core language file parameters match these strings:
