  In addition to the purchase journal, you can process purchase and supplier return documents using the Documents section on the Default ribbon. Purchases and supplier return documents can be linked to the purchase journal in Setup → Documents setup (Setup ribbon). When you process purchase and supplier return documents, the source documents will be automatically generated, allowing you to have physical or digital copies of these documents for record-keeping purposes. These documents can be printed and reprinted as needed, enabling you to send them to your creditors (suppliers/vendors) as required.

  Once the purchase and supplier return documents are updated and posted to the ledger, the corresponding transactions will be automatically processed in the purchase journal. Each item included in the purchase and supplier return documents will be recorded in the purchase journal, ensuring accurate tracking of your purchase transactions.

  By utilising the purchase journal and linking purchase and supplier return documents, you can efficiently manage and maintain a comprehensive record of your purchase activities in osFinancials5/TurboCASH5.

- Cash transactions: To record cash transactions in osFinancials5/TurboCASH5, specialised journals such as the cash receipts journal and cash disbursements journal are used. In osFinancials5/TurboCASH5, when setting up bank accounts and petty cash accounts in the Setup → Accounts menu of the Setup ribbon, each account will be associated with its own unique payments journal and receipts journal.

  If the Bank import plugin is not activated in osFinancials5/TurboCASH5, you can manually process cash transactions in the respective payments journal and receipts journal associated with the bank account or petty cash account. To access these journals, you can go to the Batch entry option on the Default ribbon.

  If the Bank import plugin is activated, you have the option to process and import transactions directly into the payments journal and receipts journal associated with the bank account or petty cash account. This can be done through the Cash/Bank entry option on the Default ribbon.

  By using the appropriate journals for cash transactions, you can effectively record and manage your cash receipts and disbursements. The journals allow for accurate tracking of cash flows, providing a clear overview of your financial activities.

  Please note that the availability and functionality of specific features may depend on the configuration

and settings of your Set of Books in osFinancials5/TurboCASH5.

Bank import plugin - Bank Reconciliations Plugin Manual - BankImport Plugin Manual - Shop - The Bank import plugin is included in the osFinancials5/TurboCASH5 subscription.

The Bank import plugin is included with the osFinancials5/TurboCASH5 Business Class license, meaning you have access to it without any additional cost or separate license requirement.

With the plugin, you can download bank statement files from your online banking app or portal provided by your bank or financial institution. These files can be imported into the appropriate bank accounts (cash books) in osFinancials5/TurboCASH5.

You can download statements for multiple bank accounts and credit cards, as long as you have them linked to your online banking. Each bank account or credit card should have its corresponding Payments and Receipts journals set up in osFinancials5/TurboCASH5.

Importing the bank statements automatically populates the transactions into the Payments and Receipts columns, saving you time and reducing the risk of errors associated with manual entry.

The plugin offers a user-friendly interface with context menus that make it easy to locate, select, and search for specific transactions, debtors, creditors, or general ledger accounts. This simplifies the navigation and management of your bank transactions.

You can link debit transactions to credit transactions and vice versa, allowing for accurate tracking of outstanding balances and efficient management of payments and receipts. You can also link a portion of a payment or receipt to multiple outstanding transactions if needed.

Additionally, the plugin allows you to link accounts to specific debtors, creditors, or general ledger accounts. This ensures that subsequent bank statement imports automatically allocate transactions correctly based on the predefined account linkages, improving accuracy and saving time.

The plugin utilizes bank references to automatically allocate or link various transactions to the correct accounts in your Set of Books. It supports automatic receipts for debit orders from your debtors and automatic payments for managing supplier payments.

In summary, the Bank import plugin in osFinancials5/TurboCASH5 simplifies the import of bank statements, automates transaction allocation, and efficiently manages and reconciles your bank accounts. It reduces manual data entry, improves accuracy, and streamlines your financial management processes.

- Payroll: To record payroll transactions in osFinancials5/TurboCASH5, a specialised journal such as the payroll journal can be used. If you need to add the payroll journal, you can do so in the Setup → Batch types menu on the Setup ribbon.

  By processing payroll transactions in the payroll journal, you can effectively track your salary and wage

expenses and payments. This allows you to have a dedicated journal specifically for recording payroll-related transactions, providing specific configuration of the payroll journal and better organisation and analysis of your payroll data.

In addition to the payroll journal, osFinancials5/TurboCASH5 also provides the option to process repeating transactions. Repeating transactions can be accessed in the Edit → Repeating transactions menu on the Default ribbon. This feature allows you to set up and manage transactions that occur on a regular basis, such as recurring payroll entries. You can edit the repeating transactions as needed and import them into the normal payroll journal, ensuring consistency and efficiency in recording your payroll transactions.

Using a payroll journal and taking advantage of the repeating transactions feature in osFinancials5/TurboCASH5 can streamline your payroll processing and help maintain accurate records of your payroll expenses and payments.

- Depreciation: To record fixed asset transactions in osFinancials5/TurboCASH5, a specialized journal such as the fixed asset journal can be used. If the fixed asset journal is not already added, you can do so in the Setup → Batch types menu on the Setup ribbon.

  By processing transactions for fixed assets in the fixed asset journal, you can effectively track your fixed asset-related transactions. This includes recording acquisitions, disposals, multi-year depreciation, and any transactions related to losses or profits on the disposal of fixed assets. Having a dedicated journal specifically for fixed asset transactions allows for better organization and analysis of your fixed asset data.

  In addition to the fixed asset journal, osFinancials5/TurboCASH5 also provides the option to process repeating transactions. The repeating transactions feature can be accessed in the Edit → Repeating transactions menu on the Default ribbon. This feature is useful for setting up and managing transactions that occur on a regular basis, such as recurring depreciation entries for fixed assets. You can edit the repeating transactions as needed and import them into the normal fixed asset journal, ensuring consistency and efficiency in recording your fixed asset transactions.

  Using the fixed asset journal and leveraging the repeating transactions feature in osFinancials5/TurboCASH5 can streamline your fixed asset processing and help maintain accurate records of your fixed asset-related transactions. This allows for better tracking and management of your fixed assets throughout their life-cycle.

  It's important to note that the availability and functionality of specific features may vary depending on the configuration and settings of your Set of Books in osFinancials5/TurboCASH5.

Activa plugin - *Manual* - *Shop* - *Licence : Once-off* -

The Activa plugin automates the management and processes of fixed assets and the depreciation of fixed assets in your accounts over the lifespan of the fixed assets. Periodically you will receive a notification screen, which the depreciation shown. From this screen, the depreciation(s) can directly take place.

The Activa plugin in osFinancials5/TurboCASH5 allows you to register fixed assets that need to be written off. The write-off process occurs over the lifespan of the asset and can be spread across multiple financial years.

By adding the Activa Fixed asset accounts in the plugin setup, you will receive reminders when new transactions are posted to the ledger or when Activa transactions require processing. This automation streamlines the management of depreciation allowances for fixed assets (tangible assets) in your Set of Books over the asset's lifespan.

As you record the depreciation expenses for each financial year, they will be reported in the income statement and reduce your net profit. Additionally, the plugin will provide you with the net value of your fixed assets, which is calculated as the fixed assets' cost minus the accumulated depreciation, and this information will be reflected in the balance sheet.

In summary, the Activa plugin helps automate the depreciation management process, ensures accurate reporting of depreciation expenses, and provides visibility into the net value of fixed assets over their lifespan in both the income statement and the balance sheet.

When a fixed asset reached the end of life end process that will clear of the total write-off from the balance write-off account and the initial asset account. This will display only the remaining total on the asset account and the contra account the will be cleared of this total.

By allowing the write-off process to occur over the lifespan of the asset and providing reminders for transaction processing, the plugin further streamlines the management of depreciation allowances for fixed assets.

The accurate reporting of depreciation expenses in the income statement and the reflection of the net value of fixed assets (cost minus accumulated depreciation) in the balance sheet remain essential features of the plugin.

Furthermore, the ability to clear the total write-off from the balance write-off account and the initial asset account when a fixed asset reaches the end of its life adds to the efficiency of the process.

The Activa plugin's powerful grid, custom filtering options, and integrated pivot tables enhance the search and analysis capabilities for active fixed assets, assets requiring processing, and transaction details. The Ledger analyser allows for the printing and exporting of the trial balance, income statement, and balance sheet, while the T-Account viewer facilitates the export of transactions to spreadsheets.

The Central search feature in osFinancials5/TurboCASH5 further aids in searching for transactions related to fixed assets, providing comprehensive functionality for managing and analysing fixed asset data.

- Accrual-based adjustments: To record transactions for accrual-based accounting adjustments, you can add an "*Adjustments*" journal type in the Setup → Batch types menu on the Setup ribbon. By creating an adjustments journal, you can specifically configure the options for recording month-end or year-end adjustments and easily track these adjustments within your Set of Books.

Using a dedicated adjustments journal allows you to separate these specific transactions from other routine transactions and provides better organization and visibility for accrual-based adjustments. This ensures that these adjustments are properly captured and reflected in your financial statements.

Specialised journals

Payroll journal: This journal type can be used specifically for recording payroll entries, including salary expenses, tax withholdings, benefits, and other related transactions. It allows for accurate tracking and reporting of payroll-related costs.

Fixed assets journal: By creating a custom journal type for fixed assets, you can record transactions related to asset acquisition, depreciation, disposals, and any other changes in the fixed asset register. This ensures proper tracking of asset values and facilitates compliance with accounting standards and regulatory requirements.

Accruals journal: An accruals journal can be used to record accrual-based adjustments, such as recognizing revenue or expenses that have been incurred but not yet recorded in the general ledger. This journal type helps ensure accurate matching of revenues and expenses in the appropriate accounting periods.

Inventory adjustment journal: This journal type allows for the recording of inventory adjustments, such as write-offs, write-downs, and any changes in the quantity or value of inventory items. It helps maintain accurate inventory records and supports proper valuation of inventory on the financial statements.

Depreciation journal / Amortization journal

Depreciation journal or Amortization journal - is there examples of transactions to be recorded in this journal?

There are examples of transactions that can be recorded in a Depreciation Journal or Amortization Journal. These journals are used to record the periodic depreciation or amortization expense of fixed assets or intangible assets. Here are some examples:

Depreciation journal:

1. Straight-Line Depreciation: This is the most common method of depreciation, where the asset's cost is evenly allocated over its estimated useful life. Each period, a portion of the asset's value is recorded as depreciation expense in the Depreciation Journal.
2. Accelerated Depreciation: In some cases, businesses may use accelerated depreciation methods, such as the declining balance method or the sum-of-the-years'-digits method. These methods allocate higher depreciation expense in the early years and lower expense in the later years.
3. Depreciation Expense Adjustment: If there are any changes to the estimated useful life or residual value of an asset, an adjustment entry would be made in the Depreciation Journal to reflect the updated depreciation expense.

Amortization journal:

1. Intangible Asset Amortization: Intangible assets, such as patents, trademarks, copyrights, and software, are typically amortized over their estimated useful life. The periodic amortization expense is recorded in the Amortization Journal.
2. Loan Amortization: If your business has loans or borrowings, the periodic repayment of principal and interest can be recorded in the Amortization Journal. This allows for accurate tracking of the principal reduction and interest expense over time.
3. Prepaid Expense Amortization: If your business has prepaid expenses, such as insurance premiums or rent paid in advance, the gradual allocation of these expenses over the applicable period can be recorded in the Amortization Journal.

These examples highlight the types of transactions that can be recorded in a Depreciation Journal or Amortization Journal. The specific entries will depend on the depreciation or amortization methods used, the assets or liabilities being accounted for, and any adjustments or changes made over time. By maintaining a dedicated journal for depreciation or amortization, you can accurately record and track these expenses, ensuring compliance with accounting principles and providing a clear view of your asset or liability values.

Accruals journal

The Accruals journal is used to record accrual entries, which are adjustments made to recognize revenues or expenses that have been earned or incurred but not yet recorded in the financial statements. Here are some examples of transactions that could be recorded in an Accruals journal:

1. Accrued Revenues: If your business has provided goods or services to customers, but the payment or invoice has not been received or issued by the end of the accounting period, you can record an accrued revenue entry. This recognizes the revenue earned in the current period, even though the payment or invoice is not yet received.
2. Accrued Expenses: Similarly, if your business has received goods or services from suppliers, but the payment or invoice has not been processed or received by the end of the accounting period, you can record an accrued expense entry. This recognizes the expense incurred in the current period, even though the payment or invoice is not yet paid.
3. Interest Accruals: If your business has borrowed funds and the interest expense for a certain period has not been paid or invoiced, you can record an accrual entry to recognize the interest expense incurred during that period.
4. Salary and Wage Accruals: If your business has employees and the payroll period ends before the actual payment is made, you can record an accrual entry to recognize the salary or wage expense incurred during that period.
5. Rent Accruals: If your business is renting premises or equipment and the rental period ends before the actual payment is made, you can record an accrual entry to recognize the rent expense incurred during that period.
6. Utilities Accruals: If your business has utility expenses, such as electricity or water, and the billing period ends before the actual payment is made, you can record an accrual entry to recognize the utility expense incurred during that period.

These are just a few examples of transactions that could be recorded in an Accruals Journal. The specific entries will depend on the nature of your business and the timing of revenue and expense recognition. By recording these accrual entries in a dedicated journal, you can ensure that your financial statements reflect the appropriate revenue and expense recognition, providing a more accurate representation of your business's financial position.

Inventory adjustment journal

Inventory adjustment journal - Is there examples of transactions to be recorded in this journal?

The Inventory Adjustment Journal is used to record various transactions related to inventory adjustments. These adjustments help to maintain accurate inventory records and reflect changes in the quantity or value of inventory items. Here are some examples of transactions that can be recorded in an Inventory Adjustment Journal:

1. Physical Inventory Count: When conducting a physical inventory count, any discrepancies found between the actual physical count and the recorded inventory quantities are recorded in the Inventory Adjustment Journal. This includes adjustments for overstock or understock situations.
2. Damaged or Spoiled Goods: If inventory items become damaged, spoiled, or unsellable, the reduction in their value is recorded as an inventory adjustment. This adjustment is typically recorded as a decrease in quantity and value in the Inventory Adjustment Journal.
3. Write-Off of Obsolete Inventory: When inventory items become obsolete or are no longer usable or sellable, they are typically written off from the inventory records. The write-off is recorded as a decrease in quantity and value in the Inventory Adjustment Journal.
4. Returns or Exchanges: If there are customer returns or exchanges that result in changes to inventory quantities, the adjustments are recorded in the Inventory Adjustment Journal. This includes both increases and decreases in quantity and value.
5. Price Adjustments: If there are changes in the cost or selling price of inventory items, adjustments may be made in the Inventory Adjustment Journal to reflect the updated values. This helps to ensure accurate valuation of inventory.
6. Shrinkage or Losses: Inventory shrinkage or losses can occur due to theft, damage, or other reasons. Any adjustments made to account for these losses are recorded in the Inventory Adjustment Journal as decreases in quantity and value.

These examples highlight the types of transactions that can be recorded in an Inventory Adjustment Journal. The specific entries will depend on the nature of your business, the inventory management practices you follow, and any specific events or circumstances that impact your inventory. By maintaining a dedicated journal for inventory adjustments, you can keep track of changes in inventory quantities and values, maintain accurate records, and ensure your financial statements reflect the true state of your inventory.

Inter-company transactions journal - Is there examples of transactions to be recorded in this journal?

Inter-company transactions involve transactions between different entities or subsidiaries within the same organization. Here are some examples of transactions that could be recorded in an Inter-company transactions journal:

1. Inter-company sales: When one entity within the organization sells goods or services to another entity, the transaction should be recorded in the Inter-company transactions journal. This ensures that the sales revenue is properly recognized in the selling entity's financial records and the purchasing entity's accounts payable is appropriately recorded.
2. Inter-company purchases: Similarly, when one entity purchases goods or services from another entity within the organization, the transaction should be recorded in the Inter-Company Transactions Journal. This ensures that the purchasing entity's accounts payable is accurately reflected, and the selling entity's sales revenue is appropriately recorded.
3. Inter-company loans: If one entity lends funds to another entity within the organization, the loan transaction should be recorded in the Inter-company transactions journal. This helps track the borrowing entity's liability for the loan and the lending entity's receivable for the loan.
4. Inter-company service charges: If one entity provides services to another entity within the organization and charges a fee for those services, the service charge transaction should be recorded in the Inter-company transactions journal. This ensures that the service revenue is appropriately recognized and the purchasing entity's accounts payable is properly recorded.
5. Inter-company asset transfers: When assets are transferred between entities within the organization, such as equipment, machinery, or inventory, the transfer should be recorded in the Inter-company transactions journal. This helps track the movement of assets between entities and ensures proper accounting for the value of the transferred assets.

These are just a few examples of transactions that could be recorded in an Inter-Company Transactions Journal. The specific transactions will depend on the nature of the inter-company activities and the policies of your organization. By recording these transactions in a dedicated journal, you can accurately track inter-company balances, eliminate inter-company transactions during consolidation, and ensure proper financial reporting within your organization.

Point-of-Sales journal

What is the POS journal (Point-of-Sales journal)?

The POS journal, also known as the Point-of-Sales journal, is a specific type of journal used in osFinancials5/TurboCASH5 that integrate with point-of-sale (POS) systems. It is designed to record sales transactions that occur directly at the point of sale, typically in retail or hospitality businesses where goods or services are sold to customers in-person.

Here are some key points about the POS journal:

1. Purpose: The POS journal is used to record and track sales transactions that take place at the point of sale, where customers make purchases in real-time. It captures details such as the items sold, quantities, prices, discounts, and payment methods.
2. Integration with POS Systems: The POS journal is closely linked with the business's POS system or software. It receives data directly from the POS system, which automatically captures and transfers sales transaction information to the journal.
3. Real-Time Recording: As sales occur, the POS system records the transaction details, and the information is immediately transferred to the POS journal. This enables real-time tracking of sales and ensures accurate and up-to-date financial information.
4. Sales Information: The POS journal includes essential details about each sale, such as the date and time of the transaction, customer information, items purchased, sales prices, discounts applied, and the total amount of the sale.
5. Integration with Other Journals: The data from the POS journal is typically integrated into other relevant journals, such as the Sales Journal, Cash Receipts Journal, or General Journal. This integration ensures that the sales transactions are properly recorded and reflected in the appropriate accounts.
6. Reporting and Analysis: The POS journal provides valuable data for reporting and analysis purposes. It allows businesses to track sales trends, monitor inventory levels, evaluate product performance, calculate sales commissions, and analyze customer buying patterns.
7. Cash Management: The POS journal also plays a role in cash management, as it records cash sales and tracks the amount of cash collected during each transaction. This information can be used for cash reconciliation and to ensure that cash on hand matches the recorded sales.

The POS journal is an essential component of accounting systems in retail and hospitality businesses. It

enables accurate and efficient recording of sales transactions, provides real-time information for decision-making, and facilitates proper financial management and reporting.

Batch entry selection screen

These are so named because all transactions of the same type are grouped together as a “batch” (for example, all the receipts or, all the purchases).

Batch types are added / renamed and/or edited in Setup → Batch types. (Setup ribbon).

The following are the most commonly used batch types are included in the Sets of Books:

- Sales journal - This journal or book is used to record your sales for the day. You would record the invoice number, date of invoice, invoice details, the debtor (who you sold to), Output VAT/GST/Sales Tax (if you are registered for VAT/GST/Sales Tax) and the amount you charged the customer - including or excluding VAT/GST/Sales Tax, depending on your requirements.
- Purchase journal - This journal is used to record all the purchases, which were made in the normal operation of your business. Details which would be recorded include the supplier invoice or other number (as a reference), the date of the purchase, purchase details, from whom you purchased, Input VAT/GST/Sales Tax (if you are VAT/GST/Sales Tax registered and if applicable) and the amount you were charged, including or excluding VAT/GST/Sales Tax, depending on your requirements.
- Cashbook - This is made up of both the Receipts and Payments Journals. The Receipts and Payments Journals of the Cashbook are reconciled with a bank statement.
    - Receipts journal - All deposits, along with the date of the deposit, the name of the depositor and the amount are recorded in this book. For debtors it would have the effect of debiting the bank account and crediting the debtor, after the debtor has been debited through the Sales journal.
    - Payments journal - All payments made, along with the date, detail and amount are recorded here. Payments would have the effect of debiting the creditor or the expense, and crediting the bank.
- General journal - This book is used to enter all your opening balances, correct any errors you have made and process items like depreciation of assets and the payroll. Depending on the need, the payroll (or any other journal) for example, can be set up as separate batch type and it will then be possible to print a separate report for that function will then be generated. Other journals that may be

required are the sales returns or debtor allowances journal, petty cash journal, depreciation journal or payroll journal.

To select and open a batch:

1. On the Default ribbon, select Batch entry (F2).

2. Select the batch from the list and click on the Open button. The "*Batch entry*" screen for the selected Batch type will be displayed.

Once the options for a batch or journal has been set up, the Contra account code and name or description, will be displayed. If the options for a batch or journal, which have not yet been setup, it will display no Contra account.

If you access a batch type and the contra account is for example, displayed as the Sales account (010-000), you may change the contra account when you set the options for a batch.

If any transactions have been entered into a batch (journal), the total amount of the transactions entered in the debit column and/or the total amount of the transactions entered in the credit column will be displayed as unposted.

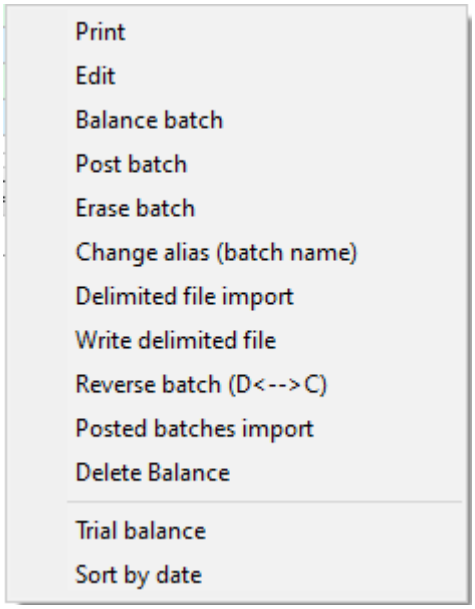
If the batch is in balance (amounts of equal value is entered in the debit and credit columns or if the batch has been balanced), the debit and credit amounts will reflect the same value.

The alias (batch name) will display at the bottom (left to the Open and Cancel buttons.

Created with the Standard Edition of HelpNDoc: Effortlessly Edit and Export Markdown Documents

Batch entry selection screen - Context menu

To access the context menu options, right-click on the "*Batch type*" selection screen for easy access to perform various batch processing tasks in osFinancials5/TurboCASH5. Here is a summary of the available options:



1. Print - Allows you to print a list of transactions in a selected batch (journal) that has not been posted (updated) to the ledger. This provides a printed record of the transactions for reference or auditing purposes. it is recommended to review the batch list and edit or correct any transactions before proceeding to post the batch (journal). This ensures that the transactions are accurate and complete before being updated to the ledger. Printing the list of transactions allows you to have a physical record that can be used for reference, auditing, or reconciliation purposes.

2. Edit - Opens the selected Batch entry screen, where you can enter or add new transactions, edit existing transactions, delete or insert transactions, reverse transactions, change the alias (batch name), write transactions to a delimited file, or import transactions from a delimited file. This option gives you flexibility in managing and modifying batch transactions.

3. Balance batch - Balances the transactions entered into a selected batch by generating balancing entries (transactions) to ensure that the debits and credits in the batch match. Balancing the batch is crucial for accurate financial records and proper posting to the ledger.

4. Post batch - Updates the transactions entered into a selected batch to the ledger, effectively posting them and updating the accounts with the transaction data. This step finalises the batch processing and ensures the transactions are reflected in the financial records.

5. Erase batch - Deletes the selected batch (journal) along with all the transactions contained within it. This option is useful when you need to remove an entire batch and its associated transactions from the system.

6. Change alias - Allows you to modify the alias (batch name) for a selected batch type. The alias provides a unique identifier for the batch and helps in distinguishing between different batches. You

can assign a specific name or use an auto-generated alias based on system date or other criteria.

Auto-alias - Setting may also be activated on the F10:Setup - Advanced tab - "Options for this batch". This will automatically generate the system date as the alias (batch name) (e.g., "20210331") for the batch.

Auto generated - Alias in Receipts batches - TR00001, TR00002,etc. These aliases prefixed with "TR" (consisting of seven (7) digits) will automatically be generated in receipt batches when the "Receive payment" option is used in Open item link context menu.

See -

- *Receive payment for a selected debtor (customer / client) account.*
- *Receive payment for a selected creditor (supplier / vendor) account.*

7. Delimited file import - Imports transactions from a valid delimited file into the selected batch (journal). This feature enables you to efficiently import a large number of transactions from external sources into osFinancials5/TurboCASH5.

8. Write delimited file - Writes or exports the transactions entered or imported into a batch to a delimited file. This option allows you to generate a file containing the batch transactions that can be used for various purposes such as data backup or to re-import the transactions a batch or journal at a later stage.

9. Reverse batch (D<-->C) - Reverses the amounts of transactions in a selected batch (journal) from the debit column to the credit column or vice versa. This option is helpful when you need to correct or adjust the direction of the transaction entries.

10. Posted batches import - Imports transactions from a valid file format if the transactions from a batch (journal) that have already been posted (updated) to the ledger were exported using the "*Export - Posted Batches*" option. This feature allows you to re-import posted transactions if necessary.

11. Delete balance - Deletes the balancing entries (transactions) if the selected batch (journal) is already balanced. This option is useful when you want to remove or modify the balancing entries associated with a batch.

12. Trial balance - Generates a trial balance for the unposted transactions entered or imported into batches that have not been posted (updated) to the ledger. You can choose to include unposted transactions, posted transactions, or only posted transactions in the trial balance report. This helps in reviewing the financial impact of unposted transactions.

13. Sort by date - Sorts the transactions in the selected batch (journal) in ascending date sequence (from the oldest date to the latest date) if they have not been entered or imported in that order. This option ensures proper sequencing of transactions based on their transaction dates.

If any invoices and credit notes have been updated to the ledger, these transactions will be included in the batch type report for the sales journal (or other batch (journal)) selected in Setup → Documents setup.

If any Purchase documents and Supplier return documents have been updated to the ledger, these transactions will be included in the batch type report for the Purchase journal (or other batch (journal)) selected in Setup → Documents setup.

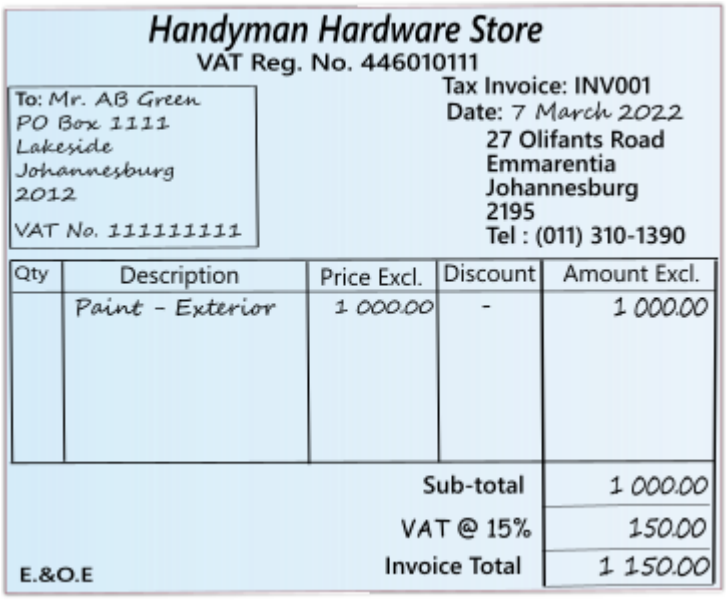
Created with the Standard Edition of HelpNDoc: Simplify Your Help Documentation Process with a Help Authoring Tool

Batch entry form

The batch entry screen can accommodate various types of transactions depending on your business needs. It allows you to enter the necessary details, allocate amounts to specific accounts, and accurately record your financial transactions.

Remember to adhere to proper accounting principles and guidelines when entering transactions and ensure that the information entered is accurate and supported by appropriate documentation.

The basic layout and principles of the "*Batch entry*" screen, is as follows:



Handyman Hardware Store
VAT Reg. No. 446010111

To: Mr. AB Green
PO Box 1111
Lakeside
Johannesburg
2012
VAT No. 111111111

Tax Invoice: INV001
Date: 7 March 2022
27 Olifants Road
Emmarentia
Johannesburg
2195
Tel : (011) 310-1390

Qty	Description	Price Excl.	Discount	Amount Excl.
	Paint - Exterior	1 000.00	-	1 000.00
			Sub-total	1 000.00
			VAT @ 15%	150.00
			Invoice Total	1 150.00

E.&O.E

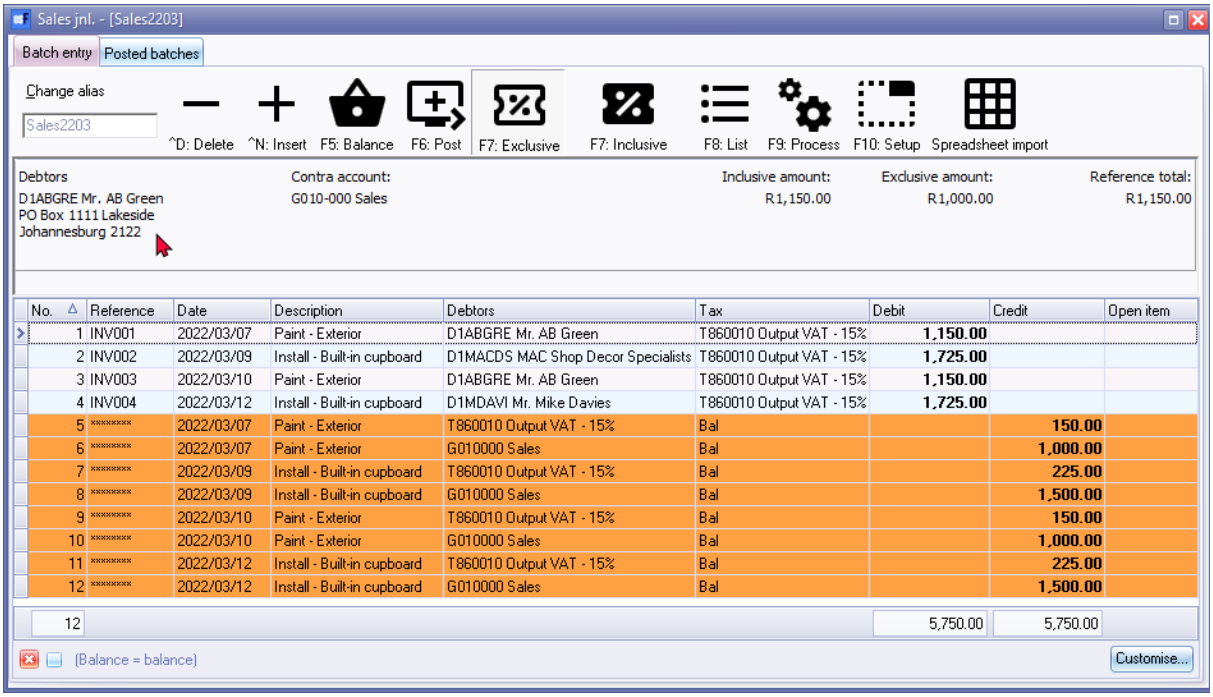
When selecting a debtor (customer/client) account or a creditor (supplier/vendor) account in the batch entry screen, their details such as account code, name, and address will be displayed. This allows you to verify the accuracy of the account details before entering the transaction.

If you notice any discrepancies in the displayed information for a debtor or creditor account, such as an incorrect address, you can update the account with the correct details. In osFinancials5/TurboCASH5, you can do this by following these steps:

1. *In the Batch entry screen, right-click on the debtor or creditor account for which you want to edit the details.*
2. *From the context menu that appears, select the "Edit account" option and select the "Debtors" or "Creditors" account type.*
3. *Select the debtor or creditor account. This will open the account details screen for the selected debtor or creditor account.*
4. *Make the necessary changes to the address or other contact information in the account details.*
5. *Save the updated information to apply the changes to the debtor or creditor account.*

Alternatively, you can access the debtor or creditor accounts directly from the Default ribbon. In osFinancials5/TurboCASH5, you will find the "Debtors" and "Creditors" options on the Default ribbon. Clicking on these options will allow you to view and edit the debtor or creditor accounts and make the necessary changes to the contact details.

By keeping the debtor and creditor account information up to date, you can ensure accurate communication and maintain reliable records of your business transactions.



For each transaction, you need a source document from which you will enter the basic information in a Batch entry screen. We would enter the cheque number, date, to whom the payment is made, for what, and the amount of the transaction.

Title bar

Displays the name of the selected batch accessed from the batch type screen. The name of the selected batch [between square brackets in the title bar], may be entered in the Change alias field to reflect the batch name for the specific transactions entered into the selected batch. Once the batch is posted or updated to the ledger, the batch name will make it easier if you need to identify the specific batch to print a batch type report, export the posted transactions in the posted to a file or to reverse the posted batch.

Speed buttons or icons

These speed buttons or icons are conveniently placed below the title bar on the Batch entry screen to allow you to access the most frequently used options with ease. Each of the speed buttons has a shortcut key to access the required option from your keyboard.

^D:Delete - Delete selected transaction(s).

^N:Insert - Select the line or row in which you wish to insert a blank line or row above the selected transaction.. You may then enter a transaction.

F5:Balance - Generate balancing transactions to the contra accounts.

F6:Post - Post (update) transactions to the ledger.

F7:Exclusive - Enter amounts of transactions exclusive of Tax (VAT/GST/Sales tax).

F7:Inclusive - Enter amounts of transactions inclusive of Tax (VAT/GST/Sales tax).

F8:List - After entering all your transactions in a batch, and before updating or posting the transactions to the ledger, you need to print a list of the transactions entered in the batch.

F9:Process - Launches the Batch processing options to select various options to process transactions in unposted batches, export and import functions. Various functionalities to generate and process transactions is also available.

F10:Setup - Set and configure the "*Batch entry*" screen for each batch or journal to meet your own specific requirements. The following two (2) options is available:

- Standard tab - In addition to selecting the contra account, various settings and configuration options, you may set the amount entry columns to "*Debit, Credit*" or "*Allow both*" to enter amounts faster and more accurately.
- Advanced tab - In addition to various settings and configuration options, the "*Account code lookup type*" and "*Contra account lookup type*" may be set to list only those accounts to select from in the Accounts lookup when processing transactions.

Spreadsheet import - osFinancials5/TurboCASH5 supports the "*Excel Workbook (*.xlsx) file type* Spreadsheet import and export feature.

- Spreadsheet export - You may export unposted batch transactions and save it as a "*Excel Workbook (*.xlsx) file type.*
- Spreadsheet import - You may import batch transactions from a saved "*Excel Workbook (*.xlsx) file type.*

Column headings and rows

Column headings

Show where to enter the basic information:

Column heading	*Description*
Reference:	*The number of the document, which contains the details of the transaction. It may be an invoice*

	number for a sales transaction, a supplier invoice number for a purchase transaction, cheque number for a payment mad, deposit or receipt for a payment received, etc., depending on the batch type.
Date:	*The date of the transaction. This date must be a valid date within any accounting period within a financial year.*
Description:	*A brief description of the details of the transaction.*
Account:	*The account which must be debited or credited with the transaction.*
Tax:	*The tax account - the correct tax code must be selected if you are registered as a VAT/GST/Sales Tax Vendor and/or if VAT/GST/Sales Tax is applicable to an entry or transaction. The Tax amount will be calculated automatically based on the percentage of the selected tax code.* *If you are not registered as a VAT/GST/Sales Tax Vendor, and/or if VAT/GST/Sales Tax is not applicable to all the transactions in the batch or journal, you may select to hide the Tax column for the specific batch or journal.*
Amount:	*The amount of the transaction. if VAT/GST/Sales Tax is applicable, it may be inclusive or exclusive of Tax (VAT/GST/Sales Tax),*

Rows

For each source document or transaction you need to enter the basic information in a row on the Batch entry screen.

Should you, for example, make one payment or issue a cheque for petrol and repairs and wish to allocate the petrol to one account and the repairs to another account, you need to enter each of these items (parts of a transaction) in 2 separate rows.

You will still need to use one reference number (same cheque number) for both transactions. You will then have one source document (cheque) with 2 entries representing 2 transactions with the same party.

The descriptions entered in the description fields should be entered sensibly; they should enable anybody to determine the origin and nature of the transaction.

Some general recommendations for transaction descriptions entered in journals. Here are a few tips:

1. *Be concise: Transaction descriptions should be brief and to the point. Avoid including unnecessary details that do not add to the understanding of the transaction.*
2. *Be specific: The description should clearly identify the nature of the transaction and the accounts*

affected. For example, instead of simply saying "payment," include the name of the vendor and the invoice number.

3. *Use consistent terminology: Use the same terminology consistently throughout the journal to ensure clarity and avoid confusion.*
4. *Include reference numbers: Whenever possible, include reference numbers such as invoice numbers, purchase order numbers, or account numbers in the description. This can make it easier to track transactions and reconcile accounts.*
5. *Avoid abbreviations: Unless they are widely understood and accepted in your industry, avoid using abbreviations in transaction descriptions. This can help to avoid confusion and ensure that the descriptions are clear to everyone who reads them.*
6. *Include any relevant details: If there are any special circumstances or details related to the transaction, include them in the description. This can help to provide context and ensure that the transaction is properly understood.*

By following these general recommendations, you can help to ensure that your transaction descriptions are clear, concise, and easy to understand. This can be helpful for accounting and record-keeping purposes, as well as for communication with others who may need to understand the transactions.

You may define any abbreviations, which you wish to enter in the description fields for each description, which is of a repetitive nature. You only need to enter the key or keys to transfer the full description when the cursor is in the description field of the batch entry screen.

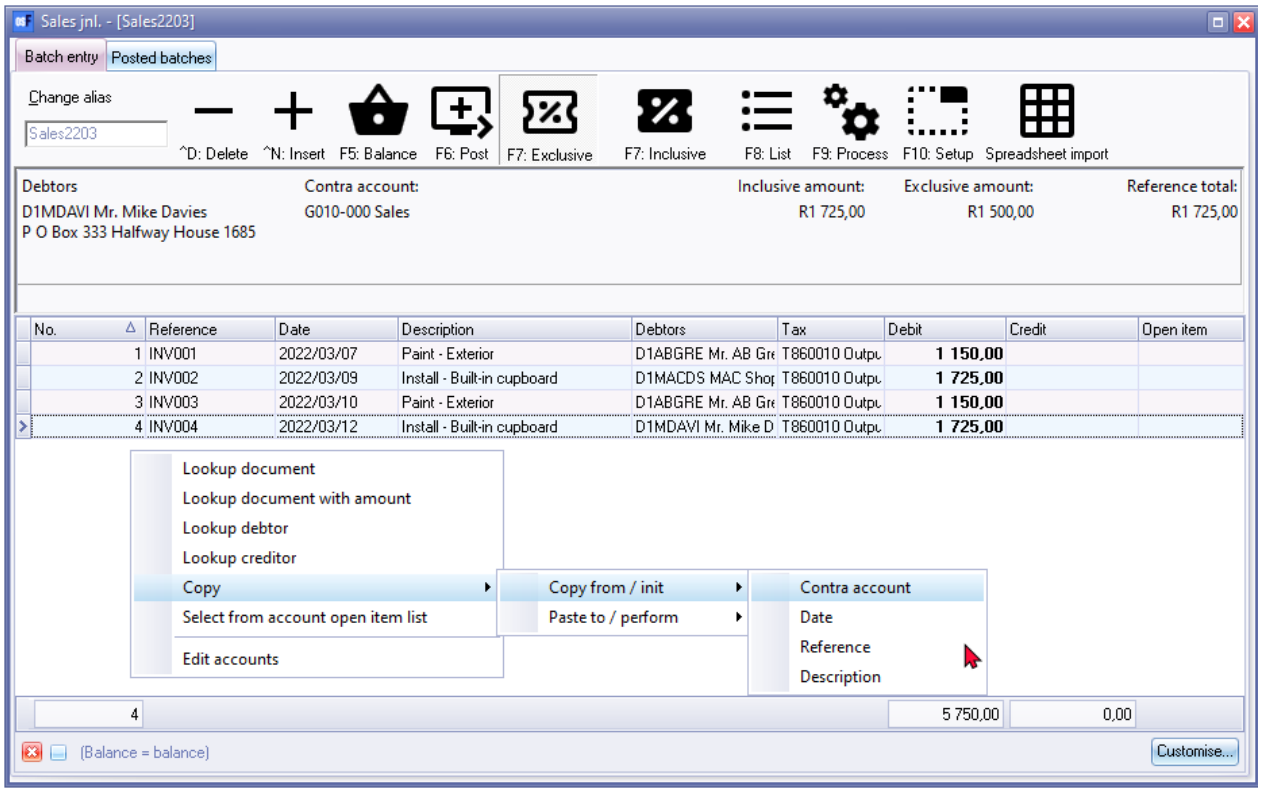
Batch entry screen - Context menu

In addition to the standard account lookup in the "*Account*" column, you may use the right-click context menu and select options to select accounts in batches, to edit an account, etc.

You may also copy and paste the "*Contra account*, *Date*, *Reference*" and "*Description*" from one line to another.



The options are as follows:

1. Lookup document - In addition to the lookup function in the "*Accounts / Debtors / Creditors*" column in the ""*Batch entry*" screen you can choose to search for a specific document. You can use the advanced search and filter options in the "Document entry" screen to select a specific document.
    - Once you have selected a document (invoice or credit note), the debtor's (customer/ client) account associated with the document (invoice or credit note) will appear in the "*Accounts / Debtors / Creditors*" column of the "*Batch entry*" screen, be selected.
    - Once you have selected a document (purchase or supplier return), the creditor (supplier / vendor) account associated with the document (purchase or supplier return) will be selected in the "*Accounts / Debtors / Creditors*" column of the "*Batch entry*" screen .
2. Lookup document with amount - The option is similar to the Lookup document context menu option.
3. Lookup debtor - In addition to the lookup function in the "*Account*" column in the "*Batch entry*" screen, you can choose to lookup a debtor (customer / client) account from the "*Debtor accounts*" screen. On the "*Debtor accounts*" screen, you can use the filter and search options to select a specific debtor (customer / client) account.
4. Lookup creditor - In addition to the lookup function in the "*Account*" column in the "*Batch entry*" screen you may choose to lookup a creditor (supplier / vendor) account from the "*Creditor accounts*"

screen. On the "*Creditor accounts*" screen, you can use the filter and search options to select a specific creditor (supplier / vendor) account.

5. Copy - Copy the "*Contra account, Date, Reference*" or "*Description*" from one transaction in a batch to another transaction.

6. Select from account open item list - You may select a debtor (customer / client) or creditor (supplier / vendor) account on the "*Batch entry*" screen (right-click on selected transaction) and select the "*Select from account open item list*" option. The "*Open item selection*" screen will list the unlinked transactions as well as transactions with outstanding amounts for the relevant debtor (customer / client) or creditor (supplier / vendor) account. You then choose to link this transaction to a specific outstanding transaction on this open item list.

7. Edit accounts - If you have selected a debtor (customer / client) or a creditor (supplier / vendor) account, the details (ie Account Code, Name and Address) will be displayed on the top left of the "*Batch entry*" screen. If it does not match the source document, or something has changed, you can choose to edit the account.

Edit accounts from the Batch entry screen

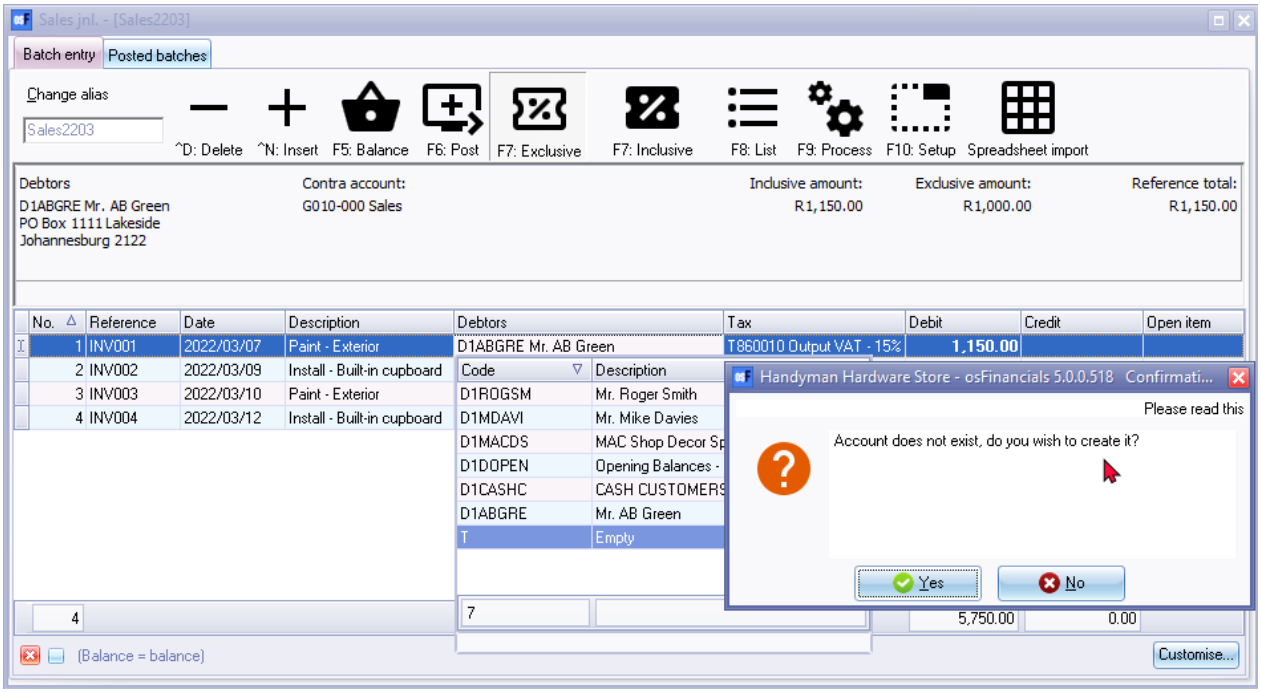
If you have selected a debtor (customer / client) or a creditor (supplier / vendor) account in a batch, the details (i.e. Name, address will be displayed on the top of Batch entry screen which does not match the details on the source document, you may need to edit the account.

1. Select the debtor (customer / client) or a creditor (supplier / vendor) account and click on the Edit button of the "*Debtor accounts"* list screen or *Creditor accounts* list screen.
2. Edit the account, as necessary and click on the OK or Save button of the Debtor account edit form or Creditor account edit form.
3. Click on the Close button of the *accounts* screen.
4. Reselect the account and the updated information will be displayed on the top of Batch entry screen.

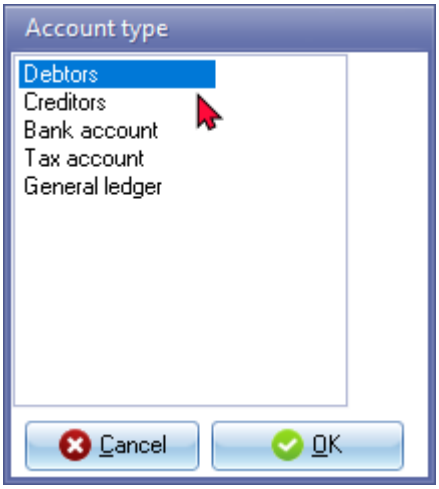
Create new accounts from the Batch entry screen

If you enter an invalid account code or account description in the standard filter options for the account lookup in the "*Accounts*" column for a transaction, a confirmation message will be displayed.

"w Account does not exist, do you wish to create it?" (where "w" does not exist in the chart of accounts, debtor accounts or creditor accounts)



If you click on the Yes button, the "*Account type*" screen is displayed:



Select the account type for which you need to create a new account. The account types are as follows:

1. Debtors - The "*Debtor accounts*" list screen, will be displayed on which you may use the search and filter options to locate a debtor (customer / client) account. If the account does not exist, you may click on the New button and create a new debtor (customer / client) account.

2. Creditors - The "*Creditor accounts*" list screen, will be displayed on which you may use the search and filter options to locate a creditor (supplier / vendor) account. If the account does not exist, you may click on the New button and create a new creditor (supplier / vendor) account.

3. Bank account, Tax account and General ledger account - The Accounts screen will be displayed. You may filter for that account and create the new account, if necessary.

You may configure the Account types to be included in the lookup Account lookup. On the F10:Setup Advanced tab, you may set the Account lookup type to:

- *All (default) all account types,*
- *General ledger – All account types, except Debtors, Creditors.*
- *Debtors (only Debtor accounts),*
- *Creditors (only Creditor accounts).*
- *Open item – Only those General ledger, Debtor and Creditor accounts for which Open item is activated.*

Created with the Standard Edition of HelpNDoc: Full-featured multi-format Help generator

Accounts lookup - Batches

When the cursor is in various fields on a screen, osFinancials5/TurboCASH5 will display the lookup screen for that specific field. A lookup screen is basically a list of all the valid master records in a Set of Books from which you need to select one item from the list.

Some lookup screens contains all accounts. Other lookup screens lists only ledger accounts / only debtor accounts and / only creditor accounts.

Disabled or blocked accounts will be excluded from some lookups.

Debtor / Creditor accounts - "Account disabled" field selected (ticked) on Accounting information tab (Default ribbon).

Accounts - "Status" field set to "Disabled". (Setup → Accounts on the Setup ribbon). For example;

W *if a ledger account is disabled, it will not be listed on the Accounts lookup when processing transactions.*

W *if a Tax type account (Tax code) is disabled, the disabled accounts will not be available on the Tax lookup in batches.*

Account lookup for Contra account in batch setup

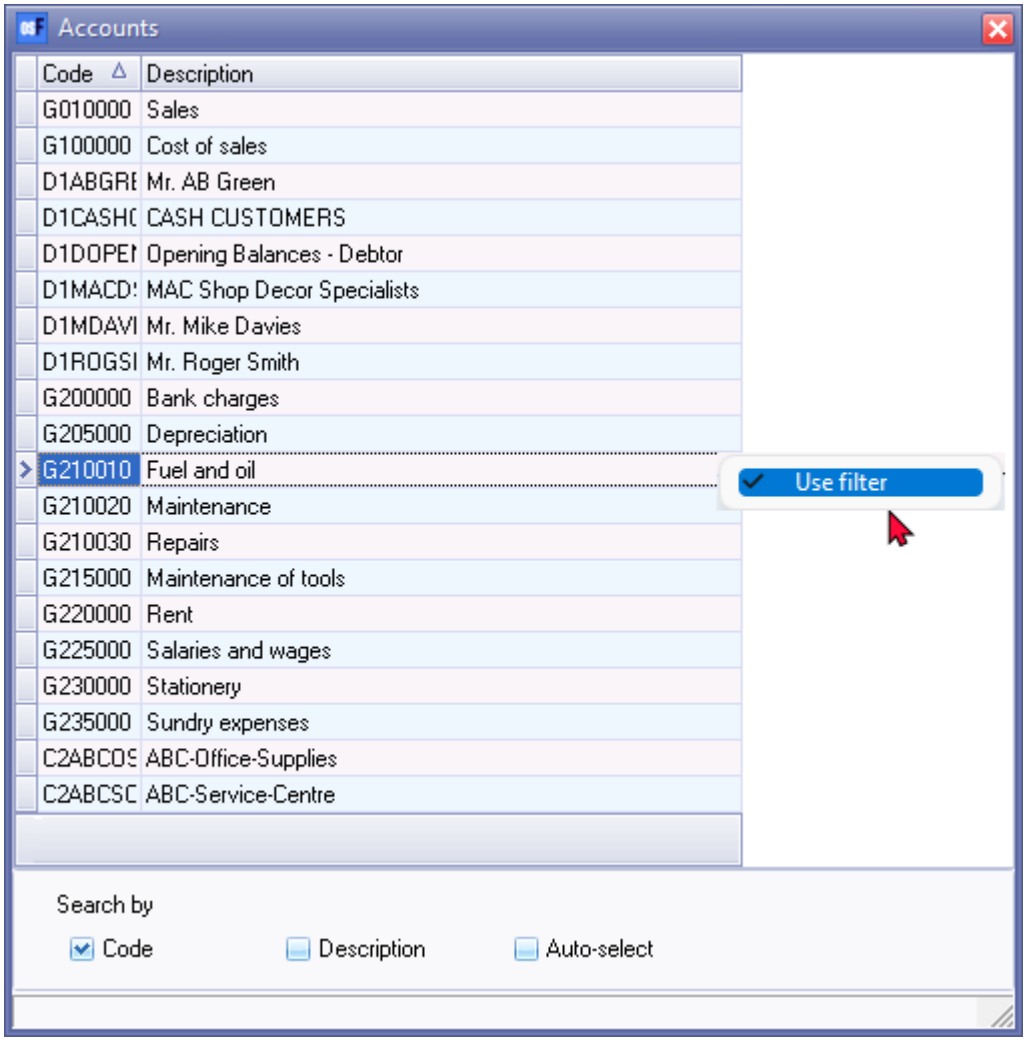
The last selected contra account for a batch will be displayed in the Batch entry selection screen.

If no contra account is displayed in the Contra account, you need to select a contra account.

If a contra account is displayed in the Contra account column, and you wish to select a different contra account for a selected batch, you may change it.

The options to select a contra account is as follows:

1. Access the batch.
2. Click on the F10:Setup - *Options for this batch* - Standard tab.
3. Select the contra account on the "*Accounts*" lookup.

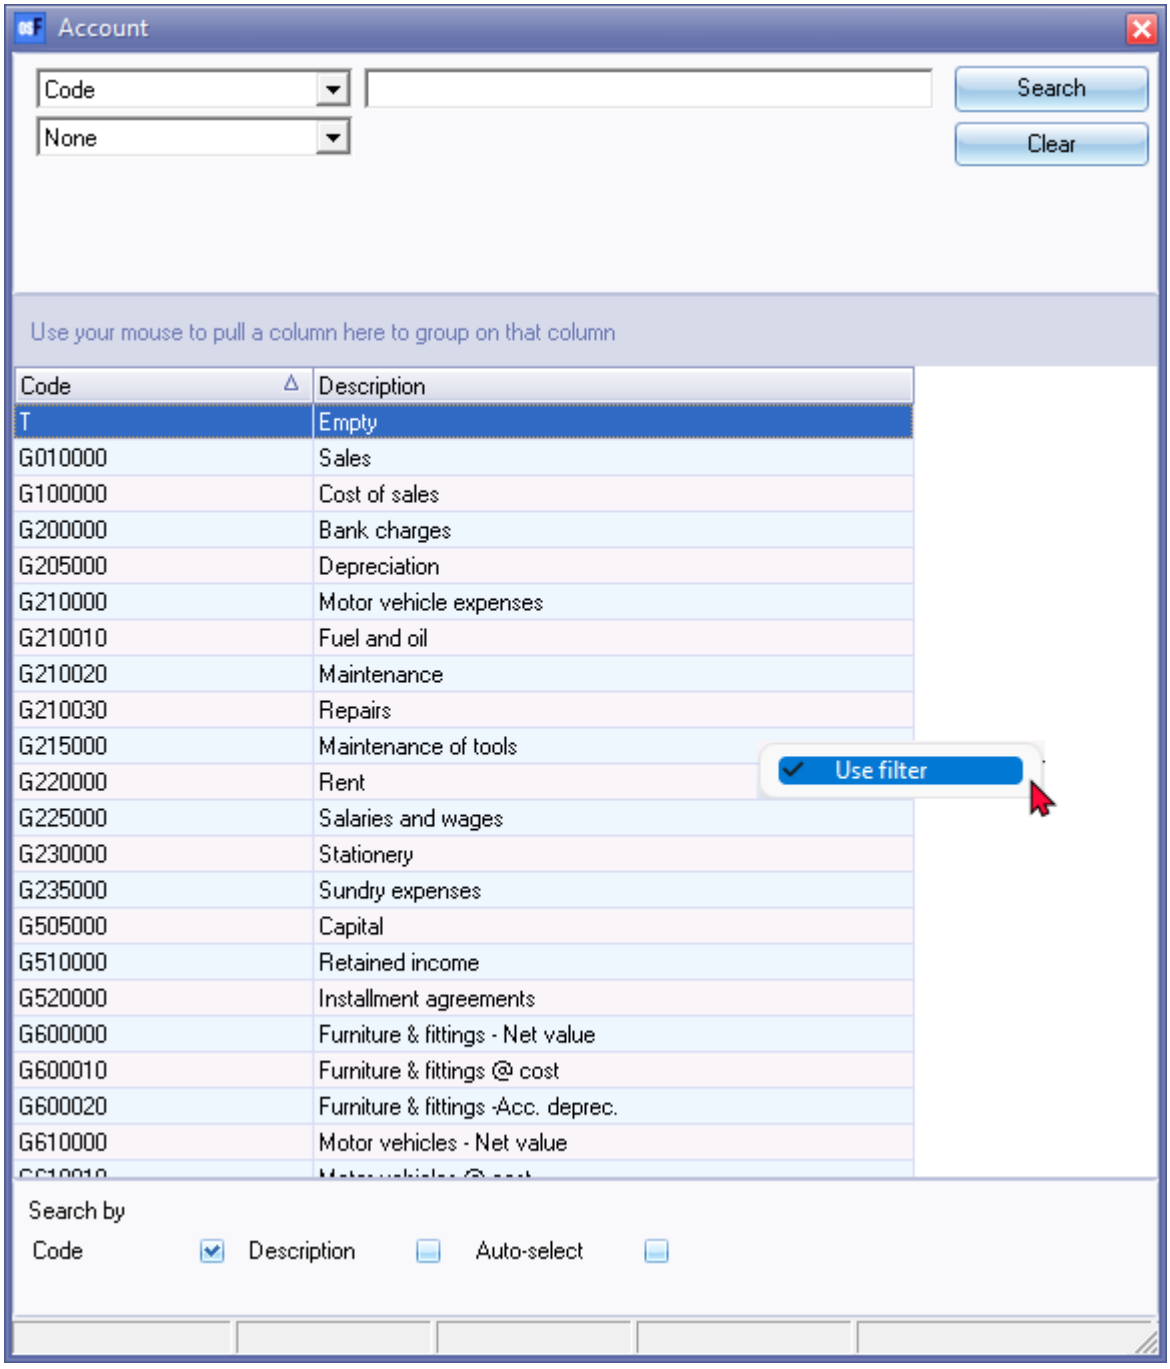


Bank accounts - Payments and receipt batches - Select contra accounts disabled.

When creating Bank accounts, a Payments and Receipt batch is linked to the bank account. The Bank account will be by default set as the contra account of the Payments and Receipt batches. The select Contra account option, will for this reason be disabled for Payments and Receipt batches linked to Bank accounts.

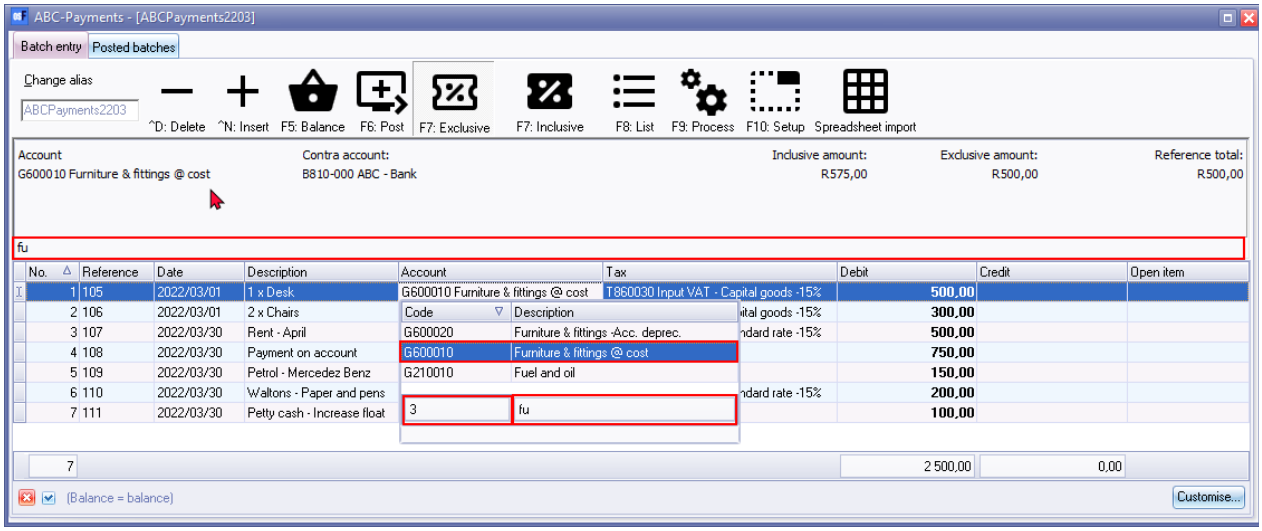
You may also go to the Setup ribbon and select Setup → Batch types. *Then click on the Edit button to launch the F10:Setup - Options for this batch - Standard tab.*

Account lookup for ledger reports



Account lookup for selecting accounts when entering transactions

The lookup in the batch entry screen automatically filter the code or the description. When the Account or Tax columns are focused, you may type the code or description. In this example, the description is typed as “*fu*” and it lists only those accounts with the starting with the typed characters, e.g. *Fuel and Oil* and *Furniture...*



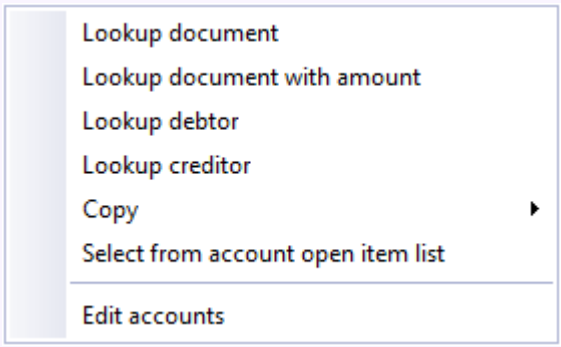
The number of records matching your search characters will be displayed.

Your search characters entered will be displayed at the bottom of the lookup as well as above the column descriptions.

You may configure the Account types to be included in the lookup Account lookup. On the F10:Setup Advanced tab, you may set the Account lookup type to:

- *All (default) all account types,*
- *General ledger – All account types, except Debtors, Creditors.*
- *Debtors (only Debtor accounts),*
- *Creditors (only Creditor accounts).*
- *Open item – Only those General ledger, Debtor and Creditor accounts for which Open item is activated.*

Context menu (right-click) lookup on Batch entry screen:



You may right-click on a selected transaction to allocate a transaction to a debtor (customer / client) or creditor (supplier) account, or to copy and paste a contra account, reference or date from one transaction to other transaction(s)

Configure the account lookup list for batches

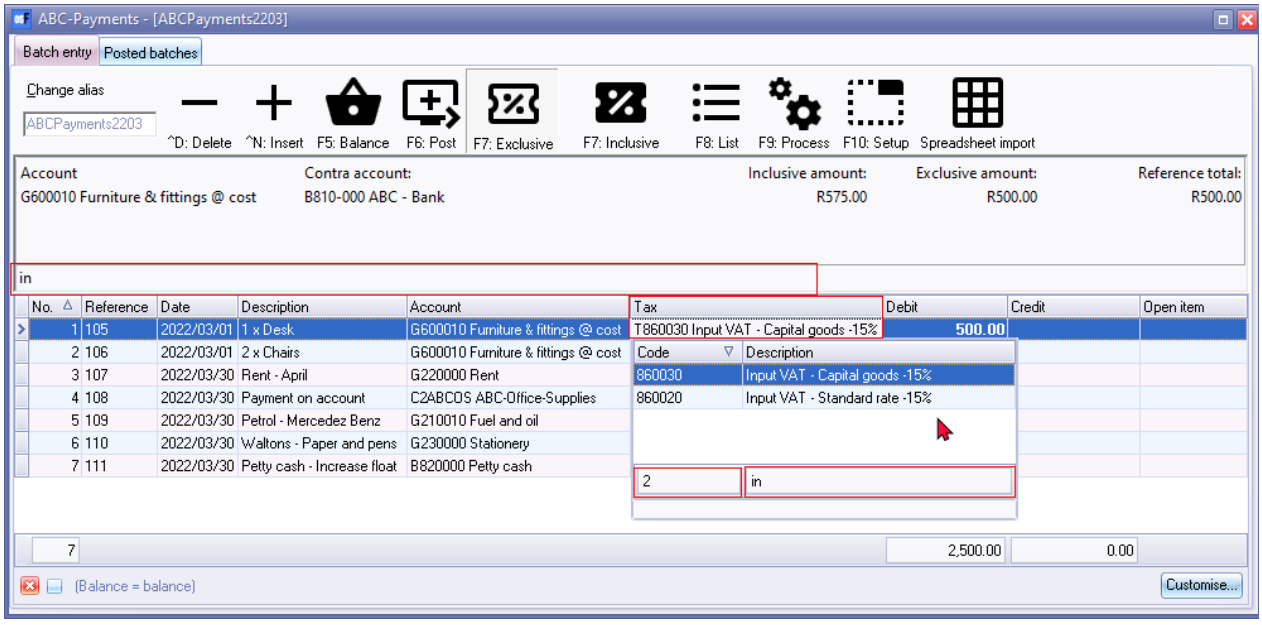
To display only the accounts for the specific transactions you need to enter in the batch, you may configure the accounts to be listed in the lookup.

To do this, you may select the Account lookup type option and the Contra account lookup type option on the F10:Setup - *Options for this batch* - Advanced tab as follows:

1. All - select to display all accounts (i.e. General ledger, Debtors, Creditors and Special ledgers).
2. General ledger - select to display all General ledger accounts (excluding Debtors, Creditor and Special ledgers). Examples would be if only need to enter and process transactions which does not apply to Debtors or Creditor accounts, e.g. Depreciation or adjustments to General ledger accounts in the General journal. Other examples would be cash purchases in the Payments journal or Petty cash payments journal which need to be allocated to the Expense and Asset accounts).
3. Debtors - select to display only Debtor accounts (excluding General ledger, Creditors and Special ledgers). An example would be if only sales invoices are batched and entered into the Sales journal for which you only need to select the Debtor accounts. Another example would be if you only batch or group deposits (receipts) for payments received from Debtors.
4. Creditors - select to display all Creditor accounts (excluding General ledger, Debtors, and Special ledgers). An example would be if only purchase invoices (received from creditors) are batched and entered into the Purchase journal for which you only need to select the Creditor accounts. Another example would be if you only batch or group a payments (cheque counterfoils or payment remittance advises) for payments made to Creditors.

Tax column - Tax lookup

If the No tax option on the F10:Setup - *Options for this batch* - Standard tab is not ticked (default option), the Tax lookup list will also be displayed.



The number of records matching your search characters will be displayed.

Your search characters entered will be displayed at the bottom of the lookup as well as above the column descriptions.

If the No tax option on the F10:Setup - Options for this batch - Standard tab is ticked, the Tax column and Tax lookup list will not be displayed.

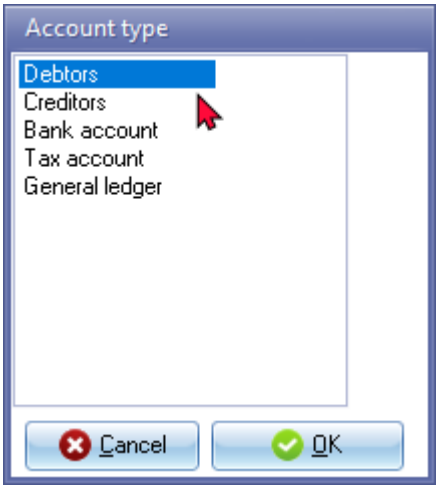
Create accounts if the account does not exist

If you enter an invalid account code or account description in the standard filter options for the account lookup in the Accounts column for a transaction, a confirmation message will be displayed.

> "w Account does not exist, do you wish to create it?" (where "w" does not exist in the chart of accounts, debtor accounts or creditor accounts)

If you click on the No button, you will be returned to the batch entry screen, on which you may select a different account.

If you click on the Yes button, you may select the "*Account type*" screen is displayed:



Select the account type for which you need to create a new account. The account types will launch the screens as follows:

1. Debtors - The "*Debtor accounts"* list screen, will be displayed on which you may use the search and filter options to locate a debtor (customer / client) account. If the account does not exist, you may click on the New button and create a new debtor (customer / client) account.
2. Creditors - The "*Creditor accounts"* list screen, will be displayed on which you may use the search and filter options to locate a creditor (supplier / vendor) account. If the account does not exist, you may click on the New button and create a new creditor (supplier / vendor) account.
3. Bank account, Tax account and General ledger account - The Accounts screen will be displayed. You may filter for that account and create the new account, if necessary.

Batch entry screen - Posted batches tab

All transactions are entered into batches and documents and when these batches and documents are updated or posted to the Ledger transactions are generated. All transactions are stored in osFinancials5/TurboCASH5 for up to two years. The format in which transactions are stored in osFinancials5/TurboCASH5 is the same as the way they are entered in the batch entry screens. The quality of your reports depends on the care you have taken to enter your data or transactions correctly and to optimise the various fields in the batch entry screens.

You may enter thousands of transactions of a different nature.osFinancials5/TurboCASH5 have provided you with a powerful facility to retrieve reports on each of these Batch types. You may print batch type reports for specific periods, or by Batch numbers, or batch names. You are then able to view and analyse

these transactions for each of the specific Batch types (Journal types), in which they were entered into the system.

- Sales - Sales journal
- Purchases - Purchase journal
- Payments - Payments journal
- Receipts - Receipts journal
- Petty cash - Petty cash payments journal
- General - Adjustments, correction of errors, Depreciation, Payroll transactions, etc. - General journal

You may also create additional batch types to enter and update or post specific transactions to the Ledger. These additional Batch types would then be reflected in the Batch type report.

If you generate documents in Documents (Default ribbon), the documents will be updated and posted to the Ledger and be included in the Batch type reports for the following Journals:

- *Sales journal - Invoices and Credit notes*
- *Purchase journal - Purchase documents and Supplier return documents.*

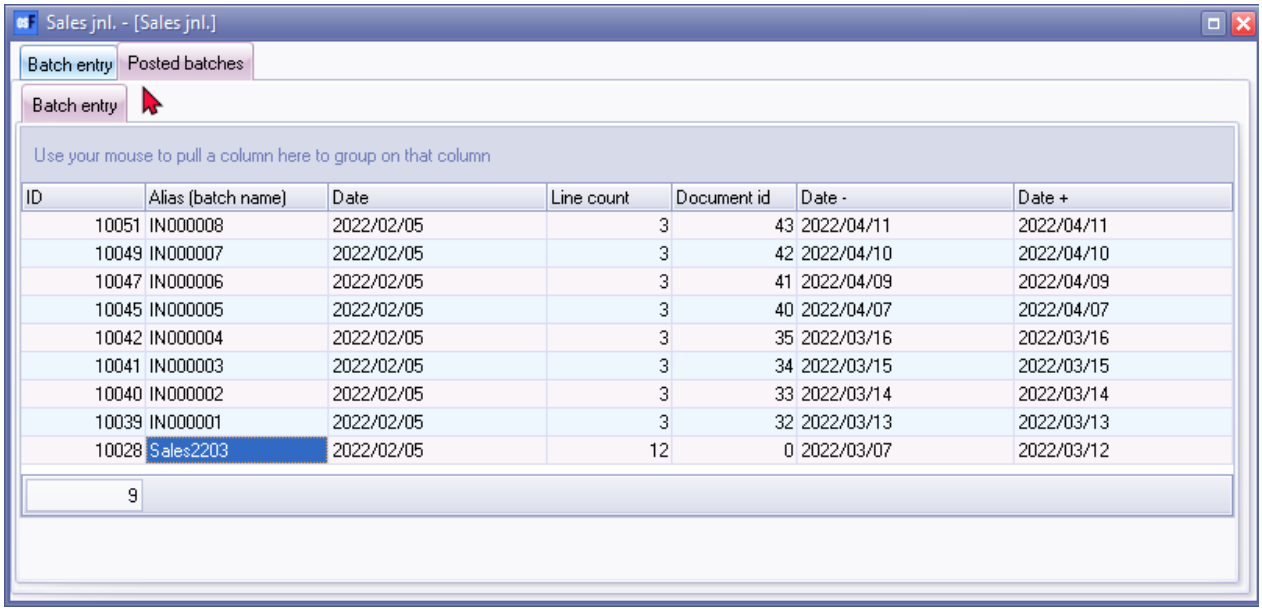
In addition to the Batch type Reports Options on the Reports → Batch entry menu, you may print a batch type report for a specific posted batch.

To print a batch type report for a specific batch:

1. On the Default ribbon, select Batch entry (F2).

   You may also print the same batch type reports in Tools → Global processes → Reverse posted batch/document (Setup ribbon).

2. Select the specific Batch type.
3. Click on the Posted batches tab. The Batch entry tab listing all batches and documents posted to the ledger is displayed:



4. The context menu (right-click) are as follows:

    a) Details - Select to open the Details tab for a selected batch.

    b) Report - This will launch the old standard batch type report for a specific batch.

5. The columns of the Batch entry tab is as follows:

    a) ID - Batch ID as automatically generated for each batch created.

    b) Alias (batch name) - This is the name entered in the "*Change alias*" field before you post the batch.

    > *In the case of documents, the document number will be listed. Document numbers are generated automatically generated.*

    c) Date - The date and time on which the batch was posted to the ledger.

    d) Line count - The number of transactions (including balancing transactions) in batches. In the case of documents,the line count is the debtor / creditor account, the contra account and the tax (VAT/GST/Sales tax) account as set in the Ledger tab of the selected stock item.

    e) Document id - This is the record id automatically generated when a new document is created.

    > *In the case of Batches the "Document id" will always be "0".*

    f) Min date - The date of the first transaction entered in the batch.

g) Max date - The date of the last transaction entered in the batch.

6. Select a specific batch and double-click it. The Details tab is displayed:

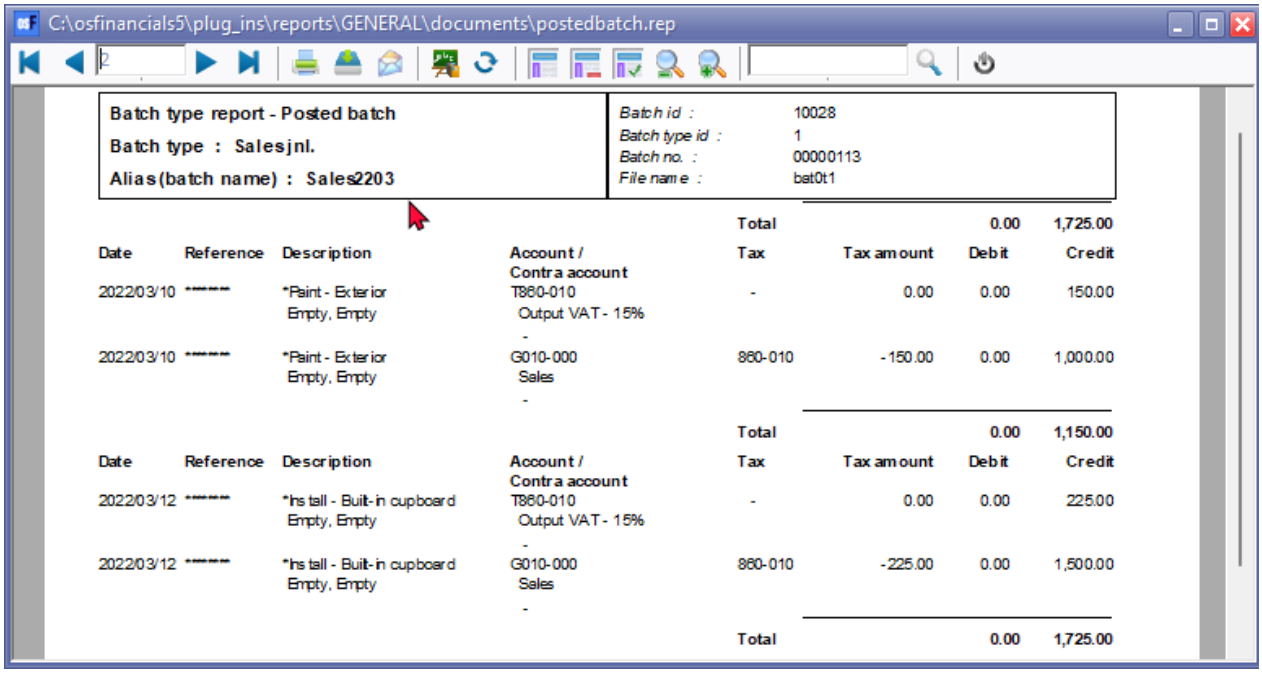
Page 2 -



Some additional information for consultants and advanced users (using the SQL Browser Plugin or FlameRobin) are displayed in the right-hand block. The details are as follows:

- *ID - Batch ID as automatically generated for each batch created.*
- *Batch type ID - This is the ID generated when a batch type is created in Setup → Batch types.*
- *Batch No. - Internal number for each batch automatically generated.*
- *File Name - The File name as automatically generated.*

8. After printing the batch - click on the Close button.

Created with the Standard Edition of HelpNDoc: Streamline Your Documentation Process with HelpNDoc's Project Analyzer

Batch setup

---

osFinancials5/TurboCASH5 also allows you to set and configure the "*Batch entry*" screen for each batch or journal to meet your own specific requirements. The following two (2) options is available:

- Standard tab - In addition to selecting the contra account, various settings and configuration options, you may set the amount entry columns to "*Debit, Credit*" or "*Allow both*" to enter amounts faster and more accurately.

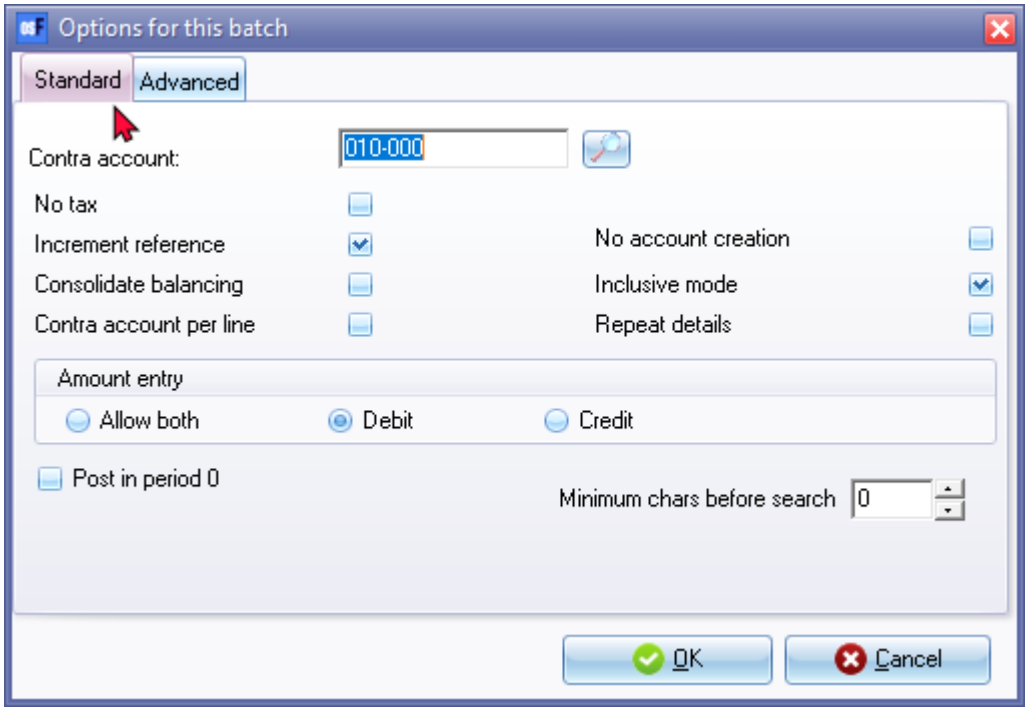
- Advanced tab - In addition to various settings and configuration options, the "*Account code lookup type*" and "*Contra account lookup type*" may be set to list only those accounts to select from in the Accounts lookup when processing transactions.

Created with the Standard Edition of HelpNDoc: Modernize your help files with HelpNDoc's WinHelp HLP to CHM conversion tool

F10:Batch setup - Standard tab

---

osFinancials5/TurboCASH5 allows you to set the Standard options for each batch or journal to make the entering and processing of transactions easier, faster and more accurate.



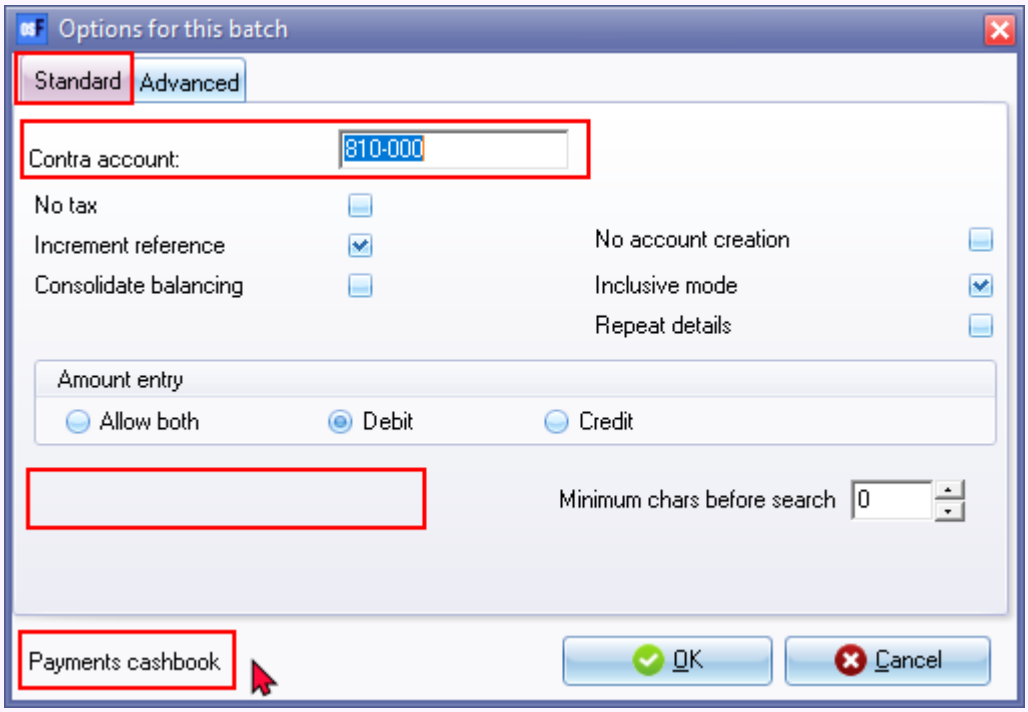
The options are as follows:

1. Contra account - Select the default balancing account contra account for the batch. When you balance the batch, osFinancials5/TurboCASH5 will generate the balancing transaction to the contra account for the total amount of all the transactions for each date.

> *For example in the SALES JOURNAL you would set up the contra account to be the SALES account and enter all the DEBIT transactions for the various debtors. When you balance the batch, generates CREDIT transactions to the SALES account.*

> *In the case of the Payments and Receipts journal, the contra account is always the Bank account*

and cannot be changed.



Post in period 0 - This option is not available for the Payments and Receipts journal. since you will not be allowed to post transactions for opening balances. If you need to take-on the opening balances for bank accounts, you need to process the opening balances in a normal batch type, e.g. "General journal".

2. No Tax - Hide the Tax column in the batch or journal entry screen as well as the Tax account lookup (Search). This option should only be used if no VAT/GST/Sales Tax is applicable to all transactions entered in the batch or journal or if the user is not registered as a VAT/GST/Sales Tax Vendor. However, there may be certain transactions, such as opening balances, depreciation transactions, or other non-taxable transactions, where VAT/GST/Sales Tax is not applicable. In such cases, you have the option to disable the Tax feature in the batch.

   By disabling the Tax in the batch, the tax account lookup will be hidden, indicating that no tax is applicable to any of the transactions within the batch. This eliminates the need to specify tax treatment for each individual transaction and streamlines the data entry process for non-taxable transactions.

Some examples of transactions where VAT/GST/Sales Tax may not be applicable:

- *Opening balances: When setting up your accounting system, you may need to enter opening balances for your accounts. These balances represent the financial position of your business at the beginning of a specific accounting period. Since opening balances are not actual transactions involving the sale or purchase of goods or services, VAT/GST/Sales Tax is not applicable.*

- *Depreciation entries: Depreciation is an accounting entry that reflects the decrease in value of an asset over time. It is a non-cash expense and does not involve any actual transaction or the application of VAT/GST/Sales Tax.*
- *Journal entries for adjustments: Journal entries made for adjustments, corrections, or reclassifications within your accounting system are not transactions that trigger VAT/GST/Sales Tax. These entries are made to ensure accurate financial reporting and may involve reclassifying expenses or revenues, correcting errors, or adjusting account balances.*
- *Internal transfers: If your business has multiple locations or departments and you need to transfer assets, inventory, or funds between them, these internal transfers are not subject to VAT/GST/Sales Tax. Internal transfers are internal movements within your organization and do not involve the sale or purchase of goods or services to external parties.*
- *Inter-company transactions: If your business has multiple entities or subsidiaries and you need to record transactions between them, these inter-company transactions may not involve VAT/GST/Sales Tax. Instead, these transactions may be recorded as eliminations or internal accounting entries to consolidate financial statements.*

These are just a few examples where VAT/GST/Sales Tax may not be applicable. The key is to identify transactions that are not related to the sale or purchase of goods or services to external parties. By selecting the appropriate tax treatment, or disabling the tax feature altogether, you can ensure accurate tax calculations and reporting for the transactions where VAT/GST/Sales Tax is applicable and streamline the data entry process for non-taxable transactions.

3. Increment reference - If the Reference number of most of the transactions are the same, you may leave the setting for this option blank. When proceeding to the next line, the previous line's reference number will be blank. You may over type these, if necessary.

   If the Reference number of most of the transactions are following in a sequence (e.g. payment numbers, invoice numbers, etc.), you may select (tick) this option. When proceeding to the next line, the previous line's reference number will be repeated. You may over type the next reference number, if necessary (for example if more than 1 item is purchases on the same cheque or payment number and need to be allocated to different accounts).

4. Consolidate balancing - If you select (tick) this option, the balancing entries generated (when you click on the F5:Balance icon), will be grouped to the balancing entry by date.

The Tax report (Reports → Tax) does not include the Sales journal. It only includes Sales documents (i.e. Invoices an Credit notes). Transactions on other Batch types may cause similar errors.

The reason for this, is the Consolidate balancing option on the Standard tab - F10:Setup on the

Options for this batch screen. When setting up the batch, an information message will be displayed.

"Consolidating lines and using tax will mess up your tax report! Please make sure you do not use tax or do not consolidate lines!"

Click on the OK button and click on the F10:Setup icon and deselect (remove the tick) from the Consolidate balancing field on the Standard tab of the "Options for this batch" screen.

Balance the batch again.

5. Contra account per line - If you select (tick) this option, each time you select an account, you to also need to select a contra account. In this way you can select a different contra account for each transaction. When you balance the batch, will generate all the transactions to each of these contra accounts.

6. Inclusive mode - Select (tick) to enter amounts in the inclusive mode. If not selected (not) ticked, the default for entering amounts, is exclusive.

7. Repeat details - If the descriptions of most of the transactions are of a repeating nature, you may select (tick) this option. When proceeding to the next line, the previous line's descriptions will be repeated. You may over type these, if necessary.

If *Abbreviation definitions* are set, you may type a character or a few characters to auto-complete the descriptions.

8. Amount entry - This setting allows you to enable or block amount entry in the debit and/or credit columns of batches. You may select Allow Both (enter amounts in both the debit and credit column), Debit (enter amounts in the debit column only) or Credit (enter amounts in the credit column only). The recommended amount entry and lookup type settings for batch types, is as follows:

BATCH TYPES	*Lookup Type*	*Contra account lookup type*	*DEBIT /CREDIT*
Sales journal	*Debtors*	*General ledger*	*Debit*
Sales returns	*General ledger*	*Debtors*	*Credit*
Purchases	*General ledger*	*Creditors*	*Credit*
Purchase returns	*Creditors*	*General ledger*	*Debit*
Payments	*All*	*All*	*Debit*

Receipts	*All*	*All*	*Credit*
General journal	*All*	*All*	*Allow both (Debit / Credit)*

9. Post in period 0 - If you need to enter opening balances in the current year (not in last year) select (tick) this option.

In the case of the Payments and Receipts batches, the Post in period 0 setting is not available.

10. Minimum chars before search - The default value is 0. If you enter one (1) invalid account code or description on the lookup, an message will be displayed, e.g.

"z Account does not exist, do you wish to create it?"

You can set the number of characters before receiving this confirmation message.

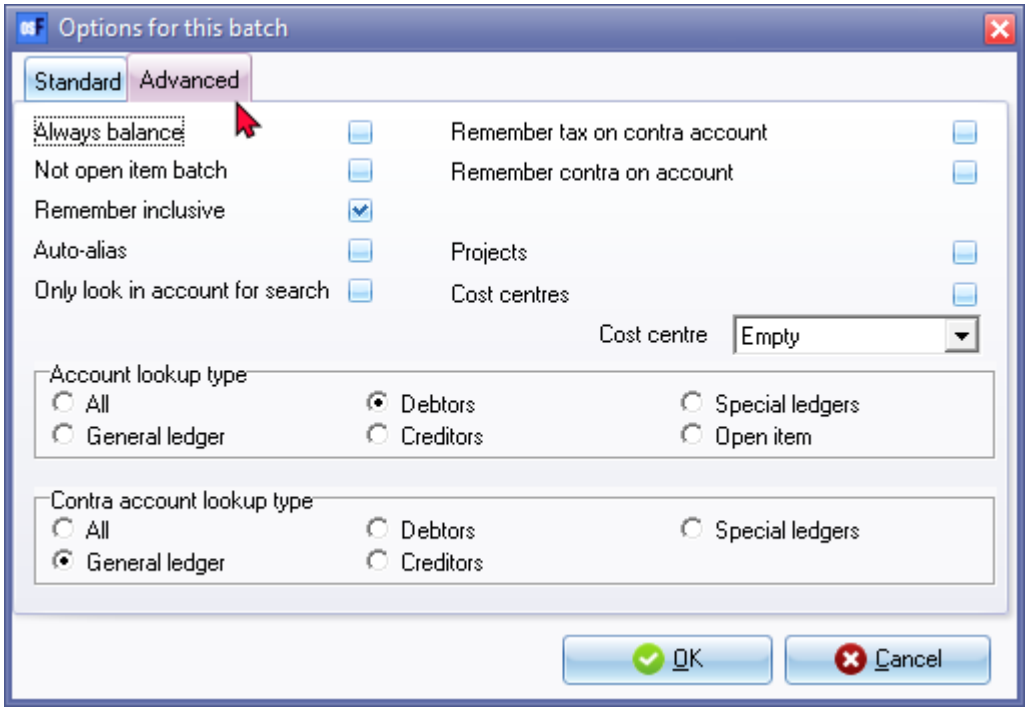
You have the option to click No and select another account. If you click Yes, you have the options to create a new account for a selected account type (i.e. ledger, bank, tax, debtor or creditor.

Created with the Standard Edition of HelpNDoc: Maximize Your Documentation Capabilities with HelpNDoc's User-Friendly UI

F10:Batch setup - Advanced tab

---

osFinancials5/TurboCASH5 also allows you to set the advanced options for each batch or journal to make the entering and processing of transactions easier, faster and more accurate.



The options are as follows:

1. Always balance - Automatically balance the transactions in the batch or journal
2. Not open item batch - Disables the Open item selection screens and Open item confirmation messages
3. Remember inclusive - Save the settings for tax on the Contra account.
4. Auto-alias - Select to automatically generate aliases for this batch.
5. Only look in account for search - To be advised.
6. Remember tax on contra account - Save the settings for tax on the Contra account.
7. Remember contra on account - Save the settings for the Contra account (Balancing Entry) on the selected Account.
8. Projects - Activate projects for this batch.
9. Cost centres - Activate cost centres for this batch.
10. Cost centre - Select the default cost centre for this batch. Cost centres will only be available if cost groups are added in Setup → Groups.
11. Account code lookup type - Select to filter list of accounts to be displayed in the lookup facility:
    a) All - select to display all accounts (i.e. General ledger, Debtors, Creditors and Special ledgers).
    b) General ledger - select to display all General ledger accounts (excluding Debtors, Creditor and Special ledgers). Examples would be if only need to enter and process transactions which does not apply to Debtors or Creditor accounts, e.g. Depreciation or adjustments to General

ledger accounts in the General journal. Other examples would be cash purchases in the Payments journal or Petty cash payments journal which need to be allocated to the Expense and Asset Accounts).

c) Debtors - select to display only Debtor accounts (excluding General ledger, Creditors and Special ledgers). An example would be if only sales invoices are batched and entered into the Sales journal for which you only need to select the Debtor accounts. Another example would be if you only batch or group deposits (receipts) for payments received from Debtors.

d) Creditors - select to display all Creditor accounts (excluding General ledger, Debtors, and Special ledgers). An example would be if only purchase invoices (received from creditors) are batched and entered into the Purchase journal for which you only need to select the Creditor accounts. Another example would be if you only batch or group a payments (cheque counterfoils or payment remittance advises) for payments made to Creditors.

e) Special ledgers - select to display all Special ledger accounts (i.e. General ledger, Debtors and Creditors).

f) Open item – Only those General ledger, Debtor and Creditor accounts for which Open item is activated.

12. Contra account code lookup type - Select to filter list of accounts to be displayed in the lookup facility for Contra accounts or Balancing transaction accounts:

a) All - select to display all accounts (i.e. General ledger, Debtors, Creditors and Special ledgers).

b) General ledger - select to display all General ledger accounts (excluding Debtors, Creditor and Special ledgers).

c) Debtors - select to display only Debtor accounts (excluding General ledger, Creditors and Special ledgers).

d) Creditors - select to display all Creditor accounts (excluding General ledger, Debtors, and Special ledgers).

e) Special ledgers - select to display all Special ledger accounts (i.e. General ledger, Debtors and Creditors).

Created with the Standard Edition of HelpNDoc: Easily create Help documents

F9:Batch processing options

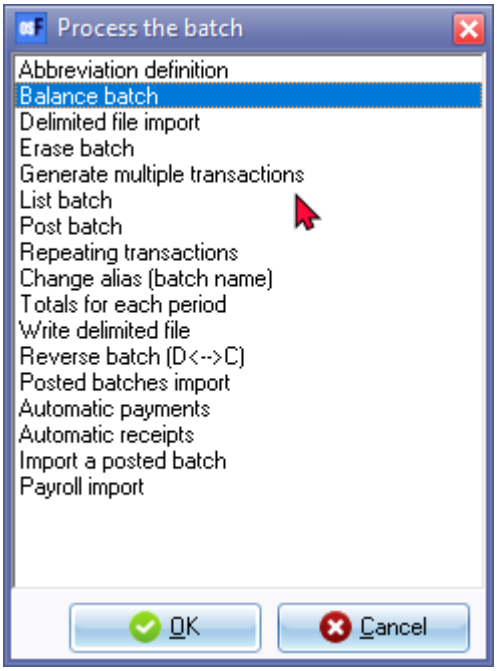
Batch processing options contains various options to process transactions in unposted batches, export and import functions. Various functionalities to generate and process transactions is also available.

Process the batch options - Normal batch entry

Batch processing options:

1. Click Launch the correct batch type.

2. Click on the F9: Process icon. The Process the batch options screen is displayed:



3. Select one of the following options:

    a) Abbreviation definition - You may define any abbreviations, which you wish to enter in the description fields for each description, which is of a repetitive nature. You only need to select the key to transfer the full description when the cursor is in the description field of the batch entry screen. Abbreviation definitions may also be used in the description column of lines in documents (invoices, credit notes, quotes, purchases, supplier returns and orders).

    b) Balance batch - Before you may proceed to post a batch, you need to balance the batch. This will not be necessary when your batch is in balance (i.e. where you have entered debit transactions and credit transactions of equal value) in a batch.

    c) Delimited file import - Select and open a valid comma separated value file format to import the transactions in a an unposted batch. This feature will import batch transactions exported using the Write delimited file option.

    d) Erase batch - You may delete an entire batch, including all the entries, which you may have entered or which was imported into the batch.

e) Generate multiple transactions - This option allows you to process transactions for all debtor (customer / client) accounts that matches specific criteria. You may also process transactions for creditor's with charge amounts.

> *Generate multiple transactions - will be replaced with the following in:*
>
> - *Receipts batches - Create receipts - You may create a receipt from a receipt batch, print it out and hand it to a customer or the party from which you have received payment. A receipt will automatically be generated and the transaction for the receipt will automatically be entered in the selected Receipts journal.*
> - *Payment batches - Creditor balances to date - The "Creditor balances at date" batch processing option allows you to add payment transactions for all your creditors (suppliers) into the payments batch at a specified date. You may then edit the batch (for example, decide which creditors (suppliers) to pay, change the amounts, delete creditors (suppliers), etc.).*

f) List Batch - After entering all your transactions in a batch, and before updating or posting the transactions to the ledger, it is recommended to print a list of the transactions entered in the batch. You may need to check the transactions and edit the batch, if necessary, before you post the batch.

g) Post batch - Posting a batch is the final step in batch processing. To Post the transactions in a batch, will automatically update the ledger accounts, general ledger (with its control accounts) and the subsidiary ledgers (individual ledger accounts for the Debtors and Creditors) simultaneously.

h) Repeating transactions - The Repeating transactions feature allows you to enter transactions, which occur on a periodic basis. They may be weekly, monthly, quarterly or annually, etc. You may enter the transactions once and, when due, copy them into the normal batch, edit (if amounts have changed), delete or add an entry.

i) Change alias (batch name) - The alias provides the opportunity for you to add an unique name for the batch type. For example, you may use a specific batch type (e.g. general journal) for many different transactions and may post many general journal transactions in a month or even in a year. You need to enter these in the Batch header.

Auto-alias - Setting may also be activated on the F10:Setup - Advanced tab - "Options for this batch". This will automatically generate the system date as the alias (batch name) (e.g., “20210331”) for the batch.

Auto generated - Alias in Receipts batches - TR00001, TR00002,etc. These aliases prefixed with "TR" (consisting of seven (7) digits) will automatically be generated in receipt batches when the "Receive payment" option is used in Open item link context menu.

See -

- *Receive payment for a selected debtor (customer / client) account.*
- *Receive payment for a selected creditor (supplier / vendor) account.*

j) Totals for each period - Once you have entered transactions for more than one accounting period in any batch (journal), you may view the totals for each accounting period of the transactions in the batch (journal). This will display the total amount for the debit transactions, as well as the total amount for the credit transactions in each respective accounting period.

k) Write delimited file - Export and save the transactions in a an unposted batch to a file in a comma separated value file format.

l) Reverse batch (D<-->C) - If transactions were entered incorrectly in the debit column in stead of entering the transactions in the credit column, and *vice versa,* you may transfer (switch) the transaction amounts as entered into the credit columns to the debit columns and *vice versa* for any unposted batch.

m) Posted batches import - This feature is not supported in this version of osFinancials5/TurboCASH5. It is recommended to use the Write delimited file option to export and save the transactions in a an unposted batch to a file in a comma separated value file format. You may then use the Delimited file import option to select and open a valid comma separated value file format to import the transactions in a an unposted batch.

osFinancials5 supports the "Excel Workbook (.xlsx) file type Spreadsheet import and export feature.*

- *Spreadsheet export - You may export unposted batch transactions and save it as a "Excel Workbook (*.xlsx) file type.*
- *Spreadsheet import - You may import batch transactions from a saved "Excel Workbook (*.xlsx) file type.*

n) Automatic payments - You may pay your creditor (supplier / vendor) accounts, as well as refunds to debtor (customer / client) accounts (with credit balances, which need to be refunded) via the electronic banking system. The transactions for accounts with outstanding transactions and balances will be transferred into the "*Automatic payments*" screen, where you may select the accounts and outstanding amounts you need to pay.

o) Automatic receipts - You may receive payments from debtor (customer / client) accounts for their accounts via the electronic banking system. The transactions for debtor (customer / client) accounts with outstanding transactions and balances will be transferred into the "*Automatic receipts*" screen, where you may select the debtor (customer / client) accounts and outstanding amounts you need to receive from the debtor 's Bank accounts.

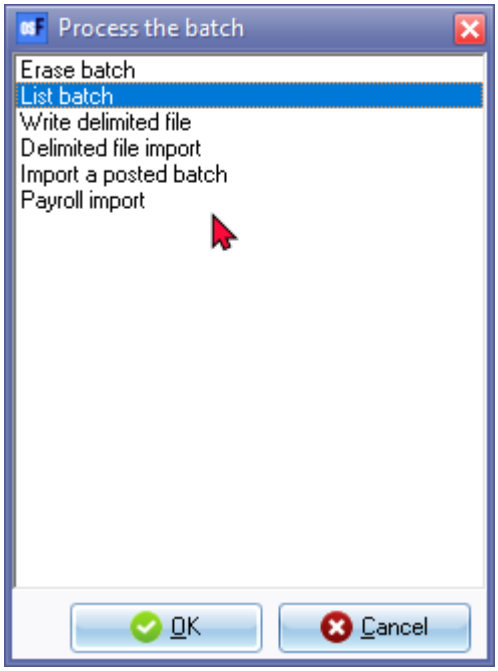
p) Import a posted batch - This option allows you to import the transactions from a posted batch in the same Set of Books.

q) Payroll import - This is a plugin - *Shop* - Licence : Once-off - Supported applications: Logisal, RoosRoos and Unit 4.

4. Click on the OK button.

Process the batch options - Repeating batch entry

In Repeating transactions batch entry screens (Edit - Repeating transactions) the F9:Process lists six (6) "*Process the batch*" options:



1. Erase batch - You may delete an entire batch, including all the entries, which you may have entered or which was imported into the batch.
2. List Batch - After entering all your transactions in a batch, and before updating or posting the transactions to the ledger, it is recommended to print a list of the transactions entered in the batch. You may need to check the transactions and edit the batch, if necessary, before you post the batch.
3. Write delimited file - Export and save the transactions in a an unposted batch to a file in a comma separated value file format.
4. Delimited file import - Select and open a valid comma separated value file format to import the transactions in a an unposted batch. This feature will import

batch transactions exported using the Write delimited file option.

5. Import a posted batch - This option allows you to import the transactions from a posted batch in the same Set of Books.

6. Payroll import - This is a plugin - *Shop* - Licence : Once-off - Supported applications: Logisal, RoosRoos and Unit 4.

Created with the Standard Edition of HelpNDoc: Maximize Your CHM Help File Capabilities with HelpNDoc

Abbreviation definition

You may define any abbreviations, which you wish to enter in the description fields for each description, which is of a repetitive nature. You only need to enter the key or keys to transfer the full description when the cursor is in the description field of the batch entry screen.

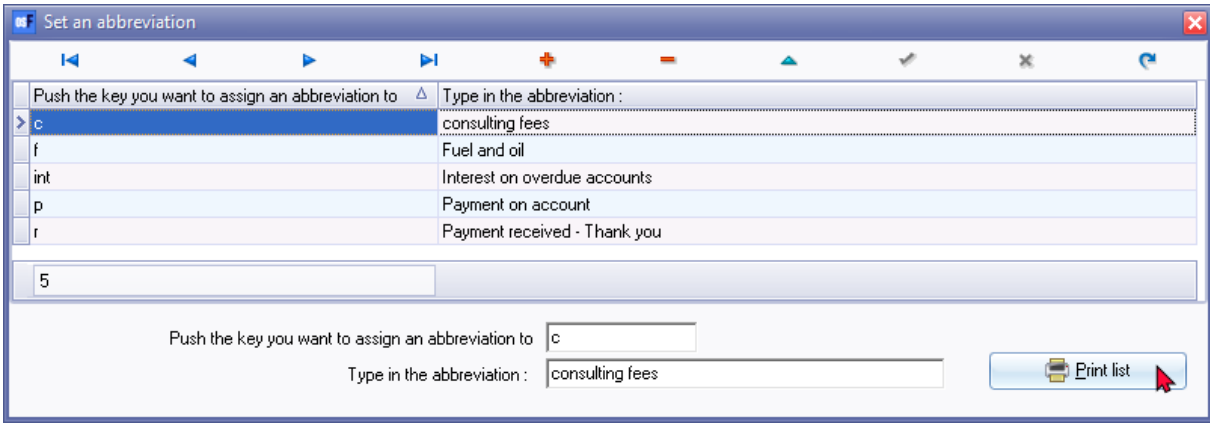
You may now assign more than 1 key for abbreviation definitions.

Abbreviation definitions may also be used in the description column of lines in documents (invoices, credit notes, quotes, purchases, supplier returns and orders) .

To set an abbreviation definitions:

1. When the cursor is in the description field (of any Batch entry screen) when entering a transaction, click on the F9:Process icon. The Process the batch options screen will be displayed.

2. Select the Abbreviation definition option and click on the OK button.



3. Enter any alphabetical and/or numeric key(s) on your keyboard you wish to assign to an abbreviation.

> *Use the record buttons add, edit, delete, save the abbreviations.*
>
> *You may click on the column headings to sort and filter the abbreviations on the list.*

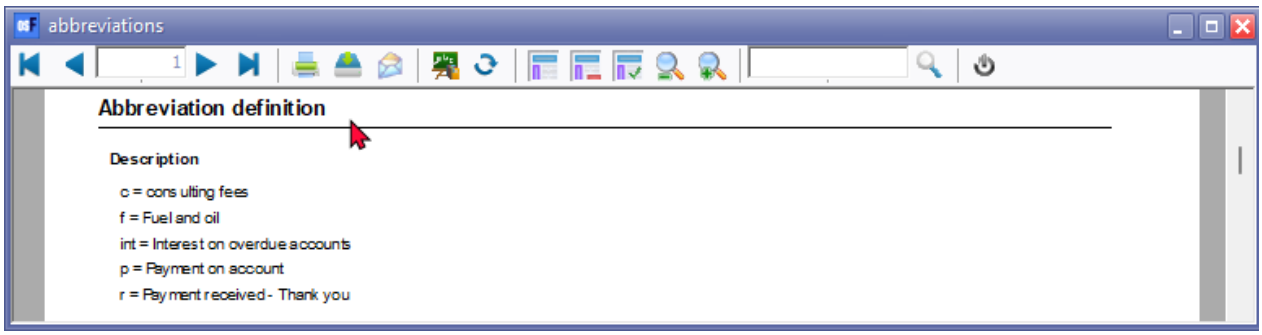
4. Enter the description for the abbreviation.

> *The description should be useful to debtors or creditors if the abbreviation key is selected when entering descriptions for transactions for debtors (customers / clients) or creditors (suppliers), since this abbreviation will be displayed on debtor statements and creditor remittance advises.*

5. Click on the X button on the titlebar.

To print a list of abbreviations:

If you click on the Print list button on the first screen of the Set an abbreviations screen, a list of your abbreviations will be printed.



If you press any of your abbreviation keys the descriptions will be transferred to the description field for a transaction. In this example, the descriptions for the p and r keys will be transferred to the description fields of the batch entry screen. If you have assigned numerical characters (0 to 9) they will be listed before the alphabetical keys are listed.

Created with the Standard Edition of HelpNDoc: Create help files for the Qt Help Framework

Change alias (Batch name)

The alias provides the opportunity for you to add an unique name for the batch type. For example, you may use a specific batch type (e.g. general journal) for many different transactions and may post many general journal transactions in a month or even in a year.

Auto-alias - Setting may also be activated on the F10:Setup - Advanced tab - "Options for this batch". This will automatically generate the system date as the alias (batch name) (e.g., “20210331”) for the batch.

Auto generated - Alias in Receipts batches - TR00001, TR00002,etc. These aliases prefixed with "TR" (consisting of seven (7) digits) will automatically be generated when the "Receive payment" option is used in Open item link context menu.

See -

- *Receive payment for a selected debtor (customer / client) account.*
- *Receive payment for a selected creditor (supplier / vendor) account.*

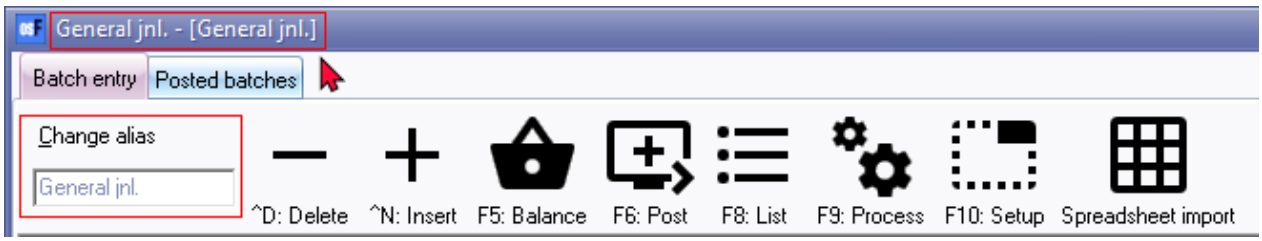
The alias enables you to easily identify and select specific batches (journals). The alias (batch name) will be displayed on the bottom section next to the Open and Cancel buttons of the Batch type selection screen.

You may need to identify and select a specific batch type from the following options:

- Tools → Export posted batches option - Batches List Lookup screen to export specific posted batches.
- Posted Batches tab of the Batch entry screen - View the details and/or print the batch type report for a specific batch.
- Import a posted batch (F9:Process) - To Import all the transactions of a specific batch which have already been posted / updated to the ledger.
- Tools → Global processes → Reverse posted batch/document . This will cancel (unpost) the posted batch and import it to the Batch entry screen for the selected batch.

If you do not utilise this feature to change the alias, you may not find it easy to identify the correct batch.

The alias is displayed directly after the batch type name in square [ ] brackets on the title bar of a selected batch type. For example, if you access the "*General jnl.*", "*General jnl. - [General jnl.]*" will be displayed on the title bar.

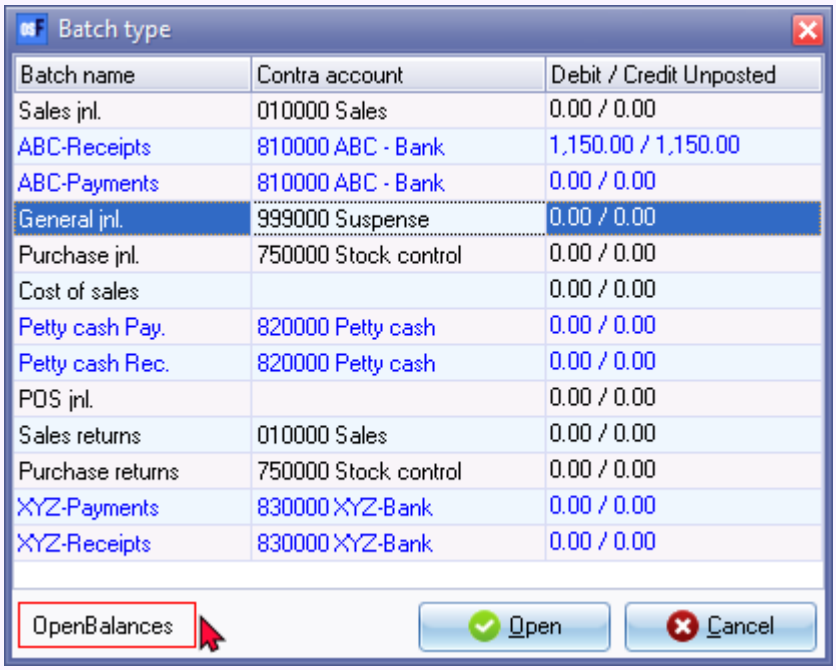


After changing the alias for a batch type, the alias will be displayed in the square brackets [ ] on the title bar. For example, if we use the General journal to record the Opening balance transactions, you may change the alias to display the "*General jnl. -[OpenBalances]*" description.

You will then be able to identify the Batch number by the alias on various options.

When selecting a batch on the Batch entry selection screen, the Alias will be displayed on the left side of the Open and Cancel buttons.

If the alias was not changed, the name of the selected batch type will be displayed.



Created with the Standard Edition of HelpNDoc: Full-featured Documentation generator

Balance batch

Before you may proceed to post a batch, you need to balance the batch.

This will not be necessary when your batch is in balance (i.e. where you have entered debit transactions and credit transactions of equal value) in a batch.

An example for this is when you take-on opening balances from a trial balance, obtained from the accounting records of your previous accounting system.

The Tax report (Reports → Tax) does not include the Sales journal. It only includes Sales documents (i.e. Invoices an Credit notes). Transactions on other Batch types may cause similar errors. The reason for this, is the Consolidate balancing option on the Standard tab - F10:Setup on the Options for this batch screen. When setting up the batch, an information message will be displayed.

> "Consolidating lines and using tax will mess up your tax report! Please make sure you do not use tax or do not consolidate lines!" .

Click on the OK button and click on the F10:Setup icon and deselect (remove the tick) from the Consolidate balancing field on the Standard tab of the "Options for this batch" screen. Balance the batch again.

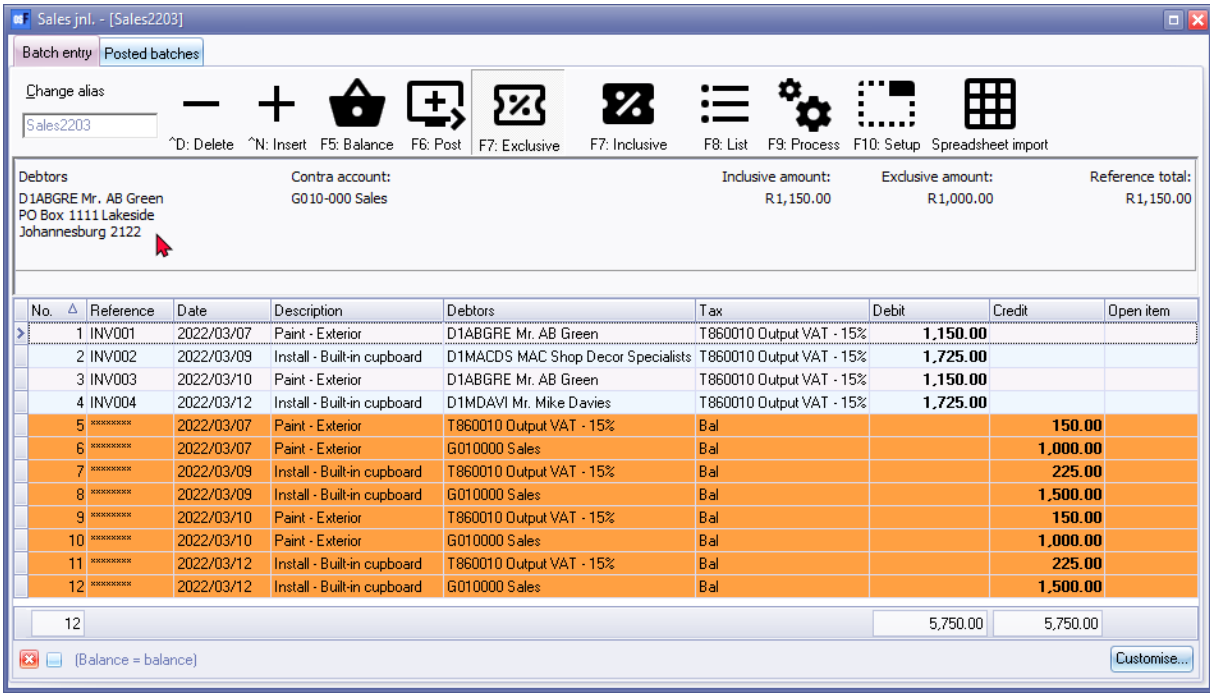
To balance a Batch:

1. Click on the F5:Balance icon.

Right-click on the selected batch (journal) on the Batch type selection screen, and select the Balance batch option on the context menu.

You may click on the F9:Process icon. You then need to select the Balance batch from the list of batch processing options.

2. When this process is finished, the balancing entries will automatically be inserted directly below your last transaction entry. An example of the transactions entered in the Sales journal, is as follows:



a) Reference - Balancing entries are indicated by 8 asterisks (********) in the Reference Field.

b) Date - The Date of the balancing entries will be the date of the last transaction, which you have entered.

> *If you have entered transactions with dates in more than one accounting period, balancing entries will be generated for each accounting period.*

c) Description - Balancing entries for the description of the transactions, as entered in the batch, will be generated for each entry, excluding Tax (VAT/GST/Sales Tax) and also for the Tax (VAT/GST/Sales Tax) amounts.

> *In cases where the Consolidate balancing option on the Standard tab of the F10:Setup on the Batch entry screen is selected (ticked), the BALANCING ENTRY followed by the Batch name and the alias name are displayed in the Description field.*
>
> *Once again, make sure that No Tax (VAT/GST/Sales Tax) is applicable to all transactions in the batch.*
>
> *You may then over type these descriptions, as it is not very meaningful to an outside auditor or accountant. If you over type these, it will definitely make it easier to trace and reconcile transactions.*

Steps after balancing the batch

After the batch balances, you still need to do the following to finalise the batch:

1. Click on the F8:List icon to print a list of the transactions in the batch.

> *It is a good idea to list the batch, and check the entries on the batch thoroughly. If there are any errors, you may edit the batch, before posting the batch.*

2. Click on the F6:Post icon to post the batch. The transactions will automatically be posted (updated) to the ledger.

> *In this example, it would debit the individual accounts (i.e. Debtor accounts), credit the total to the contra account (i.e. sales account) and credit the VAT amount to the Output VAT account.*

> *You may also post batches in Update ledger (Batches tab) (*Default ribbon*), or from the Post batch option on the Batch type selection screen's context menu.*

Created with the Standard Edition of HelpNDoc: Save time and frustration with HelpNDoc's WinHelp HLP to CHM conversion feature

List batch

After entering all your transactions in a batch, and before updating or posting the transactions to the ledger, you need to print a list of the transactions entered in the batch.

> *It is recommended to review the batch list and edit or correct any transactions before proceeding to post the batch (journal). This ensures that the transactions are accurate and complete before being updated to the ledger.*
>
> *Printing the list of transactions allows you to have a physical record that can be used for reference, auditing, or reconciliation purposes.*

> *Once a batch is posted, any errors or corrections would need to be addressed through additional journal transactions or by reversing the posted batch and making the necessary corrections before reposting it.*
>
> *It's important to ensure accuracy in the initial batch entry and review process to minimize the need for subsequent corrections.*

> *Using the printed batch list as an index or cover for the supporting source documents is a good practice. It provides a clear connection between the batch list and the underlying transactions, serving as evidence or proof of the recorded transactions.*

This can be helpful during audits or when reviewing the accuracy and completeness of the batch. Keeping the supporting documents organized and easily accessible alongside the printed batch list helps maintain proper documentation and facilitates efficient reference and verification processes.

Tax authorities and legislation in various jurisdictions often prescribe specific retention periods for financial documents and records. These retention periods determine how long businesses are required to keep their documents as proof of profits, deductions, and other financial transactions. The purpose of these regulations is to ensure that businesses maintain proper records for auditing, compliance, and legal purposes.

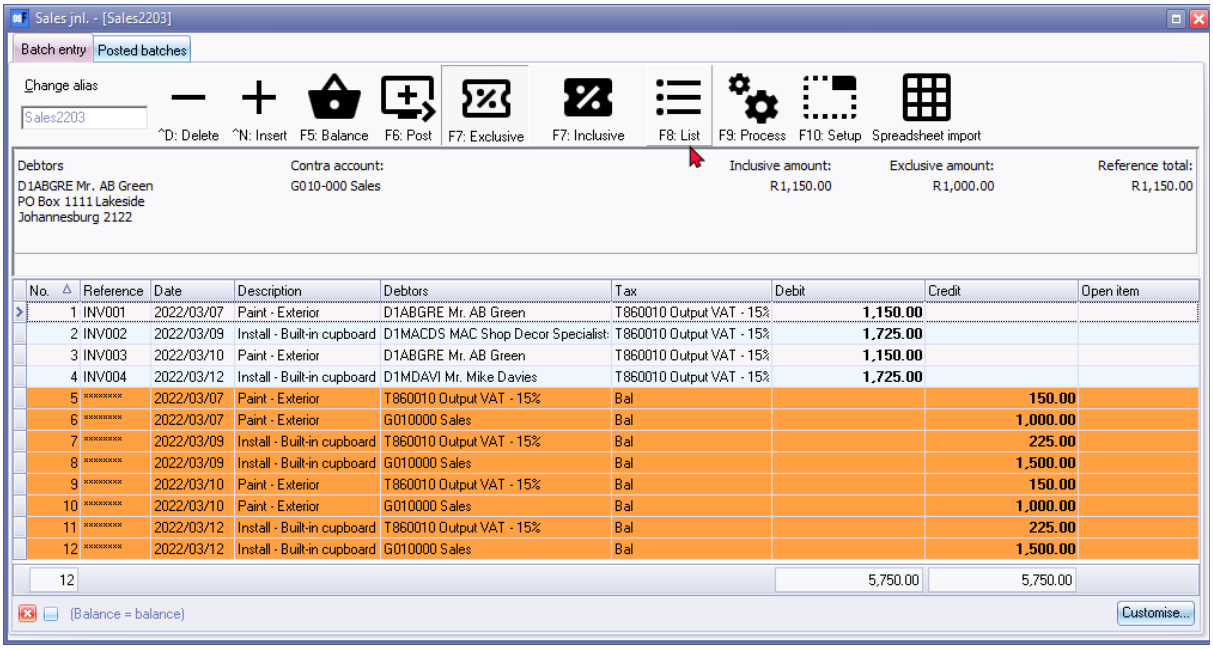
The retention periods can vary depending on the jurisdiction and the specific type of document. It's important for businesses to familiarize themselves with the applicable regulations in their jurisdiction and ensure that they comply with the required retention periods. This may involve retaining documents such as invoices, receipts, bank statements, financial statements, and other supporting documentation for a certain number of years.

By adhering to the prescribed retention periods, businesses can meet their legal obligations, facilitate audits or inspections, and maintain a reliable and accurate record-keeping system. It's always recommended to consult with tax professionals or legal advisors to ensure compliance with the specific requirements of your jurisdiction.

You may list the entries at any time when transactions have been entered in a batch, even if the batch has been balanced or not. Before printing a list of your batch transactions, you need to decide if you wish to include the balancing entries. Should you wish to include the balancing entries on your batch list, you need to first balance the batch.

To list transactions entered in a batch:

1. Once the transactions are entered in a batch, you may print a list of transactions entered in the batch to check the transactions.

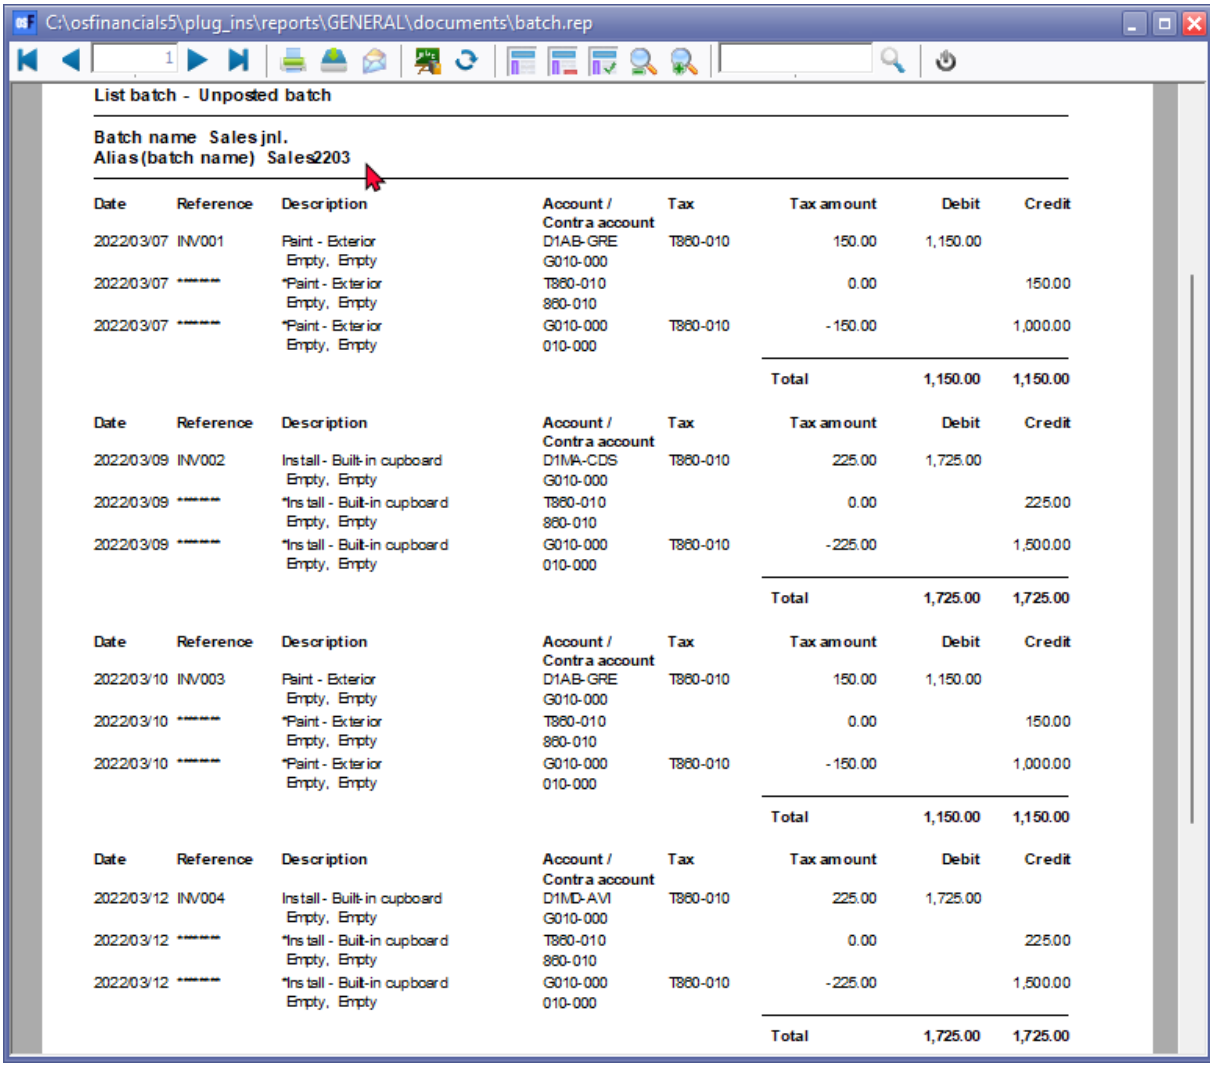


2. Click on the F8:List icon to print a list of the transactions in the batch.

> *You may also right-click on the selected batch (journal) on the "Batch type" selection screen, and select the Print option on the context menu.*

> *You may click on the F9:Process icon. You then need to select the List batch option from the list of batch processing options.*

3. An example of the transactions in the "*List batch - - Unposted batch*" report, is as follows:



C:\osfinancials5\plug_ins\reports\GENERAL\documents\batch.rep

List batch - Unposted batch

Batch name Sales jnl.
Alias (batch name) Sales2203

Check that the "Alias (batch name)" is displayed on correctly on the report.

4. The details of the transactions, displayed in nine (9) columns, are as follows:

   a) Date - This is the transaction date as entered in the date field.

   b) Reference number - This is usually refers to the source document from which the transaction is entered (e.g. the cheque number, deposit number, invoice number, supplier invoice number, etc. as entered in the "*Reference*" field.

If a batch is balanced, the reference number will be indicated by eight asterisks (********).

This refers to the contra account and cannot not, under any circumstances, be over typed or changed before you post the batch.

c) Description - This is the description of the transaction as entered in the description field.

> *This detail should be entered sensibly so as to enable any person or independent auditor to determine the nature of the transaction (what was paid, purchased, sold, etc.*

> *When a Creditor account or a Debtor account was selected, the descriptions should also make sense for the creditor or debtor if Creditor Remittance advises or Debtor statements are sent.*

d) Account - The account code for the selected General ledger, Creditor or Debtor account will be displayed.

> *If a batch is balanced (if the Consolidate balancing is selected in the Options for this batch), the selected Contra account (balancing account) will be displayed.*

> *If any VAT/GST/Sales Tax was applicable to transactions and a Tax account or Code was selected, the Tax code would also be displayed as a balancing entry.*

e) Contra account - This is the default the selected Contra account (balancing account) selected in the Options for this batch Standard tab.

f) Tax - The tax code will be displayed (if tax was selected for a transaction).

g) Tax - The tax amount will be displayed (if tax was selected for a transaction).

h) Debit - The amount of each transaction as entered in the debit column.

i) Credit - The amount of each transaction as entered in the credit column.

5. After printing the report, click on the Close button.

Created with the Standard Edition of HelpNDoc: Full-featured EBook editor

Post batch

Posting a batch is the final step in batch processing. To Post the transactions in a batch, will automatically update the ledger accounts, general ledger (with its control accounts) and the subsidiary ledgers (individual ledger accounts for the Debtors and Creditors) simultaneously.

Once the batches have been posted to the ledger, you need to create another transaction in another batch to correct any errors.

Since your reports will be as accurate as the transactions entered into a batch type, when the batch type is posted (updated) to the ledger, it is recommended that you print a batch list and to check your transactions before posting the batches.

Once transactions have been posted to the ledger, a trial balance can then be generated giving you a list of the accounts and the value of the transactions, as well as a profit / loss analysis. You may also print a wide range of reports for the posted transactions.

Before you start to post the batch, you need to balance the batch and check the descriptions of your balancing entries, You also need to change the alias for the batch, list the batch and check the entries if they are correct.

The transaction data in unposted batches are not included in any ledger reports. You may check for any unposted batches and/or documents in the Input → Checking for unposted items menu on the Default ribbon. You may then decide to post the batches if you wish to include these transactions in your reports.

osFinancials5/TurboCASH5 displays the posted transactions in the 3-column ledger account format. You may also view the posted transactions in general ledger and the subsidiary ledgers (debtors and creditors ledger) in the traditional T-Account format using the T-Account viewer.

To post a batch to the ledger:

1. Click on the F6:Post icon, to post (update) the batch to the ledger.

   You may also right-click on the selected batch (journal) on the Batch type selection screen, and select the Post batch option on the context menu.

   Before you start to post the batch, you need to balance the batch and check the descriptions of your balancing entries, You also need to change the alias for the batch, list the batch and check the entries if they are correct.

   You may click on the F9:Process icon. You then need to select the Post batch from the list of batch processing options.

2. The transactions in the Batch entry Transaction screen will be posted (updated) to the selected accounts in the batch.

3. Once the transactions are posted (updated) to the ledger, the Batch entry Transaction screen will automatically be closed and the Batch type selection screen will be displayed.

4. Click on the Cancel button, or press the Esc key on your keyboard, to exit this screen.

Post to last year

1. Transactions may however be posted to the previous financial year, after the year-end procedure is performed. Should the batch contain transactions with a date relating to the previous financial year, (for example, if the current financial year is from 01/03/2022 to 28/02/2023, and the date of the transaction is 10/02/2022), a confirmation message will be displayed.

   "Do you want to continue posting? Batch contains transactions posting to last year!"

2. Check that the date is correct - Last year's date.

3. Click on the Yes button. osFinancials5/TurboCASH5 will post the transaction to the previous (last) financial year.

If the date(s) of the transactions is incorrect:

1. Click on the No button.

2. Correct the date(s) of the transaction in the batch to this year.

3. Balance the batch once again.

4. Post the Batch.

Error message : Batch does not balance

Should the batch not be in balance or if the batch is not balanced, an error message will be displayed.

"Batch is not in balance!"

To fix this:

1. Click on the OK button.

2. Balance the batch.

3. Post the batch again.

Error message : Account disabled

You will not be allowed to post (update) the batch or document, if a selected the "*Account disabled*" field

on the Accounting information tab for a debtor (customer / client) (Debtors on the Default ribbon) or a creditor (supplier / vendor) (Creditors on the Default ribbon) account is selected.

If the "*Status*" field of a ledger account is set to "*Disabled*" for a ledger account (Setup → Accounts) it will also not allow you to post (update) the batch or document to the ledger.

An error message will be displayed.

> "This batch does not validate! Account disabled 000005 Mr. AB Green" (000005 Mr. AB Green is the account code and name of the debtor (customer / client) as per this example - creditor (supplier / vendor) accounts or ledger account)

This error may be caused by one of two reasons, i.e.

1. The incorrect debtor (customer / client), creditor (supplier / vendor) or ledger account was selected.
2. The "*Account disabled*" field is selected (ticked) on the Accounting information tab of the debtor (customer / client) or creditor (supplier / vendor) account. In the case of a ledger account, the "*Status*" field of a ledger account is set to "*Disabled*".

If you have selected an account in a Batch, and the account is disabled, osFinancials5/TurboCASH5 will display an error message when you post (update) the batch to the ledger:

1. Take note of the account code and name. You may also check that you have not selected the incorrect account.
2. Click on the OK button.
3. If the incorrect account has been selected, select the correct account in the batch and continue to post the batch.

If the selected account was correct, you need to follow the following process:

1. If it is a correct debtor (customer / client) or creditor (supplier / vendor) account, remove the tick in the "*Account disabled*" field on the Accounting information tab of the debtor (customer / client) or creditor (supplier / vendor) account. In the case of a ledger account, set the "*Status*" field to "*Enabled*".
2. Access the Batch type, from which this error message was generated, and post the batch again.

It is also a good idea to make a backup before posting, in case there is any incorrect allocations in the batch. If there are, it is easy to restore your data from your backup and correct the allocations before updating the transactions to the ledger again.

allows you to set the options or defaults for a batch to enable you to minimise errors and/or to maximise your productivity when you capture or enter transactions in a batch. The batch options or defaults only needs to be set once when you start to enter transactions for the first time, unless your requirements change.

You need to post (update) Payments and Receipt batches before you can do the Bank reconciliation (Cash / Bank entry on the Default ribbon) (reconcile your Payments and Receipts journals with your Bank Statement).

Post (update) transactions from the Update ledger (F3) option

This option is used to post (update) your batches to the ledger, which you have entered in Batch entry (Default ribbon) in the various batches. When these batches are updated to the ledger they will automatically pass the journals and post the transactions to the applicable accounts in the Ledger.

You may also post (update) these batches to the ledger from the following options:

- *F6:Post icon or Post batch batch processing option on the Batch entry screens.*
- *Post option on the context menu (right-click) on the Bach Type Selection screen.*

Steps before updating / posting

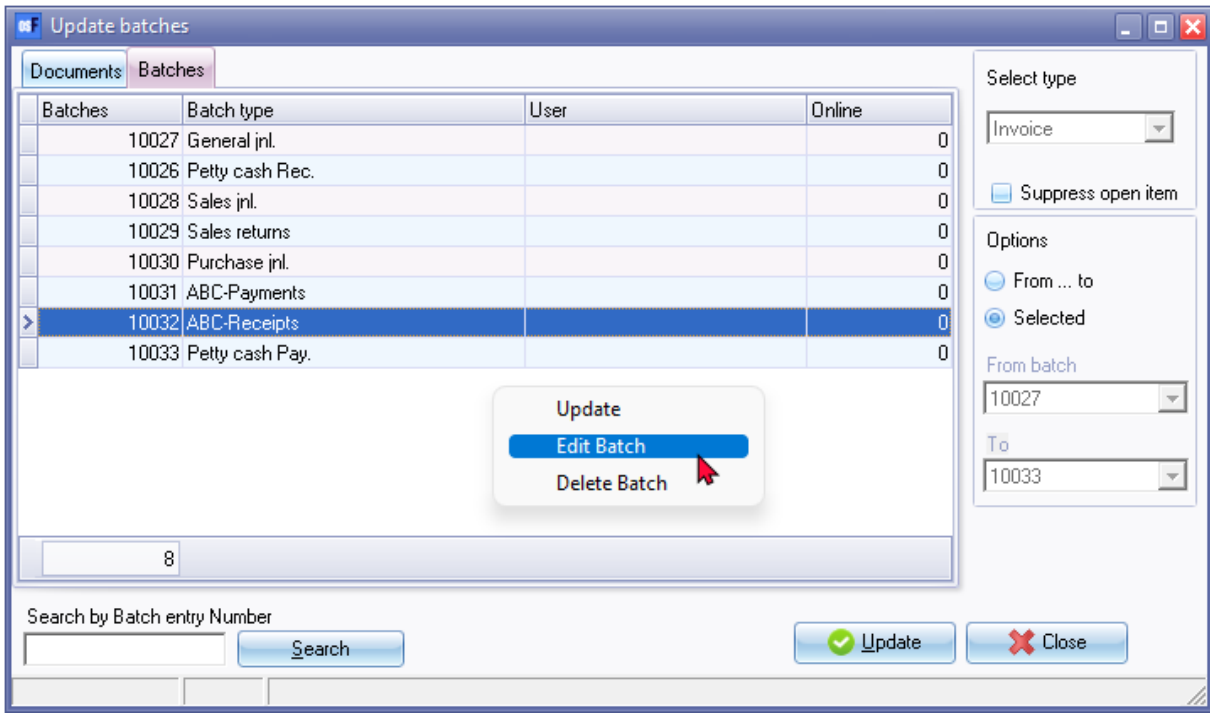
1. Balance the batch - If the debit and credit totals for the batch is not the same as displayed on the Batch type selection screen, you need to balance the batch. This will generate the balancing entries or transactions.
2. List the batch - Generate or Print a list of the transactions in the Batch.

You need to check the transactions to see that they are correct. This is your last chance to correct any incorrect transactions.

You may also need to attach the source documents to the Batch List for record and audit purposes.

To post (update) batches to the ledger:

1. On the Default ribbon, select Update ledger (F3). The "*Update invoices*" screen will be displayed.
2. Click on the Batches tab. The "*Update batches*" screen will be displayed. Any of the available batches, for which you have entered transactions, will be listed:



Batch numbers is automatically generated.

3. Select the following options:

   a) Select type - This is only active for documents if you click on the Documents tab.

   b) Suppress open item - By default, the following Open item selection screens will be displayed on which you need to link the debit and credit transactions when updating batches:

      i) Open item selection screen for debtor (customer / client) accounts if the Use Open item field on the Accounting information tab is selected.

      ii) Open item selection screen for creditor (supplier / vendor) accounts if the Use Open item field on the Accounting information tab is selected.

      Select the Suppress open item field, if you do not wish to use the Open item link selection facilities when updating or posting batches. You may then later use the Open item link facility to link the transactions.

   c) From ... to - This will display the Batch numbers "*From ... to*". This option allows you to select the starting Batch number on a drop-down list, and a last Batch number which you need to post (update) to the ledger. All batches (journals) within the selected range of Batch numbers will be posted (updated) to the ledger.

If you only need to post (update) one batch (journal) to the ledger, the Batch number in the From... and To... fields must be the same.

d) Selected - If you select this option, the "*From ... to*" fields and the drop-down lists for Batch numbers will be de-activated. An arrow will indicate the selected document. You may also use the down arrow or Up arrow keys on your keyboard, to select a document from the list.

4. Click on the Update button. osFinancials5/TurboCASH5 will automatically post (update) the transactions in the selected batches (journals) to the respective accounts in the General ledger, Debtor's ledger and/or Creditor's ledger.

Finding or locating specific batches

You may also use the following options to find or locate a specific batch or batches:

1. Search by Batch entry number -

2. Enter the Batch number - The Batch number will automatically be selected. If not, click on the Search button.

Sort sequences - Double-click on Column headings to sort the list of batches ascending or descending:

1. Batch entry number - By default, all Batch numbers are displayed ascending (smallest Batch number to the latest Batch number).

   If you double-click on this heading, it will list the Batch numbers in the descending sequence (from the latest Batch number to the smallest or first Batch number).

2. Batch type - By default, the batches are listed by Batch numbers. The batch descriptions or names (as created or edited in Setup → Batch types) may not be displayed in the ascending sequence.

   To display the batch descriptions or names in the descending sequence (9-0 / Z-A), double-click on this heading. To display the batch descriptions or names in the ascending sequence (0-9 / A-Z), double-click on this heading again.

3. User - By default, the batches are listed by Batch numbers. The Users (as created in Setup → Access control and which were logged on to the system and which have processed any transactions in Batches / Journals) may not be displayed in the ascending sequence.

   To display the Users in the descending sequence (9-0 / Z-A), double-click on this heading. To display the users in the ascending sequence (0-9 / A-Z), double-click on this heading again.

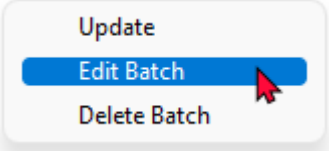
4. Online - By default, the batches are listed by Batch numbers. The Online column will display TRUE or

FALSE and may not be displayed in the ascending sequence.

To display the Online in the descending sequence (TRUE then FALSE), double-click on this heading. To display the users in the ascending sequence (FALSE then TRUE), double-click on this heading again.

Context menu options

If you select a batch on the list, you may right-click to launch the following context menu:



1. Update - will post (update) the transactions in the selected batch (journal) to the ledger.
2. Edit batch - will launch or open the selected batch entry screen. You may then edit the transactions in the batch, balance the batch, list the batch and change the alias, etc. before posting it to the ledger.
3. Delete batch - When a batch (journal) is posted (updated) to the ledger, it is automatically removed from the list of batches.

It is recommended that this option not be used to delete a batch (journal), but that batches rather be deleted in the Erase batch batch processing option.

Created with the Standard Edition of HelpNDoc: Easy CHM and documentation editor

Totals for each period

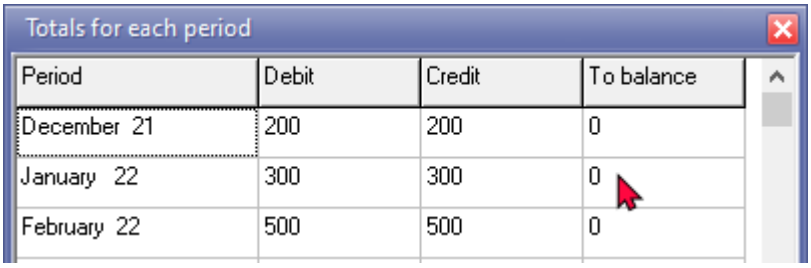
Once you have entered transactions for more than one accounting period in any batch (journal), you may view the totals for each accounting period of the transactions in the batch (journal). This will display the total amount for the debit transactions, as well as the total amount for the credit transactions in each respective accounting period.

To view the totals for each period:

For example, transactions have been entered for more than one accounting period (e.g. December, January and February), in a General journal, it would be displayed as follows:

1. Click on the F9: Process icon. The *Process the batch options* screen will be displayed.
2. Select the Totals for each period option, and click on the OK button. The *Totals for each Period* screen

is displayed:



3. Check that the totals for the debit transactions are equal to the credit transactions and that the *To Balance* column is reflecting a zero amount for each Accounting period.

4. Once finished checking the totals, click on the Close button on the title bar of the *Totals for each Period* screen or press the Esc key on your keyboard, to exit or close this screen.

Differences in the Amount to Balance column could implicate that the -

- *Batch is not balanced.*
- *Amounts in the Debit Amount column or the Credit Amount column are entered incorrectly (e.g. 54 as 45, etc.) This option is usually the case if the Amount entry is set to enter both Debit and Credit amounts in the Batch setup Options.*

You need to either balance the batch or find and enter the correct amount if an amount was entered incorrectly in the batch.

Created with the Standard Edition of HelpNDoc: Easy CHM and documentation editor

Edit unposted batch transactions

In addition to the Insert transactions to, and Delete transactions in, an unposted batch, you may use the following "*Options for this batch*" to edit or change transactions in an unposted batch:

1. Erase batch - You may delete an entire batch, including all the entries, which you may have entered or which was imported into the batch.

2. Reverse batch (D<-->C) - If transactions were entered incorrectly in the debit column in stead of entering the transactions in the credit column, and *vice versa*, you may transfer (switch) the transaction amounts as entered into the credit columns to the debit columns and *vice versa* for any unposted batch.

Created with the Standard Edition of HelpNDoc: Add an Extra Layer of Security to Your PDFs with Encryption

Erase batch

You may delete an entire batch, including all the entries, which you may have entered or which was imported into the batch.

Should you have deleted a batch by mistake, you cannot undo the delete. You need to re-enter or import all the transactions into the batch.

To erase a batch:

1. Click on the F9: Process icon. The Process the batch options screen will be displayed.
2. Select the Erase batch option, and click on the OK button.

   You may also right-click on the selected batch (journal) on the Batch type selection screen, and select the Erase batch option on the context menu.

   A Warning message will be displayed.

   "Are you sure you want to erase this entire batch?"

3. Click on the Yes button to permanently remove the transactions in the batch and close the batch entry screen.

   If you have selected the incorrect batch (journal), click on the No button to cancel this operation.

4. Click on the Close button on the title bar or press the Esc key on your keyboard, to close or exit the Batch entry transaction screen and/or the Batch type selection screens.

Created with the Standard Edition of HelpNDoc: Easy to use tool to create HTML Help files and Help web sites

Insert transactions in a batch

Sometimes you may have entered a number of transactions in a batch. You may wish to insert a transaction in a specific place in the batch.

To insert a transaction in a batch:

1. Select the line or row in which you wish to insert a blank line or row above the selected transaction.
2. Click on the ^N:Insert icon (Ctrl + N) / (Insert).
3. A new blank row above a selected transaction will be inserted.
4. Enter the transaction in the inserted row or line.

Created with the Standard Edition of HelpNDoc: Make Documentation a Breeze with a Help Authoring Tool

Delete transactions in a batch

If an incorrect transaction have been entered in a batch, you may select the transaction and delete it from a row in a batch.

Should you have deleted a transaction by mistake, you cannot undo the delete. You need to re-enter the transaction, which is incorrectly deleted.

Should you wish to delete all the transactions in a batch, you may select the Erase batch option from the Process the batch options screen.

To delete transactions in a batch:

1. Select the transaction in the batch, which you wish to delete.

   Multi-select feature allows you to delete more than one (1) transaction at a time. To select the more than one (1) transaction, press the Ctrl key and keep it down while selecting the other lines to delete with a mouse click.

2. Click on the ^D:Delete icon (Ctrl + D). A confirmation message will be displayed:

   "Are you sure you wish to delete this transaction? (3)"
   ((3) is the number of selected transactions to be deleted) .

3. Click on the Yes button to delete the selected transaction.

If you have selected the incorrect transaction or row, click on the No button to cancel this action.

All the Balancing Entries may be deleted on the Delete Balance context menu of the selected batch type on the Batch type selection screen, if the selected batch (journal) is already balanced.

To delete a selected transaction, you need to select an account and/or enter the amount. If the reference number, date and description fields, contains data, but the account and/or amount fields are blank, you will not be allowed to delete the selected transaction.

Created with the Standard Edition of HelpNDoc: iPhone web sites made easy

Reverse batch (D<-->C)

Once a batch has been posted (updated) to the ledger with the amounts in the incorrect column (e.g. in the debit column instead of the credit column), this error will not be revealed by the trial balance. This is called errors of reverse posting.

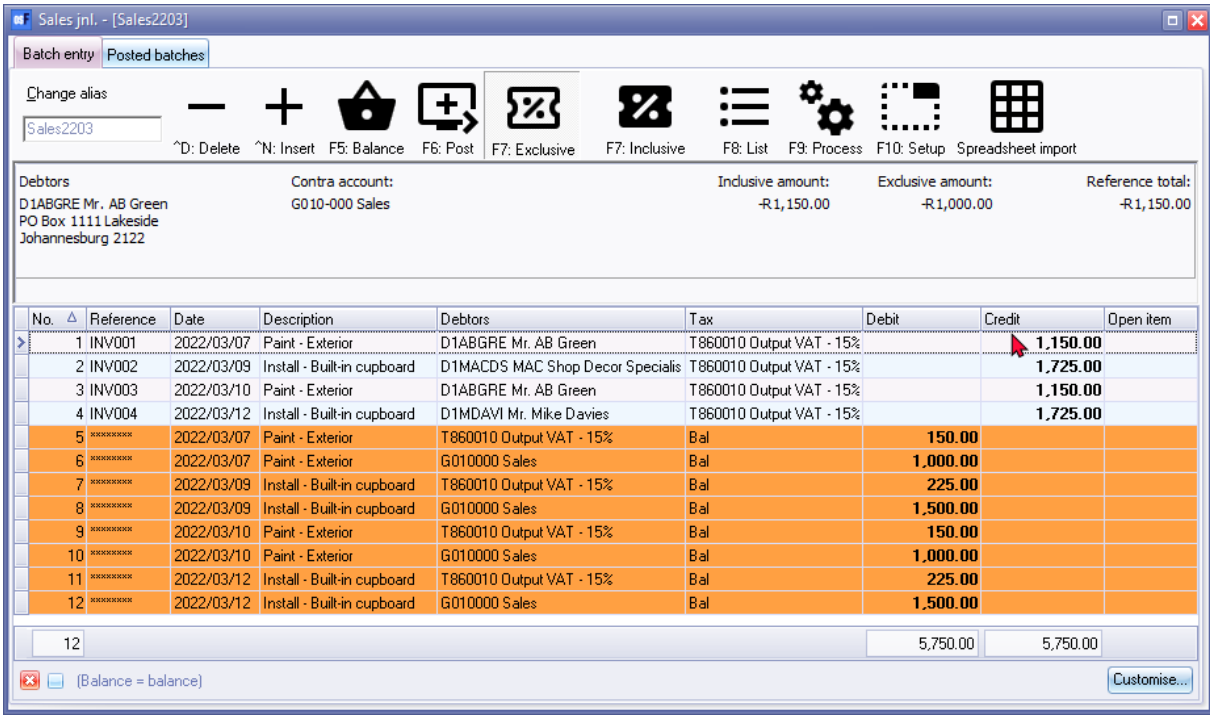
You may check and edit the entries in a batch before posting or updating the transactions to the ledger. It is good practice to list the transactions in the batch and check your data thoroughly before posting a batch.

You may transfer the transaction amounts as entered into the debit columns to the credit columns and *vice versa* for any unposted batch.

This option should be used with utmost care and only if you have entered amounts in the incorrect side debit instead of credit and vice versa.

To reverse transactions in an unposted batch:

1. In the following example, the amounts for the transactions in the Sales journal (Batch type), were incorrectly entered in the credit column (instead of the debit column). The Batch entry screen for the Sales journal will display the incorrect transactions as follows:



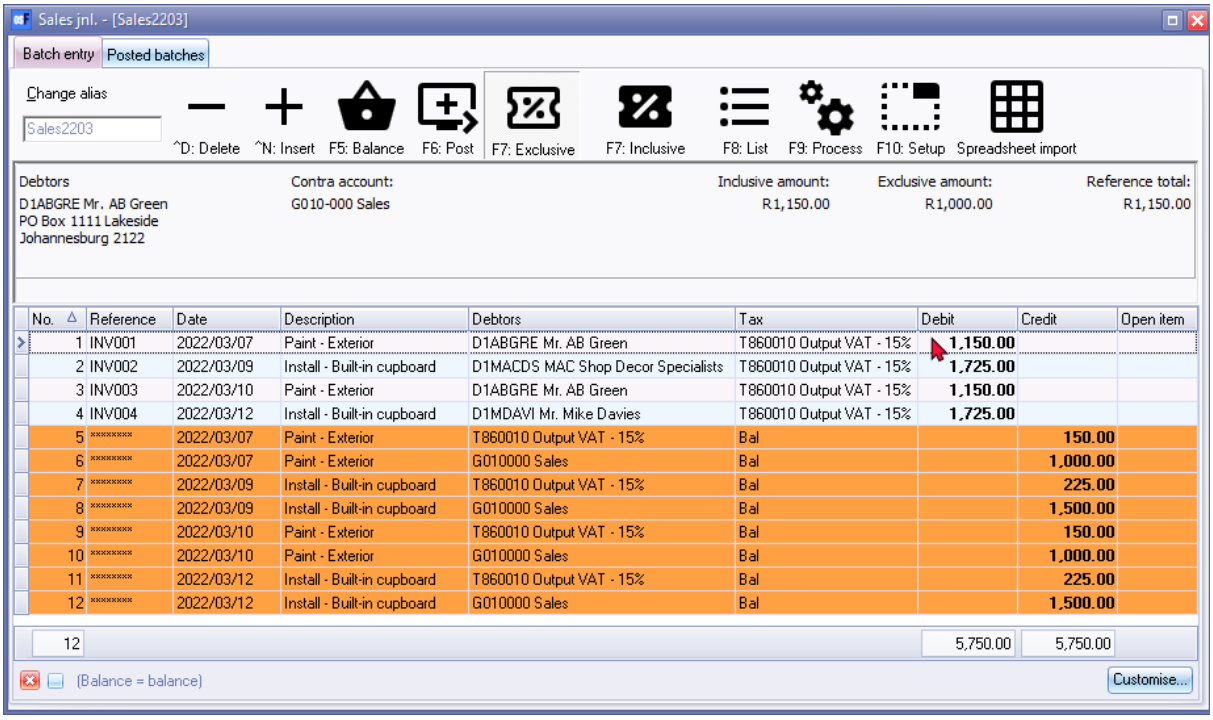
> *Should this batch be posted (updated) to the ledger, the individual debtor accounts (and the Debtor's control account) will incorrectly be credited and the Sales account (income) incorrectly debited. This feature allows you to correct this with a few mouse clicks.*

2. Click on the F9:Process icon. The Process the batch options screen will be displayed.

3. Select the Reverse batch (D<-->C) option, and click on the OK button.

> *You may also right-click on the selected batch (journal) on the Batch type selection screen, and select the Reverse batch (D<-->C) option on the context menu.*

4. All amounts entered in the credit columns will be transferred to the debit column. If the batch was balanced, the Balancing amounts will also be transferred to the correct column (e.g. credit column).



Should the processing icons on the "Batch entry" screen is inactive during this process, you may need to close and reopen the batch.

Should this corrected batch be posted (updated) to the ledger, the individual debtor accounts (and the Debtor's control account) will correctly be debited and the Sales account (income) incorrectly credited.

If you have selected a Tax code, in the Cashbook (Receipts journal and Payments journal), the amount EXCLUSIVE of VAT/GST/Sales Tax (NOT the INCLUSIVE of VAT/GST/Sales Tax) is reflected in the amount column, when the cursor is not on the amount field of a transaction.

The following list indicates whether amounts of transactions for a specific batch type should be entered in the debit or credit columns in a batch entry screen:

Batch	*Debit / Credit (Amount entry)*
Sales	*Debit*
Sales returns	*Credit*
Purchase journal	*Credit*

Purchase returns journal	*Debit*
Receipts journal	*Credit*
Payments journal	*Debit*
Petty cash journal	*Credit*
General journal	*Both Debit and Credit*

Once a batch is posted of which the transactions have been entered in the incorrect amount columns (debits as credits and vice versa), you need to:

1. *Enter the transactions in another batch (journal) to cancel the transactions, which were incorrectly posted (updated) to the ledger.*
2. *Enter the transactions again to record the original transactions and post (update) it to the ledger.*

Another option is to make a backup and use the Cancel / Reverse posted batch in Tools → Global processes (Setup ribbon). This will cancel the batch and import it to the batch entry screen on which you may use the "Reverse batch (D<-->C)" option before posting the batch again.

Created with the Standard Edition of HelpNDoc: Why Microsoft Word Isn't Cut Out for Documentation: The Benefits of a Help Authoring Tool

F9:Batch processing options - Transactions

The following "*Options for this batch*" may be used to generate transactions.

1. Generate multiple transactions - This option allows you to process transactions for all debtor (customer / client) accounts that matches specific criteria. You may also process transactions for creditor's with charge amounts.

Generate multiple transactions - will be replaced with the following in:

- *Receipts batches - Create receipts - You may create a receipt from a receipt batch, print it out and hand it to a customer or the party from which you have received payment. A receipt will automatically be generated and the transaction for the receipt will automatically be*

entered in the selected Receipts journal.

- *Payment batches - Creditor balances to date - The "Creditor balances at date" batch processing option allows you to add payment transactions for all your creditors (suppliers) into the payments batch at a specified date. You may then edit the batch (for example, decide which creditors (suppliers) to pay, change the amounts, delete creditors (suppliers), etc.).*

2. Repeating transactions - The Repeating transactions feature allows you to enter transactions, which occur on a periodic basis. They may be weekly, monthly, quarterly or annually, etc. You may enter the transactions once and, when due, copy them into the normal batch, edit (if amounts have changed), delete or add an entry.

3. Automatic payments - You may pay your creditor (supplier / vendor) accounts, as well as refunds to debtor (customer / client) accounts (with credit balances, which need to be refunded) via the electronic banking system. The transactions for accounts with outstanding transactions and balances will be transferred into the "*Automatic payments*" screen, where you may select the accounts and outstanding amounts you need to pay.

4. Automatic receipts - You may receive payments from debtor (customer / client) accounts for their accounts via the electronic banking system. The transactions for debtor (customer / client) accounts with outstanding transactions and balances will be transferred into the "*Automatic receipts*" screen, where you may select the debtor (customer / client) accounts and outstanding amounts you need to receive from the debtor 's Bank accounts.

Created with the Standard Edition of HelpNDoc: Free help authoring environment

Generate multiple transactions

This option allows you to process transactions for all debtor (customer / client) accounts that matches specific criteria. You may also process transactions for creditor's with charge amounts.

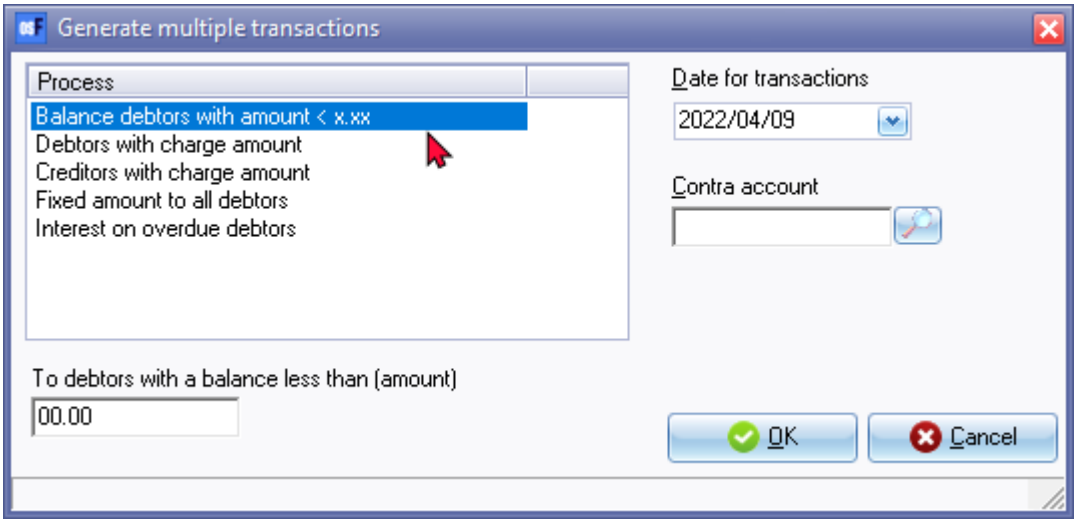
To generate multiple transactions:

1. On the Default ribbon, select Batch entry (F2).
2. Select the Batch type (except Payment and Receipt Journals, which is linked to Bank accounts) and click on the Open button.
3. Enter the Alias (batch name) in the "*Change alias*" field.

4. Click on the F10:Setup icon and select the Contra account.

5. Click on the F9: Process icon. The "*Process the batch*" screen will be displayed.

6. Select the "*Generate multiple transactions*" option.



7. The following five (5) options are available:

   a) Balance debtors with amount < x.xx - Generate transactions for those Debtor accounts, which have an outstanding balance of less than the amount you specify.

   b) Debtors with charge amount - Generate transactions for those Debtor accounts, which have a charge amount entered in the Debtor (Accounting information tab).

   c) Creditors with charge amount - Generate transactions for those Creditor accounts, which have a charge amount entered in the Creditor (Accounting information tab).

   d) Fixed amount to all debtors - Generate transactions for all Debtor accounts, to charge a fixed specified amount.

   e) Interest on overdue debtors - Generate transactions for those Debtor accounts, which are overdue and have a percentage monthly interest entered in the (Accounting information tab).

Created with the Standard Edition of HelpNDoc: Upgrade Your Documentation Process with a Help Authoring Tool

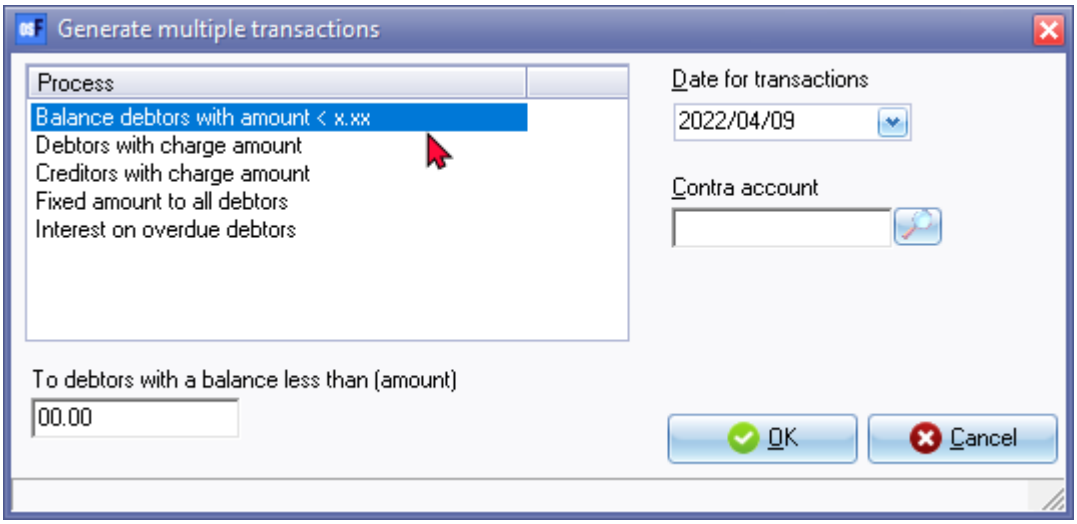
Balance debtors with amount < x.xx

You may generate transactions for those Debtor accounts, which have an outstanding balance of less than the amount you specify.

This feature may be used if you decide, for example, to write-off all debts of all the debtors who owe less than a specified amount, which are considered uneconomical to recover.

To generate multiple transactions for debtors with an outstanding amount less than a specified amount:

1. On the Default ribbon, select Batch entry (F2).
2. Select the Batch type (except Payment and Receipt Journals, which is linked to Bank accounts) and click on the Open button.
3. Enter the Alias (batch name) in the *Change alias* field.
4. Click on the F10:Setup icon and select the Contra account.
5. Click on the F9: Process icon. The "*Process the batch*" screen will be displayed.
6. Select the "*Generate multiple transactions*" option.



7. Select and enter the following:
    a) Date for transactions - Enter or select the date for which the transactions should be generated.
    b) Contra account - Do not select.

The selected contra account is not stored. The contra account needs to be selected in the F10:Setup batch before balancing the batch.

c) To debtors with a balance less than (amount) - Specify an amount for which debtors owing less than this amount should be listed in the batch.

5. Click on the OK button. The Generate multiple transactions screen will automatically be closed, and the transactions for the Debtors will be imported into the selected batch.

6. Check the transactions and, if necessary, change the descriptions, etc.

Once you have finished entering / editing the transactions in the batch you need to: -

1. *Change the Alias (Batch name).*
2. *Balance the batch.*
3. *List the batch.*
4. *Post the batch.*

Created with the Standard Edition of HelpNDoc: Say Goodbye to Documentation Headaches with a Help Authoring Tool

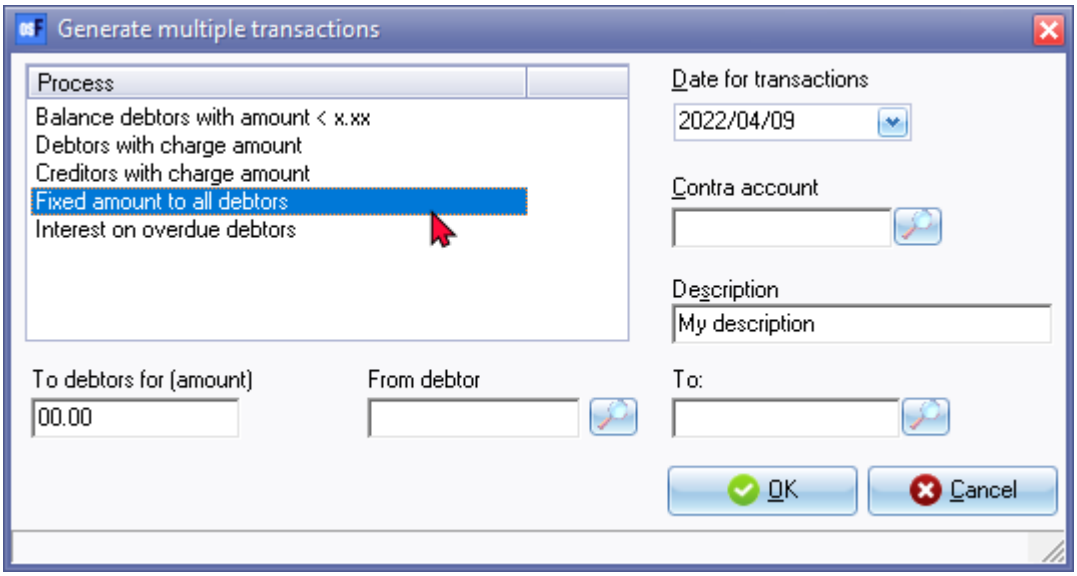
Fixed amount to all debtors

You may generate transactions for all or selected Debtor accounts, to charge a fixed specified amount.

When this fixed amount transactions is generated, and once the batch has been posted, the Debtor accounts will be increased (debited) and the selected contra account (e.g. income account) will also be increased (credited).

To generate multiple transactions for fixed amount to debtors:

1. On the Default ribbon, select Batch entry (F2).
2. Select the Batch type (except Payment and Receipt Journals, which is linked to Bank accounts) and click on the Open button.
3. Enter the Alias (batch name) in the "*Change alias"* field.
4. Click on the F10:Setup icon and select the Contra account. This is the account to be credited with the generated transactions. This account may be an Income or Sales account, or any other account you specify.
5. Click on the F9: Process icon. The "*Process the batch*" screen will be displayed.
6. Select the Generate multiple transactions option. The "*Generate multiple transactions"* screen will be displayed.
7. Select the Fixed amount to all debtors option. The screen will change to reflect the options for this option:



8. Select and enter the following:

    a) Date for transactions - Enter or select the date for which the transactions should be generated.

    b) Contra account - Do not select.

> *The selected contra account is not stored. The contra account needs to be selected in the F10:Setup batch before balancing the batch.*

    c) Description - Change "Description" with any description to suit your requirements.

> *The description must be useful to your debtors, since it will be displayed on Debtor statements.*

    d) To debtors for (amount) - Enter the amount, which should be charged to all Debtor accounts or a selected Debtor account.

    e) From debtor ... To - Select a specific Debtor account or a range of Debtor accounts from the Debtors lookup facility.

9. Click on the OK button. The Generate multiple transactions screen will automatically be closed, and the transactions for the selected Debtor accounts with the specified amounts, will be imported into the selected batch.

10. Check the transactions and, if necessary, change the descriptions, etc.

11. Click F10:Setup and select the contra account.

12. Click F5:Balance to generate balancing entries to the contra account.

> *Once you have finished entering / editing the transactions in the batch you need to: -*
>
> 1. *Change the Alias (Batch name).*
> 2. *Balance the batch.*
> 3. *List the batch.*
> 4. *Post the batch.*

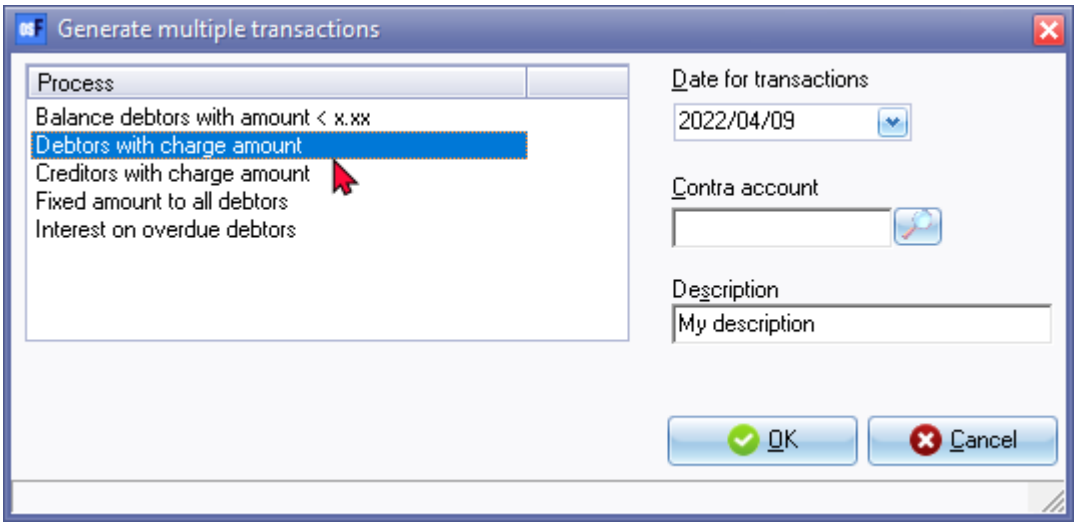
Debtors with charge amount

osFinancials5/TurboCASH5 provides this useful feature to generate transactions for those Debtor accounts, which have a charge amount entered in the Debtors (Accounting information tab).

When this charge amount is generated and once the batch has been posted, the Debtor accounts will be increased (debited) and the selected contra account (e.g. income account) will also be increased (credited).

To generate multiple transactions for debtors with charge amount:

1. On the Default ribbon, select Batch entry (F2).
2. Select the Batch type (except Payment and Receipt Journals, which is linked to Bank accounts) and click on the Open button.
3. Enter the Alias (batch name) in the "*Change alias*" field.
4. Click on the F10:Setup icon and select the Contra account.
5. Press or click on the F9: Process icon. The "*Process the batch*" screen will be displayed.
6. Select the "*Generate multiple transactions*" option.
7. Select the Debtors with charge amount option.



8. Select and enter the following:
    a) Date for transactions - Enter or select the date for which the transactions should be generated.
    b) Contra account - Do not select.

The selected contra account is not stored. The contra account needs to be selected in the F10:Setup batch before balancing the batch.

c) Description - Change "*My Description*" with any description to suit your requirements.

The description must be useful to your debtors, since it will be displayed on Debtor statements.

9. Click on the OK button. The *Generate multiple transactions* screen will automatically be closed, and the transactions for the Debtors which have charge amounts entered in the Accounting information tab of the Debtor account, will be imported into the selected batch.

10. Click F10:Setup and select the contra account.

11. Click F5:Balance to generate balancing entries to the contra account.

12. Check the transactions and, if necessary, change the descriptions, etc.

Once you have finished entering / editing the transactions in the batch you need to: -

1. *Change the Alias (Batch name).*
2. *Balance the batch.*
3. *List the batch.*
4. *Post the batch.*

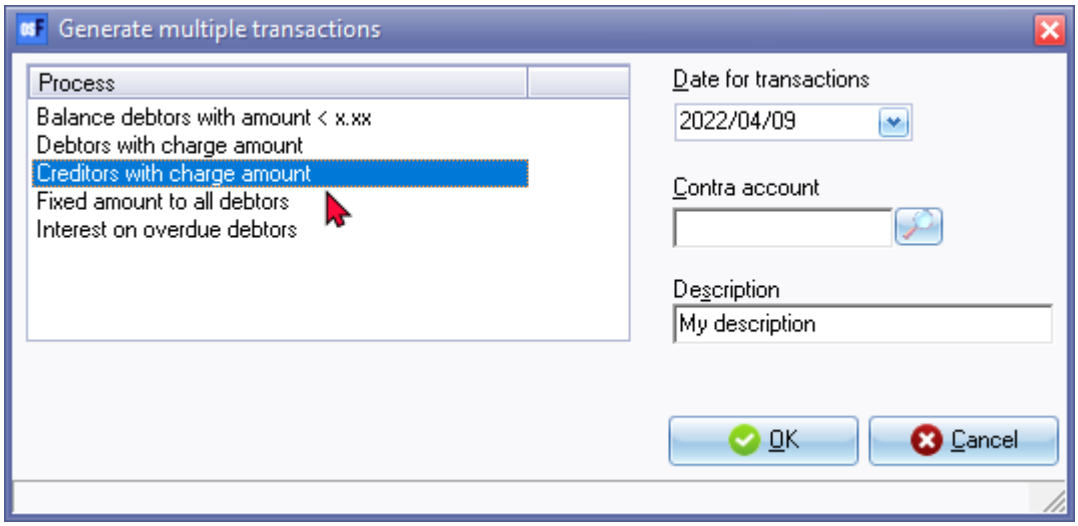
Creditors with charge amount

This feature allows you to generate transactions for those Creditor accounts, which have a charge amount entered in the Creditor (Accounting information tab).

When this charge amount is generated and once the batch has been posted, the Creditor accounts will be increased (credited) and the selected contra account (e.g. expense or cost account) will also be increased (debited).

To generate multiple transactions for creditors with charge amount:

1. On the Default ribbon, select Batch entry (F2).
2. Select the Batch type (except Payment and Receipt Journals, which is linked to Bank accounts) and click on the Open button.
3. Enter the Alias (batch name) in the *Change alias* field.
4. Click on the F10:Setup icon and select the Contra account. This is the account to be debited with the generated transactions. This account may be an Expense account, or any other account you specify.
5. Click on the F9: Process icon. The "*Process the batch*" screen will be displayed.
6. Select the Generate multiple transactions option. The "*Generate multiple transactions"* screen will be displayed.
7. Select the Creditors with charge amount option. The screen will change to reflect the options for this option:



8. Select and enter the following:

a) Date for transactions - Enter or select the date for which the transactions should be generated.

b) Contra account - Do not select.

> *The selected contra account is not stored. The contra account needs to be selected in the F10:Setup batch before balancing the batch.*

c) Description - Change "*My Description*" with any description to suit your requirements.

> *This description must be useful to your creditors, since it will be displayed on Creditor Remittance advises.*

9. Click on the OK button. The *Generate multiple transactions* screen will automatically be closed, and the transactions for the Creditors which have charge amounts entered in the Accounting information tab of the Creditor account, will be imported into the selected batch.

10. Check the transactions and, if necessary, change the descriptions, etc.

11. Click F10:Setup and select the contra account.

12. Click F5:Balance to generate balancing entries to the contra account.

> *Once you have finished entering / editing the transactions in the batch you need to: -*
>
> 1. *Change the Alias (Batch name).*
> 2. *Balance the batch.*
> 3. *List the batch.*
> 4. *Post the batch.*

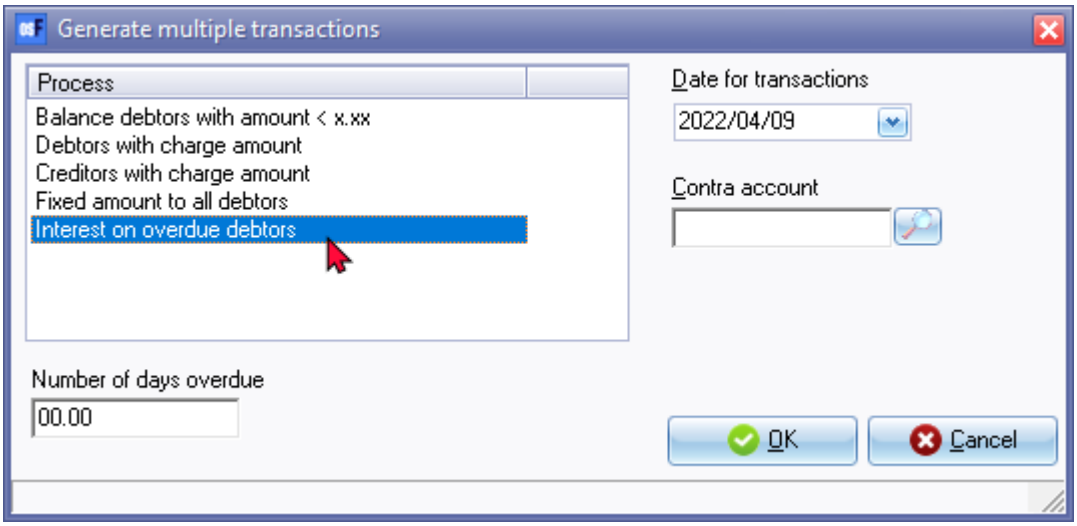
Interest on overdue debtors

You may generate transactions for those Debtor accounts, which are overdue and have a percentage monthly interest entered in Debtors (Accounting information tab).

If this option is initiated, osFinancials5/TurboCASH5 will calculate the Interest and generate the transactions. Once the batch has been posted, the Debtor accounts will be increased (debited) and the selected contra account (e.g. interest received - income account) will also be increased (credited).

To generate multiple transactions for interest on overdue debtor accounts:

1. On the Default ribbon, select Batch entry (F2).
2. Select the Batch type (except Payment and Receipt Journals, which is linked to Bank accounts) and click on the Open button.
3. Enter the Alias (batch name) in the *Change alias* field.
4. Click on the F10:Setup icon and select the Contra account. This is the account to be credited with the generated transactions. This account should be an Income or Interest Received account.
5. Press or click on the F9: Process icon. The "*Process the batch*" screen will be displayed.
6. Select the "*Generate multiple transactions*" option.
7. Select the Interest on overdue debtors option. The screen will change to reflect the options for this option:



8. Select and enter the following:

a) Date for transactions - Enter or select the date for which the transactions should be generated.

b) Contra account - Do not select.

> *The selected contra account is not stored. The contra account needs to be selected in the F10:Setup batch before balancing the batch.*

c) Number of days overdue - Enter the number of days the account is overdue. Note it is important that the correct number of days be entered here. osFinancials5/TurboCASH5 will use this to calculate the Interest amount.

9. Click on the OK button. The Generate multiple transactions screen will automatically be closed and osFinancials5/TurboCASH5 will calculate the Interest and transfer the calculated interest transactions for the Debtors which have a monthly interest percentage entered in the Debtor account (Accounting information tab). The transactions will be imported into the selected batch.
10. Check the transactions and, if necessary, change the descriptions, etc.
11. Click F10:Setup and select the contra account.
12. Click F5:Balance to generate balancing entries to the contra account.

> *Once you have finished entering / editing the transactions in the batch you need to: -*
>
> 1. *Change the Alias (Batch name).*
> 2. *Balance the batch.*
> 3. *List the batch.*
> 4. *Post the batch.*

Create receipts (Receipt batches)

Normally you would write out a receipt in a receipt book, and then enter the details of the hand-written receipt in the receipt batch.

You may create a receipt from a receipt batch, print it out and hand it to a customer or the party from which you have received payment. A receipt will automatically be generated and the transaction for the

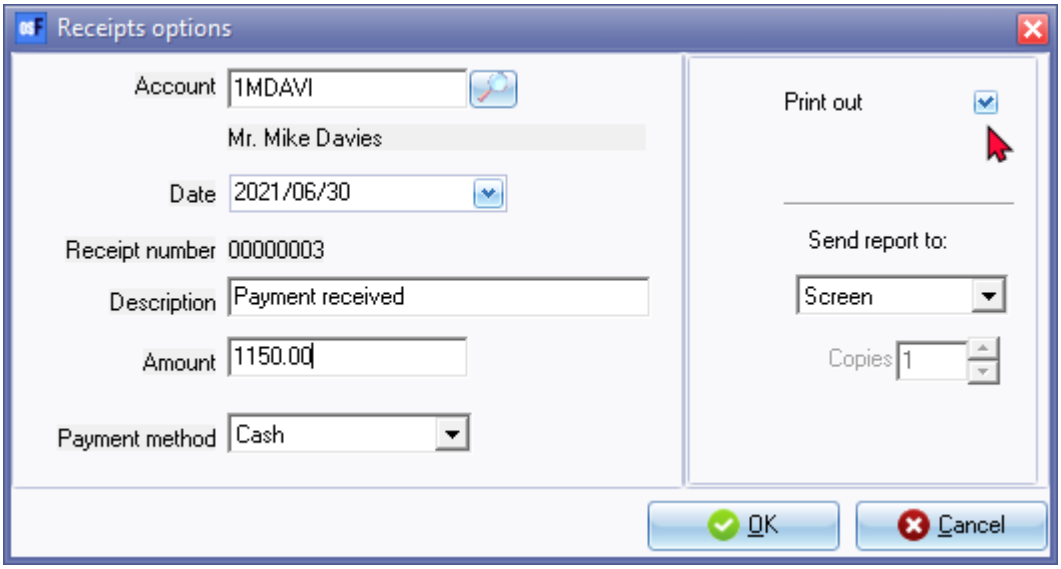
receipt will automatically be entered in the selected Receipts journal.

To create a receipt:

1. On the Default ribbon, select Batch entry (F2).
2. Select the Receipts journal.

> *Should you have more than one Bank account, you need to make sure that you select the correct Receipts journal for the Bank account into which you are going to deposit the payment received.*

3. Click on the Open button. The Batch entry screen for the selected Receipts journal will be displayed.
4. Enter the Alias (batch name) and press the Enter key, if necessary.
5. Click on the F9: Process icon. The Process the batch options screen will be displayed.
6. Select the Create receipts option, and click on the OK button. The "*Edit receipts options*" screen is displayed:



7. Enter and select the following options:

   a) Account - Select the Account to which you wish to allocate the moneys received from the Accounts lookup facility. Usually it would be a Debtor account for which the money is received. In some cases, it may also be a ledger account to be credited with the moneys received for cash (e.g. Sale of a Fixed Asset for cash).

   b) Date - The system date of your operating system will automatically be displayed in the date field. Enter the date or select the date, if necessary.

c) Description - Enter the description, which you wish to be displayed on the receipt, as well as on the details of reports and on the debtor statements if applicable.

d) Amount - Enter the amount in figures. You may enter up to Nine billion, nine hundred and ninety nine million, nine hundred and ninety nine thousand nine hundred and ninety nine (Rands, Euros, Pounds or Dollars) and ninety nine cents in this field (9,999,999,999.99).

> *If your system's digit separator id set to a comma and your system's Decimal symbol is set to a period, do not enter a comma as the decimal separator.*
>
> *If a comma is used as a digit separator, It will print and generate the transaction amount as 115,000.00 instead of 1,150.00.*

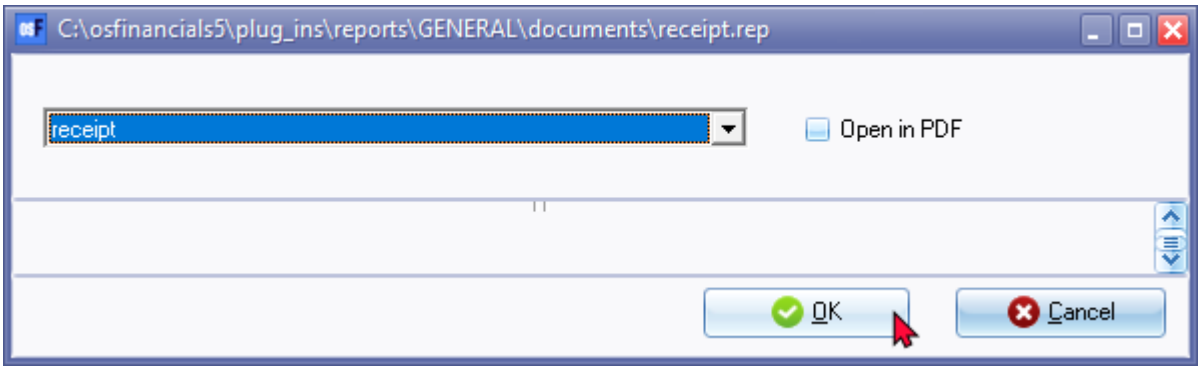
e) Payment method - Select the payment method Cash, Cheque, Credit Card or Other.

f) Print out - Select to print out or not to print the receipt in the print out field. If this field is left blank, no receipt will be printed, but the details of the receipt will generate a transaction in the batch entry screen.

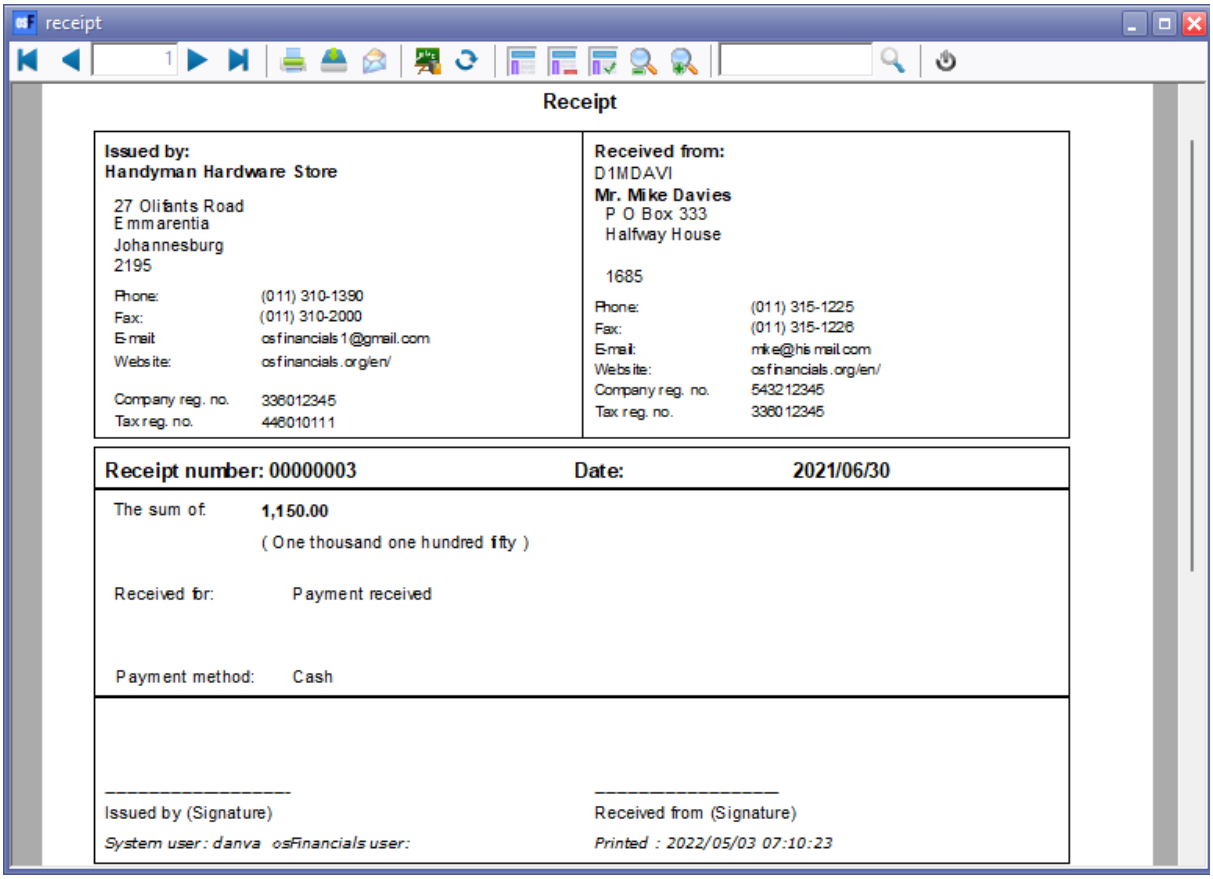
g) Send report to - Select Screen, Printer, File, E-mail or Fax to generate the receipt.

h) Copies - Not implemented.

8. Click on the OK button. The receipt will be sent to the medium you have selected in the Send report to field, provided that the "*Print out*" field is selected. Click OK on the "*Report parameter*" screen.



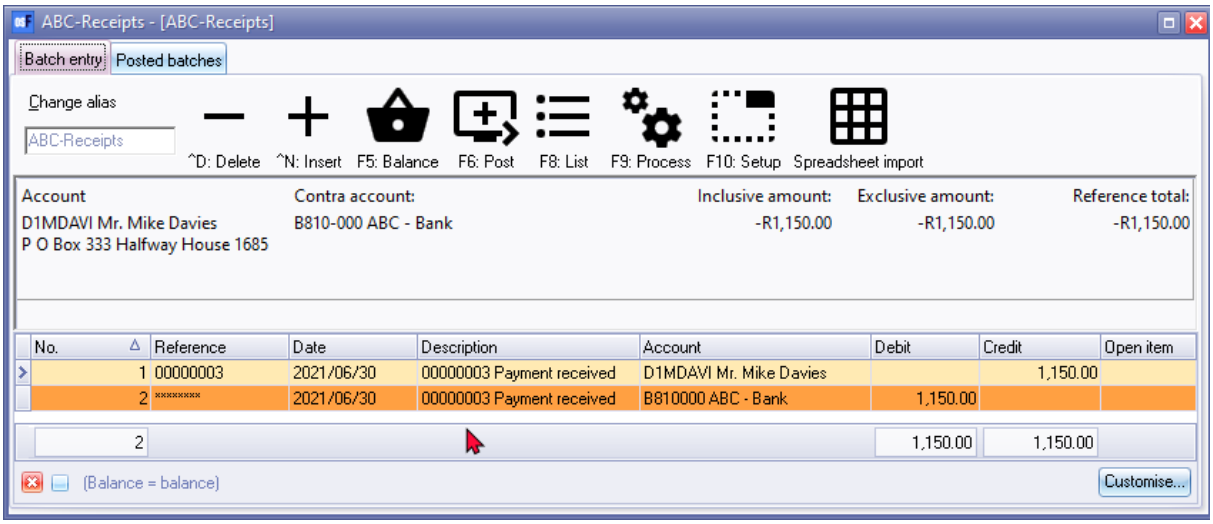
9. An example of the printed "*Receipt*", is as follows:



To display the amount in words correctly on receipts, where the rules are different than in English or other languages, you need to select the Dutch text numbering option on Setup → System parameters (Setup ribbon).

10. The transaction for the receipt will automatically be inserted into the Receipts journal from which this option was initiated.

11. Click on F5:Balance. An example, of the balanced batch, is as follows:

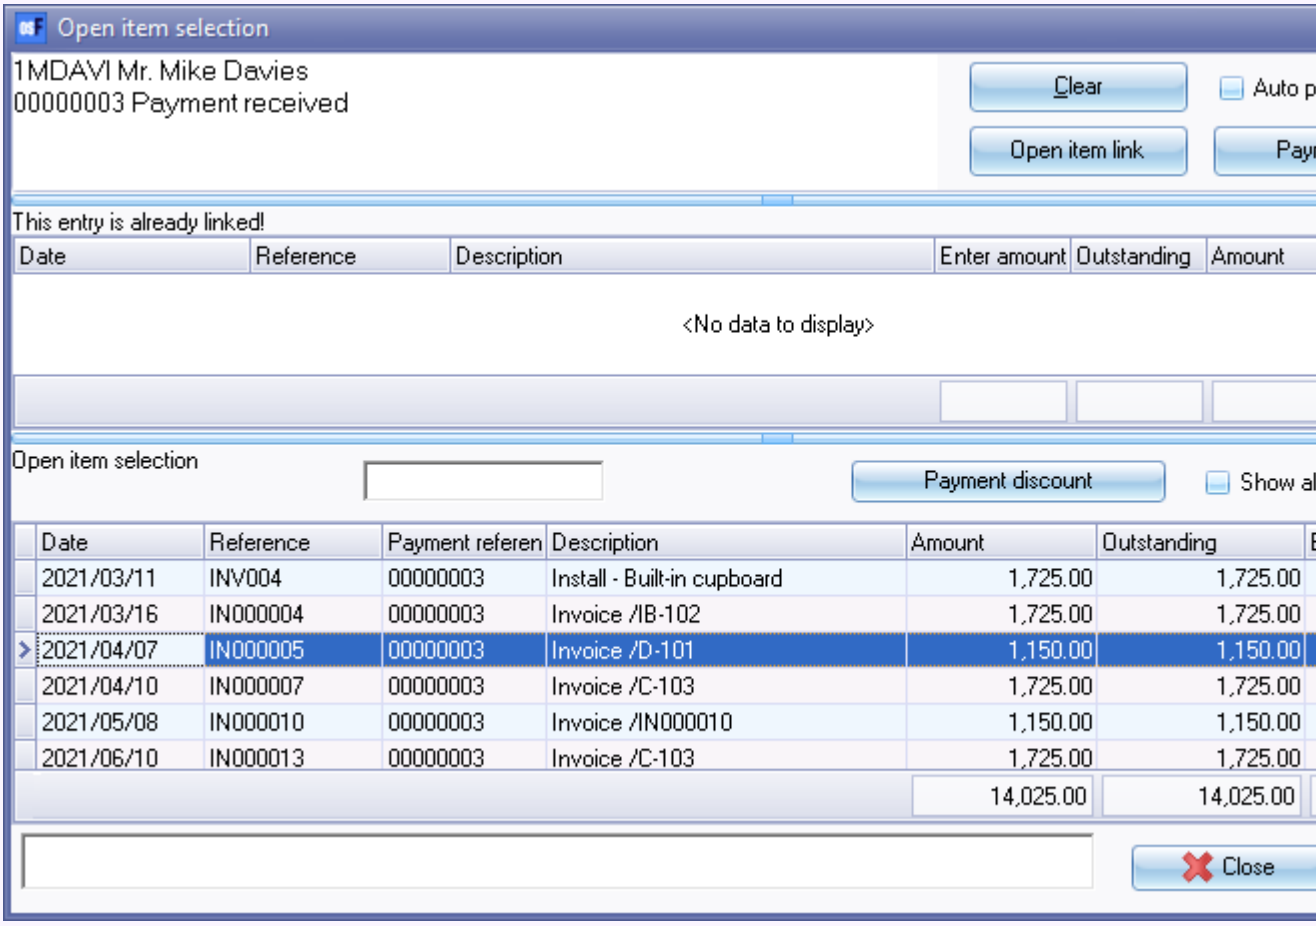


You may change the receipt number in the reference field to the deposit number on which the receipt is deposited. It is important to use the deposit number as reference number. If this is not done, you may find difficulties when matching the bank statement with the transactions in the Receipts journal when you finalise the bank reconciliation.

Should the processing icons on the "Batch entry" screen is inactive during this process, you may need to close and reopen the batch.

Open item debtor (customer / client) accounts

If a debtor (customer / client) account were set as an Open item account, and when you edit or select a transaction. the "Open i be displayed. You may confirm or select a transaction to which you wish to apply the receipt.



Once you have finished entering / editing the transactions in the batch you need to: -

1. *Change the Alias (Batch name).*
2. *Balance the batch.*
3. *List the batch.*

4. *Post the batch*.

Creditor balances to date (Payments batches)

The "*Creditor balances at date*" batch processing option allows you to add payment transactions for all your creditors (suppliers) into the payments batch at a specified date.

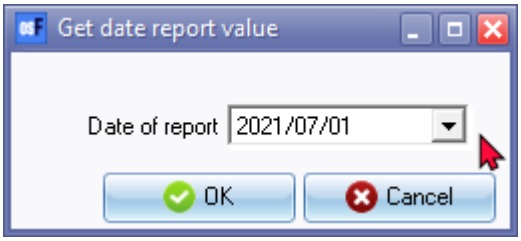
You may then edit the batch (for example, decide which creditors (suppliers) to pay, change the amounts, delete creditors (suppliers), etc.).

To create outstanding transactions for creditors (suppliers) at a specified dates:

1. On the Default ribbon, select Batch entry (F2).
2. Select the Payments journal.

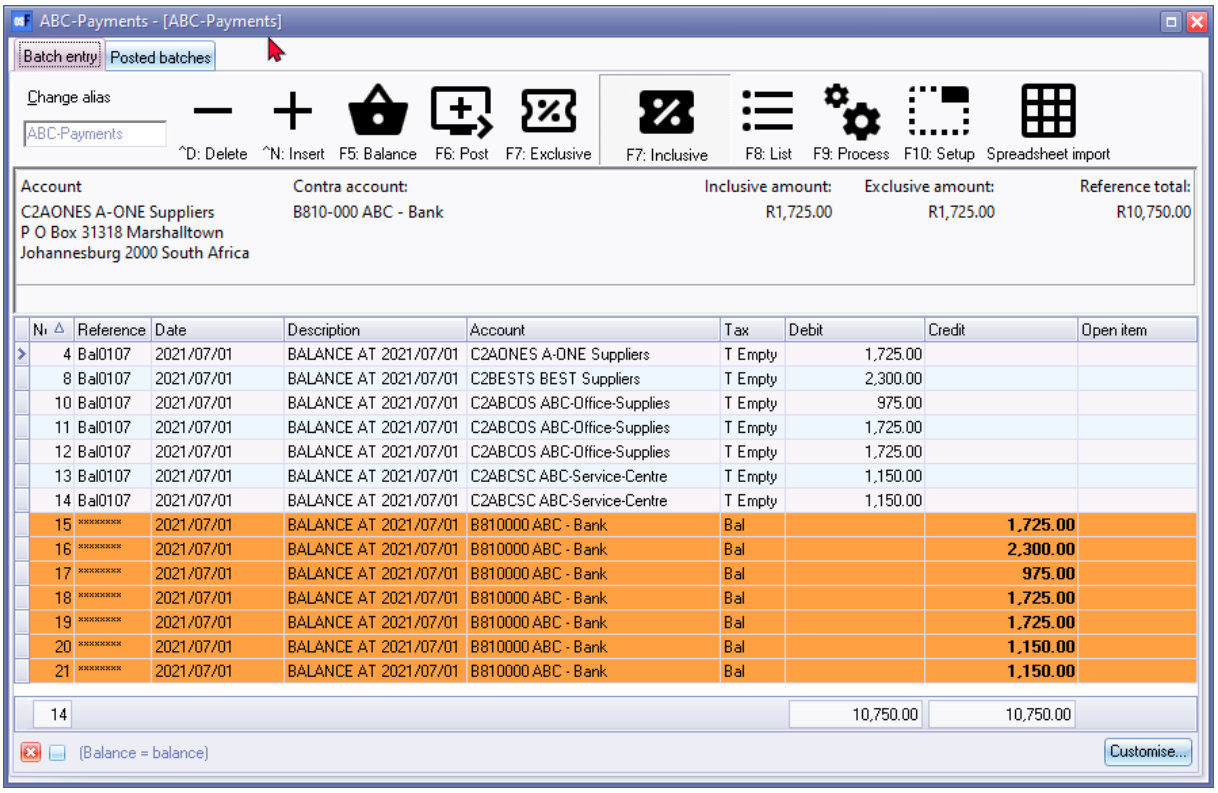
> *Should you have more than one Bank account, you need to make sure that you select the correct Payments journal for the Bank account out of which you are going to pay the creditors (suppliers).*

3. Click on the Open button. The Batch entry screen for the selected Payments journal will be displayed.
4. Enter the "*Alias (batch name)*" and press the Enter key, if necessary.
5. Click on the F9: Process icon. The "*Process the batch*" options screen will be displayed.
6. Select the Creditor balances at date option, and click on the OK button. The "*Get date report value*" screen is displayed:



7. Select the date on which the creditor (supplier / vendor) accounts with outstanding balances to be added as transactions in the payments batch.
8. Click OK. The transactions for the creditor (supplier / vendor) balances as at the specified date will be

imported into the payments batch as follows:



N	Reference	Date	Description	Account	Tax	Debit	Credit	Open item
4	Bal0107	2021/07/01	BALANCE AT 2021/07/01	C2AONES A-ONE Suppliers	T Empty	1,725.00		
8	Bal0107	2021/07/01	BALANCE AT 2021/07/01	C2BESTS BEST Suppliers	T Empty	2,300.00		
10	Bal0107	2021/07/01	BALANCE AT 2021/07/01	C2ABCOS ABC-Office-Supplies	T Empty	975.00		
11	Bal0107	2021/07/01	BALANCE AT 2021/07/01	C2ABCOS ABC-Office-Supplies	T Empty	1,725.00		
12	Bal0107	2021/07/01	BALANCE AT 2021/07/01	C2ABCOS ABC-Office-Supplies	T Empty	1,725.00		
13	Bal0107	2021/07/01	BALANCE AT 2021/07/01	C2ABCSC ABC-Service-Centre	T Empty	1,150.00		
14	Bal0107	2021/07/01	BALANCE AT 2021/07/01	C2ABCSC ABC-Service-Centre	T Empty	1,150.00		
15	********	2021/07/01	BALANCE AT 2021/07/01	B810000 ABC - Bank	Bal		**1,725.00**	
16	********	2021/07/01	BALANCE AT 2021/07/01	B810000 ABC - Bank	Bal		**2,300.00**	
17	********	2021/07/01	BALANCE AT 2021/07/01	B810000 ABC - Bank	Bal		**975.00**	
18	********	2021/07/01	BALANCE AT 2021/07/01	B810000 ABC - Bank	Bal		**1,725.00**	
19	********	2021/07/01	BALANCE AT 2021/07/01	B810000 ABC - Bank	Bal		**1,725.00**	
20	********	2021/07/01	BALANCE AT 2021/07/01	B810000 ABC - Bank	Bal		**1,150.00**	
21	********	2021/07/01	BALANCE AT 2021/07/01	B810000 ABC - Bank	Bal		**1,150.00**	
14						10,750.00	10,750.00	

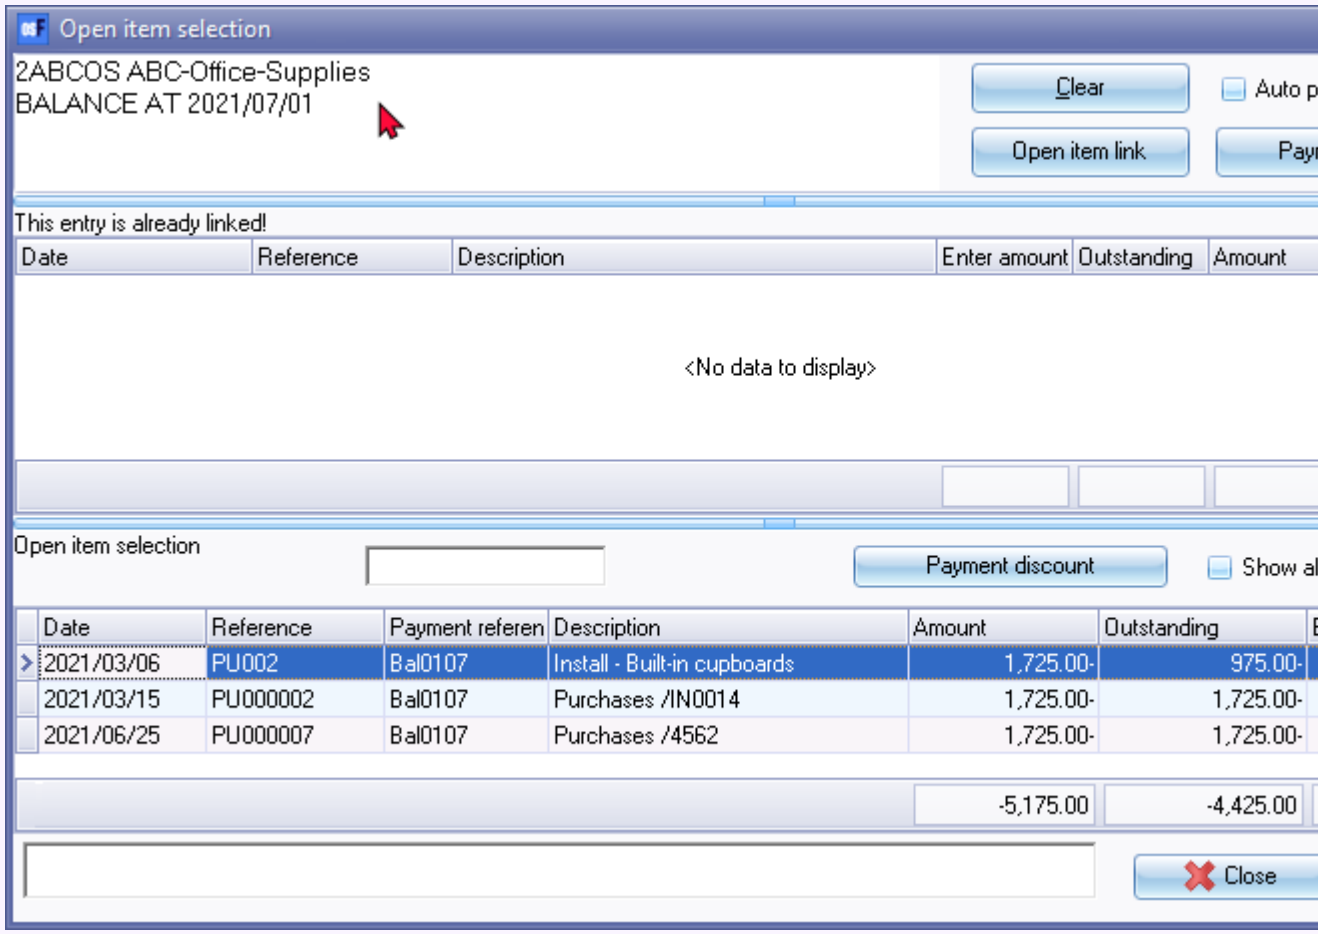
9. Edit the batch as necessary. In this example, transactions numbers 1 to 3 and 5 to 7 were deleted, since transactions of those creditor (supplier / vendor) accounts were excluded from this payment.

Should the processing icons on the "Batch entry" screen is inactive during this process, you may need to close and reopen the batch.

Open item creditor (supplier / vendor) accounts

If a creditor (supplier / vendor) account were set as an Open item account, and when you edit or select a transaction. the "Open
be displayed. You may confirm or select a transaction to which you wish to apply the payment.

In this example, a purchase transaction (i.e. PU002) has an outstanding balance which is imported.



Once you have finished entering / editing the transactions in the batch you need to: -

1. *Change the Alias (Batch name).*
2. *Balance the batch.*
3. *List the batch.*
4. *Post the batch.*

Created with the Standard Edition of HelpNDoc: Free EPub producer

Automatic payments

You may use the "Creditor balances at date" batch processing option to generate all Creditor accounts with outstanding balances as at the specified date. The transactions will automatically be imported into the Payments journal.

You may pay your creditor (supplier / vendor) accounts, as well as refunds to debtor (customer / client)

accounts (with credit balances, which need to be refunded) via the electronic banking system. The transactions for accounts with outstanding transactions and balances will be transferred into the "*Automatic payments*" screen, where you may select the accounts and outstanding amounts you need to pay.

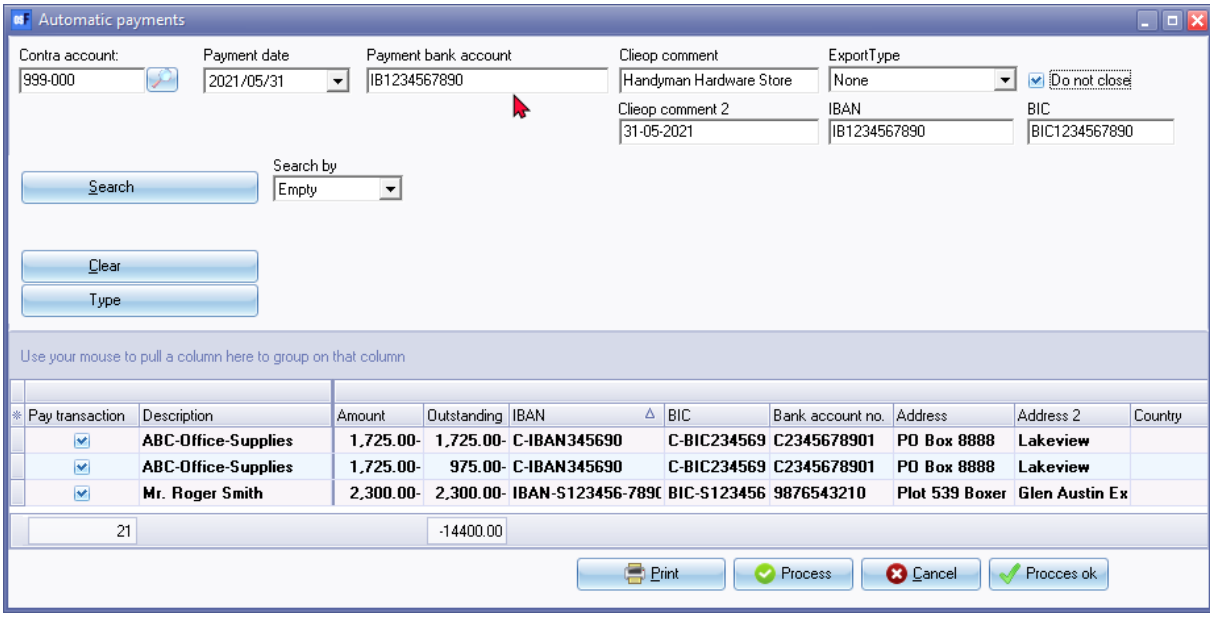
The accounts which have open or outstanding amounts will be listed. The (outstanding amount) balances are transferred to an intermediate account or clearing account on the date of the transactions.

Once the payment is cleared at the bank (on the due date) payment is deducted from the Bank account and will appear on the bank statement. When you allocate the transaction on the bank statement, the intermediate account or clearing (account contra account) will be debited.

> *Before using this feature, bank accounts need to be entered the Accounting information tab of Creditor (supplier / vendor) accounts (Default ribbon).*

To pay accounts using the automatic payments feature:

1. On the Default ribbon, select Batch entry (F2).
2. Select the General journal or any other batch type.
3. Click on the Open button. The "*Batch entry*" screen for the selected batch will be displayed.
4. Enter the Alias (batch name) and press the Enter key.
5. Click on the F9: Process icon. The "*Process the batch*" options screen will be displayed.
6. Select the "*Automatic payments*" option, and click on the OK button. The "*Automatic payments*" screen is displayed:



Debtor (customer / client) accounts, with a credit balance, which need to be refunded, may also be included in this "Automatic payments" feature.

See -

- *https://www.paiementor.com/keys-to-understand-the-sepa-messages-names/*
- *https://wiki.xmldation.com/General_Information/ISO_20022/pain.001*

7. All the creditors (supplier / vendor) accounts with transactions will be imported.

8. Select and enter the following:

   a) Contra Account - Select the intermediate account. This is basically a clearing account for the payments to creditor (supplier / vendor) accounts.

      It is recommended that a General ledger account, which is linked to the Current liabilities Account group be selected.

   b) Payment Date - Enter or select the date for which you need to process payments for creditor (supplier / vendor) accounts.

      The transactions on this date to the intermediate account or clearing account (Contra account), and calculate the due days as specified in the Due days field on the Accounting information tab of the selected creditor (supplier / vendor) account.

   c) Create Clieop File - If you select this option, you need to specify the name for the Clieop file.

      The Clieop file is a general accepted file format that can be read into a bank program for payments.

   d) Payment Bank Account - Enter the payment Bank account.

   e) Clieop comment - By default, this will be the system date in the format "*DD-MM-YYYY*". Enter a comment for the transaction.

   f) Export Type - "*None*" is the default option. This will transfer the selected transactions into the "*Batch entry*" screen. If you select the following export types you need to save a export file before the selected transactions is transferred into the "*Batch entry*" screen:

      i) Create a clieop file - Create an export file.

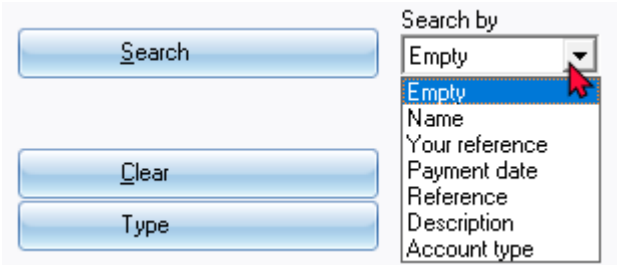
      ii) pain.001.001.03 - Create an export file in the XML Document type.

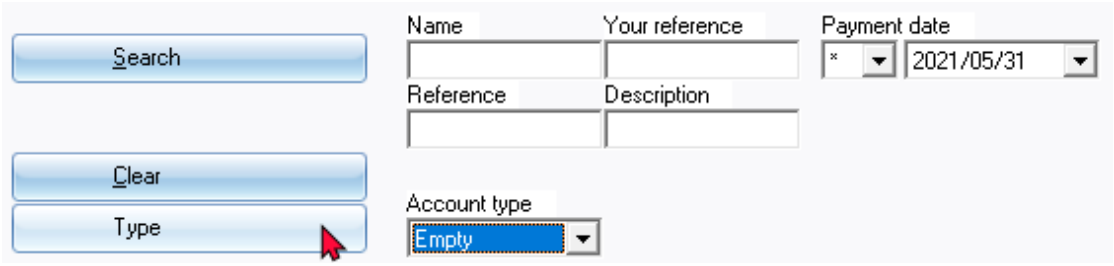
See -

- *https://www.paiementor.com/keys-to-understand-the-sepa-messages-names/*
- *https://wiki.xmldation.com/General_Information/ISO_20022/pain.001*

g) Do not close - By default, this option is not selected. If this option is selected, the Process ok button will be available.

h) Search and filter options -

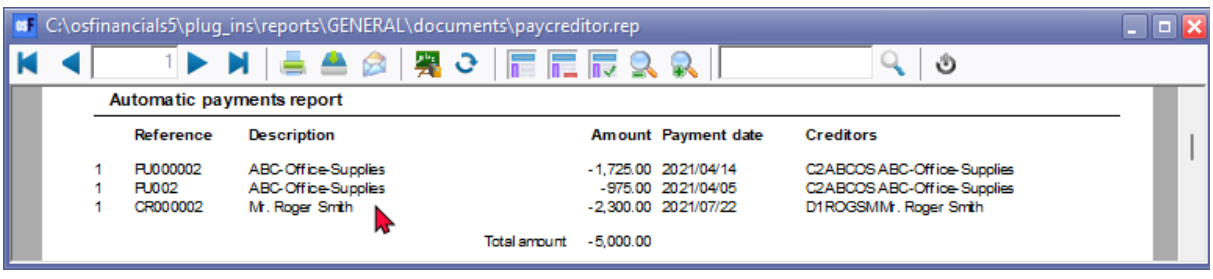




9. Check that the payment information and outstanding amounts for each account is correct.

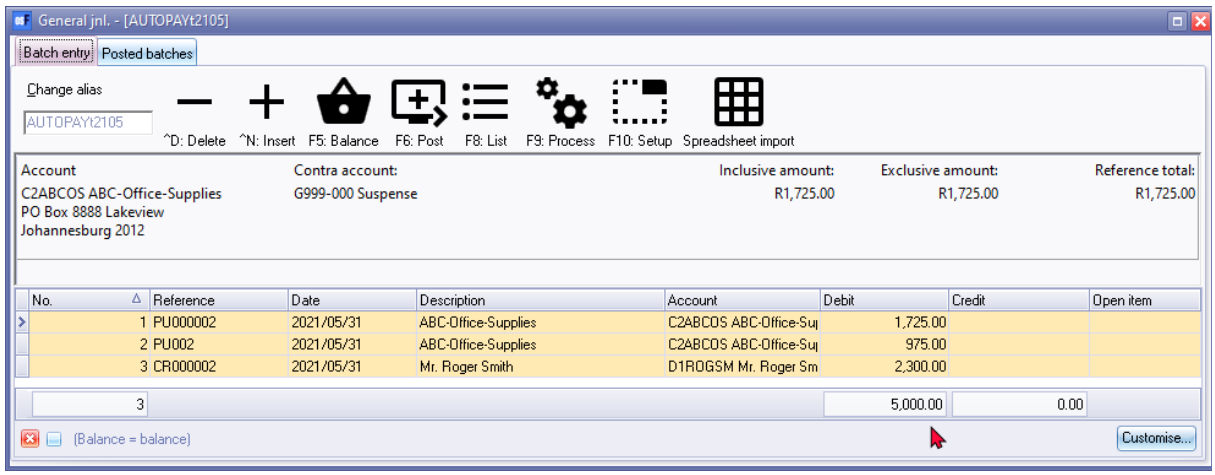
If you do not wish to pay an account at this stage, deselect (remove the tick) the "Pay transaction" field next to the selected creditor. If the "Pay transaction" field is not selected, no transactions will be generated for the account and the account will be excluded from the "Automatic payments report".

10. Click on the Print button to print a "*Automatic payments report*" for all accounts with outstanding amounts (balances) for which the "*Pay transaction*" field was selected. An example of the "*Automatic payments report*", is as follows:



11. Click on the Process button. All accounts with outstanding amounts (balances), for which the "*Pay transaction*" field was selected will be imported into the selected batch (journal).

> *If "Create a clieop file" or pain.001.001.03" is selected as the "ExportType" option, a "Save As" screen will be launched, in which the export file needs to be saved. Thereafter, all selected creditor (supplier / vendor) accounts, as well as debtor (customer / client) accounts, if any, with outstanding amounts (balances) for which the receive transaction field was selected, will be imported into the selected batch (journal).*

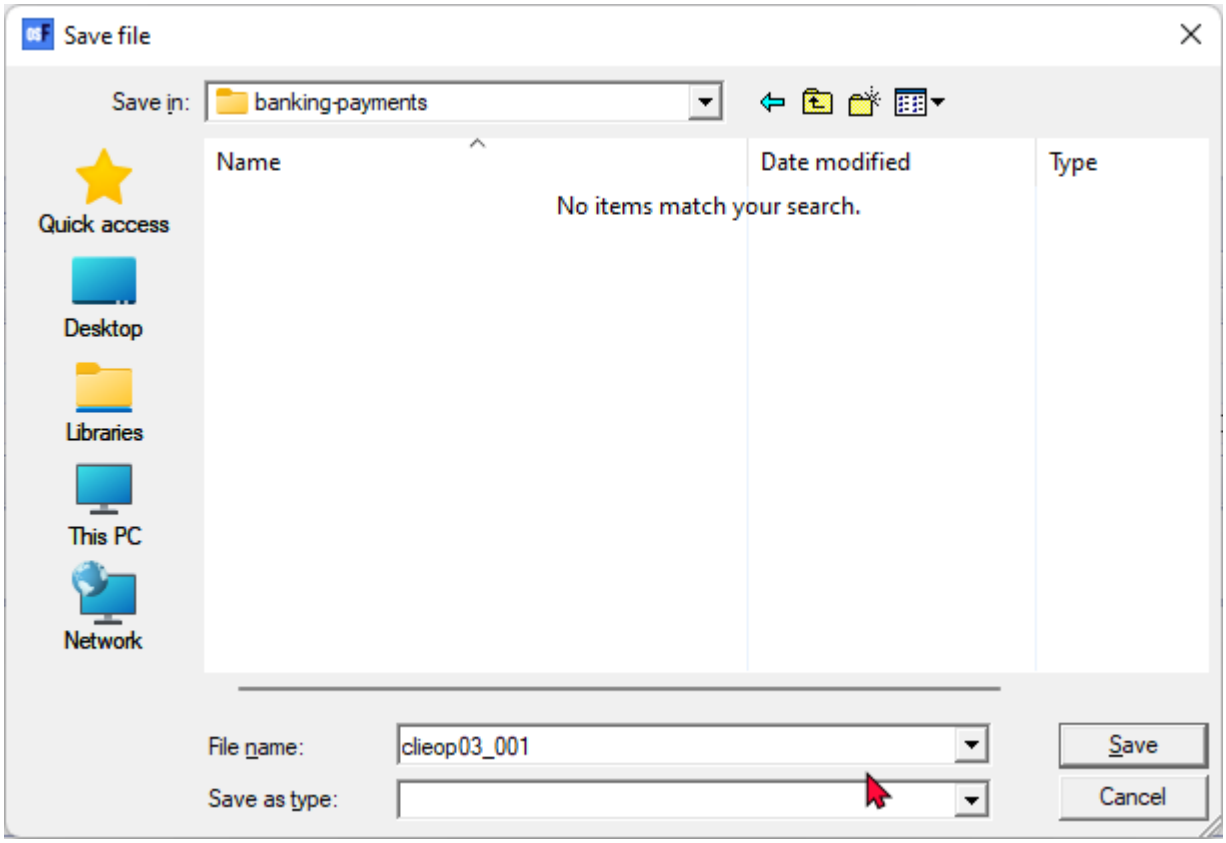


> *Debtor (customer / client) accounts, with a credit balance, which need to be refunded, may also be included in this "Automatic payments" feature.*

> *Once you have finished entering / editing the transactions in the batch you need to: -*
>
> 1. *Change the Alias (Batch name).*
> 2. *Balance the batch.*
> 3. *List the batch.*
> 4. *Post the batch.*

Export type : Clieop file

If the "*Create Clieop file*" option was selected as the "*ExportType*" field, the "*Save As*" screen will be displayed, if you click on the Update button of the "*Automatic payments*" screen.

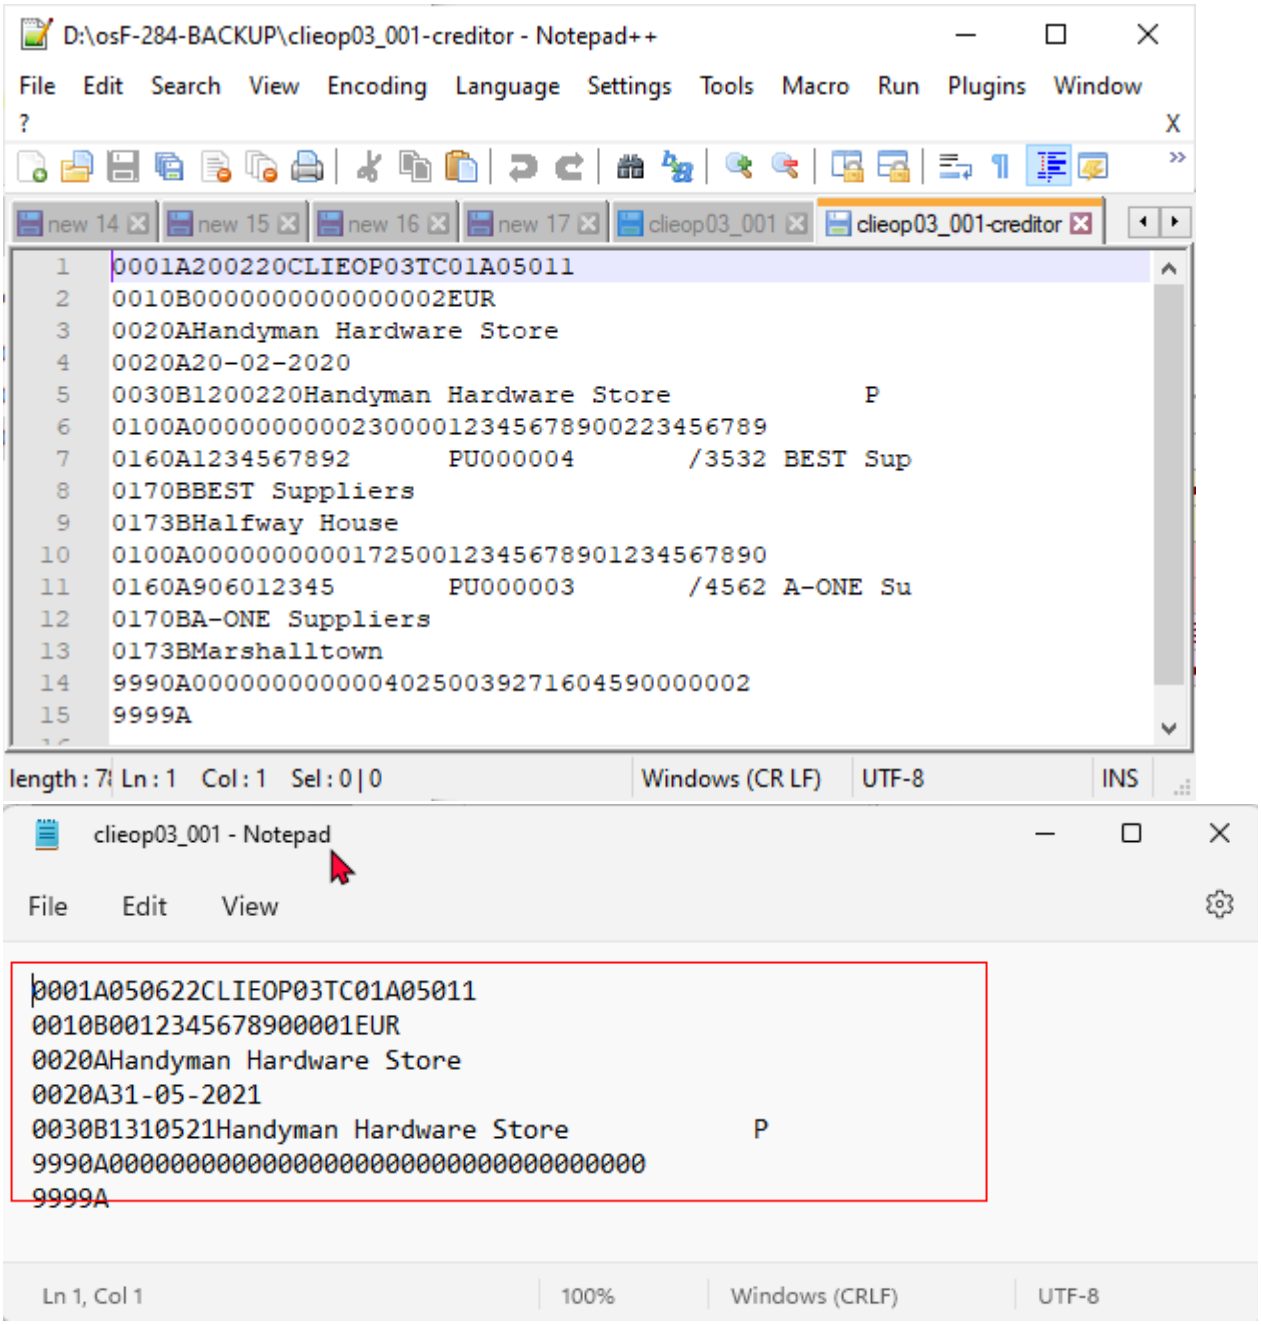


Select the directory in which you need to store the file and specify the name for the file.

If the bank accounts is not entered for a creditor (supplier / vendor) account (on the Accounting information tab, a message similar to this will be displayed.

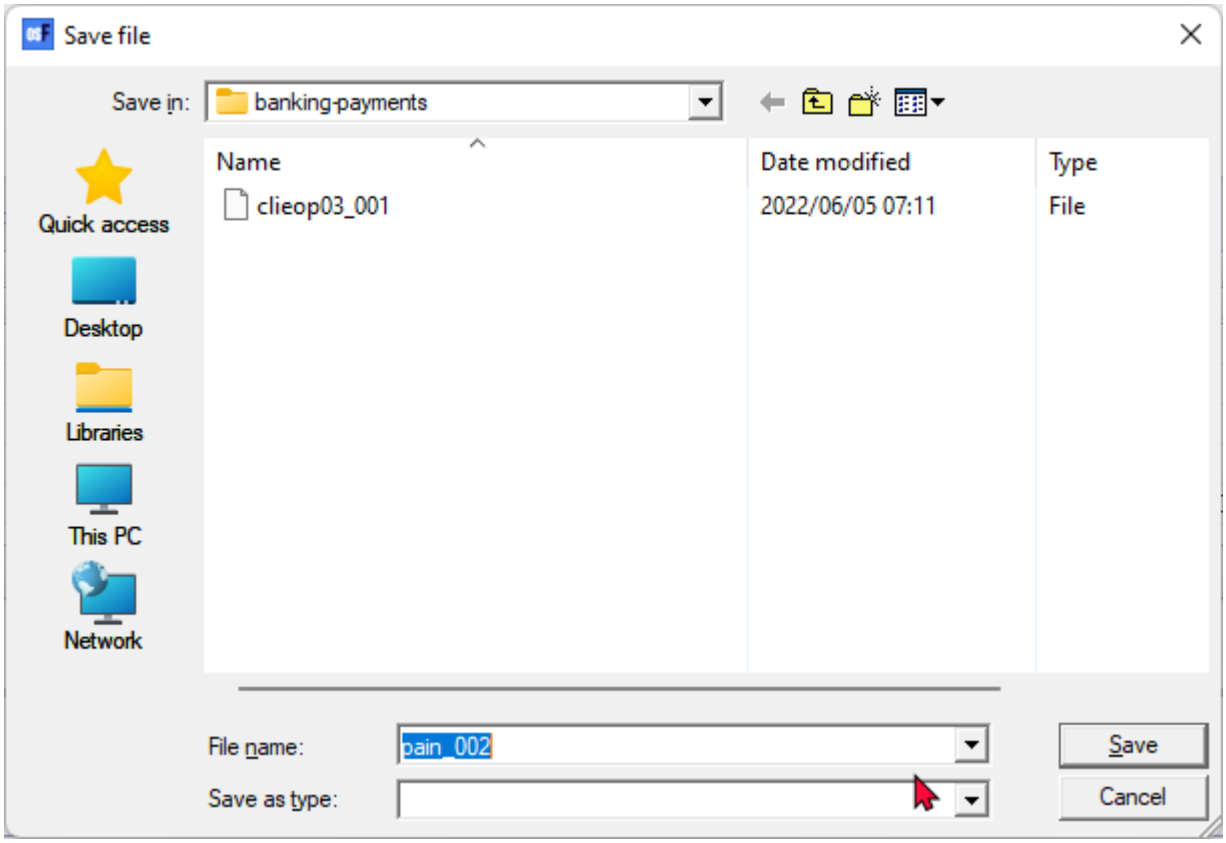
"No bank account for C2ABCOS ABC-Office-Supplies
Skiping record!"

Click on the Save button to save and generate the "*clieop*" export file. An example of the exported "*clieop*" file, is as follows:



Export type : pain.001.001.03

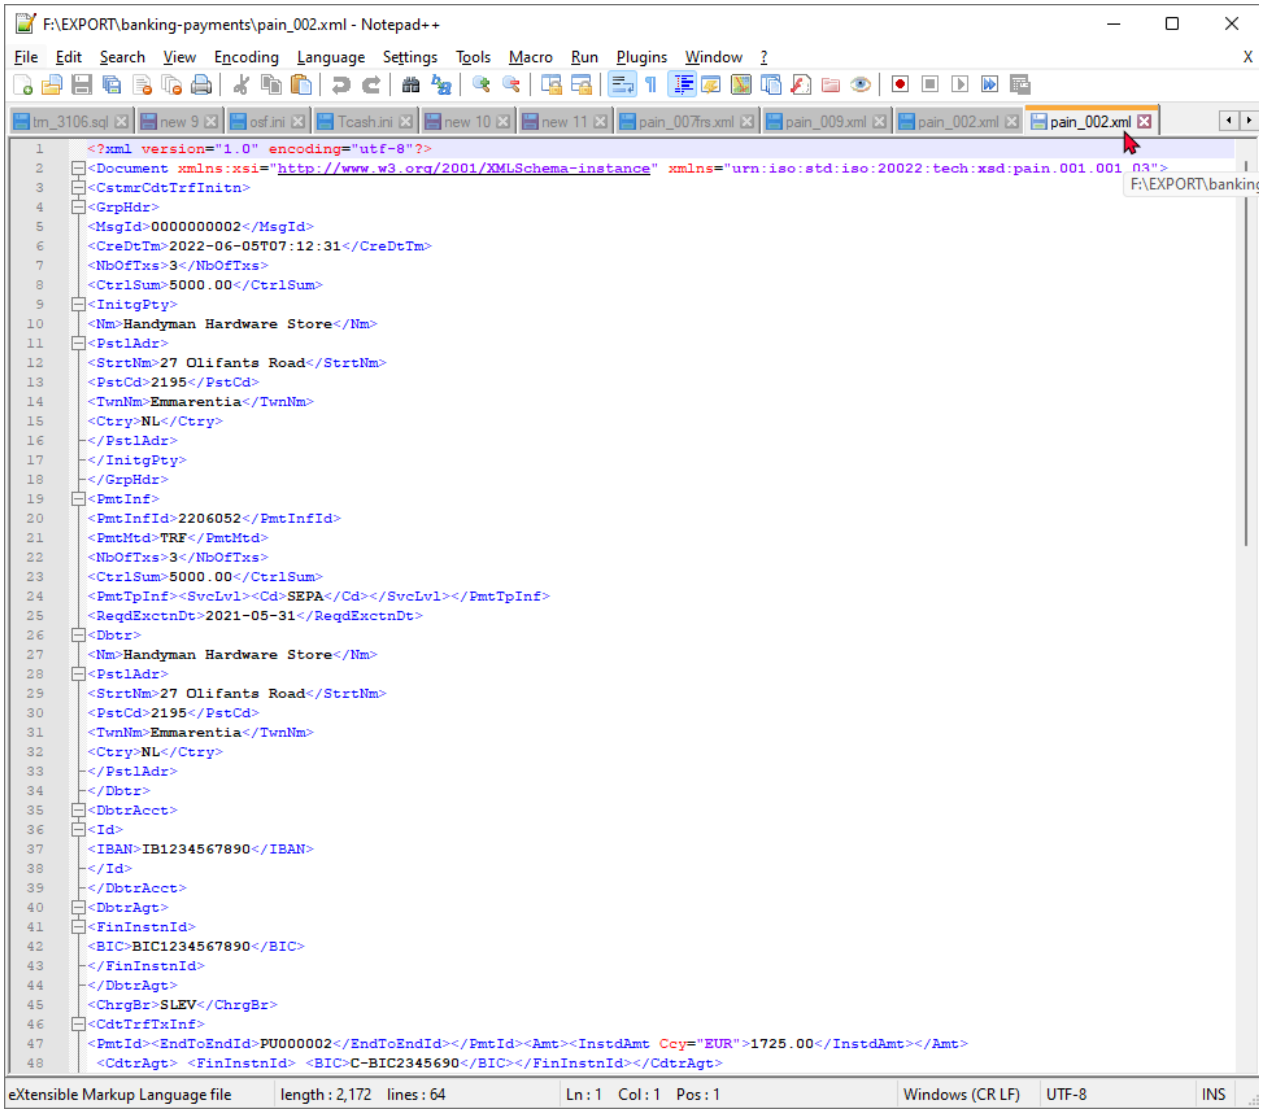
If the "*pain.001.001.03*" option was selected as the "*ExportType*" field, the "*Save As*" screen will be displayed, (after the "*Automatic receipts report*" is printed) if you click on the Update button of the "*Automatic receipts*" screen.



Click on the Save button. This will create an XML Document file type for the "*pain.001.001.03*" "*ExportType*".

The export file name will be generated as "pain_002", etc. These numbers indicate the version number of the file export.

An example of the "*pain.001.001.03*" export file, is as follows:



Created with the Standard Edition of HelpNDoc: Generate EPub eBooks with ease

Automatic receipts

You may receive payments from debtor (customer / client) accounts for their accounts via the electronic banking system. The transactions for debtor (customer / client) accounts with outstanding transactions and balances will be transferred into the "*Automatic receipts*" screen, where you may select the debtor (customer / client) accounts and outstanding amounts you need to receive from the debtor 's Bank accounts.

The debtor (customer / client) accounts which have open or outstanding amounts will be listed. The (outstanding amount) balances are transferred to an intermediate account or clearing account on the date of the transactions.

Once the payment is cleared at the bank (on the due date) payment is received into the Bank account it will

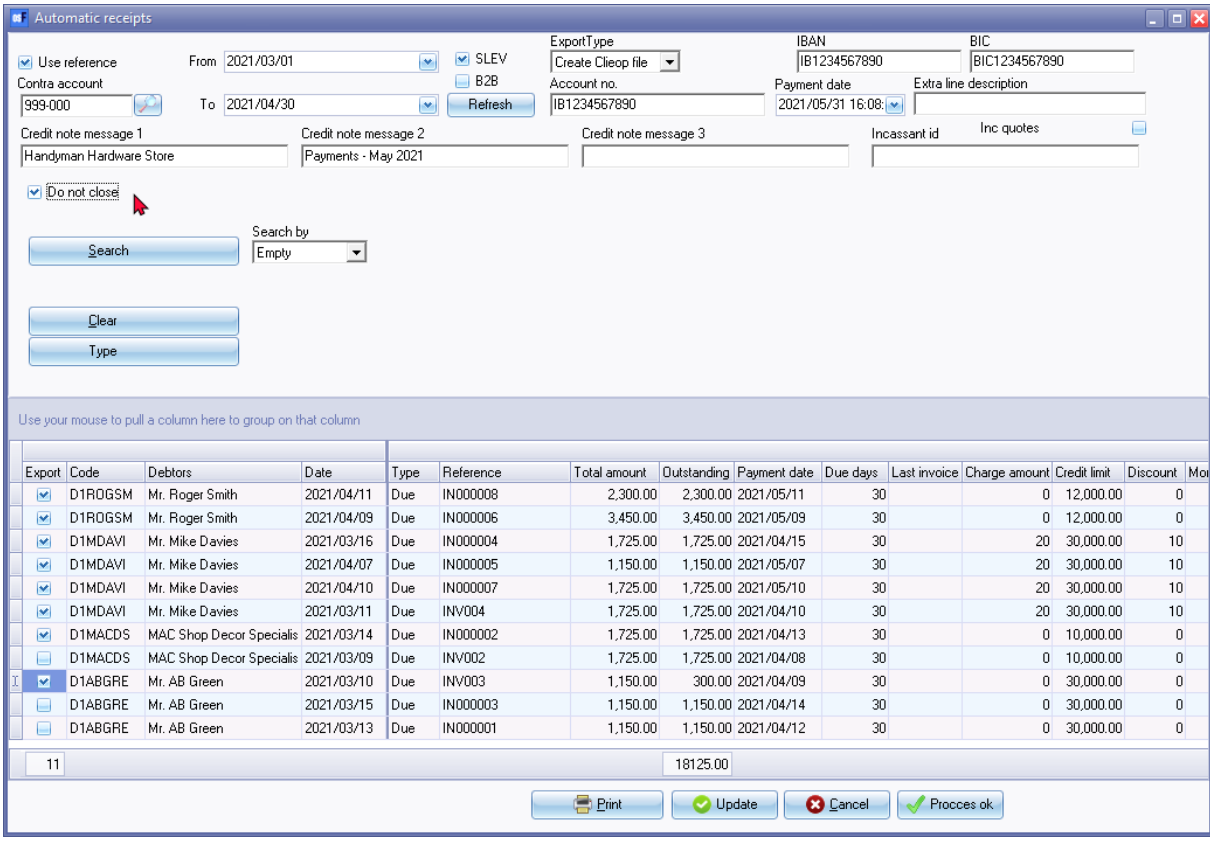
appear on the bank statement. When you allocate the transaction on the bank statement, the intermediate account or clearing (account contra account) will be credited.

Before using this feature, bank account details need to be entered in:

- *Setup → Company information (Setup ribbon)*
- *Accounting information tab of Debtor (customer / client) accounts (Default ribbon).*

To process automatic receipts for debtor (customer / clients):

1. On the Default ribbon, select Batch entry (F2).
2. Select the General journal or any other batch type.
3. Click on the Open button. The "*Batch entry*" screen for the selected batch will be displayed.
4. Enter the Alias (batch name) and press the Enter key.
5. Click on the F9: Process icon. The "*Process the batch*" options screen will be displayed.
6. Select the "*Automatic receipts*" option, and click on the OK button. The "*Automatic receipts*" screen is displayed:



7. The bank account of the Set of Books as entered in Setup → Company information is automatically

displayed on this screen.

8. Select and enter the following:

    a) Use reference - Select to use the Invoice reference as entered in the "Your reference" field of the Document entry form.

    b) Contra account - This is basically a clearing account for the payments received from debtors.

    > *The contra account needs to be set in the F10:Setup.*
    >
    > *It is recommended that a general ledger account, which is linked to the Current assets Account group be selected.*

    c) From - Enter or select the date from which you need to process payments for debtor (customer / client) accounts.

    d) To - Enter or select the date until which you need to process payments for debtor (customer / client) accounts.

    > *The transactions for the debtor (customer / client) accounts created on and until the selected dates. After selecting (or reselecting) the dates, click on the Refresh button to update the listed transactions with the date selection.*

    e) SLEV - To be advised.

    f) B2B - To be advised.

    g) Refresh button - This will refresh the data in the "*Automatic receipts*" screen.

    h) Export Type - "*None*" is the default option. This will transfer the selected transactions into the "*Batch entry*" screen. If you select the following export types you need to save a export file before the selected transactions is transferred into the "*Batch entry*" screen:

        i) Create a clieop file - Create an export file.

        ii) pain.001.001.03 - Create an export file in the XML Document type.

        iii) pain.001.001.08 - Create an export file in the XML Document type. To use this export file type, you need to specify a valid "*Incassant* id" (Collector ID).

    These export files contains specific validation and parameters etc. for specific payment systems. These export files will instruct the banks or financial institutions to clear the payments to your debtors (customers / clients).

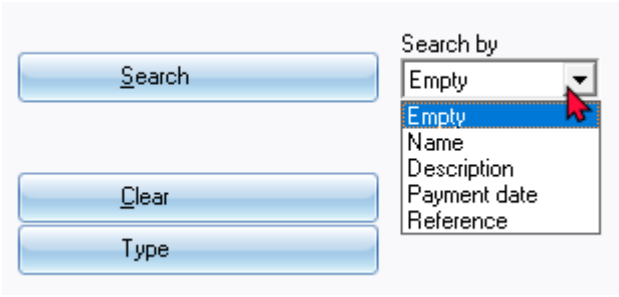
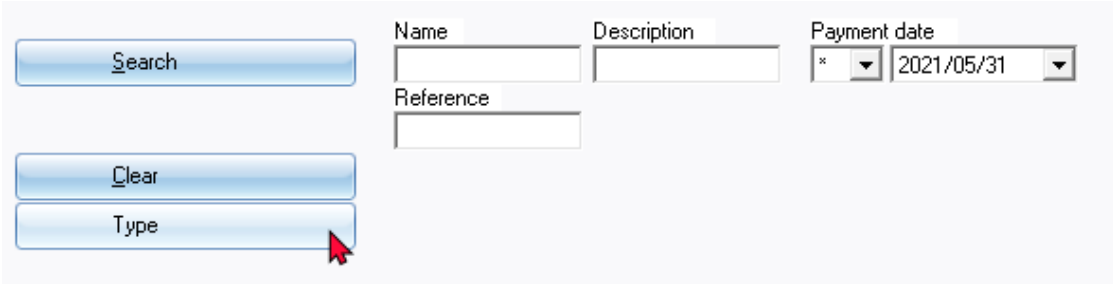
p) Credit note message 3 - You may enter message to be included in the export file, if required.

q) "*Incassant* id" (Collector ID) - Enter a valid "*Incassant* id" (Collector ID) in this field. This is required for the "*pain.001.001.08*" export file type.

r) Do not close - By default, this option is not selected. If this option is selected, the Process ok button will be available.

s) Search and filter options -





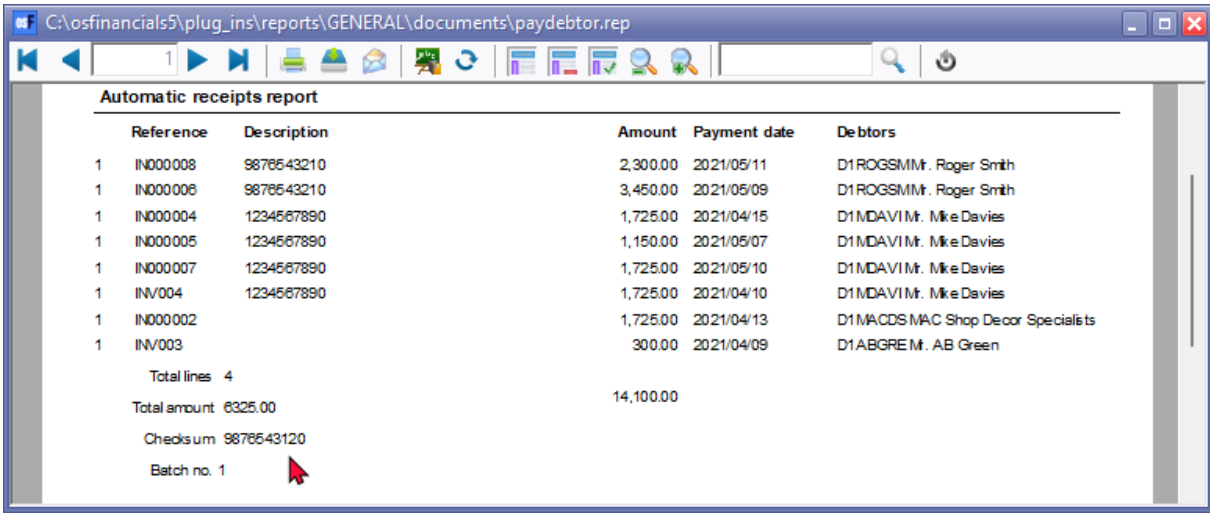
9. Check that the payment information and outstanding amounts for each account is correct.

> *If you do not wish to include a payment from a debtor at this stage, deselect (remove the tick) the Export field next to the selected debtor. If the "ExportType" field is not selected, no transactions will be generated for the debtor and the debtor will be excluded from the Automatic receipts report".*

10. Click on the Print button to generate a "*Automatic receipts report*" for all accounts with outstanding amounts (balances) for which the receive transaction field was selected.

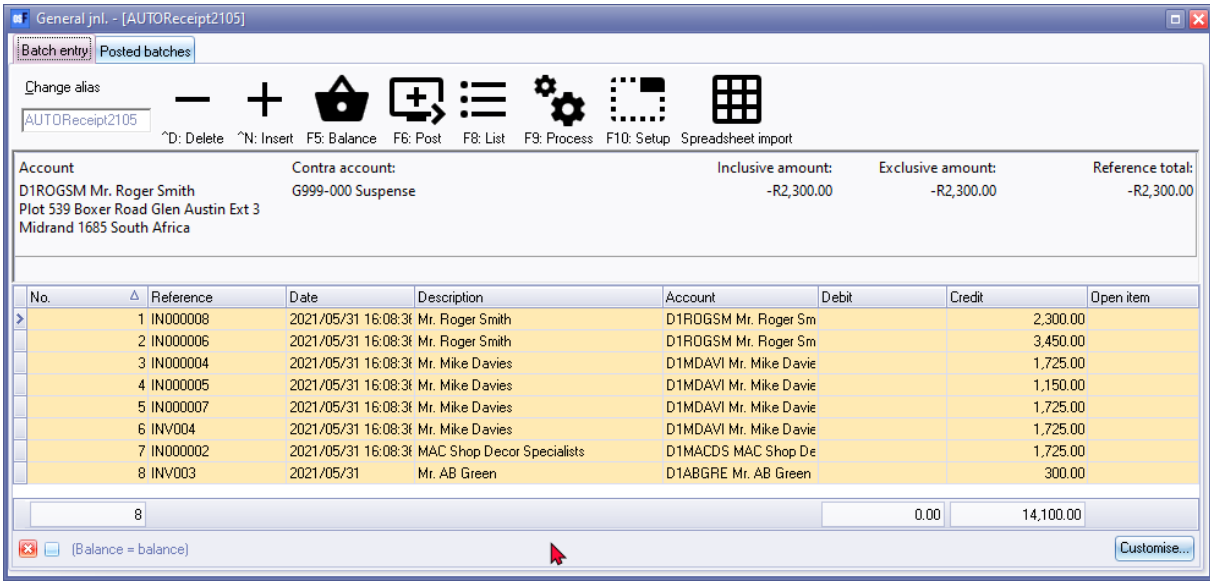
> *If the bank accounts is not entered for a debtor (customer / client) account (on the Accounting information tab, a message similar to this will be displayed.*
>
> "No bank account for D1ROGSM Mr. Roger Smith
> Skiping record!"

An example of the printed "*Automatic receipts report*", is as follows:



11. Click on the Update button. If "*None*" is selected as the "*ExportType*" option, all debtor (customer / client) accounts with outstanding amounts (balances) for which the receive transaction field was selected, will be imported into the selected batch (journal).

If "Create a clieop file, pain.001.001.03" or "pain.001.001.08" is selected as the "ExportType" option, a "Save As" screen will be launched, in which the export file needs to be saved. Thereafter, all debtor (customer / client) accounts with outstanding amounts (balances) for which the receive transaction field was selected, will be imported into the selected batch (journal).



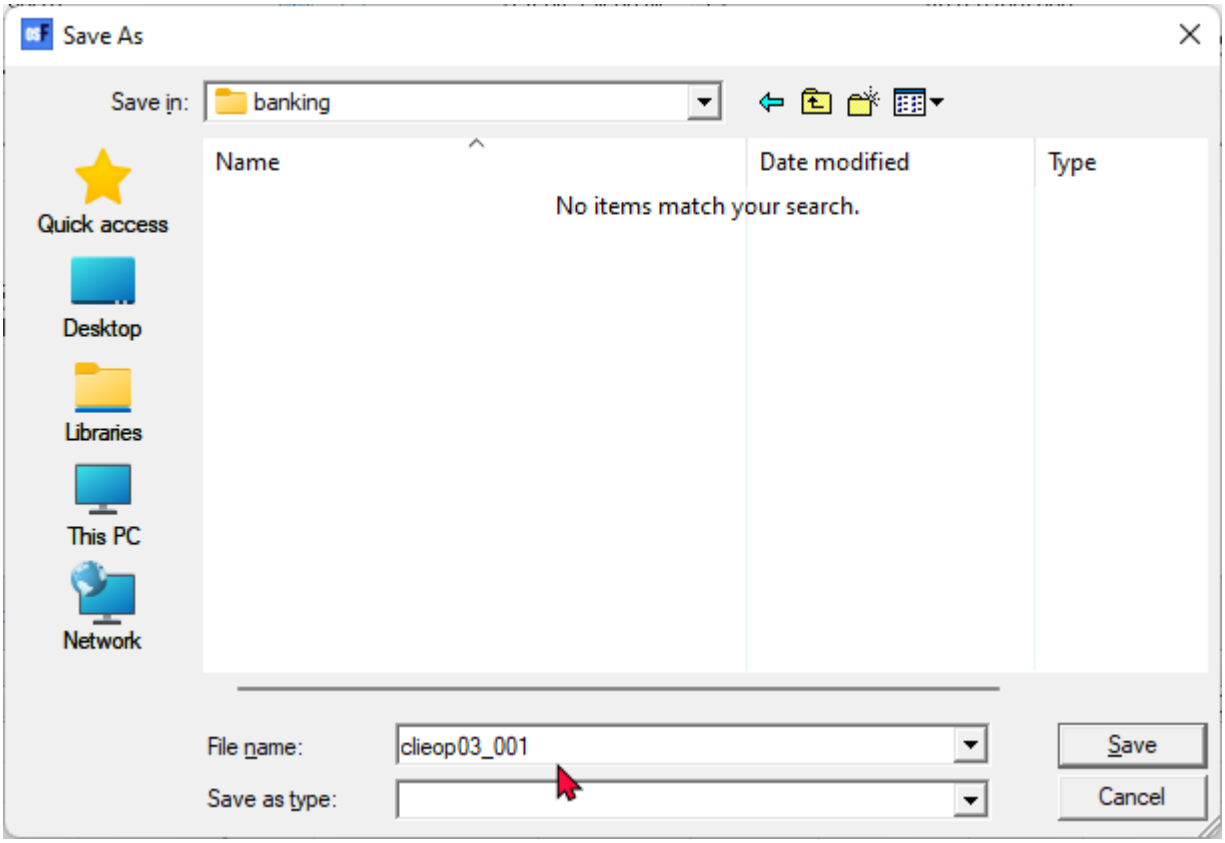
Once you have finished entering / editing the transactions in the batch you need to: -

1. *Change the Alias (Batch name).*
2. *Balance the batch.*
3. *List the batch.*

4. *Post the batch*.

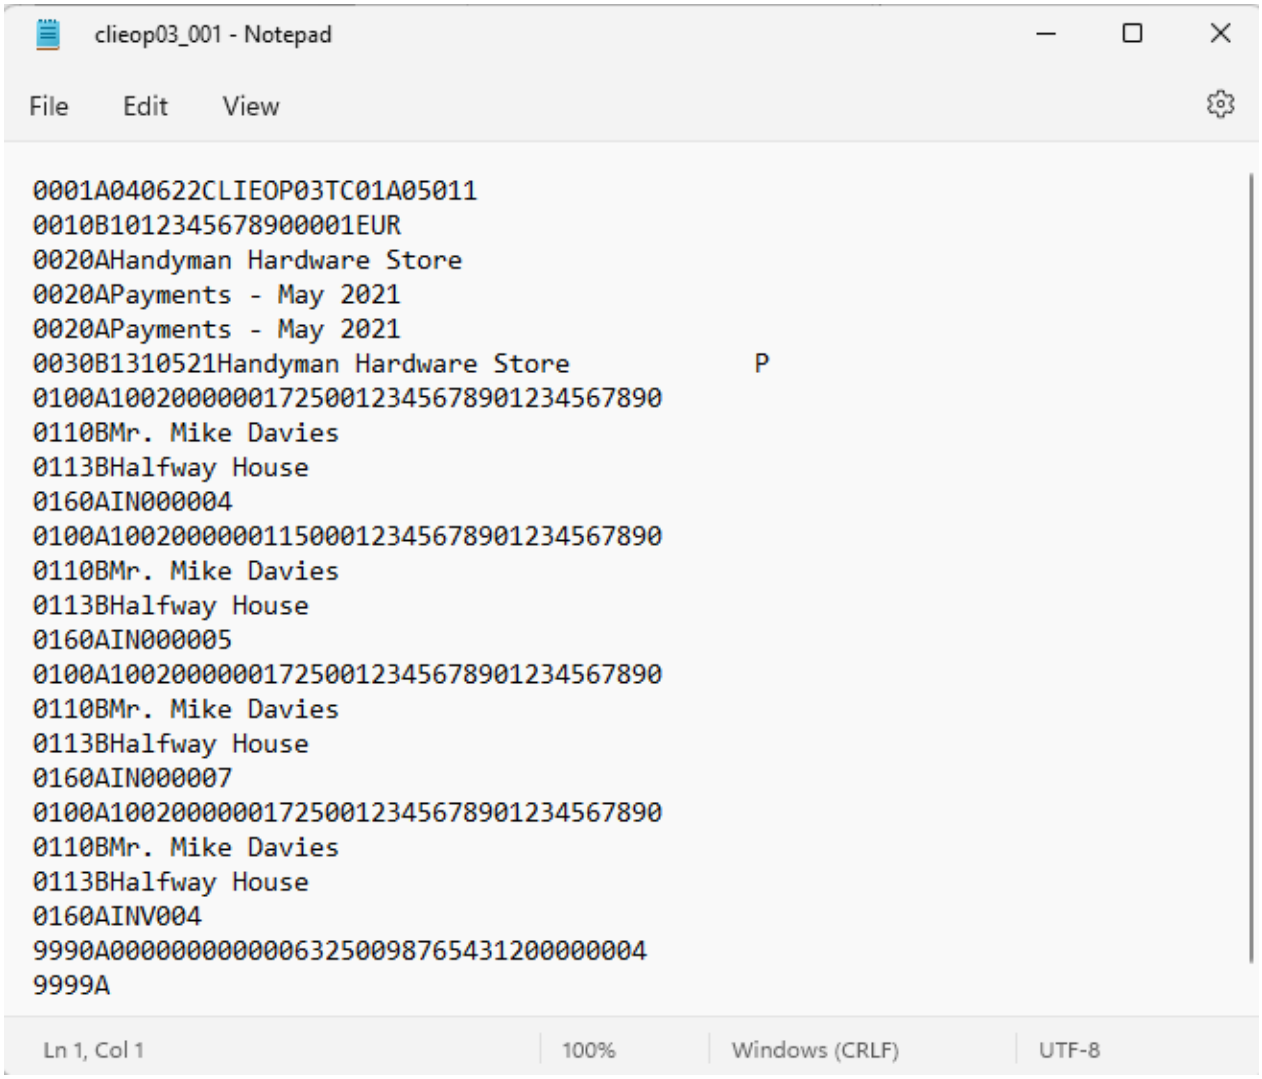
Export type : Clieop file

If the "*Create Clieop file*" option was selected as the "*ExportType*" field, the "*Save As*" screen will be displayed, if you click on the Update button of the "*Automatic receipts*" screen.



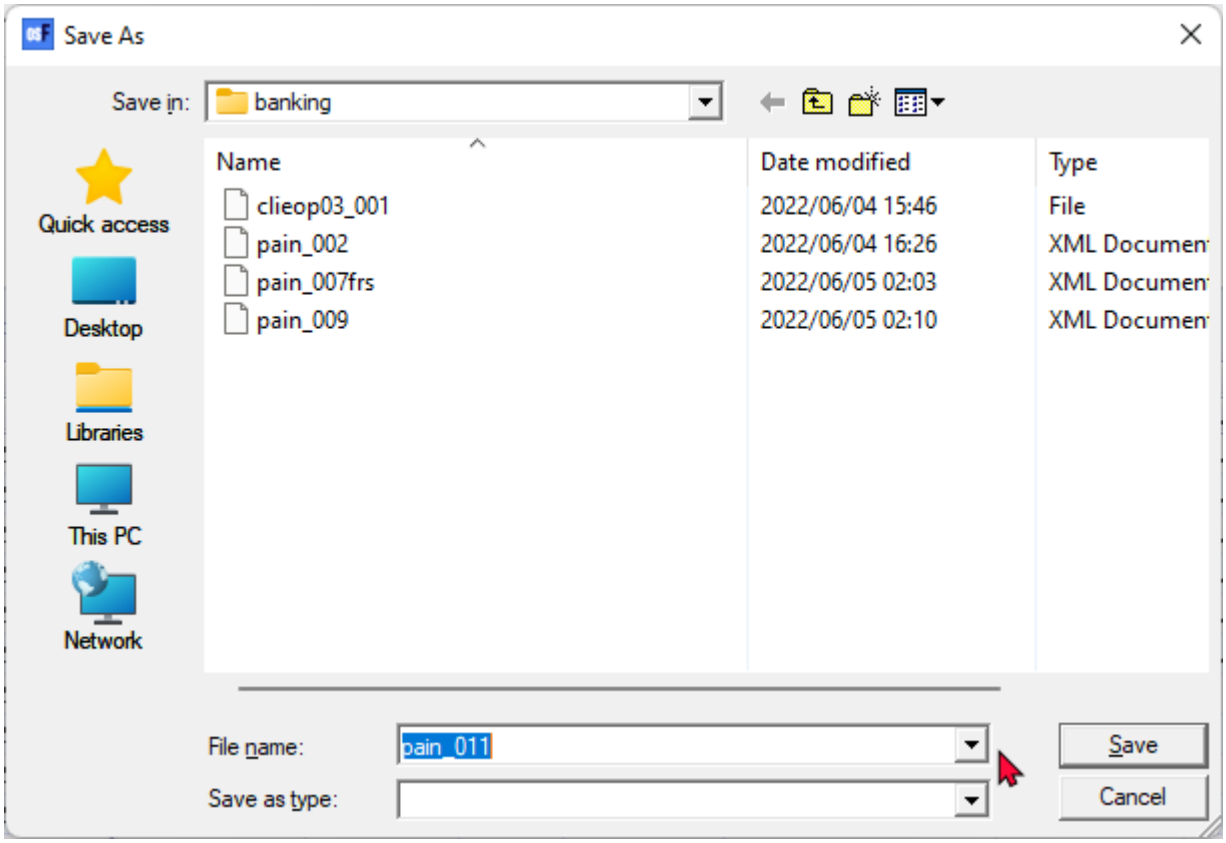
Select the directory in which you need to store the file and specify the name for the file.

Click on the Save button to save and generate the "*clieop*" export file. An example of the "*clieop*" export file, is as follows:



Export type : pain.001.001.03

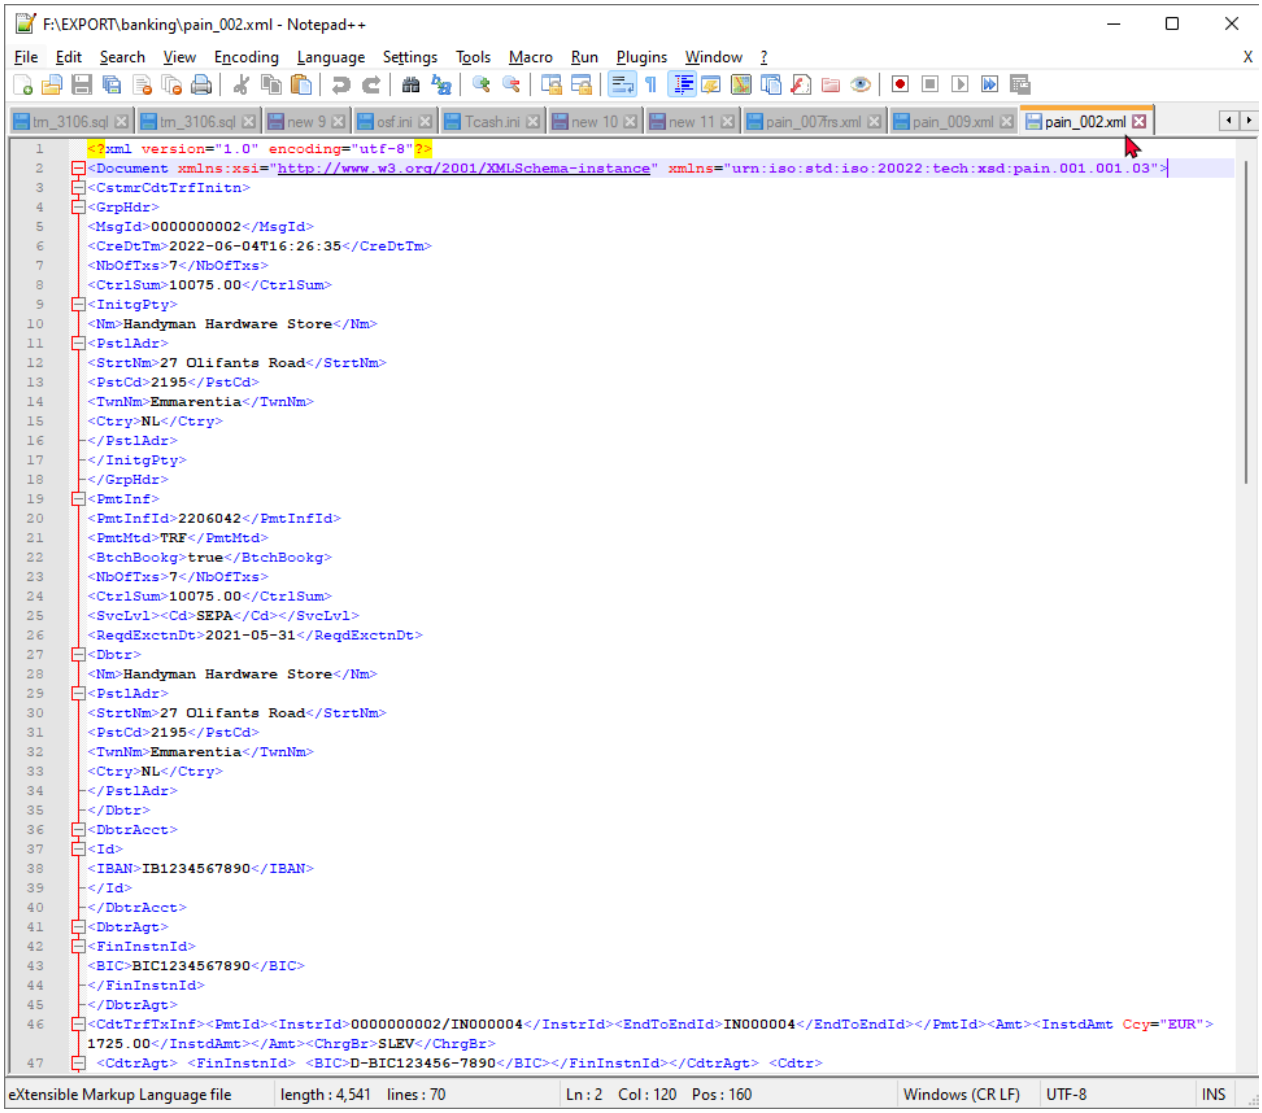
If the "*pain.001.001.03*" option was selected as the "*ExportType*" field, the "*Save As*" screen will be displayed, (after the "*Automatic receipts report*" is printed) if you click on the Update button of the "*Automatic receipts*" screen.



Click on the Save button. This will create an XML Document file type for the "*pain.001.001.03*" "*ExportType*".

The export file name will be generated as "pain_002", etc. These numbers indicate the version number of the file export.

An example of the "*pain.001.001.03*" export file, is as follows:



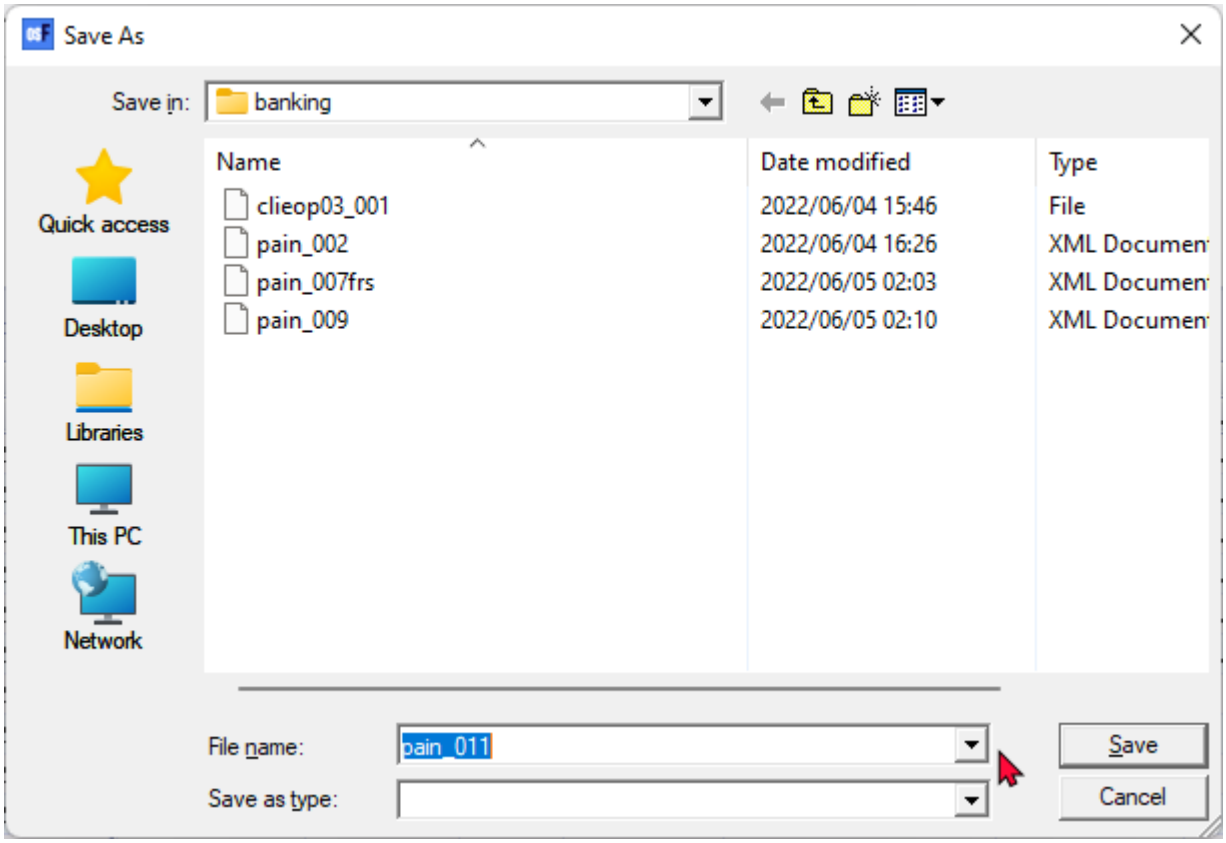
Export type : pain.001.001.08

To use the "pain.001.001.08" "ExportType" option, you need to specify a valid "Incassant id" (Collector ID) on the "Automatic receipts" screen.

If no valid id, is specified, an error message, similar to the following; will be displayed.

"U heeft geen incassant id opgegeven!"

If the "*pain.001.001.08*" option was selected as the "*ExportType*" field, the "*Save As*" screen will be displayed (after the "*Automatic receipts report*" is printed), if you click on the Update button of the "*Automatic receipts*" screen.



Click on the Save button. This will create an XML Document file type for the "*pain.001.001.08*" "*ExportType*".

The export file name will be generated as "pain_009", "pain_011, etc. These numbers indicate the version number of the file export.

An example of the "*pain.001.001.08*" export file, is as follows:

Payroll import

Payroll plugin

Payroll - Manual - Shop - Licence : Once-off -

Supported applications: Logisal, RoosRoos and Unit 4.

Seamlessly import payroll data from supported applications like Logisal, RoosRoos, and Unit 4 directly into osFinancials5/TurboCASH5, simplifying payroll-related transactions.

Is the program you use not listed? No problem! With our commitment to customer satisfaction, simply

send us an export, and we will explore the possibility of adding that import. In most cases, the addition is free of charge.

Say goodbye to manual data entry and hello to efficiency as you effortlessly generate batches or journals for payroll processing within osFinancials5/TurboCASH5.

Payroll Plugin Access - Batch entry - F9:Process - Payroll import option.

Created with the Standard Edition of HelpNDoc: Easily create HTML Help documents

Repeating transactions

The Repeating transactions feature allows you to enter transactions, which occur on a periodic basis. They may be weekly, monthly, quarterly or annually, etc.

You may enter the transactions once and, when due, copy them into the normal batch, edit (if amounts have changed), delete or add an entry. This facility will save you lots of time. You may identify those transactions in your business and enter them in this facility. A few examples of these entries are:

1. For entry in the General journal or alternative batch type.
    - Depreciation of fixed assets
    - Payroll journals or integration
2. For entry in the Payments journal
    - Debit orders to third parties
3. For entry in the Receipts journal
    - Debit orders from third parties, etc.

Repeating transactions may be processed via the following options:

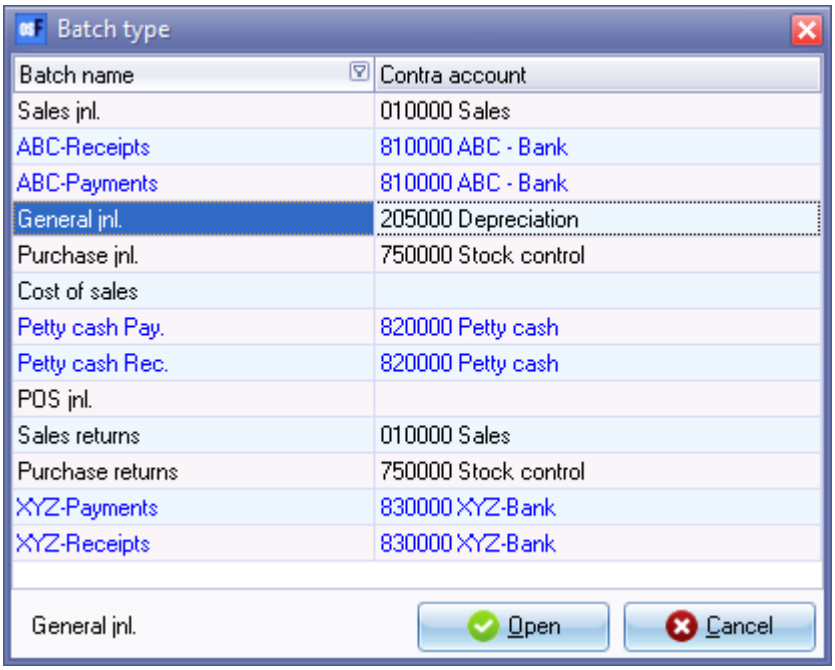
- Edit → Repeating transactions – Enter the transactions once in the Repeating batch entry screen. You may then Import the transactions into the normal Batch entry screen using the Repeating transactions option on the F9:Process options.
- Import a posted batch option on the F9:Process options. Once you have entered and posted a normal batch, you may import the batch, edit it as required and then post it.

Created with the Standard Edition of HelpNDoc: Effortlessly upgrade your WinHelp HLP help files to CHM with HelpNDoc

Enter / Edit - Repeating transactions

To enter Repeating transactions:

1. On the Default ribbon, select Edit → Repeating transactions.



The alias (batch name) is not entered on the Repeating transactions batch.

The alias (batch name) of the last Repeating transactions batch imported (F9:Process) will be displayed before the Open and Cancel buttons

The Debit and Credit totals will not be displayed. These totals are only displayed if the Batch type selection screen is launched from the Default → Batch entry (F2) on the Default ribbon.

2. Select the General Jnl batch type and click on the Open button.

To indicate that you have selected a Repeating Batch or Journal, note the following:

- ****Repeating transactions*** is displayed after the name of the batch type.*
- *No alias for the batch will be displayed in the screen heading (title bar).*

3. Click on the F10:Setup icon to set your batch up.

4. Set up the Repeating transactions General journal for depreciation transactions as follows:
    a) Contra account - Select the contra (balancing) account (e.g. Depreciation expense account).
    b) Amount entry - Select Credit.
5. Click on the Advanced tab.
6. Select the "*General ledger*" option for the Account lookup type, since you do not need to select Debtor or Creditor accounts when you enter transactions for depreciation.
7. Once setup; click on the OK button.

> *Tax*
>
> *Since No Tax (VAT/GST/Sales Tax) is applicable, to the depreciation transactions in this topic, we have selected to hide the Tax column in the Setup Options.*

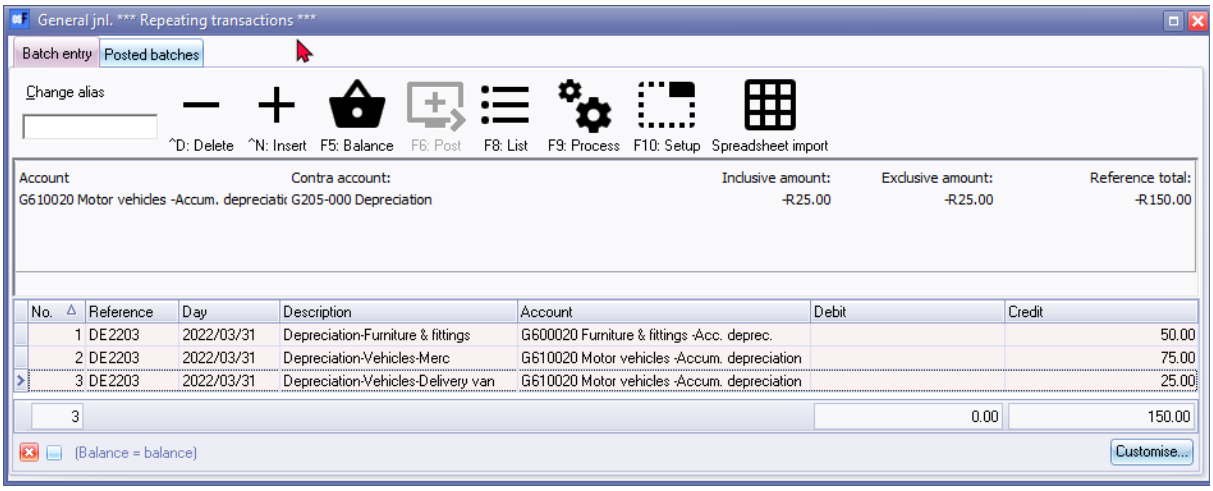
8. You are now ready to capture your first repeating entry transaction.
    a) Reference: DE2203
    b) Date: 2022/03/31
    c) Description: Depreciation-Furniture and Fittings.
    d) Account: 600/020 Furniture and Fittings - Accumulated Depreciation
    e) Amount: 50.00 CR
9. Once finished, capture your second entry.
    a) Reference: DE2203
    b) Date: 2022/03/31
    c) Description: Depreciation-Motor Vehicles-Merc
    d) Account: 610/020 Motor Vehicles - Accumulated Depreciation
    e) Amount: 75.00 CR
10. Once finished, capture your third transaction.
    a) Reference: DE2203
    b) Date: 2022/03/31

c) Description: Depreciation-Motor Vehicles-Delivery Van

d) Account: 610/020 Motor Vehicles - Accumulated Depreciation

e) Amount: 25.00 CR

11. The Repeating transactions for General journal screen should now reflect as follows:



A Repeating Batch differs from a normal batch as follows:

*Title bar - displays *** Repeating transactions ****

F6:Post - Disabled since you cannot post repeating transactions.

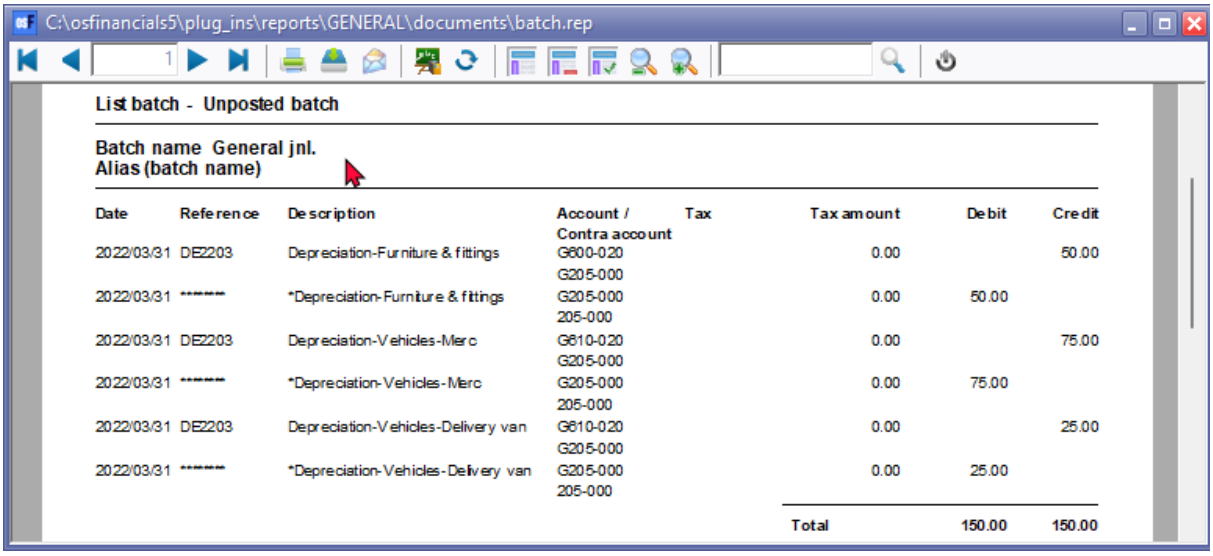
Lines - Background colour.

12. Click on the F5:Balance icon to balance the batch. osFinancials5/TurboCASH5 will generate a balancing entry to the selected Contra account (e.g. "*Depreciation*").

If the description is displayed as "BALANCING ENTRY General Jnl", and you have entered transactions with Tax, the Tax reports may not include these transactions correctly.

You need to deselect (remove the tick) of the Consolidate balancing field on the Standard tab of the F10:Setup (Options for this batch screen) and rebalance the batch.

13. Click on the F8:List icon to print a list of the transactions in the batch.



It is recommended that the source documents (e.g. working papers, calculations, etc.) be attached to this List of the transactions and that it be retained for record and audit purposes.

14. Press the Esc key to exit this repeating batch.

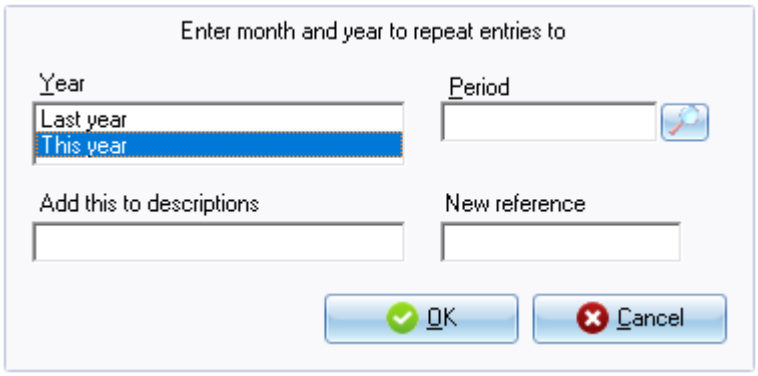
Repeating transactions import

Once transactions is added and or edited, in the Repeating transactions batch entry screen, you may then import the transactions into the normal Batch entry screen using the Repeating transactions option on the F9:Process options.

To post (update) the Repeating transactions batch:

1. On the Default ribbon, select Batch entry (F2).
2. Select the General Jnl and click on the Open button. The *General journal* screen will be displayed. Note that there will be no alias displayed on the screen title bar as this is a normal batch.
3. Click on the F9:Process icon. The *Process the batch* screen will be displayed.
4. Select the "*Repeating transactions*" option and click on the OK button. osFinancials5/TurboCASH5 will display the following screen on the *Batch entry* screen:



If you enter a reference number into the New Reference number field, the reference numbers will not be incremented.

The reference number entered, will apply to all repeating transactions which will be imported or generated into the batch (journal).

5. Enter or select the following:

    a) Select "*This Year*" in the Year field.

    b) Select the period (month, i.e. "*March 2022*") in which to repeat or copy the transactions.

    c) Enter *"2203"* in the "*Add this to descriptions*" field. You may enter your own, if necessary. This will add it after the description entered in the Repeating Batch which was imported.

    d) Enter *"DE2203"* in the "*New Reference*" field. This will replace the Reference entered in the Repeating batch which was imported.

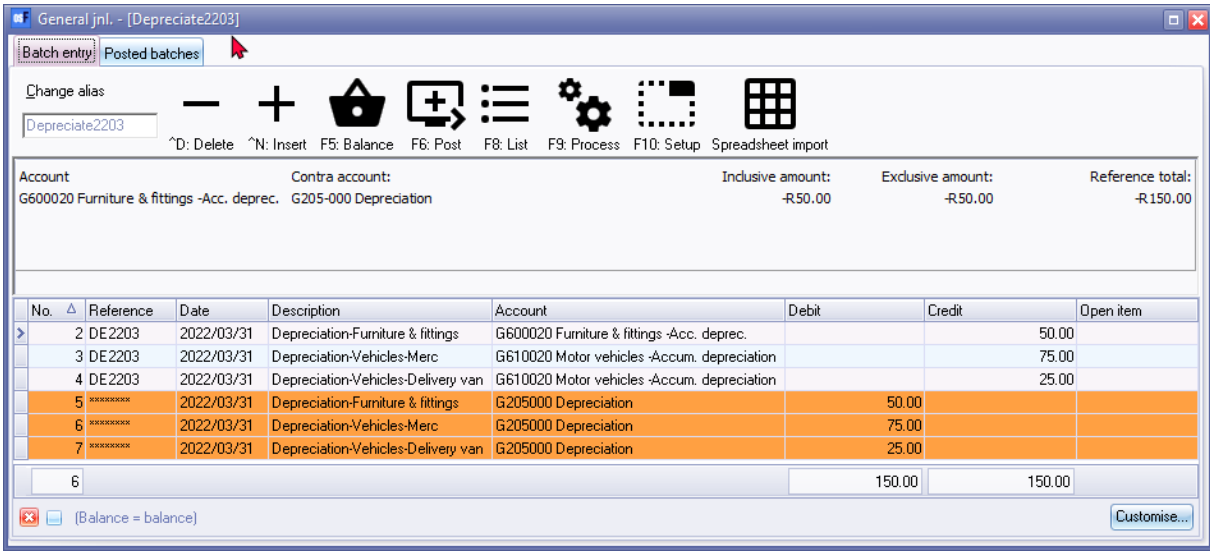
The Reference "DE2203", as in this example, indicates that it is Depreciation for March 2023.

6. Click on the OK button. All the transactions you have entered in the repeating Batch entry for the General journal will be imported (copied) into the normal batch.

7. Enter the Alias (batch name) in the *Change alias* field on the Topbar of the Batch entry screen. In this example we enter *"Depreciate2203"* to indicate that the Depreciation transactions for March 2023 was entered in this General journal batch.

The alias option allows you to identify a batch by a unique name. You will be able to select the batch by alias or batch name if you need to reverse the posted batch or import a posted batch.

8. The imported repeating batch, as in this example, should reflect as follows:

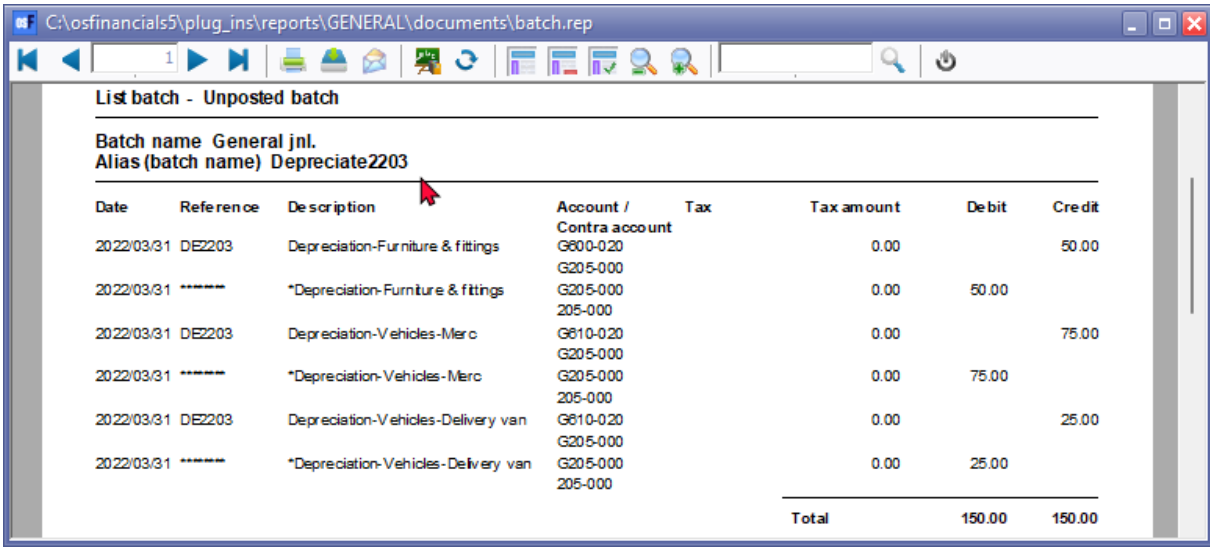


9. The first line should be imported will be blank, consisting only of the reference number and date. Click on the ^D: Delete icon to delete this row.

> *Always check that the amounts are the same before posting this batch. For instance if you have sold your Mercedes-Benz, you may need to delete the entry for the next months. If you have purchased new assets you may change the amount or add a new entry.*
>
> *You may do it on this screen, but it is recommended that you edit your repeating transactions in Edit → Repeating transactions (Default ribbon) to avoid having to change the same issues every time you wish to update a repeating batch.*

10. If the batch is not balanced or in balance, you need to click on the F5:Balance icon to balance the batch.

11. Click on the F8:List icon to print a list of the transactions in the batch.



It is recommended that the source documents (e.g. working papers, calculations, etc.) be attached to this List of the transactions and that it be retained for record and audit purposes.

12. Once you are satisfied that all the entries are correct, click on the F6:Post icon to post (update) the batch to the ledger. osFinancials5/TurboCASH5 will update and post the transactions to the ledger accounts.

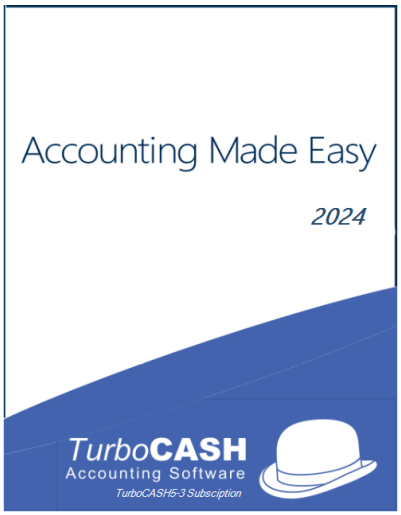
Batch transactions / Journal transactions

---

osFinancials5/TurboCASH5 installation provides tutorial Sets of Books in both English and Afrikaans. These tutorial books allow users to explore different settings, transactions, and reports within the software. Here are the available tutorial sets:

Accounting Made Easy	***Accounting Made Easy - Bank Import***	***Rekeningkunde Met Gemak (Afrikaans)***
English tutorials (using separate receipt and payments journals for banking / cash transactions)	*English tutorials (using the BankImport plugin for banking / cash transactions)*	*Afrikaanse handleidings (gebruik aparte ontvangste- en betalingsjoernale vir bank- / kontanttransaksies)*
		


The following Set of Books based on this tutorial, is installed in the "…\bin\Tutorials\ENGLISH\" folder:	*The following Set of Books based on this tutorial, is installed in the "…\bin\Tutorials\BANK-IMPORT\" folder:*	*Die volgende Stel Boeke gebaseer op die Afrikaanse handleidings, is in die "…\bin\Tutorials\AFRIKAANS\"-lêergids geïnstalleer:*

- *HANDYMAN (No transactions)*
- *HANDYMAN-A (Unposted transactions)*
- *HANDYMAN-B (Posted transactions)*
- *HANDY-BANK (No transactions).*
- *HANDY-BANK-A (Unposted transactions)*
- *HANDY-BANK-B (Posted transactions).*
- *HANDY-BANK-UNPOSTED-BANK-STATEMENT – Posted transactions, excluding bank / cash transactions. Bank statement needs to be imported from the "…\bin\Tutorials\BANK-IMPORT\BANK-STATEMENTS" folder.*
- *NUTSMAN (Geen transaksies).*
- *NUTSMAN-A (Ongeposteerde transaksies)*
- *NUTSMAN-B (Geposteerde transaksies).*

To open the tutorial Sets of Books, installed in the "*bin / Tutorials*" directory, you need to click on the Open icon on the Start ribbon. On the "*Set of Books*" screen, click on the Browse icon and select the desired tutorial Set of Books that you wish to follow.

Additionally, there are other tutorial folders available with relevant files for import into batches. The following folders contains files which may be imported into batches:

- *EXPORTED-BATCH-Delimited-File – Exported batch transactions using the "Write delimited file" option and may be imported into a batch using the "Delimited file import" option (F9:Process icon) on batches.*
- *EXPORTED-BATCH-Spreadsheets – Exported batch transactions in the *.xlsx (Excel 2007-365) file format. These transaction files may be opened in the Spreadsheet import icon on batches, and imported into a selected batch.*

These tutorials are designed to guide users, regardless of their accounting experience, through the basics of accounting and demonstrate how to effectively use osFinancials5/TurboCASH5 for managing business finances. The tutorials cover various aspects, including software features, chart of accounts setup, transaction creation, processing sales and purchase documents, and report generation. They also serve as a reference guide to osFinancials5/TurboCASH5.

By the end of these tutorials, users will have gained a solid understanding of the accounting process and will be able to confidently utilise osFinancials5/TurboCASH5 for managing their business finances.

OTHER TUTORIALS

Additionally, there are other tutorials for exploring the activation, processing, and reporting of Cost centres and Projects within osFinancials5/TurboCASH5.

COST-CENTRES

Tutorials / examples to explore the activation, processing and reporting of Cost centres in osFinancials5/TurboCASH5. See - Cost centres in this Help file.

The following Set of Books based on this tutorial, is installed in the "*...\bin\Tutorials\COST-CENTRES*" folder:

- COST-CENTRES-A (transactions and documents not posted to the ledger)
- COST-CENTRES-B (transactions and documents posted to the ledger).

PROJECTS

Tutorials / examples to explore the activation, processing and reporting of Projects in osFinancials5/TurboCASH5. See - Projects in this Help file.

The following Set of Books based on this tutorial, is installed in the "*...\bin\Tutorials\PROJECTS*" folder:

- PROJECTS-A (transactions and documents not posted to the ledger)
- PROJECTS-B (transactions and documents posted to the ledger).

Take-on Opening Balances

Commencing the use of osFinancials5/TurboCASH5 need not coincide with the commencement of business operations. osFinancials5/TurboCASH5 may be implemented at a later time. Nonetheless, it is likely that the closing balances of your existing ledger accounts, obtained from your Set of Books either from a manual or computer system, must be recorded in osFinancials5/TurboCASH5. These balances are referred to as opening balances. To ensure the efficiency of the system, it is advisable to enter these balances at the time of system setup.

The latest trial balance from your previous accounting system, will provide the necessary information for

opening balances. In cases where the business has been running for an extended period, it is recommended that the trial balance figures from the preceding year be entered into the osFinancials5/TurboCASH5. Suppose your financial year commences on 2024/03/01, in that case, it is ideal to record your opening balances using the date 2024/02/29, providing an opportunity for a comparison between the prior year and the current year.

Should the trial balance figures of the previous financial year be entered, osFinancials will perform a net profit/loss calculation and allocate the result to the Retained Income account. However, it will not transfer the expense figures to the current year.

The completeness of your set of accounts depends on the entry of opening balances. Should you fail to enter these balances, your accounts will remain incomplete. However, if you are commencing a new business venture, it would be unnecessary to enter any opening balances since none are in existence.

If you do not enter any opening balances, your set of accounts will not be complete. However, if it is a brand new business you are starting, it will obviously not be necessary to enter any opening balances, as you will not have any.

The opening balances are captured in the General journal.

Opening Balance - Configuration of osFinancials

Transitioning to a new accounting system like osFinancials5/TurboCASH5 requires careful preparation and data migration. Here are the essential steps to take when setting up your new system and adding opening balances:

1. Prepare Your Data:
    a) On your old accounting system, prepare and finalise all outstanding transactions, adjustments to prepare financial statements like, the trial balance, income statement and balance sheet. This step is necessary to eliminate any duplicates or errors.
    b) Back up your data from the old accounting system to ensure you have a safe copy of your financial records.
    c) Gather the necessary data to configure osFinancials5/TurboCASH5 and process opening balances.
2. Configure Chart of Accounts:
    a) Set up your Chart of Accounts in osFinancials5/TurboCASH5 to match your business's financial structure. You may need to refer to your previous system's Chart of Accounts and trial balance

for guidance.

b) Create or add the necessary accounting groups to classify your accounts and link the account groups to the financial categories such as income, expense, asset, liability, and equity. This will ensure that your accounts are properly structured, categorized and labelled.

3. Add Debtor Accounts:

a) Setup a default debtor account to capture the total opening balance of the debtors ledger of your customers and clients. This account will be necessary to take on the total opening balance of the debtors control account of the debtors' ledger in the general ledger. Once this is done, you need to Take on the individual balances of your once your individual debtor (customer / client) accounts is added in osFinancials5/TurboCASH5.

b) Set up your debtor accounts for your customers and clients into osFinancials5/TurboCASH5. This includes accurate details such as customer names, contact information such as contactpersons, postal and delivery address information, payment terms, and credit limits, interest rates, discounts, etc.

c) Use your old system's debtor records as a reference to maintain consistency.

4. Add Creditor Accounts:

a) Set up creditor accounts for your suppliers and vendors.

b) Enter supplier information, contact details, payment terms, and any outstanding amounts.

c) Verify the accuracy of this information against your previous system's creditor records.

5. Import Stock/Inventory Data:

a) Transfer your stock or inventory data into osFinancials5/TurboCASH5. This includes product names, descriptions, quantities, costs, and selling prices.

b) Ensure that your stock data aligns with your existing inventory levels.

6. Take On Opening Balances:

a) Once your master files (Chart of Accounts, debtor accounts, creditor accounts, and stock) are correctly configured and populated, you can proceed to enter opening balances.

b) Record the opening balances for your debtor accounts, creditor accounts, and inventory.

c) These balances should reflect the outstanding amounts owed to you by customers, the amounts you owe to creditors, and the value of your existing inventory at the start of your osFinancials5/TurboCASH5 accounting.

7. Verification and Reconciliation:

a) Verify that the opening balances you've entered match the figures from your old accounting system.

b) Reconcile your accounts to ensure accuracy and to identify any discrepancies that need correction.

8. Test Transactions:

a) Conduct test transactions to make sure your new accounting system is functioning correctly.

b) Verify that your opening balances are correctly carried forward in your financial reports.

9. Training and Familiarization:

a) Ensure that your team is familiar with osFinancials5/TurboCASH5 and its features. Provide training as necessary to ensure efficient operation.

10. Documentation:

a) Maintain documentation of the entire setup process, including the configuration, data migration, and opening balances.

b) Keep records of any issues encountered and how they were resolved.

By following these steps, you can successfully set up osFinancials5/TurboCASH5, add your master files, and take on opening balances from your previous accounting system, ensuring a smooth transition to your new financial software.

Which records is required from your previous accounting system to take on opening balances in osFinancials5/TurboCASH5?

When transitioning to a new accounting system like osFinancials and taking on opening balances, you will need certain records and information from your previous accounting system. Here are the essential records and data you should have:

1. Trial Balance: Obtain a copy of the trial balance from your previous accounting system. This trial balance should include the closing balances of all your accounts at the end of the previous accounting period. It will serve as a starting point for entering opening balances in osFinancials5/TurboCASH5.

2. Chart of Accounts: Ensure you have a detailed list of your chart of accounts from the previous system. This list should include the account names, account numbers, and account types (e.g., assets, liabilities, equity, revenue, expenses).

3. Debtor (Accounts Receivable) Reports: These reports show the outstanding amounts that your customers owe you. It's important to have records of outstanding customer invoices, sales orders, and

customer statements as of the transition date. This information is necessary for accurately setting up your accounts receivable balances and creating accurate opening balances for your debtor accounts in osFinancials5/TurboCASH5.

4. Creditor (Accounts Payable) Reports: These reports show the outstanding balances you owe to your suppliers or creditors. You should obtain records of outstanding invoices, bills, and supplier statements as of the transition date. This information is necessary for accurately setting up your accounts payable balances and creating accurate opening balances for your creditor accounts in osFinancials5/TurboCASH5.
5. General Ledger Transactions: Depending on the complexity of your accounting, you might need access to detailed general ledger transactions for the accounts you're transferring. This is especially important if you have complex transactions, accruals, or prepayments that need to be accurately carried forward.
6. Debtor (Customer/Client) Information: Information about your debtors (customers/clients), including contact details, credit terms, and outstanding balances, can be helpful for setting up accounts receivable and accounts payable in osFinancials5/TurboCASH5.
7. Creditor (Supplier/Vendor) Information: Information about your creditors (suppliers/vendors), including contact details, credit terms, and outstanding balances, can be helpful for setting up accounts receivable and accounts payable in osFinancials5/TurboCASH5.
8. Customer Invoices and Statements: It can be helpful to have copies of customer invoices and statements, particularly if there are any discrepancies or disputes that need to be resolved during the transition.
9. Supplier Invoices and Statements: It can be helpful to have copies of supplier invoices and statements, particularly if there are any discrepancies or disputes that need to be resolved during the transition.
10. Aged Receivables Report: An aged receivables report shows how long each receivable has been outstanding. It can be useful for accurately ageing your outstanding debtor balances in osFinancials5/TurboCASH5, especially if you plan to use the ageing facility in osFinancials5/TurboCASH5.
11. Aged Payables Report: An aged payables report shows how long each payable has been outstanding. It can be useful for accurately ageing your outstanding creditor balances in osFinancials5/TurboCASH5, especially if you plan to use the ageing facility in the osFinancials5/TurboCASH5.
12. Tax Records: Ensure you have records of any outstanding sales tax or value-added tax (VAT) liabilities to accurately reflect your tax obligations in osFinancials5/TurboCASH5.
13. Asset and Liability Information: If you have assets or liabilities with specific details (e.g., depreciation

schedules for assets, loan details for liabilities), gather this information to accurately carry it forward in your new accounting system.

14. Bank Statements: If your bank account balances are part of your opening balances, obtain copies of your bank statements to reconcile and verify the balances.
15. Opening Inventory Balances: If you manage inventory, you'll need records of your opening inventory balances to accurately reflect your inventory assets.
16. Employee Records: If you handle payroll in your accounting system, ensure you have employee records, payroll tax information, and year-to-date payroll figures to transfer into osFinancials5/TurboCASH5.

Having these records and data readily available will make the process of taking on opening balances inosFinancials5/TurboCASH5 smoother and more accurate. It's essential to maintain accuracy during the transition to ensure the continuity of your financial records and reporting.

Converting a Set of Books from other accounting systems

When converting a Set of Books from other accounting systems, to osFinancials5/TurboCASH5, all balances and transactions are automatically included. Nevertheless, if the decision is made to use osFinancials5/TurboCASH5 while possessing balances in a manual system or a different computerised accounting system, the balances from the prior accounting system must be entered.

Conversion Options on the osFinancials Shop

If you need to convert your data from other accounting packages, please visit the osFinancials Webshop for options; such as Basic conversion, Extensive conversion, Conversion to Microsoft SQL Server database.

Example: Take on Opening Balances

A simplified example of the transactions to take-on opening balances for Debtors (customers/clients) can be followed in the HANDYMAN, HANDYMAN-A and HANDYMAN-B tutorials which may be downloaded fro free using the option "*Let osFinancials help you to create a Set of Books?*" option.

To illustrate the entry of opening balances, this documentation will utilize the following examples:

General ledger : The Trial balance:

Handyman Hardware Store
Closing Trial Balance as at 29 February 2024

Description	Account No.	Debit	Credit
Capital	505		11 500.00
Retained Income	510		4 200.00
Furniture & Fittings - @ Cost	600-010	1 007.00	
Furniture & Fittings - Accumulated Depreciation	600-020		300.00
Motor Vehicles - @ Cost	610-010	5 000.00	
Motor Vehicles - Accumulated Depreciation	610-020		500.00
Debtor's Control	700	1 800.00	
Creditor's Control	900		1 000.00
Stock Control	750	6 500.00	
Bank	810	3 193.00	
Petty Cash	820	100.00	
Output VAT	860-010		100.00
Total		17 600.00	17 600.00

Control accounts:

Individual balances needs to be taken on separately for the following Control accounts:

- *Debtor's control (G700).*
- *Creditor's control (G900).*
- *Stock control (G750)*

Control accounts in the General ledger must always be in balance with the total of the sub-ledgers.

Debtor's ledger : The Balances of the individual Debtor accounts:

Handyman Hardware Store
Debtor's Age analysis as at 29 February 2024

Debtor	Account no.	Outstanding amount	Outstanding as at		
			29/02/2024	31/01/2024	31/12/2023
Mr. Mike Davies	D1MD-AVI	800.00	500.00	200.00	100.00
Mr. Roger Smith	D1RO-GSM	1 000.00	600.00	200.00	200.00
Total		1 800.00	1 100.00	400.00	300.00

Debtor's ledger:

Individual balances may be taken on for the following:

- *Outstanding amount.*
- *Each period separately. Each period separately will allow you to use the Debtor's age analysis reports.*

Creditor's ledger : The Balances of the individual Creditor accounts:

Handyman Hardware Store
Creditor's Age Analysis as at 29 February 2024

Creditor	Account No.	Outstanding Amount	Outstanding as at		
			29/02/2024	31/01/2024	31/12/2023
A-One Suppliers	2AO-NES	600.00	300.00	200.00	100.00
BEST Suppliers	2BE-STS	400.00	200.00	100.00	100.00
Total		1 000.00	500.00	300.00	200.00

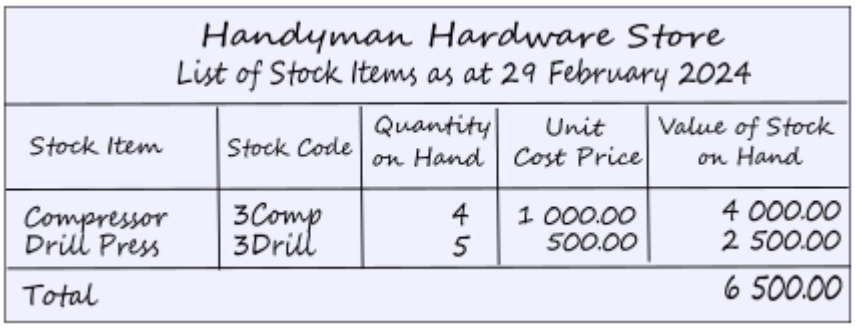
Creditor's ledger:

Individual balances may be taken on for the following:

- *Outstanding amount.*
- *Each period separately. Each period separately will allow you to use the Creditor's*

age analysis reports.

Stock Ledger: The Balances (Quantities and Cost prices) of the Individual Stock items:



Handyman Hardware Store
List of Stock Items as at 29 February 2024

Stock Item	Stock Code	Quantity on Hand	Unit Cost Price	Value of Stock on Hand
Compressor	3Comp	4	1 000.00	4 000.00
Drill Press	3Drill	5	500.00	2 500.00
Total				6 500.00

Stock Ledger / Inventory Ledger: Only the total value (cost price of inventory) is entered as the opening balance of your inventory items.

The number of units and value of the individual inventory items (cost of inventory) is entered when you record your opening inventory.

The total quantities and the total value of the inventory at cost must match the total amount of the Stock control account as the opening balance of your inventory.

The opening balances for your stock items must be entered for each individual stock item - you cannot simply enter the total from the trial balance. You need to specify the quantities on hand and the cost prices for each stock item.

osFinancials5/TurboCASH5 will calculate the value of each stock item by multiplying the quantities on hand by the cost price. After all the quantities and cost prices of your stock items are entered, the total value of all stock items should be equal to the control figure (stock control account), as per your financial statements.

Take-on General Ledger Opening Balances

Entering opening balances for general ledger accounts

To enter opening balances for general ledger accounts, you will need to have the account balances as of

the start of your accounting period. This could be the beginning of a new financial year or the start of a new accounting cycle.

It is important to ensure that your opening balances are entered accurately, as they will form the foundation for all future transactions in your accounts. You should also ensure that you have supporting documentation for your opening balances, such as, bank statements and previous trial balance and other financial statements.

Once you have entered your opening balances, you can begin recording transactions for the current period. You should also regularly review and reconcile your accounts to ensure that they are accurate and up-to-date.

Guidelines to process opening balances for general ledger accounts

When setting up a new accounting system, it is important to set up the chart of accounts correctly to ensure that your financial information is accurate and organized. Here are some steps you can follow to set up your chart of accounts:

1. Review your existing chart of accounts: If your new Set of Books already includes a chart of accounts, review it to ensure that it meets the needs of your business. Compare it to your previous accounting system's chart of accounts to identify any differences.
2. Make necessary changes: If your new Set of Books chart of accounts is missing any accounts that you need, or includes accounts that you don't require, make the necessary changes. This may involve adding new accounts, deleting accounts, or modifying account names or numbers.
3. Determine account structure: Determine the structure of your accounts, including the number of digits in your account numbers, the grouping of accounts, the linking of account groups to financial categories, and the use of sub-accounts. This will help ensure that your accounts are organized in a way that makes sense for your business.
4. Create a standard naming convention : Establish a standard naming convention for your accounts to ensure consistency and clarity. This may involve using abbreviations, codes, or other conventions to make it easier to identify accounts.
5. Enter your opening balances: Once you've set up your chart of accounts, enter the opening balances for each account to ensure that your financial statements are accurate from the beginning.
6. Review and adjust: After setting up your chart of accounts and entering opening balances, review your work to ensure that everything is correct. Make any necessary adjustments to ensure that your accounts are accurate and organized.

By following these steps, you can ensure that your chart of accounts is set up correctly and that your financial information is accurate and well-organized.

Steps to Process General Ledger Opening Balances

Once you have set up your chart of accounts and entered the opening balances correctly, you can begin recording transactions in your new accounting database. It is important to maintain accurate records of all transactions to ensure that your financial statements are accurate.

To maintain accurate records, you should:

1. Record transactions timely: Record all transactions as soon as possible to avoid any delay and ensure that the records are up-to-date.
2. Enter all transactions correctly: Ensure that you enter all transactions accurately, with the correct account and amount.
3. Categorize transactions correctly: Categorize transactions correctly based on the chart of accounts you have set up, to ensure that your financial reports reflect the correct information.
4. Reconcile accounts regularly: Regularly reconcile your accounts to ensure that your records match your bank and other statements. This will help you identify and correct any errors or discrepancies.
5. Generate financial reports: Regularly generate financial reports, such as balance sheets and income statements, to help you analyse the financial health of your business.

By following these practices, you can maintain accurate records in your new accounting database, which will help you make informed business decisions and ensure that your financial statements are accurate.

Output VAT	860-010		100.00
Total		17 600.00	17 600.00

Process opening Balances in General journal

These transactions can be replicated in HANDYMAN, HANDYMAN-A en HANDYMAN-B Tutorials Sets of Books.

Since you cannot enter transactions to the Debtors control account and Creditors control account you need to:

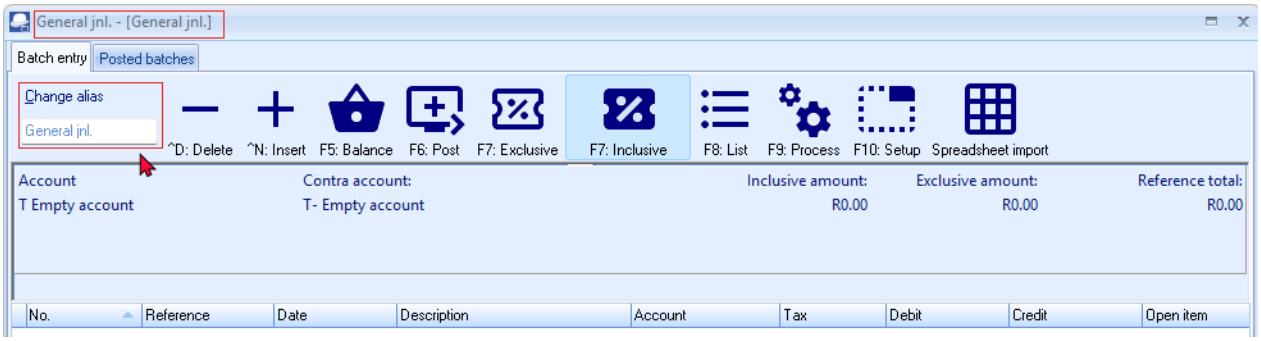
- Add an "*Opening balances - Debtors*" account in the Debtors ledger in Debtors (Default ribbon).
- Add an "*Opening balances - Creditors*" account in the Creditors ledger in Creditors (Default ribbon).

To enter opening balances from your trial balance:

1. On the Default ribbon, select Batch entry (F2).

> *If no contra account, or a different contra account than the contra account you wish to use, is displayed on the Batch type selection screen, you need to set up the options for the batch. If you have not yet set up the General journal, or if your requirements should change,click on the F10:Setup icon.*

2. Select the General Jnl and click on the Open button.
3. Enter the Alias (batch name) in the '*Change alias'* field on the "*Batch entry*" screen.

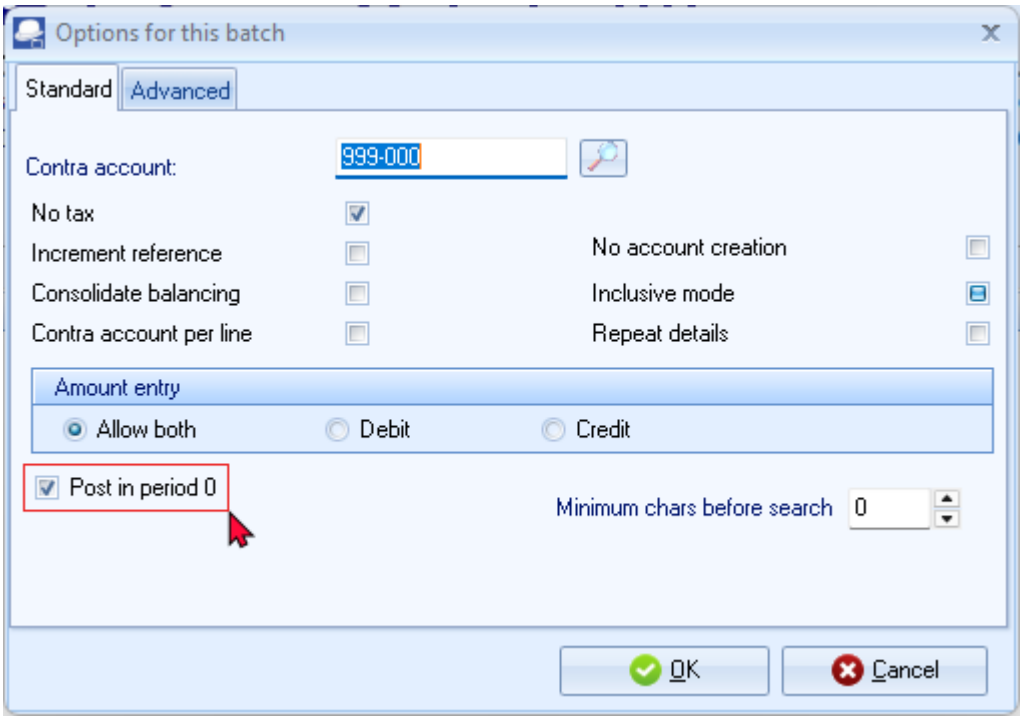


Batch Settings

Before you can process transactions for opening balances, you first need to setup or configure the batch (journal). The setup "*Options for this batch*", consists of two tabs, i.e. Standard tab and Advanced tab.

To set the Options for this batch:

1. Click on the F10:Setup icon to set your batch up. On the Standard tab, the options is as follows:



> *The first time you enter transactions in a General journal, you should set it up according to your requirements. This should be done for each journal, but only need to be done once, unless your requirements change.*

2. The recommended settings (Standard tab) for entering opening balances in the General journal, is as follows:

    a) Contra account - The relevant contra account for the batch (i.e. the account to which

osFinancials5/TurboCASH5 will create a balancing entry). Select the suspense account, i.e. "*999 - Suspense Account*".

b) No Tax - Select this option, as no VAT/GST/Sales Tax (Output VAT/GST/Sales Tax and Input VAT/GST/Sales Tax) is applicable to the opening balance transactions.

c) Consolidate balancing - If you tick this field, osFinancials5/TurboCASH5 will consolidate all balancing entries into 1 entry, if you have used an account more than once. As for the take-on of opening balances, it is NOT necessary to tick this option, since you will be entering both debits and credits from your Trial balance and will not be asking osFinancials5/TurboCASH5 to balance the batch.

d) Repeat details - If you tick this field, the detail entered in the "*Description*" column will be repeated (duplicated) on each subsequent line. Tick this option to repeat the details for the next transactions.

e) Amount entry - Set to "*Allow both*", since you will enter amounts in both the debit and credit column.

The rest of the tick-boxes may be left blank.

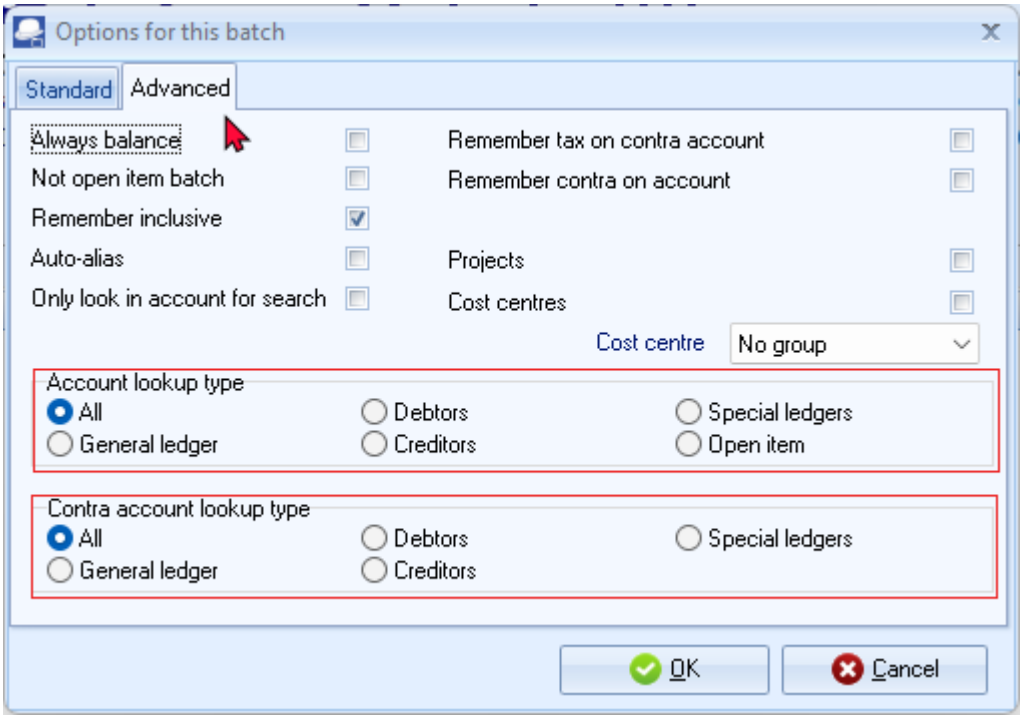
f) Post in period 0 - Need to tick this field for opening balances, if you need to post retained income transactions to the previous year.

If the "Post in period 0" field is not selected (ticked), you will not be allowed to post the transactions to the Retained earnings / income account.

An error message (similar to this error message, will be produced:

"This batch does not validate!
Line JNL1 Opening balance - Take-on retained income must be adjusted in opening balance batch! See F10 in batch for setup."

3. Click on the Advanced tab. On the Advanced tab, the options is as follows:



4. Leave all fields blank, and make sure that the default option, "*Account lookup type*" and "*Contra account lookup type*" both, is set to "*All*" for opening balances.

> *You need to enter the total opening balance for all debtor accounts in the Debtors control account on the source Trial balance to the "Opening balances - Debtors" account. There after you need to clear this Opening balances - Debtors" account and debit the individual debtor accounts with their own opening balances.*
>
> *Similarly, you need to enter the total opening balance for all creditor accounts in the Creditors control account on the source Trial balance to the to the "Opening balances - Creditors" account. There after you need to clear this Opening balances - Creditors" account and credit the individual creditor accounts with their own opening balances.*

5. Click on the OK button.

Capturing opening balances in the General ledger

Capture the transactions, from your source document (Trial balance) from your previous accounting system.

Handyman Hardware Store
Closing Trial Balance as at 29 February 2024

Description	Account No.	Debit	Credit
Capital	505		11 500.00
Retained Income	510		4 200.00
Furniture & Fittings - @ Cost	600-010	1 007.00	
Furniture & Fittings - Accumulated Depreciation	600-020		300.00
Motor Vehicles - @ Cost	610-010	5 000.00	
Motor Vehicles - Accumulated Depreciation	610-020		500.00
Debtor's Control	700	1 800.00	
Creditor's Control	900		1 000.00
Stock Control	750	6 500.00	
Bank	810	3 193.00	
Petty Cash	820	100.00	
Output VAT	860-010		100.00
Total		17 600.00	17 600.00

1. Capture the first transaction as follows:

    a) Reference: JNL1

    b) Date: 2024/02/29

    c) Description: Opening Balance Take-on

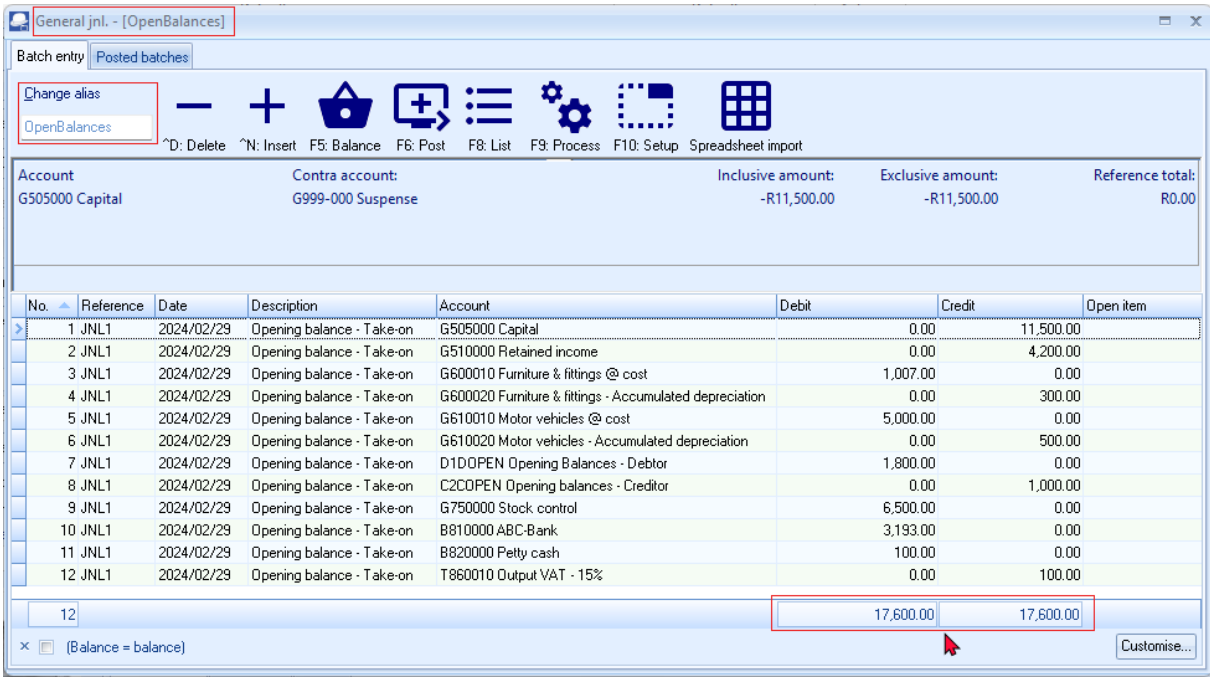
    d) Account: 505 (for Capital)

    e) Amount: 11500.00 CR

> *Use the same reference number, date and details for all the entries.*

> *Tax*
>
> *Since No Tax (VAT/GST/Sales Tax) is applicable, to the opening balance transactions in this tutorial, we have selected to hide the Tax column in the Setup Options.*

2. Repeat as above for capturing the rest of the Trial balance. After capturing the Trial balance, the transactions should reflect as follows:



When entering the opening balance for the Debtor's control account (Account number G700-000), will not allow you to select the Debtor's control account.

The same applies to the Creditor's control account (Account number G900-000).

The reason for this is that you cannot post any transactions to the Debtor's control account in the General ledger. You need to select the individual Debtor accounts in the Debtor's ledger, to take on each individual Debtor's opening balance. When posting the transactions for the opening balances in the General journal, the Debtor's control account in the General ledger will automatically be updated with the total of all the individual transactions posted to the Debtor's ledger.

It is not necessary to "balance" your batch, as your Trial balance should already be in balance.

You will note that there is an amount indicating the difference between the debit and credit entries at the end of the Debit Amount column.

This amount (and the Reference Total at the bottom of the screen) should reflect a zero after entering all your transactions.

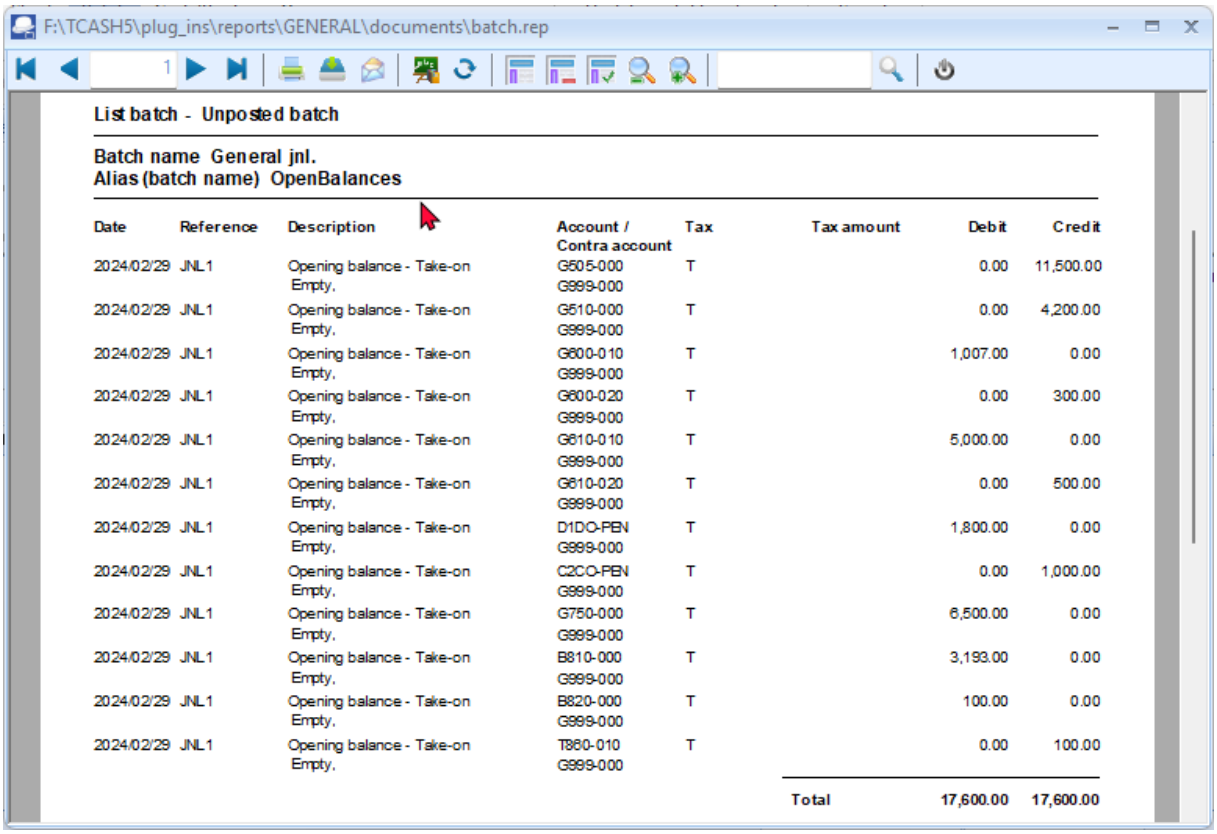
Checking your transactions before posting the transactions

Once your transactions is entered in the General ledger journal, you need to make absolutely sure that you have captured the transactions correctly. This is crucial to post the transactions on the correct date, correct references, descriptions debit and credit amounts to the correct accounts.

To print a list of transactions in the unposted batch:

1. Click on the F8:List icon to print a list of the transactions in the batch (journal). The batch list is

displayed as follows:



F:\TCASH5\plug_ins\reports\GENERAL\documents\batch.rep

List batch - Unposted batch

Batch name General jnl.
Alias (batch name) OpenBalances

2024/02/29	JNL1	Opening balance - Take-on Empty,	G505-000 G999-000	T		0.00	11,500.00
2024/02/29	JNL1	Opening balance - Take-on Empty,	G510-000 G999-000	T		0.00	4,200.00
2024/02/29	JNL1	Opening balance - Take-on Empty,	G600-010 G999-000	T		1,007.00	0.00
2024/02/29	JNL1	Opening balance - Take-on Empty,	G600-020 G999-000	T		0.00	300.00
2024/02/29	JNL1	Opening balance - Take-on Empty,	G610-010 G999-000	T		5,000.00	0.00
2024/02/29	JNL1	Opening balance - Take-on Empty,	G610-020 G999-000	T		0.00	500.00
2024/02/29	JNL1	Opening balance - Take-on Empty,	D1DO-PEN G999-000	T		1,800.00	0.00
2024/02/29	JNL1	Opening balance - Take-on Empty,	C2CO-PEN G999-000	T		0.00	1,000.00
2024/02/29	JNL1	Opening balance - Take-on Empty,	G750-000 G999-000	T		6,500.00	0.00
2024/02/29	JNL1	Opening balance - Take-on Empty,	B810-000 G999-000	T		3,193.00	0.00
2024/02/29	JNL1	Opening balance - Take-on Empty,	B820-000 G999-000	T		100.00	0.00
2024/02/29	JNL1	Opening balance - Take-on Empty,	T860-010 G999-000	T		0.00	100.00
					Total	17,600.00	17,600.00

It is recommended that the source document (e.g. trial balance or balance sheet and income statement, etc.) be attached to this List of the transactions (take-on of opening balances) and that it be retained for record and audit purposes.

You may also click on the *icon (Save the report as a metafile report), and save it as a PDF - compressed file for archiving purposes.*

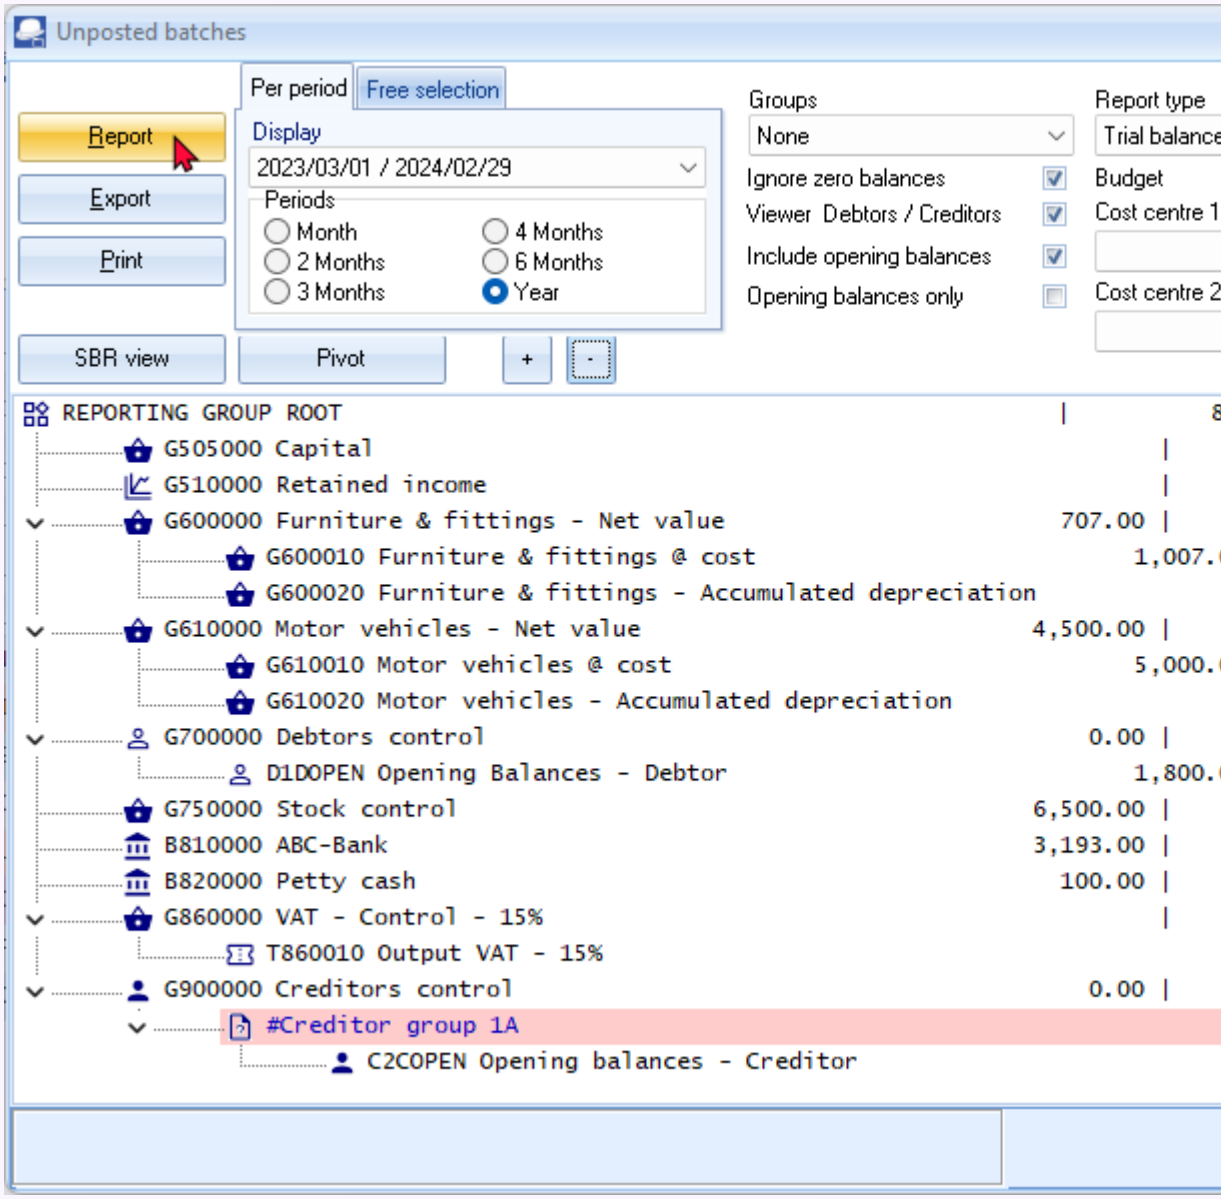
2. If there are any errors, you may fix this before you update (post) the transactions to the ledger.

Print a Trial balance for unposted batches

You may print a Trial balance of unposted batches journals. To do this, press the F2-key and right-click on the Batch e balance" from the context menu. A confirmation screen will be displayed:

"Unposted only?"

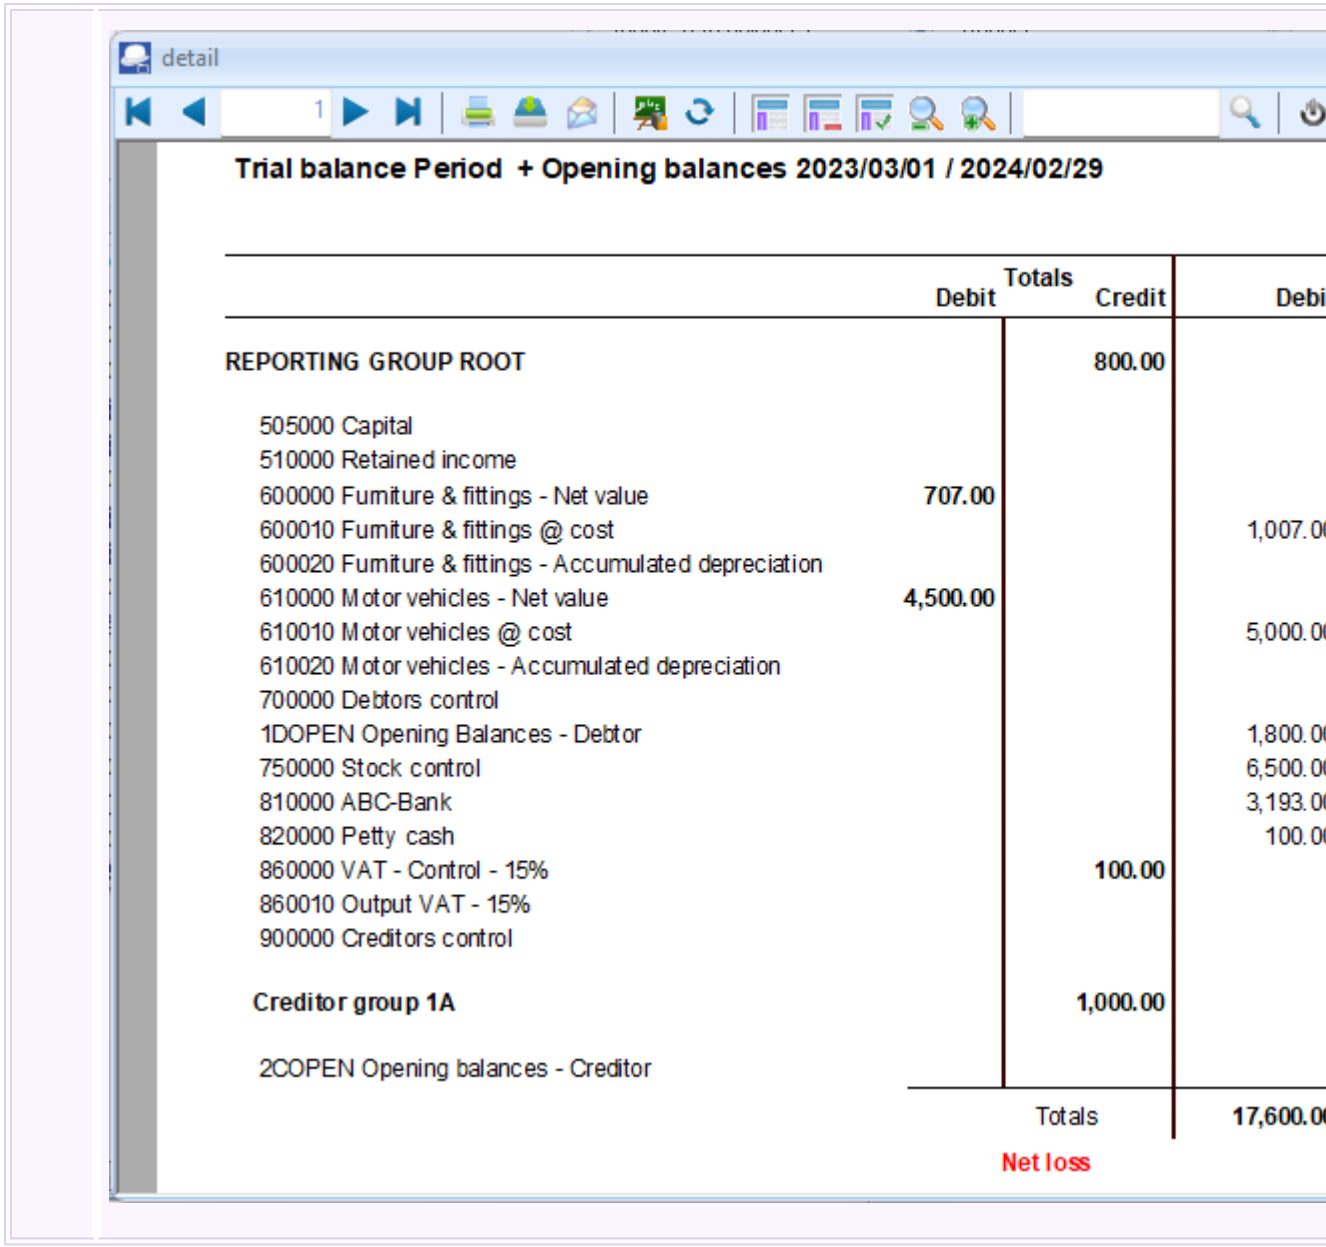
Click Yes and the Trial balance for unposted batches (journals) will be launched:



NOTE: Initially, the Print button will not be displayed. To display the Print button, go to the "Report type" and re-sel

You may print the Trial balance for unposted batches.

An example of the Trial balance for the opening balances (not updated (posted) to the ledger should display as follo



detail

Trial balance Period + Opening balances 2023/03/01 / 2024/02/29

Update (post) transactions to the ledger

Once you have entered your transactions an you are absolutely sure that it is correct, you may proceed with the final step in processing jour opening balances in the journal (batch).

To Update (post) transactions to the ledger:

1. Click on the F6:Post icon, to post (update) the batch to the ledger. A confirmation message will be displayed.

   "Do you want to continue posting? Batch contains transactions posting to last year!"

2. Click on the Yes button, or press the Enter key to continue. A confirmation message will be displayed.

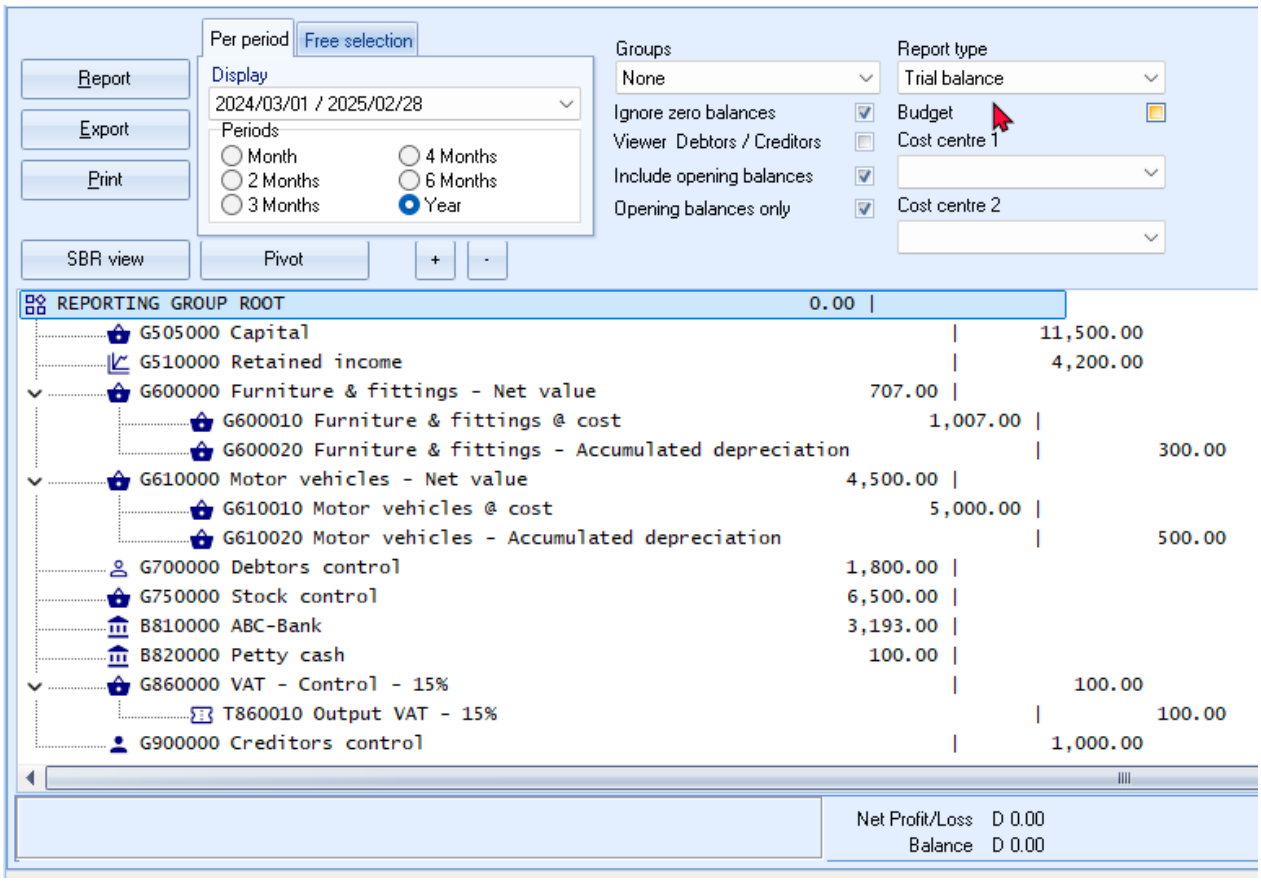
"Do you wish to post on the retained earnings account?"

If you click on the No button, the transactions will not be posted.

3. osFinancials5/TurboCASH5 will now post all the transactions to the general ledger.

Opening Balances - Transactions

Once the transactions is updated (posted) to the ledger, you may print a Trial balance of your opening balances.



Click on the Print button to print your opening balances.

Take-on Debtor Opening Balances

Which records is required from your previous accounting system to take on opening balances for debtors (customers/clients) in osFinancials5/TurboCASH5?

When transitioning to a new accounting system like osFinancials5/TurboCASH5 and taking on opening balances, you will need certain records and information from your previous accounting system. Here are the essential records and data you should have for debtors (customers/clients):

1. Trial Balance: Obtain a copy of the trial balance from your previous accounting system. This trial balance should include the closing balances of all your accounts at the end of the previous accounting period. It will serve as a starting point for entering opening balances in osFinancials5/TurboCASH5. The total balances of Debtor's control account (Accounts receivable account) should be entered.
2. Debtor (Accounts Receivable) Reports: These reports show the outstanding balances owed to you by your suppliers or debtors. You should obtain records of outstanding invoices, bills, and debtor statements as of the transition date. This information is necessary for accurately setting up your accounts receivable balances and creating accurate opening balances for your debtor accounts in osFinancials5/TurboCASH5.
3. Debtor (customer/client) Information: Information about your debtors (customers/clients), including contact details, credit terms, and outstanding balances, can be helpful for setting up accounts receivable in osFinancials5/TurboCASH5.
4. Customer Invoices and Statements: It can be helpful to have copies of supplier invoices and statements, particularly if there are any discrepancies or disputes that need to be resolved during the transition.
5. Aged Receivables Report: An aged receivables report shows how long each payable has been outstanding. It can be useful for accurately ageing your outstanding creditor balances in osFinancials5/TurboCASH5, especially if you plan to use the ageing facility in osFinancials5/TurboCASH5.

Having these records and data readily available will make the process of taking on opening balances in osFinancials5/TurboCASH5 smoother and more accurate. It's essential to maintain accuracy during the transition to ensure the continuity of your financial records and reporting.

Steps to take-on opening balances for debtors

Taking on opening balances for debtor accounts is an essential step in the accounting process, especially when transitioning to a new accounting system, like osFinancials5/TurboCASH5. Here's a step-by-step

guide on how to do this using osFinancials5/TurboCASH5:

1. Add Debtor (Customer/Client) accounts: Create or add each individual debtor (customer/client) account. Each individual debtor (customer/client) account should contain specific information about your debtors (customers/clients), including postal and delivery addresses, contact details, credit terms (including credit limits) tax and registration numbers, and more. You could use the Filter and search options to verify the details and or using Debtor listing reports to verify the correct details.

2. Set Up an "*Opening Balances - Debtors*" Account: In osFinancials, create a new account called "*Opening Balances - Debtors*." This account will be used to record the total opening balances for all your debtor accounts. This Opening balance should match the total amount in the Debtors control account (Accounts payable account) and would be processed when Taking on the Trial Balance of the General ledger accounts.

3. Process Journal Entries: Create journal entries to allocate the outstanding amounts to individual debtor accounts. The journal entries should credit the "*Opening Balances - Debtors*" account and credit the respective debtor accounts.

   Example Journal Entry:

   - Debit: Customer A (Individual Debtor Account)
   - Credit: Opening Balances - Debtors

   Repeat this process for each debtor account until all opening balances have been allocated.

   If you wish to utilize the ageing feature in osFinanacials, when entering the opening balances in individual debtor accounts, you need to capture the outstanding balances at the end of each accounting period as per ageing reports or lists from your previous accounting system. A breakdown of each individual to track and manage the ageing of outstanding receivables. This will help you monitor how long each receivable has been outstanding, which is essential for managing cash flow and debtor relationships.

4. Import or Enter Opening Balances: Import or manually enter the opening balances for your debtor accounts into the "*Opening Balances - Debtors*" account. These balances should represent the amounts you owe to your suppliers at the beginning of the accounting period.

5. Verify the Totals: Double-check that the total outstanding amount in the "*Opening Balances - Debtors*" account matches the total opening balances in your trial balance. It's essential to ensure accuracy at this stage.

6. Utilise the Ageing Facility: When entering the opening balances are correctly recorded in individual debtor accounts, you can utilise the ageing facility within osFinancials5/TurboCASH5 to track and manage the ageing of outstanding receivables. This will help you monitor how long each receivable

has been outstanding, which is essential for managing cash flow and debtor relationships.

7. Reconcile and Review: After processing the journal entries, reconcile the individual debtor accounts to make sure they match the opening balances from your trial balance. This step ensures that all amounts have been correctly transferred.

8. Regularly Update Debtor Accounts: Going forward, continue to update your debtor accounts with new transactions, sales, and payments received as they occur. Regularly reconcile these accounts to ensure accuracy.

Remember that accurate recording of debtor balances is crucial for financial reporting and maintaining good relationships with your customers. Always consult yourosFinancials's documentation and guidelines for the most accurate and up-to-date instructions on handling opening balances and debtor accounts.

By following these steps, you can accurately capture outstanding balances at the end of each accounting period for individual debtor accounts in osFinancials5/TurboCASH5 and utilise the ageing feature to track the ageing of receivables effectively. This approach ensures that your financial records reflect the true state of your accounts receivable and helps with financial reporting and cash flow management.

Example: Source document - Debtor Age Analysis

Handyman Hardware Store
Debtor's Age analysis as at 29 February 2024

Debtor	Account no.	Outstanding amount	Outstanding as at		
			29/02/2024	31/01/2024	31/12/2023
Mr. Mike Davies	D1MD-AVI	800.00	500.00	200.00	100.00
Mr. Roger Smith	D1RO-GSM	1 000.00	600.00	200.00	200.00
Total		1 800.00	1 100.00	400.00	300.00

Opening Balances - Debtors

These transactions can be replicated in HANDYMAN, HANDYMAN-A en HANDYMAN-B Tutorials Sets of Books.

The transactions for opening balances in the ledger should already include the total outstanding balances in an "*Opening balances - Debtors*" account. This total outstanding balances need to be allocated and processed for each individual debtor (customer/client) account.

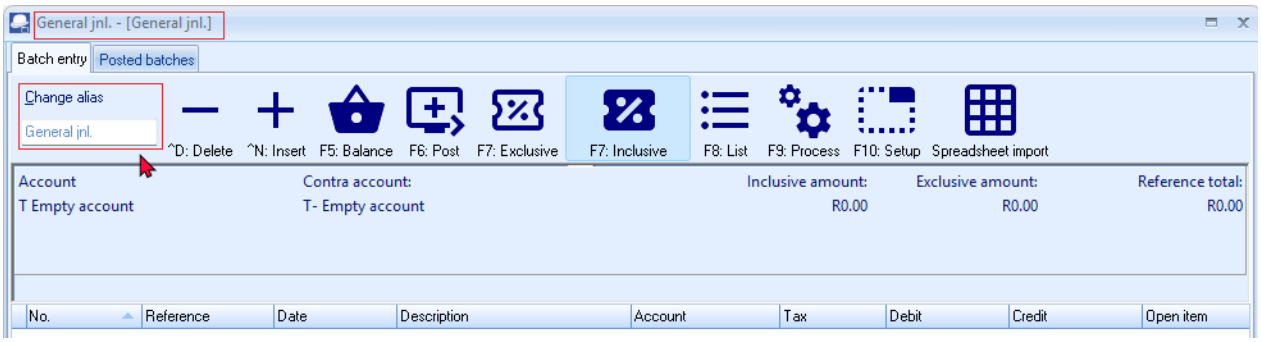
To enter Opening Balances for your Debtor accounts:

1. On the Default ribbon, select Batch entry (F2).

If no contra account, or a different contra account than the contra account you wish to use, is displayed on the Batch type selection screen, you need to set up the options for the batch. If you have not yet set up the General journal, or if your requirements should change,click on the F10:Setup icon.

2. Select the General Jnl and click on the Open button.

3. Enter the Alias (batch name) in the *Change alias* field on the Batch entry screen. (In this example, "*D-OpenBalances*" is used for Debtor Opening Balances).



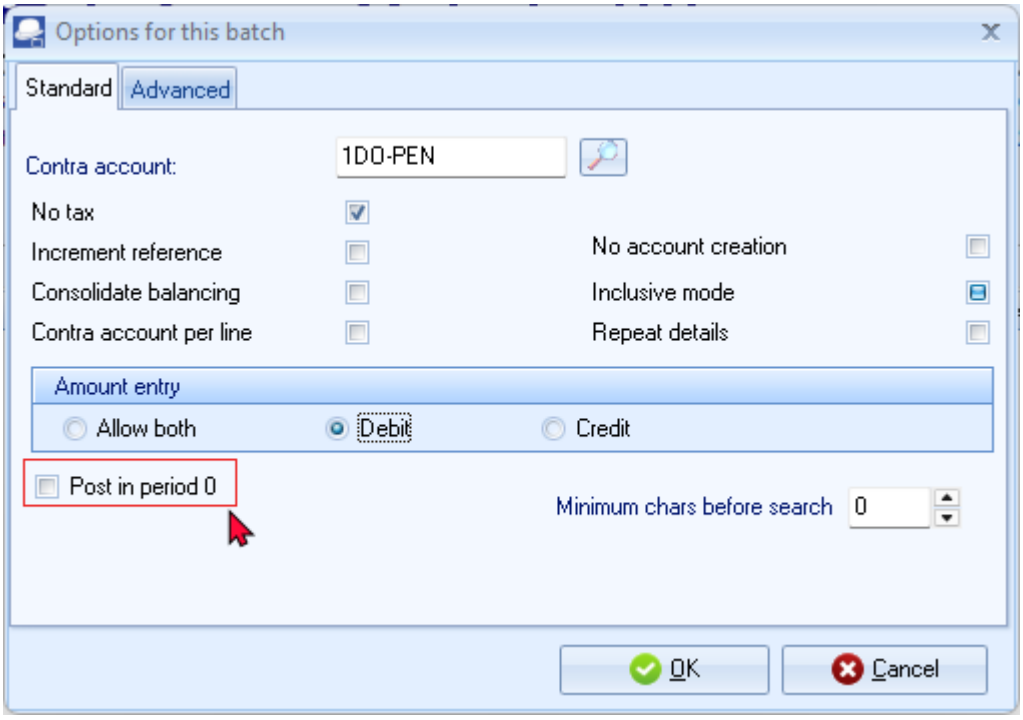
Batch settings

Before you can process transactions for opening balances, you first need to setup or configure the batch (journal). The setup "*Options for this batch*", consists of two tabs, i.e. Standard tab and Advanced tab.

To set the Options for this batch:

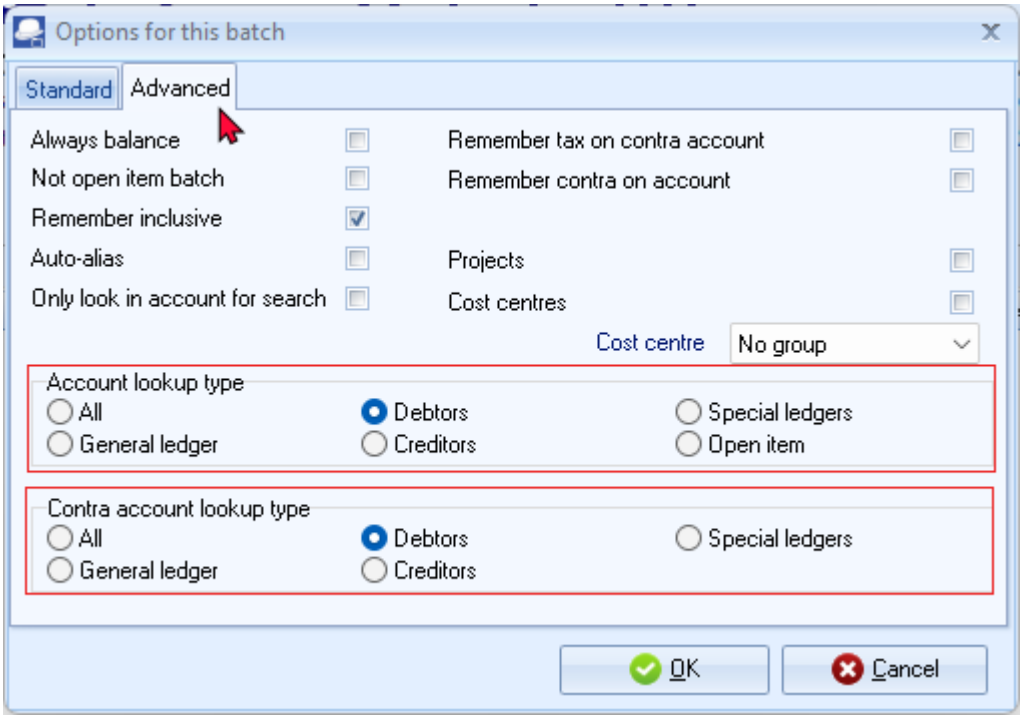
1. Click on the F10:Setup icon to set your batch up. The '*Options for this batch'* screen will be displayed. The settings are basically the same as for the Opening balances of the General ledger account. Change the options for this batch, as follows:

a) Standard tab – Select the Contra account for Opening Balances – Debtors (1DO-PEN) and Set Amount entry to Debit.



The tick in the "Post in period 0" field must not be selected (not ticked) for opening balances for debtors (customers / clients).

b) Advanced tab – Set the "*Account lookup type*" and "*Contra account lookup type*" both to Debtor.



5. Once setup, click on the OK button.

Process Opening balance transactions : Debtors

1. Find your source document.

2. Enter the following transactions:

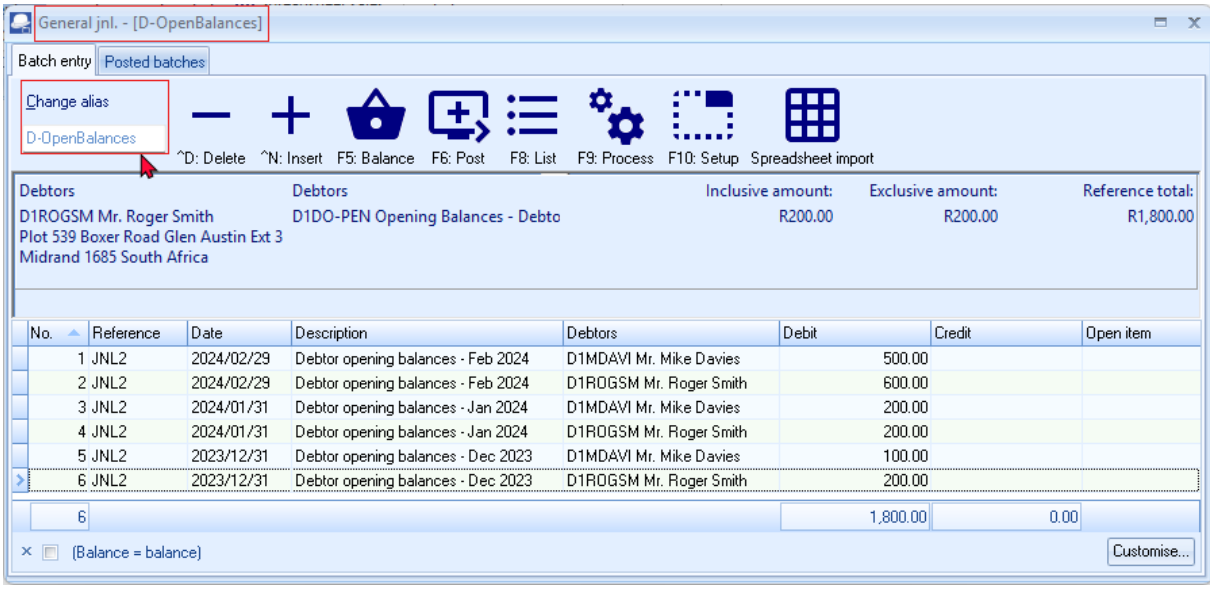
Handyman Hardware Store
Debtor's Age analysis as at 29 February 2024

Debtor	Account no.	Outstanding amount	Outstanding as at 29/02/2024	31/01/2024	31/12/2023
Mr. Mike Davies	D1MD-AVI	800.00	500.00	200.00	100.00
Mr. Roger Smith	D1RO-GSM	1 000.00	600.00	200.00	200.00
Total		1 800.00	1 100.00	400.00	300.00

The Opening Balances – Debtor account should reflect the total of all Debtor accounts (in the Debtor's control account). You only need to list (select) the individual debtor accounts and enter their balances.

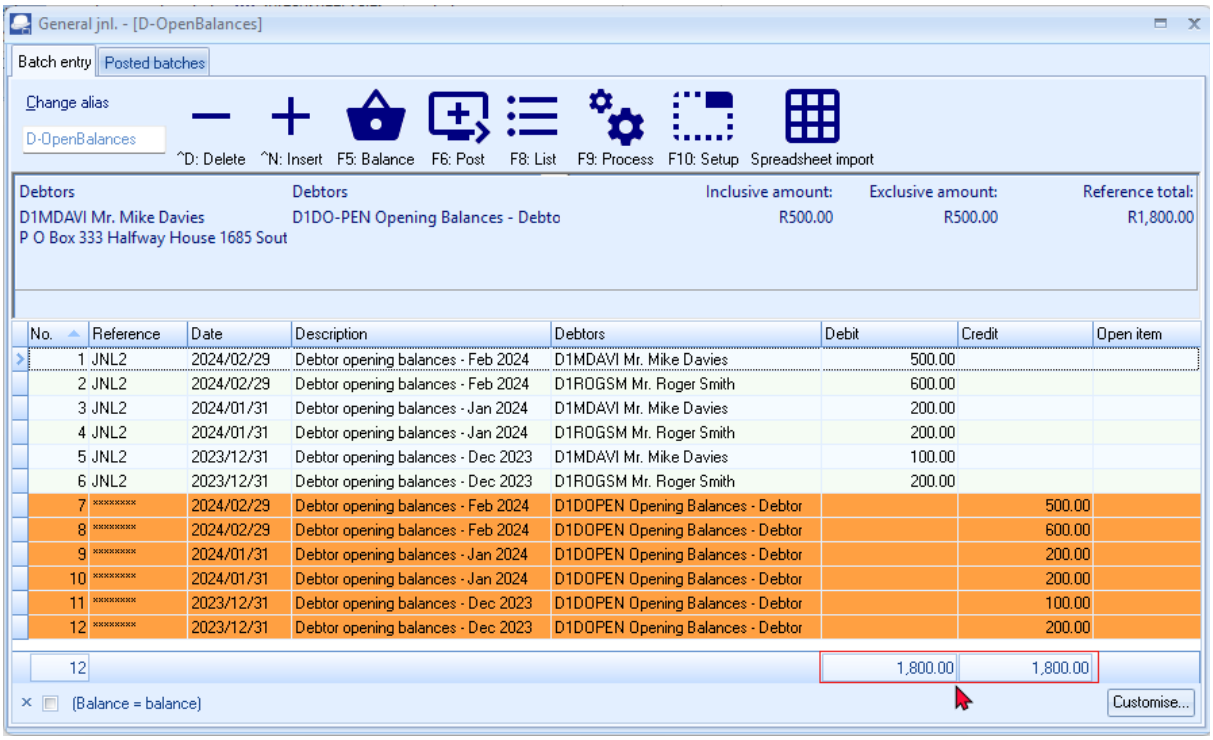
You may enter only the total outstanding balance (i.e. 1800.00 as per this example) as at 29 February 2024 for each debtor account (2 entries).

If you wish to optimise the ageing facility in , you may enter the balances for each debtor account as at the end of each period, e.g. 29 February 2024 – 1100.00, 31 January 2024 – 400.00 and 31 December 2023 – 300.00.

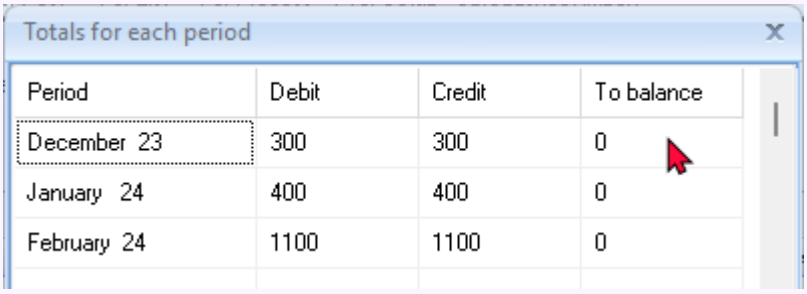


3. Click on the F5: Balance icon. osFinancials will generate balancing entries for each period. After entering the individual balances for each period, and balancing the batch, the transactions should be

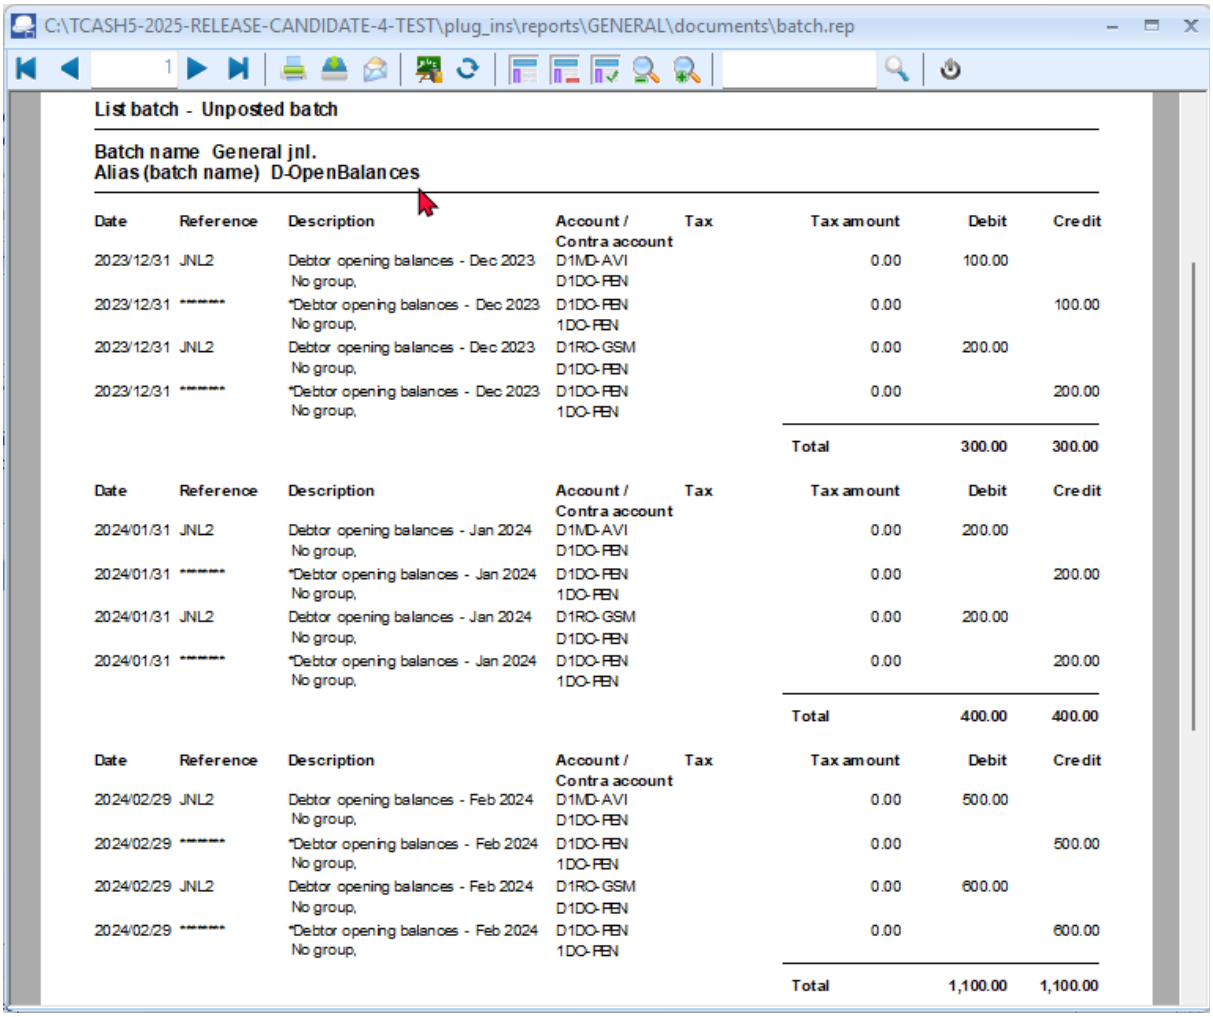
displayed as follows:



You may click on the F9: Process icon and select the "Totals per period" option. This will list the totals of all the Debit entries and all the Credit entries for each period. The difference should be zero.



4. Click on the F8:List icon to print a list of the transactions in the batch.



5. Click on the F6:Post icon, to post (update) the batch to the ledger. A confirmation message will be displayed.

> "Do you want to continue posting? Batch contains transactions posting to last year!"

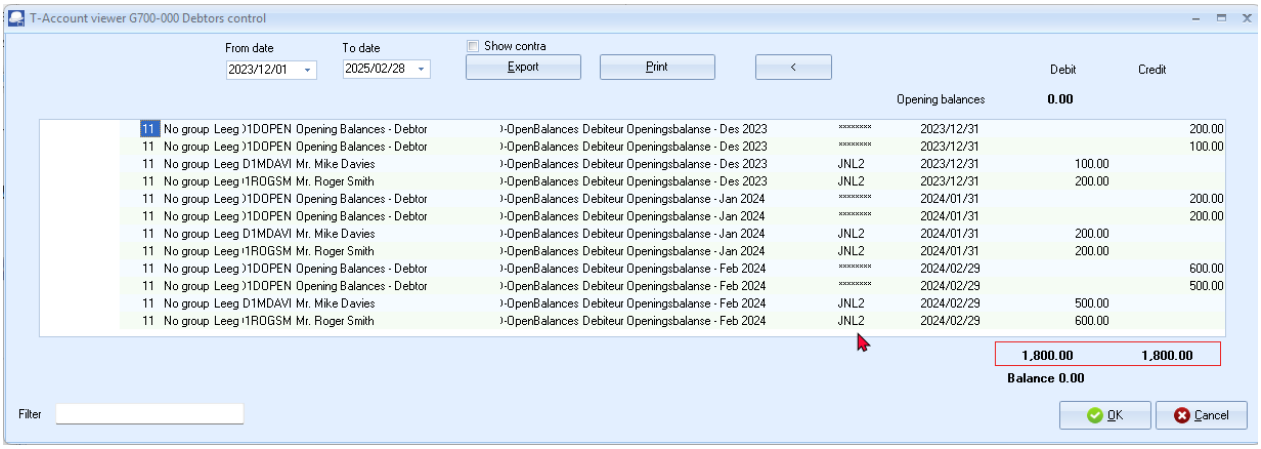
6. Click on the Yes button, or press the Enter key to continue.

> *If you click on the No button, the transactions will not be posted.*

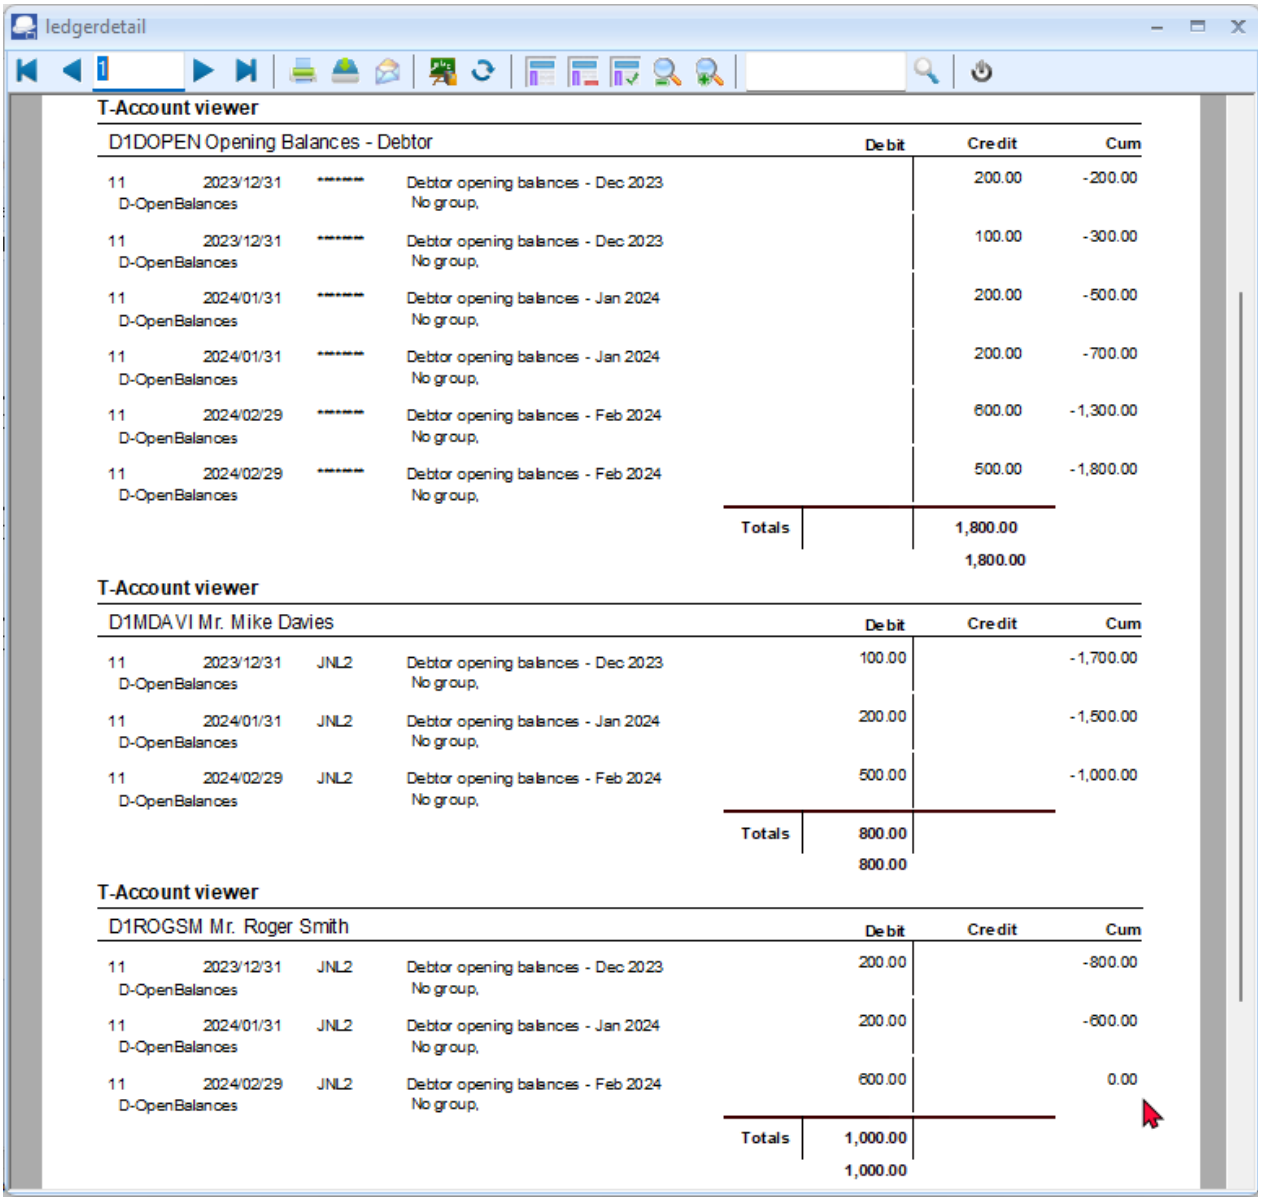
7. osFinancials5/TurboCASH5 will post the entries for each period to the ledger.

T-Account view : Debtor - Opening balances

The Opening Balances - Debtor account should have a zero balance after balances were debited to the individual Debtor accounts.

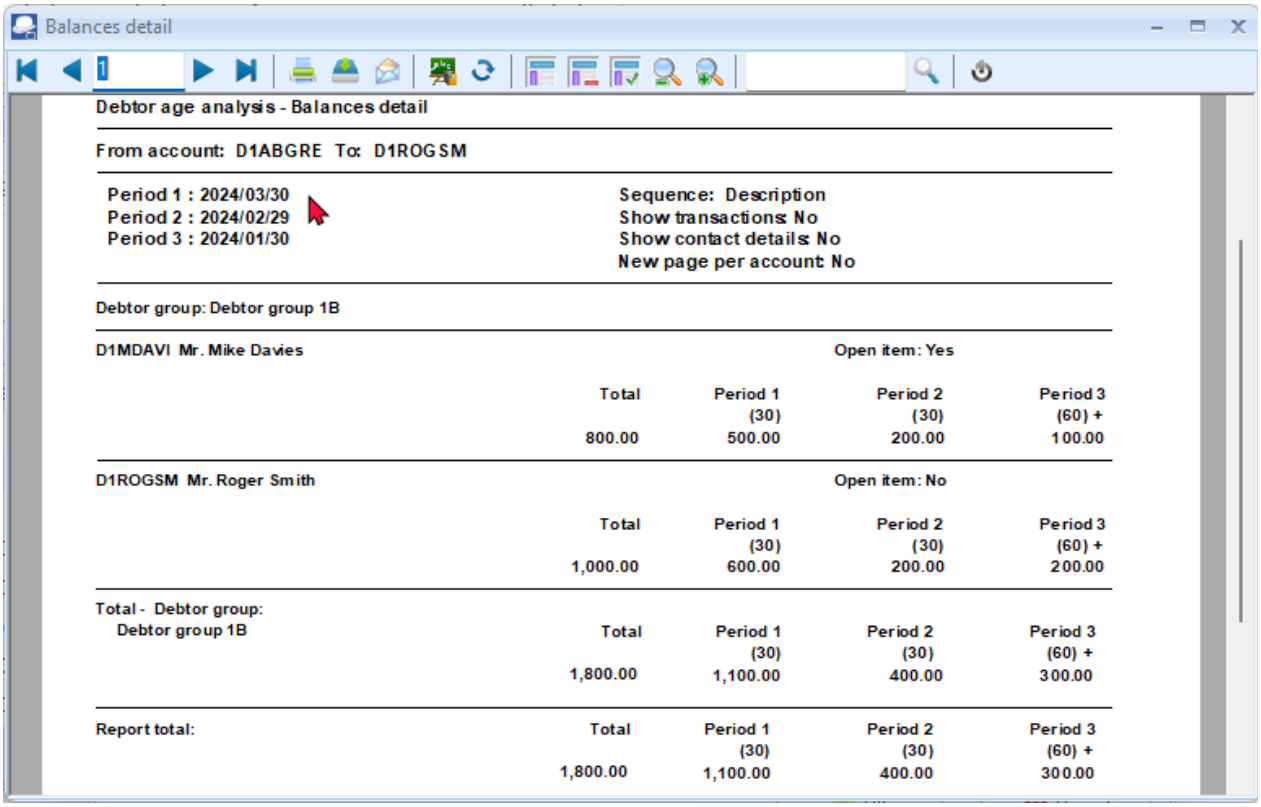


The Batch for Opening Balances (e.g. BatchID 11) should have a zero balance (credit transactions in Opening Balances - Debtor account = debit transactions individual Debtor accounts).



Age analysis view : Debtor - Opening balances

The Debtor age analysis report for 30 March 2024 (Reports → Debtors → Age analysis - Balances detail) will display the totals for each period as follows:



Balances detail

Debtor age analysis - Balances detail

Take-on Creditor Opening Balances

Which records is required from your previous accounting system to take on opening balances for creditors (suppliers/vendors) in osFinancials5/TurboCASH5?

When transitioning to a new accounting system like osFinancials5/TurboCASH5 and taking on opening balances, you will need certain records and information from your previous accounting system. Here are the essential records and data you should have for creditors (suppliers/vendors):

1. Trial Balance: Obtain a copy of the trial balance from your previous accounting system. This trial balance should include the closing balances of all your accounts at the end of the previous accounting period. It will serve as a starting point for entering opening balances in osFinancials5/TurboCASH5. The total balances of Creditor's control account (Accounts payable account) should be entered.
2. Creditor (Accounts Payable) Reports: These reports show the outstanding balances you owe to your suppliers or creditors. You should obtain records of outstanding invoices, bills, and supplier statements as of the transition date. This information is necessary for accurately setting up your accounts payable balances and creating accurate opening balances for your creditor accounts in osFinancials5/TurboCASH5.
3. Creditor (Supplier/Vendor) Information: Information about your creditors (suppliers/vendors), including contact details, credit terms, and outstanding balances, can be helpful for setting up accounts receivable and accounts payable in osFinancials5/TurboCASH5.
4. Supplier Invoices and Statements: It can be helpful to have copies of supplier invoices and statements, particularly if there are any discrepancies or disputes that need to be resolved during the transition.
5. Aged Payables Report: An aged payables report shows how long each payable has been outstanding. It can be useful for accurately ageing your outstanding creditor balances in osFinancials5/TurboCASH5, especially if you plan to use the ageing facility in the osFinancials5/TurboCASH5.

Having these records and data readily available will make the process of taking on opening balances in osFinancials5/TurboCASH5 smoother and more accurate. It's essential to maintain accuracy during the transition to ensure the continuity of your financial records and reporting.

Steps to take-on opening balances for creditors

Taking on opening balances for creditor accounts is an essential step in the accounting process, especially when transitioning to a new accounting system, like osFinancials. Here's a step-by-step guide on how to do this using osFinancials5/TurboCASH5:

1. Add Creditor (Supplier/Vendor) accounts: Create or add each individual creditor (supplier/vendor) account. Each individual creditor (supplier/vendor) account should contain specific information about your creditors (suppliers/vendors), including postal and delivery addresses, contact details, credit terms (including credit limits) tax and registration numbers, and more. You could use the Filter and search options to verify the details and or using Creditor listing reports to verify the correct details.
2. Set Up an "*Opening Balances - Creditors*" Account: In osFinancials5/TurboCASH5, create a new account called "*Opening Balances - Creditors*." This account will be used to record the total opening balances for all your creditor accounts. This Opening balance should match the total amount in the Creditors control account (Accounts payable account) and would be processed when Taking on the Trial Balance of the General ledger accounts.
3. Process Journal Entries: Create journal entries to allocate the outstanding amounts to individual creditor accounts. The journal entries should debit the "*Opening Balances - Creditors*" account and credit the respective creditor accounts.

   Example Journal Entry:

   - Debit: Opening Balances - Creditors
   - Credit: Supplier A (Individual Creditor Account)

   Repeat this process for each creditor account until all opening balances have been allocated.

   If you wish to utilise the ageing feature in osFinanacials, when entering the opening balances in individual creditor accounts, you need to capture the outstanding balances at the end of each accounting period as per aging reports or lists from your previous accounting system. a breakdown of each individual to track and manage the ageing of outstanding accounts payable. This will help you monitor how long each payable has been outstanding, which is essential for managing cash flow and supplier relationships.
4. Import or Enter Opening Balances: Import or manually enter the opening balances for your creditor accounts into the "*Opening Balances - Creditors*" account. These balances should represent the amounts you owe to your suppliers at the beginning of the accounting period.
5. Verify the Totals: Double-check that the total outstanding amount in the "*Opening Balances - Creditors*" account matches the total opening balances in your trial balance. It's essential to ensure accuracy at this stage.
6. Utilize the Ageing Facility: When entering the opening balances are correctly recorded in individual creditor accounts, you can utilize the ageing facility within your accounting software to track and manage the ageing of outstanding accounts payable. This will help you monitor how long each payable has been outstanding, which is essential for managing cash flow and supplier relationships.

7. Reconcile and Review: After processing the journal entries, reconcile the individual creditor accounts to make sure they match the opening balances from your trial balance. This step ensures that all amounts have been correctly transferred.
8. Regularly Update Creditor Accounts: Going forward, continue to update your creditor accounts with new transactions, purchases, and payments as they occur. Regularly reconcile these accounts to ensure accuracy.

Remember that accurate recording of creditor balances is crucial for financial reporting and maintaining good relationships with your suppliers. Always consult your specific accounting software's documentation and guidelines for the most accurate and up-to-date instructions on handling opening balances and creditor accounts.

By following these steps, you can accurately capture outstanding balances at the end of each accounting period for individual creditor accounts in osFinancials5/TurboCASH5 and utilise the ageing feature to track the ageing of accounts payable effectively. This approach ensures that your financial records reflect the true state of your accounts payable and helps with financial reporting and cash flow management.

Example: Source document - Creditor Age Analysis

Handyman Hardware Store
Creditor's Age Analysis as at 29 February 2024

Creditor	Account No.	Outstanding Amount	Outstanding as at		
			29/02/2024	31/01/2024	31/12/2023
A-One Suppliers	2AO-NES	600.00	300.00	200.00	100.00
BEST Suppliers	2BE-STS	400.00	200.00	100.00	100.00
Total		1 000.00	500.00	300.00	200.00

Opening Balances - Creditors

These transactions can be replicated in HANDYMAN, HANDYMAN-A en HANDYMAN-B Tutorials Sets of Books.

The transactions for opening balances in the ledger should already include the total outstanding balances in an "*Opening balances - Creditors*" account. This total outstanding balances need to be allocated and processed for each individual creditor (supplier/vendor) account.

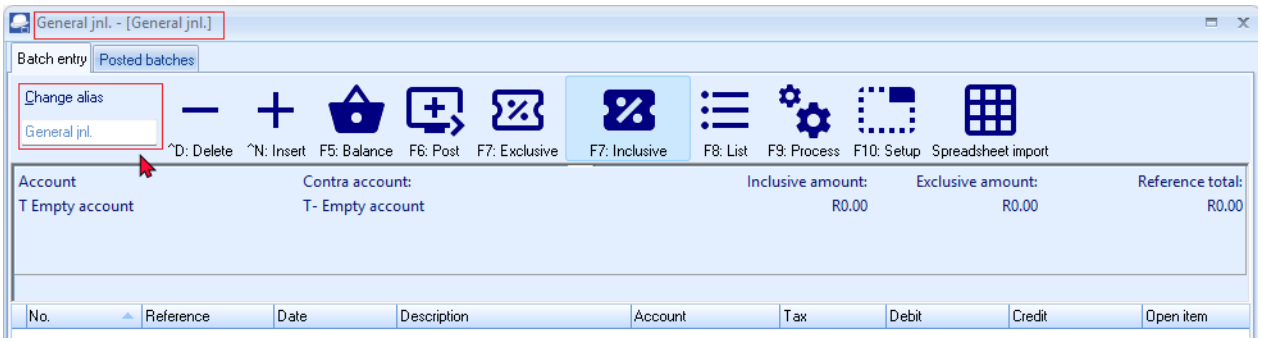
To enter Opening Balances for your Creditor accounts:

1. On the Default ribbon, select Batch entry (F2).

If no contra account, or a different contra account than the contra account you wish to use, is displayed on the Batch type selection screen, you need to set up the options for the batch. If you have not yet set up the General journal, or if your requirements should change,click on the F10:Setup icon.

2. Select the General Jnl and click on the Open button.

3. Enter the Alias (batch name) in the *Change alias* field on the Batch entry screen. (In this example, "*C-OpenBalances*" is used for Creditor Opening Balances).



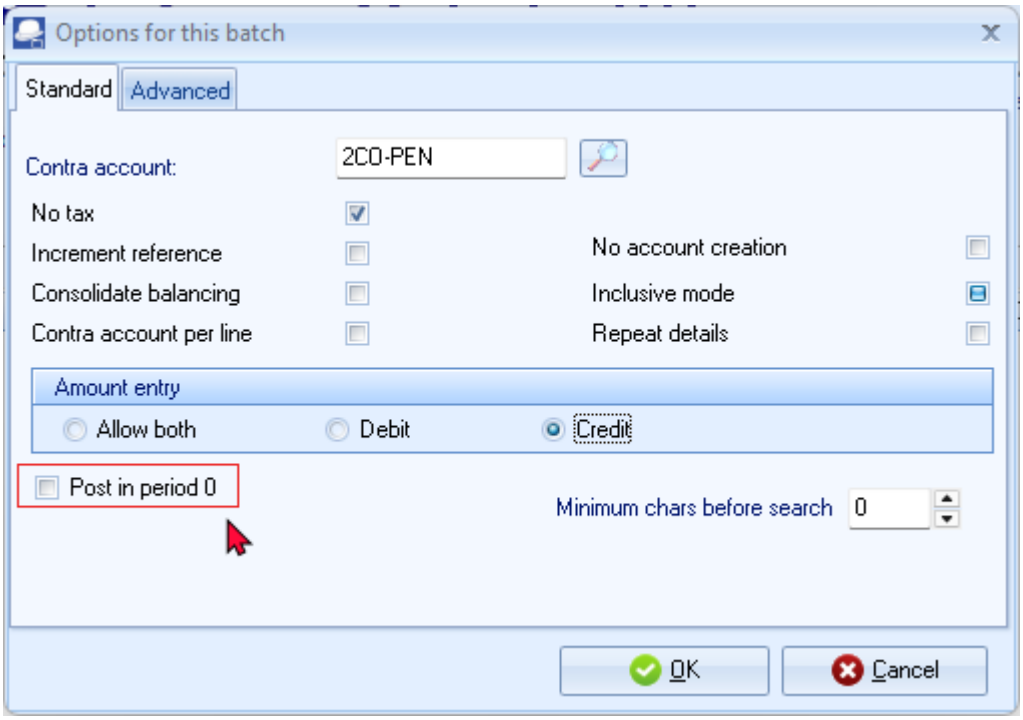
Batch settings

Before you can process transactions for opening balances, you first need to setup or configure the batch (journal). The setup "*Options for this batch*", consists of two tabs, i.e. Standard tab and Advanced tab.

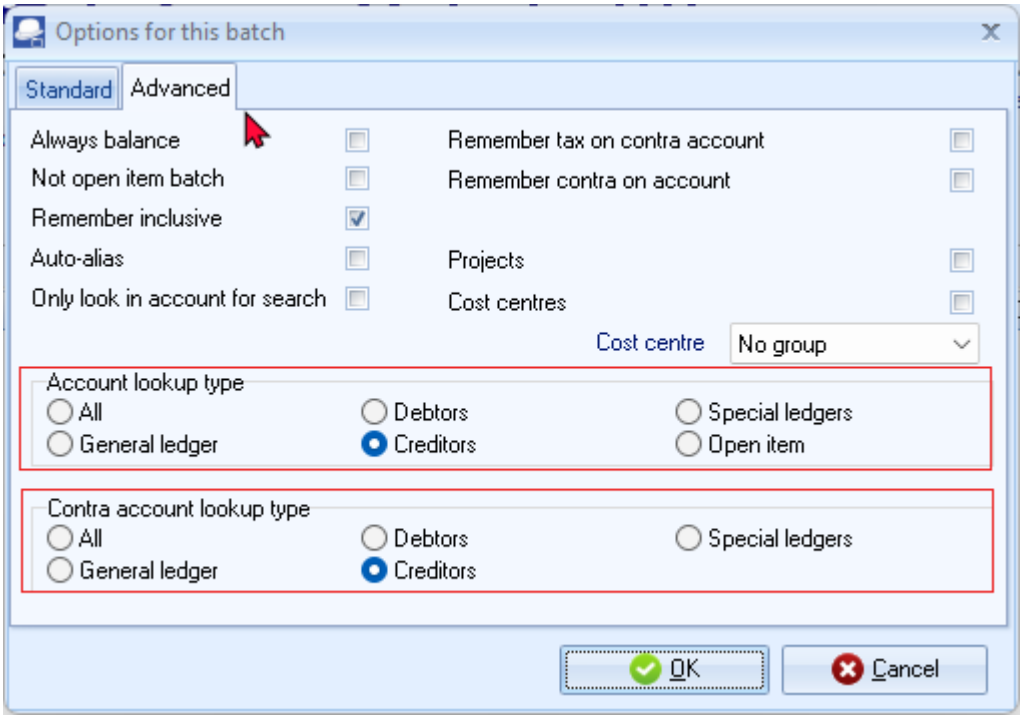
1. Click on the F10:Setup icon to set your batch up. The "*Options for this batch*" screen will be displayed. The settings are basically the same as for the Opening Balances of the General ledger account. Change the Batch Settings as follows:

    a) Standard tab – Select the Contra account for "*Opening Balances – Creditors (2CO-PEN)*" and set

Amount entry to Credit.



b) Advanced tab – Set the "*Account lookup type*" and the "*Contra account lookup type*" both to Creditors.



2. Once setup, click on the OK button.

Process Opening balance transactions : Debtors

1. Find your source document.

2. Enter the following transactions:

Handyman Hardware Store
Creditor's Age Analysis as at 29 February 2024

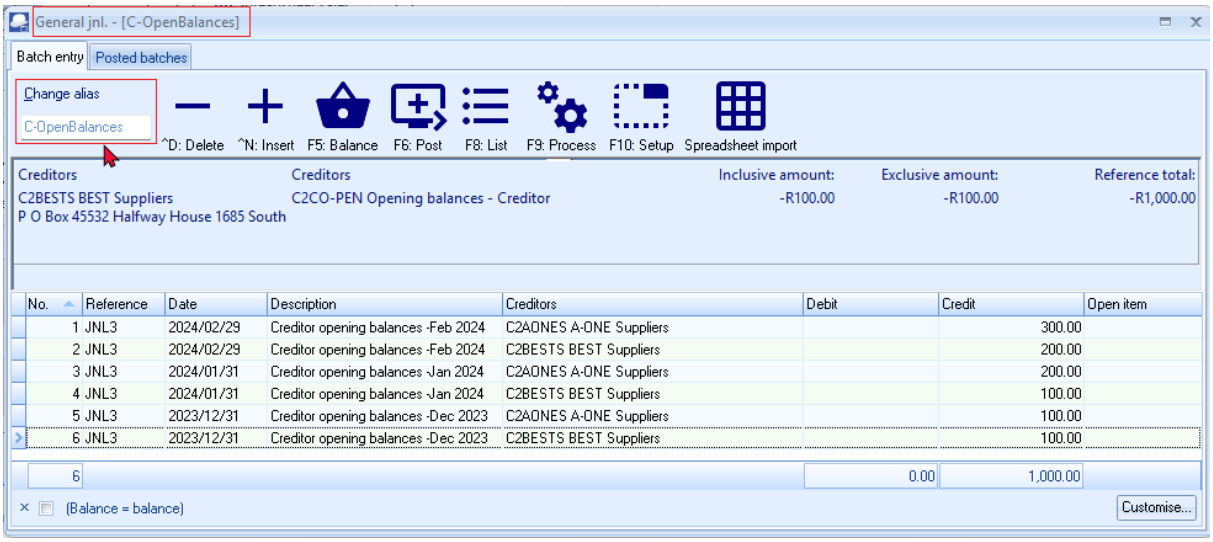
Creditor	Account No.	Outstanding Amount	Outstanding as at 29/02/2024	31/01/2024	31/12/2023
A-One Suppliers	2AO-NES	600.00	300.00	200.00	100.00
BEST Suppliers	2BE-STS	400.00	200.00	100.00	100.00
Total		1 000.00	500.00	300.00	200.00

The Opening Balances – Creditor account should reflect the total of all Creditor accounts (in the Creditor's control account). You only need to list (select) the individual creditor accounts and enter their balances.

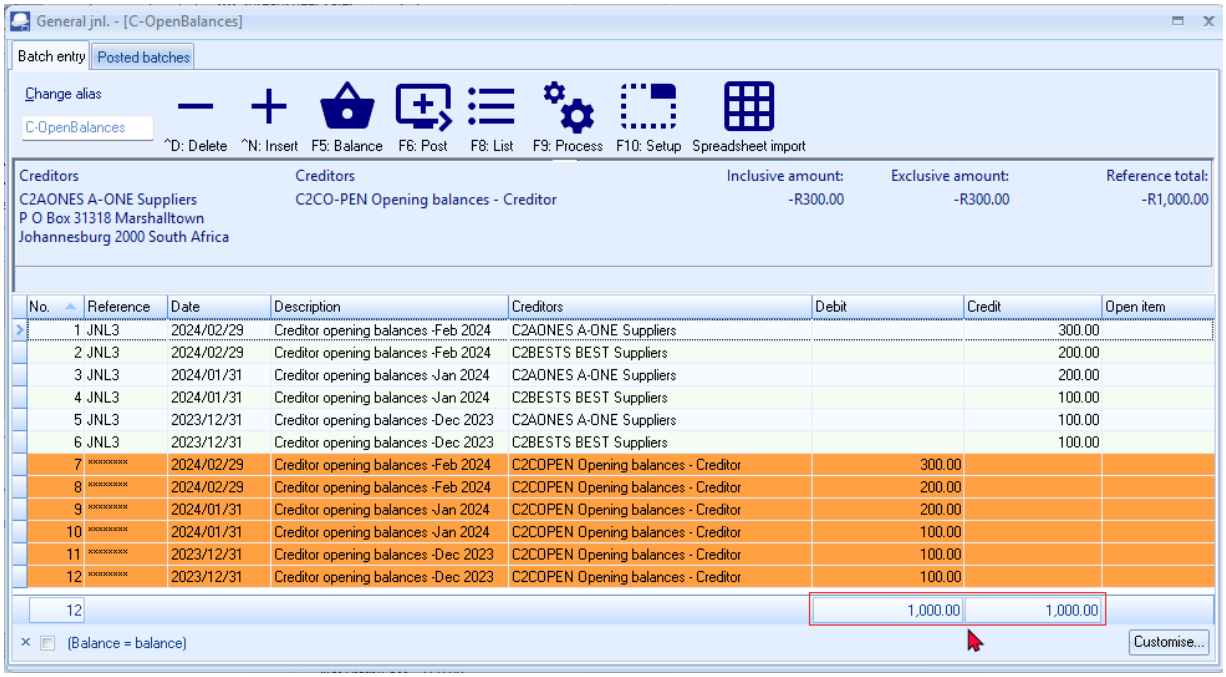
You may enter only the total outstanding balance (i.e. 1000.00 as per this example) as at 29 February 2024 for each creditor account (2 entries).

If you wish to optimise the ageing facility in osFinancials5/TurboCASH5, you may enter the balances for each creditor account as at the end of each period, e.g. 29 February 2024 – 500.00, 31 January 2024 – 300.00 and 31 December 2023 – 200.00.

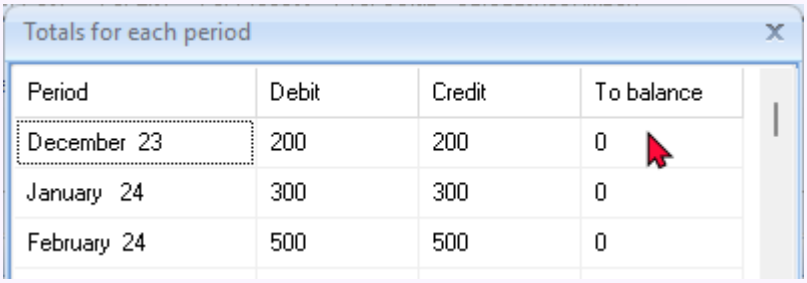
3. Click on the F5: Balance icon. osFinancials will generate balancing entries for each period. After entering the individual balances for each period, and balancing the batch, the transactions should be displayed as follows:



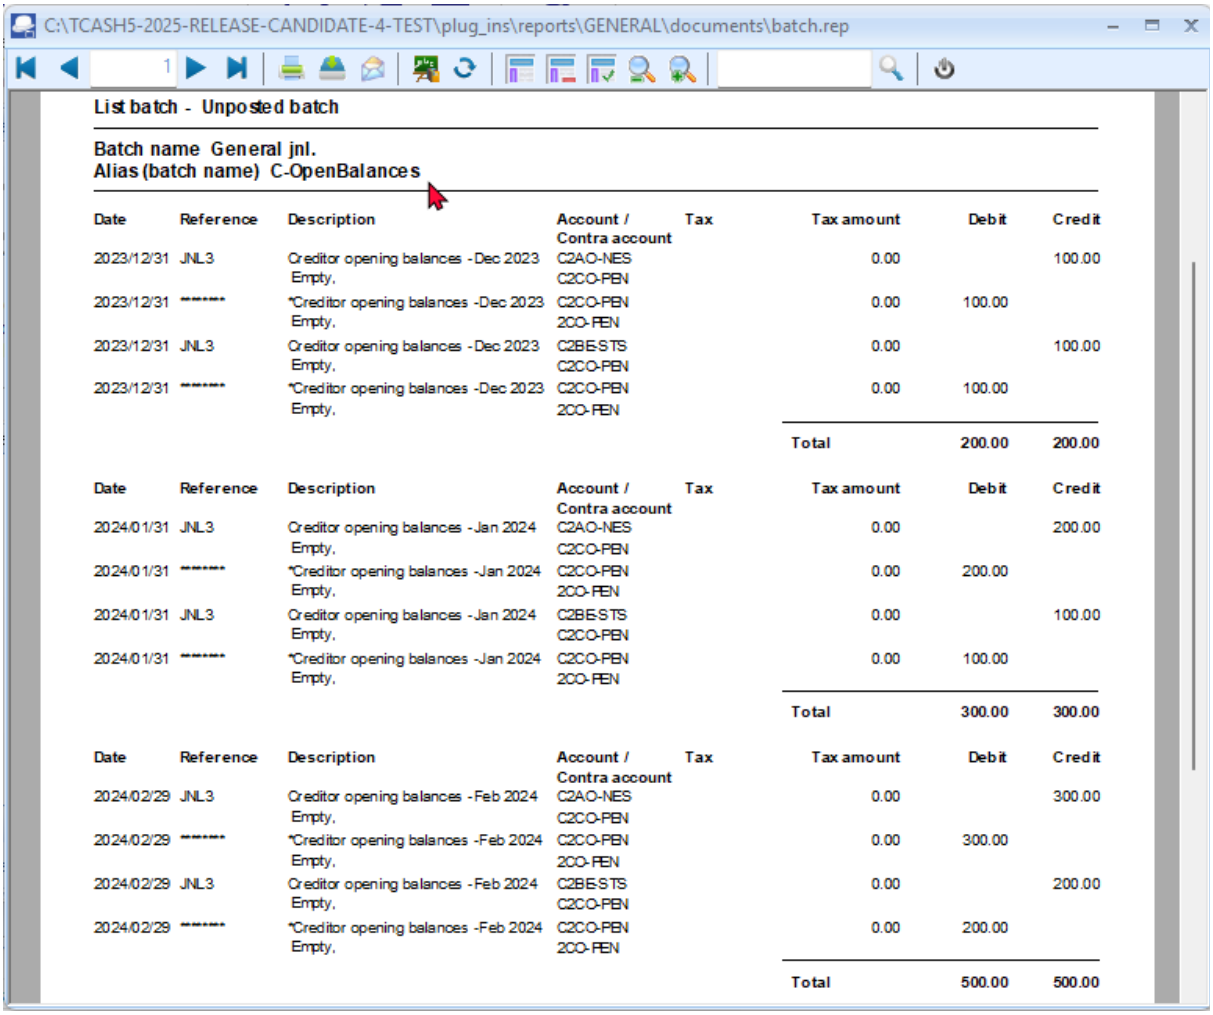
4. Click on the F5:Balance icon to generate balancing transactions.



You may click on the F9: Process icon and select the Totals per Period option. This will list the totals of all the Debit entries and all the Credit entries for each period. The difference should be zero.



5. Click on the F8:List icon to print a list of the transactions in the batch.



6. Click on the F6:Post icon, to post (update) the batch to the ledger. A confirmation message will be displayed.

> "Do you want to continue posting? Batch contains transactions posting to last year!"

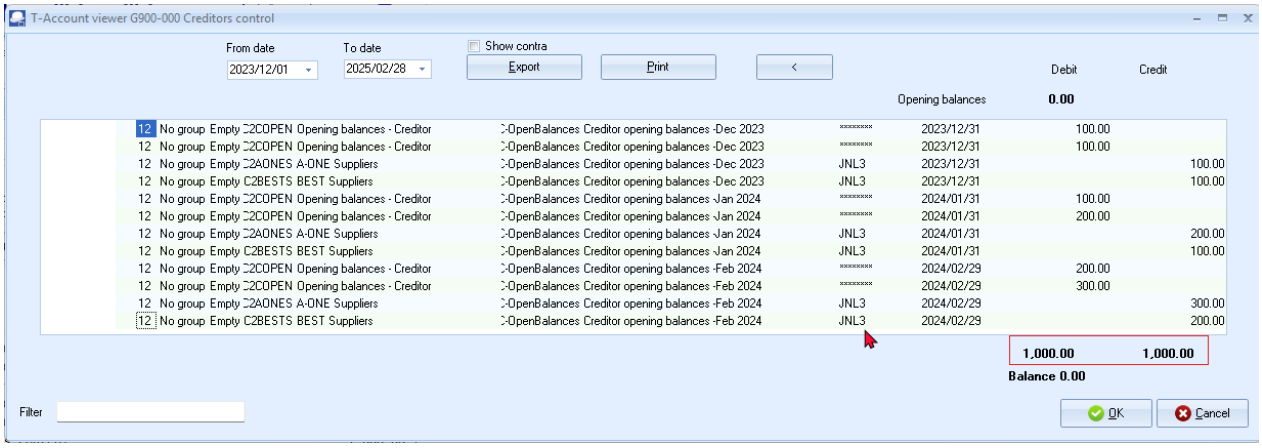
7. Click on the Yes button, or press the Enter key to continue.

> *If you click on the No button, the transactions will not be posted.*

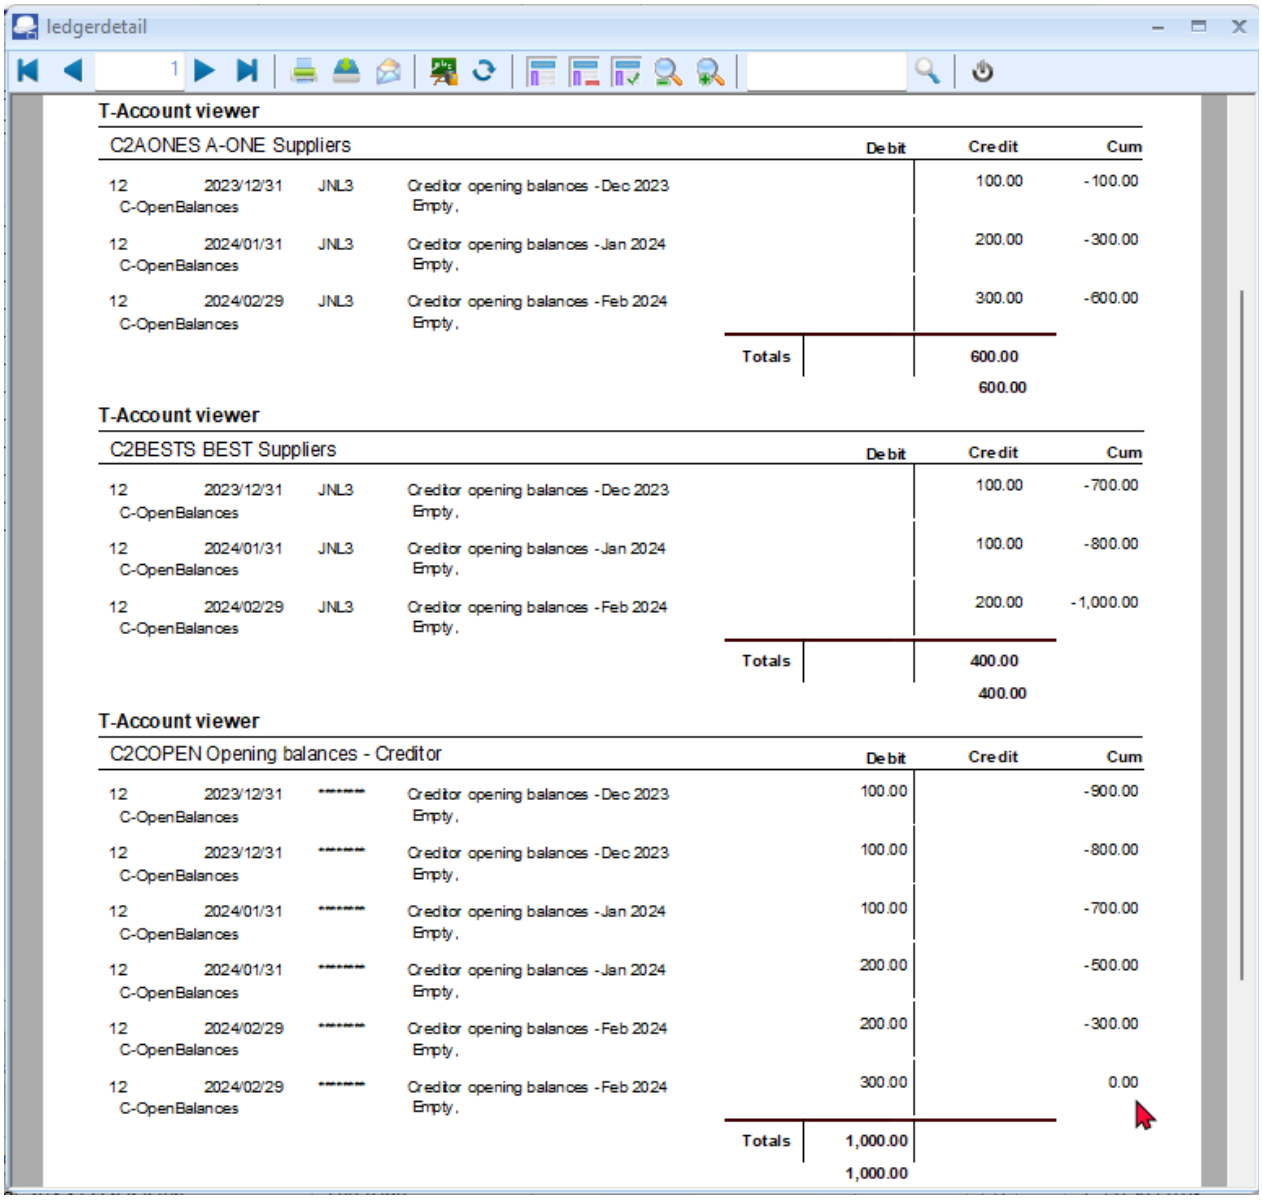
8. osFinancials5/TurboCASH5 will post the entries for each period to the ledger.

T-Account view : Creditor - Opening balances

The Opening Balances – Creditor account should have a zero balance after balances were credited to the individual Creditor accounts.

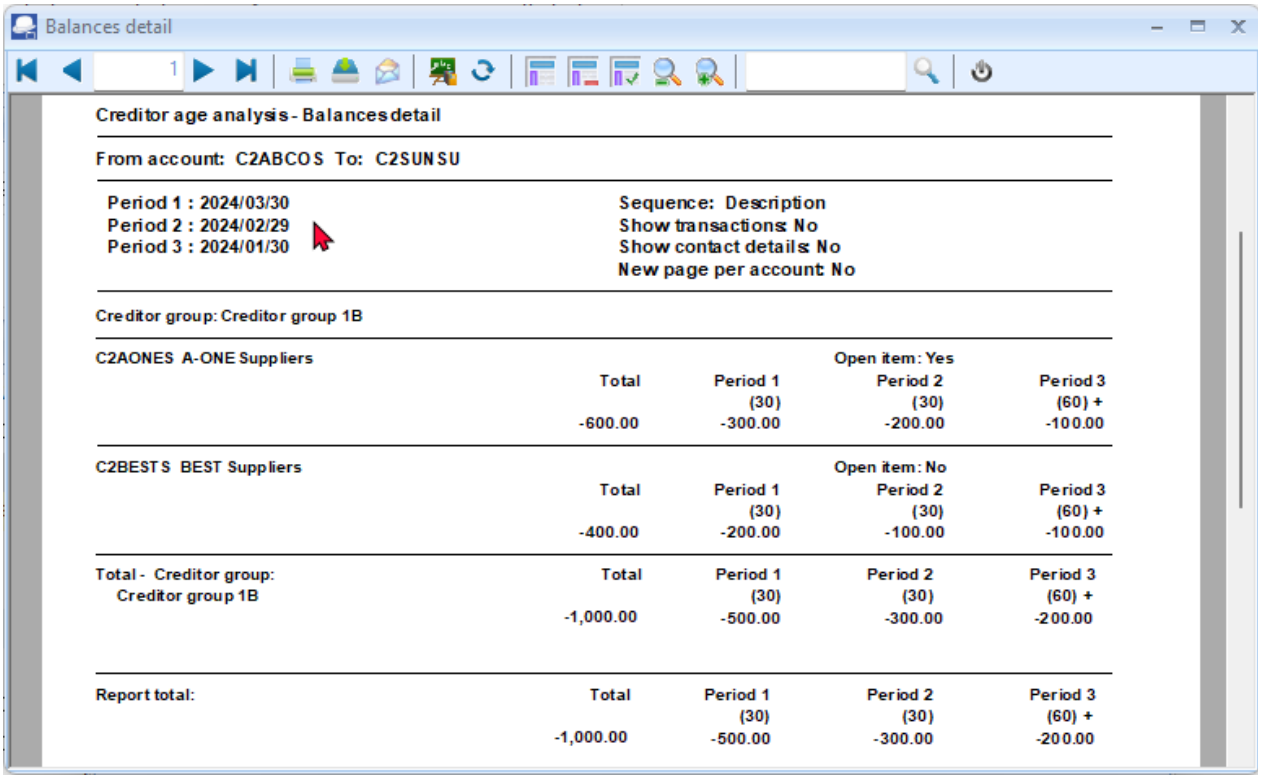


The Batch for Opening Balances (e.g. BatchID 12) should have a zero balance (debit transactions in Opening Balances – Creditor account = credit transactions individual Creditor accounts).



Age analysis view : Creditor - Opening balances

The Creditor age analysis report for 30 March 2024 (Reports → Creditors → Age analysis - Balances detail) will display the totals for each period as follows:



Handyman Hardware Store
Creditor's Age Analysis as at 29 February 2024

Creditor	Account No.	Outstanding Amount	Outstanding as at 29/02/2024	31/01/2024	31/12/2023
A-One Suppliers	2AO-NES	600.00	300.00	200.00	100.00
BEST Suppliers	2BE-STS	400.00	200.00	100.00	100.00
Total		1 000.00	500.00	300.00	200.00

Print a Trial Balance for Opening Balances

Print a Trial Balance for Opening Balances

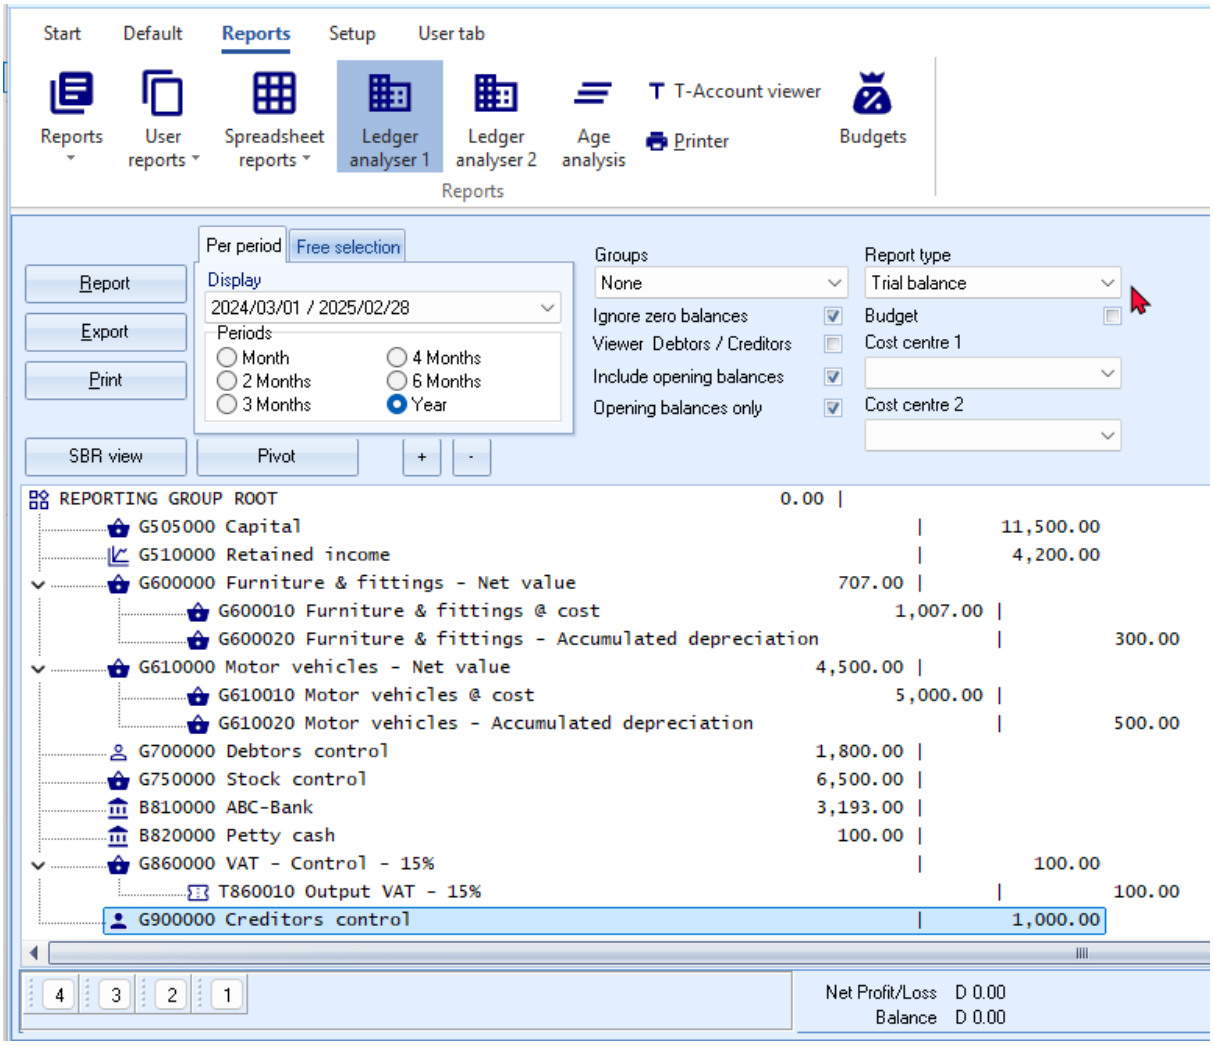
It is good practice to print a Trial balance in osFinancials5/TurboCASH5 at this point and check it with the

Trail balance of your previous accounting records from which you have entered your transactions.

> *It is recommended that this printed Trial balance be retained with your working papers and the previous trial balance for record and audit purposes.*

To print a trial balance from the Ledger analyser:

1. On the Reports ribbon, select Ledger analyser 1 or Ledger analyser 2.



> *If you need to check the individual balances of the Debtor's accounts in the Debtor's control account (G700), you need to generate Debtor's age analysis report.*
>
> *If you need to check the individual balances of the Creditor's accounts in the Creditor's control account (G900), you need to generate Creditor's age analysis report.*
>
> *If you need to check the opening balances of the individual stock items in the Stock control account, you need to generate a Stock item listing report.*

2. Select the following:

a) Periods - On the default "*Per period*" tab, select "*Year*" and Period "*2024/03/01-2025/02/28*".

b) Report type -Select "*Trial balance*".

c) Reporting group - The following options are available:

   i) None - Select this option. This will list the accounts according to the Account code (account number).

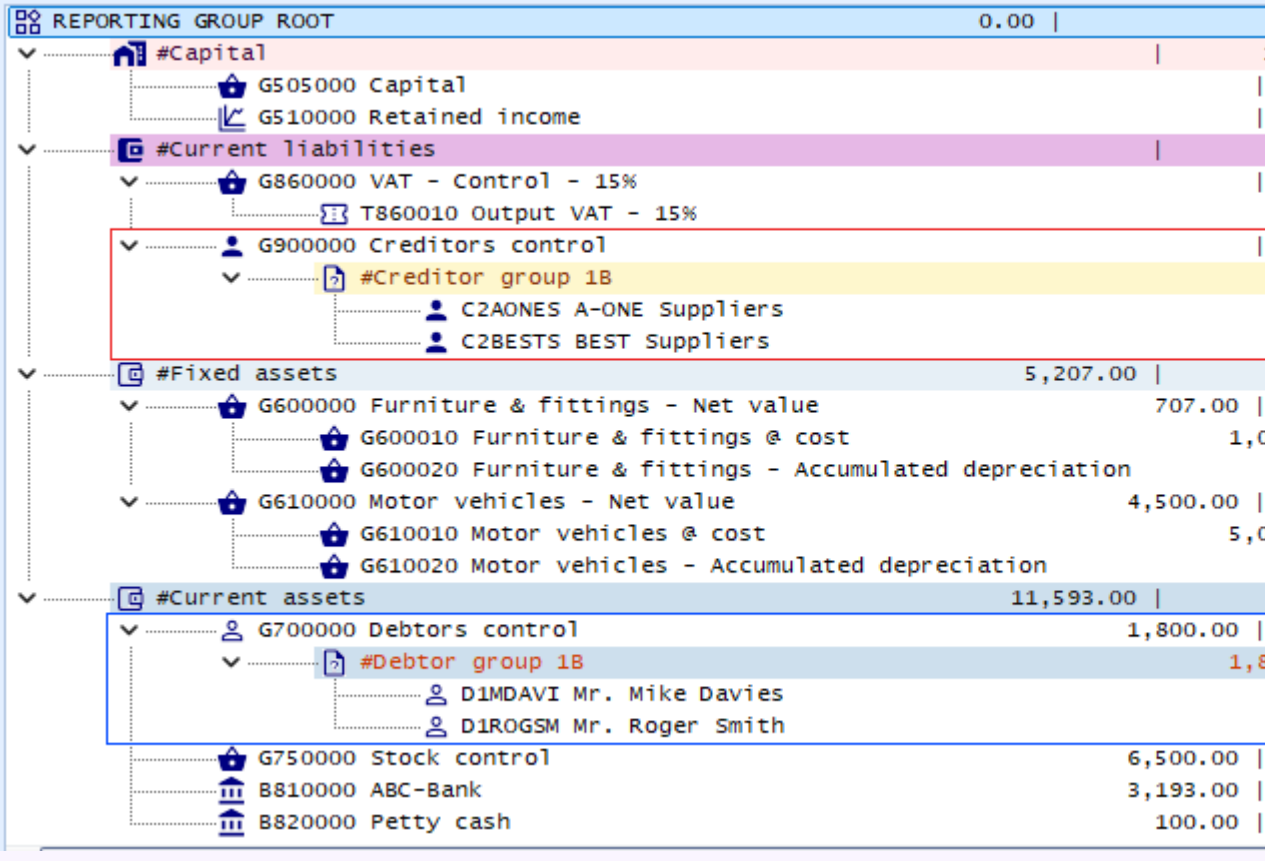
   ii) Reporting group 1 - This will list the accounts according to the Account Group 1 (Groups - Account group1) (Setup ribbon).

   iii) Reporting group 2 - This will list the accounts according to the Account Group 2 (Groups (Account group2) (Setup ribbon).

d) Ignore zero balances - Tick will list only those accounts for which opening balances was entered.

e) Viewer Debtors / Creditors - If this option is not ticked, it will list only the balances of the Debtor's control account and the Creditor's control account.

Tick this option to show the break down of the Debtor accounts in the Debtor's control account and the break down of the C account.



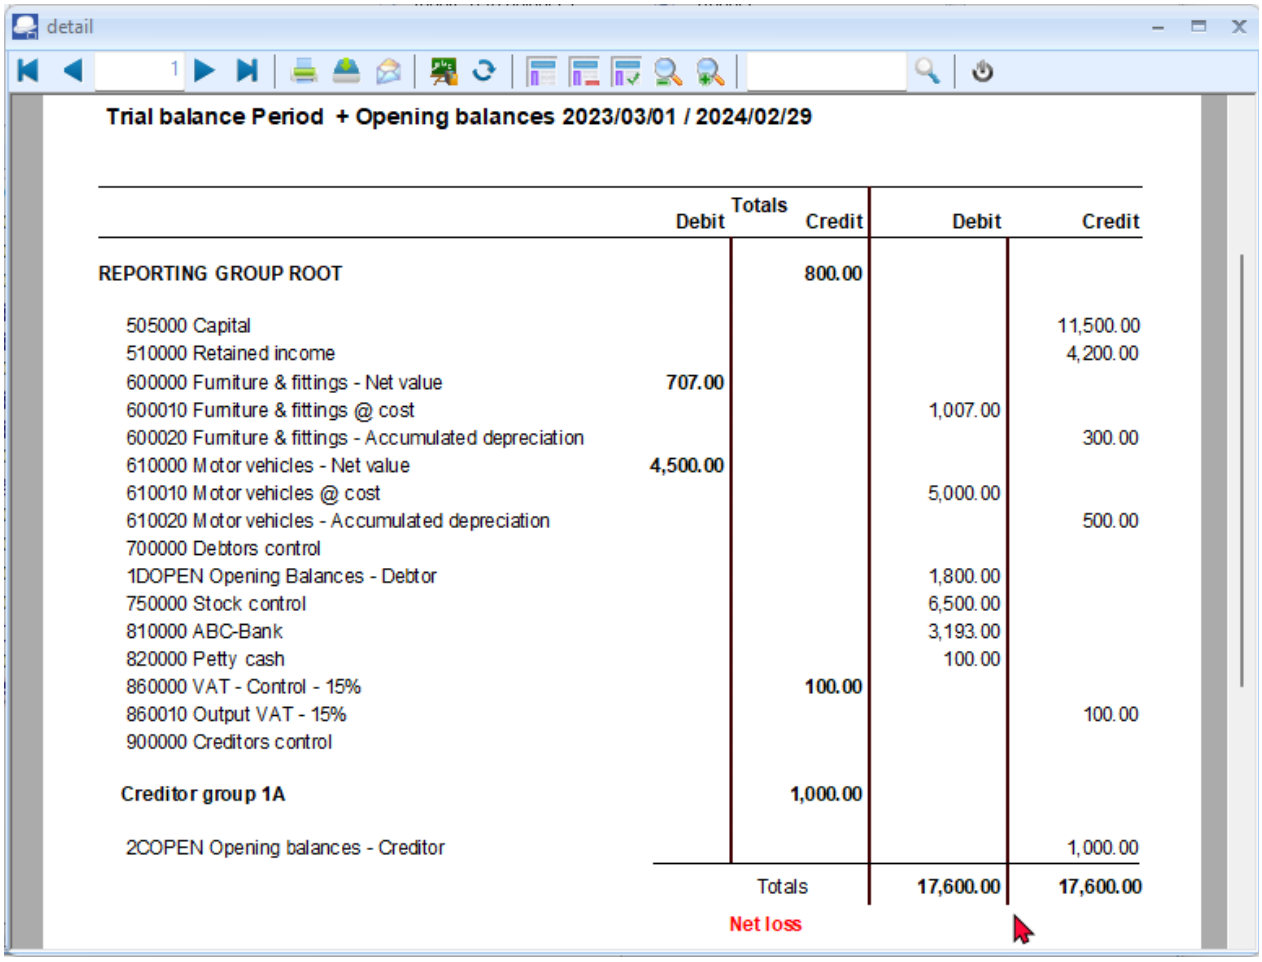
f) Include opening balances – Tick this option to include the opening balances.

g) Opening balances only – Tick this option to include only the opening balances.

> *If any transactions is posted for the selected period, you need to tick this option to list only the accounts for which opening balances have been entered.*
>
> *You may leave this option blank, if no other transactions are entered and posted for the selected period.*

3. Click on the Report button. You may change the sequences, and click on the Print button to print the trial balance.

An example of the "*Trial balance*" (account code sequence), is as follows:



detail

Trial balance Period + Opening balances 2023/03/01 / 2024/02/29

	Totals Debit	Credit	Debit	Credit
REPORTING GROUP ROOT		**800.00**		
505000 Capital				11,500.00
510000 Retained income				4,200.00
600000 Furniture & fittings - Net value	**707.00**			
600010 Furniture & fittings @ cost			1,007.00	
600020 Furniture & fittings - Accumulated depreciation				300.00
610000 Motor vehicles - Net value	**4,500.00**			
610010 Motor vehicles @ cost			5,000.00	
610020 Motor vehicles - Accumulated depreciation				500.00
700000 Debtors control				
1DOPEN Opening Balances - Debtor			1,800.00	
750000 Stock control			6,500.00	
810000 ABC-Bank			3,193.00	
820000 Petty cash			100.00	
860000 VAT - Control - 15%		**100.00**		
860010 Output VAT - 15%				100.00
900000 Creditors control				
Creditor group 1A		**1,000.00**		
2COPEN Opening balances - Creditor				1,000.00
	Totals		**17,600.00**	**17,600.00**
	Net loss			

> *The totals should balance with the previous financial year. Check that the totals are in balance and that the correct balances correspond with the balances on your source trial balance.*

Handyman Hardware Store
Closing Trial Balance as at 29 February 2024

Description	Account No.	Debit	Credit
Capital	505		11 500.00
Retained Income	510		4 200.00
Furniture & Fittings - @ Cost	600-010	1 007.00	
Furniture & Fittings - Accumulated Depreciation	600-020		300.00
Motor Vehicles - @ Cost	610-010	5 000.00	
Motor Vehicles - Accumulated Depreciation	610-020		500.00
Debtor's Control	700	1 800.00	
Creditor's Control	900		1 000.00
Stock Control	750	6 500.00	
Bank	810	3 193.00	
Petty Cash	820	100.00	
Output VAT	860-010		100.00
Total		17 600.00	17 600.00

At this point you have completed your setup, charted your accounts, captured your debtors and creditors; and entered your opening balances into osfinancials5.

Sales transactions

What is sales transactions?

Sales transactions are any type of financial transaction that involves the sale of goods and/oror services by a business to a customer or client. These transactions can be conducted in a variety of ways, including in-person, online, or over the phone, and can involve different payment methods, such as cash, credit card, or invoice.

Sales transactions typically involve the exchange of goods or services for some form of payment or consideration. They may also involve additional terms or conditions, such as warranties, returns policies, or delivery timelines. Sales transactions are an important part of a business's revenue stream and are recorded in the sales journal or ledger as part of the accounting process. By tracking sales transactions, a business can monitor its sales performance, identify trends or patterns in customer behaviour, and make informed decisions about its marketing and sales strategies.

How to correct incorrect sales transactions?

If a sales transaction is incorrect, there are several steps that can be taken to correct it, depending on the

nature and extent of the error. Here are some common methods:

1. Refund or return: If a customer received the wrong product or if the product is defective, the business may need to issue a refund or accept a return.
2. Adjustment: If the price charged was incorrect, the business may need to adjust the transaction to reflect the correct amount. This can be done by issuing a credit or debit memo, which adjusts the amount owed or paid by the customer.
3. Cancellation: If a transaction was recorded in error, it may need to be cancelled or reversed. This can be done by issuing a credit note or cancellation invoice, which cancels the original transaction and corrects the accounting records.
4. Credit or debit note: If there was an overcharge or undercharge, a credit or debit note can be issued to correct the transaction amount.

It's important to note that correcting sales transactions should be done in a timely and accurate manner to maintain good relationships with customers and ensure the accuracy of financial records. It may also be helpful to review and improve internal processes to minimize errors and prevent similar mistakes from happening in the future.

How to prevent incorrect sales transactions?

There are several steps that businesses can take to prevent incorrect sales transactions, including:

1. Implementing proper controls: Businesses should establish proper controls for all sales activities, including proper authorisation procedures, separation of duties, and regular reconciliations.
2. Providing training: Employees should receive proper training on sales procedures, policies, and best practices to ensure they understand their roles and responsibilities.
3. Ensuring accuracy of sales orders: Sales orders should be accurately prepared, including correct quantities, prices, and delivery dates.
4. Verifying deliveries: When goods are shipped or services are provided, they should be thoroughly verified to ensure they match the details of the sales order.
5. Reviewing invoices: Invoices should be carefully reviewed to ensure they match the sales order and delivery details. Any discrepancies should be resolved promptly.
6. Regularly reviewing and updating processes: Businesses should regularly review and update their sales processes to ensure they are efficient, effective, and minimize the risk of errors.

By implementing these steps, businesses can prevent incorrect sales transactions and minimize the risk of financial discrepancies, inventory issues, and other related problems. Additionally, businesses should invest

in robust accounting and inventory management systems to ensure the accuracy and timeliness of sales transactions.

What is a sales order and what is a quote?

A sales order is a document that records the details of a transaction between a buyer and a seller. It includes information such as the names and addresses of both parties, the items being purchased, the quantity of each item, the price per item, and the total cost of the order. A sales order is typically generated by the seller after the buyer has agreed to purchase the items.

A quote, on the other hand, is a document that provides an estimated price for goods or services. It is often requested by a potential buyer before a purchase is made, as it allows them to compare prices and make an informed decision. A quote may include details such as the item or service being offered, the quantity, the price per item or service, and any applicable discounts or taxes. Unlike a sales order, a quote does not represent a binding agreement and does not require the buyer to make a purchase.

Sales Journal in osFinancials5/TurboCASH5

In addition to sales transactions, you can process sales documents (such as invoices, credit notes, and quotes) in the Journal entries (Journals on the Default ribbon). The following stock item types can be used to process these sales documents:

- Financial Entry: Allows you to select a general ledger account.
- Sales (No Inventory): Suitable for service-based inventory items (e.g., consulting fees, labour). Sales documents (Invoices and Credit Notes) can be linked to the Sales Journal.

In the Setup → Documents menu for Invoices and Credit notes on the Setup ribbon, you can link these documents to the Sales journal. When you process sales documents (Invoices and Credit Notes) in Documents (Default ribbon), source documents will be generated. Once these documents are updated (posted) to the general ledger, the transactions will appear similarly to those in the Sales journal under the Journals option on the Default ribbon.

In addition to sales documents, you can create, print, edit, and convert quotes to invoices by confirming quotes. For documentation purposes, transactions processed in the Sales journal under the Journals option on the Default ribbon are similar. The Journals option is illustrative for this documentation.

The Journals option on the Default ribbon is not designed to handle your trading inventory where cost of sales applies. To take full control of your inventory items (products), you must process the transactions in Documents (Default ribbon).

Processing Invoices and Credit Notes in the Documents option on the Default ribbon, rather than the Journals option, offers the following benefits:

- Quotes: The origin of sales transactions that can later be confirmed and converted to invoices.
- Layout Files: Several document layout files are available. osFinancials allows you to print and reprint quotes as needed. Universal document layout files can print and reprint one layout for all sales documents (quotes, invoices, and credit notes) and purchasing documents (orders, purchases, and supplier returns) in your preferred language. You can also create and edit your own document layout files using the Report designer.
- References: You can enter a reference.
- Messages: In the Setup → Documents for sales documents, you can enter up to three message lines that will be used as standard messages for each sales document (e.g., Quotes, Invoices, and Credit Notes). These standard messages will be included in the document when processed and can be edited as needed.
- Notes, Comments, and Remarks: In addition to the product's item code and description, you can enter additional information that will be printed on the sales documents.
- Discount: You can specify the discount on documents. The discount on documents will automatically be adjusted.

Sales Journal Options in osFinancials5/TurboCASH5

Hand-written invoices can be used when immediate invoicing is required or when electronic invoicing is not available. These invoices can be captured in the Sales journal using the Batch entry mode in osFinancials5/TurboCASH5.

The sales journal is not used to keep track of inventory or stock. The sales journal is a record of all credit sales made by a business, including information about the customer, date of sale, invoice number, and amount of the sale. It is used to keep track of the revenue generated by the business.

Processing Sales Documents in osFinancials:

1. Batch Entry Mode:
    - This mode is used to capture invoices from debtors (customers/clients).
    - It does not support stock items (inventory items/products).
2. Document Entry Mode:

- This mode allows you to create Quotes, Invoices and Credit notes linked to the Sales journal in Setup → Documents (Setup ribbon).
- It supports stock item types (inventory items/products).
- This method creates the necessary source documents (Quotes, Invoices and Credit notes), which can be printed and reprinted as needed.
- When documents (Invoices and Credit notes are posted to the ledger, the transactions are processed in the Sales journal.
- Features of Invoices and Credit Notes:
  - Quotes: You can use quotes and convert (confirm) the quotes to invoices .
  - Comments and Remarks: Add comments and remarks to items on a quote, invoice and credit note.
  - Standard Messages: Include standard messages on the quote, invoice and credit note and add additional messages and references.
  - Credit Limit Monitoring: You will be warned if a debtor exceeds their credit limit and can track their available balance.
- Support for Additional Stock Item Types:
  - This option allows you to create quotes, invoices and credit notes using various stock item types, such as:
    - Financial entry: Use the Accounts lookup to select general ledger accounts.
    - Sales (no stock): For items that do not involve stock.
    - Invoices and credit notes created in this way are automatically linked to the Sales journal in Setup → Documents (Setup ribbon).
    - When posted to the ledger, these invoices automatically process transactions in the Sales journal.
- Available Stock Item Types for Sales Documents:
  - Default
  - Sales
  - Option item
  - Option item (No stock)

- BOM (Bill of Materials)
- BOM (Bill of Materials) - Production
- Linked item

Recommended Approach:

The Document entry mode is recommended for creating invoices and credit notes whenever possible, as it provides a more efficient and accurate way of managing sales transactions in osFinancials5/TurboCASH5.

When to use a general journal or a credit note for sales transactions?

The decision to use a general journal or a credit note for sales transactions depends on the specific circumstances of the transaction.

A general journal entry is typically used to record adjusting entries, corrections, or other non-routine transactions. For example, if a sale was recorded in the wrong account or in the wrong period, a general journal entry may be used to correct the error. General journal entries are also used for transactions that do not involve a customer, such as depreciation or inventory adjustments.

On the other hand, a credit note is typically used for routine transactions related to returns, discounts, or allowances given to a customer. If a customer returns goods or receives a discount or allowance, a credit note is issued to adjust the amount owed by the customer. Credit notes are also used to correct errors related to sales transactions, such as incorrect pricing or quantity.

In general, if the transaction involves a customer and is related to returns, discounts, or allowances, a credit note is typically used. If the transaction is a non-routine transaction or does not involve a customer, a general journal entry may be more appropriate. However, it is important to follow the specific accounting policies and procedures of the business to ensure that transactions are properly recorded and documented.

What is the recommended process and journal to correct errors in the sales journal?

If an error is made in the sales journal, the recommended process to correct it depends on the nature and severity of the error.

If the error is a simple mistake, such as a transposition error in the amount of a sale, it can typically be corrected by making an adjusting entry in the sales journal. The adjustment should be made in the same month as the original entry, and the correction should be clearly noted in the sales journal.

If the error is more complex or if it affects multiple periods, it may be necessary to create a reversing entry in the general journal to cancel out the original entry and then create a new entry to correct the error. This process ensures that the original entry is properly reversed and that the correction is properly recorded.

For example, if a sale was recorded in the wrong period or with the wrong customer, the correcting entry would be recorded in the sales journal with the correct date and customer information. Then, a reversing entry would be made in the general journal to cancel out the original entry. Finally, a new entry would be made in the sales journal to correctly record the sale.

It is important to maintain proper documentation of all corrections made in the sales journal. The sales journal should clearly indicate the reason for the correction and the date of the correction. This ensures that the corrected information is accurately reflected in the business's financial records and that the business's financial statements are accurate.

Process Sales journal in Batch Entry Mode

However, if there is a need for handwritten invoices, they can be captured in the Sales journal using the Batch entry mode.

For the purposes of the sales journal this topic, assume that you will be writing out your invoices manually for sales to your debtors (customers / clients). You simply need to capture the details such as the invoice number, date of the invoice, details of the services or goods sold, the amount and Tax (VAT/GST/Sales Tax) (if you are registered as a Tax (VAT/GST/Sales Tax) vendor) in the Sales journal.

The hand written invoices in this topic are only applicable to the selling of services and items, which does not constitute your trading stock items to debtors (customers / clients) on credit. In this case, you need to manually produce hand-written invoices, which are captured in the Sales journal.

Example : Source documents - Invoices

Capture the following hand-written invoices:

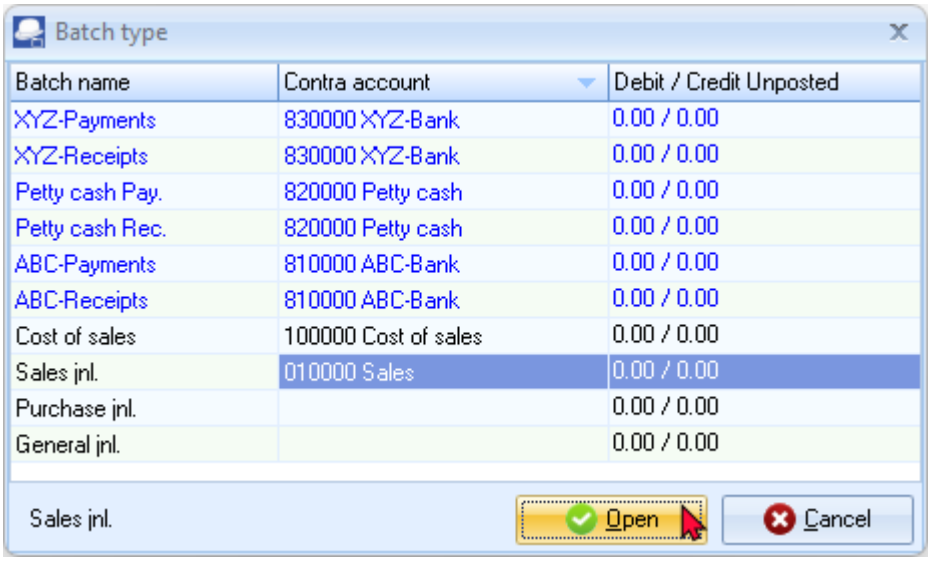
Using the Document entry, Invoices may be printed by osFinancials5/TurboCASH5, which will generate similar transactions as the Batch entry in the Sales journal. Using the documents feature to record sales transactions in the Sales journal, you do not have to write out hand written invoices as in this example.

Capture your Invoices in the Sales journal

To enter your Sales transactions in the sales journal:

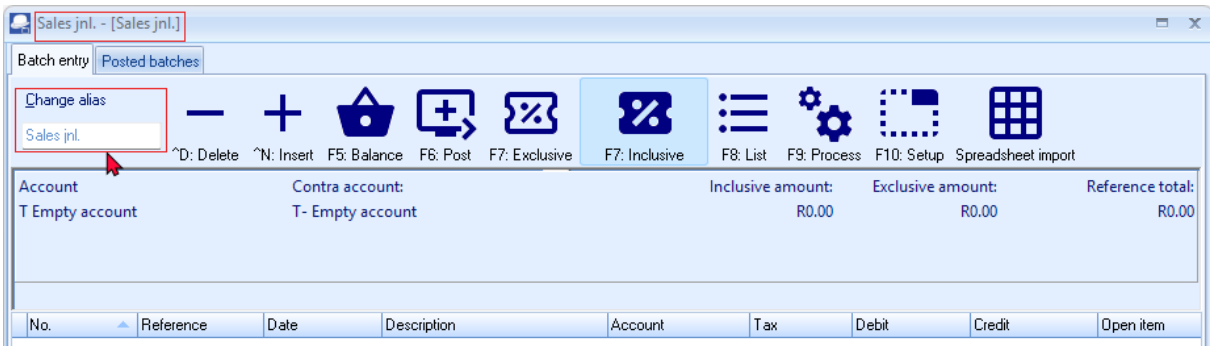
1. On the Default ribbon, select Batch entry (F2).



If no contra account is displayed on the "Batch type" selection screen, you need to set up the options for the batch. If you have not yet set the Sales journal, or if your requirements should change, click on the F10:Setup icon.

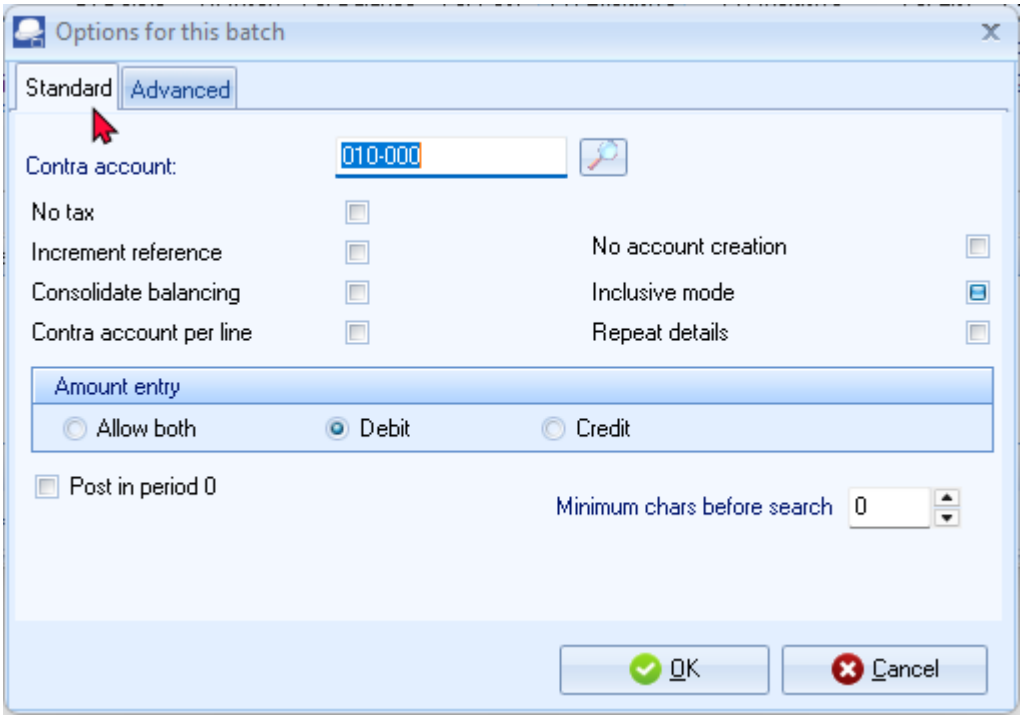
2. Select the “Sales jnl” and click on the Open button.

3. Enter the Alias (batch name) and press the Enter key.



The Alias (Batch name) will help you if you need to identify a specific batch, to print a batch type report, if you wish to export posted batches to a file, etc. The alias (batch name) will also make it easier to identify the specific transactions in reports and various screens, and exported data.

4. Click F10:Setup to set the "*Options for this batch*". On the Standard tab, check the settings, and change, as required.

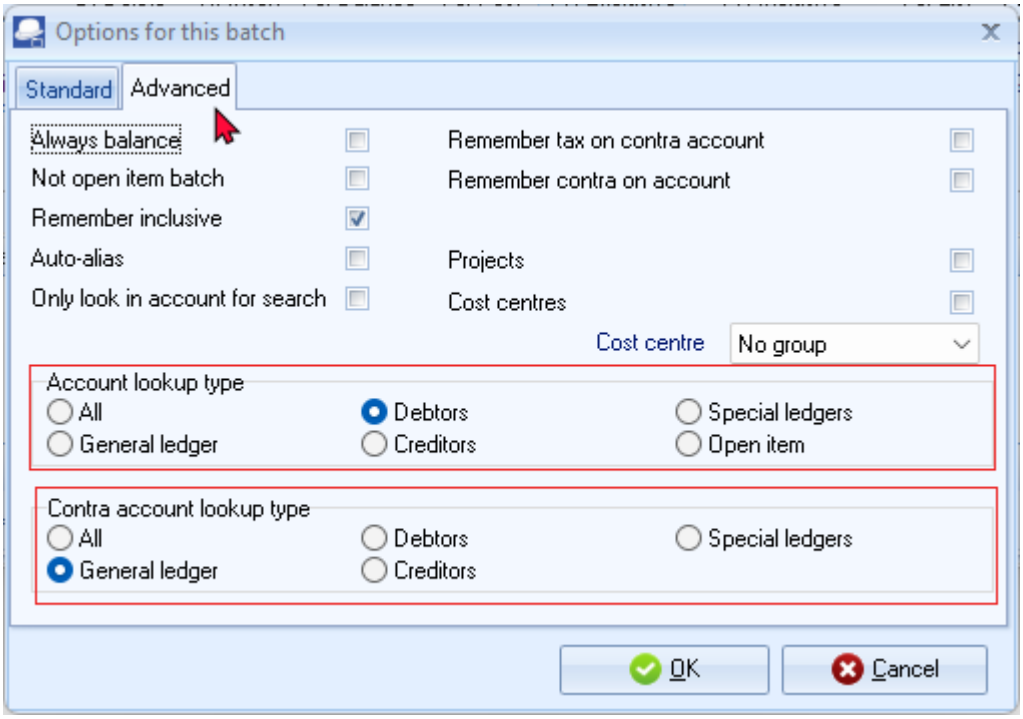


Note that for Invoices, the "Amount entry" field should be set to Debit.

If you have a few credit notes, you may enter a negative (minus sign), followed by the amount in the credit column. These amounts will be transferred to the debit column.

On the Advanced tab and check and take note of the settings.

If you have many credit notes to capture, you need to set the amount entry to debit in the setup options for the Sales journal, before entering credit notes in the Sales journal. Alternatively, you may enter the credit notes in the Sales returns journal.



Select the "Debtor" option for the Account lookup type, since you only need to select "Debtor" option when you enter transactions for sales on credit to Debtors only.

If you wish to allocate different transactions to different sales accounts, setup one contra account per line.

The Tax report (Reports → Tax) does not include the Sales journal. It only includes Sales documents (i.e. Invoices an Credit notes). Transactions on other Batch types may cause similar errors.

The reason for this, is the Consolidate balancing option on the Standard tab - F10:Setup on the Options for this batch screen. When setting up the batch, an information message will be displayed.

> "Consolidating lines and using tax will mess up your tax report! Please make sure you do not use tax or do not consolidate lines!"

Click on the OK button and click on the F10:Setup icon and deselect (remove the tick) from the

	Consolidate balancing field on the Standard tab of the "Options for this batch" screen. *Balance the batch again.*

5. Once set up; click on the OK button.

6. Capture the following hand-written invoices:

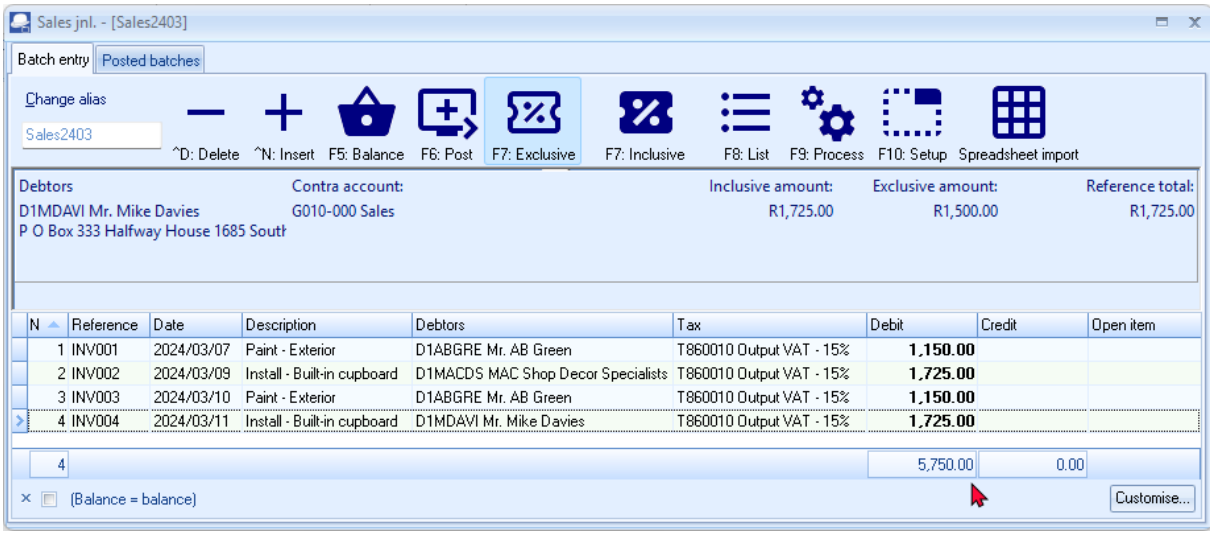
7. After capturing all your invoices, the Batch entry screen for the Sales journal should reflect as follows:



"F7: Inclusive" icon - Amounts in the bold font indicate that it is entered Inclusive of VAT/GST/Sales Tax.

If the "F7: Exclusive" icon is displayed, the amounts are entered as Exclusive if VAT/GST/Sales Tax and will be displayed in the normal or regular font.

You have now captured all your sales invoices for the month and may proceed with posting.

Finalising the Sales journal

Once you have completed entering these invoices, and you are sure they are correct, you may proceed to finalise the batch. The recommended process, consists of the following steps:

1. Balance the transactions entered in the sales journal.
2. Print a list the transactions in the sales journal (after the journal is balanced).
3. Post the transactions in the sales journal to the ledger.

Balance the sales journal

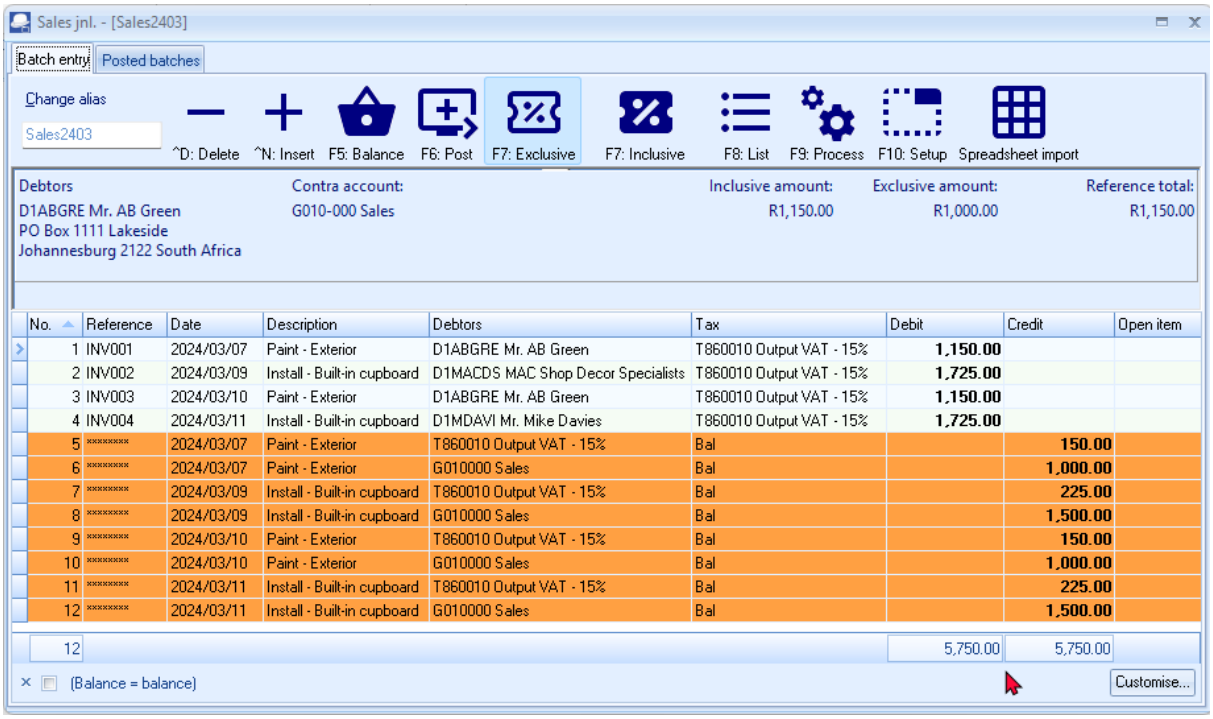
Balancing the transactions entered in a sales journal before posting to the ledger is an important step in maintaining accurate financial records for a business. Here are some reasons why:

1. Accuracy: Balancing the transactions in the sales journal helps to ensure that the total debits and total credits are equal, which is the basic principle of double-entry accounting. This helps to minimize the risk of errors or discrepancies in the financial records.
2. Efficiency: Balancing the sales journal before posting to the ledger can help to streamline the posting process by ensuring that all necessary information is complete and accurate. This can help to reduce the time and effort required to correct any errors or discrepancies that may arise later.
3. Compliance: Balancing the transactions in the sales journal is a standard accounting practice and is often required by accounting regulations and standards. This can help to ensure compliance with legal and regulatory requirements.
4. Verification: Balancing the transactions in the sales journal provides an opportunity to review and verify the accuracy of the recorded transactions. This can help to catch any errors or discrepancies that may have been made during the recording process.

Overall, balancing the transactions in a sales journal before posting to the ledger is an essential step in maintaining accurate financial records and ensuring compliance with accounting regulations and standards.

To balance the transactions entered in the sales journal:

Click on the F5:Balance icon. osFinancials5/TurboCASH5 will generate balancing entries. The balancing entries should reflect as follows:



No.	Reference	Date	Description	Debtors	Tax	Debit	Credit	Open item
1	INV001	2024/03/07	Paint - Exterior	D1ABGRE Mr. AB Green	T860010 Output VAT - 15%	1,150.00

List the transactions in the Sales journal

Printing a list of transactions in a sales journal before posting to the ledger can be an important step in ensuring accurate financial records for a business. Here are some reasons why:

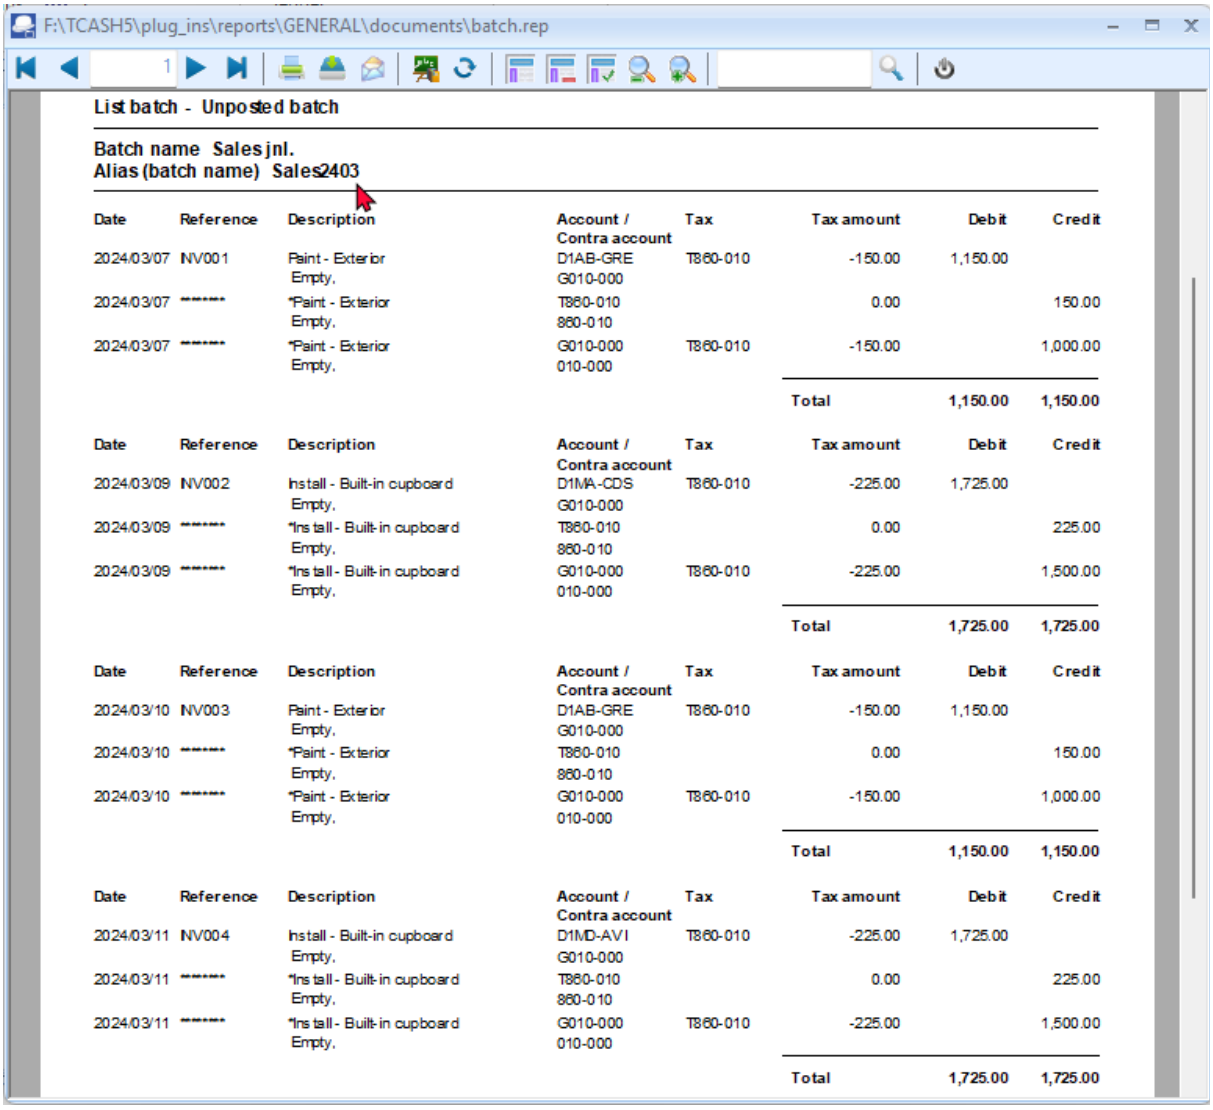
1. Verification: Printing a list of transactions in the sales journal provides an opportunity to review and verify the accuracy of the recorded transactions before they are posted to the ledger. This helps to catch any errors or discrepancies that may have been made during the recording process. If you find any errors or discrepancies, you can make the necessary corrections in the sales journal before posting the transactions to the ledger. This can help ensure that the financial records are accurate and up-to-date, which is important for making informed business decisions.
2. Organisation: Printing a list of transactions in the sales journal can help to organize and keep track of all the transactions that have been recorded. This can be useful in case there are any questions or disputes that arise regarding specific transactions.
3. Audit trail: Printing a list of transactions in the sales journal can help to create an audit trail that can be used to track the flow of transactions from the source documents (such as sales invoices) to the ledger. This can be important for both internal and external audits.
4. Reference: Printing a list of transactions in the sales journal can serve as a reference for future use. For

example, if a customer calls with a question about a transaction, the sales journal can be used to quickly locate and review the relevant information.

Overall, printing a list of transactions in a sales journal before posting to the ledger can help to ensure accurate and organized financial records, which is important for the success and stability of any business.

To print a list of the transactions in the sales journal:

Click on the F8:List icon to print a list of the transactions in the sales journal.



It is recommended that the source documents (e.g. sales invoices, etc.) be attached to this List of the transactions and that it be retained for record and audit purposes.

You may also click on the *icon (Save the report as a metafile report), and save it as a PDF - compressed file for archiving purposes.*

Post the Sales journal to the Ledger

Click on the F6:Post icon, to post (update) the batch to the ledger.

Posting transactions from a sales journal to the ledger is an important accounting process that helps to ensure accurate financial reporting for a company. When these transactions are posted to the ledger, several things happen:

1. The accounts affected by the transactions are updated: Each transaction in the sales journal represents a sale made by the company. When these transactions are posted to the ledger, the accounts affected by the sale, such as revenue or accounts receivable, are updated with the appropriate amounts.
2. The ledger provides a complete record of transactions: By posting the transactions from the sales journal to the ledger, the ledger provides a complete record of all sales made by the company during the period. This information can be used to prepare financial statements and to analyze the company's financial performance.
3. The accuracy of financial information is improved: Posting transactions to the ledger helps to ensure the accuracy of financial information. By keeping a complete and accurate record of all sales, the company can track its revenue and make informed business decisions based on the financial information.
4. Adjusting entries can be made: Sometimes, errors are made in the sales journal that need to be corrected. When transactions are posted to the ledger, adjusting entries can be made to correct these errors and ensure the accuracy of the financial information.

In summary, posting transactions from a sales journal to the ledger is a crucial step in the accounting process. It helps to ensure the accuracy of financial information, provides a complete record of transactions, and allows for the preparation of financial statements that can be used to analyze the company's financial performance.

T-Account view

All processed (posted) transactions will be accumulated in the Ledger analyser. There are various ways in which the transactions may be viewed, exported and analysed.

To access the T-Account view of the transactions, do the following:

1. On the Reports ribbon, select Ledger analyser1 or Ledger analyser 2.
2. Select "*Trial balance*" report type and click on the Report button.
3. On the "*Trial balance*", select the "*Sales*" account.

4. Double-click on the selected account; or right-click and select Show details on the context menu.

5. Click on the following to get specific views of transactions:

    - Batch number (e.g. 4 generated by osFinancials). This will list only the transactions for a specific batch (journal).

    - Account code (e.g. G100-000 Sales, T850-010 Output VAT/GST/Sales Tax, D1MD-AVI Mr. Mike Davies, D1AB-GRE Mr. AB Green, DMA-SDS MAC Shop Decor Specialists). This will list the transactions for a selected account.

    - Date – This will list the transactions for a specific date. If you double-click on a date, the *'From date'* and *'To date'* will be changed to the selected date.

After posting the transactions in the Sales journal, the transactions should display as follows in the T-Account viewer:

Purchase transactions

What is purchase transactions?

Purchase transactions are financial transactions that involve the acquisition of goods or services by a business from a supplier or vendor. These transactions can take various forms, such as placing an order, receiving goods, and making payments.

In a typical purchase transaction, a business will create a purchase order, which specifies the details of the items or services being purchased, such as quantity, price, delivery date, and any special terms or conditions. The purchase order is sent to the supplier or vendor, who will then send the goods or provide the services. The business will then record the transaction in its accounting system, typically in a purchase journal or ledger.

Purchase transactions are an essential part of a business's operations, as they allow the business to acquire the materials, supplies, and services it needs to operate and grow. By tracking purchase transactions, a business can monitor its spending, manage its cash flow, and make informed decisions about its purchasing strategies. It is also important for a business to maintain accurate records of purchase transactions for tax and accounting purposes.

How to incorrect purchase transactions?

If a purchase transaction is incorrect, there are several steps that can be taken to correct it, depending on the nature and extent of the error. Here are some common methods:

1. Return or exchange: If the wrong goods were received or the goods are defective, the business may need to return or exchange them with the supplier or vendor.
2. Adjustment: If the price charged was incorrect, the business may need to adjust the transaction to reflect the correct amount. This can be done by issuing a credit or debit memo, which adjusts the amount owed or paid by the business.

3. Cancellation: If a transaction was recorded in error or if the goods or services are no longer required, it may need to be cancelled or reversed. This can be done by issuing a credit note or cancellation invoice, which cancels the original transaction and corrects the accounting records.
4. Credit or debit note: If there was an overcharge or undercharge, a credit or debit note can be issued to correct the transaction amount.

It is important to maintain accurate records of purchase transactions and correct any errors promptly to avoid overpayment, incorrect inventory balances, and other financial discrepancies. By establishing and maintaining effective internal controls and reviewing and improving processes regularly, a business can minimize errors and prevent similar mistakes from happening in the future.

How to prevent incorrect purchase transactions?

There are several steps that businesses can take to prevent incorrect purchase transactions, including:

1. Implementing proper controls: Businesses should establish proper controls for all purchasing activities, including proper authorization procedures, separation of duties, and regular reconciliations.
2. Conducting thorough vendor research: Before engaging with a vendor or supplier, businesses should conduct thorough research to ensure they are reputable and have a good track record.
3. Ensuring accuracy of purchase orders: Purchase orders should be accurately prepared, including correct quantities, prices, and delivery dates.
4. Verifying deliveries: When goods are received, they should be thoroughly inspected to ensure they match the details of the purchase order.
5. Reviewing invoices: Invoices should be carefully reviewed to ensure they match the purchase order and delivery details. Any discrepancies should be resolved promptly.
6. Regularly reviewing and updating processes: Businesses should regularly review and update their purchasing processes to ensure they are efficient, effective, and minimize the risk of errors.

By implementing these steps, businesses can prevent incorrect purchase transactions and minimize the risk of financial discrepancies, inventory issues, and other related problems.

When to use a general journal or a credit note for purchase transactions?

The decision to use a general journal or a supplier return for purchase transactions depends on the specific circumstances of the transaction.

A general journal entry is typically used to record adjusting entries, corrections, or other non-routine

transactions. For example, if a purchase was recorded in the wrong account or in the wrong period, a general journal entry may be used to correct the error. General journal entries are also used for transactions that do not involve a debtor, such as depreciation or inventory adjustments.

On the other hand, a supplier return is typically used for routine transactions related to returns, discounts, or allowances given to a creditor. If a creditor returns goods or receives a discount or allowance, a supplier return is issued to adjust the amount owed to the creditor. Supplier returns are also used to correct errors related to purchase transactions, such as incorrect pricing or quantity.

In general, if the transaction involves a creditor and is related to returns, discounts, or allowances, a supplier return is typically used. If the transaction is a non-routine transaction or does not involve a creditor, a general journal entry may be more appropriate. However, it is important to follow the specific accounting policies and procedures of the business to ensure that transactions are properly recorded and documented.

What is the recommended process and journal to correct errors in the purchase journal?

If an error is made in the purchase journal, the recommended process to correct it depends on the nature and severity of the error.

If the error is a simple mistake, such as a transposition error in the amount of a purchase, it can typically be corrected by making an adjusting entry in the purchase journal. The adjustment should be made in the same month as the original entry, and the correction should be clearly noted in the purchase journal.

If the error is more complex or if it affects multiple periods, it may be necessary to create a reversing entry in the general journal to cancel out the original entry and then create a new entry to correct the error. This process ensures that the original entry is properly reversed and that the correction is properly recorded.

For example, if a purchase was recorded in the wrong period or with the wrong creditor, the correcting entry would be recorded in the purchase journal with the correct date and creditor information. Then, a reversing entry would be made in the general journal to cancel out the original entry. Finally, a new entry would be made in the purchase journal to correctly record the sale.

It is important to maintain proper documentation of all corrections made in the purchase journal. The purchase journal should clearly indicate the reason for the correction and the date of the correction. This ensures that the corrected information is accurately reflected in the business's financial records and that the business's financial statements are accurate.

Purchase Journal Options in osFinancials5/TurboCASH5

Hand-written invoices received from creditors (suppliers/vendors) can be used when immediate purchase is required or when electronic purchase invoices is not available. These purchase invoices can be captured in the Purchase journal using the Batch entry mode in osFinancials5/TurboCASH5.

The purchase journal is not used to keep track of inventory or stock. The purchase journal is a record of all credit purchases made by a business, including information about the creditor, date of purchase, purchase invoice number, and amount of the purchase. It is used to keep track of the expenses / payments incurred by the business.

Processing Purchase Documents in osFinancials:

1. Batch Entry Mode:
    - This mode is used to capture invoices received from creditors (suppliers/vendors).
    - It does not support stock items (inventory items/products).
2. Document Entry Mode:
    - This mode allows you to create Purchases and Supplier returns linked to the Purchase journal in Setup → Documents (Setup ribbon).
    - It supports stock item types (inventory items/products).
    - This method creates the necessary source documents (Purchases and Supplier returns), which can be printed and reprinted as needed.
    - When documents (Purchases and Supplier returns) are posted to the ledger, the transactions are processed in the Purchase journal.
    - Features of Purchases and Supplier returns:
        - Orders: You can use orders and convert (confirm) the orders to purchases.
        - Comments and Remarks: Add comments and remarks to items on a Order, Purchase and Supplier return document.
        - Standard Messages: Include standard messages on the Order, Purchase and Supplier return document and add additional messages and references.
        - Credit Limit Monitoring: You will be warned if a creditor's credit limit is exceeded it can track their available balance.
    - Support for Additional Stock Item Types:

- This option allows you to create orders, purchases and supplier returns using various stock item types, such as:
  - Financial entry: Use the Accounts lookup to select general ledger accounts.
  - Purchases (no stock): For items that do not involve stock.
  - Purchases and Supplier returns created in this way are automatically linked to the Purchase journal in Setup → Documents (Setup ribbon).
  - When posted to the ledger, these purchases and supplier returns automatically process transactions in the Purchase journal.

- Available Stock Item Types for Purchase Documents:
  - Default
  - Purchases
  - Purchases (no stock)
  - Financial entry
  - Option item
  - Option item (No stock)
  - BOM (Bill of Materials)
  - BOM (Bill of Materials) - Production
  - Linked item

Recommended Approach:

The Document entry mode is recommended for creating purchases whenever possible, as it provides a more efficient and accurate way of managing purchase transactions in osFinancials5.

Purchase journal

Process Purchase journal in Batch Entry Mode

If there is a need for handwritten invoices, they can be captured in the Sales journal using the Batch entry mode.

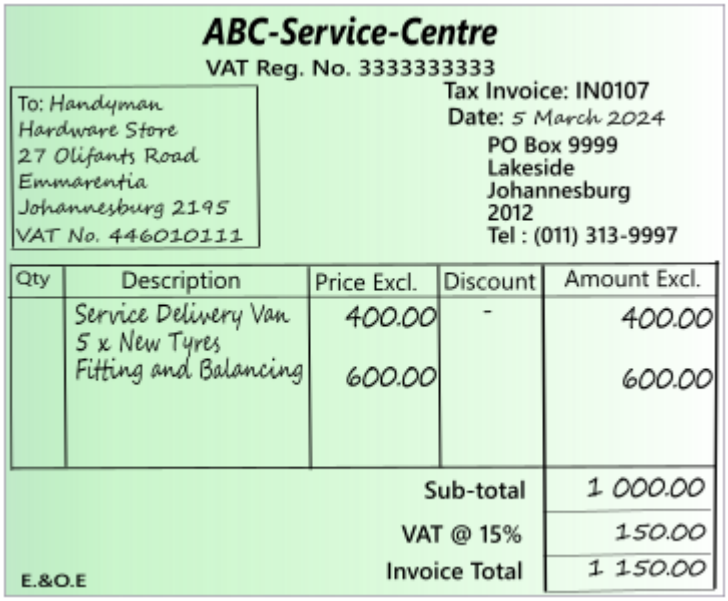
To record your credit purchases from your creditors (suppliers / vendors), you would need to use the Purchase journal. In this journal, you would enter details such as the supplier invoice number, date of the supplier invoice, creditor information, Input VAT/GST/Sales Tax (if applicable), and the amount (including or excluding VAT/GST/Sales Tax).

The purchase journal is not used to keep track of inventory or stock. The purchase journal is a record of all credit purchases made by a business, including information about the supplier, date of purchase, supplier invoice number, and amount of the purchase. It is used to keep track of the purchases made by the business.

Overall, it is important to accurately record all supplier invoices received for credit purchases. You can choose to use either the Batch entry mode or the Document entry option to do this, depending on your preference and specific needs.

Example : Source documents - Supplier invoices

Capture the following supplier invoices in the Purchase journal:



ABC-Service-Centre

			VAT @ 15%	225.00
			Invoice Total	1 725.00

E.&O.E

Using the Document entry, Purchases may be printed by osFinancials5/TurboCASH5, which will generate similar transactions as the Batch entry in the Purchase journal.

Capture your Supplier invoices in the Purchases journal

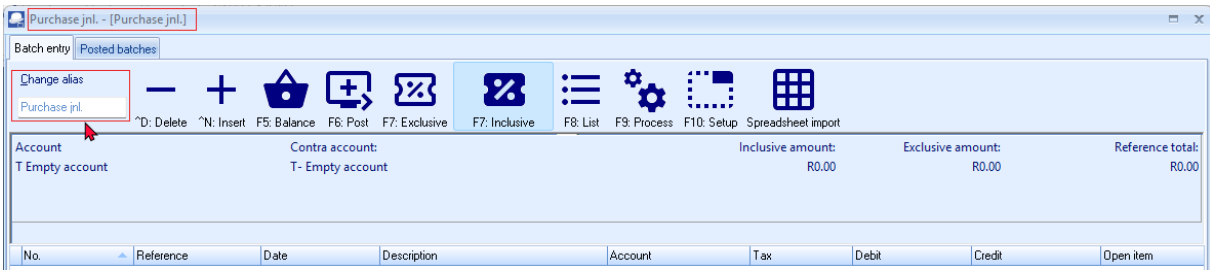
To enter your purchase transactions in the purchase journal:

1. On the Default ribbon, select Batch entry (F2).

If no contra account is displayed on the "Batch type" selection screen, you need to set up the options for the batch. If you have not yet set the Purchase journal, or if your requirements should change, click on the F10:Setup icon.

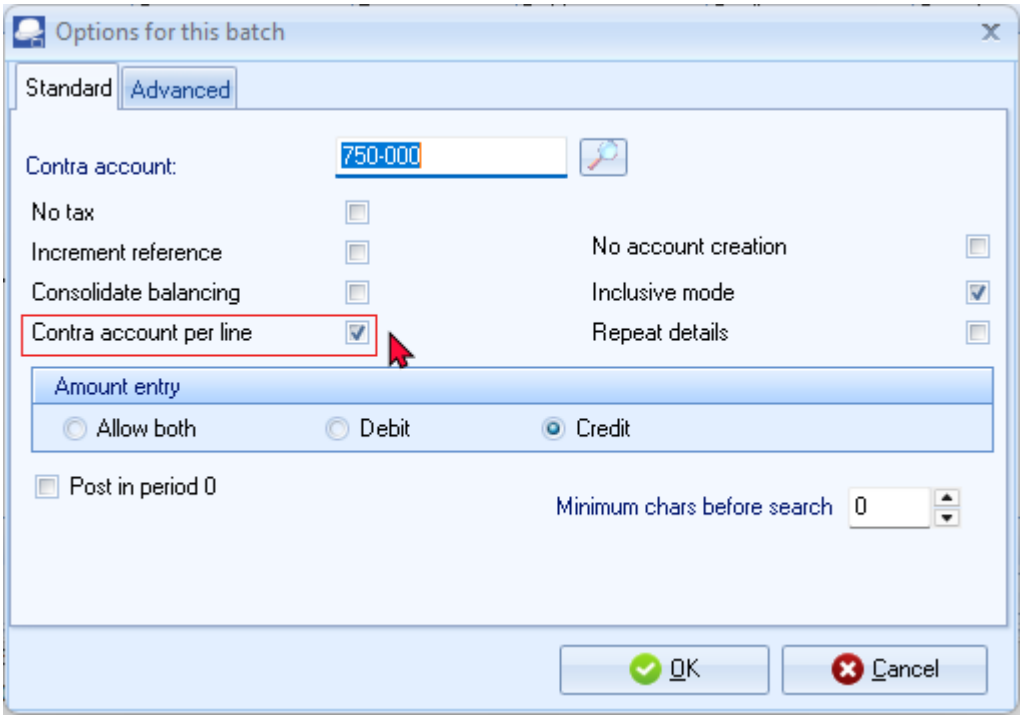
2. Select the “Purchase jnl” and click on the Open button.

3. Enter the Alias (batch name) and press the Enter key.



> *The Alias (Batch name) will help you if you need to identify a specific batch, to print a batch type report, if you wish to export posted batches to a file, etc. The alias (batch name) will also make it easier to identify the specific transactions in reports and various screens, and exported data.*

4. Click F10:Setup to set the "*Options for this batch*". On the Standard tab, check the settings, and change, as required.



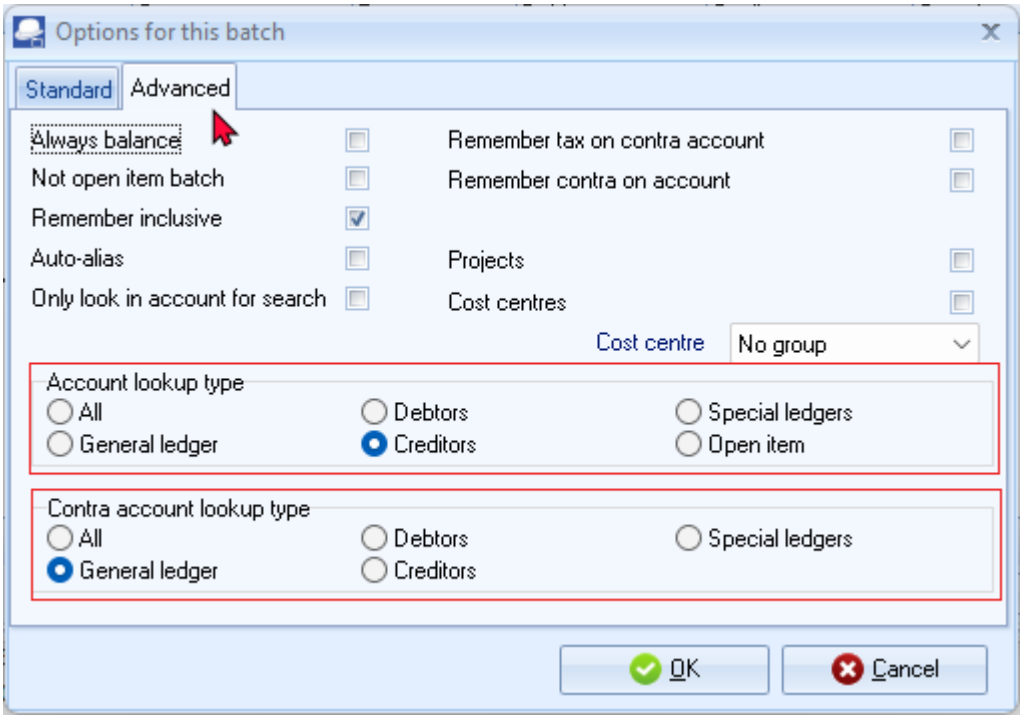
> *Contra account per line -Select (tick) this option, each time you select a creditor account, you to also need to select a ledger account for each purchase. In this way you can select a different contra account for each transaction. When you balance the batch, osFinancials5/TurboCASH5 will generate all the transactions to each of these contra accounts.*

> *Note that for Purchase or Supplier Invoices, the "Amount entry" field should be set to Credit.*

If you have a few supplier credit notes, you may enter a negative (minus sign), followed by the amount in the credit column. These amounts will be transferred to the debit column.

If you have many supplier credit notes to capture, you need to set the amount entry to debit in the setup options for the Purchase journal, before entering supplier credit notes in the Purchase journal. Alternatively, you may enter the supplier credit notes in the Purchase returns journal.

On the Advanced tab and check and take note of the settings.

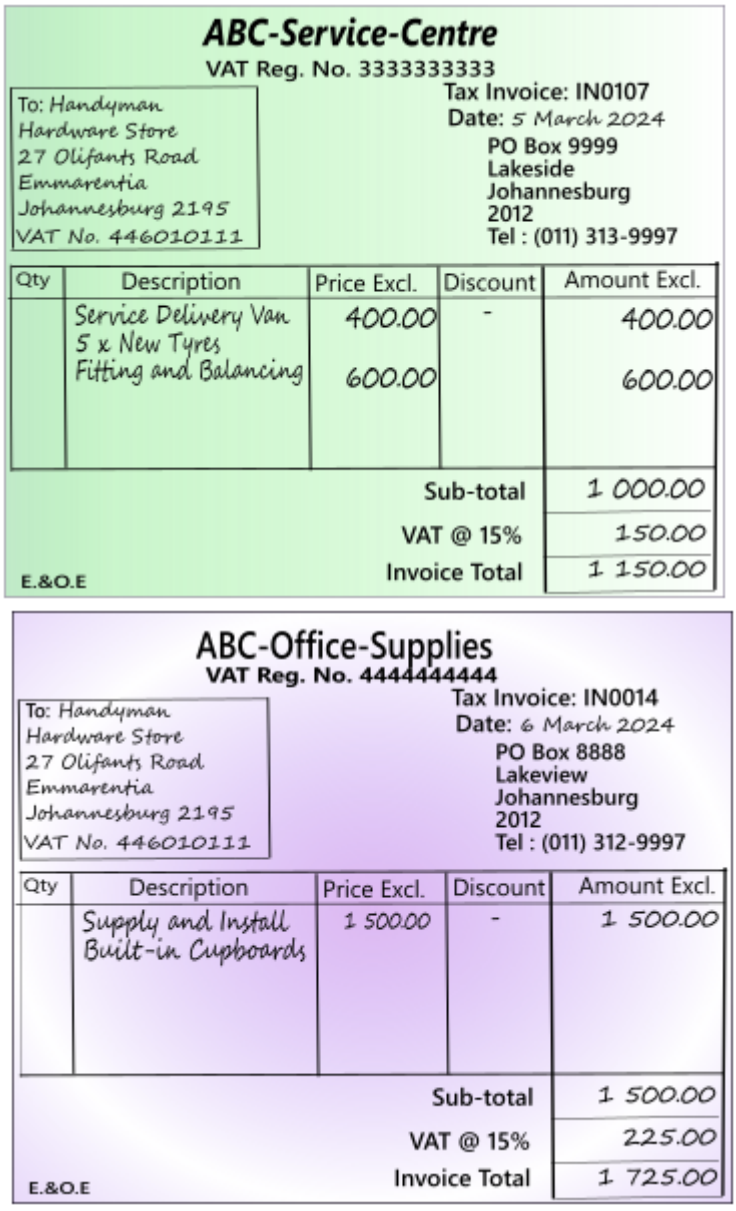


Select the “Creditor” option for the "Account lookup type", since you only need to select “Creditor” accounts when you enter transactions for purchases on credit to creditors (suppliers / vendors) only.

Set the “Contra account lookup type” to “General ledger”, since you need to select the ledger account for each purchase. When you balance the batch, osFinancials5/TurboCASH5 will generate balancing transactions for each of these contra accounts to the general ledger accounts

5. Once set up; click on the OK button.

6. Capture the following supplier invoices in the Purchase journal:



ABC-Service-Centre

7. Enter and/or select the following:

   a) Reference - Enter the purchase or other applicable number you allocate to the supplier invoice.

   b) Date - Enter or select the date of the transaction.

   c) Description - Enter a description for the transaction.

   d) Account - Select the Creditor account.

   e) Contra account - Select the account to be debited with the credit purchase (expense or asset).

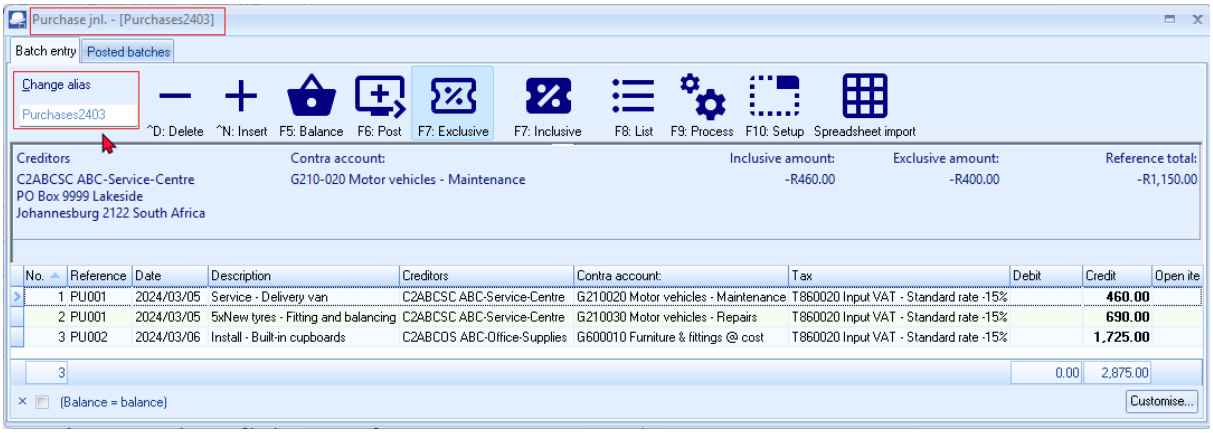
   f) Tax - Select the applicable Input Tax account for the expense or purchase.

> *This is only applicable if Input VAT/GST/Sales Tax is allowed on a transaction, and if you are registered as a VAT/GST/Sales Tax Vendor. If no VAT/GST/Sales Tax is applicable to the transaction, select the "Empty" option as the "No Tax" code.*

> *You may also select to hide the Tax column, and lookup facility in the Setup Options for the Purchase journal, if no VAT/GST/Sales Tax is applicable to all transactions in this batch; or if you are not registered as a VAT/GST/Sales Tax Vendor.*

g) Amount - Enter the amount of the transaction (Inclusive or Exclusive of VAT/GST/Sales Tax) in the Credit amount column.

8. After entering the supplier invoices in the Purchase journal, the transactions will be displayed as follows:



Finalising the Purchase journal

Once you have completed entering these invoices, and you are sure they are correct, you may proceed to finalise the batch. The recommended process, consists of the following steps:

1. Balance the transactions entered in the purchase journal.
2. Print a list the transactions in the purchase journal (after the journal is balanced).
3. Post the transactions in the purchase journal to the ledger.

Balance the Purchase journal

Balancing the transactions entered in the purchase journal before posting to the ledger is an important step in maintaining accurate financial records for a business. Here are some reasons why:

1. Accuracy: Balancing the transactions in the sales journal helps to ensure that the total debits and total credits are equal, which is the basic principle of double-entry accounting. This helps to minimize the

risk of errors or discrepancies in the financial records.

2. Efficiency: Balancing the purchase journal before posting to the ledger can help to streamline the posting process by ensuring that all necessary information is complete and accurate. This can help to reduce the time and effort required to correct any errors or discrepancies that may arise later.

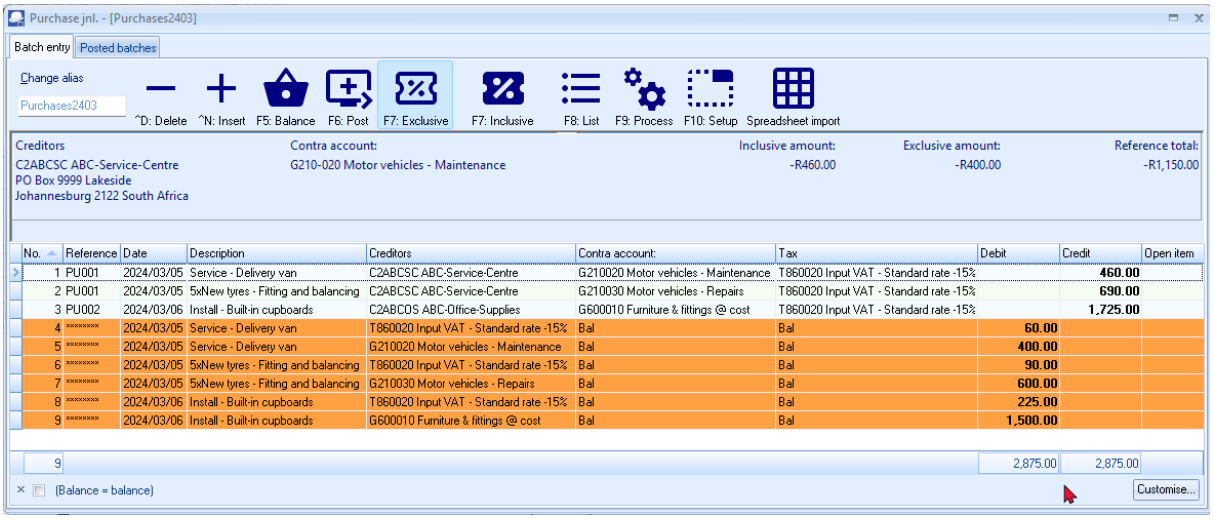
3. Compliance: Balancing the transactions in the purchase journal is a standard accounting practice and is often required by accounting regulations and standards. This can help to ensure compliance with legal and regulatory requirements.

4. Verification: Balancing the transactions in the purchase journal provides an opportunity to review and verify the accuracy of the recorded transactions. This can help to catch any errors or discrepancies that may have been made during the recording process.

Overall, balancing the transactions in a purchase journal before posting to the ledger is an essential step in maintaining accurate financial records and ensuring compliance with accounting regulations and standards.

To balance the transactions entered in the purchase journal:

Click on the F5:Balance icon. osFinancials5/TurboCASH5 will generate balancing entries. The balancing entries should reflect as follows:



List the transactions in the Purchase journal

Printing a list of transactions in a purchase journal before posting to the ledger can be an important step in ensuring accurate financial records for a business. Here are some reasons why:

1. Verification: Printing a list of transactions in the purchase journal provides an opportunity to review

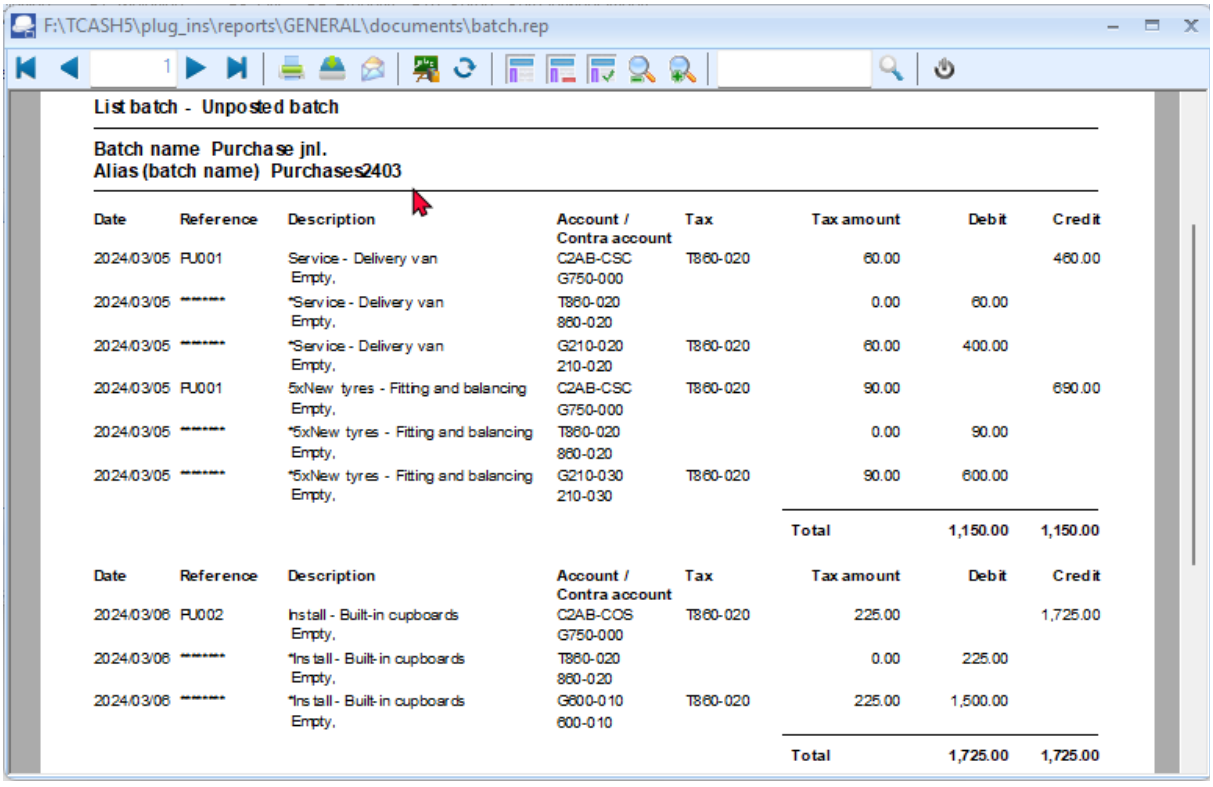
and verify the accuracy of the recorded transactions before they are posted to the ledger. This helps to catch any errors or discrepancies that may have been made during the recording process. If you find any errors or discrepancies, you can make the necessary corrections in the sales journal before posting the transactions to the ledger. This can help ensure that the financial records are accurate and up-to-date, which is important for making informed business decisions.

2. Organisation: Printing a list of transactions in the purchase journal can help to organize and keep track of all the transactions that have been recorded. This can be useful in case there are any questions or disputes that arise regarding specific transactions.
3. Audit trail: Printing a list of transactions in the purchase journal can help to create an audit trail that can be used to track the flow of transactions from the source documents (such as sales invoices) to the ledger. This can be important for both internal and external audits.
4. Reference: Printing a list of transactions in the purchase journal can serve as a reference for future use. For example, if a customer calls with a question about a transaction, the purchase journal can be used to quickly locate and review the relevant information.

Overall, printing a list of transactions in a purchase journal before posting to the ledger can help to ensure accurate and organized financial records, which is important for the success and stability of any business.

To print a list of the transactions in the purchase journal:

Click on the F8:List icon to print a list of the transactions in the purchase journal.



It is a good idea to list the batch, and check the entries on the batch thoroughly. If there are any errors, you may edit the batch, before posting the batch.

Post the Purchase journal to the Ledger

Click on the F6:Post icon, to post (update) the purchase journal to the ledger.

Posting transactions from a sales journal to the ledger is an important accounting process that helps to ensure accurate financial reporting for a company. When these transactions are posted to the ledger, several things happen:

1. The accounts affected by the transactions are updated: Each transaction in the purchase journal represents a sale made by the company. When these transactions are posted to the ledger, the accounts affected by the sale, such as revenue or accounts receivable, are updated with the appropriate amounts.
2. The ledger provides a complete record of transactions: By posting the transactions from the purchase journal to the ledger, the ledger provides a complete record of all sales made by the company during the period. This information can be used to prepare financial statements and to analyze the company's financial performance.
3. The accuracy of financial information is improved: Posting transactions to the ledger helps to ensure the accuracy of financial information. By keeping a complete and accurate record of all sales, the company can track its revenue and make informed business decisions based on the financial information.
4. Adjusting entries can be made: Sometimes, errors are made in the sales journal that need to be corrected. When transactions are posted to the ledger, adjusting entries can be made to correct these errors and ensure the accuracy of the financial information.

In summary, posting transactions from a sales journal to the ledger is a crucial step in the accounting process. It helps to ensure the accuracy of financial information, provides a complete record of transactions, and allows for the preparation of financial statements that can be used to analyze the company's financial performance.

Click on the F6:Post icon, to post (update) the batch to the ledger.

It is not necessary to post (update) the transactions at the end of each day. You may add and/or post the transactions on a daily, or weekly basis, or at the end of a month. When you have entered a few transactions, you may close or exit the batch. The data will not be lost.

T-Account view

All processed (posted) transactions will be accumulated in the Ledger analyser. There are various ways in which the transactions may be viewed, exported and analysed.

All processed (posted) transactions will be accumulated in the Ledger analyser. There are various ways in which the transactions may be viewed, printed, exported and analysed.

To access the T-Account view of the transactions:

1. On the Reports ribbon, select Ledger analyser1 or Ledger analyser 2.
2. Select "*Trial balance*" report type and click on the Report button.
3. On the "*Trial balance*", select the "*Creditors control*" account.
4. Click on the following to get specific views of transactions:
    - Batch number (e.g. 3 automatically generated). This will list only the transactions for a specific batch (journal).
    - Account code (e.g. G210-020 Maintenance, G210-030 Repairs, G610-010 Furniture & fittings, T850-020 Input VAT/GST/Sales Tax-Standard rate, C2ABCOS ABC-Office Supplies, C2ABCSC ABC-Service Centre). This will list the transactions for a specific account.
    - Date – This will list the transactions for a specific date. If you double-click on a date, the '*From date'* and '*To date'* will be changed to the selected date.

After posting the transactions in the Purchase journal, the transactions should display as follows in the T-Account viewer:

Cash transactions

Options to process cash / bank transactions

osFinancials5/TurboCASH5 provides two options for processing transactions for Bank accounts:

1. Manual Transaction Capture:
    - Navigate to Setup → System parameters (Setup ribbon).
    - Ensure the "*Default bank reconciliation*" option is selected.
    - This setting links each bank account to its own separate payment and receipt journal.
    - Enter and process payment transactions separately in the payment journal, and similarly for receipt transactions in the receipts journal.
    - Perform bank reconciliation to reconcile processed transactions with bank statements.
2. Bank Import Plugin:

- Ensure the "*Default bank reconciliation*" option is not selected in Setup → System parameters (Setup ribbon).
- This setting links each bank account to a combined payment and receipt journal in a single batch entry screen.
- Utilise the Bank Import batch entry screen to manage imported banking transactions from valid downloaded bank statements.

Payments and Receipt Journals

Payments and Receipt batches (journals) in accounting are indeed linked to bank accounts and petty cash accounts, and they play a crucial role in recording the physical inflow and outflow of cash in a business. Here's a more detailed explanation:

1. Payments Journal (Cash Disbursements Journal): This journal is used to record all outgoing payments or disbursements made by the business. It includes payments made by check, electronic transfer, or in cash. These payments could be for various purposes, such as paying suppliers, employees, utilities, rent, or any other expenses incurred by the business. The Payments journal helps in tracking cash outflows and ensures that all expenditures are properly documented.
2. Receipts Journal (Cash Receipts Journal): The Receipts Journal, on the other hand, is used to record all incoming cash receipts. This includes payments received from customers, clients, or any other sources of income. Like the Payments journal, it helps in tracking cash inflows and ensures that all revenue is accurately recorded.

Both of these journals are linked to bank accounts and petty cash accounts in the following ways:

- Bank Accounts: Transactions recorded in the Payments and Receipts Journals are closely related to the business's bank accounts. When a payment is made (recorded in the Payments Journal), it usually results in a decrease in the bank balance, and when a receipt is recorded (in the Receipts Journal), it leads to an increase in the bank balance. These journals serve as a bridge between the physical cash transactions and the entries made in the bank statement, ensuring that the bank accounts are accurately reconciled.
- Petty Cash Accounts: Petty cash is a small amount of cash that a business keeps on hand for minor expenses. Transactions involving petty cash, such as replenishing the petty cash fund or recording expenses paid using petty cash, are also recorded in these journals. This helps in maintaining a clear record of petty cash transactions and ensures that the petty cash account is balanced.

While the Payments and Receipts Journals focus on cash transactions, other journals like the Sales Journal and Purchase journal primarily deal with credit transactions. Sales Journal records credit sales to customers, while the Purchase journal records credit purchases from suppliers. These journals help in

tracking accounts receivable (amounts owed to the business by customers) and accounts payable (amounts owed by the business to suppliers) but do not directly involve physical cash flow in and out of the business.

In summary, Payments and Receipts Journals are essential tools for accurately tracking and managing the physical flow of cash in a business, while other journals like the Sales and Purchase journals are more concerned with credit transactions and accounts receivable/payable. Properly maintaining these journals is crucial for effective cash flow management and financial record-keeping.

This procedure describes the process to record transactions in the Receipts journal and the Payments journal, if the Bank import plugin is not activated. If the Bank import plugin, is activated, please read the following:

- *Bank import plugin -*
- *Bank import plugin - Petty cash transactions (Manual entry) -*

Bank import plugin - Bank Reconciliations Plugin Manual - BankImport Plugin Manual - Shop -The Bank import plugin is included in the osFinancials5/TurboCASH5 subscription.

The Bankimport plugin will import bank transactions and save you hours of data entry. You can simply link transactions to your debtors, creditors or other accounts. And with a simple mouse click link the payments to the right invoices. Needs to be activated on the Setup ribbon, select Setup → System parameters.

The bank accounts and the petty cash accounts, are the only source where money can physically flow into and out of the business. The bank account should be strictly monitored to ensure that all the monies that are received are deposited, and that all the payments and/or cheques have been honoured.

Options to Process Cashbook Transactions

Bank transactions are recorded the cashbook. The cashbook consists of a Bank account created in Accounts (Setup ribbon) and linked to its own Payments and Receipts batch. The transactions are manually entered and processed in the following batches:

- Receipts batches - receipts and deposit slips and credits on the bank statements such as interest received, monies paid directly into your bank account.

Create receipts:

- *F9:Process - Create receipts - You may print a receipt and generate a transaction into the receipts batch.*

- *Receive payment option on Open item link - Allows you to print a receipt / payment advise and directly update (post) the receipts batch with the transaction.*
- *F9:Process - Automatic receipts option.*

- Payments batches - cheques or other payment source documents, debits on the bank statements such as bank charges, withdrawals, etc.

Automatic payments:

- *F9:Process - Creditors at date - You may import the creditor accounts with balances as at a selected date. Once these transactions are imported into the payments batch, you may edit the amounts and delete those you do not wish to pay at that stage, if necessary.*
- *F9:Process - Automatic payments option.*

You need to reconcile the bank account / cashbook (Receipts- and Payments batches) with the bank statement in Cash / Bank (Default-ribbon) .

Receipts journal

All the receipts (deposits, debit orders into your Bank account, interest received, etc), which are deposited into a specific Bank account are entered in the Receipts journal for the Bank account in which the money is deposited.

The source documents used to enter transactions in a receipt batch are receipts and deposit slips and entries on the bank statement (e.g. bank interest received, etc.).

All receipts and moneys deposited will be displayed on the bank statement, and must be reconciled (usually on a monthly basis) with the Receipts journal. You may find other transactions, such as monies deposited directly into your Bank account, interest, etc. on your bank statement, which are usually dealt with when the bank reconciliation are done.

A copy of a receipt issued to a customer, debtor or other party from whom the money is received, is retained for record purposes, and should be included with the deposit slip. The original receipt is handed

to the party from whom the money is received.

All the moneys received are deposited in the Bank account. A receipt should always be issued when cash is received. In some cases, cheques may be received instead. In these cases, receipts are not always issued, as cheques are listed on the deposit slip when the money is deposited into the Bank account.

Transactions in the Receipts journal can also be generated by the following options:

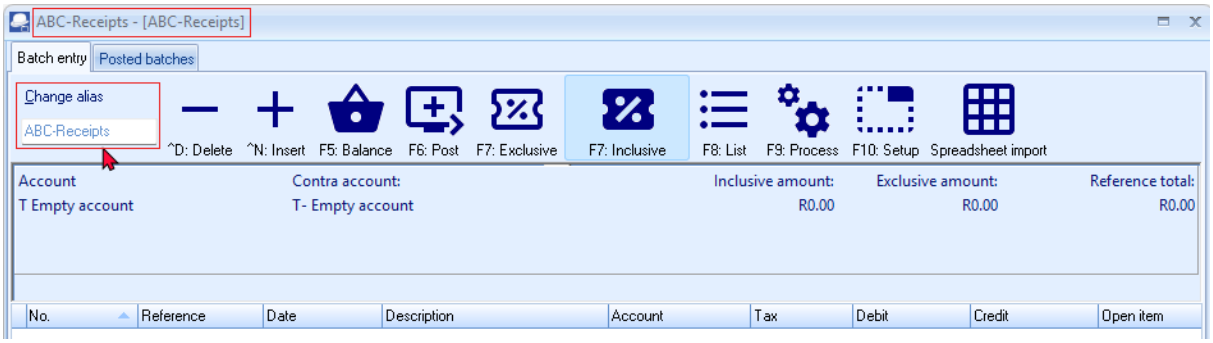
- Automatic receipts - Batch Processing option.
- Open item link - Debtor - select a transaction and right-click select the *Receive Payment* option on the context menu.
- Create receipts - Batch Processing option. When using this option, you may print the receipt, and the transaction for the receipt will automatically be inserted in the Receipts journal, in which case you do not have to write a hand-written receipt.

Process Transactions in the Receipts journal

To enter transactions in Receipt journals:

1. On the Default ribbon, select Batch entry (F2).

2. Select the Receipts Journal (linked to the correct Bank account) and click on the Open button.

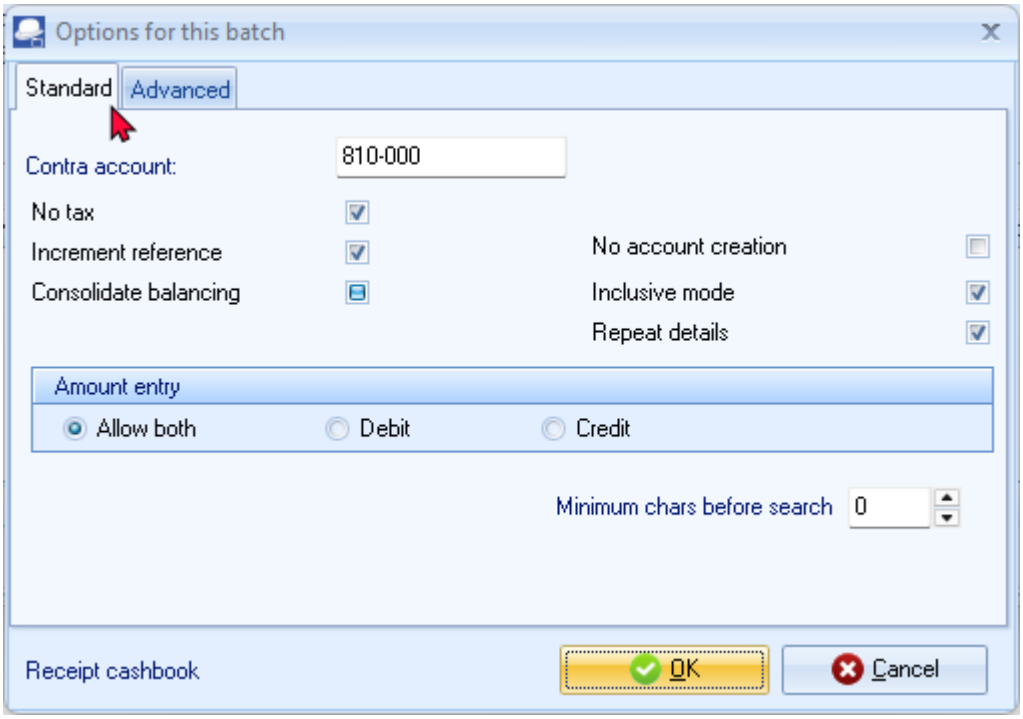


3. Enter the Alias (batch name) in the "*Change alias*" field on the Batch entry screen. In this example we enter *"ABCReceipts2403"* to indicate that the receipts in the ABC Bank account for March 2024 was entered in this Petty cash payments journal.

> *If you have more than one Bank account, select the correct Receipts journal for the Bank account into which the moneys is deposited.*

> *If you have not yet set up the Receipts journal, or if your requirements should change, click on the F10: Setup icon.*

4. Click F10:Setup to set the "*Options for this batch*". On the Standard tab, check the settings, and change, as required.

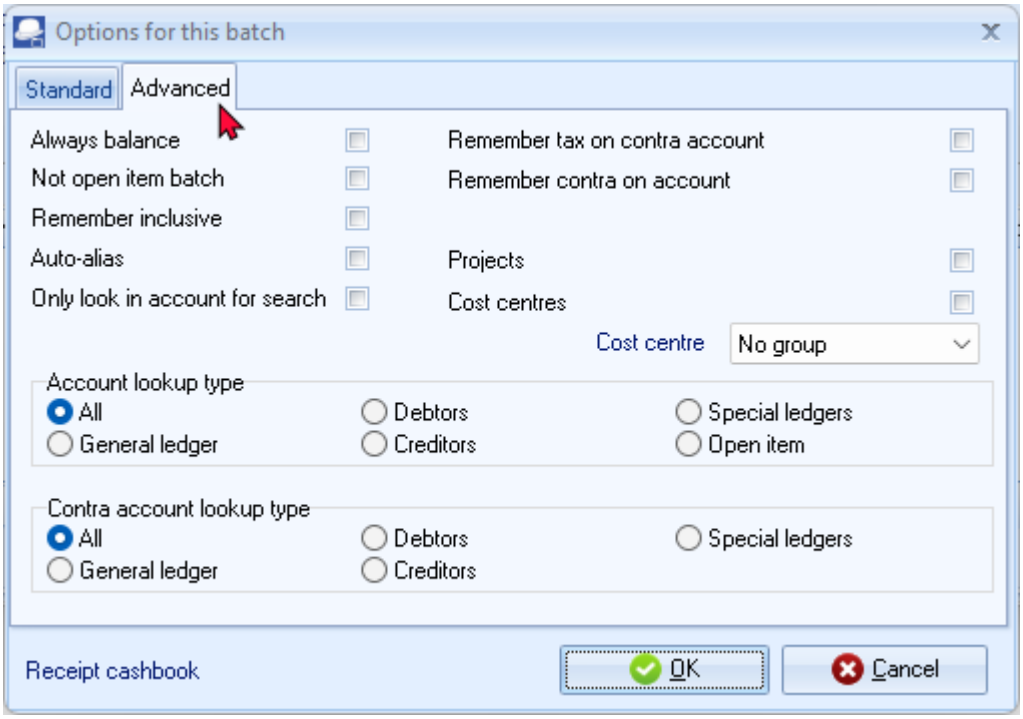


> *The contra account of the Bank account to which the Receipts journal is linked, will be displayed on the Batch type selection screen. You cannot change the contra account in the batch setup options*

for the Receipts journal.

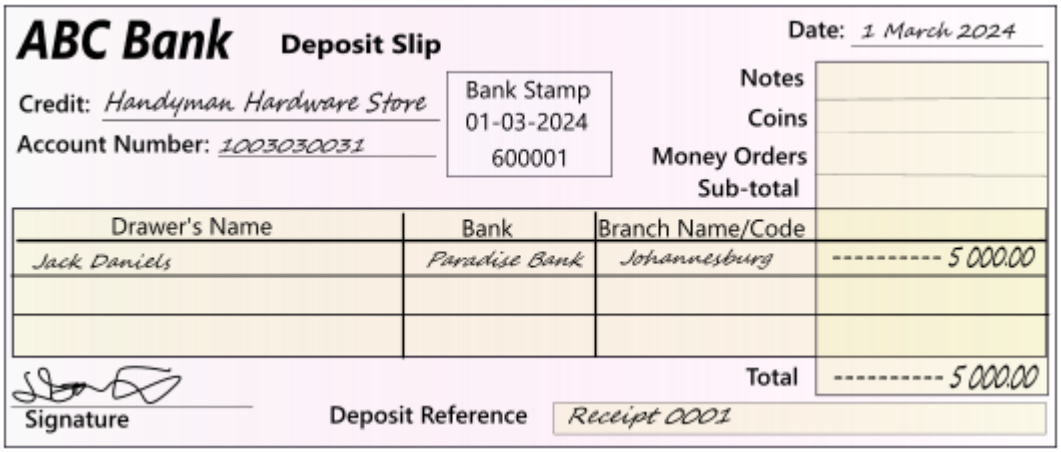
By default, the “Amount entry” is set to “Allow both”. You cannot set the “Amount entry” to “Credit”.

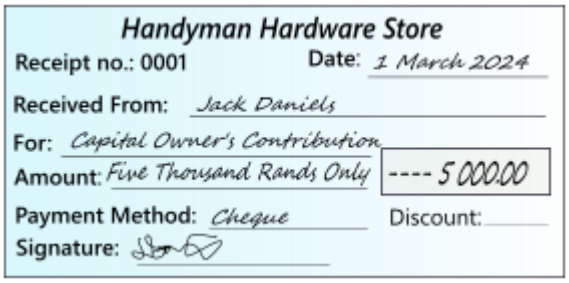
On the Advanced tab and check and take note of the settings.

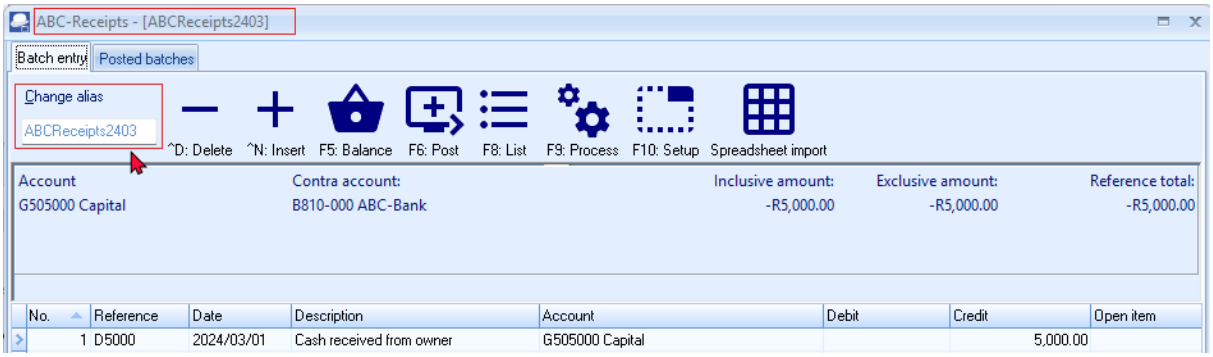


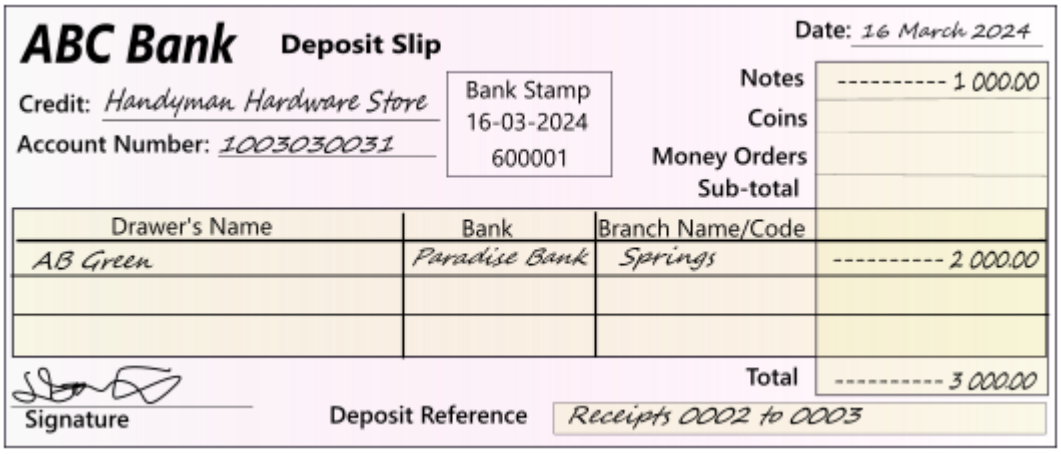
3. Enter the Alias (batch name) and press the Enter key.

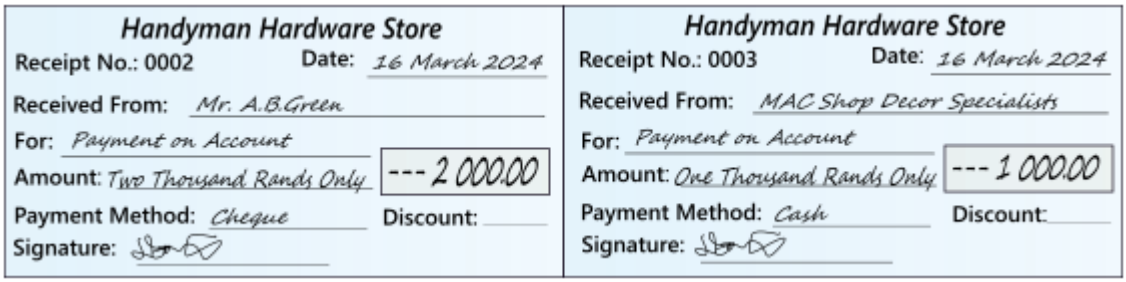
4. Capture the Deposit slips or Receipts. The following is an example of deposit slips obtained from a bank:











You may have pre-printed deposit slips, which may be pre-numbered and of a different appearance, but the information on the deposit slips is basically the same.

5. Enter and/or select the following:

   a) Reference - Enter the deposit number.

All the receipts on the same deposit slip must have the same reference number. If this is not done, bank reconciliation will be difficult, if not impossible. On the 16th of March, we have two receipts deposited on the last deposit slip. In this case, we use the same reference number (e.g. D5001) to enter both the deposit transactions on the same deposit slip.

b) Date - Enter or select the date of the deposit.

c) Description - Enter a brief description for the transaction.

You need to enter a sensible description (e.g. "Payment Received - Thank you" in the description column, as this will appear on the debtor's statement and it must be useful information for the debtor.

If you have many transactions with descriptions of a repetitive nature, you may assign a key on your keyboard as an abbreviation. For example, if you assign the R key on your keyboard for the description "Payment received - Thank you", you only need to press the R key and press the Enter key in the description field. The full description (e.g. "Payment received - Thank you") will be transferred to the description field.

d) Account - Select the Debtor or other applicable account to which you need to allocate the receipt.

e) Tax - Select the applicable Output Tax account for the receipt, if applicable.

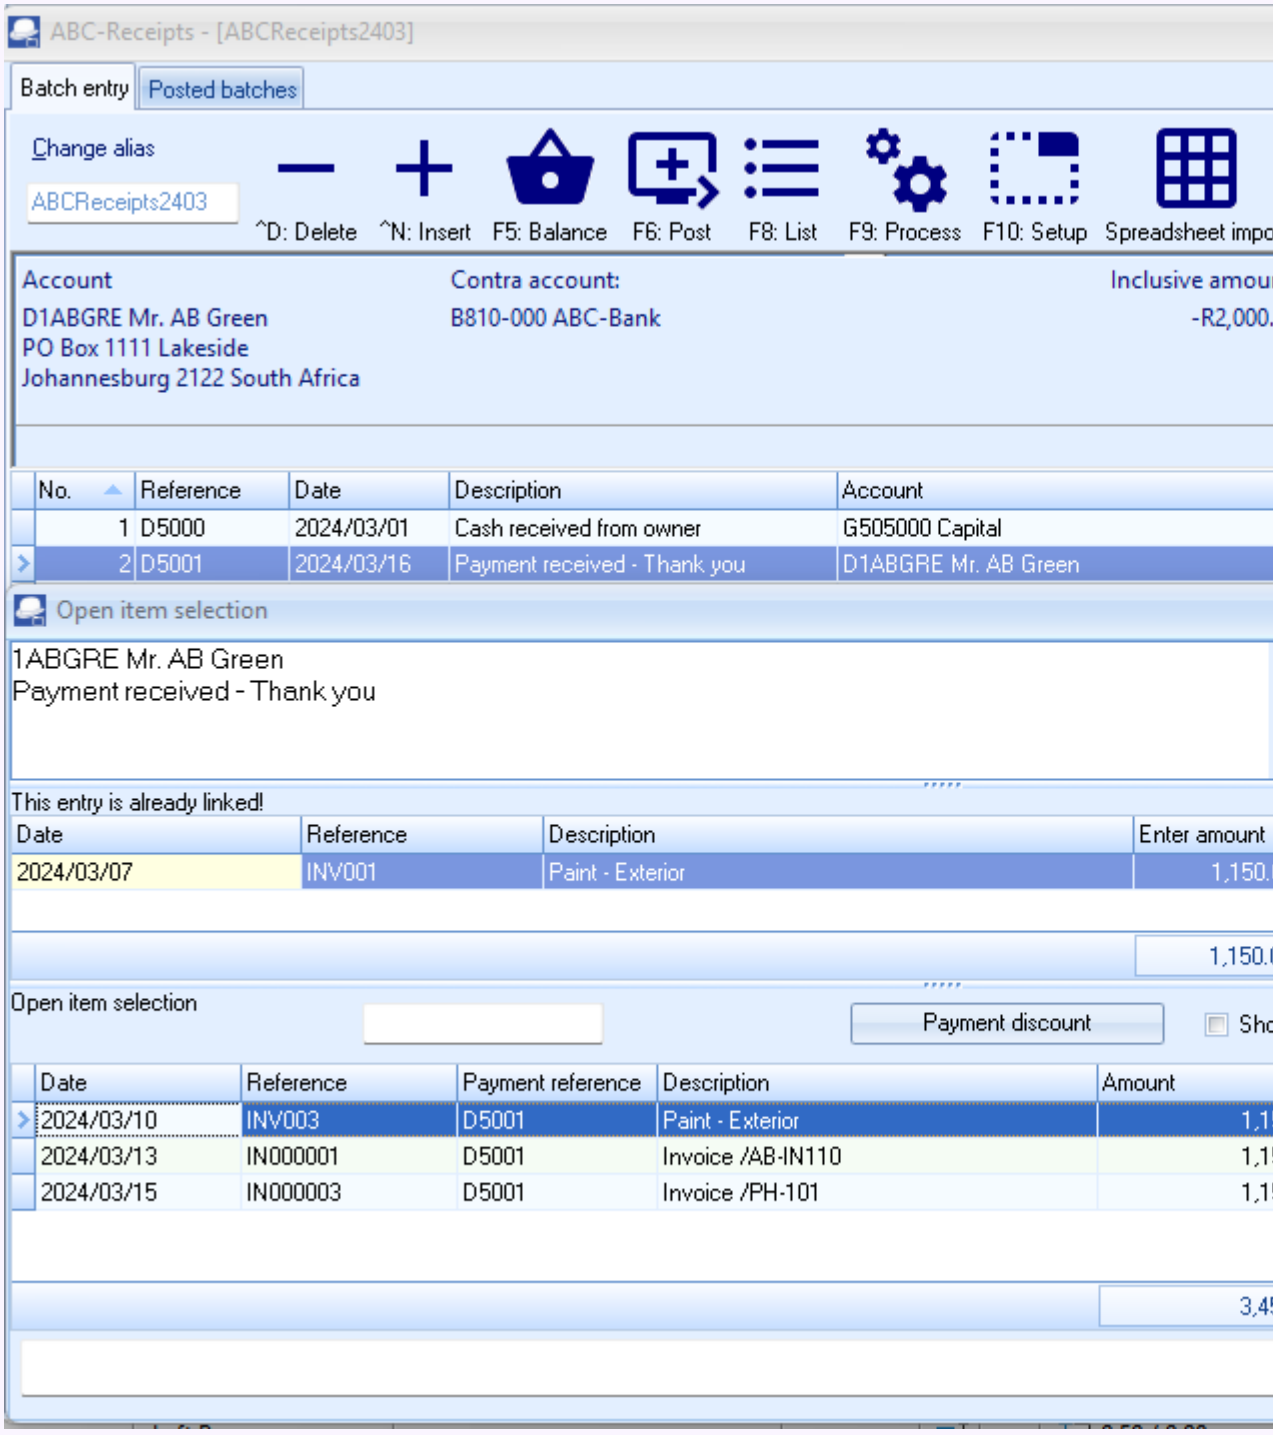
This is only applicable if Output VAT/GST/Sales Tax is allowed on a transaction, and if you are registered as a VAT/GST/Sales Tax Vendor. If no VAT/GST/Sales Tax is applicable to the transaction, select the "Empty" option as the "No Tax" code.

You may also select to hide the Tax column, and lookup facility in the Setup Options for the Receipts journal, if no VAT/GST/Sales Tax is applicable to all transactions in this batch (e.g. only capturing Receipts from Debtors; or if you are not registered as a VAT/GST/Sales Tax Vendor.

f) Amount - Enter the amount of the transaction (Inclusive or Exclusive of VAT/GST/Sales Tax, if applicable).

Should you have any Open item Debtors, an Open item selection screen will appear, listing all debit transactions, as well a you have selected in the account field, if this Debtor account is created as an Open item Debtor. You need to select the spec

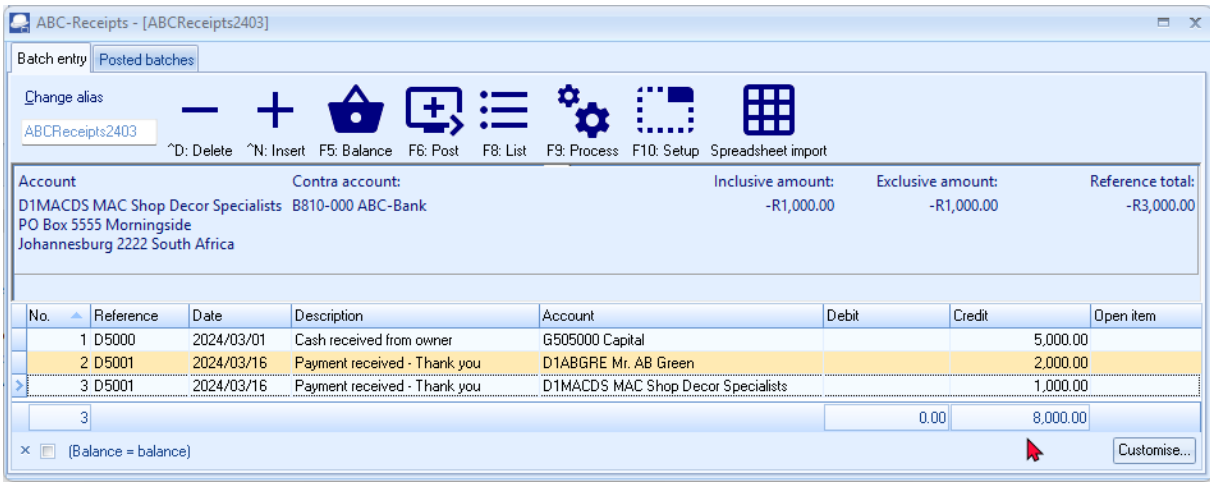
payment.



If you need to enter a debit transaction (i.e. early settlement discount allowed), you may enter a negative (minus sign), followed by the amount in the credit column. These amounts will be transferred to the debit column.

You may select (tick) the "Not open item batch" field (F10:Setup - "Options for this batch" - Advanced tab) to de-activate the open item feature in batches.

6. After entering the Deposits in the Receipts journal, the transactions will be displayed as follows:



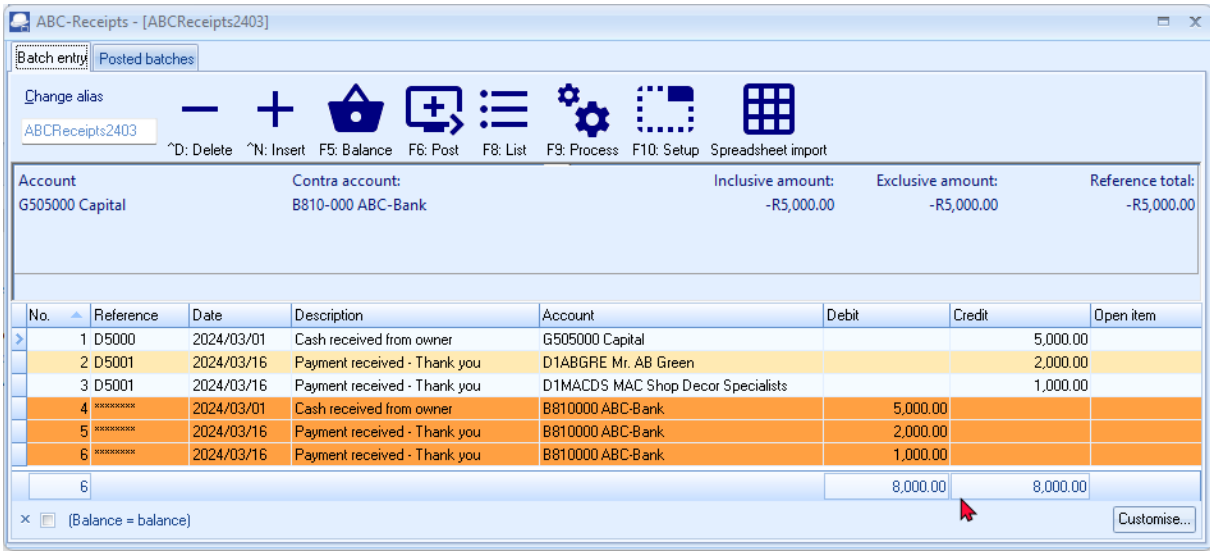
> *If you have selected a Tax code, in the Cashbook (Receipts journal), the amount EXCLUSIVE of VAT/GST/Sales Tax (NOT the INCLUSIVE of VAT/GST/Sales Tax) is reflected in the amount column, when the cursor is not on the amount field of a transaction.*

> *If a transaction for a debtor in the receipts journal is linked to an transaction on the Open item selection screen, the transaction will be displayed in a peach background colour.*

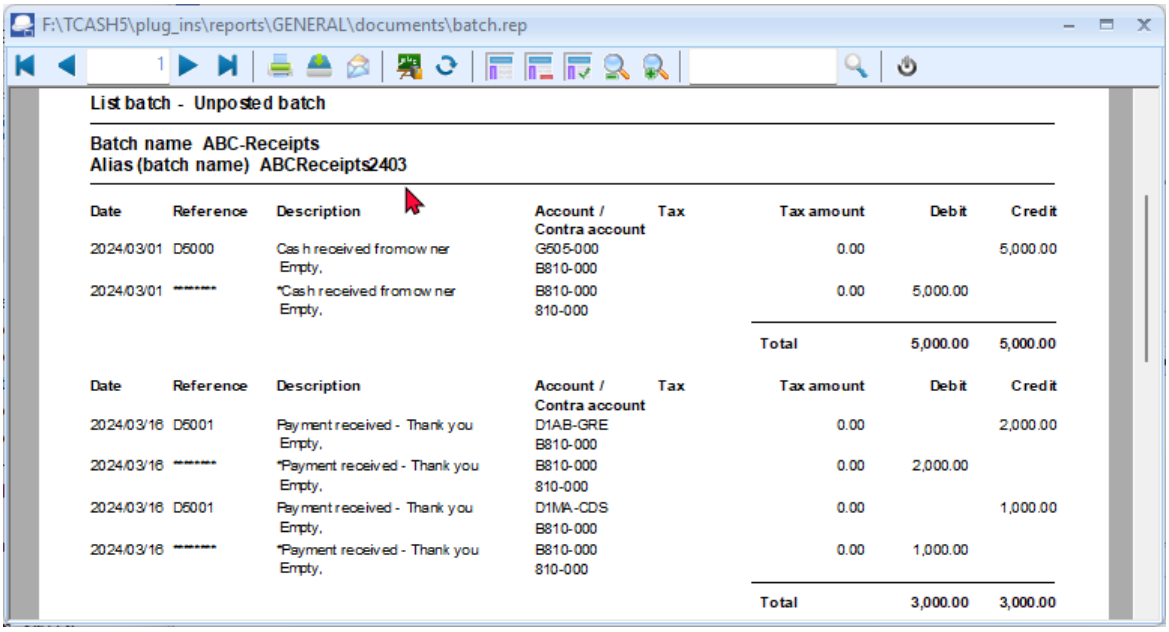
Finalising the Receipts batch

Once you have completed entering these receipts, and you are sure they are correct, you may proceed to finalise the batch. The recommended process, is as follows:

1. Click on the F5:Balance icon.osFinancials5/TurboCASH5 will generate balancing entries to the Bank account (contra account) and to the Output VAT/GST/Sales Tax account, if a Tax code was selected for a transaction.



2. Click on the F8:List icon to print a list of the transactions in the batch.



> *It is a good idea to list the batch, and check the entries on the batch thoroughly. If there are any errors, you may edit the batch, before posting the batch.*

3. Press or click on the F6:Post icon, to post (update) the batch to the ledger.

> *It is not necessary to post (update) the transactions at the end of each day. You may add and/or post the transactions on a daily, or weekly basis, or at the end of a month. When you have entered a few transactions, you may close or exit the batch. The data will not be lost.*

T-Account view of transactions

After posting the transactions in the Receipts journal, the transactions should display as follows in the T-Account viewer:

All processed (posted) transactions will be accumulated in the Ledger analyser. There are various ways in which the transactions may be viewed, printed, exported and analysed.

To access the T-Account view of the transactions:

1. On the Reports ribbon, select T-Account analyser 1.
2. Select an account (e.g. B810-000 ABC - Bank) and double-click on it.
3. Click on the following to get specific views of transactions:
    - Batch number (e.g. 9 automatically generated). This will list only the transactions for a specific batch (journal).
    - Account code (e.g. G505-000 Capital account, B810-000 ABC - Bank, D1AB-GRE Mr. AB Green, D1MA-CDS MAC Shop Decor Specialists). This will list the transactions for a specific account.
    - Date – This will list the transactions for a specific date. If you double-click on a date, the "*From date"* and "*To date*" will be changed to the selected date.

After posting the transactions in the Receipts journal, the transactions should display as follows in the T-Account viewer:

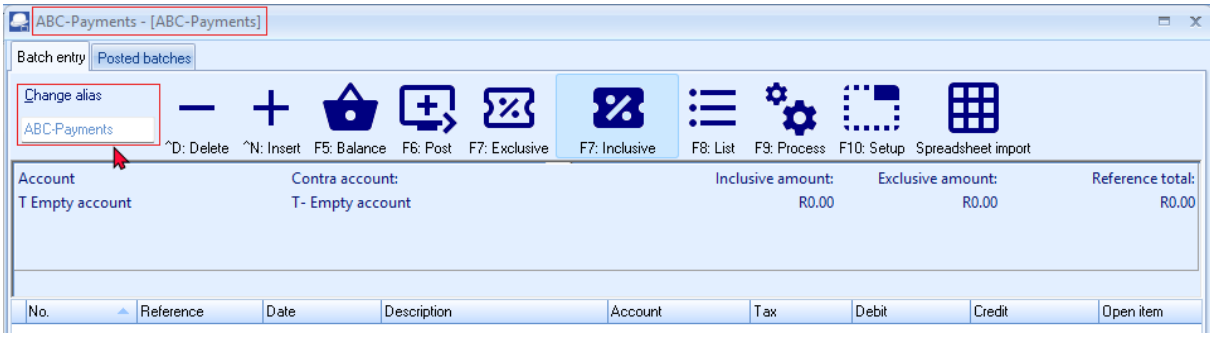
Payments journal

Process Transactions in the Payment journal

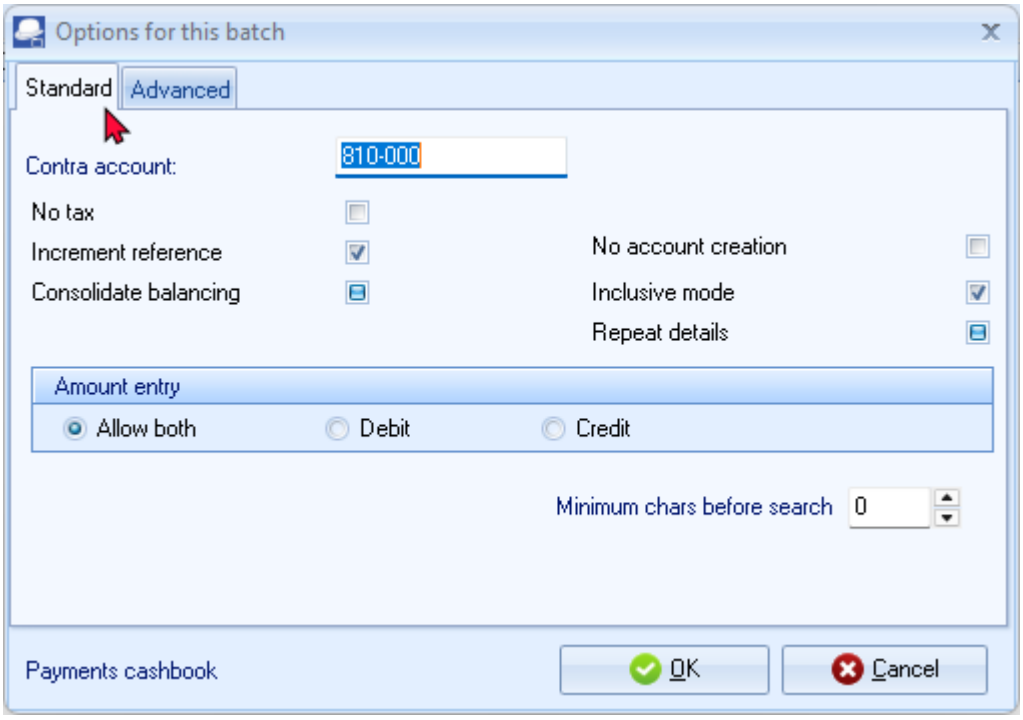
To enter your Payments Transactions:

1. On the Default ribbon, select Batch entry (F2).

2. Select the Payments Journal (linked to the correct Bank account) and click on the Open button.



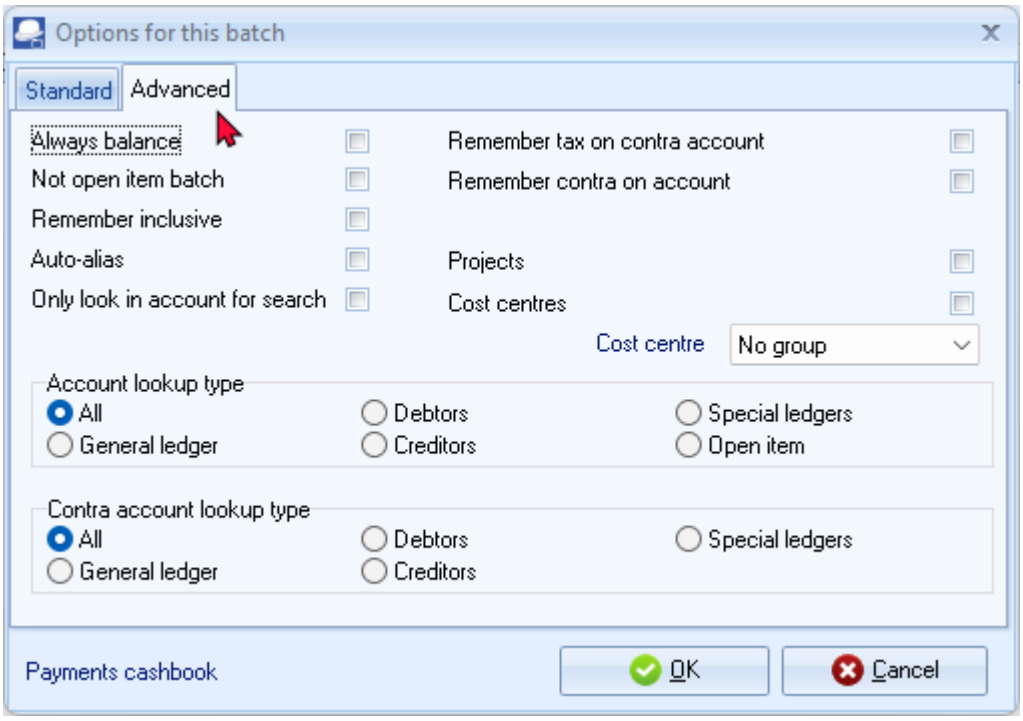
3. Enter the Alias (batch name) in the "*Change alias"* field on the Batch entry screen. In this example we enter *''ABCPayments2403''* to indicate that the payments from the ABC Bank account for March 2024 was entered in this Petty cash payments journal.



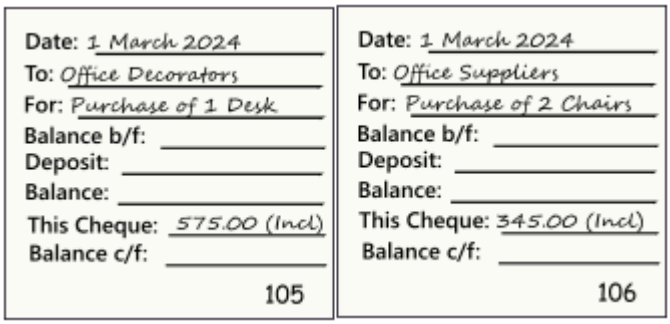
The contra account of the Bank account to which the Payments journal is linked, will be displayed on the Batch type selection screen. You cannot change the contra account in the batch setup options for the Payments journal.

By default, the "Amount entry" is set to "Allow both". You cannot set the "Amount entry" to "Debit".

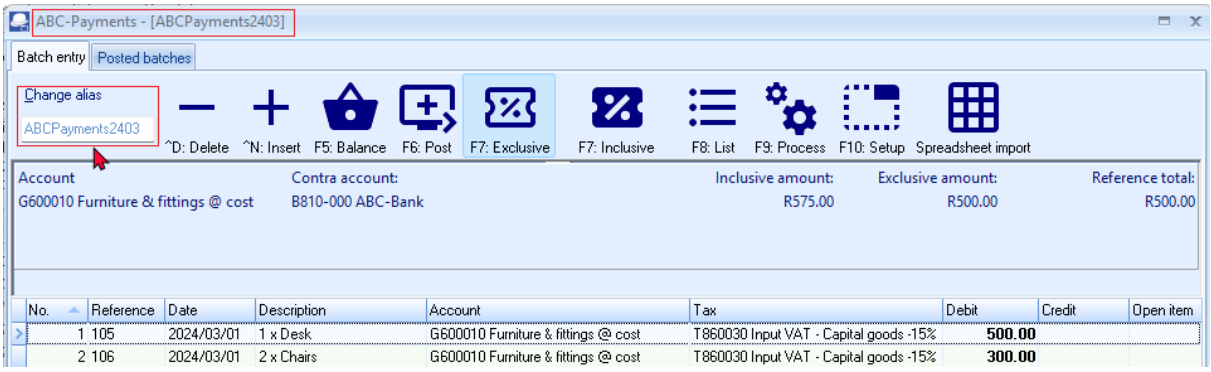
On the Advanced tab and check and take note of the settings.



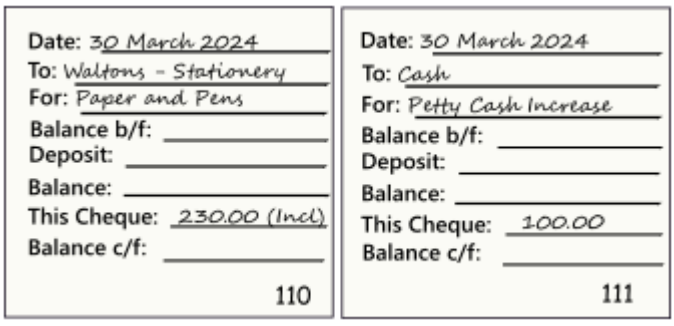
4. Capture the following payments (cheques) issued on 1 March 2024 in the Payments journal:



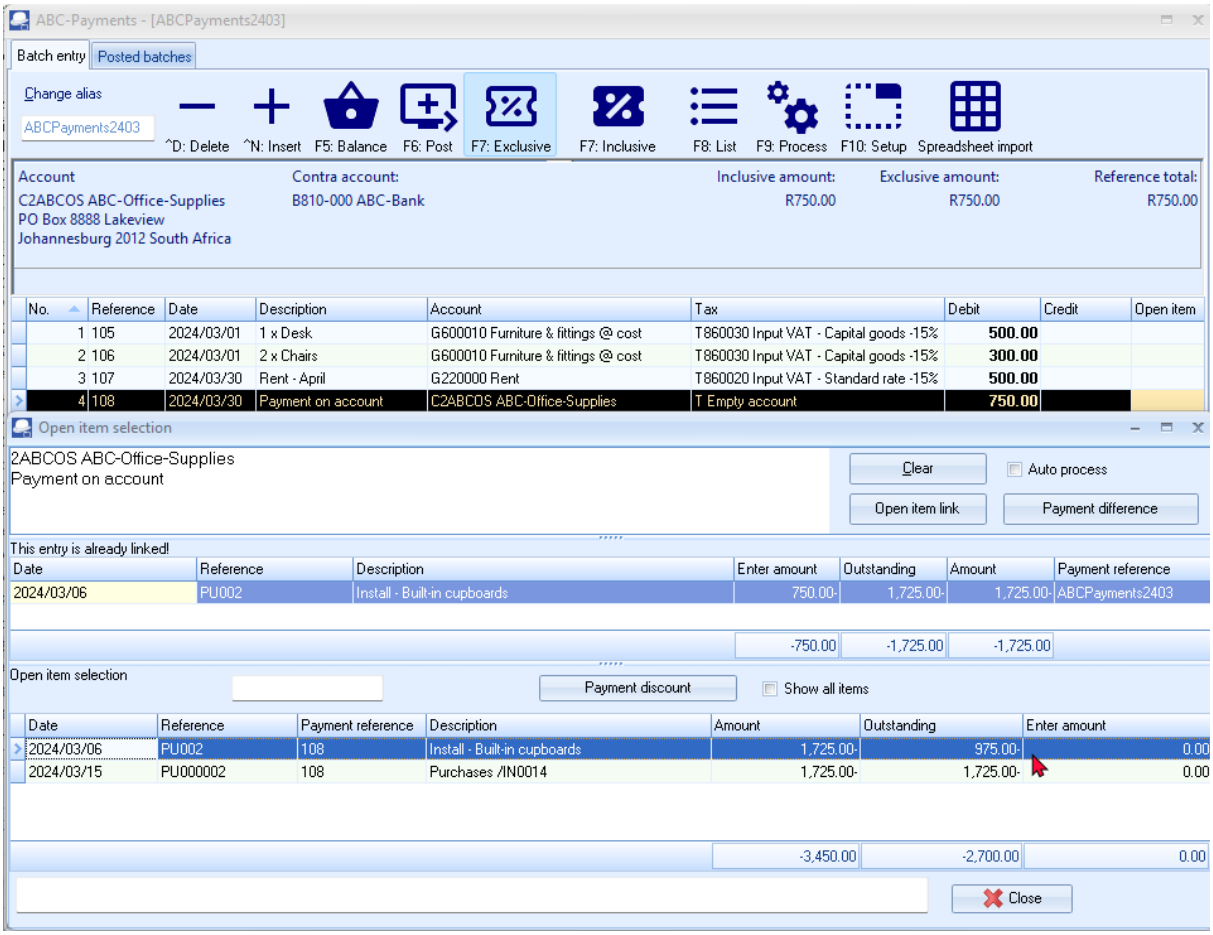
5. After capturing the transactions, it should display as follows:



6. Capture the following payments (cheques) issued on 30 March 2016 in the Payments journal:



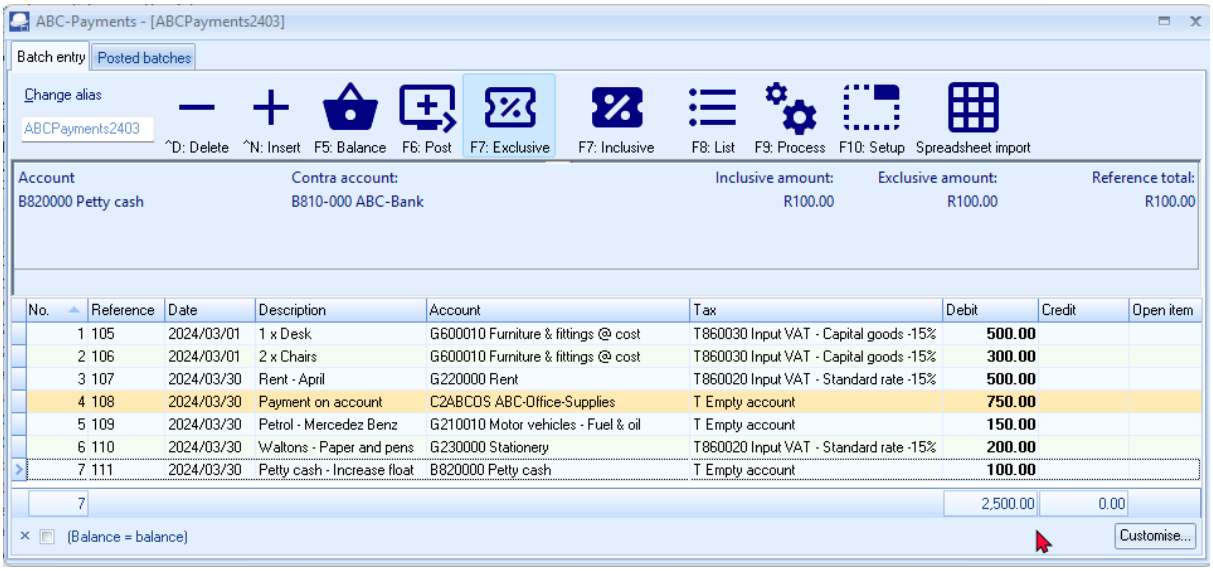
7. An "*Open item selection"* screen will appear listing all purchase documents for Mr. AB Green. You need to select the purchase document which, is paid, i.e. PU000002. Select the correct amount and press the Enter key. This links this payment to that purchase document.



> *If a transaction for a debtor in the receipts journal is linked to an transaction on the Open item selection screen, the transaction will be displayed in a peach background colour.*

> *You may select (tick) the “Not open item batch” field (F10:Setup - “Options for this batch” - Advanced tab) to de-activate the open item feature in batches.*

8. After entering all your payments (cheques), the screen should reflect your transactions as follows:



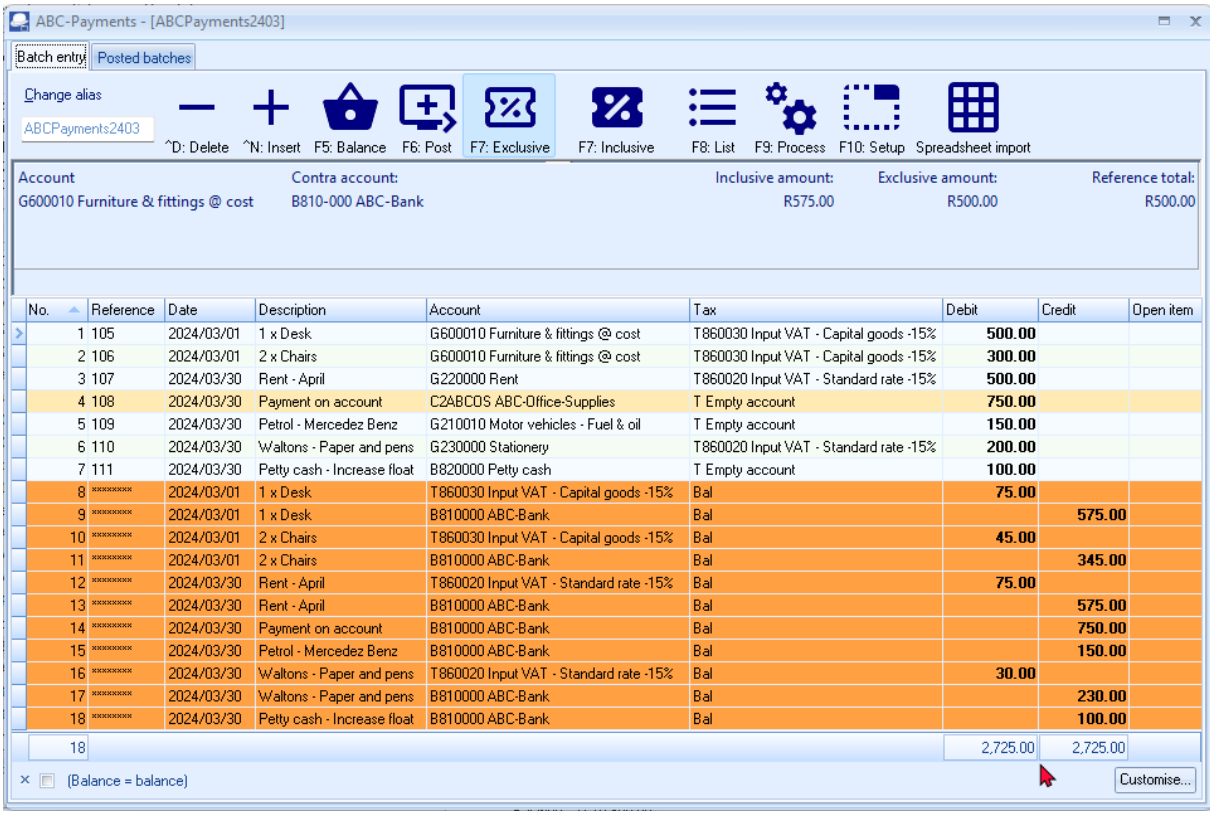
"F7: Inclusive" icon - Amounts in the normal or regular font indicate that it is entered Inclusive of VAT/GST/Sales Tax.

If the "F7: Exclusive" icon is selected, the amounts are entered as Exclusive if VAT/GST/Sales Tax and will be displayed in the bold font.

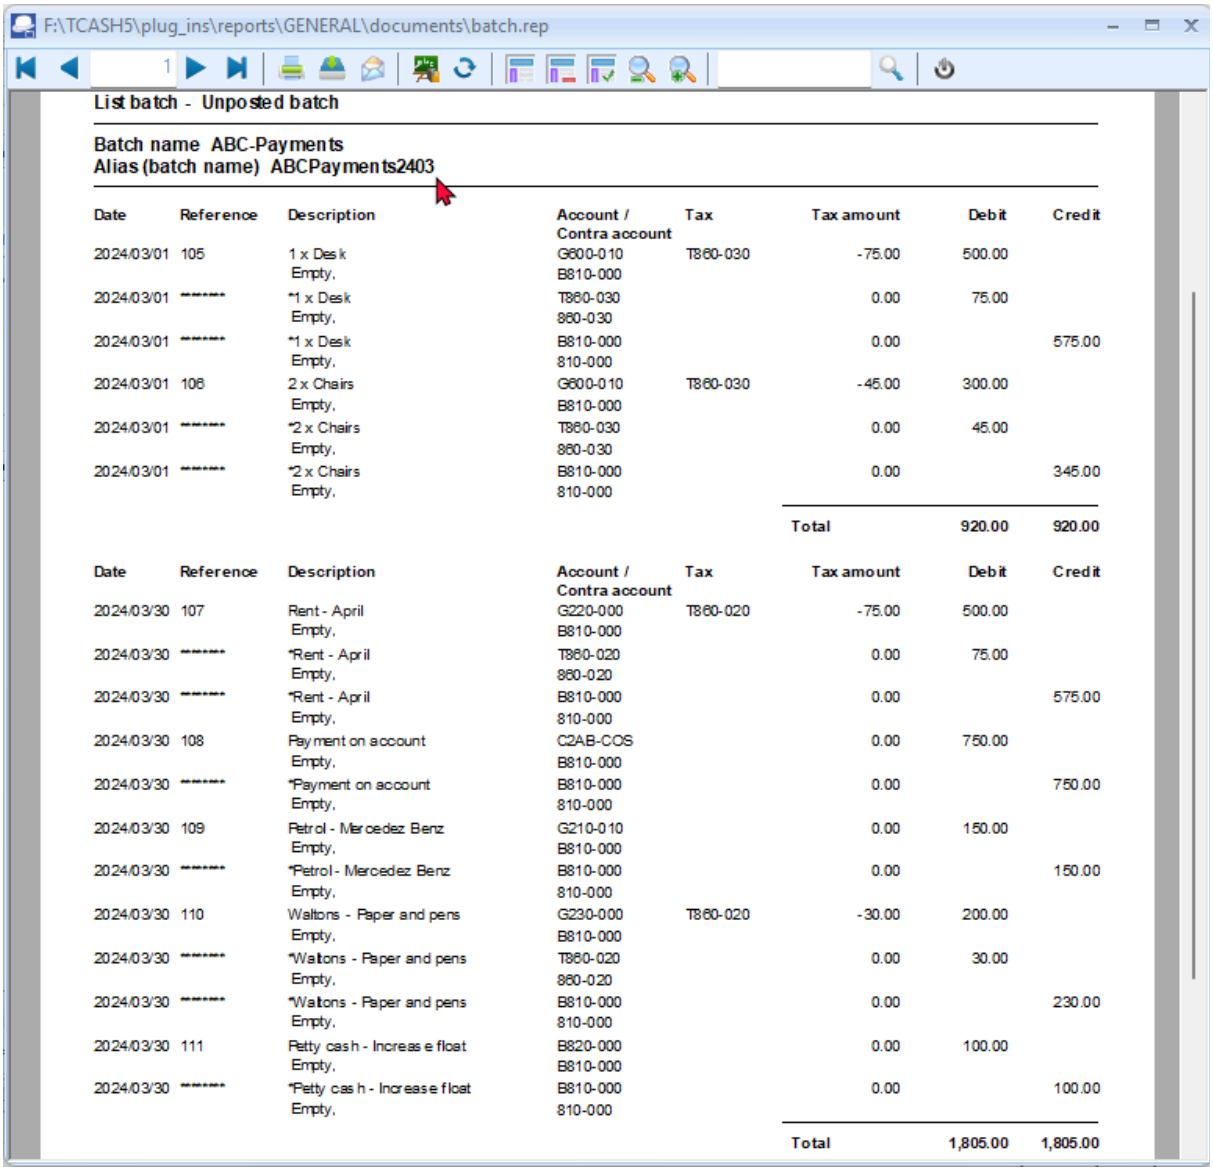
Finalising the Payments batch

Once you have completed entering these payments (cheques), and you are sure they are correct, you may proceed to finalise the batch. The recommended process, is as follows:

1. Click on the F5:Balance icon. osFinancials5/TurboCASH5 will generate balancing entries. The balancing entries should reflect as follows:



2. Click on the F8:List icon to print a list of the transactions in the batch.



F:\TCASH5\plug_ins\reports\GENERAL\documents\batch.rep

List batch - Unposted batch

Petty cash transactions

What is petty cash?

Petty cash is a small amount of cash that is kept on hand by a business or organization to cover small, incidental expenses.

This fund is typically used for expenses such as office supplies, postage, taxi fares, or other small purchases that do not warrant the use of a company credit card or a check.

The amount of petty cash maintained by a business may vary depending on the size and nature of the organization. Typically, petty cash is held in a secure location and is managed by a designated employee, such as an administrative assistant or office manager.

To ensure that the petty cash fund remains balanced and that all transactions are properly accounted for, a petty cash book or ledger is maintained. This book is used to record all transactions made from the petty cash fund, including the date, amount, purpose, and recipient of each expenditure.

At regular intervals, such as at the end of each month or quarter, the petty cash fund is reconciled to ensure that the balance of the fund matches the total of the transactions recorded in the petty cash book.

Source documents

The source documents used to enter transactions in petty cash are typically receipts, invoices, and other documents that provide evidence of the transaction.

For example, if a small amount of cash is used to purchase office supplies, a receipt would be obtained and used as the source document to record the transaction in the petty cash book.

Other types of transactions that may be recorded in a petty cash book could include reimbursements for

small expenses such as transportation costs, office snacks or coffee, and other incidental expenses.

In order to maintain accurate records of petty cash transactions, it's important to ensure that all source documents are properly dated and contain the necessary details, such as the amount spent, the purpose of the expenditure, and the names of any individuals involved in the transaction. This will help to ensure that all transactions are properly accounted for and can be easily reconciled with the petty cash book.

Petty cash vouchers

A petty cash voucher is a small form or document that is used to record transactions for small, incidental expenses paid from a petty cash fund.

The voucher typically contains information such as the date of the transaction, the amount of the expense, the purpose of the expenditure, the name of the payee or recipient, and the signature of the person authorizing the expense.

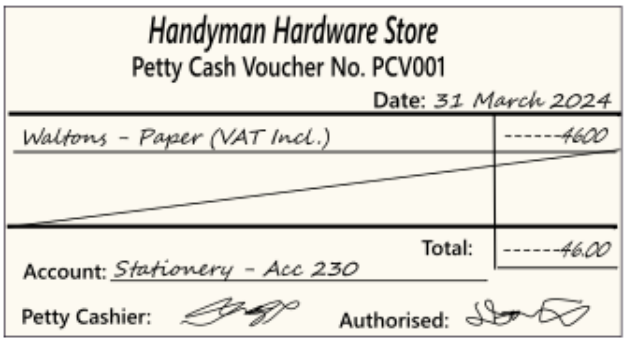
Petty cash vouchers are important because they provide a record of all transactions made from the petty cash fund, which helps to ensure that all expenditures are properly accounted for and that the fund remains balanced.

The voucher is usually submitted along with the original receipt or other source document as evidence of the transaction. It is then used to record the transaction in the petty cash book or ledger, which is used to track all transactions made from the petty cash fund.

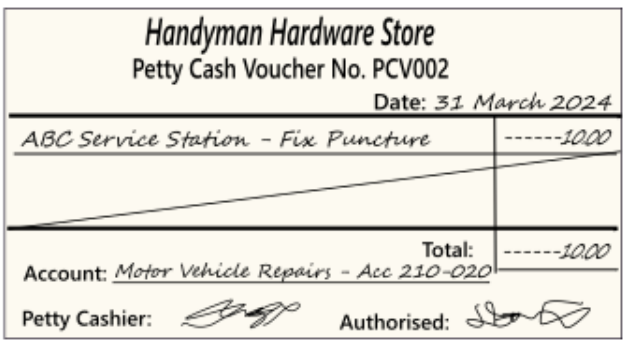
Petty cash payments should be used as a bank account. If it is used as a normal General ledger – Balance sheet Account, it could cause problems on the Tax Reports (Input VAT/GST/Sales Tax).

You may also reconcile your Petty cash payments and Receipt batches.

For the purposes of this tutorial, we assume that you have paid the following expenses from your petty cash:



Handyman Hardware Store
Petty Cash Voucher No. PCV001
Date: 31 March 2024
Waltons - Paper (VAT Incl.) ------46.00
Total: ------46.00
Account: Stationery - Acc 230
Petty Cashier: Authorised:



Handyman Hardware Store
Petty Cash Voucher No. PCV002
Date: 31 March 2024
ABC Service Station - Fix Puncture ------10.00
Total: ------10.00
Account: Motor Vehicle Repairs - Acc 210-020
Petty Cashier: Authorised:

Petty cash transactions

This procedure describes the process to record Petty cash transactions if the Bank import plugin is not activated. If the Bank import plugin, is activated, please read the following:

- *Bank import plugin -*
- *Bank import plugin - Petty cash transactions (Manual entry) -*

Bank import plugin - Bank Reconciliations Plugin Manual - BankImport Plugin Manual - Shop -The Bank import plugin is included in the osFinancials5/TurboCASH5 subscription.

The Bankimport plugin will import bank transactions and save you hours of data entry. You can simply link transactions to your debtors, creditors or other accounts. And with a simple mouse click link the payments to the right invoices. Needs to be activated on the Setup ribbon, select Setup → System parameters.

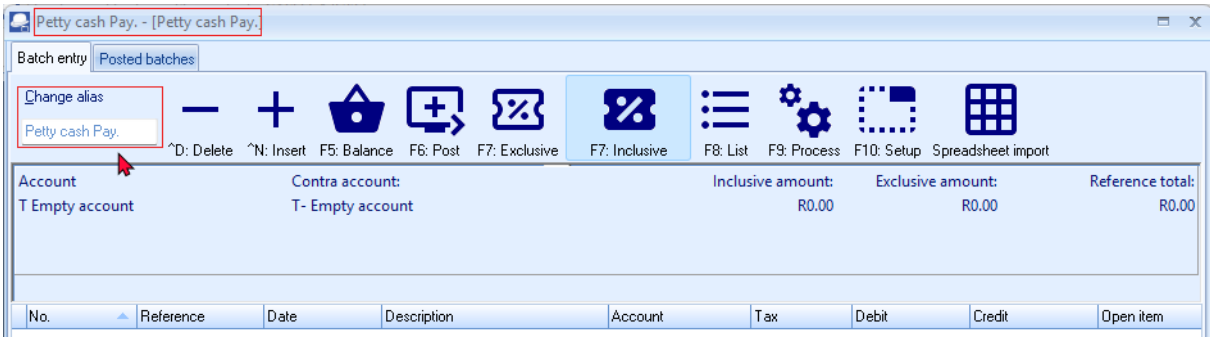
In addition to bank accounts, petty cash accounts, is the only source where money can physically flow into and out of the business. The bank account should be strictly monitored to ensure that all the monies that are received are deposited, and that all the payments and/or cheques have been honoured.

Select and Open the Petty cash journal

To enter your Petty cash payment transactions:

1. On the Default ribbon, select Batch entry (F2).

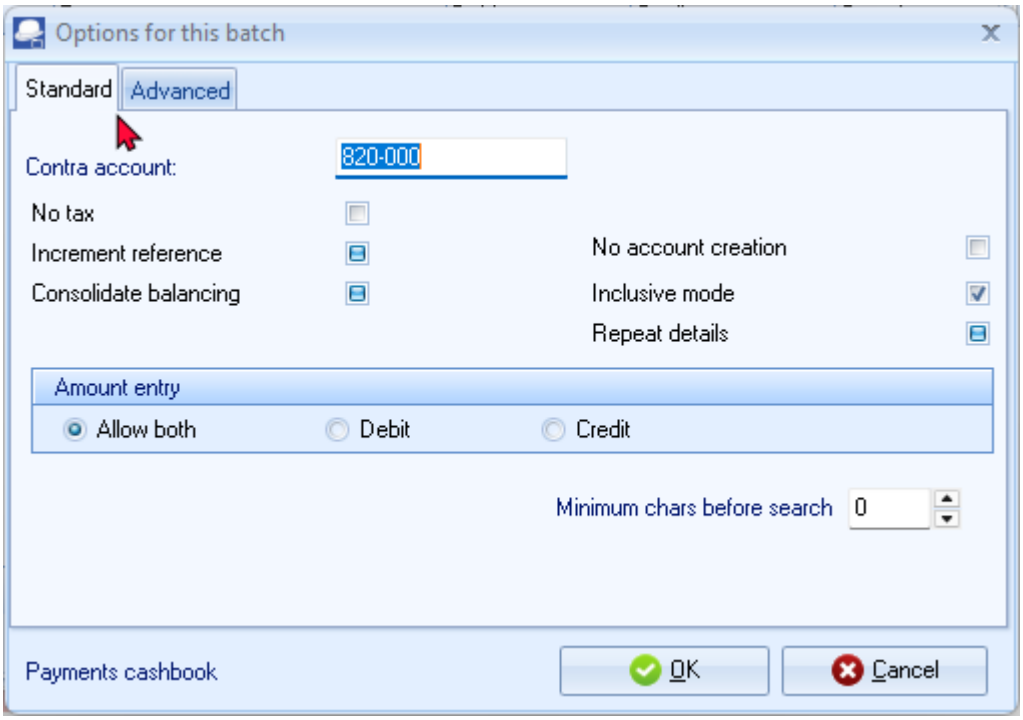
2. Select the Petty cash Pay Jnl and click on the Open button. The *Petty cash journal* screen will be displayed.



3. Enter the Alias (batch name) in the "*Change alias*" field on the Batch entry screen. In this example we enter *''PettyCash2403''* to indicate that the Petty cash payments for March 2024 was entered in this Petty cash payments journal.

> *The alias option allows you to identify a batch by a unique name. You will be able to select the batch by alias or batch name if you need to reverse the posted batch or import a posted batch.*

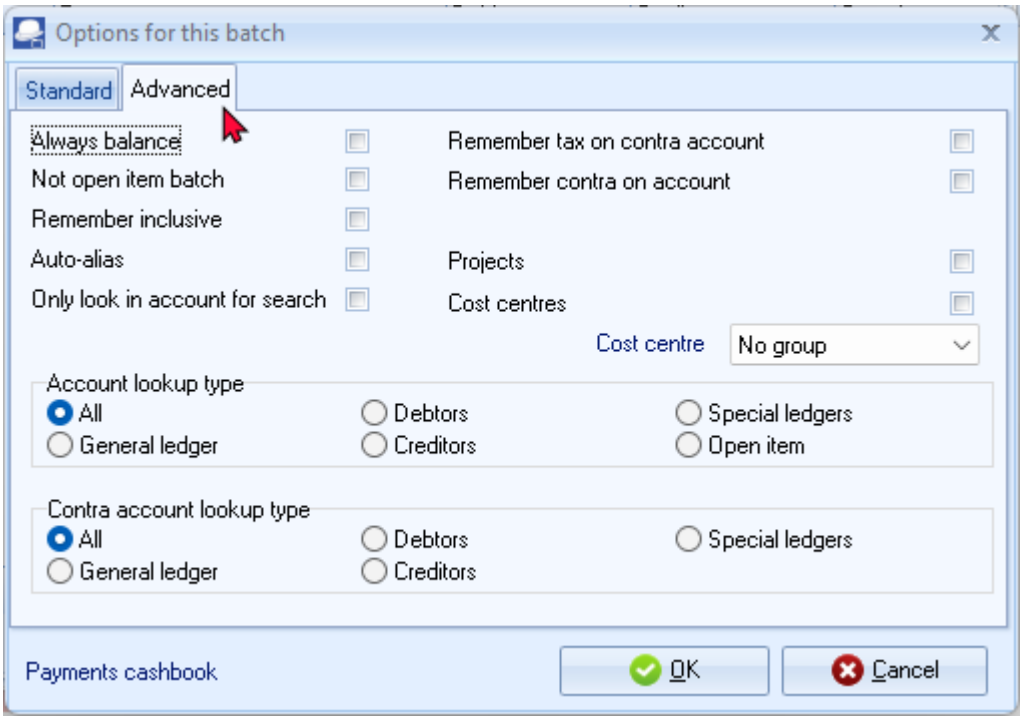
4. Click on the F10:Setup icon to set the Options for the batch, if necessary.



> *The contra account of the Bank account to which the Petty cash payments journal is linked, will be displayed on the Batch type selection screen. You cannot change the contra account in the batch setup options for the Payments journal.*

> *By default, the "Amount entry" is set to "Allow both". You cannot set the "Amount entry" to "Debit".*

On the Advanced tab and check and take note of the settings.



If you need to enter transactions with Tax accounts, you need to check that the Consolidate balancing field is not selected (not ticked) on the Standard tab of the F10:Setup (Options for this batch screen).

5. Select the General ledger option for the Account lookup type, since you do not need to select Debtor or Creditor accounts when you enter transactions for petty cash payments.

6. Once set up; click on the OK button. You are now ready to capture your first petty cash voucher.

Ref. No.	*Date*	*Description*	*Account*	*Tax*	*Amount*
PCV001	*2024/03/31*	*Paper - Waltons*	*Stationery*	*Input VAT/GST/ Sales Tax*	*46.00*
PCV002	*2024/03/31*	*Fix Puncture ABC Service Station*	*Maintenance*	*No Tax*	*10.00*

7. Capture your petty cash vouchers from your petty cash voucher book or from your requisitions. Use your petty cash voucher number as the reference number.

    a) Reference: PCV001

    b) Date: 2024/03/31

c) Description: Waltons Paper

d) Account: Type 720 or Petty cash and select the correct Petty cash account.

e) Contra account: Type 230 or Stationery to select the correct account, for this payment.

f) Tax: Input VAT/GST/Sales Tax - Standard Goods.

g) Amount: 46.00 CR Ensure that the F7:Inclusive icon is reflecting "*inclusive*". This should be so as we set the batch to the inclusive mode.

8. You are now ready to enter your next petty cash voucher no. PCV002.

a) Reference: PCV002

b) Date: 2024/03/31

c) Description: ABC Service Centre - Fix Puncture

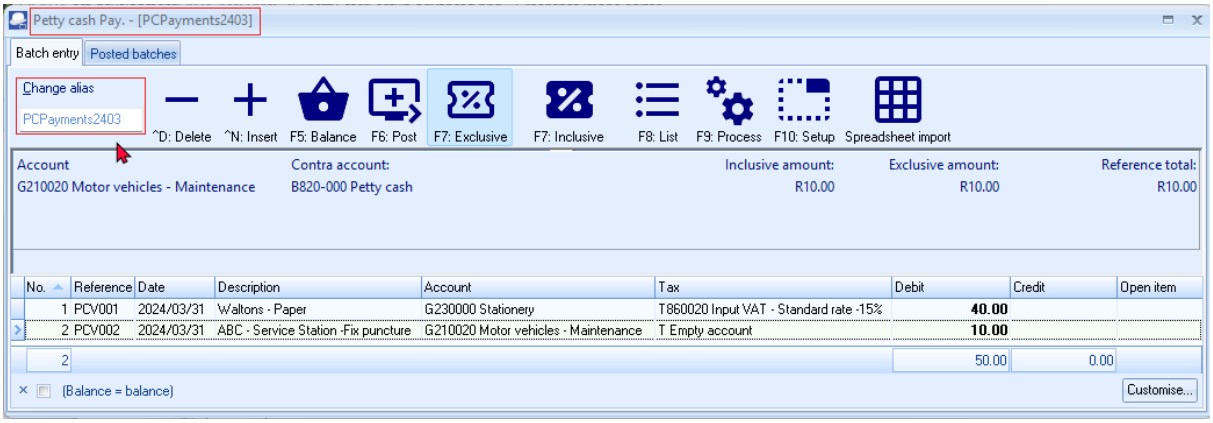
d) Account: Type 720 or Petty cash and select the correct Petty cash account.

e) Contra account: Type 210020 or Maintenance to select the correct account, for this payment.

f) Tax: No Tax

g) Amount: 10.00 CR

9. After capturing all your petty cash vouchers, the Petty cash journal is displayed as follows:



"F7: Inclusive" icon - Amounts in the bold font indicate that it is entered Inclusive of VAT/GST/Sales Tax.

If the "F7: Exclusive" icon is displayed, the amounts are entered as Exclusive if VAT/GST/Sales Tax and will be displayed in the normal or regular font.

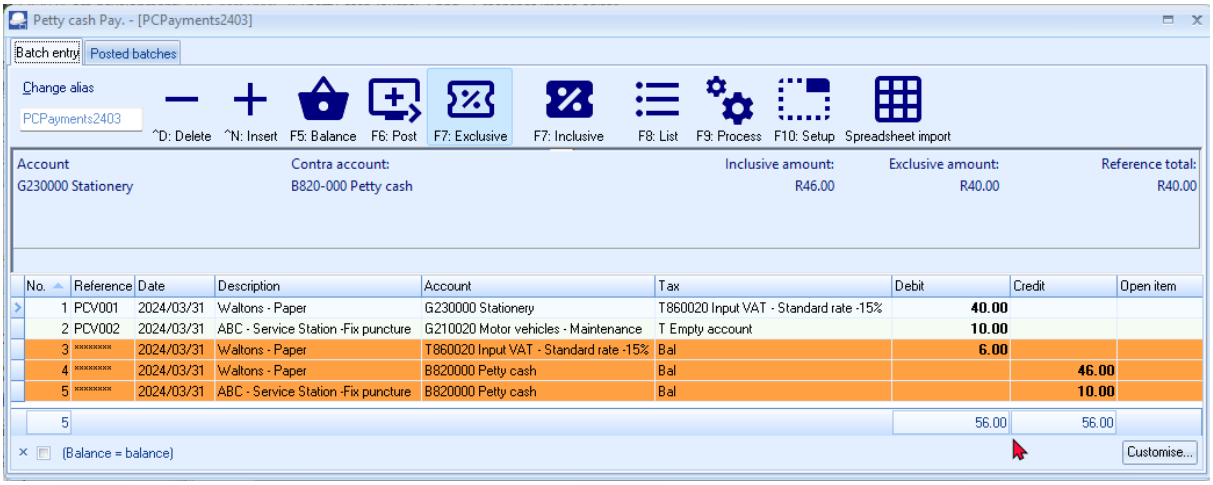
When you enter a transaction and the cursor is in the -

- *Account field, you need to select the correct contra account to be credited with the petty cash payment. This should at all times be the Petty cash account.*
- *Contra account field, you need to select the correct account to be debited with the petty cash payment.*

Posting the Petty cash batch

Once you have completed entering these petty cash payments, and you are sure they are correct, you may proceed to finalise the batch. The recommended process, is as follows:

1. Click on the F5:Balance icon. osFinancials5/TurboCASH5 will generate balancing entries to the selected contra accounts and the "*Input VAT/GST/Sales Tax - Standard Rate*" and the "*Petty cash*" accounts.

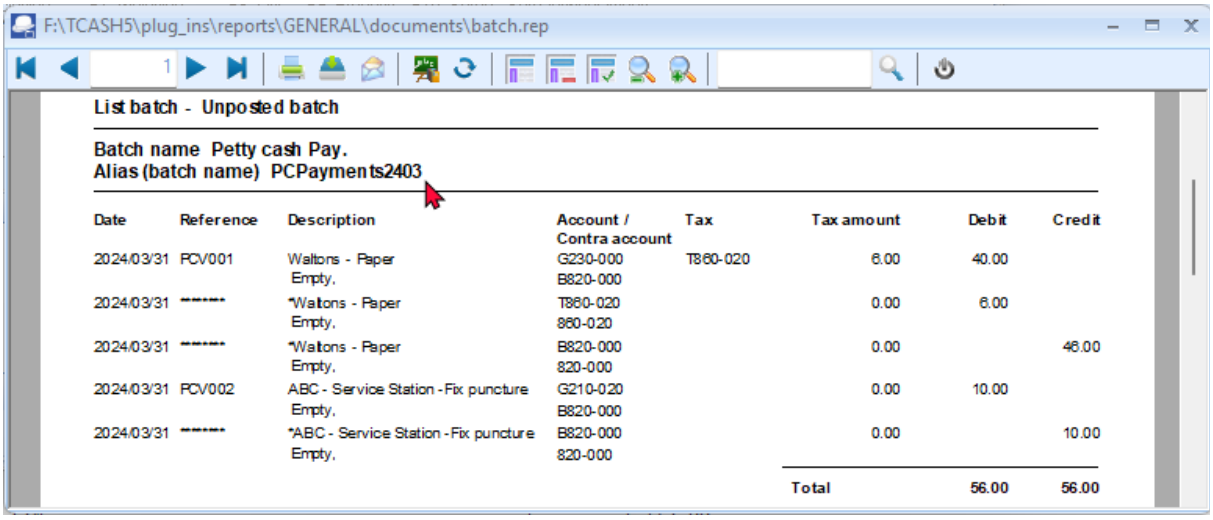


The Balancing Entries will automatically be generated for each transaction to the Contra account (e.g. Petty cash account) and the Input Tax (VAT/GST/Sales Tax) accounts.

If the description is displayed as "BALANCING ENTRY Pay.PettyCash", the Tax reports may not include these transactions correctly. This implies that the Consolidate balancing field is ticked on the Standard tab of the F10:Setup (Options for this batch screen).

You need to deselect (remove the tick) of the Consolidate balancing field on the Standard tab of the F10:Setup (Options for this batch screen) and rebalance the batch.

2. Click on the F8:List icon to print a list of the transactions in the batch.



It is recommended that the source documents (e.g. petty cash vouchers and/or invoices, slips, etc. received from suppliers, etc.) be attached to this List of the transactions and that it be retained for record and audit purposes.

3. Click on the F6:Post icon, to post (update) the batch to the ledger.

T-Account view of transactions

All processed (posted) transactions will be accumulated in the Ledger analyser. There are various ways in which the transactions may be viewed, exported and analysed.

To access the T-Account view of the Transactions, do the following:

1. Click on the T-Account Analyser (on the Sidebar (Quick menu); or on the Tools menu).
2. Select an Account (e.g. B820-000 Petty cash) and double-click on it.
3. Click on the following to get specific views of transactions:
    - Batch number (e.g. 10 generated by osFinancials). This will list only the transactions for a specific batch (journal).
    - Account code (e.g. B820-000 Petty cash, G210-020 Maintenance G230-000 Stationery, 860-020 Input VAT – Standard rate - 15%). This will list the transactions for a specific account.
    - Date – This will list the transactions for a specific date. If you double-click on a date, the From date and To date will be changed to the selected date.

After posting the transactions in the Petty cash payments journal, the transactions should display as follows in the T-Account viewer:

General journal

What is the general journal used for?

The general journal is a book or computer program used in accounting to record all transactions in chronological order. It is also known as the "*journal*" or "*journal entry book*".

Each transaction recorded in the general journal includes a date, a brief description of the transaction, the accounts involved, and the amounts debited or credited. These transactions are then later transferred to the appropriate ledgers for posting and summarization.

The general journal is used to record a wide range of transactions, such as sales, purchases, expenses, and other financial transactions. It is also used to record adjusting entries and closing entries at the end of an accounting period.

By recording all transactions in the general journal, a business can keep a complete and accurate record of its financial activities. This information is then used to prepare financial statements and to analyze the financial performance of the business. The general journal is an essential tool for any business that wants to maintain accurate financial records and make informed decisions about its financial activities.

When should a general journal not be used?

A general journal should NOT be used in certain situations where there are specific journals designed for recording transactions. For example:

1. Sales and purchases: For recording sales and purchases, specialized journals like sales journal and purchase journal should be used.
2. Cash transactions: For recording cash transactions, specialized journals like cash receipts journal and cash disbursements journal should be used.
3. Payroll: For recording payroll transactions, a specialized journal like payroll journal should be used.
4. Fixed assets: For recording fixed asset transactions, a specialized journal like fixed asset journal should be used.

In general, a general journal is used to record non-routine or unusual transactions that do not fit into the other specialized journals. However, if there is a specific journal available for a particular type of transaction, it is best to use that journal to ensure accuracy and efficiency in record-keeping.

The General journal is used to enter the general transactions and corrections, or adjustments, you would not normally enter in the Sales journal, Purchase journal, Receipts journal, Payments journal.

When to use the general journal?

The general journal is used to enter and post (update) non-regular transactions to the General journal, such as:

- To Take-on your Opening Balances for General ledger accounts, Debtor accounts and Creditor accounts.
- To correct errors in posting (accounts have been debited or credited incorrectly or with incorrect amounts, etc.)
- To enter transactions for depreciation of fixed assets.
- To write-off bad debts and make provision for doubtful debts.
- To do year-end adjustments for the accrual-based accounting.

You may create or add any other Batch types or Journal types in Setup → Batch types to suit your specific requirements.

Examples of journals that you could use for specific other transactions:

- *Payroll journal: For recording payroll transactions*
- *Adjustments journal: - Accrual journal:*

- *Fixed assets journal: Depreciation journal:*

To process transactions in the General journal:

1. On the Default ribbon, select Batch entry (F2).

2. Select the General journal.

> *If no contra account, or a different contra account than the contra account you wish to use, is displayed on the Batch type selection screen, you need to set up the options for the batch. If you have not yet set up the General journal, or if your requirements should change, click on the F10:Setup icon.*

3. Click on the Open button.

> *Note that for General journal, the Amount entry field could be set to debit, credit or allow both, depending on your requirements.*

4. Enter the Alias (batch name) in the *Change alias* field on the Topbar of the Batch entry screen.

> *The alias option allows you to identify a batch by a unique name. You will be able to select the batch by alias or batch name if you need to reverse the posted batch or import a posted batch.*

5. Enter and/or select the following:

a) Reference number - Enter the applicable reference number.

b) Date - Enter or select the date of the transaction.

c) Description - Enter a brief description for the transaction.

> *You need to enter a sensible description to describe the nature of the transaction.*

d) Account - Select the applicable account to which you need to allocate the debit or the credit transaction.

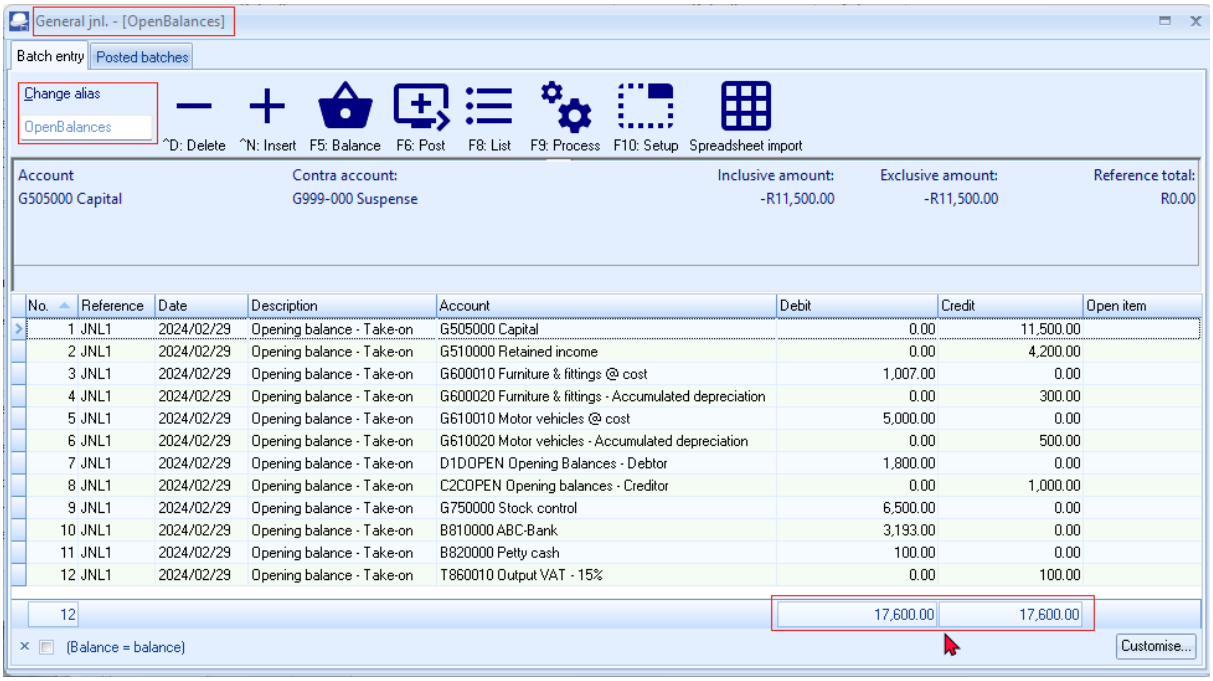
e) Tax - Select the applicable Input Tax or Output Account for the transaction, if applicable.

> *This is only applicable if Input VAT/GST/Sales Tax is allowed on a transaction, and if you are registered as a VAT/GST/Sales Tax Vendor. If no VAT/GST/Sales Tax is applicable to the transaction, select the "Empty" option as the "No Tax" code.*

> *Since no Tax is applicable to these transactions, you may select to hide the tax column, F7:Exclusive and F7:Inclusive icons, as well as the lookup facility in the Setup options for the General journal, as in this example.*

f) Amount - Enter the amount of the transaction (Inclusive or Exclusive of VAT/GST/Sales Tax, if applicable).

6. After entering the transactions in the General journal, the transactions will be displayed as follows:



You may enter transactions in a batch daily, and only post at the end of the month. Exiting or closing the batch, or even osFinancials5/TurboCASH5, will not cause these transactions to be lost. You may also choose to post after every entry.

7. Click on the F5:Balance icon, to create balancing transactions for the transactions entered in the batch, if the batch is not in balance.

It is not necessary to balance the batch if you have entered debit transactions for the same amount as for credit transactions, the net total of all transactions (debits minus credits) and the reference total for the entire batch (journal) should be zero.

will generate balancing entries to the selected contra accounts and the Input VAT/GST/Sales Tax or Output VAT/GST/Sales Tax accounts (if a Tax code was selected for a transaction).

8. Click on the F8:List icon to print a list of the transactions in the batch.

It is a good idea to list the batch, and check the entries on the batch thoroughly. If there are any errors, you may edit the batch, before posting the batch.

9. Click on the F6:Post icon, to post (update) the batch to the ledger.

It is not necessary to post (update) the transactions at the end of each day. You may add and/or post the transactions on a daily, or weekly basis, or at the end of a month. When you have entered a few transactions, you may close or exit the batch. The data will not be lost.

Export / Import batch transactions

The following options is available to export and import batch transactions:

- Posted batches - Import a posted batch option (F9:Process) of the "*Batch entry*" screen. You may select a posted batch on the Posted batches tab of the "*Batch entry*" screen to import.
- Spreadsheet Import Export - osFinancials5/TurboCASH5 supports the "*Excel Workbook (*.xlsx) file type* Spreadsheet import and export feature.

- Spreadsheet export - You may export unposted batch transactions and save it as a "*Excel Workbook (*.xlsx) file type.*
- Spreadsheet import - You may import batch transactions from a saved "*Excel Workbook (*.xlsx) file type.*

- Unposted batches
  - Export batch transactions - Write delimited file option (F9:Process) of the "*Batch entry*" screen. This will create a Comma Separated Value (*.csv) file.
  - Import batch transactions - Delimited file import option (F9:Process) of the "*Batch entry*" screen. Select the Comma Separated file (*.csv) file.

Created with the Standard Edition of HelpNDoc: Easily create HTML Help documents

Export posted batches

All files exported in the Posted batches option in the Export (Setup ribbon) cannot be imported as the TXF or XML file formats.

All other file types in the (Posted batches) option in the Export (Setup ribbon) cannot be imported as well using the Posted batches import option (F9:Process) option of the Batch entry screen.

The following options is available to export and import batch transactions:

- Posted batches - Import a posted batch option (F9:Process) of the "*Batch entry*" screen. You may select a posted batch on the Posted batches tab of the "*Batch entry*" screen to import.
- Spreadsheet Import Export - osFinancials5/TurboCASH5 supports the "*Excel Workbook (*.xlsx) file type* Spreadsheet import and export feature.
  - Spreadsheet export - You may export unposted batch transactions and save it as a "*Excel Workbook (*.xlsx) file type.*
  - Spreadsheet import - You may import batch transactions from a saved "*Excel Workbook (*.xlsx) file type.*
- Unposted batches
  - Export batch transactions - Write delimited file option (F9:Process) of the "*Batch entry*"

screen. This will create a Comma Separated Value (*.csv) file.

- Import batch transactions - Delimited file import option (F9:Process) of the "*Batch entry*" screen. Select the Comma Separated file (*.csv) file.

Import a posted batch

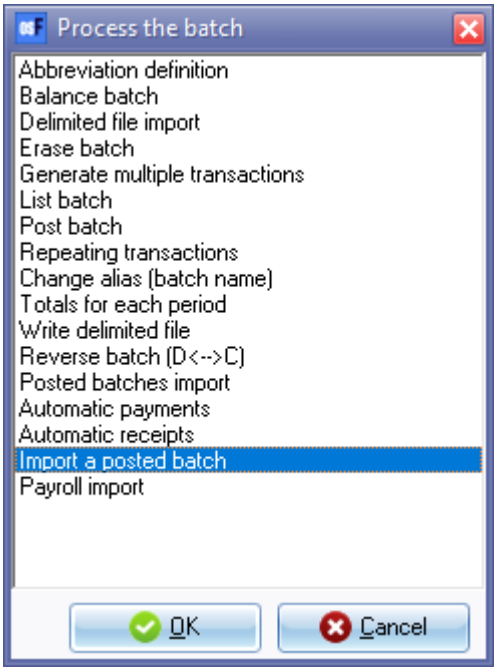
This option allows you to import the transactions from a posted batch in the same Set of Books.

If you need to import posted batches from TurboCASH4 or a different Set of Books in osFinancials, osFinancials5/TurboCASH5, you need to:

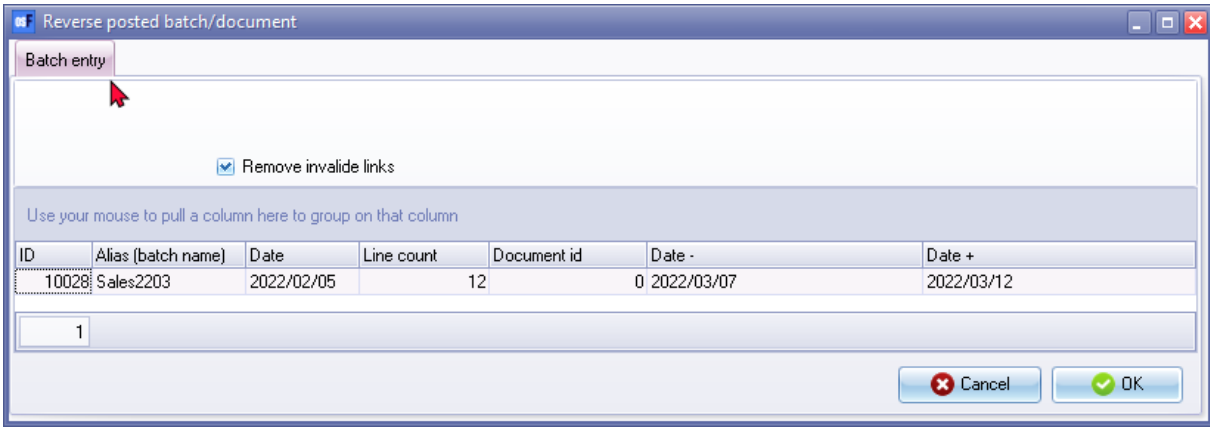
1. *On the Setup ribbon, go to Export (Posted batches tab) and create a valid export file in the Set of Books containing that batch.*
2. *On the Default ribbon, go to Batch entry - F9:Process and select the "Posted batches import" option in the Set of Books you need to import the batch.*

To import a posted batch:

1. On the Default ribbon, select Batch entry (F2).
2. Select a Batch type and click on the Open button.
3. Click on the F9:Process icon. The "*Process the batch*" options screen is displayed:



4. Select the Import a posted batch option, and click on the OK button. The "*Reverse posted batch/document*" screen is displayed:

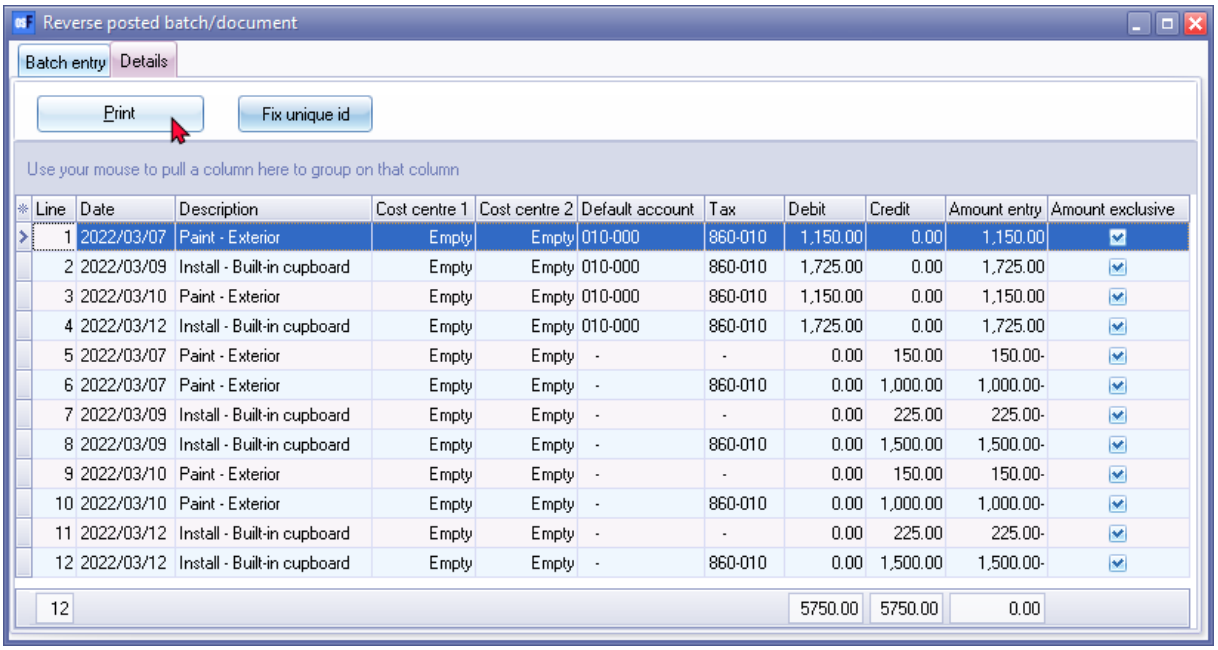


5. All posted batches associated with the selected batch type, will be listed. Select a batch to import. The Alias (batch name) makes it easier to identify the correct batch to import. View the details of the batch to make absolutely sure that it is the correct batch (journal).

> *To view the details of the transactions in the selected batch (journal), you may:-*
>
> - *Double-click on the selected batch (journal).*
> - *On the Details tab, the transactions for the selected batch will be listed. (If you wish to print a list of the transactions in the posted batch, you may click on the Print button to print a "Batch type - Posted batch" report).*

6. If you double-click, or select the Details option on the context menu, the following screen is

displayed:



Line	Date	Description	Cost centre 1	Cost centre 2	Default account	Tax	Debit	Credit	Amount entry	Amount exclusive

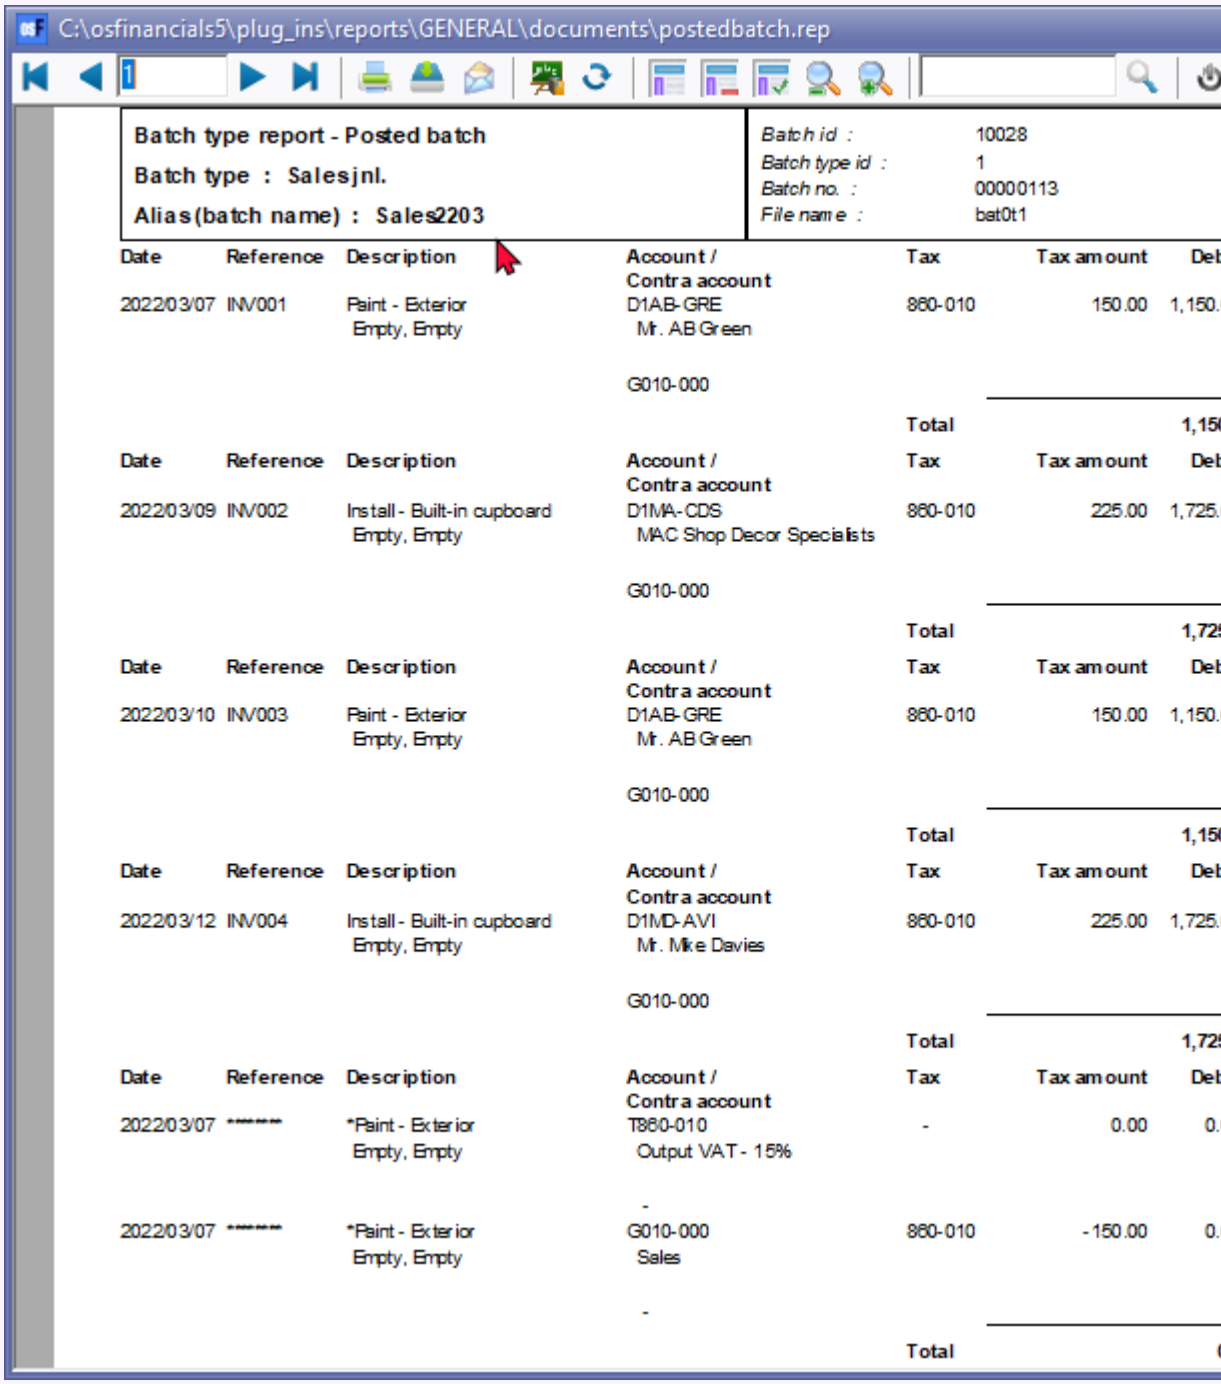
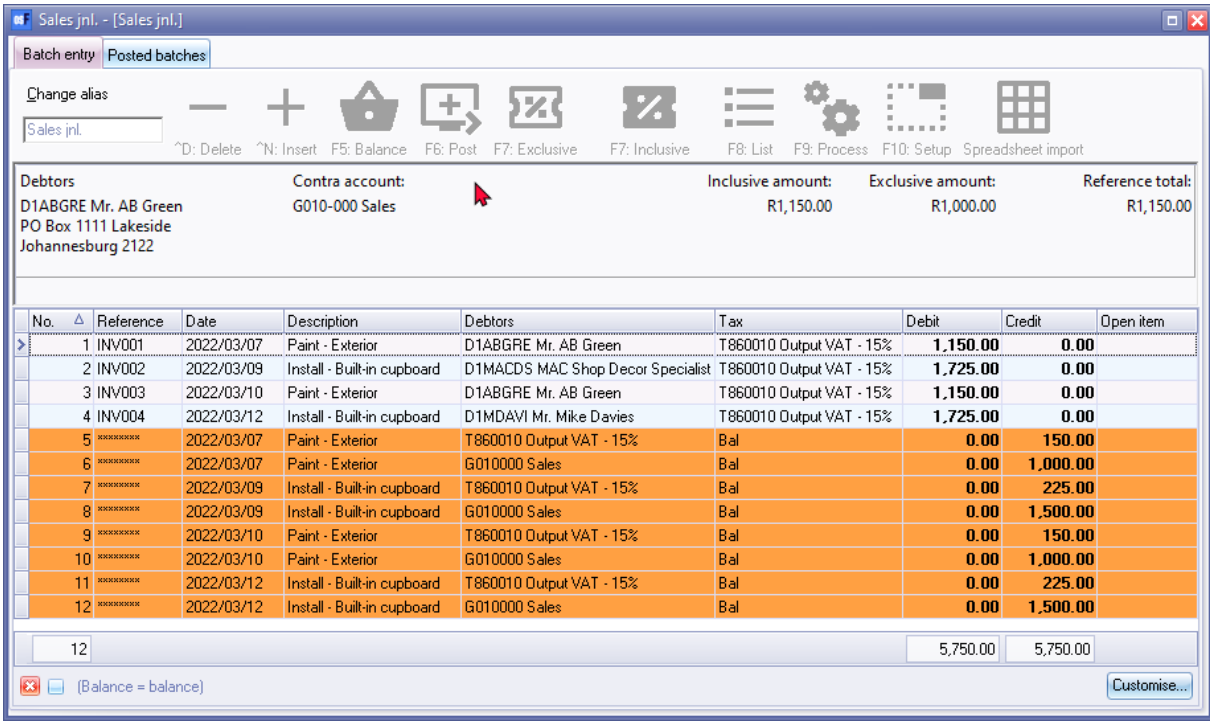
7. All the details of the transactions entered or imported and posted (updated) to the ledger for the selected batch, will be displayed. Check that the selected batch (journal) contains the transactions which needs to be imported, and click on the Batch entry tab.

You may click on the Print button to print the transactions in the posted batch. An example of the "Batch type - Poste



Only those batches for the selected batch type will be listed.

8. Select a batch and click on the OK button. All the transactions in the selected, posted batch will be imported into the selected batch. An example, is as follows:



Should the processing icons on the "Batch entry" screen is inactive during this process, you may need to close and reopen the batch.

Once you have finished entering / editing the transactions in the batch you need to: -

1. *Change the Alias (Batch name).*
2. *Balance the batch.*
3. *List the batch.*
4. *Post the batch.*

Write delimited file

The Write delimited file batch processing option allows you to export transactions in an unposted batch to a valid Comma Separated Batch (*.csv) file format.

To import delimited files in a batch, you need to select a valid file format using the Delimited file import batch processing option.

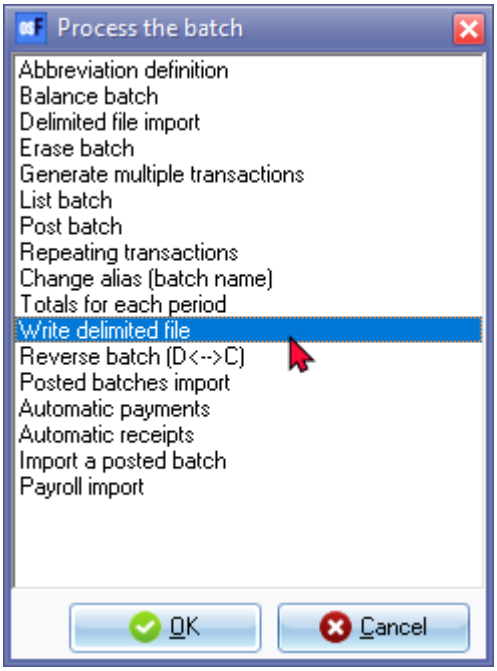
To write a delimited file:

1. On the Default ribbon, select Batch entry (F2).

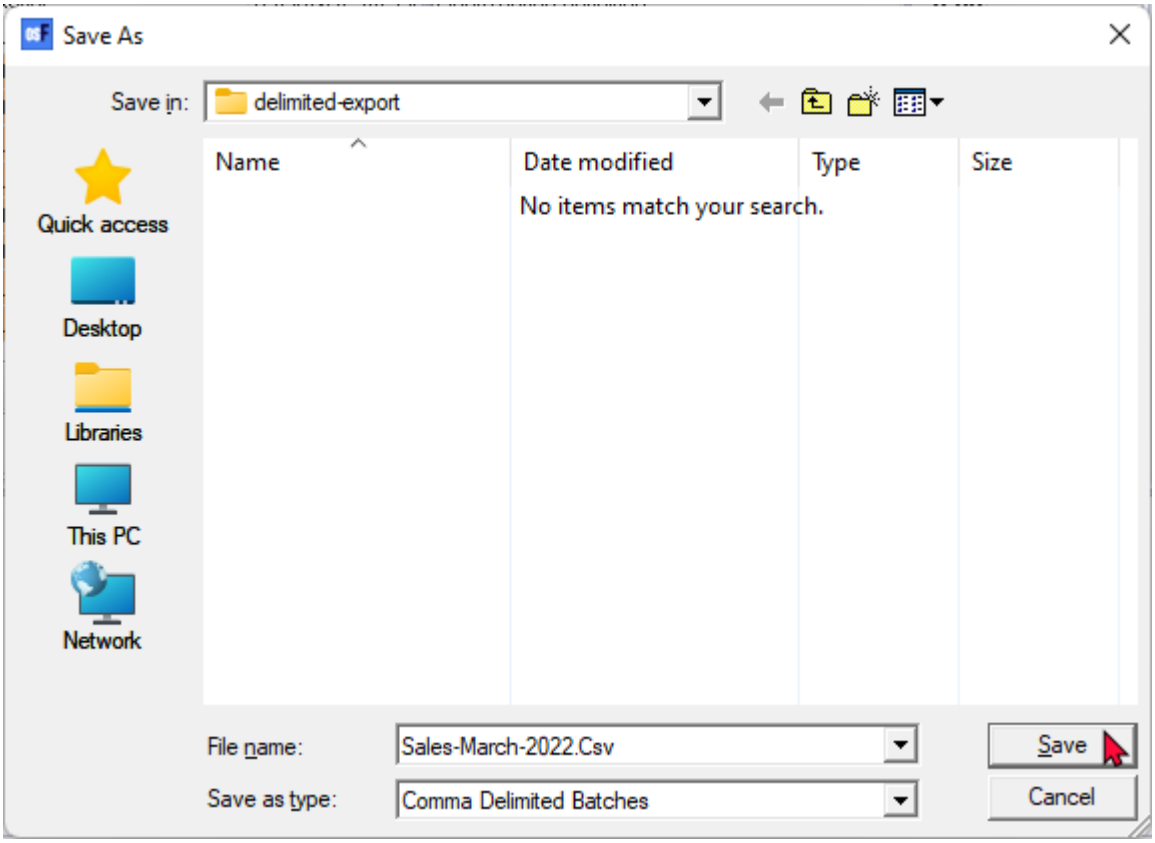
2. Select a Batch type and click on the Open button.

> *You may right-click on the selected batch (journal) on the Batch type selection screen, and select the Write delimited file option on the context menu.*

3. Click on the F9:Process icon. The "*Process the batch options*" screen will be displayed.



4. Select the Write delimited file option, and click on the OK button. The "*Save as*" screen will be displayed.



5. Enter a File name for the "*Comma Delimited Batches*" file. You may select any valid folder on your system, in which you wish to save the file. You may create a new folder, if you click on the New folder icon on the *"Save as"* screen.

6. Click on the Save button. All the transactions in the selected batch will be saved (exported) into the selected folder.

Created with the Standard Edition of HelpNDoc: Transform Your CHM Help File Creation Process with HelpNDoc

Delimited file import

The Delimited file import batch processing option allows you to import transactions in a batch from valid Comma Separated Batch (*.csv) file format.

To import delimited files in a batch, you need to select a valid file format (created with the Write delimited file option).

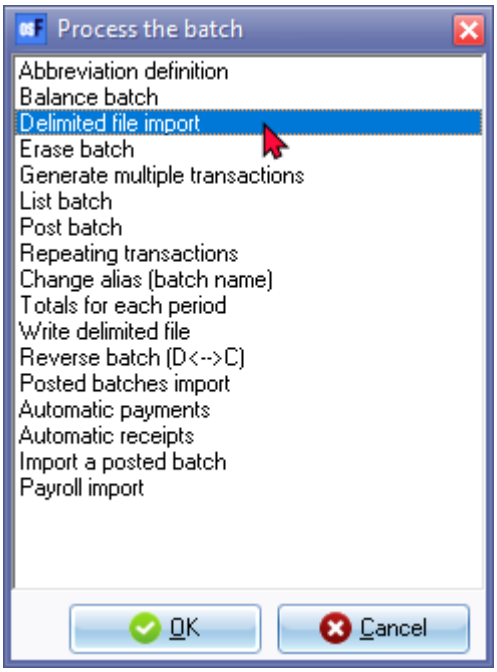
To import a delimited file into a batch:

1. On the Default ribbon, select Batch entry (F2).

> *You may right-click on the selected batch (journal) on the Batch type selection screen, and select the Delimited file import option on the context menu.*

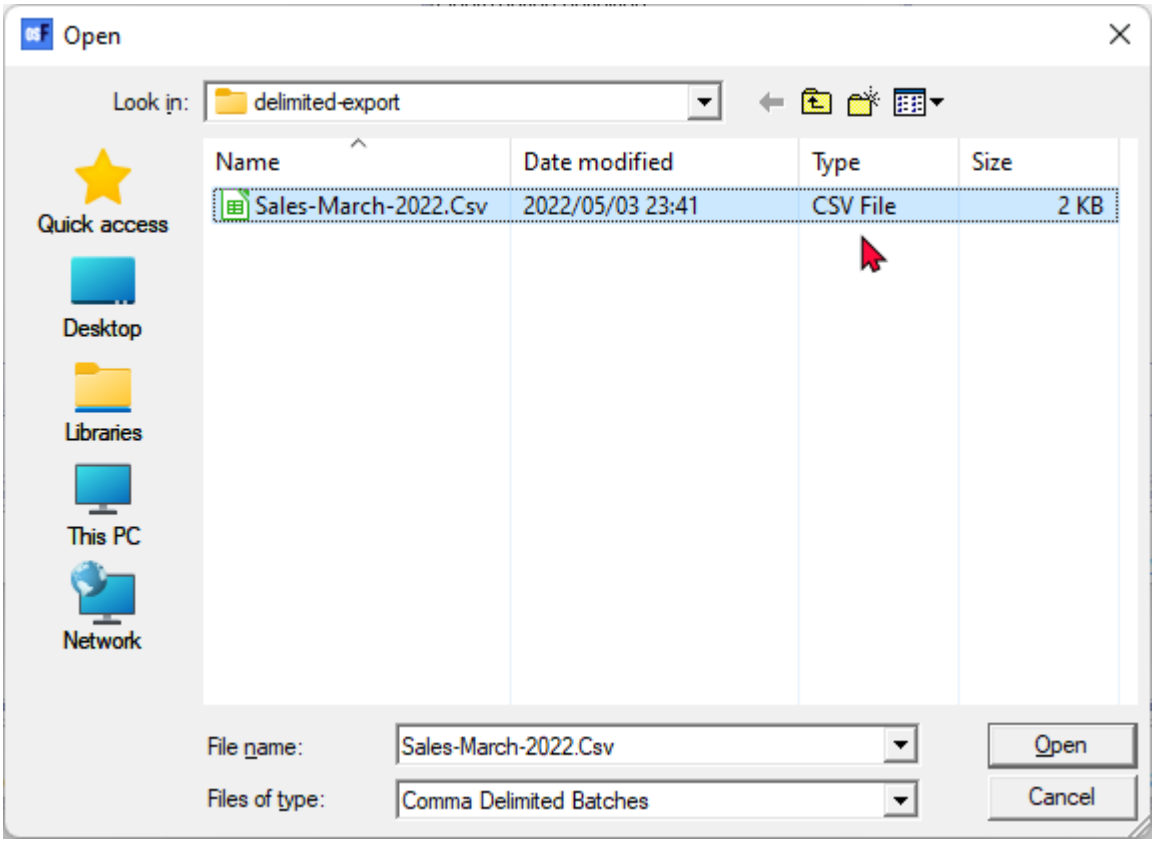
2. Select a Batch type and click on the Open button. The Batch entry transaction screen for the selected Batch type will be displayed.

3. Click on the F9:Process icon. The "*Process the batch*" options screen is displayed:



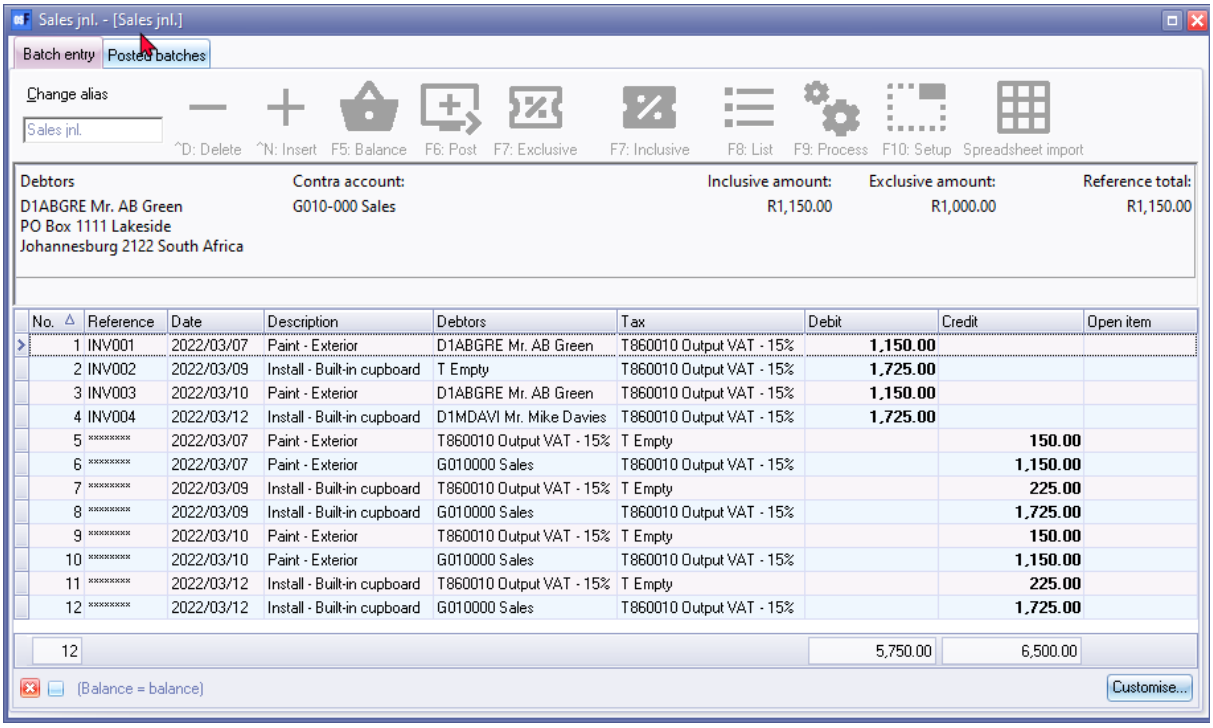
4. Select the Delimited file import option, and click on the OK button.

5. The "*Open*" screen is displayed:



6. Select valid "*Comma Delimited Batches*" (default) file from the folders on your system

7. Click on the Open button. All the transactions in the selected, posted batch will be imported into the selected batch.



Should the processing icons on the "Batch entry" screen is inactive during this process, you may need to close and reopen the batch.

Imported or copied text in osFinancials5/TurboCASH5 screens from external files - Description lines in batches

When importing or copying text for account. group descriptions or any other screens, or forms, the fields from external programs such as spreadsheet, word documents, etc. the hyphenation character "–" may be displayed as a pipe character " | " in lookups and some screens or as " " in some screens and in reports, document layout files, etc.

For example, Motor vehicles Net value if copied or imported into Setup - Accounts as Motor vehicles – Net value (with the hyphenation format) it will be displayed as Motor vehicles Net value on some screens and in reports and as Motor vehicles | Net value on lookup screens.

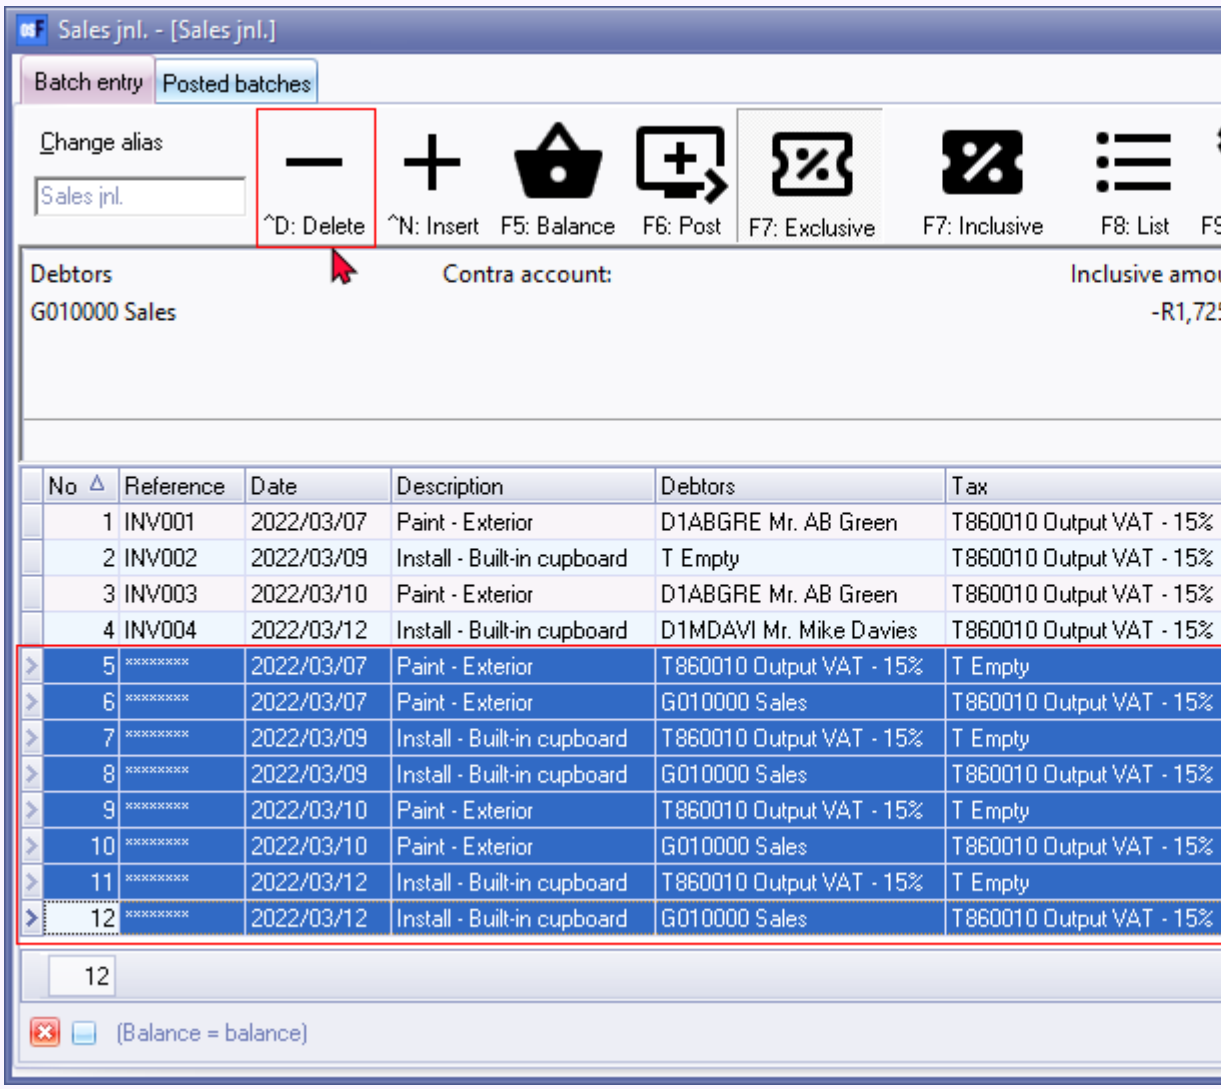
You need to use the dash sign "-" to be displayed correctly.

Solution:

To ensure hyphens display correctly in osFinancials5/TurboCASH5, use the standard dash character ("-") instead of the hyphenation character when copying or importing text from external files.

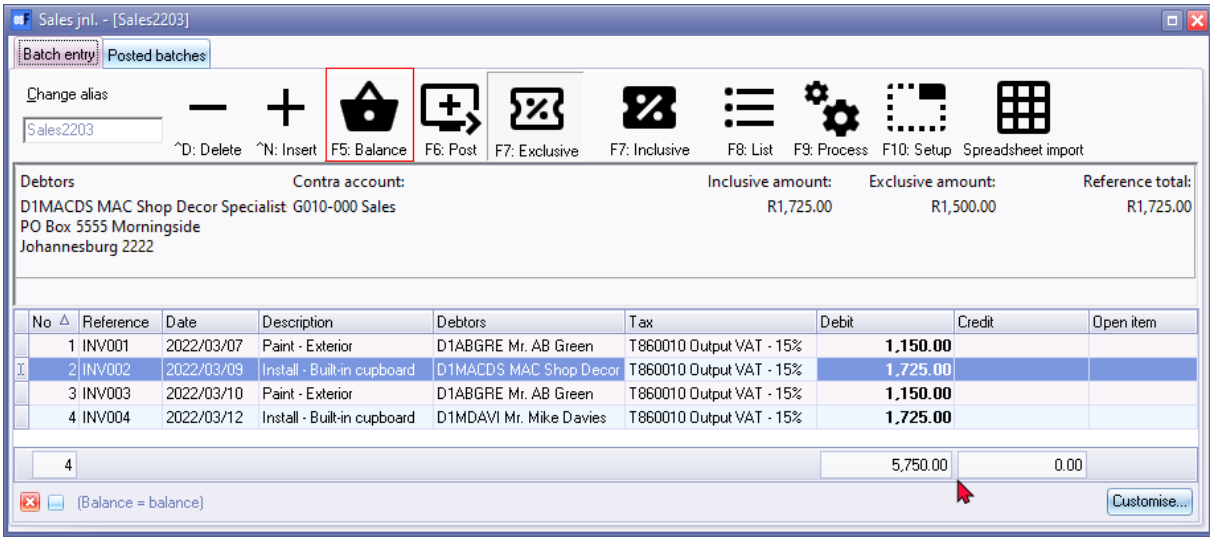
8. All the transactions included in the Exported file saved using the "*Write delimited file*" option, will be imported into the batch.

*If Balancing entries (transactions indicated with ******** (8 asterisks) in the "Reference" column) were included in the must be deleted.*

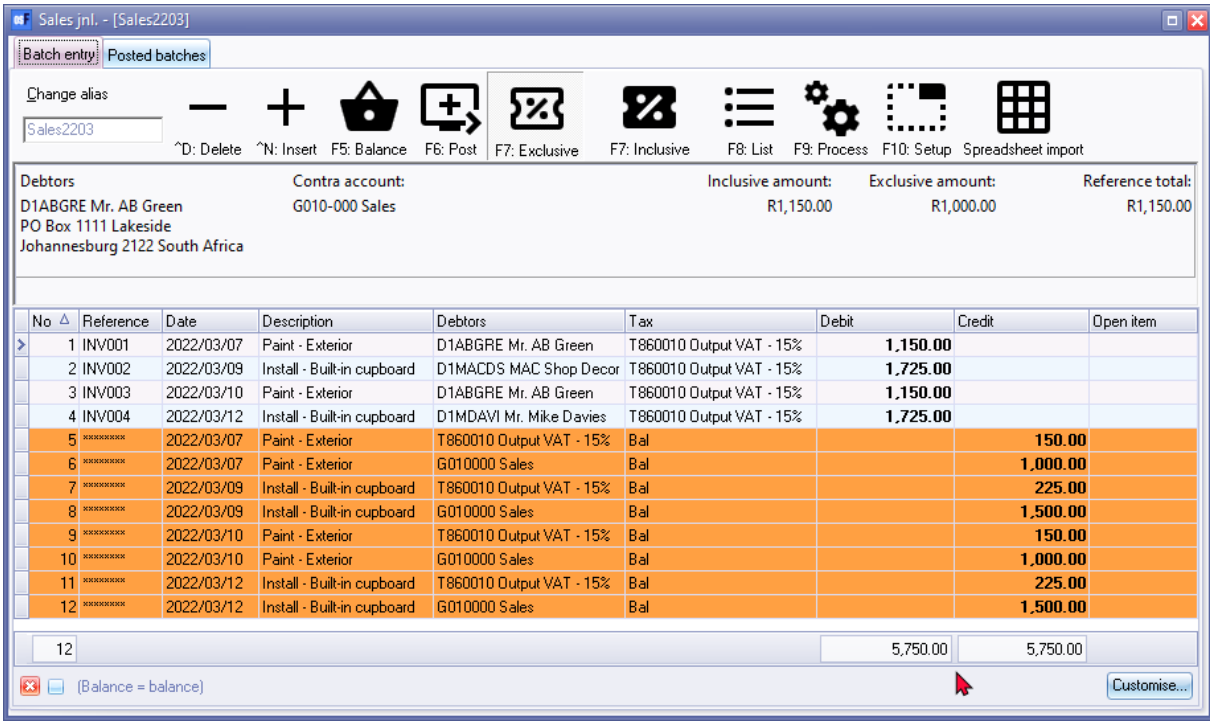


9. Edit the transactions as necessary. In this example the Debtors account is "*T-Empty*". You may need to select the account,, or delete the transaction, if you do not wish to import that transaction.

It is important to check and edit the transactions imported in the batch, before you proceed to balance and post the batch.



10. Press F5: Balance to generate balancing entries for the batch. The balancing entries, as per this example, should be as follows:



Once you have finished entering / editing the transactions in the batch you need to: -

1. *Change the Alias (Batch name).*
2. *Balance the batch.*
3. *List the batch.*
4. *Post the batch.*

Created with the Standard Edition of HelpNDoc: Effortlessly Convert Your Word Doc to an eBook: A Step-by-Step Guide

Batch transactions - Spreadsheet Export / Import

osFinancials5/TurboCASH5 supports the "*Excel Workbook (*.xlsx) file type* Spreadsheet import and export feature.

- Spreadsheet export - You may export unposted batch transactions and save it as a "*Excel Workbook (*.xlsx) file type.*
- Spreadsheet import - You may import batch transactions from a saved "*Excel Workbook (*.xlsx) file type.*

This feature may be used to import transactions into:

- Batches into the same Set of Books - Also handy to handle Repeating transactions.
- Batches into a different Set of Books with a similar accounts.
- Batches into a new Set of Books - Created from scratch - Create your own Set of Books (Advanced)? option for Firebird database types.
- Batches into a new Set of Books - Created from scratch - Create your own Set of Books (Advanced)? option for Microsoft SQL sever (MSSQL) database types.

Before you may import batch transactions in a new Set of Books, you need to do the necessary setup and add batch types.

You also need to create or import:

- *Accounts*
- *Debtor (customer / client) accounts*
- *Creditor (supplier / supplier) accounts*

Once this is done, you may start to import batch transactions from a saved "Excel Workbook (.xlsx) file type.*

Created with the Standard Edition of HelpNDoc: Streamline Your CHM Help File Creation with HelpNDoc

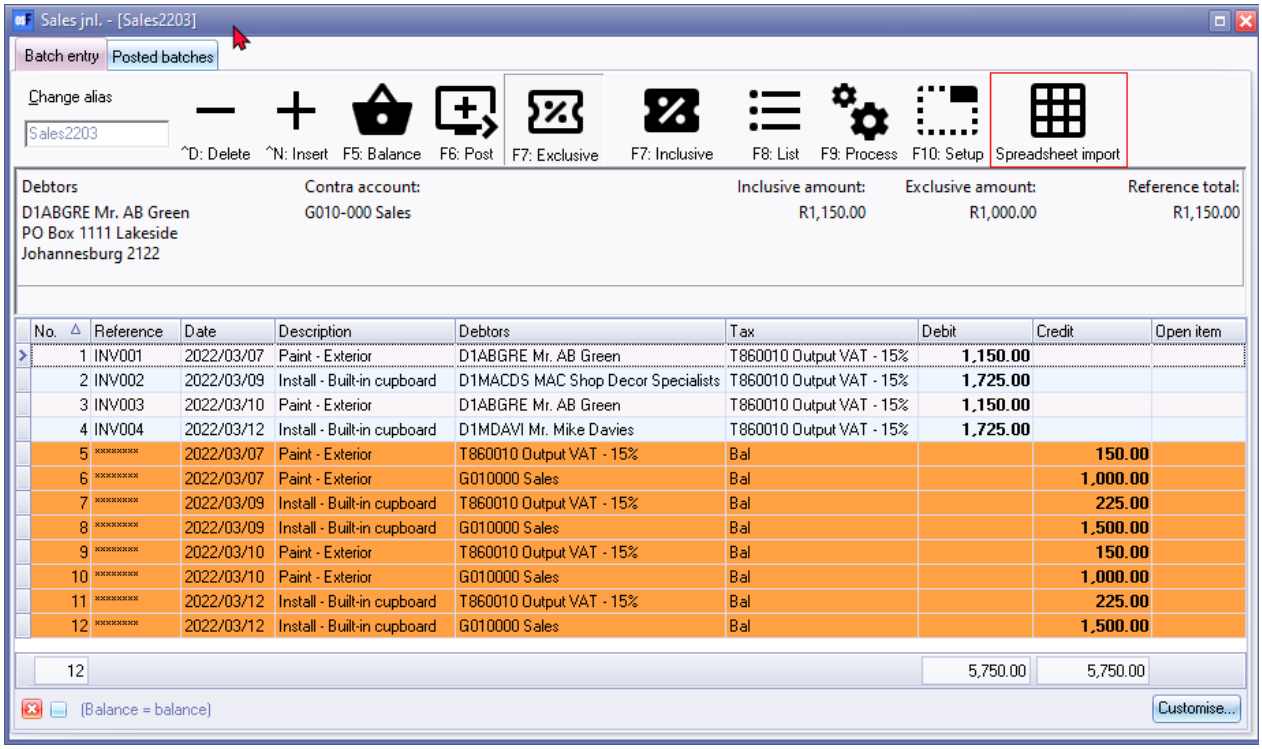
Batch transactions - Spreadsheet Export

You may export unposted batch transactions in a selected batch and save it in a spreadsheet "*Excel Workbook (*.xlsx) file type.*

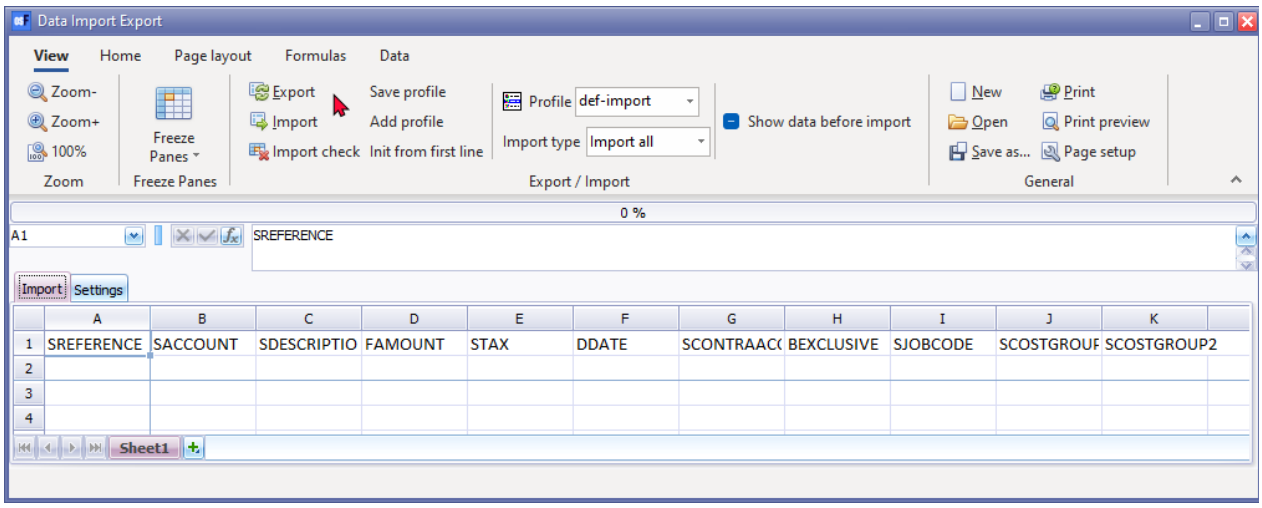
You may then import it into a batch, when required.

To export batch transactions from a Excel Workbook (xlsx) file:

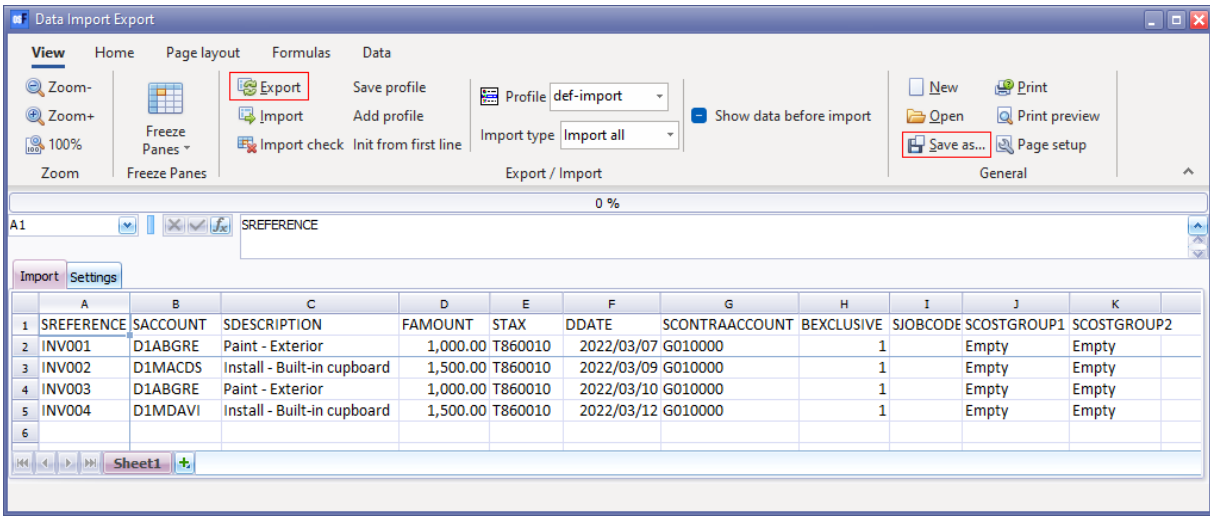
1. On the Default ribbon, select Batch entry (F2).
2. Select an unposted batch, and click Open.



3. Click on the Spreadsheet import icon.
4. The "*Data Import Export*" be launched without any data.



5. On the "*Data Import Export*" screen, click Export. All the transactions (excluding the balancing transactions, if the batch is already balanced) in the unposted batch will be imported the "*Data Import Export*" screen.



SREFERENCE	SACCOUNT	SDESCRIPTION	FAMOUNT	STAX	DDATE	SCONTRAACCOUNT	BEXCLUSIVE	SJOBCODE	SCOSTGROUP1	SCOSTGROUP2
INV001	D1ABGRE	Paint - Exterior	1,000.00	T860010	2022/03/07	G010000	1		Empty	Empty
INV002	D1MACDS	Install - Built-in cupboard	1,500.00	T860010	2022/03/09	G010000	1		Empty	Empty
INV003	D1ABGRE	Paint - Exterior	1,000.00	T860010	2022/03/10	G010000	1		Empty	Empty
INV004	D1MDAVI	Install - Built-in cupboard	1,500.00	T860010	2022/03/12	G010000	1		Empty	Empty

If the Batch includes balancing transactions, these will not be included in the "Data Import Export" screen.

Imported or copied text in osFinancials5/TurboCASH5 screens from external files - Description lines in batches

When importing or copying text for account. group descriptions or any other screens, or forms, the fields from external programs such as spreadsheet, word documents, etc. the hyphenation character "–" may be displayed as a pipe character " | " in lookups and some screens or as " " in some screens and in reports, document layout files, etc.

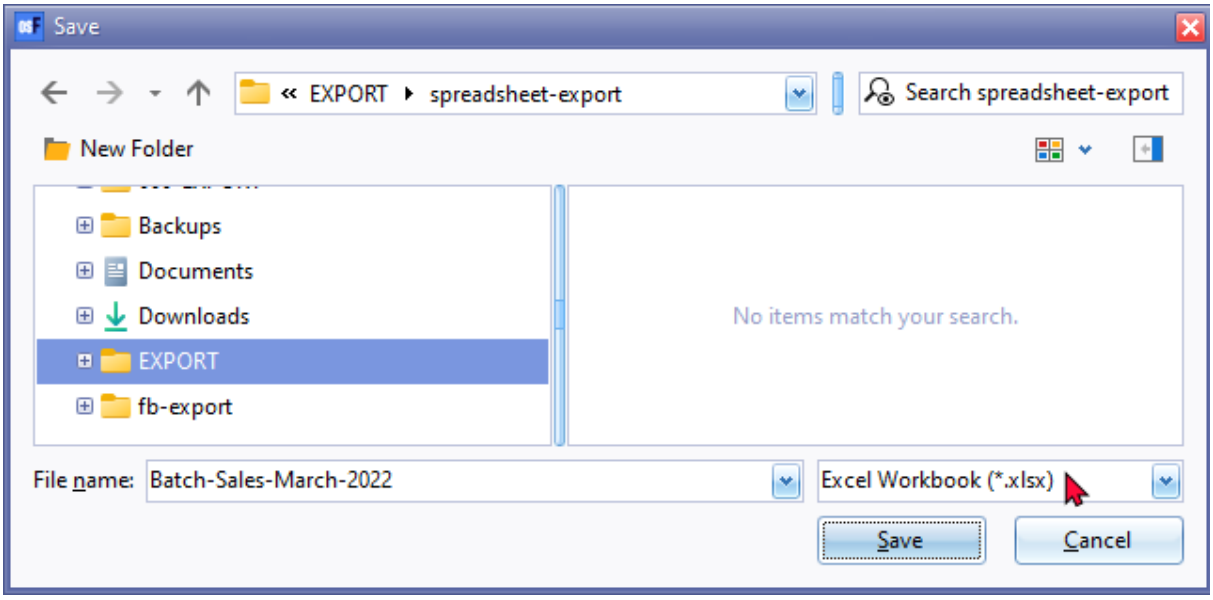
For example, Motor vehicles Net value if copied or imported into Setup - Accounts as Motor vehicles – Net value (with the hyphenation format) it will be displayed as Motor vehicles Net value on some screens and in reports and as Motor vehicles | Net value on lookup screens.

You need to use the dash sign "-" to be displayed correctly.

Solution:

To ensure hyphens display correctly in osFinancials5/TurboCASH5, use the standard dash character ("-") instead of the hyphenation character when copying or importing text from external files.

6. Click on Save as... to save the imported transactions to an Excel Workbook.



7. Select the folder and enter a name for the file.
8. Click on the Save button.
9. Click on the Close icon in the titlebar of the "*Data Import Export*" screen.

The data of the imported accounts is imported (populated) in the following eleven (11) columns in the spreadsheet and is as follows:

		Field name	*Values*	*Comments*
	A	*SREFERENCE*	*Alpha-numeric*	*Reference entered*
	B	*SACCOUNT*	*Account code - Prefixed by:* *G = Ledger account* *D = Debtor account* *C = Creditor account* *B = Bank account*	*Selected account - Account lookup*
	C	*SDESCRIPTION*	*Description*	*Description entered for the transaction*
	D	*FAMOUNT*	*Amount*	*Amount entered - Exclusive of Tax*
	E	*STAX*	*Tax account code (should be pre-fixed by T)*	*Selected tax account - Tax lookup*

	F	DDATE	Date	Date of the transaction
	G	SCONTRAACCOUNT	Account code - Prefixed by: G = Ledger account D = Debtor account C = Creditor account B = Bank account	Account code selected / set in F10:Setup (for balancing entries)

	J	SCOSTGROUP1	Cost centre 1 name	Cost centre 1 group (if activated and selected)
	K	SCOSTGROUP2	Cost centre 2 name	Cost centre 2 group (if activated and selected)

Created with the Standard Edition of HelpNDoc: 5 Reasons Why a Help Authoring Tool is Better than Microsoft Word for Documentation

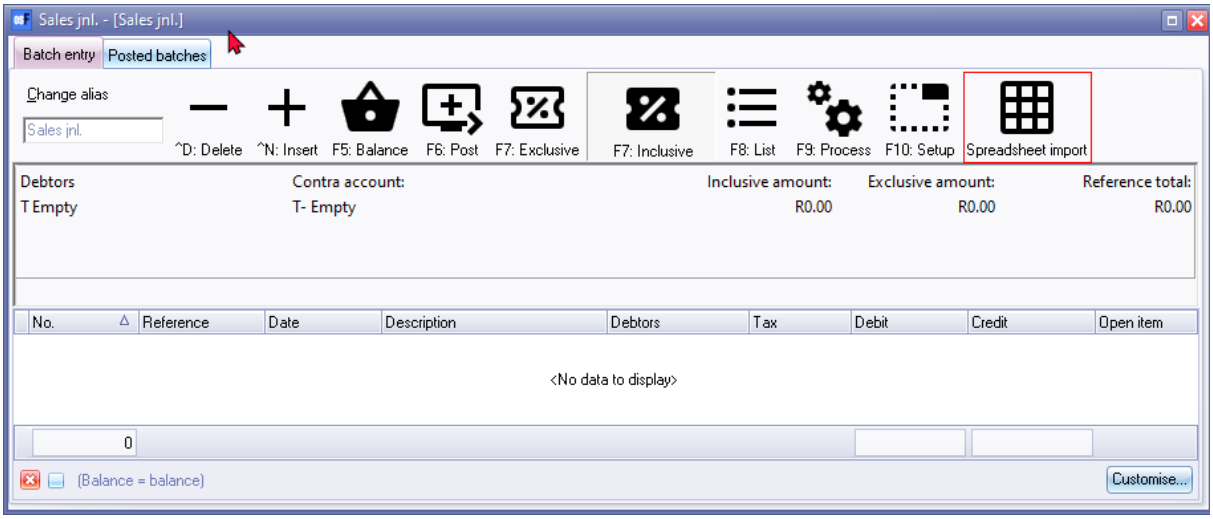
Batch transactions - Spreadsheet Import

You may import batch transactions from a valid spreadsheet saved as a "*Excel Workbook (*.xlsx) file type* into a batch.

You may then add new transactions, edit existing transactions, etc.

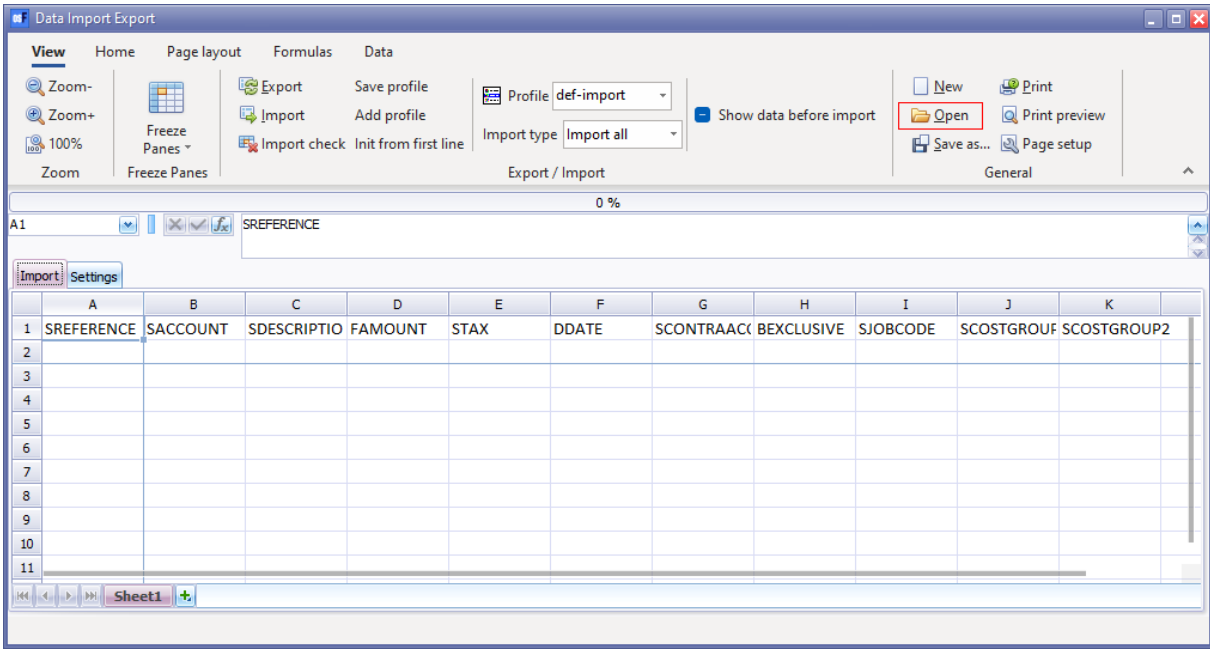
To import batch transactions from a Excel Workbook (xlsx) file:

1. On the Default ribbon, select Batch entry (F2).
2. Select a blank Batch, and click Open.

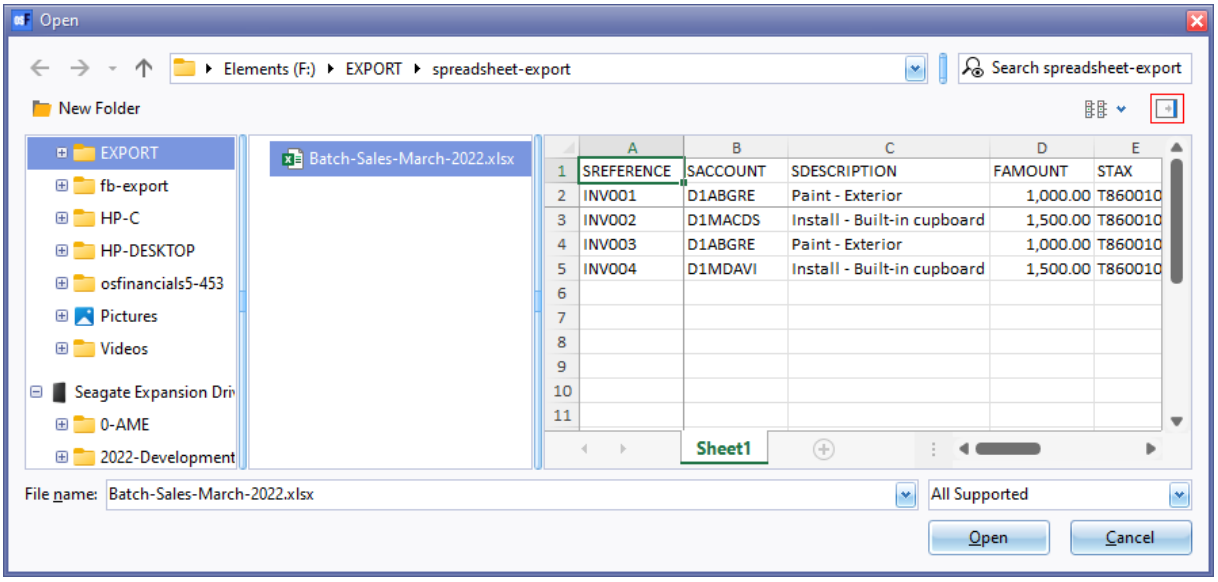


3. Click on the Spreadsheet import icon.

4. The "*Data Import Export*" be launched without any data.

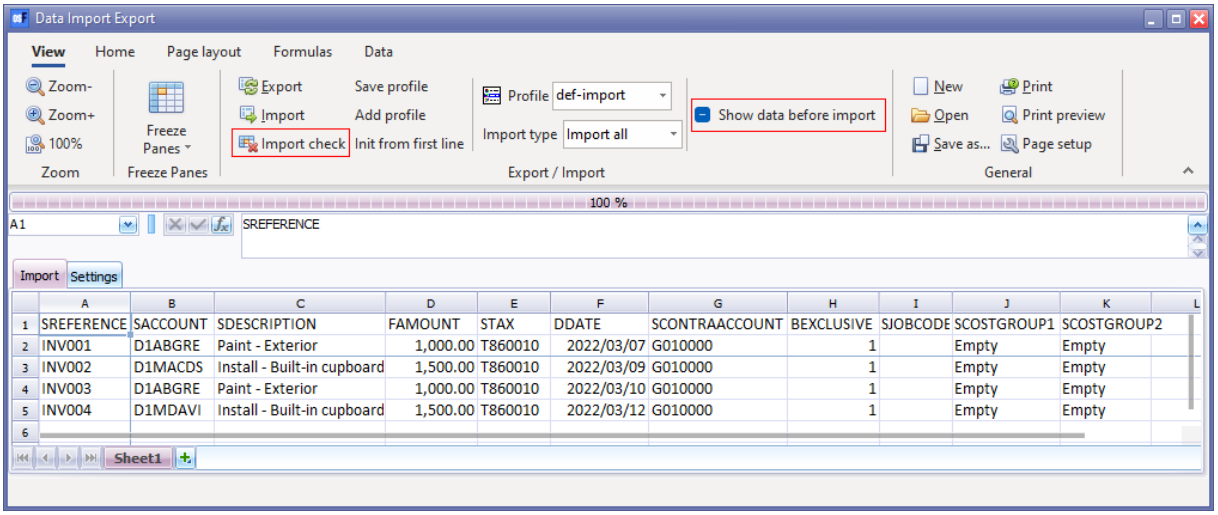


5. On the "*Data Import Export*" screen, click Open to select a valid saved exported file.



You may click on the "Show the preview pane" icon on the "Open" screen to display a preview of the selected file to open (import) in the "Data Import Export" screen..

6. Select the folder and file. Click on the Open button. The batch transactions included in the selected "Excel Workbook (*.xlsx) file opened will be imported and listed in the "*Data Import / Export*" screen.



Should you need to change an account (in column B - "SACCOUNT" or column E - "STAX" or column G - "SCONTRAAC option.

	A	B	C	D	E	F	G

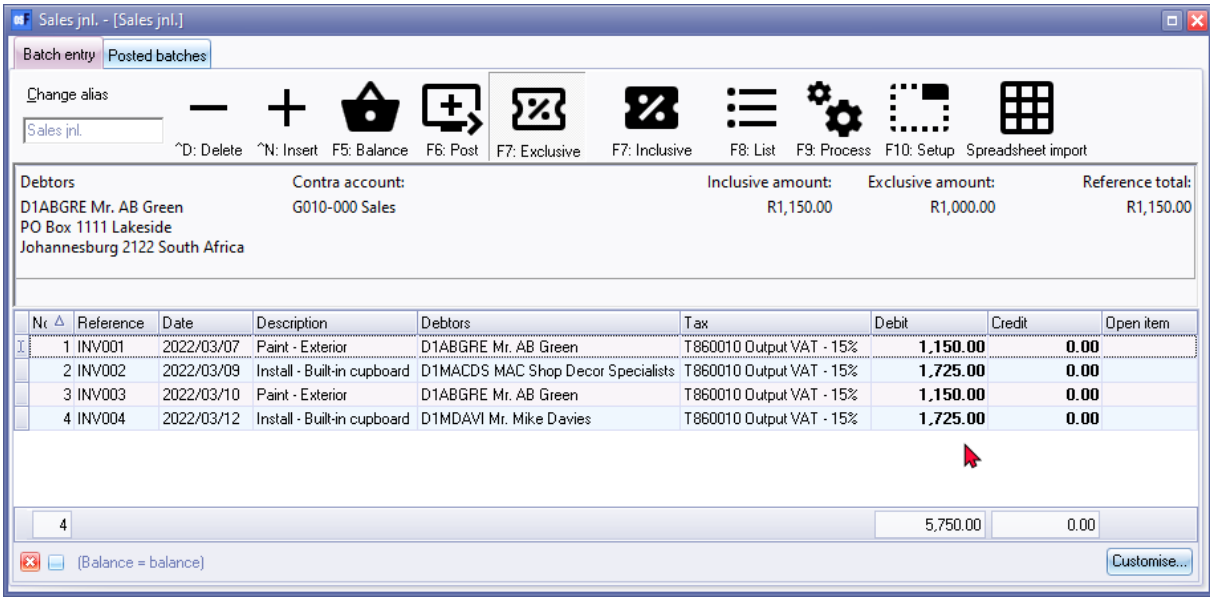
10. Click on the Import icon. The colour of the cells in the rows for the transactions in the "*SREFERENCE*" column should be green. This means that the import process is finalised.

11. Click on the Close icon in the titlebar of the "*Data Import Export*" screen. The imported transactions will be listed in the "*Batch entry*" screen.



No	Reference	Date	Description	Debtors	Tax	Debit	Credit	Open item
1	INV001	2022/03/07	Paint - Exterior	D1ABGRE Mr. AB Green	T860010 Output VAT - 15%	1,150.00	0.00	
2	INV002	2022/03/09	Install - Built-in cupboard	D1MACDS MAC Shop Decor Specialists	T860010 Output VAT - 15%	1,725.00	0.00	
3	INV003	2022/03/10	Paint - Exterior	D1ABGRE Mr. AB Green	T860010 Output VAT - 15%	1,150.00	0.00	
4	INV004	2022/03/12	Install - Built-in cupboard	D1MDAVI Mr. Mike Davies	T860010 Output VAT - 15%	1,725.00	0.00	
4						5,750.00	0.00	

12. You may edit the transactions if necessary.

Once you have finished importing and/or editing the transactions in the batch you need to: -

1. *Change the Alias (Batch name).*
2. *Balance the batch.*
3. *List the batch.*
4. *Post the batch.*

Created with the Standard Edition of HelpNDoc: Free Web Help generator

Reverse posted batches

This feature allows you to cancel transactions that were processed in batches (journals) which have already been updated (posted) to the ledger. By selecting this option, all the transactions that were previously updated (posted) to the ledger will be cancelled and removed from the transaction file.

The cancelled transactions will be automatically imported to the selected batch (journal). At this point, you have the option to either erase or delete the entire batch (journal). If you wish to keep the cancelled (reversed) batch, you can edit and correct the transactions, balance the batch, print the batch list, and post it to the ledger.

The Log-report in Setup → Access control (Setup ribbon) will list the date and time, as well as which user and on which device, the batch were cancelled as REVBATC - Reverse batch! and the Batch ID.

If any transactions are already entered or imported in a batch (journal), which is not yet posted (updated) to the ledger, and all or some of the transactions are incorrect, you may use the following options to edit the transactions in the batch (journal):

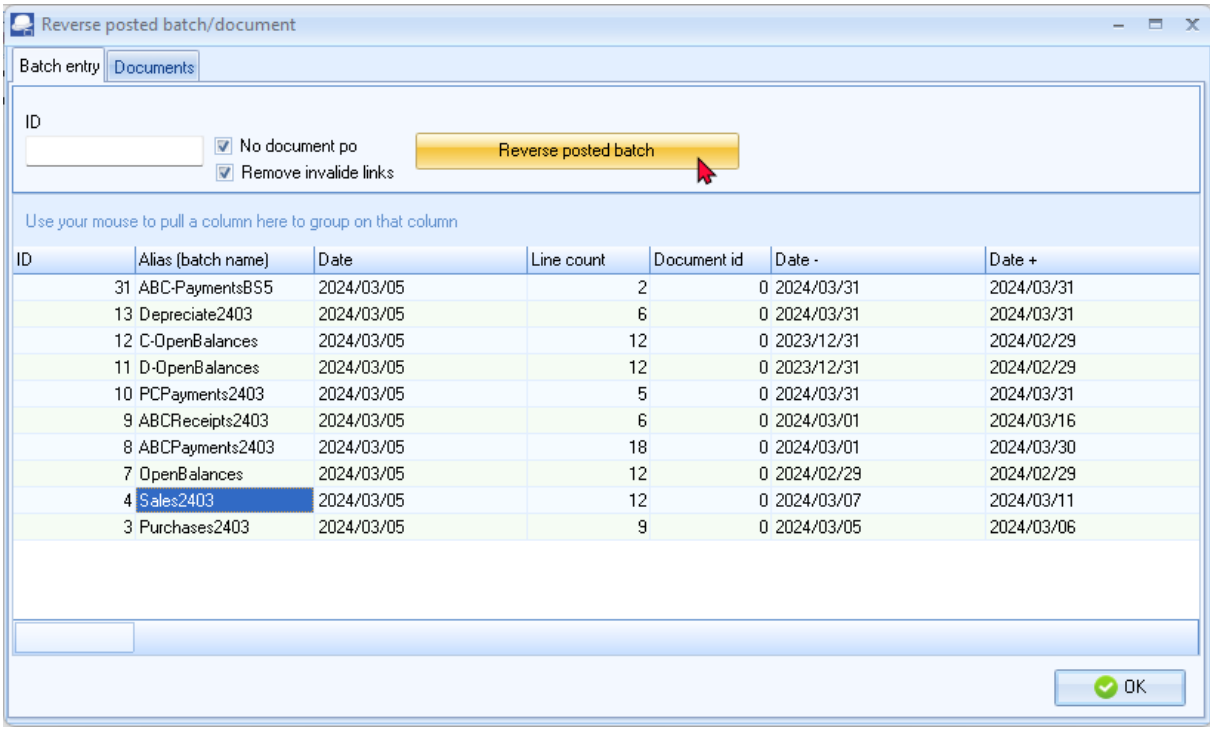
- *Delete Batch - delete the entire journal as well as all the transactions entered or imported.*
- *Delete Transaction - delete only the selected transaction in the batch (journal).*
- *Reverse batch (D<-->C) - all amounts entered or imported in the debit column of the journal, will be transferred to the credit column, and all amounts entered or imported in the credit column of the journal will be transferred to the debit column.*

This option should only be used to correct critical errors. Errors encountered in the normal accounting process, (for example, errors of omission, errors of principle, posting to incorrect accounts, errors of principle, etc.) should be corrected in the general journal or specific batches (journals).

It is recommended that you make a backup of the Set of Books, before you start to use this facility to cancel or reverse a posted batch. In the event of making a mistake or if some problems are experienced, you may then easily restore the Set of Books from the backup file.

To reverse or cancel all the transactions in a posted batch (journal):

1. On the Setup ribbon, select Global processes → Reverse posted batch/document .



No document posted

- *If this field is selected, it will only list the batches processed in the Batch entry (F2) option.*
- *If this field is not selected, it will list all the batches processed in the Batch entry (F2) options well as any documents (i.e Invoices, Credit notes, Purchases and Supplier returns.*

2. Select the posted batch from the list to be reversed or cancelled.

You may identify the posted batch (journal) by Batch number as displayed on the Batch list lookup facility, alias or date and time. If you changed the alias of the batch, it will be easier to identify the batch (journal) to be reversed, or cancelled, by the alias (batch name).

3. View the details of the batch to make absolutely sure that it is the correct batch (journal).

To view the details of the transactions in the selected batch (journal), you may:-

- *Double-click on the selected batch (journal).*
- *On the Details tab, the transactions for the selected batch will be listed. (If you wish to print a list of the transactions in the posted batch, you may click on the Print button to print a Batch type - Posted batch report).*

4. If you double-click, or select the Details option on the context menu, the following screen is displayed:

6. Click on the Reverse posted batch button to start the process. The following information message will be displayed:

This will radically alter your data! We recommend that you stop and make a backup! Do you wish to continue?

7. Click on the Yes button, only if you are absolutely sure that the selected batch is correct, and that you need to continue with this process.

> *If you have not made a backup of the Set of Books, before starting this process, it is recommended that you click on the No button, and first make a backup of the Set of Books.*

8. Wait until the process is finalised.

> *It is advisable not to use your system for other tasks while this process is running.*

> *Once this process is finalised, the selected batch will not be listed on the Reverse posted batch screen.*

9. Click on the Close button in the title bar of the Reverse posted batch/document screen to exit (close) this facility.

10. Click on the Batch entry icon, and select the batch type, to see the transactions of the posted batch which was reversed. You may then edit these transactions, delete the transactions, etc. Once your transactions is corrected, you need to balance the batch (journal), and post (update) the transactions to the ledger.

Documents (Sales and Purchases)

In osFinancials5/TurboCASH5, the Documents feature provides a comprehensive solution for processing and managing sales documents and purchase documents related to debtor (customer/client) and creditor (supplier/vendor) accounts. It offers a range of functionalities to streamline document management and automate source document and transaction generation. Additionally, osFinancials5/TurboCASH5 supports the usage of up to two reporting groups for documents. This feature allows you to categorize and classify your documents based on different criteria or attributes that are relevant to you. This categorization and classification feature enhances your document organization capabilities, making it easier to manage and retrieve specific documents when needed. Here's an overview of the key aspects of the Documents feature:

1. Sales documents: This includes (invoices, credit notes, quotes), associated with debtor accounts. You can create, process, and manage these sales documents (invoices, credit notes, quotes) within

osFinancials5/TurboCASH5. The Documents option provides a centralized interface to handle all sales documents efficiently. Additionally, the Documents option provides a centralized interface to process sales documents (invoices, credit notes, quotes) for debtors (customers/clients).

2. Purchase documents: This comprises purchases, supplier returns, orders relevant to creditor accounts. Similarly, you can create, process, and manage these purchase documents using the Documents option. It allows for seamless handling of purchase transactions and associated records. Furthermore, the Documents option provides centralized management for purchase documents (purchases, supplier returns, orders) for creditors (suppliers/vendors).

3. Transaction generation: When you create sales documents or purchase documents, osFinancials5/TurboCASH5 automatically generates the required transactions and source documents based on the document details. This ensures accurate and consistent recording of financial transactions in your accounting system. Moreover, in addition to the normal processing options, the context menus provide quick access to process various options for easy copying, converting documents, and more to process documents.

4. Layout files: The Documents feature allows you to choose from various layout files for printing or reprinting your sales and purchase documents. You can use the Report designer to customize the appearance and format of these documents to align with your business branding or specific requirements.

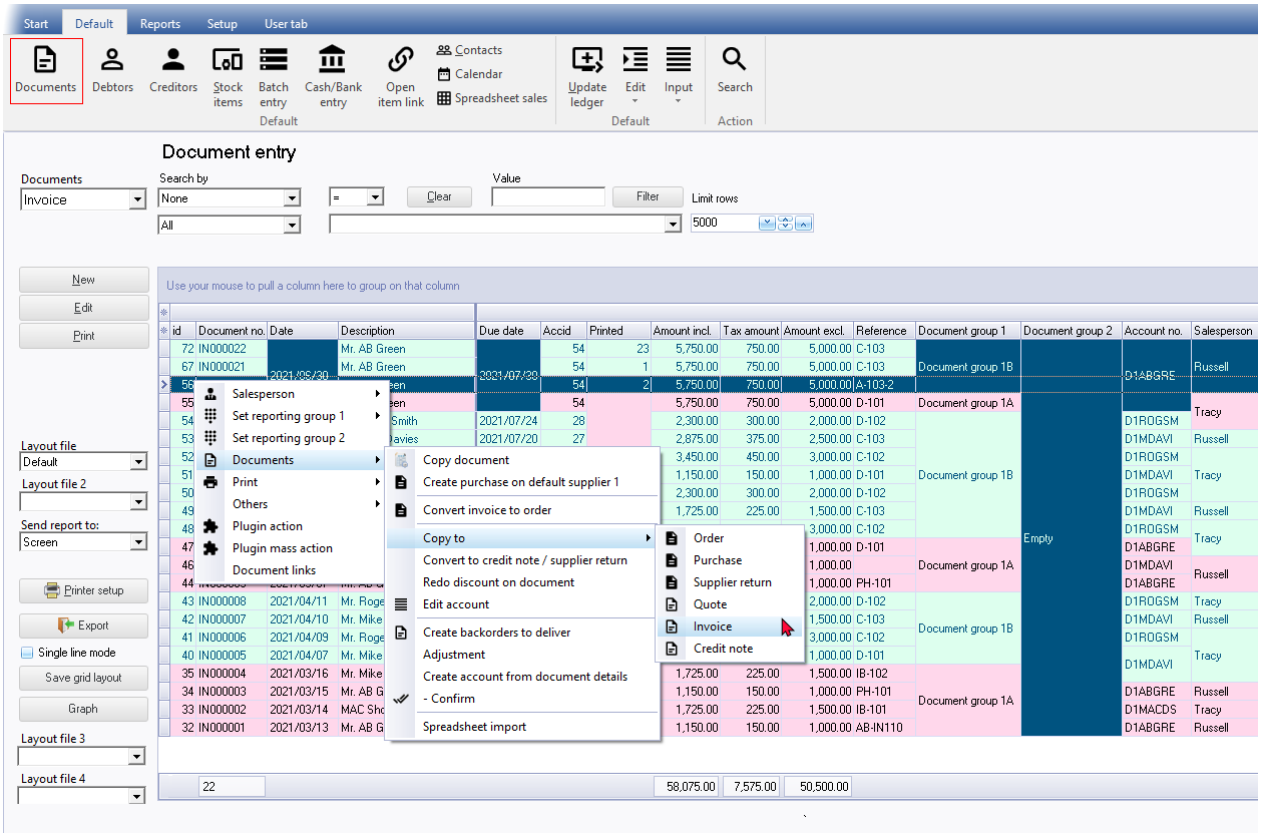
5. Print and Reprint: With osFinancials5/TurboCASH5, you have the ability to print or reprint your sales and purchase documents as needed. This allows for easy distribution of invoices, credit notes, quotes, purchases, supplier returns, orders, and delivery notes relevant to your customers, suppliers, or internal stakeholders. Additionally, the powerful grid for documents contains the data for each document, allowing you to filter and search for specific documents according to the criteria you specify.

Overall, the Documents feature in osFinancials5/TurboCASH5 simplifies the management of sales documents and purchase documents. It automates transaction generation, provides options for selecting layout files, and enables printing or reprinting of these documents. By leveraging this functionality, you can streamline your document workflows, ensure accurate financial records, and effectively communicate with your customers and suppliers.

To access the Document selection screen:

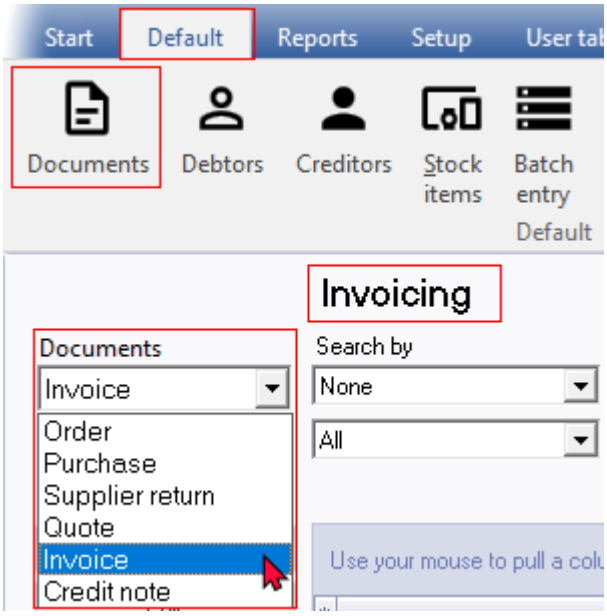
On the Default ribbon, select Documents (F6).

This is the first screen displayed when you access the Documents in your Set of Books. At first, when you start a new Set of Books, and have not processed any documents, this list will be empty.



The six (6) document types are grouped as follows:

1. Sales documents -



a) Quotes - You may need to produce a Quote for your debtors (customers / clients). When the Quote is accepted, you may confirm the quote (convert the Quote to an Invoice).

b) Invoices - Invoices are created for debtors (customers / clients). This will generate a source document which can be printed. The Invoice, can be edited before it is posted (updated) to the ledger. When an Invoice is posted (updated) to the ledger, the transactions in the Sales journal will automatically be generated.

c) Credit notes - Credit notes are created for debtors (customers / clients) to correct a transaction or an exiting posted Invoice or to cancel the Invoice. This will generate a source document which can be printed. The Credit notes, can be edited before it is posted (updated) to the ledger. When a Credit note is posted (updated) to the ledger, the transactions in the

Sales journal (or Sales returns journal) will automatically be generated.

2. Purchase documents -

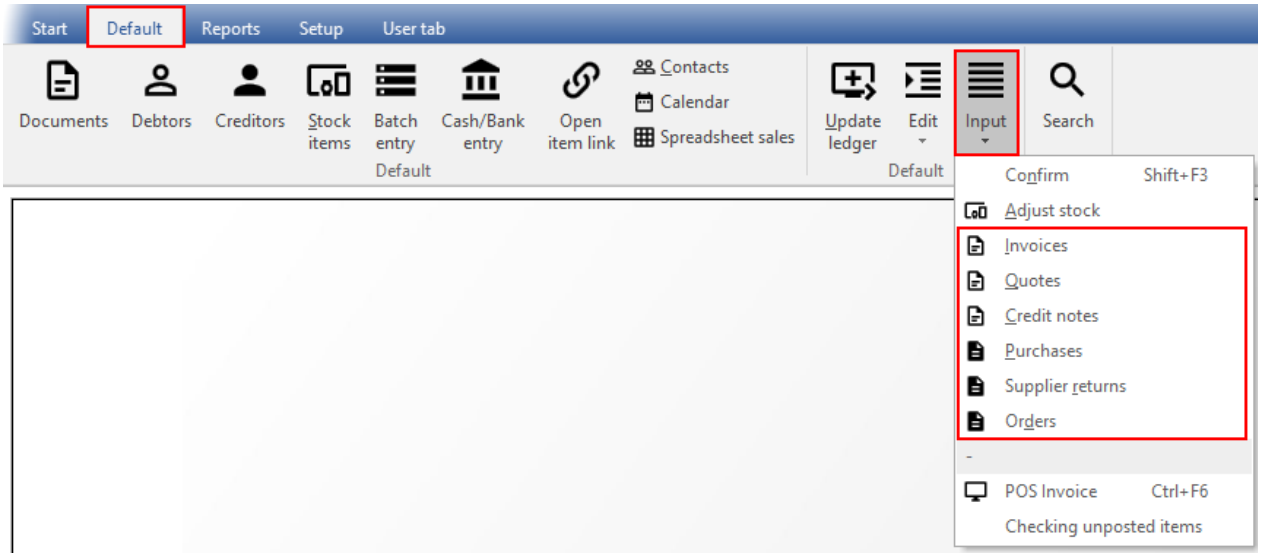
   a) Orders - You may need to place an Order with any of your creditors (suppliers / vendors). When the goods are received or services are provided, you may confirm the Order against the actual goods received and the original Order. You will do this by converting the Order to a Purchase document.

   b) Purchases - Purchase documents are created for creditors (suppliers / vendors). This will generate a source document which can be printed. The Purchase document, can be edited before it is posted (updated) to the ledger. When a Purchase document is posted (updated) to the ledger, the transactions in the Purchase journal will automatically be generated.

   c) Supplier returns - Supplier returns are created creditors (suppliers / vendors) to correct a transaction or an exiting posted Purchase or to cancel the Purchase. This will generate a source document which can be printed. The Supplier returns, can be edited before it is posted (updated) to the ledger. When a Supplier return is posted (updated) to the ledger, the transactions in the Purchase journal (or Purchase returns journal) will automatically be generated.

Access document types - Stand alone screens

By default, the "*Document list*" screen and the "*Document entry*" screens will be launched as a Integral part of the program. If you select a document type on the Input menu on the Default ribbon, the "*Document list*" screen and the "*Document entry*" screens, will launch the selected document type in a separate stand alone screens.



Other options to create documents

In addition to process Documents from this option, documents may be also be created from the following options on the Default ribbon:

- Documents - Various context menu options.
- Edit → Repeating invoices
- Calendar (Repeating invoices)
- Calendar (Invoices for hours)
- Calendar (Create invoice - context menu)
- Calendar (Bulk time entry)
- Input → Confirm (Quotes and Orders)

Context menu options to create documents

In addition to this, documents may also be created on quickly from the following context menus:

- Copy document - Create a copy of a selected document.
- Create purchase on default supplier 1 - Create order/s for selected invoice/s). Preferred supplier 1 must be selected for a stock item.
- Convert invoice to order - Create order/s for selected invoice/s).
- Convert to credit note / supplier return (invoice/s will be converted to credit note/s and purchase/s to supplier return/s).
- Copy to - Copy selected document/s - to invoice/s, credit note/s, quote/s, purchase/s, supplier return/s or order/s.

Documents setup

The "*Documents setup*" option in osFinancials5/TurboCASH5 allows you to set up sales documents such as invoices, credit notes and quotes for debtors (customers / clients) as well as purchase documents such as purchases, supplier returns and orders for creditors (suppliers / vendors).

You can also enter global statement messages on the Statement setup tab to be displayed on statements for debtors (customers / clients).

Before you can start generating documents in osFinancials5/TurboCASH5, you need to set up the documents. If you have created a new Set of Books in osFinancials5/TurboCASH5, the basic settings in the documents setup will already be set up for you. However, it's recommended to review and customize each document type according to your specific needs and requirements.

By default, osFinancials5/TurboCASH5 assigns document numbers that begin with 000001 and are prefixed by 2 alphabetical characters - IN for invoices, CR for credit notes, PU for purchase documents, SR for supplier return documents, OR for orders, and QU for quotes.

However, you can change this to fit your requirements. Afterwards, osFinancials5/TurboCASH5 will automatically allocate document numbers in the numerical sequence they were generated.

If you have created multiple users in Setup → Access control (Setup ribbon), you can choose to use general numbers for users and select a default user. This will enable document numbers to be generated by each user.

If your business or organization is registered as a company, close corporation, non-profit organisation, non-governmental organisation, or any other type of organisation that requires your registration number to be displayed on all documentation in accordance with legislation, you must enter that registration number in the "Company reg. no." field of the Setup → Company info (Setup ribbon).

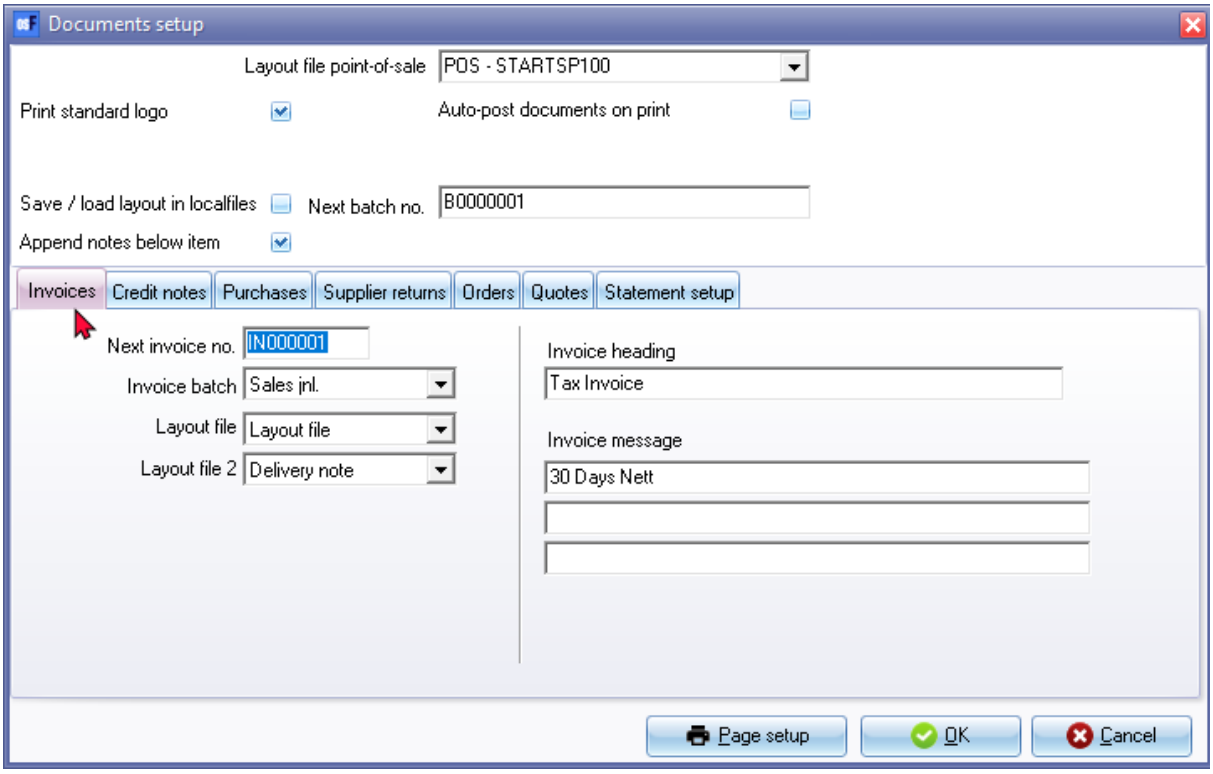
This should be done before processing any documents.

If you are registered as a VAT/GST/Sales Tax vendor, you must enter your Tax (VAT/GST/Sales Tax) registration number in the "Tax reg. no." field of the Setup → Company info (Setup ribbon). This should be done before processing any documents.

Before you start processing any documents in osFinancials5/TurboCASH5, it is important to check and set the document numbers, batches (journals), headings, and messages. You should also ensure that your document headings are displayed correctly in accordance with your country's tax legislation, especially if you are registered for VAT/GST/Sales Tax.

To set documents:

1. On the Setup ribbon, select Setup → Documents setup. The "*Documents setup*" screen is displayed:



2. The global settings to configure for document processing, is as follows:

   a) Layout file point-of-sale - This is the default layout file ("*POS-STARTSP100*" layout file for a till-slip printer) used in the standard point-of-sale feature (Setup → Point-of-Sale (Setup ribbon) and POS Invoice (Input → POS Invoice (Default ribbon).

   b) Print standard logo - The logo field is included in the document layout files, debtor statements and creditor remittance advices. To display the logo, you need to load the logo in the "*Company info - Options*" screen.

   c) Auto-post documents on print - By default, documents in osFinancials5/TurboCASH5 require manual updating (posting) to the ledger. However, if you choose to select the option for automatic updating (posting), the system will automatically update (post) the documents to the ledger when they are printed.

   d) Save / load layout in localfiles - This settings is optional for a network environment when the settings of the documents (layout column visible, etc.) needs to be stored at a central location.

   e) Append notes after item - By default, this option is selected. When processing documents, and a comment F9: Comment is inserted in a document, the comment is added one line below the selected stock item in the document lines.

> *By default, comments is inserted below a selected item. The option "Append notes below*

item" (Setup → Documents setup (Setup ribbon)) is added to set the preference if comments should be added before, or below (default option), a selected item when processing documents and printing comments on layout files.

The default "Append notes below item" setting is selected (ticked). It will display on document lines and document layout files as follows:

1. *Item*
2. *Remark*
3. *Comment*

If the "Append notes below item" setting is not selected. It will display on document lines and document layout files as follows:

1. *Comment*
2. *Item*
3. *Remark*

f) Next batch number - The batch numbers are are automatically generated starting from the number in this field. These batch numbers are generated for batch transactions as well as the transactions in documents posted to the ledger.

3. To check or amend the document numbers, batch types (except in the case of Orders and Quotes), select the paper type, change the headings, if necessary, and to enter the messages you wish to be displayed on the documents, you can select each of the following documents:

a) Debtor (customer / client) documents:

i) Invoices: record the sales transactions with your debtors (customers / clients) from your stock code file. Once updated (posted) to the ledger, this document will record the sales, cost of sales transactions in the general ledger and update the debtor's ledger.

ii) Credit notes: record the sales returns received from your debtors (customers / clients) from your stock code file. Once updated (posted) to the ledger, this document will reverse the entries or part of the transactions issued and posted on the Invoice.

iii) Quotes: record the promise to sell specified goods or stock items at certain prices and quantities, if the debtor (customer / client) accepts the quote within a specified period. Once a quote is accepted, it can be confirmed and converted to an Invoice. Quotes cannot be updated (posted) to the ledger.

b) Creditor (supplier / vendor) documents:

i) Purchases (Goods received notes): record all the purchase transactions with your creditors (suppliers / vendors) from your stock code file. Once updated (posted) to the ledger, this document will record the purchases in the stock ledger, the stock control account in the general ledger and the creditors account in the creditor's ledger.

ii) Supplier returns: record the purchase returns returned to your creditors (suppliers / vendors) from your stock code file. Once updated (posted) to the ledger, this document will reverse the entries or part of the transactions issued and posted on the Purchase document (Goods received note).

iii) Orders: record the stock items or goods, which are ordered from a creditor (supplier / vendor). Once an order is fulfilled, i.e. the stock items or goods are received, the order can be confirmed and converted to a Purchase document (Goods received note). Orders cannot be updated (posted) to the ledger.

4. To add or edit a global statement message that will be displayed on all debtor statements, go to the Statement setup tab. Here, you can enter up to three (3) lines of text that will appear on every debtor statement you print using the Reports → Debtors → Debtor statement feature. This is a useful way to communicate important information to your debtors, such as payment terms, contact information, or other relevant details. Once you have entered your statement messages, they will be automatically included on all debtor statements you generate going forward.

5. Click on the OK button to save your changes and close or exit this screen.

If you click on the Page setup button, the following screen will be launched:

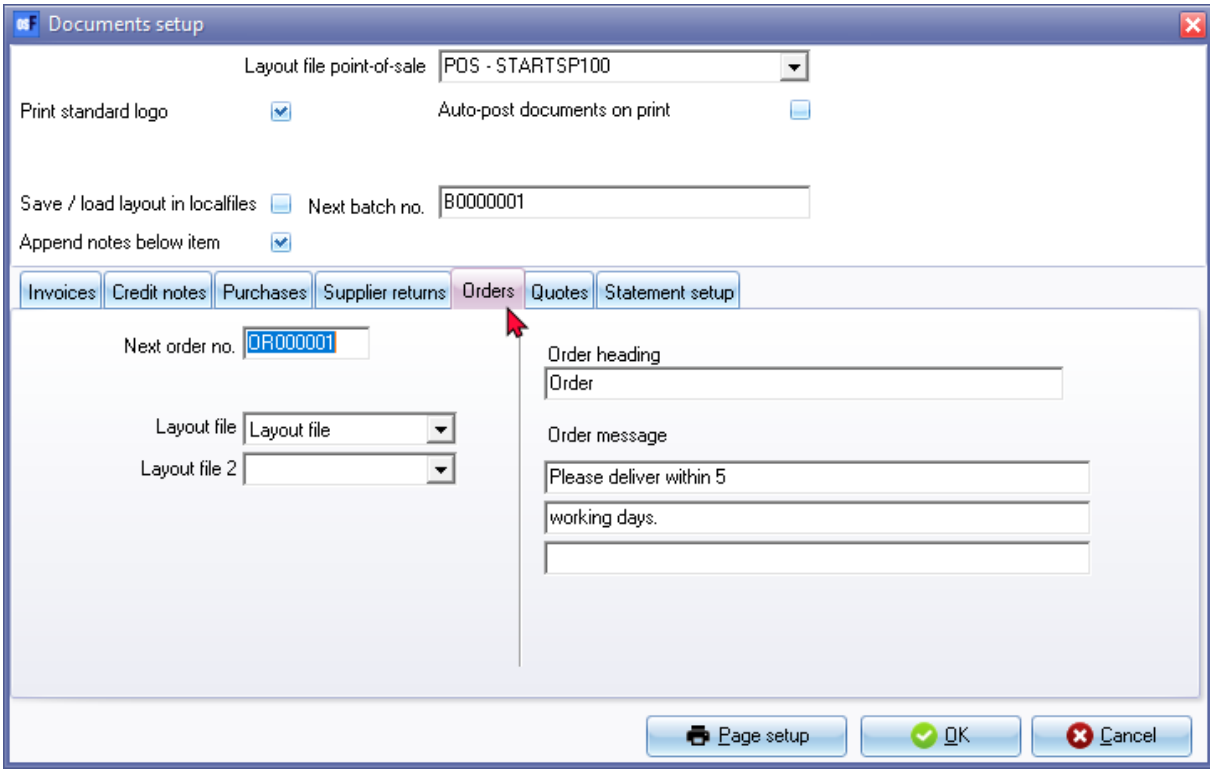
Documents setup - Orders

To set documents - Orders:

1. On the Setup ribbon, select Setup → Documents setup.

2. Click on the Orders tab.



3. Enter or select the following options:

a) Next order no. - It is recommended that the Order number be prefixed (e.g. OR000001) to identify the document type.

b) Layout file - If you have a customised layout file, you may select the layout file.

The universal Layout file (one file to print all document types) is by default set for all Sets of Books.

See - Document layout files to assist you in selecting a layout files.

The Layout files set in the Documents setup, is a global setting. If you need to set a different layout file for a specific creditor (supplier / vendor), you may select it on the Delivery address tab of Creditors (Default-ribbon).

You may also change the layout file when printing documents.

c) Layout file 2 - This field is optional. If a layout file is selected, the document will print twice using this layout file. If you have a customised layout file, you may select the layout file. Otherwise, you may select one of the layout files listed above.

d) Order heading - This field is not used on the document layout files, but it is recommended that Order should be displayed or entered.

e) Order message - Enter a global message to be printed on all Orders.

4. Click on the other tabs, if necessary. Once finished, click on the OK button to save your changes.

Created with the Standard Edition of HelpNDoc: Effortlessly Support Your Windows Applications with HelpNDoc's CHM Generation

Documents setup - Change document numbers

Each transaction should have a unique document number, which helps to identify the source document for that transaction. Document numbers are important as they are displayed in reports and screens in osFinancials5/TurboCASH5. The default document numbers are eight character alphanumeric numbers, but these can be changed to suit your own numbering system.

The default document numbers in most Sets of Books (templates) are set to start with:-

- Invoices - IN000001
- Credit notes - CR00001
- Quotes - QU00001
- Purchases - PU00001

- Supplier returns - SR00001
- Orders - OR00001

It is important to note that document numbers should only be changed before processing any documents, and each source document containing details of a transaction should be numbered with a unique alphanumeric identifier consisting of eight characters.

To change document numbers:

1. Go to the Setup ribbon and select Setup → Documents setup.
2. Select the Document type (Invoices, Credit notes, Purchases, Supplier returns, Orders and/or Quotes) and over type the displayed number with your own number. A confirmation message will be displayed.

   "Are you sure you want to change the next document number?Invoice no." (Where Invoice no. is the selected Document tab (document type) description).

3. Click on the Yes button, and the Next document number for the selected document will be changed. Should you click on the No button, the document number will not be changed.
4. Repeat this process for all your document numbers. Once you have changed all your other document numbers and/or settings, click on the Close button, or press the Esc key on your keyboard, to exit this screen.

You may use any combination of letters and/or numbers for your document numbers. As osFinancials5/TurboCASH5 will increment the document number from the last character (letter or number), it is recommended that the following format for your document numbers be used:

- *Use all eight characters of the document number. If you only use for example 3 or 4 numerical characters for your documents you may find that the document numbers may be repeated in an accounting period or financial year.*
- *Assign unique two or three unique alphabetical-character prefixes to each document. For example, Invoices could be ''IN'', Credit notes ''CN'', Quotes "QU", Purchase "PU", Supplier returns "SR" and Orders "OR".*
- *Enter numeric characters for the rest of the document number. For example, if your last invoice number on your previous accounting system was 56 enter the last invoice number as IN000056. osFinancials5/TurboCASH5 will automatically generate the next invoice number as IN000057 when you generate your first Invoice.*

By prefixing document numbers with specific codes, it helps to avoid any overlap of numbers and confusion with other transactions in the Set of Books. This practice also aids in easy identification of the document type and tracing, tracking and grouping them through reports, screens, pivot tables, spreadsheets, and more. Additionally, using prefixes for document numbers, can assist in identifying the transaction type, for example if it is a sales or a purchase transaction.

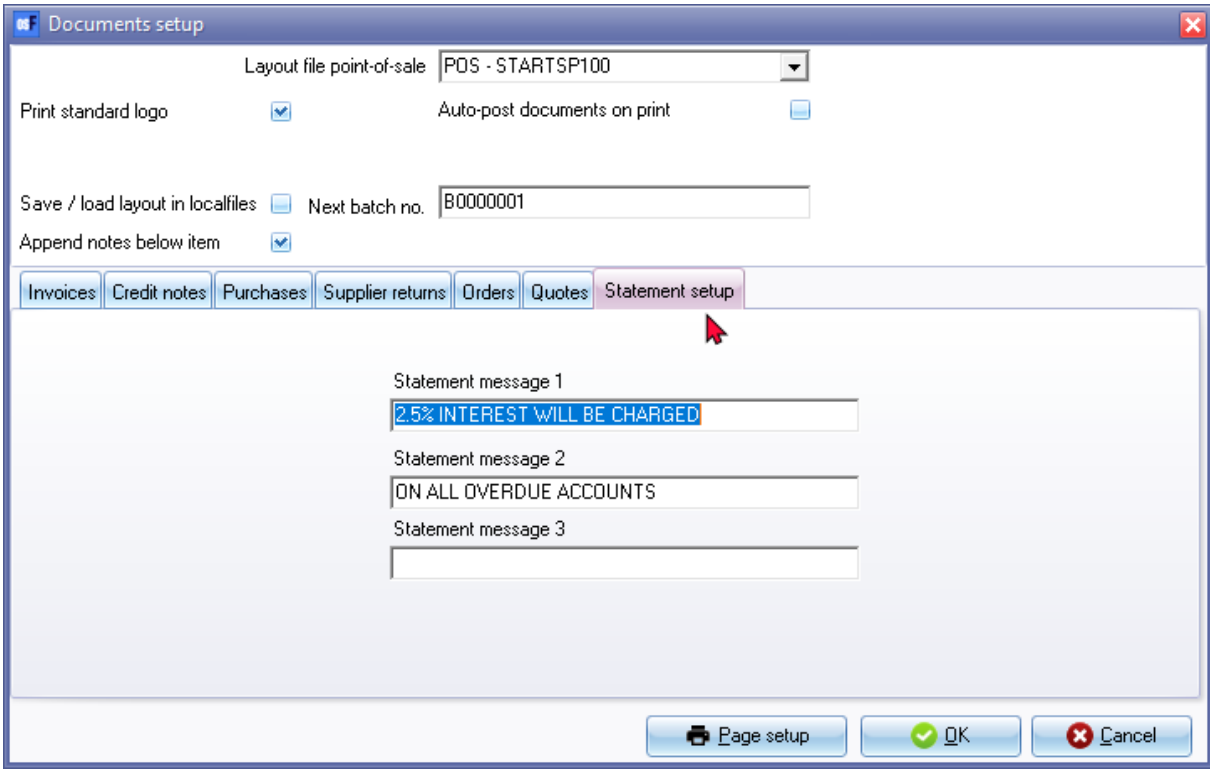
Documents setup - Statement setup

The Statement setup tab allows you to add or edit a global statement message that will be displayed on all debtor statements. Here, you can enter up to three (3) lines of text that will appear on every debtor statement you print using the Reports → Debtors → Debtor statement feature. This is a useful way to communicate important information to your debtors, such as payment terms, contact information, or other relevant details. Once you have entered your statement messages, they will be automatically included on all debtor statements you generate going forward.

Enter global messages to display on all debtor statements:

1. On the Setup ribbon, select Setup → Documents setup.
2. Select the Statement setup tab.



3. Enter the message in up to 3 lines to display on the Debtor statements.

4. Click on the OK button.

Enter statement messages for specific debtor accounts:

1. On the Default ribbon, select Debtors (F4).

2. Select the debtor (customer / client) account.

3. On the Delivery address tab, enter a message of up to 3 lines.

4. Click on the Save button.

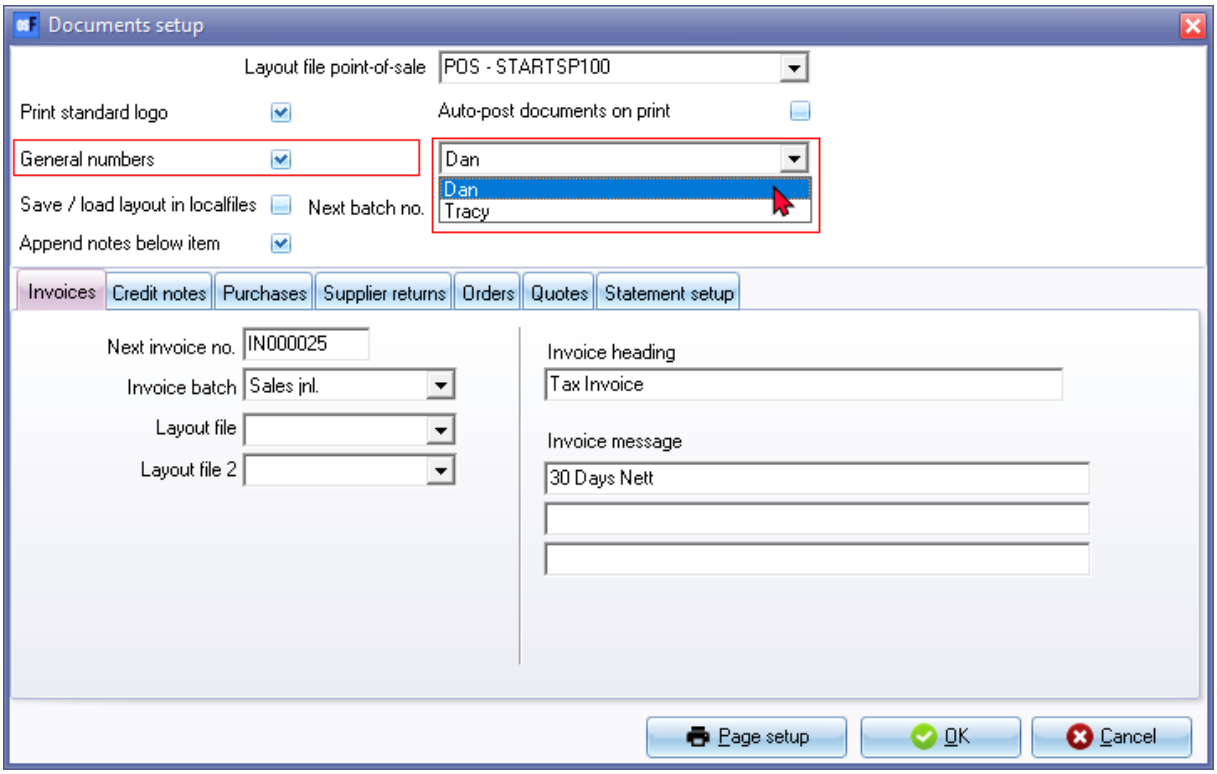
Created with the Standard Edition of HelpNDoc: Ensure High-Quality Documentation with HelpNDoc's Hyperlink and Library Item Reports

Documents setup - General numbers

The "*General numbers*" option will only be available and displayed in a multi-user environment. Once users have been set up, in Setup → Access control (Setup ribbon). the "*General numbers*" option can be assigned specific users.

To set the General numbers:

1. Once users are add in Setup → Access control (Setup ribbon), select Setup → Documents setup on the Setup ribbon.



2. Select (tick) the "*General numbers*" option. A list of the users will be displayed. Select the user from the drop-down list; which osFinancials5/TurboCASH5 will use to generate document numbers.

3. Click OK.

If the "General numbers" field is not selected (ticked), osFinancials5/TurboCASH5 will generate the document numbers numerically.

You may also select the user from the "Doc no" field on the Documents tab in Setup → Access control (Setup ribbon).

Documents setup - Change document type names

Internal Translatable Language Labels for Document Layout Files

These language labels serve as a reference point within the osFinancials5/TurboCASH5 language files, so that you can easily identify and work with the different document layout files. Using these language labels, you can customize or modify the names or descriptions of document layout files for your specific language

file. These names or descriptions of the translatable document layout files will be displayed when you need to select a document layout file to print your documents.

Feel free to use a copy of the documents in the Report designer to serve as a base template when creating your own custom translatable document layout file that aligns with your branding and communication needs.

For your convenience the internal translatable language labels for the document layout files is as follows:

TAX (VAT/GST/Sales tax)		*NO TAX - If not registered for TAX (VAT/GST/Sales tax)*	
Language LabelID	*Layout file name*	*Language LabelID*	*Layout file name*
TRN_1910	*Layout file*	*TRN_906589*	*NO-TAX Layout file*
TRN_3174	*Document layout*	*TRN_906590*	*NO-TAX Document layout*
TRN_906277	*Document layout (15-code)*	*TRN_906591*	*NO-TAX Document layout (15-code)*

These document layout files prints the document type " *Invoice*," "*Credit note*," "*Quote*," "*Purchase*," "*Supplier return*," or "*Order*", based on the specific type of document being processed and printed.

Customised Tax Terminology in Document Layout File Names:

The filenames assigned to these document layout files are initially based on the "*English*" language file and prominently include the term "*Tax*". However, the beauty of osFinancials5/TurboCASH5 lies in its adaptability to various regions and jurisdictions, accommodating diverse tax naming conventions.

Depending on your chosen language setting or the language associated with your Set of Books, the tax terminology within these filenames can be tailored to accurately reflect the tax applicable in your specific country or jurisdiction. For instance:

- South Africa and the UK: In Sets of Books for these regions, the tax-related expressions and translatable labels will seamlessly incorporate "*VAT*" as the tax term.
- Australia and New Zealand: For Sets of Books operating in these countries, the tax-related expressions and translatable labels will use "*GST*" to align with the prevailing tax structure.
- United States: In the context of the US, the tax-related expressions and translatable labels will appropriately adopt "*Sales tax*" terminology.

By embracing this customization, osFinancials5/TurboCASH5 ensures that your document layout files not

only conform to the legal and linguistic nuances of your region but also facilitate a smoother user experience. This adaptability underscores the global applicability of osFinancials5/TurboCASH5 in serving businesses across different geographies and tax frameworks.

Changing Document Type Names for Universal Translatable Document Layout Files

In osFinancials5/TurboCASH5, translatable document layout files offer a dynamic way to seamlessly adapt document type names such as "*Invoice*," "*Credit note*," "*Quote*," "*Purchase*," "*Supplier return*," or "*Order*", based based on the specific document being printed. This dynamic capability is driven by expressions sourced from the *"TYPES.SDESCRIPTION"* field within the document layout.

To customize and modify these document type names, follow the outlined steps below:

1. Leveraging Translatable Expressions in Layout Files: The *"Layout file", "Document layout",* and "*Document layout (15 code)" document* layout files harness the power of translatable expressions, facilitated by language files and settings within osFinancials5/TurboCASH5. These layout files adeptly pull data from various fields entered during document processing, establishing connections to database tables and expressions for precise data presentation.
2. NO-TAX Layout Files and Tax Exclusions: Similarly, the *"NO-TAX Layout file," "NO-TAX Document layout," and "NO-TAX Document layout (15 code)"* layout files also make use of translatable expressions, leveraging language files and settings within osFinancials5/TurboCASH5. These files mirror the functionality of their tax-inclusive counterparts but are tailored for scenarios where Tax (VAT/GST/Sales Tax) is not applicable. Notably, these "NO-TAX" layout files exclude any Tax (VAT/GST/Sales Tax) expressions in their translatable components, catering to Set of Books instances where tax provisions do not apply.

To begin the process of modifying document type names for Translatable Document layout files, navigate to the Types tab within the "*Customize Languages*" screen. This screen is accessible through the Tools → Customise language menu on the Setup ribbon. Follow the steps outlined in the subsequent sections to tailor the document type names according to your specific business requirements.

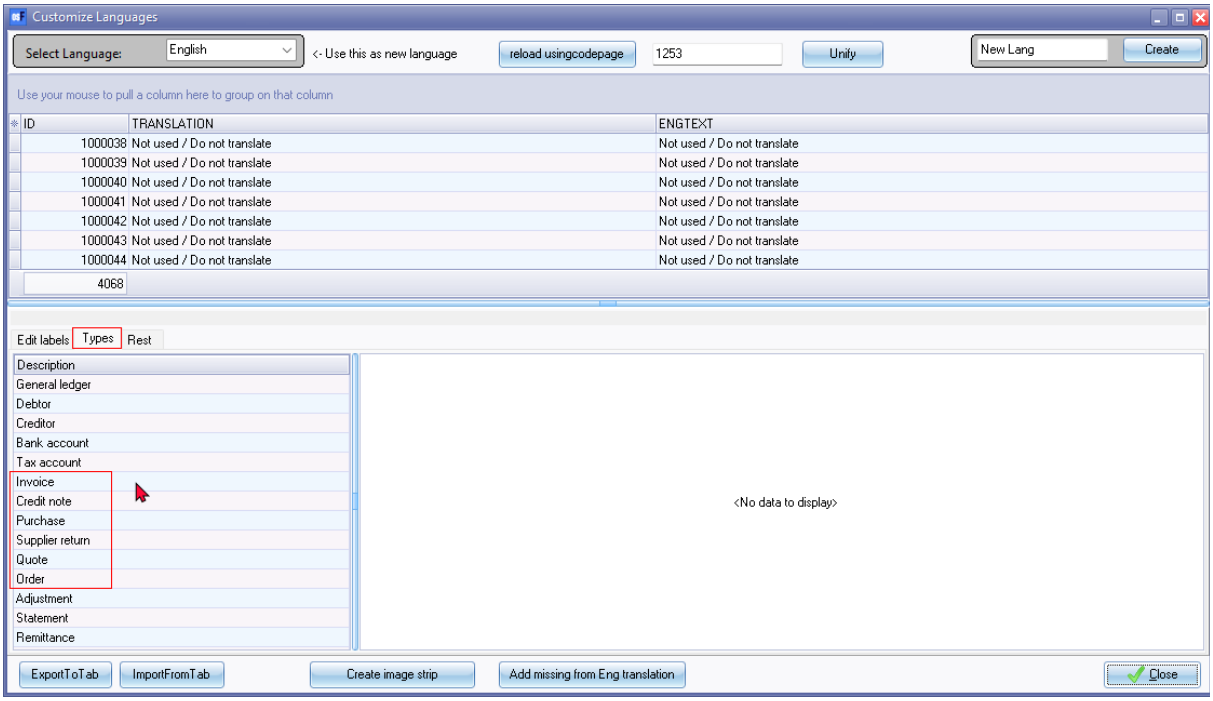
Procedure to Modify Document Type Names

To tailor document type names according to your business requirements, follow these steps:

1. On the Setup ribbon, select the Tools → Customise language menu.
2. On the "*Customize Languages*" screen click on the Types tab.
3. On the Types tab. locate the document names you wish to modify, such as "*Invoice*," "*Credit note*,"

"*Quote*," "*Purchase*," "*Supplier return*," or "*Order*". These will be listed among other entries on the Types tab. For each document type, click on the name and replace it with your desired modification.

For example, you could change "*Invoice*" to "*Tax Invoice*" (or if "*Tax Invoice*" is listed, you could change this to "*Invoice*". Similarly you could change the document type names of the other document names, to suit your specific requirements.



4. Click on any other item on the Types tab to focus out of the edited item. and click on the Close button on the "*Customize Languages*" screen.

5. To see the updated document type names in effect, either go to the Tools → Close active forms (Setup ribbon) or close and reopen the Set of Books.

6. Impact of Modified Document Type Names: The modified document type names will have a cascading impact:

    - Dynamic Printing: When using translatable document layout files, the modified document type names will dynamically display the appropriate name on invoices, credit notes, quotes, purchases, supplier returns, or orders based on the specific document type being printed.
    - User Interface Update: The altered document type names will also reflect in the osFinancials5/TurboCASH5interface of your Set of Books. This is noticeable when selecting document types for processing or copying documents.

By customizing the document type names, you tailor osFinancials to better match your business terminology and preferences, improving clarity and consistency throughout your financial processes.

Tax Invoice or Invoice document layout files for Point-of-Sales invoices

For translatable Point-of-Sales invoices, osFinancials5/TurboCASH5 offers the following document layout files are available for Point-of-Sales invoices:

1. POS-STARTSP100 - (TRN_906183) - This layout file is designed for Till slip printers.
2. POS 1 - (TRN_906184)
3. POS 2 - (TRN_906185)

To further customize the Point-of-Sales invoice experience, you have the flexibility to modify the names associated with POS Invoices. By using the Tools → Customise language menu accessible from the Setup ribbon, you can alter the following translation labels:

1. 1270 - POS Invoice
2. 906104 - POS Tax Invoice

Other Document-name expressions that support Debtors / Creditors language preferences

The names of the document types are included as a translatable expression in the document layout files.

- Delivery note: CUSTOM('GETTEXTLANG',1313,'DeliveryNote',ACCOUNTINFO.SLANGUAGE,0,0)
- POS 2: CUSTOM('GETTEXTLANG',906014,'POSTaxInvoice',DEBTORINFO.SLANGUAGE,0,0)+': '
- POS - STARTSP100: CUSTOM('GETTEXTLANG',906014,'POSInvoice',ACCOUNTINFO.SLANGUAGE,0,0)

Documents setup - POS layout

Changing the Layout File for Point-of-Sale (POS) Documents

The default setting in the "*Point-of-sale layout file*" field on the "*Documents setup*" screen is "*POS - STARTSP100*," a till slip document layout file. To select a different layout file from the default document layout files included in the osFinancials5/TurboCASH5 installation or your own if you have created one, the

document layout will be printed in that format.

When you alter the default Point-of-Sale (POS) layout file (or any other selected layout file), the changes will also impact documents generated with specific prefixes in various scenarios:

- *D - Project Quotes: These documents are automatically created with a 7-digit format, starting with "D" followed by 6 numeric digits.*
- *ST - Stock adjustments: Generated when stock quantities are modified within the Input → Adjust stock menu on the Default ribbon, these documents are prefixed with "ST," for example, "ST00001." Notably, the document number consists of 7 digits, including 4 zeros instead of 5.*
- *SA - BOM (Production) stock item type: Document numbers with the "SA" prefix, such as "SA00001," are generated for BOM (Production) stock items when they are Assembled or Disassembled. Similar to stock adjustments, the document number follows a 7-digit format with 4 zeros.*

Available document layout files for Point-of-Sales invoices

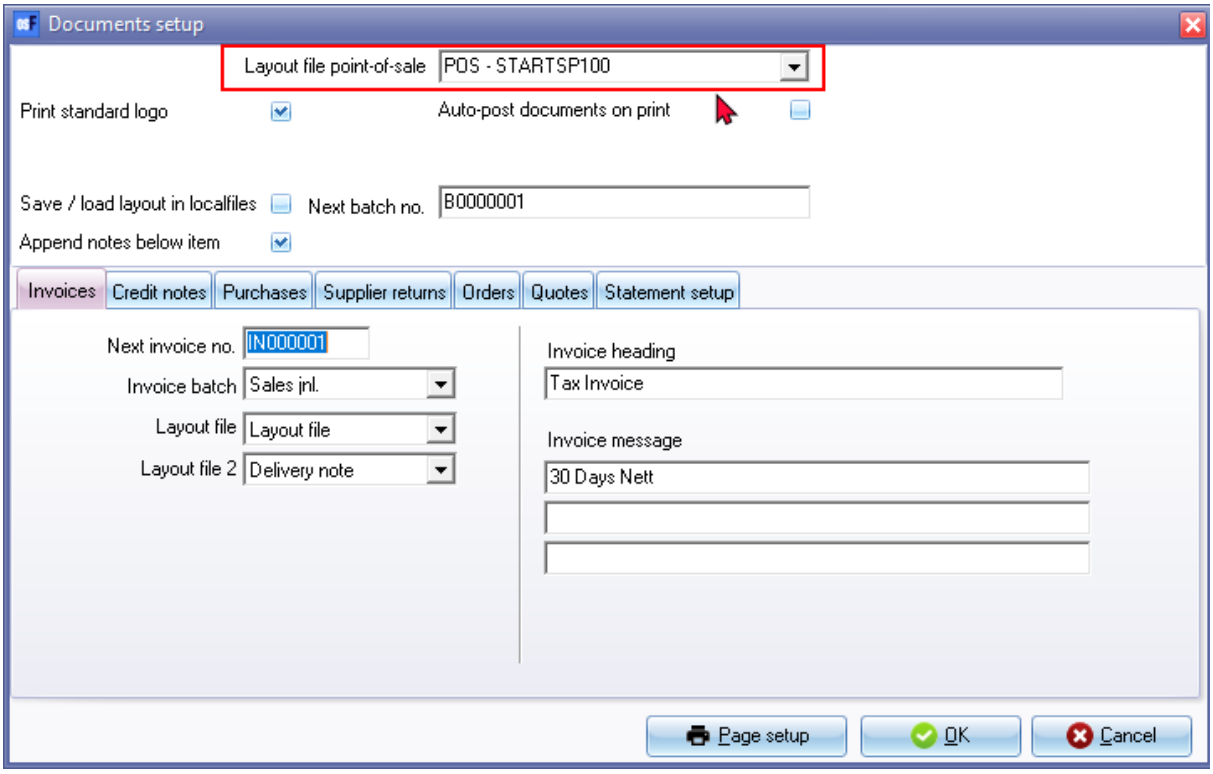
The following document layout files are available for Point-of-Sales invoices:

1. POS-STARTSP100 - (TRN_906183) - Prints on Till slip printers.
2. POS 1 - (TRN_906184)
3. POS 2 - (TRN_906185)

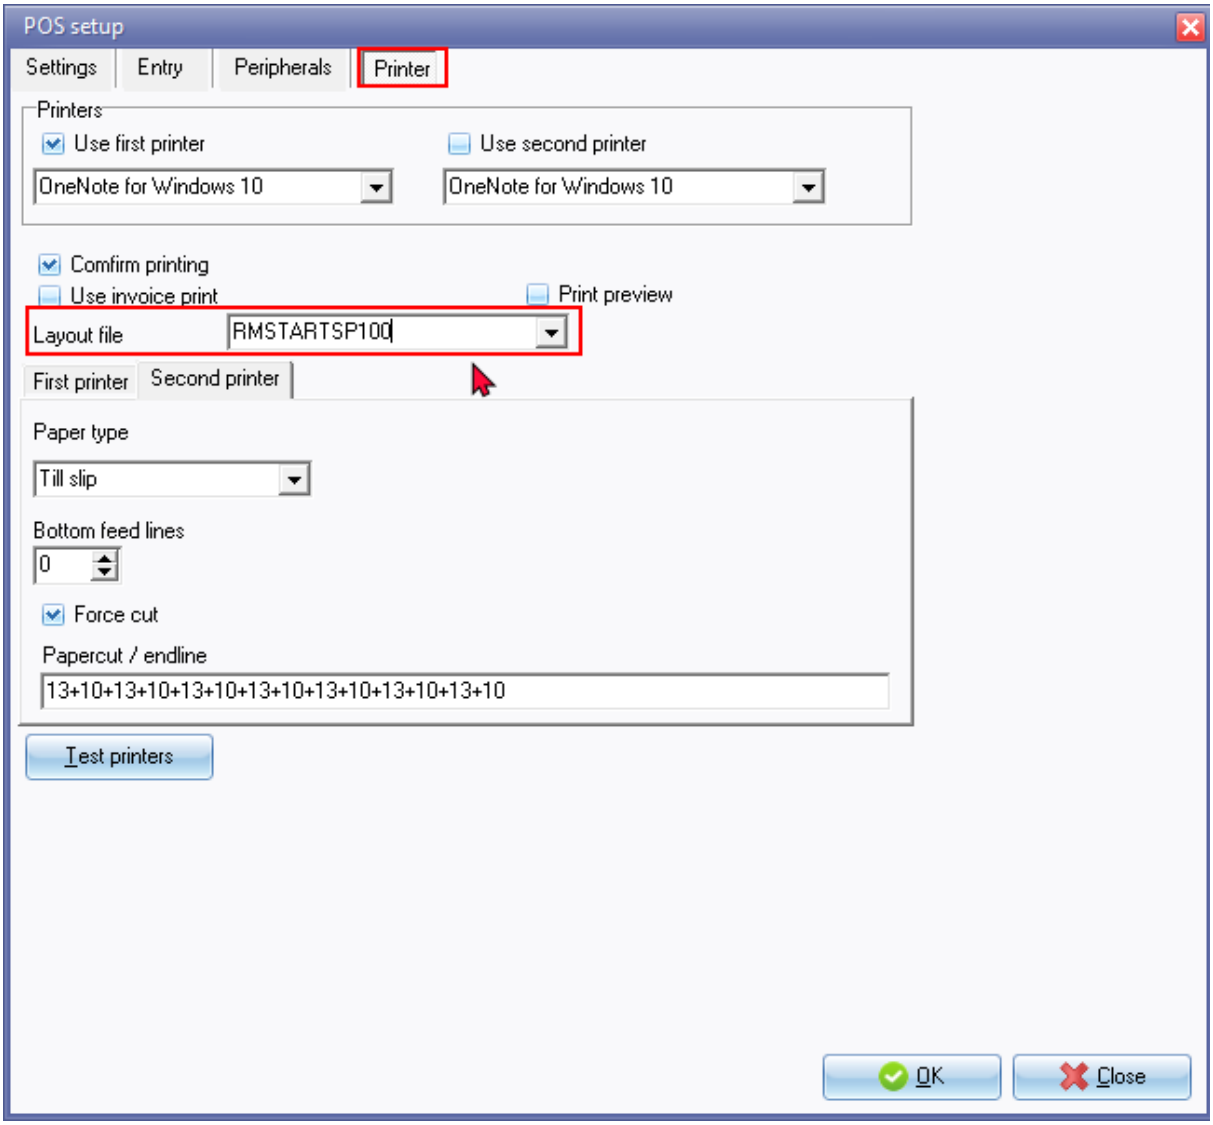
Options to select a point-of-sale document layout file

To configure the layout files for point-of-sale documents, you can choose from the following options:

1. Documents setup - Setup menu on the Setup ribbon.



2. Point-of-Sale - Printer tab - Setup menu on the Setup ribbon.



On whichever option you choose, the layout file will be updated in both screens

---

Documents settings - Check list

The setup of documents in osFinancials5/TurboCASH5 is a one-time process that involves several steps:

1. Check the document numbers, messages, and set layout files on the Setup → Documents setup menu of the Setup ribbon.
2. Select the "*Append notes below item*" option (default setting) or choose to add comments before a selected item on documents and layout files.

By default, comments is inserted below a selected item. The option "Append notes below item" (Setup → Documents setup (Setup ribbon)) is added to set the preference if comments should be added before, or below (default option), a selected item when processing documents and printing comments on layout files.

The default "Append notes below item" setting is selected (ticked). It will display on document lines and document layout files as follows:

1. *Item*
2. *Remark*
3. *Comment*

If the "Append notes below item" setting is not selected. It will display on document lines and document layout files as follows:

1. *Comment*
2. *Item*
3. *Remark*

3. Add the Cost of sales reporting group under Account group 1 (Reporting group 1) on the Setup → Groups menu of the Setup ribbon. Also, add reporting groups 1 and 2 for Document groups and reporting groups 1 and 2 for Stock groups, where applicable.
4. Add Salespersons on the Setup → Salesperson menu of the Setup ribbon.
5. Add a Cost of sales batch (journal) on the Setup → Batch types menu of the Setup ribbon (only to be used with Cost of sales settings for the "*Default*" stock item type).
6. Set up unit prices, selling price descriptions, and default selling price on the Setup → Stock information menu of the Setup ribbon.
7. Create a Cost of sales account for Trading stock on the Setup → Accounts menu of the Setup ribbon.
8. Create a Sundry Supplier account under the Creditors section on the Default ribbon.
9. Create a Cash Customer and linking debtors to a Salesperson under the Debtors section on the Default ribbon.

By completing these steps, you will have all the necessary settings in place to efficiently manage and process documents in osFinancials5/TurboCASH5.

Created with the Standard Edition of HelpNDoc: Full-featured EPub generator

Steps - Document processing

Once documents are set up and configured in osFinancials5/TurboCASH5, creating new documents is a simple process that involves the following steps:

1. Access Documents from the Default ribbon and the document type (e.g. invoices, credit notes, quotes, purchases, supplier returns or orders) .
2. Click on the New button.
3. Select the appropriate debtor or creditor account.
4. The document entry screen for the selected document type and debtor/creditor will be displayed, showing all relevant details that were entered and set up in the debtor/creditor account and any messages or document setup.
5. Select the stock code for the stock items (products) being added to the document. The default selling price or purchase price will be displayed, and you can enter the quantity (if the default quantity of 1 is not applicable).

   You may add Comments and remarks to selected items (products).
6. Click on the OK button to finalise the document and print it (e.g. as an invoice).
7. Post the document to the ledger to complete the process.

Overall, this process is designed to be easy and intuitive, allowing for quick creation of documents and efficient management of financial transactions.

Created with the Standard Edition of HelpNDoc: Easy CHM and documentation editor

Salespersons

This option allows you to add / delete the salespersons, who sell your stock items or services. Salespersons may be selected on sales documents (quotes, invoices point-of-sales access and credit notes).

The Salespersons are also added to the purchase documents (orders, purchases and supplier returns). This feature is useful to manage a user / salesperson / cashier who have processed a specific purchase document.

You may select the default salesperson for each debtor (customer / client) account. When sales documents are generated and the debtor (customer / client) account is selected, the default salesperson will be displayed for the document or you may select any available salesperson.

This feature makes it easy to see who made the most sales or did not make target. It is also a useful tool if it is necessary to pay commission on those sales.

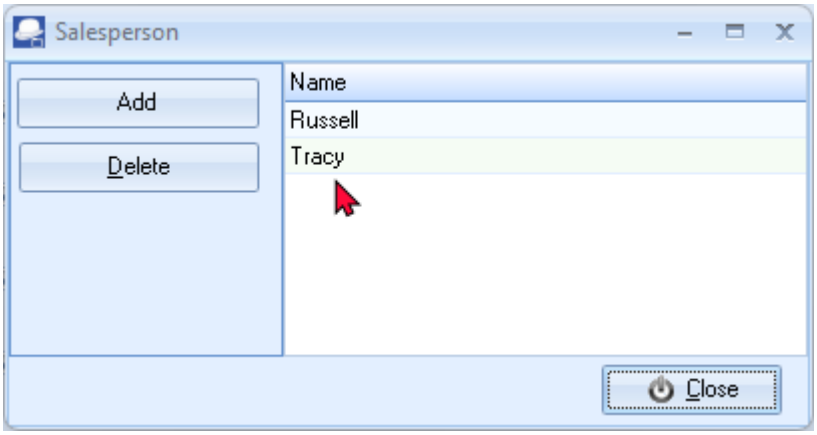
Salespersons may also be selected for purchase documents (i.e. Purchases, Supplier returns and Orders). This allows you to see who handled the purchase document.

You may also link the salespersons (cashiers) to users on the Setup → Access control - Others tab (Setup ribbon) for improved Point-of-Sale access and security.

To add Salespersons:

Salespersons may also be added or deleted in Setup → Groups - Salespersons) (Setup ribbon).

1. On the Setup ribbon, select Setup → Salesperson. The "*Salesperson*" screen is displayed:



2. Click on the Add button. A new record will be inserted "*Change name*"

3. Overtype this with the name of your salesperson. Repeat this process for all your salespersons.

4. Click on the Close button.

To delete Salespersons:

1. On the Setup ribbon, select Setup → Salesperson.

2. Select the Salesperson and click on the Delete button. A confirmation message is displayed.

Do you want to delete the salesperson?: Name

3. Make absolutely sure that the correct salesperson is selected.
4. Click on the Yes button to delete the salesperson.
5. Click on the Close button.

To print a list of the salespersons:

1. *Go to Setup → Groups (Setup ribbon).*
2. *On the Salespersons group, click on the Print button.*

Created with the Standard Edition of HelpNDoc: 5 Reasons Why a Help Authoring Tool is Better than Microsoft Word for Documentation

Document groups

You can set up to two (2) reporting groups for your documents, which can categorise them based on their types, such as invoices, credit notes, quotes, purchases, supplier returns, and orders. These document groups can be linked to each document for further reporting and analysis.

These Document groups can be linked to each document.

- *You may use the context menu option on the documents grid to set or change the reporting groups for Document group 1 and/or Document group 2 for selected document(s).*
- *You may use the documents grid to filter, search or group documents.*
- *You may print Sales analysis reports for Document group 1 or Document group 2.*

Examples of reporting groups for sales documents

Some examples of reporting groups for sales documents (quotes, invoices and credit notes:

1. Sales regions: You can use reporting groups to categorize sales documents based on different sales regions. For example, you can create reporting groups for regions such as North America, Europe, Asia-Pacific, etc. This allows you to analyse and compare sales performance across different regions.
2. Sales representatives: Reporting groups can also be used to track sales documents by sales representatives or sales teams. Each sales representative can be assigned to a specific reporting

group, enabling you to evaluate individual sales performance or team performance.

3. Product categories: Another way to utilize reporting groups is by grouping sales documents based on product categories. You can create reporting groups for categories like electronics, apparel, furniture, etc. This helps in analysing sales patterns and identifying the performance of different product categories.

4. Customer types: Reporting groups can be used to differentiate sales documents based on customer types. For instance, you can create reporting groups for retail customers, wholesale customers, corporate clients, etc. This allows you to assess sales trends and profitability based on customer segments.

5. Sales channels: If your business operates through multiple sales channels, reporting groups can help classify sales documents accordingly. You can create reporting groups for channels like online sales, retail stores, distribution partners, etc. This enables you to monitor and compare sales performance across different channels.

These are just a few examples of how you can utilize reporting groups for sales documents in osFinancials5/TurboCASH5. By assigning documents to appropriate reporting groups, you can gain insights into various aspects of your sales operations and make informed business decisions.

Examples of reporting groups for purchase documents

Some examples of reporting groups for purchase documents (orders, purchases, and supplier returns):

1. Supplier categories: You can create reporting groups based on the categories or types of suppliers. For example, you can have reporting groups for raw material suppliers, equipment suppliers, or service providers. This helps in analysing and comparing the purchasing activities and performance for different supplier categories.

2. Product categories: Another option is to group purchase documents based on the product categories or types. You can create reporting groups for specific product lines or categories, such as electronics, office supplies, or machinery. This allows you to track the purchasing patterns and expenses associated with each product category.

3. Approval levels: If your organization follows an approval hierarchy for purchase documents, you can create reporting groups based on different approval levels. For example, you can have reporting groups for purchases approved by managers, directors, or executives. This helps in monitoring the approval process and identifying bottlenecks or delays in purchasing activities.

4. Purchase regions: If your organization operates in multiple regions or countries, you can assign purchase documents to reporting groups based on the regions or countries of the suppliers. This allows you to analyse and compare the purchasing activities and expenses across different regions.

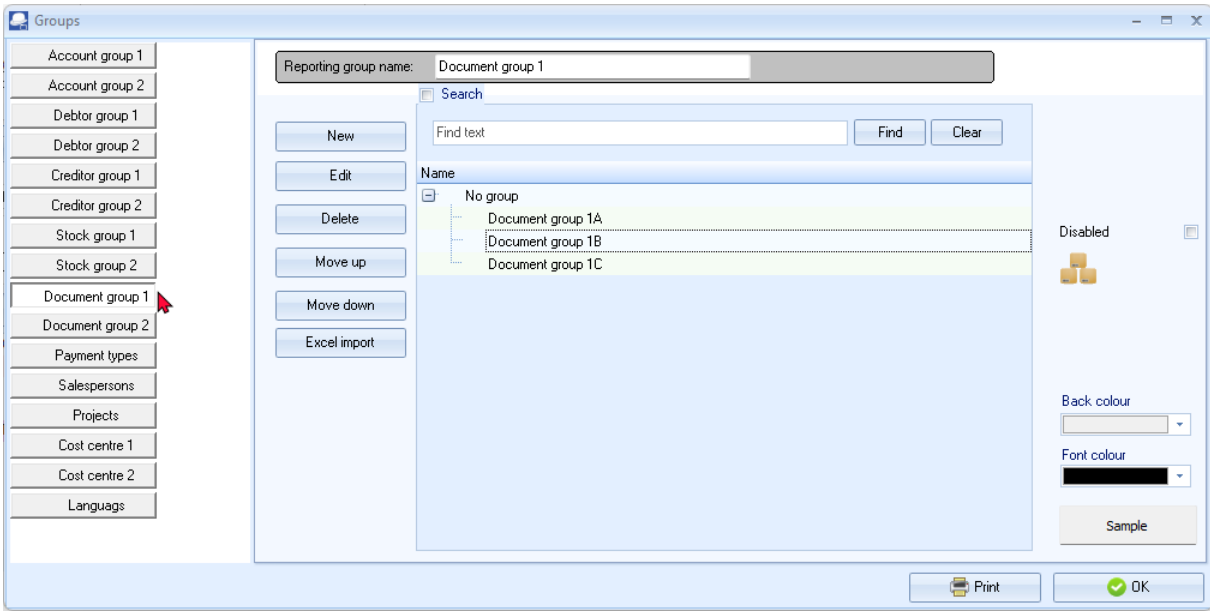
These examples demonstrate how reporting groups for purchase documents in osFinancials5/TurboCASH5 can be used to categorize and analyse purchasing data. By assigning purchase documents to appropriate groups, you can track expenses, monitor supplier performance, and make informed decisions regarding purchasing strategies and cost management.

Define reporting groups

To set reporting groups for Documents:

1. On the Setup ribbon, select Setup → Groups. The "*Groups (Account group 1)"* default screen will be displayed.

2. Click on the Document group 1 button.



3. If you wish to rename the Reporting group name - Document group 1, over-type the description with your new description. This will change the description of the button for Document group 1.

4. To add a new Group to the root directory or list, select the "*REPORTING GROUP ROOT*" on the list and click on the New button.

5. Enter the name of your Document group 1 and click on "*REPORTING GROUP ROOT*" on the list.

> *Adding sub groups for document groups*
>
> *Select a Document group, for example; "Document group 1B" and click on the New button. Enter the name of your sub group.*

6. Repeat the process until you have entered all the Document groups, etc.

7. If you need to add Reporting group 2 for Documents, click on the Document group 2 button and repeat the process as for Document group 1.

8. Click on the OK button to save your changes and close (exit) this screen.

Changing the sequence of groups for document groups

Select a Document group, for example; "Document group 1B" and click on the Move up or Move down button. This will list the stock group according to your preferred sequence.

You may click on the Print button to print a list of your document groups.

You may set colours to display on the Documents grid screen. To do this, click on the Back colour button to set the rows background colour and the Font colour button to set the Font colour.

To retain and save the selected colors, you also need to set both the "Back color" and the "Font color".

Created with the Standard Edition of HelpNDoc: Effortlessly Convert Your Word Doc to an eBook: A Step-by-Step Guide

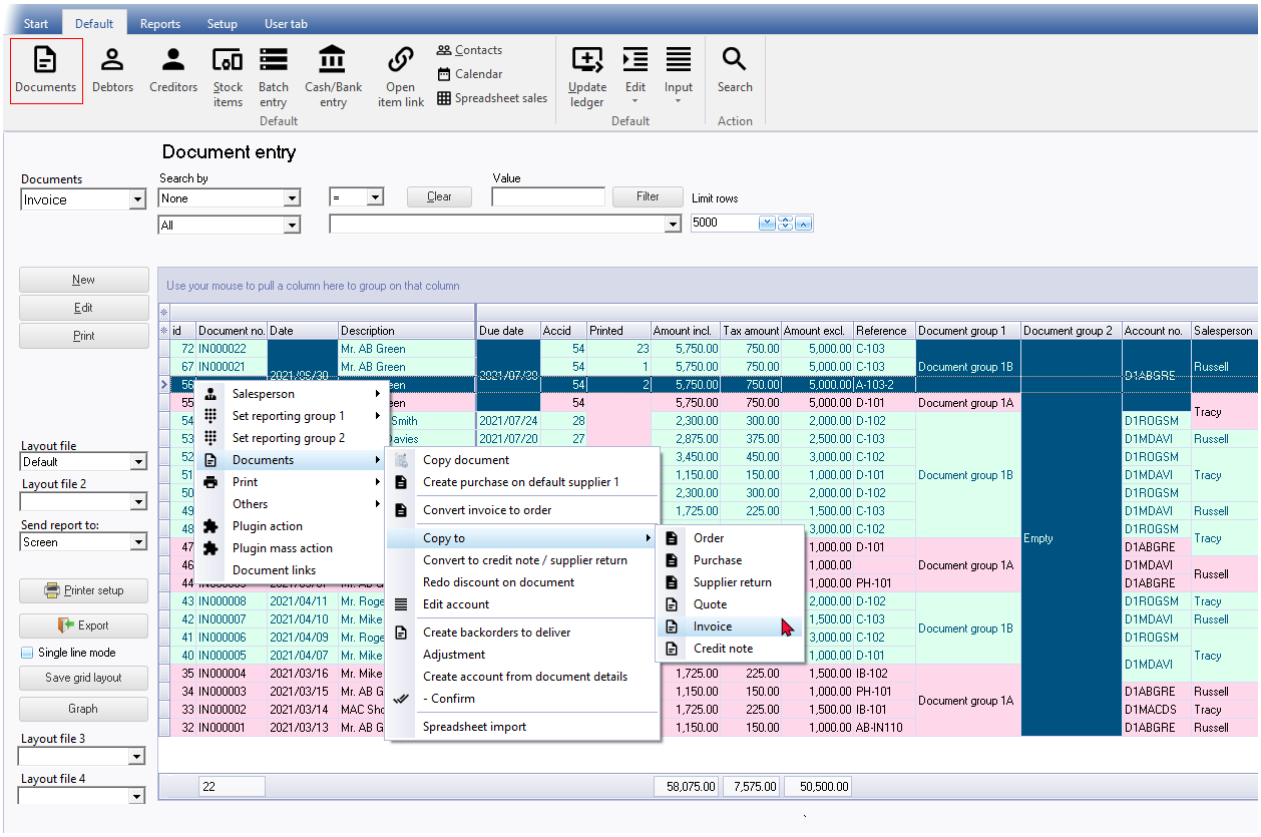
Documents list screen

This is the first screen displayed when you access the Documents in your Set of Books. At first, when you start a new Set of Books, and have not processed any documents, this list will be empty.

To access the Document selection screen:

1. On the Default ribbon, select Documents (F6).

You may also click on the Input menu (Default ribbon) to select a specific sales document (Invoices, Credit notes or Quotes) or Purchase documents (Purchases or Orders) or the Point-of-Sale Invoice option.



> *The Background colour and the Font colour may be set for each Document group 1 (in Setup → Groups).*

2. Document type - Select one of the six (6) document types (i.e. Invoices (default), Credit notes, Quotes, Purchases, Supplier returns or Orders) if the correct one is not displayed.

3. Search and filter options - Search by – Once you have selected a document type, you may filter and search by columns and/or document status (posted, unposted and/or all). You may also filter documents by Document group 1. In addition to this, you may configure the grid to show / hide columns or to group columns, etc.

> *If you click on the Show All Items list, it will list all Document group 1 items (inSetup → Groups (Document groups 1)). You may select any of the available groups from the list and click on the Filter button. Only those documents matching the selected Document group 1, will be listed.*

4. Buttons - By default the following buttons are available:

   a) New - create a new document for the selected document type.

   b) Edit - Edit or change a selected document from the list.

c) Print - Print a selected document.

> *If you activate (tick) the Document Posting option on the Setup → Access control (Documents tab), it will add the following two (2) buttons underneath the Print button:*
>
> - *Posting - This will allow you to launch the Update ledger screen to post Invoices to the ledger. If Quotes or Orders is selected, the button's caption will change to Confirmation.*
> - *Delete - This will allow you to delete an unposted document.*

5. Layout file – Default is displayed. The global settings for layout files are done by selecting a Layout file for each document type on Setup → Documents setup (Setup ribbon).

> *Specific Layout files may also be selected for:*
>
> - *Each debtor (customer / client) account by selecting a different layout file in the Layout file 1 (Invoices), Layout file 2 (Credit notes), Layout file 3 (Quotes) in Debtors (Default ribbon).*
> - *Each creditor (supplier / vendor) account by selecting a different layout file in the Layout file 1 (Purchases), Layout file 2 (Supplier return), Layout file 3 (Orders) in Creditors (Default ribbon).*
>
> *The global settings for the document layout files as selected in Setup → Documents setup (Setup ribbon) will be over-ruled.*

6. Layout file 2 – This field is optional. If a layout file is selected, the document will print twice using this layout file. If you have a customised layout file, you may select the layout file. Otherwise, you may select one of the layout files as selected for Layout file (1).

> *If you need to print Delivery notes, you may you may select the Delivery note layout file.*

7. Layout file 3 – This field is optional. If a layout file is selected, the document will print a third time using this layout file. If you have a customised layout file, you may select the layout file. Otherwise, you may select one of the layout files as selected for Layout file (1).

8. Layout file 4 – This field is optional. If a layout file is selected, the document will print a fourth time using this layout file. If you have a customised layout file, you may select the layout file. Otherwise, you may select one of the layout files as selected for Layout file (1).

9. Send report to – Select - Screen, Printer, File, E-mail or Fax.

10. Printer setup – The printer settings may be set in Printer on Reports or Setup ribbons. You may click on the Page button to set the page and printer options.

> *If you have selected (ticked) the "Use Multiple Printers" field, you may click on the Page button of the "Printer settings" screen to select the any available printer (properly configured on your system) for the First printer, Second printer, Barcode printer and/or Label printer. You may also set the page and printer options for each of these, if necessary.*

11. Export - Export the view of your document data as displayed in the list of list of documents for the selected document type. Only those records matching your sort, search and filter options will be exported.

12. Single line mode - By default, this option is selected (ticked). The details for each of the documents in the list will display in a single line. If you do not select this option (remove the tick), a column header "*Use your mouse to pull a column here to group on that column*" will be displayed and the similar data in columns will be grouped.

13. Save grid layout - Once you have used the filter and sort options (column sequences, etc.), you need to click on this button to save the grid layout. If you Exit osFinancials5/TurboCASH5, and reopen the Set of Books, the grid layout may return to its old values id you do not save the grid layout.

> *To display this button, you may need to hide the ribbons (double-click on any of the ribbon tabs (i.e. Start, Default, Reports, Setup or User tab).*

14. Graph - Displays the documents in a graph.

> *You may use the filter options to display a graph that matches your filter criteria only.*

15. Grid totals - This will display the line count (number of records in rows / documents) that is available on the list. The number of records will indicate the number of records that matches your filter / search criteria. It will also display the totals of the amount columns.

Created with the Standard Edition of HelpNDoc: Step-by-Step Guide: How to Turn Your Word Document into an eBook

Document types

By default, the Document list screen and the Document entry screens will be launched as a Integral part of

the program. If you access the document types from the following options, it will be launched as separate screens:

1. Documents icon on the Default ribbon and select the document type.
2. Input menu on the Default ribbon. This will launch the selected document type as a separate screens.

Other options to create documents

In addition to process Documents from this option, documents may be also be created from the following options on the Default ribbon:

- Documents - Various context menu options.
- Edit → Repeating invoices
- Calendar (Repeating invoices)
- Calendar (Invoices for hours)
- Calendar (Create invoice - context menu)
- Calendar (Bulk time entry)
- Input → Confirm (Quotes and Orders)

Context menu options to create documents

In addition to this, documents may also be created on quickly from the following context menus:

- Copy document - Create a copy of a selected document.
- Create purchase on default supplier 1 - Create order/s for selected invoice/s). Preferred supplier 1 must be selected for a stock item.
- Convert invoice to order - Create order/s for selected invoice/s).
- Convert to credit note / supplier return (invoice/s will be converted to credit note/s and purchase/s to supplier return/s).
- Copy to - Copy selected document/s - to invoice/s, credit note/s, quote/s, purchase/s, supplier return/s or order/s.

Access document types

The six (6) document types are grouped as follows:

1. Sales documents -

   a) Quotes - You may need to produce a Quote for your debtors (customers / clients). When the Quote is accepted, you may confirm the quote (convert the Quote to an Invoice).

   b) Invoices - Invoices are created for debtors (customers / clients). This will generate a source document which can be printed. The Invoice, can be edited before it is posted (updated) to the ledger. When an Invoice is posted (updated) to the ledger, the transactions in the Sales journal will automatically be generated.

   c) Credit notes - Credit notes are created for debtors (customers / clients) to correct a transaction or an exiting posted Invoice or to cancel the Invoice. This will generate a source document which can be printed. The Credit notes, can be edited before it is posted (updated) to the ledger. When a Credit note is posted (updated) to the ledger, the transactions in the Sales journal (or Sales returns journal) will automatically be generated.

2. Purchase documents -

   a) Orders - You may need to place an Order with any of your creditors (suppliers / vendors). When the goods are received or services are provided, you may confirm the Order against the actual goods received and the original Order. You will do this by converting the Order to a Purchase document.

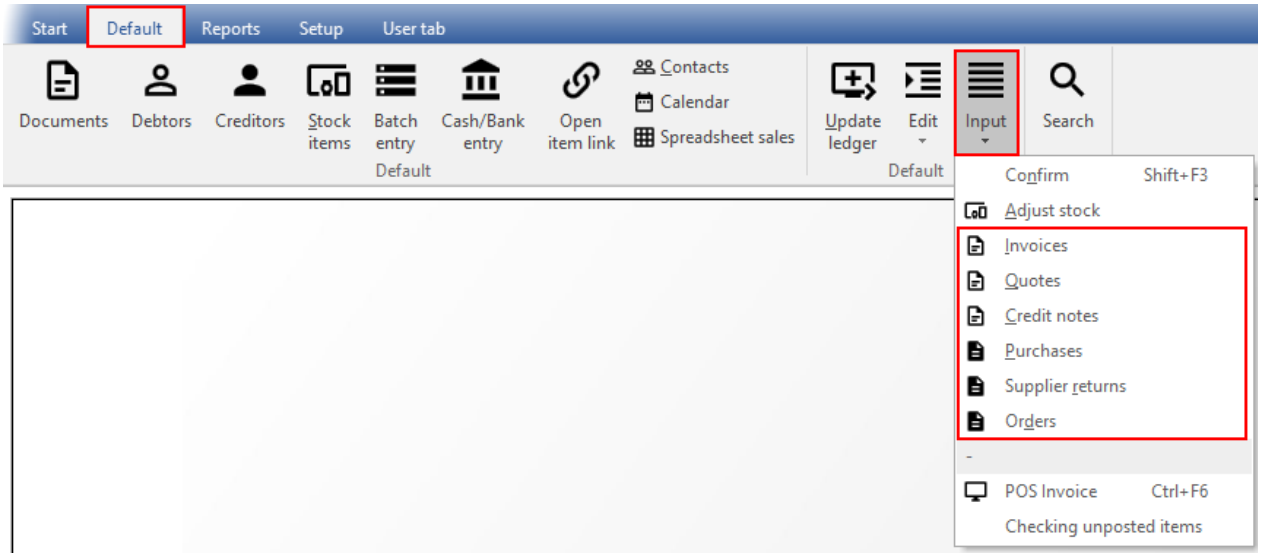
   b) Purchases - Purchase documents are created for creditors (suppliers / vendors). This will generate a source document which can be printed. The Purchase document, can be edited before it is posted (updated) to the ledger. When a Purchase document is posted (updated) to the ledger, the transactions in the Purchase journal will automatically be generated.

   c) Supplier returns - Supplier returns are created creditors (suppliers / vendors) to correct a transaction or an exiting posted Purchase or to cancel the Purchase. This will generate a source document which can be printed. The Supplier returns, can be edited before it is posted (updated) to the ledger. When a Supplier return is posted (updated) to the ledger, the transactions in the Purchase journal (or Purchase returns journal) will automatically be

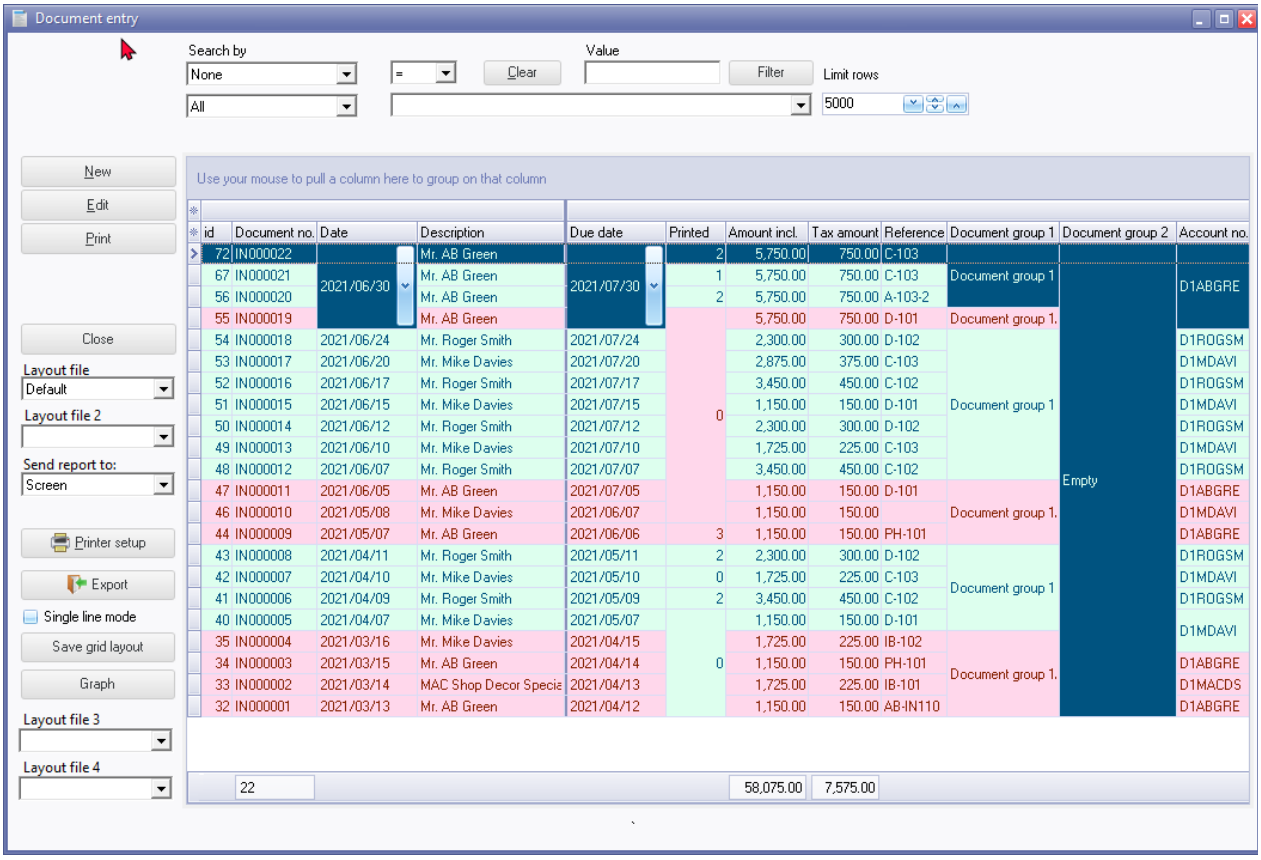
generated.

Access document types - Stand alone screens

You may select a document type on the Input menu on the Default ribbon. This will launch the selected document type in a separate stand alone screens.

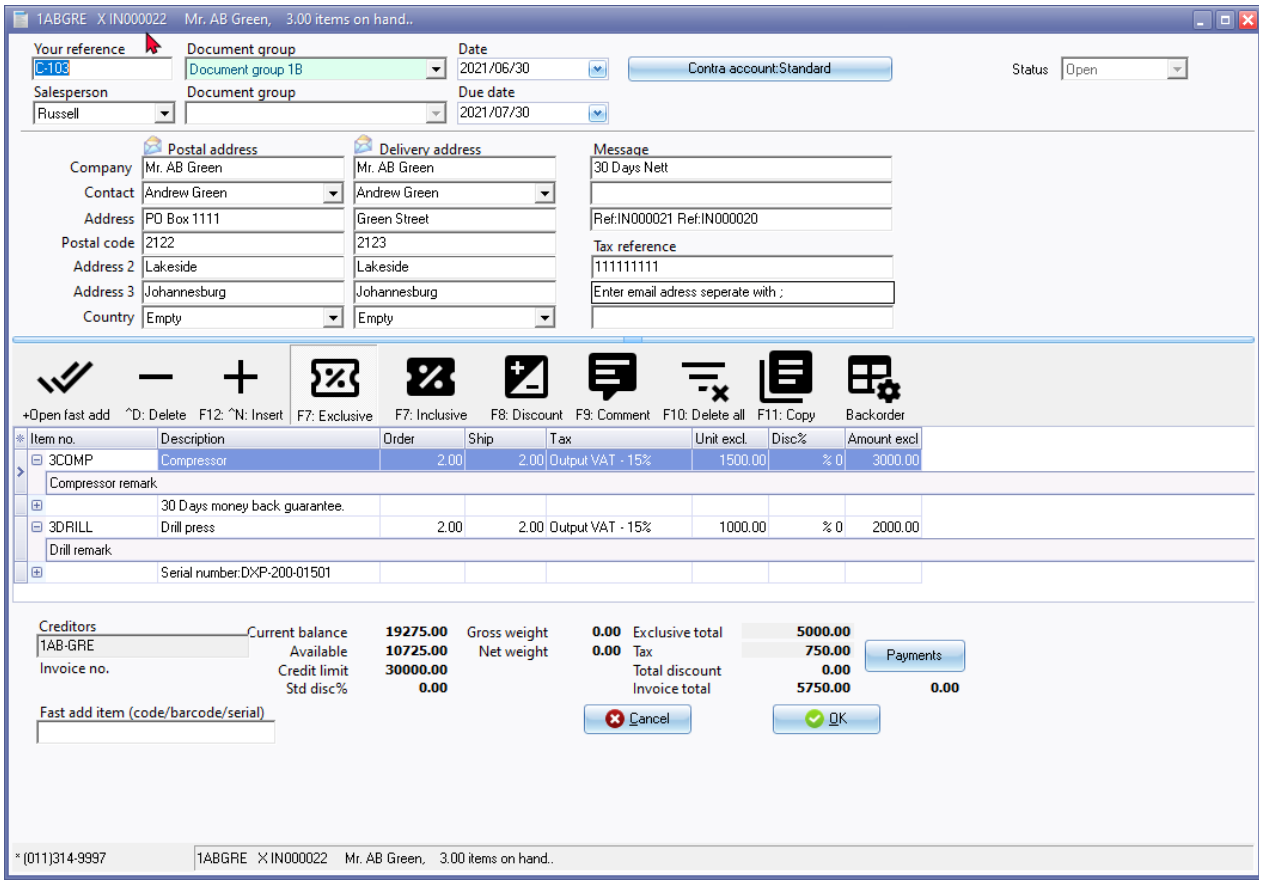


The "*Document entry*" screen, listing the Invoices, is displayed if the Input → Invoices menu is selected, from the Default ribbon.



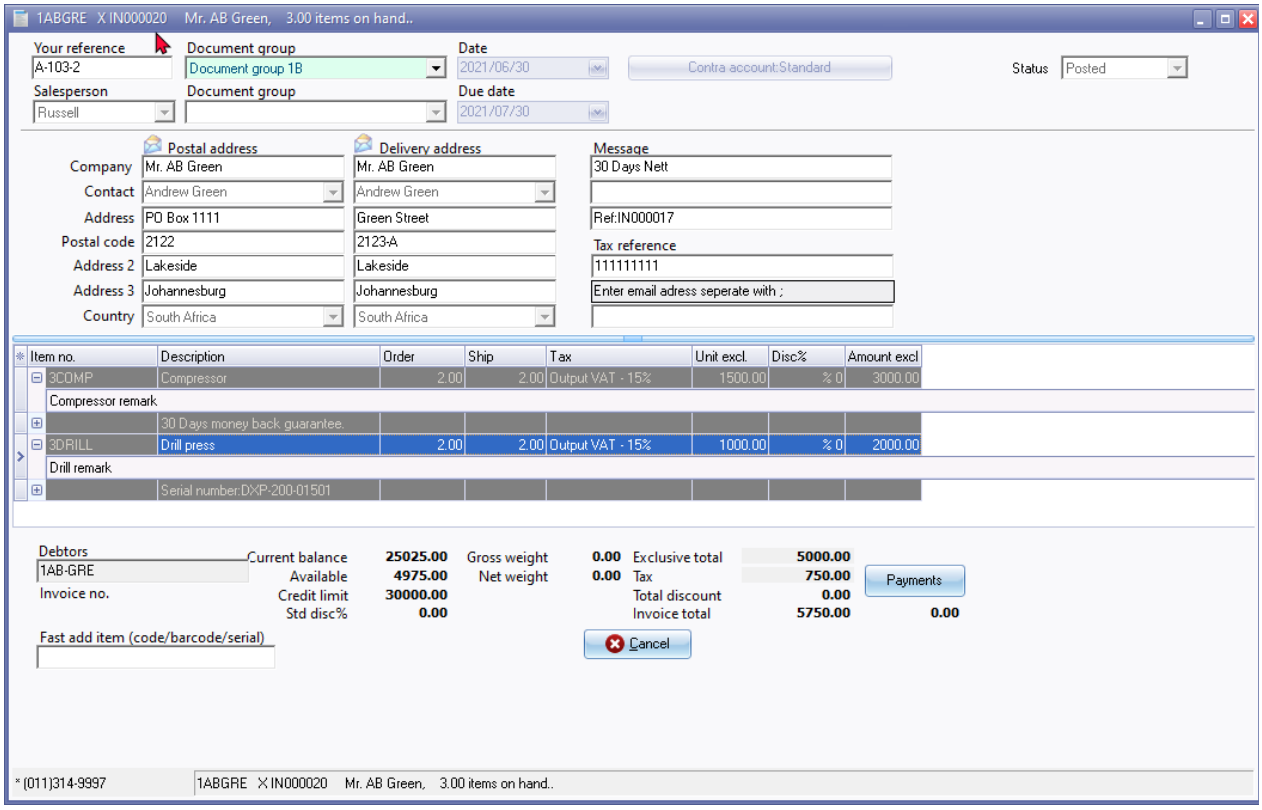
Unposted document

If an unposted document (Invoice) is selected, the "*Document entry*" form for the selected unposted document (Invoice) will be displayed as a separate screen:



Posted document

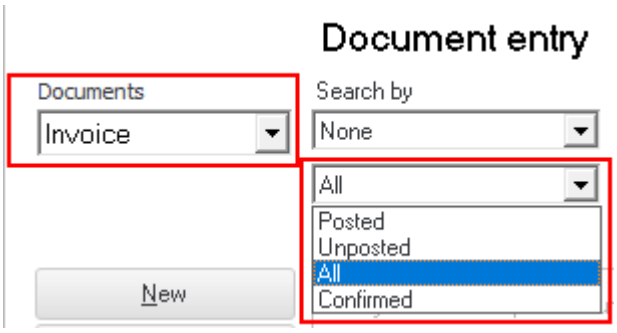
If an posted document (Invoice) is selected, the "*Document entry*" form for the selected posted document (Invoice) will be displayed as a separate screen:



Created with the Standard Edition of HelpNDoc: Transform Your Documentation Process with HelpNDoc's Project Analyzer

Document status

The Document list screen can be filtered by the document status for existing Invoices, Credit notes, Purchases or Supplier returns, Orders and Quotes, as follows:

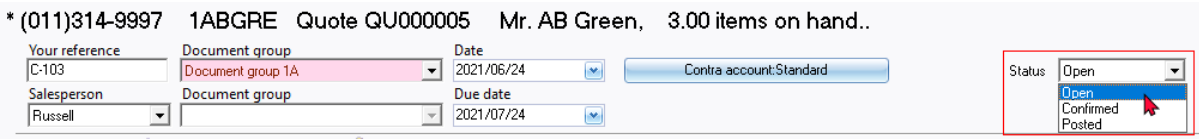


1. Unposted documents - This is the default option on the Document list screen. Any document (Invoice, Credit note, Quote, Purchase, Supplier returns or Orders) may be edited, if it is not yet updated or posted to the ledger.
2. Posted documents - If you select this option on the Document list screen, you may view the documents as they were originally processed in the Document entry screen before these documents were updated (posted) to the ledger. You will not be allowed to edited posted documents.

> *The reason for this is, that quotes and orders cannot be posted (updated) to the ledger. Quotes need to be converted to Invoices and Orders need to be converted to a Purchase documents. Once a*

Quote or Order is confirmed, the Status will change to "Posted".

3. Confirmed - The status for Quotes and Orders will may be filtered as Confirmed, Posted or Open, Document list screen. In the Document entry header of Quotes and Orders, the "*Status*" may also be changed.



When a Quote or Order is created, the Status is set as "*Open*". Once a Quote or Order is confirmed, the Status will change to "*Posted*". You may change it to "*Confirmed*" when editing the Quote or Order.

You may set the status of unposted documents (i.e. Invoices, Credit notes, Purchases or Supplier returns) from "Open (Unposted)" to "Confirmed".

To do this, select the document(s), right-click and select Documents → Confirm on the context menu.

Once unposted documents (i.e. Invoices, Credit notes, Purchases or Supplier returns) is posted (updated to the ledger), these "Confirmed" documents will change to "Posted".

Filter options (Documents)

The osFinancials5/TurboCASH5 grid has a powerful and user-friendly filtering and sorting system that makes it quicker and easier than other methods. With just a few mouse clicks, you can group, sort, and filter any column(s) of data on most screens in a Set of Books. This feature is very useful and efficient for managing and analysing data.

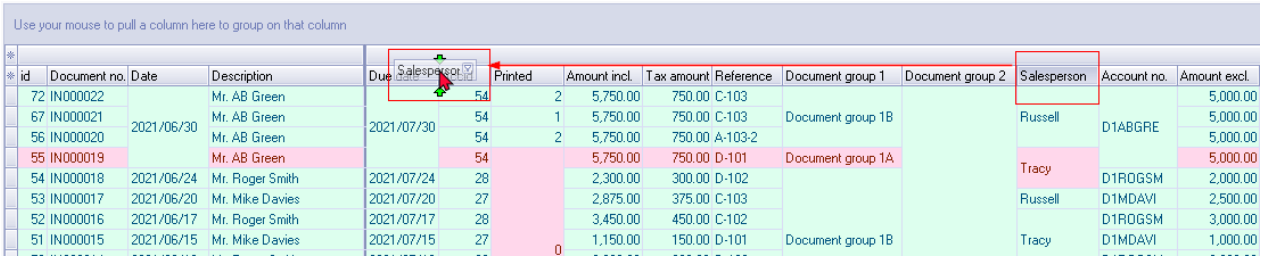
Column headings

All the data for each of your sales documents and purchase documents are listed in thirty-six (36) columns. To view change the sequence in which the data is displayed, you may:

- Scroll bars - Scroll to the right or to the left on the horizontal scroll bar to view the information.
- Sequence of rows - Click on any of the column headings to change the sorting sequence of the

documents listed in the descending or ascending sequence.

- Sequence of columns - Click on a column heading and drag it to the right or to the left to change the sequence in which the columns need to be displayed.



id	Document no.	Date	Description	Due date	Period	Printed	Amount incl.	Tax amount	Reference	Document group 1	Document group 2	Salesperson	Account no.	Amount excl.
72	IN000022		Mr. AB Green		54	2	5,750.00	750.00	C-103					5,000.00
67	IN000021	2021/06/30	Mr. AB Green	2021/07/30	54	1	5,750.00	750.00	C-103	Document group 1B		Russell	D1ABGRE	5,000.00
56	IN000020		Mr. AB Green		54	2	5,750.00	750.00	A-103-2					5,000.00
55	IN000019		Mr. AB Green		54		5,750.00	750.00	D-101	Document group 1A		Tracy		5,000.00
54	IN000018	2021/06/24	Mr. Roger Smith	2021/07/24	28		2,300.00	300.00	D-102				D1RGGSM	2,000.00

52	IN000016	2021/06/17	Mr. Roger Smith	2021/07/17	28		3,450.00	450.00	C-102				D1RGGSM	3,000.00
51	IN000015	2021/06/15	Mr. Mike Davies	2021/07/15	27	0	1,150.00	150.00	D-101	Document group 1B		Tracy	D1MDAVI	1,000.00

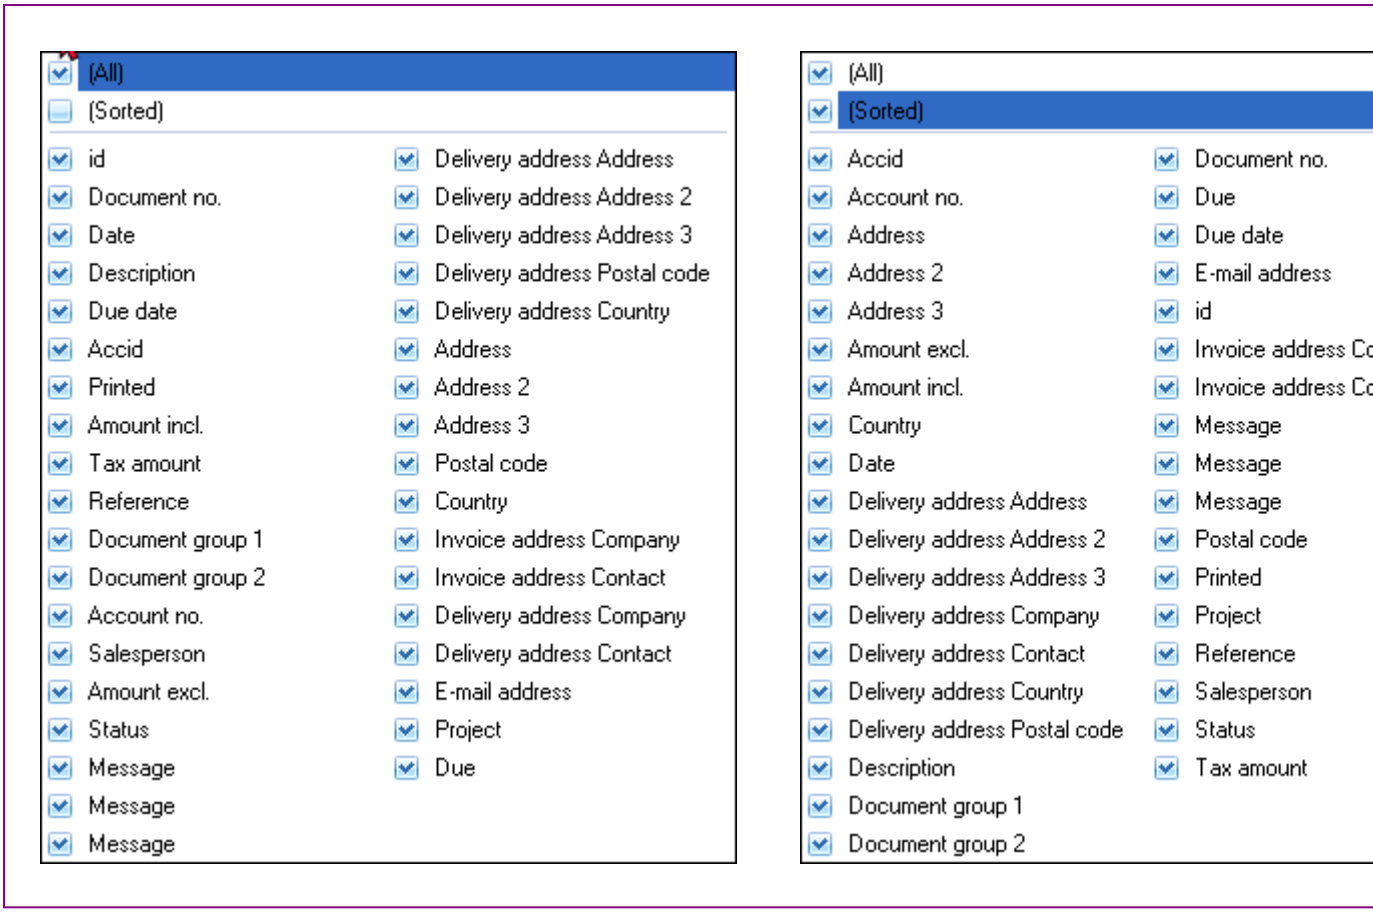
You may drag and drop any of the columns on the left band to the right band and the columns from the right band to the left band, to customise the grid for your requirements.

If you wish to retain your layout, click on the Save grid layout button.

Search by options

You may use the filter options to find a specific document, or all documents with the same values, in any of the thirty-six (36) columns. These columns are as follows:

Default	*Sorted (selected) - Alphabetical list*



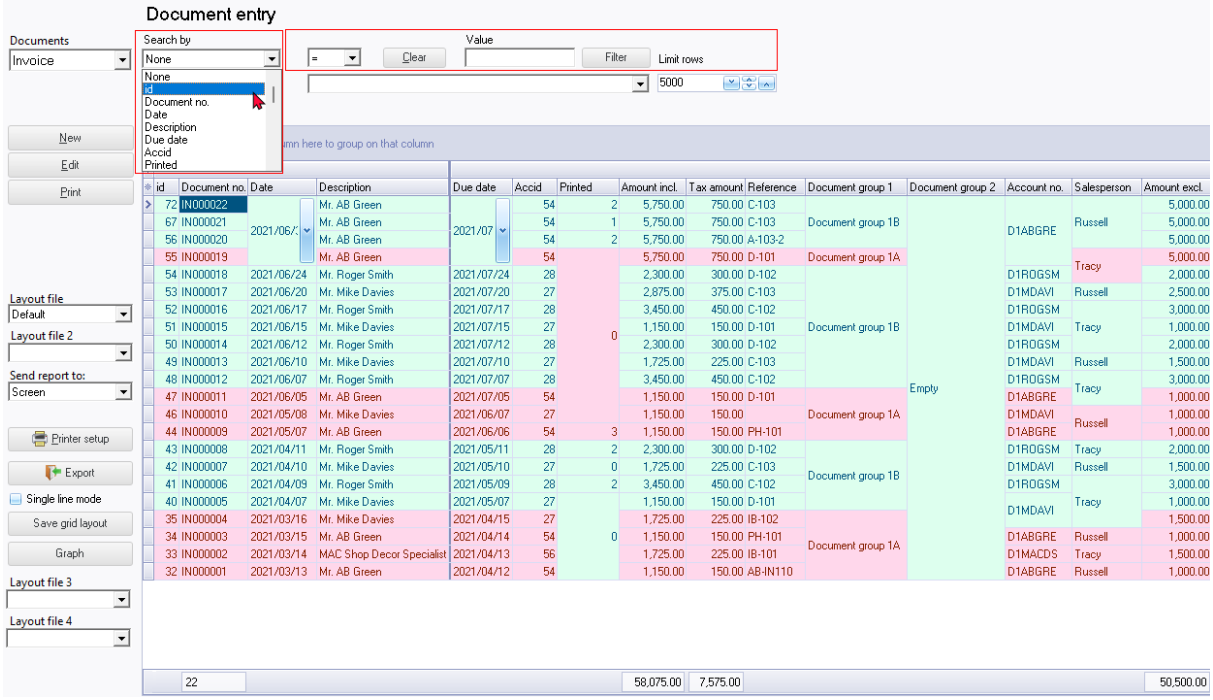
To search for specific documents:

1. The filter options will display only those documents in your search or filter criteria. To do this, you may:

   a) Search by - The default option is none. It will list all the column headings. You may select any of these as an option.

   b) Like - Operator to find all documents with the same value, values greater than, smaller than, greater than or equal to, smaller than or equal to the values you have selected, or wish to enter.

   c) Value - Enter the value for the field type you have selected, for example, Postal code (if you have selected "*Postal code*" as the "*Search by*" option).



2. Once you have selected or specified the search criteria, click on the Filter button. Only those documents as in your search or filter criteria or options will be listed.

3. If you need to clear your filter options and values, click on the Clear button. You may also click on any of the column headings to change the sorting sequence of the debtor (customer / client) accounts listed.

The "Line count" will show the number of records (documents) that matches your search or filter criteria.

You may also search for documents in the "Investigator" screen (Search (Setup ribbon)).

Filter by Document group

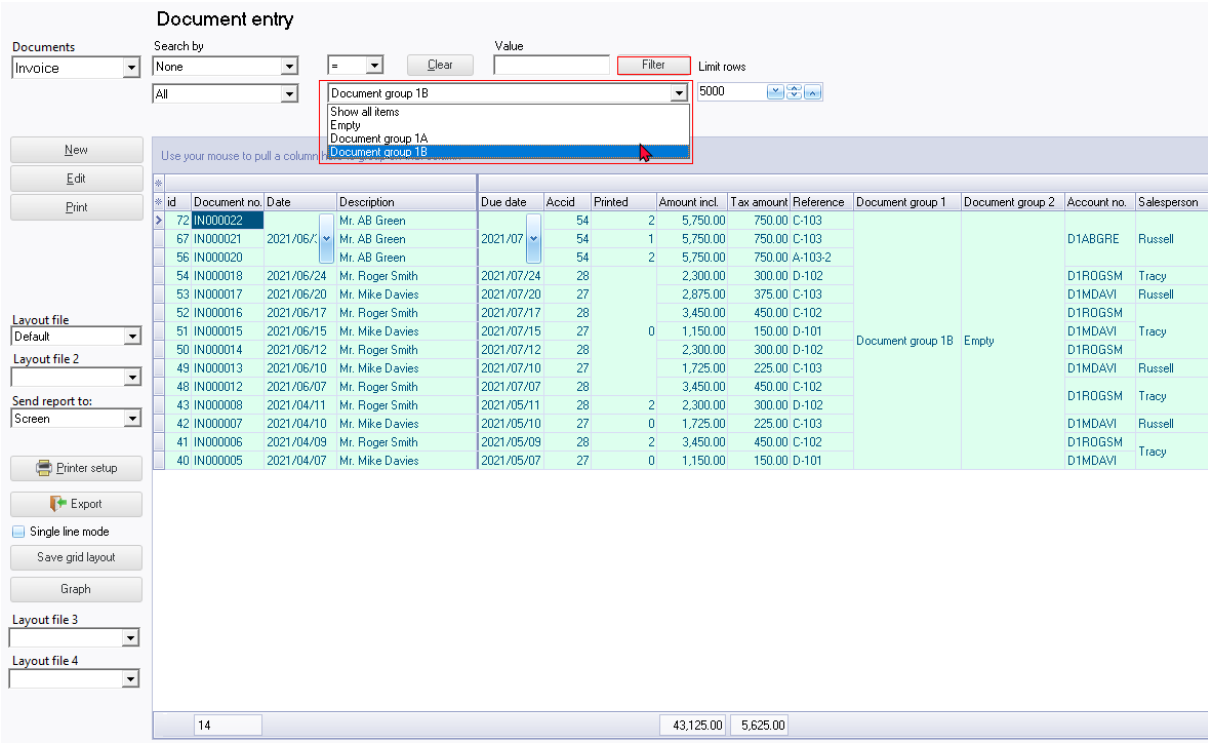
When processing documents, you may select up two (2) reporting groups for documents, if document groups are added in the Groups - Documents (Setup menu on the Setup ribbon).

You may select any available Document reporting group 1 to list only those documents linked to selected Document group 1.

To filter for specific documents for a document group:

1. The default is "*Empty*". Select a document group 1 (e.g. Document group 1B, as in this example). Click

on the Filter button. Only those documents linked to the selected document group will be listed.



2. To clear your selection, Select "*Show all items*" and click on the Filter button.

You may change the Document groups - Reporting group1 on the context menu of the Document list screen.

Created with the Standard Edition of HelpNDoc: Maximize Your Documentation Output with HelpNDoc's Advanced Project Analyzer

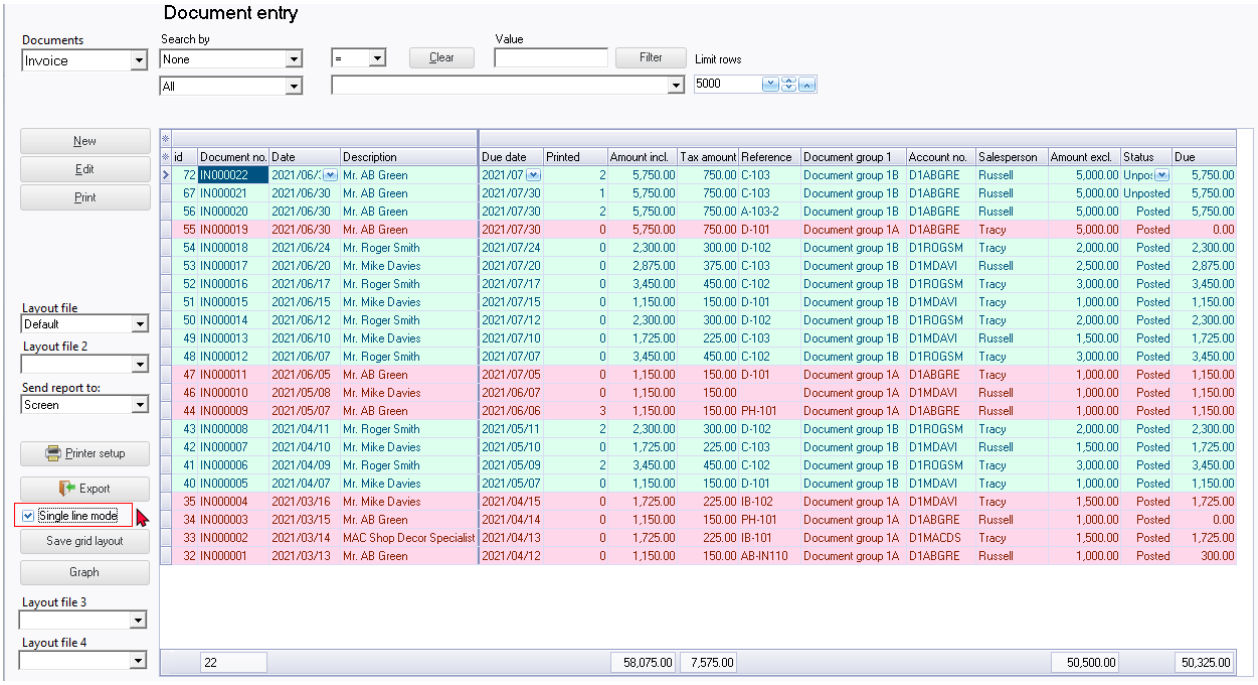
Single line mode

By default, the "*Single line mode*" option is selected (ticked). The details for each of the documents in the list will display in a single line.

If you do not select this option (remove the tick), a column header "*Use your mouse to pull a column here to group on that column*" will be displayed and the similar data in columns will be grouped.

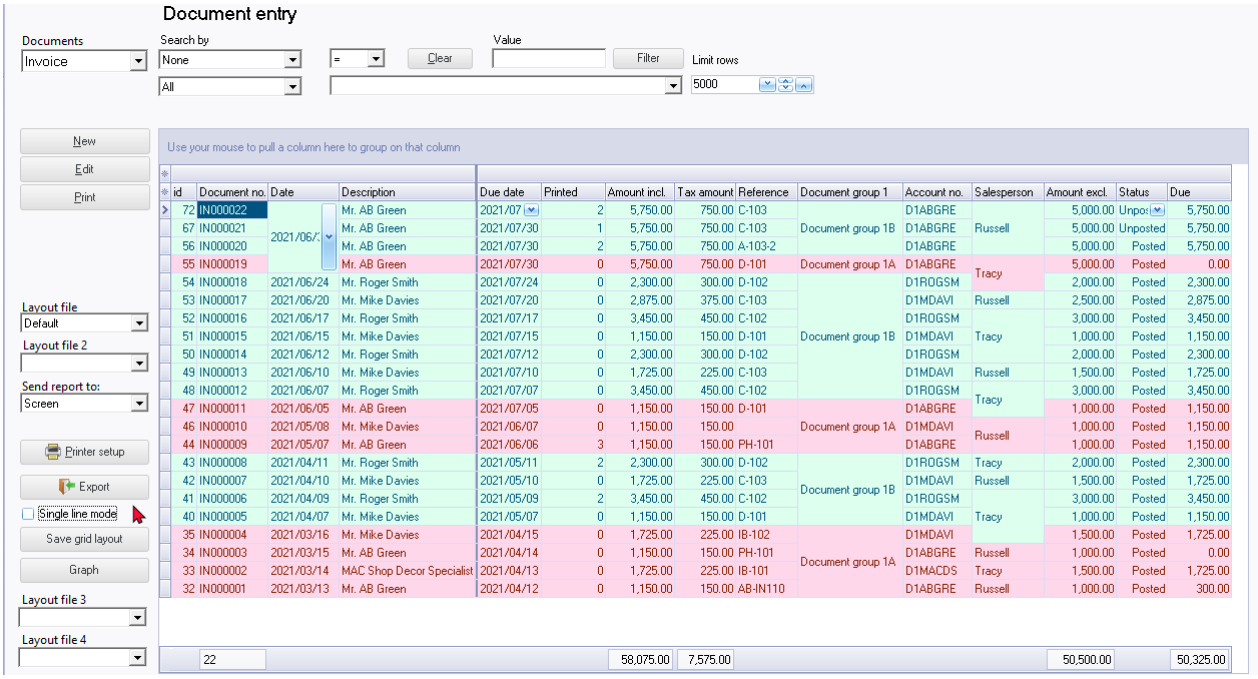
Single line mode selected

The details for each of the documents in the list will display in a single line.



Single line mode not selected

If the "*Single line mode*" option is not selected a column header "*Use your mouse to pull a column here to group on that column*" will be displayed and the similar data in columns will be grouped.



All similar data in columns will be displayed once, e.g. Dates, Document groups, Salespersons, etc.

If you wish to retain your layout, click on the Save grid layout button.

Created with the Standard Edition of HelpNDoc: Create Professional CHM Help Files with HelpNDoc's Easy-to-Use Tool

Show / Hide columns

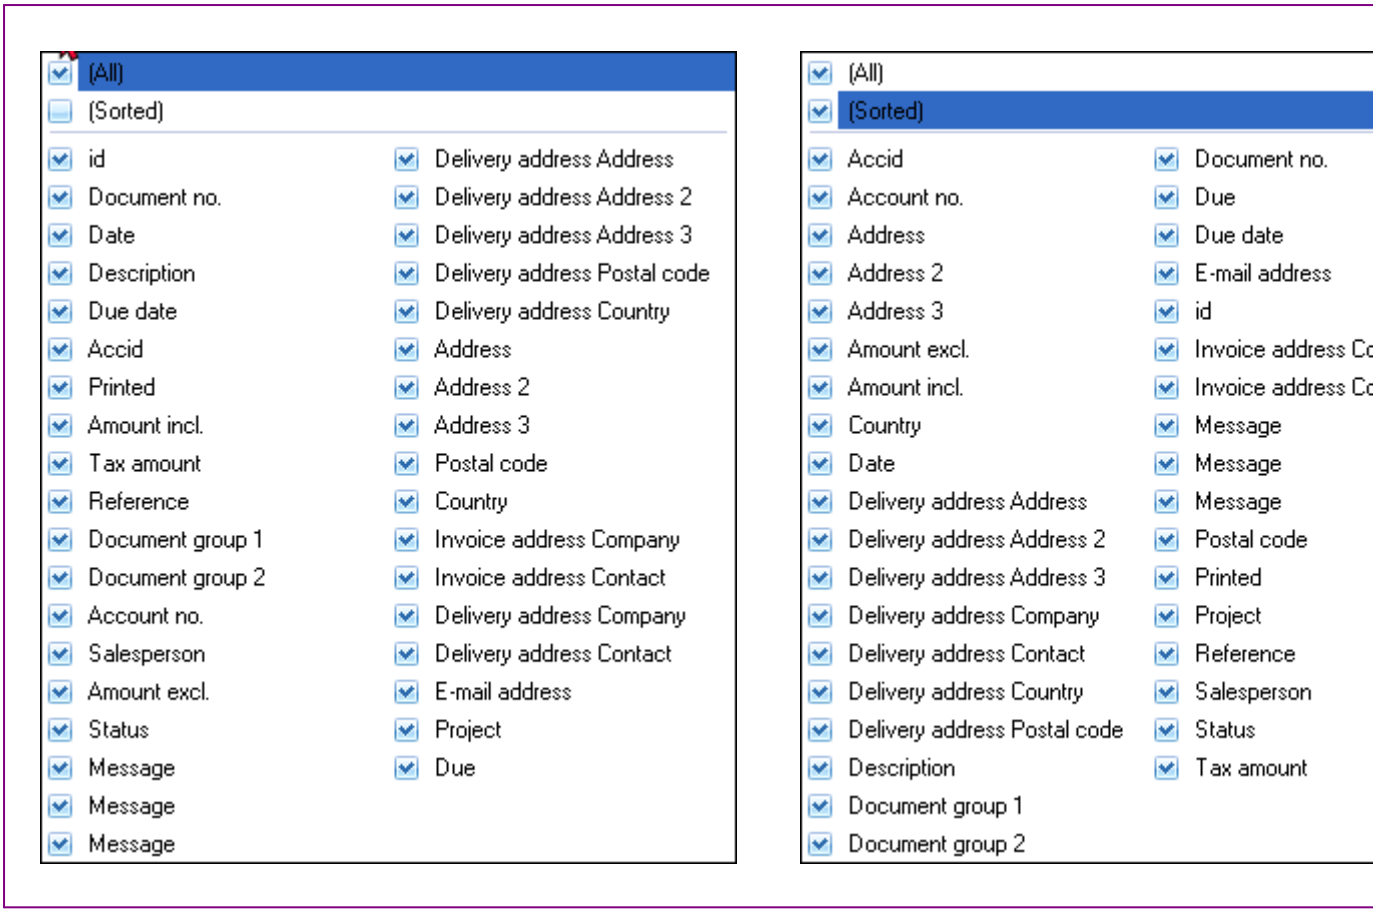
By default, all thirty-four (36) columns will be displayed and listed in the Document entry list screen for each document type.

The columns is grouped in to two (2) bands:

You may use the filter options to find a specific document, or all documents with the same values, in any of the thirty-six (36) columns. These columns are as follows:

1. Left band - Lists the first four (4) columns, i.e., id (document id), Document number, Date of document, and Account description.
2. Data band - List the rest of the columns Due date, Accid (Account id), Printed, Amount inclusive, Tax amount, Reference, Document group 1, Document group 2, Account no., Salesperson, Amount exclusive, Status, Message line 1, Message line 2, Message line 3, Delivery address 1, Delivery address 2, Delivery address 3, Delivery address country, Postal address 1, Postal address 2, Postal address 3, Postal code, Country, Invoice address Company, Invoice address Contact, Delivery address Company, Delivery address Contact, E-mail address, Project, and Due (due / outstanding amount).

Default	*Sorted (selected) - Alphabetical list*



You may drag and drop any of the columns on the left band to the right band and the columns from the right band to the left band, to customise the grid for your requirements.

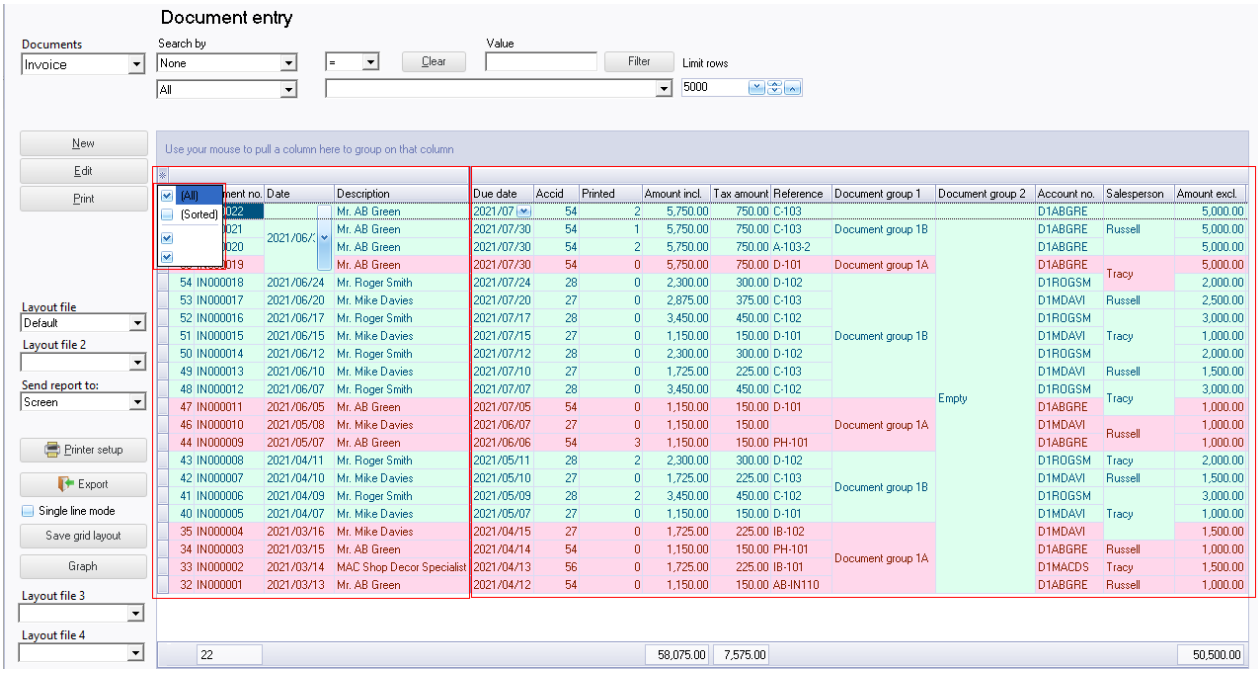
Hide / Show bands

Hide left band - Remove the tick in the first tick box. This will hide the id, Document no. Date and Description, columns.

Show left band - Tick the first block. This will add the hidden columns on the left band.

Hide data band - Remove the tick in the second tick box. This will hide all columns in the data band.

Show data band - Tick the second block. This will add all the hidden columns on the left band.



Hide / Show columns

By default, all thirty-six (36) columns will be displayed and listed in the Document entry list screen for each document type.

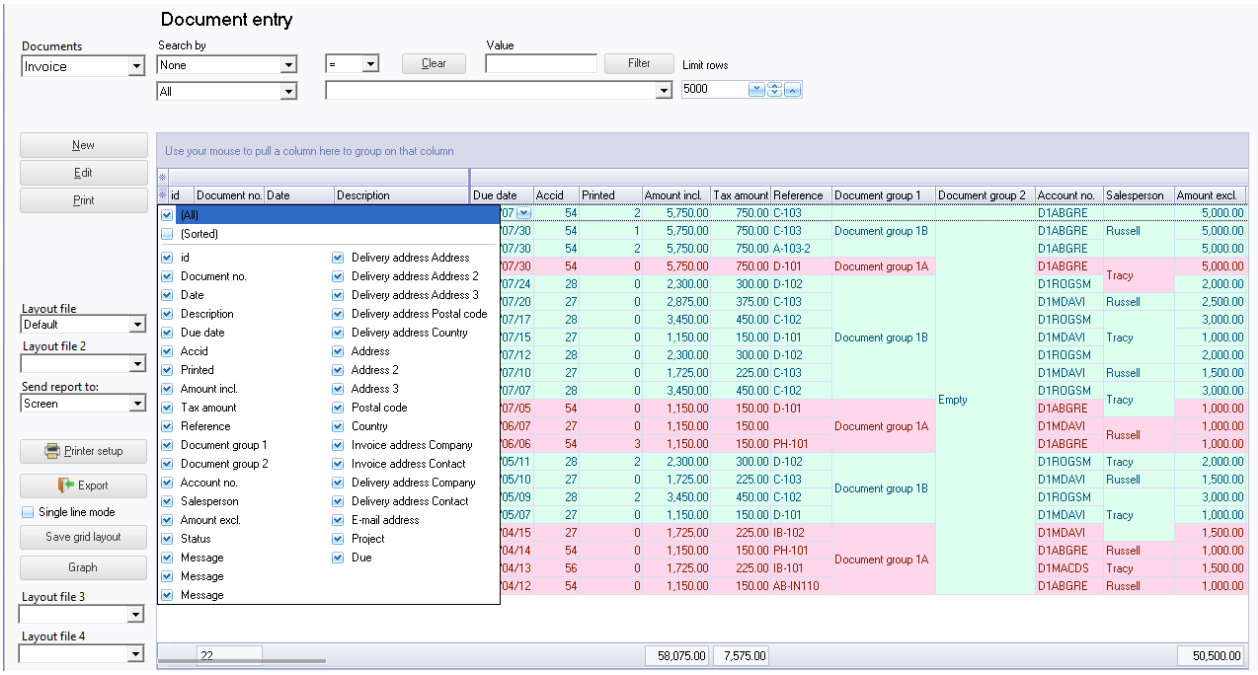
You may select to hide or show any column, as required.

To hide or show columns:

Click on the second block - Column headings - A list of the fields will be listed.

Remove the ticks for the columns to hide or select the columns you need to display.

You may use the Up arrows and/or the Down arrows Right or Left arrows keys to navigate the fields. You may use the Space bar to deselect (remove the tick) or to reselect (tick a field again).



If you wish to retain your layout, click on the Save grid layout button.

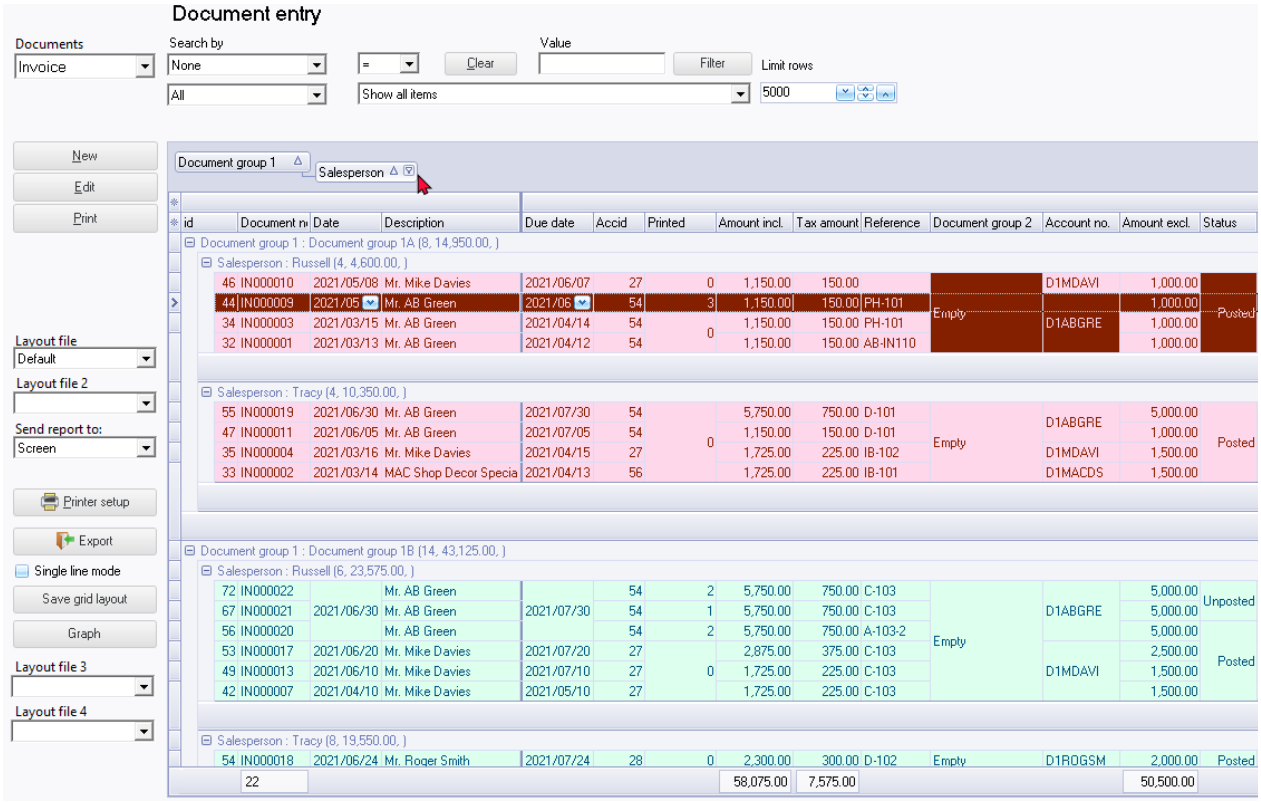
Created with the Standard Edition of HelpNDoc: Easily share your documentation with the world through a beautiful website

Group columns

If the "*Single line mode*" option is not selected (tick removed), a column header "*Use your mouse to pull a column here to group on that column*" will be displayed and the similar data in columns will be grouped.

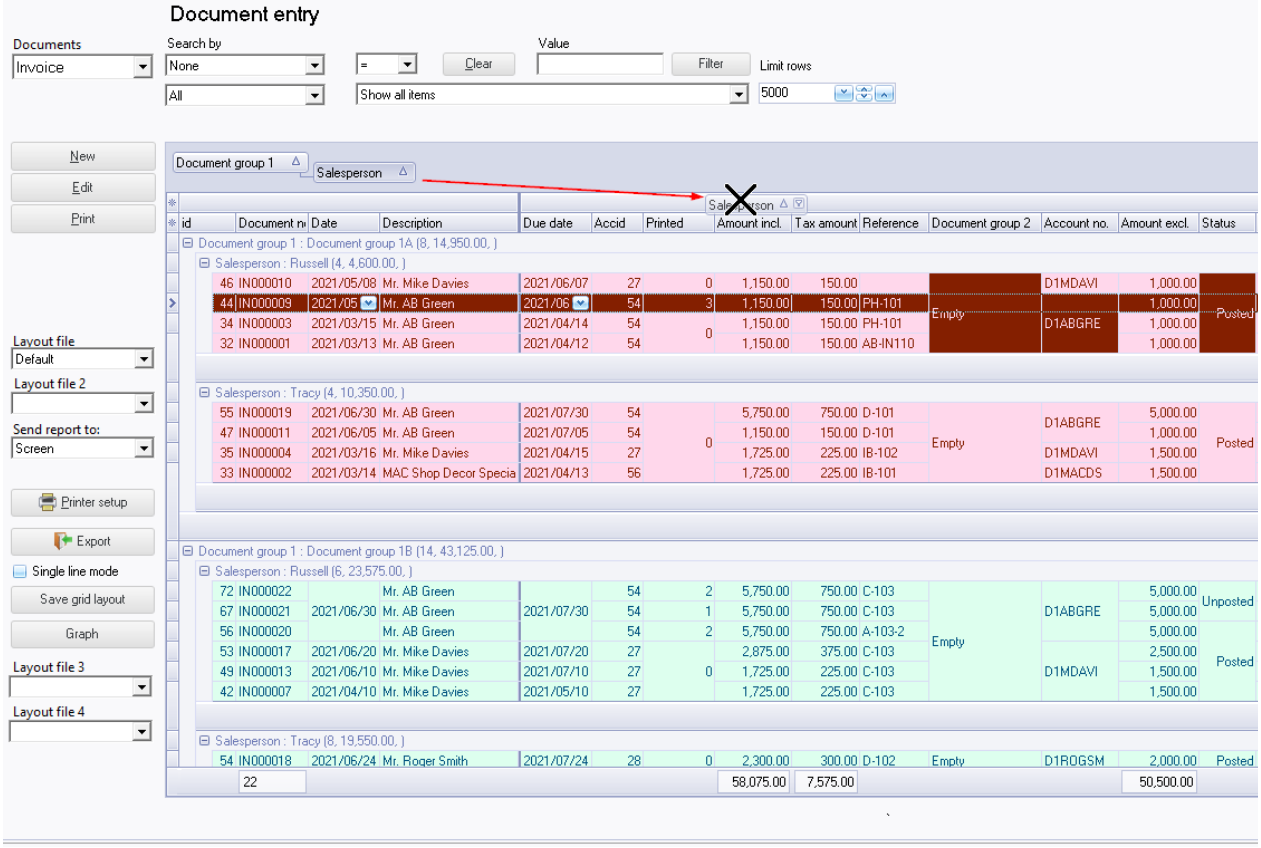
Select a column and click on it. While holding the mouse button down, drag it to the "*Use your mouse to pull a column here to group on that column*" bar. Select any other column to drag and drop it on the the "*Use your mouse to pull a column here to group on that column*" bar. You may select as many columns, as necessary, to group your data.

You may also drag and drop these columns to the right or left to change the grouping of these columns.



If you wish to retain your layout, click on the Save grid layout button.

To remove a column from the "*Use your mouse to pull a column here to group on that column*" bar, you may use the following two (2) options:



1. Select the column heading (e.g., “*Document group*”) on the "*Use your mouse to pull a column here to group on that column*" bar, and drag it to the first line (above the column headings). When the mouse pointer change to a big X, drop it. The column will automatically be placed in the correct default sequence (or the place of the previous saved grid layout).
2. If you wish to change the column to a specific place, select the column heading (e.g., “*Document group*”) on the "*Use your mouse to pull a column here to group on that column*" bar, and drag it to the second line (column headings). When you drop it, the column will be added to the selected position or sequence of the columns.

If you wish to retain your layout, click on the Save grid layout button.

Created with the Standard Edition of HelpNDoc: Streamline Your Documentation Process with a Help Authoring Tool

Documents - Graphs

In addition to the Graph feature for each document type, in Documents on the Default ribbon, you may also print Graphs per week or Graphs per month for posted document types on the User reports menu:

1. Graphs → Graphs per week → Sales menu:
    a) Sales (Invoices - Credit notes) per week
    b) Invoices per week
    c) Credit notes per week
    d) Quotes per week
2. Graphs → Graphs per week → Purchases menu:
    a) Purchases (Purchases - Supplier returns) per week
    b) Purchases per week
    c) Supplier returns per week
    d) Orders per week
3. Graphs → Graphs per month → Sales menu:
    a) Sales (Invoices - Credit notes) per month
    b) Invoices per month
    c) Credit notes per month
    d) Quotes per month
4. Graphs → Graphs per month → Purchases menu:
    a) Purchases (Purchase - Supplier returns) per month
    b) Purchases per month
    c) Supplier returns per month
    d) Orders per month

View graphs

You may filter and view the documents in a graph.

To view the documents in graph, you may use the following options for the data to be included in the graph:

- Document types - Select the document type (i.e. invoices, credit notes, quotes purchases, supplier returns or orders).
- Document status - Select All, Posted or Unposted and Confirmed (Quotes and Orders).

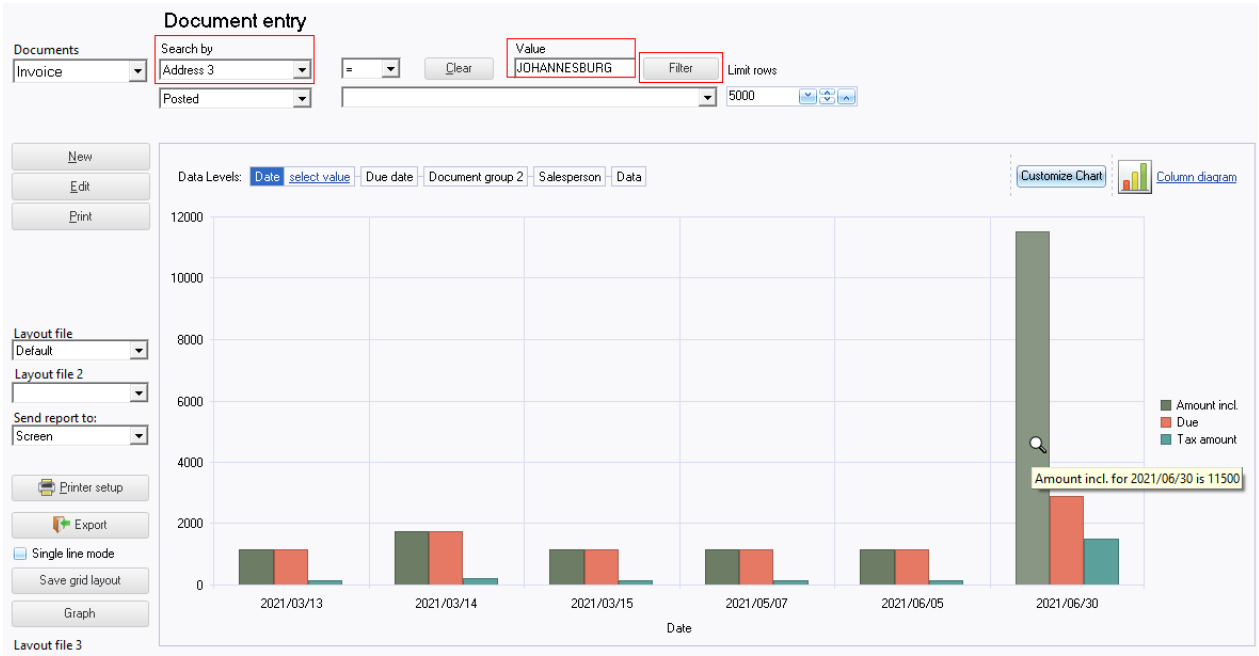
- Filter options to select the documents to include or exclude from the graph , etc.

To view the documents in a graph, click on the Graph button.

To close the graph, click on the Graph button again.

In this example, the amount due is lower than the amount inclusive. This implies that the invoice is partially settled with payments or credit notes, linked to that invoice in the Open item link.

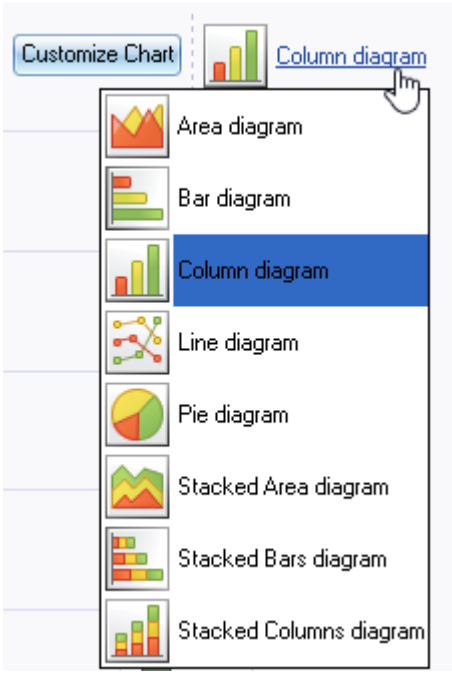
Example : Filtered by Address 3



Customize Chart

Customize Chart : Types

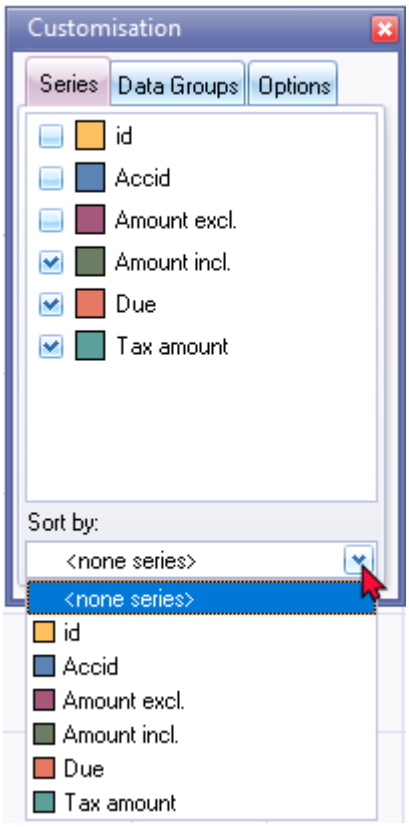
The default chart diagram is the "*Column diagram*". You may select the one of the following diagrams to view the graph.



Customize Chart : Series

By default, only the Amount inclusive and Due amount and Tax amount is displayed.

You may remove the tick of the series or add a tick to a series. For example, if you wish to see the amount exclusive, tick that option and if you do not wish to view the tax amount, remove the tick.



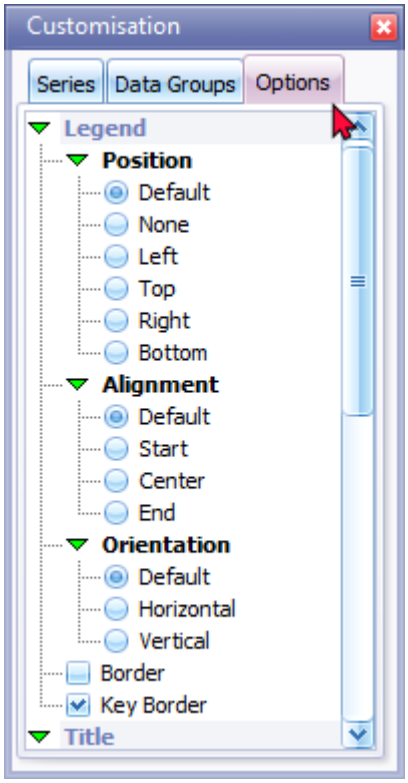
Sort by: select the options in the series to change the sequence of the documents in the graph is displayed.

Customize Chart : Data Groups

The Data Groups will list all the columns headings (field names) of the Document selection screen.

Customize Chart : Options

You may change the default values for the "*Legend, Title, Toolbox*" and "*Other (Value Hints)*" according to your requirements.



Customize Chart : Data groups

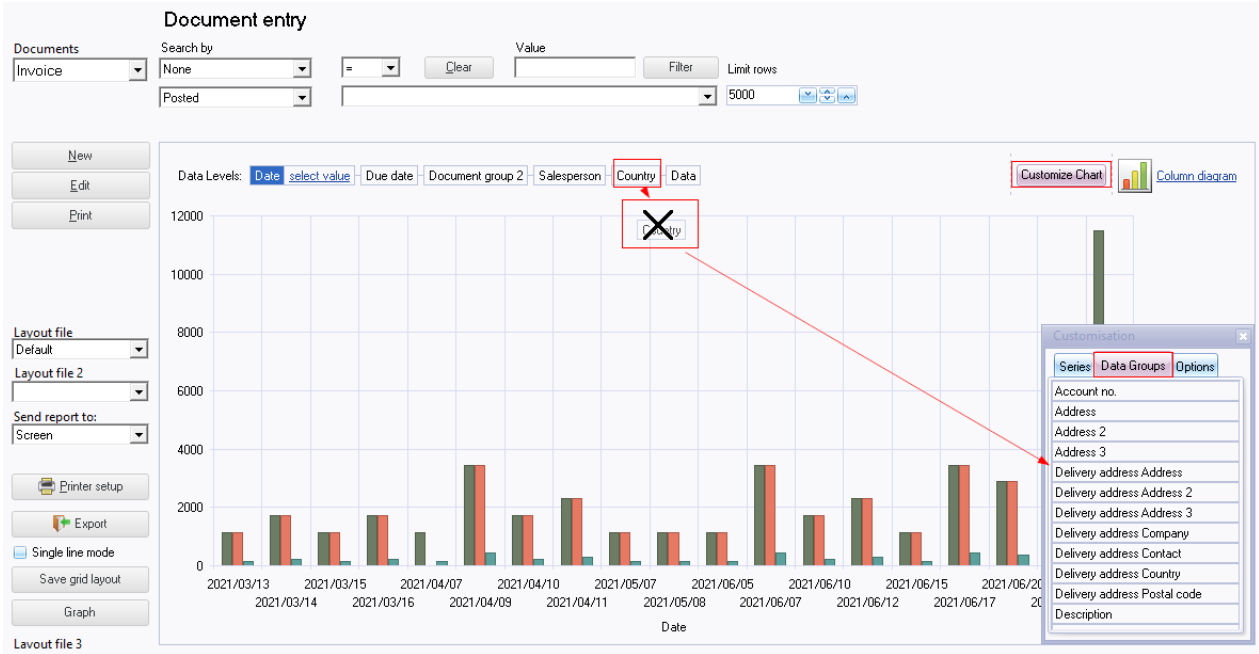
The data groups list all the available columns on the Documents grid, which is not already set as "*Data Levels*". You may add or remove any of the available Data Groups on the "*Data Levels*".

To add a "*Data Group*" to the "*Data Levels*":

1. Click on the Customize Chart button.
2. On the "*Customisation*" screen, click on the Data Groups tab.
3. Select the available data group form the list you wish to add to the "*Data Levels*".
4. Drag and drop the data group to the required place on the "*Data Levels*".

To remove a "*Data Group*" from the "*Data Levels*":

1. Click on the Customize Chart button.
2. On the "*Customisation*" screen, click on the Data Groups tab.
3. Select the available data group on the "*Data Levels*".
4. Drag the data group to any place below the "*Data Levels*". When the mouse pointer change to a big X, drop it. The data field will be added to its original place on the list in the "*Data Groups*" tab of the "*Customisation*" screen.



Created with the Standard Edition of HelpNDoc: Don't be left in the past: convert your WinHelp HLP help files to CHM with HelpNDoc

Export - Documents grid

The Export button on the Document entry list screen allows you to export the detail of a selected document type to a CSV (Comma Separated Value) file type. The saved exported file will automatically open the "*Export.txt*" file in a default spreadsheet app (program) (associated with the CSV (Comma Separated Values) file type.

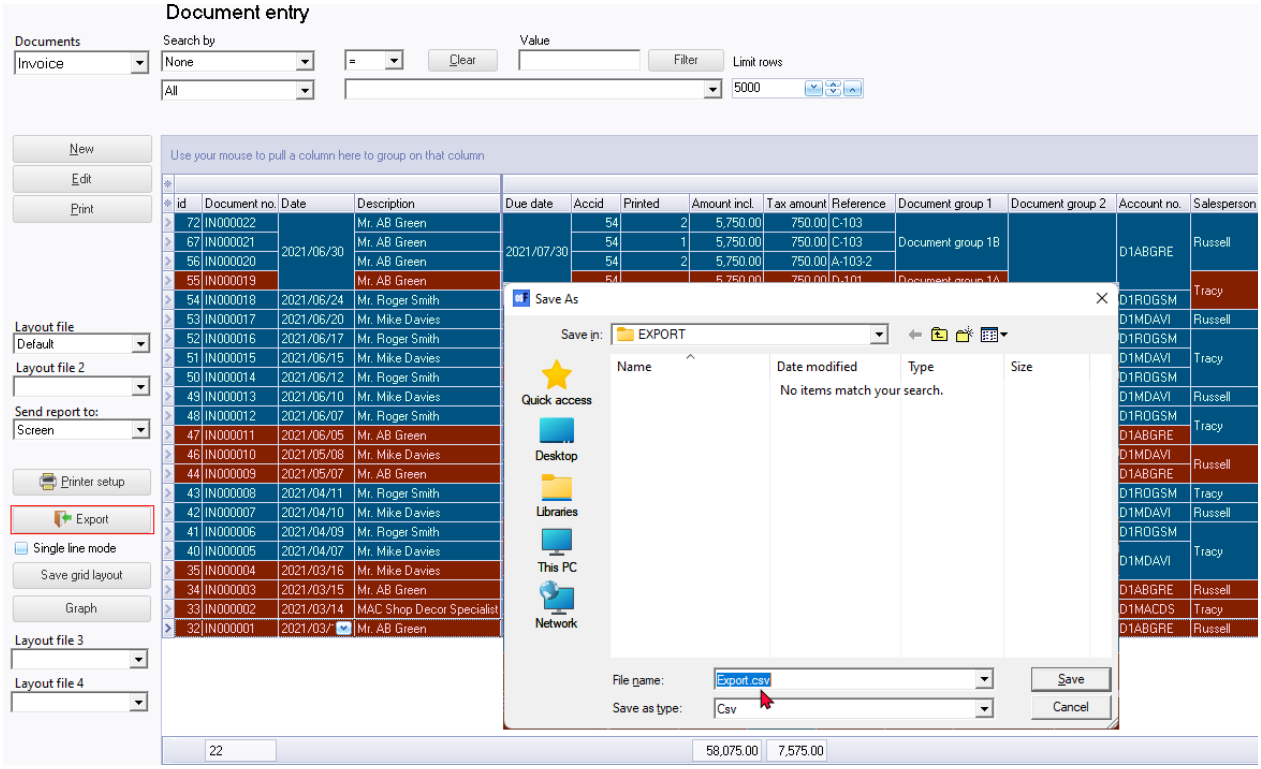
You may use the following options to filter the data which you need to include in the spreadsheet:

1. Document type - Select one of the six (6) document types (i.e. Invoices (default), Credit notes, Quotes, Purchases, Supplier returns or Orders) you need to export.
2. Document status - Select "*All, Posted, Unposted*" or "*Confirmed*" for selected document types (i.e. Invoices (default), Credit notes, Quotes, Purchases, Supplier returns or Orders) you need to export.
3. Search and filter options - Search by – Once you have selected a document type, you may filter and search by columns. For example, if you wish to export documents for a specific Salesperson, you may filter for that Salesperson.
4. Document groups - You may select any specific document groups for Document group 1 you need to export.

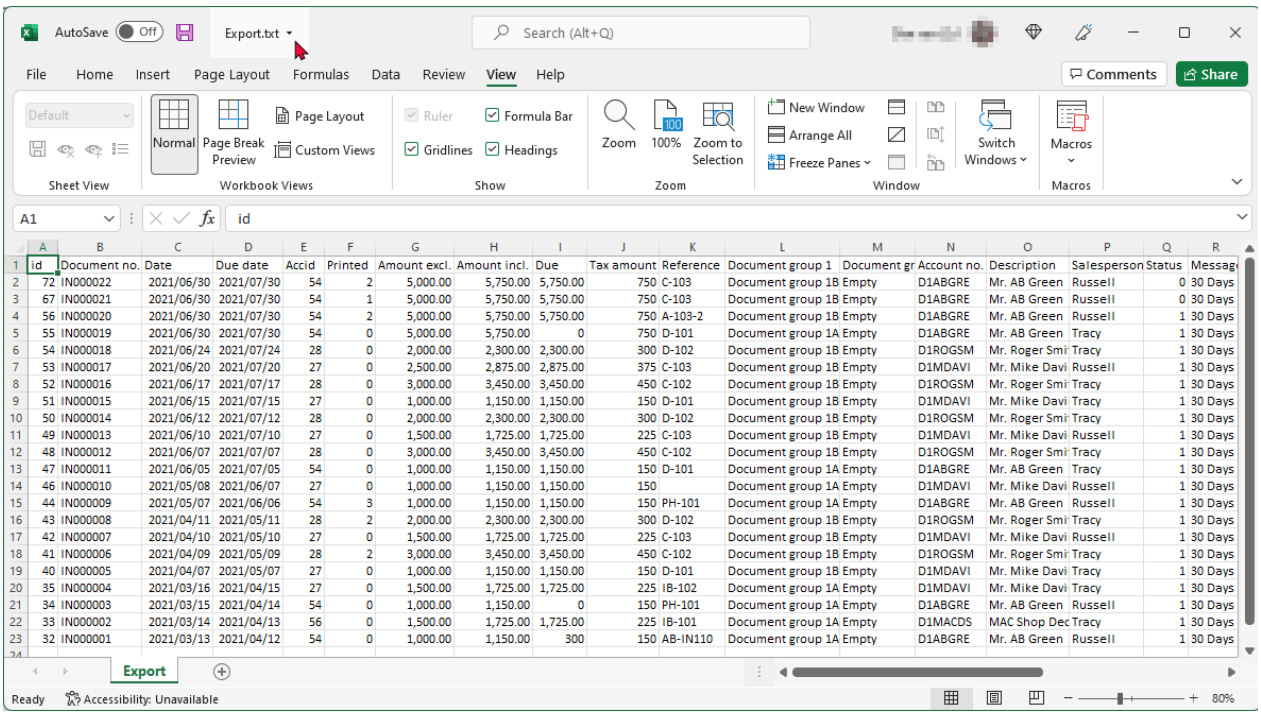
Once you have made your choices, click on the Export button.

On the "*Save As*" screen, select the folder to store the file and enter name.

Click on the Save button.



Once the file is saved, it will automatically be opened in your system's default spreadsheet program, e.g. Microsoft Excel.



Open saved Export.txt files in another app (program) for CSV (Comma Separated Values) file type

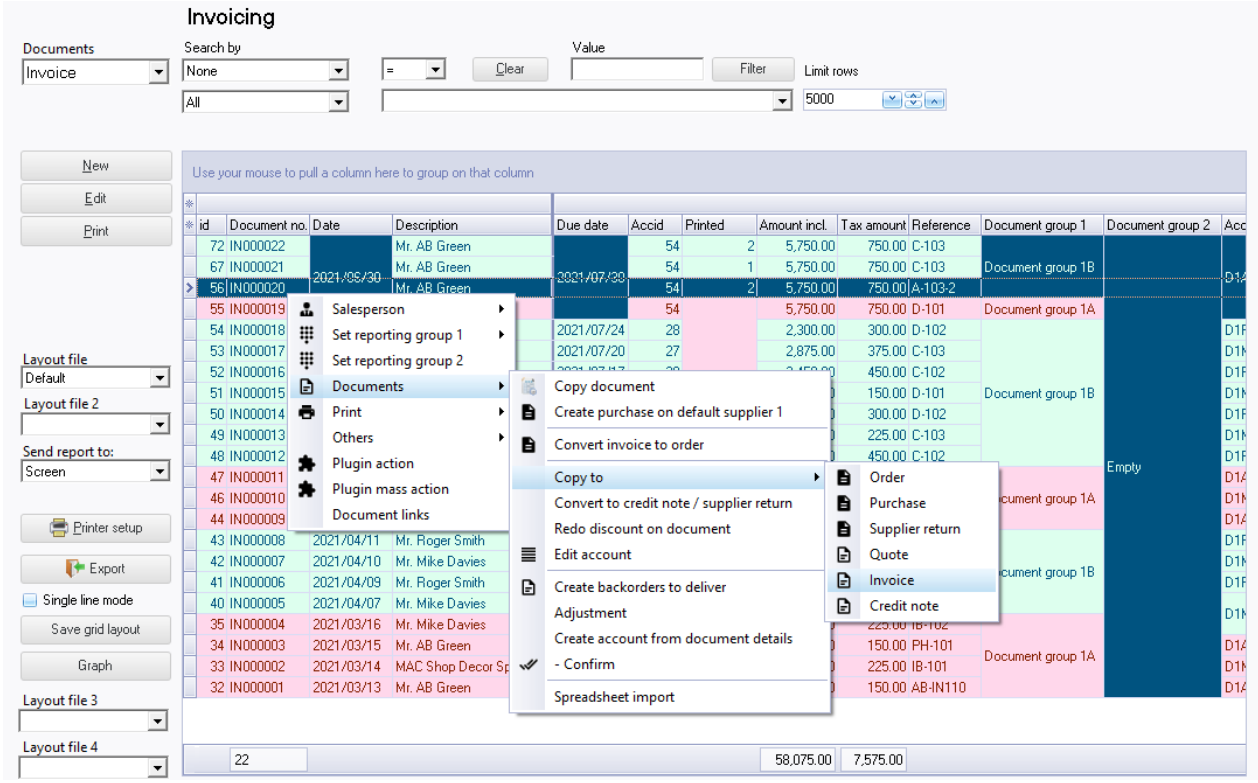
If you wish to open saved Export.txt files in another app (program) for CSV (Comma Separated Values) file type, than Microsoft Excel, you may use the spreadsheet components of other apps (programs) e.g. LibreOffice, OpenOffice or UltraOffice installed on your system.

To do this, select the saved Export.txt file and right click on LibreOffice Calc.

Created with the Standard Edition of HelpNDoc: Leave the tedious WinHelp HLP to CHM conversion process behind with HelpNDoc

Documents - Context menu

Right-click to display the following context menu:



The options are as follows:

1. Salesperson – Change the Salesperson (as added in Setup → Setup → Salesperson or Setup → Groups (Salespersons)).

2. Set reporting group 1 – Change the reporting group of a document, if Reporting group 1 was set for Documents (as added in the Setup → Groups (Document groups 1)).

The colours of the rows (list of documents) will be changed, if set in Reporting group 1.

3. Set reporting group 2 – Change the reporting group of a document, if Reporting group 2 was set for Documents (as added in Setup → Groups (Document group 2)).

4. Documents - The "*Documents*" context menu option on the Document list screen changes for the document type selected. Depending on whether a posted document; or an unposted document is selected; some context menu options may not be available, or additional specific context menu options may be added. Some examples are:

    - Change account - is not available for posted documents.
    - Adjustment - is not available for unposted documents. Adjustments not implemented in osFinancials5/TurboCASH5.

5. Print

    a) Print barcodes – This will print only the barcodes of stock item codes included on selected document(s).

    b) Print labels – This will only print the name (account description) of a debtor customer / client on a selected sales document. In the case of a purchase document, it will print the name (account description) of the creditor (supplier / vendor).

6. Others

    a) Import – This option allows you to import an exported document from a valid existing export.txf file. "*TurboCASH Data Exchange files*" are exported (created) in Tools → Export (Documents).

    b) Totals – This will list a summary of the Exclusive, Inclusive, Open amounts and the records on an Information screen.

The results may be selected and copied to any other text editor or other external program.

    c) Show details – This will display a mouse-over screen displaying the details (i.e. account description, document number, stock description, quantity and amount (inclusive of tax) of the selected document.

    d) Open item link – This will launch the Open item link screen displaying the transactions of the debtor (customer / client) or creditor (supplier / vendor) account on a selected document.

Only available for Invoices / Purchases document type.

This option is not available for other document types (Quotes, Credit notes, Orders and Supplier return documents).

7. Plugin action - To be advised.
8. Plugin mass action - Launch the mass actions (multiple actions), if plugins are activated and supported. To be advised.

The Plugins will be discussed in separate documentation.

9. Document links - To be advised.

Created with the Standard Edition of HelpNDoc: Full-featured EBook editor

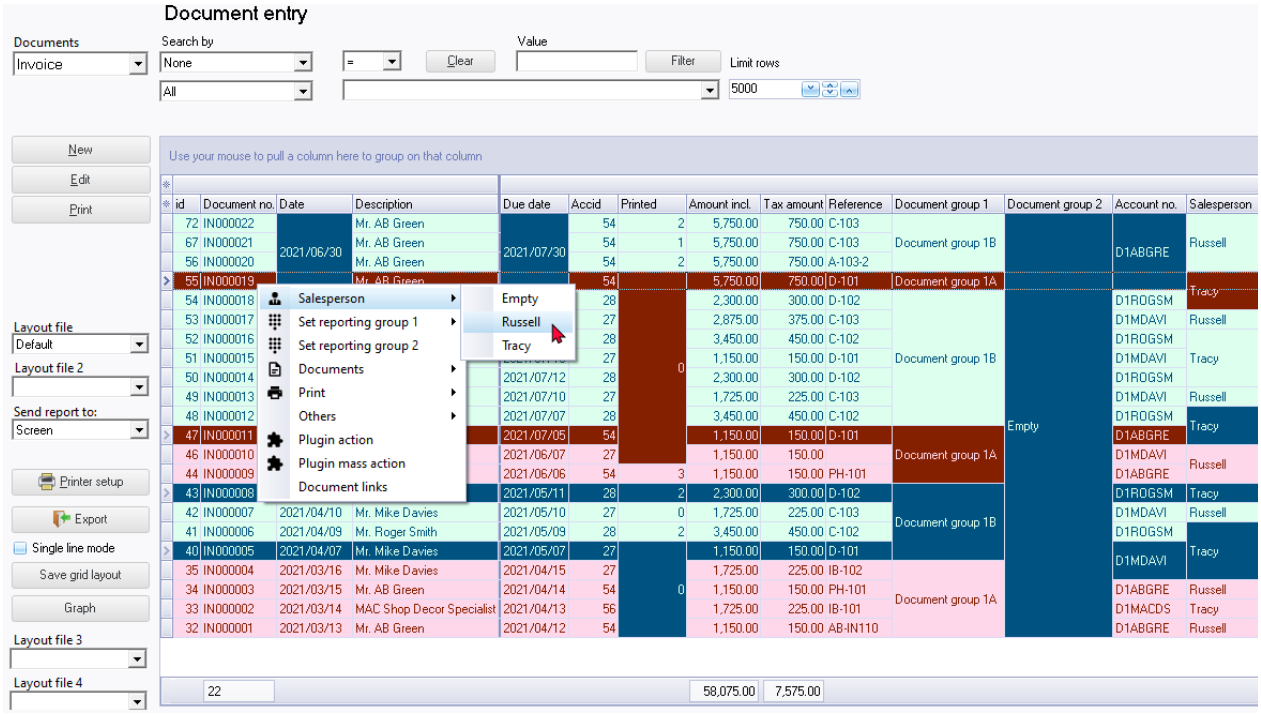
Context menu - Salesperson

You may change the Salesperson for a selected document or documents. Salespersons can be changed for posted as well as unposted documents.

To change the salesperson on documents:

1. On Documents (Documents list screen) (Default ribbon), select the Document type, if the correct document type is not selected.
2. Select the Document(s), right-click on "*Salesperson*" context menu and select "*Empty*" or the salesperson from the sub-menu. The Salesperson will change on documents and the reports.

If you need to select multiple documents, press the Ctrl or Shift key and click on each document, for which you need to change the salesperson.



Created with the Standard Edition of HelpNDoc: Full-featured Help generator

Context menu - Set reporting group 1/2

You may change the Document group 1 and/or Document group 2 for a selected document or documents. These Groups can be changed for posted as well as unposted documents.

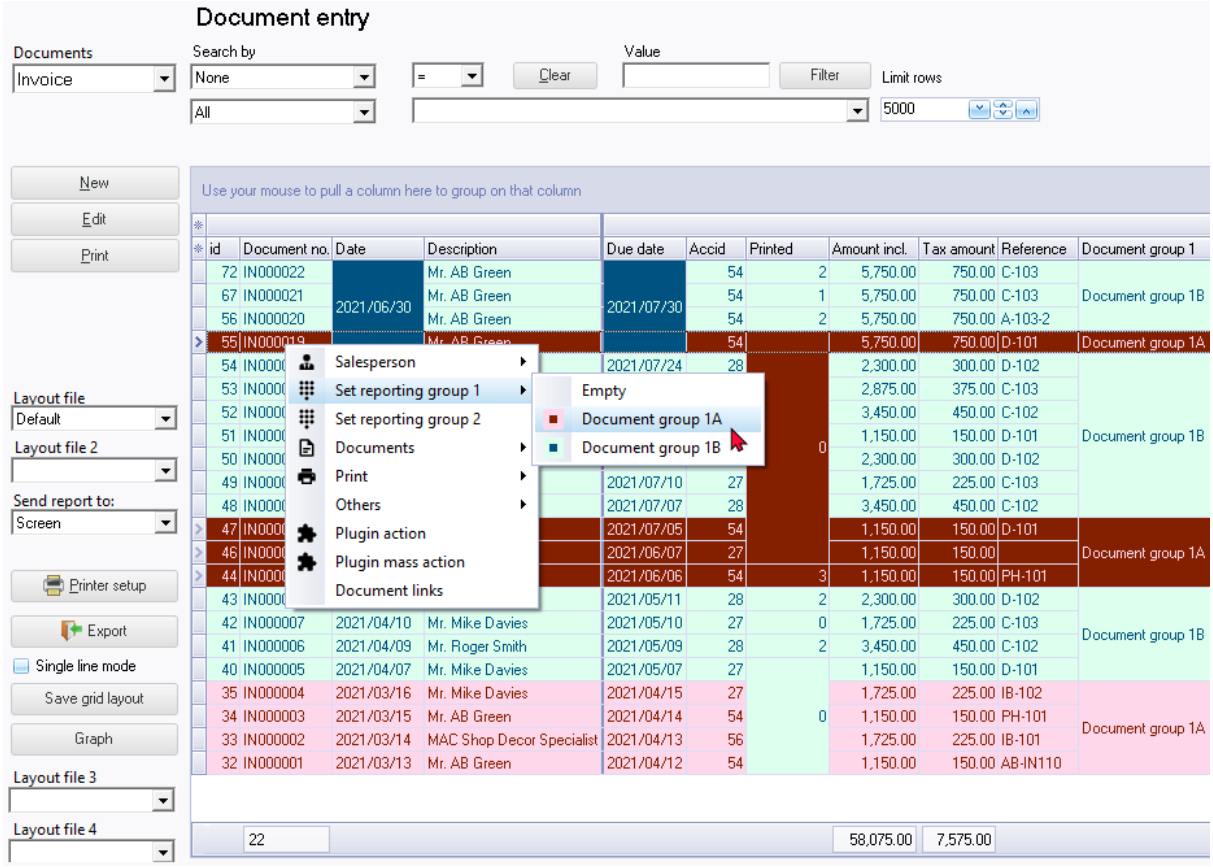
To change the Document group 1 or 2 on documents:

1. On Documents (Documents list screen) (Default ribbon), select the Document type, if the correct document type is not selected.

2. Select the Document(s), right-click on "*Document group 1*" or "*Document group 2*" context menu.

> *If you need to select multiple documents, press the Ctrl or Shift key and click on each document, for which you need to change the document reporting group.*

3. Select "*Empty*" or the available document group from the sub-menu. The "*Document group 1*" or "*Document group 2*" will change on documents and the reports.



Created with the Standard Edition of HelpNDoc: Full-featured multi-format Help generator

Context menu - Documents

The "*Documents*" context menu option on the "*Document list*" screen changes for the document type selected.

Depending on whether a posted document; or an unposted document is selected; some context menu options may not be available, or additional specific context menu options may be added.

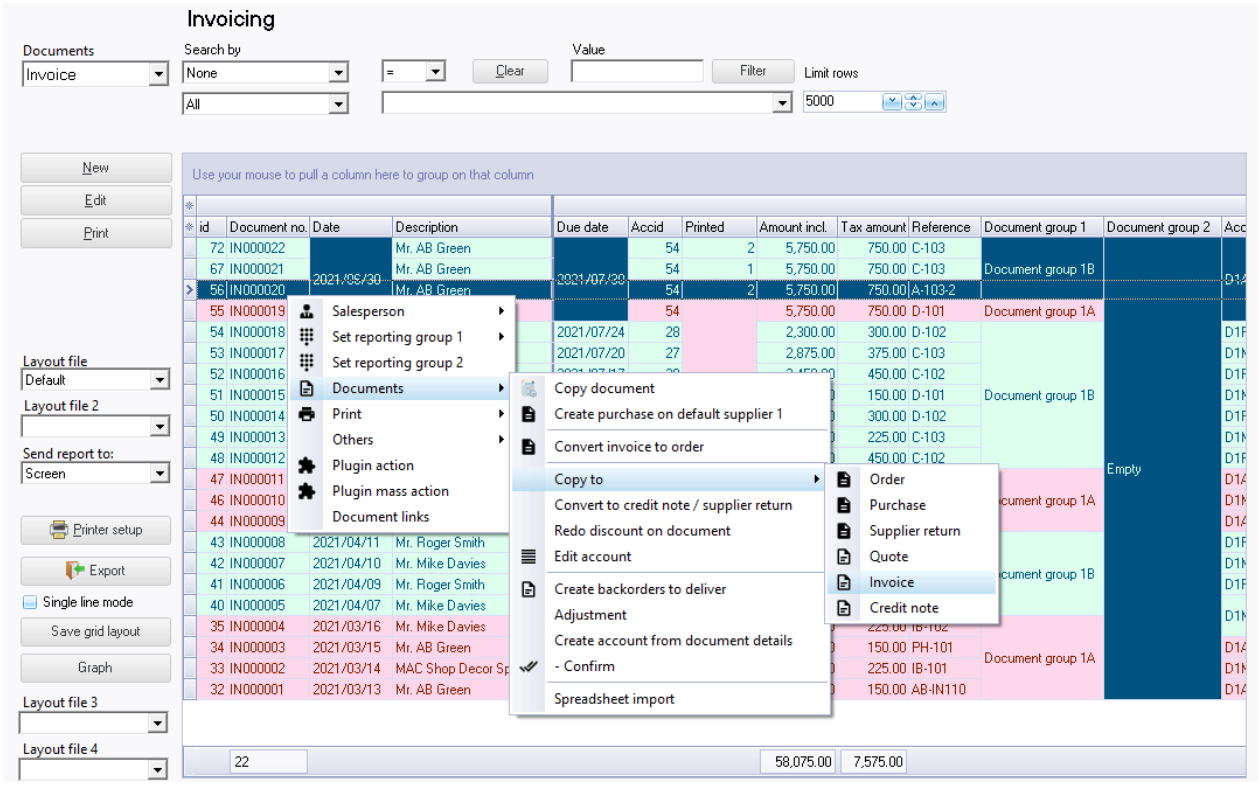
Some examples are:

Change account - is not available for posted documents.

Adjustment - is not available for unposted documents and is not implemented in osFinancials5/TurboCASH5.

Sales documents

Invoices - Documents context menu



The options is as follows:

1. Copy document - Create an exact copy of a selected document and add it as a new document to the list for the same document type.

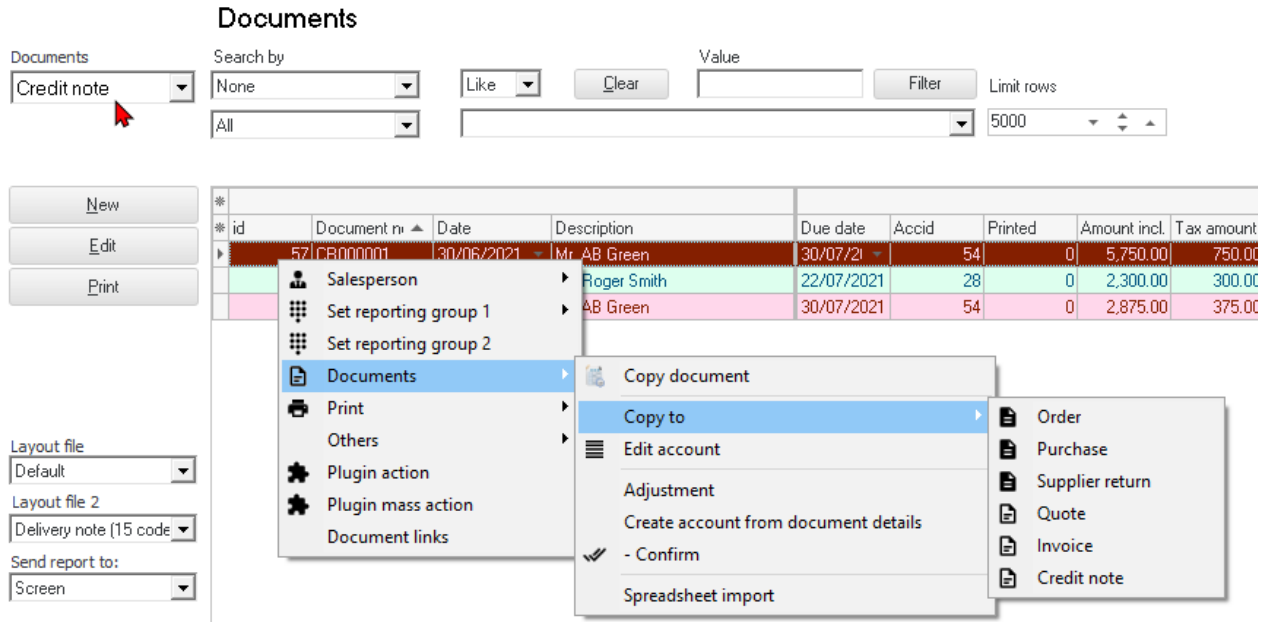
2. Create purchase on default supplier 1 – This option allows you to create an order for a default preferred supplier 1 (as selected for a specific stock item (Stock items on the Default ribbon)).

3. Convert invoice to order - Create an Order from a selected Invoice or Quote. The "*Creditor accounts*" screen will be displayed on which you need to select a creditor (supplier / vendor) account. This will add the converted Invoice or Quote as a new document to the list of Orders. You may edit the Order and then confirm (convert) the Order to a Purchase document.

4. Copy to - In addition to the Documents → Copy document option on the context menu of the "*Document list*" screen, to create exact copies of the selected document(s) of a specific document type, you may also copy any of the documents to another document type.

5. Convert to credit note / supplier return - Convert selected Invoice(s) to Credit note(s).
6. Redo discount on document - This will refresh the discount on a selected document.
7. Change account - Select another debtor (customer / client) account for a selected unposted Invoice.
8. Edit account - Edit the debtor (customer / client) account for a selected document.
9. Create backorders to deliver - If an outstanding backorder exists for a debtor (customer / client), you may use this option to create a new Invoice for the outstanding backorders to deliver.
10. Adjustment - This option is only available for posted documents. This option to edit the document header of a posted document is not implemented in osFinancials5/TurboCASH5.
11. Create account from document details - This document context menu allows you to create a new debtor (customer / client) account for unposted Invoices, using the document details.
12. Confirm - By default, the "*Status*" of an unposted document (i.e. Invoice, Credit note, Purchase or Supplier return), is set as "*Unposted*". Unposted documents can be edited. You may change the "*Status*" of unposted documents (i.e. Invoices, Credit notes, Purchases or Supplier returns), from "*Open*" to "*Confirmed*". Once document status, is set to "*Confirmed*" you may filter the document status for a Confirmed documents. Posting "*Confirmed*" unposted documents (i.e. Invoices, Credit notes, Purchases or Supplier returns), will change the document's "*Status*" from "*Confirmed*" to "*Posted*".
13. Spreadsheet import -

Credit notes - Documents context menu



The options is as follows:

1. Copy document - Create an exact copy of a selected document and add it as a new document to the list for the same document type.

2. Copy to - In addition to the Documents → Copy document option on the context menu of the "*Document list*" screen, to create exact copies of the selected document(s) of a specific document type, you may also copy any of the documents to another document type.

3. Change account - Select another debtor (customer / client) account for a selected unposted Credit note.

4. Edit account - Edit the debtor (customer / client) account for a selected document.

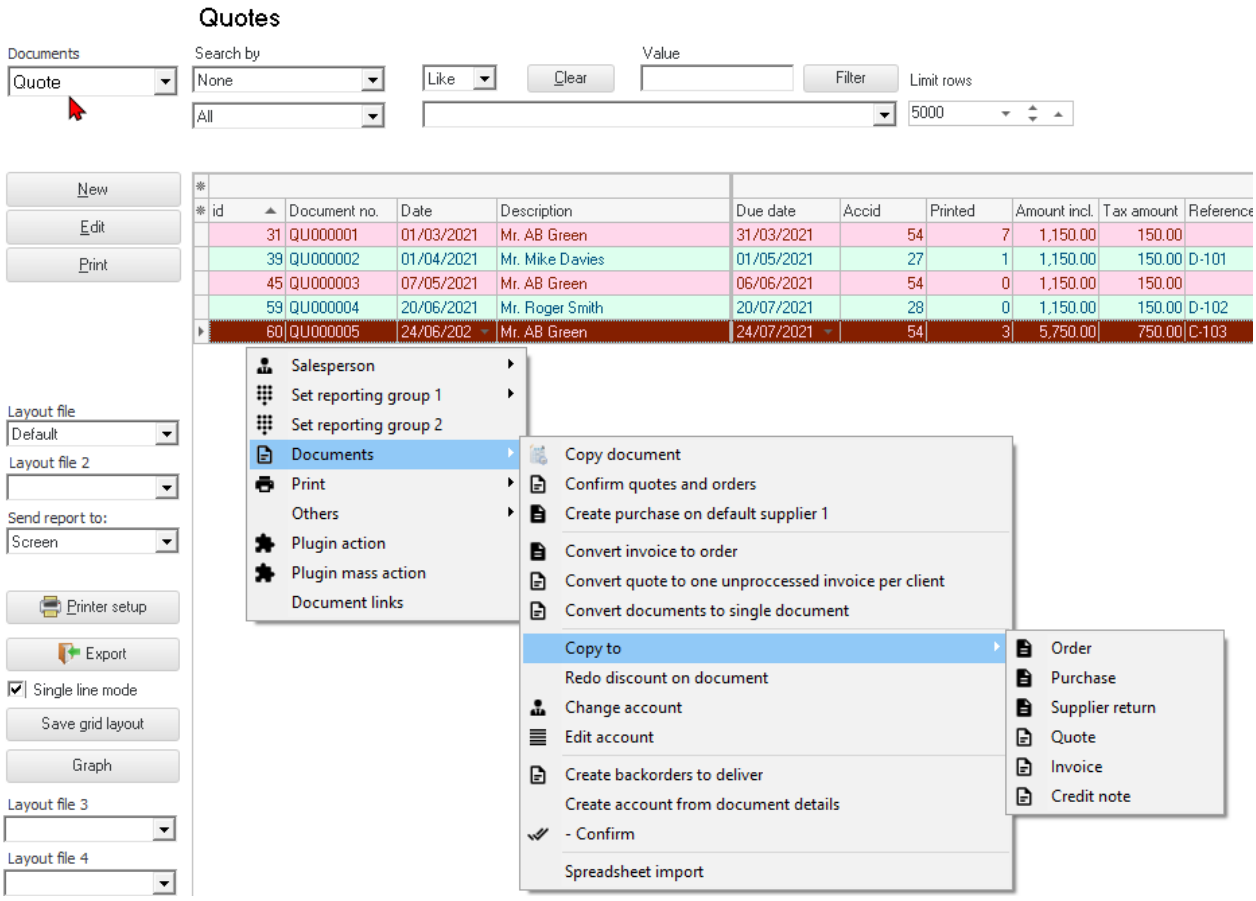
5. Adjustment - This option is only available for posted documents. This option to edit the document header of a posted document is not implemented in osFinancials5/TurboCASH5.

6. Create account from document details - This document context menu allows you to create a new debtor (customer / client) account for unposted Credit notes, using the document details.

7. Confirm - By default, the "*Status*" of an unposted document (i.e. Invoice, Credit note, Purchase or Supplier return), is set as "*Unposted*". Unposted documents can be edited. You may change the "*Status*" of unposted documents (i.e. Invoices, Credit notes, Purchases or Supplier returns), from "*Open*" to "*Confirmed*". Once document status, is set to "*Confirmed*" you may filter the document status for a Confirmed documents. Posting "*Confirmed*" unposted documents (i.e. Invoices, Credit notes, Purchases or Supplier returns), will change the document's "*Status*" from "*Confirmed*" to "*Posted*".

8. Spreadsheet import -

Quotes - Documents context menu



The options is as follows:

1. Copy document - Create an exact copy of a selected document and add it as a new document to the list for the same document type.

2. Confirm quotes and orders - Once the debtor (customer / client) accepts the Quote, it can then be confirmed and converted to an Invoice. Once a Quote is confirmed and converted to an Invoice, you may need to edit the Invoice, before you update (post) the Invoice to the ledger.

3. Create purchase on default supplier 1 - This option allows you to create an order for a default supplier 1 (as selected for a specific stock item (Stock items on the Default ribbon)).

4. Convert invoice to order - Create an Order from a selected Invoice or Quote. *The "Creditor accounts*" screen will be displayed on which you need to select a creditor (supplier / vendor) account. This will add the converted Invoice or Quote as a new document to the list of Orders. You may edit the Order and then confirm (convert) the Order to a Purchase document.

5. Convert quote to one unprocessed invoice per client -

6. Convert documents to single document - This will convert selected unposted Quotes to a single document.

WARNING - CONVERT POSTED DOCUMENTS TO A SINGLE DOCUMENT

In the case of Purchases and Supplier returns, DO NOT SELECT THE POSTED documents.

7. Copy to - In addition to the Documents → Copy document option on the context menu of the "*Document list*" screen, to create exact copies of the selected document(s) of a specific document type, you may also copy any of the documents to another document type.

8. Redo discount on document - This will refresh the discount on a selected document.

9. Change account - Select another debtor (customer / client) account for a selected unconfirmed Quote.

10. Edit account - Edit the debtor (customer / client) account for a selected document.

11. Create backorders to deliver - If an outstanding backorder exists for a debtor (customer / client), you may use this option to create a new Invoice for the outstanding backorders to deliver.

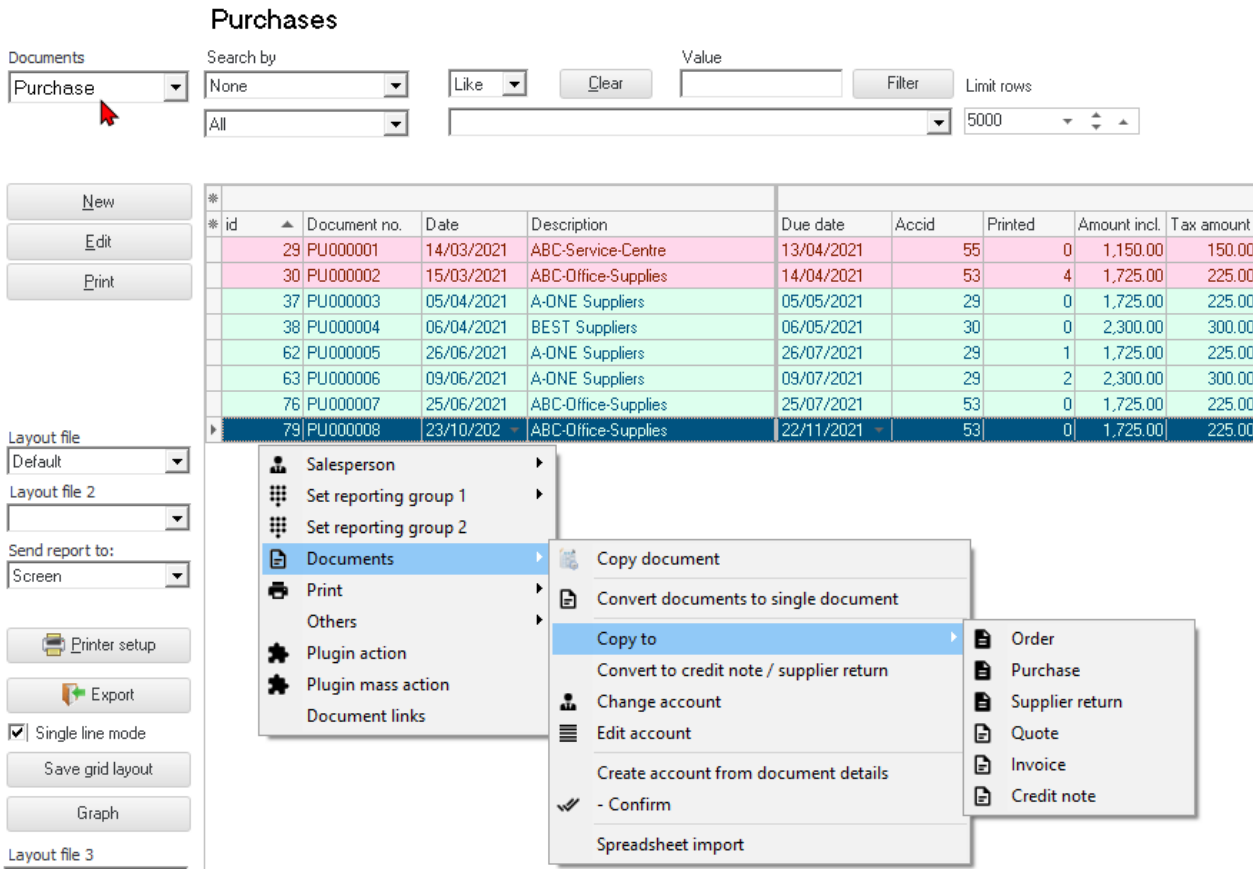
12. Create account from document details - This document context menu allows you to create a new debtor (customer / client) account for unconfirmed Quotes, using the document details.

13. Confirm - This option is not applicable to Quotes.

14. Spreadsheet import -

Purchase documents

Purchases - Documents context menu



The options is as follows:

1. Copy document - Create an exact copy of a selected document and add it as a new document to the list for the same document type.

2. Convert documents to single document - This will convert selected unposted Purchase documents to a single document.

> *WARNING - CONVERT POSTED DOCUMENTS TO A SINGLE DOCUMENT*
>
> *In the case of Purchases and Supplier returns, DO NOT SELECT THE POSTED documents.*

3. Copy to - In addition to the Documents → Copy document option on the context menu of the "*Document list*" screen, to create exact copies of the selected document(s) of a specific document type, you may also copy any of the documents to another document type.

4. Convert to credit note / supplier return - Convert selected Purchase(s) to Supplier return(s).

5. Change account - Select another creditor (supplier / vendor) account for a selected unposted

Purchase.

6. Edit account - Edit the creditor (supplier / vendor) account for a selected document.

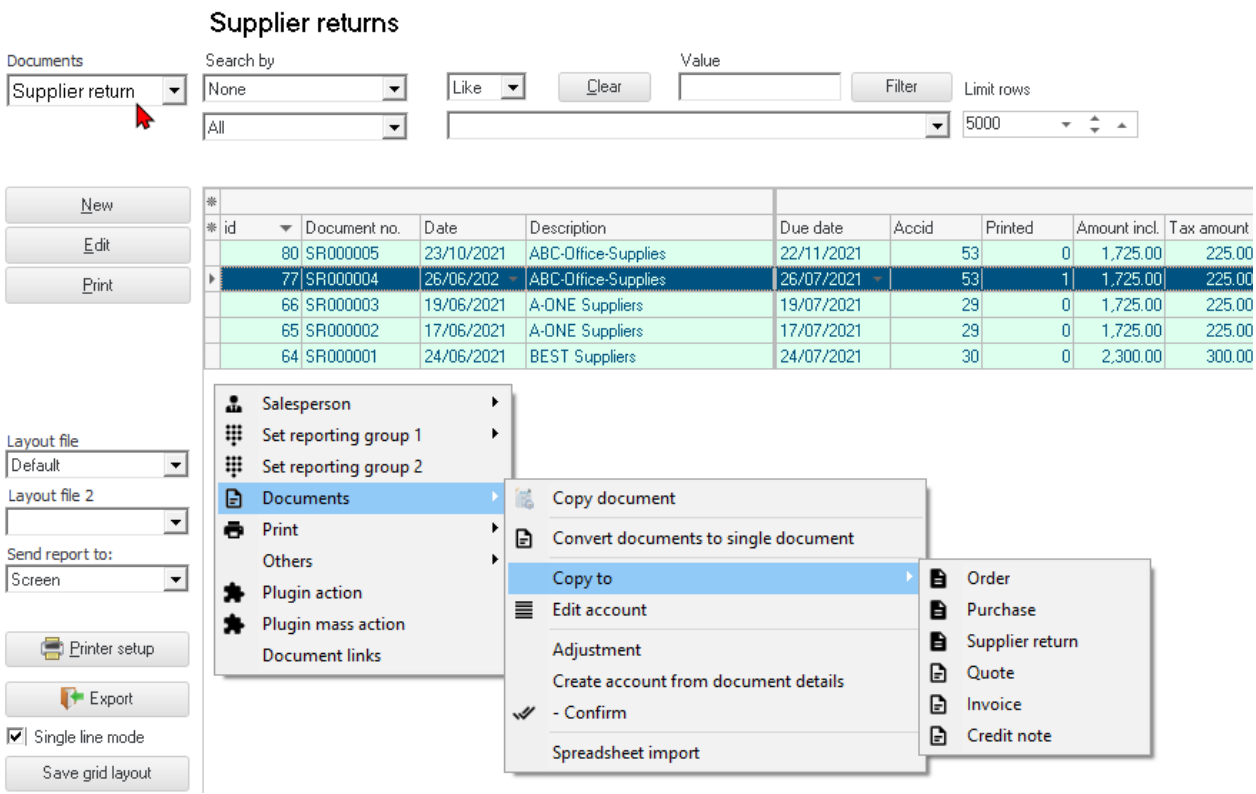
7. Adjustment - This option is only available for posted documents. This option to edit the document header of a posted document is not implemented in osFinancials5/TurboCASH5.

8. Create account from document details - This documents context menu allows you to create a new creditor (supplier / vendor) account for unposted Purchases, using the document details.

9. Confirm - By default, the "*Status*" of an unposted document (i.e. Invoice, Credit note, Purchase or Supplier return), is set as "*Unposted*". Unposted documents can be edited. You may change the "*Status*" of unposted documents (i.e. Invoices, Credit notes, Purchases or Supplier returns), from "*Open*" to "*Confirmed*". Once document status, is set to "*Confirmed*" you may filter the document status for a Confirmed documents. Posting "*Confirmed*" unposted documents (i.e. Invoices, Credit notes, Purchases or Supplier returns), will change the document's "*Status*" from "*Confirmed*" to "*Posted*".

10. Spreadsheet import -

Supplier returns - Documents context menu



The options is as follows:

1. Copy document - Create an exact copy of a selected document and add it as a new document to the list for the same document type.

2. Convert documents to single document - This will convert selected unposted Supplier return documents to a single document.

WARNING - CONVERT POSTED DOCUMENTS TO A SINGLE DOCUMENT

In the case of Purchases and Supplier returns, DO NOT SELECT THE POSTED documents.

3. Copy to - In addition to the Documents → Copy document option on the context menu of the "*Document list*" screen, to create exact copies of the selected document(s) of a specific document type, you may also copy any of the documents to another document type.

Context menu - Create purchase on default supplier1

This option allows you to create an order for a default supplier 1 of specific stock items (products) account (as selected for a specific stock item (Stock items on the Default ribbon)) from the Invoices, Quotes and Orders document types.

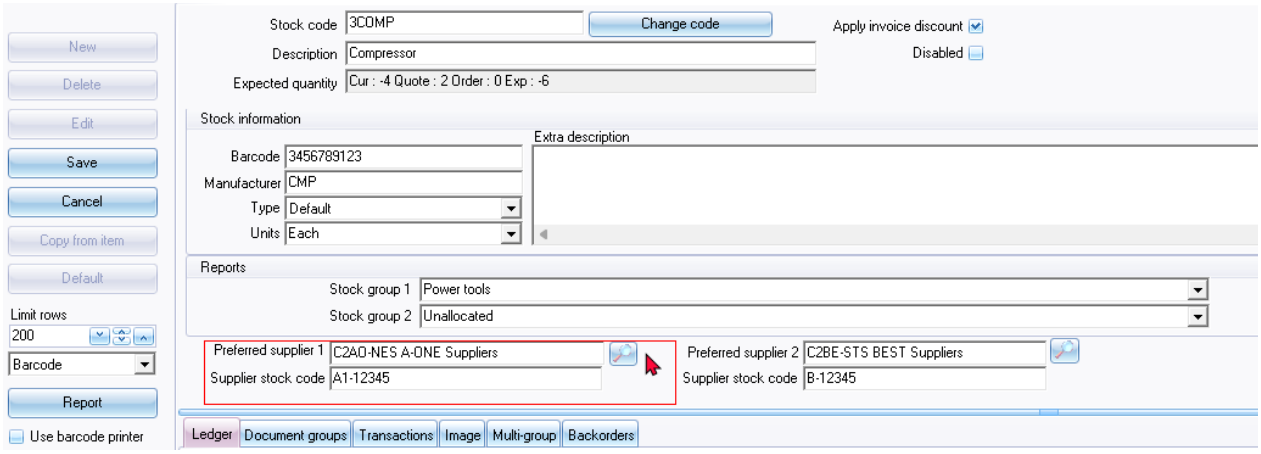
If you have selected Documents → Create purchases on default supplier1 on the context menu of the Documents list screen; and no default supplier 1 have been added in the "Preferred supplier 1" field for the

Stock item included in the document(s) selected stock item, an error message will be displayed.

"3DRILL Drill press No default supplier 1 for these stock items! Please correct first!" (where "3DRILL Drill press" is the stock code and stock description, as per this example).

Click on the OK button and correct it in the Stock items (Default ribbon) for the stock item, if necessary.

Preferred supplier setting

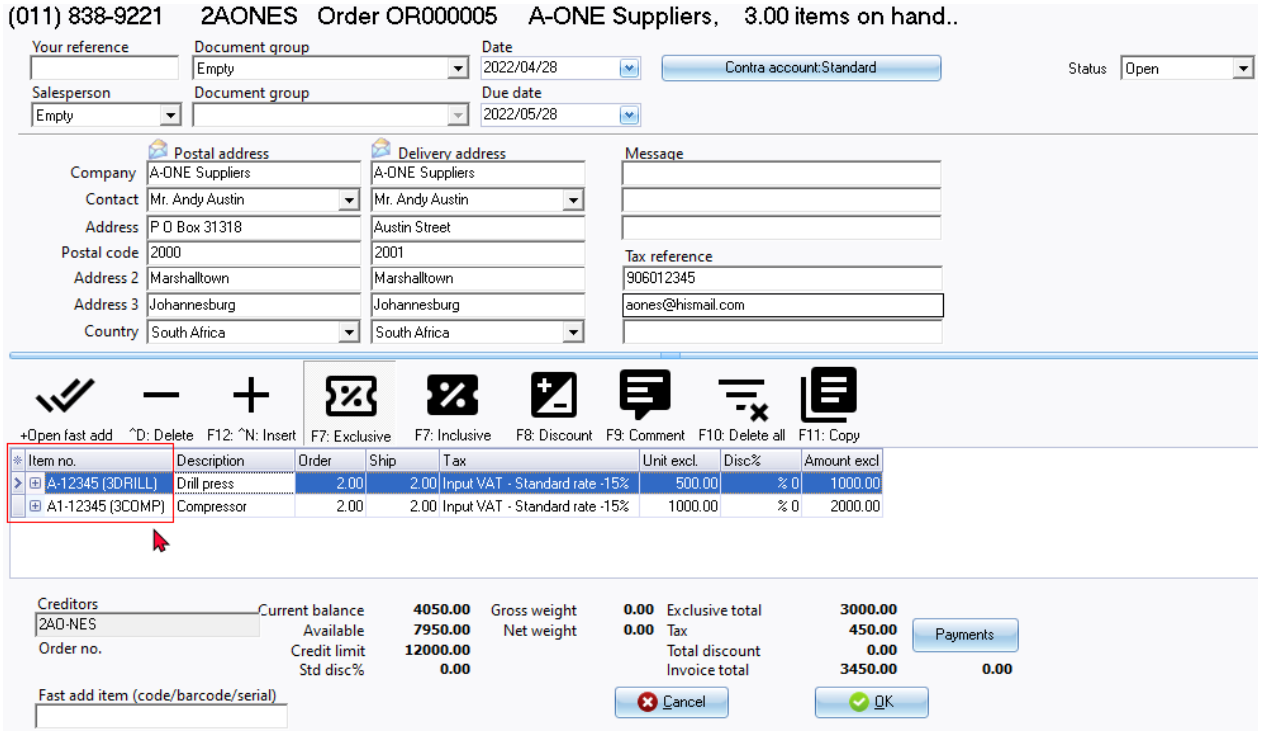


Create Orders for preferred supplier 1

To create orders for preferred supplier 1:

1. Select the "*Invoice*" or "*Quote*"or "*Order*" document type.

2. Right-click and select Documents → Create purchase on default supplier 1 option on the context menu. A new Order for the default (preferred) supplier account will be created.



Note the Supplier stock code will be displayed in the "Item no." field of Document entry form, if entered in the "Supplier stock code" field.

The original Stock code will still print on document layout files.

Context menu - Convert invoice to credit note / supplier return

---

Convert Invoices to Credit notes

Once you have posted an Invoice to the ledger, you cannot edit the Invoice.

Adjustments - not implemented in osFinancials5/TurboCASH5

For example; it may happen sometimes that a debtor (customer / client), relocates and still have outstanding invoices with the incorrect (old) address after the Invoice is posted to the ledger.

You may use the Documents → Adjustment - option on the context menu (Documents list screen), to change / edit specific fields, such as the reference in the "Your reference" field, "Postal address", Contactperson, "Delivery address" and "Messages" in the Document header. The Tax reference field may also be edited.

You may change the Salesperson or Document groups (Reporting group1 and/or Reporting group) on the

context menu.

These changes will be reflected on the document layout files, when you print or reprint the document.

If an Invoice is incorrectly processed and posted; or if the all the items; or some of the items on an Invoice is returned, you may use this option to create a Credit note for the Invoice to cancel the Invoice or a part of the Invoice.

To convert invoice to credit note / return note:

1. Select the "*Invoices*" document type.

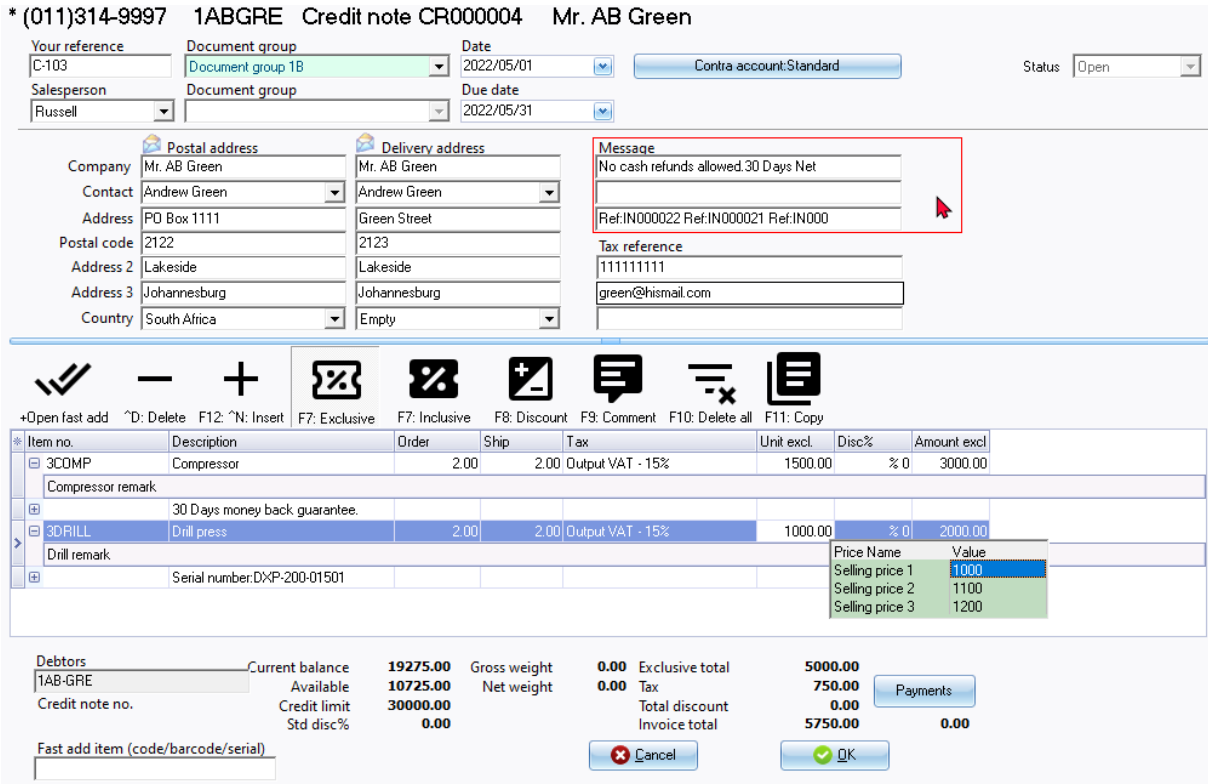
2. Select the document(s) to convert.

   If you need to select multiple documents, press the Ctrl or Shift key and click on each Invoice, which you need to convert to a Credit note.

3. Right-click and select Documents → Convert to credit note / supplier return option on the context menu. A confirmation screen will be displayed.

   "Do you wish to continue?"

4. Click on the Yes button to continue. The Credit note(s) will be available as a new unposted Credit note(s).



Once a Credit note is converted from an Invoice, the selected source Invoice from which it is converted, will be added to the third message line.

You need to edit the first and second message line, if required.

Note the following:

- *Date - The system date will be used. You may edit the date, if required.*
- *Message lines 1 and 2 - Document message (set in the Setup → Documents setup on the Setup ribbon) will also be added to the copied message of the selected source document.*
- *Message line 3 - Up to 2 References for Document numbers (e.g. IN000022 (the latest document reference from the Purchase is converted will automatically be inserted before any existing document numbers on the Supplier return. Only 5 digits of the 3 document number will be available..*

You may need to edit the quantities. For example, if 2 stock items were included on the selected source Credit note, and only 1 stock item was returned, you need to change the Quantities to 1.

Comments and remarks

The comments and remarks, if added in the source invoice will be included in the converted credit note. You may need to check and edit these, if necessary.

This is important if specific information for the stock item (such as, for example, series or serial numbers, etc.) may not be applicable in the converted credit note.

Convert Purchases to Supplier returns

Once you have posted a Purchase document to the ledger, you cannot edit the Purchase document.

Adjustments - not implemented in osFinancials5/TurboCASH5

For example; it may happen sometimes that a creditor (supplier / vendor), relocates and still have outstanding purchases with the incorrect (old) address after the Purchase document is posted to the ledger.

You may use the Documents → Adjustment - option on the context menu (Documents list screen), to change / edit specific fields, such as the reference in the "Your reference" field, "Postal address", Contactperson, "Delivery address" and "Messages" in the Document header. The Tax reference field may also be edited.

You may change the Salesperson or Document groups (Reporting group1 and/or Reporting group 2) on the context menu.

These changes will be reflected on the document layout files, when you print or reprint the document.

If a Purchase document is incorrectly processed and posted; or if the all the items; or some of the items on

a Purchase document is returned, you may use this option to create a Supplier return for the Purchase to cancel the Purchase or a part of the Purchase.

To convert a purchase to Supplier return:

1. Select the "*Purchases*" document type.

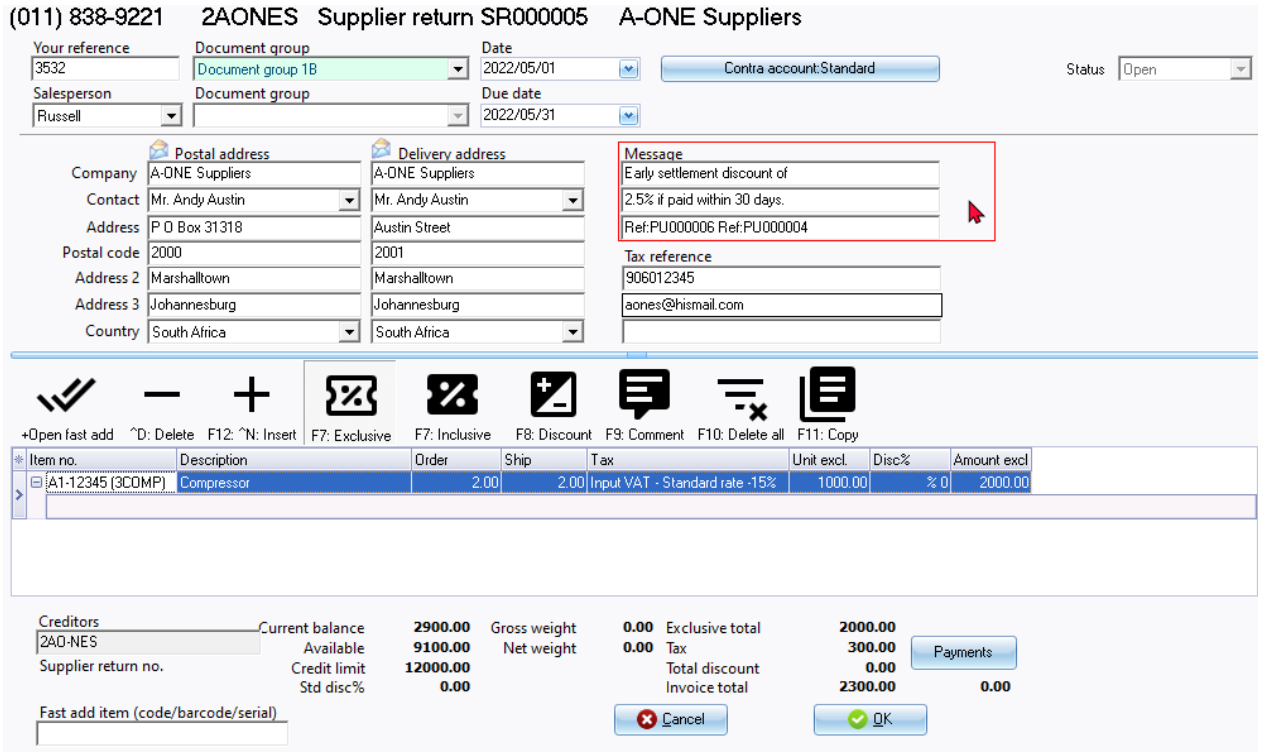
2. Select the document(s) to convert.

> *If you need to select multiple documents, press the Ctrl or Shift key and click on each Purchase, which you need to convert to a Supplier return.*

3. Right-click and select Documents → Convert to credit note / supplier return option on the context menu. A confirmation screen will be displayed.

> "Do you wish to continue?"

4. Click on the Yes button to continue. The Supplier return(s) will be available as a new unposted Supplier return document.



> *Once a Supplier return is converted from a Purchase, the selected source Purchase from which it is converted, will be added to the third message line.*
>
> *You need to edit the first and second message line, if required.*
>
> *Note the following:*

- *Date - The system date will be used. You may edit the date, if required.*
- *Message lines 1 and 2 - Document message (set in the Setup → Documents setup on the Setup ribbon) will also be added to the copied message of the selected source document.*
- *Message line 3 - Up to 2 References for Document numbers (e.g. PU000006 (the latest document reference from which the document is converted will automatically be inserted before any existing document numbers on the Supplier return. Only 5 digits of the 3 document number will be available..*

You may need to edit the quantities. For example, if 2 stock items were included on the selected source Supplier return, and only 1 stock item was returned, you need to change the Quantities to 1.

Comments and remarks

The comments and remarks, if added in the source purchae will be included in the converted supplier return. You may need to check and edit these, if necessary.

This is important if specific information for the stock item (such as, for example, series or serial numbers, etc.) may not be applicable in the converted supplier return.

(Default ribbon).

Convert Quotes to a single document

The process to convert Orders to a single document, is similar than to convert Quotes to a single document.

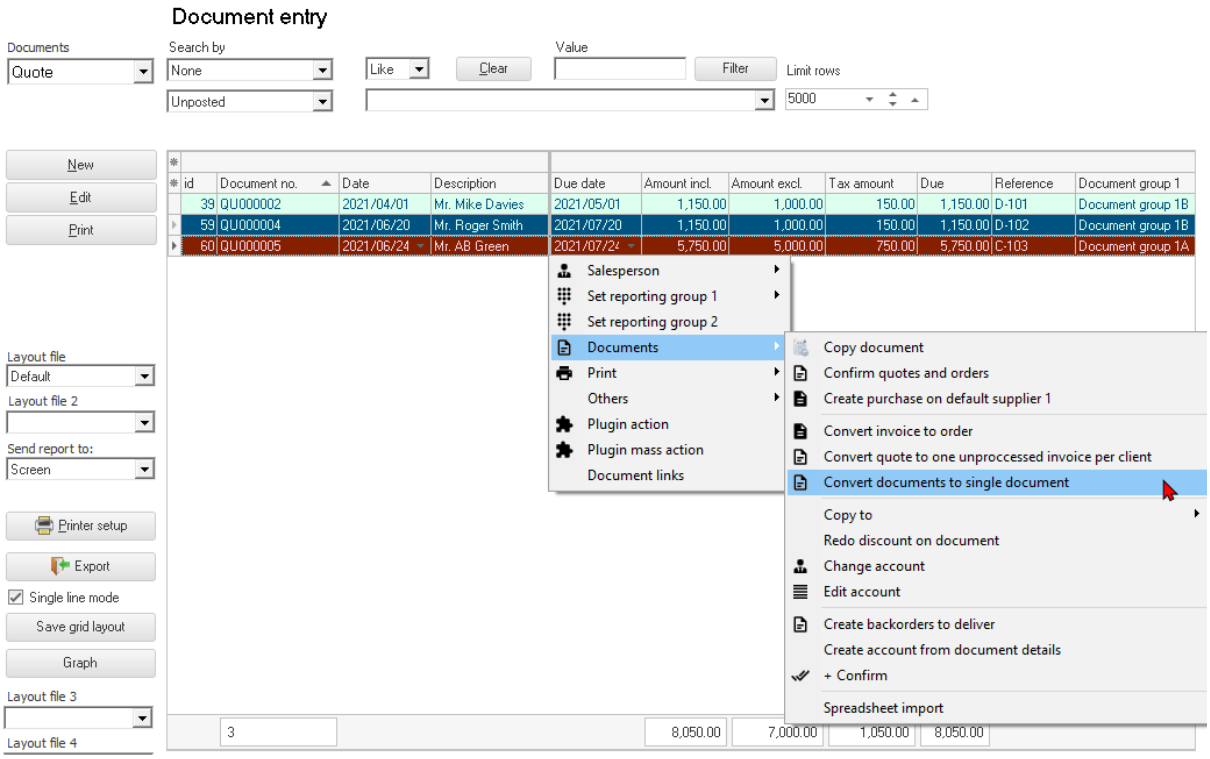
To convert quotes to a single document:

1. Select the "*Quotes*" document type.

> *WARNING - CONVERT POSTED DOCUMENTS TO A SINGLE DOCUMENT*
>
> *In the case of Purchases and Supplier returns, DO NOT SELECT THE POSTED documents.*

2. Select the unposted documents to convert into one document.

> *If you need to select multiple documents, press the Ctrl or Shift key and click on each document, which you need to convert to a single document.*



3. Right-click and select Documents → Convert documents to a single document option on the context menu. A confirmation message will be displayed.

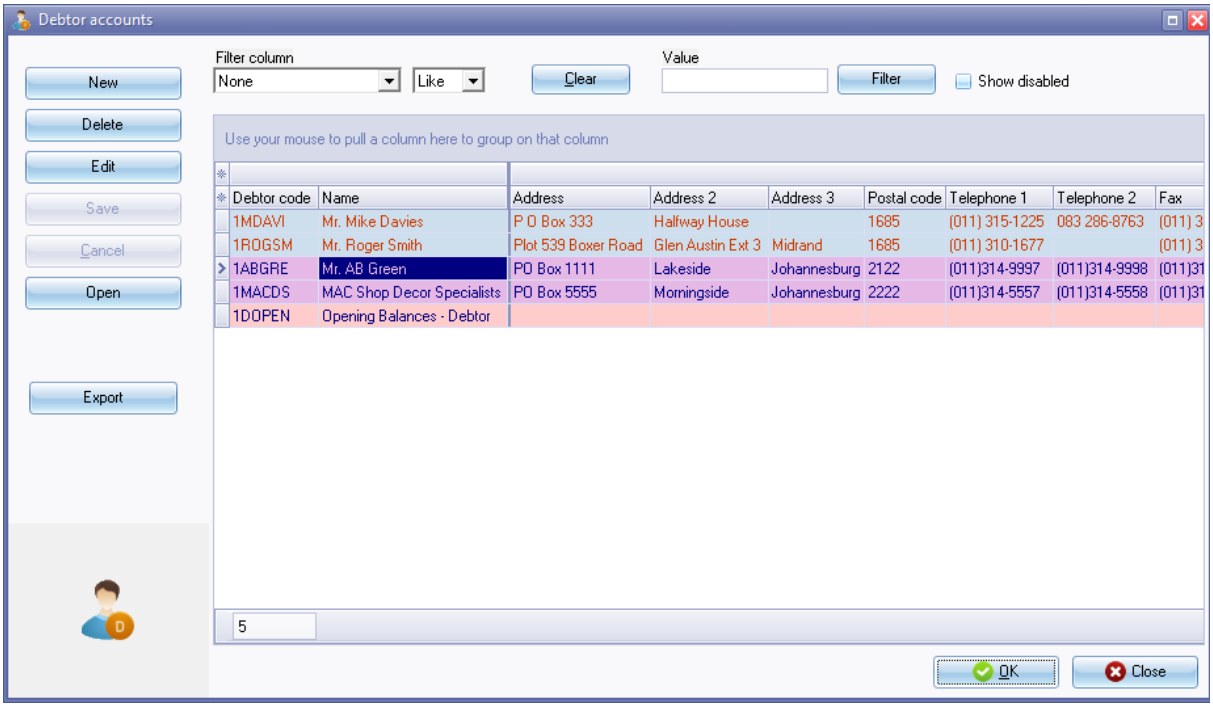
"Do you wish to delete this Quotes?"

4. If you need to retain the selected documents and create a new document, click on the No button to continue.

If you wish to retain the original Quotes, click on the No button. These Quotes will still be available to process.

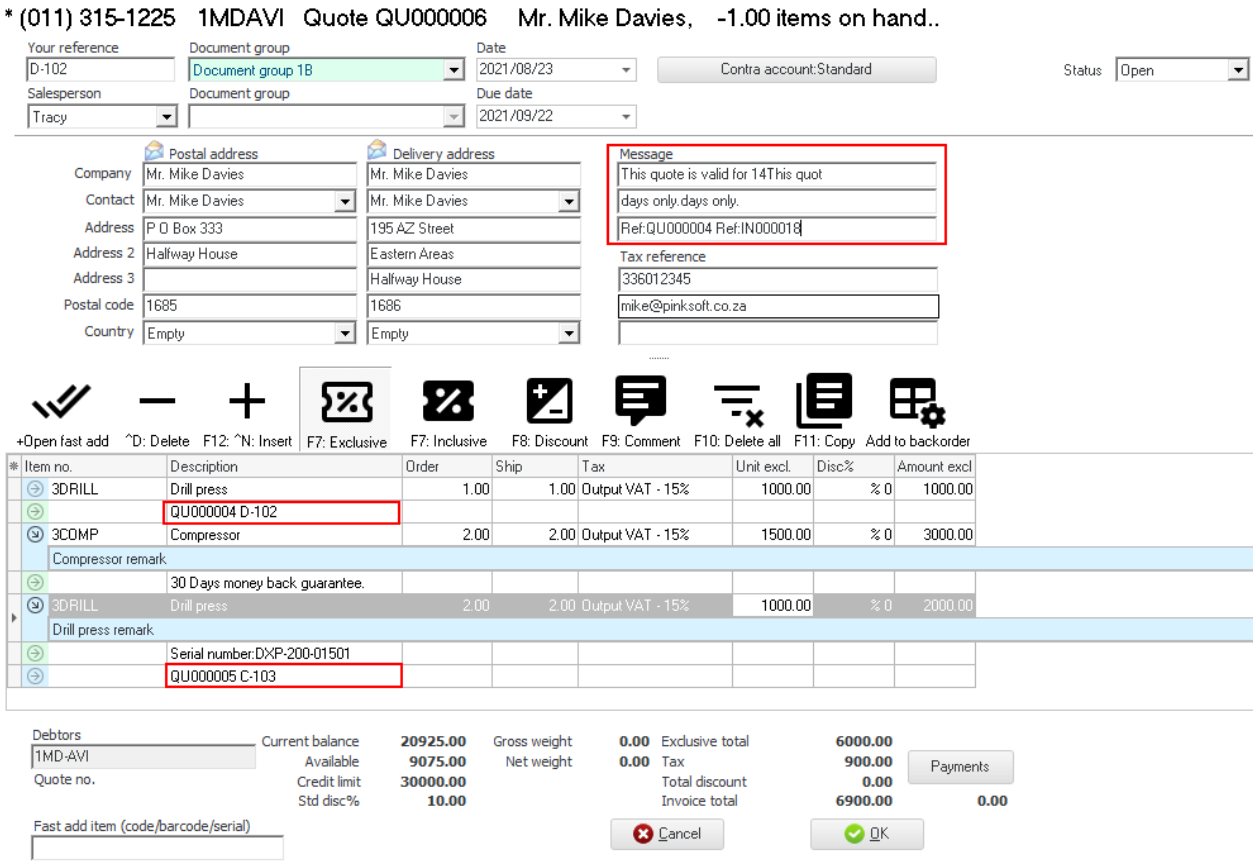
If you click on the Yes button, these Quotes will permanently be deleted. If you have selected the incorrect documents, and you have clicked on the Yes button, you may need to create these Quote(s) again.

The *"Debtor accounts" list* screen is displayed:



5. Select the Debtor (customer / client) account and click on the Open / OK button. Once the process is finished, the new document will be available will be available as "Unposted" (unconfirmed) for the selected document type.

6. You may edit the new document, if necessary. An example of 2 Quotes that is converted to a single Quote, is as follows:



You may need to edit the quote with specific attention to the following:

- Message lines 1 and 2 - The message fields need to be edited, as the messages of both the source quotes are added in the first 2 message lines.
- Message line 3 - The reference of the last selected source Quote,
- Comments - The Quote number and Reference number (as in the "*Your reference*" field of the document header) will be added as a Comment after the items.

In this example, the selected source Quotes selected is as follows:

- *QU000005 C103 - It contains two items. This inserted after the last item's comment line.*
- *QU000004 D-102 - This inserted after the item's comment line.*

Context menu - Change account

You may change the account for unposted documents.

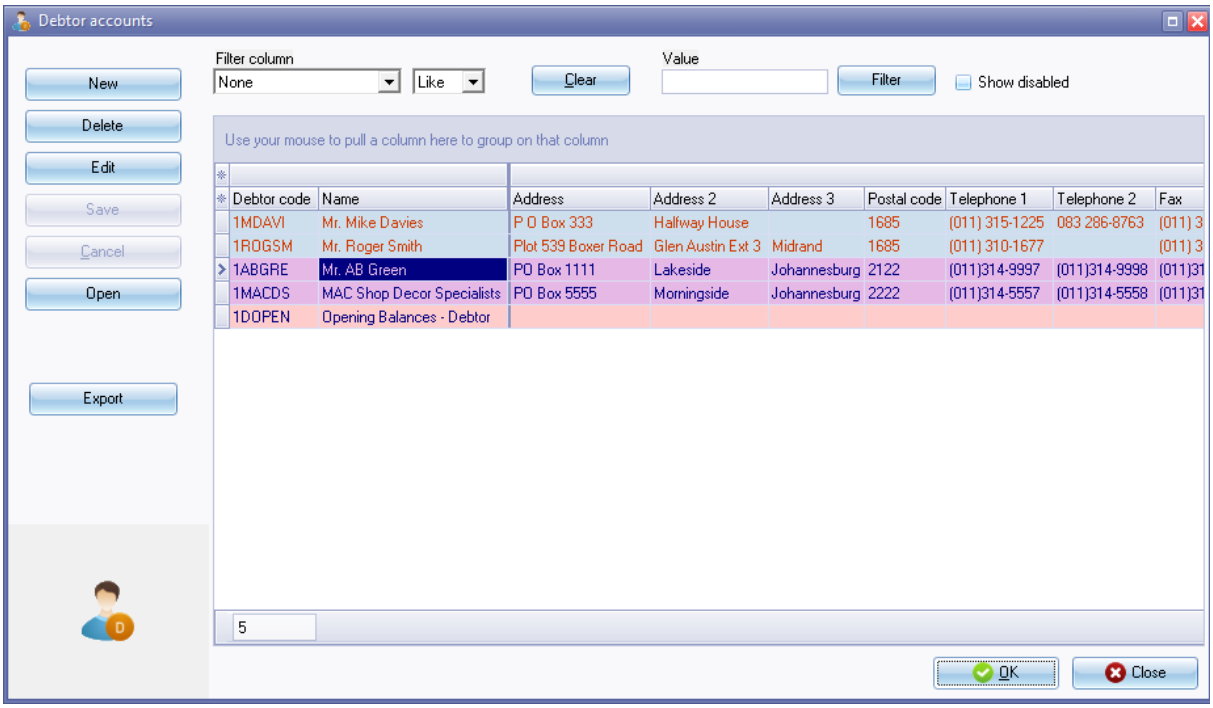
Sales documents - Select a different debtor (customer / client) account for unposted sales documents (i.e. Invoices, Credit notes or Quotes).

Purchase documents - Select a different creditor (supplier / vendor) account for unposted purchase documents (i.e. Purchases, Supplier returns or Orders).

Change a debtor (customer / client) account

To change a debtor (customer / client) account for a unposted document:

1. Select the Invoices, Credit notes or Quotes document type.
2. Select the document to change the account for.
3. Right-click and select Documents → Change account option on the context menu. The "*Debtor accounts*" list screen will list only the active debtor (customer / client) accounts:



4. Select a different account.
5. Click on the Open or OK button.

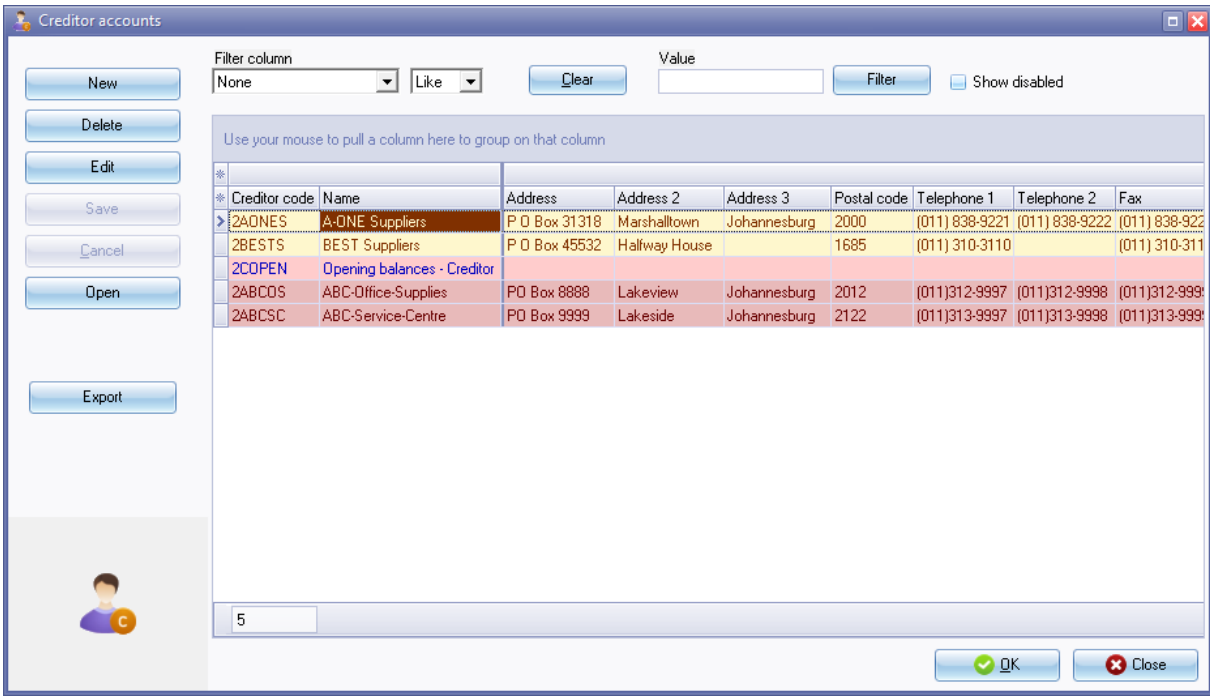
Change the creditor (creditor / vendor) account

To change the creditor (creditor / vendor) account for a unposted purchase document:

1. Select the Purchases, Supplier returns or Orders document type.

2. Select the document to change the account for.

3. Right-click and select Documents → Change account option on the context menu. The "*Creditor accounts*" list screen will list only the active creditor (supplier / vendor) accounts:



4. Select a different account.

5. Click on the Open or OK button.

Created with the Standard Edition of HelpNDoc: Single source CHM, PDF, DOC and HTML Help creation

Context menu - Edit account

You may edit a debtor (customer / client) account for sales documents (i.e. Invoices, Credit notes or Quotes) or edit a creditor (supplier / vendor) account for purchase documents (i.e. Purchases, Supplier returns or Orders) using the document details.

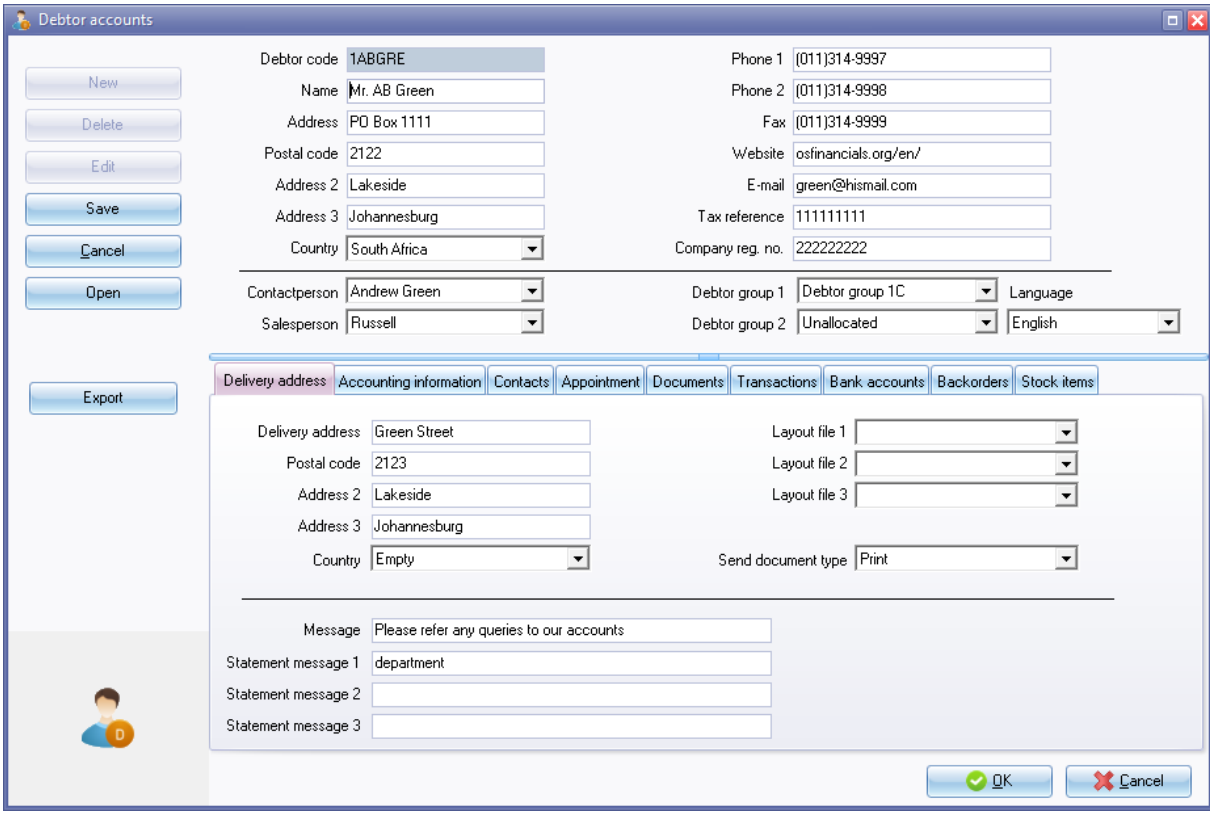
Once the changes on an account is saved, it will be reflected in the document header of unposted documents.

If a document is posted and the account is edited, the changes will not be reflected in the document header.

Edit a debtor (customer / client) account

To edit a debtor (customer / client) account from the documents list screen:

1. Select the Invoices, Credit notes or Quotes document type.
2. Select the document to edit the account.
3. Right-click and select Documents → Edit account option on the context menu. The "*Debtor accounts*" edit form with the details of the debtor (customer / client) account for sales documents (i.e. Invoices, Credit notes or Quotes) is displayed:



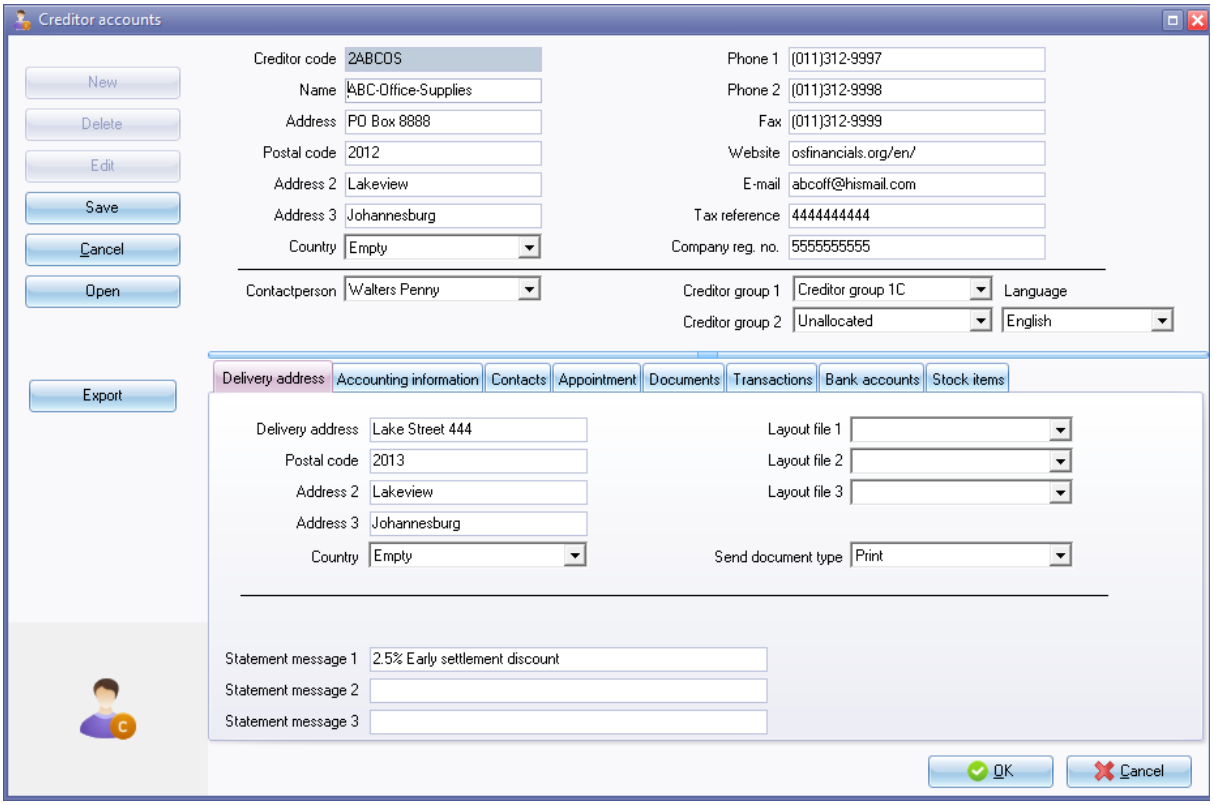
4. Enter and/or edit the fields, as necessary.
5. Click on the OK or Save button.

Edit a creditor (supplier / vendor) account

To edit a creditor (supplier / vendor) account from the documents list screen:

1. Select the Purchases, Supplier returns or Orders document type.
2. Select the document to edit the account.

3. Right-click and select Documents → Edit account option on the context menu. The "*Creditor accounts*" edit form with the details of the creditor (supplier / vendor) account for purchase documents (i.e. Purchases, Supplier returns or Orders) is displayed:



4. Enter and/or edit the fields, as necessary.

5. Click on the OK or Save button.

Created with the Standard Edition of HelpNDoc: Create HTML Help, DOC, PDF and print manuals from 1 single source

Context menu - Create account from document details

This documents context menu option allows you to create a new debtor (customer / client) account for unposted sales documents (i.e. Invoices, Credit notes or Quotes) or an new creditor (supplier / vendor) account for unposted purchase documents (i.e. Purchases, Supplier returns or Orders) using the document details.

This may be necessary if a Document is imported and the account does not exist.

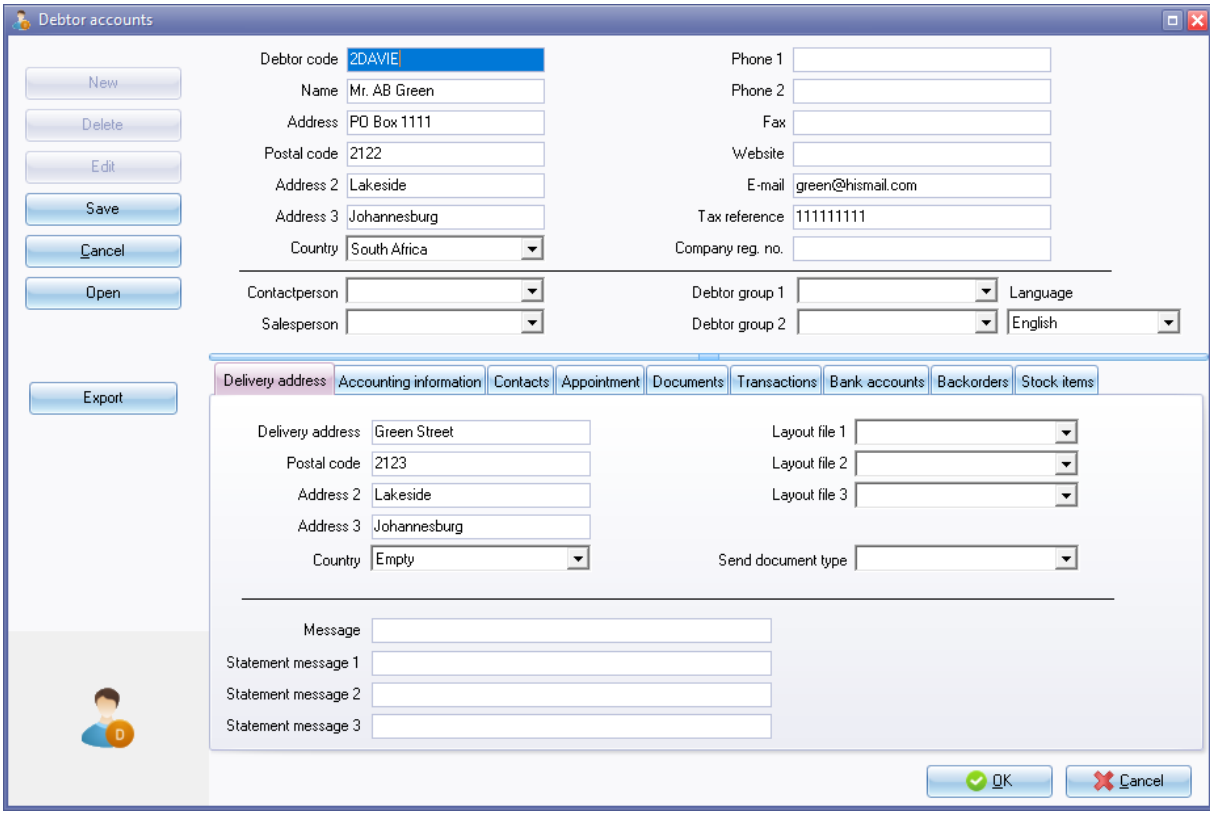
Create a new debtor (customer / client) account using the document details

To create a new debtor (customer / client) account using the document details:

1. Select the Invoices, Credit notes or Quotes document type.

2. Select the document to create an account for.

3. Right-click and select Documents → Create account from document details option on the context menu. The "*Debtor accounts*" edit form with the details on the document header is displayed:



4. Enter a "*Debtor code*" and enter or edit the fields, as necessary.

> *Debtor code - Enter a prefix followed by 5-digits. In this example, the Debtor code is prefixed with "1". Creditor codes are prefixed with "2" in this documentation.*
>
> *This is important to distinguish accounts for debtors (customers / clients) from accounts for creditors (suppliers / vendors). In some features and on some screens and reports this makes it easier to identify the account type.*

5. Click on the OK or Save button. A confirmation message will be displayed.

Create this account?"

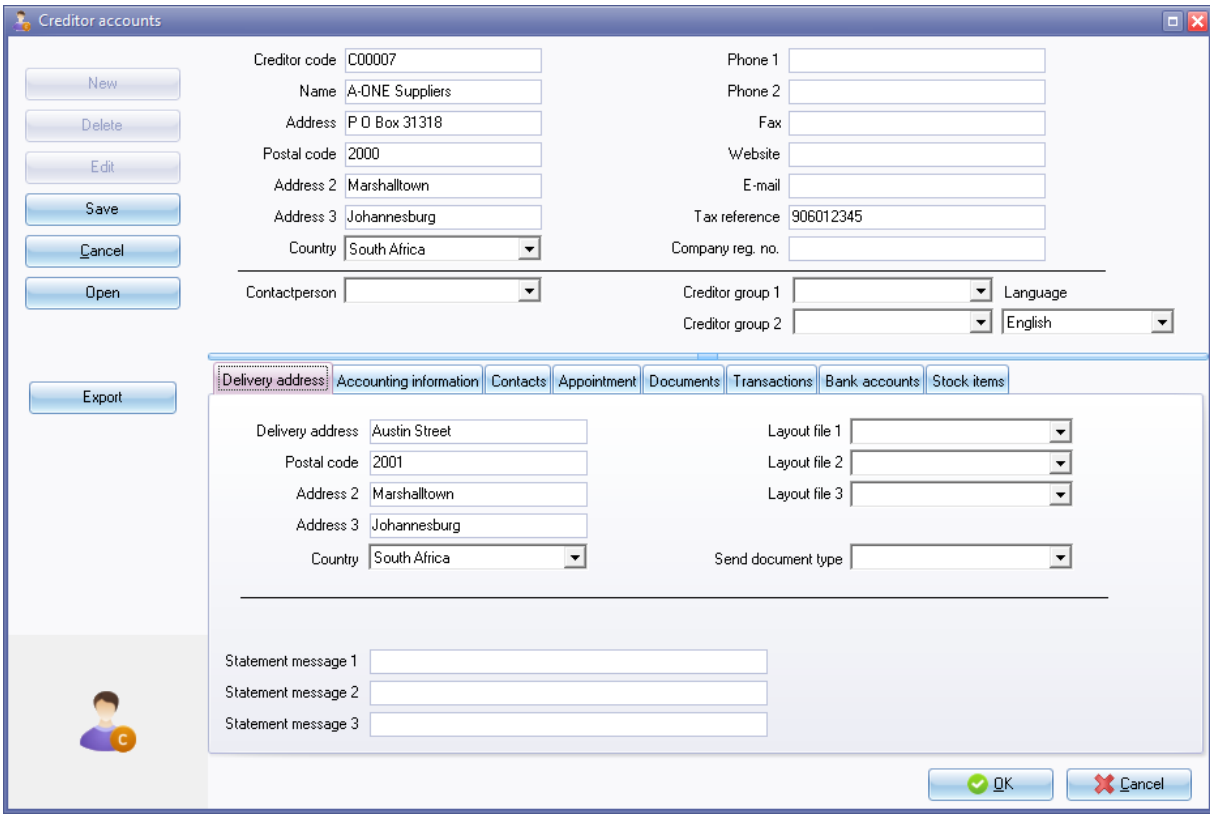
6. Click on the Yes button to continue.

Once the New account is saved the document will be listed in the Documents tab of the new debtor (customer / client) account.

Create a new creditor (supplier / vendor) account using the document details

To create a new creditor (supplier / vendor) account using the document details:

1. Select the Purchases, Supplier returns or Orders document type.
2. Select the document to create an account for.
3. Right-click and select Documents → Create account from document details option on the context menu. The "*Creditor accounts"* edit form with the details on the document header is displayed:



4. Enter a "*Creditor code*" and enter or edit the fields, as necessary.

Creditor code - Enter a prefix followed by 5-digits. In this example, the Creditor code is prefixed

with "2". Debtor codes are prefixed with "1" in this documentation.

This is important to distinguish accounts for creditors (suppliers / vendors) from accounts for debtors (customers / clients). In some features and on some screens and reports this makes it easier to identify the account type.

5. Click on the OK or Save button. A confirmation message " will be displayed.

Create this account?

6. Click on the Yes button to continue.

Once the New account is saved the document will be listed in the Documents tab of the new creditor (supplier / vendor) account.

Context menu - Redo discount on document

If discount is processed on unposted Invoices or Quotes, you may need to reset or clear the discount. The "*Redo discount on document*" option is also available for posted Invoices, but cannot be cleared as you may not edit a posted Invoice.

To redo discount on document:

1. Select the Invoices or Quotes document type.
2. Select the document(s) to reset the discount.

If you need to select multiple documents, press the Ctrl or Shift key and click on each document, which you reset the discount.

3. Right-click and select Documents → Redo discount on document option on the context menu.
4. Once the process is finished, you may need to edit the document.

Discount changes

The discount that will be cleared and reset, is added as follows:

1. F8:Discount icon - Percentage added which applies to all items included in the document lines.

2. Any Discount percentage added manually in the "*Discount percentage*" column of the document lines for a Stock item.

3. Enter Invoice total - If a new Invoice total is added "*Enter new inclusive total*"

The discount will not be cleared for Customer discount

If a different percentage (lower or higher percentage) is entered, it will reset back to the percentage as added on the Accounting information tab of the debtor (customer / client) account.

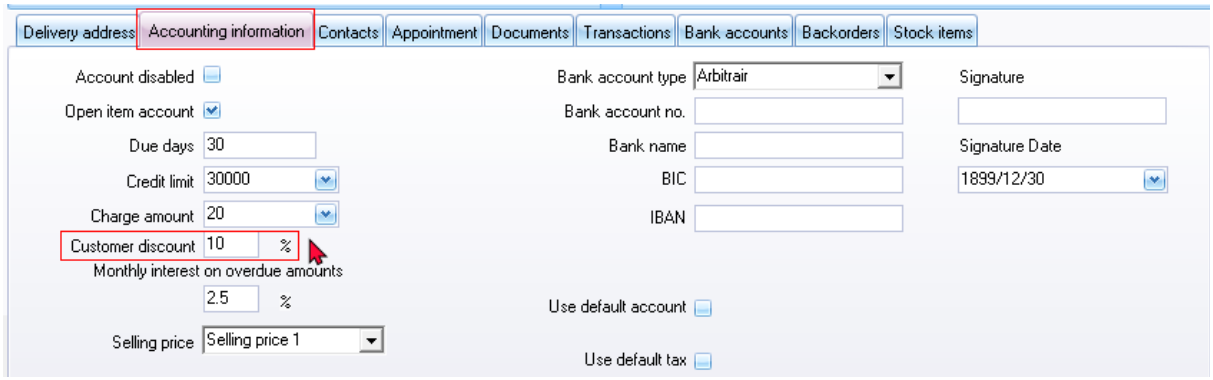
Customer discount automatically added if the "Customer discount" percentage is added on the Accounting information tab of the debtor (customer / client) account and the "Apply invoice discount" setting is selected, will not clear or reset. If you wish to change the percentage to 0%, you need to edit the Invoice and change the discount percentage.

Example of Customer discount percentage

To allow item discount for a debtor (customer / client):

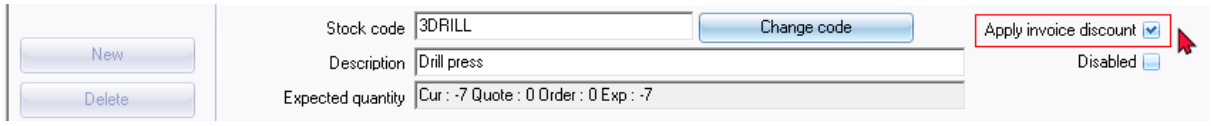
To allow a specific percentage of discount to a debtor (customer / client) on sales documents (Invoices, Credit notes and Quotes) for a specific stock item (item discount), you need to do the following basic settings:

- The Customer discount percentage (which you will allow for a specific debtor (customer / client) account) must be specified on the Accounting information tab of Debtors (Default ribbon).

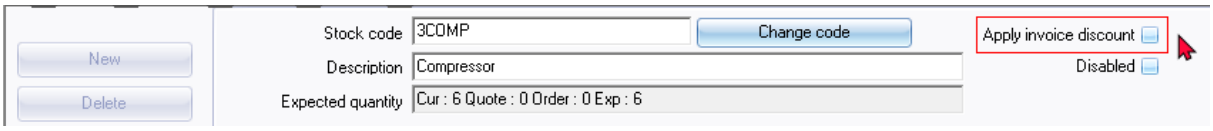


- The "*Apply invoice discount*" field for the stock item on which you will allow discount, must be selected on Stock items (Default ribbon).

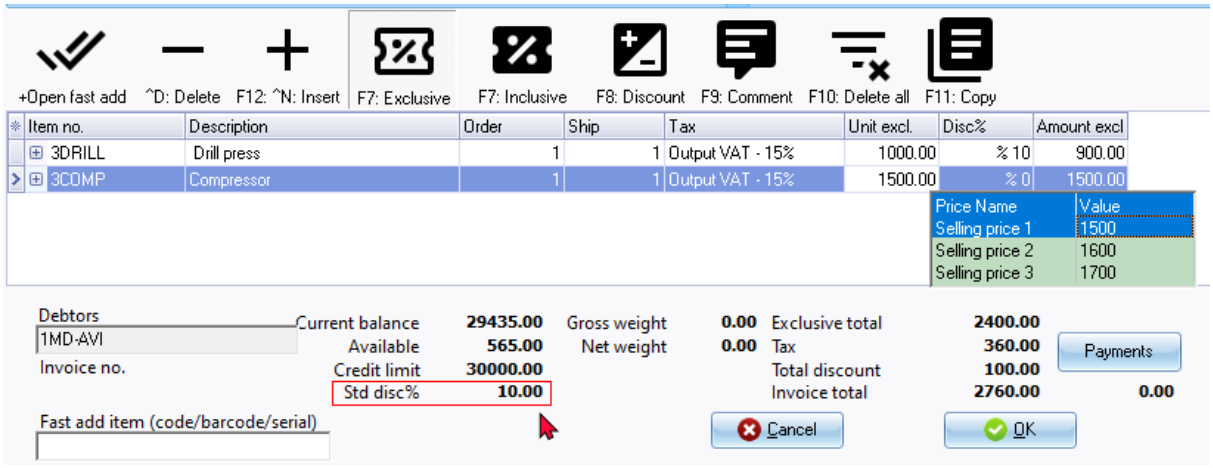
  Apply invoice discount - selected



Apply invoice discount - not selected



Selecting Stock items



In this example the "Apply invoice discount" field is selected for the Drill press and the "Customer discount" percentage is set to 10% for the debtor (customer / client) account. The 10% discount will be applied for the Drill press.

In this example the "Apply invoice discount" field is not selected for the Compressor and the "Customer discount" percentage is set to 10% for the debtor (customer / client) account. No discount will be applied for the Compressor.

You may overtype the percentages if you wish to, you may overtype a percentage or enter a percentage, if no discount is applicable to an item.

Created with the Standard Edition of HelpNDoc: Easily create EBooks

Context menu - Adjustment

The "*Adjustment*" option (on the Documents context menu) to edit the document header of a posted document is not implemented in osFinancials5/TurboCASH5.

Unposted documents may be edited before a document is posted to the ledger.

Once a document is posted (updated) to the ledger, the document cannot be edited. You may access a

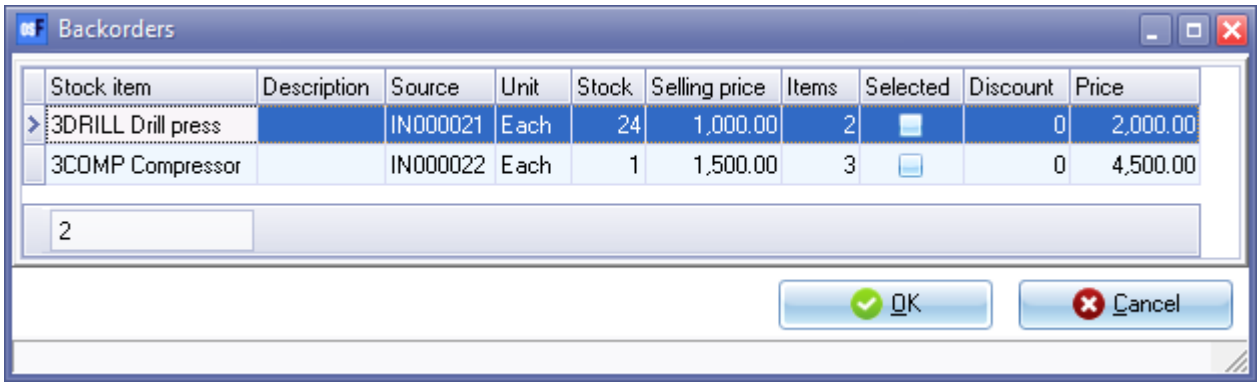
posted document by double clicking on it (Documents selection screen).

For example; it may happen sometimes that a debtor (customer / client), relocates and still have outstanding invoices with the incorrect (old) address.

Created with the Standard Edition of HelpNDoc: Easily create EPub books

Create backorders to deliver

When processing documents, and there are any Backorders outstanding, a list of Backorders will be displayed.



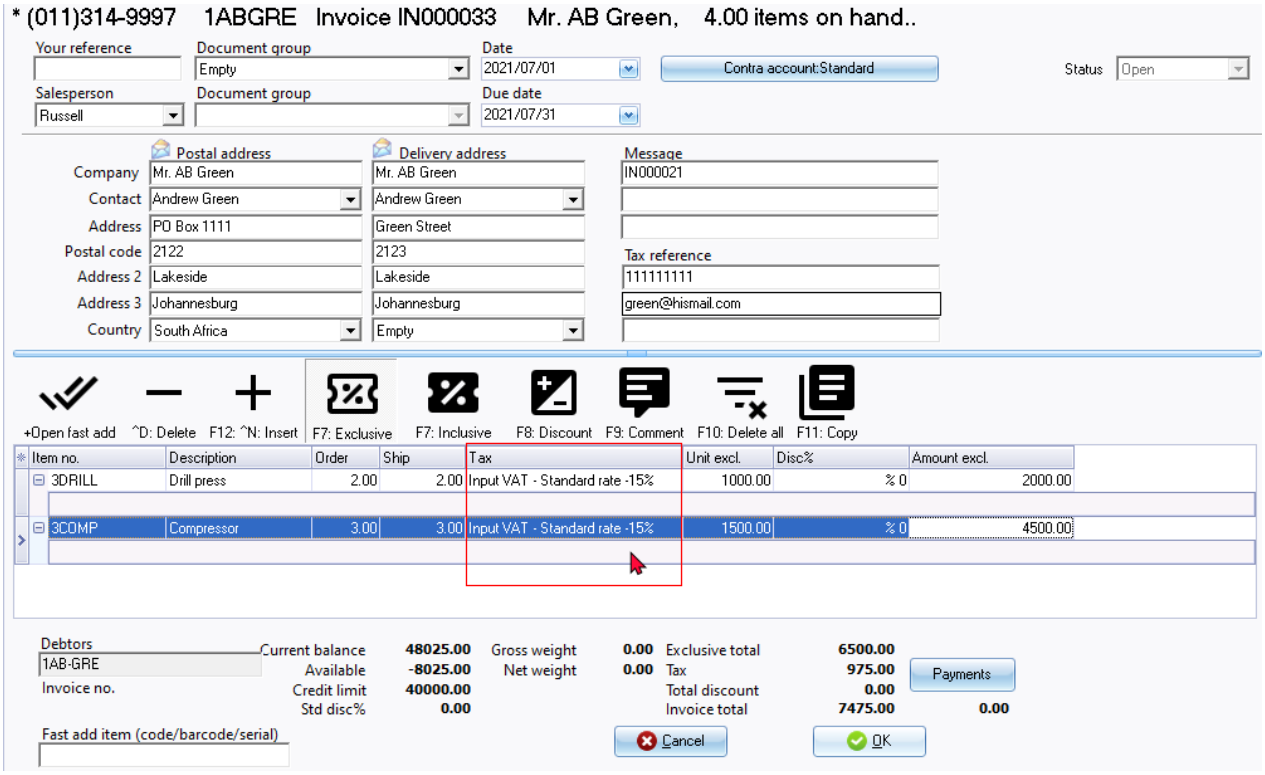
You may select the item on the list and the quantities (in the Items) will be added to the document lines and will be removed from this list.

Backorders to deliver - Invoices

If an outstanding backorder exists for a debtor (customer / supplier account), you may use this option to create a new Invoice for the outstanding backorders to deliver.

To create backorders to deliver:

1. Select the "*Invoices*" document type.
2. Select the document to create backorders to deliver.
3. Right-click and select Documents → Backorders to deliver option on the context menu. A new Invoice will be created.
4. You may need to edit the Invoice.



WARNING - Input Tax / Output tax

In the case of Invoices, the Input tax is used instead of the Output tax. You need to check this, and change it to the Output Tax.

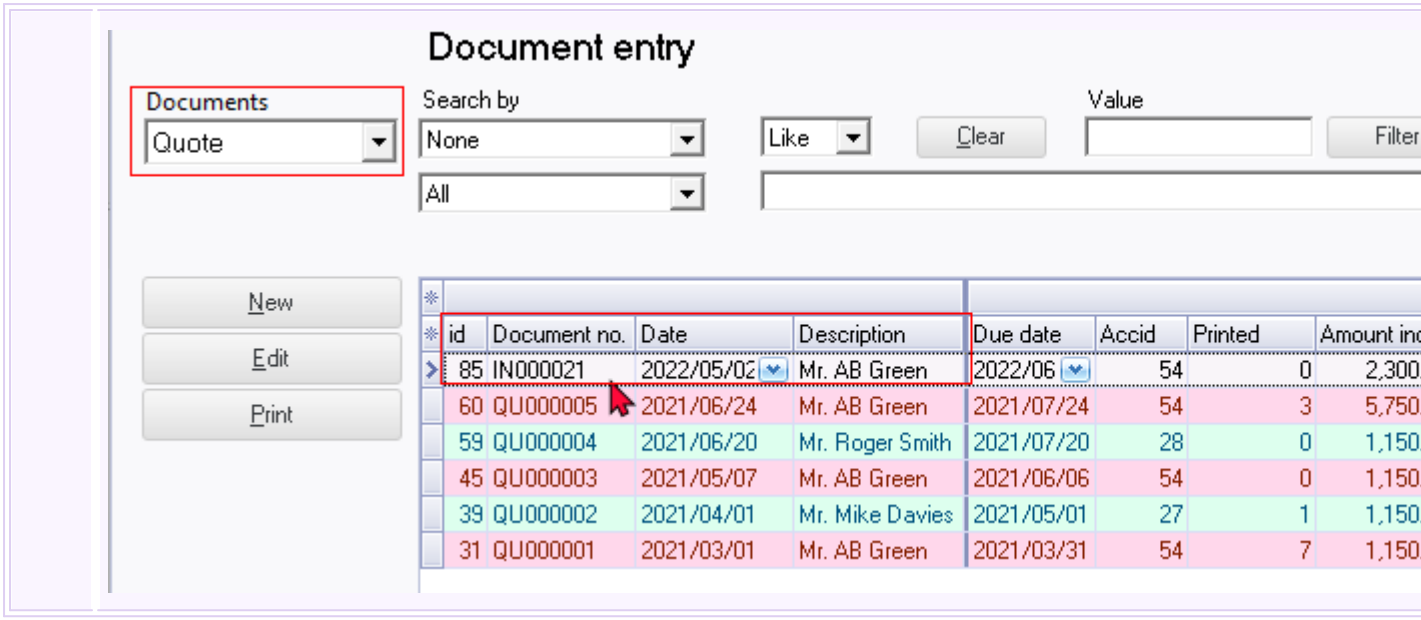
The Invoice will reflect the Selling prices and the quantities as it was on the Backorders. The stock item will be removed from the Backorders screen as well as on the Backorders tabs for the Stock item and the Backorders tab of the Debtor (customer / client) account.

You may click on the Backorder icon and select another stock item to add to the Invoice.

Backorders to deliver - Quotes

WARNING - INVOICE under Quotes document type

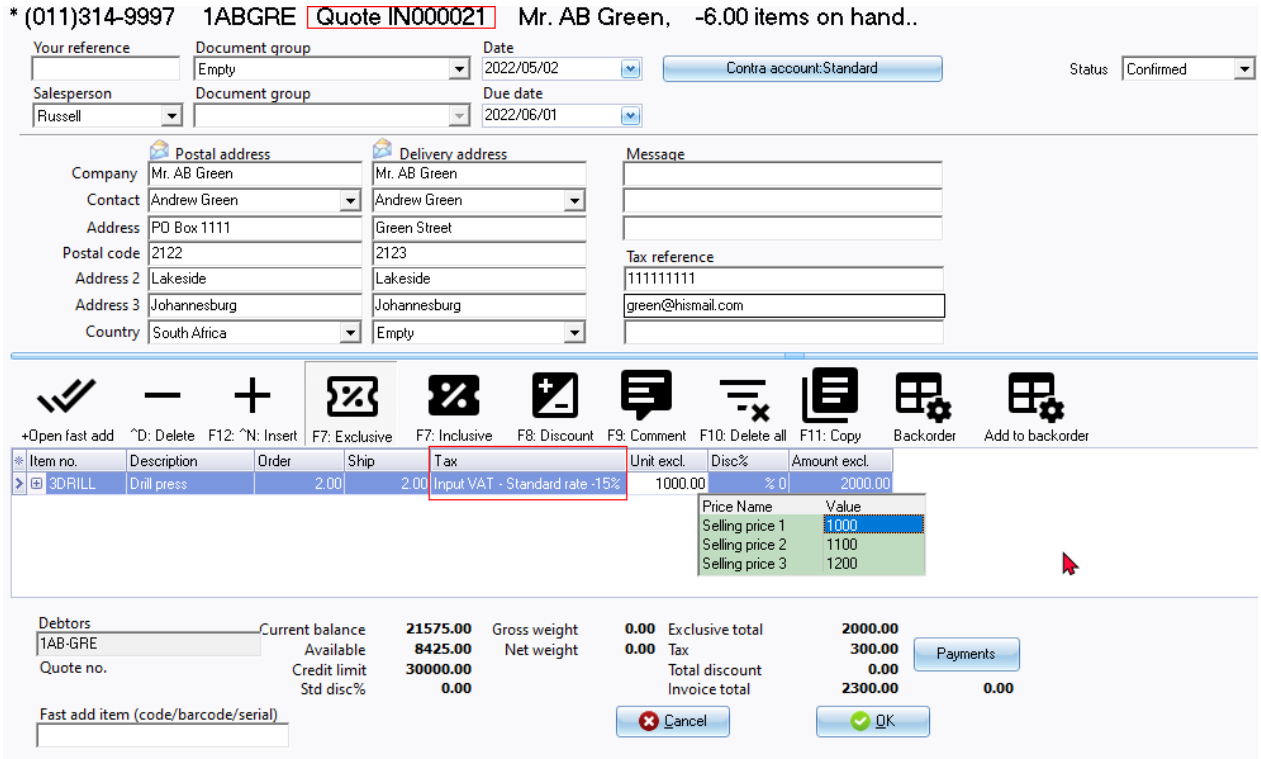
This process is not recommended, as it will create an Invoice on the Quotes document type.



To create an Invoice from the Quotes document type for Backorders to deliver:

To create backorders to deliver:

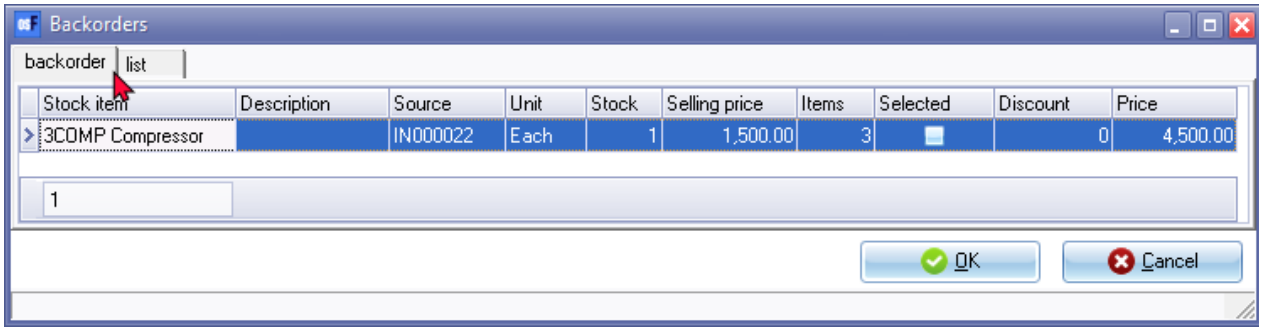
1. Select the "*Quotes*" document type.
2. Select the document to create backorders to deliver.
3. Right-click and select Documents → Backorders to deliver option on the context menu. A new Invoice will be created in the Quotes document type.
4. You may need to edit the Invoice / Quote.



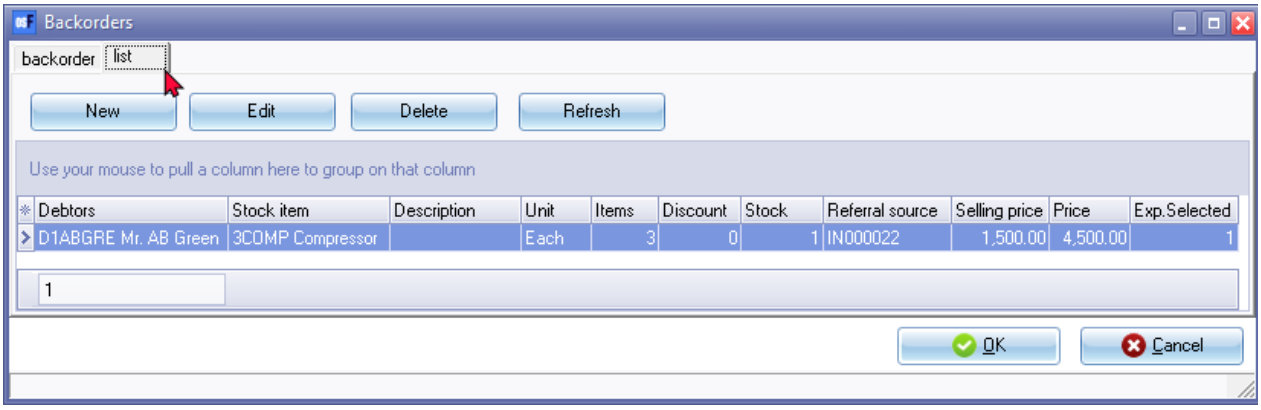
WARNING - Input Tax / Output tax

In the case of Invoices, the Input tax is used instead of the Output tax. You need to check this, and change it to the Output Tax.

The Add to backorder icon is added (after the Backorder icon).



This will list the Outstanding items on Backorder. You may click on the list tab to view a list of the debtor (customer / client) accounts.



Created with the Standard Edition of HelpNDoc: Full-featured EPub generator

Context menu - Confirm

Document listing → Documents per account

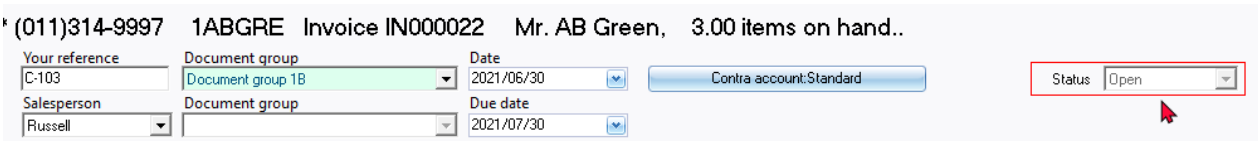
Unprinted document listing only included posted documents - Confirmed unposted documents is excluded.

Posted document status

By default, the "*Status*" of a posted (updated to the ledger) document (i.e. Invoice, Credit note, Purchase or Supplier return), is set as "*Posted*". Posted documents cannot be edited.

Unposted document status

By default, the "*Status*" of an unposted document (i.e. Invoice, Credit note, Purchase or Supplier return), is set as "*Unposted*". Unposted documents can be edited.



Note the "*Status*" is set to "*Open*" for an unposted document, and cannot be changed. You may edit the Unposted document.

After posting an unposted document (i.e. Invoice, Credit note, Purchase or Supplier return), the "*Status*" will be displayed as "*Posted*".

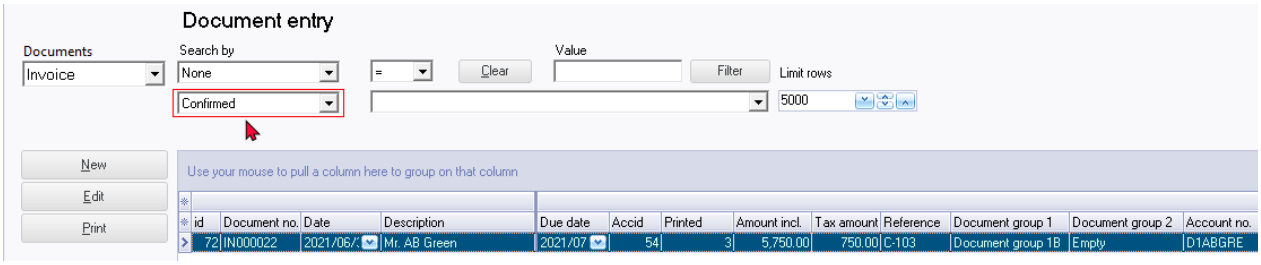
Confirmed unposted document status

To change an unposted document status from "*Open (Unposted)*" to "*Confirmed*":

Choose the unposted document (i.e. Invoice, Credit note, Purchase or Supplier return), right-click and select Documents → Confirm on the context menu.

The "*Status*" of the unposted document will change from "*Open*" to "*Confirmed*".

Once document status, is set to "*Confirmed*" you may filter the document status for a Confirmed documents.



Confirmed posted document status

Posting a "*Confirmed*" unposted documents (i.e. Invoices, Credit notes, Purchases or Supplier returns), it will change the document's "*Status*" from "*Confirmed*" to "*Posted*".

Context menu - Print barcodes

This option allows you to print barcodes for the stock items included on sales documents (i.e. Invoices, Credit notes or Quotes) or purchase documents (i.e. Purchases, Supplier returns or Orders).

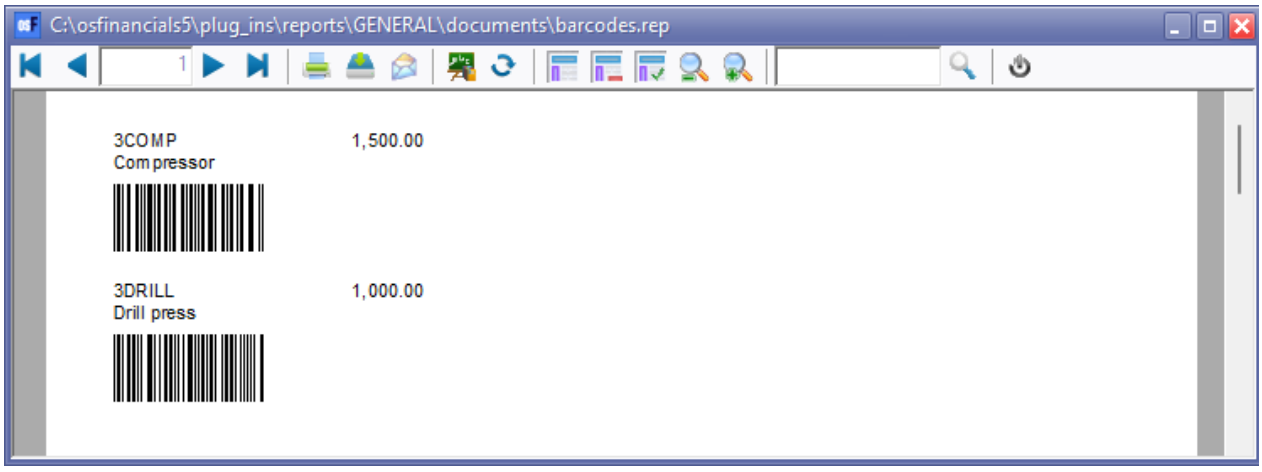
You may also print the Barcode or the Yagoda barcode from the Reports → Stock → Print labels menu on the Reports ribbon.

To print barcodes for selected stock items:

1. On Documents (Documents list screen) Default ribbon), select the Document type, if the correct document type is not selected.
2. Select the Document(s), right-click and select Print → Barcodes on the context menu. This will print the labels of all the stock items included on a selected document.

If you need to select multiple documents, press the Ctrl or the Shift key and click on each document, for which you need to print barcodes.

An example of a printed barcodes for a selected document, is as follows:



Barcodes will be printed for each stock item included in a selected document.

It will display / print the following for each stock item included in a document:

1. Stock code
2. Stock item description
3. Barcode
4. Selling price (exclusive of Tax (VAT/GST/Sales tax).

Labels will be printed for each stock item on a selected document.

If more than one document is selected, labels will be printed for each of the selected documents.

Created with the Standard Edition of HelpNDoc: 5 Reasons Why a Help Authoring Tool is Better than Microsoft Word for Documentation

Context menu - Print labels

This option allows you to print the postal address labels of the selected debtor (customer / client) account(s) for which sales documents (i.e. Invoices, Credit notes or Quotes) were processed.

If purchase documents (i.e. Purchases, Supplier returns or Orders) were selected, it will print the postal address labels for creditor (supplier / vendor) account(s).

You may also print the Postal address labels or Delivery address labels for debtor (customer / client) accounts from the Reports → Debtors → Print labels menu on the Reports ribbon.

You may also print the Postal address labels or Delivery address labels for creditor (supplier / vendor) accounts from the Reports → Creditors → Print labels menu on the Reports ribbon.

To print labels for selected stock items:

1. On Documents (Documents list screen) (Default ribbon), select the Document type, if the correct document type is not selected.
2. Select the Document(s), right-click and select Print → Labels on the context menu. This will print the postal address labels of the selected debtor (customer / client) or creditor (supplier / vendor)

account(s).

An example of a printed postal address labels, is as follows:

Context menu - Others - Import

This option allows you to import documents from a valid exported txf file (exported in the Export - Documents option on the Setup ribbon).

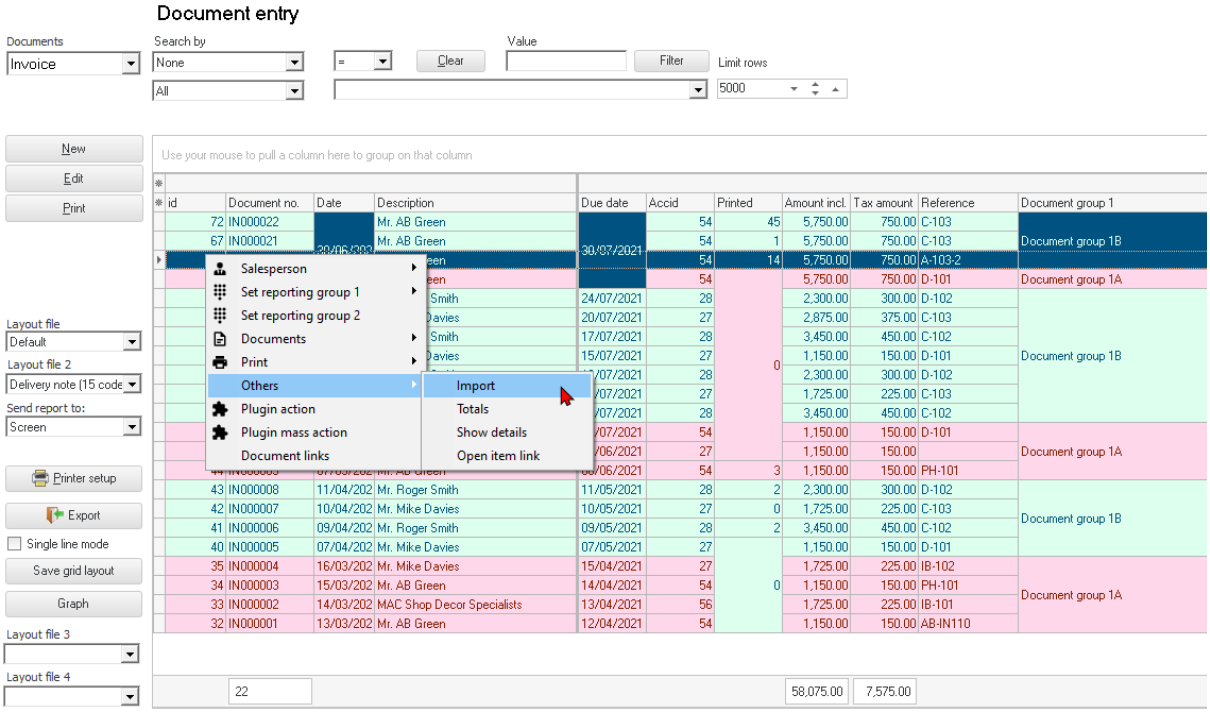
Document Export / Import plugin - Manual - Shop - Licence: Once-off

The Document Export / Import plugin allows you to export sales documents (invoices, credit notes and quotes) and purchase documents (purchases, supplier returns and orders) to a TurboCASH Exchange (.txf) or a Comma Separated Value (*.csv) file format. You may then select an exported documents file (context menu Others → Export) and import the exported file in the (context menu Others → Import) options in the documents grid.*

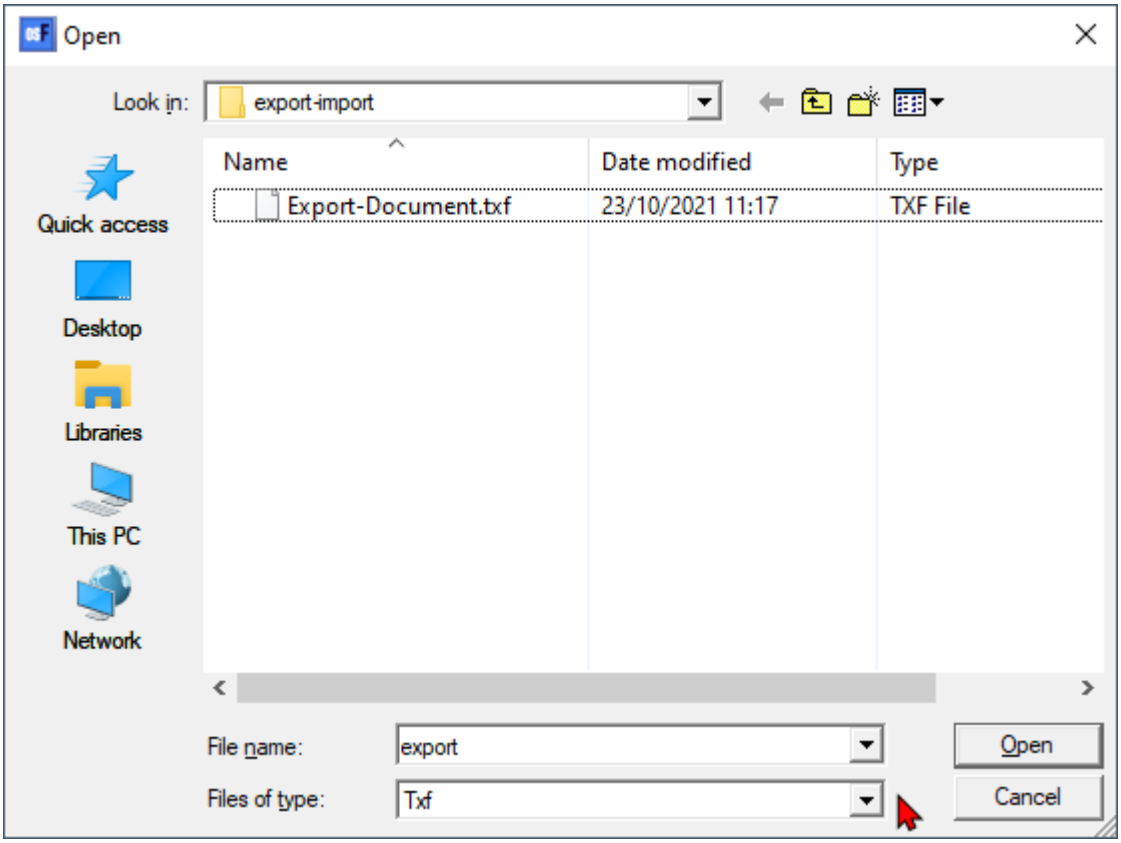
To import documents from a valid txf file:

1. On the Default ribbon, select Documents (Documents list screen), select the Document type.

2. Right-click and select the Others → Import option on the context-menu.



3. The "*Open*" screen is displayed:



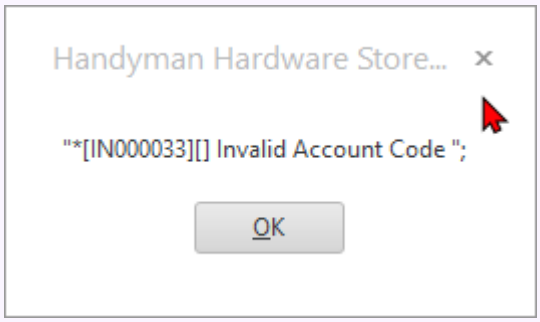
4. Select a valid "*TurboCASH Exchange file (*.txf)*" file and click Open.

The valid "TurboCASH Exchange file (.txf)" file is generated in the Export - Documents option on*

the Setup ribbon. This will only include the documents on the dates selected to include in the export file.

5. On the "*Debtor accounts*" list screen, click on any of the OK, Close or Open buttons. The Documents will be imported.

If an invalid account code is included in the "TurboCASH Exchange file (.txf)" file (generated in the Export - Documents option on the Setup ribbon), a message will be displayed:*



The document (listed on the message screen) will not be imported.

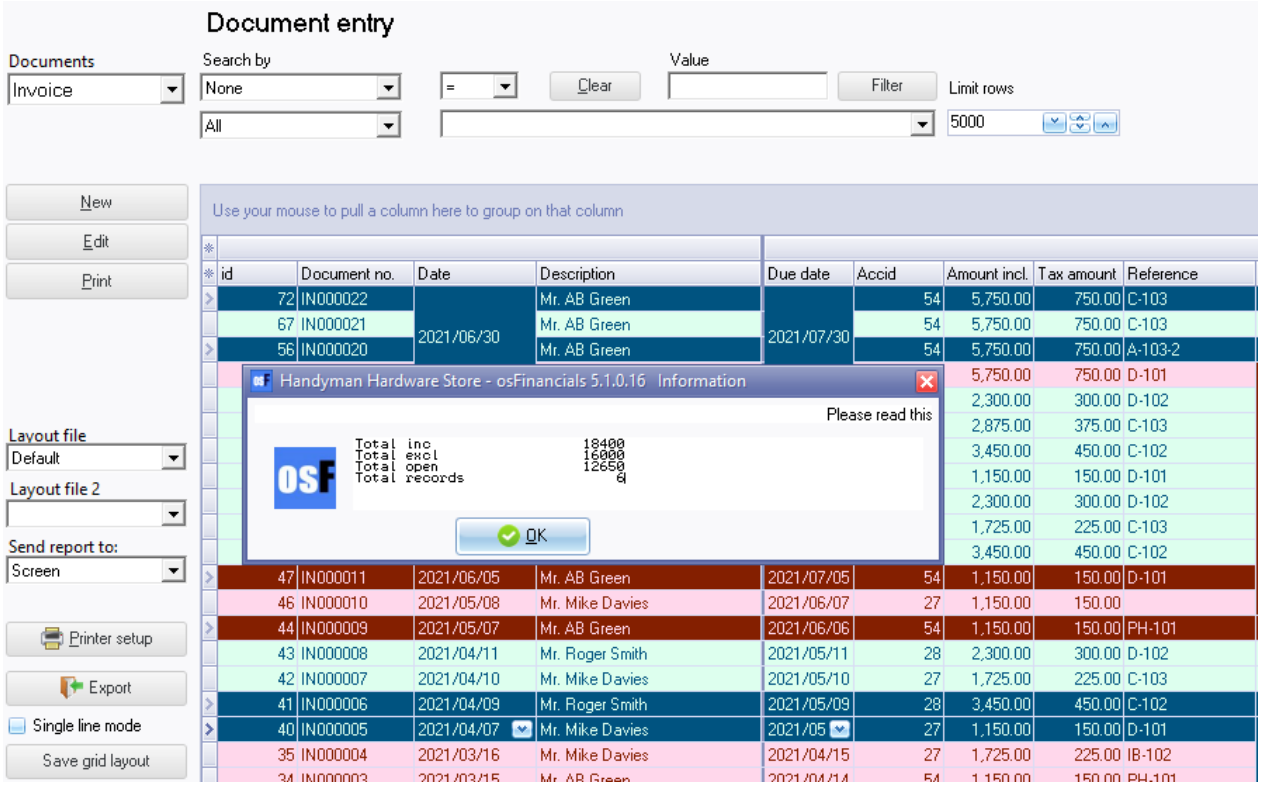
Context menu - Others - Totals

On the Document list screen, select the document type for sales documents (i.e. Invoices, Credit notes or Quotes) or purchase documents (i.e. Purchases, Supplier returns or Orders).

To select multiple documents, press the Ctrl key and keep it down while selecting the other documents to include in the Totals.

Right-click and select Others → Totals option on the context menu. This will list an information screen with the calculated totals of selected document(s).



This will display the following on an information message:

- Total inc - Total amount of the selected documents inclusive of Tax (VAT/GST/Sales tax).
- Total excl - Total amount of the selected documents exclusive of Tax (VAT/GST/Sales tax).
- Total open - Total of selected documents; with outstanding amounts.
- Total records - The total number of documents selected.

Context menu - Others - Show details

By default, the details of each document is listed on the Documents list screen in columns. You may select to show the basic details of the items, quantities, remarks and comments added to documents. When a document is selected or the scrolled on the list, the details will be displayed.

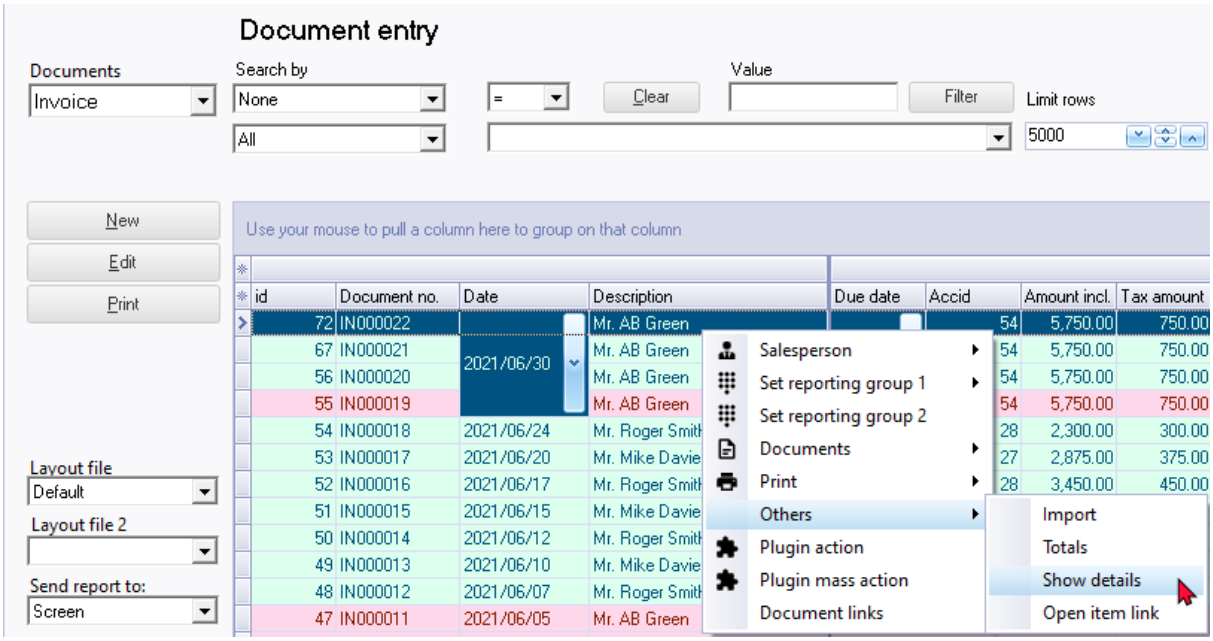
The detail will be displayed regardless of whether you select other document types.

The "Show detail" will only be disabled when you:

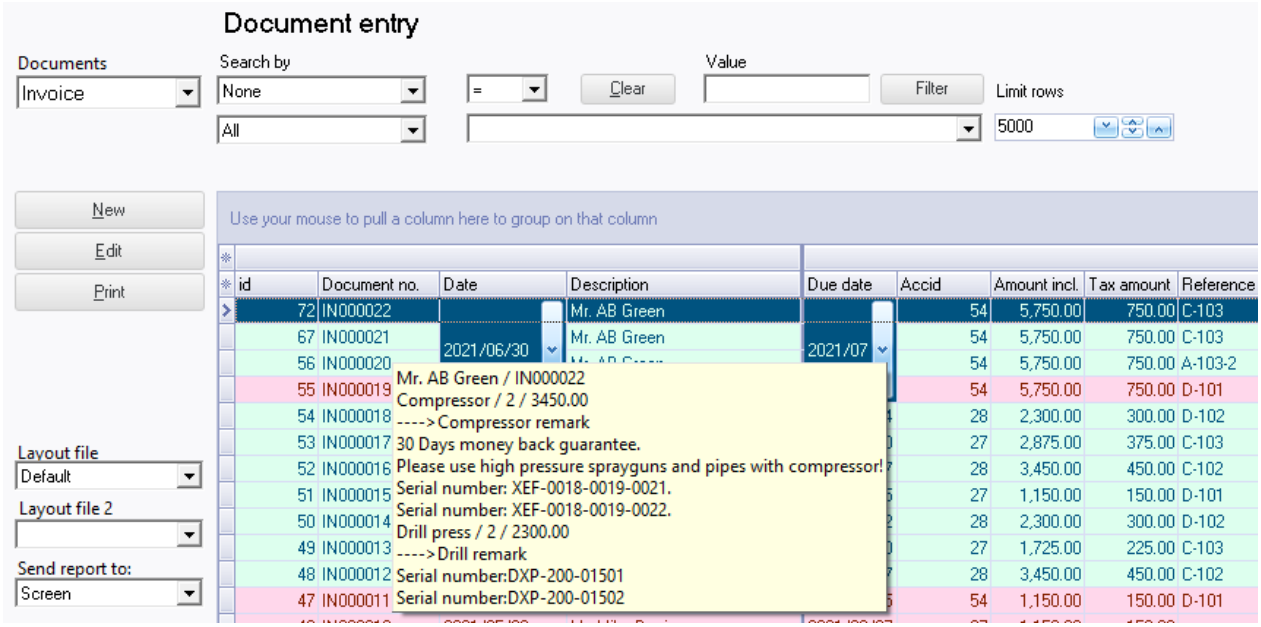
- *Select the Other → Hide option context menu option on the Document entry list screen.*
- *Select the Tools → Close active forms (Setup ribbon) option.*
- *Close and reopen the Set of Books.*

To show or hide the details on a selected document:

1. On the Default ribbon, select Documents (Documents list screen), select the Document type, if the correct document type is not selected.
2. Right-click anywhere on the Documents list screen or on a selected document. On the context menu, select the Others → Show details option.



3. When a document is selected, it will display the details of the document.



The details will display the following:

- Name of debtor (customer / client) or creditor (supplier / vendor)
- Document number
- Stock item description
- Quantity
- Price (Inclusive of tax)
- Remarks (if entered)
- Comments (if entered)

To turn the Show details off:

Right-click and select the Others → Hide option on the context menu.

Created with the Standard Edition of HelpNDoc: Easy Qt Help documentation editor

Context menu - Others - Open item link

The Open item link option will launch the "*Open item link*" form for the debtor (customer / client) account associated with the selected document, if Invoices, Credit notes or Quotes document type is selected.

If purchase documents, (Purchases, Supplier returns or Orders document type is selected, the "*Open item*

link" form for the creditor (supplier / vendor) account associated with the selected document will be launched.

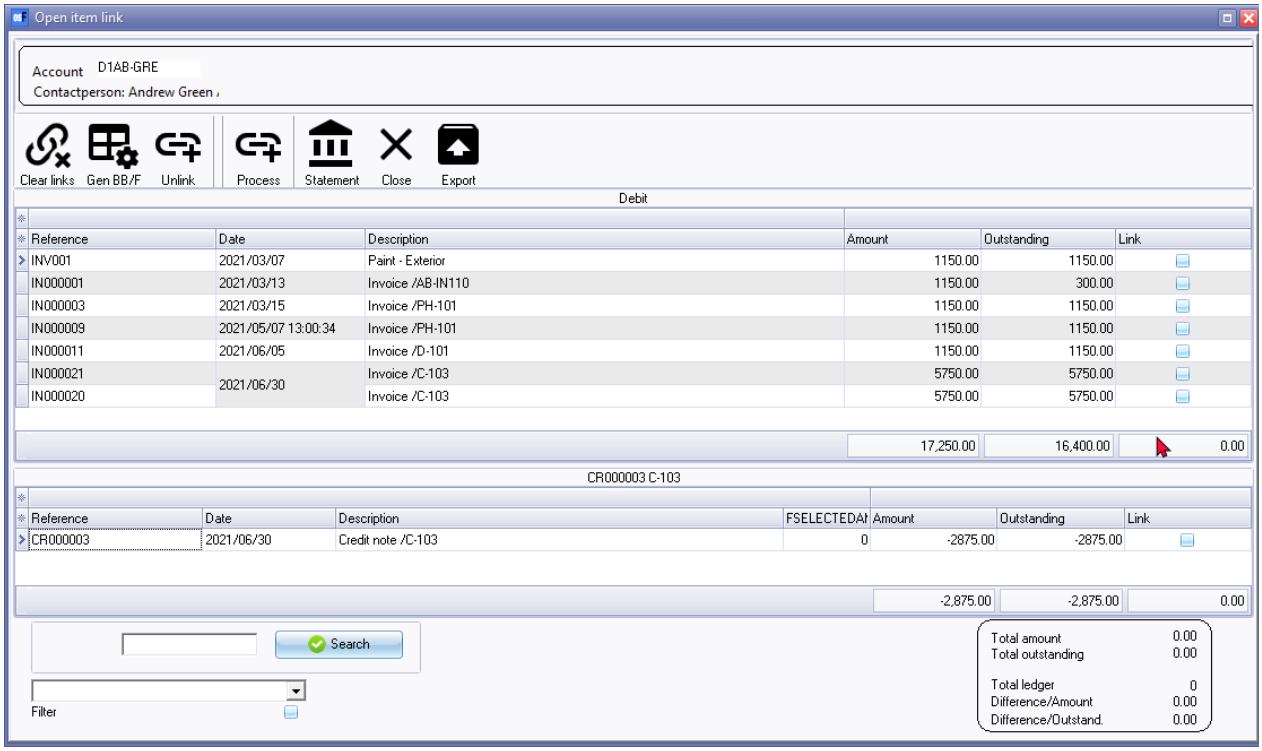
You may view all the transactions and process open item links for the selected account. See - Open item link.

To launch the Open item link for a selected document:

1. On Default ribbon, select Documents (Documents list screen), select the Document type, if the correct document type is not selected.

2. Right-click on a selected document. On the context menu, select the Others → Open item link option.

This will launch the "*Open item link*" form for the debtor (customer / client) account; or the creditor (supplier / vendor) account; associated with the selected document.



Only the unlinked (outstanding) transactions will be listed.

You may link the transactions to the documents.

Document entry

Once you have selected a specific Document type and the Debtor account or Creditor account or an existing Document (to edit), the Document type entry (Invoice, Credit note, Quote, Purchase, Supplier returns or Orders) screen will be initiated.

This Document entry screen displays similar information as found in a source document (e.g. Invoice, etc.) such as the details of the selected Debtor or Creditor account, etc. You only need to select the stock items, enter quantities, discounts, comments, etc. or to edit the transactions, discounts, comments, etc.

Once a document (Invoices, Credit notes, Purchases or Supplier returns) have been updated (posted) to the ledger, you cannot edit or change these documents.

The Document entry screen can be accessed for existing Invoices, Credit notes, Purchases or Supplier returns as follows:

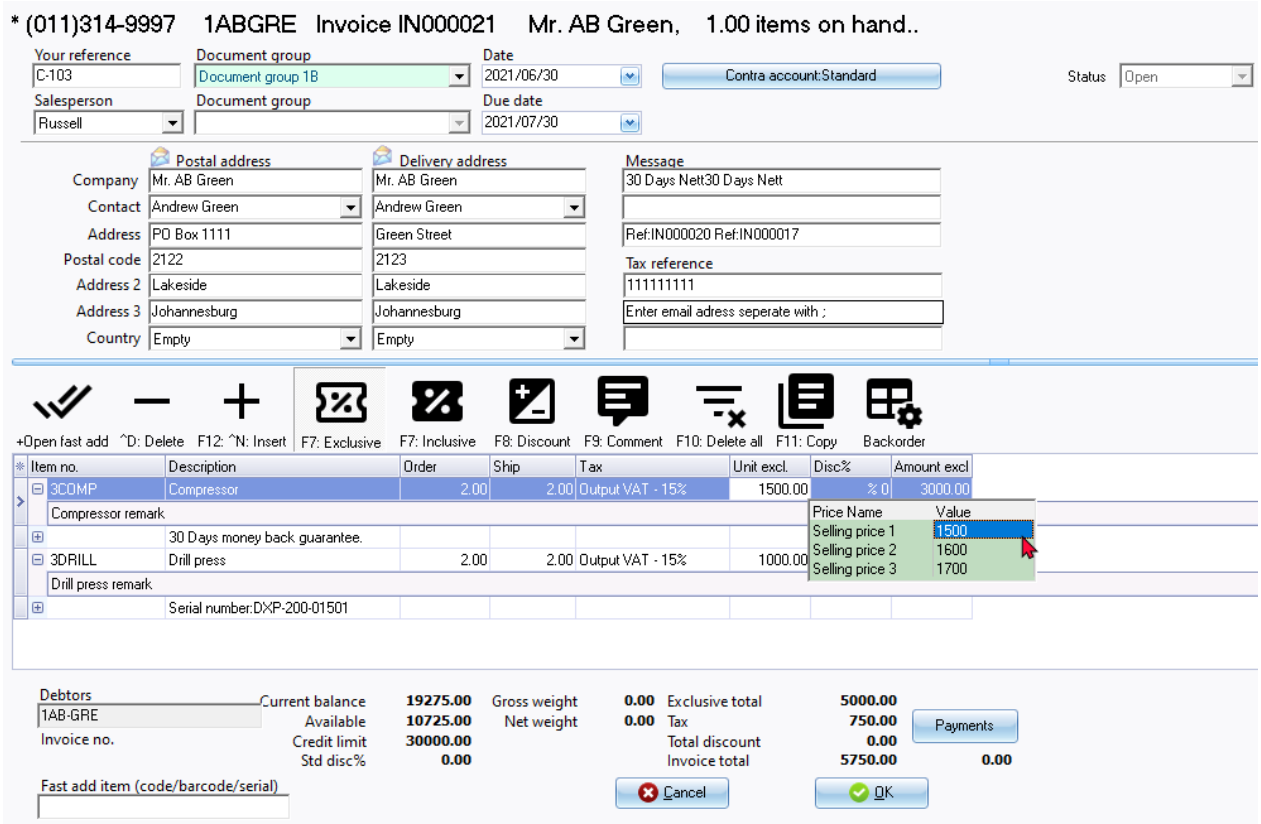
1. Unposted documents - This is the default option on the Document list screen. Any document (Invoice, Credit note, Quote, Purchase, Supplier returns or Orders) may be edited, if it is not yet updated or posted to the ledger.
2. Posted documents - If you deselect (remove the tick) in the Unposted option on the Document list screen, you may view the documents as they were originally processed in the Document entry screen before these documents were updated (posted) to the ledger.

Quotes and Orders will not be listed, if the Unposted field is not selected on the Document list screen. The reason for this is, that quotes and orders cannot be posted (updated) to the ledger. Quotes need to be converted to Invoices and Orders need to be converted to a Purchase documents.

Created with the Standard Edition of HelpNDoc: Achieve Professional Documentation Results with a Help Authoring Tool

Document entry form - Unposted documents

The Document entry screen is as follows:



The layout of the Document entry screen displays all active fields, which may be edited (options to select and entering or editing of data) first, and all other fields (which cannot be changed) is displayed in the bottom section of this screen.

The Document entry screen consists of the following sections:

1. Title bar: - Displays the following:

    a) Telephone number - The telephone number as entered in the Phone 1 field of the debtor (customer / client) or creditor (supplier / vendor) account.

    b) Account number or code of the selected Debtor account or Creditor account for which you need to create a document will be displayed.

    c) Document type - Invoice, Credit note, Quote for sales documents or in the case of creditor (supplier / vendor) or documents it will display Purchase, Supplier returns or Orders.

    d) Document number - If you create a new document; the next document number will be displayed (as generated). If you have selected a specific document to edit, the number of the selected document will be displayed.

It is recommended that you check your document numbers and change the document

numbers, if necessary in Setup → Documents setup before starting to process your first document.

If you have created more than one user in Setup → Access control, you may set to Use General Numbers and select the Default User in Setup → Documents setup.

e) Quantities on hand - The Quantities on hand of the selected trading stock item.

The Quantity on hand is only displayed for the following stock item types:

- *Default*
- *Option item*
- *BOM Production*

For all other stock item types it will not be displayed.

2. Header section: - You may enter or select the following where necessary:

a) Your reference - Enter the reference number if received from the debtors (customers / clients) or creditors (suppliers). When printing the documents, the reference number will be displayed and make it easier for the debtors (customers / clients) or creditors (suppliers) to link and trace the transaction in their records.

b) Salesperson – Select from the list for Invoices, Credit notes or Quotes only.

You may select the default salesperson for each debtor account. When sales documents are generated and the debtor (customer / client) account is selected, the default salesperson will be displayed for the document or you may select any available salesperson.

Salespersons may also be selected for purchase documents (i.e. purchases, supplier returns and orders). This allows you to see who handled the purchase document.

c) Document group 1 and/or Document group 2 - Select, if you have created any document groups in Setup → Groups.

d) Date - The system date should automatically be displayed. You may enter or select the date

using the date picker (if not correct).

If your system date is incorrect, please set your operating system's date. If it is a document which you are editing, the date when the document was created will be displayed.

e) Due date - The due date will automatically be calculated as the number of days entered in the Due days field of the Debtors (Default ribbon) (Accounting information tab). If this field is left blank for the Debtor account, or a value of (zero) 0 is entered, this due date will be the same as the date of the document. The same principles apply to Creditor accounts.

f) Postal address - The postal address, as entered on the Debtors (Default ribbon), and in the case of creditors in the Creditors (Default ribbon), will be displayed. You may over type this address for a specific document, but need to change the address details on the Debtors / Creditors (Default ribbon), if the address for a debtor or a creditor has permanently changed.

g) Delivery address - The delivery address, if entered on the Debtors (Default ribbon) (Delivery address tab), and in the case of creditors in the Creditors (Default ribbon) (Delivery address tab), will be displayed. You may enter or over type this address for a specific document, but need to change the address details on the Debtors / Creditors (Default ribbon), if the address for a debtor or a creditor has permanently changed.

h) Message – Message (up to 3 lines will be printed on the selected layout files for documents. By default, the message, if entered for the specific document type on Setup → Documents setup (Setup ribbon) will be displayed.

Messages entered in the Message fields of the following screens, will be displayed on the Message fields in the Document entry screen's Header section:

- *Edit → Repeating invoices – The message as entered (and if it is selected to replace message by) will be displayed.*
- *Calendar – Repeating invoices - Event. The message as entered will be displayed.*

Data may also be inserted into the message fields from the following options:

- *Order number – Convert Orders to Purchase documents.*
- *Quote number – Convert Quotes to Purchase documents.*
- *Document number – Copy Document – the number of the copied document.*

3. Transaction / Remarks / Comments section: - Select and enter or edit the following:

   a) Transactions - Select the stock item and specify the quantities and discount percentages for sales to debtors (customers / clients) or purchases from creditors (suppliers / vendors).

   > *The Purchase and Purchase (no stock) stock item types will not be listed on the lookup screen when sales documents (Quotes, Invoices and Credit notes) are processed.*

   > *The Sales and Sales (no stock) stock item types will not be listed on the lookup screen when purchase documents (Orders, Purchases and Supplier returns) are processed.*

   b) Comments (optional) - You may add comments, or additional information, for transactions or stock items.

   > *Remarks are similar than comments. You may click on the + icon (before the stock code) to add a remark for the stock item.*
   >
   > *You may select Expand to show remarks or Collapse to hide remarks on the context menu.*

   c) Speed buttons (icons) - The following eight (8) icons (speed buttons) are conveniently placed on top of the rows to edit and process documents:

      i) +Open fast add / -Close fast add - Open or Close the Item lookup as a part of the "*Document entry*" form.

      ii) ^D:Delete - Delete a selected transaction. (F12 or Ctrl+D).

      iii) F12:^N:Insert - Insert a row directly above the selected transaction. (Ctrl+N).

      iv) F7:Exclusive - Switch to the exclusive mode.

      v) F7:Inclusive - Switch to the inclusive mode.

      vi) F8:Discount - This will allow you to enter a percentage for discount.

      vii) F9:Comment - This will change a line to a comment line to insert a comment or additional information for the transaction.

      viii) F10:Delete all - This will delete or clear all the transactions and/or comments entered in this document.

      ix) F11:Copy - This will display a list of documents of which you may select to copy the content (transactions and comments). All the transactions and comments for the

selected document will be copied after the last line.

New keyboard shortcuts:

- *Alt+F3 - Focus on Quantity ship field.*
- *Ctrl+F3 - Focus on Fast add item (code/barcode/serial) field. Then press scan.*

d) Context menu - You may right-click and use the following options:

i) Sequence - Move up, Move down and Sort on stock code options on the context menu to change the sequence of the document lines. This will change the sequence of transactions and/or comments on document layout files when printing or reprinting documents.

ii) Enter total - You may also enter an amount to round the document (e.g. Invoice total).

This will automatically recalculate and adjust the inclusive totals and tax amounts proportionally for all items included in the document.

4. Footer section: - These fields cannot be edited and displays the following information:

a) Debtor / Creditor - The Account code, or Number, of the selected Debtor / Creditor account.

b) Document number - The Document number for the selected document type.

c) Credit facilities - It is good practice to train your eye to view the available balance quickly to see if sufficient credit facilities are available. This area of the screen displays the following:

i) Current balance - osFinancials5/TurboCASH5 will reflect the current account balance for the selected Debtor or Creditor account.

ii) Credit limit - The credit limit, if entered on the Debtors (Default ribbon) (Accounting information tab), and in the case of creditors in the Creditors (Default ribbon) (Accounting information tab) menus.

iii) Available balance - osFinancials5/TurboCASH5 will calculate and display the amount available on the credit facility Credit limit minus the Available balance). If the current balance exceeds the credit facility when you enter transactions,

osFinancials5/TurboCASH5 will inform you accordingly.

d) Totals - The totals of the transactions on the document (excluding tax (VAT/GST/Sales Tax)) Discount amount and the Document total (payable / due).

5. Status bar: - The statusbar of the Document entry screen is only displayed if the document is not launched from the sidebar. It displays the similar information as in the titlebar. It also displays the following applicable to debtor (customer / client) or sales documents (i.e, Invoices, Credit notes, Quotes).

a) Selling price - The selected selling price (Selling price 1 / 2 / 3) or the default selling price as set in the Debtors (Default ribbon) (Accounting information tab) for the debtor (customer / client) account.

b) Customer discount - If you have entered any percentage for Customer discount on the Debtors (Default ribbon) (Accounting information tab), and the "*Apply invoice discount*" field is selected on Default → Stock items for the selected stock item, the customer discount percentage for the selected Debtor account will be displayed.

You may over type the discount with a zero (0) percentage, if you do not wish to allow discount for this transaction in the Discount Column of the Transaction section of this screen. If you wish to grant a lower percentage or higher percentage of discount, you may over type the percentage with the percentage of discount you wish to allow.

Delete transactions / comments in documents

Sometimes you may have entered a number of transactions and/or comments in a document, and you wish to delete a transaction or a comment in the Document entry screen.

To delete a transaction or a comment in a document:

1. Select the row or line for the transaction or comment which you wish to delete.

Once again, make sure absolutely sure that the correct stock item, transaction, or comment is selected.

2. Click on the ^D:Delete icon; or (Ctrl + D). A confirmation message is displayed:

   "Do you wish to delete this Line?"

3. Click on the Yes button. The selected transaction, or comment, will be deleted or removed.

Created with the Standard Edition of HelpNDoc: Streamline Your Documentation Creation with a Help Authoring Tool

Insert transactions / comments in documents

Sometimes you may have entered a number of transactions in a document, and you wish to insert a transaction or a line in a specific place in the document. You may need to do this to insert another transaction, or to insert a comment for a selected transaction.

To insert a line for a transaction or a comment in a document:

1. Select the row or line into which you wish to insert a transaction or enter a comment.
2. Click on the ^N:Insert icon (Ctrl + N). A new blank line or row above a selected transaction or comment line will be inserted.
3. Enter the transaction in the inserted row, or change the inserted row to a Comment.

Tax Inclusive / Exclusive - Documents

You may select to change the amounts to be displayed as exclusive or exclusive of Output VAT/GST/Sales Tax on all sales documents for debtors (customers / clients) (i.e. Invoices, Credit notes and Quotes) and exclusive or exclusive of Input VAT/GST/Sales Tax on all purchase documents for creditors (suppliers) (i.e. Purchase, Supplier returns and Orders).

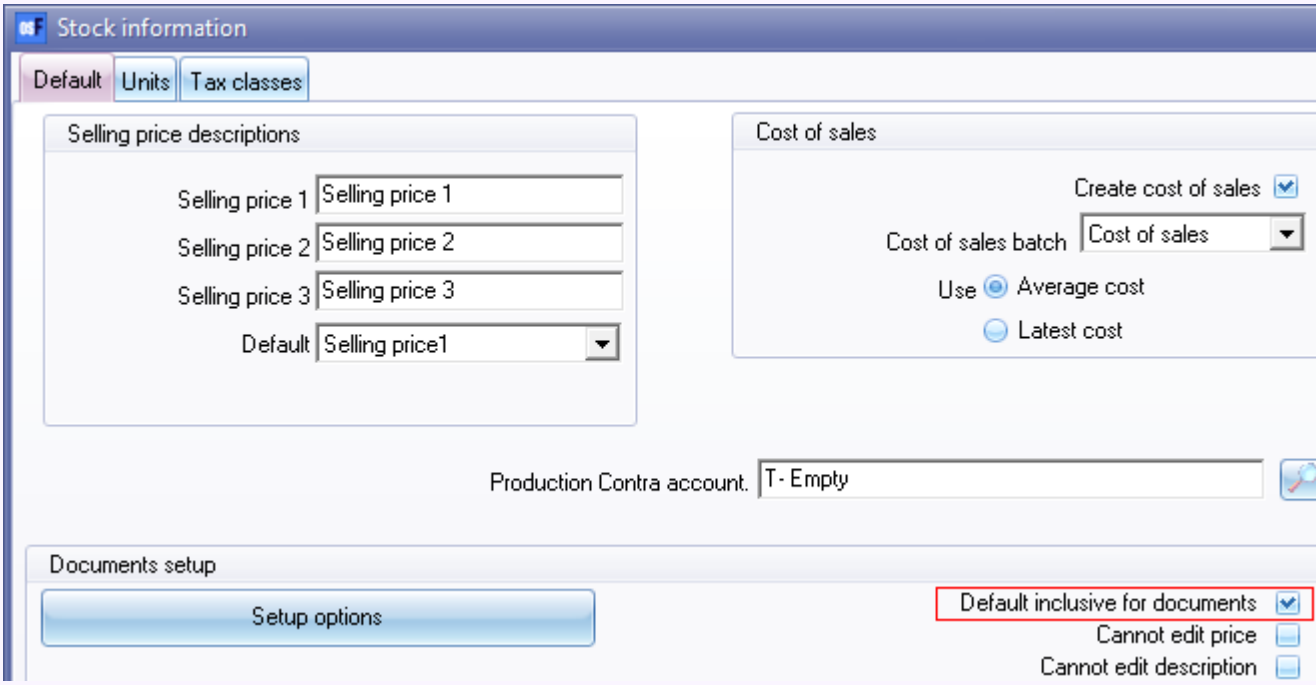
The selling price amounts for debtor (customer / client) documents are automatically inserted in the documents when a stock item is selected.

Please take note of whether these selling prices are entered or adjusted Inclusive or Exclusive of

VAT/GST/Sales Tax on Stock items (Default ribbon), or if you adjust the selling prices in the Input → Adjust stock menu (Selling prices tab) on the Default ribbon.

The purchase (cost) price amounts for creditor (supplier / vendor) documents are automatically inserted in the documents when a stock item is selected.

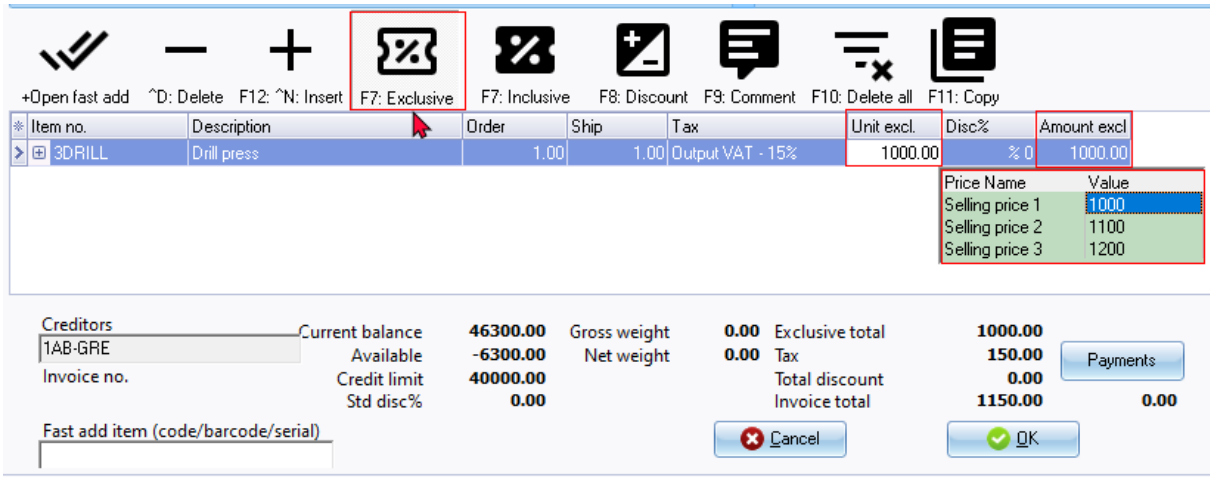
By default, the amounts are inserted or entered (if manually over-typed) Exclusive of VAT/GST/Sales Tax on the amount column the document lines. To enter and view amounts Inclusive of VAT/GST/Sales Tax, you may select (tick) the "Default inclusive for documents" field option on Setup → Stock information menu (Setup ribbon).



Tax Exclusive mode

To set the Exclusive of Tax (VAT/GST/Sales tax) mode:

1. Click on the F7:Exclusive icon.



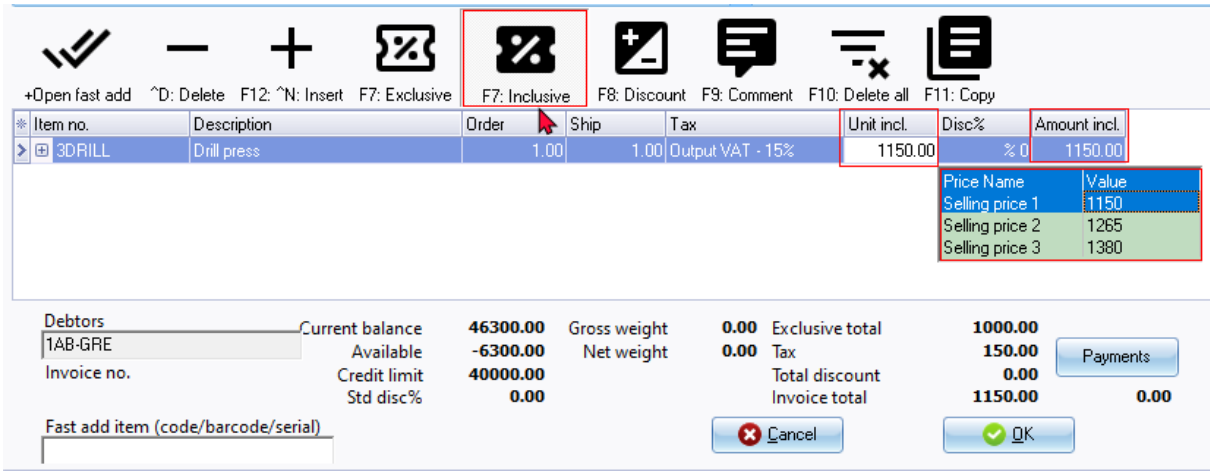
2. The amount will change to the selected mode, and will be displayed in the transaction section, as well as at the bottom of the Document entry screen.

You may press the F7 key or click on the F7:Exclusive / F7:Inclusive icons on the "Document entry" screen for unposted documents to toggle between the Inclusive or Exclusive modes.

Tax Inclusive mode

To set the Inclusive of Tax (VAT/GST/Sales tax) mode:

1. Click on the F7:Inclusive icon.



2. The amount will change to the selected mode, and will be displayed in the transaction section, as well as at the bottom of the Document entry screen.

Created with the Standard Edition of HelpNDoc: Transform Your Word Doc into a Professional-Quality eBook with HelpNDoc

Discount - Documents

There are two basic methods to allow a percentage of discount to your debtors, or to enter the discount received from your creditors (suppliers / vendors) at the time of the sale or purchase transaction. These discounts are often referred to as trade discounts.

- Item discount - This option allows you to specify the percentage of discount in the Discount percentage column on the Document entry screen.
- Invoice discount - This option allows you to specify a percentage of discount, which is applicable to all the transactions in the document.

If you have already specified a percentage in the discount percentage column, this percentage will be calculated as well for the item.

It is recommended that you use only one of these methods (either the item discount or the Invoice discount), unless you wish to allow overall discount on all the transactions including those transactions that already has a discount specified. Both of these methods can be applied to debtors (customers / clients) and creditors (suppliers / vendors).

- Change invoice total - You may allow or process discount on the document total, e.g. Rounding discount or discontinued cents, etc.).

If discount is processed on unposted Invoices or Quotes, you may need to reset or clear the discount. The "Redo discount on document" option is also available for posted Invoices, but cannot be cleared as you may not edit a posted Invoice.

Discount received

On the other hand, you may use price list received form your creditors (suppliers / vendors), which is the normal selling price. Your creditors (suppliers / vendors) may give you a trade discount at the time of the purchase. This discount is reflected on Purchase documents, Supplier return documents and Orders). When these Purchase documents are updated (posted) to the ledger, the net cost price (the purchase price less discount) at the time of the purchase will be recorded as a transaction. This will reduce the cost prices of your purchases, and will consequently affect the gross profit.

Discount allowed

Line discount

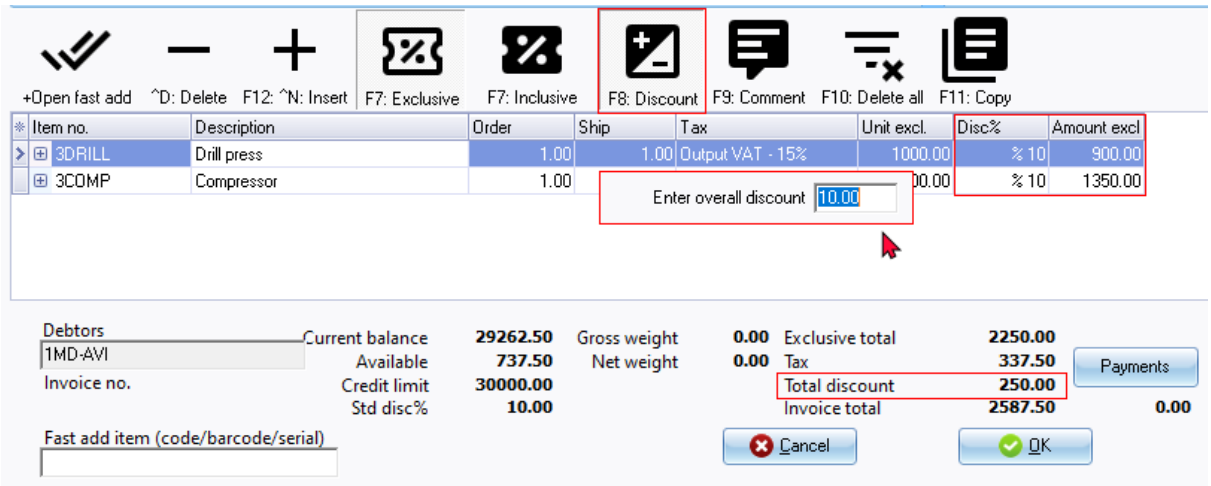
This feature is used to calculate and record the trade discounts or other discounts which you may allow to your debtors at the time of the sale transaction. This discount is reflected on the sales source document (Quote, Invoice or Credit note) and will reduce the selling price on the sales document. When these sales source documents are updated (posted) to the ledger, the net selling price (selling price less discounts) will be recorded as a transaction. This discount will reduce the selling price of the sales, and consequently your gross profit will be affected.

Overall discount

You may allow discount to all items selected in the document lines.

To allow overall discount to a debtor (customer / client):

1. Click on the F8:Discount icon. The "*Enter overall discount*" screen is displayed:



2. Enter the percentage for the overall discount you wish to allow to your debtor (customer / client), and press the Enter key on your keyboard. This discount percentage will be applied to each item.

You may overtype the discount percentage, if required. Please do not enter any negative percentages.

If you print the Invoice, the Item discount and the Invoice discount will be displayed in the % Discount column.

- *If you confirm and convert a Quote to an Invoice, and you have entered any item and/or Invoice discounts, these discounts will reflect on the converted Invoice.*
- *If you have generated repeating invoices, which include any discounts, these discounts will also be copied to the new Invoice.*
- *If you have copied transactions from Invoices, which include any discounts, these discounts will also be copied to the new Invoice.*

Discounts should be entered or specified on Credit notes exactly as they were entered or specified on the original Invoice for which the Credit note is issued.

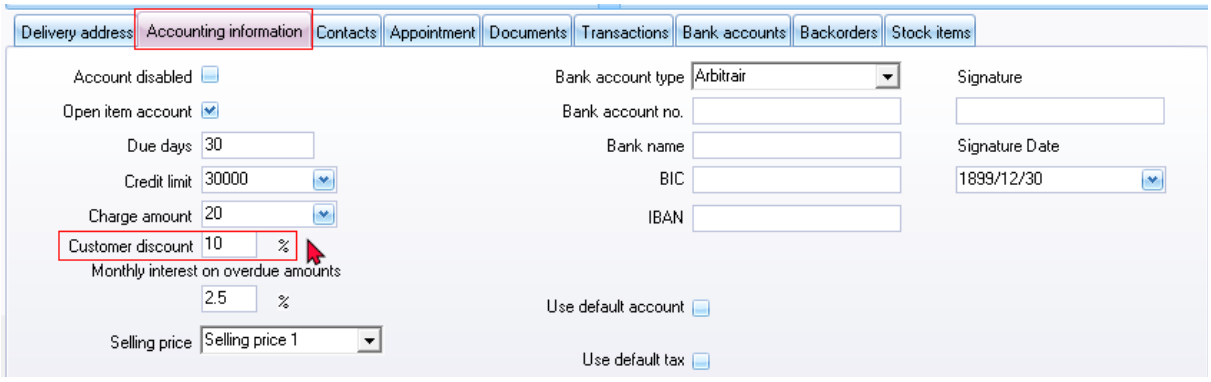
Customer discount on items

If discount is processed on unposted Invoices or Quotes, you may need to reset or clear the discount. The "Redo discount on document" option is also available for posted Invoices, but cannot be cleared as you may not edit a posted Invoice.

To allow item discount for a debtor (customer / client):

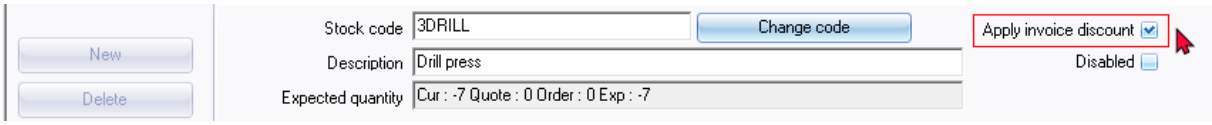
To allow a specific percentage of discount to a debtor (customer / client) on sales documents (Invoices, Credit notes and Quotes) for a specific stock item (item discount), you need to do the following basic settings:

- The Customer discount percentage (which you will allow for a specific debtor (customer / client) account) must be specified on the Debtors - Accounting information tab (Default ribbon).

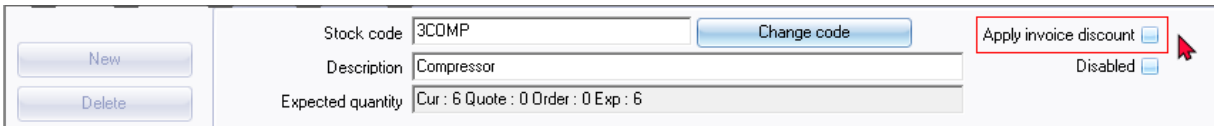


- The "*Apply invoice discount*" field for the stock item on which you will allow discount, must be selected on Stock items (Default ribbon).

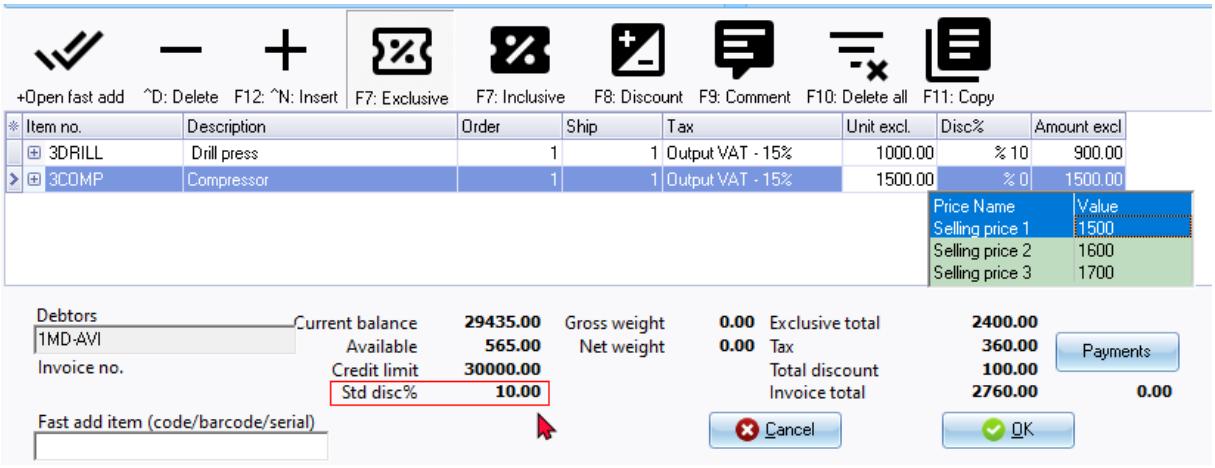
  Apply invoice discount - selected



Apply invoice discount - not selected



Selecting Stock items



In this example the "Apply invoice discount" field is selected for the Drill press and the "Customer discount" percentage is set to 10% for the debtor (customer / client) account. The 10% discount will be applied for the Drill press.

In this example the "Apply invoice discount" field is not selected for the Compressor and the "Customer discount" percentage is set to 10% for the debtor (customer / client) account. No discount will be applied for the Compressor.

You may overtype the percentages if you wish to, you may overtype a percentage or enter a percentage, if no discount is applicable to an item.

Negative / Positive discount percentages

Negative percentage

Adds to selling price

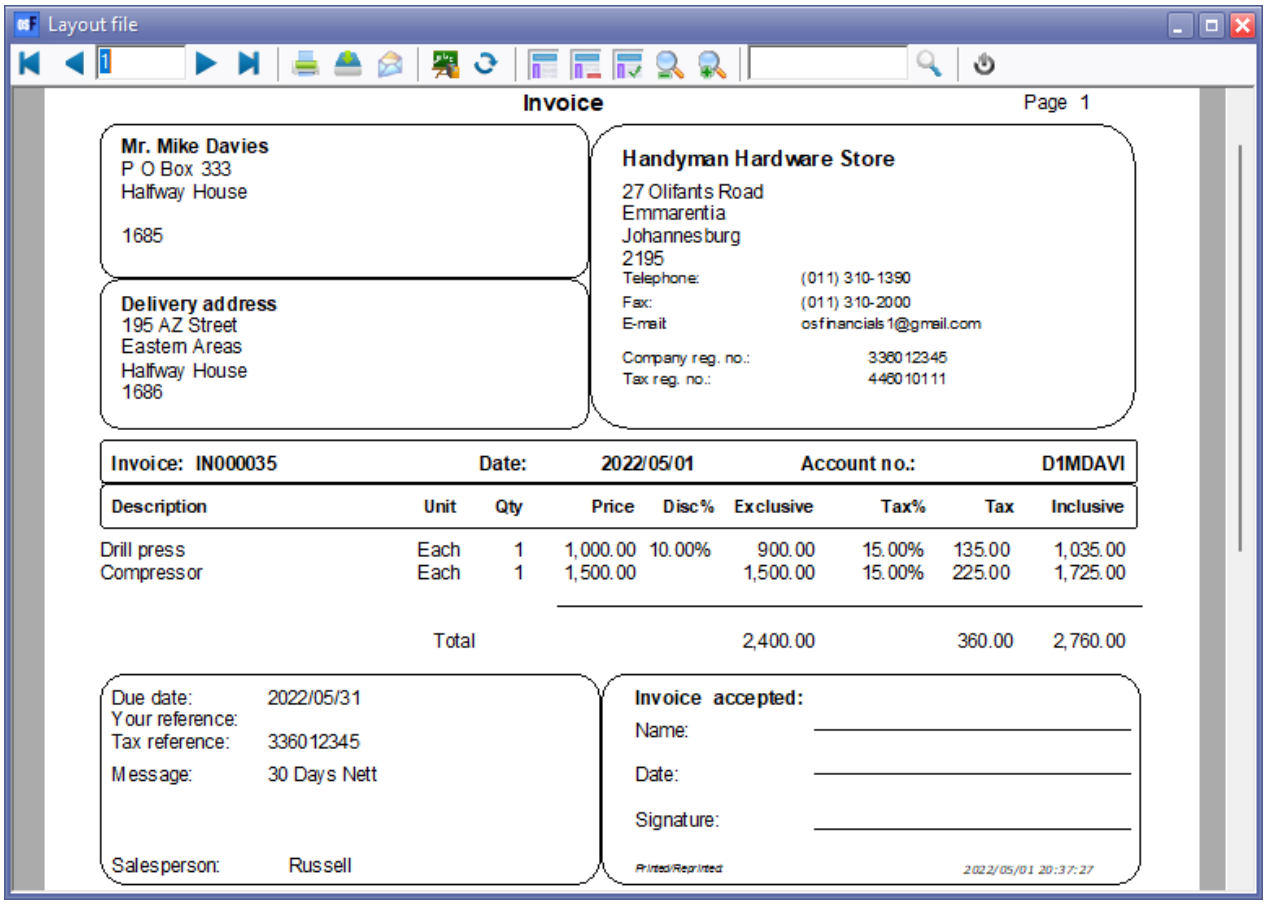
Invoice: IN000035			Date:	2022/05/01		Account no.:		D1MDAVI
Description	**Unit**	**Qty**	**Price**	**Disc%**	**Exclusive**	**Tax%**	**Tax**	**Inclusive**
Drill press	Each	1	1,000.00	-10.00%	1,100.00	15.00%	165.00	1,265.00
	Total				1,100.00		165.00	1,265.00

Positive percentage (Normal)

Subtracts from selling price

Invoice: IN000035			Date:	2022/05/01		Account no.:		D1MDAVI
Description	**Unit**	**Qty**	**Price**	**Disc%**	**Exclusive**	**Tax%**	**Tax**	**Inclusive**
Drill press	Each	1	1,150.00	10.00%	900.00	15.00%	135.00	1,035.00
	Total				900.00		135.00	1,035.00

An example of a printed layout file, which includes the customer discount for a specific stock item, is as follows:

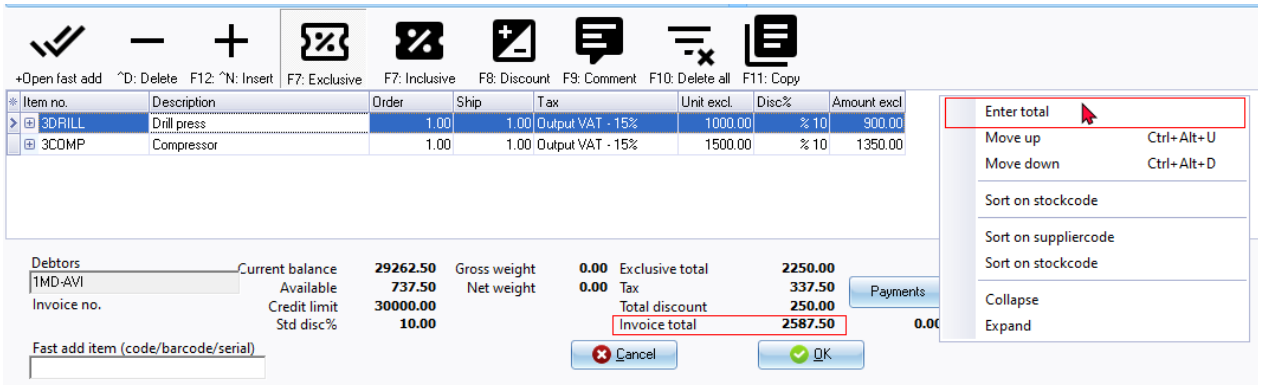


Rounding discount

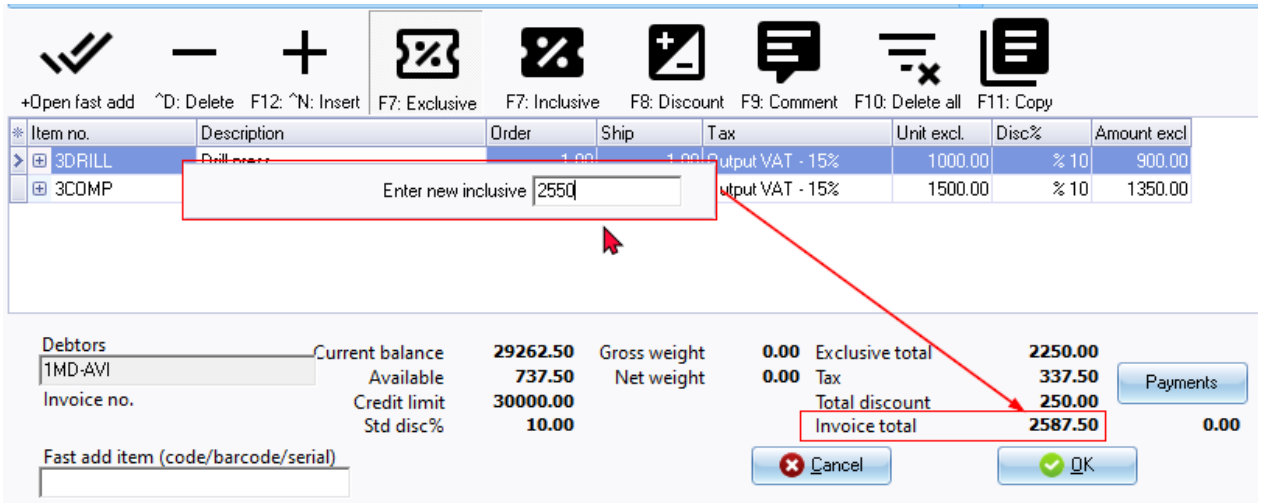
You may allow a total discount on the Invoice, for example rounding of the Invoice for discontinued coins, etc.

To change the Invoice total:

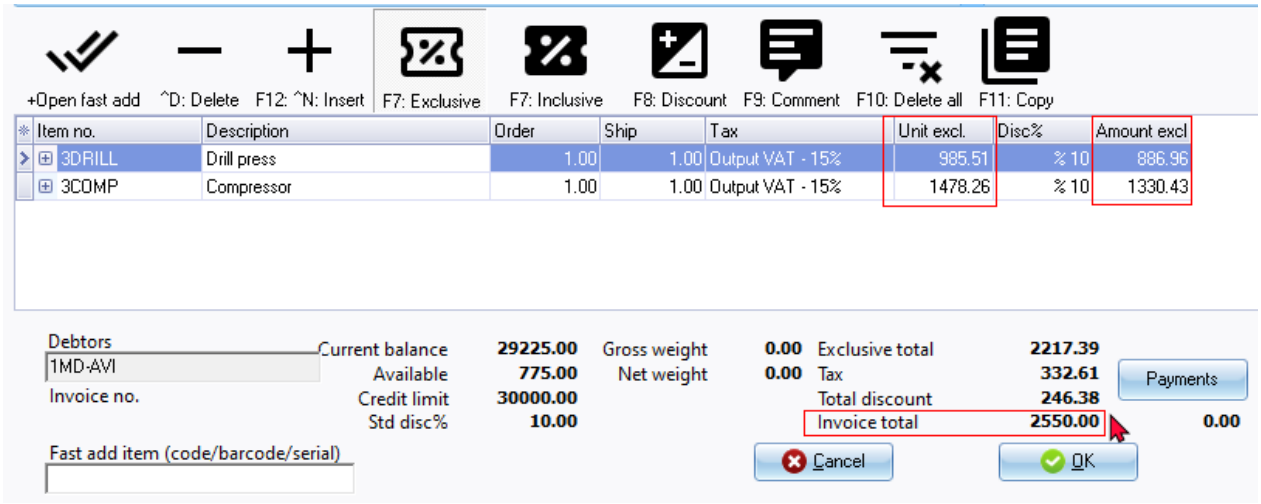
Right-click anywhere in the Document lines or on the Document footer section of the " *Document entry*" screen, and select the "*Enter total*" option on the context menu.



Enter a new total (inclusive of Tax (VAT/GST/Sales tax) for the Invoice on the " *Enter new inclusive total*" screen and press the Enter key.



The new Invoice total will be displayed. The Inclusive and Exclusive amounts (as well as the Tax) for each item will automatically be recalculated accordingly and adjusted.



Types of discount

There are basically two types of discount:

- Trade discount - This discount is allowed to your debtors (customers / clients) for cash sales or to a special classification or group of debtors (customers / clients), e.g. trade customers, retailers, etc. is allowed at the time when you sell items or services to your debtors (customers / clients).

> *This discount is usually deducted from the selling price at the time of sale. Only the net selling price is reflected, and no discounts are physically recorded as a transaction. This discount will reduce the selling price of the sales and consequently your gross profit will be affected.*

- Discount allowed for the early settlement of accounts - This discount is allowed to your debtors (customers / clients) at the time of the settlement of their account. You may agree with your customers to allow a certain percentage of discount allowed, e.g. 2½ %, if they settle the full amount on an Invoice within 30 days.

> *This discount is recorded when a debtor (customer / client) settles the full Invoice within the specified time. This discount needs to be entered as an expense in a Discount Allowed account, will reduce the net profit, and will have no effect on the gross profit.*

Created with the Standard Edition of HelpNDoc: Powerful and User-Friendly Help Authoring Tool for Markdown Documents

Insert comments - Documents

Comments

Comments are additional information which can be entered when processing documents. This additional information will be printed on layout files for sales documents (e.g. Invoices, Credit note and Quote) and purchase documents (e.g. Purchases, Supplier returns and Orders).

Information entered in comments can be used to find and track specific invoices, etc.

By default, comments is inserted below a selected item. The option "Append notes below item" (Setup → Documents setup (Setup ribbon)) is added to set the preference if comments should be added before, or below (default option), a selected item when processing documents and printing comments on layout files.

The default "Append notes below item" setting is selected (ticked). It will display on document lines and document layout files as follows:

1. *Item*
2. *Remark*
3. *Comment*

If the "Append notes below item" setting is not selected. It will display on document lines and document layout files as follows:

1. *Comment*
2. *Item*
3. *Remark*

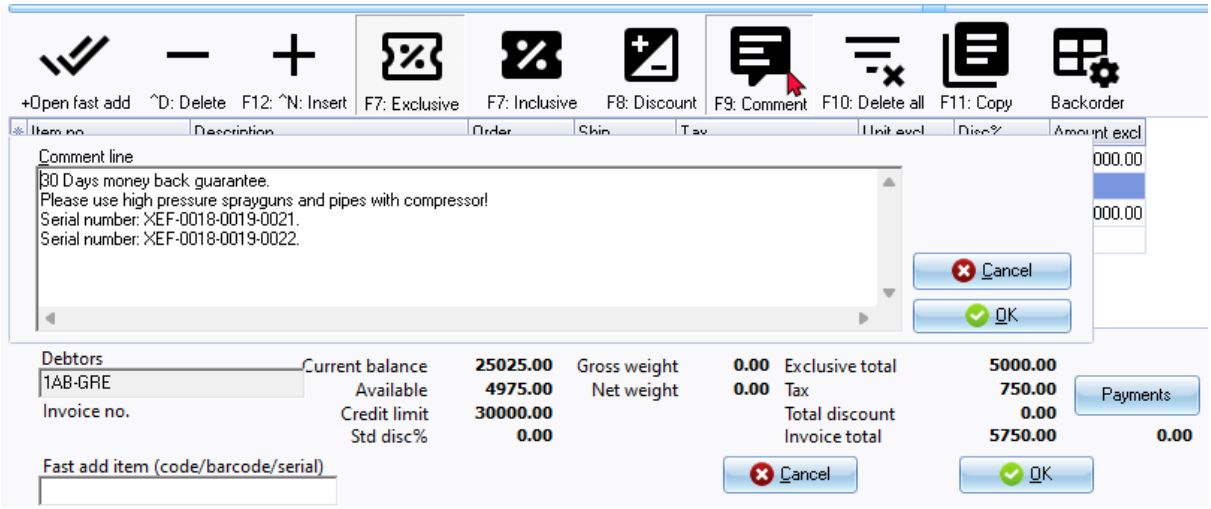
To insert a comment in a document:

1. Select the row or line directly underneath the transaction for which you wish to insert a comment.

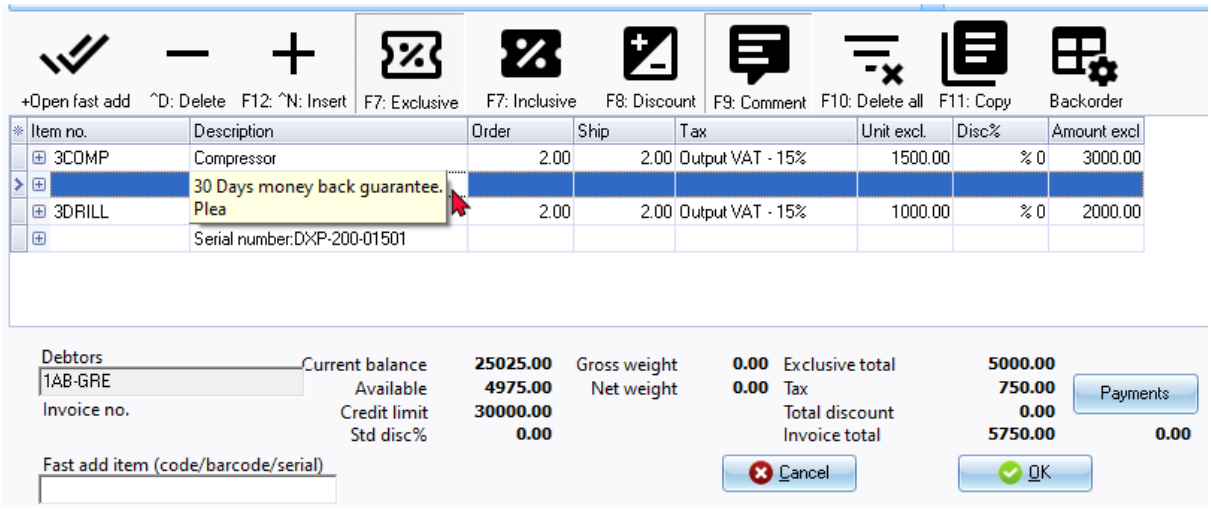
   If you have any other transactions below the selected line or row, which you wish to keep, it is recommended that you click on the ^N:Insert icon, or press the Ctrl + N keys to insert a line or row before you change the selected line to a comment.

   You should note that if any information or a transaction is displayed in a selected line, that information would be lost for the selected line or row.

2. Click on the F9:Comment icon.



3. Enter the comment for the stock item, or transaction, and click on the OK button. The comment will be transferred into the selected line or row and will display as follows on the Document entry form:



You may double-click on a selected comment to edit an existing comment.

You may also click on the + (before stock item code) to add a remark (additional information) for a stock item.

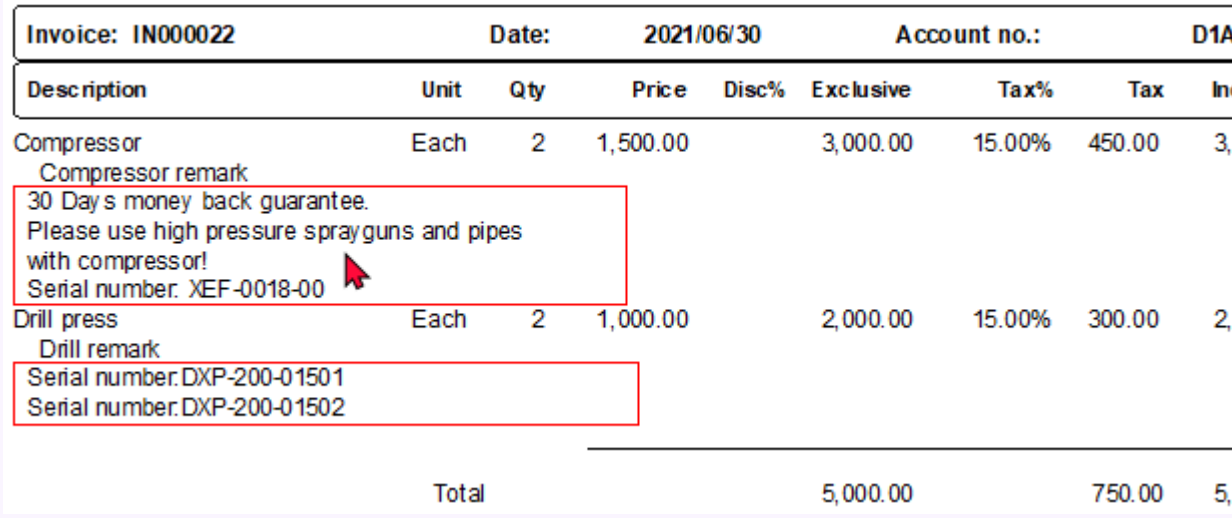
This remark will also be printed before the comment (if added) on document layout files.

[*Search (Investigator)*]

- *Comments entered in document lines are searchable.*
- *Remarks is not searchable.*

4. Press the Enter key on your keyboard to proceed to the next line or row.

Although the full comment is not displayed on the comment line or row, it will be displayed as entered on the printed d
(transaction section). For example;



Invoice: IN000022		Date:	2021/06/30		Account no.:		D1A
Description	Unit	Qty	Price	Disc%	Exclusive	Tax%	Tax	In
Compressor	Each	2	1,500.00		3,000.00	15.00%	450.00	3,
Compressor remark								
30 Days money back guarantee. Please use high pressure sprayguns and pipes with compressor! Serial number: XEF-0018-00								
Drill press	Each	2	1,000.00		2,000.00	15.00%	300.00	2,
Drill remark								
Serial number:DXP-200-01501 Serial number:DXP-200-01502								
	Total				5,000.00		750.00	5,

5. You may proceed to enter any further transactions for the debtor (customer / client) or creditor (supplier / vendor). If you are finished, click on the Esc key on your keyboard to exit (close) the Stock item lookup screen, and to return to the Document list screen.

Serial number tracking

Should you for example, enter a serial number in the comment of a document, you may locate it on the Search - Investigator. To do this:

1. On the Default ribbon, select Search (Ctrl + F3). The "*Investigator*" screen will be displayed.
2. Enter the serial number.
3. Click on the Search now button.
4. The sales document (e.g. Invoices, Credit note or Quote) and purchase documents (e.g. Purchases, Supplier returns or Orders) containing that serial number will be listed. To display the selected document, simply double-click on it.

Delete all transactions and comments - Documents

If you have entered transactions and/or comments in a Document entry screen, you may wish to delete all

the transactions and comments, if any, in the document.

To delete all the transactions and comments:

1. Click on the F10:Delete all icon. A confirmation message is displayed:

   Are you sure you want to clear all the entries in this Invoice?

2. Click on the Yes button, if you are absolutely sure. All the transactions and comments will be removed and deleted from this document.

If you have clicked on the F10:Delete all icon by accident; or if you want to delete only a few transactions and/or comments, click on the No button. You may then click on the F12:^D:Delete icon, or press the F12 key or the Ctrl + D keys, to delete only the selected lines or rows.

If you have entered any overall discount for this Invoice, you need to click on the F8:Discount icon, to set the discount to a zero percentage. The Enter overall discount screen is displayed:

Enter the zero percentage, and press the Enter key on your keyboard. You may start to enter any transactions and comments for the same document.

Created with the Standard Edition of HelpNDoc: Easily create Help documents

Copy transactions / comments - Documents

This feature allows you to copy the transactions and the comments, if any, entered in another document into the current document.

In addition to this option, you may also copy selected documents from the following context menu options on the Document entry grid screen:

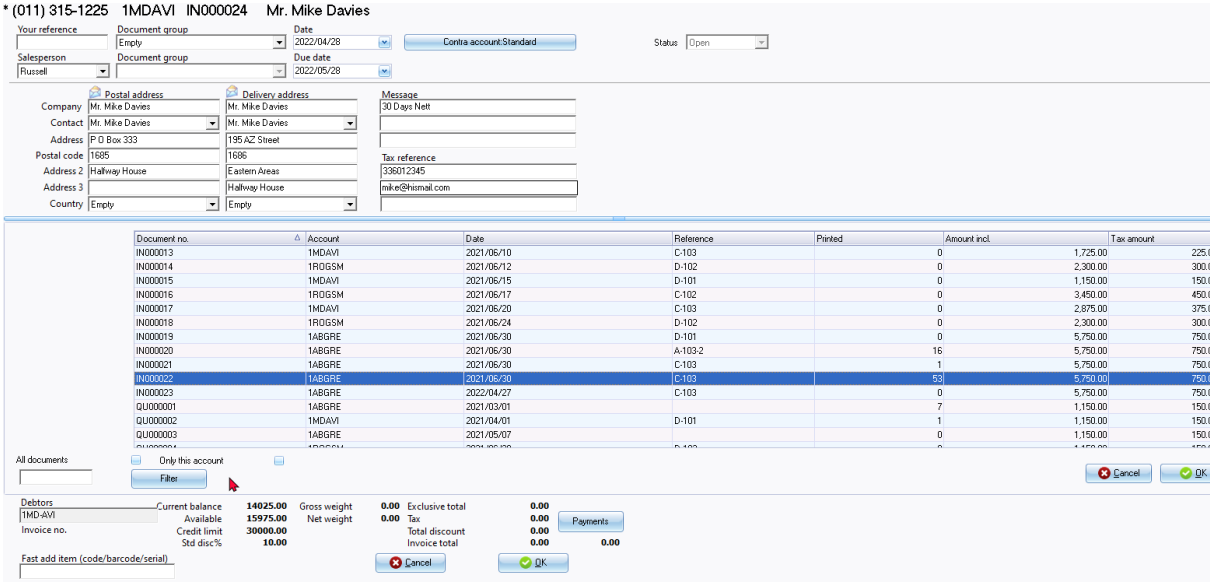
- *Documents → Copy document*
- *Documents → Copy to - Order, Purchase, Supplier return, Quote, Invoice or Credit note.*

To copy transactions and comments from a selected document to another document:

1. Create a new document or edit a selected document.

2. Click on the F11:Copy icon.

3. The options to select an existing document to copy from, is as follows:



4. Select the document number and the account code of the debtor (customer / client) (if it is Invoices, Credit notes or Quotes), or the document number and the account code of your creditor (supplier / vendor) (Purchase, Supplier return documents or Orders).

By default, the "Only this account" option will be selected (ticked). This means that only those documents generated for the selected debtor (customer / client) or the creditor (supplier / vendor) in the Document header will be listed. You may filter and search for documents using the following values:

- *Document number - Enter a valid document number and click on the Filter button.*
- *Only this account - Deselect (remove the tick) this option and click on the Filter button to list all posted as well as unposted documents of debtor (customer / client) or creditor (supplier / vendor) accounts.*
- *All documents - Select (tick) this option and click on the Filter button to list all sales documents and purchase documents.*

If the "All documents" option is selected (ticked), take note of the document numbers:

The document numbers for Invoices, Credit notes, Quotes, Purchases, Supplier returns and Orders as prefixed in the Documents setup (Setup ribbon), makes it easy to identify the document type.

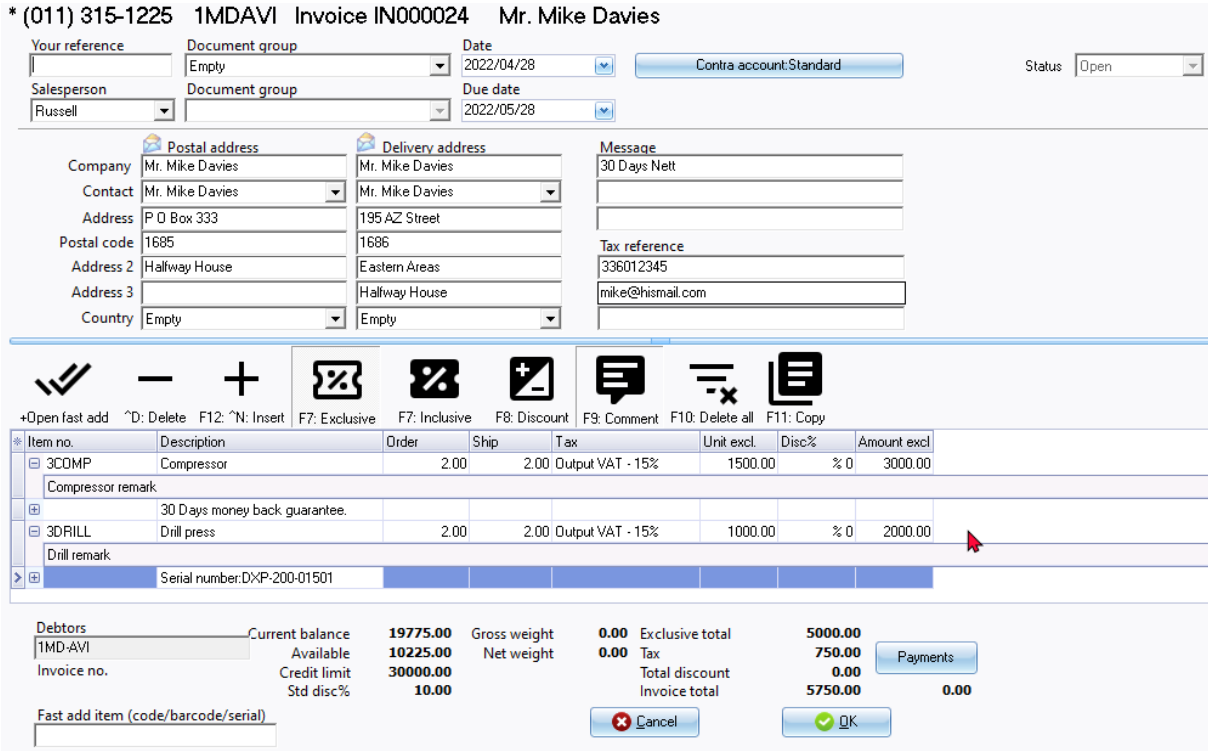
In addition to these standard document numbers, the following documents may be included:

- *Stock adjustments - Document numbers prefixed with "ST" is a 7-digit document number. These are automatically generated when doing stock adjustments (changes in the quantities on hand). These stock adjustments does not show any transactions and it prints a blank Posted batch type reports.*
- *BOM (Production) stock type - Assemble / Disassemble context menu options - Document numbers prefixed with"SA" will be a 7-digit number.*
- *Project Quote - Document numbers prefixed with"D" will be a 7-digit number.*

It is recommended that you do not select these documents.

5. Select a document on the list.

6. Click on the OK button. All the transactions as well as any comments and remarks, if any, will be copied into the current document.



You may need to:

- *Edit remarks and comments.*
- *Edit the transactions (change quantities, delete items or add items, etc.).*
- *You may need to use the Move up or Move down options on the context menu (document lines section)*

to set the sequence of transactions and/or comments.

This feature can only be used to copy from sales documents for debtors (customers /clients) (i.e. Invoices, Credit notes and Quotes) and purchase documents for creditors (suppliers) (i.e. Purchase, Supplier returns and Orders).

- *If any transactions in purchase documents (i.e. Purchase, Supplier returns and Orders) are copied to sales documents (i.e. Invoices, Credit notes and Quotes) the purchase prices will be indicated. You may then select any of the selling prices for the sales documents.*
- *If any transactions in sales documents (i.e. Invoices, Credit notes and Quotes) are copied to purchase documents (i.e. Purchase, Supplier returns and Orders) the selling prices will be indicated. You may then select any of the purchase prices for the purchase documents.*

Item lookup

When processing documents, you're required to choose the stock item within the document lines section. By default, only the active stock items are displayed. If a stock item is marked as inactive (disabled) on the Stock form, it won't appear in the Stock lookup. This ensures that only active or enabled items are available for selection in the documents.

If you need to select disabled items in documents, simply check the "*Inactive*" box and click the Search button. This action will include inactive or disabled stock items in the lookup results.

There are basically three (3) options to select stock items in any open / unposted document:

1. Lookup - Click on the "*Item no.*" column of document line or when proceeding to a new line, the Lookup will automatically be launched. To edit / select an existing Item, you need to double-click on the selected item in the document line.
2. Open fast add - The icon will launch the lookup as a part of the "*Document entry*" screen (replace the header section of the document). Once finished selecting stock items, you may click on the Close fast add icon.

You may enter a valid stock code, barcode or serial number and press the Enter key in the "Fast add item (stockcode / barcode/ serial)" field in the footer section of the "Document entry" screen. This will insert the stock transaction in the document line.

Keyboard shortcuts:

- *Alt+F3 - Focus on Quantity ship field.*
- *Ctrl+F3 - Focus on Fast add item (code/barcode/serial) field. Then press scan.*

3. Button lookup - This will launch a graphical image view of images added for Stock group 1 (Setup → Groups - Stock group 1 (Setup ribbon) and the images for stock items added in the Image tab of Stock items (Default-ribbon).
4. Accounts lookup - If you have added a Financial entry stock item type, you may select a general ledger account, debtor (customer / client) account or a creditor (supplier / vendor) account from the Accounts lookup when processing documents.

Stock item types en Document types

The selected document type will list only the stock item types:

Sales documents (Quotes, Invoices and Credit notes)	*Purchase documents (Orders, Purchases and Supplier returns)*
The following stock item types may be selected to process Sales documents:	*The following stock item types may be selected to process Purchase documents:*
Default	*Default*
Sales	*Purchases*
Sales (No stock)	*Purchases (No stock)*
Financial entry	*Financial entry*
Option item	*Option item*
Option item (No stock)	*Option item (No stock)*
BOM (Bill of Materials)	*BOM (Bill of Materials)*
BOM (Bill of Materials) - Production	*BOM (Bill of Materials) - Production*
Linked item	*Linked item*

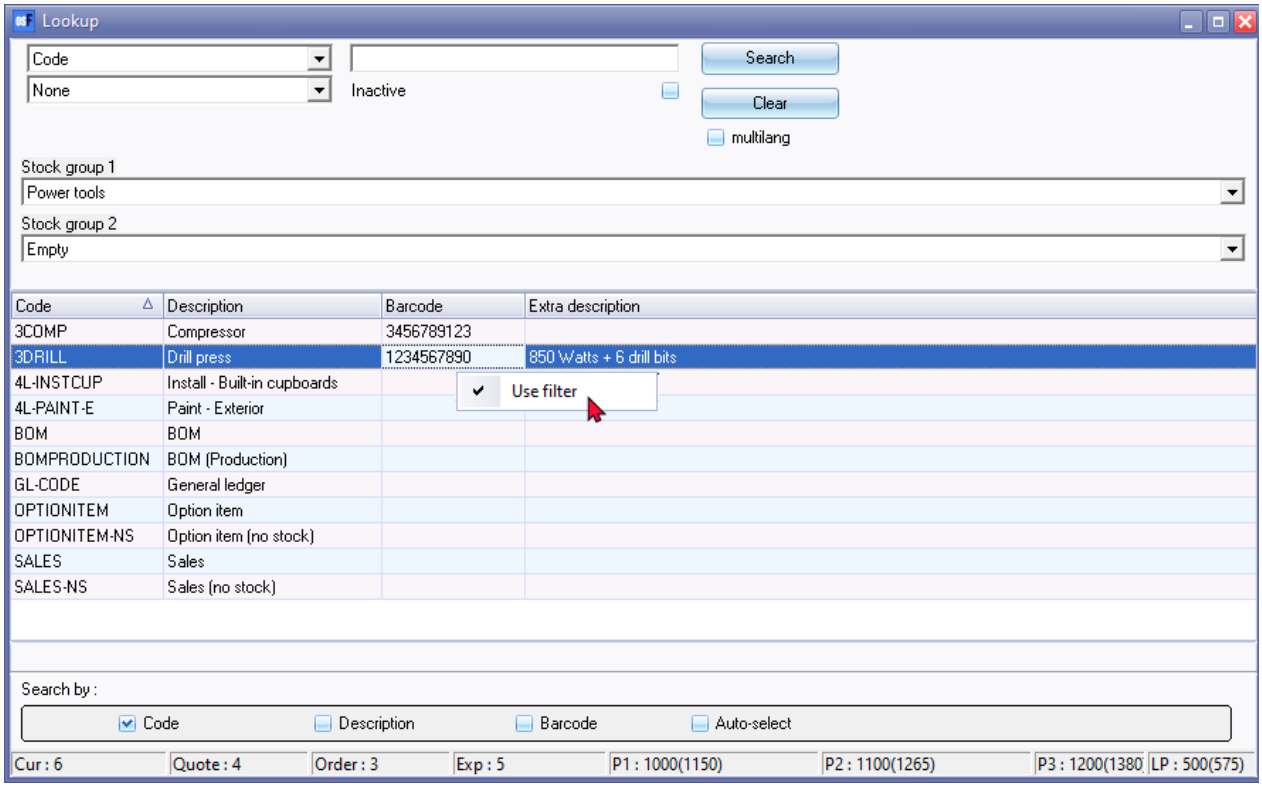
Item lookup - Default

When processing documents, you're required to choose the stock item within the document lines section. By default, only the active stock items are displayed. If a stock item is marked as inactive (disabled) on the Stock form, it won't appear in the Stock lookup. This ensures that only active or enabled items are available for selection in the documents.

If you need to select disabled items in documents, simply check the "*Inactive*" box and click the Search button. This action will include inactive or disabled stock items in the lookup results.

The standard "*Lookup*" screen is as follows:



The values and fields are as follows:

1. Code - Code is the default option. You may select the Description, Barcode, Description and extra description or Code, Description and extra description option. This will allow you to enter any valid values for a stock item. If you click on the Search button, it will list only those stock items matching the value entered.

2. Operator - None is the default. You may select an operator (i.e. "*and*" / "*or*"). These operators will add another field where you may enter values to filter the stock items. If you click on the Search button, it

will list only those stock items matching the values entered in the first search values field and/or the values entered in the second search values field.

3. Stock group 1 - You may select a stock group 1 (created / added in Groups (Stock group 1) (Setup ribbon) and linked to the stock item). This will only list those stock items linked to Stock group 1.

4. Stock group 2 - You may select a stock group 2 (created / added in Groups (Stock group 2) (Setup ribbon) and linked to the stock item). This will only list those stock items linked to Stock group 2.

5. Search by: Code, Description and Barcodes is the default options. If any of these are selected (ticked), it will change the sort sequence in which the stock items are listed.

The Auto-select tick box will only be displayed when the

(right-click) is selected (ticked). The "Auto-select" option allows you to enter any keys to filter by stock code, description, barcode, etc.

6. Status bar - This bar is located right at the bottom of the lookup screen. It will display the following details for the selected stock item:

    a) Cur: This displays the current actual quantities on hand for the selected stock item. This is the totals of the "*Quantity on hand*" field of the Values section on the Ledger tab of Stock items (Default ribbon) (as updated by posted documents) plus any unposted purchase documents.

    b) Quote: This displays the quantities of any open / unconfirmed quotes which have not yet been converted to invoices.

    c) Order: This displays the quantities of any open / unconfirmed orders which have not yet been converted to purchase documents.

    d) Exp: This displays the expected quantities on hand for the selected stock item. This is the current quantities on hand for the selected stock item. This is the totals of the "*Quantity on hand*" field of the Values section on the Ledger tab of Stock items (Default ribbon) MINUS the quantities of any open / unconfirmed quotes which have not yet been converted to invoices PLUS the quantities of any open / unconfirmed orders which have not yet been converted to purchase documents.

    e) P1: This displays the "*Selling price 1*" field of the Selling prices section on the Ledger tab of Stock items (Default ribbon). The price is displayed as exclusive of tax (VAT/GST/Sales tax) and the price is displayed as inclusive of tax (VAT/GST/Sales tax) between brackets.

    f) P2: This displays the "*Selling price 2*" field of the Selling prices section on the Ledger tab of

Stock items (Default ribbon). The price is displayed as exclusive of tax (VAT/GST/Sales tax) and the price is displayed as inclusive of tax (VAT/GST/Sales tax) between brackets.

g) P3: This displays the "*Selling price 3*" field of the Selling prices section on the Ledger tab of Stock items (Default ribbon). The price is displayed as exclusive of tax (VAT/GST/Sales tax) and the price is displayed as inclusive of tax (VAT/GST/Sales tax) between brackets.

h) LP: This displays the "*Latest cost*" (last cost price) field of the Values section on the Ledger tab of Stock items (Default ribbon). The price is displayed as exclusive of tax (VAT/GST/Sales tax) and the price is displayed as inclusive of tax (VAT/GST/Sales tax) between brackets.

The following options is not available on the Stock lookup in when selecting stock items on Reports:

- *Stock group 2 - Created / added in Groups - Stock group 2 on the Setup ribbon and linked to the stock item.*
- *Multilang - Multi-language stock item descriptions.*

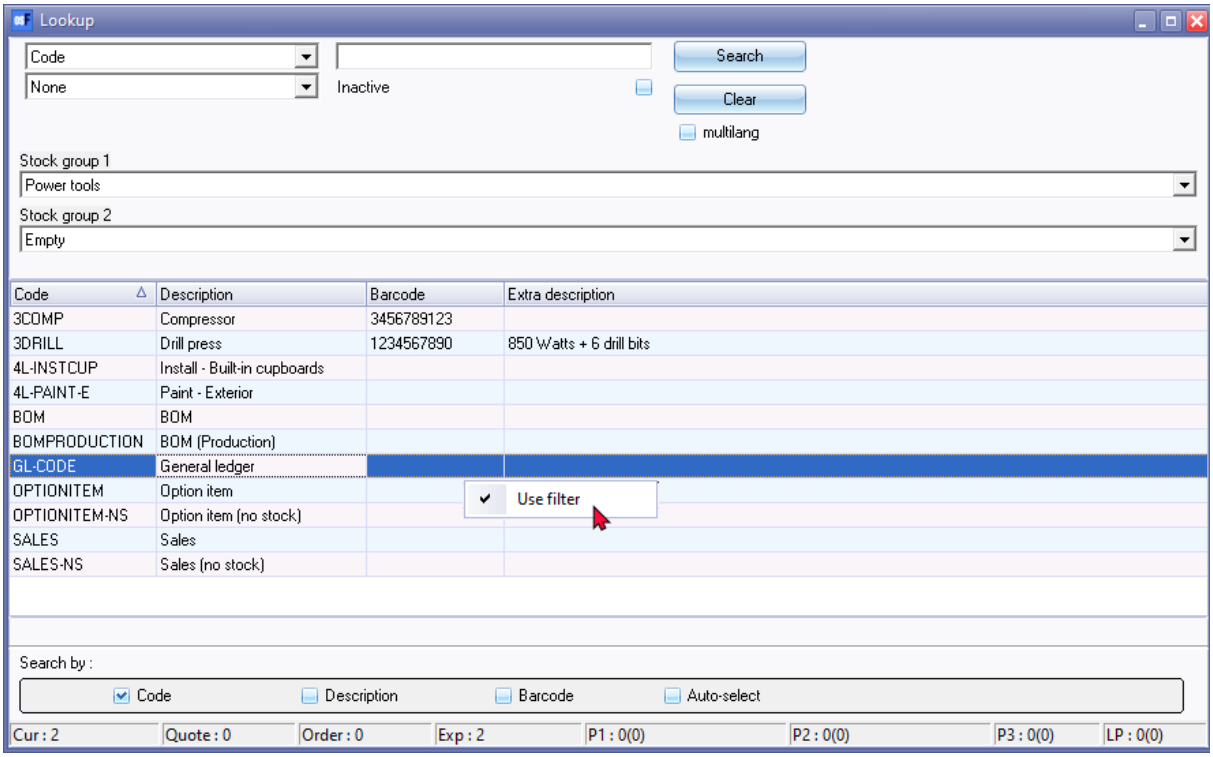
Item lookup - Financial entry

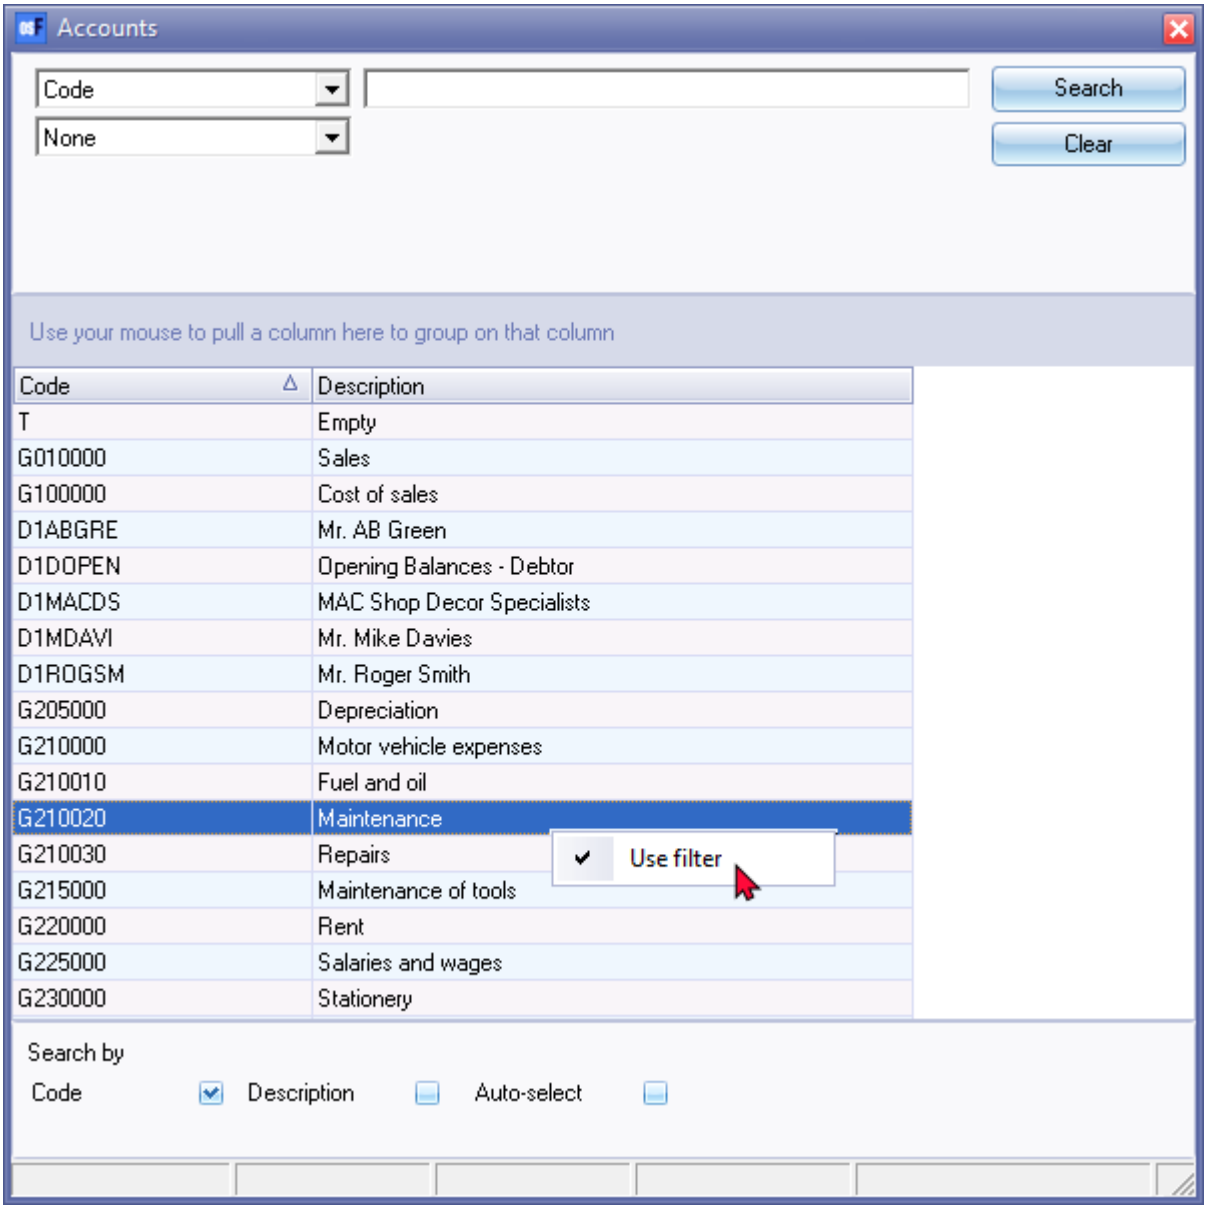
If you have added a Financial entry stock item type, you may select a general ledger account, debtor (customer / client) account or a creditor (supplier / vendor) account from the Accounts lookup when processing documents.

To select the Financial entry item in documents:

1. On the "*Document entry*" screen, select the "*Financial entry*" stock type code.



2. On the "*Accounts*" lookup, select a general ledger account, debtor (customer / client) account or a creditor (supplier / vendor) account.



Disabled (blocked) accounts will not be available in the "Accounts" lookup.

- *Ledger accounts - Status set to disabled.*
- *Account disabled selected (ticked) - Accounting information tab of debtor (customer / client) accounts.*
- *Account disabled selected (ticked) - Accounting information tab of creditor (supplier / vendor) accounts.*

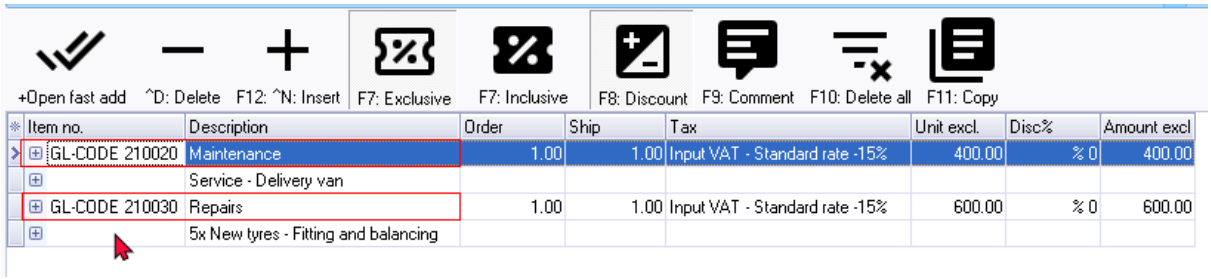
Do not select Main accounts. For example, an error message will be displayed if an account is selected which contains sub-accounts and the document is posted:

```
You cant post a account With subaccounts!
IN000023      Motor vehicle expenses          210-000
```

You need to select a valid sub-account, for example:

- *G210010 - Fuel and oil*
- *G210020 - Maintenance*
- *G210030 - Repairs*

3. Once an account is selected, it will display on the Document lines as follows:



4. The selected account code will be displayed in the "*Item no.*" column and the account description will be added in the "*Description*" column.

You may enter comments (F9: Comment) and/or remarks for additional information regarding this item.

If comments were added, these will also be available in the Search - Investigator.

Remarks will not be searchable in the Search - Investigator.

5. Once a document containing a financial entry stock item type, is posted to the ledger, you may search for the stock item description in the Search - Investigator.

Created with the Standard Edition of HelpNDoc: Free PDF documentation generator

Document entry form - Posted documents

Once a document (Invoices, Credit notes, Purchases or Supplier returns) have been updated (posted) to the ledger, you cannot edit or change these documents.

However, you may still view the documents as they were originally processed in the Document entry screen before these documents were updated (posted) to the ledger.

To view the posted documents in the Document entry screen:

1. Select the document type (Invoices, Credit notes, Purchases, or Supplier returns).

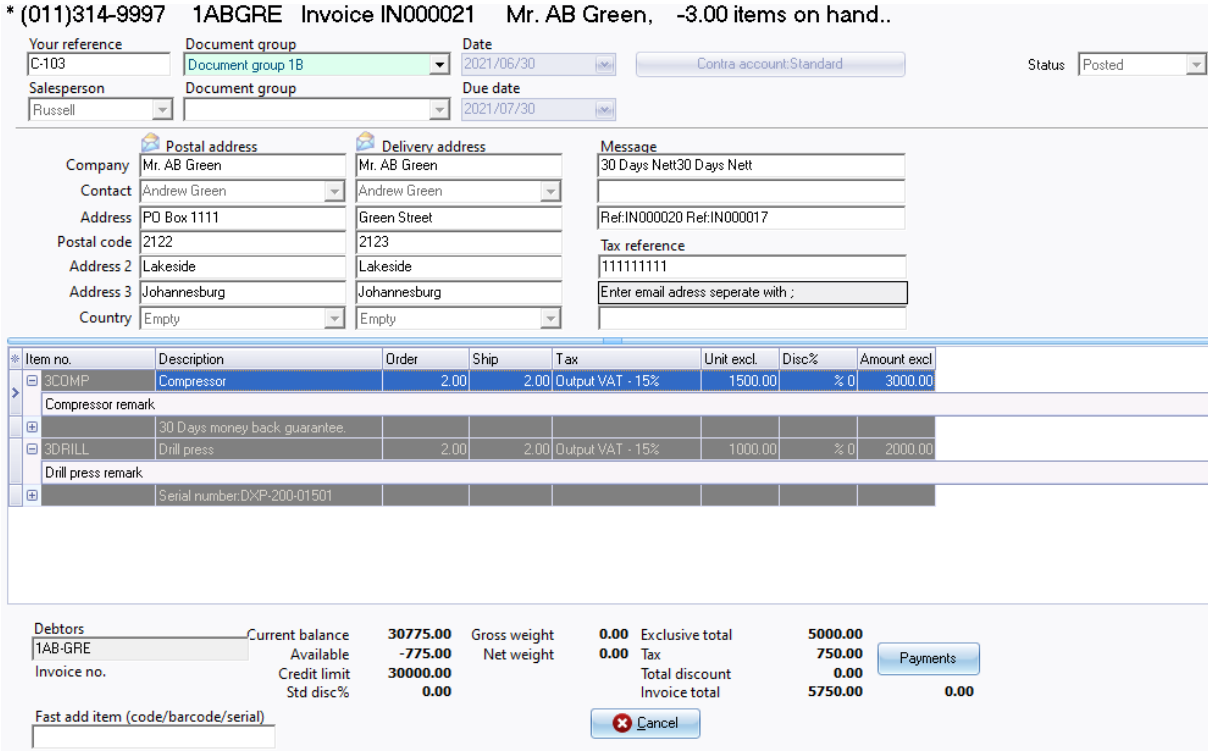
2. Select "Posted" on the Document grid screen. Only the posted documents will be listed.

3. Select the Posted document on the list.

4. Click on the Edit button.

> *You may double-click on a selected document.*

The document is displayed in the Document entry screen:



> *To view the full comment, you need to print the document.*
>
> *You may select a comment and double-click on it to view the full comment on screen. You will not be allowed to edit (change) the comment.*

> *Remarks are similar than comments. You may click on the + icon (before the stock code) to add a remark for the stock item.*
>
> *You may select Expand to show remarks or Collapse to hide remarks on the context menu.*

> *The Move up, Move down and Sort on stock code options on the context menu to change the sequence of the document lines. This will not change the sequence of transactions and/or comments when you cancel the posted Document entry form.*

5. To close this screen, click on the Cancel button.

The layout Document entry screen displays all fields as on the original Document entry screen before it was updated (posted) to the ledger.

The transaction section lists all the stock item codes and/or comments. It does not display the processing icons since posted documents cannot be edited.

The Enter total option on the context menu will also be disabled, since posted documents cannot be edited.

To print the document, click on the Cancel button and click on the Print button on the Document list screen.

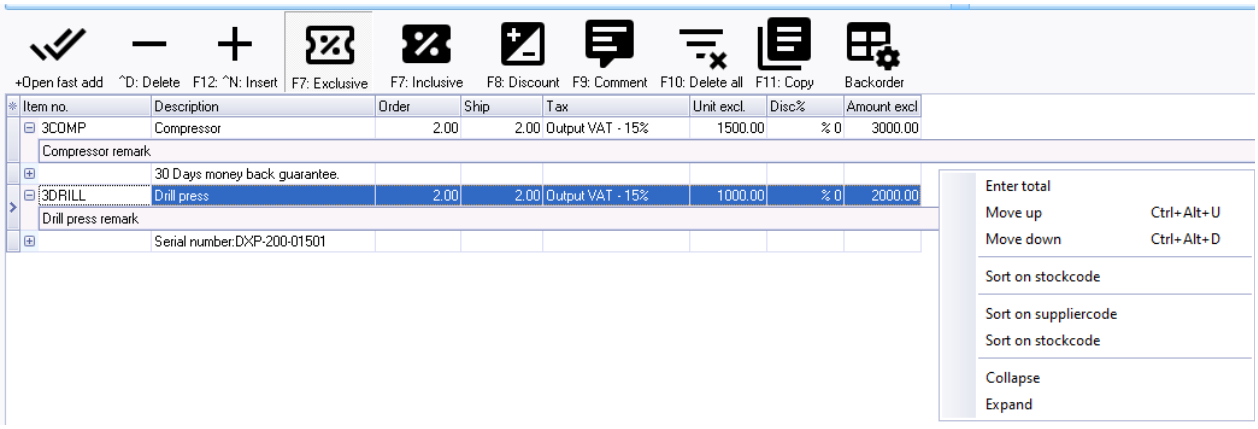
Document entry form - Context menu

Context menu options on Document lines

In the document entry form, you may right-click on the document lines area to access the options on the context menu:



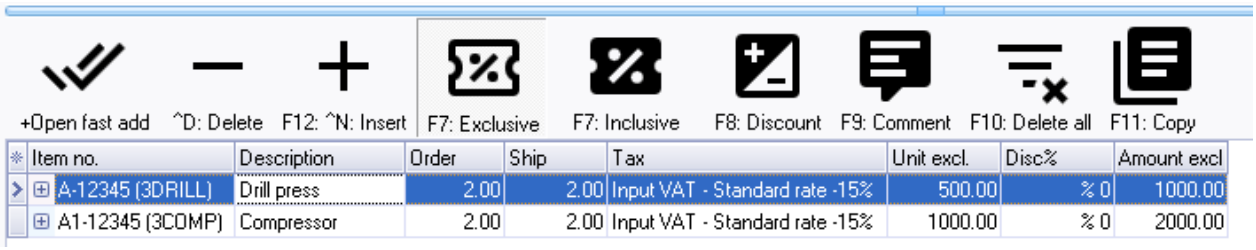
Move up, Move down and Sort on stock code

Change the sequence of transactions and/or comments - in unposted documents. Once you have entered transactions and/or comments, you may need to change the sequence of the document lines. You may have entered a comment in the incorrect document line, or need to sort the document lines by moving an

item and/or comment down or up, and or sort the items by stock code, etc. This will change the sequence of transactions and/or comments on document layout files when printing or reprinting documents.

Sort on suppliercode

If the "*Preferred supplier 1*" was selected and a "*Supplier stock code*" is entered for a stock item on a Stock form, the Supplier (vendor) item codes will be added in the "*Item no.*" column in the document lines when you use the "*Create purchase on default supplier 1*" context menu option of the "*Document entry*" list screen.



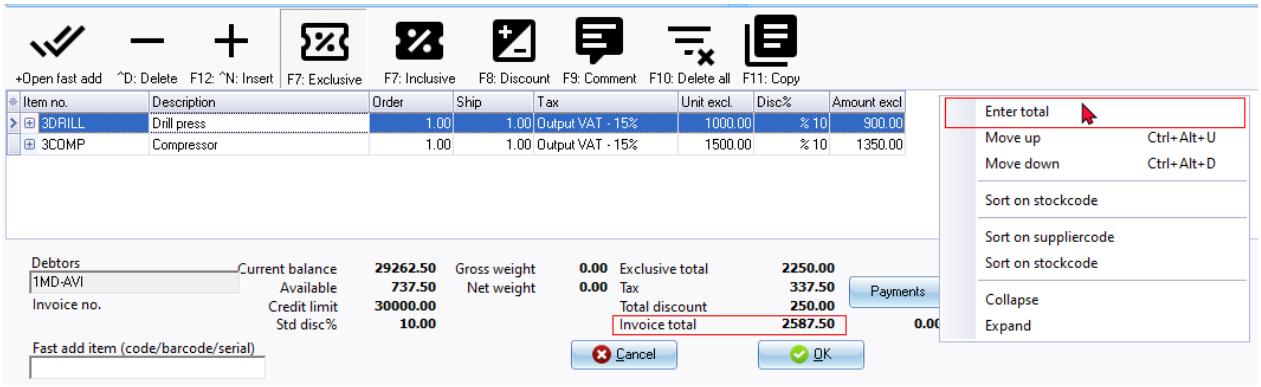
You may use the "*Sort on suppliercode*" to change the sequence in which the items are listed.

You may also use the "Move up, Move down" and "Sort on stock code" options to move individual items, according to your requirements.

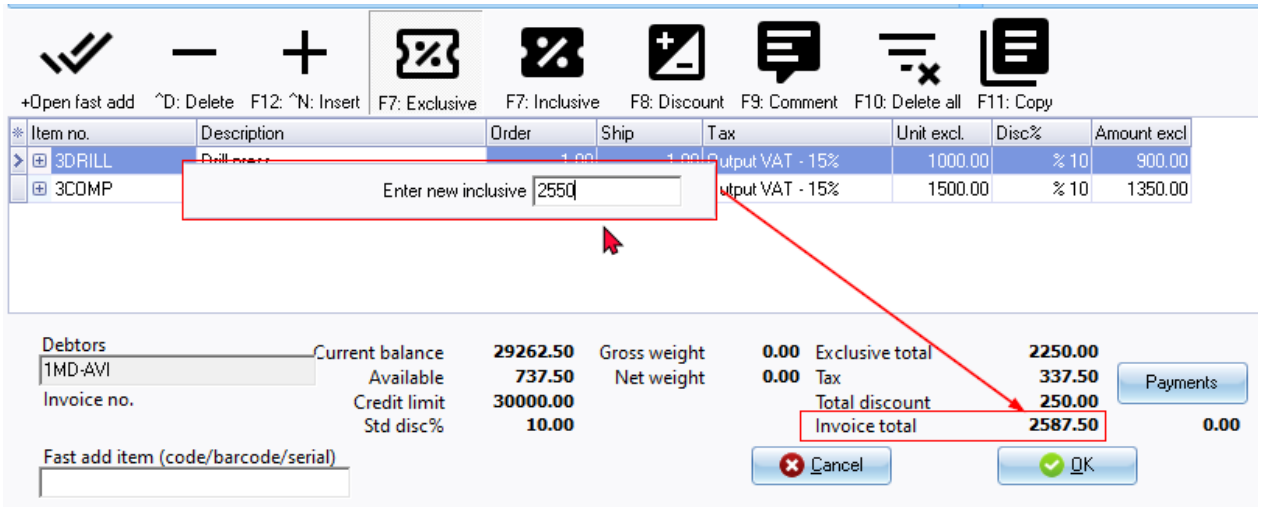
Enter total

Enter a new inclusive total for an unposted document. The "*Enter total*" option is mostly used to allow rounding discount.

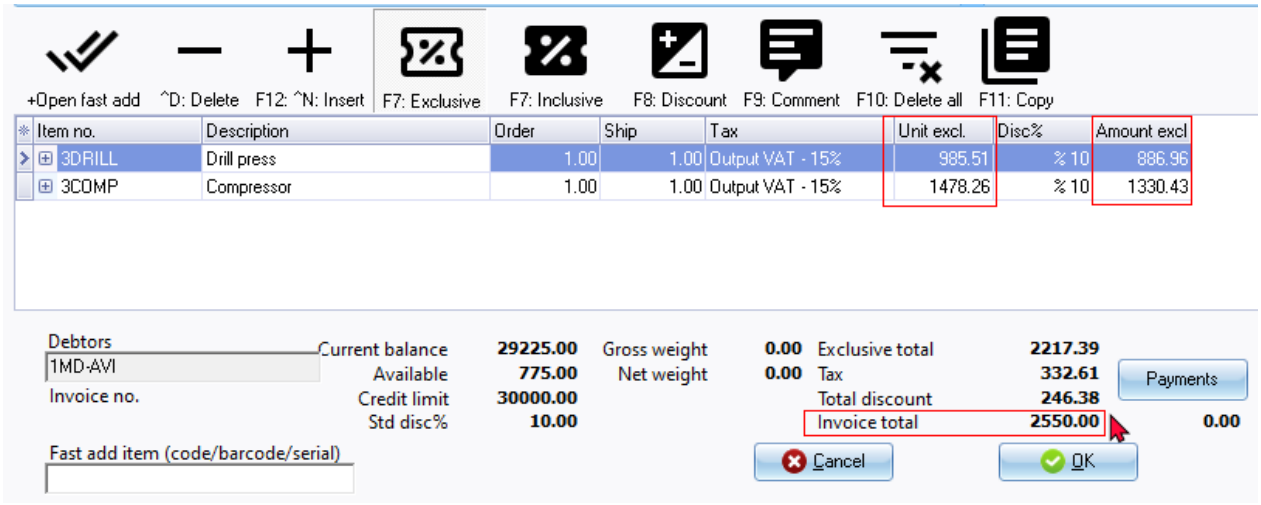
Right-click anywhere in the Document lines or on the Document footer section of the " *Document entry*" screen, and select the "*Enter total*" option on the context menu.



Enter a new total (inclusive of Tax (VAT/GST/Sales tax) for the Invoice on the " *Enter new inclusive total*" screen and press the Enter key.



The new Invoice total will be displayed. The Inclusive and Exclusive amounts (as well as the Tax) for each item will automatically be recalculated accordingly and adjusted.



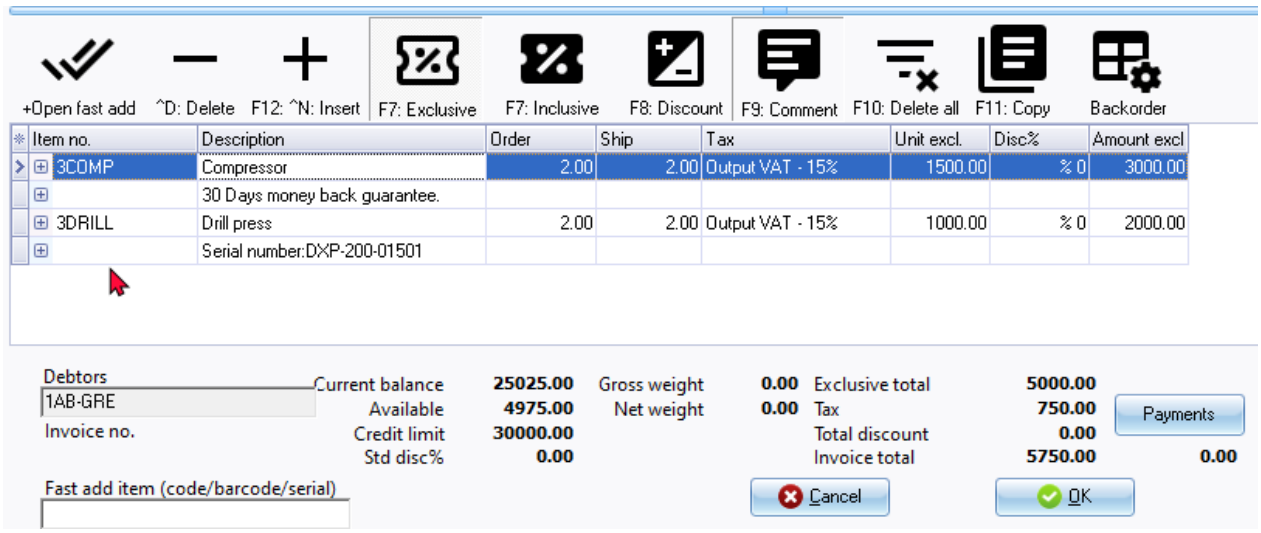
This will automatically recalculate and adjust the inclusive totals and tax amounts proportionally for all items included in the document.

Collapse / Expand

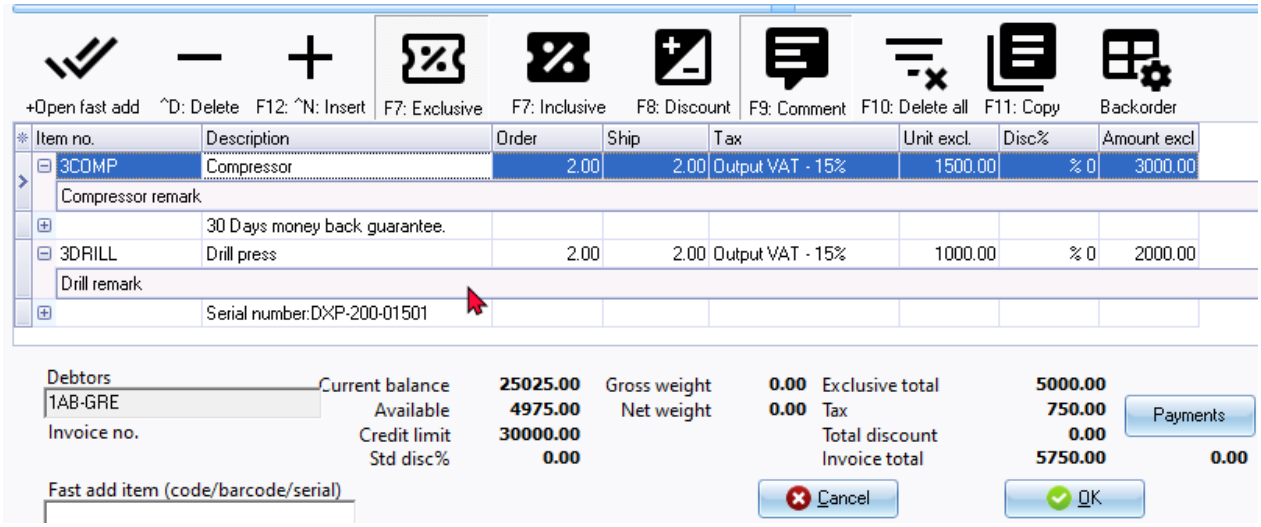
If Remarks is added to a Stock item (additional to Comments) in the document lines is displayed when opening a selected Document entry form.

On the context menu, you may select "*Collapse*" to hide the remarks or "*Expand*" to show the remarks in the document lines.

Document lines - Collapsed (hide remarks)

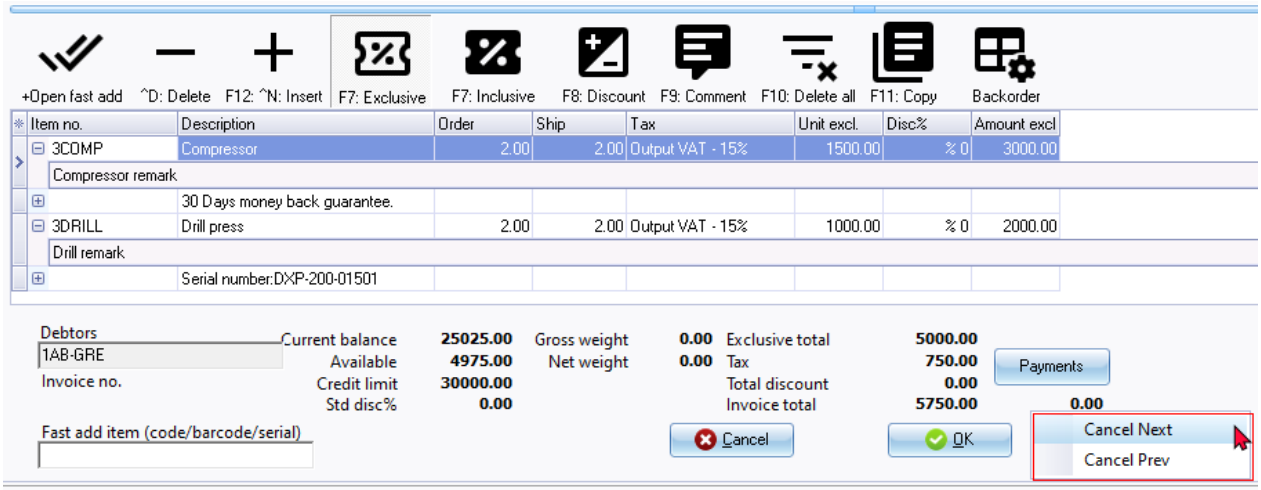


Document lines - Expanded (show remarks)



Context menu options on Document footers

In the document entry form, you may right-click on the document footer area to access the options on the context menu:



If you click on the "*Cancel Next*" or "*Cancel Prev*" options on the context menu, an error message is displayed:

> Please save or cancel your document first!

Click OK on to close the error message.

You need to close the Document entry form by clicking on the OK or Cancel buttons in the document footer:

- OK button will save any changes to the unposted Document entry form and close it. The OK button will not be available on posted Document entry forms.
- Cancel button will discard any changes to the unposted Document entry form and close it. If a posted Document entry form is active the Cancel button will close the Document entry form.

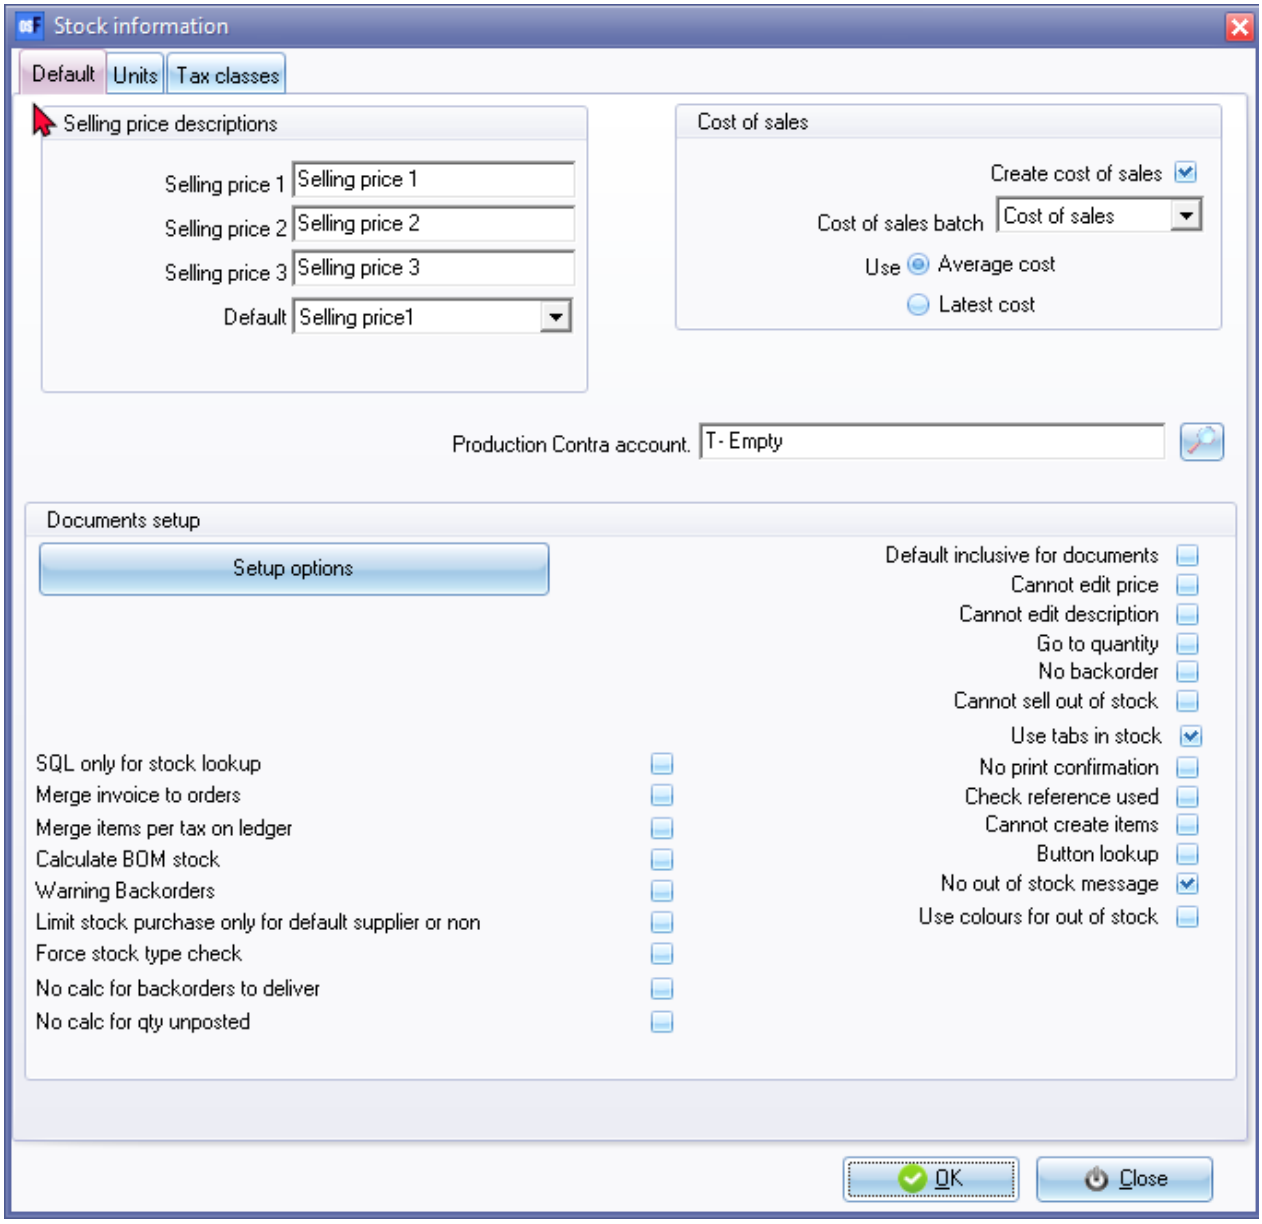
Document processing options

Setup Stock information

Document processing may be globally configured on Setup → Stock information.



The options in the Documents setup section is as follows:

1. SQL only for stock lookup - To be advised.
2. Merge invoice to orders - To be advised.
3. Merge items per tax on ledger - To be advised.
4. Calculate BOM stock – This setting is for the Bills of Materials - BOM (Production) stock item type.
5. Warning Backorders -
6. Limit stock purchase only for default supplier or non - To be advised.
7. Force stock type check - To be advised.
8. No calc for backorders to deliver - To be advised.
9. No calc for qty unposted - To be advised.

10. Default inclusive for documents - By default, the amounts are entered (if manually over-typed) Exclusive of VAT/GST/Sales Tax on the amount column of the document lines. To enter amounts Inclusive of VAT/GST/Sales Tax, select (tick) this option.
11. Cannot edit price - By default, the prices may be entered or manually over-typed in the amount column of the document lines. To disable the editing of prices, select (tick) this option. When processing documents, cursor will bypass the Price field.
12. Cannot edit description - By default, the descriptions may be entered or manually over-typed in the Description column of the document lines. To disable the editing of descriptions, select (tick) this option.
13. Go to quantity – By default, the cursor will go directly to the description field. To set the cursor on document lines (after selecting the stock item) to go directly to the quantity column, select (tick) this option.
14. No backorder – Select this option to disable the backorder feature when processing documents.
15. Cannot sell out of stock – By default, you are allowed to sell trading stock items that is out of stock. This will indicate negative stock quantities. To block the selling of stock items that is out of stock (insufficient quantities on hand), select this option.
16. Use tabs in stock - By default, this option is selected (ticked). If you deselect (remove the tick) for this option, the selected stock item (Stock items on the Default ribbon) screen's layout (interface) will change.
17. No print confirmation - By default, the print confirmation message will be displayed, when you click on the OK button to finish creating or editing a document. If you click on the Yes button, the document will be printed. To turn this feature off, select (tick) this option.
18. Check reference used - By default, the Check reference used field on Setup → Stock information (Default tab) is not selected (not ticked). This will not check if any matching references exists in the Your reference field of the document entry screen for any open / unposted documents for the same document type. If you activate (tick) this option, a warning message "*The reference has been used in a other document! Please check your input for duplicates!*" will be displayed. Click OK twice to save and exit the document entry screen.
19. Cannot create items - By default, if an invalid stock code, description, etc. is typed, an confirmation screen to create a new stock item will be displayed. If you click on the Yes button, you may first create the item and then return to continue with your document. To turn this feature off, select (tick) this option.
20. Button lookup - By default the Stock lookup are the default. To change this to be replaced by the Button lookup, select (tick) this option. This should support Touchscreen technology.

Groups - Images and colours

The Button lookup may be configured by adding images of your product groups and setting colours (background and font) in Setup → Groups (Stock group 1).

Product - Images

The Button lookup may be configured by adding images of your products on the Images tab of Stock items (Default → Stock items on the Default ribbon).

21. No out of stock message – By default, an information message for the trading stock items (Default stock item type) is displayed when the stock item is out of stock (insufficient quantities) or when a quantity is entered in the "*Qty Shipped*" field of the Document entry screen. To hide this message, select (tick) this option.
22. Use colours for out of stock - If this option is selected (ticked), the "*Qty Shipped*" field of the Document entry screen, will be displayed in a Red background and a White font colour.

Access control setup

The following settings may be globally configured on Setup → Access control - Documents tab:

- Set Tax Lookup On/Off - By default the Tax accounts lookup will be displayed - when the cursor is in the Tax field of the Document line on the Document entry screen. To deactivate this, select (tick) the "*Tax Read-only*" option.

  Only when you re-open the Set of Books, and process documents, the Tax account lookup will not be displayed.

- Document posting – By default only the New, Edit and Print buttons are available on the Document list screen. To add the Posting and Delete buttons, select (tick) the "*Document Posting*" option. It will add the following two (2) buttons underneath the Print button:
  - Posting - This will allow you to launch the Update ledger screen to update (post) documents (Invoices, Credit notes, Purchases and Supplier returns) to the ledger.
  - Delete - This will allow you to delete unposted documents.

  Only when you re-open the Set of Books, these buttons will be added.

Setup Documents

Auto-post on document printing

By default Documents are updated manually in Update ledger (F3) (Default ribbon). You may configure it to be updated automatically once a document is printed. To do this select (tick) the "*Auto-post on document printing*" field in Setup → Documents setup (Setup ribbon).

Only when the document is printed it will be updated – unprinted documents will not be posted (updated) to the ledger.

Created with the Standard Edition of HelpNDoc: Experience the Power and Ease of Use of HelpNDoc for CHM Help File Generation

Append notes below item

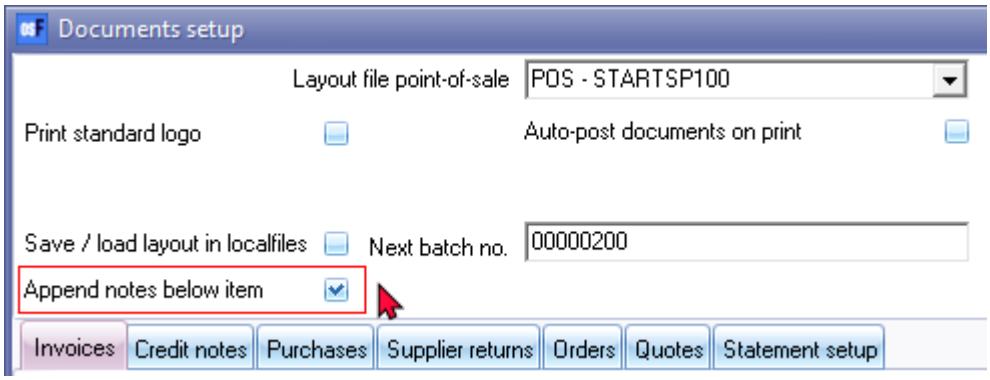
The F9:Comments is, by default, inserted after a selected stock item.

The "*Append notes below item*" (Setup → Documents setup (Setup ribbon)) option is added to set the preference if comments should be added before, or after, a selected stock item when processing documents and printing comments on layout files.

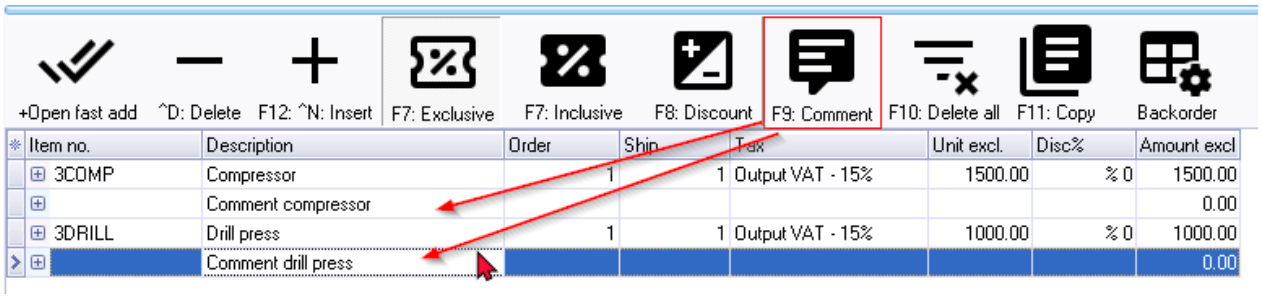
If you change this "Append notes below item" setting when a Document entry form is open or active, you may need to go to Tools → Close active forms (Setup ribbon)*, before this setting will be activated.*

Insert comments below a selected item

"Append notes below item" = TICKED (selected). This is the default setting.



Document lines



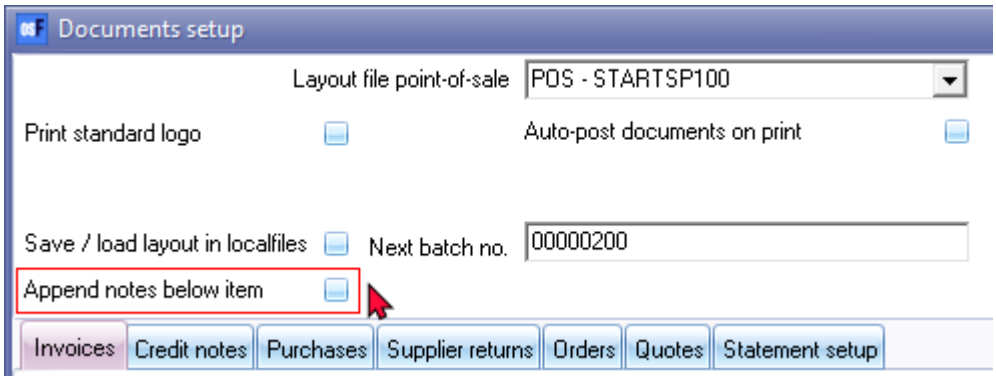
Document layout file

It will display on document lines and document layout files as follows:

1. Item
2. Remark
3. Comment

Insert comments before a selected item

"*Append notes below item*" = NOT TICKED.



If you change this setting when a Document entry form is open or active, you may need to go to Tools → Close active forms (Setup ribbon), before this setting will be activated.

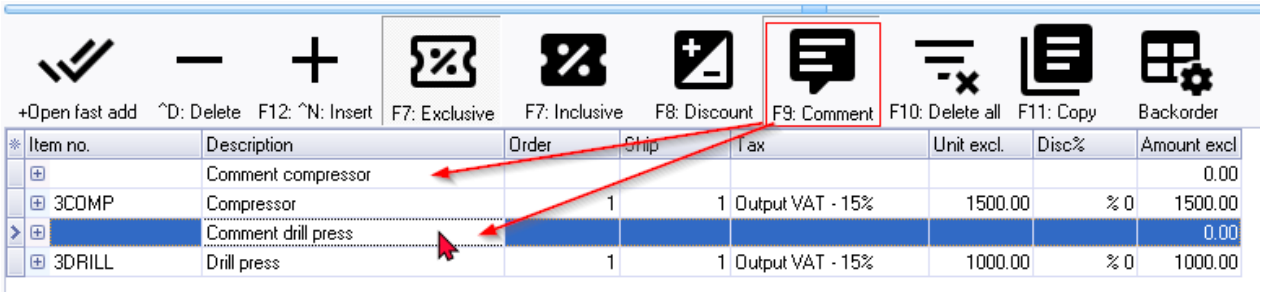
It will display on document lines and document layout files as follows:

1. Comment

2. Item

3. Remark

Document lines



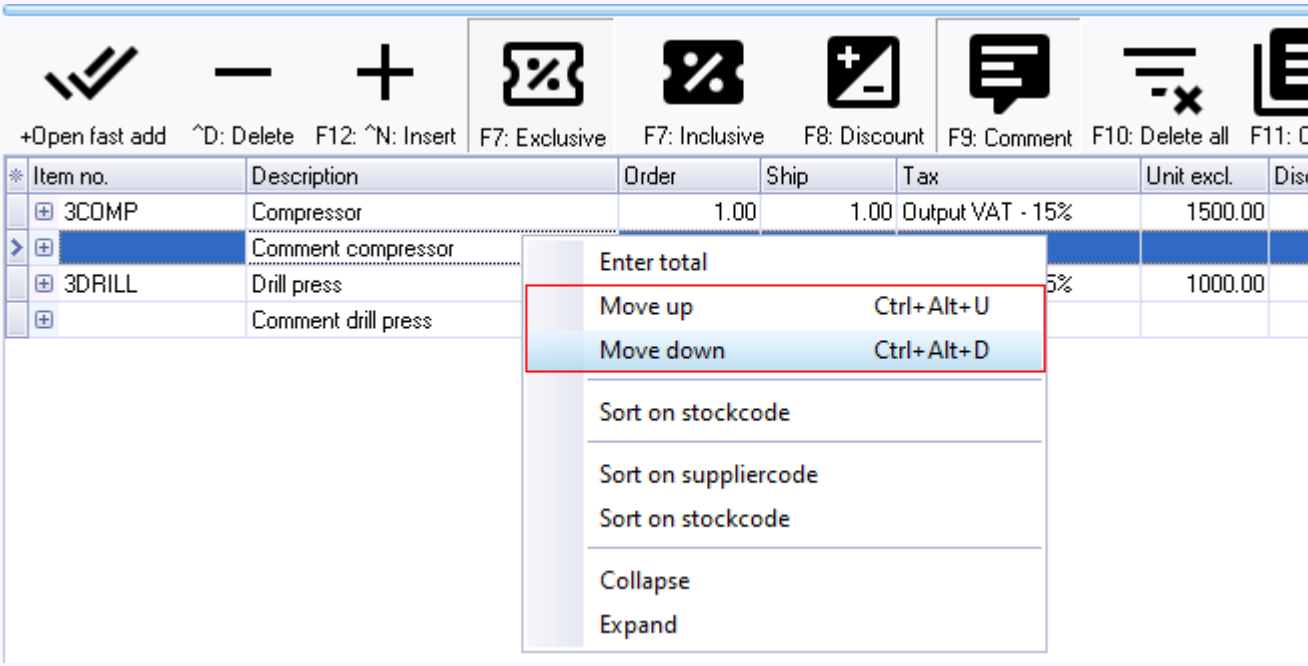
Document layout file

Description	Unit	Qty	Price	Disc%	Exclusive	Tax%	Tax	Inclusive
Comment compressor								
Compressor	Each	1	1,500.00		1,500.00	15.00%	225.00	1,725.00
Comment drill press								
Drill press	Each	1	1,000.00		1,000.00	15.00%	150.00	1,150.00

Change the sequence of document lines in unposted documents:

You may select an item, or a comment and right-click to change the sequence (order) on the document lines. On the context me

options are available:



Should you select a comment only the selected comment will be moved up or down to the previous or next line.

Should you select a item, the item and its remarks, if entered, will be moved up or down.

Sort on stockcode - This will sort the items according to the items stock code in an alphabetical sequence. Note that comments w alphabetically and will not be sorted with the stock item code.

Sort on Suppliercode - This will sort the document lines to the supplier code, if available.

Created with the Standard Edition of HelpNDoc: Make your documentation accessible on any device with HelpNDoc

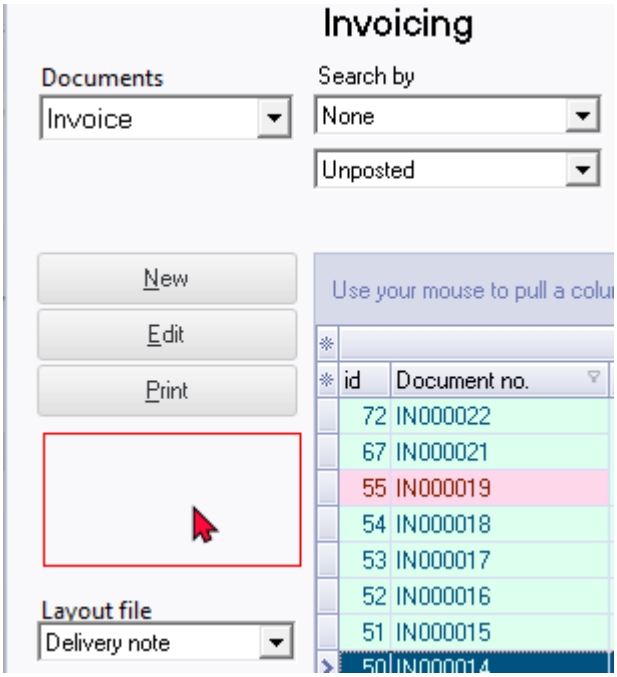
Add Posting and Delete buttons

By default, only the New, Edit and Print buttons are available on the Documents grid's sidebar. You may add the Posting and Delete buttons underneath the Print button for a selected user:

- Posting - This will allow you to launch the Update ledger screen to update (post) documents (Invoices, Credit notes, Purchases and Supplier returns) to the ledger.

  If Quotes and Orders is selected as the document type, the caption of the Posting button, will change to Confirmation. If you click on the Confirmation button, it will launch the Confirm quotes and orders process option on the Documents list screen's context menu.

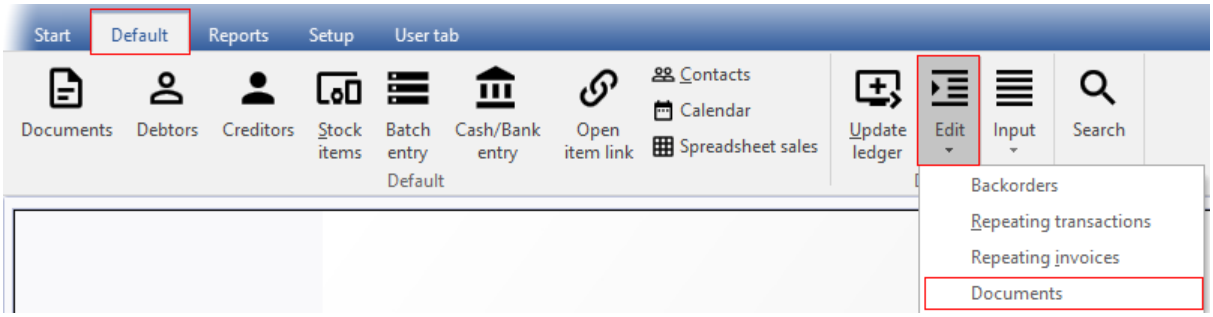
- Delete - This will allow you to delete an unposted document.



If the Posting and Delete buttons are not available, you may:

1. To post documents, click on the Update ledger (Default ribbon) or press the F3 key.

2. To delete documents, click on the Edit → Delete → Documents (Default ribbon).

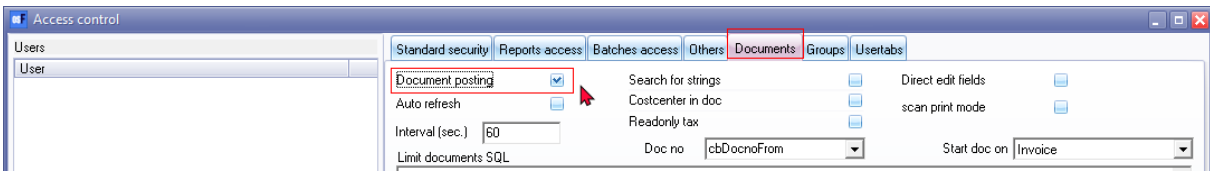


To Add the Posting and Delete buttons to the Document list screen:

1. Click on the Setup → Access control.

2. Select the Documents tab.

3. Select (tick) the Document posting field.



4. Click on the Apply button.

5. Click on the Close button.

6. You need to click on Tools → Close active forms (Setup ribbon) or reopen the Set of Books. The Posting and Delete buttons will then be available on the Documents list screen.

Auto-post documents on print

By default all documents need to be manually posted on the following options:

- Update ledger (Default ribbon)
- Documents - Posting button (if added) (Default ribbon)
- Setup → Documents setup menu (Setup ribbon)- Auto-post documents on print field not selected.

To set the documents to post (update) to the ledger when printed:

1. Click on the Setup → Documents.
2. Select (tick) the Auto-post documents on print option.
3. Click on the OK button to save your changes. Documents will automatically be updated (posted) to the ledger, when documents are printed.

If you use this feature, and do not print a document once it is generated, you need to:

- *Update (post) the unprinted documents manually; or*
- *Print unposted documents to update the documents. You may print a list of unprinted documents in Reports → Documents → Unprinted documents listing.*

You may disable this mode of document printing by selecting (placing a tick) in the " No print confirmation" field on Setup → Stock information. This will not print any documents when processing documents.

Document printing options

Where are Document layout files stored?

Documents can be printed/reprinted at any stage. To be able to print documents, you can select the document layout files stored in the " … \ *plug_ins* \ *reports* \ *DOCUMENTS* \ *DOCUMENTS* \ " directory or file folder of your osFinancials5/TurboCASH5 installation on your system.

When you want to customize document layout files according to your requirements, it is recommended to make a copy of the existing document layout file, and save it under your unique name. To be able to select your own document layout files to print, print it must be " … \ *plug_ins* \ *reports* \ *DOCUMENTS* \ *DOCUMENTS* \" directory or file folder of your osFinancials5/TurboCASH5 installation stored on your system.

Options to print Document layout files

Documents may be printed / reprinted at any stage using the following options on the Default ribbon:

1. Documents - Selection screen (Print button). This will print the documents for the selected document for a specific document type.

2. Debtors (Documents tab) - Select a list on a document and print it. Allows you to search and filter for and locate specific document.
3. Creditors (Documents tab) - Select a list on a document and print it. Allows you to search and filter for and locate specific document.
4. Stock items (Document groups tab of a selected stock item) - Select a document and double-click to print it.
5. Search (Investigator) – Search and double click on a document.

To determine which documents have not yet been printed, you can use the following options:

- *The filter and search options in the Document grid will allow you to search and filter for unprinted documents and select the documents which has not been printed (Printed column with value of 0). You can export the unprinted documents to a spreadsheet, for example "Excel".*
- *Reports*
  - *Reports → Documents → Unprinted document listing → Sales documents - Choose to list only the unprinted Invoices, Credit notes or Quotes.*
  - *Reports → Documents → Unprinted document listing → Purchase documents - Choose to list only the unprinted Purchases, Supplier returns or Orders.*

Select layout files

The layout files selected for each document type on the Setup → Documents setup menu (Setup ribbon) are the global default layout files that will be used to print documents. You may select up to two (2) Layout files for each document type (i.e. Quotes, Invoices, Credit notes, Orders, Purchases and Supplier returns).

Layout file 2 is optional. If layout file 2 is selected, it will print Layout file 2 document after the first layout file.

The first Layout file is required (global setting) and will serve as the default option for printing document layout files (for example, if "Default" is selected in the Layout file" field for Documents.

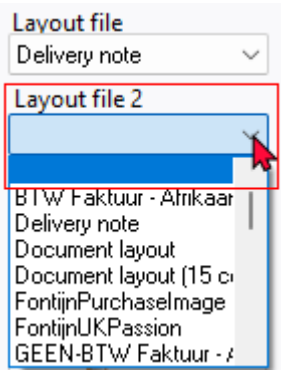
Specific layout files may also be selected on the Default ribbon for:

1. Debtors - Delivery address tab - Each debtor (customer / client) account by selecting a different layout file in the Layout file 1 (Invoices), Layout file 2 (Credit notes), Layout file 3 (Quotes).
2. Creditors - Delivery address tab - Each creditor (supplier / vendor) account by selecting a different

layout file in the Layout file 1 (Purchases), Layout file 2 (Supplier return), Layout file 3 (Orders).

The global settings will be over-ruled.

In addition to these settings, you may also select a different layout file when printing documents on the "*Layout file*" fields of the following options (Default ribbon):



- Documents - Selection screen (Print button) - You may select up to four (4) layout files. If you have selected a layout file for Layout file 2, Layout file 3 and/or Layout file 4, and you no longer want to print these layout files, you can select the blank option.
- Debtors (Documents tab)
- Creditors (Documents tab)

Layout files are stored in the "...\plug_ins\reports\DOCUMENTS\DOCUMENTS" directory. These may be edited using the Reportman (Report designer accessed from Setup ribbon).

Layout files have been designed to be displayed in the Language file (Switch language on the Start ribbon). If you change the language, the layout file will be displayed in the selected language.

Should the correct tax terminology (e.g. Sales Tax, VAT, GST) not be displayed on layout files, you need to select the correct language / country file.

Created with the Standard Edition of HelpNDoc: Streamline Your CHM Help File Creation with HelpNDoc

Document print confirmation

By default, when a document is created or edited, it's automatically set to be printed. Upon saving the document (by clicking the OK button in the Document entry screen), a print confirmation message will appear. By default, documents will be printed when a document is created or edited (when clicking on the OK button of the Document entry screen). A print confirmation message will be displayed:

"Do you wish to print this Invoice now?"

For instance, if the document type is an "Invoice," the message might read: "Do you wish to print this Invoice now?" The same applies to other document types like credit notes, quotes, purchases, supplier returns, or orders.

If you click on the Yes button, the document will be printed immediately. If you click on the No button, you have the option to print the document at a later stage.

No print confirmation setting

You may disable this mode of document printing by selecting (placing a tick) in the "No print confirmation" field on Setup → Stock information. This will not print any documents when processing documents.

To disable the print confirmation mode, select (place a tick) in the "No print confirmation" field. This can be done through the Setup → Stock information menu under the Setup ribbon.

This means that documents will not be automatically printed when created or edited. There won't be any print confirmation message displayed.

Auto-post documents on print setting

You may also set the "Auto-post documents on print" option on the Setup Setup → Documents setup (Default ribbon) to post the documents automatically when printing the documents.

You can further streamline your document processing by setting the "Auto-post documents on print" option. This can be done through the Setup → Documents setup menu under the Setup ribbon. Enabling this option will automatically post the documents when you print them, eliminating the need for a separate posting step.

By utilizing these settings, you can customize your document creation and printing process to match your preferred workflow, ensuring efficiency and accuracy in your business operations.

Printing logo on documents

Company Logo in Layout Files

You can easily include your company logo on various documents in osFinancials5/TurboCASH5, enhancing your branding and ensuring a professional look for your financial documentation.

If any of the existing layout files that come with osFinancials5/TurboCASH5 installations or updates are

customized, there's a risk of losing your changes. When working with layout files other than your own, it's crucial to create a copy of the layout file or report and rename it before making any modifications.

osFinancials offers two options to add logos to document layout files:

1. Load Company logo: Logo Expressions included in the document layout files installed with osFinancials5/TurboCASH5 i.e. Layout file, Document layout, Document layout (15 code), and their NO-TAX equivalents (NO-TAX Layout file, NO-TAX Document layout, NO-TAX Document layout (15 code) layout files, Delivery note layout files as well as the Tutorial-Invoice and NO-TAX Invoice-English layout files and on Debtor statements as well as on Creditor remittance advises . When you load the Company logo the logo will by default be displayed and printed in the place of the Company name, Address, Telephone, Fax, E-mail address and Website.
2. Insert a logo image in to your custom layout files: When you design or customise your own layout file, you can insert or add the Image object into the place of your layout file.

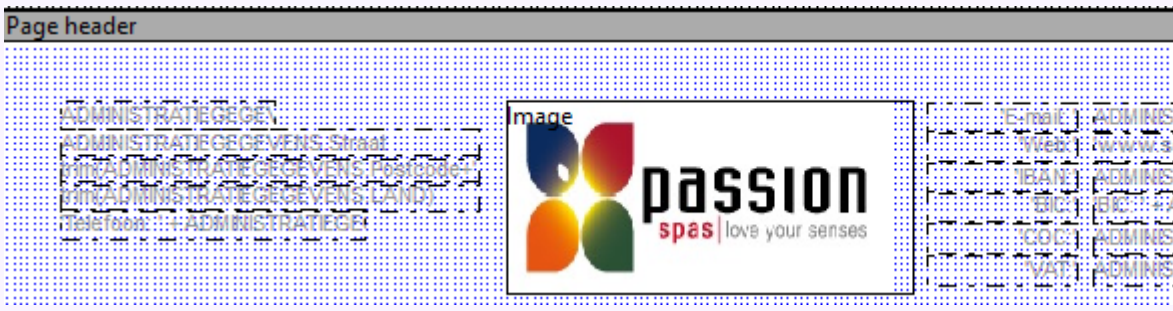
Options for Including Company Logo in Layout Files

Options for Including Company Logo in Layout Files:

1. Load Company Logo Option:
    1. Description: osFinancials5/TurboCASH5 provides a straightforward way to include logos in document layout files.
    2. Usage: This option applies to document layout files that come pre-installed with osFinancials5/TurboCASH5, including standard layouts and their NO-TAX equivalents, as well as delivery note layout files, Tutorial-Invoice, and NO-TAX Invoice-English layouts. It also extends to Debtor statements and Creditor remittance advises.
    3. Functionality: By loading the Company logo, it will automatically replace designated elements like Company name, Address, Telephone, Fax, E-mail address, and Website. The logo is displayed and printed in these locations.
    4. Implementation: Access the "Company info" options in the Setup menu to load the logo. This logo expression is integrated within the layout files.
2. Insert Logo Image in Custom Layout Files:
    1. Description: For enhanced customization, osFinancials5/TurboCASH5 offers the flexibility of inserting a logo image directly into custom-designed or modified layout files.
    2. Usage: This option is ideal when you're creating your own layout or making changes to existing ones.

3. Functionality: Design your layout to include an Image object in the desired location. This object will hold the logo image.
4. Implementation: Access the Report designer (Reportman) tool within the Setup menu. Drag and drop the Image object into your layout and configure its settings as needed.

Example : Company logo as Image



In this example a company logo may also be added as an image in the layout file. In this example, you do not nee

Company info (Setup ribbon).

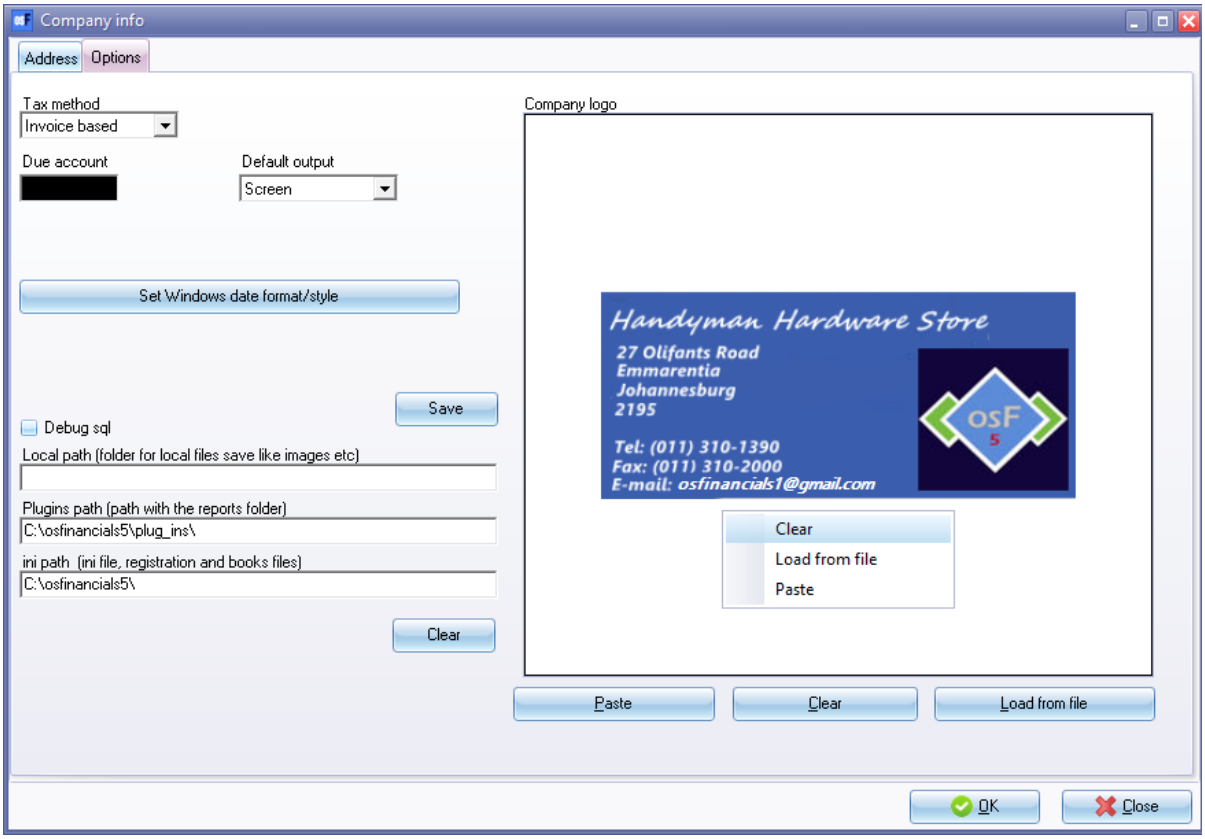
By understanding and utilizing these two options, you can seamlessly incorporate your company logo into various layout files within osFinancials5/TurboCASH5. Whether you're using pre-installed layouts or creating your own, these choices ensure that your branding is effectively represented on your documents.

Load Company Logo

To display and print the logo, you need to load the logo in the "*Company info - Options*" screen.

To load the Company logo:

1. On the Setup ribbon, select Company info.
2. Click on the Options tab.

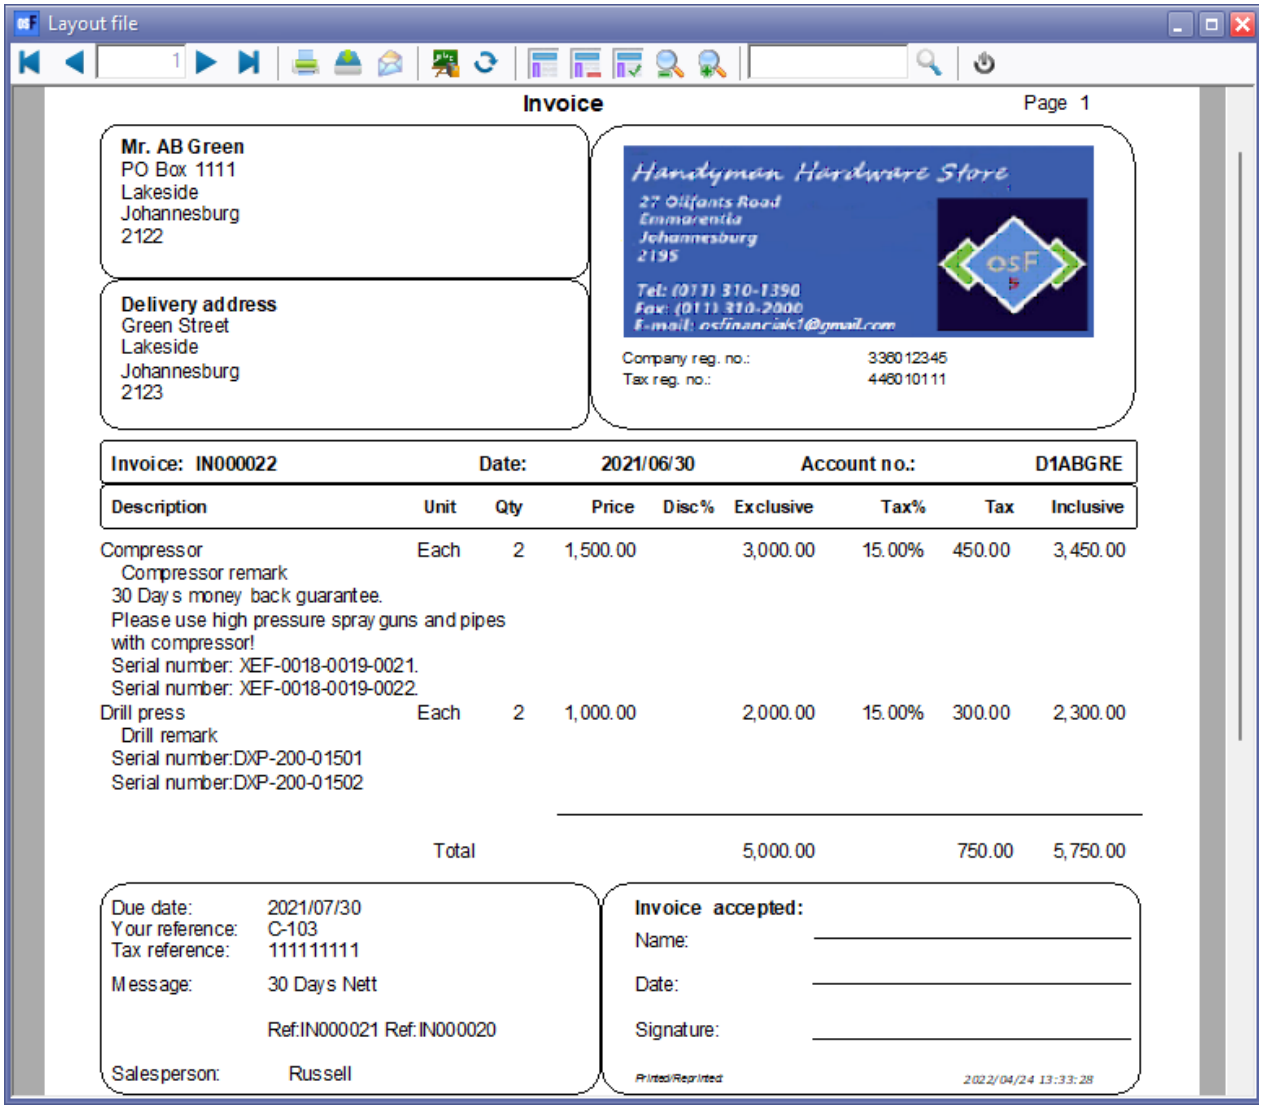


3. Click on the Load from file button (or right-click in the Logo area and select the Load from file option).

4. On the "osFinancials5/TurboCASH5 - *Load Picture*" screen, select a valid file format (i.e. jpg, png, gif, bmp).

5. Click OK to save.

6. The selected Company logo will print on Document layout files and Debtor statements as well as on Creditor remittance advises.



If you do not wish to print the logo, repeat the process but select the Clear option.

See Reportman - Company logo. You add your own document layout files and add resize and move the image on your layout file and change the settings (i.e. crop, stretch, display full size, tile or proportional tile) on the Image tab - Draw Style field to display the image or logo (in the Report designer (accessed from the Setup ribbon).

Document layout files

Preview of available document layout file samples

To assist in choosing a layout file for your needs, you may preview some screenshots of document layout files:

1. Translatable Document Layout Files with Dynamic Document Types:
    - *"Layout File"*
    - *"Document Layout"*
    - *"Document Layout (15 Code)"*

    These layout files utilize translatable expressions facilitated by language files and osFinancials5/TurboCASH5 settings. They dynamically display the appropriate document type names such as "*Invoice," "Credit note," "Quote," "Purchase," "Supplier return,*" or "*Order*" based on the specific document being printed. The document types are sourced from the *"TYPES.SDESCRIPTION*" expressions within the layout.

2. Translatable Document Layout Files with Dynamic Document Types without VAT/GST/Sales Tax:
    - *"NO-TAX Layout File"*
    - *"NO-TAX Document Layout"*
    - *"NO-TAX Document Layout (15 code)"*

    If you are not registered for VAT/GST/Sales tax or have chosen not to opt for voluntary registration, these layout files exclude VAT/GST/Sales tax information. They also dynamically display the appropriate document type names based on the specific type of document being printed.

    These layout files utilize translatable expressions facilitated by language files and osFinancials5/TurboCASH5 settings. They dynamically display the appropriate document type names such as "*Invoice," "Credit note," "Quote," "Purchase," "Supplier return,"* or *"Order"* based on the specific document being printed. The document types are sourced from the "*TYPES.SDESCRIPTION*" expressions within the layout.

3. Document Layout Files in English with Static Text:
    - *"TAX Invoice - English"*
    - *"NO-TAX Invoice - English"*

    These layout files offer a simple design featuring fixed text labels in the English language. Unlike translatable expressions, these layouts utilize static text labels. They are well-suited for customization to suit a range of document types, including *"Invoice", "Credit note", "Quote", "Purchase", "Supplier*

return", or *"Order"*. You have the flexibility to personalize these files according to your specific layout requirements and English translations. Additionally, you can leverage the Invoice layout as a foundation for creating other document types.

4. Translatable Delivery Note Document Layout File: The delivery note document layout file includes a versatile and dynamic option that caters to a wide range of language preferences and customisation needs. This translatable delivery note layout is powered by our language files feature, ensuring seamless translation of content across various languages. Not only does it adapt to the default language of your Set of Books, but it also accommodates debtor and creditor language preferences when they differ from the default.
5. Translatable Document Layout Files for Point-of-Sale (POS): These layout files are designed specifically for point-of-sale systems, catering to the needs of retail transactions at the point of sale.
6. Document Layout Files in Dutch Language: These layout files are previewed in the Dutch language, providing options for document layout customization for users in the Netherlands.

By offering these different layout file samples, osFinancials5/TurboCASH5 provides users with a range of choices to accommodate their needs, whether it's for different document types, languages, VAT/GST considerations, or point-of-sale transactions. This variety allows users to select the most suitable document layout template for their specific requirements.

You may use the Report designer to design your own layout files or copy any existing layout file and customise it for your own specific requirements.

Document layout files (English) - (static text)

English Layout Files With Static Text - English

The "*TAX Invoice - English*" and "*NO-TAX Invoice - English*" Invoice document layout files is designed as a straightforward layout file featuring fixed text labels in the English language. Unlike translatable expressions enabled by language files and settings in osFinancials5/TurboCASH5, this layout utilizes static text labels. The document pulls data from various fields entered during the document processing phase, and it establishes connections to tables and expressions within the Database fields to present the data accurately.

- *"TAX Invoice - English"* - This document layout file includes the Tax (VAT/GST/Sales tax) expressions

and static tax-related labels. This layout file is designed for those businesses which needs to be registered for Tax (VAT/GST/Sales tax).

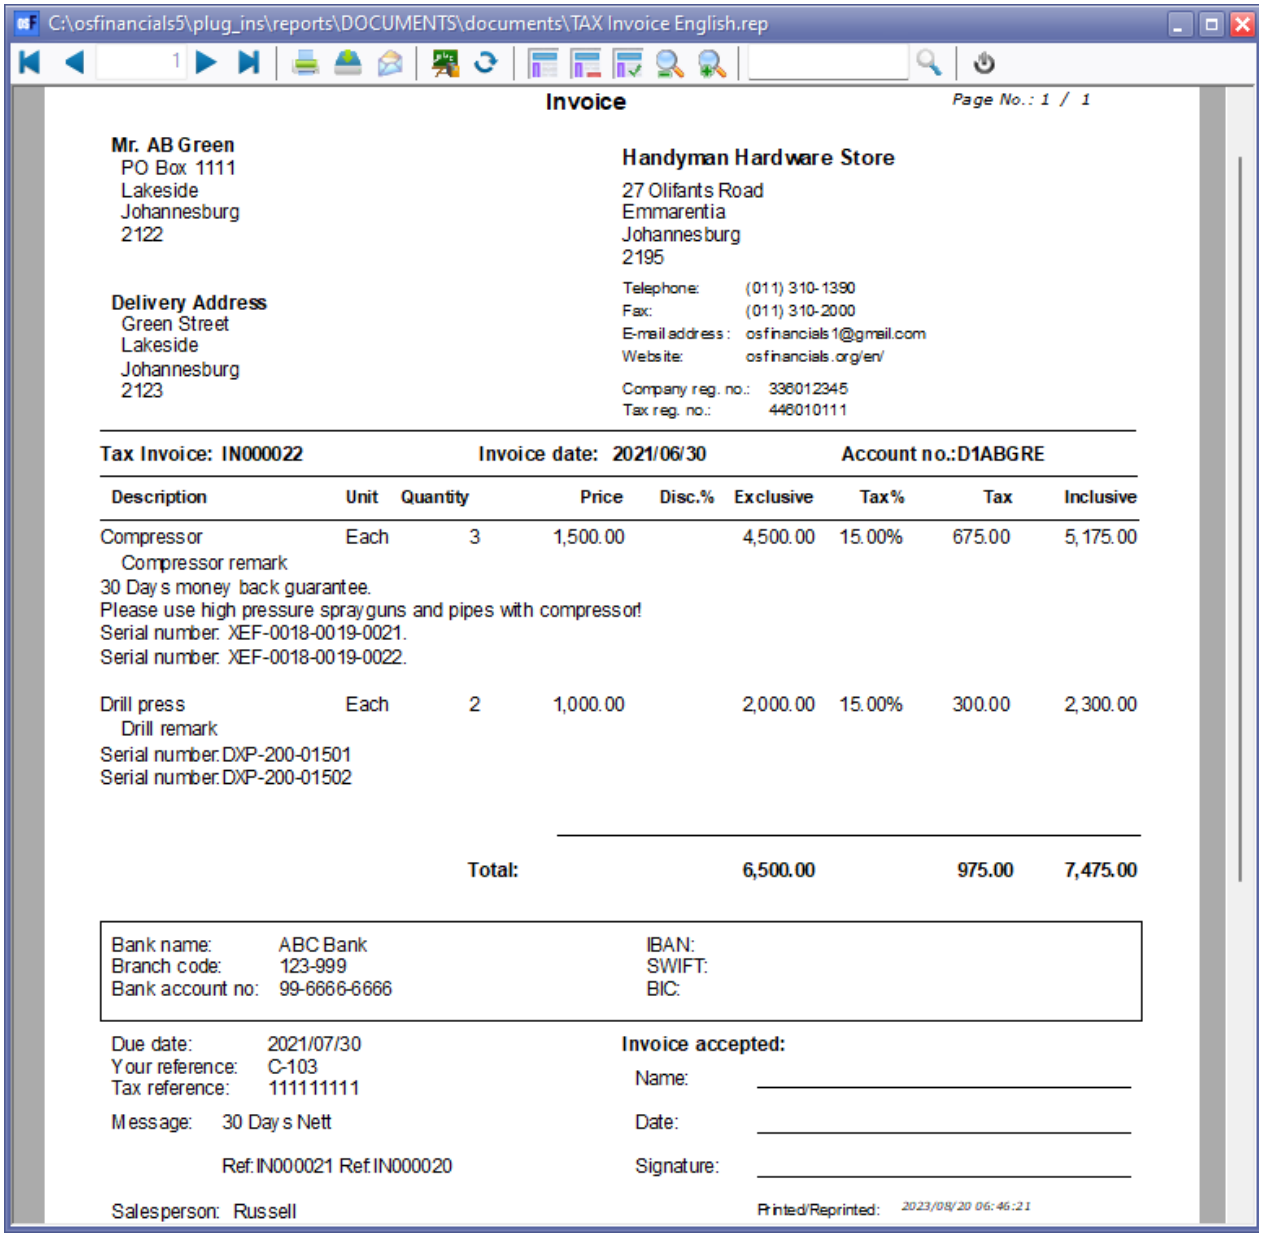
- *"NO-TAX Invoice - English"* - This document layout file excludes the Tax (VAT/GST/Sales tax) expressions and static tax-related labels. This layout file is designed for those businesses which is not required to be registered for Tax (VAT/GST/Sales tax).

These layout files offer a simple design featuring fixed text labels in the English language. Unlike translatable expressions, these layouts utilize static text labels. They are well-suited for customization to suit a range of document types, including *"Invoice", "Credit note", "Quote", "Purchase", "Supplier return",* or *"Order".* You have the flexibility to personalize these files according to your specific layout requirements and English translations. Additionally, you can leverage the Invoice layout as a foundation for creating other document types.

Example: TAX Invoice - English

The "*TAX Invoice - English*" document layout files is designed as a straightforward layout file featuring fixed text labels in the English language. Unlike translatable expressions enabled by language files and settings in osFinancials5/TurboCASH5, this layout utilizes static text labels. The document pulls data from various fields entered during the document processing phase, and it establishes connections to tables and expressions within the Database fields to present the data accurately.

TAX Invoice - English - VAT/GST/Sales Tax expressions For scenarios where VAT/GST/Sales Tax is not relevant to your business, you can refer to a similar layout file called "*NO-TAX Invoice - English*". This layout excludes the VAT/GST/Sales Tax provisions, if needed. This layout file accommodates those businesses that does not meet the compulsory threshold for registration of Tax (VAT/GST/ Sales Tax) or those businesses which did not opt for the voluntarily registration of Tax (VAT/GST/ Sales Tax).



This layout file includes the details of your business bank accounts (for bank account 1) as entered in Setup → Company info menu on the Setup ribbon. You may print the "*Company info – Bank accounts*" report from the Reports → Company info menu on the Reports ribbon to verify that your banking details are correct. This ensures that accurate and up-to-date banking information is presented on your documents, fostering transparency and professionalism in your financial transactions.

Customising the TAX Invoice - English layout file

The "*TAX Invoice - English*" layout file is designed as a straightforward template, featuring fixed text labels in the English language. Unlike translatable expressions enabled by language files and settings in osFinancials5/TurboCASH5, this layout utilizes static text labels. The document draws data from various fields entered during the document processing phase and establishes connections to tables and expressions within the database fields to ensure accurate presentation of the data.

You have the creative freedom to customize the "*TAX Invoice - English*" according to your preferences. Adjust not only the placement of static text and labels but also integrate logos and image objects to craft a unique design that resonates with your brand identity and document needs.

Furthermore, The "*TAX Invoice - English*" layout file includes English tax components to accommodate VAT/GST/Sales Tax requirements.

Utilizing the "*TAX Invoice - English*" Layout:

1. Customization Basis: This layout provides a strong foundation for customization. The "*TAX Invoice - English*" layout file includes English tax components to accommodate VAT/GST/Sales Tax requirements. You can duplicate the "*TAX Invoice - English*" layout and utilize it as a template for creating personalized document layout files for invoices. You may also create other document types such as credit notes, quotes, purchases supplier returns and orders.
2. Edit Labels: Modify, edit, or translate the static text labels within the layout to align with your specific language and terminology preferences.
3. Design Flexibility: Adjust the placement of static text, labels, and even database fields (expressions) to create a layout that suits other document types as well. This flexibility extends to sales documents such as invoices, credit notes, and quotes, as well as purchase documents like purchases, supplier returns, and orders.
4. Including Logos and Image Objects:
    - Logos: Infuse your company's logo for a distinctive and professional touch. Logos contribute to branding and reinforce your business identity across documents.
    - Image Objects: Elevate your design by incorporating image objects. These can include product images, service visuals, or any other relevant graphics that enhance the visual appeal of your documents.
5. Tailoring Layouts for Your Needs: With the ability to seamlessly integrate logos, image objects, and finely tune the placement of text and labels, you can create layout files that reflect your business's style and meet specific requirements. Whether you're designing invoices, credit notes, quotes, purchases, supplier returns, or orders, this adaptability empowers you to produce documents that stand out and convey information effectively.

   By harnessing design flexibility, you ensure that your documents not only convey information accurately but also exude a professional and consistent visual representation, strengthening your brand's identity and leaving a lasting impression.
6. Tax Relevance and Customization Options:
    - For Tax-Applicable Scenarios: The "*TAX Invoice - English*" layout is designed to include English

Tax to accommodate VAT/GST/Sales Tax. This ensures accurate tax calculations and inclusion in your invoice documents.

- For Non-Tax Scenarios: If your business operates in scenarios where VAT/GST/Sales Tax is not applicable, you have the option to refer to a similar layout file called "*NO-TAX Invoice -English*." This layout is designed to accommodate scenarios where tax provisions are excluded. It provides the flexibility to tailor your document layout based on your business needs.

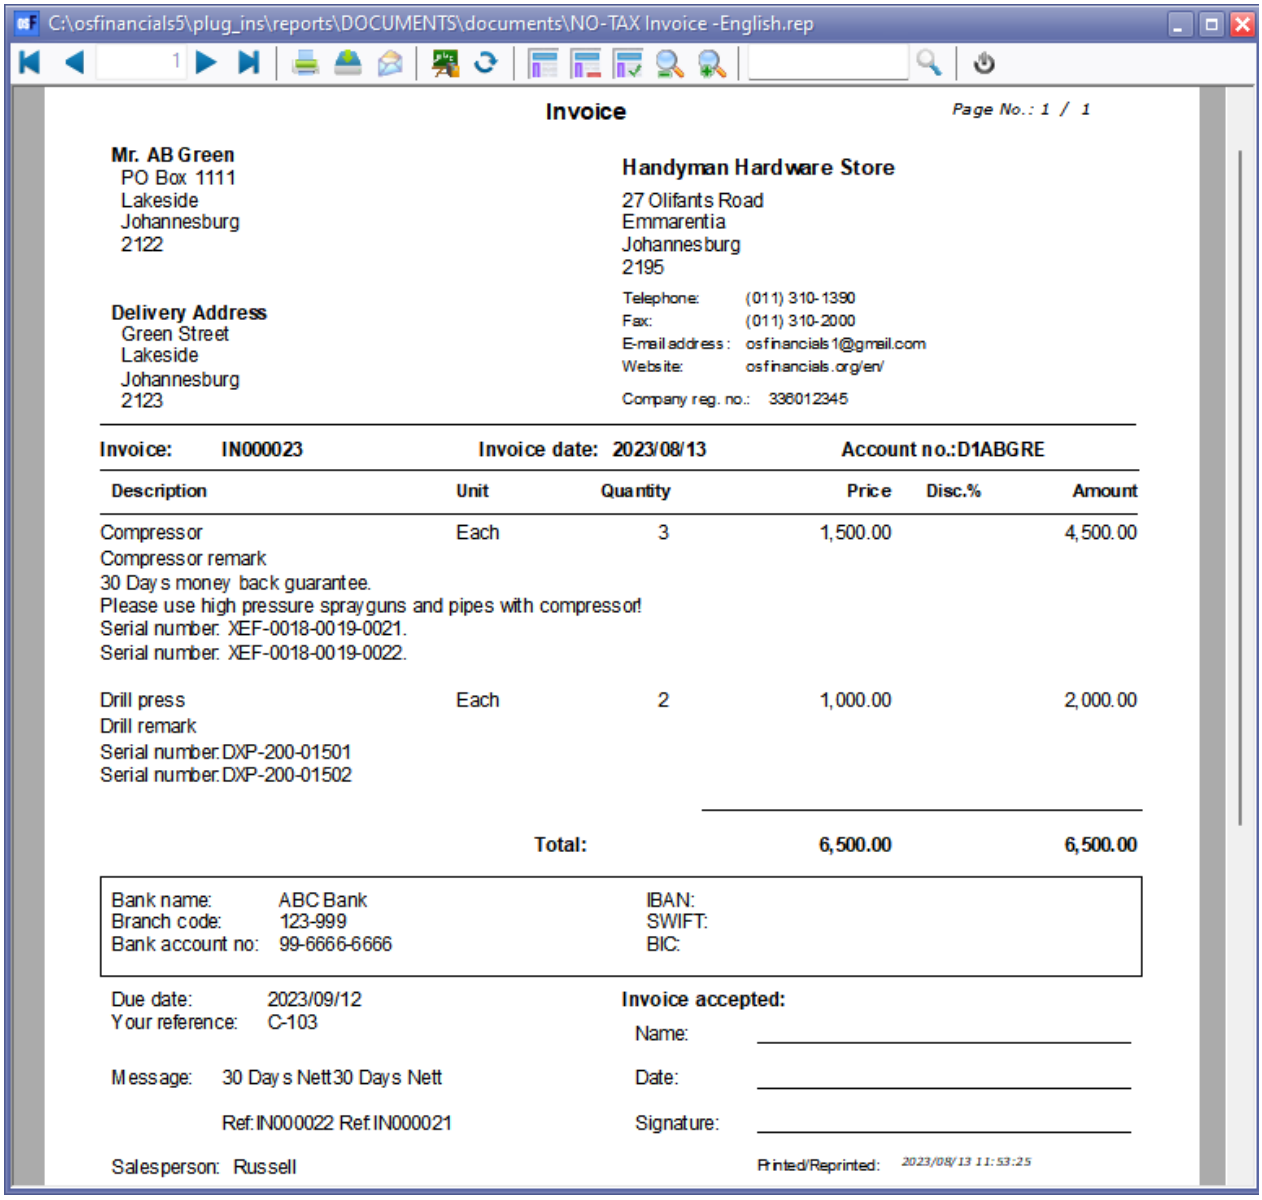
By understanding and utilizing the features and customization options of the "*Tutorial-Invoice - English*" layout file, you can create professional, accurate, and tailored invoice documents that suit your business's specific requirements and scenarios.

By harnessing design flexibility, you ensure that your documents not only convey information accurately but also exude a professional and consistent visual representation, strengthening your brand's identity and leaving a lasting impression.

NO-TAX Invoice - English

The "*NO-TAX Invoice - English*" document layout files is designed as a straightforward layout file featuring fixed text labels in the English language. Unlike translatable expressions enabled by language files and settings in osFinancials5/TurboCASH5, this layout utilizes static text labels. The document pulls data from various fields entered during the document processing phase, and it establishes connections to tables and expressions within the Database fields to present the data accurately.

TAX Invoice - English - VAT/GST/Sales Tax expressions For scenarios where VAT/GST/Sales Tax becomes relevant to your business, you can refer to a similar layout file called "*TAX Invoice - English*". This layout accommodates the inclusion of VAT/GST/Sales Tax provisions, if needed, offering flexibility as your business needs evolve.



Here's what you can do with this "*NO-TAX Invoice - English*" layout:

1. Customization Basis: You can create a duplicate of this NO-TAX Invoice layout and use it as a foundational template to personalize your document layout files for invoices.
2. Edit Labels: Modify, edit, or translate the static text labels within the document layout to align with your specific language and terminology requirements.
3. Design Flexibility: Adjust the placement of static text, labels, and even database fields (expressions) to create a layout that suits other document types as well. This extends to sales documents such as invoices, credit notes, and quotes, as well as purchase documents like purchases, supplier returns, and orders.

For scenarios where VAT/GST/Sales Tax becomes relevant to your business, you can refer to a similar layout file called "*TAX Invoice - English*". This layout accommodates the inclusion of VAT/GST/Sales Tax provisions, if needed, offering flexibility as your business needs evolve.

Customising the NO-TAX Invoice - English layout file

The "*NO-TAX Invoice - English*" layout file is designed as a straightforward template, featuring fixed text labels in the English language. Unlike translatable expressions enabled by language files and settings in osFinancials5/TurboCASH5, this layout utilizes static text labels. The document draws data from various fields entered during the document processing phase and establishes connections to tables and expressions within the database fields to ensure accurate presentation of the data.

You have the creative freedom to customize the "*NO-TAX Invoice - English*" according to your preferences. Adjust not only the placement of static text and labels but also integrate logos and image objects to craft a unique design that resonates with your brand identity and document needs.

The "*NO-TAX Invoice - English*" layout file includes English tax components to accommodate VAT/GST/Sales Tax requirements.

Utilizing the "*NO-TAX Invoice - English*" Layout:

1. Customization Basis: This layout provides a strong foundation for customization. The "*NO-TAX Invoice - English*" layout file excludes English tax components to accommodate VAT/GST/Sales Tax requirements. You can duplicate the "*NO-TAX Invoice - English*" layout and utilize it as a template for creating personalized document layout files for invoices. You may also create other document types such as credit notes, quotes, purchases supplier returns and orders.
2. Edit Labels: Modify, edit, or translate the static text labels within the layout to align with your specific language and terminology preferences.

This layout is designed to accommodate scenarios where tax provisions are excluded. It provides the flexibility to tailor your document layout based on your business needs.

By understanding and utilizing the features and customization options of the "*Tax-Invoice - English*" layout file, you can create professional, accurate, and tailored invoice documents that suit your business's specific requirements and scenarios.

By harnessing design flexibility, you ensure that your documents not only convey information accurately but also exude a professional and consistent visual representation, strengthening your brand's identity and leaving a lasting impression.

Additional Note for Customization of Static English Document Files:

These static document layout files serve as fundamental templates, primarily supporting translations in a single language. However, if your business operations involve multiple languages or require the inclusion of alternative language options for debtors and creditors, there are advanced options available.

Consideration for Enhanced Customization:

For comprehensive language options and the ability to adapt to diverse language preferences, you might want to explore the following options as a foundation for customization:

1. Dynamic Language Features:
    - Opt for the "*Document layout files - Translatable*" or the "*NO-TAX Document layout files - Translatable*" as your base templates.
    - These options offer powerful dynamic language capabilities within osFinancials5/TurboCASH5,

allowing you to create layouts that adapt to various languages seamlessly.

2. Accommodating Multilingual Scenarios:
    - If your business engages with international clientele or operates in regions with multiple languages, these dynamic language features become essential.
    - You can cater to the language preferences of both debtors and creditors, ensuring clear communication and professional documentation.

By embracing the "*Document layout files - Translatable*" or the "*NO-TAX Document layout files - Translatable*", you harness the potential of osFinancials' language versatility. This empowers you to create customized layouts that not only adhere to diverse language requirements but also enhance the clarity, accuracy, and professionalism of your financial documents.

Report designer help

To customize or create your own document layout files and reports using the Report designer within the Setup ribbon, you can follow these steps:

1. Refer to Documentation: To get started, you can refer to the "*Report designer*" section within the osFinancials5/TurboCASH5 help file. Additionally, you can access online documentation related to the Report designer on the osFinancials website.
2. Utilize Offline Documentation: Apart from the topics covered in this documentation, there is a comprehensive offline set of resources available in the "*.../plug_ins/reportman/doc*" folder of your osFinancials5/TurboCASH5 installation directory. You can access this offline documentation by opening the "*index.html*" file located at "*.../plug_ins/reportman/doc/index.html*" in your web browser.
3. Visit Online Resources: For further insights, the official online documentation for the "*Report Manager*" can be found at https://reportman.sourceforge.io/. This online documentation offers additional resources and information specifically about the Report Manager, providing valuable guidance as you work on your customization and design endeavours.

By following these steps and utilizing the available resources, you can effectively navigate the Report designer in osFinancials5/TurboCASH5 and create customized document layout files and reports to meet your specific requirements.

Afrikaans Layout Files (Static labels)

Similar versions than the "*TAX Invoice - English*" and "*NO-TAX Invoice - English*" document layout files is also available in the Afrikaans Language:

- "*BTW-Faktuur - Afrikaans*"
- "*GEEN-BTW Faktuur - Afrikaans*" is also available.

These documents contain static text labels that can be translated to Afrikaans in just a few minutes.

Document layout files - Translatable

The layout files selected for each document type on the Setup → Documents setup menu (Setup ribbon) are the global default layout files that will be used to print documents.

Specific layout files may also be selected on the Default ribbon for:

1. Each debtor (customer / client) account by selecting a different layout file in the Layout file 1 (Invoices), Layout file 2 (Credit notes), Layout file 3 (Quotes) in the Debtors.

2. Each creditor (supplier / vendor) account by selecting a different layout file in the Layout file 1 (Purchases), Layout file 2 (Supplier return), Layout file 3 (Orders) in the Creditors.

The global settings will be over-ruled.

In addition to these settings, you may also select a different layout file when printing documents on the "*Layout file*" fields of the following options (Default ribbon):

- Documents - Selection screen (Print button)
- Debtors (Documents tab)
- Creditors (Documents tab)

Layout files are stored in the *"...\plug_ins\reports\DOCUMENTS\DOCUMENTS"* directory. These may be edited using the Reportman (Report designer accessed from the Reports or Setup ribbons).

Layout files have been designed to be displayed in the Language file (Switch language on the Start ribbon). If you change the language, the layout file will be displayed in the selected language.

Should the correct tax terminology (e.g. Sales Tax, VAT, GST) not be displayed on layout files, you need to select the correct language / country file.

Document layout files supports all document types

These translatable document layout files includes a versatile and dynamic option that caters to a wide range of language preferences and customisation needs. These translatable document layout files is powered by our language files feature, ensuring seamless translation of content across various languages. Not only does it adapt to the default language of your Set of Books, but it also accommodates debtor and creditor language preferences when they differ from the default.

Changing the Document type name

To change the Document type name for Document layout files which supports all document types. you need to modify the document type names, you can navigate to the Types tab within the "*Customize Languages*" screen (accessible through the Tools → Customise Language menu on the Setup ribbon).

Labels for Tax terminology will be printed in the selected language or the language associated with the Set of Books or the selected language in the Switch language option on the Start ribbon.

If you need to customise the Tax terminology labels in your selected language, you may change these in the may be modified in the Tools → Customise Language menu on the Setup ribbon).

Examples: Document layout files (Translatable)

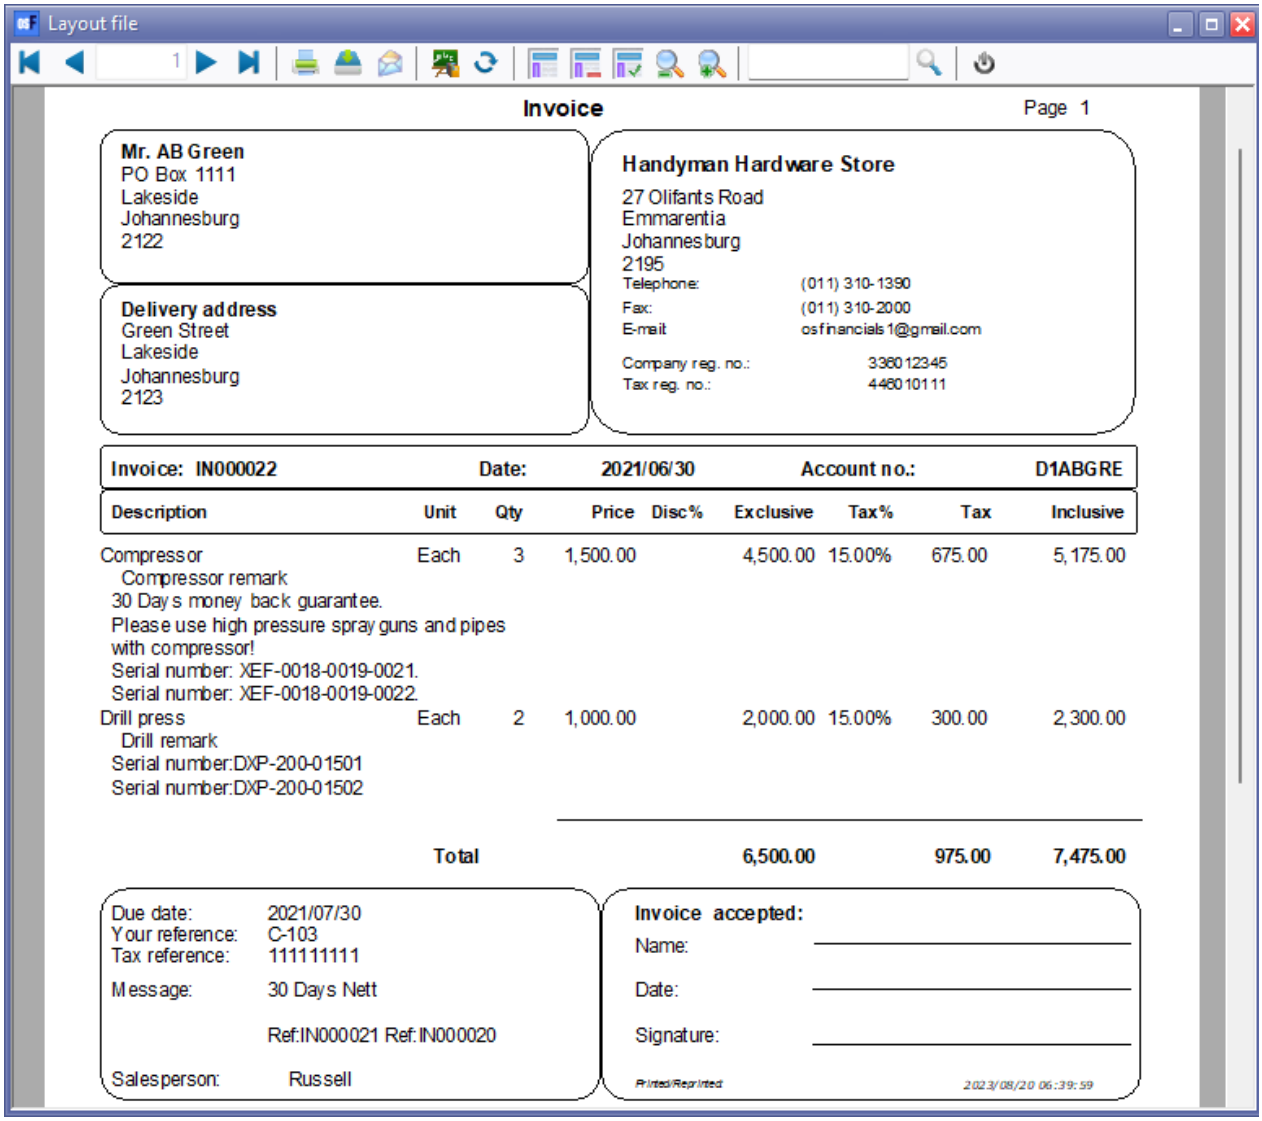
The "*Layout file*", *Document layout*" and "*Document layout (15 code)*" document layout files make use of translatable expressions facilitated by language files and settings within osFinancials5/TurboCASH5. These files extract data from various fields input during the document processing stage, establishing connections to tables and expressions in the Database fields to ensure accurate data presentation.

These Document layout files dynamically display the appropriate document type name, whether it's an "*Invoice*," "*Credit note*," "*Quote*," "*Purchase*," "*Supplier return*," or "*Order*", based on the specific type of document being printed. This information is sourced from the "*TYPES.SDESCRIPTION*" expressions within the document layout.

To modify the document type names, you can navigate to the Types tab within the "*Customize Languages*" screen (accessible through the Tools → Customise Language menu on the Setup ribbon).

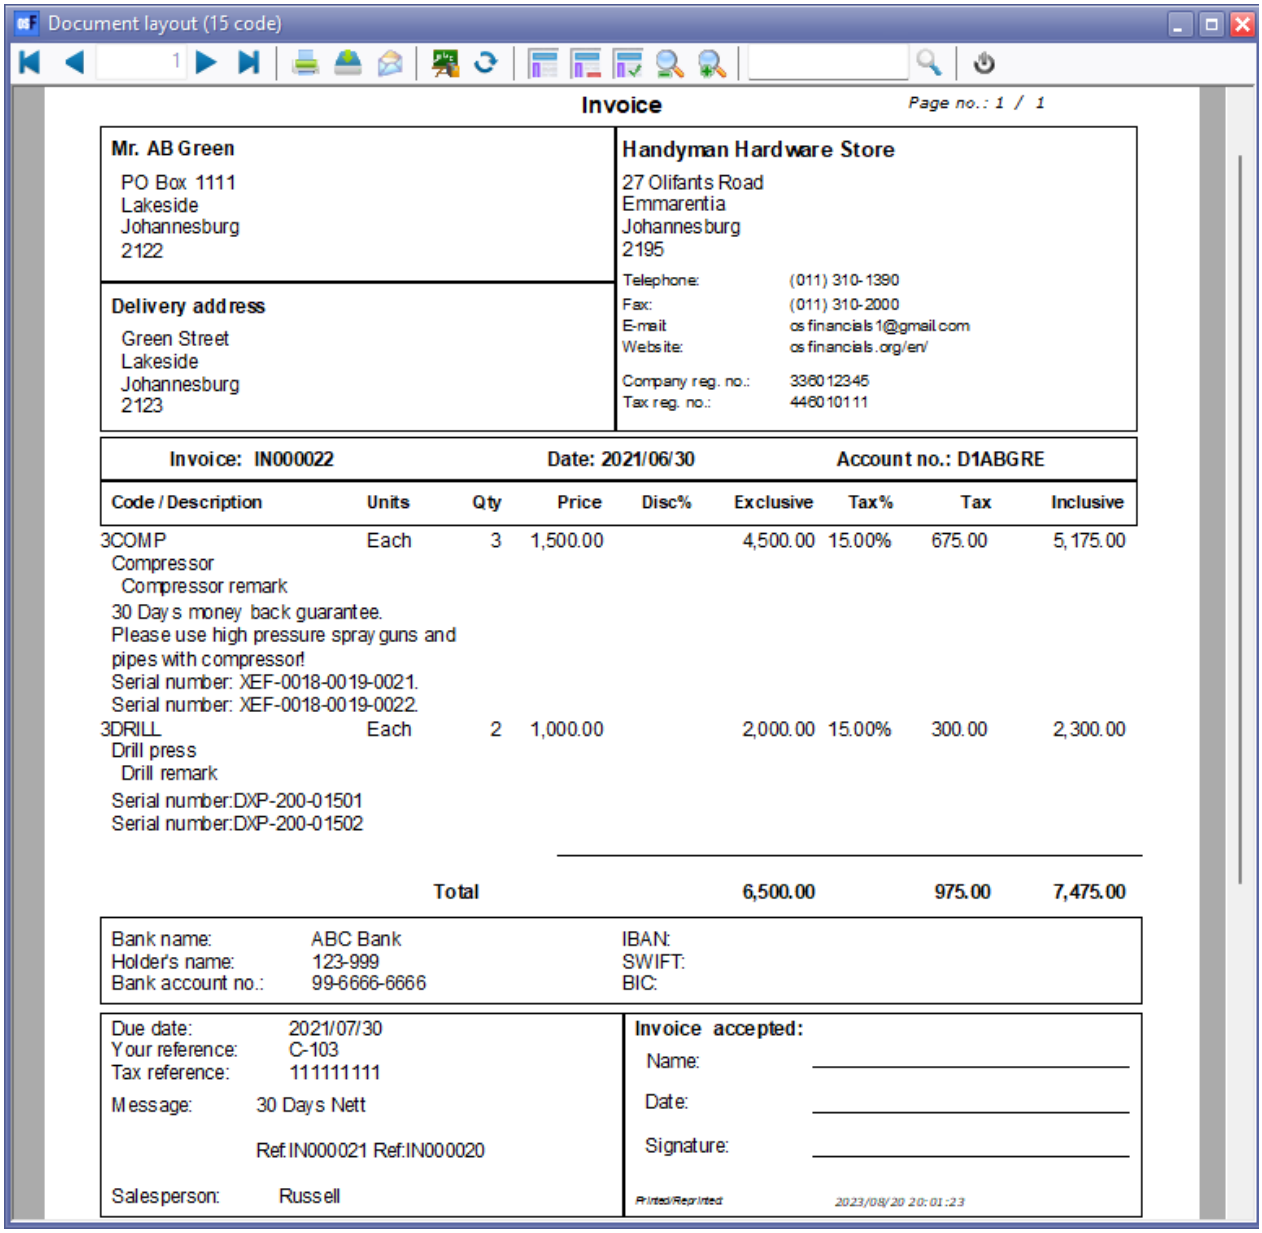
Layout file

The "*Layout file*" does not print stock codes, but only stock descriptions.



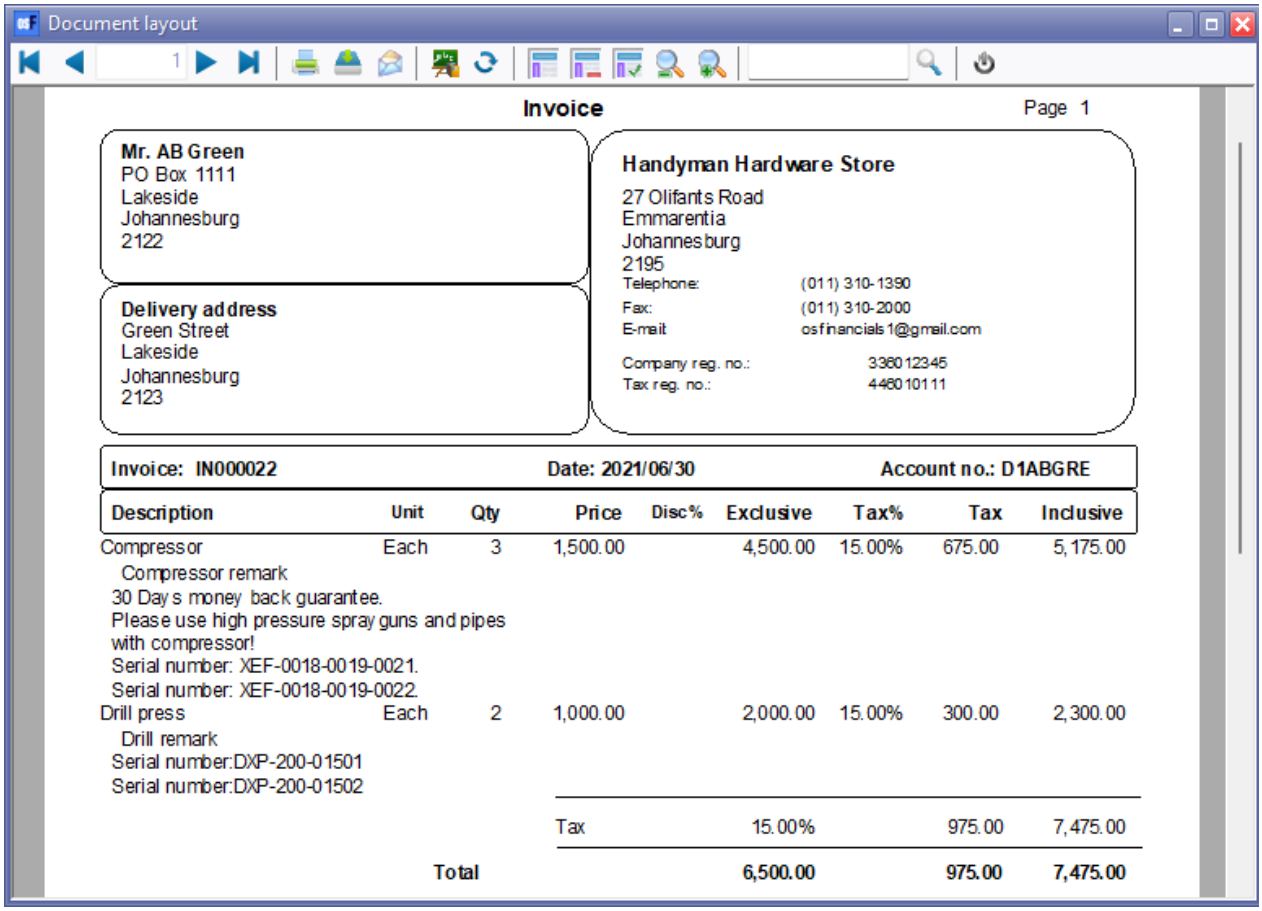
Document layout (15-code) file

The "*Document layout file*" prints stock codes (of up to 15-digits – Maximum allowed creating stock items) and stock descriptions.



This layout file includes the details of your business bank accounts (for bank account 1) as entered in Setup → Company info menu on the Setup ribbon. You may print the "*Company info – Bank accounts*" report from the Reports → Company info menu on the Reports ribbon to verify that your banking details are correct. This ensures that accurate and up-to-date banking information is presented on your documents, fostering transparency and professionalism in your financial transactions.

Document layout file



The "*Document layout"* file does not print stock codes, but only stock descriptions.

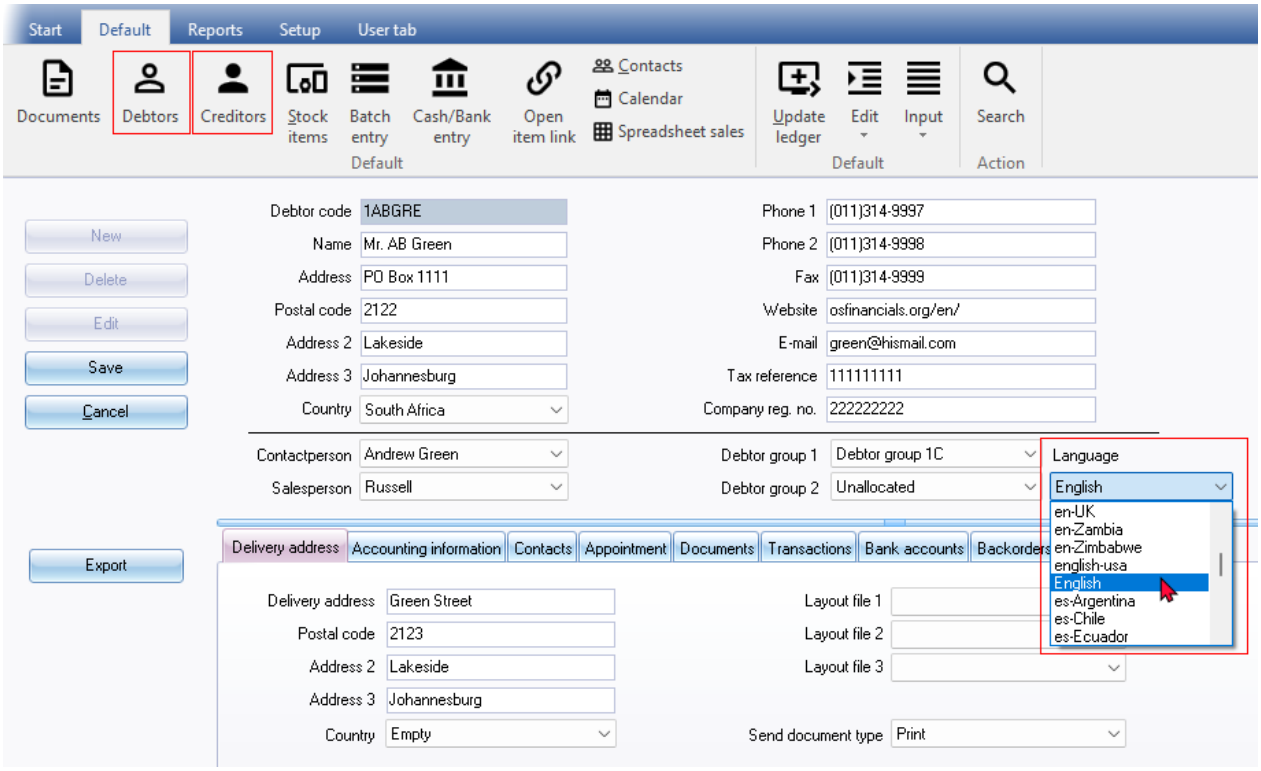
Document layout files supports additional languages for Debtors / Creditors

These translatable document layout files are a feature designed to accommodate multiple languages within osFinancials5/TurboCASH5. These files facilitate printing documents in either the chosen language or the default language associated with the Set of Books. Additionally, these translatable document layout files take into account language preferences specified for debtor (customer/client) or creditor (supplier/vendor) accounts, including international ones.

In osFinancials5/TurboCASH5, users have the flexibility to designate a particular language for debtor or creditor accounts:

- Debtors: When a specific language is assigned to a debtor account, osFinancials5/TurboCASH5 will print document layout files for sales-related documents (such as invoices, credit notes, quotes, and point-of-sale invoices) in the debtor's preferred language.
- Creditors: If a specific language is set for a creditor account, osFinancials5/TurboCASH5 will print document layout files for purchase-related documents (including purchase orders, supplier returns,

and orders) in the preferred language of the creditor, whether they are domestic or international.



This feature ensures that financial documents align with the language preferences of both customers and suppliers, enhancing communication and clarity for a diverse range of business interactions and in regions with multiple languages. For instance, in a country like South Africa, documents can be generated in languages like Afrikaans or English..

Document layout file - Delivery notes (Translatable)

What is a delivery note?

A delivery note, also known as a delivery receipt or packing slip, is a document used in the shipping and logistics industry to confirm the delivery of goods from a seller or supplier to a buyer or customer. It serves as a record of the items that have been delivered, their quantities, and their condition at the time of delivery. Here are some key points about a delivery note:

1. Contents: A delivery note typically includes information such as the names and addresses of the sender (supplier) and the recipient (buyer), a list of the items being delivered along with their descriptions and quantities, any special handling instructions, and any additional notes relevant to the delivery.

2. Purpose: The primary purpose of a delivery note is to provide both the sender and the recipient with

a record of the goods that have been shipped and received. It acts as proof of delivery and can be used to resolve any disputes or discrepancies that might arise regarding the delivered items.

3. Reference: Often, a delivery note will include a reference number or code that can be used to cross-reference the delivery with corresponding sales orders, purchase orders, invoices, and other related documents.

4. Internal and External Use: Delivery notes are used internally within the shipping and receiving departments of a company to ensure that the correct items are dispatched and received. They are also provided to the recipient to assist with inventory management and quality control.

5. Legal and Financial Implications: Delivery notes may have legal and financial implications. For instance, they can be used as evidence in cases where disputes arise over the condition, quantity, or timeliness of a delivery. They can also be used by the recipient to check against their purchase orders and invoices to ensure accurate billing.

6. Variations: The specific format and information included in a delivery note can vary based on the industry, company policies, and local regulations. Some businesses may choose to include additional details such as batch numbers, serial numbers, barcodes, and more.

In summary, a delivery note is an essential document that helps ensure the smooth flow of goods between suppliers and customers. It provides a clear record of what has been delivered, aiding in accuracy, accountability, and transparency in business transactions.

Exclude / Include prices in a delivery note

It is a common practice to exclude prices from a delivery note, particularly for security and confidentiality reasons. Including prices on a delivery note can have several potential drawbacks:

1. Confidentiality: Prices can be sensitive information, and sharing them on a delivery note could potentially expose sensitive financial details to unintended recipients, such as third-party logistics providers, warehouse staff, or even competitors.

2. Customer Relations: If a delivery note with prices falls into the hands of the recipient's customers or clients, it might cause confusion, privacy concerns, or even harm the business relationship by revealing pricing agreements.

3. Theft and Fraud Prevention: Excluding prices from delivery notes can help reduce the risk of theft and fraud. If unauthorized individuals gain access to delivery notes with prices, they might exploit the information for illicit purposes.

4. Data Protection: Many countries have data protection regulations that require businesses to handle personal and sensitive data with care. Exposing pricing information unnecessarily could potentially

violate these regulations.

5. Focus on Delivery: Delivery notes are primarily used to confirm the receipt of goods and their condition. Excluding prices allows both the sender and the recipient to focus on verifying the accuracy of the items received rather than getting distracted by financial details.

While excluding prices is a common practice, it's essential to ensure that the delivery note contains enough information for the recipient to accurately verify the delivered items. Including details such as references, item codes, descriptions, quantities, unit measurements, and any relevant comments is crucial for efficient inventory management and reconciliation.

Ultimately, the decision to include or exclude prices on a delivery note should be based on your business's specific policies, industry norms, and the need to balance security and transparency in your business operations.

Delivery notes is usually sent to customers and to creditors for returns

Sending delivery notes to both customers and creditors for returns is a common practice in business transactions. Here's how the process typically works:

1. Debtors (Customers/Clients):
    - Outgoing Deliveries: When you send products to customers, you provide them with a delivery note along with the shipment. The delivery note contains details about the items being delivered, their quantities, descriptions, and any other relevant information.
    - Returns: If a customer wants to return items to you, they would typically include a copy of the delivery note that was sent with the original shipment. This helps you verify the returned items against the original delivery and ensures accuracy in the return process.
2. Creditors (Suppliers/Vendors):
    - Incoming Deliveries: When you receive goods from your suppliers or vendors, they might send a delivery note along with the shipment. This note provides you with information about the items you've received, quantities, descriptions, and potentially other details like batch numbers.
    - Returns to Suppliers: If you need to return items to your suppliers due to defects, errors, or other reasons, you can include a copy of the original delivery note (if available) to indicate the items being returned and their quantities. This helps the supplier process the return efficiently.

In both cases, the primary purpose of the delivery note is to ensure transparency and accuracy in the

movement of goods. Including essential details like references, item codes, descriptions, quantities, and any relevant comments ensures that both parties have clear records of the transactions.

While it's common to exclude prices from delivery notes to maintain security and confidentiality, the exact content and format of the delivery notes can vary based on your business's practices and industry norms. The key is to provide enough information for easy verification and processing of shipments and returns while protecting sensitive information.

Features: Delivery note

This Delivery note document layout file is a document template used to create delivery notes that can be adapted to various languages. This layout file would allow you to generate delivery notes in different languages while maintaining a consistent structure and design. Here's a breakdown of what this might entail:

1. Purpose: The purpose of a translatable delivery note document layout file is to provide a template for creating delivery notes that can be easily customized to display information in different languages. This is particularly useful when dealing with international clients, suppliers, or partners who prefer to receive documents in their native language.
2. Translatable Elements: The layout file would incorporate translatable elements, such as placeholders or expressions, which dynamically populate with the appropriate content based on the language settings or preferences.
3. Dynamic Language Switching: The layout file might be designed to switch between different languages based on the language settings associated with the recipient's account or the specific transaction. For example, if you're sending a delivery note to a customer with a preference for French, the layout file could render the content in French.
4. Customizable Fields: The layout would include fields for essential information such as item codes, descriptions, quantities, and any other relevant details specific to delivery notes.
5. Consistent Layout: While the content within the delivery note might change based on the language, the overall layout and design would remain consistent. This ensures professionalism and brand coherence.
6. Adaptability for Different Document Types: The same translatable delivery note document layout file might be used as a foundation to create other similar documents, such as return notes or order acknowledgements.
7. User-Friendly Customization: Users could easily customize the translatable elements, language expressions, and placeholders to adapt the layout for their specific needs.

In summary, a translatable delivery note document layout file simplifies the process of generating delivery notes in different languages, ensuring effective communication with recipients from various linguistic backgrounds while maintaining a unified visual identity.

Preview of Available Translatable Delivery Note Document Layout Files

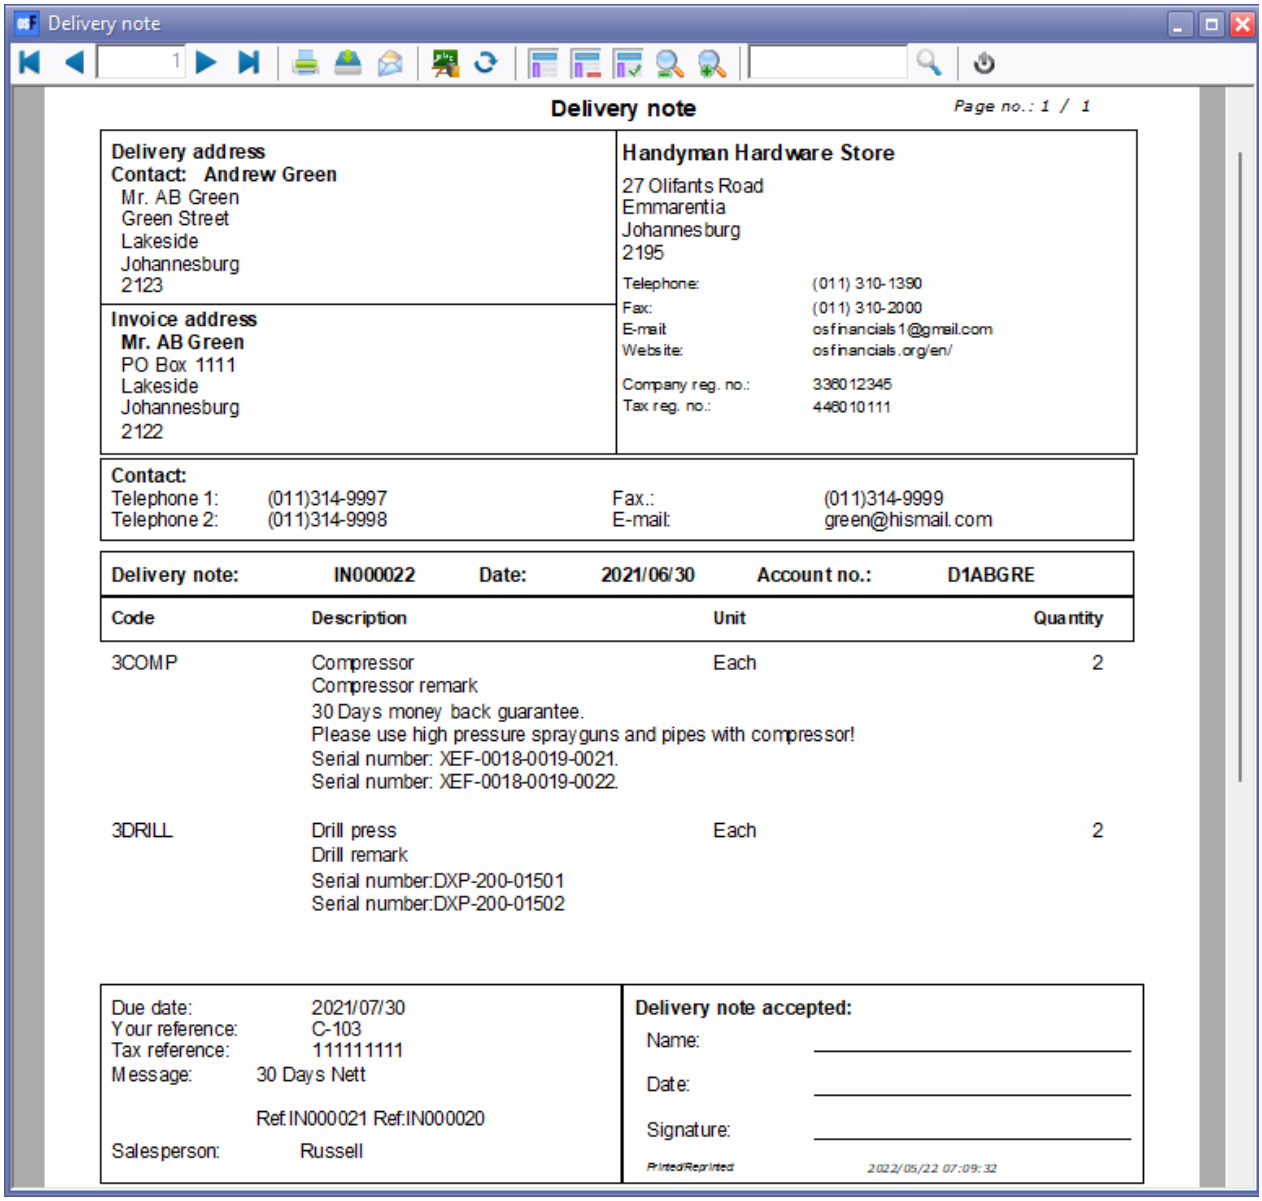
This delivery note document layout files includes a versatile and dynamic option that caters to a wide range of language preferences and customisation needs. This translatable delivery note layout is powered by our language files feature, ensuring seamless translation of content across various languages. Not only does it adapt to the default language of your Set of Books, but it also accommodates debtor and creditor language preferences when they differ from the default.

By selecting this translatable delivery note layout, you benefit from:

- Multi-Language Support: Your delivery notes can be generated in different languages, ensuring effective communication with recipients around the world.
- Debtor and Creditor Language Adaptation: When the language preferences of your debtors or creditors vary from the default, the layout dynamically adjusts to present the information in the preferred language.
- Consistent and Professional Layout: While the content changes with translation, the layout maintains a consistent and professional appearance.
- Customization Flexibility: Customize the layout to include essential details such as item codes, quantities, descriptions, and more, ensuring accuracy in every delivery.

This translatable delivery note document layout offers an advanced level of flexibility and adaptability, enhancing your communication efficiency with customers, suppliers, and partners across different linguistic backgrounds.

Feel free to adapt and adjust the description to match the specific features and benefits of your translatable delivery note document layout in osFinancials5/TurboCASH5.



The "*Delivery note*" prints stock codes (of up to 15-digits – Maximum allowed creating stock items) and stock descriptions.

The name of this "Delivery note" document type is translatable in the "LabelID 1313" in the Language file as expression "CUSTOM('GETTEXTLANG',1313,'DeliveryNote',CLIENTORDEFLANG.SLANGUAGE,0,0)".

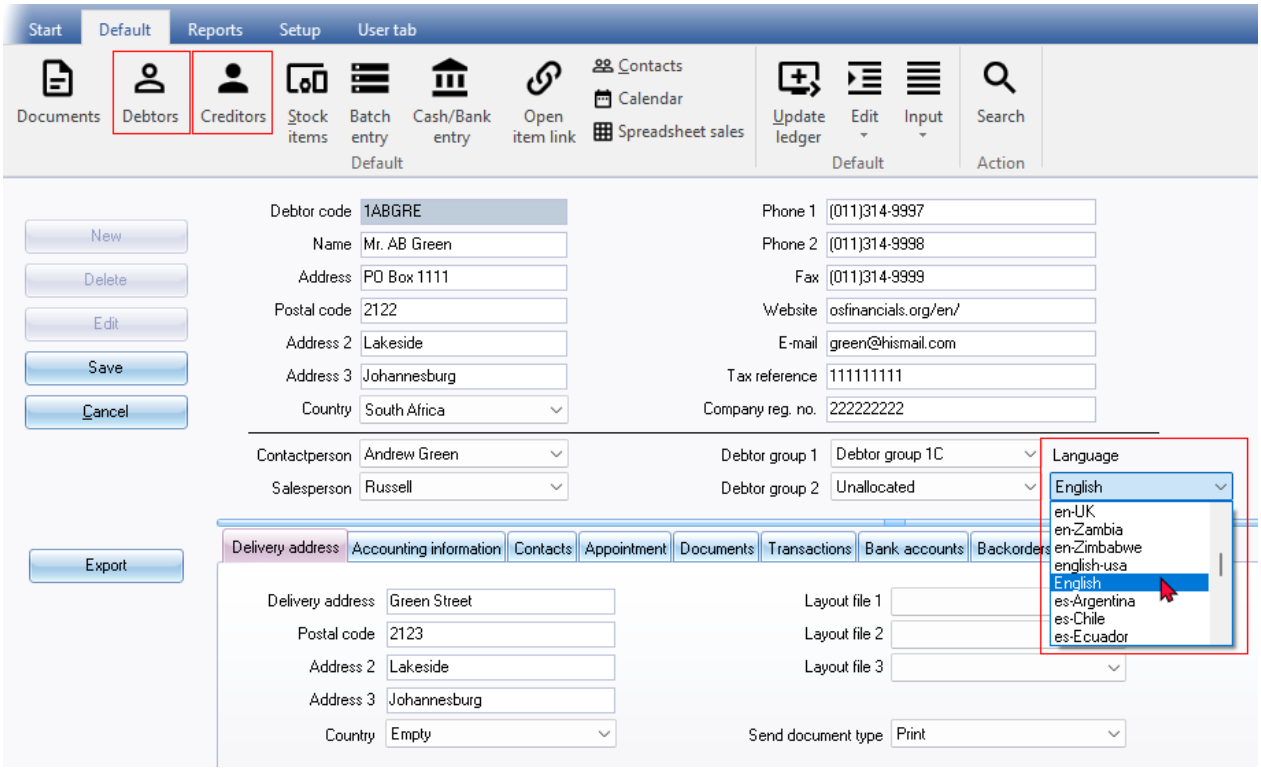
Document layout files supports additional languages for Debtors / Creditors

The translatable "*Delivery note*" document layout file is a feature designed to accommodate multiple languages within osFinancials5/TurboCASH5. These files facilitate printing documents in either the chosen language or the default language associated with the Set of Books. Additionally, these translatable document layout files take into account language preferences specified for debtor (customer/client) or

creditor (supplier/vendor) accounts, including international ones.

In osFinancials5/TurboCASH5, users have the flexibility to designate a particular language for debtor or creditor accounts:

- Debtors: When a specific language is assigned to a debtor account, osFinancials5/TurboCASH5 will print document layout files for sales-related documents (such as invoices, credit notes, quotes, and point-of-sale invoices) in the debtor's preferred language.
- Creditors: If a specific language is set for a creditor account, osFinancials5/TurboCASH5 will print document layout files for purchase-related documents (including purchase orders, supplier returns, and orders) in the preferred language of the creditor, whether they are domestic or international.



This feature ensures that financial documents align with the language preferences of both customers and suppliers, enhancing communication and clarity for a diverse range of business interactions and in regions with multiple languages. For instance, in a country like South Africa, documents can be generated in languages like Afrikaans or English.

Document layout files - Plugins

Kassabon VM

To print this layout file, the HORECAPOS plugin need to be activated and installed.

HORECAPOS - Shop - Annual subscription -

With this plugin you can create a checkout system specifically for catering.
The use of hand-held computers can speed up the serving of customers and gives you a control of the ordered products.
After recording an order at a table, the ticket printer in the kitchen and/or bar and/or POS pc will be used for the specific printout of the products.
You can specify a product to be a "kitchen" or "bar" product, and thus the printer specified is used to print the order.
You can even use product options such as butter, mustard, bread, etc. if the customer chooses that.
Products can be selected through a quick search function based on the starting letter of the product.
Or through icon based images of the product group and ultimately the product.

See Video of the latest version(Dutch) Video of an older version(Dutch) .

If not activated and configured, the following error message is displayed:

```
C:\osfinancials5\plug_ins\reports\DOCUMENTS\documents\Kassabon  VM.rep
has errors TABLENO:Dynamic SQL Error

Quotes

You may need to produce a quote for your debtors (customers / clients). When the quote is accepted, you may confirm the quote (convert the Quote to an Invoice).

Quotes cannot be updated (posted) to the ledger and it generates no transactions. But, once the Quote has been converted to an Invoice, the Invoice can be edited (if necessary) and updated (posted) to the ledger.

The following options is available to convert Quotes to Invoices:

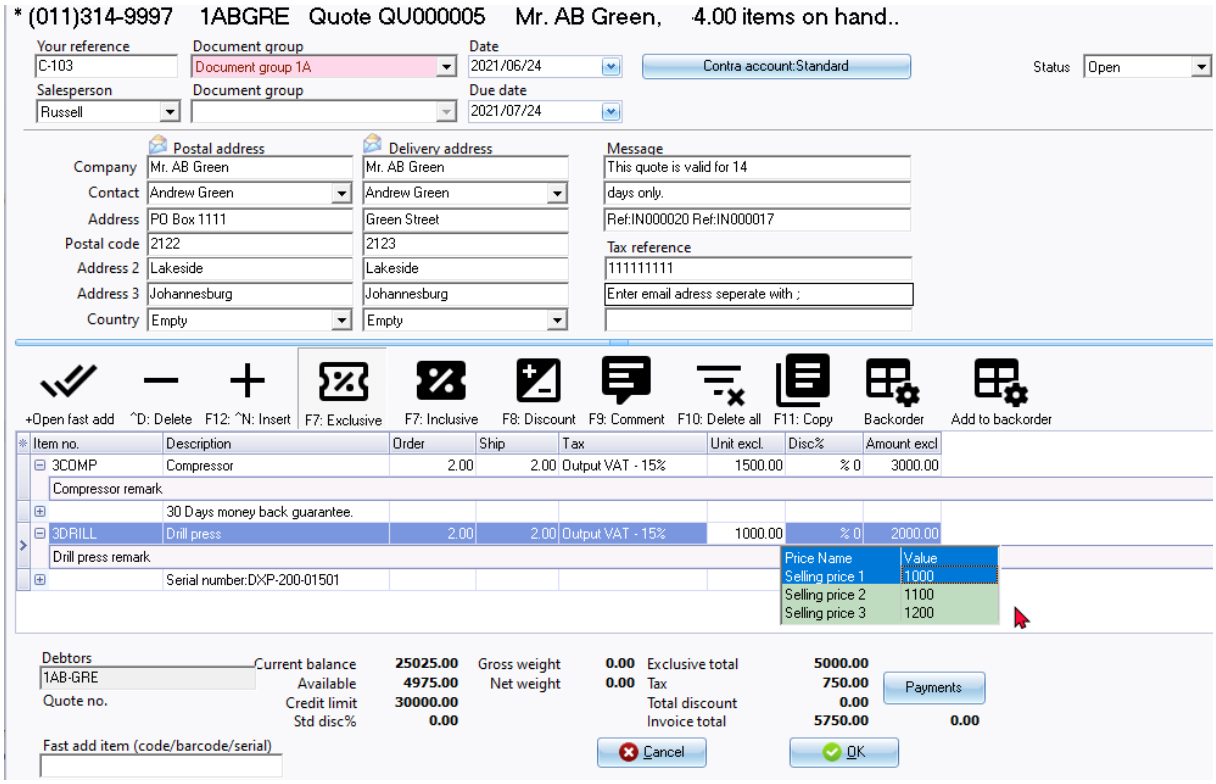
- *Confirm quotes and orders context menu option on the "Document entry" list screen for the Quote document type.*
- *Input → Confirm menu.*

Options to create / edit Quotes:

1. *New - On the "Quotes" screen, click the New button. Select a debtor (customer / client) account on the "Debtor accounts" list screen.*
2. *Edit - On the "Quotes" screen, click the Edit button.*
3. *Copy - "Documents → Copy document" or "Documents → Copy to → Quotes" option on context menu (right-click).*

Unposted Quote entry form

The sections and fields of the Quote form, is as follows:



1. Document header:

   a) Your reference - You may enter a reference. This will allow you to track down the reference in the Search (Investigator) on the Default ribbon. All documents matching the reference will be listed.

   b) Salesperson - Select a Salesperson. This field is to show who handled the Quote. The salespersons are used for reports and to filter and search documents.

   c) Document group 1/2 - Select Document group 1 / 2 - These groups are used for reports and to filter and search documents.

   d) Date - By default, the system date will be displayed. You may enter or select any other date.

   e) Due date - This date will be automatically be calculated. It is the "*Date*" plus the number of days set in the Accounting information tab of the selected debtor (customer / client) account.

   f) Postal address - The postal address as entered for the debtor (customer / client).

   g) Delivery address - The delivery address as entered for the debtor (customer / client) on the Delivery address tab.

   h) Message - The message, as entered in Setup → Documents setup - Quotes tab (Setup ribbon) will be displayed. You may edit / enter messages to be printed on the document layout file.

> *Message line 3 - Reference document numbers converted or copied document(s).*

i) Tax reference - The Tax (VAT/GST/Sales tax) registration number as entered for the debtor (customer / client).

j) Contra account:Standard - This is the default setting. If you click on this button, you may select a different account. The account code will then be displayed.

k) Status - Open, Confirmed and Posted.

2. Document lines:

a) Item no. - Select a stock item.

Options to select stock items:

- *Stock item lookup - Use the down arrow key to launch the Stock lookup.*
- *+ Open Fast add*
- *Enter the stock code, bar code or serial number in the document footer.*

The following stock item types may be selected to process Sales documents (Quotes, Invoices and Credit notes):

- *Default (trading stock items)*
- *Sales*
- *Sales (No stock)*
- *Financial entry*
- *Option item*
- *Option item (No stock)*
- *BOM (Bill of Materials)*
- *BOM (Bill of Materials) - Production*
- *Linked item*

If the Financial entry stock item type is selected, the Accounts lookup screen will be displayed. The description of the selected account will be displayed. You may overtype this.

If Abbreviation definitions were set in the Batch entry menu (F9:Process), you may enter a character (or more) to auto-complete a description in the document line.

b) Remark - You may also click on the + (before stock item code) to add a remark (additional information) for a stock item. This remark will be printed before the comment (if added) on document layout files.

Remarks are similar than comments. You may click on the + icon (before the stock code) to add a remark for the stock item.

You may select Expand to show remarks or Collapse to hide remarks on the context menu.

c) Comment - You may click on the F9:Comment icon or press the F9 key to add additional information. This comment will be printed on document layout files.

Search (Investigator)

- *Comments entered in document lines are searchable.*
- *Remarks is not searchable.*

d) Order - The default quantity is 1. You may overtype the quantities.

e) Ship - The default quantity is 1. You may overtype the quantities.

f) Unit price - If up to three (3) selling prices have been entered in in the Selling price field for the selected stock item, the selling prices will be listed. The default selling price will be selected for the Set of Books or the selling price set as default for the selected debtor (customer / client) account. You may select any of the three (3) selling prices for the item. Selling prices Exclusive of VAT/GST/Sales Tax, if the F7:Exclusive icon is active - or Inclusive of VAT/GST/Sales, Tax if the F7:Inclusive icon is active.

Selling prices

If you have entered up to three (3) sales prices for a stock item (inventory / product), the selling prices will be listed when you focus in the "Unit" (amount) column.

You can set the global default selling prices 1 / 2 / 3 in the Setup → Stock information (Setup ribbon) which will apply to all debtors (customers / clients).

You can also set the default selling price 1 / 2 / 3 in the Debtors - Accounting information tab (Default ribbon) which will apply to a specific debtor (customer / client).

g) Discount - You may enter the discount percentage for the item.

h) Amount exclusive - This will is the quantities in the Ship field x Unit price. If any discount percentage is entered, the discount will be deducted from the unit price.

You may use the F11: Copy feature to copy the document transactions / comments from

an existing document.

3. Document footer:
    a) Fast add item (code / barcode / serial) - Enter the stock code, barcode or serial number. Press enter to add the item to the document lines.
    b) Current balance - The balance of all posted and unposted documents for the debtor (customer / client).
    c) Available - The available balance is calculated as the Credit limit minus the Current balance. When processing documents, and the credit limit is exceeded, a warning message will be displayed.
    d) Credit limit - The credit limit as entered for the debtor (customer / client) on the Accounting information tab.
    e) Std disc% - Standard discount percentage is only applicable to debtor (customer / client) accounts. The discount percentage as entered for the debtor (customer / client) in the Customer discount field on the Accounting information tab.
4. Click on the OK button.

By default, a confirmation message will be displayed.

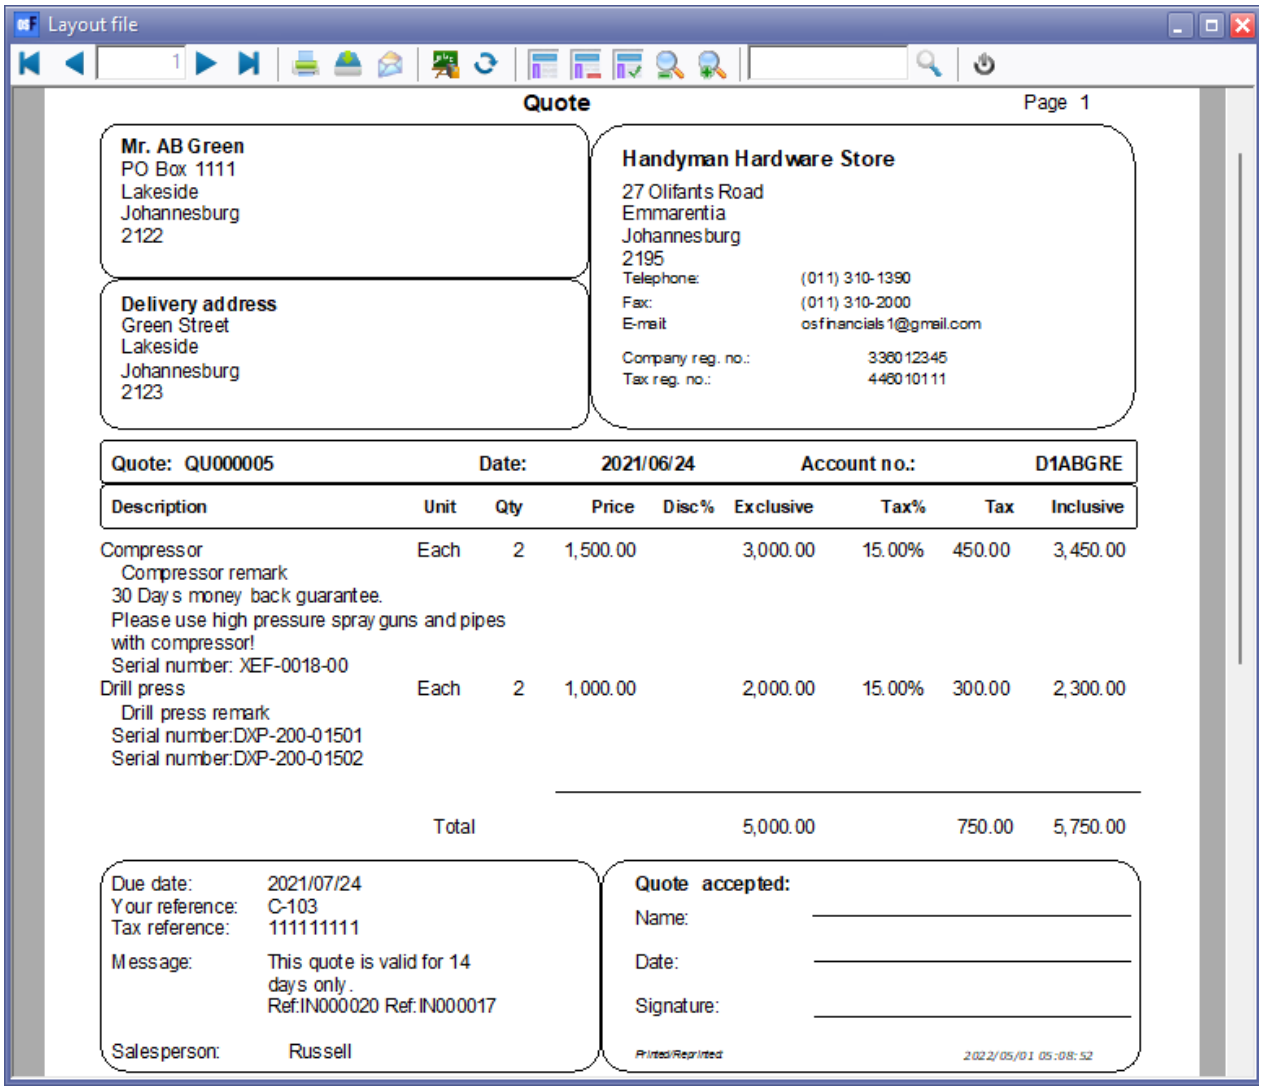
"Do you wish to print this quote?"

You may turn this feature off by selecting the "No print confirmation" option on Stock information (Setup ribbon).

5. Click on the Yes button to print the Quote.

Printed : Quote

An example of the printed "*Quote*", is as follows:



This example is based on the "Layout file". You may select other available layout files.

Created with the Standard Edition of HelpNDoc: Free EPub producer

Invoices

Invoices are created for debtors (customers / clients). This will generate a source document which can be printed. The Invoice, can be edited before it is posted (updated) to the ledger.

When an Invoice is posted (updated) to the ledger, the transactions in the Sales journal (or the batch selected in the Setup → Documents setup - Invoices tab on the Setup ribbon) will automatically be generated.

Posted (updated) Invoices cannot be edited.

You may right-click and use the Move up, Move down and Sort on stock code options on the context menu to change the sequence of the document lines.

This will change the sequence of transactions and/or comments on document layout files when printing or reprinting documents.

If you need to cancel or correct a posted (updated) Invoice, you need to process a Credit note.

You may use the Reverse posted batch / document option on Global processes menu (Setup ribbon).

The reversed document may then be selected and edited. It can then be posted (updated) to the ledger.

Quotes cannot be updated (posted) to the ledger and it generates no transactions. But, once the Quote has been converted to an Invoice, the Invoice can be edited (if necessary) and updated (posted) to the ledger.

Options to create / edit Invoices:

1. *New - On the "Invoices" screen, click the New button. Select a debtor (customer / client) account on the "Debtor accounts" screen.*
2. *Edit - On the "Invoices" screen, click the Edit button.*
3. *Copy - "Documents → Copy document" or "Documents → Copy to → Invoice" option on context menu (right-click).*
4. *Confirm quotes - On "Quotes" document type, select "Documents → Confirm quotes and orders" option on context menu (right-click). (You may also confirm Orders on the Input → Confirm menu (Default ribbon)).*

1. *Edit → Repeating invoices*
2. *Calendar (Repeating invoices)*
3. *Calendar (Invoices for hours)*
4. *Calendar (Create invoice - context menu option).*
5. *Calendar (Bulk time entry)*

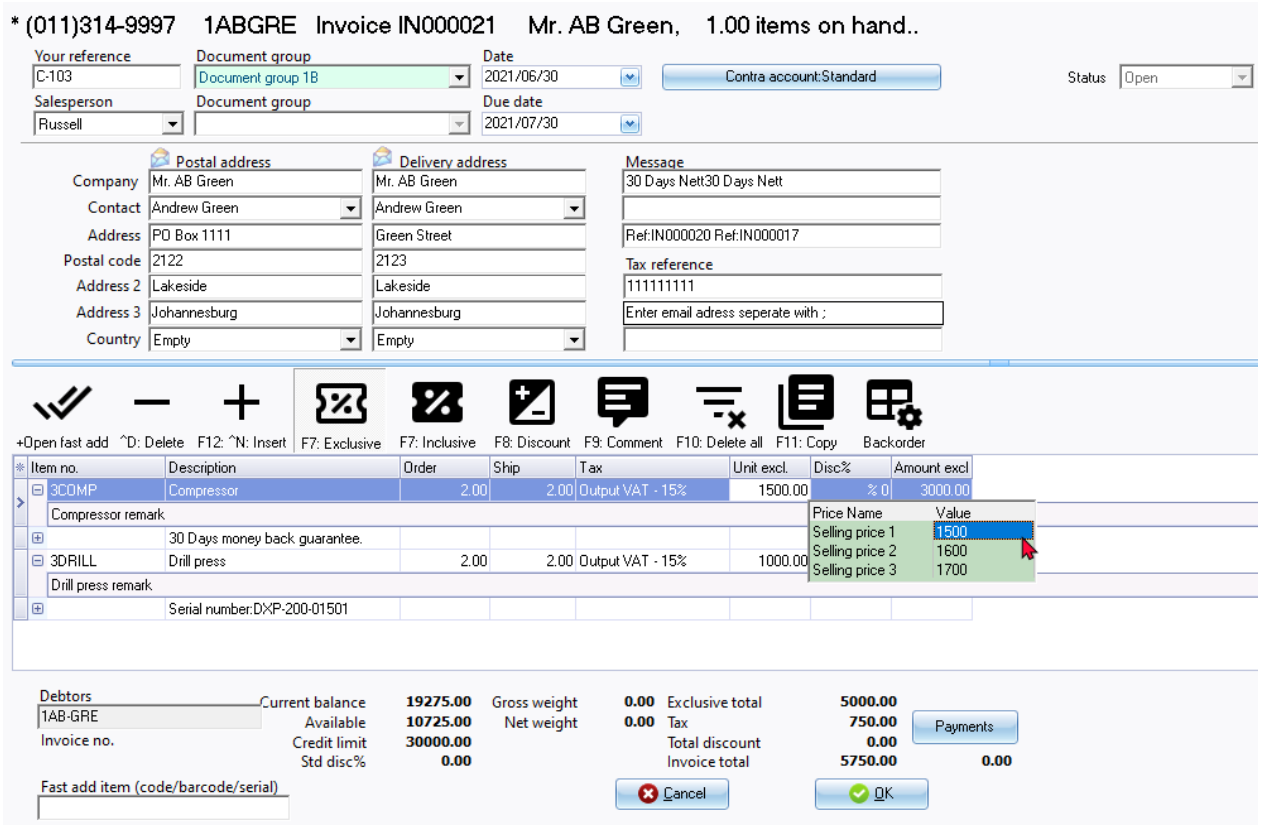
Convert invoice to order

If you have already created invoices (whether they are updated to the ledger (posted) or not), you may convert the Invoice to an Order. To do this, select the Invoice on the documents list and right-click and select the Documents → Convert invoice to an order option from the context menu.

You may then edit the order and convert it to a purchase document.

Unposted Invoice entry form

The sections and fields of the Invoice screen, is as follows:



The Backorder icon will only be displayed if a backorder is activated for stock items on invoices or quotes.

1. Document header:

    a) Your reference - You may enter a reference. This will allow you to track down the reference in the Search (Investigator) on the Default ribbon. All documents matching the reference will be listed.

    b) Salesperson - Select a Salesperson. This field is to show who handled the Invoice. The salespersons are used for reports and to filter and search documents.

    c) Document group 1/2 - Select Document group 1 / 2 - These groups are used for reports and to filter and search documents.

    d) Date - By default, the system date will be displayed. You may enter or select any other date.

    e) Due date - This date will be automatically be calculated. It is the "*Date*" plus the number of days set in the Accounting information tab of the selected debtor (customer / client) account.

    f) Postal address - The postal address as entered for the debtor (customer / client).

g) Delivery address - The delivery address as entered for the debtor (customer / client) on the Delivery address tab.

h) Message - The message, as entered in Setup → Documents setup - Invoices tab (Setup ribbon) will be displayed. You may edit / enter messages to be printed on the document layout file.

If a Quote is confirmed and converted to an Invoice, the message as entered in the Documents setup - Quotes tab (Setup ribbon) will be displayed. You may remove or edit the Quote message.

Message line 3 - Reference document numbers

- *Quote number for confirmed and converted Quote will be displayed.*
- *Document number of the copied document.*

i) Tax reference - The Tax (VAT/GST/Sales tax) registration number as entered for the debtor (customer / client).

j) Contra account:Standard - This is the default setting. If you click on this button, you may select a different account. The account code will then be displayed.

k) Status - Open, Confirmed and Posted.

2. Document lines:

a) Item no. - Select a stock item.

Options to select stock items:

- *Stock item lookup - Use the down arrow key to launch the Stock lookup.*
- *+ Open Fast add*
- *Enter the stock code, bar code or serial number in the document footer.*

Keyboard shortcuts:

- *Alt+F3 - Focus on Quantity ship field.*
- *Ctrl+F3 - Focus on Fast add item (code/barcode/serial) field. Then press scan.*

The following stock item types may be selected to process Sales documents (Quotes, Invoices and Credit notes):

- *Default (trading stock items)*
- *Sales*
- *Sales (No stock)*
- *Financial entry*
- *Option item*
- *Option item (No stock)*
- *BOM (Bill of Materials)*
- *BOM (Bill of Materials) - Production*
- *Linked item*

If the Financial entry stock item type is selected, the Accounts lookup screen will be displayed. The description of the selected account will be displayed. You may overtype this.

If Abbreviation definitions were set in the Batch entry menu (F9:Process), you may enter a character (or more) to auto-complete a description in the document line.

b) Remark - You may also click on the + (before stock item code) to add a remark (additional information) for a stock item. This remark will be printed before the comment (if added) on document layout files.

Remarks are similar than comments. You may click on the + icon (before the stock code) to add a remark for the stock item.

You may select Expand to show remarks or Collapse to hide remarks on the context menu.

c) Comment - You may click on the F9:Comment icon or press the F9 key to add additional information. This comment will be printed on document layout files.

Search (Investigator)

- *Comments entered in document lines are searchable.*
- *Remarks is not searchable.*

d) Order / Ship - The default quantity is 1. You may overtype the quantities.

e) Unit price - If up to three (3) selling prices have been entered in in the Selling price field for

the selected stock item, the selling prices will be listed. The default selling price will be selected for the Set of Books or the selling price set as default for the selected debtor (customer / client) account. You may select any of the three (3) selling prices for the item. Selling prices Exclusive of VAT/GST/Sales Tax, if the F7:Exclusive icon is active - or Inclusive of VAT/GST/Sales, Tax if the F7:Inclusive icon is active.

Orders

You may need to place an order with any of your creditors (suppliers). When the goods are received or services are provided, you may confirm the order against the actual goods received and the original order. You will do this by converting the Order to a Purchase document.

Orders cannot be updated (posted) to the ledger and it generates no transactions. But, once the Order has been converted to a Purchase document, the Purchase document can be edited (if necessary) and updated (posted) to the ledger.

The following options is available to convert Orders to Purchases:

- *Confirm quotes and orders context menu option on the "Document entry" list screen for the Orders document type.*
- *Input → Confirm menu.*

Options to create / edit orders:

1. *New - On the “Orders” screen, click the New button. Select a creditor (supplier / vendor) account on the "Creditor accounts" screen.*
2. *Edit - On the “Orders” screen, click the Edit button.*
3. *Copy - "Documents → Copy document" or "Documents → Copy to → Orders" option on context menu (right-click).*
4. *On "Invoices" screen, select "Documents → Create purchase on default supplier 1" option on context menu (right-click).*

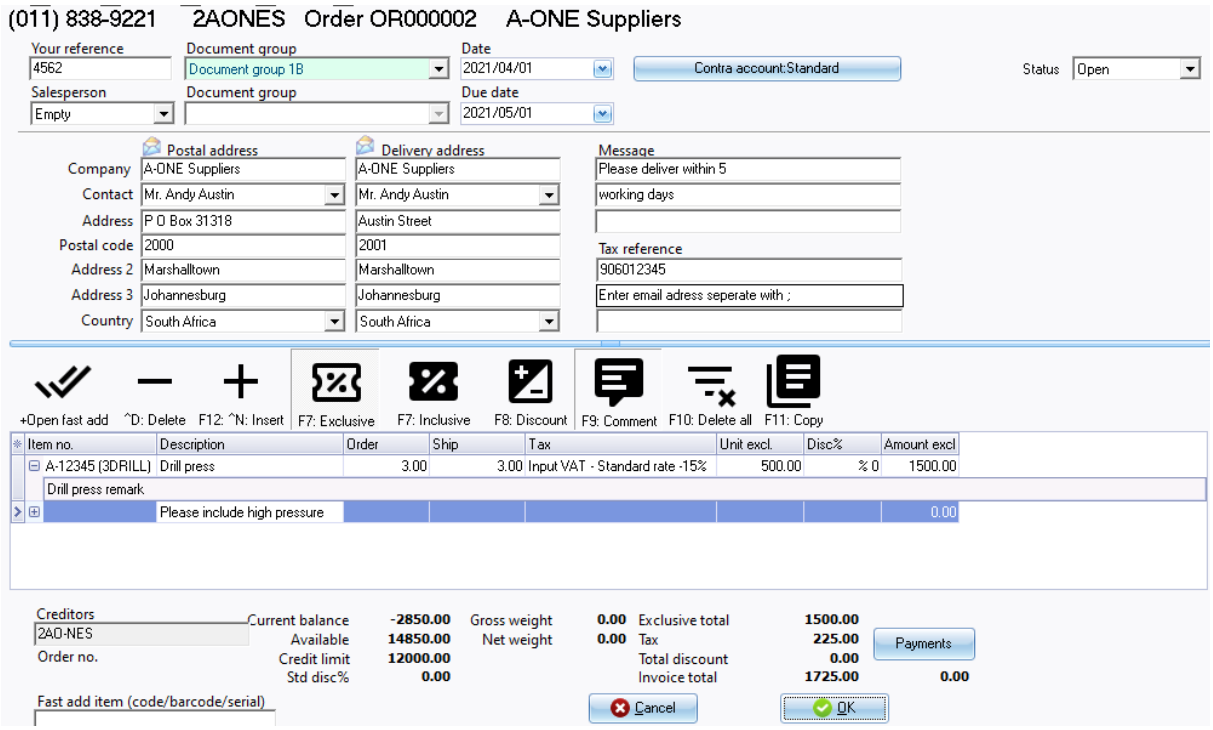
Convert invoice to order

If you have already created invoices (whether they are updated to the ledger (posted) or not), you may convert the Invoice to an Order. To do this, select the Invoice on the documents list and right-click and select the Documents → Convert invoice to an order option from the context menu.

You may then edit the order and convert it to a purchase document.

Unposted Order entry form

The sections and fields of the Order screen, is as follows:



1. Document header:

   a) Your reference - You may enter a reference. This will allow you to track down the reference in the Search (Investigator) on the Default ribbon. All documents matching the reference will be listed.

   b) Salesperson - Select a Salesperson. Salespersons are optional for orders. This field is to show who handled the order. The salespersons are used for reports and to filter and search documents.

   c) Document group 1/2 - Select Document group 1 / 2 - These groups are used for reports and to filter and search documents.

   d) Date - By default, the system date will be displayed. You may enter or select any other date.

   e) Due date - This date will be automatically be calculated. It is the "*Date*" plus the number of days set in the Accounting information tab of the selected creditor account.

   f) Postal address - The postal address as entered for the creditor (supplier / vendor).

   g) Delivery address - The delivery address as entered for the creditor (supplier / vendor) on the Delivery address tab.

   h) Message - The message, as entered in Setup → Documents setup - Orders tab (Setup ribbon) will be displayed. You may edit / enter messages to be printed on the document layout file.

> *Message line 3 - Reference document number(s) of the copied document(s).*

i) Tax reference - The Tax (VAT/GST/Sales tax) registration number as entered for the creditor (supplier / vendor).

j) Contra account:Standard - This is the default setting. If you click on this button, you may select a different account. The account code will then be displayed.

k) Status - Open, Confirmed and Posted.

2. Document lines:

a) Item no. - Select a stock item.

If you have selected a default supplier in the "Preferred supplier 1" and entered a "Supplier stock code" for a specific stock item, the supplier stock code will be displayed in the "Item no." field followed by the Stock item code in brackets.

Only the original Stock code will still print on document layout files.

Options to select stock items:

- *Stock item lookup - Use the down arrow key to launch the Stock lookup.*
- *+ Open Fast add*
- *Enter the stock code, bar code or serial number in the document footer.*

The following stock item types may be selected to process Purchase documents (Orders, Purchases and Supplier returns):

- *Default*
- *Purchases*
- *Purchases (No stock)*
- *Financial entry*
- *Option item*
- *Option item (No stock)*
- *BOM (Bill of Materials)*
- *BOM (Bill of Materials) - Production*
- *Linked item*

If the Financial entry stock item type is selected, the Accounts lookup screen will be displayed. The description of the selected account will be displayed. You may overtype this.

If Abbreviation definitions were set in the Batch entry menu (F9:Process), you may enter a character (or more) to auto-complete a description in the document line.

b) Remark - You may also click on the + (before stock item code) to add a remark (additional information) for a stock item. This remark will be printed before the comment (if added) on document layout files.

Remarks are similar than comments. You may click on the + icon (before the stock code) to add a remark for the stock item.

You may select Expand to show remarks or Collapse to hide remarks on the context menu.

c) Comment - You may click on the F9:Comment icon or press the F9 key to add additional information. This comment will be printed on document layout files.

Search (Investigator)

- *Comments entered in document lines are searchable.*
- *Remarks is not searchable.*

d) Order / Ship - The default quantity is 1. You may overtype the quantities.

e) Unit price - If cost prices have been entered in in the Cost price field for the selected stock item, the cost price will be displayed. Cost prices Exclusive of VAT/GST/Sales Tax, if the F7:Exclusive icon is active - or Inclusive of VAT/GST/Sales, Tax if the F7:Inclusive icon is active.

f) Discount - You may enter the discount percentage for the item.

g) Amount exclusive - This will is the quantities in the Order and Ship field x Unit price. If any discount percentage is entered, the discount will be deducted from the unit price.

You may use the F11: Copy feature to copy the document transactions / comments from an existing document.

3. Document footer:

a) Fast add item (code / barcode / serial) - Enter the stock code, barcode or serial number. Press enter to add the item to the document lines.

b) Current balance - The balance of all posted and unposted documents for the creditor

(supplier / vendor).

c) Available - The available balance is calculated as the Credit limit minus the Current balance. When processing documents, and the credit limit is exceeded, a warning message will be displayed.

d) Credit limit - The credit limit as entered for the creditor (supplier / vendor) on the Accounting information tab.

e) Std disc% - Standard discount percentage is only applicable to debtor (customer / client) accounts.

4. Click on the OK button.

By default, a confirmation message will be displayed.

"Do you wish to print this order?"

You may turn this feature off by selecting the "No print confirmation" option on Stock information (Setup ribbon).

5. Click on the Yes button to print the order.

Purchases

Purchase documents are created creditors (suppliers). This will generate a source document which can be printed. The Purchase document, can be edited before it is posted (updated) to the ledger.

When a purchase document is posted (updated) to the ledger, the transactions in the Purchase journal (or the batch selected in the Setup → Documents setup - Purchases tab on the Setup ribbon) will automatically be generated.

Posted (updated) purchase documents cannot be edited.

You may right-click and use the Move up, Move down and Sort on stock code options on the context menu to change the sequence of the document lines.

This will change the sequence of transactions and/or comments on document layout files when printing or reprinting documents.

If you need to cancel or correct a posted (updated) purchase document, you need to process a Supplier return.

You may use the Reverse posted batch / document option on the Tools → Global processes menu on Setup ribbon.

The reversed document may then be selected and edited. It can then be posted (updated) to the ledger.

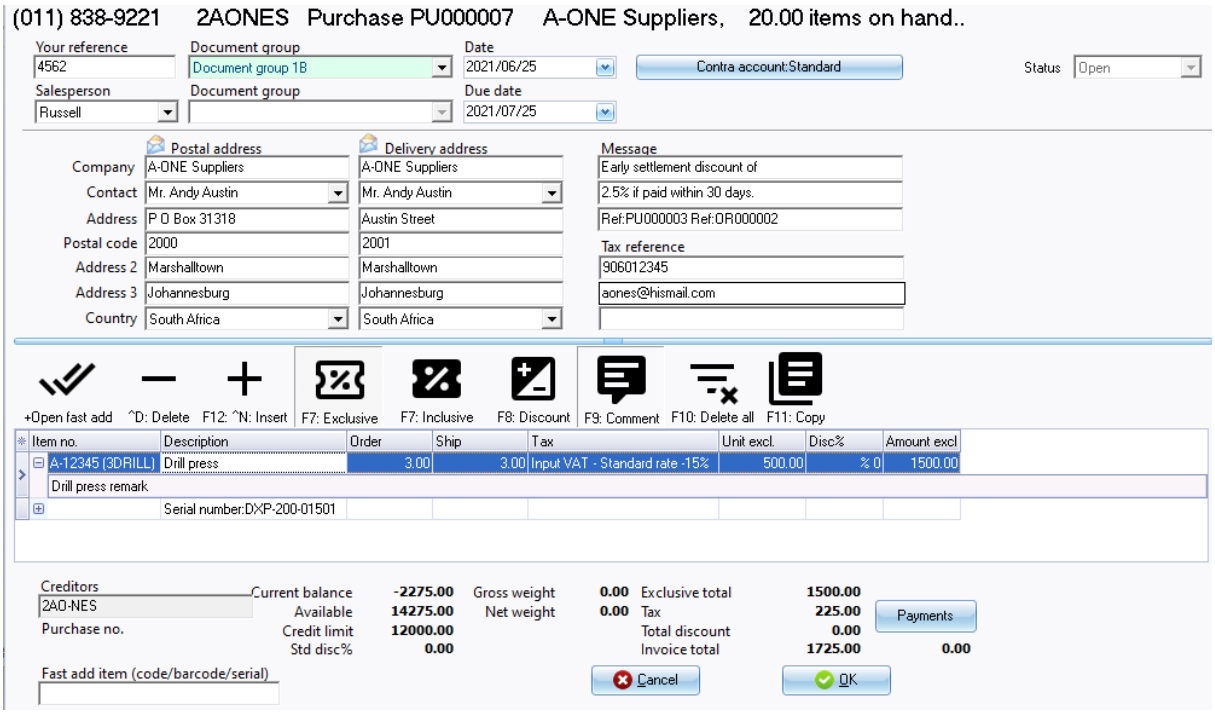
Orders cannot be updated (posted) to the ledger and it generates no transactions. But, once the Order has been converted to a Purchase document, the Purchase document can be updated (posted) to the ledger.

Options to create / edit Purchases:

1. *New - On the "Purchases" screen, click the New button. Select a creditor (supplier / vendor) account on the "Creditor accounts" screen.*
2. *Edit - On the "Purchases" screen, click the Edit button.*
3. *Copy - Copy a selected purchase. "Documents → Copy document" or "Documents → Copy to → Purchases" option on context menu (right-click).*
4. *Confirm orders - On "Orders" document type, select "Documents → Confirm quotes and orders" option on context menu (right-click). (You may also confirm Orders on the Input → Confirm menu (Default ribbon)).*

Unposted Purchase entry form

The sections and fields of the Order screen, is as follows:



1. Document header:

   a) Your reference - You may enter a reference. This will allow you to track down the reference in the Search (Investigator) on the Default ribbon. All documents matching the reference will be listed.

   b) Salesperson - Select a Salesperson. Salespersons are optional for purchases. This field is to show who handled the purchase. The salespersons are used for reports and to filter and search documents.

   c) Document group 1/2 - Select Document group 1 / 2 - These groups are used for reports and to filter and search documents.

   d) Date - By default, the system date will be displayed. You may enter or select any other date.

   e) Due date - This date will be automatically be calculated. It is the "*Date*" plus the number of days set in the Accounting information tab of the selected creditor account.

   f) Postal address - The postal address as entered for the creditor (supplier / vendor).

   g) Delivery address - The delivery address as entered for the creditor (supplier / vendor) on the Delivery address tab.

   h) Message - The message, as entered in Setup → Documents setup - Purchases tab (Setup ribbon) will be displayed. You may edit / enter messages to be printed on the document layout file.

> *If an Order is confirmed and converted to an Invoice, the message as entered in the Documents setup - Orders tab (Setup ribbon) will be displayed. You may remove or edit the Order message.*

Message line 3 - Reference document numbers

- *Order number for confirmed and converted Order will be displayed.*
- *Document number of the copied document.*

i) Tax reference - The Tax (VAT/GST/Sales tax) registration number as entered for the creditor (supplier / vendor).

j) Contra account:Standard - This is the default setting. If you click on this button, you may select a different account. The account code will then be displayed.

k) Status - Open, or Posted.

2. Document lines:

a) Item no. - Select a stock item.

Options to select stock items:

- *Stock item lookup - Use the down arrow key to launch the Stock lookup.*
- *+ Open Fast add*
- *Enter the stock code, bar code or serial number in the document footer.*

If you have selected a default supplier in the "Preferred supplier 1" and entered a "Supplier stock code" for a specific stock item, the supplier stock code will be displayed in the "Item no." field followed by the Stock item code in brackets.

Only the original Stock code will still print on document layout files.

The following stock item types may be selected to process Purchase documents (Orders, Purchases and Supplier returns):

- *Default*
- *Purchases*
- *Purchases (No stock)*
- *Financial entry*
- *Option item*
- *Option item (No stock)*
- *BOM (Bill of Materials)*

- *BOM (Bill of Materials) - Production*
- *Linked item*

If the Financial entry stock item type is selected, the Accounts lookup screen will be displayed. The description of the selected account will be displayed. You may overtype this.

If Abbreviation definitions were set in the Batch entry menu (F9:Process), you may enter a character (or more) to auto-complete a description in the document line.

b) Remark - You may also click on the + (before stock item code) to add a remark (additional information) for a stock item. This remark will be printed before the comment (if added) on document layout files.

Remarks are similar than comments. You may click on the + icon (before the stock code) to add a remark for the stock item.

You may select Expand to show remarks or Collapse to hide remarks on the context menu.

c) Comment - You may click on the F9:Comment icon or press the F9 key to add additional information. This comment will be printed on document layout files.

Search (Investigator)

- *Comments entered in document lines are searchable.*
- *Remarks is not searchable.*

d) Order / Ship - The default quantity is 1. You may overtype the quantities.

e) Unit price - If cost prices have been entered in in the Cost price field for the selected stock item, the cost price will be displayed. Cost prices Exclusive of VAT/GST/Sales Tax, if the F7:Exclusive icon is active - or Inclusive of VAT/GST/Sales, Tax if the F7:Inclusive icon is active.

f) Discount - You may enter the discount percentage for the item.

g) Amount exclusive - This will is the quantities in the Order and Ship field x Unit price. If any discount percentage is entered, the discount will be deducted from the unit price.

You may use the F11: Copy feature to copy the document transactions / comments from an existing document.

3. Document footer:
    a) Fast add item (code / barcode / serial) - Enter the stock code, barcode or serial number. Press enter to add the item to the document lines.
    b) Current balance - The balance of all posted and unposted documents for the creditor (supplier / vendor).
    c) Available - The available balance is calculated as the Credit limit minus the Current balance. When processing documents, and the credit limit is exceeded, a warning message will be displayed.
    d) Credit limit - The credit limit as entered for the creditor (supplier / vendor) on the Accounting information tab.
    e) Std disc% - Standard discount percentage is only applicable to debtor (customer / client) accounts.
4. Click on the OK button.

By default, a confirmation message will be displayed.

"Do you wish to print this order?"

You may turn this feature off by selecting the "No print confirmation" option on Stock information (Setup ribbon).

5. Click on the Yes button to print the Purchase.

Supplier returns

Supplier returns are created creditors (suppliers) to correct a transaction or an exiting Purchase or to cancel the Purchase. This will generate a source document which can be printed. The Supplier returns, can be edited before it is posted (updated) to the ledger.

When a Supplier return is posted (updated) to the ledger, the transactions in the Purchase journal (or the batch selected in the Setup → Documents setup - Supplier returns tab on the Setup ribbon) will automatically be generated.

Posted (updated) Supplier returns cannot be edited.

You may right-click and use the Move up, Move down and Sort on stock code options on the context menu to change the sequence of the document lines.

This will change the sequence of transactions and/or comments on document layout files when printing or reprinting documents.

You may use the Reverse posted batch / document option on Tools → Global processes menu on Setup ribbon.

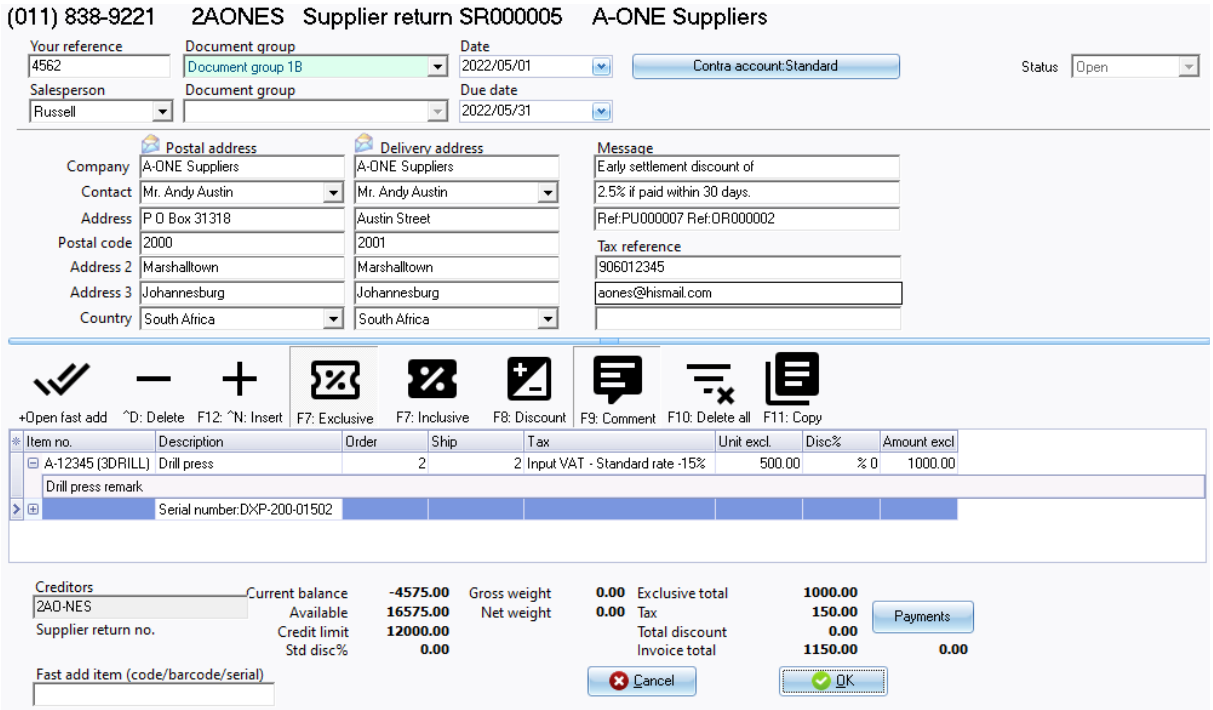
The reversed document may then be selected and edited. It can then be posted (updated) to the ledger.

Options to create / edit Supplier returns:

1. *New - On the "Supplier returns" screen, click the New button. Select a creditor (supplier / vendor) account on the "Creditor accounts" screen.*
2. *Edit - On the "Supplier returns" screen, click the Edit button.*
3. *Copy - Copy a selected purchase. "Documents → Copy document" or "Documents → Copy to → Supplier return" option on context menu (right-click).*
4. *On "Puechases" screen, select "Documents → Convert to credit note / supplier return" option on context menu (right-click).*

Unposted Supplier return entry form

The sections and fields of the Supplier return screen, is as follows:



1. Document header:

    a) Your reference - You may enter a reference. This will allow you to track down the reference in the Search (Investigator) on the Default ribbon. All documents matching the reference will be listed.

    b) Salesperson - Select a Salesperson. Salespersons are optional for supplier returns. This field is to show who handled the supplier return. The salespersons are used for reports and to filter and search documents.

    c) Document group 1/2 - Select Document group 1 / 2 - These groups are used for reports and to filter and search documents.

    d) Date - By default, the system date will be displayed. You may enter or select any other date.

    e) Due date - This date will be automatically be calculated. It is the "*Date*" plus the number of days set in the Accounting information tab of the selected creditor account.

    f) Postal address - The postal address as entered for the creditor (supplier / vendor).

    g) Delivery address - The delivery address as entered for the creditor (supplier / vendor) on the Delivery address tab.

    h) Message - You may enter messages to be printed on the document layout file. The message, as entered in Setup → Documents setup - Supplier returns tab (Setup ribbon) will be displayed. You may edit / enter messages to be printed on the document layout file.

    > *Message line 3 - Reference document number(s) of the copied document(s).*

    i) Tax reference - The Tax (VAT/GST/Sales tax) registration number as entered for the creditor (supplier / vendor).

    j) Contra account:Standard - This is the default setting. If you click on this button, you may select a different account. The account code will then be displayed.

    k) Status - Open or Posted.

Confirm Quotes and Orders

Confirm and convert Quotes to Invoices

Once the debtor (customer / client) accepts the Quote, it can then be confirmed and converted to an Invoice. Once a quote is confirmed and converted to an invoice, you may need to edit the Invoice, before

you update (post) the invoice to the ledger.

The following options is available to confirm and convert Quotes to Invoices:

- Input → Confirm menu on the Default ribbon.
- Documents → Confirm quotes and orders option on the context menu, (on the Document entry selection screen), if the Quotes document type is selected.

Confirm and convert Orders to Purchases

Once the creditor (supplier / vendor) delivers the Order, it can then be confirmed and converted to a Purchase. Once a Order is confirmed and converted to a Purchase document, you may need to edit the Purchase, before you update (post) the Purchase to the ledger.

The following options is available to confirm and convert Orders to Purchases:

- Input → Confirm menu on the Default ribbon.
- Documents → Confirm quotes and orders option on the context menu, (on the Document entry selection screen), if the Orders document type is selected.

Created with the Standard Edition of HelpNDoc: Streamline Your Documentation Creation with a Help Authoring Tool

Confirm Quotes

Once the debtor (customer / client) accepts the Quote, it can then be confirmed and converted to an Invoice. Once a Quote is confirmed and converted to an Invoice, you may need to edit the Invoice, before you update (post) the Invoice to the ledger.

The debtor (customer / client) may, when accepting the Quote, not accept all the items on the Quote, or may add some more items on the Quote. In this case, you may edit the Quote (Documents) (Default ribbon), before you confirm the Quote and convert it to an Invoice.

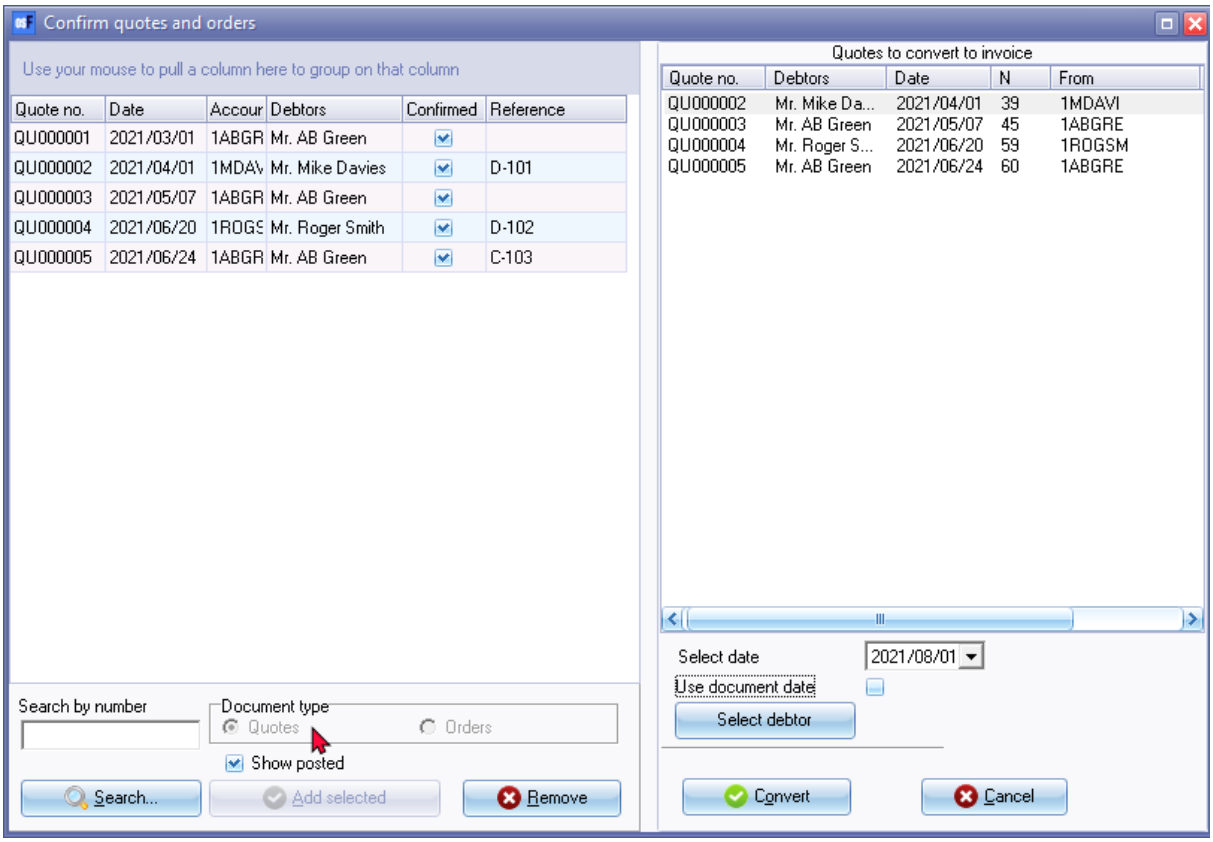
If you have already confirmed a Quote and converted it to an Invoice, and there are still any discrepancies in the Quote, for example the correct quantities of goods accepted, you may edit the Invoice (Documents) (Default ribbon), before you update (post) the Invoice to the ledger.

If you did not edit the Invoice (converted Quote), you will then need to process a Credit note to correct the updated (posted) Invoice with the incorrect amounts and quantities.

Quotes may also be converted to Invoices on the Confirm quotes and orders context menu option on the "Document entry" list screen for the Quotes document type.

To confirm and convert a Quote to an Invoice:

1. On the Default ribbon, select Input → Confirm (Shift + F3).



2. Select Quotes in the "*Document type*" field. The screen will change to reflect Quotes, Invoices and Debtors, and a list of the Quotes.

By default, only the open and unconfirmed Quotes will be listed. To list the confirmed (Quotes already confirmed and converted to Invoices) select (tick) the "Show posted" field.

3. Select the Quotes to be confirmed and converted to Invoices. Click on the Add selected button. The selected Quotes will be transferred to the "*Quotes to convert to invoice*" section of the screen.

4. Enter or select the Date on which the Quotes was accepted, if necessary.

By default, the system date is displayed. You may select (tick) the "Use document date" option. The Quotes will be converted to Invoices using the original document date.

5. Click on the Convert button. A confirmation message is displayed:

"Do you wish to delete all Quotes?"

6. Click on the Yes button to convert the Quotes to Invoices and to delete the Quotes.

If you click on the No button, the selected Quotes will still be confirmed and converted to Invoices. These Quotes will still be available to edit.

You may delete the Quotes manually in Edit → Delete → Documents menu on the Default ribbon.

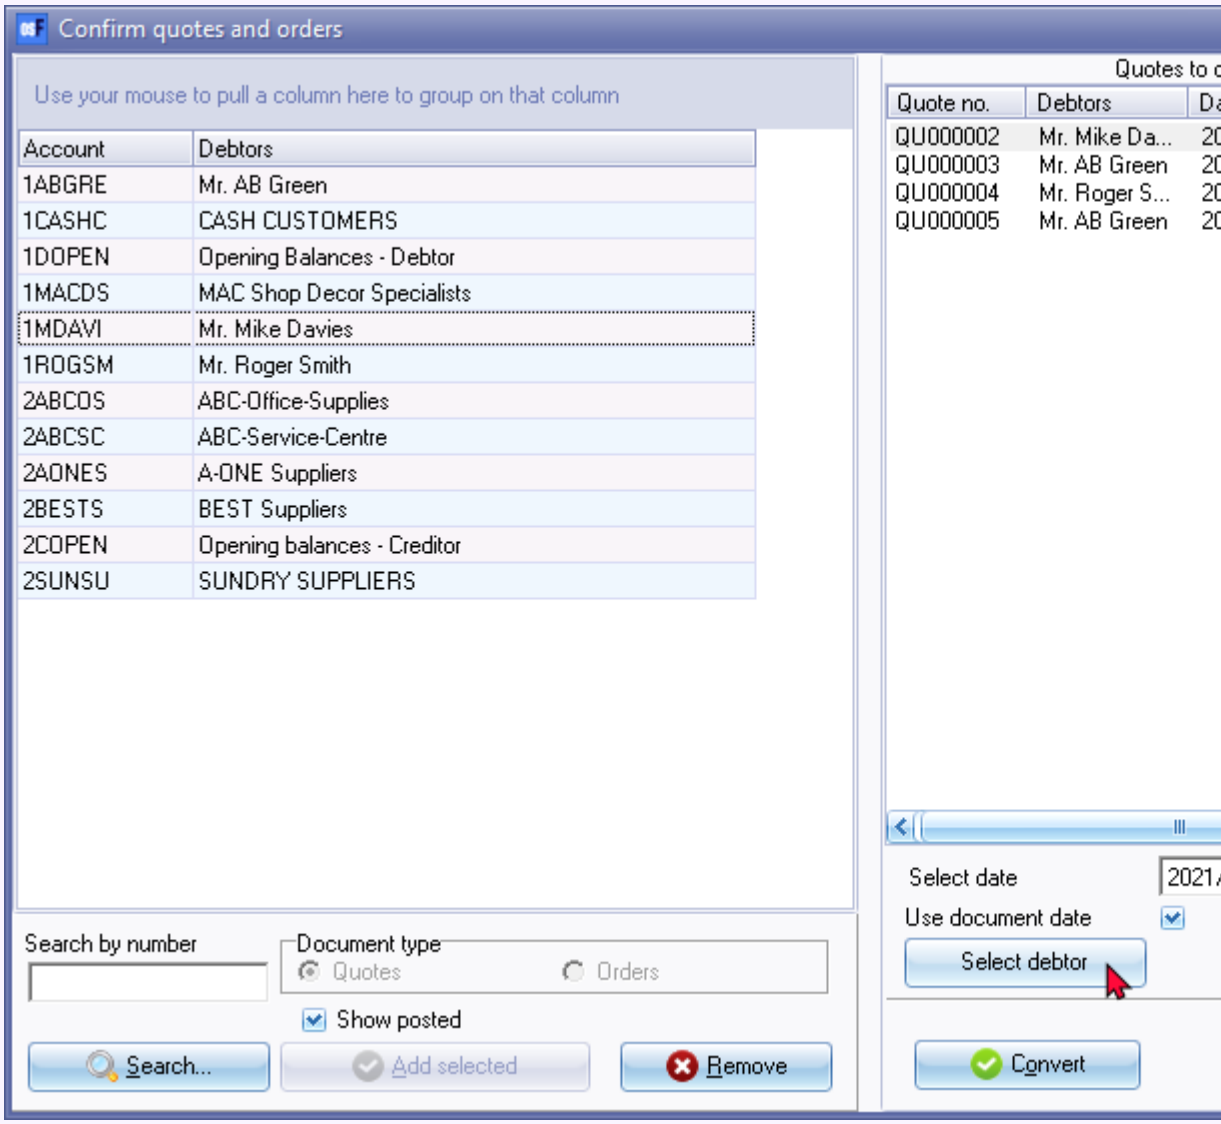
7. The Quotes will be removed from the "*Quote to convert to invoice*" list, and will be ready to be edited in the Invoices document type on the Document list screen.

8. Click on the Cancel button, or press the Esc key on your keyboard, to close or exit this screen.

You may also search for a specific Quote by entering the Quote number, and click on the Search button.

You may also select a specific Debtor (customer / client) account by clicking on the Select debtor button. The screen w

Quotes to the lookup for Debtor (customer / client) accounts. (It also includes Creditor (supplier / vendor) accounts).



Select the Debtor (customer / client) account and click on the OK button. The screen will change to the normal screen displayed.

Created with the Standard Edition of HelpNDoc: Easily create EPub books

Confirm Orders

Once the creditor (supplier / vendor) delivers the Order, it can then be confirmed and converted to a Purchase. Once a Order is confirmed and converted to a Purchase document, you may need to edit the Purchase, before you update (post) the Purchase to the ledger.

When the creditor (supplier / vendor) delivers the stock items or products, you may discover that some items are damaged or not included in the order, you may remove or add some more items on the Order. In this

case, you may edit the Order (Documents) (Default ribbon), before you confirm the Order and convert it to an Purchase.

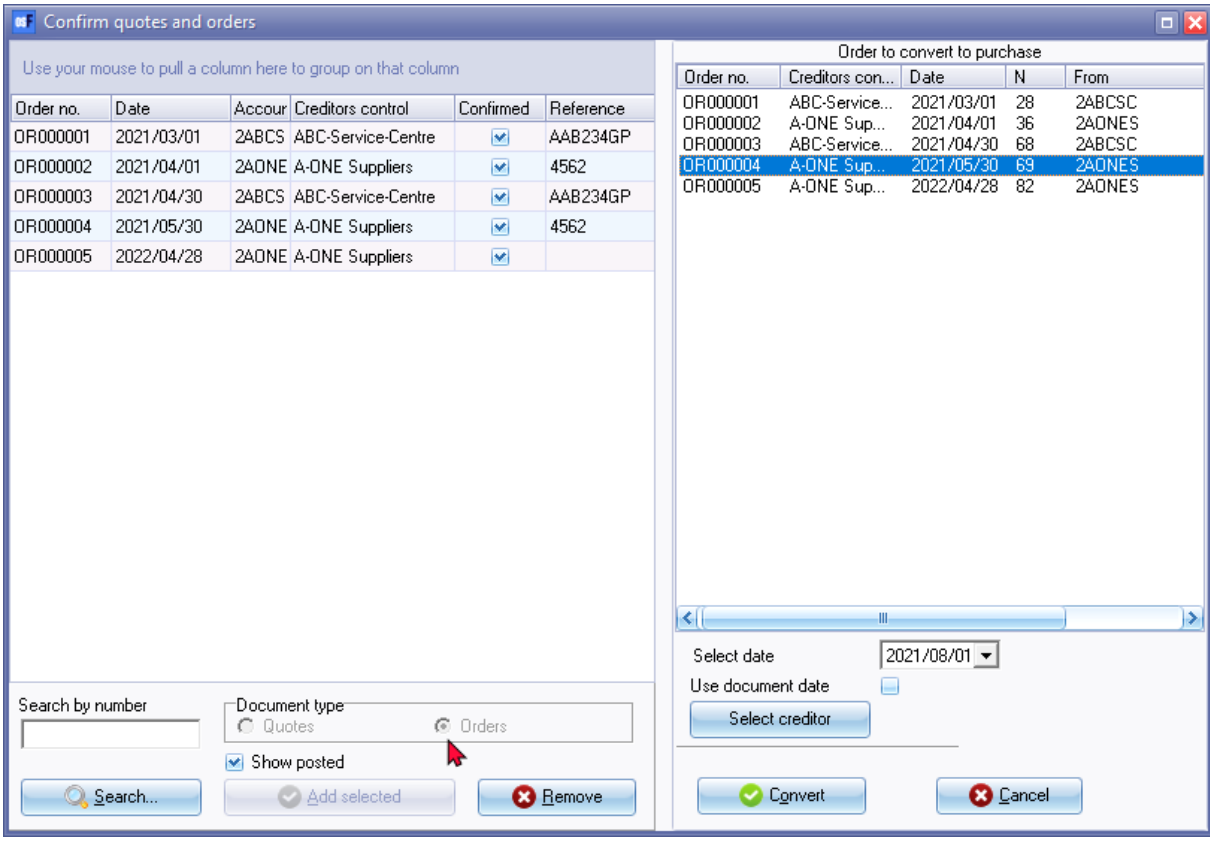
If you have already confirmed an Order and converted it to a Purchase, and there are still any discrepancies in the Order, for example the correct quantities of goods accepted, you may edit the Purchase (Documents) (Default ribbon), before you update (post) the Purchase to the ledger.

If you did not edit the Purchase (converted Order), you will then need to process a Supplier return to correct the updated (posted) Purchase with the incorrect amounts and quantities.

Orders may also be converted to Purchases on the Confirm quotes and orders context menu option on the "Document entry" list screen for the Orders document type.

To confirm and convert an Order to a Purchase:

1. On the Default ribbon, select Input → Confirm (Shift + F3).



2. Select Orders in the "*Document type*" field. The screen will change to reflect Orders, Purchases and Creditors, and a list of the Orders.

By default, only the open and unconfirmed Orders will be listed. To list the confirmed (Orders already confirmed and converted to Purchases) select (tick) the "Show posted" field.

3. Select the Orders to be confirmed and converted to to Invoices. Click on the Add selected button. The selected Orders will be transferred to the "*Order to convert to purchase*" section of the screen.

4. Enter or select the Date on which the Order was accepted, if necessary.

By default, the system date is displayed. You may select (tick) the "Use document date" option. The Orders will be converted to invoices using the original document date.

5. Click on the Convert button. A confirmation message is displayed:

"Do you wish to delete all Orders?"

6. Click on the Yes button to convert the selected Orders to Purchases and to delete the Orders.

If you click on the No button, the selected Orders will still be confirmed and converted to Purchases. These Orders will still be available to edit.

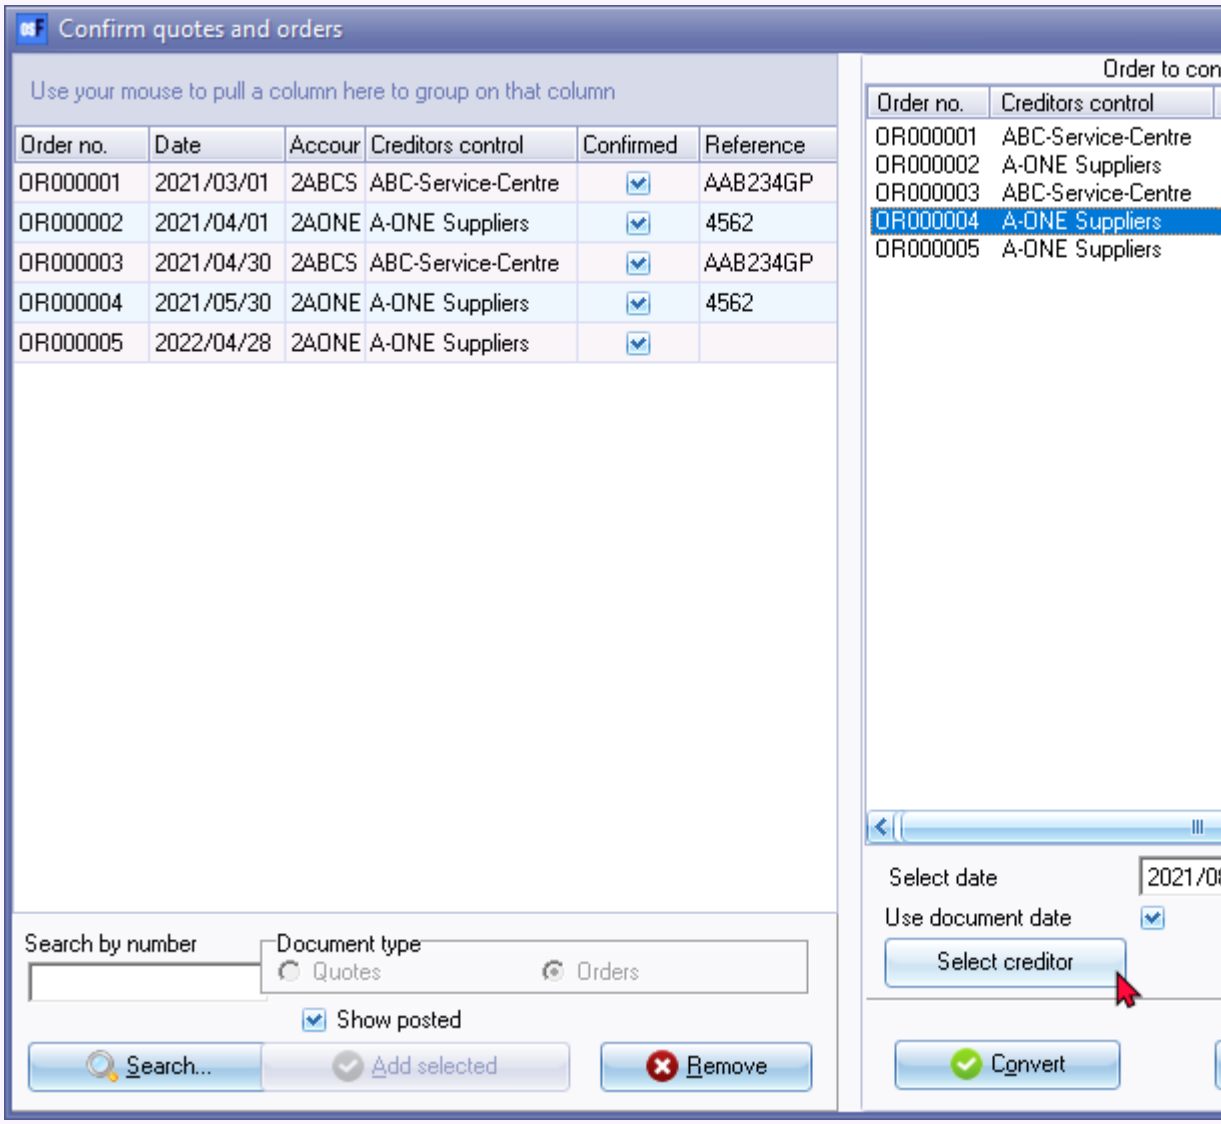
You may delete the Orders manually in Edit → Delete → Documents menu on the Default ribbon.

7. The Orders will be removed from the "*Order to convert to purchase*" list, and will be ready to be edited in the Purchases document type on the Document list screen.

8. Click on the Cancel button, or press the Esc key on your keyboard, to close or exit this screen.

You may also search for a specific Order by entering the Order number, and click on the Search button.

You may also select a specific Creditor account by clicking on the Select creditor button. The screen will change from lookup for Creditor (supplier / vendor) accounts. (It also includes Debtor (customer / client) accounts).



Select the Creditor account and click on the OK button. The screen will change to the normal screen and the available

Repeating invoices

You may select Invoices from the Invoice history which occur frequently or on a regular basis (e.g. every month) and to set them as repeating invoices.

In addition to this feature, you may schedule Repeating invoices as events in Calendar (Default ribbon). You may select to generate Invoices for selected Invoices or Quotes from the Invoice History List to one or many Debtor accounts.

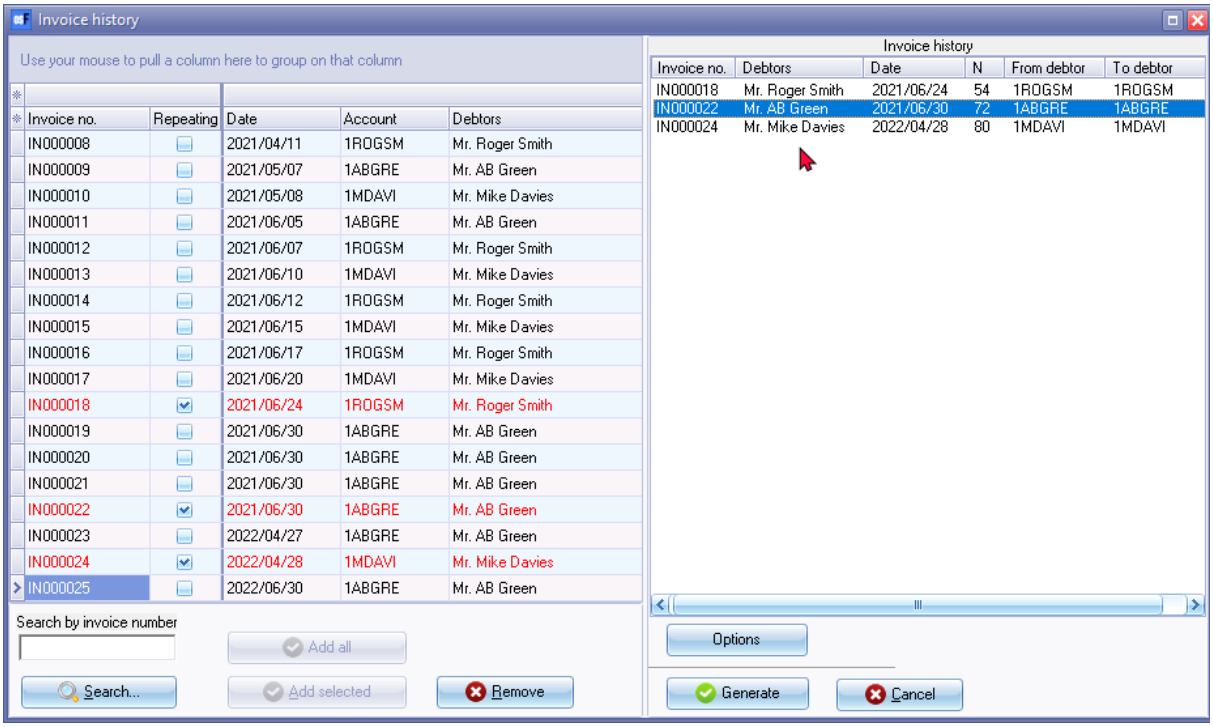
Once selected Invoices are generated, osFinancials5/TurboCASH5 will generate Invoice numbers and the transactions will be copied into normal Invoice documents for the selected debtor or debtors.

To check and /or edit these Invoices you need to access the Invoices (Documents on the Default ribbon) and select the Debtor account for which you have copied a repeating Invoice.

Finally, you need to update (post) the Invoices to the ledger for the selected debtor or debtors. This feature saves you the extra work of entering these Invoices each month.

To generate repeating invoices:

1. On the Default ribbon, select Edit → Repeating invoices. The *Invoice History* screen will be displayed. The "*Invoice History*" screen will list all the posted and unposted Invoices associated for your debtors (customers / clients). These Invoices will be listed according to the Invoice Number:



2. Select the Invoices to repeat. You have two (2) basic options to select and copy the Invoices to the "*Invoice history*" field.

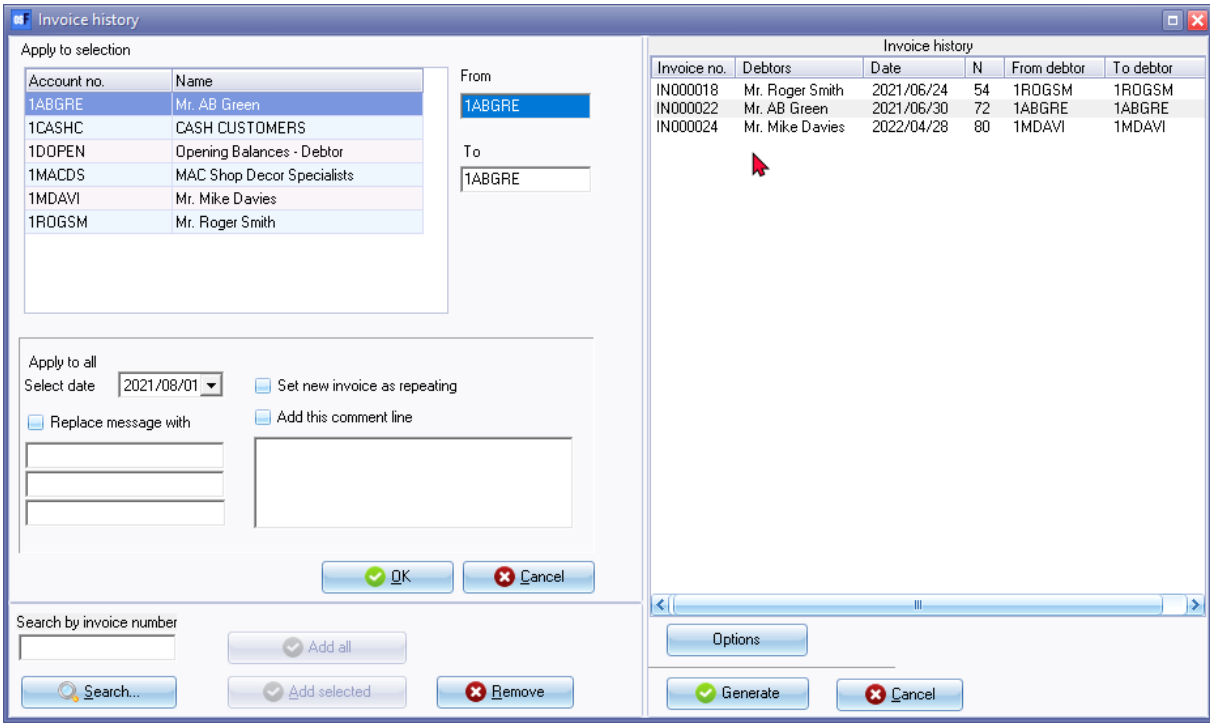
    a) Select and highlight an Invoice and click on the Add sel. (Add Selected) button to transfer only the selected Invoice to the "*Invoice history*" field.

    b) Select the Invoices to repeat, and mark them as Repeating and click on the Add all button to transfer all the selected marked Invoices to the "*Invoice history*" field.

> *If you have incorrectly selected and transferred an Invoice to the Invoices to Repeat List,*

you may select the Invoice to activate the Remove button. You may then click on the Remove button. This Invoice will remove the selected Invoices from the Invoices to Repeat field.

3. Select the Invoice from the list of Invoices in the Invoices to Repeat field and click on the Options button. (The Options button will only be activated once an Invoice is selected on the Invoices to Repeat (right hand side of the screen)). The Invoice history screen will change as follows:



4. Select one or a range of Debtor accounts from the list of available Debtor accounts for which you wish to copy the repeating invoice.

5. Apply to all - The following options will apply to all repeating invoices when you click on the Generate button:

    a) Select date - Enter the date or select the date (using the date picker) on which you wish to generate the repeating invoices. This date will be displayed as the Invoice date on the Invoices, and it will also be the transaction date when the Invoice(s) is updated (posted) to the ledger.

    b) Set new invoice as repeating - You may select to set the New invoice as repeating to add this new Invoice to the Invoices to repeat list. If selected, you may use the selected Invoice to generate the new Invoices in the future.

    c) Replace message with - You may also replace any existing messages (which are currently displayed as the standard Invoice message as entered in Setup → Documents setup - Invoices tab) with a message which you may enter in the "*Replace message with*" field. There

are three (3) lines to enter a message.

> *If you enter the message, you should not exceed the viewable area of each line. If too many characters are entered in a line, the characters exceeding the line, will not be displayed on the Document entry screen and on the printed Invoice.*

d) Add this comment line - You may also enter a standard comment line, if you wish to add a comment to the transactions on the invoice. This comment will be displayed on the new generated repeating invoices.

6. Click on the OK button to close the "*Options*" screen. The screen will display the list of Invoices.

7. Click on the Generate button to generate repeating invoices for the selected debtor (customer / client) accounts. It will generate the next Invoice number.

> *Should you by accident have generated a repeating Invoice incorrectly to a debtor (customer / client) account, you need to delete the Invoice in Edit → Documents (Default ribbon).*

> *The generated repeating invoices can be selected when you click in Documents (Default ribbon). You need to select the Debtor account and the Invoice number to check, edit (if necessary) and print the Invoices. Finally, you need to update (post) the Invoices to the ledger to update the transactions to the general ledger, debtors ledger, and the stock ledger.*

Created with the Standard Edition of HelpNDoc: Full-featured Kindle eBooks generator

Delete documents

This option is used to delete the selected sales document types (Invoices, Credit notes or Quotes) for your debtors (customers / clients) and purchase document types (Purchases, Supplier returns or Orders) for your creditors (suppliers / vendors) which you have created or edited in Documents (Default ribbon).

> *An option to delete Quotes for debtors (customers / clients) and Orders for creditors (suppliers) is available when:*
>
> - *Quotes are confirmed and converted to Invoices.*
> - *Orders are confirmed and converted to Purchase documents.*
>
> *If you did not delete Quotes and Orders when these are confirmed or converted, these documents may be*

deleted with this option.

You may only delete documents which have not yet been updated (posted) to the ledger.

You will not be allowed to delete documents (i.e. Invoices, Credit notes, Purchases or Supplier returns) which have been updated (posted) to the ledger.

Confirmed, posted or unposted Quotes and Orders may be deleted.

If the Document posting option is selected on the Documents tab of Setup → Access control, the Delete button will be added to the sidebar of then Document list screen. Clicking on this button will delete a selected document.

Once a document has been deleted you will no longer be able to reprint deleted documents. These deleted document numbers will also not be available to be selected on the Reports → Documents (Document listing, Document listing per account or Unprinted document listing).

Any deleted documents will no longer be available to be printed or re-printed from the Documents tab of the Debtor (customer / client) accounts or from the Documents tab of the Creditor (supplier/ vendor) accounts.

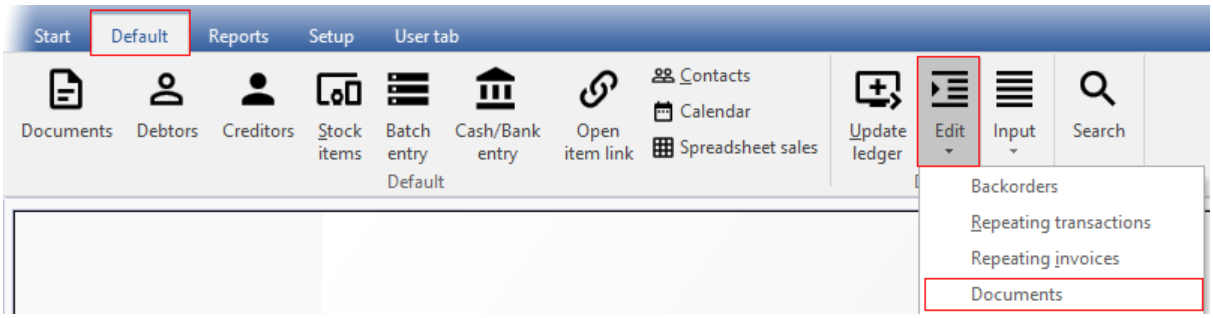
Before you decide to delete a document, it is advisable to make sure that you don't need to:

- *Copy the transactions and comments to an active document.*
- *Use it as a repeating Invoice or schedule it as an repeating Invoice event.*

Delete Documents

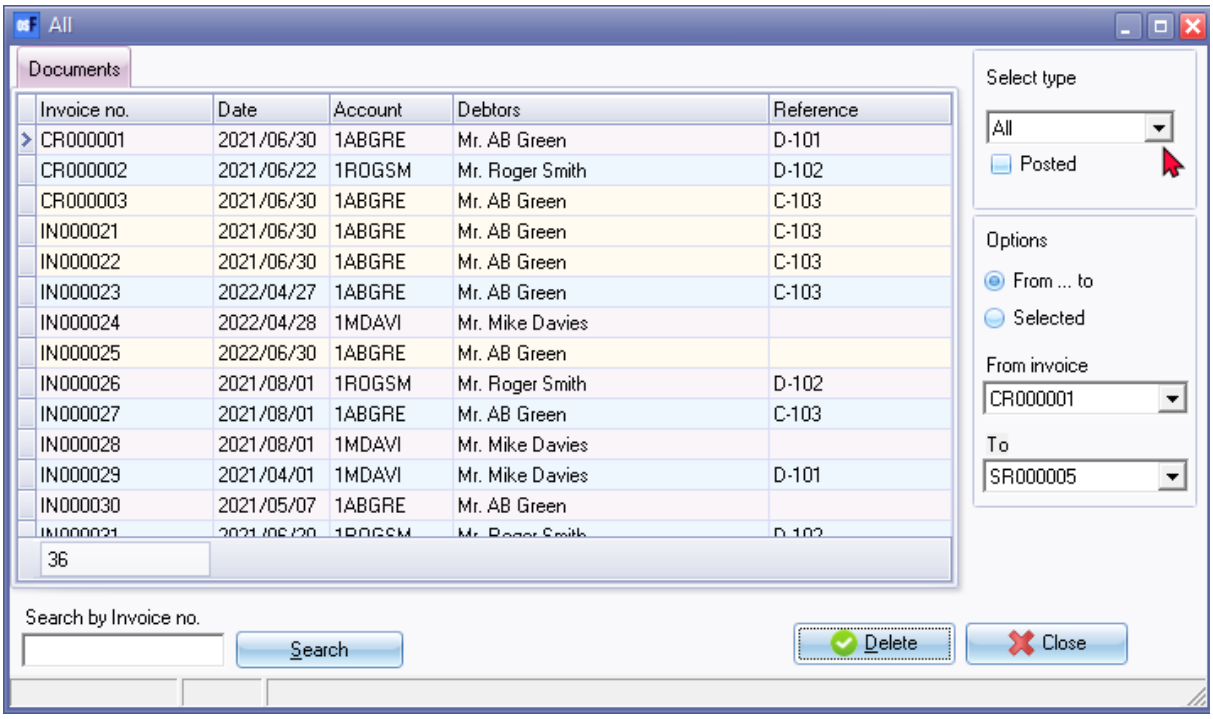
To delete documents:

1. On the Default ribbon, select Edit → Delete → Documents.



2. The "*Delete Invoices*" screen will be displayed.

3. Select type - Select Invoices, Credit notes, Quotes, Purchases, Supplier returns or Orders. If you select the "*All*" option, all these document types will be listed.



> *If the row in which a document is listed is shaded (light cream colour) (in this example CR000003, IN000021, IN000022 and IN000025), it indicates that the document is printed. The other colour shades in the rows, indicates that a document is not yet printed. You may wish to print these documents before deleting them.*

3. Select the following options:

   a) Posted - By default, only the unposted documents will be listed. The posted option (tick box) will be inactive (cannot be ticked) for Invoices, Credit notes, Purchases or Supplier returns. These document types can only be deleted if these are not yet posted or updated to the ledger.

> *The posted field can only be selected for Quotes and Orders.*
>
> - *Posted - Not selected (default), will list Quotes or Orders which status is "Open" and "Confirmed".*
> - *Posted - Selected (ticked), will list Quotes or Orders which status is "Posted".*

   b) From / To - This will display "*From ... to*" and the name of the Document type. This option

allows you to select a starting document number on a drop-down list and a last document number which you need to delete. All documents within the selected range of document numbers will be deleted.

> *If you need to delete only one document, the document number in the "From ... to" fields must be the same.*

c) Selected - If you select this option, the "*From ... to*" fields and the drop-down lists of document numbers will be de-activated. An arrow will indicate the selected document.

> *You may also use the Down arrow or Up arrow keys on your keyboard to select a document from the list.*

> *You may also right-click to access the context menu.*
>
> >
>
> *Update (Ctrl + U) will display a confirmation message to delete the selected document(s).*

4. Click on the Delete button. The information message is displayed:

   "Do you want to delete?"

5. Click on the Yes button.

Finding or locating specific documents

You may also use the following options to find or locate a specific document (documents):

1. Search by Invoice no. - (or document number for the selected document type) will reflect the Search by the selected Document type no.
2. Enter the Document number - The document number will automatically be selected. If not, click on the Search button.

Sort sequences

Double-click on the column headings to sort the list of documents ascending or descending:

1. Invoice no. - (or document number for the selected document type) - By default, all document numbers are displayed ascending (smallest document number to the latest document number). If you double-click on this heading, it will list the Invoice no. or document number for the selected document type descending (from the latest document number to the smallest or first document number).

2. Date - By default, the document dates are listed by document numbers. The dates may not necessarily be in the ascending sequence. To display the dates in the descending sequence (from the latest date to the newest date), double-click on this heading. To display the dates in the ascending sequence (oldest date to the latest date), double-click on this heading again.

3. Account - By default, the Debtor accounts (Invoices, Credit notes and Quotes) and Creditor accounts (Purchases and Supplier return documents and Orders) are listed by document numbers. The Debtor / Creditor account codes may not be displayed in the ascending sequence. To display the Debtor / Creditor account codes in the descending sequence (9-0 / Z-A), double-click on this heading. To display the Debtor / Creditor account codes in the ascending sequence (0-9 / A-Z), double-click on this heading again.

4. Description - By default, the Debtor accounts (Invoices, Credit notes and Quotes) and Creditor accounts (Purchases and Supplier return documents and Orders) are listed by document numbers. The Debtor / Creditor account descriptions or names may not be displayed in the ascending sequence. To display the Debtor / Creditor account descriptions or names in the descending sequence (9-0 / Z-A), double-click on this heading. To display the Debtor / Creditor account descriptions or names in the ascending sequence (0-9 / A-Z), double-click on this heading again.

Update / Post documents

This option is used to update (post) your documents created or generated in Documents (Default ribbon) to the ledger. The debtor (customer / client) documents which can be updated (posted) to the ledger are Invoices and Credit notes. The creditor (supplier / vendor) documents are Purchase documents and Supplier return documents.

You may set the "Auto-post documents on print" option in Setup → Documents setup (Setup ribbon) to update (post) documents automatically, once a document is generated and printed. If you use this feature, and do not print a document once it is generated, you need to update (post) the unprinted documents in Update ledger (Default ribbon) .

Quotes for debtors (customers / clients) and Orders for creditors (suppliers) cannot be updated (posted) to the ledger.

- *Quotes - only when a Quote is confirmed and converted to an Invoice, can the Invoice be edited and updated (posted) to the ledger.*
- *Orders - only when an Order is confirmed and converted to a Purchase document, can the Purchase document be edited and updated (posted) to the ledger.*

When these documents are updated to the ledger they will automatically write up your journals and post the transactions to the applicable accounts in the ledger (the General ledger as well as the Debtor's ledger, Creditors ledger and Stock ledger).

If you have purchased stock items from a creditor (supplier / vendor), you need to update the Purchase documents before you update (post) your Invoices for sales of stock items to your debtors (customers / clients). This will ensure that your Stock item file will be updated with the purchases before you actually sell the stock items and that you will have sufficient stock items on hand when you update (post) the Invoices.

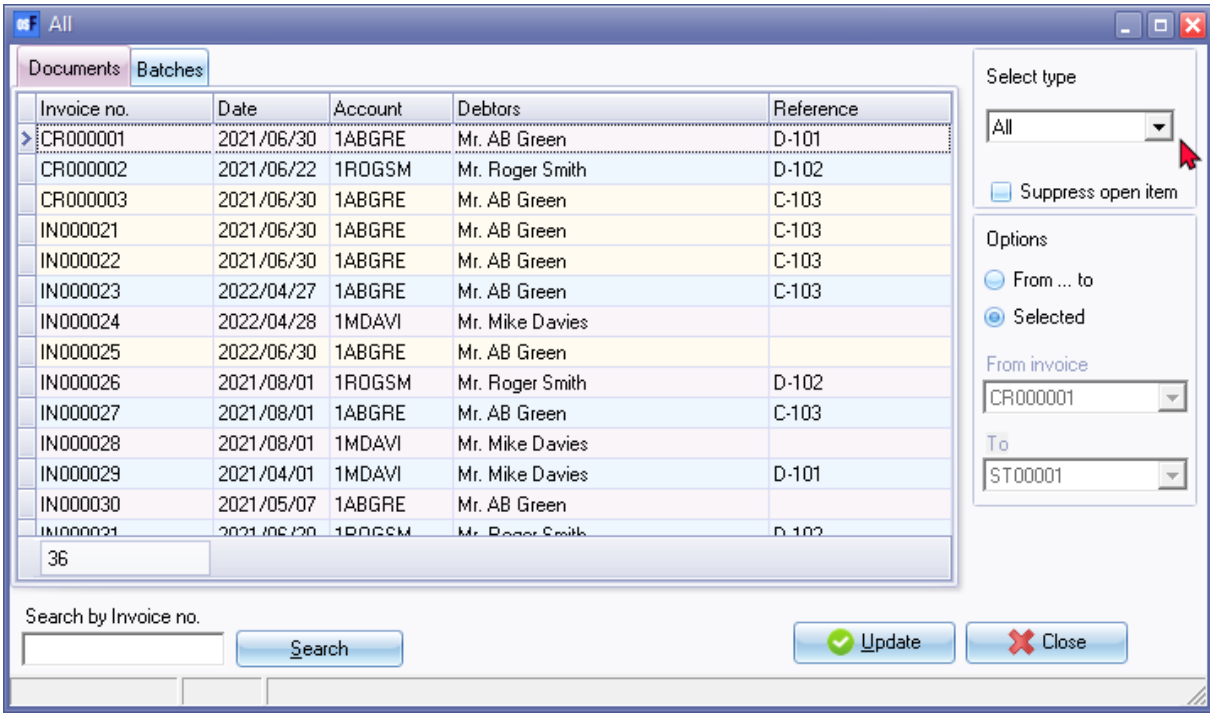
Update ledger - Documents

To update the documents to the ledger:

1. On the Default ribbon, select Update ledger (F3). The "*Update Invoices"* screen is ("*Invoices*" - default document type) will be displayed.

   If the Document Posting option is selected on the Documents tab - Setup → Access control, the Posting button will be added to the sidebar of the Document list screen. Clicking on this button will launch the Update ledger - Documents screen.

2. Select type - Select "*Invoices, Credit notes, Purchases*" or "*Supplier returns*". If you select the "*All"* option, all these document types will be listed.



The document numbers for Invoices, Credit notes, Purchases and Supplier returns, as prefixed in the Documents setup (Setup ribbon), makes it easy to identify the document type.

If the "All" option is selected, the following documents may be included:

- *Stock adjustments - Document numbers prefixed with "ST" is a 7-digit document number. These are automatically generated when doing stock adjustments (changes in the quantities on hand). These stock adjustments does not show any transactions and it prints a blank Posted batch type reports.*
- *BOM (Production) stock type - Assemble / Disassemble context menu options - Document numbers prefixed with"SA" will be a 7-digit number.*
- *Project Quote - Document numbers prefixed with"D" will be a 7-digit number.*

These documents will not be listed. if Invoices, Credit notes, Purchases and Supplier returns in the "Select type" list.

If the row in which a document is listed is shaded (light cream colour) (in this example CR000003, IN000021, IN000022 and IN000025), it indicates that the document is printed. The other colour shades in the rows, indicates that a document is not yet printed. You may wish to print these documents before updating them.

3. Select the following options:

   a) Suppress open item - By default, the following Open item selection screens will be displayed

on which you need to link the debit and credit transactions when updating (posting) documents:

- § Open item selection screen for Debtor (customer / client) accounts if the "*Use Open item*" field on the Accounting information tab is selected.
- § Open item selection screen for Creditor (supplier / vendor) accounts if the "*Use Open item*" field on the Accounting information tab is selected.

b) Select the Suppress Open item field, if you do not wish to use the Open item link selection feature to be launched when updating or posting documents. You may then later use the Open item link feature to link the transactions.

c) From / To - This will display "*From ... to*" and the name of the Document type. This option allows you to select a starting document number on a drop-down list and a last document number which you need to update (post) to the ledger. All documents within the selected range of document numbers will be updated (posted) to the ledger.

If you need to update (post) only one document to the ledger, the document number in the "From ... to" fields must be the same.

d) Selected - If you select this option, the "*From ... to*" fields and the drop-down lists of document numbers will be de-activated. An arrow will indicate the selected document.

You may also use the Down arrow or Up arrow keys on your keyboard to select a document from the list.

4. Click on the Update button. osFinancials5/TurboCASH5 will automatically write up the transactions in the respective batches (journals), as selected in Setup → Documents setup (Setup ribbon).

Finding or locating specific documents

You may also use the following options to find or locate a specific document (documents):

1. Search by Invoice no. - (or document number for the selected document type) will reflect the Search by the selected Document type no.
2. Enter the Document number - The document number will automatically be selected. If not, click on the Search button.

Sort sequences

Double-click on the column headings to sort the list of documents ascending or descending:

1. Invoice no. - (or document number for the selected document type) - By default, all document numbers are displayed ascending (smallest document number to the latest document number). If you double-click on this heading, it will list the Invoice no. (or document number for the selected document type) descending (from the latest document number to the smallest or first document number).

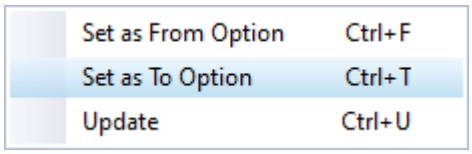
2. Date - By default, the document dates are listed by document numbers. The dates may not necessarily be in the ascending sequence. To display the dates in the descending sequence (from the latest date to the newest date), double-click on this heading. To display the dates in the ascending sequence (oldest date to the latest date), double-click on this heading again.

3. Account - By default, the Debtor accounts (Invoices and Credit notes) and Creditor accounts (Purchases and Supplier return documents) are listed by document numbers. The Debtor / Creditor account codes may not be displayed in the ascending sequence. To display the Debtor / Creditor account codes in the descending sequence (9-0 / Z-A), double-click on this heading. To display the Debtor / Creditor account codes in the ascending sequence (0-9 / A-Z), double-click on this heading again.

4. Description - By default, the Debtor accounts (Invoices and Credit notes) and Creditor accounts (Purchases and Supplier return documents) are listed by document numbers. The Debtor / Creditor account descriptions or names may not be displayed in the ascending sequence. To display the Debtor / Creditor account descriptions or names in the descending sequence (9-0 / Z-A), double-click on this heading. To display the Debtor / Creditor account descriptions or names in the ascending sequence (0-9 / A-Z), double-click on this heading again.

Context menu options

If you select a document on the list, you may right-click to launch the following context menu:



The options are as follows:

1. Set as From Option - This will set and display the selected document number as the starting document number in the range options From ... field.

2. Set as To Option - This will set and display the selected document number as the end document number in the range options To... field.

3. Update - This will update (post) the document to the ledger.

Created with the Standard Edition of HelpNDoc: Elevate Your CHM Help Files with HelpNDoc's Advanced Customization Options

Reverse posted documents

This facility allows you to cancel or reverse all the transactions and balances of a selected document which have been updated (posted) to the ledger. This process will automatically:

- Export (remove) the transactions from the transaction file (TransAct.DB) file, reset the totals and account balances of all the accounts (which is linked to the selected stock items on Stock items (Default ribbon), debtor or creditor accounts, stock quantities, etc.

- The reversed document may then be selected for the debtor or creditor, edited and posted to the ledger. If you do not need to update (post) the document to the ledger, you may delete the document in Edit → Documents (Default ribbon).

The balances of the accounts and stock item records will be corrected automatically for the following documents:

- Documents for Debtors (customers / clients) (Invoices or Credit notes) - debtor account, sales account, cost of sales and stock control account as well as any Output VAT/GST/Sales Tax accounts and the quantities and cost prices of any stock items.

- Documents for Creditors (suppliers) (Purchase or Supplier return documents) - creditor account, cost of sales and stock control account, as well as any Input VAT/GST/Sales Tax accounts, and the quantities and cost prices of any stock items returned to creditors (suppliers).

The Log-report in Setup → Access control (Setup ribbon) will list the date and time, as well as which user and on which device, the documents were cancelled as REVDOC - Reverse doc! and the Batch ID.

If a document for a debtor (customer / client) (Invoice is generated or a Quote which is confirmed and converted to an Invoice), or if a document for a creditor (supplier / vendor) (purchase document is generated an order is confirmed and converted to a purchase document), and these documents are not yet updated

(posted) to the ledger, the following options are available to edit the transactions and/or comments:

- *Delete Document - delete the entire document, including all transactions and comments in the document.*
- *Delete transactions and/or comments in a document - only the selected transaction(s), or comment(s), will be deleted from the document.*

It is recommended that you make a backup of the Set of Books, before you start to use this facility to cancel or reverse a posted batch. In the event of making a mistake or if some problems are experienced, you may then easily restore the Set of books from the backup file.

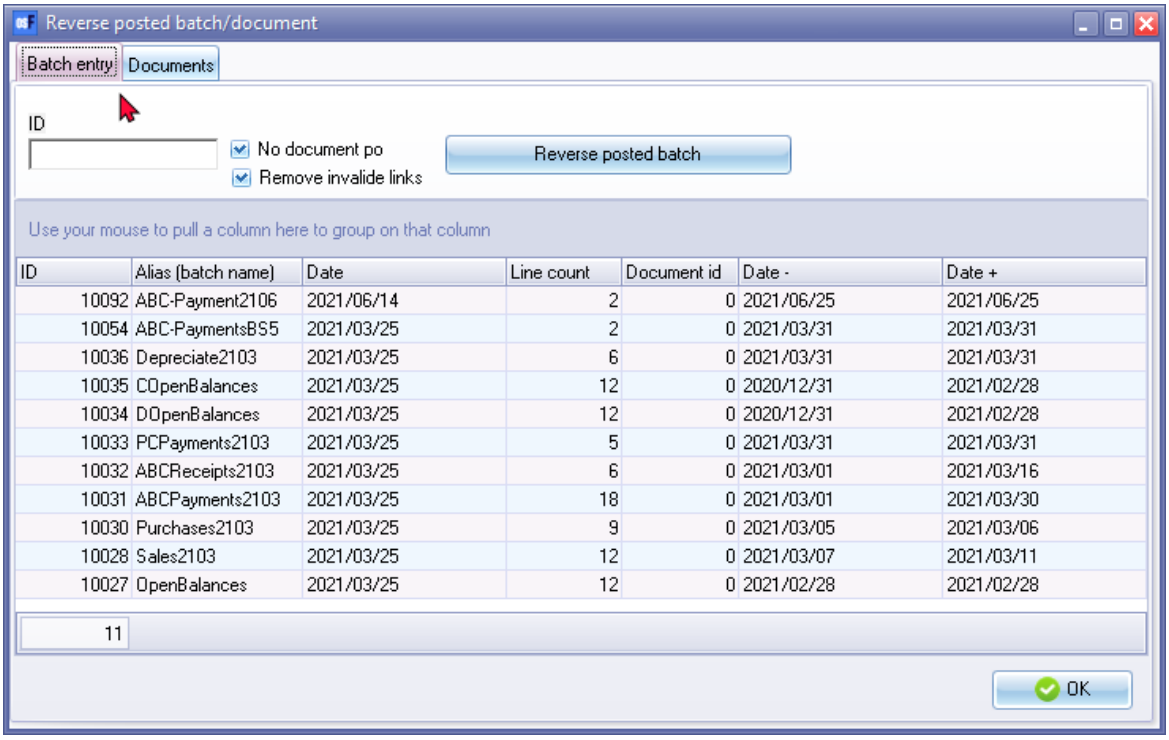
It is strongly recommended that you take the utmost precautions, before you use this facility. The following is a few guidelines to be taken into account, before using this facility:

- *Invoices - Once an invoice is already handed to, or sent to a debtor (customer / client), you need to generate a credit note to reverse or cancel the invoice.*
- *Purchase documents - Once a purchase document is already handed to or sent to a creditor (supplier / vendor), you need to generate a supplier return document to reverse or cancel the purchase document.*

This is of importance as the debtor (customer / client) or creditor (supplier / vendor) will receive the documents (invoice or purchase document), and record it in their books. They will then receive no source document to cancel or correct the source document received earlier in their records. If you and your debtors (customers / clients) or creditors (suppliers) are registered as VAT/GST/Sales Tax-vendors, it may have implications for VAT/GST/Sales Tax.

To reverse or cancel all the transactions in a posted document:

1. On the Setup ribbon, select Global processes → Reverse posted batch/document . The "*Reverse posted batch/document"* screen is displayed, listing only the posted batches on the Batches tab:



By default, only the posted batches will be listed. If you select (tick) the "No document po" (No documents posting) option, it will add the posted documents to the posted batches on the list.

2. To list the posted documents, click on the Documents tab. The "*Reverse posted batch/document"* screen will change to list all the documents which are already updated (posted) to the ledger.

The document numbers for Invoices, Credit notes, Purchases and Supplier returns, as prefixed in the Documents setup (Setup ribbon), makes it easy to identify the document type.

The following documents may be included:

- *Stock adjustments - Document numbers prefixed with "ST" is a 7-digit document number. These are automatically generated when doing stock adjustments (changes in the quantities on hand). These stock adjustments does not show any transactions and it prints a blank Posted batch type reports.*

- *BOM (Production) stock type - Assemble / Disassemble context menu options - Document numbers prefixed with"SA" will be a 7-digit number.*
- *Project Quote - Document numbers prefixed with"D" will be a 7-digit number.*

3. Select the posted document you need to reverse or cancel from the list.

If you have more than one updated (posted) document to cancel (reverse), you may press the Ctrl key and click on each document you wish to reverse / cancel.

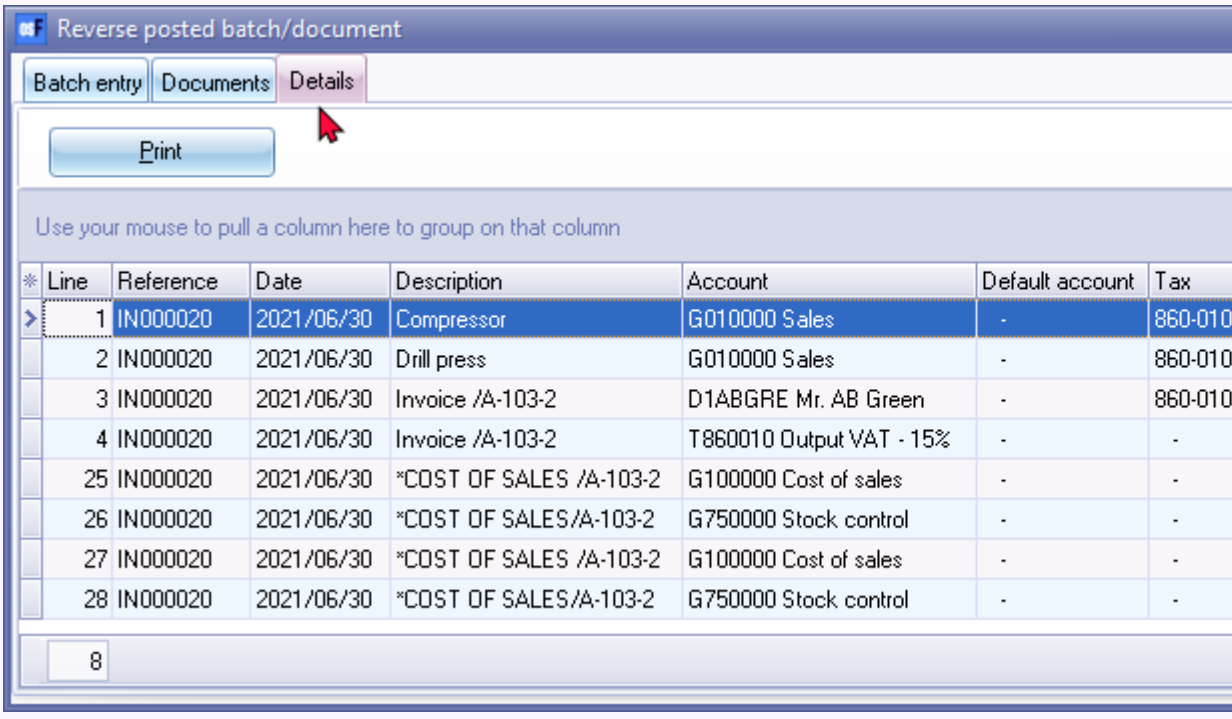
If you have more than one updated (posted) document to cancel (reverse), you may click on the Select from delimited list button.

For example, if you wish to cancel (reverse) Invoices IN000003 and IN000004 as well as Credit note CR000001 simultaneously, enter each of the document numbers separated by a comma (without a space) e.g. IN000003,IN000004,CR000001. If you click on the Reverse posted document button, all the selected documents will be cancelled (reversed) during the same process.

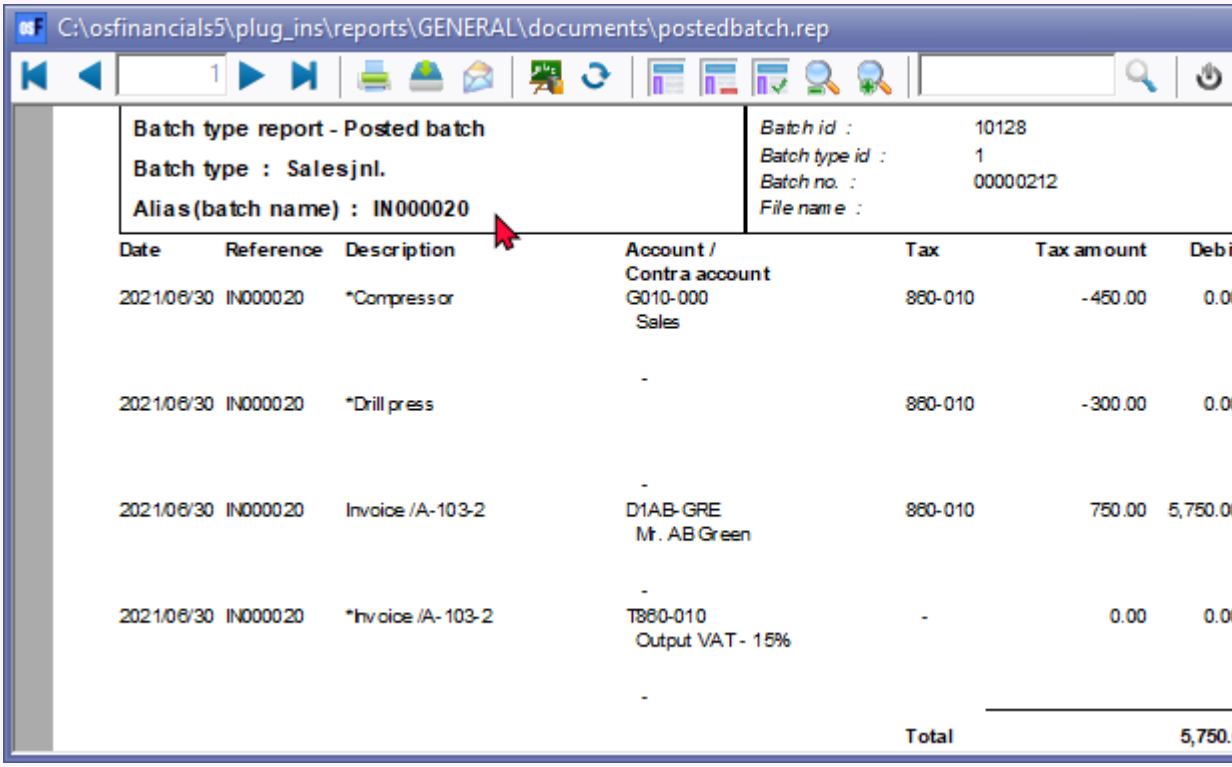
4. View the details of the document(s) to make absolutely sure that it is the correct document(s).

To view the details of the transactions in the selected document(s), you may:-

- *Double-click on the selected document(s).*
- *On the Details tab, the transactions for the selected document(s) will be listed.*



If you wish to print a list of the transactions in the posted batch (posted batches), you may click on the Print button to



*The Cost of Sales "*COST OF SALES entries for each stock item will not be printed.*

5. Click on the Reverse posted document button to start the process. The following information message will be displayed:

> This will radically alter your data! We recommend that you stop and make a backup!
> Do you wish to continue?

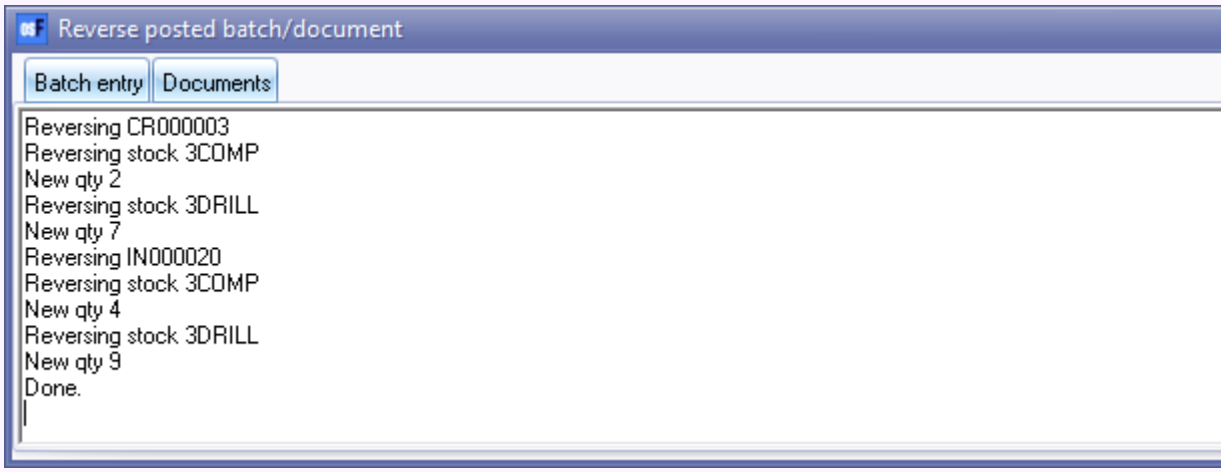
6. Click on the Yes button, only if you are absolutely sure that the selected document(s) is correct, and that you need to continue with this process.

> *If you have not made a backup of the Set of Books before starting this process it is recommended that you click on the No button and first make a backup of the Set of Books.*

7. If you click on the Yes button, the process will be started.

8. Wait until the process is finalised.

> *A log displaying the new quantities for each stock item on the reversed documents will be displayed, for example:*



You may copy this information to Notepad or your favourite text editor.

It is advisable not to use your system for other tasks while this process is running.

Once this process is finalised, the selected document will not be listed on the Reverse posted document screen.

9. Click on the Close button in the title bar of the Reverse posted batch/document screen.

10. Click on the Invoice icon, and select the document type. If you select the debtor or creditor, for which the document was reversed, or cancelled, you may select the reversed document number. You may then edit these documents, delete the transactions, etc. Once the document is corrected, you may update (post) the document to the ledger.

Created with the Standard Edition of HelpNDoc: Full-featured EPub generator

Export Documents - Export grid

The Export button of the sidebar of the "*Documents*" list screen, will create a text file (tab delimited), which will open in your system's default Microsoft Excel (if installed on your system).

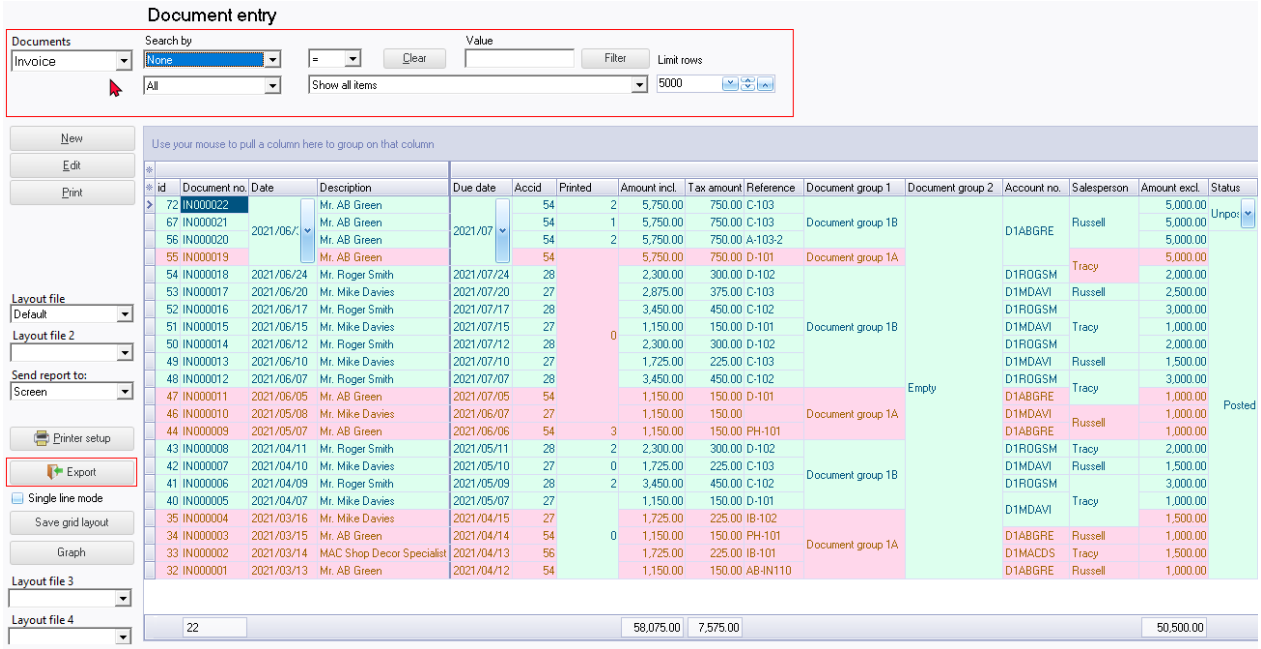
Export options

To export documents:

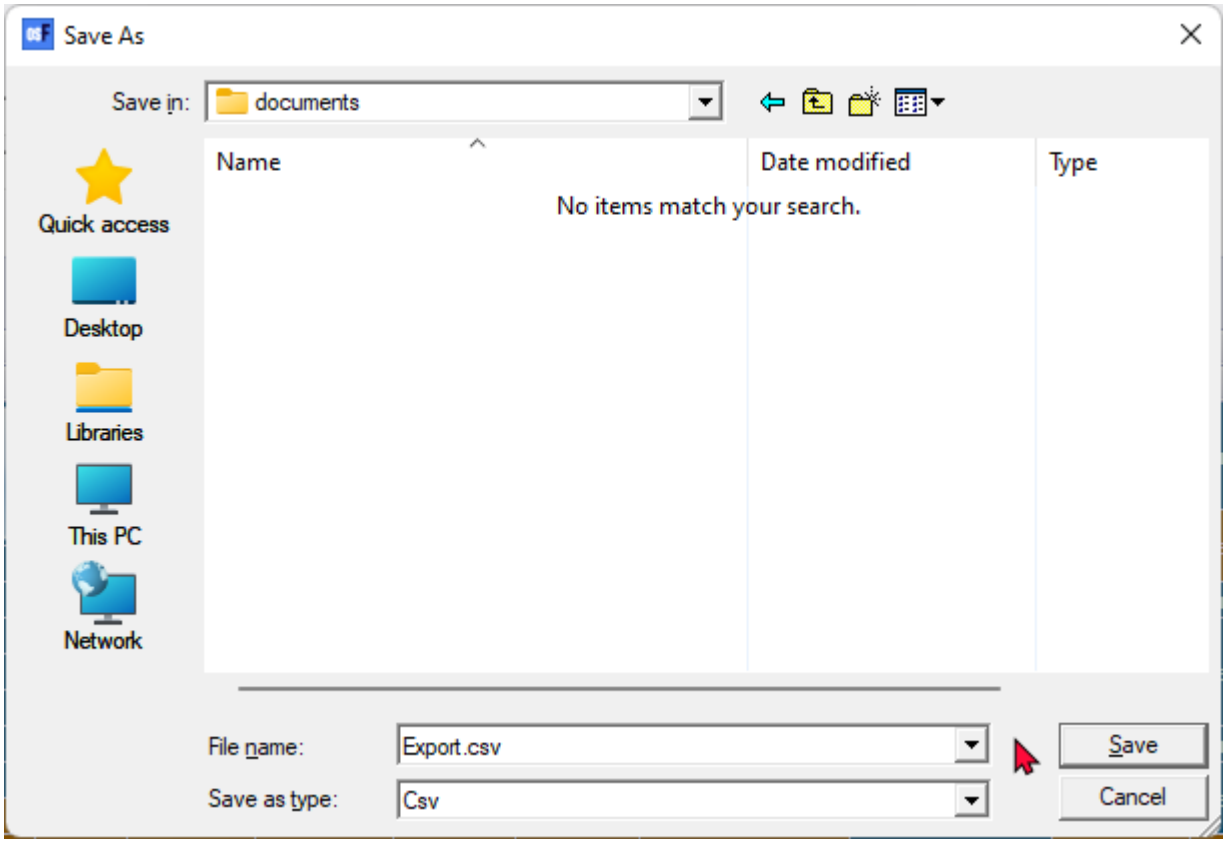
On Documents (Default ribbon), select the document type.

Select the document status; i.e. "*All, Posted, Unposted*" or "*Confirmed*".

> *Select the Filter and search options in the Filter column and click on the Filter button to include only those filter criteria to be included in the Export file.*



Click on the Export button. The "*Save As*" screen is displayed:



Enter a name to save the file.

"Save as type :" options will be "CSV". A text (.txt) file type will automatically be created with your file name.*

If you do not enter a unique name in the selected folder, and save the export.csv or export.txt file name, you may replace existing (previously exported) files.

If an existing exported file is opened, and you are trying to save a export file with the same name, a similar error message as the following will be displayed:

> Cannot create file "F:\exports\your-file-name.txt". The process cannot access the file because it is being used by another process.

Click on the Save button.

Example : Exported text file - Microsoft Excel

In this example, the exported file is automatically opened in "*Microsoft Excel*":

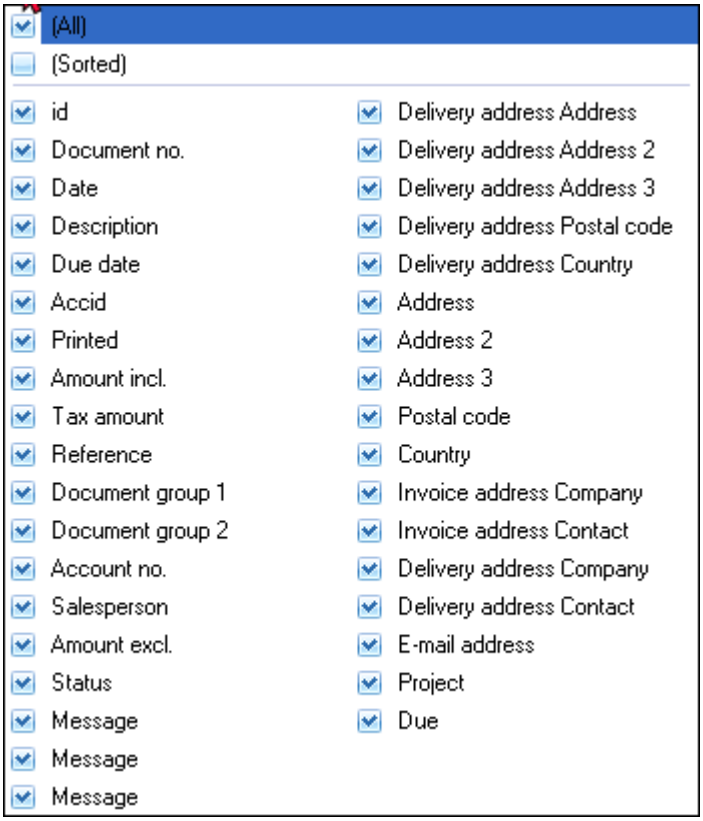
Only those documents matching your filter and search criteria in the Filter column options, will be included in the export file.

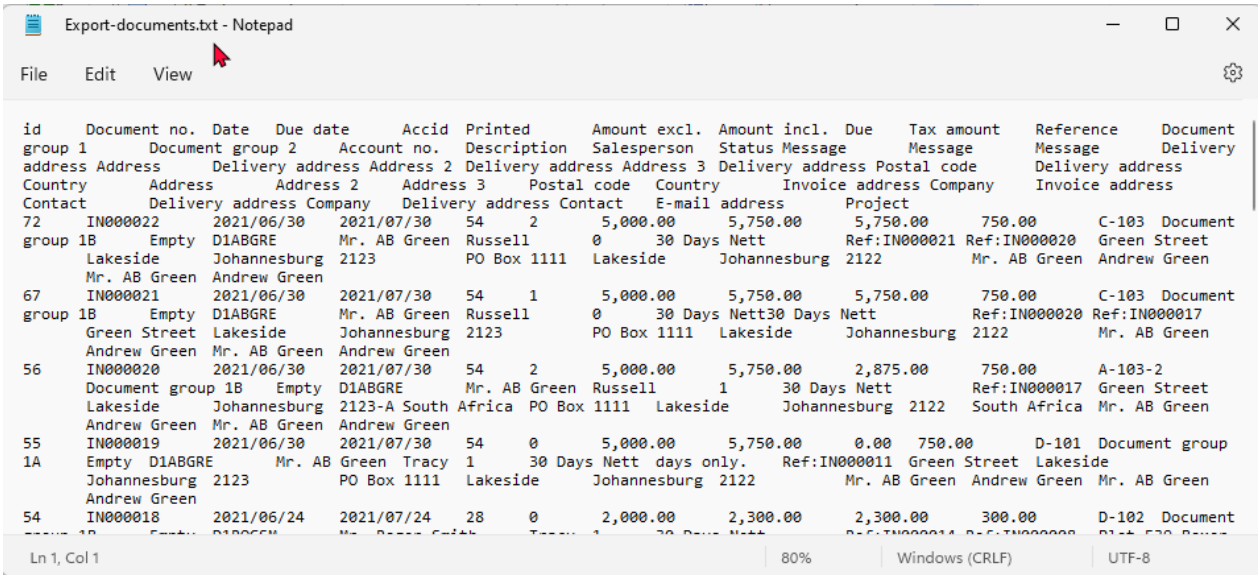
For example, if the Document status is selected as "Unposted", only those unposted documents will be included in the export file. Posted documents will be excluded from the export file.

All of the thirty-six (36) columns will be exported in the default sequence.



Example : Exported text file - Notepad

An example, of the exported text file file opened in your systems default program associated with *.txt files (e.g. "*Notepad*") is as follows:

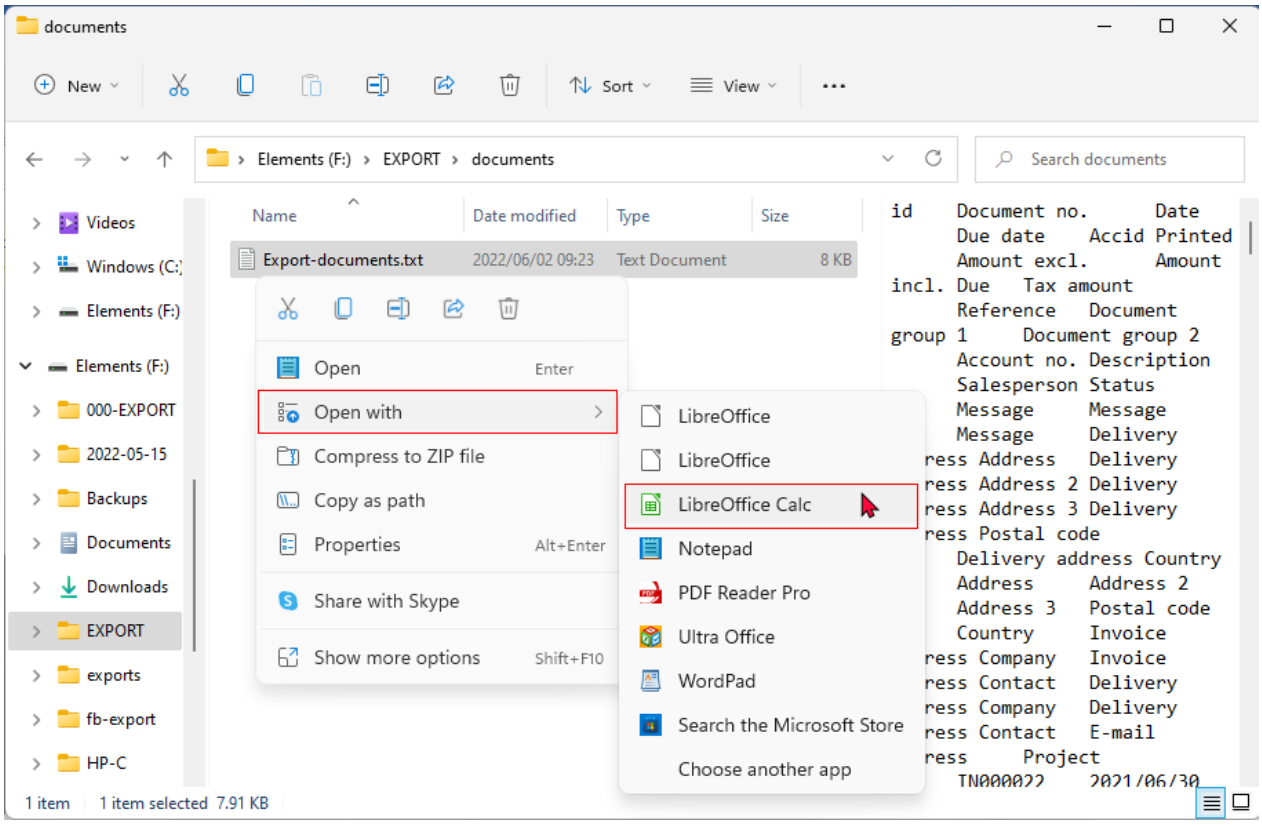


Example : Exported text file - LibreOffice Calc

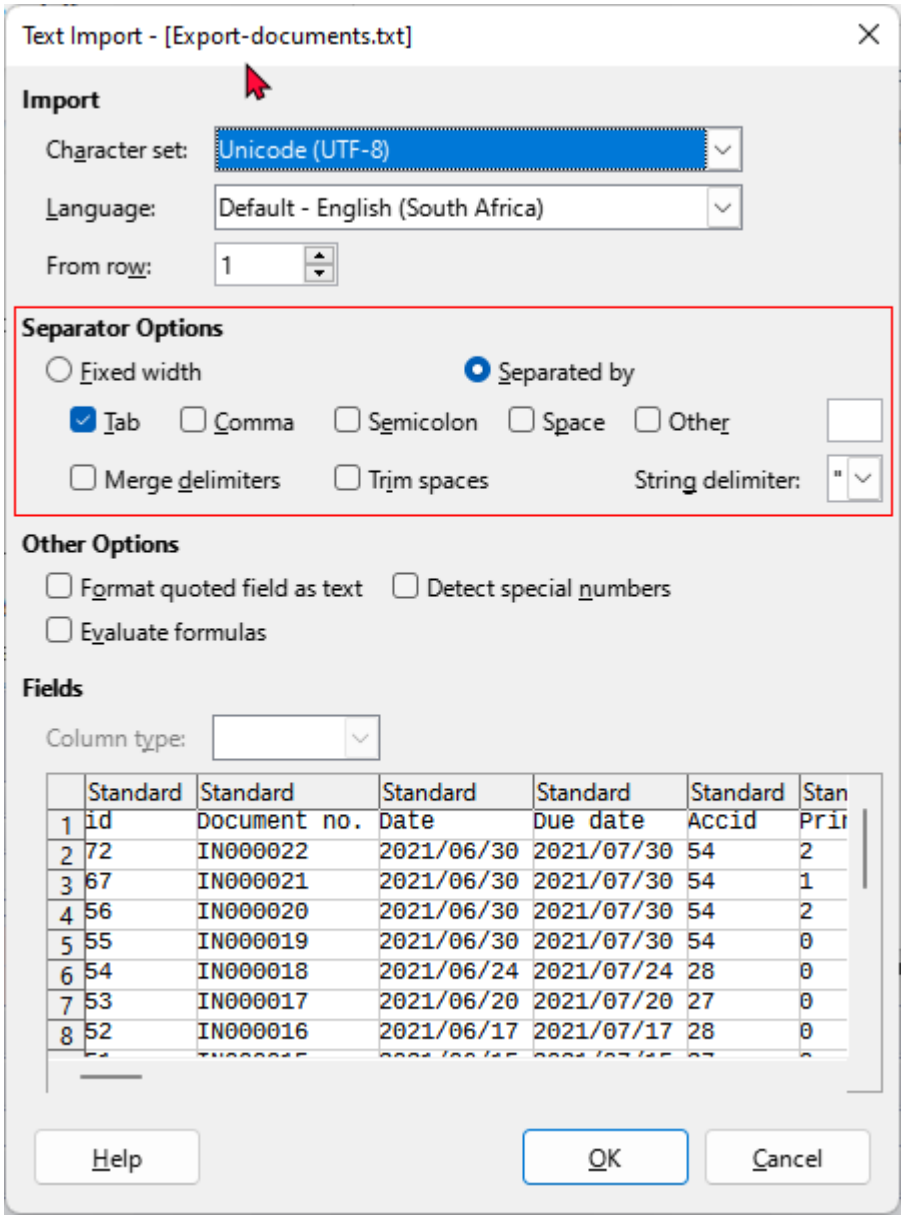
If the exported text file does not open in Microsoft Excel; or if you do not have Microsoft Excel installed on your system, you may open the file with OpenOffice, LibreOffice, Ultra Office, etc.

Locate the exported text file in your System's File Explorer.

In this example, Open with > LibreOffice Calc is selected. The "*Text Import*" screen is selected.



If LibreOffice and not LibreOffice Calc is selected, the exported text file will open in LibreOffice Writer as a text file.



Separator options - Separated by

Tab is the only option which should be selected for this exported text file. This may differ for some other report types.

Export / Import documents

Using this export feature, you may also export the data for sales documents (Invoices, Credit notes and Quotes) as well as purchase documents (Purchases, Supplier returns and Orders) in an open Set of Books to the available file formats.

All the information for each account as entered in Documents (Default ribbon), will be exported in the selected file format for the selected dates.

To import documents, it is recommended that a valid "TurboCASH Exchange file (.txf)" file is generated in the Export - Documents option on the Setup ribbon. This will only include the documents on the dates selected to include in the export file. These exported documents may then be imported from the Others → Import context menu option on the "Documents list" screen.*

Created with the Standard Edition of HelpNDoc: Full-featured Kindle eBooks generator

Export documents

Document Export / Import plugin - Manual - Shop - Licence: Once-off

The Document Export / Import plugin allows you to export sales documents (invoices, credit notes and

quotes) and purchase documents (purchases, supplier returns and orders) to a TurboCASH Exchange (.txf) or a Comma Separated Value (*.csv) file format. You may then select an exported documents file (context menu Others → Export) and import the exported file in the (context menu Others → Import) options in the documents grid.*

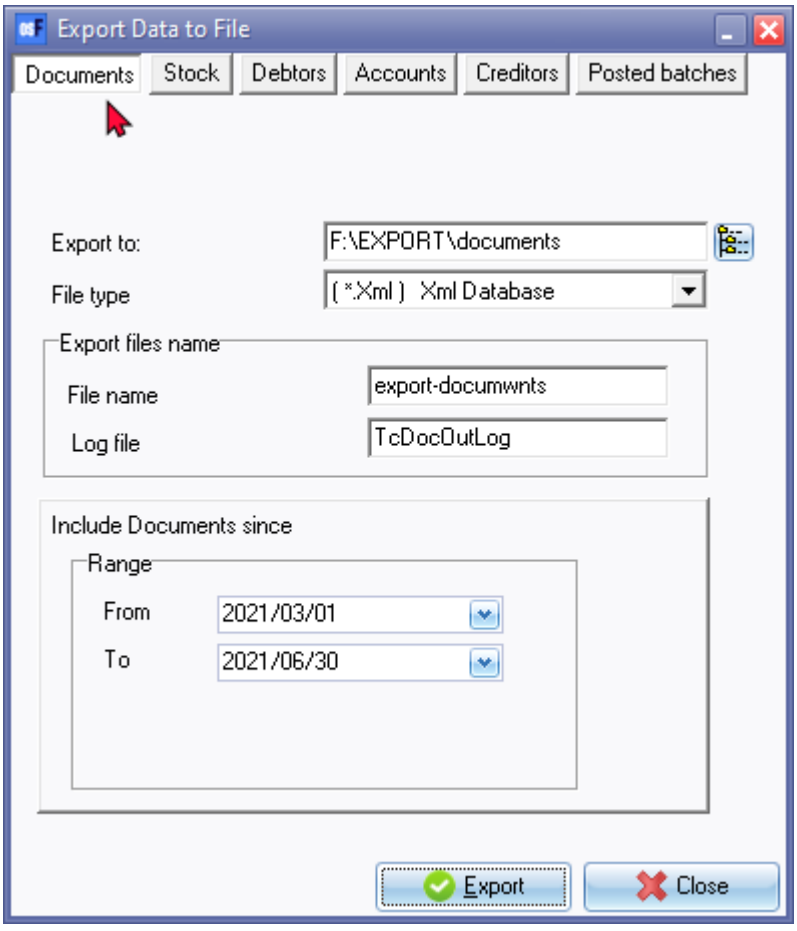
Using this facility, you may also export the data for sales documents (invoices, credit notes and quotes) as well as purchase documents (purchases, supplier returns and orders) in an open Set of Books to the available file formats.

All the information for each document, as entered in Documents (Default ribbon), will be exported in the selected file format.

To be able to import the data for sales documents (invoices, credit notes and quotes) as well as purchase documents (purchases, supplier returns and orders) in Import (Setup ribbon), you need to create a valid XML Database File format on your system in Export (Setup ribbon).

To export Documents:

1. On the Setup ribbon, select Export.
2. Click on the Documents button.



3. Select and/or enter the following:

    a) Export to - The installation directory in which osFinancials5/TurboCASH5 is installed, will be displayed. You may click on the Browse icon to select a folder on the *Browse for Folder* screen. You may then select any available folder, or drive, on your system into which you wish to export the data.

    b) File type - Select to export the file in the XML Database (*XML), Comma Separated Variable (*CSV), Lotus Spreadsheet File (*WK1), MS Excel Spreadsheet (*XLS), or any other format available on your system from the list.

    c) Export files name - Enter the File name. You need to select this file at a later stage when you wish to import the file, or analyse the data in a spreadsheet.

    d) Log file - Enter the Log file name.

    e) Range - From / To - Select the date from and to. All documents in the selected period(s) should be included in the export file.

4. Click on the Export button to create the export file, and save it in the specified directory.

Created with the Standard Edition of HelpNDoc: Easy EPub and documentation editor

Import documents

Document Export / Import plugin - Manual - Shop - Licence: Once-off

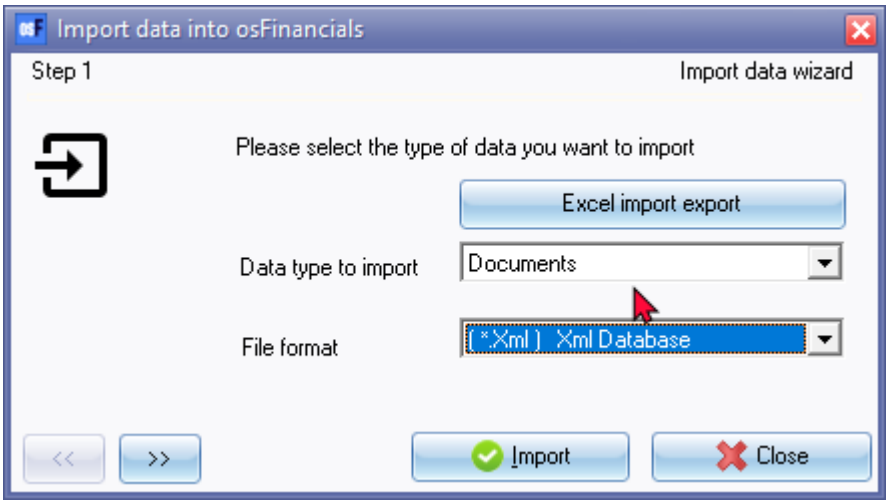
The Document Export / Import plugin allows you to export sales documents (invoices, credit notes and quotes) and purchase documents (purchases, supplier returns and orders) to a TurboCASH Exchange (.txf) or a Comma Separated Value (*.csv) file format. You may then select an exported documents file (context menu Others → Export) and import the exported file in the (context menu Others → Import) options in the documents grid.*

This option will allow you to import data for sales documents (invoices, credit notes and quotes) as well as purchase documents (purchases, supplier returns and orders) from a valid file format into an existing Set of Books.

To be able to import the data for sales documents (invoices, credit notes and quotes) as well as purchase documents (purchases, supplier returns and orders), you need to have created a valid XML Database File format on your system in Export (Setup ribbon).

To import documents:

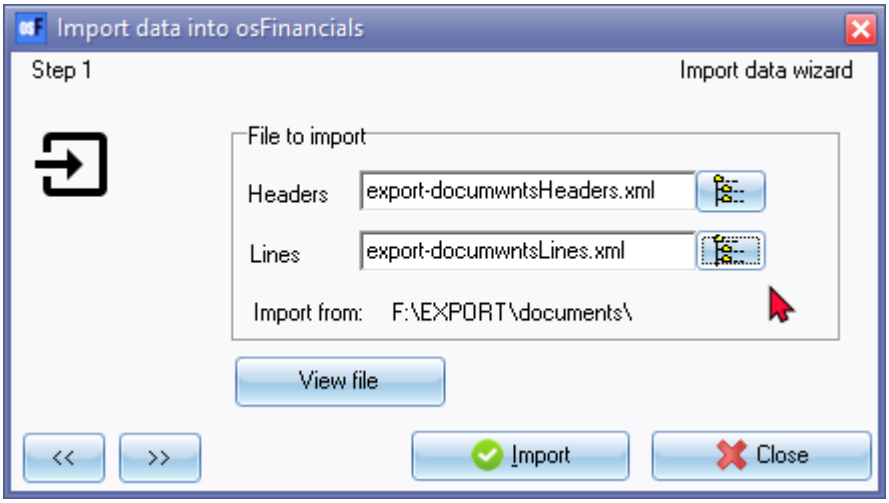
1. On the Setup ribbon, select Import. The "*Import Data into osFinancials*" screen is displayed:



2. Select Documents as the "*Data type to import*".

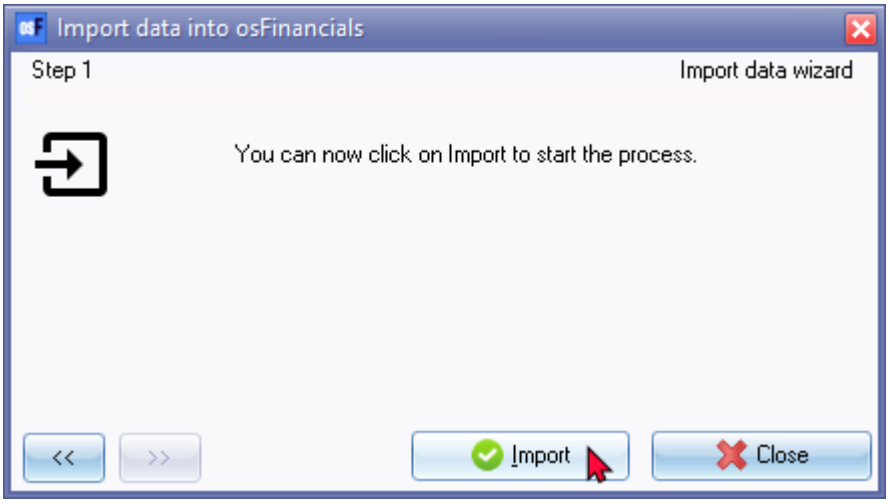
3. Select a valid exported in which the data to import, is saved on your system.

4. Click on the button to locate the data file. The following screen is displayed:

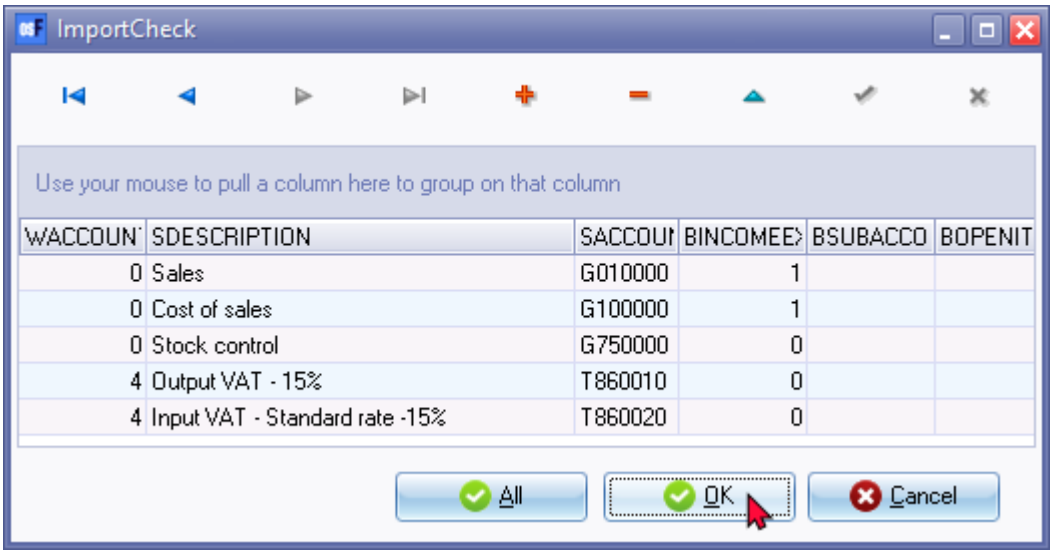


5. Click on the button to locate the data file.

6. Click on the button. The following screen is displayed:



7. Click on the Import button. The "*ImportCheck*" screen is displayed:



8. You may use the record buttons to add, delete or change the stock records on the "*ImportCheck*" screen. You may then click on the All or OK buttons to import the stock file.

9. Once the import process is finished an information message is displayed:

   "Data file import completed!"

10. Click on the OK button.

11. Go to the Default ribbon and select Documents to edit the stock items, if necessary.

Created with the Standard Edition of HelpNDoc: Streamline your documentation process with HelpNDoc's WinHelp HLP to CHM conversion feature

Exported documents in Spreadsheets

Using this export feature, you may also export the data for sales documents (Invoices, Credit notes and Quotes) as well as purchase documents (Purchases, Supplier returns and Orders) in an open Set of Books to the available file formats.

All the information for each document as entered in Documents (Default ribbon), will be exported in the selected file format for the selected dates.

To illustrate the exported fields and data, the exported text file is opened in a spreadsheet.

Once the exported documents is saved in the "(*.XLS) MS Excel SpreadSheet" file format, it will create 2 files:

1. Headers file
2. Lines file

You may open these files with your spreadsheet application i.e Excel, LibreOffice, OpenOffice, Ultra Office, etc.

Created with the Standard Edition of HelpNDoc: Write EPub books for the iPad

Exported documents - Headers files in Spreadsheets

If you have saved the documents for the selected periods as a "MS Excel SpreadSheet (*.XLS)" file type, you can open this export file for the document header ("*Header*") in a spreadsheet.

An example of the exported file opened in "*LibreOffice Calc*" spreadsheet, is as follows:

Created with the Standard Edition of HelpNDoc: Eliminate the Struggles of Documentation with a Help Authoring Tool

Calendar / Planner

In osFinancials5/TurboCASH5, the Calendar feature provides a comprehensive tool for managing your agenda, tasks, appointments, contacts, and more within a Set of Books. It offers a range of functionalities to help you stay organised and efficiently handle your events and tasks in a Set of Books.

One of the key features of the Calendar is its ability to schedule events with various recurrence options. You can set events to repeat on a daily, weekly, monthly (by day or date), yearly (by day or date), or custom interval. This allows you to automate the scheduling of repetitive events, such as meetings, reminders, or recurring invoices.

The Calendar supports different event types, including general appointments, repeating invoices for managing regular billing processes, debtor appointments for scheduling interactions with customers or clients (with the option to create quotes and invoices directly from these appointments), and creditor appointments for scheduling interactions with suppliers. Additionally, you can schedule hours to invoice debtors based on time spent and generate quotes for those hours, which can later be edited and converted into invoices.

To make it easier to distinguish between different event categories, the Calendar uses colour coding, which helps visually identify the type of event when displayed in the Calendar view.

In addition to event management, the Calendar also provides functionalities to handle tasks. You can add, edit, and delete tasks, allowing you to maintain a to-do list and set completion dates for each task. Furthermore, the Calendar allows you to manage contacts, enabling you to search, add, edit, or delete contacts within your Set of Books.

Another notable feature is the bulk time entry option, which facilitates the efficient processing of quotes and invoices for specific salespersons, debtor accounts, and stock items. You can allocate time slots for each entry, streamlining the invoicing process for time-based services or activities.

Overall, the Calendar in osFinancials5/TurboCASH5 serves as a powerful tool for managing your agenda, tasks, appointments, contacts, and bulk time entries. It offers a comprehensive set of features to enhance your organisation, productivity, and invoicing processes within the software.

The Calendar is a powerful tool, which integrates your agenda (tasks, appointments, contacts, etc.) in a Set of Books. You may manage all your events in this Calendar with options to set the recurrence of an event (i.e. daily, weekly, monthly by day, monthly by date, yearly by day, yearly by date or custom, where you may specify the interval in days).

In addition to scheduling all your events, the Calendar has a powerful reminder system which may be set to remind you of a scheduled event, or task, well in advance (from any number of minutes, hours and even days).

Event categories

The Calendar feature offers the flexibility to schedule and create various types of events or appointments.

You can schedule or add events in the following categories:

1. Appointment (General): This category allows you to schedule general appointments, such as meetings with a bank manager or lunches with clients or colleagues.
2. Repeating invoices: If you have recurring invoices that need to be processed or copied regularly, you can schedule them as repeating invoices. This feature simplifies the task of generating invoices for repetitive transactions.
3. Hours: This category allows you to schedule services rendered on an hourly basis. Once the hours are scheduled, you have the option to generate Quotes based on the scheduled hours. These Quotes can be edited if necessary to ensure accuracy. After finalizing the Quotes, you can convert them into Invoices.
4. Debtors appointment: You have the ability to schedule up to six different categories of appointments with debtors (customers/clients). These categories can be customized based on your specific needs and can include appointments for specials, accounts, or any other relevant category. Moreover, you can create quotes and invoices directly from these debtor appointments, streamlining your quotations and invoicing processes.
5. Creditors appointment: This category allows you to schedule appointments with creditors (suppliers/vendors). You can use this feature to keep track of important meetings or discussions with your suppliers regarding orders, accounts, or any other related matters.

By leveraging these features in the Calendar, you can effectively manage and track various types of appointments, schedule repeating invoices, and create invoices for debtor appointments, all within osFinancials5/TurboCASH5.

The Calendar feature utilises colour coding to visually distinguish between different categories of events. This makes it easier to identify and differentiate the types of events when they are displayed on the Calendar. The colour-coded system helps you quickly recognise and navigate through your scheduled events, improving efficiency and organisation.

Additional features of the Calendar

In osFinancials5/TurboCASH5, the Calendar feature offers additional functionality to manage tasks, contacts, and bulk time entries.

1. Tasks: You can use the Calendar to manage your tasks effectively. This includes adding, editing, and deleting tasks such as bank reconciliation, printing debtor statements, printing creditor remittance

advises, and more. By keeping track of your tasks in the Calendar, you can easily monitor and complete your to-do list.

2. Contacts: The Calendar provides a convenient way to manage your contacts. You can find contacts by clicking on the alphabetical keys and perform various actions like adding, editing, or deleting contacts. This allows you to keep your contact information organized and easily accessible within the Calendar.

3. Bulk time entry: The Calendar feature also allows for bulk time entry. This functionality enables you to select a salesperson, debtor (customer/client) account, and stock item. You can then add time in specific slots to process invoices for the designated times and days. Bulk time entry simplifies the process of invoicing for multiple time entries, making it more efficient and less time-consuming.

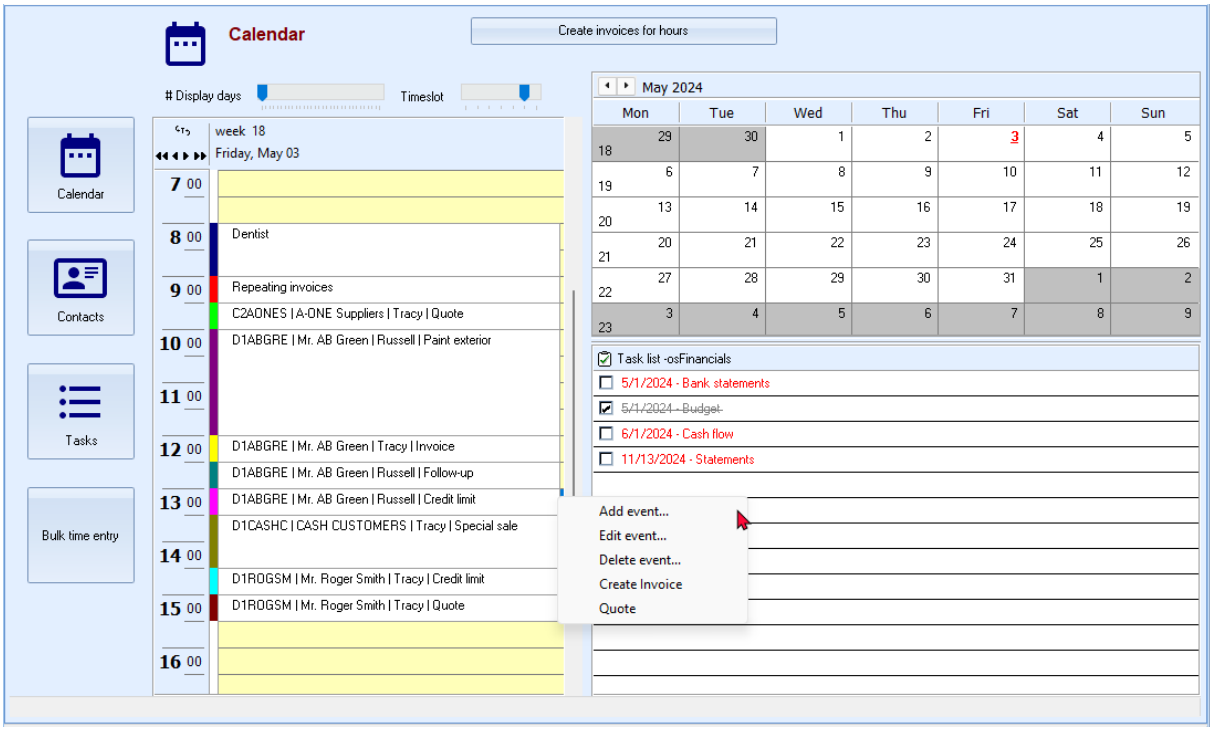
By incorporating tasks, contacts, and bulk time entry into the Calendar, osFinancials5/TurboCASH5 provides a comprehensive platform for managing various aspects of your business operations in one centralized location.

Access and views of the Calendar

The Calendar is (by default) not displayed when you open a Set of Books. You may set the "Show calendar" option in Setup → System parameters to launch the Calendar as default view when you Open a Set of Books.

To access the Calendar:

1. On the Default ribbon, select Calendar.



2. The *Display* listing four (4) icons will be displayed. You may click on the following icons to change or display the view of the Calendar:

    a) Agenda - This is the default view of the Planner (Calendar). It displays the following three sections:

        i) Day view - This displays the selected day in time intervals of one hour each. If any events, or appointments, have been scheduled for the selected date, they will be displayed.

        You can also use the slider to view up to a week (seven days) at a time.

        ii) Calendar by month - displays the dates for the selected month. The selected day will be displayed in a red font colour.

        If any events, or appointments, have been scheduled for any dates within the selected month, the day will be underlined and displayed in a bold font style.

    b) Tasks - Lists all tasks, if any. Displays the tasks in the full viewable area.

    c) Contacts - Lists all the contacts created in the Set of Books alphabetically. You may find and filter contacts by clicking on alphabetical character buttons.

    *You may also manage (add, edit or delete) contacts in addition to Contacts on the (*Default ribbon*).*

    d) Bulk entry time entry - Select the salesperson, debtor (customer / client) account and the stock item. Add time in slots to process invoices for the times and days.

Multi-User calendar (agenda) - Manual - Shop - Licence : Once-off -

This plugin adds the multi-user agenda (multiple agendas) to the Calendar (Planner). You can add agendas and link them as default to the current user. For every agenda a tab will appear in the agenda Calendar so you can see what the appointments, etc. are on other agendas. You can have a agenda for each employee, salesperson, user, etc. and create invoices directly from his / her agenda with a simple click. Each agenda has it's own calendar and task list.

Created with the Standard Edition of HelpNDoc: Easily create CHM Help documents

Calendar- Resource name

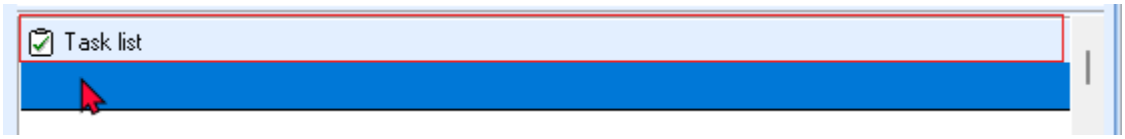
The Resource name links the events, tasks, etc. to a specific name in the Calendar. It will also print on the Calendar report.

Multi-User calendar (agenda) - Manual - Shop - Licence : Once-off -

This plugin adds the multi-user agenda (multiple agendas) to the Calendar (Planner). You can add agendas and link them as default to the current user. For every agenda a tab will appear in the agenda Calendar so you can see what the appointments, etc. are on other agendas. You can have a agenda for each employee, salesperson, user, etc. and create invoices directly from his / her agenda with a simple click. Each agenda has it's own calendar and task list.

By default a Resource is already defined as osFinancials or osFinancials5/TurboCASH5 in each of the Firebird database templates you may download from the Downloads screen launched from the Creation wizard - Let osFinancials help you to create a Set of Books? option.

After creating a Blank database on the Creation wizard - Customise your own Set of Books (Advanced)? option, no resource is available for the blank database.



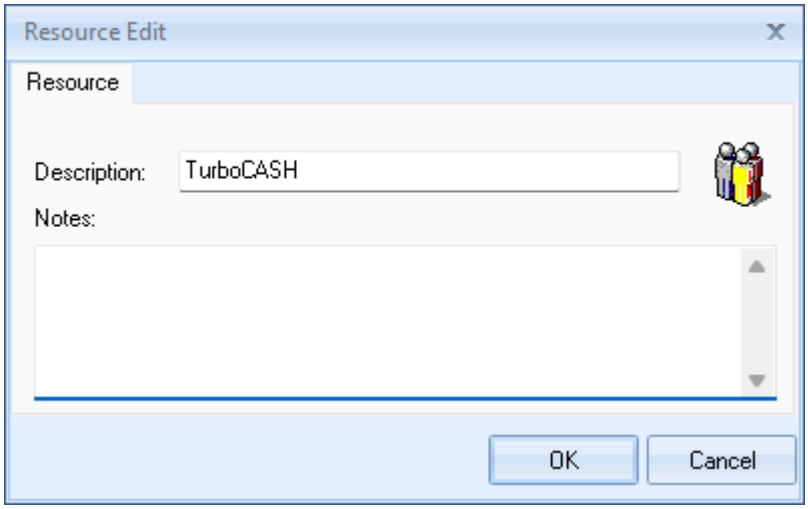
When you start to add an Event to the Calendar for the first time, the following confirmation message is displayed:

> No resources have been defined! Would you like to add one now?

Click Yes to add a Resource name.

The resource name or description field can accommodate up to 255 characters in the "RESOURCES" table.

The Task form can only display up to 12 characters.



Click OK to save the resource.

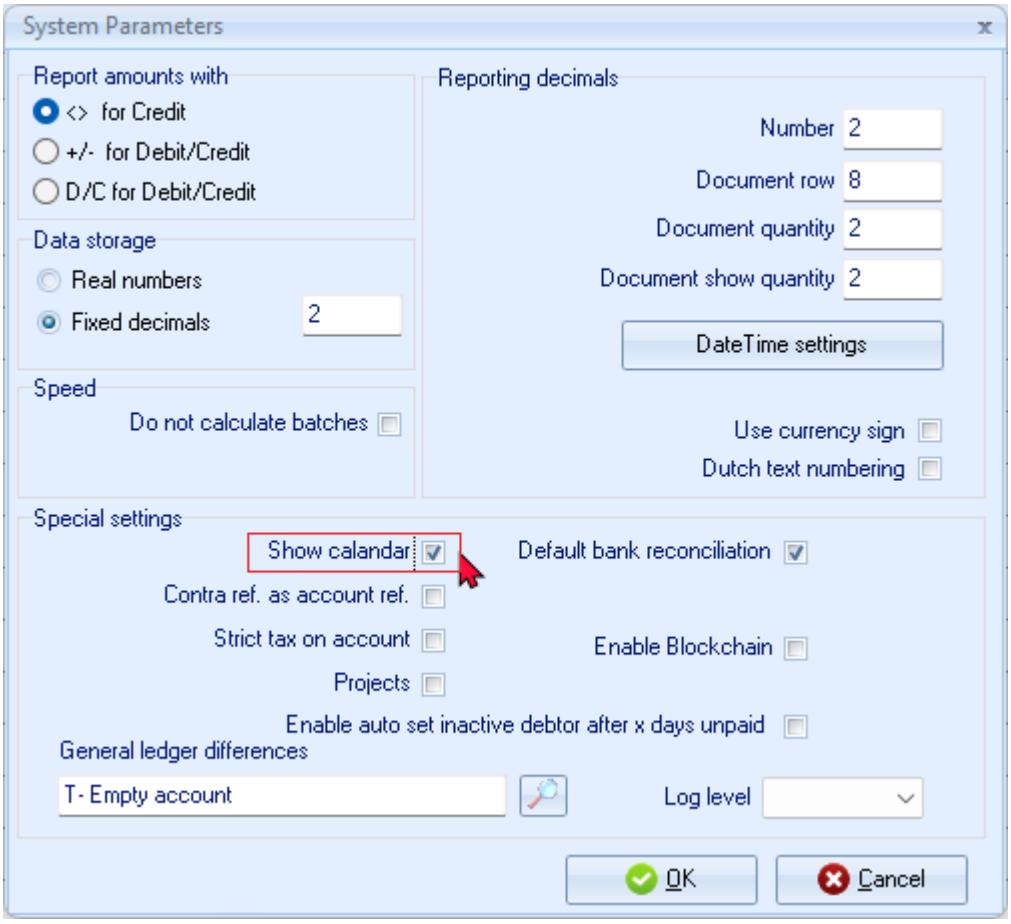
Set the Calendar as default

In osFinancials5/TurboCASH5, the default behaviour is for the Welcome screen to be launched when opening a Set of Books. However, you have the option to activate the Calendar to be launched instead. This means that whenever you open a Set of Books, the Calendar will be automatically displayed as the default screen.

Activating the Calendar as the default screen can be useful if you frequently rely on the Calendar feature and want quick access to it whenever you open your Set of Books. It allows you to directly view and manage your scheduled events, appointments, and other calendar-related tasks without having to navigate through the Welcome screen first.

To set the Calendar as the default when opening the Set of Books:

1. On the Setup ribbon, select Setup → System parameters.



2. Select (tick) the "*Show calendar*" field.

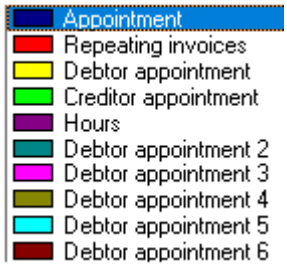
3. Click on the OK button.

Created with the Standard Edition of HelpNDoc: Transform Your Documentation Workflow with HelpNDoc's Intuitive UI

Create / Add events (Appointments)

In osFinancials5/TurboCASH5, the Calendar feature offers the flexibility to schedule and create various types of events or appointments. You can schedule or add events in the following The Calendar feature offers the flexibility to schedule and create various types of events or appointments. You can schedule or

add events in the following categories:



1. Appointment (General): This category allows you to schedule general appointments, such as meetings with a bank manager or lunches with clients or colleagues.
2. Repeating invoices: If you have recurring invoices that need to be processed or copied regularly, you can schedule them as repeating invoices. This feature simplifies the task of generating invoices for repetitive transactions.
3. Hours: This category allows you to schedule services rendered on an hourly basis. Once the hours are scheduled, you have the option to generate Quotes based on the scheduled hours. These Quotes can be edited if necessary to ensure accuracy. After finalizing the Quotes, you can convert them into Invoices.
4. Debtors appointment: You have the ability to schedule up to six different categories of appointments with debtors (customers/clients). These categories can be customized based on your specific needs and can include appointments for specials, accounts, or any other relevant category. Moreover, you can create quotes and invoices directly from these debtor appointments, streamlining your quotations and invoicing processes.
5. Creditors appointment: This category allows you to schedule appointments with creditors (suppliers/vendors). You can use this feature to keep track of important meetings or discussions with your suppliers regarding orders, accounts, or any other related matters.

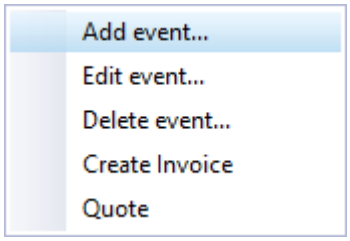
By leveraging these features in the Calendar, you can effectively manage and track various types of appointments, schedule repeating invoices, and create invoices for debtor appointments, all within osFinancials5/TurboCASH5.

The Calendar feature utilises colour coding to visually distinguish between different categories of events. This makes it easier to identify and differentiate the types of events when they are displayed on the Calendar. The colour-coded system helps you quickly recognise and navigate through your scheduled events, improving efficiency and organisation.

To add (create) events or appointments:

1. Select a suitable time on the day-time view of the agenda and right-click. The following context menu is

displayed:



a) Add event - Select this option to create a new event. You can choose the category of the event, select the salesperson associated with the event, and provide all the necessary details such as description, start and end time, reminders, appointment recurrence, location, select a default stock item or product for the event, add notes, and any other relevant information.

b) Edit event - If you have already created an event, you can select it and choose the "*Edit event*" option to modify its details. This allows you to make changes such as updating the title, salesperson, adjusting the time, rescheduling the event, change the appointment recurrence, setting or removing reminders, selecting a default stock item or product, adding notes, or updating any other information associated with the event.

c) Delete event - This option allows you to delete a selected event. If you want to remove a previously created event, select it and choose the "*Delete event*" option from the context menu. You will be prompted to confirm the deletion before the event is permanently removed.

d) Create invoice - By selecting this option, you can generate an invoice for a selected debtor (customer/client) account directly from the event. This simplifies the invoicing process by automatically populating the invoice with the relevant details from the event.

e) Create quote - If you need to create a quote for a selected debtor (customer/client) account, you can select this option. It enables you to generate a quote based on the information provided in the event. The quote can be further customized, finalized, and sent to the customer for review.

Change to Agenda - option may be available on the context menu.

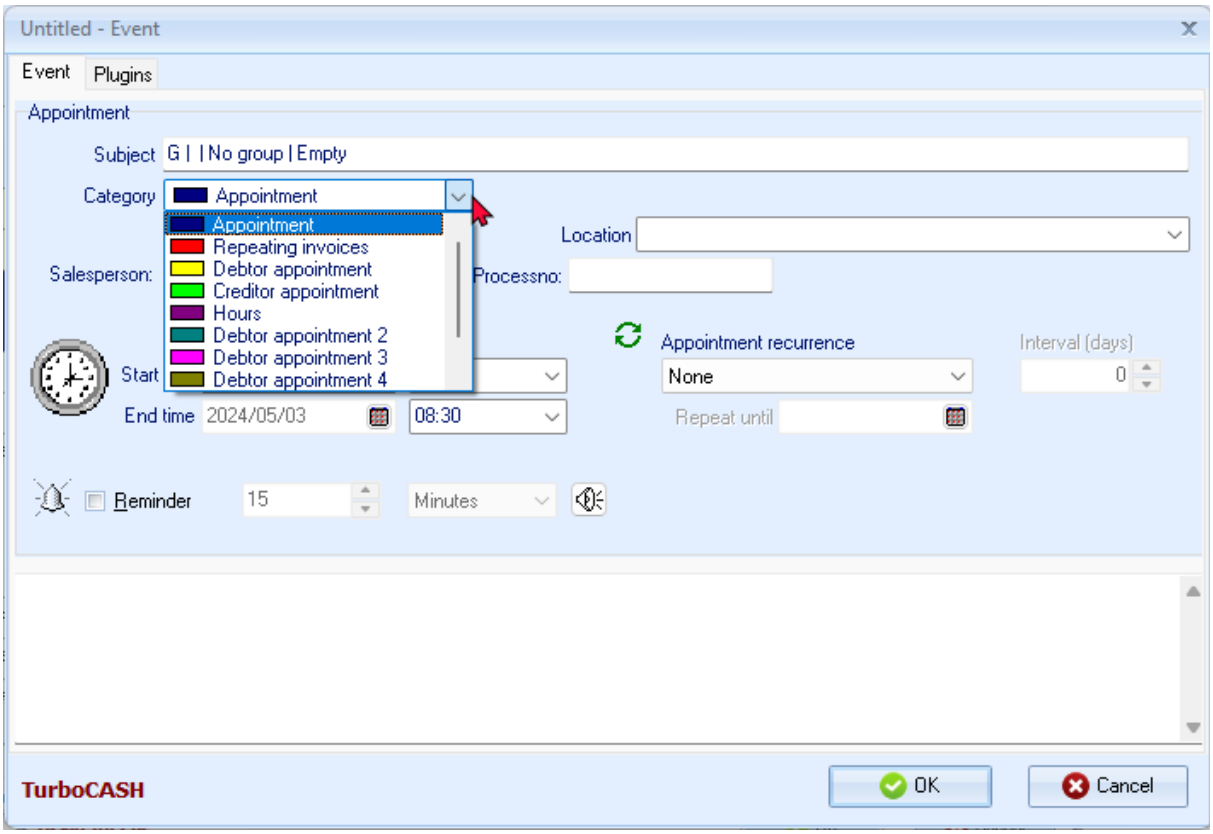
Multi-User calendar (agenda) - Manual - Shop - Licence : Once-off -

This plugin adds the multi-user agenda (multiple agendas) to the Calendar (Planner). You can add agendas and link them as default to the current user. For every agenda a tab will appear in the agenda Calendar so you can see what the appointments, etc. are on other agendas. You can have a agenda for each employee, salesperson, user, etc. and create invoices directly from his / her agenda with a simple click. Each agenda has it's own calendar and task list.

These options in the context menu of the Calendar provide convenient ways to add, edit, delete events or appointments, as well as create invoices or quotes directly from the agenda in

osFinancials5/TurboCASH5.

2. To create a new event, select the "*Add event*" option. The "*Untitled - Event*" screen is displayed:



3. Enter the subject (topic) of the appointment.

4. Select the category (i.e. Appointment, Repeating invoices, Debtors appointment (up to six (6) categories) or Creditors appointment).

5. Set the "*Start time*" and "*End time*" for the appointment. The selected time, when the "*Add event*" option was launched, will be displayed.

> *If you wish to mark this event as an all day event, select the "All day event" option. You are then not able to set the start and the end date.*

6. Select the appointment recurrence (i.e. "*None*" (default), "*Daily, Weekly, Monthly by day, Monthly by date, Yearly by day, Yearly by date*" or "*Custom*").

> *If "Custom" is selected, you may set the interval in the number of days.*

> *If the Recurrence is set to any other value than "None", the Repeat until date will be displayed for one calendar year, e.g. 07/05/2022 if the start date is 07/05/2023.*

You may then select a date until, which the event or appointment is to be repeated.

7. Select the Reminder option if you need to be reminded of the event or appointment.

This will remind you of a scheduled event or task well in advance (from any number of minutes, hours and even days) until the event or appointment is deleted.

8. Enter any additional information or notes about the appointment. This will also be displayed when you edit the event or when the Reminder is displayed.

9. Click on the OK button to save the event or appointment.

Create documents - Events (Appointments)

Event categories

The Calendar feature offers the flexibility to schedule and create various types of events or appointments. You can schedule or add events in the following categories:

1. Appointment (General): This category allows you to schedule general appointments, such as meetings with a bank manager or lunches with clients or colleagues.

2. Repeating invoices: If you have recurring invoices that need to be processed or copied regularly, you can schedule them as repeating invoices. This feature simplifies the task of generating invoices for repetitive transactions.

3. Hours: This category allows you to schedule services rendered on an hourly basis. Once the hours are scheduled, you have the option to generate Quotes based on the scheduled hours. These Quotes can be edited if necessary to ensure accuracy. After finalizing the Quotes, you can convert them into Invoices.

4. Debtors appointment: You have the ability to schedule up to six different categories of appointments with debtors (customers/clients). These categories can be customized based on your specific needs and can include appointments for specials, accounts, or any other relevant category. Moreover, you can create quotes and invoices directly from these debtor appointments, streamlining your quotations

and invoicing processes.

5. Creditors appointment: This category allows you to schedule appointments with creditors (suppliers/vendors). You can use this feature to keep track of important meetings or discussions with your suppliers regarding orders, accounts, or any other related matters.

By leveraging these features in the Calendar, you can effectively manage and track various types of appointments, schedule repeating invoices, and create invoices for debtor appointments, all within osFinancials5/TurboCASH5..

The Calendar feature utilises colour coding to visually distinguish between different categories of events. This makes it easier to identify and differentiate the types of events when they are displayed on the Calendar. The colour-coded system helps you quickly recognise and navigate through your scheduled events, improving efficiency and organisation.

Additional features of the Calendar

In osFinancials5/TurboCASH5, the Calendar feature offers additional functionality to manage tasks, contacts, and bulk time entries.

1. Tasks: You can use the Calendar to manage your tasks effectively. This includes adding, editing, and deleting tasks such as bank reconciliation, printing debtor statements, printing creditor remittance advises, and more. By keeping track of your tasks in the Calendar, you can easily monitor and complete your to-do list.

2. Contacts: The Calendar provides a convenient way to manage your contacts. You can find contacts by clicking on the alphabetical keys and perform various actions like adding, editing, or deleting contacts. This allows you to keep your contact information organized and easily accessible within the Calendar.

3. Bulk time entry: The Calendar feature also allows for bulk time entry. This functionality enables you to select a salesperson, debtor (customer/client) account, and stock item. You can then add time in specific slots to process invoices for the designated times and days. Bulk time entry simplifies the process of invoicing for multiple time entries, making it more efficient and less time-consuming.

By incorporating tasks, contacts, and bulk time entry into the Calendar, osFinancials5/TurboCASH5 provides a comprehensive platform for managing various aspects of your business operations in one centralized location.

Repeating invoices - Calendar

The "*Repeating invoices*" appointment category in the Calendar feature of osFinancials5/TurboCASH5 provides a convenient way to schedule and generate recurring invoices for your debtors (customers/clients). This feature is especially useful for invoices that occur frequently or on a regular basis, such as monthly service fees or subscription payments.

With the "*Repeating invoices*" category, you have the flexibility to select invoices for selected debtors or debtors linked to a selected group that need to be generated repeatedly. These can be invoices for specific services or products that are billed to multiple debtors or a single debtor.

Once you have selected the invoices to be generated, osFinancials5/TurboCASH5 will automatically generate invoice numbers and copy the document details into the normal invoice document for the selected debtor or debtors. This eliminates the need for manual entry of invoice information, saving you time and reducing the chances of errors.

To review and make any necessary edits to the generated invoices, you can access the Invoices section of osFinancials5/TurboCASH5. Here, you can check the details, adjust any amounts or descriptions if needed, and ensure the accuracy of the invoices before they are sent to the debtors.

After reviewing and editing the invoices, the next step is to update (post) them to the ledger. This final step ensures that the generated invoices are properly recorded in the accounting system and reflected in the relevant debtor accounts.

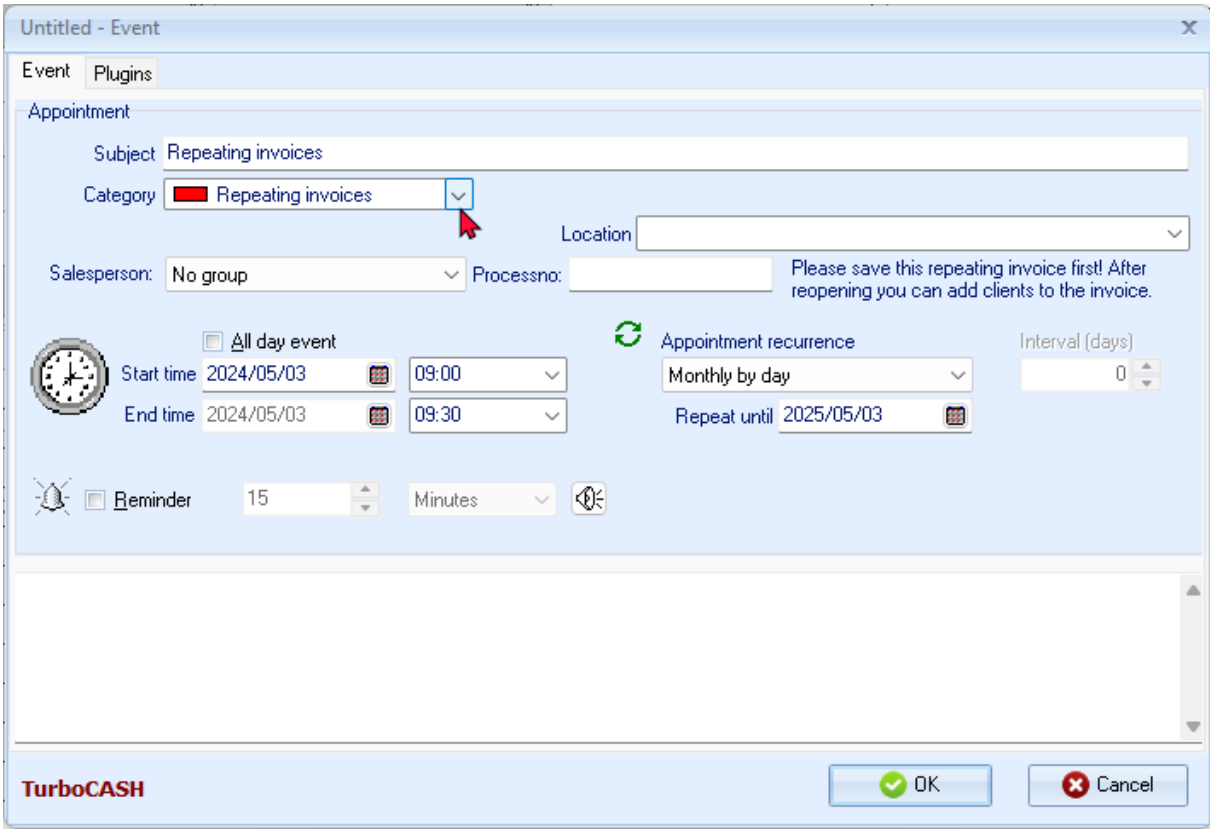
By utilizing the "*Repeating invoices*" category in the Calendar, you can streamline the invoicing process for recurring transactions. It eliminates the need to manually enter the same invoices each month and reduces the risk of overlooking or forgetting to bill for recurring services. This feature in osFinancials5/TurboCASH5 saves you time and effort by automating the generation of repeating invoices, allowing you to focus on other aspects of your business.

Schedule Repeating invoice events

To schedule a Repeating Invoice Event:

1. On the Default ribbon, select Calendar. The Planner (Display - Agenda - the default screen) will be displayed.

2. Select a suitable time and right-click on the Day View. On the context menu, select the Add Event option. The *Untitled - Event* screen is displayed:



3. Enter and select the following:

   a) Subject - Enter the subject for the repeating invoices event. This subject needs to be a sensible one to allow you to easily identify and manage the scheduled event on the Calendar.

   b) Category - Select the category as Repeating invoices. This will be indicated with red in the Calendar. (Other options are Appointments, Debtors Appointments or Creditors Appointments).

   c) Start time ... End time - The selected time when the Add Event option was launched, will be displayed. You may set or adjust the Start time, if necessary.

> *You may need to:*
>
> - *If it will take longer than the default 30 minutes (from the Starting time), you may adjust the end time.*
> - *If you wish to mark this event as an all day event, select the "All day event" option. You will then not be able to set the start and the end date.*

   d) Recurrence - This is the frequency and times you may schedule the repeating invoices. For example, if you need to process the Invoices on a monthly basis, you may select the "*Monthly by day*" or the "*Monthly by date*" options.

Select the appointment recurrence (i.e. "None" (default), "Daily, Weekly, Monthly by day, Monthly by date, Yearly by day, Yearly by date" or "Custom"). If "Custom" is selected, you may set the interval in the number of days.

Interval (days) - If "Custom" is selected you may set the interval in the number of days, for example, 30 days if you need to process the repeating invoices every 30 days.

Repeat until - If the Recurrence is set to any other value than "None", the "Repeat until date" will be displayed for one calendar year, e.g. 07/05/2022 if the end date is 07/05/2023.

e) Reminder - Select this option, if you need to be reminded of the event or appointment. This will remind you of a scheduled event or task well in advance (from any number of minutes, hours and even days). This will also remind you until the Event or appointment is deleted.

f) Notes / Information - Enter any notes or additional information about the appointment. This will also be displayed when you edit the event, or when the "*Reminder*" is displayed.

4. Click on the OK button.

Copy scheduled Repeating invoice

To copy scheduled Repeating invoices:

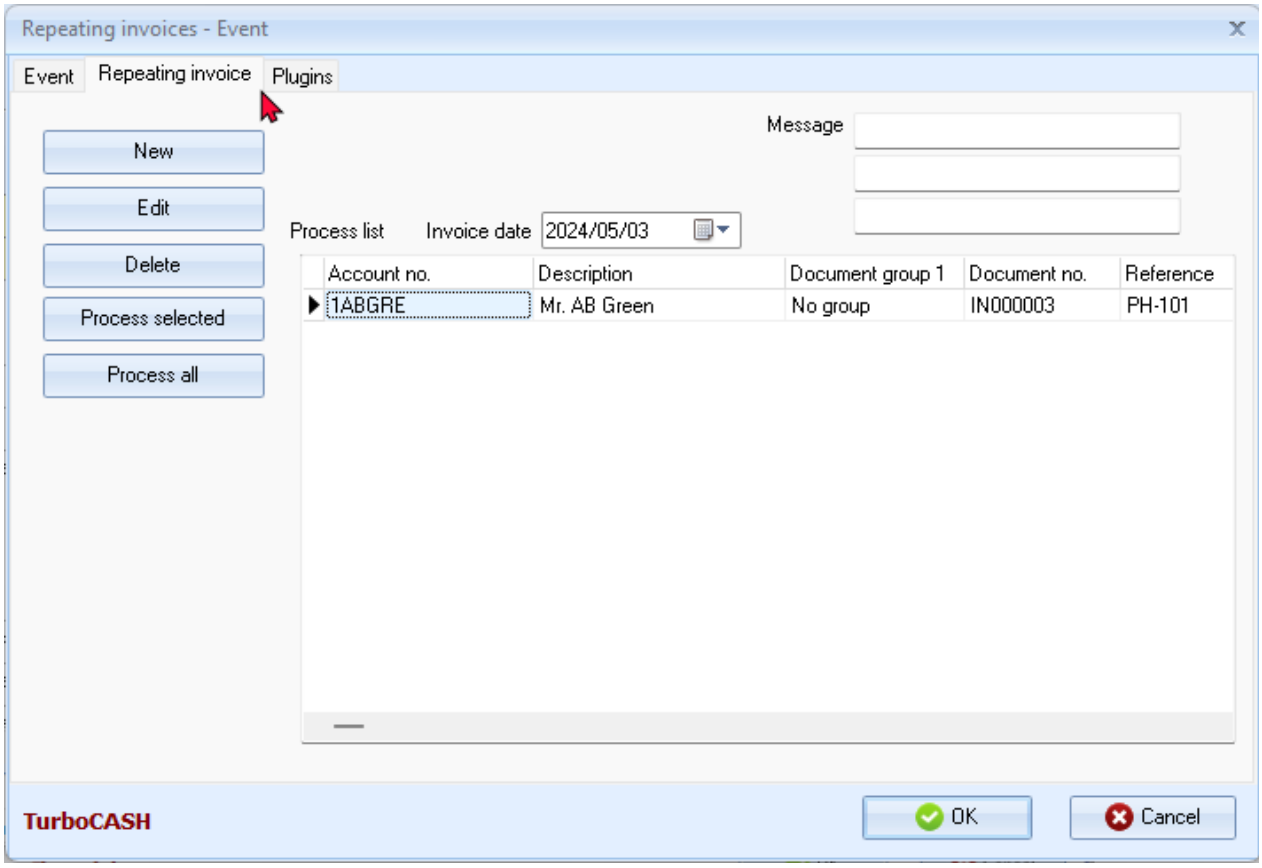
1. You may also open the event - Repeating invoices using the following two options:

   a) Click on the Open item button of the Reminder screen to edit the event - Repeating invoices.

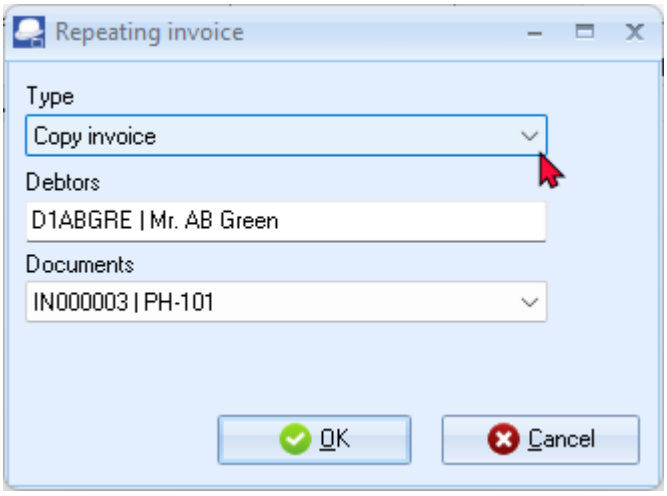
   b) Right-click on the event - "*Repeating invoices*" on the Calendar. Select the Add event option. This will launch the Repeating invoices - Event screen.

2. On the Event tab you may edit any of the fields you need to edit. You may also add any additional information or edit any notes or information already added when the event or appointment was created or previously edited.

3. Click on the Repeating invoice tab. The following Process list screen is displayed:



4. The first time the Process list screen is displayed, no Invoices will be listed. Click on the New button to copy or set the Invoices as recurring invoices. The following screen is displayed:



5. Enter and select the following:

    a) Type - Select one of the following:

        i) Copy Invoice (default option) - to copy a selected Debtor account.

        ii) Copy Invoice to group 1 - this will copy a selected document (Invoice or Quote) to all Debtor accounts linked to a specific debtor group 1.

This option is only available if you have created Debtor groups 1 in Setup → Groups (Debtors).

b) Debtor - Select one of the following:

i) If the Copy Invoice has been selected, select the Debtor account for which you need to set or copy a selected Invoice as a Repeating Invoice.

ii) If the Copy Invoice to group 1 has been selected, you need to select an available debtor group from the drop-down list.

c) Documents - Select a specific document (Invoice or Quote) from the drop-down list. This Invoice will be set or copied to a selected Debtor account, or to all Debtor accounts within the selected Debtor group 1.

6. Select the date on which these repeating invoices are to be processed / generated, if necessary.

7. Enter a message which you would like to be displayed on the repeating Invoice, or all repeating invoices for the selected Debtor group 1.

8. Click on the OK button. All Repeating invoices will be listed on the Process list.

Edit scheduled Repeating invoices

Once a document (Invoice or Quote) has been copied or added to the Process list, you may edit the Process List, if necessary. The process list will display a list of the copied documents. The following information for each document will be displayed on each row:

- Account number - Account number or account code of the Debtor account.
- Description - Account description or name of the Debtor account.
- Debtor group 1 - The debtor group 1 if the selected Debtor account have been linked to a Debtor group 1 and the Copy Invoice to group 1 option was selected will be displayed.
- Document number - The selected document number from which the repeating Invoice will be copied to create / generate a new Invoice.
- Reference - The reference, if entered on the Document entry screen for the document.

The following options are available:

- Edit button - click to edit the selected Repeating Invoice's selection (Type, Debtor / Debtor

group 1 or Documents).

- Delete button - click to remove the selected Repeating invoice from the Process list.

Process scheduled Repeating invoices

Once a document (Invoice or Quote) has been copied or added to the Process list, you may process or create the Repeating documents. Before you do this, you need to check that the date is correct and enter or edit the message, if necessary.

To Process Scheduled Repeating invoices:

When you are ready you may click on one of the following buttons:

1. Process selected - click to process or create a document for selected Debtor accounts, or all Debtor accounts linked to the selected debtor group 1, from the selected document on the process list.
2. Process All - click to process or create documents for selected Debtor accounts or all Debtor accounts linked to the selected debtor group 1 from the selected document on the process list. Once the process is finished, a confirmation message will be displayed.

   "Document(s) created!"

3. Click on the OK button to close or exit the Repeating invoices - Process list screen, or Repeating invoices - Event screen.

Edit / Process copied / created invoices

When the Invoices are created with this feature, osFinancials5/TurboCASH5 will automatically generate document numbers for each Invoice. The created / generated Invoices will be listed on the Document list screen for Invoices.

To do this, go to Invoices. You need to select the Debtor account and the Invoice number to check, edit (if necessary) and print the Invoices.

Finally you need to update (post) the Invoices to the ledger. This will update the transactions to the general ledger, debtors ledger, and the stock ledger. You may select the Invoice and edit the Invoices before posting or updating it to the ledger.

Should you by accident have generated a Repeating invoice incorrectly to a Debtor account, you need to delete the Invoice.

Invoices - Hours - Calendar

The "*Hours*" appointment category in the Calendar feature of osFinancials5/TurboCASH5 is designed for scheduling services rendered on an hourly basis. This category is particularly useful for professions that charge their clients based on the amount of time spent, such as consultants, contractors, or other service providers.

When you schedule hours appointments in the Calendar, you can specify the duration and details of the services provided. This allows you to track and manage your time effectively and ensure accurate billing for your clients.

Once the hours are scheduled, you have the option to generate Quotes based on the scheduled hours. Quotes serve as a preliminary document outlining the services and associated costs for your debtors. These Quotes can be edited if necessary to ensure accuracy.

After finalizing the Quotes, you can convert them into Invoices. The Quotes serve as a basis for creating the actual invoices that you send to your debtors for payment. This conversion process helps streamline the invoicing workflow and ensures that the services provided are accurately reflected in the invoices. The integration of the Calendar with the billing functionality in osFinancials5/TurboCASH5 streamlines the invoicing process and eliminates the need for manual data entry.

By using the "*Hours*" category in the Calendar, you can keep track of your time spent on different tasks or projects, allocate it to the corresponding debtors (customers/clients), and seamlessly generate quotes for invoicing. This integration between time tracking and billing ensures accurate and efficient billing processes for services provided on an hourly basis.

Overall, the "*Hours*" appointment category in the Calendar feature of osFinancials5/TurboCASH5 serves as an electronic diary and time sheet, allowing you to schedule, track, and invoice your hours-based services to your debtors (customers/clients) with ease and accuracy.

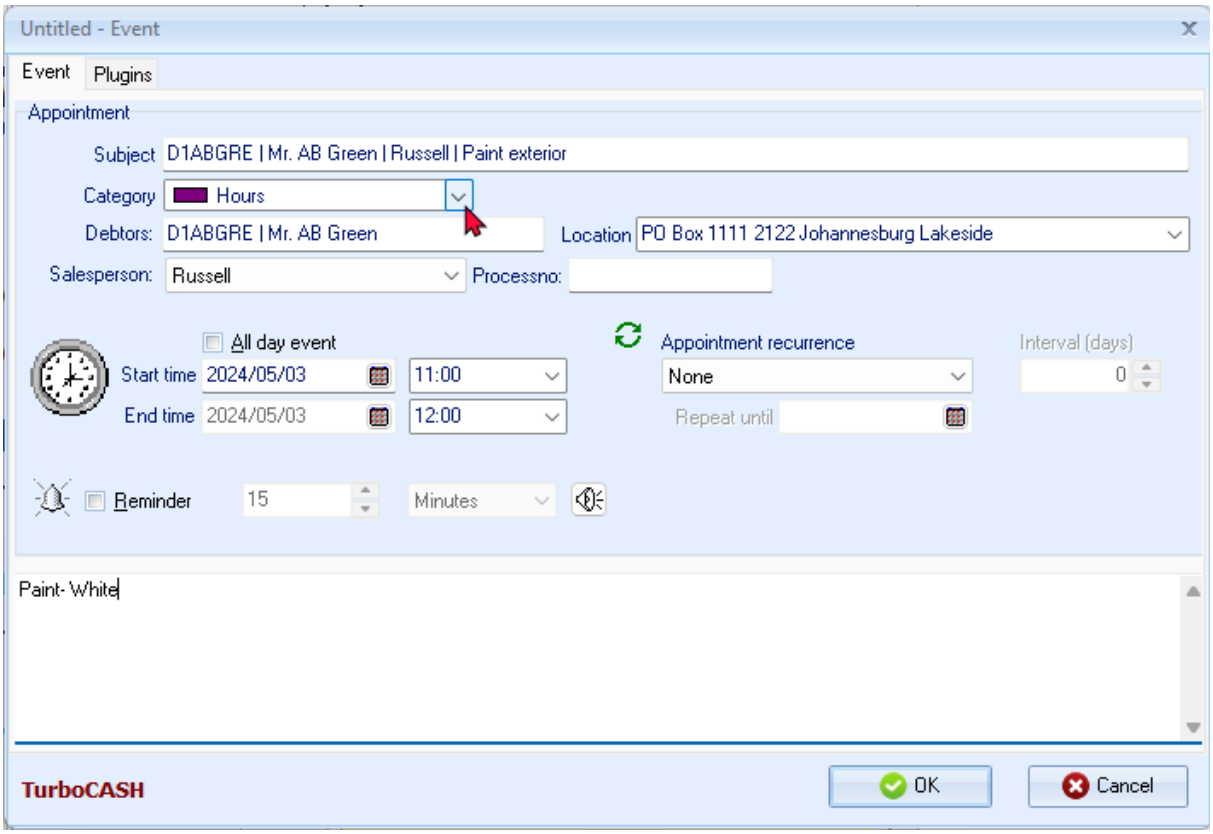
This option generates Quotes and not Invoices. The reason for this, is:

- *Quotes are used to schedule the hourly services in the future.*
- *Once the service is rendered, the Quotes are edited and confirmed (converted to invoices).*
- *You may also view and print the Invoice on the Documents tab of the Debtor account (Default ribbon). Once the Invoice is posted (updated to the ledger), it will be listed as a debit transaction on the Transactions tab of the Debtor account.*

- *You may also select a specific person (salesperson) which will render these services.*

To create Invoices for Hours:

1. On the Default ribbon, select Calendar.
2. Select the day and a time slot to schedule the hours.
3. Select a date and right-click on a time slot. On the context menu, select the Add event... option. The "*Untitled – Event*" screen will be displayed.



4. On the *Untitled Event* screen, enter and/or select the following:

   a) Subject - Leave blank. This will automatically be filled in with the debtor (customer / client) account code, description and Salesperson when selecting it. If you have entered any text in the "*Subject*" field (fourth Empty) field, this text would also be included in the subject (for example "*Paint exterior*".

   b) Category - Select *Hours* (Magenta colour).

   c) Hours - Click on the *Hours* field. Select a debtor customer account.

   d) Projects - *Empty* is the default project. Select a Project from the list.

e) Salesperson - Select a salesperson. If the consultant or the salesperson is not added you need to exit this screen and first add a salesperson in Setup → Salesperson or in Setup → Groups (Salesperson).

f) Quote - Leave blank.

g) All day event - Leave blank.

h) Start time - Select *2024/05/03*. This is the date and time as selected on the Calendar from where the *Untitled - Event* screen was launched. If this date is not correct, you may select the correct date. Enter or select the time slot, if not correct.

i) End time - Enter the time expected to finish the project.

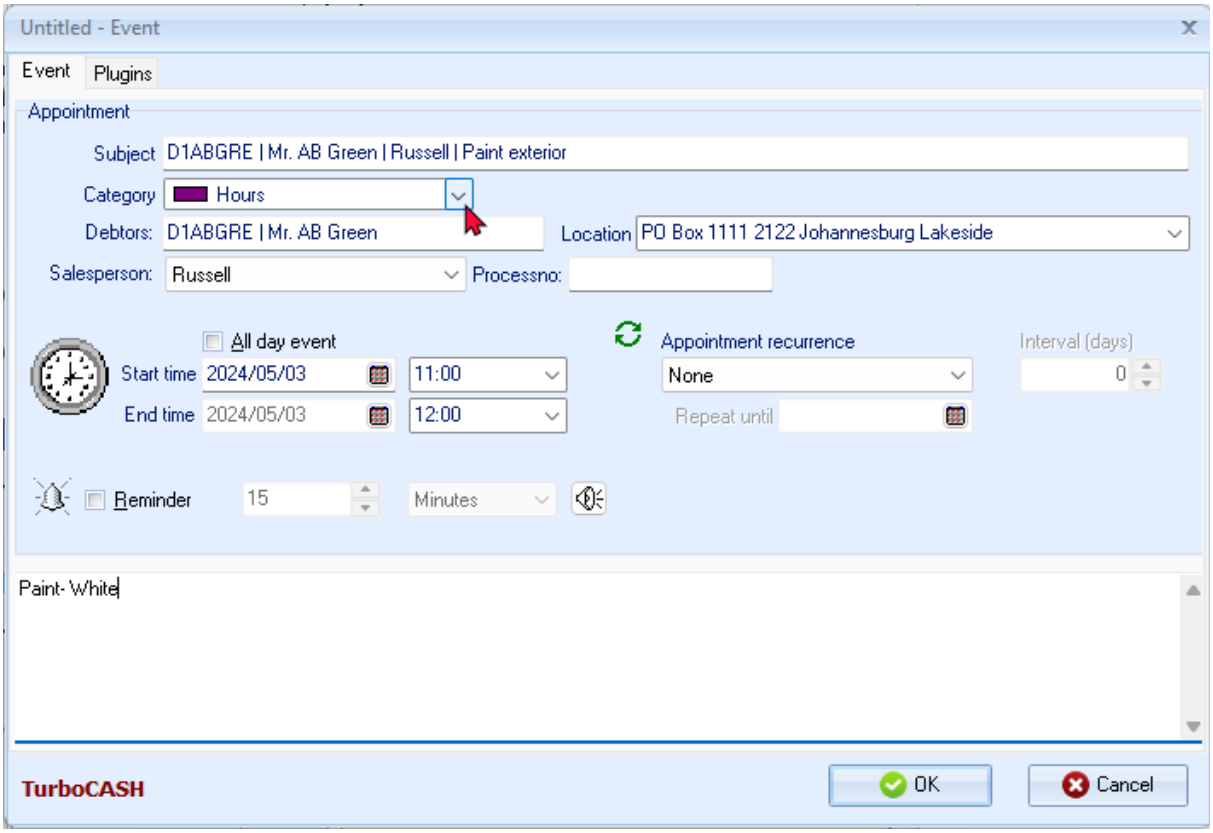
j) Appointment recurrence - The default is "*None*".

k) Repeat until - Field disabled.

l) Reminder - Leave blank. You may activate it and set the Minutes, Hours or Days to remind you in advance to process invoices for hours.

m) Stock item - You may select a default stock item (product) for this Appointment.

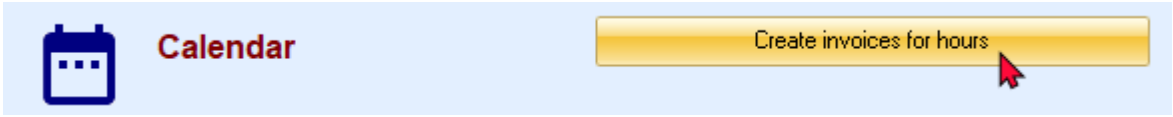
5. After scheduling the invoices for hours, the screen should display as follows:



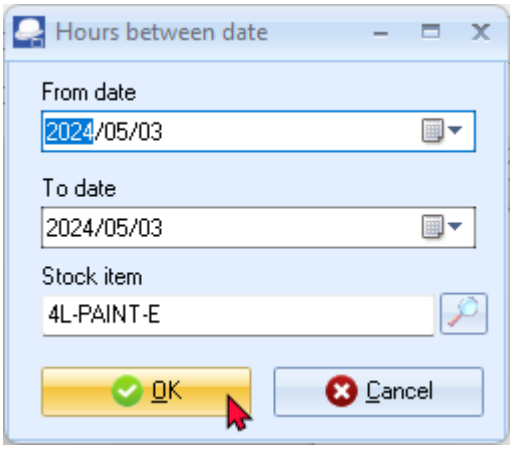
The Subject and the Titlebar will display the Debtor (customer / client) account code and name as well as the name of the salesperson (consultant). If Projects are activated, you may select the project. The selected Project code and description will be displayed.

6. Click on the OK button.

7. On the Agenda (top of the screen), click on the Create invoices for hours button.



The "*Hours between date*" options screen is displayed:



8. Select the date from and date to in which the hourly fee is to be charged (e.g. *2024/05/03*).

9. Click on the Lookup icon and select the stock item for services (or the correct Stock item if you have created one).

10. Click on the OK button to create the quote. An information message will be displayed.

"Quote(s) generated!"

11. Click on the OK button.

This Quote may be viewed on the following options:

- *Document entry screen - Quotes document type - as Unposted (i.e. Not converted to an Invoice).*
- *Projects on the list of a selected Project.*
- *Documents tab of the Debtor (customer / client) account. Once the Quote is confirmed (converted to an invoice and the Invoice is posted (updated to the ledger), it will be listed as a debit transaction on the Transactions tab of the Debtor account.*

You may need to edit the quote, e.g. add comments, change the hours, etc. change the Project code (if projects are activated), before converting it to an Invoice.

The Hours – Event will be displayed in Purple (Magenta) colour on the time slot of the scheduled day. The Day in the calendar will also be underlined and displayed in a Purple (Magenta) font.

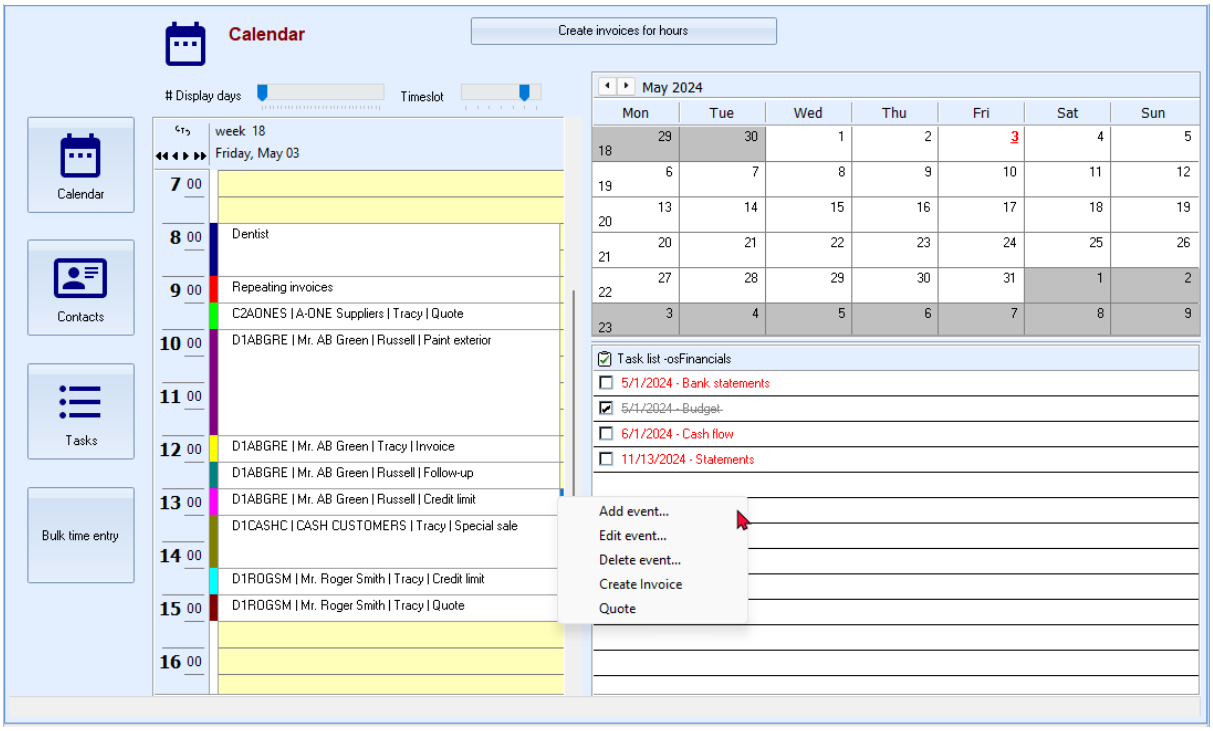
Create invoices - Debtor appointments

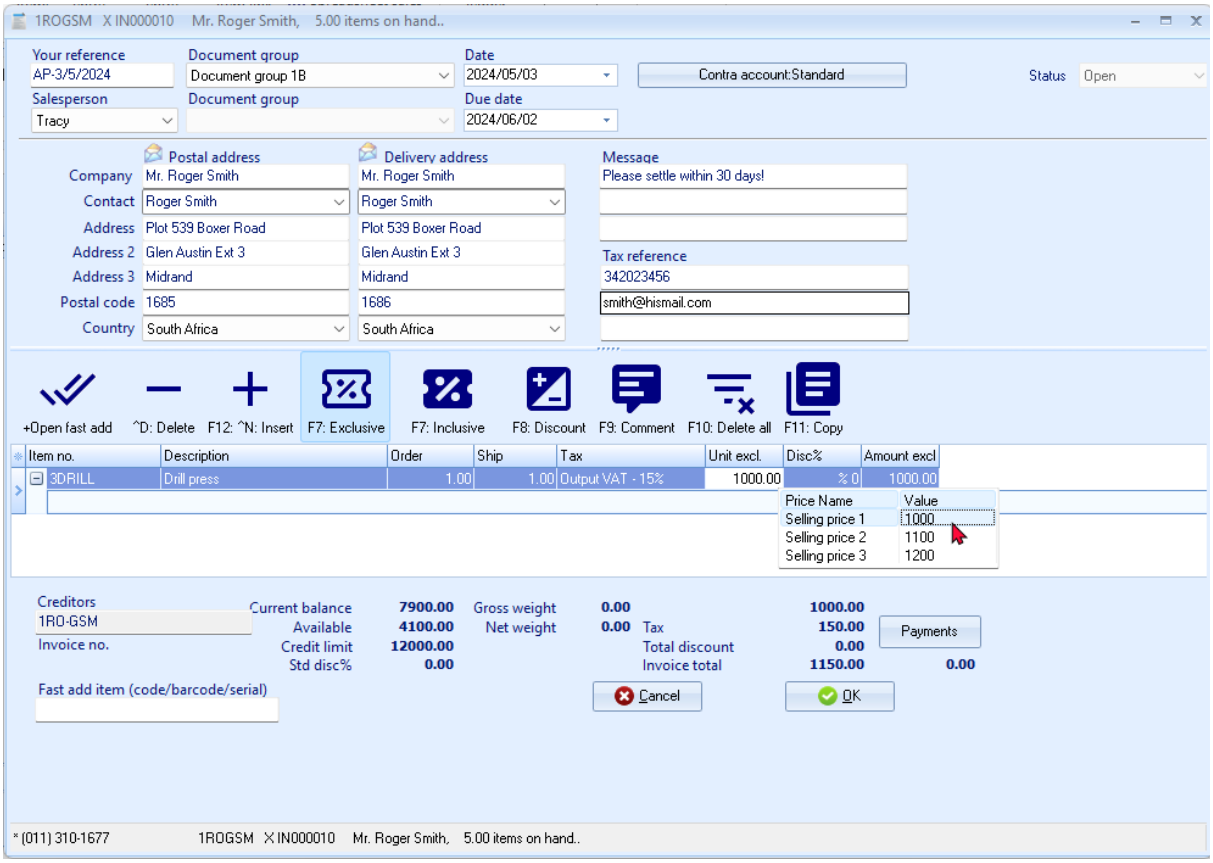
You may also create invoices for any of the six (6) categories of appointments scheduled with debtors (customers / clients).

To create invoices for debtor (customer / client) appointments:

1. On the Calendar, select any of the six (6) categories of debtor appointments and right-click.



2. On the context menu, select the "*Create Invoice*" option. A new invoice entry screen, displaying all the information and details for the debtor (customer / client) account will be displayed.



3. Enter and/or select the necessary fields and select a stock item.

4. Click on the OK button.

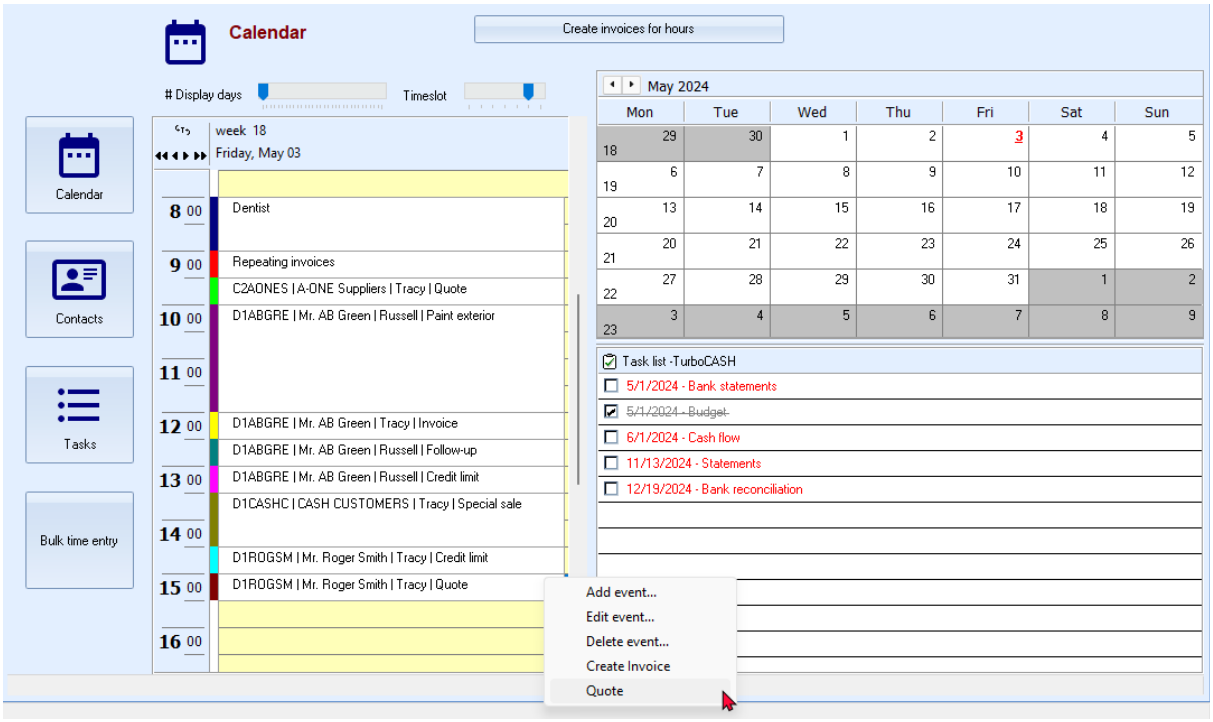
Created with the Standard Edition of HelpNDoc: Import and export Markdown documents

Create quotes - Debtor appointments

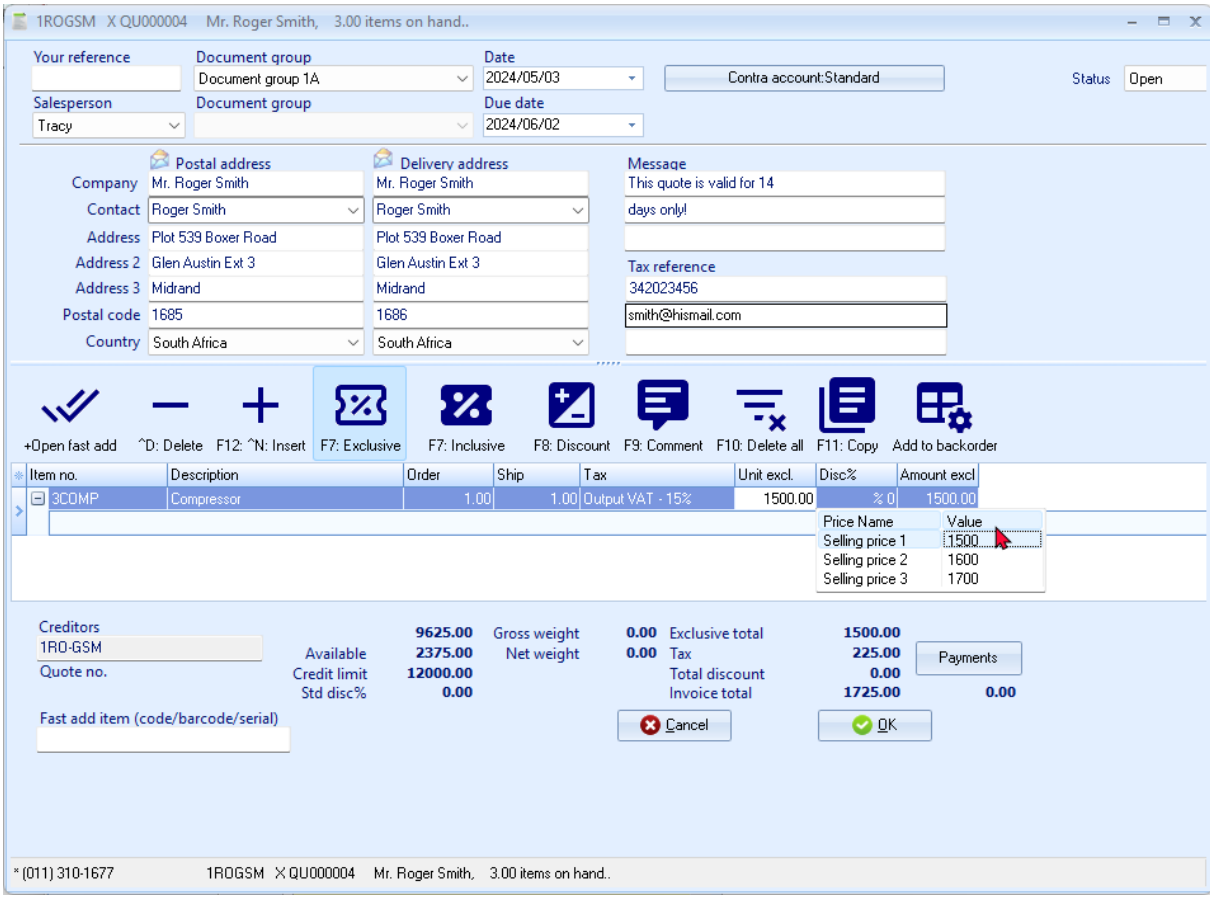
You may also create quotes for any of the six (6) categories of appointments scheduled with debtors (customers / clients).

To create quotes for debtor (customer / client) appointments:

1. On the Calendar, select any of the six (6) categories of debtor appointments and right-click.



2. On the context menu, select the "*Quote*" option. A new Quote entry screen, displaying all the information and details for the debtor (customer / client) account will be displayed.



3. Enter and/or select the necessary fields and select a stock item.

4. Click on the OK button.

This Quote may be viewed on the following options:

- *Document entry screen - Quotes document type - as Unposted (i.e. Not converted to an Invoice).*
- *Projects on the list of a selected Project.*
- *Documents tab of the Debtor (customer / client) account. Once the Quote is confirmed (converted to an invoice and the Invoice is posted (updated to the ledger), it will be listed as a debit transaction on the Transactions tab of the Debtor account.*

You may need to edit the quote, e.g. add comments, change the quantities, etc. change the Project code (if projects are activated), before converting it to an Invoice.

Bulk time entry

The bulk time entry feature in the Calendar of osFinancials5/TurboCASH5 allows you to efficiently add multiple time entries for a salespersons and a specific debtor (customer/client) account. This feature is particularly useful when scheduling recurring appointments or events.

To use bulk time entry, you can select the desired dates and set the time for a salesperson's hours event on the Calendar. For example, if a debtor (customer/client) has booked a training course or workshop for a week, you can easily schedule appointments for each day of that week. These bulk time entries will create multiple appointments on the calendar as hours-type events for the selected dates and time slots.

Once the bulk time entries are created, you have the option to generate quotes for these events. Quotes can be customised and edited as needed before sending them to the debtor (customer/client). This allows for clear communication and documentation of the scheduled appointments or services.

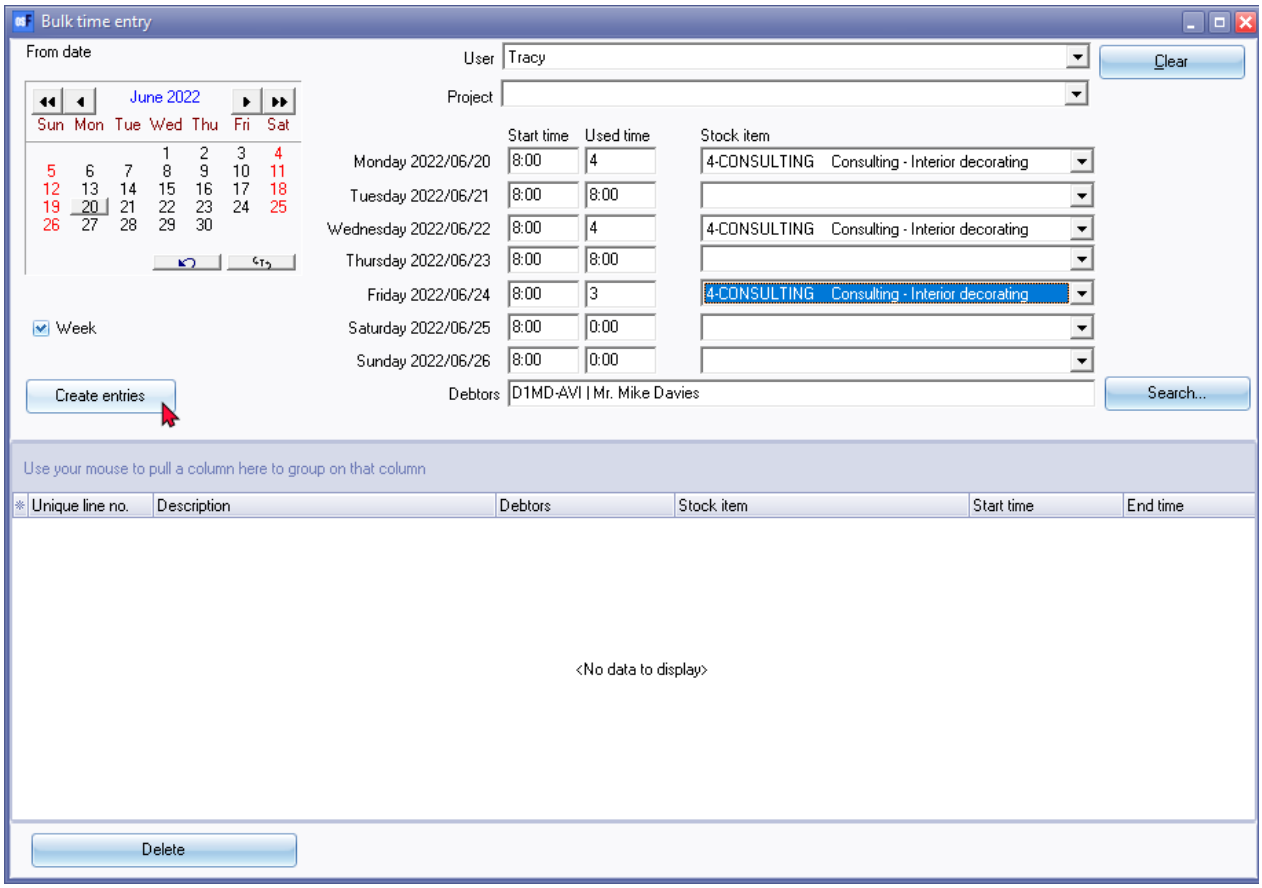
After the appointments are completed, you have the flexibility to convert the quotes to invoices. This streamlined process eliminates the need for manual data entry and ensures accuracy in billing and invoicing. By converting the quotes to invoices, you can efficiently generate invoices based on the scheduled appointments and bill the debtor (customer/client) for the services provided.

Overall, the bulk time entry feature in osFinancials' Calendar provides a convenient way to schedule and manage multiple appointments for salespersons and debtors (customers/clients). It enables the creation of quotes, smooth transition to invoices, and simplifies the workflow for tracking and billing services.

See video on Bulk time entries

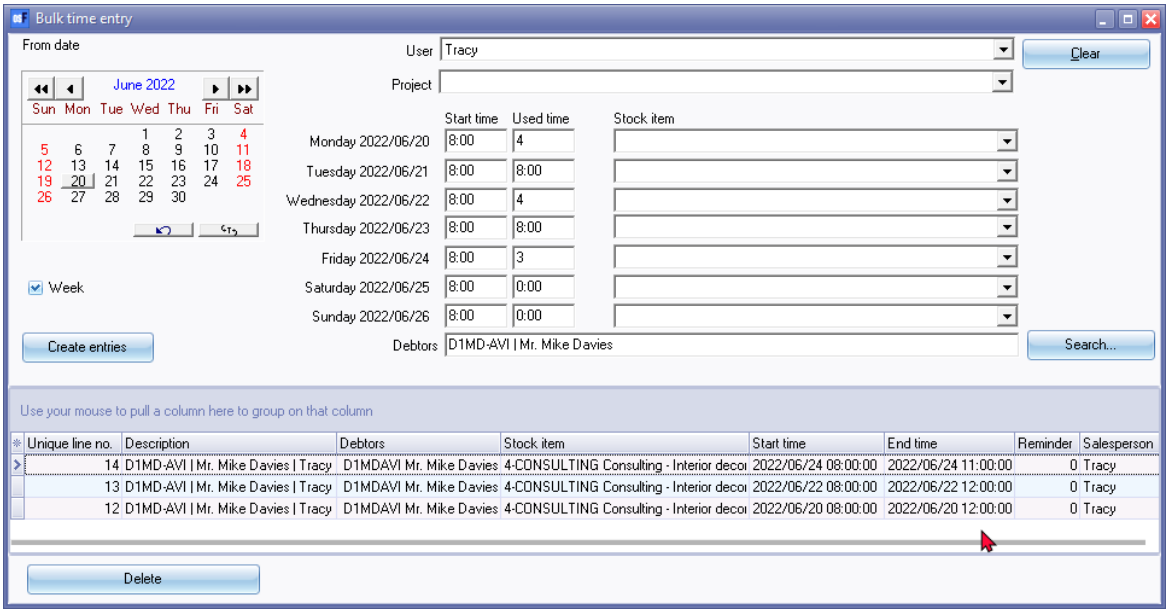
To process bulk entries:

1. On the Default ribbon, select Calendar.
2. Click on the Bulk time entry button.
3. Select the dates / days and a time slot to schedule the hours.
4. "*Week*" is the default option - it displays Monday to Sunday. If the "*Week*" option is not selected it will list only the selected date.
5. Select the Salesperson and enter the start dates and number of hours.
6. Select a stock item (usually sales no stock type)
7. Select the debtor (customer / client) account.

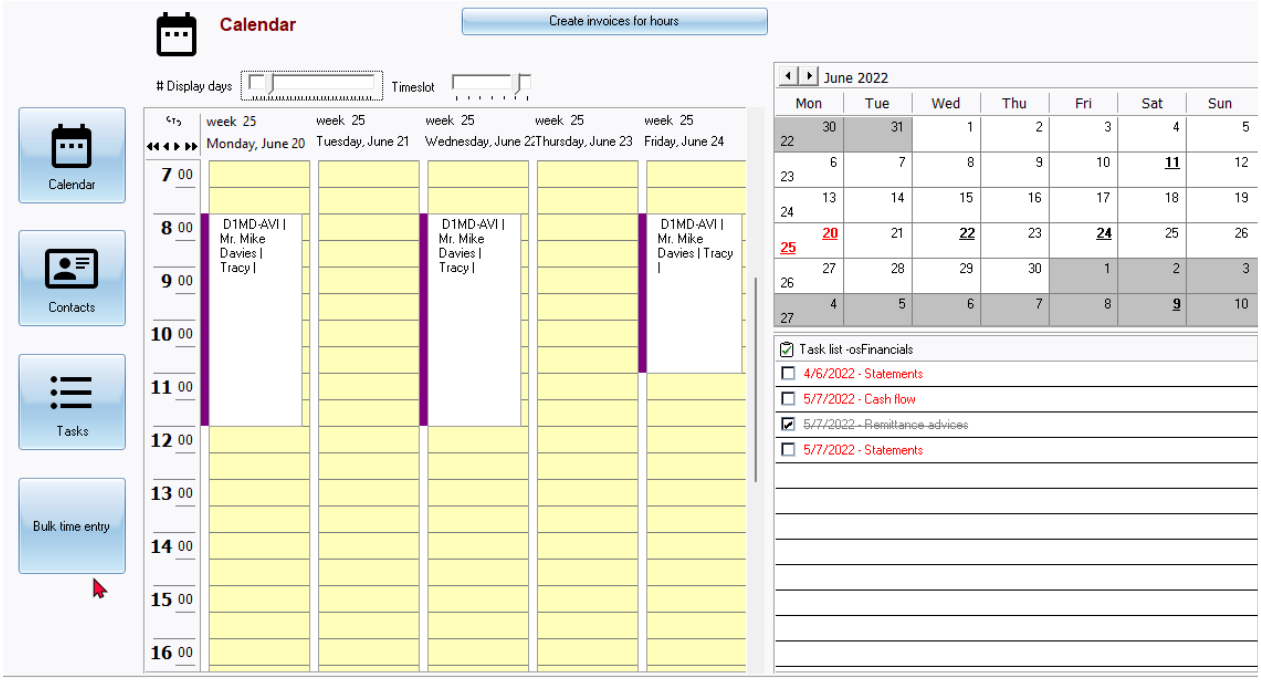


8. Click on the Create entries button. A confirmation message will be displayed.

"Entries created!"

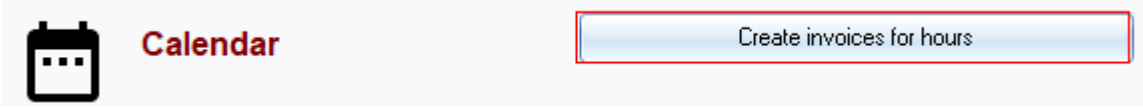


9. Once the entries are created, these entries will be listed in the calendar.

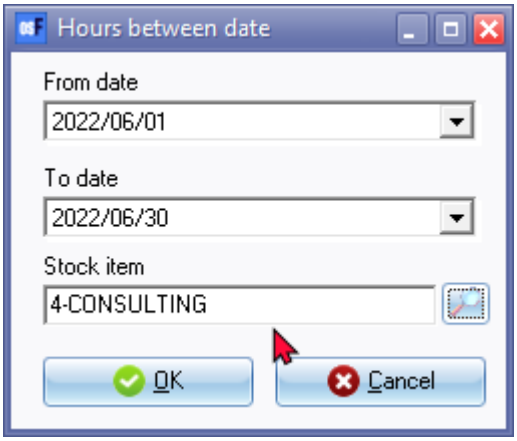


10. You may edit these events, set reminders and add notes.

11. On the top of the screen, click on the Create invoices for hours button.



The "*Hours between date*" options screen is displayed:



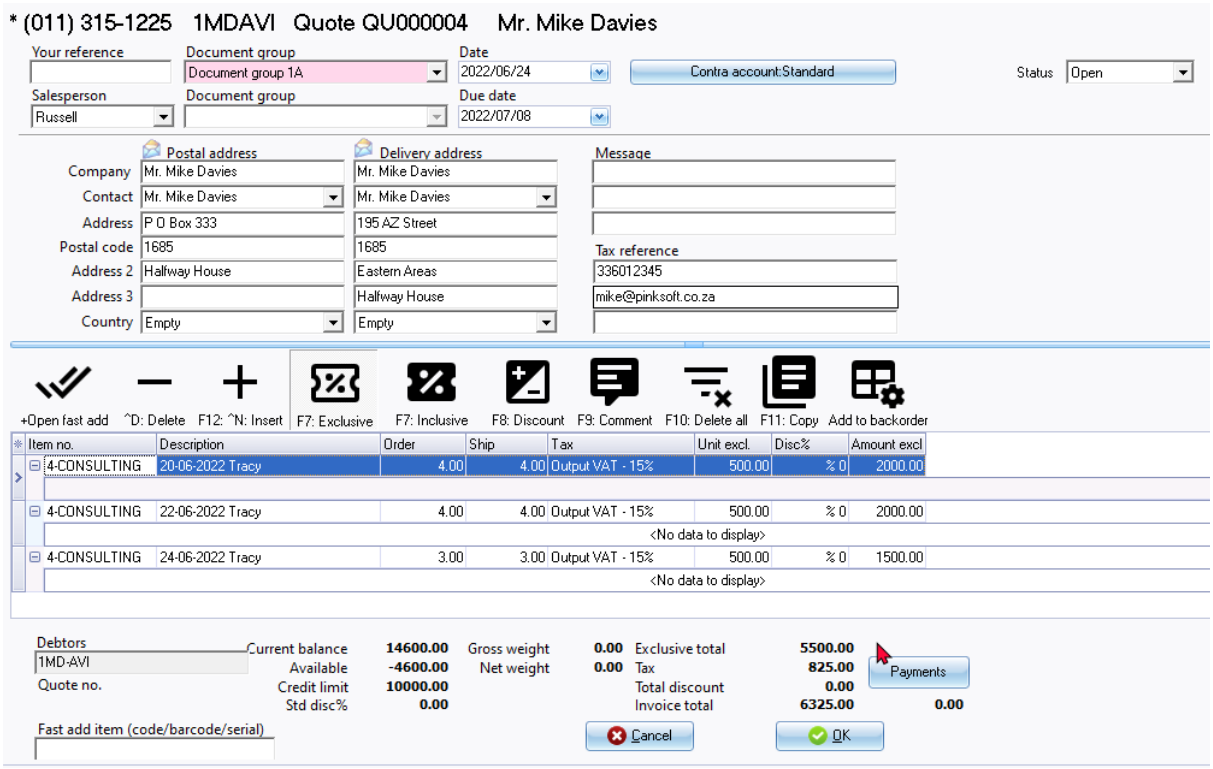
12. Select the dates (from date and to date) and a Stock item.

13. Click OK. An information message will be displayed.

    "Quote(s) generated!"

    A quote is generated for the entries on the Bulk time entries for the selected dates and number of hours.

14. You may edit the quote



15. Check and edit the quote, if necessary. You may wish to:

    a) Enter a reference.

b) Enter a message.

c) Add comments and remarks, as needed.

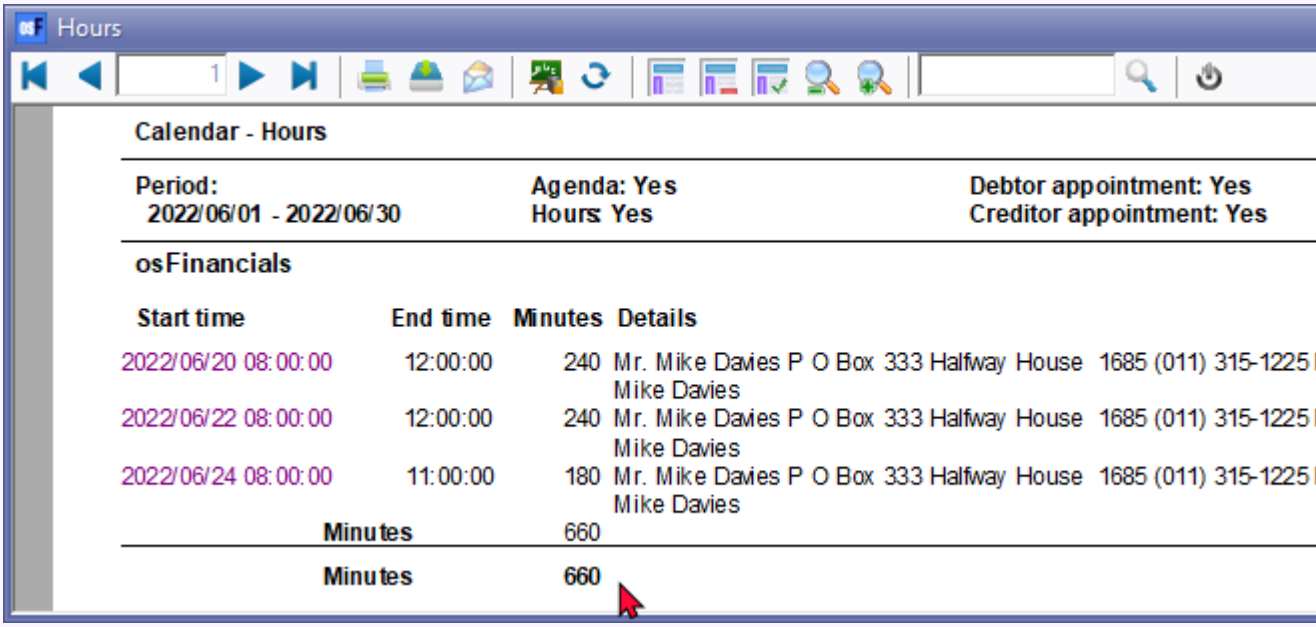
d) Change the number of hours and selling prices.

e) Add discount, etc.

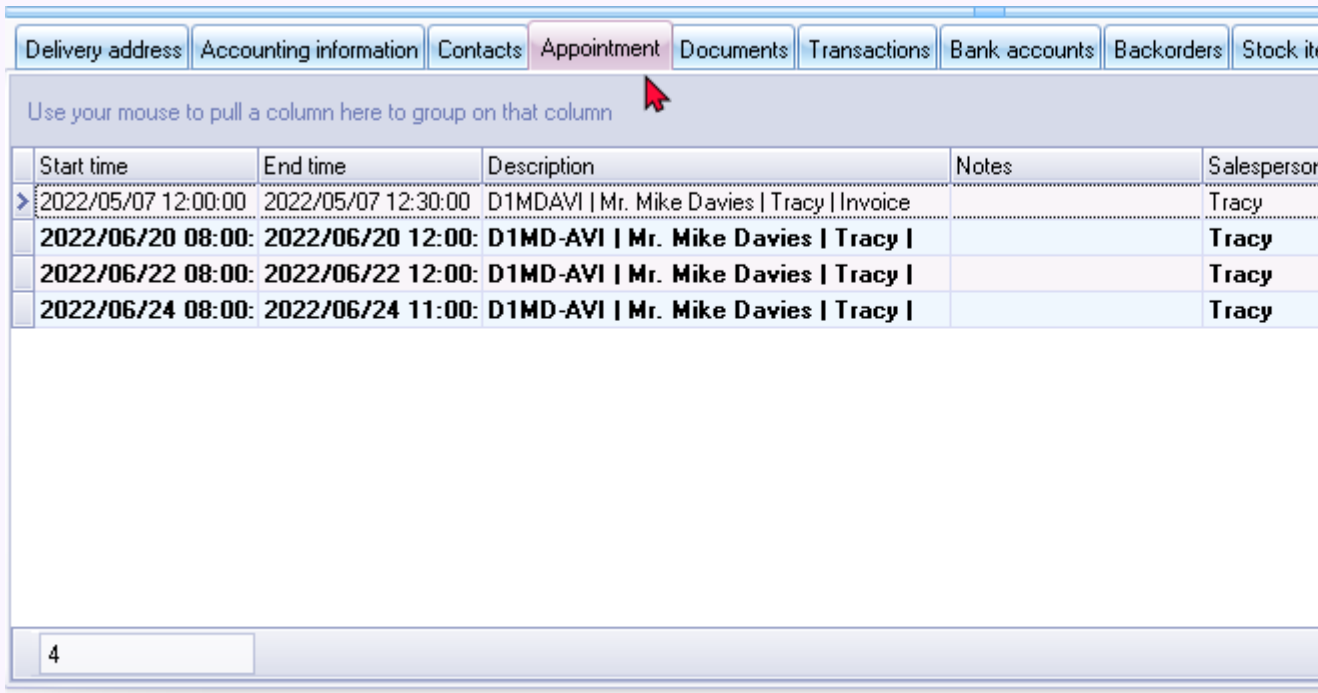
16. Click OK to save the quote.

17. Once these appointments bookings are done, you may print the quote and forward it to the debtor (customer / client). The quote needs to be converted to an invoice.

The bulk time entries will be printed in the "Calendar - Hours" report (Reports → Calendar (Reports ribbon).



These bulk time entries will be listed in the Appointment tab of the selected debtor (customer / client) account.



If you double-click on a selected appointment, the Bulk time entry screen will be launched. You may select the dates edit resch

Tasks - Calendar

In osFinancials5/TurboCASH5, the Calendar feature includes the ability to manage tasks or a to-do list. You can add, edit, or delete tasks according to your requirements. When creating a task, you can specify a completion date to indicate when the task should be completed.

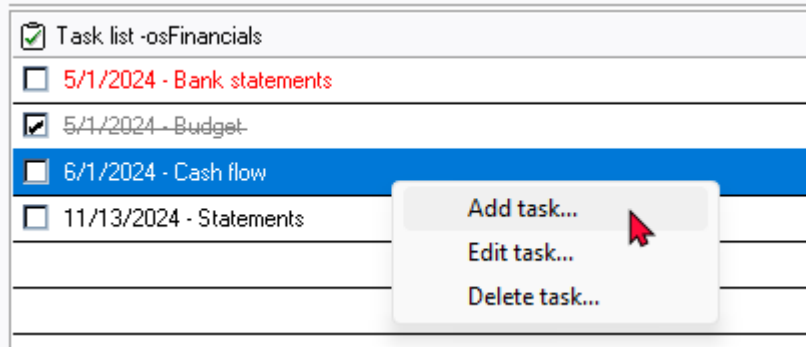
Additionally, you have the option to include notes or additional details for each task. These notes can serve as reminders for additional steps, procedures, contact information such as phone numbers, or any other relevant information related to the task.

By utilising the task management functionality in the osFinancials5/TurboCASH5 Calendar, you can stay organized and keep track of your to-do list efficiently. This feature helps you manage and prioritize your tasks effectively, ensuring that important activities are completed within the desired time-frame.

You may add, edit, or delete tasks (to do list), and set a completion date when the tasks should be completed. You may also add some notes to each task to remind you of additional steps, procedures,

phone numbers, etc.

All tasks (excluding the deleted tasks, will display as follows:



- Future tasks - If tasks have not yet reached its completion date, these tasks will be displayed in a grey font.
- **Expired tasks** - Will display in a **red** font colour.
- Tasks marked as completed - The field is ticked and the task displays a stripe through it. The task will also be displayed in a grey font.

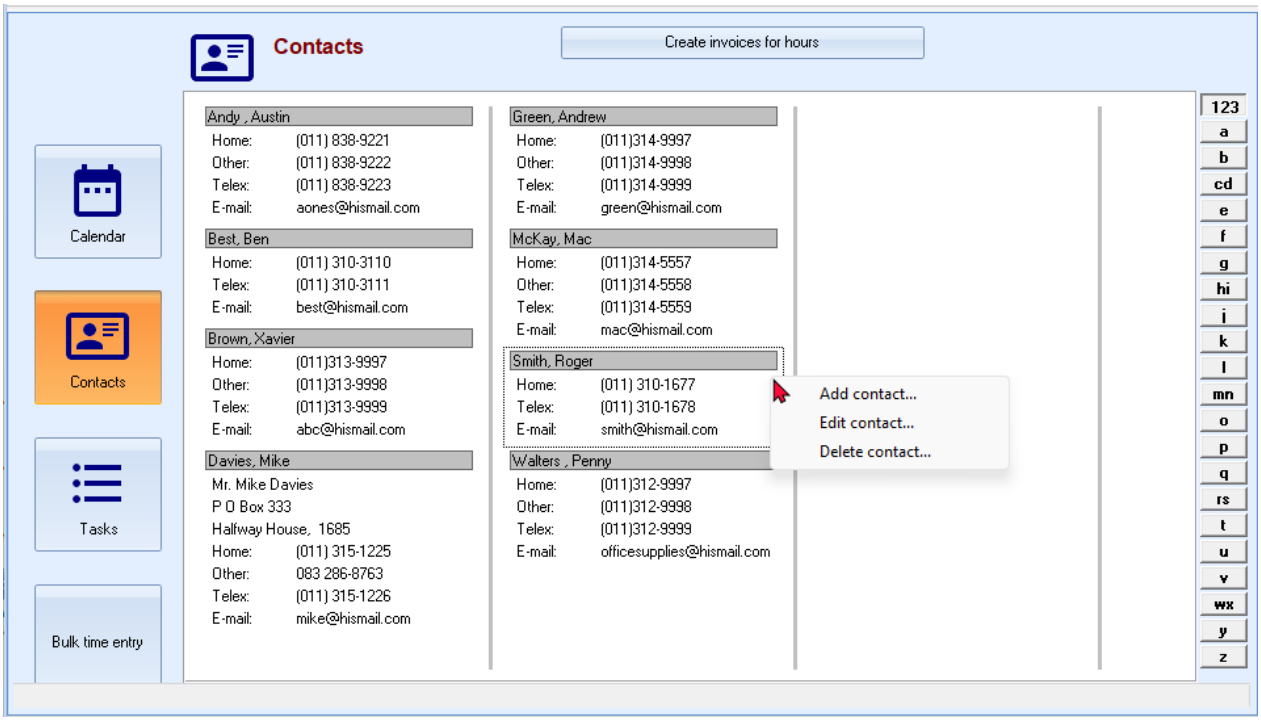
Contacts - Calendar

In osFinancials5/TurboCASH5, the Calendar feature provides the ability to manage contacts, ensuring that any changes made to contact information are reflected across the system. The following options on the Default ribbon allow you to create, edit, or delete contacts, with all updates being synchronized with the Contacts in the Calendar:

1. Contacts: This option allows you to access the general Contacts section, where you can manage and maintain contact information for debtors (customers/clients) and creditors (suppliers/vendors).
2. Debtors - Contacts tab: This tab specifically focuses on managing contacts associated with debtor accounts. You can add, edit, or delete contacts linked to debtor accounts, ensuring that the contact details are up to date.
3. Creditors - Contacts tab: Similar to the Debtors - Contacts tab, this tab is dedicated to managing contacts associated with creditor accounts. You can modify the contact information for your suppliers/vendors to maintain accurate records.

By utilizing these options, you can conveniently manage contacts within osFinancials5/TurboCASH5,

ensuring that all contact information remains consistent and accessible across different sections in a Set of Books.



You may print a "*Contact listing*" report for all debtors (customers/clients) as well as contacts for creditors (suppliers / vendors) from Contacts option on the Default ribbon. Additionally "*Contact listing*" reports may be printed in the following options on the Reports ribbon:

- Contact listing - This report will list all contacts for debtors (customers/clients) as well as contacts for creditors (suppliers/vendors). It offers a consolidated view of all contacts in your Set of Books.
- Reports → Debtors → Listing - Contacts - This report specifically focuses on contacts related to debtors (customers/clients). It provides a listing of contacts associated with your debtor accounts.
- Reports → Creditors → Listing - Contacts - This report specifically lists contacts related to creditors (suppliers/vendors). It presents a comprehensive view of contacts associated with your creditor accounts.

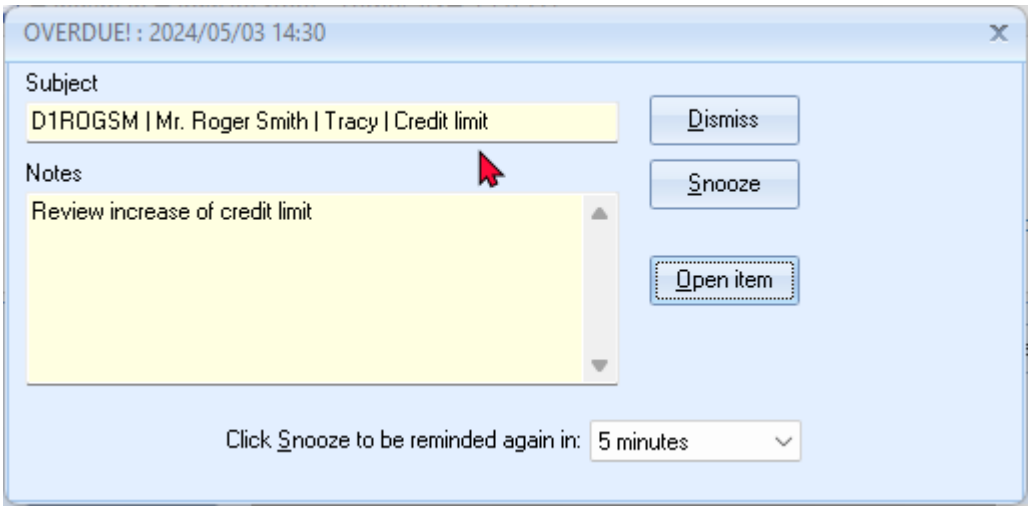
Reminders

In osFinancials5/TurboCASH5, the Calendar feature includes a Reminder functionality that helps you stay organised and on top of your scheduled events and appointments. Here are the key options available for managing reminders:

1. Dismiss: By clicking on the Dismiss option, you can turn off the reminder for a specific event or appointment. If you no longer wish to receive reminders for that particular item, this option allows you to deactivate the reminder. If needed, you can always edit the event later to enable the reminder again.



2. Snooze: If you're not ready to address the reminder at that moment but would like to be reminded later, you can click on the Snooze option. This will postpone the reminder and provide you with options to set a customised time interval for the reminder to reappear. You can choose intervals such as 5, 10, 15, 30, or 45 minutes, as well as 1 to 8 hours, 1 to 6 days, or 1 week.

3. Open item: Clicking on the Open item option allows you to directly access and edit the event or appointment associated with the reminder. You can make any necessary changes, finalise or reschedule the appointment, and even activate or deactivate the reminder based on your preferences.

By utilising these reminder management options, you can efficiently handle your scheduled events and appointments, ensuring that you stay informed and can take appropriate actions when needed.

What is the open item processing?

Open item processing is indeed a method of managing financial transactions, and it is commonly used in accounts receivable (debtors ledger) and accounts payable (creditors ledger) to track outstanding invoices, payments, and balances in a detailed and organized manner.

In addition to its primary application in accounts receivable and accounts payable, open item processing can also be extended to manage financial transactions for selected accounts in the general ledger. This approach allows organizations to maintain detailed records of specific general ledger accounts, monitor balances, reconcile transactions, and generate comprehensive financial reports for those accounts.

Open item processing in the general ledger can be particularly useful for accounts that require a high level of scrutiny or where tracking individual transactions is important. This method helps ensure transparency and accuracy in financial management across various accounts within an organization's financial system.

Open Item Basics

In open item processing, each individual transaction, such as an invoice or payment, is tracked separately as an "*open item*" until it is paid or resolved. This means that the transaction is not considered fully completed until the balance has been paid in full. The open item remains on the debtor or creditor account as a record of the transaction until it is fully paid, and any remaining balance is kept open until the next payment is received.

The advantage of open item processing is that it provides a detailed and accurate record of all transactions, making it easier to identify and resolve payment issues. It allows for more precise tracking of payments and outstanding debts, and helps to ensure that all transactions are accounted for. However, it can require more administrative work to manage and track individual transactions.

Open item processing is commonly used in industries such as retail, where there are multiple transactions for each customer, and in business-to-business transactions, where there are ongoing relationships between the debtor and creditor.

What is balance forward and open item processing?

Balance forward and open item processing are two different methods used to manage financial transactions, particularly in accounts receivable (debtors control account) and accounts payable (creditors control account). These methods differ in how they handle outstanding balances and invoices.

1. Balance Forward Processing:
    - In balance forward processing, customer or supplier accounts typically carry forward a running balance from one period to the next, rather than tracking individual transactions. The

outstanding balance is updated based on the net effect of transactions within a given period.

- Balance forward processing is a more simplified approach. It is often used for low-volume transactions or in situations where tracking individual invoices is less critical. This method is commonly used for utilities, subscriptions, or regular service fees.
- Customers or suppliers receive statements that show their beginning balance, transactions during the period, and ending balance. The statement may not provide a detailed breakdown of individual invoices or payments.

2. Open Item Processing:

- Open item processing, on the other hand, meticulously tracks individual transactions, such as invoices and payments, without carrying forward balances from one period to the next. It maintains a list of "open" or outstanding items until they are fully cleared.
- With open item processing, each invoice and payment is tracked separately, and the system maintains a record of which invoices are paid and which ones are still outstanding. It provides a more detailed and transaction-specific view of the accounts.
- Open item processing is typically used in situations where detailed tracking of transactions is essential, such as in accounts receivable and accounts payable for businesses with a high volume of transactions.

In summary, the key distinction between balance forward processing and open item processing lies in how they manage outstanding balances and transactions. Balance forward processing carries forward balances, while open item processing maintains a detailed record of individual transactions until they are reconciled. The choice between these methods depends on the specific needs and complexity of an organization's financial processes and the level of detail required for effective management and reporting.

Open Item Account Basics in osFinancials

Open item processing allows you to allocate (match / link) each debit transaction to a credit transaction and each credit transaction to a debit transaction; which are posted to the same account.

Basically most or all receipts or payments transactions, should be matched when processing transactions in batches. When allocating transactions to an account, which is set as an Open item account, an "*Open item selection*" screen will list all the transactions with outstanding amounts. You may then select a specific outstanding transaction on a list to link the transaction to.

By default, Open item is not activated when an account is created. You need to activate or set an account as an Open item account.

Debtor (customer / client) accounts / Creditor (supplier / vendor) accounts

The basics for debtor (customer / client) accounts and creditor (supplier / vendor) accounts, which is set as an "*Open item account*", is as follows:

- Debtor (customer / client) accounts - By default, the " *Open item selection*" screen will be launched when allocating credit transactions (e.g. payments received or credit notes, etc.) to debit transactions (e.g. Invoices, Credit notes, and other debit transactions such as interest on overdue accounts, etc.)
- Creditor (supplier / vendor) accounts - By default, the "*Open item selection*" screen will be launched when allocating debit transactions (e.g. payments on account or supplier returns, etc.) to credit transactions (e.g. Purchases, and other credit transactions such as charge amounts, etc.).

There are various options to filter and manage the details, totals and transactions of open item accounts.

General ledger accounts

The "*Open item link*" for a specific ledger account may be opened with a double-click from the Totals tab or the Transactions tab on Open item link.

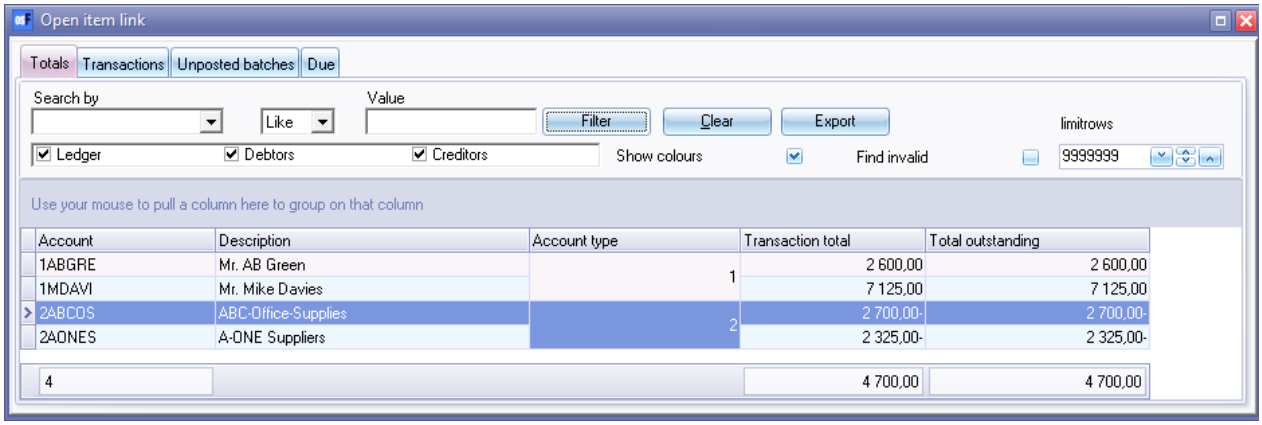
Some examples of such ledger accounts may be;

- Advance accounts - You may wish to keep track and manage advances paid to an employee or salesperson for subsistence and travel. After the employee or salesperson returns from his trip, he return the expenses source documents and refund any unused monies. When processing these source documents in batches, etc., these transactions may be linked (matched) to the original advance.
- Suspense / Clearing accounts - When an transactions needs to be managed, matched or reconciled, etc.

Open item link access in osFinancials

To access the Open item link feature, click on the Open item link icon (Default ribbon).

There are four (4) tabs, i.e. Totals, Transactions, Unposted batches and Due tabs to manage open item accounts.



You may also edit or unlink the existing links, or even convert a specific account to the "*Balance brought forward*" method, where any payment or receipt will be set off against the oldest outstanding amount.

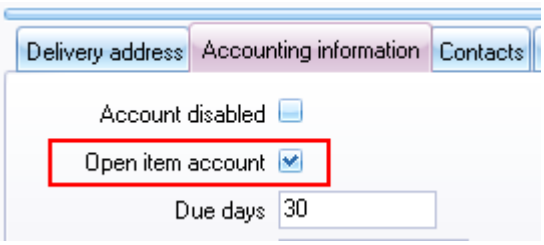
Open item link - Settings

---

osFinancials5/TurboCASH5 allows two basic methods of age processing Ledger, Debtor and Creditor transactions. These age type processing methods are:

- Balance brought forward -
  - Debtor (customer) accounts - The credit transactions (payments received, debtor allowances, credit notes or any other credit transaction) are allocated to the oldest outstanding debit transaction (opening balances, invoices, etc.) amount.
  - Creditor (supplier / vendor) accounts - The debit transactions (payments made to creditors, creditor allowances or supplier returns documents or any other debit transaction) are allocated to the oldest outstanding credit transaction (opening balances, purchases, etc.) amount.
- Open item -
  - Debtor (customer) accounts - Open item is by default not activated. To activate Open item processing for a debtor (customer / client) account, select (tick) the "*Open item*" field on the Accounting information tab of a selected debtor (customer / client) account.

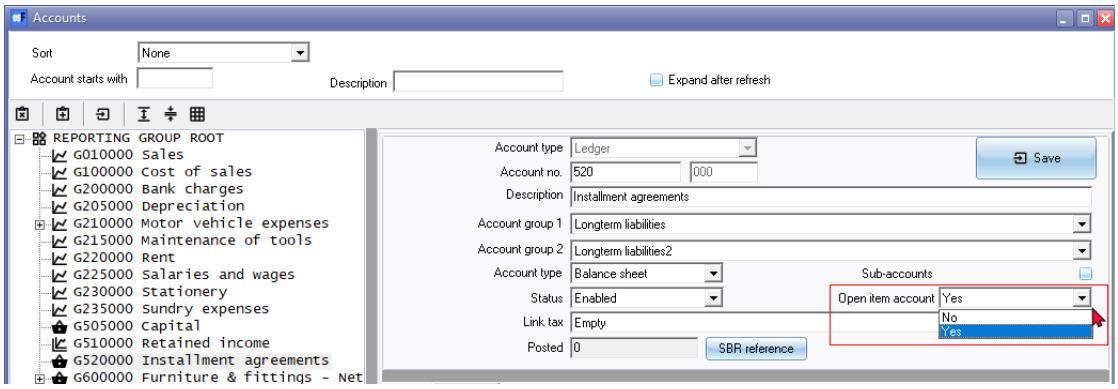


The credit transactions (payments received, debtor allowances, credit notes or any other credit transaction) may be linked to any selected outstanding debit transaction (opening balances, invoices, etc.) amount.

- Creditor (supplier / vendor) accounts - Open item is by default not activated. To activate Open item processing for a creditor (supplier / vendor) account, select (tick) the "*Open item*" field on the Accounting information tab of a selected creditor (supplier / vendor) account.

  The debit transactions (payments made to creditors, creditor allowances or supplier return documents or any other debit transaction) may be linked to any selected outstanding credit transaction (opening balances, purchases, etc.) amount.

- General ledger accounts - Accounts (Setup ribbon) Open item account field – Default is No. You may set it to Yes.



The Open item account option is not available for the Retained earnings / income, Debtor's control and Creditor's control accounts.

Open item processing of ledger accounts, may be useful for suspense accounts, clearing accounts, advance accounts for subsistence and travel, etc.

You may link debit transactions to credit transactions or credit transactions to debit transactions.

Created with the Standard Edition of HelpNDoc: iPhone web sites made easy

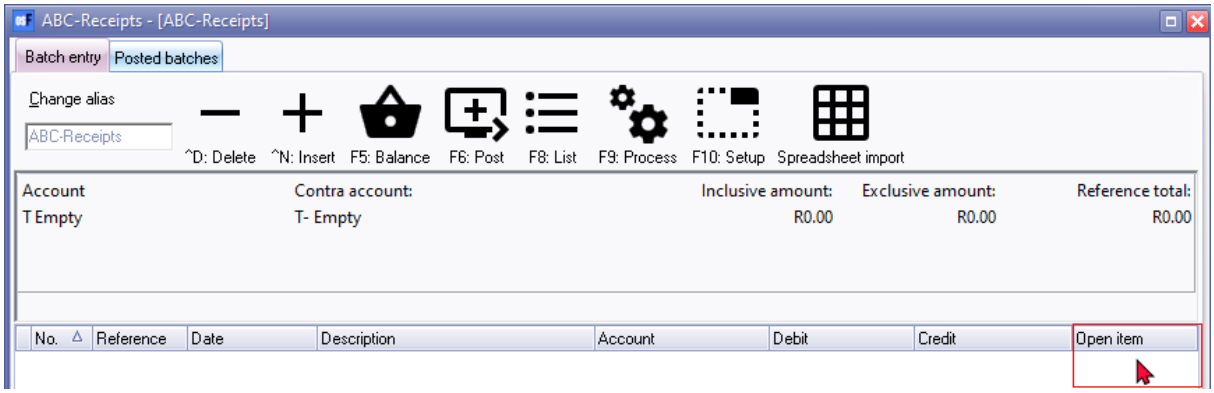
Open item link - Disable / Enable in batches

By default, the "*Open item selection*" feature is enabled in batches. The last column, i.e. "*Open item*", will be available in "*Batch entry*" screens.

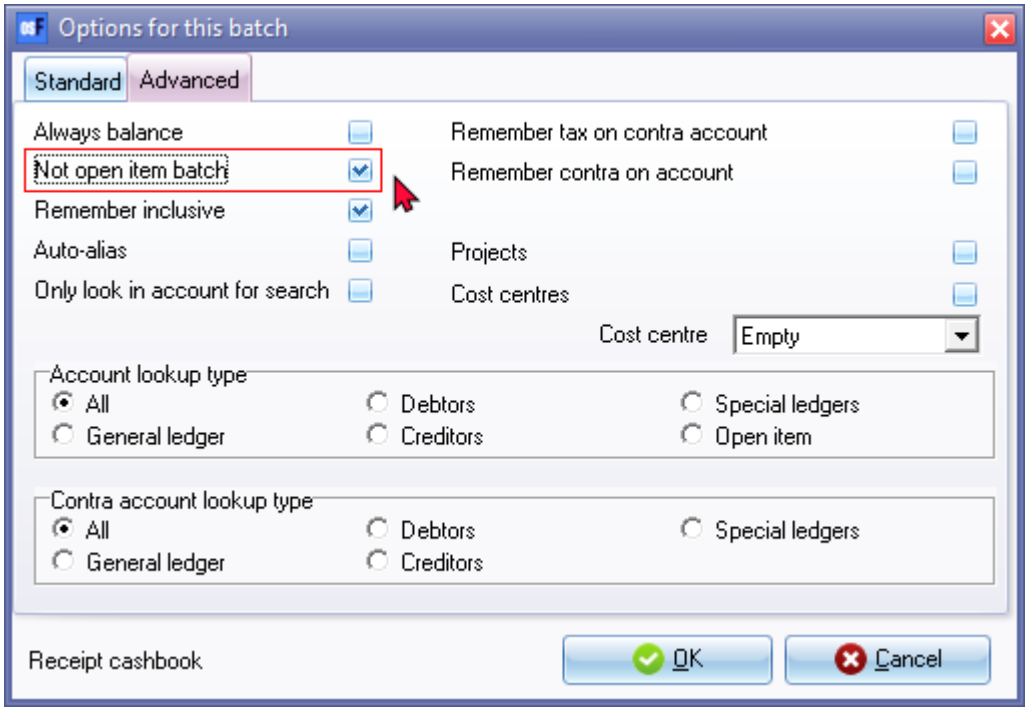
If the "*Open item*" column is displayed, and you wish to disable open item processing, you may disable this feature.

To disable open item in batches:

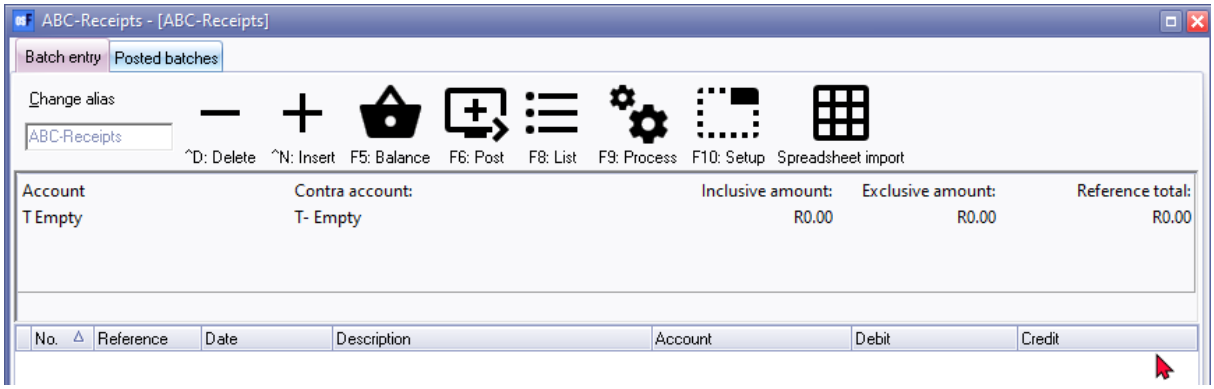
1. On the "*Batch entry*" screen, click F10: Setup.



2. On the Advanced tab, add a tick in the "*Not open item batch*" field.



3. Click OK. The "*Open item*" column will be removed from the "*Batch entry*" screen.

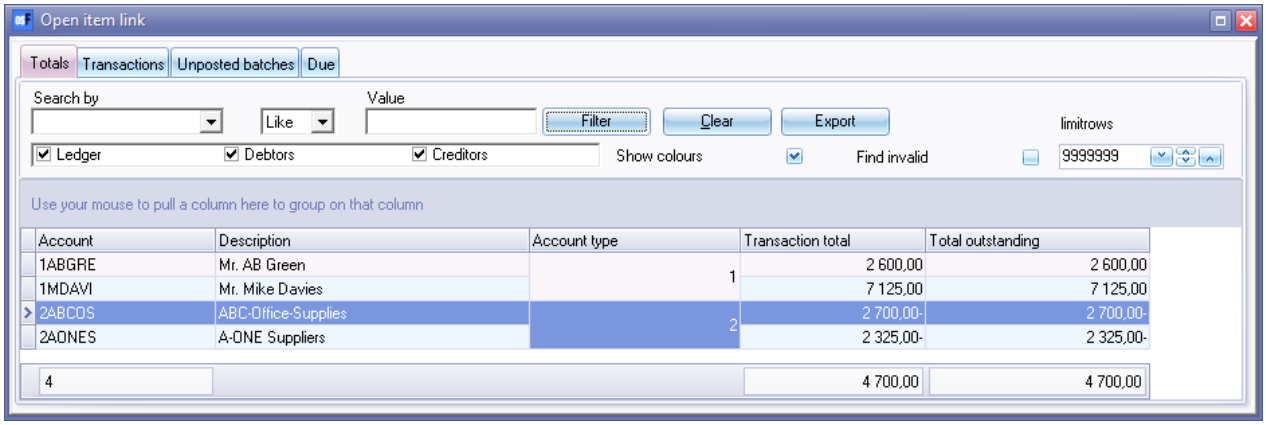


Created with the Standard Edition of HelpNDoc: Effortlessly Publish Your Word Document as an eBook

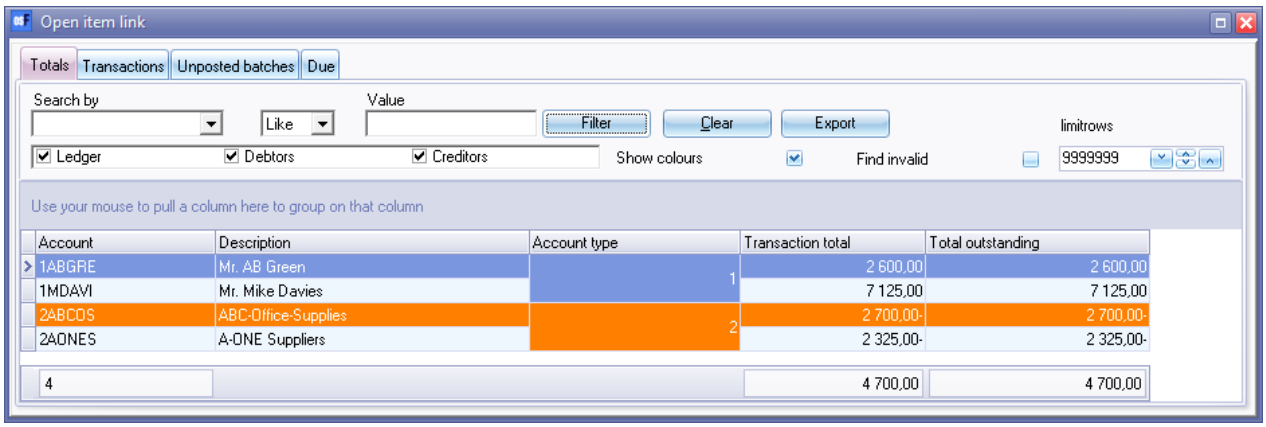
Open item link - Totals tab

The Totals tab will list the transaction total and total outstanding total for open item accounts.

Show colours - Option selected where no transactions have incorrect or outstanding links.



Show colours - If this field is, selected, This will show red or orange colours for those accounts and transactions which have incorrect or outstanding links.



Account type:

- *1 - Debtor accounts (Open item account field selected (ticked) on the Accounting information tab in Debtors (Default ribbon).*
- *2 - Creditor accounts (Open item account field selected (ticked) on the Accounting information tab in Creditors (Default ribbon).*
- *0 - General ledger (Open item account field set to Yes in Setup → Accounts).*
- *3 - Bank accounts (Open item account field set to Yes in the Setup → Accounts).*
- *4 - Tax accounts (Open item account field set to Yes in the Setup → Accounts).*

Filter options

Filter options:

1. Search by - Select any of the column headings and an operator (e.g. Like (default), =, <, >, <=, =>, or <>) and enter a value. Click on the Filter button. Only those transactions matching your specified values will be listed. To clear the values, click on the Clear button.
2. Account type - Select (tick) or deselect (remove the tick) to list the accounts for the selected account type(s) (Ledger, Debtors or Creditors).
3. Show colours - If this field is, selected, This will show red or orange colours for those accounts and transactions which have incorrect links.
4. Find invalid - Select (tick) and click on the Filter button to list those accounts and transactions which have incorrect links.
5. limitrows - Limit rows - 200 rows is the default number of rows or transactions to be listed. The number of rows may be specified (decreased or increased).
6. Export - This button will create an Export.txt (Text files), which you may change the name and folder and save it. A Comma separated (CSV) file format is also available. This will export the list, as selected and/or filtered and displayed in the Totals tab, as a comma separated text file as a "*Export.txt*" file. The Exported file will automatically be opened in your in your system's app (program) associated with the CSV (Comma Separated Values) file types.

Column headings

The columns is as follows:

1. Account - Account code.
2. Description - Account name or account description.
3. Account type - Ledger (General ledger accounts, Bank accounts and Tax accounts), Debtors or Creditors. The account type values is as follows:

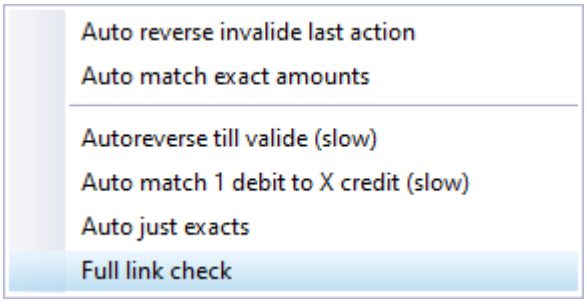
> *Account type:*
>
> - *1 - Debtor accounts (Open item account field selected (ticked) on the Accounting information tab in Debtors (Default ribbon).*
> - *2 - Creditor accounts (Open item account field selected (ticked) on the Accounting information tab in Creditors (Default ribbon).*
> - *0 - General ledger (Open item account field set to Yes in Setup → Accounts).*
> - *3 - Bank accounts (Open item account field set to Yes in the Setup → Accounts).*
> - *4 - Tax accounts (Open item account field set to Yes in the Setup → Accounts).*

4. Transaction total - The total of the actual transactions in posted batches and documents.
5. Total outstanding - The outstanding total of outstanding transactions, which is not matched linked. If the totals in the "*Transaction total*" and "*Total outstanding*" columns matches; or is displayed in the default system font, it means that all transactions are linked (matched). In this example, the font colour of "*ABC-Office-Supplies*", is in an orange font colour or row background colour. This indicates that there may be some transactions which is not linked (matched).

> *You may also drag columns to the "Use your mouse to pull a column here to group on that column" row.*

Context menu

Right-click on a selected account on the list, to launch the context menu for the following processing options.



Created with the Standard Edition of HelpNDoc: Effortlessly Edit and Export Markdown Documents

Open item link - Transactions tab

The Transactions tab will list the transactions for open item accounts.

Open item link - Transactions tab - All transactions

Open transactions only - By default, this option is not selected and will list all transactions, including those with a 0.00 balance.

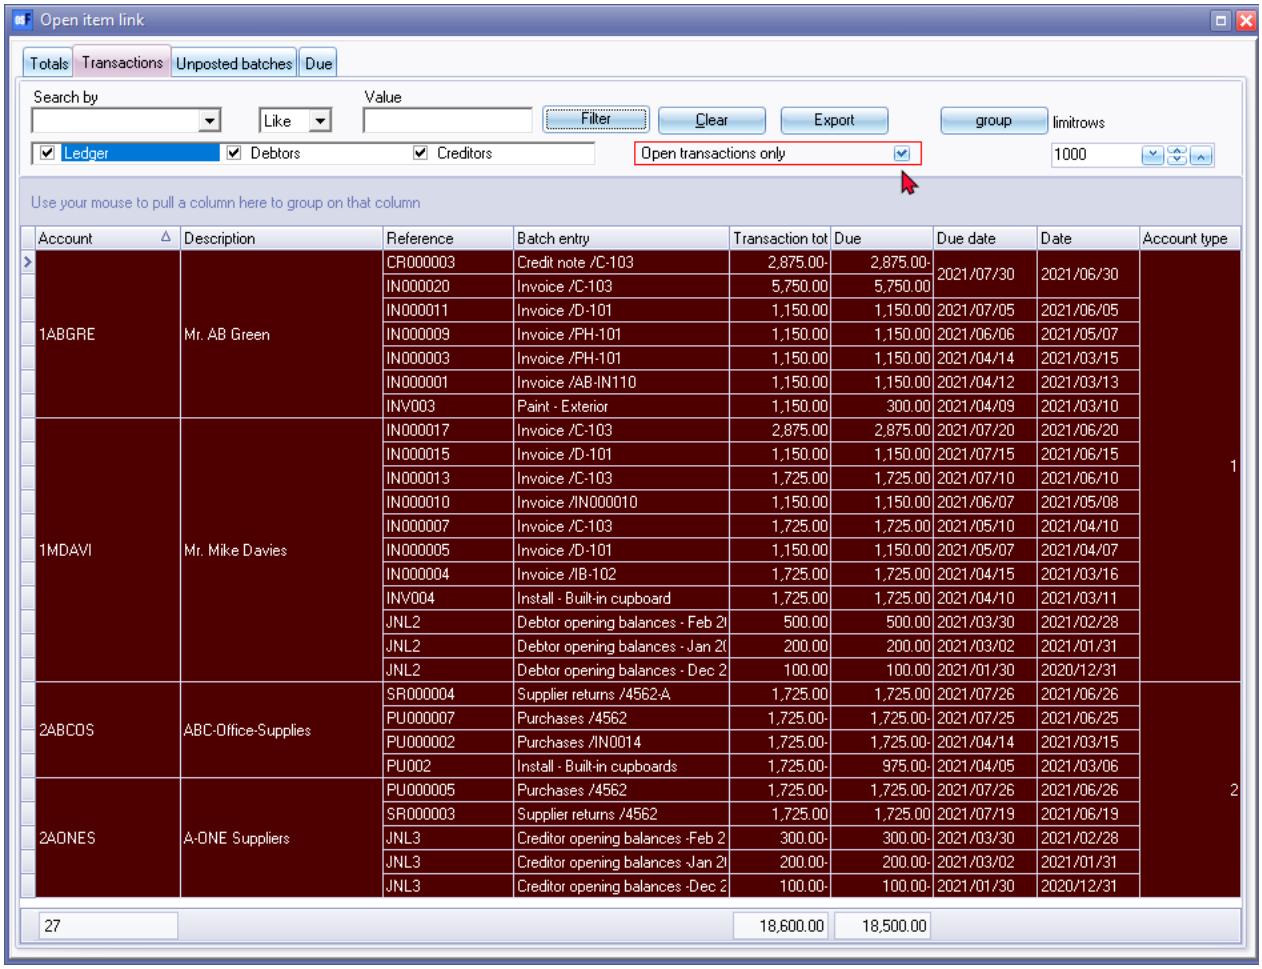
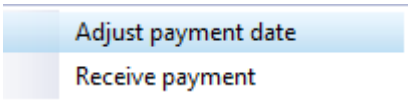
Open item link - Transactions tab - Open transactions only

Open transactions only - If this field is ticked, it will list only those transactions with a value of more than 0.00 in the "*Due*" column.



Open item link - Transactions tab - Context menu

Select an account and a transaction. Right-click to select the following options from the context menu:



- Adjust payment date - This will change the due date to a selected date.

- Receive payment - This feature, will automatically generate the transactions to the receipts batch for a selected transaction and print a combined receipt / payment advise (if selected). The transaction will automatically be posted (updated) to the ledger.

Open item link - Transactions tab - Filter options

Filter options:

1. Search by - Select any of the column headings and an operator (e.g. Like (default), =, <, >, <=, =>, or <>) and enter a value. Click on the Filter button. Only those transactions matching your specified values will be listed. To clear the values, click on the Clear button.

2. Account type - Select (tick) or deselect (remove the tick) to list the accounts for the selected account type(s) (Ledger, Debtors or Creditors).

3. Open transactions only - By default, this option is not selected and will list all transactions, including those with a 0.00 balance. If this field is ticked, it will list only those transactions with a value of more than 0.00 in the "*Due*" column.

> *The Transactions tab of a selected debtor (customer / client) account, will by default, only list the transactions with outstanding amounts. You may select the "All" option to view all the transactions, including those linked (matched) transactions.*
>
> *The Transactions tab of a selected creditor (supplier / vendor) account, will by default, only list the transactions with outstanding amounts. You may select the "All" option to view all the transactions, including those linked (matched) transactions.*

4. group - Click on the group button to group the transactions on the list by "*Month, From today, By date*" and "*By year*".

> *You may also drag columns to the "Use your mouse to pull a column here to group on that column" row.*

5. limitrows - Limit rows - 200 rows is the default number of rows or transactions to be listed. The number of rows may be specified (decreased or increased).

6. Export - This button will create an Export.txt (Text files), which you may change the name and folder and save it. A Comma separated (CSV) file format is also available. This will export the list, as selected and/or filtered and displayed in the Transactions tab, as a comma separated text file as a "*Export.txt*" file. The Exported file will automatically be opened in your in your system's app (program) associated with the CSV (Comma Separated Values) file types.

Open item link - Transactions tab - Columns

The columns is as follows:

1. Account - Account code.

2. Description - Account name or account description.

3. Reference - The reference as entered in the "*Reference*" column for each transaction in "*Batch entry*" screens. In the case of Documents, the document number will be listed.

4. Batch entry - The description as entered in the "*Description*" column for each transaction in *"Batch entry*" screens. In the case of Documents, the document type and reference as entered in the "*Your*

reference" field of the document header section of the "*Document entry*" screen will be listed.

5. Transaction total - The total of the actual transactions in posted batches and documents.
6. Due - The due amount lists the total of outstanding for transactions, which is not matched linked. If the totals in the "*Transaction total*" and "*Due*" columns matches; or is displayed in the default system font, it means that all transactions are linked (matched).
7. Due date - The Due date is the number of days added to the actual date of the transaction. The number of days is on the Accounting information tab of debtor (customer / client) accounts and on the Accounting information tab of creditor (supplier / vendor) accounts.
8. Date - The actual date of the transaction in documents and batches.
9. Account type - Ledger (General ledger accounts, Bank accounts and Tax accounts), Debtors or Creditors.

Account type:

- *1 - Debtor accounts (Open item account field selected (ticked) on the Accounting information tab in Debtors (Default ribbon).*
- *2 - Creditor accounts (Open item account field selected (ticked) on the Accounting information tab in Creditors (Default ribbon).*
- *0 - General ledger (Open item account field set to Yes in Setup → Accounts).*
- *3 - Bank accounts (Open item account field set to Yes in the Setup → Accounts).*
- *4 - Tax accounts (Open item account field set to Yes in the Setup → Accounts).*

Adjust payment date

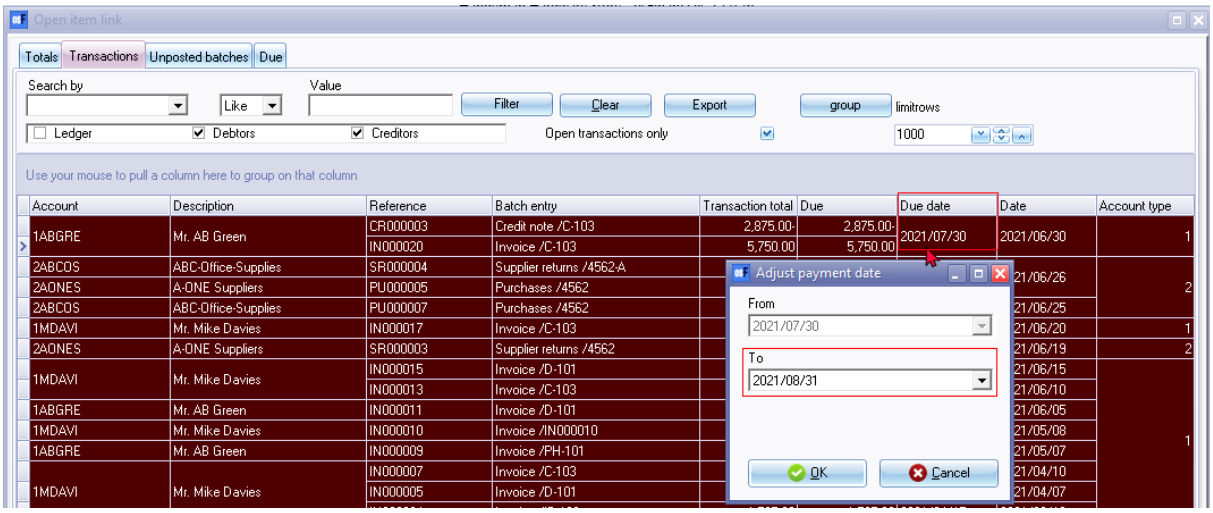
The Payment date (due date) is automatically calculated by adding the number of days (entered in the "*Due date*" field on the Accounting information tab of Debtor/ Creditor accounts) to the date of the document (i.e. invoices, credit notes, purchase and supplier return documents) and the transaction dates entered in batches.

To adjust payment date:

1. On the Default ribbon, select Open item link. The Totals tab of the "*Open item link*" screen will be displayed.

2. Click on the Transactions tab.

3. Select an account and right-click to select the Adjust payment date option from the context menu. The "*Adjust payment date*" will display the current payment dates in the From (disabled) and To fields. Select or enter the new payment date in the To field.



4. Click on the OK button. The new payment date will be displayed in the "*Due date*" column.

Created with the Standard Edition of HelpNDoc: Maximize Your Documentation Efficiency with a Help Authoring Tool

Receive payment

The Receive payment feature, will automatically generate the transactions to the receipts batch for a selected transaction and print a combined receipt / payment advise (if selected). The transaction will automatically be posted updated to the ledger.

The "Receive payment" feature may also be launched on the context menu of selected transactions on the "Open item link" screen of a selected debtor (customer / client) account or on the "Open item link" screen of a selected creditor (supplier / vendor) account.

It will generate the transactions as follows:

Create receipts - Debtor (customer / client) accounts

- Invoices - Positive amount - Debit : Bank account and Credit : Debtor (customer / client) account.

- Credit notes - Negative amount - Debit : Debtor (customer / client) account and Credit : Bank account.

Create receipts - Creditor (supplier / vendor) accounts

- Purchases - Negative amount - Debit : Creditor (supplier / vendor) account and Credit : Bank account.
- Supplier returns - Positive amount - Debit : Bank account and Credit : Creditor (supplier / vendor) account.

Created with the Standard Edition of HelpNDoc: Easy to use tool to create HTML Help files and Help web sites

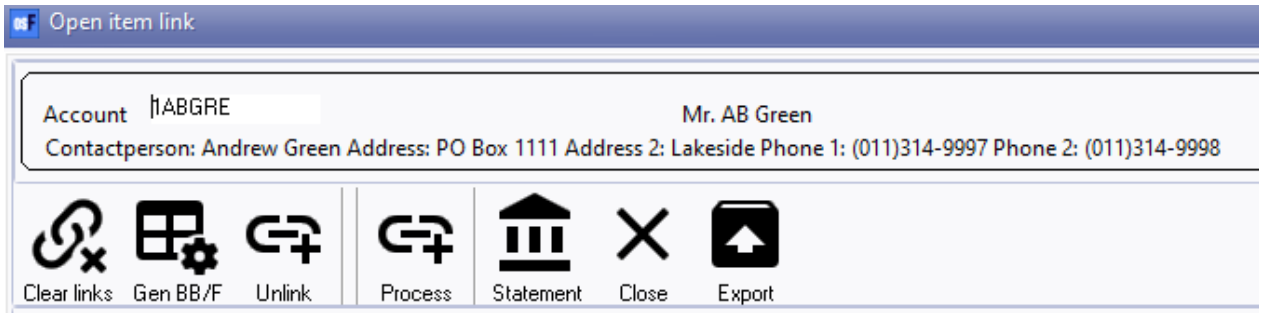
Open item processing - Selected accounts

The "*Open item link*" for a specific ledger account, debtor (customer / client) account or a creditor (supplier / vendor) account may be opened with a double-click from the Totals tab or Transactions tab on "*Open item link*".

Accounts which contains unlinked (unmatched) transactions, will be listed in an orange font or row colour on the Totals tab (if the "Show colours" option is selected).

Icon options

The icons on the "*Open item link*" screen for a selected account:



Contactperson, Address 1, Address 2, Phone 1 and Phone 2 is only displayed for a selected debtor (customer / client) account or a selected creditor (supplier / vendor) account. This is not applicable to a selected ledger account,

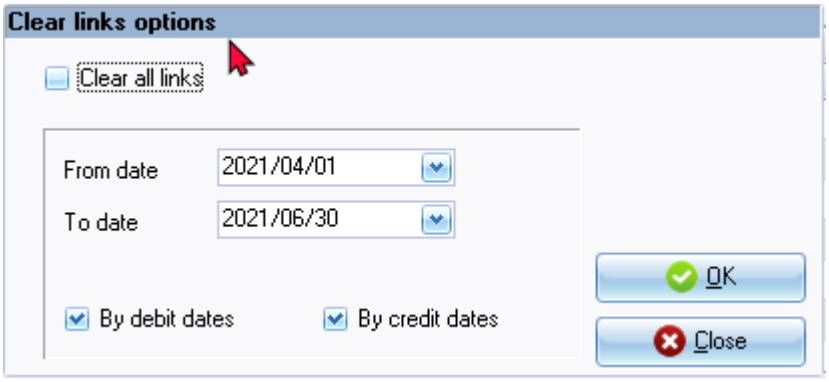
Clear links

This option will clear links according to the options you select.

If you click on the Clear links icon, a confirmation message is displayed:

> "Warning, if you click yes you will lose all your current links for this account!"

If you click on the Yes button of the confirmation message, the "*Clear links options*" screen is displayed:



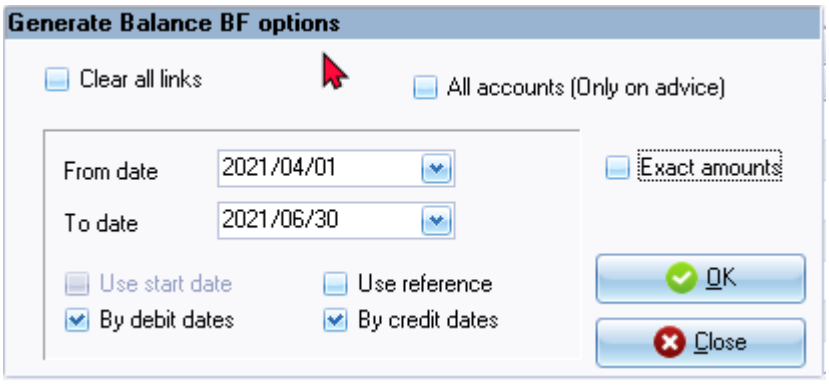
Generate BBF

This option will clear all the open item links, and generate the ageing as balance brought forward account for a selected ledger, debtor or creditor account, according to the options you select.

If you click on the Generate BB/F icon, a confirmation message is displayed:

> "Warning, if you click yes you will lose all your current links for this account!"

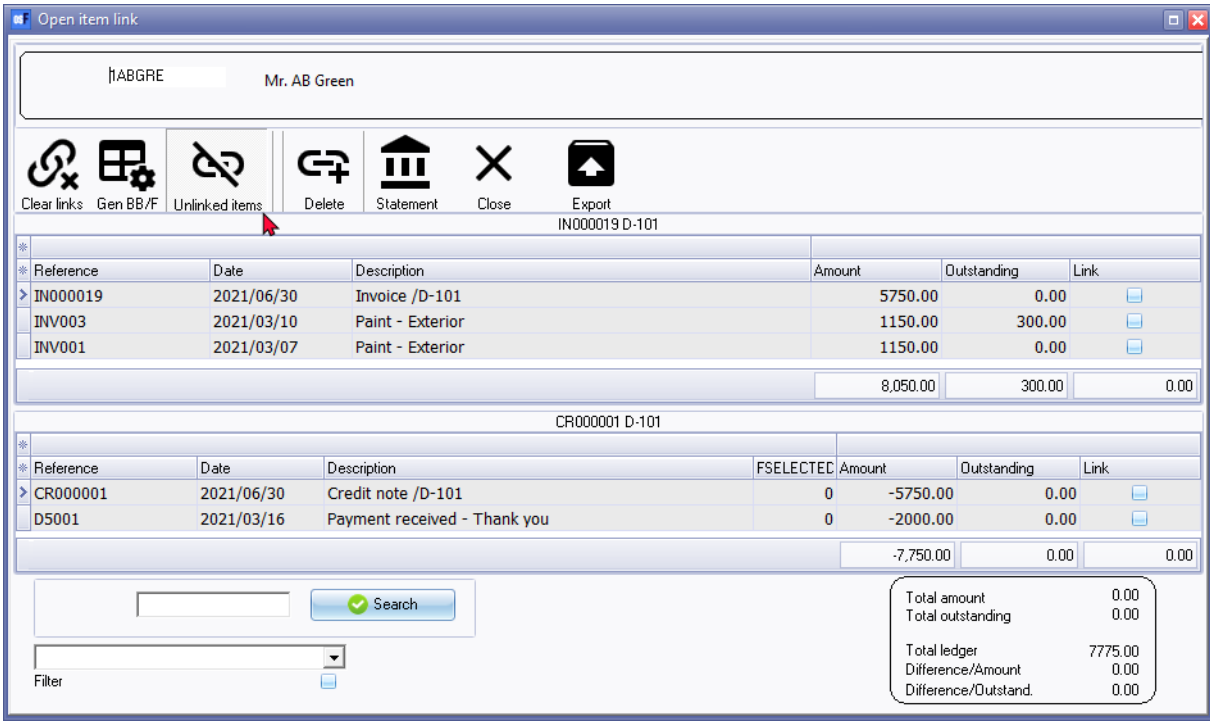
If you click on the Yes button of the confirmation message, the "*Generate Balance BF options*" screen is displayed:



Unlink

This option allows you to unlink a selected linked debit and credit transactions.

The Unlink icon will change to Unlinked items and the Process icon will change to Delete icon. This will list all transactions as linked. If any transaction is not fully linked, it will list the outstanding amount for the transaction.

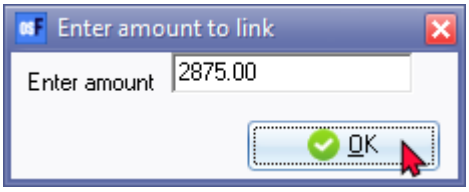


You may select a debit transaction(s) to unlink to a credit transaction(s) (tick the "*Link*" column) and click on the Delete icon to remove the link of selected transactions.

Process

Any linked transaction(s) will be removed from the debit or credit sections of the "*Open item link*" screen.

Select a debit transaction(s) to link to a credit transaction(s) (tick the "*Link*" column) and click on the Process icon. The "*Enter amount to link*" screen will display, by the default, the amount of the selected transaction to enter.



You need to confirm or over-type the amount, if necessary and click OK.

If the amounts of the selected transactions is the same, the debit and credit transactions will be removed from the "*Open item link*" screen.

If the amounts of the selected transactions differs (is not the same), the debit or credit transaction will be removed from the "*Open item link*" screen and the amount of a transaction which is not fully linked, will be adjusted in the "*Outstanding*" column.

Statement

Click to view the selected account in a statement layout with the ageing labels (e.g. Current, 30 days, 60 days, etc.). You may select the dates from which and until which date to include items.

Close

Close the "*Open item link*" screen for the selected account and return to Totals tab or Transactions tab of the "*Open item link*" main screen.

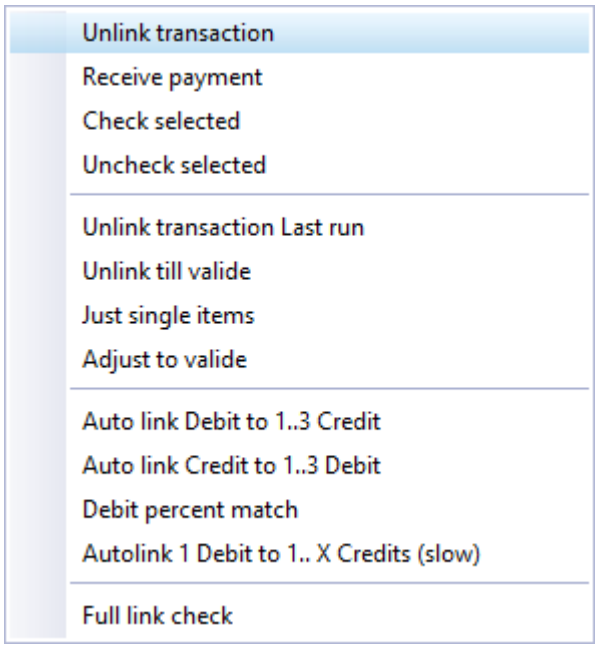
Export

The Export icon will create an Export.txt (Text files), which you may change the name and folder and save it. A Comma separated (CSV) file format is also available.

This will export the list, as selected and/or filtered and displayed in the "*Open item link*" screen for a selected account, as a comma separated text file as a "*Export.txt*" file. The Exported file will automatically be opened in your in your system's app (program) associated with the CSV (Comma Separated Values) file types.

Context menu processing options

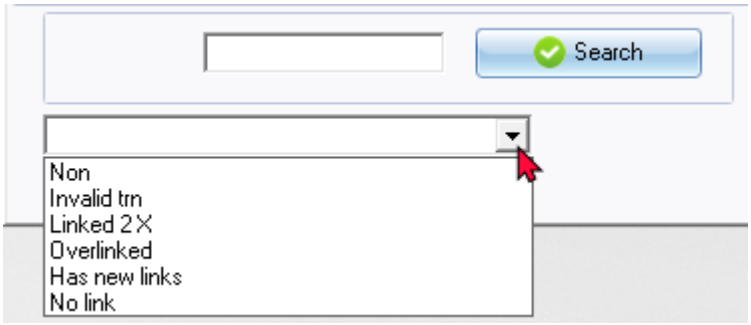
In the "Debit" (top half) or "Credit" (bottom half) section of the selected account, right-click on a selected transaction on the list, to launch the context menu for the following processing options:



When the Statement option is selected for a selected account, only the "Unlink" option will be available for a selected transaction.

Filter options

You may apply the following options to filter transactions:



You may double-click on a selected account on the Totals tab or Transactions tab to process open item links.

Document entry context menu - Right-click on a selected document. On the context menu, select the Others → Open item link option.

The Invoice, Credit note or Quote document type will list the "Open item link" screen associated with the debtor (customer / client) account.

The Purchase, Supplier return or Orders document type will list the "Open item link" screen associated with the creditor (supplier / vendor) account.

Batch entry context menu - Right-click on a selected transaction. On the context menu, select the "Select from account open item list" option. The "Open item selection" screen will list the unlinked transactions as well as transactions with outstanding amounts for the selected debtor (customer / client) or creditor (supplier / vendor) account.

Transactions tab of a selected debtor (customer / client) account - This list the posted transactions similar to the "Open item link" screen.

- *All not selected - This is the default option. Only those with outstanding amounts will be listed.*
- *All option selected - All transactions will be listed. Those transactions, which are fully linked or settled,*

will display an 0.00 amount in the "Outstanding" column.

Transactions tab of a selected creditor (supplier / vendor) account - This list the posted transactions similar to the "Open item link" screen.

- *All not selected - This is the default option. Only those with outstanding amounts will be listed.*
- *All option selected - All transactions will be listed. Those transactions, which are fully linked or settled, will display an 0.00 amount in the "Outstanding" column.*

Open item processing - Ledger accounts

How does Open item processing help to manage general ledger accounts?

Open item processing can also be applied to general ledger accounts, particularly in organizations that require detailed tracking and reconciliation of individual transactions within their financial records. Here's how open item processing helps manage general ledger accounts:

1. Detailed Transaction Tracking: Open item processing allows for the detailed recording of individual financial transactions within various general ledger accounts. This means that every transaction, whether it's an expense, revenue, asset acquisition, liability, or equity movement, is tracked and recorded with specific details.
2. Accurate Account Balances: By meticulously tracking each transaction, open item processing ensures that the account balances for general ledger accounts are accurate and up-to-date. This accuracy is crucial for financial reporting, decision-making, and compliance with accounting standards.
3. Transaction Reconciliation: Regular reconciliation processes are employed to match recorded transactions against account balances. This reconciliation helps identify and rectify discrepancies or errors in the general ledger, ensuring the financial data's integrity.
4. Audit Trail: Open item processing maintains a comprehensive audit trail, which can be invaluable for internal and external audits. This trail provides a transparent record of all financial transactions, making it easier to verify and ensure the accuracy of financial records.
5. Reporting and Analysis: The detailed transaction data recorded through open item processing allows for the generation of various financial reports and analyses. These reports can provide insights into

the organization's financial performance, including profit and loss, balance sheets, and cash flow statements.

6. Compliance and Accountability: Open item processing helps organizations ensure compliance with financial regulations and accounting standards. It also promotes accountability and transparency in financial management practices.
7. Historical Reference: Over time, open item processing creates a historical record of all transactions. This historical reference is valuable for trend analysis, budgeting, forecasting, and other financial planning activities.
8. Efficient Error Correction: If errors are identified in the general ledger, open item processing makes it easier to pinpoint the exact transaction or entry that needs correction, streamlining the error resolution process.

In summary, open item processing in general ledger accounts provides a structured and detailed method for recording, reconciling, and maintaining financial transactions. It supports accurate financial reporting, ensures compliance, and facilitates a more efficient and transparent financial management process for organizations of varying sizes and complexities.

Can open item processing be used in other ledger accounts in the chart of accounts, for example suspense or ledger accounts?

Open item processing can potentially be used in any ledger account where there are multiple transactions or outstanding balances to be tracked. However, whether or not it is appropriate to use open item processing in a particular ledger account will depend on the specific nature of the account and the transactions involved.

For example, a suspense account is typically used to temporarily hold transactions that cannot be immediately classified to a specific account. In this case, open item processing may not be appropriate, as the purpose of the account is to temporarily hold transactions that will eventually be classified elsewhere.

Similarly, a general ledger account may not be well-suited to open item processing, as it is typically used to record a summary of all transactions for a particular account or category. In this case, it may be more appropriate to use a subsidiary ledger account, such as an accounts receivable or accounts payable ledger, to track individual transactions using open item processing.

That being said, there may be situations where open item processing could be used in conjunction with other ledger accounts in the chart of accounts. For example, if a particular general ledger account has multiple transactions that need to be tracked separately, it may be possible to use open item processing to track those transactions within the account.

Ultimately, the decision of whether or not to use open item processing in a particular ledger account will depend on a variety of factors, including the nature of the account, the specific transactions involved, and the desired level of detail and accuracy in tracking those transactions.

Open item link - Ledger accounts

Open item link feature may be activated for selected accounts in the Chart of accounts. This allows you to match credit transactions to specific debit transactions and vice versa. The Open item feature is used to manage and reconcile transactions in ledger accounts.

The "Open item account" setting is not available for the following accounts:

- *Retained earnings / Retained income - This account reflect the Net profit/Net loss.*
- *Debtors control - This account reflect the total of the individual debtor (customer / client) accounts in the general ledger. You may set selected debtor (customer / client) accounts as an "Open item account" on the Accounting information tab.*
- *Creditors control - This account reflect the total of the individual creditor (supplier / vendor) accounts in the general ledger. You may set selected creditor (supplier / vendor) accounts as an "Open item account" on the Accounting information tab.*

The "*Open item link*" for a specific ledger account may be opened with a double-click from the Totals tab or the Transactions tab on Open item link.

Some examples of such ledger accounts may be;

- Advance accounts - You may wish to keep track and manage advances paid to an employee or salesperson for subsistence and travel. After the employee or salesperson returns from his trip, he return the expenses source documents and refund any unused monies. When processing these source documents in batches, etc., these transactions may be linked (matched) to the original advance.
- Suspense / Clearing accounts - When an transactions needs to be managed, matched or reconciled, etc.

Age analysis reports for "Open item" ledger accounts is available on the Reports ribbon, or the Due tab of Open item link option on the Default ribbon.

Bank accounts should not be set to open item accounts. The allocation of transactions in the Receipts and Payments (batches) journals may be linked matched to specific transactions in the "Open item" ledger accounts, debtor (customer / client) accounts or creditor (supplier / vendor) accounts.

Bank account transactions is reconciled to Bank statements in the Cash/Bank entry option on the Default ribbon.

When processing transactions in batches and documents, the Open item link for a ledger account, may be launched to link and allocate or match transactions specific transactions for open item ledger accounts. Some of these options, is as follows:

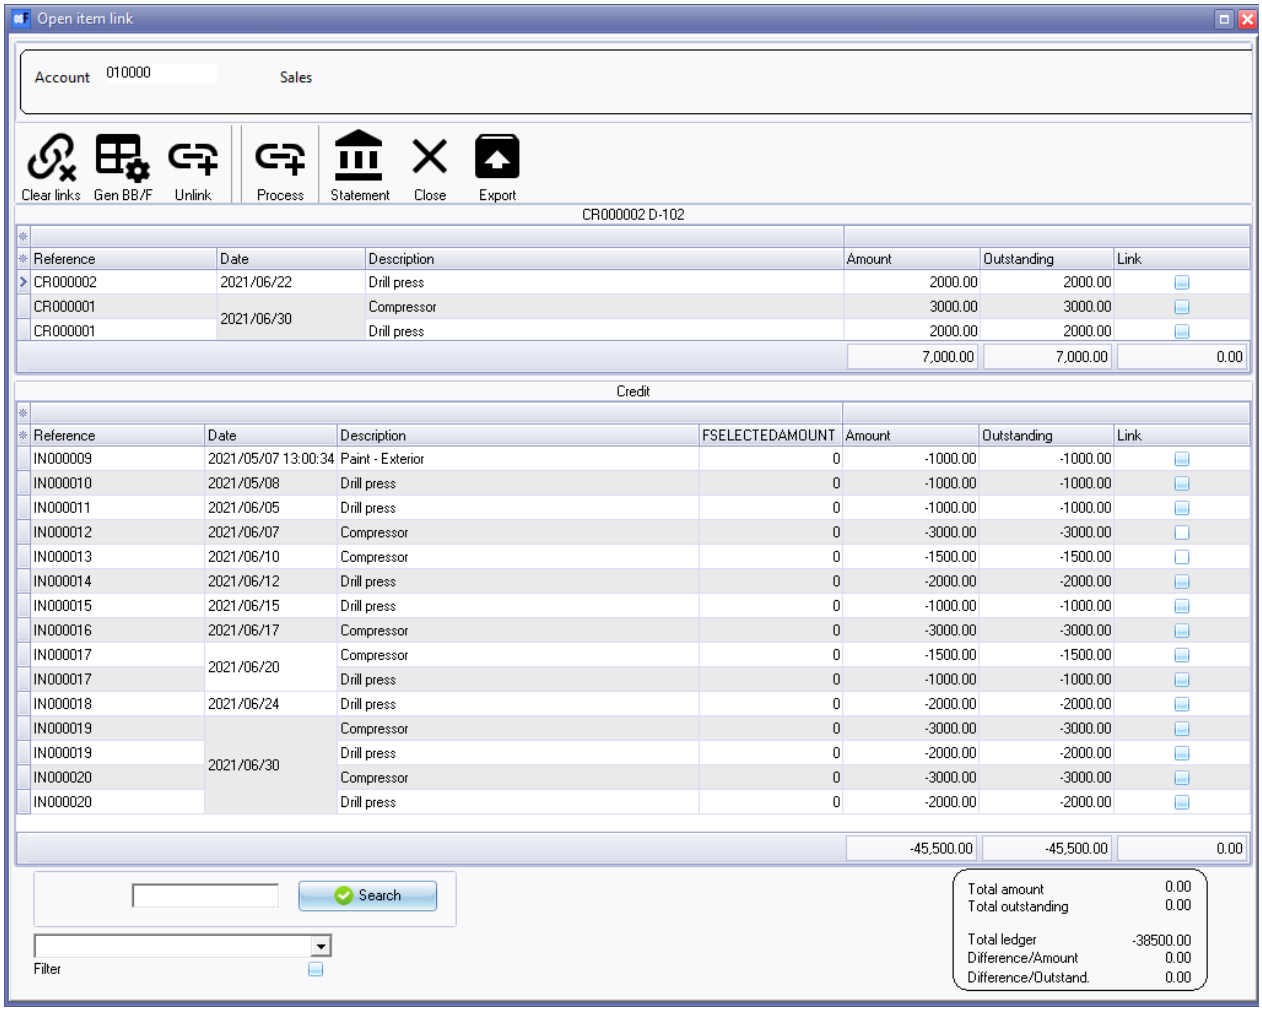
1. Batch entry - Select transactions on the "*Open item selection*" screen when processing credit transactions for a specific ledger accounts and match them to debit transactions and visa versa.

   By default, the "Open item selection" feature is enabled in batches. The last column, i.e. "Open item", will be available in "Batch entry" screens. The "Open item selection" feature may be deactivated or activated in "Batch entry" screens.

2. Batch entry - Once a ledger account is selected for a transaction on the "*Batch entry*" screen, you may right-click and choose the Select from account open item list option on the context menu. The "*Open item selection*" screen will list all the transactions with outstanding balances. You may select a specific outstanding transaction to link the transaction to.

Open item link - Unlinked Ledger transactions

A simple example of the "*Sales*" account, where no (or not all) credit transactions (e.g. Credit notes) were linked to specific debit transactions (e.g. Invoices), is as follows:

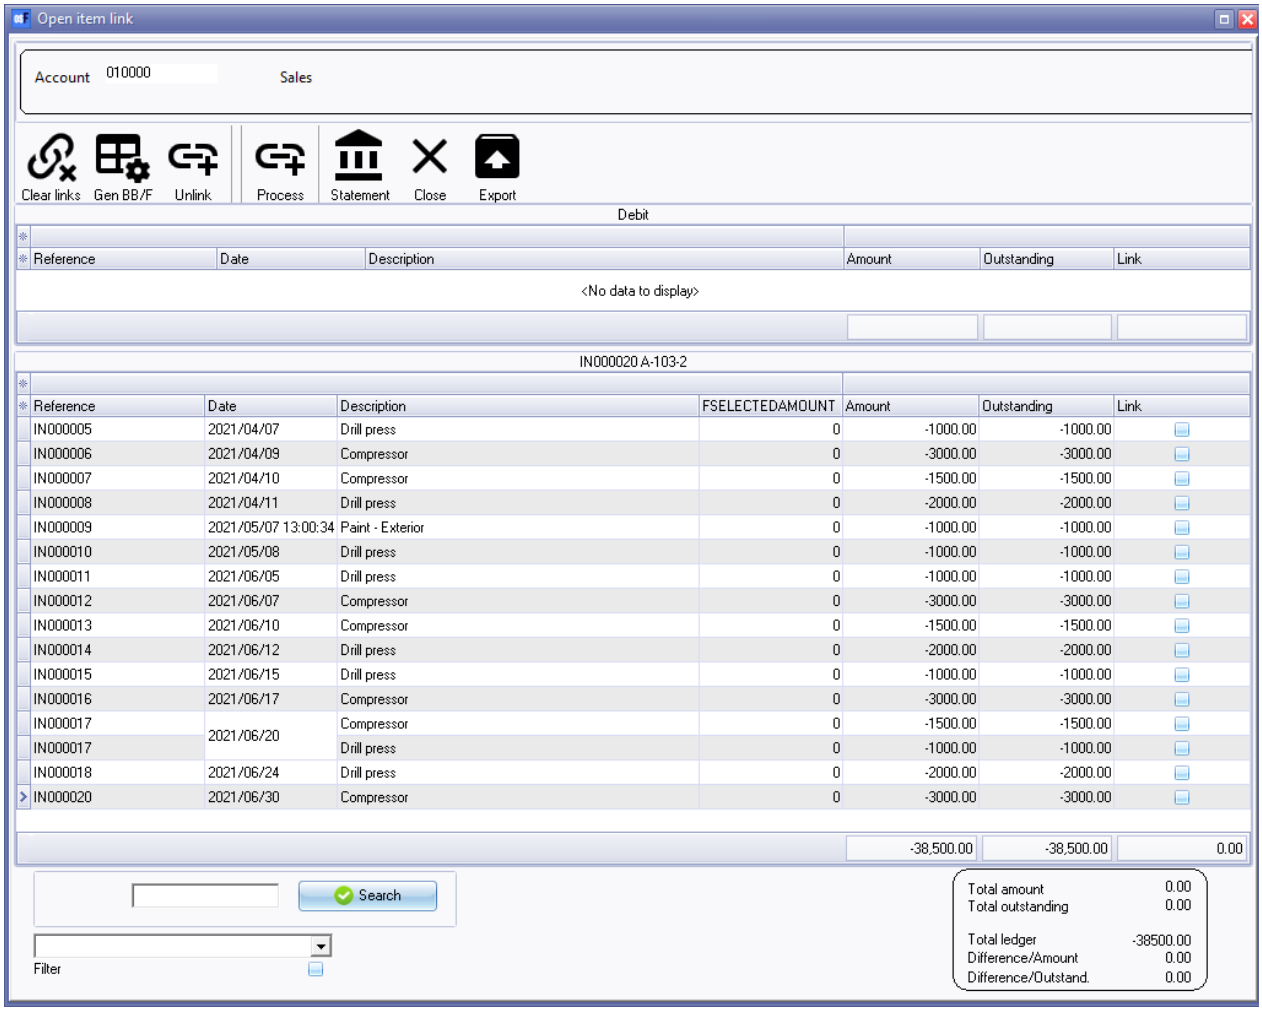


In this example, the debit section (top half) lists all the Credit notes not matched to Invoices.

If an Invoice or Credit note includes more than one stock item, e.g. Drill press and Compressor (as in this example), you may link (match) the item on the Credit note to a specific item on the Invoice.

Open item link - Linked Ledger transactions

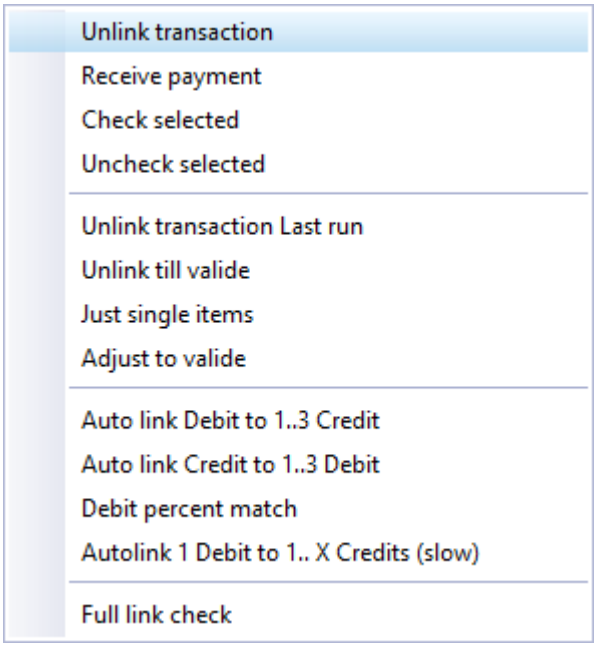
An example of the "Sales" account where all credit transactions (e.g. Credit notes) were linked to specific debit transactions (e.g. Invoices), is as follows:



In this example, the debit section (top half) does not list any transactions. All Credit notes is linked to Invoices.

Open item link - Ledger context menu

Right-click on a selected transaction on the list, to launch the context menu for the following processing options:



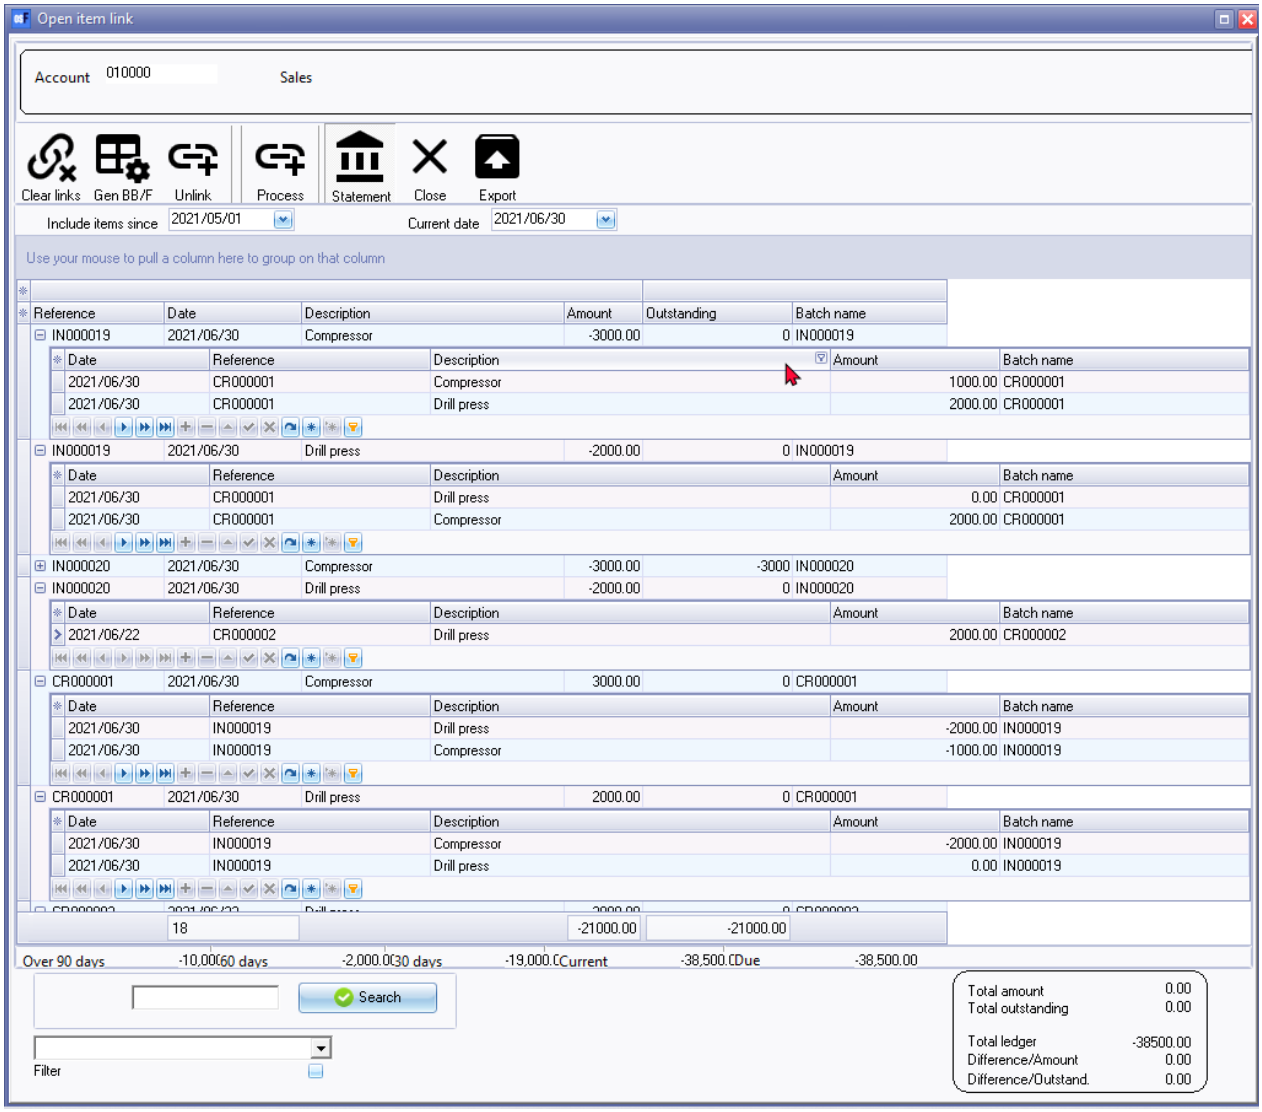
Open item link - Ledger - Filter options

You may apply the following options to filter transactions:

Open item link - Ledger - Statement

The Statement option list all the transactions from a selected date up to the current date (or selected date. If the transactions on Credit notes and Invoices is matched for the full amount, a 0.00 (zero amount) will be displayed in the in the "*Outstanding column*".

If transactions is partially matched on an Invoice, the Outstanding amount will differ from the Invoice amount.



Context menu

Right-click on a selected transaction on the list to "Unlink" selected transactions from the context menu.

Open item - Debtors

How does Open item processing help to manage debtor accounts in the debtors ledger?

Open item processing plays a crucial role in managing debtor accounts within the debtors ledger (accounts receivable) by providing a systematic and detailed method to track, reconcile, and manage

outstanding invoices and payments from customers. Here's how open item processing helps manage debtor accounts:

1. Detailed Transaction Tracking: Open item processing allows for the detailed recording of individual transactions in debtor accounts. This means that each invoice and payment is tracked with specific information, such as the invoice date, due date, amount, and payment date.
2. Accurate Account Balances: By recording every transaction individually, open item processing ensures that debtor account balances are accurate and up-to-date. This accuracy is crucial for understanding the financial position of the company.
3. Transaction Reconciliation: Regular reconciliation processes are employed to match recorded transactions against debtor account balances. This reconciliation helps identify any discrepancies or errors in the debtor ledger and ensures the integrity of the financial data.
4. Ageing Analysis: Open item processing facilitates the generation of aging reports, which categorize outstanding invoices by their due dates. This helps the company prioritize collections efforts and determine which invoices are overdue and require attention.
5. Clearing Outstanding Items: When a payment is received and matched with specific invoices, those invoices are considered "cleared" or "closed." This reduces the outstanding balance of the debtor account and allows for accurate tracking of which invoices are paid and which are still open.
6. Customer Statements: The system can generate detailed customer account statements that provide customers with a transparent view of their outstanding balances and transaction history. These statements can include a breakdown of open items.
7. Improved Collections Management: Open item processing helps organizations efficiently manage their collections process by providing a clear view of outstanding invoices and prioritizing collections activities. This can help improve cash flow and reduce bad debt.
8. Historical Reference: Over time, open item processing creates a historical record of all debtor transactions. This historical reference is valuable for understanding customer payment patterns, making financial forecasts, and resolving any disputes or discrepancies.
9. Transparency and Customer Relations: Customers appreciate transparency in their accounts. Open item processing ensures that customers have a clear view of their financial obligations and payment history, which can enhance customer relations.

In summary, open item processing in debtor accounts within the debtors ledger provides an organized and transparent method for managing accounts receivable. It helps companies maintain accurate records, improve cash flow, streamline collections efforts, and enhance customer relations by ensuring clarity and accuracy in the management of outstanding invoices and payments.

Open item debtor (customer / client) accounts in osFinancials

In the case of debtor (customer / client) accounts, debit transactions are processed in the sales batch or invoices (document entry).

Once these debit transactions is updated (posted) to the ledger, and credit transactions are processed in the receipts batch, or credit notes in document entry) these credit transactions may be linked to the debit transactions.

Once these debit transactions is linked to a credit transaction, only the outstanding transactions (unlinked) outstanding transactions should be listed.

If all the transactions are not linked, it will be indicated on the Totals tab in a red or orange colour. This will help you to identify those accounts which may need open item processing.

1. *Show colours - If this field is selected, this will show red or orange colours for those accounts and transactions, which have unlinked transactions.*
2. *Find invalid - Select (tick) and click on the Filter button to list those accounts and transactions, which have unlinked transactions.*

It is important to check that all batches and documents are updated to the ledger and that all transactions are linked, before sending out debtor statements. The Unposted batches tab of Open item link will only display the linked transactions which is already linked but not yet posted (updated) to the ledger.

There may also be unposted documents and batches, which need to be linked, once these transactions and documents are posted (updated) to the ledger. To view these, select in Input → Checking for unposted items on the Default ribbon).

Open item / Ageing reports for debtor (customer / client) accounts

In addition to the Age analysis icon on the Reports ribbon; or the Due tab of Open item link icon on the Default ribbon; the following reports is available to manage open item debtor (customer / client) accounts:

Reports menu

Transaction reports -

- Transaction list - Open item - This report lists only those outstanding transactions in documents and batches which are posted (updated) to the ledger. It will list only those transactions with outstanding amounts. Any debit amounts, which are not linked to credit transactions, should be processed in Open

item link (Default ribbon).

- Transaction list - This report lists all the transactions in documents and batches which are posted (updated) to the ledger. All transactions will be listed irrespective of open item links.

Debtor statements -

- Debtor statements - The statement will print all transactions. It does not use the "*Open item*" feature.
- Debtor statements - Outstanding The statement will print only the transactions with outstanding amounts.

Age analysis reports -

- Age analysis - Balances detail - Displays the reference, date, amount and description for each transaction. The Total outstanding as at the Date of ageing is split to the number of days specified in up to 3 periods.
- Age analysis - Balances detail history (open item) - This is similar to the "*Balances detail*" report, but it displays the outstanding amount and TransactionID.
- Age analysis - Balances - This is a similar report as the "*Balances detail*" report. It will only list the balances for each ageing period.

Accessing the Open item link screen for a debtor (customer / client) account

To launch the Open item link screen for a debtor account:

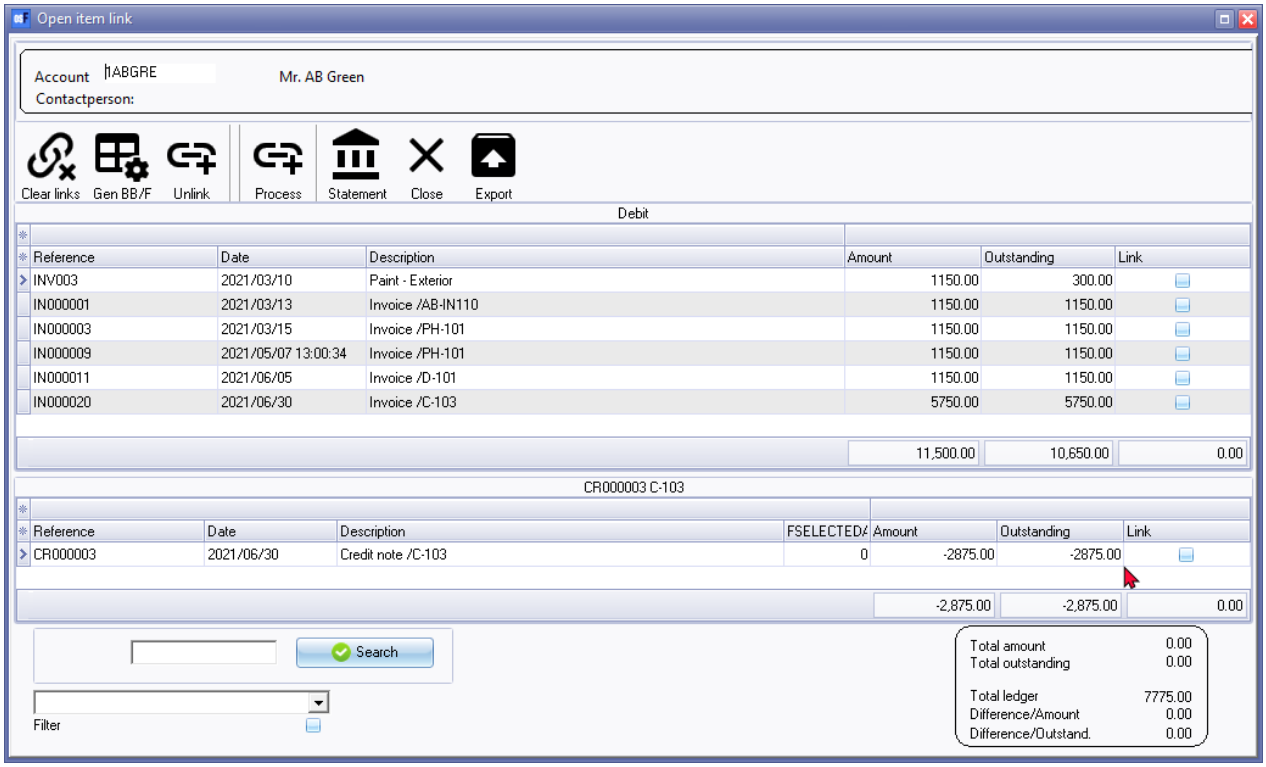
Documents list screen - context menu - Others → Open item link option.

On Default ribbon, select Documents (Documents list screen), select the Document type, e.g. Invoices, Credit notes or Quotes.

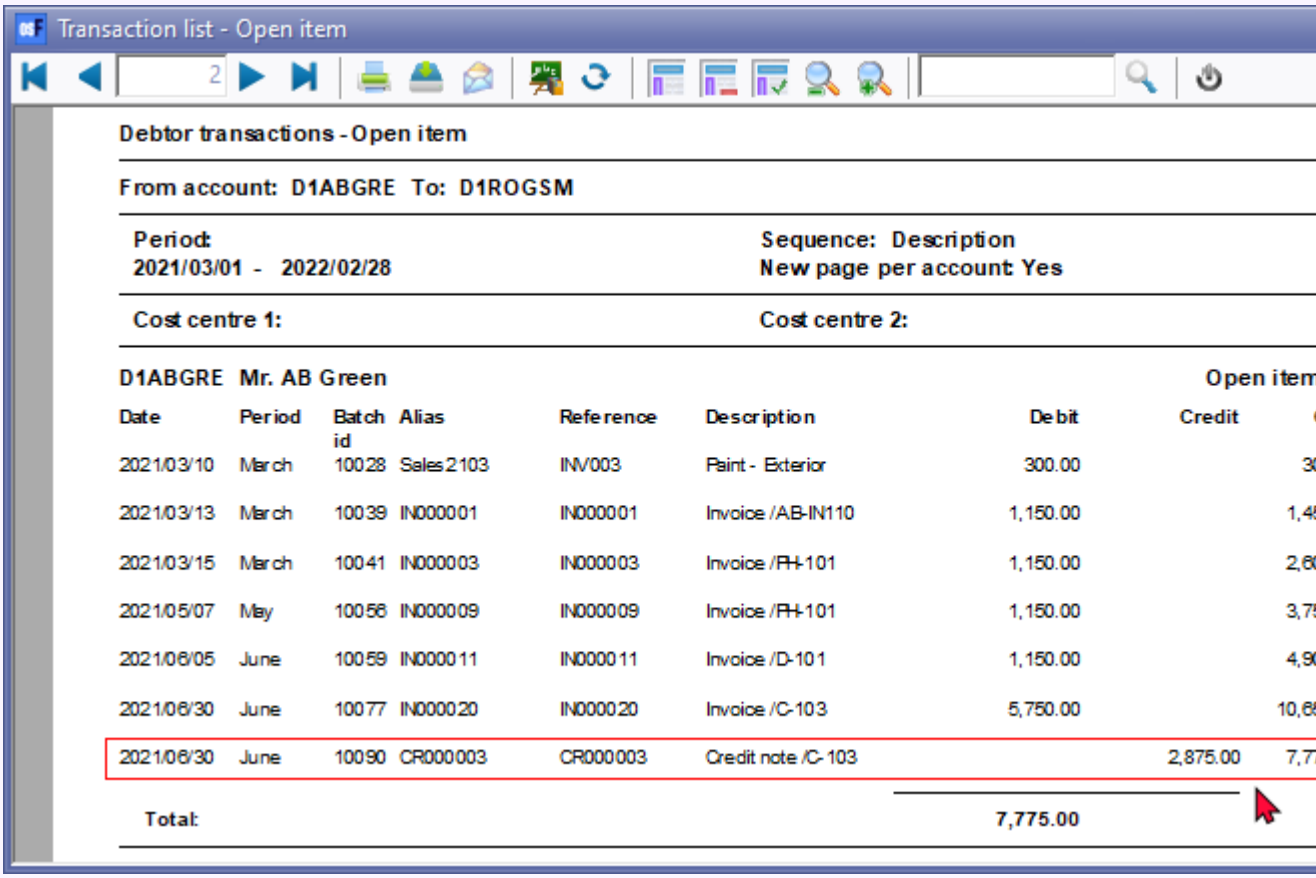
Right-click on a selected document. On the context menu, select the Others → Open item link option.

This will launch the "Open item link" form for the debtor (customer / client) account;; associated with the selected document.

1. Go to Open item link (Default ribbon).
2. On the list of accounts in the Totals or the Transactions tab, select the debtor (customer / client) account and double-click.
3. The "*Open item link*" screen for a selected debtor (customer / client) account is launched.

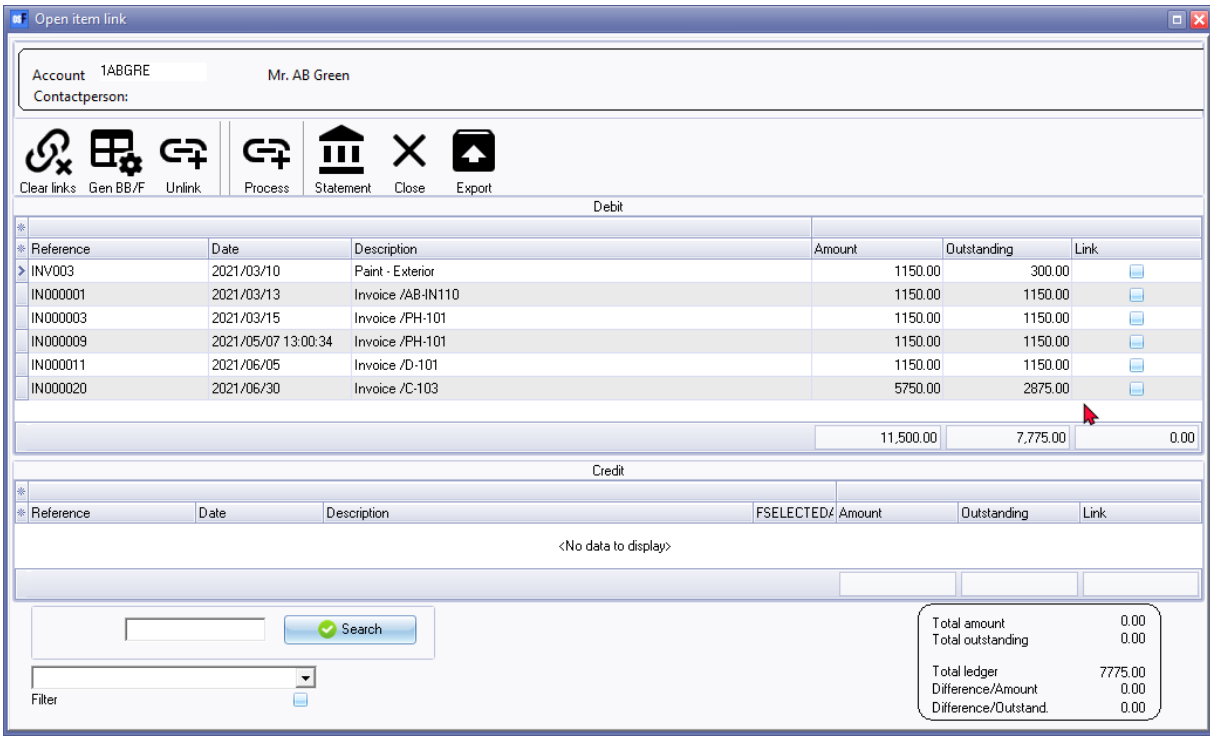


If the transaction for Credit note CR000003 is not linked to Invoice IN000020, both Credit note CR000003 and Invoice IN000020, "Transaction list - Open item" report as well as the "Debtor statement - Outstanding".



You may need to process the links on the Open item link (Default ribbon).

4. All the outstanding transactions which are not linked (matched), while processing transactions in batches and documents, will be listed. Once all transactions for an open item debtor account, is correctly linked and processed, there should be no transactions in the "*Credit*" section of the screen:



Transactions tab - This list the posted transactions similar to the "Open item link" screen.

- *All not selected - This is the default option. Only those with outstanding amounts will be listed.*
- *All option selected - All transactions will be listed. Those transactions, which are fully linked or settled, will display an 0.00 amount in the "Outstanding" column.*

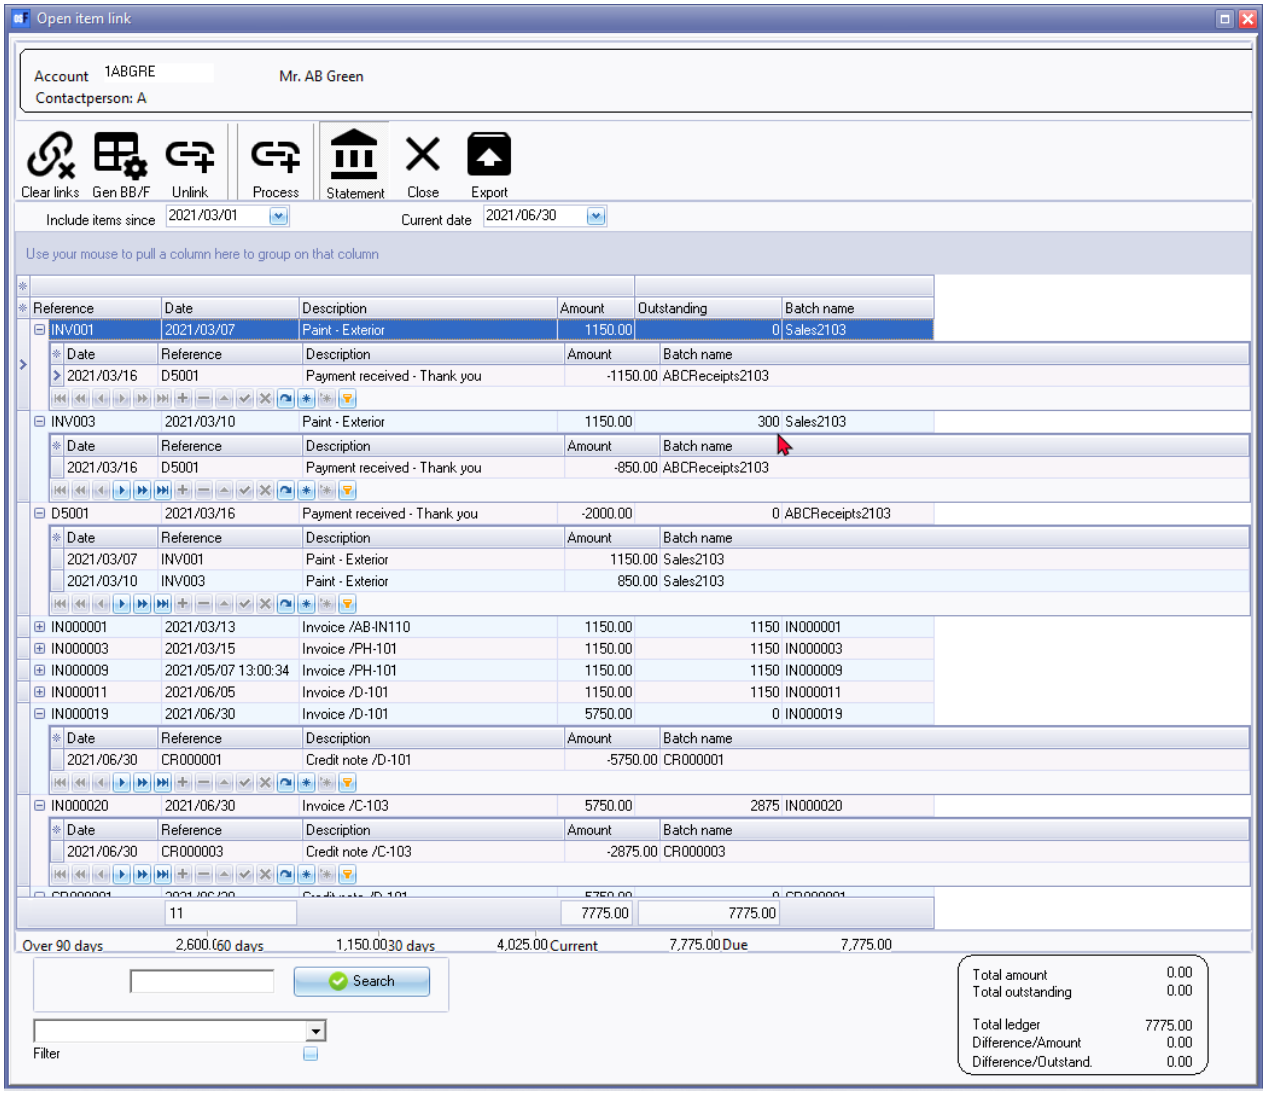
Open item - processing options and filter options

See - Open item processing - Selected accounts.

Created with the Standard Edition of HelpNDoc: Create iPhone web-based documentation

Open item - Debtor - Statements

The Open item link - Statement - This is a statement view of the transactions with outstanding amounts included between selected dates for a selected debtor (customer / client) account.



You may click on the ⊞ icon to expand show the links to for a selected transactions. To hide the links, click on the ⊟ icon.

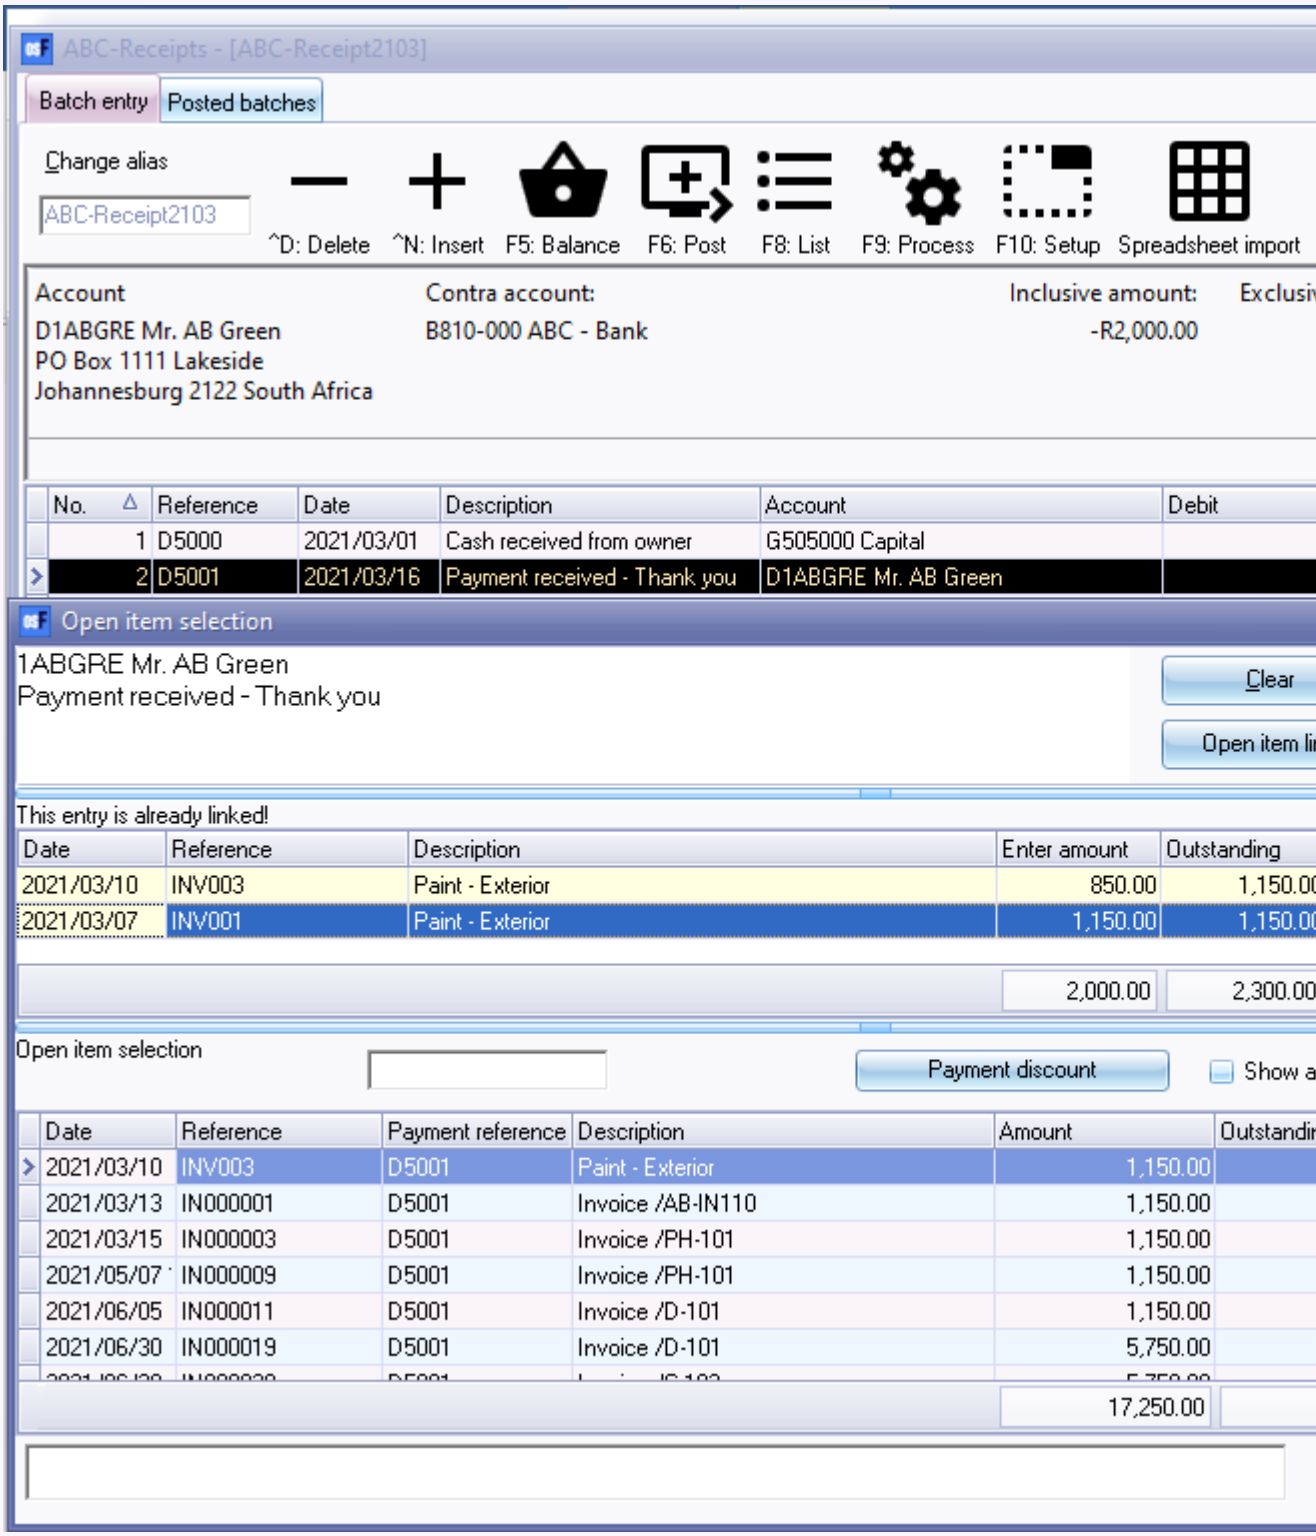
Debtor statements -

- *Debtor statements - The statement will print all transactions. It does not use the "Open item" feature.*
- *Debtor statements - Outstanding The statement will print only the transactions with outstanding amounts.*

The credit transactions which are linked to specific debit transactions of the same value, will not be displayed. If a transaction c

specific transaction, only the outstanding amount (difference) will be listed.

An example of transactions in a receipts batch link to outstanding transactions on the "Open item selection" screen.



For example, an payment of 2,000.00 is received from the debtor (customer / client) on 2021/03/16. The payment is linked as fo

- *INV001 - 2021/03/07 - 1,150.00 is fully settled (linked to the payment of 2000.00) -*
- *The remaining balance of 850.00 is linked to INV003 as a partial settlement of INV003. An outstanding amount of 300.00 v amount is calculated as 1,150.00 minus the partial settlement of 850.00 = 300.00 as the outstanding amount.*

As per this example -

- *Invoice INV001 will not be printed on some reports and in other reports it will print 0.00 as the outstanding amount.*
- *INV003 will print on some reports as 300.00 as the outstanding amount.*

All the credit transactions which are linked to specific debit transactions of the same value, will be displayed. If a transaction of a different amount is linked to a specific transaction, the full amount of the transaction will be listed.

Open item - Debtor - Receive payments

The Receive payment feature, will automatically generate the transactions to the receipts batch for a selected transaction and print a combined receipt / payment advise (if selected). The transaction will automatically be posted updated to the ledger.

The "Receive payment" feature may also be launched on the context menu of selected transactions on the "Open item link" screen of a selected debtor (customer / client) account or on the "Open item link" screen of a selected creditor (supplier / vendor) account.

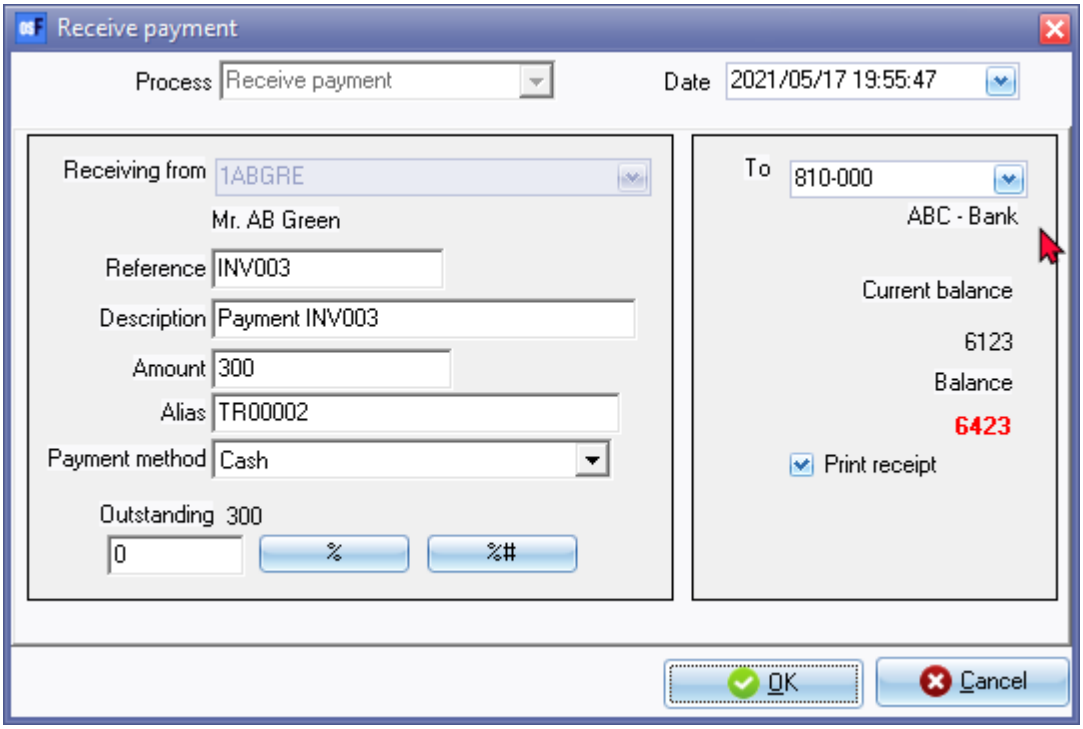
It will generate the transactions as follows:

- Invoices - Positive amount - Debit : Bank account and Credit : Debtor (customer / client) account.
- Credit notes - Negative amount - Debit : Debtor (customer / client) account and Credit : Bank account.

Receive payments - Debtor (customer / client) accounts

To receive a payment:

1. Go to Open item link (Default ribbon). The Totals tab of the "*Open item link"* screen will be displayed.
2. Click on the Transactions tab and click on the Filter button.
3. Select the debtor (customer / client) account and select a transaction. Right-click to select the Receive payment option from the context menu. The "*Receive payment"* screen is displayed:



4. Enter and select the following options:

   a) Date - The Operating System (e.g. Windows) date will automatically be displayed in the date field. Enter the date or select the date, if necessary.

   b) Bank account - Please make sure that the correct bank account is selected.

   c) Receiving from - The account code is disabled. The name of the debtor (customer / client) is displayed. Check that the correct account is selected.

   d) Reference - The Document number or reference number in batches.

   e) Description - The default description is Payment follows by the Document number.

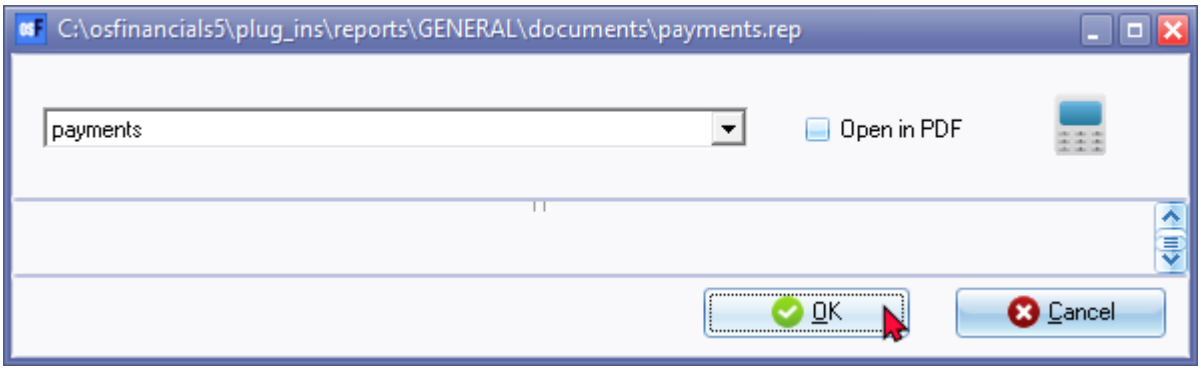
   f) Amount - The default outstanding amount of the selected transaction is displayed. You may overtype this, if necessary.

   g) Alias - The alias is automatically generated. It is prefixed by TR and five (5) numeric characters.

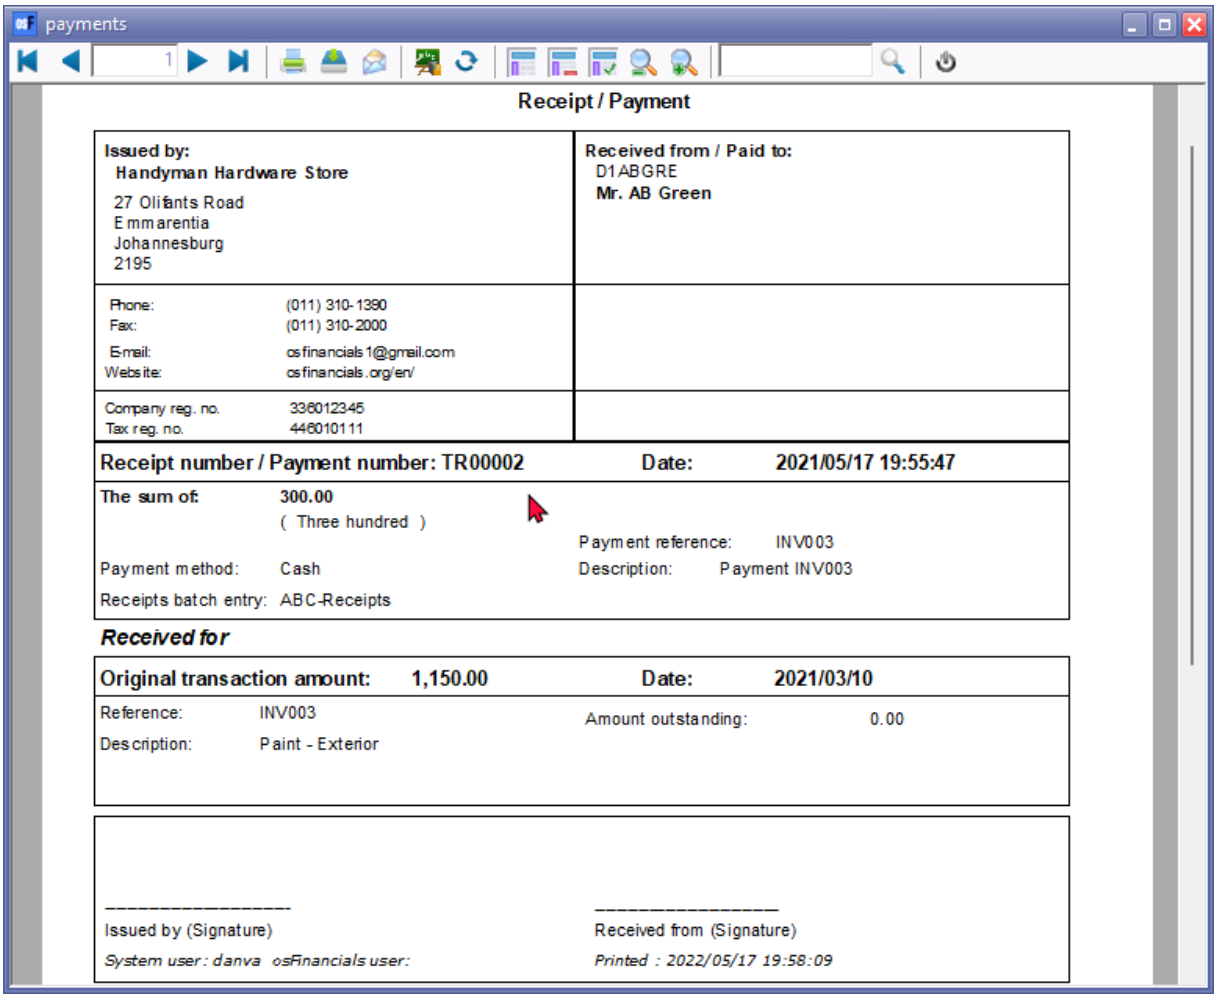
   h) Payment method - Select the payment method Cash, Cheque, Credit Card or Other.

   i) Print receipt - Select to print out or not to print the receipt / payment advise. If this field is left blank, no receipt payment advise will be printed, but the details of the receipt will generate a transaction in the receipts batch linked to the bank account. The transaction will automatically be posted (updated to the ledger).

5. Click on the OK button.



6. Click on the OK button of the parameters screen. The transaction for the receipt will automatically be inserted into the Receipts journal from which this option was initiated. An example of the printed "*Receipt / Payment*" (if the "*Print receipt*" option was selected), is as follows:



payments

Receipt / Payment

Issued by: **Handyman Hardware Store** 27 Olifants Road Emmarentia Johannesburg 2195	**Received from / Paid to:** D1ABGRE **Mr. AB Green**

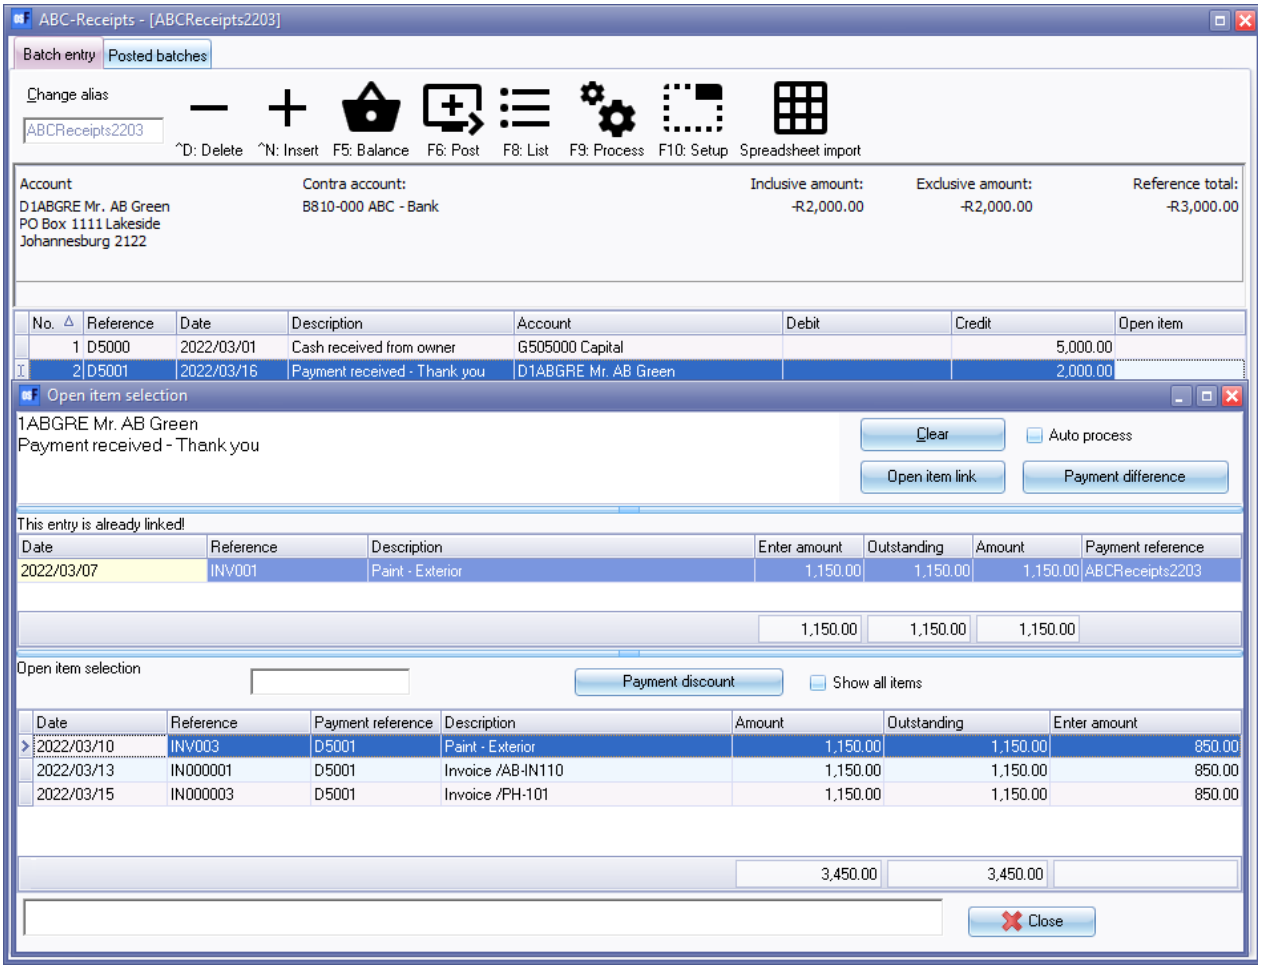
Open item - Debtors - Link / allocate transactions in batches

Allocate and link transactions in batches

By default, the "*Open item selection*" screen will be launched when allocating credit transactions (e.g. payments received or credit notes, etc.) to debit transactions (e.g. Invoices, Credit notes, and other debit transactions such as interest on overdue accounts, charge amounts, fixed amounts, etc.).

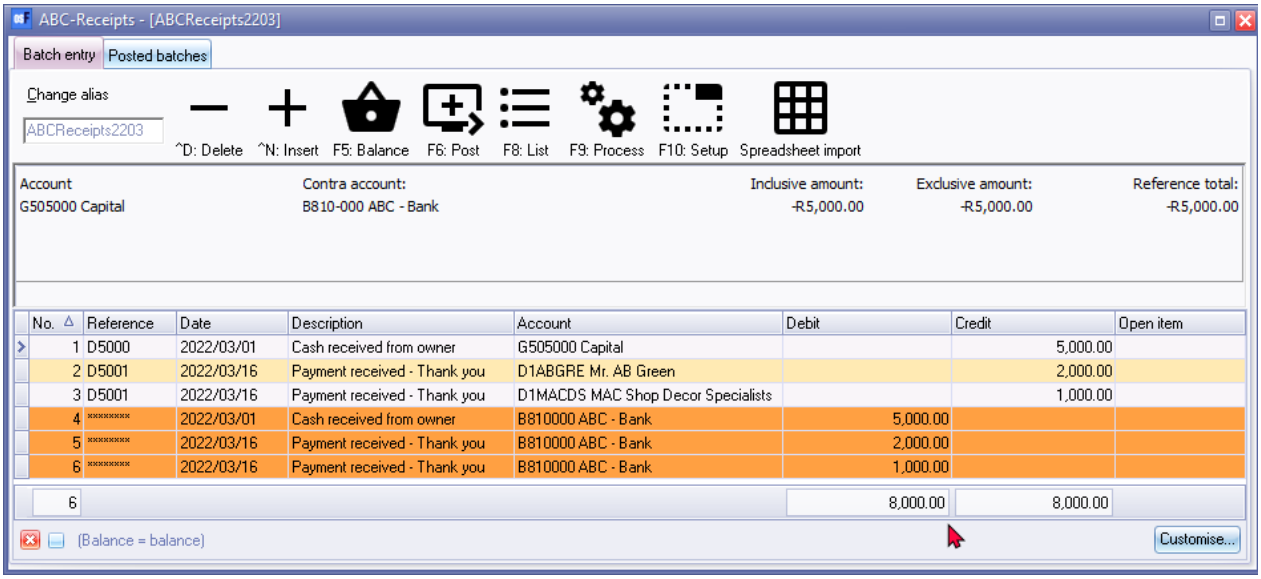
It will list all the transactions with outstanding amounts. You need to select the specific invoice or transaction for which, you are receiving the payment.

Should you have any Open item debtors, an "*Open item selection*" screen will appear, listing all debit transactions, as well as the outstanding balances of transactions for the debtor you have selected in the account field, if this debtor (customer / client) account is created as an Open item debtor.



You may select (tick) the "Not open item batch" field (F10:Setup - "Options for this batch" - Advanced tab) to de-activate the open item feature in batches.

After entering the receipts (deposits) in the Receipts journal, the transactions will be displayed as follows:



If a transaction for a debtor in the receipts journal is linked to an transaction on the "Open item selection" screen, the transaction will be displayed in a peach background colour.

Open item - Creditors

How does Open item processing help to manage creditor accounts in the creditors ledger?

Open item processing is instrumental in efficiently managing creditor accounts within the creditors ledger (accounts payable). It provides a structured and detailed approach to tracking and reconciling transactions with suppliers or creditors, helping organizations maintain accurate financial records and effective financial management. Here's how open item processing helps manage creditor accounts:

1. Detailed Transaction Tracking: Open item processing enables organizations to track and record individual transactions with suppliers. Each invoice and payment is recorded with specific information, such as the invoice date, due date, amount, and payment date.
2. Accurate Account Balances: By meticulously recording each transaction, open item processing ensures that creditor account balances are accurate and up-to-date. This accuracy is essential for managing the company's financial liabilities.
3. Transaction Reconciliation: Regular reconciliation processes are carried out to match recorded transactions against creditor account balances. This reconciliation helps identify discrepancies or errors in the creditor ledger, ensuring the financial data's integrity.
4. Ageing Analysis: Open item processing facilitates the generation of aging reports, which classify outstanding invoices by their due dates. These reports help the company monitor which invoices are overdue and prioritize payments to suppliers.
5. Clearing Outstanding Items: When a payment is made and matched with specific invoices, those invoices are considered "cleared" or "closed." This reduces the outstanding balance of the creditor account and allows for accurate tracking of paid and outstanding invoices.
6. Supplier Statements: The system can generate detailed supplier account statements, providing suppliers with a transparent view of their outstanding balances and transaction history. These statements may include a breakdown of open items.

7. Improved Cash Flow Management: Open item processing helps organizations effectively manage their cash flow by providing a clear view of outstanding invoices and payment priorities. This can aid in optimizing working capital and ensuring timely payments to suppliers.
8. Historical Reference: Over time, open item processing creates a historical record of all creditor transactions. This historical reference is valuable for understanding payment patterns, making financial forecasts, and resolving any disputes or discrepancies with suppliers.
9. Compliance and Transparency: Open item processing promotes compliance with financial regulations and accounting standards by maintaining transparent and accurate records of financial transactions.

In summary, open item processing in creditor accounts within the creditors ledger offers an organized and transparent method for managing accounts payable. It helps organizations maintain accurate records, effectively manage their cash flow, prioritize payments to suppliers, and ensure clarity and accuracy in the management of outstanding invoices and payments to creditors. This approach fosters healthy supplier relationships and financial management practices.

Open item creditor (supplier / vendor) accounts in osFinancials

In the case of creditor (supplier / vendor) accounts, credit transactions are processed in the purchase batch or purchase documents (document entry).

Once these credit transactions is updated (posted) to the ledger, and debit transactions are processed in the payments batch, or supplier returns in document entry) these debit transactions may be linked to the credit transactions.

Once these credit transactions is linked to a debit transaction, only the outstanding transactions (unlinked) outstanding transactions should be listed.

If all the transactions are not linked, it will be indicated on the Totals tab in a red or orange colour. This will help you to identify those accounts which may need open item processing.

1. *Show colours - If this field is selected, this will show red or orange colours for those accounts and transactions, which have unlinked transactions.*
2. *Find invalid - Select (tick) and click on the Filter button to list those accounts and transactions, which have unlinked transactions.*

It is important to check that all batches and documents are updated to the ledger and that all transactions are linked, before sending out creditor remittance advises. The Unposted batches tab of Open item link will only display the linked transactions which is already linked but not yet posted (updated) to the ledger.

There may also be unposted documents and batches, which need to be linked, once these transactions and

documents are posted (updated) to the ledger. To view these, select in Input → Checking for unposted items on the Default ribbon).

Open item / Ageing reports for creditor (supplier / vendor) accounts

In addition to the Age analysis icon on the Reports ribbon; or the Due tab of Open item link icon on the Default ribbon; the following reports is available to manage open item creditor (supplier / vendor) accounts:

Reports menu

Transaction reports -

- Transaction list - Open item - This report lists only those outstanding transactions in documents and batches which are posted (updated) to the ledger. It will list only those transactions with outstanding amounts. Any debit amounts, which are not linked to credit transactions, should be processed in Open item link (Default ribbon).
- Transaction list - This report lists all the transactions in documents and batches which are posted (updated) to the ledger. All transactions will be listed irrespective of open item links.

Remittance advices -

- Creditor remittance advises - The remittance advice will print all transactions. It does not use the "*Open item*" feature.
- Creditor remittance advises - Outstanding - The remittance advice will print only the transactions with outstanding amounts.

Age analysis reports -

- Age analysis - Balances detail - Displays the reference, date, amount and description for each transaction. The Total outstanding as at the Date of ageing is split to the number of days specified in up to 3 periods.
- Age analysis - Balances detail history (open item) - This is similar to the "*Balances detail*" report, but it displays the outstanding amount and TransactionID.
- Age analysis - Balances - This is a similar report as the "*Balances detail*" report. It will only list the balances for each ageing period.

Accessing the Open item link screen for a creditor (supplier / vendor) account

Documents list screen - context menu - Others → Open item link option.

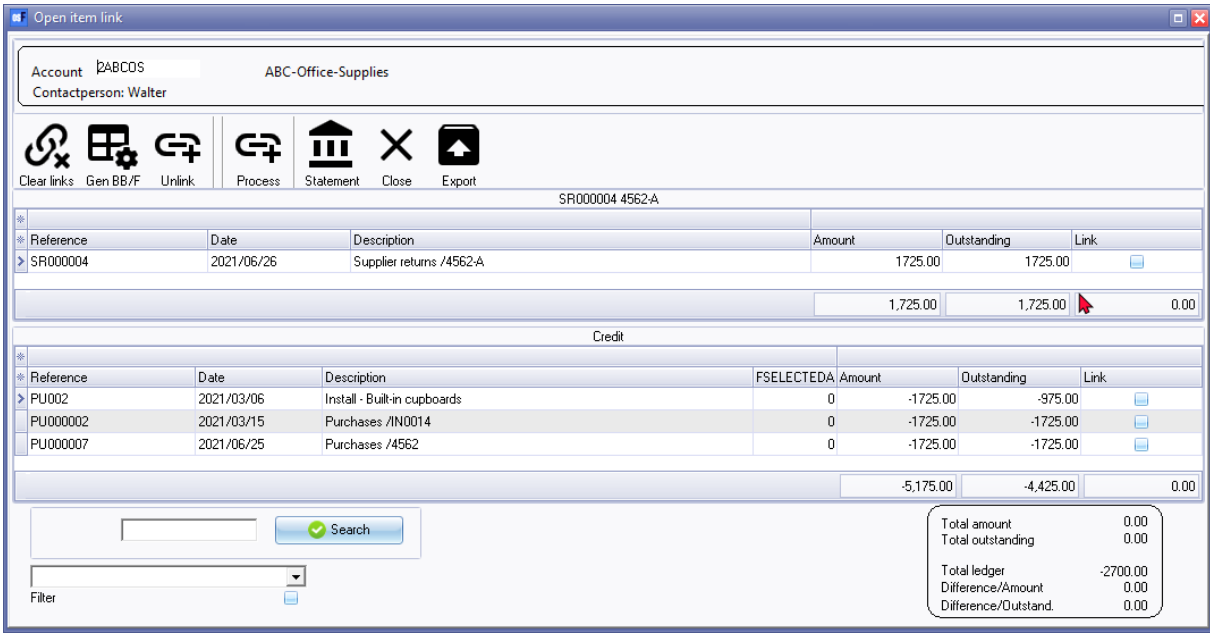
On Default ribbon, select Documents (Documents list screen), select the Document type, e.g. Purchase, Supplier return or Orders.

Right-click on a selected document. On the context menu, select the Others → Open item link option.

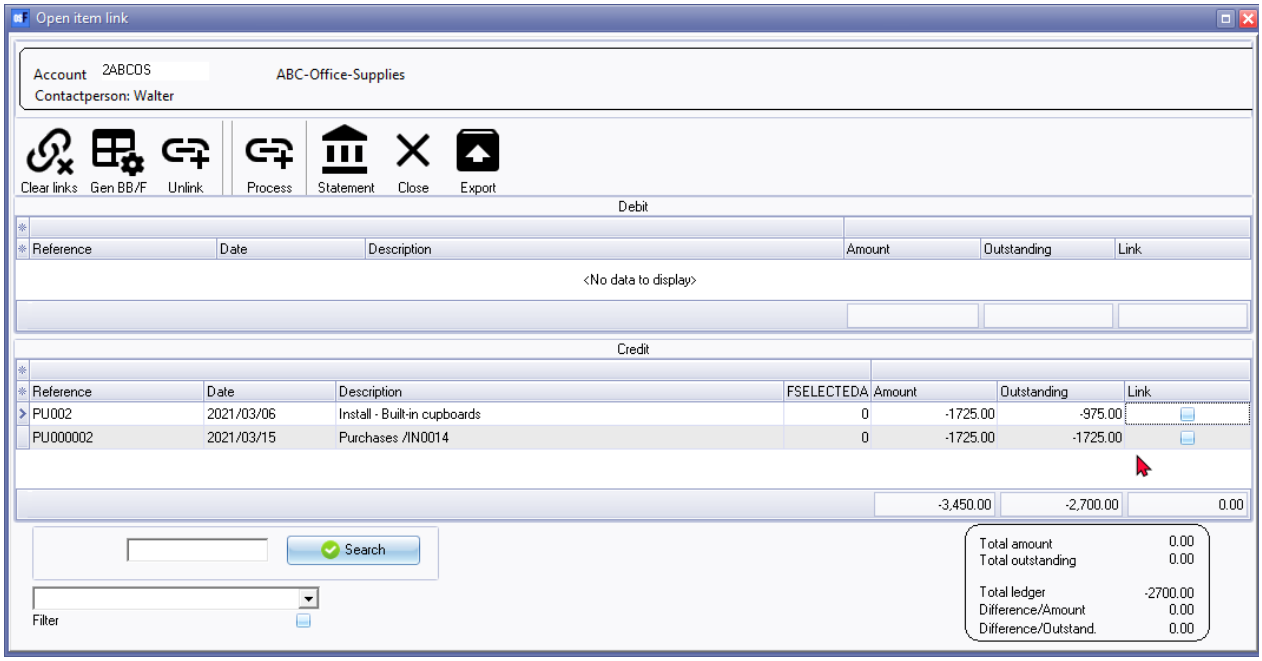
This will launch the "Open item link" form for the creditor (supplier / vendor) account; associated with the selected document.

To launch the Open item link screen for a creditor (supplier / vendor) account:

1. Go to Open item link (Default ribbon).
2. On the list of accounts in the Totals or the Transactions tab, select the creditor (supplier / vendor) account and double-click.
3. The "*Open item link*" screen for a selected creditor (supplier / vendor) account is launched.



4. All the outstanding transactions, which are not linked (matched), while processing transactions in batches and documents, will be listed. Once all transactions for an open item creditor (supplier / vendor) account, is correctly linked and processed, there should be no transactions in the "*Debit*" section of the screen:



Transactions tab - This list the posted transactions similar to the "Open item link" screen.

- *All not selected - This is the default option. Only those with outstanding amounts will be listed.*
- *All option selected - All transactions will be listed. Those transactions, which are fully linked or settled, will display an 0.00 amount in the "Outstanding" column.*

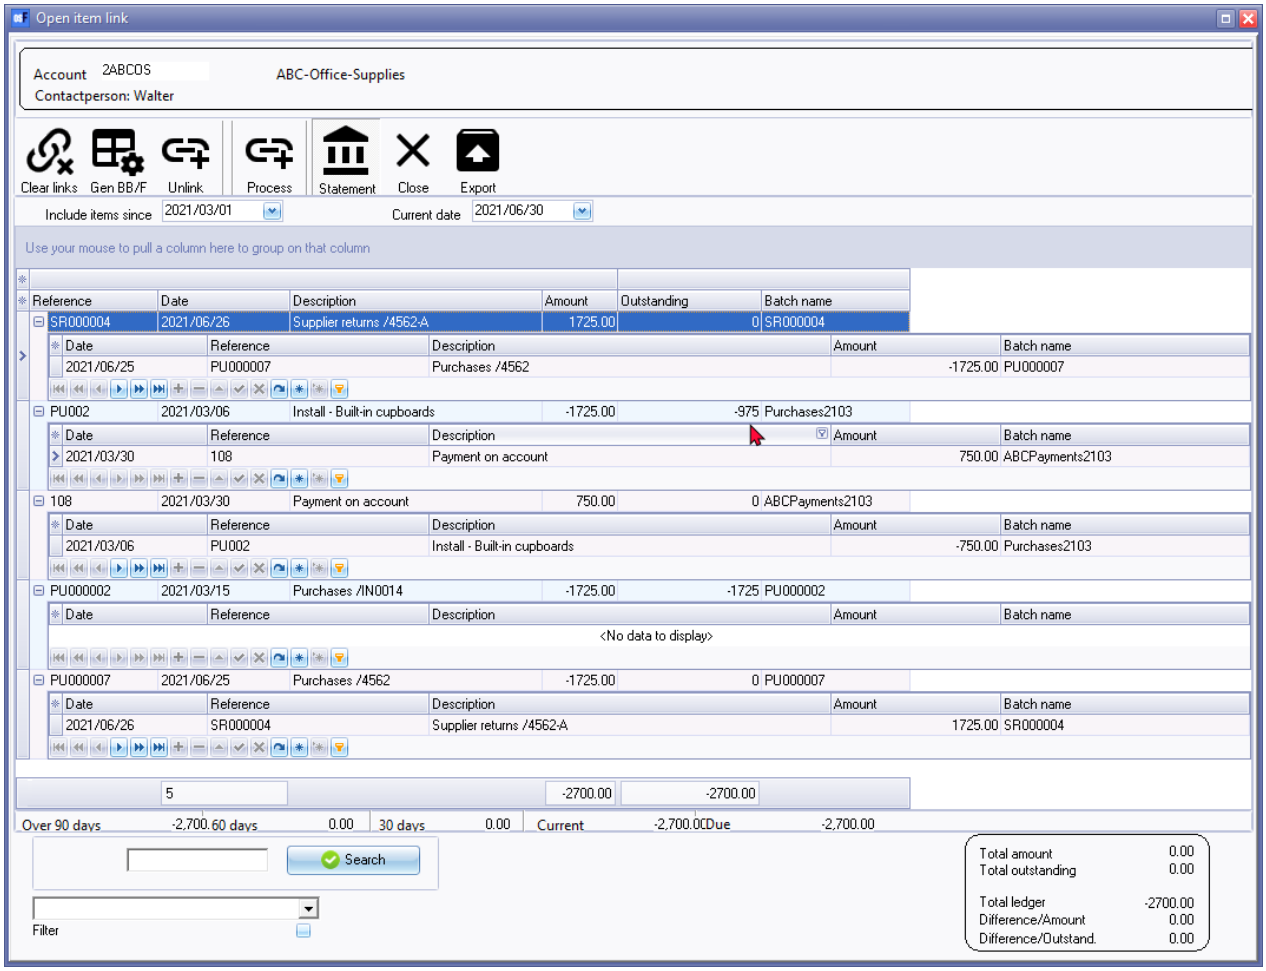
Open item - processing options and filter options

See - Open item processing - Selected accounts.

Created with the Standard Edition of HelpNDoc: Effortlessly Support Your Windows Applications with HelpNDoc's CHM Generation

Open item - Creditor - Remittance advises

The Open item link - Statement option displays the transactions of the selected creditor (supplier / vendor) account.



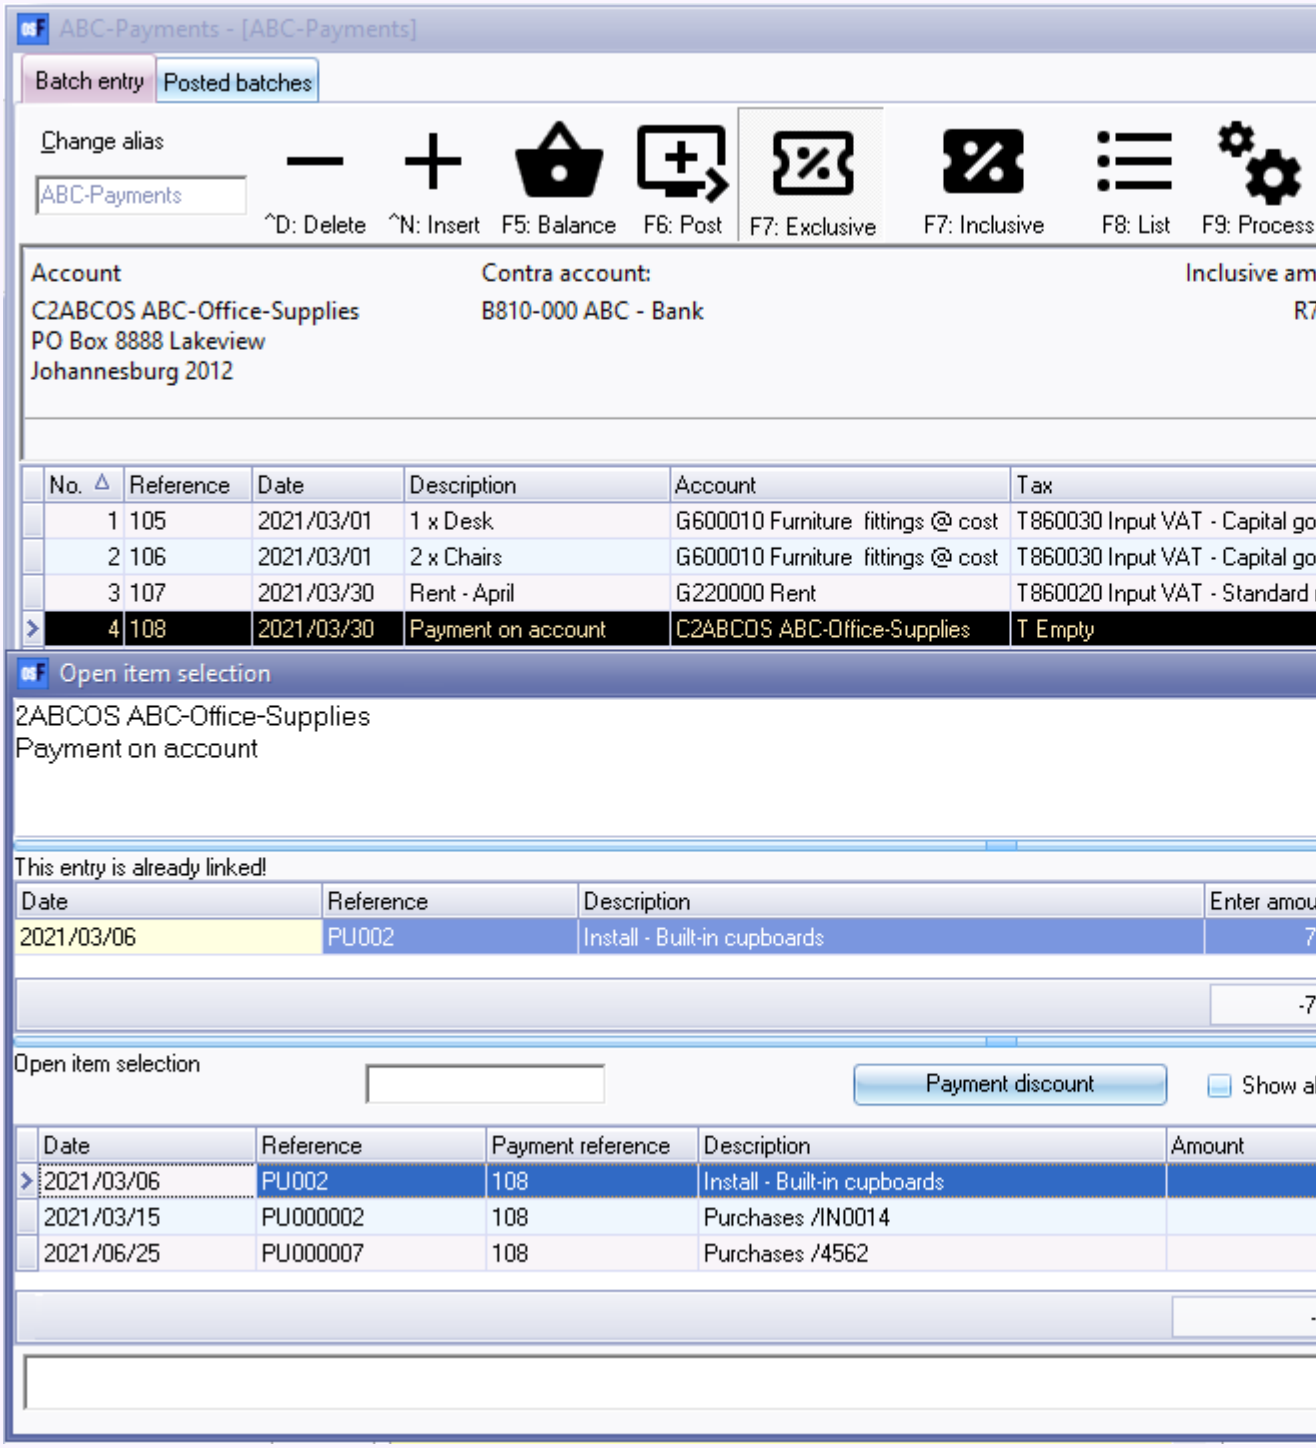
You may click on the ⊞ icon to expand show the links to for a selected transactions. To hide the links, click on the ⊟ icon.

Remittance advices -

- *Creditor remittance advises - The remittance advice will print all transactions. It does not use the "Open item" feature.*
- *Creditor remittance advises - Outstanding - The remittance advice will print only the transactions with outstanding amounts.*

The debit transactions which are linked to specific credit transactions of the same value, will not be displayed. If a transaction c
outstanding amount (difference) will be listed.

An example of transactions in a payments batch link to outstanding transactions on the "Open item selection" screen.



For example, an payment of 750.00 is made to the creditor (supplier / vendor) on 2021/03/30. The payment is linked as follows:

- *PU002 - 2021/03/06 - 1,725.00 is partially settled (linked to the payment of 750.00) - The outstanding amount is calculate outstanding amount.*

As per this example -

- *The payment for "Payment reference - 108" will not be printed on some reports and in other reports it will print 0.00 as the*
- *PU002 will print on some reports as 975.00 as the outstanding amount.*

The debit transactions which are linked to specific credit transactions of the same value, will not be displayed. If a transaction is linked to a specific transaction, only the outstanding amount (difference) will be listed.

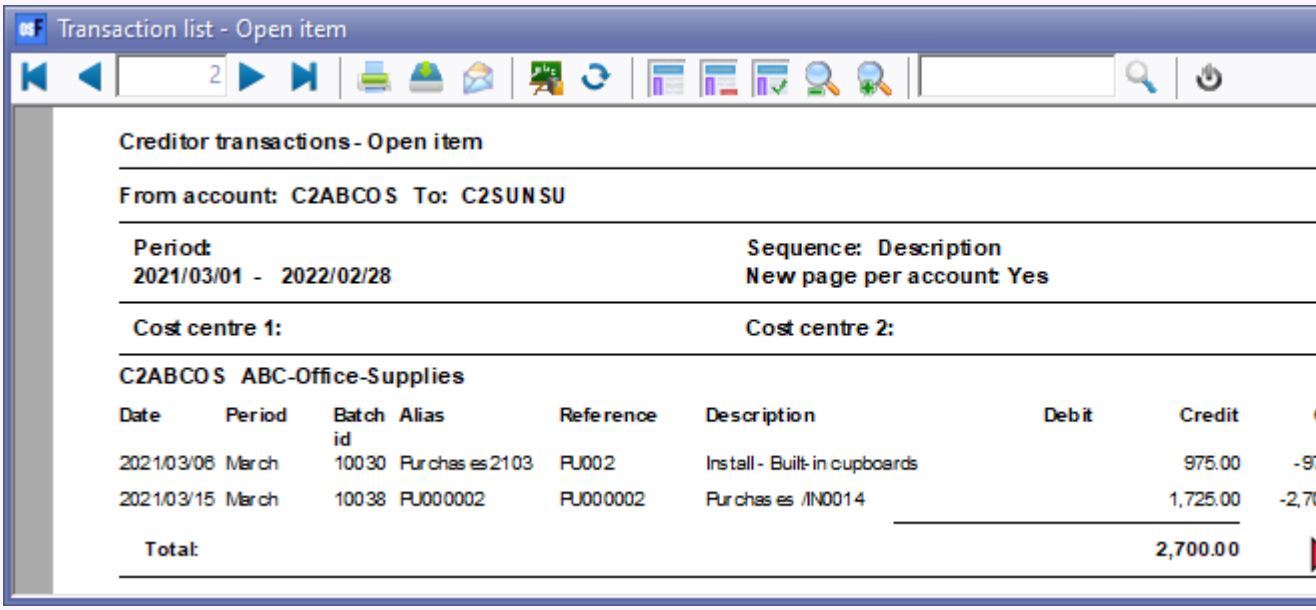
For example:

- *Payment - 108 - 2021/03/30 - 750.00 - Debit transaction in the Payments journal is linked to the supplier invoice PU002 - 2*

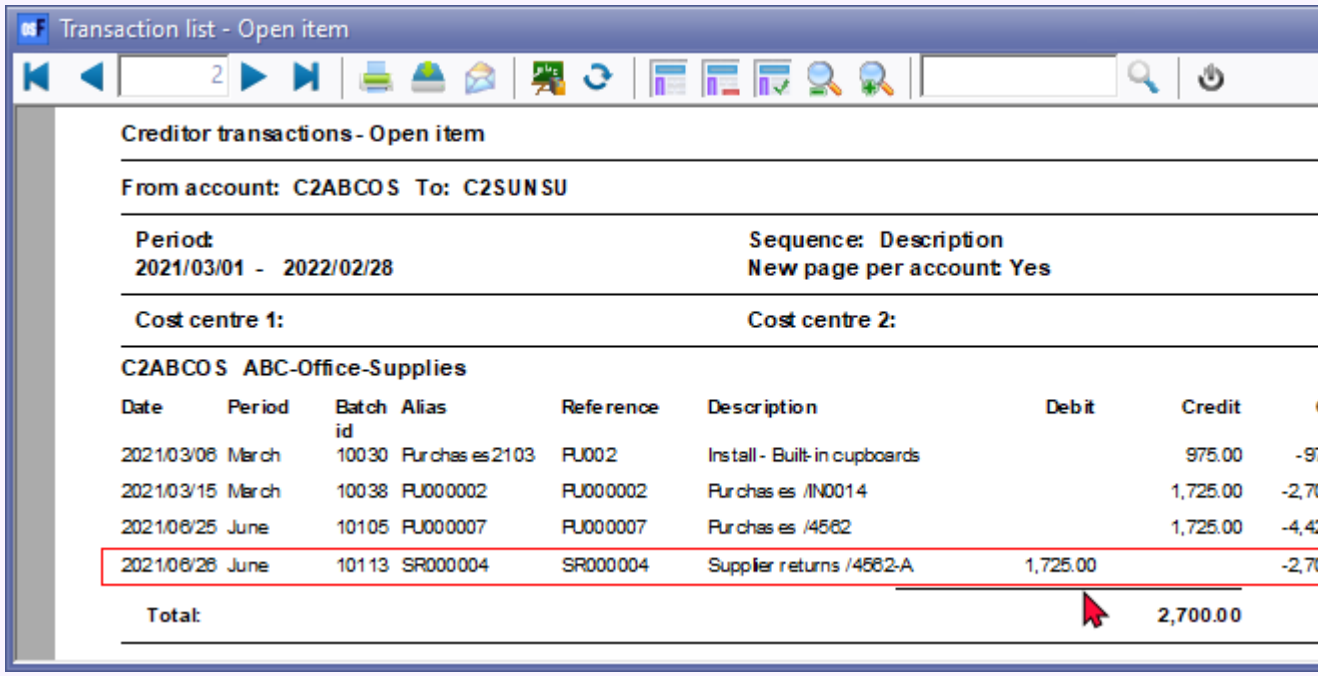
The outstanding amount for this transaction is 850.00 still due to the creditor (supplier / vendor). (1725.00 minus 750.00). Only

- *Supplier return SR000004 - 2021/06/26 - 1725.00 is linked to Purchase PU000007 - 2021/06/25 - 1725.00.*

Supplier return SR000004 and Purchase PU000007 will not be listed on the "Transaction list - Open item" report as well as the "C advise - Outstanding".



If the transaction for Supplier return SR000004 is not linked to Purchase PU000007, both Supplier return SR000004 and Purchas listed on the "Transaction list - Open item" report as well as the "Creditor remittance advise - Outstanding".



You may need to process the links on the Open item link (Default ribbon).

Open item - Creditor - Receive payments

The Receive payment feature, will automatically generate the transactions to the receipts batch for a selected transaction and print a combined receipt / payment advise (if selected). The transaction will automatically be posted updated to the ledger.

The "Receive payment" feature may also be launched on the context menu of selected transactions on the "Open item link" screen of a selected debtor (customer / client) account or on the "Open item link" screen of a selected creditor (supplier / vendor) account.

It will generate the transactions as follows:

- Purchases - Negative amount - Debit : Creditor (supplier / vendor) account and Credit : Bank account.
- Supplier returns - Positive amount - Debit : Bank account and Credit : Creditor (supplier / vendor) account.

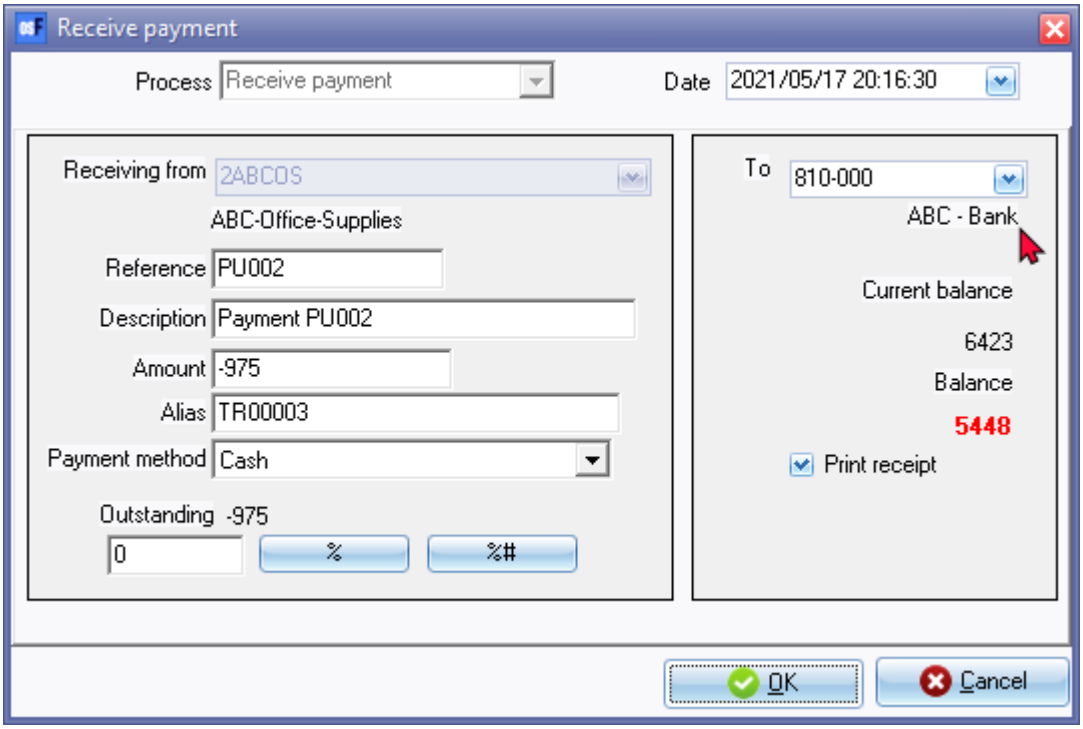
Receive payments - Creditor (supplier / vendor) accounts

To make a payment:

1. Go to Open item link (Default ribbon). The Totals tab of the "*Open item link*" screen will be displayed.

2. Click on the Transactions tab and click on the Filter button.

3. Select the creditor (supplier / vendor) account and select a transaction. Right-click to select the Receive payment option from the context menu. The "*Receive payment*" screen is displayed:



4. Enter and select the following options:

    a) Date - The Operating System (e.g. Windows) date will automatically be displayed in the date field. Enter the date or select the date, if necessary.

    b) Bank account - Please make sure that the correct bank account is selected.

    c) Receiving from - The account code is disabled. The name of the creditor (supplier / vendor) is displayed. Check that the correct account is selected.

    d) Reference - The Document number or reference number in batches.

    e) Description - The default description is Payment follows by the Document number.

    f) Amount - The default outstanding amount of the selected transaction is displayed. You may

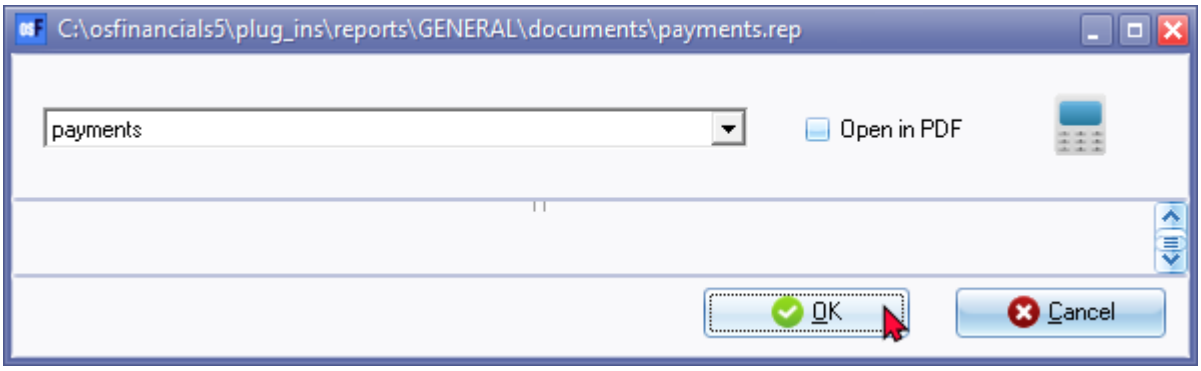
overtype this, if necessary.

g) Alias - The alias is automatically generated. It is prefixed by TR and five (5) numeric characters.

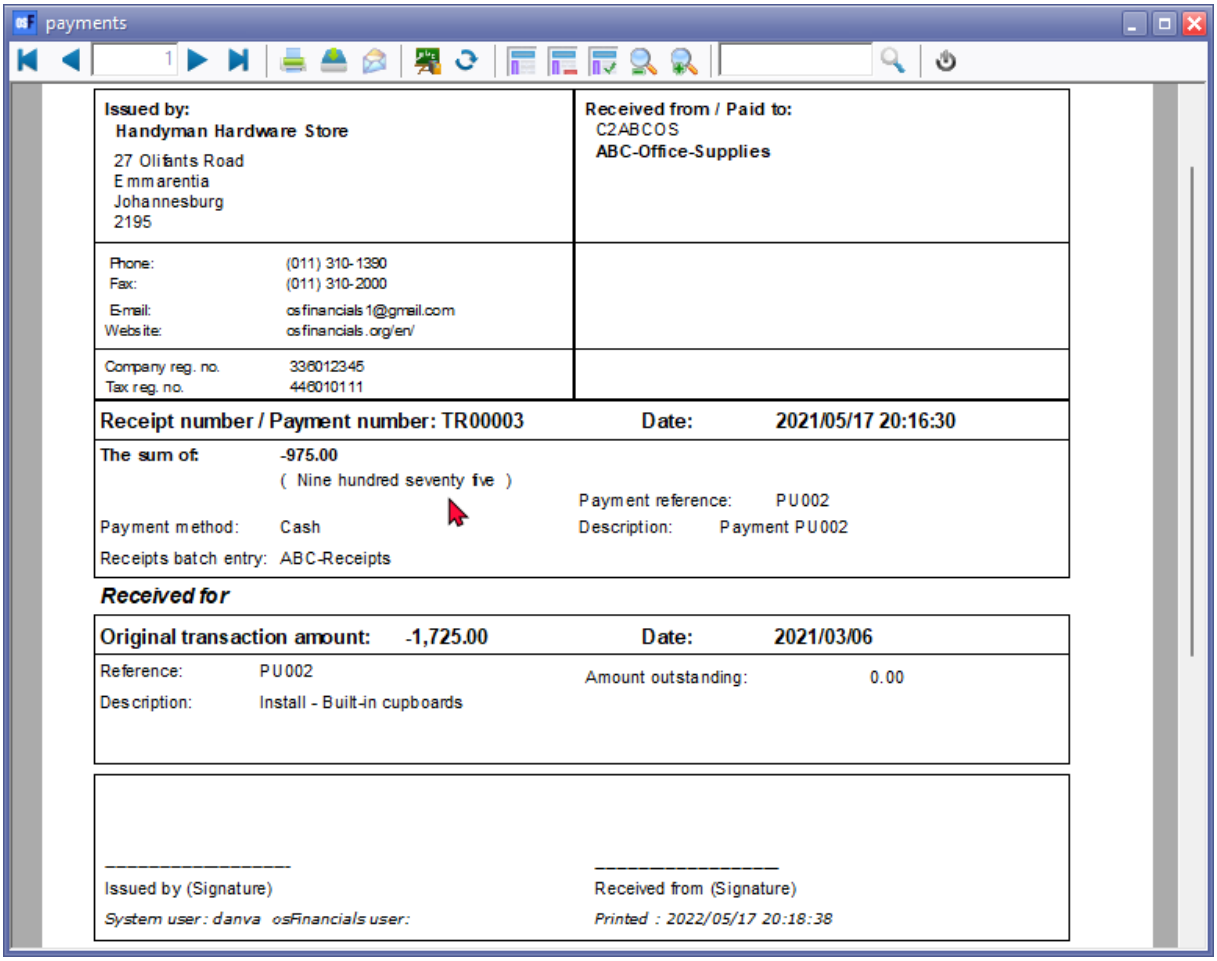
h) Payment method - Select the payment method Cash, Cheque, Credit Card or Other.

i) Print receipt - Select to print out or not to print the receipt / payment advise. If this field is left blank, no receipt payment advise will be printed, but the details of the receipt will generate a transaction in the receipts batch linked to the bank account. The transaction will automatically be posted (updated to the ledger).

5. Click on the OK button.



6. Click on the OK button of the parameters screen. The transaction for the receipt will automatically be inserted into the Receipts journal from which this option was initiated. An example of the printed "*Receipt / Payment*" (if the "*Print receipt*" option was selected), is as follows:



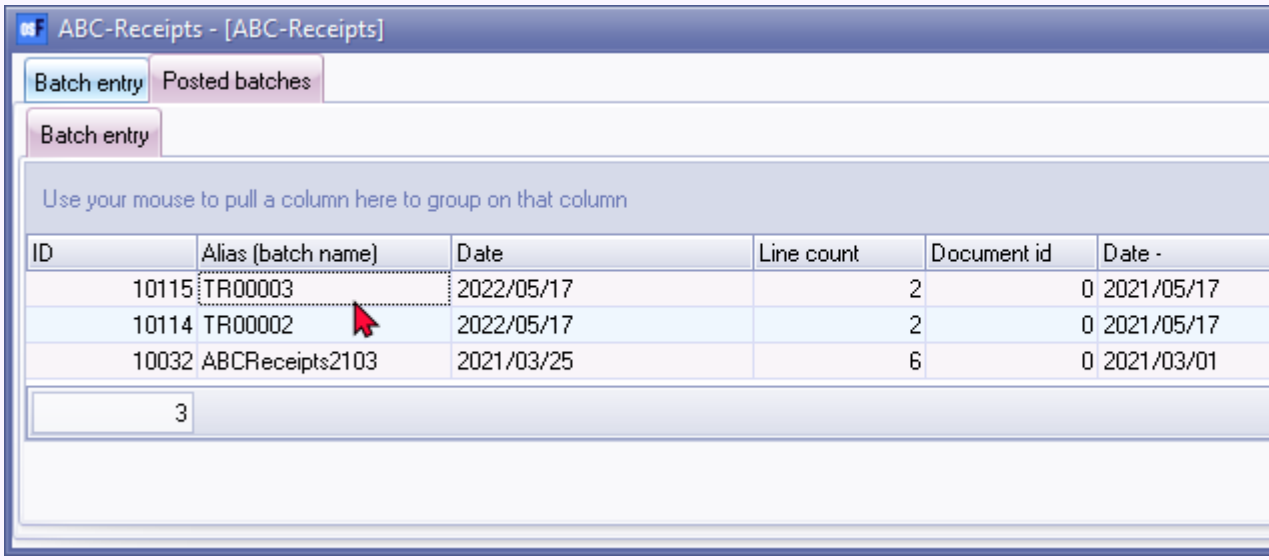
7. Click the Cancel button of the parameters screen.

The Receive payment feature, will automatically generate the transactions to the receipts batch for a selected transaction and selected). The transaction will automatically be posted (updated) to the ledger. The updated posted transaction will be availab

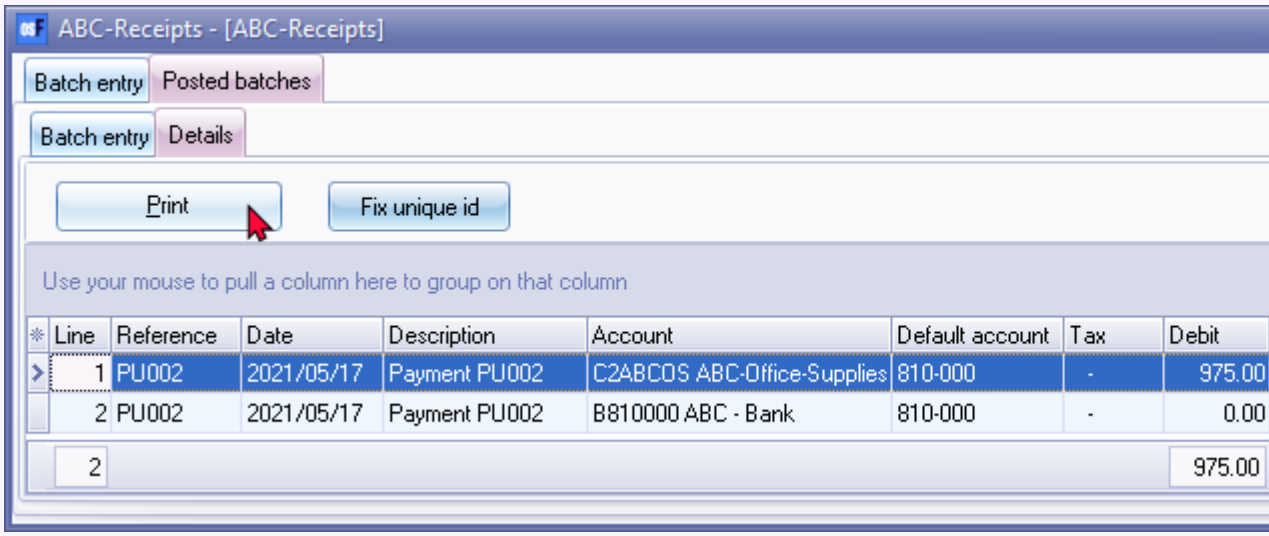
The outstanding amount of a creditor (supplier / vendor) account is usually a credit amount, and the creditor (supplier / vendo account will be credited.

To view the Receipt transaction:

1. *Select and open the Bank account receipt batch.*
2. *Click on Posted batches tab.*



3. *On the Batch entry tab, select the batch and double-click. The transaction is on the Details tab.*



4. *Click on the Print button to print the transactions in the Posted batch report.*

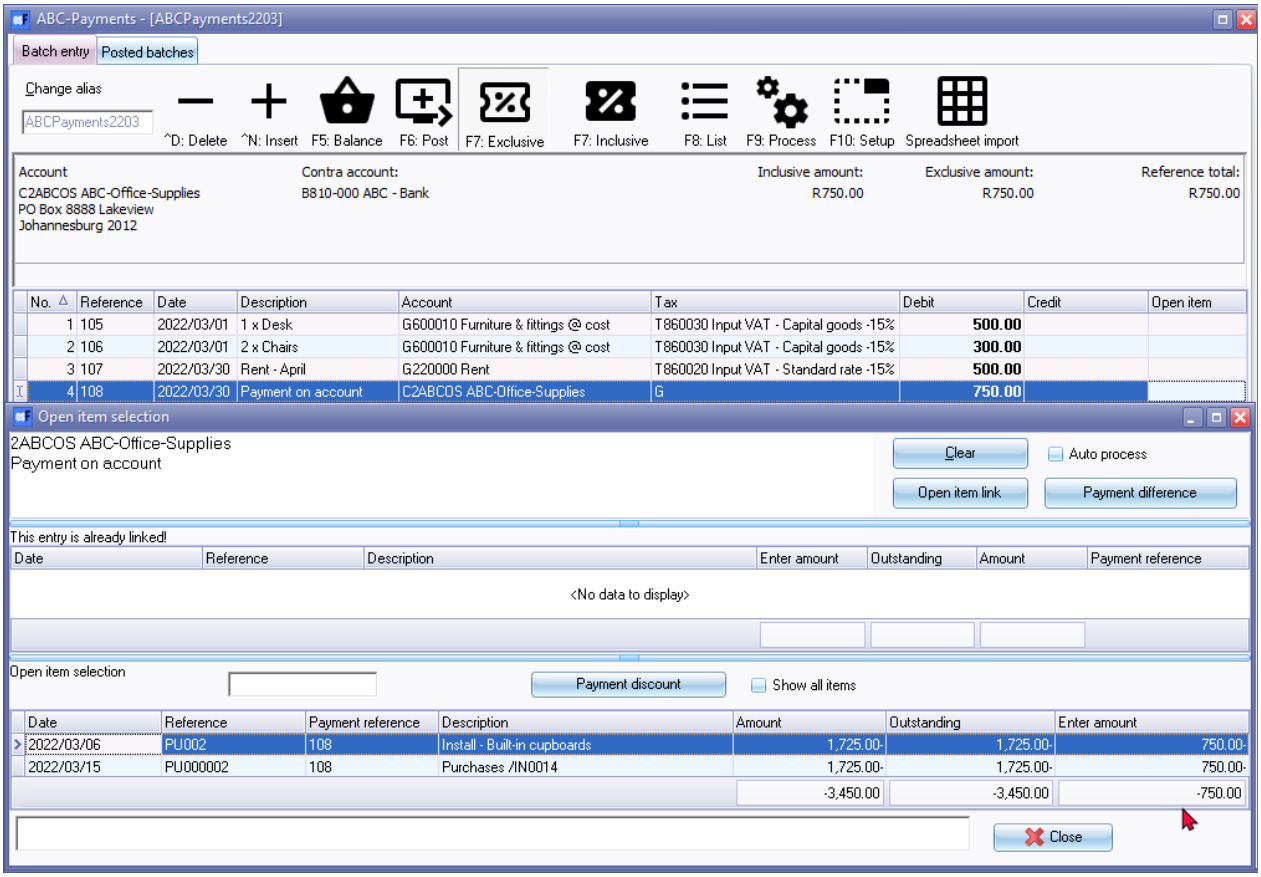
Open item - Creditors - Link / allocate transactions in batches

Allocate and link transactions in batches

By default, the "*Open item selection*" screen will be launched when allocating debit transactions (e.g. payments made on account or supplier returns, etc.) to credit transactions (e.g. Purchases, Supplier returns, and other debit transactions such as, charge amounts, etc.).

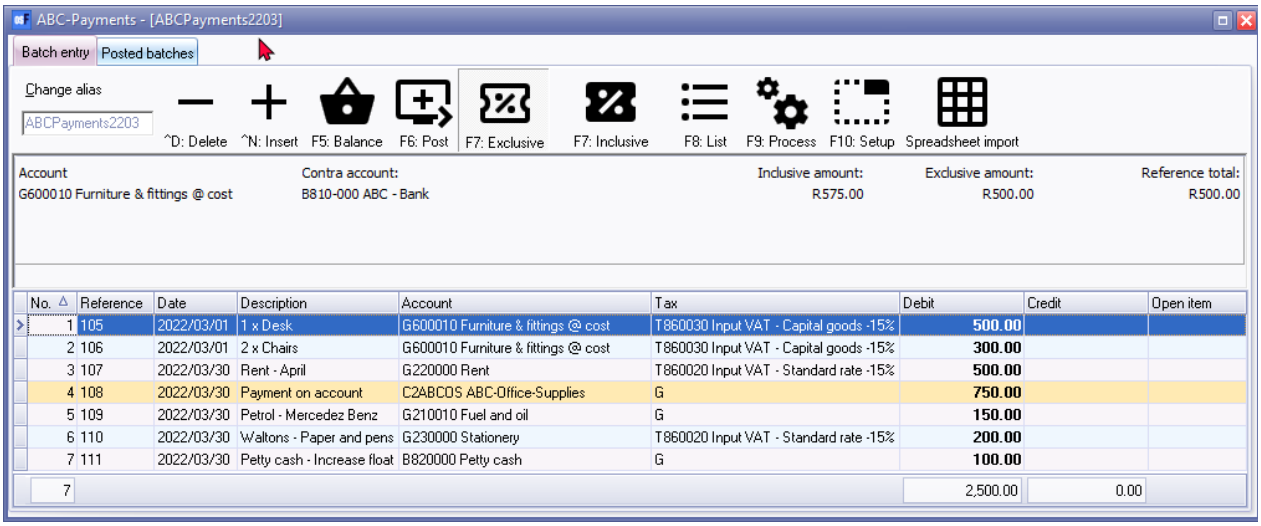
It will list all the transactions with outstanding amounts. You need to select the specific purchase transaction or or other transaction for which, you are making the payment.

Should you have any Open item creditors, an "*Open item selection*" screen will appear, listing all credit transactions, as well as the outstanding balances of transactions for the creditor you have selected in the account field, if this creditor (supplier / vendor) account is created as an Open item creditor.



You may select (tick) the "Not open item batch" field (F10:Setup - "Options for this batch" - Advanced tab) to de-activate the open item feature in batches.

After entering the payments in the Payments journal, the transactions will be displayed as follows:

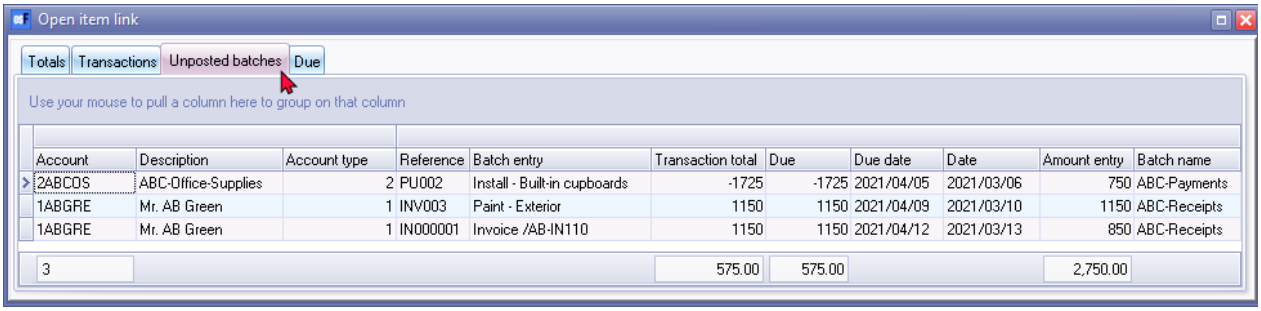


If a transaction for a creditor in the payments journal is linked to an transaction on the "Open item selection" screen, the transaction will be displayed in a peach background colour.

Created with the Standard Edition of HelpNDoc: Free PDF documentation generator

Open item link - Unposted batches tab

The Unposted batches tab will list all transactions linked to open item accounts (i.e. ledger, debtors and creditors) in batches, which have not yet been posted (updated) to the ledger. The transactions in unposted batches for open item accounts need to be linked to transactions in posted batches.



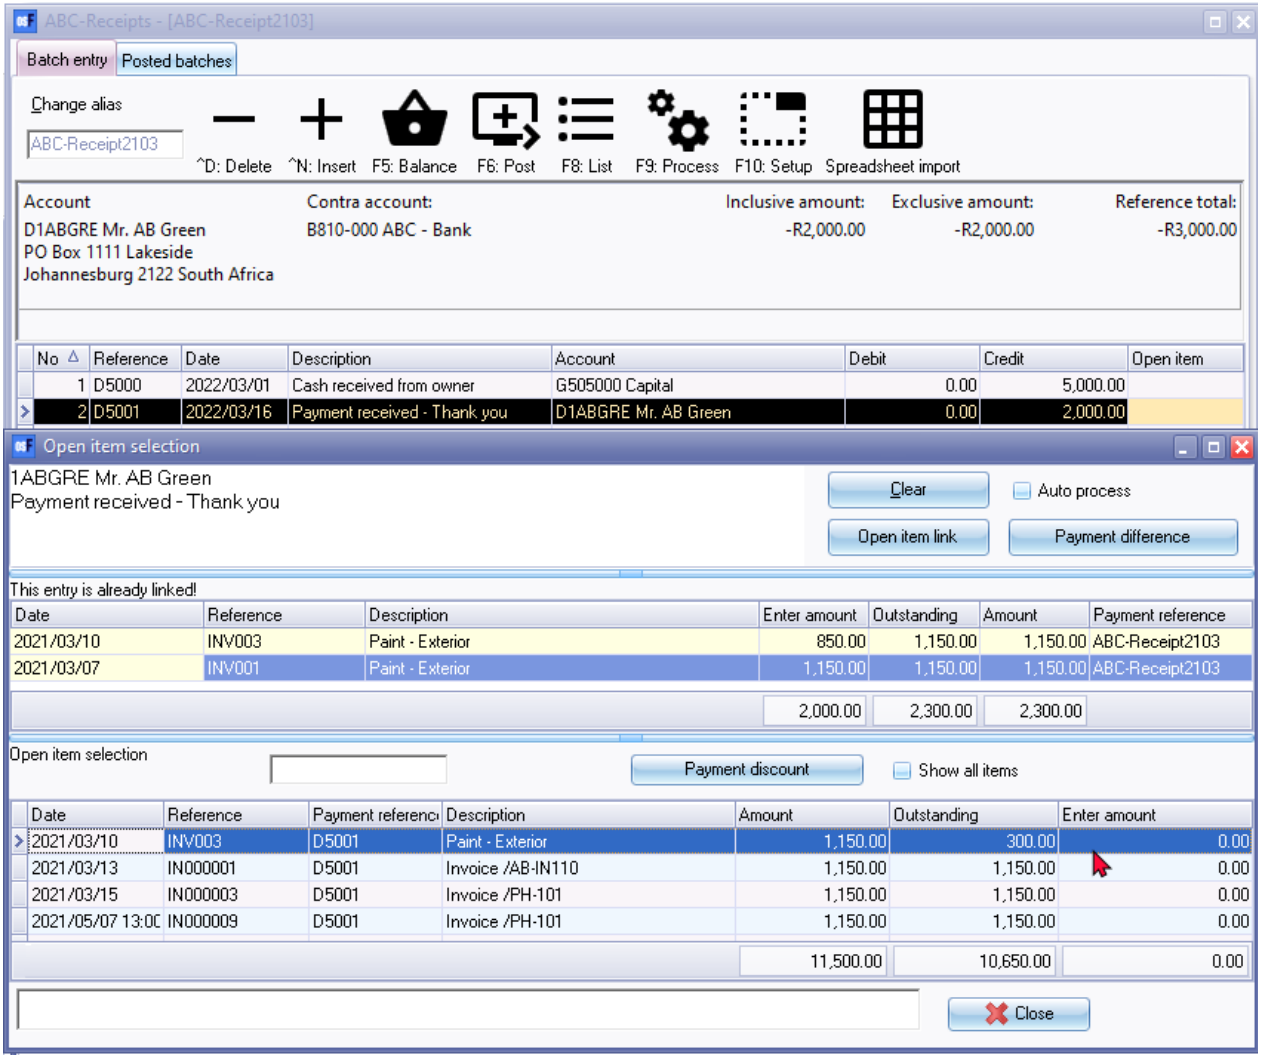
If any transactions in unposted batches are not linked to transactions in posted batches, these transactions will not be listed on the Unposted batches tab.

You may remove linked transactions (right-click on selected transaction(s) and select Remove on the context menu. A confirmation message is displayed:

"Continue action Unlink transaction?"

Click Yes to remove the link. This will clear the links in the "Batch entry" screen.

When processing transactions in batches and an open item account is selected, the "*Open item selection*" screen list all the outstanding transaction. For example, if a payment is received, you may select to link the receipt to outstanding amount(s) in batches as well as documents.



If a transaction in unposted batches is linked to outstanding amounts in the Open item selection screen the transaction line will be displayed in a peach background.

You may also select an account on the "Batch entry" screen (right-click on selected transaction) and select the "Select from account open item list" option. The "Open item selection" screen will list the unlinked transactions as well as transactions with outstanding amounts.

Open item link - Due tab

The Due tab will list all transactions for all open item accounts (i.e. ledger, debtors and creditors), which is set as open item accounts.

The transaction or outstanding transaction amounts are added in columns based on the number of days (0-29 days, 30-59 days, 60-89 days and +90 days).

You may to view and generate the report for a selected date options:

- Date of ageing - Select the date or due date option. The default is "*Date of ageing*" is the "*Current date*" (which is the date of your operating system). This report will include all outstanding transactions of only the open item accounts, for selected account types.
- Date of ageing - Select a specific date of the ageing to include in the report. This report will include all outstanding transactions of all accounts, including those non-open item accounts, for selected account types.

You may click on Age analysis icon on the Reports ribbon to access this Due tab.

Date of ageing - Current date

To generate and print ageing report for the current date:

1. Select Open item link (Default ribbon).
2. Click on Due tab.

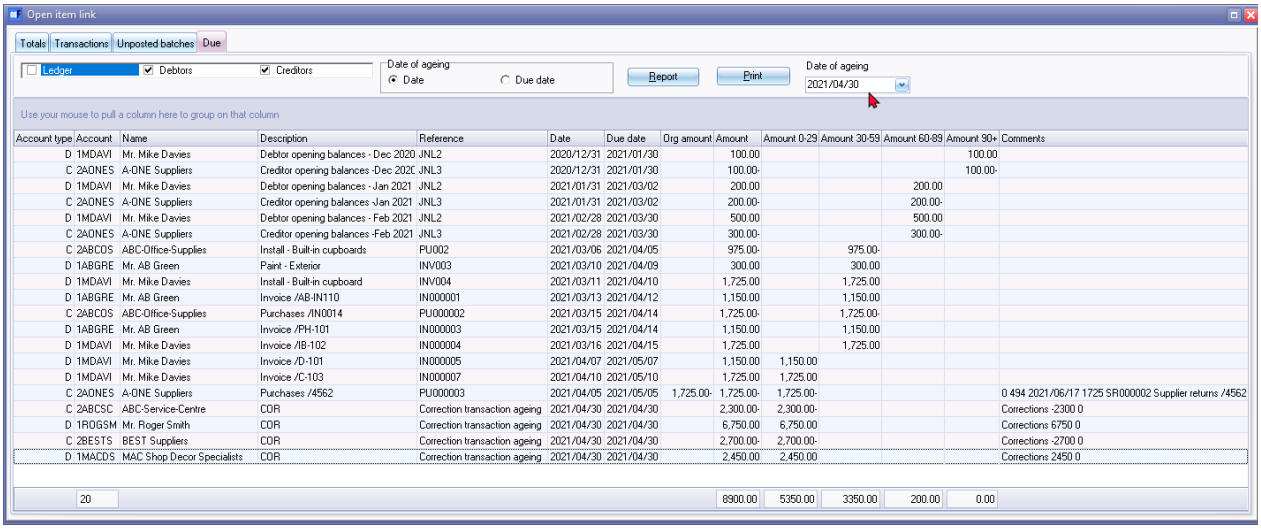
Only the transactions of accounts set as open item accounts will be included in this report.

Date of ageing - Selected date

To generate and print ageing report for a selected date:

1. Select Open item link (Default ribbon).

2. Click on Due tab.



3. Select the account type (i.e. ledger, debtors and creditors) to generate the Age analysis report for a specific account type.

4. Date of ageing - The default is "*Date of ageing*" is the "*Current date*" (which is the date of your operating system). Select a specific date of the ageing.

> *In this example, the date of ageing is set to 30 April 2021.*
>
> *"Correction transaction ageing COR" will automatically be generated to include the outstanding transactions of all accounts for selected account types.*
>
> *The "Correction transaction ageing COR" message, is only displayed for transactions of non-open item accounts.*

5. Click on the Print button to print the "*opendays*" report.

In this example, the date of ageing is set to 30 April 2021.

Open item link - Export to spreadsheets

The Open item link, matching your filter and search criteria, may be exported and opened in spreadsheets:

- The Totals tab will list the transaction total and total outstanding total for each open item account.
- The Transactions tab will list all transactions for each open item account. It will also list the outstanding amount (due amount) for each transaction.
- Selected accounts - The Export icon will export the transaction totals and outstanding amounts for a specific ledger account, debtor (customer / client) account or a creditor (supplier / vendor) account.

Created with the Standard Edition of HelpNDoc: Full-featured Kindle eBooks generator

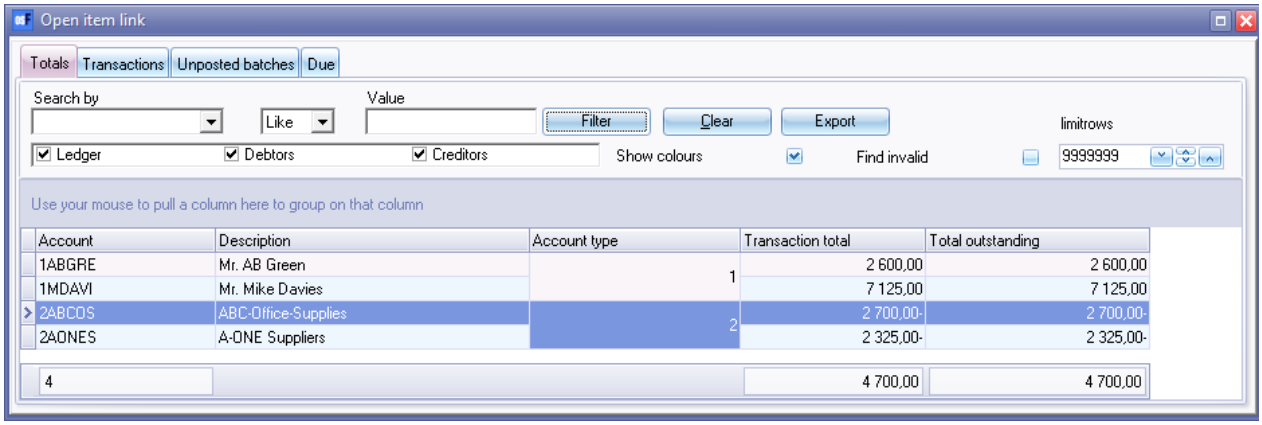
Open item link - Totals tab - Spreadsheet

The Totals tab will list the transaction total and total outstanding total for each open item account.

Export options

To export Open item - Totals to a spreadsheet:

1. Op die Default ribbon, select Open item link. The Totals tab (default) is displayed.

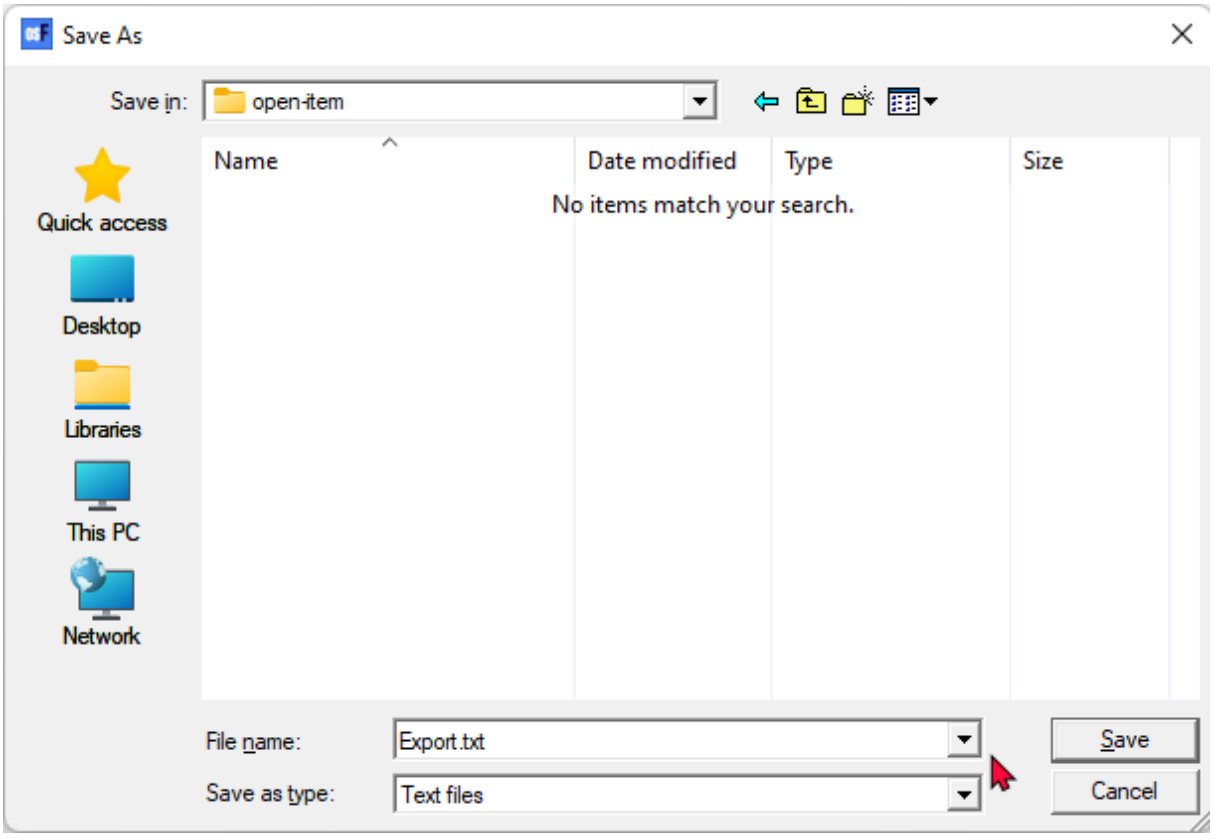


2. Select the account type ledger account, debtor (customer / client) account or a creditor (supplier / vendor) account, which you need to include in the export file.

> *You may:*
>
> - *Use the search and filter and options to export only the criteria that matches your search and filter options.*
> - *Drag the columns in the sequence you wish to export the data.*

3. Click on the Filter button to list all accounts that have been set as open item accounts, and against which transactions have been posted in journals and/or documents for the selected account type(s).

4. Click the Export button. This will launch the "*Save As*" screen:



5. Select the folder in which you wish to save the file and enter a file name.

> *If you do not enter and save the Export.txt file name, you may replace existing (previously exported) files.*
>
> *If an existing exported file is opened, and you are trying to open a export file with the same name, a similar error message as the following will be displayed:*
>
> Cannot create file "D:\Export\Export.txt". The process cannot access the file because it is being used by another process.

6. Select the file type. Text files (*.txt) is the default; or select CSV files (*.csv) (Comma Separated Values).

> - *Text files e.g. (Export.txt) - This should automatically open the exported text file of your system's default text file program associated with Text file type (*.txt) file types (e.g. Notepad, etc). You need to close the exported text file and launch your spreadsheet program. In your spreadsheet program, Open the text file to launch the "Text Import" options.*
> - *CSV files e.g. (Export.csv) - This should automatically open the "Text Import" options of your system's default spreadsheet program associated with Comma Separated Value file type (*.csv) file types (e.g. Microsoft Excel, Apache OpenOffice, LibreOffice, Ultra Office, etc.). You may need to set the "Separator Options" on the "Text Import" screen to "Tab".*

7. Click on the Save button. This will automatically open (launch) the exported file in the program associated with the selected file type.

Export file opened in Microsoft Excel

In this example, the exported "*Export.txt*" file is automatically opened in "*Microsoft Excel*":

Open item link - Totals tab - Spreadsheet columns

This will open your exported text file of the accounts in a spreadsheet. An example of the exported file opened in "*Microsoft Excel*" spreadsheet, is as follows:

The first 6 rows will display the following:

- Row 1 - Date and timestamp on which the export file is created.
- Row 2 - Ledger - TRUE - Included in the Export file, if account is set as "*Open item account*". If FALSE - Ledger accounts was not selected in the Filter options.
- Row 3 - Debtors - TRUE - Included in the Export file, if account is set as "Open item account" If FALSE - Debtors accounts was not selected in the Filter options.
- Row 4 - Creditors - TRUE - Included in the Export file, if account is set as "Open item account" If FALSE - Creditors accounts was not selected in the Filter options.
- Row 5 - Blank.
- Row 6 - Column headings

The exported data will be exported in 11 columns:

Column	*Column heading*	*Source / fields*	*Remarks*
A	*Account*	*Account code / Account no.*	*Ledger is prefixed by account type* *G = Ledger* *B = Bank* *T = Tax*
B	*Description*		*Name (Account description)*
C	*Account type*		*1 = Debtors* *2 = Creditors* *0 = Ledger* *3 = Bank* *4 = Tax*

D	*Transaction total*	
E	*Total outstanding*	
F		*Not used*
G	*Contactperson*	*Only the first name of the contactperson.*
H	*Address*	*Postal address 1*
I	*Address 2*	*Postal address 2*
J	*Phone 1*	*Telephone 1*
K	*Phone 2*	*Telephone 2*

Columns G to K - The contact details (Contact person, Address, Address2, Phone1 and Phone2) is only applicable to debtor (customer / supplier) accounts (Account type 1) and creditor (supplier / vendor) accounts (Account type 2)

Columns G to K - will be blank for the following account types:

G	General ledger (Account type 0)
B	Bank (Account type 3)
T	Tax (Account type 4)

Open item link - Transactions tab - Spreadsheet

Open item link - Transactions tab - Export to spreadsheet

The Transactions tab will list all transactions for each open item account. It will also list the outstanding amount (due amount) for each transaction.

Export options

Select the account type ledger account, debtor (customer / client) account or a creditor (supplier / vendor) account, which you need to include in the export file.

You may:

- *Select Open transactions only to include only the transactions with outstanding amounts or to include all transactions in the export file.*
- *Use the search and filter and options to export only the criteria that matches your search and filter options.*
- *Drag the columns in the sequence you wish to export the data.*

To export Open item - Transactions to a spreadsheet:

1. Op die Default ribbon, select Open item link. The Totals tab (default) is displayed.
2. Click on the Transactions tab.

The first 6 rows will display the following:

- Row 1 - Date and timestamp on which the export file is created.
- Row 2 - Ledger - TRUE - Included in the Export file, if account is set as "*Open item account*". If FALSE - Ledger accounts was not selected in the Filter options.
- Row 3 - Debtors - TRUE - Included in the Export file, if account is set as "*Open item account*" If FALSE - Debtors accounts was not selected in the Filter options.
- Row 4 - Creditors - TRUE - Included in the Export file, if account is set as "*Open item account*" If FALSE - Creditors accounts was not selected in the Filter options.
- Row 5 - Blank row.
- Row 6 - Column headings

The exported data will be exported in 16 columns:

Colu	*Column heading*	*Source / fields*	*Remarks*

mn

A	*Account*	*Account code / Account no.*	*Ledger is prefixed by account type* *G = Ledger* *B = Bank* *T = Tax*
B	*Description*	*Name (Account description)*	
C	*Reference*	*Batches = Reference entered in Reference columns of Batch entry screens* *Documents = Document number*	
D	*Batch entry*	*Batches = Description entered in Description columns of Batch entry screens* *Documents = Document number / Your reference (on document headers)*	
E	*Transaction total*	*Total transactions*	
F	*Due*	*Total outstanding*	
G	*Due date*	*Due date*	*(Usually 30 days after the document date)*
H	*Date*	*Date of transaction / Date of document*	
I	*Account type*	*1 = Debtors* *2 = Creditors* *0 = Ledger* *3 = Bank* *4 = Tax*	
J	** -*	*Account ID*	
K	** Contactperson*	*Transaction ID*	

L	** Address*	*First name of the contactperson*
M	** Address 2*	*Postal address 1*
N	** Phone 1*	*Postal address 2*
O	** Phone 2*	*Telephone 1*
P	** -*	*Telephone 2*

* Column headings out of line in spreadsheet export, as column J does not include a column heading.

Columns L to P - The contact details (Contact person, Address, Address2, Phone1 and Phone2) is only applicable to debtor (customer / supplier) accounts (Account type 1) and creditor (supplier / vendor) accounts (Account type 2).

Columns L to P - will be blank for the following account types:

G	General ledger (Account type 0)
B	Bank (Account type 3)
T	Tax (Account type 4)

Created with the Standard Edition of HelpNDoc: Achieve Professional Documentation Results with a Help Authoring Tool

Open item link - Selected account - Spreadsheet

The Transactions tab will list all transactions for each open item account. It will also list the outstanding amount (due amount) for each transaction.

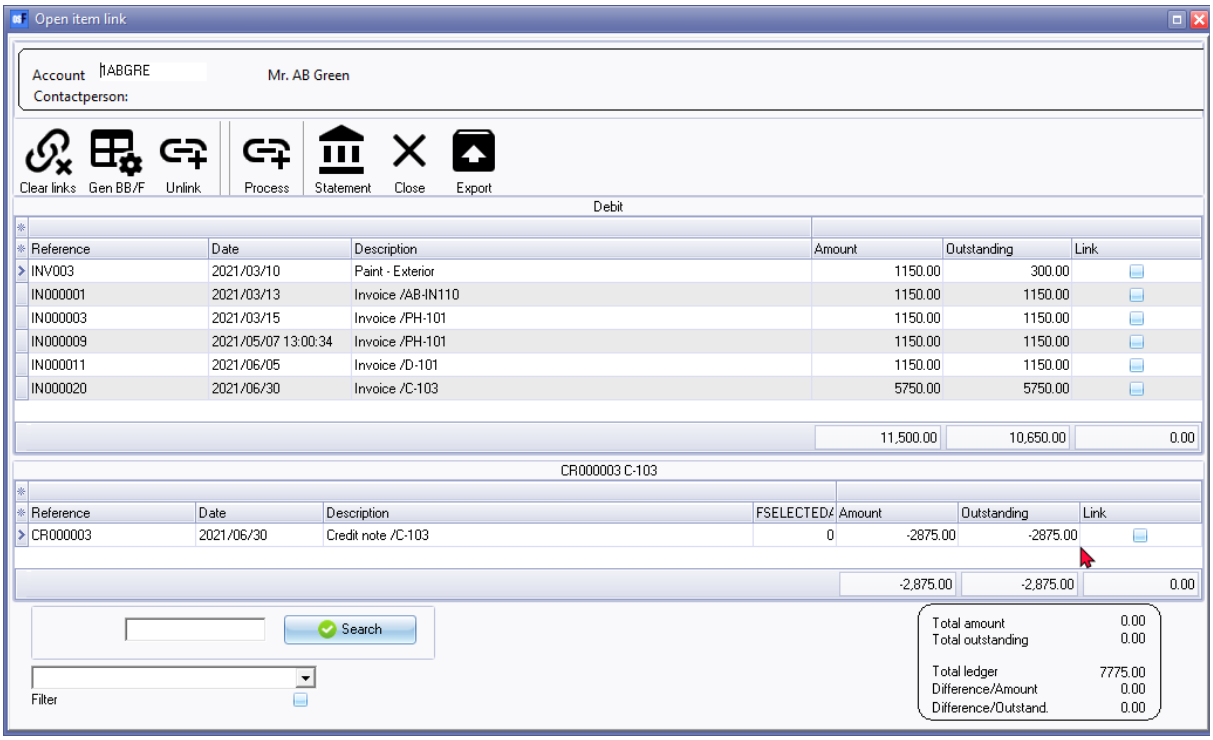
Export options

To export a selected account to a spreadsheet:

1. Op die Default ribbon, select Open item link. The Totals tab (default) is displayed.
2. On the Totals tab or on the Transactions tab, select the specific account type(s) ledger account, debtor (customer / client) account or a creditor (supplier / vendor) account.

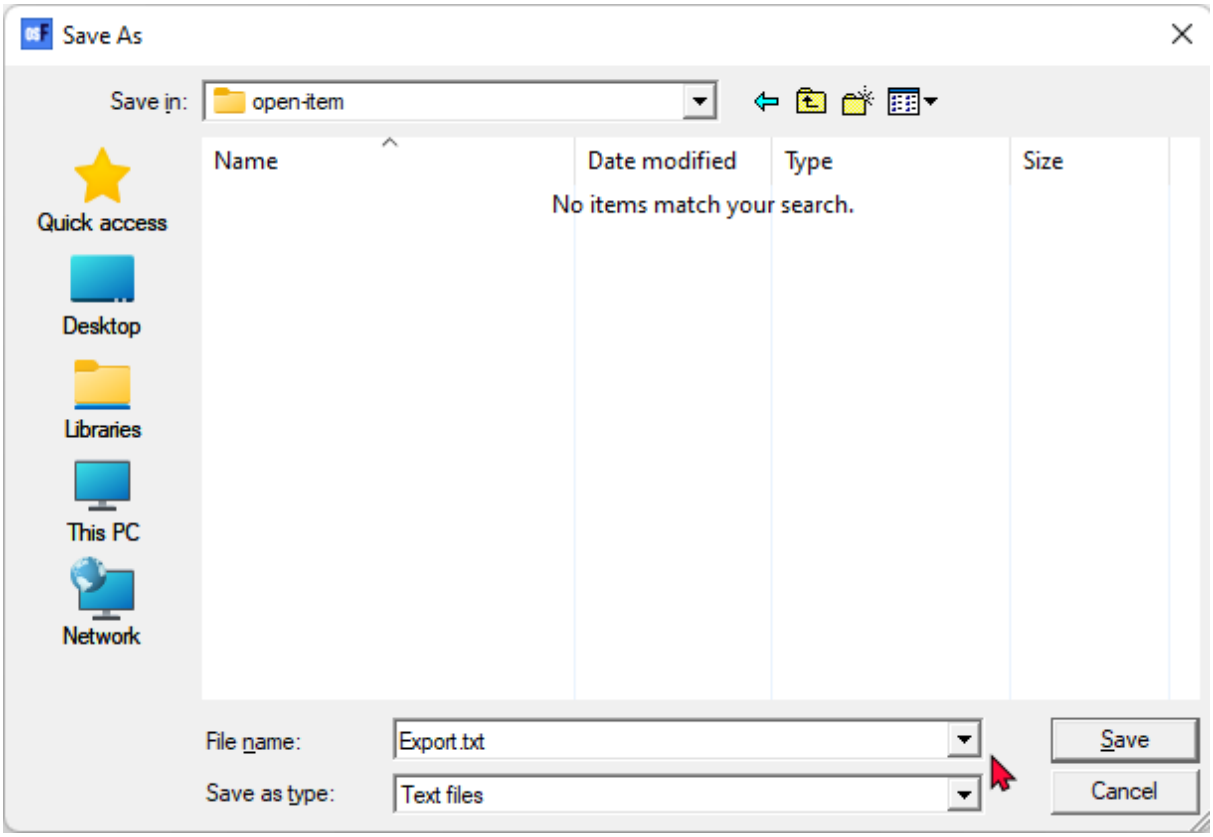
3. Click on the Filter button to list all accounts that have been set as open item accounts, and against which transactions have been posted in journals and/or documents for the selected account type(s).

4. Select the account and double-click on it.



> *Only outstanding items will be included in the export file.*
>
> *The export file in the Statement option will be similar to the default Open item link option for a selected account.*

5. Click the Export button. This will launch the "*Save As*" screen:



6. Select the folder in which you wish to save the file.folder in which you wish to save the file and enter a file name.

> *If you do not enter and save the Export.txt file name, you may replace existing (previously exported) files.*
>
> *If an existing exported file is opened, and you are trying to open a export file with the same name, a similar error message as the following will be displayed:*
>
> Cannot create file "D:\Export\Export.txt". The process cannot access the file because it is being used by another process.

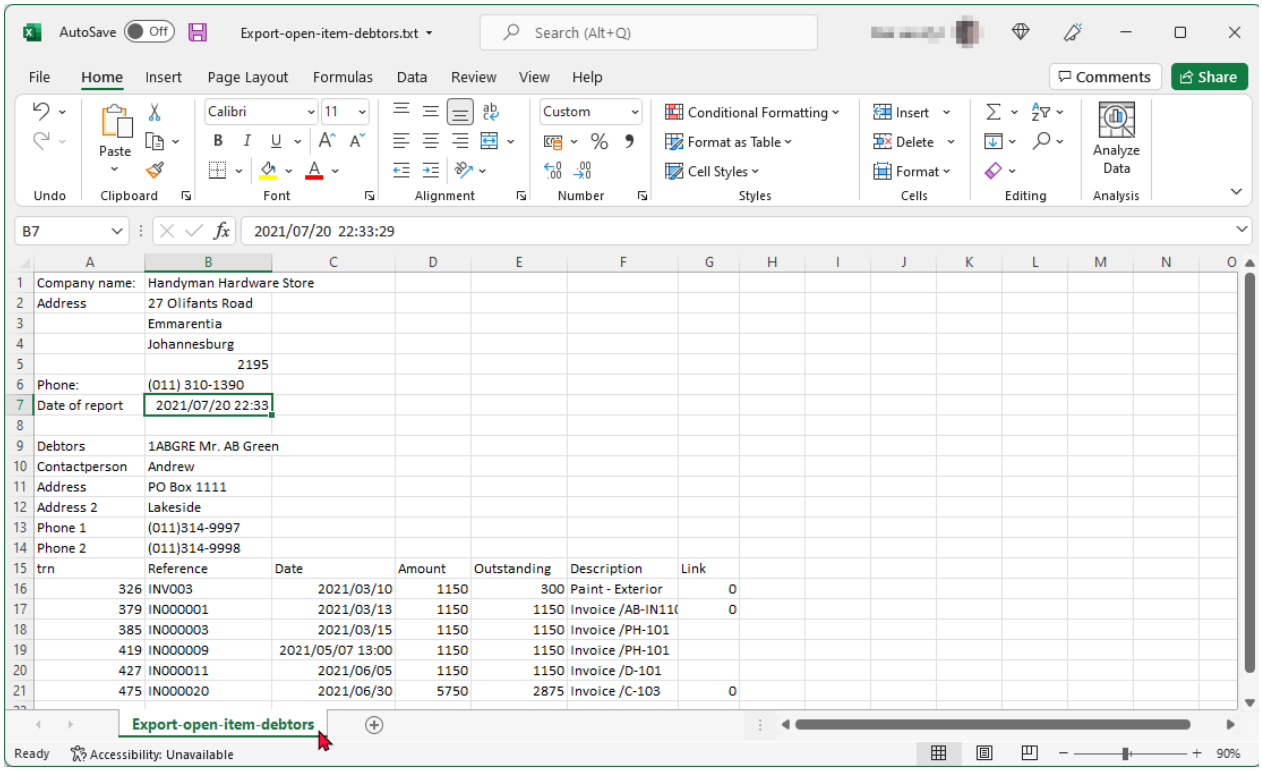
7. Select the file type. Text files (*.txt) is the default; or select CSV files (*.csv) (Comma Separated Values).

> - *Text files e.g. (Export.txt) - This should automatically open the exported text file of your system's default text file program associated with Text file type (*.txt) file types (e.g. Notepad, etc). You need to close the exported text file and launch your spreadsheet program. In your spreadsheet program, Open the text file to launch the "Text Import" options.*
> - *CSV files e.g. (Export.csv) - This should automatically open the "Text Import" options of your system's default spreadsheet program associated with Comma Separated Value file type (*.csv) file types (e.g. Microsoft Excel, Apache OpenOffice, LibreOffice, Ultra Office, etc.). You may need to set the "Separator Options" on the "Text Import" screen to "Tab".*

8. Click on the Save button. This will automatically open (launch) the exported file in the program associated with the selected file type.

Export file opened in Microsoft Excel

In this example, the exported "*Export.txt*" file (for a selected debtor (customer / client) account) is automatically opened in "*Microsoft Excel*":



The first 8 rows will display the following:

- Row 1 - Company name.
- Row 2 - Company address 1.
- Row 3 - Company address 2.
- Row 4 - Company address 3.
- Row 5 - Company postal code.
- Row 6 - Company phone number 1.
- Row 7 - Date and timestamp on which the export file is created.
- Row 8 -Blank row.
- Row 9 - Account type - Debtors, Creditors or Ledger (Account code also included in the export).

- Row 10 - Contact person - Only applicable if Debtors or the Creditors account type is exported.
- Row 11 - Address - Only applicable if Debtors or the Creditors account type is exported.
- Row 12 - Address 2 - Only applicable if Debtors or the Creditors account type is exported.
- Row 13 - Phone 1 - Only applicable if Debtors or the Creditors account type is exported.
- Row 14 - Phone 2 - Only applicable if Debtors or the Creditors account type is exported
- Row 15 - Column headings

The exported data will be exported in 8 columns:

Column	*Column heading*	*Source / fields*
A	*trn*	*Transaction ID*
B	*Reference*	*Batches = Reference entered in Reference columns of Batch entry screens* *Documents = Document number*
C	*Date*	*Date of transaction / Date of document*
D	*Amount*	*Transaction total*
E	*Outstanding*	*Total outstanding*
F	*Description*	*Batches = Description entered in Description columns of Batch entry screens* *Documents = Document number / Your reference (on document headers)*
G	*Link*

Bank reconciliation

Bank import plugin - Bank Reconciliations Plugin Manual - BankImport Plugin Manual - Shop - The Bank import plugin is included in the osFinancials5/TurboCASH5 subscription.

The Bank import plugin will import bank transactions and save you hours of data entry. You can simply link transactions to your debtors, creditors or other accounts. And with a simple mouse click link the payments to the right invoices. Needs to be activated on the Setup ribbon, select Setup → System parameters.

In addition to the petty cash account, the bank account is the only source where money can physically flow into and out of the business. The bank account should be strictly monitored to ensure that all the monies that are received are deposited, and that all the payments and/or cheques have been honoured.

The Bank reconciliation feature allows you to match, or reconcile, your Cashbook with the bank statement you receive from the bank. The bank reconciliation is a process of checking and comparing the transactions in your cashbook with the transactions on the bank statement.

All the transactions on the bank statement should be reflected in the cashbook and those transactions appearing in the cashbook, but not on the bank statement, should be reflected on the bank reconciliation statement.

When the bank statement is received, you will find that any bank costs (and interest if you have an overdrawn cheque account) is debited, and any interest that you have received on a positive bank balance is credited to your bank account. These transactions will appear on your bank statement, but will not appear in your cashbook. The same applies for debit orders and electronic payments as well as monies paid directly into your bank account by your customers or other parties.

The bank reconciliation helps you to identify these transactions and enter them into your cashbook. Another reason is the time factor. If you send a cheque to another supplier by post, this can take some time and the other party (beneficiary) to whom the cheque is issued, may bank the cheque too late for the bank to clear the cheque and reflect it on your bank statement. You may also have made a deposit up, after banking hours, and the deposit will only be reflected on the bank statement on the next day.

The bank reconciliation is carried out for a number of reasons. These are:

1. Determining of outstanding cheques and deposits and reporting it in the Cashbook Reconciliation report:
    - Outstanding deposits – Monies may have been received after banking hours and deposited into your bank account on the next day of the month or the day after the bank statement was printed.
    - Outstanding cheques – All cheques that were issued may not yet have been presented to the bank by the recipient or beneficiary of the cheque. The cheque may have been presented at a different bank or may not yet have reached the beneficiary of the cheque.

allows you to match your Cash-book with your bank statement. You will always find that the bank costs and interest paid/received does not appear in your Cash-book. The same applies for debit orders and electronic payments as well as moneys paid directly into your bank account by your customers or other parties. This bank reconciliation helps you to identify these transactions and enter them into your general ledger.

2. Recording of transactions on the bank statement which do not appear in the cashbook:
    - Electronic payments – Some electronic payments by debit orders may not reflect in the cashbook, but do appear on the bank statement.
    - Bank charges and interest – The amount of these bank charges will only be known when the bank statement is received. Interest may also be received on a favourable bank balance and can only be recorded when the amount is known.
    - Dishonoured cheques – Sometimes cheques deposited may have been returned to the drawer as there are no funds in the drawers account, or the cheque has not been signed, or many other reasons.

The transactions on the deposits (credit) side of the bank statement which are not yet recorded in the cashbook, should be entered in the receipts journal. The transactions on the payments (debit) side of the bank statement which are not yet recorded in the cashbook, should be entered in the payments journal.

3. Tracing and correction of errors:
    - Errors of entered transactions – This may occur when receipts were recorded in the receipts journal and/or when payments were recorded in the payments journals. Amounts may have been entered incorrectly (e.g. 45 instead of 54).
    - Errors of omission – Transactions have not been entered in the receipts or payments batches.
    - Errors that may occur at the bank – This is usually when the teller at the bank has recorded the amount of a cheque or a deposit incorrectly. This is very rare and is sometimes rectified automatically by the bank. (This is also referred to as "error in cast" on bank statements).
        - In the case where banks use the Automated Clearing Bureau (ACB) to read and record the cashed cheques electronically on your bank statement, you should take care that the cheques are written out clearly and correctly.
        - Deposit slips should also be filled in correctly and the entries (cash and cheques, etc.)

should add up correctly.

> *There are various reasons which may cause differences between the bank balance, as per bank statement, and the reconciled balance according to .*

4. Fraudulent cheques - The amounts on the bank statement should match the amount in the cashbook. If it does not, the cashed cheque should be scrutinised to determine that there was no tampering with the cheque.

You may receive a bank statement by fetching it from the bank or by post. An example of a bank statement is as follows:

Handyman Hardware Store
27 Olifants Raod
Emmarentia
Johannesburg
2195
Bank Statement No. 5

ABC Bank - Registered Bank
PO Box 111
Johannesburg
2000
Date of Statement: 1 April 2024

Definition of Codes	Deposits	Interest Received	Cheques	Unpaid Cheques	Other Debits	Bank Charges
CO - Commission DO - Debit Order INT- Interest SF - Service Fee UC - Unpaid Cheque	8 000.00	0.00	2 150.00	0.00	0.00	45.00

Important Notice
Statements are accepted as correct unless queried within 30 days. Any cheques reflected on this statement, which are not attached, will be included with your next statement.

The bank reconciliation is carried out for a number of reasons, such as:

- It checks to see that the transactions, which you have entered into osFinancials5/TurboCASH5, are the same as the transactions, which went through your bank.
- It checks to see that these transactions which went through the bank are the same as those going through your osFinancials5/TurboCASH5 program.
- It checks to see whether you or the bank is, in fact, correct.
- It will list all your outstanding cheques and receipts, thus giving you a reconciled bank balance, which would be the actual amount you would have in the bank, had all your transactions gone through the bank.

Created with the Standard Edition of HelpNDoc: Easily create HTML Help documents

Hints when doing the bank reconciliation

Hints when doing the Bank reconciliation:

1. Check that you have all the bank statement pages and that they run sequentially.
2. Use the last day of the month and amount as per the bank statement - this will be your closing date (include items until) and bank balance.
3. Start at the beginning of the bank statement and not in the middle.
4. Use a ruler to make it easier to do the reconciliation line by line and "tick" every reconciled item on your statement.
5. If you find an error, go back to your Cashbook and try to correct it immediately. Do not simply carry on doing the reconciliation.

You may to do your bank reconciliation, even if all your batches have not been posted. You may post or update your batches after your reconciliation is completed, unless you are working on a “Client Machine” in a network environment.

Created with the Standard Edition of HelpNDoc: Easy to use tool to create HTML Help files and Help web sites

Reconciling your cashbook with bank statements

Bank import plugin - Bank Reconciliations Plugin Manual - BankImport Plugin Manual - Shop - The Bank import plugin is included in the osFinancials5/TurboCASH5 subscription.

The Bank import plugin will import bank transactions and save you hours of data entry. You can simply link transactions to your debtors, creditors or other accounts. And with a simple mouse click link the payments to the right invoices. Needs to be activated on the Setup ribbon, select Setup → System parameters.

Once your receipt transactions have been entered in the Receipts journal and the payment transactions have been entered in the Payments journal, for a specific month or period, you may reconcile your cashbook (payments and receipts batches) with the bank statement. Before you start to reconcile, ensure the bank statement is received by post, or fetched from your bank or financial institution.

If you are registered for online banking, you may download a bank statement from your bank or financial institution, and import a bank statement which is saved in a valid file format on your system.

If you have any repeating transactions set up for your receipts batch and payments batch in Edit → Repeating transactions (Default ribbon), you need to copy them to the normal batch as they will not reflect in the cashbook for a specific period when doing the Bank reconciliation. Examples of such entries in the receipts batch would be amounts (debit orders) paid into your bank account on a monthly basis. Examples for the payments batch would be amounts (debit orders) paid out of your bank account on a monthly basis.

osFinancials5 allows you to reconcile your Bank accounts, before you update or post your Payments and Receipts Journals to the ledger.

This will allow you to easily correct any errors found (edit transactions, insert transactions which are omitted, delete transactions which are entered twice, reverse all the transactions if entered on the incorrect side, etc.), when doing the bank reconciliation.

You may also enter any transactions (such as bank charges and interest), which are listed in your bank statement, but do not appear in your cashbook.

You may post or update your batches after your reconciliation is completed, unless you are working on a "Client Machine" in a network environment.

To do a Bank reconciliation using a printed bank statement:

1. Obtain the Bank statement for the bank account you need to reconcile. The following is an example of a printed bank statement:

Handyman Hardware Store
27 Olifants Raod
Emmarentia
Johannesburg
2195

Bank Statement No. 5

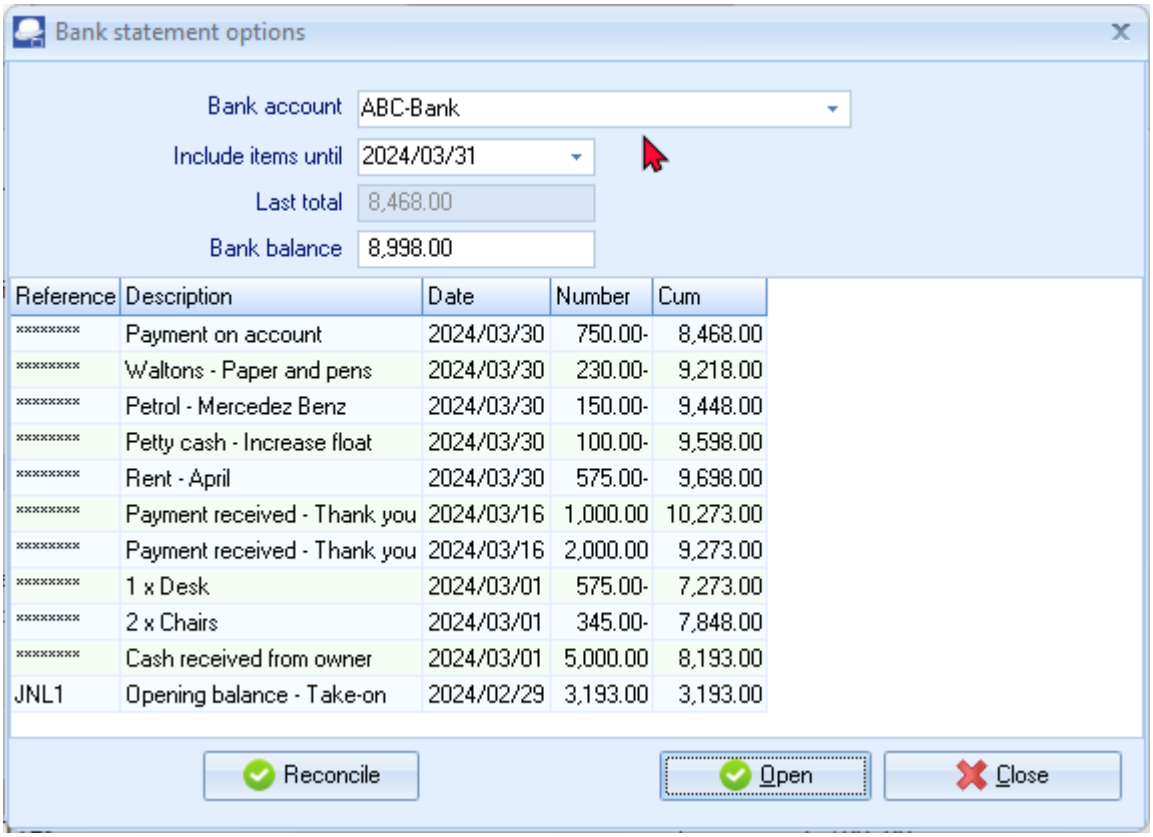
CO - Commission DO - Debit Order INT- Interest SF - Service Fee UC - Unpaid Cheque	8 000.00	0.00	2 150.00	0.00	0.00	45.00

Important Notice

Statements are accepted as correct unless queried within 30 days. Any cheques reflected on this statement, which are not attached, will be included with your next statement.

2. On the Default ribbon, select Cash / Bank (Alt + F2). The "*Bank statement options*" screen will list all transactions to the selected bank account up to the date specified:



3. Select and enter the following:

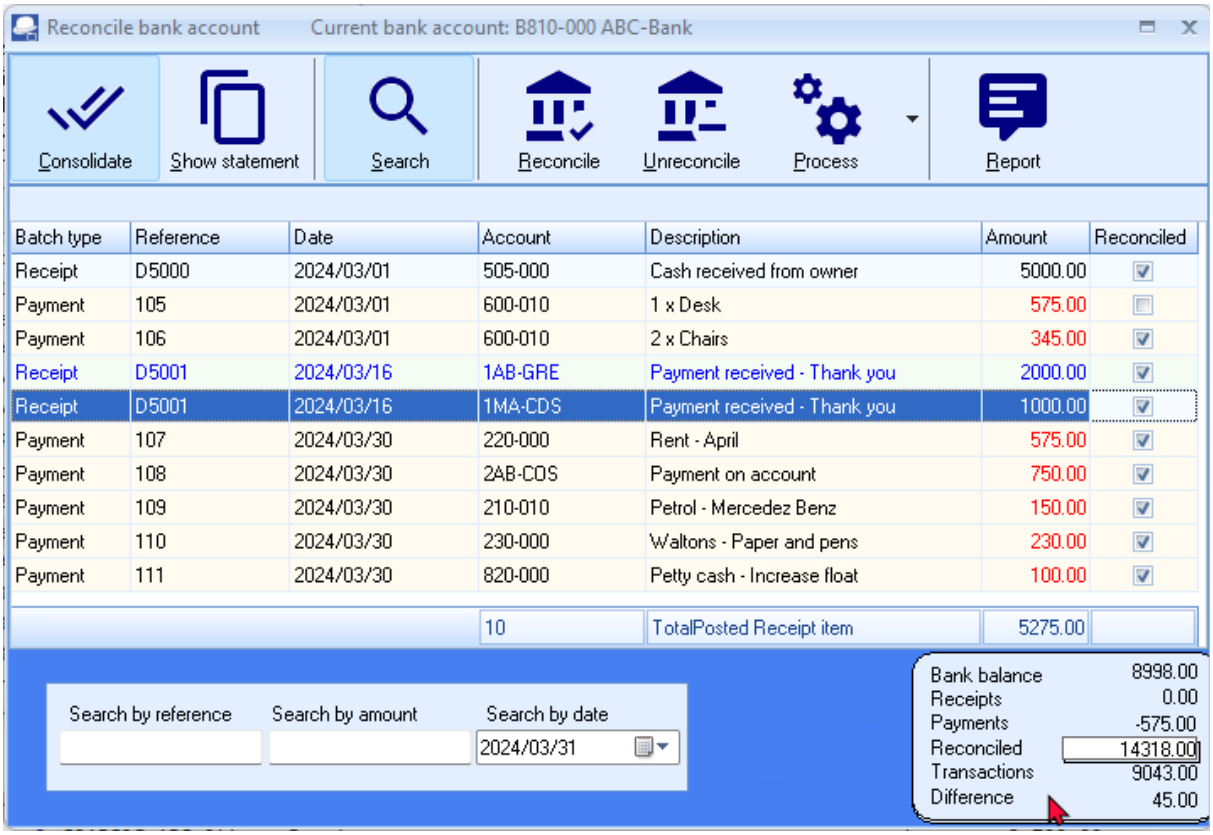
    a) Bank account - Select the cashbook you wish to reconcile.

    b) Include Items Until - Enter or select the date until which you would like to include cashbook transactions to be reconciled with your Bank Statement.

    c) Last total - The last total of the bank account will be displayed.

    d) Bank Balance - Enter the closing balance of your bank statement.

4. Click on the Open button and the *"Reconcile bank account"* screen displaying the name of your selected account is displayed:



This screen will list all the transactions Receipts and Payments Journals (batches) for the selected cashbook for the selected period. These entries represent your unreconciled items.

5. If you have more than one transaction with the same reference number (deposit or cheque number), you may click on the Consolidate icon.

This will group the transactions with the same reference number together, and it will display one amount which can then be matched with the bank statement.

6. You need to mark the item appearing on your bank statement as reconciled in the last column of this screen. To do this, you need to select the item and click on the reconciled field.

You may also use the Up arrow or Down arrow and the Spacebar on your keyboard to mark an item as reconciled or not.

The items displayed on your bank statement also need to be manually ticked off on the printed bank statement.

You will find that not all the transactions would be selected or marked on the Reconcile Bank

account screen and the bank statement. These unmarked transactions or items are as follows:

a) *Bank Statement - These unmarked transactions are not yet entered in your cashbook (receipts or payments journal (batch)). You need to exit this screen and enter the unmarked items or bank statement transactions in the cashbook as follows:*

- *Debits - enter these transactions in the payments journal (batch).*
- *Credits - enter the transactions in the receipts journal (batch).*

Once all these transactions are entered, or if any errors are found at this stage, and are corrected, you need to access the Reconcile Bank account screen again and mark the corresponding transactions.

No difference should be displayed on the bottom right-hand corner of the Reconcile Bank account screen. If any differences are displayed, you need to find these differences and correct them.

b) *Reconcile Bank account screen - These unmarked items or transaction which are not selected, represent outstanding deposits (receipts) and outstanding cheques (payments). These transactions will be reported in the bank reconciliation statement and should be displayed on the next bank statement.*

7. Once this is done and there is no difference displayed on the bottom left-hand corner of the Reconcile Bank account screen, click on the Process icon.

This will group the transactions with the same reference number together, and it will display one amount which can then be matched with the bank statement.

8. Click on the Reconciliation icon to print a bank reconciliation report. This report will reflect the outstanding deposits and payments (cheques), and will also display any differences.

9. Click on the Close button on the title bar to close or exit the Bank reconciliation screen.

If this report does not reflect any differences between the cashbook and the Bank balance, it is said to be "in balance" as at a specified date. This report will also enable you to determine whether bank charges and other debits or credits appearing on your bank statement, are recorded in your cashbook for the selected period.

If you access or return to the receipts and payments journal, to add or to edit any transactions, the transactions (which are marked or selected as reconciled items or transactions) will be displayed in a blue font colour.

Speed buttons - Bank reconciliations

The following speed buttons (icons) are available to help you to reconcile or unreconcile your cashbook with the bank statement:

1. Consolidate - Click to consolidate all entries in the selected cashbook with the same reference number.

   If an entry is selected, for which other entries with the same reference number exists, all these entries will be displayed in a different colour (blue).

   The total amount of all these entries with the same reference number will be displayed as a Posted Payments item, or Unposted Payments item, or Posted Receipts item, or an Unposted Receipts item.

   If you click on this icon again to turn it off, all entries will be listed as individual entries with the same reference number and will not be consolidated.

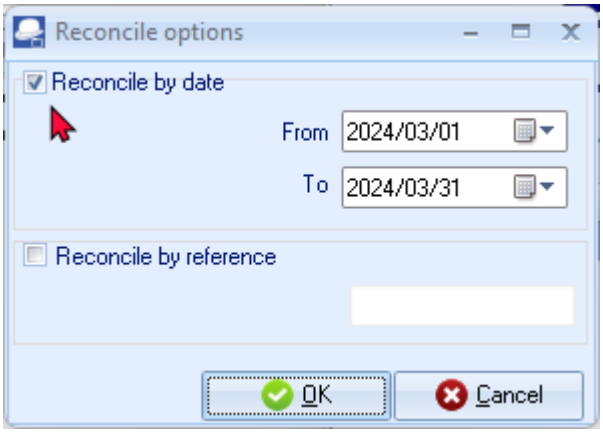
2. Show statement - Click to split the screen in two sections. The top section will display the details of the Receipts and Payments batches while the bottom half of this screen will display the details of the transactions displaying on the bank statement.

   Bank import plugin - Bank Reconciliations Plugin Manual - BankImport Plugin Manual - Shop - The Bank import plugin is included in the osFinancials5/TurboCASH5 subscription.

   The BankOnline Plugin - Not implemented at this stage. You may use the BankImport Plugin to import bank statements (if the "Default bank reconciliation method" field is not selected on Setup → Setup → System parameters).

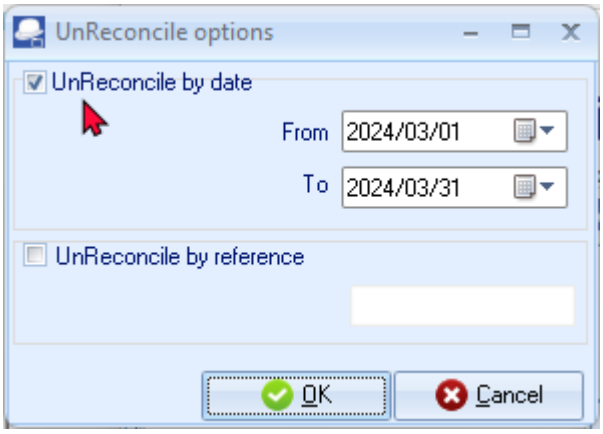
   If you click on this icon again, the "*Bank statement transactions*" section will not be displayed.

3. Reconcile - Click to automatically reconcile all payments and receipts for a specified period.



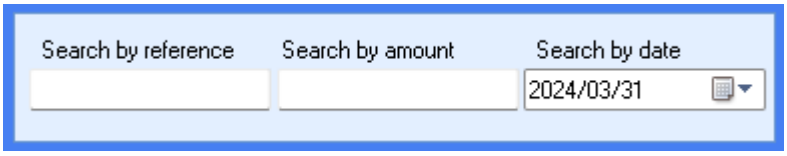
If you select the "Reconcile by reference" field, you will not be able to select the date from and to. This will allow you to automatically reconcile payments and receipts for a specified reference number.

4. UnReconcile - Click to automatically unreconcile all payments and receipts for a specified period.



If you select the "UnReconcile by reference" field, you will not be able to select the date from and to. This will allow you to automatically unreconcile reconciled payments and receipts for a specified reference number.

5. Search - Click to launch a screen (displayed on the bottom of the reconciliation screen) where you may enter any of the following to search for an item:



a) Search by reference - You need to enter a valid reference number. The date and amount for the specific transaction will be displayed.

b) Search by amount - You need to enter the amount and the entry will be selected. The reference and date for the specific transaction will be displayed.

c) Search by date - You need to enter a valid date within the periods and the entry will be selected. The reference and amount for the specific transaction will be displayed.

6. Report – Click to launch the "*Bank account recon options*" screen on which you may print a bank reconciliation report.

Created with the Standard Edition of HelpNDoc: Generate Kindle eBooks with ease

Bank charges and items on the bank statement

You would only know what your bank charges are when you actually receive your bank statement from the bank. Any bank charges that have to be paid must be entered into your "*Payments journal*", and only interest received must be entered into your "*Receipts journal*".

It is always a good idea to use a reference number; such as your Bank Statement number; so as have a reference to the specific bank statement.

You now need to go back to your Payments journal and enter your bank charges. Press the Esc key to exit the reconciliation.

Before exiting the batch, make sure that you have clicked on the Apply reconciled option on the Process button to save the "ticks" and reconcile the ticked items).

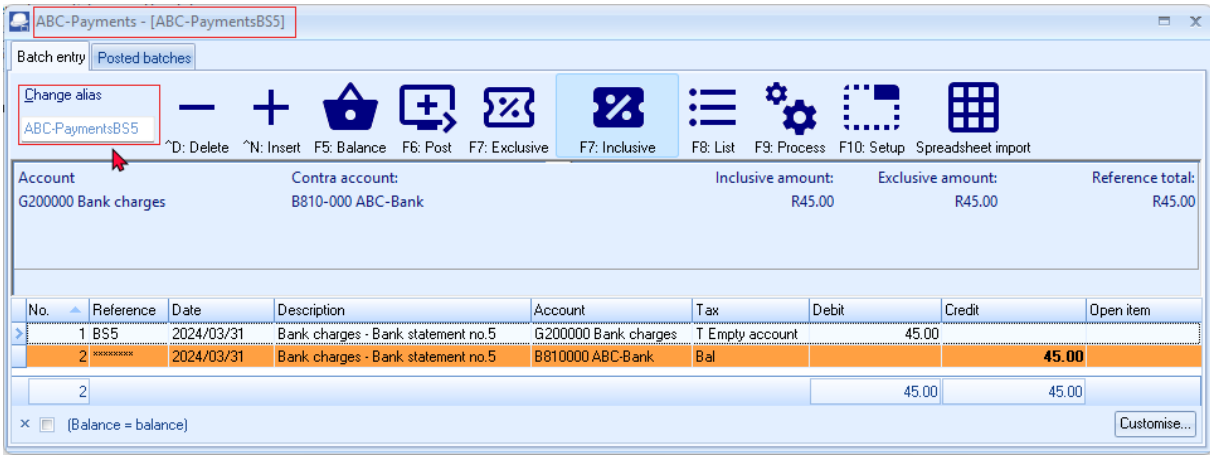
To enter bank charges and finalise the bank reconciliation:

1. Click on the Batch entry icon. (You may also press the F2 key). The "*Batch type*" screen will be displayed.
2. Select the Payments Jnl and click on the Open button. The "*Payments journal*" screen will be displayed.
3. Enter the Alias (BatchName) as "*ABC-Payments-BS5*".
4. Enter the following transaction:
    a) Reference: BS5
    b) Date: 2024/03/31
    c) Description: Bank charges- Bank statement no.5
    d) Account: Bank Charges
    e) Tax: Select No Tax for the purposes of this documentation.

        Tax (VAT/GST/Sales tax) may be applicable to some charges on your bank statement, if you are registered as a VAT/GST/Sales Tax vendor.

    f) Amount: 45.00 DR

        In practice, it is easier to enter any bank charges, debit orders, interest, etc. into your Payments or Receipts Journals before starting the reconciliation.
5. Balance the batch. After entering the transactions and balancing the batch, the Payments Jnl is as follows:



6. List the unposted transactions in the batch.
7. Post the batch.
8. Press the Esc key to exit the batch or journal.
9. Go back to your bank reconciliation and reconcile your bank charges. (To do this, tick the Unreconciled item and click the Process icon and select the Apply reconciled option) on the The Difference in the bottom right-hand corner of the "*Reconcile bank account*" screen should now reflect a nil balance.

> *Once you have completed your bank reconciliation, you must check that your Cashbook is, in fact, in balance.*

10. Click on the Report icon.

> *Any unreconciled payments will be subtracted from a positive bank balance and any unreconciled receipts will be added to a positive bank balance according to the bank statement, thus giving a reconciled balance.*

11. Click on the Close button of the *Reconcile Bank account Options* screen; or press the Esc key to exit (close) these screens.

Created with the Standard Edition of HelpNDoc: Create Professional CHM Help Files with HelpNDoc's Easy-to-Use Tool

Bank reconciliation reports

A bank reconciliation report typically includes the following information:

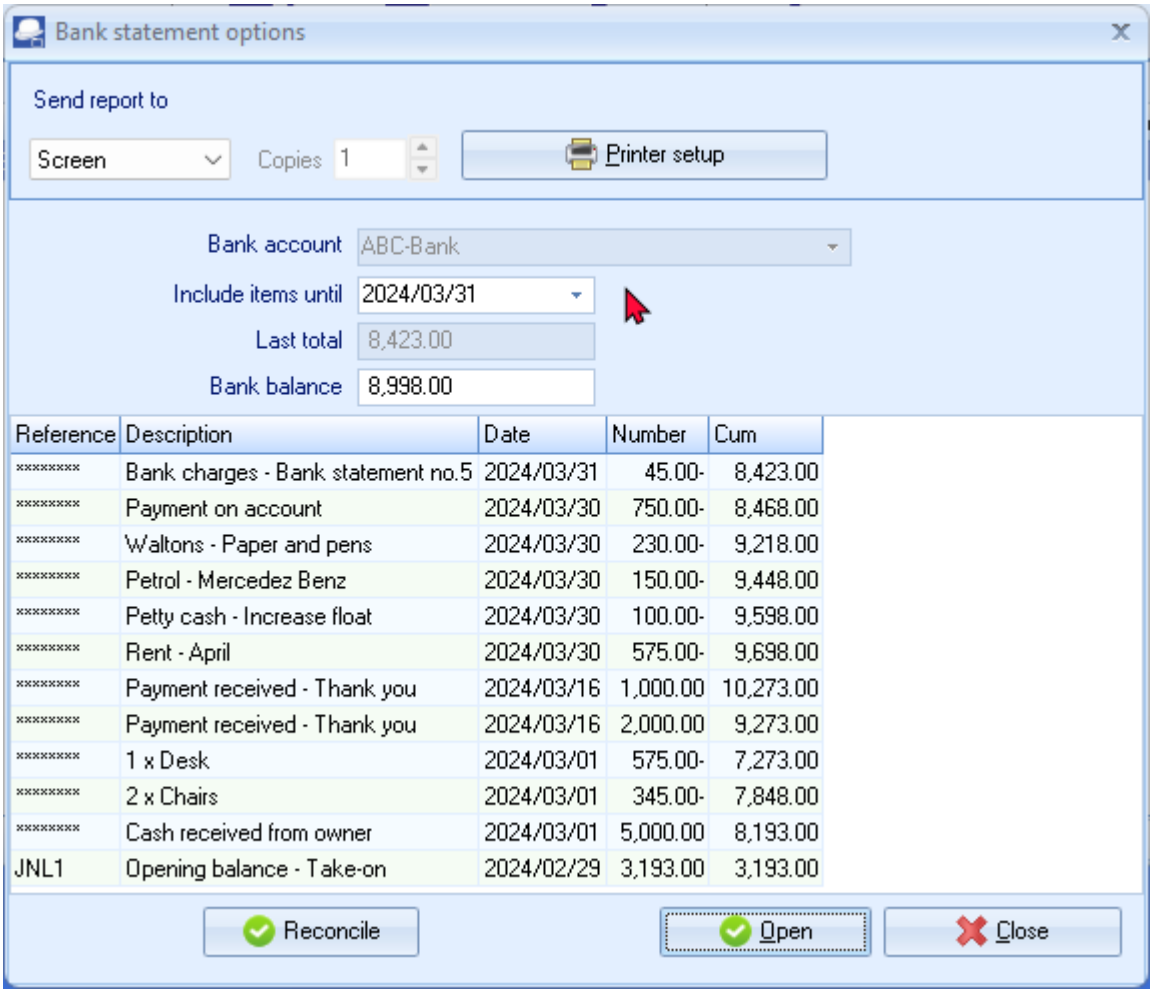
1. Bank statement balance: The balance of the bank account as shown on the bank statement.

2. Company statement balance: The balance of the bank account as shown in the company's records.
3. Adjustments: Any adjustments made to the company's records to reconcile them with the bank statement, such as outstanding checks or deposits in transit.
4. Reconciled balance: The final balance of the bank account after all adjustments have been made.
5. Date range: The period covered by the bank statement and the company's records.
6. Explanation of differences: Any differences between the bank statement and the company's records should be explained, including any discrepancies that could not be resolved.

The bank reconciliation report provides a clear picture of the company's cash position and ensures that the company's records are accurate and up-to-date. It is an important tool for financial management and helps to identify any errors or discrepancies in the financial records.

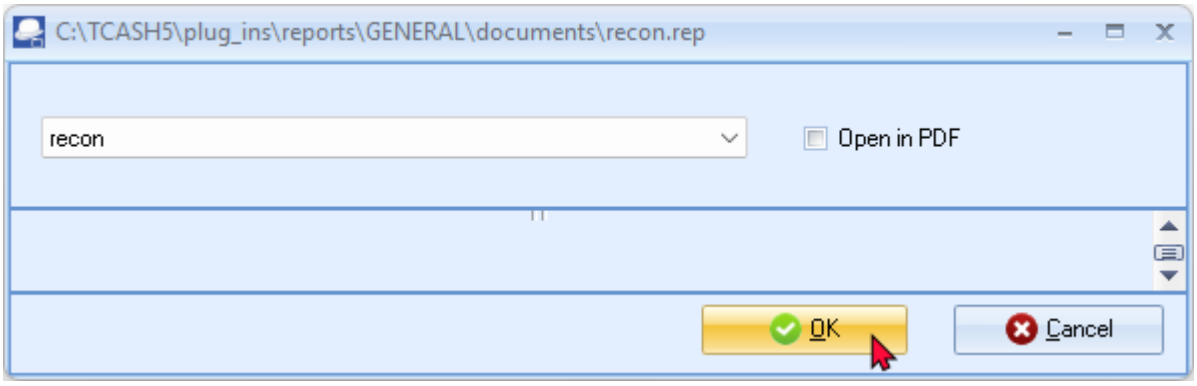
To print a bank reconciliation report:

1. Click on the Report icon on the *"Bank statement options"* screen.



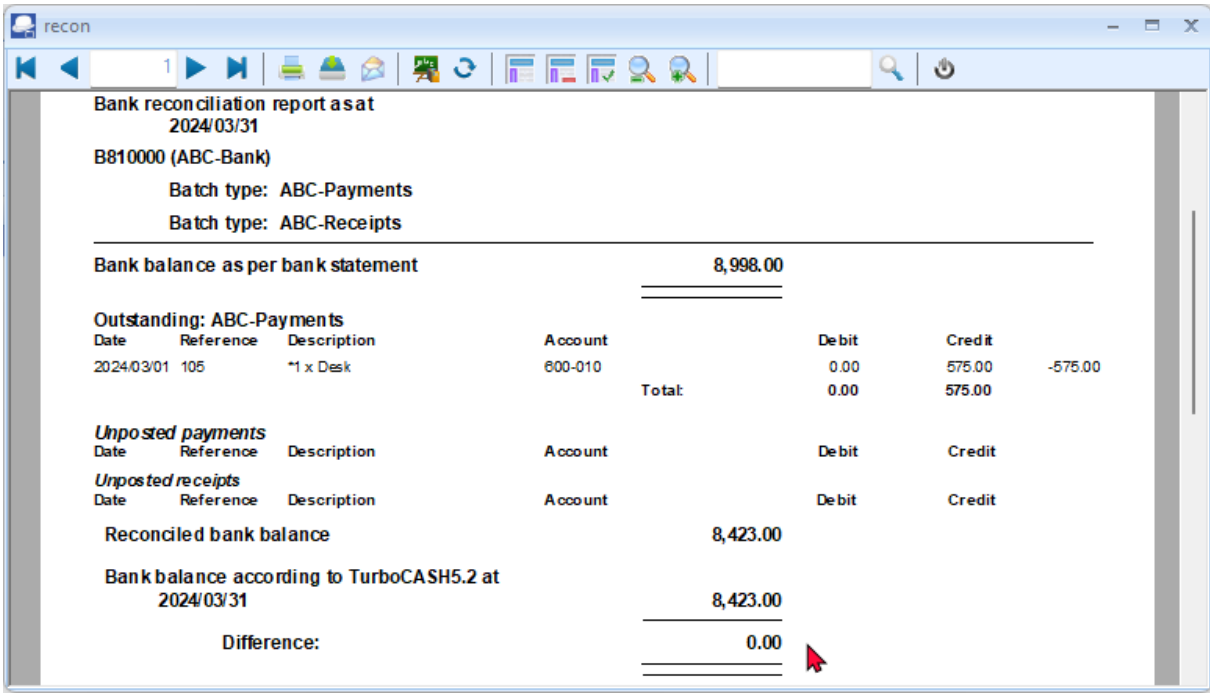
All the data of the Bank account, Date, Bank balance, etc. should still be the same as per your your previous selection criteria.

2. Click on the Open or Reconcile button. The "*recon.rep*" report parameters screen will be displayed:



If you wish to print the bank reconciliation report in the PDF file format, you may tick the "Open in PDF" option.

3. The "*Bank reconciliation report as at*" is displayed:



After the bank reconciliation is finalised, the Difference should be 0.00. If there is an amount in the Difference section of the report, you may need to find the differences and fix them. - See Troubleshooting differences.

Created with the Standard Edition of HelpNDoc: Free Kindle producer

Troubleshooting differences

If there is a difference between the reconciled balance and the balance according to osFinancials5/TurboCASH5, there is an error, in the “Payments” or the “Receipts” journals. Search for the error and correct it.

Steps to resolve differences in the Bank reconciliation

If there are differences between the bank statement and the company's records during the bank reconciliation process, the following steps can be taken to resolve them:

- Verify the accuracy of both sets of records: Check the company's records and the bank statement to make sure that they are accurate and up-to-date.
- Check for errors: Look for any errors or mistakes that may have been made in recording transactions. For example, a transaction may have been recorded twice, or an incorrect amount may have been entered.
- Investigate outstanding transactions: Outstanding transactions, such as checks that have not yet cleared the bank, may need to be investigated to determine the cause of the difference.
- Contact the bank: If the cause of the difference cannot be determined, contact the bank to request more information about the transactions in question.
- Make adjustments: Once the cause of the difference has been identified, adjustments can be made to correct the records. For example, if an outstanding check is causing the difference, it can be subtracted from the company's records.
- Reconcile again: After making any necessary adjustments, reconcile the bank statement and the company's records again to ensure that the difference has been resolved.

It is important to resolve any differences in the bank reconciliation process as quickly as possible to ensure that the company's financial records are accurate and up-to-date.

Examples causing differences

A few examples that can possibly cause a difference:

- Your closing bank balance is incorrectly entered on the *"Reconcile Bank account"* screen (Reconciliation on the Default ribbon).
- Incorrect date entered ("*Include Items until*" field) on "*Bank account recon options"* screen (Reconciliation on the Default ribbon).
- Errors in posting - they should have been detected when your bank reconciliation was done.

- If everything else fails you may sometimes have to look at your Cash-book and link up the source documents to check if you have entered all your transactions correctly. You could also have posted an amount incorrectly e.g. as 64.00 and entered it as 46.00.

You may need to print the posted batch transactions for the period on the following options to trace the errors:

- Batch transactions per period report for the Payments and Receipt Batch and the (Reports → Batch entry) (select the period of your Bank reconciliation).
- Batch entry for the Payments batch and/or Receipts batch (Batch entry - Posted batches tab). Select the correct batch and double-click on it. Click on the Print button.

Created with the Standard Edition of HelpNDoc: Full-featured Kindle eBooks generator

Bank import plugin

Using the Bank import plugin, you may import a valid bank statement file (downloaded from your online banking) saved on your system into a Bank account (Cash-book).

This Bank import plugin will save you time, since you do not need to physically enter the transactions manually in the Payments journal and Receipts journal.

This plug-in uses Bank references to automatically allocate or link payments and deposits, receipts, other debits. credits, etc. to the correct accounts.

It further supports the bank accounts of your debtors (customers / clients) to use the automatic receipts for debit orders, etc.

It further supports the bank accounts of your creditors (suppliers) to use the automatic payments to manage the payments to suppliers, etc.

Bank import plugin - Bank Reconciliations Plugin Manual - BankImport Plugin Manual - Shop - The Bank import plugin is included in the osFinancials5/TurboCASH5 subscription.

The Bankimport plugin will import bank transactions and save you hours of data entry. You can simply link transactions to your debtors, creditors or other accounts. And with a simple mouse click link the payments to the right invoices. Needs to be activated on the Setup ribbon, select Setup → System parameters.

Created with the Standard Edition of HelpNDoc: Benefits of a Help Authoring Tool

Access control

This option allows you to set the security options for a specific Set of Books. User passwords and access levels may also be set. You may have as many users to work on a Set of Books as you wish. You may set differing functions and restrictions for each user, in order that they are enabled to perform only the function(s) assigned to them.

Multi-User Plugin

This version of osFinancials5/TurboCASH5, may be configured and set up a Network Server for multi-users. To enable the full multi-user functionality, you need to purchase a multi-user license and register osFinancials5/TurboCASH5 as a multi-user product.

- *Multi-user installation and configuration are described in the following documentation:*
  - *Multi-user Windows installation*
  - *Multi-user Linux server install*
  - *Multi-user installation (TurboCASH website)*
- *Multi-user is limited in this edition! You will need to buy a multi-user licence.*

Other plugins for a multi-user environment:

Multi-Language accounts - Manual - Shop - Licence : Once-off -

This plugin makes it possible to translate the ledger and group names in multiple languages. It is already possible to choose different languages for the interface (the buttons). But this plugin makes it possible to do the accounting in different languages. Per user you can select a language, so the user can account in his/her own language. The set of books can be viewed in different languages, therefore it is possible an employee enters information into an English Set of Books and a bookkeeper, auditor, etc. can see the set of books in a set language, e.g. Afrikaans, Dutch, etc.

Multi-User calendar (agenda) - Manual - Shop - Licence : Once-off -

This plugin adds the multi-user agenda (multiple agendas) to the Calendar (Planner). You can add agendas and link them as default to the current user. For every agenda a tab will appear in the agenda Calendar so you can see what the appointments, etc. are on other agendas. You can have a agenda for each employee, salesperson, user, etc. and create invoices directly from his / her agenda with a simple click. Each agenda has it's own calendar and task list.

This option allows you to set the security options for a specific Set of Books, your users, their passwords,

e-mail addresses and access levels to restrict the users to perform specific functions.

Access control may be used for single-user installations on a single device.

Some functions for persons (not using the multi-user licence) are:

- *Creating and changing passwords.*
- *Customise / Configure Document processing:*
  - *Add the Posting / Confirm and Delete buttons to the Document listing screen*
  - *Activate the Read-only Tax in Documents*
- *Customise Setup groups - Deselect (remove ticks) for Groups that you do not wish to be listed when accessing Setup → Groups. For example, if you do not want / need to use Cost centres or Projects, etc., you may deselect these not to display on the Groups Setup.*
- *Activate Cost Centres in Documents - This will allow you to select Cost centre when selecting stock items in documents.*

You may also create a password for one user only (which has all the access levels) if you have no other users. Once you have entered (or set a password), the Set of Books in which you have set up the password can only be accessed when a valid password is entered, unless the user with the system function deletes all the passwords.

If you need to send reports and documents via e-mail, you need to enter a valid e-mail address on at least any of the following options before you can set up and configure osFinancials5/TurboCASH5 for the Internet:

- *Setup → Company info - E-mail field, or;*
- *Setup → Access control to create a user and enter a valid e-mail address.*

You may have as many users to work on a Set of Books as you wish. You may set differing functions for each user. If any of the users enter a valid password, that user will only be able to access those functions you have allocated to that user. The disabled functions will be inactive or not available on the menu options and ribbons for that user.

By default, Access control to all the functions in a Set of Books is allowed when you create a user. To restrict a user from certain or specific functions, you simply have to deselect (remove the tick) from the option, function or feature you do not wish that user to have access to.

The access control options, functions or features are as follows:

- Standard security - Allow or restrict a user to System Setup, Delete Set of Books on the Start ribbon and Global processes (Clear / Reset, Reverse posted batches / documents) and Do year end on the Setup ribbon.

- Reports access - Allow or restrict a user to print or view Creditor reports, Debtor reports, General ledger reports, Stock reports or User reports.

- Batches access - Allow or restrict a user from Posting batches and/or Updating documents to the Ledger, to enter transactions in Batches (Journals) or to create and edit Documents (Invoices, Purchases, Credit notes and Supplier returns). If you allow a user to enter transactions in Batches (Journals), you may restrict a user from accessing and processing transactions in batches (journals). For example, if you have a Petty Cashier, you may allow that person to only access the Petty cash payments journal; the Cashier only has access to process receipts in the Receipts journal, etc. In addition to this, you may also restrict or block a user from accessing specific accounts.

- Others - Allow or restrict the user from access to create, edit or delete master files, such as General ledger accounts, Debtor (customer / client) accounts, Creditor (supplier / vendor) accounts, Bank accounts and/or Stock items, set the mode for the user and link the user to a salesperson. You may select to restrict the selected user from updating (posting) documents to the ledger and/or set customised limitations.

- Documents - Allows to configure document processing.

- Groups - By default, all available groups will be available. Groups that you do not wish to be listed when accessing Setup → Groups (Setup ribbon) may be deselected. For example, if you do not want / need to use Cost centres or Projects, etc., you may deselect these not to display on the Groups.

- Usertabs - Customise and manage the user navigation for a selected user on the User tab ribbon options in up to six (6} groups.

Created with the Standard Edition of HelpNDoc: Easily create EBooks

Access control - Passwords

In osFinancials5/TurboCASH5, you have the option to create and manage passwords for user authentication in the Setup → Access control menu on the Setup ribbon.

It is recommended to create at least two users with passwords, with the main user being the administrator who has access to all default functions within a Set of Books.

For additional users and any other users for whom you have created passwords (excluding the main user who is the administrator), you can utilise the User tab ribbon to customize the Set of Books in osFinancials5/TurboCASH5. You can also review and configure specific settings to personalise the use of certain functions and preferences on the Standard security, Reports access, Batches access, Others, Documents, Groups and Usertabs tabs.

In addition to the options provided on these tabs for customising functions and preferences, you can also restrict specific users from accessing or performing certain functions within osFinancials5/TurboCASH5 Set of Books.

To ensure security, it is advisable to change passwords periodically. The password field consists of eight characters, including alphanumeric and special characters. It is important to note that passwords are case-sensitive. When a user password is set, it becomes essential to enter the password correctly when performing actions such as opening or deleting a Set of Books, or executing specific functions like year-end processes.

When accessing a Set of Books, deleting a Set of Books, or performing certain functions, a login screen will prompt you to enter a valid username (if required) along with the corresponding password associated with that username.

In addition to setting passwords for osFinancials5/TurboCASH5 Set of Books, it is also recommended to implement user control and passwords for your operating system. This provides an additional layer of security for accessing the osFinancials5/TurboCASH5 software and helps protect sensitive financial information. By using user control and passwords for the operating system, you can ensure that only authorized individuals can access and use the software and its associated data.

In addition to the access control feature in osFinancials5/TurboCASH5, you have the option to set and configure passwords for your operating system and/or network. This refers to the passwords used to secure access to your computer or network infrastructure, separate from the application itself.

Setting strong and unique passwords for your operating system and network is an essential security measure to protect your osFinancials5/TurboCASH5 data and prevent unauthorized access. By implementing password policies and configurations at the operating system and network levels, you add an extra layer of security to your overall system.

Here are some considerations for setting and configuring passwords for your operating system and network:

1. *Strong Passwords: Choose passwords that are complex, combining uppercase and lowercase letters, numbers, and special characters. Avoid using easily guessable or common passwords.*
2. *Unique Passwords: Use different passwords for different accounts or systems. Reusing passwords across multiple platforms increases the risk of unauthorized access if one password is compromised.*
3. *Password Length and Complexity: Set minimum password length requirements and enforce complexity rules to ensure passwords are sufficiently robust.*

4. *Password Expiration and Renewal: Implement a password expiration policy that requires users to change their passwords at regular intervals. This practice helps mitigate the risk of password-related vulnerabilities.*
5. *Account Lockout Policies: Configure account lockout settings to automatically lock user accounts after a certain number of failed login attempts. This helps prevent brute-force attacks and unauthorized access attempts.*
6. *Two-Factor Authentication (2FA): Consider implementing two-factor authentication for your operating system or network, which adds an extra layer of security by requiring users to provide a second form of verification, such as a code sent to their mobile device.*

By ensuring strong and unique passwords, enforcing password policies, and implementing additional security measures like two-factor authentication, you can strengthen the overall security of your operating system and network. This, in turn, helps protect your osFinancials5/TurboCASH5 data and reduces the risk of unauthorized access or data breaches.

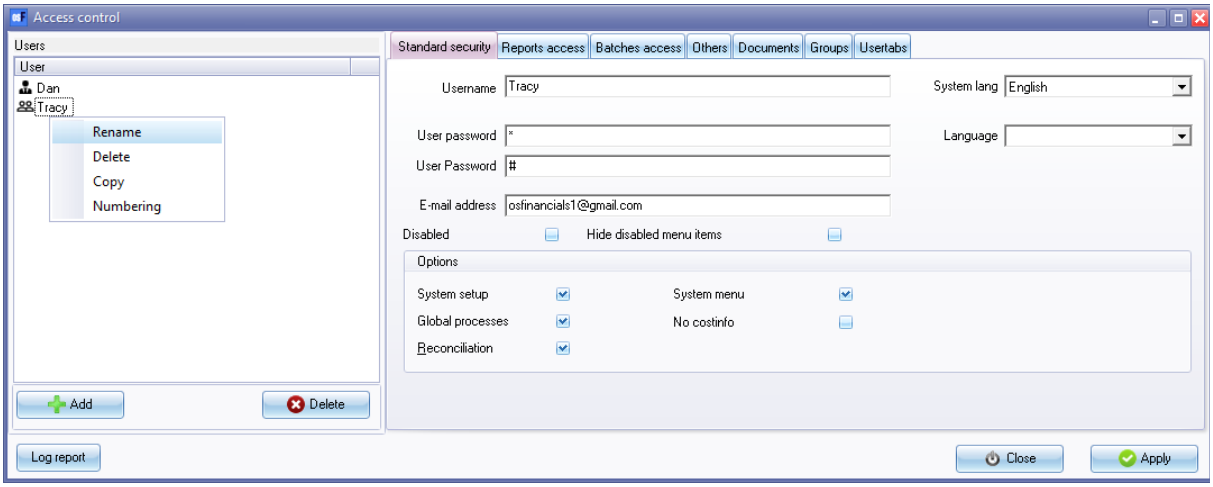
Create passwords

To use passwords, you need to create at least two (2) users.

In addition to this access control feature, you may also set and configure the passwords for your operating system and/or network.

To create a user passwords:

1. On the Setup ribbon, click on Setup → Access control.



2. Click on the Add button to create an user. An icon, will be displayed in the "*User*" area of the screen.

3. Right-click on the New user0 icon and select the Rename option on the context menu. Enter the name for this user. The user's name will be displayed next to the "Username" field.

4. Enter a Password. The E-mail address (optional) for this user and select the access levels for this user.

If you do not enter a user password, an error message is displayed:

Please type in a password for this user!

If your confirmation password does not match the user password, an error message is displayed:

Password do not match

5. You may select the options to allow or restrict a user to access on the various options on the tabs (i.e. Standard security, Reports Access, Batches Access, Others, Documents, Groups and/or User tabs.

6. Click on the Apply button to save the changes for this user.

7. Repeat the process if you have more than one user. Once finished, click on the tabs, to set the access levels for each selected user.

8. Once finished, click on the Close button to exit the "*Access control*" screen.

You may select the specific options for which you wish to restrict that user by removing the tick for the specific option the user may not access. You may move down the options with the Down Arrow or Up Arrow keys and toggle between a tick and a blank in the tick box fields with the Spacebar on your keyboard, or select it with the mouse and click on the box you want to select or deselect.

It is recommended that at least one User (Default user or System administrator) should have no restrictions on the System setup.

If you disable some menu or access options for a user, you may select to hide disabled menu items, If this option is not selected, any disabled menu items, (e.g. system setup, global processes, reconciliation, reports, edit accounts, etc.) will be displayed as an inactive option (greyed out).

User icons are displayed as follows:

- indicates that all functions are allowed to that user.

- some functions or security options are restricted or disabled.

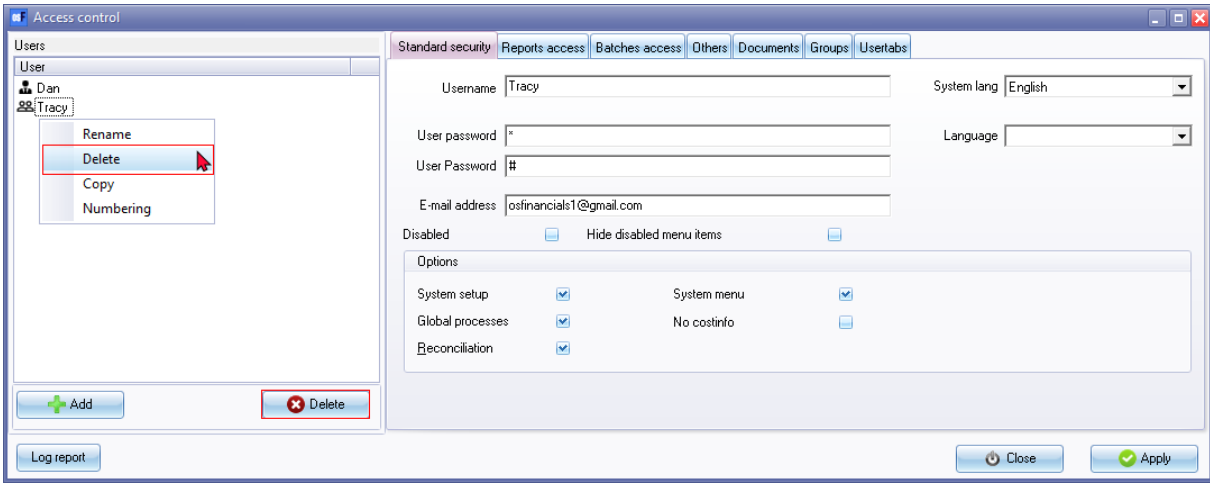
Created with the Standard Edition of HelpNDoc: Streamline Your Documentation Process with a Help Authoring Tool

Delete passwords

You may delete a password for a selected user. All other users may still continue to use their passwords to open and work in a Set of Books. You could also delete the passwords for all users, in which case the security options will then be disabled.

To delete an user password:

1. On the Setup ribbon, click on Setup → Access control.



2. Make sure that the correct User is selected, or click on the User icon, which you need to delete.

3. Click on the Delete button. You may also right-click on the selected User icon and select the Delete option on the context menu.

Should you delete user system administrator and then user with restrictions, the following confirmation message is displayed:

> Not accessing the Setup system with just one user
> makes changing user privilages unposible by the program!
> Are you sure you want to continue?

4. A confirmation message is displayed:

> Warning, this will seriously affect your Set of Books! Do you still wish to continue?

5. Click on the Yes button. The selected user password and all security options and access levels for that user will be permanently removed. If you click on the No button, the user will not be removed.

6. Click on the Close button to exit the "*Access control*" screen.

If you delete the last of the users in a Set of Books, the password login will be cleared and display the information message is displayed.

> You have chosen to delete all users! Access control will now be disabled!

Click on the OK button. The Login screen will not be displayed when you Open or Delete the Set of Books.

Created with the Standard Edition of HelpNDoc: Easily create HTML Help documents

Enter passwords (Login)

If you need to Open a Set of Books or Delete a Set of Books, the "*Login*" screen to allow the user to enter a valid username and password password for the Set of Books:

Enter a valid password and click on the OK button.

The password is an eight-character alphanumeric and special character field. The password is also Case sensitive. Remember if you use Capital alpha characters. Once a user password is set, you will not be able to Open a Set of Books or to Delete the Set of Books, if you do not enter the password absolutely correctly.

Should you enter an incorrect username and password, an error message is displayed:

Invalid password!

Click on the OK button and re-enter the correct password. Check that your Caps Lock key is not accidentally switched on.

After the third attempt when an invalid username and/or password is entered, the Set Books (open) screen will be automatically closed.

To use (enable) passwords, you need to create at least two (2) users with passwords.

If users have been created and passwords are set for the users, a login screen for Point-of Sale Invoicing access will be displayed on which the Cashier or Salesperson needs to enter a valid username and password.

Created with the Standard Edition of HelpNDoc: Generate EPub eBooks with ease

Access control - Standard security tab

The Standard security tab in the Access control feature of osFinancials5/TurboCASH5 serves as the primary tool for managing user access and permissions. Here are the key features of the Standard security tab:

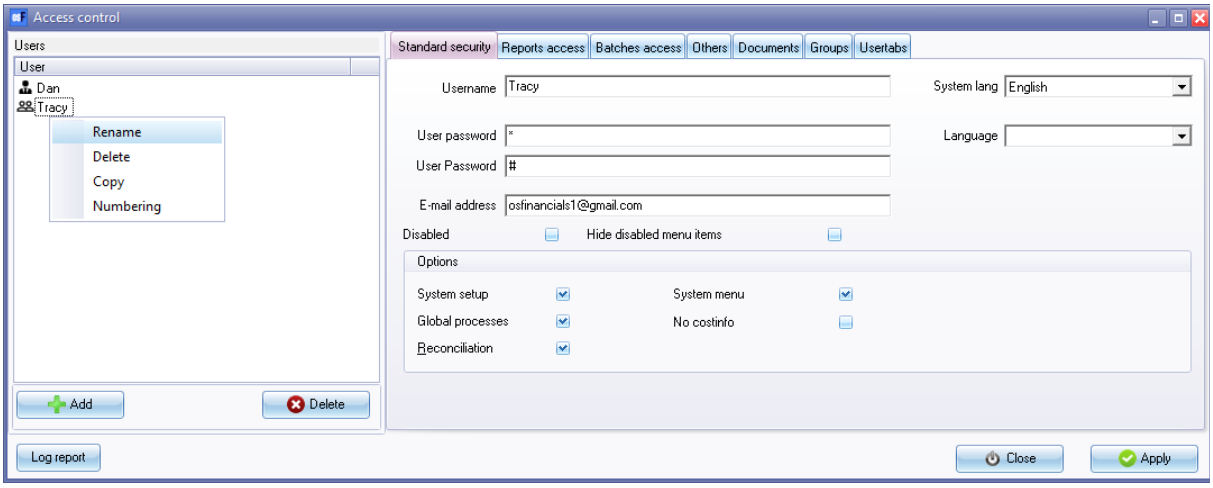
1. User management: The Standard security tab allows you to create users and set or change their passwords and email addresses. You can also disable or delete user accounts as needed.
2. Access to main functions: In the Standard security tab, you can define user access to important functions such as System setup, System menu, Global processes, and Bank reconciliation. By allowing or restricting access to these functions, you can control what users can do within the system.

3. Display of menu options: When you restrict a user's access to specific functions, all menu items are displayed by default. However, the menu options to which the user has no access will be displayed as inactive or greyed out. If desired, you can choose to hide these inactive menu options, ensuring that users only see and interact with the functions they are allowed to access.

By utilizing the Standard security tab, you can create a secure environment and tailor user access to specific functions within osFinancials5/TurboCASH5. This helps maintain control over system configuration, global processes, and critical financial functions while ensuring that users only see and access the relevant features based on their assigned permissions.

To set standard security options for an user:

1. On the Setup ribbon, click on Setup → Access control.



2. System lang - The default language set for each user for will be displayed in this field. You may set another language for each of your users. The selected language will be displayed every time a specific user opens the Set of Books.

3. Language - The languages added in the Languages tab in Groups (Setup ribbon) may be selected for the *Multi-Language accounts* plugin. Languages may also be set in the this field for debtors /creditors.

Multi-Language accounts - *Manual* - *Shop* - *Licence : Once-off* -

This plugin makes it possible to translate the ledger and group names in multiple languages. It is already possible to choose different languages for the interface (the buttons). But this plugin makes it possible to do the accounting in different languages. Per user you can select a language, so the user can account in his/her own language. The set of books can be viewed in different languages, therefore it is possible an employee enters information into an English Set of Books and a bookkeeper, auditor, etc. can see the set of books in a set language, e.g. Afrikaans, Dutch, etc.

4. Select an user in the "*User"* field or area of the screen.

> *Do not select the Default user with all rights (Universal administrator).*
>
> *The Universal administrator (Default user) user should not have any restrictions.*

5. By default, all options are selected (ticked), except the "*Disabled"* and "*Hide disabled"* options.

> *If an user is set to disabled, (Disabled field ticked), and the disabled user tries to log in, an error message will be displayed.*
>
> "Access control"

6. The options to set the access levels is as follows:

   a) System setup -

      i) Start ribbon - Disables the following:

         - Create Set of Books (Creation wizard).
         - Save as.
         - Delete Set of Books.

      ii) Setup ribbon - Disables all features, except the following:

         - Calculator - Can access the calculator.
         - Import - Import accounts, debtors, creditors, documents and stock from specific file formats.
         - Export - Export accounts, debtors, creditors, documents, stock and posted batches to specific file formats.

   b) Global processes -

      i) Import - Disables import of accounts, debtors, creditors, documents and stock from specific file formats.

      ii) Export - Disables export accounts, debtors, creditors, documents, stock and posted batches to specific file formats.

      iii) Setup ribbon - Disables the following seven (7) options:

- Global processes - The following four (4) options are available:
    - Clear / Reset - This option allows you to clear all the transactions and balances in a Set of Books.
    - Do year end - This option allows you to close off all the nominal accounts (income and expense accounts) and transfer the balances for the financial year to the Retained income / earnings account. The start date and the reporting dates for the financial year will also be created for the new financial year.
    - Copy from a Set of Books - This option allows you to copy the data from a selected Set of Books into the active (open) Set of Books. This will replace all the data in the active Set of Books.
    - Reverse posted batch / document - This feature allows you to reverse or cancel the transactions in posted documents and batches.

iv) Tools - Disables the following options:

- Data integrity check - Run a Data integrity check and print a Data integrity check report.
- Customise language - Customise (edit, change and translate) language files.
- Close active forms - Close any open forms (e.g. Documents, Debtors, Creditors, Stock items screens, etc.)
- Activate plugins - By default, no plugins is activated when osFinancials5/TurboCASH5 is installed. This option allows you to activate / deactivate all plugins, registered plugins or specific plugins. The activated plugins will be available from the Plugins menu.
- Plugins - By default, no plugins are listed on this menu. Only activated plugins will be listed.
- Others - Not used.

c) Reconciliation - Disables the bank reconciliation feature.

d) System menu -

i) This will disable the (Start ribbon).

- Delete Set of Books option.
- Online registration - Register the osFinancials5/TurboCASH5 program.
- Help menu - Disable the following seven (7) options:
    - Help - Launch the osFinancials Help system where you may locate topics.
    - Support - View contact information of osFinancials5/TurboCASH5 or go to the Support page via the Internet.
    - Show Welcome - By default, the Welcome to osFinancials5 / Welcome to TurboCASH5 screen displays the website. If the Welcome to osFinancials5 / Welcome to TurboCASH5 screen is not displayed, it will launch the Welcome to osFinancials5 / Welcome to TurboCASH5 screen.
    - Updates -
    - Forum - Please visit our Forum to find solutions or to post comments, etc.
    - Webshop - Please visit our webshop.
    - Bug report - View, search and report any bugs on our bug-tracking system.

ii) This will disable the following on the Default ribbon:

- Update ledger (F3) – Disables Update ledger (F3) posting of batches and documents.
- Edit menu - Disable the following three (3) options:
    - Repeating transactions - Enter / edit transactions in batches of a recurring nature.
    - Repeating invoices - Generate and process invoices of an recurring nature.
    - Delete - Delete sales documents (i.e. invoices, credit notes and quotes) and purchase documents (i.e. purchases, supplier returns and

orders).

- Input - Disable the following six (6) options:
  - Adjust stock - Access the Edit Stock screen.
  - Confirm - Confirm and convert quotes to invoices and orders to purchases.
  - Backorders - Add, edit and delete back orders for stock items.
  - Sales documents - Process / edit invoices, credit notes and quotes.
  - Purchase documents - Process / edit purchases, supplier returns and orders.
  - POS Invoice - Run and manage a point-of-sales shift and process point-of-sale invoices.

7. Select to allow or restrict a user to System Setup, Delete Set of Books on the Start ribbon and Global processes (Clear / Reset, Do year end, Reverse posted batches / documents) on the Tools ribbon. (You may press the Spacebar on your keyboard to select or deselect an option).
8. Applying changes: Click on the Apply button to save the changes for the selected user.
9. Setting access levels for other users: If necessary, select the next available user and configure their access and restrictions in the same manner.
10. Finalizing changes: Once you have finished setting the access levels for all desired users, click on the Close button to exit the "*Access control*" screen.

You may select the specific options for which you wish to restrict that user by removing the tick for the specific option the user may not access. You may move down the options with the Down Arrow or Up Arrow keys and toggle between a tick and a blank in the tick box fields with the Spacebar on your keyboard, or select it with the mouse and click on the box you want to select or deselect.

It is recommended that at least one User (Default user or System administrator) should have no restrictions on the System setup.

If you disable some menu or access options for a user, you may select to hide disabled menu items, If this option is not selected, any disabled menu items, (e.g. system setup, global processes, reconciliation,

reports, edit accounts, etc.) will be displayed as an inactive option (greyed out).

User icons are displayed as follows:

- indicates that all functions are allowed to that user.

- some functions or security options are restricted or disabled.

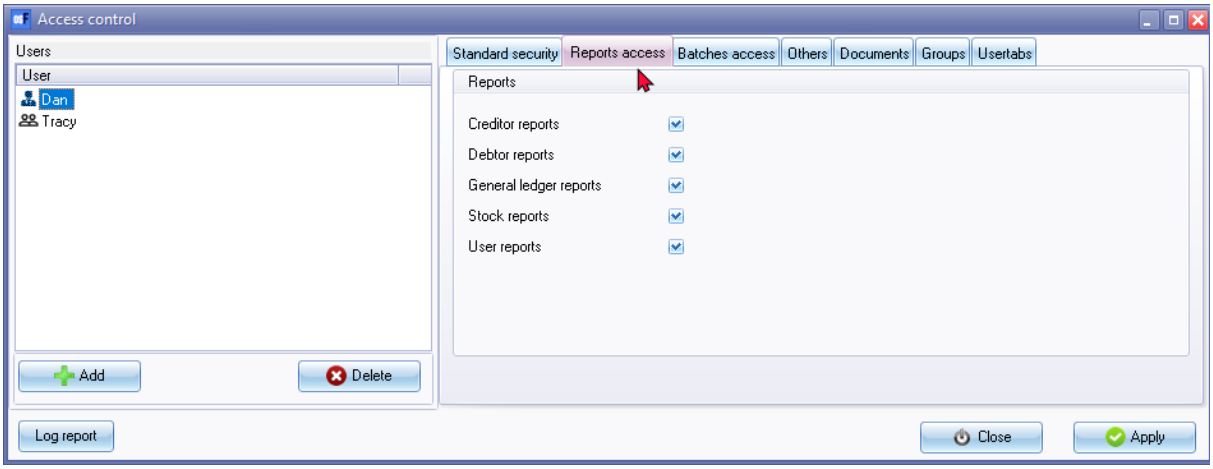
Created with the Standard Edition of HelpNDoc: Streamline Your CHM Help File Creation with HelpNDoc

Access control - Reports access tab

The Reports access tab in the Access control feature of osFinancials5/TurboCASH5 allows you to control a user's access to printing and viewing specific reports in a Set of Books.

To set reports access options for an user:

1. On the Setup ribbon, click on the Setup → Access control menu. Then, navigate to the Reports access tab.



2. Selecting the User: Ensure that the correct user is selected for whom you want to restrict or allow access to reports. If needed, click on the User icon to select the desired user.

3. Configuring reports access: To restrict the selected user from accessing specific reports, remove the tick in the respective field. To allow access to reports, place a tick in the field to allow access to the following reports:

    a) Creditor reports - This option is not implemented, so it does not affect the user's access to

creditor reports.

b) Debtor reports - This option is not implemented, so it does not affect the user's access to debtor reports.

c) General ledger reports - Allow access to print, view and export reports from the Ledger analyser 1, Ledger analyser 2, T-Account viewer. All Ledger reports (except Ledger analyser 1) accessed from the Reports menu list on the Reports ribbon, are still available to print.

d) Stock reports - This option is not implemented, so it does not affect the user's access to stock reports.

e) User reports - This option is not implemented, so it does not affect the user's access to the User reports menu.

4. Applying changes: Click on the Apply button to save the changes for the selected user.
5. Setting access levels for other users: If necessary, select the next available user and configure their batches access and account restrictions in the same manner.
6. Finalizing changes: Once you have finished setting the access levels for all desired users, click on the Close button to exit the "*Access control*" screen.

By utilizing the Reports access tab in Welcome to osFinancials5 / Welcome to TurboCASH5, you can manage and control a user's access to specific reports, allowing you to tailor their reporting capabilities based on their responsibilities and requirements within the Set of Books.

Created with the Standard Edition of HelpNDoc: Effortlessly Convert Your Word Doc to an eBook: A Step-by-Step Guide

Access control - Batches access tab

The Batches access tab in the Access control feature of osFinancials5/TurboCASH5 allows you to manage user access to accounts and posting of transactions in batches and updating document transaction to the ledger.

The key features on the Batches access tab to control access to specific functions, is as follows:

1. Default account access: By default, all users have access to all accounts in the Set of Books. This includes General ledger accounts (Income and Expense Accounts, Capital, Assets, and Liabilities Accounts), Bank accounts, Tax accounts, Debtor accounts, and Creditor accounts.

2. Blocking specific accounts: To restrict or block access to specific accounts for a user, access the Batches access tab and you will see a list of all accounts in the Set of Books. Simply deselect (remove the tick) from each account that you wish to block access for that user. Once blocked, the user will not be able to process any transactions involving the blocked or restricted accounts.

3. Blocking access to specific batches: You may restrict a user to specific batches (journals) For example, if you have a Petty Cashier, you can allow them access to only the Petty cash payments journal. This means they will only be able to process transactions within the Petty cash payments journal and won't have access to other journals or batch types to process transactions.

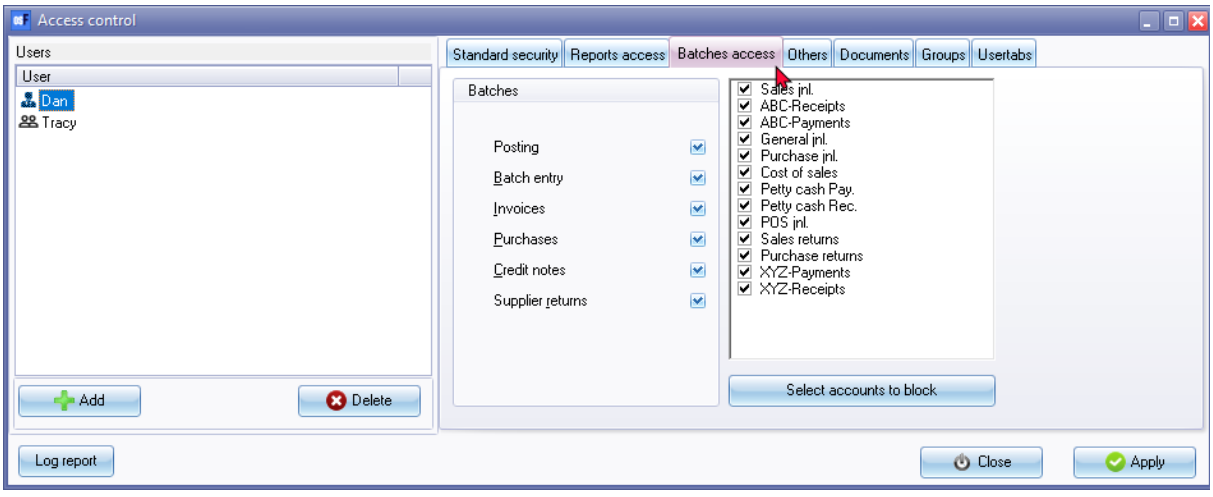
4. Posting batches and updating documents: In addition to account access, the Batches access tab allows you to control user access to posting batches and updating documents to the ledger. If you allow a user to enter transactions in batches (journals), you can restrict their access to processing transactions in specific batches. This means they can only work with specific journals or transaction types based on their assigned permissions.

5. Creating and editing documents: You can also allow or restrict a user from creating and editing various types of documents, including Invoices, Purchases, Credit notes, and Supplier returns. By setting the appropriate permissions, you can control which documents the user is allowed to create and modify.

By using the Batches access tab, you can finely tune user permissions, limiting access to specific accounts and transaction functions within osFinancials5/TurboCASH5. This helps maintain control over financial transactions, ensuring that users can only work with authorized accounts and perform designated tasks based on their assigned roles and responsibilities.

To set the batches access options for an user:

1. On the Setup ribbon, click on the Setup → Access control menu. Then, navigate to the Batches access tab.

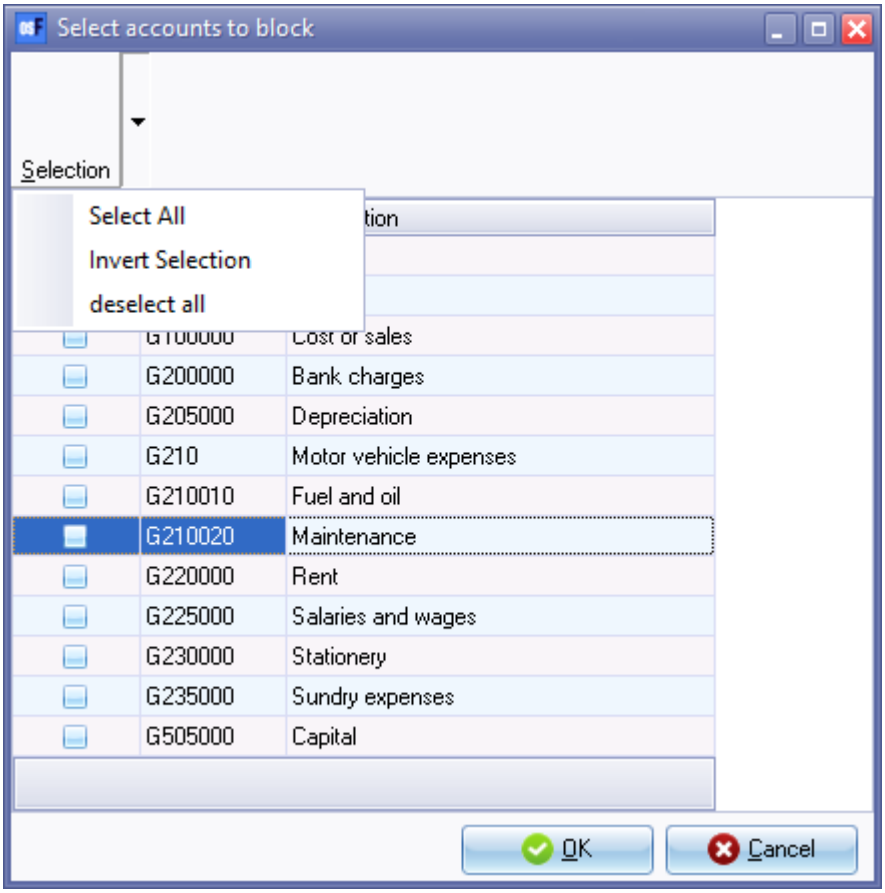


3. Selecting the user: Ensure that the correct user is selected for whom you want to restrict or allow access to batches, accounts, and processing options. If needed, click on the User icon to select the desired user.

4. Configuring batches access: To restrict the selected user from accessing and processing transactions using specific journals (batch types), remove the tick in the respective field. To allow access to specific journals (batch types), place a tick in the field.

> *You can use the Spacebar on your keyboard to select or deselect an option.*

5. Blocking specific accounts: By default, all users have access to all accounts in the Set of Books. To restrict or block access to specific accounts for a user, click on the Select accounts to block button. This will open the "*Select accounts to block*" screen, where you can see a list of all accounts in the Set of Books. Deselect (remove the tick) from each account that you wish to block access for that user. Once blocked, the user will not be able to process any transactions involving the blocked or restricted accounts.



> *You may press the Spacebar on your keyboard to select or deselect an option.*

Remember to click OK on the "Select accounts to block" screen to save your selection.

6. Posting: In addition to account access and batches access, the Batches access tab allows you to control user access to posting batches and updating documents to the ledger. If you allow a user to enter and edit transactions in batches (journals), you can restrict their access to posting transactions in batches. This means the Post option on the "*Batch entry*" screen will be inactive. Users will also have the option to create and edit transactions in batches (journals). Restricted users with the "Posting" option, will also have the option to create and edit various sales documents (such as invoices and credit notes) and purchase documents (such as purchases and supplier returns). However, the Update button on the "*Update documents*" screen will be inactive. This allows you to control which users is allowed or restricted to updating documents to the ledger.
7. Creating and editing documents: You can also allow or restrict a user from creating and editing various types of documents, including Invoices, Purchases, Credit notes, and Supplier returns. By setting the appropriate permissions, you can control which documents the user is allowed to create and modify.
6. Applying changes: Click on the Apply button to save the changes for the selected user.
7. Setting access levels for other users: If necessary, select the next available user and configure their batches access and account restrictions in the same manner.
8. Finalizing changes: Once you have finished setting the access levels for all desired users, click on the Close button to exit the "*Access control*" screen.

If a user attempts to access a batch type or journal type for which access has been disabled in osFinancials5/TurboCASH5, they will receive a warning message indicating the restriction. The message will typically state:

> "User cannot use this batch! Enable access in Setup → Access control"

To proceed, the user should click on the OK button.

If they had selected an incorrect batch, they should select the appropriate batch (journal) instead.

If the restriction persists or they believe access should be granted, they should contact their System Administrator or the person responsible for managing access control settings. The System Administrator can then review and modify the access control configuration to allow the user access to the desired batch type or journal type.

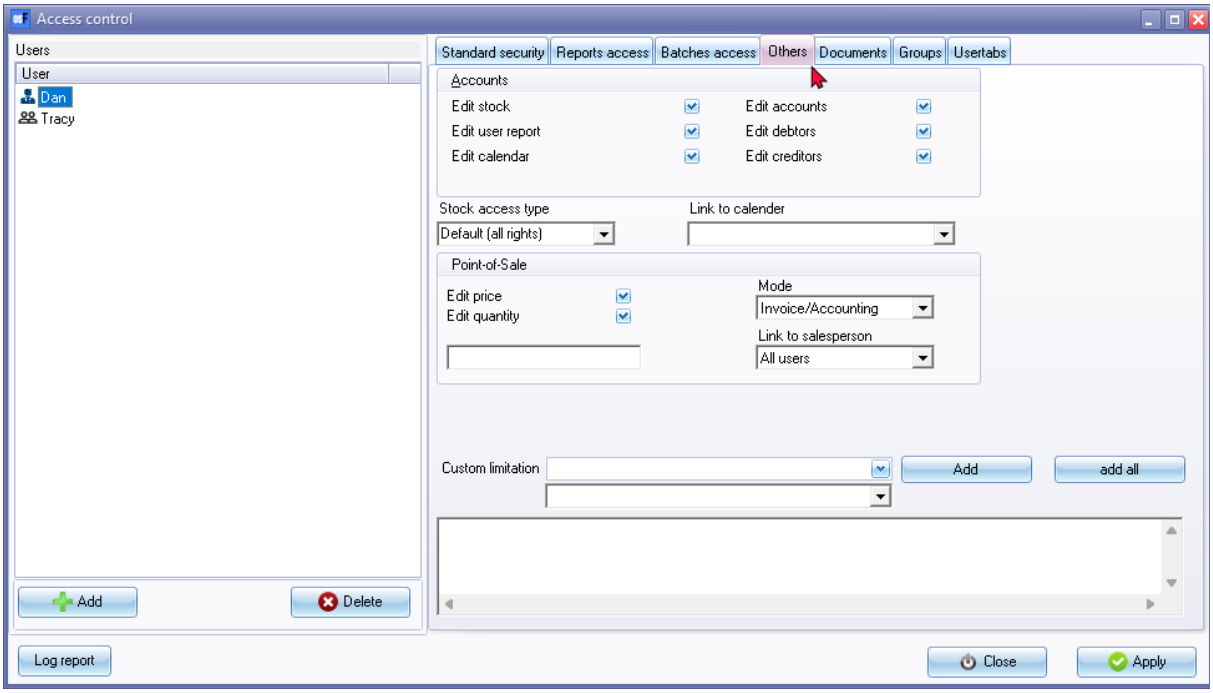
Access control - Others tab

The Others tab in the Access control feature of osFinancials5/TurboCASH5 allows you to define access options for specific users in a Set of Books. With this feature, you can control the user's access to create, edit, or delete master files, set point-of-sale settings, and apply custom limitations. Additionally, you can specify the user's mode of operation, such as Invoice/Accounting, Accounting only, or Point-of-Sale only. Furthermore, you can link the user to a salesperson for enhanced security in Point-of-Sale activities.

To set other access options for an user:

1. On the Setup ribbon, click on the Setup → Access control menu. Then, navigate to the Others tab.



2. Select the desired user: Ensure that the correct user is selected for whom you want to configure access options. If needed, click on the User icon to select the desired user.

3. Accounts - Select the following options, if necessary:

    a) Edit stock - Remove the tick to restrict the selected user from access to create, edit or delete stock items. This will set the Stock items option on the Default ribbon to inactive.

    b) Edit user report - Not implemented.

    c) Edit calendar - Not implemented.

    d) Edit accounts - Remove the tick to restrict the selected user from access to create, edit or delete general ledger accounts (general ledger / bank and tax accounts). This will set the

Setup → Accounts menu option on the Setup ribbon to inactive.

e) Edit debtors - Remove the tick to restrict the selected user from access to create, edit or delete debtor (customer / client) accounts. This will set the Debtors option on the Default ribbon to inactive.

f) Edit creditors - Remove the tick to restrict the selected user from access to create, edit or delete creditor (supplier) accounts. This will set the Creditors option on the Default ribbon to inactive.

4. Stock access type - By default, the access type is set to *'All rights*,' which grants full access to stock items. However, you also have the option to select the '*Warehouse (barcode/weight dish)'* access type. This option is useful when you want to restrict stock access to specific areas such as warehouses or when utilising barcode or weight dish functionality.

5. Link to calendar - Default is User or osFinancials5/TurboCASH5 (as in the resources table).

Multi-User calendar (agenda) - Manual - Shop - Licence : Once-off -

This plugin adds the multi-user agenda (multiple agendas) to the Calendar (Planner). You can add agendas and link them as default to the current user. For every agenda a tab will appear in the agenda Calendar so you can see what the appointments, etc. are on other agendas. You can have a agenda for each employee, salesperson, user, etc. and create invoices directly from his / her agenda with a simple click. Each agenda has it's own calendar and task list.

6. Point-of-Sale - Select the following options for the user if necessary:

a) Mode: This determines the functions available to the user. Select the desired mode for the user:

i) Invoice / Accounting: Allow all functions to the user.

ii) Accounting: Will only allow Accounting functions to the user.

iii) Point-of-Sale: Will allow only Point-of-Sale invoicing functions to the user.

b) Edit price: Remove the tick to restrict the user from editing or changing the selling prices of stock items in Point-of-Sale invoicing.

c) Edit quantity: Remove the tick to restrict the user from editing or changing the quantities of stock items in Point-of-Sale invoicing.

d) Link to salesperson: Select the salesperson from the drop-down list for the user. This allows access only to the selected user for Point-of-Sale invoicing.

7. Custom limitation - All the available menu options are listed for each user. This feature allows you to set custom access levels for specific options. You can select menu options from a list and choose to hide, show, enable, or disable them for the user. A script will be automatically generated for each custom limitation added. This custom limitation settings will only be reflected on the menu items and options when the selected user logs in on the Set of Books.

8. Applying changes: Click on the Apply button to save the changes for the selected user.

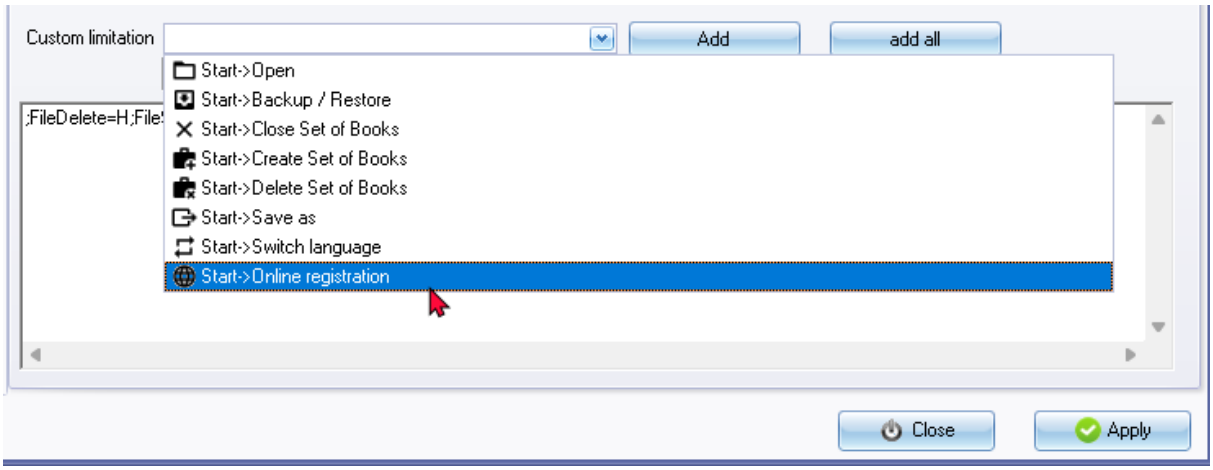
9. Setting access levels for other users: If necessary, select the next available user and configure their access options in the same manner.

10. Finalizing changes: Once you have finished setting the access levels for all desired users, click on the Close button to exit the "*Access control*" screen.

Custom limitations

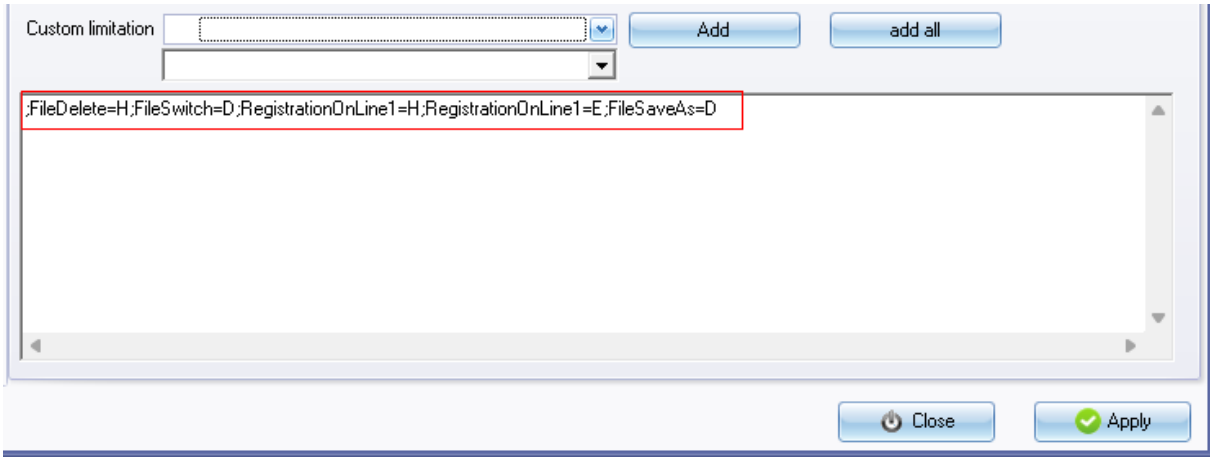
To set the custom limitation for an user:

1. Click on the list to select a feature or menu.



2. Select "*Hide, Show, Enable*" or "*Disable*" from the list.

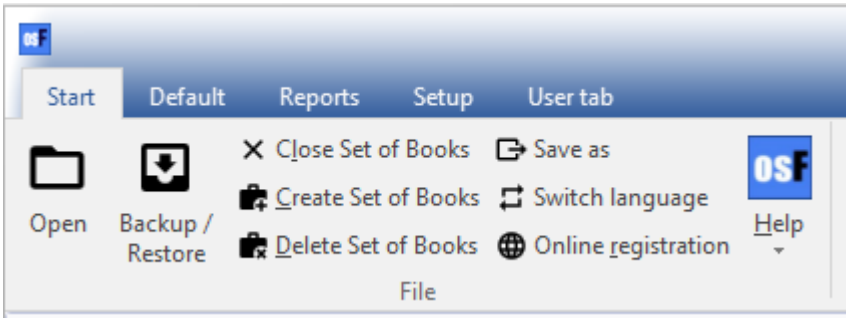
3. Click on the Add button. The script for the selected custom limitation will be displayed in the text area.



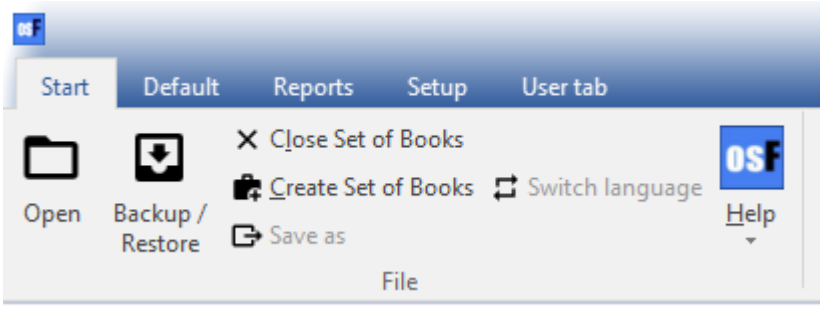
Each selected or added custom limitation is preceded by a semi-colon ; In this example, File indicates that it is an item on the File (Start), and Delete is the Delete (Set of Books) item on the Start ribbon. The option to hide, show, enable or disable the selected menu option, is indicated as follows:

- =H - the menu item will not be displayed.
- =S - the menu item will be displayed.
- =E - the menu item is enabled.
- =D - the menu item is disabled and will be displayed as an inactive menu item.

All functions (options) on the Start ribbon, is as follows:



In this example, the custom options on the Start ribbon, is as follows:



- Online registration and Delete Set of Books is hidden.

- Switch language and Save as options is disabled.

4. Click on the Apply button to save the selection or changes.

Created with the Standard Edition of HelpNDoc: Easy EBook and documentation generator

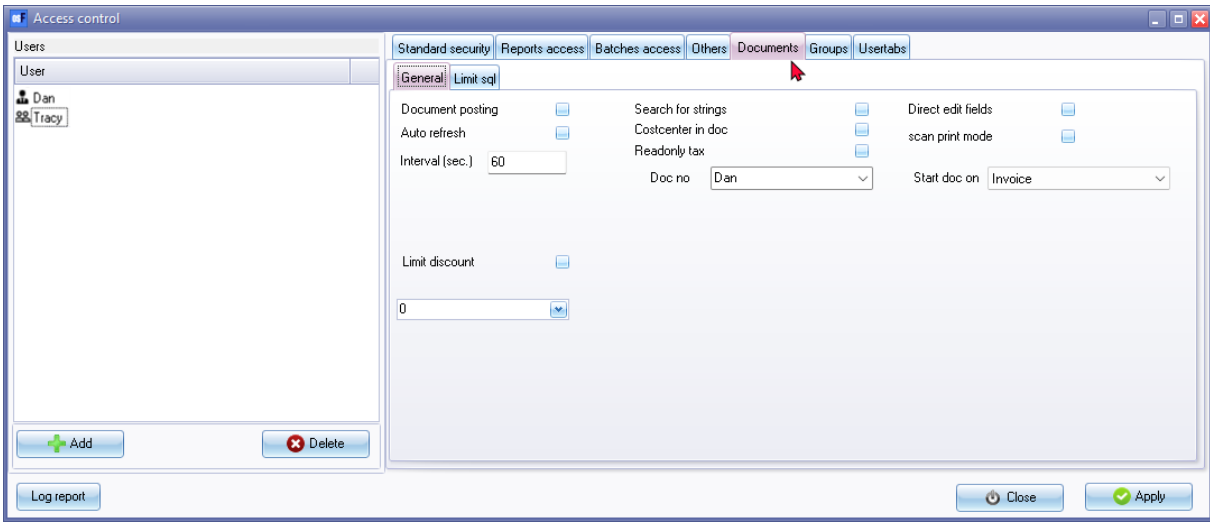
Access control - Documents tab

This option allows you to set variuos options for document processing. You may customise the access levels for each option by selecting or deselecting them based on your requirements.

For advances users, on the Limit sql tab, limitations for sql could be set for limit documents sql, limit stock sql, disable or limit actions on the document entry screen, limit debtors / creditors and limit layouts. To be advised.

To set documents access options for an user:

1. On the Setup ribbon, click on the Setup → Access control menu. Then, navigate to the Documents tab.



3. Selecting the user: Ensure that the correct user is selected for whom you want to restrict or allow configure document processing options. If needed, click on the User icon to select the desired user.

4. LimitGeneral tab settings: Select the following options based on your requirements:

   a) Documents posting - By default, the Posting and Delete buttons are not available on the Documents grid. Selecting this option allows the user to have access to the Posting and Delete buttons on the Documents grid, enabling them to delete or update (post) documents to the ledger.

> *It's important to note that for the Quotes and Orders document types, the behaviour of the "Posting" button changes. Instead of being labelled as "Posting," it is labelled as "Confirmation." This is because quotes and orders cannot be directly posted or updated to the ledger. They need to be confirmed and converted to invoices (for quotes) or purchases (for orders) before they can be posted.*

b) Auto refresh - To be advised.

c) Interval (sec.) - To be advised.

d) Search for strings - To be advised.

e) Costcenter in doc - By default, the Cost centre feature is not activated for Documents. By selecting this option, you activate the Cost Centre feature for documents. This allows the user to select cost centres when processing sales documents (invoices, credit notes, and quotes) as well as purchase documents (purchases, supplier returns, and orders).

f) Readonly tax - Set tax lookup On/Off - By default, the Tax accounts lookup is displayed when the cursor is in the Tax field of the Document line on the Document entry screen. If you want to deactivate this feature, select (tick) the "*Tax Read-only*" option.

g) Doc no - Select the salesperson from the list. This will use the salesperson or user to generate document numbers when creating new documents.

Activate the General numbers option: Additionally, to enable the generation of document numbers based on general numbering rules, you can activate the "*General numbers*" option in the Setup → Documents setup menu on the Setup ribbon. This option allows you to configure specific numbering patterns and rules for document numbering.

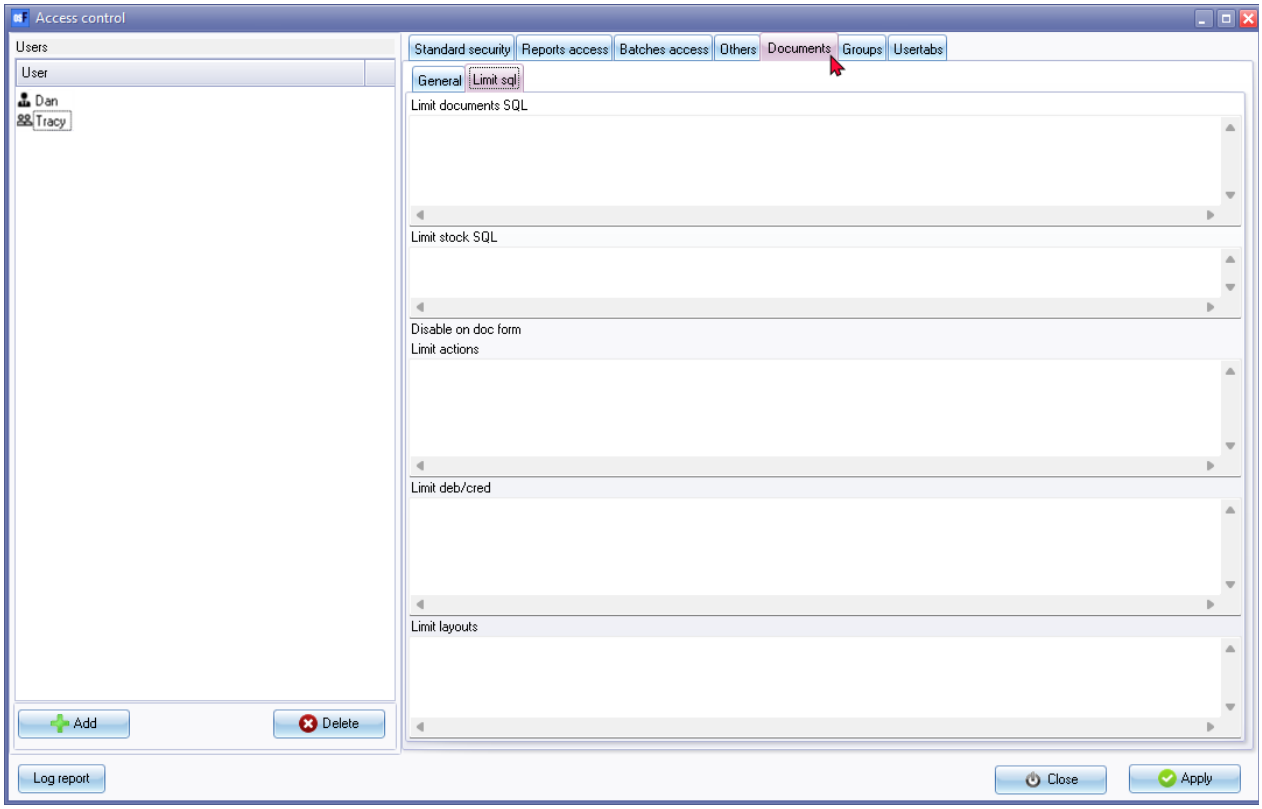
h) Direct edit fields - To be advised.

i) scan print mode - To be advised.

j) Start doc on - By default Invoice is selected and the Invoices document type will be launched when accessing Documents option on the Default ribbon. You may select to launch Quotes, Purchases or Orders document types as the default document type when accessing Documents option on the Default ribbon.

k) Limit discount - This field you may set the values for the limitation of discount when processing documents. You may access the calculator function to perform calculations.

6. Limit sgl tab settings: Click on the Limit sgl tab. To be advised.



7. Set the SQL limitations: Within the "Limit sql" tab, you can configure limitations for document SQL, stock SQL, actions on the document entry screen, debtor/creditor limitations, and layouts. These limitations can be defined based on the user's specific requirements or security considerations.

> *Please note that the specific steps and options for setting these limitations may vary based on the version and configuration of osFinancials5/TurboCASH5 being used. It is recommended to refer to the osFinancials5/TurboCASH5 documentation or consult with the system administrator for detailed instructions on configuring SQL limitations in the application.*

8. Applying changes: Click on the Apply button to save the changes for the selected user.

9. Customising document options for other users: If necessary, select the next available user and configure their options in the same manner.

10. Finalizing changes: Once you have finished setting the access levels for all desired users, click on the Close button to exit the "*Access control*" screen.

Created with the Standard Edition of HelpNDoc: Easily create EBooks

Access control - Groups tab

The Groups tab on Access control allows you to restrict access or allow access to specific users for the Groups to be available when accessing the Setup → Groups menu on the Setup ribbon.

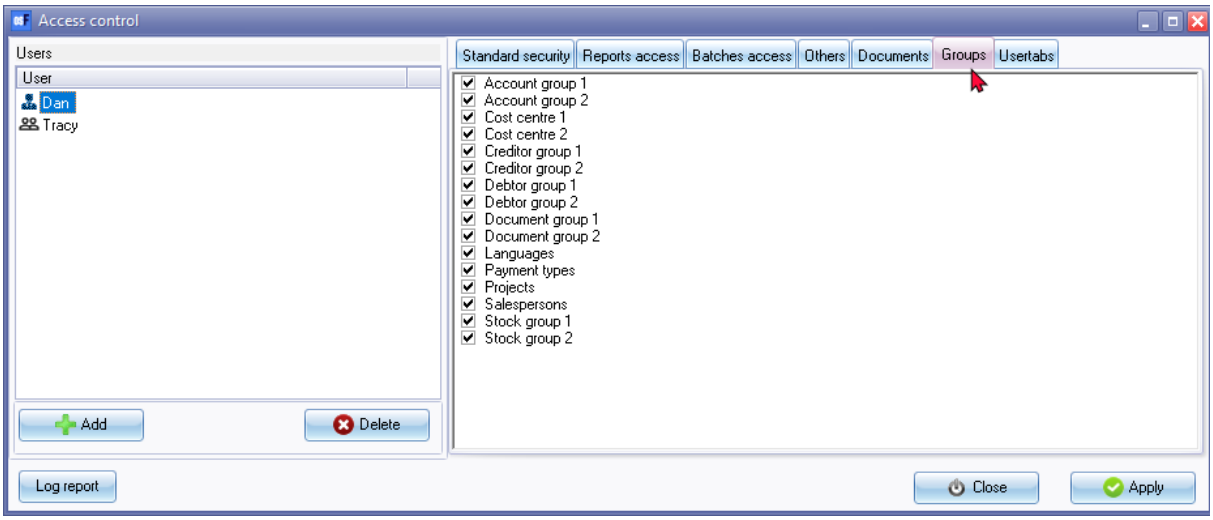
By default all reporting groups such as Account group 1, Account group 2, Debtor group 1, Debtor group 2, Creditor group 1, Creditor group 2, Document group 1, Document group 2, Stock group 1, Stock group 2, Cost centre 1, Cost centre 2, Projects, Salespersons, Languages and Payment types will be available.

If you restrict a user from access to a specific groups, the users will not be able to view and add, edit, delete or disable items on these groups.

However users which is restricted to specific groups, which they cannot view and edit will still have the options and functionality to select restricted groups when printing reports and select groups when creating, editing accounts, debtors, creditors, documents and stock items.

To set groups access options for an user:

1. On the Setup ribbon, click on the Setup → Access control menu. Then, navigate to the Groups tab.



2. Selecting the user: Ensure that the correct user is selected for whom you want to restrict or allow access to batches, accounts, and processing options. If needed, click on the User icon to select the desired user.

3. Managing groups access: By default, all reporting groups such as Account group 1, Account group 2, Debtor group 1, Debtor group 2, Creditor group 1, Creditor group 2, Document group 1, Document group 2, Stock group 1, Stock group 2, Cost centre 1, Cost centre 2, Projects, Salespersons, Languages and Payment types are available for all users.

4. Restricting groups access: To restrict a user from accessing specific groups, remove the tick (deselect) from the respective group. This means that the user will not be able to view, add, edit, delete, or disable items within those restricted groups.

You can use the Spacebar on your keyboard to select or deselect an option.

5. Applying changes: Click on the Apply button to save the changes for the selected user.
6. Setting access levels for other users: If necessary, select the next available user and configure their groups access and restrictions in the same manner.
7. Finalizing changes: Once you have finished setting the access levels for all desired users, click on the Close button to exit the "*Access control*" screen.

By customizing the access to groups, you can control the level of permissions and data visibility for different users in osFinancials5/TurboCASH5. Users with restricted access to specific groups will not be able to perform any actions related to those groups, ensuring that they only have access to the necessary data and functionality within the application.

Access to selecting groups for reports

In osFinancials5/TurboCASH5, when you restrict a user from accessing specific groups using the Groups tab in the Access control feature, it means that the user will not be able to view, add, edit, delete, or disable items within those restricted groups. However, they will still be able to select the reporting groups on report options screens when printing reports.

By allowing users to select reporting groups on report parameter screens, they can filter and customize the reports based on their reporting needs, even if they don't have access to perform actions within the restricted groups. This provides flexibility in generating reports while maintaining the necessary restrictions on data manipulation and management within osFinancials5/TurboCASH5.

Access to selecting groups for documents

In osFinancials5/TurboCASH5, if users are restricted to specific Document groups using the Access control feature, they will still be able to filter and search for specific documents within the restricted groups. However, it's important to note that this functionality is subject to the document type permissions set in the Batches access tab of the Setup → Access control menu.

If a user is restricted from accessing or processing certain document types (such as Invoices, Credit Notes, Purchases, or Supplier Returns) in the Batches access tab, they will not be able to filter or search for documents of those restricted document types, even within the restricted Document groups. The document type restrictions in the Batches access tab take precedence over the Document group restrictions.

By carefully managing both Document group access and document type permissions, you can effectively control user access to specific documents and document types in osFinancials5/TurboCASH5, ensuring

users can only work with the documents relevant to their assigned permissions.

Access to selecting groups in various functions

In osFinancials5/TurboCASH5, if users are restricted to specific Account groups, Debtor groups, Creditors groups, or Stock items groups using the Access control feature, they will still have certain capabilities within those restricted groups. Here's how it works for each scenario:

1. Account groups: Users with restricted access to specific Account groups will still be able to select and change the existing account groups when creating or editing ledger accounts (Setup → Accounts menu).
2. Debtor groups: Users with restricted access to specific Debtor groups will still be able to select and change the existing debtor groups when creating or editing debtor accounts. This means they can assign debtors to the available groups. Additionally, they can filter and search for specific debtors within the restricted groups on the Debtors grid.
3. Creditor groups: Similar to debtor groups, users with restricted access to specific Creditors groups will be able to select and change the existing creditor groups when creating or editing creditor accounts. They can assign creditors to the available groups. They can also filter and search for specific creditors within the restricted groups on the Creditors grid.
4. Stock groups: Users with restricted access to specific Stock items groups will retain the ability to select and modify the existing stock item groups when creating or editing stock items. They can assign stock items to the restricted groups. Additionally, they can filter and search for specific stock items within the restricted groups on the Stock items grid.

By allowing these capabilities within the restricted groups, users can still manage and organize debtor accounts, creditor accounts, and stock items effectively, even with limited access to specific groups. This ensures that users can work with the relevant data while maintaining the necessary access controls in osFinancials5/TurboCASH5.

Created with the Standard Edition of HelpNDoc: Effortlessly create a professional-quality documentation website with HelpNDoc

Access control - User tabs

User tab ribbon

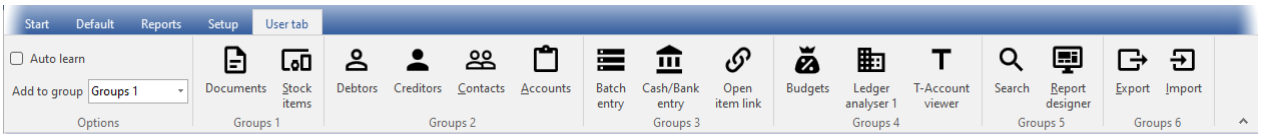
The User tab ribbon in osFinancials5/TurboCASH5 is a customisable quick menu that allows you to manage

user navigation in up to six (6) groups within a Set of Books. This makes it convenient for users to access their frequently used features.

Activating the Auto-learn feature: The "Auto-learn" feature, when selected (ticked), automatically adds the last accessed options to the User tab ribbon in up to six (6) groups. This makes it convenient for users to access their frequently used features.

Deactivating Auto-learn feature: Once you have populated the User tab ribbon with the desired shortcuts, you can deactivate the "*Auto-learn*" feature by removing the tick from the "*Auto-learn*" field. This ensures that the User tab ribbon retains the manually selected options and doesn't automatically update based on the last accessed features.

Default ribbon: By default, when opening the Set of Books, the Default ribbon is displayed. However, if the User tab ribbon is activated and configured, it will automatically display the User tab ribbon instead of the Default ribbon upon opening the Set of Books.



Manually configure the User tab ribbon: The User tab ribbon may be changed or set manually in the Usertabs tab on the Setup → Access control (Setup ribbon).

Removing Control icons: If any of the Control icons are added, you may remove it from the "User tab". For example, "Do year-end" is only performed once a year, you may select a different feature to replace it, or simply delete it from the list.

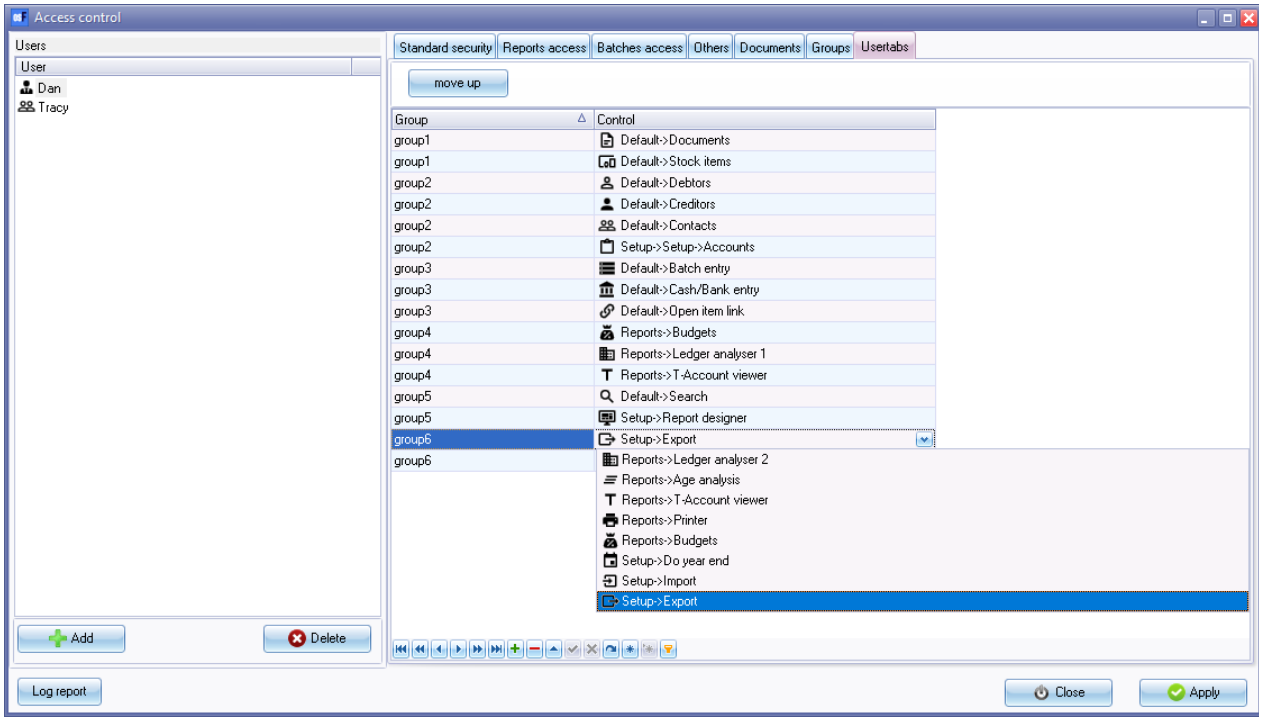
By customizing the User tab ribbon, you can streamline user navigation, enhance efficiency, and tailor the interface to match the specific needs and preferences of each user in a Set of Books.

Configure User tab ribbon in Access control

Once you have activated the User tab ribbon in osFinancials5/TurboCASH5 and want to make edits or manually configure its options, you can utilise the Usertabs tab within the Access control feature. This tab allows you to manage the configuration of the User tab ribbon.

To set (change / edit) User ribbon in Access control:

1. On the Setup ribbon, click on the Setup → Access control menu. Then, navigate to the Usertabs tab. This tab allows you to manage the configuration of the User tab ribbon.



2. Selecting the user: Ensure that the correct user is selected for whom you want to create or add the access options on the User tab ribbon. If needed, click on the User icon to select the desired user.

3. Adding a new option to the User tab ribbon:

    - Click in the Add record icon to create a new record. Select a Control option from the available options on the list and select the Group (group 1 to 6).

    - Click on the Save record icon to add the record.

4. Removing an existing option from the User tab ribbon: To remove an existing option from the list, you can select a Control option you wish to remove from the User tab ribbon.

    - Click in the Delete record icon to remove (delete) an existing option.

    - Click on the Save record icon to save the record.

5. Rearranging options: If you want to change the order of the options on the User tab ribbon, you can achieve it by changing the group of the option. Each option is assigned to a specific group, and the order of the groups determines the order in which the options are displayed on the ribbon. This allows you to customize the layout of the ribbon to match your preferred workflow. Click on the Save record icon to save your changes.

6. Applying changes: Click on the Apply button to save the changes for the selected user.

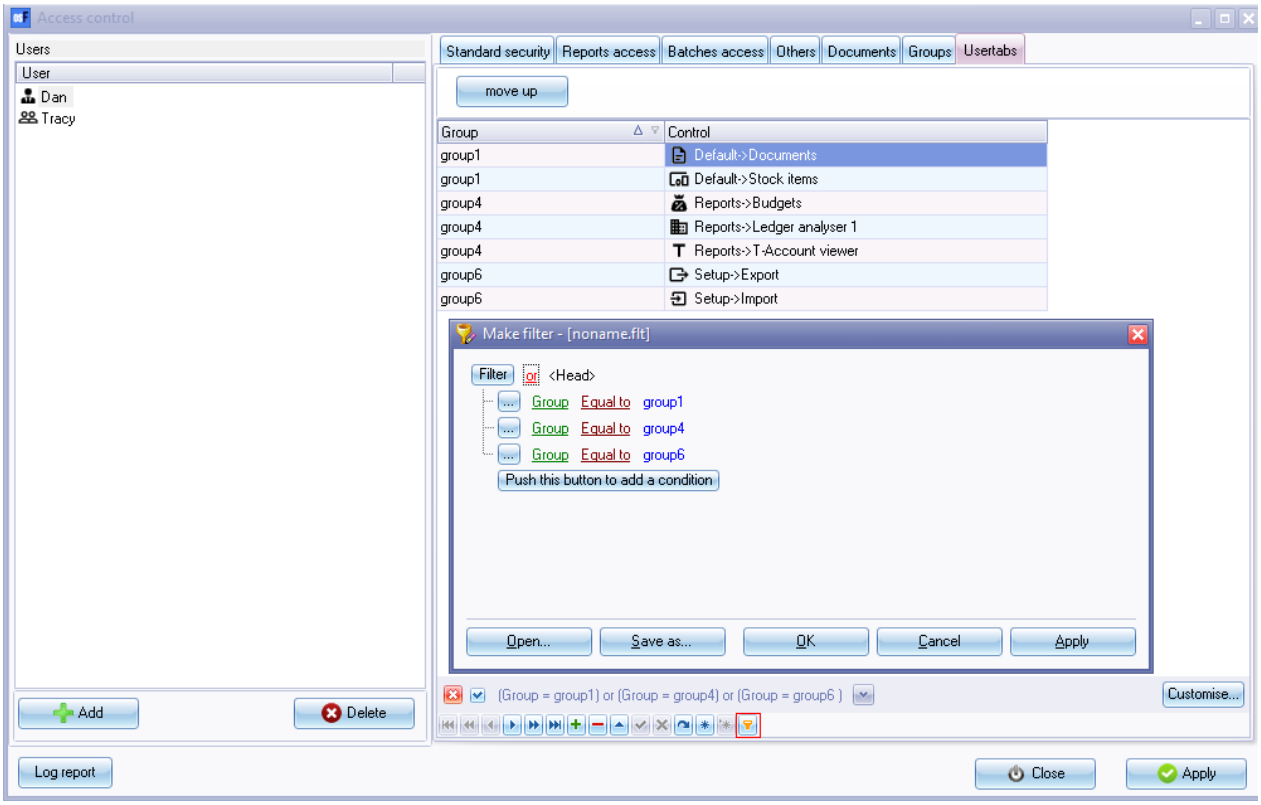
7. Customising User tab ribbons for other users: If necessary, select the next available user and configure their options in the same manner.

8. Finalizing changes: Once you have finished setting the access levels for all desired users, click on the Close button to exit the "*Access control*" screen.

By using the Usertabs tab within the Access control feature, you have the flexibility to customize and fine-tune the User tab ribbon in osFinancials5/TurboCASH5 based on your specific preferences and requirements.

Filter options

The User tab ribbon also provides filter options, allowing you to create filter files, save them, and load them as needed. This helps in managing and organising data based on specific criteria.



Created with the Standard Edition of HelpNDoc: Create iPhone web-based documentation

Access control - Log report

In osFinancials5/TurboCASH5, the log report functionality provides a record of various activities performed within a Set of Books, including the opening and closing of the Set of Books, user logins and logouts, and important functions like reversing posted journals and documents, as well as year-end processes. Here's

how the log report can be useful:

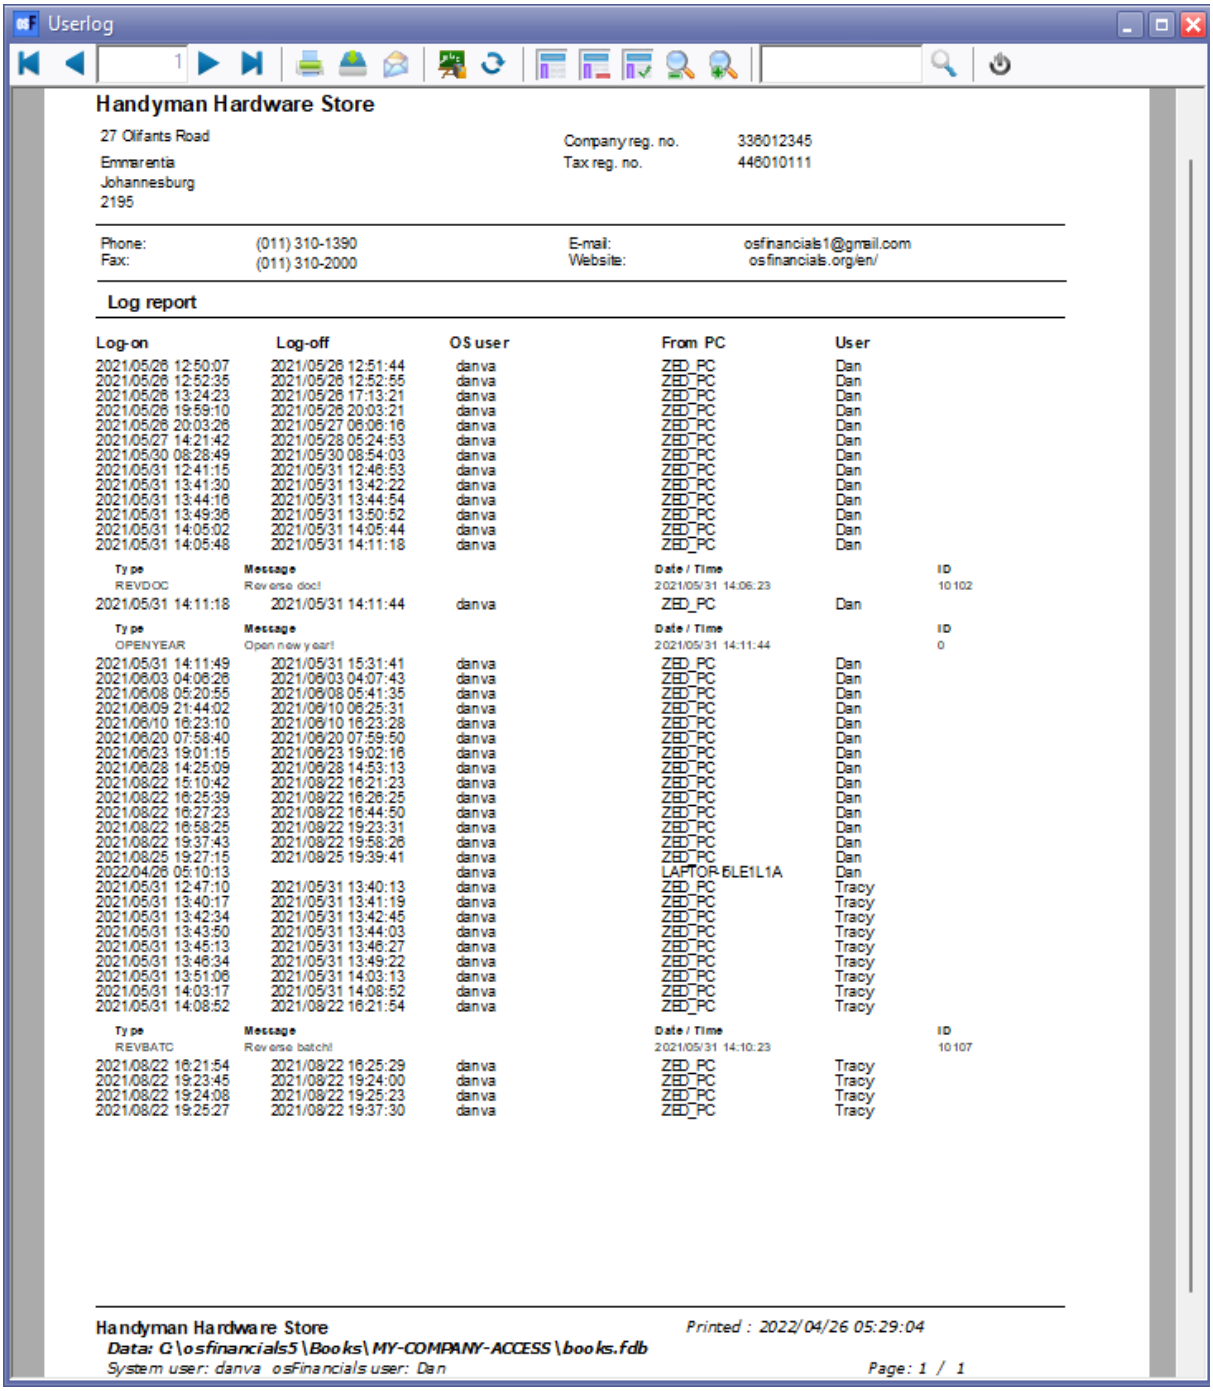
1. Tracking Set of Books activity: The log report allows you to monitor when a Set of Books has been opened or closed. This information helps track the usage and access patterns of the system. It provides an audit trail of when the Set of Books was accessed, which can be valuable for monitoring and ensuring appropriate usage and security.
2. User activity monitoring: The log report also captures user login and logout activities. It records when each user has accessed the Set of Books, allowing you to monitor user activity and identify any unusual or unauthorized access. By reviewing the log report, you can track which users have interacted with the system and when, providing a level of accountability and transparency.
3. Reversal of posted journals and documents: The log report includes information on the reversal of posted journals and reversal of posted documents. This is helpful for tracking the history of corrections or adjustments made to financial transactions. By reviewing the log report, you can identify the specific instances when posted journals or documents were reversed, helping to ensure accuracy and integrity in the financial records.
4. Year-end processes: The log report captures important year-end activities performed in a Set of Books. This includes tasks such as closing the fiscal year, generating financial reports, and performing other year-end procedures. The log report helps document and verify the completion of these critical processes, which are essential for accurate financial reporting and compliance.

Overall, the log report in osFinancials5/TurboCASH5 provides a detailed record of various activities, including Set of Books opening and closing, user logins, reversal of posted transactions, and year-end processes. It serves as an audit trail, helping to monitor system usage, track user activity, and ensure the integrity of financial data. The log report can be a valuable tool for detecting errors, identifying unauthorized access, and promoting transparency and accountability within the accounting system.

Important functions such as Do year end, Reverse posted batch/document (accessed from the Global processes menu list on the Setup ribbon), will also be listed to display the date and type as well as which user performed these important actions.

To print log reports:

1. On the Setup ribbon, click on Setup → Access control.
2. Click on the Log report button. The Report parameters screen will be displayed.
3. Click on the OK button. An example of the "*Userlog report*", is as follows:



Userlog

Budgets

A budget is a financial plan that outlines expected income and expenses over a specific period of time, usually one year. It is a tool that helps individuals, businesses, and organizations to allocate resources efficiently and effectively by estimating the amount of money they expect to receive and the amount they plan to spend.

Budgets can be created for different purposes, such as managing personal finances, planning business operations, or organizing a project. They typically include an estimation of revenues, which may include salaries, sales, investments, or other sources of income, as well as an estimation of expenses, which may include rent, utilities, supplies, equipment, marketing, and other costs.

The main goal of a budget is to ensure that expenses do not exceed revenues and that financial goals are achieved. By tracking actual spending against budgeted amounts, individuals and organizations can adjust their plans and make informed decisions about where to allocate resources.

The budget feature is used to enter and edit budget figures in osFinancials5/TurboCASH5, which can be compared with actual income and expenses. Budgets are a guide as to what you want to achieve; for instance what income you expect to generate (sales forecasts and income from other sources) and a plan for your expenses you need to incur to achieve that income. Budget figures can be flexible so as to take into account seasonal trends in business.

The following new features have been added:

1. *Budget figures may be entered, adjusted or processed in the Budgets option on the Reports ribbon. This is in addition to the standard option to process budgets in Setup → Accounts (Setup ribbon).*

2. *The Pivot feature is introduced to analyse your Budget figures.*
3. *Budgets may be entered for any of the periods or financial years.*
4. *Budgets may be entered for a specific date - e.g. Expected once off purchases or a specific big sale, etc.*
5. *Budgets may be copied from Budget figures from the previous year.*
6. *Budgets may be copied from Actual figures from the previous year.*
7. *Budgets may be entered for Cost centres (Cost centre 1 and/or Cost centre 2), if activated.*
8. *Budgets may be entered for Projects, if activated.*

Budget figures will be displayed on the following reports (Reports ribbon):

1. Ledger analyser 1 /2:
    - Budget option for the Trial balance, Income statement, Balance sheet and Standard column balances report types. The Pivot feature is introduced to analyse your Budget figures.
    - Budget vs actual report type.
2. T-Account viewer - List the Budget figures (for all accounts or specific accounts), as entered or processed in the Budgets (Reports ribbon); or on Setup → Accounts (Setup ribbon), in the T-Account viewer. You may print these budget figures and export the budget figures in T-Account viewer to a spreadsheet.
3. Ledger - Budget vs Actual (3 periods).
4. Optional (if activated):
    - Cost centres - If Cost centres are activated and Budget figures may be entered, adjusted or processed.
    - Projects - If Projects are activated and Budget figures may be entered, adjusted or processed.

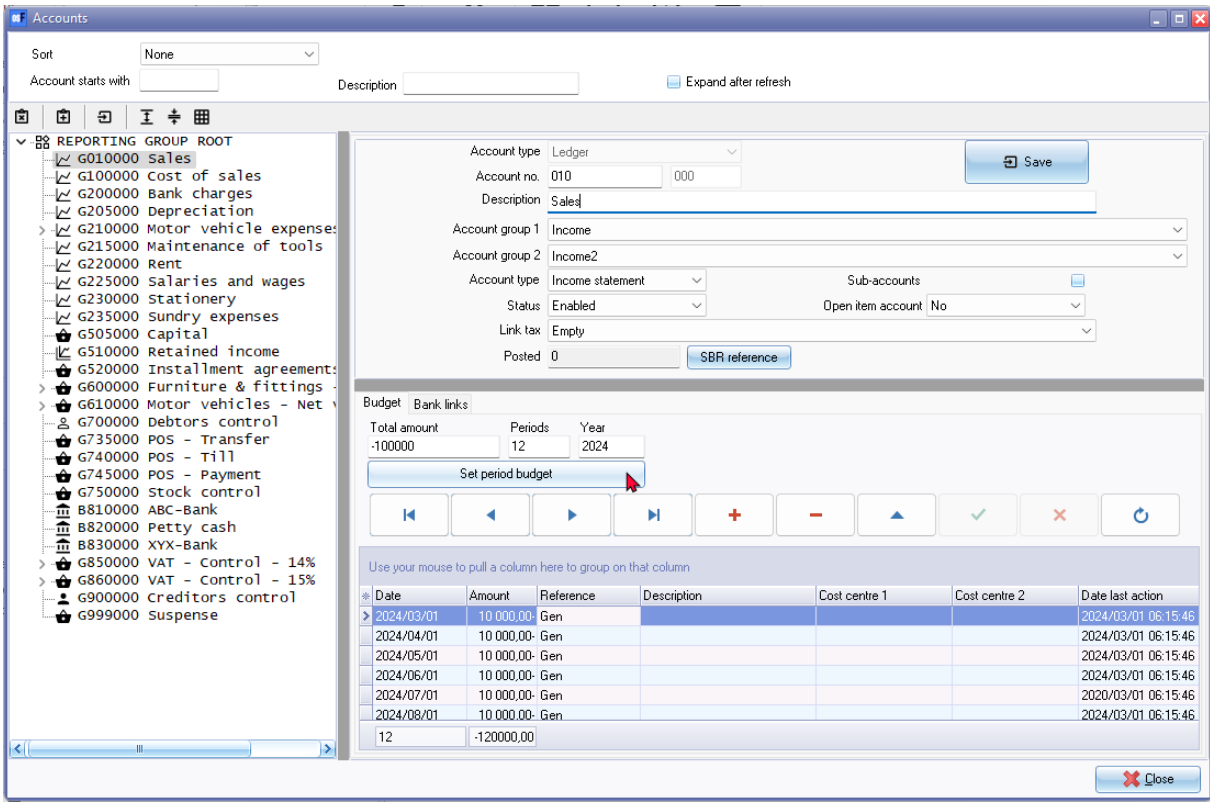
Created with the Standard Edition of HelpNDoc: Make Help Documentation a Breeze with a Help Authoring Tool

Enter budget figures (Setup - Accounts)

To enter / change your Budget figures:

1. On the Setup ribbon, select Setup → Accounts.

2. Select the account to enter the budget figures.



3. Select the first account, i.e. "*Sales*" and enter the budget figure. Enter the annual amount of *–120 000* in the "*Total Amount"* field and click on the Set period budget button.

> *For a credit amount, insert minus sign "–". The credit amount will be indicated with a minus sign after the amount (e.g. 10,000.00– in the "Amount" column.*
>
> *For a debit amount just insert the annual amount without the minus sign "–". The amount will automatically be divided this amount into 12 months in the "Amount" field.*

> *Each month can be overwritten so that the budget can be flexed month by month to accommodate seasonal trends and spending patterns of your business. The system will keep a running total for you, so that as you are flexing the monthly budget, you can see the effect on the annual amount.*
>
> *Budget figures can also be entered for for Balance sheet accounts (Capital, Liabilities and Assets), which may be used as a guideline to control the balances on these accounts.*
>
> *See - Enter budget figures for special events.*

3. Click on the Save button (next to the account description field).

If budget figures already exist for the account, and you click on the Save button, a similar confirmation message will be displayed:

"Delete old budget for year 2022?"

Click Yes to replace the existing budget figures.

If you do not click on the Save button, any budget figures entered, or changed, will not be saved.

4. Select the next account and enter the budget figure.
5. Continue to enter your budget figures for all accounts.
6. When you are finished entering all your budget figures, click on the Close button (on the titlebar).

Created with the Standard Edition of HelpNDoc: Easily Add Encryption and Password Protection to Your PDFs

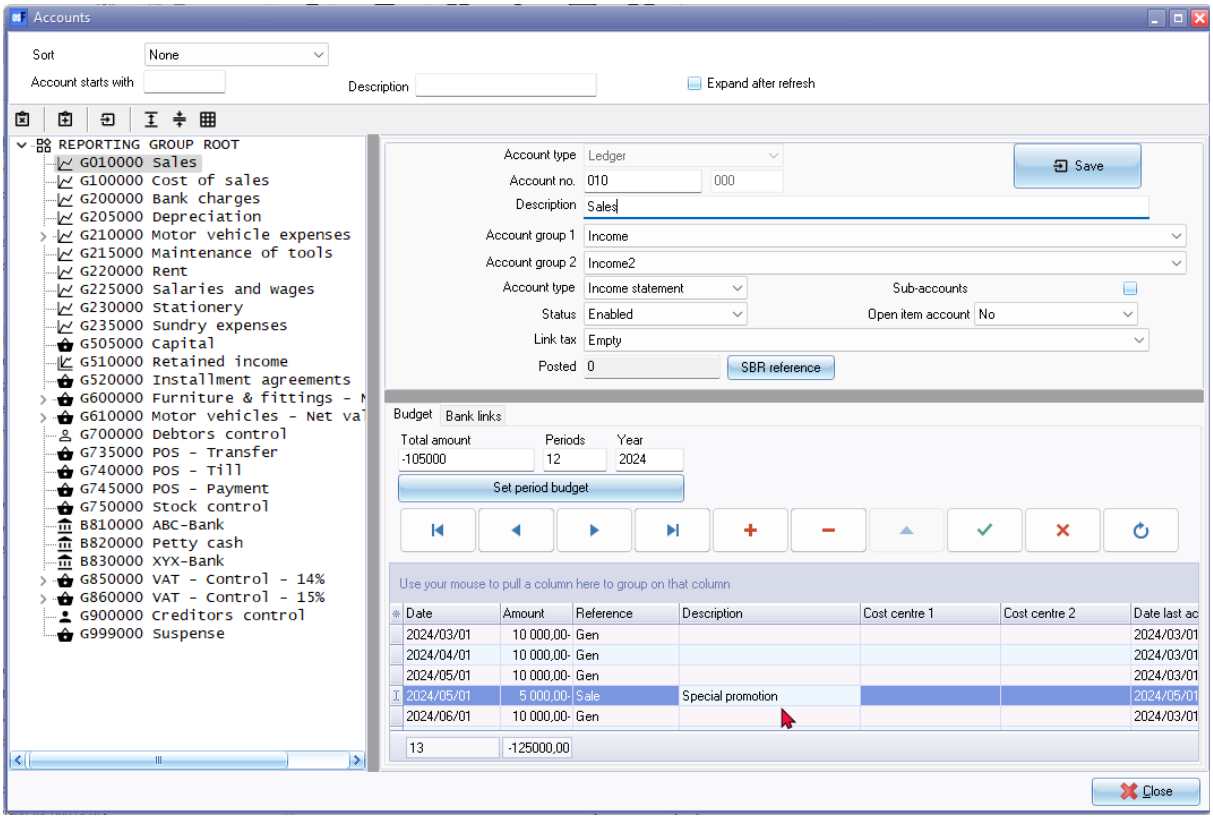
Enter budget for special events (Setup - Accounts)

Each month can be overwritten so that the budget can be flexed month by month to accommodate seasonal trends and spending patterns of your business. The system will keep a running total for you, so that as you are flexing the monthly budget, you can see the effect on the annual amount.

You may enter budget figures for specific dates and/or periods. For example, if you need to budget 5,000.00 for a special event, on 1 May 2024 - extra sales for a special promotion sale, you may add that.

To enter budget figures for special events:

1. On the Setup ribbon, select Setup → Accounts.



2. Select the "*Sales*" account. On the Budget tab, click on the button to create a new record.

3. The system date will automatically be displayed. Enter or select the date (i.e. "*2024/05/01*") for the special event.

4. Enter the amount for the budget (i.e. "*–5000*") in die "*Amount*" column.

> *For a credit amount, insert minus sign "–". The credit amount will be indicated with a minus sign after the amount (e.g. 5,000.00– in the "Amount" column.*
>
> *For a debit amount just insert the amount without the minus sign "–". The amount will automatically be divided this amount into 12 months in the "Amount" field.*

5. Enter the reference (e.g. "*Sale*") in the "*Reference*" column.

6. Enter the description (e.g. "*Special promotion*") in die "*Description*" column.

7. Click on the button to save the new budget for "*2024/05/31*".

8. Click on the Save button.

> *If you do not click on the Save button, any budget figures entered, or changed, will not be saved.*

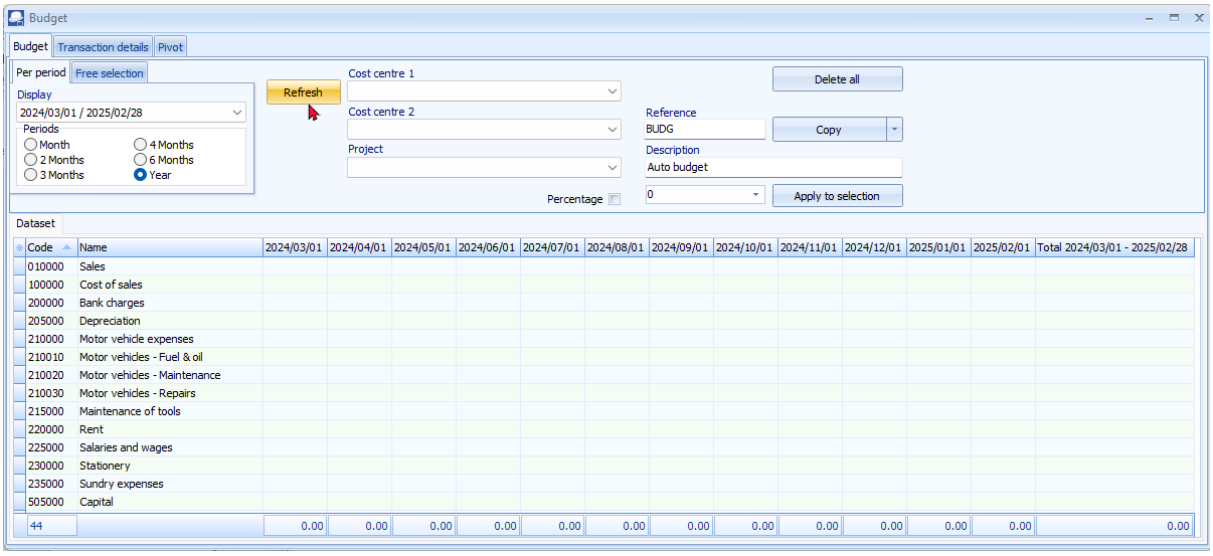
Budgets (Reports ribbon)

The following new features have been added:

1. *Budget figures may be entered, adjusted or processed in the Budgets option on the Reports ribbon. This is in addition to the standard option to process budgets in Setup → Accounts (Setup ribbon).*
2. *The Pivot feature is introduced to analyse your Budget figures.*
3. *Budgets may be entered for any of the periods or financial years.*
4. *Budgets may be entered for a specific date - e.g. Expected once off purchases or a specific big sale, etc.*
5. *Budgets may be copied from Budget figures from the previous year.*
6. *Budgets may be copied from Actual figures from the previous year.*
7. *Budgets may be entered for Cost centres (Cost centre 1 and/or Cost centre 2), if activated.*
8. *Budgets may be entered for Projects, if activated.*

To process your Budget figures:

1. On the Reports ribbon, select Budgets. The Budget tab will be displayed.
2. Period - Select a period on the Per period tab. You may click on the Free selection tab to select a specific date or a range of dates to include budget figures. Select the period “Year” (i.e. “*2024/03/01*” to “*2025,/02/28*") to enter your budget figures for the selected period.



3. Click on the Refresh button to populate the accounts and periods. This will list all the existing ledger accounts in your "*Chart of accounts*" (existing as added, edited in the Setup → Accounts (Setup ribbon)), in the Account code sequence.

> *If you already have existing budget figures in the previous year, you may use the "Copy – From Budget Previous year" option.*
>
> *If you have already posted transactions in batches and documents in the previous year, you may use the "Copy – From Actual Previous year" option to use the transaction totals as basis for your budget.*

4. Reference – The default is "*BUDG*". You may enter your own reference, up to 15-characters, in this field. For the purposes, of this example, leave as is.

> *Options*
>
> 1. *Cost centre 1 - Budgets may be entered for Cost centres (Cost centre 1), if activated.*
> 2. *Cost centre 2 - Budgets may be entered for Cost centres (Cost centre 2), if activated.*
> 3. *Projects - Budgets may be entered for Projects, if activated.*
> 4. *Percentage - Tick this option and specify a percentage to adjust the budget figures.*
> 5. *Delete all - If any budget figures exists, a confirmation message will be displayed.*
>
> > "Delete data for this period?"
>
> *If you click Yes, the budget figures for the selected period or dates will be deleted.*
>
> 6. *Copy -*
>
> a) *From Budget Previous year - If you already have budget figures for the previous*

financial year, select this option to populate last year's budget figures.

b) *From Actual Previous year - If you already have posted batch and document transactions for the previous financial year, select this option to populate last year's the actual totals of posted transactions.*

7. *Apply to selection - Add amount to selection?If you key in a value (amount or percentage), and you click the Apply to selection button, a confirmation message will be displayed:*

" Add amount to selection?"

Click Yes to change the amount or percentage. The value (amount or percentage) will increase or decrease any existing values.

You may enter or overtype an amount. Editing an amount, e.g. editing one or more digits will produce an error message, for example;

'-13,000.00' is not a valid floating point value for field '2024/06/01 - 2024/06/30'

5. Description – The default is "*Auto budget*". You may enter your own description (up to 35 characters), in this field. Enter "*Budget 2024/2025*".

6. Select the first account, i.e. "*Sales*" and enter the monthly budget amount, i.e. –10,000 in die amount field (before the Apply to selection button) in.

The " - " (minus sign), added before the amount, indicates a credit budget amount. For a debit budget amount, add the amount without the " - " (minus sign).

7. Select the months for which you need to add the budget figures.

To select multiple periods, press the "Shift" key on your keyboard and click on the periods to select the months.

8. Click on the Apply to selection button. A confirmation message is displayed:

"Add amount to selection?"

9. Click Yes to add the monthly budget figures to the selected months.

10. Repeat this process to add your budget figures.

11. After adding your budget figures for the accounts in this documentation, the "*Budgets*" screen should display as follows:

3. Refresh - This button will populate the Budget figures for the selected period or selected dates.

4. Cost centre 1 - Budgets may be entered for Cost centres (Cost centre 1), if activated.

5. Cost centre 2 - Budgets may be entered for Cost centres (Cost centre 2), if activated.

6. Projects - Budgets may be entered for Projects, if activated.

7. Reference - "*BUDG*" is the default reference. You may enter your own reference (up to 15 characters).

8. Description - "*Auto budget*" is the default description. You may enter your own description (up to 35 characters).

9. Percentage - Tick this option and specify a percentage to adjust the budget figures.

10. Delete all - If any budget figures exists, a confirmation message will be displayed.

    "Delete data for this period?"

    If you click Yes, the budget figures for the selected period or dates will be deleted.

11. Copy -

    a) From Budget Previous year - If you already have budget figures for the previous financial year, select this option to populate last year's budget figures.

    b) From Actual Previous year - If you already have posted batch and document transactions for the previous financial year, select this option to populate last year's the actual totals of posted transactions.

12. Apply to selection - Add amount to selection?

You may enter or overtype an amount. Editing an amount, e.g. editing one or more digits will produce an error message, for example;

" '-13,000.00' is not a valid floating point value for field '2024/06/01 - 2024/06/30' ".

Created with the Standard Edition of HelpNDoc: Effortlessly create a professional-quality documentation website with HelpNDoc

Budgets - Enter budget figures for special events

In this example, on 1 May 2024 we need to budget 5,000.00 extra sales for a special promotion. You may enter budget figures for specific dates and/or periods to accommodate, for example, special events, fluctuations and business patterns.

To enter budget figures for special events:

1. On the Reports ribbon, select Budgets.

2. Period – Select the period "*Year*" (i.e. "*2024/03/01*" to "*2025/02/28*") to enter your budget figures for the selected period.

3. Click on the Refresh button. This will list all the existing ledger accounts in your "*Chart of accounts*" (existing as added, edited in the Setup → Accounts (Setup ribbon)), in the Account code sequence.

4. Select the "*Sales*" account and the month "*2024/05/01*" - May 2024.

5. Reference – The default or previous reference entered, will be displayed, for example, "*BUDG*". Enter "*BUDGET SALE*" to indicate that it is a sales event that is scheduled for May 2024; or that took place in

May 2024.

6. Description – The description as previously entered, is "*Budget 2024/2025*". Enter "*Budget 2024/2025 – Sale*".
7. Only enter the additional amount with which you need to increase the budget for May 2024.
8. To increase the existing amount for May 2024 from –10,000 to –15000, only enter –5000 in the amount field (before the Apply to selection button).

> *The " - " (minus sign), added before the amount, indicates a credit budget amount. For a debit budget amount, add the amount without the " - " (minus sign).*

> *In the case of Sales and trading stock items, is applicable, you may need to change the "Cost of of sales" account.*

9. Click on the Apply to selection button. A confirmation message , is displayed:

"Add amount to selection?"

10. Click Yes to save the increased budget figure for May 2024.

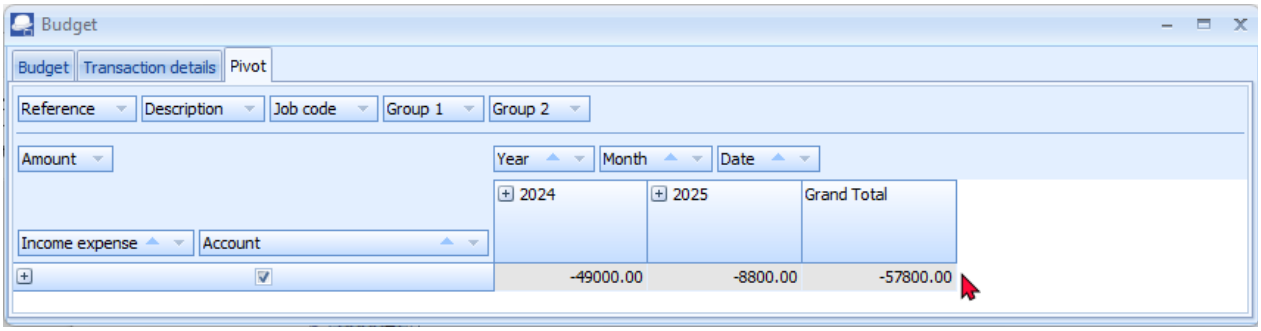
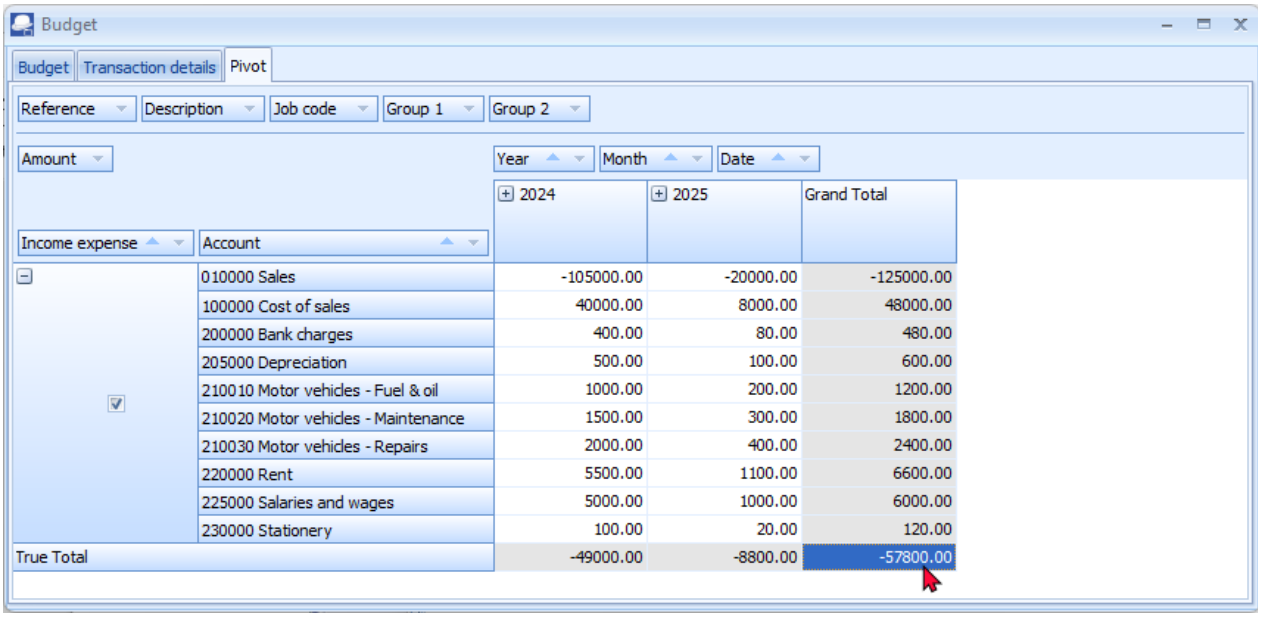
Tool

Budgets - Pivot tab (Reports ribbon)

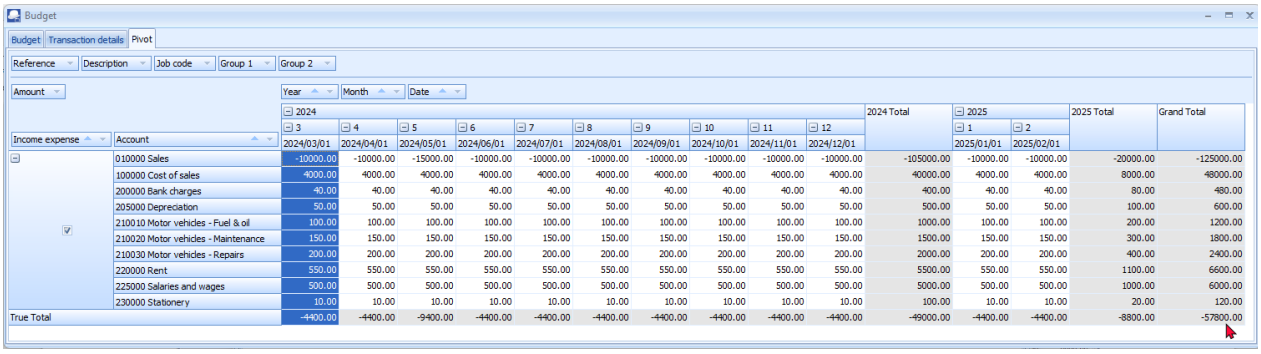
The Pivot tab, by default, summarises the budget totals for the Income and Expense (Income statement) accounts and Capital, Assets and Liabilities (Balance sheet) accounts for which budget figures were entered for the selected period or dates.



Click on the ⊞ icon to list the budget totals for the accounts. The icon will change ⊟ to list totals for each account for which budget figures are entered.

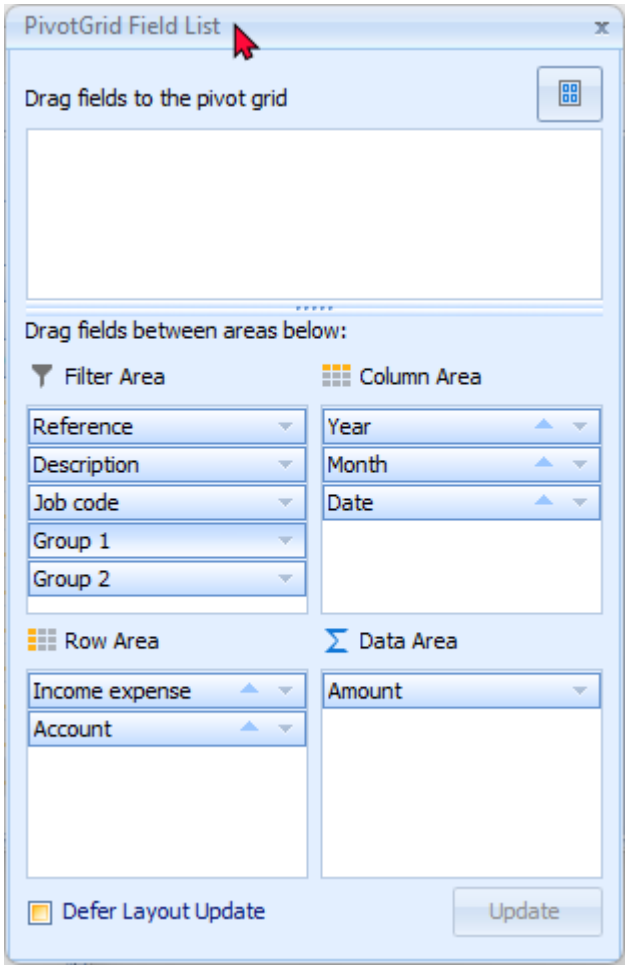


The expanded view of the budget should display as follows:



The default filter options, which may be selected as needed, is structured on the Pivot screen in four (4) areas, "*Filter Area, Column Area, Row Area*" and "*Data Area*". The filter options is as follows:

Filter Area:



1. Reference - The default Reference "*BUDG*" or your reference as entered on the options section of the Budget tab. Select the available reference(s) on the list as filter options, as required.
2. Description - The default Description "*Auto budget*" or your description as entered on the options section of the Budget tab. Select the available description(s) on the list as filter options, as required.
3. Job code - (Projects) - If budgets were entered or processed for Projects, the project code(s) may be selected as filter options.
4. Group 1 - If budgets were entered entered for Cost centres (Cost centre 1), the Cost centres for Cost centre 1 may be selected as filter options.
5. Group 2 - If budgets were entered entered for Cost centres (Cost centre 2), the Cost centres for Cost centre 2 may be selected as filter options.

Data Area:

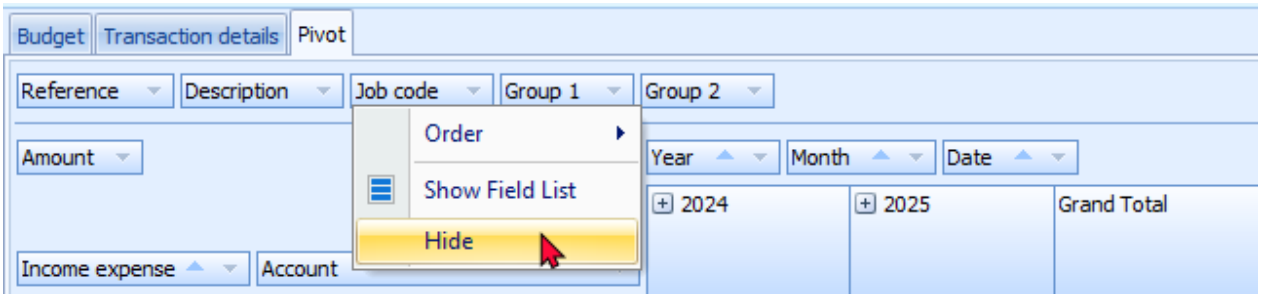
6. Amount - The total debit amounts a credit amounts (prefixed by a - (minus sign)) will be listed. Select the available amount(s) on the list as filter options, as required.
7. Income expense - The options is as follows:
   - True = Income and Expense (Income statement) accounts. The totals of the Income and Expense (Income statement) accounts will be displayed as True Total.
   - False = Capital, Assets and Liabilities (Balance sheet) accounts. The totals of the Capital, Assets and Liabilities (Balance sheet) accounts will be displayed as False Total.
8. Account - All accounts will be listed by Account code and description. Select the available account(s) on the list as filter options, as required.

Column Area:

9. Year - The budget totals will be listed for each calendar year. For example, if your financial year starts on 1 January 2020 and ends on 31 December 2020, only one (1) financial year will be listed, i.e. 2020. In this example the financial year starts on 1 March 2020 and ends on 28 February 2021, the totals will be listed for 2020 and 2021. Select the year on the list as filter options, as required.
10. Month - Period 0 to 12 will be listed if your Reporting dates are set for a 12 periods (Setup → Reporting dates (Setup ribbon), the period numbers will be listed. Select the period (month) on the list as filter options, as required.
11. Date - All the dates for the selected period or dates selected on the options section of the Budget tab, will be listed. Select the available date(s) on the list as filter options, as required.

Hide Pivot grid fields

Select a Pivot grid field, right-click, and select "*Hide*" on the context menu. The selected Pivot grid field will be removed from the grid. For example, if you do not use Projects, you may click on the "Job code" pivot grid field, and select "*Hide*" on the context menu to remove "*Job code*" from the Pivot Filter Area.



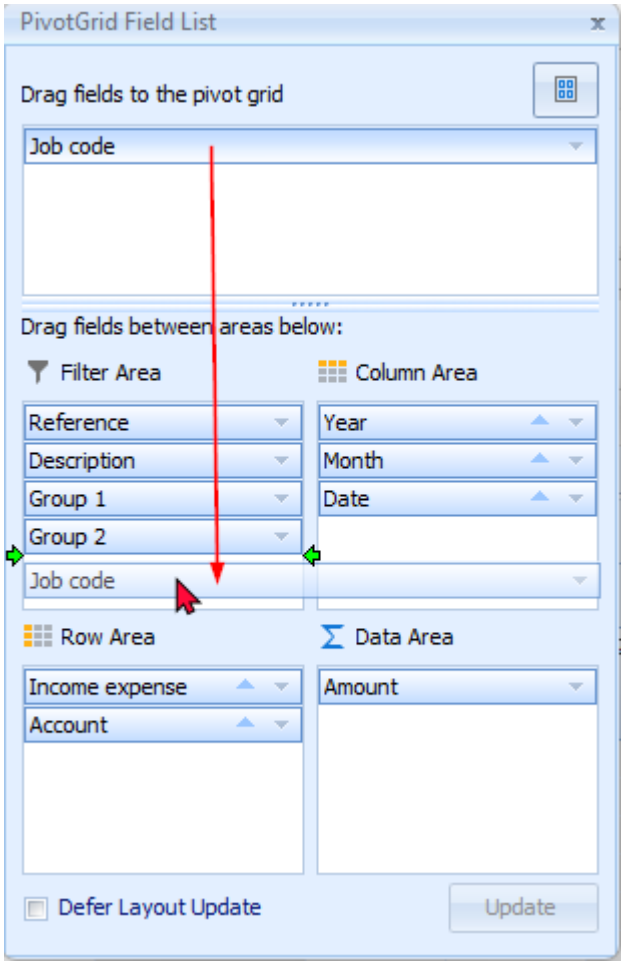
If you do not use Cost centres, you may hide "Group 1" for Cost centre 1 and select the "Hide" option on the context menu. To hide Cost centre 2, you may repeat the process for "Group 2" to hide Cost centre 2.

The removed Pivot grid fields will not be displayed on the "*Filter area*" of the Pivot grid, but will be added to a list in the "*Drag fields to the pivot grid*" on the "*PivotGrid Field List*" screen.

Add hidden Pivot grid fields

If a Pivot grid field is removed accidentally, you may add the Pivot grid field again.

To do this, right-click on the "*Filter Area*" and select the "*Show Field List*" option on the context menu. This will launch the "*PivotGrid Field List*" screen. On the "*Drag fields to the pivot grid*" list, select the field and drag it to the "*Filter Area*" list. You may also drag it straight onto the "*Filter Area*" of the Pivot screen itself.

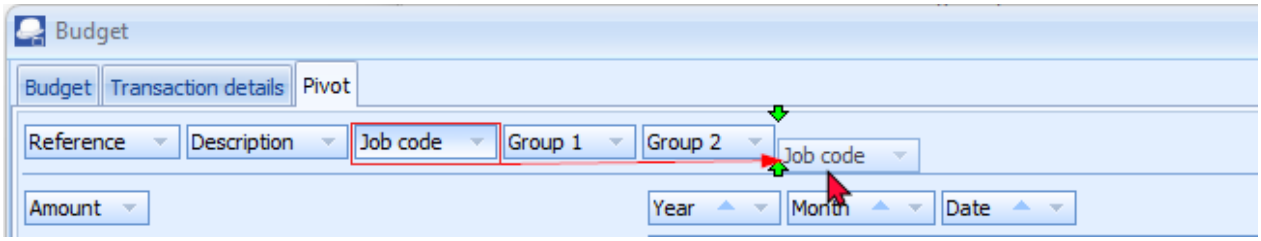


Order (sequence) of columns

To arrange the sequence of Pivot grid fields, you may select a Pivot grid field, right-click, and select the following options from the "*Order*" option the context menu:

1. Move to Beginning - Move to the first Pivot grid field.
2. Move to End - Move to the last Pivot grid field.
3. Move Left - Move the selected Pivot grid field before the previous Pivot grid field to the left.
4. Move Right - Move the selected Pivot grid field after the next Pivot grid field to the right.

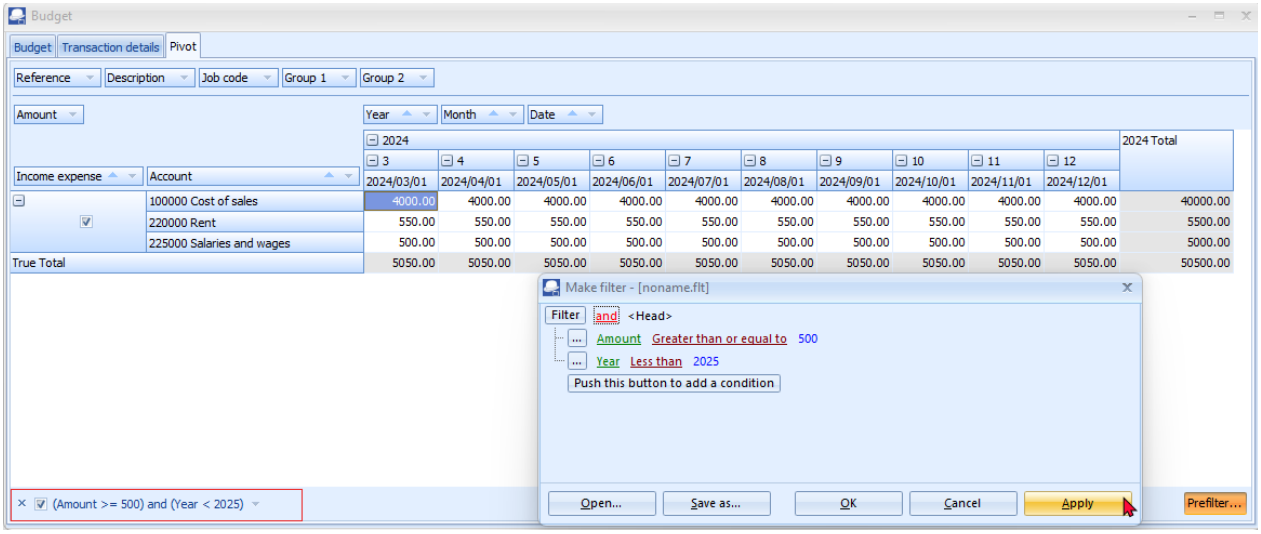
You may use your mouse to drag a selected Pivot grid field to the right or left to your required position.



Filters

Right-click on the Filter Area, Data Area or Column Area to access the "*Show Field List*" or the "*Show Prefilter Dialog*" options.

PivotGrid Field List



The "*PivotGrid Field List*" lists the available Pivot grid fields not displayed on the default Pivot table view. You select an available field on the list and add them to the four (4) areas (i.e. Data Area, Filter Area, Column Area or the Row Area) of the Pivot table.

You may click on the Prefilter option on a column list or click on the Prefilter button to:

1. Make a filter (add or delete conditions and groups).
2. Save a filter.
3. Open a filter.

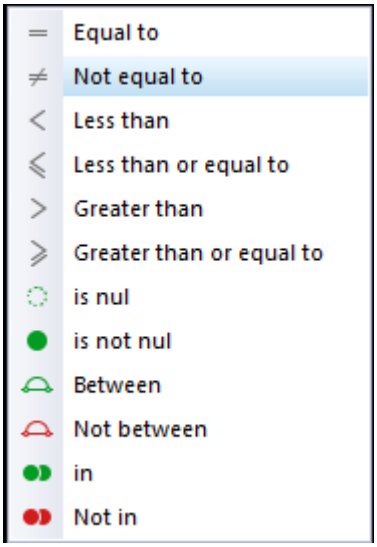
Make a Custom Filter

To make a filter:

1. Click on the Prefilter option on a column list or click on the Prefilter button.

2. Select an operator (i.e. and, or, and not, or not).
3. Click on the Filter button (or on the ... button) and select one of the following options on the context menu:
    a) New condition
    b) New group
    c) Delete row (If you click on the Filter button, you may delete all rows (conditions and groups)).
4. Select a column from the list of available data applicable to the screen. In this example, the Date is selected.
5. Select a filter condition. If the Between option is selected, another field is opened to select another date.
6. Once you have created your conditions or groups, click on the Apply button.
7. Click on the OK button to close and exit this Make filter screen.

Conditions



1. Equal to - list or display all values which is the same as the specified value.
2. Not equal to - list or display all values which is not the same as the specified value.
3. Less than - list or display all values smaller than the specified value.
4. Less than or equal to - list or display all values smaller or equal to the specified value.
5. Greater than - list or display all values greater than the specified value.
6. Greater than or equal to - list or display all values greater or equal to the specified value.
7. is null - excludes any value entered, will not be listed or displayed.
8. is not null - is not zero - any value which is not equal to zero will be listed or displayed.
9. Between - Specify specific values, etc. to include only matching values.

10. Not between - Specify specific values, etc. to exclude values.

11. in - In a specified value.

12. Not in - Not in a specified value.

If a Date for a column condition is selected, additional conditions will be available (i.e. is this month, is this year, is next 7 days, is next week, is next 14 days, is next two weeks, is next 30 days, is next month, is future, is this week, is yesterday, is today, is last 7 days, is last week, is last 14 days, is last two weeks, is last 30 days, is last month, is last year, is past, is this week, etc.

Save Custom Filter Files

To Save a Custom Filter file:

1. Once you have sorted or filtered your data with the Make filter utility, click on the Save as... button. The "*Save active filter as*" screen will be displayed.

2. Select a Directory in which you wish to save the custom filter file.

3. Enter a file name.

4. Click on the Save button to save the Filter in a (*.*flt*) Filter file format. You may then at any later stage open the saved *.flt file.

Open Custom Filter Files

To Open a Saved a Custom Filter file:

1. Once you have sorted or filtered your data with the Make filter utility, click on the Open... button. The "*Open saved filter as*" screen will be displayed.

    - True = Income and Expense (Income statement) accounts. The totals of the Income and Expense (Income statement) accounts will be displayed as True Total.

- False = Capital, Assets and Liabilities (Balance sheet) accounts. The totals of the Capital, Assets and Liabilities (Balance sheet) accounts will be displayed as False Total.

14. Account - All accounts will be listed by Account code and description. Select the available account(s) on the list as filter options, as required.

15. Year - The budget totals will be listed for each calendar year. For example, if your financial year starts on 1 January 2022 and ends on 31 December 2022, only one (1) financial year will be listed, i.e. 2022. In this example the financial year starts on 1 March 2022 and ends on 28 February 2023, the totals will be listed for 2022 and 2023. Select the year on the list as filter options, as required.

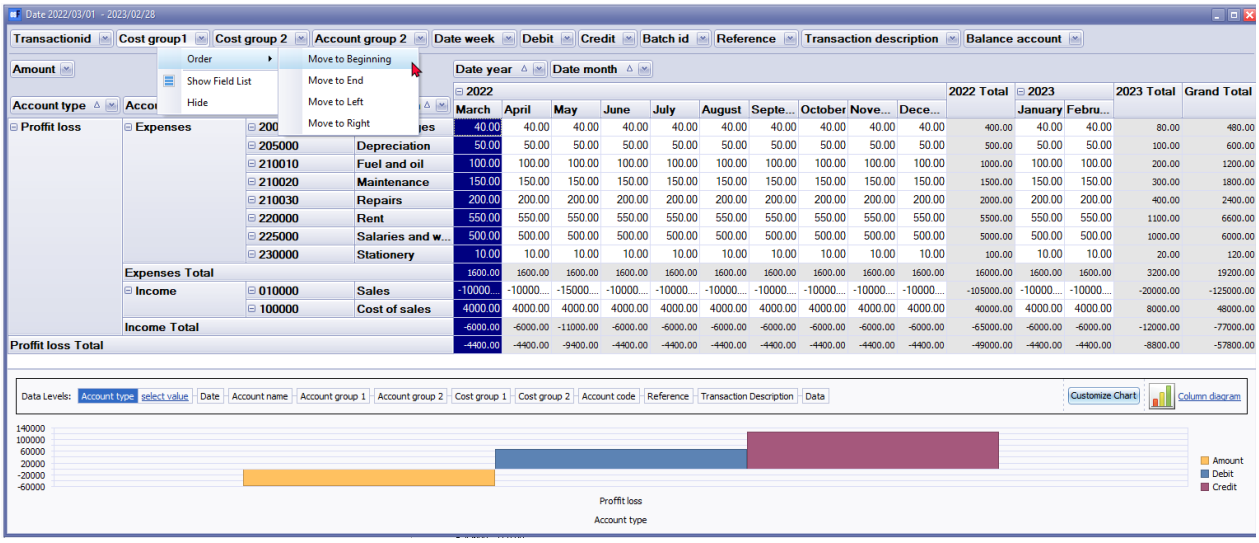
16. Month - Period 0 to 12 will be listed if your Reporting dates are set for a 12 periods (Setup → Reporting dates (Setup ribbon), the period numbers will be listed. Select the period (month) on the list as filter options, as required.

17. Date - All the dated for the selected period or dates selected on the options section of the Budget tab, will be listed. Select the available date(s) on the list as filter options, as required.

Change sequence add / remove Pivot grid fields

Hide Pivot grid fields

Select a Pivot grid field, right-click, and select Hide on the context menu. The selected Pivot grid field will be removed from the grid. For example, If you do not use Cost centres, You may hide Cost group 1 and Cost group 2.

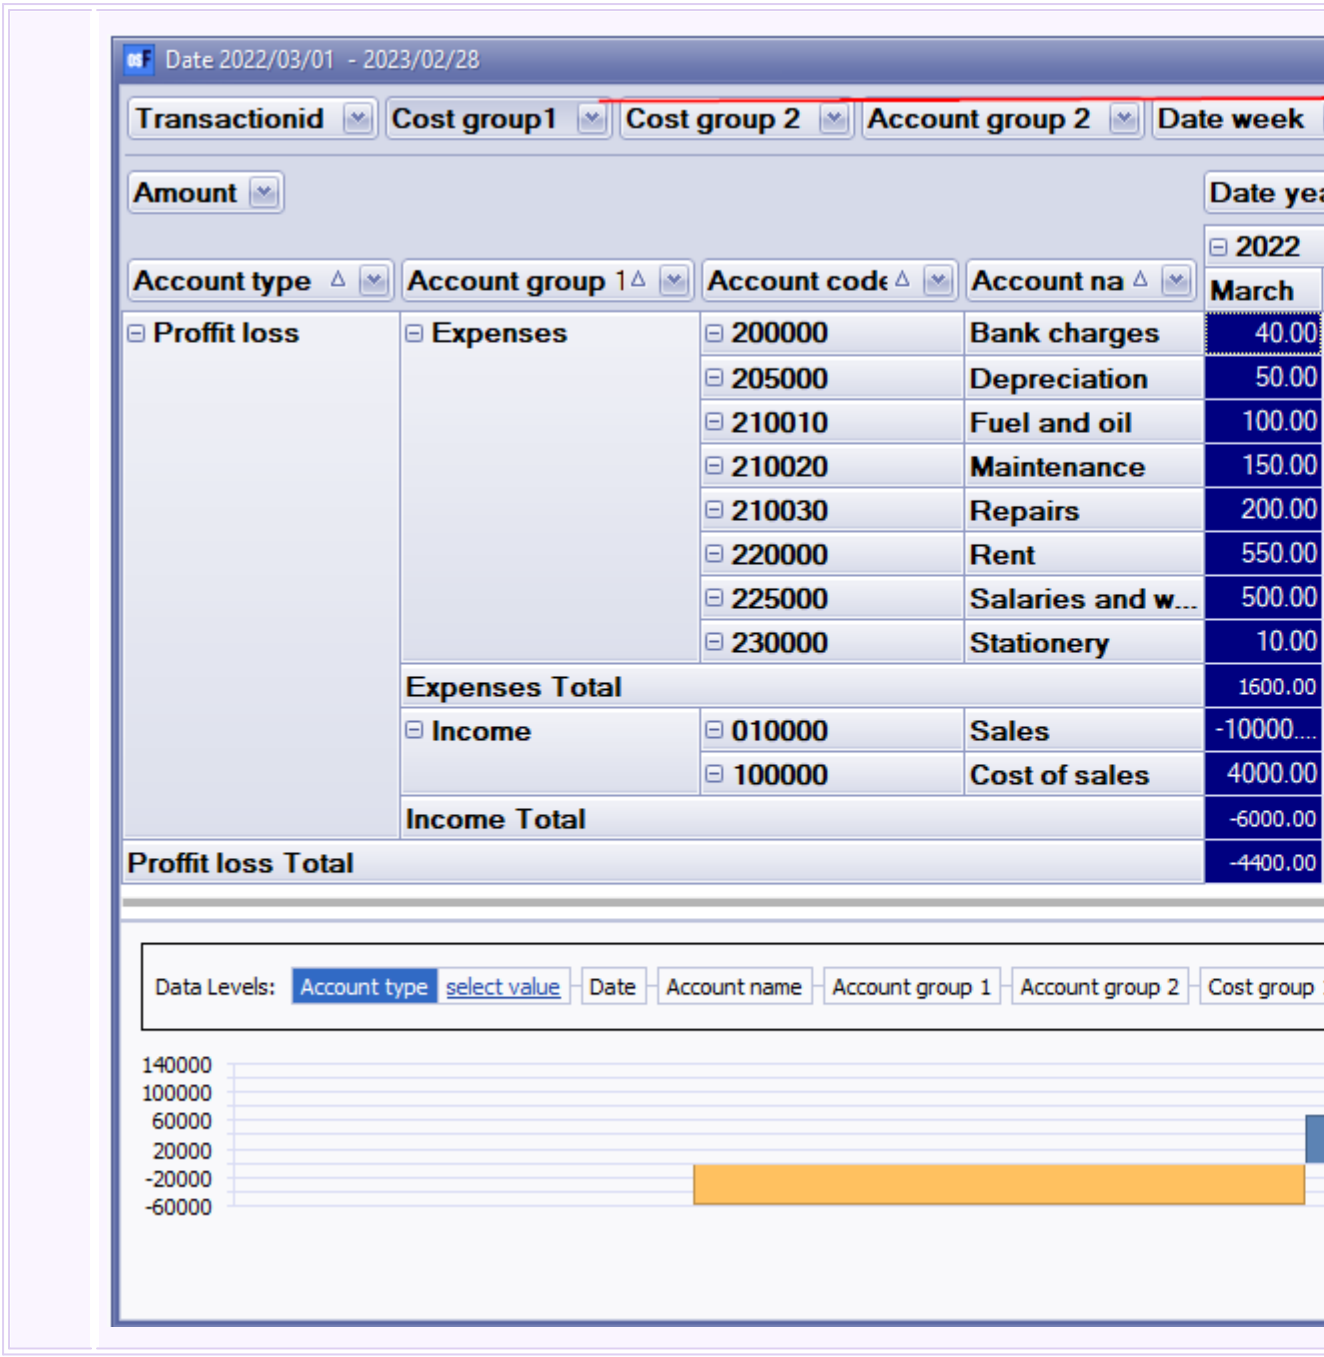


Order

You may select a Pivot grid field, right-click, and select the following options on the context menu:

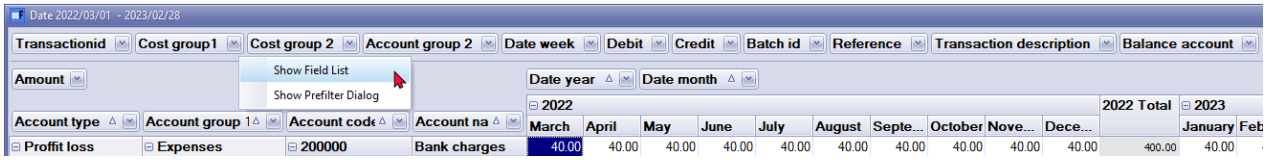
1. Move to Beginning - Move to the first Pivot grid field.
2. Move to End - Move to the last Pivot grid field.
3. Move Left - Move the selected Pivot grid field before the previous Pivot grid field to the left.
4. Move Right - Move the selected Pivot grid field after the next Pivot grid field to the right.

You may use your mouse to drag a selected Pivot grid field to the right or left to your required position.



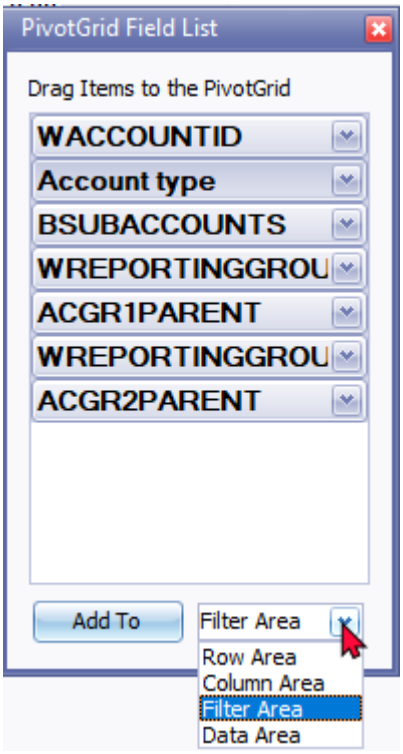
Filters

Right-click to access the "*Show Field List*" or the "*Show Prefilter Dialog*" options.



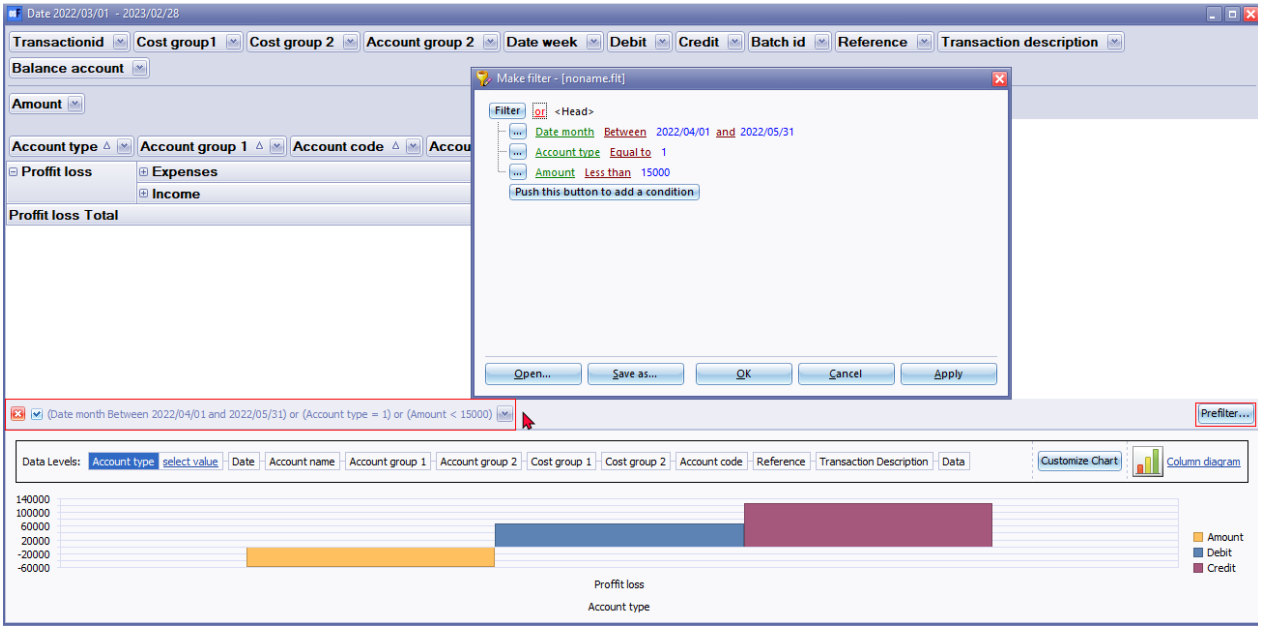
PivotGrid Field List

Pivot grid fields



Show Prefilter Dialog

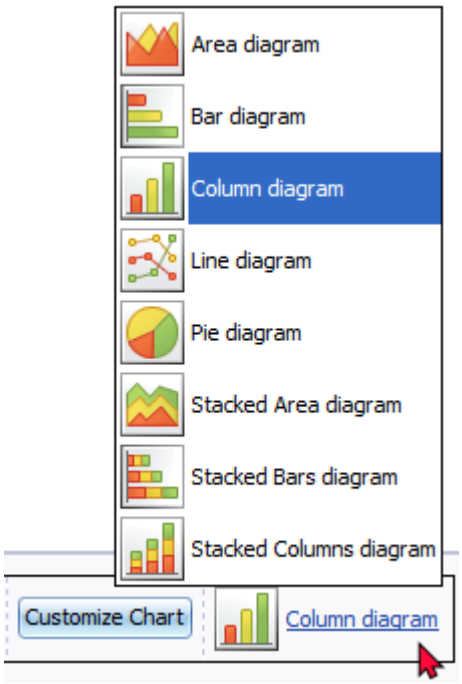
The "*Prefilter Dialog*" allows you to create custom filters for the Pivot.



Customise the graphs

Graph types

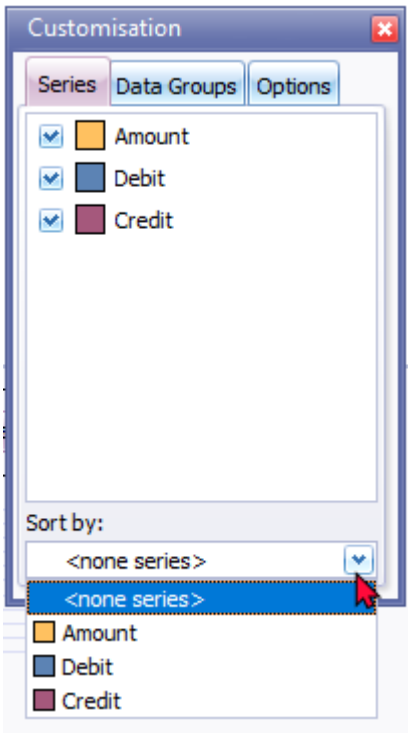
You may select the one of the following diagrams to view the graph.



Series

By default, only the Amount and Debit and Credit amount is displayed.

You may remove the tick of the series or add a tick to a series. For example, if you wish to see only the Debit and Credit amounts, tick these options; and if you do not wish to view the Amount, remove the tick.



Sort by: select the options in the series to change the sequence in which the data in the graph will be displayed.

Data groups

Data groups is empty.

Options

You may change the default values for the "*Legend, Title, Toolbox*" and "*Other (Value Hints)*" according to your requirements.

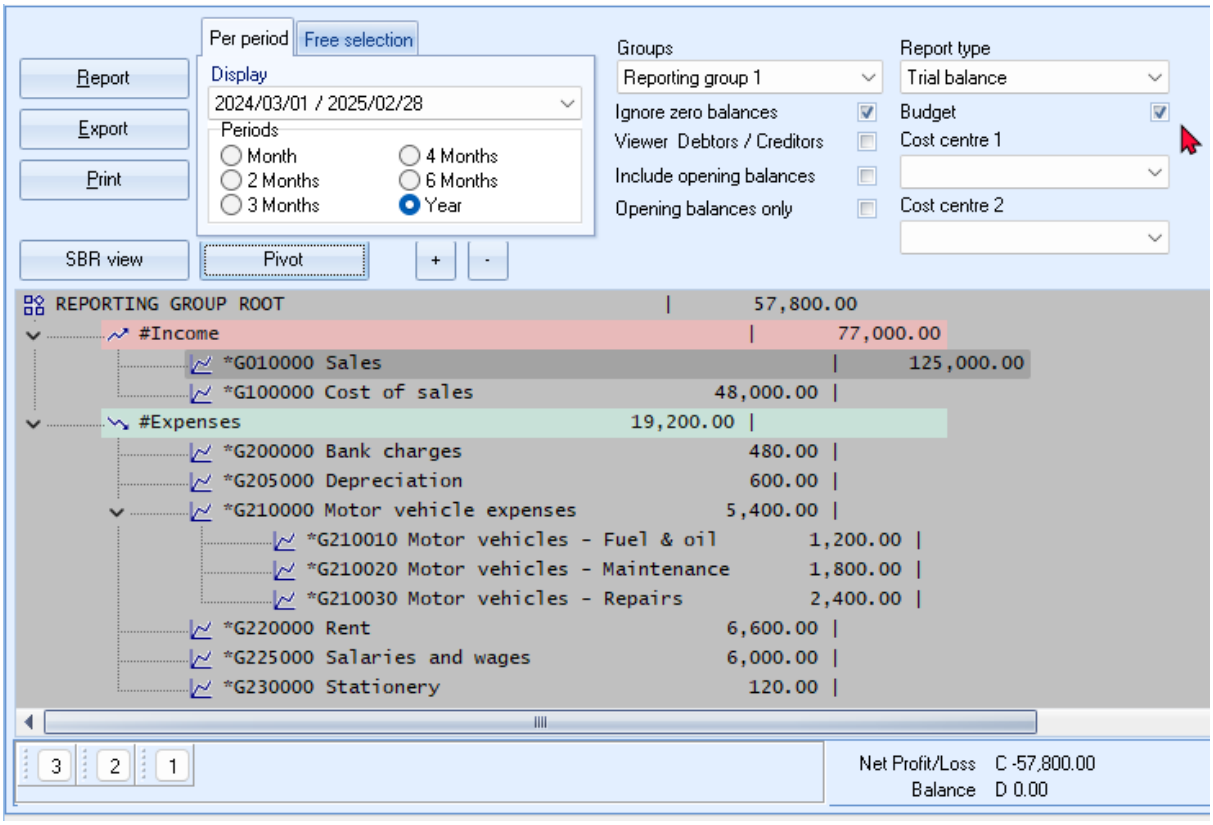
Budget listing reports

The "*Budget*" option, if selected, will list only the budget figures (Budget listing) in the Trial balance, Income statement, Balance sheet and Standard column balances report types.

Budget listing - Income statement options

To view and analyse budget listing:

1. On the Reports ribbon, select Ledger analyser 1 or Ledger analyser 2.
2. Select the Trial balance, Income statement, Balance sheet or Standard column balances report types. In this example, Income statement the report type is selected.
3. Select the "*Budget*" option (tick).



Buttons 11 to 1 at the bottom of the report - is shortcut keys to the last accessed T-Account viewer options or Pivot options. These shortcuts will be cleared when you close active forms, or when you open the Set of Books.

4. Select the period on the Per period tabs. You may click on the Free selection tab to select a specific date or a range of dates to include budget figures in the report.
5. Click on the Report button to refresh and generate the budget figures.
6. Click on the Print button.

Printed : Budget listing - Income statement

An example of the "*Budget listing*" in the "*Income statement*", is as follows:

	Totals Debit	Credit	Debit	Credit
REPORTING GROUP ROOT		57,800.00		
Income		77,000.00		
010000 Sales				125,000.00
100000 Cost of sales			48,000.00	
Expenses	19,200.00			
200000 Bank charges			480.00	
205000 Depreciation			600.00	
210000 Motor vehicle expenses	5,400.00			
210010 Motor vehicles - Fuel & oil			1,200.00	
210020 Motor vehicles - Maintenance			1,800.00	
210030 Motor vehicles - Repairs			2,400.00	
220000 Rent			6,600.00	
225000 Salaries and wages			6,000.00	
230000 Stationery			120.00	
	Totals		67,200.00	125,000.00
	Net profit		67,200.00	125,000.00
				57,800.00

If any of these budget figures need some adjustment, go to Budgets (Reports ribbon) or Setup → Accounts - Budget tab (Setup ribbon); select the applicable accounts and edit or enter or delete the figures, as necessary.

Printing the Budget vs actual (3 Periods) report

The Budget vs Actual (realisation - 3 periods) report lists the Income and Expense account balances and budget figures for three (3) periods as comparative figures.

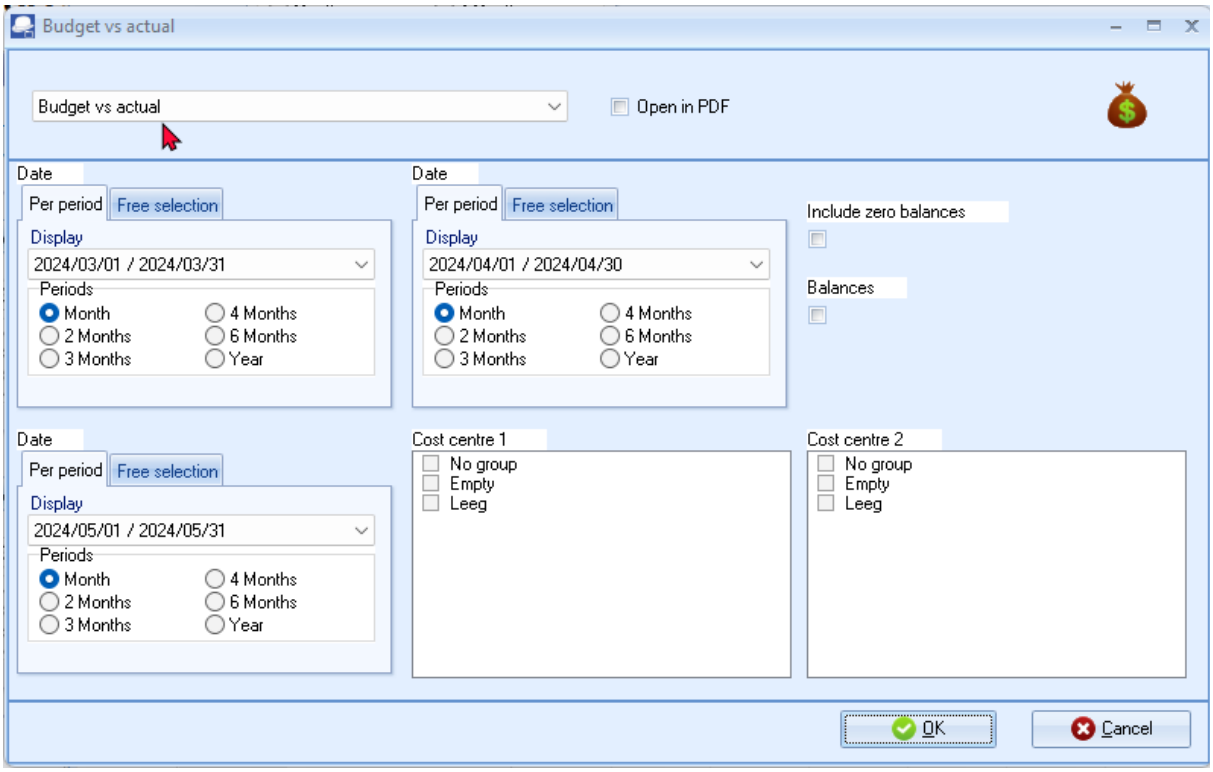
Only the transactions in documents and batches which are posted (updated) to the ledger will be included in this report.

Budget figures are entered and edited in the Setup → Accounts (Setup ribbon).

If you have activated Cost centres and have entered the budget figures for Cost centres, you may select (tick) the Cost centres to print this report for your Cost centres.

To print a Budget vs actual (3 periods) report:

1. On the Reports ribbon, select Reports → Ledger → Budget.



2. Select the following options:

   a) Period - Select up to three (3) periods on the Per period tabs. You may click on the Free selection tab to select a specific date or a range of dates to include balances and budget figures in the report.

   b) Include zero balances - If this option is not selected (not ticked), it will list only the expense and income accounts which has balances and / or budget figures. Tick this option to include all accounts including those with no actual transactions and / or budget figures).

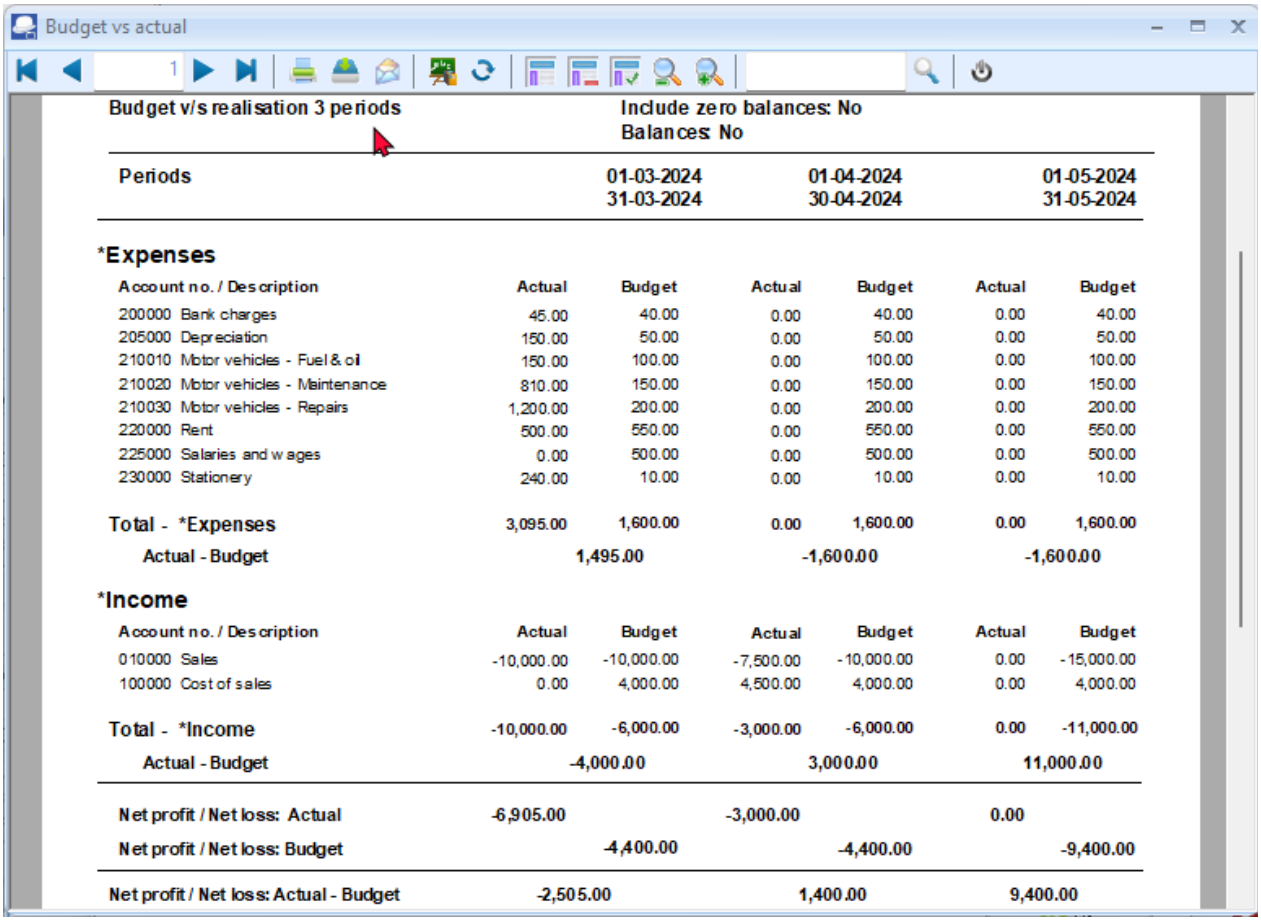
   c) Balances - If this option is not selected (not ticked), it will list the expense and income accounts which has balances and / or budget figures. If you tick this option to show only the actual transactions totals and / or budget totals of expense and income accounts for the selected period or dates.

d) Cost centre 1 - Will be listed if you have activated Cost centres and created Cost centre 1 (Groups (Setup ribbon)). You may select any of these Cost centres, to include in the report.

e) Cost centre 2 - Will be listed if you have activated Cost centres and created Cost centre 2 (Groups (Setup ribbon)). You may select any of these Cost centres, to include in the report.

3. Click on the OK button.

The "*Budget vs actual (realisation - 3 periods)*" report, should be displayed as follows:



The details, is as follows:

1. Header section - Report name and Periods as selected on the Periods in the "*Report options / parameters*" screen.

2. Expenses - A list of the accounts (created as Income and Expense account type and linked to the Expenses group / financial category). If the "*Include zero balances*" field is selected (ticked), all expense accounts will be listed (including those accounts with no actual transactions and or budget figures. If the "*Balances*" field is selected (ticked), only the "*Total - *Expenses*" will be displayed.

3. Income - A list of the accounts (created as Income and Expense account type and linked to the Income group / financial category). If the "*Include zero balances*" field is selected (ticked), all income accounts will be listed (including those accounts with no actual transactions and or budget figures). If the

"*Balances*" field is selected (ticked), only the "*Total - *Income*" will be displayed.

4. Totals -

    a) Net Profit / Net Loss: Actual - This is the total of the Expenses less the Income totals for posted batches and documents. A negative figure indicates a Net Profit and a positive figure displays a Net Loss for the selected periods (dates).

    b) Net Profit / Net Loss: Budget - This is the total of the Expenses less the Income totals for the budget figures as entered / edited (Setup → Accounts (Setup ribbon)). A negative figure indicates a Net Profit and a positive figure displays a Net Loss for the selected periods (dates).

    c) Net Profit / Net Loss: Actual - Budget - This is the total of the Net Profit / Net Loss: Actual less the Net Profit / Net Loss: Budget totals. A negative figure indicates that the posted batches and documents exceeds (overspend) the budget figures for the selected periods (dates). A positive figure indicates that the posted batches and documents is less than the budget figures (available) for the selected periods (dates).

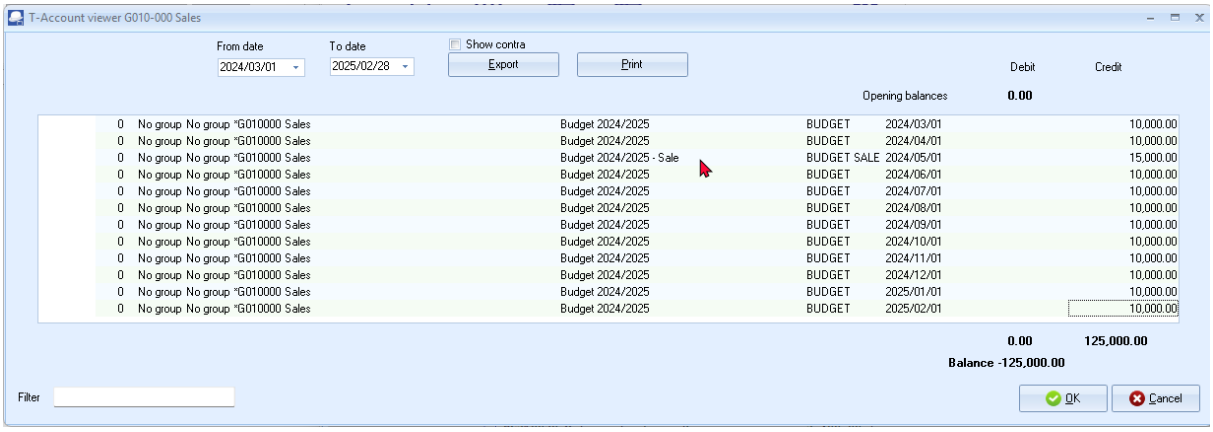
Budget listing - T-Account viewer

You may list the Budget figures (for all accounts or specific accounts), as entered or processed in the Budgets (Reports ribbon); or on Setup → Accounts (Setup ribbon), in the T-Account viewer. You may print these budget figures and/or export the budget figures in T-Account viewer to a spreadsheet.

To print a list of budgets in the T-Account viewer:

1. If the Budget option is selected on the "*Trial balance, Income statement*", or "*Balance sheet*" report types in the Ledger analyser 1 or 2, you may right-click and select the Show details option. This will display the budget figures in the T-Account viewer.

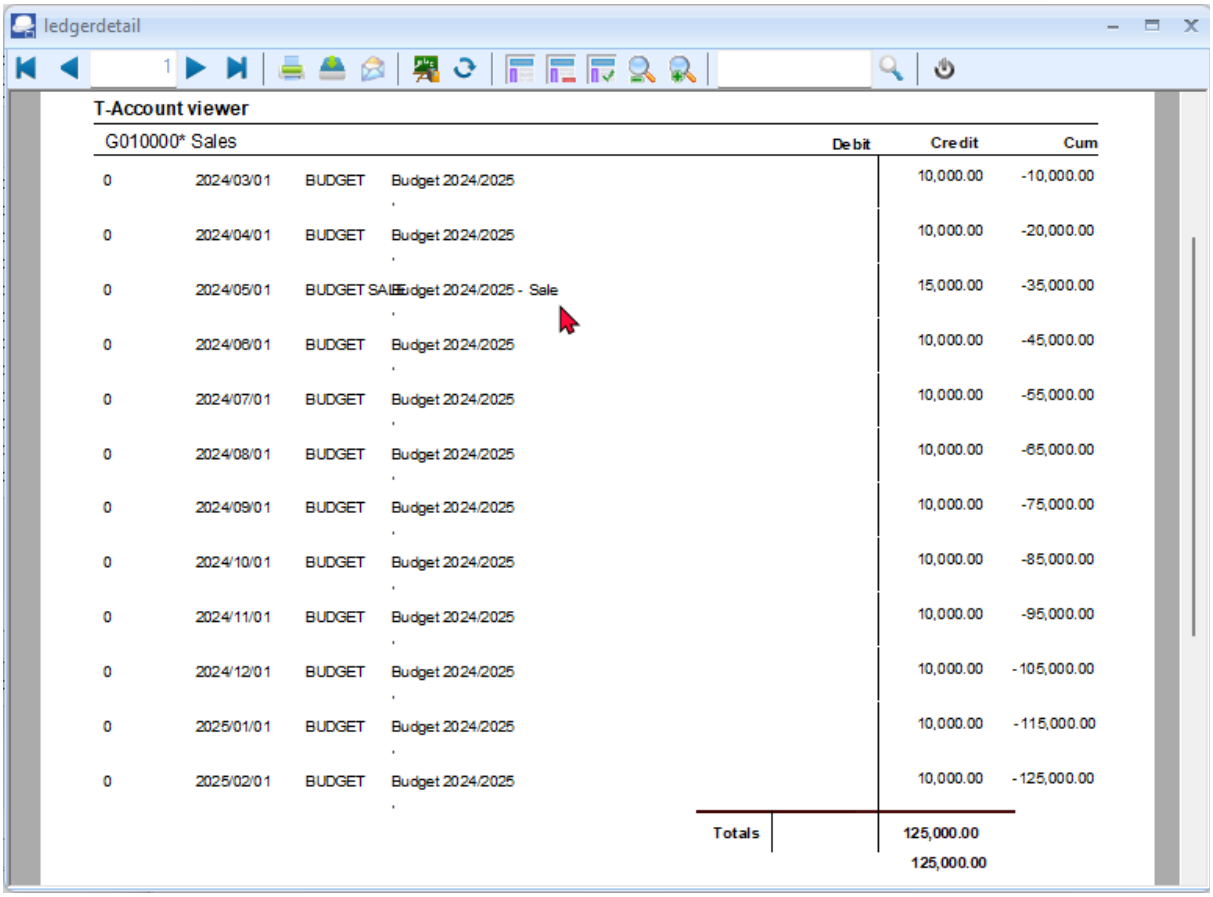


2. Select the dates from and to to include in the budget figures, if necessary.

> *The Batch number is displayed as "0", to indicate that this is a budget listing.*

> *The "Show contra" option will not list the Contra accounts, since no Contra accounts is available for budgets.*

3. Click on the Print button. You may also click on the Export button to export the budget figures to a spreadsheet.



Created with the Standard Edition of HelpNDoc: Easy to use tool to create HTML Help files and Help web sites

Search - Investigator

The Investigator allows you to search for data in an open Set of Books. To search or locate data, you may enter a valid word or phrase to search for an item. This facility also allows you to define, or refine, or filter the search criteria, and select to view the details for a selected search result.

SERIAL TRACKING - If you have entered a serial number of a product (stock item) as a comment on your sales documents (Invoices, Credit notes and/or Quotes) and/or on Purchase documents (Purchases and Supplier returns and/or Orders), you may enter the serial number in the "Search for": field.

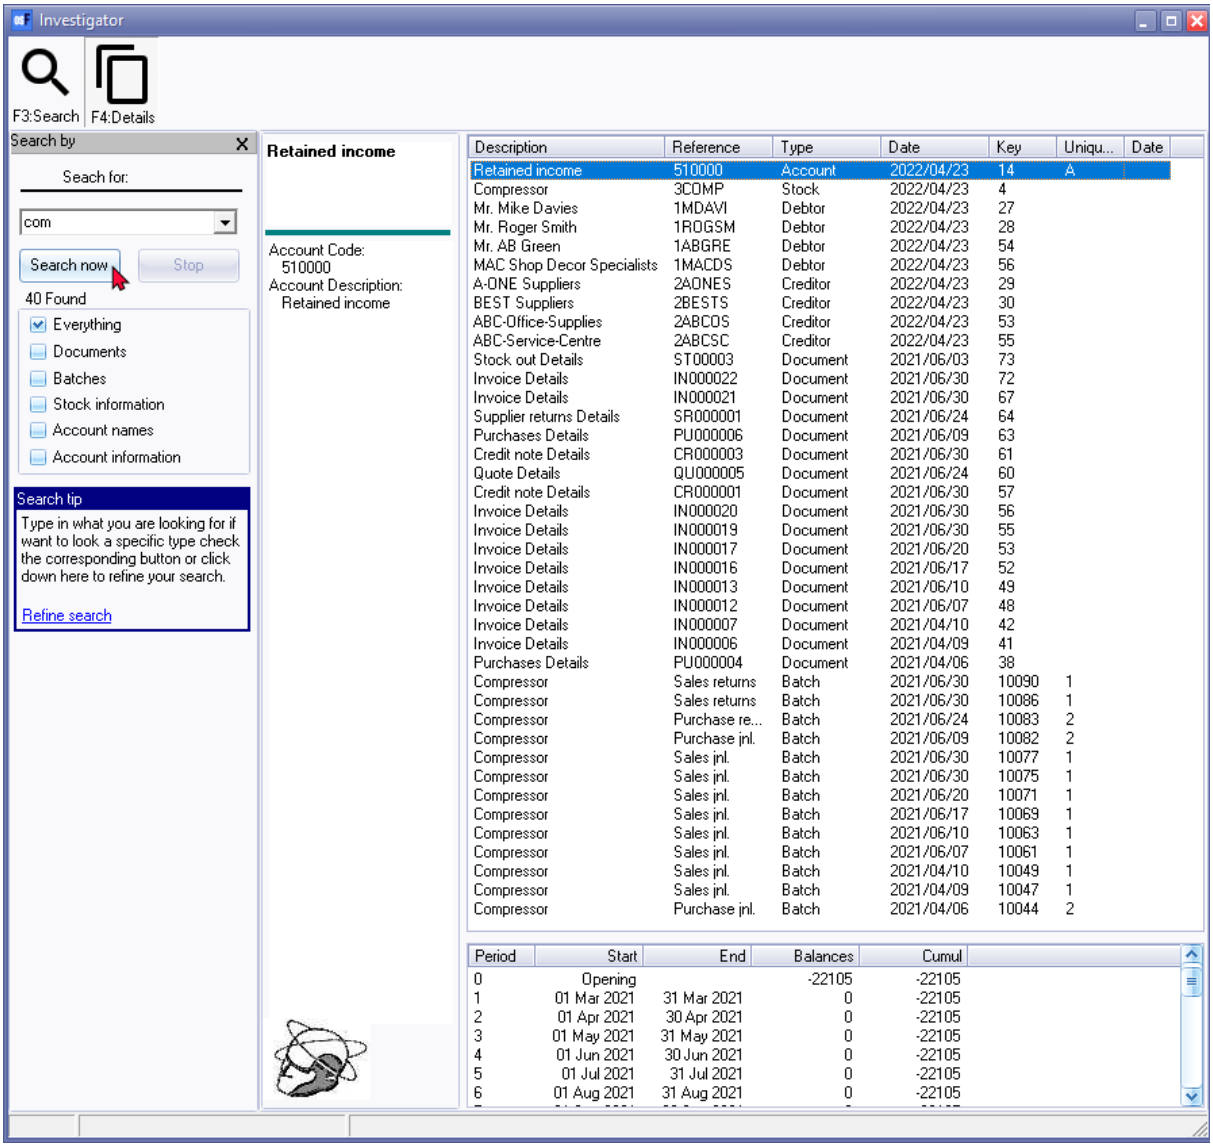
If you click on the Search now button, the Documents will be listed. You may then double-click on the selected document to preview the document.

Comments entered in document lines are searchable.

Remarks is not searchable.

To search for data using the Investigator:

1. On the Default ribbon, select Search. The "*Investigator*" screen is displayed:



2. Enter a word or phrase to search for specific data. To filter the data, you may also select to include everything or documents, batches, stock information, account names and/or account information.

3. Click on the Search now button or on the F3:Search icon. The number of items found (which matches the search criteria) will be displayed, and each of the items found will be listed.

4. Select an item type from the search results list and right-click - select "*Show detail*" option on the context menu (or double-click) to launch the options. The types is as follows:

    a) Account - Launch the T-Account viewer - You may select or enter the dates from and dates to, as well as any filters (if necessary) to view and filter the transactions. Transactions may be printed and exported to a spreadsheet file.

    b) Debtor / Creditor - Launch the Debtor accounts screen to edit or check specific details for the debtor (customer / client). If a Creditor is indicated, it will launch the specific creditor (supplier / vendor) account.

c) Stock - Launch the Stock items screen to edit or check specific details for the stock item.

d) Document - The selected document will be printed.

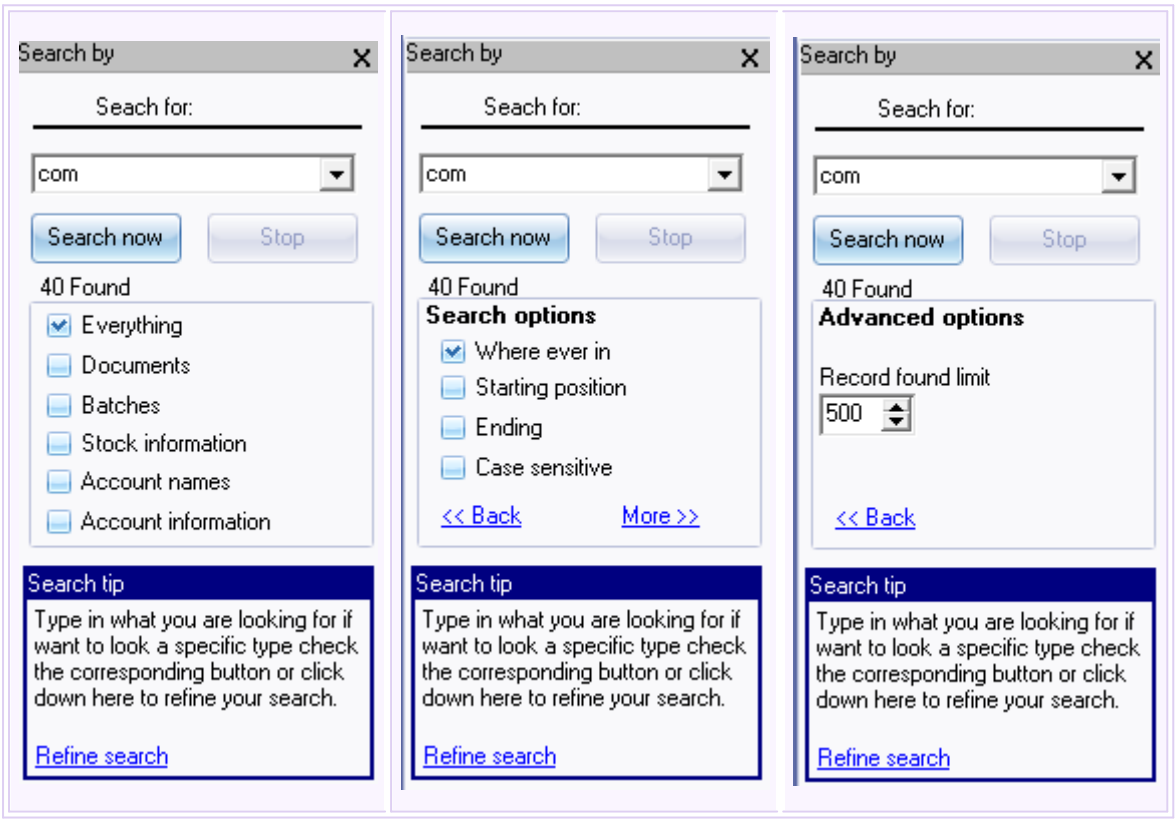
e) Batch - Launch the T-Account viewer - You may select or enter the dates from and dates to, as well as any filters (if necessary) to view and filter the transactions. Transactions may be printed and exported to a spreadsheet file.

For certain types (e.g. Account), the F4:Details icon will be available. If you click on this icon, the balances for general ledger accounts will be displayed for each period.

5. To close or exit this screen, click on the Close button on the title bar.

Further Search options are available to select from. If you click on the More >> link, the Advanced options will be available in which the limit for the number of records found may be set.

To refine or filter the search criteria, you may click on the Refine search link.



Payroll - Salaries and wages

Payroll plugin

Payroll - Manual - Shop - Licence : Once-off -

Supported applications: Logisal, RoosRoos and Unit 4.

Seamlessly import payroll data from supported applications like Logisal, RoosRoos, and Unit 4 directly into osFinancials5/TurboCASH5, simplifying payroll-related transactions.

Is the program you use not listed? No problem! With our commitment to customer satisfaction, simply send us an export, and we will explore the possibility of adding that import. In most cases, the addition is free of charge.

Say goodbye to manual data entry and hello to efficiency as you effortlessly generate batches or journals for payroll processing within osFinancials5/TurboCASH5.

Payroll Plugin Access - Batch entry - F9:Process - Payroll import option.

Introduction to payroll - salaries and wages

Payroll is the process by which a company pays its employees for the work they have done. Salaries and wages are the most common forms of compensation that employers use to pay their employees. Salaries are typically paid to employees who are exempt from overtime pay, such as managers and professionals, while wages are paid to non-exempt employees who are entitled to overtime pay for any hours worked over 40 hours in a week.

The payroll process involves several steps, including tracking employee time and attendance, calculating gross pay, deducting taxes and other payroll deductions, and issuing paychecks or direct deposits to employees. Payroll also involves complying with federal, state, and local laws and regulations related to employee pay and benefits, including minimum wage laws, overtime regulations, and payroll tax requirements.

The accurate and timely processing of payroll is essential for maintaining employee satisfaction and ensuring compliance with legal requirements. Mistakes in payroll processing, such as incorrect pay amounts or missed tax payments, can result in financial penalties and damage to the company's reputation.

Therefore, it is important for companies to have effective payroll processes and systems in place, and to

keep up-to-date with changing laws and regulations related to payroll. This can include using payroll software to streamline processes, working with payroll experts or outsourcing payroll functions to a third-party provider, and providing training to employees to ensure they understand their pay and benefits.

Payroll differences from country to country

Payroll processes and regulations can vary significantly from country to country, and even within countries, depending on local laws and customs. Here are some examples of payroll differences from country to country:

1. Payroll taxes: The types of payroll taxes, tax rates, and thresholds can vary widely from country to country. In some countries, employers are responsible for withholding both employee and employer payroll taxes, while in others, only the employee is responsible. Some countries also have social security taxes, pension contributions, or health insurance premiums that must be paid by the employer or employee.
2. Minimum wage: Minimum wage laws also vary widely between countries, with some countries not having a minimum wage at all. Additionally, some countries have different minimum wage rates for different industries or regions.
3. Overtime regulations: Overtime regulations also differ between countries, with some countries mandating overtime pay for hours worked over a certain number per week or per day, while others do not. Some countries also have different overtime pay rates depending on the time of day or day of the week worked.
4. Payroll processing frequencies: Payroll processing frequencies can also differ between countries. For example, in the United States, it is common to process payroll bi-weekly or semi-monthly, while in some countries, payroll is processed monthly.
5. Leave and vacation benefits: Paid leave and vacation benefits vary between countries and may be subject to local laws and regulations. In some countries, employers are required to provide paid sick leave, parental leave, or vacation time, while in others, it is not mandated by law.
6. Payroll reporting requirements: Countries have different payroll reporting requirements, including the frequency of reports and the specific information that must be reported. In some countries, employers are required to submit regular payroll reports to government agencies, while in others, reporting is not required.

It is important for companies operating in multiple countries to be aware of these payroll differences and to ensure compliance with local laws and regulations. This may require the help of local payroll experts or legal counsel to navigate the complex and changing landscape of global payroll.

What is the basic payroll accounts and transactions in the chart of accounts?

The chart of accounts for payroll includes accounts that are used to record various payroll transactions. Some of the basic payroll accounts and transactions in the chart of accounts are:

1. Salaries and Wages Payable: This account represents the amount of salaries and wages earned by employees but not yet paid. It is credited when employees earn their wages or salaries, and debited when the company pays them.
2. Employee Benefits Payable: This account represents the amounts the company owes for employee benefits such as health insurance, retirement plans, and vacation pay. It is credited when the company incurs the expense and debited when the company pays for the benefits.
3. Payroll Tax Expense: This account represents the taxes the company is required to pay on behalf of its employees, such as Social Security, Medicare, and federal and state income taxes. This account is debited as the company incurs the expense.
4. Payroll Tax Payable: This account represents the amounts the company owes for payroll taxes. It is credited when the company withholds taxes from employee pay and debited when the company remits those taxes to the government.
5. Employee Advances: This account represents any money the company has advanced to employees as an advance on their salaries or wages. It is debited when the advance is made and credited when the employee repays the advance.
6. Payroll Clearing: This account represents the net amount paid to employees after all deductions have been made. It is debited when the company pays employees and credited when employees cash their paychecks.

Each payroll transaction involves at least two accounts, with one account being debited and another being credited. For example, when an employee is paid, the Payroll Clearing account is debited for the amount of the payment, and the Salaries and Wages Payable account is credited for the amount owed to the employee.

What options is there to import payroll transactions from a payroll system into a accounting software system?

There are several options for importing payroll transactions from a payroll system into an accounting software system. Some of the most common methods include:

1. Manual entry: This involves manually entering each payroll transaction into the accounting software.

While this method is the most time-consuming and prone to errors, it is the simplest and most accessible option for smaller businesses.

2. Importing transactions as a CSV File: Many payroll systems can export transactions as a CSV file that can be imported directly into an accounting software system. This option saves time and reduces errors, but may require some formatting adjustments to ensure the data is correctly mapped to the appropriate accounts.
3. Integrating Payroll and Accounting software: Some payroll and accounting software systems have integrations that allow for the automatic transfer of payroll transactions. This option is the most efficient and eliminates the need for manual data entry or file transfers.
4. Using a third-party integration platform: There are third-party integration platforms available that can connect payroll and accounting software systems that do not have native integrations. These platforms act as a bridge between the two systems and automate the transfer of payroll transactions.

The option that is best for a company will depend on their specific needs and the payroll and accounting software they are using. Factors such as the size of the business, the volume of payroll transactions, and the level of automation desired will all influence which option is most suitable.

Can a payroll system be used in a spreadsheet?

Yes, a payroll system can be created and used in a spreadsheet program like Microsoft Excel or Google Sheets. Spreadsheets are commonly used for managing payroll because they offer a range of features such as calculations, formulas, data validation, and data analysis tools.

To create a payroll system in a spreadsheet, you can start by listing all of the employees and their corresponding salary information. You can then use formulas to calculate the gross pay, deductions, and net pay for each employee.

You can also use conditional formatting to highlight any discrepancies or errors in the data, such as missing or incorrect information. Additionally, you can create charts and graphs to visualize the payroll data and track trends over time.

However, it's important to note that using a spreadsheet for payroll has its limitations, especially for larger organizations. As the number of employees and payroll complexity increases, it may become more difficult to manage and maintain the spreadsheet. In such cases, it may be more efficient to use specialized payroll software that is designed for larger organizations.

How are salaries and wages (payroll) expenses recorded in an accounting system?

Salaries and wages expenses are typically recorded in an accounting system through a process called payroll accounting. This involves several steps, including:

1. Recording employee information: The first step in payroll accounting is to collect and record information about each employee, such as their name, address, Social Security number, tax withholding status, and salary or wage rate.
2. Calculating gross pay: Gross pay is the total amount of money an employee earns before any deductions are taken out. This includes regular wages or salary, as well as any overtime pay or bonuses earned during the pay period.
3. Deducting taxes and other withholdings: Once gross pay is calculated, payroll software will automatically deduct any taxes or other withholdings required by law, such as federal and state income taxes, Social Security taxes, and Medicare taxes.
4. Calculating net pay: Net pay is the amount of money an employee receives after all taxes and other deductions have been taken out.
5. Recording payroll expenses: The final step in payroll accounting is to record the payroll expenses in the company's accounting system. This includes debiting the appropriate expense accounts for salaries, wages, and any employer-paid taxes or benefits, and crediting the company's cash account for the net amount paid to employees.

Payroll accounting can be a complex process, especially for companies with a large number of employees or multiple locations. Many companies use payroll software or outsource their payroll processing to third-party providers to simplify the process and ensure accuracy.

Bad debts

Introduction to Bad debts

Bad debts refer to the portion of a company's accounts receivable that is deemed uncollectible and unlikely to be recovered from customers or clients. When a business extends credit to its customers or

sells products or services on credit, there is a risk that some customers may fail to make payment for various reasons, such as financial difficulties, bankruptcy, or disputes. These unpaid debts become bad debts.

Bad debts are typically recorded as an expense in the financial statements of the business, usually in the form of a provision for bad debts or a specific write-off of the individual customer's outstanding balance. By recognizing bad debts as an expense, the business acknowledges the financial loss it has incurred due to the non-payment of debts.

Accounting standards, such as IFRS (International Financial Reporting Standards) and GAAP (Generally Accepted Accounting Principles), provide guidelines on how to estimate and account for bad debts. It involves assessing the creditworthiness of customers, analysing the ageing of accounts receivable, and considering historical collection patterns to determine the amount of bad debts or provisions to be recorded.

Managing bad debts is an important aspect of credit control and financial management for businesses. By monitoring and controlling credit risk, implementing effective credit policies, conducting regular credit assessments, and taking prompt action to recover outstanding debts, businesses can minimize the impact of bad debts on their financial performance.

Consideration to manage bad debts and provision for bad debts

It's important to establish a provision for bad debts or irrecoverable debts to accurately reflect the uncertainty surrounding the collection of debts. This provision helps businesses estimate the potential losses and maintain appropriate records of the written-off amounts.

To effectively manage bad debts and estimate the provision, businesses should consider the following:

1. Credit control: Carefully assess the creditworthiness of customers before granting credit facilities. Screening debtors and setting credit limits can help mitigate the risk of bad debts.
2. Regular statements: Send debtor statements on a regular basis to remind customers of their outstanding balances and encourage timely payments.
3. Age analysis reports: Utilise debtors' age analysis reports to track overdue amounts and follow up with reminders, letters of demand, and other collection efforts.
4. Early settlement discounts: Consider offering early settlement discounts to incentivize prompt payment from debtors.

Write-off and provisions for bad debt - scope and accounting standards

Write-off and provisions for bad debt are applicable to small businesses as well as larger enterprises. The accounting treatment for bad debts and provisions may vary depending on the accounting standards followed by the business, such as IFRS (International Financial Reporting Standards), IFRS for SMEs (International Financial Reporting Standards for Small and Medium-sized Entities), and GAAP (Generally Accepted Accounting Principles).

Under these accounting standards, businesses are required to assess and recognize potential losses arising from bad debts and make provisions accordingly. The objective is to ensure that the financial statements reflect the true and fair view of the business's financial position, including the estimation of potential losses due to uncollectible debts.

The specific guidelines and requirements for recognizing and measuring provisions for bad debts may differ between the accounting standards. IFRS and IFRS for SMEs provide more detailed guidance on the recognition, measurement, and disclosure of bad debts and provisions. GAAP, on the other hand, may have its own specific principles and requirements for the treatment of bad debts.

It's important for businesses to adhere to the relevant accounting standards applicable in their jurisdiction and industry. This ensures consistency, comparability, and transparency in financial reporting, allowing stakeholders to make informed decisions based on the financial information provided. Consulting with accounting professionals or referring to the specific accounting standards and guidelines is recommended to ensure compliance and accurate financial reporting related to write-offs and provisions for bad debts.

Example of the accounts for Provision for bad debts and Recovery of bad debts in a chart of accounts

An example of the account structure for managing accounts receivable, provision for bad debts, and bad debts recovered in the current asset section of based on a 4-digit Chart of Accounts, is as follows:

1. G1200-000 Accounts receivable (Debtors control): This account is used to track the total amount owed to your business by your customers. It represents the outstanding receivables and is classified as a current asset. The debit balance of $20,000 indicates the total amount owed by your customers.
2. G1210-000 Provision for bad debts: This account is used to record the estimated amount set aside for potential bad debts. It is a contra-asset account and is subtracted from the accounts receivable balance. The provision amount represents an estimate of the potential losses from uncollectible debts.
3. G1220-000 Bad debts recovered: This account is used to record the recovered amount from

previously written-off bad debts. It is a current asset account and is used to offset the provision for bad debts when the recovered amount is received.

By including these accounts in the current assets section of your chart of accounts, you can effectively track accounts receivable, manage provisions for bad debts, and record any recoveries from previously written-off bad debts. This provides a clear picture of your outstanding receivables and the impact of bad debts on your financial statements.

Please note that the account codes (e.g., G1200-000, G1210-000, G1220-000) may vary depending on your specific accounting system or organizational preferences. It's important to use account codes that align with your chart of accounts structure.

Credit control and bad debts

Credit control and bad debts

Credit control and managing bad debts are essential aspects of financial management for businesses. Here are some key points to consider regarding credit control and handling bad debts:

1. Credit control policies: Establishing robust credit control policies and procedures is crucial. This involves assessing the creditworthiness of customers before extending credit, setting appropriate credit limits, and defining payment terms and conditions.
2. Credit checks: Conducting credit checks on potential customers can help assess their financial stability and credit history. This information assists in determining whether to grant credit and the appropriate credit limit.
3. Clear terms and conditions: Clearly communicate your payment terms and conditions to customers upfront. This includes specifying credit periods, penalties for late payments, and any applicable interest charges.
4. Invoicing and Statements: Timely and accurate invoicing is essential to ensure prompt payment. Regularly send account statements to customers to keep them informed of their outstanding balances.
5. Payment reminders: Implement a systematic process for sending payment reminders to customers as payment due dates approach. This can be done through automated reminders or personalized communications.
6. Debt collection: If customers fail to make payments within the agreed terms, initiate a structured debt

collection process. This may involve sending reminder letters, making phone calls, or engaging a debt collection agency if necessary.

7. Provision for Bad Debts: Estimate and allocate provisions for bad debts based on the likelihood of non-payment. This helps account for potential losses and maintains accurate financial reporting.
8. Write-offs: When it becomes clear that a debt is uncollectible, it may need to be written off as a bad debt. Proper documentation and accounting entries should be made to reflect this.
9. Legal options: In extreme cases where all collection efforts fail, legal action may be pursued to recover outstanding debts. Consult legal professionals to explore available options.
10. Regular review: Continuously monitor and review your credit control processes and performance. Identify areas for improvement and implement necessary adjustments to minimize bad debts.

Effective credit control practices can help mitigate the risk of bad debts and maintain healthy cash flow. Regular monitoring, proactive communication, and diligent follow-up are crucial in managing credit effectively and minimizing the impact of bad debts on your business.

When granting credit to customers, the credit screening, credit bureaus and legislation to consider?

When granting credit to customers, it is important to consider several factors related to credit screening, credit bureaus, and relevant legislation. Here's an overview of each aspect:

1. Credit screening:
    - Financial information: Assess the financial stability and creditworthiness of the customer by reviewing their financial statements, bank references, and credit references.
    - Credit history: Obtain credit references from other suppliers or vendors to gauge the customer's payment history and credit behavior.
    - Trade references: Contact the customer's previous or existing suppliers to gather information about their payment habits and creditworthiness.
    - Credit application: Require customers to complete a credit application form that includes essential details such as business information, financial statements, and references.
2. Credit bureaus:
    - Credit reports: Utilize credit reports obtained from credit bureaus that provide information on an individual or company's credit history, payment patterns, outstanding debts, and credit scores.

- Credit scores: Evaluate credit scores provided by credit bureaus to assess the risk associated with extending credit to a particular customer. Credit scores are typically based on various factors such as payment history, credit utilization, length of credit history, and public records.

3. Legislation and regulations:
    - Fair Credit Reporting Act (FCRA): Adhere to the provisions of the FCRA, which governs the collection, dissemination, and use of consumer credit information, ensuring compliance with consumer rights and privacy.
    - Equal Credit Opportunity Act (ECOA): Comply with the ECOA, which prohibits discrimination based on race, colour, religion, national origin, sex, marital status, age, or receipt of public assistance when evaluating credit applications.
    - Data Protection Laws: Abide by applicable data protection and privacy laws to safeguard customer data and ensure proper handling and storage of credit-related information.
    - Industry-Specific Regulations: Consider any industry-specific regulations or guidelines that may impact the extension of credit, such as those related to financial services, healthcare, or consumer lending.

By considering these factors, businesses can make informed decisions when granting credit to customers, mitigating the risk of defaults and ensuring compliance with relevant laws and regulations. It is advisable to establish clear credit policies and procedures, conduct thorough credit assessments, and regularly monitor the creditworthiness of customers to manage credit risks effectively.

Open item feature versus the balance brought forward - Advantages to manage debtor accounts to reduce bad debts

Managing debtor accounts using the Open Item feature can offer advantages in reducing bad debts. Here's how it can help:

1. Improved accuracy: With the Open Item feature, each transaction is treated as a separate item or entry. This allows for precise tracking of individual invoices and payments. By accurately matching payments to specific invoices, you can identify any outstanding balances more easily, ensuring that debts are promptly addressed.
2. Enhanced visibility: The Open Item feature provides a clear overview of each debtor's account, showing all outstanding invoices and payments. This visibility enables you to identify overdue invoices and take appropriate actions, such as sending reminders or initiating collection efforts promptly.
3. Proactive credit control: By regularly reviewing open items and following up with debtors, you can maintain better control over credit terms and ensure timely payments. Promptly addressing any

discrepancies or disputes can help prevent bad debts from accumulating.

4. Accurate ageing analysis: The Open Item feature enables accurate ageing analysis of outstanding invoices. By categorizing debts based on their ageing periods (e.g., current, 30 days, 60 days, etc.), you can identify problematic accounts or overdue payments more effectively. This analysis helps in prioritising collections and taking necessary actions to recover outstanding amounts.

5. Prompt dispute resolution: The detailed tracking provided by the Open Item feature facilitates faster resolution of invoice disputes. By promptly addressing and resolving any discrepancies or disputes, you can minimise the risk of bad debts arising from unresolved issues.

Overall, the Open Item feature offers greater control and visibility over debtor accounts, helping you proactively manage credit control and reduce the occurrence of bad debts. It promotes accuracy, enables effective ageing analysis, and facilitates prompt actions to address outstanding balances, enhancing your overall debt management practices.

Open item and managing of debtor accounts

The Open Item feature in osFinancials5/TurboCASH5 allows for efficient management of debtor accounts by matching transactions and tracking outstanding amounts. Here are the key aspects of the Open item feature:

1. Enabling open item: The Open item feature is selected in the "*Open item account*" of the Accounting tab in a Debtor account. It allows transactions, such as invoices, credit notes, and payments, to be matched to credit or debit transactions.

2. Processing transactions: When processing transactions in batches, journals, or documents, an Open Item selection screen displays all outstanding transactions. Here, specific transactions can be selected and linked to the current transaction.

3. Open item options on the Default ribbon:

    - Open item: This feature allows you to manage links, clear links, generate balance forward, unlink transactions, view transactions in a statement layout, and export transactions to a spreadsheet. You can select all debtor accounts or a specific debtor account.

    - Debtors - Transactions tab: The Transactions tab in debtor accounts lists all transactions or only unmatched outstanding transactions. Filtering options are available, and you can print posted batch reports or view transactions in the T-Account viewer, which also allows printing and exporting to a spreadsheet.

    - Documents: The powerful document grid for Invoices and Credit notes allows filtering and searching for specific documents with outstanding balances or documents without any

outstanding or due amounts for a particular debtor account. You may export these filter results to a spreadsheet.

4. Open item options on the Reports ribbon:

   - Transaction list reports: Transaction reports under the Reports → Debtors → Transactions menu offer options such as the Transaction list (lists a complete list of transactions) or a Transaction list - Open item (lists only the outstanding transactions) for all debtors or a selected debtor account.
   - Age analysis: Age analysis (accessed on the Reports ribbon or on the Due tab of Age analysis on the Default ribbon) generate on-screen or printed reports based on the system date or a selected date of ageing.
   - Age analysis - Reports: The Reports → Debtors → Age analysis menu provides the ability to print age analysis reports for all debtors or a selected debtor account.
   - Debtor statements: Debtor statements can be printed for all transactions or only outstanding transactions.

By utilising the Open Item feature and accessing its various options, users can effectively manage debtor accounts, match transactions, generate reports, and monitor outstanding balances for efficient credit control and bad debt reduction.

Managing credit limits

Available balances - Credit control listing

In osFinancials5/TurboCASH5, besides the age analysis reports, you have the option to print a list of debtor's available balances as of the system date. This report is available on the Reports → Debtors listing - Credit control listing (credit limit vs actual balance) as at report. This report provides information on the available balances for all debtors or for a selected debtor account or for all debtors associated with a particular debtor reporting group. Moreover, you have the option to include the contact details of the debtors in the report. Please note that this report reflects the available balances as of the current date recorded in your system.

The current balance displayed in the "Credit control listing (credit limit versus actual balance) as at " report does not include unposted transactions in batches or journals, as well as unposted documents such as invoices and credit notes. It represents the balance based on posted transactions recorded in the ledger. Please keep this in mind when reviewing the report, as any unposted transactions will not be reflected in the current balance.

The report will include the following details for each debtor:

1. Credit limit: This is the maximum amount of credit extended to the debtor.
2. Posted transactions in batches and documents: It will display the totals of the transactions that have been recorded in batches (journals) and documents.
3. Available balances: The report will show the available balance for each debtor. The available balance is calculated by subtracting the outstanding balance from the credit limit. It represents the remaining credit that the debtor has available.

By printing this report, you can have an overview of the credit limits, current balances, and available balances for your debtors. This information can help you monitor credit utilisation, identify potential risks, and make informed decisions regarding credit extensions and debt management.

Remember to review the report regularly and take appropriate actions based on the information provided to maintain healthy debtor accounts and minimize credit-related issues.

Available balances in documents - Messages

In osFinancials5/TurboCASH5, when processing sales documents such as quotes, invoices, and credit notes, the available balances (credit limit minus current balance) are shown in the document entry footer section. When you complete the document and click OK, a warning message may appear if the debtor's balance exceeds the credit limit. The warning message will indicate the amount by which the balance exceeds the credit limit, such as

> "Debtor's balance is over credit limit with: -1100."

This warning message serves as an alert to inform you that the debtor's outstanding balance has exceeded the predefined credit limit. It indicates that the debtor may have exceeded their credit terms or credit limit, and you may need to review their account and take appropriate actions, such as contacting the debtor to arrange payment or adjusting their credit limit.

It's important to address these warnings and take necessary steps to manage credit risks and ensure timely payment from debtors. This helps maintain healthy cash flow and minimizes the potential for bad debts or financial difficulties for your business.

Messages to enhance credit control

In osFinancials5/TurboCASH5, you can utilize messages to enhance credit control practices. Here are some relevant features:

1. Messages on Sales documents: Within the Setup → Documents setup, you can set up to three lines of messages that will appear on sales documents like quotes, invoices, and credit notes. These global

messages apply to all debtors and are printed on the document layout files. During document processing, you have the flexibility to modify or add additional text to the messages as needed.

2. Messages on Debtor statements: Within the Setup → Documents setup - Statements tab, you can enter a global message that will be printed on all debtor statements. This message allows you to communicate important information or reminders to your debtors. Additionally, you have the option to enter a statement message specific to a selected debtor account, which can be added on the Delivery address tab. This enables you to include personalized statements or specific instructions for individual debtors.

By utilizing these message features in osFinancials5/TurboCASH5, you can effectively communicate with your debtors, provide important information, and reinforce credit control measures. These messages serve as reminders, prompts, or additional notes on various documents and statements, enhancing your credit control practices.

Calendar - Appointments and notes

Calendar - If you need to review a credit limit or have some concerns, you may schedule up to six categories of appointments with debtors in the Calendar. On these appointments, you may add notes about the intended reason for the appointment and discussions. This feature allows you to effectively manage and review credit limits, address concerns, and track important discussions with debtors.

By utilising the calendar feature, you can effectively manage your debtor-related appointments and stay on top of credit limit reviews and other important discussions. The ability to add notes and set reminders enhances your ability to track and follow up on these appointments, ensuring efficient debtor management.

A list and detailed information of all appointments, including any notes, can be accessed on the Appointment tab of a selected debtor account in osFinancials5/TurboCASH5. This tab provides a comprehensive list of all scheduled appointments related to that particular debtor, allowing you to review and manage the details and notes associated with each appointment.

Remember to regularly check your calendar to stay updated on upcoming appointments and make necessary preparations. This feature provides a convenient way to schedule, manage, and keep track of debtor-related activities, promoting effective communication and timely follow-ups.

Disable debtor accounts

Disable debtor accounts - In osFinancials5/TurboCASH5, if you have written off bad debts for a debtor and consider them to be a credit risk, you have the option to disable their debtor account. By selecting the "*Account disabled*" option on the Accounting information tab, you can prevent any further processing and

posting of transactions for that particular debtor.

By setting a debtor account as inactive or disabling a debtor account, you ensure that no further transactions can be processed or posted for that specific debtor. This helps in managing credit risks and preventing additional financial exposure. However, it's important to note that all existing transactions and historical data related to the debtor will still be available in reports and other relevant areas of the osFinancials5/TurboCASH5 system.

Created with the Standard Edition of HelpNDoc: Produce electronic books easily

Write-off of Bad debts

Write-off of Bad Debts

Bad debts are written off when debts become irrecoverable during the financial year.

It is important to note that if you need to make provisions for bad debts, which are estimated to become irrecoverable in future financial years, you should also write off any debts that are currently irrecoverable. This is because these calculations should be based on the good book Debtor accounts.

To write off bad debts, the usual practice is to use the General journal. Since bad debts represent a loss or expense for the business, their write-off will reduce the net profit or increase the net loss. It is crucial to maintain documentary proof, such as letters of demand, to support the attempts made to recover the bad debts.

Before you can write off bad debts in osFinancials5/TurboCASH5, please ensure the following:

1. Disabled accounts: If you have disabled a debtor account and set it to inactive, you need to enable the account by setting it back to active. This will allow you to process the bad debts write-off transactions to the debtor account. Check the account settings and ensure that the debtor account is active and enabled for transactions.

2. Open item reconciliation: It is important to ensure that all outstanding amounts are correctly linked to credit transactions or credit notes. Review the open item transactions for the debtor account and ensure that any relevant credits or credit notes are properly applied to offset the outstanding amounts. This will help in accurately reflecting the bad debts write-off and maintaining proper account reconciliation.

By addressing these two points, you can ensure that the debtor account is active and ready for processing the bad debts write-off transactions, and that the outstanding amounts are reconciled correctly with

appropriate credits or credit notes.

Example : Write off Bad debts with VAT/GST/Sales tax

To write off bad debts and clear the Debtors account with the amount of irrecoverable debts (including VAT/GST/Sales Tax), follow these steps:

1. Identify the irrecoverable Debtor account and ensure you have sufficient documentary evidence of attempts to collect the debt. Only proceed with write-off after exhausting all avenues.
2. If you are a registered VAT/GST/Sales Tax vendor, identify the Interest amount and the VAT/GST/Sales Tax amount of the Output VAT/GST/Sales Tax already paid to the Tax Authorities in a previous Tax period. This is important to verify the correct VAT/GST/Sales Tax amount.

When writing off bad debts for debtor accounts on which output tax was paid to the tax authorities in a previous tax period, you may need to consider the VAT/GST or sales tax implications. However, the specific steps and requirements may vary depending on the jurisdiction and tax regulations.

Here are some general considerations:

1. *Create a Tax code: In osFinancials5/TurboCASH5, you may need to create a specific tax code or sub-account in the Setup → Accounts - Tax account type (Setup ribbon) to account for the VAT/GST or sales tax related to bad debts.*
2. *Write-off process: When writing off bad debts, you would typically credit the debtor's account with the amount of the irrecoverable debts (inclusive of VAT/GST/sales tax), debit the bad debts expense account (exclusive of VAT/GST/Sales tax), and debiting the Bad debts tax code with the VAT/GST/Sales tax amount.*
3. *Tax Return and Adjustments: The VAT/GST/sales tax amount associated with the bad debts write-off needs to be considered for the tax return. It may be reported as a tax adjustment or a deduction on the VAT/GST/Sales tax return. The specific reporting block or line may vary depending on the tax jurisdiction. By reducing the taxable amount on the return, it can potentially lower the amount payable to the tax authority.*

It's important to consult with a tax professional or refer to the tax regulations specific to your jurisdiction to ensure compliance with the VAT/GST or sales tax requirements when writing off bad debts and handling the associated tax implications.

Interest amount - Identifying the interest amount, it typically refers to determining the portion of the outstanding debt that represents interest charges.

When dealing with bad debts or debt write-offs, it's important to consider any interest charges that may have been applied to the outstanding debt. In some cases, businesses may charge interest on overdue payments, and this interest may be subject to VAT/GST or sales tax depending on the

applicable regulations in your jurisdiction.

By identifying the interest amount, you can ensure that the correct VAT/GST/sales tax amount is calculated and accounted for when writing off the bad debts. This helps in accurately determining the tax implications and complying with the tax regulations specific to your VAT/GST/sales tax system.

It's important to consult with a tax professional or refer to the tax regulations in your jurisdiction to understand the specific requirements and treatment of interest charges in relation to VAT/GST/sales tax.

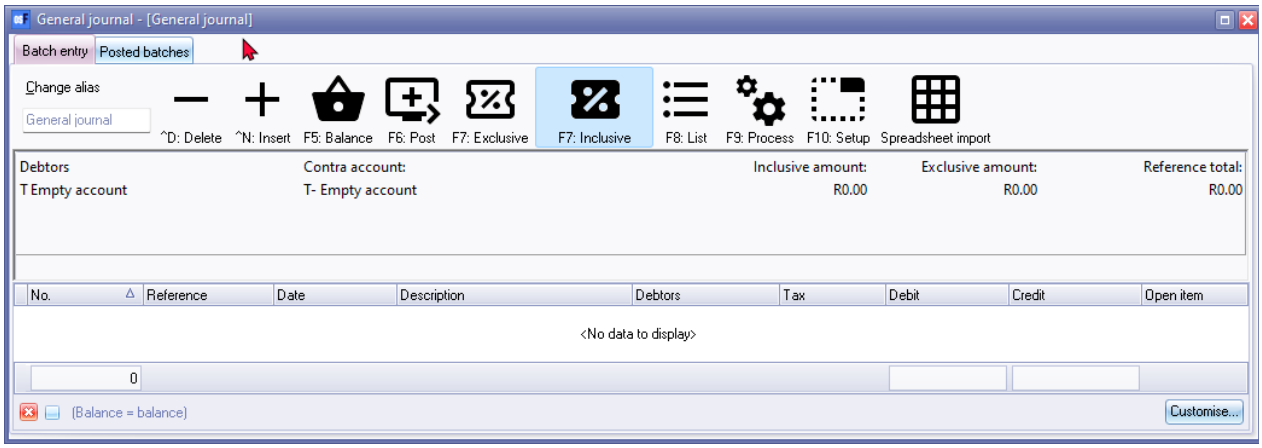
3. Write off the Bad Debts in the General journal.

Procedure to write-off bad debts for a debtor account:

Example: An amount of 1,150 (including VAT at 15%) is written off.

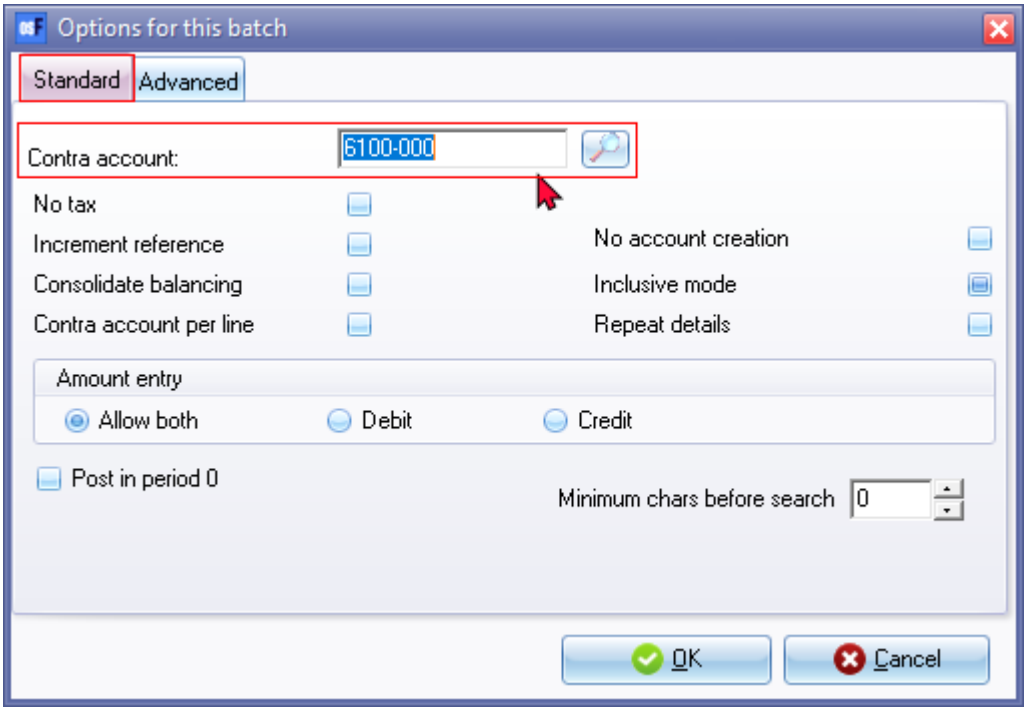
1. In osFinancials5/TurboCASH5 navigate to the Default ribbon.

2. Select "*Batch entry*" and choose the "*General journal*" option.

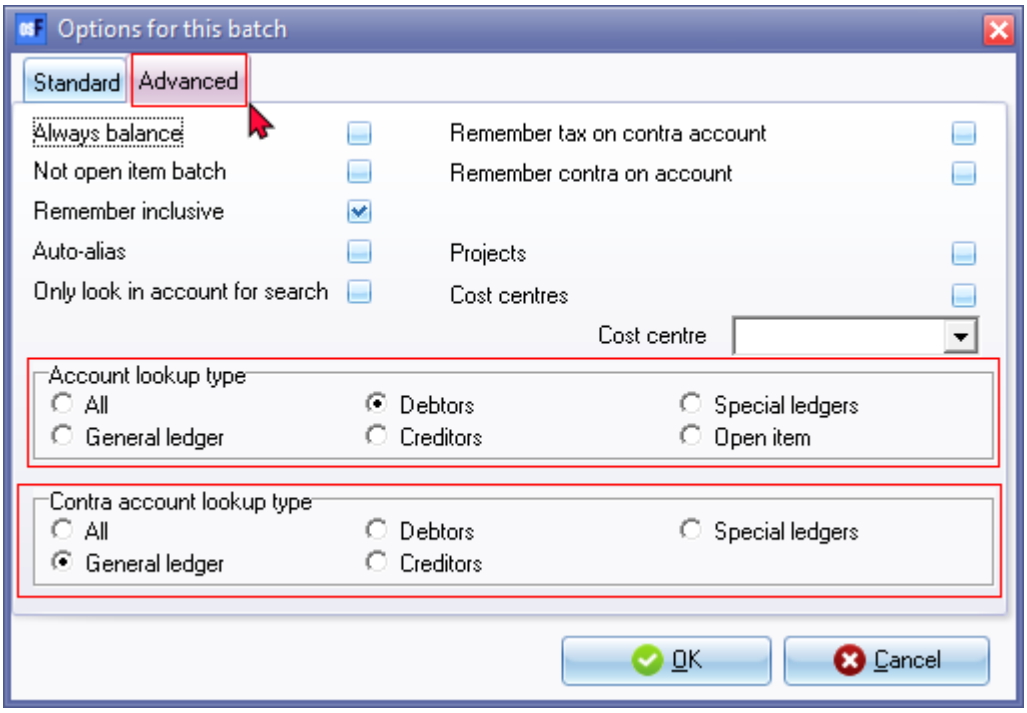


3. Batch setup: Since this is a general journal that may be used for other general transactions, click F10: Setup to set the "*Options for this bath*" as follows:

    a) Standard tab - "*Contra account*" select the "*Bad debts*" expense account.



b) Advanced tab - Select the following options:



- Account lookup type - Select "*Debtors*" to only list the debtor accounts in the lookup.
- Contra account lookup type - Select "*General ledger*" to only list the general ledger account as the contra account for the balancing entries or transactions.
- Leave the rest of the settings as in the options for this batch as in the screenshots, and click OK to save your settings.

4. Change alias: By default the name of the journal is displayed as "*General journal - [General journal]*"

To make it easy to identify the specific nature of the transactions in the General journal, enter a unique name for your specific requirements, in the "*Change alias field*" and press Enter. In this example the "*Bad debts-Green*" was entered. This will change the general journals name as name of the journal is displayed as "*General journal - [Bad debts-Green]*" in the titlebar It indicates that "*Bad debts for Debtor Green*" was processed in the general journal.

5. Enter the transactions for the bad-debts:

   - Date: By default, the date of your operating system would be displayed. Select the specific date on which you need to write off the debt.
   - Reference: The default reference in a new General journal would be "*1*" . In the case of a previous processed transactions, the Description could be the related to the last reference used. Enter a valid reference.
   - Description: Enter a description for each transaction for your own requirements. In this example, the description is changed to "*Write-off bad debts -AB Green IN000005*" Note: The descriptions should make sense to understand the nature of the transactions.
   - Debtors (Accounts): Select the account of the debtor for which you need to write-off bad debts.
   - Tax: Select the VAT/GST.Sales tax code for bad debts if applicable to your jurisdiction.

VAT/GST/Sales tax - Writing off of bad debts:

It is important to note that the specific tax rules and regulations regarding bad debt write-offs can vary, and it's advisable to consult with a tax professional or refer to the tax laws in your jurisdiction to determine the exact requirements and treatment of VAT/GST/Sales tax in relation to writing off uneconomical bad debts.

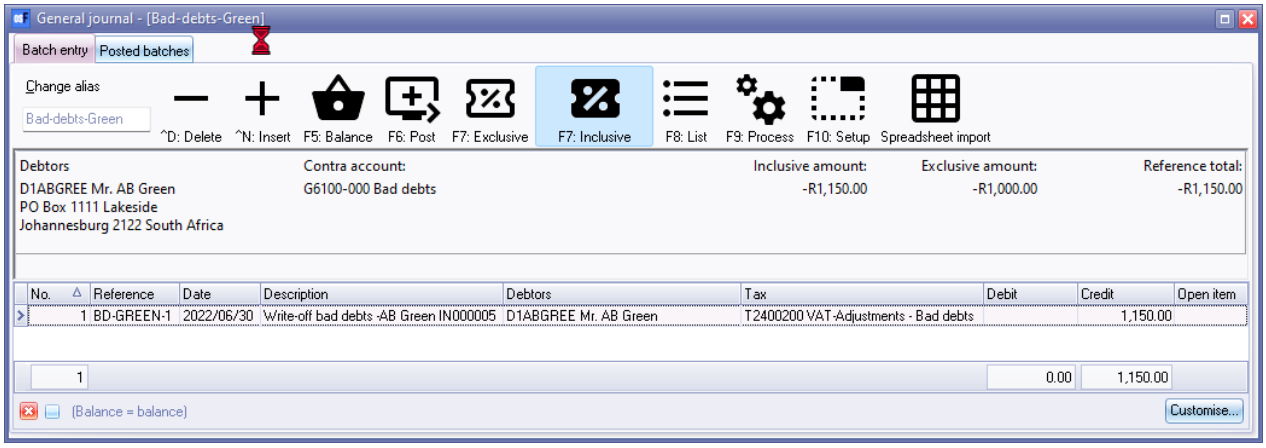
If VAT/GST/Sales tax is applicable on the writing off of bad debts, you can follow the steps below to ensure proper recording and allocation of the tax:

- *Add a Tax account code for Bad debts: Create a specific Tax account code for bad debts, such as "T2400-200 - VAT-Adjustments - Bad debts." This account should be included in the structure of your VAT/GST/Sales tax control account in the current liabilities section of your Chart of Accounts. This will allow you to track and report the VAT/GST/Sales tax adjustments related to bad debts separately.*
- *Process the general journal to write off bad debts: When recording the write-off of bad debts in the general journal, select the appropriate Tax code for "Bad debts." This Tax code should be associated with the specific VAT/GST/Sales tax percentage and transactions applicable to bad debts. By selecting the appropriate Tax code, the system will calculate and allocate the VAT/GST/Sales tax amount accordingly.*

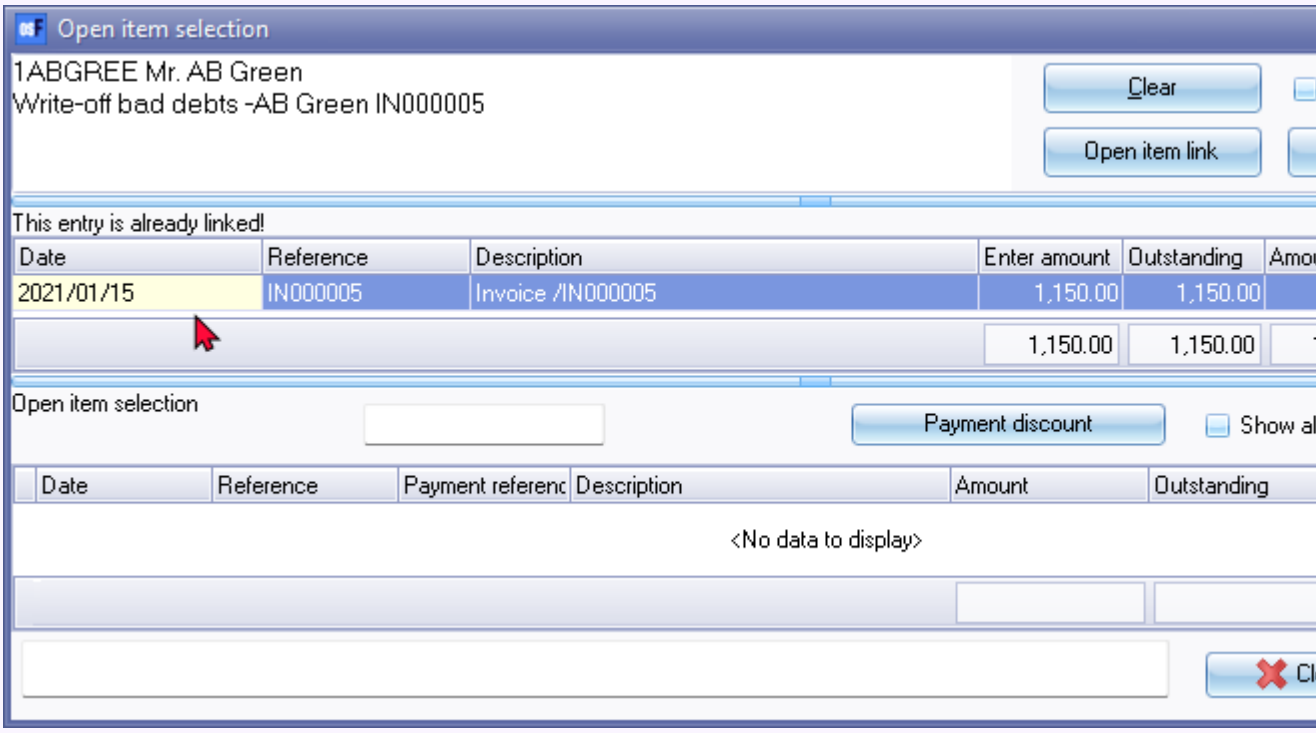
By following these steps, you can ensure that the VAT/GST/Sales tax implications of writing off bad debts are properly accounted for and reflected in your financial records and tax returns.

- Credit: Enter the amount in the credit column. If the VAT/GST/Sales tax code for bad debts was selected, it will automatically generate the VAT/GST/Sales tax percentage when balancing entries are generated.

7. After entering the write off transaction in the General journal should be displayed as follows:



Open item selection: The "Open item selection" screen will be launched for debtors whose accounts are set as Open item accou debts to be written off against specific transactions or invoices.

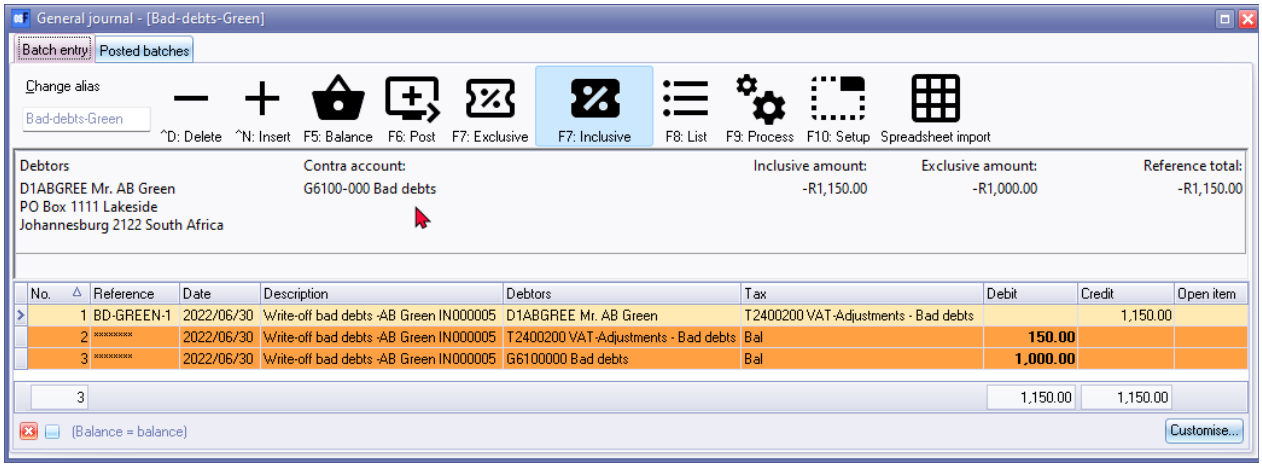


After selecting or linking the Bad-debts write-off transaction to an outstanding transactions, the transaction line will be displa

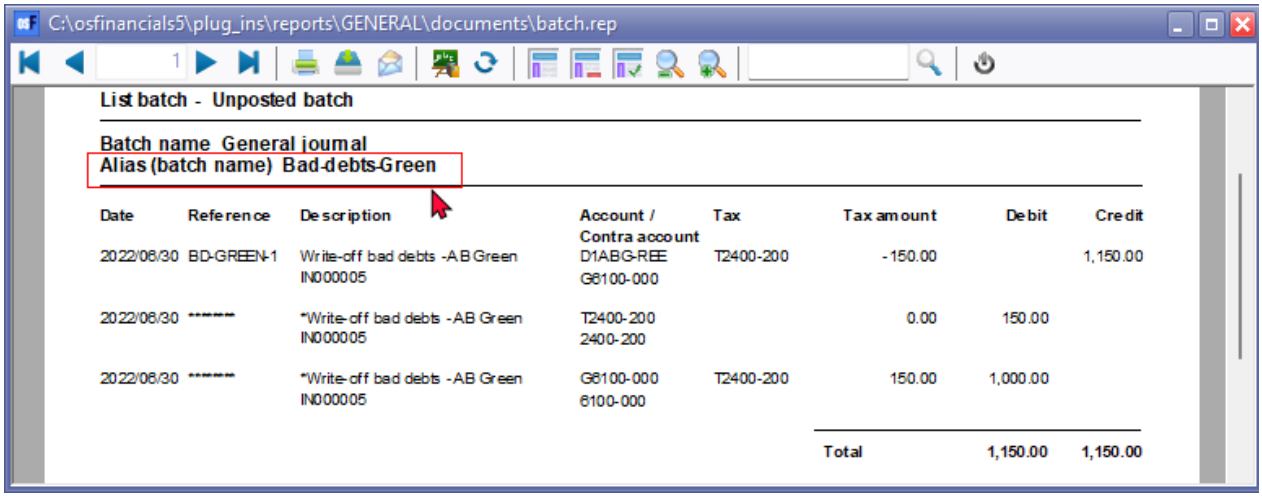
Finalising the batch transactions

Once you have entered or edited your transactions, you need to finalize the batch:

- Balance the batch: Click F5: Balance to generate the balancing transactions to the contra account.



- List the batch: Click F8: List to print a list of the unposted batch transactions in the batch. Review the list for any errors or discrepancies and make necessary edits before proceeding. This list may be retained for record and audit purposes.



- Post the batch: Click F6: Post to post or update the transactions in the batch.

Disable debtor accounts - After processing and writing off bad debts, and considering them to be a credit risk, you have the option to disable their debtor account. By selecting the "Account disabled" option on the Accounting information tab, you can prevent any further processing and posting of transactions for that specific debtor.

By setting a debtor account as inactive or disabling it, you ensure that no additional transactions can be

processed or posted for that particular debtor. This helps in managing credit risks and preventing additional financial exposure. It's important to note that all existing transactions and historical data related to the debtor will still be available in reports and other relevant areas of the osFinancials5/TurboCASH5 system.

Disabling debtor accounts provides an effective way to control credit risks and manage your accounts receivable effectively. By keeping inactive debtor accounts separate from active ones, you can easily identify and focus on those accounts that require attention or further action.

Please exercise caution when disabling debtor accounts and ensure that it aligns with your internal policies and procedures. Additionally, consider any legal or regulatory requirements that may affect the management and retention of debtor information.

Transactions in the ledger

The transactions is updated in all respective accounts and will be available in all reports for the accounts for the Debtor accounts and in the Bad debts expense account. These totals of the accounts will be reflected in the Trial balance in the Ledger analyser. The Debtors control account will reflect the transactions in the Balance sheet. The "*Bad debts*" expense account will be reflected on the Income statement.

T-Account viewer

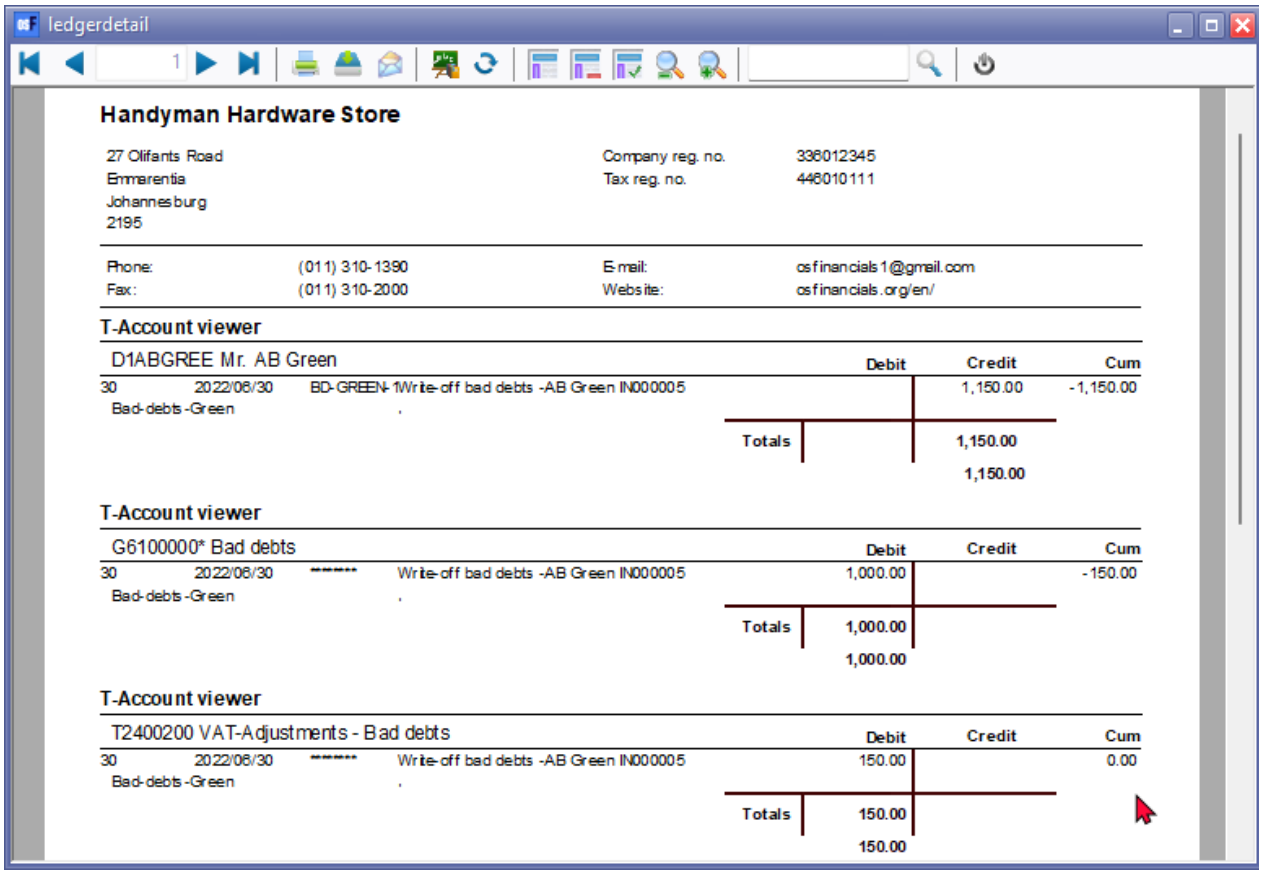
In any of these report types in the Ledger analyser, you may double-click on an account or right-click and select the "*Show details*" option on the context menu. This will launch the T-Account viewer with the transaction details. You may print the transactions or export the transactions to a spreadsheet. An example of the transactions is as follows:

The T-Account viewer allows you to view transaction details for specific accounts. You can access it by double-clicking on an account or right-clicking and selecting the "*Show details*" option. In the T-Account viewer, you can double-click on the batch number, account code, or date to filter transactions.

Contra transactions are indicated by eight asterisks (********). The "*Show contra*" option displays the contra transactions. When printing the transactions the contra accounts will not be printed.

When exporting the transactions to a spreadsheet, the contra accounts will be included in column "*A*" if the "*Contra account*" option is selected.

Click on the Print button to print the transactions in the T-Account viewer.



In addition to launching the T-Account viewer from the Ledger analyser options, the T-Account viewer may also be launched separately on the Reports ribbon; or from the following options on the Default ribbon:

- *Search - Investigator - Account or Batch type searched items.*
- *Debtors - Transactions tab - Click on the Show transactions button.*
- *Creditors - Transactions tab - Click on the Show transactions button.*

By utilising the T-Account viewer and the reports in the Ledger Analyser, you can gain a detailed understanding of the transactions and their impact on the accounts involved.

Please note that the specific accounts and tax codes may vary based on your accounting system and local tax regulations. It's important to consult with a tax professional or refer to the guidelines provided by your tax authority to ensure accurate and compliant recording of write-offs including VAT/GST/sales tax.

Write-off bad debts - Uneconomical to recover

When does Bad debts become uneconomical to collect?

Determining when bad debts become uneconomical to collect depends on various factors and may vary based on individual circumstances and business practices. Here are some common indicators that may suggest bad debts are uneconomical to collect:

1. Length of delinquency: If a debt has been outstanding for an extended period without any progress in collection efforts or communication from the debtor, it could indicate that it is becoming increasingly difficult to recover the amount.
2. Lack of debtor communication: When debtors consistently ignore attempts to contact them or fail to provide viable repayment plans, it may signal that collecting the debt is unlikely.
3. Financial hardship: If the debtor is experiencing significant financial difficulties, such as bankruptcy or insolvency, it may make it impractical to pursue the debt further.
4. Insufficient assets or resources: If the debtor lacks sufficient assets or income to satisfy the debt, it may be economically unfeasible to continue collection efforts.
5. Cost-benefit analysis: Assessing the costs associated with further collection efforts, such as legal fees, time, and resources, against the potential recovery amount can help determine if it is uneconomical to continue pursuing the debt.

It's important to note that the determination of uneconomical debts is subjective and may vary among businesses. Establishing clear internal policies and guidelines, and consulting with accounting professionals or legal advisors, can help in making informed decisions regarding the write-off of bad debts.

Write-off bad debts which is uneconomical to collect for multiple debtor accounts

In osFinancials5/TurboCASH5 you may generate multiple entries in a journal to list all the debtor account balances which is less than a specified amount.

In osFinancials5/TurboCASH5, you have the capability to generate multiple entries in a journal to list all debtor account balances that are less than a specified amount. This functionality is particularly useful for identifying and dealing with bad debts that are considered uneconomical to collect.

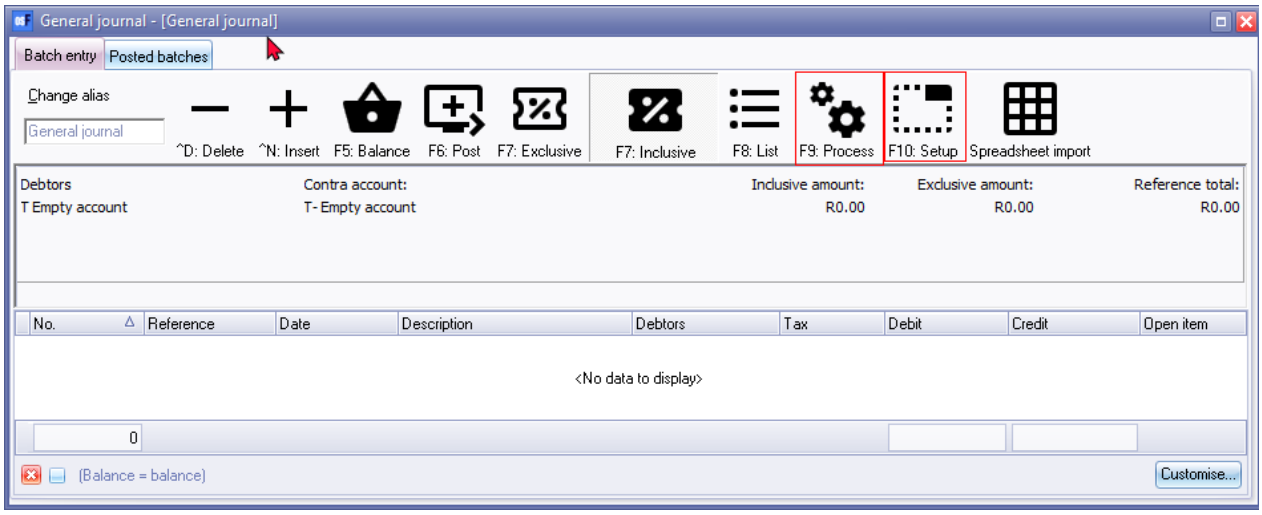
By generating multiple entries in a journal for debtor accounts with balances below a specified amount, you can effectively identify and isolate bad debts that are uneconomical to collect. This enables you to

have a clear overview of these accounts and take appropriate actions, such as writing off the debts or pursuing alternative debt recovery methods.

Decide on the threshold amount below which debtor account balances will be considered uneconomical to collect. For example, you may choose $100 as the threshold.

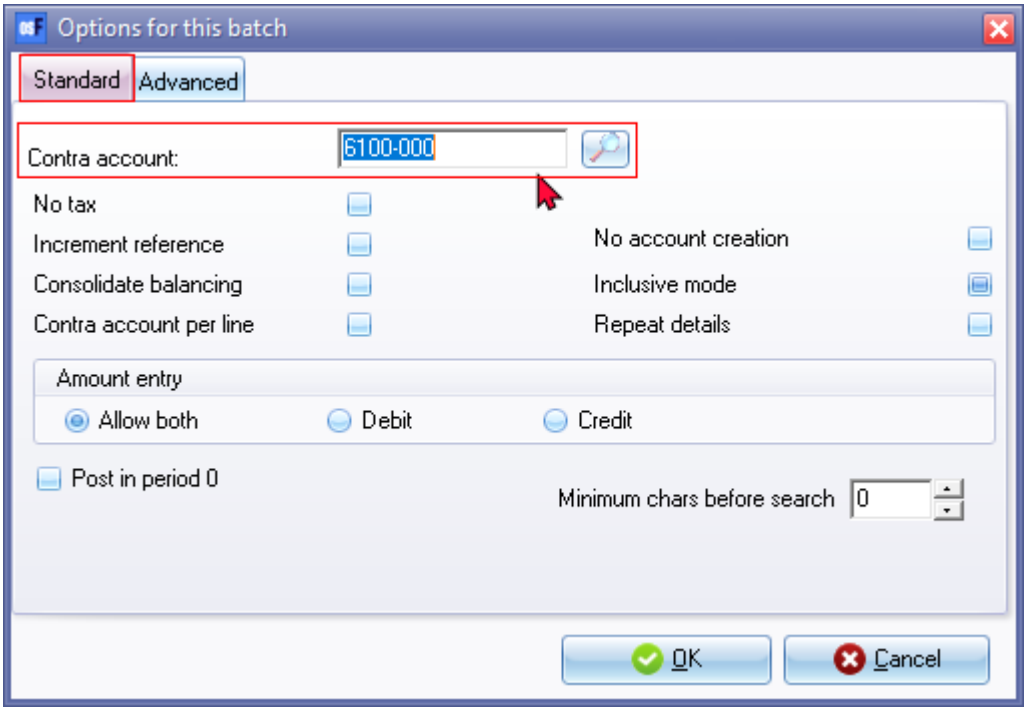
Procedure to write-off bad debts multiple debtor accounts:

1. In osFinancials5/TurboCASH5 navigate to the Default ribbon.
2. Select "*Batch entry*" and choose the "*General journal*" option.

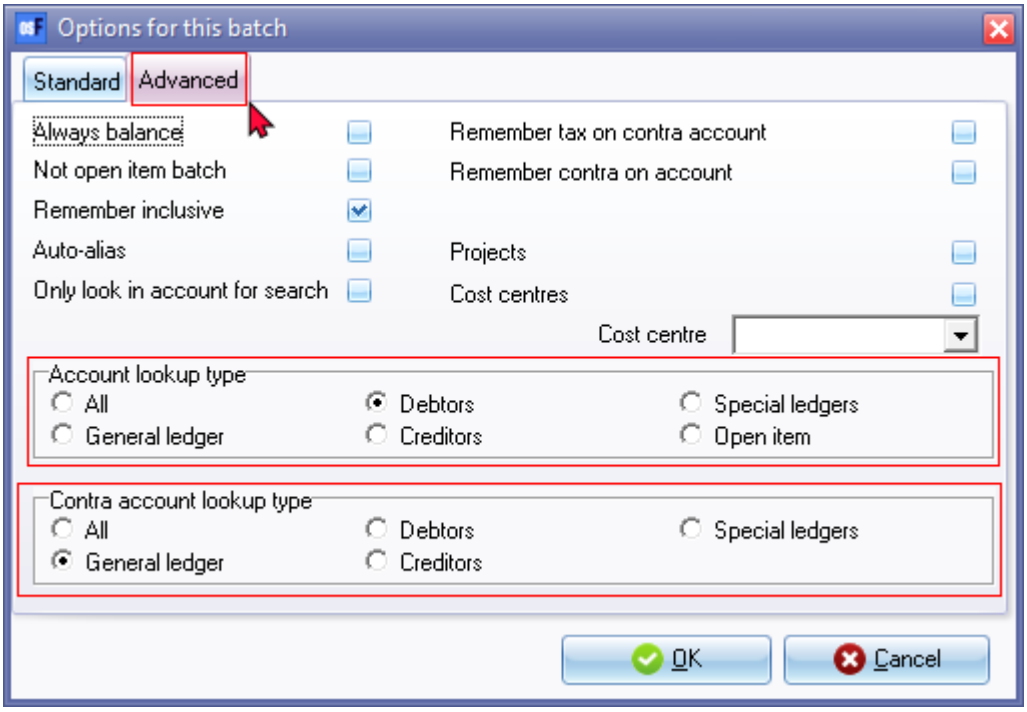


3. Batch setup: Since this is a general journal that may be used for other general transactions, click F10: Setup to set the "*Options for this bath*" as follows:

    a) Standard tab - "*Contra account*" select the "*Bad debts*" expense account.

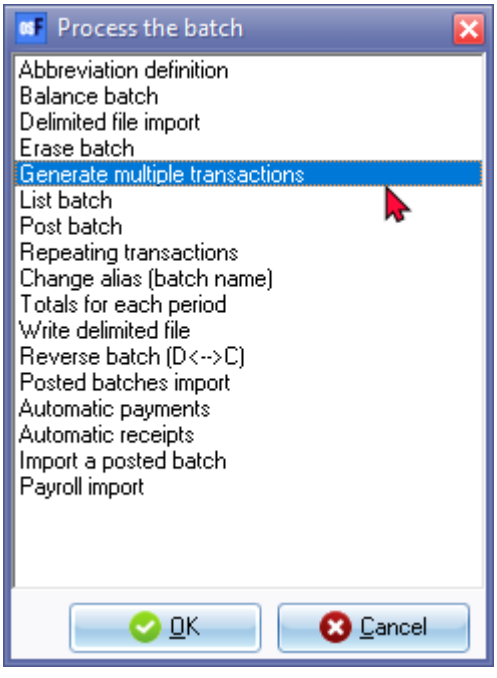


b) Advanced tab - Select the following options:

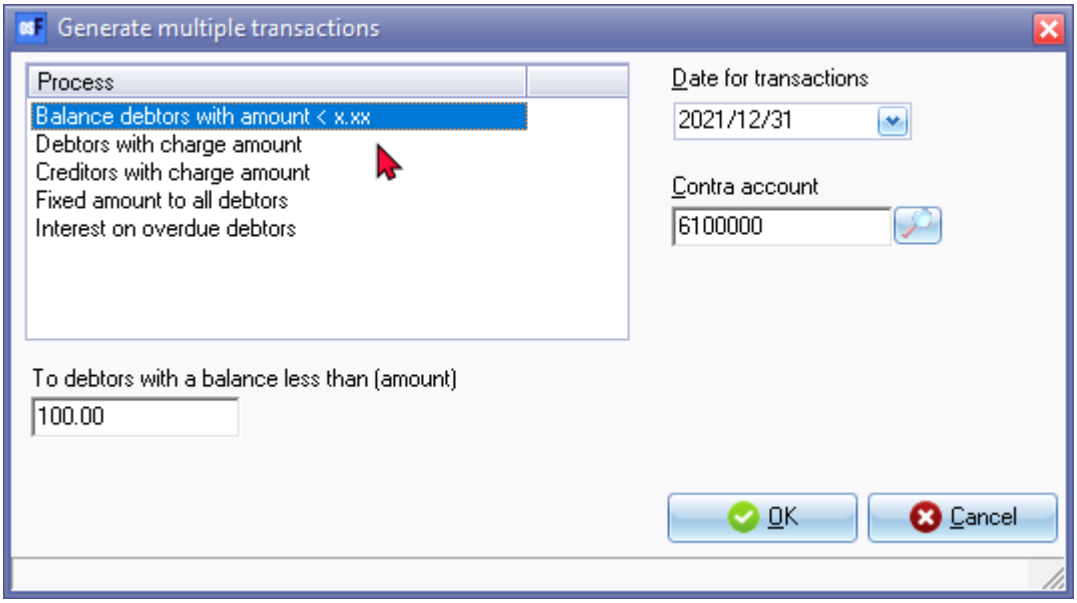


- Account lookup type - Select "*Debtors*" to only list the debtor accounts in the lookup.
- Contra account lookup type - Select "*General ledger*" to only list the general ledger account as the contra account for the balancing entries or transactions.
- Leave the rest of the settings as in the options for this batch as in the screenshots, and click OK to save your settings.

4. On the batch entry screen, go to the F9: Process icon and select the "*Generate multiple transactions*" option on the "Process the batch" screen.



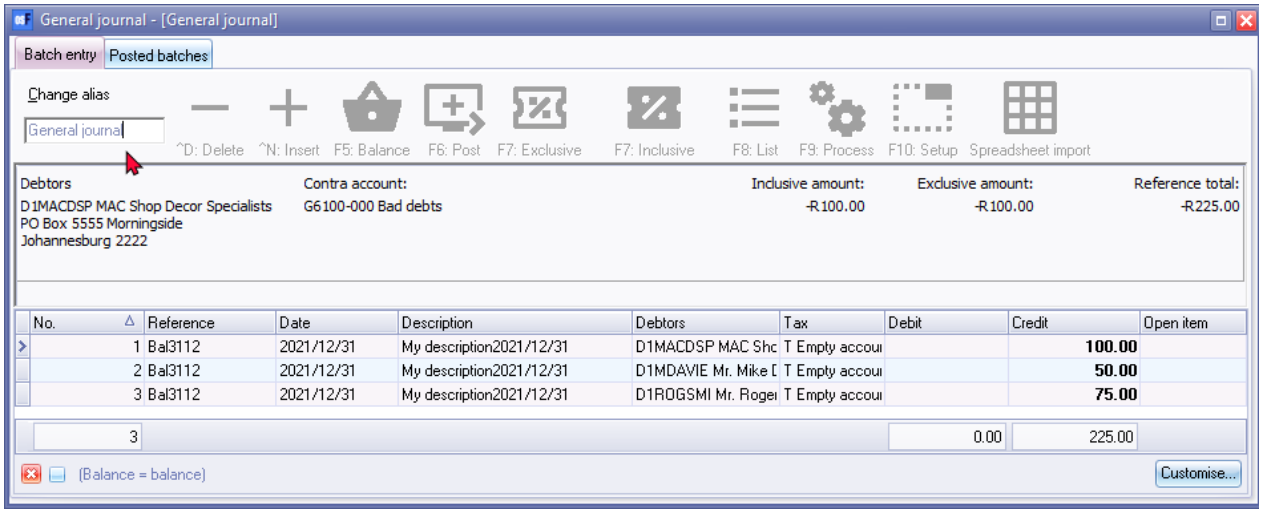
5. Click OK.



6. On the "Generate multiple transactions" screen the default option "Balance debtors with amount < x.xx" is selected. On this option, select the following:

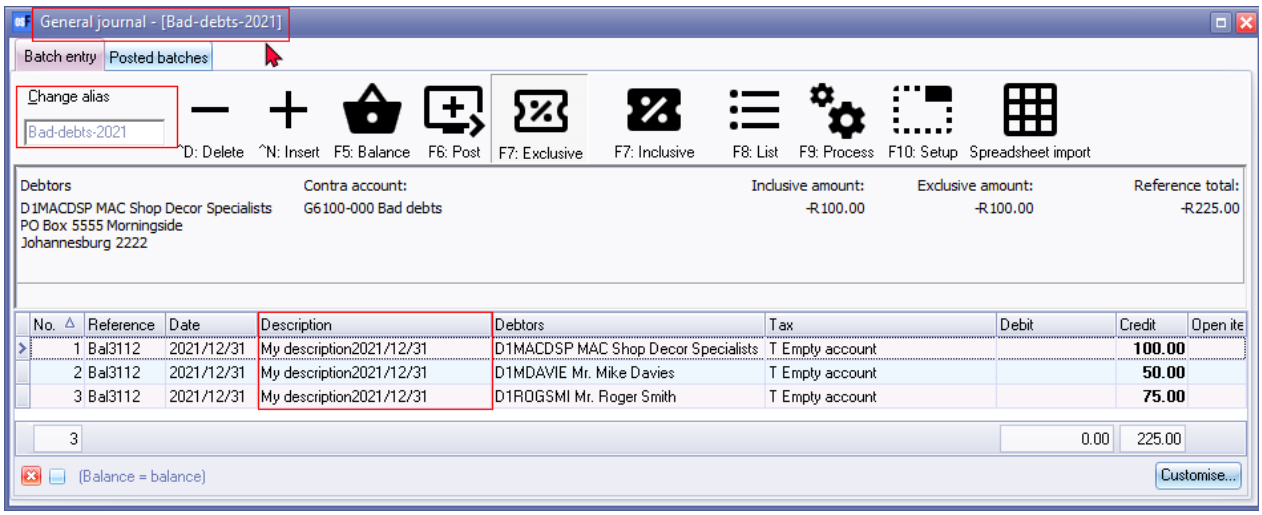
   - Date for transactions: The date of your operating system will be displayed. Select the date on which you need to write off the bad debts which is uneconomical to recover. Note: In this example the date is the last date in the accounting period or financial year e.g. "*31 December 2021*" if you need to to include in your financial reporting and statements for the year ending on "*31 December 2021*".
   - Contra account: Select the contra account for the "*Bad debts*" expense account. This contra account is not used, but the contra account selected on the F10: Setup - "*Options for this batch*" on the Standard tab.
   - To debtors with a balance less than (amount): Specify the amount (e.g., $100.00) for debtor accounts with balances less than or equal to that amount.

7. Click OK. All debtor accounts with outstanding balances of $100.00 or less, will be imported into the general journal as on the selected date.



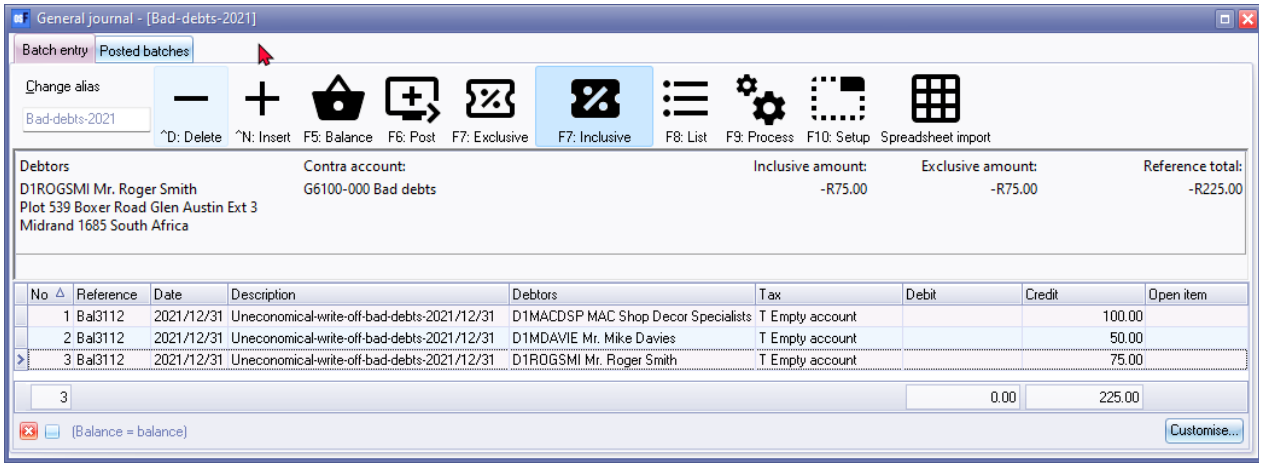
8. After importing the multiple transactions of debtors in the "*General journal*", The icons in the speed bar options will be inactive. Close the "*General journal*" and relaunch the batch to activate these options.

9. Edit the "*General journal*" for the imported transactions:



- Change alias: By default the name of the journal is displayed as "*General journal - [General journal]*" To make it easy to identify the specific nature of the transactions in the General journal, enter a unique name for your specific requirements, in the "*Change alias field*" and press Enter. In this example the "*Bad debts-2021*" was entered. This will change the general journals name as name of the journal is displayed as "*General journal - [Bad debts-2021]*" in the titlebar It indicates that "*Bad debts for 2021*" was processed in the general journal.

- Description: The default description for each transaction, is "*My description2021/03/31*" Change this with a description for your own requirements. In this example, the description is changed to "*Uneconomical-write-off-bad-debts-2021/12/31*" Note: The descriptions should make sense to understand the nature of the transactions.



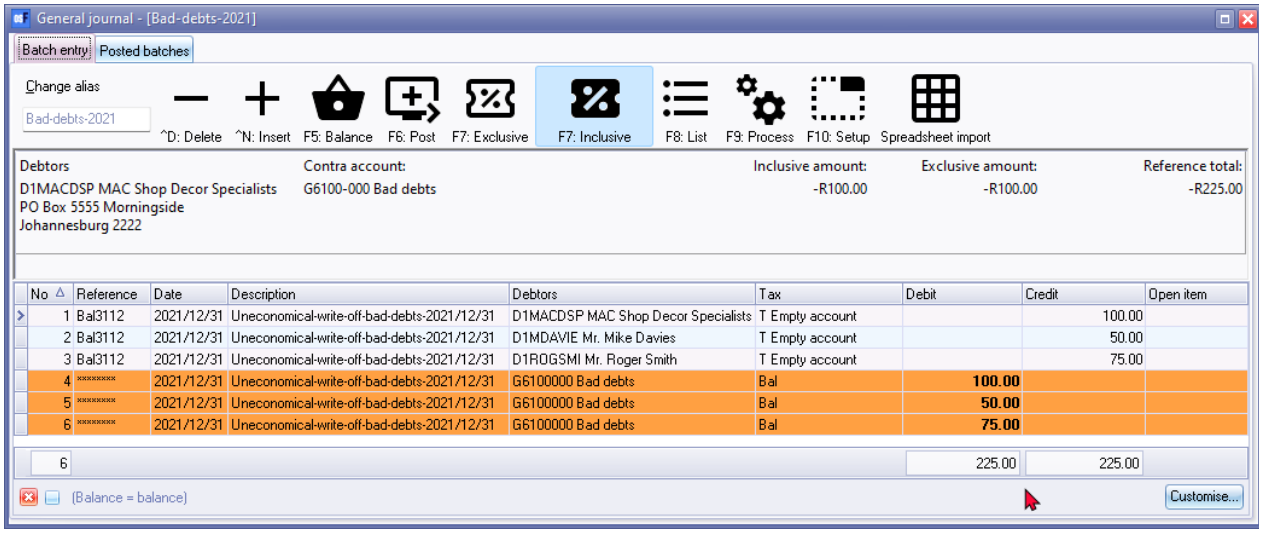
- Edit / Delete transactions: Edit the imported transactions, ensuring that you do not write off debtor accounts with small outstanding balances that are likely to be recovered through normal business processes. Delete any transactions that should not be written off.

> *VAT/GST/Sales tax - Writing off of bad debts:*
>
> *It is important to note that the specific tax rules and regulations regarding bad debt write-offs can vary, and it's advisable to consult with a tax professional or refer to the tax laws in your jurisdiction to determine the exact requirements and treatment of VAT/GST/Sales tax in relation to writing off uneconomical bad debts.*
>
> *If VAT/GST/Sales tax is applicable on the writing off of bad debts that are uneconomical to recover, you can follow the steps below to ensure proper recording and allocation of the tax:*
>
> - *Add a Tax account code for Bad debts: Create a specific Tax account code for bad debts, such as "T2400-200 - VAT-Adjustments - Bad debts." This account should be included in the structure of your VAT/GST/Sales tax control account in the current liabilities section of your Chart of Accounts. This will allow you to track and report the VAT/GST/Sales tax adjustments related to bad debts separately.*
> - *Process the general journal to write off bad debts: When recording the write-off of bad debts in the general journal, select the appropriate Tax code for "Bad debts." This Tax code should be associated with the specific VAT/GST/Sales tax percentage and transactions applicable to bad debts. By selecting the appropriate Tax code, the system will calculate and allocate the VAT/GST/Sales tax amount accordingly.*
>
> *By following these steps, you can ensure that the VAT/GST/Sales tax implications of writing off bad debts are properly accounted for and reflected in your financial records and tax returns.*

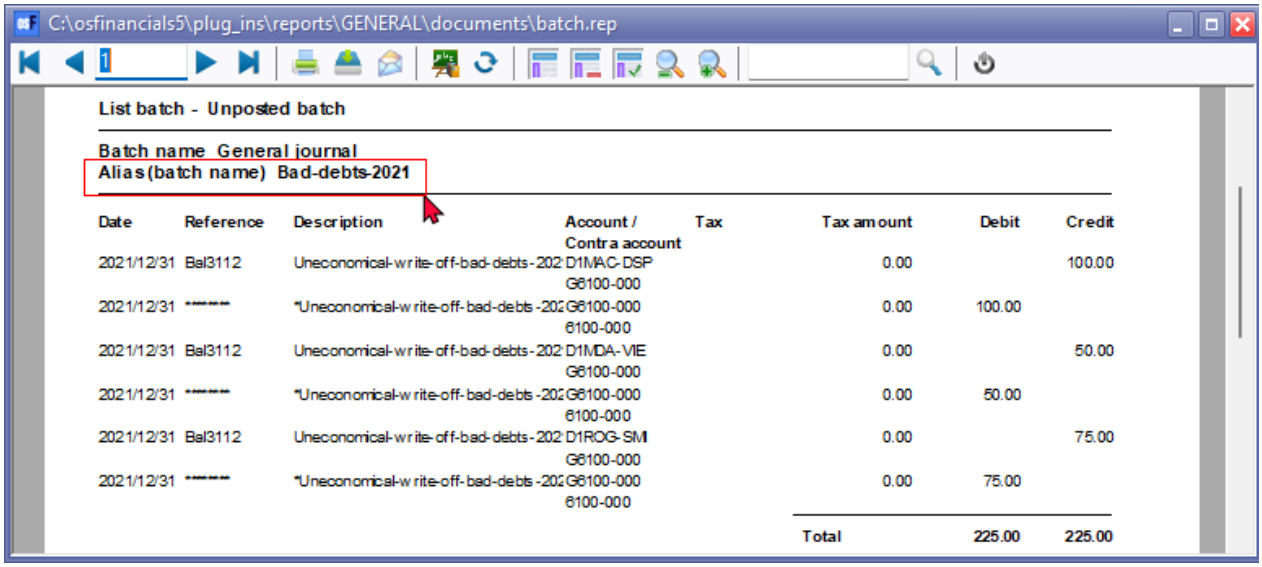
10. Once you have edited your transactions, you need to finalize the batch:

- Balance the batch: Click F5: Balance to generate the balancing transactions to the contra

account.



- List the batch: Click F8: List to print a list of the unposted batch transactions in the batch. Review the list for any errors or discrepancies and make necessary edits before proceeding. This list may be retained for record and audit purposes.



11. Post the batch: Click F6: Post to post or update the transactions in the batch.

Disable debtor accounts - After processing and writing off bad debts that are uneconomical to recover, and considering them to be a credit risk, you have the option to disable their debtor account. By selecting the "Account disabled" option on the Accounting information tab, you can prevent any further processing and posting of transactions for that specific debtor.

By setting a debtor account as inactive or disabling it, you ensure that no additional transactions can be processed or posted for that particular debtor. This helps in managing credit risks and preventing additional financial exposure. It's important to note that all existing transactions and historical data related to the debtor will still be available in reports and other relevant areas of the osFinancials5/TurboCASH5 system.

Disabling debtor accounts provides an effective way to control credit risks and manage your accounts receivable effectively. By keeping inactive debtor accounts separate from active ones, you can easily identify and focus on those accounts that require attention or further action.

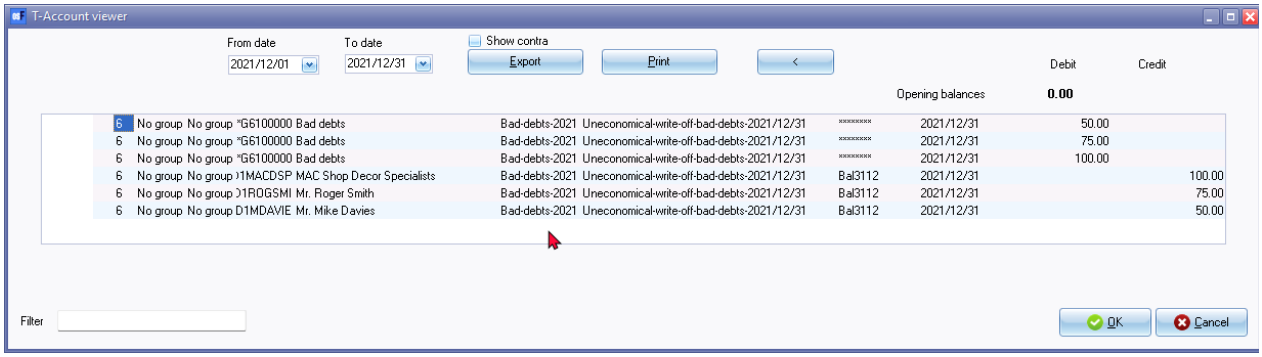
Please exercise caution when disabling debtor accounts and ensure that it aligns with your internal policies and procedures. Additionally, consider any legal or regulatory requirements that may affect the management and retention of debtor information.

Transactions in the ledger

The transactions is updated in all respective accounts and will be available in all reports for the accounts for the Debtor accounts and in the Bad debts expense account. These totals of the accounts will be reflected in the Trial balance in the Ledger analyser. The Debtors control account will reflect the transactions in the Balance sheet. The "*Bad debts*" expense account will be reflected on the Income statement.

T-Account viewer

In any of these report types in the Ledger analyser, you may double-click on an account or right-click and select the "*Show details*" option on the context menu. This will launch the T-Account viewer with the transaction details. You may print the transactions or export the transactions to a spreadsheet. An example of the transactions is as follows:

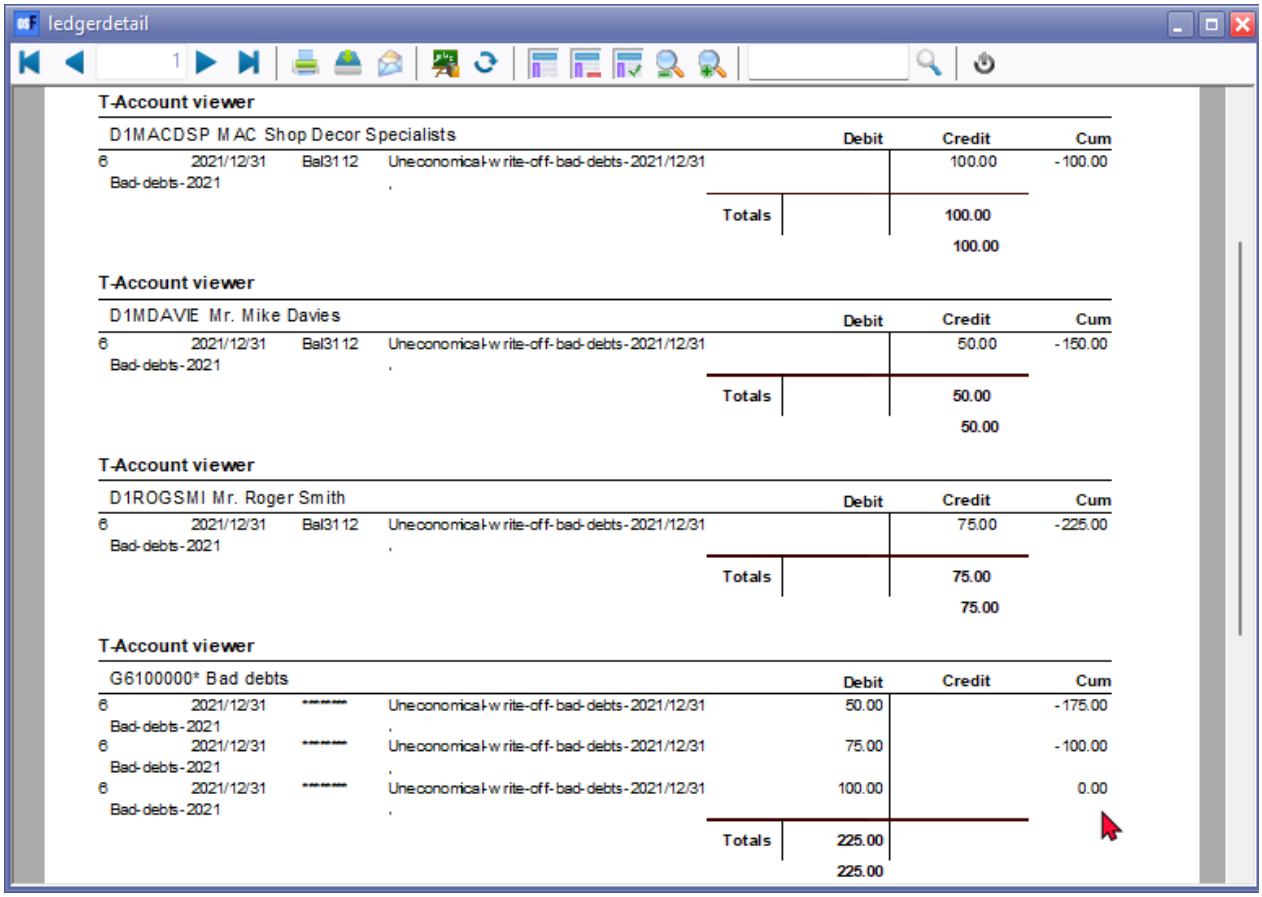


The T-Account viewer allows you to view transaction details for specific accounts. You can access it by double-clicking on an account or right-clicking and selecting the " *Show details*" option. In the T-Account viewer, you can double-click on the batch number, account code, or date to filter transactions.

Contra transactions are indicated by eight asterisks (********). The "*Show contra*" option displays the contra transactions. When printing the transactions the contra accounts will not be printed.

When exporting the transactions to a spreadsheet, the contra accounts will be included in column "*A*" if the "*Contra account*" option is selected.

Click on the Print button to print the transactions in the T-Account viewer.



In addition to launching the T-Account viewer from the Ledger analyser options, the T-Account viewer may also be launched separately on the Reports ribbon; or from the following options on the Default ribbon:

- *Search - Investigator - Account or Batch type searched items.*
- *Debtors - Transactions tab - Click on the Show transactions button.*
- *Creditors - Transactions tab - Click on the Show transactions button.*

By utilising the T-Account viewer and the reports in the Ledger Analyser, you can gain a detailed understanding of the transactions and their impact on the accounts involved.

Recovery of bad debts written-off

Recovery of bad debts written-off

There may be instances where previously written-off bad debts or irrecoverable debts are actually recovered. However, it's important to note that typically only a portion of the original amount of bad debts is recovered.

The recovery of bad debts written off refers to the process of collecting payments or receiving funds for debts that were previously deemed uncollectible and written off as losses by a business. When a business determines that a debt is unlikely to be recovered, it may choose to write off the debt as a bad debt expense, reducing the Accounts receivable (Debtor's control account) balance.

However, there are cases where the debtor later makes a payment or settles the debt, resulting in the recovery of the previously written-off amount. This recovery of bad debts written off represents the collection of funds that were once considered irrecoverable.

The recovery of bad debts written off is recorded as a separate transaction in the accounting records. It typically involves reversing the write-off entry and recognizing the recovered amount as income or reducing the provision for bad debts, depending on the accounting treatment chosen by the business.

This recovery process allows the business to improve its financial position by collecting previously uncollectible debts and potentially reducing the impact of bad debts on its financial statements.

Options to record the recovery of bad debts already written-off

To record the recovery of bad debts that have already been written off, you have several options:

1. Allocate the amount directly to the debtor's account: You can allocate the recovery amount directly to the debtor's account, which creates a credit balance in the account. This method reflects the specific debtor's account that has experienced the recovery and provides a clear record of the transaction.
2. Transfer the amount from the debtor's account to the Bad debts recovered account : After allocating the recovery amount to the debtor's account, you can then transfer the same amount from the debtor's account to a separate account called "*Bad Debts Recovered*." This transfer effectively clears the credit balance in the debtor's account and records the recovery as a current asset.
3. Use a specific income account: Alternatively, you can allocate the recovery amount directly to a designated income account such as "Bad debts recovered." This method treats the recovery as income, reflecting the increase in the financial resources of the business due to the recovery of previously written-off debts.

The choice of method depends on your specific accounting requirements and preferences. It's important to ensure that the chosen method accurately reflects the recovery of bad debts and provides a clear audit

trail of the transactions.

Options to record the recovery of bad debts already written-off

To record the recovery of bad debts that have already been written off, you have several options:

1. Allocate the amount directly to the Bad debts recovered account : You can allocate the recovery amount directly to the "*Bad Debts Recovered*" account since the debtor's account, should have a zero balance when the bad debts was written-off at the stage when the recovery of bad debts is collected. The "*Bad Debts Recovered*" account may be a current asset account or an income account, in your chart of accounts according to the accounting policies and principles that apply to your jurisdiction.
2. Transfer the amount from the Bad debts recovered account to the debtor's account : After allocating the recovery amount to a separate account called "*Bad Debts Recovered*" you can then transfer the same amount to the debtor's account. This will create a credit balance in the debtor's account. This method reflects the specific debtor's account that has experienced the recovery and provides a clear record of the transaction. This transfer effectively clears the credit balance in the "*Bad Debts Recovered*" account debtor's account and records the recovery as a current asset.

   After allocating the recovery amount to the debtor's account, you can then transfer the same amount from the debtor's account to a separate account called "*Bad Debts Recovered*." This transfer effectively clears the credit balance in the debtor's account and records the recovery as a current asset.
3. Use a specific income account: Alternatively, you can allocate the recovery amount directly to a designated income account such as "Bad debts recovered." This method treats the recovery as income, reflecting the increase in the financial resources of the business due to the recovery of previously written-off debts.

The choice of method depends on your specific accounting requirements and preferences. It's important to ensure that the chosen method accurately reflects the recovery of bad debts and provides a clear audit trail of the transactions.

Recovery of Bad debts to Debtor account

When recording the recovery of bad debts that have already been written off, the steps are generally applicable in most cases. However, the need for transferring the amount from the "*Bad Debts Recovered*" account back to the debtor's account depends on the specific circumstances and accounting practices of the business. Let's explore each option in more detail:

1. Allocate the amount directly to the "*Bad Debts Recovered*" account: In this approach, you directly allocate the recovery amount to the "*Bad Debts Recovered*" account. This method is straightforward and treats the recovery as income. The "*Bad Debts Recovered*" account could be a current asset account if

the business intends to use the funds for future operations, or it could be an income account if it represents recovered revenue. This option is generally suitable for cases where the debtor's account has been fully written off, and there is no need to update the debtor's account balance.

2. Transfer the amount from the "*Bad Debts Recovered*" account to the debtor's account: This option is appropriate when you want to reflect the recovery on the specific debtor's account. It involves allocating the recovery amount to the "*Bad Debts Recovered*" account initially and then transferring the same amount back to the debtor's account. This transfer creates a credit balance in the debtor's account, indicating that the debtor has paid off the recovered amount. The "*Bad Debts Recovered*" account will have a zero balance after the transfer.

Whether this step is necessary if the debtor has passed away, or the debtor is insolvent or liquidated, it depends on the accounting treatment followed by the business and the specific circumstances of the recovery. If the debtor is no longer alive or is insolvent or liquidated, and there is no likelihood of further transactions with the debtor, some businesses may choose to skip the transfer step and directly allocate the recovery amount to the "Bad Debts Recovered" account as income. In such cases, the recovery may be treated as a general income item and not associated with the individual debtor's account.

It is essential to consider the relevant accounting standards and regulations in your jurisdiction and consult with a qualified accountant or financial advisor to determine the best approach for recording the recovery of bad debts in your specific situation. Proper documentation and adherence to accounting principles are crucial to maintain accurate financial records and comply with relevant accounting and tax rules.

Sources of the recovery of bad debts written-off

Recovery of bad debts that have been previously written off can occur through various means, including:

1. Debt collector: The business may engage the services of a debt collection agency to recover the outstanding debt from the debtor. The debt collector will attempt to collect the debt on behalf of the business, and if successful, the recovered amount will be recorded in the Receipts journal.

2. Garnishee order: In some cases, the business may obtain a garnishee order from a court to collect the debt directly from the debtor's employer. The employer deducts the specified amount from the debtor's salary and pays it to the business, which is then recorded in the Receipts journal.

3. Insolvency or Liquidation: If the debtor becomes insolvent or is liquidated, the business may be able to recover a portion of the outstanding debt from the debtor's estate as part of the liquidation process. This recovery would also be recorded in the Receipts journal.

In all these cases, when the bad debts are recovered, the transaction should be allocated to the "*Bad debts recovered*" account to properly account for the amount received. Depending on the specific circumstances and any applicable taxes or adjustments, the business may need to take further accounting steps, such as

recording a tax adjustment or debiting the "*Bad debts recovered*" account and crediting the debtor account.

It's important for businesses to keep accurate records of all debt recovery transactions, as well as the methods used to recover the bad debts. Properly accounting for bad debt recoveries ensures that the financial statements accurately reflect the business's financial position and performance. As always, it's advisable to follow relevant accounting standards and consult with accounting or financial professionals if there are any uncertainties or complexities in the debt recovery process.

Estate distribution when a debtor passed away

In the case where a debtor has passed away, and their estate is distributing the debts, the process would typically involve the following steps:

1. Notification: The business should be notified of the debtor's passing and the appointment of an executor or administrator to handle the estate's affairs.
2. Verification: The executor or administrator of the estate will verify the outstanding debts owed by the deceased debtor to the business. This may involve reviewing records, invoices, and any existing agreements or contracts.
3. Agreement: Once the debts are verified, the executor or administrator may contact the business to agree on the settlement of the outstanding debts. This agreement will depend on the financial situation of the estate and the available assets to cover the debts.
4. Debt distribution: After reaching an agreement with the business, the executor or administrator will distribute the appropriate payments to the business for the outstanding debts. These payments will be recorded as receipts in the Receipts journal.
5. Recording transactions: The business should record the debt recovery transactions in its accounting records. The recovered amounts should be allocated to the "*Bad debts recovered*" account or the appropriate revenue or income account, depending on the nature of the debts.
6. Tax implications: Depending on the tax regulations in the relevant jurisdiction, there may be tax implications for both the estate and the business related to the debt recoveries. It's essential to follow the tax rules and properly account for any tax adjustments in the financial records.
7. Estate distribution: The executor or administrator will continue to distribute the remaining assets of the estate to the beneficiaries, following the deceased's will or the rules of intestacy if there is no will.

As with any financial transaction involving estates and legal matters, it is crucial for the business to work closely with the executor or administrator of the deceased debtor's estate and seek professional advice if needed. Proper documentation and record-keeping are vital during this process to ensure accurate accounting and compliance with legal and tax requirements.

Batch or Journal to process transactions for the recovery of bad debts written-off

The recovery of bad debts written off is typically recorded in the receipts journal when the money is received or deposited into the bank account. The receipts journal is used to record all incoming funds and their allocation to various accounts.

When a recovery of bad debts occurs, the business receives payment from the debtor or on behalf the debtor, and this payment is recorded in the receipts journal. The entry in the receipts journal will include the amount received, the debtor's account being credited (reducing the outstanding balance), and the account to which the recovered amount is allocated, such as the "*Bad debts recovered*" account or the debtor's account itself.

By recording the recovery in the receipts journal, it ensures that the transaction is properly documented and reflects the inflow of funds into the business. It also allows for accurate tracking of the recovered amounts and facilitates reconciliation with bank statements or other financial records.

Procedure for the recording of transactions for the recovery of bad debts

The procedure for entering receipt transactions for the recovery of bad debts:

1. Access the "*Batch entry*" screen by clicking on the Batch entry icon (or the Cash / Bank entry icon if you use the Bank import plugin) on the Default ribbon.
2. Select the "*Receipts journal*", ensuring you choose the correct journal if multiple bank accounts are involved.
3. Enter the recovery details, including the deposit number, transaction date, transaction details, and select the debtor account. If VAT/GST/Sales Tax was applicable when the original debt was written off, select the bad debt tax code. Enter the amount in the credit column.
4. Enter the amount received and deposited, including VAT/GST/Sales Tax, using the same reference numbers, and select the debtor account and the "*VAT/GST/Sales Tax - Bad debts*" tax code. Enter the amount in the credit column.
5. Enter the amount of bad debts recovered, excluding VAT/GST/Sales Tax, using the same reference numbers. Select the Other income account (Bad debts recovered), select the "*Empty*" option as the "*No Tax*" code, and enter the amount in the credit column.
6. To create the debit transaction to the debtor's account, use the same reference numbers, select the debtor account, select the "*Empty*" option as the "*No Tax*" code, and enter the amount (excluding

VAT/GST/Sales Tax). Since the Receipts Journal only allows a credit amount entry, enter a negative sign before typing the amount in the credit column. osFinancials5/TurboCASH5 will automatically transfer the amount to the debit column upon pressing Enter.

Once the transactions for the recovery of bad debts are entered in the receipts journal, they will be displayed accordingly. Use the F5:Balance icon or press F5 to list the batch, and osFinancials5/TurboCASH5 will generate balancing entries to the bank account and the Output VAT/GST/Sales Tax account, if applicable. It is advisable to overtype the default descriptions of these balancing entries for better traceability and reconciliation.

Finally, change the alias (batch name) using the F9:Process icon or pressing F9, list the batch using the F8:List icon or pressing F8, and post (update) the batch to the ledger using the F6:Post icon or pressing F6.

After posting the transactions, the T-Account viewer should reflect the appropriate changes in the Debtors ledger and General ledger. The debits and credits will be recorded for record purposes, and the VAT/GST/Sales Tax on bad debts should be submitted on the relevant tax return and paid to the tax authority.

To summarize the accounting equation for the recovery of bad debts written off:

Debits: Bank account

Credits: Bad Debts Recovered (Other Income account) + Output VAT/GST/Sales Tax

Debits: Current Assets Credits: Other Income + Current Liabilities (VAT/GST/Sales Tax)"

Please note that this is a general guide, and it's always recommended to consult with a professional accountant or financial advisor for specific accounting practices and procedures.

===

Example : Recovery of Bad debts already written off

Example: An amount of 1150 (including VAT at 15%) is written off.

To record the write-off of an amount of $1,150, including VAT at 15%, the example entry would depend on the specific accounts and tax codes used in your accounting system. However, here's a general example of the entry:

Example entry:	*Account classification*	*Debit*	*Credit*
Debit: Bad debts expense (excluding VAT)	*Expenses*	*$1,000*	

Debit: Bad debts Tax code (VAT)	*Current liabilities*	*$150*	
Credit: Debtor account	*Current assets*		*$1,150*

Example : Recovery of Bad debts with VAT/GST/Sales tax

To write off bad debts and clear the Debtors account with the amount of irrecoverable debts (including VAT/GST/Sales Tax), follow these steps:

1. Identify the irrecoverable Debtor account and ensure you have sufficient documentary evidence of attempts to collect the debt. Only proceed with write-off after exhausting all avenues.
2. If you are a registered VAT/GST/Sales Tax vendor, identify the Interest amount and the VAT/GST/Sales Tax amount of the Output Tax already paid to the Tax Authorities in a previous Tax period. This is important to verify the correct VAT/GST/Sales Tax amount.

When writing off bad debts for debtor accounts on which output tax was paid to the tax authorities in a previous tax period, you may need to consider the VAT/GST or sales tax implications. However, the specific steps and requirements may vary depending on the jurisdiction and tax regulations.

Here are some general considerations:

1. *Create a Tax code: In osFinancials5/TurboCASH5, you may need to create a specific tax code or sub-account in the Setup → Accounts - Tax account type (Setup ribbon) to account for the VAT/GST or sales tax related to bad debts.*
2. *Write-off process: When writing off bad debts, you would typically credit the debtor's account with the amount of the irrecoverable debts (inclusive of VAT/GST/sales tax), debit the bad debts expense account (exclusive of VAT/GST/Sales tax), and debiting the Bad debts tax code with the VAT/GST/Sales tax amount.*
3. *Tax Return and Adjustments: The VAT/GST/sales tax amount associated with the bad debts write-off needs to be considered for the tax return. It may be reported as a tax adjustment or a deduction on the VAT/GST/Sales tax return. The specific reporting block or line may vary depending on the tax jurisdiction. By reducing the taxable amount on the return, it can potentially lower the amount payable to the tax authority.*

It's important to consult with a tax professional or refer to the tax regulations specific to your jurisdiction to ensure compliance with the VAT/GST or sales tax requirements when writing off bad debts and handling the associated tax implications.

Interest amount - Identifying the interest amount, it typically refers to determining the portion of the outstanding debt that represents interest charges.

When dealing with bad debts or debt write-offs, it's important to consider any interest charges that may have been applied to the outstanding debt. In some cases, businesses may charge interest on overdue payments, and this interest may be subject to VAT/GST or sales tax depending on the applicable regulations in your jurisdiction.

By identifying the interest amount, you can ensure that the correct VAT/GST/sales tax amount is calculated and accounted for when writing off the bad debts. This helps in accurately determining the tax implications and complying with the tax regulations specific to your VAT/GST/sales tax system.

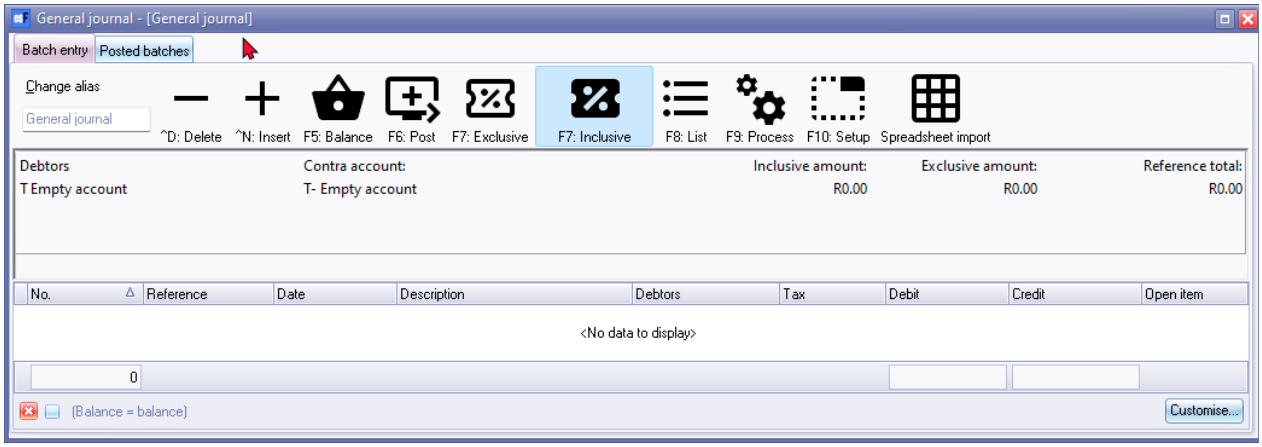
It's important to consult with a tax professional or refer to the tax regulations in your jurisdiction to understand the specific requirements and treatment of interest charges in relation to VAT/GST/sales tax.

3. Write off the Bad Debts in the General journal.

Example: An amount of 1,150 (including VAT at 15%) is written off.

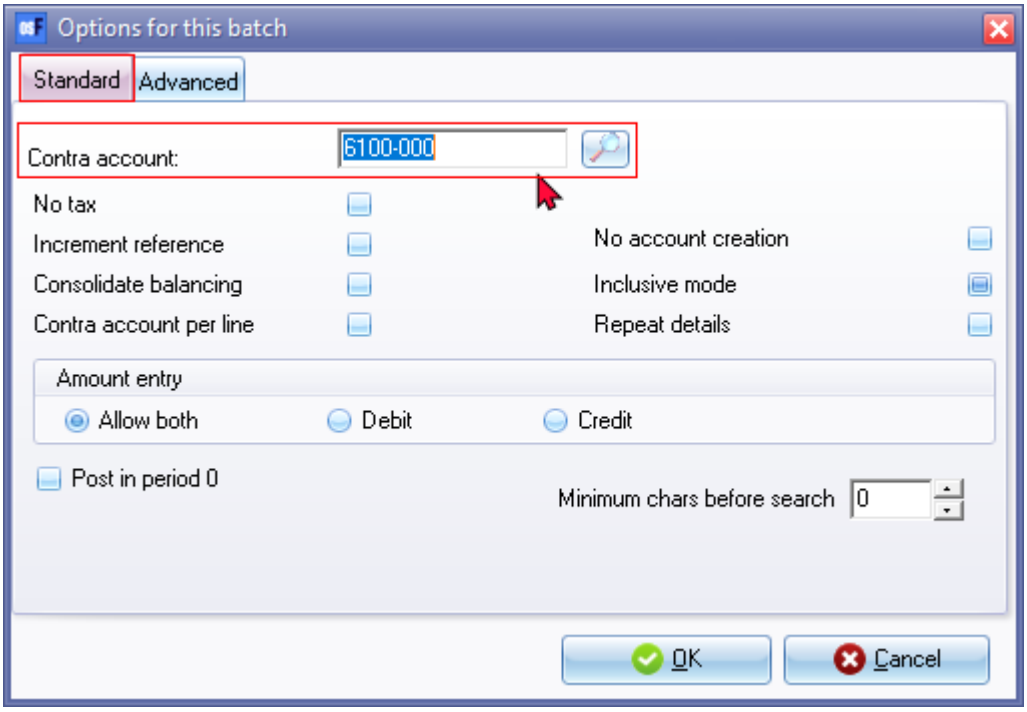
Procedure to process the recovery bad debts written off for a debtor account:

1. In osFinancials5/TurboCASH5 navigate to the Default ribbon.
2. Select "*Batch entry*" and choose the "*Receipts journal*" for the bank account into which the monies were received.

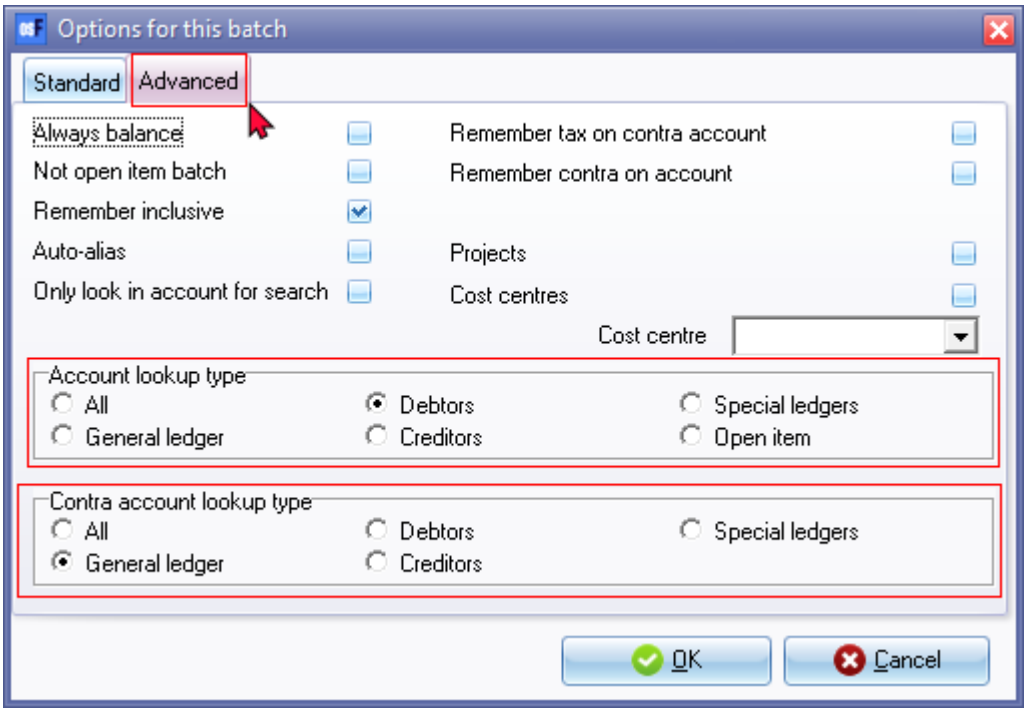


3. Batch setup: Since this is a general journal that may be used for other general transactions, click F10: Setup to set the "*Options for this bath*" as follows:

    a) Standard tab - "*Contra account*" select the "*Bad debts*" expense account.



b) Advanced tab - Select the following options:



- Account lookup type - Select "*Debtors*" to only list the debtor accounts in the lookup.
- Contra account lookup type - Select "*General ledger*" to only list the general ledger account as the contra account for the balancing entries or transactions.
- Leave the rest of the settings as in the options for this batch as in the screenshots, and click OK to save your settings.

4. Change alias: By default the name of the journal is displayed as "*General journal - [General journal]*"

To make it easy to identify the specific nature of the transactions in the General journal, enter a unique name for your specific requirements, in the "*Change alias field*" and press Enter. In this example the "*Bad debts-Green*" was entered. This will change the general journals name as name of the journal is displayed as "*General journal - [Bad debts-Green]*" in the titlebar It indicates that "*Bad debts for Debtor Green*" was processed in the general journal.

5. Enter the transactions for the bad-debts:

   - Date: By default, the date of your operating system would be displayed. Select the specific date on which you need to write off the debt.
   - Reference: The default reference in a new General journal would be "*1*" . In the case of a previous processed transactions, the Description could be the related to the last reference used. Enter a valid reference.
   - Description: Enter a description for each transaction for your own requirements. In this example, the description is changed to "*Write-off bad debts -AB Green IN000005*" Note: The descriptions should make sense to understand the nature of the transactions.
   - Debtors (Accounts): Select the account of the debtor for which you need to write-off bad debts.
   - Tax: Select the VAT/GST.Sales tax code for bad debts if applicable to your jurisdiction.

VAT/GST/Sales tax - Writing off of bad debts:

It is important to note that the specific tax rules and regulations regarding bad debt write-offs can vary, and it's advisable to consult with a tax professional or refer to the tax laws in your jurisdiction to determine the exact requirements and treatment of VAT/GST/Sales tax in relation to writing off uneconomical bad debts.

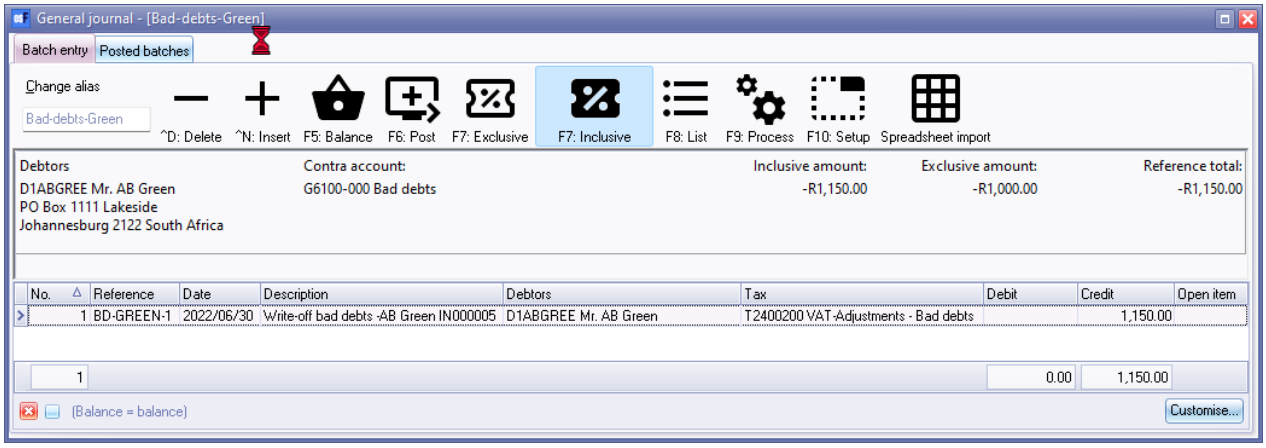
If VAT/GST/Sales tax is applicable on the writing off of bad debts, you can follow the steps below to ensure proper recording and allocation of the tax:

- *Add a Tax account code for Bad debts: Create a specific Tax account code for bad debts, such as "T2400-200 - VAT-Adjustments - Bad debts." This account should be included in the structure of your VAT/GST/Sales tax control account in the current liabilities section of your Chart of Accounts. This will allow you to track and report the VAT/GST/Sales tax adjustments related to bad debts separately.*
- *Process the general journal to write off bad debts: When recording the write-off of bad debts in the general journal, select the appropriate Tax code for "Bad debts." This Tax code should be associated with the specific VAT/GST/Sales tax percentage and transactions applicable to bad debts. By selecting the appropriate Tax code, the system will calculate and allocate the VAT/GST/Sales tax amount accordingly.*

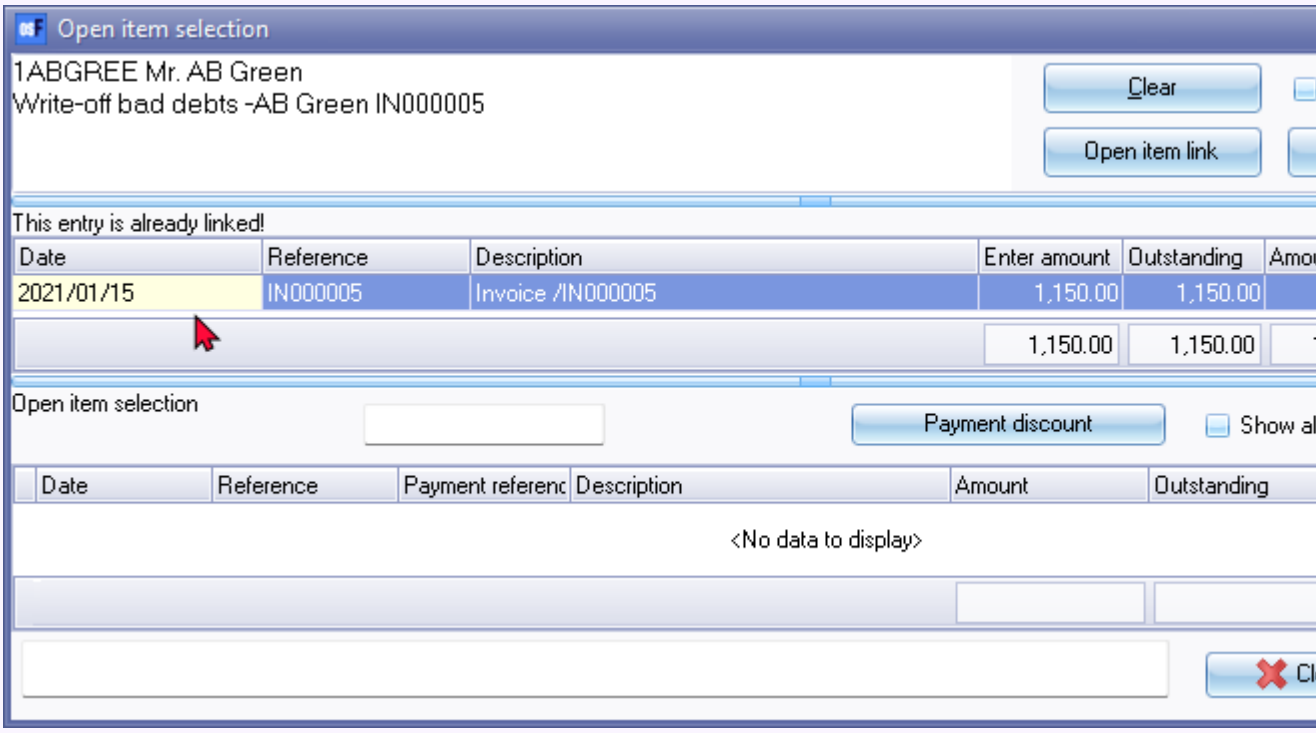
By following these steps, you can ensure that the VAT/GST/Sales tax implications of writing off bad debts are properly accounted for and reflected in your financial records and tax returns.

- Credit: Enter the amount in the credit column. If the VAT/GST/Sales tax code for bad debts was selected, it will automatically generate the VAT/GST/Sales tax percentage when balancing entries are generated.

7. After entering the write off transaction in the General journal should be displayed as follows:



Open item selection: The "Open item selection" screen will be launched for debtors whose accounts are set as Open item accou debts to be written off against specific transactions or invoices.



After selecting or linking the Bad-debts write-off transaction to an outstanding transactions, the transaction line will be displa

In this example, the bad debts expense account is debited with the amount of $1,000, representing the irrecoverable debt excluding VAT. The bad debts tax code account is debited with the VAT amount of $150. The debtor account is credited with the total amount of $1,150 to clear the outstanding debt.

Please note that the specific accounts and tax codes may vary based on your accounting system and local tax regulations. It's important to consult with a tax professional or refer to the guidelines provided by your tax authority to ensure accurate and compliant recording of write-offs including VAT/GST/sales tax.

Here's the revised entry:

Example entry:	*Account classification*	*Debit*	*Credit*
Debit: Debtor account	*Current assets*	*$1,150*	
Credit: Bad debts recovered	*Current assets*		*$1.000*
Credit: Bad debts - Tax code (VAT/GST/Sales tax)	*Current liabilities*		*$150*

Using the "Bad Debts Recovered" account helps maintain proper accounting records and provides better visibility of the recovered amount specifically related to bad debts.

===

If an amount of 1150, including VAT at 15%, is written off in a previous year and the full amount is subsequently recovered, the example entry would depend on the specific accounts and tax codes used in your accounting system. However, here's a general example of the entry:

1. Reversal of Write-off Entry: Debit: Debtor Account - 1000 Debit: VAT/GST/Sales Tax Control Account -

150 Credit: Bad Debts Expense (excluding VAT) - 1000 Credit: Bad Debts Tax Code (VAT) - 150

In this entry, the debtor account is debited with the full amount of 1150 to reverse the previous write-off. The VAT/GST/Sales Tax control account is also debited with the VAT amount of 150. The bad debts expense account (excluding VAT) is credited with 1000, and the bad debts tax code account (VAT) is credited with 150 to reverse the initial write-off entries.

2. Recovery of Debt Entry: Debit: Debtor Account - 1150 Credit: Revenue/Sales Account - 1000 Credit: VAT/GST/Sales Tax Control Account - 150

In this entry, the debtor account is debited with the recovered amount of 1150. The revenue/sales account is credited with the original amount excluding VAT (1000), and the VAT/GST/Sales Tax control account is credited with the VAT amount of 150.

Please note that these entries are general examples, and you should consult with a professional accountant or refer to the guidelines provided by your accounting software to ensure accurate recording of the recovery of a previously written-off amount, including VAT/GST/sales tax.

===

"Cashbook Line:125 Desc:Payment AB Green Recover bad debts Cannot use 2400-200 on a debtors creditors bank or other tax account!"

===

In osFinancials5/TurboCASH5, when recovery of bad debts already written off transaction is recorded in the receipts journal and tax is applicable you cannot select a debtor account with a tax. This will render an error message = "Cashbook Line:125 Desc:Payment AB Green Recover bad debts Cannot use 2400-200 on a debtors creditors bank or other tax account!"

In osFinancials5/TurboCASH5, the error message "Cashbook Line:125 Desc:Payment AB Green Recover bad debts Cannot use 2400-200 on a debtors creditors bank or other tax account!" indicates that there is an issue with selecting a tax account for a debtor account when recording a recovery of bad debts transaction in the receipts journal.

This error message occurs because tax accounts, such as 2400-200 in this case, are generally not allowed to be used on debtor or creditor accounts. Tax accounts are typically reserved for specific tax-related transactions and should not be linked to debtor or creditor accounts directly.

To resolve this issue and record the recovery of bad debts transaction correctly, you need to ensure that you are selecting the appropriate accounts for the transaction. Here's what you can do:

1. Identify the correct accounts: When recording a recovery of bad debts, you should select the relevant debtor account (AB Green in this case) for the receipt entry. The receipt entry should represent the amount received from the debtor to recover the previously written-off bad debt.

2. Use a regular income or bank account: For the transaction's account selection, use a regular income account or bank account (depending on how the money is received) instead of a tax account. The receipt of the recovered amount should be posted to an appropriate income or bank account to reflect the recovery.

3. Adjust the tax appropriately: If tax is applicable to the recovered amount, you should handle the tax calculation separately. Depending on your tax setup and regulations, you may need to calculate and account for the tax amount separately from the receipt entry.

By following these steps and selecting the correct accounts for the recovery of bad debts transaction, you should be able to avoid the error message and accurately record the transaction in osFinancials5/TurboCASH5. If you are unsure about how to handle tax-related transactions or if you encounter any difficulties, it's recommended to consult with your accounting or tax professional for specific guidance based on your company's setup and applicable tax regulations.

===

When recovery of bad debts is recorded in the Receipts journal, the transaction including the transaction should be allocated to the "Bad debts recovered account" Then I think need to decide whether to do further business with the debtor, unblock the account (is account is blocked /disabled) then have the option to record a transaction to debit "Bad debts recovered account" and credit the bad debts tax account and credit the debtor account?

Yes, you are correct. When recording the recovery of bad debts in the Receipts journal, the transaction should be allocated to the "Bad debts recovered account" to properly account for the amount received for the previously written-off bad debt.

After recording the recovery of bad debts and allocating it to the "*Bad debts recovered*" account, you have several options to handle the further business with the debtor:

1. Unblock the debtor account: If the debtor's account was previously blocked or disabled due to the bad debt, you can unblock the account after the recovery. This will allow you to continue doing business with the debtor.

2. Record a separate transaction: If you decide to do further business with the debtor and want to settle the recovered bad debt, you can record a separate transaction to debit the "*Bad debts recovered*" account and credit the debtor account. This will offset the recovery amount against the bad debt, showing that the bad debt has been fully settled.

3. Record a tax adjustment: If tax was applicable to the recovered bad debt, you can also record a tax adjustment separately. Depending on your tax regulations and setup, you may need to credit the bad debts tax account and debit the appropriate tax liability account to account for the tax amount.

By taking these steps, you can ensure that the recovery of bad debts is properly accounted for and that

your debtor accounts reflect the accurate financial position after the recovery. As always, it's essential to follow proper accounting practices and comply with relevant tax regulations when handling bad debts and their recovery. If you have any specific questions or uncertainties regarding the accounting treatment, it's advisable to consult with your accounting or financial advisor for guidance tailored to your business's individual circumstances.

Provision for Bad debts

What is provision for bad debts?

Provision for bad debts, also known as an allowance for doubtful accounts or provision for credit losses, is an accounting concept that involves estimating and setting aside an amount of money to cover potential losses from customers' unpaid debts. It is a financial provision made by a company to account for the possibility that some portion of its accounts receivable may not be collectible.

The provision for bad debts is created to reflect the expected credit losses in a company's financial statements. It is based on the principle of conservatism, which states that companies should recognise potential losses as soon as they are probable, but not necessarily wait until they are certain.

The provision for bad debts is typically determined by considering factors such as the creditworthiness of customers, historical collection patterns, ageing of accounts receivable, economic conditions, industry trends, and any specific circumstances that may affect the collectability of outstanding debts.

Creating a provision for bad debts allows the company to match anticipated losses with the revenue earned in the same accounting period, ensuring a more accurate representation of the company's financial position and performance.

The provision for bad debts is reported as an expense on the income statement, reducing the company's profit and taxable income. It is also presented as a contra-asset on the balance sheet, offsetting the accounts receivable to reflect the net realizable value.

By establishing a provision for bad debts, companies demonstrate prudence in recognising and accounting for potential credit losses, improving the accuracy and reliability of their financial statements. It also helps in assessing the true value of accounts receivable and evaluating the overall credit risk of the business.

Summary of key points for provision of bad debts

The outline for the process of creating a provision for bad debts or doubtful debts in your accounting practices, is as follows:

1. Identifying irrecoverable debts: Before calculating the provision for bad debts, it is important to identify the debts that are deemed irrecoverable and should be written off as bad debts. This assessment helps separate the debts that are unlikely to be collected from those that still have a chance of recovery.
2. Methods for calculating the provision for bad debts:
    - Age analysis schedules: One method is to estimate or calculate the provision based on the age analysis schedules of your debtor accounts. This involves categorizing outstanding debts

by their age and applying specific percentages or rates based on historical data or industry norms.

- Total outstanding debt: Another method is to base the provision on the total outstanding debt, considering factors such as the overall creditworthiness of your customers and any specific risks associated with certain accounts.
- Total credit sales: You can also calculate the provision based on the total sales made on credit, taking into account the historical percentage of bad debts experienced in relation to credit sales.

3. Revising the provision for bad debts amount: In subsequent years, it is necessary to review and revise the provision amounts established in previous years. Changes may be required to increase or decrease the provision based on changes in credit sales, outstanding debts, economic conditions, or other relevant factors. Consistency in the chosen method is essential to ensure accurate and comparable provisions across different periods.
4. Impact on Income statement: The provision for bad debts or doubtful debts directly affects the Income Statement (Profit or Loss) of your business. It represents an expense incurred to account for potential losses from irrecoverable debts and reflects the prudent recognition of these risks in your financial statements.

By following these procedures and consistently applying the chosen method for calculating provisions, you can ensure the accuracy of your financial reporting and reflect the potential impact of bad debts on your business's profitability. It is recommended to consult with an accounting professional or adhere to accounting standards and regulations applicable in your jurisdiction to ensure compliance and accuracy in recording provisions for bad debts.

What is the frequency for provision for bad debts?

The frequency for creating a provision for bad debts can vary depending on the company's accounting policies and the specific circumstances. There is no fixed rule or standard frequency mandated by accounting regulations such as IFRS (International Financial Reporting Standards) or GAAP (Generally Accepted Accounting Principles).

Typically, the provision for bad debts is established at the end of the accounting period, which is usually annually for most companies. It is common for companies to review their accounts receivable and estimate the potential losses at the end of each financial year. This allows them to adjust the provision based on the ageing of the debts and changes in the creditworthiness of customers.

However, some companies may choose to review and update the provision more frequently, such as semi-annually, quarterly, or even on a monthly basis. This can be particularly relevant for businesses with higher

credit risk customers or industries where payment delays or defaults are more prevalent.

The frequency of provisioning is determined by factors such as the nature of the business, the volume and credit terms of sales, historical collection patterns, economic conditions, and the accuracy of credit risk assessments. It is important for companies to maintain consistency in their approach to provisioning and ensure that it aligns with their financial reporting policies and requirements.

Ultimately, the frequency of provisioning for bad debts should strike a balance between timely recognition of potential losses and the practicality of assessing and estimating the credit risk on a regular basis.

How is Provision for bad debts calculated?

Common approaches to provision of bad debts

The provision for bad debts is typically calculated by estimating the amount of accounts receivable that is expected to become uncollectible. This provision is created to account for the possibility of customers defaulting on their payment obligations. While the exact calculation method may vary depending on the company's specific policies and circumstances, here are a few commonly used approaches:

1. Ageing analysis: This method involves categorizing accounts receivable based on their age and assessing the likelihood of collection for each category. Typically, the older the debt, the higher the probability of it becoming uncollectible. The company assigns specific percentages or rates of uncollectibility to each age category and applies them to the corresponding outstanding balances to calculate the provision.
2. Percentage of total receivables: Under this approach, a predetermined percentage is applied to the total accounts receivable balance to estimate the provision. The percentage used may be based on historical data, industry averages, or management's judgment.
3. Specific analysis: In certain cases, a company may individually evaluate each customer account to determine the likelihood of non-payment. Factors such as the customer's payment history, financial condition, and creditworthiness are considered to estimate the provision for each specific account.
4. Historical loss rate: This method involves analysing historical bad debt write-offs over a certain period and applying the average loss rate to the current outstanding balances. The historical loss rate can be calculated by dividing the total bad debts written off in a specific period by the total credit sales for the same period.

It's important to note that the provision for bad debts is an estimate and may require periodic adjustments as actual collection experience differs from initial expectations. The specific calculation method chosen should be based on sound judgment, consistent application, and adherence to applicable accounting standards and regulations.

Common methods for calculation of provision for bad debts

The provision for bad debts is calculated based on the total outstanding debtors' balances. Before calculating the provision, it's necessary to identify and write off any irrecoverable bad debts that may have occurred throughout the financial year.

Typically, the provision for bad debts is established at the end of the financial year before closing the books. However, it's important to review and adjust the provision from year to year. This may involve increasing or decreasing the provision based on changes in circumstances.

There are three common methods for calculating the provision for bad debts or doubtful debts:

1. Age analysis: This method involves analysing the age of outstanding debtor accounts and estimating the provision based on different age categories. Typically, older debts have a higher probability of becoming uncollectible, so higher provision rates are applied to those categories.
2. Total outstanding debt: This method estimates the provision based on the total amount of outstanding debt owed by customers. A certain percentage or rate is applied to the total outstanding balance to calculate the provision.
3. Total credit sales: This method estimates the provision based on the total sales made on credit. A percentage or rate is applied to the total credit sales to determine the provision amount.

These methods are commonly used, and the choice of which method to use may depend on various factors such as the company's industry, historical collection data, and management's judgment. It's important to note that companies may also use a combination of these methods or other approaches based on their specific circumstances.

Creating a provision for bad debts signifies that a business has encountered difficulties in collecting funds from its debtors. It is an accounting practice to anticipate and account for potential losses due to non-payment or uncollectible debts.

When it comes to writing off bad debts or before doing so, it is indeed important to have proper documentation and evidence of the collection efforts made. These records serve as documentation of the business's attempts to recover the outstanding amounts and support the decision to write off the debts as uncollectible. This documentation may be required by tax authorities for various purposes, including income tax, VAT/GST/sales tax reporting, and other regulatory requirements.

Maintaining proper documentation helps ensure transparency, compliance with accounting standards, and accurate financial reporting. It is advisable for businesses to establish clear policies and procedures regarding the documentation of collection efforts and the process of writing off bad debts to maintain the integrity of their financial records.

In larger business entities, the provision for bad debts or doubtful debts may be calculated on a regular

basis, such as monthly or every six months. However, most businesses typically calculate the provision on an annual basis.

Provision for bad debts - Calculation methods

After calculating the amount using your preferred method, the next step is to create a provision for bad debts. In subsequent years or accounting periods, you will need to adjust the provision by either increasing or decreasing it based on the circumstances.

Adjusting the provision for bad debts allows for the recognition of changes in the expected collectability of outstanding debts. If the creditworthiness of debtors deteriorates or there are indications that certain debts may not be recoverable, it may be necessary to increase the provision. On the other hand, if there are improvements in the collectability of outstanding debts, a decrease in the provision may be warranted.

Regularly reviewing and adjusting the provision for bad debts ensures that it accurately reflects the potential losses from uncollectible debts. This adjustment is essential for reporting purposes and helps maintain the integrity of your financial statements.

Method 1: Calculation based on Age analysis schedules

To calculate the provision for bad debts, you can begin by analysing the outstanding balances of your debtors based on the ageing periods for which these debts are outstanding. This analysis requires age analysis schedules or an age analysis report.

In osFinancials5/TurboCASH5, the ageing analysis report is particularly useful if you utilize the open item feature for debtor accounts and have resolved any disputes and correctly linked transactions.

Opening balances - If you are a new user of osFinancials5/TurboCASH5 and have recorded debtor account balances for each period when entering opening balances, you can generate a Debtor Age analysis report to base your calculations on. However, if this data is not available in osFinancials5/TurboCASH5, you will need to obtain the Debtors Age analysis schedules from your previous accounting system.

Follow these steps to calculate the provision using the Debtors Age analysis reports in osFinancials5/TurboCASH5:

1. In osFinancials, navigate to Age analysis on the Reports ribbon or the Open item link option (Due tab) on the Default ribbon. You may also print age analysis reports from the Reports → Debtors → Age analysis menu.

2. Select all your debtors and set the Date of ageing as the last day of the period you want to use for the totals, typically the last day of your financial year.
3. Click the Print or OK buttons to generate the Debtors age analysis report.

The report will display the outstanding balances categorised by ageing periods, such as current, 30 days, 60 days, and 90 days. Each balance should be considered individually, with particular attention given to accounts with the longest outstanding balances. Calculating the percentages of the ageing periods in relation to the total transactions can provide guidelines for your calculations.

Based on this age analysis, you can identify doubtful debts. The list of doubtful debts will then be used to create or adjust the provision for bad debts.

If you have accounting records from a previous system that do not include debtor accounts for each outstanding period in osFinancials, you can refer to your old accounting records to find the Debtors Age analysis schedule (summary).

Method 2: Calculation based on Credit sales

This method is useful when you have identified a trend, such as an average of 2% of the total credit sales over the past two years being bad debts. To calculate the provision for bad debts using this method, multiply the total credit sales for a specific financial year or accounting period by the estimated percentage. For example, if the total credit sales amount to $100,000, the provision for bad debts would be $2,000 (2% of $100,000).

Please note that this method provides a simple calculation or estimation for the provision for bad debts but does not consider the specific amounts owed by individual debtors.

This calculation for doubtful debts will then be used to create or adjust the provision for bad debts.

Method 3: Calculation based on Total outstanding debt

You can also use the summarised information from the age analysis schedule or report to calculate or estimate the provision for bad debts.

Take the list of outstanding debt totals for each period and add an estimated percentage for the bad debts likely to be irrecoverable. These percentages are typically determined based on trends of past bad debts written off for debts in each of these ageing periods.

For example, if the trend shows 1% for the current period, 2% for debts older than 30 days, 5% for debts older than 60 days, and approximately 10% of outstanding debts are likely to become irrecoverable, the provision for bad debts would amount to $800.

Please keep in mind that these percentages may vary depending on the nature of your business, and

implementing better credit control and debt collection practices can help reduce these percentages.

This calculation for doubtful debts will then be used to create or adjust the provision for bad debts.

Create Provision for Bad Debts

In osFinancials5/TurboCASH5, the batch or journal type typically used to write-off bad debts and create or adjust provisions for bad debts is the "*General journal*" type. The General journal allows for manual entry of various accounting transactions, including those related to bad debts.

When writing off bad debts, you would make a journal entry in the General journal to debit the Bad debt expense account and credit the Debtor or Accounts receivable account. This effectively removes the uncollectable debt from the debtor's account and recognizes the expense associated with the bad debt.

To create a provision for bad debts or adjust an existing provision, you would also use the General journal. The specific accounts involved may vary based on your accounting practices, but typically you would debit the Provision for bad debts account and credit the Provision Reversal account.

It's important to consult with an accountant or follow the accounting standards and guidelines applicable in your jurisdiction when determining the appropriate accounts and entries for writing off bad debts and creating or adjusting provisions.

The provided information outlines the process of creating a provision for bad debts or doubtful debts in your accounting practices. Here's a summary of the key points:

1. Identifying Irrecoverable Debts: Before calculating the provision for bad debts, it is important to identify the debts that are deemed irrecoverable and should be written off as bad debts. This assessment helps separate the debts that are unlikely to be collected from those that still have a chance of recovery.
2. Methods for Calculating the Provision:
    - Age Analysis Schedules: One method is to estimate or calculate the provision based on the age analysis schedules of your debtor accounts. This involves categorizing outstanding debts by their age and applying specific percentages or rates based on historical data or industry norms.
    - Total Outstanding Debt: Another method is to base the provision on the total outstanding

debt, considering factors such as the overall creditworthiness of your customers and any specific risks associated with certain accounts.

- Total Credit Sales: You can also calculate the provision based on the total sales made on credit, taking into account the historical percentage of bad debts experienced in relation to credit sales.

3. Revising the Provision Amount: In subsequent years, it is necessary to review and revise the provision amounts established in previous years. Changes may be required to increase or decrease the provision based on changes in credit sales, outstanding debts, economic conditions, or other relevant factors. Consistency in the chosen method is essential to ensure accurate and comparable provisions across different periods.
4. Impact on Income Statement: The provision for bad debts or doubtful debts directly affects the Income Statement (Profit or Loss) of your business. It represents an expense incurred to account for potential losses from uncollectible debts and reflects the prudent recognition of these risks in your financial statements.

By following these procedures and consistently applying the chosen method for calculating provisions, you can ensure the accuracy of your financial reporting and reflect the potential impact of bad debts on your business's profitability. It is recommended to consult with an accounting professional or adhere to accounting standards and regulations applicable in your jurisdiction to ensure compliance and accuracy in recording provisions for bad debts.

Creating a Provision for Bad Debts

When your business completes its first year or when you implement an accounting policy, it is important to create a provision for bad debts or doubtful debts.

Before estimating or calculating the provision for bad debts, it is necessary to identify the debts that are irrecoverable and should be written off as bad debts.

You can calculate the provision using the following methods:

1. Estimates or calculations based on the age analysis schedules of your debtor accounts.
2. Estimates or calculations based on the total outstanding debt.
3. Estimates or calculations based on the total credit sales.

In subsequent years, it is important to review and adjust the provision made in the previous year. This may involve increasing or decreasing the amount of the provision.

It is crucial to maintain consistency in the method used for calculating the provision in consecutive years. This ensures that the provisions are aligned with any fluctuations in credit sales and outstanding debts. The

provision will have an impact on your Income Statement (Profit or Loss).

What is the transactions to create provision for bad debts in the general journal?

To create a provision for bad debts in the general journal, you typically need to make an adjusting entry at the end of an accounting period. The specific transactions involved will depend on the method used to calculate the provision. Here are three common methods and the corresponding journal entries:

Age Analysis Schedules Method:

Debit: Bad Debts Expense

Credit: Provision for Bad Debts

To record the provision based on age analysis schedules, you need to estimate the amount of bad debts and create a provision accordingly. The Bad Debts Expense account is debited to recognize the expense, and the Provision for Bad Debts account is credited to increase the provision amount.

Total Outstanding Debt Method:

Debit: Bad Debts Expense

Credit: Provision for Bad Debts

When calculating the provision based on the total outstanding debt, you estimate a percentage of outstanding debts that are likely to be irrecoverable. The Bad Debts Expense account is debited to recognize the expense, and the Provision for Bad Debts account is credited to increase the provision amount.

Total Sales on Credit Method:

Debit: Bad Debts Expense

Credit: Provision for Bad Debts

If you use the total sales on credit method, you estimate a percentage of credit sales that will become bad debts. The Bad Debts Expense account is debited to recognize the expense, and the Provision for Bad Debts account is credited to increase the provision amount.

These entries recognize the provision for bad debts as an expense on the income statement and create a corresponding liability (provision) on the balance sheet. The specific amounts will depend on the estimates made using the chosen method.

It's important to consult with an accountant or follow the specific guidelines of your accounting system to ensure accurate recording of provision for bad debts in the general journal.

What is the transactions to adjust a decrease in the provision for bad debts in the general journal?

To adjust a decrease in the provision for bad debts in the general journal, you need to make an adjusting entry. The specific transactions involved will depend on the reason for the decrease. Here are two common scenarios and the corresponding journal entries:

1. Recovery of Previously Written-off Debt:

   Debit: Provision for Bad Debts

   Credit: Accounts Receivable

   When a previously written-off debt is recovered, you reduce the provision for bad debts and reinstate the accounts receivable. The Provision for Bad Debts account is debited to decrease the provision, and the Accounts Receivable account is credited to reflect the recovery of the debt.

2. Reassessment of Bad Debts:

   Debit: Provision for Bad Debts

   Credit: Bad Debts Expense

If you reassess the likelihood of certain debts becoming irrecoverable and determine that a lower provision is required, you need to adjust the provision for bad debts. The Provision for Bad Debts account is debited to decrease the provision, and the Bad Debts Expense account is credited to reflect the reduction in the expense.

It's important to note that adjusting the provision for bad debts involves decreasing the provision amount and adjusting the corresponding accounts accordingly. The specific amounts will depend on the circumstances and reassessment made.

Consulting with an accountant or following the guidelines of your accounting system is advisable to ensure accurate recording of the adjustment for a decrease in the provision for bad debts in the general journal.

What is the transactions to adjust a increase in the provision for bad debts in the general journal?

To adjust an increase in the provision for bad debts in the general journal, you need to make an adjusting entry. The specific transactions involved will depend on the reason for the increase. Here are two common scenarios and the corresponding journal entries:

Increased Estimate of Bad Debts:

Debit: Bad Debts Expense

Credit: Provision for Bad Debts

If you reassess the likelihood of certain debts becoming irrecoverable and determine that a higher provision is required, you need to adjust the provision for bad debts. The Bad Debts Expense account is debited to recognize the increased expense, and the Provision for Bad Debts account is credited to reflect the higher provision.

Addition of New Bad Debts:

Debit: Bad Debts Expense

Credit: Provision for Bad Debts

When you identify specific debts that are considered bad or doubtful and need to be included in the provision, you record the expense associated with these new bad debts. The Bad Debts Expense account is debited, and the Provision for Bad Debts account is credited to increase the provision.

It's important to note that adjusting the provision for bad debts involves increasing the provision amount and adjusting the corresponding accounts accordingly. The specific amounts will depend on the circumstances and reassessment made.

Consulting with an accountant or following the guidelines of your accounting system is advisable to ensure accurate recording of the adjustment for an increase in the provision for bad debts in the general journal.

Depreciation

Depreciation : Accounting standards and Accounting method

Depreciation is applicable to both small and medium entities (SMEs) and larger entities following International Financial Reporting Standards (IFRS), including IFRS (full) and IFRS for SMEs.

Under IFRS (full) and IFRS for SMEs, entities are required to account for depreciation of their tangible assets. Depreciation is considered an important aspect of financial reporting as it helps to accurately present the financial position and performance of an entity by allocating the cost of assets over their useful lives.

As for the accounting method, depreciation is primarily associated with the accrual-based accounting method. In accrual accounting, expenses are recognized when incurred, and revenues are recognized when earned, regardless of the timing of cash flows. Depreciation is recorded as an expense over the asset's useful life, even if the cash outflow for the asset's acquisition occurred in a different accounting period.

On the other hand, the cash-based accounting method does not typically involve the recognition of depreciation. Cash-based accounting recognizes revenues and expenses when cash is received or paid, respectively, rather than when they are earned or incurred. Since depreciation is a non-cash expense, it is not recognized in the cash-based accounting method.

However, it's important to note that entities following the cash-based accounting method may still be required to account for depreciation for taxation purposes or for other reporting needs outside of their cash-based financial statements.

Activa plugin - Manual - Shop - Licence : Once-off -

The Activa plugin automates the management and processes of fixed assets and the depreciation of fixed assets in your accounts over the lifespan of the fixed assets. Periodically you will receive a notification screen, which the depreciation shown. From this screen, the depreciation(s) can directly take place.

The Activa plugin in osFinancials5/TurboCASH5 allows you to register fixed assets that need to be written off. The write-off process occurs over the lifespan of the asset and can be spread across multiple financial years.

By adding the Activa Fixed asset accounts in the plugin setup, you will receive reminders when new transactions are posted to the ledger or when Activa transactions require processing. This automation streamlines the management of depreciation allowances for fixed assets (tangible assets) in your Set of Books over the asset's lifespan.

As you record the depreciation expenses for each financial year, they will be reported in the income statement and reduce your net profit. Additionally, the plugin will provide you with the net value of your fixed assets, which is calculated as the fixed assets' cost minus the accumulated depreciation, and this information will be reflected in the balance sheet.

In summary, the Activa plugin helps automate the depreciation management process, ensures accurate

reporting of depreciation expenses, and provides visibility into the net value of fixed assets over their lifespan in both the income statement and the balance sheet.

When a fixed asset reached the end of life end process that will clear of the total write-off from the balance write-off account and the initial asset account. This will display only the remaining total on the asset account and the contra account the will be cleared of this total.

By allowing the write-off process to occur over the lifespan of the asset and providing reminders for transaction processing, the plugin further streamlines the management of depreciation allowances for fixed assets.

The accurate reporting of depreciation expenses in the income statement and the reflection of the net value of fixed assets (cost minus accumulated depreciation) in the balance sheet remain essential features of the plugin.

Furthermore, the ability to clear the total write-off from the balance write-off account and the initial asset account when a fixed asset reaches the end of its life adds to the efficiency of the process.

The Activa plugin's powerful grid, custom filtering options, and integrated pivot tables enhance the search and analysis capabilities for active fixed assets, assets requiring processing, and transaction details. The Ledger analyser allows for the printing and exporting of the trial balance, income statement, and balance sheet, while the T-Account viewer facilitates the export of transactions to spreadsheets.

The Central search feature in osFinancials5/TurboCASH5 further aids in searching for transactions related to fixed assets, providing comprehensive functionality for managing and analysing fixed asset data.

What is depreciation?

Depreciation is an accounting method used to allocate the cost of a tangible asset over its useful life. It represents the gradual decrease in the value of an asset due to factors such as wear and tear, obsolescence, or the passage of time. Depreciation is a non-cash expense, meaning it does not involve an actual outflow of cash but is recorded to reflect the decrease in the asset's value over time.

Depreciation is important in financial reporting as it helps to match the cost of an asset with the revenue it generates during its useful life. By spreading the cost over multiple accounting periods, depreciation allows businesses to reflect the consumption of the asset's value in the periods it is used to generate revenue.

There are various methods for calculating depreciation, including straight-line depreciation, declining balance depreciation, and units of production depreciation. The choice of depreciation method depends on factors such as the nature of the asset, its expected useful life, and applicable accounting standards.

It's worth noting that depreciation is primarily applicable to tangible assets such as buildings, vehicles, machinery, equipment, and furniture. Intangible assets, such as patents or trademarks, are subject to a similar concept called amortization.

Is Depreciation a long-term adjustment?

Depreciation is a long-term adjustment. It involves allocating the cost of a tangible asset over its useful life. The purpose of depreciation is to recognize the gradual wear and tear, obsolescence, or decrease in the asset's value over time. By spreading the cost of the asset over its useful life, depreciation helps to match the expense of using the asset with the revenues it generates.

Since depreciation is related to the usage of long-term assets, it is considered a long-term adjustment. It affects the financial statements over multiple accounting periods, reflecting the ongoing consumption of the asset's economic benefits. The accumulated depreciation is typically presented as a contra-asset account on the balance sheet, reducing the carrying value of the related asset.

Depreciation is important for accurately reporting an entity's financial position and profitability, as it recognizes the cost of utilizing long-term assets in generating revenue. It is a key component in determining the true cost and value of an entity's assets and impacts various financial ratios, such as return on assets and net income.

What accounts is required to record and manage depreciation?

To record and manage depreciation, the following accounts are typically used:

1. Accumulated Depreciation: This is a contra-asset account that is used to accumulate the total depreciation expense recognized on an asset over its useful life. It is presented on the balance sheet and reduces the carrying value of the related asset.
2. Depreciation Expense: This is an expense account on the income statement that represents the periodic depreciation charge for the accounting period. It is used to record the portion of an asset's cost that is expensed during the period.
3. Asset Accounts: Each individual asset that is subject to depreciation should have its own asset account. These accounts represent the cost or value of the asset and are typically classified as long-term assets on the balance sheet.

The recording of depreciation involves debiting the Depreciation Expense account and crediting the Accumulated Depreciation account. This allocation process continues over the useful life of the asset until the asset's carrying value is reduced to its estimated residual value.

Managing depreciation involves periodically reviewing and updating the estimated useful lives, residual values, and depreciation methods for assets. It also includes conducting periodic impairment assessments to ensure that the carrying value of the assets is not higher than their recoverable amounts.

It's important to note that the specific accounts and procedures for recording and managing depreciation

may vary based on the accounting standards followed (such as IFRS or GAAP) and the entity's internal policies and practices.

Is Asset accounts for each Asset main account structured into sub-accounts?

It is a common practice to use sub-accounts within the Fixed assets category in the Chart of Accounts to track the cost of the asset and the accumulated depreciation.

Typically, the main account under the Fixed assets category represents the net value or carrying value of the asset. This main account reflects the original cost of the asset minus the accumulated depreciation. It provides a snapshot of the asset's value at a specific point in time.

The sub-accounts within the Fixed assets category are used to track specific details related to the asset. In this case, the *"Asset at cost*" sub-account is used to record the original cost or value of the asset. The "Accumulated depreciation" sub-account is a contra account that is credited with the amount of depreciation expense recognized over time. By having a contra account, the net value of the asset is calculated by subtracting the accumulated depreciation from the asset's cost.

This approach allows for better visibility and tracking of the asset's cost, accumulated depreciation, and net value. It also simplifies the process of recording depreciation expenses and provides a clear picture of the asset's value on the balance sheet.

Here's an example of how the main account and sub-accounts for motor vehicles could be structured within the Fixed Assets category in the Chart of Accounts:

G1540-000	*Motor vehicles - Net Value*	*This main account "Motor Vehicles - Net Value" represents the book value or holding value of the asset and is derived by subtracting the accumulated depreciation from the asset's cost. It provides a clear reflection of the net value of the motor vehicles on the balance sheet. It consists basically of the following two sub-accounts.*
G1540-010	*Motor vehicles at cost*	*This sub-account captures the original cost of the vehicles, including the purchase price, taxes, transportation costs, and other directly attributable expenses.*
G1540-020	*Accumulated depreciation - Motor vehicles*	*This sub-account serves as a contra account to record the total accumulated depreciation of the motor vehicles over time, based on their useful life and depreciation method.*

This account structure enables proper tracking and reporting of the motor vehicles' financial information, providing insights into their historical cost, accumulated depreciation, and net value. It adheres to common

accounting principles and facilitates accurate financial statements and analysis.

By using these sub-accounts, you can track the cost of the motor vehicles, the accumulated depreciation, and the net value of the motor vehicles separately. This provides a more detailed breakdown of the motor vehicles' financial information and facilitates accurate reporting and analysis.

It's important to note that the specific account names and structure may vary based on the organization's preferences and accounting system. Therefore, it is advisable to consult with an accounting professional or follow the established guidelines and practices in your specific accounting framework or industry.

Depreciation - when is it recorded, annually, 6 months, 3 months or monthly?

The frequency of recording depreciation depends on the accounting policy and the specific requirements of the reporting entity. In general, depreciation is recorded periodically over the useful life of the asset. The most common frequency for recording depreciation is monthly or annually.

Monthly depreciation: Some businesses choose to record depreciation on a monthly basis. This approach allows for more precise allocation of the asset's cost over time and provides a more granular view of the asset's impact on the financial statements. Monthly depreciation is commonly used for assets with shorter useful lives or when more accurate tracking of depreciation expense is desired.

Annual depreciation: Many businesses opt to record depreciation on an annual basis. This means that the total depreciation expense for the year is recorded in a single transaction. Annual depreciation is commonly used for assets with longer useful lives or when the periodic impact of depreciation on the financial statements is considered less significant.

Other frequencies: In certain cases, businesses may choose to record depreciation on a different time frame, such as every six months or every three months. These alternative frequencies are less common but may be employed based on specific reporting or operational needs.

It's important to note that the chosen frequency of depreciation should be consistent and in line with the accounting policies and practices of the entity. The frequency should also adhere to the relevant accounting standards, such as International Financial Reporting Standards (IFRS) or Generally Accepted Accounting Principles (GAAP), which provide guidance on depreciation accounting.

This includes IFRS (International Financial Reporting Standards) and its specific application for small and medium-sized entities (IFRS for SMEs). IFRS for SMEs provides simplified and streamlined accounting requirements for entities that meet the definition of a small or medium-sized entity. While it contains specific provisions tailored for SMEs, it still includes guidance on depreciation accounting. Therefore, the chosen frequency of depreciation should align with the requirements and principles outlined in IFRS for SMEs when applicable.

It is important for entities to carefully consider and apply the relevant accounting standards, such as IFRS for SMEs, to ensure accurate and consistent financial reporting, including the recording of depreciation. Compliance with the applicable accounting standards helps maintain transparency and comparability in financial statements, which is essential for users of financial information.

What transactions is required to process the procurement of a fixed asset?

To process the procurement of a fixed asset, you would typically need to perform the following transactions:

1. Purchase of the Fixed asset: Create a purchase transaction to record the acquisition of the fixed asset. This transaction includes the purchase price of the asset, any applicable taxes, transportation costs, and other directly attributable costs. Debit the Fixed asset account to increase its value and credit the appropriate Cash (bank account) or Accounts payable account (creditor/supplier account to reflect the payment made.
2. Recording Depreciation: After the fixed asset is acquired, you need to record depreciation expense over its useful life. This transaction transfers a portion of the asset's value from the Fixed Asset account to the Accumulated depreciation account. The specific depreciation method and useful life of the asset will determine the amount of depreciation expense to be recorded periodically.
3. Revaluation: If the fixed asset's value changes significantly over time, you may need to perform a revaluation transaction to adjust its carrying value. This transaction involves updating the Fixed asset account with the new value of the asset and adjusting the Accumulated Depreciation account accordingly.
4. Disposal: When the fixed asset is no longer in use or is sold, a disposal transaction is recorded. This transaction removes the asset's value from the Fixed asset account and its accumulated depreciation from the Accumulated Depreciation account. Any proceeds from the sale of the asset are recorded in a separate account, such as Gain on Disposal of Fixed assets or Loss on Disposal of Fixed assets.

These transactions ensure that the procurement, depreciation, and disposal of fixed assets are accurately recorded in the financial statements, reflecting the asset's value, depreciation over time, and any changes in its carrying value.

Legislation for depreciation or wear an tear allowances

Which legislation prescribes the depreciation methods or wear and tear allowances?

The legislation that prescribes the depreciation methods or wear and tear allowances can vary depending on the country or jurisdiction in which the entity operates. In many cases, tax legislation or tax regulations govern the specific depreciation methods and wear and tear allowances that entities can use for tax purposes. These regulations are typically defined by the tax authorities and may differ from the accounting standards or frameworks.

For example, in the United States, the Internal Revenue Service (IRS) provides guidelines on depreciation methods and recovery periods through the tax code, specifically under the Modified Accelerated Cost Recovery System (MACRS). The MACRS provides rules for determining the depreciation deductions for various types of assets used in business or income-generating activities.

In other countries, similar tax regulations or legislation govern the allowable depreciation methods and rates. These regulations may specify the useful lives of different types of assets, the depreciation methods that can be used (such as straight-line, declining balance, or units of production), and any special considerations or restrictions.

It's important for entities to consider both the accounting standards and the applicable tax legislation when determining the depreciation methods or wear and tear allowances to use for their fixed assets. Compliance with both sets of regulations ensures accurate financial reporting and tax compliance. Consulting with tax professionals or experts familiar with the local tax laws can help ensure proper adherence to the relevant legislation.

Common methods to calculate depreciation

What is the common methods used to calculate depreciation?

There are several common methods used to calculate depreciation. The choice of method depends on factors such as the nature of the asset, its expected pattern of use, and the reporting entity's accounting policies. Here are some commonly used depreciation methods:

1. Straight-line depreciation: This is the most straightforward and commonly used method. It evenly distributes the cost of an asset over its estimated useful life. The formula for straight-line depreciation is:

   ```
   Depreciation Expense = (Cost of Asset - Residual Value) / Useful Life
   ```

   The depreciable amount is allocated equally to each period, resulting in a consistent depreciation expense over the asset's useful life.

2. Declining balance depreciation: Also known as accelerated depreciation, this method assigns higher depreciation expenses in the earlier years and gradually reduces them over time. Two common declining balance methods are:

   a) Double declining balance (DDB): This method applies a fixed rate of depreciation (typically twice the straight-line rate) to the asset's net book value each year. The formula for DDB depreciation is:

      ```
      Depreciation Expense = Net Book Value * Depreciation Rate
      ```

      The net book value is reduced by the depreciation expense each year until it reaches the asset's residual value.

   b) Sum-of-years-digits (SYD): This method considers the asset's useful life and allocates higher depreciation in the earlier years. The formula for SYD depreciation is:

      ```
      Depreciation Expense = (Remaining Useful Life / Sum of Years) * (Cost of Asset - Residual Value)
      ```

      The sum of years is calculated by adding the digits of the asset's useful life (e.g., for a 5-year useful life: 5 + 4 + 3 + 2 + 1 = 15).

3. Units of production depreciation: This method is based on the actual usage or production output of the asset. It calculates depreciation based on the number of units produced, hours worked, or any other suitable production measure. The formula for units of production depreciation is:

   ```
   Depreciation Expense per Unit = (Cost of Asset - Residual Value) / Total Units of Production Depreciation Expense = Depreciation Expense per Unit * Units Produced or Utilized
   ```

   The depreciation expense varies based on the level of asset utilization or production activity.

These are just a few examples of commonly used depreciation methods. Other specialized methods, such as group depreciation or component depreciation, may also be used in specific situations. It's important to select a depreciation method that best aligns with the nature of the asset, applicable accounting standards, and relevant regulations.

Purchase of fixed assets

What is the purchase transaction of a fixed asset?

The purchase transaction of a fixed asset typically involves the acquisition of the asset from an external party or the construction of the asset within the entity. Here are the key elements of a purchase transaction for a fixed asset:

1. Identification and selection of the asset: The entity identifies the need for a fixed asset and determines the specific type and characteristics of the asset required to meet its operational needs.
2. Vendor selection and negotiation: If the asset is purchased from an external party, the entity identifies potential vendors, evaluates their offerings, and negotiates the terms of the purchase, including the price, payment terms, warranties, and any other relevant conditions.
3. Purchase order or contract: A purchase order or contract is created to formalize the agreement between the entity and the vendor. It specifies the details of the asset, the agreed-upon price, delivery terms, and other relevant terms and conditions.
4. Receipt and acceptance of the asset: Upon delivery of the asset, the entity verifies the physical receipt of the asset, inspects it for any damage or discrepancies, and confirms that it meets the specifications outlined in the purchase order or contract. If there are any issues, they may be resolved with the vendor through a return, replacement, or adjustment in the purchase terms.
5. Record the purchase: The entity records the purchase transaction in its accounting records. This typically involves debiting the appropriate fixed asset account or category (e.g., Motor Vehicles, Buildings, Machinery) to reflect the cost of the asset acquired. The corresponding credit is usually made to a liability account or cash/bank account to reflect the payment made or the liability incurred.
6. Allocate costs: If the asset acquisition involves additional costs beyond the purchase price, such as transportation, installation, or legal fees, these costs are allocated to the appropriate accounts (e.g., Transportation Expense, Installation Expense) to reflect the total cost of the asset acquisition.

It's important to note that the specific details and accounting treatment of a purchase transaction for a fixed asset may vary depending on the entity's accounting policies, applicable accounting standards (such as IFRS or GAAP), and any specific requirements or regulations in the entity's jurisdiction.

Fixed Asset Register

What is the Fixed Asset Register?

The Fixed Asset Register, also known as the Fixed Asset Ledger or Fixed Asset Inventory, is a record-keeping system that contains detailed information about a company's fixed assets. It serves as a centralized repository for all relevant information related to the company's fixed assets, including their acquisition, depreciation, disposal, and current status.

The Fixed Asset Register typically includes the following information for each fixed asset:

1. Asset identification: A unique identifier or code for each asset to track and differentiate it from other assets.
2. Description: A detailed description of the asset, including its specifications, model, or serial number.
3. Acquisition date: The date when the asset was acquired or put into service.
4. Cost: The original cost or purchase price of the asset, including any associated expenses such as taxes, transportation, and installation costs.
5. Depreciation method: The method used to calculate the depreciation expense for the asset, such as straight-line, declining balance, or units of production.
6. Useful life: The estimated period over which the asset is expected to provide economic benefits to the company.
7. Residual value: The estimated value of the asset at the end of its useful life, often assumed to be its salvage or scrap value.
8. Depreciation expense: The amount of depreciation charged to the company's financial statements for each reporting period.
9. Accumulated depreciation: The cumulative total of depreciation expenses recorded for the asset over its useful life.
10. Net book value: The net value of the asset, calculated as the cost of the asset minus its accumulated depreciation.
11. Location: The physical location or department where the asset is located within the company's premises.
12. Maintenance and service history: Records of maintenance activities, repairs, and any significant

events related to the asset's upkeep.

The Fixed Asset Register is essential for accurate financial reporting, internal control, and asset management. It provides an overview of the company's fixed assets, helps track their depreciation, facilitates budgeting and forecasting, and assists in making informed decisions regarding asset maintenance, replacement, or disposal.

In which formats can the Fixed Asset Register be kept?

The Fixed Asset Register can be kept in various formats, depending on the preferences and needs of the organization. Here are some common formats used to maintain the Fixed Asset Register:

1. Spreadsheet software: Spreadsheets such as Microsoft Excel or Google Sheets are commonly used to create and manage Fixed Asset Registers. Each asset can be recorded in a separate row, and the relevant information can be organized in columns. Spreadsheet software allows for easy data entry, calculations, filtering, and sorting.
2. Accounting software: Many accounting software applications have built-in modules or features specifically designed for managing fixed assets. These software solutions provide dedicated tools to create and maintain the Fixed Asset Register, automate depreciation calculations, generate reports, and integrate with other financial processes. In osFinancials5/TurboCASH5 the Activa plugin automates the management and processes of fixed assets and the depreciation of fixed assets in your accounts over the lifespan of the fixed assets.

Activa plugin - Manual - Shop - Licence : Once-off -

The Activa plugin automates the management and processes of fixed assets and the depreciation of fixed assets in your accounts over the lifespan of the fixed assets. Periodically you will receive a notification screen, which the depreciation shown. From this screen, the depreciation(s) can directly take place.

3. Database systems: Organizations may choose to create a custom database using database management software like Microsoft Access, SQL Server, or Oracle. A database allows for structured storage and retrieval of asset data and offers more advanced capabilities for data management and reporting.
4. Asset management software: There are specialized asset management software solutions available in the market that focus specifically on managing fixed assets. These software systems offer comprehensive features for asset tracking, depreciation calculation, maintenance scheduling, and reporting.

Regardless of the format chosen, it is important to ensure that the Fixed Asset Register is regularly updated, accurate, and aligned with the organization's accounting policies and practices. It should also

comply with any applicable accounting standards or regulations governing fixed asset reporting.

Insurance for fixed assets

Is insurance commonly obtained for fixed assets?

Insurance is commonly obtained for fixed assets. Fixed assets represent significant investments for businesses, and insuring them helps protect against potential risks and losses. Insurance coverage for fixed assets can include various types of policies, such as property insurance, casualty insurance, liability insurance, or specialized coverage for specific types of assets.

Insurance for fixed assets typically covers events like fire, theft, natural disasters, vandalism, and other unexpected incidents that could cause damage or loss to the assets. The insurance policy helps provide financial compensation or replacement for the damaged or lost assets, allowing the business to recover from such incidents without significant financial burden.

Insurance coverage for fixed assets is particularly important for assets of high value or critical importance to the business's operations. It helps mitigate the financial risks associated with potential damage or loss, giving the business peace of mind and financial protection.

Can the proper records maintained help to be penalised by insurance companies regarding to be over-insured and under-insured?

Maintaining proper records of fixed assets can help prevent penalties related to over-insurance or under-insurance by insurance companies. Accurate and up-to-date records provide essential information about the value and characteristics of fixed assets, which is crucial for determining appropriate insurance coverage.

When insuring fixed assets, it is important to accurately assess their value and determine the appropriate coverage amount. Over-insuring can lead to unnecessarily high insurance premiums, while under-insuring can result in inadequate compensation in the event of a loss.

By maintaining comprehensive records of fixed assets, including details such as acquisition cost, depreciation, improvements or upgrades, and current market value, businesses can provide accurate information to insurance companies during the underwriting process. This allows insurance companies to

assess the value of the assets and recommend appropriate coverage limits.

Proper records also help in regular insurance reviews and updates. As fixed assets may change in value or undergo significant changes over time, periodically reviewing and updating insurance coverage ensures that the coverage remains aligned with the assets' current value and risk exposure.

In case of a claim, thorough and well-maintained records can serve as evidence to support the insurance claim and help expedite the claims settlement process. Detailed records provide a clear picture of the assets' value and condition before the loss occurred, facilitating a smoother claims process and reducing the likelihood of disputes or penalties.

Overall, accurate and comprehensive records of fixed assets play a vital role in maintaining appropriate insurance coverage, avoiding penalties related to over-insurance or under-insurance, and ensuring a fair and efficient claims process.

How is insurance premiums is this recorded?

Recording insurance premiums involves categorizing them as an expense and reflecting them in the financial records of a business. Here's how insurance premiums are typically recorded:

1. Create an expense account: Set up a specific expense account in the Chart of Accounts to track insurance-related expenses. This account could be named something like "Insurance Expense" or "Insurance Premiums."
2. Record the premium payment: When the insurance premium is paid, create a journal entry to record the transaction. Debit the Insurance Expense account for the amount of the premium, reflecting the increase in expenses. Credit the Cash or Bank account to show the decrease in cash as a result of the payment.

Example entry:	*Account classification*	*Debit*	*Credit*
Debit: Insurance expense / Insurance premiums	*Expenses*	*$1,200*	
Credit: Cash or bank account	*Current asset*		*$1.200*

Periodic adjustments

The periodic adjustments for allocating insurance premiums over the coverage period are typically

applicable to the accrual basis accounting method rather than the cash basis accounting method.

If your business follows the the accrual basis accounting method, you may need to consider adjusting the entries as prepaid expenses or expenses paid in advance. This adjustment would be necessary to record and allocate the recognise only portion of the insurance expenses or insurance premiums at the end of the current reporting period to the

Under the cash basis accounting method, expenses are recognized when cash is paid out, and income is recognized when cash is received.

Since insurance premiums are typically paid upfront for a specific coverage period, they would be recorded as an expense in full when the payment is made. There is no need for adjusting entries to allocate the expense over the coverage period because the cash basis accounting method does not consider the passage of time or the matching of expenses to the corresponding revenue.

On the other hand, under the accrual basis accounting method, expenses are recognized when they are incurred, regardless of when the cash payment is made. Adjusting entries are used to properly allocate expenses over the accounting periods to reflect the matching principle, which states that expenses should be recognized in the same period as the related revenue. Therefore, under accrual accounting, insurance premiums would be allocated over the coverage period through adjusting entries at the end of each accounting period.

It's important to note that the choice between the cash basis and accrual basis accounting methods depends on the specific circumstances and accounting requirements of the business. The accrual basis is generally considered more accurate and in line with generally accepted accounting principles (GAAP) and international financial reporting standards (IFRS).

Periodic adjustments: Insurance premiums are often paid for a specific coverage period (e.g., one year) and are typically recorded as an expense evenly over that period. To reflect this, you may need to make adjusting entries at the end of each accounting period to allocate the insurance expense for the portion of coverage used during that period.

For example, if you have an annual insurance premium of $1,200, and your accounting period is one month, you would record a monthly insurance expense of $100. At the end of each month, you would make an adjusting entry to recognize $100 as insurance expense and reduce the prepaid portion of the premium.

Example entry:	*Account classification*	*Debit*	*Credit*
Debit: Prepaid Insurance	*Expenses*	*$100*	

Credit: Insurance expense / Insurance premiums	*Current asset*	*$100*

The adjusting entry would look like this:

Debit: Insurance Expense $100 Credit: $100

Reporting: The insurance expense recorded will be reflected in the income statement as part of the operating expenses for the specific period. It will contribute to the calculation of net income and the overall financial performance of the business.

By properly recording insurance premiums as expenses, businesses can accurately track and report their insurance-related costs, which provides insights into their financial performance and aids in budgeting and decision-making processes.

Disposal of fixed assets

What is disposal of a fixed assets?

Disposal of a fixed asset refers to the process of selling, scrapping, or otherwise removing a long-term tangible asset from a company's balance sheet. Fixed assets are items with a useful life greater than one accounting period and are not intended for sale as part of the company's normal business operations. Examples of fixed assets include buildings, machinery, equipment, vehicles, and furniture.

When a company decides to dispose of a fixed asset, it typically goes through the following steps:

1. Identification: The company identifies the fixed asset to be disposed of, which may be due to various reasons like the asset becoming obsolete, damaged beyond repair, or no longer needed for the company's operations.
2. Valuation: The asset is valued to determine its current worth. The valuation can be based on the original cost of the asset minus depreciation or any impairment that may have been recognized over its useful life.
3. Decision Making: The management decides on the best course of action for disposal. This could involve selling the asset, trading it in for a new asset, or simply scrapping it if it has no remaining value.

4. Disposal Method: Depending on the decision made, the asset can be sold to a third party, auctioned, traded, or salvaged for parts. If it has no value or is considered a liability, it may be discarded or recycled responsibly.
5. Accounting Entries: The accounting department records the disposal of the fixed asset on the company's books. The specific accounting treatment depends on whether the disposal resulted in a gain or loss. If the proceeds from the sale exceed the asset's book value, there will be a gain, and if the proceeds are less, there will be a loss.
    - If there is a gain on disposal, it is recorded as a credit to the income statement, increasing the company's profit.
    - If there is a loss on disposal, it is recorded as an expense on the income statement, reducing the company's profit.
6. Tax Implications: Disposing of fixed assets may have tax implications for the company. Depending on the tax laws in the company's jurisdiction, the gain or loss on disposal may be subject to taxation.
7. Reporting: The disposal of fixed assets is disclosed in the company's financial statements, usually in the notes to the financial statements or in the statement of cash flows.

It's essential for companies to carefully document and adhere to proper procedures when disposing of fixed assets to ensure accuracy in financial reporting and compliance with accounting standards and regulations.

Is the disposal of fixed assets subject to Capital Gains Tax (CGT)?

The disposal of fixed assets can be subject to Capital Gains Tax (CGT) in many countries, but the specific rules and rates vary depending on the tax laws of each jurisdiction. Capital Gains Tax is generally applicable when there is a gain on the disposal of an asset, which is calculated as the difference between the selling price (proceeds) and the original cost of the asset (adjusted for any improvements or deductions).

Here are some key points to consider regarding Capital Gains Tax and the disposal of fixed assets:

1. Tax Jurisdiction: The rules regarding CGT are specific to each country, and sometimes even different within different states or regions of a country. Companies need to adhere to the tax regulations of the jurisdiction in which the disposal takes place.
2. Exemptions and Allowances: Some jurisdictions may provide exemptions or allowances for certain types of assets or specific scenarios, such as the sale of a primary residence or small business assets up to a certain value.
3. Holding Period: In some countries, the length of time the asset was held before disposal can impact

the CGT liability. For example, a lower tax rate may apply to assets held for more extended periods.

4. Tax Rates: Capital Gains Tax rates can vary based on factors like the type of asset, the taxpayer's income, and the duration of ownership. Sometimes, different rates may apply to individuals and corporations.
5. Offsetting Losses: Capital losses from the disposal of other assets may be used to offset capital gains, reducing the overall CGT liability.
6. Roll-over Relief: Some jurisdictions may offer roll-over relief, allowing taxpayers to defer CGT when selling one asset and reinvesting the proceeds in another qualifying asset.
7. Main Residence Exemption: Many countries offer a CGT exemption for the sale of the taxpayer's primary residence, up to certain limits.
8. Proper Record-Keeping: It's essential for companies and individuals to maintain accurate records of the original cost, improvements, and selling price of the asset to calculate the correct CGT liability.

As tax laws and regulations are subject to change and can be complex, it is crucial to consult with tax professionals or advisors who are knowledgeable about the specific tax laws in the relevant jurisdiction to ensure compliance and accurate reporting of Capital Gains Tax on the disposal of fixed assets.

Journal to record the transactions relating to the profit loss at the disposal

It is not a general practice to record transactions related to the profit or loss at the disposal of fixed assets in the Depreciation journal. The Depreciation journal is typically used to record regular depreciation expenses or adjustments for fixed assets over their useful life. It is not specifically designed to handle transactions related to the disposal or sale of fixed assets.

When a fixed asset is disposed of, the transaction is usually recorded in a separate journal or module, such as the Asset Disposal or Asset Sale module. This module allows you to record the details of the asset sale, including the selling price, disposal date, any gains or losses incurred, and the allocation of the proceeds.

The disposal transaction may impact the Profit and Loss statement, as it involves recognizing any gains or losses on the sale of the asset. These gains or losses are typically recorded in the Income or Expense section of the Profit and Loss statement, depending on whether the disposal resulted in a profit or loss.

It's important to consult with your specific accounting practices and the regulations of your jurisdiction to determine the appropriate journal or module to record transactions related to the disposal of fixed assets and the treatment of associated gains or losses in the Profit and Loss statement.

What would the example transactions be for a profit on the disposal of a fixed asset?

Example transactions for a profit on the disposal of a fixed asset would typically involve recording the following entries:

1. Record the sale of the fixed asset:
    - Debit: Accounts Receivable (or Cash) - The amount received from the sale
    - Credit: Fixed Asset - The original cost of the asset
    - Credit: Accumulated Depreciation - The total depreciation accumulated on the asset until the date of disposal
2. Calculate the gain on disposal:
    - Debit: Accumulated Depreciation - The amount of depreciation accumulated on the asset until the date of disposal
    - Debit: Loss on Disposal (if applicable) - Any additional expenses incurred in the disposal process
    - Credit: Gain on Disposal - The difference between the sale price and the asset's carrying value (original cost minus accumulated depreciation)
3. Remove the fixed asset from the books:
    - Debit: Accumulated Depreciation - Any remaining balance in the accumulated depreciation account
    - Debit: Loss on Disposal (if applicable) - Any additional expenses incurred in the disposal process
    - Credit: Fixed Asset - The original cost of the asset
    - Credit: Accumulated Depreciation - The total depreciation accumulated on the asset until the date of disposal

These transactions will recognize the gain on disposal as income in the Profit and Loss statement, reflecting the profit realized from the sale of the fixed asset. The specific accounts used may vary depending on your company's chart of accounts and accounting practices.

It's important to consult with a qualified accountant or financial advisor to ensure that the transactions are recorded correctly and in compliance with applicable accounting standards and regulations.

What would the example transactions be for a loss on the disposal of a fixed asset?

Example transactions for a loss on the disposal of a fixed asset would typically involve recording the following entries:

1. Record the sale of the fixed asset:
    - Debit: Accounts Receivable (or Cash) - The amount received from the sale
    - Credit: Fixed Asset - The original cost of the asset
    - Credit: Accumulated Depreciation - The total depreciation accumulated on the asset until the date of disposal
2. Calculate the loss on disposal:
    - Debit: Loss on Disposal - The difference between the asset's carrying value (original cost minus accumulated depreciation) and the sale price
    - Credit: Accumulated Depreciation - The amount of depreciation accumulated on the asset until the date of disposal
3. Remove the fixed asset from the books:
    - Debit: Loss on Disposal - The remaining balance in the loss on disposal account
    - Credit: Fixed Asset - The original cost of the asset
    - Credit: Accumulated Depreciation - The total depreciation accumulated on the asset until the date of disposal

These transactions will recognize the loss on disposal as an expense in the Profit and Loss statement, reflecting the loss incurred from the sale of the fixed asset. The specific accounts used may vary depending on your company's chart of accounts and accounting practices.

It's important to consult with a qualified accountant or financial advisor to ensure that the transactions are recorded correctly and in compliance with applicable accounting standards and regulations.

Depreciated fixed assets - Nominal value or Token value principle

---

What is the nominal value / token value principle for fixed assets?

The nominal value or token value principle for fixed assets is a practice used to maintain a minimal or symbolic value for fixed assets that have reached the end of their useful life and are no longer in active use. Instead of fully writing off the fixed asset and removing it from the books with a zero value, companies choose to keep the asset on the books with a nominal or token value, often as low as $1 or another small amount.

The main reason for applying the nominal value principle is to avoid the administrative burden and costs associated with fully disposing of the asset and updating the fixed asset register. It simplifies the accounting process, especially when dealing with a large number of fixed assets.

Here's how the nominal value principle works:

1. End of useful life: When a fixed asset reaches the end of its useful life and is no longer in active use, it is time to dispose of the asset.
2. Nominal value entry: Instead of writing off the asset completely, a nominal value entry is made. For example, if the asset's value is fully depreciated and its net book value is $0, a journal entry may be made to credit the fixed asset account with $1 and debit an appropriate nominal value account, such as "*Nominal Value of Fixed Assets*".
3. Token value on books: The fixed asset remains on the books with a nominal value of $1 (or another small amount) instead of being fully written off. This token value allows the asset to remain in the fixed asset register, simplifying record-keeping and asset tracking.
4. No depreciation: Once the asset is set at a nominal value, no further depreciation is recorded since the asset is no longer in use, and its economic benefit to the company is considered negligible.

It's important to note that the nominal value principle is primarily a simplification technique and doesn't reflect the actual value of the asset. It is used when the administrative costs of fully disposing of the asset outweigh the benefits of keeping precise records for assets that have no substantial economic value to the company.

However, companies must comply with relevant accounting standards and regulations when applying the nominal value principle and ensure that it aligns with the principles of financial reporting and transparency. It is always recommended to consult with a qualified accountant or financial advisor to determine the appropriateness of applying this principle based on the specific circumstances and regulatory requirements.

What are the reasons for keeping fixed assets with a nominal value on the books?

Keeping fixed assets with a nominal value on the books offers several benefits and reasons for companies. Some of the main reasons include:

1. Simplified record-keeping: By assigning a nominal value (e.g., $1) to fixed assets that have reached the end of their useful life, companies simplify their record-keeping and accounting processes. Fully disposing of assets with a zero value can be administratively burdensome, especially when dealing with a large number of fixed assets. The nominal value allows the asset to remain in the fixed asset register, making it easier to track and manage.
2. Cost-effectiveness: Fully disposing of fixed assets may involve additional administrative costs, such as legal fees, documentation, and asset removal expenses. Keeping the asset on the books with a nominal value can be a cost-effective alternative, especially when the actual economic value of the asset is negligible.
3. Asset tracking: Retaining fixed assets with a nominal value facilitates better asset tracking. Even though the asset is no longer in active use, it may still be located on the company's premises or held in storage. Having it listed in the fixed asset register with a nominal value ensures that it is accounted for and easily traceable.
4. Compliance with accounting standards: In some cases, accounting standards or regulatory requirements may recommend or permit the use of nominal value for fixed assets at the end of their useful life. This practice can ensure compliance with reporting guidelines while still acknowledging that the asset has no significant remaining economic benefit.
5. Historical record: Keeping fixed assets with a nominal value can serve as a historical record of the company's past investments and asset acquisitions. This information can be valuable for financial analysis, decision-making, or audits.
6. Legal and Tax considerations: In certain jurisdictions, there may be legal or tax implications associated with fully disposing of fixed assets. Retaining the asset with a nominal value can help address these considerations while still recognising the asset's retirement.
7. Inherent Value: Some companies attach a symbolic or sentimental value to their fixed assets, even after their useful life is over. Assigning a nominal value allows the company to acknowledge the significance of the asset within the organisation, beyond its financial worth.

While keeping fixed assets with a nominal value can offer advantages, it is essential to ensure that this practice aligns with accounting principles and regulatory requirements in the company's jurisdiction. Companies should maintain transparency and accuracy in financial reporting and consult with accounting

professionals to determine the appropriateness of applying the nominal value principle based on their specific circumstances.

At the end of the use of the asset and it is disposed of, the nominal value of $1 should then be cleared when determining and processing the profit on the disposal of fixed assets?

Yes, when a fixed asset reaches the end of its useful life and is disposed of, the nominal value (e.g., $1) should be cleared from the books. The disposal of a fixed asset involves removing it from the balance sheet and recognizing any gain or loss on the disposal.

Here's how the process typically works:

1. Clearing the nominal value: Before processing the disposal, the nominal value of the asset (e.g., $1) should be written off or cleared from the books. This is usually done through a journal entry that debits the asset account (with the nominal value) and credits it to an appropriate account, such as the "Accumulated Depreciation" account, to remove the asset from the books.
2. Calculate the gain or loss: Next, the gain or loss on the disposal is calculated. The gain or loss is the difference between the disposal proceeds (the amount received from selling the asset) and the asset's net book value at the time of disposal. The net book value is the original cost of the asset minus any accumulated depreciation up to the date of disposal.
3. Journal entry for the disposal: The gain or loss on the disposal is recorded through a journal entry. If there is a gain, it is credited to the "*Gain on Disposal of Fixed assets*" account, and if there is a loss, it is debited to the "*Loss on Disposal of Fixed assets*" account. The corresponding entry will be made to the asset account to remove it completely from the books.
4. Update the fixed asset register: The fixed asset register should be updated to reflect the disposal, including the date of disposal, the proceeds received, and any gain or loss recognised.

By clearing the nominal value and recognizing any gain or loss on disposal, the company ensures that its financial records accurately reflect the outcome of the asset's disposal. This process is essential for providing transparency and accuracy in financial reporting. Again, it is essential to consult with a qualified accountant or financial advisor to ensure that the disposal of fixed assets is correctly accounted for and complies with relevant accounting principles and regulations.

Month-end and year-end procedures

Are there any month-end procedures and year-end procedures in accounting?

Yes, there are typically month-end procedures and year-end procedures in accounting. These procedures are important for ensuring accurate financial reporting and compliance with accounting standards and regulations.

Month-end procedures may include reconciling bank accounts, reviewing and adjusting journal entries, preparing financial statements, and ensuring all transactions are properly recorded.

Year-end procedures are more extensive and involve closing out the books for the entire year. This includes reconciling all accounts, completing any necessary adjusting entries, preparing financial statements, and performing a year-end audit. Year-end procedures also involve preparing for tax reporting and compliance, including preparing tax returns and reviewing compliance with tax regulations.

Overall, both month-end and year-end procedures are critical for maintaining accurate financial records and ensuring compliance with accounting and tax regulations.

Adjustments - Cash basis accounting - when is it recorded, annually, 6 months, 3 months or monthly?

In cash basis accounting, adjustments are not typically made because the focus is on recording transactions when cash is received or paid. Cash basis accounting does not consider the timing of revenue recognition or expense allocation.

Under the cash basis, revenue is recognized when cash is received, and expenses are recorded when cash is paid. There is no need for periodic adjustments since transactions are recorded based on actual cash inflows and outflows.

However, it's important to note that cash basis accounting may not comply with generally accepted accounting principles (GAAP) or International Financial Reporting Standards (IFRS), which often require accrual basis accounting for financial reporting. Accrual basis accounting recognizes revenue when it is earned and expenses when they are incurred, regardless of the timing of cash flows.

So, in summary, adjustments are not typically made in cash basis accounting since transactions are recorded based on cash receipts and payments.

Adjustments - Accrual basis accounting - when is it recorded, annually, 6 months, 3 months or monthly?

In accrual basis accounting, adjustments are typically recorded at the end of each accounting period, which is often annually but can also be quarterly or monthly depending on the reporting requirements and internal practices of the entity.

The purpose of these adjustments is to ensure that the financial statements accurately reflect the financial position and operating results of the company for the specific accounting period. They help match revenues with expenses in the appropriate period, recognize accrued revenues or expenses, and make necessary corrections or estimates.

Common types of adjustments in accrual basis accounting include:

1. Accrued Revenues: Revenue that has been earned but not yet received or recorded. For example, if a company provides services but has not yet billed the customer, an adjustment is made to recognize the revenue in the appropriate period.
2. Accrued Expenses: Expenses that have been incurred but not yet paid or recorded. For example, if a company has received goods or services but has not yet received an invoice, an adjustment is made to recognize the expense in the appropriate period.
3. Prepaid Expenses: Expenses that have been paid in advance but have not yet been consumed or used. An adjustment is made to allocate the prepaid expense over the periods benefiting from the expenditure.
4. Deferred Revenues: Revenue that has been received but not yet earned. For example, if a company receives advance payments from customers for services to be provided in the future, an adjustment is made to defer recognizing the revenue until the services are delivered.
5. Depreciation and Amortization: Adjustments are made to allocate the cost of long-term assets over their useful lives to reflect the portion of the asset's value consumed during the accounting period.

These adjustments are made to ensure that the financial statements present a true and fair view of the company's financial performance and position. They are typically recorded at the end of the accounting period before the financial statements are prepared.

In the case of adjustments for correction of errors and disallowing private expenses - should these be done when discovered in the accounting cash and accrual basis accounting?

Yes, adjustments for the correction of errors and disallowing private expenses should be made as soon as they are discovered in both cash and accrual basis accounting.

In cash basis accounting, adjustments for correction of errors and disallowing private expenses would involve identifying the errors or inappropriate expenses and making the necessary adjustments to the cash receipts or payments. This ensures that the financial records accurately reflect the true financial position of the business.

In accrual basis accounting, adjustments for correction of errors and disallowing private expenses would involve identifying the errors or inappropriate expenses and making the necessary journal entries to correct the accounts affected. This ensures that the financial statements present a true and fair view of the business's financial performance and position.

It is important to make these adjustments as soon as they are discovered to maintain accurate and reliable financial records and to comply with accounting standards and regulations. Delaying the adjustments could result in misleading financial statements and potential issues with compliance and decision-making.

Is the month-end and year-end procedures and principles the same for GAAP and IFRS?

The month-end and year-end procedures and principles are generally similar under both Generally Accepted Accounting Principles (GAAP) and International Financial Reporting Standards (IFRS), as both sets of standards require companies to prepare financial statements at regular intervals and to adhere to certain accounting principles and practices.

However, there may be some differences in specific requirements and reporting standards between GAAP and IFRS, depending on the country or region where the company is based. It is important for companies to understand and comply with the relevant accounting standards and regulations in their jurisdiction.

Accounting method (accrual basis or cash basis)

It's important to note that the choice of accounting method (accrual basis or cash basis) depends on various factors, including legal requirements, business needs, and financial reporting purposes. Always consult with an accounting professional or refer to the accounting standards applicable to your jurisdiction for guidance on the appropriate accounting treatment based on your specific circumstances.

It's important to choose the appropriate accounting method (either accrual basis or cash basis) based on the nature and size of your business, as well as any legal or regulatory requirements. Generally, larger businesses and entities are required to use the accrual basis accounting method, while smaller businesses may opt for the cash basis method for simplicity and ease of recording transactions.

Common year-end adjustments for both cash basis and accrual basis accounting methods

When using the accrual basis accounting method, year-end adjustments are necessary to ensure that the financial statements reflect the actual income and expenses for the accounting period. Here are some common year-end adjustments for both cash basis and accrual basis accounting methods:

Cash basis accounting method:

1. Adjusting entries for depreciation: Depreciation is a non-cash expense that needs to be recorded for fixed assets, such as buildings and equipment.
2. Adjusting entries for bad debts: If you have any outstanding debts that are unlikely to be paid, you need to write them off as bad debts.
3. Recording prepaid expenses: If you have made payments for expenses that will benefit future accounting periods, such as insurance premiums, these need to be recorded as prepaid expenses.
4. Recording unearned income: If you have received payments for goods or services that you have not yet provided, these need to be recorded as unearned income.

Accrual basis accounting method:

1. Recording accrued income: If you have provided goods or services but have not yet received payment, you need to record this as accrued income.
2. Recording accrued expenses: If you have received goods or services but have not yet paid for them, you need to record this as accrued expenses.
3. Recording prepaid expenses: Similar to cash basis accounting, you need to record any payments made for expenses that will benefit future accounting periods as prepaid expenses.

4. Recording unearned income: Similar to cash basis accounting, you need to record any payments received for goods or services that have not yet been provided as unearned income.

It's important to note that each of these adjustments needs to be made before performing a year-end procedure in the osFinancials5/TurboCASH5 to ensure that the financial statements are accurate.

Is the month-end and year-end procedures and principles the same for GAAP and IFRS?

The month-end and year-end procedures and principles are generally similar under both Generally Accepted Accounting Principles (GAAP) and International Financial Reporting Standards (IFRS), as both sets of standards require companies to prepare financial statements at regular intervals and to adhere to certain accounting principles and practices.

However, there may be some differences in specific requirements and reporting standards between GAAP and IFRS, depending on the country or region where the company is based. It is important for companies to understand and comply with the relevant accounting standards and regulations in their jurisdiction.

Are provision for bad debts, prepaid expenses, accrued expenses, provision for accrued expenses, income received in advance, and accrued income short-term adjustments?

Yes, provision for bad debts, prepaid expenses, accrued expenses, provision for accrued expenses, income received in advance, and accrued income are typically considered short-term adjustments. These adjustments are made to ensure that the financial statements for a particular accounting period accurately reflect the expenses and revenues that belong to that period. They usually relate to transactions or events that occur during the current accounting period but whose impact will be felt in future periods. These adjustments are usually reversed or adjusted in the following accounting period when the related transactions or events are fully realized.

After these adjustments were made for a financial year whet entries is necessary for the next financial year?

After adjustments have been made for the previous financial year, you would typically start the next financial year with opening entries. These opening entries are necessary to bring forward the balances of certain accounts from the previous financial year to the new financial year.

For example, the balance of the retained earnings account from the previous financial year would be

brought forward as the opening balance for the new financial year. Similarly, any other account balances that need to be carried forward to the new financial year would be entered as opening entries.

The opening entries would be recorded in the general journal and posted to the relevant ledger accounts to update the balances in those accounts. Once the opening entries have been posted, you can start entering new transactions for the new financial year.

Are these adjustments accrued income, accrued expenses, prepaid expenses, unearned income doe annually at year end or can they be done on a monthly, quarterly or six months basis?

The timing of these adjustments (accrued income, accrued expenses, prepaid expenses, unearned income) may vary depending on the specific accounting policies of a company and the frequency of their accounting periods.

For example, some companies may choose to adjust their prepaid expenses or unearned income on a monthly basis, while others may do it on a quarterly or annual basis. Similarly, accrued expenses or accrued income may also be adjusted on a regular basis depending on the accounting period.

However, it is common practice to ensure that all such adjustments are made at least once a year, during the year-end procedures, to ensure that the financial statements accurately reflect the company's financial position and performance.

Accrual basis adjustments

What is year-end adjustments?

Year-end adjustments, also known as adjusting entries, are accounting entries made at the end of an accounting period to ensure that a business's financial statements accurately reflect its financial position and performance.

These adjustments are necessary because certain transactions may not have been recorded or may have been recorded incorrectly during the accounting period. Year-end adjustments are made to correct these errors and to recognize revenues and expenses in the appropriate accounting period.

Year-end adjustments may include accruals for expenses and revenues that have been incurred but not yet recorded, such as salaries and wages, interest, and rent. They may also include adjustments for prepaid

expenses, such as insurance or rent, that have been paid in advance.

Depreciation adjustments may also be made for fixed assets that have been in use during the accounting period. In addition, adjusting entries may be made to correct errors in previously recorded transactions, such as incorrect account balances or misclassified expenses.

Year-end adjustments are an important part of the accounting process and are necessary for accurate financial reporting. They ensure that a business's financial statements reflect its true financial position and performance for the accounting period.

What is the difference between the cash based and accrual based accounting?

Cash basis accounting and accrual basis accounting are two methods used to keep track of a business's financial transactions.

In cash basis accounting, revenue and expenses are recognized only when money is actually received or paid out. This means that income is recognized only when cash is received and expenses are recorded only when they are actually paid.

On the other hand, accrual basis accounting recognizes revenue when it is earned, regardless of whether payment has been received, and expenses when they are incurred, regardless of whether payment has been made. This means that revenue is recognized when the product or service is delivered, and expenses are recognized when the goods or services are received.

For example, let's say a company provides services to a client in January but does not receive payment until February. Under the cash basis accounting method, the revenue would be recognized in February when payment is received. However, under the accrual basis accounting method, the revenue would be recognized in January when the services were provided.

The choice between cash basis accounting and accrual basis accounting depends on the specific needs and goals of the business. Cash basis accounting is simpler and easier to maintain, while accrual basis accounting provides a more accurate picture of a business's financial position over time.

Do the cash based accounting need any adjustments?

While cash basis accounting is simpler than accrual basis accounting, it may still require adjustments.

One common adjustment needed is for accounts receivable and accounts payable. In cash basis accounting, revenue is recognized when cash is received and expenses are recognized when cash is paid. However, if a business has accounts receivable or accounts payable, there may be revenue or expenses that have been earned or incurred but have not yet been paid or received.

To adjust for this, a business using cash basis accounting may need to make adjustments for accruals, deferrals, and other adjustments. For example, if a business has earned revenue but has not yet received payment, an adjusting entry would be made to recognize the revenue and increase accounts receivable.

Other adjustments may include the recognition of prepaid expenses or unearned revenue, as well as the recognition of accrued expenses or revenue. These adjustments can help ensure that a business's financial statements accurately reflect its financial position and performance.

It's important to note that while adjustments may be needed for cash basis accounting, they are generally simpler and less frequent than those required for accrual basis accounting.

What is the types for adjustments of accrual bases accounting?

There are several types of adjustments that may be required for accrual basis accounting. Some common types of adjustments include:

1. Accrued expenses: Accrued expenses are expenses that have been incurred but have not yet been paid. An adjusting entry is made to recognize these expenses and to increase the corresponding liability account.
2. Accrued revenue: Accrued revenue is revenue that has been earned but has not yet been received. An adjusting entry is made to recognize this revenue and to increase the corresponding asset account.
3. Prepaid expenses: Prepaid expenses are expenses that have been paid in advance. An adjusting entry is made to recognize the portion of the expense that has been used and to decrease the corresponding asset account.
4. Unearned revenue: Unearned revenue is revenue that has been received in advance. An adjusting entry is made to recognize the portion of the revenue that has been earned and to decrease the corresponding liability account.
5. Depreciation: Depreciation is the process of allocating the cost of a long-term asset over its useful life. An adjusting entry is made to recognize the portion of the asset's cost that has been used up and to decrease the corresponding asset account.

These adjustments ensure that a business's financial statements accurately reflect its financial position and performance. They also help to ensure that revenue and expenses are recognized in the correct accounting period.

What journal types is used to process adjustments?

Accrual or year-end adjustments are typically recorded in the general journal. The general journal is a catch-all journal where transactions that do not fit into specific specialised journals are recorded.

While it is possible to create a separate journal type such as "*Adjustments*" specifically for accrual or year-end adjustments, it is not a common practice. The general journal is often used for such adjustments as it allows for flexibility in recording various types of transactions and adjustments that may arise during the accounting period.

However, in osFinancials5/TurboCASH5 you may create a specific batch or journal type in Setup → Batch types menu on the Setup ribbon depending on the company's internal accounting procedures. You may configure the settings osFinancials5/TurboCASH5 can be a useful approach to segregate and control the processing of adjustment transactions.

Using an "Adjustments" journal type and configuring the batch settings can indeed help minimize errors and streamline the tracking and reporting of adjustment entries in osFinancials5/TurboCASH5. By setting up specific batch settings for the "Adjustments" journal type, you can customise the behaviour and attributes of the batch. This includes defining default accounts, specifying required fields, setting validation rules, and enabling specific features that align with your adjustment entry process.

Configuring the batch settings for adjustments can help enforce consistency and accuracy in recording adjustment transactions. For example, you can ensure that all required fields are correctly entered before a transaction is posted to the ledger, reducing the likelihood of missing or incomplete information. You can also set up validation rules to validate the data entered in certain fields, preventing entry errors.

Furthermore, by having a designated journal type for adjustments, you can easily generate specific batch type reports that focus solely on adjustment transactions. These reports can provide a consolidated view of all adjustment entries, making it easier to review, analyse, and reconcile the adjustments made during a specific period.

Additionally, the ability to search and filter specific adjustment transactions within the Set of Books can be beneficial for tracking and auditing purposes. You can use the search and filter functionality to narrow down the displayed transactions to only those categorized as adjustments. This helps isolate and review the adjustment entries separately, providing better visibility and control over the adjustment process.

Overall, by leveraging an "Adjustments" journal type and configuring the batch settings in osFinancials5/TurboCASH5, you can enhance accuracy, streamline reporting, and improve the management of adjustment transactions within your accounting system.

In the multi-user environment of osFinancials5/TurboCASH5, you can configure the journal type and access control settings in the Setup → Access control - Batches access tab on the Setup ribbon. This allows you to define the appropriate restrictions and permissions for each user, ensuring that adjustments are recorded and managed by designated individuals.

Additionally, the ability to block selected accounts from posting can further enhance control over the adjustment process. By blocking specific accounts, you can restrict users from posting to those accounts, maintaining the integrity of the financial data and ensuring accurate recording of accrued income and other adjustments.

It is important to align these practices with your organisation's internal accounting procedures and consult with accounting professionals to ensure compliance with accounting standards and best practices.

Accrued income / Outstanding income / Income receivable : Accounting standards and Accounting method

Accrued income, also referred to as outstanding income or income receivable, is applicable to both small and medium entities (SMEs) and larger entities following IFRS (full) or IFRS for SMEs. The recognition and treatment of accrued income are generally consistent across these frameworks.

Under IFRS (full), accrued income is recognized as an asset and is accounted for using the accrual basis of accounting. It represents revenue that has been earned but not yet received in cash or its equivalent. This typically occurs when goods or services have been provided to customers, but the payment is not yet due or has not been received. Accrued income is recognized to reflect the economic benefit that the entity has earned.

Similarly, under IFRS for SMEs, there are specific provisions for the recognition, measurement, and presentation of accrued income. The standard provides guidance on when accrued income should be recognized as an asset and how it should be measured. The disclosure requirements may also differ from IFRS (full), tailored to the needs of SMEs.

Regarding the accounting method, the treatment of accrued income would also differ between the cash basis and accrual basis of accounting. Under the cash basis, income is recognized when cash is received, and therefore, accrued income would not be applicable. In contrast, under the accrual basis, accrued income is recognized as an asset even if cash has not been received yet, based on the concept of earning revenue.

It's important to note that the recognition and measurement of accrued income may vary based on the specific circumstances and industry practices. It's advisable to consult the applicable accounting standards and guidelines, as well as any specific requirements or interpretations for your jurisdiction and entity, to ensure proper treatment and disclosure of accrued income based on the chosen accounting framework.

What is Accrued income / Outstanding income?

Accrued (outstanding) income refers to income that has been earned by a business but has not yet been received or recorded as revenue. It represents the amount of income that is due to the business for goods sold or services rendered but for which the payment has not been received.

Accrued income typically arises when a business follows the accrual basis of accounting, which recognises revenue when it is earned, regardless of when the payment is actually received. This means that even if the payment for a sale or service is expected to be received in the future, the revenue is still recognized in the period when it was earned.

Examples of accrued income include:

1. Services rendered but not yet billed: If a business provides services to a customer but has not yet issued an invoice for those services, the income earned from those services would be considered accrued income.
2. Rent or interest income: If a business owns rental properties or lends money and the payment for rent or interest is due at the end of the month or at a later date, the income for that period would be accrued until the payment is received.
3. Sales made on credit: When a business sells goods or services on credit, meaning the customer is allowed to pay at a later date, the revenue from those sales is recognized as accrued income until the payment is received.

Accrued income is recorded as a current asset on the balance sheet until it is received. It represents the right to receive payment for goods sold or services rendered. Once the payment is received, the accrued income is reversed, and the corresponding revenue is recorded.

What is the batch type for accrued (outstanding) income?

Accrual or year-end adjustments are typically recorded in the general journal. The general journal is a catch-all journal where transactions that do not fit into specific specialised journals are recorded.

While it is possible to create a separate batch or journal type such as "*Adjustments*" specifically for accrual or year-end adjustments, it is not a common practice. The general journal is often used for such adjustments as it allows for flexibility in recording various types of transactions and adjustments that may arise during the accounting period.

What is the journal entries for accrued (outstanding) income?

To record the adjustment for accrued (outstanding) income, follow these steps:

1. Identify the income that has been earned but not yet received: Review your records and identify any income that has been earned during the accounting period but has not yet been received or recorded as revenue.
2. Create an Accrued income account: Establish a liability account in your chart of accounts called "*Accrued Income*" or a similar name. Assign it a suitable account number based on your accounting system's numbering convention.

> *Sub-accounts: It is advisable to create a main account called "Accrued Income" in the current asset section of the balance sheet. This main account can serve as a summary account to track all accrued income amounts that are yet to be received or invoiced.*
>
> *Under the "Accrued Income" main account, you can create sub-accounts to categorize specific types of accrued income. For example, you can create sub-accounts for "Sales in Advance," "Rent Received in Advance," or any other specific types of accrued income relevant to your business.*
>
> *By using sub-accounts, you can provide more detailed information about the nature and source of the accrued income. It allows for better organization and tracking of the various sources of accrued income within the overall "Accrued Income" category.*
>
> *Creating sub-accounts helps in presenting a clear and comprehensive view of your accrued income in the balance sheet. It also facilitates easier analysis and monitoring of the different types of accrued income and their impact on the financial position of the business.*
>
> *Remember to consult with an accounting professional or refer to accounting standards specific to your jurisdiction to ensure accurate and compliant reporting of accrued income in your financial statements.*

3. Record the adjustment: Debit the Accrued Income account to increase the balance and recognize the amount of income that has been earned but not yet received. Credit the corresponding revenue account to reflect the income earned.

Example entry:	*Account classification*	*Debit*	*Credit*
Debit: Accrued Income	*Current asset*	*$1,000*	
Credit: Revenue account	*Revenue*		*$1,000*

4. Review and adjust the accrued income: Periodically review and update the Accrued Income account to reflect any changes in the outstanding income. This could involve recording additional accrued income or adjusting for any receipts or adjustments related to the outstanding income.

By recording the accrued income, you are recognizing the revenue that has been earned but not yet

received. This adjustment ensures that the financial statements reflect the true financial position and performance of the business by including the income that has been earned, even though it has not been received in cash or recorded as revenue.

The specific accounts used and the timing of recognising the accrued income may vary based on your business's accounting policies and the nature of the transaction. Consulting with an accounting professional or referring to the accounting standards applicable to your jurisdiction can provide further guidance on the appropriate treatment of accrued income or outstanding income in your financial statements.

Treatment of accrued (outstanding) income in the new financial year

The treatment of accrued (outstanding) income in the new financial year depends on the accounting method used by the company. In some cases, it may be necessary to reverse the accrued income recorded in the previous financial year, while in other cases, it may not be required.

1. Accrual Basis Accounting:
    - If the company follows the accrual basis of accounting, where revenues are recognized when earned and not when cash is received, the accrued income recorded in the previous financial year should be reversed.
    - At the start of the new financial year, the accrued income recorded in the previous year is no longer outstanding because it has been earned and should now be recognized as revenue.
    - The reversal entry would typically involve debiting the Accrued income account and crediting the appropriate revenue account(s) to recognise the revenue earned.
2. Cash Basis Accounting:
    - If the company follows the cash basis of accounting, where revenues are recognised only when cash is received, there is no need to reverse the accrued income recorded in the previous financial year.
    - Accrued income is not recognised until the cash is actually received in the new financial year.
    - The recognition of revenue will occur when the payment is received, and the journal entry would typically involve debiting the Cash account and crediting the appropriate revenue account(s) to recognize the revenue earned.

It's important to note that the specific accounting treatment may vary based on the company's accounting policies, local regulations, and specific circumstances. It is recommended to consult with a qualified accountant or accounting professional to determine the appropriate treatment of accrued income in your

specific situation.

Income received in advance / Unearned revenue / Deferred revenue : Accounting standards and Accounting method

The concept of income received in advance, also known as unearned revenue or deferred revenue, is applicable to both small and medium entities (SMEs) and larger entities following IFRS (full) or IFRS for SMEs. The treatment of income received in advance is generally consistent across the two frameworks.

Under IFRS (full), income received in advance is recognized as a liability and is accounted for using the accrual basis of accounting. It represents cash received from customers or clients for goods or services that are yet to be provided. The liability is recognized because the revenue has not been earned at the time of receipt. As the goods or services are delivered or performed, the liability is reduced, and the corresponding revenue is recognized.

Similarly, under IFRS for SMEs, there are specific provisions for the recognition, measurement, and presentation of income received in advance. The standard provides guidance on how to account for unearned revenue, including when it should be recognized as a liability and how it should be measured. The disclosure requirements may also differ from IFRS (full), being more streamlined and tailored to the needs of SMEs.

In terms of the accounting method, the treatment of income received in advance would also differ between the cash basis and accrual basis of accounting. Under the cash basis, income is recognized when cash is received, and therefore, income received in advance would be recognized as revenue immediately upon receipt. In contrast, under the accrual basis, income received in advance is recognized as a liability and is gradually recognized as revenue over time as the goods or services are provided.

It's important to consult the specific accounting standards and guidelines applicable to your jurisdiction and entity to ensure proper treatment and disclosure of income received in advance based on the chosen accounting framework.

What is income received in advance?

Income received in advance, also known as unearned revenue or deferred revenue, refers to payments

received from customers or clients for goods or services that have not yet been provided. It represents a liability for the business because the revenue has been received in advance of earning it.

When a business receives income in advance, it has an obligation to deliver the goods or services at a later date. Until that obligation is fulfilled, the amount received is classified as a liability on the balance sheet.

Examples of income received in advance include:

1. Subscriptions: When a customer pays for a subscription service upfront, such as an annual magazine subscription or a software subscription.
2. Rent: If a tenant pays rent for several months in advance, the portion of rent that corresponds to future periods is considered income received in advance.
3. Service contracts: When a business enters into a service contract with a customer and receives payment upfront before providing the services.
4. Membership fees: Membership-based organizations that collect fees in advance from their members.

To account for income received in advance, the business initially records it as a liability on the balance sheet. As the goods or services are provided over time, the liability is gradually recognized as revenue in the income statement. The amount recognized as revenue is based on the portion of the goods or services delivered or consumed.

Proper accounting for income received in advance ensures that revenue is recognized in the appropriate accounting periods, aligning with the matching principle in accrual accounting.

What is the batch type for Income received in advance?

Accrual or year-end adjustments are typically recorded in the general journal. The general journal is a catch-all journal where transactions that do not fit into specific specialised journals are recorded.

While it is possible to create a separate batch or journal type such as "*Adjustments*" specifically for accrual or year-end adjustments, it is not a common practice. The general journal is often used for such adjustments as it allows for flexibility in recording various types of transactions and adjustments that may arise during the accounting period.

The "*Adjustments*" batch type or journal can be used to record transactions related to income received in advance instead of using the general journal. The "*Adjustments*" batch type or journal provides flexibility for recording various types of adjustments and can be customized to suit your specific needs.

Adjustments - Income received in advance - how would this be recorded?

Adjustments - Income received in advance or unearned revenue refers to a category of adjustments made in accounting to account for revenue that has been received by a business in advance but has not yet been earned. It represents an obligation for the business to deliver goods or services in the future in order to fulfil the revenue that has been received upfront.

When a business receives payment from a customer before providing the goods or services, it is considered unearned revenue or income received in advance. The business has a liability to fulfil its obligation to the customer by delivering the promised goods or services.

The Adjustments - Income received in advance or unearned revenue entry is typically recorded at the time of receiving the payment. It involves debiting the liability account (e.g., Unearned Revenue or Income Received in Advance) and crediting the cash or bank account to reflect the inflow of funds.

As the business fulfils its obligation and earns the revenue, the unearned revenue is gradually recognized as revenue in the income statement. This is done through adjusting entries, which involve debiting the Unearned Revenue account and crediting the revenue account corresponding to the goods or services provided.

By making adjustments for income received in advance or unearned revenue, the financial statements accurately reflect the revenue that has been earned during a specific accounting period. It ensures that the recognition of revenue aligns with the actual delivery of goods or services, providing a more accurate representation of the business's financial performance.

To record the adjustment for income received in advance, follow these steps:

1. Determine the amount of income received in advance: Identify the total amount of income that has been received from customers but has not yet been earned. This could include prepayments for services or goods to be delivered in the future.
2. Create an "*Income Received in Advance*" account: Establish a liability account in your chart of accounts called "Income Received in Advance" or a similar name. Assign it a suitable account number based on your accounting system's numbering convention. This account represents the amount of unearned revenue.

Sub-accounts: Creating sub-accounts under the main account "Income received in Advance" or "Unearned revenue" in the current liability section of the balance sheet is a common and advisable practice. It provides a structured approach to track and categorize different types of unearned income or revenue received in advance.

By creating sub-accounts, you can better classify and differentiate the sources of unearned income. This allows for more detailed reporting and analysis of the specific types of unearned income, such as subscriptions, rent received in advance, or any other relevant categories for your business.

Using sub-accounts also enhances the clarity and transparency of your financial statements. It helps stakeholders understand the composition and magnitude of the unearned income and its impact on the overall financial position of the business.

When creating sub-accounts, it is important to follow accounting standards and guidelines applicable to your jurisdiction. These standards provide specific requirements and recommendations for the presentation and disclosure of unearned revenue or income received in advance in financial statements.

3. Record the adjustment: Debit the "Income Received in Advance" account for the amount of income received in advance. This entry increases the liability for unearned revenue.

Example entry:	*Account classification*	*Debit*	*Credit*
Debit: Income Received in Advance	*Current liability*	*$1,000*	
Credit: Revenue account (related to the earned income)	*Revenue*		*$1,000*

This entry recognizes the decrease in the liability for unearned revenue and the increase in the income account as the revenue is earned.

4. Recognize the earned income: As the revenue is earned over time or when the related goods or services are delivered, you will need to record the corresponding revenue.

Example entry:	*Account classification*	*Debit*	*Credit*
Debit: Revenue account (related to the earned income)	*Revenue*	*$1,000*	
Credit: Income Received in Advance	*Current liability*		*$1,000*

This entry reduces the liability for unearned revenue and recognizes the earned income in the appropriate income account.

By recording the adjustment for income received in advance, you are appropriately matching revenue with the related expenses and recognizing the income as it is earned over time. This adjustment ensures that your financial statements reflect the actual revenue earned during the reporting period.

The specific accounts used and the timing of recognising the earned income may vary based on your business's accounting policies and the nature of the transaction. Consulting with an accounting professional or referring to the accounting standards applicable to your jurisdiction can provide further guidance on the appropriate treatment of income received in advance in your financial statements.

Treatment of a Income received in advance (Unearned income) in the new financial year?

1. In the new financial year, the treatment of income received in advance (unearned income) depends on whether the income has been earned or not.
2. If the income has been earned in the new financial year:
    - Debit the "Income Received in Advance" account (liability) to reduce the balance.
    - Credit the appropriate income account to recognize the earned income.
3. This entry will transfer the amount from the "Income Received in Advance" account to the income account, reflecting the income that has been earned in the new financial year.
4. If the income has not been earned in the new financial year:
    - No journal entry is required as the income remains unearned and will continue to be recorded as a liability in the "Income Received in Advance" account.

It's important to review the specific circumstances and timing of the income to determine if it has been earned or not. This will guide the appropriate treatment in the new financial year.

The specific accounts used and the timing of recognising the unearned revenue or outstanding income may vary based on your business's accounting policies and the nature of the transaction. Consulting with an accounting professional or referring to the accounting standards applicable to your jurisdiction can provide further guidance on the appropriate treatment of accrued income or outstanding income in your financial statements.

Is Adjustments - Income received in advance (Unearned revenue) only applicable to the accrual basis accounting method or does it apply to the cash basis accounting methods?

The concept of "*Income received in advance*" or "*Unearned revenue*" generally applies to the accrual basis accounting method.

Under the accrual basis, revenue is recognised when it is earned, regardless of when the payment is received. If a customer pays in advance for goods or services that will be provided in the future, the payment is recorded as a liability (unearned revenue) until the revenue is earned.

In contrast, the cash basis accounting method recognises revenue when cash is received. With cash basis accounting, there is no concept of unearned revenue because revenue is only recorded when the cash is actually received.

Therefore, the specific account "*Adjustments - Income received in advance*" would typically be applicable to the accrual basis accounting method, where there is a need to record and track unearned revenue. In cash basis accounting, such adjustments may not be necessary as revenue is recognized upon receipt of cash.

It's important to note that the choice of accounting method (accrual basis or cash basis) depends on various factors, including legal requirements, business needs, and financial reporting purposes. Always consult with an accounting professional or refer to the accounting standards applicable to your jurisdiction for guidance on the appropriate accounting treatment based on your specific circumstances.

Accrued expenses / Outstanding expenses : Accounting standards and Accounting method

The concept of accrued expenses, also known as outstanding expenses, is applicable to both small and medium entities (SMEs) and larger entities following IFRS (full) or IFRS for SMEs. The treatment of accrued expenses is generally consistent across the two frameworks.

Under IFRS (full), accrued expenses are recognized as liabilities and are accounted for using the accrual basis of accounting. Accrued expenses represent expenses that have been incurred but not yet paid or

recorded in the financial statements. Examples of accrued expenses include salaries payable, utility bills accrued but not yet paid, or interest payable on outstanding loans. These expenses are recognized as liabilities and are subsequently recorded as expenses when they are incurred, even if payment has not been made.

Under IFRS for SMEs, there are specific provisions for the recognition, measurement, and presentation of accrued expenses. The standard provides guidance on how to account for accrued expenses, including when they should be recognized as liabilities and how they should be measured. The disclosure requirements may also differ from IFRS (full), being more streamlined and tailored to the needs of SMEs.

Regarding the accounting method (cash basis or accrual basis), the treatment of accrued expenses would generally be different. The cash basis of accounting recognizes expenses and liabilities only when cash is paid or received, and therefore, accrued expenses would not be recorded as liabilities under the cash basis. In contrast, under the accrual basis of accounting, accrued expenses are recognized as liabilities when the expenses are incurred, even if the payment has not yet been made.

It's important to consult the specific accounting standards and guidelines applicable to your jurisdiction and entity to ensure proper treatment and disclosure of accrued expenses based on the chosen accounting framework.

What is Accrued expenses / Outstanding expenses?

Accrued expenses, also known as outstanding expenses, refer to expenses that have been incurred by a business but have not yet been paid or recorded in the accounting records. These expenses are recognised and recorded in the period in which they are incurred, even if the payment is due at a later date.

Examples of accrued expenses include:

1. Salaries and wages: If employees have worked for a certain period but have not yet been paid, their salaries and wages would be considered as accrued expenses.
2. Utilities: If the business has consumed utilities such as electricity, water, or gas but has not yet received the bill or made the payment, the expenses would be accrued.
3. Rent: If rent is due at the end of the month but the payment has not yet been made, the rent expense would be accrued.
4. Interest: If the business has borrowed money and the interest expense has accrued but has not yet been paid, it would be recorded as an accrued expense.
5. Taxes: If the business has incurred taxes but the payment is due at a later date, the taxes would be considered as accrued expenses.

Accrued expenses are recorded as a liability on the balance sheet, indicating the amount owed by the business. The corresponding entry is made in the expense account on the income statement to recognize the expense for the period.

By recording accrued expenses, the financial statements provide a more accurate representation of the expenses incurred during a particular period, even if the cash outflow has not occurred yet. It ensures that the financial statements reflect the true financial position and performance of the business.

Adjustments - Accrued expenses / Outstanding expenses - how would this be recorded?

"*Adjustments - Accrued expenses / Outstanding expenses*" refers to the process of recording and adjusting the financial transactions related to expenses that have been incurred but not yet paid or recorded in the current accounting period. It involves recognising the expenses in the income statement and creating a corresponding liability on the balance sheet to reflect the amount owed for these outstanding expenses.

Accrued expenses or outstanding expenses are liabilities that arise when a business incurs expenses but has not yet paid for them. These expenses are typically recorded and recognised in the period in which they are incurred, regardless of when the actual payment occurs. By accruing the expenses, the financial statements provide a more accurate representation of the expenses for the given period.

The "*Adjustments - Accrued expenses / Outstanding expenses*" entry is used to adjust the accounts and reflect the unpaid expenses. The adjustment is made by debiting the respective expense accounts to recognize the expense in the income statement and crediting the Accrued expenses or Outstanding expenses account to record the liability.

This adjustment is necessary to ensure that the financial statements accurately reflect the expenses incurred and the corresponding liabilities as of the end of the accounting period. It helps in providing a more complete and accurate picture of the business's financial position and performance.

To record the adjustment for accrued expenses or outstanding expenses, follow these steps:

1. Identify the accrued expenses: Determine the expenses that have been incurred but not yet paid as of the end of the accounting period. These expenses could include salaries, utilities, rent, interest, or any other expenses that are recognized but unpaid.
2. Create an Accrued expenses account: Establish a liability account in your chart of accounts called "Accrued expenses" or "Outstanding expenses." Assign it a suitable account number based on your accounting system's numbering convention. This account will track the amount owed for the accrued expenses.

Sub-accounts: Creating sub-accounts under the main account "Outstanding expenses" or "Accrued expenses" in the current liability section of the balance sheet is a common and advisable practice. It provides a structured approach to track and categorize different types of accrued expenses or outstanding expenses.

By creating sub-accounts, you can better classify and differentiate the sources of accrued expenses or outstanding expenses. This allows for more detailed reporting and analysis of the specific types of accrued expenses or outstanding expenses, such as subscriptions, salaries and wages, interest, rent, or any other relevant categories for your business.

Using sub-accounts also enhances the clarity and transparency of your financial statements. It helps stakeholders understand the composition and magnitude of the accrued expenses or outstanding expenses and its impact on the overall financial position of the business.

When creating sub-accounts, it is important to follow accounting standards and guidelines applicable to your jurisdiction. These standards provide specific requirements and recommendations for the presentation and disclosure of accrued expenses or outstanding expenses in financial statements.

3. Record the adjustment: Debit the respective expense accounts for the amount of the accrued expenses. This recognizes the expense in the income statement for the period. Credit the Accrued expenses account for the same amount. This records the liability for the unpaid expenses.

Example entry:	*Account classification*	*Debit*	*Credit*
Debit: Salaries and wages	*Expense*	*$2,000*	
Credit: Accrued expenses	*Current liability*		*$2,000*

4. Review and adjust the accrued expenses: Periodically review and update the Accrued expenses account to reflect any changes in the outstanding expenses. This could involve recording additional accruals or adjusting for any payments made or corrections required.

By recording the accrued expenses, you are recognizing the expenses that have been incurred but not yet paid. This adjustment ensures that the expenses are properly recognized in the income statement, even though the payment has not been made. It also creates a corresponding liability on the balance sheet to reflect the amount owed for these expenses.

The specific accounts used and the timing of recognising the accrued expenses or outstanding expenses may vary based on your business's accounting policies and the nature of the transaction. Consulting with an

accounting professional or referring to the accounting standards applicable to your jurisdiction can provide further guidance on the appropriate treatment of accrued expenses or outstanding expenses in your financial statements.

Treatment of Accrued expenses (Outstanding expenses) in the new financial year?

In the new financial year, the treatment of accrued expenses or outstanding expenses depends on the specific circumstances and accounting policies of the business. Here are some common approaches:

1. Reverse the previous year's accrual: If an expense was accrued at the end of the previous financial year but has not yet been paid, it may be appropriate to reverse the accrual entry in the new financial year. This is done by debiting the accrued expense account and crediting the corresponding expense account. By reversing the accrual, the expense is no longer recognized in the new financial year until the actual payment is made.
2. Record the actual payment: When the accrued expense is eventually paid in the new financial year, you would record the payment by debiting the relevant expense account and crediting the cash or accounts payable account, depending on the payment method. This entry recognizes the expense in the new financial year and reduces the liability associated with the outstanding expense.
3. Adjust for any changes: If there are any changes in the amount of the accrued expense or outstanding expense, adjustments should be made accordingly. For example, if the initial accrual was an estimate and the actual amount paid differs, an adjustment entry may be needed to reflect the correct expense amount.

It's important to note that the specific accounting treatment may vary based on the accounting standards, regulations, and company policies. It's recommended to consult with an accounting professional or refer to the applicable accounting guidelines to ensure accurate and compliant treatment of accrued expenses or outstanding expenses in the new financial year.

Accrued expenses (Outstanding expenses) is this applicable to cash basis accounting method?

Accrued expenses, also known as outstanding expenses, are typically associated with the accrual basis accounting method rather than the cash basis accounting method.

In accrual accounting, expenses are recognised when they are incurred, regardless of when the payment is made. This means that even if the payment for an expense has not been made yet, it is still recognized as

an expense in the accounting period in which it was incurred. Accrued expenses represent expenses that have been incurred but not yet paid.

On the other hand, the cash basis accounting method recognizes expenses only when the actual payment is made. With the cash basis, expenses are recorded when the cash outflow occurs, rather than when the expense is incurred. Therefore, accrued expenses are not applicable to the cash basis accounting method since expenses are not recognized until the cash payment is made.

It's important to choose the appropriate accounting method (either accrual basis or cash basis) based on the nature and size of your business, as well as any legal or regulatory requirements. Generally, larger businesses and entities are required to use the accrual basis accounting method, while smaller businesses may opt for the cash basis method for simplicity and ease of recording transactions.

Prepaid expenses / Expenses paid in advace

Prepaid expenses : Accounting standards and Accounting method

The concept of prepaid expenses, also known as expenses paid in advance, is applicable to both small and medium entities (SMEs) and larger entities following IFRS (full) or IFRS for SMEs. The treatment of prepaid expenses may vary slightly between the two frameworks.

Under IFRS (full), prepaid expenses are recognized as assets and are accounted for using the accrual basis of accounting. Prepaid expenses represent payments made in advance for goods or services that will be received in the future. Examples of prepaid expenses include prepaid rent, prepaid insurance premiums, or prepaid subscriptions. These expenses are initially recorded as assets and are gradually recognized as expenses over the period to which they relate.

Under IFRS for SMEs, there are specific provisions for the recognition, measurement, and presentation of prepaid expenses. The standard provides guidance on how to account for prepaid expenses, including when they should be recognized as assets and how they should be measured. The disclosure requirements may also differ from IFRS (full), being more streamlined and tailored to the needs of SMEs.

Regarding the accounting method (cash basis or accrual basis), the treatment of prepaid expenses would generally be different. The cash basis of accounting recognizes expenses and assets only when cash is paid or received, and therefore, prepaid expenses would not be recorded as assets under the cash basis. In contrast, under the accrual basis of accounting, prepaid expenses are recognized as assets when the payment is made, and the related expenses are gradually recognized over the period to which they relate.

It's important to consult the specific accounting standards and guidelines applicable to your jurisdiction and entity to ensure proper treatment and disclosure of prepaid expenses based on the chosen accounting framework.

What is Prepaid expenses?

Prepaid expenses refer to expenses that have been paid in advance by a business but have not yet been consumed or used up. These expenses are considered assets because they represent future economic benefits that the business will receive.

When a business pays for an expense in advance, it initially records the payment as a prepaid expense on the balance sheet. This is because the payment has not yet been "*used*" or "*consumed*" to generate an expense in the relevant accounting period. Instead, it represents a future benefit that will be realised over time.

Common examples of prepaid expenses include:

1. Insurance premiums: If a business pays for insurance coverage for a future period, the portion of the premium that corresponds to the period yet to be covered is considered a prepaid expense.
2. Rent: If a business pays rent in advance for a future period, the portion of the rent that corresponds to the period yet to be occupied is considered a prepaid expense.
3. Subscriptions: If a business pays for a subscription service or membership in advance, the portion of the subscription fee that covers the future period is treated as a prepaid expense.
4. Supplies: If a business purchases supplies or inventory in advance and hasn't yet used them in its operations, the cost of those supplies is recorded as a prepaid expense.

Prepaid expenses are typically classified as current assets on the balance sheet if they will be consumed or used within one year. If the prepaid expense extends beyond one year, it is classified as a long-term asset.

As time passes and the prepaid expense is "used up" or consumed, the amount is gradually recognized as an expense in the appropriate accounting period. This is done through adjusting entries, which reduce the prepaid expense asset account and record the corresponding expense in the income statement.

Proper management and accounting for prepaid expenses are important for accurate financial reporting and ensuring that expenses are appropriately matched with the periods in which they provide economic benefits to the business.

Adjustments - Prepaid expenses - how would this be recorded?

"*Adjustments - Prepaid expenses*" refers to a category or journal type used to record adjustments related to prepaid expenses in accounting. Prepaid expenses are expenses that have been paid in advance but have

not yet been consumed or used up. They are considered assets because they represent future economic benefits that the business will receive.

When a business pays for an expense in advance, such as insurance premiums, rent, or annual subscriptions, it initially records the payment as a prepaid expense. However, over time, as the prepaid expense is consumed or utilized, it needs to be recognized as an expense in the appropriate accounting periods.

The "*Adjustments - Prepaid expenses*" category or journal type allows for the recording of adjusting entries related to prepaid expenses. These entries are made to reflect the portion of the prepaid expense that has been consumed or expired during a specific accounting period.

> For example, if a business prepaid $12,000 for a one-year insurance policy, and six months have passed, $6,000 of the prepaid expense has been consumed. To adjust the accounts, an entry would be made in the "Adjustments" journal to record the prepaid expense asset account and recognise the $6,000 as an expense in the income statement by decreasing the insurance expense or insurance premiums account.

It's important to review prepaid expenses regularly and make appropriate adjustments to ensure accurate financial reporting and the proper matching of expenses with the periods in which they are incurred or consumed.

To record the adjustment for prepaid expenses, follow these steps:

1. Identify the prepaid expenses: Determine the amount of prepaid expenses that have been paid in advance and are yet to be consumed or used up. This may include items such as prepaid insurance premiums, prepaid rent, prepaid subscriptions, or any other prepaid expenses relevant to your business.
2. Create a Prepaid expenses account: Establish a new asset account in your chart of accounts called "*Prepaid expenses*" or a similar name. Assign it a suitable account number based on your accounting system's numbering convention.

> *Sub-accounts: Creating sub-accounts under the main account "Prepaid expenses" or "Expenses paid in advance" in the current asset section of the balance sheet is a common and advisable practice. It provides a structured approach to track and categorize different types of prepaid expenses or expenses paid in advance.*
>
> *By creating sub-accounts, you can better classify and differentiate the sources of prepaid expenses or expenses paid in advance. This allows for more detailed reporting and analysis of the specific types of prepaid expenses or expenses paid in advance such as "Prepaid insurance, Prepaid rent", or "Prepaid subscriptions", depending on the nature of the expenses incurred.*
>
> *Using sub-accounts also enhances the clarity and transparency of your financial statements. It helps stakeholders understand the composition and magnitude of the prepaid expenses or*

expenses paid in advance and its impact on the overall financial position of the business.

When creating sub-accounts, it is important to follow accounting standards and guidelines applicable to your jurisdiction. These standards provide specific requirements and recommendations for the presentation and disclosure of prepaid expenses or expenses paid in advance in financial statements.

3. Record the adjustment: Debit the Prepaid expenses account for the portion of the prepaid expense that corresponds to the current accounting period. Credit the relevant expense account for the same amount. This entry recognizes the portion of the prepaid expense that has now become an expense in the current period.

Example entry:	*Account classification*	*Debit*	*Credit*
Debit: Prepaid insurance	*Current asset*	*$1,000*	
Credit: Insurance premiums	*Expense*		*$1,000*

4. Review and adjust the prepaid expenses: Periodically review and update the Prepaid expenses account to reflect any changes in the prepaid expenses. This could involve recording additional prepaid expenses or adjusting for any portions that have been consumed or used up.

By recording the prepaid expenses adjustment, you are recognising the portion of the prepaid expense that corresponds to the current accounting period as an expense. This adjustment ensures that expenses are properly matched with the periods in which they provide economic benefits to the business, resulting in accurate financial reporting.

The specific accounts used and the timing of recognising the prepaid expenses may vary based on your business's accounting policies and the nature of the transaction. Consulting with an accounting professional or referring to the accounting standards applicable to your jurisdiction can provide further guidance on the appropriate treatment of prepaid expenses in your financial statements.

Treatment of Prepaid expenses in the new financial year?

In the new financial year, the treatment of prepaid expenses depends on whether the prepaid expenses are fully consumed or if there is still an unexpired portion remaining.

1. Fully consumed prepaid expenses: If the prepaid expenses have been fully consumed or used up during the previous financial year, there is no further adjustment needed in the new financial year. The

prepaid expenses account will be reduced to zero, and the entire amount would have been recognized as an expense in the previous period.

2. Unexpired portion of prepaid expenses: If there is an unexpired portion of prepaid expenses remaining at the end of the previous financial year, it represents a future economic benefit to the business. In the new financial year, you need to recognize the portion of the prepaid expenses that corresponds to the current accounting period as an expense.

To record the adjustment for the unexpired portion of prepaid expenses in the new financial year, follow these steps:

- Identify the remaining unexpired portion of prepaid expenses.
- Debit the relevant expense account for the portion of the prepaid expense that corresponds to the current accounting period.
- Credit the Prepaid expenses account for the same amount.

This entry recognises the portion of the prepaid expense that has now become an expense in the new period. The Prepaid expenses account will reflect the reduced unexpired portion.

Remember to review and adjust the prepaid expenses account periodically throughout the new financial year to reflect any changes or updates in the prepaid expenses.

The specific accounts used and the timing of recognising the prepaid expenses may vary based on your business's accounting policies and the nature of the transaction. Consulting with an accounting professional or referring to the accounting standards applicable to your jurisdiction can provide further guidance on the appropriate treatment of prepaid expenses in your financial statements.

Prepaid expenses - is this applicable to cash basis accounting method?

Prepaid expenses are typically not applicable to the cash basis accounting method.

In the cash basis accounting method, revenue and expenses are recognised when cash is received or paid, respectively. This means that expenses are recorded when the actual payment is made, rather than when the economic benefit is consumed or received.

Prepaid expenses, on the other hand, represent expenses that have been paid in advance but have not yet been consumed or utilised. They are recognised as assets on the balance sheet until they are gradually expensed over the period in which the related benefit is received.

Since the cash basis accounting method focuses on cash transactions, it does not recognise prepaid

expenses as assets or allow for their gradual recognition as expenses over time. Instead, expenses are recorded when the cash is paid, regardless of the period to which they relate.

Prepaid expenses are more commonly associated with the accrual basis accounting method, where revenue and expenses are recognized when earned or incurred, regardless of the timing of cash flows.

It's important to choose the appropriate accounting method (either accrual basis or cash basis) based on the nature and size of your business, as well as any legal or regulatory requirements. Generally, larger businesses and entities are required to use the accrual basis accounting method, while smaller businesses may opt for the cash basis method for simplicity and ease of recording transactions.

Accrued or outstanding expenses : Accounting standards and Accounting method

The concept of accrued or outstanding expenses is applicable to both small and medium entities (SMEs) and larger entities following IFRS (full) or IFRS for SMEs. The treatment of accrued expenses may vary slightly between the two frameworks.

Under IFRS (full), accrued expenses are recognized as liabilities and are accounted for using the accrual basis of accounting. Accrued expenses are expenses that have been incurred but not yet paid or recorded in the financial statements. Examples of accrued expenses include accrued salaries, accrued interest, or accrued utilities. These expenses are recognized as a liability and are typically recorded when the related goods or services have been received, regardless of whether the cash payment has been made.

Under IFRS for SMEs, there are specific provisions for the recognition, measurement, and presentation of accrued expenses. The standard provides guidance on how to account for accrued expenses, including when they should be recognized as liabilities and how they should be measured. The disclosure requirements may also differ from IFRS (full), being more streamlined and tailored to the needs of SMEs.

Regarding the accounting method (cash basis or accrual basis), the treatment of accrued expenses would generally be different. The cash basis of accounting recognizes expenses and liabilities only when cash is paid, and therefore, accrued expenses would not be recorded as liabilities under the cash basis. In contrast, under the accrual basis of accounting, accrued expenses are recognized as liabilities when the related expenses have been incurred, regardless of the cash payment.

It's important to consult the specific accounting standards and guidelines applicable to your jurisdiction and entity to ensure proper treatment and disclosure of accrued or outstanding expenses based on the chosen accounting framework.

What is accrued or outstanding expenses?

Accrued or outstanding expenses refer to expenses that have been incurred but have not yet been paid or recorded in the accounting books by the end of the accounting period. These expenses are recognised as liabilities because they represent an obligation of the business to make future payments.

Accrued expenses can include various types of costs, such as salaries and wages, interest, utilities, rent, taxes, and professional fees. They typically arise when the expense is recognized in the accounting period, but the payment is due in a subsequent period.

For example, if a business receives an invoice for utility expenses at the end of the month but has not yet paid the bill, the utility expense is considered an accrued expense. The business has incurred the expense during the month, and even though the payment has not been made, it is recorded as a liability in the financial statements.

Accrued expenses are typically recorded through an adjusting entry at the end of the accounting period to ensure that the expense is properly recognized in the period it relates to. This helps in matching expenses with the revenues they generate, providing a more accurate representation of the financial position and performance of the business.

Accrued expenses are reversed in the following accounting period when the actual payment is made. The reversal ensures that the expense is not double-counted, and the liability is removed from the books.

Accrued or outstanding expenses are relevant for both cash basis and accrual basis accounting methods, as they reflect the timing of the expense recognition and payment, regardless of the method used to track cash flows.

Adjustments - Accrued expenses (Outstanding expenses) - how would this be recorded?

To record the adjustment for accrued expenses (outstanding expenses), follow these steps:

1. Identify the accrued expenses: Determine the expenses that have been incurred but not yet paid by the end of the accounting period. This could include items like salaries, rent, utilities, or any other expenses that are accrued.
2. Create an Accrued Expenses account: Establish a liability account in your chart of accounts called "Accrued Expenses" or a similar name. Assign it a suitable account number based on your accounting

system's numbering convention.

> *Sub-accounts: Creating a main account called "Accrued expenses" or "Outstanding expenses" in the current liabilities section of the balance sheet is a common practice. This main account serves as a summary account to track all the accrued or outstanding expenses that are yet to be paid by the end of the accounting period.*
>
> *Under the "Accrued expenses" or "Outstanding expenses" main account, you can create sub-accounts to categorize specific types of accrued expenses. For example, you can create sub-accounts for "Salaries payable," "Rent payable," "Utilities payable," or any other specific types of expenses relevant to your business.*
>
> *By using sub-accounts, you can provide more detailed information about the nature and source of the accrued expenses. It allows for better organization and tracking of the various sources of accrued expenses within the overall "Accrued expenses" category.*
>
> *Creating sub-accounts helps in presenting a clear and comprehensive view of your accrued expenses in the balance sheet. It also facilitates easier analysis and monitoring of the different types of accrued expenses and their impact on the financial position of the business.*

3. Record the adjustment: Debit the appropriate expense accounts for the value of the accrued expenses. This entry recognizes the expenses incurred during the period.

Example entry:	*Account classification*	*Debit*	*Credit*
Debit: Rent paid	*Expense*	*$1,000*	
Credit: Accrued expenses / Outstanding expenses	*Current liabilities*		*$1,000*

4. Review and adjust the accrued expenses: Periodically review and update the Accrued Expenses account to reflect any changes in the liabilities. This could involve recording additional accruals or adjusting for any payments made towards the accrued expenses.

By recording the accrued expenses, you are recognizing the expenses that have been incurred but not yet paid. This adjustment helps in accurately reflecting the financial obligations of the business and ensures that the expenses are properly accounted for in the financial statements.

Treatment of Accrued expenses (Outstanding expenses) in the new financial year?

When transitioning to a new financial year, the treatment of accrued expenses (outstanding expenses)

depends on whether the expenses have been paid or settled by the end of the previous financial year. Here are two scenarios to consider:

1. Unpaid Accrued Expenses:
    - If the accrued expenses from the previous financial year remain unpaid at the end of that year, they will continue to be recorded as liabilities in the new financial year.
    - Create a new entry in the new financial year to recognize the outstanding expenses and update the balances accordingly.
    - The journal entry typically involves debiting the appropriate expense account and crediting the accrued expenses account to clear the previous year's accruals.
    - This adjustment ensures that the expenses are properly recorded in the new financial year, reflecting the actual liability owed.
2. Paid Accrued Expenses:
    - If the accrued expenses from the previous financial year were paid or settled in the new financial year before finalizing the accounts, no adjustment is needed.
    - The expenses would have been recorded in the previous financial year when they were accrued, and the subsequent payment clears the liability in the new financial year.
    - Ensure that the payment is correctly recorded in the accounts, typically by debiting the corresponding expense account and crediting the cash or bank account.

In both cases, it's essential to review and reconcile the accrued expenses accounts from the previous financial year with the actual payments and expenses incurred in the new financial year to ensure accurate financial reporting.

The specific accounts used and the timing of recognising the Accrued expenses (Outstanding expenses) may vary based on your business's accounting policies and the nature of the transaction. Consulting with an accounting professional or referring to the accounting standards applicable to your jurisdiction can provide further guidance on the appropriate treatment of prepaid expenses in your financial statements.

Consumable stores on hand

Consumable stores on hand : Accounting standards and Accounting method

The concept of consumable stores on hand is applicable to various types of entities and accounting frameworks, including small and medium entities (SMEs) under both IFRS (full) and IFRS for SMEs. However, the specific treatment and disclosure requirements may vary depending on the accounting framework and the size of the entity.

Under IFRS (full), consumable stores on hand are typically classified as inventory and are accounted for using the accrual basis of accounting. The entity is required to recognize and measure inventory at the lower of cost or net realizable value, and disclose relevant information such as the accounting policies, carrying amounts, and any impairment losses.

Under IFRS for SMEs, there is a simplified approach to accounting for inventories, which may include consumable stores on hand. The standard provides guidance on the cost formula that can be used to measure inventories, such as the weighted average cost or the first-in, first-out (FIFO) cost. Additionally, the disclosure requirements are less extensive compared to IFRS (full).

Regarding the accounting method (cash basis or accrual basis), the treatment of consumable stores on hand may differ. The cash basis of accounting recognizes transactions and events only when cash is received or paid, and inventory is not typically recorded as an asset. However, under the accrual basis of accounting, consumable stores on hand would be recognized as inventory and accounted for based on the applicable accounting framework.

It's important to consult the specific accounting standards and guidelines applicable to your jurisdiction and entity to ensure proper treatment and disclosure of consumable stores on hand.

What is Consumable stores on hand?

Consumable stores on hand is considered non-trading stock. Non-trading stock refers to inventory items that are not directly involved in the business's primary trading activities or intended for resale. These items are typically used internally by the business and are consumed in the normal course of operations.

Consumable stores, such as stationery, office supplies, cleaning materials, or maintenance supplies, fall under the category of non-trading stock. They are not purchased for the purpose of selling to customers but rather for internal use within the business.

Non-trading stock is distinguished from trading stock, which refers to inventory items that are acquired or produced with the intention of being sold to customers. Trading stock is directly related to the core business activities and represents the goods or products held for sale.

By categorising Consumable stores on hand as non-trading stock, businesses can differentiate between inventory items used for internal consumption and those held for resale. This classification helps in tracking and managing different types of inventory effectively, ensuring accurate financial reporting and inventory control.

Is Consumable stores on hand a current asset?

Consumable stores on hand is generally classified as a current asset on the balance sheet. Current assets are assets that are expected to be converted into cash or used up within a year or the operating cycle of the business, whichever is longer.

Consumable stores on hand represents inventory items that are readily available for use within the business. These items are expected to be consumed or used up in the normal course of operations within a relatively short period. Examples of consumable stores include office supplies, cleaning materials, or maintenance supplies.

As a current asset, Consumable stores on hand is reported on the balance sheet under the assets section, typically within the category of inventory or stock. It reflects the value of the inventory items that are not intended for sale but rather used internally by the business.

It's important to note that the specific classification of assets may vary depending on the accounting framework or company's accounting policies. Therefore, it's advisable to refer to the company's financial statements or consult with an accountant for the accurate classification of Consumable stores on hand in a specific context.

Adjustments - Consumable Stores on Hand - how would this be recorded?

At the end of each financial year, the business should conduct a physical count of its consumable stores on hand and adjust its accounts accordingly. This adjustment is necessary to accurately reflect the value of the assets on the balance sheet.

If there are any consumable stores on hand that have not been used or consumed by the end of the financial year, they will be carried forward as assets into the next financial year. Conversely, if any of these items are used up or consumed during the year, they should be recognized as an expense in the income statement.

The journal type

The recording of the consumable stores on hand would typically be done in the general journal. The general journal is used to record transactions and adjustments that don't fit into the specific journals like

sales journal or purchases journal.

In the general journal, you can create a separate entry specifically for the adjustment of consumable stores on hand. This entry would include the appropriate debit and credit accounts to reflect the changes in the asset balance and any associated expenses or gains.

Alternatively, some businesses may choose to create a separate journal called the "*Adjustment journal*" or "*Inventory adjustment journal*" specifically for recording adjustments related to inventory, including consumable stores on hand. This provides a dedicated journal for capturing these adjustments and helps in organizing the accounting records.

The choice of using the general journal or a specific adjustment journal may vary depending on the preferences and accounting practices of the business. Both methods are acceptable as long as the adjustments are properly recorded and documented.

The process

To record the adjustment for Consumable stores on hand, you can follow these steps:

1. Determine the value of consumable stores on hand: Conduct a physical count or inventory valuation of the consumable stores available in your business. This will give you the total value of the inventory items that are used up in the normal course of operations.
2. Create a Consumable Stores on Hand account: In your chart of accounts, set up a new asset account specifically for tracking Consumable stores on hand. You can name it "*Consumable stores on hand*" or something similar. Assign a suitable account number based on your accounting system's numbering convention.
3. Record the adjustment: Make a journal entry to record the adjustment in your accounting system. Debit the Consumable stores on hand account for the value of the consumable stores on hand. This entry recognizes the value of the inventory items that are readily available for use. On the credit side, you can select an applicable expense account that corresponds to the type of consumable items you have, such as Stationery, Office supplies, Cleaning materials, or other appropriate accounts.

Example entry:	*Account classification*	*Debit*	*Credit*	
Debit: Consumable stores on hand	*Current asset*	*$1,000*		*This entry recognizes the value of the inventory items that are readily available for use.*
Credit: Stationery	*Expense*		*$1,000*	*This recognizes the expense not consumed for the consumable stores during the year.*

4. Review and adjust periodically: Regularly review and update the Consumable Stores on Hand account to reflect any changes in the inventory. This may involve recording additional purchases, adjusting for losses or usage, or writing off damaged or expired items. By keeping the account up to date, you ensure that the balance accurately represents the value of consumable inventory on your balance sheet.

Recording the Consumable stores on hand adjustment helps in accurately tracking and managing the internal inventory used in your business. It provides visibility into the value of these consumable items and assists in effective inventory management.

Decrease in the Consumable stores on hand

If the amount of consumable stores on hand has decreased during the year due to usage or consumption, the journal entry would be as follows:

Example entry:	*Account classification*	*Debit*	*Credit*	
Debit: Stationery	*Expense*	*$1,000*		*This recognizes the expense incurred for the consumable stores used during the year.*
Credit: Consumable stores on hand	*Current asset*		*$1,000*	*This reduces the value of the consumable stores on hand, reflecting the decrease in the asset balance.*

By recording this journal entry, you are properly reflecting the decrease in the value of consumable stores on hand and recognizing the associated expense in the income statement. This ensures that the financial statements accurately reflect the usage and impact of consumable items in the business.

Consumable stores shortages / losses

What happens if items in a consumable assets inventory is, stolen, destroyed by water damage or fire?

If items in a consumable assets inventory are stolen, destroyed by water damage, or fire, it can have

several implications for the business:

1. Loss of inventory value: The stolen or damaged items represent a loss in the value of the consumable assets. The cost of these items would need to be written off or adjusted in the accounting records to reflect the loss.
2. Insurance coverage: Depending on the insurance policies in place, the business may be able to make a claim for the stolen or damaged inventory. The insurance coverage can help mitigate the financial impact of the loss, although the actual reimbursement may not cover the full value of the inventory.
3. Reporting the loss: The loss should be documented and reported appropriately. It is important to maintain proper records and documentation, such as police reports in the case of theft or insurance claim documents. This helps in accurately reflecting the loss in the financial statements and supporting any insurance claims.
4. Adjusting financial statements: The financial statements, particularly the balance sheet, may need to be adjusted to reflect the reduced value of the consumable assets. This is typically done by recognizing a loss or expense in the income statement and reducing the value of the consumable assets on the balance sheet.
5. Internal controls and preventive measures: Incidents like theft, water damage, or fire highlight the importance of having strong internal controls and preventive measures in place. This includes implementing security measures to prevent theft, safeguarding inventory against damage, and having adequate insurance coverage.

It's crucial for businesses to have appropriate risk management strategies, including inventory control, security measures, and insurance coverage, to minimize the impact of such incidents on the financial position and operations of the business. Consulting with an accountant or financial advisor can provide specific guidance tailored to your business's circumstances.

When doing an inventory of consumable stores and a shortage is detected, should the same procedure be applicable?

Yes, if a shortage is detected during an inventory of consumable stores, a similar procedure can be followed to record and address the shortage. Here's how you can handle the situation:

1. Identify the shortage: During the inventory count, if it is discovered that there is a shortage of consumable items compared to the recorded quantities, it indicates that some items are missing or have been used without proper documentation.
2. Investigate the cause: Determine the reason for the shortage by reviewing transaction records, checking for any discrepancies in documentation, or conducting further investigations. This will help

identify if the shortage is due to theft, improper usage, errors in recording, or other factors.

3. Adjust the records: Once the cause of the shortage is determined, adjust the inventory records accordingly. This involves reducing the quantity and value of the consumable items in the accounting records to reflect the actual count.

4. Record the loss: If the shortage is due to theft or damage, it may be necessary to record a loss in the accounting records. This involves recognizing an expense or loss in the income statement to reflect the value of the missing items. The specific account used will depend on your accounting system's chart of accounts.

5. Review internal controls: Assess the internal controls related to inventory management to identify any weaknesses or gaps that may have contributed to the shortage. Strengthening controls, such as implementing stricter inventory tracking procedures, enhancing security measures, or improving documentation processes, can help prevent future shortages.

6. Take corrective actions: Depending on the findings of the investigation, take appropriate actions to address the shortage. This may involve disciplinary measures, improving supervision, revising inventory management procedures, or implementing additional security measures.

By following these steps, you can accurately reflect the shortage in the inventory records, update the financial statements, and take necessary measures to prevent similar issues in the future. Consulting with an accountant or inventory management expert can provide further guidance based on your specific business needs and circumstances.

Correction of Errors / Adjustments

What is correction of errors in accounting and how can it help to combat fraud and corruption?

Correction of errors in accounting refers to the process of identifying and rectifying mistakes or inaccuracies in financial records or statements. Errors can occur due to various reasons, such as mathematical errors, data entry mistakes, omissions, or misinterpretations of accounting principles.

The correction of errors plays a crucial role in maintaining the accuracy and integrity of financial information. Here's how it can help combat fraud and corruption:

1. Enhanced transparency: By identifying and rectifying errors, financial statements become more accurate and transparent. This transparency makes it harder for fraudulent activities to go unnoticed. Errors that are left uncorrected can create opportunities for fraudsters to manipulate financial data, misrepresent the financial position, or hide fraudulent transactions. Detecting and correcting errors promptly reduces the chances of such manipulations and enhances the overall transparency of financial reporting.
2. Error detection as an Anti-fraud measure: When errors are investigated and corrected, it can uncover irregularities or discrepancies that may be indicative of fraudulent activities. In some cases, errors may be deliberately introduced as part of fraudulent schemes to divert funds or manipulate financial statements. Correcting errors involves scrutinizing the underlying transactions and identifying any anomalies or signs of fraudulent behaviour, helping to uncover potential fraud.
3. Strengthened Internal controls: The process of error correction often involves reviewing internal controls and implementing necessary improvements. Strengthening internal controls can help prevent and detect fraudulent activities by establishing proper segregation of duties, implementing checks and balances, and ensuring proper oversight of financial processes. Effective internal controls act as deterrents and make it more difficult for fraud and corruption to occur.
4. Reliable Financial information: Correcting errors leads to more accurate financial information, which is essential for decision-making and stakeholder confidence. Reliable financial information helps stakeholders, including investors, creditors, and regulatory bodies, make informed decisions. It reduces the risk of making decisions based on incorrect or manipulated data, thus mitigating the potential for fraud or corruption to go unnoticed.
5. Auditing and Compliance: Correcting errors contributes to the integrity of financial records, making them more reliable for audit purposes. Auditors rely on accurate financial information to perform their examinations and identify any red flags or irregularities. Correcting errors improves the effectiveness of auditing processes, facilitating the detection and prevention of fraud and corruption.

Overall, the correction of errors in accounting ensures the accuracy and reliability of financial information, which in turn helps combat fraud and corruption by increasing transparency, enabling error detection, strengthening internal controls, providing reliable data for decision-making, and facilitating effective auditing and compliance measures.

Could access control in Access control help in elimination errors and fraud and corruption in osFinancials?

Yes, access control plays a crucial role in eliminating errors, fraud, and corruption in osFinancials5/TurboCASH5 or any other accounting system. Access control refers to the process of

restricting and managing user access to the system and its functionalities based on their roles and responsibilities within the organization. Here's how access control can help:

1. Prevention of Unauthorized Access: By implementing access controls, you can ensure that only authorized individuals have access to sensitive financial data and functionalities. Unauthorized access can lead to errors, manipulation of data, or fraudulent activities. Access control helps prevent unauthorized users from accessing critical financial information and reduces the risk of errors and fraudulent actions.

2. Segregation of Duties: Access control enables the segregation of duties, ensuring that no single user has complete control over the entire accounting process. This segregation helps distribute responsibilities, preventing any one individual from having the ability to perpetrate fraud or manipulate financial data without detection. It establishes a system of checks and balances, reducing the risk of errors or fraudulent activities going unnoticed.

3. User Permissions and Restrictions: Access control allows you to assign specific user permissions and restrictions based on roles and responsibilities. This ensures that users only have access to the functionalities and data necessary for their job functions. By limiting access to sensitive areas, such as financial transactions or sensitive reports, you minimize the risk of errors, unauthorized changes, or fraudulent activities in those areas.

4. Audit Trails and Monitoring: Access control systems often include audit trail capabilities that track user activities within the system. These logs capture user actions, such as data modifications or system configurations, providing a record of activities for auditing purposes. By monitoring user actions, you can detect and investigate any suspicious or unauthorized activities, helping to identify errors, fraud, or corruption.

5. Password and Authentication Controls: Access control systems typically include password policies and authentication controls to ensure that users have secure and unique login credentials. This helps prevent unauthorized access to the system by unauthorized individuals. Strong password policies and multi-factor authentication methods enhance system security and reduce the risk of unauthorized access and potential fraudulent activities.

By implementing access control measures in osFinancials5/TurboCASH5 or any accounting system, you establish a framework that helps prevent errors, detect fraud, and reduce the occurrence of corrupt practices. It promotes a secure and controlled environment, safeguarding financial data and mitigating the risks associated with unauthorized access and malicious activities.

Log report

In osFinancials5/TurboCASH5, the log report functionality provides a record of various activities performed within a Set of Books, including the opening and closing of the Set of Books, user logins and logouts, and

important functions like reversing posted journals and documents, as well as year-end processes. Here's how the log report can be useful:

1. Tracking Set of Books activity: The log report allows you to monitor when a Set of Books has been opened or closed. This information helps track the usage and access patterns of the system. It provides an audit trail of when the Set of Books was accessed, which can be valuable for monitoring and ensuring appropriate usage and security.
2. User activity monitoring: The log report also captures user login and logout activities. It records when each user has accessed the Set of Books, allowing you to monitor user activity and identify any unusual or unauthorized access. By reviewing the log report, you can track which users have interacted with the system and when, providing a level of accountability and transparency.
3. Reversal of posted journals and documents: The log report includes information on the reversal of posted journals and reversal of posted documents. This is helpful for tracking the history of corrections or adjustments made to financial transactions. By reviewing the log report, you can identify the specific instances when posted journals or documents were reversed, helping to ensure accuracy and integrity in the financial records.
4. Year-end processes: The log report captures important year-end activities performed in a Set of Books. This includes tasks such as closing the fiscal year, generating financial reports, and performing other year-end procedures. The log report helps document and verify the completion of these critical processes, which are essential for accurate financial reporting and compliance.

Overall, the log report in osFinancials5/TurboCASH5 provides a detailed record of various activities, including Set of Books opening and closing, user logins, reversal of posted transactions, and year-end processes. It serves as an audit trail, helping to monitor system usage, track user activity, and ensure the integrity of financial data. The log report can be a valuable tool for detecting errors, identifying unauthorized access, and promoting transparency and accountability within the accounting system.

Private expenses

The concept of private expenses

The concept of disallowing private expenses and recovering them applies to all businesses, regardless of whether they use the cash basis or accrual basis accounting method. Properly managing and accounting for private expenses is important for maintaining accurate financial records and ensuring fair treatment of

business expenses.

This adjustment helps in presenting a true picture of the business's financial performance and ensures proper allocation of expenses. It's important to maintain clear documentation and communication regarding the treatment of private expenses in order to comply with accounting standards and regulations. Consulting with an accounting professional can provide further guidance specific to your business and jurisdiction.

What is private expenses?

Private expenses are personal in nature and are not typically allocated or recorded in the financial records of a business.

In accounting, it is essential to separate personal expenses from business expenses to ensure accurate financial reporting. Personal expenses incurred by the owner of the business should be recorded separately as owner's drawings or distributions, depending on the legal structure of the business.

Similarly, it is important for a business or organisation to have policies and procedures in place to prevent employees from including their personal expenses within the business expense accounts. Personal expenses should be handled and recorded separately for the employees, and they should not be reimbursed or treated as business expenses.

Maintaining this separation between personal and business expenses is crucial for several reasons:

1. Accurate financial reporting: Keeping personal and business expenses separate ensures that the financial statements accurately reflect the financial position and performance of the business. It provides a clear picture of the business's income, expenses, assets, and liabilities.
2. Compliance with tax regulations: Mixing personal and business expenses can lead to complications and potential tax issues. By maintaining separate records, it becomes easier to identify and report business-related expenses for tax purposes.
3. Transparency and credibility: Separating personal and business expenses enhances the transparency and credibility of financial statements. It allows stakeholders, such as investors, lenders, and regulators, to assess the financial health and performance of the business accurately.

To maintain this separation, it is important to establish clear policies and procedures, educate employees on proper expense reporting, and conduct regular audits or reviews to ensure compliance. By doing so, businesses can maintain accurate financial records and promote integrity in their financial reporting.

Private expenses and the Business entity principle

The Business Entity Principle is applicable to all businesses, regardless of their size or the accounting

standards they follow. Whether a business is a small business or a large corporation, adhering to the Business Entity Principle is essential for accurate and reliable financial reporting.

The principle is recognized and incorporated in various accounting frameworks, including generally accepted accounting principles (GAAP), International Financial Reporting Standards (IFRS), and IFRS for Small and Medium-sized Entities (IFRS for SMEs). These frameworks provide guidelines and standards for financial reporting, and they emphasize the separation of business transactions from personal transactions.

Regardless of the accounting framework used, businesses are expected to maintain separate financial records and accounts for their business activities, ensuring that personal expenses or transactions of the owners or stakeholders, including that transactions of the employees. are not mixed with the business's financial information. This principle helps in presenting a true and fair view of the business's financial performance and position to stakeholders and facilitates transparency and comparability of financial statements.

Compliance with the Business Entity Principle is important for maintaining the integrity and reliability of financial information and is considered a fundamental aspect of sound financial management and reporting practices.

The Business Entity Principle is a fundamental concept in accounting that applies to all businesses, regardless of their size or the accounting standards they follow. It requires businesses to maintain separate financial records and accounts for their business activities, distinct from the personal transactions of the owners or stakeholders or its employees.

Adhering to the Business Entity Principle is crucial for accurate and reliable financial reporting. By keeping business transactions separate from personal transactions, businesses can present a clear and unbiased view of their financial performance and position. This separation ensures transparency, facilitates proper evaluation of the business's financial health, and allows for meaningful comparisons with other entities.

Whether a business follows specific accounting standards such as GAAP, IFRS, or other recognized frameworks, the principle remains the same. It is a fundamental principle that underlies the entire accounting process and ensures that financial information is reported in a manner that is consistent, objective, and in accordance with established accounting principles and guidelines.

In summary, all businesses, regardless of their size or the accounting standards they follow, should adhere to the Business Entity Principle to maintain accurate and reliable financial records and reporting.

Examples or occurrences of personal expenses

There are several other examples of personal expenses or occurrences that may need to be disallowed by a business. Here are a few common ones:

1. Personal use of company vehicles: If employees use company vehicles for personal purposes, the portion of expenses related to personal use should be disallowed. This can include fuel costs, maintenance, insurance, and other associated expenses.
2. Personal meals or entertainment: If employees charge personal meals or entertainment expenses to the company, the portion that is personal should be disallowed. This may occur when employees mix personal and business expenses on their company credit cards or expense reports.
3. Personal travel expenses: If employees incur travel expenses for personal reasons while on a business trip, such as extending the trip for personal vacation, the personal portion of the expenses should be disallowed.
4. Personal purchases using company accounts: If employees make personal purchases using company accounts or credit cards, the personal portion of those expenses should be disallowed.
5. Personal use of company assets: If employees use company assets, such as equipment, facilities, or supplies, for personal purposes, the corresponding expenses should be disallowed.

It's important for businesses to establish clear policies and guidelines regarding the use of company resources for personal purposes and to communicate these policies to their employees. By disallowing private expenses, the business ensures that its financial records accurately reflect only legitimate business expenses and comply with accounting principles and taxation regulations.

By disallowing private expenses, the business ensures that its financial records accurately reflect only legitimate business expenses and comply with accounting principles and taxation regulations. Consulting with an accounting professional can provide further guidance tailored to your specific business and jurisdiction.

Instances to allocate or disallow private expenses

The recording of private expenses depends on whether it is related to the business owner(s) and partnerships or the employees. Here are the key points:

1. Private Expenses for Business Owner(s) and Partnerships:
    - Private expenses incurred by the business owner(s) or partners are typically allocated to the Drawings or Distribution accounts. When owners or partners incur personal expenses that are paid directly from the business's funds, these expenses should be recorded as drawings or distributions in the respective owner's or partner's capital account. This reflects the reduction of the owner's or partner's equity in the business.
    - The recording of private expenses can occur during the payment processing, where the private expenses are pre-identified and included in the payment. In this case, the private

expenses is directly allocated to the respective Drawings or Distribution accounts.

- If private expenses are discovered or detected after the payment has been made, a separate journal entry may be required to disallow the private expenses from identified Expense account and allocated to the respective Drawings or Distribution accounts.

2. Private Expenses for Employees:
    - Private expenses incurred by employees are allocated to the Employee's Payable/Recoverable account, which is a current asset account.
    - The recording of private expenses for employees may also occur during the payment processing, where the private expenses are already included in the payment. In this case, the private expenses are allocated to the Employee's Payable/Recoverable account.
    - If private expenses are discovered or detected after the payment has been made, a separate journal entry may be required to disallow the private expenses from identified Expense account and allocated to the Employee's Payable/Recoverable account.

It's important to adapt the recording of private expenses based on the specific circumstances and policies of the business, ensuring proper separation of personal and business transactions and following the appropriate accounting principles and guidelines.

Allocate private expenses during the payment of recording and processing private expenses

When processing expense payments, and the private expenses is pre-identified and included in the payment, you may allocate these private expenses directly to the appropriate accounts. A brief summary for allocating private expenses when processing transactions in batches, is as follows:

1. Owners or Partners: When owners or partners incur personal expenses that are paid directly from the business's funds, these expenses should be recorded as drawings or distributions in the respective owner's or partner's capital account. This reflects the reduction of the owner's or partner's equity in the business.
2. Employees: If private expenses are incurred by employees and are pre-identified and included in the payment made to them, it is appropriate to allocate these expenses directly when processing the cash/bank transaction. This can be done by recording the payment with a split allocation, where the portion related to business expenses is allocated to the applicable expense account (which will be reflected in the income statement) and the portion related to private expenses is allocated to the employee's payable or recoverable account (which will be reflected in the balance sheet). The amount allocated to the employee's payable or recoverable account is owed by an employee to the business.

Reimbursement or recovery of private expenses for employees If there are private expenses owed by an employee to the business, the business can include the amount owed as a deduction in the employee's payroll. By deducting the amount from the employee's payroll, it helps to recover the private expenses owed by the employee to the business. This deduction will clear any private expense amounts that were allocated to the Employee's Payable/Recoverable account (a current asset account) when the expense payments were processed. It ensures that the employee reimburses or pays back the business for their personal expenses, maintaining the separation between personal and business transactions.

It's important to have clear policies and procedures in place to document and approve private expenses incurred by employees. This helps ensure that the reimbursement and recovery of private expenses process is accurate and transparent. Additionally, maintaining proper records of these transactions and reimbursements is important for auditing purposes and to ensure compliance with tax regulations.

Private expenses for Business Owner(s) / Partnerships: Recording and processing

The process of allocating and disallowing private expenses for business owners/partnerships, may occur in the following instances:

- The allocation of private expenses to the respective owner's or partner's drawings or distributions account reflects the reduction in their equity.
- On the other hand, if private expenses are mistakenly included in the payment of expenses and later discovered, a journal entry is processed to disallow those expenses from the owner(s) or partners, rectifying the error and ensuring accurate financial reporting.

Allocating Private Expenses for Business Owner(s) / Partnerships

When owners or partners incur personal expenses that are paid directly from the business's funds, these expenses should be recorded as drawings or distributions in the respective owner's or partner's capital account. This reflects the reduction of the owner's or partner's equity in the business.

In osFinancials5/TurboCASH5, the recording and allocation of private expenses to the owner's or partner's drawings or distributions account can be done in different circumstances, depending on the type of transaction. Here are some scenarios:

1. Cash payments: If expenses are paid in cash through the bank account, credit card, or petty cash, you can allocate the expenses directly to the owner's or partner's drawings or distributions account. This

can be done through batch entry or journal entry, or by using the Bank import plugin on the Default ribbon.

2. Purchases on credit: If expenses are procured on credit from creditors or suppliers, you can record the transaction in the purchases journal through batch entry or journal entry. In this case, you can allocate the private portion of the expense to the owner's or partner's drawings or distributions account.

3. Document entry: If you are using the purchases document type with the financial entry stock item type, you can select the owner or partner and allocate the expenses to their respective drawings or distributions account.

Example entry:	*Account classification*	*Debit*	*Credit*
Debit: Drawings or Distributions accounts	*Equity*	*$100*	
Credit: Cash or bank account	*Current asset*		*$100*
Credit: Purchase journal	*Current liability*		

In cases where the private portion of the expense is included in the transaction, such as a mixed business and private expense, you may need to split the transaction. Allocate the business portion to the applicable expense account and allocate the owner's or partner's portion to their respective drawings or distributions account.

These methods in osFinancials5/TurboCASH5 allow for accurate recording and allocation of private expenses to the owner's or partner's accounts, ensuring proper tracking and reporting of business and personal transactions.

By recording the private expenses separately, you are accurately reflecting the portion of expenses that should not be attributed to the business but rather borne by the owner or partners.

Disallow Private Expenses for Business Owner(s) / Partnerships - Mistakenly included in the payment of expenses and are later discovered

If private expenses are mistakenly included in the payment of expenses and are later discovered, a journal entry should be processed to disallow those private expenses from the owner(s) or partners. This is done to rectify the error and ensure accurate financial reporting.

The journal entry to disallow private expenses would typically involve debiting an appropriate account to

reflect the disallowed expenses and crediting the respective owner's drawing account or the partner's distribution account.

Example entry:	*Account classification*	*Debit*	*Credit*
Debit: Drawings or Distributions accounts	*Equity*	*$100*	
Credit: Relevant expense accounts	*Expenses*		*$100*

By recording the private expenses separately, you are accurately reflecting the portion of expenses that should not be attributed to the business but rather borne by the owner or partners.

Remember to consult with an accounting professional or refer to applicable accounting standards and regulations for specific guidance on disallowing private expenses and the appropriate accounts to use in your jurisdiction.

Private expenses for Employees: Recording and processing

The process of allocating and disallowing private expenses for employees, may occur in the following instances:

- The allocation of private expenses to the respective Employee's Payable/Recoverable account reflects the amount that is recoverable by the business and is due by the employee(s) as a current asset.
- On the other hand, if private expenses are mistakenly included in the payment of expenses and later discovered, a journal entry is processed to disallow those expenses from the relevant expense account which includes private expenses related to employee(s), rectifying the error and ensuring accurate financial reporting.

It is crucial to inform or notify the employees about the private expenses incurred and the need for reimbursement or recovery. Transparency and clear communication are essential in maintaining a healthy employer-employee relationship and ensuring compliance with financial policies.

By informing employees about the private expenses and the subsequent need for reimbursement or recovery, you establish open and honest communication channels. This allows employees to understand their obligations and responsibilities regarding the private expenses incurred on their behalf.

Clear communication helps avoid misunderstandings and ensures that employees are aware of the financial impact of their private expenses on the business. It also promotes accountability and encourages timely

reimbursement or payment, which helps maintain accurate financial records and prevents prolonged debit balances in the "Employee's Payable/Recoverable" account.

By keeping employees informed and engaged in the process, you promote a culture of financial responsibility and collaboration within the organization.

Allocating Private Expenses for Employees

In osFinancials5/TurboCASH5, the recording and allocation of private expenses to the Employee's Payable/Recoverable account can be done in different circumstances:

1. Cash payments: If expenses are paid in cash through the bank account, credit card, or petty cash, you can allocate the expenses directly to the Employee's Payable/Recoverable account using batch entry, journal entry, or the Bank import plugin.
2. Purchases on credit: If expenses are procured on credit from creditors or suppliers, you can record the transaction in the purchases journal through batch entry or journal entry. Allocate the private portion of the expense to the Employee's Payable/Recoverable account.
3. Document entry: When using the purchases document type with the financial entry stock item type, you can select and allocate the expenses directly to the Employee's Payable/Recoverable account.

Example entry:	*Account classification*	*Debit*	*Credit*
Debit: Employee's Payable/Recoverable account	*Current asset*	*$100*	
Credit: Cash or bank account	*Current asset*		*$100*
Credit: Purchase journal	*Current liability*		

In cases where the private portion of the expense is included in the transaction, such as a mixed business and private expense, you may need to split the transaction. Allocate the business portion to the applicable expense account and allocate the employees' portion to their Employee's Payable/Recoverable account account.

These methods in osFinancials5/TurboCASH5 allow for accurate recording and allocation of private expenses by debiting the Employee's Payable/Recoverable account as a current asset and crediting the appropriate accounts such as Cash or Bank account or the Purchase journal.

Disallow Private Expenses for Employees - Mistakenly included in the payment of expenses and are later discovered

If private expenses are mistakenly included in the payment of expenses and are later discovered, a journal entry should be processed to disallow those private expenses from the relevant expense accounts. This is done to rectify the error and ensure accurate financial reporting.

Example entry:	*Account classification*	*Debit*	*Credit*
Debit: Employee's Payable/Recoverable account	*Current asset*	*$100*	
Credit: Relevant expense accounts	*Expenses*		*$100*

The journal entry to disallow private expenses would typically involve debiting an appropriate "*Employee's Payable/Recoverable*" account to reflect the disallowed expenses that needs to be recovered and crediting the respective expense account which includes the private expenses which was incorrectly allocated as an expense.

By recording the private expenses separately, you are accurately reflecting the portion of expenses that should not be attributed to the business but rather borne by the employee(s).

Recovery of private expenses from employee(s)

Once the adjustment for private expenses is disallowed and the "*Employee's Payable/Recoverable*" account reflects a debit balance, it is important to recover the private expenses from the employees. This ensures that the business's financial records are accurate and up to date.

Recovering the private expenses from the employees involves collecting the amount owed by them and recording the transaction in the accounting records. The specific method of recovery can vary depending on the business's processes and policies.

Here are some options to record the recovery of private expenses from employees:

1. Direct payment: The employees can make a direct payment to the business to reimburse the private expenses. This involves the issue of a receipt, etc. and process the receipt transactions in the Cash or Bank account.

Example entry:	*Account classification*	*Debit*	*Credit*

Debit: Cash or Bank account	*Current asset*	*$100*	
Credit: Employee's Payable/Recoverable account	*Current asset*		*$100*

2. Payroll deduction: You can also recover the private expenses from employees via the payroll system. This involves deducting the reimbursement amount from the employee's wages or salary. The payroll system will automatically calculate the deduction and adjust the employee's net pay accordingly.

Example entry:	*Account classification*	*Debit*	*Credit*
Debit: Payroll Deductions or Payroll Clearing account	*Current liability*	*$100*	
Credit: Employee's Payable/Recoverable account	*Current asset*		*$100*

3. Offset against future payments: If the employee has upcoming payments or reimbursements owed to them by the business, you can offset the private expenses against these future amounts. In this case, you would record the transaction as a deduction to reduce the payments made to the employee when processing the next payments to employees.

Example entry:	*Account classification*	*Debit*	*Credit*
Debit: Expense Reimbursement Payable	*Current liability*	*$100*	
Credit: Employee's Payable/Recoverable account	*Current asset*		*$100*

The "Expense Reimbursement Payable" account is typically classified as a current liability account. This account is used to track the amounts owed by the business to employees or other parties for expense reimbursements.

When employees or individuals incur expenses on behalf of the business and are eligible for reimbursement, the business records the expenses as liabilities in the "Expense Reimbursement Payable" account until the reimbursement is made. Once the reimbursement is processed, the liability is reduced, and the corresponding cash or bank account is debited.

It's worth noting that account classifications can vary between different accounting systems or organizations. It's important to consult the specific chart of accounts or accounting guidelines used by your business to determine the appropriate classification for the "Expense Reimbursement Payable" account.

By recording the transactions for the recovery of private expenses, you are effectively clearing the debit balance in the Employee's Payable/Recoverable account and ensuring that the business's financial records

accurately reflect the reimbursement or recovery of the private expenses.

Notes : Recovering private expenses for employees via the payroll system

Recovering private expenses for employees via the payroll system has several advantages, and one of them is to keep track and accumulate taxable totals for tax certificates, such as the IRP5 in South Africa (or W-2 forms in the United States).

By processing the reimbursement or recovery of private expenses through the payroll system, the amounts can be properly accounted for and included in the employee's taxable income. This allows for accurate reporting of the employee's income and deductions, which is necessary for tax purposes.

Recovering the private expenses through the payroll system ensures that the reimbursement amounts are reflected in the employee's payroll records and reported on their tax certificates. This helps in complying with tax regulations and providing accurate information to employees for their tax filings.

Additionally, using the payroll system allows for automation and integration of the reimbursement process, making it more efficient and reducing the administrative burden of separate cash payments for each employee's private expenses.

Overall, recovering private expenses via the payroll system helps in maintaining accurate tax records and simplifies the process of reporting and accounting for the reimbursement amounts.

---

Common Errors in Accounting

There are several common errors that can occur in accounting, including:

1. Data entry errors: These errors occur when transactions are entered incorrectly, such as transposing numbers or recording the wrong amount.
2. Timing errors: These errors occur when transactions are recorded in the wrong period, such as recording a transaction in the wrong month or year.
3. Omission errors: These errors occur when a transaction is not recorded at all, such as forgetting to record a sale or purchase.
4. Reversal errors: These errors occur when debits and credits are reversed, such as debiting an account

that should be credited.

5. Overstatement or understatement errors: These errors occur when transactions are recorded with the wrong amount, such as overstating revenue or understating expenses.
6. Duplication errors: These errors occur when a transaction is recorded twice, resulting in an overstatement of assets or income.
7. Incorrect account errors: These errors occur when a transaction is recorded in the wrong account, resulting in misstatements in financial statements.

It is important for businesses to have internal controls in place to prevent these common errors from occurring. Regular review and reconciliation of accounts can help identify and correct any errors that do occur. It is also important to have well-trained accounting staff and to use reliable accounting software, such as osFinancials5/TurboCASH5 to minimize the risk of errors.

What is the general journal used for?

The general journal is a book or computer program used in accounting to record all transactions in chronological order. It is also known as the "journal" or "journal entry book".

Each transaction recorded in the general journal includes a date, a brief description of the transaction, the accounts involved, and the amounts debited or credited. These transactions are then later transferred to the appropriate ledgers for posting and summarization.

The general journal is used to record a wide range of transactions, such as sales, purchases, expenses, and other financial transactions. It is also used to record adjusting entries and closing entries at the end of an accounting period.

By recording all transactions in the general journal, a business can keep a complete and accurate record of its financial activities. This information is then used to prepare financial statements and to analyze the financial performance of the business. The general journal is an essential tool for any business that wants to maintain accurate financial records and make informed decisions about its financial activities.

The document types is already linked to the batch types in Setup → Document setup (Setup ribbon). The batch types linked to the documents, is as follows:

Invoices - Sales journal

Credit notes - Sales journal

Purchases - Purchase journal

Supplier returns - Purchase journal

When should a general journal not be used?

A general journal should not be used in certain situations where there are specific journals designed for recording transactions. For example:

- Sales: For recording sales, specialised journals like the sales journal should be used. To record sales transactions in osFinancials5/TurboCASH5, you can use the sales journal available in the Batch entry section of the Default ribbon. The sales journal allows you to enter and manage sales-related transactions effectively.

  In addition to the sales journal, you can process invoices and credit notes using the Documents section on the Default ribbon. Invoices and credit notes can be linked to the sales journal in Setup → Documents setup (Setup ribbon). When you process invoices and credit notes, the source documents will be automatically generated, allowing you to have physical or digital copies of these documents for record-keeping purposes. These documents can be printed and reprinted as needed, enabling you to send them to your debtors (customers/clients) as required.

  Once the invoices and credit notes are updated and posted to the ledger, the corresponding transactions will be automatically processed in the sales journal. Each item included in the invoice or credit note will be recorded in the sales journal, ensuring accurate tracking of your sales transactions.

  By utilising the sales journal and linking invoices and credit notes, you can efficiently manage and maintain a comprehensive record of your sales activities in osFinancials5/TurboCASH5.

- Purchases: For recording purchases, specialised journals like the purchase journal should be used. To record purchase transactions in osFinancials5/TurboCASH5, you can use the purchase journal available in the Batch entry section of the Default ribbon. The purchase journal allows you to enter and manage purchase-related transactions effectively.

  In addition to the purchase journal, you can process purchase and supplier return documents using the Documents section on the Default ribbon. Purchases and supplier return documents can be linked to the purchase journal in Setup → Documents setup (Setup ribbon). When you process purchase and supplier return documents, the source documents will be automatically generated, allowing you to have physical or digital copies of these documents for record-keeping purposes. These documents can be printed and reprinted as needed, enabling you to send them to your creditors (suppliers/vendors) as required.

  Once the purchase and supplier return documents are updated and posted to the ledger, the corresponding transactions will be automatically processed in the purchase journal. Each item included in the purchase and supplier return documents will be recorded in the purchase journal, ensuring accurate tracking of your purchase transactions.

By utilising the purchase journal and linking purchase and supplier return documents, you can efficiently manage and maintain a comprehensive record of your purchase activities in osFinancials5/TurboCASH5.

- Cash transactions: To record cash transactions in osFinancials5/TurboCASH5, specialised journals such as the cash receipts journal and cash disbursements journal are used. In osFinancials5/TurboCASH5, when setting up bank accounts and petty cash accounts in the Setup → Accounts menu of the Setup ribbon, each account will be associated with its own unique payments journal and receipts journal.

  If the Bank import plugin is not activated in osFinancials5/TurboCASH5, you can manually process cash transactions in the respective payments journal and receipts journal associated with the bank account or petty cash account. To access these journals, you can go to the Batch entry option on the Default ribbon.

  If the Bank import plugin is activated, you have the option to process and import transactions directly into the payments journal and receipts journal associated with the bank account or petty cash account. This can be done through the Cash/Bank entry option on the Default ribbon.

  By using the appropriate journals for cash transactions, you can effectively record and manage your cash receipts and disbursements. The journals allow for accurate tracking of cash flows, providing a clear overview of your financial activities.

  Please note that the availability and functionality of specific features may depend on the configuration and settings of your Set of Books in osFinancials5/TurboCASH5.

Bank import plugin - Bank Reconciliations Plugin Manual - BankImport Plugin Manual - Shop - The Bank import plugin is included in the osFinancials5/TurboCASH5 subscription.

The Bank import plugin is included with the osFinancials5/TurboCASH5 Business Class licence, meaning you have access to it without any additional cost or separate licence requirement.

With the plugin, you can download bank statement files from your online banking app or portal provided by your bank or financial institution. These files can be imported into the appropriate bank accounts (cash books) in osFinancials5/TurboCASH5.

You can download statements for multiple bank accounts and credit cards, as long as you have them linked to your online banking. Each bank account or credit card should have its corresponding Payments and Receipts journals set up in osFinancials5/TurboCASH5.

Importing the bank statements automatically populates the transactions into the Payments and Receipts columns, saving you time and reducing the risk of errors associated with manual entry.

The plugin offers a user-friendly interface with context menus that make it easy to locate, select, and search for specific transactions, debtors, creditors, or general ledger accounts. This simplifies the

navigation and management of your bank transactions.

You can link debit transactions to credit transactions and vice versa, allowing for accurate tracking of outstanding balances and efficient management of payments and receipts. You can also link a portion of a payment or receipt to multiple outstanding transactions if needed.

Additionally, the plugin allows you to link accounts to specific debtors, creditors, or general ledger accounts. This ensures that subsequent bank statement imports automatically allocate transactions correctly based on the predefined account linkages, improving accuracy and saving time.

The plugin utilizes bank references to automatically allocate or link various transactions to the correct accounts in your Set of Books. It supports automatic receipts for debit orders from your debtors and automatic payments for managing supplier payments.

In summary, the Bank import plugin in osFinancials5/TurboCASH5 simplifies the import of bank statements, automates transaction allocation, and efficiently manages and reconciles your bank accounts. It reduces manual data entry, improves accuracy, and streamlines your financial management processes.

- Payroll: To record payroll transactions in osFinancials, a specialised journal such as the payroll journal can be used. If you need to add the payroll journal, you can do so in the Setup → Batch types menu on the Setup ribbon.

  By processing payroll transactions in the payroll journal, you can effectively track your salary and wage expenses and payments. This allows you to have a dedicated journal specifically for recording payroll-related transactions, providing specific configuration of the payroll journal and better organisation and analysis of your payroll data.

  In addition to the payroll journal, osFinancials5/TurboCASH5 also provides the option to process repeating transactions. Repeating transactions can be accessed in the Edit → Repeating transactions menu on the Default ribbon. This feature allows you to set up and manage transactions that occur on a regular basis, such as recurring payroll entries. You can edit the repeating transactions as needed and import them into the normal payroll journal, ensuring consistency and efficiency in recording your payroll transactions.

  Using a payroll journal and taking advantage of the repeating transactions feature in osFinancials5/TurboCASH5 can streamline your payroll processing and help maintain accurate records of your payroll expenses and payments.

- Fixed assets: To record fixed asset transactions in osFinancials5/TurboCASH5, a specialized journal such as the fixed asset journal can be used. If the fixed asset journal is not already added, you can do so in the Setup → Batch types menu on the Setup ribbon.

By processing transactions for fixed assets in the fixed asset journal, you can effectively track your fixed asset-related transactions. This includes recording acquisitions, disposals, multi-year depreciation, and any transactions related to losses or profits on the disposal of fixed assets. Having a dedicated journal specifically for fixed asset transactions allows for better organization and analysis of your fixed asset data.

In addition to the fixed asset journal, osFinancials5/TurboCASH5 also provides the option to process repeating transactions. The repeating transactions feature can be accessed in the Edit → Repeating transactions menu on the Default ribbon. This feature is useful for setting up and managing transactions that occur on a regular basis, such as recurring depreciation entries for fixed assets. You can edit the repeating transactions as needed and import them into the normal fixed asset journal, ensuring consistency and efficiency in recording your fixed asset transactions.

Using the fixed asset journal and leveraging the repeating transactions feature in osFinancials5/TurboCASH5 can streamline your fixed asset processing and help maintain accurate records of your fixed asset-related transactions. This allows for better tracking and management of your fixed assets throughout their life-cycle.

It's important to note that the availability and functionality of specific features may vary depending on the configuration and settings of your Set of Books in osFinancials5/TurboCASH5.

Activa plugin - Manual - Shop - Licence : Once-off -

The Activa plugin automates the management and processes of fixed assets and the depreciation of fixed assets in your accounts over the lifespan of the fixed assets. Periodically you will receive a notification screen, which the depreciation shown. From this screen, the depreciation(s) can directly take place.

The Activa plugin in osFinancials5/TurboCASH5 allows you to register fixed assets that need to be written off. The write-off process occurs over the lifespan of the asset and can be spread across multiple financial years.

By adding the Activa Fixed asset accounts in the plugin setup, you will receive reminders when new transactions are posted to the ledger or when Activa transactions require processing. This automation streamlines the management of depreciation allowances for fixed assets (tangible assets) in your Set of Books over the asset's lifespan.

As you record the depreciation expenses for each financial year, they will be reported in the income statement and reduce your net profit. Additionally, the plugin will provide you with the net value of your fixed assets, which is calculated as the fixed assets' cost minus the accumulated depreciation, and this information will be reflected in the balance sheet.

In summary, the Activa plugin helps automate the depreciation management process, ensures accurate reporting of depreciation expenses, and provides visibility into the net value of fixed assets over their lifespan in both the income statement and the balance sheet.

When a fixed asset reached the end of life end process that will clear of the total write-off from the balance write-off account and the initial asset account. This will display only the remaining total on the asset account and the contra account the will be cleared of this total.

By allowing the write-off process to occur over the lifespan of the asset and providing reminders for transaction processing, the plugin further streamlines the management of depreciation allowances for fixed assets.

The accurate reporting of depreciation expenses in the income statement and the reflection of the net value of fixed assets (cost minus accumulated depreciation) in the balance sheet remain essential features of the plugin.

Furthermore, the ability to clear the total write-off from the balance write-off account and the initial asset account when a fixed asset reaches the end of its life adds to the efficiency of the process.

The Activa plugin's powerful grid, custom filtering options, and integrated pivot tables enhance the search and analysis capabilities for active fixed assets, assets requiring processing, and transaction details. The Ledger analyser allows for the printing and exporting of the trial balance, income statement, and balance sheet, while the T-Account viewer facilitates the export of transactions to spreadsheets.

The Central search feature in osFinancials5/TurboCASH5 further aids in searching for transactions related to fixed assets, providing comprehensive functionality for managing and analysing fixed asset data.

- Accrual-based adjustments: To record transactions for accrual-based accounting adjustments, you can add an "*Adjustments*" journal type in the Setup → Batch types menu on the Setup ribbon. By creating an adjustments journal, you can specifically configure the options for recording month-end or year-end adjustments and easily track these adjustments within your Set of Books.

  Using a dedicated adjustments journal allows you to separate these specific transactions from other routine transactions and provides better organization and visibility for accrual-based adjustments. This ensures that these adjustments are properly captured and reflected in your financial statements.

General journal: The general journal, on the other hand, is typically used for recording non-routine or unusual transactions that do not fit into other specialized journals. It is a versatile journal that can be used for various purposes, including corrections of errors. If there is no specific journal available for a particular type of transaction, using the general journal is a suitable option.

However, whenever there is a specialized journal available for a specific type of transaction, it is recommended to use that journal to ensure accuracy and efficiency in record-keeping. This helps maintain consistency and allows for easier analysis and reporting of transactions within their relevant categories.

In general, a general journal is used to record non-routine or unusual transactions that do not fit into the other specialized journals. However, if there is a specific journal available for a particular type of

transaction, it is best to use that journal to ensure accuracy and efficiency in record-keeping.

===

osFinancials5/TurboCASH5 provides a range of default journal types, including sales journal, purchase journal, general journal, payments journals, and receipt journals that are automatically linked to bank accounts or petty cash accounts. Additionally, you have the flexibility to add custom journal types, in the Setup → Batch types menu on the Setup ribbon, to meet your specific requirements.

By using dedicated journals for specific transactions, you can separate these transactions from routine ones, resulting in better organization and visibility. Each journal can be configured with standard and advanced options such as contra accounts, account and tax lookup settings, and more, ensuring accuracy when recording specific transactions and facilitating easy tracking within your Set of Books.

Furthermore, if you have multiple users, you can control their access to process transactions in specific journals. The Setup → *Access control* menu, specifically the Batches access tab, allows you to restrict or grant access to users for processing transactions in specific journals, ensuring proper segregation of duties and maintaining data integrity.

This level of customization and access control in osFinancials5/TurboCASH5 enables you to tailor your journaling process to match your specific business needs, enhance accuracy in recording transactions, and maintain a secure and organized accounting system.

Month-end procedures

Steps for the month-end process

Some general steps for the month-end process in accounting:

1. Review transactions: Review all transactions posted during the month to ensure they are complete and accurate. This includes checking for any missing or incomplete transactions, as well as correcting any errors or discrepancies.
2. Reconcile bank accounts: Reconcile all bank accounts to ensure that the balances in the accounting system match the bank statements. Any discrepancies should be investigated and corrected.
3. Review and adjust journal entries: Review and adjust any journal entries made during the month to ensure they are accurate and complete. This includes making any necessary accruals or adjustments for prepaid expenses or deferred revenue.

4. Prepare financial statements: Prepare financial statements, including the balance sheet, income statement, and statement of cash flows, for the month. These statements should be reviewed for accuracy and completeness.
5. Review accounts receivable and payable: Review the accounts receivable and payable to ensure that all invoices have been paid and all payments have been made.
6. Review inventory: Review the inventory to ensure that all items have been correctly accounted for and that the valuation is accurate.
7. Backup data: Create a backup of all data and store it in a secure location. This is important for disaster recovery and to ensure that data is not lost due to hardware failure or other issues.
8. Close the books: Close the books for the month, which involves finalizing all transactions and updating account balances. This ensures that the accounting records are up-to-date and accurate.

These are just some general steps for the month-end process. The specific steps may vary depending on the organization and its accounting procedures.

Created with the Standard Edition of HelpNDoc: Add an Extra Layer of Security to Your PDFs with Encryption

Year-end procedures

Depending on the accounting basis (cash basis or accrual basis) on which your accounting records or system is based, you may need to do specific adjustments before you do the year-end procedures in osFinancials5/TurboCASH5.

Examples of some of the adjustments based on the accrual accounting basis are; provision for bad debts, prepaid expenses, accrued expenses, provision for accrued expenses, income received in advance, and accrued income. Most of these adjustments are short-term adjustments, where these expenses or income relate to the next successive accounting period or financial year.

However, some adjustments may relate to the long term where the income or expenses are for more than one financial year. A good example is depreciation on fixed assets where the amounts are calculated over the life span of the assets and are apportioned over more than one year.

osFinancials5/TurboCASH5 allows you to close the previous financial year, to prevent any further posting to the previous financial year. To do this, you need to select the Setup → Reporting dates menu (Setup ribbon) option and remove the tick on the "Post to last year" field. You will still be able to generate all the available reports in osFinancials5/TurboCASH5 for that the previous financial year. Should you wish to enter transactions for the "Closed year" or last year (previous financial year), you may remove the tick in this field.

Steps for the year-end process

Some general steps for the year-end process in accounting:

1. Reconcile accounts: Reconcile all accounts, including bank accounts, accounts receivable, accounts payable, and inventory. This involves reviewing all transactions and ensuring that the account balances match the corresponding statements.
2. Adjust entries: Make any necessary adjusting entries to ensure that the accounts reflect the correct balances. This includes accruals, deferrals, and any other necessary adjustments.
3. Perform inventory valuation: Perform a physical inventory count and reconcile the results with the accounting records. This is necessary to determine the actual value of inventory at the end of the year.
4. Review fixed assets: Review the fixed assets to ensure that all items are properly accounted for and that depreciation schedules are accurate.
5. Review accounts receivable and payable: Review the accounts receivable and payable to ensure that all invoices have been paid and all payments have been made.
6. Prepare financial statements: Prepare financial statements, including the balance sheet, income statement, and statement of cash flows, for the year. These statements should be reviewed for accuracy and completeness.
7. Perform a year-end audit: Perform an audit of the financial statements to ensure that they comply with accounting standards and regulations. This is typically performed by an external auditor.
8. Prepare tax returns: Prepare tax returns and ensure compliance with tax regulations. This may involve working with a tax professional to ensure that all deductions and credits are properly accounted for.
9. Close the books: Close the books for the year, which involves finalizing all transactions and updating account balances. This ensures that the accounting records are up-to-date and accurate.

These are just some general steps for the year-end process. The specific steps may vary depending on the organization and its accounting procedures.

Year-End Procedures

After processing all your daily transactions for a specific year, you have to check the results and ensure that certain actions have been performed before the Year-end procedure can be performed.

It is important to develop a checklist to meet your specific requirements. This will ensure that you generate useful reports and that you evaluate your business performance and financial position for a specific period on correct information.

The following represent a basic list and may vary according to your circumstances:

1. All batches (journals) have been updated (posted) to the ledger.
2. All documents, invoices, credit notes and supplier returns) have been updated (posted) to the ledger.
3. Depreciation transactions have been entered and updated (posted) to the ledger.
4. Bad debts have been have written off and updated (posted) to the ledger.
5. Provision for bad debts or doubtful debts have been created or adjusted and updated (posted) to the ledger.
6. Payroll (Salaries and Wages) transactions have been entered and updated (posted) to the ledger.
7. Repeating transactions and Repeating invoices have been updated (posted) to the ledger.
8. Adjustments and Corrections have been entered and updated (posted) to the ledger.
9. Bank Reconciliation is finalised.
10. Interest on overdue debtors accounts have been entered and updated (posted) to the ledger.
11. Generate any Multiple Entries (Fixed amounts to debtor accounts, Debtors with charge amount, and Creditors with charge amount, etc.).
12. Print Reports as necessary, e.g. trial balance, income statements and balance sheets and any other reports. You need to analyse these reports and do the necessary adjustments or corrections, if necessary.
13. Print debtors statements and creditor remittance advises.
14. Create sufficient Backups of your Set of Books.

Adjustments are those transactions that occur, which usually do not involve a third party. These adjustments are usually made at the end of a financial year to adjust certain accounts to reflect the accounting policy of the business entity or to comply with the principles of the Generally Accepted Accounting Principles (GAAP) or International Financial Reporting Standards (IFRS).

Adjustments are made before the closing transactions where the nominal accounts (income and expense accounts) are transferred to the profit and loss account.

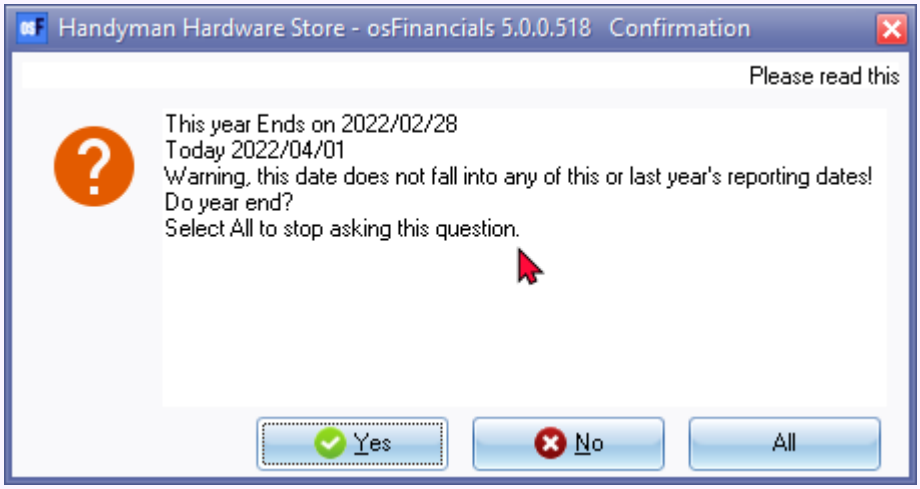
These adjustments are normally carried out in the general journal and not in the specific journals (i.e. sales journal, purchase journal, cash receipts journal, cash payments journal, etc.), and the entries are posted to the ledger accounts. Normally the description entered on the journal and / or the applicable working papers are used as the source document.

Created with the Standard Edition of HelpNDoc: Write EPub books for the iPad

Do year end

The Log-report in Setup → Access control (Setup ribbon) will list the date and time, as well as which user and on which device, the year-end procedure was performed as OPEN YEAR - Open new year.

When opening a Set of Books, and the financial year expired, a warning confirmation message do the year end, will be displayed.



If you wish to continue, click on the Yes button.

If you do not wish to do the Year end at this stage, and continue to work in the Set of Books in the previous financial year, this confirmation message will be displayed each time the Set of Books is opened.

If you do not wish to receive this message when opening the Set of Books, click on the All button to hide this confirmation message.

When you are ready to Do the year-end, go to the Setup ribbon and select Do year end.

If you click on the Open button on the Set of Books screen, and the start of the financial year (for the Set of Books) is older than the system date, the similar confirmation message will be displayed.

If you click on the Yes button, you may proceed to do the year end.

If you click on the No button, you may go to the Do year end menu on the Setup ribbon.

This option will perform year-end processing for you. It will balance all the income/expense accounts transferring the balance of each account to the retained earnings or retained income account.

This account will then show your net profit or loss for the year. The balances of the balance sheet accounts are brought forward to the New year.

The reporting dates are updated to cater for the New Year. Once the year-end procedure is completed, you will be able to post transactions to your new financial year.

osFinancials5/TurboCASH5 stores the transactions and balances for accounts for up to two financial years (This Year and Last Year). You will still be able to view the transactions and reports for the previous closed financial year.

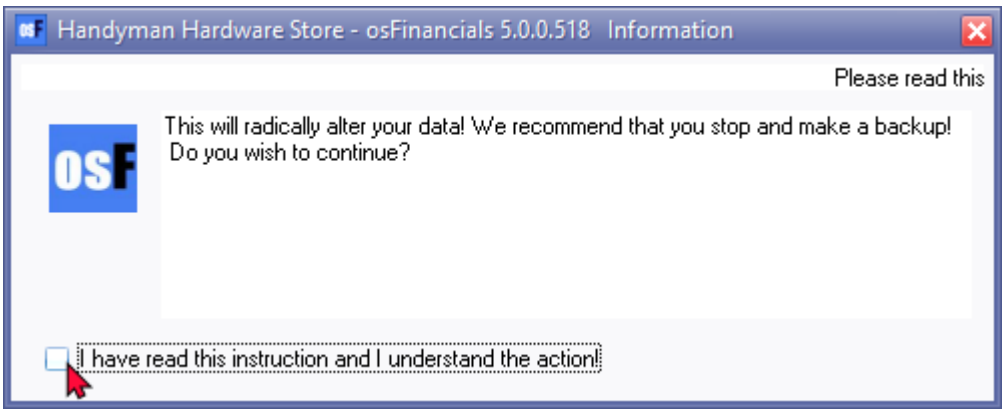
Before you may perform this year-end procedure to close off all your accounts for a specific financial year you need to:

- *Post any batches (journals) and update any documents to the ledger.*
- *Do any corrections, if any errors are found and do the year-end adjustments.*
- *Print the necessary reports and retain it with the necessary supporting documents for record and audit purposes.*
- *Do a Data integrity check to check that all your data is correct and in balance.*
- *Make a Backup of the Set of Books.*

It is recommended that you Disable your Screen Saver in the Windows Operating System, before starting this process. This will prevent the Screen Saver being activated while the process is running.

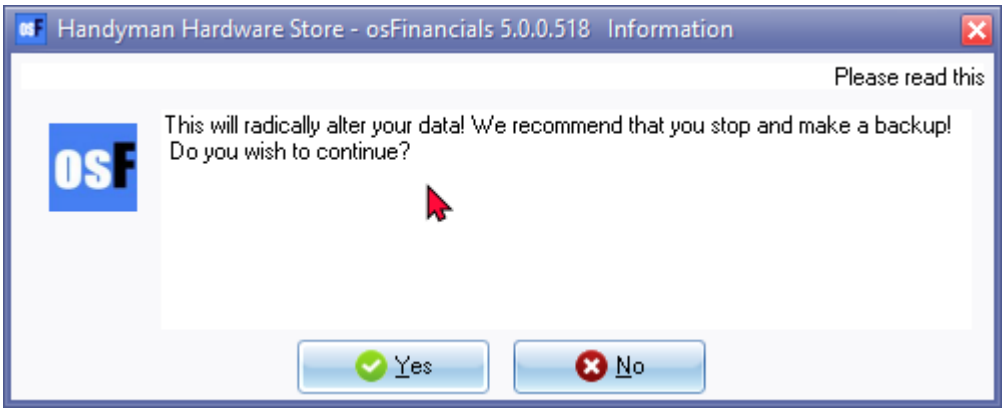
To do a year end:

1. On the Setup ribbon, select Do year end. The following information screen is displayed:



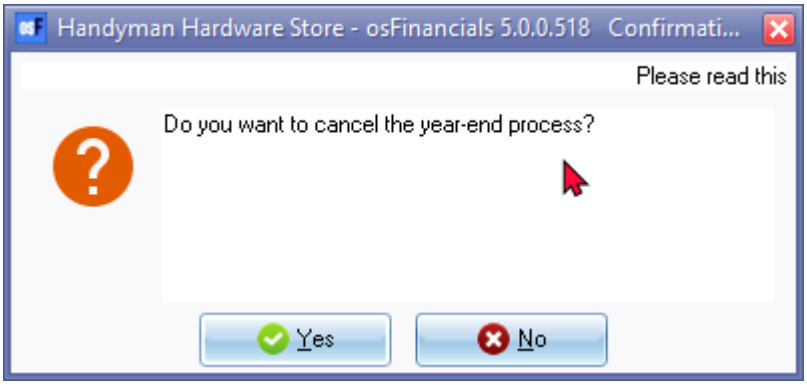
2. If you are absolutely sure, tick the "*I have read this instruction and understand the action!*" field. The Yes

and No buttons will be available on this screen.



If you have not made backups, click on the No button and backup your Set of Books.

3. If you click on the Yes button, a confirmation message is displayed:



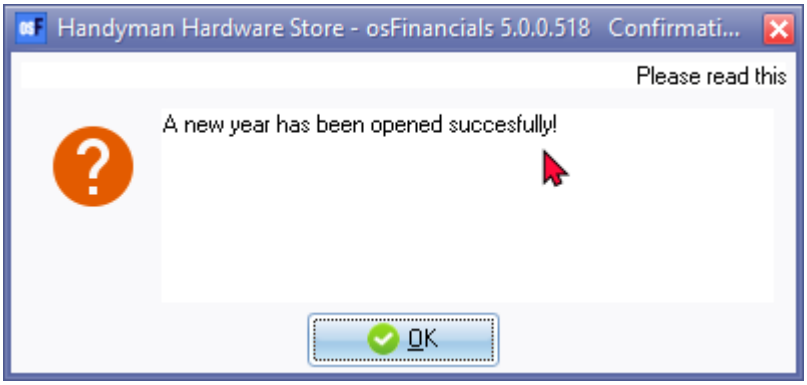
4. Click on the Yes button, if you are absolutely sure you have made backups.

This is your last chance to cancel this process. If you want to abort the process, click on the Yes button.

5. Click on the No button to start the process.

It is recommended that you do not use your system for other tasks while this process is running.

6. Once the process is finished, the confirmation message is displayed:



7. Click on the OK button. You may continue to work in the new year.

Post to last year

1. It is possible to post transactions in batches (journals) and/or documents (invoices, credit notes, purchases and supplier returns) to the previous financial year. For example, if transactions in a batch includes a date that corresponds to the previous financial year (for instance, if the current financial year spans from 01/03/2022 to 28/02/2023 and the transaction date is 10/03/2021), a confirmation message will appear asking if you want to proceed with posting the batch. The message will state:

   "Do you want to continue posting? Batch contains transactions posting to last year!"

2. Check that the date is correct - Last year's date.

3. Click on the Yes button. osFinancials5/TurboCASH5 will post the transaction to the previous (last) financial year.

If the date(s) of the transactions is incorrect:

1. Click on the No button.

2. Correct the date(s) of the transaction in the batch to this year.

3. Balance the batch once again.

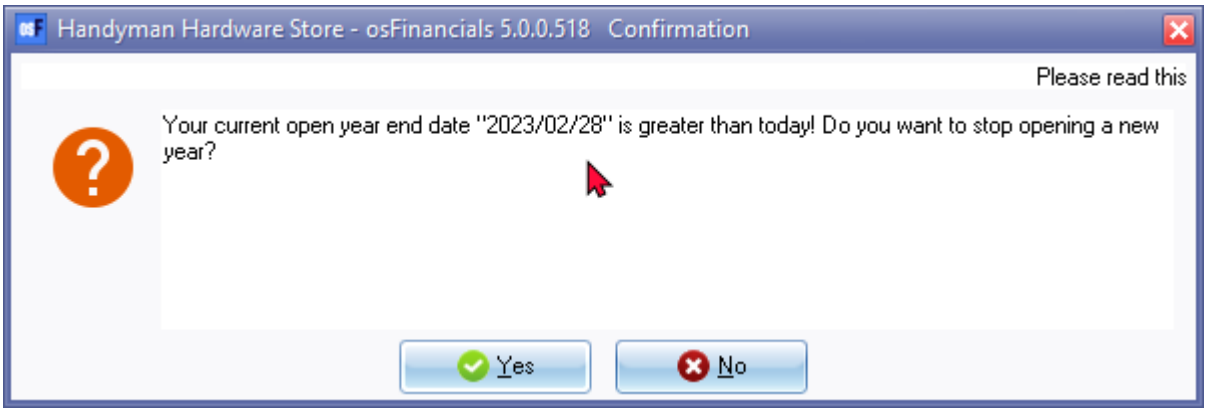
4. Post the batch.

It is also a good idea to restrict posting to the previous financial year. You may do this by selecting Setup → Reporting dates (Setup ribbon) and remove the tick in the "Post to last year" field.

Although you will not be able to post transactions to that financial year, you may still print reports. You may at any time select this field again should you wish to post to the previous financial year.

Do a year end in the future

Should you initiate the year end process (Do year end (Setup ribbon)) and the financial year ends in the future, a similar confirmation message to the following, will be displayed:



If you do not wish to proceed at this stage, click Yes.

Created with the Standard Edition of HelpNDoc: News and information about help authoring tools and software

Year-end closing transactions

In general, the year-end closing process involves transferring the balances of temporary accounts (such as income and expense accounts) to the retained earnings account, and transferring the balances of permanent accounts (such as assets, liabilities, and equity accounts) to the new accounting period. This process is usually done annually, but the frequency can vary depending on the accounting system and business needs.

Year-end closing transactions

When you do the year-end in the Setup ribbon, osFinancials5/TurboCASH5 automatically closes off all the accounts and transfers all the:

1. General ledger accounts created as an Income / Expense account (Income statement accounts) in the Setup → Accounts to the Retained earnings account at the end or last day of the accounting period for the current financial year (This year). You will still be able to view these figures as comparative figures in the new financial year on the trial balance and income statement.
2. General Ledger Accounts created as a Balance Sheet Account (Assets, Liabilities, Capital) will be closed off and the opening balances will be transferred to the new financial year.

Debtor Accounts in the Debtors Ledger (created in Debtors on the Default ribbon) and Creditor Accounts in the Creditors Ledger (created in Creditors on the Default ribbon) menu option will be closed off and the opening balances will be transferred to the new financial year.

An example of the trial balance after the year-end closing transactions is as follows:

Note

The Income / Expense Account transactions are reflected as nil or zero balances for the new financial year (e.g. 1 March 2007 to 29 February 2008). The previous year (Last Year) figures for each of these accounts will still be available as comparative figures for the (e.g. 1 March 2006 to 28 February 2007).

Note

The Retained Earnings Account is increased in the new financial year with the net profit of the previous year. If it were a net loss (where the Expenses exceed the Income) the net loss would decrease the Retained Earnings Account.

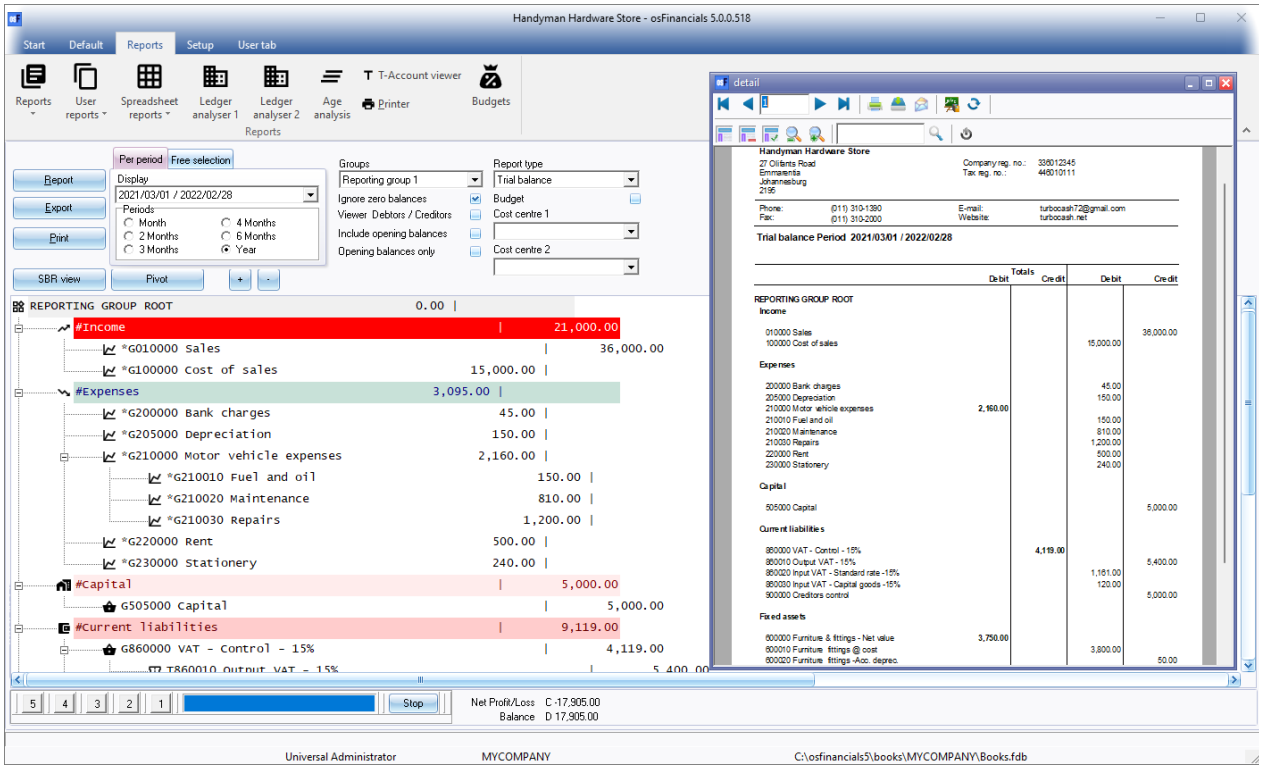
Note

Once your Financial Statements are finalised, you may need to restrict posting to the previous financial year. You may do this by clicking on the Setup → Reporting dates menu Setup ribbon) and remove the tick in the *"Post to last year*" field. Although you will not be able to post transactions to that financial year, you may still generate reports. You may at any time select this field again should you need to post to the previous financial year.

Created with the Standard Edition of HelpNDoc: Easy to use tool to create HTML Help files and Help web sites

Reports (Reports ribbon)

The Reports ribbon is used to access all reports from the Reports, User reports, Spreadsheet reports menus. The financial statements such as the Trial balance, Income statement, Balance sheet, Standard column balances, Budget vs actual, This year vs last year as well as Column balances reports in the Ledger analyser 1 / Ledger analyser 2 and T-Accounts can be accessed and printed and even exported and opened in a Spreadsheet. It is also used to process and analyse Budgets access to the Printer setup.



Buttons 5, 4, 3, 2 and 1 at the bottom of the report - is shortcut keys to the last accessed T-Account viewer options or Pivot options. These shortcuts will be cleared when you close active forms, or when you open the Set of Books.

In addition to the Printer and Budgets options, the reports is grouped into the seven (7) options:

1. Reports - List the reports in the following groups:

    a) Ledger - You may print the Budget vs actual (3 periods) report, List the General ledger accounts (Chart of accounts) and Transaction reports.

    b) Debtors - You may print various debtor statements, age analysis reports, various listing reports, address labels and transaction reports.

    c) Creditors - You may print various creditor remittance advises, age analysis reports, various listing reports, address labels and transaction reports.

    d) Stock - Reorder reports, listing reports, stock movements, backorder reports. You may also print labels (barcodes).

    e) Contacts - Lists the details of all your contacts.

    f) Calendar - Print the appointments (events) (i.e. Appointment, Debtor appointment, Creditor appointment and Hours) that was scheduled in the Calendar / Planner.

    g) Batch entry - Print the transactions of posted invoices, credit notes purchase and supplier return documents as well as posted batch transactions (i.e. sales journal, purchase journal,

payments journals, receipts journals, general journals, etc.).

h) Documents - Lists your documents, such as invoices, credit notes, purchases, supplier returns documents, orders and quotes or a selection of documents or for a selected period.

i) Tax - If you are registered as a Tax (VAT/GST/Sales tax) vendor, you need to print and view reports for a specific period for all your Tax (VAT/GST/Sales tax) or for a specific tax code such as Input Tax (VAT/GST/Sales tax), Output Tax (VAT/GST/Sales tax), Zero-rated Tax (VAT/GST/Sales tax), etc.

j) Sales - Various reports are available to analyse your sales documents. Print Graphs, Debtors, Sales and Items reports for Invoices, Credit notes and Quotes.

k) Sales analysis - You may print reports for five (5) reporting groups (i.e. Debtor group 1, Debtor group 2, Document group 1, Document group 2 and Salespersons) for each sales documents (i.e. quotes, invoices and credit notes). You may also print sales per product for stock group 1 or stock group 2 reports for sales documents.

l) Purchases - Various reports are available to analyse your purchase documents. Print Graphs, Creditors, Purchases and Items reports for Purchase and Supplier return documents as well as Orders.

m) Purchase analysis - You may print reports for five (5) reporting groups (i.e. Creditor group 1, Creditor group 2, Document group 1, Document group 2 and Salespersons) for each purchase documents (i.e. orders, purchases and supplier returns). You may also print purchases per product for stock group 1 or stock group 2 reports for purchase documents.

n) Company info - You may print the details of the bank accounts or the company information, messages and cost of sales settings.

o) Currencies - If you process Multi-currency documents (i.e. Invoices, Credit notes and Quotes for debtors (customers / clients) or Purchases, Supplier returns and Orders for creditors (suppliers / vendors). you may print a list of the "*Currencies*" (added / edited in the Setup → Currencies menu on the Setup ribbon.

p) Plugins - Price agreement report for the Price agreement plugin.

q) Point-of-sale - Sales and Receipt reports for the plugin point-of-sale systems (if you purchased and use the HorecaPOS or RetailPOS point-of-sale systems).

2. User reports - Any other reports that are under construction. Users may add their own reports in the …\plug_ins\reports\userreports folder.

You may use Report designer on the Setup ribbon to create, add or edit document layout files and

reports. You may add your own reports to be accessible from the User reports menu.

- *User reports is stored in the ...\plug_ins\reports\userreports filder.*
- *Document layout files is stored in the ...\plug_ins\reports\DOCUMENTS\DOCUMENTS folder.*

3. Spreadsheet reports - The following reports will be opened in the powerful spreadsheet feature in osFinancials5/TurboCASH5:
   a) Creditors - The Creditors → Listing - List postal addresses report will be imported into the spreadsheet.
   b) Debtors - The Debtors → Listing - List postal addresses report will be imported into the spreadsheet.
   c) Transactions per period - List the transactions in posted batches and documents (i.e. sales documents (Invoices and Credit notes) and Purchase documents (Purchases and Supplier returns)) for a selected period in a spreadsheet.
   d) General ledger - Budget
      i) Column balances this year - Reporting group 1
      ii) Column balances this year - This year
   e) General ledger (Transaction totals)
      i) Column balances this year - Reporting group 1
      ii) Column balances this year - This year Column balances
   f) Sales analysis
      i) Stock movement
      ii) Sales per period
4. Ledger analyser 1 - Trial balance, Income statement, Balance sheet, Standard column balances (column view of the Trial balance, Income statement and Balance sheet in one report), Budget vs actual, This year vs last year as well as Column balances.

Export button for all Report types on Ledger analyser 1 / Ledger analyser 2 -

You may save the export file as Text files (.txt) (default file type); or as CSV files (*.csv) (Comma Separated Values) file type. This will automatically open (launch) the exported file in the program associated with the selected file type:*

- *Text files e.g. (Export.txt) - This should automatically open the exported text file of your system's default text file program associated with Text file type (*.txt) file types (e.g. Notepad, etc). You need to close the exported text file and launch your spreadsheet program. In your spreadsheet program, Open the text file to launch the "Text Import" options.*
- *CSV files e.g. (Export.csv) - This should automatically open the "Text Import" options of your system's default spreadsheet program associated with Comma Separated Value file type (*.csv) file types (e.g. Microsoft Excel, LibreOffice Calc, OpenOffice Calc, Ultra Office, etc.).*

5. Ledger analyser 2 - The same reports are available as for the Ledger analyser 1, but it gives you another option to generate. print or export different views and reports.
6. Age analysis - View and choose options for the Age analysis report on screen and print it on the Reports ribbon and on the Open item link - Due tab (Default ribbon).
7. T-Account viewer - Analyse, print and export transactions for specific accounts, etc. You may also export the transactions in the T-Account viewer to spreadsheets.

Column balances - Report types on Ledger analyser 1 / Ledger analyser 2 - The column balances report types will list the transactions of a selected account for each period of Last year and This year in a spreadsheet format.

You may select an account and double-click on any period. This will launch the T-Account viewer with a list of all the transactions for the selected period. You may be print and/or export the transactions.

The following six (6) column balances report types is available:

1. *Column balances - Lists all ledger account balances in a spreadsheet view. These are the ledger accounts reported in the Trial balance (this includes both the accounts reported in the Income statement and Balance sheet).*
2. *Column balances debtors - Lists the balances of all the individual debtor (customer / client) accounts (Debtors on the Default ribbon) in a spreadsheet view. The total of these accounts are reported in the Debtor's control account on the Trial balance and the Balance sheet.*
3. *Column balances creditors - Lists the balances of all the individual creditor (supplier / vendor) accounts (Creditors on the Default ribbon) in a spreadsheet view. The total of these accounts are reported in the Creditor's control account on the Trial balance and the Balance sheet.*
4. *Column balances D/C - Lists all debit and credit ledger account balances in a spreadsheet view. These are the accounts reported in the Trial balance (this includes both the accounts reported in the Income statement and Balance sheet).*

5. *Column balances debtors D/C - Lists the debit and credit account balances of all the individual debtor (customer / client) accounts (Debtors on the Default ribbon) in a spreadsheet view. The total of these accounts are reported in the Debtor's control account on the Trial balance and the Balance sheet.*

6. *Column balances creditors D/C - Lists all debit and credit balances of all the individual creditor (supplier / vendor) accounts (Creditors on the Default ribbon) in a spreadsheet view. The total of these accounts are reported in the Creditor's control account on the Trial balance and the Balance sheet.*

8. Printer - Setup and configure the printers on your system.

9. Budgets - You may process your budget figures, copy "*Budget figures from the previous year*" or from "*Actual figures from the previous year*". You may view, filter and analyse the budget figures in the Pivot feature.

This is in addition to the standard option to process budgets in Setup → Accounts (Setup ribbon).

Created with the Standard Edition of HelpNDoc: Effortlessly Support Your Windows Applications with HelpNDoc's CHM Generation

Checking for unposted items

Before printing reports, you should check for unposted batches and documents. The transactions in batches and documents not posted (updated) to the ledger are not included in the reports.

Some examples, where this is important:

- *Before completing your tax returns*
- *Before sending out Debtor statements, Creditor remittance advises,, etc.*

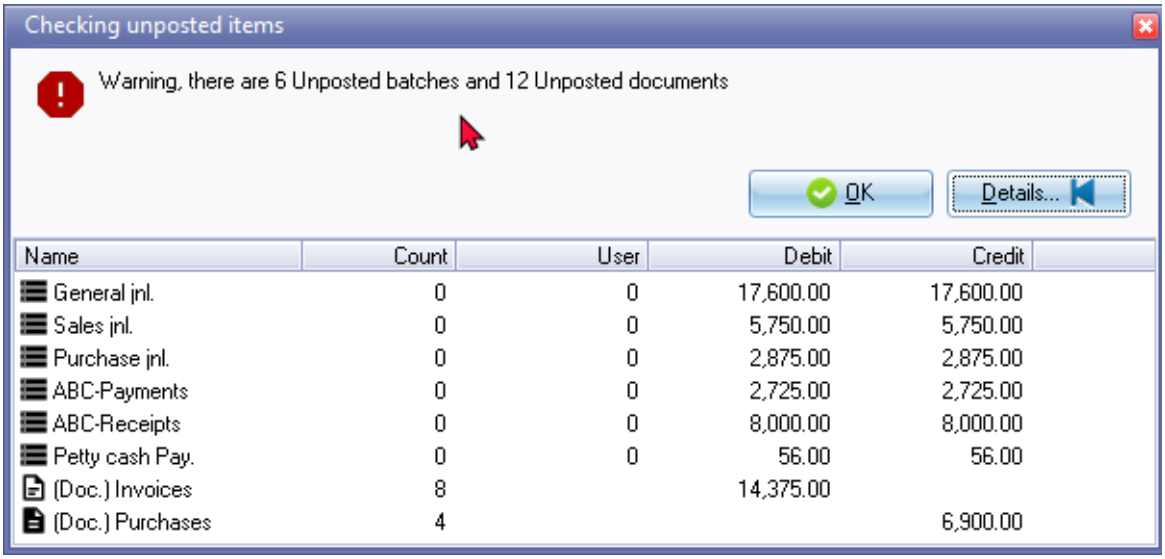
You may also print a trial balance, income statement or balance sheet for unposted transactions in batches in the Ledger analyser - Unposted batches.

To check for unposted items:

1. On the Default ribbon, select Input → Checking unposted items
2. This will list the unposted batches and the number of documents for each document type (i.e. invoices,

credit notes, purchases and supplier returns).

If there are no unposted batches and/or documents, this screen will not be displayed.



You may move your mouse over an area at the bottom of the screen, click and drag this screen to the required size.

Created with the Standard Edition of HelpNDoc: Easily create CHM Help documents

Settings for reports - Number format

If the "*Digit separator symbol*" setting e.g. 1 000.00 is not displayed on reports and screens, you need to change the "*Customize Format – Numbers*" format.

This is a global setting for all Sets of Books on your operating system.

You may need to set the number format of your operating system to print some reports.

When printing the "*Budget vs actual*" and "*This year vs last year*" reports, you may encounter the following error message:

"Type conversion error 'Val':Expression TRpExpression46"

The "*Customize Format – Numbers*" of your Windows operating system number format needs to be set as follows:

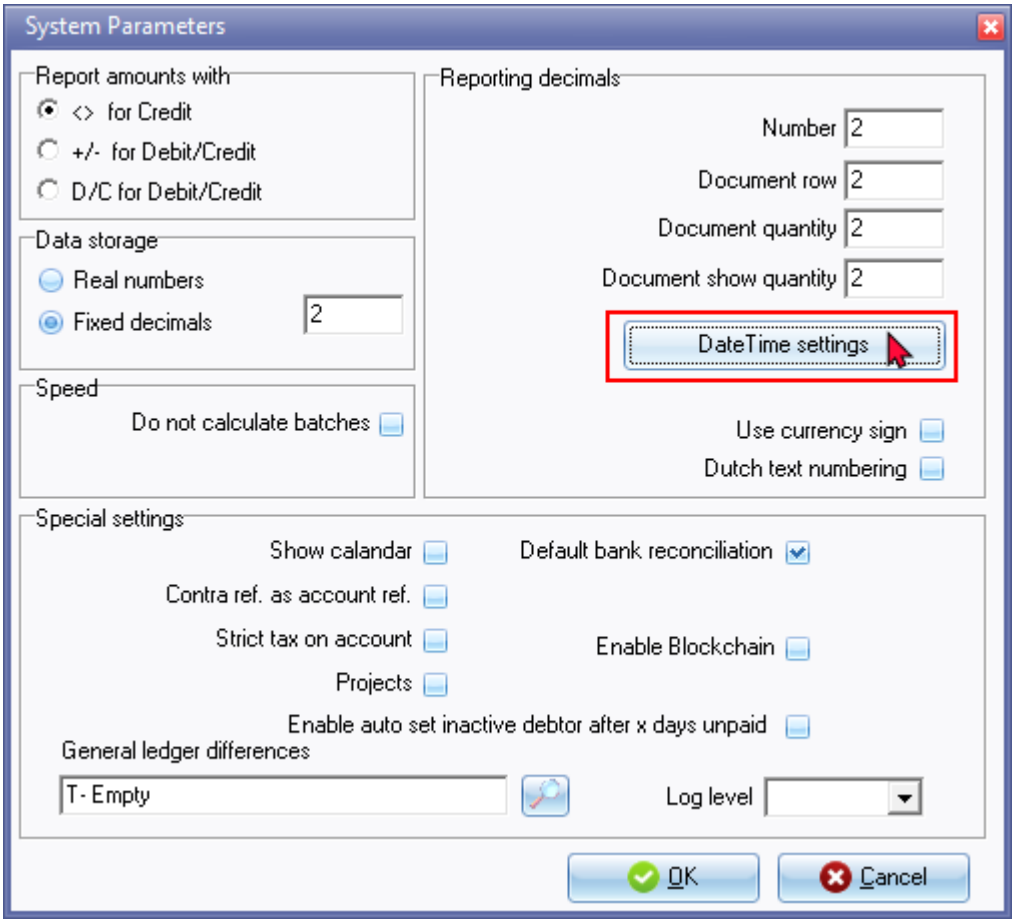
- Decimal symbol - set to period (.)
- Digit grouping symbol - set to comma (,) (If Digit grouping symbol is set to blank it does not print but produces an error.

This is a global setting for all Sets of Books on your operating system.

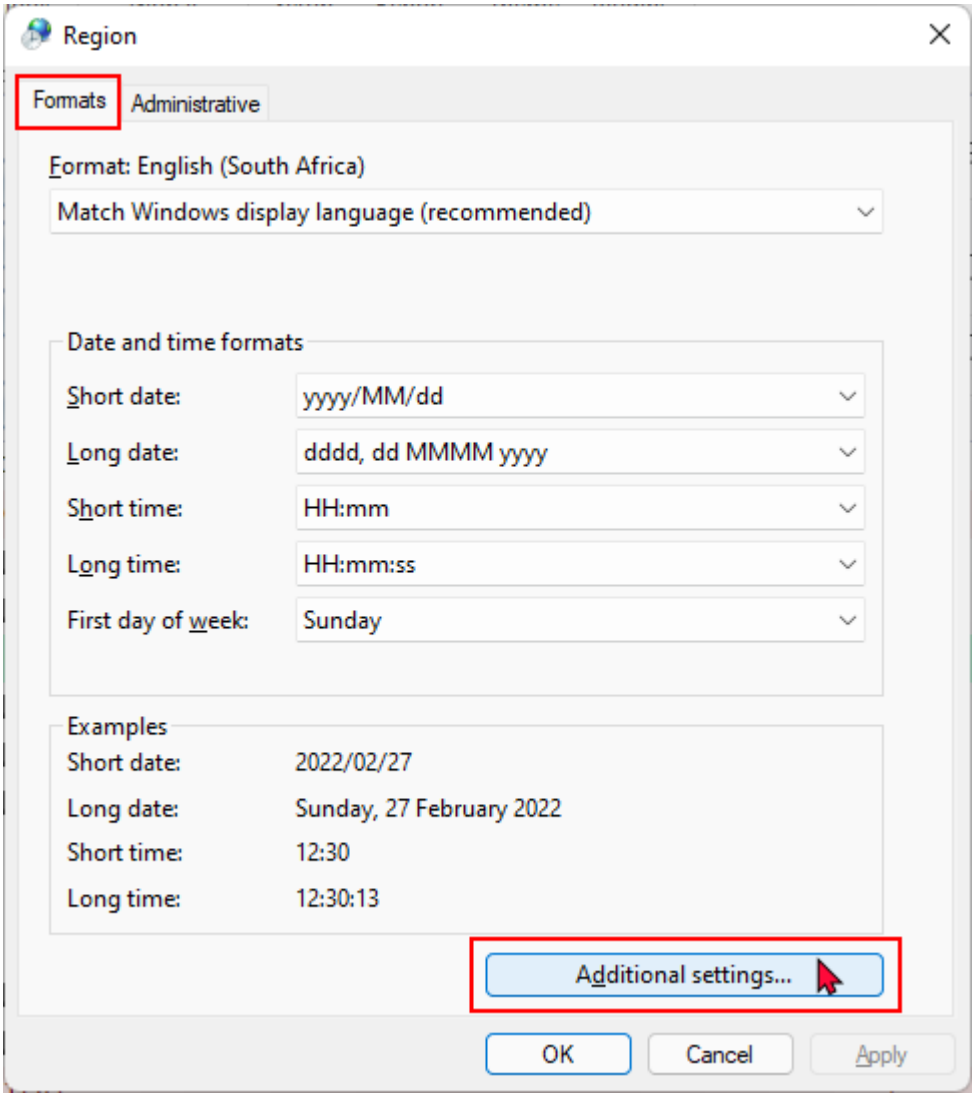
To change the number format of your operating system:

1. In any active (opened) Set of Books, select Setup → System parameters (Setup ribbon).

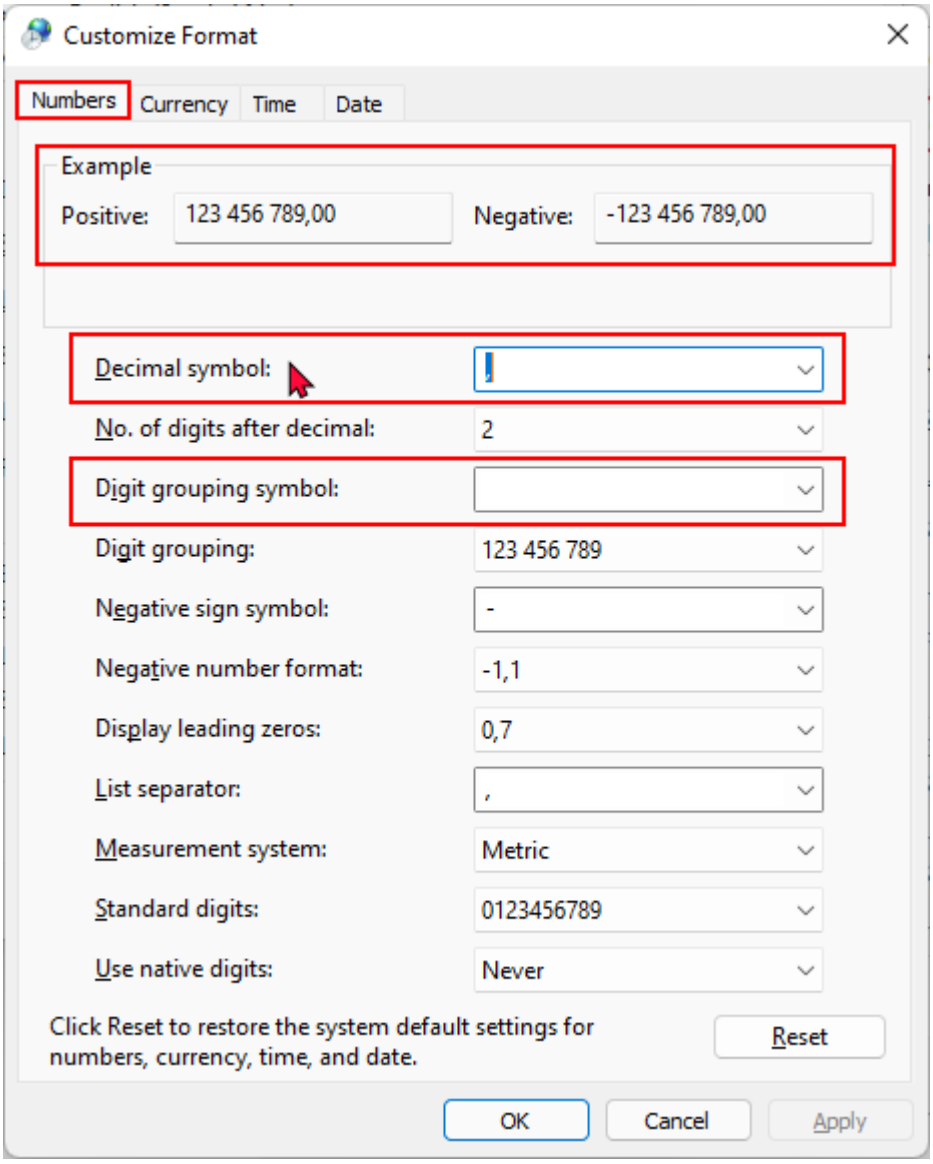
The Region and Language settings of your operating system should launch if you click on the Setup → Company info - Options - Set Windows date format/style button on the Setup ribbon.



2. On the "*System Parameters*" click on the DateTime settings button.



3. On the Formats tab, click on the Additional settings ... button.

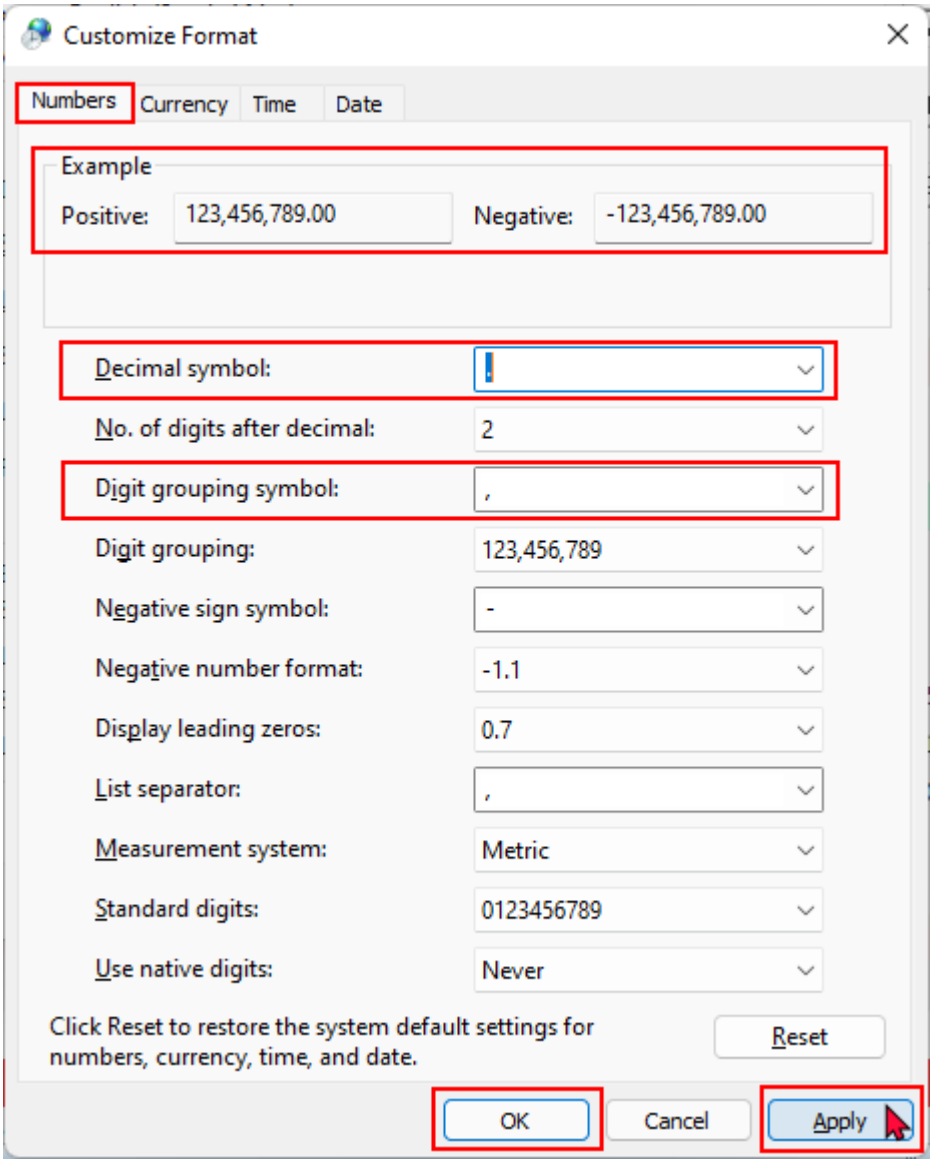


4. On the Numbers tab, the default settings (as per new installaion of Windows or on some new devices), the settings that need to be changed is as follows:

   - Decimal symbol set to period (.)
   - Digit grouping symbol set to comma (,)

> *If Digit grouping symbol is set to blank; and when you click on the Print button of the "Budget vs actual" and "This year vs last year" reports; it does not print but produces same error; i.e.*
>
> "Type conversion error 'Val':Expression TrpExpression46"

5. After changing the number formats, the "*Example*" on the Numbers tab of the "*Customize Format*" screen, should display as follows:



6. Click on the Apply and OK buttons of the "*Customize Format*" - Numbers tab, as well as the "*Region*" - Formats screen.

7. You may need to exit (close) osFinancials5/TurboCASH5 for these changes to be updated when generating and printing reports.

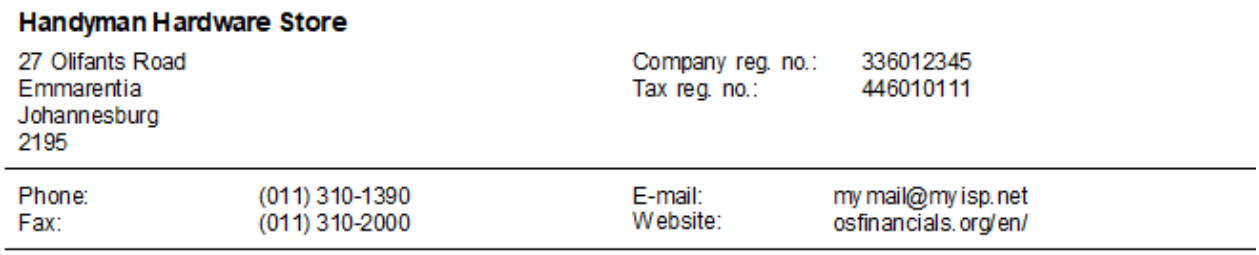
Reports - Page headers and Page footers

Report headers

The standard data in the report headers will be displayed on all reports (except on Debtor statements,

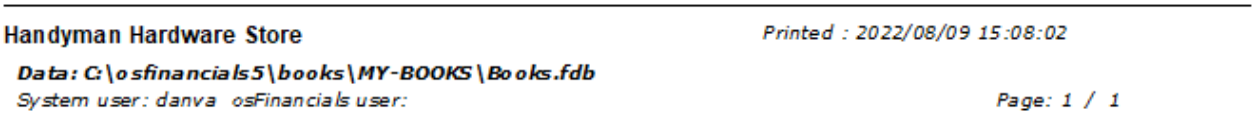
Creditor remittance advises, Document layout files en Spreadsheet reports).



The company's contact details and registration numbers, as entered in the Setup → Company info (Setup ribbon).

Report footers

The standard data in the report footers will be displayed on all reports (except on Debtor statements, Creditor remittance advises, Document layout files and Spreadsheet reports).



At the end of each page of a report, the page footer will display the following details:

1. Name for Set of Books - The Company name as entered in Setup → Company info (Setup ribbon).
2. Printed: Your system's date and time when the report was printed.
3. Data - Name of the Set of Books and the full path of the Set of Books (e.g. ."*Data: C:\osFinancials5\books\MY-BOOKS/books.fdb*")
4. System user - The user of your computer's operating system.
5. osFinancials user / TurboCASH user - If users is added in Setup → Access control (Setup ribbon),the user name will be displayed.
6. Page: Page number and the last page number of the report.

The Two pass report setting is necessary to print reports which consists of more than one page.

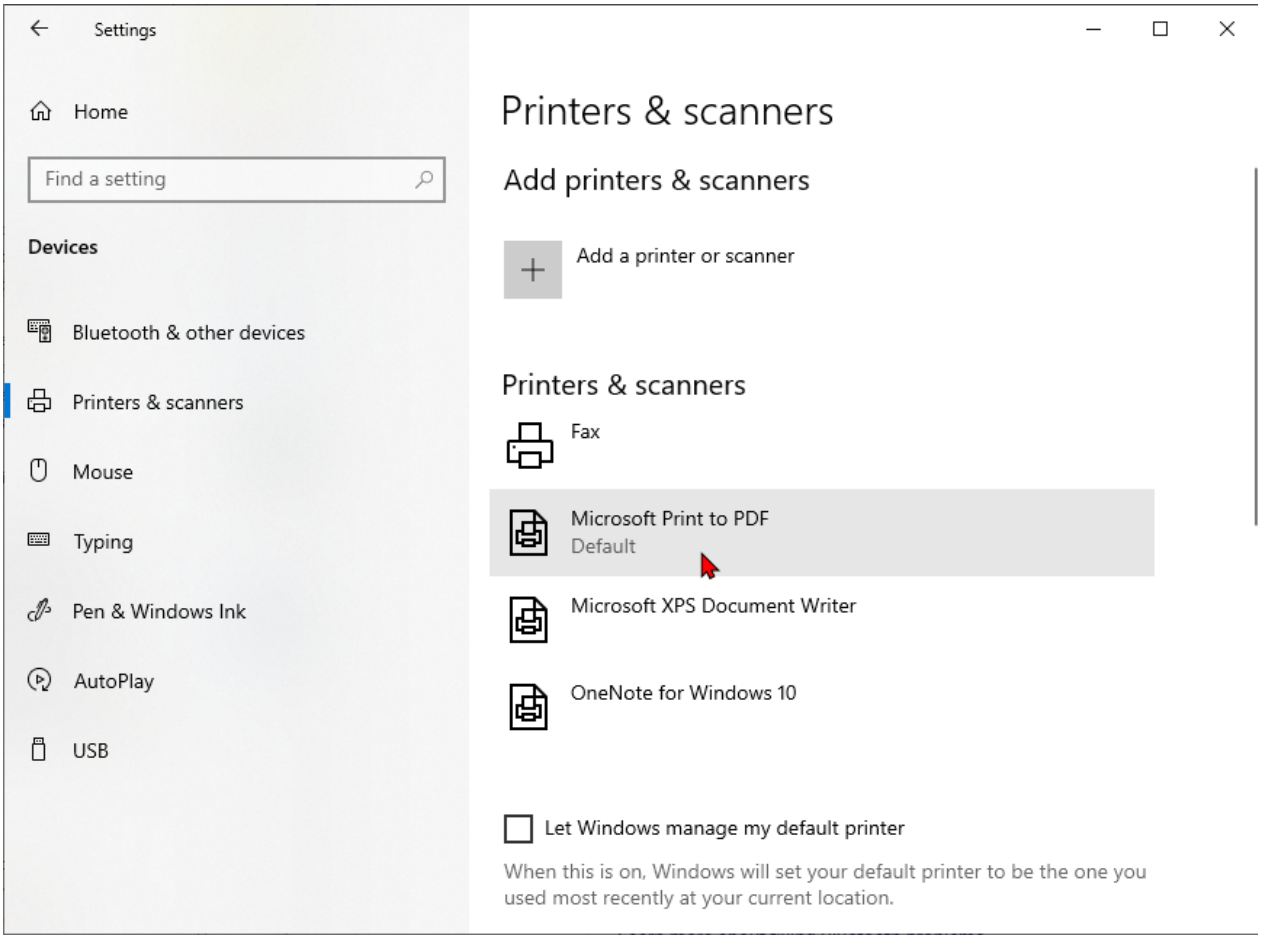
Reportman reports - Print options

Created with the Standard Edition of HelpNDoc: Leave the tedious WinHelp HLP to CHM conversion process behind with HelpNDoc

Reportman reports - Send to printer

The report will print the reports directly to the system's default printer.



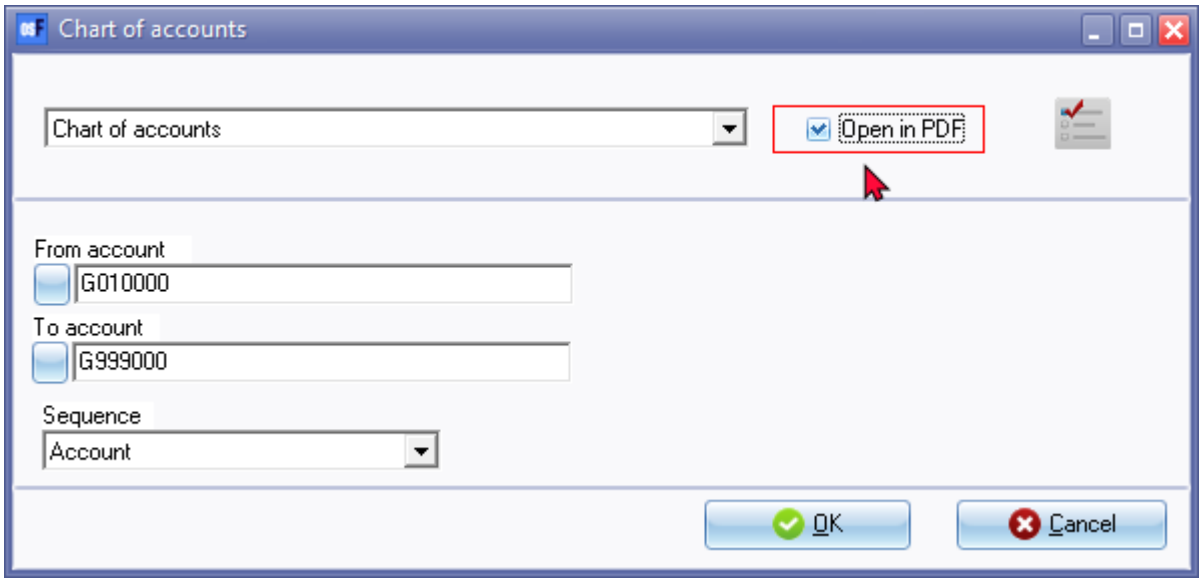
Created with the Standard Edition of HelpNDoc: Easily create iPhone documentation

Reportman reports - Save as PDF

If you print any report or document layout file to the screen, you may save the report as a compressed or uncompressed PDF file from the "Reportman print preview" screen.

By default the "*Open in PDF*" option is not selected on the report options (parameter) screens.

If the "*Open in PDF*" option is selected on any report options (parameter) screen, it will print all reports on the Reports menu or User reports menu directly as a PDF file.



The PDF file will automatically be opened in your system's default PDF viewer or app.

Reportman reports - Printer setup

By default, the page settings for all document layout files and reports are set to the A4 page layout size.

The Page printer and page settings (page size, margins, etc.) for specific layout files and reports may be set and configured and attached to specific printers.

The printer settings for layout files and reports may be set and configured from the following options:

1. Printer icon on the Reports ribbon or Setup → Printer menu on the Setup ribbon. Printer settings.
2. Reports → Report designer (Print preview button). Page setup and Printer settings.

This is the change where we used to have the ability to setup printers for all reports

Now its loaded from reportman

Need to configure printers in reportman and attach layout to those printers

i.e. printer 1 = document A4 printer and printer 2 = pos printer

Set layout of pos to printer2 and make sure the printer is correctly set in reportman printer setup.

In the screen second tab to set the default printer of a layout file and there is also a button configure printers with is device or user specific.

they can then set there printers accordingly to the pc they logon to - i.e. printer 1 is the same network printer for everyone, but the pos printer is specific to the point its connected to.

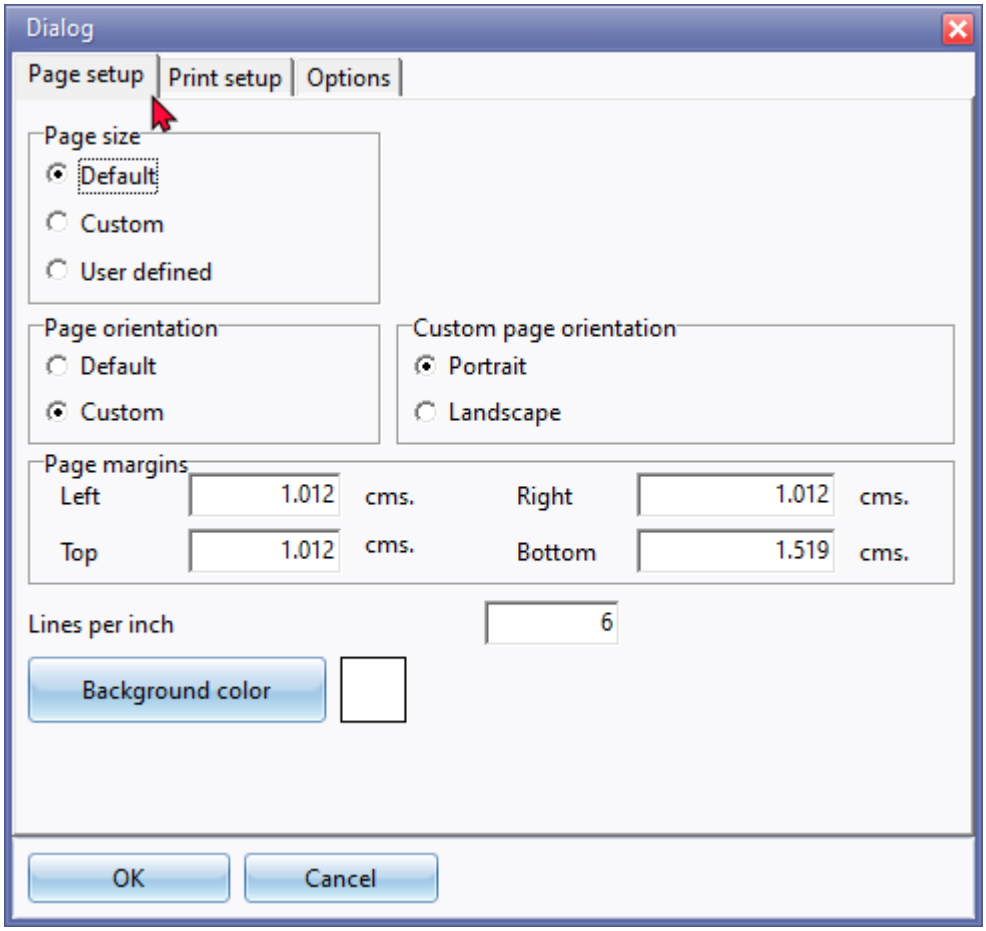
http://reportman.sourceforge.net/doc/dotmatrix.html

Printer settings

Page setup

To do a Page setup for reports:

1. If a layout file or a report is sent to screen (in the Report preview screen), click on the Show report print setup icon or press the F11 key.
2. On the "*Dialog*" screen, click on the Page setup button, if not already displayed.



3. You may change the default Settings, if necessary:

    a) Page size -

        § Default is the standard option.

        § Custom radio button - You may select or standard page sizes from a list.

        § User defined radio button - You may set the width and height of the paper size. This is important and may need to be specified for dot-matrix printers.

    b) Page orientation - The Default option is Portrait. You may click on the Custom radio button the set the Custom page orientation to Landscape.

    c) Page margins - You may specify the left and right margins as well as the top and bottom margins.

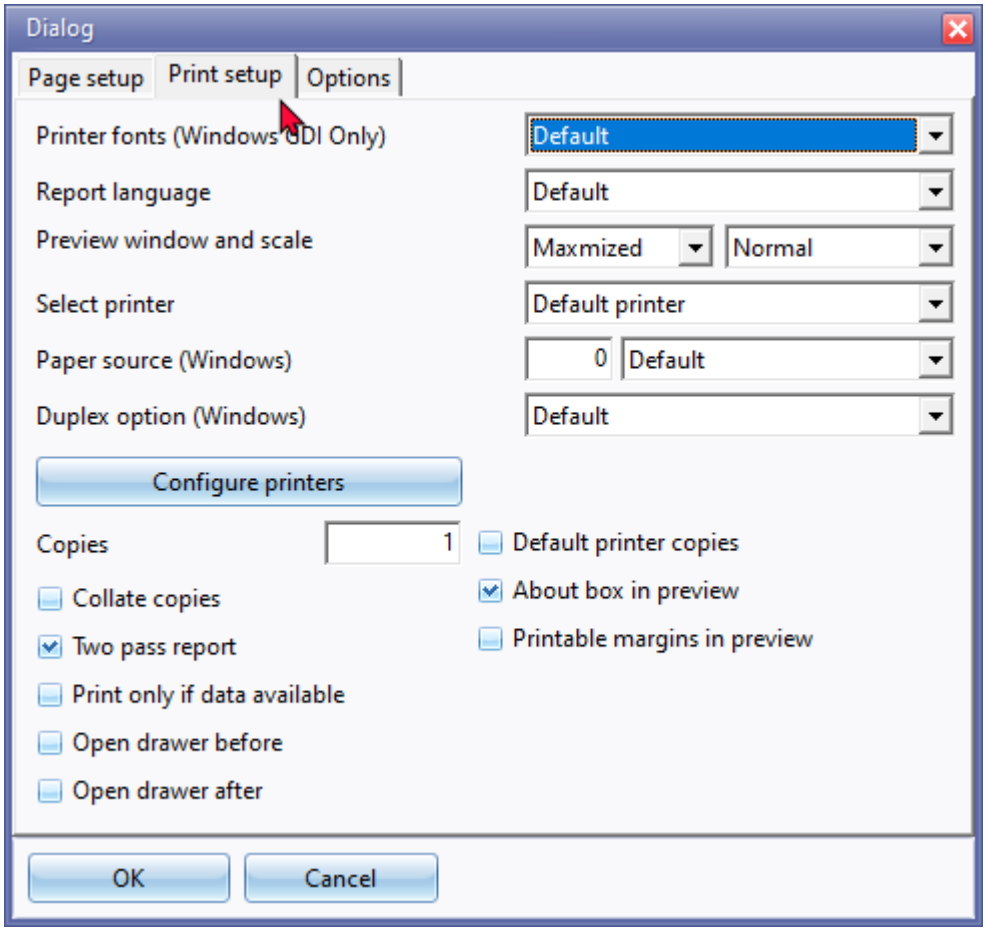
    d) Lines per inch - The default option is 6 lines per inch.

    e) Background color - The default colour is white. This is optional.

4. Once finished, you may click on the Print setup tab.

Print setup

On this tab, you may set the default printer of a layout file or a report and there is also a button configure printers with is device or user specific. For example, you may then set there printers accordingly to the pc users logon to - i.e. printer 1 is the same network printer for everyone, but the pos printer is specific to the point its connected to.



5. On this tab, you may set the default printer of a layout file or a report and there is also a button to configure printers which is device or user specific. For example, you may then set there printers accordingly to the pc users logon to - i.e. printer 1 is the same network printer for everyone, but the pos printer is specific to the point its connected to.

    a) Printer Fonts (Windows GDI Only) - The Microsoft Windows graphics device interface (GDI) enables reportman to use graphics and formatted text on both the screen and the printer.

    > *Windows-based applications do not access the graphics hardware directly. Instead, GDI interacts with device drivers on behalf of applications. http://msdn.microsoft.com/en-us/library/windows/desktop/dd145203%28v=vs.85%29.aspx*

    b) Report language - Default will use the Operating system's Regional and Language settings.

You may select any of the available languages from the list as the language for reportman.

All reports are already translatable via the Language files in osFinancials5/TurboCASH5 (Switch language (Start ribbon). Languages as customised in Setup → Tools → Customise language).

Languages may also be set in the Setup → Access control - Standard security tab System lang field for each user and the Language field for debtors /creditors.

c) Preview window and scale -

- § Print preview - Select Normal (default) or Maximised.
- § Scale - Select Wide (default), Normal or Page.

d) Select printer - Select one of the following printers; Default, Reporting printer, Reporting printer 2, Ticket printer, Ticket printer 2, Graphics printer, Character based printer, User printer 1 - 9, Plain text printer or Full plain text printer.

e) Paper source (Windows) - You may select Default (default option), First source, Lower source, Middle source, Manual envelope source, Automatic source, Tractor source, Small format source, Large capacity source, Cassette source or Form source.

f) Duplex option (Windows) - Select this option to print on both sides of a page (duplex printing). Note Some printers supports duplex printing; some printers supports automatic duplex printing; and some printers do not support duplex printing at all.

To check whether your printer supports duplex printing, please consult the printer manual, or check the printer's properties (Properties in the Print dialog box).

g) Configure printers button - The Dialog window will open on which you may: -

- § Select one of the following printers; Default printer, Reporting printer, Reporting printer 2, Ticket printer, Ticket printer 2, Graphics printer, Character based printer, User printer 1 - 9, Plain text printer or Full plain text printer.
- § Printer Fonts (Windows GDI Only) - The Microsoft Windows graphics device interface (GDI).
- § Text driver only - You may select a print driver from the list (i.e. "*PLAIN, EPSON, EPSON-MASTER, EPSON-ESCP, EPSON-ESCPQ, IBMPROPRINTER, EPSONTMU210, EPSONTMU210CUT, EPSONTM88II, EPSONTM88IICUT, HP-PCL, VT100*" of "*PLAINFULL*".

Oem (Original Equipment Manufacturers) tick to use the drivers from the hardware manufacturers.

§ Position adjustment - Optional - You may enter a value for the left and top of the page.

§ Operations after print -

- Cut paper -
- Open drawer -

§ Configuration file - Printer configuration file - Report Manager Designer will use a Printer configuration file, only used in printer selection.

Configuration file options - Location:

- *User configuration - e.g. - "C:\Users\danva\AppData\Roaming\reportman.ini"*
- *System configuration - e.g. - "C:\ProgramData\reportman.ini"*

This configuration file will be searched as Documents & Settings\Local Config\All Users\reporman.ini, if not found it will create or use Documents & Settings\Local Config\YourUserName\reporman.ini

h) Copies - By default the number of copies printed, is 1. You may enter the number of copies to be printed.

i) Default printer copies - If this option is selected, the Copies will be disabled. The number of the copies as set in the printer settings (Properties or Preferences) will be used.

j) Collate copies - This will determine how the printed pages of a layout file or report (which contains multiple pages) is sorted when more than one copy of the report or layout file is printed.

For example, if you print multiple copies (three copies) of a report or document layout file that is four pages long, it will print the pages as follows:

- *Collate copies enabled - Prints the first copy of the entire report (pages 1-4); then the second copy of the entire report (pages 1-4); then the last (third) copy of the*

entire report (pages 1-4).

- *Collate copies disabled - Prints all three copies of page 1, then all three copies of page 2, then all three copies of page 3 and, then all three copies of page 4. Note Collate will be inactive if you are printing multiple copies.*

k) Two pass report - This setting allows you to preview the first page before all the pages are calculated (e.g. page 1/2, etc.). This is the default setting implemented in reports and document layout files which supports multi-page and subreports in reports and document layout files. This controls the print speed and memory usage (when printing, pages printed are released from memory).

This two pass report setting must be selected (ticked) for both, "PAGECOUNT" and/or "SkipToPage" settings.

l) Print only if data available - By default this option is not selected (ticked). If no data is available to print, an error message is displayed:

"No data available to print"

When some reports, are printed, and there are no data, it will still print the report without any data. You may then need to re-run the report and select the correct parameters on the report options.

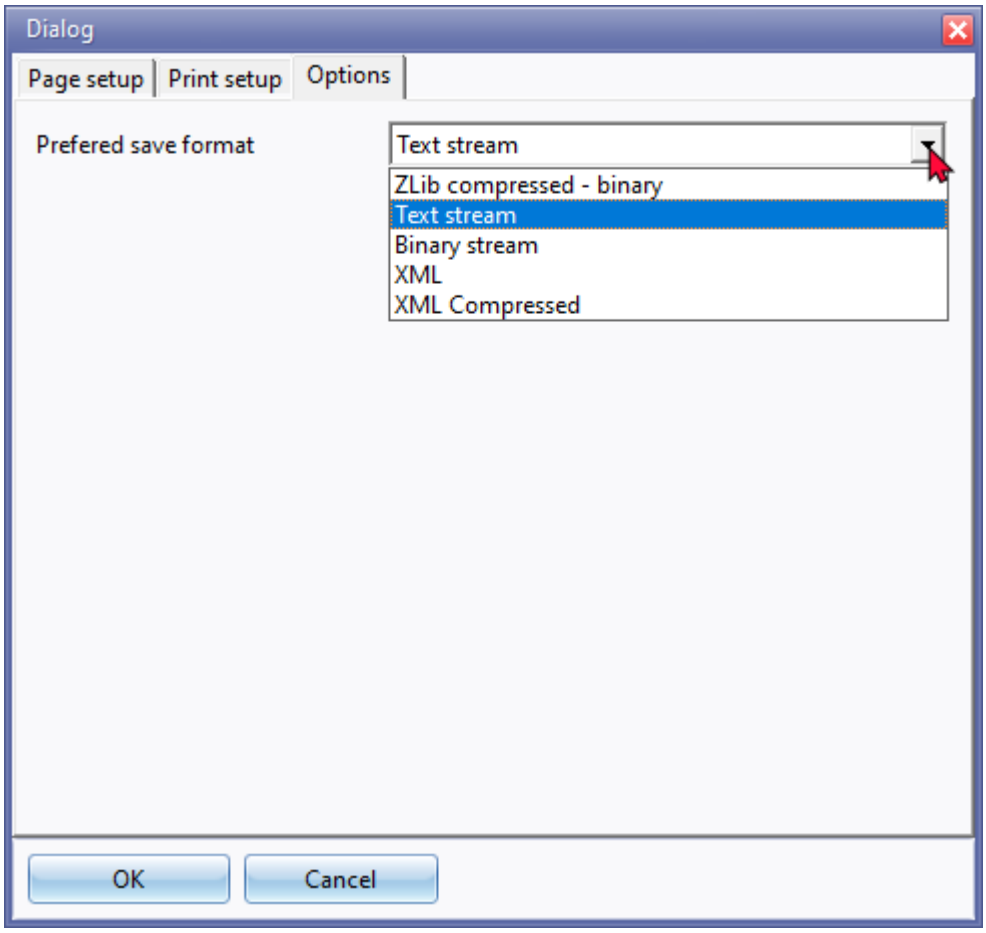
m) Open drawer before / Open drawer after - If a drawer is connected and configured correctly to your system and is also set and configured to the standard Point-of-Sales (Setup → Setup → Point-of-Sales - Peripherals - Drawer tab) or other Plugins (HorecaPOS / RetailPOS), etc., you may select to open the drawer before or after printing the invoice, etc.

n) About box in preview - Not implemented.

o) Printable margins in preview - Not implemented.

6. Click on the Options tab.

Options



Preferred save format - The default option is "*Text stream*".

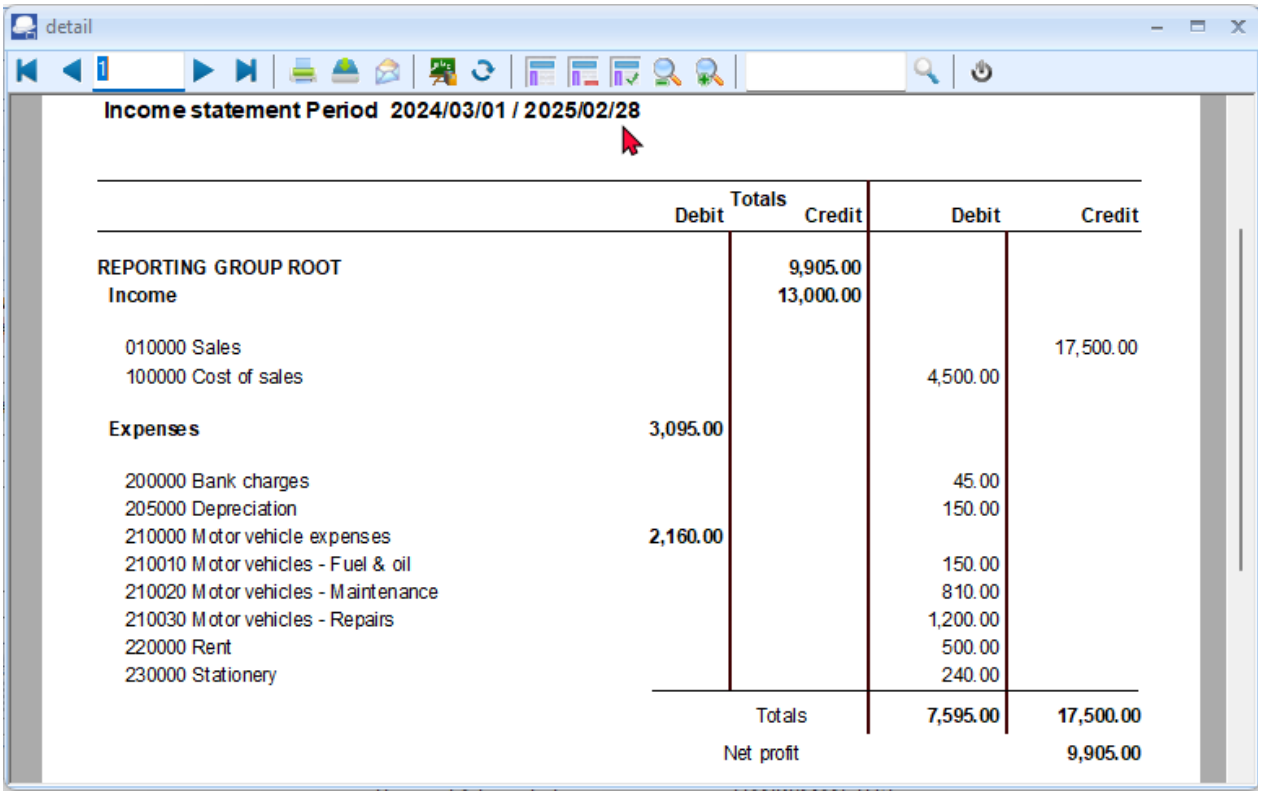
To be advised.

Created with the Standard Edition of HelpNDoc: Full-featured Help generator

Reportman output - Send to screen

The "*Reportman preview*" screen is displayed when printing a report to the screen. Reports and Documents are stored in the following directories (folders):

- Reports …*plug_ins**reports**systemreports*
- Documents …*plug_ins**reports/DOCUMENTS/DOCUMENTS*
- User reports …*plug_ins**reports**userreports*



The icons are grouped into five (5) sections (i.e. Navigation, Output, Settings, Zoom and Search) and the Close button. These icons are as follows:

1. Navigation -

    a) First (Home) – Goes to the first page of the report.

    b) Previous (Page up) – Goes to the previous page of the report.

    c) Page number – Displays the page number of the page in the "*Report preview*" screen. You may enter a specific page number and hit the Enter key on your keyboard to jump to that specific page.

    d) Next page (Page down) – Goes to the next page of the report.

    e) Last page (End) – Goes to the last page of the report.

2. Output -

    a) Print (Ctrl+P) – This will launch the "*Print*" screen. You may select another printer (than your system's default printer), select a specific page and change the number of copies, if necessary.

    b) Save (Ctrl+S) – This will launch the "*Save metafile as*" screen. On this screen, you need to do

the following where necessary:

i) Select the directory (folder) where you need to save this file, if necessary.

ii) Enter a file name.

iii) Select a file type if another file type than the default file type (PDF file – Compressed) is required. The following Report meta file types are available:

		File type	File type name
	-	*.rpmf	Report Metafile
		*.pdf	PDF file – Compressed (default)
	-	*.pdf	PDF file – Uncompressed
*	-	*.xls	Excel file
*	-	*.xls	Excel file (one sheet)
	-	*.txt	Text file
	-	*.bmp	Bitmap file
	-	*.html	Html file
	-	*.html	Html file (single)
	-	*.svg	Scalable Vector Graphics file
	-	*.csv	Comma Separated Value file
	-	*.txt	Custom Text file
	-	*.rpmf	Executable Meta file uncompressed
	-	*.exe	Executable meta file

* Microsoft Excel or an alternative program such as; LibreOffice, OpenOffice or UltraOffice, etc. installed to save reports (Save report as a meta file report from the Reportman Print preview screen) to an Excel spreadsheet or Excel (one sheet) spreadsheet.

c) E-mail (Ctrl+E) – This will generate a Portable Document Format (pdf) file. It will also launch a blank E-mail message (using your system's default e-mail program) and insert the report (or document) as an attachment.

> *The name of the report (or document) is automatically generated (for example, REPC526.pdf). It will also automatically be inserted in the "Subject" field and displayed in the title bar of the e-mail message.*
>
> *It is recommended that you add your own sensible subject to this in the "Subject" field. You still need to select a recipient (and other recipients, if necessary) and type a message before clicking on the Send button.*

3. Settings -

i) Show report page setup (F11) – This will display a "*Dialog*" screen on which you may do the Page setup, Print setup and Options (i.e. select the "*Preferred save format*").

ii) Show report parameters (F12)- This is the selection or options screen, on which you may select the options to include or exclude data in the report.

> *Should the report have no report parameters (when it prints directly when you click on the Print button of the Reportman screen), the report has no options to change. This icon will then be inactive.*
>
> *If the report has an active Report parameters icon, you may click on it to change the report parameters. This will change the content of the report.*

4. Zoom -

i) Shows the report in real size (F6) – This will display the report in the actual size when it is printed.

ii) Adjusting the paper to fit the window width (F7) – The report will be stretched to fit the entire Preview window. If you resize the report (e.g. click on the Maximize button or on the Restore down button of the "*Reportman preview*" screen's titlebar), it will automatically be resized.

iii) Scale to full page (F8) – This will display the full page (length and with) in the window.

iv) Zooms out the view (- numeric keypad) – Each click will reduce the size.

v) Zooms in the view (+numeric keypad) – Each click will increase the size.

5. Search (Ctrl+F3) -

Enter text, numbers, amounts, special characters, etc. to find the matching results in the report.

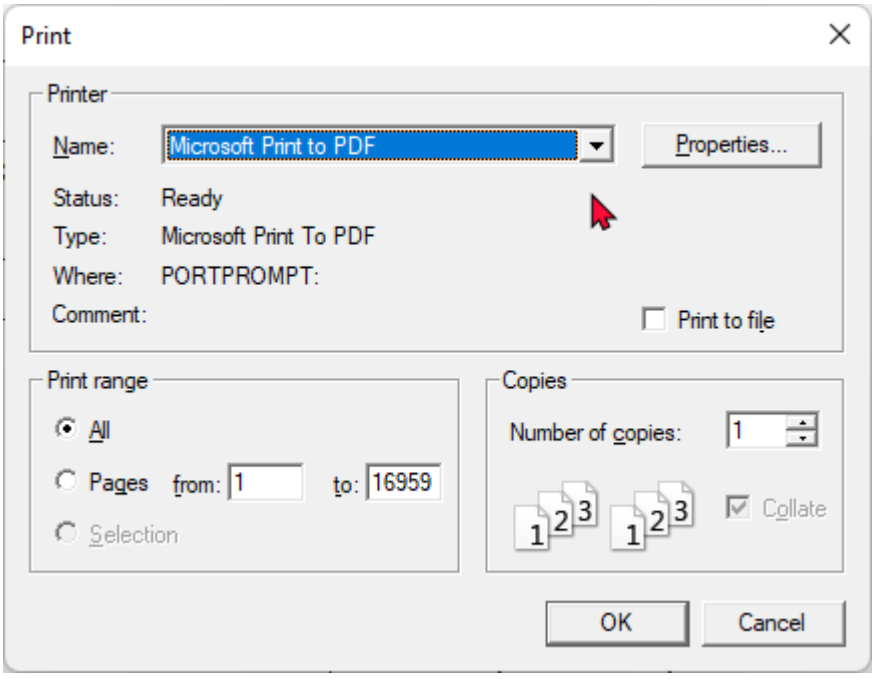
> *To close the Reportman preview screen, click on the Close button. Alternatively, click on the Close button of the "Reportman preview" screen's title bar.*

Created with the Standard Edition of HelpNDoc: Make Your PDFs More Secure with Encryption and Password Protection

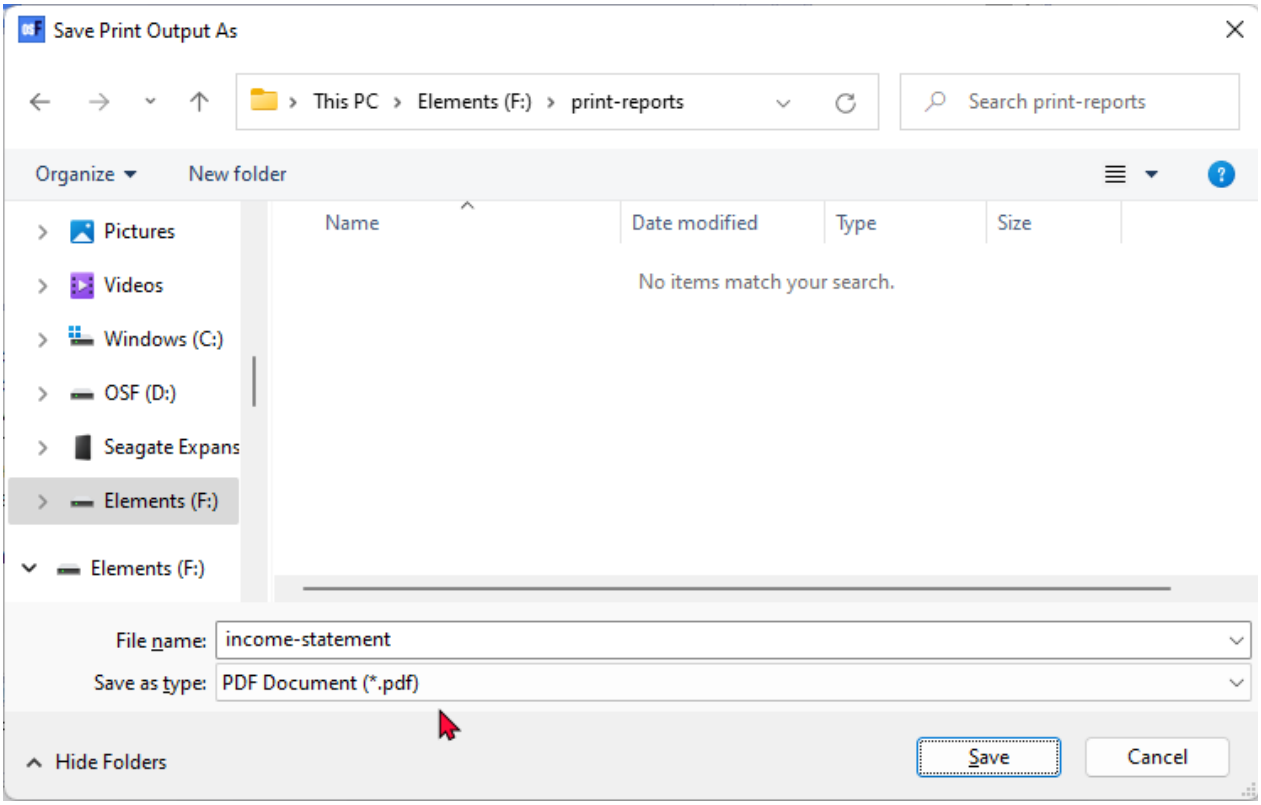
Reportman output - Print

Print (Ctrl+P) – This will launch the "*Print*" screen. You may select another printer (than your system's default printer), select a specific page and change the number of copies, if necessary.

In this example, the "*Microsoft Print to PDF*" is the default printer.



Save the print output file.



Open the printed pdf file in your system's default PDF App.

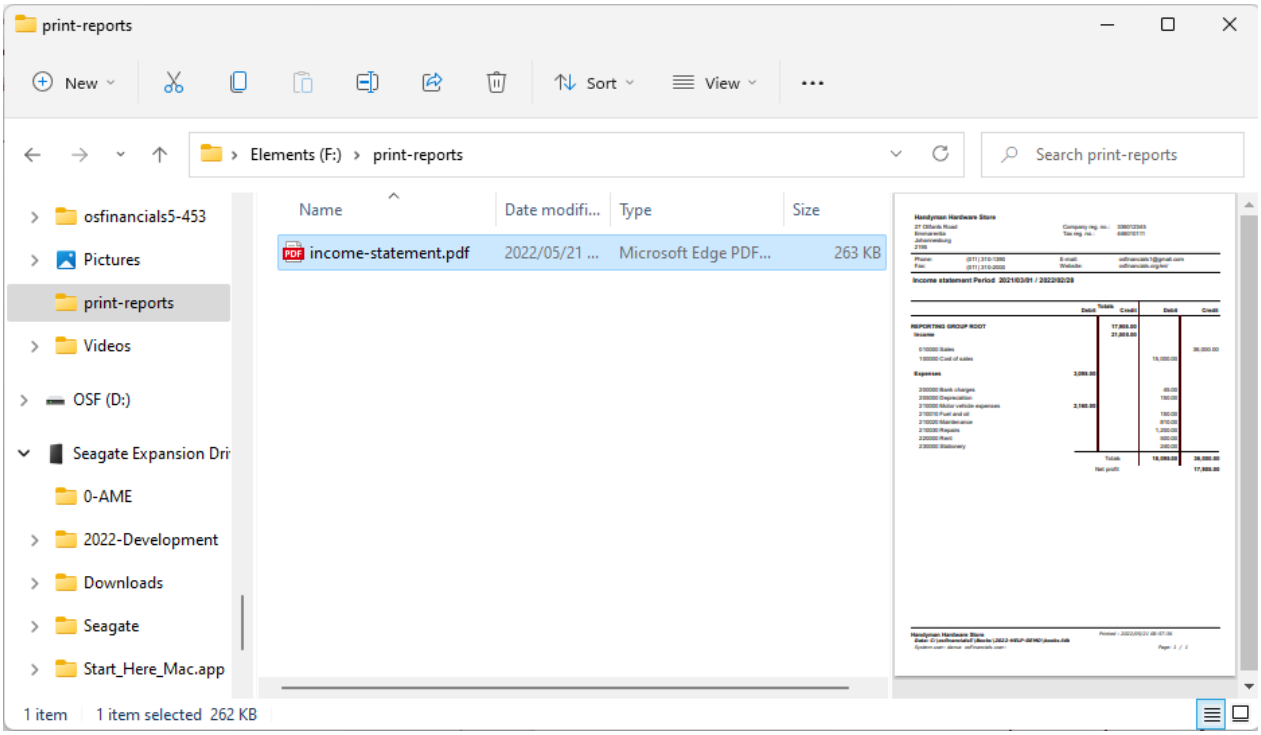
If the printed file does not open automatically; or if you need to open it at a later stage; you may open the file in your system's file explorer.



Created with the Standard Edition of HelpNDoc: Don't Let Unauthorized Users View Your PDFs: Learn How to Set Passwords

Reportman output - E-mail

This will generate a Portable Document Format (pdf) file. It will also launch a blank E-mail message (using your system's default e-mail program) and insert the report (or document) as an attachment.

The name of the report (or document) is automatically generated (for example, REPC526.pdf). It will also automatically be inserted in the "Subject" field and displayed in the title bar of the e-mail message.

It is recommended that you add your own sensible subject to this in the "Subject" field. You still need to select a recipient (and other recipients, if necessary) and type a message before clicking on the Send button.

To use the E-mail option, you need to have a correctly configured e-mail account on your system. You may also need to configure the following in your Set of Books:

- Setup → Company info (Setup ribbon) - Add the e-mail address for the Set of Books.
- Setup → Internet (Setup ribbon) - Configure your Internet, e-mail accounts to send reports, lists and documents via the internet or to configure a network server.
- Debtors (Default ribbon) - Correct e-mail addresses added for your debtor (customer / client)

accounts.

- Creditors (Default ribbon) - Correct e-mail addresses added for your creditor (supplier / vendor) accounts.

The following message will be displayed if you don't have a default E-mail App installed and associated on your operating system:

"Email
There is no email program associated to perform the requested action. Please install an email program or, if one is already installed, create an association in the Default Programs control panel."

Reportman output - Save metafile as PDF

"*PDF*" is the acronym for "*Portable Document Format*". The "*PDF*" file format is generally used to save files that cannot be modified. The "PDF files can be saved as a hardcopy of reports and document layout files can be saved as a hardcopy for audit and record purposes.

PDF files can be easily shared across all devices (e.g. desktops, laptops, mobile devices (tablets, cellular phones, etc.). It is also compatible and readable with the default pdf app or pdf reader app on all operating system platforms (e.g. Windows, Linux, Mac, Android, etc.).

You may also open saved PDF files on your system, in the your system's associated default Web browser , e.g. Google Chrome, Firefox, Microsoft Edge, etc.

PDF files may easily be sent via e-mail, read, printed on demand according to your own requirements; or the recipient's requirements.

What apps or tools can be used to open pdf files?

A list of tools and apps that can be used to open PDF files, along with their cross-compatibility across different operating systems:

1. Desktop Applications
    - Adobe Acrobat Reader: Widely used and available for Windows, macOS, and Linux.
    - Foxit Reader: A fast and lightweight PDF reader available for Windows, macOS, and Linux.
    - Nitro PDF Reader: Available for Windows, it offers features like PDF creation, editing, and

conversion.

- Sumatra PDF: A free, open-source PDF reader for Windows.
- PDF-XChange Editor: Available for Windows, it offers advanced editing and annotation features.

2. Web Browsers
   - Google Chrome: Can natively open and view PDF files. Available for Windows, macOS, Linux, Android, and iOS.
   - Mozilla Firefox: Can natively open and view PDF files. Available for Windows, macOS, Linux, Android, and iOS.
   - Microsoft Edge: Can natively open and view PDF files. Available for Windows, macOS, Android, and iOS.
   - Safari: Can natively open and view PDF files. Available for macOS and iOS.
3. Online Tools
   - Google Drive: Can open and view PDF files. Accessible via any modern web browser.
   - Dropbox: Can open and view PDF files. Accessible via any modern web browser.
   - Smallpdf: An online PDF tool that allows you to view, edit, and convert PDF files. Accessible via any modern web browser.
   - PDFescape: An online PDF editor and viewer. Accessible via any modern web browser.
4. Mobile Apps
   - Adobe Acrobat Reader: Available for iOS and Android.
   - Google Drive: Available for iOS and Android.
   - Dropbox: Available for iOS and Android.
   - Microsoft OneDrive: Available for iOS and Android.
   - WPS Office: Available for iOS and Android, it includes a PDF reader and editor.
5. Command Line Tools
   - Poppler: A suite of free software tools for PDF manipulation, available for Windows, macOS, and Linux.
   - PDFtk: A command-line tool for working with PDF files, available for Windows, macOS, and Linux.

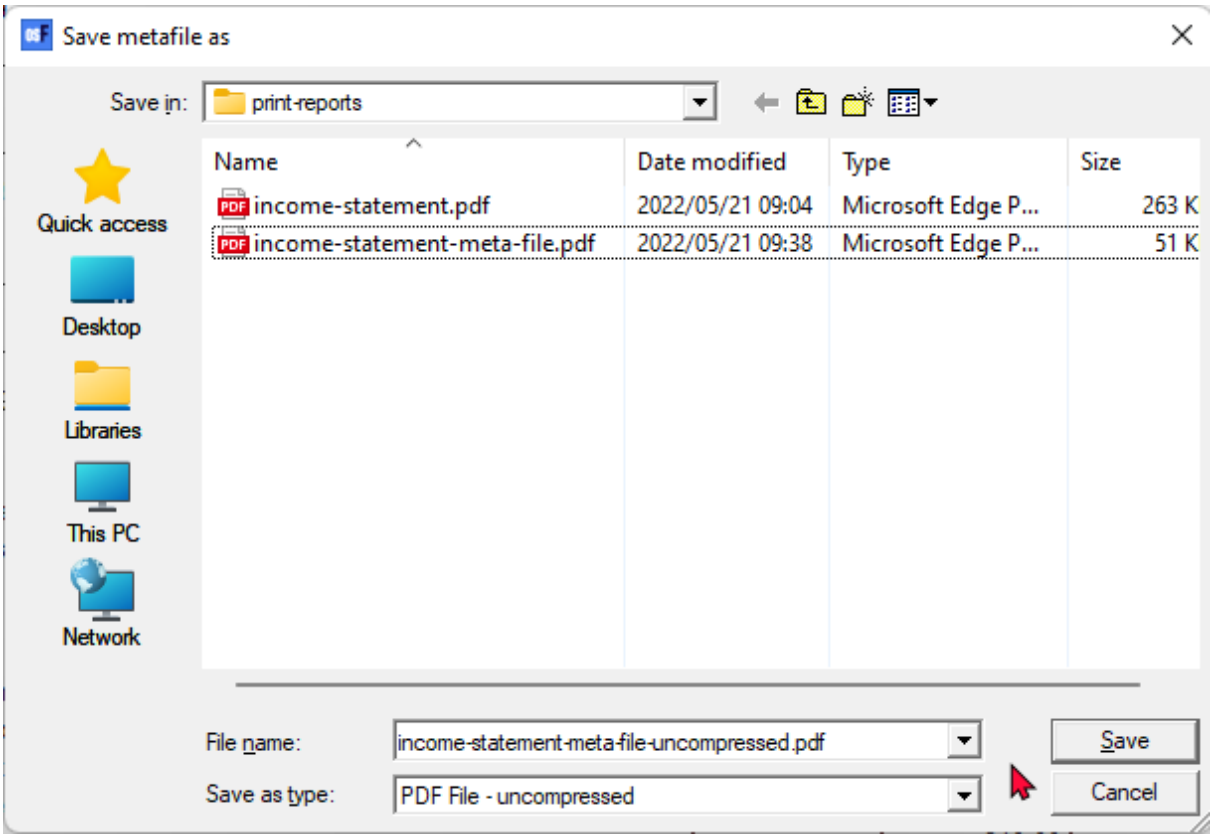
6. Text Editors
    - Visual Studio Code: With the right extensions, you can view PDF files in VS Code. Available for Windows, macOS, and Linux.
    - Sublime Text: Similar to VS Code, you can install extensions to view PDF files. Available for Windows, macOS, and Linux.
7. Other Tools
    - PDF.js: An open-source JavaScript library for rendering PDF files in web browsers. Accessible via any modern web browser.

This list should help you find the right tool for viewing and editing PDF files regardless of your operating system.

Save metafile options

To save reports or document layout files as a PDF file:

1. On the "*Reportman print preview*" screen, select Save (Ctrl+S) - This will launch the "*Save metafile as*" screen.



2. Select the directory (folder) where you need to save this file, if necessary.

3. Enter a file name.
4. Select the "*PDF File - compressed (*.pdf)*" (default option) or the "*PDF File – uncompressed (*.pdf)*" file type.
5. Click Save.

You may select the compressed or uncompressed PDF file types

"PDF File – compressed" (default) - The file size and quality may be reduced (smaller) for sending these files via e-mail, etc.

"PDF File – uncompressed"

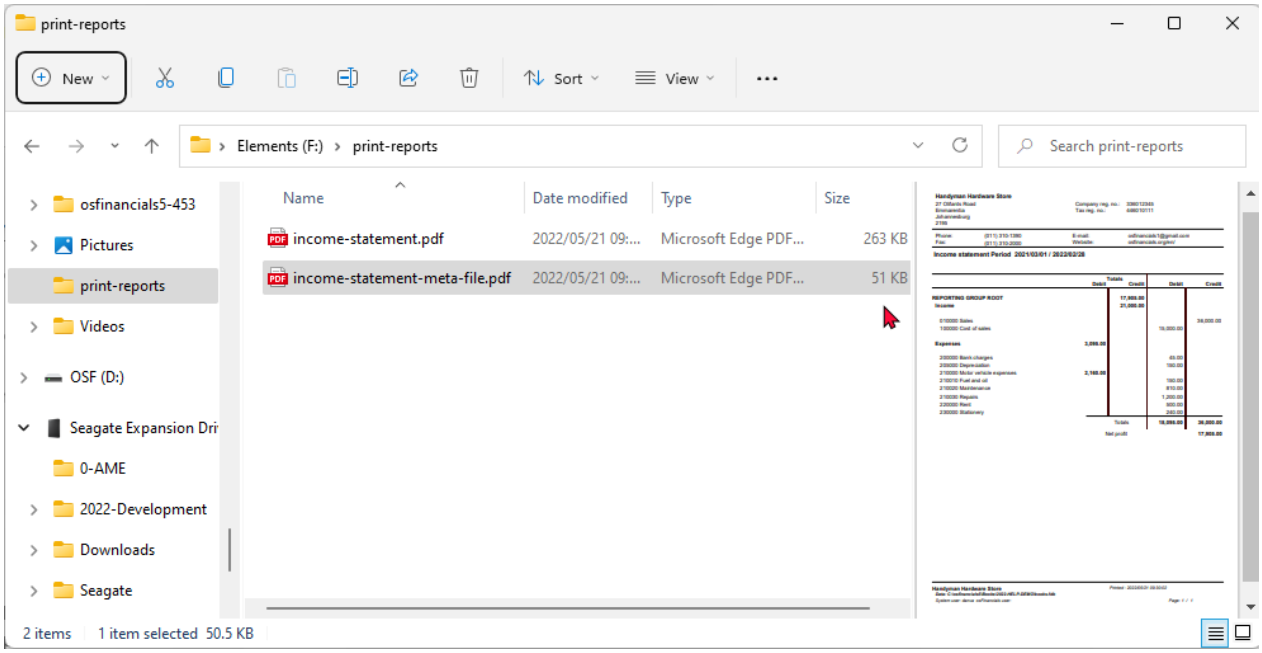
In osFinancials5/TurboCASH5, the average file pdf file size and quality for reports and document layout files, saved to the PDF compressed or PDF uncompressed, is hardly noticeable.

The default print (Print (Ctrl+P) option where the "Print" screen is set to "Microsoft Print to PDF" option is much smaller in size (263K) than the "PDF File – compressed" size (51K) or "PDF File – uncompressed" size (59K) PDF file types "Save metafile as" option.

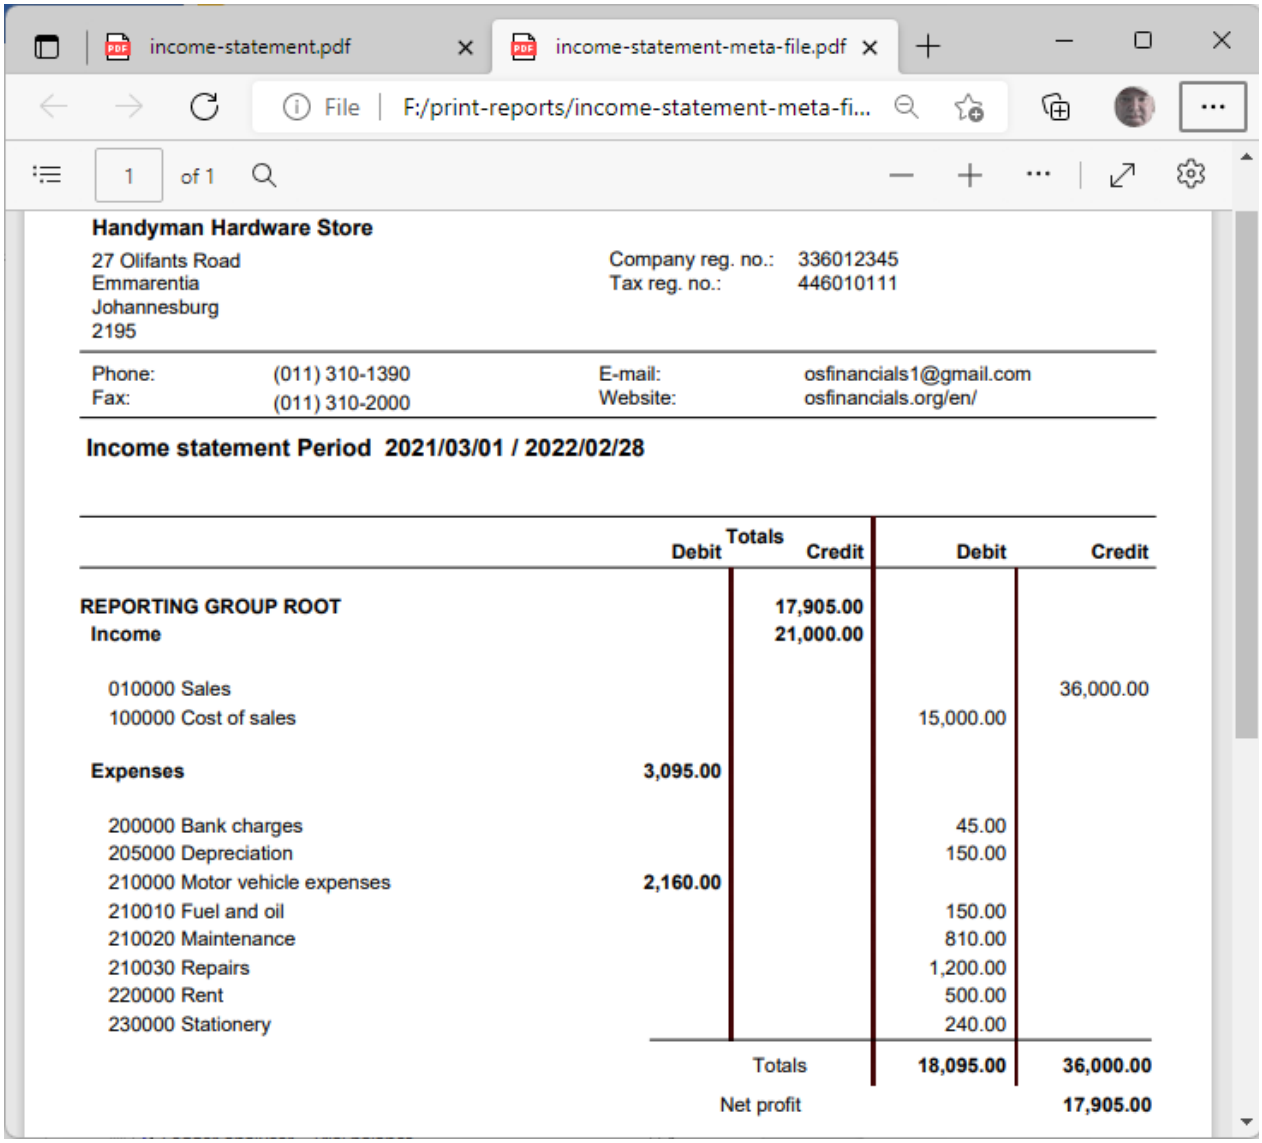
The PDF file format may be selected for all reports and document layout files to external recipients.

Income statement - PDF

If the saved file does not open automatically; or if you need to open it at a later stage; you may open the file in your system's file explorer.



An example of the "*Income statement*" saved as a PDF file, opened in "*Microsoft Edge*", is as follows:



income-statement.pdf | income-statement-meta-file.pdf

File | F:/print-reports/income-statement-meta-fi...

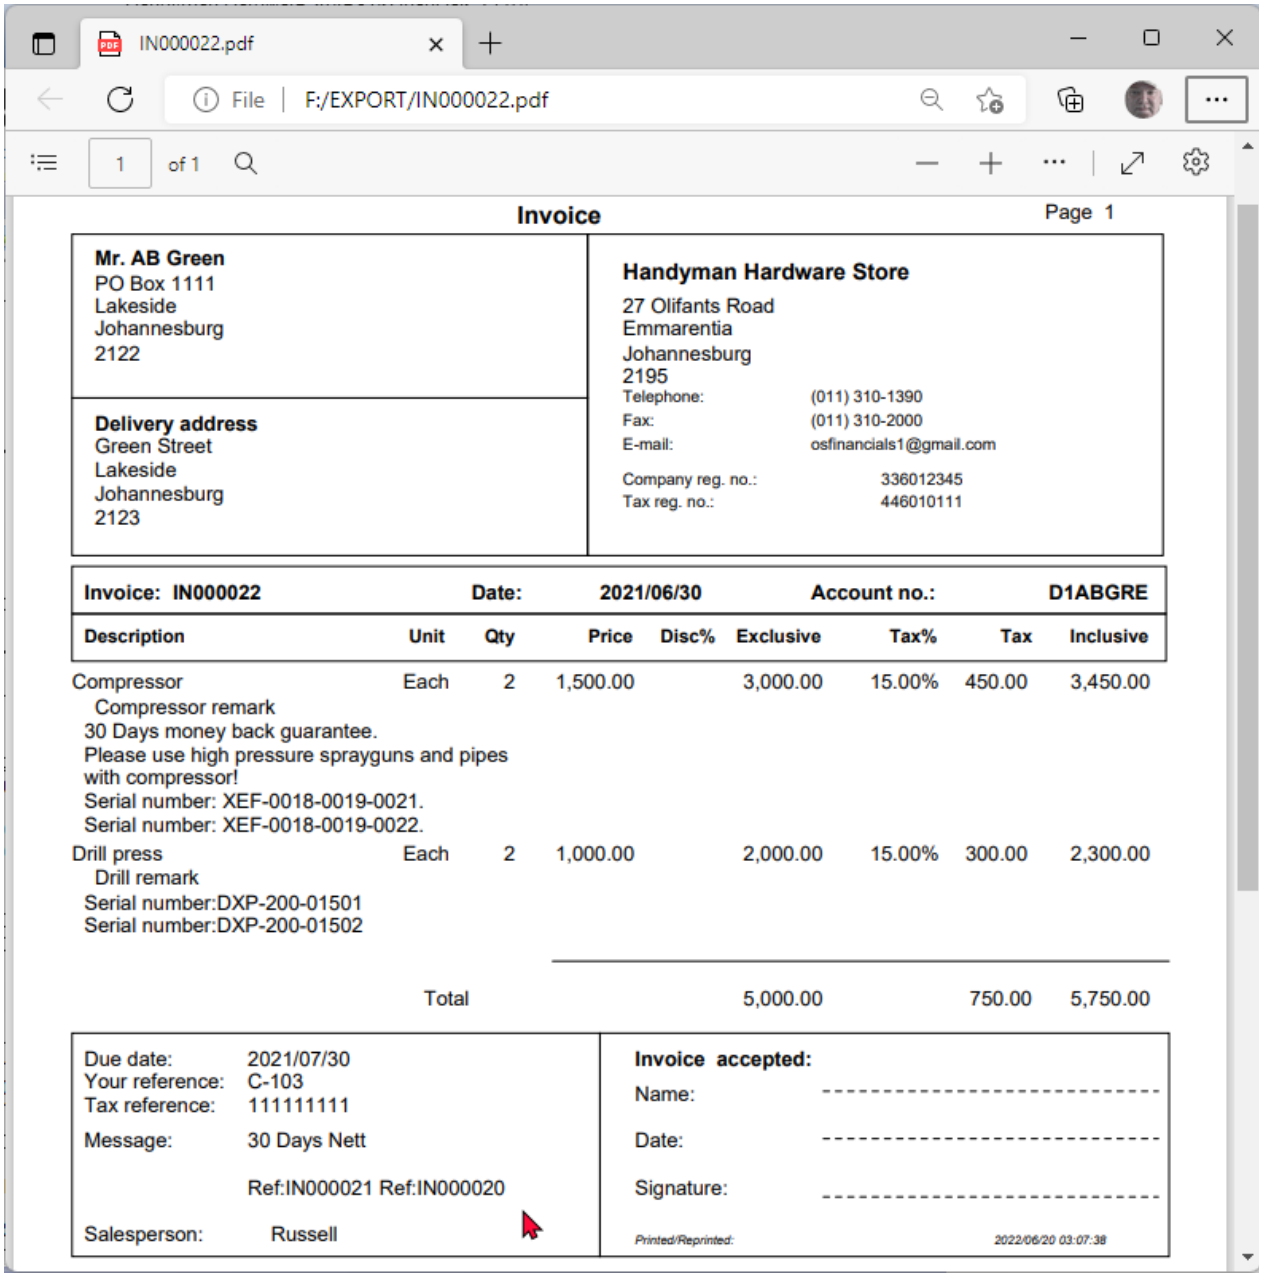
The PDF file format may be selected for all reports and document layout files to external recipients

Irrespective of the operating systems and apps your debtors (customers / clients) are running, Invoices, Credit notes, Quotes and Statements may be easily shared and sent to these recipients.

Irrespective of the operating systems and apps your creditors (suppliers / vendors) are running, Purchase, Supplier returns, Orders and Remittance advises may be easily shared and sent to these recipients.

Document layout file - PDF

An example of an "*Invoice*" saved as a PDF file, opened in "*Microsoft Edge*", is as follows:



Created with the Standard Edition of HelpNDoc: Produce online help for Qt applications

Reportman output - Save metafile as text file

Text files is a flat file, which contains text and has no special formatting such as bold text, *italic text*, images, etc. The text files is saved with the *. txt file extension. It is usually opened with Notepad, or any other text file editor set as default and associated with your operating system.

What apps or tools can be used to open text files?

Text files, which typically use extensions like `.txt`, `.log`, `.csv`, and others, can be opened using a wide

range of applications and tools. Here are some popular options along with their operating system compatibility:

1. Text Editors
    - Notepad: Pre-installed on Windows.
    - Notepad++: Windows.
    - Sublime Text: Windows, macOS, Linux.
    - Visual Studio Code: Windows, macOS, Linux.
    - Atom: Windows, macOS, Linux.
    - Vim: Windows, macOS, Linux.
    - Emacs: Windows, macOS, Linux.
    - TextEdit: Pre-installed on macOS.
    - Gedit: Pre-installed on many Linux distributions.
2. Office Suites
    - Microsoft Word: Windows, macOS.
    - LibreOffice Writer: Windows, macOS, Linux.
    - Google Docs: Cross-platform (accessible via any modern web browser).
    - WPS Office: Windows, macOS, Linux, Android, iOS.
3. Integrated Development Environments (IDEs)
    - Eclipse: Windows, macOS, Linux.
    - IntelliJ IDEA: Windows, macOS, Linux.
    - PyCharm: Windows, macOS, Linux.
    - Visual Studio: Windows, macOS.
4. Command Line Tools
    - cat: Available on Unix-based systems (Linux, macOS).
    - less: Available on Unix-based systems (Linux, macOS).
    - more: Available on Unix-based systems (Linux, macOS).
    - type: Available on Windows.

- more: Available on Windows.

5. Online Tools
    - Google Docs: Cross-platform (accessible via any modern web browser).
    - Microsoft OneDrive: Cross-platform (accessible via any modern web browser).
    - Dropbox Paper: Cross-platform (accessible via any modern web browser).
    - Notepad Online: Cross-platform (accessible via any modern web browser).
6. Mobile Apps
    - Google Docs: iOS, Android.
    - Microsoft OneDrive: iOS, Android.
    - Dropbox: iOS, Android.
    - WPS Office: iOS, Android.
    - Notepad+: Android.
    - Text Editor: iOS.
7. Other Tools
    - Adobe Acrobat Reader: Can open text files as well as PDF files. Available for Windows, macOS, Android, iOS.
    - Foxit Reader: Can open text files as well as PDF files. Available for Windows, macOS, Linux.

These tools should cover most of your needs for viewing and editing text files across different operating systems.

Save metafile options

To save reports or document layout files as a text file:

1. On the "*Reportman print preview*" screen, select Save (Ctrl+S) – This will launch the "*Save metafile as*" screen.
2. Select the directory (folder) where you need to save this file, if necessary.
3. Enter a file name.
4. Select "*Text file (*.txt)*" file type.

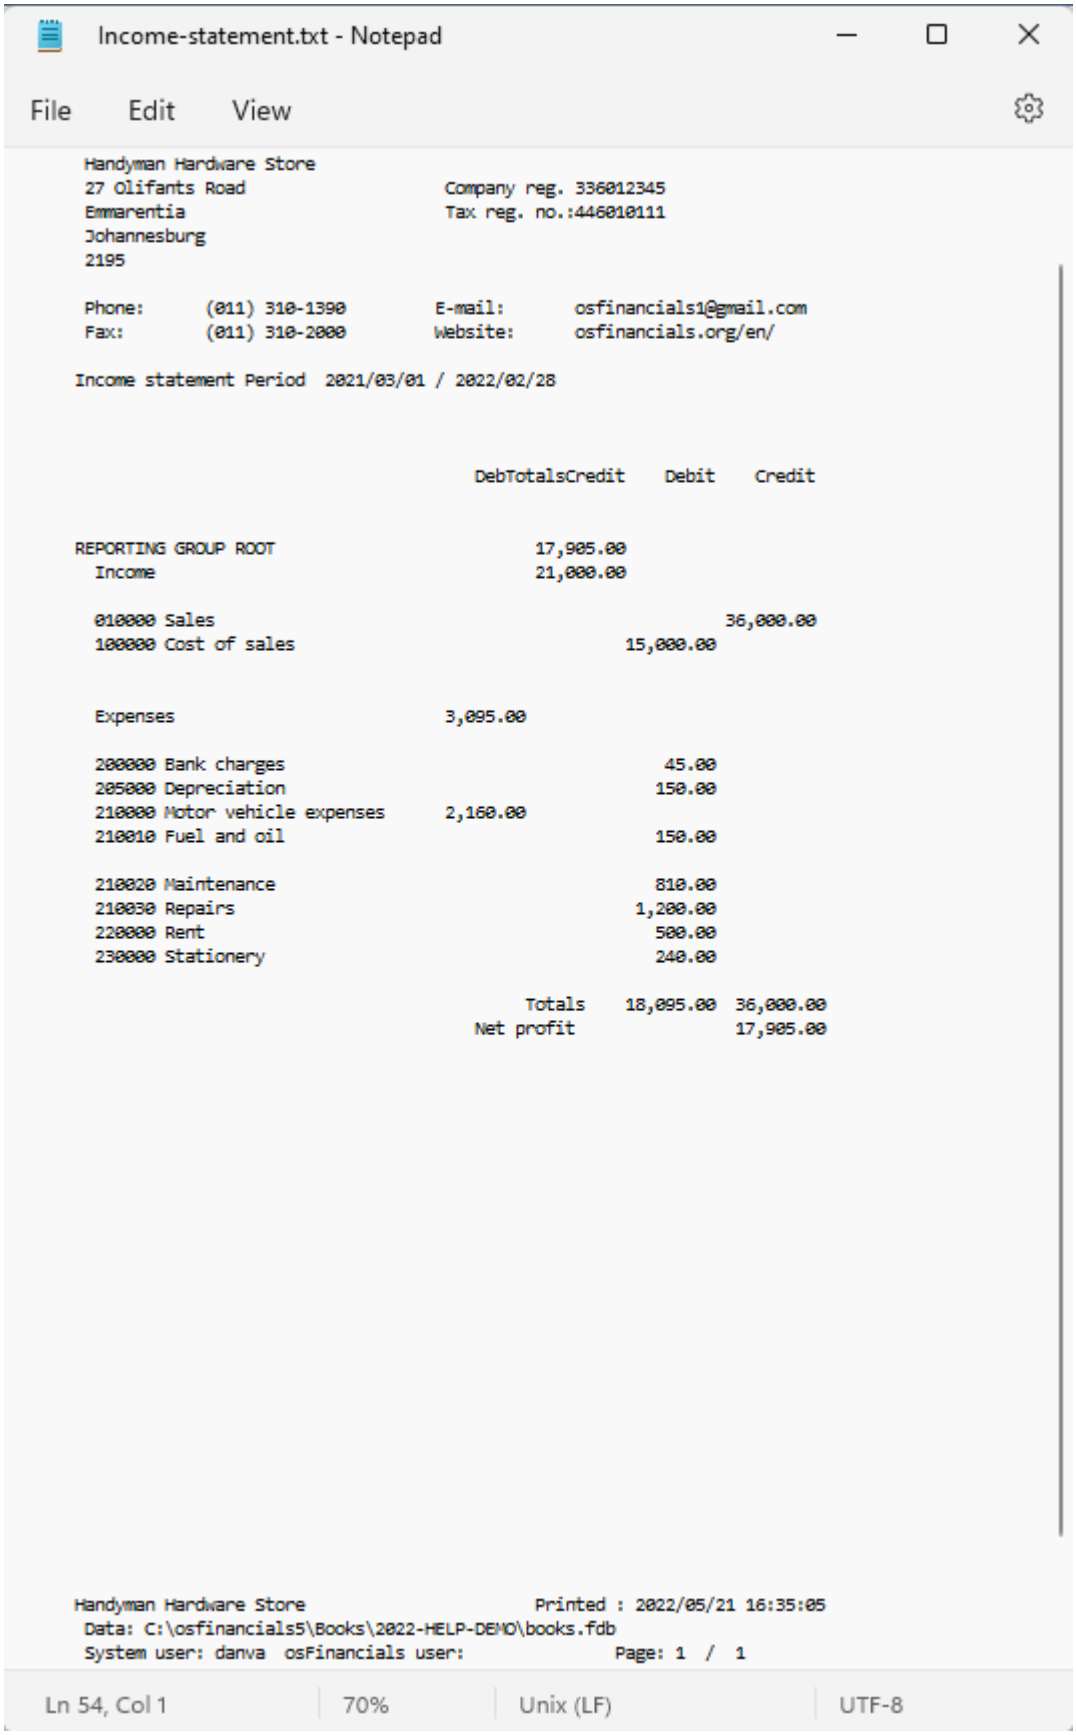
5. Click Save.

Income statement - Text file

If the saved file does not open automatically; or if you need to open it at a later stage; you may open the file in your system's file explorer.

This should automatically open the saved text file of your system's default text file program associated with Text file type (*.txt) file types (e.g. Notepad, etc).

An example of the "*Income statement*" saved as a text file, is as follows:



Income-statement.txt - Notepad

File Edit View

Reportman output - Save metafile as html

HTML (Hypertext Markup Language) files can be easily shared across all devices (e.g. desktops, laptops, mobile devices (tablets, cellular phones, etc.). It is also compatible and readable in the your system's associated default Web browser , e.g. Google Chrome, Firefox, Microsoft Edge, etc.

What apps or tools can be used to open html files?

HTML (HyperText Markup Language) files can be opened and viewed using a variety of applications and tools. Here are some popular options:

1. Web Browsers
    - Google Chrome: Available for Windows, macOS, Linux, Android, and iOS.
    - Mozilla Firefox: Available for Windows, macOS, Linux, Android, and iOS.
    - Microsoft Edge: Available for Windows, macOS, Android, and iOS.
    - Safari: Available for macOS and iOS.
    - Opera: Available for Windows, macOS, Linux, Android, and iOS.
2. Text Editors
    - Notepad: Pre-installed on Windows.
    - Notepad++: Available for Windows.
    - Sublime Text: Available for Windows, macOS, and Linux.
    - Visual Studio Code: Available for Windows, macOS, and Linux.
    - Atom: Available for Windows, macOS, and Linux.
    - Vim: Available for Windows, macOS, and Linux.
    - Emacs: Available for Windows, macOS, and Linux.
    - TextEdit: Pre-installed on macOS.
    - Gedit: Pre-installed on many Linux distributions.
3. Integrated Development Environments (IDEs)
    - Eclipse: Available for Windows, macOS, and Linux.
    - IntelliJ IDEA: Available for Windows, macOS, and Linux.

- PyCharm: Available for Windows, macOS, and Linux.
- Visual Studio: Available for Windows and macOS.

4. Online Tools
    - JSFiddle: An online code editor that allows you to write and test HTML, CSS, and JavaScript. Accessible via any modern web browser.
    - CodePen: An online code editor that allows you to write and test HTML, CSS, and JavaScript. Accessible via any modern web browser.
    - JSBin: An online code editor that allows you to write and test HTML, CSS, and JavaScript. Accessible via any modern web browser.
5. Mobile Apps
    - Dcoder: Available for Android, it allows you to write and run HTML, CSS, and JavaScript code.
    - Web Editor: Available for iOS, it allows you to write and view HTML files.
6. Command Line Tools
    - cat: Available on Unix-based systems (Linux, macOS).
    - less: Available on Unix-based systems (Linux, macOS).
    - more: Available on Unix-based systems (Linux, macOS).
    - type: Available on Windows.
    - more: Available on Windows.
7. Other Tools
    - Adobe Dreamweaver: Available for Windows and macOS, it is a professional web development tool that supports HTML.
    - Brackets: Available for Windows, macOS, and Linux, it is an open-source text editor for web development.

These tools should cover most of your needs for viewing and editing HTML files across different operating systems.

Save metafile options

To save reports or document layout files as a html file:

1. On the "*Reportman print preview*" screen, select Save (Ctrl+S) – This will launch the "*Save metafile as*" screen.
2. Select the directory (folder) where you need to save this file, if necessary.
3. Enter a file name.
4. Select "*Html file (single) (*.html)*" file type. This option is recommended for html output, as it does not save or export numbering bullets (numbering). as is the case with the "*Html file*" option.
5. Click Save.

Html file (single)

An example of the "*Trial balance*" (consisting of 2 pages) saved as a "*Html file (single)*" file type, is as follows:

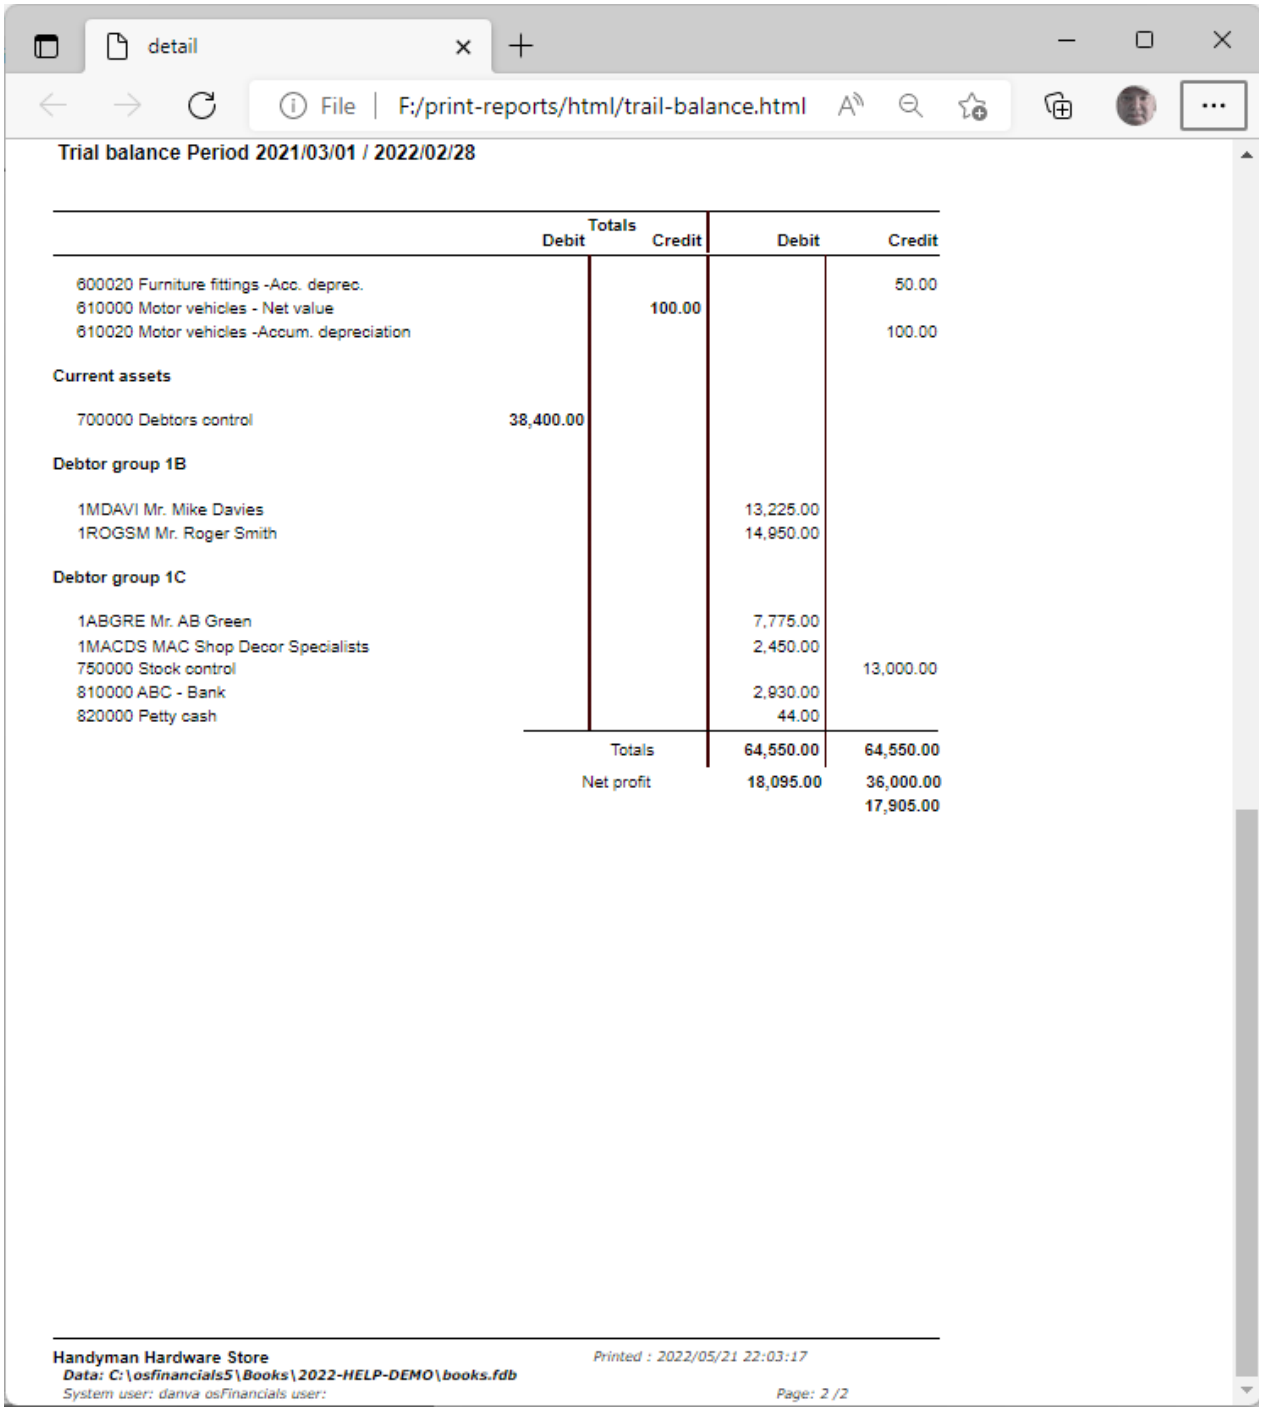
Page 2 - (included in the single file - Scroll down to view page 2)



Html file

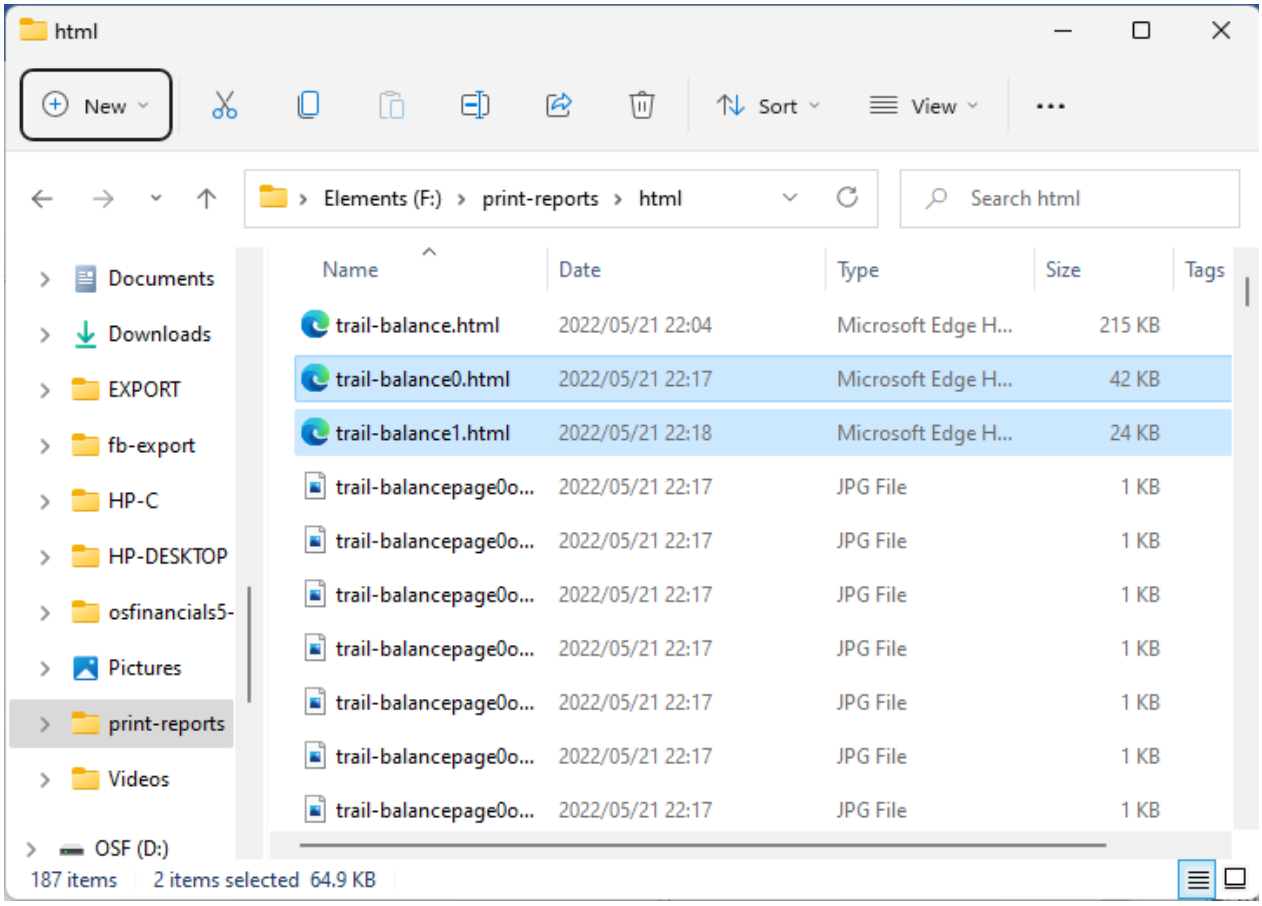
An example of the "*Trial balance*" (consisting of 2 pages) saved as a "*Html file*" file type.

If a report with multiple pages is saved as an Html file format, it will save the file in separate pages (and opened in separate tabs in your web browser). For example, a Trial balance consisting of 2 pages, will be printed as follows:

html - Output folder

In this example, 186 items is saved.

- name of report and "0" added for page 1.
- name of report and "1" added for page 2.
- It will also export numbering bullets (numbering) as objects for each page. The vertical lines, separating the columns, in the "*detail*" report used to print the Trial balance, Income statement, Balance sheet, etc. is exported as bullets (numbering) objects.



Trail-balance0.html is the first page of the saved html file.

If the trial balance consists of more than one page name of report will increment to page "1" for page 2.

It will also export numbering bullets (numbering) as objects for each page.

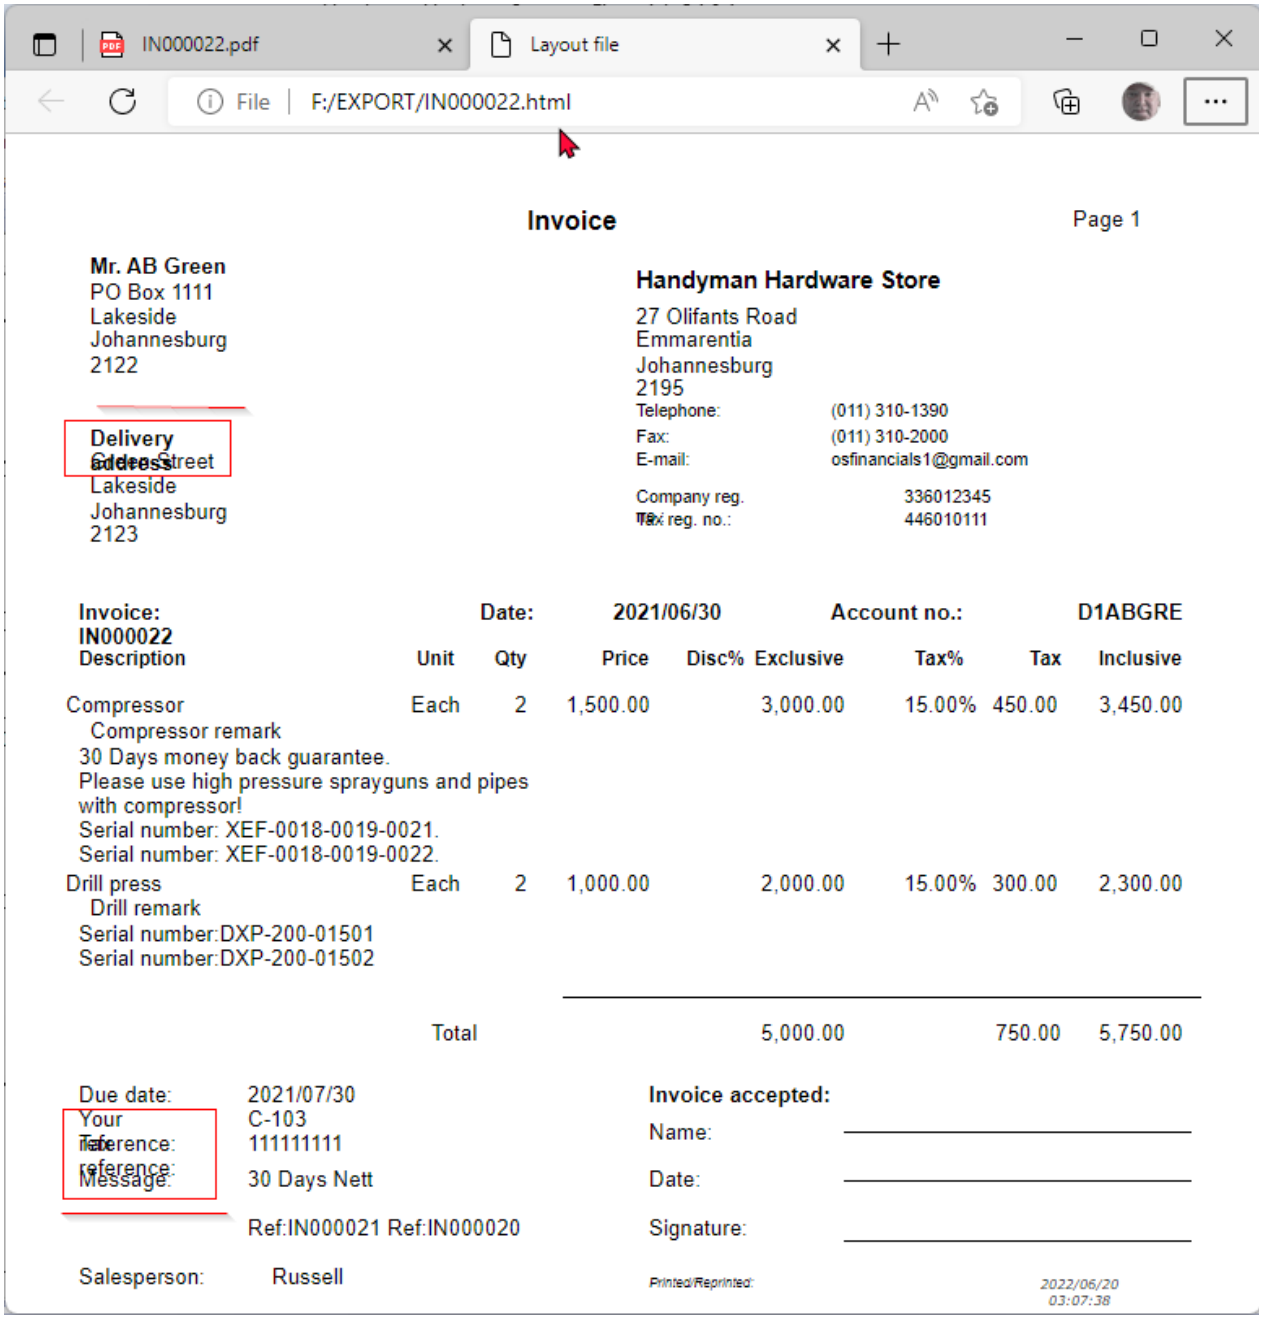
Document layout files saved as the Html file type

Before fixes



If a layout file is saved as:

- *Html file type - it will add a zero after the file name for the first page , e.g. invoice-IN0000220.html (0 added after the file name for page 1)*
- *Html (single) file type - no page numbers will be inserted after the file name.*

These issues in the HTML file type for layout files is not applicable to other file types.

Overlapping labels and expressions:

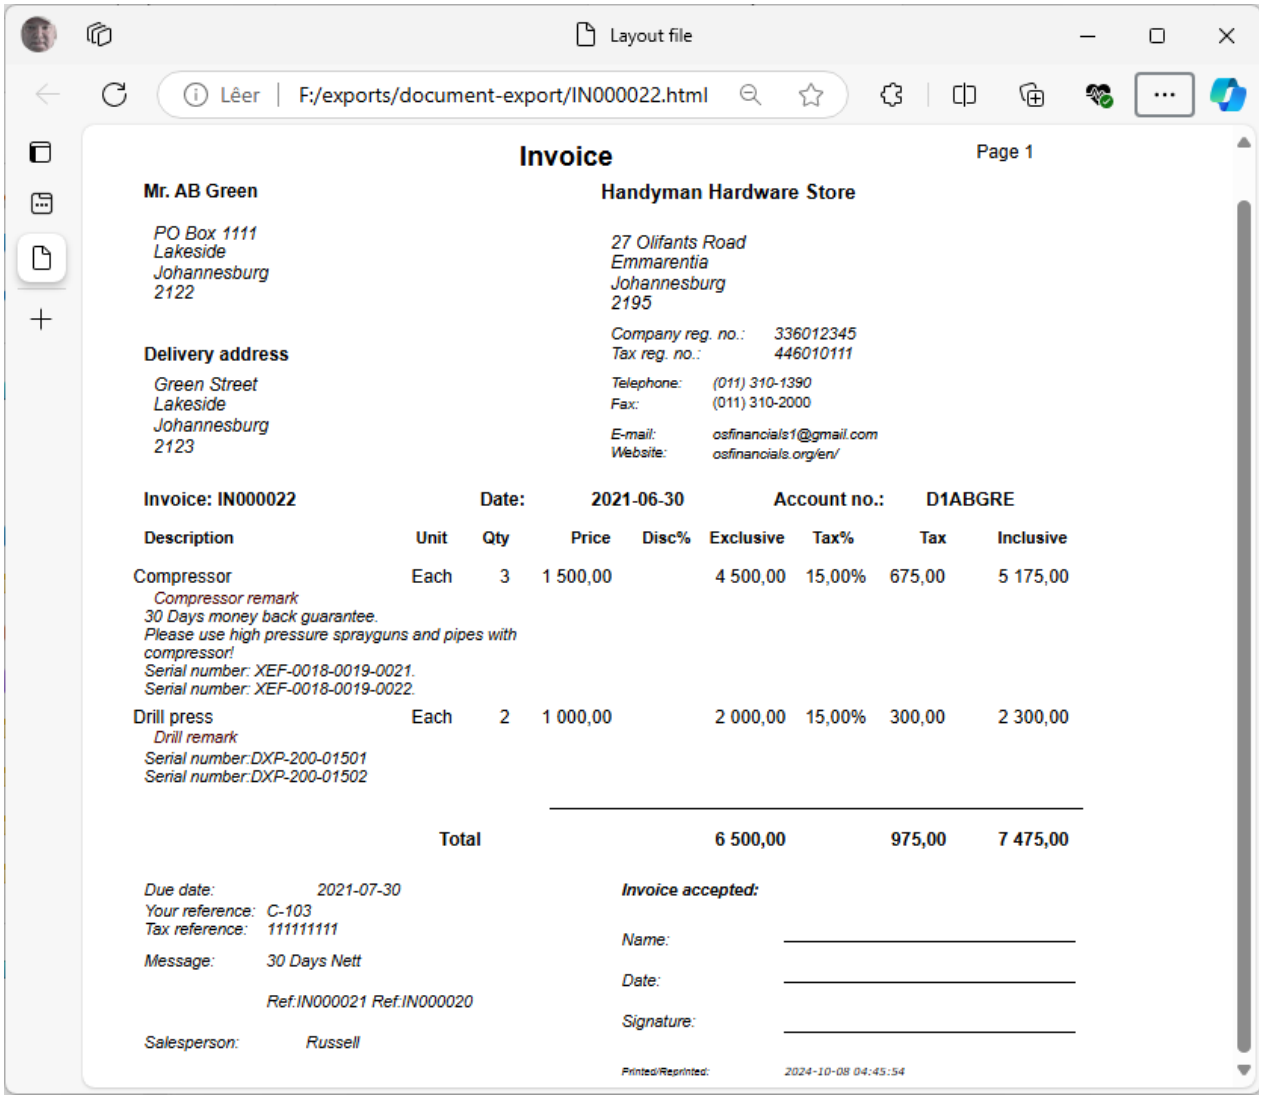
The "Delivery address" labels overlaps.

Should you need to use this html format, explore by selecting other layout file formats.

To fix this:

1. *Go to the Report designer (on the Reports ribbon; or on the Setup ribbon) and select the Document layout file. Copy and rename the layout file.*
2. *Stretch the Expressions until they fit and save the layout file.*
3. *Select the layout file and it should display as per your changes when you save the layout file in the HTML file type.*

After Fixes



These issues in the HTML file type for layout files is not applicable to other file types.

Including / excluding Rectangular objects on html output:

Shapes - The If a file is saved to html file type:

- *Rounded rectangle 'Round Rect' 'TrpShape' and 'Round Square' Expressions will not be included in the saved html file types.*
- *Rectangle 'Rectangle' 'TrpShape' Expressions shape will be included in the saved html file types.*

Reportman output - Save metafile as Excel file

Bug - Excel file to save reports (Save report as a meta file report from the Reportman Print preview screen) or export data from the Ledger analyser, and various options to export data to an Excel spreadsheet or Excel (one sheet) spreadsheet (.xls).*

Error - Unable to set the HorizontalAlignment property of the Range class

This error is replicated in the following file formats:

Excel file (.xls)*

Excel file (one sheet) (.xls)*

"Excel file (one sheet)" - For example, a Trial balance consisting of 2 or more pages, will be opened in one sheet.

"Excel file" For example, a Trial balance consisting of 2 or more pages, will be opened in separate sheets for each page (e.g. Sheet1, Sheet2, etc.).

Created with the Standard Edition of HelpNDoc: Easily create EPub books

Reportman output - Save metafile as csv

All reports may be saved or exported to the "*CSV*" (Comma Separated Values) file format. These data in the report is basically a text file that stores the data records in each line. The records in each line is structured in a tabular format and the fields are separated by commas, tabs, etc.

The csv files can be opened into basically any spreadsheet application in Microsoft Excel or alternative spreadsheet components of LibreOffice, OpenOffice, Ultra Office, Google Sheets, etc.

Save metafile options

To save reports or document layout files as a comma separated values file:

1. On the "*Reportman print preview*" screen, select Save (Ctrl+S) - This will launch the "*Save metafile as*" screen.
2. Select the directory (folder) where you need to save this file, if necessary.
3. Enter a file name.
4. Select the "*Comma separated values (*.csv)*" file type.
5. Click Save.

Income statement - CSV file - Microsoft Excel

An example, of the "*Income statement*" saved as a comma separated values file, and opened in "*Microsoft Excel*" is as follows:

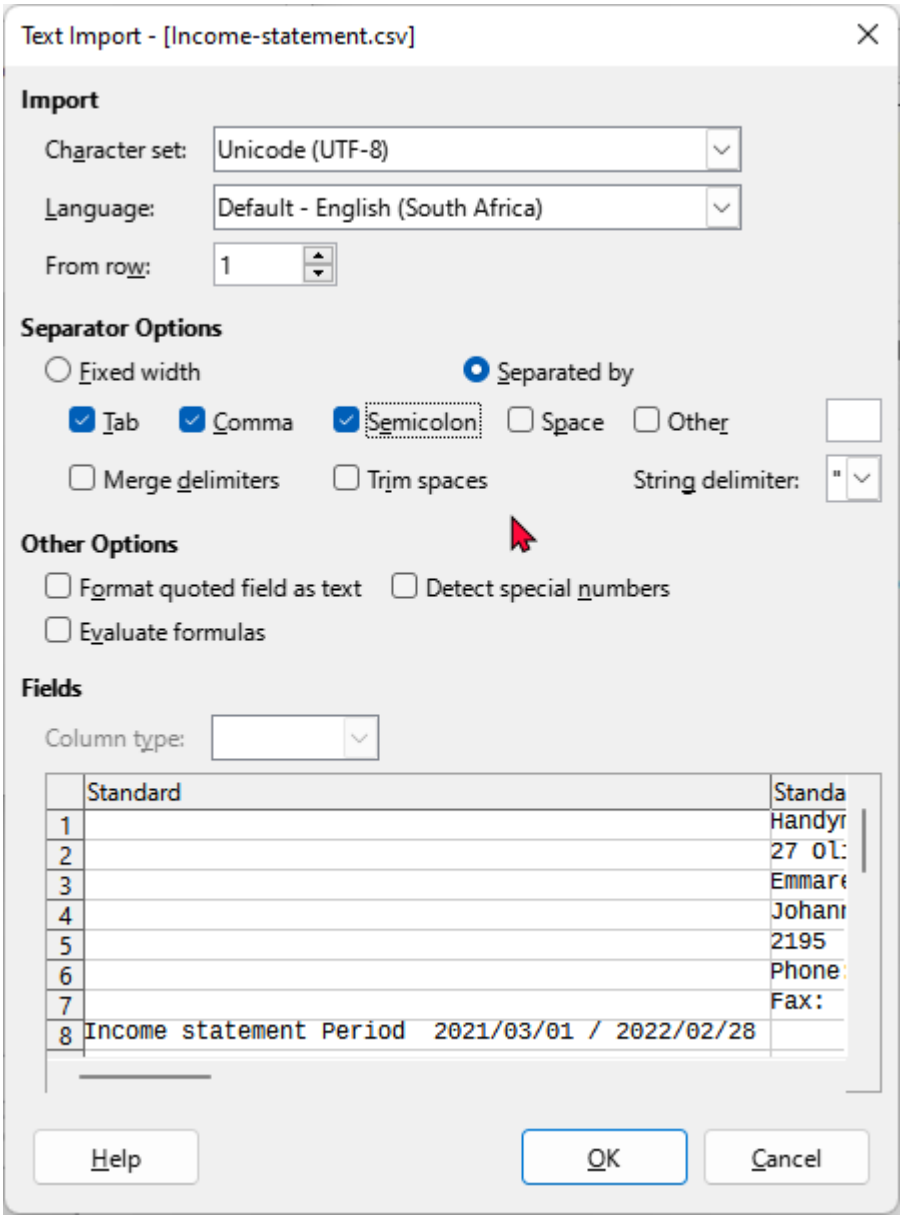
Income statement - CSV file - LibreOffice

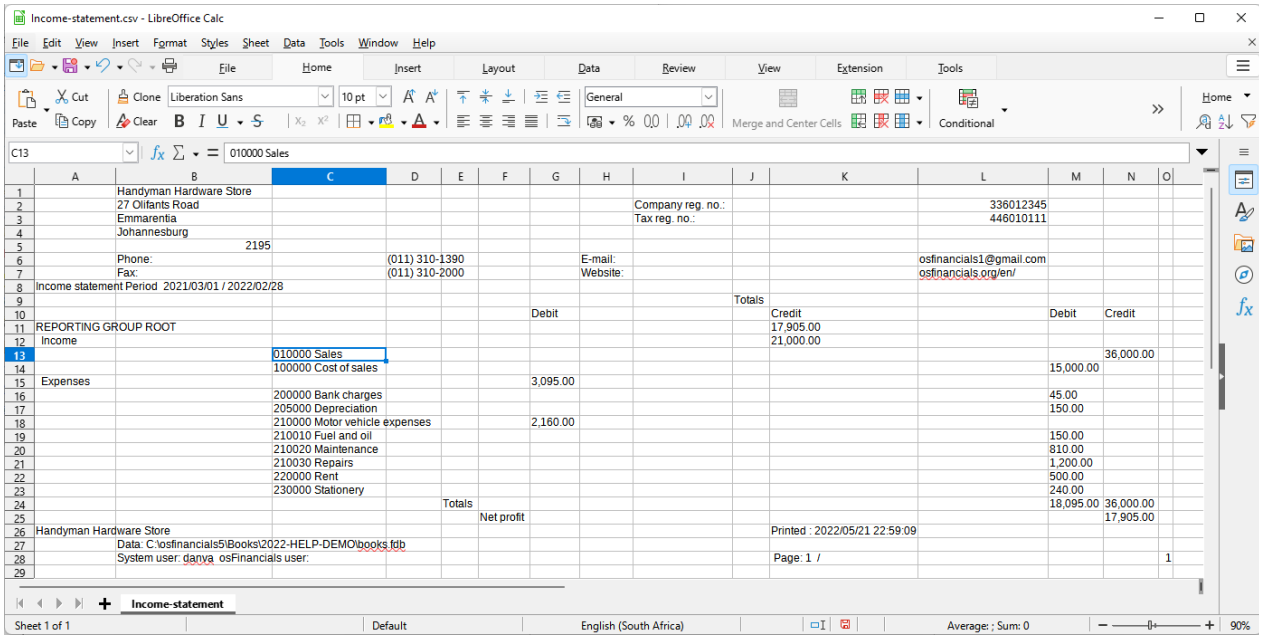
An example, of the "*Income statement*" saved as a comma separated values file, and opened in "*LibreOffice Calc*" (spreadsheet) is as follows:



Select the "Separator Options", if necessary.

Click OK.

The data, according to this selection, will be displayed in the various columns.



Created with the Standard Edition of HelpNDoc: Create Professional CHM Help Files with HelpNDoc's Easy-to-Use Tool

Reportman output - Save metafile as bitmap

The "*Bitmap File*" type extension is a Bitmap image file. The BMP file contains raster graphics data which are independent of display devices. BMP images may be uncompressed or compressed with a lossless compression method.

Saving a report or document layout as a Bitmap file is useful when you need a high-resolution, device-independent image. However, be aware that Bitmap files can be much larger than their compressed counterparts, such as PDFs. Always consider the intended use and storage requirements before choosing the Bitmap format.

This significant increase in file size is due to the uncompressed nature of Bitmap files, which store each pixel of the image individually.

What is the color of a monochrome image?

A monochrome image typically refers to an image that uses a single color or shade to represent all the pixels. The most common interpretation of a monochrome image is that it is black and white.

Key Points:

- Black and White: In a strict sense, a monochrome image is usually black and white, meaning it uses

only two colors: black and white. This is often referred to as binary or bitonal imaging.

- Grayscale: Sometimes, the term "monochrome" can also refer to images that use a range of shades of gray, from black to white. This is known as grayscale imaging. In this case, the image can have varying shades of gray, but it still uses only one color channel (gray).
- Practical Consideration:
    - Default Setting: When you select "*Monochrome*" as the color mode in the "*Bitmap properties*" screen, it typically means the image will be rendered in black and white. However, if the software allows for grayscale options within the monochrome setting, it might also include shades of gray.
    - Example:
        - Binary Monochrome: An image where every pixel is either black or white.
        - Grayscale Monochrome: An image where every pixel can be any shade of gray, but there are no colors other than shades of gray.

The default interpretation of a monochrome image is black and white. However, depending on the software and settings, it might also include shades of gray, making it a grayscale image. Always check the specific settings and documentation of the software you are using to confirm the exact behavior of the monochrome option.

What apps or tools can be used to open bitmap files?

Bitmap files, which typically have the `.bmp` file extension, can be opened and viewed using a variety of applications and tools. Here are some common options:

1. Microsoft Paint: A basic image editor that comes pre-installed with Windows.
2. Microsoft Photos: A convenient and user-friendly tool for viewing and printing BMP images. While it may not offer advanced editing features like some dedicated image editors, it is more than sufficient for basic viewing and printing tasks. This makes it a handy option for quickly reviewing and printing reports or document layout files saved as BMP images.
3. Adobe Photoshop: A professional image editing software.
4. GIMP (GNU Image Manipulation Program): A free, open-source alternative to Photoshop.
5. CorelDRAW: A vector graphics editor, but it can also import and open and edit bitmap files.
6. Microsoft Word and PowerPoint: While primarily document and presentation tools, they can also open and insert bitmap images.

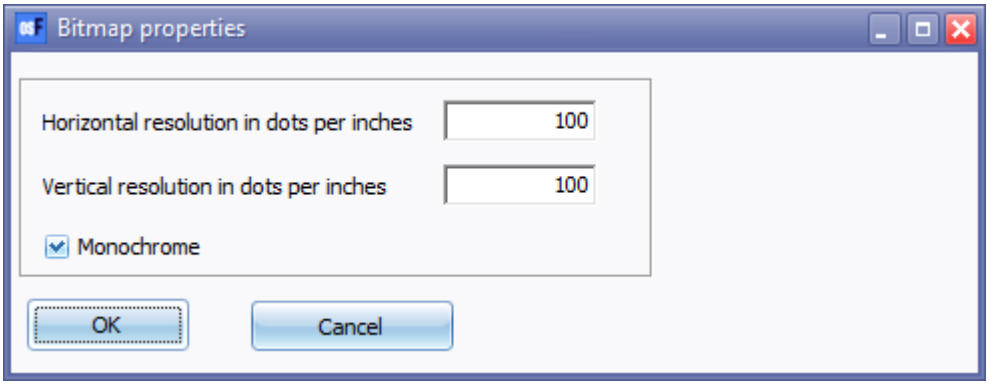
7. LibreOffice Writer and Impress: A word processing application similar to Microsoft Word. LibreOffice Impress is a presentation application similar to Microsoft PowerPoint.
8. Google Photos: An online photo storage and viewing service.
9. Web Browsers: Modern web browsers like Chrome, Firefox, and Edge can display bitmap images directly.
10. Preview (macOS): A default image and PDF viewer on macOS.
11. IrfanView: A fast, compact, and innovative graphics viewer for Windows.
12. XnView: A freeware utility for viewing and converting graphic files.
13. Online Image Viewers: Various online tools that allow you to upload and view bitmap files.

Bitmap files are widely supported and can be opened using a variety of software tools, ranging from basic image viewers like Microsoft Paint to professional image editing software like Adobe Photoshop. These files can also be opened and viewed across various operating systems, including Windows, macOS, and Linux. The choice of tool depends on your specific needs, such as viewing, editing, or sharing the image.

Save metafile options

To save reports or document layout files as a bitmap file:

1. On the "*Reportman print preview*" screen, select Save (Ctrl+S) – This will launch the "*Save metafile as*" screen.
2. Select the directory (folder) where you need to save this file, if necessary.
3. Enter a file name.
4. Select the "*Bitmap File (*.bmp)"* file type.
5. Click Save. The "*Bitmap properties*" screen is displayed.



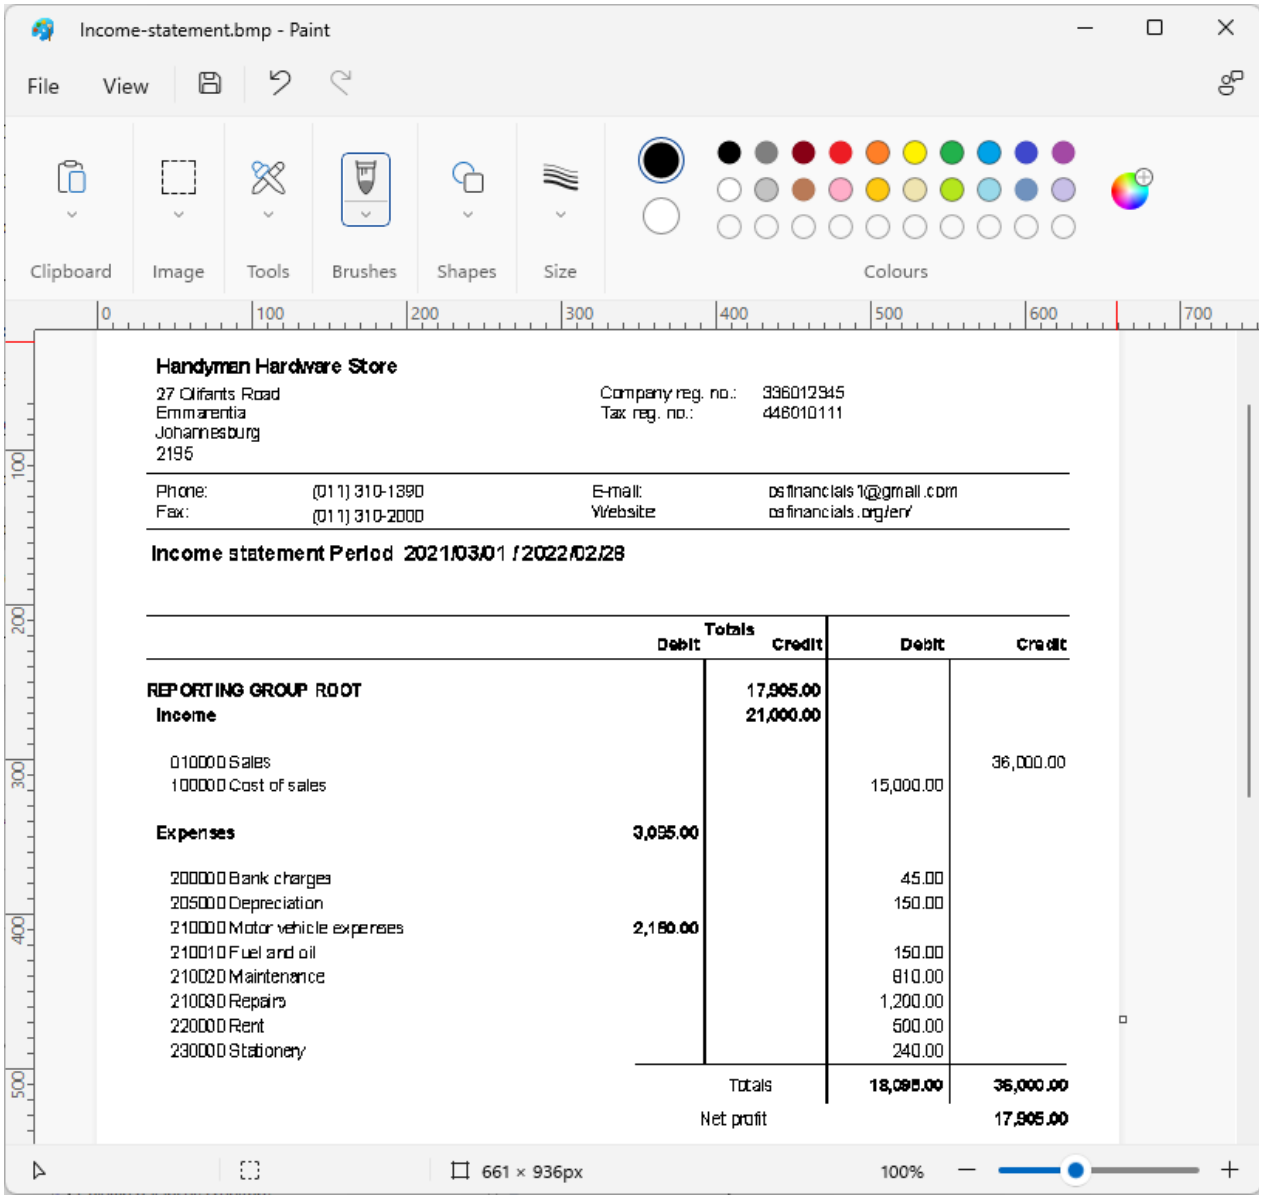
To view the OK and Cancel buttons, you need to resize the "Bitmap properties" screen

6. The default values is 100 dots per inch in both the horizontal and vertical resolution.
7. "*Monochrome*" is the default value. Leave this selected. It will create a bitmap image of the report or layout file.

These Bitmap image files may be much larger in size. For example, if an Invoice layout file is saved in the PDF file format, the size would be 277 KB (Kilobytes). The same Invoice layout file in the Bitmap format, could be as large as 3.56 MB (Megabytes).

Income statement - Bitmap file

An example of the "*Income statement*" saved as a Bitmap file, opened in "*Paint*", is as follows:



Created with the Standard Edition of HelpNDoc: Streamline your documentation process with HelpNDoc's WinHelp HLP to CHM conversion feature

Reportman output - Save metafile as svg

The "*Scalable Vector Graphics file*" type SVG file type extension is a is an *Extensible Markup Language* (XML)-based *vector image format* for *two-dimensional* graphics with support for interactivity,

SVG images and their related behaviours are defined in *XML* text files, which means they can be searched, indexed, scripted, and compressed.

There are a few SVG editors available to edit SVG files.

What apps or tools can be used to open svg files?

Some of the tools and apps that can be used to open SVG files, along with their cross-compatibility across different operating systems is listed as follows:

1. Web Browsers
    - Google Chrome: Windows, macOS, Linux, Android, iOS
    - Mozilla Firefox: Windows, macOS, Linux, Android, iOS
    - Microsoft Edge: Windows, macOS, Android, iOS
    - Safari: macOS, iOS
2. Image Viewers and Editors
    - Inkscape: Windows, macOS, Linux
    - Adobe Illustrator: Windows, macOS
    - GIMP: Windows, macOS, Linux
    - CorelDRAW: Windows, macOS
3. Office Suites
    - Microsoft Office (Word, PowerPoint, Excel): Windows, macOS
    - LibreOffice (Writer, Impress, Draw): Windows, macOS, Linux
4. Online Tools
    - SVG Viewer Online: Cross-platform (accessible via any modern web browser)
    - Cloud Services (Google Drive, Dropbox): Cross-platform (accessible via any modern web browser)
5. Mobile Apps
    - Adobe Illustrator Draw: iOS, Android
    - Inkscape Viewer**: Android
6. Command Line Tools
    - ImageMagick: Windows, macOS, Linux
7. Text Editors
    - Visual Studio Code: Windows, macOS, Linux

- Sublime Text: Windows, macOS, Linux

8. Other Tools
    - SVG-Edit: Cross-platform (accessible via any modern web browser)

This list should help you find the right tool for viewing and editing SVG files regardless of your operating system.

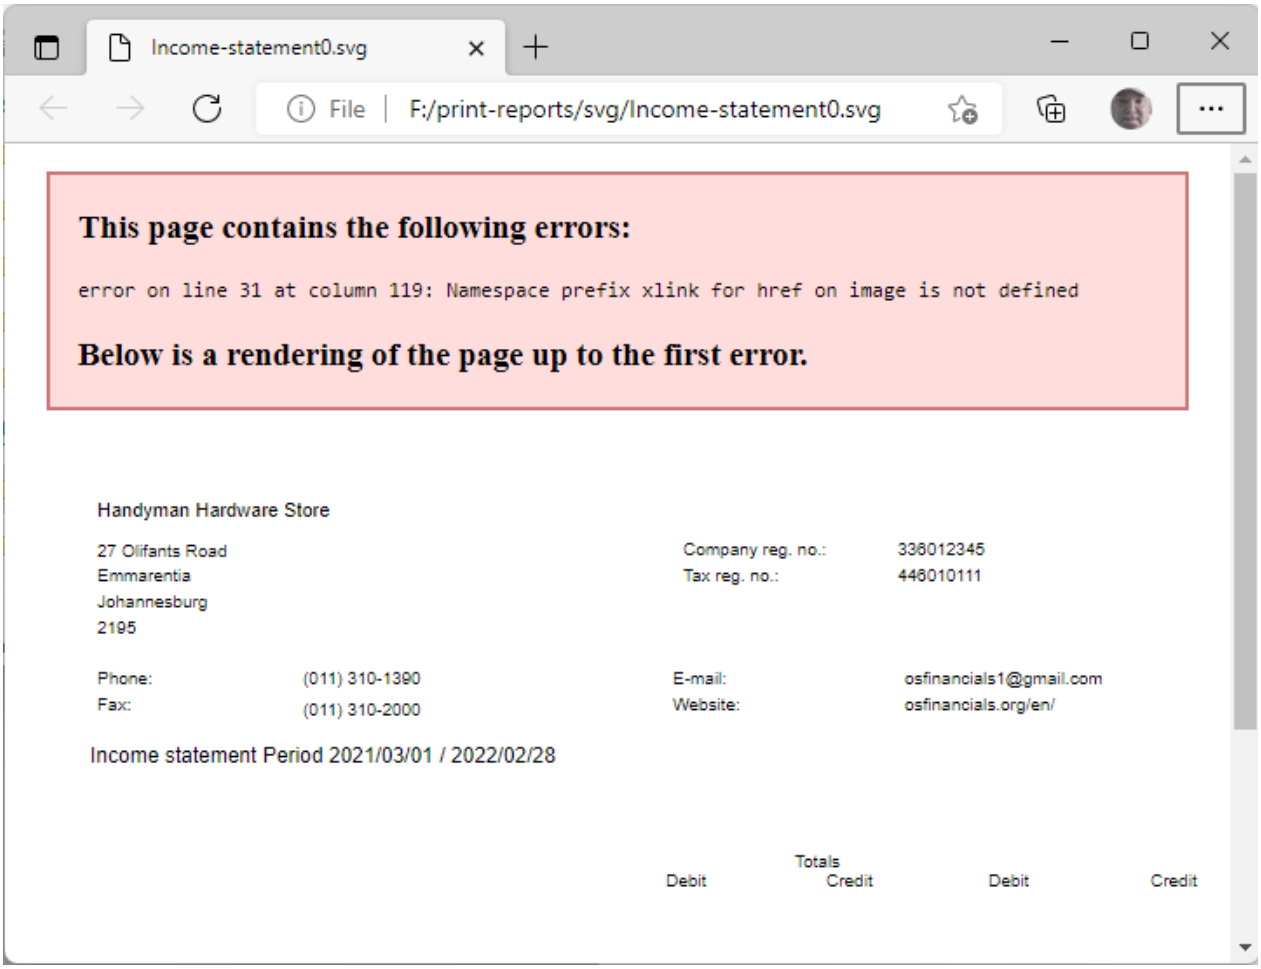
Save metafile options

To save reports or document layout files as a Scalable Vector Graphics file:

1. On the "*Reportman print preview*" screen, select Save (Ctrl+S) – This will launch the "*Save metafile as*" screen.
2. Select the directory (folder) where you need to save this file, if necessary.
3. Enter a file name.
4. Select the "*Scalable Vector Graphics (*.svg)*" file type.
5. Click Save.

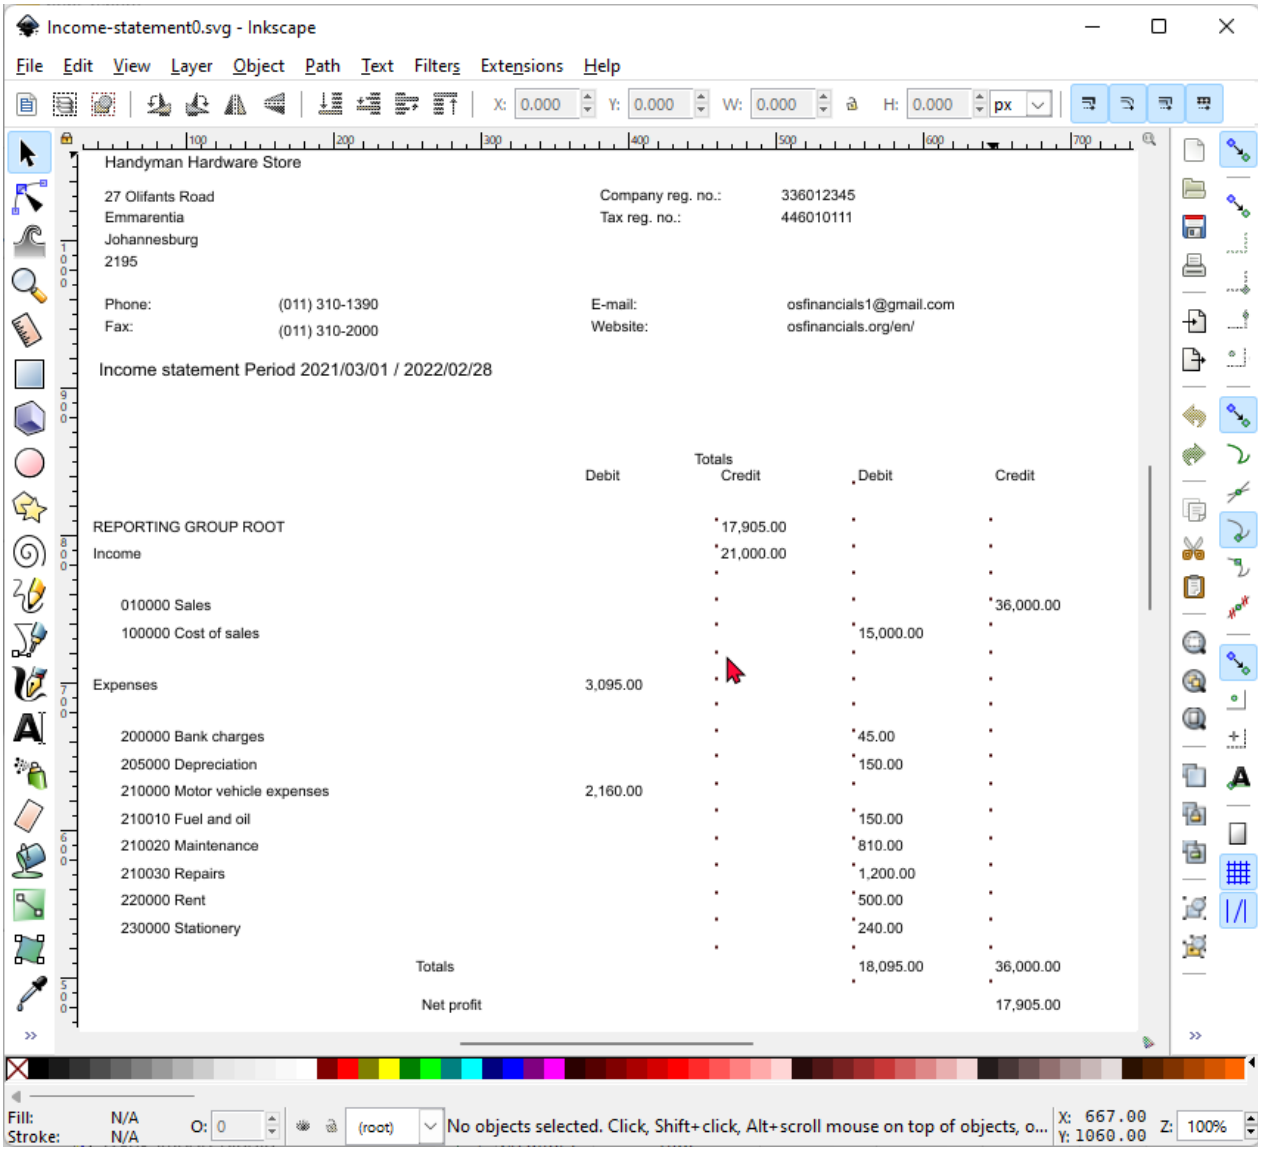
Income statement - SVG file

An example of the "*Income statement*" saved as a SVG file, opened in "*Microsoft Edge*", is as follows:



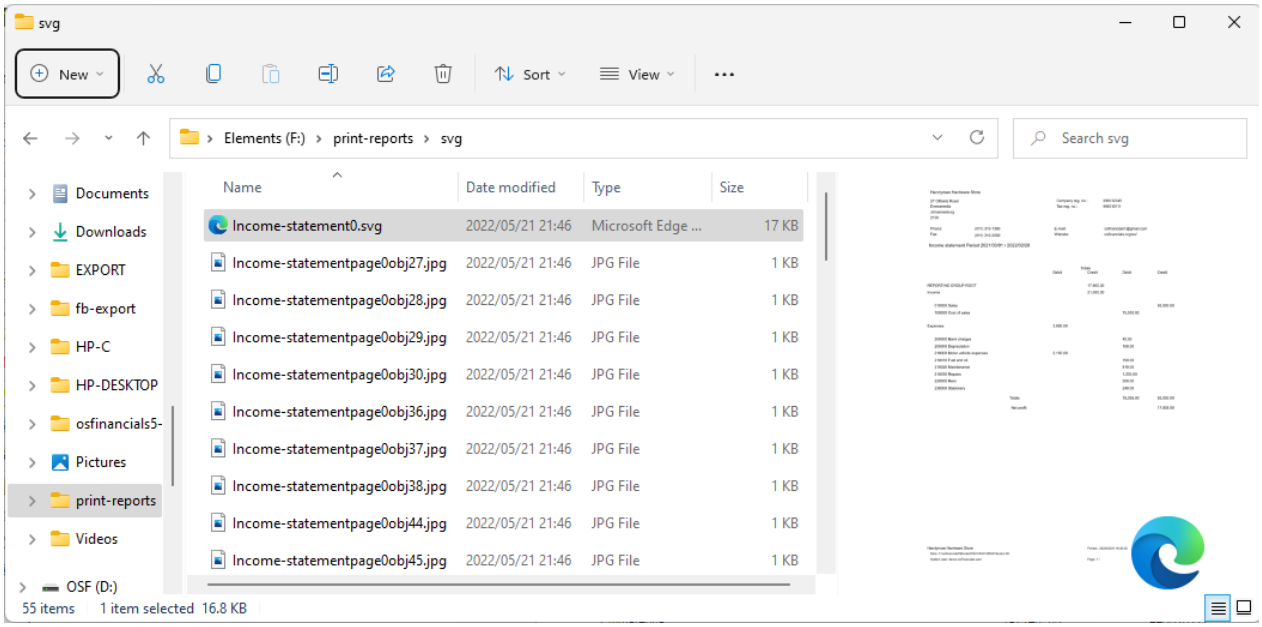
Since the Namespace links, by default renders an error as displayed in the "*Microsoft Edge*" Web browser, as per this example, as well as in other Web browsers ,such as Google Chrome, etc.), the report headers seem to be displayed correctly, but the data in the report details does not display.

Using a SVG editor such as Inkscape is professional quality vector graphics software which runs on Windows desktop, Linux, Mac OS X and most computers, the data displays correctly.



If a report is saved as a "*Scalable Vector Graphics file*" file format, it will save the file in separate pages. An example of a one page saved "*Scalable Vector Graphics file*" will also export numbering bullets (numbering) as objects for each page.

The vertical lines, separating the columns, in the "*detail*" report used to print the Trial balance, Income statement, Balance sheet, etc. is exported as bullets (numbering) objects.



Created with the Standard Edition of HelpNDoc: Streamline Your CHM Help File Creation with HelpNDoc

Reportman output - Save metafile as custom text file

The custom text file option does not save any data. It creates a blank text file.

Created with the Standard Edition of HelpNDoc: Easily create EPub books

Reportman output - Save metafile as metafiles

The following Meta file file types is available to save reports or layout files:

- Report Metafile *.rpmf
- Executable Meta file uncompressed *.rpmf
- Executable meta file *.exe

These File types could not be opened, if the required applications are not available on your system.

Executable meta file *.exe may produce a system error as follows:

"System Error. Code: 2.
The system cannot find the file specified"

Created with the Standard Edition of HelpNDoc: Free EPub producer

Ledger analyser

All processed (posted) transactions will be accumulated in the Ledger analyser 1 or Ledger analyser 2 (Reports ribbon). There are various ways in which the transactions may be viewed, exported and analysed.

The options, is as follows:

1. Transactions and balances – These are the balances of transactions as posted (updated to the ledger) in batches (journals), sales documents (i.e. Invoices, Point-of-Sale Invoices and Credit notes) and purchase documents (i.e. Purchases and Supplier returns).

   There are six (6) report types, which may be selected (i.e. Trial balance, Income statement, Balance sheet, Standard column balances, Budget vs actual and This year vs last year) which may be printed and exported to spreadsheets.

   In addition to this, there are 6 report types which may be exported to spreadsheets (i.e. Column balances, Column balances Debit/Credit, Column balances debtor, Column balances creditor, Column balances debtor Debit/Credit, and Column balances creditor Debit/Credit.)

2. Budget – Budget figures as entered in Budgets (Reports ribbon) or in the Setup → Accounts (Setup ribbon). This option, if selected, will list only the budget figures (Budget listing) in the Trial balance, Income statement, Balance sheet and Standard column balances report types. The Budget vs Actual is the budget performance report. It will list and compare the budget figures versus the actual posted (updated) transactions.

3. T-Account viewer – You may select a specific account, group, etc. to view the transactions in the T-Account viewer. To do this, right-click on a selected account, and select the "*Show details*" option on the context menu.

The T-Account viewer may also be selected on the T-Account viewer on the Reports ribbon. When launching it from the Reports ribbon, you may select the following:

- *Account – Select a specific account.*
- *From date and To date – Select a specific date or a range of dates to view data.*

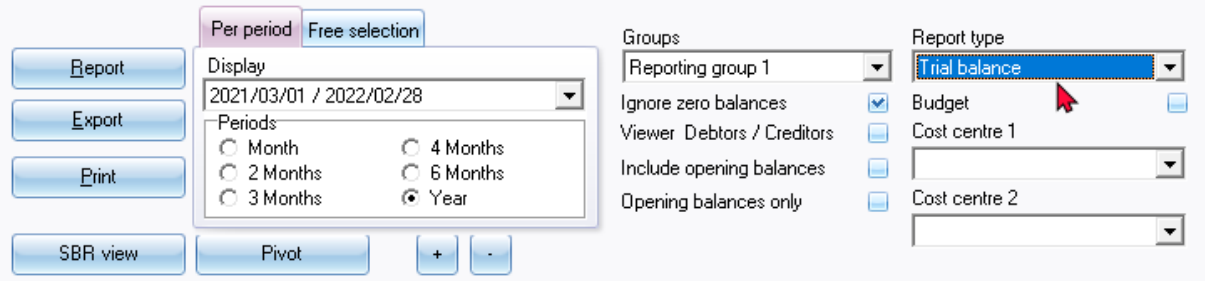
You may click on the following to get specific views of transactions:

- *Batch number (e.g. 10012, etc. automatically generated). This will list only the transactions for a specific batch (journal).*
- *Account code (e.g. G010000 Sales, B810000 ABC - Bank, T860010 Input VAT/GST/Sales tax, etc.). This will list the transactions for a specific account.*
- *Date – This will list the transactions for a specific date. If you double-click on a date, the "From date" and "To date" will be changed to the selected date.*

Ledger analyser options

To print reports in the Ledger analyser:

1. On the Reports ribbon, select Ledger analyser 1 / 2.



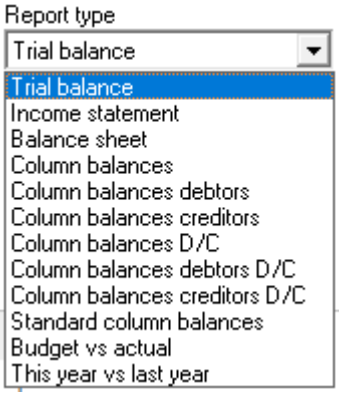
Ledger analyser 1 and Ledger analyser 2 Features implemented in osFinancials5/TurboCASH5:

- *SBR view - (Standard Business Reporting) Add SBR references for accounts and reporting groups in Setup → Accounts. Once the references are set, and generate reports on screen, click on the SBR view button, check, filter and copy to clipboard. Open your spreadsheet program, and copy the contents into your spreadsheet, save the data, etc.*
- *Pivot – View, filter and analyse your report on screen, view graphs, customise datasets and types of graphs.*
- *Zoom in / Zoom out + / - buttons added to resize (increase / decrease the font) the reports (i.e. Trial balance, Balance sheet and Income statement) on screen.*

2. Select the following options:

Option	*Description*

Report type:



1. *Trial balance – List of all accounts in the chart of accounts. This will include:*
   a) *- Income /* *- Expense;*
   b) *- Asset / Liability / Capital accounts;*
   c) *- Retained earnings / income;*
   d) *- Debtor's control; and*
   e) *- Creditor's control accounts.*
2. *Income statement -* *Income /* *Expenses – List only those accounts which is reported on the Income statement.*
3. *Balance sheet – List only those Accounts, which is reported in the Balance sheet. This will include:*
   a) *- Asset / Liability / Capital accounts;*
   b) *- Retained earnings / income;*
   c) *- Debtor's control; and*
   d) *- Creditor's control accounts.*
4. *Standard column balances – Lists the debit and credit account balances in the Trial balance and the Income statement and Balance sheet accounts in separate columns.*
5. *Budget vs actual – Lists the budget figures entered in the Setup → Accounts (Setup ribbon) versus the actual totals of all transactions in posted batches and documents.*
6. *This year vs last year – This will list the actual totals of all transactions in posted batches and documents in this year periods versus the actual totals of all transactions in posted batches and documents posted to last year periods (previous financial years).*
7. *Column balances – Lists all accounts in a spreadsheet view.*

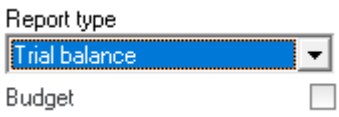
These are the Accounts reported in the Trial balance (this includes both the accounts reported in the Trial balance, Income statement and Balance sheet).

8. *Column balances debtors – Lists the balances of all accounts which is created and maintained in the Debtors (Default ribbon) in a spreadsheet view. The total of these accounts are reported in the Debtor's control account on the Trial balance and the Balance sheet.*
9. *Column balances creditors – Lists all accounts which is created and maintained in the Creditors (Default ribbon) in a spreadsheet view. The total of these accounts are reported in the Creditor's control account on the Trial balance and the Balance sheet.*
10. *Column balances D/C – Lists all debit and credit account balances in a spreadsheet view. These are the Accounts reported in the Trial balance (this includes both the accounts reported in the Trial balance, Income statement and Balance sheet).*
11. *Column balances debtors D/C – Lists the debit and credit account balances of all accounts which is created and maintained in the Debtors (Default ribbon) in a spreadsheet view. The total of these accounts are reported in the Debtor's control account on the Trial balance and the Balance sheet.*
12. *Column balances creditors D/C – Lists all debit and credit account balances which is created and maintained in the Creditors (Default ribbon) in a spreadsheet view. The total of these accounts are reported in the Creditor's control account on the Trial balance and the Balance sheet.*

Budget:

This will list all accounts for which budget figures were entered (and / or edited) in Budgets (Reports ribbon) or the Setup → Accounts (Setup ribbon).

If you wish to print a list of the Budget figures, tick the "Budget option" on the following report types:



- *Trial balance*
- *Income statement*

	• *Balance sheet*
Cost centre 1 / 2:	*The Cost centres (2 Groups) will only be available, if Cost centres are added in Groups (Setup ribbon); and if activated.*
Groups:	*Select one of the following options:* • *None – This is the default. This will list all accounts for the selected Report type according to the Account numbers (codes) in numerical order.* • *Reporting group 1 – Lists all accounts according to the Account reporting group 1 as created in Groups (Setup ribbon).* • *Reporting group 2 – Lists all accounts according to the Account reporting group 2 as created in Groups (Setup ribbon).* *Reporting group 1 and 2 – The sequence in which the groups and accounts are listed, may be changed in Groups. (Setup ribbon).* *This is done by selecting the groups on the list and use the Move up or Move down buttons.*
Period:	*Select "Per period" or "Free selection"* • *Per period – Select a period (Month, 2 Months, 3 Months, 4 Months, 6 Months or Year.* • *Free selection – You may select or enter any date or dates.*
From: *To:*	*The periods will automatically filter and display the periods matching the selected option in the "Per period" radio selection options.* *On the "Free selection" tab, you may select any date or dates in the "From date" and "To date" fields.*
Ignore zero balances:	*If this field is not selected, all accounts will be listed for the selected reports type. If you select (tick) this field; only those accounts with balances will be included in the report.*
Include opening balances:	*If this option is selected (ticked), it will include the opening balances of those accounts which have opening balances. If this option is not selected; the opening balances will not be included in the report.* *(Not applicable to the Income statement report type).*

Opening balances only:	*If the "Include opening balances" option is not selected; this option will not be displayed. If this option is available; you may select (tick) this option to include only the opening balances. All other balances will then be ignored.* *(Not applicable to the Income statement and Column balances report types).*
Viewer Debtors / Creditors:	*Do not select (tick) if you only need to view the balances of the Debtor's control account and Creditor's control account only. If this field is selected (ticked), it will list all the individual accounts in the following ledgers:* · *Debtor's ledger - all debtor (customer / client) accounts.* · *Creditor's ledger - all creditor (supplier / vendor) accounts.* *(Only applicable to the Trial balance and the Balance sheet report types).*
Report button:	*This will generate the report as per your selection of the report parameters.*
Export button:	*This will export the report to a comma separated value (*.csv) file format. The exported data will automatically be opened in your system's default spreadsheet (if configured) e.g. Excel.*
Print button:	*Click to print the report.*

3. Select a group or account and right-click on it. On the context menu, select the "*Show details*" option. This will launch the T-Account viewer.

The T-Account viewer may also be selected on the T-Account viewer option (Reports ribbon).

The Ledger analyser will not be automatically updated when batches or documents are updated (posted) to the ledger.

You need to click on the Report button to rebuild (refresh) the report.

Printing unposted batches in the Ledger analyser

The Ledger analyser does not include unposted batches and documents. You may view, print and export a Trial balance, Income statement and Balance sheet for unposted as well as posted

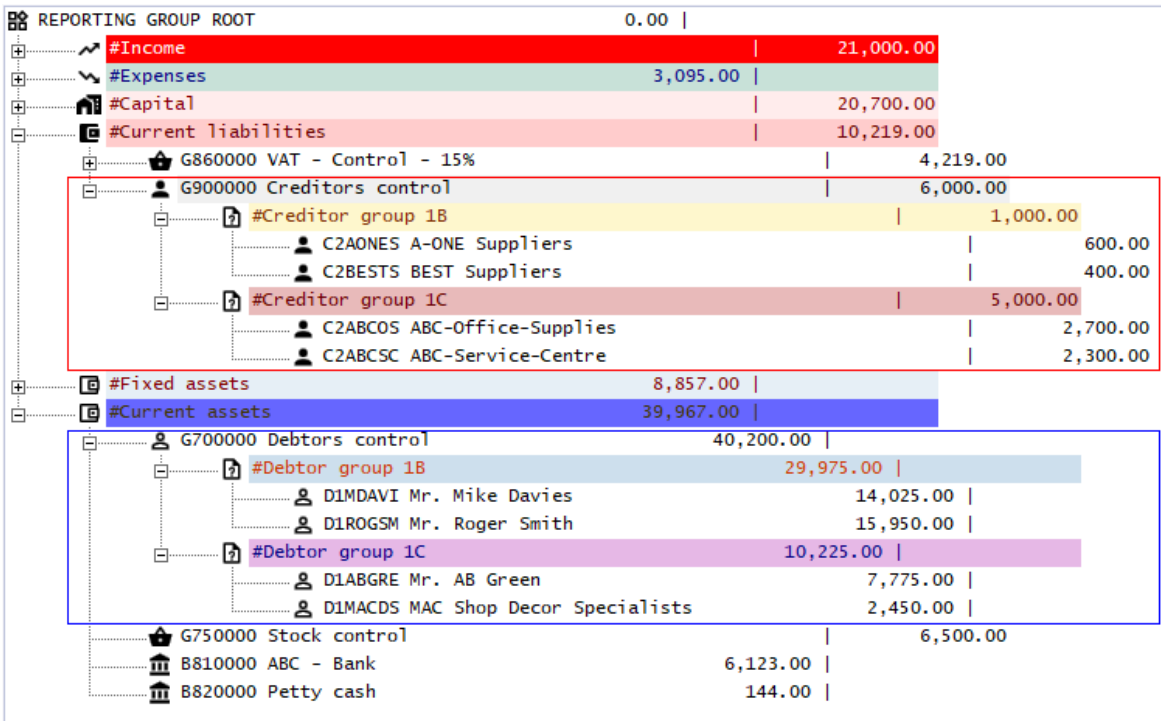
batches from the Batch entry (F2) context menu.

Viewer Debtors / Creditors - Trial balance / Balance sheet

The Trial balance and the Balance sheet report types allows you to select the Viewer Debtors / Creditors option. This will list the individual debtor (customer / client) account balances for the Debtor's control account and the individual creditor (supplier / vendor) account balances for the Creditor's control account.

Do not select (tick) if you only need to view only the control accounts of the Debtor and Creditor accounts.

An example, in the "*Trial balance*" and "*Balance sheet*", listing the individual debtor (customer / client) and creditor (supplier / vendor) accounts, is as follows:



Export to CSV Files

The export feature of the T-Account Analyser allows you to create export files of any view of the data to the Comma Separated Value (*.csv) file format. You may then use your favourite Spreadsheet program (e.g. OpenOfficeCalc or Microsoft Excel, etc.) to analyse, sort and filter the data.

You may also build charts in your Spreadsheet program and use it to make powerful presentations in your presentation program (e.g. OpenOfficeImpress, Microsoft Powerpoint, etc.).

To create a Ledger Export report:

1. Once finished, selecting your options, click on the Report button to update the Ledger analyser screen.
2. You may then click on the Export button. This will launch the *Save as* screen.
3. Select the folder in which you wish to save the file.
4. The default file name will be *ExportLedger*. Overtype this with your own, if necessary. If you do not do this, you may replace existing (previously exported) files.
5. Select the file type *Comma Separated Value* (*.csv).
6. Click on the Save button. This will automatically open (launch) the file in the program associated with the Comma Separated Value file type (e.g. OpenOfficeCalc or Microsoft Excel, etc.).

Ledger analyser - Trial balance

A Trial balance is a simple list of the debit and credit account balances in the general ledger. A Trial balance can be generated at any time, once the transactions are posted to the ledger accounts. It checks the arithmetic accuracy of the double entry accounting system as at a specific date. The total of all the debit balances must be equal to the total of credit balances.

The Trial balance will list all the debit and credit balances of all the Accounts (Income, Expenses, Assets, Capital and Liabilities) contained in osFinancials5/TurboCASH5 for a selected period, or as at a specified period. osFinancials5/TurboCASH5 stores all your account balances for up to two financial years. You may at any time generate a Trial balance for any accounting period for the current (This Year) and the previous financial year (Last Year), provided that you have posted (updated) transactions to the ledger accounts.

Types of Trial balances

The following Trial balances may be generated at different stages in the accounting process:

1. Pre-adjustment Trial balance - The debit and credit balances are listed, before any adjustments are made in the accounts, and it normally includes all balances of capital, assets, liabilities, income and expense accounts for any selected accounting period. For example, you may generate this Trial balance, after all your normal transactions in batches and documents have been updated and posted to the ledger. This may include any correction of errors on a general journal to correct any incorrect posted transactions.

2. Post-adjustment Trial balance - The debit and credit balances are listed, after the final adjustments are made in the accounts, and it normally includes all balances of capital, assets, liabilities, income and expense accounts.

3. Final Trial balance - The debit and credit balances are listed, after the final closing entries are done, when you have completed the Year-end process on the Do year end option (Setup ribbon). This Trial balance will not include income and expense accounts, but only the calculated net profit or loss in the Retained earnings ledger account. All nominal accounts (income and expense accounts) are closed off at the end of a financial year, and no balances are brought down to the new financial year.

This will list all accounts in the chart of accounts reported both in the Income statement (Income / Expense accounts), as well as the Balance sheet.

This will list the following account types:

- Income statement - Income / Expense accounts.
- Balance sheet - Assets, Liabilities and Capital. It includes the following account types, i.e.:
  - Bank accounts.
  - Tax accounts.
  - Retained income / earnings.
  - Creditor's control account.
  - Debtor's control account.

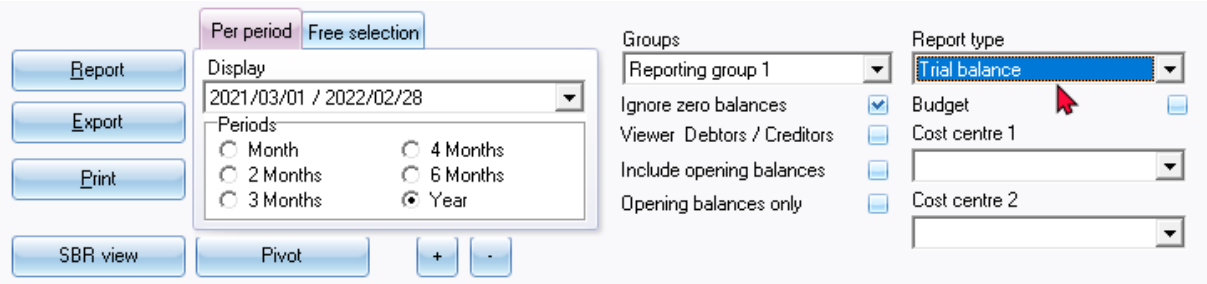
This report only includes batch and document transactions which are posted. Unposted batches and documents will be NOT be included in this report.

To view a list of unposted batches and documents, which is not updated to the ledger, go to Input → Checking unposted items (Default ribbon).

Trial balance options

To print a Trial balance:

1. On the Reports ribbon, select Ledger analyser 1 or Ledger analyser 2.
2. Select the "*Trial balance*" report type.



3. Per period - Select a period (Month, 2 Months, 3 Months, 4 Months, 6 Months or Year).

> *You may click on the "Free selection" tab. You may select or enter any date or dates, which you need to include in the "Trial balance".*

4. Groups - "*None*" is the default option. You may select "*Reporting group 1*" or "*Reporting group 2*".

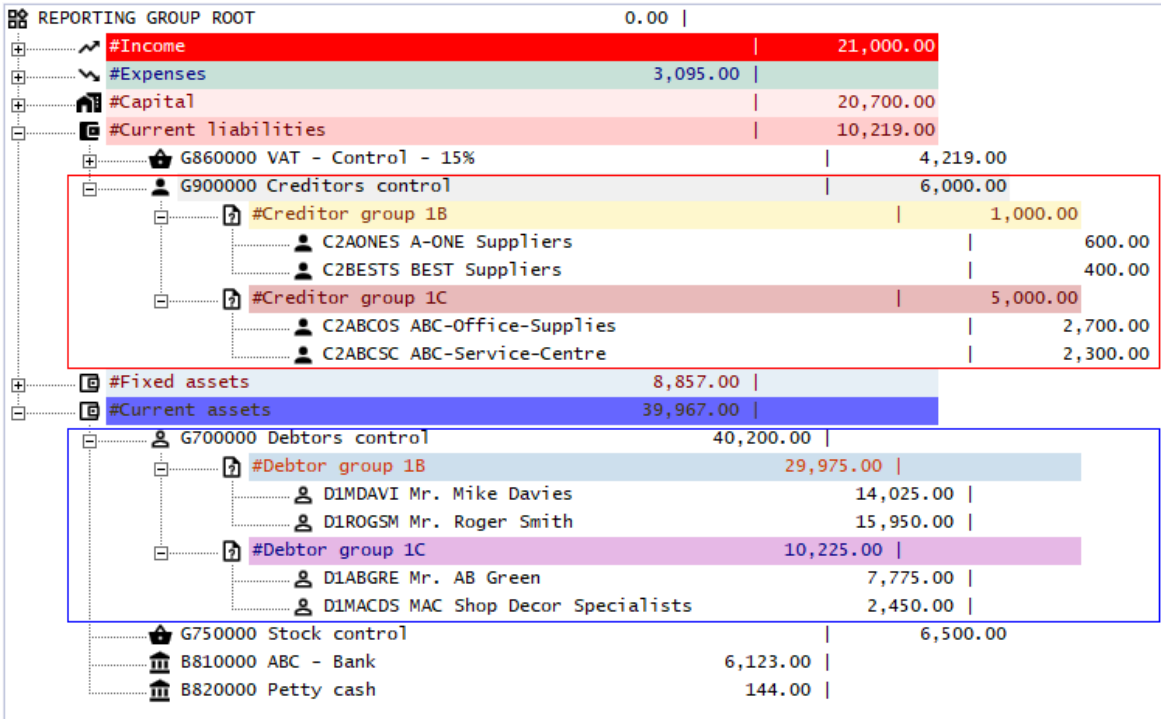
> *If you have created two (2) Reporting groups (Setup → Groups), you may have different views of your data. For example the Group options:*
>
> - *None - Lists all accounts according to account code.*
> - *Reporting group 1 - List all accounts according to the reporting group (e.g. Income + Expenses + Capital + Current liabilities + Fixed assets + Current assets)*
> - *Reporting group 2 - List all accounts according to the reporting group (e.g. Fixed assets + Current assets + Capital + Current liabilities + Income + Expenses)*

> *To change your view of the Accounting groups , select the groups and use the Move up and Move down buttons to change the sequence.*
>
> *This will determine the sequence in which your Groups are listed on the Setup → Accounts option on the Setup ribbon and on the Ledger analyser is displayed, when Reporting group 1 or Reporting group 2 is selected.*

5. Ignore zero balances - If this field is not selected, all accounts will be listed for the Trial balance. If you select (tick) this field; only those accounts with balances will be included in the "*Trial balance*".
6. Viewer Debtors / Creditors - Do not select (tick) if you only need to list only the control accounts of

the Debtor (customer / client) and Creditor (supplier / vendor) accounts. If this field is selected (ticked), it will list the individual debtor (customer / client) and creditor (supplier / vendor) accounts.

> *The Trial balance and the Balance sheet report types allows you to select the Viewer Debtors / Creditors option.*
>
> *Tick this option to show the break down of the Debtor (customer / client) accounts in the Debtor's control account and the break down of the Creditor (supplier / vendor) accounts in the Creditor's control account. This will list all individual debtor (customer / client) for the debtor's control account and creditor (supplier / vendor) account balances for the creditor's control account.*



7. Include opening balances - If this option is selected (ticked), it will include the opening balances of those accounts which have opening balances. If this option is not selected; the opening balances will not be included in the "*Trial balance*".

8. *Opening balances only* - This option will only be available if the "*Include opening balances*" option is selected. You can select (check) this option to include only the opening balances. All other balances will then be ignored.

9. Budget - Leave this option blank to include the actual posted (updated) transactions in the "*Trial balance*".

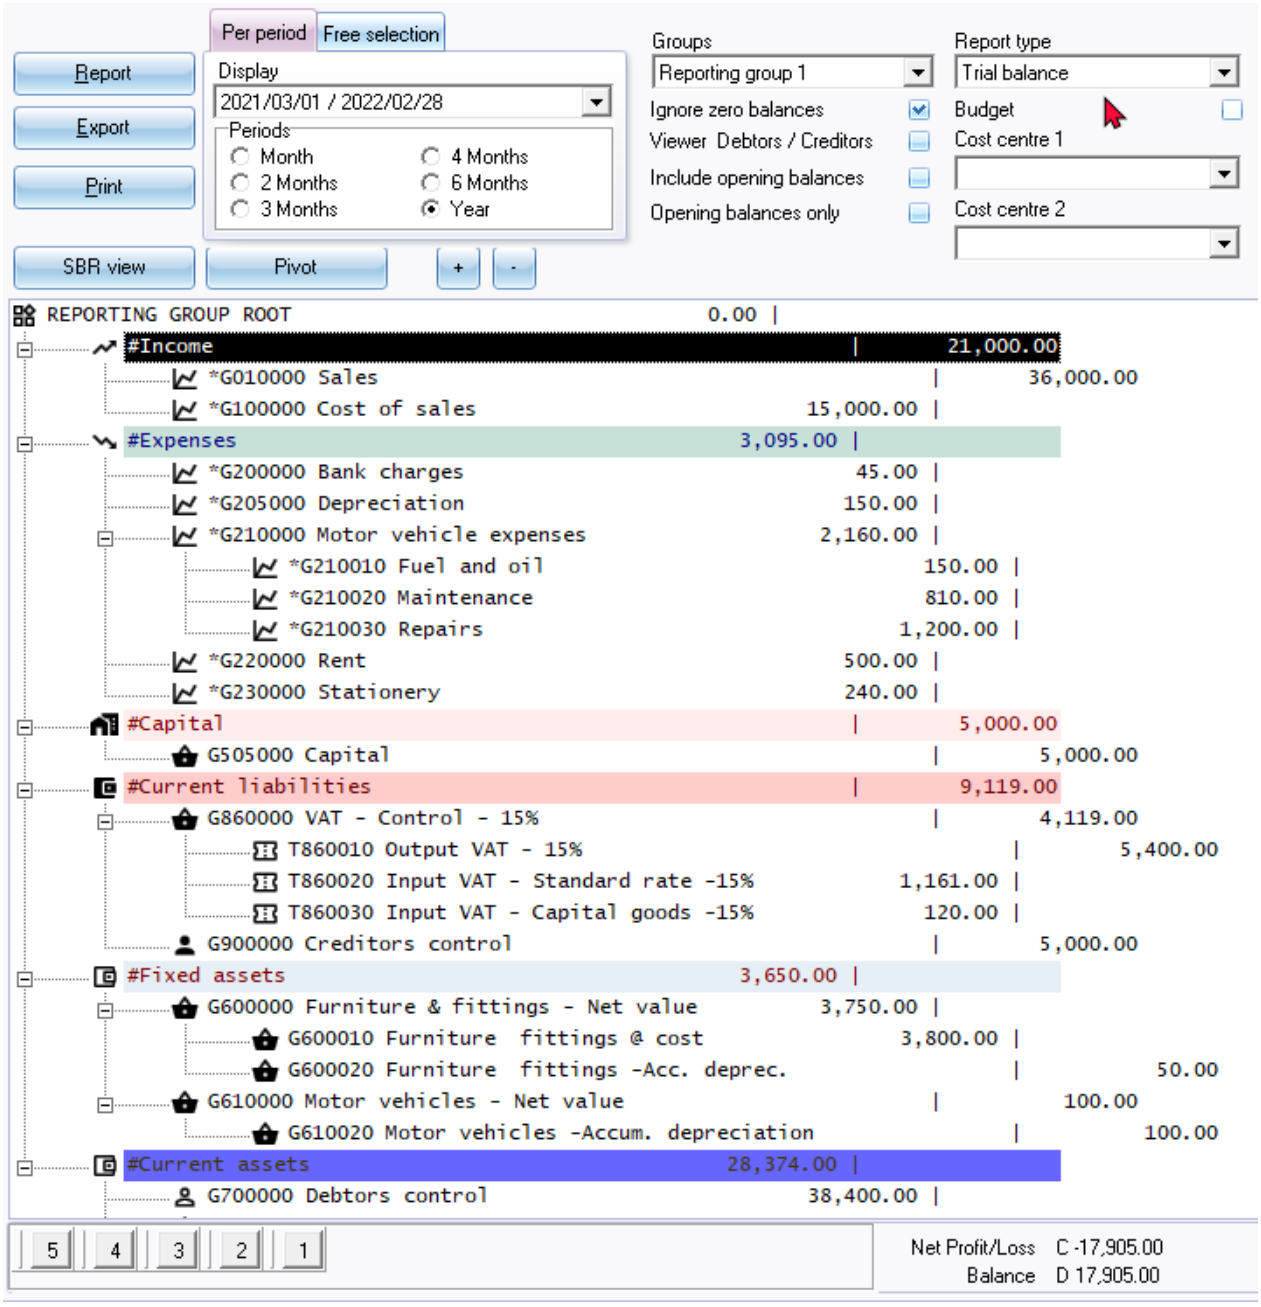
> *The "Budget" option, if selected, will list only the budget figures (Budget listing) in the Trial balance, Income statement, Balance sheet and Standard column balances report types (if budget figures were entered in the Budgets option (Reports ribbon) or Setup → Accounts option on the Setup ribbon).*

10. Cost centre 1 and Cost centre 2 - The Cost centres (2 Groups) will only be available, if Cost centres are added in Setup → Groups on the Setup ribbon; and if activated.

11. Click on the Report button. This will build or refresh the "*Trial balance*" with the selected options.

Example : Trial balance

An example of the "*Trial balance - Reporting group 1"* report type, is displayed as follows:



Buttons 5, 4, 3, 2 and 1 at the bottom of the report - is shortcut keys to the last accessed T-Account viewer options or Pivot options. These shortcuts will be cleared when you close active forms, or when you open the

Set of Books.

If you have created two (2) Reporting groups (Setup → Groups), you may have different views of your data. For example the Group options:

- *None - Lists all accounts according to account code.*
- *Reporting group 1 - List all accounts according to the reporting group (e.g. Income + Expenses + Capital + Current liabilities + Fixed assets + Current assets)*
- *Reporting group 2 - List all accounts according to the reporting group (e.g. Fixed assets + Current assets + Capital + Current liabilities + Income + Expenses)*

To change your view of the Accounting groups , select the groups and use the Move up and Move down buttons to change the sequence.

This will determine the sequence in which your Groups are listed on the Setup → Accounts option on the Setup ribbon and on the Ledger analyser is displayed, when Reporting group 1 or Reporting group 2 is selected.

Click on the Print button.

Printed example : Trial balance

An example of the printed "*Trial balance - Reporting group 1"*, is displayed as follows:

To save the Trial balance as a PDF file:

1. *On the "Reportman print preview" screen, select Save (Ctrl+S)* *– This will launch the "Save metafile as" screen.*
2. *Select the directory (folder) where you need to save this file, if necessary.*
3. *Enter a file name.*
4. *Select the "PDF File – compressed" default file type.*
5. *Click Save.*

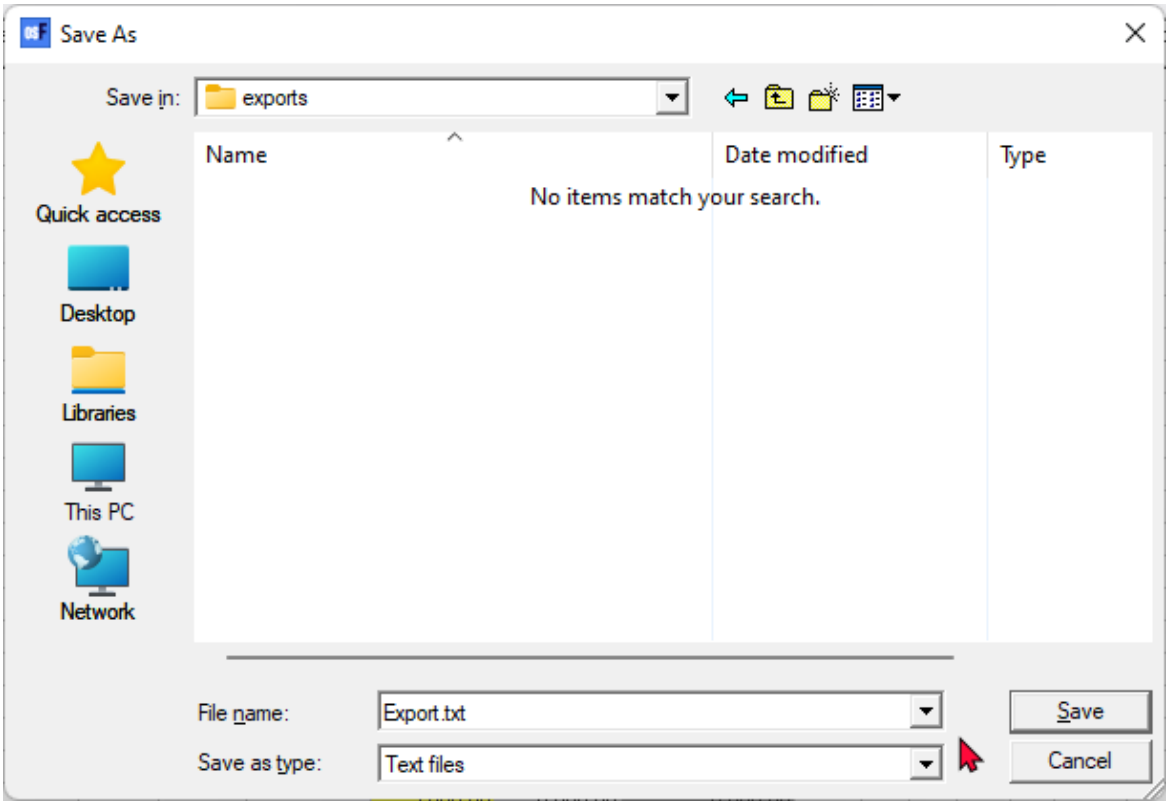
To change your view of the Accounting groups, select the groups and use the Move up and Move down buttons to change the sequence.

This will determine the sequence in which your Groups are listed on the Setup → Accounts and on the Reports → Ledger analyser 1 is displayed, when Reporting group 1 or Reporting group 2 is selected.

Spreadsheet example : Trial balance

To create a Trial balance - Export file:

1. Click on the Export button. This will launch the "*Save as*" screen.



2. Select the folder in which you wish to save the file.

3. The default file name will be "*Export.txt*". Overtype this with your own name.

> *If you do not enter and save the Export.txt file name, you may replace existing (previously exported) files.*
>
> *Of an existing exported file is opened, and you are trying to save a export file with the same name, a similar error message as the following will be displayed:*
>
> Cannot create file "D:\exports\Export.txt". The process cannot access the file because it is being used by another process.

4. Click on the Save button.

5. This will automatically open (launch) the file in your system's default text editor program associated with value text file type.

Ledger analyser - Income statement

The Income statement will list all the balances of your accounts which are created as an Income / Expense type in the Setup → Accounts menu, and will reflect your net profit or loss for a specific period. The Income statement has two main sections (financial categories), i.e. Income and Expenses. When the Income exceeds the Expenses, the report will reflect the net profit. If the Expenses exceed the Income, the report will reflect a net loss.

The Income statement is used to manage and report on your businesses' income and expenses. osFinancials5/TurboCASH5 allows you to compare the actual figures in the Income statement with one of the following comparative figures:

- Last year's actual figures, if available. The financial performance of the actual figures may be compared to last year' actual figures for the selected periods.

- Budget figures, if entered in the Budgets option (Reports ribbon) or Setup → Accounts option (Setup ribbon). If the budgeted figures are entered correctly, you may compare the actual income received and expenses paid to the budgeted figures, to determine whether your income is on track, or where you are over spending or under spending.

This will list the following account types and account groups:

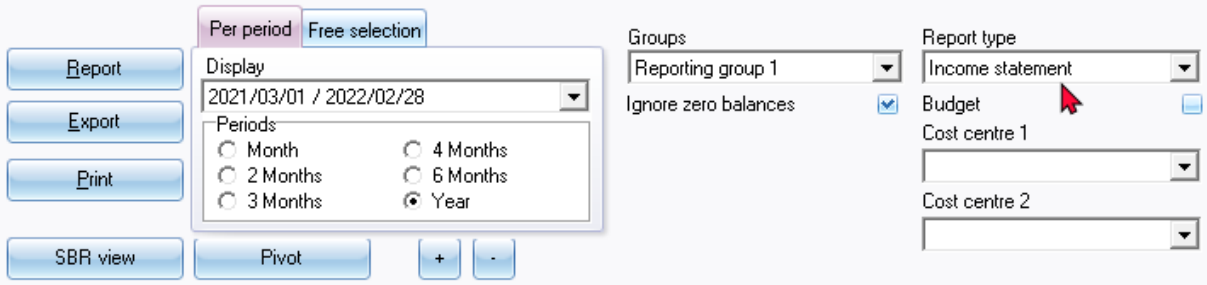
- Income accounts.
- Expense accounts.

> *This report only includes batch and document transactions which are posted. Unposted batches and documents will be NOT be included in this report.*
>
> *To view a list of unposted batches and documents, which is not updated to the ledger, go to Input → Checking unposted items (Default ribbon).*

Income statement options

To print an Income statement:

1. On the Reports ribbon, select Ledger analyser 1 or Ledger analyser 2.
2. Select the "*Income statement*" report type.



3. Per period - Select a period (Month, 2 Months, 3 Months, 4 Months, 6 Months or Year).

> *You may click on the "Free selection" tab. You may select or enter any date or dates, which you need to include in the Income statement.*

4. Groups - "*None*" is the default option. You may select "*Reporting group 1*" or "*Reporting group 2*".

> *If you have created two (2) Reporting groups (Setup → Groups), you may have different views of your data. For example the Group options:*

- *None - Lists all accounts according to account code.*
- *Reporting group 1 - List all accounts according to the reporting group (e.g. Income + Expenses)*
- *Reporting group 2 - List all accounts according to the reporting group (e.g. Income + Expenses)*

To change your view of the Accounting groups , select the groups and use the Move up and Move down buttons to change the sequence.

This will determine the sequence in which your Groups are listed on the Setup → Accounts option on the Setup ribbon and on the Ledger analyser is displayed, when Reporting group 1 or Reporting group 2 is selected.

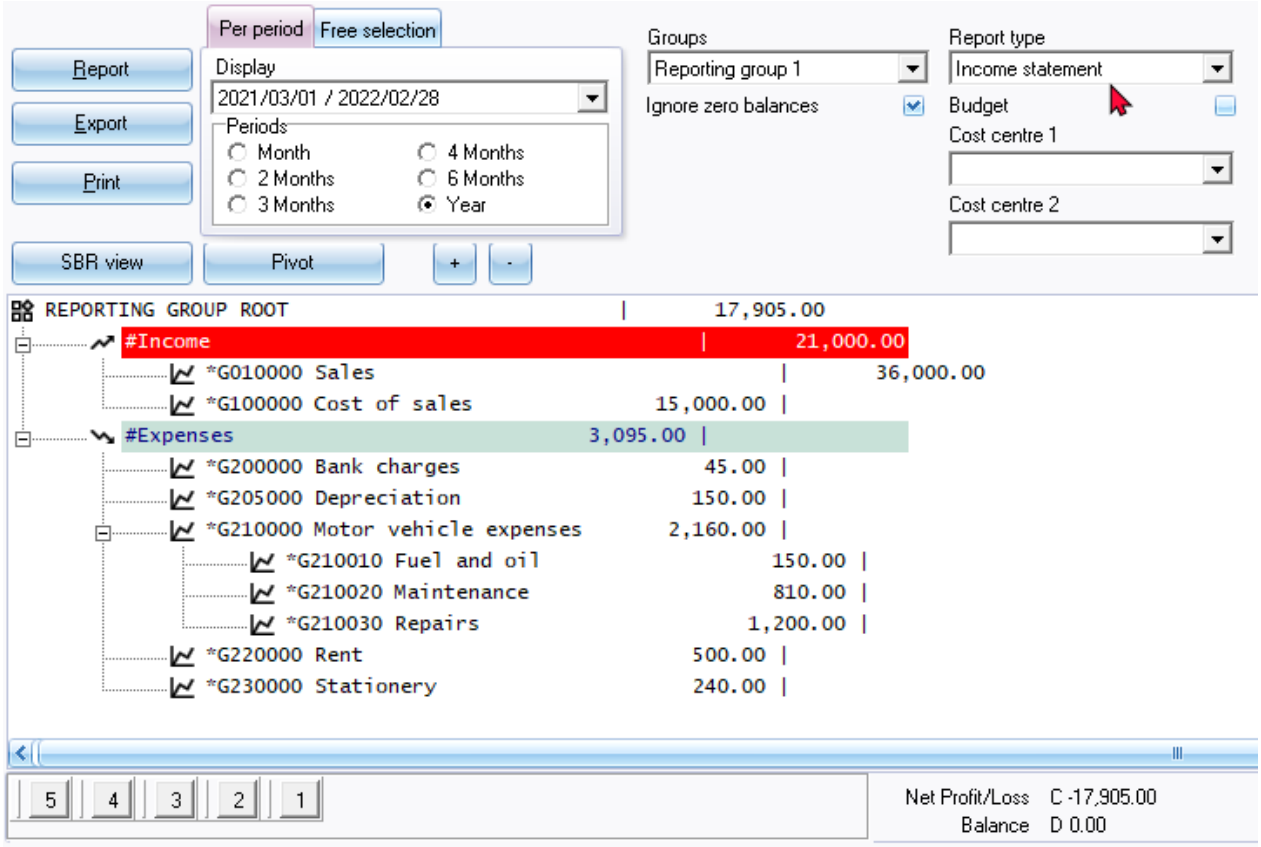
5. Ignore zero balances - If this field is not selected, all income and expense accounts will be listed for the Income statement balance. If you select (tick) this field; only those income and expense accounts with balances will be included in the Income statement.
6. Budget - Leave this option blank to include the actual posted (updated) transactions in the Income statement.

The "Budget" option, if selected, will list only the budget figures (Budget listing) in the Trial balance, Income statement, Balance sheet and Standard column balances report types (if budget figures were entered in the Budgets option (Reports ribbon) or Setup → Accounts option on the Setup ribbon).

7. Cost centre 1 and Cost centre 2 - The Cost centres (2 Groups) will only be available, if Cost centres are added in Setup → Groups on the Setup ribbon; and if activated.
8. Click on the Report button. This will build or refresh the Income statement with the selected options.

Example : Income statement

An example of the "*Income statement - Reporting group 1"* report type, is displayed as follows:



Buttons 5, 4, 3, 2 and 1 at the bottom of the report - is shortcut keys to the last accessed T-Account viewer options or Pivot options. These shortcuts will be cleared when you close active forms, or when you open the Set of Books.

Ledger analyser - Balance sheet

The Balance sheet is a statement of all Assets and Liabilities of a business at a particular time. It has three main components, i.e. Assets, Liabilities and Capital. This report will reflect the owners' interest in the business, as well as all Liabilities and Assets.

The balancing figure is the Net Profit or Loss. A Net Profit is displayed, when the Income account balances are more than the Expense account balances. A Net Loss is displayed, when the Expense account balances are more than the Income account balances.

The Balance sheet will list all the balances of your accounts which are not created as Income / Expense types in the Setup → Accounts option on the Setup ribbon).

The Reporting groups (on the Account Group 1 tab in the Groups option on the Setup ribbon) should be linked to the Assets, Capital and Liabilities Financial categories (in the Setup → Financial categories menu on the (Setup ribbon), before this report is generated.

This will list all accounts in the chart of accounts reported only in the Balance sheet.

Balance sheet - Assets, Liabilities and Capital. It includes the following account types, i.e.:

- Bank accounts
- Tax accounts
- Retained income / earnings.
- Creditor's control account.
- Debtor's control account.

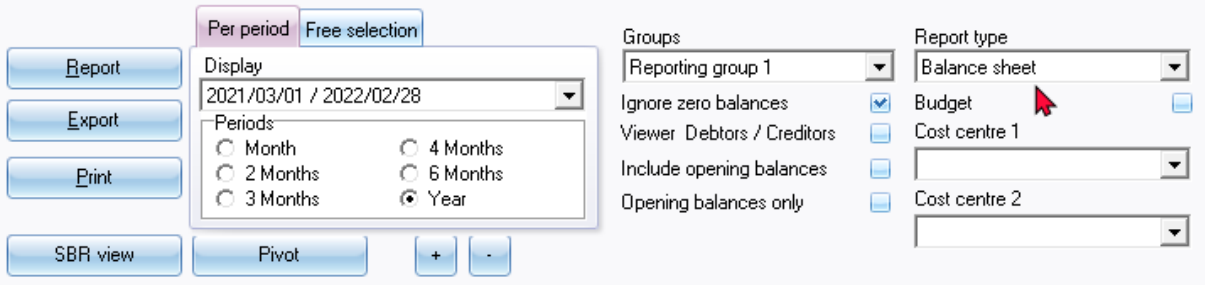
This report only includes batch and document transactions which are posted. Unposted batches and documents will be NOT be included in this report.

To view a list of unposted batches and documents, which is not updated to the ledger, go to Input → Checking unposted items (Default ribbon).

Balance sheet options

To print a Balance sheet:

1. On the Reports ribbon, select Ledger analyser 1 or Ledger analyser 2.
2. Select the "*Balance sheet*" report type.



3. Per period - Select a period (Month, 2 Months, 3 Months, 4 Months, 6 Months or Year).

You may click on the "Free selection" tab. You may select or enter any date or dates, which you need to include the Balance sheet.

4. *Groups* - "*None*" is the default option. You may select "*Reporting group 1*" or "*Reporting group 2*".

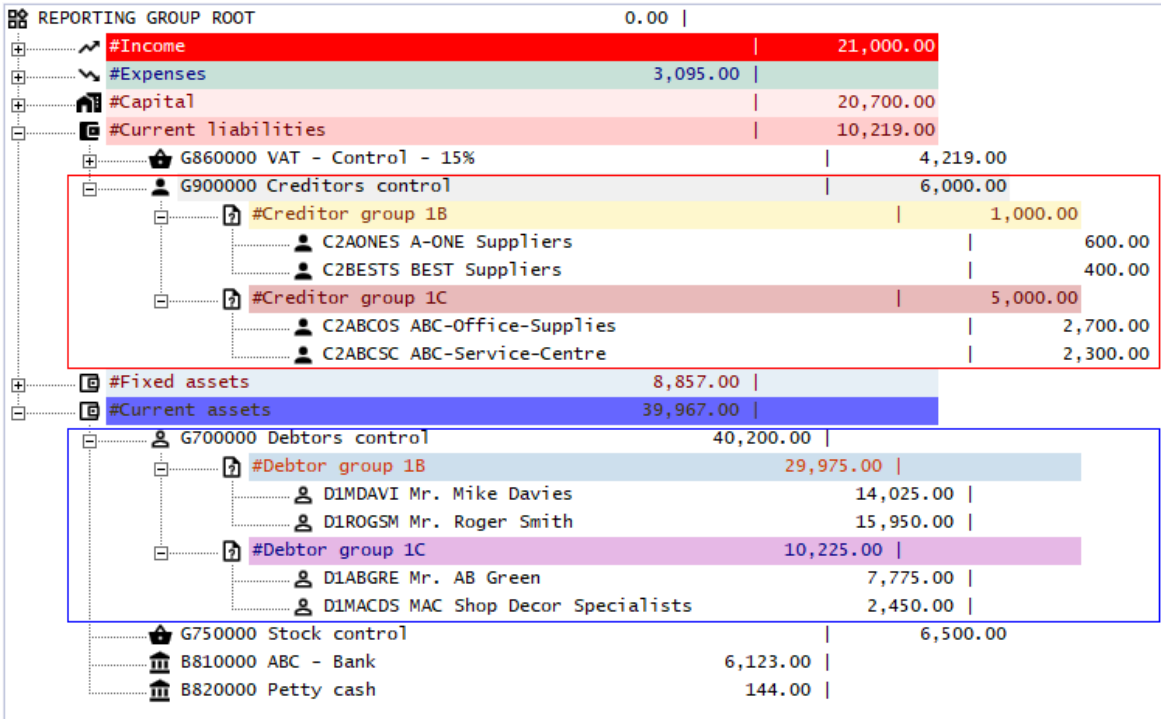
> *If you have created two (2) Reporting groups (Setup → Groups), you may have different views of your data. For example the Group options:*
>
> - *None - Lists all accounts according to account code.*
> - *Reporting group 1 - List all accounts according to the reporting group (e.g. Capital + Current liabilities + Fixed assets + Current assets)*
> - *Reporting group 2 - List all accounts according to the reporting group (e.g. Fixed assets + Current assets + Capital + Current liabilities)*

> *To change your view of the Accounting groups , select the groups and use the Move up and Move down buttons to change the sequence.*
>
> *This will determine the sequence in which your Groups are listed on the Setup → Accounts option on the Setup ribbon and on the Ledger analyser is displayed, when Reporting group 1 or Reporting group 2 is selected.*

5. Ignore zero balances - If this field is not selected, all accounts will be listed for the Balance sheet. If you select (tick) this field; only those accounts with balances will be included in the Balance sheet.

6. Viewer Debtors / Creditors - Do not select (tick) if you only need to list only the control accounts of the Debtor (customer / client) and Creditor (supplier / vendor) accounts. If this field is selected (ticked), it will list all the individual debtor (customer / client) and creditor (supplier / vendor) accounts.

> *The Trial balance and the Balance sheet report types allows you to select the Viewer Debtors / Creditors option.*
>
> *Tick this option to show the break down of the Debtor (customer / client) accounts in the Debtor's control account and the break down of the Creditor (supplier / vendor) accounts in the Creditor's control account. This will list all individual debtor (customer / client) for the debtor's control account and creditor (supplier / vendor) account balances for the creditor's control account.*



7. Include opening balances - If this option is selected (ticked), it will include the opening balances of those accounts which have opening balances. If this option is not selected; the opening balances will not be included in the Balance sheet.

8. Opening balances only - This option will only be available if the "*Include opening balances*" option is selected. You can select (check) this option to include only the opening balances. All other balances will then be ignored.

9. Budget - Leave this option blank to include the actual posted (updated) transactions in the Balance sheet.

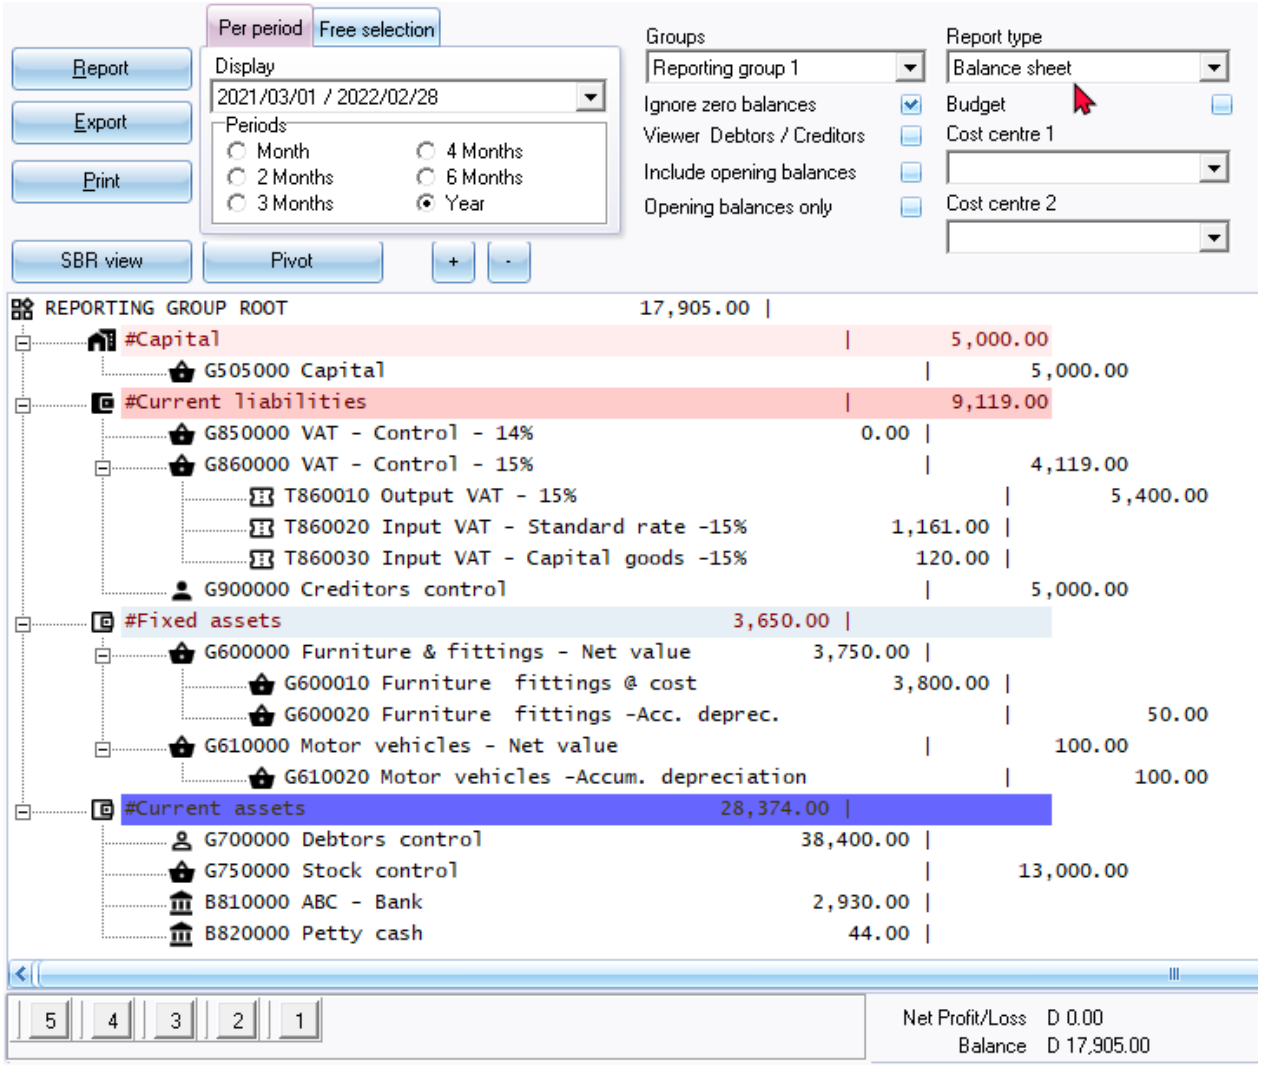
> *The "Budget" option, if selected, will list only the budget figures (Budget listing) in the Trial balance, Income statement, Balance sheet and Standard column balances report types (if budget figures were entered in the Budgets option (Reports ribbon) or Setup → Accounts option on the Setup ribbon).*

10. Cost centre 1 and Cost centre 2 - The Cost centres (2 Groups) will only be available, if Cost centres are added in Setup → Groups on the Setup ribbon; and if activated.

11. Click on the Report button. This will build or refresh the Balance sheet with the selected options.

Example : Balance sheet

An example of the "*Balance sheet - Reporting group 1"* report type, is displayed as follows:



Buttons 5, 4, 3, 2 and 1 at the bottom of the report - is shortcut keys to the last accessed T-Account viewer options or Pivot options. These shortcuts will be cleared when you close active forms, or when you open the Set of Books.

If you have created two (2) Reporting groups (in Setup → Groups (Setup ribbon)), you may have different views of your data. For example the Group options:

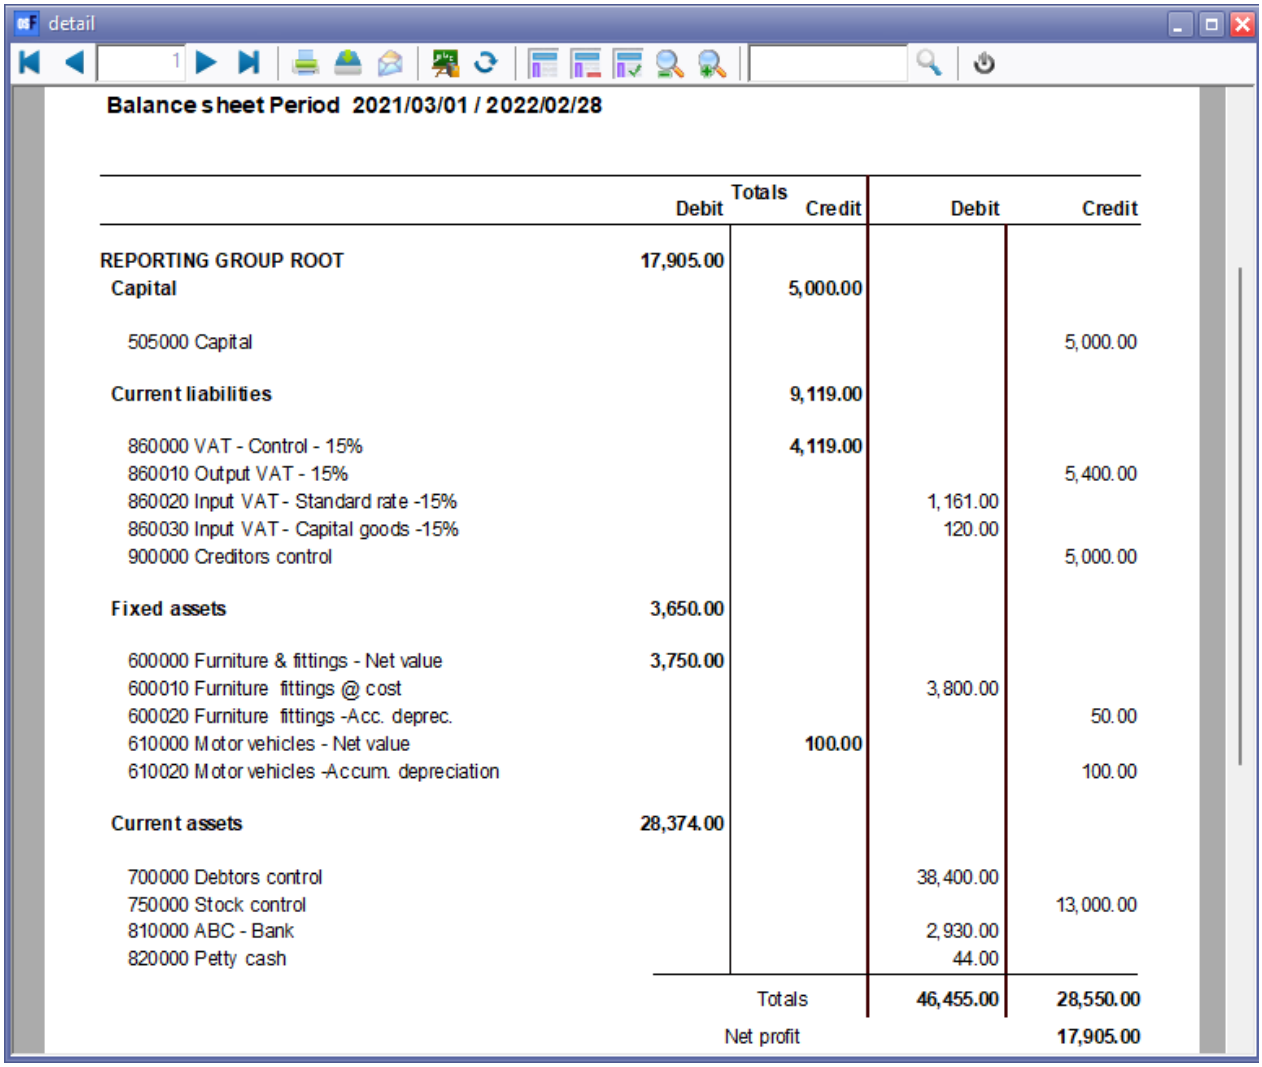
- None - Lists all accounts according to account code.
- Reporting group 1 - List all accounts according to the reporting group (e.g. Capital + Current Liabilities + Fixed Assets + Current Assets)
- Reporting group 2 - List all accounts according to the reporting group (e.g. Fixed Assets + Current Assets + Capital + Current Liabilities)

To change your view of the Accounting groups , select the groups and use the Move up and Move down buttons to change the sequence.

This will determine the sequence in which your Groups are listed on the Setup → *Accounts option on the Setup ribbon and on the Ledger analyser is displayed, when Reporting group 1 or Reporting group 2 is selected.*

Printed example : Balance sheet

Click on the Print button. An example of the printed "*Balance sheet - Reporting group 1"*, is displayed as follows:



detail

Balance sheet Period 2021/03/01 / 2022/02/28

	Totals Debit	Credit	Debit	Credit
REPORTING GROUP ROOT	**17,905.00**			
Capital		**5,000.00**		
505000 Capital				5,000.00
Current liabilities		**9,119.00**		
860000 VAT - Control - 15%		**4,119.00**		
860010 Output VAT - 15%				5,400.00
860020 Input VAT - Standard rate -15%			1,161.00	
860030 Input VAT - Capital goods -15%			120.00	
900000 Creditors control				5,000.00
Fixed assets	**3,650.00**			
600000 Furniture & fittings - Net value	**3,750.00**			
600010 Furniture fittings @ cost			3,800.00	
600020 Furniture fittings -Acc. deprec.				50.00
610000 Motor vehicles - Net value		**100.00**		
610020 Motor vehicles -Accum. depreciation				100.00
Current assets	**28,374.00**

		Totals	**46,455.00**	**28,550.00**
		Net profit		**17,905.00**

To save the Balance sheet as a PDF file:

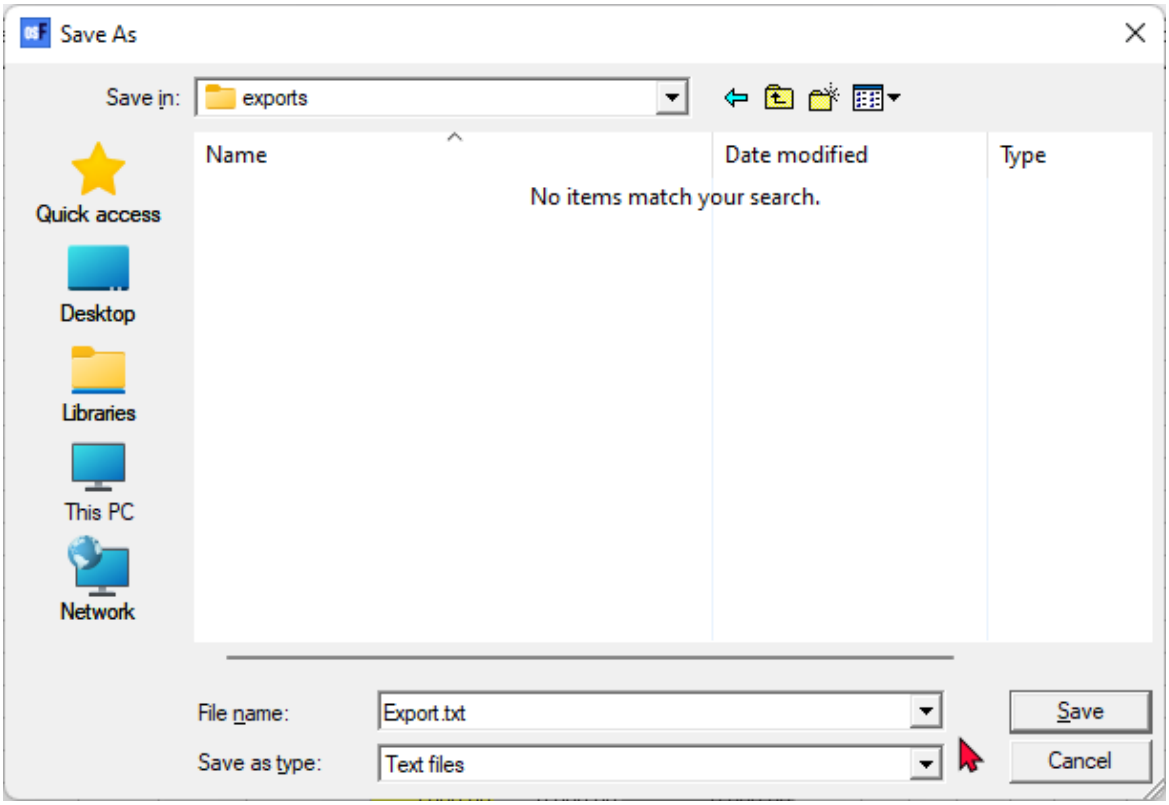
1. *On the "Reportman print preview" screen, select Save (Ctrl+S)* *– This will launch the "Save metafile as" screen.*
2. *Select the directory (folder) where you need to save this file, if necessary.*
3. *Enter a file name.*

4. *Select the "PDF File – compressed" default file type.*
5. *Click Save.*

Spreadsheet example : Balance sheet

To create a Balance sheet - Export file:

1. Click on the Export button. This will launch the "*Save as*" screen.



2. Select the folder in which you wish to save the file.
3. The default file name will be "*Export.txt*". Overtype this with your own name.

If you do not enter and save the Export.txt file name, you may replace existing (previously exported) files.

Of an existing exported file is opened, and you are trying to save a export file with the same name, a similar error message as the following will be displayed:

> Cannot create file "D:\exports\Export.txt". The process cannot access the file because it is being used by another process.

4. Click on the Save button.

5. This will automatically open (launch) the file in your system's default text editor program associated with value text file type.

Ledger analyser - Standard column balances

The "*Standard column balances*" report type displays the account debit and credit balances in the following three (3) reports, in one report:

1. Trial balance (Income, Expenses, Assets, Liabilities and Capital).

2. Income statement (Income and Expenses).

3. Balance sheet (Assets, Liabilities and Capital).

This is a breakdown of the Trial balance into the Income statement and Balance sheet.

This report will only print in the account code sequence.

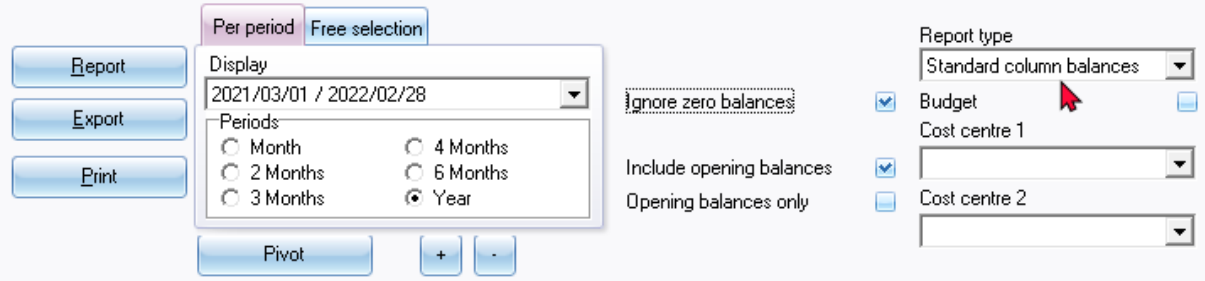
This report only includes batch and document transactions which are posted. Unposted batches and documents will be NOT be included in this report.

To view a list of unposted batches and documents, which is not updated to the ledger, go to Input → Checking unposted items (Default ribbon).

Standard column balances options

To print a Standard column balances report:

1. On the Reports ribbon, select Ledger analyser 1 or Ledger analyser 2.
2. Select the "*Standard column balances*" report type.



3. Per period - Select a period (Month, 2 Months, 3 Months, 4 Months, 6 Months or Year).

You may click on the "Free selection" tab. You may select or enter any date or dates, which you need to include the Standard column balances report.

4. Ignore zero balances - If this field is not selected, all accounts will be listed for the Standard column balances report. If you select (tick) this field; only those accounts with balances will be included in the Standard column balances report.
5. Include opening balances - If this option is selected (ticked), it will include the opening balances of those accounts which have opening balances. If this option is not selected; the opening balances will not be included in the Standard column balances report. If this field is not selected, all accounts will be listed for the "*Standard column balances*" report. If you select (tick) this field; only those accounts with balances will be included in the "*Standard column balances*" report.
6. Opening balances only - This option will only be available if the "*Include opening balances*" option is selected. You can select (check) this option to include only the opening balances. All other balances will then be ignored.

7. Budget - Leave this option blank to include the actual posted (updated) transactions in the Standard column balances report.

> *The "Budget" option, if selected, will list only the budget figures (Budget listing) in the Trial balance, Income statement, Balance sheet and Standard column balances report types (if budget figures were entered in the Budgets option (Reports ribbon) or Setup → Accounts option on the Setup ribbon).*

8. Cost centre 1 and Cost centre 2 - The Cost centres (2 Groups) will only be available, if Cost centres are added in Setup → Groups on the Setup ribbon; and if activated.

9. Click on the Report button. This will build or refresh the Standard column balances report with the selected options.

Created with the Standard Edition of HelpNDoc: Revolutionize Your Documentation Review with HelpNDoc's Project Analyzer

Print comparative reports for the budget

You may print the Budget vs actual report in the Ledger analyser as well as a Budget vs actual - 3 periods report to compare the budget to actual totals to determine whether your targets were met and whether you underspent or overspent and whether you have generated too little income, etc.

Budget vs actual report

The Budget vs actual report will list the budget figures as well as the actual totals of posted batches and documents for selected period(s) or date(s).

This report will display the following:

1. Trial balance – The actual figures on the Trial balance - totals of transactions as posted (updated to the ledger) in batches (journals), sales documents (i.e. Invoices, Point-of-Sale Invoices and Credit notes) and purchase documents (i.e. Purchases and Supplier returns).
2. Budget – Once any budget figures are entered or edited (and saved), these figures will automatically be updated to the applicable accounts and will be available in the Ledger analyser and any reports which supports budget figures.
3. Difference – The difference amount actual trial Trial balance vs the Budget figures.
4. Percentage – The difference expressed as a percentage.

To print this report your system's digit separator symbol need to be set to a comma and the decimal symbol needs to be set as a period. See - Suystem settings - Number format.

If these settings are not set, this report will produce an error:

```
Type conversion error 'Val':Expression TRpExpression46
```

You may access your system's Regional settings from the Setup → Company info - Options tab Set Windows date format/style button or on the DateTime settings button on the Setup → System parameters (Setup ribbon).

On your system's "Region"-screen click on the Additional settings... button to launch your system's "Customize Format" screen.

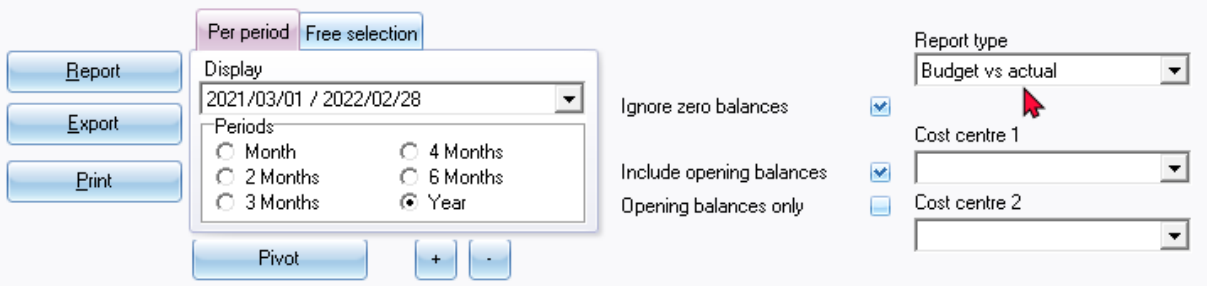
This report only includes batch and document transactions which are posted. Unposted batches and documents will be NOT be included in this report.

To view a list of unposted batches and documents, which is not updated to the ledger, go to Input → Checking unposted items (Default ribbon).

Budget vs actual options

To print a budget vs actual report:

1. On the Reports ribbon, select Ledger analyser 1 or Ledger analyser 2.
2. Select the "*Budget vs actual*" report type.



3. Per period - Select a period (Month, 2 Months, 3 Months, 4 Months, 6 Months or Year).

> *You may click on the "Free selection" tab. You may select or enter any date or dates, which you need to include the "Budget vs actual" report.*

4. Ignore zero balances - If this field is not selected, all accounts will be listed for the "*Budget vs actual*" report. If you select (tick) this field; only those accounts with balances and or budget figures, will be included in the "*Budget vs actual*" report.

5. Include opening balances - If this option is selected (ticked), it will include the opening balances of those accounts which have opening balances. If this option is not selected; the opening balances will not be included in the "*Budget vs actual*" report.

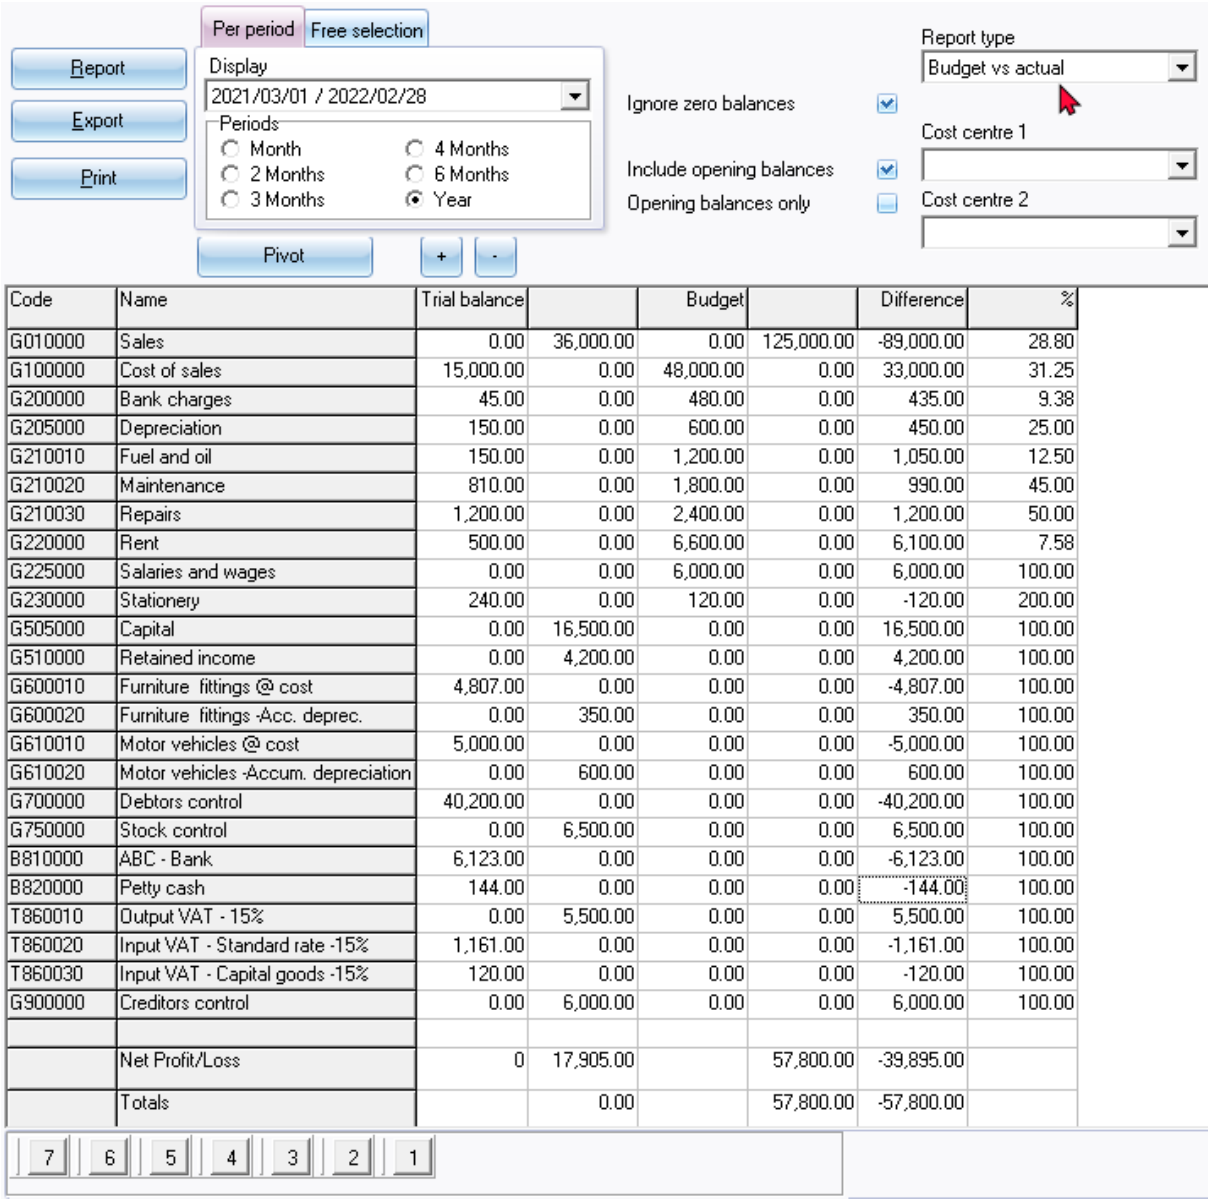
6. Opening balances only - This option will only be available if the "*Include opening balances*" option is selected. You can select (check) this option to include only the opening balances. All other balances will then be ignored.

7. Cost centre 1 and Cost centre 2 - The Cost centres (2 Groups) will only be available, if Cost centres are added in Setup → Groups on the Setup ribbon; and if activated.

8. Click on the Report button. This will build or refresh the "*Budget vs actual*" report with the selected options.

Example : Budget vs actual

An example of the "*Budget vs actual*" report type, is displayed as follows:



Code	Name	Trial balance		Budget		Difference	%

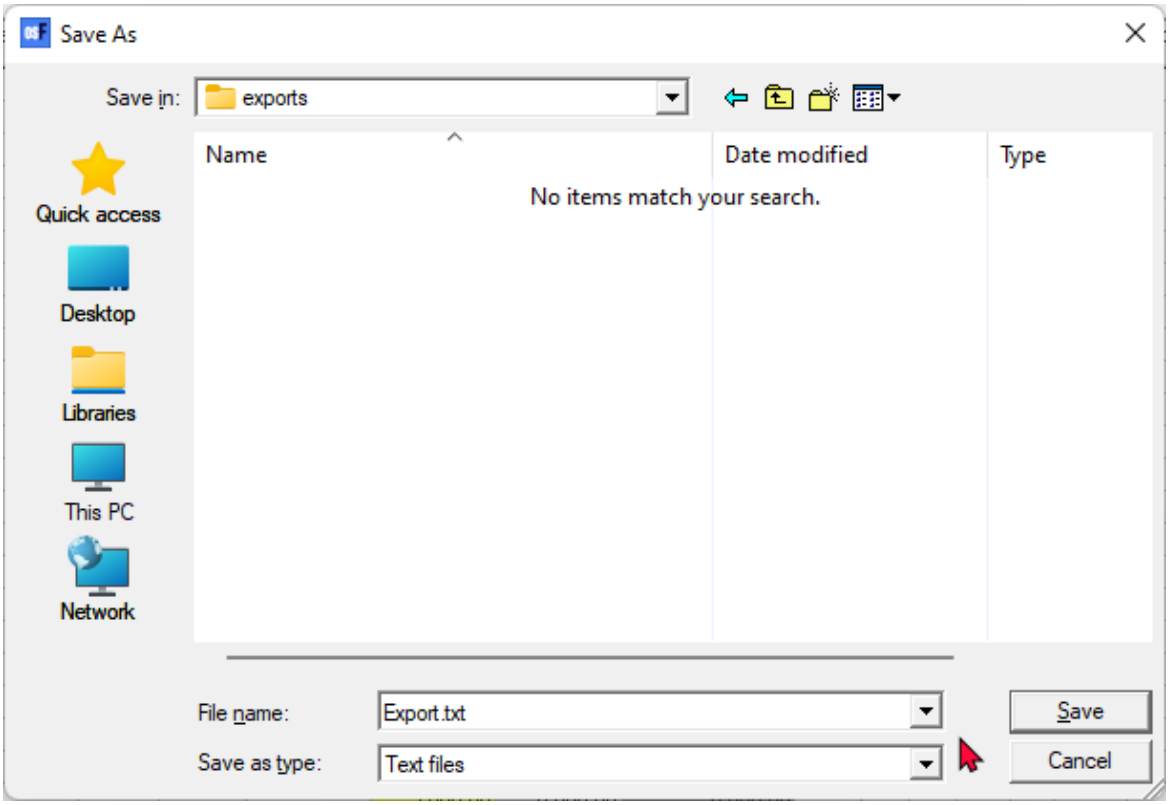
To save the ***Budget vs actual report*** *as a PDF file:*

1. *On the "Reportman print preview" screen, select Save (Ctrl+S)* *– This will launch the "Save metafile as" screen.*
2. *Select the directory (folder) where you need to save this file, if necessary.*
3. *Enter a file name.*
4. *Select the "PDF File – compressed" default file type.*
5. *Click Save.*

Spreadsheet example : Budget vs actual

To create a Budget vs actual - Export file:

1. Click on the Export button. This will launch the "*Save as*" screen.



2. Select the folder in which you wish to save the file.
3. The default file name will be "*Export.txt*". Overtype this with your own name.

If you do not enter and save the Export.txt file name, you may replace existing (previously exported) files.

Of an existing exported file is opened, and you are trying to save a export file with the same name, a similar error message as the following will be displayed:

> Cannot create file "D:\exports\Export.txt". The process cannot access the file because it is being used by another process.

4. Click on the Save button.

5. This will automatically open (launch) the file in your system's default text editor program associated with value text file type.

Created with the Standard Edition of HelpNDoc: Write eBooks for the Kindle

Ledger analyser - This year vs last year

This report will display the comparative figures for up to 2 financial years or the same periods (a specific month, 2 months, 3 months, 4 months, 6 months or a year).

To print this report your system's digit separator symbol need to be set to a comma and the decimal symbol needs to be set as a period. See - Suystem settings - Number format.

If these settings are not set, this report will produce an error:

Type conversion error 'Val':Expression TRpExpression46

You may access your system's Regional settings from the Setup → Company info - Options tab Set Windows date format/style button or on the DateTime settings button on the Setup → System parameters (Setup ribbon).

On your system's "Region"-screen click on the Additional settings... button to launch your system's "Customize Format" screen.

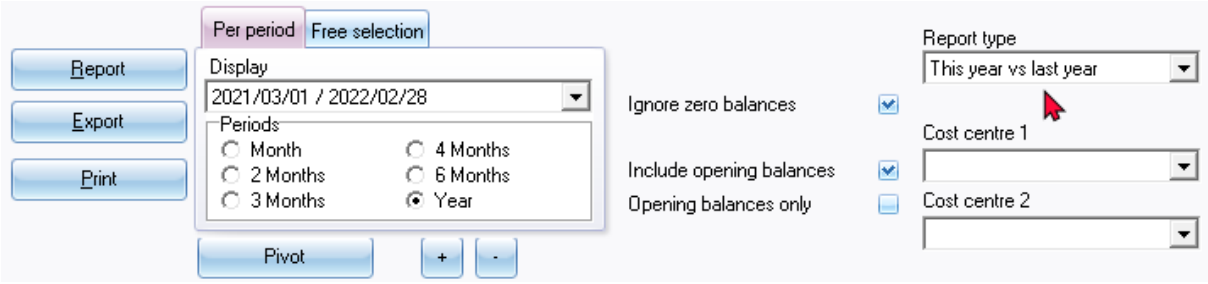
This report only includes batch and document transactions which are posted. Unposted batches and documents will be NOT be included in this report.

To view a list of unposted batches and documents, which is not updated to the ledger, go to Input → Checking unposted items (Default ribbon).

This year vs last year options

To print a This year vs last year report:

1. On the Reports ribbon, select Ledger analyser 1 or Ledger analyser 2.
2. Select the "*This year vs last year*" report type.



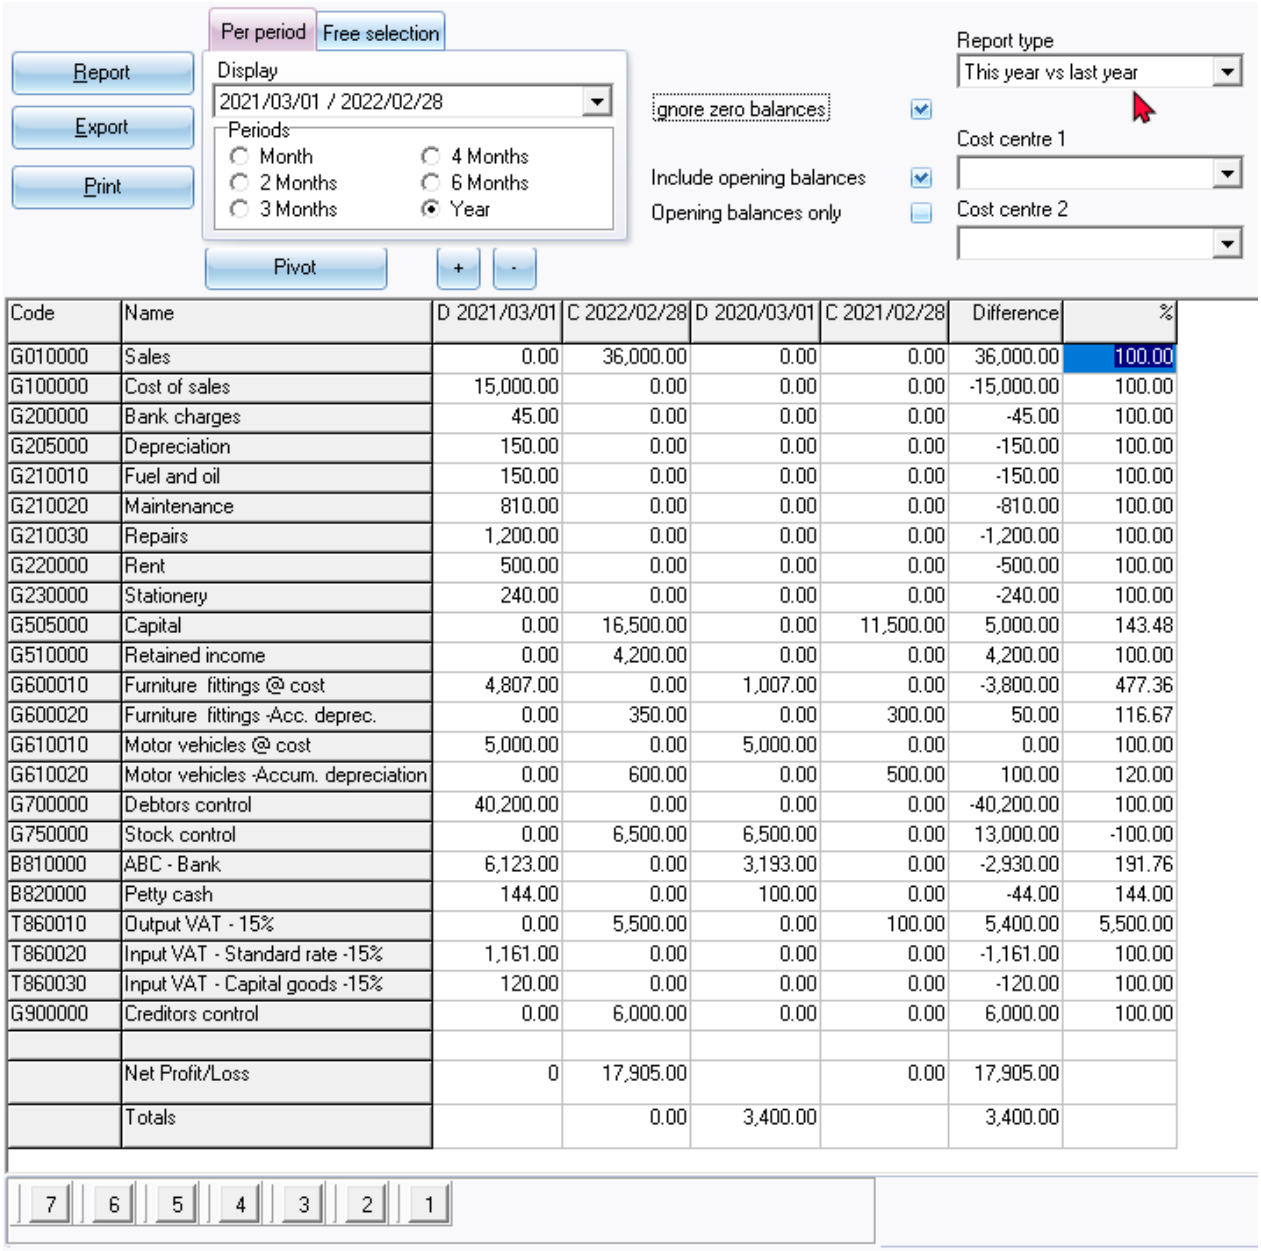
3. Per period - Select a period (Month, 2 Months, 3 Months, 4 Months, 6 Months or Year).

You may click on the "Free selection" tab. You may select or enter any date or dates, which you need to include the "This year vs last year" report.

4. Ignore zero balances - If this field is not selected, all accounts will be listed for the "*This year vs last year*" report. If you select (tick) this field; only those accounts with balances, will be included in the "*This year vs last year*" report.
5. Include opening balances - If this option is selected (ticked), it will include the opening balances of those accounts which have opening balances. If this option is not selected; the opening balances will not be included in the "*This year vs last year*" report.
6. Opening balances only - This option will only be available if the "*Include opening balances*" option is selected. You can select (check) this option to include only the opening balances. All other balances will then be ignored.
7. Cost centre 1 and Cost centre 2 - The Cost centres (2 Groups) will only be available, if Cost centres are added in Groups on the Setup ribbon; and if activated.
8. Click on the Report button. This will build or refresh the "*This year vs last year*" report with the selected options.

Example : This year vs last year

An example of the "*This year vs last year"* report type, is displayed as follows:



Code	Name	D 2021/03/01	C 2022/02/28	D 2020/03/01	C 2021/02/28	Difference	%

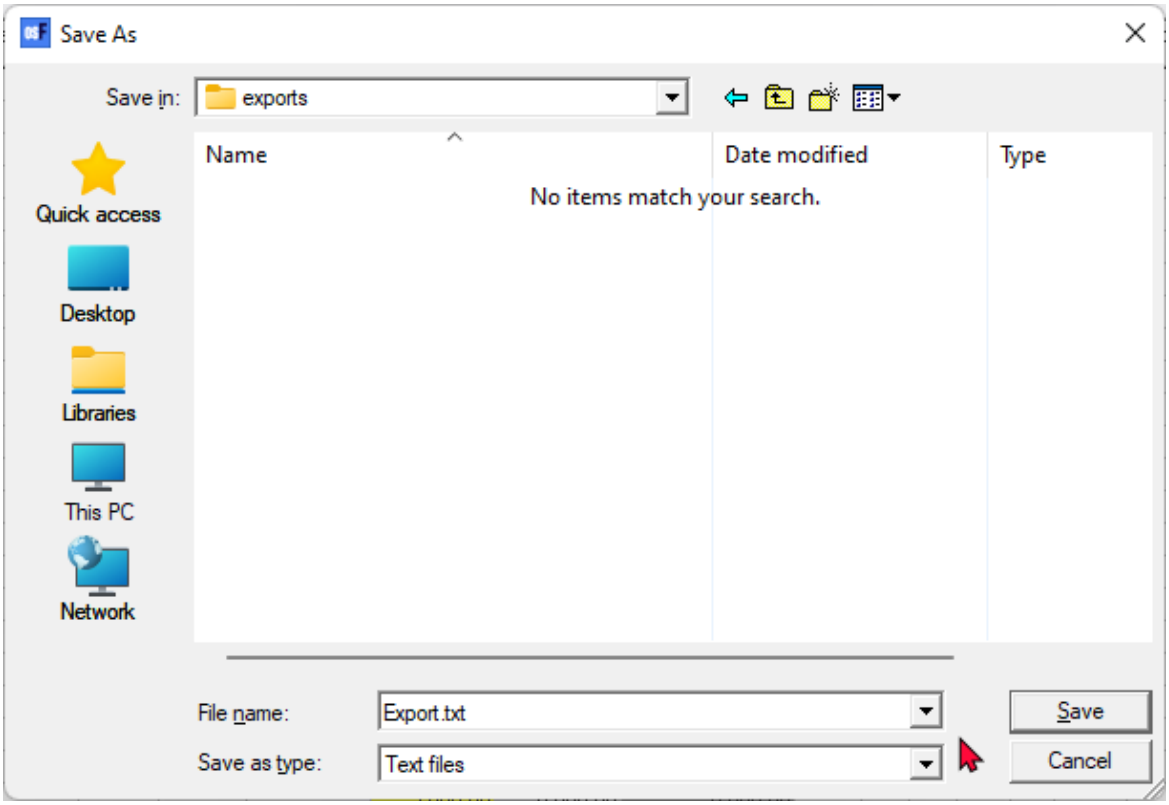
To save the This year vs last year report as a PDF file:

1. *On the "Reportman print preview" screen, select Save (Ctrl+S)* *– This will launch the "Save metafile as" screen.*
2. *Select the directory (folder) where you need to save this file, if necessary.*
3. *Enter a file name.*
4. *Select the "PDF File – compressed" default file type.*
5. *Click Save.*

Spreadsheet example : This year vs last year

To create a This year vs last year - Export file:

1. Click on the Export button. This will launch the "*Save as*" screen.



2. Select the folder in which you wish to save the file.
3. The default file name will be "*Export.txt*". Overtype this with your own name.

If you do not enter and save the Export.txt file name, you may replace existing (previously exported) files.

Of an existing exported file is opened, and you are trying to save a export file with the same name, a similar error message as the following will be displayed:

> Cannot create file "D:\exports\Export.txt". The process cannot access the file because it is being used by another process.

4. Click on the Save button.

5. This will automatically open (launch) the file in your system's default text editor program associated with value text file type.

Ledger analyser - Unposted batches

You may view, print and export a Trial balance, Income statement and Balance sheet for unposted as well as posted batches from the Batch entry (F2) context menu.

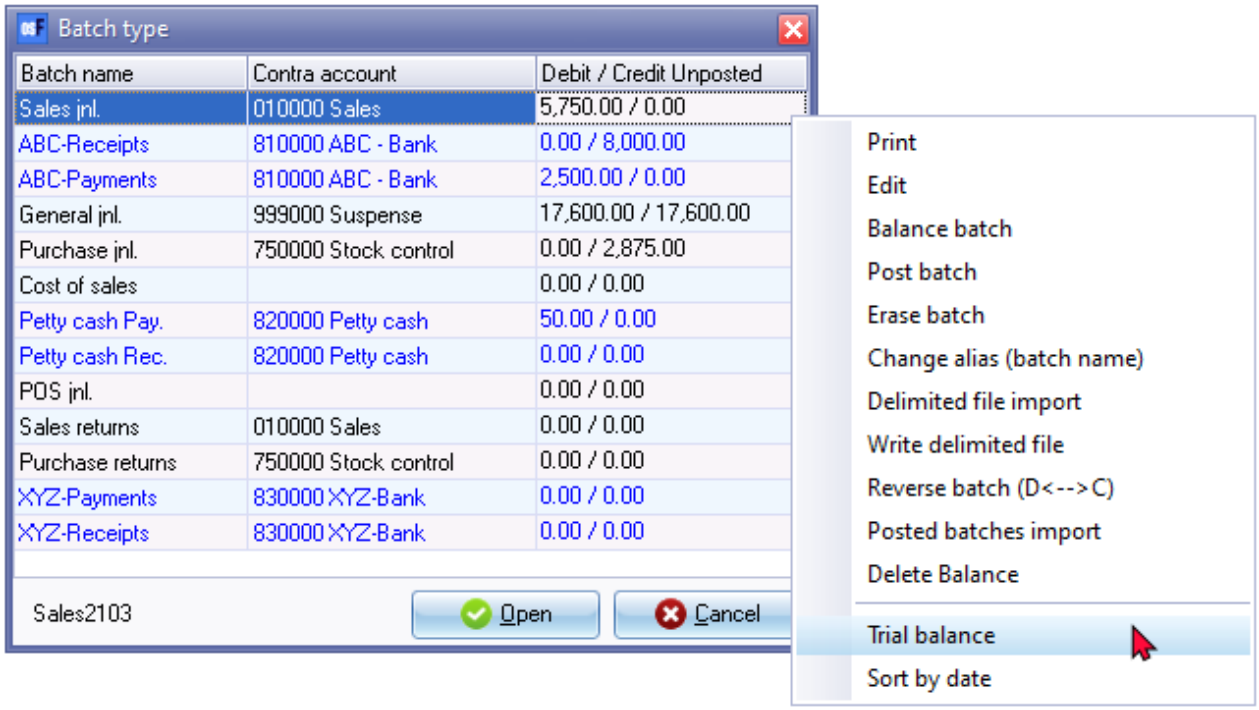
Unposted Invoices, Credit notes, Purchases and Supplier returns is not included in this report.

You may go to the Input → Checking unposted items (Default ribbon) to view a list of unposted transactions in batches and documents.

To print a Trial balance, Income statement or Balance sheet for unposted batches:

1. On the Default ribbon, select Batch entry (F2).

2. Right-click and select "*Trial balance*" from the context menu.



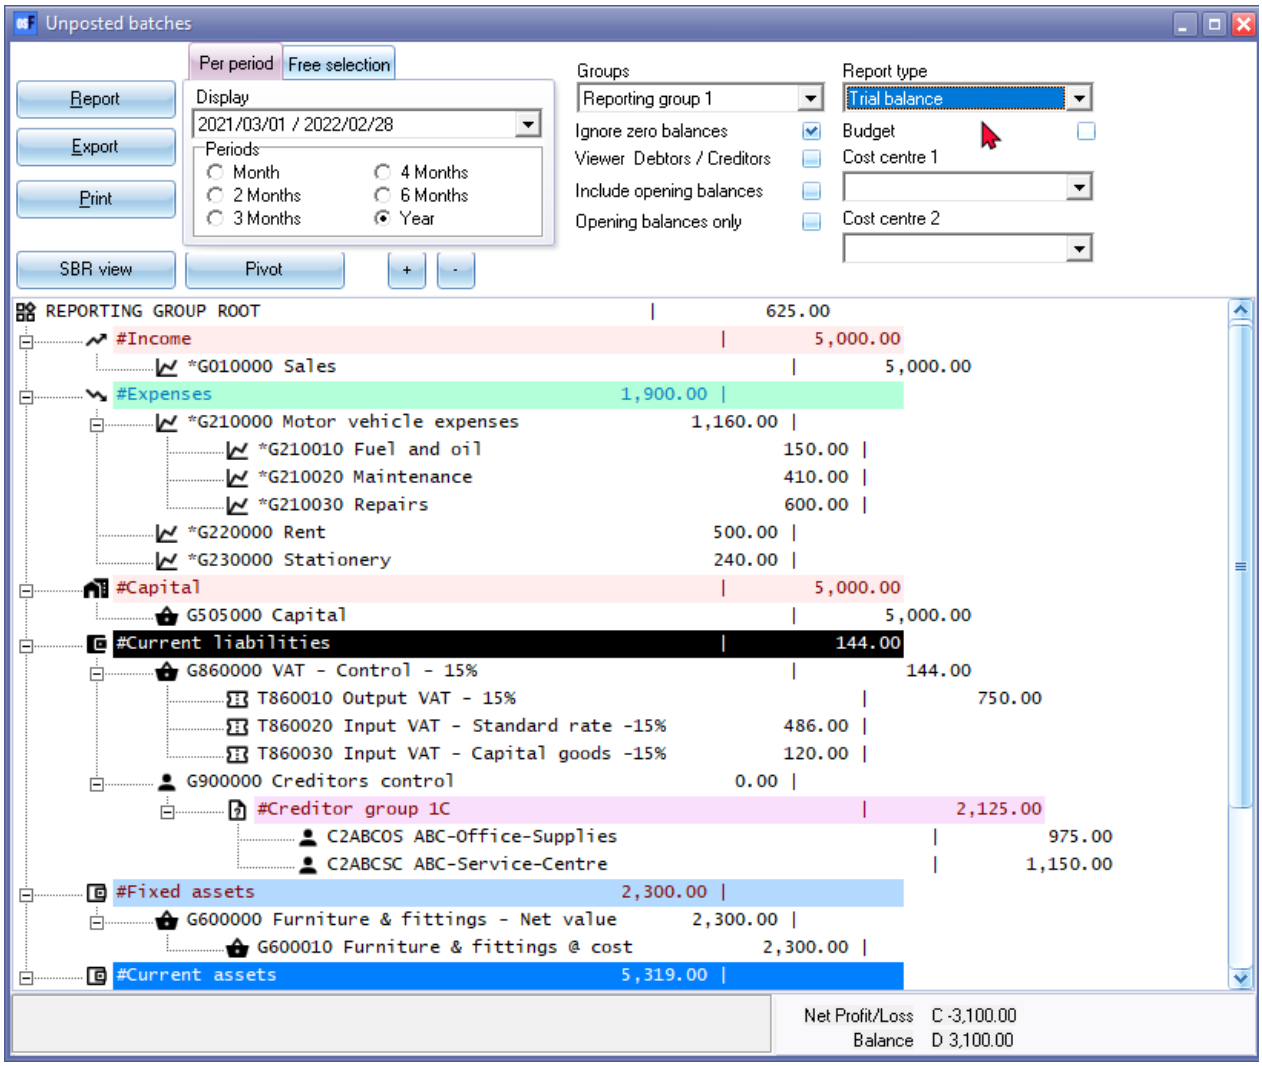
3. A confirmation message is displayed:

Unposted only?

4. Click on the Yes button.

If you click on the No button, the Trial balance, Income statement and Balance sheet for posted batches (excluding unposted documents) will be printed. These reports, as well as others, may be

printed in the Ledger analyser 1 or Ledger analyser 2 on the Reports ribbon.



When this Trial balance is launched, the Print button will not be displayed. To initialise the Print button, select Income statement or Balance sheet and then Trial balance.

If "Unposted only?" is selected, the T-Account viewer and the Pivot options will not have any data to display.

4. Click on the Print button. Only those unposted transactions (excluding unposted documents) will be printed.

Ledger analyser - Column balances - Spreadsheets

The column balances report types will list the transactions of accounts for each period of Last year and This year in a spreadsheet format.

You may select an account and double-click on any period. This will launch the T-Account viewer with a list of all the transactions for the selected period. You may be print and/or export the transactions.

The following six (6) column balances report types is available:

1. Column balances - Lists all ledger account balances in a spreadsheet view. These are the ledger accounts reported in the Trial balance (this includes both the accounts reported in the Income statement and Balance sheet).
2. Column balances debtors - Lists the balances of all the individual debtor (customer / client) accounts (Debtors on the Default ribbon) in a spreadsheet view. The total of these accounts are reported in the Debtor's control account on the Trial balance and the Balance sheet.
3. Column balances creditors - Lists the balances of all the individual creditor (supplier / vendor) accounts (Creditors on the Default ribbon) in a spreadsheet view. The total of these accounts are reported in the Creditor's control account on the Trial balance and the Balance sheet.
4. Column balances D/C - Lists all debit and credit ledger account balances in a spreadsheet view. These are the accounts reported in the Trial balance (this includes both the accounts reported in the Income statement and Balance sheet).
5. Column balances debtors D/C - Lists the debit and credit account balances of all the individual debtor (customer / client) accounts (Debtors on the Default ribbon) in a spreadsheet view. The total of these accounts are reported in the Debtor's control account on the Trial balance and the Balance sheet.
6. Column balances creditors D/C - Lists all debit and credit balances of all the individual creditor (supplier / vendor) accounts (Creditors on the Default ribbon) in a spreadsheet view. The total of these accounts are reported in the Creditor's control account on the Trial balance and the Balance sheet.

You may double-click on an account and/or in a specific period to list and view the transaction details in the T-Account viewer. You may be print the transactions.

You may also click on the Export button of the T-Account viewer to export the transactions to a

spreadsheet.

You may select to save the export file as Text files (.txt) (default file type); or as CSV files (*.csv) (Comma Separated Values) file type. This will automatically open (launch) the exported file in the program associated with the selected file type:*

- *Text files e.g. (Export.txt) - This should automatically open the exported text file of your system's default text file program associated with Text file type (*.txt) file types (e.g. Notepad, etc). You need to close the exported text file and launch your spreadsheet program. In your spreadsheet program, Open the text file to launch the "Text Import" options.*
- *CSV files e.g. (Export.csv) - This should automatically open the "Text Import" options of your system's default spreadsheet program associated with Comma Separated Value file type (*.csv) file types (e.g. Microsoft Excel, LibreOffice Calc, OpenOffice Calc, Ultra Office, etc.).*

Created with the Standard Edition of HelpNDoc: Full-featured Documentation generator

Column balances

The Column balances report type will list the net balances (debits *minus* credits) for the general ledger accounts (i.e. Income, expenses, Bank accounts, Tax accounts and other ledger accounts reported in the Trial balance.

The Column balances report type allows you to list all ledger accounts in your chart of accounts, or only those accounts with balances.

This report type cannot be printed but can be exported to a spreadsheet (e.g. Microsoft Excel or OpenOfficeCalc / LibreOffice Calc, etc.).

You may generate the transactions in a spreadsheet format in the Column balances or the Column balances D/C report types on the Ledger analyser.

You may also generate the transactions in a spreadsheet format in the Column balances D/C report types on the Ledger analyser. These transaction totals may be exported to an "Export.txt file and opened in a spreadsheet.

You may select an account and double-click on a specific period to list and view the transaction details in the T-Account viewer. You may be print or export the transactions.

This report type will list all General ledger accounts (including disabled accounts) by account code.

This spreadsheet only includes batch and document transactions which are posted. Unposted batches and documents will be NOT be included in this spreadsheet.

To view a list of unposted batches and documents, which is not updated to the ledger, go to Input → Checking unposted items (Default ribbon).

Example : Column balances

The Column balances report type will list the net balances (debits *minus* credits) for the general ledger accounts (i.e. Income, expenses, Bank accounts, Tax accounts and other ledger accounts reported in the Trial balance.

7 6 5 4 3 2 1

Buttons 7, 6, 5, 4, 3, 2 and 1 at the bottom of the report - is shortcut keys to the last accessed T-Account viewer options or Pivot options. These shortcuts will be cleared when you close active forms, or when you open the Set of Books.

Pivot – View, filter and analyse your report on screen, view graphs, customise datasets and types of graphs.

Zoom in / Zoom out + / - buttons added to resize (increase / decrease the font) the reports (i.e. Trial balance, Balance sheet and Income statement) on screen. This is not implemented for the Column balances report types.

When you Export these Column balances report types, you may use the zoom features of your spreadsheet app.

If the "*Ignore zero balances"* field is selected (ticked); it will list only those accounts with balances.

If the "Ignore zero balances" field is not selected (not ticked); it will all accounts with balances as well as zero balances.

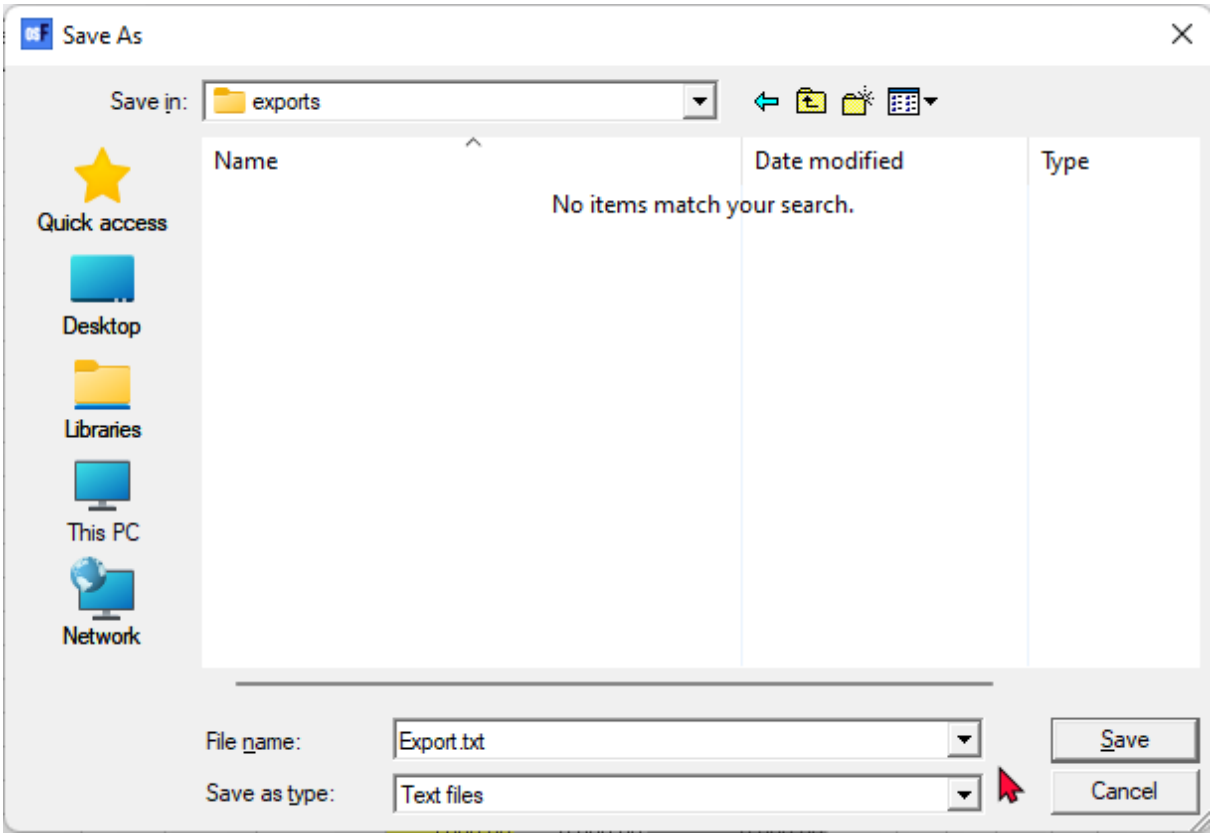
This report type will list all General ledger accounts (or with balances only, if the "*Ignore zero balances"* field is not selected (not ticked)) in the following columns:

1. Opening Balance Last Year - Period -1
2. Periods - This is last year periods - usually 1 to 12 (depending on the number of periods and descriptions specified and entered in Reporting dates on the Setup ribbon).
3. Period Total - The total of the period totals for last year.
4. End Last Year - Opening Balance Last Year total and the Period Total.
5. Opening This Year - Period 0 - This should be the same as the End Last Year totals.
6. Periods - This is the current year (this year) periods - usually 14 to 25 (depending on the number of periods and descriptions specified and entered in Reporting dates on the Setup ribbon).
7. Period Total - The total of the period totals for this year.
8. End this year - Opening Balance This Year total and the Period Total (This Year).

Export to Spreadsheet

To create an export file:

1. Click the Export button. This will launch the "*Save As*" screen:



2. Select the folder in which you wish to save the file and enter a file name.

If you do not enter and save the Export.txt file name, you may replace existing (previously exported) files.

If an existing exported file is opened, and you are trying to open a export file with the same name, a similar error message as the following will be displayed:

> Cannot create file "D:\Export\Export.txt". The process cannot access the file because it is being used by another process.

3. Select the file type. Text files (*.txt) is the default; or select CSV files (*.csv) (Comma Separated Values).

- *Text files e.g. (Export.txt) - This should automatically open the exported text file of your system's default text file program associated with Text file type (*.txt) file types (e.g. Notepad, etc). You need to close the exported text file and launch your spreadsheet program. In your spreadsheet program, Open the text file to launch the "Text Import" options.*
- *CSV files e.g. (Export.csv) - This should automatically open the "Text Import" options of your system's default spreadsheet program associated with Comma Separated Value file type (*.csv) file types (e.g. Microsoft Excel, Apache OpenOffice, LibreOffice, Ultra Office, etc.). You may need to set the "Separator Options - Separated by" on the "Text Import" screen to "Tab" and "Trim spaces".*

4. Click on the Save button. This will automatically open (launch) the exported file in the program associated with the selected file type.

Export file opened in Microsoft Excel

In this example, the exported "*Export.txt*" file is automatically opened in "*Microsoft Excel*":

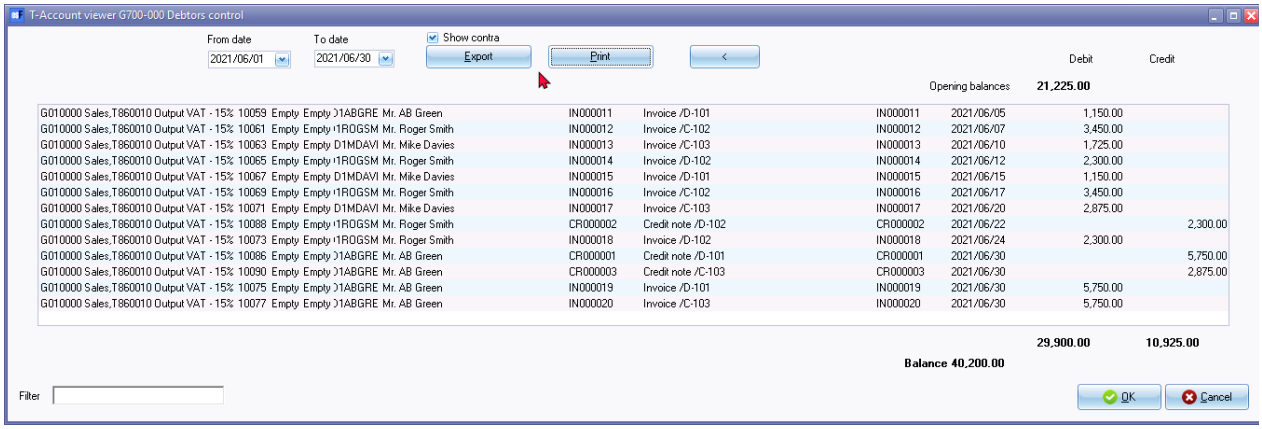
Export button

You may save the export file as Text files (.txt) (default file type); or as CSV files (*.csv) (Comma Separated Values) file type. This will automatically open (launch) the exported file in the program associated with the selected file type:*

- *Text files e.g. (Export.txt) - This should automatically open the exported text file of your system's default text file program associated with Text file type (*.txt) file types (e.g. Notepad, etc). You need to close the exported text file and launch your spreadsheet program. In your spreadsheet program, Open the text file to launch the "Text Import" options.*
- *CSV files e.g. (Export.csv) - This should automatically open the "Text Import" options of your system's default spreadsheet program associated with Comma Separated Value file type (*.csv) file types (e.g. Microsoft Excel, LibreOffice Calc, OpenOffice Calc, Ultra Office, etc.).*

View transactions in T-Account viewer

In this example, the T-Account viewer is launched by a double-click in the month (accounting period) " *June*" in the "*G700000 Debtors control*" account:



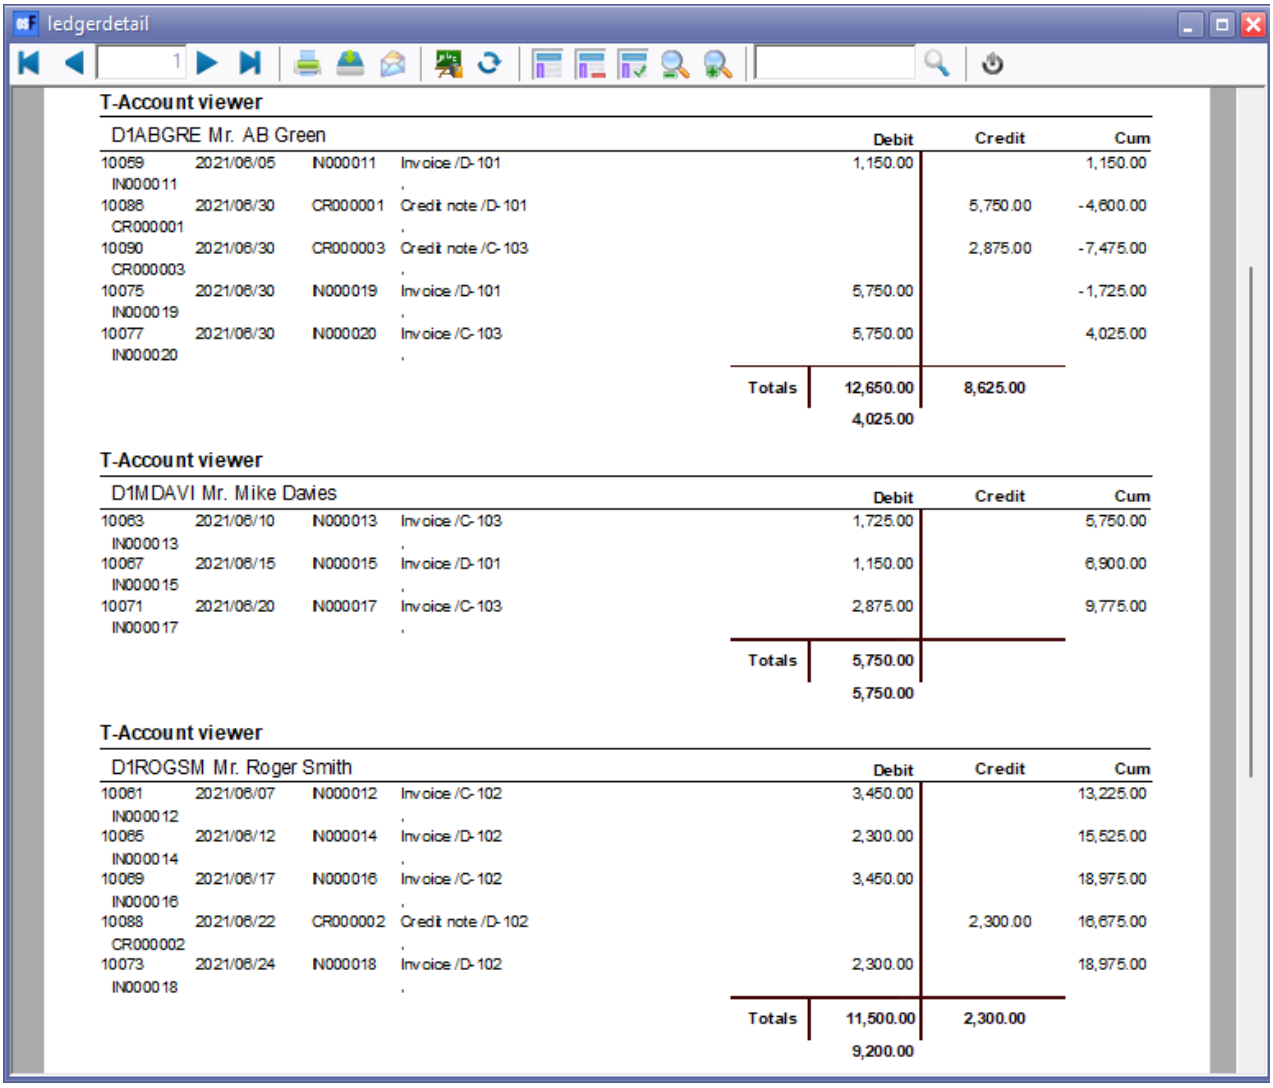
Show contra - By default this option is not selected.

If the Show contra is selected, it will insert (add) the Account code and Description before the batch id (batch number).

The Contra accounts will not print on the T-Account viewer ("ledgerdetail") report; but will be included in the Export file when you click on the Export button of the T-Account viewer.

Print transactions in T-Account viewer

Click on the Print button to print the selection in the T-Account viewer.



Export transactions in T-Account viewer

You may double-click on an account and/or in a specific period to list and view the transaction details in the T-Account viewer. You may be print the transactions.

You may also click on the Export button of the T-Account viewer to export the transactions to a spreadsheet.

You may select to save the export file as Text files (.txt) (default file type); or as CSV files (*.csv) (Comma Separated Values) file type. This will automatically open (launch) the exported file in the program associated with the selected file type:*

- *Text files e.g. (Export.txt) - This should automatically open the exported text file of your system's default text file program associated with Text file type (*.txt) file types (e.g. Notepad, etc). You need to close the exported text file and launch your spreadsheet program. In your spreadsheet program, Open the text file to launch the "Text Import" options.*
- *CSV files e.g. (Export.csv) - This should automatically open the "Text Import" options of your*

system's default spreadsheet program associated with Comma Separated Value file type (.csv) file types (e.g. Microsoft Excel, LibreOffice Calc, OpenOffice Calc, Ultra Office, etc.).*

Show contra - By default this option is not selected.

If the Show contra is selected, it will insert (add) the Account code and Description before the batch id (batch number).

The Contra accounts will not print on the T-Account viewer ("ledgerdetail") report; but will be included in the Export file when you click on the Export button of the T-Account viewer.

Created with the Standard Edition of HelpNDoc: Qt Help documentation made easy

Column balances - Debit / Credit

The Column balances report type list the debit and credit balances of the transactions totals for the general ledger accounts (i.e. Income, expenses, Bank accounts, Tax accounts and other ledger accounts reported in the Trial balance.

The Column balances report type allows you to list all ledger accounts in your chart of accounts, or only those accounts with balances.

This report type cannot be printed but can be exported to a spreadsheet (e.g. OpenOfficeCalc /

LibreOffice Calc or Microsoft Excel, etc.).

You may generate the transactions in a spreadsheet format in the Column balances or the Column balances D/C report types on the Ledger analyser.

These transaction totals may be exported to an "*Export.txt*" file or "*Export.csv*" and opened in a spreadsheet.

This spreadsheet only includes batch and document transactions which are posted. Unposted batches and documents will be NOT be included in this spreadsheet.

To view a list of unposted batches and documents, which is not updated to the ledger, go to Input → Checking unposted items (Default ribbon).

Example : Column balances D/C

The Column balances D/C report type will list the debit and credit balances for the general ledger accounts (i.e. Income, expenses, Bank accounts, Tax accounts and other ledger accounts reported in the Trial balance.

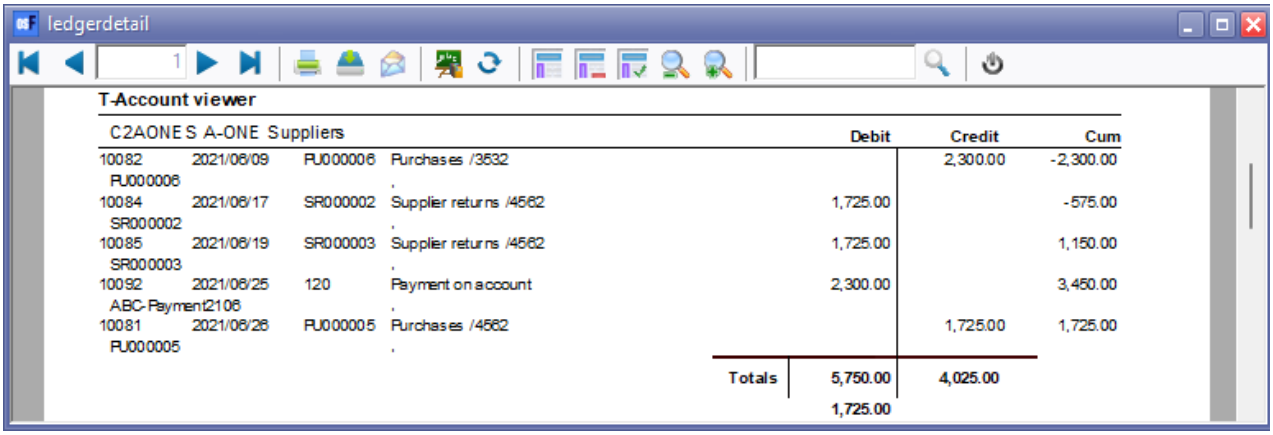
8. End this year - Opening Balance This Year total and the Period Total (This Year).

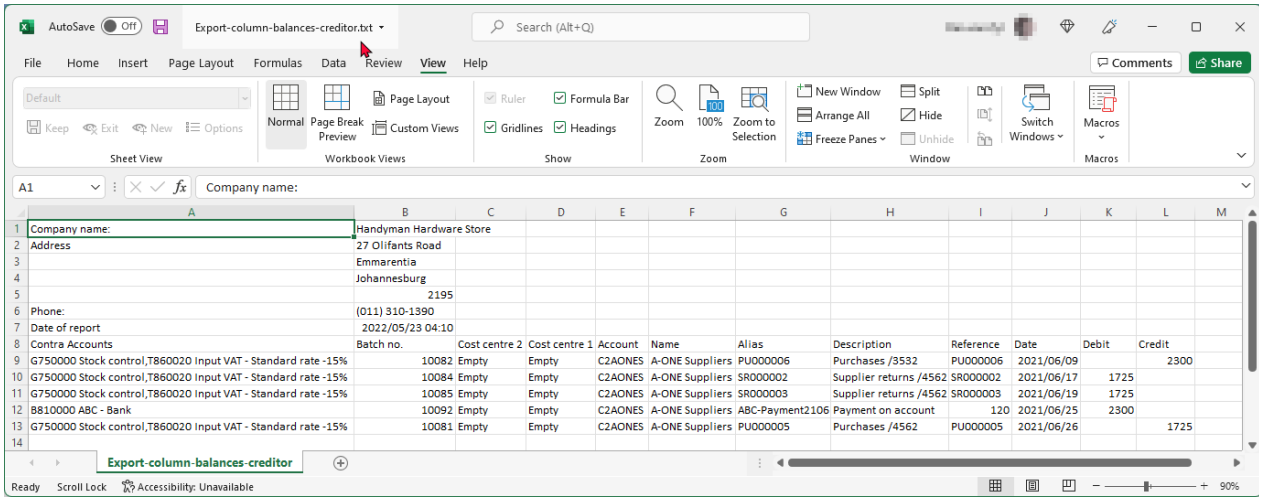
View transactions in T-Account viewer

You may double-click on a specific period of an account to list and view the transaction details in the T-Account viewer. You may be print the transactions.

Print transactions in T-Account viewer



Export transactions in T-Account viewer



You may double-click on an account and/or in a specific period to list and view the transaction details in the T-Account viewer. You may be print the transactions.

You may also click on the Export button of the T-Account viewer to export the transactions to a spreadsheet.

You may select to save the export file as Text files (.txt) (default file type); or as CSV files (*.csv) (Comma*

Separated Values) file type. This will automatically open (launch) the exported file in the program associated with the selected file type:

- *Text files e.g. (Export.txt) - This should automatically open the exported text file of your system's default text file program associated with Text file type (*.txt) file types (e.g. Notepad, etc). You need to close the exported text file and launch your spreadsheet program. In your spreadsheet program, Open the text file to launch the "Text Import" options.*
- *CSV files e.g. (Export.csv) - This should automatically open the "Text Import" options of your system's default spreadsheet program associated with Comma Separated Value file type (*.csv) file types (e.g. Microsoft Excel, LibreOffice Calc, OpenOffice Calc, Ultra Office, etc.).*

SBR (Standard Business Reporting)

What is Standard Business Reporting (SBR)?

Standard Business Reporting (SBR) is an initiative aimed at simplifying and standardizing the way businesses report their financial information to government agencies and regulatory bodies. It involves the use of digital reporting standards, such as Extensible Business Reporting Language (XBRL), to enable the seamless exchange of business information between different software systems.

SBR streamlines the reporting process by providing a common language and structure for transmitting financial and regulatory data. It eliminates the need for separate reporting formats and manual data entry, reducing the administrative burden on businesses and improving accuracy and efficiency.

The key objectives of Standard Business Reporting are:

1. Standardization: SBR promotes the use of common data formats, classifications, and definitions, ensuring consistency and comparability of business information across different reports and jurisdictions.
2. Automation: By adopting digital reporting standards like XBRL, SBR enables the automated exchange and processing of financial data, reducing manual intervention and associated errors.
3. Simplification: SBR simplifies the reporting process by providing predefined data structures, validation rules, and electronic submission mechanisms, making it easier for businesses to comply with reporting requirements.

4. Interoperability: SBR facilitates seamless information exchange between businesses and government agencies, enabling regulatory bodies to receive, process, and analyse data in a more efficient and timely manner.
5. Cost reduction: Through standardization and automation, SBR helps businesses save costs associated with report preparation, compliance, and manual data entry.

By implementing SBR, governments aim to enhance transparency, streamline regulatory compliance, and improve the overall quality and accessibility of business information. It benefits businesses by reducing the reporting burden, enhancing data accuracy, and enabling better decision-making through improved access to standardized financial data.

SBR in osFinancials5/TurboCASH5 - how is that used?

In osFinancials5/TurboCASH5, SBR (Standard Business Reporting) is used to streamline the process of reporting financial information to government agencies. It allows businesses to submit reports directly from their accounting software to government entities, such as the Australian Taxation Office (ATO), using a standardized format. This helps in reducing errors, improving accuracy, and saving time when fulfilling reporting requirements.

Is SBR related to which countries?

Standard Business Reporting (SBR) is an international effort adopted by several countries to streamline business-to-government reporting. Notable countries using SBR include:

- Netherlands: Was among the pioneers with their Dutch Taxonomy Project, later renamed to SBR.
- Australia: Adopted the SBR program to reduce regulatory costs for businesses.
- Others: Many other countries are considering or have begun using SBR for similar purposes.

How Standard Business Reporting (SBR) works and its benefits

How SBR Functions:

- Data Mapping: SBR involves mapping the financial and tax data directly from a company's accounting software to the required government format. This data is often tagged using standardized taxonomy (like XBRL - eXtensible Business Reporting Language).
- Secure Submission: The mapped data is securely transmitted to government agencies via a secure online channel.
- Validation & Acknowledgement: Government systems validate the submitted data and provide an

acknowledgement receipt to the company.

Benefits of SBR:

- Reduces Administrative Burden: Automating the reporting process reduces the time and effort required to prepare and submit reports.
- Improves Accuracy: Standardized formats minimize errors related to manual data entry.
- Increases Efficiency: Businesses can reuse financial data for multiple reports, eliminating redundancy.
- Promotes Transparency: Standardized data formats enhance the transparency and comparability of financial information.
- Cost Savings: Reduced need for third-party filing services leads to cost savings for businesses.

By integrating SBR, osFinancials5/TurboCASH5 streamlines the accounting process, making it easier for businesses to comply with their reporting obligations.

Some specific aspects of Standard Business Reporting (SBR) and how you can maximize its benefits within osFinancials5/TurboCASH5:

Key Features of SBR in osFinancials5/TurboCASH5:

- Integration with Government Portals: osFinancials5/TurboCASH5 integrates directly with government portals, making submission of reports seamless. You'll need to configure it with your local government's requirements.
- Automated Data Extraction: The system can automatically extract relevant data from your financial accounts to generate compliant reports swiftly.
- Pre-validated Reports: osFinancials5/TurboCASH5 provides pre-validation of reports to ensure compliance with government standards before submission.

Steps to Implement SBR in osFinancials5/TurboCASH5:

- Set Up Taxonomies: Ensure the correct taxonomies are set up in your osFinancials5/TurboCASH5 system based on the required taxonomy (e.g., XBRL) by your government.
- Map Data Fields: Map the data fields from your financial records to the standardized taxonomy fields.
- Generate Reports: Use the SBR features in osFinancials to generate financial reports in the required format.

Submit Reports: Transfer the reports directly to the relevant government agency through the secure online channel integrated within osFinancials5/TurboCASH5.

Maximizing the Benefits:

- Training & Support: Leverage training materials and support offered by osFinancials5/TurboCASH5 to understand how to best use SBR features.
- Stay Updated: Keep your software and taxonomies updated to ensure continued compliance with changing requirements.
- Customization: Customize the mapping and reporting functionalities to match your specific business needs and improve efficiency.

By effectively using these features and steps, you can ensure a more streamlined and accurate reporting process, ultimately saving time and reducing administrative workload.

Process of adding Standard Business Reporting (SBR) references to accounts and reporting groups in the osFinancials

SBR view - Add SBR (Standard Business Reporting) references for accounts and reporting groups in Setup → Accounts.

Once the references are set, and generate the Trial balance, Income statement or Balance sheet report types on screen, click on the SBR view button, check, filter and copy to clipboard.

Open your spreadsheet program, and copy the contents into your spreadsheet, save the data, etc.

Wikipedia - Standard Business Reporting

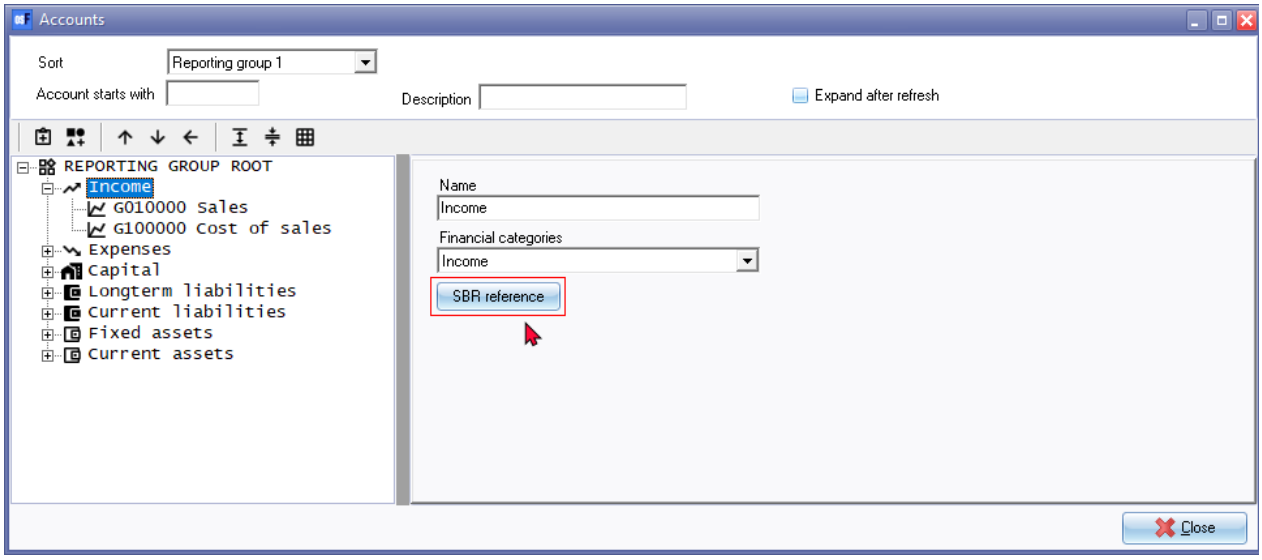
SBR - https://www.xbrl.org/tag/sbr/

See - https://business.gov.nl/regulation/standard-business-reporting/ -

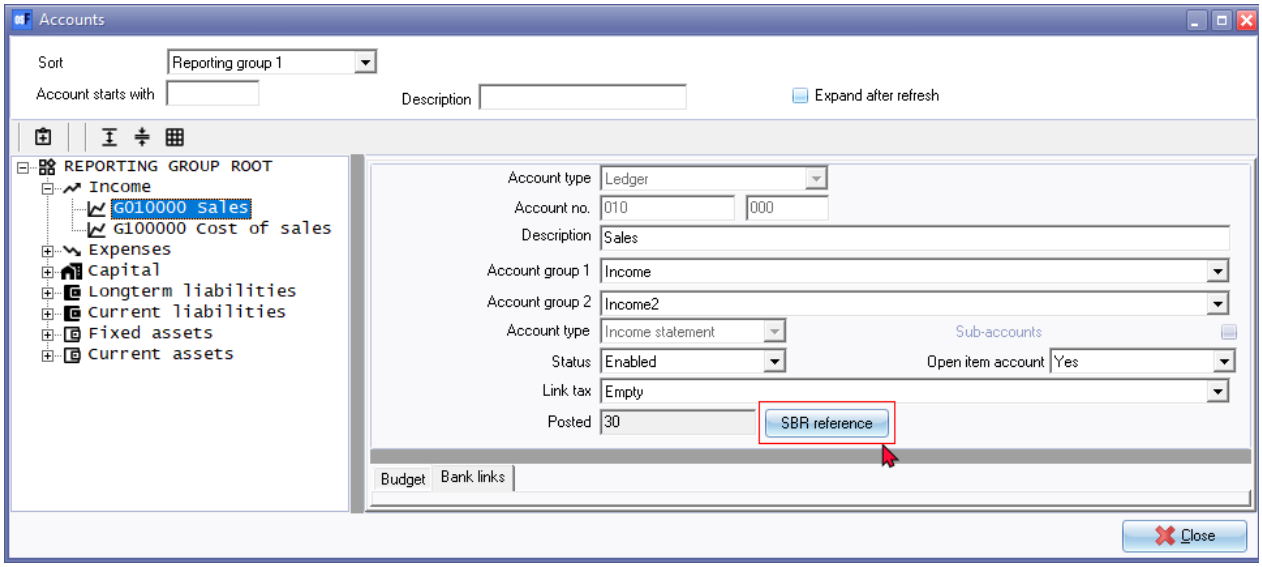
See - https://www.sbr-nl.nl/english/sbr-international -

Add SBR to Account groups and Accounts

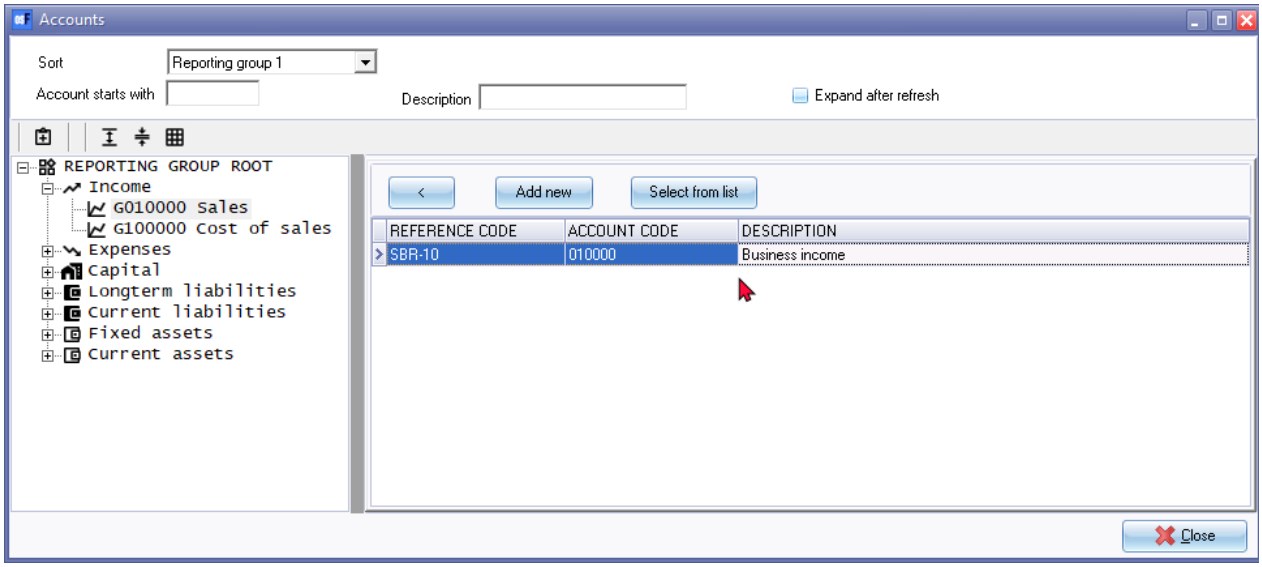
On the Setup ribbon, select Setup → Accounts.



Select a Account group, or an account and click on the SBR reference button.



Click on the Add new button to add a "*REFERENCE CODE, ACCOUNT CODE*" or "*DESCRIPTION*".

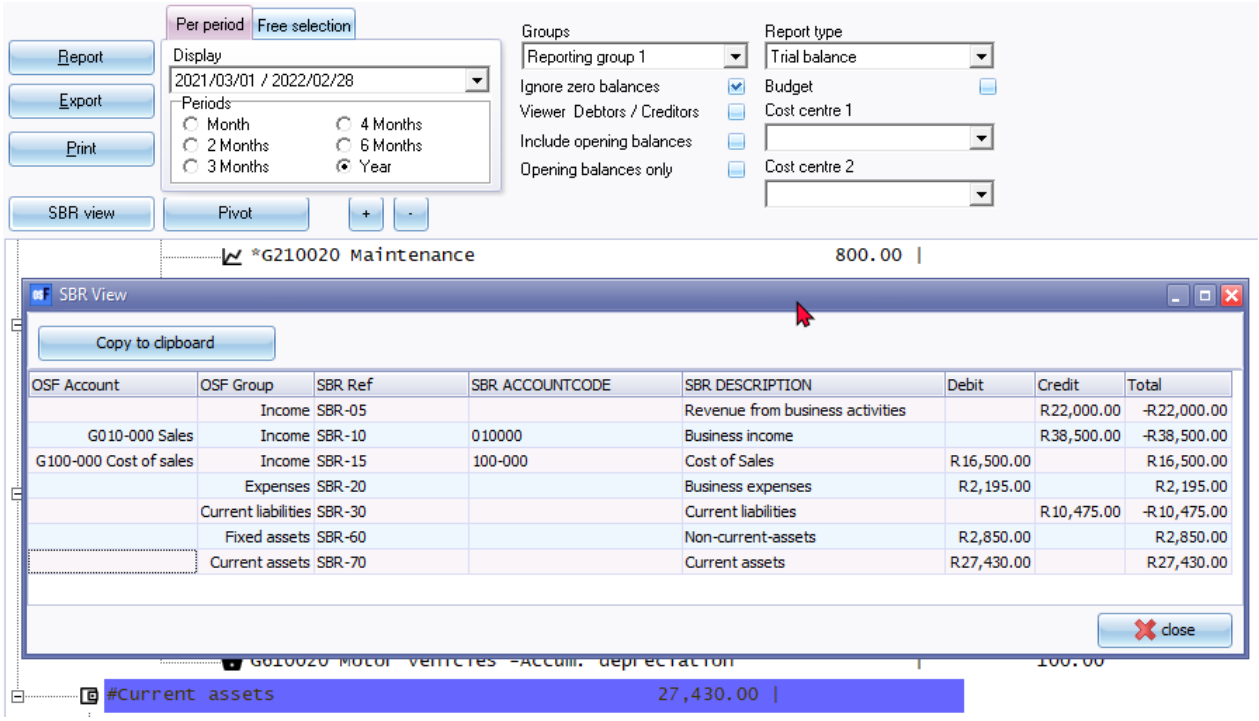


Click Save. Once you have entered your SBR references close the "*Accounts*" screen.

SBR View

Once the SBR references is defined, you may generate the Trial balance, Income statement or Balance sheet report types for specific periods.

Click on the SBR view button. The "*SBR View*" screen will list your defined SBR references and the Debit, Credit and Totals for the selected report type and periods.



The Trial balance, will include SBR references for all account type in the Chart of Accounts.

The Income statement will include only SBR references for Income and Expense account types.

The Balance sheet will include only SBR references for Balance sheet account types (excluding Income and Expense account types).

Click on the Copy to clipboard button.

Open a Spreadsheet and paste the contents of the "*SBR View*" screen into the spreadsheet.

Example - Paste in Microsoft Excel

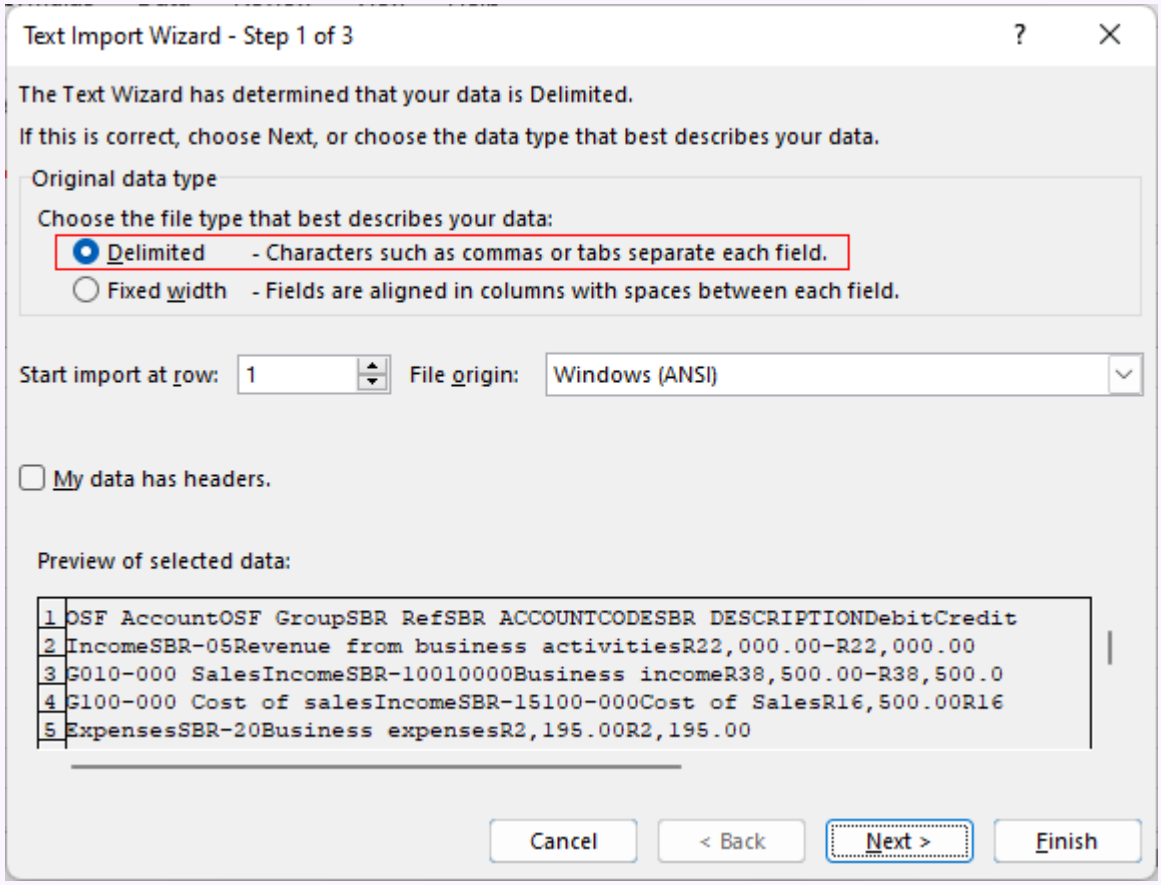
Open a Microsoft Excel spreadsheet or Workbook.

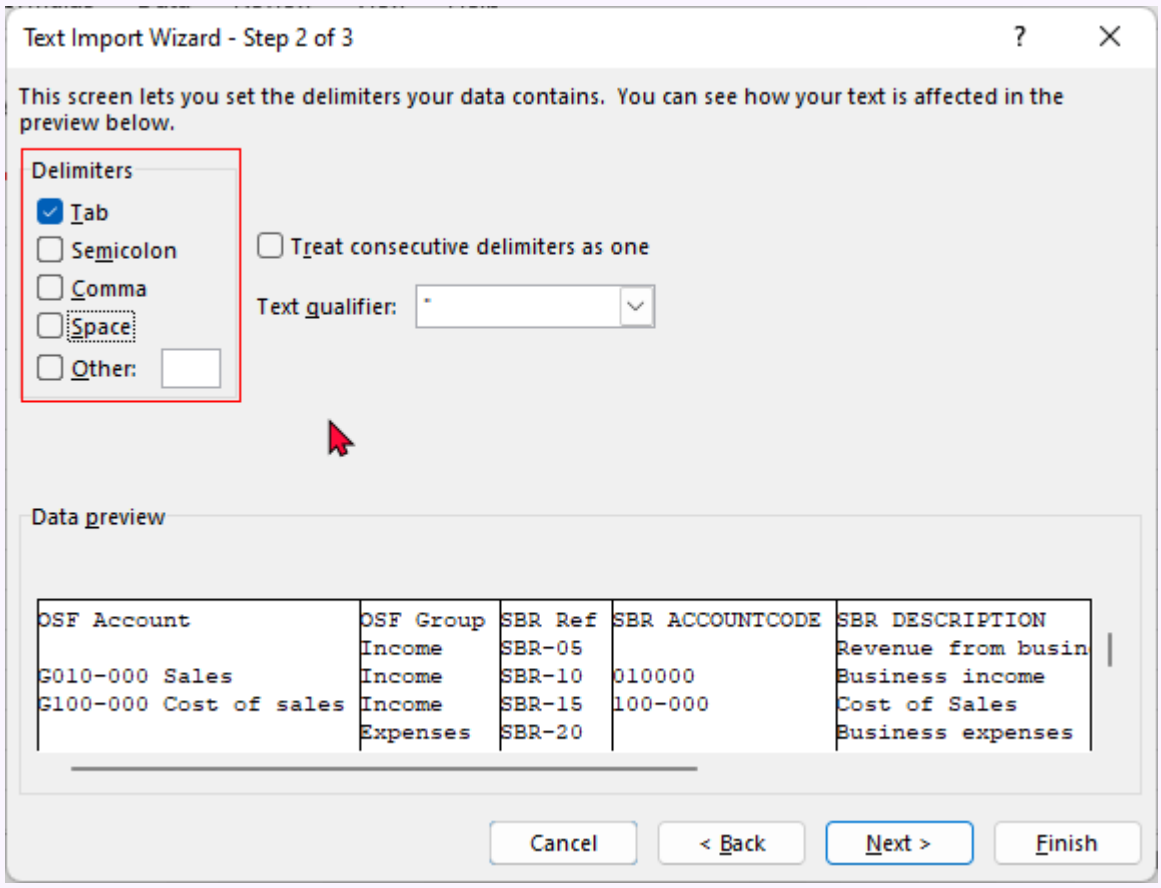
Select the Column and row where you wish to paste the content of the " *SBR View*" screen into the spreadsheet.

Click Paste option or press the Ctrl+V keys. An example of the "*SBR View*" content pasted in a Microsoft Excel spreadsheet, is as follows:

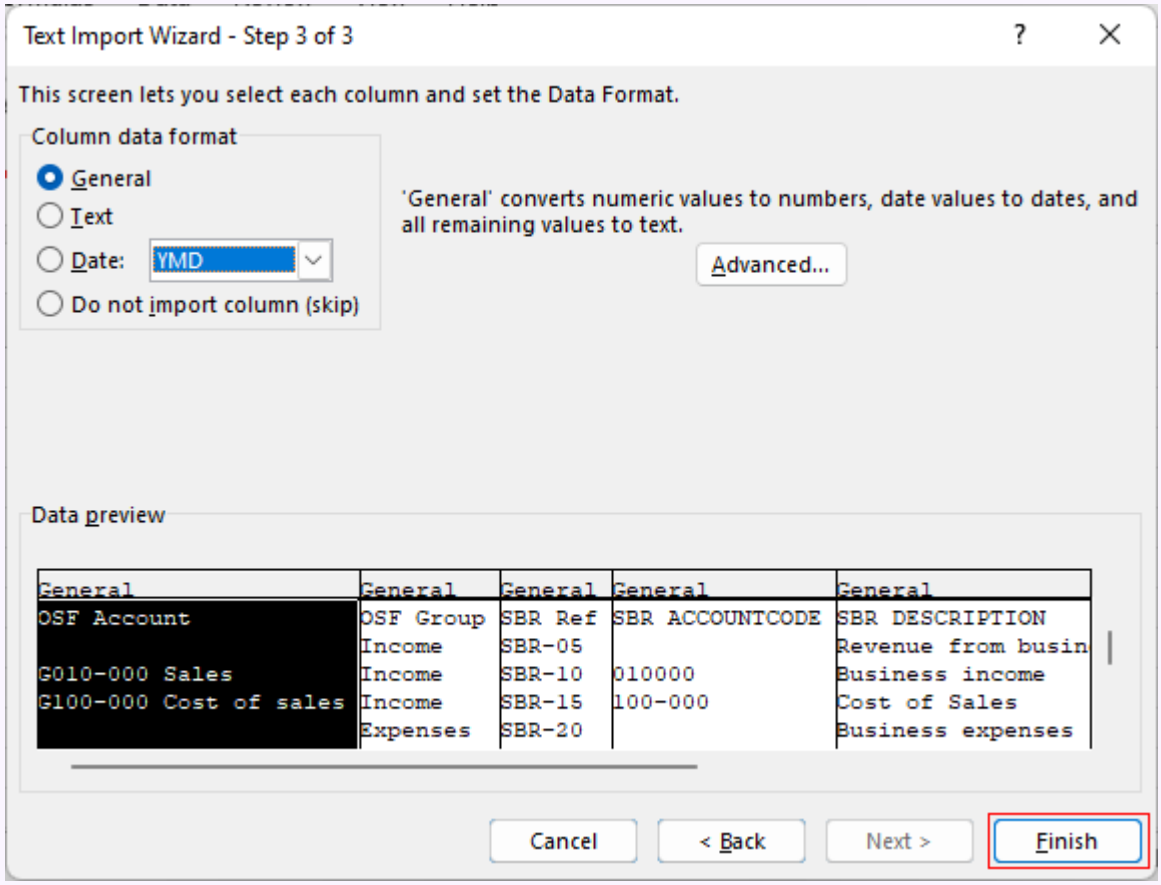
	A	B	C	D	E	F	G	H
1	OSF Account	OSF Group	SBR Ref	SBR ACCOUNTCODE	SBR DESCRIPTION	Debit	Credit	Total
2		Income	SBR-05		Revenue from business activities		R22,000.00	-R22,000.00
3	G010-000 Sales	Income	SBR-10	10000	Business income		R38,500.00	-R38,500.00
4	G100-000 Cost of sales	Income	SBR-15	100-000	Cost of Sales	R16,500.00		R16,500.00
5		Expenses	SBR-20		Business expenses	R2,195.00		R2,195.00
6		Current liabilities	SBR-30		Current liabilities		R10,475.00	-R10,475.00
7		Fixed assets	SBR-60		Non-current-assets	R2,850.00		R2,850.00
8		Current assets	SBR-70		Current assets	R27,430.00		R27,430.00

Optional - Use Import Text Wizard





Delimiters - Select Tab and do not select Space.

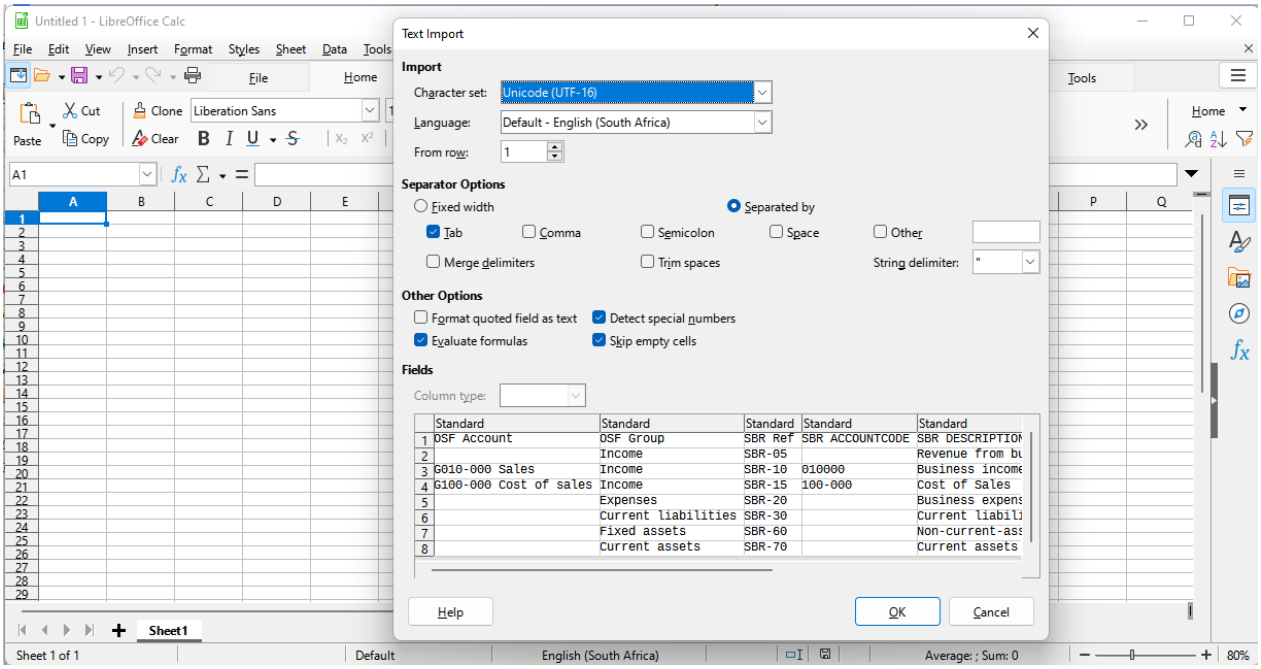


Example - Paste in LibreOffice

Open a LibreOffice Calc spreadsheet.

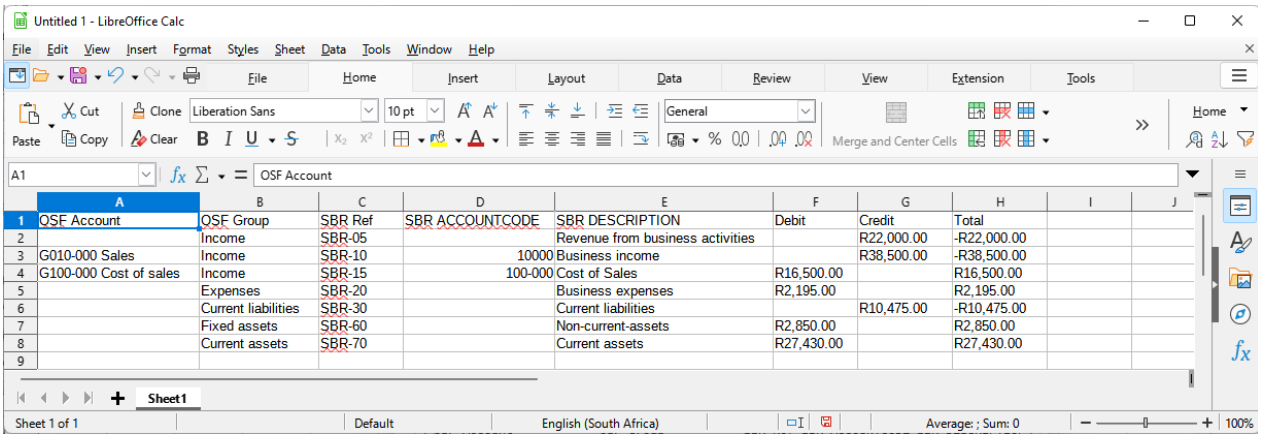
Select the Column and row where you wish to paste the content of the " *SBR View*" screen into the spreadsheet.

Click Paste option or press the Ctrl+V keys. The "*Text Import*" screen will be launched.



Separator Options - Separated by - Select Tab and do not select Space.

Click OK. An example of the "*SBR View*" content pasted in a LibreOffice spreadsheet, is as follows:



Created with the Standard Edition of HelpNDoc: Don't be left in the past: convert your WinHelp HLP help files to CHM with HelpNDoc

Pivot

The pivot view of your transaction totals and/or budget totals, for the selected periods or dates, in the Ledger analyser / Ledger analyser 2.

Pivot feature is available for all of the report types in the Ledger analyser.

Pivots, by default, summarises the totals for the Income and Expense (Income statement) accounts and Capital, Assets and Liabilities (Balance sheet) accounts for which budget figures were entered, and/or transactions in batches and documents were processed, for the selected report type and period or dates.

The pivots allows you to sort, group, filter and drill down customise datasets and types of graphs.

Pivot feature is also available for Budgets (accessed from the Reports ribbon), view graphs, filter, drill down, customise datasets.

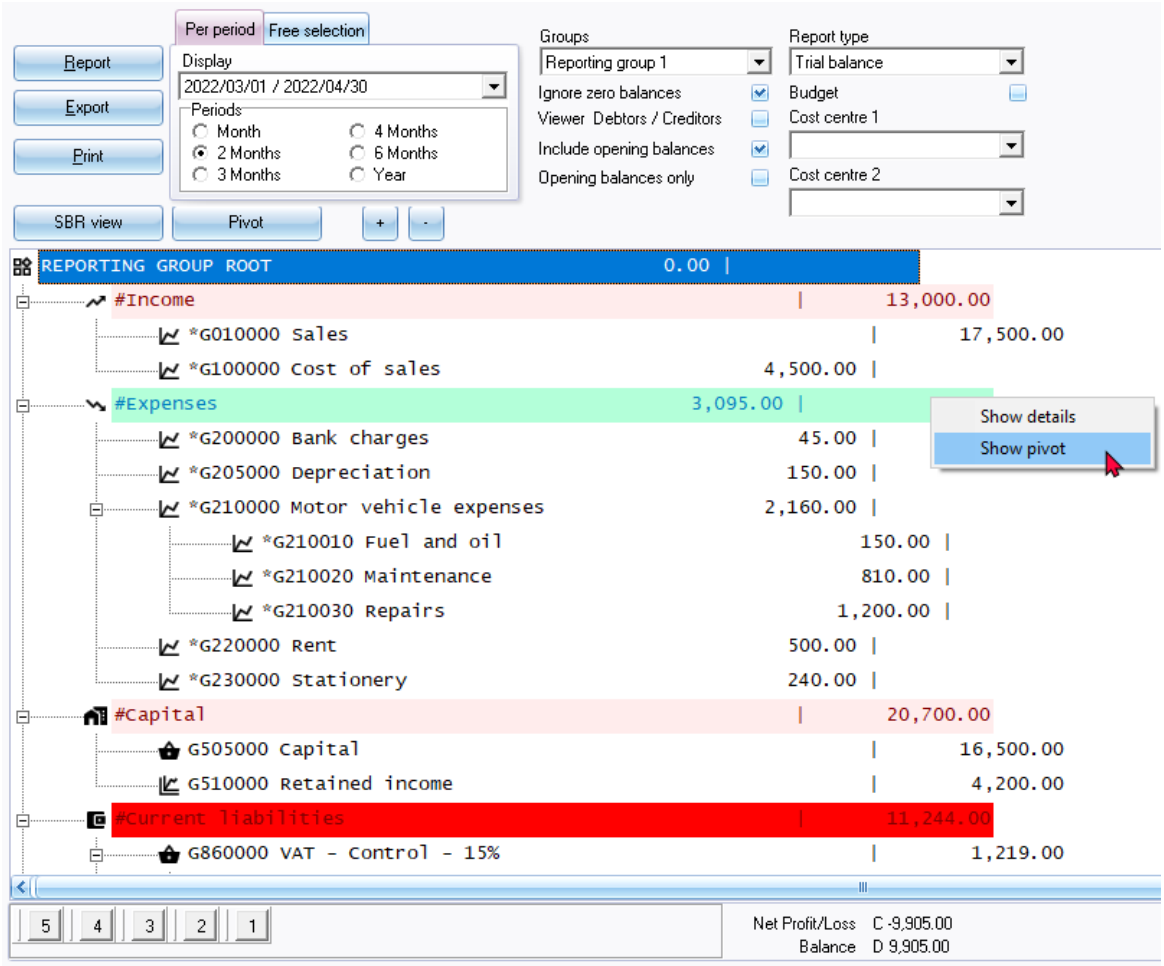
Pivots only includes batch and document transactions which are posted. Unposted batches and documents will be NOT be included in pivots.

To view a list of unposted batches and documents, which is not updated to the ledger, go to Input → Checking unposted items (Default ribbon).

Generating Pivot tables

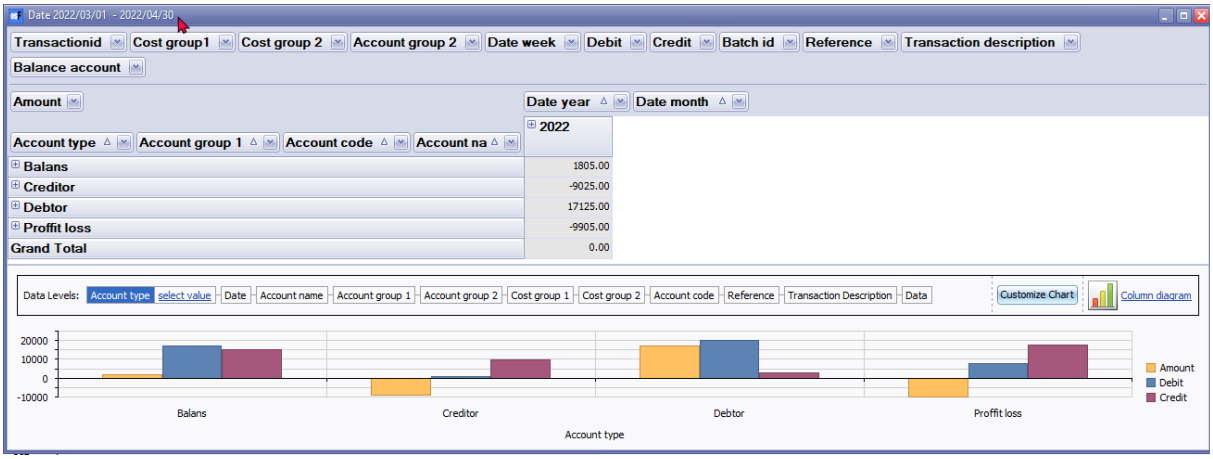
To view the Trial balance figures in the Pivot table in the Ledger analyser:

1. On the Ledger analyser 1 or Ledger analyser 2, select the Income statement, Trial balance or Balance sheet report type. In this example, the "*Trial balance*" is selected.
2. Select the Period or dates on the Free selection tab. In this example, the "*2 Months*" from "*1 March 2022*" to "*30 April 2022*" is selected.
3. Click on the Report button.



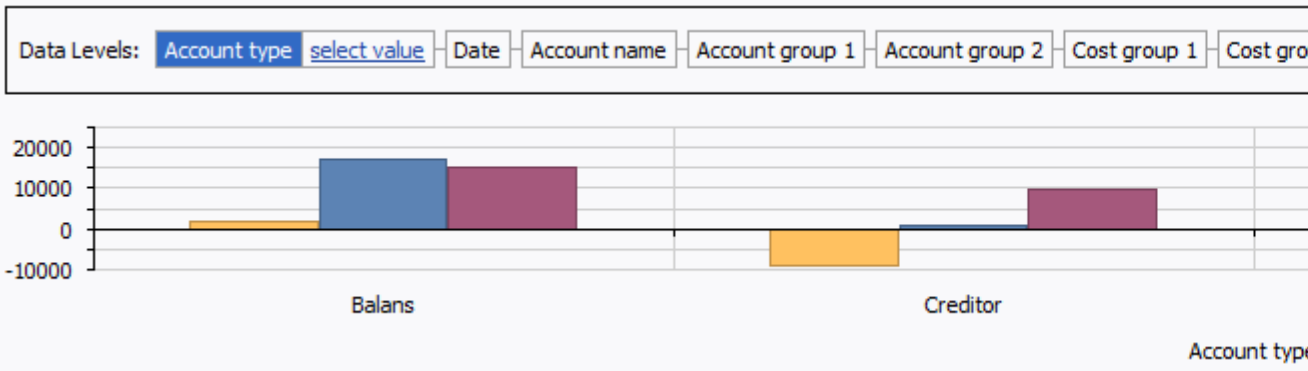
Buttons 5, 4, 3, 2 and 1 at the bottom of the report - is shortcut keys to the last accessed T-Account viewer options or Pivot options. These shortcuts will be cleared when you close active forms, or when you open the Set of Books.

4. Click on the Pivot button. The "*Trial balance*" figures for the selected period is displayed:



You may click on any graph to display the graph for the next available data level fields.

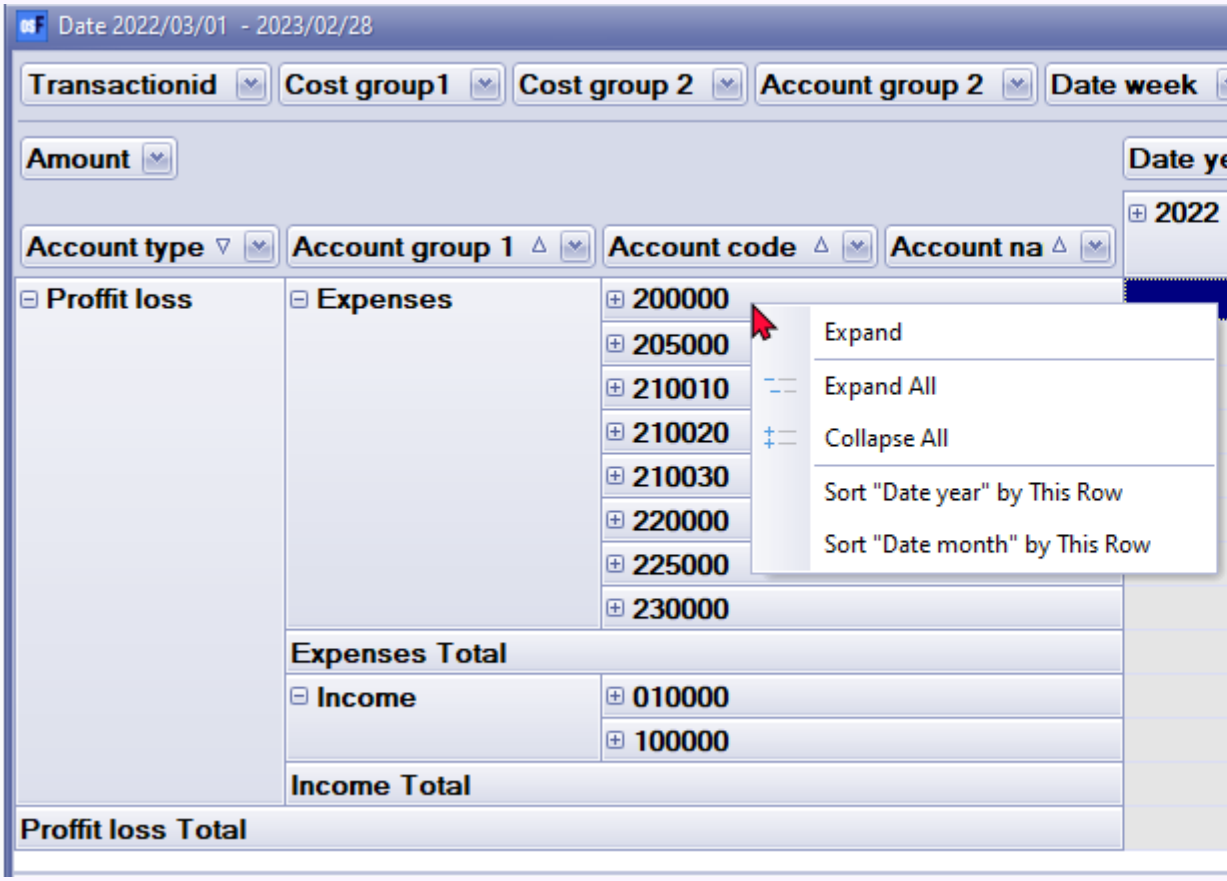
The cursor will be displayed as a magnifying glass and move to the next dataset. In this example, "Account type" is selected.



Move over graph area will display the values, e.g. "Profit / Loss - Credit is 17500" and "Amount for profit loss is -9905".

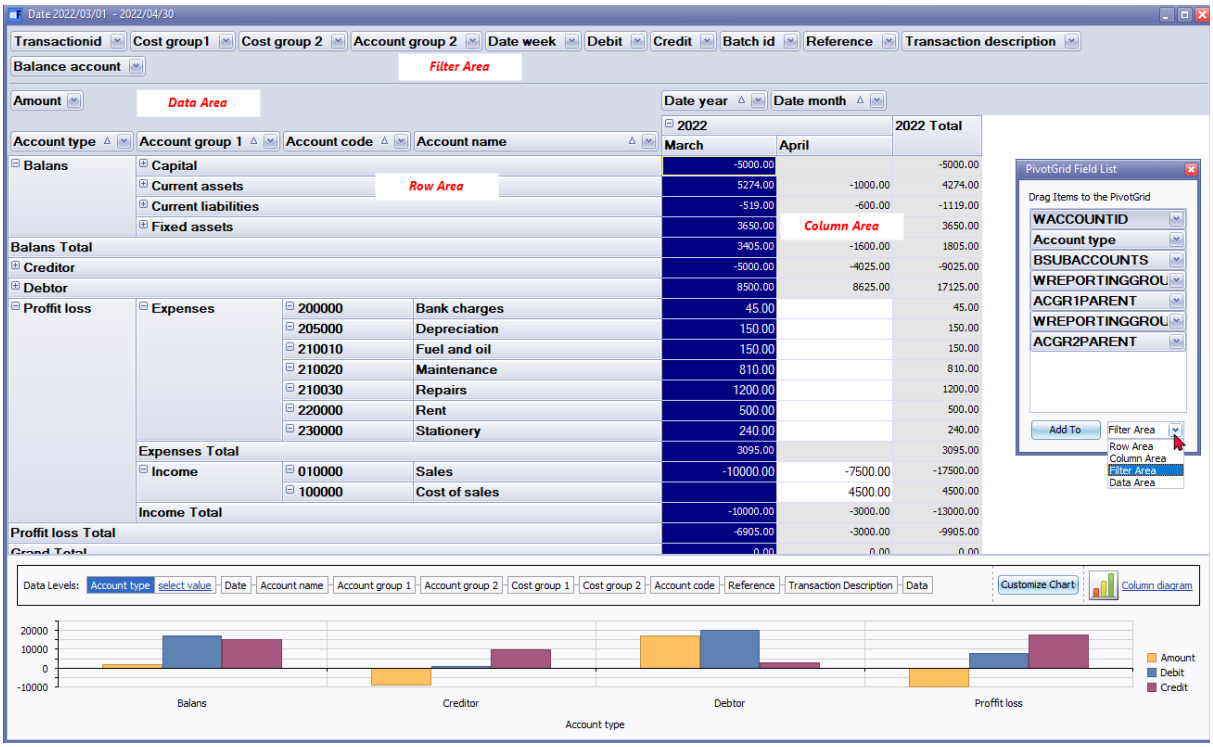
5. Click on the ⊞ icon to Profit loss to list the totals for the Income and Expense account types (e.g. Income and Expenses financial categories) for the selected period or dates. The icon will change ⊟ to list totals for each financial category (i.e. Income and Expenses).

You may right-click to launch the context menu, and select the following options:



6. Once the available columns are expanded, the Pivot table for the "*Trial balance*", according to the

selected options, should be displayed as follows:



Default filter options

The default filter options, which may be selected as needed, is structured on the Pivot screen in four (4) areas, "*Filter Area, Column Area, Row Area*" and "*Data Area*". The filter options is as follows:

Filter Area:

1. Transaction id – The transaction id is automatically generated for posted transactions in batches and documents.
2. Cost group 1 – If Cost centres 1 is selected in batch transactions and selected on documents, the Cost centres for Cost centre 1 will be listed.
3. Cost group 2 – If Cost centres 2 is selected in batch transactions and selected on documents, the Cost centres for Cost centre 2 will be listed.
4. Account group 2 – The groups set for Account group 2 in Setup → Groups (Setup ribbon) and linked to Accounting group 2 in Setup → Accounts (Setup ribbon).
5. Date week – The number of the week (from 1 to 53) for a calendar year.

> *In this example, March 2022 and April 2022 will be listed as week 9 to 14. Week 1 to 8 is for January 2022 and February 2022, which is not included in this Financial year (1 March 2022 to 28 February*

2023) as no transactions were posted in weeks 1 to 8.

6. Debit – The debit amounts.
7. Credit - The credit amounts.
8. Batch id – The batch id is auto generated for posted transactions in batches and documents.
9. Reference – The "*Reference*" is as follows:
    - Documents – Document number as generated when creating documents.

      In this example, and most database templates, the document numbers are prefixed with alpha characters, i.e. IN000001 = Invoices, CR000001 = Credit notes, PU000001 = Purchases and SR000001 = Supplier returns.

    - Batches – The reference as entered the "*Reference*" column of Batch entry screens.

      *The reference of Balancing entries in batches is indicated with eight (8) asterisks "********".*

10. Transaction description -
    - Documents – The document type (i.e. Invoice, Credit note, Purchase and Supplier returns) and the reference as entered in the "*Your reference*" field on "*Document entry*" screens, will be listed.

      COST OF SALES/Your reference – These are the Cost of Sales transactions generated for Invoices and Credit notes on which the stock items, default stock item type and other stock item types supporting cost of sales, were processed.

    - Batches – The description of the transaction entered in the "*Description*" column of Batch entry screens.
11. Balance account – The values, are as follows:
    - 0 = Income and Expense (Income statement) accounts.
    - 1 = Ledger accounts set as Balance sheet account type. These Capital, Assets and Liabilities accounts are reported on the Balance sheet.

Data Area:

12. Amount - The total debit amounts will be listed. Credit amounts (prefixed by a - (minus sign)) will be listed.

Row Area:

13. Account type – Lists all account types for the "*Trial balance*", and is as follows:

    a) Balans – Lists all accounts linked to the "*Balance sheet*" in the "*Account type*" field of Setup → Accounts (Setup ribbon). The "*Balance sheet*" accounts which is linked to the "*Capital*", "*Assets*" and "*Liabilities*" financial categories will be listed.

    b) Creditor – Lists all accounts added in the Creditor (Default ribbon).

    c) Debtor – Lists all accounts added in the Debtor (Default ribbon).

    d) Proffit / Loss – Lists all accounts linked to the "*Income statement*" in the "*Account type*" field of Setup → Accounts (Setup ribbon). The options is as follows:

        i) Income – The "*Income statement*" accounts which are linked to the "*Income*" financial category will be listed.

        ii) Expenses – The "*Income statement*" accounts which are linked to the "*Expenses*" financial category will be listed.

    e) Account group1 – List the Groups 1 linked to accounts added in Setup → Groups (Setup ribbon) as follows:

        i) Balans - Balance sheet accounts linked to Account group 1.

        ii) Creditor – Creditor accounts linked to Creditor group 1.

        iii) Debtor – Debtor accounts linked to Debtor group 1.

        iv) Proffit / Loss – Income and Expense accounts linked to Account group 1.

    f) Account code – All accounts will be listed by Account code.

    g) Account name – The description (name of the account).

Column Area:

14. Date year – The transaction totals will be displayed only for the year which was selected on the "*Per period*" tab of the Ledger analyser options. In this example only 2022 will be listed, since March 2022 and April 2022 were selected.

If a full financial year, for example, 1 March 2022 to 28 February 2023 is selected and transactions were processed for January 2022 and February 2022, the 2022 and 2023 years will be available.

The transaction totals will be listed for each calendar year. For example, if your financial year starts on 1 January 2022 and ends on 31 December 2022, only one (1) financial year will be listed, e.g. 2022.

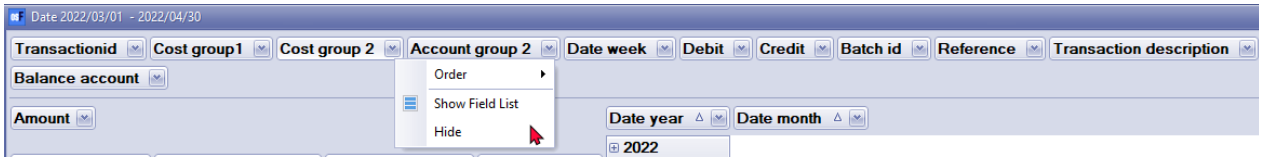
> *In this example, the financial year starts on 1 March 2022 and ends on 28 February 2023, the totals will be listed for 2022. Since no transactions is posted for January 2022 and February 2022, the 2022 year will not be available at this stage.*

15. Date month – The transaction totals will be displayed only for the months which was selected on the "*Per period*" tab of the Ledger analyser options. In this example, only March and April will be listed, since March 2021 and April 2021 were selected.

Change sequence add / remove Pivot grid fields

Hide Pivot grid fields

Select a Pivot grid field, right-click, and select "*Hide*" on the context menu. The selected Pivot grid field will be removed from the grid and added to the "*PivotGrid Field List*". For example, if you do not use Cost centres, you may hide "*Cost group 1*" and "*Cost group 2*".



Order (sequence) of columns

You may select a Pivot grid field, right-click, and select the following options from the "*Order*" option on the context menu:

1. Move to Beginning - Move to the first Pivot grid field.
2. Move to End - Move to the last Pivot grid field.
3. Move Left - Move the selected Pivot grid field before the previous Pivot grid field to the left.
4. Move Right - Move the selected Pivot grid field after the next Pivot grid field to the right.

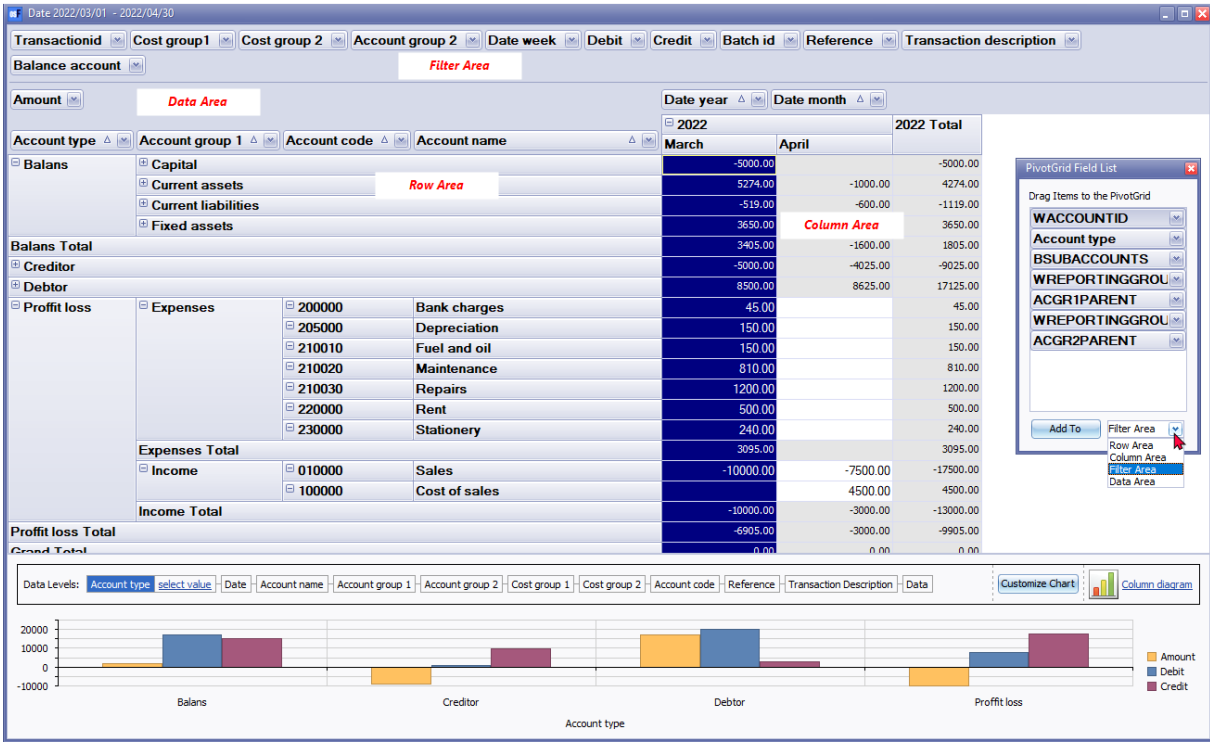
> *You may use your mouse to drag a selected Pivot grid field to the right or left to your required position.*

Filters

Right-click to access the "*Show Field List*" or the "*Show Prefilter Dialog*" options.

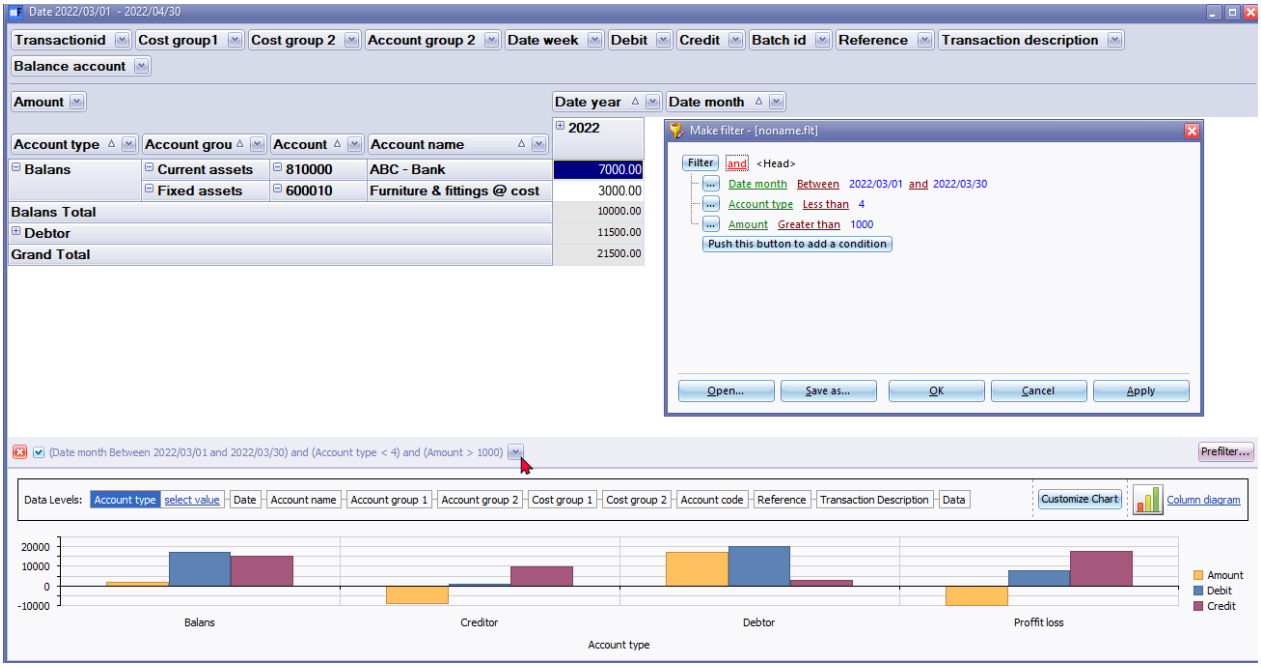
PivotGrid Field List

The "*PivotGrid Field List*" lists the available Pivot grid fields not displayed on the default Pivot table view. You select an available field on the list and add them to the four (4) areas (i.e. "*Data Area*", "*Filter Area*", "*Column Area*" or the "*Row Area*") of the Pivot table.



Show Prefilter Dialog

The "*Prefilter Dialog*" allows you to create custom filters for the Pivot table.



By default all data applicable to a column "Pivot grid field" is included in the initial launch of the Pivot table based on your report options.

You may click on the filter icon of a selected "Pivot grid field" to remove the tick to exclude that specific data on the list from the Pivot table.

Save custom filter files

To save a custom filter file:

1. Once you have sorted or filtered your data with the "*Make filter0*" screen, click on the Save as... button. The "*Save active filter as*" screen will be displayed.
2. Select a directory in which you wish to save the custom filter file.
3. Enter a file name.
4. Click on the Save button to save the Filter in a (*.flt) Filter File format. You may then at any later stage open the saved *.flt file.

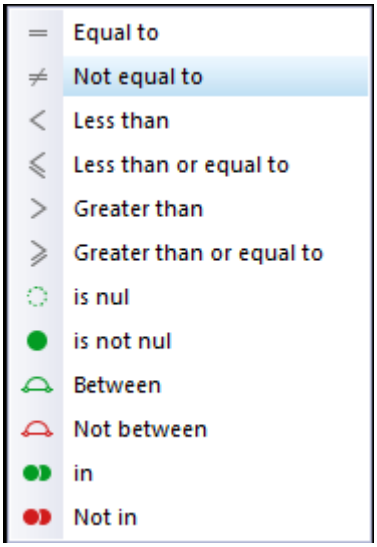
Open custom filter files

To open a saved a custom filter file:

1. Once you have sorted or filtered your data with the "Make filter" screen, click on the Open... button. The "*Open saved filter as*" screen will be displayed.

2. Select a directory in which you have saved the custom filter file.
3. Select a valid filter file.
4. Click Open. The selected filter file's name will be displayed in the titlebar of the "*Make filter*" screen.

Conditions



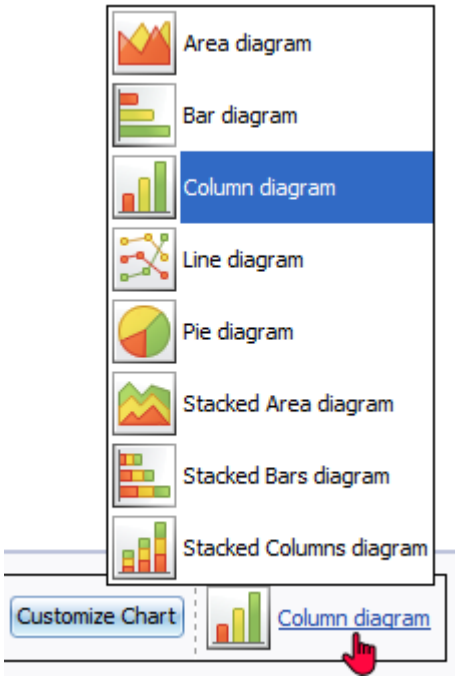
1. Equal to - list or display all values which is the same as the specified value.
2. Not equal to - list or display all values which is not the same as the specified value.
3. Less than - list or display all values smaller than the specified value.
4. Less than or equal to - list or display all values smaller or equal to the specified value.
5. Greater than - list or display all values greater than the specified value.
6. Greater than or equal to - list or display all values greater or equal to the specified value.
7. is null - excludes any value entered, will not be listed or displayed.
8. is not null - is not zero - any value which is not equal to zero will be listed or displayed.
9. Between - Specify specific values, etc. to include only matching values.
10. Not between - Specify specific values, etc. to exclude values.
11. in - In a specified value.
12. Not in - Not in a specified value.

If a Date for a column condition is selected, additional conditions will be available (i.e. is this month, is this year, is next 7 days, is next week, is next 14 days, is next two weeks, is next 30 days, is next month, is future, is this week, is yesterday, is today, is last 7 days, is last week, is last 14 days, is last two weeks, is last 30 days, is last month, is last year, is past, is this week, etc.

Customise the graphs

Graph types

The default chart diagram is the "*Column diagram*". You may select the one of the following diagrams to view the graph.

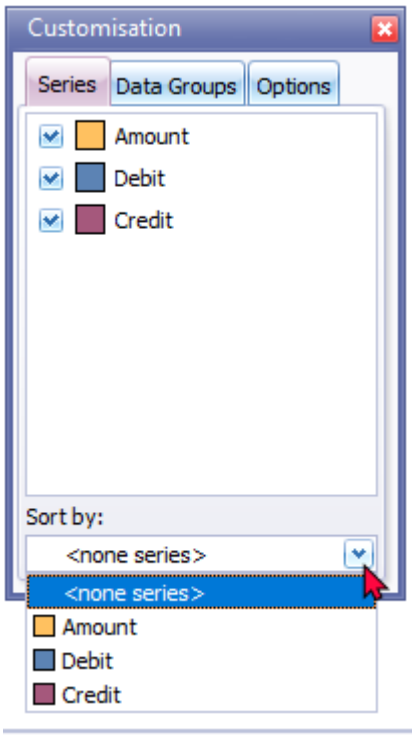


Series

By default, the "*Amount*" and "*Debit*" and "*Credit*" is displayed.

You may remove the tick of the series or add a tick to a series. For example, if you wish to see only the "*Debit*" and "*Credit*" amounts, leave these as ticked; and if you do not wish to view the "*Amount*", remove the tick.

Sort by: select the options in the series to change the sequence in which the data in the graph will be displayed.

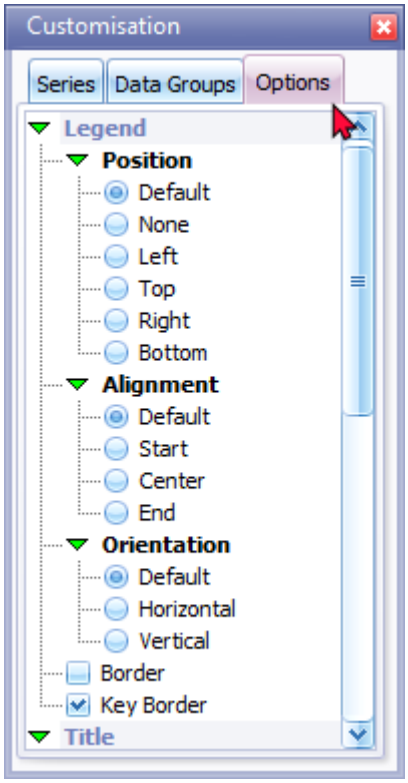


Data groups

Data groups is empty.

Options

You may change the default values for the "*Legend, Title, Toolbox*" and "*Other (Value Hints)*" according to your requirements.



Created with the Standard Edition of HelpNDoc: Effortlessly Publish Your Word Document as an eBook

Zoom in / Zoom out + / - buttons

Zoom in / Zoom out + / - buttons added to resize (increase / decrease the font) the reports (i.e. Trial balance, Balance sheet and Income statement) on screen.

These are similar to the Zoom + (Zoom in) and the Zoom - (Zoom out) buttons on the View ribbon on Spreadsheets.

- Ledger analyser - Available for Trial balance, Balance sheet and Income statement on screen. Not implemented on the other report types (i.e. Column balances, Standard column balances, This year vs last year, Budget vs actual).
- Spreadsheet reports (Reports ribbon) - All spreadsheet reports.
- Data Import / Export - Spreadsheet import button on Import / Export tab of Stock items (Default ribbon).
- Setup → Accounts - Spreadsheet icon (Setup ribbon).
- Batch entry - Spreadsheet import icon on all batches entry screens.

- Spreadsheet sales (Default ribbon).

Created with the Standard Edition of HelpNDoc: Easy CHM and documentation editor

T-Account viewer

The "*T-Account viewer*" may be launched (for specific accounts or periods) from the Ledger analyser 1 or Ledger analyser 2 options on the Reports ribbon (right-click or double-click on specific accounts or groups).

Column balances - The column balances report types will list the transactions of a selected account for each period of Last year and This year in a spreadsheet format.

You may select an account and double-click on any period. This will launch the T-Account viewer with a list of all the transactions for the selected period. You may be print and/or export the transactions.

The following six (6) column balances report types is available:

1. *Column balances - Lists all ledger account balances in a spreadsheet view. These are the ledger accounts reported in the Trial balance (this includes both the accounts reported in the Income statement and Balance sheet).*
2. *Column balances debtors - Lists the balances of all the individual debtor (customer / client) accounts (Debtors on the Default ribbon) in a spreadsheet view. The total of these accounts are reported in the Debtor's control account on the Trial balance and the Balance sheet.*
3. *Column balances creditors - Lists the balances of all the individual creditor (supplier / vendor) accounts (Creditors on the Default ribbon) in a spreadsheet view. The total of these accounts are reported in the Creditor's control account on the Trial balance and the Balance sheet.*
4. *Column balances D/C - Lists all debit and credit ledger account balances in a spreadsheet view. These are the accounts reported in the Trial balance (this includes both the accounts reported in the Income statement and Balance sheet).*
5. *Column balances debtors D/C - Lists the debit and credit account balances of all the individual debtor (customer / client) accounts (Debtors on the Default ribbon) in a spreadsheet view. The total of these accounts are reported in the Debtor's control account on the Trial balance and the Balance sheet.*
6. *Column balances creditors D/C - Lists all debit and credit balances of all the individual creditor (supplier / vendor) accounts (Creditors on the Default ribbon) in a spreadsheet view. The total of these accounts are reported in the Creditor's control account on the Trial balance and the Balance sheet.*

Account viewer - Ledger analyser

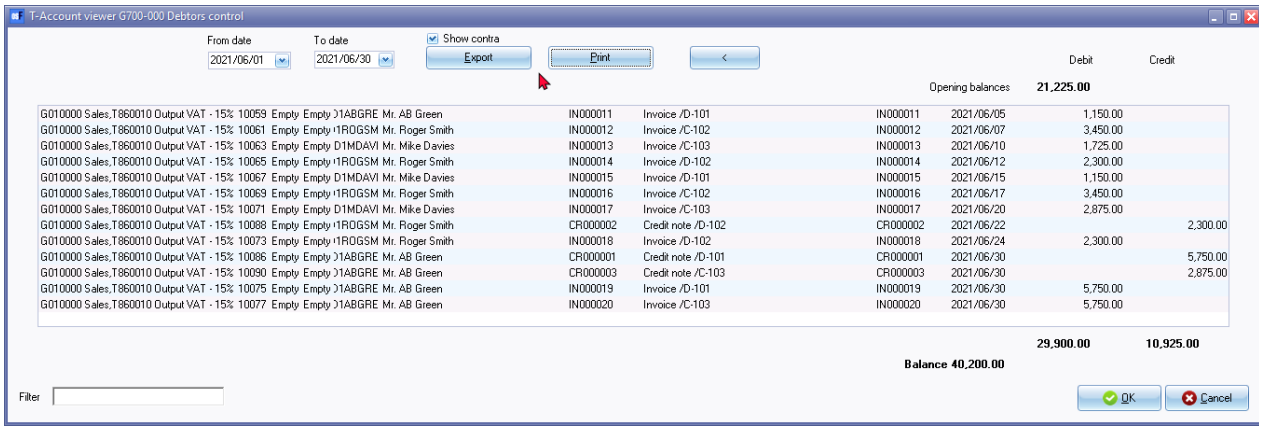
In addition to launching the T-Account viewer from the Ledger analyser options, the T-Account viewer may also be launched separately on the Reports ribbon; or from the following options on the Default ribbon:

- Search - Investigator - Account or Batch type searched items.
- Debtors - Transactions tab - Click on the Show transactions button.
- Creditors - Transactions tab - Click on the Show transactions button.

By utilising the T-Account viewer and the reports in the Ledger analyser, you can gain a detailed understanding of the transactions and their impact on the accounts involved.

You may select an account and double-click on a specific period to list and view the transaction details in the T-Account viewer. You may be print and/or export the transactions.

In this example, the T-Account viewer is launched by a double-click in the month (accounting period) " *June*" in the "*G700000 Debtors control*" account:



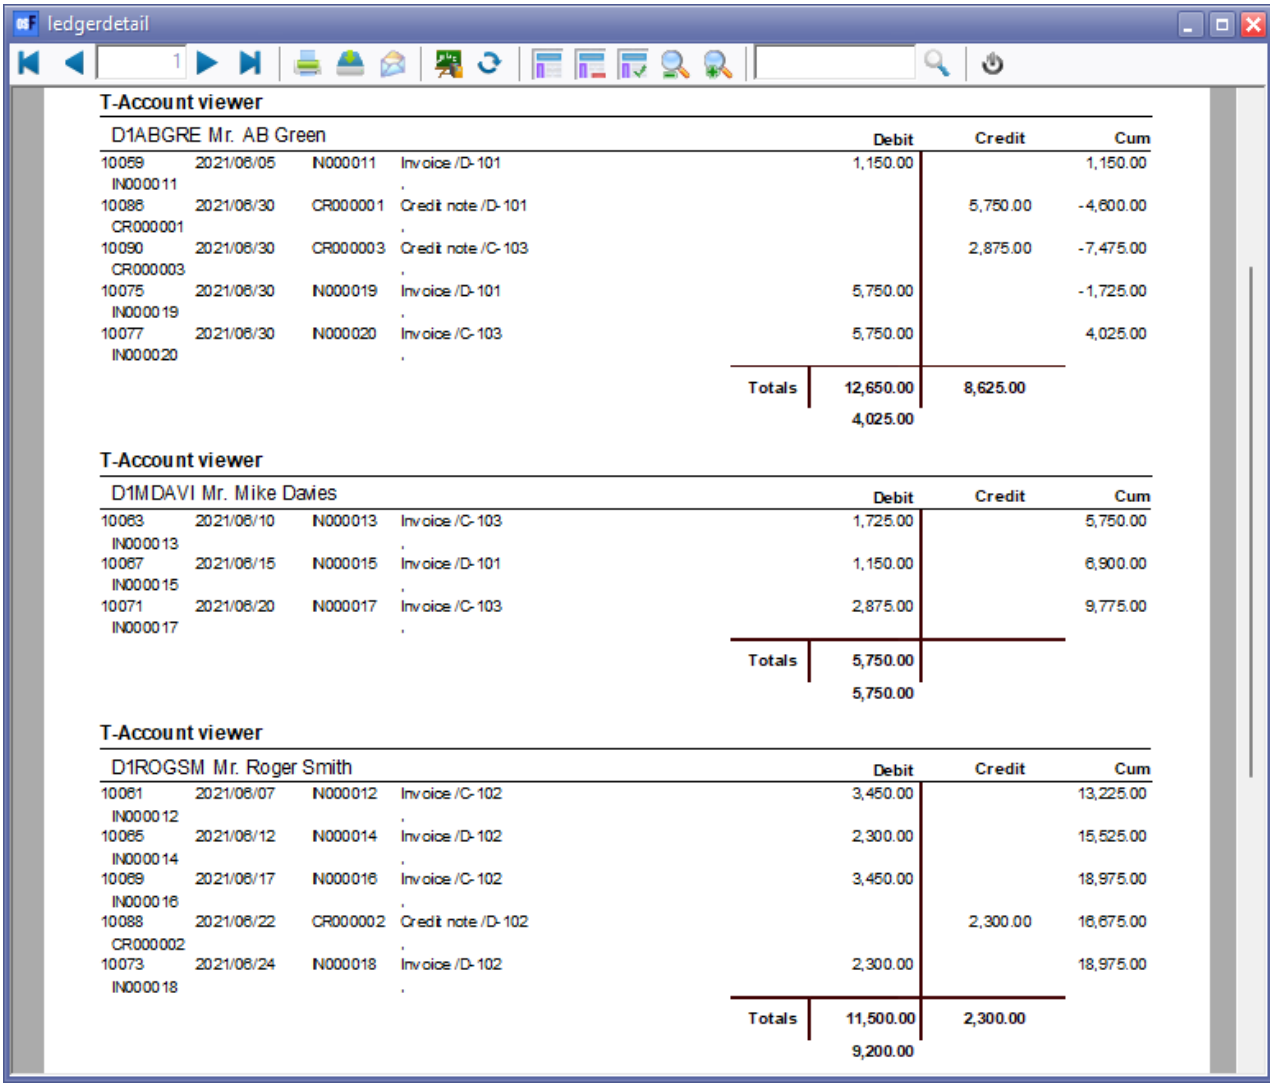
Show contra - By default this option is not selected.

If the Show contra is selected, it will insert (add) the Account code and Description before the batch id (batch number).

The Contra accounts will not print on the T-Account viewer ("ledgerdetail") report; but will be included in the Export file when you click on the Export button of the T-Account viewer.

Print transactions in T-Account viewer

Click on the Print button to print the selection in the T-Account viewer.



Each time you access the T-Account viewer from the Ledger analyser, it will create a shortcut button (numerical). You may then click on any of the 1, 2, 3, 4, 5 buttons, etc. to view your previous T-Account viewer selections.

If the Pivot option was selected, it will launch the Pivot feature.

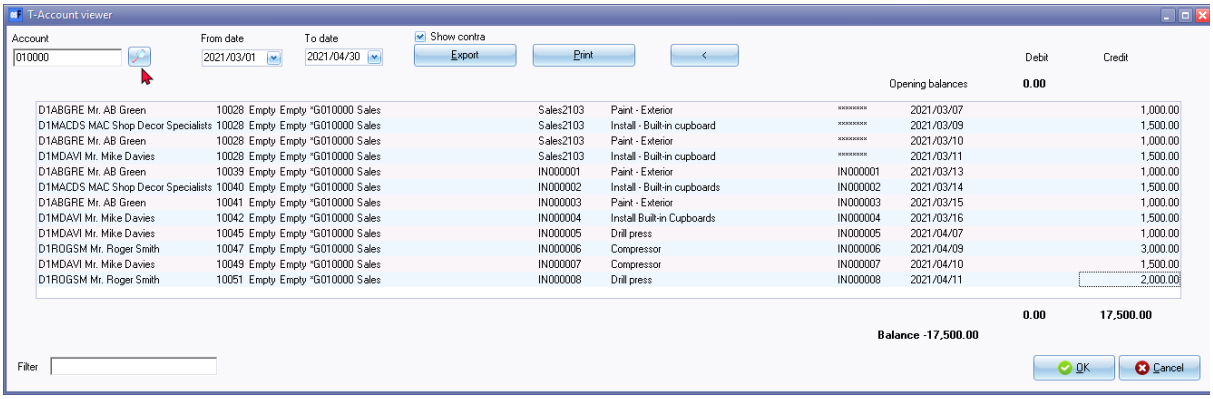
These shortcuts will only be cleared if you:

- *Close and re-open the Set of Books*
- *Tools → Close active forms (Setup ribbon)*

Account viewer - Reports ribbon

To access the T-Account viewer:

1. On the Reports ribbon, select T-Account viewer. The "*T-Account viewer*" screen is displayed:



Show contra - By default this option is not selected.

If the "Show contra" is selected, it will insert (add) the Account code and Description before the batch id (batch number).

The Contra accounts will not print on the T-Account viewer ("ledgerdetail") report; but will be included in the Export file when you click on the Export button of the T-Account viewer.

2. Select the following options:

   a) Account - Select the Account on the Lookup, if this field is available.

The Account option will only be available, if the T-Account viewer is launched from the T-Account viewer on the Reports ribbon).

The Account lookup option is not available, if the T-Account viewer is launched from elsewhere.

   b) From date and To date - Enter or select the dates on the date picker.

The "From date" and "To date" fields will automatically be filled in with the date selected on the Ledger analyser report options. It will only include transactions for these dates. You may enter or select any other dates, if necessary.

If you have selected the Column balances report types, and you click on the period columns, the dates for the selected period column will automatically be selected.

If the Pivot option was selected, it will launch the Pivot feature.

3. You may also use the following options to get specific views of transactions:

a) Batch number (e.g. 10014 automatically generated). This will list only the transactions for a specific batch (journal).

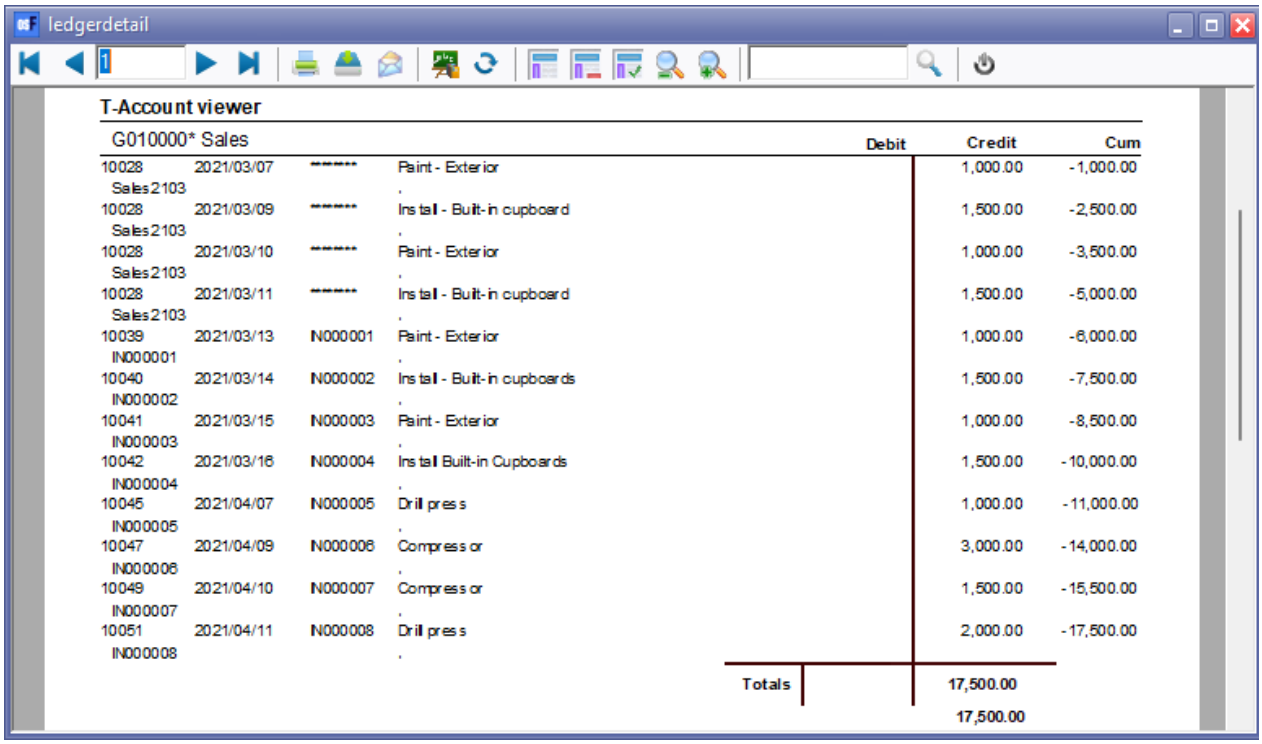
b) Account code (e.g. B810000 Current Bank account, G610010 Furniture and Fittings @ Cost, G210010 Fuel & Oil, G720000 Petty cash, G220000 Rent, G225000 Salaries and Wages, T850020 Input Tax Standard Rate, T850030 Input Tax Capital Goods). This will list the transactions for a specific account.

c) Date – This will list the transactions for a specific date. If you double-click on a date, the From date and To date will be changed to the selected date.

4. Once finished, click on the Close button to exit (close) the "*T-Account viewer*" screen.

The T-Account viewer may also be accessed from the Search (Default ribbon). - Once an account is listed, and selected, double-click on it.

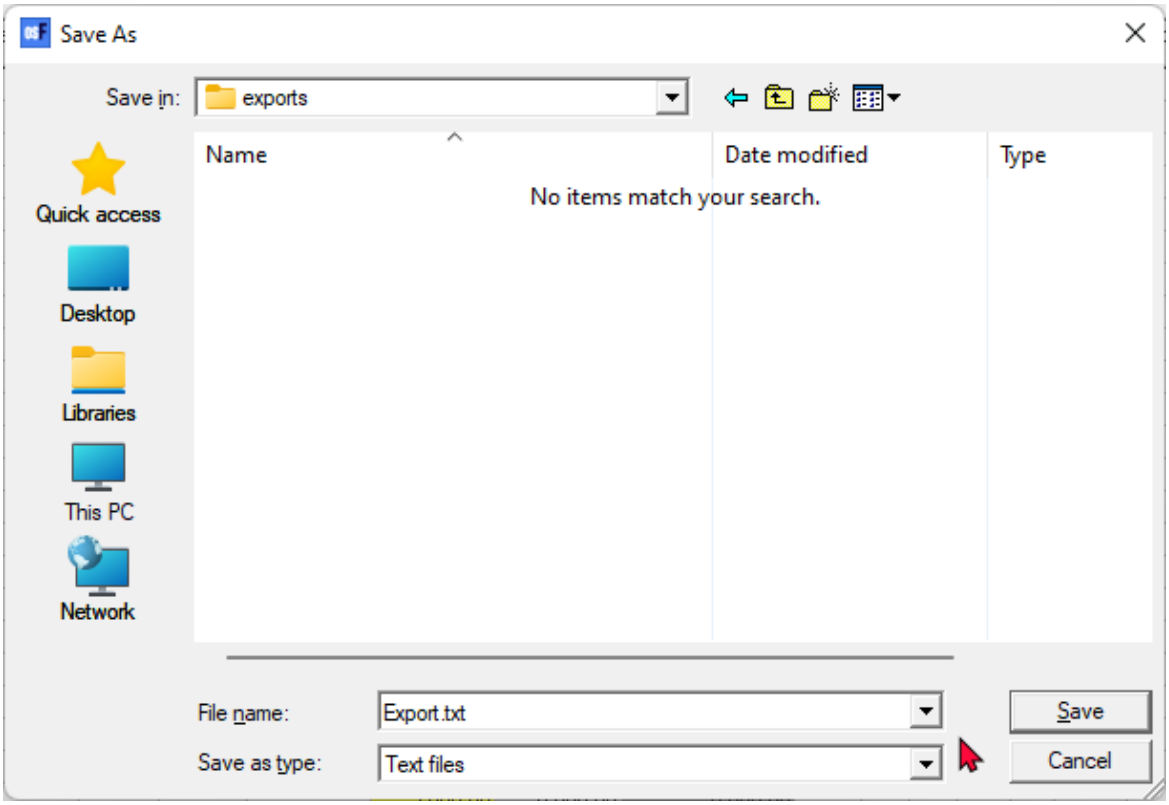
If the T-Account viewer is accessed from the Reports ribbon, you may select an account on the Accounts lookup.



Export T-Account viewer

To create a T-Account viewer - Export file:

1. On the Reports ribbon, select Ledger analyser 1 or Ledger analyser 2.
2. Select the "*Column balances*" report type. Once finished, selecting your options, click on the Report button to build, update or refresh the data for the selected report type on the Ledger analyser screen.
3. Click on the Export button. This will launch the "*Save as*" screen.



4. Select the folder in which you wish to save the file.
5. The default file name will be "*Export.txt*". Overtype this with your own name.

If you do not enter and save the Export.txt file name, you may replace existing (previously exported) files.

Of an existing exported file is opened, and you are trying to save a export file with the same name, a similar error message as the following will be displayed:

> Cannot create file "D:\exports\Export.txt". The process cannot access the file because it is being used by another process.

6. Click on the Save button.

7. This will automatically open (launch) the file in your system's default spreadsheet application or program associated with comma separates value file type.

T-Account viewer- Open exported transactions in other Spreadsheet applications

Once an "*Export.txt*" file is created, the exported file will automatically open in Microsoft Excel spreadsheet (as in this documentation).

If you wish to open saved "*Export.txt*" files in another app (program) for CSV (Comma Separated Values) file type, than Microsoft Excel, you may use the spreadsheet components of other apps (programs) e.g. LibreOffice, OpenOffice or UltraOffice installed on your system.

See - System settings - Default app for csv file types.

The T-Account viewer may be launched (for specific transactions or periods) from the Ledger analyser 1 or Ledger analyser 2 options on the Reports ribbon (right-click or double-click on specific accounts or groups).

Column balances - The column balances report types will list the transactions of a selected account for each period of Last year and This year in a spreadsheet format.

You may select an account and double-click on any period. This will launch the T-Account viewer with a list of all the transactions for the selected period. You may be print and/or export the transactions.

The following six (6) column balances report types is available:

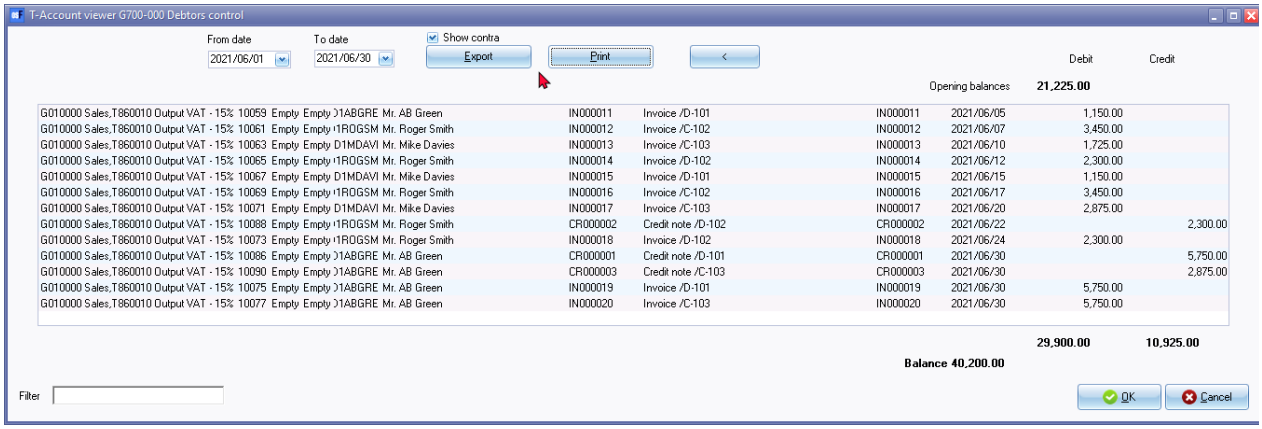
1. *Column balances - Lists all ledger account balances in a spreadsheet view. These are the ledger accounts reported in the Trial balance (this includes both the accounts reported in the Income statement and Balance sheet).*
2. *Column balances debtors - Lists the balances of all the individual debtor (customer / client) accounts (Debtors on the Default ribbon) in a spreadsheet view. The total of these accounts are reported in the Debtor's control account on the Trial balance and the Balance sheet.*
3. *Column balances creditors - Lists the balances of all the individual creditor (supplier / vendor) accounts (Creditors on the Default ribbon) in a spreadsheet view. The total of these accounts are reported in the Creditor's control account on the Trial balance and the Balance sheet.*
4. *Column balances D/C - Lists all debit and credit ledger account balances in a spreadsheet view. These are the accounts reported in the Trial balance (this includes both the accounts reported in the Income statement and Balance sheet).*
5. *Column balances debtors D/C - Lists the debit and credit account balances of all the individual debtor (customer / client) accounts (Debtors on the Default ribbon) in a spreadsheet view. The total of these accounts are reported in the Debtor's control account on the Trial balance and the Balance sheet.*
6. *Column balances creditors D/C - Lists all debit and credit balances of all the individual creditor (supplier / vendor) accounts (Creditors on the Default ribbon) in a spreadsheet view. The total of these accounts are reported in the Creditor's control account on the Trial balance and the Balance sheet.*

In addition to this, the T-Account viewer may also be launched separately on the Reports ribbon; or from the following options on the Default ribbon:

1. Search - Investigator - Account or Batch type searched items.
2. Debtors - Transactions tab - Click on the Show transactions button.
3. Creditors - Transactions tab - Click on the Show transactions button.

Example : Transactions in T-Account viewer

In this example, the T-Account viewer is launched by a double-click in the month (accounting period) "*June*" in the "*G700000 Debtors control*" account:



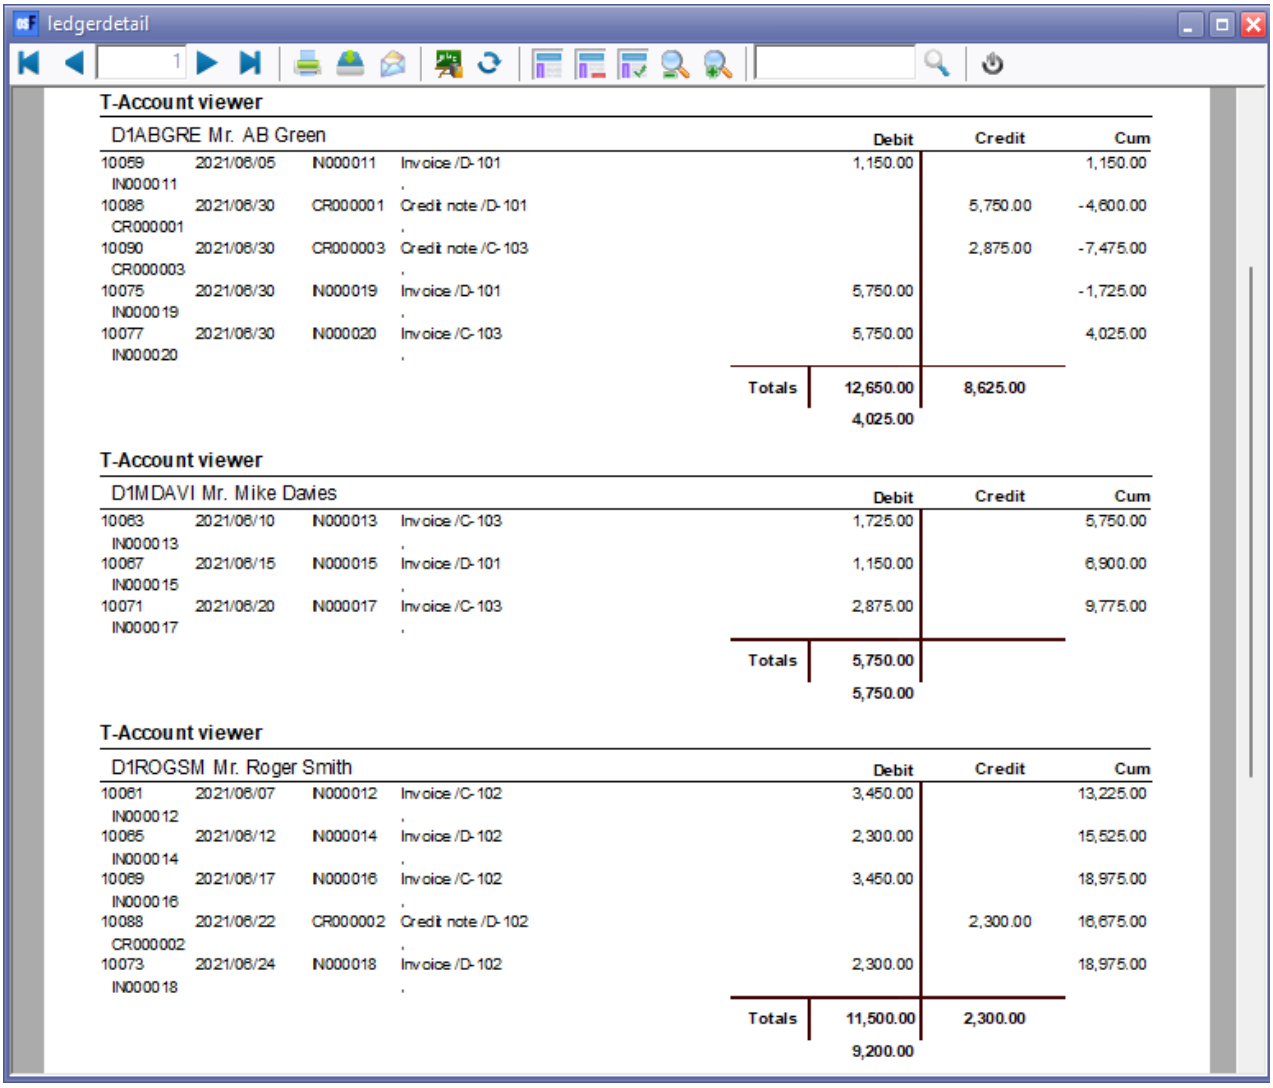
Show contra - By default this option is not selected.

If the Show contra is selected, it will insert (add) the Account code and Description before the batch id (batch number).

The Contra accounts will not print on the T-Account viewer ("ledgerdetail") report; but will be included in the Export file when you click on the Export button of the T-Account viewer.

Print transactions in T-Account viewer

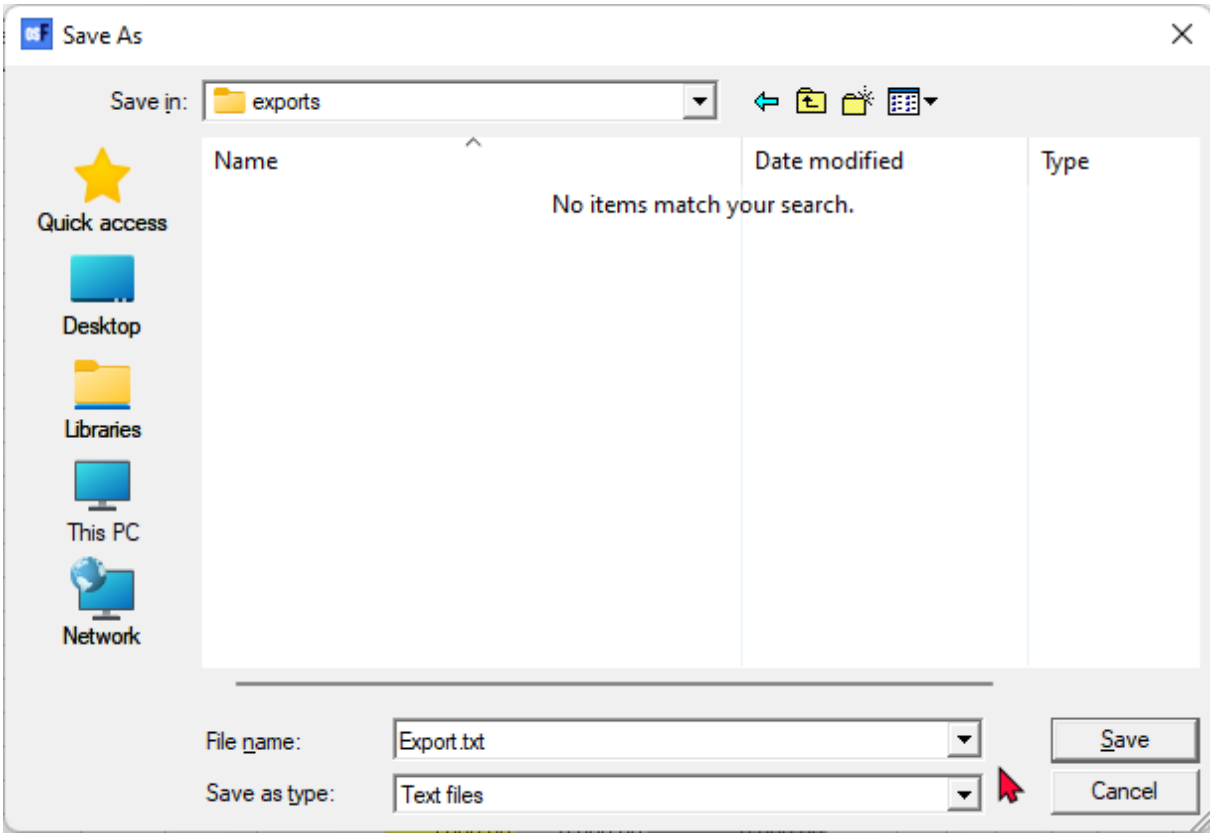
Click on the Print button to print the selection in the T-Account viewer.



Export transactions in T-Account viewer

To create an Export file for transactions in the T-Account viewer:

1. Click on the Export button (on the T-account-viewer). The "*Save As*" screen will be displayed:



2. Select the file type. Text files (*.txt) is the default; or select CSV files (*.csv) (Comma Separated Values).

3. Click on the Save button. This will automatically open (launch) the exported file in the program associated with the selected file type:

    - Text files e.g. (Export.txt) - This should automatically open the exported text file of your system's default text file program associated with Text file type (*.txt) file types (e.g. Notepad, etc). You need to close the exported text file and launch your spreadsheet program. In your spreadsheet program, Open the text file to launch the "*Text Import*" options.

    - CSV files e.g. (Export.csv) - This should automatically open the "*Text Import*" options of your system's default spreadsheet program associated with Comma Separated Value file type (*.csv) file types (e.g. Microsoft Excel, LibreOffice Calc, OpenOffice Calc, Ultra Office, etc.).

Opened in a Text editor - Notepad

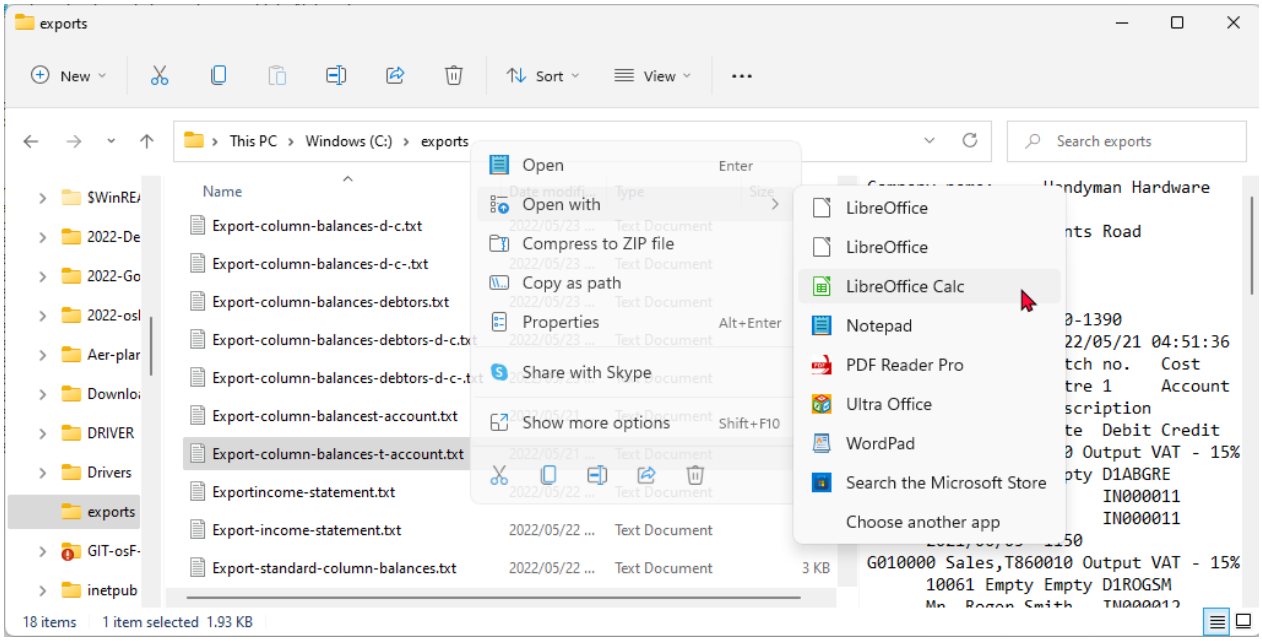
An example, of the "*Export.txt*" file opened in your systems default program associated with *.txt files *(e.g. "Notepad")* is as follows:

Open the Export.txt file in a spreadsheet

If the Comma Separated Value file type (.csv) file type for the exported file does not automatically launch in a spreadsheet program; or the incorrect program, you may change this. To do this; you need to:*

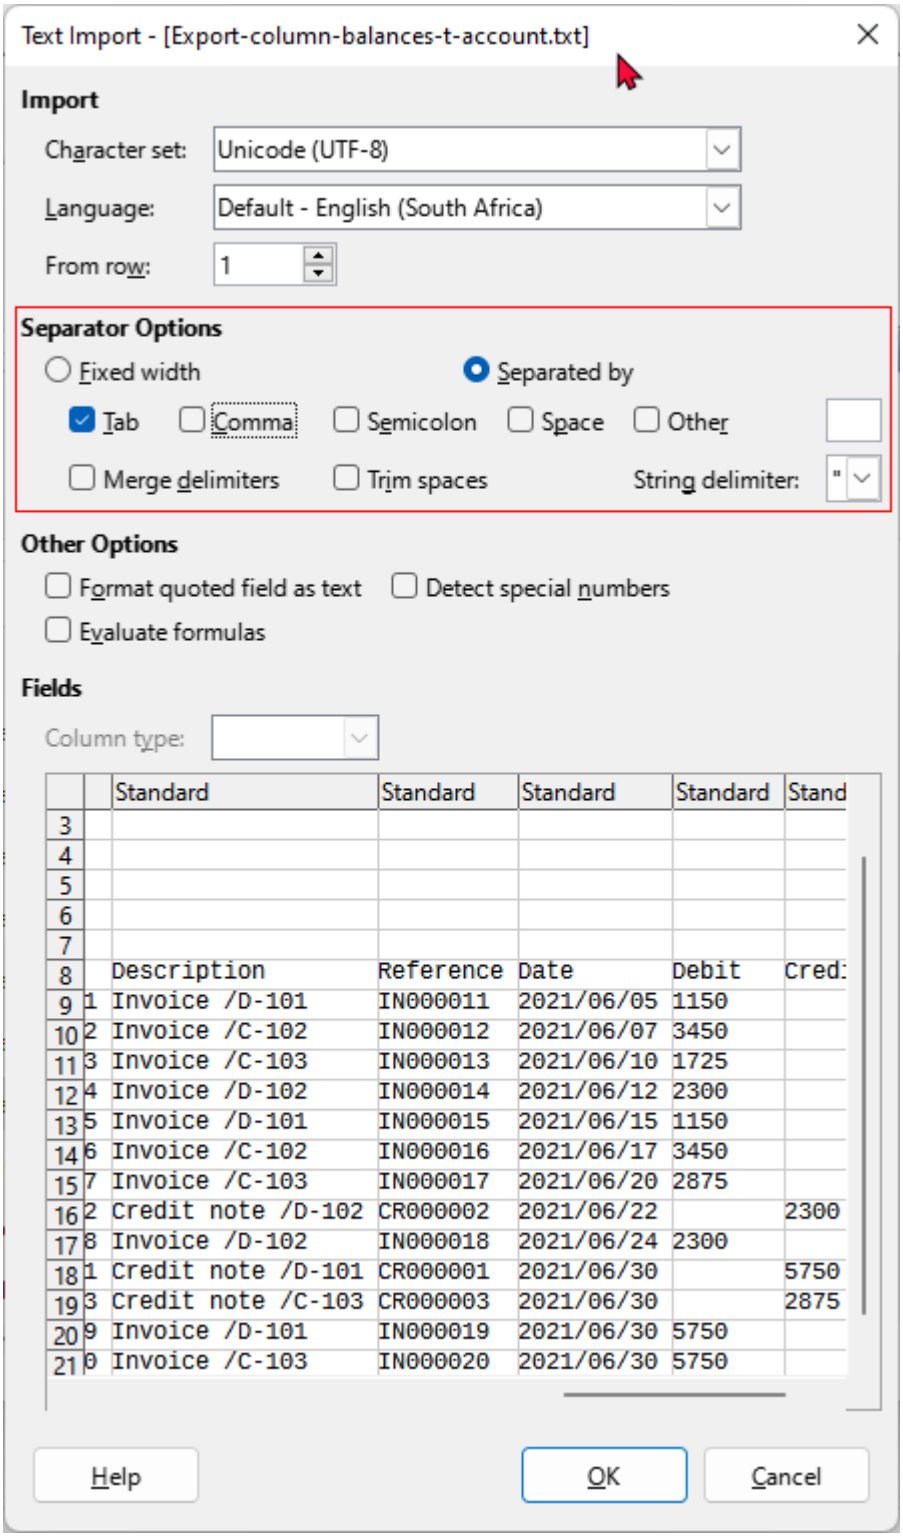
- *Select the saved *.csv file.*
- *Right-click on it and select the Open with option on your system's context-menu.*
- *If your program is not listed as one of the Recommended programs on your system's context-menu, select the Choose Default Program... option. On this screen, select your default program (e.g. Microsoft Excel, LibreOffice Calc, OpenOffice Calc, Ultra Office, etc.). You may need to click on the Browse button to do this.*
- *Make sure that the Always use the selected program to open this kind of file option is selected (ticked), and click on the OK button.*

Locate the "*Export.txt*" file in your System's File Explorer



If LibreOffice and not LibreOffice Calc is selected, the "Export.txt" file will open in LibreOffice Writer as a text file.

In this example, Open with > LibreOffice Calc is selected. The "*Text Import*" screen is selected.



Separator options - Separated by

- *Comma - Do not select this option. If you have selected "Show contra" option on the T-Account viewer, the Contra accounts will be included in the exported file as column A (e.g." **G010000 Sales,T860010 Output VAT - 15%"). If the "Comma" option is selected, it will export the Contra accounts into 2 columns. The rest of the columns would be out of line with the column headings.***

- *Merge delimiters - Do not select this option. If you select the "Merge delimiters" option, the Debit and Credit totals will be merged into the Debit column.*

Select your options and click OK. The selected "*Export.txt*" file will be opened in LibreOffice Calc spreadsheet.

Ledger analyser - Open exported files in other Spreadsheet applications

There are six (6) report types, which may be selected (i.e. Trial balance, Income statement, Balance sheet, Standard column balances, Budget vs actual and This year vs last year) which may be generated in the Ledger analyser and exported to spreadsheets.

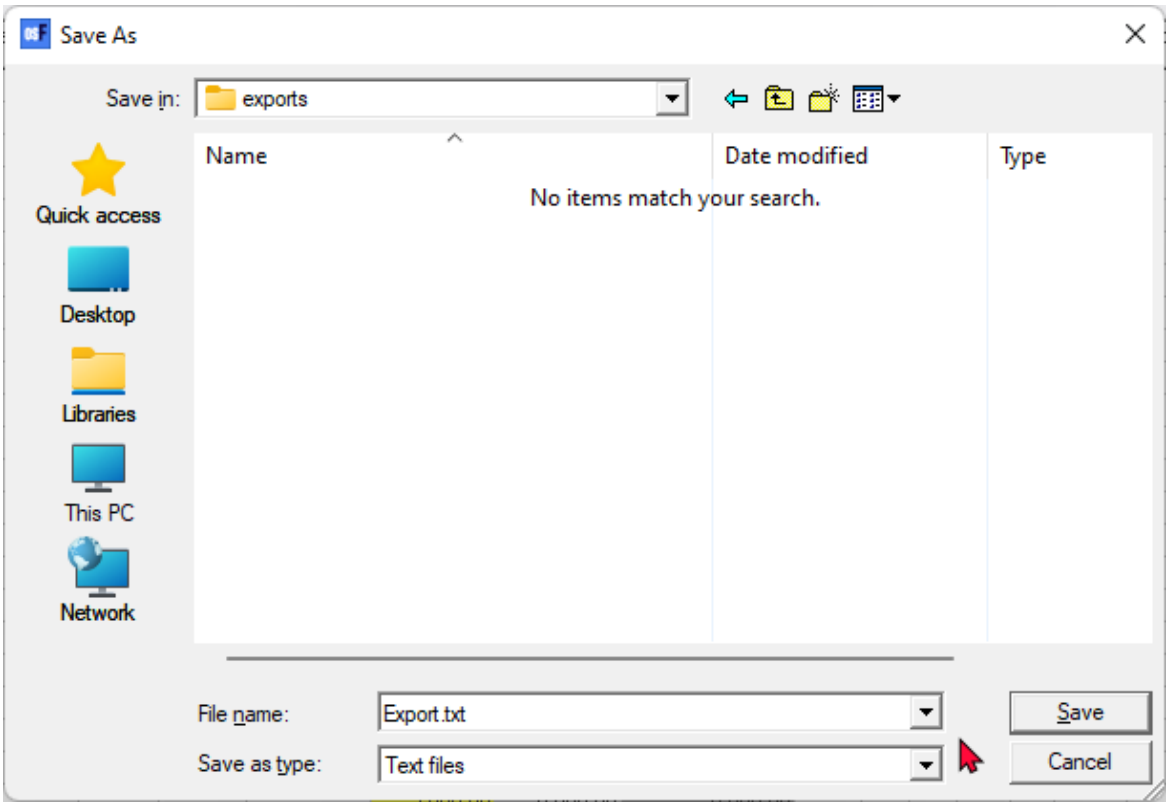
When printing reports on the Ledger analyser, it is recommended that the Export button are used to export the reports as a Comma Separated Values (.csv) file, instead of saving it as a meta file form the "Reportman print preview" screen ( ) "Save metafile as" option.*

To create an Export file in the Ledger analyser:

1. On the Reports ribbon, select Ledger analyser 1 or Ledger analyser 2.

2. Select the report type. Once finished, selecting your options, click on the Report button to build, update or refresh the data for the selected report type on the "*Ledger analyser*" screen.

3. Click on the Export button. This will launch the "*Save as*" screen.



4. Select the folder in which you wish to save the file.

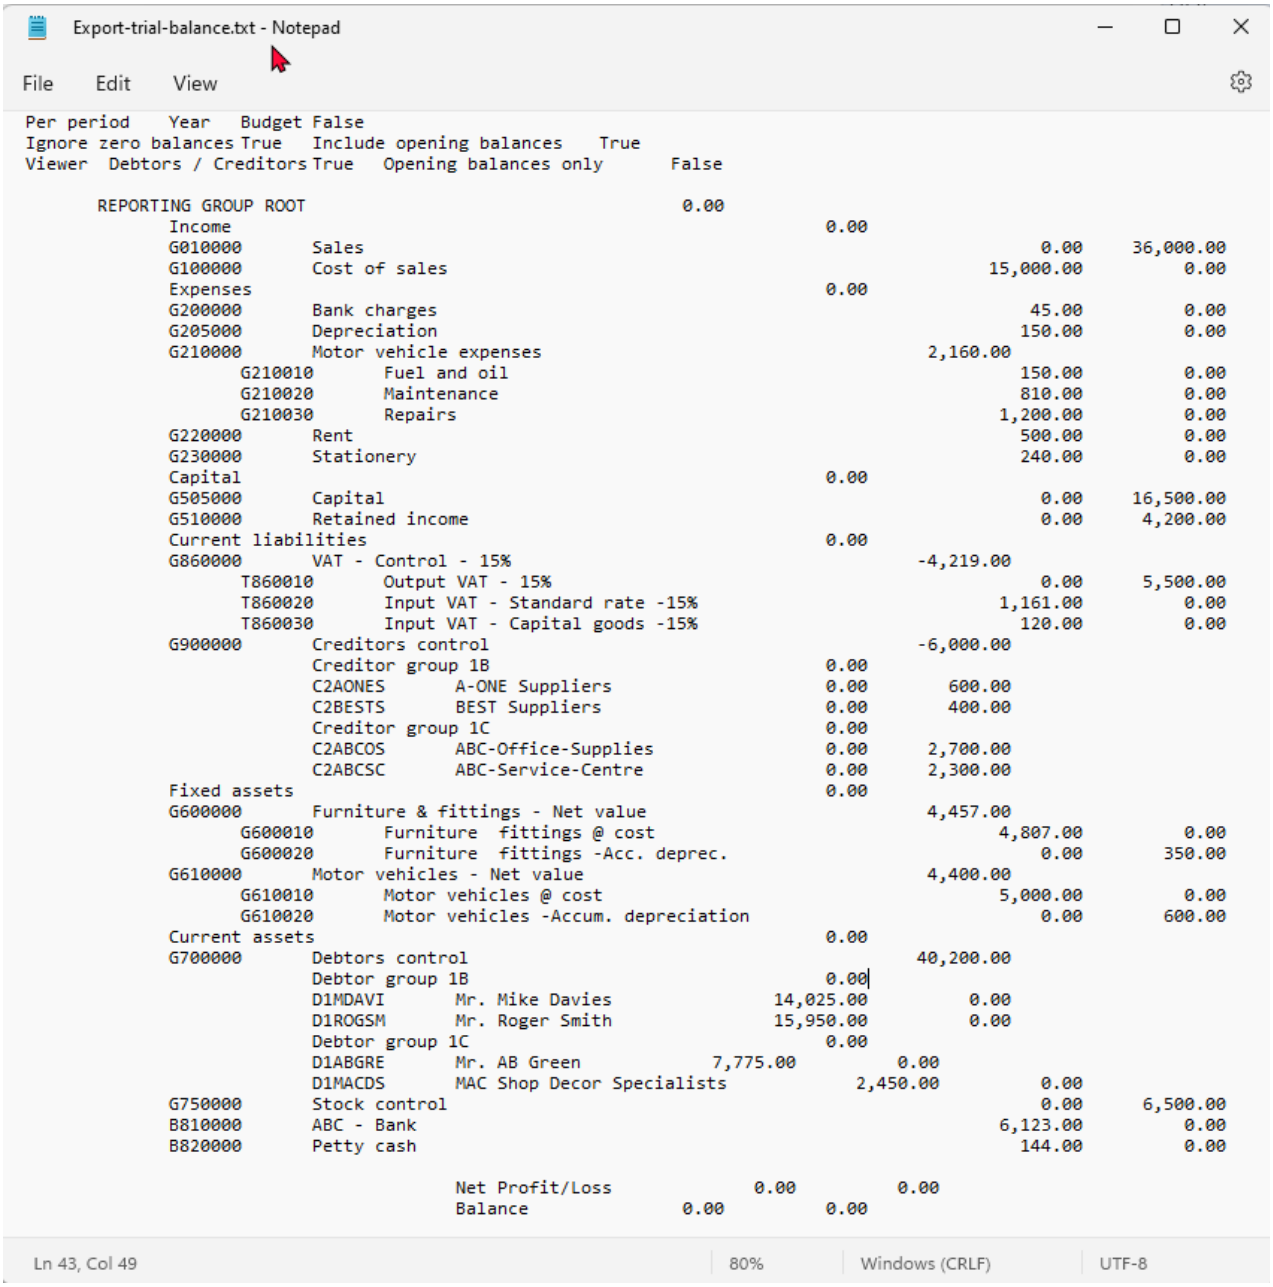
5. The default file name will be "*Export.txt*". Overtype this with your own name.

> *If you do not enter and save the Export.txt file name, you may replace existing (previously exported) files.*
>
> *Of an existing exported file is opened, and you are trying to save a export file with the same name, a similar error message as the following will be displayed:*
>
> Cannot create file "D:\exports\Export.txt". The process cannot access the file because it is being used by another process.

6. Click on the Save button. This will automatically open (launch) the file in the program associated with the Comma Separated Value file type (e.g. Microsoft Excel, LibreOffice Calc, OpenOffice Calc, Ultra Office, etc.).

Opened in a Text editor - Notepad

An example, of the "*Export.txt*" file opened in your systems default program associated with *.txt files *(e.g. "Notepad")* is as follows:



Export-trial-balance.txt - Notepad

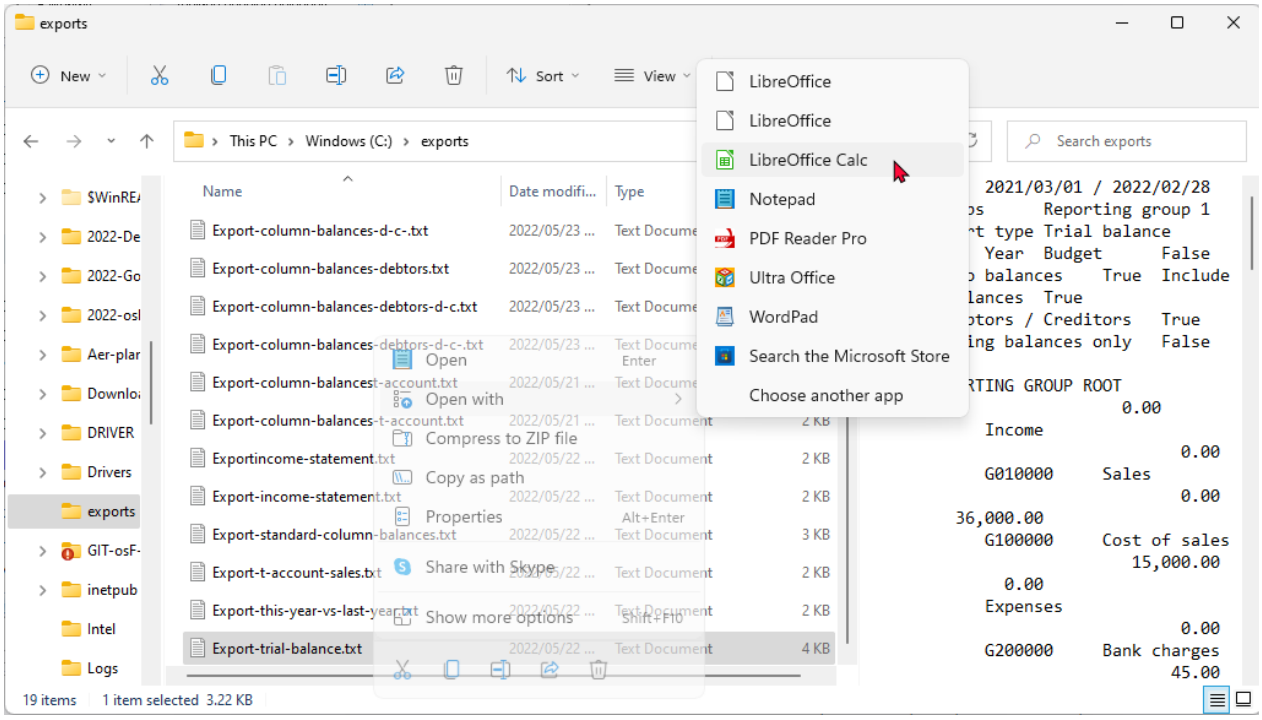
Open the Export.txt file in a spreadsheet

If the Comma Separated Value file type (.csv) file type for the exported file does not automatically launch in a spreadsheet program; or the incorrect program, you may change this. To do this; you need to:*

- *Select the saved *.csv file.*

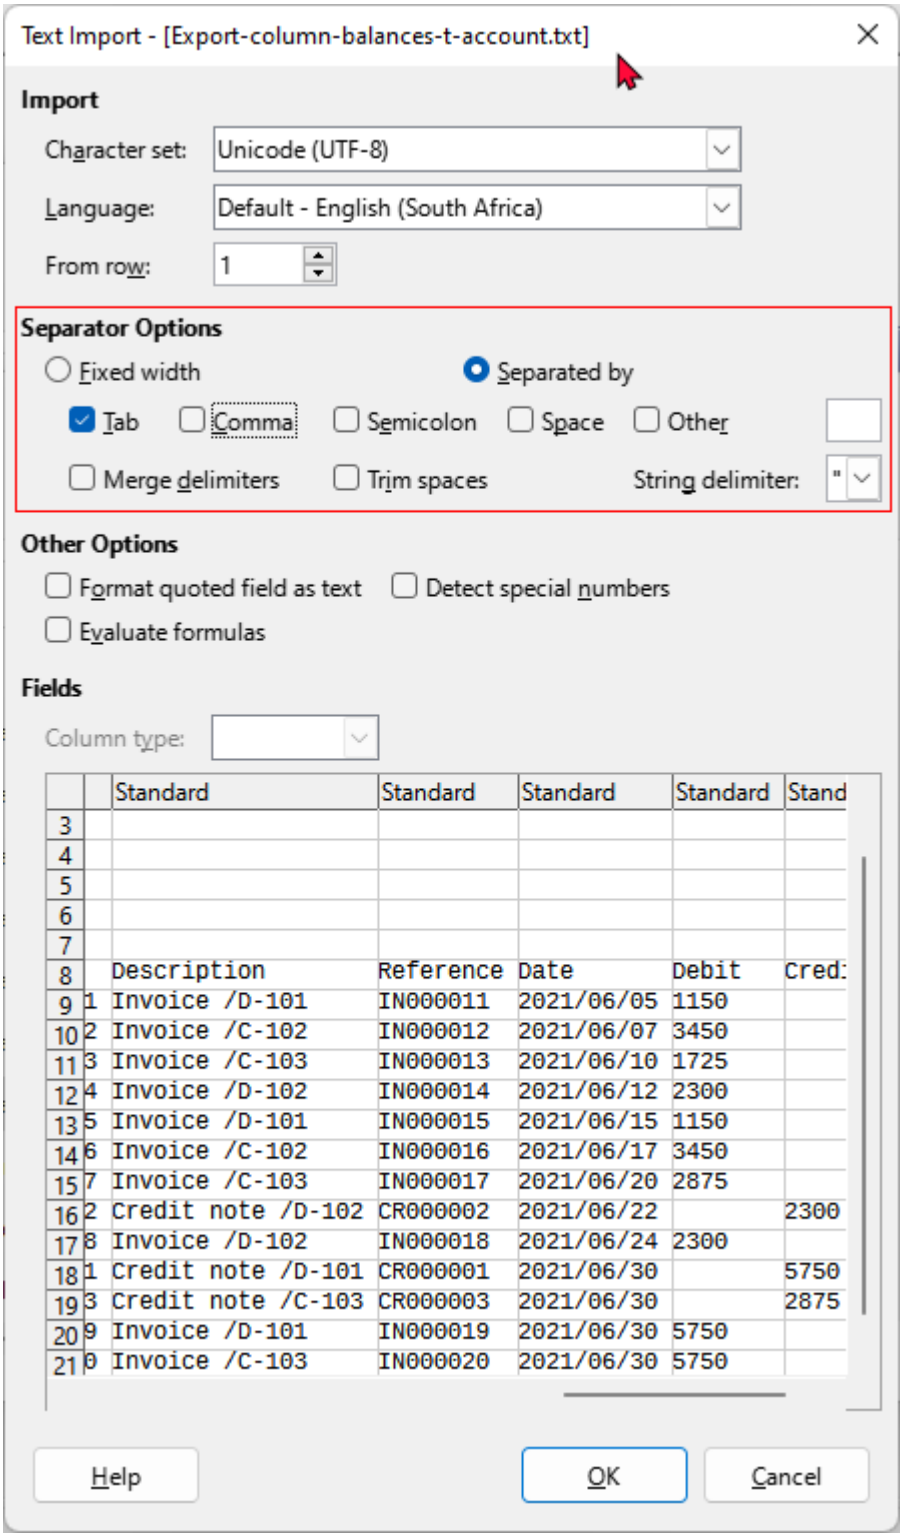
- *Right-click on it and select the Open with option on your system's context-menu.*
- *If your program is not listed as one of the Recommended programs on your system's context-menu, select the Choose Default Program... option. On this screen, select your default program (e.g. Microsoft Excel, LibreOffice Calc, OpenOffice Calc, Ultra Office, etc.). You may need to click on the Browse button to do this.*
- *Make sure that the Always use the selected program to open this kind of file option is selected (ticked), and click on the OK button.*

Locate the "*Export.txt*" file in your System's File Explorer.



If LibreOffice and not LibreOffice Calc is selected, the "Export.txt" file will open in LibreOffice Writer as a text file.

In this example, Open with > LibreOffice Calc is selected. The "*Text Import*" screen is displayed:



Separator options - Separated by

Tab is the only option which should be selected for the trial balance. This may differ for some other report types.

Select your options and click OK. The selected "*Export.txt*" file will be opened in LibreOffice Calc spreadsheet.

Reports menu

On the Reports ribbon, the Reports menu lists all the standard reports, which are required to manage the information in a Set of Books. In addition to these standard reports, you may also create your own user or custom reports in the Report designer.

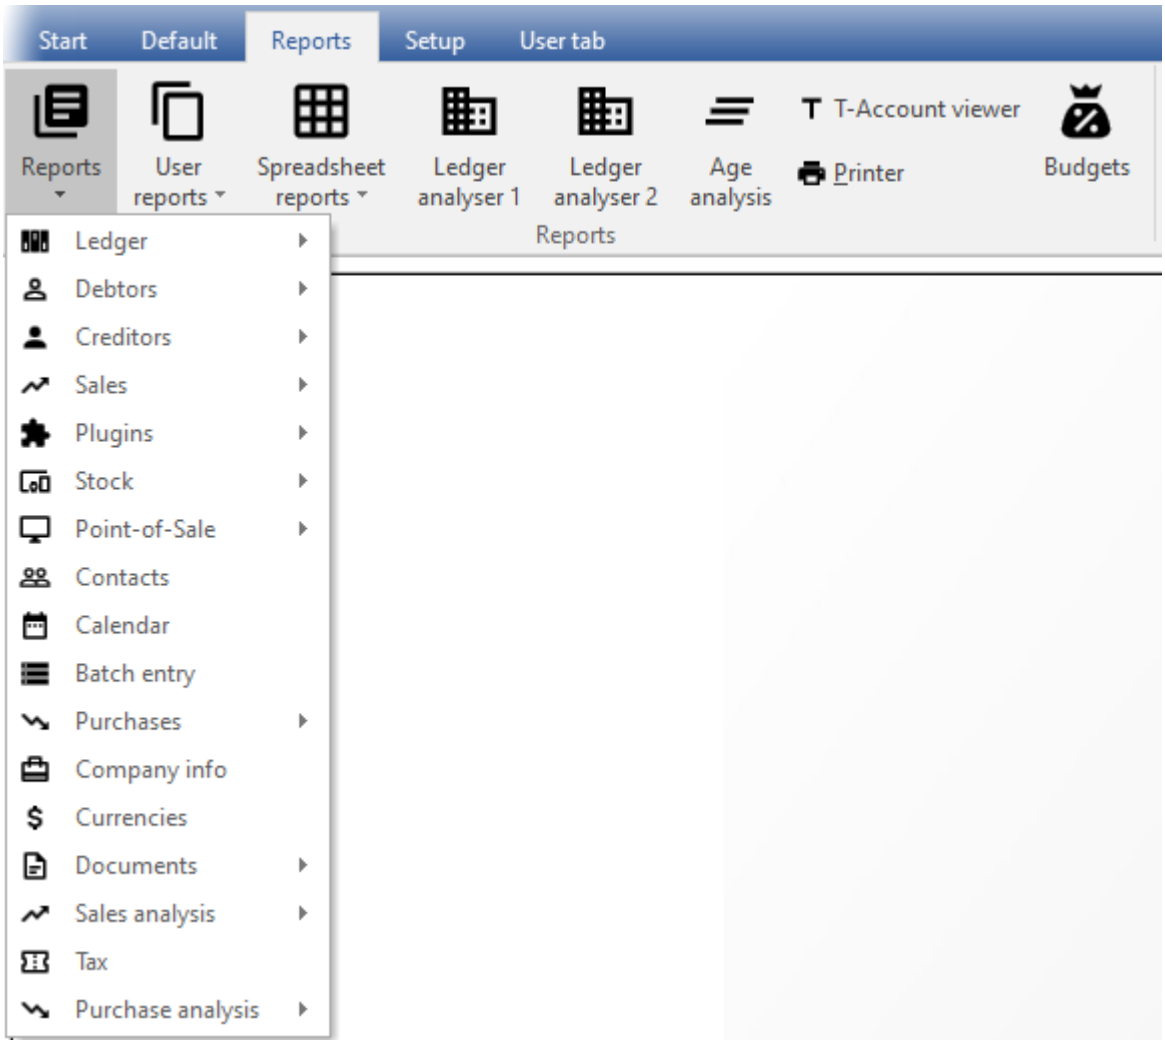
These reports that are stored in the following folder:

" ...\plug_ins\reports\systemreports"

If you are creating transactions from your stock file (processing documents - invoices, credit notes,

purchases and supplier returns documents), you will need to view reports in the stock ledger, document listing, sales analysis, purchase analysis reports.

To access the Reports menu:



Click on the Reports ribbon, select Reports. A list of the seventeen (17) reports or groups of reports will be listed.

The summary of these reports, is as follows:

1. Ledger - The following reports are available to manage all the accounts in the general ledger:

    a) Budget v/s realisation 3 periods - Lists the Income and Expense account balances and budget figures for three (3) periods as comparative figures.

    b) Listing - List the General ledger accounts (Chart of Accounts).

    c) Transactions - Transactions, Transactions - Standard and Transactions - Extra details.

2. Debtors - The following reports are available to manage the accounts in the debtor's ledger:

    a) Debtor statement - Debtor statements and Debtor statements - Outstanding.

b) Age analysis - Balances detail, Balances detail history (open item) and Balances reports.

c) Listing - Contacts, Listing, List delivery address, List postal address, List details, Tax and Company registration numbers and the Credit control listing (Credit limit vs Current balance and Available balances as at the date and time of printing) report.

d) Print labels - Postal and Delivery address labels.

e) Transactions - Transactions - Open item, Transactions - Standard and Transactions - Extra details.

3. Creditors - The following reports are available to manage the accounts in the creditor's ledger:

a) Creditor remittance advises - Remittance advise and Remittance advise - Outstanding.

b) Age analysis - Balances detail, Balances detail history (open item) and Balances reports.

c) Listing - Contacts, Listing, List delivery address, List postal address, List details, Tax and Company registration numbers and the Credit control listing (Credit limit vs Current balance and Available balances as at the date and time of printing) report.

d) Print labels - Postal and Delivery address labels.

e) Transactions - Transactions - Open item, Transactions - Standard and Transactions - Extra details.

4. Sales - Various reports are available to analyse your sales documents. Print reports for, Debtors, Sales and Items reports for Invoices, Credit notes and Quotes.

5. Plugins - Price agreement report for the Price agreement plugin.

6. Stock - The following reports are available to manage the stock items:

a) Reorder - Stock Reorder Report to list only those stock items that needs to be reordered. The Current Stock Levels lists all the current stock levels.

b) Print Barcodes – Print the Barcode or the Yagoda barcodes.

c) Listing - Print lists of All selling prices report (Selling price 1 / 2 /3) and the Stock item listing report listing the Quantities Cost prices. You may select to print extra details for these reports. You may also print a list of tax classes.

d) Backorder - Print a list of Backorders.

e) Stock In / Out - The following two (2) reports:

i) Stock In / Out - Documents - Displays a summary of sales and purchase documents for each stock item. The details option will list and display the document dates and document numbers for each stock item.

ii) Stock In / Out - Displays a list of the stock items and the quantities in and out as well as the total prices. The details option will list and display the document dates and document numbers for each stock item.

7. Point-of-Sale - The Cash-up and Sales analysis report for the built-in point-of-sale (if you use point-of-sale). Sales and Receipt reports for the plugin point-of-sale systems (if you purchased and use the HorecaPOS or RetailPOS point-of-sale systems).

8. Contacts - Lists the details of all your contacts. To list only the contacts for debtor (customer / client) accounts, you need to print it in Debtors → Listing - Contacts. To list only the contacts for creditor (supplier / vendor) accounts, you need to print it in Creditors → Listing - Contacts.

9. Calendar - Print the appointments (events) (i.e. Appointment, Debtor Appointment, Creditor Appointment and Hours) that was scheduled in the Calendar / Planner.

10. Batch entry - Print the transactions of posted invoices, credit notes purchase and supplier return documents as well as posted batch transactions (i.e. sales journal, purchase journal, payments journals, receipts journals, general journals, etc.).

11. Purchases - Various reports are available to analyse your purchase documents. Print Graphs, Creditors, Purchases and Items reports for Purchase and Supplier return documents as well as Orders.

12. Company info -

    - Bank accounts List the details of the company bank accounts details "List Bank accounts" for up to two (2) bank accounts as entered / edited in the Company info (Setup ribbon).

    - Company info – Information – Lists the details of the following:

        § Information - Document heading and messages (up to 3 lines) as entered in the Documents setup (Setup ribbon) for each of the Sales documents (i.e. Invoices, Credit notes and Quotes tabs) as well as Purchase documents (i.e. Purchases, Supplier returns and Orders tabs). This information is standard and will be printed on all documents.

        § Global statement message (up to 3 lines) as entered on the Statement setup tab on Documents setup (Setup ribbon). This information will print standard on all

Statements (Reports → Debtors – Outstanding (Reports ribbon)). This is in addition to the specific messages (up to 4 lines) that can be entered in the Delivery address tab individual debtor accounts (Debtors (Default ribbon)).

§ Selling price descriptions – The descriptions of Selling price 1, Selling price 2 and Selling price 3 as entered in the Selling price descriptions fields (Stock information - Setup ribbon).

§ Cost of Sales –

- Create Cost of Sales
  - Yes - Cost of Sales is activated.
  - No - Cost of Sales is not activated.
- Average cost
  - Yes – Average Cost of Sales is activated.
  - No – Latest Cost of Sales is activated.

13. Currencies - The Currencies report will list the currencies (added / edited in the Setup → Currencies menu on the Setup ribbon).

    You may process Multi-currency documents (i.e. invoices, credit notes and quotes for debtors (customers / clients) or purchases, supplier returns and orders for creditors (suppliers).

    You may (once currency or currencies are added) select a currency when processing documents. The currency will be printed in the document layout files.

14. Documents - Lists your documents, such as invoices, credit notes, purchases, supplier returns documents, orders and quotes or a selection of documents or for a selected period.

15. Sales analysis - You may print reports for five (5) reporting groups (i.e. Debtor group 1, Debtor group 2, Document group 1, Document group 2 and Salespersons) for each of your sales document types (i.e. Invoices, Credit notes and Quotes). You may also print a Sales analysis report for each of these five (5) reporting groups which includes both posted Invoices and Credit notes.

    a) Sales documents for each document type (i.e. Invoices, Credit notes and Quotes) - You may print reports for five (5) reporting groups (i.e. Debtor group 1, Debtor group 2, Document group 1, Document group 2 and Salespersons).

    b) Invoices and Credit notes - You may print reports for five (5) reporting groups (i.e. Creditor

group 1, Creditor group 2, Document group 1, Document group 2 and Salespersons).

c) Sales per product - Stock group 1 and Stock group 2 are also available to analyse the sales (invoices) and returns (credit notes of trading stock items (default stock item type).

16. Tax - If you are registered as a VAT/GST/Sales Tax vendor, you need to print and view reports for a specific period for all your Tax (VAT/GST/Sales Tax) or for a specific tax code such as Input VAT/GST/Sales Tax, Output VAT/GST/Sales Tax, Zero-rated VAT/GST/Sales Tax, etc.

17. Purchase analysis -

a) Purchase documents for each document type (i.e. Purchases, Supplier returns and Orders) - You may print reports for five (5) reporting groups (i.e. Creditor group 1, Creditor group 2, Document group 1, Document group 2 and Salespersons).

b) Purchase and Supplier return documents - You may print reports for five (5) reporting groups (i.e. Creditor group 1, Creditor group 2, Document group 1, Document group 2 and Salespersons).

c) Purchases per Product - Stock group 1 and Stock group 2 are also available to analyse the purchases and returns for trading stock items (default stock item type).

Budget vs actual (Reports menu)

The "*Budget v/s realisation 3 periods*" report lists the Income and Expense account balances and budget figures for three (3) periods as comparative figures.

Only the transactions in documents and batches which are posted (updated) to the ledger will be included in this report.

Budget figures are entered and edited in the following options:

1. Reports ribbon - Budgets.
2. Setup ribbon - Setup → Accounts menu (Budget tab).

If you have activated Cost centres and have entered the budget figures for Cost centres, you may select (tick) the Cost centres to print this report for your Cost centres.

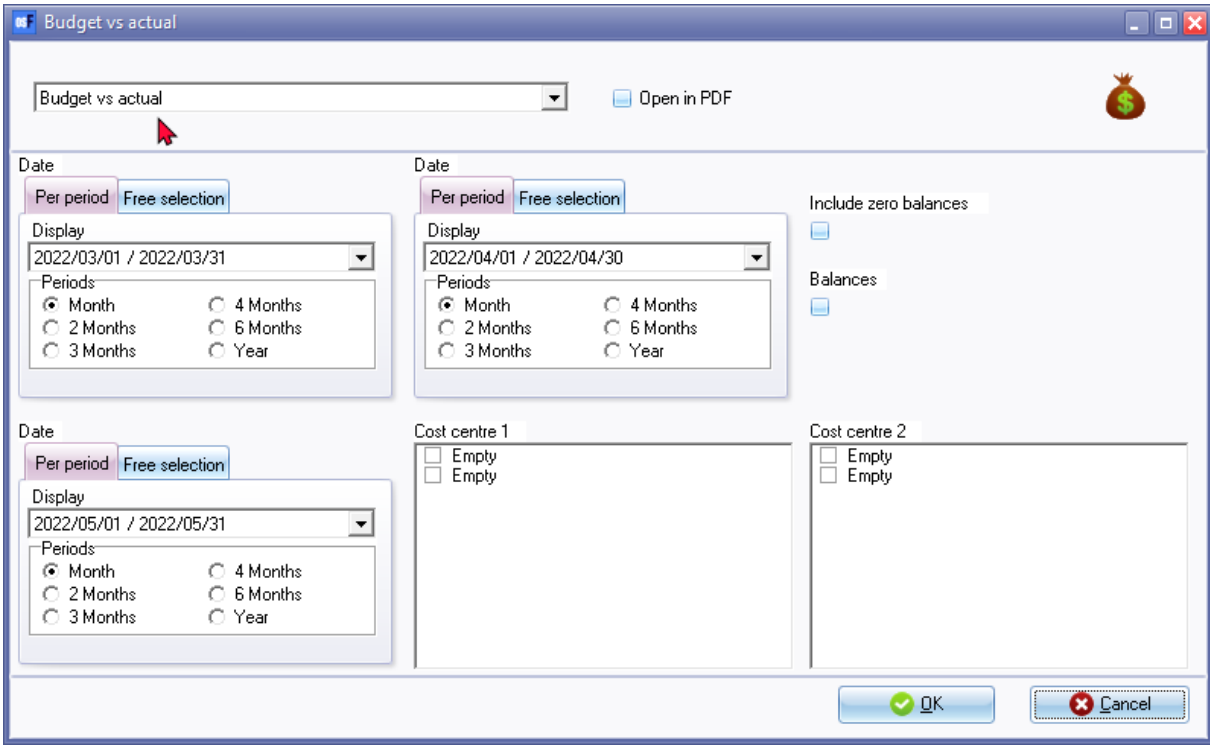
This report only includes batch and document transactions which are posted. Unposted batches and documents will be NOT be included in this report.

To view a list of unposted batches and documents, which is not updated to the ledger, go to Input → Checking unposted items (Default ribbon).

Budget vs actual report options

To print a Budget vs actual report:

1. On the Reports ribbon, select Reports → Ledger → Budget.



2. Select the following options:

   a) Period - Select up to three (3) periods on the Per period tabs. You may click on the Free selection tab to select a specific date or a range of dates to include balances and budget figures in the report.

   b) Include zero balances - If this option is not selected (not ticked), it will list only the expense and income accounts which has balances and/or budget figures. Tick this option to include all accounts including those with no actual transactions and/or budget figures).

   c) Balances - If this option is not selected (not ticked), it will list the expense and income accounts which has balances and/or budget figures. Tick this option to show only the actual transactions totals and/or budget totals of expense and income accounts for the selected period or dates.

   d) Cost centre 1 - Cost centre 1 will be listed if you have activated Cost centres and created Cost Group 1 (Setup → Groups). You may select any of these Cost centres, to include in the report.

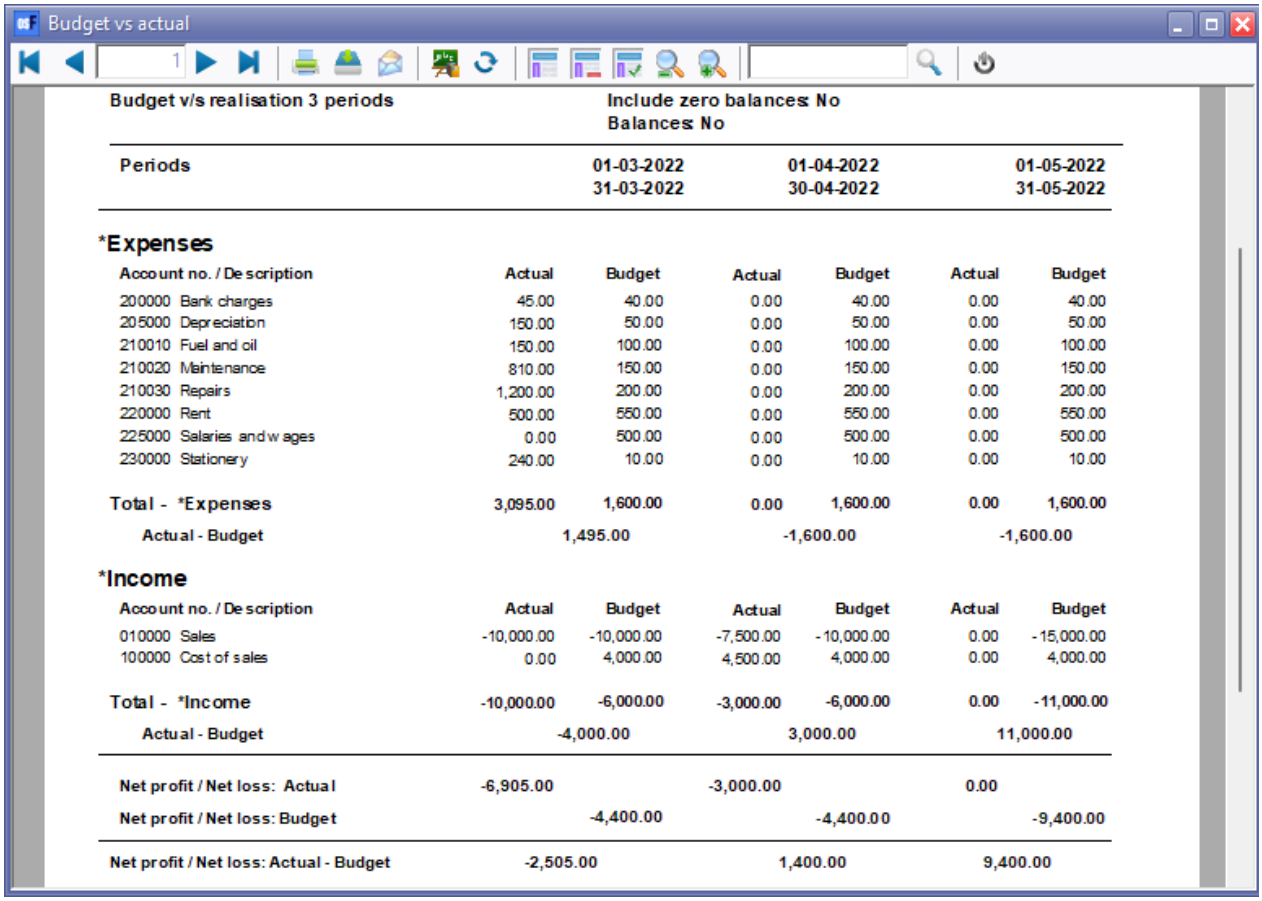
   e) Cost centre 2 - Cost centre 2 will be listed if you have activated Cost centres and created Cost

Group 2 (Setup → Groups). You may select any of these Cost centres, to include in the report.

3. Click on the OK button.

Printed : Budget vs actual (realisation - 3 periods) report

View the "*Budget v/s realisation 3 periods*" report:



The details is as follows:

1. Header section - Report name and Periods as selected on the Periods in the Report parameters screen.

2. Expenses - A list of the accounts (created as Income and Expense account type and linked to the Expenses Group / Financial category). If the Include zero balances field is selected (ticked), all expense accounts will be listed (including those accounts with no actual transactions and or budget figures. If the Balances field is selected (ticked), only the Total - *Expenses will be displayed.

3. Income - A list of the accounts (created as Income and Expense account type and linked to the Income Group / Financial category). If the Include zero balances field is selected (ticked), all income accounts will be listed (including those accounts with no actual transactions and or budget figures). If the

Balances field is selected (ticked), only the Total - *Income will be displayed.

4. Totals -

   a) Net Profit / Net Loss: Actual - This is the total of the Expenses minus the Income totals for posted batches and documents. A negative figure indicates a Net Profit and a positive figure displays a Net Loss for the selected periods (dates).

   b) Net Profit / Net Loss: Budget - This is the total of the Expenses minus the Income totals for the budget figures as entered / edited in Setup → Accounts. A negative figure indicates a Net Profit and a positive figure displays a Net Loss for the selected periods (dates).

   c) Net Profit / Net Loss: Actual - Budget - This is the total of the Net Profit / Net Loss: Actual minus the Net Profit / Net Loss: Budget totals. A negative figure indicates that the posted batches and documents exceeds (overspend) the budget figures for the selected periods (dates). A positive figure indicates that the posted batches and documents is less than the budget figures (available) for the selected periods (dates).

The details are as follows:

1. Account code - The prefixes is as follows:

    a) G - General ledger account - If the Account code is prefixed with an asterisk (*), it is an Income / Expense account type and will be reported on the Income statement. All other accounts will be reported in the Balance sheet.

    b) B - Bank account - These accounts need to be linked to its own Payments and Receipts batch.

    c) T - Tax account - These accounts contains the Tax rate for Output and Input tax. These accounts need to match your VAT/GST/Sales Tax return form's codes.

2. Type - This will indicate the type of account, i.e. Income / Expenses, Bank account and Tax account.

The Chart of Accounts includes the following three (3) important control accounts. These three (3) accounts need to be linked to the correct reporting groups, i.e.

Retained income / earnings (Capital)

Debtor's control (Current assets)

Creditor's control (Current liabilities)

3. Open item - By default, all accounts are not open item. If the *Open item account* field is set to Yes, you may use the feature to link debit and credit transactions for these accounts.

4. Disabled - If an account cannot be deleted (e.g. contains transactions and balances) and the account is no longer required, the Account may be set to "*Disabled*" in the "*Status*" field of Setup → Accounts. This will nor allow any transactions to be selected when processing transactions. Disabled (inactive) accounts are included in reports.

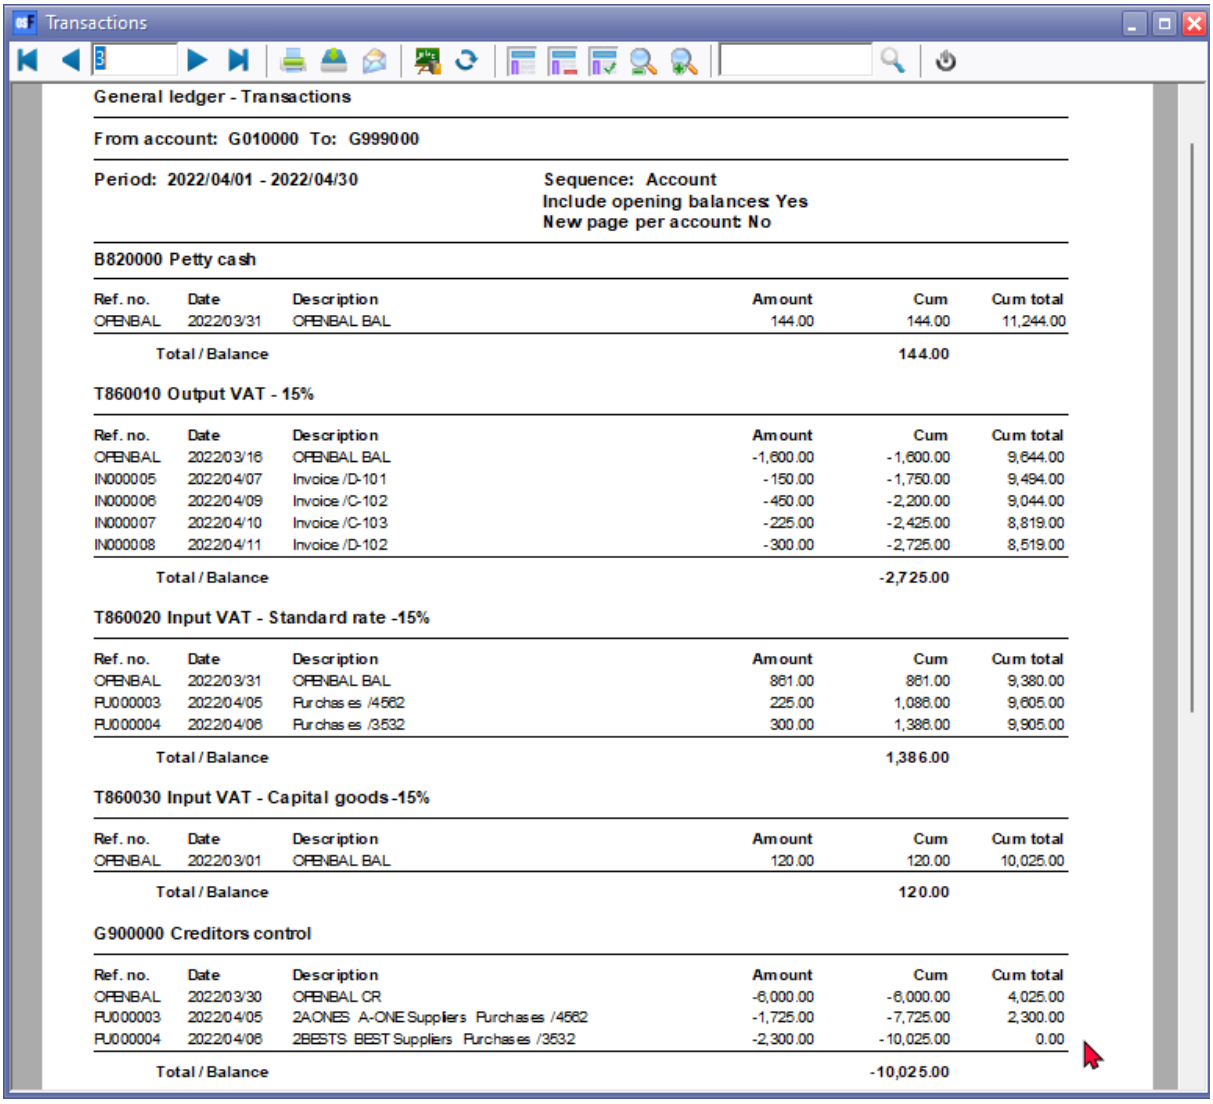
Page 3 (Last page) -



The details on the report, is as follows:

1. Page header 1 - Company details - This will only print on the fist page.

> *If the "New page per account" option on the report parameters is selected (ticked), the Company details will not be printed in the Page header of the first page. The company name is displayed in the Page footer of all pages.*

2. Page header 2 - Report name and Parameters as selected on the Report options will display below the Company details on the first page and at the top of each subsequent page.

3. Header group - The Account code and Name (description).

4. Detail - List the transaction details for each account.

    a) Reference - The reference number of the document (i.e. Invoices, Credit notes, Purchases and Supplier returns) or the reference number entered in the reference column on the Batch entry

screen.

> *If the "Include opening balances" is selected, the Opening balances will be included.*
>
> *In this example, it will display as follows:*
>
> - *All balance sheet accounts "OPENBAL BAL"*
> - *Debtors control account "OPENBAL DR"*
> - *Creditors control account "OPENBAL CR"*
> - *Retained earnings / income "OPENBAL RET"*

b) Date - The date of the transaction or document.

c) Description - The stock item code or the account description (if the Financial entry stock item type was selected on a document) of the document (i.e. Invoices, Credit notes, Purchases and Supplier returns) or the description entered in the description column on the Batch entry screen.

d) Amount - The debit or credit transaction amount.

e) Cum - The accumulative total of the transactions included in the account.

f) Cum total - The accumulative total of the transactions and accounts included in the report.

5. Footer - Groups - Total / Balance - Displays the total / closing balance for each account.

6. Page Footer - List the following:

a) Data - Name of the Set of Books and the full path of the Set of Books (e.g. ... \books\BOOKSNAME\Books.fdb)

b) System user and osFinanacials user (Setup → Access control).

c) Printed: The date and time of the system (computer) on which the report is printed.

d) Page: Page number and the last page number of the report.

Created with the Standard Edition of HelpNDoc: Write EPub books for the iPad

Ledger - Transactions - Standard / Extra details (Reports menu)

The "*General ledger transactions - Standard*" report lists all the transactions in documents and batches which are posted (updated) to the ledger.

The "*General ledger transactions - Extra details*" report is similar to the "*General ledger transactions - Standard*" report, but displays extra details of the Contra accounts (i.e. Account code, Account description, Contra account code and Description as well as the Tax account code and Description). For example;

"Contra Accounts D1ABGRE Mr. AB Green,T860010 Output VAT - 15%

These reports does not include any opening balances for Income and Expense accounts reported on the Income statement.

These reports will include opening balances for all other ledger accounts (closing balances before for the selected periods / dates).

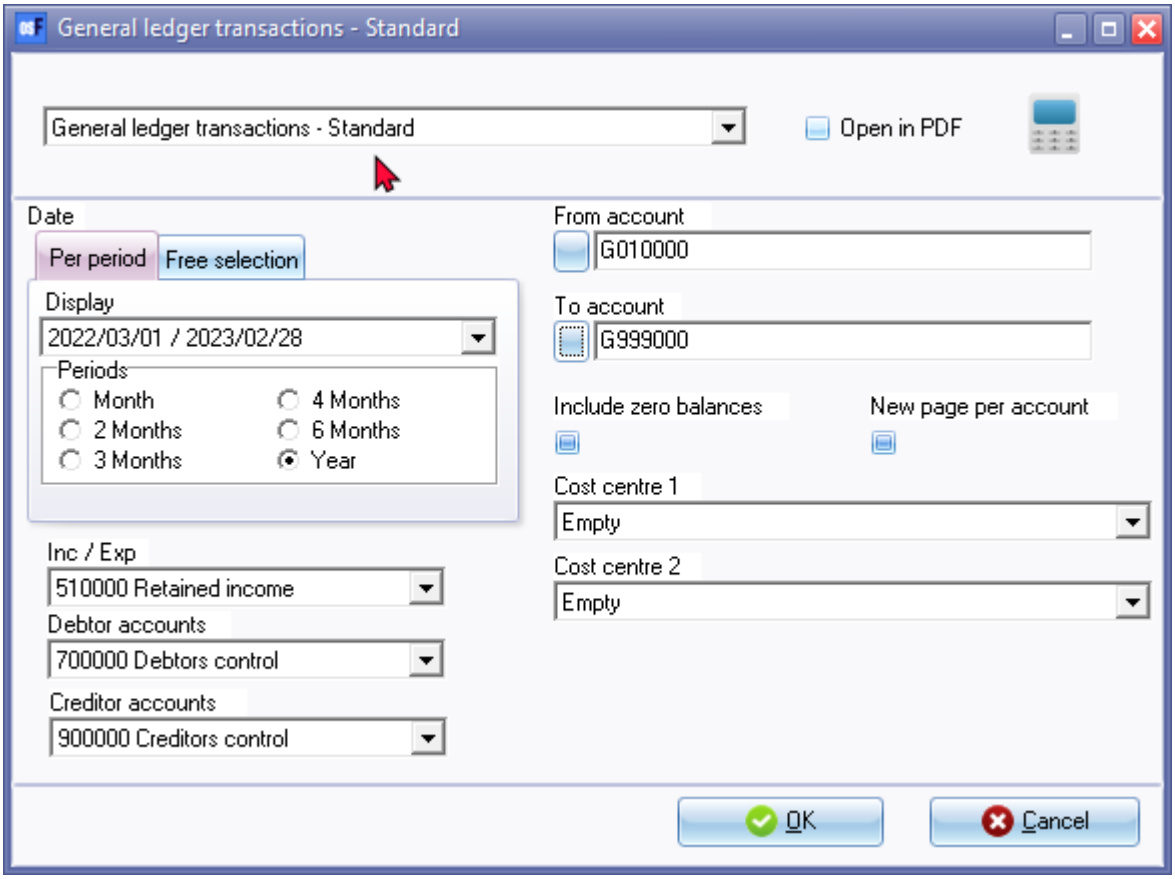
This report only includes batch and document transactions which are posted. Unposted batches and documents will be NOT be included in this report.

To view a list of unposted batches and documents, which is not updated to the ledger, go to Input → Checking unposted items (Default ribbon).

General ledger transactions - Standard / Extra details report options

To print General ledger transactions - Standard / Extra details reports:

1. On the Reports ribbon, select Reports → Ledger → Transactions.
2. Select the "*General ledger transactions - Standard*" or "*General ledger transactions - Extra details*".



3. Select the following options:

   a) Period - Select a period on the Per period tab. You may click on the Free selection tab to select a specific date or a range of dates to include transactions in the report.

   b) From account / To account - Select a general ledger account or a range of general ledger accounts, to include in the report.

   c) Include zero balances - If this option is not selected (not ticked), it will list only the transactions for accounts which has transactions and/or balances. Tick this option to include opening balances (closing balances before the selected periods / dates).

   > *Opening and Closing balances will not be displayed for Income and Expense account types. It will only be displayed for Balance sheet accounts.*

   d) New page per account - If this option is selected (ticked), it will print the transactions for each account on a new page.

   > *The Company details will not be printed as in the Page header. The company name is displayed in the Page footer.*

e) Cost centre 1 / 2 - If you have activated Cost centres, you may select the Cost centres.

3. Click on the OK button.

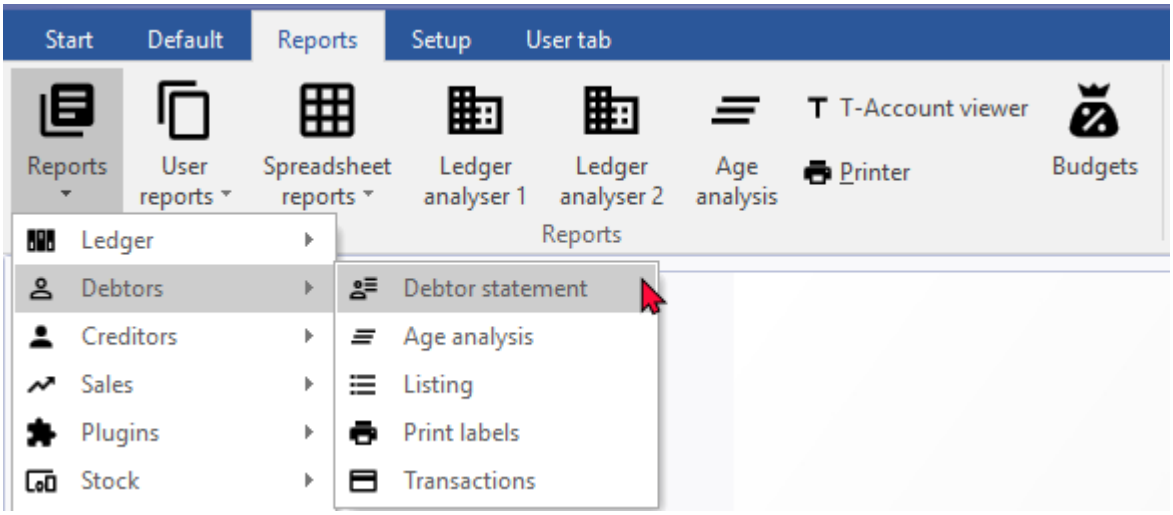
Debtors (Reports menu)

On the Reports ribbon, select Reports → Debtors.



The following reports are available to manage the accounts in the debtor's ledger:

1. Debtor statement – Debtor statements and Debtor statements - Outstanding.
2. Age analysis - Balances detail, Balances detail history (open item) and Balances reports. These reports offers different options of views to support the details of debtor statements.
3. Listing - Contacts, Listing, List delivery address, List postal address or List details, Tax and company registration numbers and the Credit control listing (Credit limit vs current balance and available balances as at the date and time of printing) report.
4. Print labels - Postal and delivery address labels.
5. Transactions - Transactions - Open item, Transactions - Standard and Transactions - Extra details.

Created with the Standard Edition of HelpNDoc: Produce electronic books easily

Debtor statements

The following debtor statements are available:

- Debtor statements - The statement will print all transactions. It does not use the Open item link.
- Debtor statements - Outstanding - This statement will print only the outstanding transactions. Transactions (e.g. invoices, etc. Transactions linked in the Open item link, will not be listed).

The credit transactions which are linked to specific debit transactions of the same value, will not be displayed. If a transaction for a different amount is linked to a specific transaction, only the outstanding

amount (difference) will be listed.

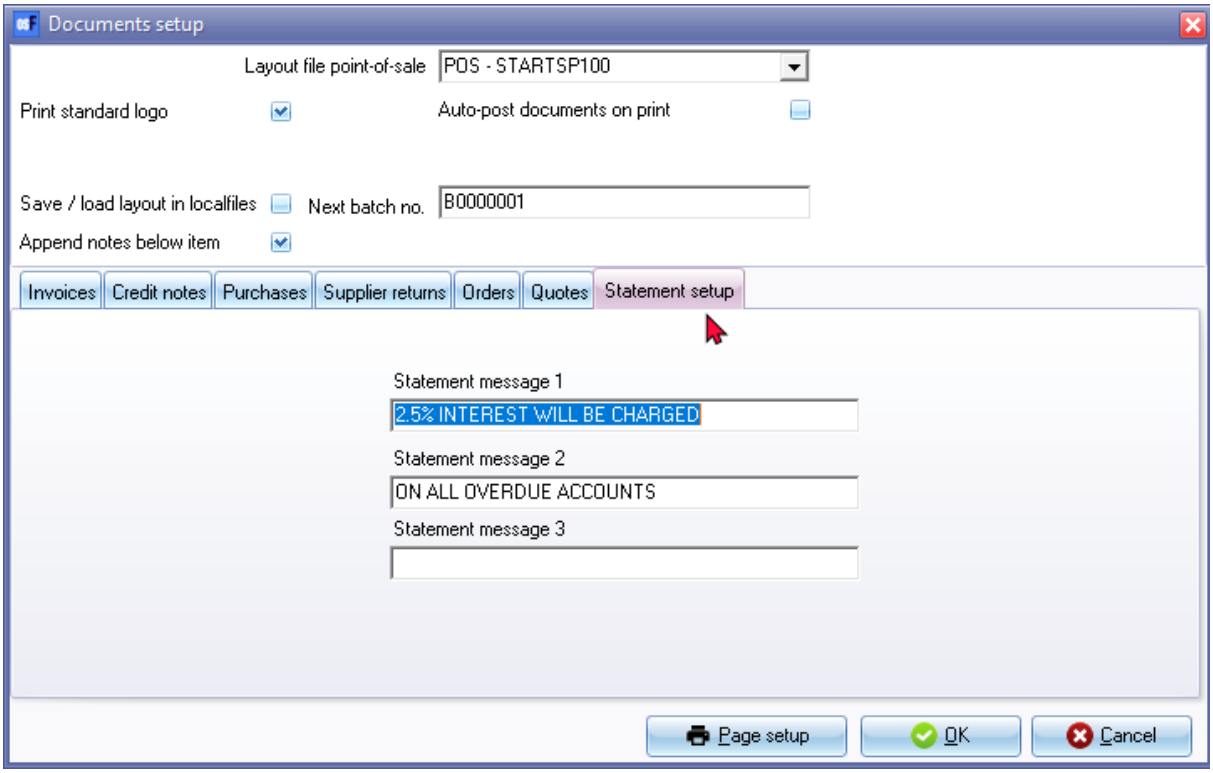
Before you wish to print Debtor statements, you may need to check the following:

- *Statement messages are entered correctly.*
- *Banking details of your company is entered in the Company info (Setup ribbon).*
- *That no outstanding transactions which is not linked in Open item processing.*

Debtor statements - Global messages

Enter global messages to print on all debtor statements:

1. On the Setup ribbon, select Documents setup.
2. Select the Statement setup tab.



3. Enter the message in up to 3 lines to display on the Debtor statements.
4. Click on the OK button.

Debtor statements - Messages for specific accounts

Enter statement messages for specific debtor accounts:

1. On the Default ribbon, select Debtors (F4).
2. Select the debtor (customer / client) account.
3. On the Delivery address tab, enter a message of up to 3 lines.
4. Click on the Save button.

Statement

Statement to: 2021/04/30
Period 1 : 2021/04/30
Period 2 : 2021/03/31
Period 3 : 2021/03/01
Due amount: 2,600.00
Due date: 2021/05/30

Date	Reference	Description	Amount	Outstanding	Payment date
2021/03/10	INV003	Paint - Exterior	1,150.00	300.00	2021/04/09
2021/03/13	IN000001	Invoice /AB-IN110	1,150.00	1,150.00	2021/04/12
2021/03/15	IN000003	Invoice /PH-101	1,150.00	1,150.00	2021/04/14

	Due amount	Period 1 (30)	Period 2 (30)	Period 3 (60) +
	2,600.00	0.00	2,600.00	0.00

Credit limit:	30,000.00
Balance :	2,600.00
Available :	27,400.00

Statement message:

Please refer any queries to our accounts department	2.5% INTEREST WILL BE CHARGED ON ALL OVERDUE ACCOUNTS

Due amount:	**2,600.00**	**Handyman Hardware Store - Bank account:**	
Due date:	**2021/05/30**	Bank name:	ABC Bank
		Branch code:	123-999
		Bank account no.:	99-6666-6666

NOTE - In this example, INV001 of 1,150.00 is not displayed on the Debtor statement - Outstanding, since the payment of 2,000.00 is linked to that invoice.

The balance of 850.00 (payment of 2,000.00 - INV001 of 1150.00) is linked to invoice INV003 - 1150.00. The outstanding amount is 300.00 for INV003.

The information is as follows:

1. Header (Left) - Debtor Information as entered / edited on the debtor account.
2. Header (Right) - Company info as entered / edited on Setup → Company info.
3. Statement to - The date as entered (selected) on the Parameters screen. The periods number of days

specified on the parameters screen is displayed. The outstanding totals for each period is displayed as a summary for the periods at the end of the transaction section.

4. Transactions - This displays the date, reference. description and amount for each transaction. The payment date for each transaction is the date of the transaction plus the number of days entered in the Due days field on the Accounting information tab of the debtor account.

5. Credit limit - The amount as entered in the Credit limit field on the Accounting information tab of the debtor account. The Balance at is the current balance of the debtor account of all posted transactions and documents as at the date of printing of the Debtor Statements. The Available amount is calculated the Credit limit minus the Balance at amount as at the date of printing of the Debtor Statements.

6. Statement message - This consists of two (2) sections:

    a) Statement message (Left) - Up to three (3) lines as entered on the Delivery address tab of the debtor account.

    b) Statement message (Right) - Up to three (3) lines as entered on the Statement setup tab on Setup → Documents setup.

7. Due amount, Due date and Banking details - The amount payable and the date on which the payment is due. The Banking details as entered on the Setup → Company info will be displayed on the Debtor statement.

Debtors - Age analysis

The Debtor age analysis report allows you to analyse your transactions with each of your debtor (customer / client) accounts according to specified accounting periods. This could be a useful tool to manage outstanding amounts owed by debtors (customers / clients).

This report will display a break down of your debtor account balances for each of the specified periods for a selected debtor account, or a range of selected debtor (customer / client) accounts.

The Debtors → Age analysis - The Debtor age analysis provides the "*Balances detail*, *Balances detail history (open item)*" and "*Balances*" reports allows you to analyse the outstanding amounts your debtors (customers / clients) owes you in specified periods such as total, 30, 60 and 90 days, or more. These reports are essential for cash flow control. You may also wish to use this facility for credit control, to send

reminders to your debtors (customers / clients), to optimise your cash flow management.

For example, an payment of 2,000.00 is received from the debtor (customer / client) on 2021/03/16. The payment is linked as fo

- *INV001 - 2021/03/07 - 1,150.00 is fully settled (linked to the payment of 2000.00) -*
- *The remaining balance of 850.00 is linked to INV003 as a partial settlement of INV003. An outstanding amount of 300.00 v minus the partial settlement of 850.00 = 300.00 as the outstanding amount.*

As per this example -

- *Invoice INV001 will not be printed on some reports and in other reports it will print 0.00 as the outstanding amount.*
- *INV003 will print on some reports as 300.00 as the outstanding amount.*

If the transaction for Credit note CR000003 is not linked to Invoice IN000020, both Credit note CR000003 and Invoice IN000020, "Transaction list - Open item" report as well as the "Debtor statement - Outstanding".

Debtors - Transactions - Standard / Extra details (Reports menu)

The "*Debtor transactions - Standard*" and "*Debtor transactions - Extra details*" report lists all the transactions in documents and batches which are posted (updated) to the ledger.

The "*Debtor transactions - Extra details*" report is similar to the "*Debtor transactions - Standard*" report, but displays extra details of the Contra accounts (i.e. Account code, Account description, Contra account code and Description as well as the Tax account code and Description). For example;

"G010000 Sales,T860010, Output VAT" - 15%"

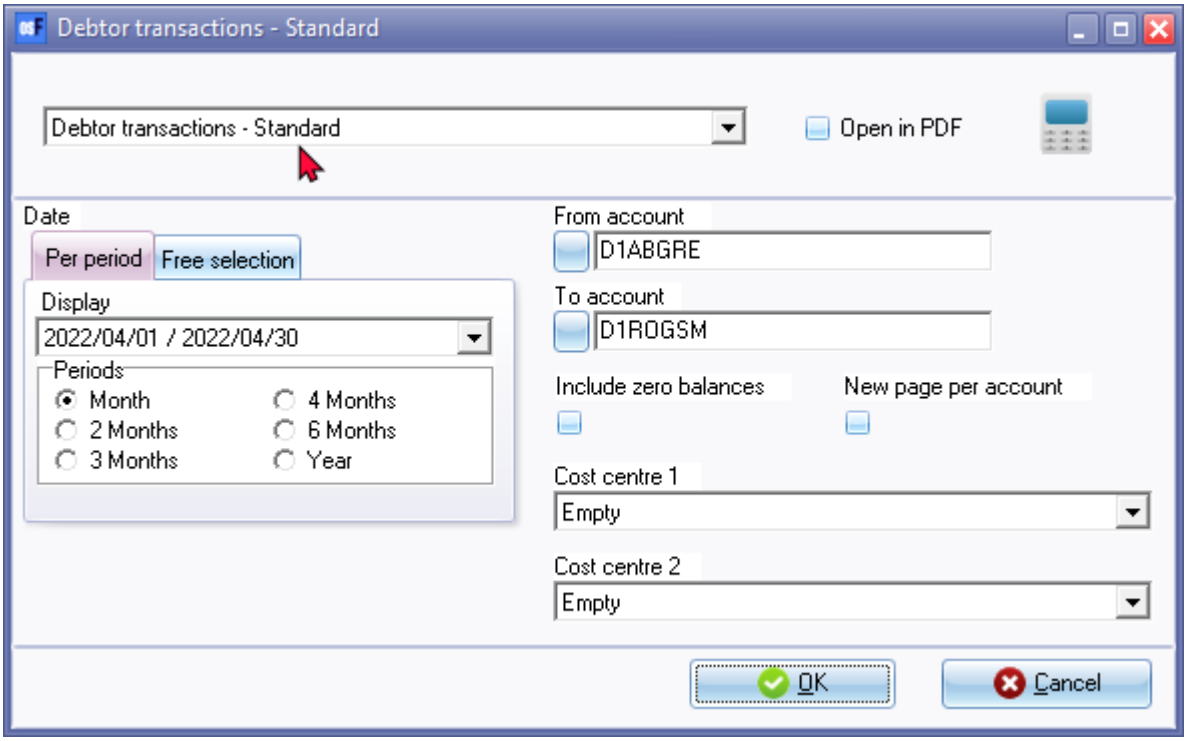
This report only includes batch and document transactions which are posted. Unposted batches and documents will be NOT be included in this report.

To view a list of unposted batches and documents, which is not updated to the ledger, go to Input → Checking unposted items (Default ribbon).

Debtor transactions - Standard / Extra details report options

To print Debtor transactions - Standard / Debtor transactions - Extra details reports:

1. On the Reports ribbon, select Reports → Debtors → Transactions.
2. Select "*Debtor transactions - Standard*" or "*Debtor transactions - Extra details*".



3. Select the following options:

    a) Period - Select a period on the Per period tab. You may click on the Free selection tab to select a specific date or a range of dates to include transactions in the report.

    b) From account / To account - Select a debtor (customer / client) account or a range of debtor (customer / client) accounts, to include in the report.

    c) Include zero balances - If this option is not selected (not ticked), it will list only the transactions for accounts which has transactions and/or balances. Tick this option to include opening balances (closing balances before the selected periods / dates).

    d) New page per account - If this option is selected (ticked), it will print the transactions for each account on a new page.

    > *The Company details will not be printed as in the Page header. The company name is displayed in the Page footer.*

    e) Cost centre 1 / 2 - If you have activated Cost centres, you may select the Cost centres.

4. Click on the OK button.
