AI / ETL

AI/ETL in osFinancials5.1/TurboCASH5-3 - Roadmap

The combination of OpenAI and ETL (Extract, Transform, Load) for the Imports of bank statements in the Bank import plugin is introduced in osFinancias5.1.0.0.233.

What is ETL?

ETL stands for Extract, Transform, Load. It's a process used in data integration to:

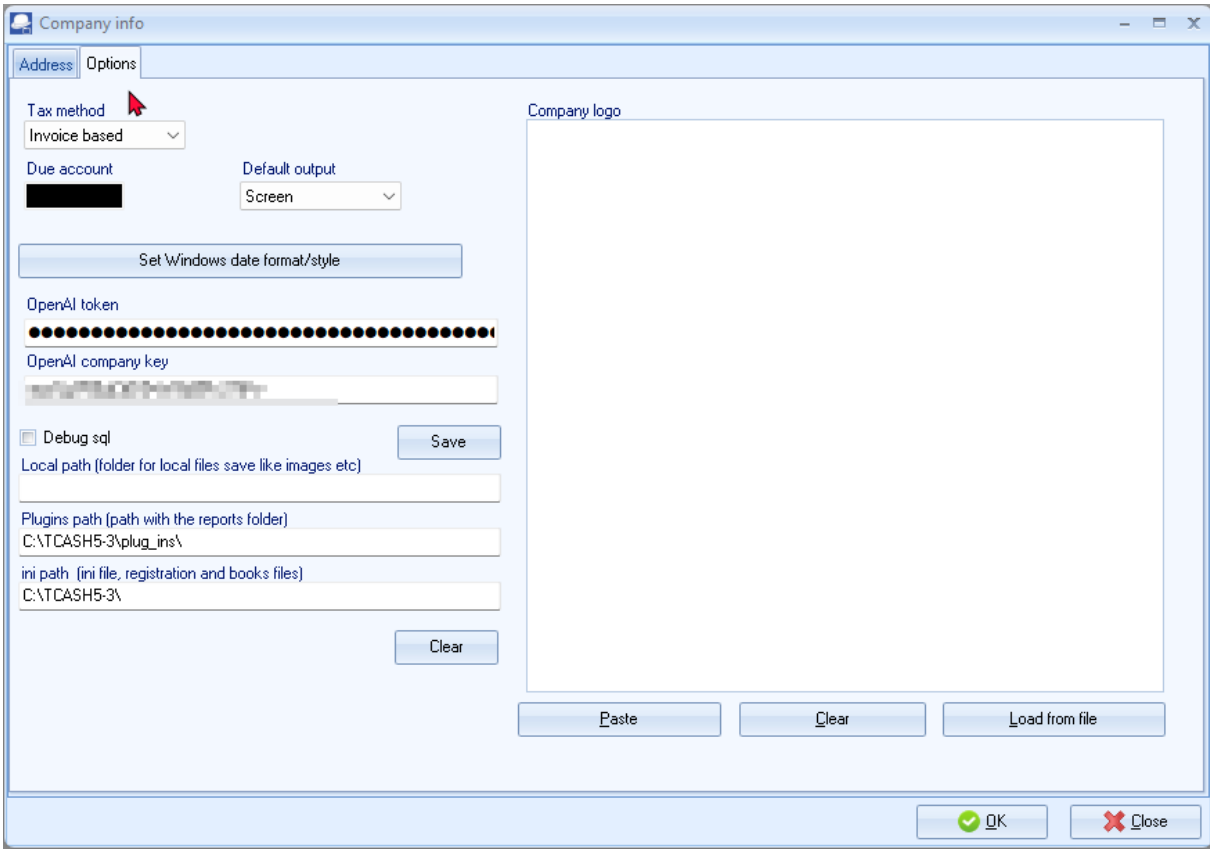
- Extract: Pull data from one or multiple sources (e.g., databases, files, APIs).
- Transform: Clean, organize, and convert the data into a consistent format.
- Load: Store the transformed data in a target system (e.g., data warehouse, data lake).

Resources

Activate OpenAI in osFinancialos5.1/TurboCASH5-3

To activate OpenAI and ETL (Extract, Transform, Load) functionality in osFinancials5.1 or TurboCASH5-3, follow these steps:

1. Open the Application:
2. Launch osFinancials5.1 or TurboCASH5-3 on your local machine.
3. Navigate to Setup:
    - Access Company Info: In the Setup menu, click on Setup → Company info (Setup ribbon). This will open a window where you can configure company-specific information and settings.
    - Go to the Options Tab: In the Company Info window, navigate to the Options tab. This is where you can enter your OpenAI credentials.



- Enter OpenAI Credentials:
  - § OpenAI Token: Enter your valid OpenAI API token. This token is provided when you subscribe to OpenAI's services.
  - § OpenAI Company Key: Enter your OpenAI company key, which is also provided as part of your OpenAI subscription.
  - § Save the Settings:
  - § Click Save to store your OpenAI token and OpenAI company key. Then, click OK to close the window.

4. Credentials Storage: Your OpenAI token and company key will be securely stored in the Registry of your local machine under the osFinancials5 folder. This allows the credentials to be used across any Set of Books in both osFinancials5.1 and TurboCASH5-3.
5. Verification: Once the credentials are saved, the OpenAI and ETL functionalities should be activated and ready for use within the application.

Important Notes:

- Ensure that your OpenAI token and company key are valid and active. If you encounter any issues, double-check the credentials and your OpenAI subscription status.

- The credentials are stored locally on your machine, so if you move to a different computer, you will need to re-enter the credentials on that machine.

By following these steps, you should be able to successfully activate OpenAI and ETL functionalities in osFinancials5.1 or TurboCASH5-3.

AI/ETL - Bank import

AI / ETL / Bank statements

The bank statement is indeed a form of ETL (Extract, Transform, Load). Let me break it down and explain how your system aligns with the ETL process:

What is ETL?

ETL stands for Extract, Transform, Load. It's a process used in data integration to:

- Extract: Pull data from one or multiple sources (e.g., databases, files, APIs).
- Transform: Clean, organize, and convert the data into a consistent format.
- Load: Store the transformed data in a target system (e.g., data warehouse, data lake).

How Your System Fits Bank Statement files into ETL:

1. Extract:

- Your system extracts data from bank statement files (e.g., OFC, MT940) stored in a specific directory:

  C:\TCASH5-3\bin\Tutorials\BANK-IMPORT\BANK-STATEMENTS\2024-03-Bank-Statement-ABC-Bank.ofc

- These files contain raw transaction data that needs to be processed.

2. Transform:

- The system uses OpenAI's language model to transform the raw data into a structured JSON format.
- Specific transformations include:
  - Parsing dates, amounts, and descriptions.
  - Reversing debit and credit values based on instructions.
  - Handling missing values (e.g., using `0.00` for numeric fields and empty strings for text fields).
- The transformation is guided by system prompts and user prompts stored in the root directory of your osFinancials5.1 or TurboCASH5-3 installation folder:
  - `accounting_banksystemprompt.txt`
  - `accounting_bankuserprompt.txt`

3. Load:

- The transformed data (in JSON format) is stored or made available for further use in your financial system (e.g., `osFinancials5.1` or `TurboCASH5-3`).
- This data can then be used for reporting, analysis, or integration with other systems.

Your System as an ETL Process:

ETL Stage	*Your System Example*
Extract	*Read raw data from OFC/MT940 files in the BANK-STATEMENTS folder.*
Transform	*Use OpenAI to convert raw data into JSON, reverse debit/credit, and handle missing values.*
Load	*Store the JSON output in the system for further use (e.g., financial reporting).*

Why This is ETL:

1. Data Integration: You're combining data from bank statements into a single, consistent format (JSON).
2. Data Cleaning: You're handling missing values, reversing debit/credit, and ensuring data consistency.

3. Automation: The process is automated using AI, reducing manual effort and improving accuracy.
4. Target System: The transformed data is loaded into your financial system for storage and analysis.

Example Workflow:

Input (Extract):

Raw OFC file (`2024-03-Bank-Statement-ABC-Bank.ofc`):

```
:61:2301010101D100,NTRFNONREF//Payment for services
:61:2301050101C200,NTRFNONREF//Refund
```

Transformation:

Parse the data.

Reverse debit (`D100`) to credit and credit (`C200`) to debit.

Handle missing fields (e.g., `emailaddress`).

Output (Load):

json

```
[
  {
     "transactionDate": "01-03-2024",
     "amountDebit": 0.00,
     "amountCredit": 100.00,
      "bankAccountNumber": "NL91ABNA0417164300",
     "emailaddress": "",
     "description": "Payment for services"
  },
  {
     "transactionDate": "05-03-2024",
     "amountDebit": 200.00,
     "amountCredit": 0.00,
      "bankAccountNumber": "NL91ABNA0417164300",
     "emailaddress": "",
     "description": "Refund"
```

```
  }
]
```

Next Steps:

- Refine the ETL Process:
  - Update the prompts (`accounting_banksystemprompt.txt` and `accounting_bankuserprompt.txt`) to improve accuracy.
  - Test with different bank statement formats (e.g., MT940, OFC).
- Automate Further: Schedule the ETL process to run automatically when new bank statements are added to the folder.
- Integrate with Downstream Systems: Load the JSON data into a database, data warehouse, or reporting tool for further analysis.

AI/ETL - Chart of Accounts

The combination of OpenAI and ETL (Extract, Transform, Load) can be extended to support a wide range of functionalities in osFinancials5.1/TurboCASH5-3, including bank statements

Chart of Accounts

- Exports and Imports (e.g., Chart of Accounts, Debtors, Creditors, Stock Items/Inventory, Journals, Documents).
- Integration with Other Accounting Software (e.g., migrating data from other systems into osFinancials5.1/TurboCASH5-3).

Here's how OpenAI and ETL can be developed and applied to these functionalities:

Chart of Accounts

Use Case:

- Migrate or synchronize the Chart of Accounts from another accounting software (e.g., QuickBooks, Xero, Sage) into osFinancials5.1/TurboCASH5-3.
- Clean and transform the data to match the required format.

ETL Process:

- Extract: Pull the Chart of Accounts data from the source system (e.g., Excel, CSV, or API).
- Transform: Use OpenAI to:
    - Map account codes, names, and types to the target format.
    - Handle discrepancies (e.g., missing fields, different naming conventions).

- Ensure compliance with osFinancials5.1/TurboCASH5-3 requirements.

· Load: Import the transformed data into osFinancials5.1/TurboCASH5-3.

Example:

- Input (Extract): Chart of Accounts from QuickBooks (CSV):

```
Account Code,Account Name,Account Type
1001,Cash,Bank
2001,Accounts Payable,Liabilities
```

- Transformation (OpenAI):
  - Map `Account Code` to `Code`, `Account Name` to `Description`, and `Account Type` to `Category`.
  - Handle any missing or mismatched fields.
- Output (Load): Transformed data ready for import:

```
Code,Description,Category
1001,Cash,Bank
2001,Accounts Payable,Liabilities
```

Created with the Standard Edition of HelpNDoc: Experience the Power and Ease of Use of HelpNDoc for CHM Help File Generation

AI/ETL - Debtors/Creditors

AI/ETL - Debtors/Creditors

The combination of OpenAI and ETL (Extract, Transform, Load) can be extended to support a wide range of functionalities in osFinancials5.1/TurboCASH5-3, including debtors/creditors:

Use Case:

- Import or export Debtors (Customers) and Creditors (Suppliers) data.
- Clean and standardize data from different sources.

ETL Process:

- Extract: Pull data from Excel, CSV, or other accounting software.
- Transform: Use OpenAI to:
  - Map fields like `Customer Name`, `Address`, `Contact Details`, and `Payment Terms`.
  - Standardize formats (e.g., phone numbers, addresses).
  - Handle duplicates or inconsistencies.
- Load: Import the transformed data into osFinancials5.1/TurboCASH5-3.

Example:

- Input (Extract): Debtors data from Xero (Excel):

```
Name,Email,Phone,Balance
John Doe,john@example.com,123-456-7890,1000.00
```

- Transformation (OpenAI):
  - Map `Name` to `Customer Name`, `Email` to `Contact Email`, Phone to `Contact Phone`, and `Balance` to `Outstanding Balance`.
  - Standardize phone numbers (e.g., `123-456-7890` to `+1 123 456 7890`).
- Output (Load): Transformed data ready for import:

```
Customer Name,Contact Email,Contact Phone,Outstanding Balance
John Doe,john@example.com,+1 123 456 7890,1000.00
```

Created with the Standard Edition of HelpNDoc: Produce Kindle eBooks easily

AI/ETL - Stock/Inventory

The combination of OpenAI and ETL (Extract, Transform, Load) can be extended to support a wide range of functionalities in osFinancials5.1/TurboCASH5-3, including stock/inventory:

Use Case:

- Import or export Inventory/Stock Items data.
- Clean and transform data from suppliers or other systems.

ETL Process:

- Extract: Pull data from Excel, CSV, or supplier files.
- Transform: Use OpenAI to:
  - Map fields like `Item Code`, `Description`, `Unit Price`, and `Quantity`.
  - Handle unit conversions (e.g., packs to units).
  - Standardize descriptions and categories.
- Load: Import the transformed data into osFinancials5.1/TurboCASH5-3.

Example:

- Input (Extract): Inventory data from supplier (CSV):

```
SKU,Product Name,Price,Units
12345,Widget A,10.00,100
```

- Transformation (OpenAI):
  - Map SKU to `Item Code`, `Product Name` to `Description`, `Price` to `Unit Price`, and `Units` to `Quantity`.
  - Convert prices to the correct currency format.

- Output (Load): Transformed data ready for import:

> *Item Code,Description,Unit Price,Quantity*
>
> *12345,Widget A,10.00,100*

Created with the Standard Edition of HelpNDoc: Streamline your documentation process with HelpNDoc's WinHelp HLP to CHM conversion feature

AI/ETL - Documents

AI/ETL - Documents

The combination of OpenAI and ETL (Extract, Transform, Load) can be extended to support a wide range of functionalities in osFinancials5.1/TurboCASH5-3, including documents.

Sales documents (invoices, credit notes, quotes) and purchase documents (purchases, supplier returns, orders)

The OpenAI and ETL (Extract, Transform, Load) approach can be extended to handle sales documents (e.g., invoices, credit notes, quotes) and purchase documents (e.g., purchases, supplier returns, orders). This would allow you to automate the processing, transformation, and integration of these documents into osFinancials5.1/TurboCASH5-3.

1. Sales Documents:

a. Invoices:

- Use Case: Import or export customer invoices from other systems or Excel.
- ETL Process:
  - Extract: Pull invoice data from Excel, CSV, or other systems.
  - Transform: Use OpenAI to:
    - Map fields like `Invoice Number`, `Customer Code`, `Date`, `Total Amount`, and `Line Items`.

        - Handle currency conversions, tax calculations, and missing fields.
    - Load: Import the transformed data into osFinancials5.1/TurboCASH5-3.

b. Credit Notes:

- Use Case: Import or export credit notes issued to customers.
- ETL Process:
    - Extract: Pull credit note data from Excel, CSV, or other systems.
    - Transform: Use OpenAI to:
        - Map fields like `Credit Note Number`, `Customer Code`, `Date`, `Total Amount`, and `Reason`.
        - Ensure the credit note references the correct invoice.
    - Load: Import the transformed data into osFinancials5.1/TurboCASH5-3.

c. Quotes:

- Use Case: Import or export customer quotes.
- ETL Process:
    - Extract: Pull quote data from Excel, CSV, or other systems.
    - Transform: Use OpenAI to:
        - Map fields like `Quote Number`, `Customer Code`, `Date`, `Valid Until`, and `Line Items`.
        - Handle currency conversions and missing fields.
    - Load: Import the transformed data into osFinancials5.1/TurboCASH5-3.

---

2. Purchase Documents:

a. Purchases:

- Use Case: Import or export purchase orders or supplier invoices.
- ETL Process:
    - Extract: Pull purchase data from Excel, CSV, or other systems.
    - Transform: Use OpenAI to:
        - Map fields like `Purchase Order Number`, `Supplier Code`, `Date`, `Total`

`Amount`, and `Line Items`.

- Handle currency conversions, tax calculations, and missing fields.

- Load: Import the transformed data into osFinancials5.1/TurboCASH5-3.

b. Supplier Returns:

- Use Case: Import or export supplier return documents.
- ETL Process:
  - Extract: Pull supplier return data from Excel, CSV, or other systems.
  - Transform: Use OpenAI to:
    - Map fields like `Return Number`, `Supplier Code`, `Date`, `Total Amount`, and `Reason`.
    - Ensure the return references the correct purchase order or invoice.
  - Load: Import the transformed data into osFinancials5.1/TurboCASH5-3.

c. Orders:

- Use Case: Import or export purchase orders.
- ETL Process:
  - Extract: Pull order data from Excel, CSV, or other systems.
  - Transform: Use OpenAI to:
    - Map fields like `Order Number`, `Supplier Code`, `Date`, `Total Amount`, and `Line Items`.
    - Handle currency conversions and missing fields.
  - Load: Import the transformed data into osFinancials5.1/TurboCASH5-3.

Example Workflow for Invoices:

Input (Extract):

Raw invoice data from Excel:

```
Invoice Number,Customer Code,Date,Total Amount,Line Items
INV-001,CUST-001,2024-01-01,1000.00,"Product A:500.00,Product B:500.00"
```

Transformation (OpenAI):

- Map `Invoice Number` to `Document Number`, `Customer Code` to `Customer ID`, `Date` to `Invoice Date`, and `Line Items` to individual line items.
- Handle currency conversions (if needed).
- Ensure tax calculations are applied correctly.

Output (Load):

Transformed data ready for import:

json

```
{
  "Document Number": "INV-001",
  "Customer ID": "CUST-001",
  "Invoice Date": "2024-01-01",
  "Total Amount": 1000.00,
  "Line Items": [
    {
      "Product": "Product A",
      "Amount": 500.00
    },
    {
      "Product": "Product B",
      "Amount": 500.00
    }
  ]
}
```

Example Workflow for Purchase Orders:

Input (Extract):

Raw purchase order data from CSV:

```
Order Number,Supplier Code,Date,Total Amount,Line Items
PO-001,SUPP-001,2024-01-01,1500.00,"Product X:750.00,Product Y:750.00"
```

Transformation (OpenAI):

- Map `Order Number` to `Document Number`, `Supplier Code` to `Supplier ID`, `Date` to `Order Date`, and `Line Items` to individual line items.
- Handle currency conversions (if needed).
- Ensure tax calculations are applied correctly.

Output (Load):

Transformed data ready for import:

json

```
{
  "Document Number": "PO-001",
  "Supplier ID": "SUPP-001",
  "Order Date": "2024-01-01",
  "Total Amount": 1500.00,
  "Line Items": [
    {
      "Product": "Product X",
      "Amount": 750.00
    },
    {
      "Product": "Product Y",
      "Amount": 750.00
    }
  ]
}
```

Benefits of Using OpenAI and ETL for Sales and Purchase Documents:

1. Automation: Reduces manual effort in processing invoices, credit notes, quotes, purchase orders, and supplier returns.
2. Flexibility: Handles various file formats and data sources.
3. Accuracy: Ensures data is clean, consistent, and compliant with osFinancials5.1/TurboCASH5-3

requirements.

4. Scalability: Can process large volumes of documents from multiple sources.

Next Steps:

1. Define Requirements: Identify the specific fields, formats, and rules for each document type (e.g., invoices, purchase orders).
2. Develop Prompts: Create system and user prompts to guide the OpenAI model for each use case.
3. Test the ETL Process: Test with sample data to ensure accuracy and reliability.
4. Deploy and Automate: Integrate the ETL process into your workflow for ongoing use.

Created with the Standard Edition of HelpNDoc: Full-featured EPub generator

AI/ETL - Journals (Batches)

AI/ETL - Journals (Batches)

The combination of OpenAI and ETL (Extract, Transform, Load) can be extended to support a wide range of functionalities in osFinancials5.1/TurboCASH5-3, including journals/batches:

Use Case:

- Import or export Journal Entries from other accounting software or Excel.
- Clean and transform journal data to match osFinancials5.1/TurboCASH5-3 requirements.

ETL Process:

- Extract: Pull journal data from Excel, CSV, or other systems.
- Transform: Use OpenAI to:
  - Map fields like `Date`, `Account Code`, `Debit`, `Credit`, and `Description`.
  - Ensure debits and credits are balanced.
  - Handle missing or inconsistent data.
- Load: Import the transformed data into osFinancials5.1/TurboCASH5-3.

Example:

- Input (Extract): Journal data from Sage (Excel):

  Date,Account,Debit,Credit,Narrative

  2024-01-01,1001,500.00,0.00,Sales

- Transformation (OpenAI):
  - Map `Date` to `Transaction Date`, `Account` to `Account Code`, `Narrative` to `Description`.
  - Ensure debits and credits are correctly formatted.
- Output (Load): Transformed data ready for import:

  Transaction Date,Account Code,Debit,Credit,Description

  2024-01-01,1001,500.00,0.00,Sales

Benefits of Using OpenAI and ETL for These Functionalities:

- Automation: Reduces manual effort in data migration and integration.
- Flexibility: Handles various file formats and data sources.
- Accuracy: Ensures data is clean, consistent, and compliant with osFinancials5.1/TurboCASH5-3 requirements.
- Scalability: Can process large volumes of data from multiple sources.

Next Steps:

- Define Requirements: Identify the specific fields, formats, and rules for each functionality (e.g., Chart of Accounts, Debtors, Inventory).
- Develop Prompts: Create system and user prompts to guide the OpenAI model for each use case.

- Test the ETL Process: Test with sample data to ensure accuracy and reliability.
- Deploy and Automate: Integrate the ETL process into your workflow for ongoing use.

Created with the Standard Edition of HelpNDoc: Easy to use tool to create HTML Help files and Help web sites

Release notes

Saturday, 24 May 2025- 01:50:48

TurboCASH5-3 - Release-Candidate-10

Languages - FIXED Typo in 27 English languages

- Label id 2047 - Name -> Last name - Contacts - information for Debtors Creditors aligns with First name. (Also in Afrikaans)
- Label ID 3690 - Enter email adress seperate with ; => Enter email address separate with ;
- Label ID 906000 - In spite of previous reminders, according to our records your account is still overdue. => Despite previous reminders, according to our records your account is still overdue.
- Label ID 1398 - Comfirm printing => Confirm printing
- Label ID 1959 - Authentification failed! => Authentication failed!
- Label ID 2251 - No Window's timers are available! => No Windows timers are available!
- Label ID 3073 - Group still has nesteled groups remove them first! => Group still has nested groups remove them first!
- Label ID 3078 - Account code already exist! => Account code already exists!
- Label ID = 3276 = Bank import extra link functions. Enter bank account for exact match on account. Enter text with a # prefix to look inside a imported bank line to see if the text is in that string. Text will be searched in the uppercase. => Bank import extra link functions. Enter bank account for exact match on account. Enter text with a # prefix to look inside an imported bank line to see if the text is in that string. Text will be searched in the uppercase.
- Label ID = 3349 - There is document input asossiated with this project! Do you wish to continue ? All project data will be lost! => There is document input associated with this project! Do you wish to

continue ? All project data will be lost!

- Label ID 3350 - There is transaction input asossiated with this project! Do you wish to continue ? All project data will be lost! => There is transaction input associated with this project! Do you wish to continue ? All project data will be lost!
- Label ID 3364 - No remaker entered process aborted! => No remark entered, process aborted!
- Label ID 3424 - Delete not local (Books this PC can not find) = Delete not local (Books this PC cannot find)
- Label ID 3471 - I have read this instruction and I understand the action! => I have read this instruction, and I understand the action! (added a comma)
- Label ID 2935 - Poll display => Pole display
- Label ID 2936 - Poll display connected => Pole display connected
- Label ID 2938 - Default POS Poll => Default POS Pole
- Label ID 2939 - 2 X 20 chars POS Poll => 2 X 20 chars POS Pole
- Arabic.dfm updated - Full translation in the accounting context relating to osFinancials5.1/TurboCASH5-3.

Std Bank account no.

4-DIGIT-BOOKS - Fixed TADE => TRADE in the Chart of Accounts in the following Sets of Books:

- 4-EN-SOUTH-AFRICA-GENERIC
- 4-EN-UK-GENERIC

TurboCASH5-3 - Release-Candidate-7

Compiled TurboCASH5-3-Release-Candidate-7 - after POS Fixes.

Updated osFinancials5.1.0.233 (from osFinancials5.1.0.227)

ADDED / Include OpenAI

OpenAI import on bank import form. Set the values in Setup -> Company data second tab and press save.

FIXED : tcash.ini files AppName=TurboCASH5-2025

AppName=TurboCASH5 change from TurboCASH5-2025 in all Language files of the TurboCASH5-MERGE

Install sorce - Labels cut off in some screens and in some languages - Also changed in Inno Setup script.

FIXED POS : Compiled TurboCASH5-Release-Candidate-6 with the POS invoice now displaying

Works can see screen and interface is now displaying.

FIXED issues:

- POS Invoice discount - Not working - For example, if add 10% discount it is not displays on the POS Invoice screen and Payment does not reduce discount.
- Quantities entered e.g. 2 does not change the selling price - x2 showing in Quantity column - Payment = 1 item only.
- Printing POS Invoice / Reprinting POS Invoices / Setup -> POS - Cannot print Invoices or test printer - Prints blank with 0kb - I use Microsoft print PDF and cannot open these prints in Edge web browser. Think the last time got the Invoices printing was in TurboCASH4/osFinancials4.

FIXED : Budgets MSSQL Error

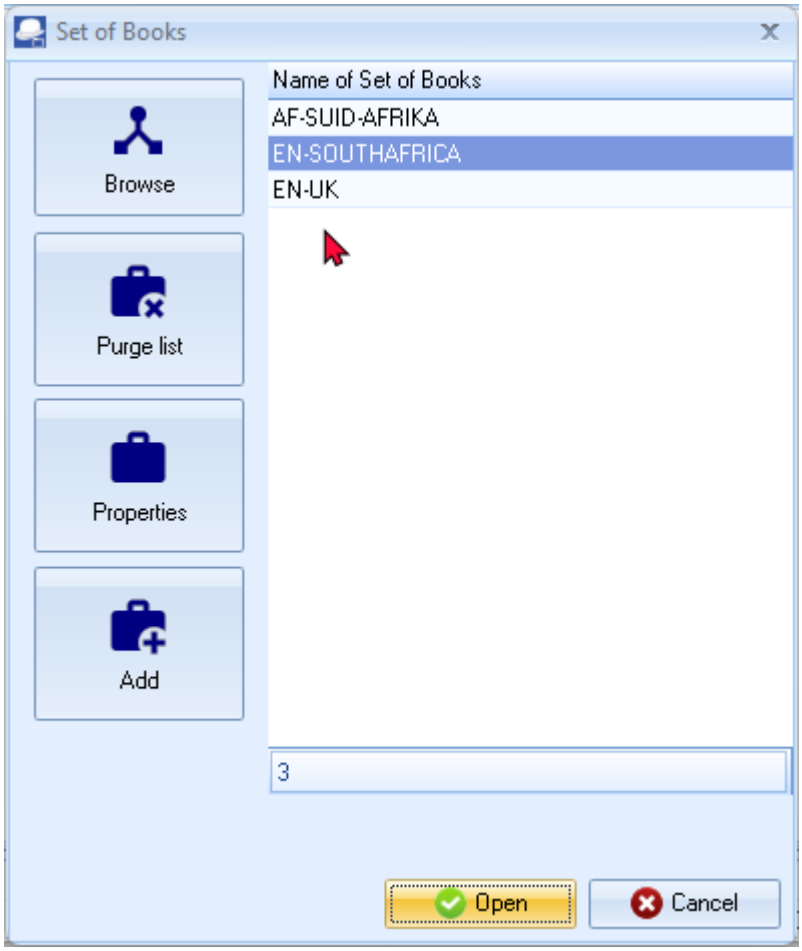
Entering Budgets (Reports ribbon) and click on the Apply to selection button produces the following error:

> Incorrect syntax near 'a'.

On Setup → Accounts you can enter budgets

Adjusted Settings.dfm file to Exclude extra EN-UK (Blue font) Set of Books

Adjusted the Settings.dfm file in the bin folder. Upon install the EN-UK Set of Books will no longer display in the BLUE FONT COLOR as a duplicate of the normal EN-UK Set of books installed via the Install script from the .../bin/Repository folder.



Installation

Install file : TurboCASH5-2025-Release-Candidate-4-setup.exe = *Download from Sourceforge*

FIXED Install Script - Install no overwrite message displayed in a clean install. NOTE: This seems to be correct - When installing TurboCASH5-2025-Release-Candidate-4 in the same existing directory you may receive two messages:

1. Directory exists - Confirm to install in the existing directory or select no to choose a different directory.
2. Set of Books exists - Confirm to keep the existing Set of Books or choose to overwrite (replace the files in the Set of Books.

Needs updates in next release - TurboCASH5-2025-Release-Candidate-5-setup.exe - To Update install source

Compile of TutboCASH5-2025-Release-Candidate-4 not compiled on TC5-2025-MERGE-Install -Source-Release-Candidate-3.7z - Lots of fixes were done and hours spent on these between 18 December 2024 and 25 December 2025.

Updated Sets of Books (Firebird Databases)

Updated the Year to 2025

Set the RESOURCES from osFinancials to TurboCASH in the Calendar for TurboCASH installtion.

Updated Setsof Books in the bin folder:

- 4-DIGIT-BOOKS
- CUSTOMISE-BOOKS-ADVANCED

Updated Help file (EngHelp.chm)

- Updated the Help file to include TurboCASH in text e.g. osFinancials5/TurboCASH5. The reason for this is to get it ready for ChatGPT Search and other AI searches on the web.
- Release Candidate 3 source = Wednesday, 25 December 2024 - 03:55:54 - osFinancials5/TurboCASH5 - Business Class - Help
- Help file outdated = Wednesday, 18 December 2024 - 06:23:01 - osFinancials5/TurboCASH5 - Business Class - Help

Fixes in progress - Debtor Statements / Creditor Remittance Advices and Age analysis reports cut-off Description text

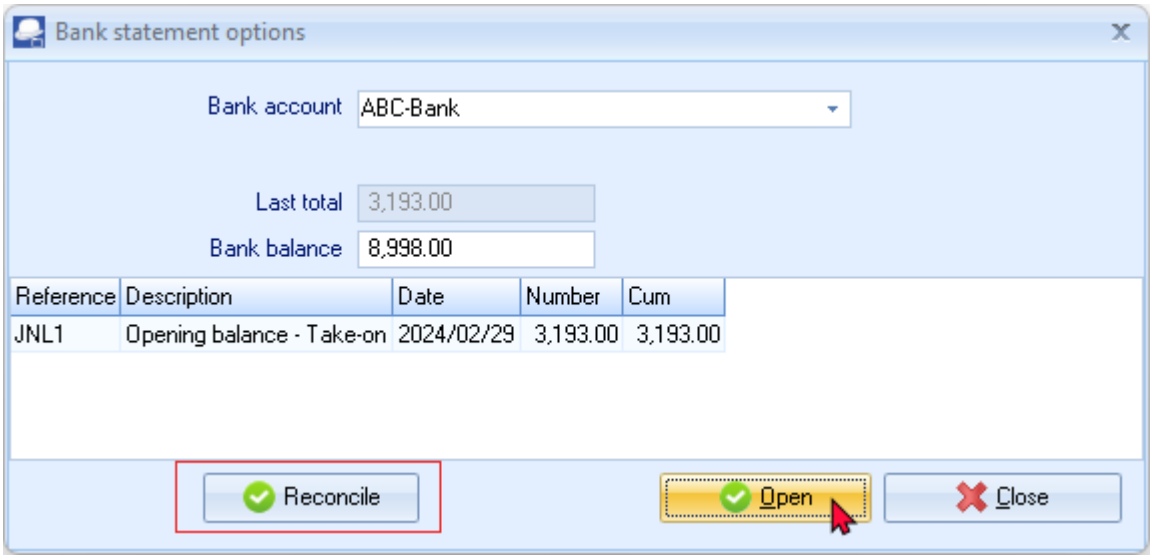
- Firebird databases - Debtor Statements / Creditor Remittance Advices and Debtor Age analysis / Creditor Age analysis reports not updated with Fixes to Descriptions not printing fully (Characters cut-off) in nounicode=FALSE setting (Unicode enabled for most users). References Such as the Document number and references entered in batch entry screens - still n cuts-off only in Firebird databases. Need to add similar sgl "`cast(messages.SDescription as varchar(255)) as SDESCRIPTION_1 " for the SREFERENCE - I may need some guidance and pointers to fix these.`
- MSSQL databases - Prints correct in all these reports - Prints the full References and Descriptions.

Folders not included

execute\localfiles\dbname folder not included.

Bank import - Shows the Reconcile button and Match log tab not correct

Neet to check the configuration / activation of the bank import plugin. The Reconcile button should not be displayed as in osFinancials5.1.0.227.



The Match log may display incorrect data

FIXED : Outstanding : Debtor Statements / Creditor Remittance Advices and Age analysis reports SREFERENCE cut off text

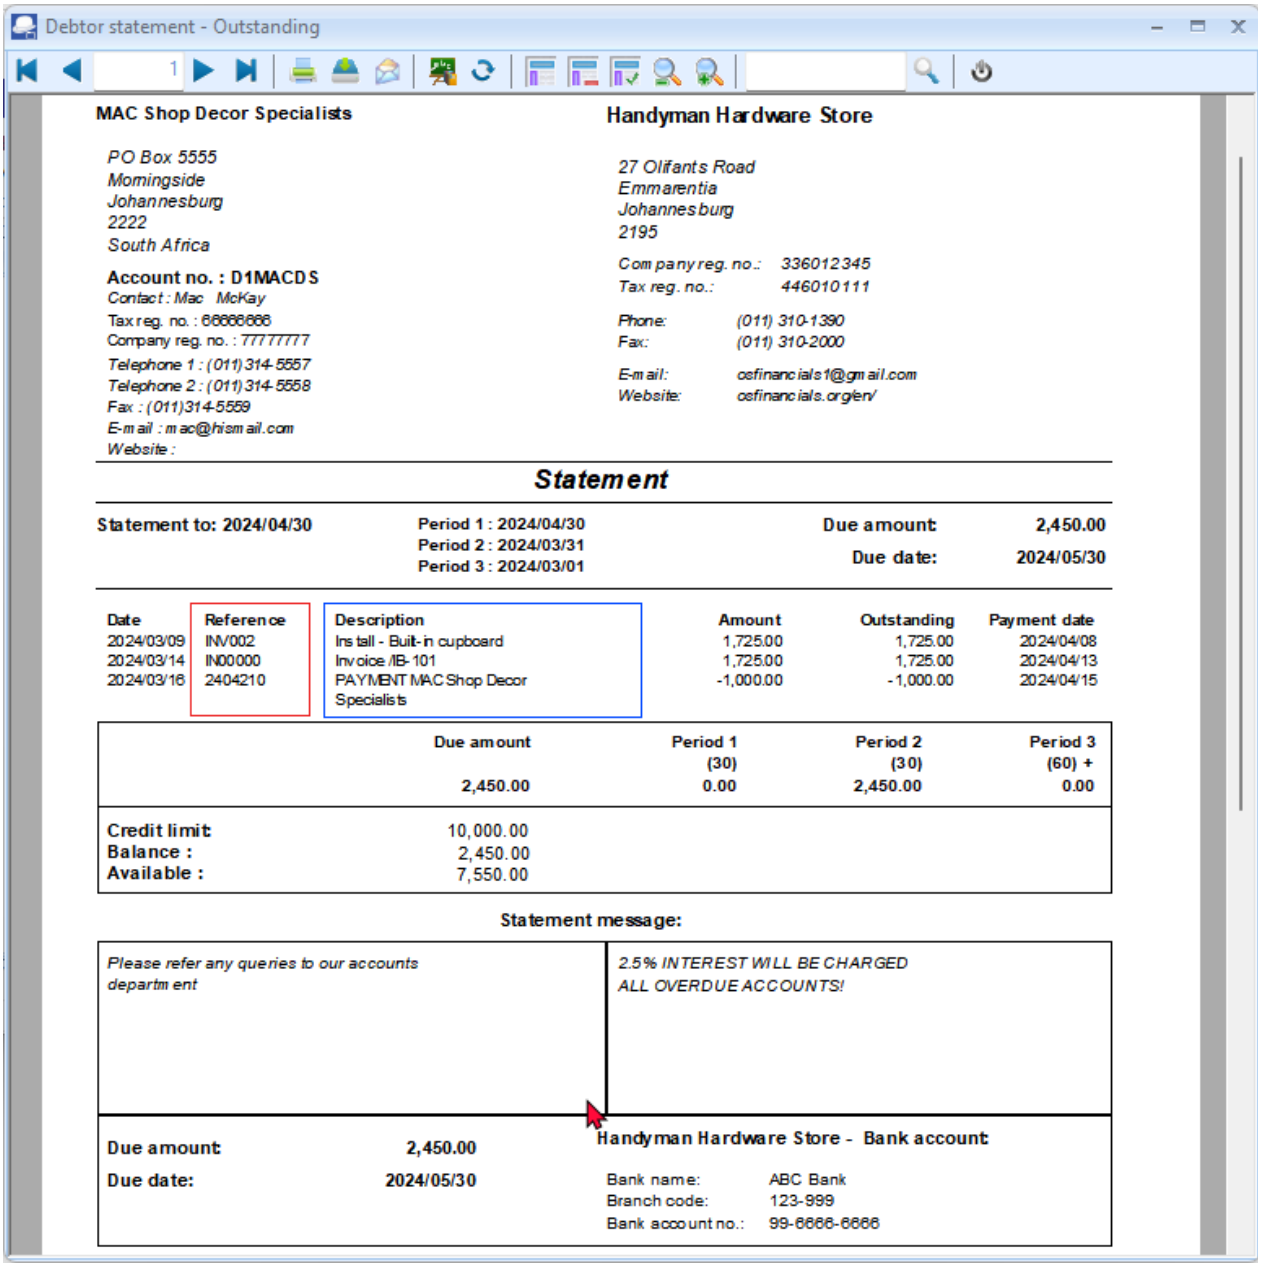
In Firebird Databases, the Reference only displays 7 Characters - not the full document number or reference as entered in the Reference field of batch entry screens. The Descriptions were fixed in TurboCASH5-2025-Release-Candidate-3 (Also replicated in osFinancials5-MERGE-7)

Replicated in nounicode=FALSE setting (installs for most users)

In MSSQL Databases, it displays the full characters and does not replicate these Reference and Description labels not fully printed.

Example of Debtors statement - Outstanding. NOTE the Debtor statement prints the full characters, while the Debtor Age analysis and Creditor Remittance advices - Outstanding and Creditors Age analysis reports, replicates the same issues with the Reference not printing in Firebird databases fully.

NOTE the Debtor statement prints the full characters but not the Debtor statement - Outstanding



The Descriptions is fixed in TurboCASH5-2025-Release-Candidate-3 (Also fixed in osFinancials5-MERGE-7)

FIXED : Transactions sequence by date : After fixing the SReference for the Document number and References entered in Batches, the transactions prints according to "*order by 11*" instead of "*order by 12*" to print the transactions by date (TN_906552) fixed in all reports updated.

FIXED : Debtor Statements / Creditor Remittance Advices and Age analysis reports cut off text

On Debtors statements, the TrExpression26 = TRANSACTDETAIL.SDESCRIPTION_1 displays only 20 characters if nounicode=FALSE setting also in Data configuration and on printed report.

If the nounicode=FALSE setting is set to nounicode=TRUE, the full descriptions on Debtor statements will

be printed.

Similar Descriptions issues were replicated in the following reports:

Debtors

- Debtor statements
  - Location : plug_ins\reports\systemreports\TRN_160\TRN_1090 \TRN_1090 - Debtor statement
  - Location : plug_ins\reports\systemreports\TRN_160\TRN_1090 \TRN_906552 - Debtor statement - Outstanding
- Debtors - Age analysis (Rreports)
  - Location : plug_ins\reports\userreports\TRN_160\TRN_906142 - Balances detail
  - Location : plug_ins\reports\userreports\TRN_160\TRN_906143 - Balances detail history (open item)
  - Location : plug_ins\reports\userreports\TRN_160\TRN_906147 - Balances

Creditors

- Creditor remittance advices
  - Location : plug_ins\reports\systemreports\TRN_161\TRN_1090 \1089 - Creditor remittance advises
  - Location : plug_ins\reports\systemreports\TRN_161\TRN_1090 \TRN_906551 - Creditor remittance advises - Outstanding
- Creditors - Age analysis (Reports)
  - Location : plug_ins\reports\userreports\TRN_160\TRN_906142 - Balances detail
  - Location : plug_ins\reports\userreports\TRN_160\TRN_906143 - Balances detail history (open item)
  - Location : plug_ins\reports\userreports\TRN_160\TRN_906147 - Balances

Added cast message field length to Descriptions in TRANSACTDETAIL

```
SELECT
cast(transact.FAmount  as decimal(12,2)) p1,
transact.*,Account.*,
cast(messages.SDescription  as varchar(255))  as  SDESCRIPTION_1
```

```
FROM  transact

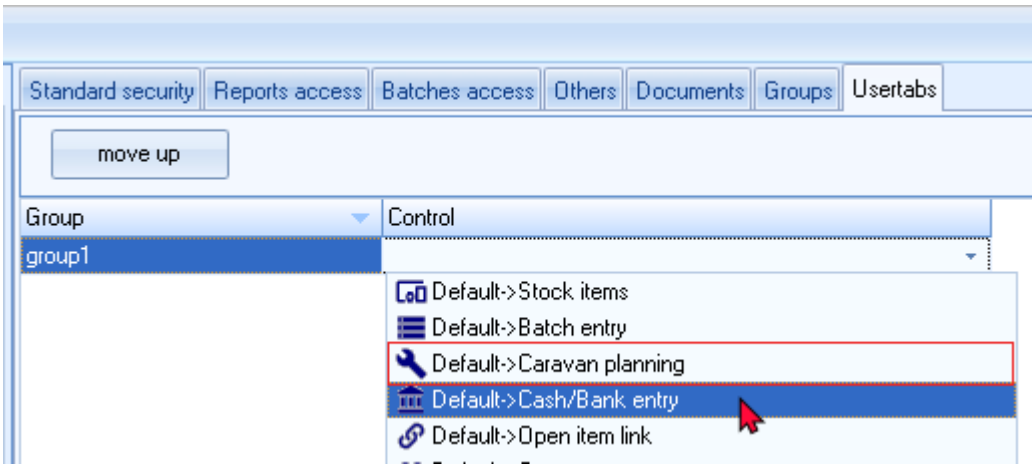
   LEFT OUTER JOIN  account

   ON   (transact.WAccountID  =  account.WAccountID)

join Messages on (transact.WDescriptionid  = messages.WMessageID)
```

FIXED - Access control - User tabs - Default -> Caravan planning

Default -> Caravan planning item in User tabs - Probably for a plugin. Need to remove it. Needs to be available only if the plugin is activated. (osFinancials5.1.0.230)



MSSQL ERROR - Budget

Incorrect syntax near 'a'.

Included in the next merge install

Document layout file

TRN_906277.rep Document layout file (15 code) Moved the Document type in the Header to the centre as printing to much to the right of the layout file.

Readme.txt android

In TurcoCASH5 root directory but not in osfinancials5 root installation directory

Deleted file in TurboCASH5 install as Android app never took off (discontinued)

Subscriptions MSSQL Error

Operand type clash: date is incompatible with int

MSSQL - Set default language

In MSSQL / Firebird the Apply button does not save the language if selected in Access control for no users.

Next release Fixes Updates

Languages updated

Fixed typo in Afrikaans language file

LabelID 337 Verskafferreoere => Verskafferretoere missing "t".

Scheduled for next installs compile.

Tutorials Updated

Images

All tutorials - Added the Compressor and Drill press images to Stock items for tutorial and documentation purposes.

These images were not included, since these tutorials was created from scratch on a blank database.

Resource name in Calendar

For TurboCASH5 changed the resource shipped in the Calendar from

osFinancials/ TurboCASH in Tutorials shipped with TurboCASH5

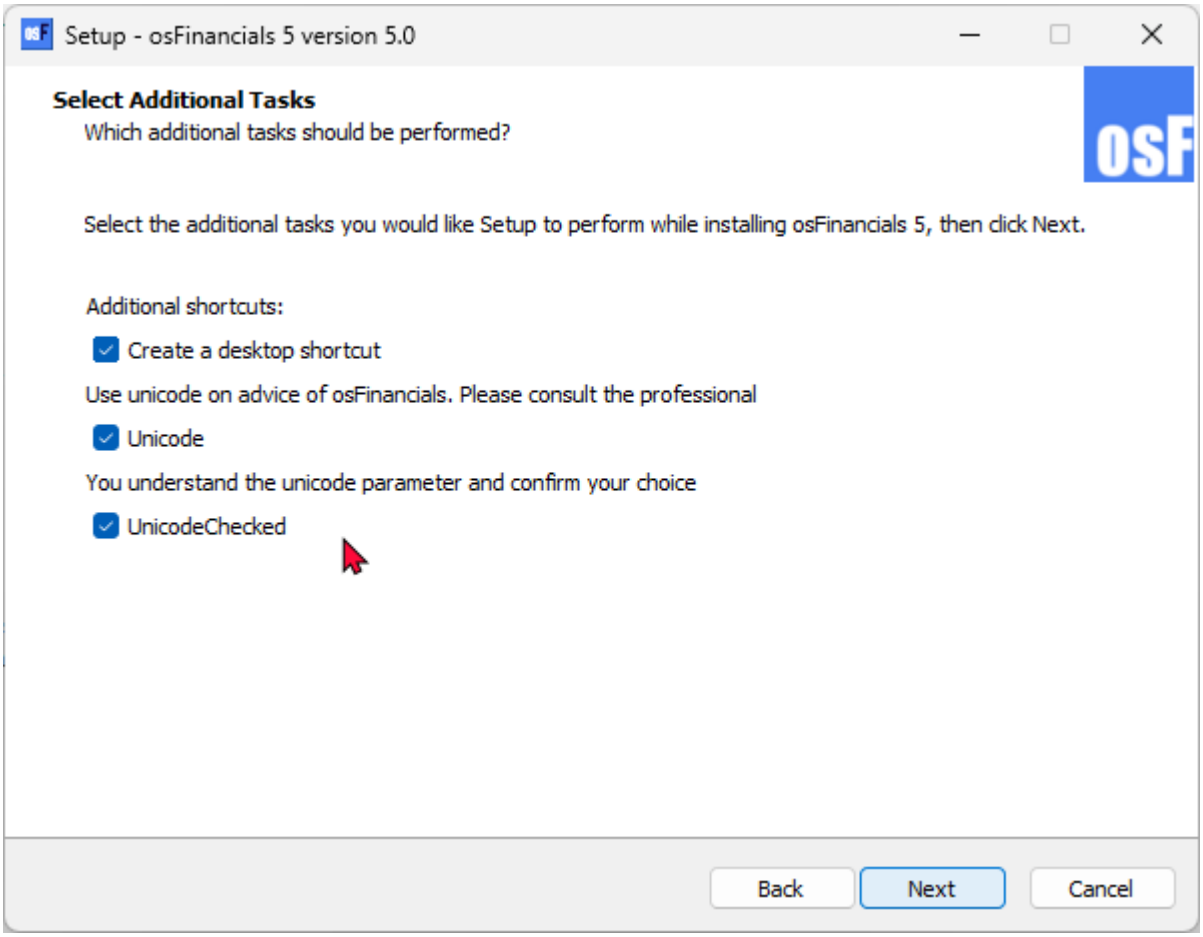
For osFinancials, the resource remains osFinancials.

Unicode install and nounicode setting

Unounicode=FALSE

If you check both the Unicode and Unicode Check tick-boxes, the Unicode setting will be set as false in the osf.ini file:

```
nounicode=false
```



This will cause the MSSQL error, when opening a Set of Books (MSSQL database type).

UNICODE SETTING in FIREBIRD ERRORS

Unicode setting will be set as false in the osf.ini file:

```
nounicode=false
```

Entering an ê (Alt+0136) or ë (Alt+0137) in for example Company name (Registered company names may include these characters, including existing users) replicates this error:

```
Dynamic SQL Error
SQL error code = -303
arithmetic exception, numeric overflow, or string truncation
```

This error is not replicated in the following options

Setup → Accounts

Setup → Batches

Setup → Groups

Budgets (Reports ribbon)

Setup → Reporting dates

Debtors

Creditors

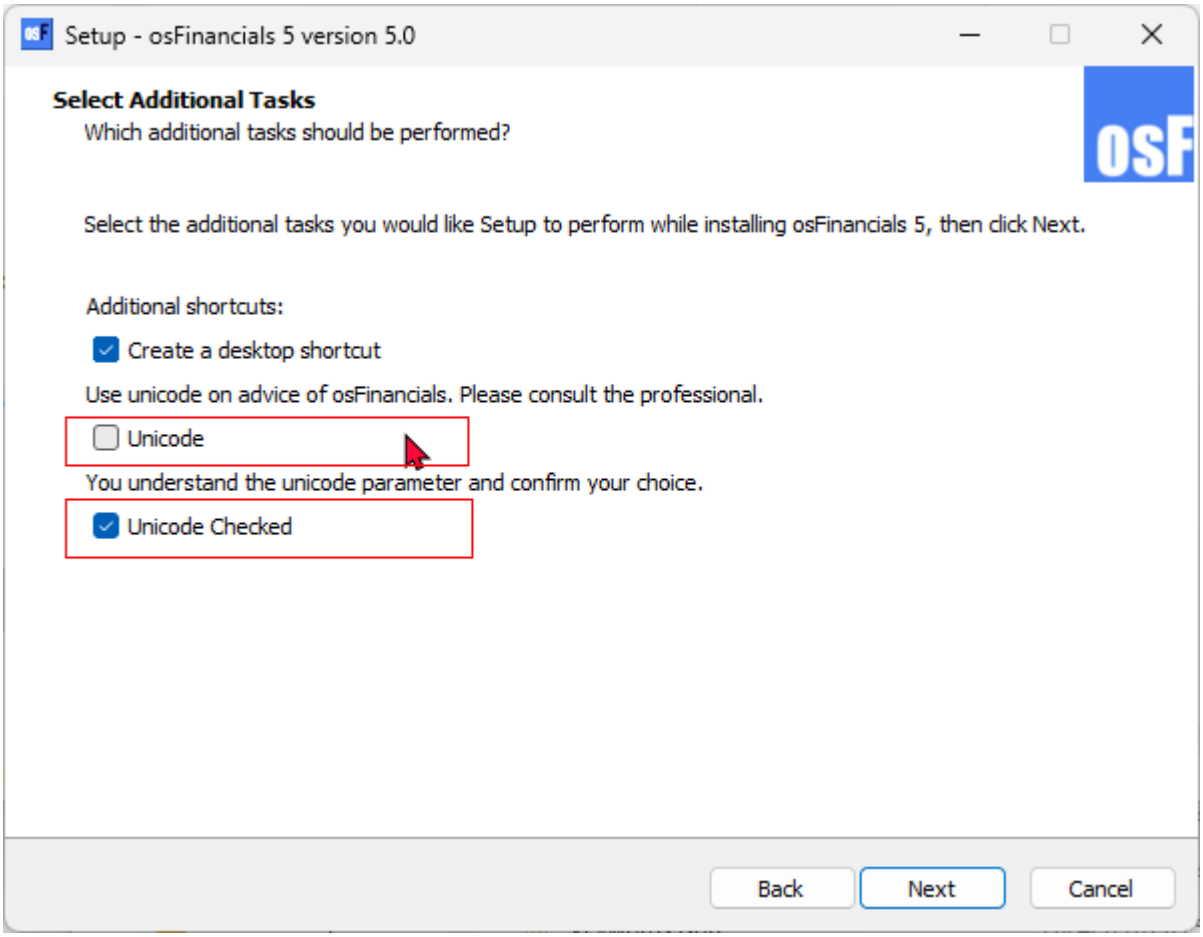
Documents NOTE The companyname (Setup → Company info with this error prints these characters incorrectly on document layout files

Need to check some more forms - or maybe this could be checked out in osFinancials core and plugins

nounicode=TRUE

If you do not check the Unicode checkbox (leave blank) and only select (tick) the Unicode Checked tick-box, the Unicode setting will be set as false in the osf.ini file:

```
nounicode=true
```



This will resolve the MSSQL error, when opening a Set of Books (MSSQL database type). Can open all Set

of Books (MSSQL database type).

Unounicode=True setting

MSSQL Database

Open Set of Books - MSSQL database- nounicode=TRUE

Can open Sets of Books in Firebird and MSSQL databases. This solves the issue with Opening a Set of Books error if nounicode=FALSE.

> "Invalid object name 'OPREPORT'."

Unicode setting needs to be set to nounicode=TRUE.

Replicates the error in osf5.1.0.227 with the Install nounicode=FALSE setting =

> "Invalid object name 'OPREPORT'."

Cannot open MSSQL all books in both in osFinancials5.1.0.227 and in osFinancials5.1.0.189. This error has to do with the nounicode=FALSE setting is set to false in the osf.ini file.

> nounicode=false.

Changing the nounicode=TRUE setting in the osf.ini file to true, then all MSSQL Sets of Books can be opened:

> nounicode=true

In osFinancials5.1.0.227, the Unicode settings is implemented in the install. Instead of editing the Unicode settings in the osf.ini file using a text editor, you can set the Unicode settings in the install.

Reports - MSSQL database- nounicode=TRUE

All reports and layout files including spreadsheet reports, seems to print fine and neatly except for the following 4 reports:

1. systemreports -Stock in / out

   Location : ...\plug_ins\reports\systemreports\TRN_1999\TRN_906112 (Stock in / out)

2. REPORTS/STOCK -Stock sidebar reports - Historical value

   Location : ...\plug_ins\reports\REPORTS\STOCK\LANG_906031 (Historical value)

3. userreports - Debtors - Outstanding at date

Location : plug_ins\reports\userreports\TRN_160\TRN_947\TRN_906104 - Debtors outstanding at date

4. userreports - Creditors - Outstanding at date

   Location : plug_ins\reports\userreports\TRN_161\TRN_947\TRN_906103 - Creditors outstanding at date

Plugins - MSSQL database- nounicode=true

Subscriptions MSSQL Error

Operand type clash: date is incompatible with int

Colours Select for Reporting groups

Setup → Groups

Setting Colous in Groups does not change easily - MSSQL databases is more sticky than in Firebird databases

Cannot set the Account group 1 colours - Loses selected colours

Standard Theme palette - Hard colours - Cannot make softer colours using Custom colours

Debtor groups, Creditor groups, Document groups and Stock groups works but sticky - If the grids is open, you may select Tools → Close active forms and access the grid to display the colours.

Customise Languages - Rest tab - Empty account / Empty Group

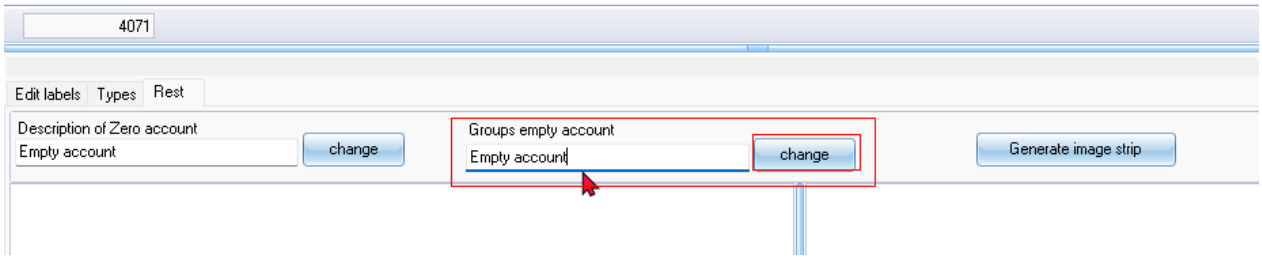
Replicated in both Firebird and MSSQL databases.

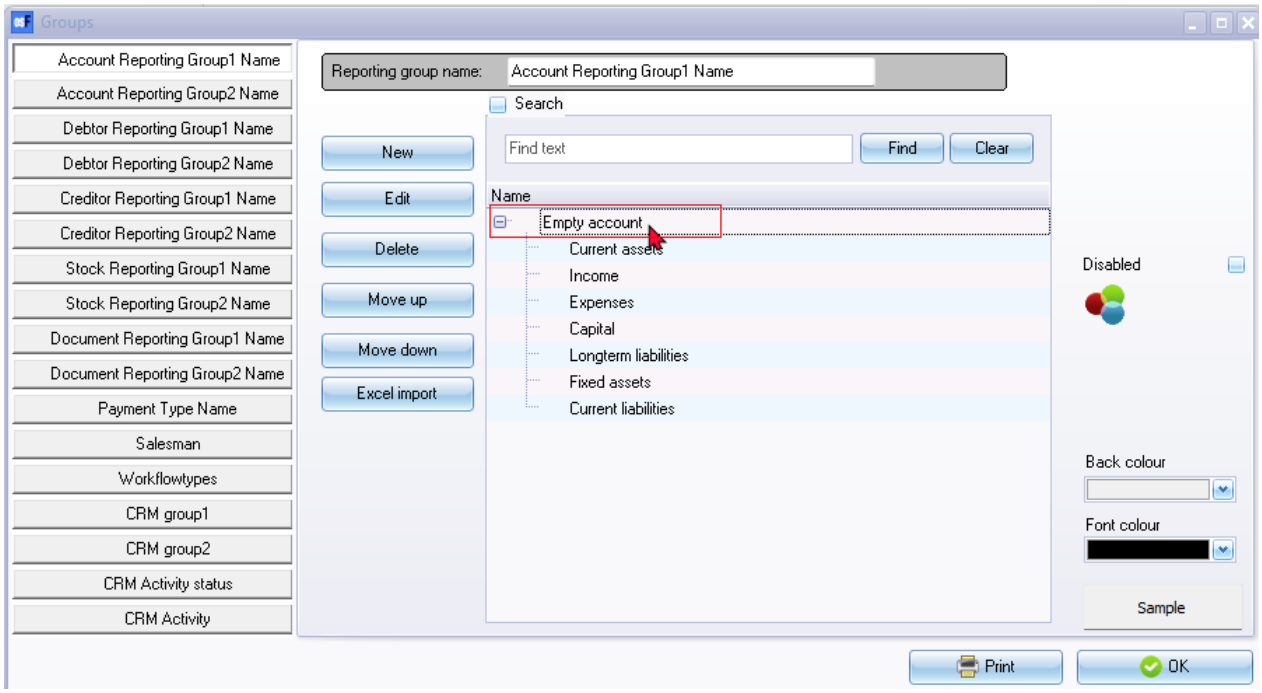
The Customise languages - Rest tab does not store "*Groups empty account*" when you click on the Change button (second button).

It displays "*Empty account*" from the first "*Description of Zero account*". It does not save correctly.

Difficult for translations or customisation.

Need to change the first Change button and confirm to change it to for example no group have to enter "*No group"* and click Change (second button). Thereafter need to reopen the Set of Books for changes to have an effect.





Access control

Posting / Delete buttons

Need to update documentation

Access control - Documents tab - Document posting tick-box - Add Posting and Delete buttons to the Documents grid sidebar. Does not work for single users - Need to setup users before this Document posting will be available for a user.

It is just a entry in the database with user id 0

Default language for a Set of Books

In Firebird and MSSQL database types cannot change the language on Setup → Access control (System language) and click the Apply button as the default language for the Set of Books. It reverts back to the original language e.g. Afrikaans if you change it to English.

Workaround - You have to use the Switch language option on the Start ribbon to update the System language in Setup Setup → Access control.

Language can be set at user level. So user a can login with language a and user b with language b

System language - Default language for the Set of Books

Language - Cannot select a language (empty / blank). You need to use the Multi-language Set of Books plugin (Manual - Shop) to select a language added in the Setup → Groups - Languages reporting group.

Access Violations - Reports

Ledger analyser - Balance sheet

Produces Access violation error

> Access violation at address 525C8283 in module 'rtl290.bpl'. Read of address 2E300858

Balance sheet prints after second attempt

Graphs

Some Graphs print Access violations click 1 or sometimes 2xtimes then it prints.

Cost centres

Cost centres were producing similar Access violation errors in the Balance sheet and some reports. Need to click 1 or more tipes then the report prints.

Export - Accounts

Spreadsheet import - Accounts

- Spreadsheet export import - No Sub-accounts Workaround delete accounts and recreate accounts.
- Export (Setup ribbon) Export tab txt file imports well - Need to delete the first tax account (No tax tab) and zero-rated items.

You can check the Tax percentages (User reports → Tax to see incorrect tax percentages such as the first Tax code (sub-account), which does not incluse a Tax tab and percentage.

Import Stock

Stock - Import - Tab-delimited .txt file

> The statement has been terminated. - Tab delimited *.txt file

> The INSERT statement conflicted with the FOREIGN KEY constraint "FK_DOCLINE_STOCK". The conflict occurred in database "MSSQL-TOETS-NUTSMAN", table "dbo.Stock", column 'WStockID'.

Spreadsheet Export from Firebird databases and Import to MSSQL works.

Imported Batches

Replicated in both Firebird and MSSQL Database types.

F8: Batch list Empty accounts on the Unposted batch report.

Balancing the batch will print only the balanced accounts - need to reselect or confirm the imported accounts

Reselect the accounts - list on Batch F8:List Unposted batches report.

Bank import - Import Bank statement

Delete Bank account with Posted transactions

Bank statement - Import Account from spreadsheet - Cannot delete bank account

> The statement has been terminated.
> The DELETE statement conflicted with the REFERENCE constraint "FK_TRANSACT_ACCOUNT". The conflict occurred in database "MSSQL-MY-BOOKS", table "dbo.TransAct", column 'WAccountID'.

If you have posted transactions to a bank account, you first need to cancel reverse posted batch and erase the batch to process the import bank statement

Similar errors in Firebird databases.

Bank-Import Open Item link

When allocating transactions for an Open item account, the Open item selection screen.

> The statement has been terminated.
> The INSERT statement conflicted with the FOREIGN KEY constraint "FK_OILINKSPRE_BATCH". The conflict occurred in database "MSSQL-MY-BOOKS", table "dbo.BatCon", column 'WBatchID'.

Imported Documents

Document Export Import plugin used to export documents from a Set of Books (Firebird Database). Imported into a Set of Books (MSSQL database).

Import Exported documents

Financial entry

Financial Entry - Need to reselect the Ledger Account and confirm it is correct.

Can select a main account (with sub accounts).

Tax by default looks like the Tax is codes is correct, Tax amount on Documents grid - When opening the document the tax code may be blank. Need to select the correct tax code.

Update Documents

When updating documents, some errors were replicated in MSSQL databases. Some of these similar errors is replicated in Firebird databases.

> Fault in rounding please set your rounding margin document:AK000001 of 150
> You cant post to the zero tax account!

Need to select the correct Tax account.

AK000001	Algemene Grootboek	1000	0

Financial Entry - Imported Documents - Need to select a Ledger account

Languages

Language files updated

The Afrikaans and 26 English language files were updated with fixes to typos, etc. See - Language-files-changelog.docx

- Location on GitHub : Changelog - https://github.com/Digidanosf/osfinancials-development/blob/main/changelog-merge/Language-files-changelog.docx
- Language files needs to be merged in " .../bin/languages " directory.
- Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/languages

Known issues - Language Files Label Inconsistencies

Some Language Files Label Inconsistencies: were found:

- Bank import plugin:

- Receipt column LabelID 1100 Receipt may need to be changed to labelID 2233 to reflect Receipts to be consistent with the plural LabelID 2233 reflecting Payments.
- Changing LabelID 1100 Receipt to Receipts will cause the Receipt options screen to print Receipts instead of Receipt.

- Document Status: In the Document entry form's header refers to Open (LanguageID's 163, 20120 or 21042)., which is used for the Open button on most screens. There is LabelID 580, Open for posting. Unposted (LabelID's 962 or 1097 shows in the Status column of documents grid.

Outstanding Translations

All the Outstanding translations which is not translatable in the osFinancials5 source, including plugins are listed with screenshots, notes and possible LabelID's. These outstanding translations is listed in various documents according to function and each of the plugins.

- Outstanding Translations osFinancials Core:
  - Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/translations
- Outstanding Translations Plugins:
  - Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/plugins-translations
- Outstanding Translations DynaReg Plugins:
  - Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/plugins-dynabreg

Reports, document layout files

All reports and document layout files are translatable via the language files, except specific document layout files designed for the Dutch market.

Meticulous efforts have been exercised to resolve any language inconsistencies and include fixes for example, some lost in translation labels not printing in the Debtor or Creditor preferred language in the Report designer.

- Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/reports/plug_ins/reports This repository contains all updated reports, document layout files, including those related to plugins. This repository can be merged with the '...\plug_ins\reports\' directory.

Themes

- Obsolete folders and files to Delete in ...bin/themes folder:
  - My-Material
  - svg-theme
  - svg-theme.zip
- Known issues - Classic Report icons display in SVG themes: The classic report icons are still displaying in SVG themes. This issue is addressed Compatible Theme Skins available for a download on GitHub to be to ensure consistency across themes.
  - Issue: Classic report icons are still displaying in SVG themes, which affects consistency across themes.
  - Resolution: Compatible theme skins are available for download on GitHub to address this issue and ensure consistency. These need to be updated and included in the next osFinancials installation.
  - Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/themes
- FIXED - Creditor control icon not loading correctly
  - The creditor icon - does not change when creating an image strip in all themes - Setup → Accounts and in Ledger viewer - It is not correctly rendered / displayed.
  - Checked properties of creditor svg files and replaced the Acccreditors.svg icons and created new image strips in all themes containing svg icons with the correct colour.
  - Creditor control icon not loading correctly - Classic icon in some themes - Fixed in osFinancials5.1.0.109 - but with the osFinancials5.1.0.127 / osFinancials5.1.0.189 update does not include these fixes.
- Compatible Theme Skins - Each theme folder includes a customizable theme skin. There are 34 custom themes available for osFinancials5/TurboCASH5. You can view screenshots of the available themes to help you make your choice.
  - Installed Themes: These 7 themes are included in the osFinancials5 installations and may include fixes. They can be downloaded as a zip file and copied to the `.../bin/themes` folder of your osFinancials5 installation directory.
    - Location on GitHub : https://github.com/Digidanosf/osfinancials-

development/blob/main/themes/themes-installed.zip

- New Themes - A collection of 27 themes. These themes are available for download as a zip file. Once unzipped, you can copy the themes you need to the `…/bin/themes` folder of your osFinancials5 installation directory. These themes are not included in the osFinancials5 installs..
  - Location on GitHub : https://github.com/Digidanosf/osfinancials-development/blob/main/themes/themes-new.zip

- Change the colour of your svg icons in one go - In osFinancials5, you have the option to easily customize the colour of all 227 icons (in the SVG "*Scalable Vector Graphics*" file format) used in the interface. This customization process can be completed in less than a minute by utilizing a text editor such as Notepad++ and the Search and Replace feature. By replacing the default black colour with a colour of your preference, you can personalize the appearance of the icons in a copy of the "*Material*" theme to suit your taste.

Documentation Update Overview

The Help documentation for osFinancials has undergone significant updates to enhance usability, accuracy, and relevance. This update is structured into two main sections: Release Notes and Core Functionalities. Below is a detailed breakdown of the recent changes and improvements made to the documentation.

Release Notes

The Release Notes section provides a comprehensive overview of known issues, fixes, and updates for osFinancials core, reports, and plugins. This section is particularly useful for tracking changes across different versions of the software, such as migrations from Delphi 10 to Delphi 11 and Delphi 12. Key features include:

- Known Issues and Fixes: Detailed notes and screenshots of bugs found and fixed in pre-release versions.
- Retesting: Each known issue is retested with every install and update to ensure ongoing stability and reliability.
- Firebird and MSSQL Compatibility: Updates and notes on compatibility with Firebird and MSSQL databases across the core, reports, plugins, and other components.

Core Functionalities

This section covers all core functionalities of osFinancials5.1/TurboCASH5-3, including reports, the report designer, and plugins. The documentation is currently being updated to provide a more comprehensive

guide to testing all features. Given that osFinancials and TurboCASH share the same source code, this documentation can also serve as a useful reference for future releases of TurboCASH.

Specific Updates in the osFinancials Help System

The following specific updates have been made to the osFinancials Help system:

- Webshop Links: Fixed approximately 400 links that were previously pointing to http://www.osf-boekhoudpakket-administratie.nl/en/webshop to https://www.osfinancials.org/en/webshop in the English Online Help and Afrikaans Online Help. This update applies to both the English Online Help and Afrikaans Online Help, as well as the CHM help files.
- Afrikaans Language: Enhanced the Afrikaans content with more translations and modernized language. This update aims to improve the accessibility and readability of the documentation for Afrikaans-speaking users.
- SEO Metatags: Added and updated metatags to improve the search engine optimization (SEO) of the documentation, making it easier for users to find relevant information through search engines.
- New and Updated Topics: Added and updated several topics, including:
    - Blockchain: Introduced new content related to blockchain technology and its integration with osFinancials.
    - Activa: Updated information on managing assets within the system.
    - Price agreements: Expanded documentation on setting up and managing price agreements.
    - Stock Sidebar Reports: Added new sections on generating and interpreting stock sidebar reports.

These updates will be included in the next release of the help files, ensuring that users have access to the most current and accurate information.

Conclusion

The recent updates to the osFinancials Help documentation reflect a commitment to providing users with a comprehensive, accurate, and user-friendly resource. By addressing known issues, updating core functionalities, and enhancing language support, the documentation aims to support users in effectively utilizing osFinancials and TurboCASH.

Firebird and MSSQL Compatibility

Ensuring compatibility with different database systems is crucial for the flexibility and scalability of

osFinancials5.1/TurboCASH5-3. The following updates and notes pertain to Firebird and MSSQL compatibility:

Core

- Database Connectivity: Enhanced database connectivity modules to support both Firebird and MSSQL.
- Performance Optimization: Optimized core functionalities for improved performance on both Firebird and MSSQL databases.

Reports

- Query Compatibility: Ensured that all SQL queries used in reports are compatible with both Firebird and MSSQL syntax.
- Report Generation: Tested and verified that report generation processes run smoothly on both database systems.
- Error Handling: Implemented robust error handling mechanisms to manage potential issues specific to each database system.

Plugins

- Database-Specific Features: Added support for database-specific features and functions in plugins to maximize compatibility.
- Configuration Options: Provided configuration options within plugins to allow users to specify their preferred database system.
- Cross-Database Compatibility: Ensured that plugins can operate effectively regardless of the underlying database system.

Other Components

- User Interface: Updated the user interface to provide clear feedback on database connectivity and compatibility status.
- Documentation: Included detailed documentation on setting up and configuring osFinancials with Firebird and MSSQL databases.
- Support and Troubleshooting: Expanded support resources and troubleshooting guides to assist users with any compatibility issues.

Conclusion

By incorporating Firebird and MSSQL compatibility updates into the Release Notes, we aim to provide users with a more comprehensive understanding of the software's capabilities and ensure a smoother experience when working with different database systems. These updates will be included in the next release of the help files, ensuring that users have access to the most current and accurate information.

Updated Reports - Larger Database Fields

The Sets of Books for the Firebird Database type now supports larger field lengths for data entry, catering to the specific requirements of larger businesses or organisations. This enhancement allows for more detailed and comprehensive data management, particularly in scenarios where extensive account codes and descriptions are necessary.

Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/firebird-databases/CUSTOMISE-BOOKS-ADVANCED

- *CUSTOMISE-EMPTY-BOOKS-3X3-DIGITS.zip*
- *CUSTOMISE-EMPTY-BOOKS-4X3-DIGITS.zip*
- *CUSTOMISE-EMPTY-BOOKS-5X3-DIGITS.zip*
- *CUSTOMISE-EMPTY-BOOKS-6X3-DIGITS.zip*
- *CUSTOMISE-EMPTY-BOOKS-7X3-DIGITS.zip*
- *CUSTOMISE-EMPTY-BOOKS-8X3-DIGITS.zip*

osFinancials Field length - Shop - Payment per request - In addition to these options, you may shop for customised field lengths.

The extended field lengths in osFinancials provide greater flexibility for creating and customizing the Chart of Accounts. This customization is designed to meet specific requirements, accounting frameworks, and standards, including taxonomies such as GAAP, IFRS (full), and IFRS for SMEs. The customization also considers language variations and jurisdiction-specific considerations.

- Relevant Standards:
  - Generally Accepted Accounting Principles (GAAP)
  - International Financial Reporting Standards (IFRS)
- Universal Chart of Accounts:
  - Suitable for use with IFRS, US GAAP, and other comparable accounting standards. See -

https://www.ifrs-gaap.com/universal-chart-accounts

- IFRS Sustainability Disclosure Standards:
  - IFRS® Sustainability Disclosure Standards around the world - See - https://www.ifrs.org/ifrs-sustainability-disclosure-standards-around-the-world/

New Sets of Books

Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/firebird-databases/4-DIGIT-BOOKS

These Sets of Books, based on the Firebird database type, include a basic Chart of Accounts supporting 4-digit main account and 3-digit sub-account codes, along with larger database fields.

4-DIGIT-BOOKS

- 4-EN-SOUTH-AFRICA-GENERIC.zip: This generic Set of Books includes 4-digit main account and 3-digit sub-account codes, based on the South African Chart of Accounts. It incorporates specific South African terminology and includes the structure of South African VAT-accounts and VAT-codes, aligned with the VAT201-return.
- 4-AF-SUID-AFRIKA-GENERIES.zip: This generic Set of Books includes 4-digit main account and 3-digit sub-account codes, based on the South African Chart of Accounts in Afrikaans. It incorporates specific South African terminology and includes the structure of South African VAT-accounts and VAT-codes (Belasting op Toegevoegde Waarde (BTW) Suid-Afrika (Afrikaans), aligned with the VAT201-return.
- 4-EN-UK-GENERIC.zip: This generic Set of Books includes 4-digit main account and 3-digit sub-accounts, based on the United Kingdom (UK) Chart of Accounts. It incorporates specific UK terminology and includes Value Added Tax (VAT) - United Kingdom accounts based on the VAT Standard rate scheme. The VAT-account and VAT-codes structure in the Chart of Accounts is designed to match the various boxes on the UK VAT return. NOTE: Various schemes for VAT may be applicable for various scenarios.

Conclusion

These examples provide a comprehensive guide to structuring VAT accounts and codes in the Chart of Accounts to match the requirements of different VAT returns. By aligning the VAT accounts with the relevant fields or boxes on VAT returns, businesses can ensure compliance and accuracy in their VAT reporting. This documentation is particularly useful for users in South Africa and the United Kingdom, offering detailed insights tailored to their specific VAT schemes and requirements. See topic - NEW - Empty Sets of Books - Supports up to 8 digit main accounts and 3 digit sub accounts.

Options to create and customise your own Set of Books

- "Customise your own Set of Books (Advanced)?" (Firebird database) - Only includes 3 control accounts (Retained earnings / Debtors control and Creditors control). Using this option, the account descriptions is limited to 35 characters and 64 characters, depending of the number of digits you select. In addition to this, you need to update the "*TYPES*" table with Paper types and may need to add the Groups for Cost centre 1 / Cost centre 2 / Projects and Languages.
- CUSTOMISE-EMPTY-BOOKS (Pre-configured Firebird database) - Only includes 3 control accounts (Retained earnings / Debtors control and Creditors control). The field length for Account descriptions and Groups description length is set to 128 characters. The "*TYPES*" table with Paper types and may need to add the Groups for Cost centre 1 / Cost centre 2 / Projects and Languages. The basic journals (such as Sales journal, Purchase journal and General journal) have been added and the basic settings for documents (such as Invoices, Credit notes, Quotes, Purchases, Supplier returns and Orders) is already set.

The basic Sets of Books created using this option will include the essential three main accounts: Debtor's Control, Creditor's Control, and Retained Earnings.

Before you start to add your own accounts to fit in with your chart of accounts, you may change the account codes and their descriptions, if necessary.

The remaining Chart of Accounts can be fully customized according to your specific requirements. This flexibility enables you to tailor the Sets of Books to suit your unique accounting needs.

Adjustments for Larger Field Lengths on Reports

The larger field lengths may result in overlapping and untidy reports. To address this, all reports and document layout files in the Report designer were accordingly adjusted and fixed where necessary. These adjustments cater to Sets of Books used by existing customers, including those with up to 8-digit main account codes and 3-digit sub-accounts, as well as larger account descriptions and input fields.

TEST-REPORTS-4-DIGIT-DESCRIPTION-1234567890123456.zip

A specialized test file, "*TEST-REPORTS-4-DIGIT-DESCRIPTION-1234567890123456.zip*", is available on GitHub for the Firebird Database type. This file is designed to test and adjust expressions, labels, and other elements across all reports and plugins when dealing with extreme field lengths.

Key Features

- Extreme Field Lengths: The file includes fields with extreme lengths to rigorously test the handling of

long descriptions and data entries.

- Comprehensive Testing: It is used to ensure that all reports and plugins can accommodate and correctly display these extended field lengths without overlapping or formatting issues.
- Adjustments for Expressions and Labels: The test file helps in fine-tuning expressions, labels, and other report elements to maintain readability and functionality even with very long data entries. All reports and document layout files were adjusted where necessary using the Report designer.
    - Location on GitHub : https://github.com/Digidanosf/osfinancials-development/blob/main/firebird-databases/TEST-REPORTS-4-DIGIT-DESCRIPTION-1234567890123456.zip

Conclusion

The TEST-REPORTS-4-DIGIT-DESCRIPTION-1234567890123456.zip file is an essential tool for ensuring that osFinancials can handle extreme field lengths effectively. By using this test file, developers and users can verify the robustness and flexibility of the system, particularly in scenarios where detailed and extensive data entries are required. This ensures that all reports and plugins remain functional and visually coherent, even with the most demanding data management needs.

Compatibility with Firebird and MSSQL Databases

- Firebird Databases: The larger field lengths have been thoroughly tested and are fully compatible with Firebird databases. This ensures that users can leverage the extended field lengths without compromising the integrity or performance of their Firebird-based systems.
- MSSQL Databases: Similarly, the larger field lengths have been tested and verified for compatibility with MSSQL databases. This dual compatibility ensures that users across different database environments can benefit from the enhanced data entry capabilities.

Conclusion

These updates enhance the flexibility and usability of osFinancials5.1/TurboCASH5-3, particularly for larger businesses and organizations that require more detailed and comprehensive data management. By supporting larger field lengths and adjusting reports accordingly, osFinancials ensures that users can effectively manage their accounting needs while adhering to various accounting standards and frameworks. The compatibility with both Firebird and MSSQL databases further broadens the applicability and reliability of these enhancements.

Updated Reports and Layout files to accommodate larger database field length

All reports and document layout files, when printed, now support larger database fields to accommodate the extended data entry requirements. The following updates were included in the osFinancials5.1.0.189 update:

1. systemreports - Location : " ...\plug_ins\reports\systemreports\ " See - List of Fixes to reports for screenshots and notes -
    - Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/reports/plug_ins/reports/systemreports
2. GENERAL - Location : " ...\plug_ins\reports\GENERAL\ "
    - documents - Location : " ...\plug_ins\reports\GENERAL\documents\ "
        - Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/reports/plug_ins/reports/GENERAL/documents
    - ledgerview - Location : " ...\plug_ins\reports\GENERAL\ledgerview\ "
        - Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/reports/plug_ins/reports/GENERAL/ledgerview
3. REPORTS - Location : "...\plug_ins\reports\REPORTS\" REPORTS/STOCK - Sidebar reports
    - Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/reports/plug_ins/reports/REPORTS/STOCK

Reports fixed - after osFinancials5.1.0.127 / osFinancials5.1.0.189 Update install

These updated reports were included in theosFinancials5.1.0.127 / osFinancials5.1.0.189 update installations. These Reports were retested in both Firebird database types and in MSSQL database types in osFinancials5.1.0.127 / osFinancials5.1.0.189. The reports include standardised Headers and Footers.

See - FIXED - After osFinancials5.1.0.127 update - Details / Notes and screenshots

The following reports were updated and fixed:

1. systemreports - These updated reports were included in the osFinancials5.1.0.127 update installation. Fixed some adjustments to text (labels expressions) and data expressions were made in about 7 reports. Also tested and fixed - To print on MSSQL and Firebird databases See - screenshots and notes after

a) Reports → Debtors → Listing - List delivery address

   - See - Subscriptions for notes and screenshots of fixes.

5. excelreports - Spreadsheet reports → Sales analysis → Sales per period -

   - Firebird database type error fixed - This report now prints in both Firebird and MSSQL database types.
   - Location on GitHub : https://github.com/Digidanosf/osfinancials-development/blob/main/reports/plug_ins/reports/excelreports/TRN_85/TRN_906122/trn_1296.sql

Reports Added / Fixed - Excluded in osFinancials5.1.0.127 / osFinancials5.1.0.189 Update install

These reports were not included in theosFinancials5.1.0.127 / osFinancials5.1.0.189 update installations. These Reports were retested in both Firebird database types and in MSSQL database types in osFinancials5.1.0.127 / osFinancials5.1.0.189. The reports include standardised Headers and Footers.

1. userreports - Reports in the user reports menu. Restructured and fixed overlapping labels, etc.

   - Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/reports/plug_ins/reports/userreports

2. DOCUMENTS/DOCUMENTS - All document layout files updated to fix overlapping labels, remarks, etc. to accommodate databases with larger input fields. Standardised the Company and Tax registration numbers before contact details, etc. Standardised the Company and Tax registration numbers before contact details, etc.

   In addition to this, the following document layout files are included in the '...

\plug_ins\reports\DOCUMENTS\DOCUMENTS' folder:

- Added : Layout files for NON-Standard document types
  - Adjustment - TRN_1767
  - BOM (Production) Stock Item Type - TRN_3266
  - Project - TRN_3556 - Project - Quote
- Added : Layout files for NON-Standard document types : Plugins
  - Stock in - TRN_906178
  - Stock out - TRN_906179
- Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/reports/plug_ins/reports/DOCUMENTS/DOCUMENTS

3. userreports - Reports in the user reports menu. Restructured and fixed overlapping labels, etc.
4. New.rep - Blank report with no Datasets. SubReport-0 consists of three blank sections Page header, detail and Page footer.
   - Location on GitHub : https://github.com/Digidanosf/osfinancials-development/blob/main/reports/plug_ins/reports/New.rep
5. Empty.rep - Tidied and standardised report Page header and Page footer to be consistent for all to be consistent with other reports such as on the Reports menu, User reports menu and stock sidebar reports (Print single item - context menu). Includes an empty Detail section. Updated and standardised Page header and Page footer. It is aligned with all Reports, User reports to accommodate databases with larger input fields.
   - Location on GitHub : https://github.com/Digidanosf/osfinancials-development/blob/main/reports/plug_ins/reports/Empty.rep

Reports for plugins Added / Fixed - Excluded in osFinancials5.1.0.127 / osFinancials5.1.0.189 Update install

The following plugins Excluded in osFinancials5.0.189 Update in the ...\osfinancials5\plug_ins\reports\ folder:

1. CRM - Location : ...\plug_ins\reports\CRM\ - Not updated - Need to activate and configure the CRM plugin before any reports could be printed. - MSSQL Errors in print preview

   "DOCUMENTHEAD:Incorrect syntax near '|'."

- Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/reports/plug_ins/reports/CRM

2. EMailInvoice
    - Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/reports/plug_ins/reports/EMailInvoice
3. remittance

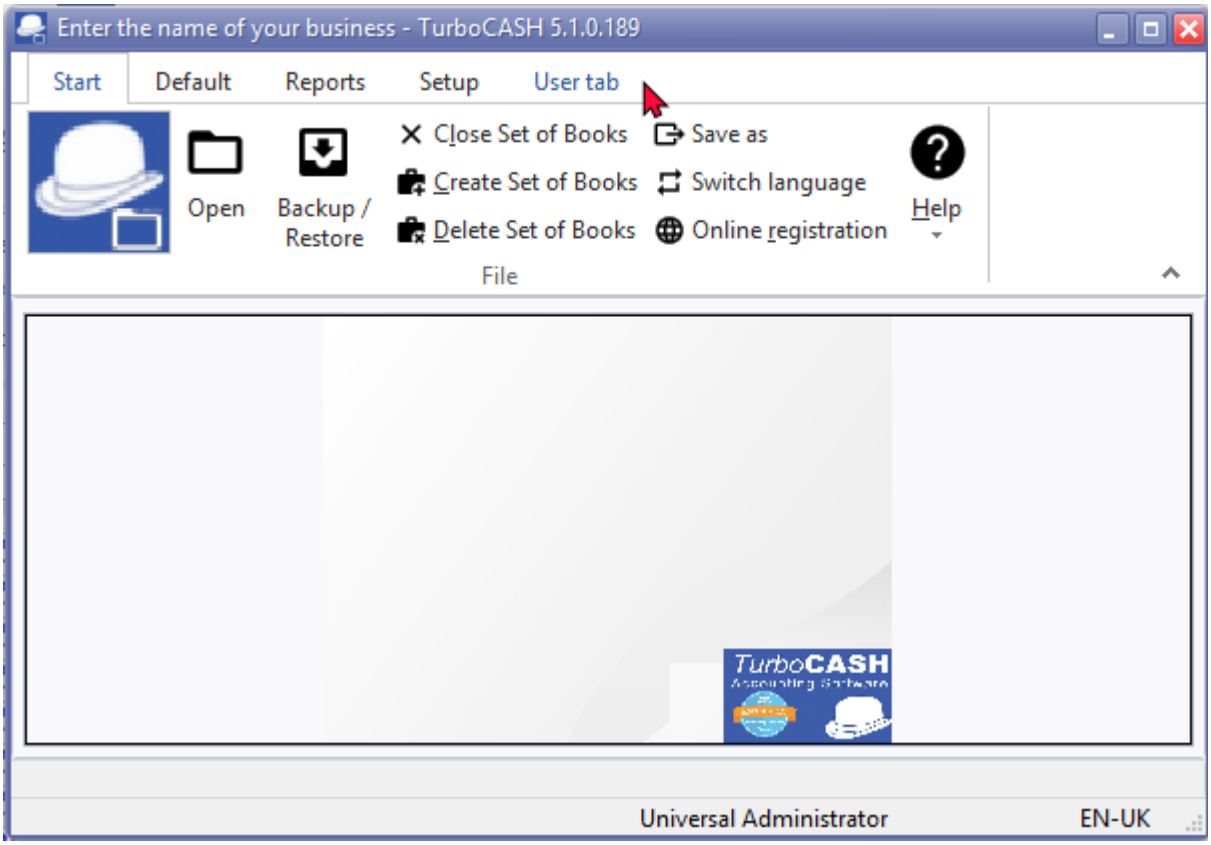
osFinancials-development merge-install

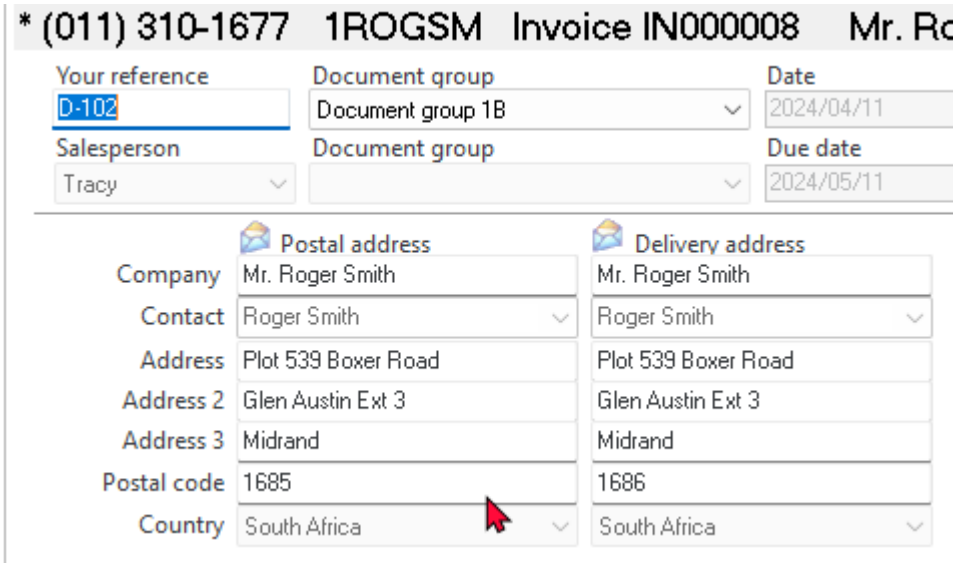
TurboCASH5 - Base type1

This changes the base type to 1 - It changes the following:

- Blank icon on Start menu



- Title bar captions, etc. refers to TurboCASH5.1.0.189 instead of osFinancials5.1.0.189.
- Addresses is ADDRESS1 + ADDRESS2+ ADDRESS3 + POSTAL CODE in forms such as debtors / creditors and documents.



That is then correct - could this be implemented for the osFinacials5 international install?

Install osFinancials - Added Unicode Setting

We've adjusted the installation script to include a new Unicode setting for Unicode databases. This setting

allows you to control the `nounicode` parameter in the INI file during installation. Additionally, we've added options to update or retain the existing `osf.ini` file based on your Unicode preferences for your Unicode databases.

Unicode Settings for Older Databases:

For existing users with Firebird Databases version ODS 10.1, the new Firebird databases will be upgraded to version ODS 11.1 as part of the 2025 installs for osFinancials5.1 and TurboCASH5-3. This upgrade is mandatory and should be carefully considered, especially for users with older databases.

Default Setting:

To ensure the safest option for users with older databases, we recommend setting the Unicode option to "*checked*" by default. However, it's crucial that users confirm their choice to avoid any unintended changes.

Installation Options:

During the osFinancials installation, you will see the following tick-boxes:

- Unicode Tick Box - Confirmation:

  By checking the Unicode box, you acknowledge that you understand the `unicode` parameter and confirm your choice. This step is designed to prevent any accidental changes without proper consideration. If you leave this checkbox unticked and the select the Unicode checkbox ticked, the Unicode setting will be set as true in the osf.ini file:

  ```
  nounicode=true
  ```

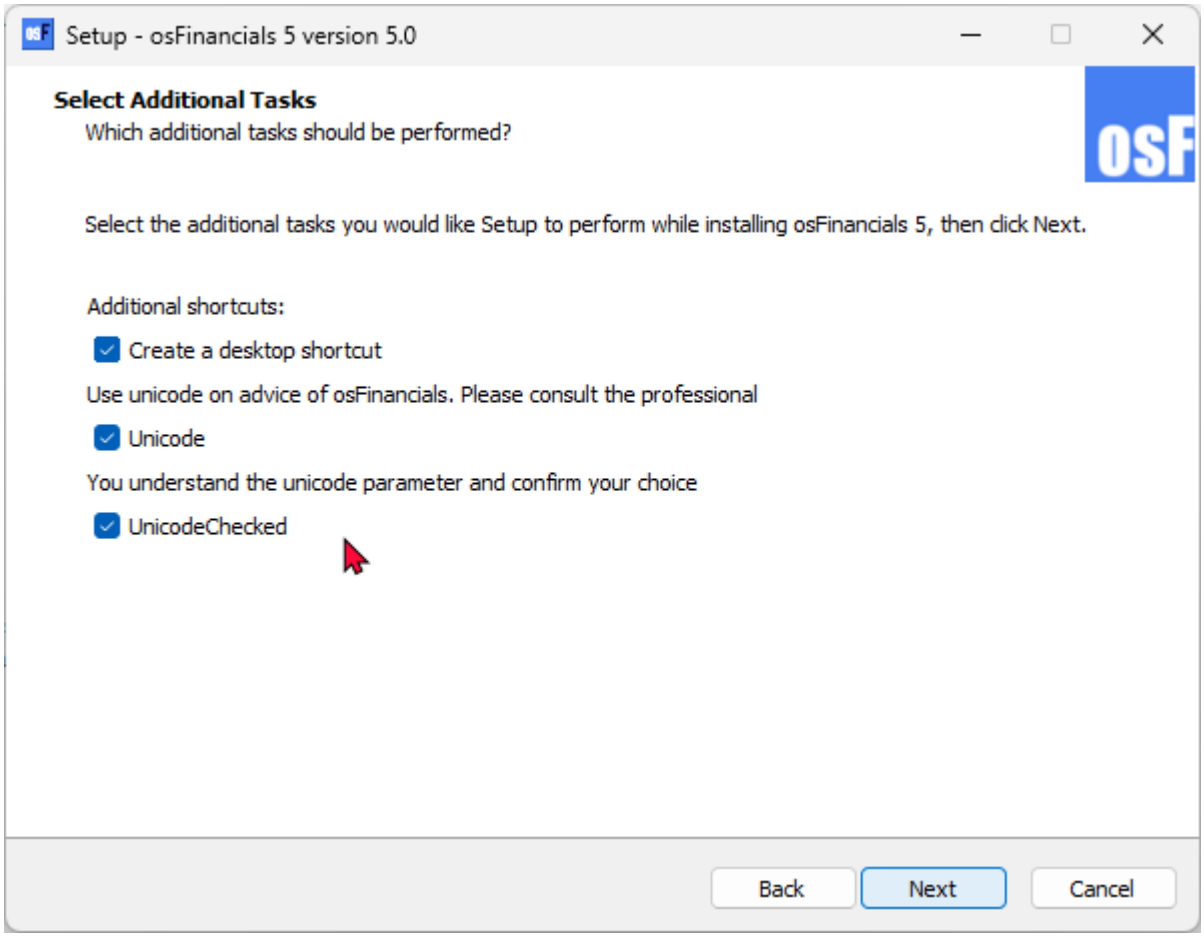
- Unicode Checked - If this checkbox is not selected, a Runtime error message is displayed:

  ```
  "Please check and confirm your unicode option."
  ```

If you need to check both the Unicode and Unicode Check tick-boxes, the Unicode setting will be set as false in the osf.ini file:

```
nounicode=false
```

We strongly advise consulting with a professional before enabling the Unicode setting. This ensures that you fully understand the implications and make an informed decision.



Setup - osFinancials 5 version 5.0
Select Additional Tasks
Which additional tasks should be performed?
OSF
Select the additional tasks you would like Setup to perform while installing osFinancials 5, then click Next.
Additional shortcuts:
Create a desktop shortcut
Use unicode on advice of osFinancials. Please consult the professional

This setting will determine the encoding of characters in Unicode setting:

- ANSI Encoding: If the file is saved in ANSI encoding, the characters " " might not be correctly represented on systems that do not support the appropriate code page.
- UTF-8 Encoding: If the file is saved in UTF-8 encoding, the characters " " will be correctly represented on any system that supports Unicode.

Upgraded Firebird Databases

Sets of Books is upgraded from Firebird database ODS version 10.1 = Firebird version 1.5 to Firebird database ODS version 11.1 = Firebird version 2.1 using FlameRobin. The following sets of books is upgraded Firebird database ODS version 11.1 = Firebird version 2.1:

- All Sets of Books download in "*Let osFinancials help you to create a Set of Books?*" options.
- Sets of Books in the ...\bin\Tutorials folder.

Microsoft Server SQL (MSSQL) Database Support

osFinancials5/TurboCASH5 now supports Microsoft Server SQL (MSSQL) Databases. You may create a MSSQL Sets of Books database using the "*Customise your own Set of Books (Advanced)?*" option.

Updated - Tutorials from 2023 to 2024

Based on the 3-digit main accounts and 3-digit sub-accounts now supports larger field-lengths for descriptions.

These Sets of Books were rebuilt by using the CUSTOMISE-EMPTY-BOOKS-3X3-DIGITS Set of Books template and imported the following files Accounts, Debtors, Creditors and Stock exported files. The descriptions of accounts, etc. were edited to accommodate more meaningful descriptions, etc. of abbreviations.

Zeng.dfm	*2020/03/06*		

These language files is not linked to any Firebird Sets of Books and linked languages available as a free download. from the Download option on the "*Creation wizard*".

bin/themes

- Fixed: Themes with no icons and image strips. The Blue, Glass, Silver Soft-blue themes with custom colors looses the reports material icons and on Reports menu it reverse back to classic icons. When Creating the image strip. (only image strips and no svg icons were included in these respective theme folders). Added the icons to the respective themes folders to display the original svg icon (after image strip was created).
- Fixed: Acccreditors.svg icon in some themes the classic icon was displayed for Creditors on reports (e.g. Ledger analyser, while the debtors and other icons were displaying the correct theme svg icons. The properties of the Acccreditors.svg icon were adjusted accordingly to be inline with other icons (after image strip was created).
- Fixed: VS2010 theme - revered to display the Classic icon sets as were included in previous versions of osFinancials5/TurboCASH5.2.
- Fixed: Background images in osFinancials theme's (Material-blue, Material-maroon and Material-navy) The background images were reflecting TurboCASH instead of osFinancials branding..
- Deleted: Obsolete folders and files in …bin/themes folder
  - My-Material
  - svg-theme
  - svg-theme.zip
- Added: In addition to the Material theme with black icons, similar Material themes with Material icons in different colors:
  - Material-blue

- Material-green
- Material-maroon
- Material-navy
- Material-pink

Merged - plugins/reports

Merged: All reports were merged in plug_ins\reports folder.

Moved: Age analysis from userreports to systemreports folder. In addition to the opendays.rep report accessible on the Age analysis (Reports ribbon) or on the Due tab on the Open item link (Default ribbon). The following age analysis reports were added on the Reports menu (moved from the User reports menu).

These reports are compatible with both Firebird and MSSQL database types.

Reports → Debtors → Age analysis

These Age analysis reports for debtors provides alternative views and options to the Debtor statements. This is now similar to the Debtors → Age analysis on osFinancials 4.0.1093 Last release.

Debtors → Age analysis - Balances detail -

Firebird Databases Sets of Books - larger field lengths

Generic templates - books-directory

Generic template based on 4-Digit Sets of Books for South Africa in English and Afrikaans and the United Kingdom (UK)

Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/firebird-databases/4-DIGIT-BOOKS -

These Sets of Books, based on the Firebird database type, include a basic Chart of Accounts supporting 4-digit main account and 3-digit sub-account codes, along with larger database fields.

- 4-EN-SOUTH-AFRICA-GENERIC.zip: This generic Set of Books includes 4-digit main account and 3-digit sub-account codes, based on the South African Chart of Accounts. It incorporates specific South African terminology and includes the structure of South African VAT-accounts and VAT-codes, aligned with the VAT201-return.
- 4-AF-SUID-AFRIKA-GENERIES.zip: This generic Set of Books includes 4-digit main account and 3-digit sub-account codes, based on the South African Chart of Accounts in Afrikaans. It incorporates specific South African terminology and includes the structure of South African VAT-accounts and VAT-codes (Belasting op Toegevoegde Waarde (BTW) Suid-Afrika (Afrikaans), aligned with the VAT201-return.
- 4-EN-UK-GENERIC.zip: This generic Set of Books includes 4-digit main account and 3-digit sub-accounts, based on the United Kingdom (UK) Chart of Accounts. It incorporates specific UK terminology and includes Value Added Tax (VAT) - United Kingdom accounts based on the VAT Standard rate scheme. The VAT-account and VAT-codes structure in the Chart of Accounts is designed to match the various boxes on the UK VAT return. NOTE: Various schemes for VAT may be applicable for various scenarios.

Firebird Databases - Empty Sets of Books templates - larger field lengths - bin/CUSTOMISE-EMPTY-BOOKS-directory

The Sets of Books for the Firebird Database type now supports larger field lengths for data entry, catering to the specific requirements of larger businesses or organizations. This enhancement allows for more detailed and comprehensive data management, particularly in scenarios where extensive account codes and descriptions are necessary.

Help Documentation

The last published help documentation were published on Friday, 24 March 2023 - 11:09:33

This include the EngHelp,chm context-sensitive Help using the F1 key to launch associated topics with most screens or fields within functionalities of the osFinancials core.

Published Online documentation - osFinancials website

English Online help *Afrikaans Online help*

Development Online osFinancials

These Online Help system will be regularly updated as more topics is retested and fixed and translations are done in the Afrikaans Help.
This documentation updates includes tests on updates of osFinancials core and plugins including Firebird and MSSQL Compatibility.
The Help file is structured as follows:

- Release notes
- Known issues
    - Translations outstanding
    - Translations outstanding - Plugins
    - Fixed and Known issues on various functionalities in the osFinancials core, including reports, plugins and Firebird and MSSQL Compatibilit .
    - Fixed items - Many previous known issues and possible bugs were addressed is listed for record to assist with retesting and reference purposes.
    - Known issues - There are various outstanding issues or possible bugs in osFinncials core and in Plugins.
    - To be advised - About 59 to be advised tags are currently in documentation topics.

Various fixes to languages, themes, MSSQL and Firebird compatibility, reports, etc. may be followed in the Release notes.

Getting Ready for 2025

TurboCASH5 is based on osFinancials5.1.0..233. It is based on Delphi 12 (Upgraded from Delphi 10 / Delphi 11)

Latest Release : osFinancials5.1/TurboCASH5-3 version 5.1.0.233.

TurboCASH Updated install script

Location : bin\Languages

Updated 140 tcash.ini files in the install languages folder for each country.

Default install theme

Updating 140 `tcash.ini` files in the installation languages folder for each country, you're ensuring consistency across all installations.

Changing the default install theme from `theme=3 (Material)` to `theme=7 (Material navy)` provides a fresh look.

This means that any new installations will now default to the Material-navy theme, improving the visual experience for all users.

Ensuring that previous installations of TurboCASH5 also respect this theme change by updating their settings is a great move to maintain a consistent user interface.

This attention to detail will likely be appreciated by users who value a cohesive look and feel in their TurboCASH5-3 software.

Users may personalise their TurboCASH5-3 interface by selecting from available themes on the Themes menu (Setup ribbon) makes the experience more enjoyable and tailored to individual preferences.

Changes - AppCondig settings

Added some specific configurations to the tcash.ini file for TurboCASH5-3:

- Unicode settings is included in the Installation of TurboCASH5-3. You may now choose if you need to enable or disable Unicode during the installation of TurboCASH5-3. The options is as follows:
    - nounicode=FALSE: This setting enables Unicode support, which might be necessary for TurboCASH5-3 to handle a wide range of characters from different languages, ensuring proper display and processing of multilingual text.

      The Unicode settings as set during the installation process will confirm the FALSE setting or set it to TRUE based on the selected installation options.
    - nounicode=TRUE: This setting will disable Unicode support, which might be necessary for compatibility with certain older databases or systems that don't fully support Unicode.

Install TurboCASH5-3 - Unicode Setting

Added Unicode options to update update the tcash.ini file.

Unicode settings -

- *Older databases mean existing users with Firebird Databases version 10.1 -*
- *New Firebird databases is upgraded to Firebird Databases version 11.1 included in the 2025 installs for osFinancials5.1 and TurboCASH-3 Its a choice for old users. maybe set it to checked by default?*

- ;BIDIMODE=RTL: This setting, likely intended to enable Right-to-Left text display, is currently commented out with a semicolon (;). If you want to enable RTL mode, you'll need to remove the semicolon at the beginning of this line. This is useful for languages like Arabic and Hebrew.
- OB1BOX=False: This setting likely controls a specific feature or option within TurboCASH5-3. Setting it to False disables that feature.

These settings can help customise the behaviour of TurboCASH5-3 to better fit your needs.

Removed about 20 blank lines in all tcash.ini files

This will allow for better display in the Preview pane of the File Explorer to view the tcash.ini files before opening it.

TurboCASH Version

Changed the TurboCASH5.2 version to TurboCASH5-3 in the 140 tcash.ini files to avoid confusion with previous TurrboCASH5.2 installations.

All 140 tcash.ini files can be changed in one go within minutes when necessary, using Notepad++ - Search and Replace in files in the inno installation languages folder.

See - TurboCASH-Version control.

Document layout file

TRN_906277.rep Document layout file (15 code) Moved the Document type in the Header to the centre as printing to much to the right of the layout file.

Readme.txt - Android

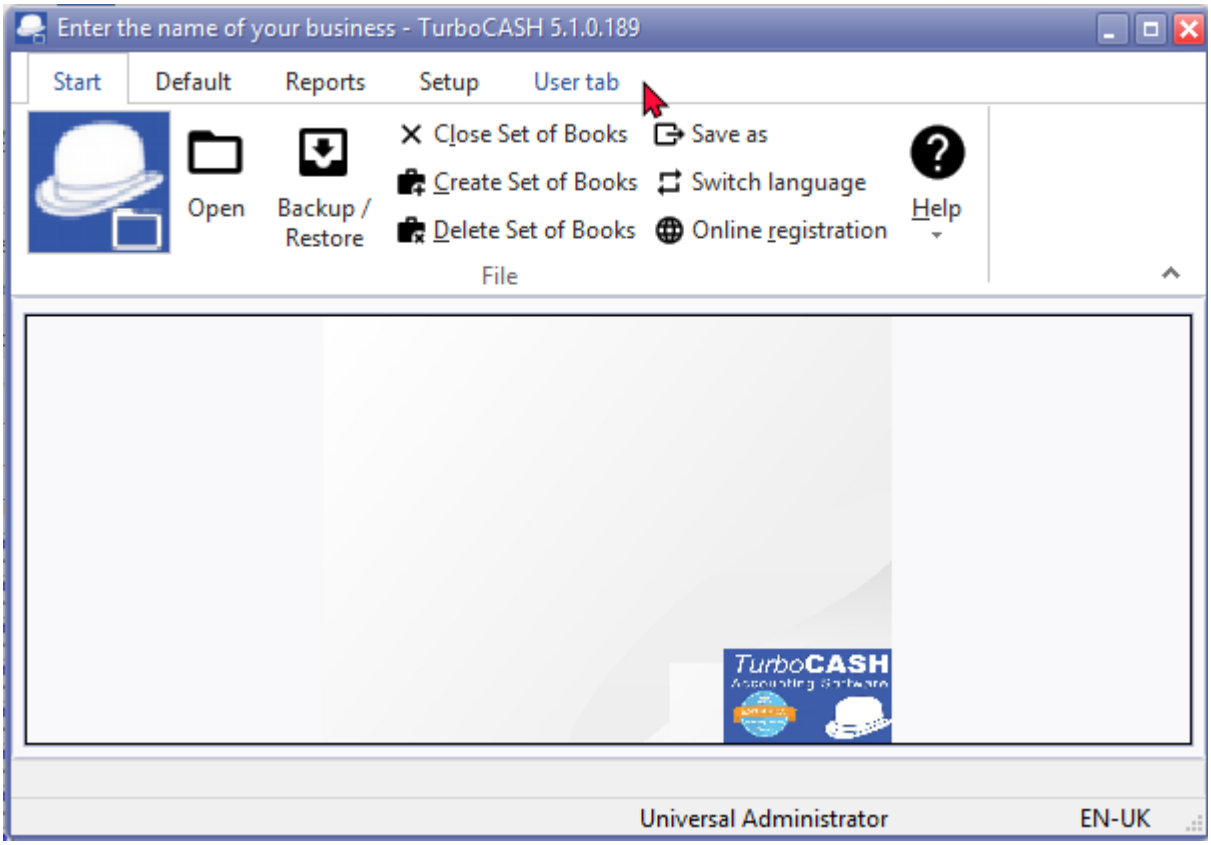
In TurboCASH5-3 root directory but not in osfinancials5 root installation directory

Deleted file in TurboCASH5 install as Android app never took off (discontinued)

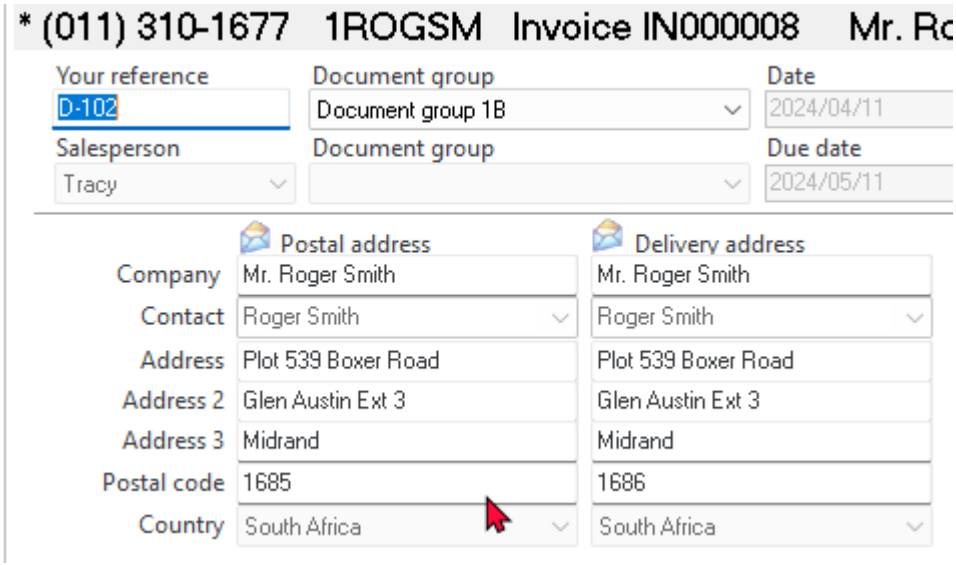
TurboCASH5 - Base type1

This changes the base type to 1 - It changes the following:

- Blank icon on Start menu



- Title bar captions, etc. refers to TurboCASH5.1.0.189 instead of osFinancials5.1.0.189.
- Addresses is ADDRESS1 + ADDRESS2+ ADDRESS3 + POSTAL CODE in forms such as debtors / creditors and documents.



That is then correct - could this be implemented for the osFinacials5 international install?

INSTALL Repository now included in TurboCASH5 (build 5.1.0.227)

- ET-ESTONIAN

- TH-THALAND
- TR-TURKEY

Licence

Licence agreement updated

license.rtf file and a html version as license.html

Licensed install:

Registered to 2025/02/27 and includes the following licensed plugins:

- Document email PRO
- Multi-workstation
- TurboCASH5-3-subscription
- BankImport
- Multimedia Pack

At first after installing, seems like an unlicensed version. You may need to go to the Online registration to confirm your subscription. To do this click on the Show licence agreement and click the Send button.

Unlicensed install:

OK - Open Set of Books - the confirmation message is there

> This software is limited to 500 transactions or 500 documents! Please register and buy a licence for osFinancials.

Need to register TurboCASH5.1.0.189

Help documentation

Added : TurboCASH5 banner in the main pages (next to the osFinancials banner).

Added : References to osFinancials5.1 added TuirboCASH5-3 in content.

Added : Help title and footers to include TurboCASH5-3.

- Title - "osFinancials5 .1 / TurboCASH5-3"
- Footers - "osFinancials5 .1 / TurboCASH5-3 - © Dan van Zyl - Special thanks to Pieter Valentijn (Delphi Dreams) and Philip Copeman (TurboCASH)"

The reason for the TurboCASH5-3 versioning is to make it clear and understanding the new versions such as TurboCASH3, TurboCASH4, TurboCASH5, TurboCASH5-2 of the legacy versions.

Plugins menu - Updated pluginsload.txt

Some plugins were set to false such as plugins only applicable to the Dutch market.

Plugins for TurboCASH5 that will display in the Plugins menu, will only list the Plugins shipped ind included with the TurboCASH5-3 subscription.

Plugins in osFinancials5 and TurboCASH5

Plugins Specific to TurboCASH5

- Plugins Set to False: Some plugins are specifically designed for the Dutch market and are set to false in TurboCASH5. These plugins are not available in the TurboCASH5 subscription.
- Plugins Menu: The Plugins menu in TurboCASH5 will only list the plugins that are shipped and included with the TurboCASH5 subscription.

Included Plugins in osFinancials5 / Subscription TurboCASH5 Subscription

- EmailInvoice Document E-mail Pro: Allows for the emailing of invoices directly from the software.
- Bank Import: Enabled in Setup → Data parameters by ensuring the "*Default bank reconciliation method*" field is not ticked.

Marketable Plugins

These plugins are functional and can be used with both osFinancials5 and TurboCASH5. Some may require additional licenses.

- Activa: Plugin for managing assets.
- Charter: Specific functionality for generating charts.
- Document Export Import: Allows for the export and import of documents.
- DrillDown: Enables drill-down functionality for detailed data analysis.
- Freefields: Adds customisation of fields to various forms.
- LocationBatchAndSerials: Manages locations, batches, and serial numbers.
- Multimedia: Integrates multimedia elements into the software.
- Multi-user Agenda: Provides a shared agenda for multiple users.
- Remittance: Facilitates remittance processes.
- Price agreement: Manages pricing agreements.
- Subscriptions: Handles subscription-based billing.

Essential Plugins

These plugins are crucial for specific functionalities within osFinancials5 and TurboCASH5.

- ReportMan - Report designer: Essential for customising layout files and reports.
- Register plugins: Adds licenses to plugins.
- SQL Browser: Essential for adding reporting groups when Customising your own Set of Books.
- HandyTools: Advanced tools for experienced users.

Plugins That Cannot Be Disabled

- DYNADBREG: This plugin cannot not be disabled and is essential for certain functionalities within the software.

Summary

The plugins available in TurboCASH5 are tailored to meet the needs of users while excluding those specific to the Dutch market. Both osFinancials5 and TurboCASH5, includes Essential plugins like Report designer, SQL Browser, and HandyTools are included to ensure core functionalities are maintained. Marketable plugins offer additional features that can be licensed as needed, enhancing the osFinancials5 and

TurboCASH5 capabilities.

Version number

Version need to sort the version number

TurboCASH5 build 5.1.0.233 as this seems lower than the TurboCASH5-2 (build 4.0.0453) shipped since 2021.

Root folder logos

Updated Images, logos to be consistent with TurboCASH branding in the root folder of the TurboCASH5 installation folder.
This will display in options such as Create Set of Books, etc.

- logo.jpg
- logohor.jpg
- logosm.jpg
- logosmall.png

Themes

Location : bin/themes

- Fixed: Checked and updated Background pictures in themes to use the TurboCASH branding in Background images.
- Fixed: Themes with no icons and image strips. The Blue, Glass, Silver Soft-blue themes with custom colors looses the reports material icons and on Reports menu it reverse back to classic icons. When Creating the image strip. (only image strips and no svg icons were included in these respective theme folders). Added the icons to the respective themes folders to display the original svg icon (after image strip was created).
- Fixed: Acccreditors.svg icon in some themes the classic icon was displayed for Creditors on reports (e.g. Ledger analyser, and in Setup → Accounts; while the debtors and other icons were displaying the correct theme svg icons. The properties of the Acccreditors.svg icon were adjusted accordingly to be inline with other icons (after image strip was created).
- Fixed: VS2010 Theme to display Classic icons to be consistent with previous releases of TurboCASH / osFinancials

- Replaced: BackGround1.Jpg + BackGround2.Jpg images in themes in line with TurboCASH branding.
- Deleted: Obsolete folders and files in …bin/themes folder
    - My-Material
    - svg-theme
    - svg-theme.zip
- Added: In addition to the Material theme with black icons, similar Material themes with Material icons in different colors:
    - Material-blue
    - Material-green
    - Material-maroon
    - Material-navy
    - Material-pink
- New Image strips created in Tools → Customise language. These image strips fixes the TurboCASH5 icon in the Help menu on Start ribbon.

Languages

Updated

Includes <@APPNAME@> tag for Basetype0 for osFinancials / Basetype1 for TurboCASH. Within Website-links to the shop the <@APPURL@> is not used as it causes broken links. Currently it points to the osFinancials website.

Merged - bin/languages

- Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/languages
- Fixed: Typos and translations in 28 languages (27 English and 1 in Afrikaans).
- Added: Languages labels - Number of records - 4071 - after new labels (Precious record count was 4061 - 10 labels added - count now 4071
    - TRN_906588 - Value stock account
    - TRN_906587 - Document reference
    - TRN_906586 - Stock - Expected quantities

- TRN_906585 - Stock item list - Active stock
- TRN_906584 - Production list
- TRN _902008 - Price list - Large retail - Sales = Added in Plugin range
- TRN _902009 - Price list - Large retail - Purchases = Added in Plugin range
- TRN_906589 - NO-TAX Layout file
- TRN_906590 - NO-TAX Document layout
- TRN_906591 - NO-TAX Document layout (15-code)

- Deleted: Obsolete / out dated language files - Deleted from languages folder (" *...\bin\languages* ")

Language file	*Date of last changes*	*Replaced and updated with*	*Books download*
African.dfm	*2020/03/06*	*Afrikaans.dfm*	
en-Trinandad.dfm	*2020/03/06*	*en-Trinidad.dfm*	*EN-TRINIDADTOBAGO*
Nederlands.dfm.bak	*2020/05/08*		
testlang.dfm	*2020/03/06*		
Zeng.dfm	*2020/03/06*		

These language files is not linked to any Firebird Sets of Books and linked languages available as a free download. from the Download option on the "*Creation wizard*".

Updated - Tutorials from 2023 to 2024

Based on the 3-digit main accounts and 3-digit sub-accounts now supports larger field-lengths for descriptions.

These Sets of Books were rebuilt by using the CUSTOMISE-EMPTY-BOOKS-3X3-DIGITS Set of Books template and imported the following files Accounts, Debtors, Creditors and Stock exported files. The descriptions of accounts, etc. were edited to accommodate more meaningful descriptions, etc. of abbreviations.

Sets of Books in Repository folder Updated

Location : ...\bin\Repository

Sets of Books in the ...\bin\Repository folder is still based on Firebird 1.5 is designated (ODS 10.1).

Is upgraded to Firebird 2.1 (ODS 11.1).

In osFinancials5.1/TurboCASH5-3 all other older databases, including tutorials, is Upgraded to Firebird 2.1 ODS 11.1.

All databases (Sets of Books) available for download in the Creation wizard, is updated to Firebird 2.1 ODS 11.1 and the start of the Financial year is set to 2025/XX/XX.

Upgraded Firebird Databases

Sets of Books is upgraded from Firebird database ODS version 10.1 = Firebird version 1.5 to Firebird database ODS version 11.1 = Firebird version 2.1 using FlameRobin. The following sets of books is upgraded Firebird database ODS version 11.1 = Firebird version 2.1:

- All Sets of Books download in "*Let osFinancials help you to create a Set of Books?*" options.
- Sets of Books in the …\bin\Tutorials folder. Sets of Books financial year starts with 2024/03/01
- All Sets of Books in the …\bin\Repository folder. Sets of Books financial year starts with 2025/01/01, except the following Sets of Books:
    - Books staring with 2024/04/06
        - EN-UK
        - EN-ISLEOFMAN
    - Books staring with 2024/07/01

FIXED - Document layout files NEED update to accommodate larger data fields

The following document layout files were fixed with the following issues:

- MSSQL errors in DOCUMENTLINE Dataset

DOCUMENTLINE:Incorrect syntax near '|'.

Replaced the || (double pipe characters) with the {concat} function. Prints in both MSSQL and Firebird databases.

- Updated these document layout files to accommodate larger data fields. These document layout files may appear untidy when using databases which supports larger data fields.
- Checked and fixed debtor / creditor language - Some labels not translating in the debtor / creditor preferred language.
- FIXED : MSSQL Error in document layout files (TRN_906276 Document layout file (10 codes) and (TRN_906278 Document layout file (no codes)):

  CLIENTLANG:'getuserlang' is not a recognized built-in function name.

- FIXED : Error in Firebird databases in document layout files TRN_906218 Invoice A4 (10 code) and TRN_906224 (Invoice A4 (15 code) Expressions referred to DOCUMENTHEAD.TAXNO instead of DOCUMENTHEAD.TAXNR

  Unknown identifier: :DOCUMENTHEAD.TAXNO 'DOCUMENTHEAD.TAXNO':Expression TRpExpression57

- FIXED : Serial/Batches printing the label with no data in stock items without serial/batch entries for stock items. Document layout file (Default (10 codes) fixed.

List of Layout files only in TurboCASH5 updated:

Firebird Databases Sets of Books - larger field lengths

Generic templates - books-directory

Generic template based on 4-Digit Sets of Books for South Africa in English and Afrikaans and the United Kingdom (UK)

Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/firebird-databases/4-DIGIT-BOOKS -

These Sets of Books, based on the Firebird database type, include a basic Chart of Accounts supporting 4-digit main account and 3-digit sub-account codes, along with larger database fields.

- 4-EN-SOUTH-AFRICA-GENERIC.zip: This generic Set of Books includes 4-digit main account and 3-digit sub-account codes, based on the South African Chart of Accounts. It incorporates specific South African terminology and includes the structure of South African VAT-accounts and VAT-codes, aligned with the VAT201-return.

- 4-AF-SUID-AFRIKA-GENERIES.zip: This generic Set of Books includes 4-digit main account and 3-digit sub-account codes, based on the South African Chart of Accounts in Afrikaans. It incorporates specific South African terminology and includes the structure of South African VAT-accounts and VAT-codes (Belasting op Toegevoegde Waarde (BTW) Suid-Afrika (Afrikaans), aligned with the VAT201-return.
- 4-EN-UK-GENERIC.zip: This generic Set of Books includes 4-digit main account and 3-digit sub-accounts, based on the United Kingdom (UK) Chart of Accounts. It incorporates specific UK terminology and includes Value Added Tax (VAT) - United Kingdom accounts based on the VAT Standard rate scheme. The VAT-account and VAT-codes structure in the Chart of Accounts is designed to match the various boxes on the UK VAT return. NOTE: Various schemes for VAT may be applicable for various scenarios.

Firebird Databases - Empty Sets of Books templates - larger field lengths - bin/CUSTOMISE-EMPTY-BOOKS-directory

The Sets of Books for the Firebird Database type now supports larger field lengths for data entry, catering to the specific requirements of larger businesses or organisations. This enhancement allows for more detailed and comprehensive data management, particularly in scenarios where extensive account codes and descriptions are necessary.

Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/firebird-databases/CUSTOMISE-BOOKS-ADVANCED

Hands-on Tutorials - Bin Tutorials directory

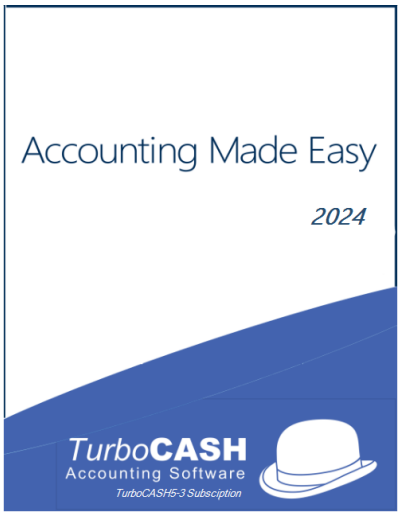
Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/documentation - osFinancials5 installation provides tutorial Sets of Books in both English and Afrikaans. These tutorial books allow users to explore different settings, transactions, and reports within the software. Here are the available tutorial sets:

Accounting Made Easy *English tutorials (using separate*	***Accounting Made Easy - Bank Import***	***Rekeningkunde Met Gemak (Afrikaans)***

receipt and payments journals for banking / cash transactions)

English tutorials (using the BankImport plugin for banking / cash transactions)

Afrikaanse handleidings (gebruik aparte ontvangste- en betalingsjoernale vir bank- / kontanttransaksies)



The following Set of Books based on this tutorial, is installed in the "…\bin\Tutorials\ENGLISH\" folder:

- *HANDYMAN (No transactions)*
- *HANDYMAN-A (Unposted transactions)*
- *HANDYMAN-B (Posted transactions)*

The following Set of Books based on this tutorial, is installed in the "…\bin\Tutorials\BANK-IMPORT\" folder:

- *HANDY-BANK (No transactions).*
- *HANDY-BANK-A (Unposted transactions)*
- *HANDY-BANK-B (Posted transactions).*
- *HANDY-BANK-UNPOSTED-BANK-STATEMENT – Posted transactions, excluding bank / cash transactions. Bank statement needs to be imported from the "…\bin\Tutorials\BANK-IMPORT\BANK-STATEMENTS" folder.*

Die volgende Stel Boeke gebaseer op die Afrikaanse handleidings, is in die "…\bin\Tutorials\AFRIKAANS\"-lêergids geïnstalleer:

- *NUTSMAN (Geen transaksies).*
- *NUTSMAN-A (Ongeposteerde transaksies)*
- *NUTSMAN-B (Geposteerde transaksies).*

These are 2024 versions of the publications

2024 Versions in LibreOffice (*.odt) format of these publications can be downloaded in English and

Afrikaans

Help Documentation

The last published help documentation were published on Friday, 24 March 2023 - 11:09:33

This include the EngHelp,chm context-sensitive Help using the F1 key to launch associated topics with most screens or fields within functionalities of the osFinancials core.

Published Online documentation - osFinancials website

English Online help *Afrikaans Online help*

Development Online osFinancials

The following documentation is hosted on my GoogleDrive in English and Afrikaans.
These Online Help system will be regularly updated as more topics is retested and fixed and translations are done in the Afrikaans Help.
This documentation updates includes tests on updates of osFinancials core and plugins including Firebird and MSSQL Compatibility.
The Help file is structured as follows:

- Release notes
- Known issues
    - Translations outstanding
    - Translations outstanding - Plugins
    - Fixed and Known issues on various functionalities in the osFinancials core, including reports, plugins and Firebird and MSSQL Compatibility.
    - Fixed items - Many previous known issues and possible bugs were addressed is listed for

record to assist with retesting and reference purposes.

- Known issues - There are various outstanding issues or possible bugs in osFinncials core and in Plugins.
- To be advised - About 59 to be advised tags are currently in documentation topics.

Various fixes to languages, themes, MSSQL and Firebird compatibility, reports, etc. may be followed in the Release notes.

Created with the Standard Edition of HelpNDoc: Make Documentation Review a Breeze with HelpNDoc's Advanced Project Analyzer

TurboCASH-Version control

You're right to emphasize the stability of the user-facing version

Revised Documentation (Release Notes, Help Files, etc.):

Explain the versioning in a clear way, emphasizing the long-term stability of the user-facing version, like this:

This release of TurboCASH5 is designated as TurboCASH5-3. This is the user-friendly version number that you will see and use. The actual executable file version (e.g., TurboCASH5.1.0.0.233) is displayed in the title bar of the application window.

Important: While the executable version (the detailed number in the title bars (e.g.) may change frequently as we release updates and bug fixes during the lifecycle of TurboCASH5-3 (which we anticipate to be approximately 3-4 years), the user-facing version will *remain* as TurboCASH5-3. This means that even if we release many updates, the version you see and refer to will stay the same.

This approach simplifies communication, ensures you are always referring to the correct major release, and prevents confusion caused by frequent version number changes. We believe this provides a good balance between giving you a stable and easy-to-remember version number while allowing us to provide regular updates and improvements.

Key Improvements:

- Emphasis on Stability: The revised wording clearly states that the user-facing version will *not* change frequently.
- Reasoning: It explains *why* this approach is beneficial (simplifies communication, avoids confusion).

- User-Centric Language: It uses "you" and "we" to make the explanation more personable and user-friendly.

By adding this information, you reassure users that even though the underlying code might be updated frequently, they don't have to worry about constantly changing version numbers. This makes the software feel more stable and easier to manage from the user's perspective.

VERSION - TurboCASH5-2025-RELEASE-CANDIDATE-8 Should we make it TurboCASH5-3?

TurboCASH5-2 shipped is indicated on message screens such as Confirm, Information, Error, Warning dialog screens, etc. visible to users of different generations of TurboCASH.

Older versions of TurboCASH such as TurboCASH5 (4.0.0.969) refers to TurboCASH.

I recommend changing the version number to TurboCASH5-3. Here's why:

- Simplicity and Clarity: "TurboCASH5-3" is much cleaner and easier to understand than "TurboCASH5-2025-RELEASE-CANDIDATE-8". It's more user-friendly and less likely to cause confusion. The version of the executable file merged from the osFinancias5.1.0.233 version e.g. TurboCASH5.1.0..233 will be displayed while on some screens it will refer to "TurboCASH5-3" indicated on message screens such as Confirm, Information, Error, Warning dialog screens, etc. visible to users of different generations of TurboCASH. The version number "TurboCASH5-3" will indicate the TurboCASH5.1.0.0.233 in the title bars in the user interface indicating the executable file on which TurboCASH5-3 is compiled. The executable file TurboCASH5.1.0.0.233 will change as bugs are fixed during the life cycle of turboCASH5-3 (about 3 to 4 years).
- Standard Versioning: Software traditionally uses simpler versioning schemes (e.g., major.minor.revision). "TurboCASH5-3" fits this pattern perfectly. The "5" represents the major version, and the "3" indicates a subsequent release within that major version.
- Release Candidate Implication: The "RELEASE-CANDIDATE" part of the current version suggests this is a pre-release version. Once it's officially released, you'd want a cleaner, more final version number. "TurboCASH5-3" achieves this.
- Consistency with Older Versions: You mentioned that older versions referred to just "TurboCASH". While you're adding the "5" now, keeping the subsequent number simple maintains a degree of backward compatibility in terms of how users might think about the software.
- Future Releases: Using a simple numbering scheme like "TurboCASH5-3" makes it easy to increment for future releases (TurboCASH5-4, TurboCASH5-5, etc.).

How to Handle the Transition:

- Internal Versioning: Keep the detailed build number (like the current "2025-RELEASE-CANDIDATE-8") internally for your development team. This is crucial for tracking specific builds and bug fixes.
- User-Facing Version: Use "TurboCASH5-3" in all user-facing areas:
    - Splash screen
    - About dialog
    - Help documentation
    - Installation files
    - Release announcements
- Release Notes: Clearly communicate the version change in your release notes. Explain that this is the official release of what was previously in development as the "2025" candidate.

By making this change, you'll have a more professional and user-friendly versioning system for TurboCASH5.

Created with the Standard Edition of HelpNDoc: Streamline Your Documentation Process with a Help Authoring Tool

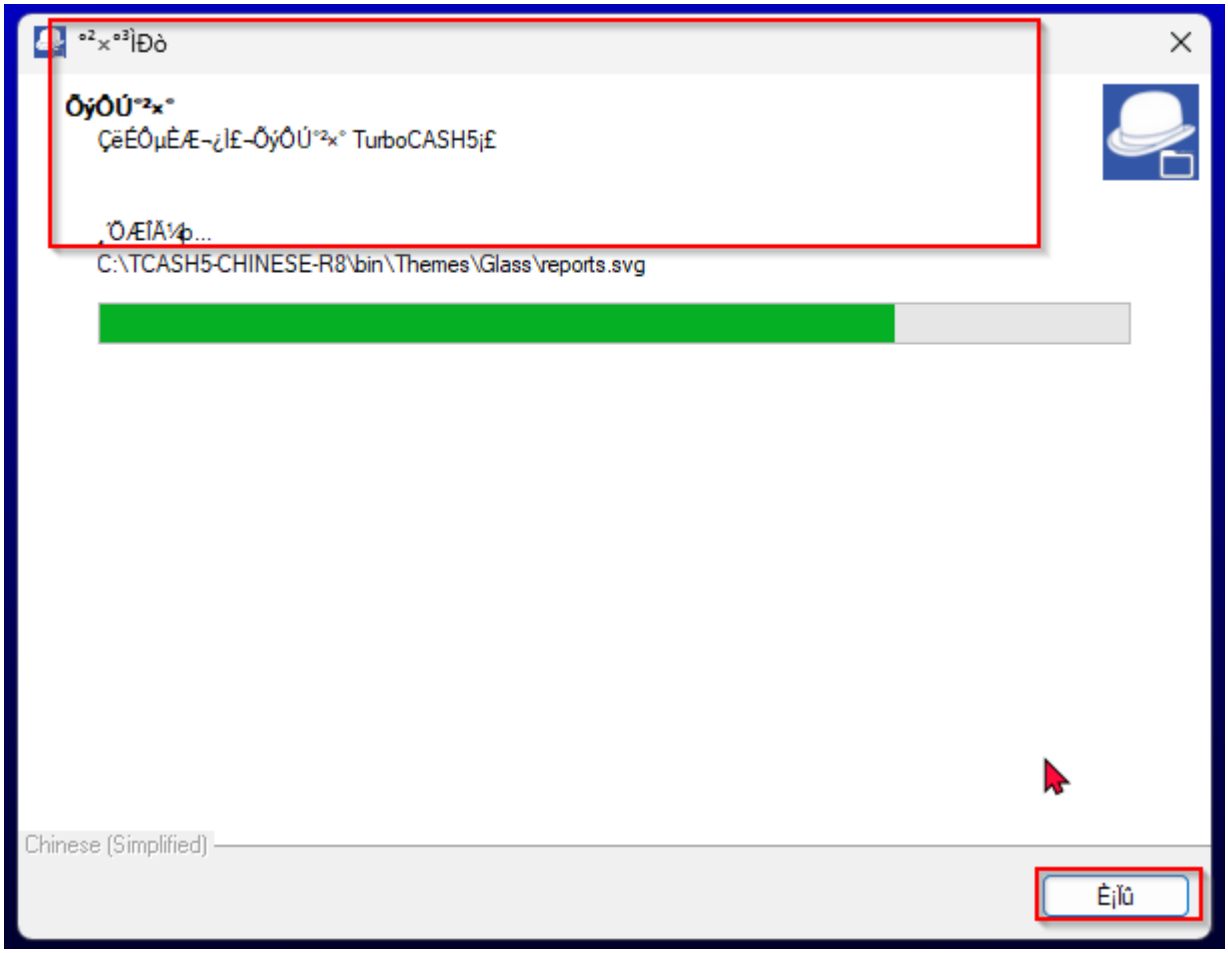
TurboCASH-development-Chinese

TurboCASH5-RELEASE-CANDIDATE-8 - Chinese added

TurboCASH5 Chinese (Simplified) install

Added the Chinese (Simplified) to the script file - It will install the 4-CAS-GENERIC Firebird database Set of Books to the books folder.

The install Wizard may display weird characters if installed on Wjndows which is not set to the Chinese local and regional folder.



Once the Set of Books is installed it display the Chinese characters.

Chinese Sets of Books - included in theis release

1. bin\CHINESE\4-CAS-GENERIC
2. bin\CHINESE\4-HANDYMAN-A

I did not make 3 Sets of Books (HANDYMAN and HANDYMAN-B) at this stage foor te following reasons:

- Group names is not translated
- Chart of Accounts includes numerical characters.
- Prints ??? in the T-ledger analyser - not addressed yet.

Chinese 4-CAS-GENERIC Set of Books Debug

Good job - Need to look at the following:

Inno Install script for Chinese

Currently we have the following languages to install TurboCASH5

Folders that contain the tcash.ini files:

chs- Chinese simplified

cht - Chinese traditional

Innoscript language files:

ChineseSimp.isl

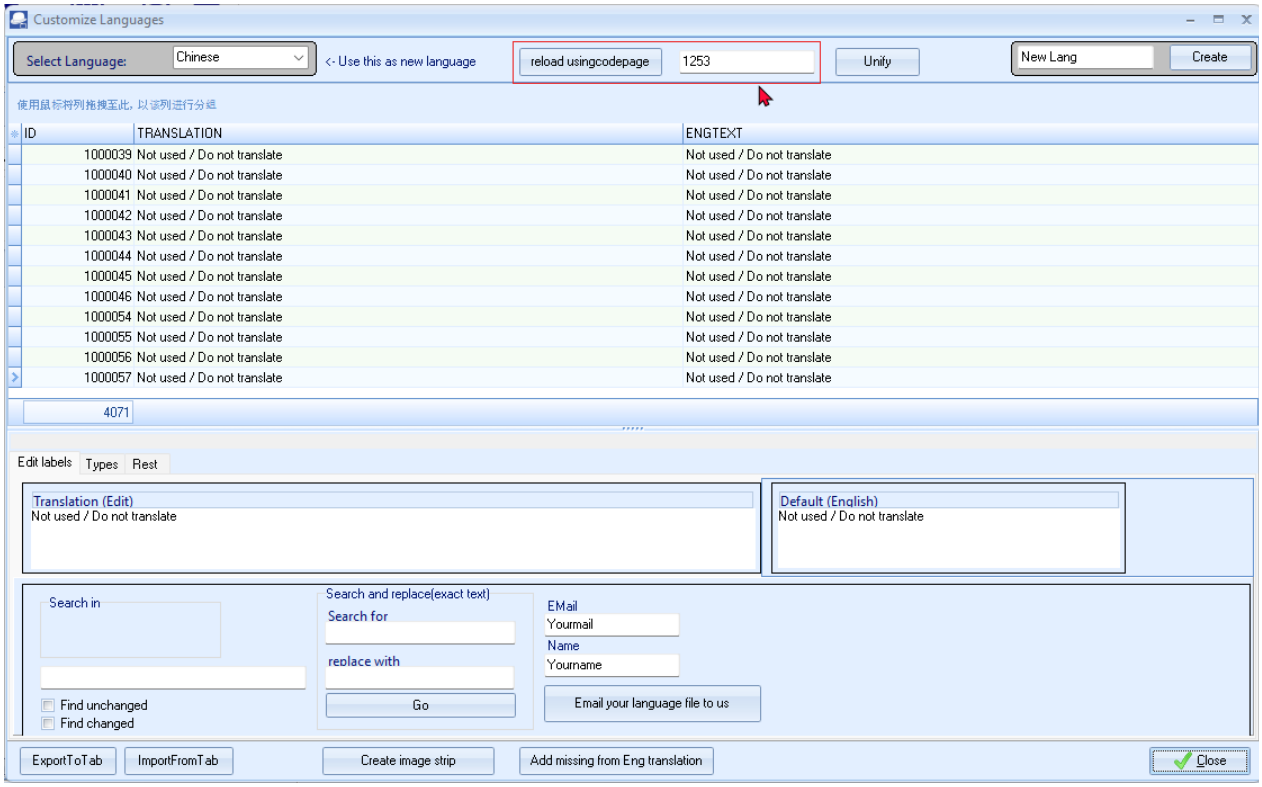
ChineseTrad.isl

Important to select the correct language folder and innoScript language files which is inline with the Chinese.dfm language file. Should it be Chinese simplified or Chinese traditional.

Language : Chinese.dfm - Codepage setting

Language : Chinese.dfm - Codepage - Tools -> Customize Language

The default codepage is 1253



What is codepage 1253 and is it applicable to the China?

Codepage 1253 is specifically designed for the Greek language. [1] It's a character encoding standard used to represent text in the modern Greek alphabet, including accented letters, punctuation marks, and special symbols.[2]

It is not applicable to the Chinese language. Chinese languages (Simplified and Traditional) require different code pages, such as GB2312, GBK, GB18030 (for Simplified Chinese) and Big5, CNS 11643 (for Traditional Chinese).

Key Points:

- Codepage 1253: For modern Greek.[3]
- Chinese Languages: Use different code pages like GB2312, GBK, GB18030, Big5, and CNS 11643.
- Unicode: The preferred standard for modern systems, supporting all languages, including Chinese and Greek.

I hope this clarifies the distinction!

- https://learn.microsoft.com/en-us/windows/win32/intl/code-page-identifiers -

What is the Codepages for Chinese languages?

The most common code pages for Chinese languages are:

Simplified Chinese:

- GB2312: A national standard for mainland China, covering a subset of simplified Chinese characters.
- GBK: An extension of GB2312, supporting a larger set of characters.
- GB18030: A more recent standard that includes a wider range of characters, including those used in minority languages in China.

Traditional Chinese:

- Big5: A widely used encoding for traditional Chinese, primarily in Taiwan and Hong Kong.
- CNS 11643: A national standard for Taiwan, supporting a comprehensive set of traditional Chinese characters.

It's important to note that:

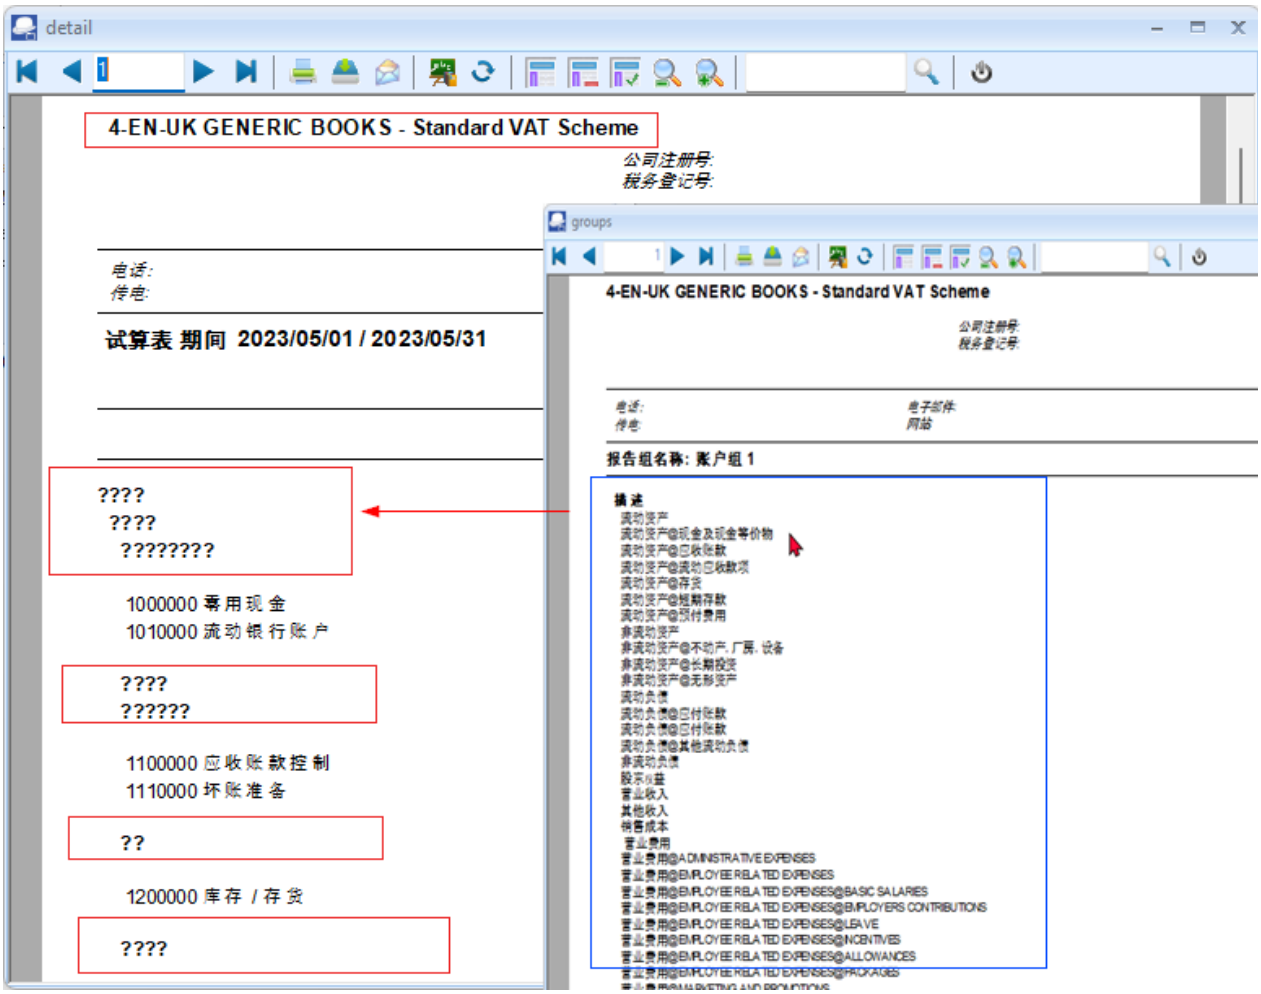
Unicode: The preferred encoding for modern systems is Unicode (specifically UTF-8), which supports all languages and scripts.

Code pages are often legacy encodings. While they may still be used in some older systems, Unicode is generally the recommended standard for new applications and data exchange.

Display of Chinese characters on screens, forms / reports

Print Setup -> Groups and Ledger analyser 1/2

Print button in Print Setup -> Groups seems to print correct Chinese characters, but in the Ledger analyser 1/2 it prints the characters with question marks ????



On the Accounts, Groups, etc. forms seems to display in the Chinese characters correctly.

Setup menu

Setup -> Company Info

Name of Set of Books refers to "4-EN-UK GENERIC BOOKS - Standard VAT Scheme"

Setup -> Reporting dates

Reporting dates refer to January - to December - may need to be translated.

Chart of accounts

VAT GST/Sales tax in China

Currently the VAT in the Chart of Accounts is based on the UK VAT - Standards= cgeme reflecting tax percentages of 20%, etc.

The correct term for the sales tax in China is Value Added Tax (VAT).[1]

See - https://taxsummaries.pwc.com/quick-charts/value-added-tax-vat-rates -

China has a multi-tiered VAT system with different rates:[2]

See - https://wise.com/gb/vat/china -

Standard Rate: 13% (applies to most goods and services)[3]

See - https://wise.com/gb/vat/china -

Reduced Rates: 9% and 6% (for specific goods and services like certain agricultural products, transportation, and some services)

Note: The specific VAT rates and their applicability can change, so it's essential to refer to the latest official information from the Chinese tax authorities for the most accurate and up-to-date details.

Organizing payroll accounts in China

Here's a possible structure for organizing payroll accounts in China, keeping in mind that specific requirements might vary:

I. Expense Accounts

501000 Salaries Expense

- 501010 Basic Salary
- 501020 Overtime Pay
- 501030 Bonuses
- 501040 Allowances (e.g., housing, transportation)

502000 Payroll Taxes Expense

- 502010 Pension Insurance - Employer Portion
- 502020 Medical Insurance - Employer Portion

- 502030 Unemployment Insurance - Employer Portion
- 502040 Work Injury Insurance - Employer Portion
- 502050 Maternity Insurance - Employer Portion
- 502060 Housing Fund - Employer Portion03000 Employee Benefits Expense
- 503010 Medical Insurance - Employee Portion
- 503020 Housing Fund - Employee Portion
- 503030 Other Employee Benefits (e.g., life insurance, meal subsidies)

II. Balance Sheet Accounts

211000 Accrued Salaries Payable

212000 Payroll Taxes Payable

- 212010 Pension Insurance Payable
- 212020 Medical Insurance Payable
- 212030 Unemployment Insurance Payable
- 212040 Work Injury Insurance Payable
- 212050 Maternity Insurance Payable
- 212060 Housing Fund Payable

213000 Withholding Taxes Payable

Key Considerations:

Chart of Accounts Design: This structure provides a basic framework. You should adapt it to your specific needs and the level of detail required for your accounting system.

Coding System: Implement a consistent coding system (e.g., alphanumeric) for easy identification and reporting.

Internal Controls: Establish strong internal controls to ensure accuracy and prevent fraud in payroll processing.[1] See - https://www.unit21.ai/fraud-aml-dictionary/payroll-fraud#:~:text=Strong%20internal%20controls%20that%20restrict,used%20to%20manage%20threats%20more -

Regular Reviews: Regularly review and update your payroll account structure to reflect changes in regulations and business requirements.

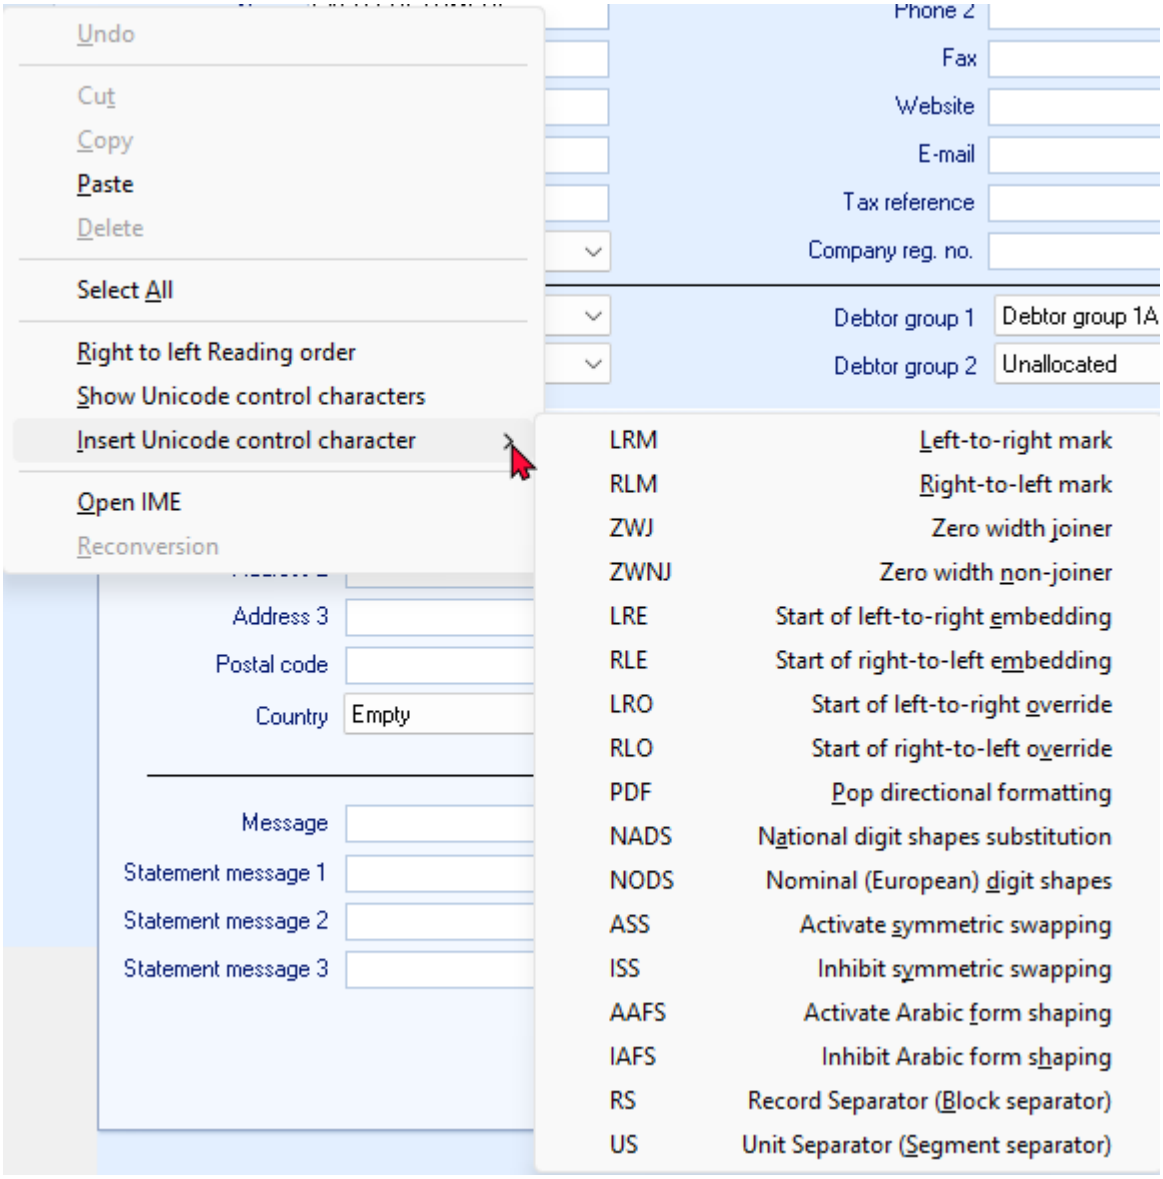
Disclaimer: This information is for general guidance only and should not be considered professional

accounting advice.

It is strongly recommended consulting with a qualified accounting professional or tax advisor in China for specific guidance on payroll accounting and tax requirements. They can help you design a Chart of Accounts that meets your specific needs and complies with all applicable regulations.

Unicode context menu options of forms

In osFinancials5/TurboCASH5, the context menu on most fields in forms, such as Debtors, Creditors, Stock on the Default ribbon and Accounts, Groups on the Setup menu, include the following context menu items related to Unicode (if Unicode is enabled).



These context menu items in osFinancials5/TurboCASH5, specifically related to Unicode, provide advanced text formatting and control options when working with characters beyond the standard ASCII set. Let's break down what each option means and its function:

1. Right to Left Reading Order
    - Function: This option controls the reading direction of the text. When enabled, the text in the field will be displayed and processed from right to left, which is essential for languages like Arabic and Hebrew.
    - What It Does:
        -
            - Controls the direction in which text is displayed and processed.
        -
            - When enabled, text is displayed right-to-left (RTL), which is necessary for languages like Arabic and Hebrew.
    -
    - When to Use:
        - Use this when working with RTL languages to ensure text is displayed correctly.
2. Show Unicode Control Characters
    - Function: This option displays invisible Unicode control characters that might be present in the text. These characters can affect text formatting and rendering, so visualizing them can help troubleshoot display issues.
    - What It Does:
        -
            - Displays invisible Unicode control characters in the text.
            - These characters affect how text is formatted and rendered but are normally hidden.
    -
    - When to Use:
        - Use this to troubleshoot text display issues, such as incorrect text direction or formatting.
3. Insert Unicode Control Character This option allows you to manually insert special Unicode characters to control text behaviour. These characters are used to fine-tune text direction, shaping, and rendering. Here's a breakdown of the most commonly used ones:
    a) LRM (Left-to-right Mark): Forces the following characters to be displayed left-to-right.

-
    - § What It Does:
        - Forces the following text to be displayed left-to-right (LTR).
    - § When to Use:
        - Use this to fix issues where numbers or special characters (like +) are displayed incorrectly in RTL text.

b) RLM (Right-to-left Mark): Forces the following characters to be displayed right-to-left.

- § What It Does:
    - Forces the following text to be displayed right-to-left (RTL).
- § When to Use:
    - Use this to ensure specific text is displayed in RTL order within LTR text.

c) ZWJ (Zero Width Joiner): Connects two characters that might otherwise be separated.

d)

e) ZWNJ (Zero Width Non-Joiner): Prevents two characters from being connected.

f) LRE (Start of Left-to-right Embedding): Starts a region of left-to-right text within right-to-left text.

g) RLE (Start of Right-to-left Embedding): Starts a region of right-to-left text within left-to-right text.

h) LRO (Start of Left-to-right Override): Overrides the current text direction and sets it to left-to-right.

i) RLO (Start of Right-to-left Override): Overrides the current text direction and sets it to right-to-left.

j) PDF (Pop Directional Formatting): Ends a region of embedded text direction.

k) NADS (National Digit Shapes Substitution): Uses the digit shapes specific to the current locale.

l) NODS (Nominal (European) Digit Shapes): Uses the standard European digit shapes (0-9).

m) ASS (Activate Symmetric Swapping): Enables symmetric swapping of characters, which can

affect the appearance of certain characters.

n) ISS (Inhibit Symmetric Swapping): Disables symmetric swapping of characters.

o) AAFS (Activate Arabic Form Shaping): Enables shaping of Arabic characters based on their position in the word.

p) IAFS (Inhibit Arabic Form Shaping): Disables shaping of Arabic characters.

q) RS (Record Separator): A block separator character.

r) US (Unit Separator): A segment separator character.

4. 4. Open IME
5. Function: This opens the Input Method Editor (IME), a tool that allows you to input characters from languages that don't have direct keyboard mappings.
6. 5. Reconversion
7. Function: This option is specific to IMEs. It re-analyzes the input text and may suggest alternative conversions or corrections.

In Summary

These Unicode-related context menu items in osFinancials5/TurboCASH5 provide powerful tools for handling text in various languages and scripts. They allow you to control text direction, insert special characters, and fine-tune text rendering to ensure accurate and professional-looking results.

==

The Unicode-related context menu items in osFinancials5/TurboCASH5. These options are designed to help you manage text formatting, especially when working with languages like Arabic or other scripts that require special handling.

---

1. Right to Left Reading Order

- What It Does:
  - Controls the direction in which text is displayed and processed.
  - When enabled, text is displayed right-to-left (RTL), which is necessary for languages like Arabic and Hebrew.
- When to Use:
  - Use this when working with RTL languages to ensure text is displayed correctly.

---

2. Show Unicode Control Characters

- What It Does:
  - Displays invisible Unicode control characters in the text.
  - These characters affect how text is formatted and rendered but are normally hidden.
- When to Use:
  - Use this to troubleshoot text display issues, such as incorrect text direction or formatting.

---

3. Insert Unicode Control Character

This option allows you to insert special Unicode characters to control text behaviour. Here's a breakdown of the most commonly used ones:

a. LRM (Left-to-right Mark)

- What It Does:
  - Forces the following text to be displayed left-to-right (LTR).
- When to Use:
  - Use this to fix issues where numbers or special characters (like +) are displayed incorrectly in RTL text.

b. RLM (Right-to-left Mark)

- What It Does:
  - Forces the following text to be displayed right-to-left (RTL).
- When to Use:
  - Use this to ensure specific text is displayed in RTL order within LTR text.

c. ZWJ (Zero Width Joiner)

- What It Does:
  - Connects two characters that would otherwise be separated.
- When to Use:
  - Use this in languages like Arabic to join characters that should appear as a single unit.

d. ZWNJ (Zero Width Non-Joiner)

- What It Does:
  - Prevents two characters from being joined.
- When to Use:
  - Use this to keep characters separate when they would normally be joined.

e. LRE (Start of Left-to-right Embedding)

- What It Does:
  - Starts a section of LTR text within RTL text.
- When to Use:
  - Use this to embed LTR text (e.g., phone numbers, URLs) in RTL documents.

f. RLE (Start of Right-to-left Embedding)

- What It Does:
  - Starts a section of RTL text within LTR text.
- When to Use:
  - Use this to embed RTL text (e.g., Arabic phrases) in LTR documents.

g. LRO (Start of Left-to-right Override)

- What It Does:
  - Forces all following text to be displayed LTR, overriding the default direction.
- When to Use:
  - Use this to ensure a block of text is displayed LTR, even in an RTL context.

h. RLO (Start of Right-to-left Override)

- What It Does:
  - Forces all following text to be displayed RTL, overriding the default direction.
- When to Use:
  - Use this to ensure a block of text is displayed RTL, even in an LTR context.

i. PDF (Pop Directional Formatting)

- What It Does:
  - Ends the effect of the last LRE, RLE, LRO, or RLO.
- When to Use:
  - Use this to return to the default text direction after embedding or overriding.

j. NADS (National Digit Shapes Substitution)

- What It Does:
  - Displays digits in the shapes specific to the current locale (e.g., Arabic-Indic digits).
- When to Use:
  - Use this to display numbers in the local format (e.g., ٠١٢٣ instead of 0123).

k. NODS (Nominal (European) Digit Shapes)

- What It Does:
  - Displays digits in standard European shapes (0-9).
- When to Use:
  - Use this to display numbers in the Western format.

l. ASS (Activate Symmetric Swapping)

- What It Does:
  - Enables swapping of characters that have mirrored forms (e.g., parentheses).
- When to Use:
  - Use this to ensure proper display of mirrored characters in RTL text.

m. ISS (Inhibit Symmetric Swapping)

- What It Does:
  - Disables swapping of mirrored characters.
- When to Use:
  - Use this to prevent unwanted character mirroring.

n. AAFS (Activate Arabic Form Shaping)

- What It Does:
  - Enables shaping of Arabic characters based on their position in a word.
- When to Use:
  - Use this to ensure proper display of Arabic script.

o. IAFS (Inhibit Arabic Form Shaping)

- What It Does:
  - Disables shaping of Arabic characters.
- When to Use:
  - Use this to display Arabic characters in their isolated forms.

p. RS (Record Separator)

- What It Does:
  - Acts as a block separator in text.
- When to Use:
  - Rarely used in everyday text formatting.

q. US (Unit Separator)

- What It Does:
  - Acts as a segment separator in text.
- When to Use:
  - Rarely used in everyday text formatting.

---

4. Open IME

- What It Does:
  - Opens the Input Method Editor (IME), a tool for typing characters in languages that don't have direct keyboard mappings.
- When to Use:

- Use this to input characters in languages like Chinese, Japanese, or Arabic.

---

5. Reconversion

- What It Does:
  - Re-analyses text input using the IME and suggests alternative conversions or corrections.
- When to Use:
  - Use this to fix or refine text input in complex scripts.

Summary

These Unicode-related context menu items in osFinancials5/TurboCASH5 provide powerful tools for:

- Controlling text direction (RTL/LTR).
- Inserting special characters to fine-tune text rendering.
- Managing complex scripts like Arabic.
- Troubleshooting text display issues.

If you're working with Arabic text or other RTL languages, the LRM (Left-to-right Mark) is particularly useful for fixing issues with numbers or special characters (like +). For example, inserting an LRM before the + sign in a phone number ensures it displays correctly as `+966 55 123 4567` instead of `4567 123 55 966+`.

osFinancials-development

Help Documentation

This include the EngHelp,chm context-sensitive Help using the F1 key to launch associated topics with most screens or fields within functionalities of the osFinancial/TurboCASH core.

Published Online documentation - osFinancials website

English Online help

Afrikaans Online help

The last published help documentation were published on Friday, 24 March 2023 - 11:09:33

Development Online osFinancials

These Online Help system will be regularly updated as more topics is retested and fixed and translations are done in the Afrikaans Help.

This documentation updates includes tests on updates of osFinancials core and plugins including Firebird and MSSQL Compatibility.

The Help file is structured as follows:

- Release notes
- Known issues
    - Translations outstanding
    - Translations outstanding - Plugins
    - Fixed and Known issues on various functionalities in the osFinancials core, including reports, plugins and Firebird and MSSQL Compatibility.
    - Fixed items - Many previous known issues and possible bugs were addressed is listed for record to assist with retesting and reference purposes.
    - Known issues - There are various outstanding issues or possible bugs in osFinancials/TuboCASH core and in Plugins.
    - To be advised - About 59 to be advised tags are currently in documentation topics.

Various fixes to languages, themes, MSSQL and Firebird compatibility, reports, etc. may be followed in the Release notes.

Resources on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main -

Specific resources which may be downloaded

Firebird Databases Sets of Books Generic templates

Generic template based on 4-Digit Sets of Books for South Africa in English and Afrikaans and the United Kingdom (UK)

Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/firebird-databases/4-DIGIT-BOOKS -

These Sets of Books, based on the Firebird database type, include a basic Chart of Accounts supporting 4-digit main account and 3-digit sub-account codes, along with larger database fields.

- 4-EN-SOUTH-AFRICA-GENERIC.zip: This generic Set of Books includes 4-digit main account and 3-digit sub-account codes, based on the South African Chart of Accounts. It incorporates specific South African terminology and includes the structure of South African VAT-accounts and VAT-codes, aligned with the VAT201-return.
- 4-AF-SUID-AFRIKA-GENERIES.zip: This generic Set of Books includes 4-digit main account and 3-digit sub-account codes, based on the South African Chart of Accounts in Afrikaans. It incorporates specific South African terminology and includes the structure of South African VAT-accounts and VAT-codes (Belasting op Toegevoegde Waarde (BTW) Suid-Afrika (Afrikaans), aligned with the VAT201-return.
- 4-EN-UK-GENERIC.zip: This generic Set of Books includes 4-digit main account and 3-digit sub-accounts, based on the United Kingdom (UK) Chart of Accounts. It incorporates specific UK terminology and includes Value Added Tax (VAT) - United Kingdom accounts based on the VAT Standard rate scheme. The VAT-account and VAT-codes structure in the Chart of Accounts is designed to match the various boxes on the UK VAT return. NOTE: Various schemes for VAT may be applicable for various scenarios.

Firebird Databases - Empty Sets of Books templates - larger field lengths

The Sets of Books for the Firebird Database type now supports larger field lengths for data entry, catering to the specific requirements of larger businesses or organizations. This enhancement allows for more detailed and comprehensive data management, particularly in scenarios where extensive account codes and descriptions are necessary.

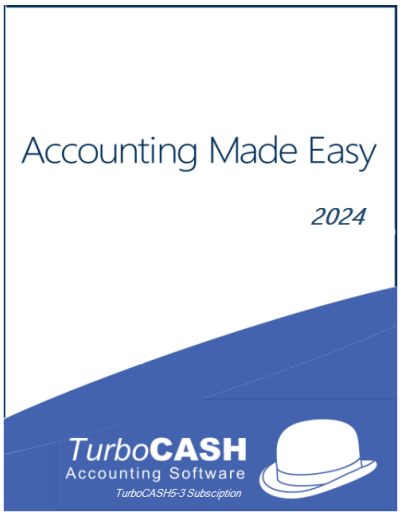
Hands-on Tutorials

Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/documentation - osFinancials5 installation provides tutorial Sets of Books in both English and Afrikaans. These tutorial books allow users to explore different settings, transactions, and reports within the software. Here are the available tutorial sets:

Accounting Made Easy

English tutorials (using separate receipt and payments journals for banking / cash transactions)



The following Set of Books based on this tutorial, is installed in the "… \bin\Tutorials\ENGLISH\" folder:

- *HANDYMAN (No transactions)*
- *HANDYMAN-A (Unposted transactions)*
- *HANDYMAN-B (Posted transactions)*

Accounting Made Easy - Bank Import

English tutorials (using the BankImport plugin for banking / cash transactions)

The following Set of Books based on this tutorial, is installed in the "… \bin\Tutorials\BANK-IMPORT\" folder:

- *HANDY-BANK (No transactions).*
- *HANDY-BANK-A (Unposted transactions)*
- *HANDY-BANK-B (Posted transactions).*
- *HANDY-BANK-UNPOSTED-*

Rekeningkunde Met Gemak (Afrikaans)

Afrikaanse handleidings (gebruik aparte ontvangste- en betalingsjoernale vir bank- / kontanttransaksies)

Die volgende Stel Boeke gebaseer op die Afrikaanse handleidings, is in die "…\bin\Tutorials\AFRIKAANS\"-lêergids geïnstalleer:

- *NUTSMAN (Geen transaksies).*
- *NUTSMAN-A (Ongeposteerde transaksies)*
- *NUTSMAN-B (Geposteerde transaksies).*

BANK-STATEMENT – Posted transactions, excluding bank / cash transactions. Bank statement needs to be imported from the "…\bin\Tutorials\BANK-IMPORT\BANK-STATEMENTS" folder.

2024 Versions in LibreOffice (*.odt) format of these publications can be downloaded in English and Afrikaans

Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/firebird-databases/TUTORIALS-AME -

Sets of Books and Supporting files for Tutorials

Firebird database type Sets of Books (in English and Afrikaans), including supporting files for export and import, for these tutorials can be downloaded.

2024-osFinancias5.1 - Build 5.1.0.189 Release notes

ADDED - GDI scaling (Graphics Device Interface scaling) support

osFinancials5.1.0.109 supports GDI scaling, or Graphics Device Interface scaling. It refers to the process of adjusting the size of graphical elements on a computer screen based on the display resolution and pixel density. The Graphics Device Interface (GDI) is a component of the Windows operating system responsible for rendering graphical elements such as text, images, and graphical user interface (GUI) elements.

As display technologies advance, screen resolutions increase, and devices with different pixel densities

become more prevalent, it becomes essential to scale the graphical elements appropriately. GDI scaling helps ensure that these elements appear at a reasonable size and are visually consistent across various displays.

Windows operating systems include a feature called Display Scaling, which allows users to adjust the size of text, apps, and other items on the screen. GDI scaling plays a role in this process by ensuring that the graphical elements are resized correctly without losing clarity or becoming pixelated.

In essence, GDI scaling helps provide a more consistent and visually pleasing user experience on displays with different resolutions and pixel densities, ensuring that the graphical elements are appropriately sized and easy to read or interact with.

Windows Registry - REGEDIT osFinancials5

Windows Registry - REGEDIT Added osFinancials5 in osFinancials5.1.0.127

All previous installations or updates of osFinancials5.1 (before osFinancials5.1.0.127) and osFinancials4.0.1093 will update the "*Computer\HKEY_CURRENT_USER\Software\osfinancials*" in the Windows registry.

"*Computer\HKEY_CURRENT_USER\Software\osfinancials5*" will since installations or updates of osFinancials5.1.0.127 be created and or updated.

See - FIX for Debtor accounts / Creditor accounts lookup when creating documents

It also fixed the Debtor / Creditor accounts lookup when creating documents in osFinancials5-453 osFinancials4.0.0.1093

Deleting the HKEY_CURRENT_USER\SOFTWARE\osfinancials in the Windows Registry

FIXED - osFinancials5.1.0.127

User ribbon tab - Auto-learn - selected

```
Incorrect syntax near ')'.
Incorrect syntax near the keyword 'select'.
```

Similar to the Firebird error

```
Dynamic SQL Error
SQL error code = -104
Token unknown - line 1, column 157
select
```

Budgets (Reports ribbon) - (MSSQL Errors)

FIXED Budgets on Reports ribbon in Firebird Database types - osFinancials5.1.0.127 update

ERROR MSSQL Databases - Budgets on Reports ribbon in MSSQL Database types - osFinancials5.1.0.127 update still produces error:

> Incorrect syntax near 'a'.

In MSSQL databases cannot enter and save budgets (Apply to selection button) in Budgets (Reports ribbon).

But can enter budget figures in Setup → Accounts (Setup ribbon).

FIXED - Access violations - POS Input - POS on Default ribbon (Ctrl + F6) Standard POS

Fixed in osFinancials5.1.0.127 - If no Sales account is selected, a message will be displayed:

> Default customer account not setup! Please setup!

When click on OK it will launch the POS setup (Setup → Point-of-Sale).

Replicated In osF5.1.0.99 and osF5.1.0.100

> Access violation at address 5F3580AA in module 'rtl280.bpl'. Write of address 00000240

Replicated In osF5.1.0.93

> Access violation at address 08D6542C in module 'osfresource.bpl'. Read of address 000001F0

POS (Standard screen flickers New Invoice / Display area

Replicated in osFinancials5.1.0.127 since osFinancials5.1.0.109

MSSQL Error - Plugin - Location-Serials-Batches

Came right probable when updated the object 'dbo.BatCon'

MSSQL Error Post Batch Purchase Document - Error

The statement has been terminated.

> Violation of PRIMARY KEY constraint 'PK__BatCon__DB7D61DFCE4DB78F'. Cannot insert duplicate key in object 'dbo.BatCon'. The duplicate key value is (61).

Posted after second attempt

MSSQL - Create Books

Groups Print button error

> GROUPDATA:Parameter 'GROUPTYPEID' not found

Import accounts

Tax - Only the Tax control account and the first tax account is imported without the tax tab. You need to delete the Tax code and recreate it.

Import Debtors / Creditors (Setup ribbon form Text file

Produces error (This is if the Date of the Signature date field on Accounting information tab

Error on import with message('1899/12/30' is not a valid date and time) Do you want to continue?

Click Yes the debtors creditors will be imported.

Created with the Standard Edition of HelpNDoc: News and information about help authoring tools and software

2024-osFinancias5.1 - Build 5.1.0.189 Known issues

Base type 0 - Address1 / Postal code / Address 2 / Address 3

In this documentation, the Postal address and Delivery address will be displayed Address1 / Postal code / Address 2 / Address 3 in the following forms:

Debtors, Creditors, Documents, Calendar (also Reports → Calendar)

The Netherlands document layout files prints in this format.

In base type 1 probably osFinancials International (like TurboCASH5.2) the Postal address and Delivery address will be displayed Address1 / Address 2 / Address 3 / Postal code. The layout files , Debtor statements , Creditor remittance advises and Report headers is displayed in this sequence.

osFinancials5.1.0.127 Interface - Delphi 12

Setup groups - Colours - groups does not retain colours

If the Background colors is set, and no Font colors is set, the groups does not retain colours set in Setup → Groups in Account group 1 and Account group 2 as well as other groups.

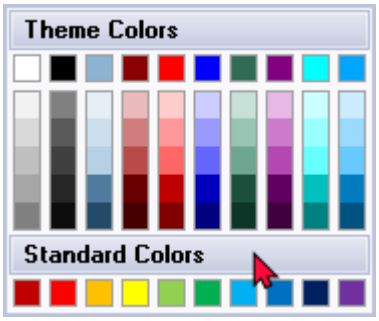
Solution: To retain and save the selected colors, you also need to set both the Back color and the Font color.

Close active forms or reopen Set of Books or use Report button (Ledger analyser 1 / 2) Account group1 / Account group2 to see the changed colors.

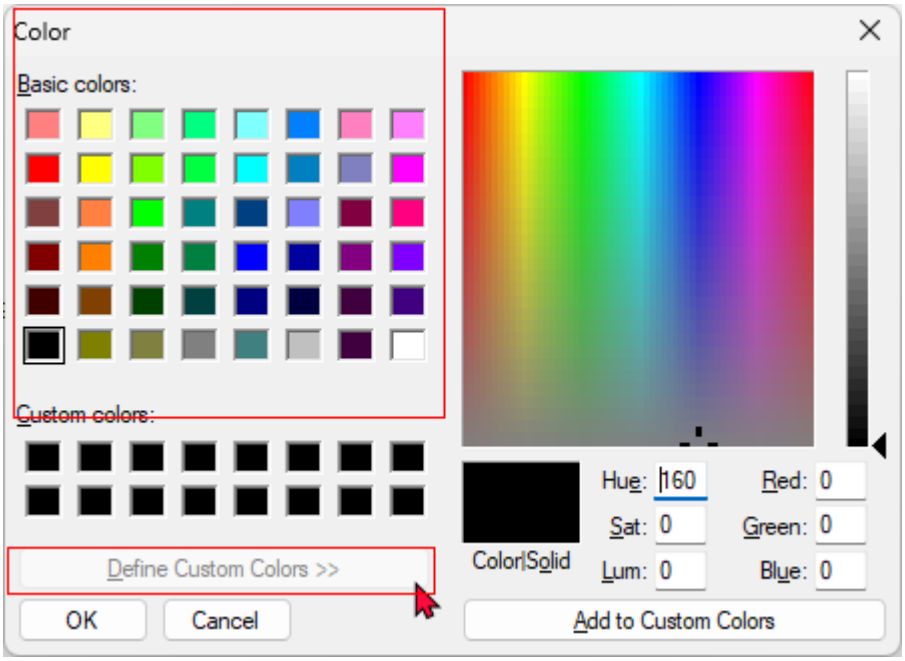
In the case of Documents, Debtors, Creditors and Stock items, the changed colors on the grids will be available when you click on the Filter button.

osFinancials5 - Delphi12 / Delphi11

Setup Goups



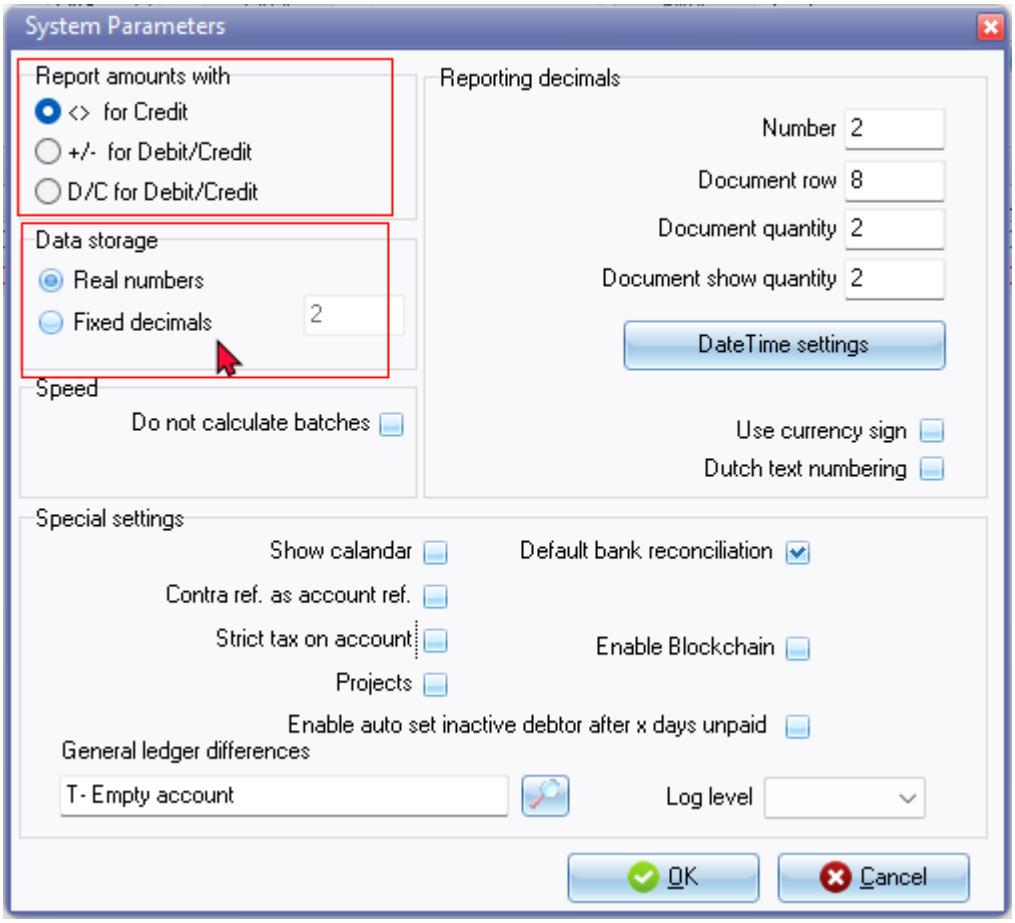
osFinancials5 - Reportman (Setup background colours) /- similar to osFinancials4



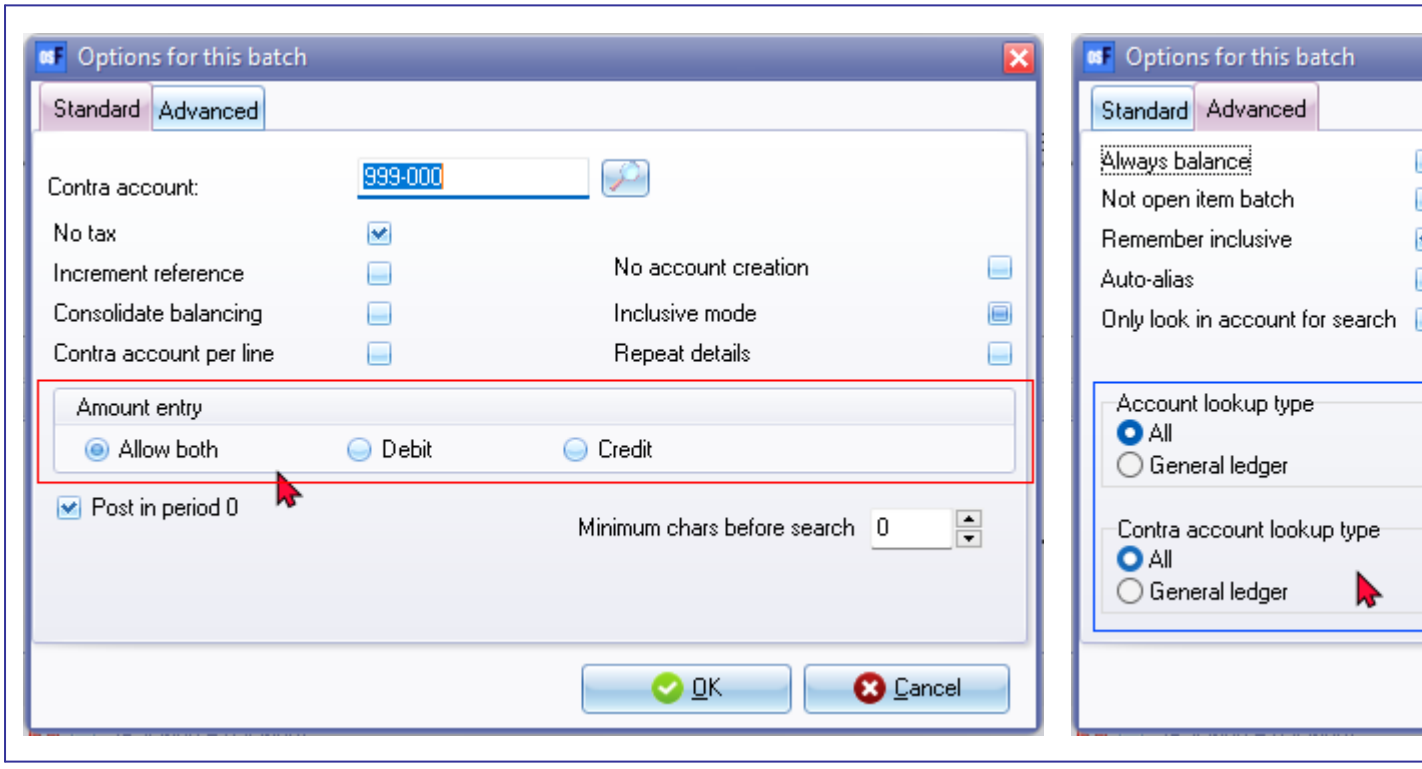
Radio buttons Selection not consistent

The radio buttons on some screens appears to be Delphi11 and on other screens Delphi12

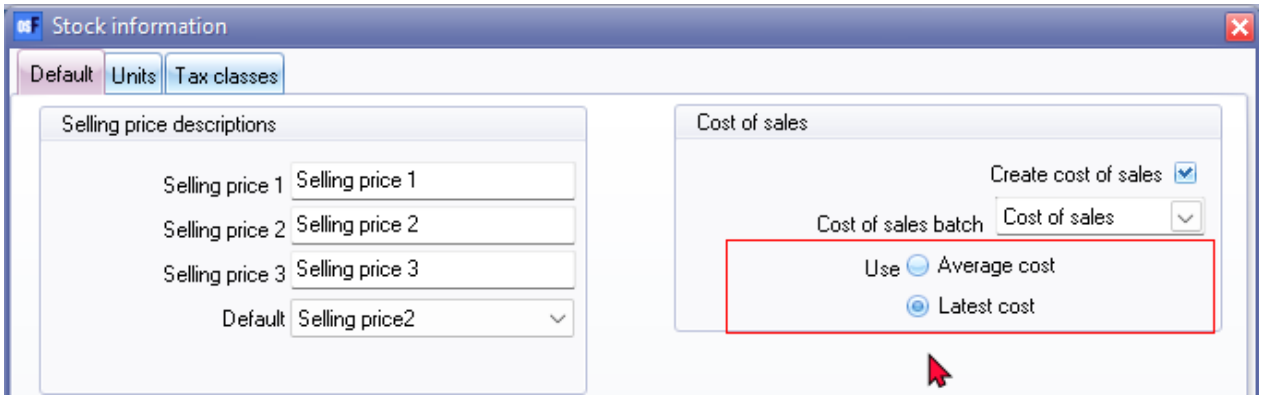
Old look and New look radio buttons on 1 screen



Examples



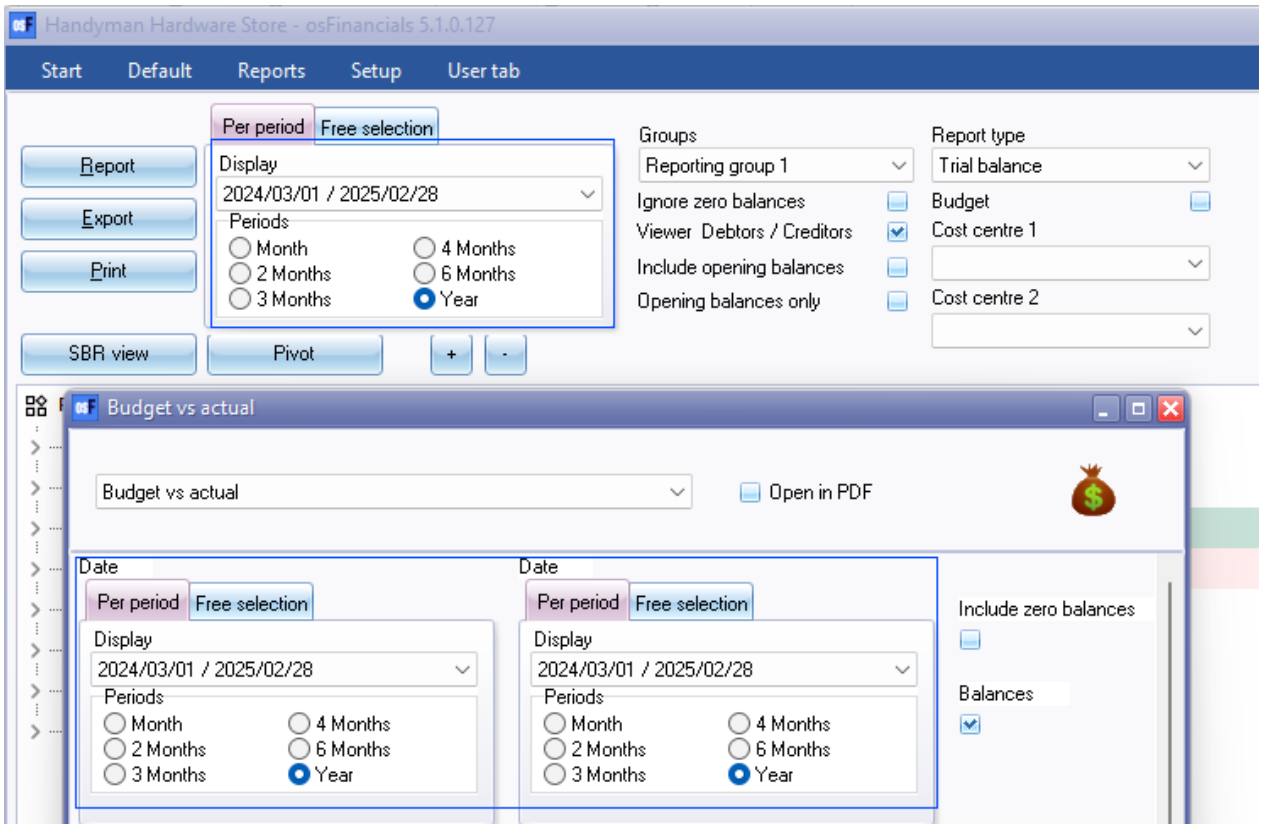
Old look Radio button



Old look Radio button

- Stock information
- Creation wizard
- Update ledger and many screens

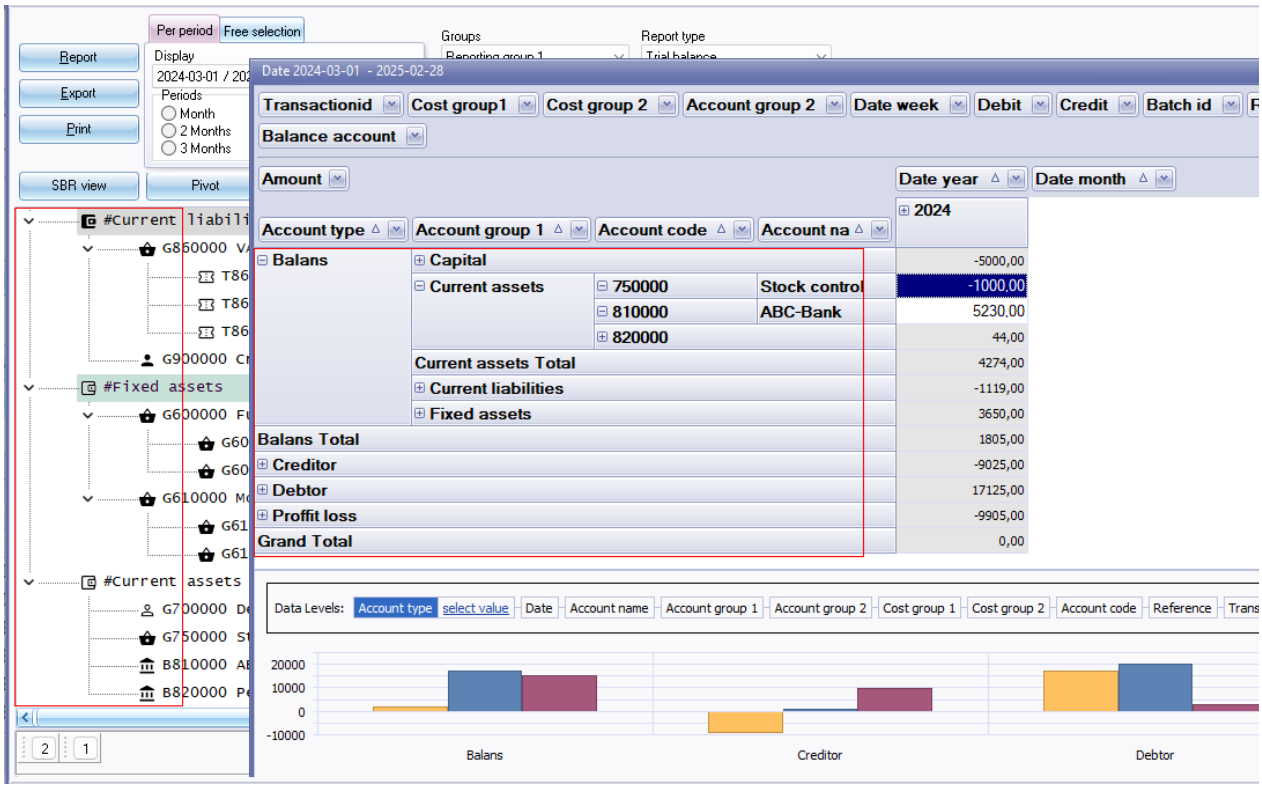
New look Radio button



New look Radio button

- Customize languages
- Input-> Confirm

Expand / Collapse options not consistent



+ / - Expand / Collapse also on Groups and Document entry forms

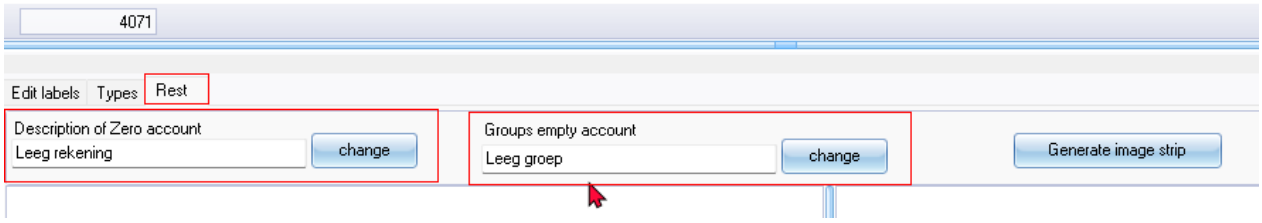
Customize language

Customize language - Rest tab

Customize language - Rest tab Change descriptions

Description of Zero account and Group empty account 2 change buttons only saves 1 description.

Work around change both to Empty



Customise Language - number of Characters

In Customise Languages - Can only enter 10 characters for new language (Some languages up to 15 characters in the " *...\bin\languages* " folder). To use more than 10 characters, you may rename it manually in File Explorer to 15 characters.

Obsolete / out dated language files

Obsolete / out dated language files - May be deleted from languages folder (" *...\bin\languages* ")

Language file	*Date of last changes*	*Replaced and updated with*	*Books download*
African.dfm	*2020/03/06*	*Afrikaans.dfm*	
en-Trinandad.dfm	*2020/03/06*	*en-Trinidad.dfm*	*EN-TRINIDADTOBAGO*
Nederlands.dfm.bak	*2020/05/08*		
testlang.dfm	*2020/03/06*		
Zeng.dfm	*2020/03/06*		

These language files is not linked to any Firebird Sets of Books and linked languages available as a free download. from the Download option on the "*Creation wizard*".

Bank accounts

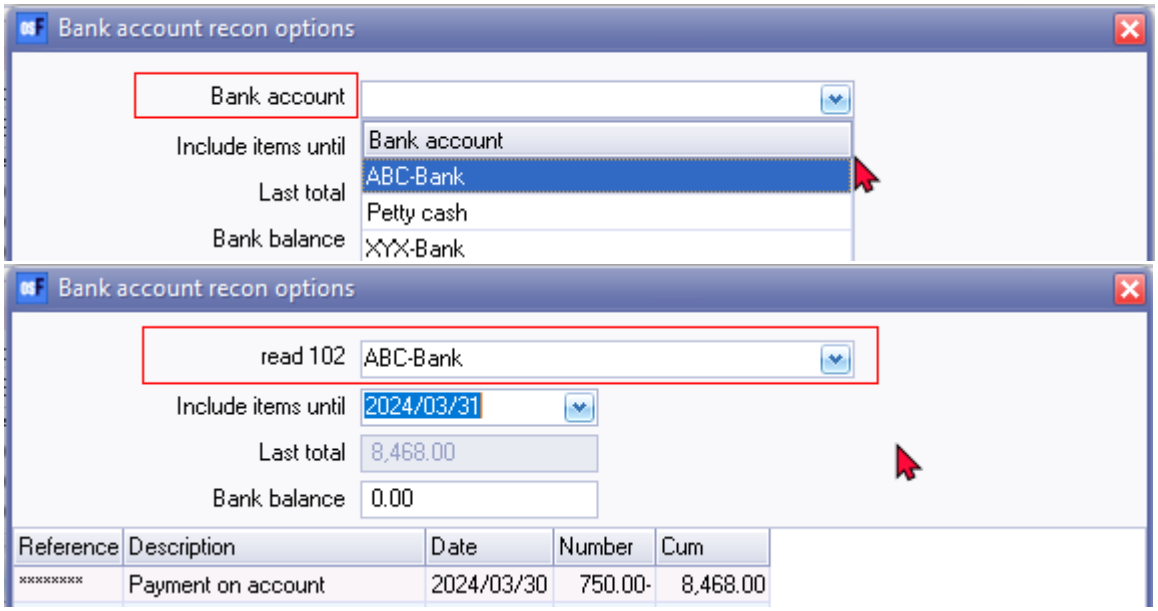
Bank Accounts - Payment and Receipt batches F10:Setup

Default reconciliation method (Setup → System parameters) Deactivated Bank import plugin

Default = Allow both - Cannot change to Debit or Credit in the Advanced tab.

Bank Accounts - Select bank account changes label

Bank account name changes to Write102, etc. the record (accountid) number selecting a bank account.



Calendar - Appointments

Creating Debtor Appointment 2 and selecting stock item produced the following error:

> "QEvents: Cannot perform this operation on a closed dataset"

Exit osFinancials and Reopen the Set of Books, could recreate the appointment.

Think it may be the Stock item. If a stock item is selected, the last Empty space in the Event screen, if typed over, it will revert back to Empty.

Budgets (Reports ribbon) - MSSQL Errors

FIXED Budgets on Reports ribbon in Firebird Database types - osFinancials5.1.0.127 update

ERROR MSSQL Databases - Budgets on Reports ribbon in MSSQL Database types - osFinancials5.1.0.127 update still produces error:

> Incorrect syntax near 'a'.

In MSSQL databases cannot enter and save budgets (Apply to selection button) in Budgets (Reports ribbon).

But can enter budget figures in Setup → Accounts (Setup ribbon).

Licence Typo - Not In Language File

Message license typo retieve in stead of retrieve - Typo not in language files

Themes - Updated Creditors control icon - imagestrips

Fixes and Supported themes:

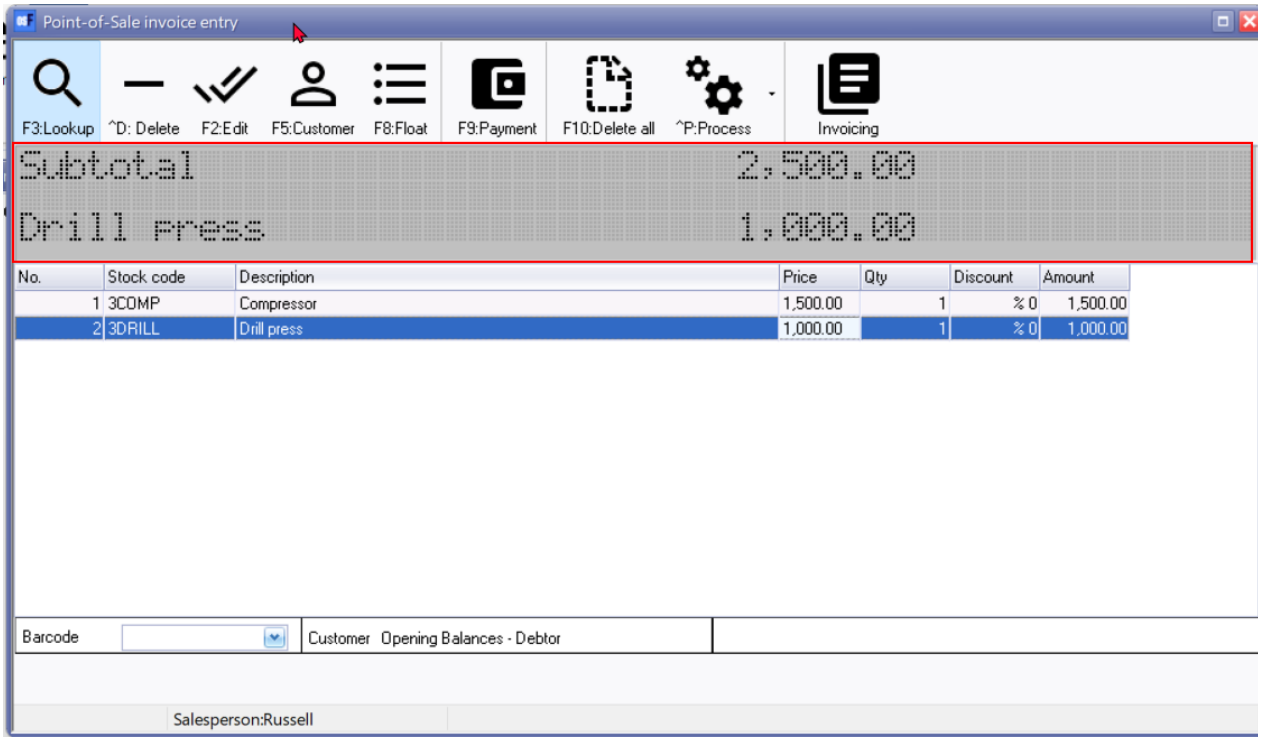
- Theme screenshots - Screenshots of the installed themes and new themes (about 34 themes). A sideshow of the themes rotating is available in osfinancials-themes-slides.zip file
- Known issues - Themes - Imagestrips excludes reports path. If images is removed from the theme folder, the imagestrip defaults to the classic theme, or other theme.
- Creditor control icon not loading correctly - Classic icon in some themes - Fixed - replaced the Acccreditors.svg icons (icon properties did not load the Acccreditors.ico) and re-created imagestrips in osFinancials5.1.0.109 - but with the osFinancials5.1.0.127 update does not include these fixes. The updated Creditors control icon - imagestrips is not included in the osFinancials5.1.0.127 update.

Screens - Display issues

osFinancials5.1.0.127 update issues with the following screens:

POS - Input → POS Invoice

Screen flickers in the New Invoice / Total/Subtotal area of the screen.



FIXED - Access violations - POS Input - POS on default ribbon (Ctrl + F6) Standard POS

Fixed in osFinancials5.1.0.127 - If no Sales account is selected, a message will be displayed:

> Default customer account not setup! Please setup!

When click on OK it will launch the POS setup (Setup → Point-of-Sale).

Replicated In osF5.1.0.99 and osF5.1.0.100

> Access violation at address 5F3580AA in module 'rtl280.bpl'. Write of address 00000240

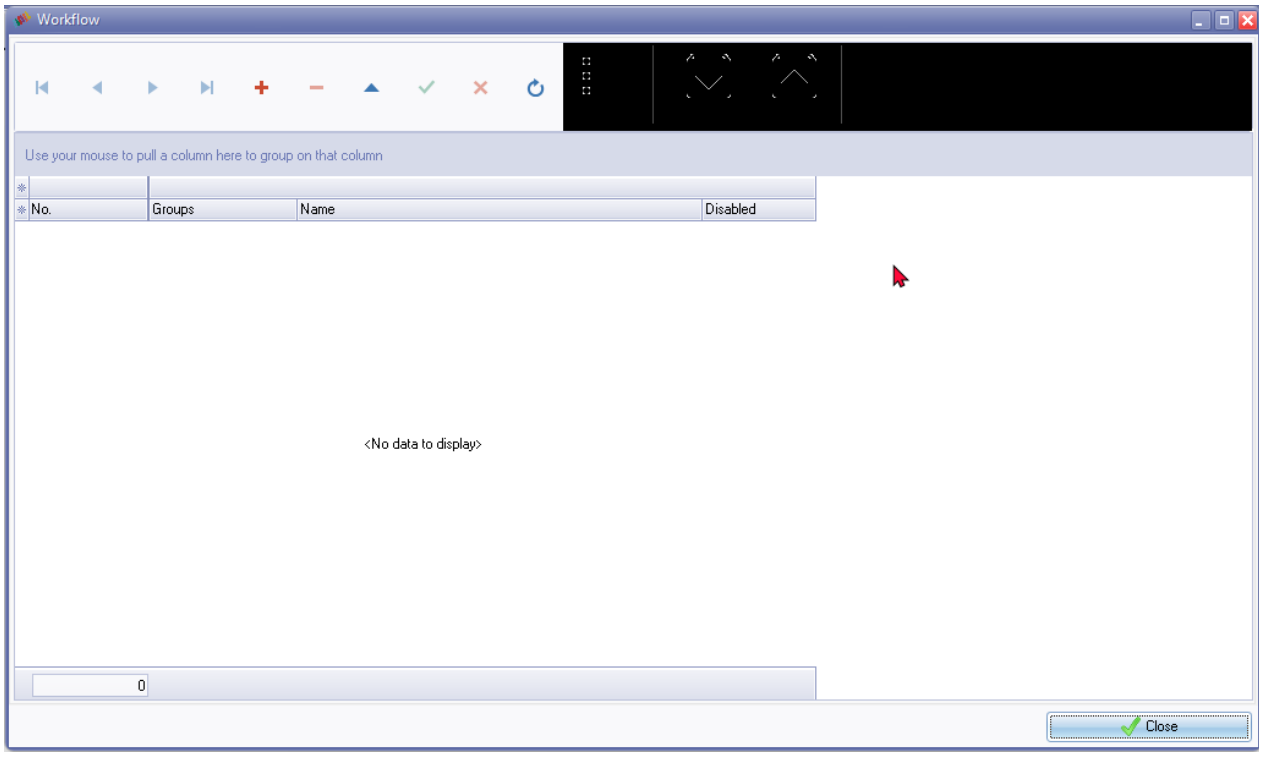
Replicated In osF5.1.0.93

> Access violation at address 08D6542C in module 'osfresource.bpl'. Read of address 000001F0

POS (Standard screen flickers New Invoice / Display area

Replicated in osFinancials5.1.0.127 since osFinancials5.1.0.109

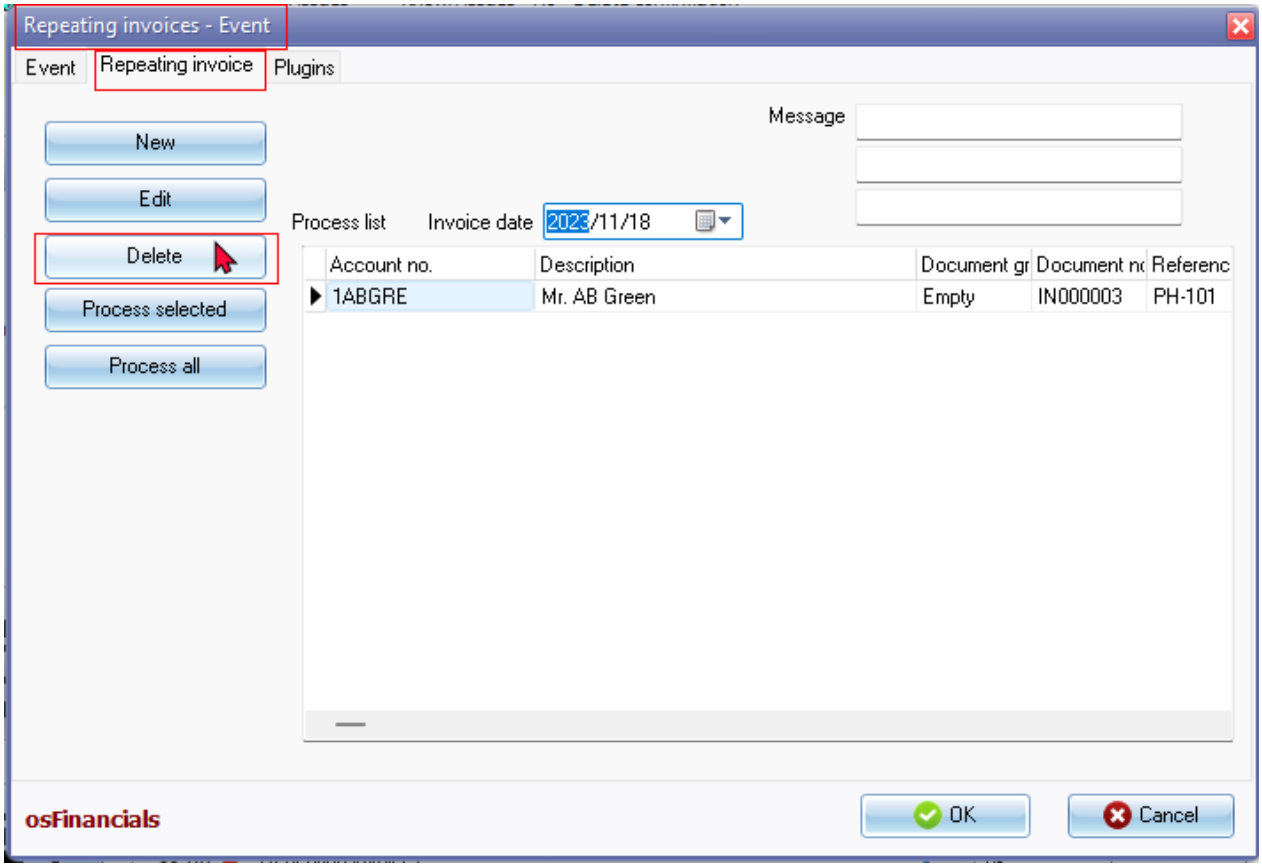
Setup → Workflow



No Delete confirmation messages

Calendar - Delete process repeating invoices

No delete confirmation message



Click on Delete button and the item is removed from the "*Process list*".

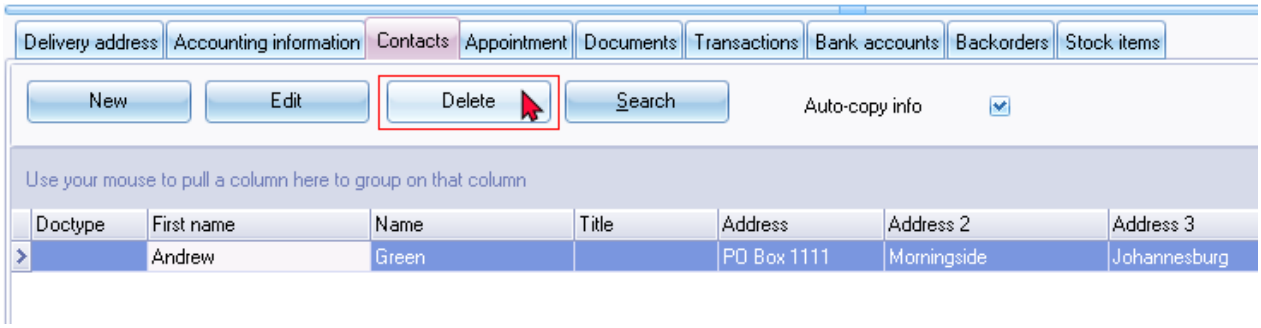
NOTE

For events there is a confirmation message to delete the event

> Delete "Repeating invoices" from your schedule?
> This operation cannot be undone!

Debtors / Creditors tab - Delete contact - No confirmation message

Click Delete button and gone is the contact



NOTE

On Contacts screen (Default ribbon) the Delete confirmation message is displayed:

> Do you want to delete this contactperson?

On Calendar - Contacts screen the Delete confirmation message is displayed:

> Delete Ben Best from your list of contacts?
> This operation cannot be undone!

Change Reporting groups 1 / Reporting group 2

Change Reporting groups 1 / Reporting group 2 for Debtors / Creditors and Documents no confirmation message is displayed from the context menu options on the grid.

Using the context menu on Stock items Change Reporting groups 1 / Reporting group 2 a confirmation message is displayed e.g.:

> Set reporting group 2

MSSQL Error - Plugin - Location-Serials-Batches

Came right probable when updated the object 'dbo.BatCon'

MSSQL Error Post Batch Purchase Document - Error

The statement has been terminated.

> Violation of PRIMARY KEY constraint 'PK__BatCon__DB7D61DFCE4DB78F'. Cannot insert duplicate key in object 'dbo.BatCon'. The duplicate key value is (61).

Posted after second attempt

MSSQL Error - Import Stock

Setup ribbon Import - Stock - Tab delimited (*.txt) file

> Error 3The statement has been terminated.
> The INSERT statement conflicted with the FOREIGN KEY constraint "FK_DOCLINE_STOCK". The conflict occurred in database "MSSQL-HANDYMAN", table "dbo.Stock", column 'WStockID'.

Default " nounicode=true " - Setting in osf.ini file Errors in Firebird Database types

Replicated in osF5.1.0.127 since osFinancials5.1.0.16 displayed incorrectly, since unicode was introduced.

Currencies

osf.ini - " *nounicode=true* " - Default setting is Not Commented or Set to False

Database types

- Firebird Replicated issues
- MSSQL - Works

The Currency symbols is not displayed correctly (displayed as a " I " character) on Setup → Currencies screen. In Reports → Currencies and printed Document layout files, it displays the currency symbol as " ".

NOTE : To be able to use Currencies the Default setting " *nounicode=true* " needs to be changed to " *nounicode=false* " or commented (in Firebird databases).

This will cut-off the Reference number / Descriptions when printing some reports e.g. of Debtor Statements,, Creditor remittance advices, etc., if the Default setting osf.ini - " *nounicode=true* " is changed.

Setup Countries - Displays incorrect character " land Islands "

See - Setup Countries - Displays incorrect character " land Islands "

If the default setting " *nounicode=true* " is not uncommented in the osf.ini file, this replicate the error not displaying correctly.

Database types

- Firebird Replicated issues
- MSSQL - Works

If the default unicode setting in the osf.ini file is changed to " ;*nounicode=true* " is uncommented or set to false " *nounicode=false* " in the osf.ini file, these settings does not change the display of " land Islands ".

land Islands Displays incorrect character irrespective of unicode settings

Also replicated in the "Country field of Debtor / Creditor accounts s well as Delivery address tab.

Reports (Firebird)

Known issues - Firebird Reports - Nounicode settings - osf.ini-file

osf.ini - " *nounicode=true* " Default setting is Not Commented or Set to False the Reference number /

Descriptions will display 100% when printing some reports e.g. of Debtor Statements,, Creditor remittance advices, etc.

Database types

- Firebird Replicated issues
- MSSQL - Works

On the other hand to use Currencies in osFinancials5.1.0.100, the Currency symbols is not displayed correctly (displayed as a " I " character) on Setup → Currencies screen, Reports → Currencies and Document layout files.

To be able to use Currencies the Default setting " *nounicode=true* " needs to be changed to " *nounicode=false* " or commented.

This will cut-off the Reference number / Descriptions when printing some reports e.g. of Debtor Statements,, Creditor remittance advices, etc., if the Default setting osf.ini - " nounicode=true " is changed.

Sets of Books in the Setup → Reporting dates - Cannot Update - Unicode - Error - Refresh failed. Found 0 records

See - Sets of Books in the Setup → Reporting dates - Cannot Update - Unicode - Error - Refresh failed. Found 0 records

Database types

- Firebird Replicated issues
- MSSQL - Works

Default unicode setting in osf.ini file =" *nounicode=true* "

> Unicode - Error - Refresh failed. Found 0 records

Cannot set reporting dates in Setup → Reporting dates - produces errors when default setting in the osf.ini files is set to

> nounicode=true

Before in earlier versions in 2022 this error was replicated since the nounicode setting was implemented in osFinancials5.1.0.49

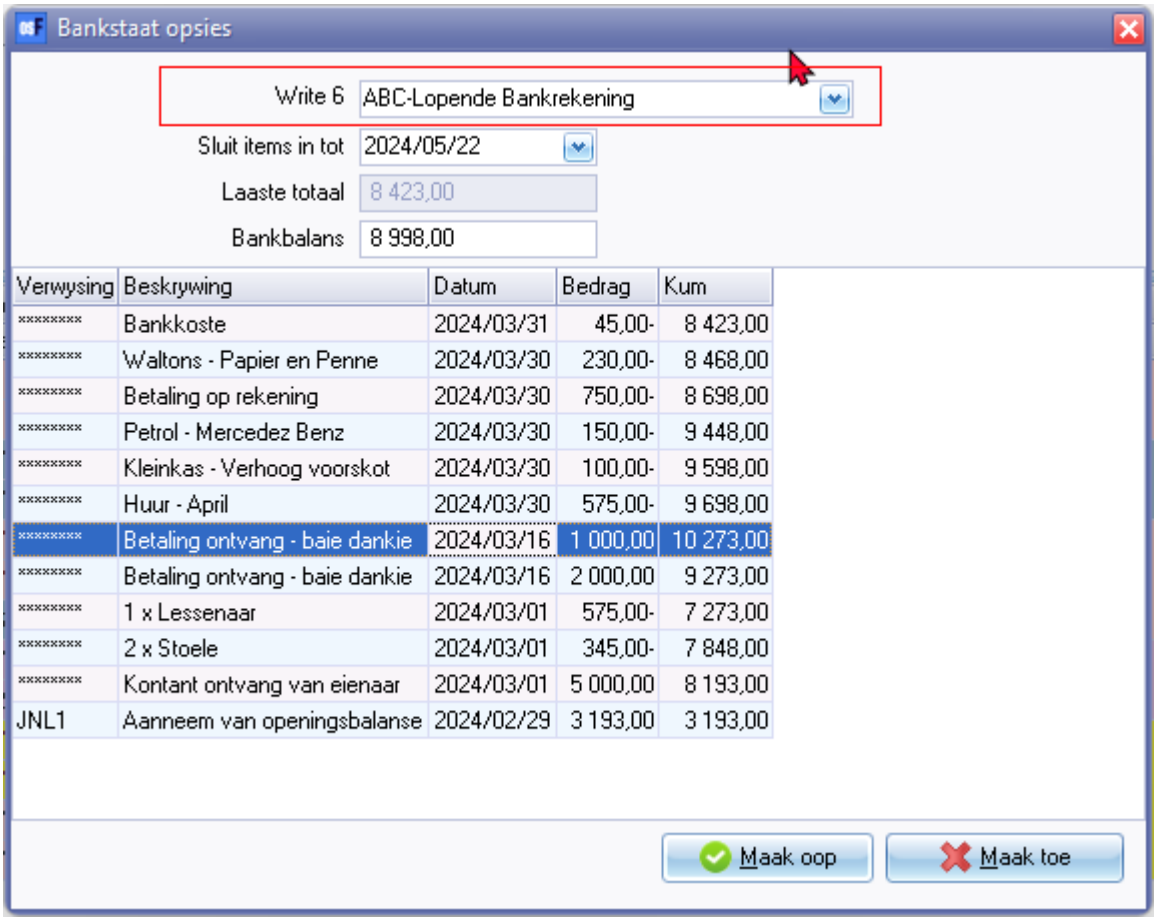
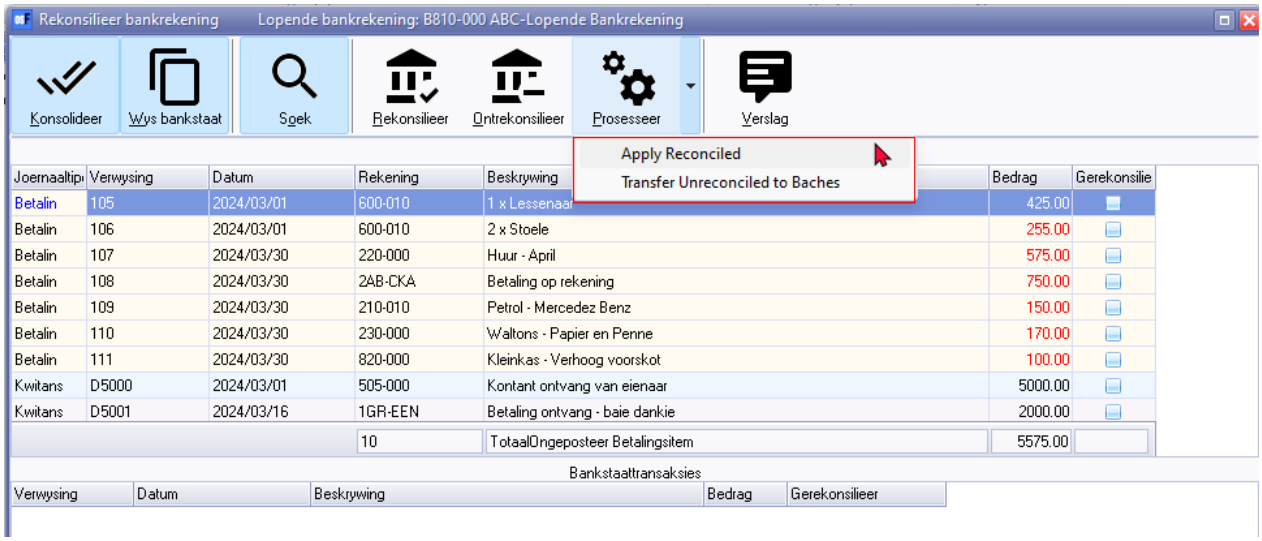
Translations - Bank recon (Default)

Bank account "*Bankrekening*" label changes to Write6 (Sometimes to Read6) when a Bank account is selected (where 6 is the record name ACCOUNTID in the ACCOUNT Table of the selected bank account.



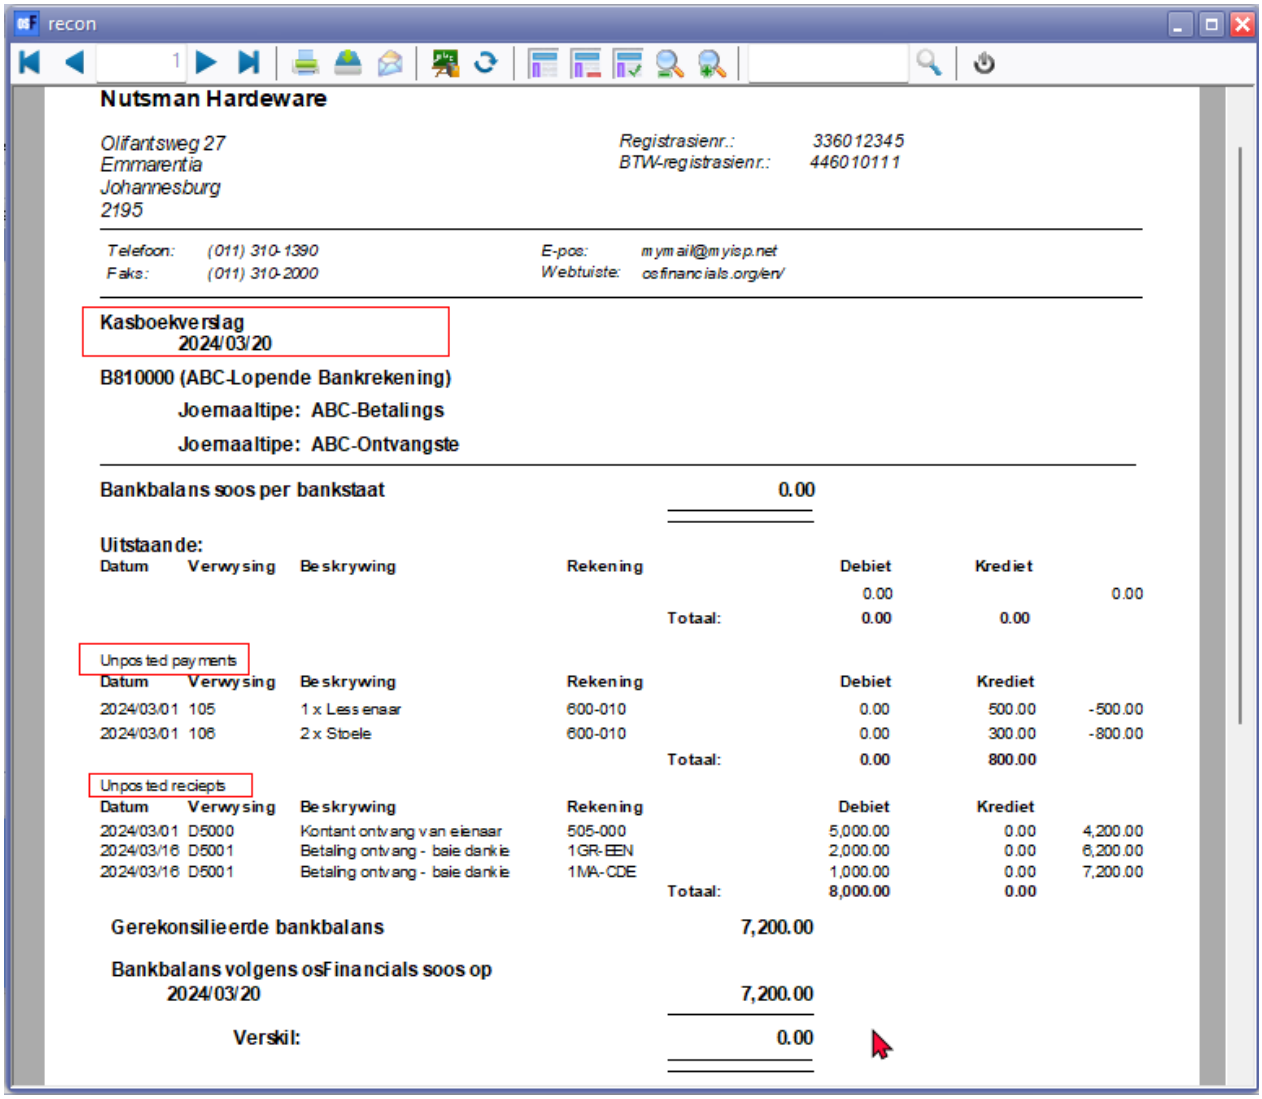
Process

- Apply reconciled
- Transfer Unreconciled to Batches



FIXED - Bank reconciliation report as at

Location: " ... \plug_ins\reports\GENERAL\documents\recon



Unposted payments 906447

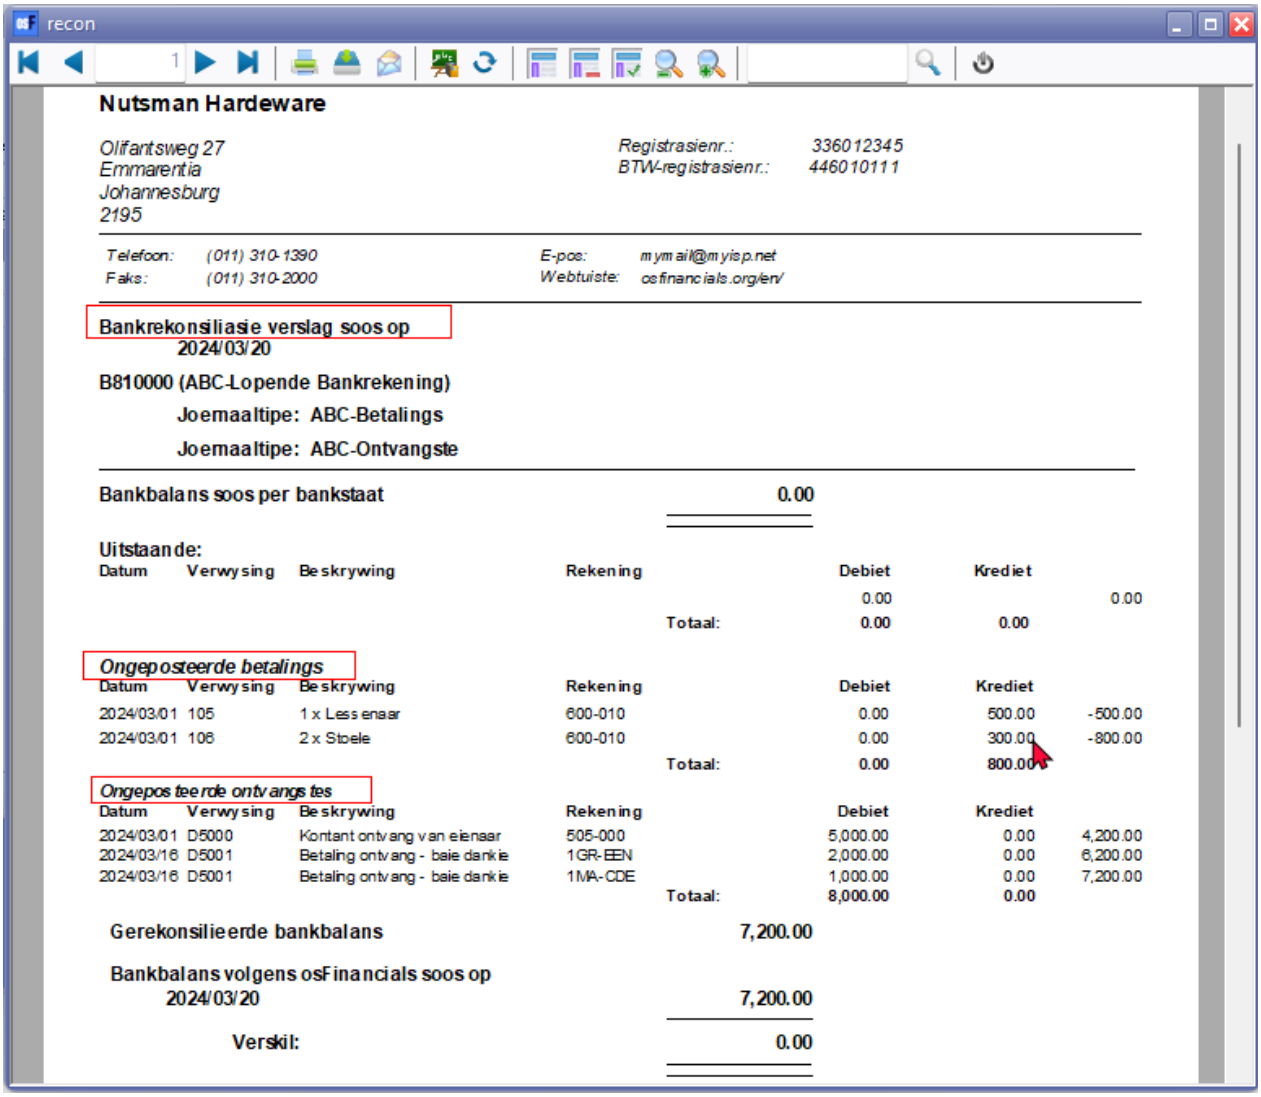
Unposted receipts 906448

Language : Kasboekverslag LabelID3014 changed in Afrikaans => Bankrekonsiliasie verslag soos op

Expressions changed :

TRpExpression55 CUSTOM('GETTEXTLANG',906447,'Unposted payments',0,0,0)

TRpExpression56 CUSTOM('GETTEXTLANG',906448,'Unposted receipts',0,0,0)



If the setting Print only if data available - Set to True for the following unposted subreports.

(SubReport-1UNPOSTEDPAYMENTS)

(SubReport-2UNPOSTEDRECEIPTS)

the Difference column will display a value as a result of the Reconciled balance

For this reason this setting is not applied.

MSSQL Error - Bank reconciliation report

Location : " ...\ plug_ins \ reports \GENERAL \documents \ recon

Prints in Firebird databases

In MSSQL databases produces error:

```
OPREPORT:Incorrect syntax near '|'.
```

OPREPORT Dataset SQL

```
select * from OPREPORT where STROPTION like  :BANKACCOUNT || 'BankBal%'
```

Tried to change SQL to accommodate the CONVAT Function (concatenate):

```
SELECT * FROM OPREPORT WHERE STROPTION LIKE CONCAT(:BANKACCOUNT, 'BankBal%')
```

Then it produces Error in MSSQL databases:

```
Type conversion error 'Val':Expression TRpExpression11
```

Could not did not fix the error in MSSQL at this stage

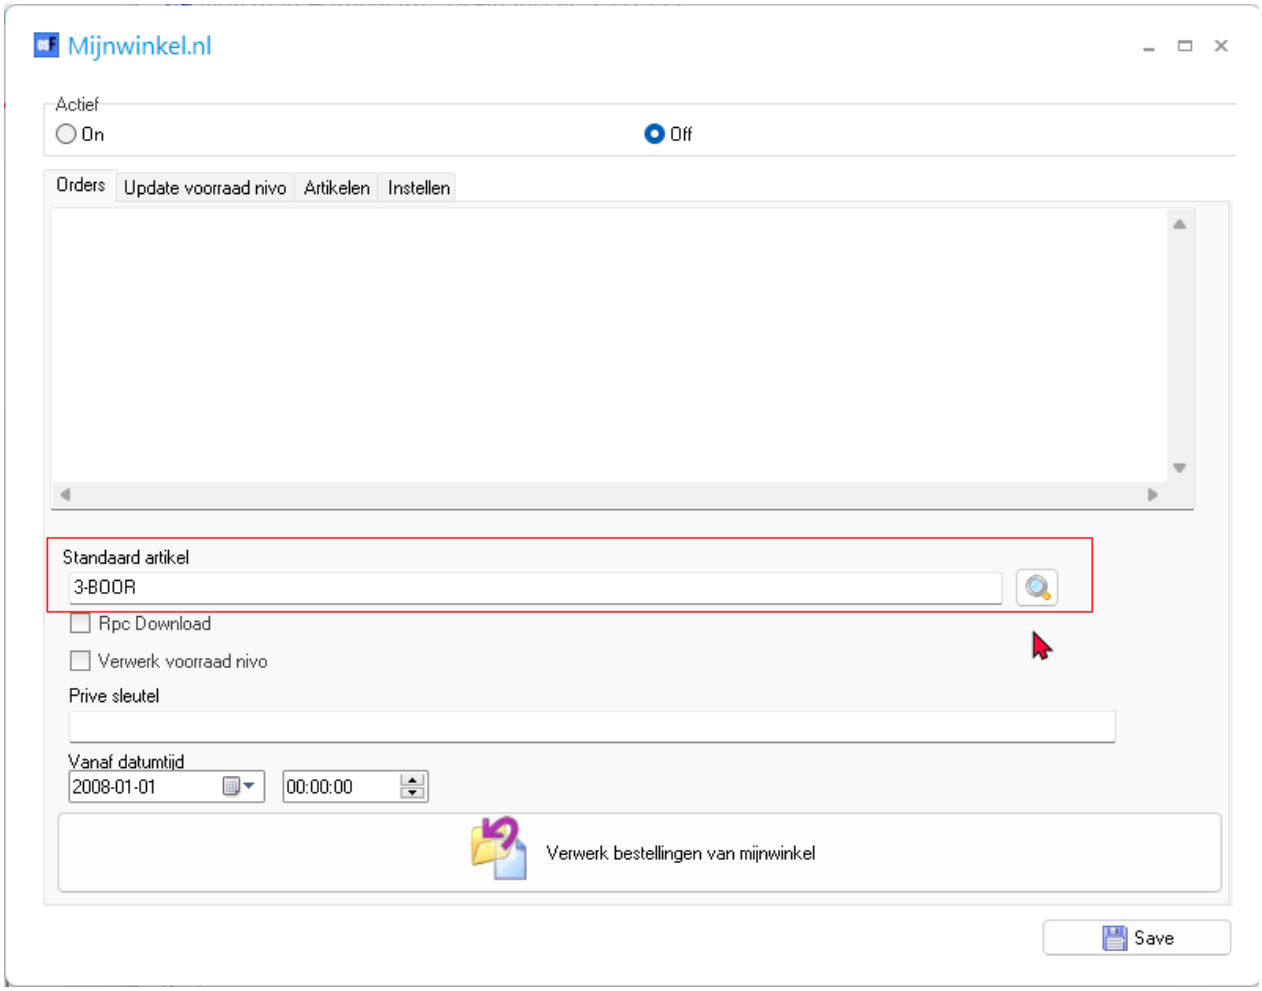
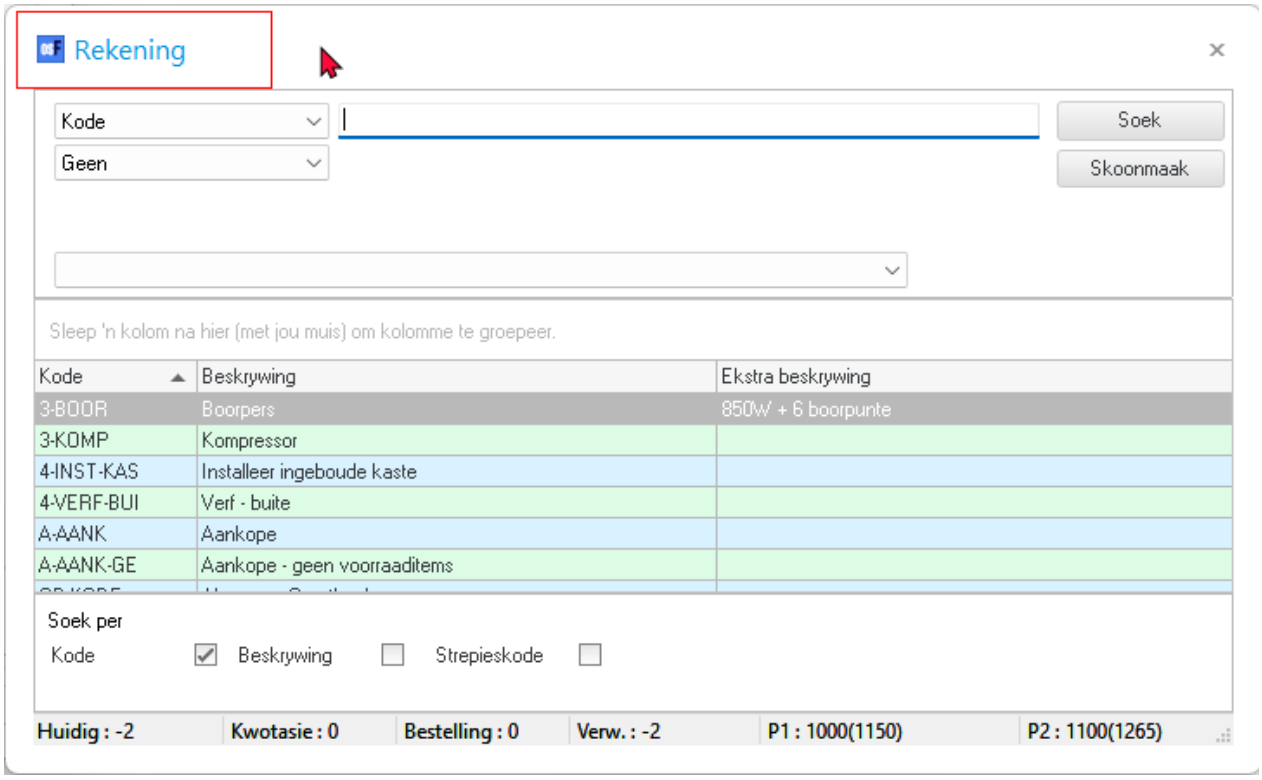
Mijnwinkel.nl plugin

Mijnwinkel.nl Plugin is included in osFinancials5 installations but Myshop.com not included in osFinancials in the Plugin → External links - menu. Myshop.com plugin is documented in the osFinancials shop

Menu: Plugins → External links → Mijnwinkel (Setup ribbon).



Standaard artikel lookup ewfers to account should probably refer to stock item



Myshop.com

Myshop.com Plugin not available in English or Translatable version in osFinancials installation.

Documentation on Webshop in English for Myshop.com

https://www.osfinancials.org/en/webshop/e-commerce/myshop.com-plugin

Myshop.com plugin (osf-boekhoudpakket-administratie.nl)

"Myshop.com plugin

This plugin can do this:

Selected products from osF can be exported into a csv file, which can be read by myshop.com.
The upload to Myshop.com can also be automated with this plugin.
Product image can be uploaded to a FTP server of your choose.
As an extra service we can host a FTP location for you.
You can import the orders based on products uploaded by osF, customer information and order status.
After importing sales into osF, you need to uplaod the productlist for updating the stock quantity in Myshop.com

If you got an existing Myshop.com webshop, you can select the productlist import for osF as an option.
We'll generate the Myshop products in osF for you, after that, you can sync the sales.

Last development:

Automatic stock update after a sale in Myshop.com.
Automatic stock update after a sale in osF (fysical shop/POS)
Importing sales direct as an invoice
Further whishes send in by users.

Plug-ins don´t need to be downloaded they are allready present in osF.

You will receive an unlocking code per email within one day after receiving payment.
WIth a push on the button you´ll activate the bought plugin."

BtwBE - Belgische BTW Plugin - Manual - Shop - Licence : Once-off - Supported language: Netherlands

De Belgische BTW Plugin biedt ondersteuning voor de specifieke BTW-regelgeving in België. Met deze plugin kunt u eenvoudig en nauwkeurig BTW-berekeningen uitvoeren volgens de Belgische voorschriften en rapportagevereisten.

Belangrijkste kenmerken:

- Automatische BTW-berekening: De plugin automatiseert het berekeningsproces voor BTW op basis van de Belgische BTW-tarieven en regels.
- BTW-rapportage: Het genereert rapporten die voldoen aan de BTW-rapportagevereisten van België, waardoor u tijd bespaart en nalevingsrisico's vermindert.
- Periodieke BTW-aangiften: Vereenvoudigde en nauwkeurige generatie van periodieke BTW-aangiften, waardoor u kunt voldoen aan de wettelijke verplichtingen voor het indienen van BTW-aangiften.

Met de Belgische BTW Plugin kunt u moeiteloos voldoen aan de complexe BTW-regelgeving in België, terwijl u tegelijkertijd uw BTW-processen stroomlijnt en risico's minimaliseert.

English text

Belgian BTW Plugin (English version of the Shop text) Plugin remains in Ditch for the Dutch market)

The Belgian VAT Plugin provides support for the specific VAT regulations in Belgium. With this plugin, you can easily and accurately perform VAT calculations according to Belgian regulations and reporting requirements.

Key Features:

- Automatic VAT Calculation: The plugin automates the VAT calculation process based on Belgian VAT rates and rules.
- VAT Reporting: It generates reports that comply with Belgium's VAT reporting requirements, saving you time and reducing compliance risks.
- Periodic VAT Returns: Simplified and accurate generation of periodic VAT returns, allowing you to comply with legal obligations for filing VAT returns.

With the Belgian VAT Plugin, you can effortlessly meet the complex VAT regulations in Belgium while streamlining your VAT processes and minimizing risks.

Documentation : Help documentation

Simplify your product ordering process with our "*Quick Order*" plugin. This plugin offers a quick and convenient method for ordering products from your PC or using a handheld PC or smart phone (through Remote Desktop / Terminal Services or RDP).

- You walk with a handheld through your warehouse, and scan or selected the product to order while standing next to the shelf.
- You see immediately actual stock numbers so that a good decision of the quantity to order can be made.
- After pressing a button it creates an order with the specified numbers.
- After which only a few clicks of the mouse will break down the order by vendor.

Optimize your ordering workflow with the "*Quick Order*" plugin, providing you with a seamless and efficient solution for managing your product orders.

ADDED - GDI scaling (Graphics Device Interface scaling) support

ADDED - GDI scaling (Graphics Device Interface scaling) support

osFinancials5.1.0.109 / TurboCASH5-2025 supports GDI scaling, or Graphics Device Interface scaling. It refers to the process of adjusting the size of graphical elements on a computer screen based on the display resolution and pixel density. The Graphics Device Interface (GDI) is a component of the Windows operating system responsible for rendering graphical elements such as text, images, and graphical user interface (GUI) elements.

As display technologies advance, screen resolutions increase, and devices with different pixel densities become more prevalent, it becomes essential to scale the graphical elements appropriately. GDI scaling helps ensure that these elements appear at a reasonable size and are visually consistent across various

displays.

Windows operating systems include a feature called Display Scaling, which allows users to adjust the size of text, apps, and other items on the screen. GDI scaling plays a role in this process by ensuring that the graphical elements are resized correctly without losing clarity or becoming pixelated.

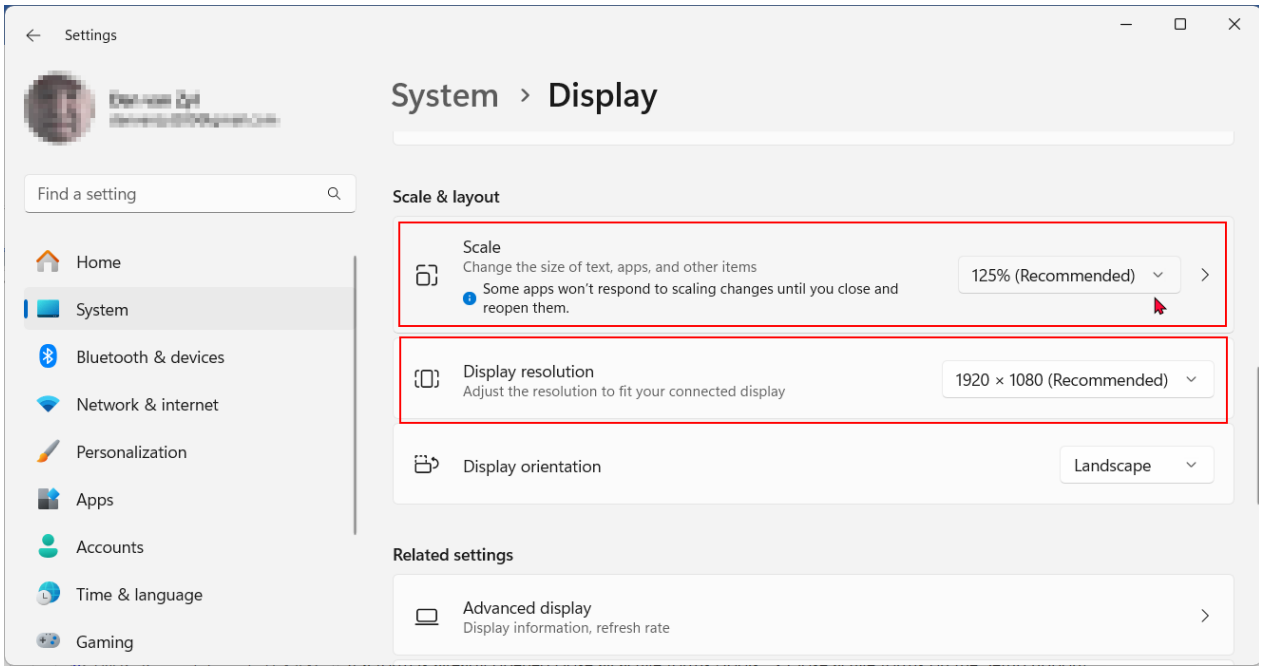
In essence, GDI scaling helps provide a more consistent and visually pleasing user experience on displays with different resolutions and pixel densities, ensuring that the graphical elements are appropriately sized and easy to read or interact with.

Additional Zoom in / Zoom out features

In addition to the Display resolution and scaling settings, in osFinancials5.1 / TurboCASH5, there is an additional feature in some components that supports the zoom in and zoom out functionality. This feature allows users to adjust the font size in Spreadsheet reports, Spreadsheet Export/Import functions, and the Ledger analyser to view and analyse financial reports (such as the Trial balance, Income Statement and Balance sheet). By using the zoom in feature, users can increase the font size for better readability, while the zoom out feature enables a decrease in font size.

This flexibility in adjusting the data font size enhances the user experience when working with Spreadsheet reports and financial statements in osFinancials5.1 / TurboCASH5-2025, providing customization options to suit individual preferences or specific viewing needs.

Windows Display Settings - Scaling



Windows Display Settings

The basic Windows Display Settings may depend on your device, system settings and monitors connected and configures on your system.

Some common options is:

- Display resolution = 1920 x 1080 (Recommended) + Scaling 125% (Recommended) + Scaling 150% + Scaling 175%
- Display resolution = 1680 x 1050 + Scaling 125% (Recommended) + Scaling 150% + Scaling 175%
- Display resolution = 1600 x 900 + Scaling 125% (Recommended) + Scaling 150% + Scaling 175%
- Display resolution = 1400 x 1050 + Scaling 125% (Recommended) / Scaling 150% / Scaling 175%
- Display resolution = 1400 x 900 + Scaling 100% (Recommended) + Scaling 125% / Scaling 150%
- Display resolution = 1360 x 768 + Scaling 100% (Recommended) + Scaling 125%

Some additional information on these settings:

1. Display Resolution: This represents the number of pixels on your screen, typically denoted by the width and height in pixels. For example, "1920 x 1080" means the screen has a resolution of 1920 pixels in width and 1080 pixels in height.
2. Scaling: Scaling is the adjustment of the size of text, apps, and other items on the screen. This is particularly important on high-DPI (dots per inch) displays to ensure that content appears at an optimal size. The scaling percentages you mentioned (e.g., 125%, 150%, 175%) indicate how much the interface elements are scaled compared to their original size.
3. Recommended Settings: The "Recommended" settings are often suggested by the operating system based on your hardware configuration and display properties. These settings are intended to provide an optimal balance between readability and screen real estate.
4. Custom Settings: Users can customize display settings based on their preferences and the capabilities of their monitors. For example, choosing a lower resolution with higher scaling can make text and icons larger, which may be useful for individuals with visual impairments.
5. High-DPI Displays: Scaling becomes especially important on high-DPI displays, where the pixel density is higher. Without proper scaling, text and graphical elements might appear too small and be challenging to read or interact with.

Users often choose display settings based on their preferences, the size of their monitor, and individual visual comfort. The goal is to find a balance between having enough screen real estate and ensuring that the displayed content is easily readable and usable. Keep in mind that the specific options available may vary depending on your version of Windows and the capabilities of your graphics hardware.

Windows Display Settings Tested in osFinancials5.1.0.109 / TurboCASH5-2025

osFinancials5.1's default themes and configuration settings are optimized for a display resolution of 1920 x 1080 with a scaling of 125%. If you decide to use a higher scaling percentage (e.g., 150%, 175%) or choose a different display resolution and / or scale settings, you may encounter display issues with some large grid and forms (e.g. Debtors, Creditors, Stock items and Documents) within the osFinancials5/TurboCASH5-2025 interface.

Adjusting these settings should help ensure a proper display and functionality when using different scaling options or display resolutions beyond the recommended 1920 x 1080 with 125% scaling.

Display resolution = 1920 x 1080 (Recommended) + Scaling 125% (Recommended)

osFinancials5.1.0.109 interface, grids and forms display great.

But when scaling of 150% or 175% is applied, similar display issues as with the Display resolution = 1366x768 + Scaling 100% on certain grid / forms may occur.

When opening these Debtor / Creditor form Stock item grid and form Documents grid and form the Unpin Ribbon or the Tablet mode setting in the Colors.ini file in the Theme folder may address some of these issues.

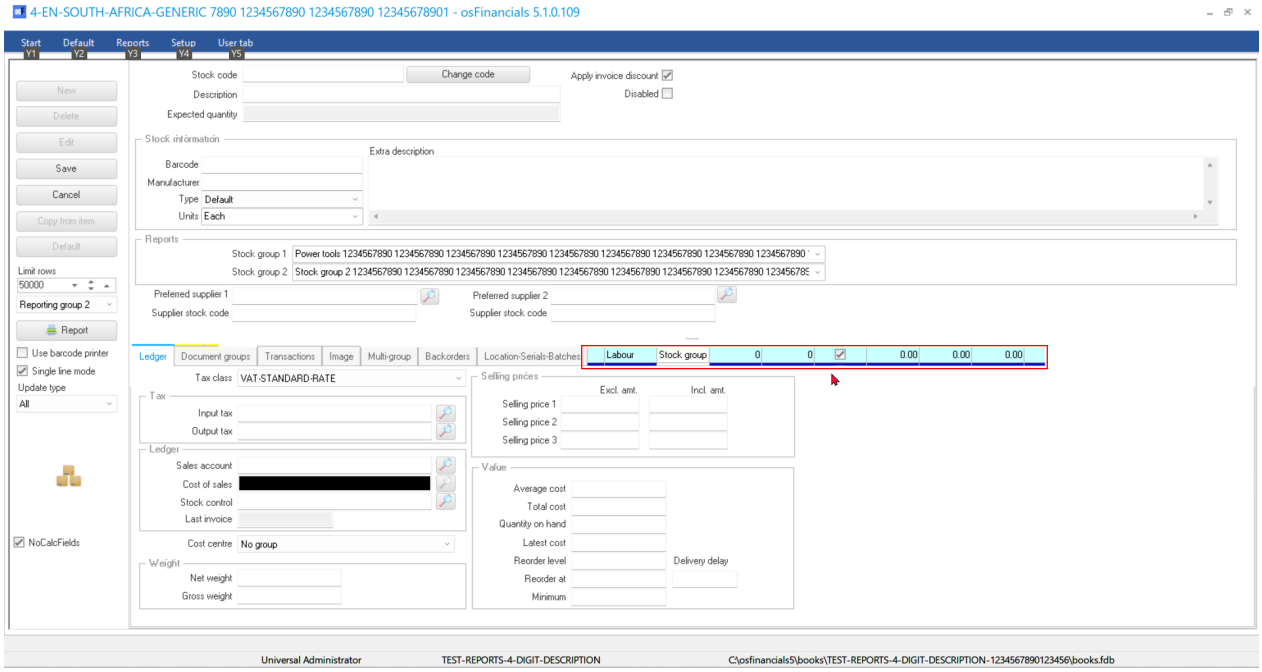
When opening these forms and grids, in the default mode (Pin the ribbon - Show ribbon) there could be rendering display issues.

To address this, you can follow these steps:

1. Unpin - Hide the ribbon or use Tablet mode before accessing these grids and forms.
2. If a form is already opened close all active forms (Tools → Close active forms (Setup ribbon)).
3. Unpin - Hide the ribbon or use Tablet mode (style=4) in the colors.ini file.
4. Automatically hide Taskbar
5. Relaunch the grids and / or forms. The display should be OK.

Stock item form - Display resolution = 1920 x 1080 (Recommended) + Scaling 125% (Recommended)

It appears that the Stock Edit form at Display resolution = 1920 x 1080 (Recommended) + Scaling 125% (Recommended) list some grid columns after the last tab (in this example, Location-Batches-Serials tab).



Grids and Forms Display resolution = 1366 x 768 + Scaling 100%

Similar issues appear at various Windows Display Settings for all options up to Display resolution = 1920 x 1080 (Recommended) + Scaling 150% / 175%, but

Display resolution = 1920 x 1080 (Recommended) + Scaling 125% seems to display correct.

Debtors / Creditors

FIXED / ADDED - Themes

Themes

Theme screenshots - Screenshots of the installed themes and new themes (about 34 themes). A sideshow of the themes rotating is available in osfinancials-themes-slides.zip file

Known issues - Themes - Image strips excludes reports path. If images is removed from the theme folder, the imagestrip defaults to the classic theme, or other theme.

Creditor control icon not loading correctly - Classic icon in some themes - Fixed in osFinancials5.1.0.109 - but with the osFinancials5.1.0.127 update does not include these fixes.

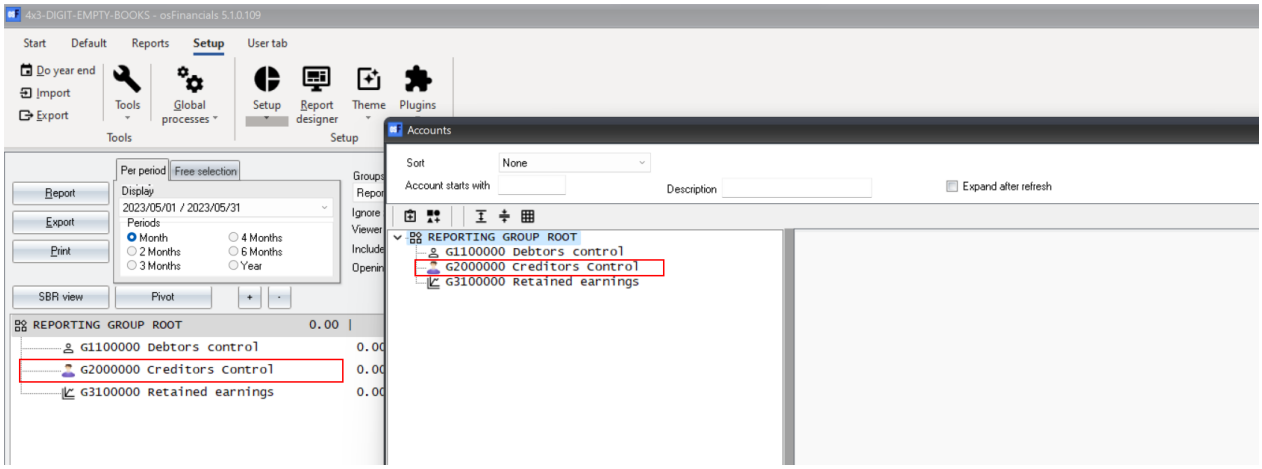
FIXED - Themes

FIXED - Creditor control icon not loading correctly

The creditor icon - does not change when creating an image strip in all themes - Setup → Accounts and in Ledger viewer - It is not correctly rendered / displayed.

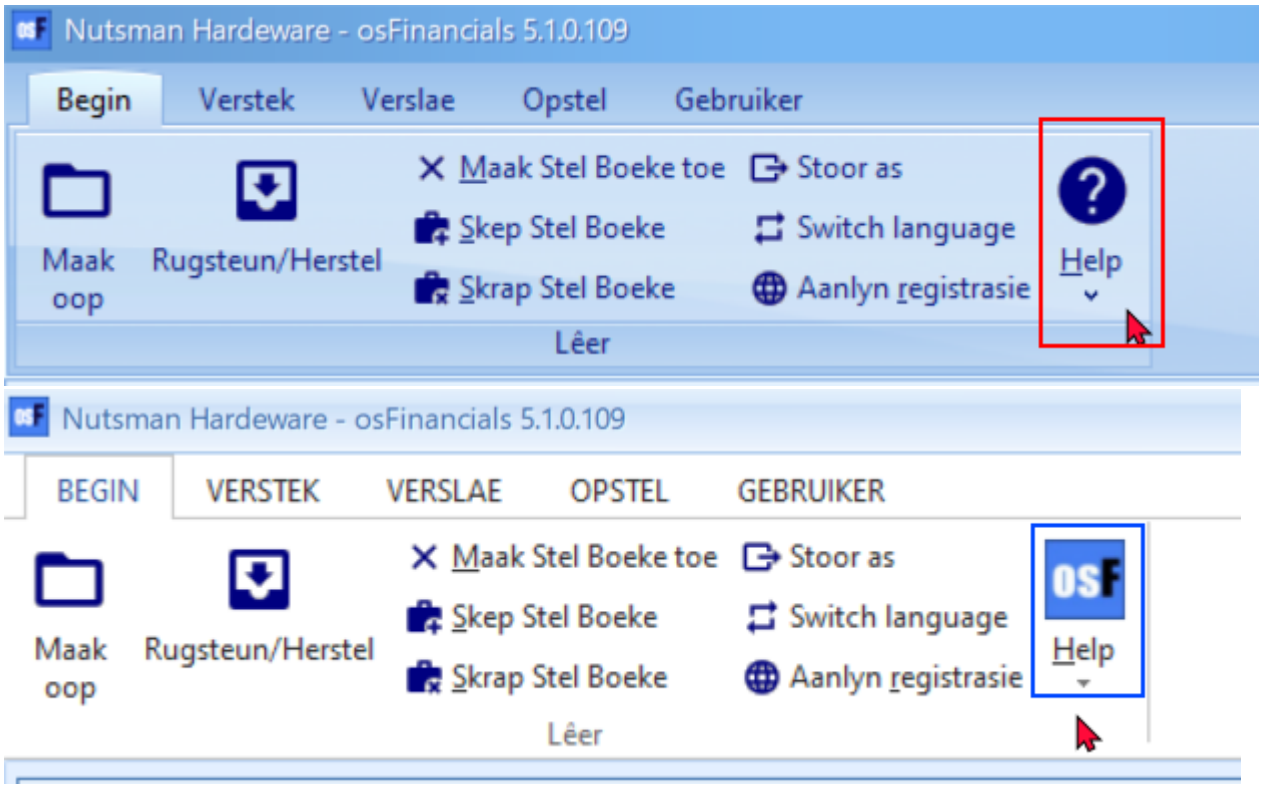
Checked properties of creditor svg files

Replaced the Acccreditors.svg icons and created new image strips



FIXED - Help.svg with osF icon

The osF icon is displayed on most themes instead of Help.svg icons.



For consistency the Help.svg icon was removed to display the osF icon from the following themes folders:

1. Glass
2. Silver
3. Soft-blue

4. Material-Blue
5. Material-Navy
6. Material-Maroon

New image strips created to update the changes.

Designing Themes with SVG Material icons

Designing themes with SVG Material icons can add a visually appealing and consistent look to your website or application. Material icons are a set of scalable vector icons created and maintained by Google. They are designed to work well with Material Design, providing a clean and unified visual language. Here's a guide on how you can integrate SVG Material icons into your theme design:

1. Include Material Icons Library: Start by including the Material Icons library in the <head> section of your HTML document. You can do this by adding the following line:

   html

   ```
   <link rel="stylesheet" href="https://fonts.googleapis.com/icon?family=Material+Icons">
   ```

2. Choose Icon(s): Visit the Material Icons website to explore and choose the icons that best fit your theme. You can search for icons and click on them to get the SVG code.
3. Embed SVG Code: Once you've selected an icon, copy the SVG code provided on the Material Icons website. Paste the SVG code directly into your HTML where you want the icon to appear. For example:

   html

   ```
   <i class="material-icons">icon_name</i>
   ```

   Replace icon_name with the actual name of the icon you chose.

4. Styling: Apply styles to your icons using CSS. You can customize the size, color, and other properties. For example:

   css

   ```
   .material-icons {
      font-size: 24px; /* Adjust the size as needed */
      color: #333;     /* Set the color */
   }
   ```

5. Responsive Design: Ensure that your icons are responsive. You can use media queries or relative units (e.g., percentage) to make sure the icons adapt to different screen sizes.

6. Icon Theming: If your theme has specific color schemes, you can adjust the icon colors to match. You may also consider creating variations of icons for different states (e.g., active, inactive).
7. Accessibility: Ensure your icons are accessible. Add appropriate ARIA roles and labels for screen readers to enhance accessibility.
8. Animation (Optional): If you want to add some interactivity, you can use CSS animations or JavaScript to create animated effects when interacting with the icons.
9. Testing: Test your theme across different browsers and devices to ensure consistent and reliable performance.

By following these steps, you can effectively integrate SVG Material icons into your theme design, providing a visually cohesive and user-friendly experience.

Current Themes

Themes Blue, Glass, Silver Soft-blue with custom colors the Create image strip looses the reports material icons and on Reports menu it reverse back to classic icons.

FIXED - Themes

Themes fixed for 2025 osFinancials5.1/TurboCASH5-3 installs - osFinancials5.1/TurboCASH5-2025

Obsolete folders and files to Delete in ...bin/themes folder

- My-Material
- svg-theme
- svg-theme.zip

Known issues - Classic Report icons display in SVG themes

If all the all icons is deleted in a theme folder just to include image strips (fst and dfm files) - then the Reports menu, Userreports menu and Spreadsheet reports menu display classic icons and not the svg icons.

NOTE with the latest installs and updates, the Blue, Glass, Silver Soft-blue themes with custom colors looses the reports material icons and on Reports menu it reverse back to classic icons. When Creating the image strip. (only image strips and no svg icons were included in these respective theme folders).

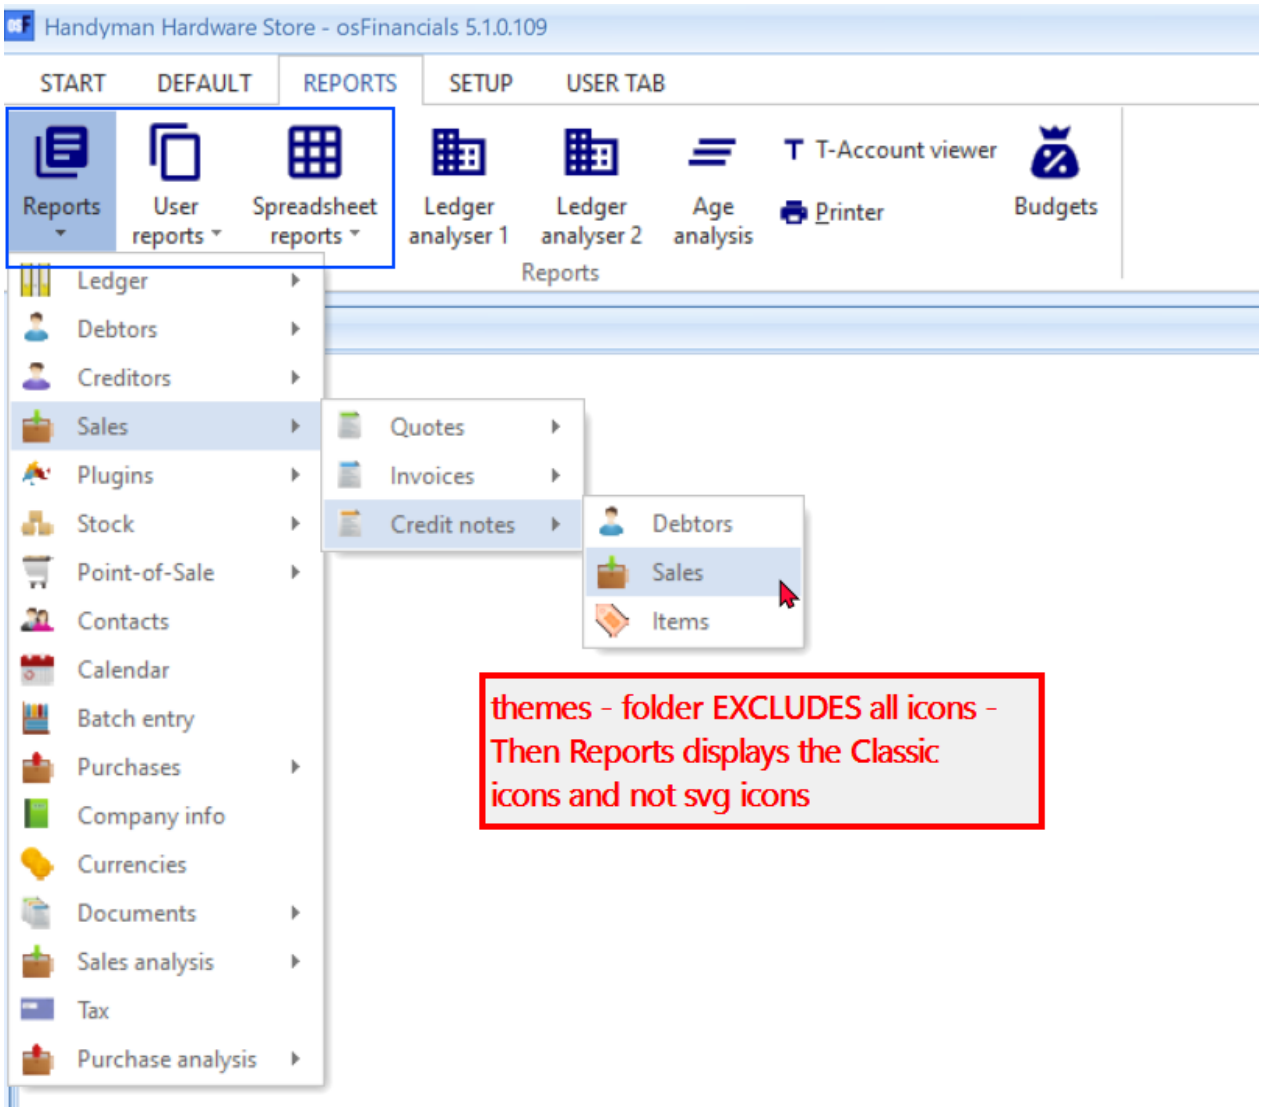
To Fix this - Had to bring back the svg icons from external source (folders) into these theme folders to display the original svg icon (after image strip was created.

theme folder with no icons content:

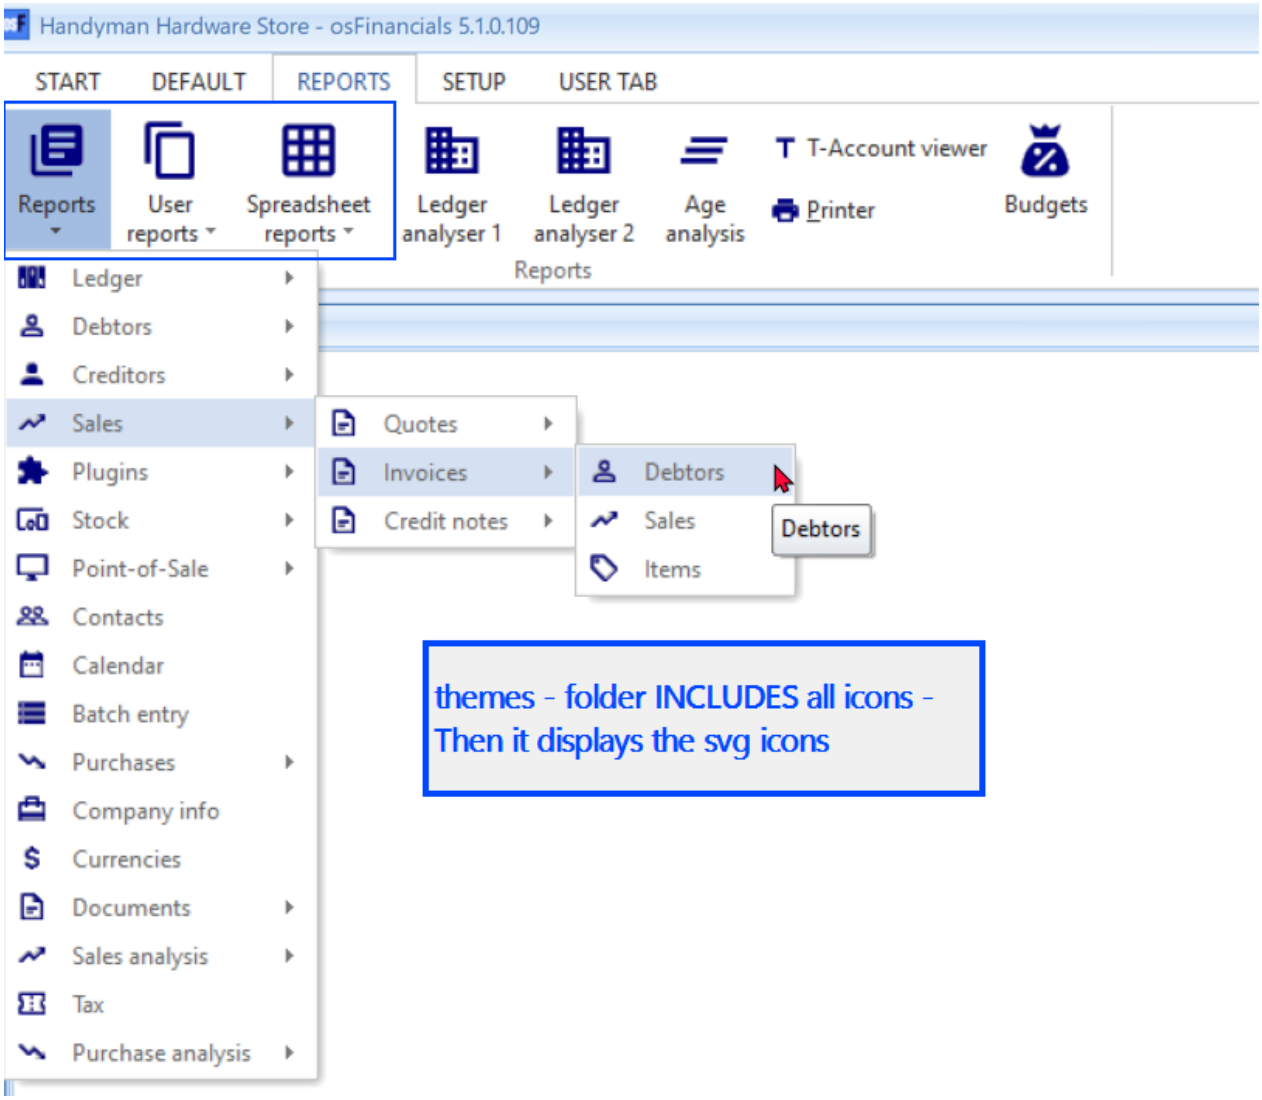
1. BatchEnabledButtons.fst
2. ilbandlarge.fst

3. ilbandsmall.fst
4. ImageList1.fst
5. BatchEnabledButtons.dfm
6. ilbandlarge.dfm
7. ilbandsmall.dfm
8. ImageList1.dfm
9. BackGround1.Jpg
10. BackGround2.Jpg
11. colors.ini

Classic icons for Reports menu, User reports menu and Excel reports menu displayed when no images is included in the respective themes folder:

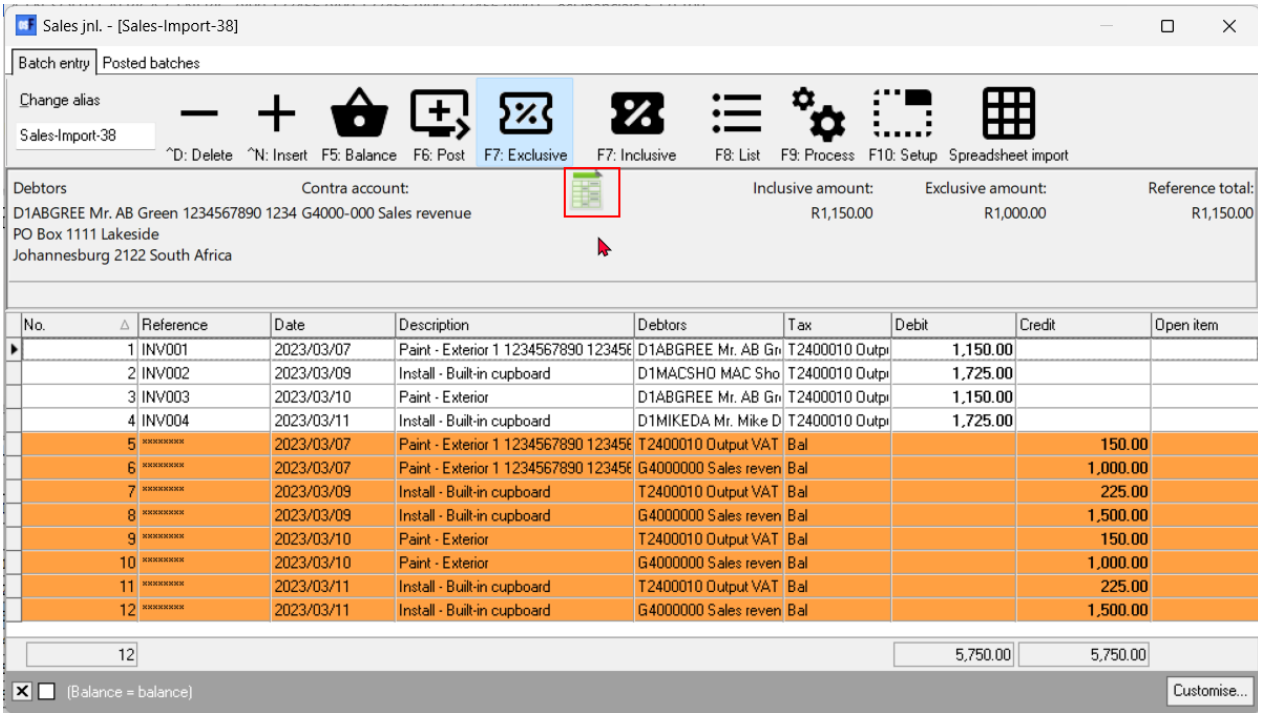


To display the correct svg icons for Reports menu, User reports menu and Excel reports menu, the icons needs to be included in the respective themes folders:



sDefaultPainters - Displays obsolete icon in Batch entry screens

sDefaultPainters - Displays icon in all Batch entry screens.



Theme skins - Incompatible

Blueprint - Messages and some labels unreadable

DarkSide - Pivot table too dark and some text not readable

DevExpressDarkStyle - Messages and some labels unreadable

HighContrast - Messages and some labels unreadable + Pivot table too dark and some text not readable

MetropolisDark - Messages and some labels unreadable + Pivot table too dark and some text not readable

Pumpkin - Pivot table too dark and some text not readable

Office2016Dark - Messages and some labels unreadable + Pivot table too dark and some text not readable

Sharp - Pivot table too dark and some text not readable

SharpPlus - Pivot table too dark and some text not readable

VisualStudio2013Dark - Messages and some labels unreadable + Pivot table too dark and some text not readable

Dark themes - Some screenshots

VisualStudio2013Dark

FIXED - Firebird databases - Upgraded to Firebird 2.1 ODS 11.1.

Upgraded to Firebird 2.1 ODS 11.1.

Creating a blank osFinancials5 database, defaults to Firebird 2.1 ODS 11.1. Also implemented in TurboCASH5-2025

Firebird 1.5 is designated ODS 10.1

All other older databases, including tutorials, is Upgraded to Firebird 2.1 ODS 11.1.

All databases (Sets of Books) available for download in the Creation wizard, is updated to Firebird 2.1 ODS 11.1 and the start of the Financial year is set to 2022/XX/XX.

If the set of books for your language and or country, is not available in the books directory, you may select any of the available Firebird Sets of Books and linked languages available as a free download.

All firebird database types available for download (Create a Set of Books -default option), is upgraded from firebird version 1.5 (ODS version - 10.1) to Firebird version 2.1 - (ODS version - 11.1)

Created with the Standard Edition of HelpNDoc: Protect Your Confidential PDFs with These Simple Security Measures

ADDED / Fixed - Languages labels

Language changelog

The language files updates may need to be merged after osFinancials5.1.0.189 - Changes to language files before osFinancials5.1.0.127 update not included in osFinancials5.1.0.189 update install.

Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/languages

Updates languages

Location : " ... \ bin \ languages \

Update Afrikaans language

- LabelID3642 Maak tafelbewegings skoon => Maak tabelbewegings skoon - Changed back to Maak tafelbewegings skoon since this is related to tables and seats for the HORECAPOS plugin.
- LabelID21073 - Shows the system print dialog, or a custom print dialog => Wys die stelseldrukdialoog, of 'n pasgemaakte drukdialoog
- LabelID906105 - BTW per priode changed to BTW per periode (Fixed languages typo in Afrikaans)
- LabelID345 is set to singular Groepe => Groep
- LabelID1718 Verkoopspersoon => Verkoper: - Salesperson: - label cuts off in Afrikaans - on Calendar appointments screen.
- LabelID3587 - Voeg merker toe - Changed label to + Merker - Afrikaans to fit in button CRM Plugin

- LabelID3014 - Kasboekverslag => in Afrikaans to Bankrekonsiliasie verslag soos op
- LabelID2186 Bankrekonsiliasie verslagopsies => Bankstaat opsies -
- LabelID2205 Verstek bankrekonsiliasie metode changed to Verstek bankrekonsiliasie - Label was too long for System parameters screen Default bank reconciliation

Update English languages and Afrikaans language

Changed Receipts options -

LabelID 1314 Receipts options changed to singular, => Receipt options. The Receipt options screen select the options to print one receipt.

Bank account recon options - Caption in titlebar - English language

Language labelID 2186 Bank account recon options => Bank statement options -

The changed caption in the titlebar "*Bank statement options*" should then be fit to accommodate both options :

1. Bank import plugin where bank transactions is imported from bank statements, or;
2. Bank reconciliation default method (since reconciling the bank transactions with bank statements).

LabelID3275 - Show refs for account => Show references for account

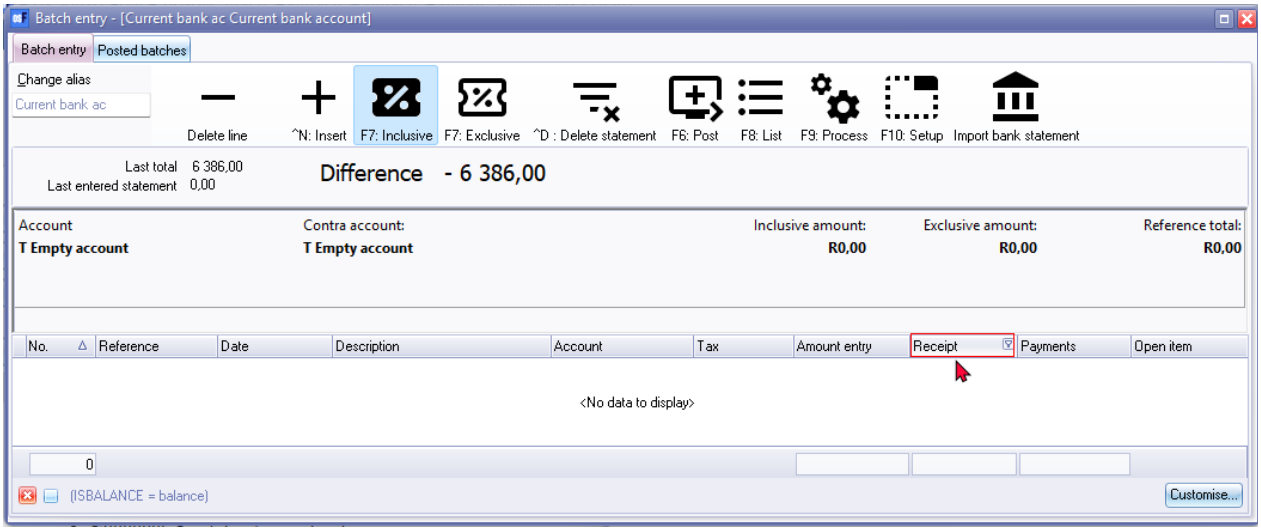
Created with the Standard Edition of HelpNDoc: Create help files for the Qt Help Framework

Known issues - Language label inconsistencies

Receipt / Receipts

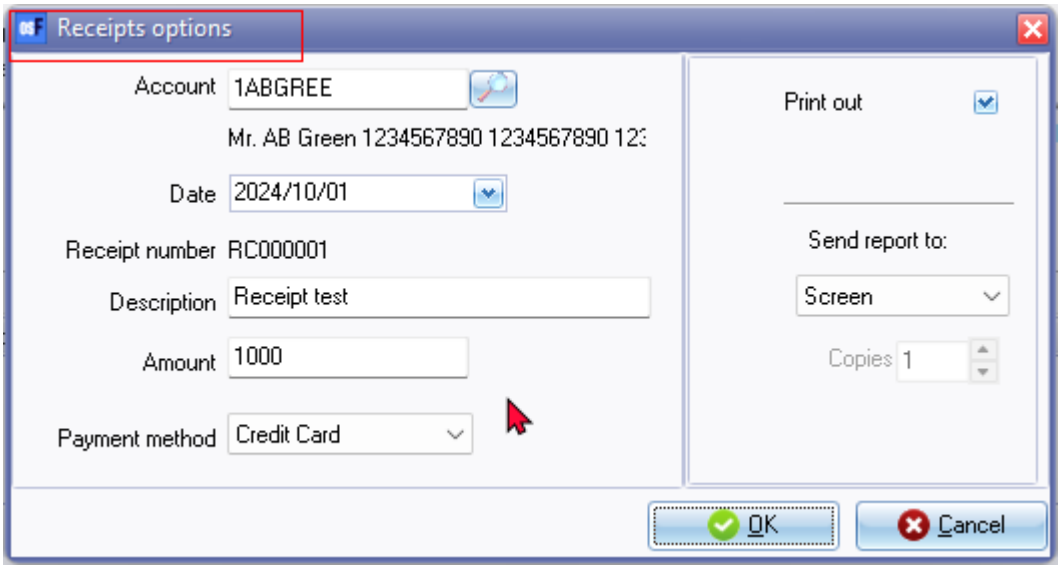
Bank import plugin it refers to Receipt LabelId 1100 used for Receipt. Receipts label ID 2233 is used in other screens such as Receipts journal and label ID 2232 such as Payments journal.



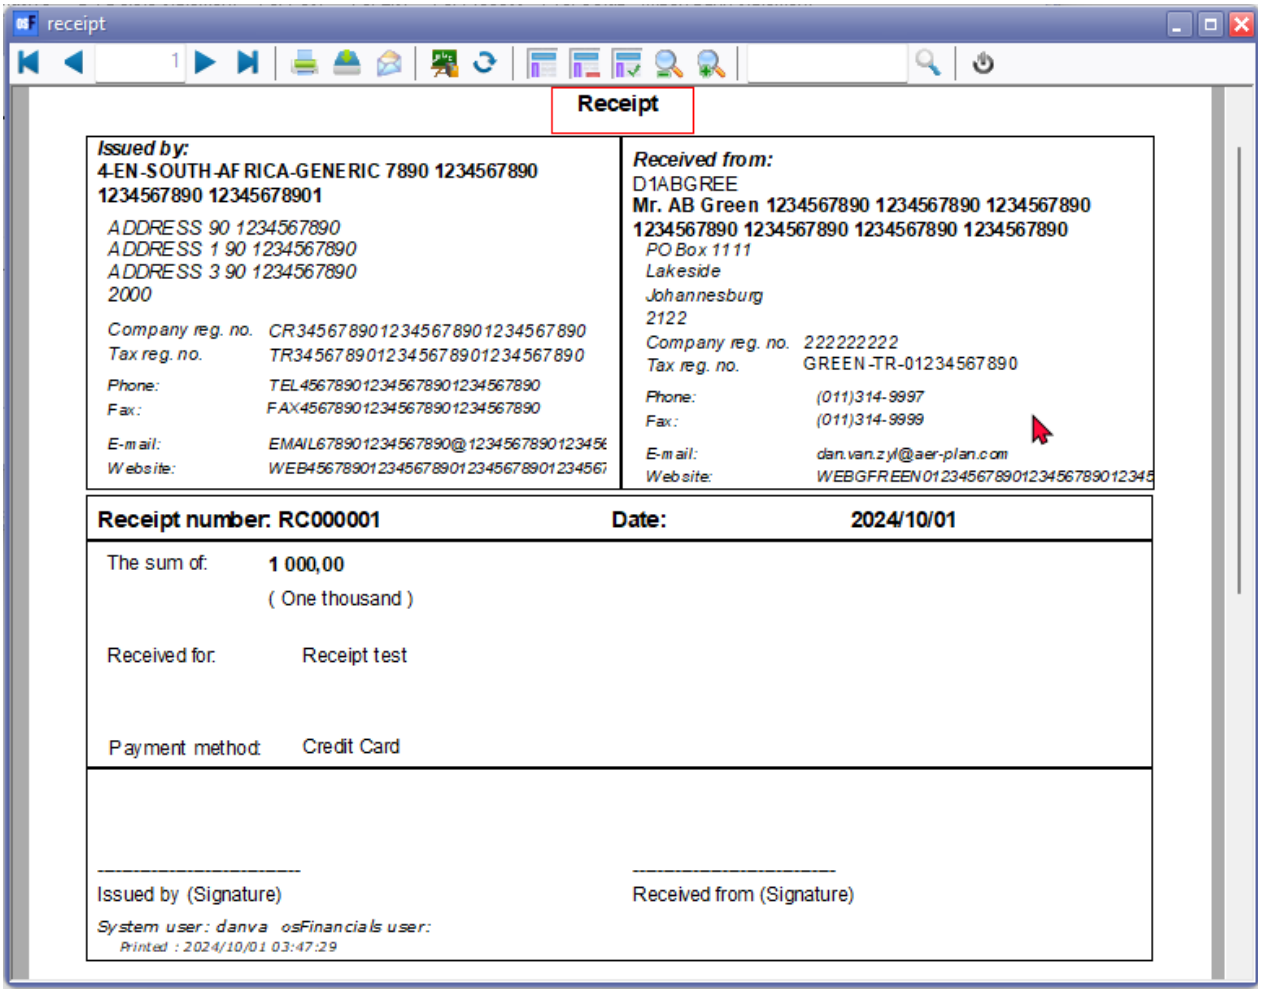
Receipt LabelId 1100 is in the singular form, changing this label, causes Receipts to display when the Print receipt option is used.

This label in the Receipt column may need to be changed in the osFinancials5.exe to be consistent with the Payments column. Also replicated in / TurboCASH5-2025.

This will resolve issues relating to other language dialects, such as Afrikaans, French, Spanish, etc.



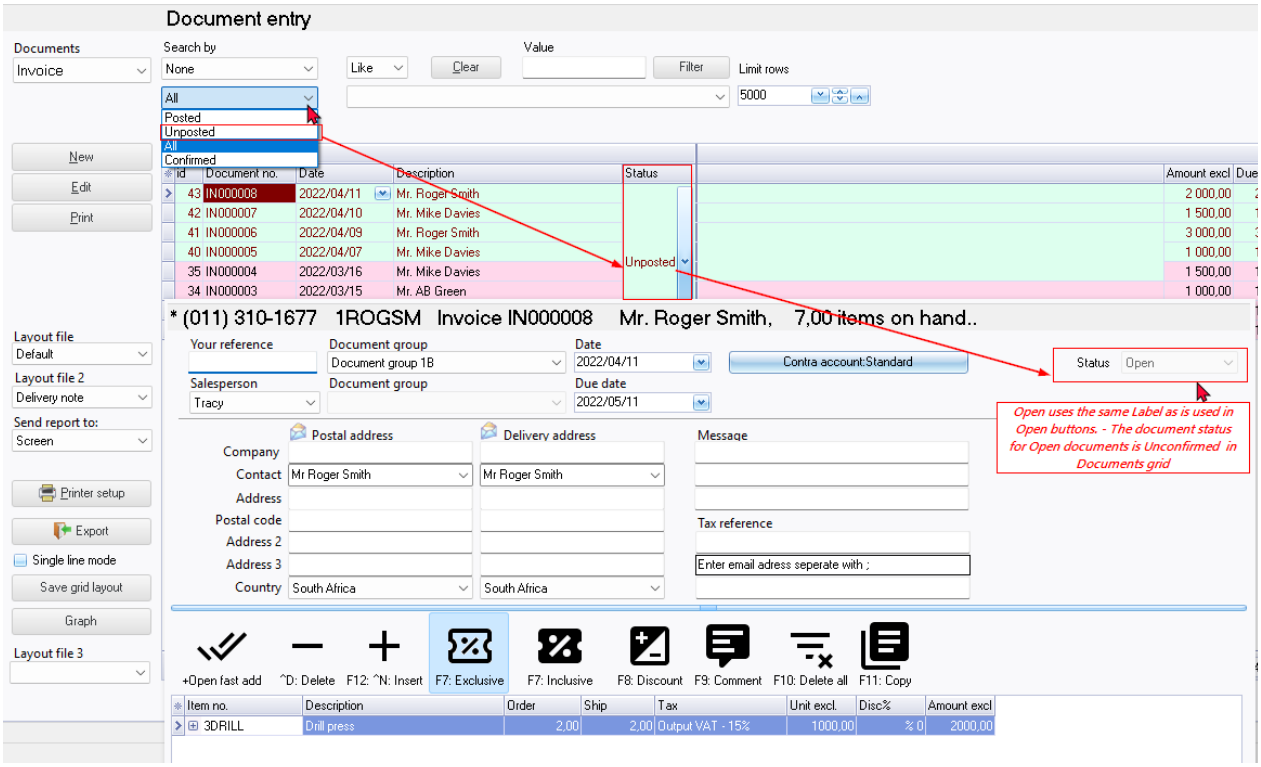
Receipts options (LabelID 1314) title bar caption is changed in the language file to Receipt options since this options screen is used to generate a single transaction and print a receipt.



This inconsistency can lead to confusion in other language dialects like Afrikaans, French, Spanish, etc.

Document Status - Open

Open uses the same Label as is used in Open buttons. The LabelID could be LabelID 163,, LabelID 20120 or LabelID 20142 - The document status for Open documents is Unconfirmed in Documents grid.



In the Document entry form's header refers to Open (LanguageID's 163, 20120 or 21042)., which is used for the Open button on most screens. There is LabelID 580, Open for posting. Unposted (LabelID's 962 or 1097 shows in the Status column of documents grid.

This inconsistency can lead to confusion in other language dialects like Afrikaans, French, Spanish, etc.

Created with the Standard Edition of HelpNDoc: Easy CHM and documentation editor

NEW - Empty Sets of Books - Supports up to 8 digit main accounts and 3 digit sub accounts

---

NEW – 4 Digit Chart of Accounts – with larger description fields

These account codes and longer descriptions in osFinancials5/TurboCASH5-2025 provide flexibility for creating and customizing the Chart of Accounts to meet specific requirements, accounting frameworks, and standards, including taxonomies such as GAAP, IFRS (full), and IFRS for SMEs. This customization takes into account language variations and jurisdiction-specific considerations.

See - Generally Accepted Accounting Principles (GAAP) and International Financial Reporting Standards (IFRS)

- Universal chart of accounts is suitable for use with IFRS, US GAAP and other comparable accounting standards. https://www.ifrs-gaap.com/universal-chart-accounts

- IFRS® Sustainability Disclosure Standards around the world - https://www.ifrs.org/ifrs-sustainability-disclosure-standards-around-the-world/

The following databases were created using the EMPTY-BOOKS-4X3-DIGITS Firebird Database type which supports longer descriptions:

- 4-EN-SOUTH-AFRICA-GENERIC.zip: This generic Set of Books includes 4-digit main account and 3-digit sub-account codes, based on the South African Chart of Accounts. It incorporates specific South African terminology and includes the structure of South African VAT-accounts and VAT-codes, aligned with the VAT201-return.
- 4-AF-SUID-AFRIKA-GENERIES.zip: This generic Set of Books includes 4-digit main account and 3-digit sub-account codes, based on the South African Chart of Accounts in Afrikaans. It incorporates specific South African terminology and includes the structure of South African VAT-accounts and VAT-codes (Belasting op Toegevoegde Waarde (BTW) Suid-Afrika (Afrikaans), aligned with the VAT201-return.
- 4-EN-UK-GENERIC.zip: This generic Set of Books includes 4-digit main account and 3-digit sub-accounts, based on the United Kingdom (UK) Chart of Accounts. It incorporates specific UK terminology and includes Value Added Tax (VAT) - United Kingdom accounts based on the VAT Standard rate scheme. The VAT-account and VAT-codes structure in the Chart of Accounts is designed to match the various boxes on the UK VAT return. NOTE: Various schemes for VAT may be applicable for various scenarios.

An example of a Firebird database is NL_RGS2019PLUS (Netherlands) where longer descriptions is used in the chart of Accounts (can be downloaded from through the "*Let osFinancials help you to create a Set of Books?*" option.

Chart of Accounts - Download options

Sets of Books - The Chart of Accounts in osFinancials supports up to 11-digits (8-digits for the main accounts and 3 digits for the sub-accounts). You have the flexibility to choose from a range of templates for Sets of Books, including a 6-digit structure consisting of 3 digits for the main accounts and 3 digits for the sub-accounts. These templates can be downloaded through the "*Let osFinancials help you to create a Set of Books?*" option.

Alternatively, if you prefer to start with a basic empty Sets of Books, you can utilize the "*Customise your own Set of Books (Advanced)?*" option. This advanced feature allows you to define the number of digits, with a maximum of 11 digits (8 digits for the main accounts and 3 digits for the sub-accounts).

The basic Sets of Books created using this option will include the essential three main accounts: Debtors control, Creditors control, and Retained earnings. The remaining Chart of Accounts can be fully customized according to your specific requirements. This flexibility enables you to tailor the Sets of Books to suit your

unique accounting needs.

Chart of Accounts - Number of digits and length of description fields

A chart of accounts serves as a comprehensive list of all the accounts utilized by an organization for financial reporting. It enables the systematic classification and summarization of financial transactions in a consistent and logical structure. In osFinancials5.1/TurboCASH5-3 the Chart of Accounts is organized by linking accounts to account groups 1 and/or account group 2. This structuring facilitates the generation of financial statements such as the Trial Balance, Income Statement, Balance Sheet, and other reports.

While some accounting software provides for up to 100 characters of account descriptions, in osFinancials the EMPTY-BOOKS range of basic Chart of Accounts, supports:

- Account code: The account code number of digits, with a maximum of 11 digits (8 digits for the main accounts and 3 digits for the sub-accounts).
- Account description: The account and group descriptions of up to 128 characters

These account codes and descriptions provide flexibility for creating and customizing the Chart of Accounts to meet specific requirements, accounting frameworks, and standards, including taxonomies such as GAAP, IFRS (full), and IFRS for SMEs. This customization takes into account language variations and jurisdiction-specific considerations.

See - Generally Accepted Accounting Principles (GAAP) and International Financial Reporting Standards (IFRS)

- Universal chart of accounts is suitable for use with IFRS, US GAAP and other comparable accounting standards. https://www.ifrs-gaap.com/universal-chart-accounts
- IFRS® Sustainability Disclosure Standards around the world - https://www.ifrs.org/ifrs-sustainability-disclosure-standards-around-the-world/

Options to create and customise your own Set of Books:

- "Customise your own Set of Books (Advanced)?" (Firebird database) - Only includes 3 control accounts (Retained earnings / Debtors control and Creditors control). Using this option, the account descriptions is limited to 35 characters and 64 characters, depending of the number of digits you select. In addition to this, you need to update the "*TYPES*" table with Paper types and may need to add the Groups for Cost centre 1 / Cost centre 2 / Projects and Languages.
- CUSTOMISE-EMPTY-BOOKS (Pre-configured Firebird database) - Only includes 3 control accounts (Retained earnings / Debtors control and Creditors control). The field length for Account descriptions

and Groups description length is set to 128 characters. The "*TYPES*" table with Paper types and may need to add the Groups for Cost centre 1 / Cost centre 2 / Projects and Languages. The basic journals (such as Sales journal, Purchase journal and General journal) have been added and the basic settings for documents (such as Invoices, Credit notes, Quotes, Purchases, Supplier returns and Orders) is already set.

The basic Sets of Books created using this option will include the essential three main accounts: Debtor's Control, Creditor's Control, and Retained Earnings. The remaining Chart of Accounts can be fully customised according to your specific requirements. This flexibility enables you to tailor the Sets of Books to suit your unique accounting needs.

Comparison of description field lengths

"Customise your own Set of Books (Advanced)?"			*EMPTY-BOOKS (Pre-configured Firebird database)*		
Number of digits Account code	*Account description length*	*Groups description length*	*Number of digits Account code*	*Account description length*	*Groups description length*
3X3-DIGITS	*35*	*30*	*CUSTOMISE-EMPTY-BOOKS-3X3-DIGITS*	*128*	*128*
4X3-DIGITS	*35*	*30*	*CUSTOMISE-EMPTY-BOOKS-4X3-DIGITS*	*128*	*128*
5X3-DIGITS	*35*	*30*	*CUSTOMISE-EMPTY-BOOKS-5X3-DIGITS*	*128*	*128*
6X3-DIGITS	*64*	*30*	*CUSTOMISE-EMPTY-BOOKS-6X3-DIGITS*	*128*	*128*
7X3-DIGITS	*64*	*30*	*CUSTOMISE-EMPTY-BOOKS-7X3-DIGITS*	*128*	*128*
8X3-DIGITS	*64*	*30*	*CUSTOMISE-EMPTY-BOOKS-8X3-DIGITS*	*128*	*128*

Document layout files and reports adjusted to accommodate the larger descriptions

All document layout files and reports, whether accessible through the osFinancials5.1 / TurboCASH5-2025 interface, documents, or on menus such as Reports and User Reports, have been meticulously adjusted

using the Report designer. These adjustments aim to prevent issues such as overlapping labels and untidy appearances, ensuring seamless accommodation of the maximum field length when users input their data.

You can find all these document layout files and reports in the " ...\plug_ins\reports\ " directory within the osFinancials5.1 / TurboCASH5-2025 installation folder.

Test databases

Firebird database - TEST-REPORTS-4-DIGIT-DESCRIPTION-1234567890123456.zip

Location on GitHub : https://github.com/Digidanosf/osfinancials-development/blob/main/firebird-databases/TEST-REPORTS-4-DIGIT-DESCRIPTION-1234567890123456.zip

Tested text length to check and align reports where necessary

1234567890 1234567890 1234567890 1234567890 1234567890 1234567890 1234567890 1234567890 1234567890 1234567890 1234567890 123456

Also tested in MSSQL database type.

Description length increased and Added missing entries in the Types table

This is an Empty Set of Books created with the "*Customise your own Set of Books (Advanced)?*" option on the Creation wizard. The following Sets of Books only include the 3 control accounts (i.e. Debtors control + Creditors control + Retained earnings) accounts in the Chart of Accounts.

See - Designing a Chart of Accounts in this documentation.

Changed the number of characters in the Descriptions (Account description and Groups description) to 128 characters for the following books:

- CUSTOMISE-EMPTY-BOOKS-3X3-DIGITS - Description Accounts =35 - GROUPS = 30 -
- CUSTOMISE-EMPTY-BOOKS-4X3-DIGITS - Description Accounts =35 - GROUPS = 30 -
- CUSTOMISE-EMPTY-BOOKS-5X3-DIGITS - Description Accounts =35 - GROUPS = 30 -
- CUSTOMISE-EMPTY-BOOKS-6X3-DIGITS - Description Accounts =64 - GROUPS = 30 -
- CUSTOMISE-EMPTY-BOOKS-7X3-DIGITS - Description Accounts =64 - GROUPS = 30 -
- CUSTOMISE-EMPTY-BOOKS-8X3-DIGITS - Description Accounts =64 - GROUPS = 30 -

Descriptions - supports longer descriptions

Before adding your own accounts in the Chart of Accounts, you may edit the account codes to fit in the structure of your own Chart of Accounts.

- Accounts

- Ledger / Bank, Tax account types - 128 characters (Setup ® Accounts (Setup ribbon))
- Debtor (customer / client) accounts - 128 characters (Debtors (Default ribbon)) Debtor account codes - Prefix the first digit with a specific character e.g. 1 for debtors and use the remaining 6 digits in the case of a 4-digit main accounts Set of Books and up to 10-digit for an 8-digit main accounts Set of Books) for the rest of the account code.
- Creditor (supplier / vendor) accounts - 128 characters (Creditors (Default ribbon)) Creditor account codes - Prefix the first digit with a specific character e.g. 2 for creditors and use the remaining 6 digits in the case of a 4-digit main accounts Set of Books and up to 10-digit for an 8-digit main accounts Set of Books) for the rest of the account code.

· Stock (Inventory / Products) (Stock (Default ribbon))

- Stock code - 15 characters
- Stock description - 64 characters
- Stock extra description - 255 characters

· Groups - 128 characters (Setup ® Groups (Setup ribbon))

· Updated Types table

- Added Groups for Projects -1000, Cost centre 1 -1002, Cost centre 2 - 1003 and Languages - 1004.
- Added paper types - 55 - Till slip and 56 New plain paper types

groups.rep - set Wordwrap to true

Changes to Firebird SQL files

Location: \bin\SQL\FIREBIRD

The Firebird SQL files pertinent to osFinancials5.1 / TurboCASH5-2025 are located in the " *…\bin\SQL\FIREBIRD* " directory.

To customize your own Set of Books using the "*Customise your own Set of Books (Advanced)?*" option for Firebird database types, you may need to edit the SQL files found in the " *…\bin\SQL\FIREBIRD* " directory within your osFinancials5.1 / TurboCASH5-2025 installation folder.

Before proceeding with any edits, it is strongly recommended to create a backup copy of these files on your system. This precautionary step ensures that you have a safeguard in case any issues arise during the

editing process.

The edited field lengths within these SQL files, particularly in the Accounts table and Groups table sections, dictate the required number of characters when creating your customized Firebird database for your Set of Books.

Specifically, the field lengths were adjusted in the following files located in the " *...\bin\SQL\FIREBIRD* " directory of your osFinancials5.1 / TurboCASH5-2025 installation folder:

- CreateDatabase.txt
- CreateDatabase_MILI.txt

CreateDatabase.txt

Account table

Changed to 128 - ,SDescription {chartype}(64)

```
CREATE TABLE Account(

,DSysDate  timestamp

,WSortNo  integer,

primary key (WGroupID)

);
```

Adjusting Field Lengths in Firebird Database Types of Existing Sets of Books

Always make sure to have a backup of your database before performing any structural changes to avoid data loss or corruption.

Always exercise caution and perform alterations during maintenance windows or low-impact periods to minimize disruptions.

Once you have created your Set of Books for the Firebird Database type using the "*Customise your own Set of Books (Advanced)?*" option or have an existing database for which you need to change field lengths, the 'ALTER TABLE' statement is crucial. It is important to make a backup of your Set of Books and possess sufficient knowledge and skills to handle table changes.

The broad basic process to adjust field lengths of tables in Firebird Database types is outlined

below:

In Firebird databases, altering the length of a field in a table involves using the ALTER TABLE statement. However, it's important to note that changing the field length can lead to potential data loss or corruption if not done carefully. Before proceeding, make sure to backup your database.

Assuming you want to change the description field length for the ACCOUNT table and the GROUPS table, here are the steps:

Changing Account Description Field Length:

sql

```
-- Backup your database before making any changes
BACKUP DATABASE TO 'your_backup_location';
-- Alter the table to modify the field length
ALTER TABLE ACCOUNT
  ALTER COLUMN description TYPE VARCHAR(128);
```

In the above example, assuming the original field type is VARCHAR, the length is set to 128. Adjust the type and length according to your requirements

Again, adjust the type and length as needed. Keep in mind that altering a column may fail if there are existing values in the column that would be truncated or cannot fit into the new length. It's essential to review the data in the table before making such changes.

Changing Groups Description Field Length:

sql

```
-- Backup your database before making any changes
BACKUP DATABASE TO 'your_backup_location';
-- Alter the table to modify the field length
ALTER TABLE GROUPS
  ALTER COLUMN description TYPE VARCHAR(128);
```

In the above example, assuming the original field type is VARCHAR, the length is set to 128. Adjust the type and length according to you.r requirements.

Remember that altering a column may fail if there are existing values in the column that would be truncated or cannot fit into the new length. It's essential to review the data in the table before making such

changes.

Always make sure to have a backup of your database before performing any structural changes to avoid data loss or corruption.

Adjusting Field Lengths in MSSQL Database Types of Existing Sets of Books

Always make sure to have a backup of your database before performing any structural changes to avoid data loss or corruption.

Always exercise caution and perform alterations during maintenance windows or low-impact periods to minimize disruptions.

In Microsoft SQL Server (MSSQL), you can change the length of a field in a table using the ALTER TABLE statement. Here's how you can change the description field length for the ACCOUNT table and the GROUPS table:

Changing Account Description Field Length:

sql

```
-- Backup your database before making any changes
BACKUP DATABASE YourDatabaseName TO DISK = 'your_backup_location';
-- Alter the table to modify the field length
ALTER TABLE ACCOUNT
  ALTER COLUMN description VARCHAR(128);
```

In the above example, assuming the original field type is VARCHAR, the length is set to 128. Adjust the type and length according to your requirements.

In the above example, I assumed the original field type is VARCHAR, and I set the length to 128. Adjust the type and length according to your requirements.

Changing Groups Description Field Length:

sql

```
-- Backup your database before making any changes
BACKUP DATABASE YourDatabaseName TO DISK = 'your_backup_location';
-- Alter the table to modify the field length
```

```
ALTER TABLE GROUPS

  ALTER COLUMN description VARCHAR(128);
```

In the above example, assuming the original field type is VARCHAR, the length is set to 128. Adjust the type and length according to your requirements.

In the above example, it is assumed the original field type is VARCHAR, and is set the length to 128. Adjust the type and length according to your requirements.

Again, adjust the type and length as needed.

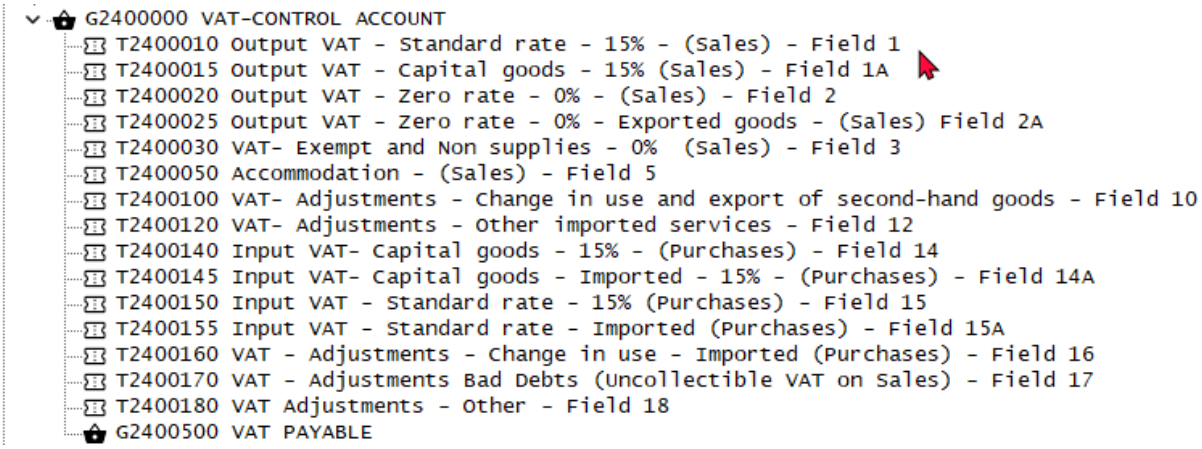
Please note that altering a column may fail if there are existing values in the column that would be truncated or cannot fit into the new length. It's essential to review the data in the table before making such changes.

Examples of VAT accounts codes and longer descriptions to match the descriptions on VAT returns

The following examples of the "*Full Structure of VAT accounts and VAT-codes in the Chart of Accounts*" and the alignment to the relevant fields or boxes on VAT Returns or VAT-declarations is available in this documentation:

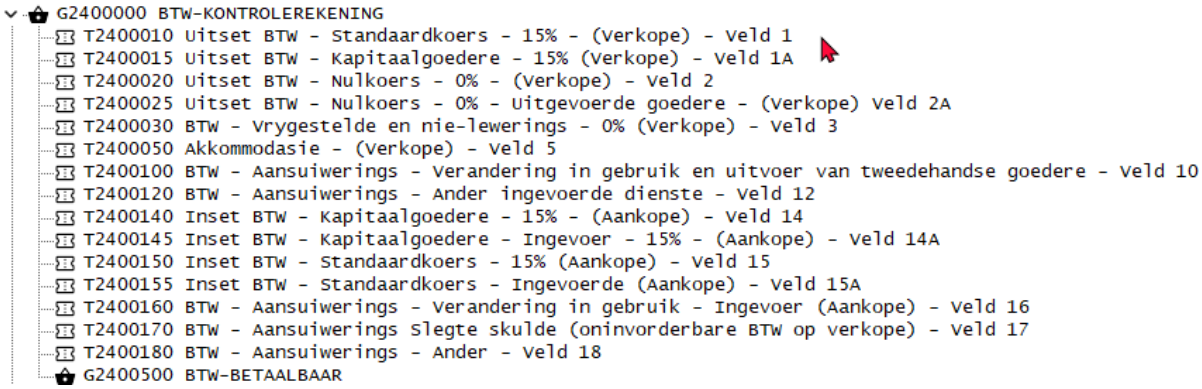
Generic Sets of Books - 4-Digit Chart of Accounts

- 4-EN-SOUTH-AFRICA-GENERIC - Value Added Tax (VAT) - South Africa - The "Full Structure of VAT accounts in the Chart of Accounts and the VAT Return" The stricture South African VAT-accounts and VAT-codes of the Chart of Accounts is aligned with the VAT201-return.



- 4-AF-SUID-AFRIKA-GENERIES - Belasting op toegevoegde waarde (BTW) Suid-Afrika (Afrikaans) - Refer to the Afrikaans documentation. The "Full Structure of VAT accounts in the Chart of Accounts and the VAT Return" The stricture South African VAT-accounts and VAT-codes of the Chart of Accounts is

aligned with the VAT201-return.



- 4-EN-UK-GENERIC - Value Added Tax (VAT) - United Kingdom - Various schemes for VAT may be applicable for various scenarios. The most commonly used VAT Standard rate scheme is documented as an example of the VAT-account and VAT-codes structure in Chart of Accounts for the United Kingdom (UK) to match the various Boxes on the UK VAT return. "VAT Standard Rate Scheme - Structure of VAT Accounts in the Chart of Accounts"

Customise Empty Books

CUSTOMISE-BOOKS-ADVANCED

Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/firebird-databases/CUSTOMISE-BOOKS-ADVANCED

The Sets of Books for the Firebird Database type now supports larger field lengths for data entry, catering

to the specific requirements of larger businesses or organizations. This enhancement allows for more detailed and comprehensive data management, particularly in scenarios where extensive account codes and descriptions are necessary.

The following Sets of Books is created using the "*Creation wizard*" (F10) from the Create Set of Books (Start ribbon) the "*Customise your own Set of Books (Advanced)?*" option for Firebird database type:

Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/firebird-databases/CUSTOMISE-BOOKS-ADVANCED

- *CUSTOMISE-EMPTY-BOOKS-3X3-DIGITS.zip*
- *CUSTOMISE-EMPTY-BOOKS-4X3-DIGITS.zip*
- *CUSTOMISE-EMPTY-BOOKS-5X3-DIGITS.zip*
- *CUSTOMISE-EMPTY-BOOKS-6X3-DIGITS.zip*
- *CUSTOMISE-EMPTY-BOOKS-7X3-DIGITS.zip*
- *CUSTOMISE-EMPTY-BOOKS-8X3-DIGITS.zip*

osFinancials Field length - Shop - Payment per request - In addition to these options, you may shop for customised field lengths.

Translate the "*CUSTOMISE-EMPTY-BOOKS*" template

To work in the language of your choice, after you have use the Browse button on the Open Set of Books. Navigate to the bin/CUSTOMISE-EMPTY-BOOKS folder. Select from 3-digits to 8-digits main accounts templates of your choice and click Open.

Basic Steps to customise or translate your Set of Books, based on one of the "*CUSTOMISE-EMPTY-BOOKS*" templates into the language of your choice:

1. Open the Set Books ("*CUSTOMISE-EMPTY-BOOKS*" template).
2. Save the Set of Books with a name of your choice. To do this go to the Save as option on the Start ribbon and enter a unique name for your Set Books.
3. Select language of your choice in the Switch language option (Start ribbon). If you have selected language of your choice, your Set of Books will automatically open in your selected language.
4. The customisation or translation is basic simple actions:
    - Translate the descriptions of records in the *'Types'* tab of Tools → Customize language (Setup ribbon). This will include, document types available in "*English*" language, (i.e. "*Invoice, Credit note, Quote, Purchase, Supplier return*" and "*Order*"). You can customise or translate it into your selected language or customise the document types for your specific language, industry or according to your unique needs.

- This will also include the Reporting groups' group descriptions, e.g. "Account Group1" to "Account Group 1", etc. in Setup → Groups, (Setup ribbon) update.
- Translate the three control accounts i.e. "*Debtors control*, *Creditors control*" and "*Retained earnings*" In the Setup → Accounts (Setup ribbon).

Your basic Set of Books has been customised and translated, and you can take the rest of the actions such as creating or importing your General ledgers accounts, Debtor accounts, Creditor accounts and Stock items (Inventory items or Products).

Sets of Books created on these templates

4-Digit main accounts and 3-Digit sub-accounts

Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/firebird-databases/4-DIGIT-BOOKS

The following Sets of Books, based on the "*CUSTOMISE-EMPTY-BOOKS-4X3-DIGITS.zip*" (with a 4-digit main accounts and 3 digit sub-accounts) were created:

- 4-EN-SOUTH-AFRICA-GENERIC.zip: This generic Set of Books includes 4-digit main account and 3-digit sub-account codes, based on the South African Chart of Accounts. It incorporates specific South African terminology and includes the structure of South African VAT-accounts and VAT-codes, aligned with the VAT201-return.
- 4-AF-SUID-AFRIKA-GENERIES.zip: This generic Set of Books includes 4-digit main account and 3-digit sub-account codes, based on the South African Chart of Accounts in Afrikaans. It incorporates specific South African terminology and includes the structure of South African VAT-accounts and VAT-codes (Belasting op Toegevoegde Waarde (BTW) Suid-Afrika (Afrikaans), aligned with the VAT201-return.
- 4-EN-UK-GENERIC.zip: This generic Set of Books includes 4-digit main account and 3-digit sub-accounts, based on the United Kingdom (UK) Chart of Accounts. It incorporates specific UK terminology and includes Value Added Tax (VAT) - United Kingdom accounts based on the VAT Standard rate scheme. The VAT-account and VAT-codes structure in the Chart of Accounts is designed to match the various boxes on the UK VAT return. NOTE: Various schemes for VAT may be applicable for various scenarios.

3-Digit main accounts and 3-Digit sub-accounts

The TUTORIALS Sets of Books, based on the "*CUSTOMISE-EMPTY-BOOKS-3X3-DIGITS*" (with a 3-digit main accounts and 3 digit sub-accounts) were created for ENGLISH and AFRIKAANS.

TUTORIALS/ENGLISH/

Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/firebird-databases/TUTORIALS/ENGLISH

1. Sets of Books
    - HANDYMAN - Starting with the "*CUSTOMISE-EMPTY-BOOKS-3X3-DIGITS.zip*" template, the HANDYMAN Set of Books contains only the 3 basic control accounts (Debtors control, Creditors control and Retained earnings accounts). The ledger accounts (chart of accounts), debtor accounts, creditor accounts and stock items were imported using the "*(*.txt) Tab delimited*" files (exported from older HANDYMAN tutorials).
    - HANDYMAN-A - UNPOSTED batch transactions and UNPOSTED documents.
    - HANDYMAN-B - POSTED batch transactions and POSTED documents.
2. Supporting files
    - EXPORTED-ACCOUNTS-STOCK folder - The following data imported in the Import option on the Setup ribbon using the "*(*.txt) Tab delimited*" files (i.e. "*Export-ACCOUNTS, Export-DEBTORS, Export-CREDITORS*" and "*Export-STOCK*") created from the Export option on the Setup ribbon in older Tutorials Set of Books.
    - EXPORTED-BATCH-Delimited-File folder - The batch transactions was imported using the files in this folder using the "*Delimited file import*" Batch processing option.
    - EXPORTED-BATCH-Spreadsheets folder - You can also use the Excel workbook files to import batch transactions Spreadsheet import icon on the Batch entry screen to open the Excel workbook (*xlsx) file and import the batch transactions into the respective batches.
3. Documentation - Accounting Made Easy - 2024-osF-5-1-AME-Revision1.odt (Book created in LibreOffice in English). Since basically all reports have been tidied and fixed to minimise overlapping labels to accommodate data to full size of allowed fields and to accommodate larger descriptions that may be required for Sets of Books with up to 8-digit main accounts these reports have been retested in English and in Afrikaans.

TUTORIALS/AFRIKAANS

Location on GitHub : https://github.com/Digidanosf/osfinancials-development/tree/main/firebird-databases/TUTORIALS/AFRIKAANS

1. Sets of Books (Handleidings)
    - NUTSMAN - Starting with the "*CUSTOMISE-EMPTY-BOOKS-3X3-DIGITS.zip*" template, the

NUTSMAN Set of Books contains only the 3 basic control accounts (Debtors control, Creditors control and Retained earnings accounts. Starting with the "*CUSTOMISE-EMPTY-BOOKS-3X3-DIGITS.zip*" template, the HANDYMAN Set of Books contains only the 3 basic control accounts (Debtors control, Creditors control and Retained earnings accounts). The ledger accounts (chart of accounts), debtor accounts, creditor accounts and stock items were imported using the "*(*.txt) Tab delimited*" files (exported from older HANDYMAN tutorials).

- NUTSMAN-A - UNPOSTED batch transactions and UNPOSTED documents.
- NUTSMAN-B - POSTED batch transactions and POSTED documents.

2. Supporting files
   - UITVOER-REKENINGE-VOORRAAD folder - The following data imported in the Import option on the Setup ribbon using the "*(*.txt) Tab delimited*" files (i.e. "*Debiteure.txt, Krediteure.txt , Rekeninge.txt*" en "*Voorraad.txt*") created from the Export option on the Setup ribbon in other Tutorials Set of Books.
   - JOERNAAL-GEDELIMITEERDE-UITVOER folder - The batch transactions was imported using the files in this folder using the "*Delimited file import*" Batch processing option.
   - JOERNAAL-SIGBLAD-UITVOER folder - You can also use the Excel workbook files to import batch transactions Spreadsheet import icon on the Batch entry screen to open the Excel workbook (*xlsx) file and import the batch transactions into the respective batches.
3. Documentation - Rekeningkunde Met Gemak - 2024-osF-5-1-RMG-AFRIKAANS-Weergawe1.odt - (Book created in LibreOffice in Afrikaans). Since basically all reports have been tidied and fixed to minimise overlapping labels to accommodate data to full size of allowed fields and to accommodate larger descriptions that may be required for Sets of Books with up to 8-digit main accounts these reports have been retested in English and in Afrikaans.

CUSTOMISE-EMPTY-BOOKS - Sets of Books properties

The basic properties of these "*CUSTOMISE-EMPTY-BOOKS*", is as follows:

1. Field length - Set maximum Account and Group descriptions to 128-characters.
2. Account codes - Character length and the default control accounts. Depending on your choice of "*CUSTOMISE-EMPTY-BOOKS*"-template for the number of digits, the number of digits for the control accounts and the debtor accounts as well as the creditor accounts will be as follows:

Number of digits	*Books name*	*Retained earnings*	*Debtors control*	*Creditors control*	*Number of account code*	*Number of account code*

Account code					*digits - Debtor accounts*	*digits - Creditor accounts*
3X3-DIGITS	*CUSTOMISE-EMPTY-BOOKS-3X3-DIGITS*	*G510-000*	*G700-000*	*G900-000*	*D + 5-characters D00001*	*C + 5-characters C00000*
4X3-DIGITS	*CUSTOMISE-EMPTY-BOOKS-4X3-DIGITS*	*G3100-000*	*G1100-000*	*G2000-000*	*D + 6-characters D000001*	*C + 6-characters C000000*
5X3-DIGITS	*CUSTOMISE-EMPTY-BOOKS-5X3-DIGITS*	*G31000-000*	*G11000-000*	*G20000-000*	*D + 7-characters D0000001*	*C+ 7-characters C0000000*
6X3-DIGITS	*CUSTOMISE-EMPTY-BOOKS-6X3-DIGITS*	*G310000-000*	*G110000-000*	*G200000-000*	*D + 8-characters D00000001*	*C + 8-characters C00000000*
7X3-DIGITS	*CUSTOMISE-EMPTY-BOOKS-7X3-DIGITS*	*G3100000-000*	*G1100000-000*	*G2000000-000*	*D + 9-characters D000000001*	*C + 9-characters - C000000000*
8X3-DIGITS	*CUSTOMISE-EMPTY-BOOKS-8X3-DIGITS*	*G31000000-000*	*G11000000-000*	*G20000000-000*	*D + 10-characters - D0000000001*	*C + 10-characters - C0000000000*

3. ADDED / FIXED - Updated TYPES table Groups and Paper types:
    - Groups Added records - for Type 2 in the WTYPEPARENT column:
        - 1000 - Projects
        - 1002 - Cost centre 1
        - 1003 - Cost centre 2
        - 1004 - Languages
    - Add Paper types - Added records - for Type 5 in the WTYPEPARENT column:
        - 55 - Till slip
        - 56 - New plain

4. TYPES table - Edited the descriptions of records in the Types tab of Tools → Customise language (Setup ribbon) such as document types (i.e. Invoice, Credit note, Quote, Purchase, Supplier return and Order), groups names, etc. This is consistent with other templates (Sets of Books that can be downloaded). When you overtype the group name descriptions e.g. "*Account Reporting Group1 Name*" to "*Account group 1*", etc. in Setup → Groups, it will update the record's description in the Types tab of the "*Customize languages*" screen.

5. Documents setup - Layout file point-of-sale: "*DefaultA4*" is the default setting and is not available in the " *...\plug_ins\reports\DOCUMENTS\DOCUMENTS* " folder- changed the default layout file to "*POS - STARTSP100*".

6. Calendar resource - The default Resource name is set to osFinancials5/TurboCASH5. The resource name links the events, tasks, etc. to a specific name in the Calendar. It will also print on the Calendar report. When you purchase and activate the *Multi-User calendar (agenda)* plugin, you will be able to define a resource for each user.

CUSTOMISE-EMPTY-BOOKS - Sets of Books - Accounts

The basic properties of these "*CUSTOMISE-EMPTY-BOOKS*", is as follows:

Ledger accounts

Accounts Setup → Accounts - Only the 3 control accounts (i.e. Debtors control + Creditors control + Retained earnings) accounts in the Chart of Accounts is included in the Chart of Accounts.

NOTE : You cannot delete these 3 control accounts. An error message will be displayed:

> "You cannot delete a control account!"

You can edit the account code and description for each of these 3 control accounts.

Depending on your choice of "*CUSTOMISE-EMPTY-BOOKS*"-template for the number of digits, the number of digits for the control accounts will be as follows:

Number of digits	*Books name*	*Retained earnings*	*Debtors control*	*Creditors control*
Account code				
3X3-DIGITS	*CUSTOMISE-EMPTY-BOOKS-3X3-DIGITS*	*G510-000*	*G700-000*	*G900-000*
4X3-DIGITS	*CUSTOMISE-EMPTY-BOOKS-4X3-*	*G3100-000*	*G1100-000*	*G2000-000*

	DIGITS			
5X3-DIGITS	*CUSTOMISE-EMPTY-BOOKS-5X3-DIGITS*	*G31000-000*	*G11000-000*	*G20000-000*
6X3-DIGITS	*CUSTOMISE-EMPTY-BOOKS-6X3-DIGITS*	*G310000-000*	*G110000-000*	*G200000-000*
7X3-DIGITS	*CUSTOMISE-EMPTY-BOOKS-7X3-DIGITS*	*G3100000-000*	*G1100000-000*	*G2000000-000*
8X3-DIGITS	*CUSTOMISE-EMPTY-BOOKS-8X3-DIGITS*	*G31000000-000*	*G11000000-000*	*G20000000-000*

Control accounts - You can edit the account code and account description for each of these 3 control accounts. It is important to note that you need to keep in mind that these control accounts need to be linked to account groups and financial categories:

Control account name	*Financial category*	*Account groups*
Retained earnings	*Capital*	*Equity / Capital*
Debtors control	*Assets*	*Current assets*
Creditors control	*Liabilities*	*Current liabilities*

If you import general ledger accounts from a Tab delimited file, you may:

- Change the account codes and descriptions to meet your specific requirements and needs. In the case of accounts, which contains sub-accounts, you cannot change the sub-accounts account codes. You first need to delete the sub-accounts and rename the account codes and account descriptions and recreate sub-accounts where necessary.
- Review your imported ledger accounts descriptions. You may use longer account descriptions (longer than the default 35-characters or 64-characters) , where necessary.
- Disabled (inactive) accounts imported - review and decide to keep these disabled (inactive) accounts or delete them if not required.
- Tax (VAT/GST/Sales tax) accounts - The first sub-account (tax code) may not include the Tax tab and Tax percentage - You need to delete and recreate the tax account (tax code) as a Tax account. Zero-rated Tax codes. You need to confirm the percentage.

- If Account groups 1 and / or Account group 2 is imported, these account groups may not be linked to the 5 financial categories. You may need to link these account groups to the five financial categories.

Imported or copied text in osFinancials5/TurboCASH5 screens from external files - Account / Group descriptions in Accounts description lines in batches

When importing or copying text for account. group descriptions or any other screens, or forms, the fields from external programs such as spreadsheet, word documents, etc. the hyphenation character "–" may be displayed as a pipe character " | " in lookups and some screens or as " " in some screens and in reports, document layout files, etc.

For example, Motor vehicles Net value if copied or imported into Setup - Accounts as Motor vehicles – Net value (with the hyphenation format) it will be displayed as Motor vehicles Net value on some screens and in reports and as Motor vehicles | Net value on lookup screens.

You need to use the dash sign "-" to be displayed correctly.

Solution:

To ensure hyphens display correctly in osFinancials5/TurboCASH5, use the standard dash character ("-") instead of the hyphenation character when copying or importing text from external files.

Debtor / Creditor accounts

Depending on your choice of "*CUSTOMISE-EMPTY-BOOKS*"-template for the number of digits, the number of digits for the control accounts and the debtor accounts as well as the creditor accounts will be as follows:

Number of digits *Account code*	*Books name*	*Number of account code digits - Debtor accounts*	*Number of account code digits - Creditor accounts*
3X3-DIGITS	*CUSTOMISE-EMPTY-BOOKS-3X3-DIGITS*	*D + 5-characters* *D00001*	*C + 5-characters* *C00000*
4X3-DIGITS	*CUSTOMISE-EMPTY-BOOKS-4X3-DIGITS*	*D + 6-characters* *D000001*	*C + 6-characters* *C000000*
5X3-DIGITS	*CUSTOMISE-EMPTY-BOOKS-5X3-DIGITS*	*D + 7-characters* *D0000001*	*C+ 7-characters* *C0000000*
6X3-DIGITS	*CUSTOMISE-EMPTY-BOOKS-6X3-DIGITS*	*D + 8-characters* *D00000001*	*C + 8-characters* *C00000000*

7X3-DIGITS	*CUSTOMISE-EMPTY-BOOKS-7X3-DIGITS*	*D + 9-characters D000000001*	*C + 9-characters - C000000000*
8X3-DIGITS	*CUSTOMISE-EMPTY-BOOKS-8X3-DIGITS*	*D + 10-characters - D0000000001*	*C + 10-characters - C0000000000*

When creating or adding Debtor accounts and Creditor accounts, it is important that you use a different prefix for the account codes:

The first Debtor code (e.g. D00001, etc.), will automatically be generated. It is important to prefix Debtor codes with a unique prefix. In this documentation, the accounts is prefixed as follows:

- *Debtor code = 1*
- *Creditor code = 2*

The reason for this, is that the account prefix is not always available when selecting accounts on some screens and reports. For example, if a Debtor code is D00001 and a Creditor code is C00001, and you select the Debtor code, it may set the Creditor code when selecting the contra account in the "Options for this batch" (F10:Setup) on "Batch entry" screens on "Batch entry" screens.

CUSTOMISE-EMPTY-BOOKS - Sets of Books configuration

Language settings

The language specific settings is as follows:

Language - "*English*" is the default language. You may select your language and country in Switch language (Start ribbon).

Set the default language for your Set of Books - You may select your language and country in Setup → Access control. When reopening your Set of Books, the language will be displayed in the osFinancial interface, reports, etc.

- Customise language - "*English*" is a default language. If you wish to customise your own language, you may select a different available language for your country language, tax regime or industry. Tools → Customise language (Setup ribbon).

  If you decide to customise your own language, and wish to edit these labels, it is important that you use a copy of the available language files. This will prevent overwriting your language file when you install osFinancials5/TurboCASH5 updates.

- Types tab - The entries on this tab is database specific and will update the "*TYPES*" table in your Set of

Books. You may edit, translate or change the descriptions as necessary.

- Reporting groups - The default descriptions for the 16 reporting groups - Setup → Groups is "Account group 1, Account group 2, Debtor group 1, Debtor group 2, Creditor group 1, Creditor group 2, Stock group 1, Stock group 2, Document group 1, Document group 2, Payment types, Salespersons, Projects, Cost centre 1, Cost centre 2 and Languages". These descriptions may be changed, edited, translated in the Types tab.
- Document types - The default descriptions for the standard 6 document types for sales documents (Invoices, Credit notes and Quotes and for purchase documents (Purchases, Supplier returns and Orders). These descriptions may be changed, edited, translated for your country language, tax regime or industry in the Types tab. In your language file, you may search and edit / translate the language labels for each of these document types.
- Tax terminology - Tax account is the default description for VAT/GST/Sales tax/Consumption tax in the Types tab. You may change this description for your country language, tax regime or industry. In your language file, you may search and edit / translate the language labels for the for the tax terminology.

· Rest tab - The entries on this tab is database specific. The Customize language - Rest tab Change descriptions of the "*Description of Zero account*" and "*Group empty account*". The 2 change buttons only saves 1 description. Work around change both to "*Empty*".

Company info

Company info - Depending on your selection of the CUSTOMISE-EMPTY-BOOKS number of digits, the similar text will display in the Titlebar and in reports e.g. "*3x3-DIGIT CUSTOMISE EMPTY BOOKS*", etc. Enter the name contact details and registration numbers of your business in Setup → Company info.

Financial year and accounting periods

Reporting dates - The default start of the financial year is "*1 January 2024*" - You may change this in Setup → Reporting dates control for the start of your financial year and set the accounting periods.

The default is the "*English*" months of the year - If have you selected a different language, you need to translate the months of your financial year.

Batches / Journal types

Batches / Journal types - Setup → Batch types the General journal, Sales journal and Purchase journal is added.

No Receipts and Payments batches for Bank accounts and Petty cash accounts is added.

When you add or create your own accounts, the Payments and Receipt batches will be created and added and linked to each Bank account and Petty cash account.

You may add any additional batch types (journal types) to accommodate your specific needs and requirements.

Documents setup

The defaults settings in the Setup → Documents setup is as follows:

1. Global settings - Documents setup
    - Layout file point-of-sale : "*DefaultA4*" is the default setting and is not available in the "*...\plug_ins\reports\DOCUMENTS\DOCUMENTS*" folder- changed the default layout file to "*POS - STARTSP100*".
    - Append notes below item: By default this option is selected. The default sequence in which the document lines will be displayed on document entry forms and printed in document layout files, is Item/Remark/Comment. If you deselect this option, the sequence in which the document lines will be displayed on document entry forms and printed in document layout files, will be Comment, Item, Remark.
    - Auto-post documents on print: By default this option is not selected. This means that you need to manually launch the Update ledger option to post or update documents to the ledger.
2. Settings for specific document types. The basic configuration for each document type, is as follows:

Field	*Sales documents*			*Purchase documents*			
Document type	*Invoice*	*Credit note*	*Quote*	*Purchase*	*Purchase returns*	*Orders*	
Next Document number	*IN000001*	*CR000001*	*QU000001*	*PU000001*	*SR000001*	*OR000001*	*This is an 8-character alpha-numeric field. You may use prefixes for each document type. Prefixes will make it easier to identify the document type in search and filters, on reports and on exported data in spreadsheets.*

Batch type	*Sales jnl*	*Sales jnl*	*Not applicable*	*Purchase journal*	*Purchase journal*	*Not applicable*	*The default batch (journal) type in which the documents will be updated to the ledger. You may rename these journals or set a different journal.* *Batches (Journals) is not applicable to Quotes and Orders.*
Layout file	*Layout file*	*Layout file*	*Layout file*	*Layout file*	*Layout file*	*Layout file*	*The Layout file is one standard generic layout file applicable to all document types (Invoices, Credit notes, Quotes, Purchases, Supplier returns and Orders) and is translated via the language files. This is a global setting. Custom or other layout files may be set as default for specific debtor or creditor accounts.*
Layout file 2	-	-	-	-	-	-	*This option is not selected. You may select other layout files or the delivery note to print after the Layout file.*
Heading	*Tax Invoice no.*	*Credit note no.*	*Quote no.*	*Purchase no.*	*Supplier return no.*	*Order no.*	*You may change the headings of each document headings to match your country language, tax regime or industry.*
Message 1/2/3	-	-	-	-	-	-	*Messages is left blank. You may enter up to 3 lines as a global message that will be displayed on the "Messages" field of the document entry screens and printed on document layout files for each document type. Custom messages may be set as default for specific debtor or creditor accounts.*

Statement message - You may enter global standard message for Debtor statements to print on Debtor statements.

Post / Confirm and Delete buttons on Documents grid - By default, only the New, Edit and Print buttons are available on the Documents grid screen's sidebar. You may add the Posting and Delete buttons underneath the Print button. To add the Posting and Delete buttons to the Document grid screen, select (tick) the "*Document posting*" field on the Documents tab in Setup → Access control.

Stock items / Inventory items

Before you add or import your stock items / inventory items / products you may need to configure some important basic settings such as Cost of sales, Create tax classes / account classes and Selling prices.

At this point, your chart of accounts (general ledger accounts) should have already been finalised.

Activate Cost of Sales

By default cost of sales is not activated. You need to configure cost of sales as follows:

1. Cost of Sales journal - Create a cost of sales batch (journal) type (Setup → Batch types) to update the transactions for cost of sales to the ledger when you post documents.
2. Cost of sales settings (Setup → Stock information) - Select the following:
    - Create cost of sales - To activate cost of sales, select (tick) the "*Create cost of sales*" tick box.
    - Cost of sales batch - Select the Cost of sales batch (journal) in which the cost of sales transactions will be posted.
    - Use "*Average cost*" or "*Latest cost*" option.

The method you use to calculate the value of your stock is crucial for determining its impact on your profit and loss figures. It is important to consider whether to use the "average cost" or the "latest cost" method.

If you are unsure which method to use, it is recommended that you seek guidance from your accountant.

Create tax classes / account classes

At this point, your chart of accounts (general ledger accounts) should have already been finalised.

You need to link each stock item / inventory item / product to the applicable ledger accounts (i.e. Input tax, Output tax, Sales account, Cost of sales account and Stock control account).

Tax classes may be set and linked to each category of tax and various tax rates such as Output tax, Input tax - Standard rate, Input tax - Capital goods, Zero rated goods, Exempt supplies applicable to the stock items / inventory items / products in your country and tax jurisdiction, etc.

Tax classes is defined and managed in the Tax classes tab in Setup → Stock information. When you create add or import your stock items / inventory items / products you may select a pre-configured Tax class to automatically link the 5 accounts (i.e. Input tax, Output tax, Sales account, Cost of sales account and Stock control account) applicable to the stock item / inventory item / product.

Selling prices

osFinancials5/TurboCASH5 supports up to 3 selling prices (i.e. Selling price 1, Selling price 2 and Selling price 3). You may change the descriptions of these selling prices on the "Selling price descriptions" section of the Default tab of Setup → Stock information to suit your specific requirements and set one of these Selling prices as the default Selling price (global setting) for your Set of Books.

In addition to this, you may set one of these Selling prices as the default Selling price on the Accounting information tab for specific debtor (customer / client) accounts.

Price agreement plugin - Manual - Shop - Licence : Once-off -

In addition to the standard 3 selling prices in odFinancials, Price agreement plugin, allows you to set up to five (5) levels of quantity discounts that can be applied to specific debtors or groups of debtors. Additionally, you can set a special price for individual debtors per product. These prices will overrule the default Selling price 1 / 2 / 3 and can be set per debtor (customer / client). The price agreement may also be activated for creditor (supplier / vendor) accounts.

Units of stock

Add and define the units such as each, hours, etc. for your stock items / inventory / products. You may add these descriptions on the Units tab in Setup → Stock information.

Reporting groups - Stock group 1 / Stock group 2

In osFinancials5/TurboCASH5, you have the option to set up to 2 reporting groups for your stock items / inventory items / products, allowing you to categorise search, filter and report on your products more effectively. These reporting groups provide a way to organize and analyse your inventory based on specific criteria.

You may add these Stock groups in Setup → Groups can be linked to each stock item (inventory item / product).

Set the Calendar as default

You have the option to activate the Calendar to be launched instead of the Welcome screen whenever you open a Set of Books, This means that the Calendar will be automatically displayed as the default screen.

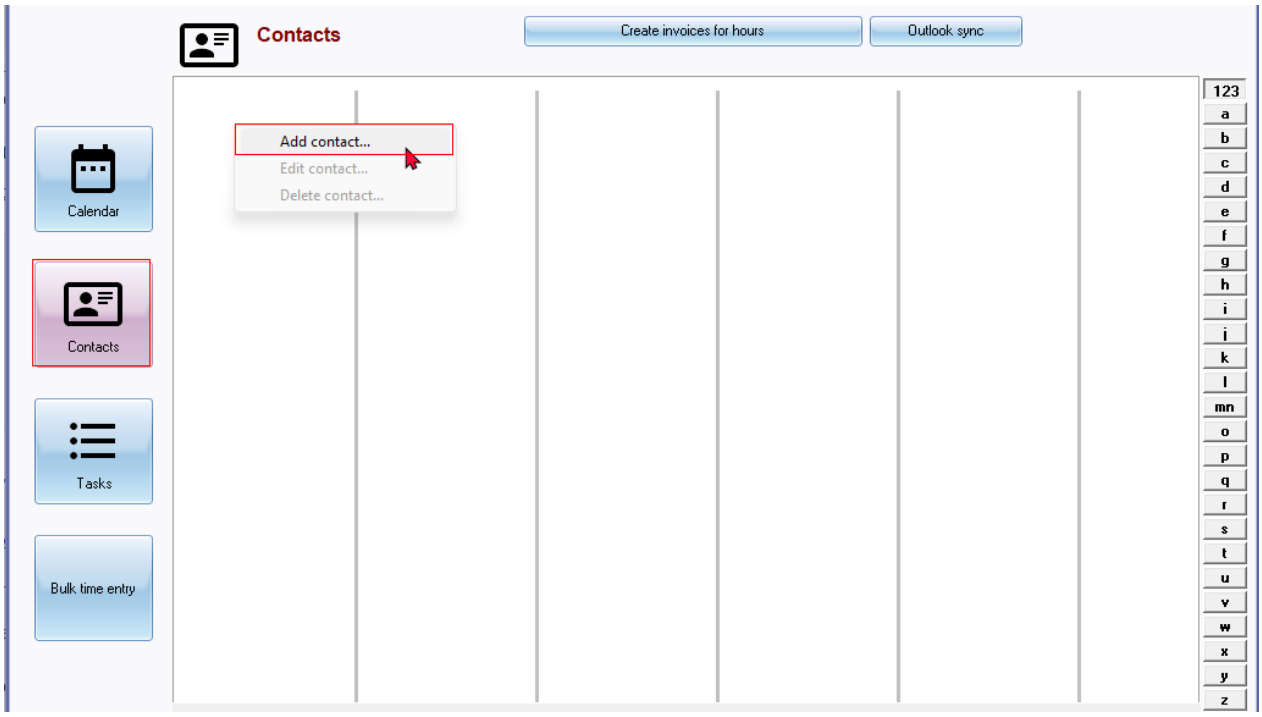
Created with the Standard Edition of HelpNDoc: Make the switch to CHM with HelpNDoc's hassle-free WinHelp HLP to CHM conversion tool

Calendar - Contacts - Add resource name

Calendar - Add resource name. When accessing the Contacts in the Calendar for the first time in the *"CUSTOMISE-EMPTY-BOOKS*", (or using the Customise your own Set of Books (Advanced)? option (for Firebird database type or the MSSQL database type), no contacts will be listed.

To add the existing contacts:

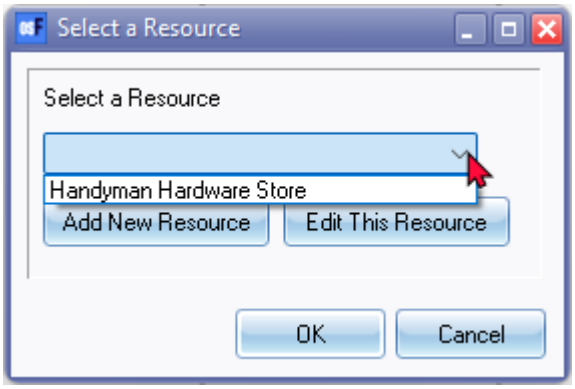
Right-click on the Contacts and select "*Add contact...*" on the context menu.



A confirmation message will be displayed:

> No resource have been defined! Would you like to add one now?

Click Yes to add a resource.



On the "Select a Resource" screen, Click Add New Resource. Selecting and editing an existing resource from the list will not add the contacts.

Enter a new resource name the contacts will be listed. When adding the new resource name, somewhere the Calendar appointments will be blank.

Deleting the new resource name for Contacts in "RESOURCES" table (SQL Browser) and exit osFinancials and reopen the Set of Books, the Calendar appointments will be listed. and the Contacts will be empty again.

FIXED - Missing Configuration Files - Full install - (osF5.1.0.16)

FIXED - Full clean install 25 June 2022 Missing Configuration Files

Configuration file missing: - C:\osfinancials5\dbxdrivers.ini

Accessing Database Connections and Datasets

Added - dbxdrivers.ini and dbxconnections.ini to root directory of new osFinancials installation.

Configuration file missing: - C:\osfinancials5\dbxdrivers.ini

Accessing Database Connections and Datasets on a full clean install - in Reportman - copied these to files from older installation into the root directory of clean full install of osfinancials - then it works

---

Created with the Standard Edition of HelpNDoc: Streamline Your Documentation Process with HelpNDoc's Intuitive Interface

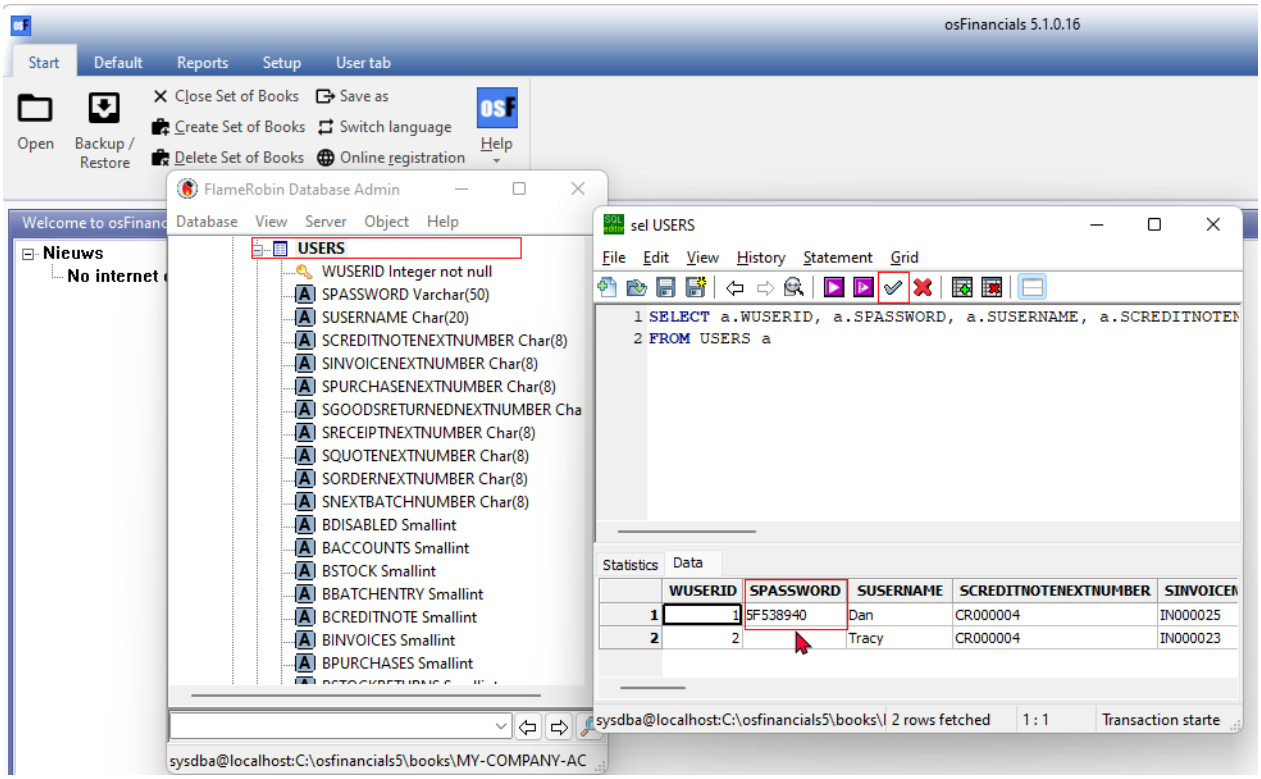
FIXED - Password change (osF5.1.0.16)

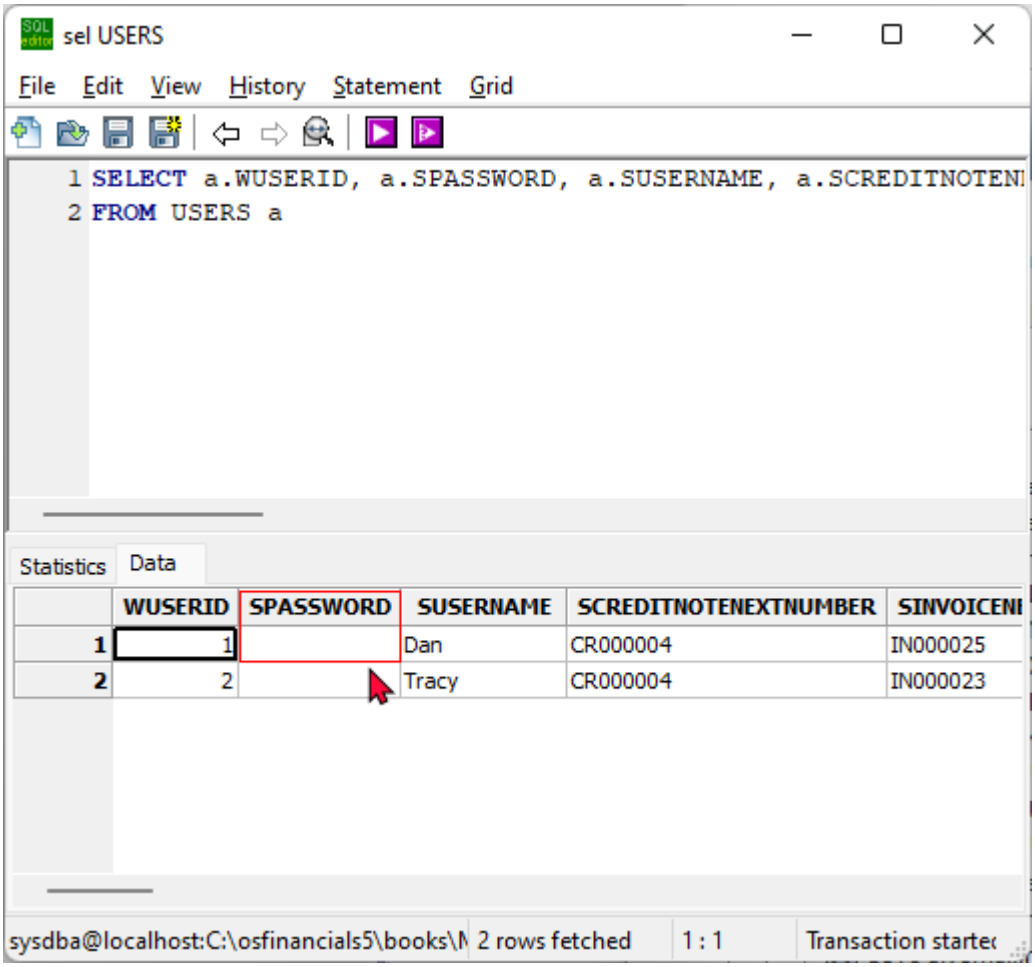
Password change

osFinancials5.1.0.16 - Change password - Cannot open Set of Books

After changing the Set of Books Password (Access control) in osFinancials5.1.0.16 - Illegal password - Open Set of Books

To access open the Set of Books, I used FlameRobin to Delete the password





Only then on the login screen with only username and no password I can access (open) the Set of Books

In osFinancials5 - 453 can change the password works 100%

Also when copy the Set of Books to the osFinancials5 / books directory (osFinancials5.1.0.16) and open the Set of Books open the new password changed in osFinancials5 - (453) is used to open a Set of Books

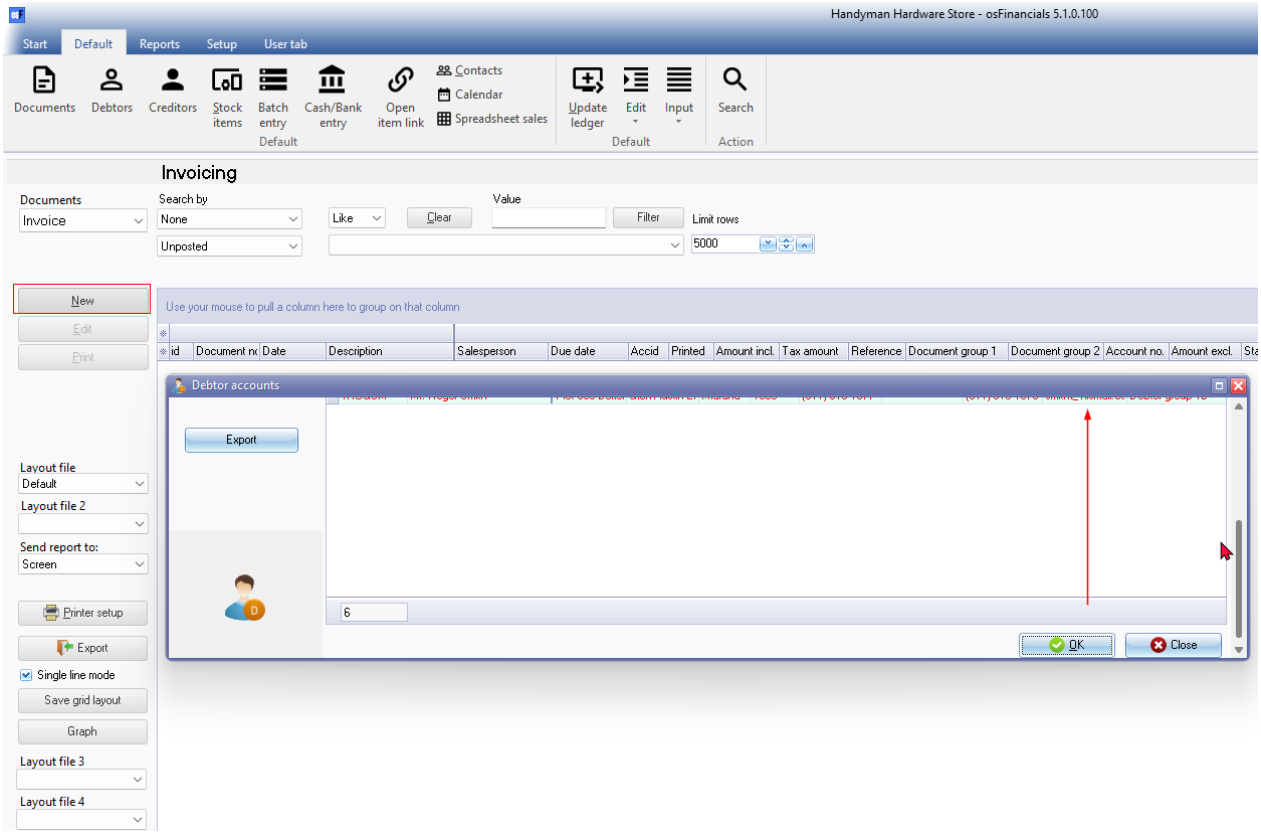
FIXED - Documents - Debtor / Creditor Lookup

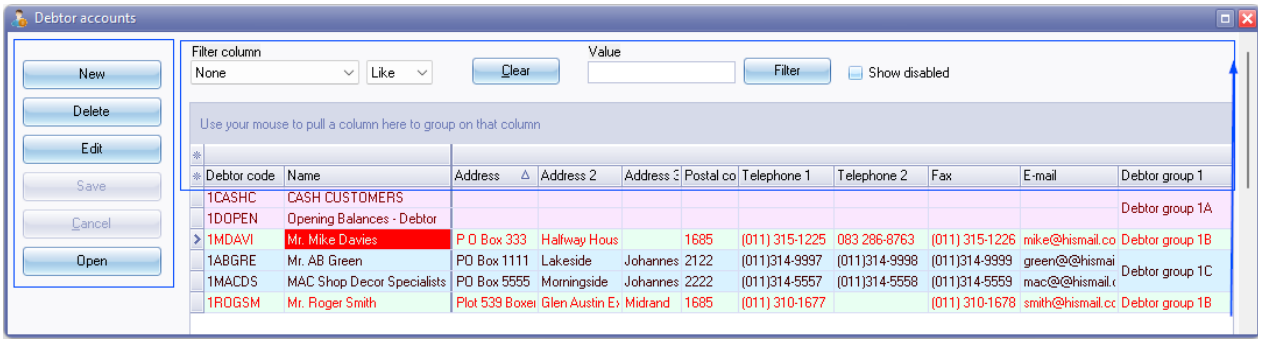
Create new Document - Select Debtor / Creditor

When creating a New sales document (e.g. Invoice, Credit note or Quote), the Debtor accounts screen list the last line. You need to use the scroll bar to view the search filter options to find an account.

Similarly when created a New purchase document (i.e. Purchase, Supplier return or Order), the Creditor accounts screen list the last line. You need to use the scroll bar to view the search filter options to find an account.



To use the filter options you need to scroll up



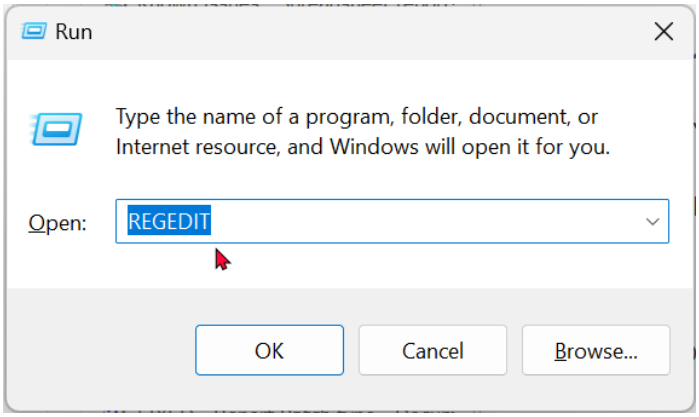
FIX for Debtor accounts / Creditor accounts lookup when creating documents

It also fixed the Debtor / Creditor accounts lookup when creating documents in osFinancials5-453 osFinancials4.0.0.1093

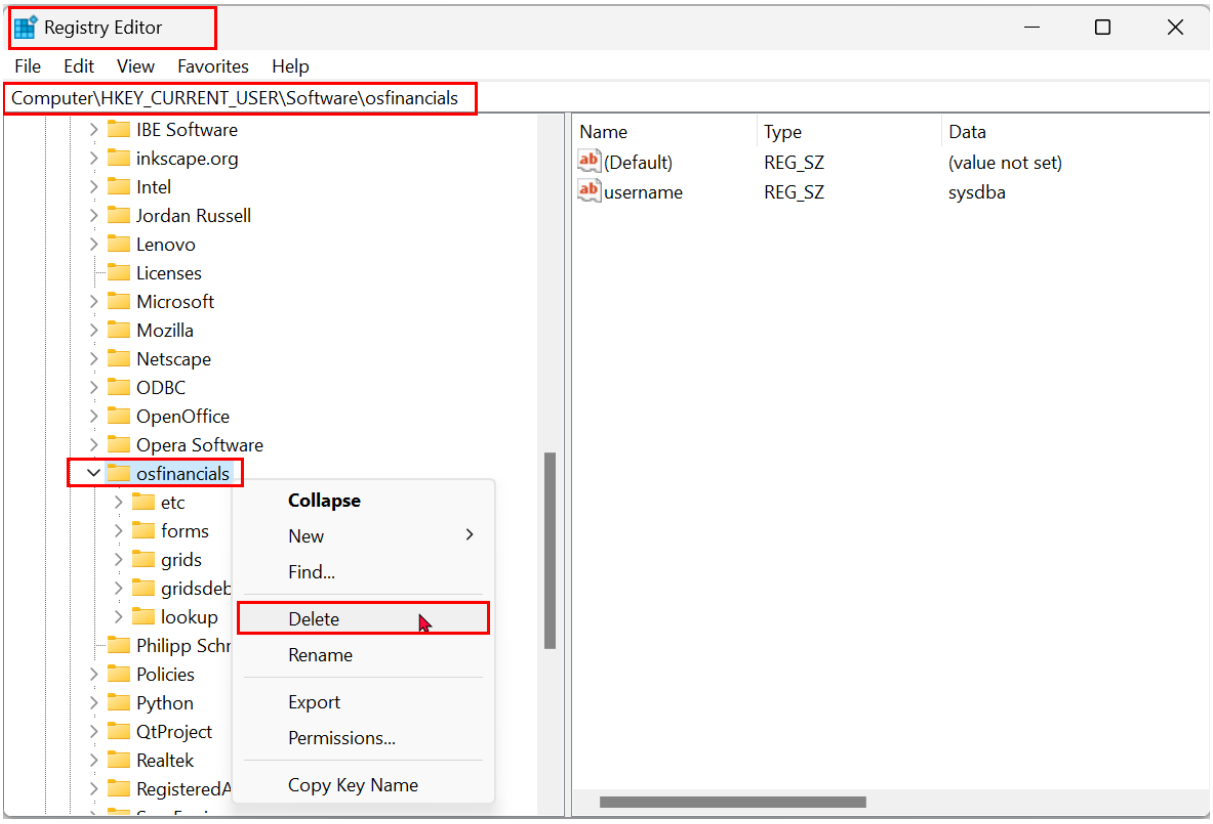
Deleting the HKEY_CURRENT_USER\SOFTWARE\osfinancials

To Delete the HKEY_CURRENT_USER\SOFTWARE\osfinancials in Windows Registry:

1. Close osFinancials5/TurboCASH5.
2. Right-click on the Start icon of your Windows operating system and select "*Run*".



3. Click OK to open the "*Registry editor*". Your system may ask for permissions and click Yes.



4. Navigate to the "HKEY_CURRENT_USER\SOFTWARE\osfinancials" key.

5. On "*osfinancials*" key right-click and select Delete on the context menu.

6. A "*Confirm Key Delete*" message will be displayed:

> Are you sure you want to permanently delete this key and all of its subkeys?

7. Make absolutely sure that the correct entry is selected and click Yes.

8. Close the "*Registry Editor*" and launch osFinancials5/TurboCASH5. It will create a new key and subkeys. The Debtor accounts / Creditor accounts lookup will display correctly when when creating new documents.

FIXED - Bank recon - Last total

Bank recon Last total

Bank recon Last total was always showing the payment and receipt batches of the first account reconciled.

When doing a bank recon on a second or different account the first bank accounts last total is displayed and printing the recon.rep it always printed the incorrect total of the first bank account. The recon.rep was then always not balancing.

Some technical code

"it should be in that table

```
OPREPORT with bankid then BankBal dbedtBankBal.Value :=
StrToFloat(StringReplace(ReadReportOp((VarToStr(DBLBanks.EditValue)) + 'BankBal', 0).AsString, '.',
FormatSettings.DecimalSeparator, [rfReplaceAll]));
```

```
LCurBalance.Value := TDataBaseRoutines.GetBalans(StrToIntDef(VarToStr(DBLBanks.EditValue), 0),
StrToDateDef(dbdtUntilDate.Text, 0))
```

====

on exit this code executes if DBLBanks.ItemIndex <> -1 then

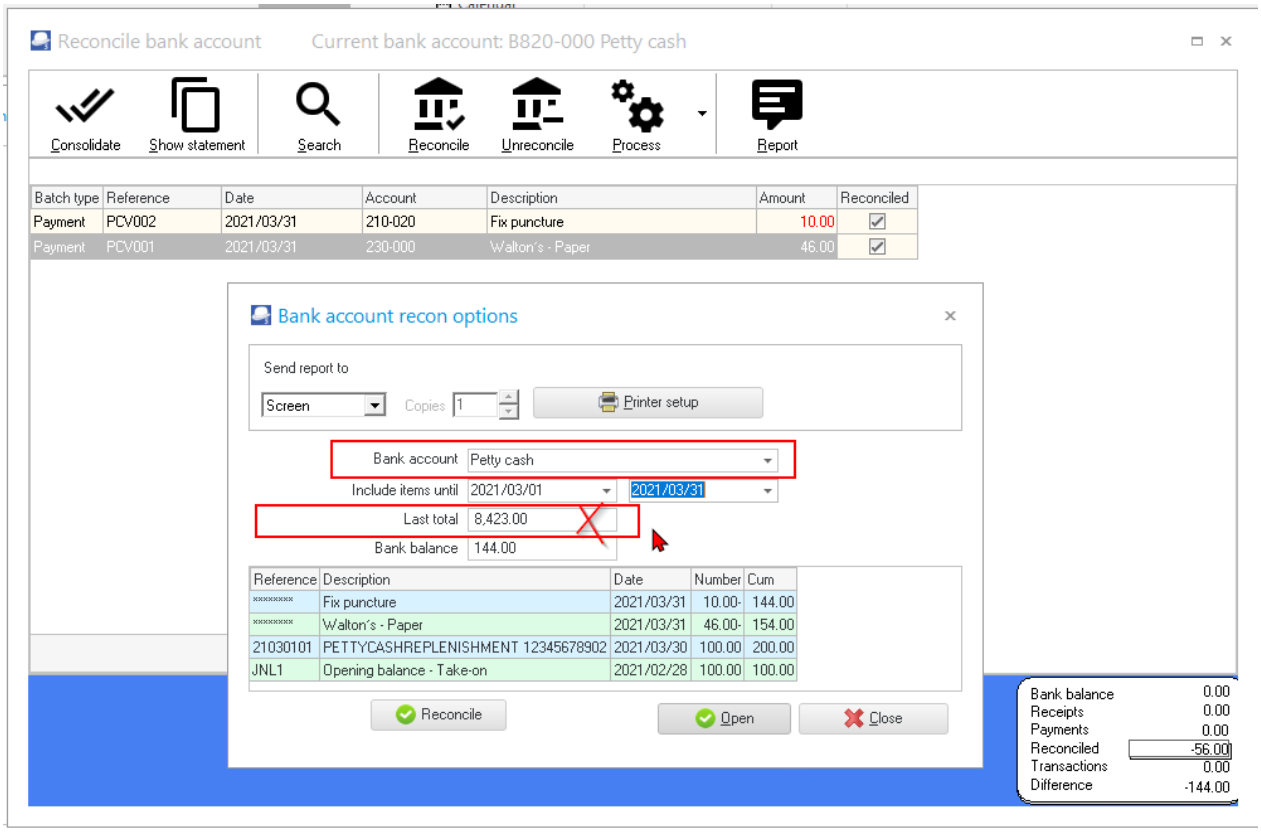
```
writeReportOp(intToStr(DBLBanks.EditValue) + 'BankBal', StringReplace(FloatToStr(dbedtBankBal.Value),
FormatSettings.DecimalSeparator, '.', [rfReplaceAll]));
```

"

Report changed it is outdated with TurboCASH5.2 / osFinancials5 code.

- the recon.rep report ok but the totals on the recon-options - Also replicate the totals of the incorrect Bank account using the BankImportPlugin - same as with the Default Bank method

Initially the Last total is displayed incorrectly but after the second time printing the recon it is correct on screen the Last total is updated



Created with the Standard Edition of HelpNDoc: Import and export Markdown documents

FIXED - Bank recon options - label

Resolved in osFinancials 5.1.0.189

Cash/Bank entry (Default ribbon) - Bank account label changes to "read 21" / "read 58" / "read 61" When selecting a bank account from the list = looks like the Id of the bank account name.

It is replicated irrespective of the selection on the "*Default bank reconciliation method*" option on Setup → System parameters menu:

- Selected - Bank import plugin not activated
- Not selected - Bank import plugin activated

FIXED - Unicode setting - Currencies - Default setting

Setup currencies

FIXED - osFinancials5.1.0.233 install / TurboCASH5-3 Install allows you to select to enable or disable Unicode settings.

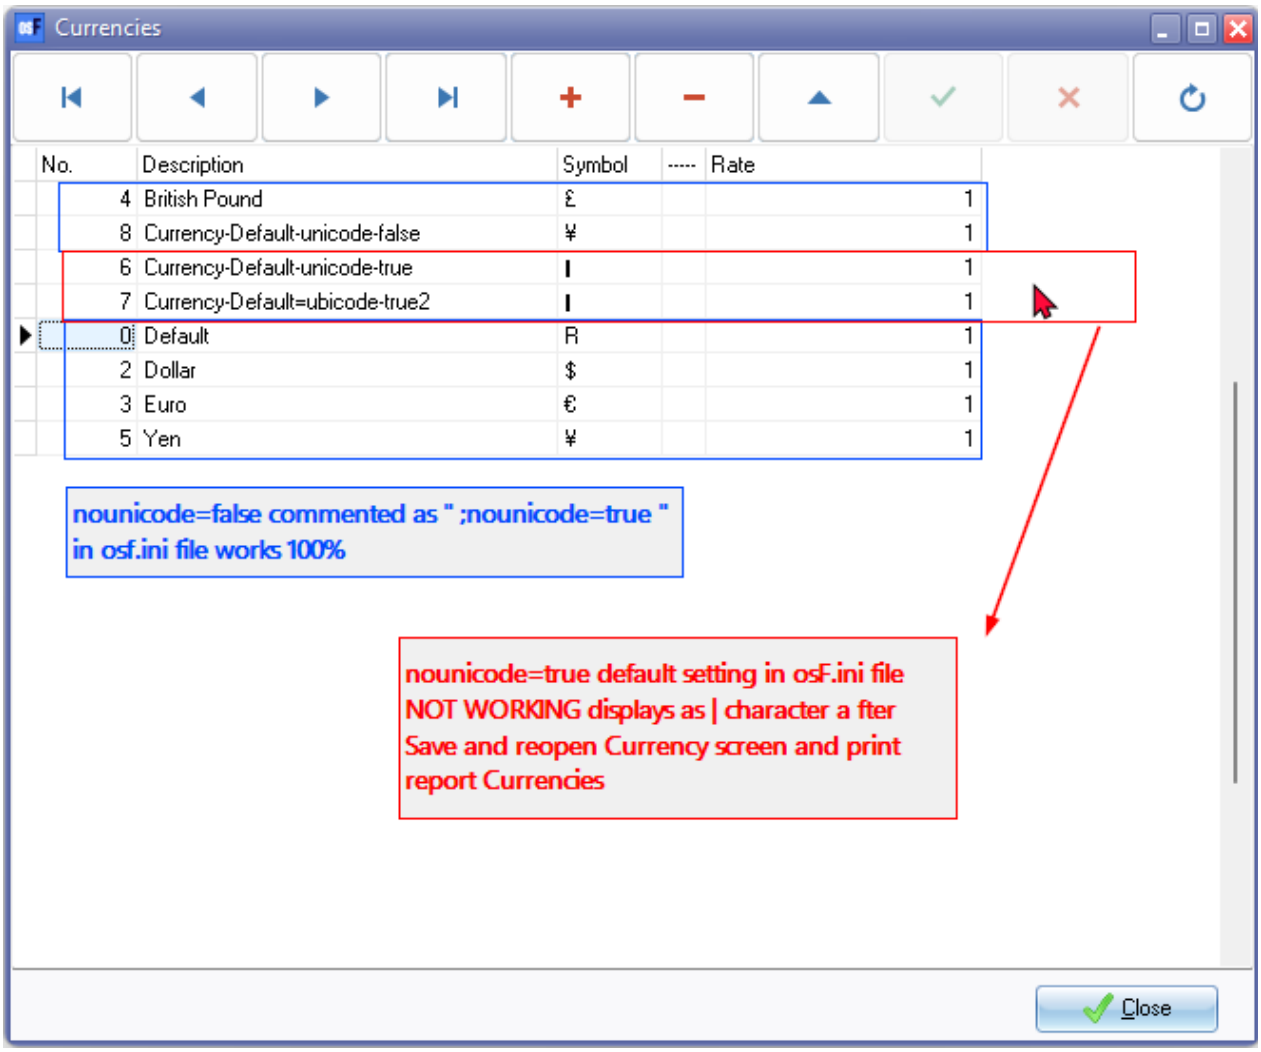
Replicated in osF5.1.100 since osFinancials5.1.0.16 displayed incorrectly, since unicode was introduced.

To use Currencies in osFinancials5 you need to change the osf.ini file

Only works correctly if " ;nounicode=true " is uncommented or set to false nounicode=false in the osf.ini file.

If the default setting " nounicode=true " is not uncommented in the osf.ini file, this replicate the error not displaying correctly.

Default setting " nounicode=true " in the osf.ini file, this replicate the error not displaying correctly

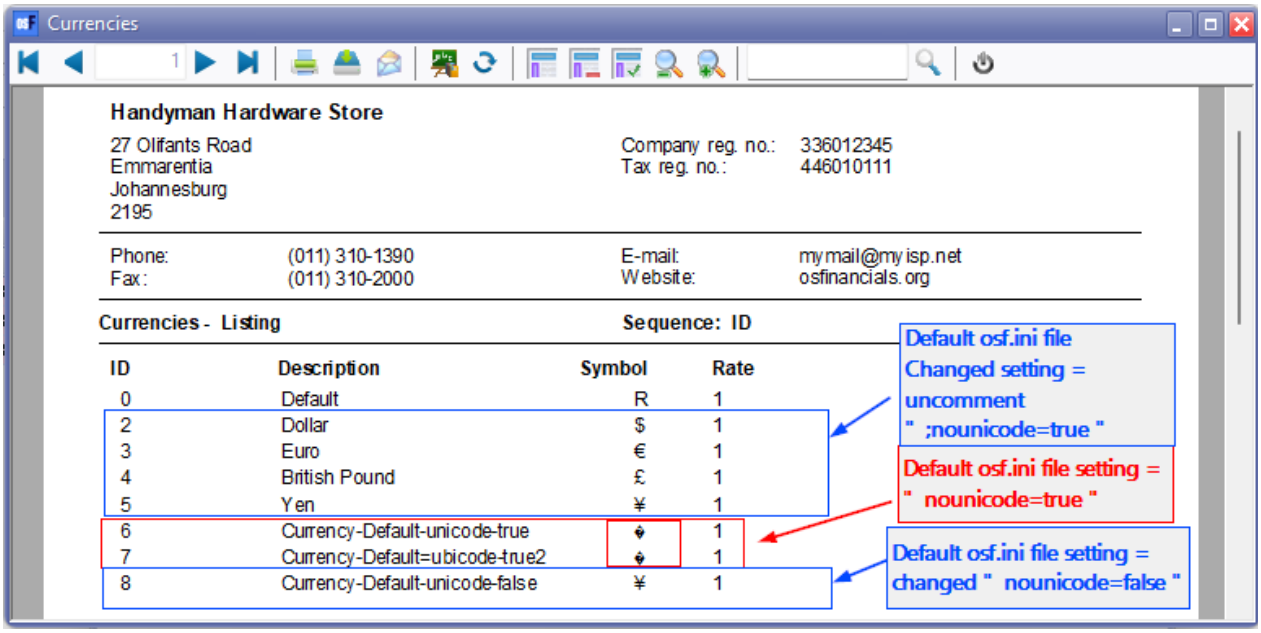


See - Alt Code Shortcuts for Currency Symbols - List of Alt+Numeric keys for generating theCurrencies in the various countries. Example Works if the Alt+0165 for Yen, etc.

To display currencies correctly in Currencies setup and print the Currency report correctly in you need to change the osf.ini file.

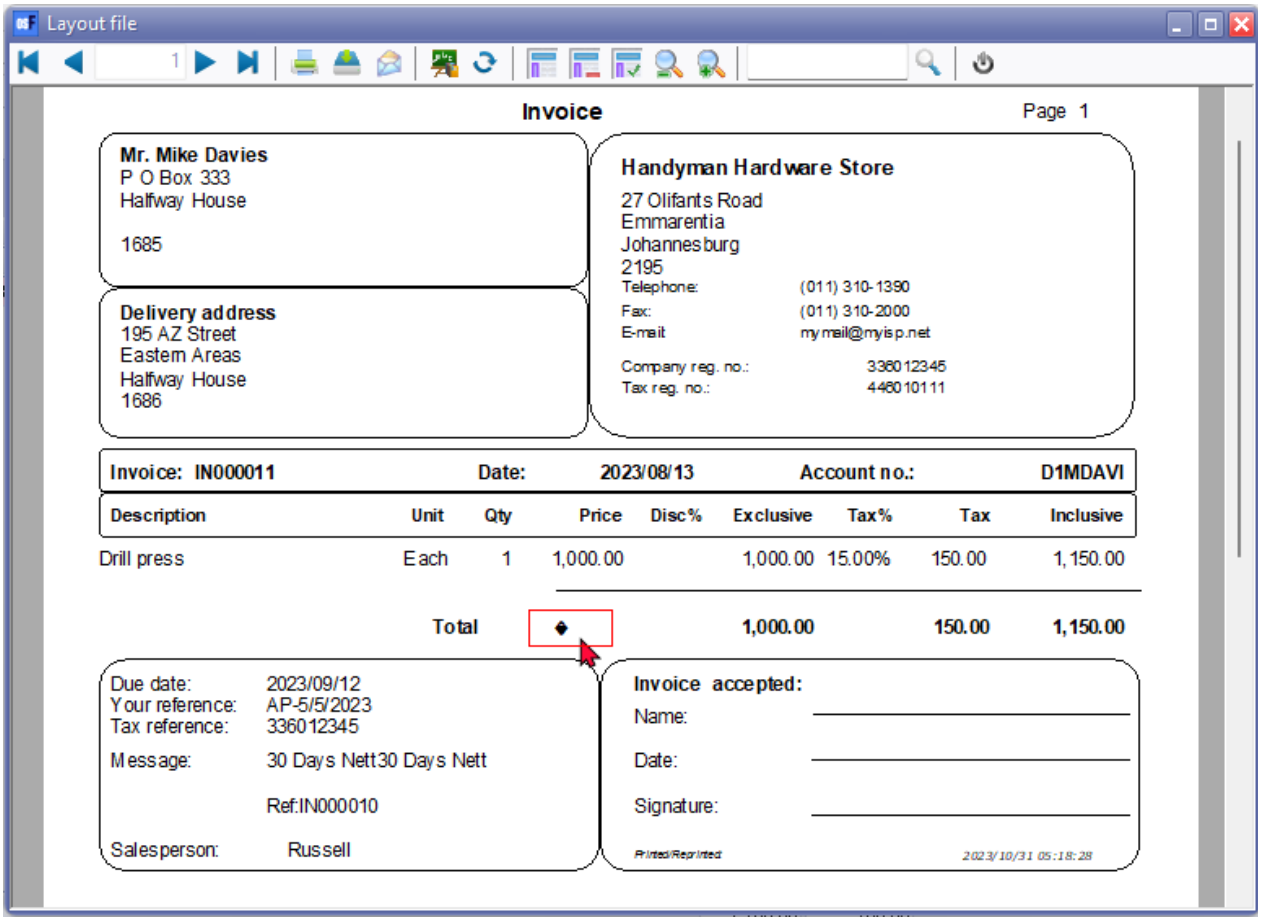
" ;nounicode=true " setting to uncomment it or set it to false nounicode=false in the osf.ini file

After changing it back to the default setting " nounicode=true " is not uncommented in the osf.ini file, The error is not replicated and is displayed correctly correctly in Setup → Currencies and Reports → Currencies report or on document layout files.



Layout file incorrect

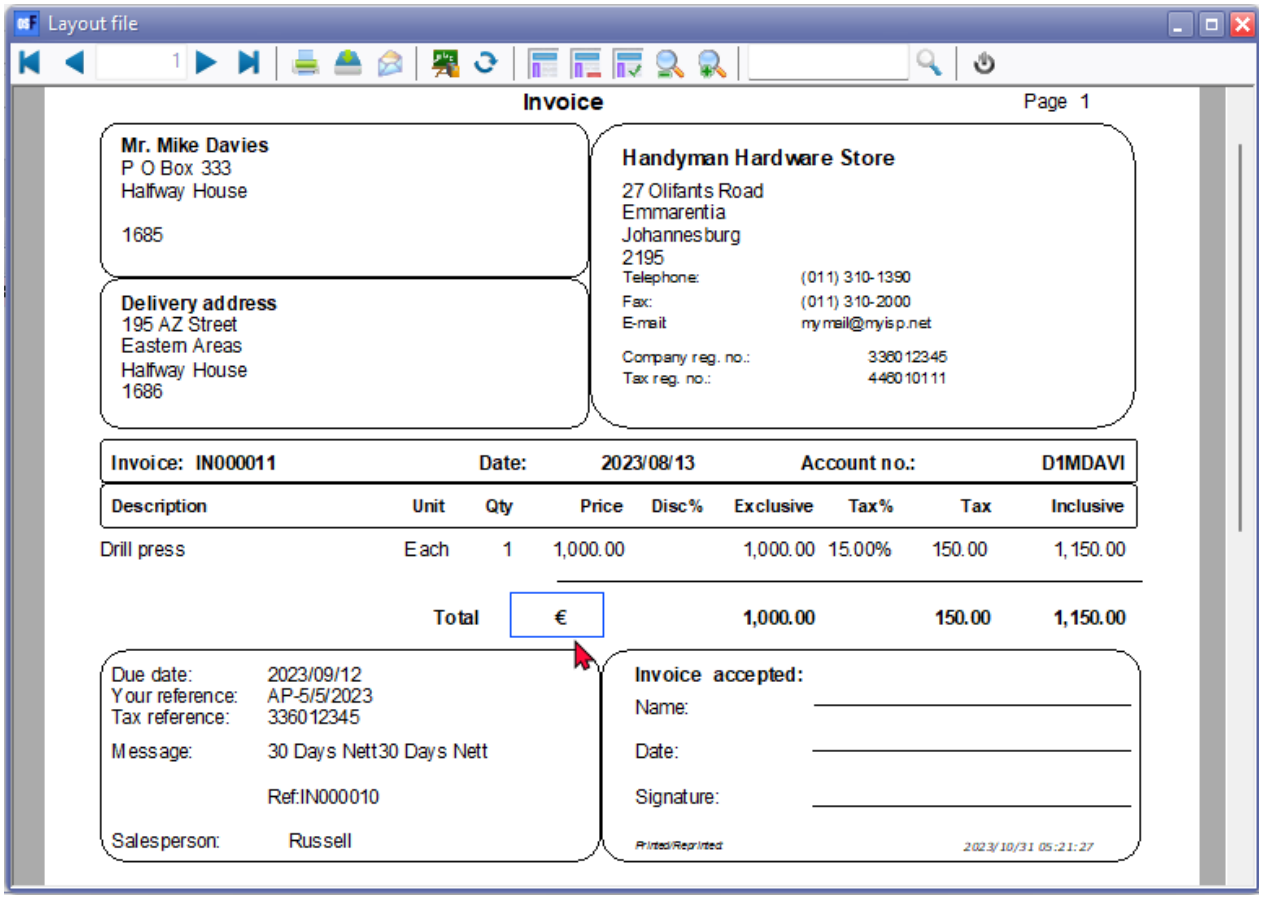
If the default setting " nounicode=true " is not uncommented in the osf.ini file, this replicate the error not displaying correctly.



Layout file correct

Only works correctly if " ;nounicode=true " is uncommented or set to false nounicode=false in the osf.ini

file.



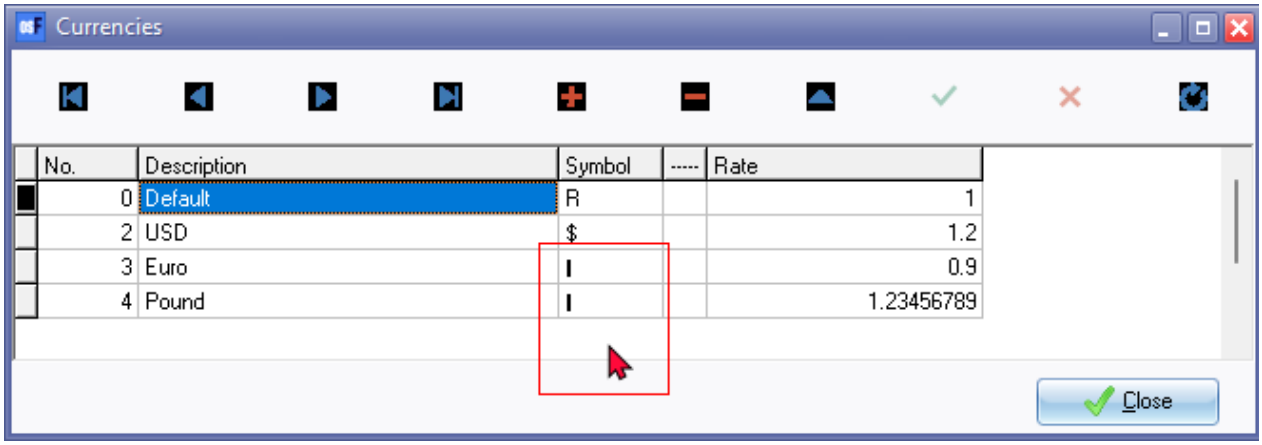
Was correct in osFinancials5 (Build 453)

See

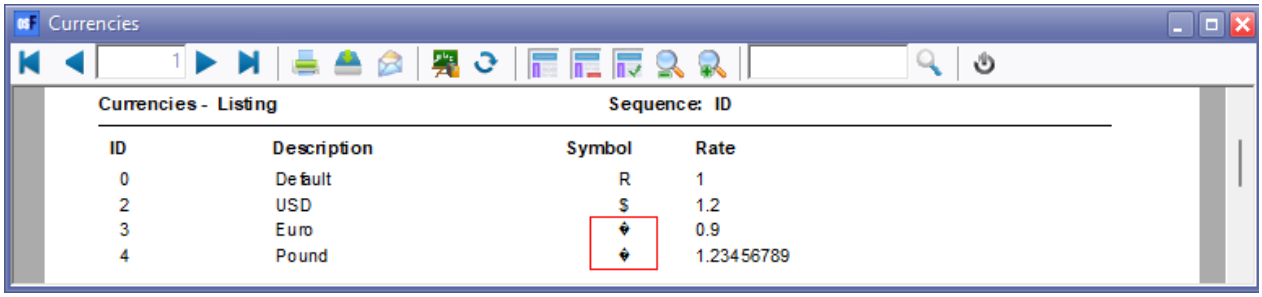
https://www.osfinancials.org/htmlhelp_eng/multi-currency-documents.html

https://www.osfinancials.org/htmlhelp_eng/multi-currency-documents.html

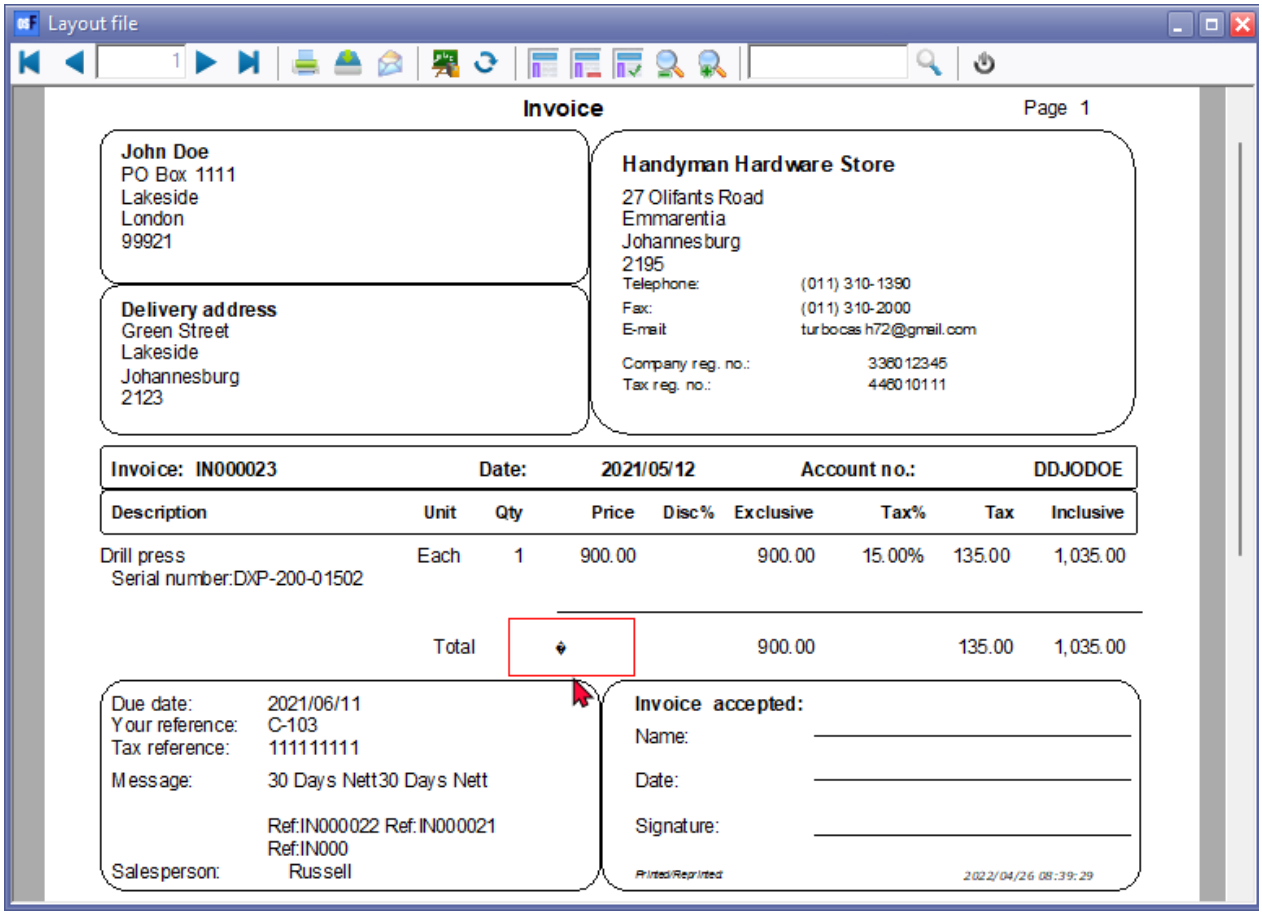
Euro and Pound symbol displaying incorrectly = osFinancials5.1.0.16



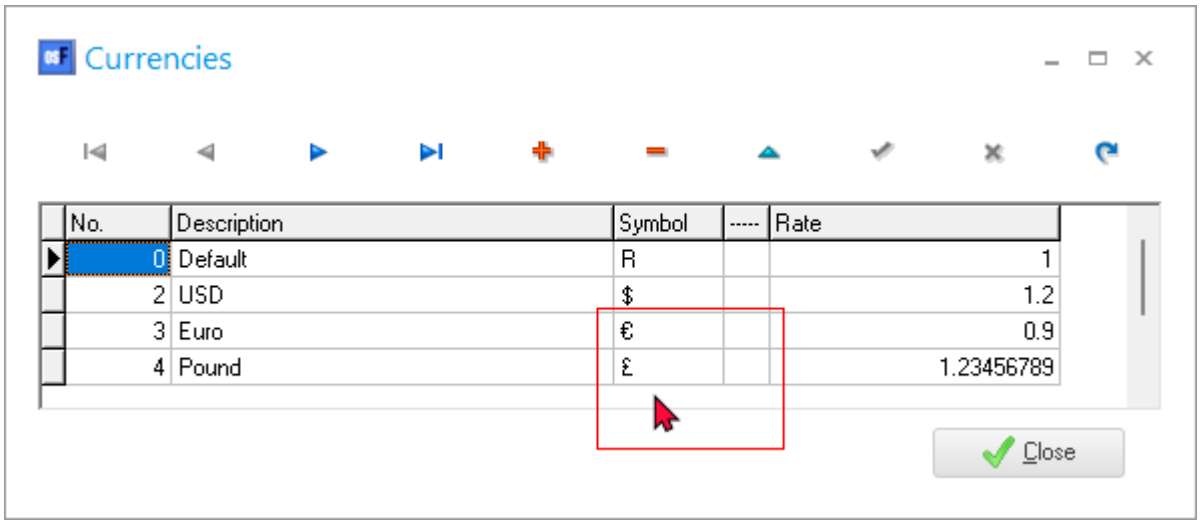
Currencies - Report prints incorrectly



Layout file also prints currency symbol incorrectly

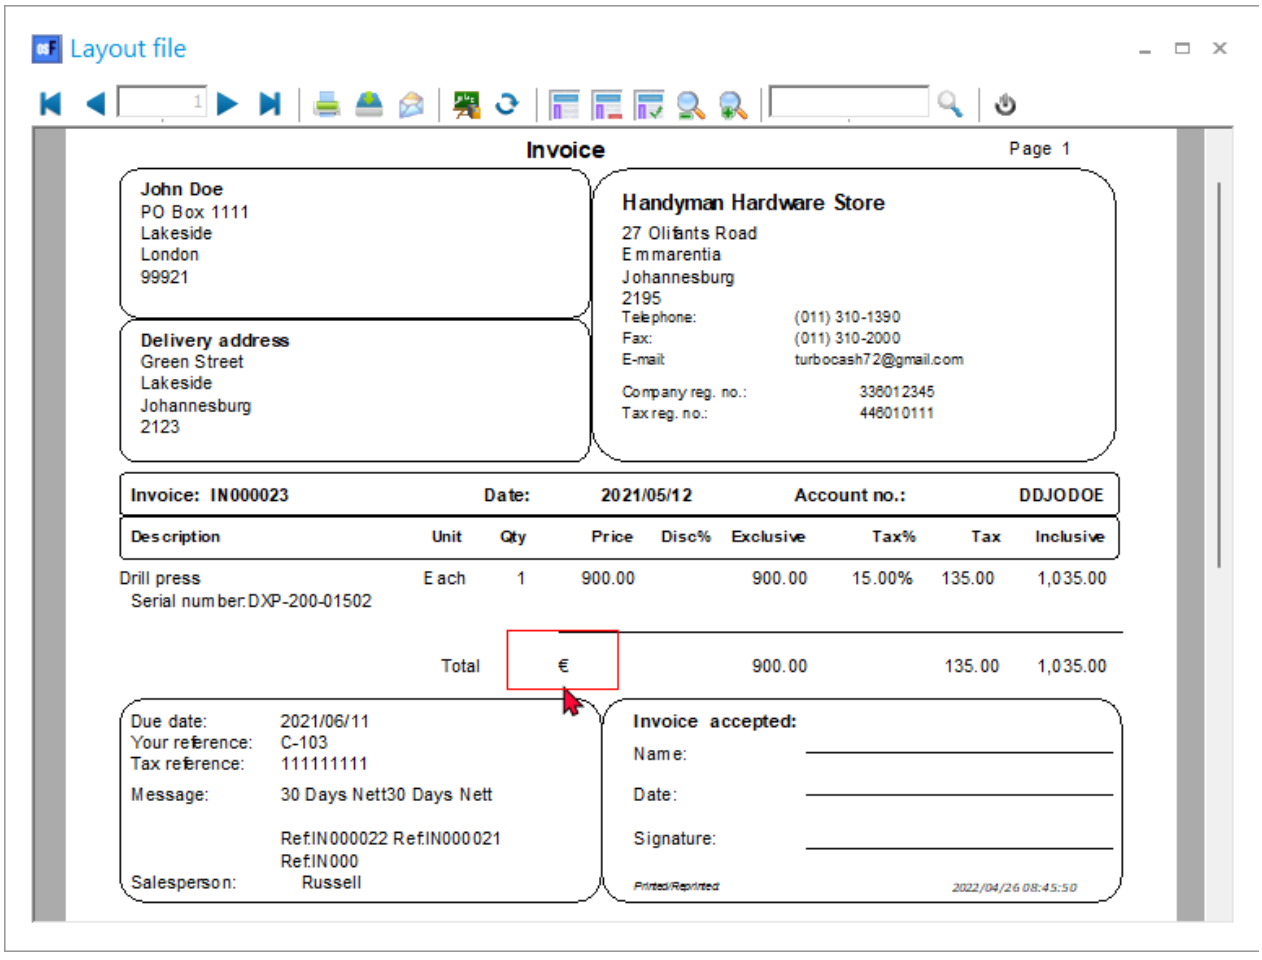


Last version was displaying correctly = osFinancials5 (Build 453)



Currencies - Report prints correctly

Layout file also prints currency symbol correctly



Could not update or confirm Reporting dates (Setup menu) produce errors - In some Firebird databases

Created with the Standard Edition of HelpNDoc: Step-by-Step Guide: How to Turn Your Word Document into an eBook

Known issues

Created with the Standard Edition of HelpNDoc: Easily create Help documents

Known issues - Clear/Reset

Clear/reset a Set of Books - Budget figures not cleared

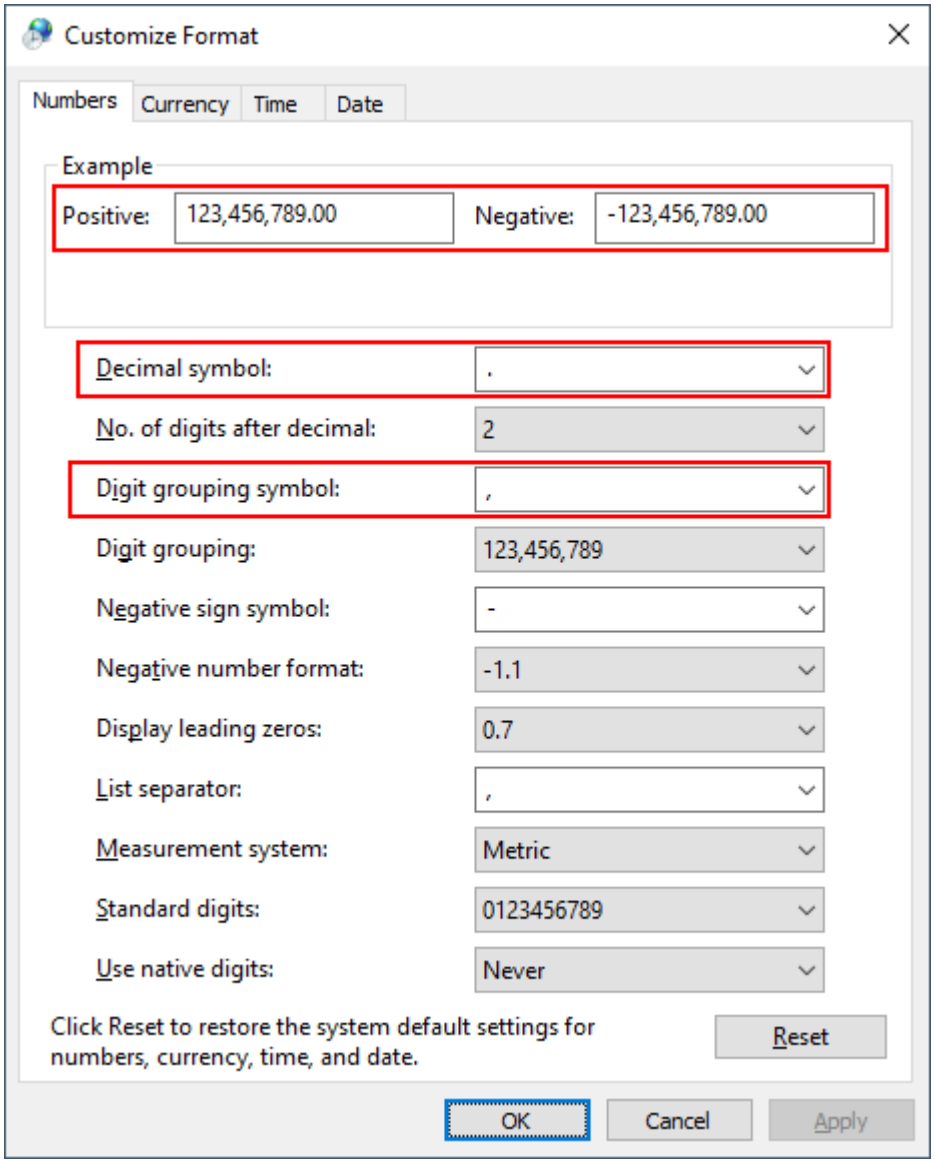
Clears all transactions an documents/stock, if selected.

- Budget totals is not cleared. Existing Budget figures still available - Budgets (Reports ribbon) and Setup -> Accounts (Budget tab)
  After Clear/reset a Set of Books you can use the Delete all button (Budgets on the Reports ribbon) to delete all Budget figures for a selected period. If you have more than 1 period, for example more than 1 financial year, you need to select the periods and repeat the process.' = Maybe I should add it as a note in Clear/Reset and Budgets topics
- We would need some tick-boxes then on what to delete. Maybe a Confirmation message could be added to clear or retain budget figures.
- Bank imports are not deleted.

Created with the Standard Edition of HelpNDoc: 5 Reasons Why a Help Authoring Tool is Better than Microsoft Word for Documentation

Known issues - Digit separator symbol - Documents - Spreadsheet import

Number format 123,456.00



If the number format is set to Decimal symbol is set to a full stop and the digit separator as a comma, as in the example of the "*Customize Format*" screen, the file exports and imports correct in most of the options.

Spreadsheet import - Document entry - context menu - Documents → Spreadsheet import

When an Export file is created based on the 123,456.00 number format, and the Export file is opened in the "*Data Import Export*" using the Spreadsheet import option, the amounts columns is blank.

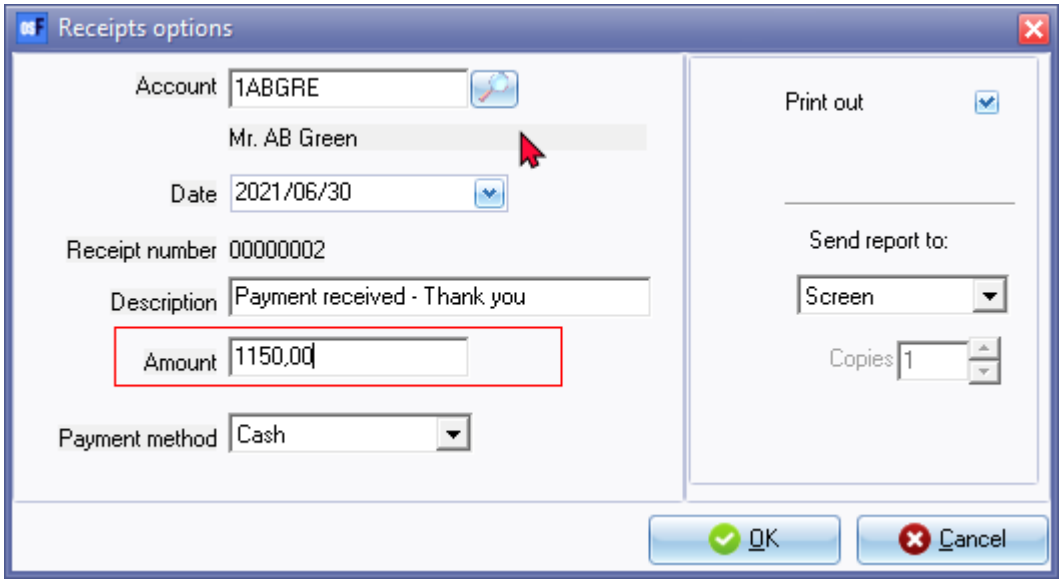
Created with the Standard Edition of HelpNDoc: Upgrade Your Documentation Process with a Help Authoring Tool

Known issues - Decimal symbol - Create receipts (Batch entry)

Launched from Receipts batch – Create receipts – F9: Process

Create receipts option in receipt batches - "*Receipts options*" screen



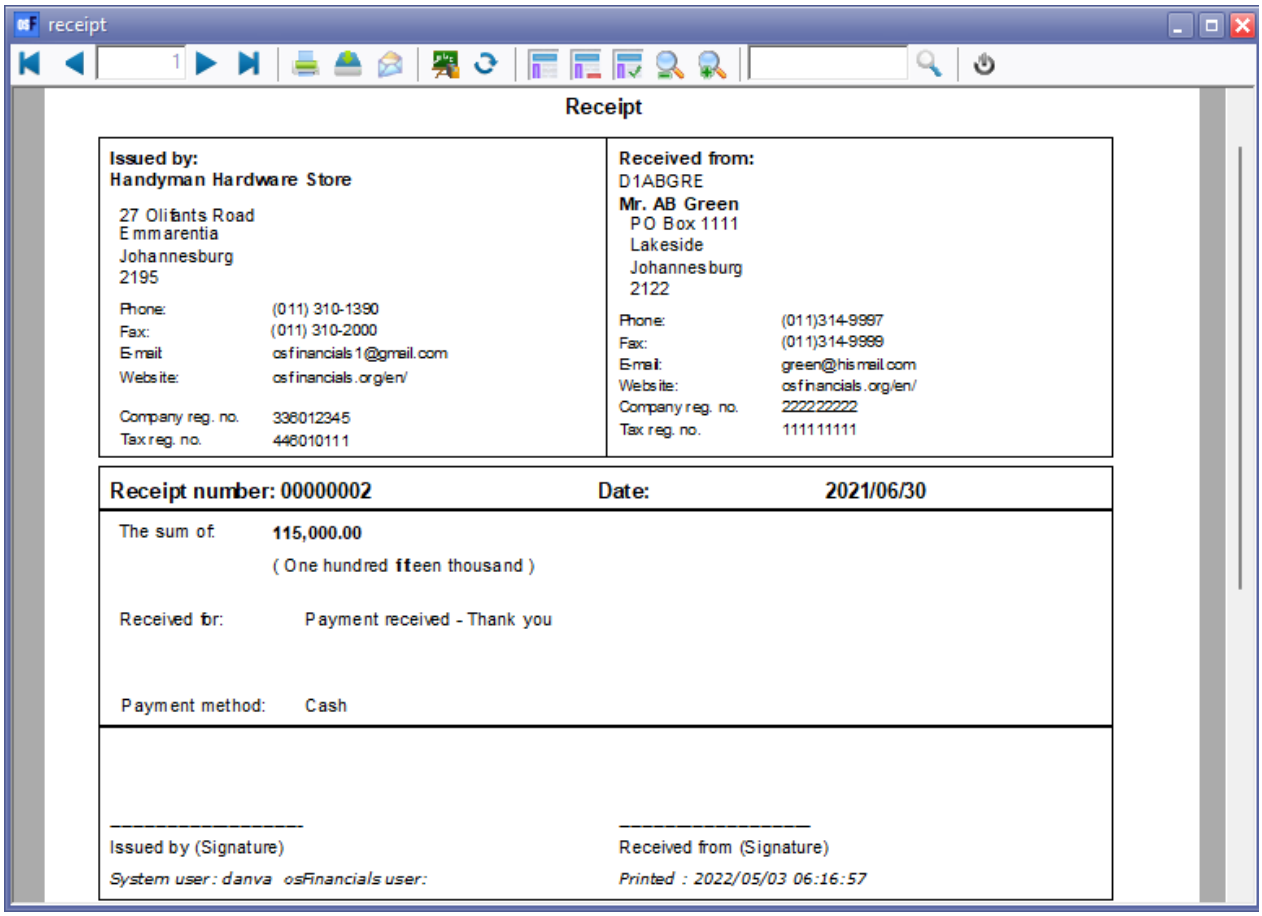
Amount - Enter the amount in figures. You may enter up to Nine billion, nine hundred and ninety nine million, nine hundred and ninety nine thousand nine hundred and ninety nine (Rands, Euros, Pounds or

Dollars) and ninety nine cents in this field (9,999,999,999.99).

If your system's digit separator is set to a comma and your system's Decimal symbol is set to a period (full stop), do not enter a comma as the decimal separator.

If a comma is used as a digit separator, it will print and generate the transaction amount as 115,000.00 instead of 1,150.00.

An example of the printed "*Receipt*", is as follows:



Receipt batch transactions

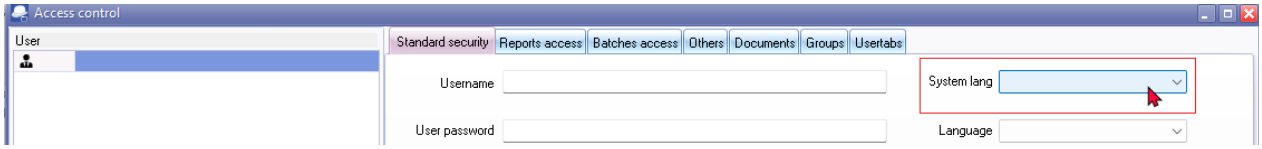
Known issues - Default language setting

Changed from previous osFinancials4, osFinancials5 and TurboCASH5.2 (453) releases - Set the default language in a Set of Books - Could save the language with no user in each database in Setup → Access control.

In osFinancials5.1.0.227 you cannot set it by default if no users were added. Now you can only set the language for each user.

Currently you cannot set the default language in a Set of Books. When opening a Set of Books from the Bin Repository folder in TurboCASH5 or Download it from the download option in Let osFinancials help you to create a Set of Books (in both TurboCASH5 and osFinancials5.1.0.227), the System language in Setup → Access control is blank.



In Firebird and MSSQL database types cannot change the language on Setup → Access control (System language) and click the Apply button as the default language for the Set of Books. It reverts back to the original language e.g. Afrikaans if you change it to English.

The Set of Books will not open in the previous default language set in Previous versions of osFinancials5/TurboCASH5. It will open in a different language (e.g. English)

After opening the Sets of Books, you need to go to Switch language option (Start ribbon). The selected language will then be updated and displayed in Setup → Access control.

Created with the Standard Edition of HelpNDoc: Create HTML Help, DOC, PDF and print manuals from 1 single source

Known issues - Customise your own Set of Books (Advanced)? - Missing Groups and Paper types

---

Customise your own Set of Books (Advanced)? - Missing Groups and Paper types

When creating a Set of Books using the "*Customise your own Set of Books (Advanced)?*" option, you begin with a clean slate and have to build your chart of accounts from scratch. The initial setup process will only include three main control accounts: the Debtor's control account, Creditor's control account, and Retained earnings account.

The Types table does not include the following in the newly created Set of Books for Firebird database types and MSSQL database types:

- Groups is by default not included in the Types table - Projects (1000), Cost Centre 1 (1002), Cost Centre 2 (1003) and Languages (1004) need to be added as WTYPEPARENT (Type 2) -
- Paper types Till Slip (55) and New Plain (56) need to be added as WTYPEPARENT (Type 5) -

These Missing records in the Types table Groups and Paper types needs to be manually added Using the SQL Browser Plugin.

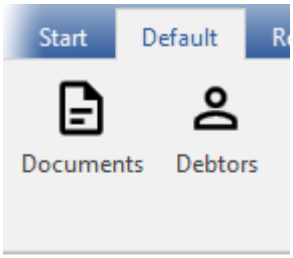
Steps after creating the Set of Books (Advanced)

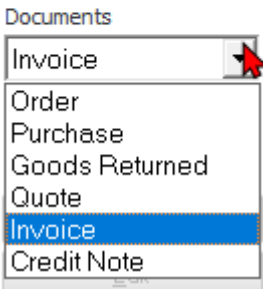
Customise labels for Document types

You may need to customise labels and fix records.

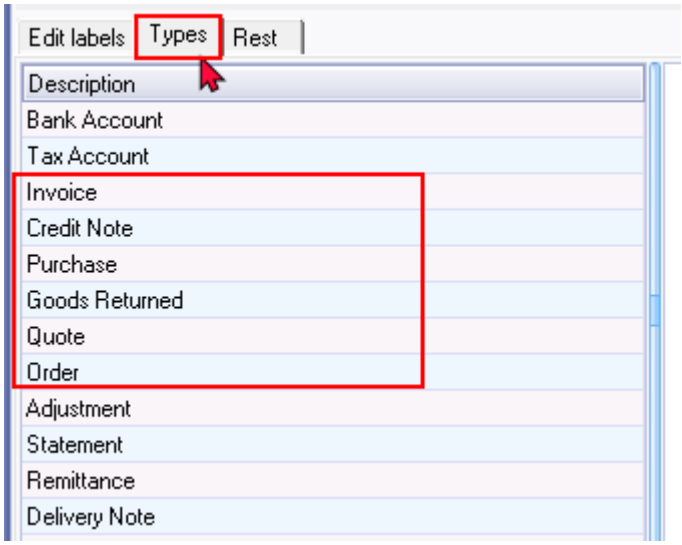
Change the descriptions on the Types tab on Tools → Customise languages (Setup ribbon). If you have a different language than English, you need to translate the descriptions for your language or specific requirements.

Document types





"*Goods Returned*" - change to Supplier return to be consistent with the other labels in the language file.



The Document type (i.e. Invoice, Credit note, Quote, Purchase, Supplier return or Order) is stored and edited in the Tools → Customize language (Setup ribbon).

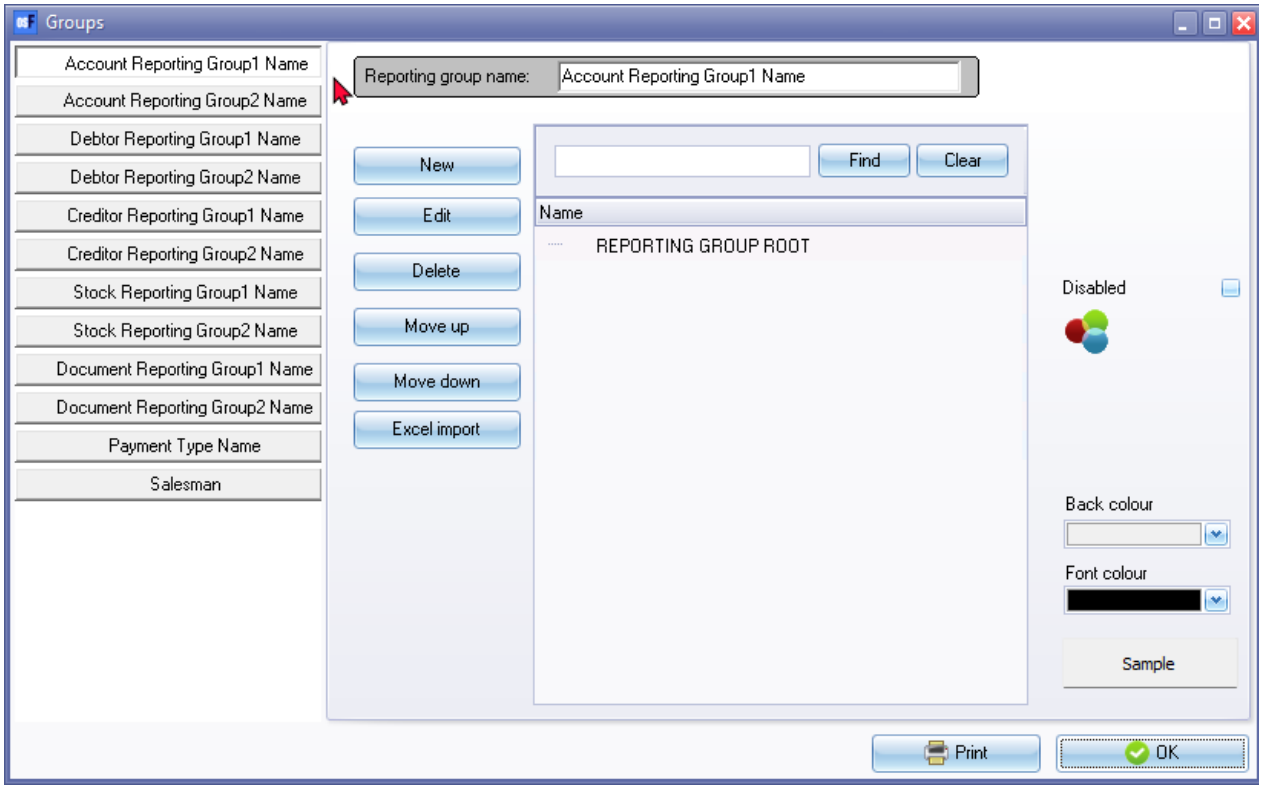
It should print the Document type (i.e. Invoice, Credit note, Quote, Purchase, Supplier return or Order) as this is more correct for the recipient of these documents.

If you need to print documents using the document layout files supporting one (1) Layout file for all document types), it is recommended that the Document types are edited and/or translated to the singular in the Types tab Tools → Customize language menu (Setup ribbon).

Change Edit Groups

Change the reporting group names (descriptions) of the Groups (Setup ribbon).

You may also add groups for reporting groups, if necessary.



The name must not already exist and may not be longer than 50 characters. This name will help you to identify the Set of Books on your system. You will need to select this name whenever you need to open the Set of Books or perform some other functions on the Set of Books.

The following groups are not included if the Set of Books was created using Create Set of Books (Advanced) option:

- Projects - You may create groups for Projects. These Projects may be activated in batches and documents. Once the batches and/or documents are posted (updated to the ledger), you may generate various reports for each Projects on the Sidebar of the Default menu.
- Cost centre 1 and/or Cost centre 2 -
- Languages - *Multi-Language accounts*

Multi-Language accounts - *Manual* - *Shop* - Licence : Once-off -

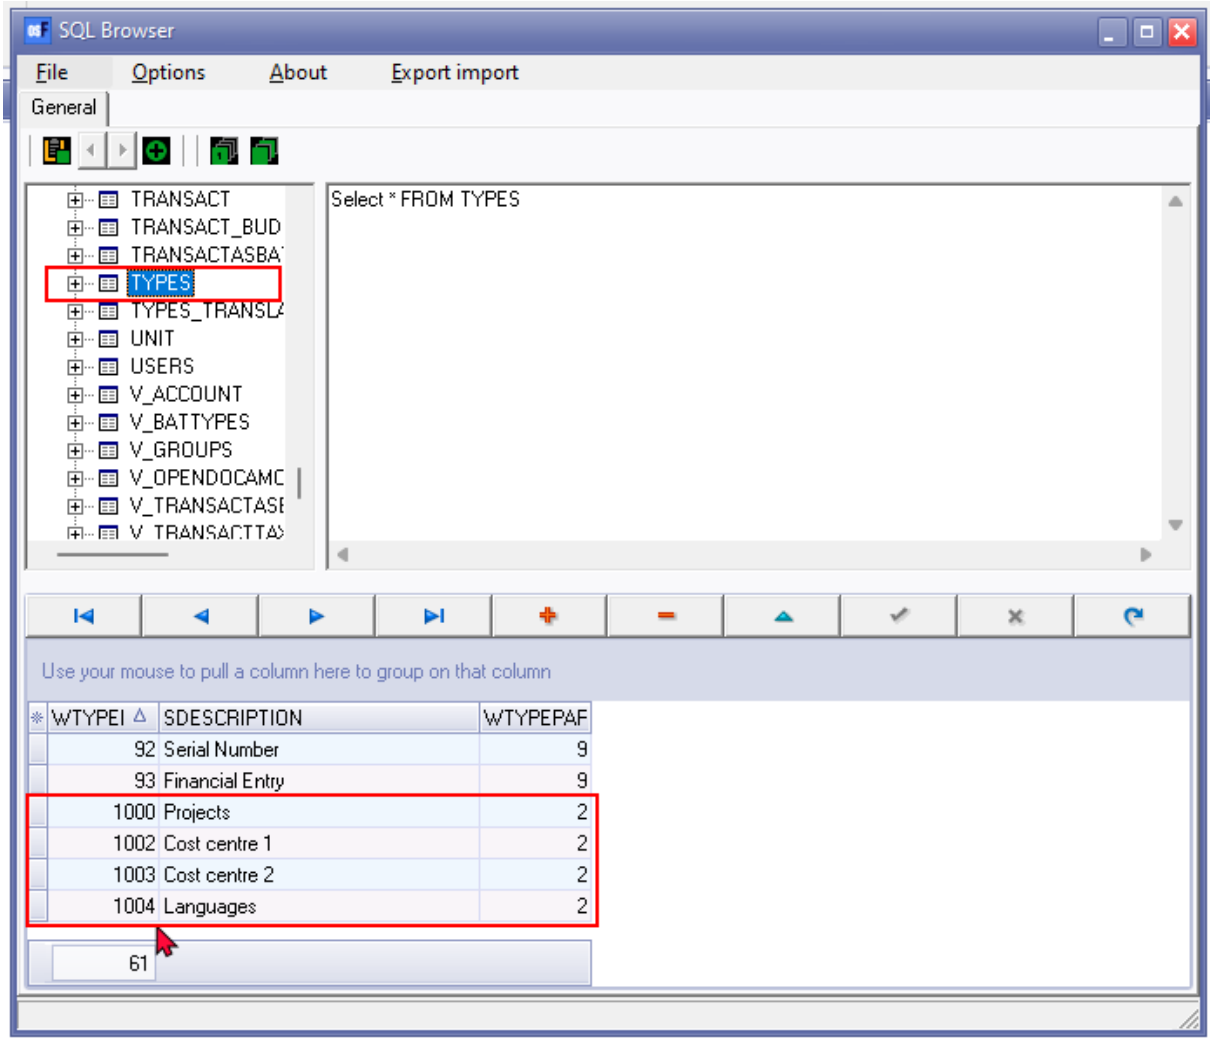
This plugin makes it possible to translate the ledger and group names in multiple languages. It is already possible to choose different languages for the interface (the buttons). But this plugin makes it possible to do the accounting in different languages. Per user you can select a language, so the user can account in his/her own language. The set of books can be viewed in different languages, therefore it is possible an employee enters information into an English Set of Books and a bookkeeper, auditor, etc. can see the set of books in a set language, e.g. Afrikaans, Dutch, etc.

Add missing Groups and Paper types in the Types table

To add missing groups:

If you intend to use Projects, Cost centres and/or Multi-language Set of Books, you need to add these Groups manually:

1. Activate the SQLBrowser plugin in Tools → Activate plugins (Setup ribbon)
2. Launch the SQLBrowser plug-in Plugins → Tools → SQLBrowser (Setup ribbon).
3. Select the "*TYPES*" table.
4. Right-click and select "*Open*" on the context menu.



5. Select the last record WTYPEID - 93 in the TYPES table. Insert or Add a new record (you may also use the down arrow on your keyboard).
6. Add Groups - Optional - If you are planning to use any of the following features in osFinancials5, you

may add the groups, as required. To do this, type the following records and type 2 in the WTYPEPARENT column:

- 1000 - Projects
- 1002 - Cost centre 1
- 1003 - Cost centre 2
- 1004 - Languages

7. Add Paper types - Type the following records and type 5 in the WTYPEPARENT column:
   - 55 - Till slip
   - 56 - New plain
8. Close the SQLBrowser

> *SQLBrowser - Manual - Shop - Licence : Once-off -*

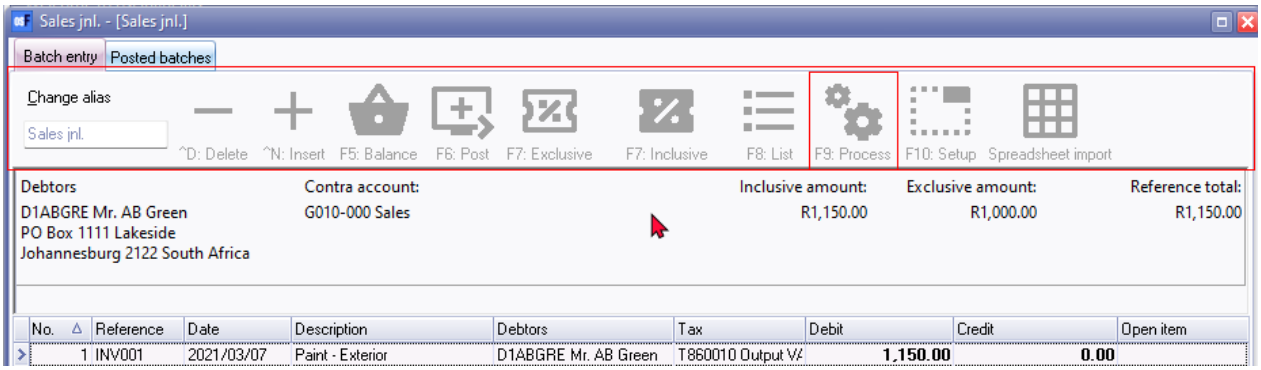
Known issues - Batches

Inactive Batch processing icons on Batch entry screens - Processes

Should the processing icons on the *"Batch entry"* screen is inactive during this process, you may need to close and reopen the batch.

This may occur after specific processes is performed in the Batch entry screen.



This may occur in the following options:

- F9:Process - Import a posted batch - This option allows you to import the transactions from a posted batch in the same Set of Books.
- F9:Process - Delimited file import - Select and open a valid comma separated value file format to import the transactions in a an unposted batch. This feature will import batch transactions exported using the Write delimited file option.
- F9:Process - Reverse batch (D<-->C) - If transactions were entered incorrectly in the debit column in stead of entering the transactions in the credit column, and *vice versa*, you may transfer (switch) the transaction amounts as entered into the credit columns to the debit columns and *vice versa* for any unposted batch.

Repeating Transactions

Clear / Reset a Set of Books - Repeating transactions not cleared

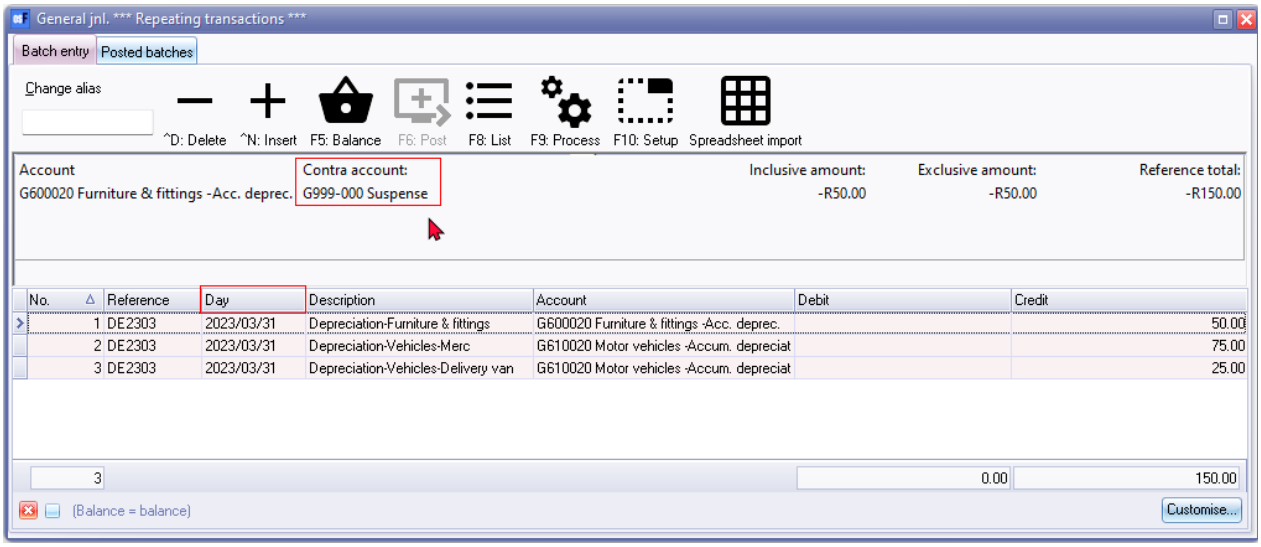
Clear / Reset a Set of Books - (Setup → Global processes → Clear / Reset) clears all batches but not the Repeating transactions entered in Edit → Repeating transactions on the Default ribbon.

Need to manually Erase (Delete) the batch.

Edit → Repeating transactions (Default ribbon)

F10:Setup select the contra account - Does not display when click OK - Only after balancing the batch, the contra account is updated.

Date column displays Day instead of Date



F9:Process - Repeating transactions

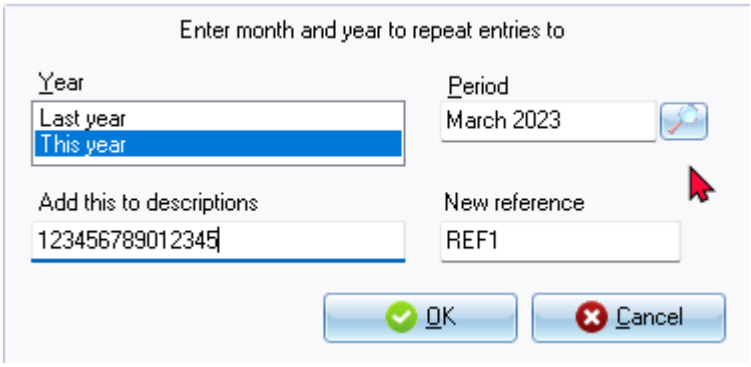
On the Batch entry screen, select the batch type for which Repeating transactions have been entered or processed on the Edit → Repeating transactions menu (Default ribbon).

On the F9:Process icon, select Repeating transactions option and click OK.

If no repeating transactions exists for the selected batch, nothing will happen.

Maybe a error or confirmation message, similar to the following, could be displayed:

> No transactions to import!



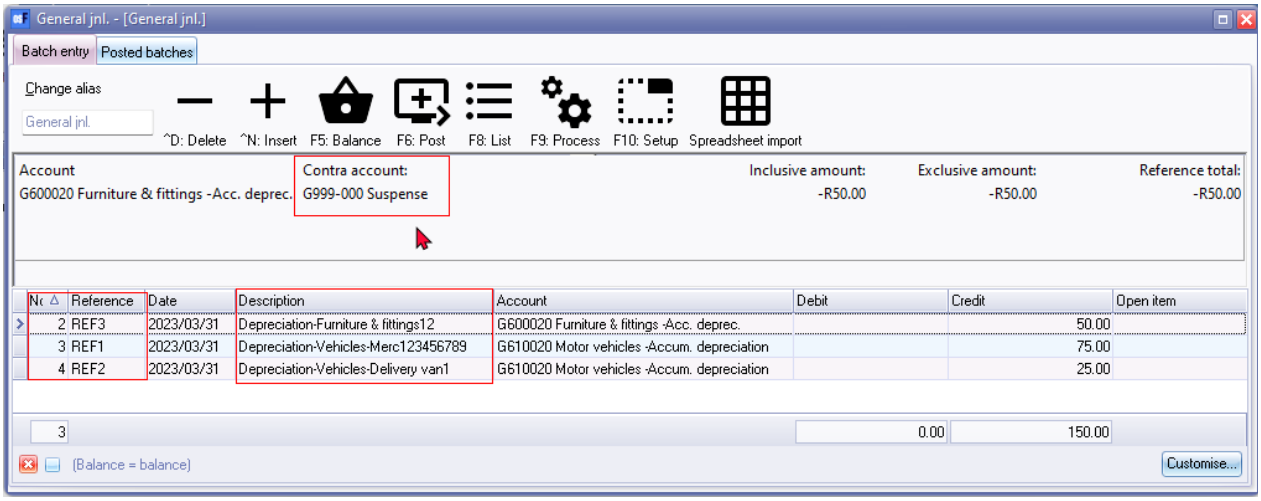
If no repeating transactions exists for the selected batch, nothing will happen.

Maybe a error or confirmation message, similar to the following could be displayed:

> No transactions to import!

The options is as follows:

- Year -
  - Last year - If this option is selected, only the previous financial year's periods will be listed.
  - This year - If this option is selected, the previous financial year's periods and the current financial year's periods will be listed.
- Add this to descriptions - NOTE that the descriptions entered in this field, will be added after the existing descriptions in the "*Description*" column. The "*Description*" column supports up to 35 characters. The for existing descriptions entered in this field may not be displayed in the Batch entry screen after import.
- New reference - NOTE that the new reference entered in this field, will replace the existing descriptions in the "*Reference*" column on the Repeating batch.

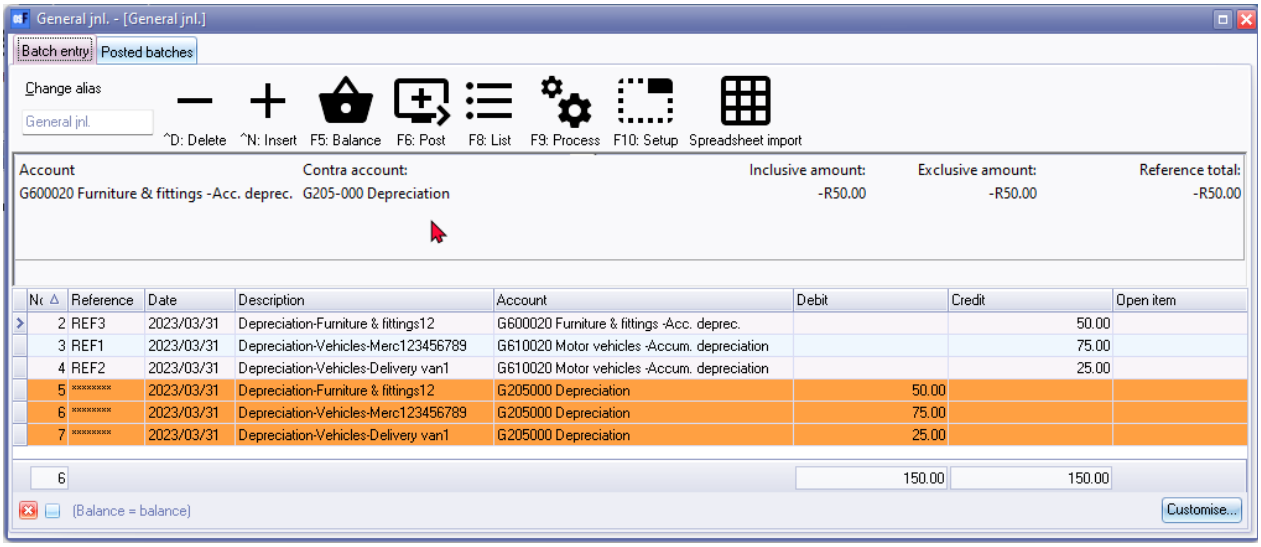


If the "*Increment reference*" option on the F10:Setup (Options for this batch) is selected, the reference number will be increased (e.g. "*REF1*" as entered). For example "*REF2*" and "*REF3*".

Once imported into a normal batch the line No. starts with 2 instead of 1 (as in other import options on Batch entry screens.

Contra account - may not be correct after Repeating entries is processed (imported) into a normal Batch entry screen.

You may need to reselect the correct contra account in F10:Setup (Options for this batch) and F5:Balance the batch.



Generate Multiple transactions - Select Contra account

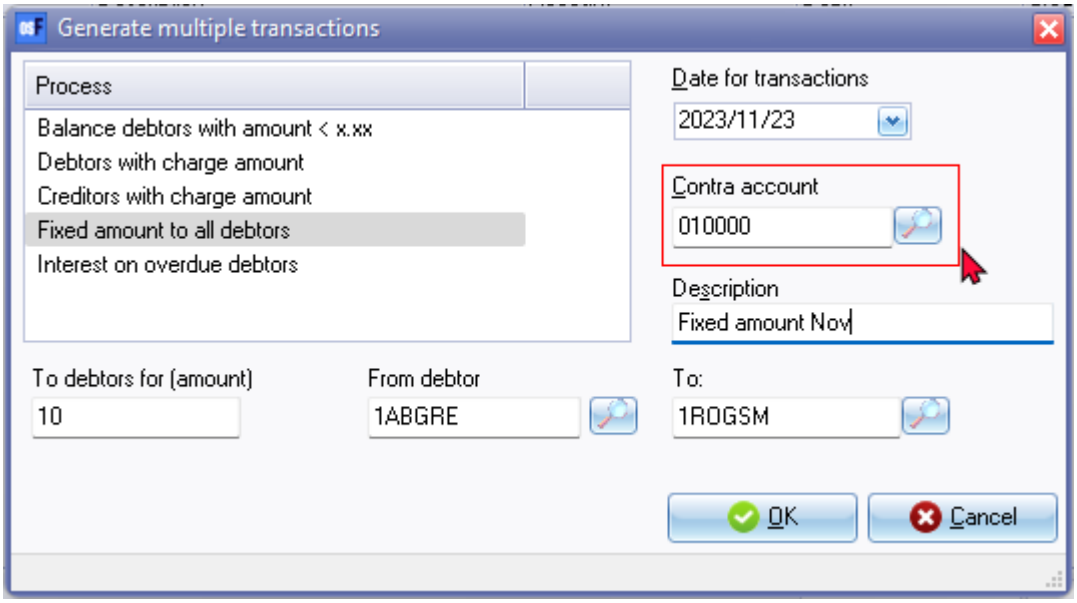
All batches (except Payments and Receipts batches)

Replicated in the following options:

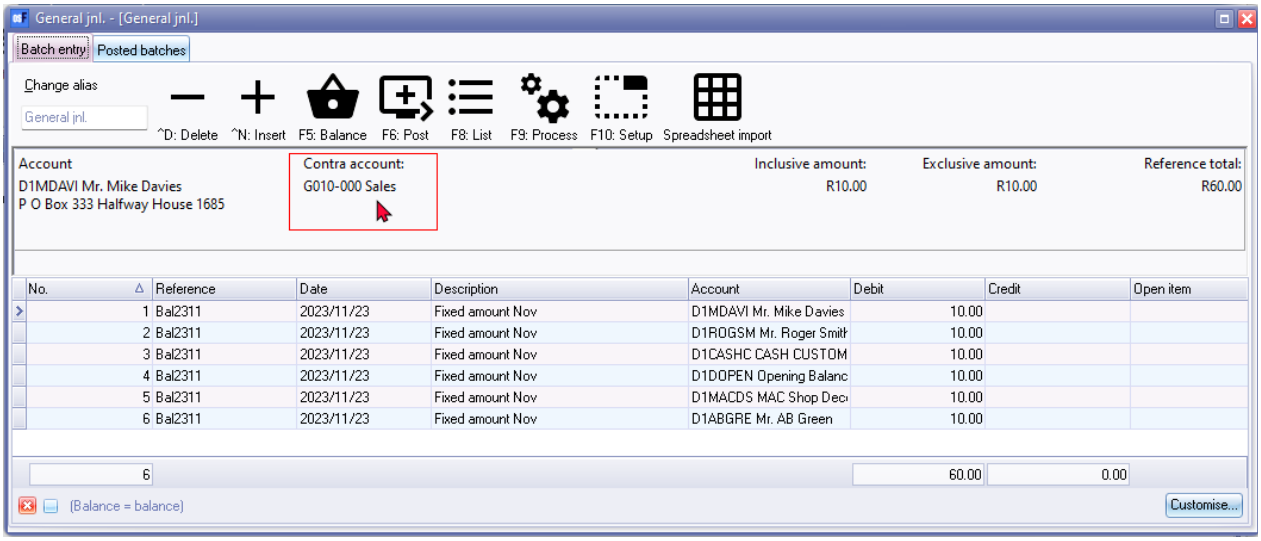
- F9:Process - Generate multiple transactions - Balance debtors with amount < x.xx - (e.g. Write-off bad debts - Uneconomical to recover)
- F9:Process - Generate multiple transactions - Fixed amount to all debtors
- F9:Process - Generate multiple transactions - Debtors with charge amount
- F9:Process - Generate multiple transactions - Creditors with charge amount
- F9:Process - Generate multiple transactions - Interest on overdue debtors

Need to select the contra account on F10:Setup.

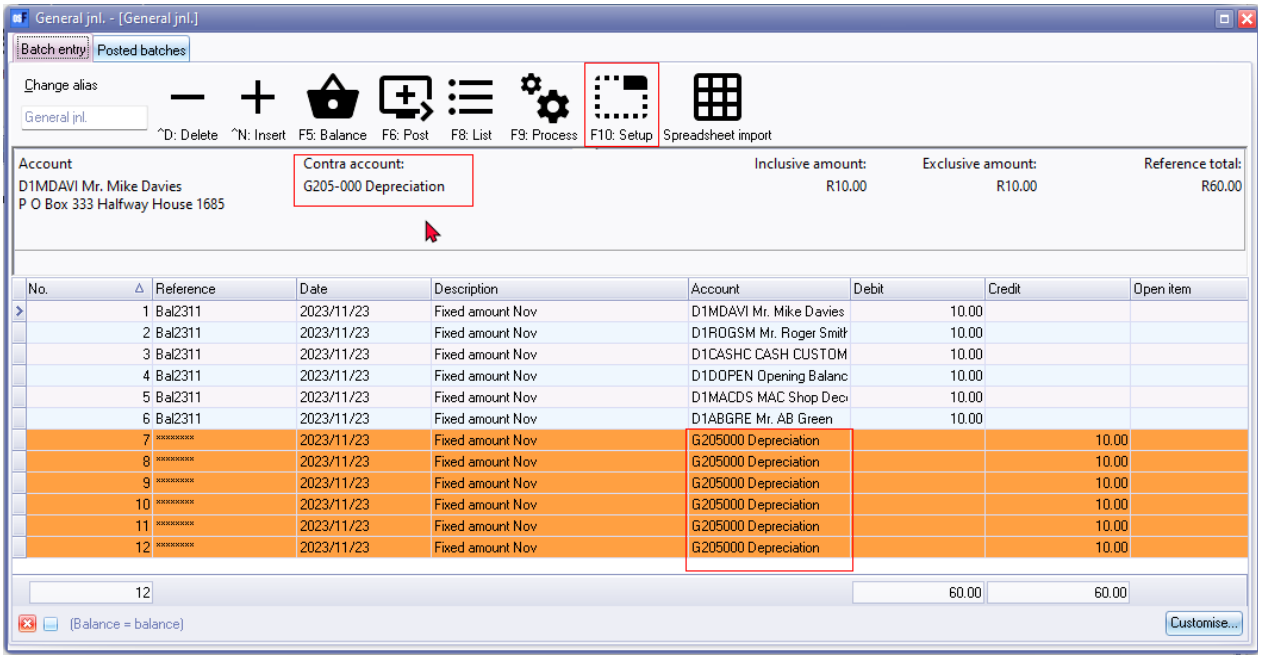
For example, "Fixed amount to all debtors" option if the Contra account is selected as "*Sales*" account.



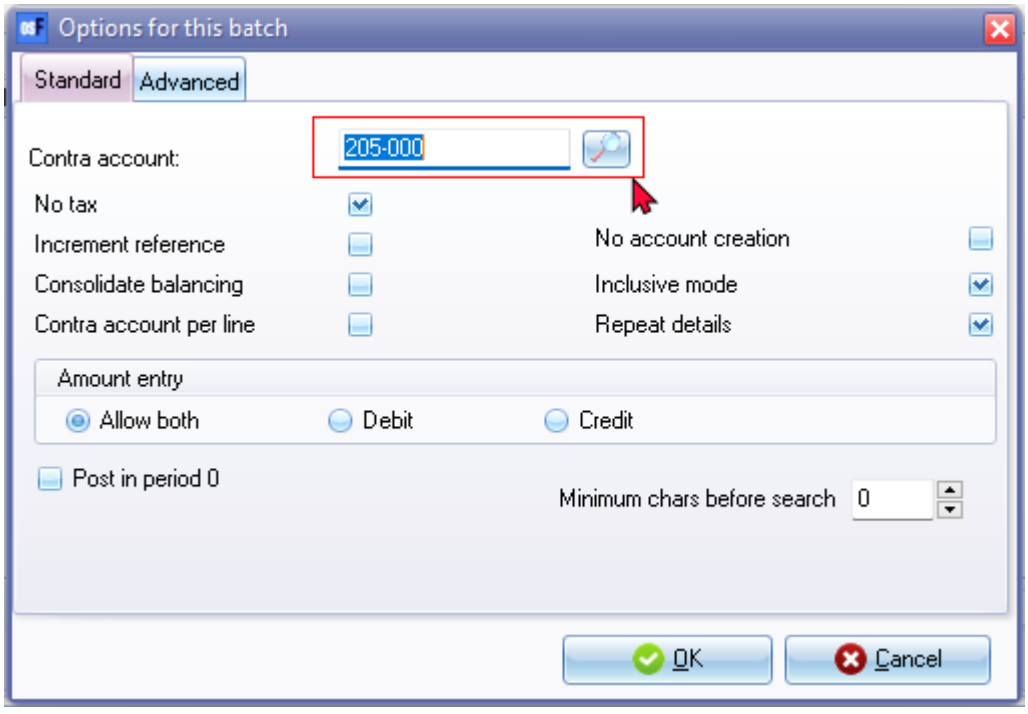
After processing the generated transactions, into the batch, the contra account is displayed on the batch as "*Sales*".



When the batch is balanced, the contra account, changes back to the contra account, as selected in the previous batch.



If balancing transactions is generated, when balancing the batch, delete these balancing transactions and go to F10:Setup and select the contra account for the Generate multiple transactions.



After the contra account is selected on the F10:Setup (Options for this batch) screen, rebalance the batch to the correct contra account.

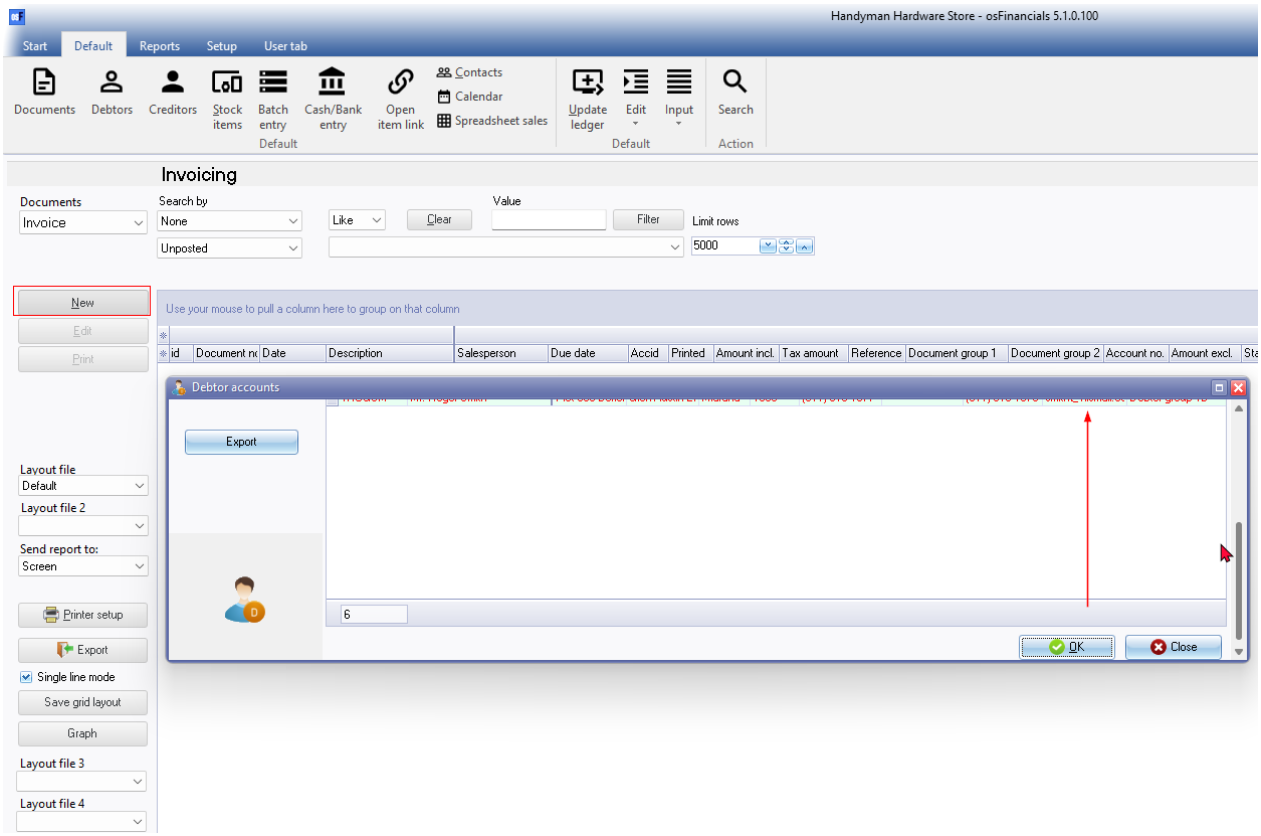
Known issues - Documents

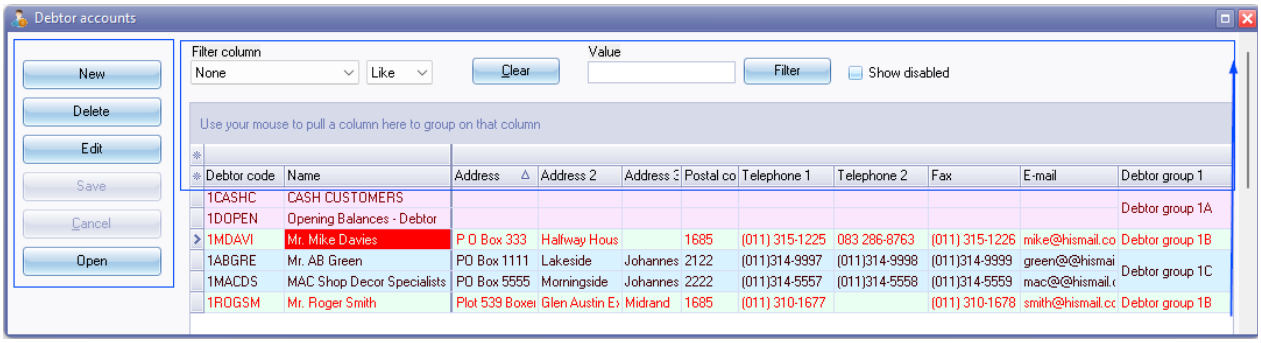
Create new Document - Select Debtor / Creditor

When creating a New sales document (e.g. Invoice, Credit note or Quote), the Debtor accounts screen list the last line. You need to use the scroll bar to view the search filter options to find an account.

Similarly when created a New purchase document (i.e. Purchase, Supplier return or Order), the Creditor accounts screen list the last line. You need to use the scroll bar to view the search filter options to find an account.



To use the filter options you need to scroll up



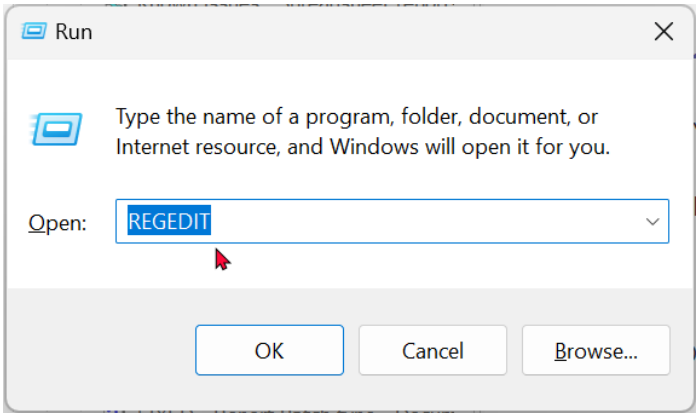
FIX for Debtor accounts / Creditor accounts lookup when creating documents

It also fixed the Debtor / Creditor accounts lookup when creating documents in osFinancials5-453 osFinancials4.0.0.1093

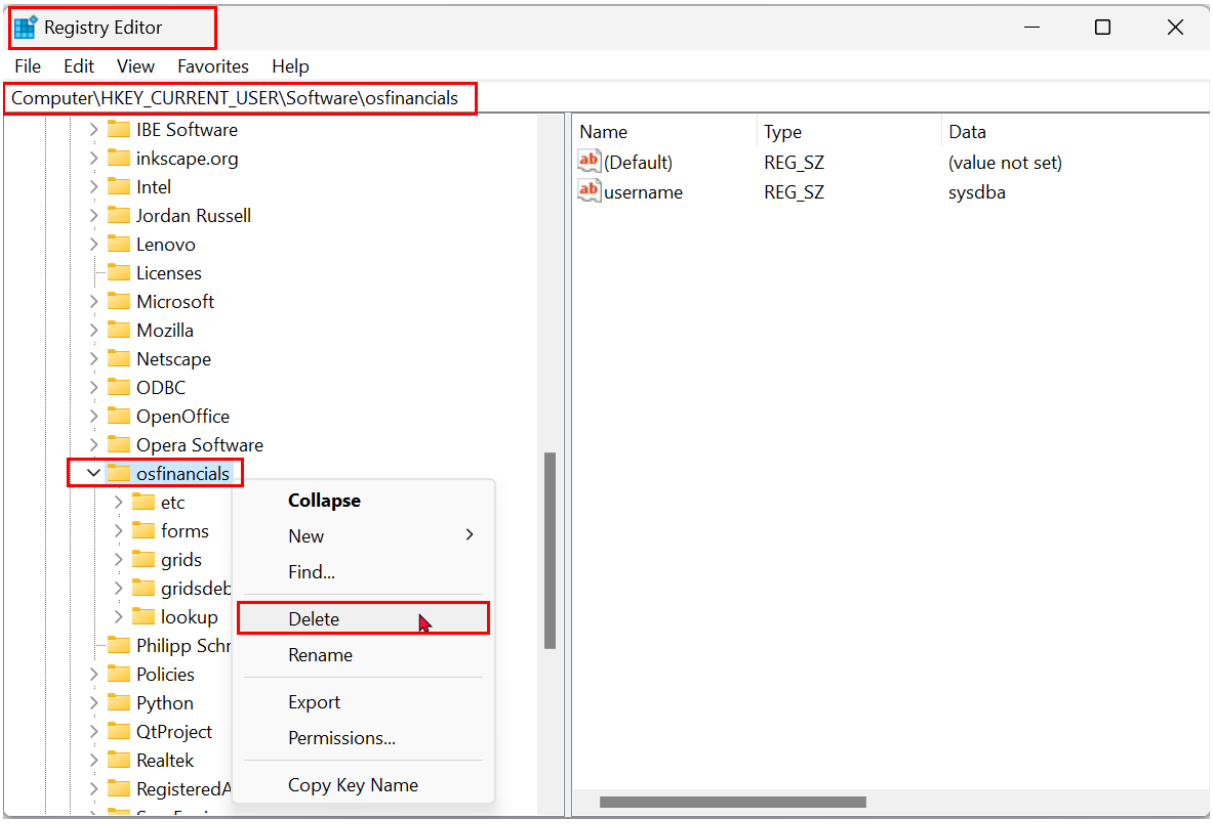
Deleting the HKEY_CURRENT_USER\SOFTWARE\osfinancials

To Delete the HKEY_CURRENT_USER\SOFTWARE\osfinancials in Windows Registry:

1. Close osFinancials5/TurboCASH5.
2. Right-click on the Start icon of your Windows operating system and select "*Run*".



3. Click OK to open the "*Registry editor*". Your system may ask for permissions and click Yes.

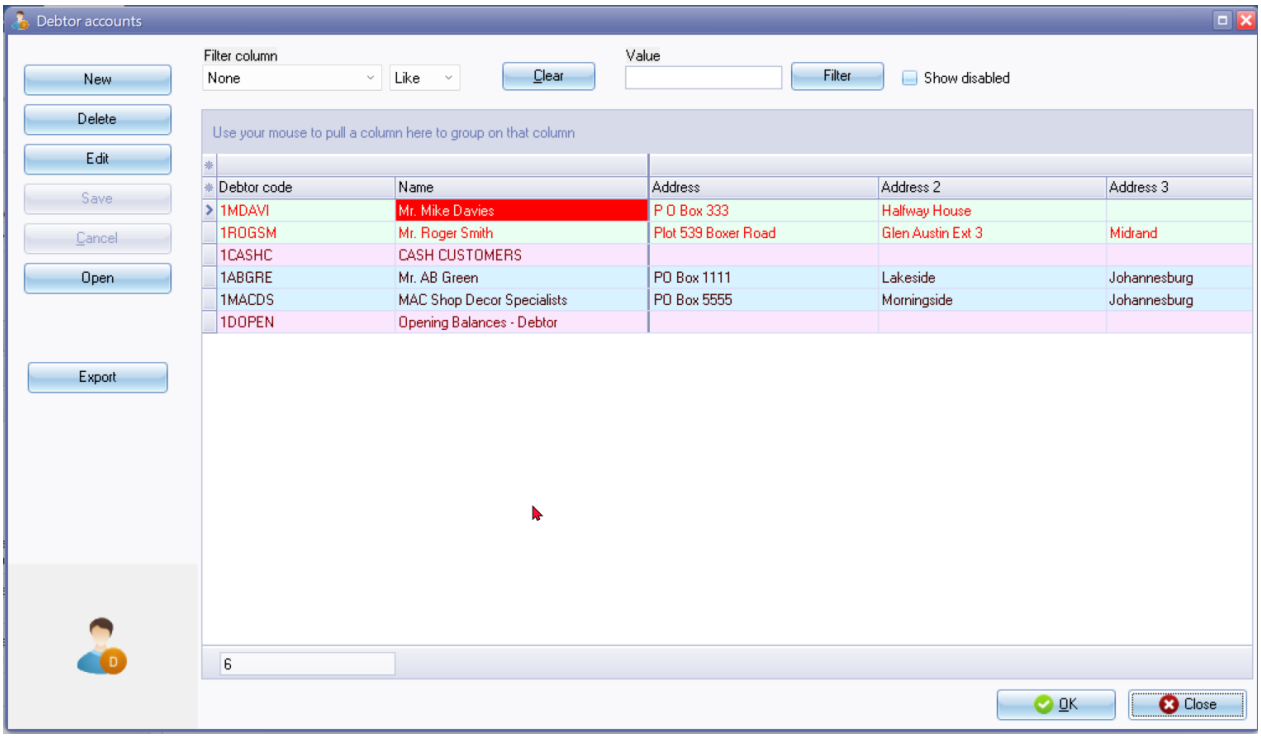


4. Navigate to the "HKEY_CURRENT_USER\SOFTWARE\osfinancials" key.
5. On "*osfinancials*" key right-click and select Delete on the context menu.
6. A "*Confirm Key Delete*" message will be displayed:

Are you sure you want to permanently delete this key and all of its subkeys?

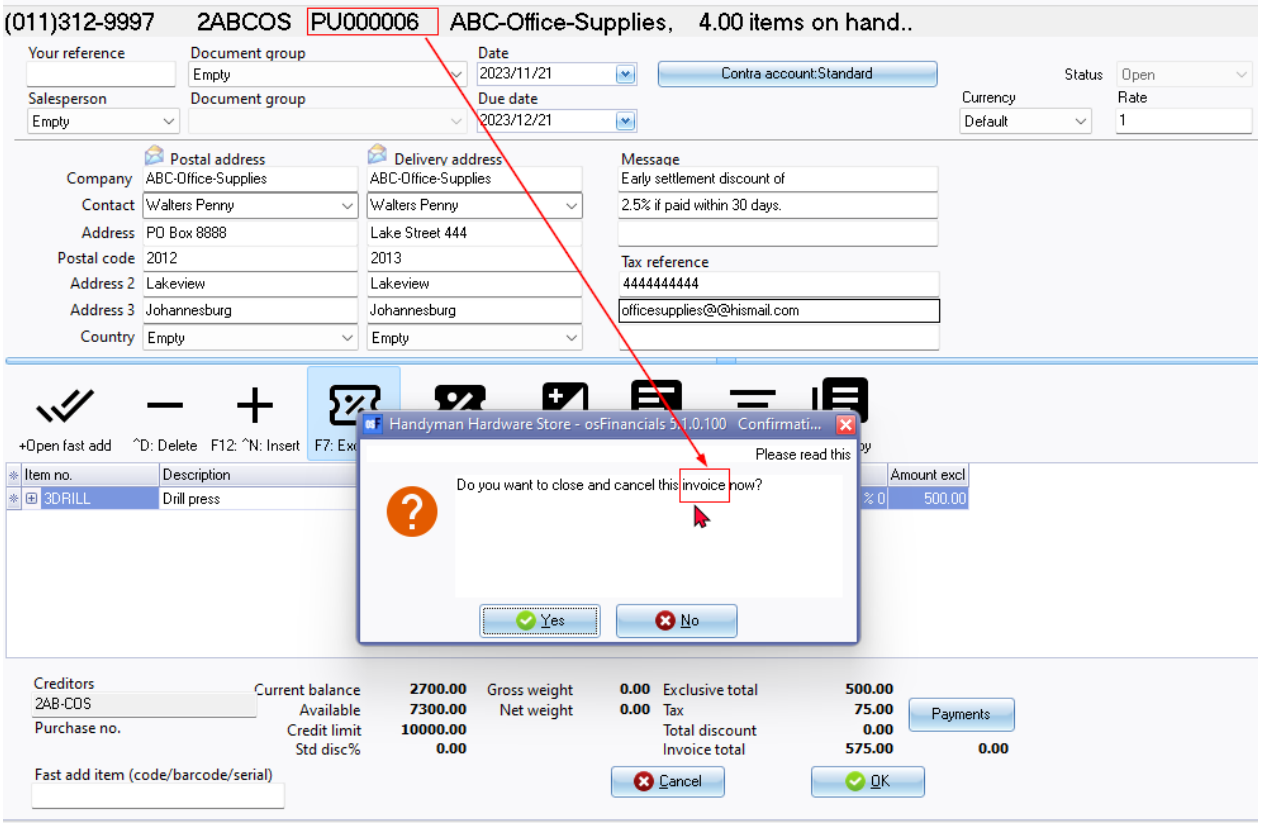
7. Make absolutely sure that the correct entry is selected and click Yes.

8. Close the "*Registry Editor*" and launch osFinancials. It will create a new key and subkeys. The Debtor accounts / Creditor accounts lookup will display correctly when when creating new documents.



Documents Cancel - Confirm message incorrect document type name

When creating a new document, and you want to cancel it, it refers to invoice, and not to credit note, quote, purchase, supplier return or order.



If an unposted document is opened and being cancelled it still display invoice, irrespective of the document type.

When printing the document, when click on OK, the correct document type name is displayed for the correct document type, e.g.

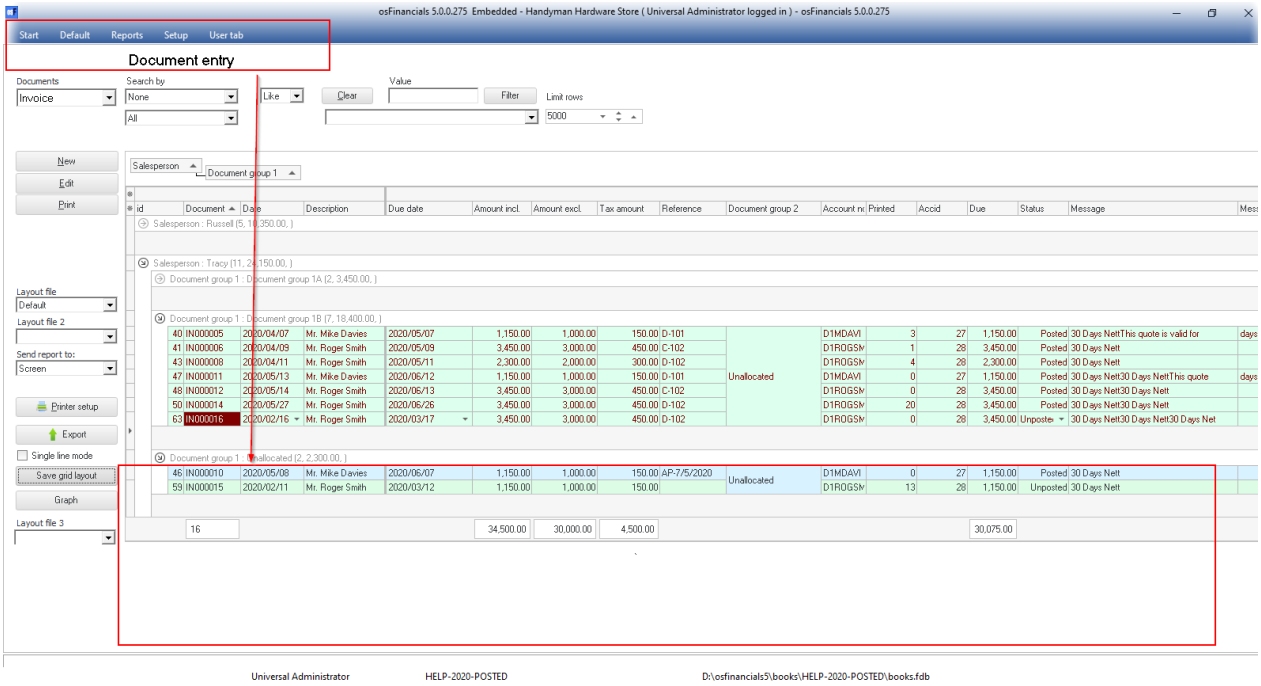
> Do you wish to print this purchase?

Documents - Projects column

Project column by default available - only when Projects are activated in documents, the column should be added (similar to the Projects tab on Debtor /Creditor accounts).

Resize Documents screen

Hide ribbons double-click documents screen not resizing - Need to re-open Set of Books after the Ribbons are turned off to launch correct



Copy Documents - Unit descriptions not copied and not printing on layout files

Options to copy documents from the Documents context menu

Documents → Copy document

Documents → Copy to → Invoice, Credit note, Quote, Purchase, Supplier return and Order

The Unit descriptions (including remarks and comments, if exists on the source document) copies and will be printed on Document layout files.

The F11:Copy option on the document entry screen - No Unit descriptions copied and will not be included in the document layout files. To have the unit descriptions printed on document layout files, you need to edit the document and reselect the stock items on the Stock lookup.

Calendar - Bulk time entry Hours and Hours type - Units not copied

These were also replicated and needs to be rechecked

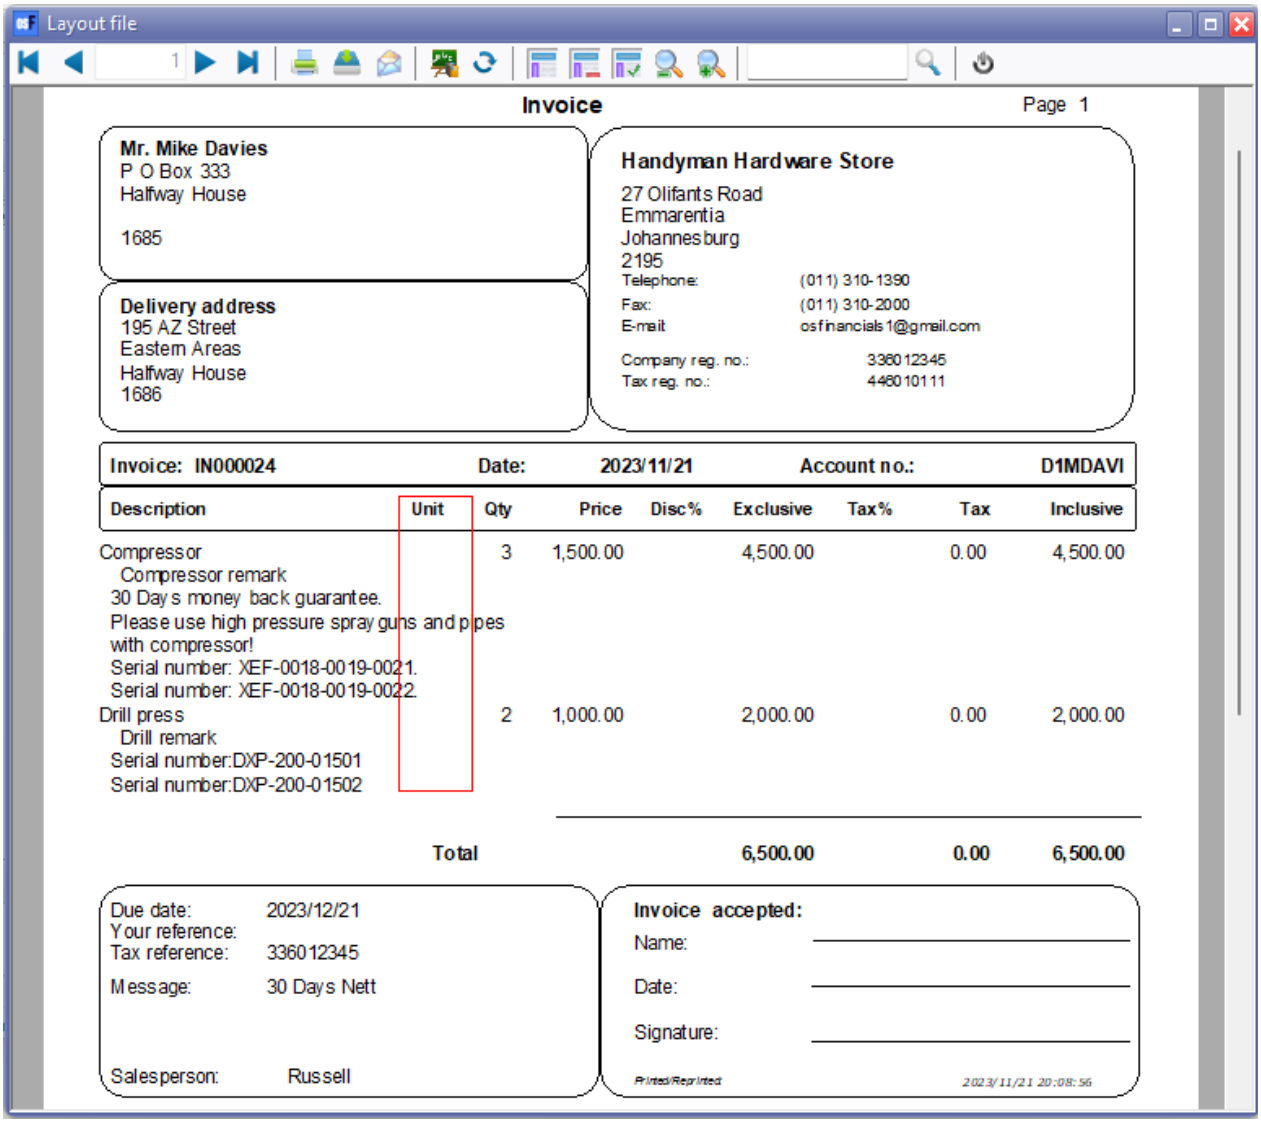
F11:Copy - No Unit descriptions copied

When printing the source document, the Unit descriptions is printed on layout file

When printing the copied document, the Unit descriptions is not printed on layout file.

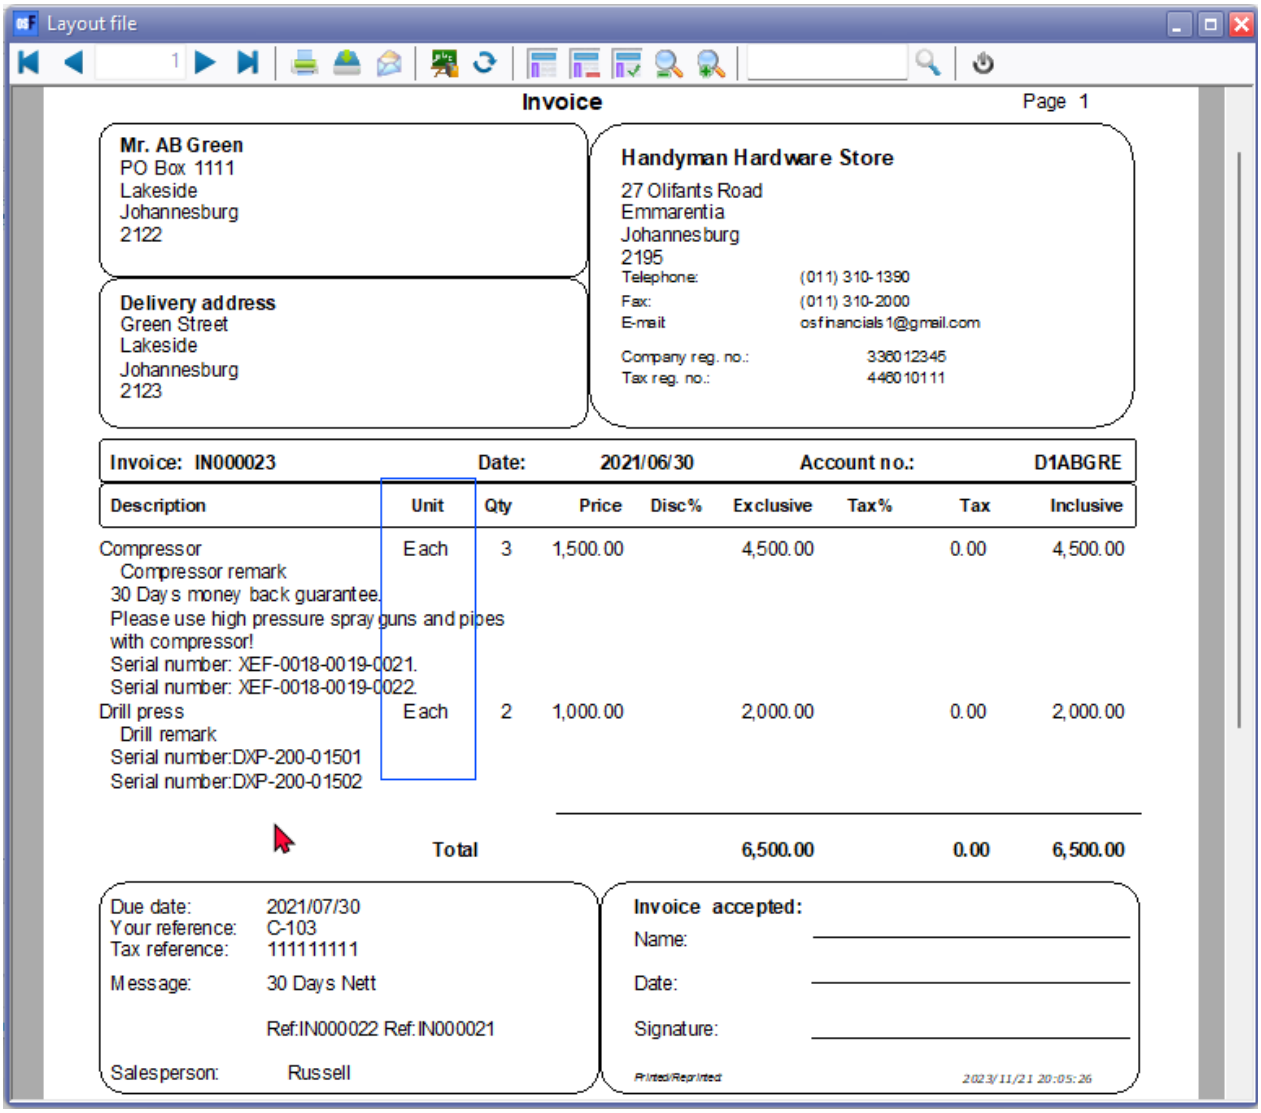
Fixed Remarks and Comments is copied and prints on layout files

copied document document Excludes Unit descriptions



Work around : Once a document is copied, need to reselect the stock item then the units will print on layout file.

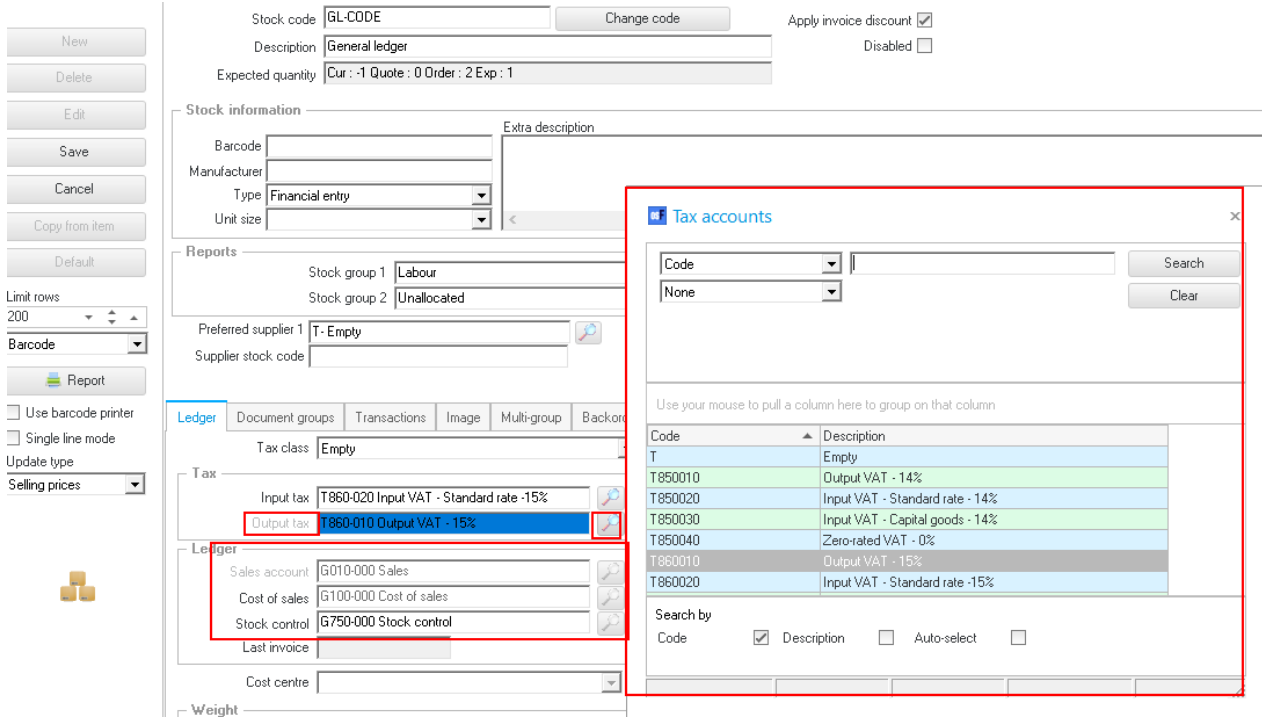
source document includes Unit descriptions



Created with the Standard Edition of HelpNDoc: Leave the tedious WinHelp HLP to CHM conversion process behind with HelpNDoc

Known issues - Stock

Financial entry = Stock type - Label inactive button active



Buttons inactive but labels are active

Cost of Sales inactive but label active

Stock Control inactive but label active also Account not greyed out

Stock - BOM errors - Need to retest

Creating a new BOM item Adds the BOM tab -

Selecting the Stock type and Enter Stock code - produces errors

Error 1

> Total of salespercentage BOM not 100% auto adjusting for 100

Error 2

> validation error for column WSTOCKID, value "*** null ***"

Linked sale - need to test

Created with the Standard Edition of HelpNDoc: Free iPhone documentation generator

Known issues - Checking unposted items - No data

Checking unposted items not launching if there are no unposted batches and /or documents

On the Default ribbon, Input → Checking unposted items.

Checking unposted items not launching if there are no unposted batches and /or documents

Could launch with

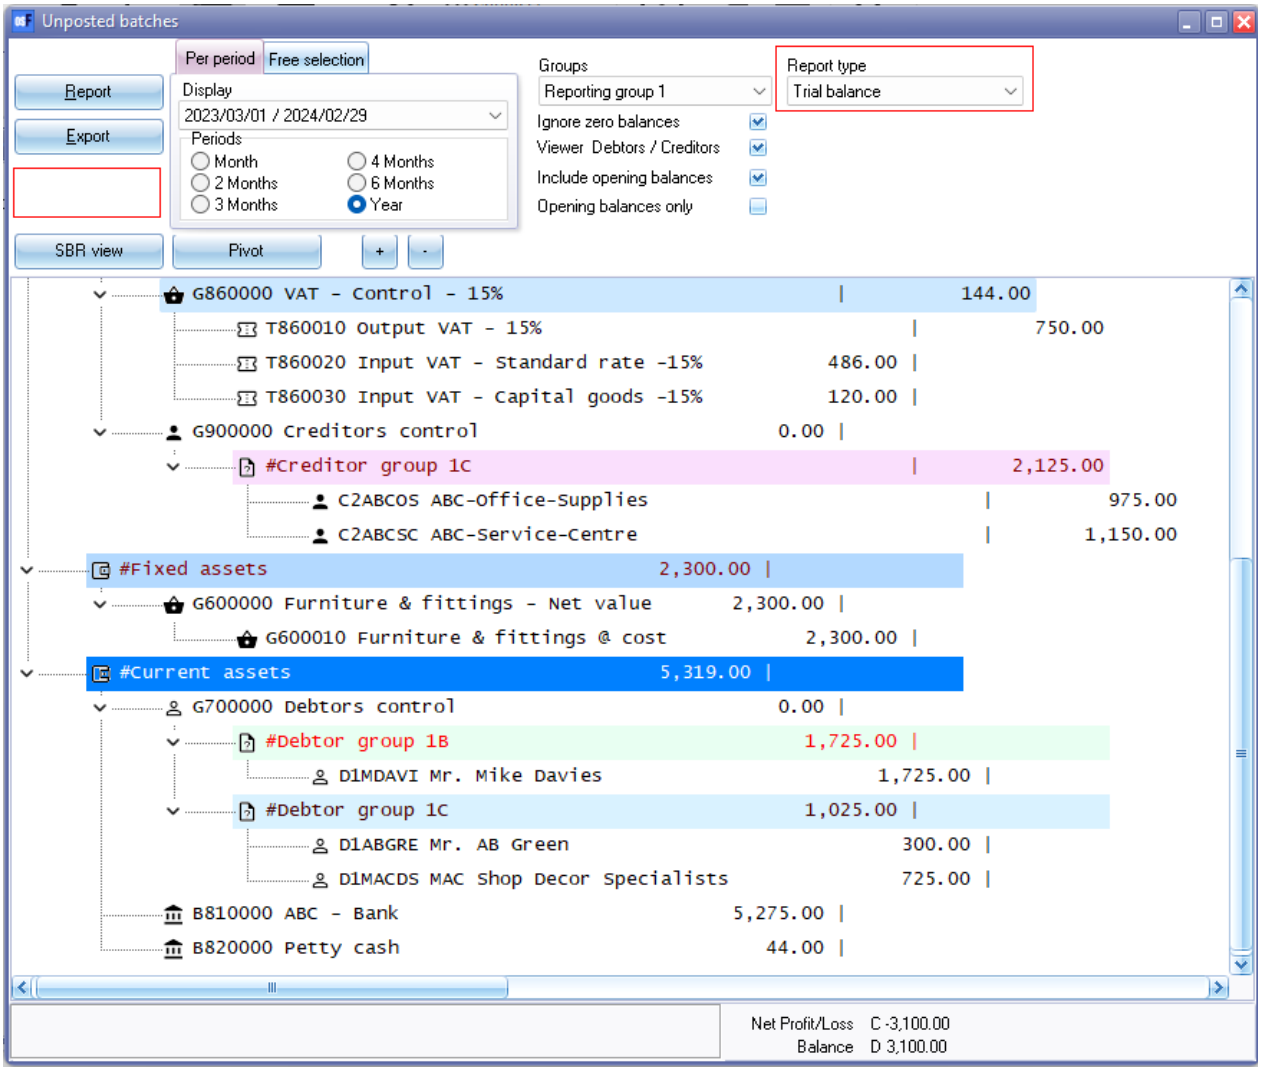
<No data to display>

Batch Entry - Trial balance option - Batch entry selection screen context menu

On the Batch entry selection screen's context menu, Select the "*Trial balance*" option. You may select to include only unposted batches or to include posted batches.

The following known issues:

1. The Print button will by default, not be displayed. To initialise the Print button, select Income statement or Balance sheet and then Trial balance in the "*Report type*" field.
2. Click report type select Income statement or Balance sheet to add the print button - then report can be printed.
3. If there no unposted transactions in batches, (and the "*Unposted only?*" option is selected) the Unposted batches trial balance will still be launched with a zero.



FIXED - The "*Unposted batches*" screen may disappear behind other programs or applications. If this happens, click on the osFinancials5 icon on the Windows task bar.

Created with the Standard Edition of HelpNDoc: Effortlessly upgrade your WinHelp HLP help files to CHM with HelpNDoc

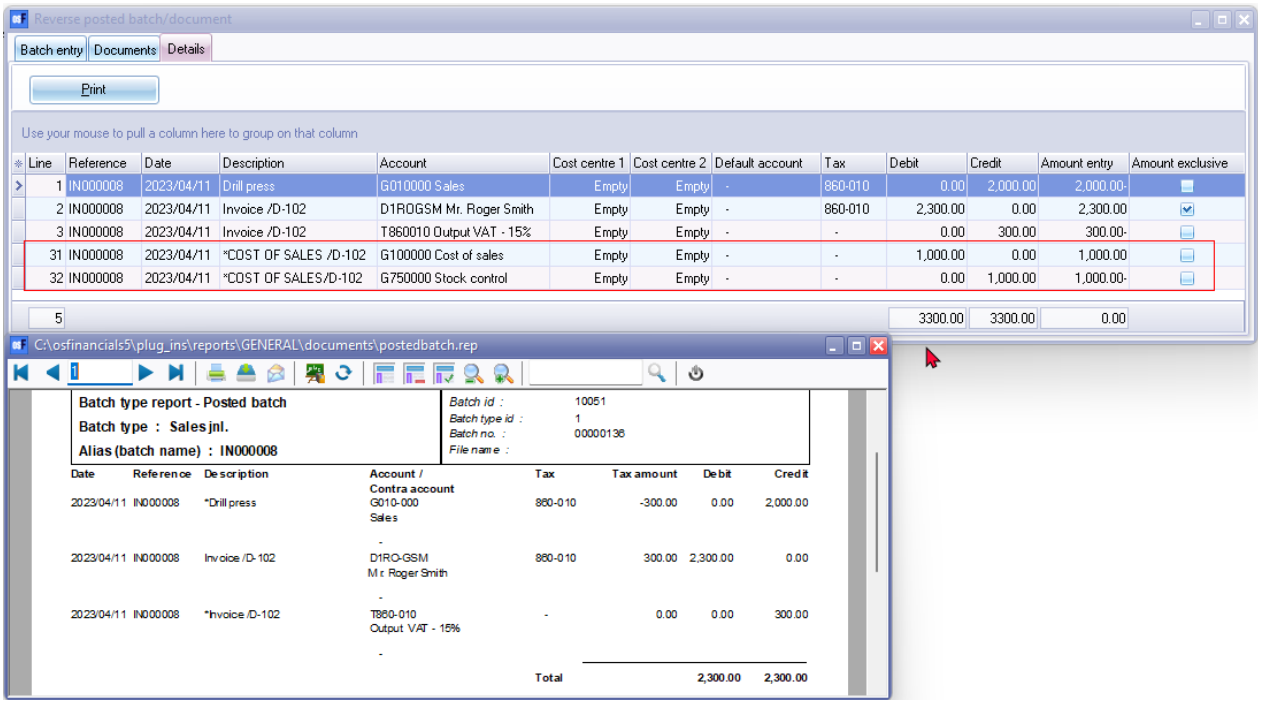
Known issues - Print - Batch type report - Posted batches - COS

Reverse posted document - Print - COS not printed

Te Cost of Sales transactions is listed, but is not included in the "*Batch type report - Posted batch*" report.

- Reverse Posted batches/documents - Details screen
- Debtors - Documents tab - Show transactions context menu option

- Debtors - Transactions tab - Show transactions context menu option



The reason for this is that the invoice will post the transactions in 2 separate batches, i.e.

Sales journal will post the transactions to Debit the Debtor account and Credit the Sales account and Tax (VAT/GST/Sales tax) accounts

Cost of Sales journal (only if Cost of Sales is applicable to the Stock item selected) it will Debit the Cost of Sales account and Credit the stock control account.

Known issues - Import / Export

Spreadsheet import / export - Works

This feature may be used to import exported "*Excel Workbook (*.xlsx) file type* Spreadsheet files into:

- Into the same Set of Books.
- Into a different Set of Books.
- Into a new Set of Books -Created from scratch - Create your own Set of Books (Advanced)? option for Firebird database types.

- Into a new Set of Books - Created from scratch - Create your own Set of Books (Advanced)? option for Microsoft SQL sever (MSSQL) database types.

Debtors / Creditors

osFinancials5 supports the "*Excel Workbook (*.xlsx) file type* Spreadsheet export and import feature.

- Spreadsheet export - You may export debtor (customer / client) accounts and creditor (supplier / vendor) accounts and save it as a "*Excel Workbook (*.xlsx) file type.*
- Spreadsheet import - You may import debtor (customer / client) accounts and creditor (supplier / vendor) accounts from a saved "*Excel Workbook (*.xlsx) file type.*

Stock

osFinancials5 supports the "*Excel Workbook (*.xlsx) file type* Spreadsheet import and export feature.

- Spreadsheet export - You may export stock items and save it as a "*Excel Workbook (*.xlsx) file type.*
- Spreadsheet import - You may import stock items from a saved "*Excel Workbook (*.xlsx) file type.*

Batches

osFinancials5 supports the "*Excel Workbook (*.xlsx) file type* Spreadsheet import and export feature.

- Spreadsheet export - You may export unposted batch transactions and save it as a "*Excel Workbook (*.xlsx) file type.*
- Spreadsheet import - You may import batch transactions from a saved "*Excel Workbook (*.xlsx) file type.*

This feature may be used to import transactions into:

- Batches into the same Set of Books - Also handy to handle Repeating transactions.
- Batches into a different Set of Books with a similar accounts.
- Batches into a new Set of Books - Created from scratch - Create your own Set of Books (Advanced)? option for Firebird database types.
- Batches into a new Set of Books - Created from scratch - Create your own Set of Books (Advanced)? option for Microsoft SQL sever (MSSQL) database types.

Spreadsheet import / export - Not working

Accounts

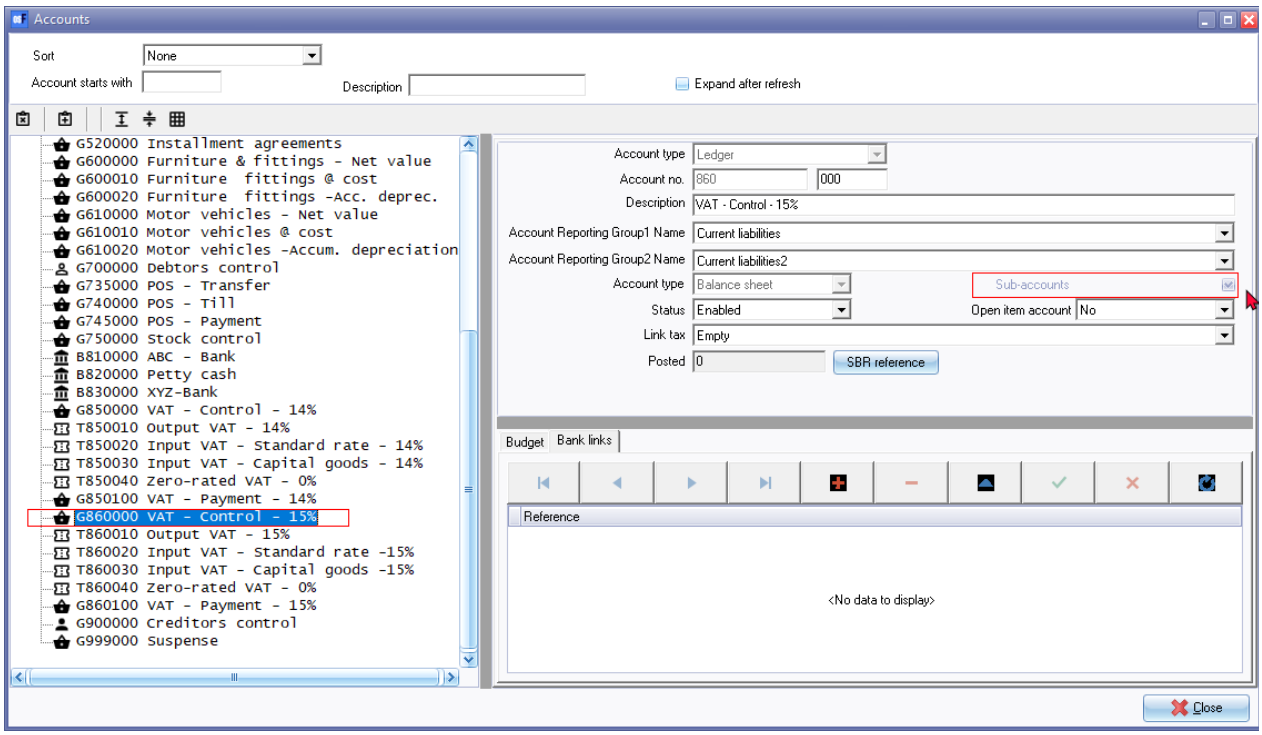
Spreadsheet export / import

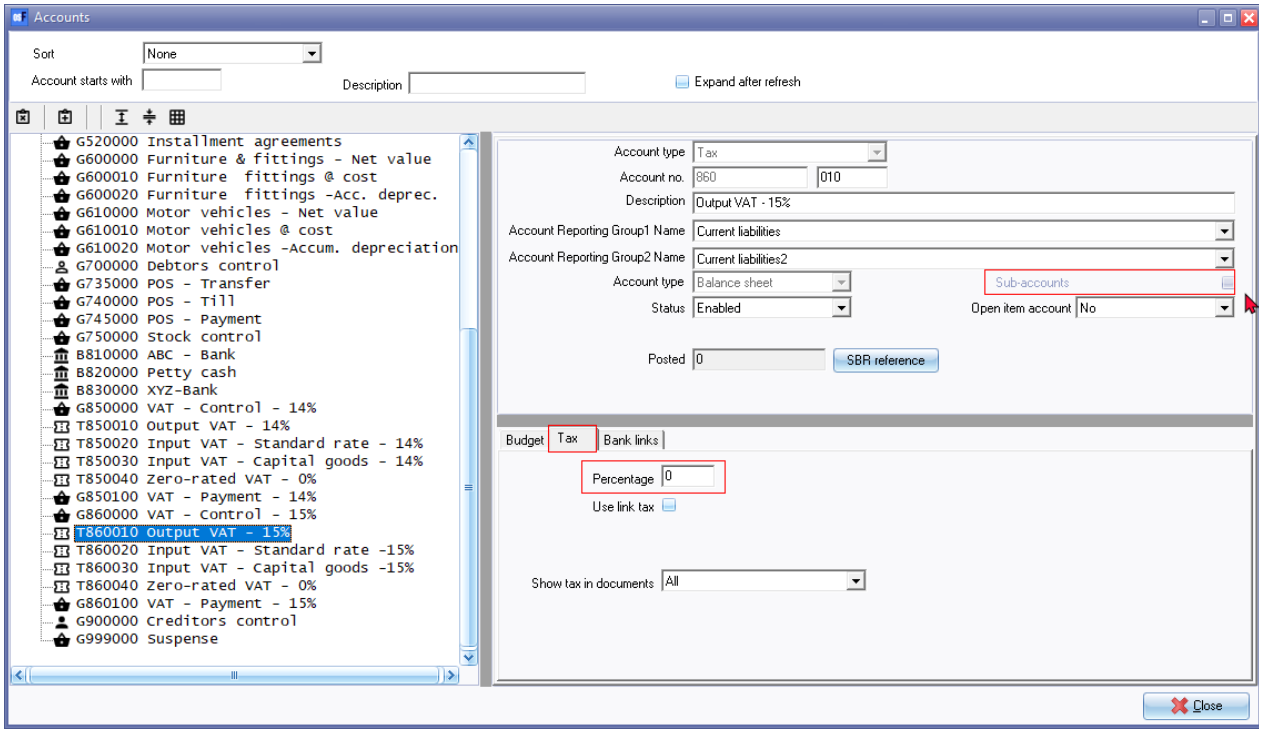
osFinancials5 supports the "*Excel Workbook (*.xlsx) file type* Spreadsheet import and export feature.

- Spreadsheet export - You may export ledger accounts and save it as a "*Excel Workbook (*.xlsx) file type.*
- Spreadsheet import - You may import ledger accounts from a saved "*Excel Workbook (*.xlsx) file type.*

Imports accounts but no Sub accounts, etc. Sub-accounts greyed out but ticked for Main accounts

Imports tax accounts with Tax tabs but no tax percentages.





Setup ribbon - Tab delimited - export / import

Export as Tab delimited (creates a txt as well as an xml file)

Import as Tab delimited. Sub accounts is correctly imported but first Tax code (Sub account does not have a Tax tab and percentage. Zero-rated percentages needs to be confirmed.

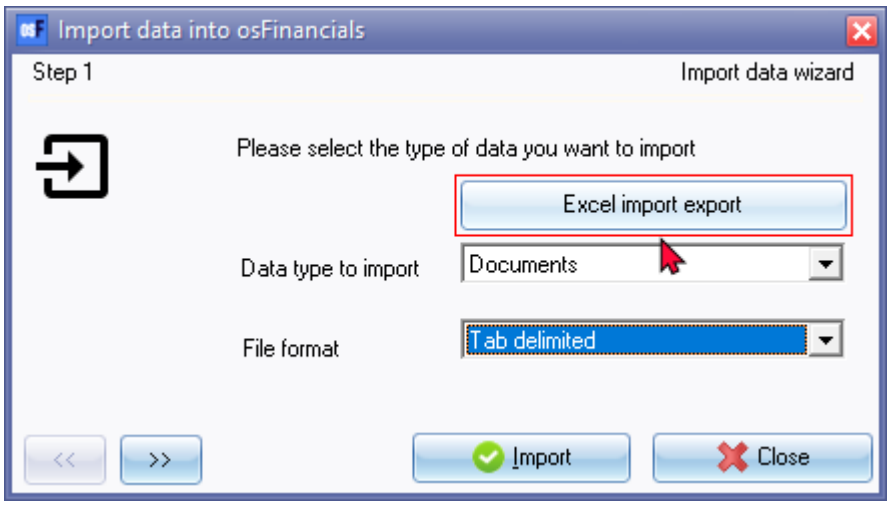
See - After Import in topic - Import General ledger accounts (Setup ribbon) -

Documents

Spreadsheet export / import

Spreadsheet import option not launched - Launches the "*Data Import Export*" screen -

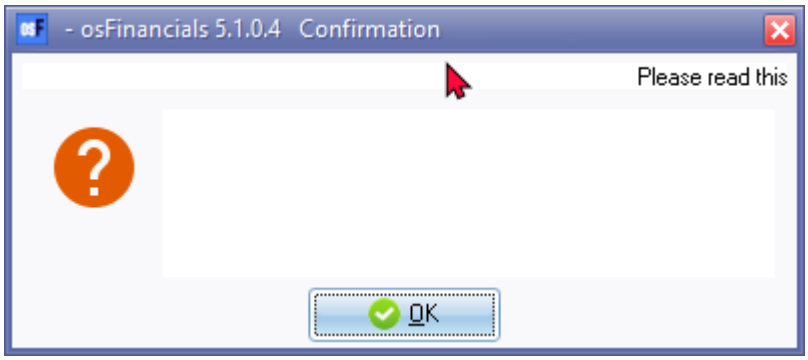
Import and Export icons is static.



Import XML

Import XML and Import XML setting is added to the Documents context menu - in osFinancials5.1.0.4 -

Blank confirmation screen - cannot select xml file to import



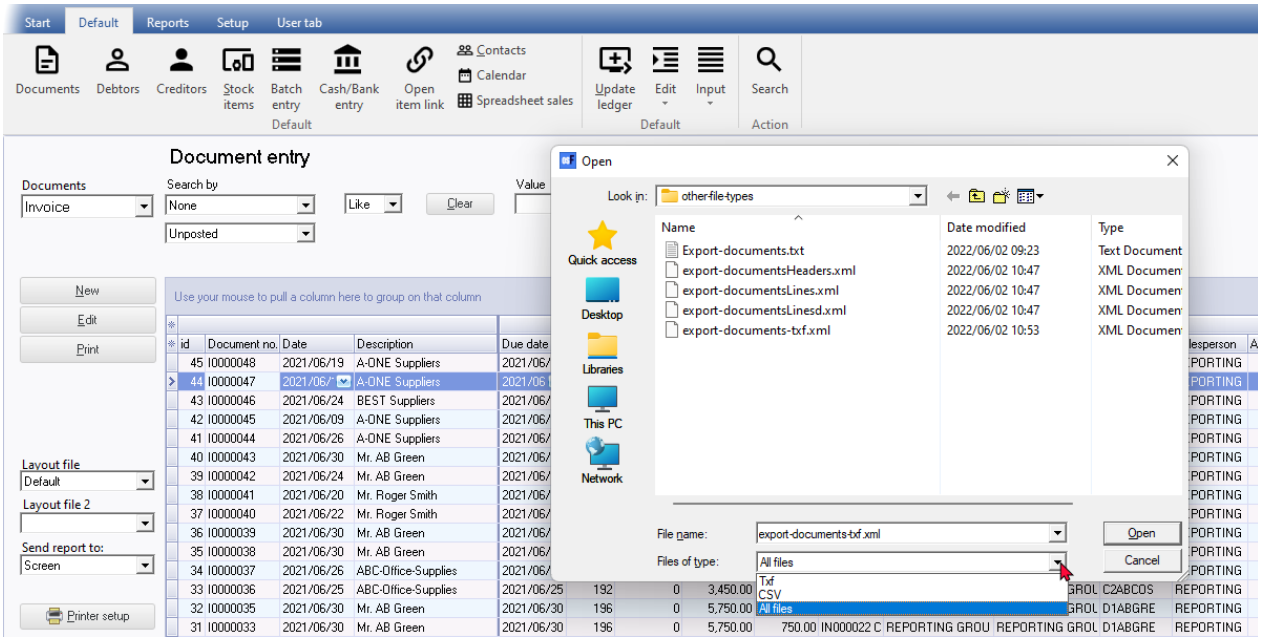
Context menu - Others - Import

Context menu - Import

TXF file required to import - Export on the Setup ribbon does not create a TXF file (default)

Only creates an XML file type

Select all file types then the xml file - it does import



Documents - Other export options

Export Documents - Export grid Creates a csv or txt file (for a document type, document status, filter options, etc..) which can be opened in spreadsheets.

Import (Setup ribbon)

Error

> cdDoubles: Cannot perform this operation on a closed dataset

Import Stock (Tools - Setup ribbon)

Import stock from a Tab delimited Text file created In Tools - Export ribbon)

> Error 3The statement has been terminated.
> The INSERT statement conflicted with the FOREIGN KEY constraint "FK_DOCLINE_STOCK". The conflict occurred in database "MSSQL-HANDYMAN", table "dbo.Stock", column 'WStockID'.

Export / Import Posted batches

Export Posted Batches only creates a XML file type

Cannot use the Posted batches import option on Process options in Batch entry screens.

Created with the Standard Edition of HelpNDoc: Full-featured Help generator

Known issues - Convert quote to one unprocessed invoice per client

---

Convert quote to one unprocessed invoice per client Documents context menu Progress indicator

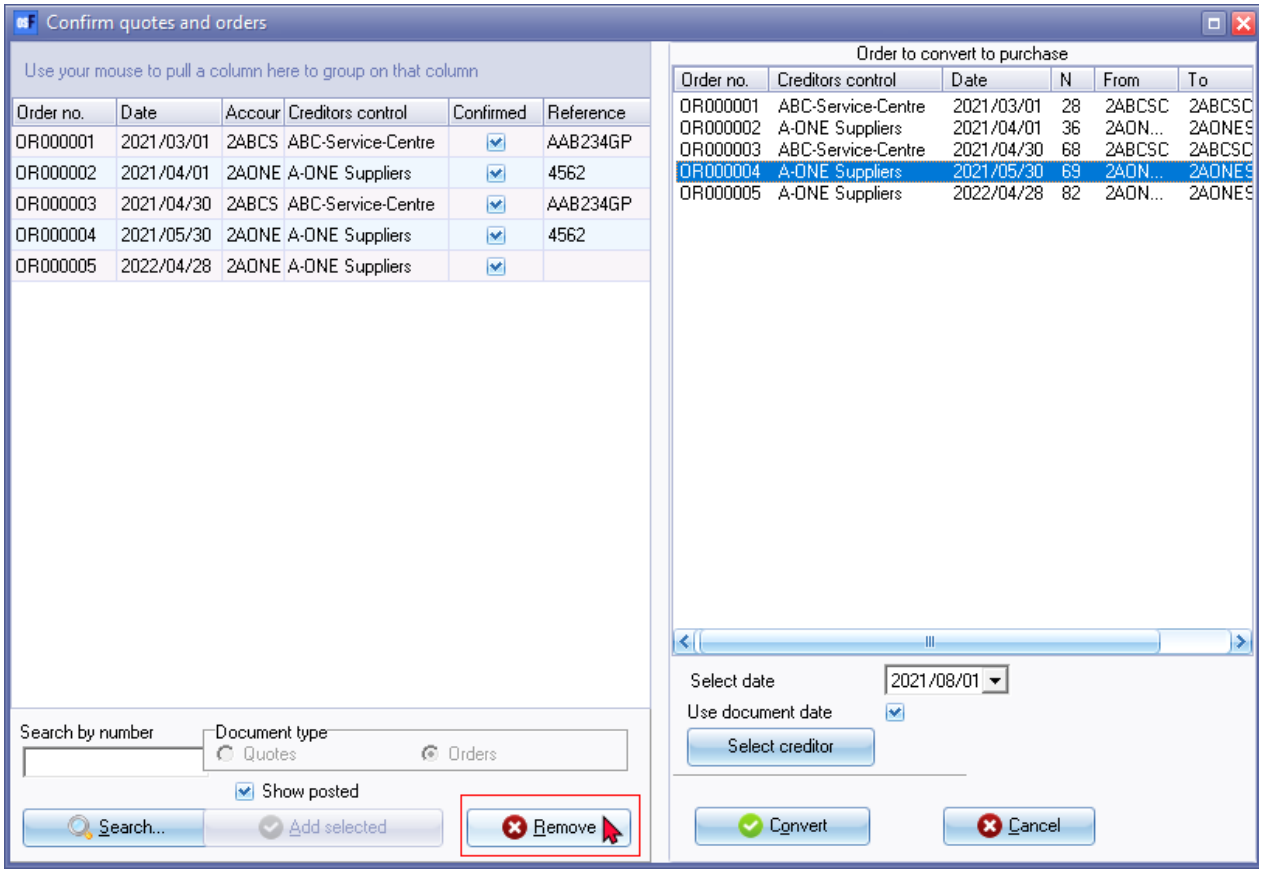
but when finished cannot see or find the new invoice.

Created with the Standard Edition of HelpNDoc: Free PDF documentation generator

Known issues - Confirm Quotes and Orders - Remove button

Menu : Input → Confirm (Default ribbon)

Remove button is static and does not seem to work on the Confirm quotes and Confirm orders options.



Created with the Standard Edition of HelpNDoc: Modernize your help files with HelpNDoc's WinHelp HLP to CHM conversion tool

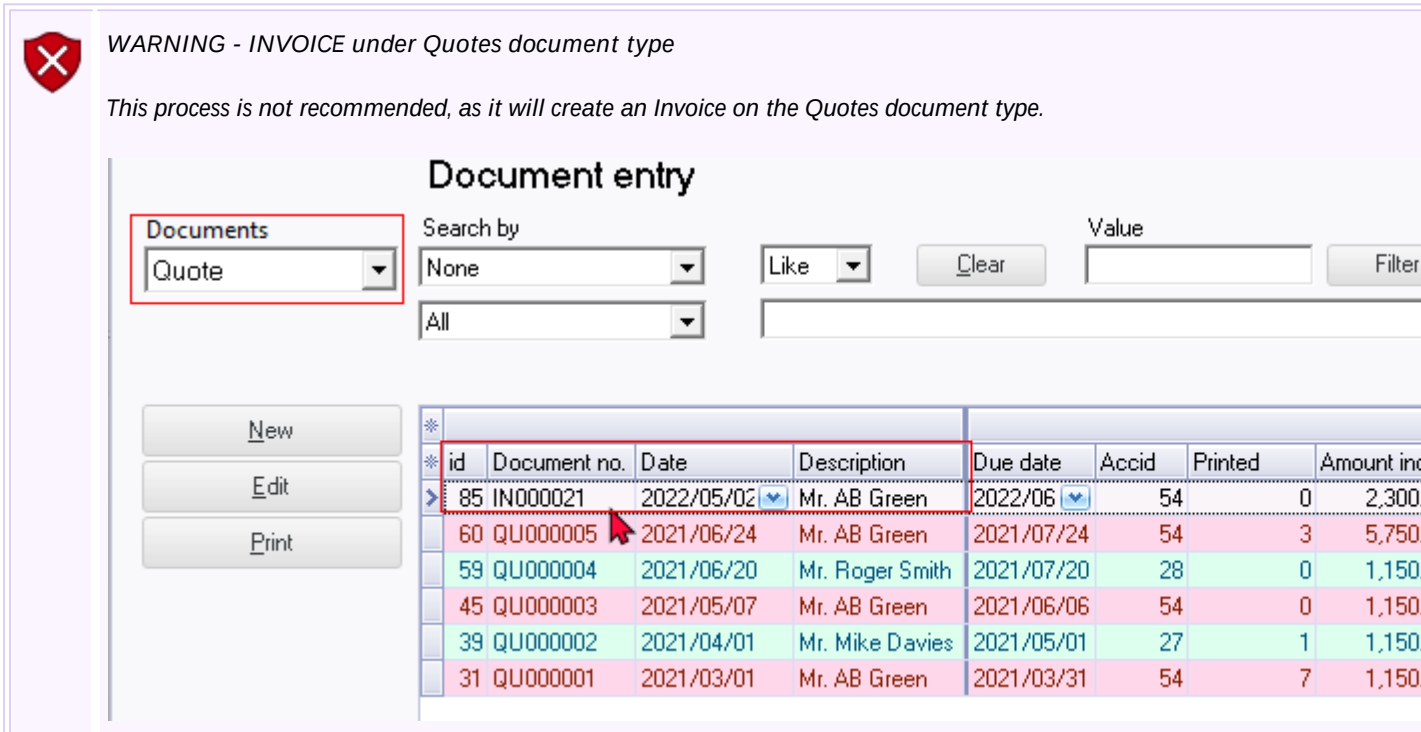
Known issues- Create backorders to deliver

Create backorders to deliver creates a new Invoice or Quote for a Debtor (customer / client) account

Uses Input Tax instead of Output tax for selling prices

If created from Quotes it creates an Invoice in the Quotes document type

Backorders to deliver - Quotes



To create an Invoice from the Quotes document type for Backorders to deliver:

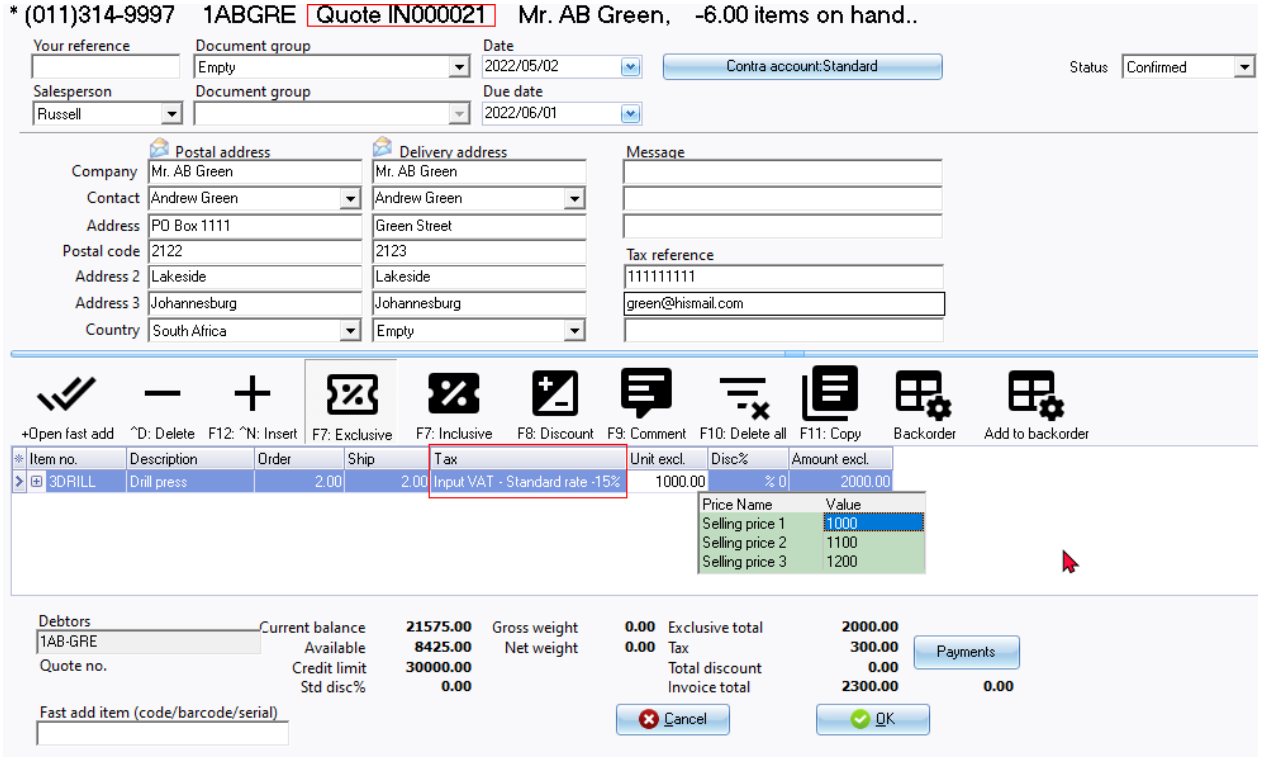
To create backorders to deliver:

1. Select the "*Quotes*" document type.

2. Select the document to create backorders to deliver.

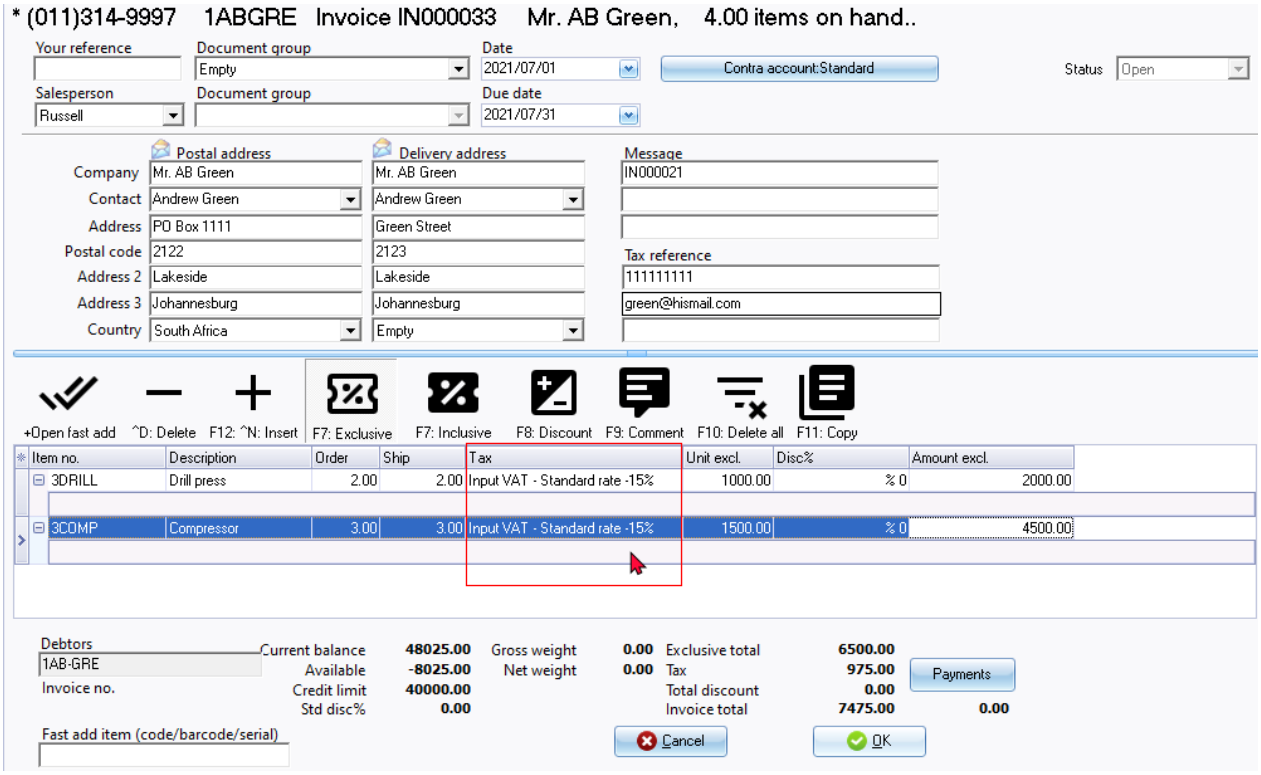
3. Right-click and select Documents → Backorders to deliver option on the context menu. A new Invoice will be created in the Quotes document type.

4. You may need to edit the Invoice / Quote.



WARNING - Input Tax / Output tax

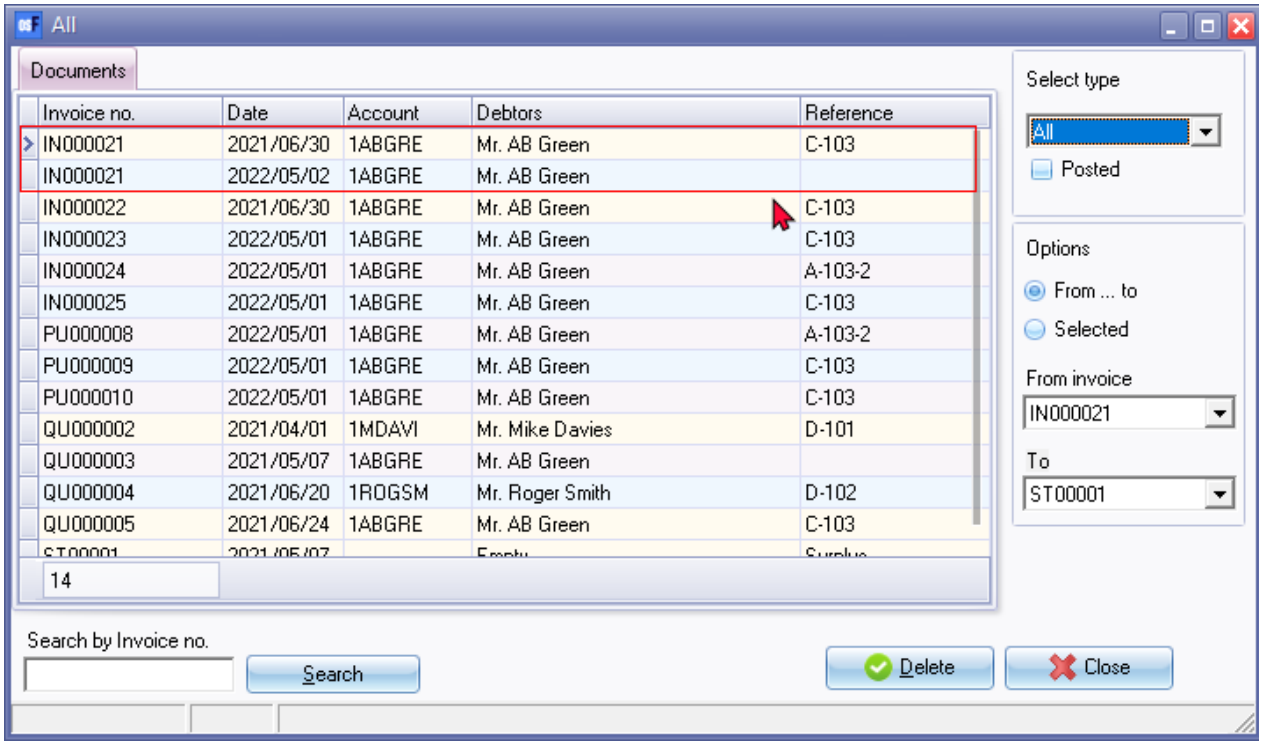
In the case of Invoices, the Input tax is used instead of the Output tax. You need to check this, and change it to the Output Tax.



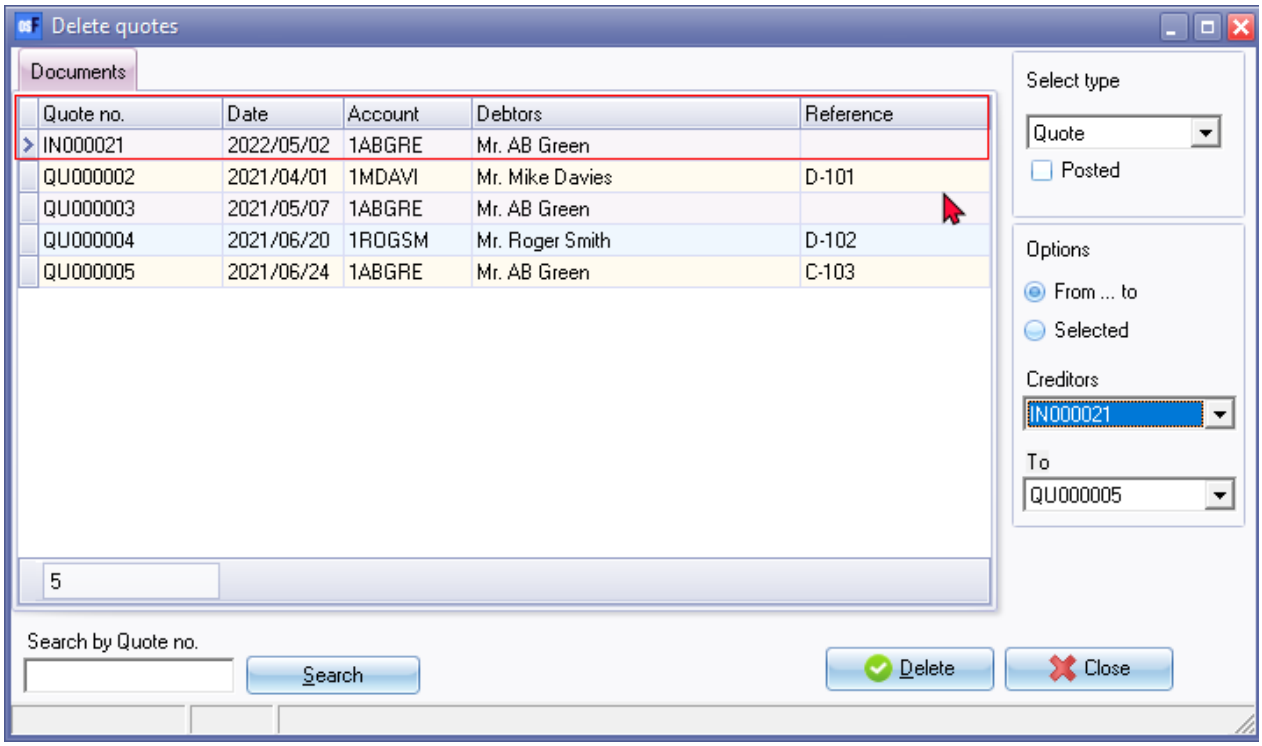
Delete documents

Both the source document from which the Backorder was created from Quotes document type is listed in the Delete Documents - All option

with the same Document number.



Delete Quotes -



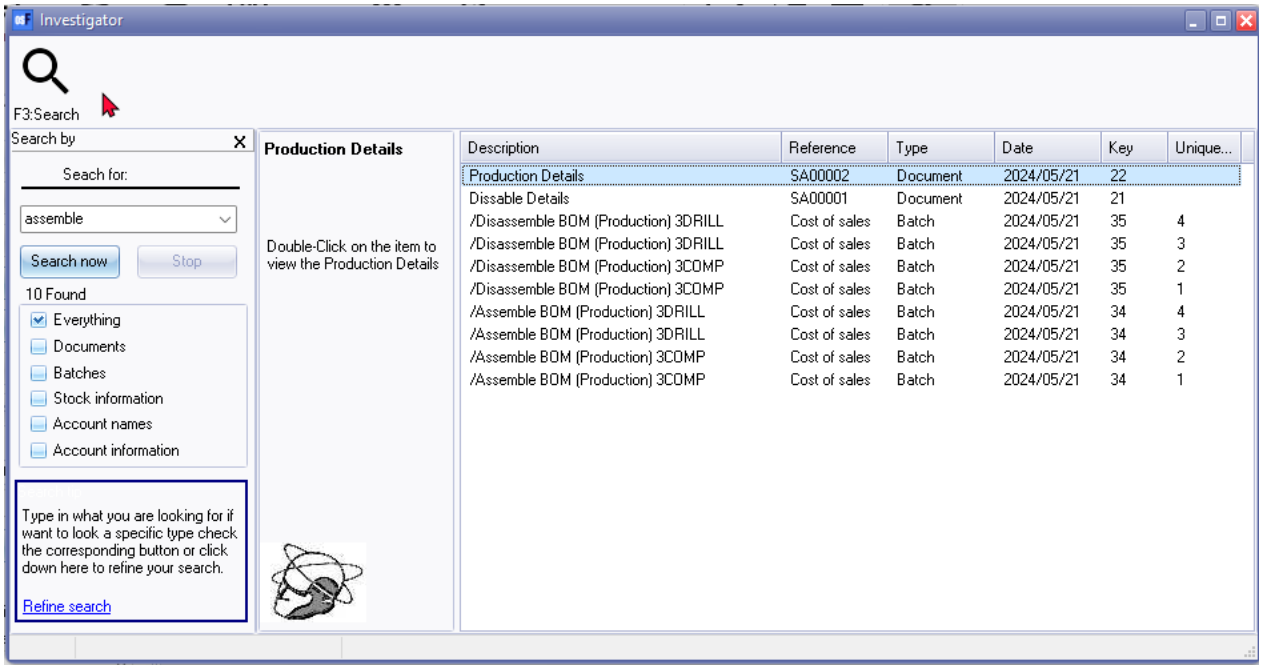
Created with the Standard Edition of HelpNDoc: Easy Qt Help documentation editor

Known issues - Search - BOM (Production)

Search (Central search) Description Inaccuracies

To locate specific assemble or disassemble transactions or document numbers:

- Search for keywords such as "*assemble*", "*disassemble*", or document numbers starting with "*SA*".
- In the search results, double-click on the "*Batch*" type to display the transactions in the T-Account viewer.
- To print a document, double-click on a document for the "*Document*" type.



NOTE: On the Search (central search), the "*Description*" column for the "*Document*" type, is indicated as follows:

- Dissable Details - Should be "*Production Details*" since the document e.g. "*SA00001*" is created using the "*Assemble*" option. The document type is listed as "*Assemble*" on the Document groups and Transactions tabs of the stock item for the BOM (Production) stock item type.
- Production Details - Should be "*Disassemble Details*" since the document e.g. "*SA00002*" is created using the "*Disassemble*" option. The document type is listed as "*Disassemble*" on the Document groups and Transactions tabs of the stock item for the BOM (Production) stock item type.

Search Description Inaccuracy:

- Central Search shows "*Dissable Details*" for "Assemble" documents (e.g., "SA00001"). This should be *"Production Details*".
- Conversely, "*Production Details*" are shown for "*Disassemble*" documents (e.g., "SA00002"). This should be "*Disassemble Details*".

Correct Descriptions:

- "*Assemble*" documents: Use "*Production Details*".
- "*Disassemble*" documents: Use "*Disassemble Details*".

These descriptions are consistent with the document types listed on the stock item's "Document groups" and "Transactions" tabs (BOM (Production) stock item type).

Document type descriptions is correct

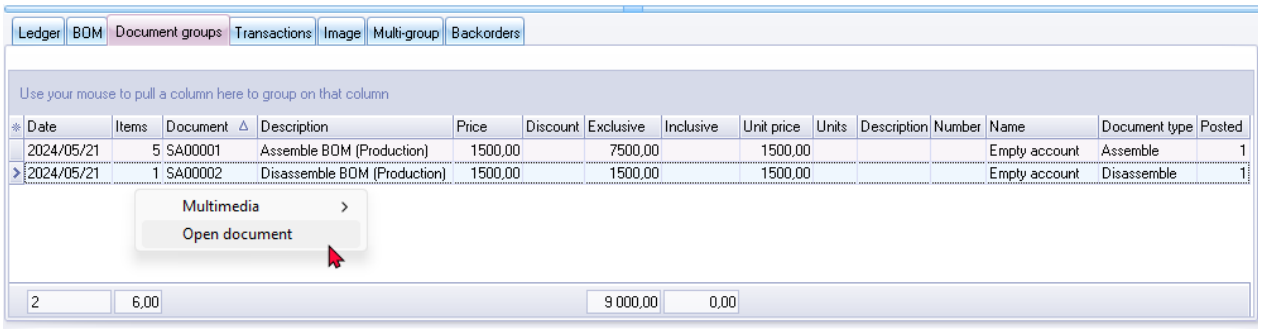
BOM (Production) Document groups / Transactions tabs

The "*Assemble*" and "*Disassemble*" functions for BOM (Production) items create posted documents. These transactions will be listed under the Document groups tab and the Transactions tab.

Documents generated by these functions will have a document prefix "*SA*" (e.g., "*SA00001*"), using a similar 7-digit format.

BOM (Production) Document Groups Tab

The Document Groups tab for BOM (Production) stock items shows documents related to assembly and disassembly. These documents are automatically posted when you perform the Assemble and Disassemble actions.

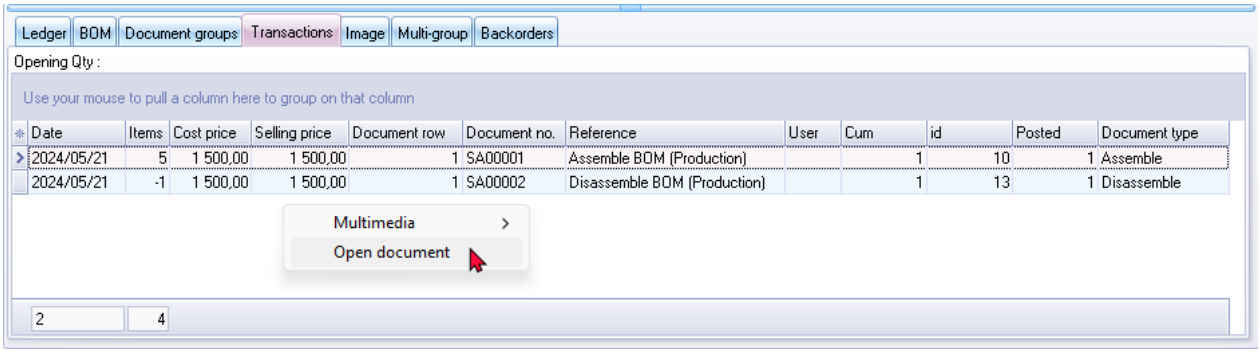


On the Document groups tab, you can:

- Print a document: Double-click on the document to print it.
- Open a posted document: Right-click on the document and select "*Open document*" from the context menu.

BOM (Production) Transactions Tab

The Transactions tab includes posted documents generated by the assembly and disassembly of BOM (Production) items.



On the Transactions tab, you can:

- Open a posted document: Right-click on the document and select "Open document" from the context menu.

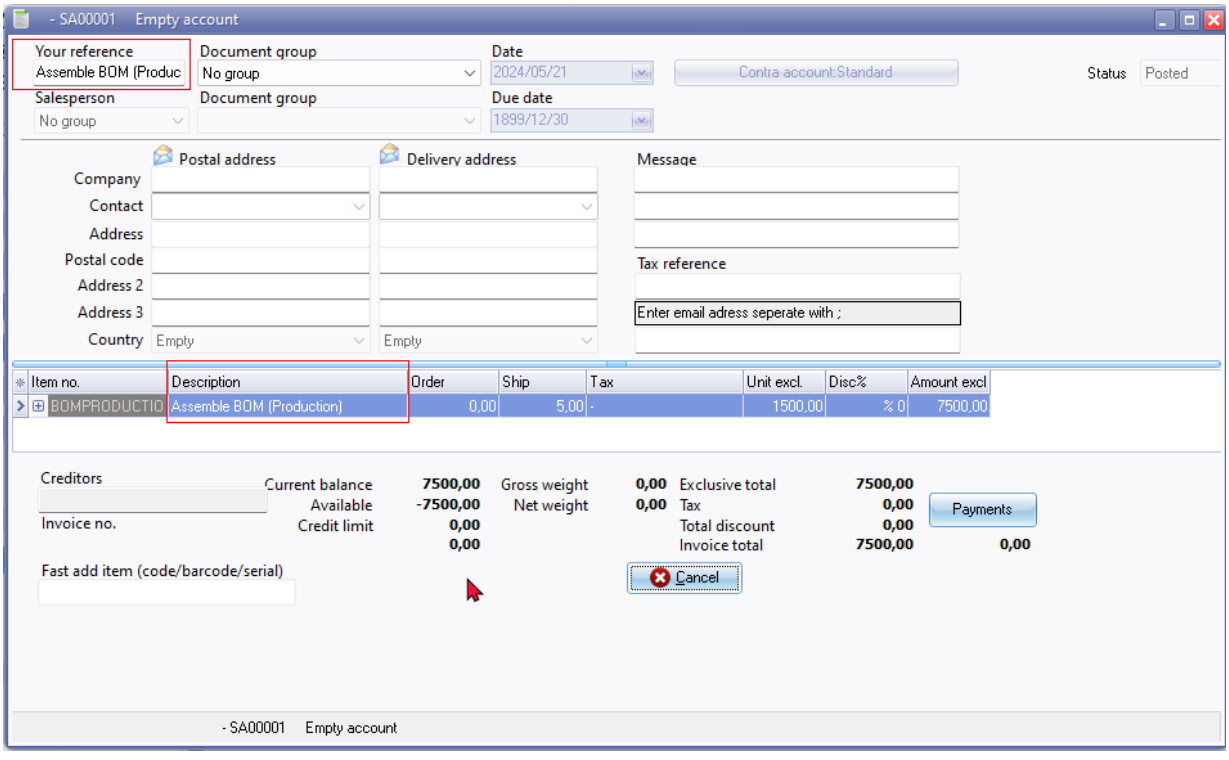
By following these instructions, you can efficiently manage and review the documents and transactions related to the assembly and disassembly of BOM (Production) items.

Viewing Posted Documents for BOM (Production) Items

Opening a Posted document

On the BOM (Production) Document groups and Transactions tabs, you can open posted documents generated by the "*Assemble*" and "*Disassemble*" functions as follows:

1. Right-click on the desired document.
2. Select "Open document" from the context menu.



Identifying the Document type

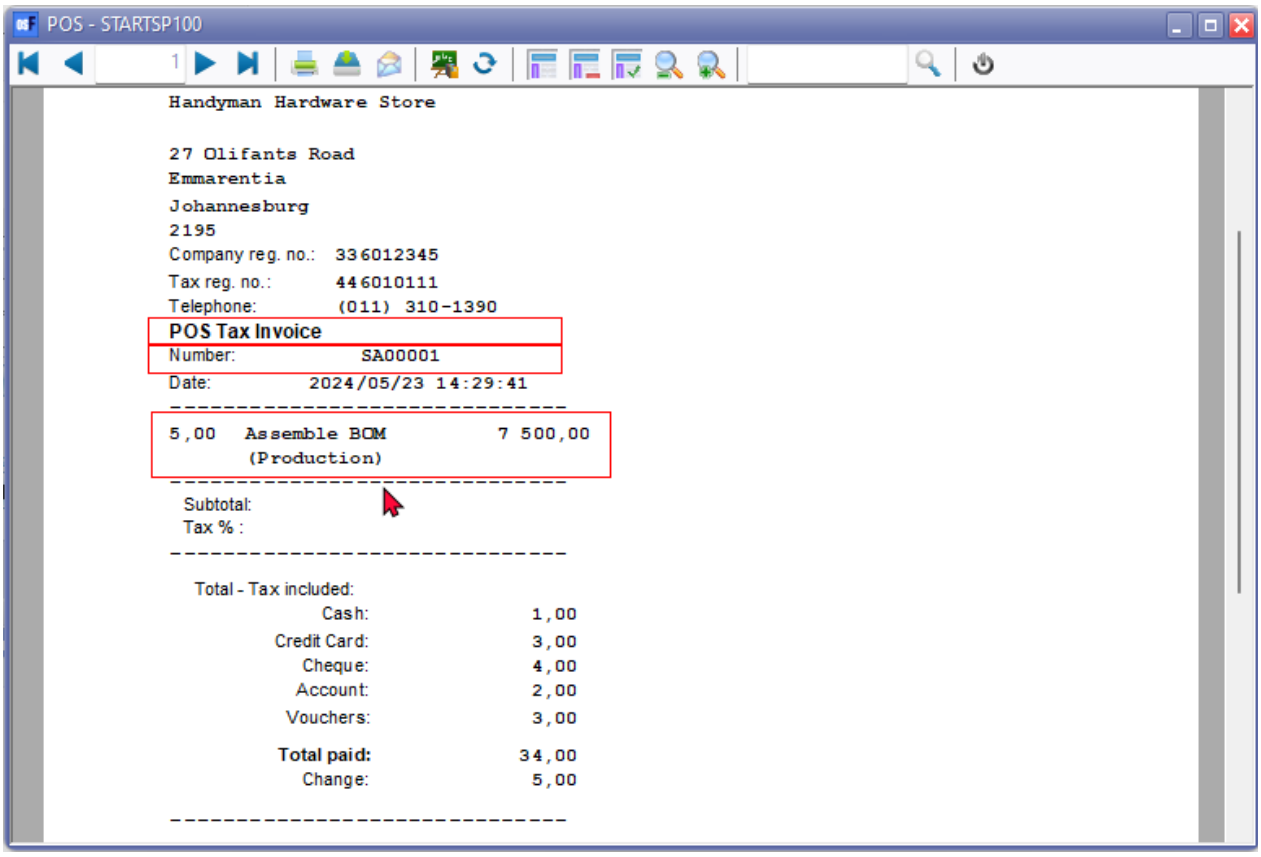
- The "*Your reference*" field and the "*Description*" column in the posted document will indicate whether the document was generated using the "*Assemble*" or "*Disassemble*" options for BOM (Production) items.
- Documents generated by these functions will have a document prefix "SA" (e.g., "SA00001"), using a similar 7-digit format.

By using these steps, you can easily access and identify the specific documents related to the assembly and disassembly of BOM (Production) items.

Print a Posted document

You may print selected posted document generated by the "*Assemble*" and "*Disassemble*" of BOM (Production) items from the following options:

- BOM (Production) - Document groups tab : (Double-click to print).
- Search (central search) : Locate these posted document generated by the "*Assemble*" and "*Disassemble*" of BOM (Production) items. (Double-click to print).



The "*POS Tax Invoice*" will print the correct document number, but will print the system date and time

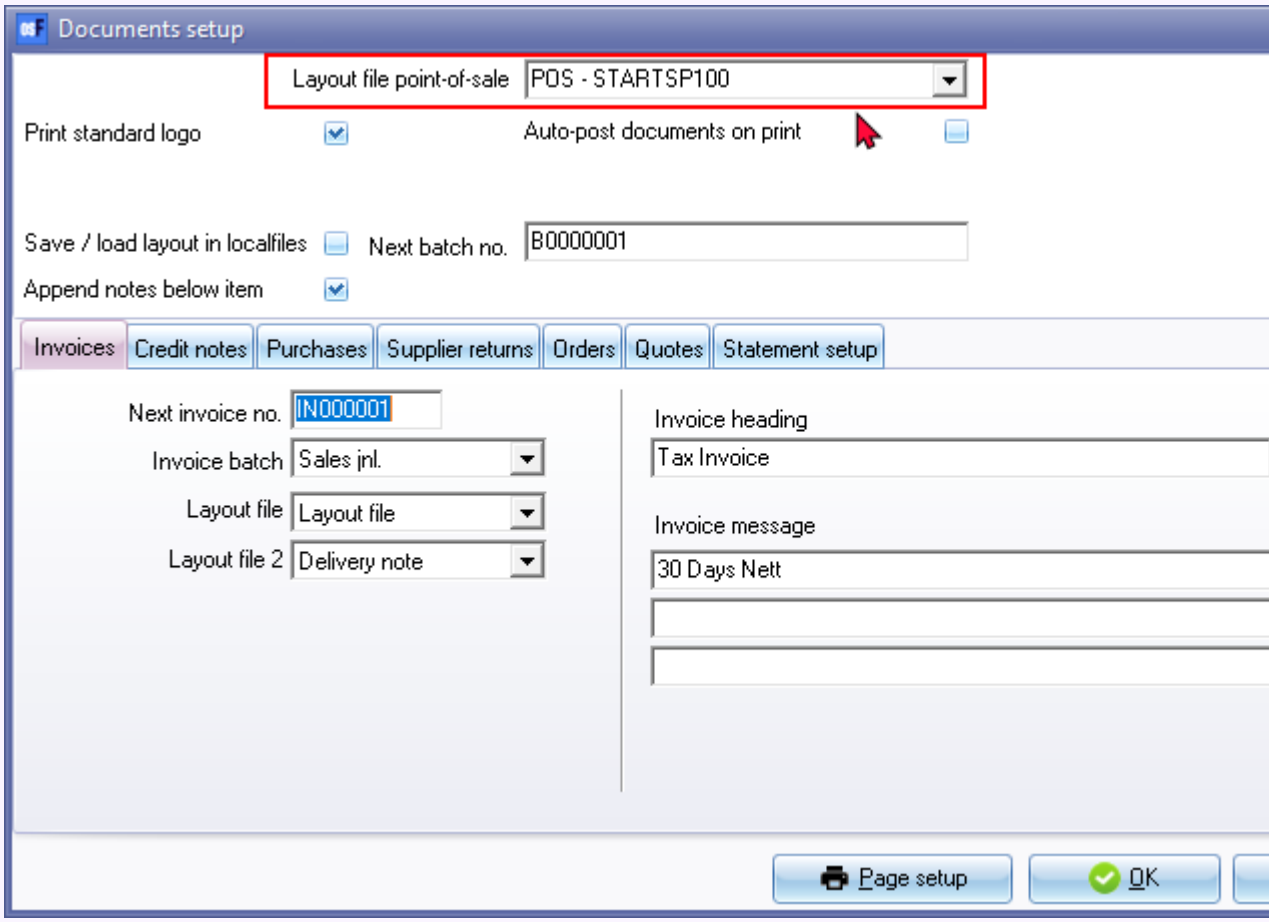
stamp of your operating system and not the actual transaction date.

The default document layout file which will be used to print documents generated by the "Assemble" and "Disassemble" of BO is the "Layout file point-of-sale" selected in Setup → Documents setup.

WARNING: Point-of-sale document layouts might not be ideal for printing "Assemble" and "Disassemble" documents for BOM types due to:

- *Date: POS invoices show your system's date, not the actual processing date.*
- *Document Name: Might say "POS Tax Invoice" instead of something relevant.*
- *Footer: Contains data like cashup amounts, not relevant for BOM operations.*

Recommendation: Select a different document layout file for BOM (Production) transactions (Setup → Documents setup).



NOTE: Selecting the document layout files, which supports the "TYPES.SDESCRIPTION" document name from the "TYPES" table, document name as "Delivery note" for "Assemble" option and "Remittance" for "Disassemble" option. Selecting the following do will replicate the document names:

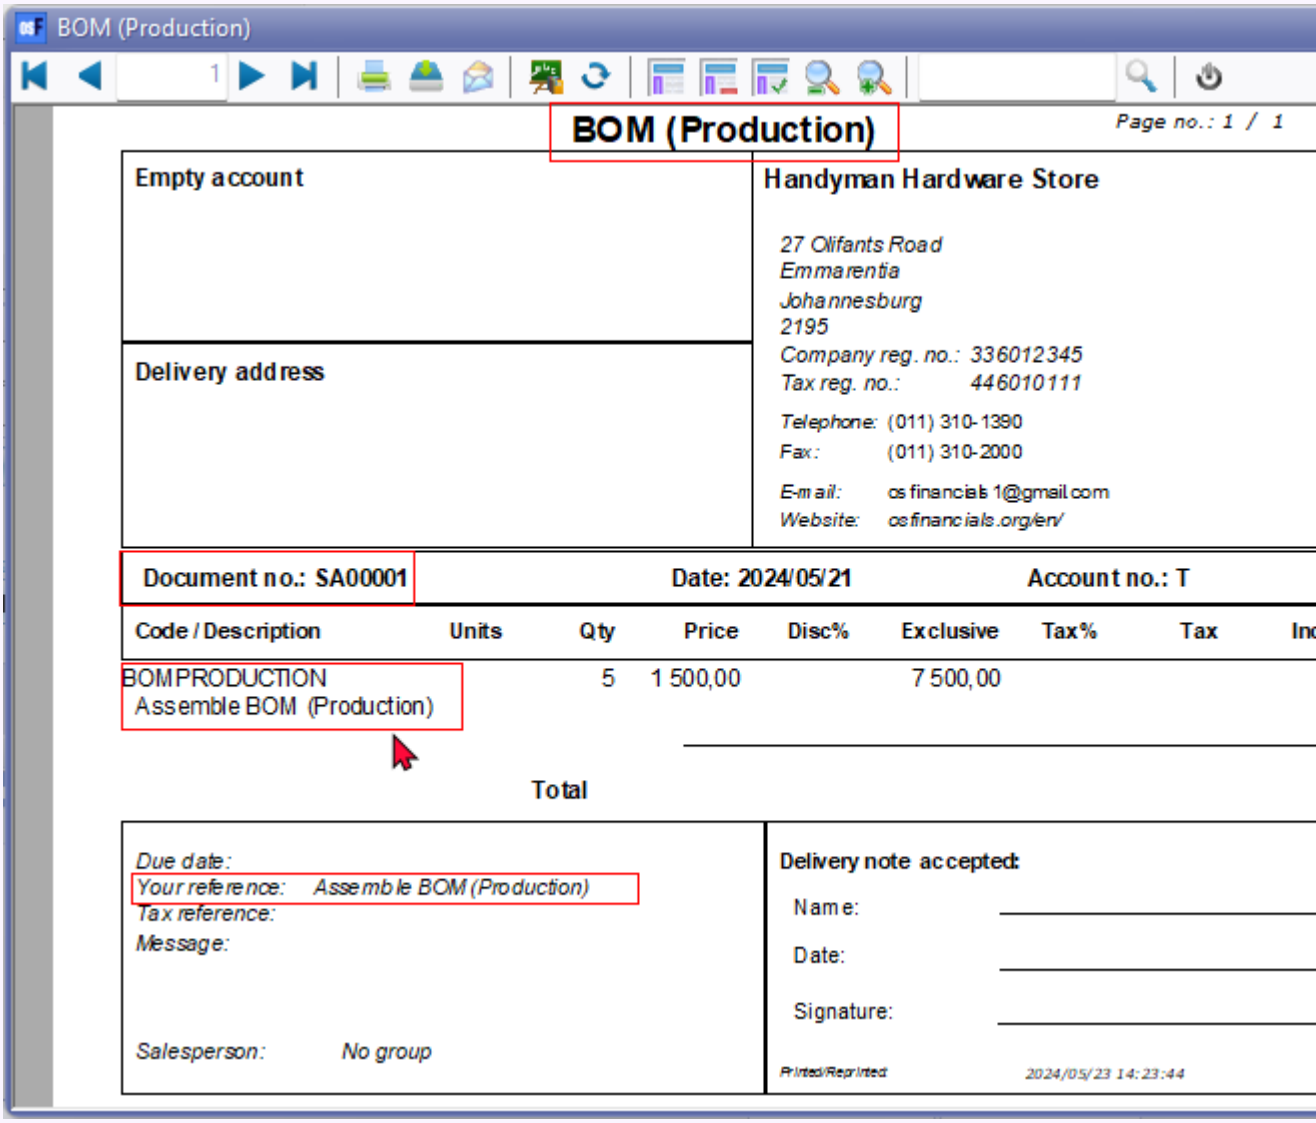
- *Layout file - (TRN_1910)*
- *Document layout - (TRN_3174)*

- *Document layout (15codes) - (TRN_906277)*
- *NO-TAX Layout file - (TRN_906589)*
- *NO-TAX Document layout - (TRN_906590)*
- *NO-TAX Document layout (15codes) - (TRN_906591)*

Recommendation: You may select the BOM (Production) Layout file (TRN_3266) for the Stock item type to print layout file "Assembly" or "Disassembly".

Document prefix: "SA" (e.g., "SA00001"), with a similar 7-digit format.

Example : Assemble



Delivery note accepted: in SubReport-1(TAX) - Changed label TRpExpression85 to print BOM (Production accepted :)

```

Viewing BOM (Production) Transactions

The transactions generated by assembling and disassembling BOM (Production) items are posted to the "BOM (Production) Contra account" as configured in Setup → Stock Information.

These transactions are recorded in the ledger and can be viewed through various reports and tools. Here's how you can view, print, and export these transactions:

1.

1. Reports Menu: To view these transactions, navigate to the Reports menu and select Reports → Ledger → Transactions. You can choose from the following reports:
    - Transactions
    - Transactions - Standard

- Transactions - Extra details

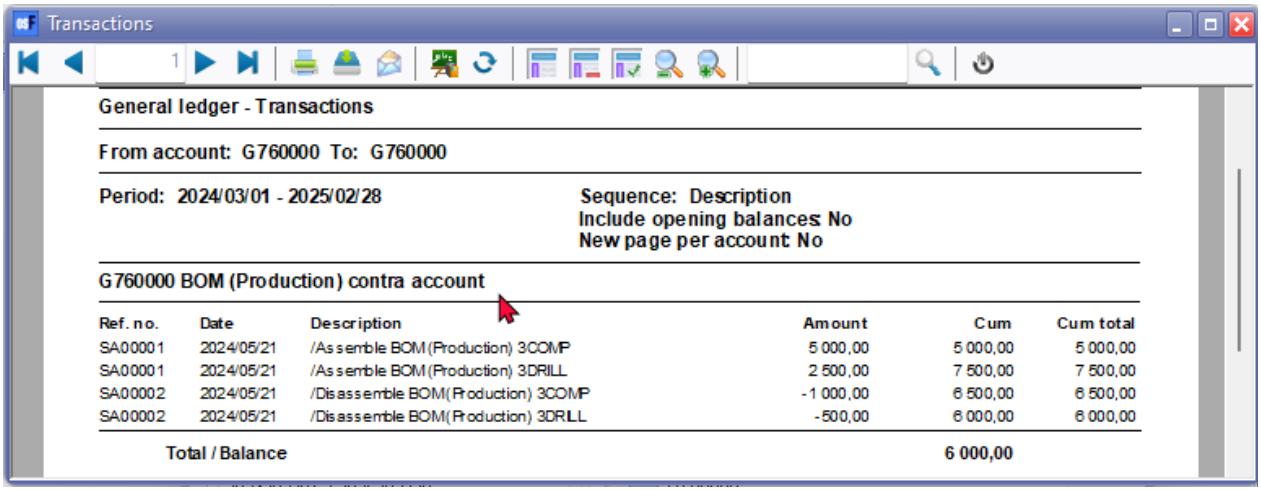
2. Batch entry: Cost of Sales journal: Open the Batch entry (F2) and select Cost of Sales journal. In the Cost of Sales journal, click on the posted batches tab and select the batch. You can print the transactions in the "*Batch type report - Posted batch*".

3. T-Account Viewer: Access the T-Account viewer and select the "*BOM (Production) Contra account*". This allows you to view, print, and export the transactions.

4. Ledger Analyser: Alternatively, you can print a Trial Balance in Ledger Analyser 1 or Ledger Analyser 2. Double-click on the desired account or use the "*Show details*" option from the context menu to view detailed transactions.

5. Central Search: To locate specific assemble or disassemble transactions or document numbers. In the search results, double-click on the Batch type to display the transactions in the T-Account viewer.

Example : Ledger transactions - BOM (Production) Contra account



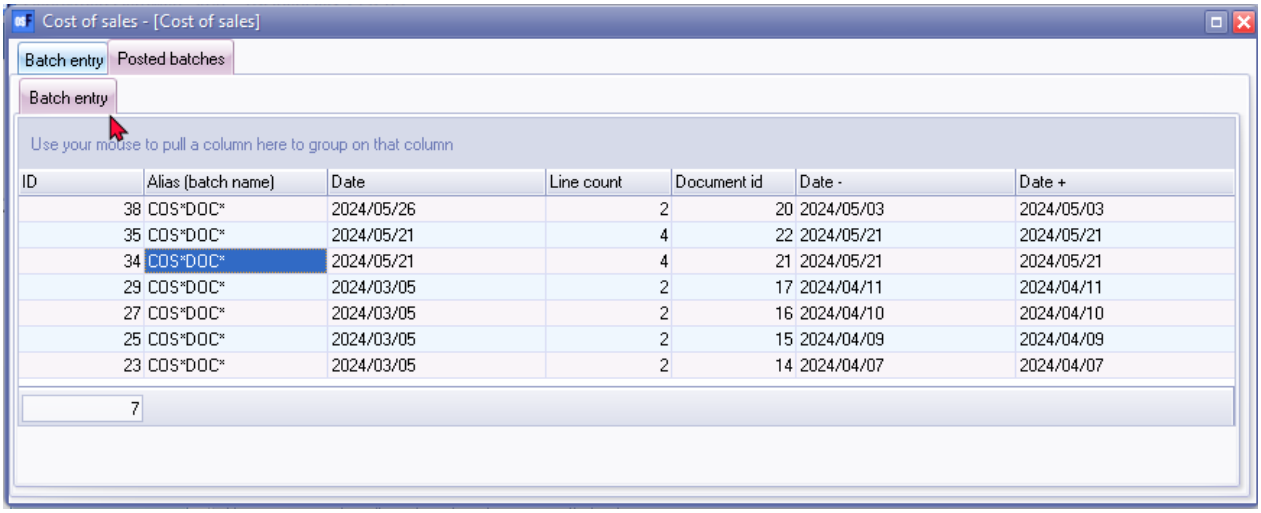
BOM (Production) - Assemble and Disassemble options will automatically generate transactions, which is posted to the ledger.

The Document no. for a BOM (Production) - Assemble and Disassemble options is automatically generated as a seven-digit number (consisting of a prefix SA followed by 5 numerical digits).

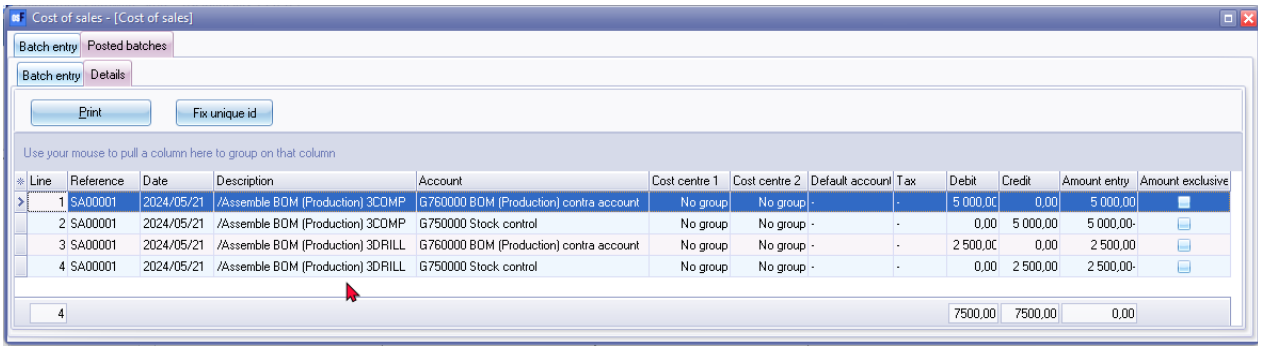
The Document type is "Assemble" or "Disassemble"

Example : Batch type report - Posted batch - BOM (Production) Batch transactions

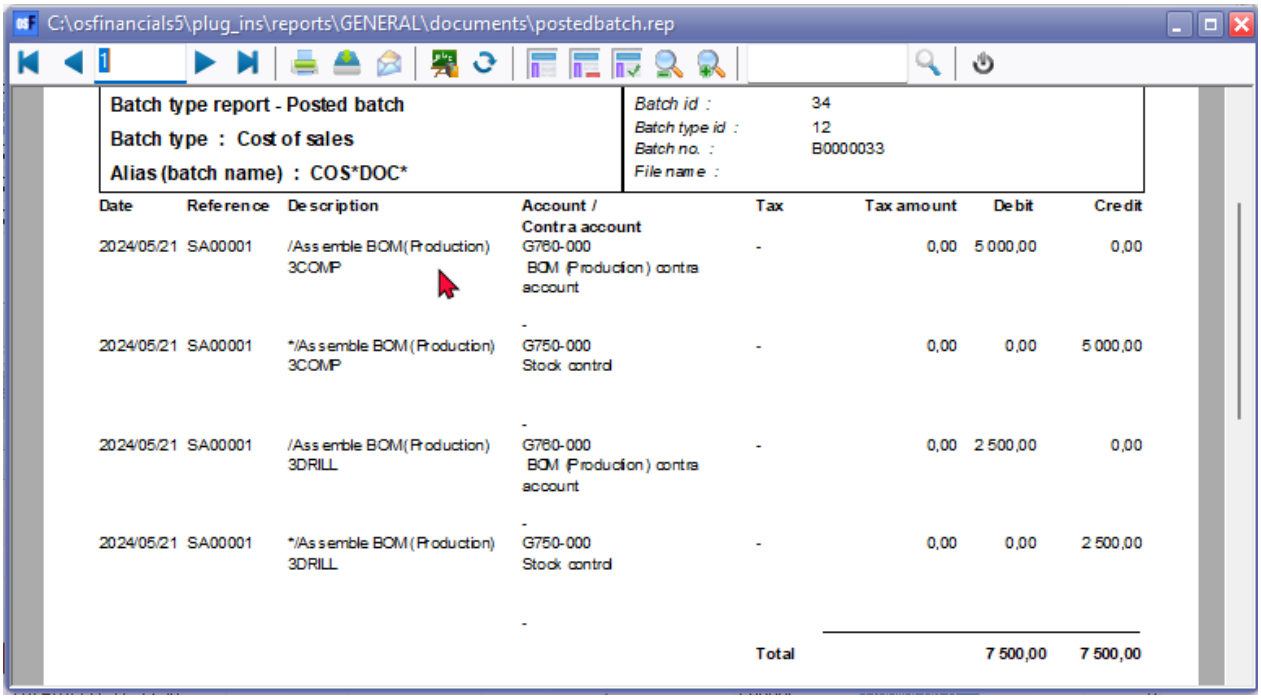
Open the Batch entry (F2) and select Cost of Sales journal. In the Cost of Sales journal, click on the posted batches tab and select the batch.



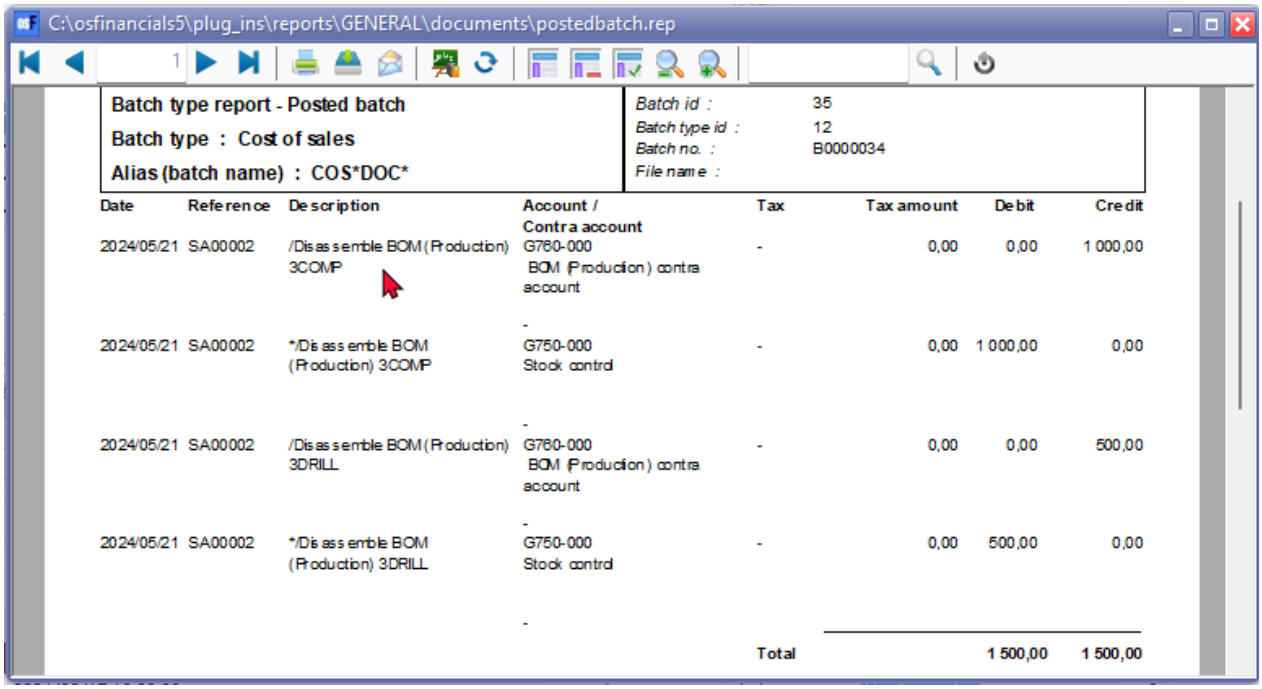
Click the Print button to print the transactions in the "*Batch type report - Posted batch*".



Example : Batch type report - Posted batch report - Assemble transactions



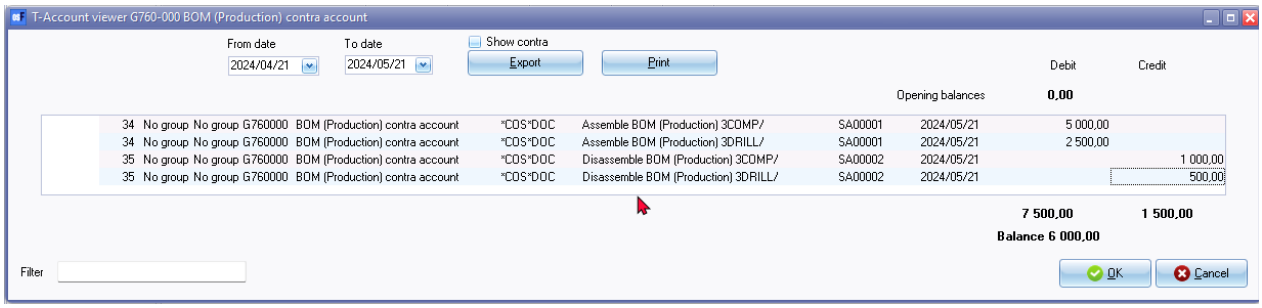
Example : Batch type report - Posted batch report - Disassemble transactions



T-Account viewer

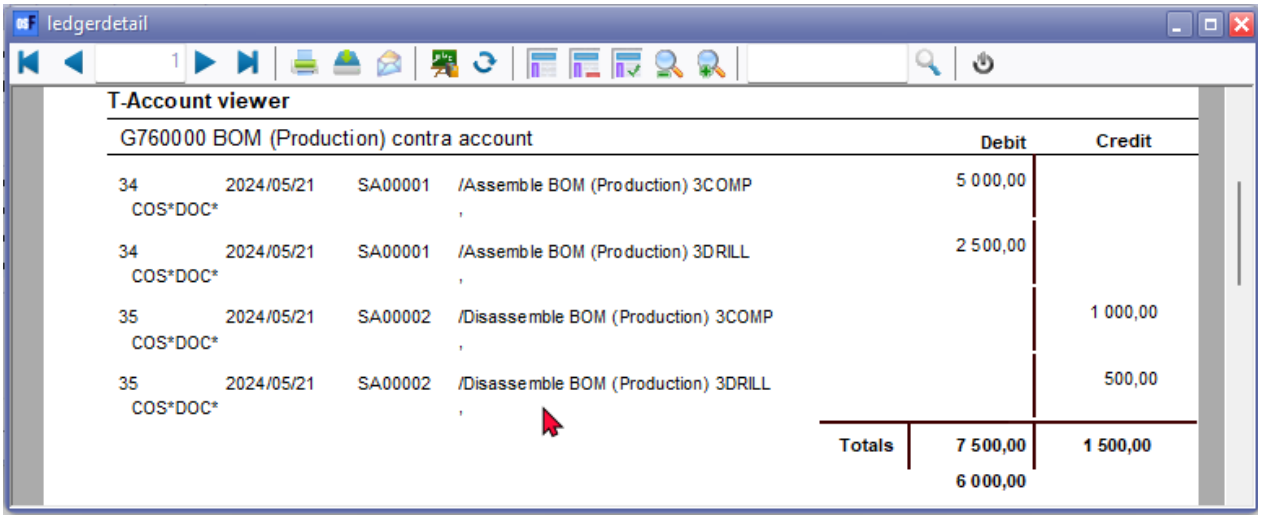
In addition to the transaction reports on the Reports menu; you may view, print and export transactions in the T-Account viewer from the following options.

- T- Account viewer : On the reports menu, select the T-Account viewer icon and select the "*BOM (Production) Contra account*".
- Alternatively, you may print a Trial balance in the Ledger analyser 1 / Ledger analyser 2 and double-click or use the "*Show details*" option on the context menu.



You may filter the transactions by batch number, e,g, "*34*" or "*35*".

Click on the Print button to print a T-account view of the transactions.



Should you wish to export these transactions to a spreadsheet click Export. If you need to include Contra accounts, in your spreadsheet, select the "*Show contra*" option

Known issues - Reports

Updated reports - maximum databases fields

osFinancials5.1.0.127 - Reports in the folder (accessed via the Reports menu) were updated and included in the osFinancials5.1.0.127 update.folder were updated and included in the osFinancials5.1.0.127 update. These updated reports were included in the osFinancials5.1.0.127 update installation

1. systemreports - Location : " ...\plug_ins\reports\systemreports\ "
2. GENERAL - Location : " ...\plug_ins\reports\GENERAL\ "
    - documents - Location : " ...\plug_ins\reports\GENERAL\documents\ "
    - ledgerview - Location : " ...\plug_ins\reports\GENERAL\ledgerview\ "
3. REPORTS - Location : "...\plug_ins\reports\REPORTS\" REPORTS/STOCK - Sidebar reports

Reports fixed - After osFinancials5.1.0.127 Update install

These updated reports were included in theosFinancials5.1.0.127 update installation. These Reports were retested in both Firebird database types and in MSSQL database types in osFinancials5.1.0.127.

See - FIXED - After osFinancials5.1.0.127 update - Details / Notes and screenshots

The following reports were updated and fixed.

1. systemreports - Fixed some adjustments to text (labels expressions) and data expressions were made in about 7 reports.
    a) Reports → Debtors → Listing - List delivery address
    b) Reports → Debtors → Listing - List postal address
    c) Reports → Creditors → Listing - List delivery address
    d) Reports → Creditors → Listing - List postal address
    e) Reports → Stock → Stock In / Out - Stock in / Out
    f) Reports → Documents → Document listing
    g) Reports → Tax - Tax per period
2. REPORTS/STOCK - Sidebar reports - Stock movement - This report prints similar data to the "*Voorraad verloop*" report
    - Renamed text report name to LANG_906038 to be translatable via the language files. Added report name "*Stock movement - Average cost - Grid*" in Header section.
    - Total print on Page 2 and Total - Data type = Currency as " ##,###,###,##0.00" in Detail of Group section (e.g. 1,000.00) - Set the Group footer data type for the Total (e.g. 1000.00) to display similar than the Detail report section.
3. excelreports - Spreadsheet reports → Sales analysis → Sales per period - Fixed - Error in Firebird databases to be updated.

    Location : " *...\plug_ins\reports\excelreports\TRN_85\TRN_906122/trn1296.sql*"

Reports not included in osFinancials5.1.0.127 update install

The following reports were fixed in osFinancials5.1.0.109 update but in osFinancials5.1.0.127 update install:

1. DOCUMENTS/DOCUMENTS - Document layout files updated to fix overlapping labels, remarks, etc. Standardised the Company and Tax registration numbers before contact details, etc.
2. userreports - Reports in the user reports menu. Restructured and fixed overlapping labels, etc.
3. New.rep
4. Empty.rep - Updated and standardized header and footer not updated in osFinancials5.1.0.127.

Reports Fixed after osFinancials5.1.0.127 update install

1. Reminders / Remittace plugin - Location : *...\plug_ins\reports\remittance* - Fixed overlapping labels

Auto Expand / Auto Contract and word wrap settings. Fixed MSSQL error in doctype layouts - MSSQL Error DOCUMENTREGEL Dataset

> DOCUMENTREGEL:Incorrect syntax near '|'.

2. Subscriptions plugin - Reports in 2 different locations, it is:

   a) Reports - Location *: ...\plug_ins\reports\REPORTS\SUBSCRIPT* - Fixed overlapping labels Auto Expand / Auto Contract and word wrap settings.

   b) layouts -

      § English layout - Location : ...\plug_ins\reports\Subscriptions\en\layouts\default.rep

      § Netherlands layout - Location : ... \plug_ins\reports\Subscriptions\nl\layouts\default.rep

3. CRM plugin- Location : ...\plug_ins\reports\CRM\ - Not updated - Need to activate and configure the CRM plugin before any reports could be printed. - MSSQL Errors in

> "DOCUMENTHEAD:Incorrect syntax near '|'."

Reports - Firebird Errors

Ledger - Transactions

Prints in most databases in Firebird and MSSQL without errors –

Error only replicated in 1 Firebird Database (Set of Books) = TEST-REPORTS-4-DIGIT-DESCRIPTION-1234567890123456

Location : ...\plug_ins\reports\systemreports\TRN_1372\TRN_74\TRN_74.rep

Nederlands - Location : ...\plug_ins\reports\remittance\nl\layouts\default.rep

> Could not convert variant of type (UnicodeString) into type (Double)

and within Reportman

```
Could not convert variant of type (UnicodeString) into type (Double)
TODATE=11-10-2006
```

The error message "*Could not convert variant of type (UnicodeString) into type (Double*)" in Firebird databases suggests that there is an issue with data conversion, particularly involving a Unicode string and a Double data type.

In your provided information, you also mentioned "*TODATE=11-10-2006*." It seems like there might be an attempt to convert a string ("*11-10-2006*") to a Double data type using the TODATE function in Firebird.

Here are a few steps you can take to troubleshoot and resolve the issue:

1. Check the Data Type Compatibility: Ensure that the data types used in your expressions are compatible. If you are using the TODATE function, make sure that the input is a valid date format.

   Example: sql

   ```
   SELECT TODATE('11-10-2006', 'DD-MM-YYYY') FROM YourTable;
   ```

2. Verify Data Formats: Double-check the format of the date string. In the example above, the format is 'DD-MM-YYYY'. If your date string follows a different format, adjust the format accordingly.

3. Handle NULL Values: If your data might contain NULL values, consider adding conditions to handle them appropriately. For instance, use the COALESCE function to replace NULL values with a default or handle them in another way.

4. Explicit Type Conversion: If you're dealing with mixed data types, explicitly convert the data types using appropriate functions. For example, you can use the CAST or CONVERT function to explicitly convert a string to a Double if needed.

   Example: sql

   ```
   SELECT CAST('11-10-2006' AS DOUBLE PRECISION) FROM YourTable;
   ```

5. Review the SQL Statement: Check the entire SQL statement or query for any other potential issues. Look for areas where data types might conflict.

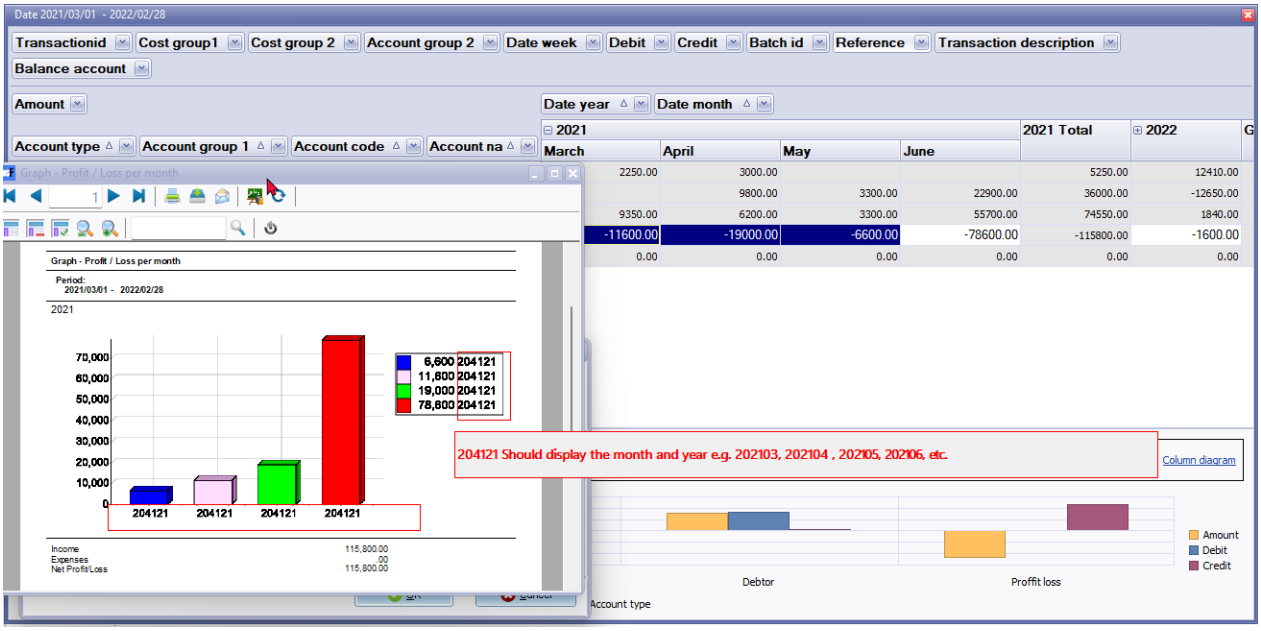
Without seeing the full query or knowing more about the database structure, these are general suggestions. If the issue persists, providing more details about the relevant part of your SQL query and the database schema would be helpful for further assistance.

FIXED -NEED TO RECHECK MSSQL Graphs per Week / Graphs per Month MSSQL- Axis labels (Axis titles)

Example Graphs per month - 204121 Should display the month and year e.g. 202103, 202104 , 202105, 202106, etc. like in Firebird databases

Example Graphs per week - 204121 Should display the week and year e.g. 09 for first week March , etc. like in Firebird databases

Need to look at and recheck the "order by and having sum issues



DOCUMENTLINE SQL Graphs per month -> Graph - Profit / Loss per month

```
SELECT 1 WTYPEID,

{if interbase}extract(year from ddate){else}year(ddate){endif} dyear,

{if interbase}extract(month from ddate){else}year(ddate){endif} dmonth,

sum(-transact.FAMOUNT) Total

FROM transact join account on transact.Waccountid = Account.Waccountid and
Account.BincomeExpense = 1

where

(transact.ddate >= :DDATEFROMFL and transact.ddate <= :DDATETOFL)

and transact.FAMOUNT > 0
```

```

Known issues - SQL Compatibility MSSQL and Firebird Database types - Plugins

---

Known issues - SQL Compatibility MSSQL and Firebird Database types - Plugins

The double pipe characters (||) for concatenation are not supported in Microsoft SQL Server. To ensure compatibility with both Firebird and SQL Server, you should use the CONCAT function instead.

Reminders plugin - MSSQL Compatibility

Email

```
Invalid column name 'REGISTER_ATT'.
Invalid column name 'REGISTERS_ID'.
Invalid column name 'REGISTERS_EMAIL'.
Invalid column name 'REGISTERS_SEND'.
```

Edit report

OPENITEMS:Column 'COUNTRIES.countries_name' is invalid in the select list because it is not contained in either an aggregate function or the GROUP BY clause.

CONCAT - in sql files

The || double pipe characters works in Firebird databases but is not compatible in MSSQL databases - causes errors.

```
Select SCompanyName || ascii_char(35) || ascii_char(25)
|| sysvars.SADDRESS1
|| ascii_char(13) || ascii_char(10)
|| sysvars.SPOSTCODE
|| ' ' || sysvars.SADDRESS2
|| ascii_char(13) || ascii_char(10)
|| sysvars.SPHONENUMBER
 from sysvars
```

Subscriptions plugin

SQL folder in the templates need update for compatibility in both MSSQL and Firebird Database types

Location : ...\plug_ins\reports\Subscriptions\en\SqlInvoice

Location : ...\plug_ins\reports\Subscriptions\en\Sql

Language templates : nl folder for Netherlands and en folder for English and af for Afrikaans folder

Current SQL Firebird database types

The double pipe characters (||) is currently supported in Firebird database types included in the SqlInvoice and Sql folders, which supports Firebird database types only.

Sample of the current SQL code (companyname.txt file) that will work in Firebird database types only:

```
Firebird database type SQL

Select SCompanyName || ascii_char(13) || ascii_char(10)
|| sysvars.SADDRESS1
```

```
|| ascii_char(13) || ascii_char(10)
|| sysvars.SPOSTCODE
|| ' ' || sysvars.SADDRESS2
|| ascii_char(13) || ascii_char(10)
|| sysvars.SPHONENUMBER
 from sysvars
```

Change SQL - Compatibility = MSSQL database types and Firebird database types

The double pipe characters (||) for concatenation are not supported in Microsoft SQL Server. To ensure compatibility with both Firebird and SQL Server, you should use the CONCAT function instead.

Sample of the modified SQL code (companyname.txt file) that will work in both database types:

MSSQL database type SQL

```
SELECT CONCAT(SCompanyName, CHAR(13), CHAR(10), sysvars.SADDRESS1, CHAR(13), CHAR(10),
sysvars.SPOSTCODE, ' ', sysvars.SADDRESS2, CHAR(13), CHAR(10), sysvars.SPHONENUMBER)
FROM sysvars;
```

Subscription plugin Files to be converted to CONCAT function (concatenation)

`Location :` …\plug_ins\reports\Subscriptions\nl

`Location on GitHub :` osfinancials-development/reports/plug_ins/reports/Subscriptions/nl at main · Digidanosf/osfinancials-development · GitHub

The double pipe characters (||) need to be converted and updated in the following files:

- companyname.txt
- email.txt
- HTMcompanyname.txt
- HTMlogo.txt
- HTMparcel.txt
- logo.txt
- parcel.txt

- Updsql.txt

EmailInvoice Plugin

Current SQL Firebird database types

The double pipe characters (||) is currently supported in Firebird database types included in the SqlInvoice and Sql folders, which supports Firebird database types only.

Sample of the current SQL code (companyname.txt file) that will work in Firebird database types only:

Firebird database type SQL

```
Select   SCompanyName || '<br/>'
|| sysvars.SADDRESS1 || '<br/>'
|| sysvars.SPOSTCODE || ' ' || sysvars.SADDRESS2   || '<br/>' ||
sysvars.SPHONENUMBER || '<br/>'
 from sysvars
```

Change SQL - Computability = MSSQL database types and Firebird database types

The double pipe characters (||) for concatenation are not supported in Microsoft SQL Server. To ensure compatibility with both Firebird and SQL Server, you should use the CONCAT function instead.

Sample of the modified SQL code (companyname.txt file) that will work in both database types:

MSSQL database type SQL

```
SELECT CONCAT(SCompanyName, '<br/>', sysvars.SADDRESS1, '<br/>',
sysvars.SPOSTCODE, ' ', sysvars.SADDRESS2, '<br/>', sysvars.SPHONENUMBER)
FROM sysvars;
```

EmailInvoice plugin Files to be converted to CONCAT function (concatenation)

`Location :` ...\plug_ins\reports\EMailInvoice\nl\Sql

`Location on GitHub :` osfinancials-development/reports/plug_ins/reports/EMailInvoice/nl/Sql at main · Digidanosf/osfinancials-development · GitHub

Language templates : nl folder for Netherlands and en folder for English and af for Afrikaans folder

The double pipe characters (||) need to be converted and updated in the following files:

- companyname.txt
- doclines.txt
- email.txt
- ExtraFiles.txt
- HTMcompanyname.txt
- HTMdoclines.txt
- HTMlogo.txt
- HTMparcel.txt
- logo.txt
- parcel.txt

FIXED-Reports

FIXED - After osFinancials5.1.0.127 update / osFinancials5.1.0.189 update - Details / Notes and screenshots

excelreports

osf.ini file : " *nounocode=true* " setting prints in Firebird database types and MSSQL database types.

Retested in osFinancials5.1.0.127 and osFinancials5.1.0.189 update on Spreadsheet reports menu.

Fixed file Excluded from osFinancials5.1.0.189 update. Firebird error replicated in all updates since osfinancials5.1.0.93.

Fixed firebird error in Spreadsheet reports → Sales analysis → Sales per period

Location : ...\plug_ins\reports\excelreports\TRN_85\TRN_906122\trn_1296.sql

```
Dynamic SQL Error
SQL error code = -104
Token unknown - line 8, column 60
)
```

NOTE : Can print in MSSQL Databases Replicated since osF5.1.0.49 up to osFinancials5.1.0.127

Fixed SQL - Removed the double closing bracket form line 60

> "group by {if interbase}Extract(year from ddate),Extract(month from ddate){else}Year(ddate),Month(ddate) {endif}"

- now it prints in both MSSQL and Firebird

```
select {if interbase}Extract(year from ddate){else}Year(ddate) {endif}
TRN_901022_Year,

{if interbase}Extract(month from ddate){else}Month(ddate) {endif} TRN_901019_MONTH ,

 sum(fdocamount) TRN_1866_IncAmt,

 sum(FTAXAMOUNT) TRN_1138_TaxAmt,

 sum(fdocamount-FTAXAMOUNT) TRN_1200_ExcAmt

 from dochead where

<@DDATE@>

group by {if interbase}Extract(year from ddate),Extract(month from ddate){else}
Year(ddate),Month(ddate) {endif}
```

FIXED = Removed Bracket (duplicated) in col60 of line 8

systemreports (Fixes to be updated)

osf.ini file : " *nounocode=true* " setting prints in Firebird database types and MSSQL database types.

These systemreports have been updated and included in osFinancials5.1.0.109.

Retested in osFinancials5.1.0.127 on Reports menu (systemreports folder) some minor fixes regarding overlapping labels and consistency in 7 reports were fixed -

Alignment headings and detail - Debtors listing

Reports → Debtors → Listing - List delivery address - Location : ...
\plug_ins\reports\systemreports\TRN_160\TRN_66\TRN_906138.rep

Reports → Debtors → Listing - List postal address - Location : ...
\plug_ins\reports\systemreports\TRN_160\TRN_66\TRN_906139.rep

Alignment headings and detail - Creditors listing

Reports → Creditors → Listing - List delivery address - Location : ...

\plug_ins\reports\systemreports\TRN_161\TRN_66\TRN_906138.rep

Reports → Creditors → Listing - List postal address - Location : …

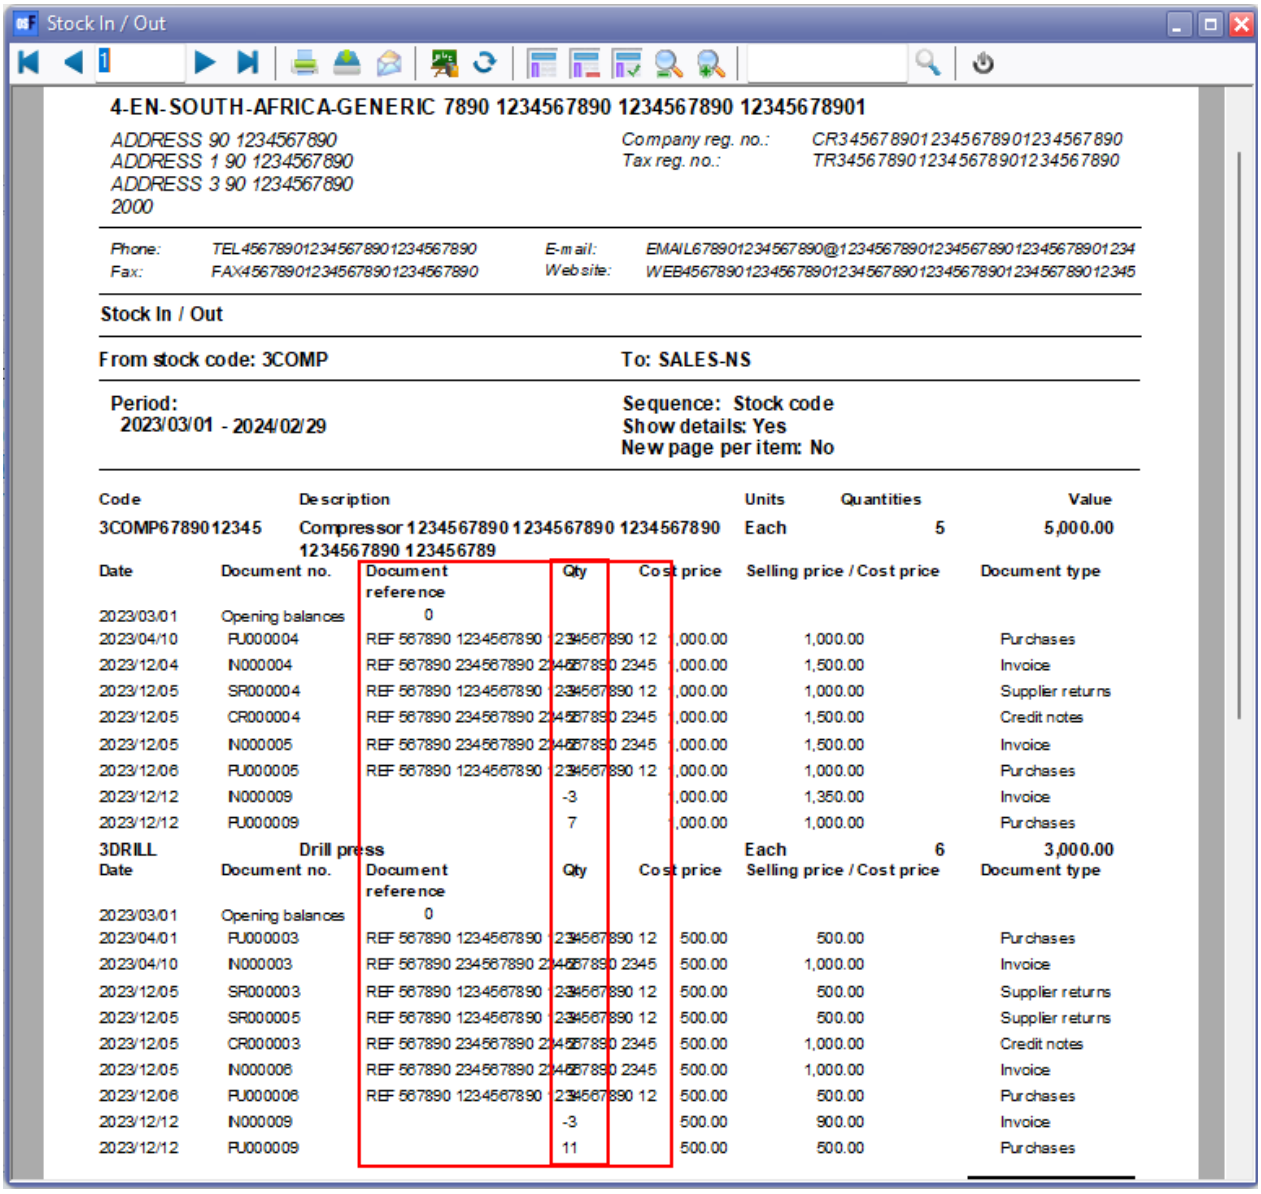
\plug_ins\reports\systemreports\TRN_161\TRN_66\TRN_906139.rep

Stock - In/Out - Show details - Overlapping labels

Reports → Stock → Stock In / Out - Stock in / Out

Location : …\plug_ins\reports\systemreports\TRN_1999\TRN_906112

Before fix

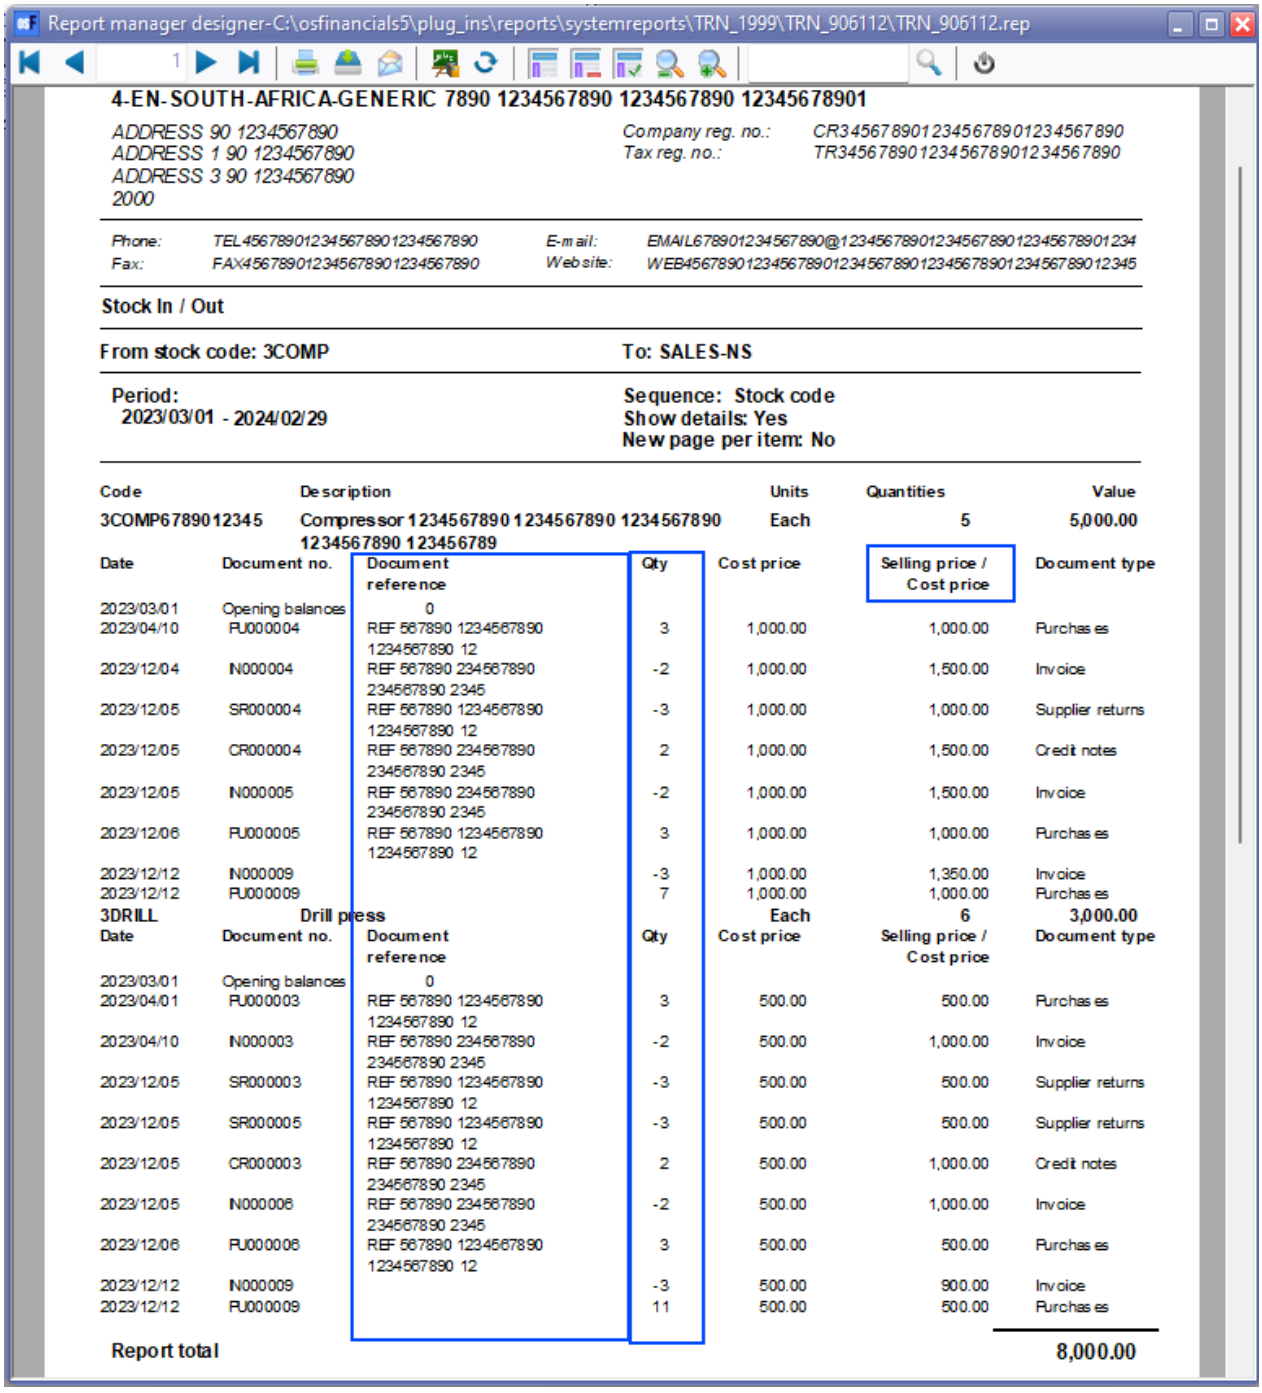


After fix

Moved Quantity, Cost price, Selling price / Cost price and Document type to right

Added line break in Selling price / Cost price expression

Set Auto expand/ Auto Contract and Word wrap

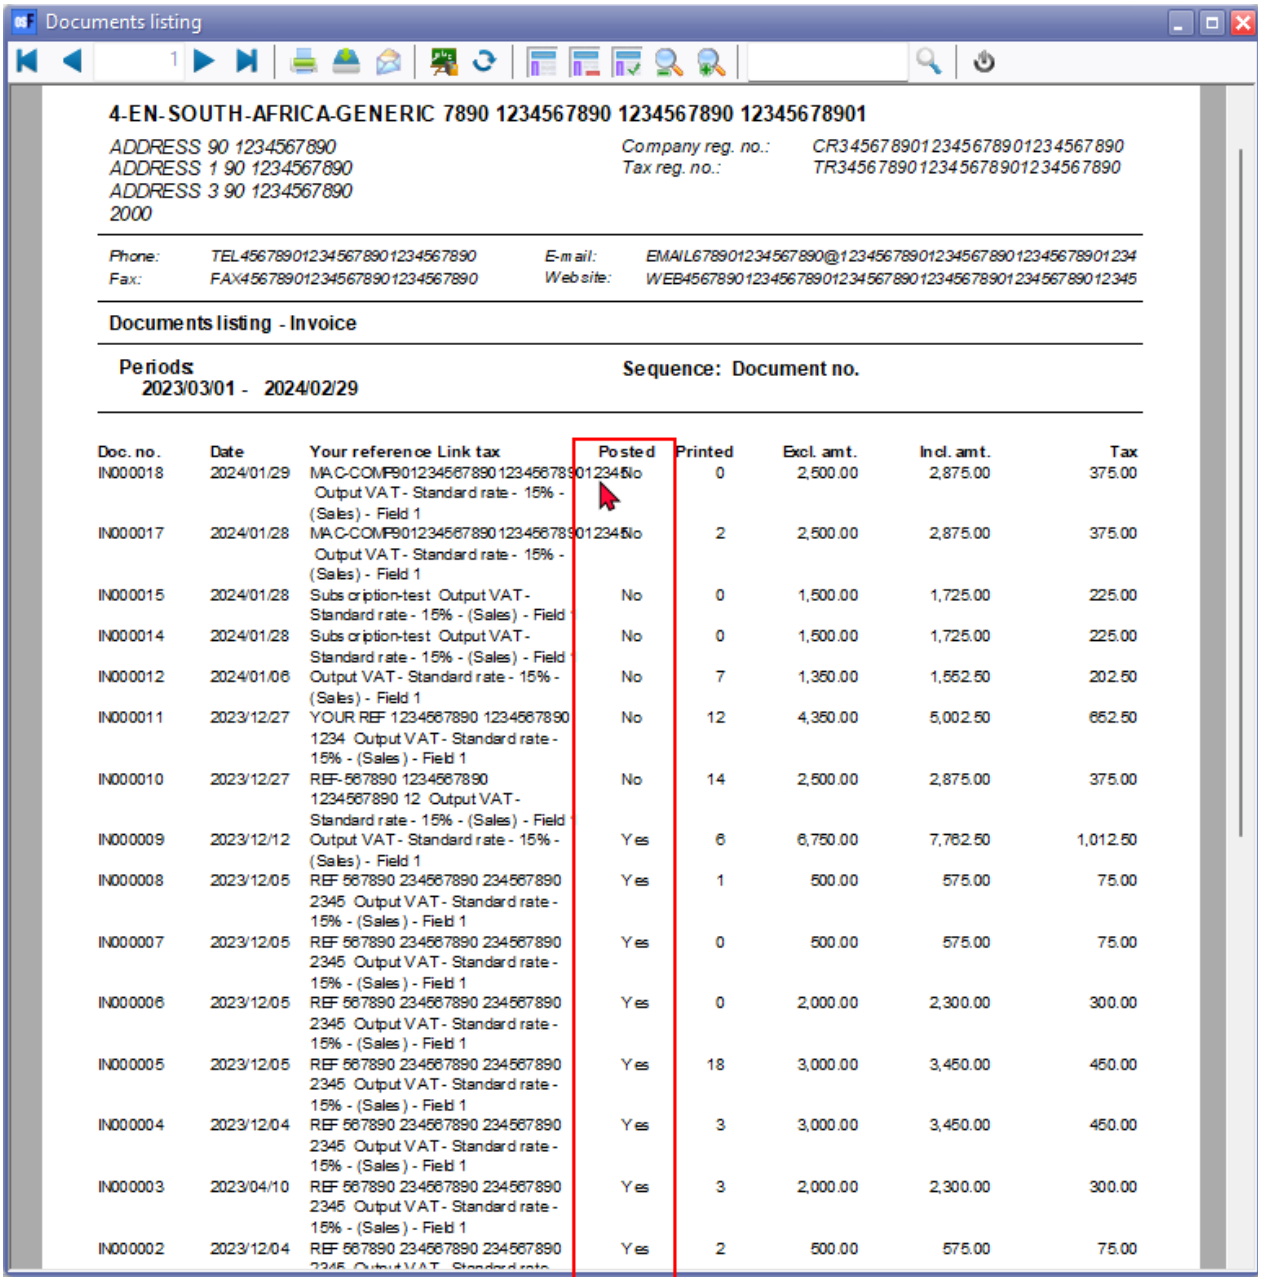


Documents - Document listing - Overlapping labels

Reports → Documents → Document listing

Location : ...\plug_ins\reports\systemreports\TRN_38\TRN_45\TRN_45.rep

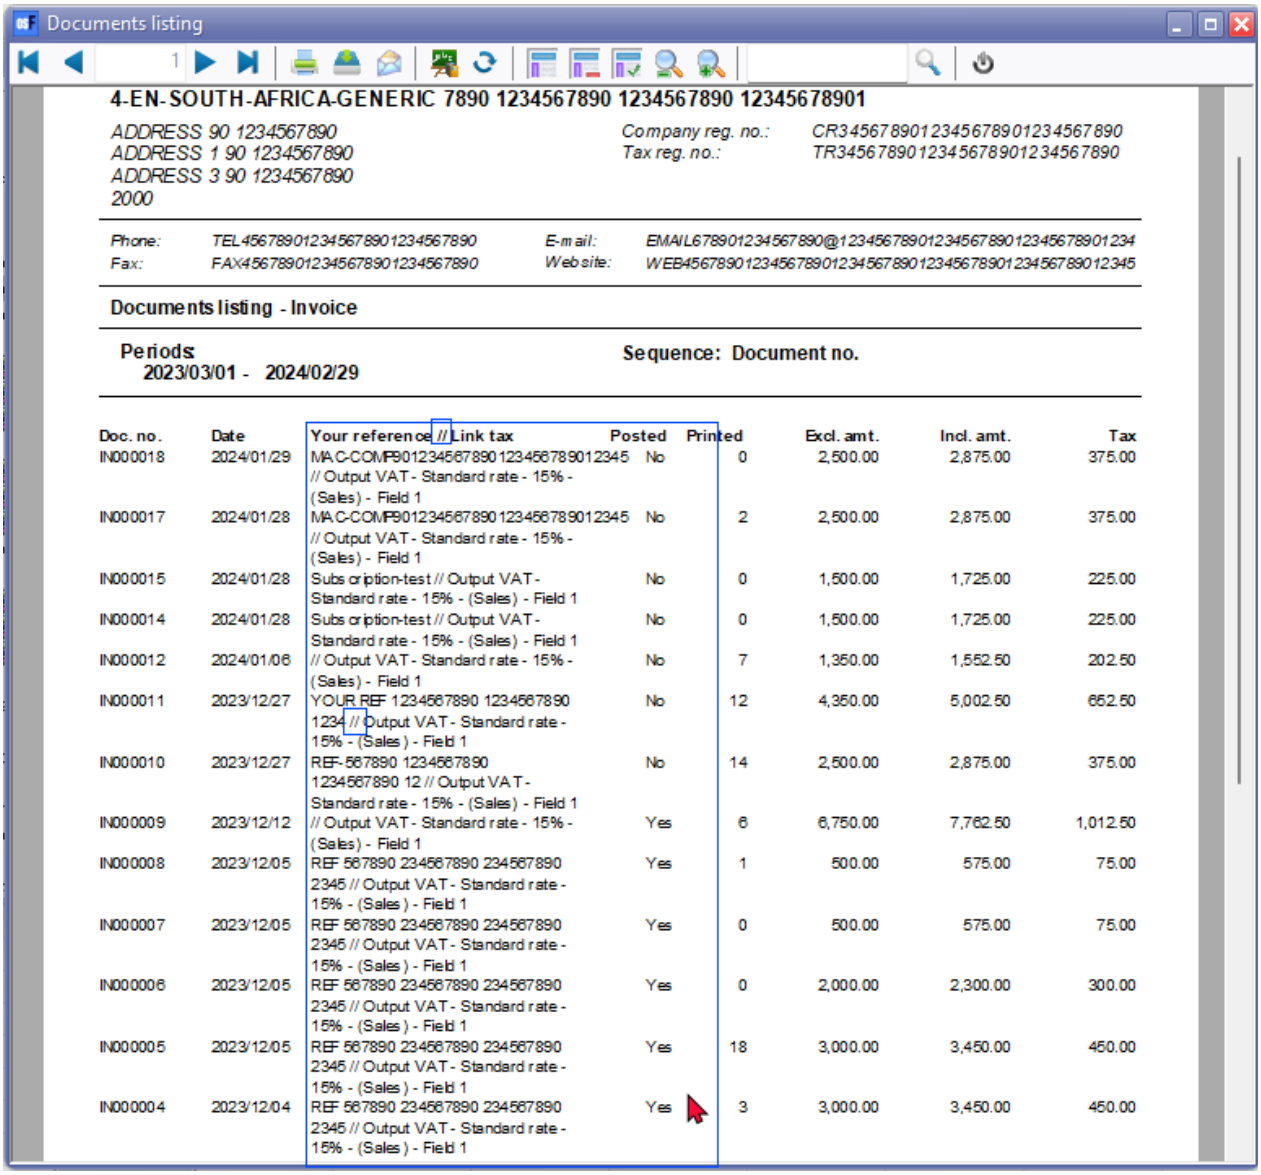
Before fix



After fix

Added // in descriptions and expressions Your reference Link tax - to Your reference // Link tax

This is to be consistent with other tax reports (e.g. Tax - Transactions and Tax report - Reference / Document no.) and easier on the eye to separate the fields.

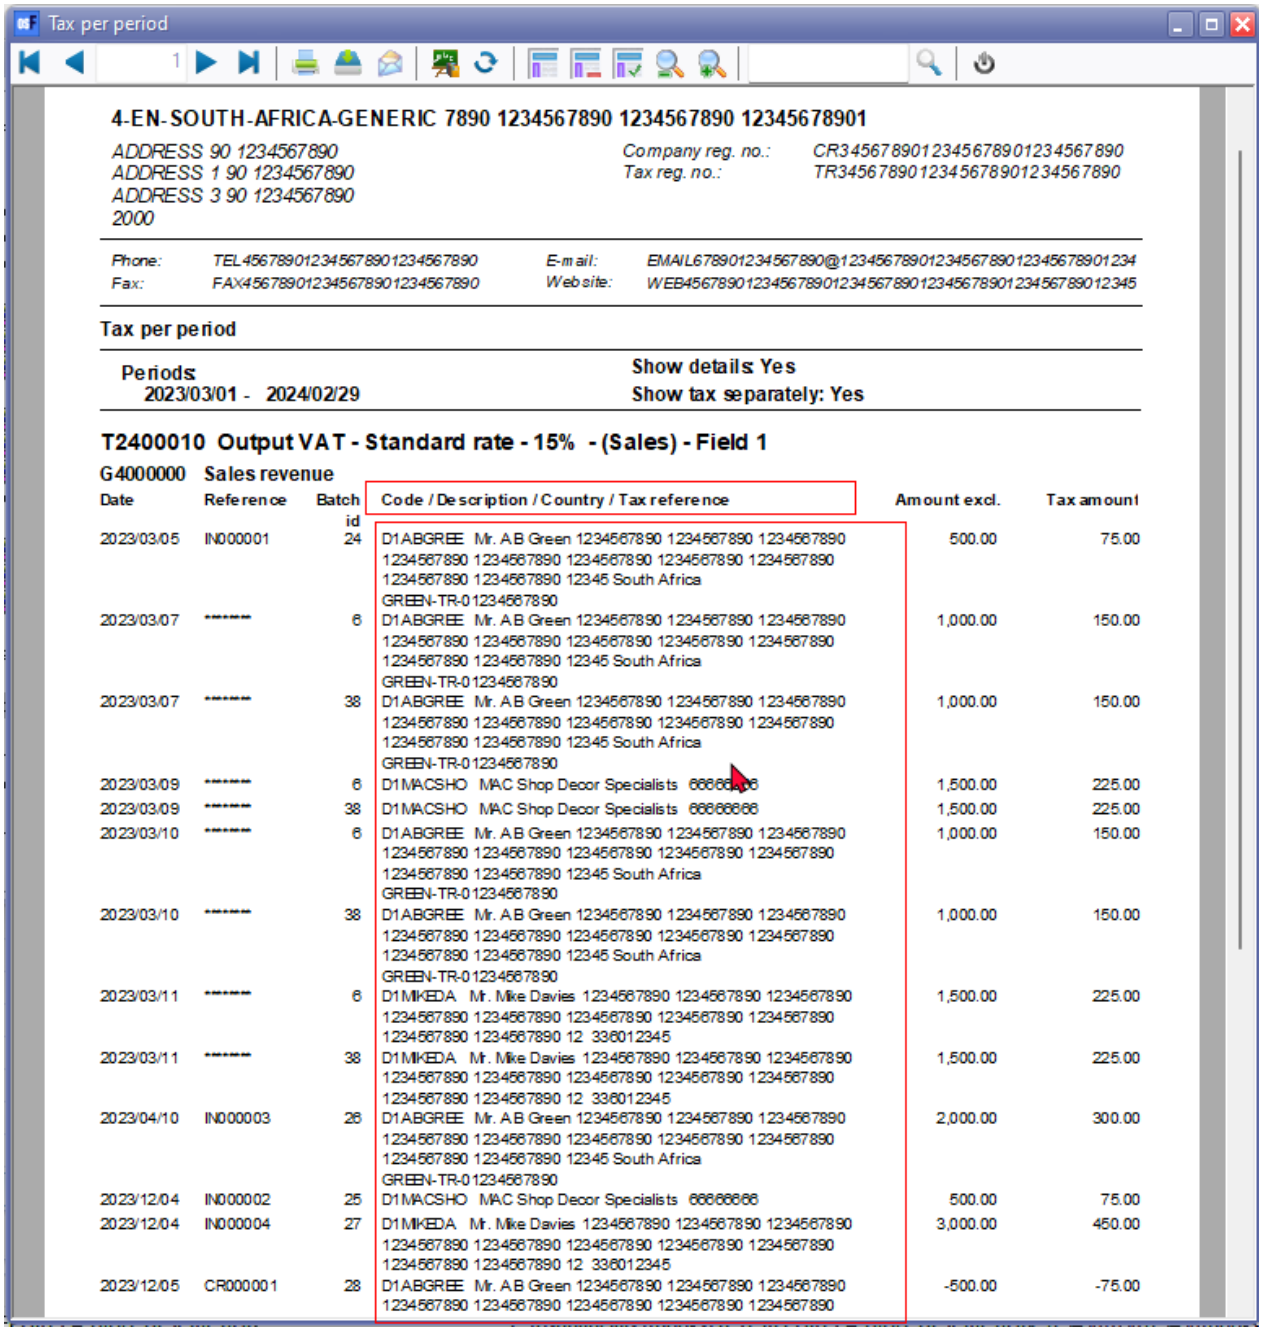


Tax - Tax per period

Reports → Tax - Tax per period

Location : .../plug_ins\reports\systemreports\TRN_906020\TRN_906020

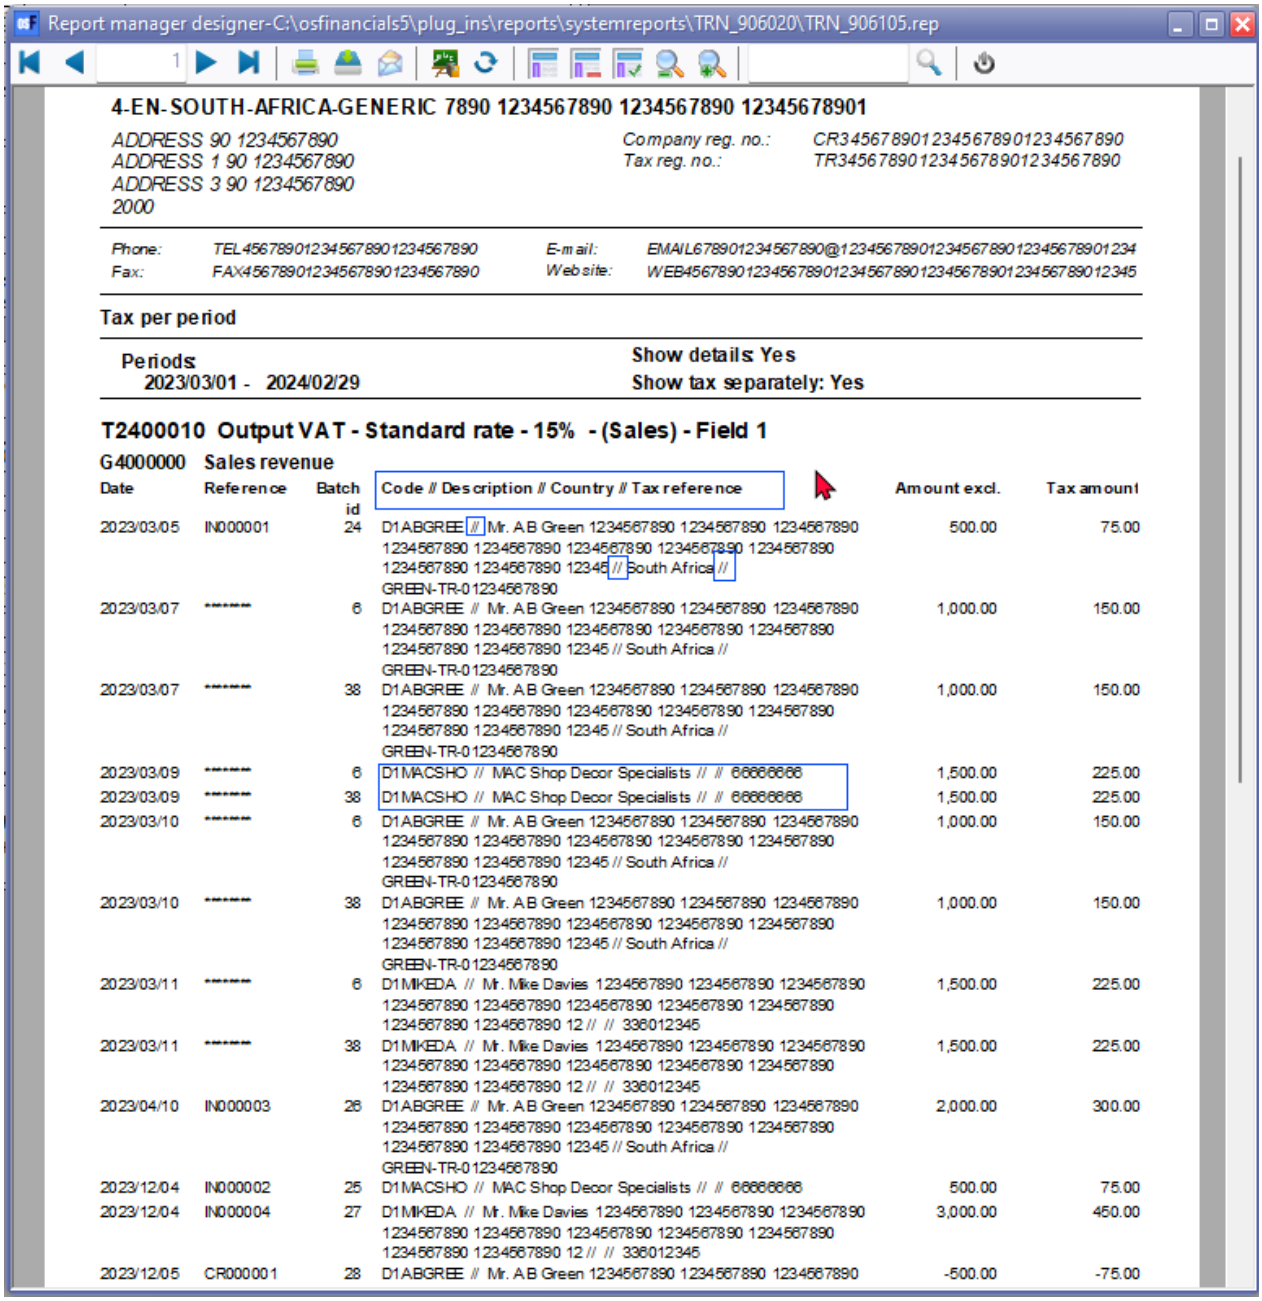
Before fix



After fix

Added // in descriptions and expressions Code / Description Country / Tax reference - to Your reference // Link tax

This is to be consistent with other tax reports (e.g. Tax - Transactions and Tax report - Reference / Document no.) and easier on the eye to separate the fields.



STOCK - Sidebar reports -

STOCK - Sidebar reports - Stock movement

Stock movement report (Stock turnover)

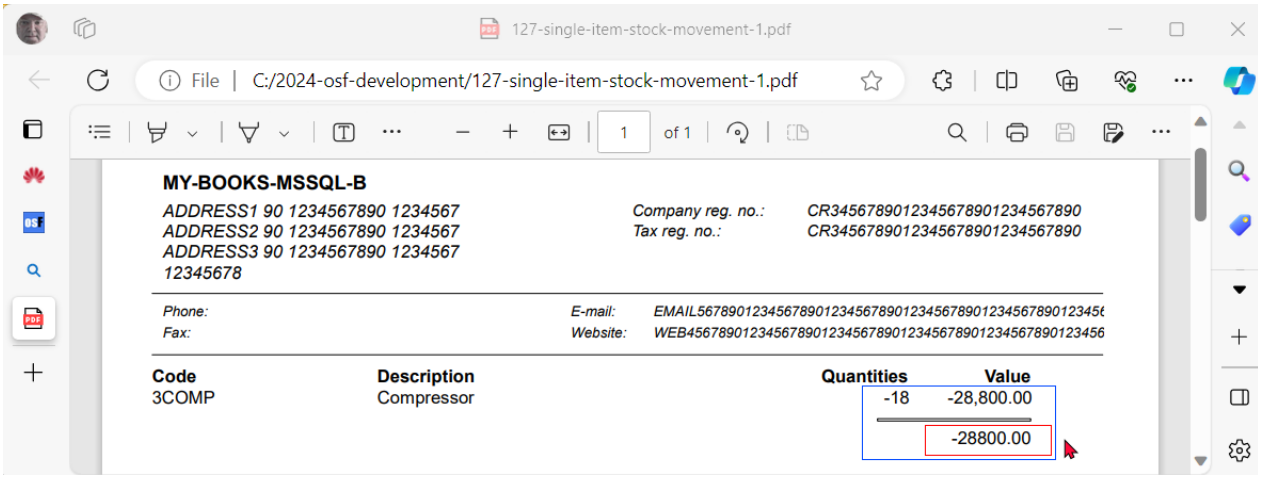
Renamed text report name to LANG_906038 to be translatable via the language files. Added report name "*Stock movement - Average cost - Grid*" in Header section.

Total print on Page 2 and Total - Data type = Currency as " ##,###,###,##0.00" in Detail of Group section (e.g. 1,000.00) - Set the Group footer data type for the Total (e.g. 1000.00) to display similar than the Detail

report section.

Location : ...\plug_ins\reports\REPORTS\STOCK\Stock Movement.rep New location : ... \plug_ins\reports\REPORTS\STOCK\LANG_906038.rep with translated file name.

Fixed - Total print on Page 2



Fixed 2 - Total - Data type = Currency as " ##,###,###,##0.00" in Detail of Group section (e.g. 1,000.00) - Set the Group footer data type for the Total (e.g. 1000.00) to display similar than the Detail report section.

FIXED - Graphs - Posted and Confirmed Quotes and Orders

Quotes / Orders Posted / Confirmed on Reports

To be consistent with Sales reports (Quotes) and Purchase reportsOeders) Graphs should also include posted and confirmed quotes but excludes open (unconfirmed) quotes

```
where dochead.BPosted = 1
```

Changed to include posted and confirmed quotes but excludes open (unconfirmed) quotes

```
where dochead.BPosted in (1,-1)
```

Posted - Status

1. 0 – Invoices and Credit notes are not yet posted (updated) to the ledger.
2. 0 – Quotes are not yet confirmed (Converted to an Invoice).
3. 1 – Invoices and Credit notes are posted (updated) to the ledger.

4. 1 – Quotes are confirmed (Converted to an Invoice).
5. -1 - Quotes which are still open.

```
where dochead.BPosted = 1
```

Changed to include posted and confirmed quotes but excludes open (unconfirmed) quotes

```
where dochead.BPosted in (1,-1)
```

Created with the Standard Edition of HelpNDoc: Free iPhone documentation generator

FIXED - MSSQL Graphs per Month - Axis labels (Axis titles)

Graphs per week - Graphs per month - X and Y axis values labels (titles)

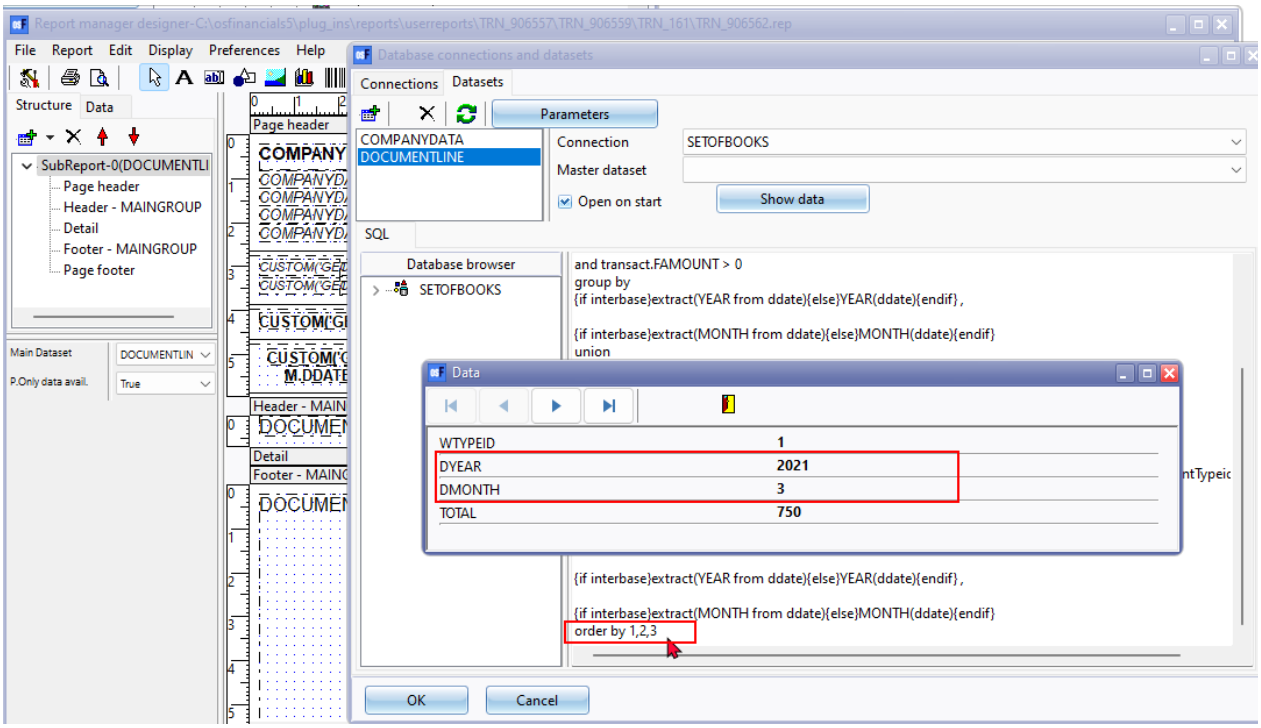
ORDER BY

2, 1, 3;

FIXED - ORDER 1,2,3

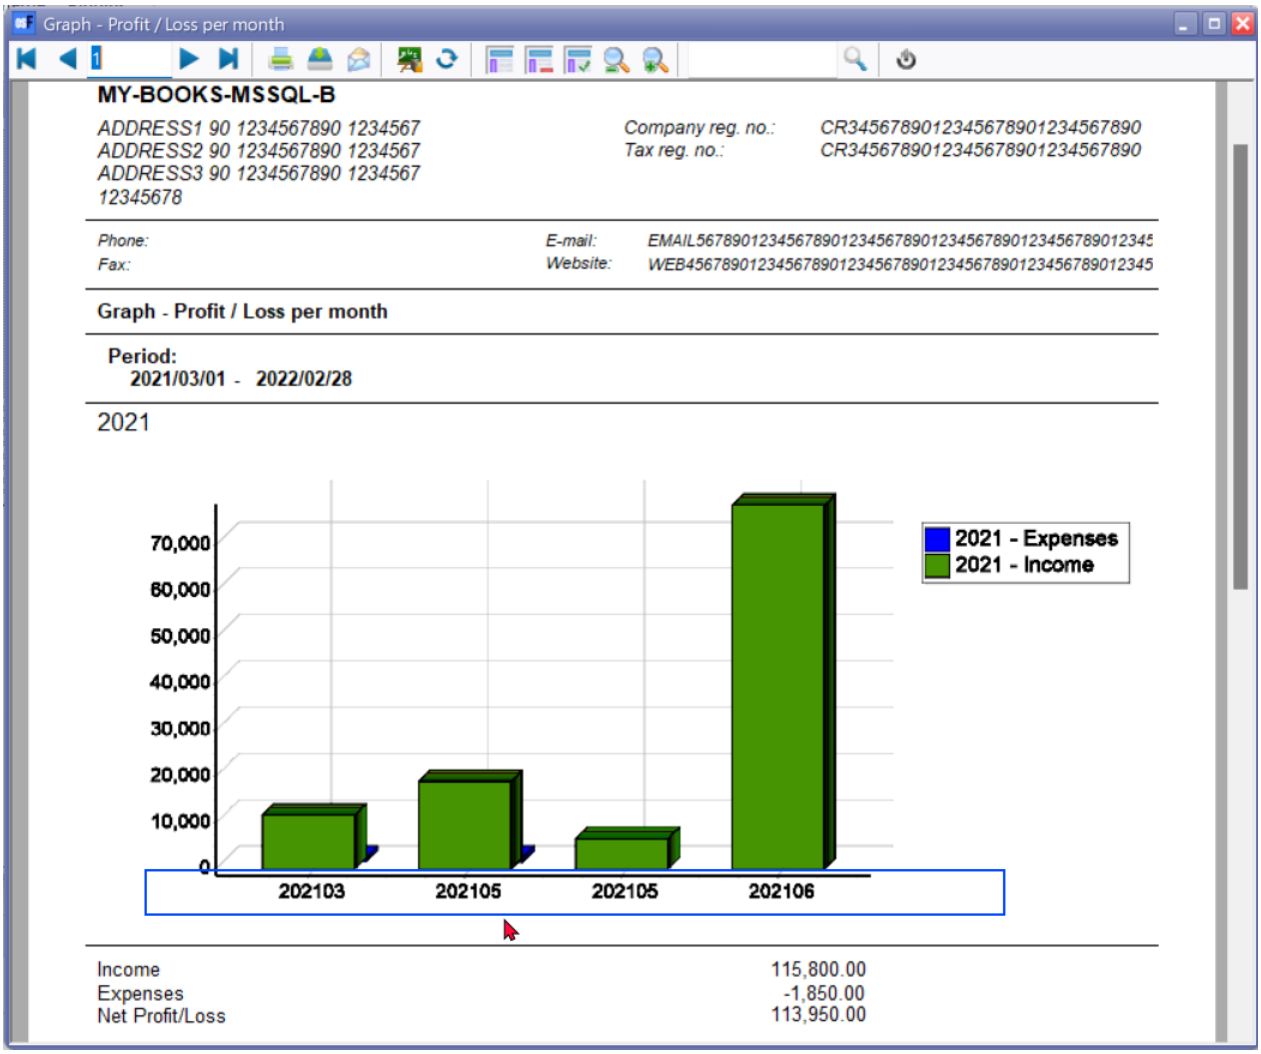
ORDER is 1 = YEAR, 2 = MONTH, 3= TOTAL

Changed from 1,2,3 to 1,2 (YEAR, MONTH)



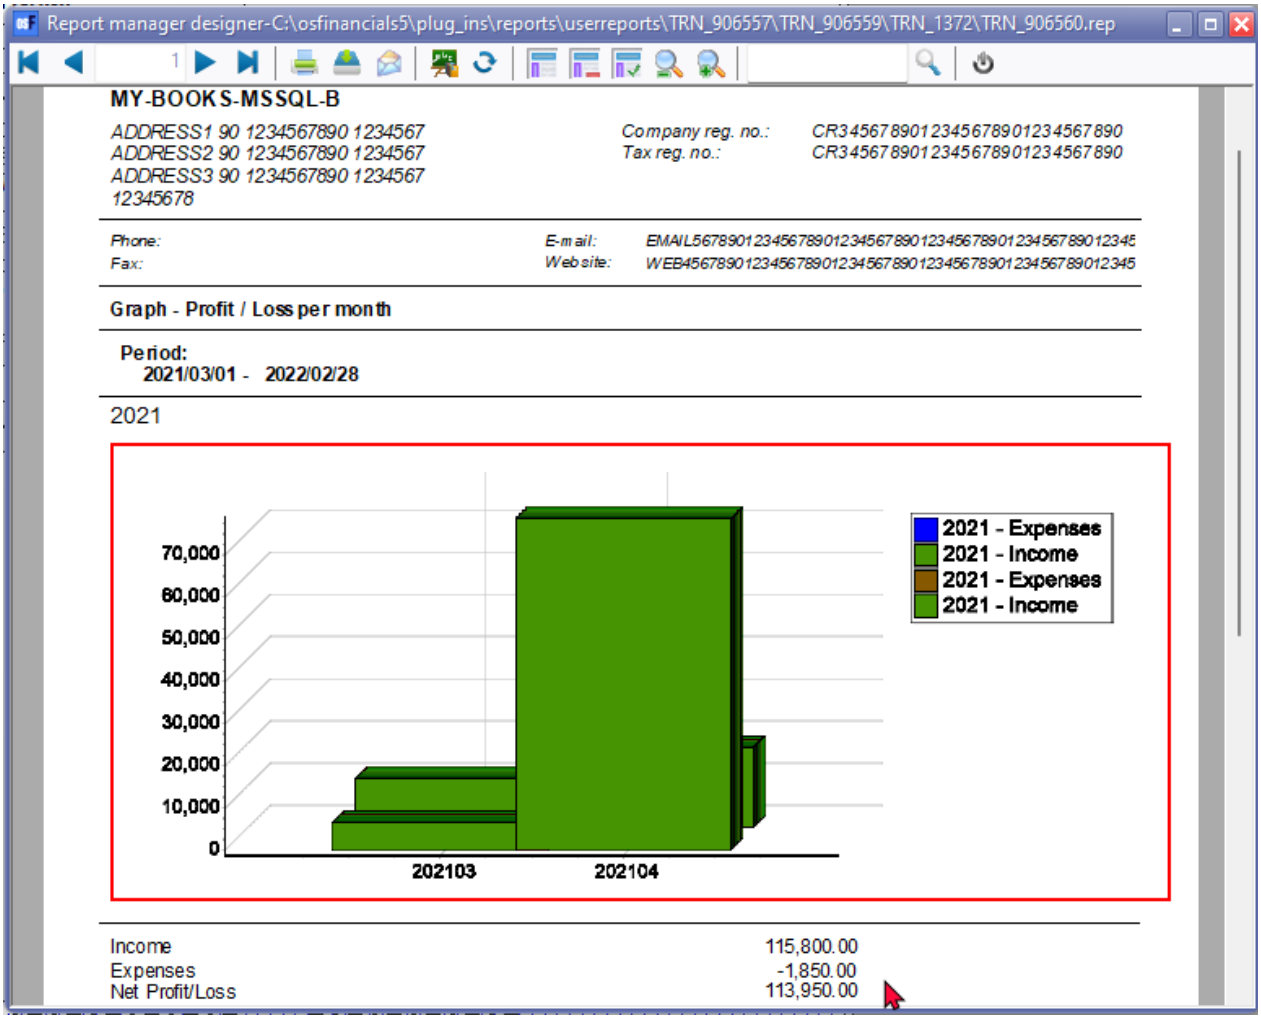
year , month , type (2,3,1)

FIXED PRINT - X and Y axis values labels correct



Order by 1,2,3 (Type, Year Month) or 2,1,3 (Year, Type, Month)

If order is set to 2,3,1 (Year, Month. Type) it prints as follows:



a

BUG - BEFORE FIXES

Example - MSSQL Graphs per Month - Axis labels (Axis titles)

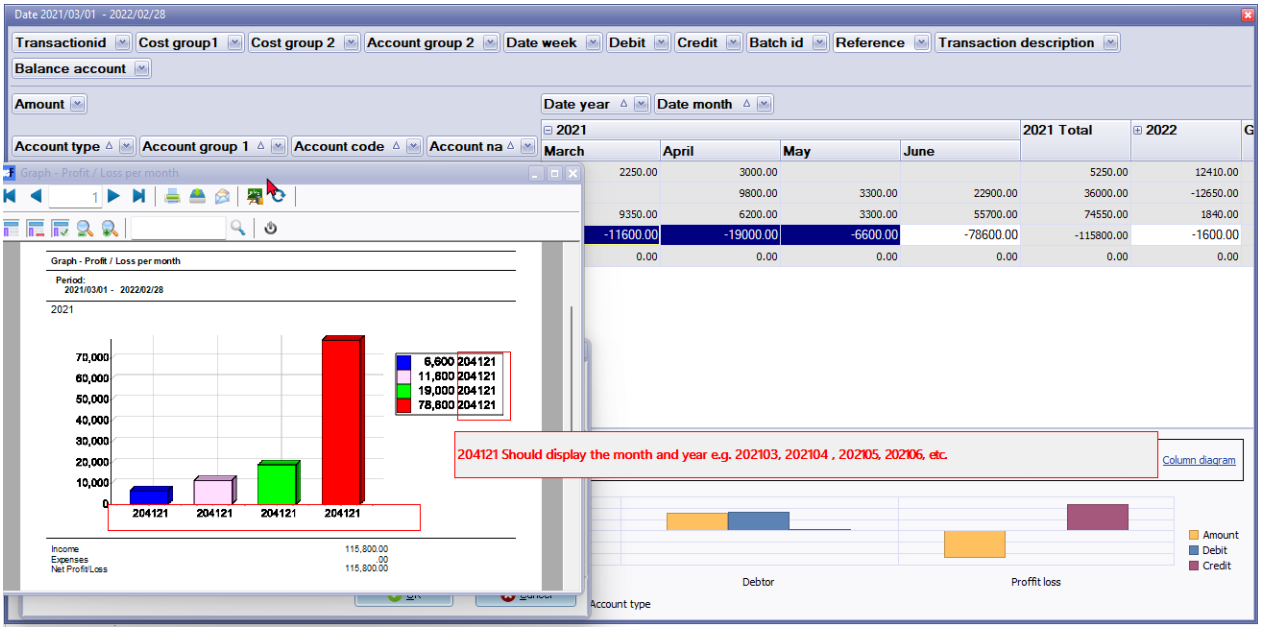
Firebird databases - All Graphs per week and Graphs per month reports prints correct values in Firebird databases.

In MSSQL databases - All Graphs per week and Graphs per month reports prints incorrect values in the X-axis and Y-axis.

The Reason for this is that MSSQL is case sensitive and needs WEEK, MONTH, YEAR to be in the UPPERCASE to print the correct values in MSSQL database types.

Example Graphs per month - 204121 Should display the month and year e.g. 202103, 202104 , 202105, 202106, etc. like in Firebird databases

Example Graphs per month - 204121 Should display the week and year e.g. 09 for first week March , etc. like in Firebird databases



DOCUMENTLINE SQL Graphs per month -> Graph - Profit / Loss per month - SQL

```
SELECT 1 WTYPEID,

{if interbase}extract(year from ddate){else}year(ddate){endif} dyear,

{if interbase}extract(month from ddate){else}year(ddate){endif} dmonth,

sum(-transact.FAMOUNT) Total

FROM transact  join account on transact.Waccountid = Account.Waccountid  and
Account.BincomeExpense = 1

where

(transact.ddate >= :DDATEFROMFL and transact.ddate <= :DDATETOFL)

and transact.FAMOUNT > 0

group by

{if interbase}extract(year from ddate){else}year(ddate){endif} ,

{if interbase}extract(month from ddate){else}month(ddate){endif}

union

SELECT 2 WTYPEID,
```

```
{if interbase}extract(year from ddate){else}year(ddate){endif} dyear,

{if interbase}extract(month from ddate){else}year(ddate){endif} dmonth,

sum(-transact.FAMOUNT) Total

FROM transact  join account on transact.Waccountid = Account.Waccountid  and
Account.BincomeExpense = 1

where

(transact.ddate >= :DDATEFROMFL and transact.ddate <= :DDATETOFL)

and transact.FAMOUNT < 0

group by

{if interbase}extract(year from ddate){else}year(ddate){endif} ,

{if interbase}extract(month from ddate){else}month(ddate){endif}

order by 2,1,3
```

Changed the needs MONTH, YEAR to be in the UPPERCASE to print the correct values in MSSQL database types

```
SELECT 1 WTYPEID,

{if interbase}extract(YEAR from ddate){else}YEAR(ddate){endif} dyear,

{if interbase}extract(MONTH from ddate){else}MONTH(ddate){endif} dmonth,

sum(-transact.FAMOUNT) Total

FROM transact  join account on transact.Waccountid = Account.Waccountid  and
Account.BincomeExpense = 1

where

(transact.ddate >= :DDATEFROMFL and transact.ddate <= :DDATETOFL)

and transact.FAMOUNT > 0

group by

{if interbase}extract(YEAR from ddate){else}YEAR(ddate){endif} ,

{if interbase}extract(MONTH from ddate){else}MONTH(ddate){endif}

union

SELECT 2 WTYPEID,
```

```
{if interbase}extract(YEAR from ddate){else}YEAR(ddate){endif} dyear,

{if interbase}extract(MONTH from ddate){else}MONTH(ddate){endif} dmonth,

sum(-transact.FAMOUNT) Total

FROM transact join account on transact.Waccountid = Account.Waccountid and
Account.BincomeExpense = 1

where

(transact.ddate >= :DDATEFROMFL and transact.ddate <= :DDATETOFL)

and transact.FAMOUNT < 0

group by

{if interbase}extract(YEAR from ddate){else}YEAR(ddate){endif} ,

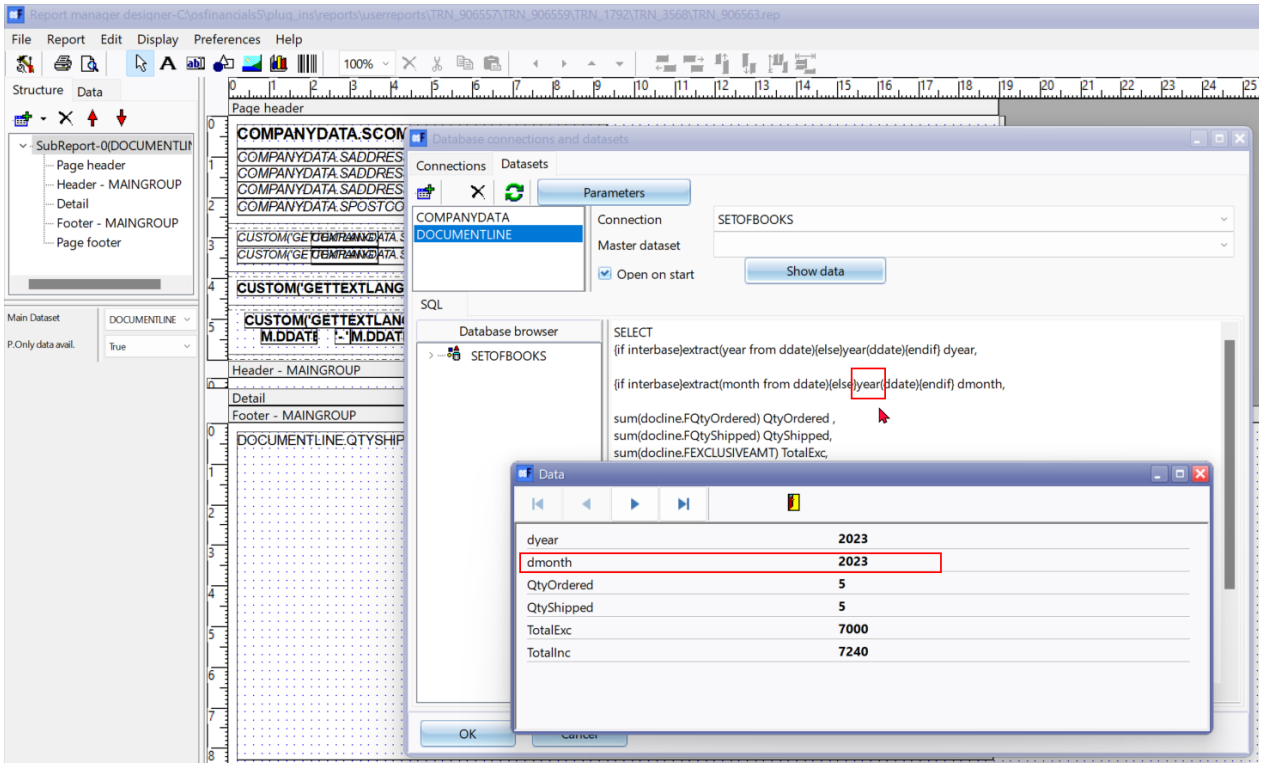
{if interbase}extract(MONTH from ddate){else}MONTH(ddate){endif}

order by 2,1,3
```

Error - dmonth - = YYYY

Changed to UPPERCASE and changed year to month

```
{if interbase}extract(MONTH from ddate){else}MONTH(ddate){endif} dmonth,
```



Changelog - Graphs per month (TRN_906559)

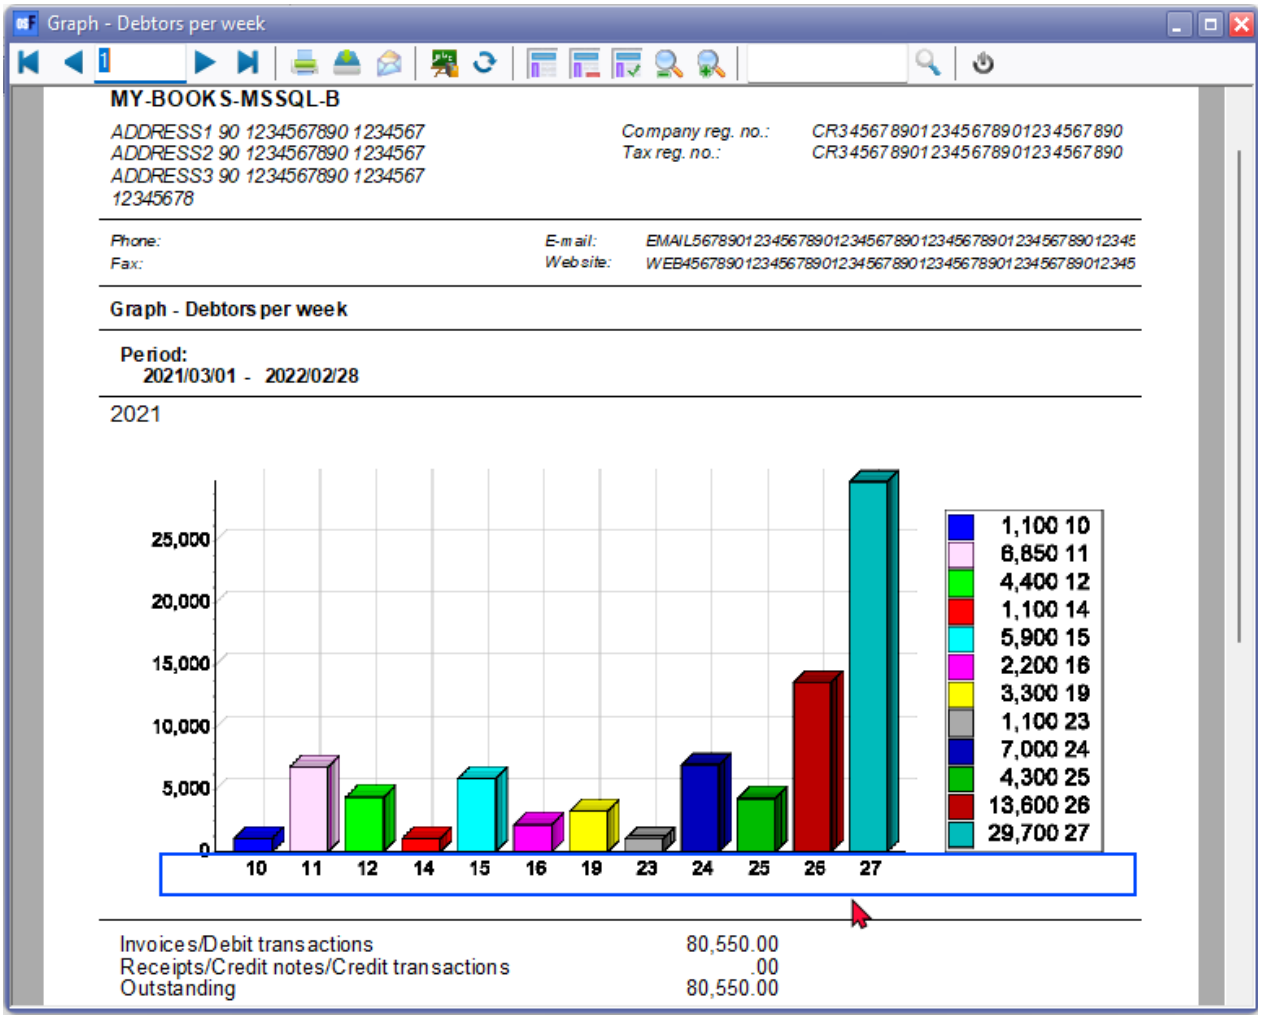
Created with the Standard Edition of HelpNDoc: Revolutionize Your Documentation Output with a Help Authoring Tool

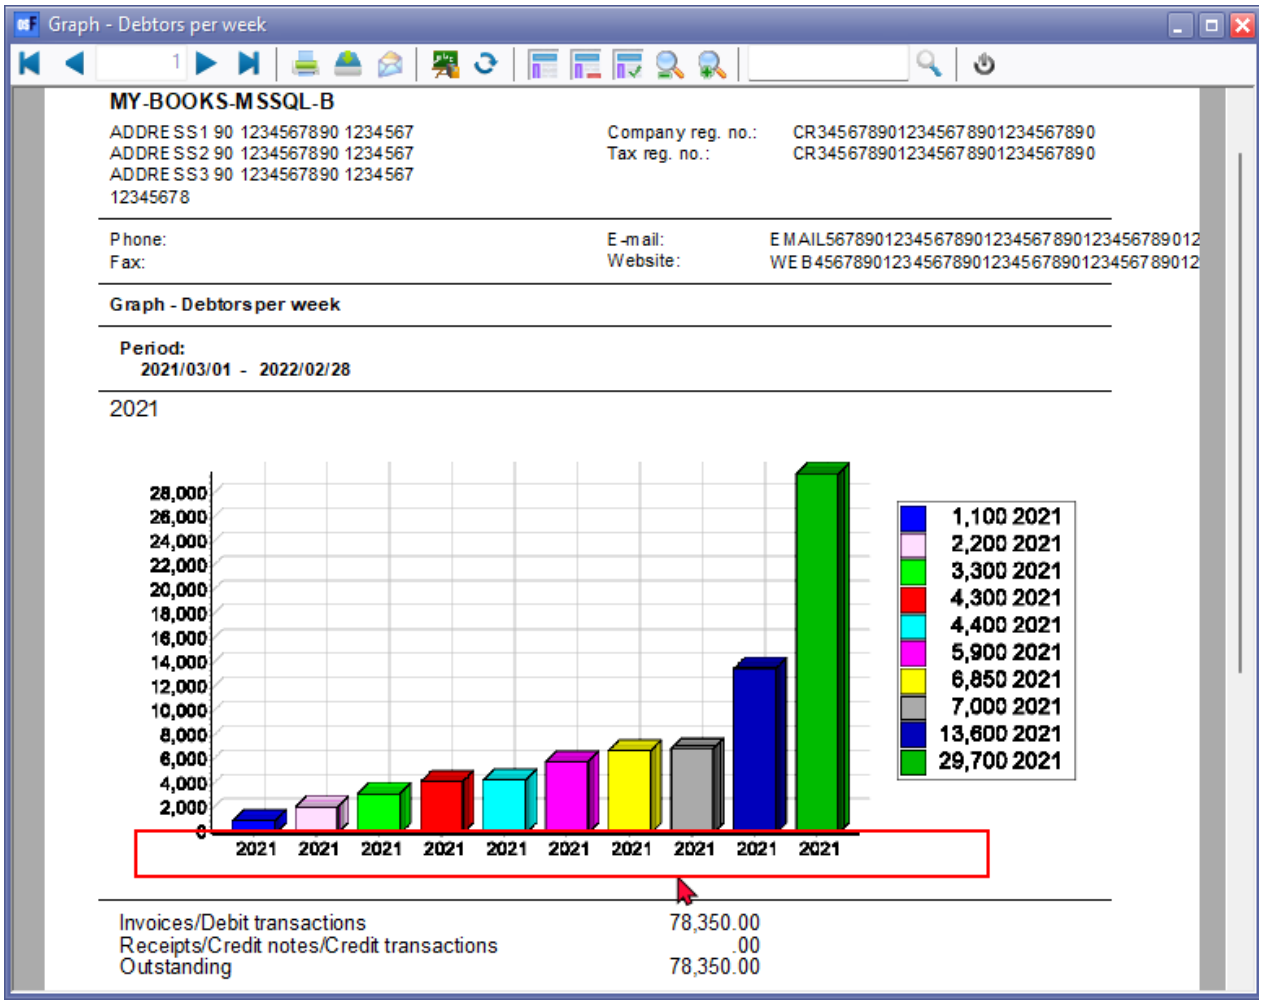
FIXED - Graphs per week - 'WEEK' is not a recognized built-in function name.

SCOPE - X-axis and Y-axis labels Graphs per week

MSSQL - X-axis and Y-axis - fixed



MSSQL - X-axis and Y-axis - incorrect

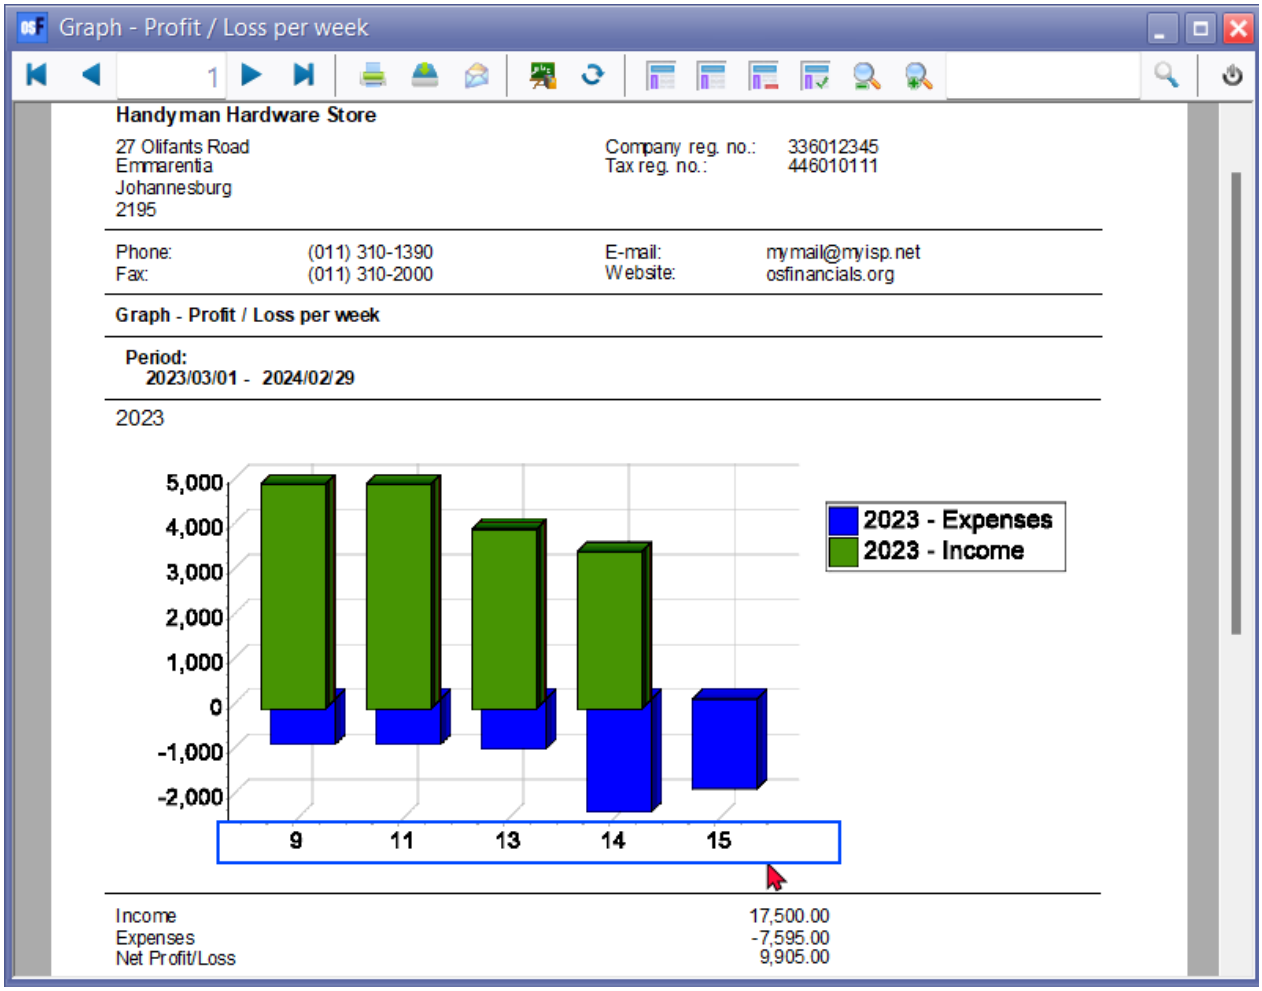


DOCUMENTLINE Dataset SQL - DATEPART - It s the line 3 DATEPART in SQL and related lines

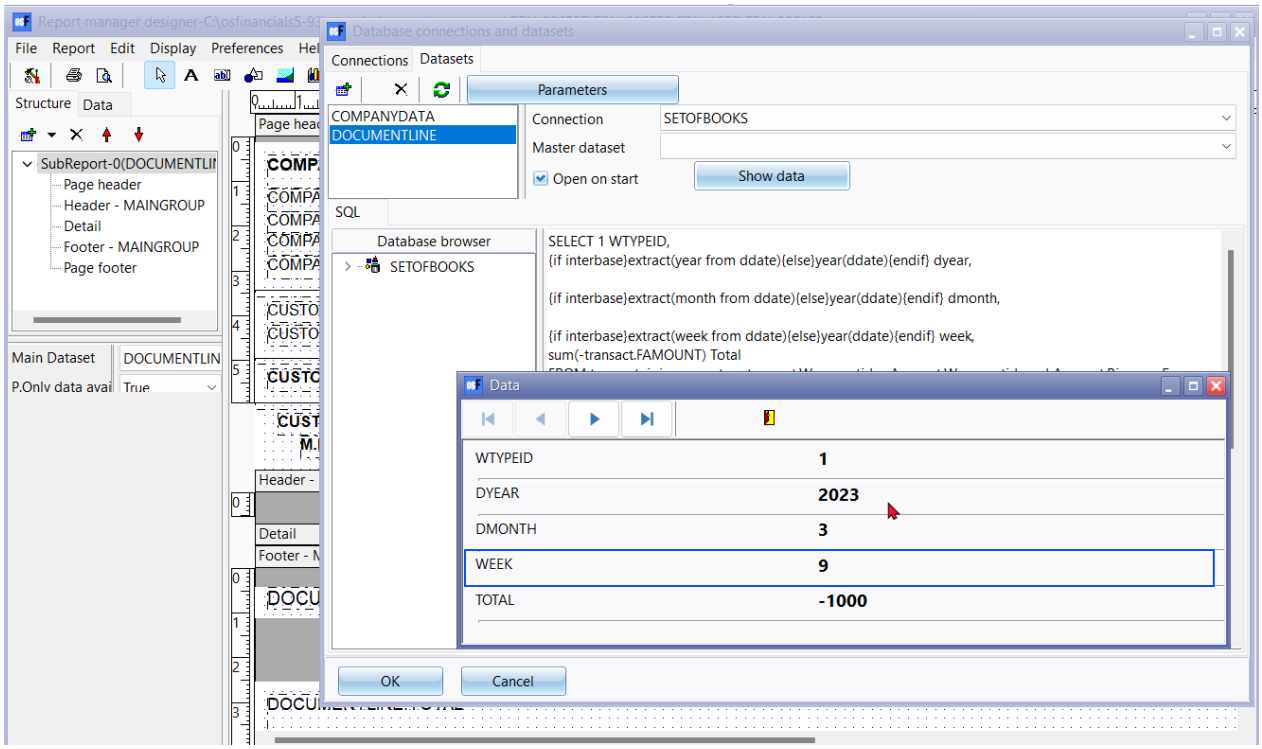
```
{if interbase}extract(week from ddate){else}datepart(week,ddate){endif}  week,
```

Firebird database types

In Firebird database types, the Graph - Profit / Loss per week - displays the week number on the x-axis - correctly

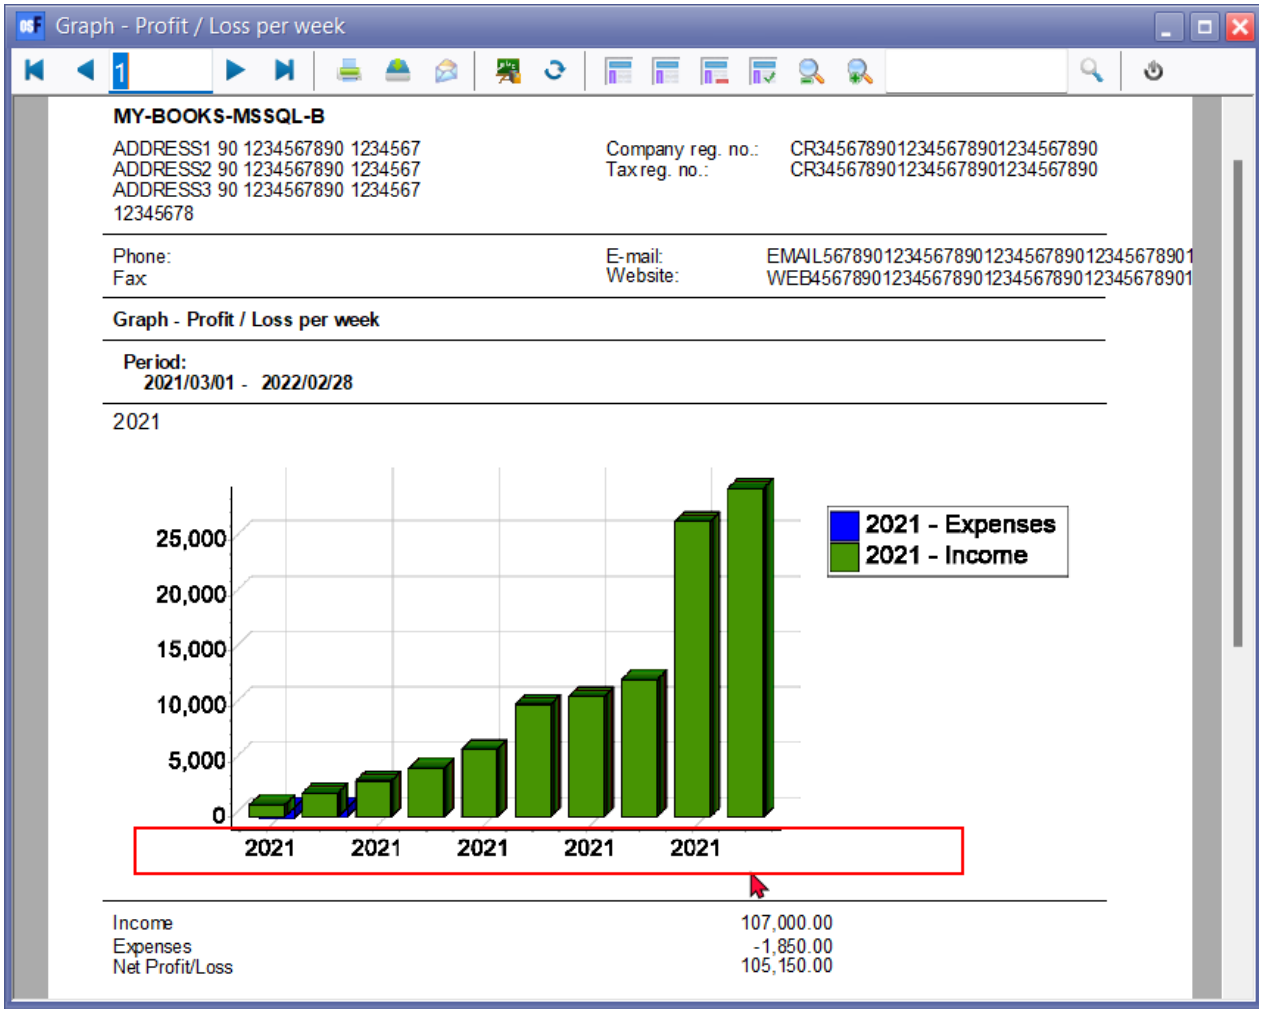


Firebird - DOCUMENTLINE Dataset - Show Data - correct



MSSQL database types

In MSSQL database types, the Graph - Profit / Loss per week - displays the Year instead of the week number on the x-axis - incorrectly



Existing SQL - DOCUMENTLINE DATASET

```
SELECT 1 WTYPEID,

{if interbase}extract(year from ddate){else}year(ddate){endif} dyear,

{if interbase}extract(month from ddate){else}year(ddate){endif} dmonth,

{if interbase}extract(week from ddate){else}year(ddate){endif} week,

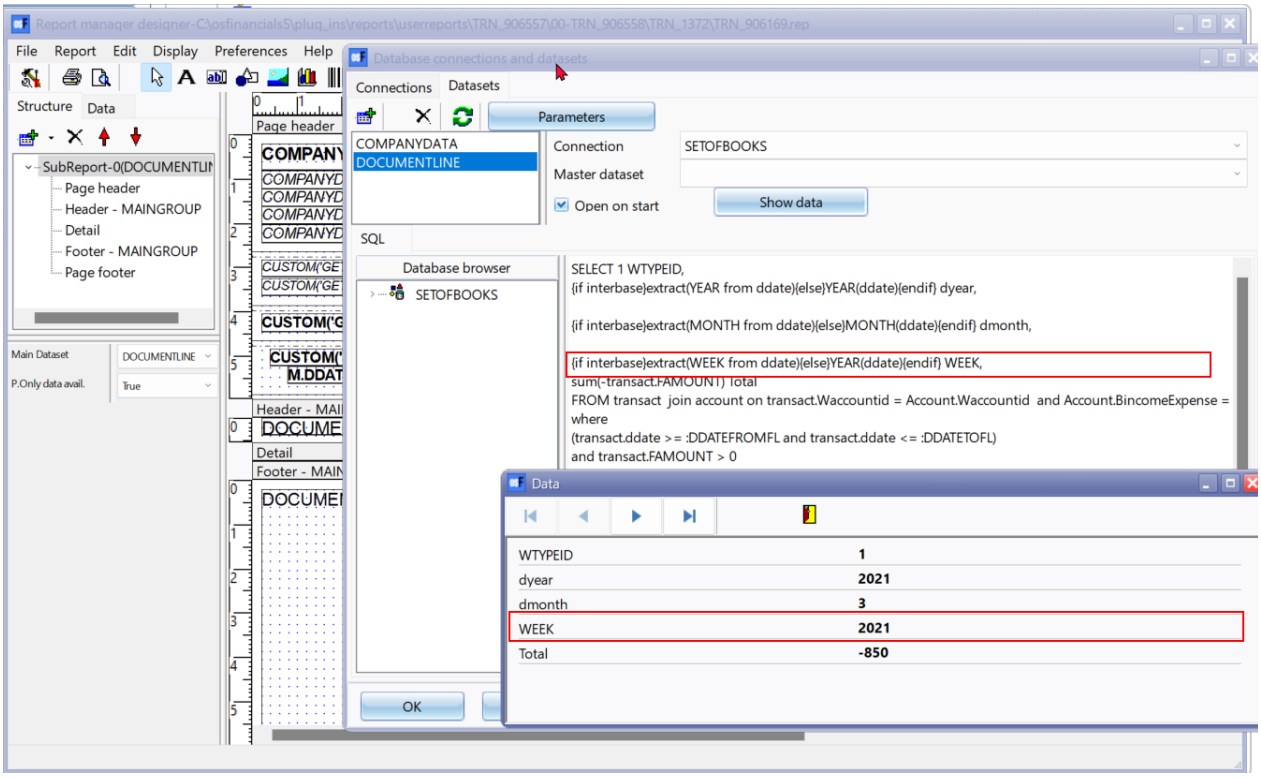
sum(-transact.FAMOUNT) Total

FROM transact join account on transact.Waccountid = Account.Waccountid and
Account.BincomeExpense = 1

where
```

```
(transact.ddate >= :DDATEFROMFL and transact.ddate <= :DDATETOFL)
and transact.FAMOUNT > 0
group by
{if interbase}extract(year from ddate){else}year(ddate){endif} ,
{if interbase}extract(month from ddate){else}month(ddate){endif} ,
{if interbase}extract(week from ddate){else}datepart(week,ddate){endif}
union
SELECT 2 WTYPEID,
{if interbase}extract(year from ddate){else}year(ddate){endif} dyear,
{if interbase}extract(month from ddate){else}year(ddate){endif} dmonth,
{if interbase}extract(week from ddate){else}year(ddate){endif} week,
sum(-transact.FAMOUNT) Total
FROM transact join account on transact.Waccountid = Account.Waccountid and
Account.BincomeExpense = 1
where
(transact.ddate >= :DDATEFROMFL and transact.ddate <= :DDATETOFL)
and transact.FAMOUNT < 0
group by
{if interbase}extract(year from ddate){else}year(ddate){endif} ,
{if interbase}extract(month from ddate){else}month(ddate){endif} ,
{if interbase}extract(week from ddate){else}datepart(week,ddate){endif}
order by 1,2,3
```

MSSQL - DOCUMENTLINE Dataset - Show Data - incorrect



MONTH (Originally "dmonth" was showing the Year value "2021")

Changing YEAR to MONTH (2nd line)

```
{if interbase}extract(MONTH from ddate){else}YEAR(ddate){endif} dmonth,
```

to

```
{if interbase}extract(MONTH from ddate){else}MONTH(ddate){endif} dmonth,
```

After changes - displays "dmonth" was showing the Month value "03" for March, etc.)

WEEK

Changing YEAR to WEEK + add datepart (3rd line)

```
{if interbase}extract(week from ddate){else}year(ddate){endif} week,
```

to

```
{if interbase}extract(week from ddate){else}datepart(week,ddate){endif} week,
```

Updated DOCUMENTLINE SQL

NOTE - For year, month, datepart week UPPERCASE / lowercase no effect on results in SQL foe Firebird database types and MSSQL database types

```
SELECT 1 WTYPEID,

{if interbase}extract(year from ddate){else}year(ddate){endif} dyear,

{if interbase}extract(month from ddate){else}month(ddate){endif} dmonth,

{if interbase}extract(week from ddate){else}datepart(week,ddate){endif} week,

sum(-transact.FAMOUNT) Total

FROM transact join account on transact.Waccountid = Account.Waccountid and
Account.BincomeExpense = 1

where

(transact.ddate >= :DDATEFROMFL and transact.ddate <= :DDATETOFL)

and transact.FAMOUNT > 0

group by

FIXED-ADDED - Layout files

Uploads for fixes to languages and layout files

languages location : " ...\bin\languages "

document layout files location = ...\plug_ins\reports\DOCUMENTS\DOCUMENTS

FIXED LAYOUT FILES

See Examples and notes on Layout files in Documentation - Document layout files.

% instead of Discount%

Document layout TRN_3174 refers to % instead of Discount percentage (Changed % to "CUSTOM('GETTEXTLANG',1865,'Discount',ACCOUNTINFO.SLANGUAGE,0,0)"

Added Unit descriptions to layout file

Added: SUNIT Dataset

```
Select * from unit where cast(WUnitid as  char(10)) = :SUNIT
```

Added Unit Label in Layout file headings

Unit label not translating

layout file TRN_1910

```
CUSTOM('GETTEXTLANG',1131,'Unit',ACCOUNTINFO.SLANGUAGE,0,0)
```

Changed to

```
CUSTOM('GETTEXTLANG',1131,'Qty',CLIENTORDEFLANG.SLANGUAGE,0,0)
```

MSSQL Layout file translations

In Firebird document layout files changes the description if you do a Switch Language

In MYSQL databases the document layout files does not change the labels when you Switch language. It only changes when the Language for Debtor / Creditor is selected it seems great working in both databases

In MSSQL "CUSTOM('GETTEXTLANG',1710,'Qty',CLIENTORDEFLANG.SLANGUAGE,0,0)" expressions is supported.

Feature to these debtor statement creditor remittance advise reports

In MSSQL all reports prints in Debtor Statements and Creditor remittance advises - Should we add the CLIENTORDEFLANG feature to these debtor statement creditor remittance advise reports yo print the reports in the Language selected for Debtor / Creditor account

So they can receive the statements and remittance advices in their preferred language like the receive layout files?

to 'GETTEXTLANG',1710,'Qty',CLIENTORDEFLANG.SLANGUAGE,0,0) the selected language.

POS in Dutch + POS translatable TRN_906184

When selecting the POS it only prints the Dutch version

To solve this change the language description to POS 1 (LanguageID 906184) from POS to POS 1 so both layouts can be selected.

ADDED LAYOUT FILES for NO TAX and Labels for report names

If you are not required to register for VAT/GST/Sales Tax due to not meeting the compulsory threshold, or if you've chosen not to voluntarily register as a vendor for such taxes, you have the option to use specific document layout files that exclude any VAT/GST/Sales Tax components:

1. NO-TAX Layout File TRN_906589
2. NO-TAX Document Layout TRN_906590
3. NO-TAX Document Layout (15 Code) TRN_906591

ALSO ADDED an English Document layout file for NO-TAX

1. NO-TAX Invoice - English
2. GEEN-BTW Faktuur

The "NO-TAX Invoice" layout file is designed as a straightforward layout file featuring fixed text labels in the English language. Unlike translatable expressions enabled by language files and settings in osFinancials5/TurboCASH5, this layout utilizes static text labels. The document pulls data from various fields entered during the document processing phase, and it establishes connections to tables and expressions within the Database fields to present the data accurately.

Use these and the Tax versions to Help tutorials as to get started with static text labels - then use these to introduce dynamic expressions for translation.

Layout files added (Previous releases after osF5 (Build 453)

TRN_1313 - Delivery note

Added Translation of stock descriptions to Delivery note for Multi-language accounts

TRN_1313 - Delivery note was not translating stock descriptions for Multi-language accounts - Other invoices translated the stock description in layout files

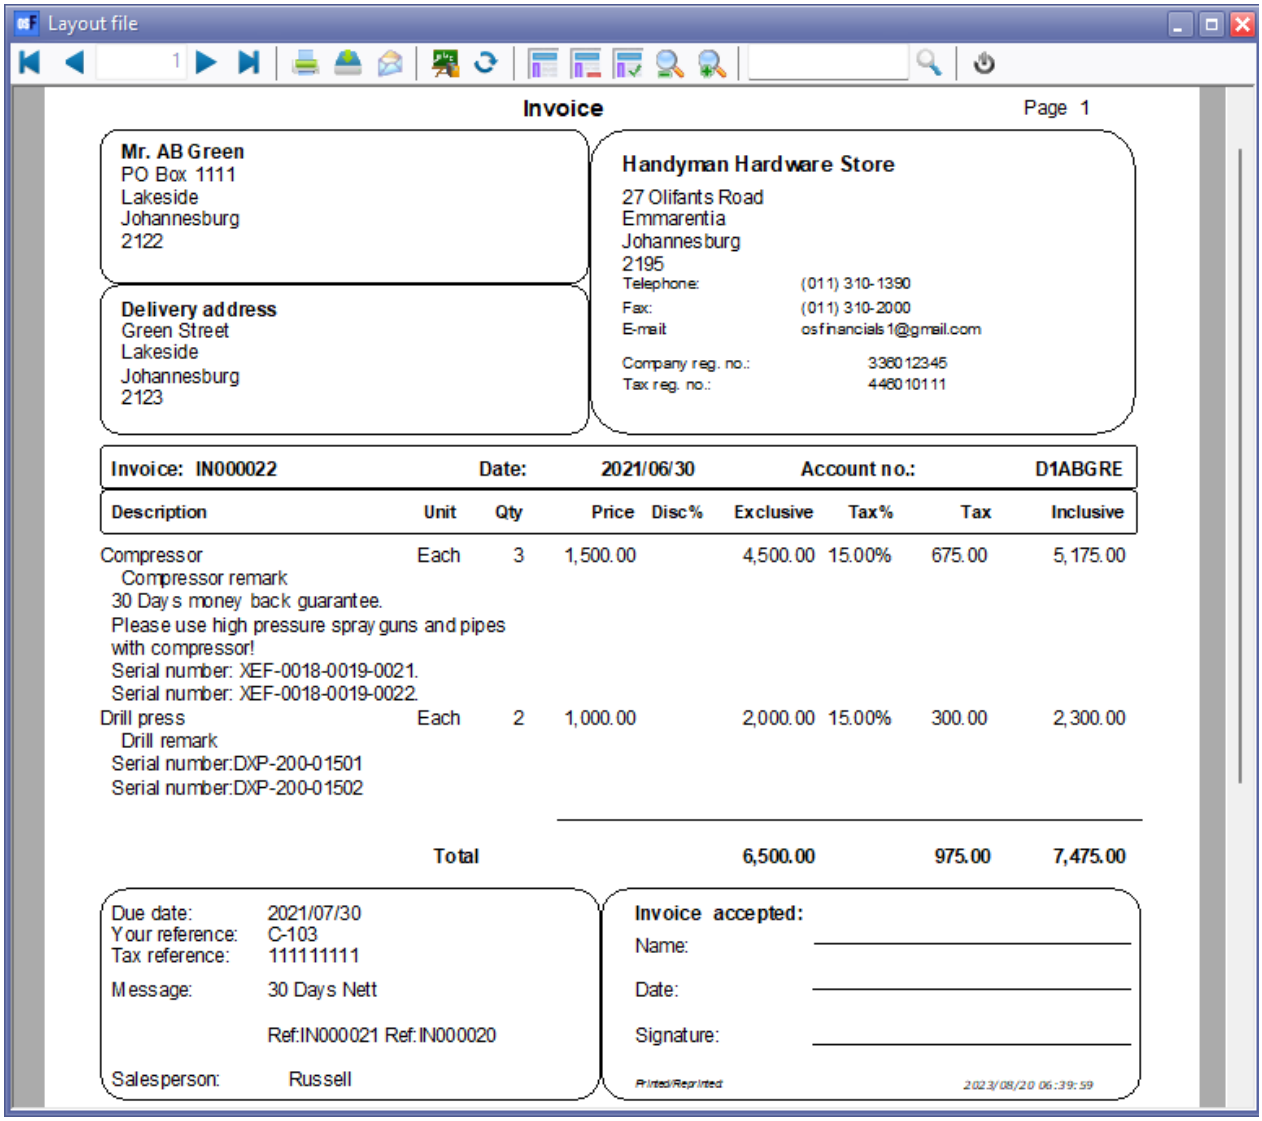
All layout files - After using Multi-language translations of Types (Customise language DOCTYPES seems not to print on those layout files in other Sets of Books

```
trim(TYPES.SDESCRIPTION)+':  '+(DOCUMENTHEAD.SDocNo)
```

TRN_1910 - Layout file

(for all document types (Invoices, Credit notes, Quotes, Purchases, Supplier returns and Orders).

Added layout file with the following fixes



Supports

Translations

Multi language

Multiple tax rates

Unit added

Comments - long

Remarks - long

Currency

Fixed longer messages in footer last Message 3 overlaps

Created with the Standard Edition of HelpNDoc: What is a Help Authoring tool?

FIXED-ADDED - Stock In / Out reports - Document reference number (Show details)

Stock In / Out reports (Reports menu)

When documents are generated using Stock adjustments, BOM Production (Assemble / Disassemble) and Project quote, the detail for these transactions is included in the "*Your reference*" field of the posted documents screen. For example, if Stock adjustments is processed, this report needs to indicate the remarks entered in the "*Change remarks*" screen (e.g. Surplus / Shortage or Auto correction).

Added Document reference number to the Show details option on the following reports:

Location : plug_ins\reports\systemreports\TRN_1999\TRN_906112

- Reports → Stock - Stock in / Out → Documents (TRN_38)
- Reports → Stock - Stock in / Out → Stock In / Out (TRN_906112)

This will display the document reference and specifically display the details for documents generated using stock adjustments, BOM Production (Assemble / Disassemble) and Project quote.

Stock adjustments	*+ Surplus* *- Shortage* *+ / - Auto correction*	*ST00001, etc. - Document numbers - Auto prefixed with ST followed by seven (7) numerical digits.* *Stock adjustments - Remarks entered in the "Change remarks" screen (e.g. Surplus / Shortage or Auto correction).*
Stock in / Stock+	*Stock+*	*SI00001, etc. - Document numbers - Auto prefixed with SI followed by seven (7) numerical digits.*
Disassemble - BOM (Production)	*+*	*BOM (Production) stock item type - Disassemble option on context menu.* *SA00001, etc. - Document numbers - Auto prefixed with SA followed by seven (7) numerical digits.*
Assemble - BOM (Production)	*-*	*BOM (Production) stock item type - Assemble option on context menu.* *SA00001, etc. - Document numbers - Auto prefixed with SA followed by seven (7) numerical digits.*

FIXED - Due Ageing

Added the 3 old age analysis reports in TurboCASH5.1 and osFinancials4 to Reports menu → Debtors and Creditors menu

Moved: Age analysis reports to support Debtor Statements and Creditor Remittance advices from the User reports menu to Reports menu.

The Help → Update option when a stable release of osFinancials is updated in TurboCASH5.2 it does not clash with osFinancials source in the "*system reports*" folder.

Age analysis reports osFinancials 4 / TurboCASH5.1 vs TurboCASH5.2

As from TurboCASH5.2 / osFinancials5 – the age analysis reports were changed as follows:

- Age analysis reports which were on the Reports → Debtors and Reports → Creditors menu, have been dropped.
- The Age analysis on the Reports ribbon was introduced. This age analysis report lists all non-open-item accounts; if the Date of ageing - “Current date” is changed to a selected date.

Discontinued Debtor / Creditor ageing reports in osFinancials4 added in TurboCASH5.2

Since osFinancials / TurboCASH4, TurboCASH5.1 / osFinancials4 the age analysis reports were included in all releases.

Added the following age analysis reports in TurboCASH5.2 (which were excluded from osFinancial5 releases) in the User reports menu.

See MODULE P - OPENITEM PROCESSING of Accounting Made Easy

These ageing reports are in addition to the one on the (Reports ribbon)

TRN_160 Debtors → TRN_65 Age analysis

Report name	*Report description*
TRN_906142.rep	*Balances detail*
TRN_906143.rep	*Balances detail history (open item)*
TRN_906147.rep	*Balances*

TRN_161 Creditors → TRN_65 Age analysis

Report name	*Report description*
TRN_906142.rep	*Balances detail*
TRN_906143.rep	*Balances detail history (open item)*
TRN_906147.rep	*Balances*

NOTE

These ageing reports adds different options, views and details to the Debtor statement and Creditor remittance advises on the Reports menu.

Age analysis (Reports ribbon)

This Age analysis option on the Reports ribbon is also available on the Due tab of Open item (Default ribbon)

openitemdays.rep (... \ plug_ins \ reports \ GENERAL \ ledgerview)

Added - Report name (updated on osFGit 2020/12/27)

65 - Age analysis added report name for the openitemdays.rep

Comments column

COR - Corrections of missing transactions

Label 3692 Correction transaction ageing (before was Correction of missing transactions)

Maybe need to change it to

Add Non-open item account balances / or maybe better ADD BB/F account balances.

Date option selected reverts back to the Date option does not save or change the data

Date of ageing = Current date lists only the Accounts set as open item:

Date of ageing = Current date lists only the Accounts set as open item:

	10							9725.00	8925.00	500.00	200.00	100.00	

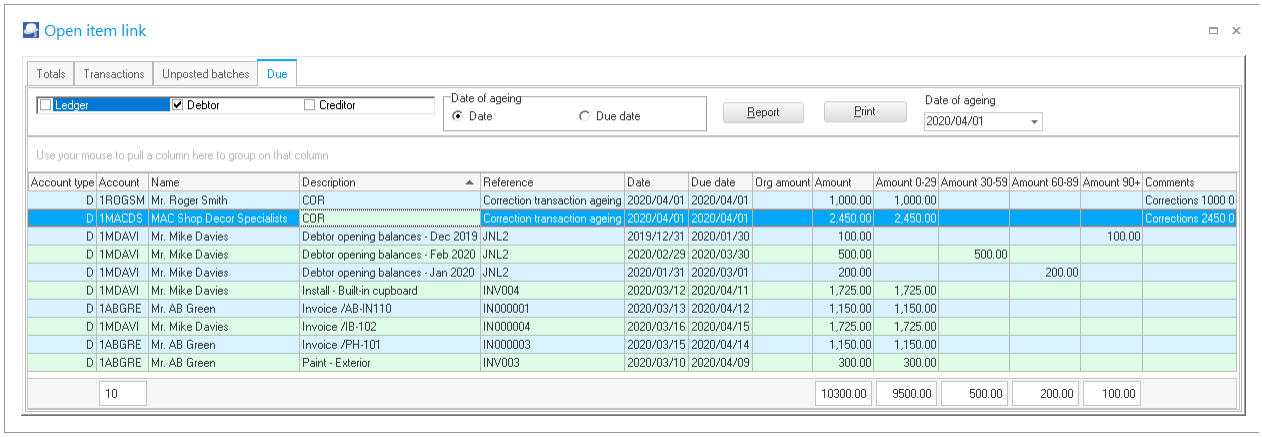
Date of ageing = Selected date - e.g. System date = 2020/04/01 and selected date of ageing = 2020/04/01 lists all the Accounts set as open item as well as non open item accounts.

The example in this database; Debtors and Creditors - set as Open item on the "*Accounting information*" tab.:

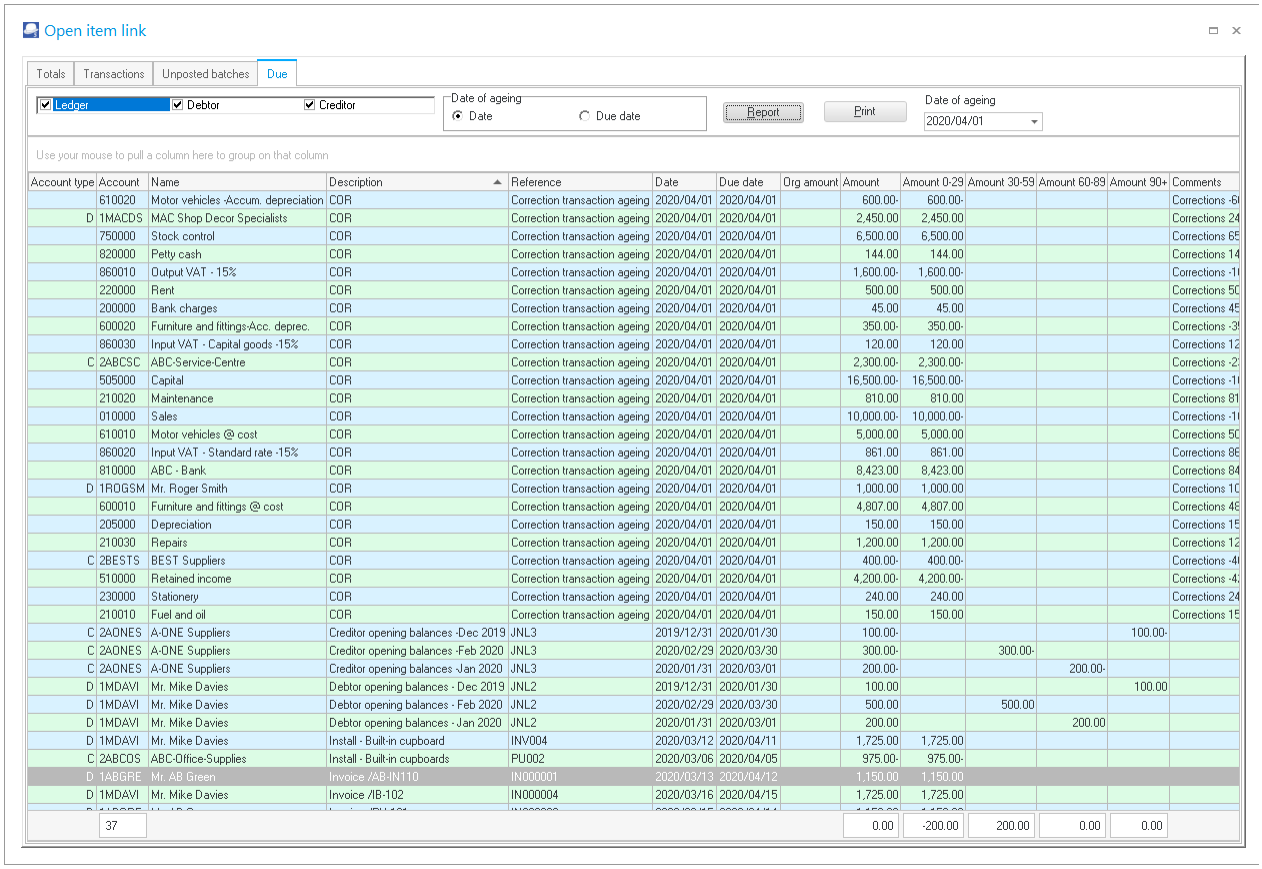
- Debtors - only two debtor accounts (i.e. "*AB Green*" and "*Mike Davies*") and
- Creditors – only two creditor accounts (i.e. "*ABC Office Supplies*" and "*A-One Suppliers*"),

For the non open item accounts, it adds COR in the description and Corrections with the Amount.

Selecting a date



In this database no Ledger accounts is set to Open item. If the Ledger option is selected, and selected date of ageing = 2020/04/01, it lists all ledger account balances



See MODULE P - OPENITEM PROCESSING

These ageing reports are in addition to the one on the (Reports ribbon)

FIXED - Debtor statements Period 2 includes Period 1

Debtor statements Period 2 includes Period 1

Location : plug_ins\reports\systemreports\TRN_160\TRN_1090\TRN_1090 - Debtor statement

FIXED in osFinacials5.1.0.102

TRpExpression 37 changed to

```
IIF(ALIASLOCATE('TRANSACTIONSPERIODE2','WACCOUNTID',TRANSACTION_DETAIL.WACCOUNTID),TRANSACTIONSPERIODE2.FAMOUNT,0)-
IIF(ALIASLOCATE('TRANSACTIONSPERIODE1','WACCOUNTID',TRANSACTION_DETAIL.WACCOUNTID),TRANSACTIONSPERIODE1.FAMOUNT,0)
```

from

```
IIF(ALIASLOCATE('TRANSACTIONSPERIODE2','WACCOUNTID',TRANSACTION_DETAIL.WACCOUNTID),TRANSACTIONSPERIODE2.FAMOUNT,0)
```

If this is changed then Firebird balances (seems fixed), but MSSQL is out in PERIOD2

The transaction on 1 April for PERIOD1 is also Included in PERIOD2 Double count.

The SQL changes in Debtor statements old Firebird and Changed for MSSQL

Only Firebird

```
SELECT
 sum(transact.FAmount ) FAmount,
account.WAccountID
FROM transact
   LEFT OUTER JOIN account
   ON  (transact.WAccountID =
account.WAccountID)
WHERE WAccountTypeId  = 1
and (transact.DDate <
 (:DDATEFL{if
postgresql}::timestamp{endif} -
((periode1){if postgresql} || '
DAY'{endif}){if
postgresql}::interval{endif})
 and transact.DDate >=
 (:DDATEFL{if
postgresql}::timestamp{endif} -
((periode1+periode2){if postgresql} || '
DAY'{endif}){if
postgresql}::interval{endif})

)
group by
account.WAccountID
having   sum(transact.FAmount ) <> 0
```

Prints in Firebird and MSSQL - P2 incorrect

```
SELECT
 sum(transact.FAmount ) FAmount,
account.WAccountID
FROM transact
   LEFT OUTER JOIN account
   ON  (transact.WAccountID =
account.WAccountID)
WHERE WAccountTypeId  = 1
and (transact.DDate <
  dateadd(day,periode1,:DDATEFL)
 and transact.DDate >=
 dateadd(day,-
(periode1+periode1),:DDATEFL)

)
group by
account.WAccountID
having   sum(transact.FAmount ) <> 0
```

Created with the Standard Edition of HelpNDoc: Benefits of a Help Authoring Tool

FIXED - Spreadsheet reports – Transactions per period

Spreadsheet reports – Transactions per period

If a Spreadsheet report Sheet tab in the base.xlsx ("Excel 2007 -365") spreadsheet file is named in the lowercase (e.g. trn_1296) instead of the uppercase (e.g. TRN_1296) the label will not translate and populate with the data.

An additional sheet with the translated label "*Data*" is added. The osFinancials5 code now supports the uppercase / lowercase.

(Transactions per period (Spreadsheet report .../excelreports\TRN_20069\TRN_3314)

Created with the Standard Edition of HelpNDoc: Write EPub books for the iPad

FIXED - Reports layout long descriptions and data

Renamed the "C:\osfinancials5\plug_ins\reports\ folder to 109-reports folder before installing the osFinacials5.1.0.127 update file to see if all the files is correctly installed in the clean reports folder.

Update installed - reports - only the following updated reports is installed:

1. excelreports - Firebird error in Sales analysis -> Sales per period

```
Dynamic SQL Error
SQL error code = -104
Token unknown - line 8, column 60
)
```

File for fix : ...\plug_ins\reports\excelreports\TRN_85\TRN_906122\trn_1296.sql (1 file fix error)

2. GENERAL- updated in osFinancials5.1.0.127
3. REPORTS - updated in osFinancials5.1.0.127
4. systemreports - updated in osFinancials5.1.0.127

Added - Reports folders and Reports not installed:

1. Empty.rep - Updated and standardized header and footer
2. New.rep
3. DOCUMENTS/DOCUMENTS/ - Layout files not installed in update
4. userreports/ - not installed in update - User reports restructured

Added - Other Reports folders not installed:

5. CRM
6. EMailInvoice
7. remittance - Fixed output overlapping labels after osFinancials5.1.0.127 update
8. Subscriptions - Fixed output overlapping labels after osFinancials5.1.0.127 update Location : ... \plug_ins\reports\REPORTS\SUBSCRIPT\

Firebird Errors

Ledger - Transactions

Prints in most databases in Firebird and MSSQL without errors

Error only replicated in 1 Database

Set of Books = TEST-REPORTS-4-DIGIT-DESCRIPTION-1234567890123456

Location : ...\plug_ins\reports\systemreports\TRN_1372\TRN_74\TRN_74.rep

> TRANSACTION_DETAIL:arithmetic exception, numeric overflow, or string truncation

MSSQL Errors

Stock In/Out

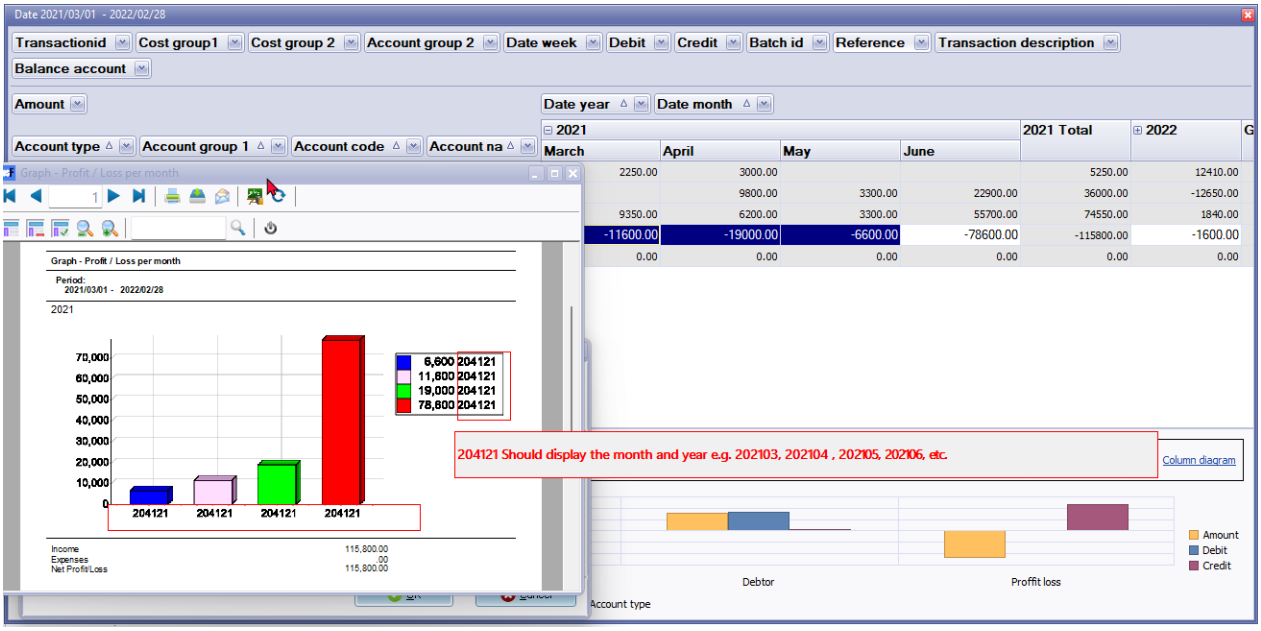
Location : ...\plug_ins\reports\systemreports\TRN_1999\TRN_906112\TRN_906112.rep

> Unknown identifier: :END.SUM 'END.SUM':Expression TRpExpression2

MSSQL Graphs per Week / Graphs per Month MSSQL - Axis labels (Axis titles)

Example Graphs per month - 204121 Should display the month and year e.g. 202103, 202104 , 202105, 202106, etc. like in Firebird databases

Example Graphs per month - 204121 Should display the week and year e.g. 09 for first week March , etc. like in Firebird databases



DOCUMENTLINE SQL Graphs per month -> Graph - Profit / Loss per month

```
SELECT 1 WTYPEID,

{if interbase}extract(year from ddate){else}year(ddate){endif} dyear,

{if interbase}extract(month from ddate){else}year(ddate){endif} dmonth,

sum(-transact.FAMOUNT) Total

FROM transact  join account on transact.Waccountid = Account.Waccountid  and
Account.BincomeExpense = 1

where
```

```
(transact.ddate >= :DDATEFROMFL and transact.ddate <= :DDATETOFL)
and transact.FAMOUNT > 0
group by
{if interbase}extract(year from ddate){else}year(ddate){endif} ,
{if interbase}extract(month from ddate){else}month(ddate){endif}
union
SELECT 2 WTYPEID,
{if interbase}extract(year from ddate){else}year(ddate){endif} dyear,
{if interbase}extract(month from ddate){else}year(ddate){endif} dmonth,
sum(-transact.FAMOUNT) Total
FROM transact join account on transact.Waccountid = Account.Waccountid and
Account.BincomeExpense = 1
where
(transact.ddate >= :DDATEFROMFL and transact.ddate <= :DDATETOFL)
and transact.FAMOUNT < 0
group by

order by 2,1,3
```

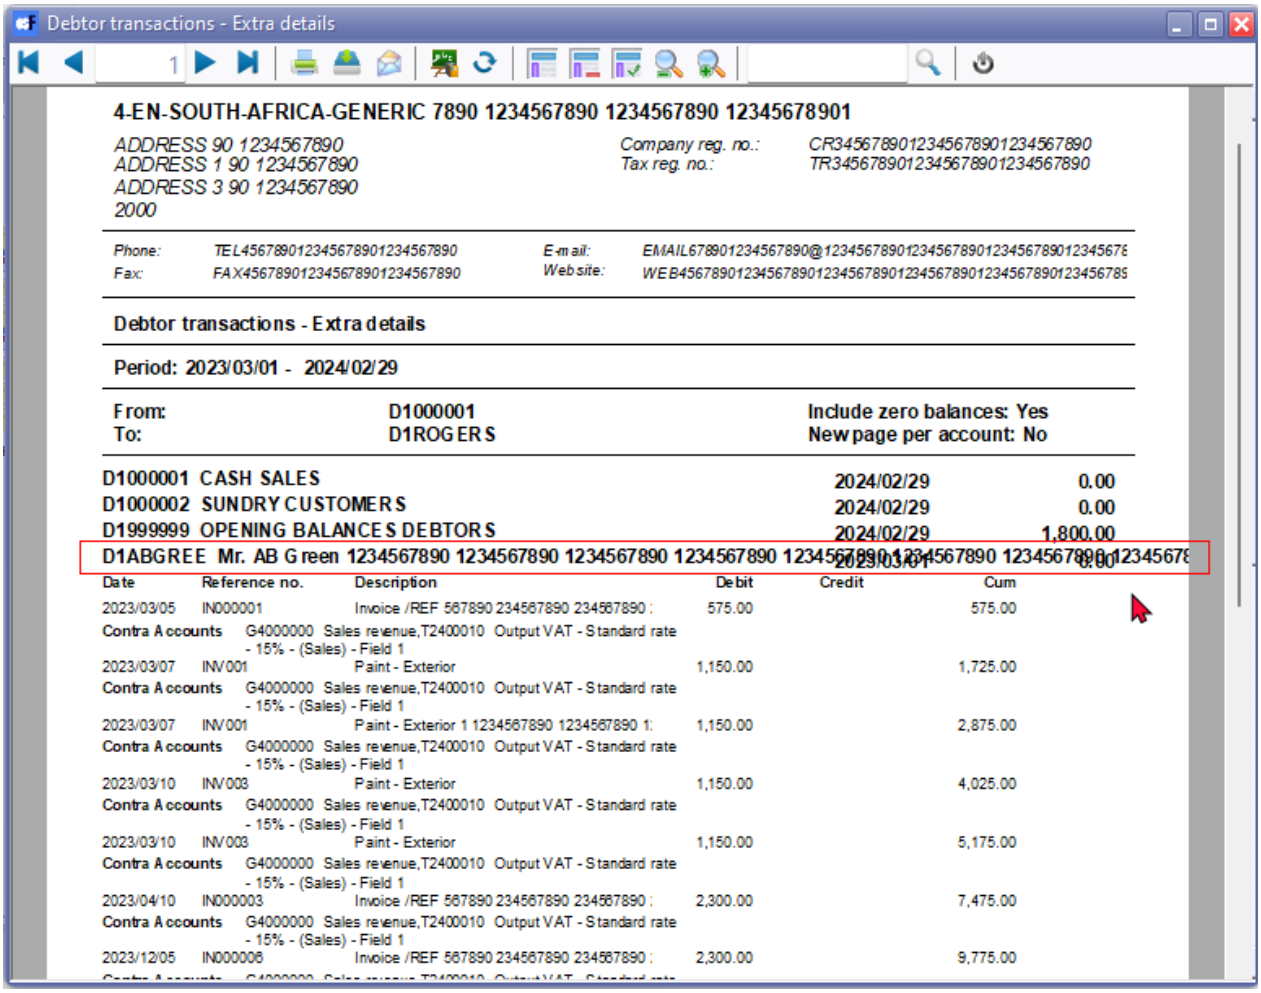
Tidy report errors

Cannot change or Set the Properties such as word wrap, cut text, etc.

Debtor transactions - Extra details - Location : …
\plug_ins\reports\systemreports\TRN_160\TRN_74\TRN_906107.rep

Creditor transactions - Extra details - Location : …
\plug_ins\reports\systemreports\TRN_161\TRN_74\TRN_906109.rep

Long Debtor / Creditor account names or descriptions may overlap



Scope of Fixes

Test Books : TEST-REPORTS-4-DIGIT-DESCRIPTION-1234567890123456.zip

Overlapping labels and expressions overall is fixed mainly in report headers and footers. Database tables and fields lengths were noted and some data is entered to the maximum length to see where fields data labels and expressions caused reports to print untidy. Reports in the default English languages, Afrikaans, Netherlands and some other languages were tested and adjusted where necessary.

For example, Purchase analysis reports prints fine in English and in Afrikaans, but in the Netherlands language labels for Aantal (Quantity) and Kosten per eenheid (Unit cost) overlaps. Some adjustments were done to fix overlapping expressions to fit most language choices. Some other reports were also tidied where similar issues were found.

Report headers and Footers

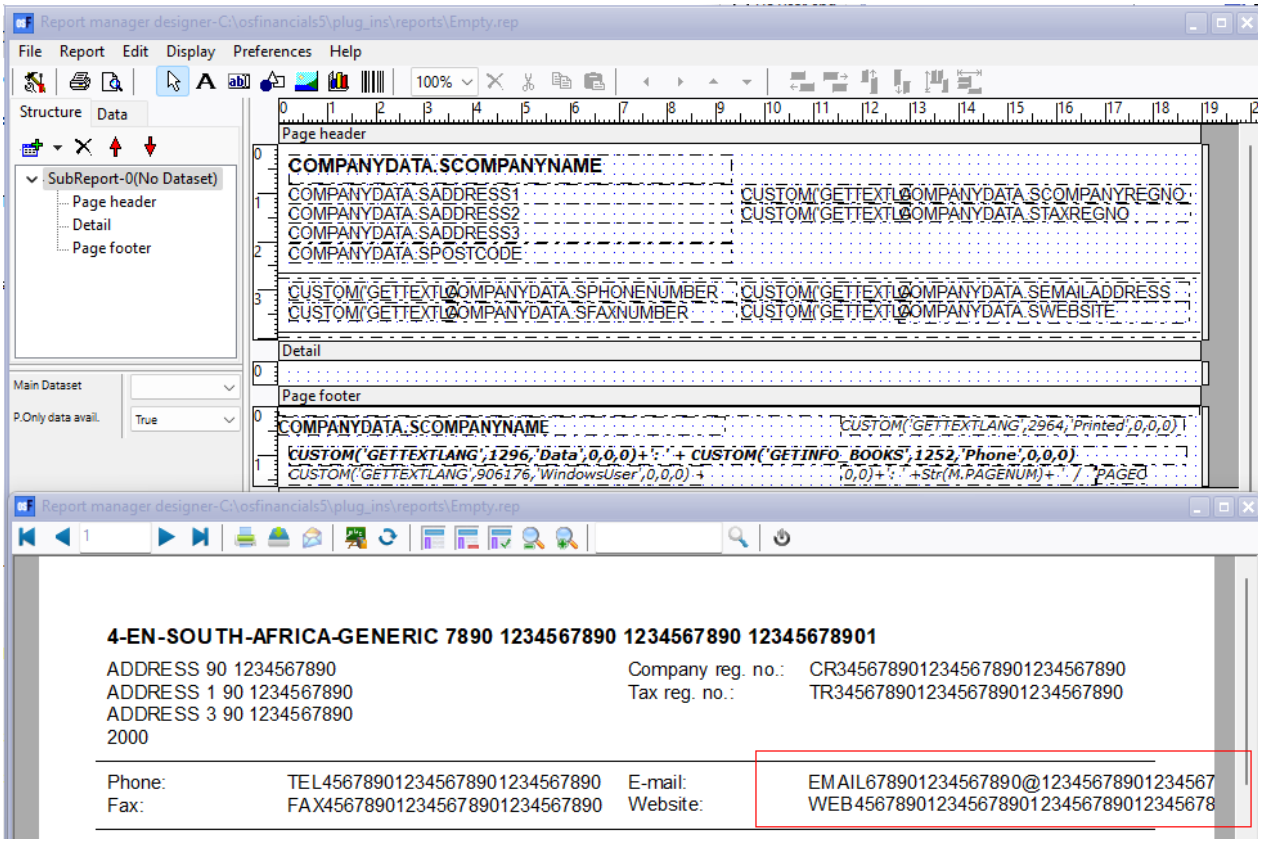
Upload folder contents : 2024-osf-development\Reports-Tidy

1. Empty.rep - Standardised header and footer
2. DOCUMENTS-29 Layout-files - Document layout files Not the standard headers and footers - But standardised Company registration and Tax registration information after Company address and contact details and telephone 1 / 2 and lastly email and websites. Word wrap for Document lines. Message boxes also tidied.
3. GENERAL-documents -
4. GENERAL-ledgerview - Ledger viewer
5. REPORTS-CREDITOR-reports - 2 Postal and Delivery address labels for Creditors grid - context menu
6. REPORTS-DEBTOR-reports - 2 Postal and Delivery address labels for Debtors grid - context menu
7. REPORTS-PROJECTS - 5 Reports for Projects
8. REPORTS-STOCK - 22 Reports for Stock grid contest menu "Print single item" and Report button
9. systemreports - 18 Reports menus and submenus for the Reports menu. All reports includes updates to the Report Headers and Report Footers to the layout and overlapping labels.
10. userreports - All user reports, including Graphs per month and Graphs per week.

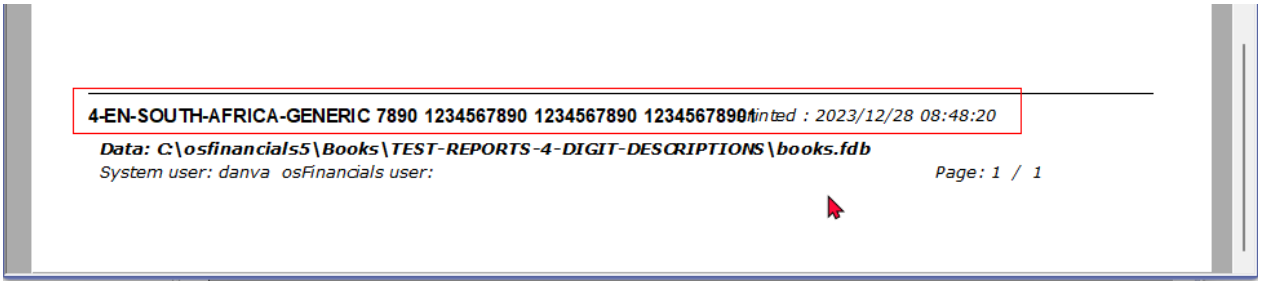
Report headers

Company registration and Tax (VAT/GST/Sales tax) registration numbers - Resized to 9 font size *Italic* and Cut text - will print all characters

Email address and Websites - Resized to 8 font size *Italic* and Cut text - will print up to 55 characters Moved.



Report footers



Company names up to 64 characters in the Setup -> Company info overlap with the time stamp - Aligned the Date-stamp on which report is printed from left to right.

Data the Full path where the Set of Books is stored must print up to 50 characters if Created a Set of Books or Save as option.

System user and osFinancials5 user - System user field length depends on the users system configuration and osFinancials5 user up to 20 characters - Setup - Access control - Moved Page and last page to right.

Some footers not standardised - Reports ->Batch

After fixes -

Empty.rep updated and applied to all report headers and footers

Reports Test

However these Sets of Books in Firebird databases (and MSSQL databases) the various longer fields, if longer data is is entered in the various fields (e,g Debtors, Creditors Stock items descriptions most of the reports, may appear to have overlapping labels and data text that may make the reports unreadable.

The aim of this exercise is to identify, fix and align reports printed in the Reports menu, User reports menu, Ledger analyser and from various functionalities within the osFinancials interface to accommodate neat and usable reports when longer data and characters is entered by users.

For example, if you create your own Set of Books from scratch, using the "*Customise your own Set of Books (Advanced)?*" option, and you select the 3-digit, 4-digit and 5-digit number of for the Chart of Accounts, the SCompanyname field will accommodate of 35 characters.

By default, the the SCompanyname field will accommodate of 64 characters if the 6-digit, 7-digit or 8-digit number of for the Chart of Accounts is selected.

Should a user enter more than 35 characters (up to the max of 64-characters) in the company name in Setup → Company info, the Company name will not display correctly on some reports, suck as document layout files and debtor statements and creditor remittance advises.

The field length is automatically set when some databases (Set of Books) is created. In addition to this, the field lengths may also be changed in Firebird and MS SQL databases using the ALTER TABLE or equivalent command processes and options by advanced users.

Field lengths in osFinancials databases

Table		*Field*	*Most Books templates - Download option*	*"Customise your own Set of Books (Advanced)?" option - 3 to 8 Digit books*	*EMPTY-BOOKS - 3 to 8 Digit main accounts*	*NL_RGS2019PLUS*
ACCOUNT	*Ledger accounts / Debtor / Creditor accounts*	*SDescription*	*35*	*64*	*128*	*128*

SYSVARS	*SCOMPANYNAME*	*35*	*64*	*64*	*35*
GROUPS	*SDESCRIPTION*	*30*	*30*	*128*	*128*

EMPTY BOOKS

These basic EMPTY-BOOKS templates for the Firebird Database type consists only of the 3 Control accounts in the Chart of Accounts following:

EMPTY-BOOKS - 3 to 8-Digit main accounts

	Debtor's control	*Creditor's control*	*Retained earnings*
EMPTY-BOOKS-3x3-DIGITS	*700-000*	*900-000*	*510-000*
EMPTY-BOOKS-4x3-DIGITS	*1100-000*	*2200-000*	*3100-000*
EMPTY-BOOKS-5x3-DIGITS	*11000-000*	*20000-000*	*31000-000*
EMPTY-BOOKS-6x3-DIGITS	*110000-000*	*200000-000*	*310000-000*
EMPTY-BOOKS-7x3-DIGITS	*1100000-000*	*2000000-000*	*3100000-000*
EMPTY-BOOKS-8x3-DIGITS	*11000000-000*	*20000000-000*	*31000000-000*

Based on the EMPTY-BOOKS-4x3-DIGITS template, the following Books were created:

- 4-EN-UK-GENERIC
- 4-EN-SOUTH-AFRICA-GENERIC
- 4-AF-SUID-AFRIKA-GENERIES

EMPTY-BOOKS-3 to 8 Digit Sets of Books - Properties

These EMPTY-BOOKS-3 to 8 Digit Sets of Books solves some issues and include the following basic settings:

1. Field length - The "*SDESCRIPTION*" field "*ACCOUNT*" table and in the "*GROUPS*" table Account descriptions supports up to 128-characters
2. TYPES table - Add Groups (1000 - Projects, 1002 - Cost centre 1, 1003 - Cost centre 2, and 1004 - Languages) and Paper Types (55 - Till slip and 56 - New plain) which is not included when creating your own Set of Books from scratch using the "Customise your own Set of Books (Advanced)?" option. These entries in the "*TYPES*" table is included in most template Set of Books - downloaded with the "*Let osFinancials help you to create a Set of Books?"* - Downloads option.
3. Accounts - (Setup → Accounts) Only of the 3 Control accounts - (Debtors control, Creditors control and Retained earnings) is included in the Chart of Accounts. You may change their account numbers and descriptions to fit in your specific plan of your Chart of Accounts. You may add Account group 1 and Account group 2 (Setup → Groups) and link these accounts, including other accounts you add to your Chart of Accounts, to structure the layout of the financial statements (trial balance, income statement and balance sheet).
4. Debtor accounts / Creditor accounts - No debtor accounts or creditor accounts have been added.

When you add debtor accounts or creditor accounts, you need to start the account code with a character to distinguish debtor accounts from creditor accounts. Although the next Debtor code (e.g. D00001) and the the next Creditor code (e.g. C00001) depending of the number of digits of the Set of Books), will automatically be generated. It is important to prefix Debtor codes with a unique prefix.

In this documentation, the accounts is prefixed as follows:

- *Debtor code = 1*
- *Creditor code = 2*

The reason for this, is that the account prefix is not always available when selecting accounts on some screens and reports. For example, if a Debtor code is D00001 and a Creditor code is C00001, and you select the Debtor code, it may set the Creditor code when selecting the contra account in the "Options for this batch" (F10:Setup) on "Batch entry" screens.

5. Stock items (Inventory items) - No stock items / inventory items or products have been added. You may add Stock group 1 and Stock group 2 reporting groups to group your stock items / inventory items / products. You may add your stock items / inventory items / products for up to 11 stock item types and link these to the Stock group 1 and Stock group 2 reporting groups.

6. Basic settings -

    - Reporting dates - (Setup → Reporting dates) The default start of the financial year is set to 1 January 2024. You need to set the starting date of your financial year..

    - Groups - (Setup → Groups) The Reporting Group names have been renamed to the basic standard names, (Account group 1, Account group 2, Debtor group 1, Debtor group 2, Creditor group 1, Creditor group 2, Stock group 1, Stock group 2, Document group 1, Document group 2, Payment types, Salespersons, Projects, Cost centre 1, Cost centre 2 and Languages. You need to add your own groups for each of these reporting groups.

    - Batch types - (Setup → Batch types) Only 3 batch types or journal types (Sales journal, Purchase journal and General journal) is included. You may rename these to suit your own requirements. You may add your own batch types or journal types as required. When creating Bank accounts, the Payments and Receipt batches will be created and linked to each bank account.

    - Documents setup - (Setup → Documents setup) The basic settings includes the following:

        - Document numbers - The default document number for each document type consists of 8-digits, and is prefixed by 2 alphabetical characters - IN for invoices, CR for credit notes, PU for purchase documents, SR for supplier return documents, OR for orders, and QU for quotes. However, you can change this to match your specific requirements.

        - Batch types linked to document types - The Sales journal is linked to the Invoices and Credit note document types. The Purchase journal is linked to the Purchase and Supplier returns document types.

        - Layout files - The default layout file (global setting) to print all document types (Invoices, Credit notes, Purchases, Supplier returns, Quotes and Orders) is set to "*Layout file*". This is a universal layout file which supports all document types and available languages in osFinancials5/TurboCASH5. You may select other layout files or your own customised layout file for each document type. The "*Layout file point-of-sale*", is selected as "*POS - STARTSP100*" since the "*DefaultA4*" layout file, which does not exist, is automatically selected after creating a Set of Books using the "*Customise your own Set of Books (Advanced)?*" option.

- Document headings and messages - You may overtype the Document headings to match your specific requirements. The messages for each document type is blank. You may enter up to 3 message lines for each document type to be included in reports and document layout files.
- Statements setup - Enter up to 3 Statement message lines to print on Debtor statements.

Support for Larger descriptions and data in Databases

There are currently some databases which can use larger descriptions and data in fields in the various forms in osFinancials in Firebird databases as well as MSSQL Databases.

Some fields such as SCompanyName allows for 64 characters to be entered

Currently when creating a Set of Books with the "*Customise your own Set of Books (Advanced)?*" option (in both Firebird and MSSQL Database types), the 6-digit main accounts and 3-digit sub-accounts, 7-digit main accounts and 3-digit sub-accounts and 8-digit main accounts and 3-digit sub-accounts supports up to 64-character Account names and descriptions.

8x3 Digit accounts - Reports Test

On some reports, if the Chart of Accounts consisting of 8-digit main accounts and 3-digit sub-accounts is created with the "*Customise your own Set of Books (Advanced)?*" option, and transactions and data is processed, the reports, seemed to have many overlapping columns and text on the printouts. In the Report designer, these reports were realigned, and properties of expressions changed, where necessary. These were addressed and fixed - See FIXED - Reports - 8x3 Digit account codes - Reports. Since there are some Sets of Books in the Firebird database type, for example "*NL_RGS2019PLUS*" and many users who may use longer field lengths, in their Sets of Books in the Firebird and MSSQL Database types, and to accommodate various aspects in larger businesses and accounting frameworks and accounting standards such as GAAP, IFRS for SME's and IFRS Full, all reports in osFinancials is reviewed and tidied, where necessary, to display and print correctly.

Scope for tidying reports in osFinancials5/TurboCASH5, addressing the issues with overlapping text and accommodating longer field lengths

Key Objectives:

- Identify affected reports: Compile a comprehensive list of reports generated from the Reports menu, User Reports menu, Ledger Analyser, and other functionalities that exhibit overlapping text or formatting issues due to longer data entries.

- Fix overlapping text: Adjust report layouts and formatting to ensure readability and prevent overlapping text, even when longer data is entered. This may involve:
    - Expanding field widths
    - Adjusting font sizes
    - Implementing word wrapping
    - Repositioning text elements and or data elements (expressions)
- Test and validate: Thoroughly test all modified reports with various data lengths to ensure proper formatting and readability.
- Document changes: Create clear documentation outlining the changes made to report designs and any potential implications for users.

Specific Considerations:

- Report Designer: Understand the design principles and capabilities of Reportman to effectively modify report layouts and formatting.
- Database Field Lengths: Be mindful of the varying field lengths in different database setups and account for these differences during report adjustments.
- Advanced User Modifications: Consider potential impacts of field length changes made by advanced users using ALTER TABLE commands and ensure compatibility with modified reports.
- Document Layout Files: Address formatting issues in document layout files, such as debtor statements and creditor remittance advice, to ensure correct company name display.
- User Guidance: Provide clear instructions to users on how to enter data appropriately to avoid formatting problems and ensure optimal report output.

Additional Recommendations:

- Prioritize critical reports: Focus initial efforts on reports that are frequently used or essential for decision-making.
- Utilize Reportman features: Leverage Reportman's capabilities for dynamic formatting and conditional logic to create more adaptable reports.
- Involve users in testing: Engage users in testing and feedback to ensure the revised reports meet their needs and expectations.
- Consider future needs: Design reports with potential future field length extensions in mind to

minimize rework.

- Explore alternative solutions: If Reportman limitations restrict optimal formatting, consider exploring alternative reporting tools or custom development options.

FIXED osFinancials5.1.0.102 Reports

These Fixes to Reports are rechecked and fixed in both Firebird and MSSQL Database types.

FIXED - Spreadsheet reports - SQL Errors - Firebird databases

Spreadsheet reports - Sales analysis - Sales per period

Location : ...\plug_ins\reports\excelreports\TRN_85\TRN_906122\trn_1296.sql

```
Dynamic SQL Error
SQL error code = -104
Token unknown - line 8, column 60
```

```
)
```

NOTE : Can print in MSSQL Databases Replicated since osF5.1.0.49

NOTE : Can print in MSSQL Databases in osFinancials5.1.0.93

Fixed SQL - Removed the double closing bracket form "line 60 group by {if interbase}Extract(year from ddate),Extract(month from ddate){else}Year(ddate),Month(ddate) {endif}" - now it prints in both MSSQL and Firebird

```
select {if interbase}Extract(year from ddate){else}Year(ddate) {endif}
TRN_901022_Year,

{if interbase}Extract(month from ddate){else}Month(ddate) {endif}  TRN_901019_MONTH
,

 sum(fdocamount)  TRN_1866_IncAmt,

 sum(FTAXAMOUNT)  TRN_1138_TaxAmt,

 sum(fdocamount-FTAXAMOUNT)  TRN_1200_ExcAmt

 from dochead where

<@DDATE@>

group by {if interbase}Extract(year from ddate),Extract(month from ddate){else}
Year(ddate),Month(ddate) {endif}
```

FIXED = Removed Bracket (duplicated) in col60 of line 8

FIXED - Reports - Debtor Statements Period Error - Period 2 includes Period 1

Debtor statement – Period 2

Incorrect - Debtor statements Period 2 includes Period 1 - TRN_1090

Fixed to support MSSQL and Firebird databases – 7 February 2023 Since then Period 2 + Period 1 is included in Period 2 total

Reports → Debtors → Debtor statements - Debtor statement - Location : plug_ins\reports\systemreports\TRN_160\TRN_1090\TRN_1090 -

FIXED in osFinacials5.1.0.102

TRpExpression 37 changed to

```
IIF(ALIASLOCATE('TRANSACTIONSPERIODE2','WACCOUNTID',TRANSACTION_DETAIL.WACCOUNTID),TRAN
SACTIONSPERIODE2.FAMOUNT,0)-
IIF(ALIASLOCATE('TRANSACTIONSPERIODE1','WACCOUNTID',TRANSACTION_DETAIL.WACCOUNTID),TRAN
```

```
SACTIONSPERIODE1.FAMOUNT,0)
```

from

```
IIF(ALIASLOCATE('TRANSACTIONSPERIODE2','WACCOUNTID',TRANSACTION_DETAIL.WACCOUNTID),TRAN
SACTIONSPERIODE2.FAMOUNT,0)
```

MSSQL Database - This report may need some rechecking in MSSQL Databases

If this is changed then Firebird balances (seems fixed), but MSSQL is out in PERIOD2

The transaction on 1 April for PERIOD1 is also Included in PERIOD2 Double count.

See - osF5-1-0-100-Reports-Debtor-statement-period-2-period-1.docx

FIXED - MSSQL ERRORS TRANSACTIONSPERIODE1:Operand type clash: datetime2 is incompatible with int

MSSQL ERROR

```
TRANSACTIONSPERIODE1:Operand type clash: datetime2 is incompatible with int
```

Known issues

Unicode settings in osf.ini files may currently have an impact on some reports. It is replicated since osFinancials5.1.0.81 and up to osFinancials5.1.0.100 and osFinancials5.1.0.102.

Migrating from Delphi 11 to Delphi 12 - in osFinancials the unicode settings may need special checking

Need to figure out if nounicode=false or true - See

- Known issues - Unicode setting - Currencies - Default setting
- Known issues - Unicode setting - Setup Countries
- Known issues - Unicode setting - Reporting dates Error - Refresh failed. Found 0 records
- Known issues - Firebird Reports - Nounicode settings - osf.ini-file
- Known issues - Unicode - Language file names
- Known issues - Unicode setting - Reports - Other languages

Known issues - Firebird Databases - SQL Error - arithmetic exception, numeric overflow, or string truncation

Error produced in Firebird databases -

This has to do with the Unicode settings in Firebird Databases - Print in osFinancials5.1.0.93

Since osFinancials5.1.0.100 and osFinancials5.1.0.102 - this error is replicated in Firebird databases Maybe the " *nounicode=true* " setting changed since these later releases in the osf.ini file.

> arithmetic exception, numeric overflow, or string truncation

Reports - Only prints if is set to nounicode=true in osf.ini files

Reports → Ledger → Transactions - Transactions

Location : plug_ins\reports\systemreports\TRN_1372\TRN_74\TRN_74.rep

> TRANSACTION_DETAIL:arithmetic exception, numeric overflow, or string truncation

Prints in osFinancials5.1.0.93 with the *" nounicode=true* " setting. In osFinancials5.1.0.102 it replicates this errror.

Remittance advises

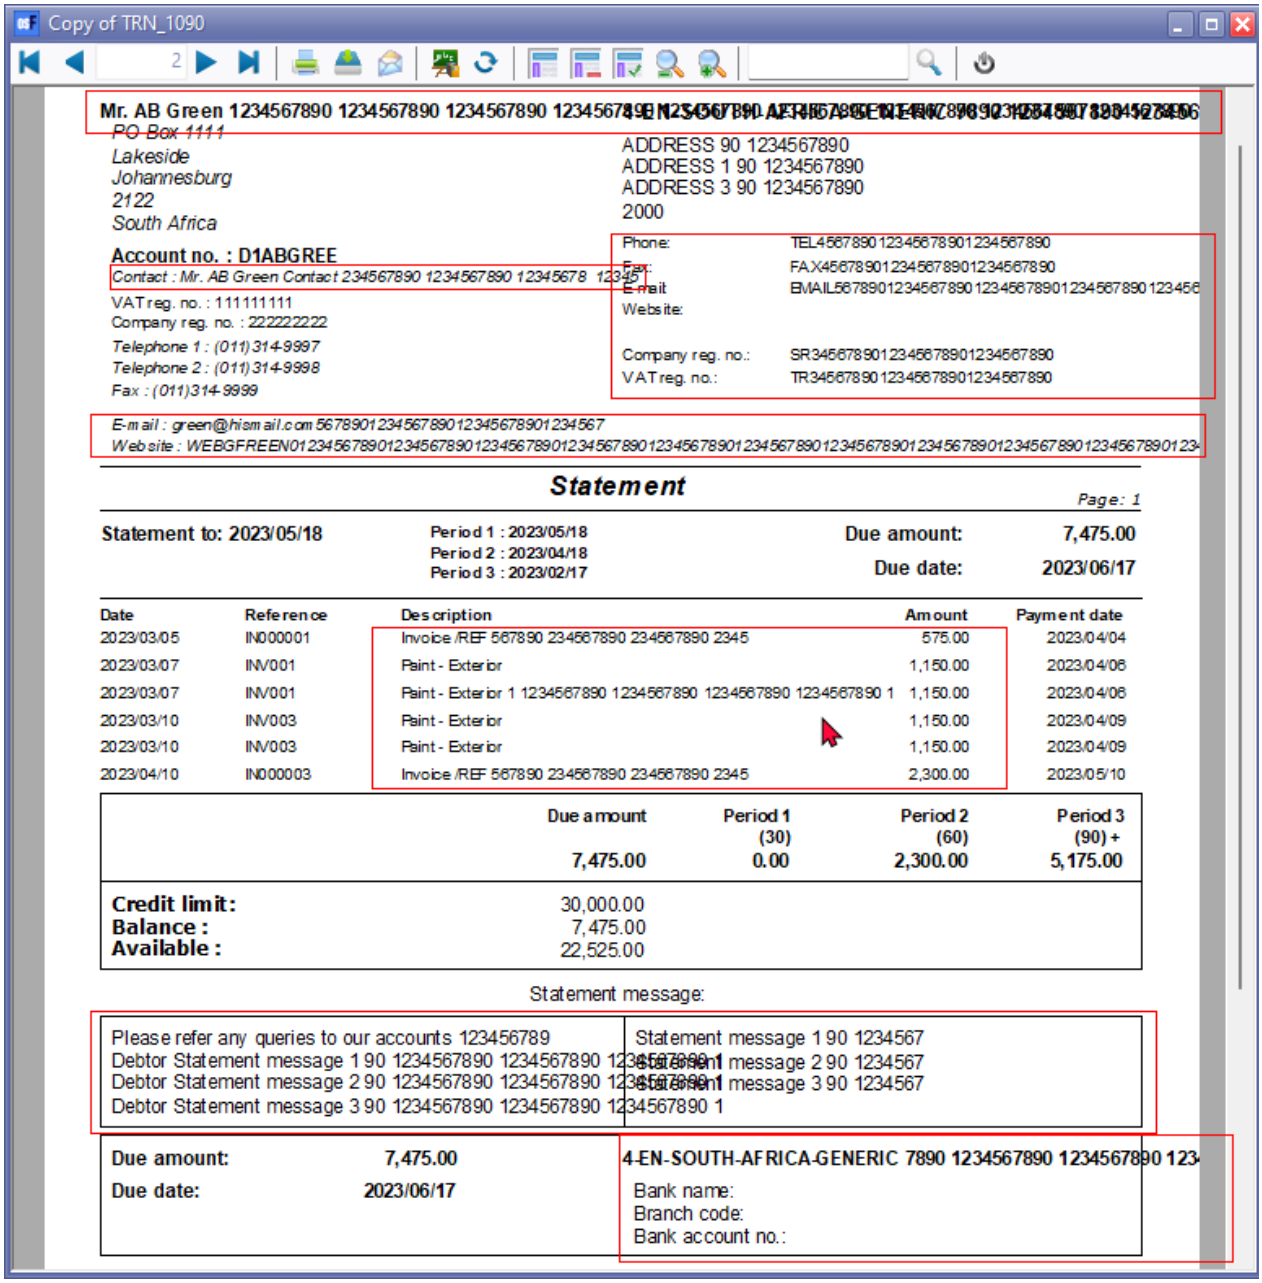
Debtor statements

Debtor statements

- Reports → Debtors → Debtor statements - Debtor statement - Location : plug_ins\reports\systemreports\TRN_160\TRN_1090\TRN_1090 -
- Reports → Debtors → Debtor statements - Debtor statement - Outstanding - Location : plug_ins\reports\systemreports\TRN_160\TRN_1090\TRN_906552 -

Before Fixes



Some fixed expressions and element properties:

1. Company name - Company data " *SCompanyName {chartype}(64)* " field in the SYSVARS table allows for 64-characters to be entered. Overlaps with Company data COMPANYDATA.SCOMPANYNAME such as COMPANYDATA.SADDRESS1 if More than 40 characters is entered. Moved address and contact details down 1 line and contact word wrap. For shorter Company names it will leave a blank line between Company name and Address 1

2. Debtor account name - Description Word wrap and moved address and contact details down 1 line and contact word wrap and cut text. Debtor names will print up to 45 characters in the first line and about 45 characters on the next line (total of 90 characters).

3. Standardised the Placement of Company registration numbers and Tax (VAT/GST/Sales tax) registration numbers - for consistency across all reports - Common Practices and User Expectations:
    - Company Name and Address First: These are typically the most prominent elements in the header, establishing the invoice issuer's identity.
    - Registration Numbers After Address: Placing registration numbers immediately after the address is a common practice, making them easily accessible for reference.
    - Contact Details Last: Phone, fax, email, and website usually follow registration numbers, providing additional means of communication.
4. E-mail addresses - Company e-mail address and Debtor e-mail address Cut text up to 40 characters would print.
5. Websites - Company website address and Debtor website address Cut text up to 40 characters would print.
6. Logo - Resized from 9.5cm by 5.7cm (approximately 3.74 inches x 2.24 inches or 5385 twips x 3231 twips) to include space to include Company registration and Tax (VAT/GST/Sales tax) information on logos.
7. Transaction detail - Prints too close to amount - Applied Word wrap and Auto Expand and Auto Contract.
8. Messages
    - Debtor statements global messages (Setup → Documents setup) - Statements tab) SYSVARS table - SSTATEMENTMESSAGE1, SSTATEMENTMESSAGE2 and SSTATEMENTMESSAGE3 supports up to 30 Characters each. Prints fine.
    - Debtor statement message (Delivery address tab) 4 Message lines SMESSAGE - 50 characters and 64 characters each for SFREEFIELDS1, SFREEFIELDS2 and SFREEFIELDS3 on DEBTOR table. Cuts off text around 50 characters and overlaps with the global messages. FIX Resized tie Rectangular square frame Combined message fields in 1 expression and set Word wrap.

```
ACCOUNTLOOKUP.SMESSAGE+#13+#10+ACCOUNTLOOKUP.SFREEFIELD1+#13+#10+ACCOUNTLOOKUP.SFREEFIELD2+#13+#10+ACCOUNTLOOKUP.SFREEFIELD3 "
```

9. Banking details - Company banking details - Expression " COMPANYDATA.SCOMPANYNAME+' - '+CUSTOM('GETTEXTLANG',29,'Bank account',0,0,0)+': ' " Resized length to accommodate up to 2 lines with Word wrap.

- Company Name and Address First: These are typically the most prominent elements in the header, establishing the invoice issuer's identity.
- Registration Numbers After Address: Placing registration numbers immediately after the address is a common practice, making them easily accessible for reference.
- Contact Details Last: Phone, fax, email, and website usually follow registration numbers, providing additional means of communication.

4. E-mail addresses - Company e-mail address and Creditor e-mail address Cut text up to 40 characters would print.
5. Websites - Company website address and Creditor website address Cut text up to 40 characters would print.
6. Logo - Resized from 9.5cm by 5.7cm (approximately 3.74 inches x 2.24 inches or 5385 twips x 3231 twips) to include space to include Company registration and Tax (VAT/GST/Sales tax) information on logos.
7. Transaction detail - Prints too close to amount - Applied Word wrap and Auto Expand and Auto Contract.
8. Messages - Creditor remittance message (Delivery address tab) 4 Message lines SMESSAGE - 50 characters is included in the CREDITOR table - but is currently not used to enter messages on the Delivery address tab of the Creditor account. This will print a blank empty space (line) in the Message section of the Creditor remittance advice and is therefore removed at this stage. Remittance messages is entered on the Statement message 1, Statement message 2 and Statement message 3 of up to 64 characters each for SFREEFIELDS1, SFREEFIELDS2 and SFREEFIELDS3 updated in the CREDITOR table.

Other older fixes

Postal address blank refers to debtors table instead of creditors table

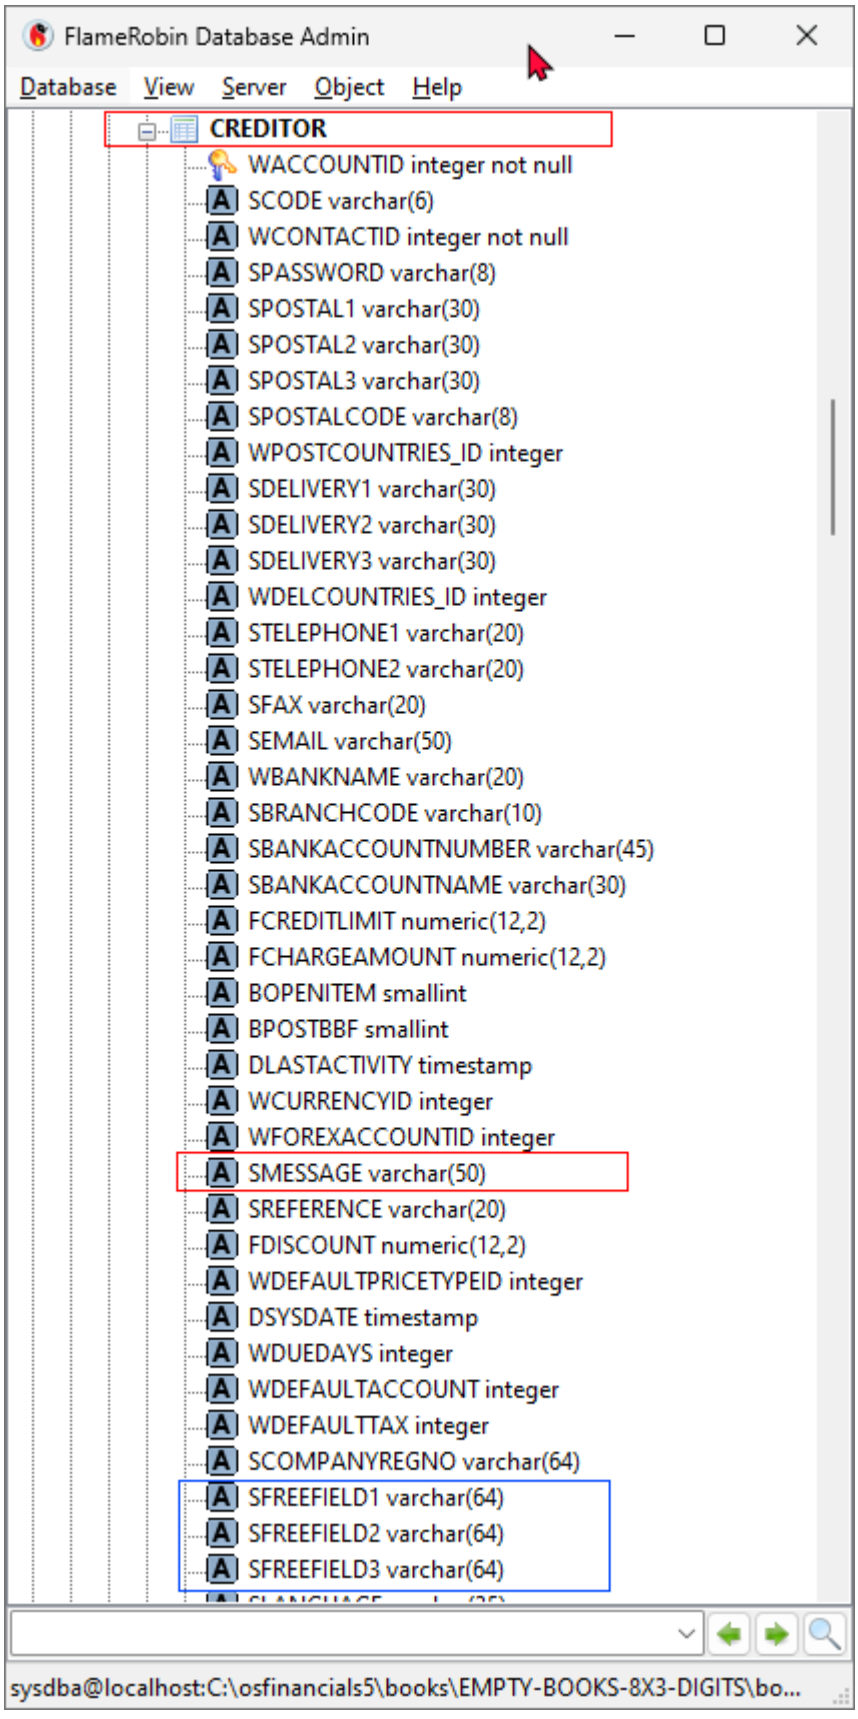
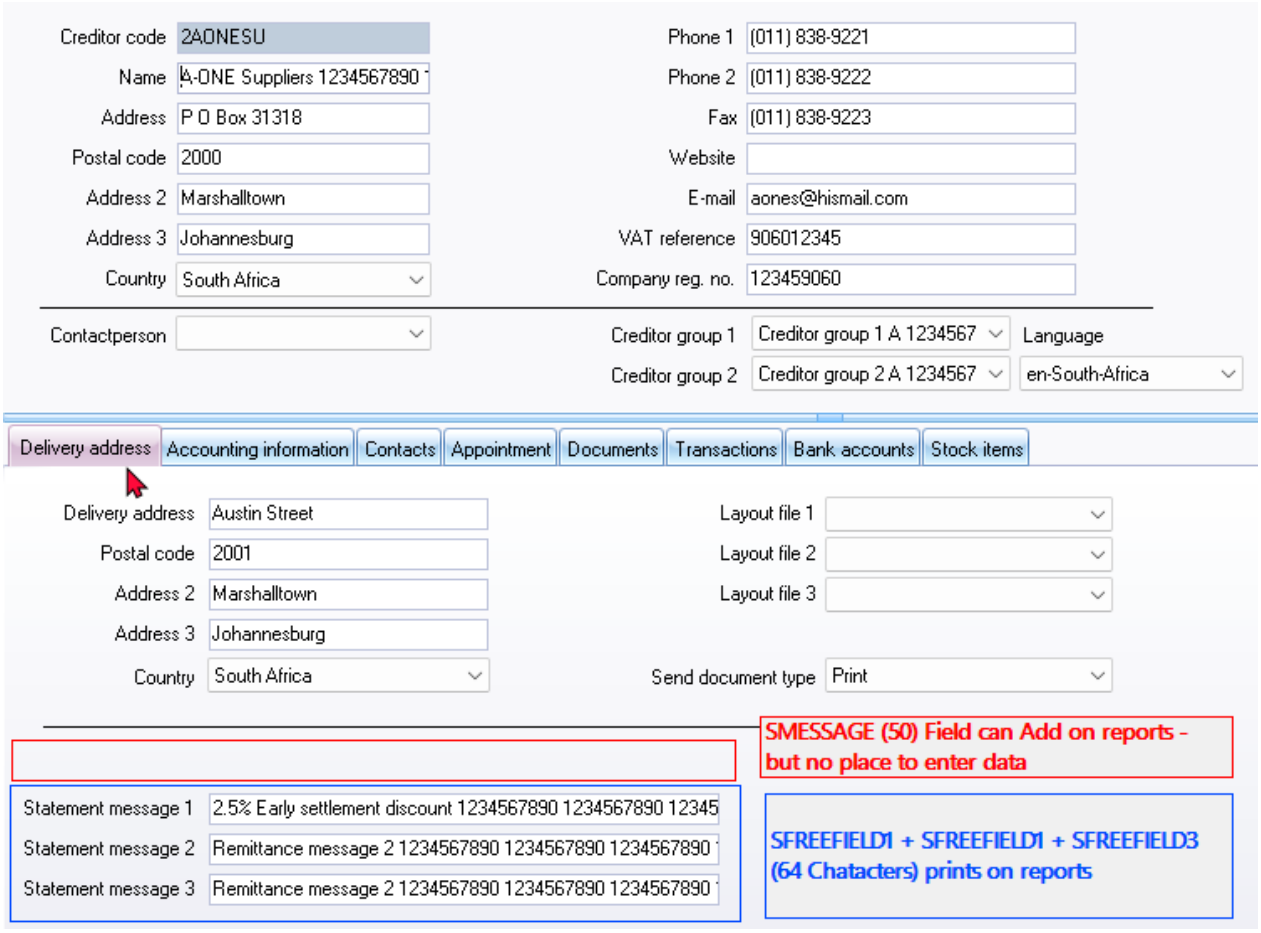
Detail of the SMESSAGE filed in the CREDITOR table not in Delivery tab of Creditor account





Created with the Standard Edition of HelpNDoc: Effortlessly Convert Your Word Doc to an eBook: A Step-by-Step Guide

FIXED - Document layout files

Document layout files

Document layout files

Fixed - Websites added to layout files

Added - Added Website to be consistent with other layout files, Debtor statements, Creditor remittance advises and other reports. Affected layout files:

- TRN_1910 - Layout file
- TRN_3174 -Document layout
- TRN_906589 - NO-TAX Layout file

- TRN_906590 - NO-TAX Document layout file

COMPANYINFO - Dataset Updated SQL to include SWebsite field

Added Expression for the Label

```
CUSTOM('GETTEXTLANG',3212,'Website',CLIENTORDEFLANG.SLANGUAGE,0,0)+': '
```

Added Expression for the SWebsite field

```
COMPANYINFO.SWEBSITE
```

Fixed - Labels not translating

TRN_1313 Delivery note - Label is system language or Debtor language not translating " *Delivery note accepted:* "

Changed Expression

```
CUSTOM('GETTEXTLANG',1150,'DeliveryNoteAccepted',ACCOUNTINFO.SLANGUAGE,0,0)+': '
```

to

```
CUSTOM('GETTEXTLANG',1150,'DeliveryNoteAccepted',CLIENTORDEFLANG.SLANGUAGE,0,0)+': '
```

Layout files - Fixed layout output presentation

Non Translatable Static text

Used for tutorials and customisation for users who wish to make simpler layout files.

Similar formatting and tiding is applied as with the translatable layout files.

- BTW Faktuur - Afrikaans.rep
- GEEN-BTW Faktuur - Afrikaans.rep
- TAX Invoice English.rep
- NO-TAX Invoice - English.rep

Before fixes

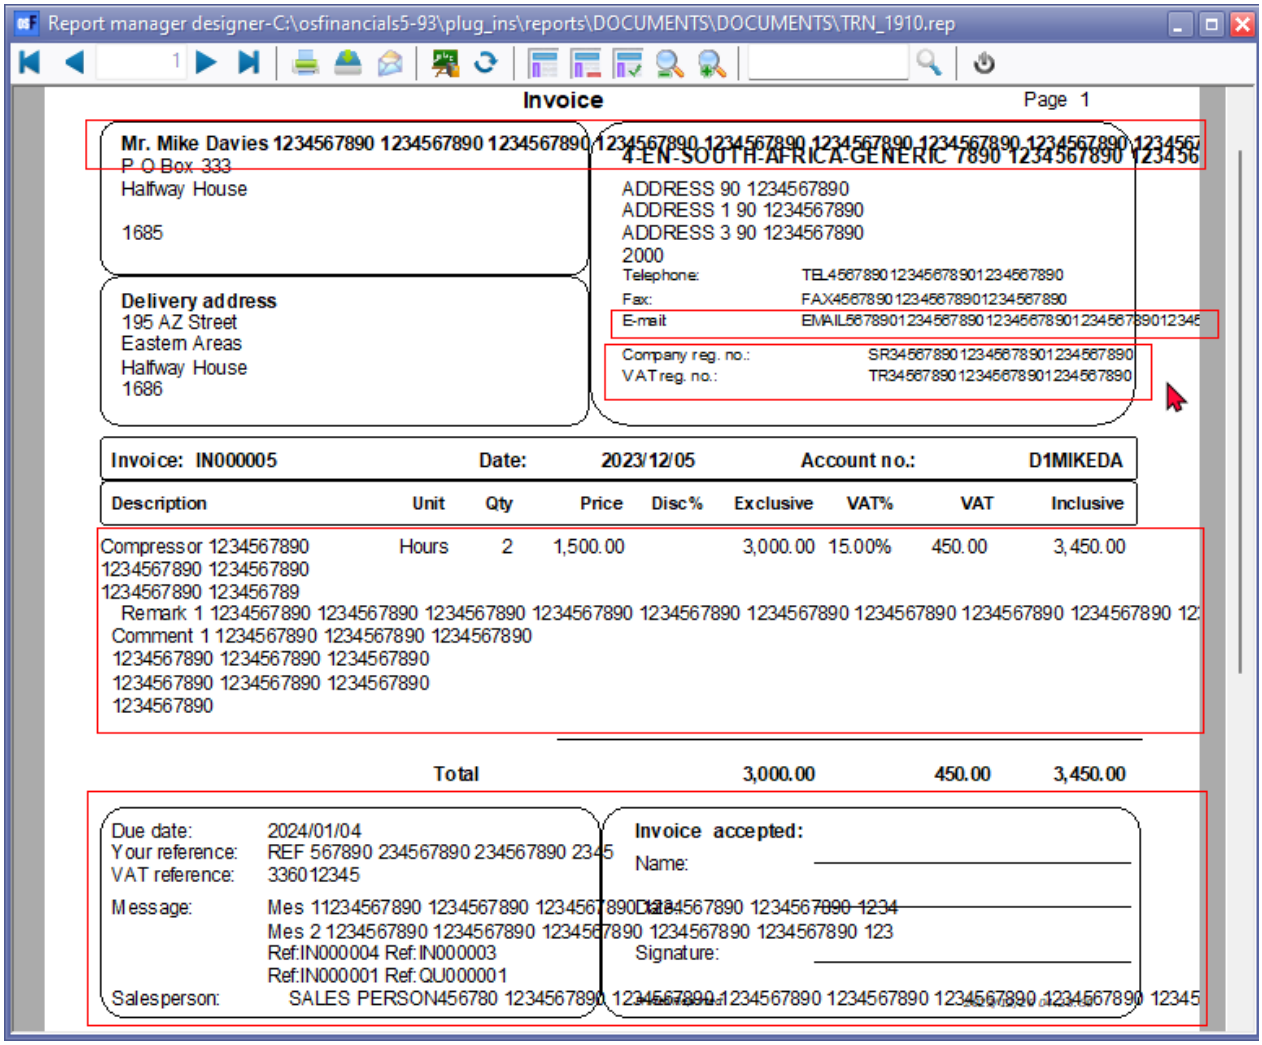
The layout file (TRN_1910.rep) Layout file illustrates the changes and fixes to tidy layout files.

Location : plug_ins\reports\DOCUMENTS\DOCUMENTS\TRN1910.rep

Long descriptions currently may overlap similar to this example.

Debtor and Creditor accounts can be entered with a description of up to 128 characters.

Layout files can only print about 45 characters without overlapping into the company address fields.



Some fixed expressions and element properties:

1. Company name - Company data " *SCompanyName {chartype}(64)* " field in the SYSVARS table allows for 64-characters to be entered. Overlaps with Company data COMPANYDATA.SCOMPANYNAME such as COMPANYDATA.SADDRESS1 if More than 40 characters is entered. Moved address and contact details down 1 line and contact word wrap. For shorter Company names it will leave a blank line between Company name and Address 1. Up to 64 characters would print on layout files.

2. Debtor account name - description word wrap and moved address and contact details down 1 line and contact word wrap and cut text. Debtor names will print up to 45 characters in the first line and about 45 characters on the next line (total of 90 characters). It may leave 2 lines blank for smaller descriptions. Studies suggest 5-10% of business names in some countries exceed 60 characters. About 90 characters should be sufficient to print on layout files.

3. Standardised the Placement of Company registration numbers and Tax (VAT/GST/Sales tax) registration numbers - for consistency across all reports - Common Practices and User Expectations:

    - Company Name and Address First: These are typically the most prominent elements in the

header, establishing the invoice issuer's identity.

- Registration Numbers After Address: Placing registration numbers immediately after the address is a common practice, making them easily accessible for reference.
- Contact Details Last: Phone, fax, email, and website usually follow registration numbers, providing additional means of communication.

4. E-mail addresses - Company e-mail address and Debtor e-mail address Cut text up to 40 characters would print.
5. Websites - Company website address and Debtor website address Cut text up to 40 characters would print.
6. Logo - Resized from 9.5cm by 5.7cm (approximately 3.74 inches x 2.24 inches or 5385 twips x 3231 twips) to include space to include Company registration and Tax (VAT/GST/Sales tax) information on logos.

   Set logo image TRpImage0 , TRpImage1 "To Front" when a logo is set the text does not print over the logo if a logo is set.
7. Document lines -
   - Stock code - 15 characters - Full
   - Stock Description - 64 characters - Word wrap
   - Comments - Word wrap as basically long comments of more than 128 characters can be entered.
   - Remarks - Word wrap as basically long remarks of more than 128 characters can be entered. Set the Remarks font size to 9 and *Italic* font style.
   - Location/batches/serials - 40 characters - Word wrap
   - Options - SReference 20 characters or 35 characters - Word wrap
8. Footer - Reduced font size from 10 to 9 and set to italic. This is done to strike a balance of the characters in the data and printing.
   - Your reference - Up to 35 characters can be entered and will be printed. stretched expression to print the full 35-characters
   - Tax reference - Tax reference from Debtor / Creditor edit form can only enter up to 20 characters would be printed in the Tax reference field. On the Doc Head up to 64 characters can be entered in an unposted document. When the document is saved with the long description and or printed the layout file defaults to the Tax reference as entered or edited on

the Debtor / Creditor form.

- Messages - Message 1, Message 2 and Message 3 these are the default messages of up to 30 characters as entered in the Setup → Documents setup for each document type.

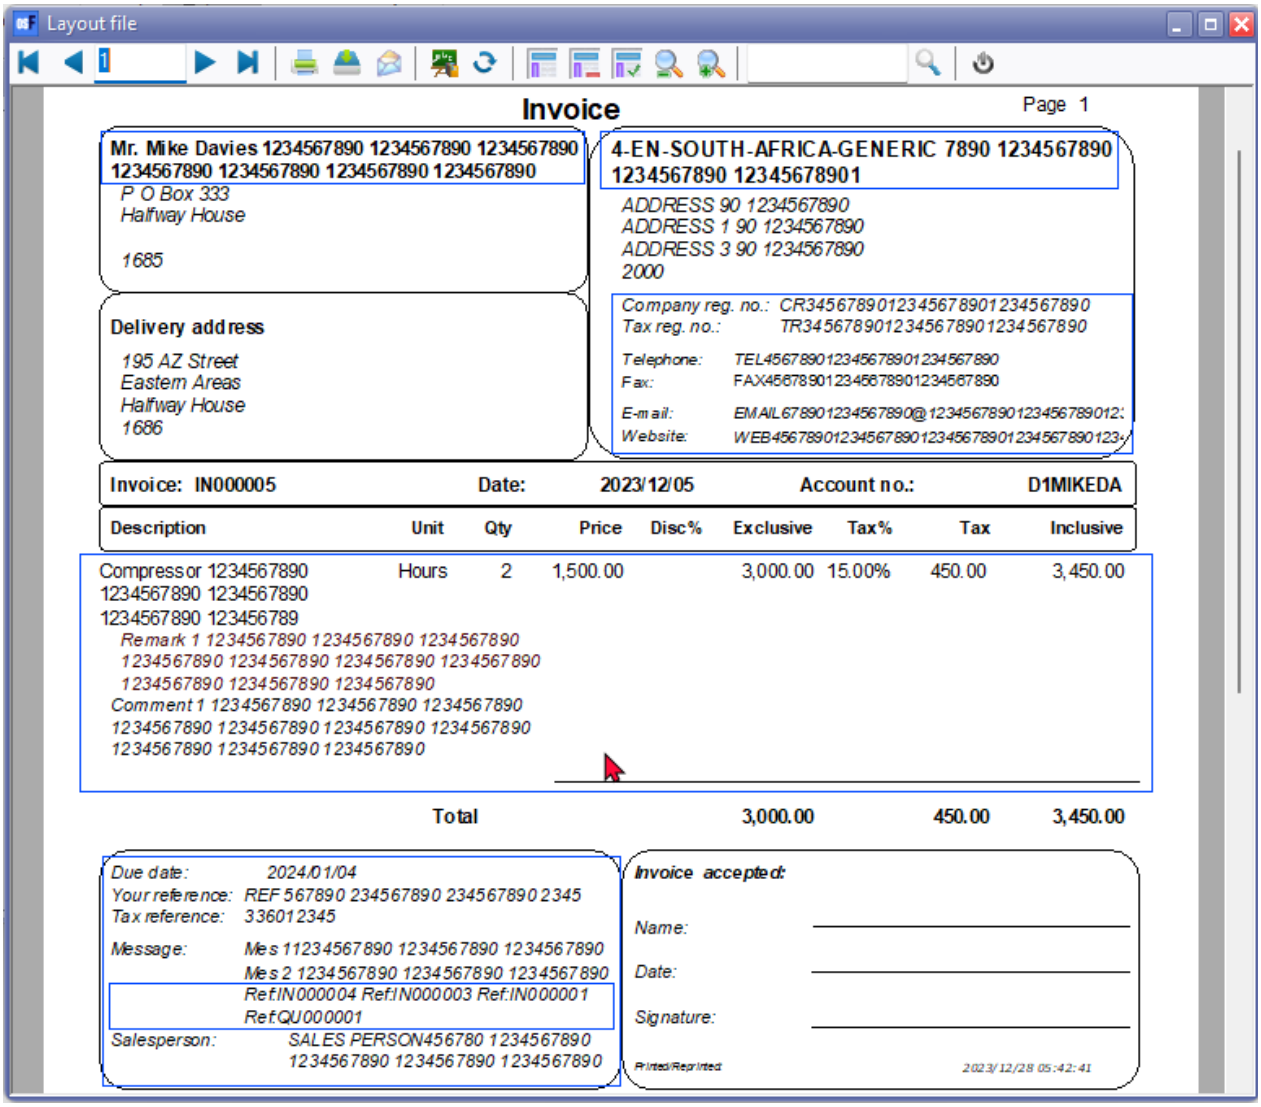
  Cut text - is applied for cases when creating or editing documents Messages can be over-typed longer descriptions can be added up to 60 characters. Up to 45 characters would be printed.

  Message 3 line is used for the reference of the source document quotes is converted to invoices, orders is converted to purchase documents or when documents is copied, etc. More than 4 Reference numbers may be generated when processing documents. Message line 3 is set to Word wrap and Cut text to print more details such as reference numbers.

- Salesperson - Word wrap = Salesperson descriptions as entered in Setup → Salespersons or Setup → Groups - Salespersons supports longer descriptions - Cut text - Only up to 50 characters will be printed.

9. Banking details - Company banking details - Expression " COMPANYDATA.SCOMPANYNAME+' - '+CUSTOM('GETTEXTLANG',29,'Bank account',0,0,0)+': ' " Resized length to accommodate up to 2 lines with Word wrap. Only applicable to specific document layout files.

After fixes



Netherlands Layout files

Company name and Debtor / Creditor account descriptions support longer descriptions.

Set Word wrap to Document lines (Comments, Remarks, Location/Batches/Serials) where necessary.

1. POS.rep - Factuur - Only includes ADMINISTRATIEINFO.Logo and no Company name.

   Added Company name expression since it is not printed on POS layout file

   ```
   ADMINISTRATIEINFO.BEDRIJFSNAAM
   ```

2. RMBestelling.rep
3. RMCreditnota.rep
4. RMfactuur BE.rep - Other fixes

- DOCUMENTKOP.MESSAGE3 - Message overlapping with box Word wrap
- Footer Wrap last line of description to print longer company names up to 64 characters

5. RMFactuur.rep
6. RMFactuurbtwAanEinde.rep
7. RMInkoop.rep
8. RMOfferte.rep
9. RMPakbon.rep - No date on document print
    - Added Static label Datum:
    - Added Expression *'FORMATSTR('dd-mm-yyyy',DOCUMENTKOP.DDate)'*
10. RMPOS.rep
11. RMRetourzending.rep
12. RMSTARTSP100.rep

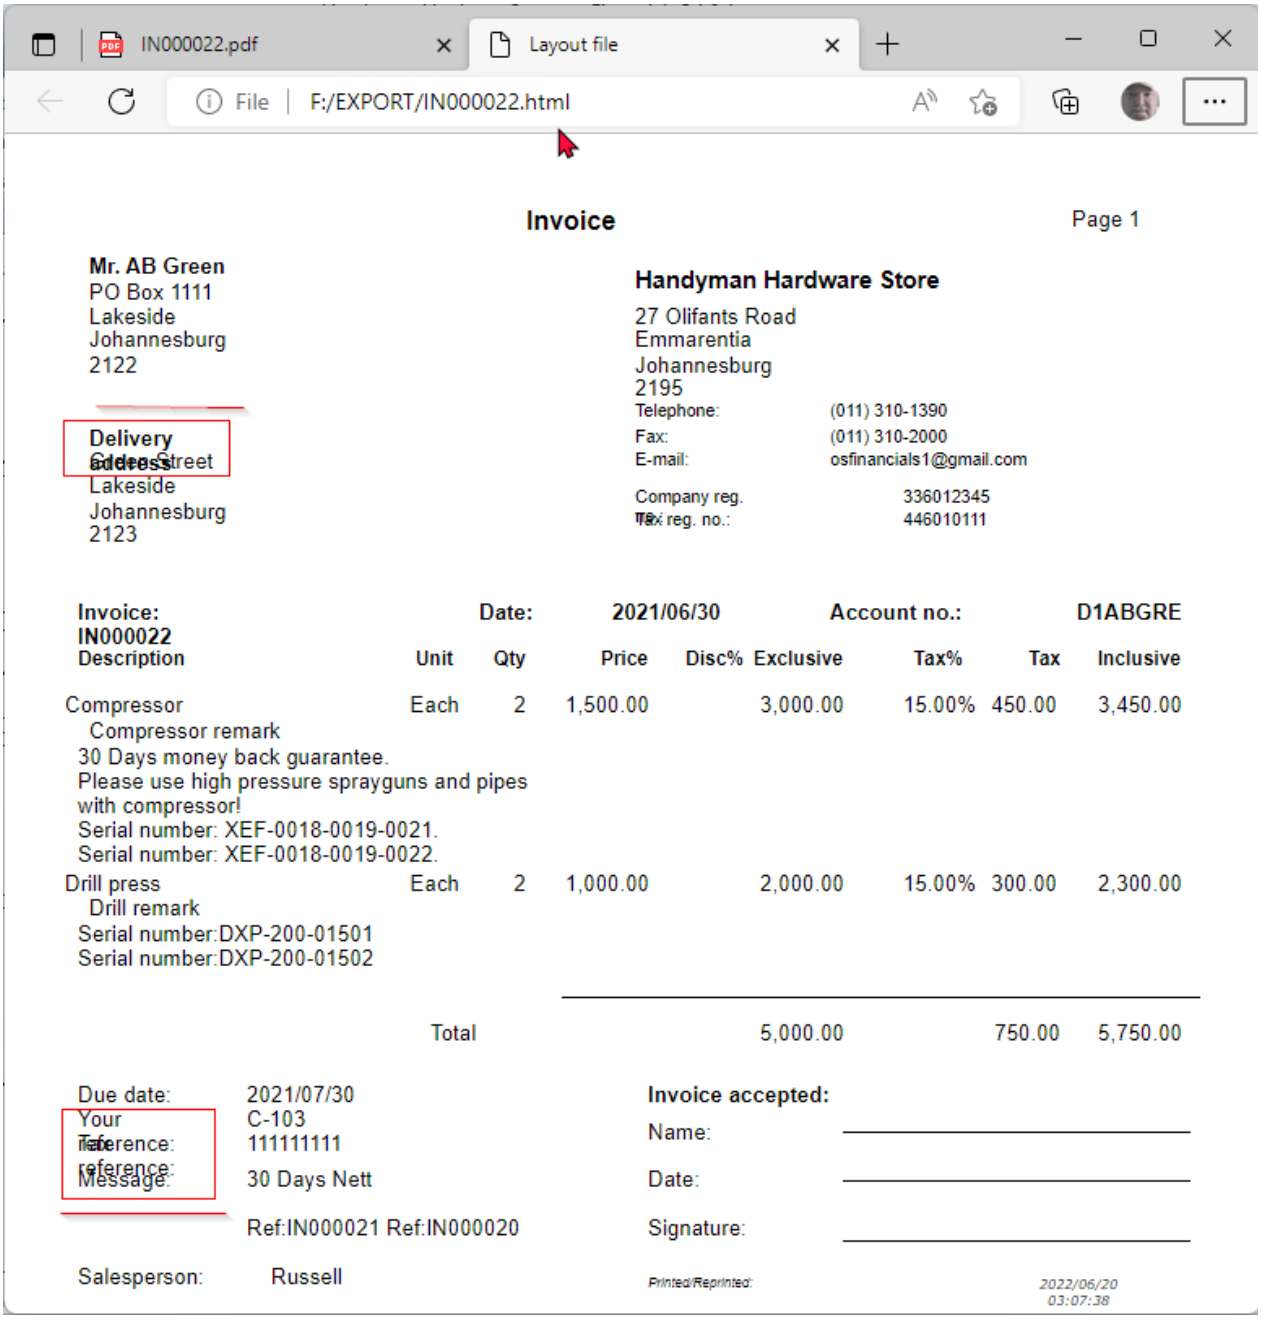
NOTE - Not done

- Kassabon VM.rep - To print this layout file, the HORECAPOS plugin need to be activated and configured.
- Removed 2 layout files for specific users.

Document layout files saved as the html file type

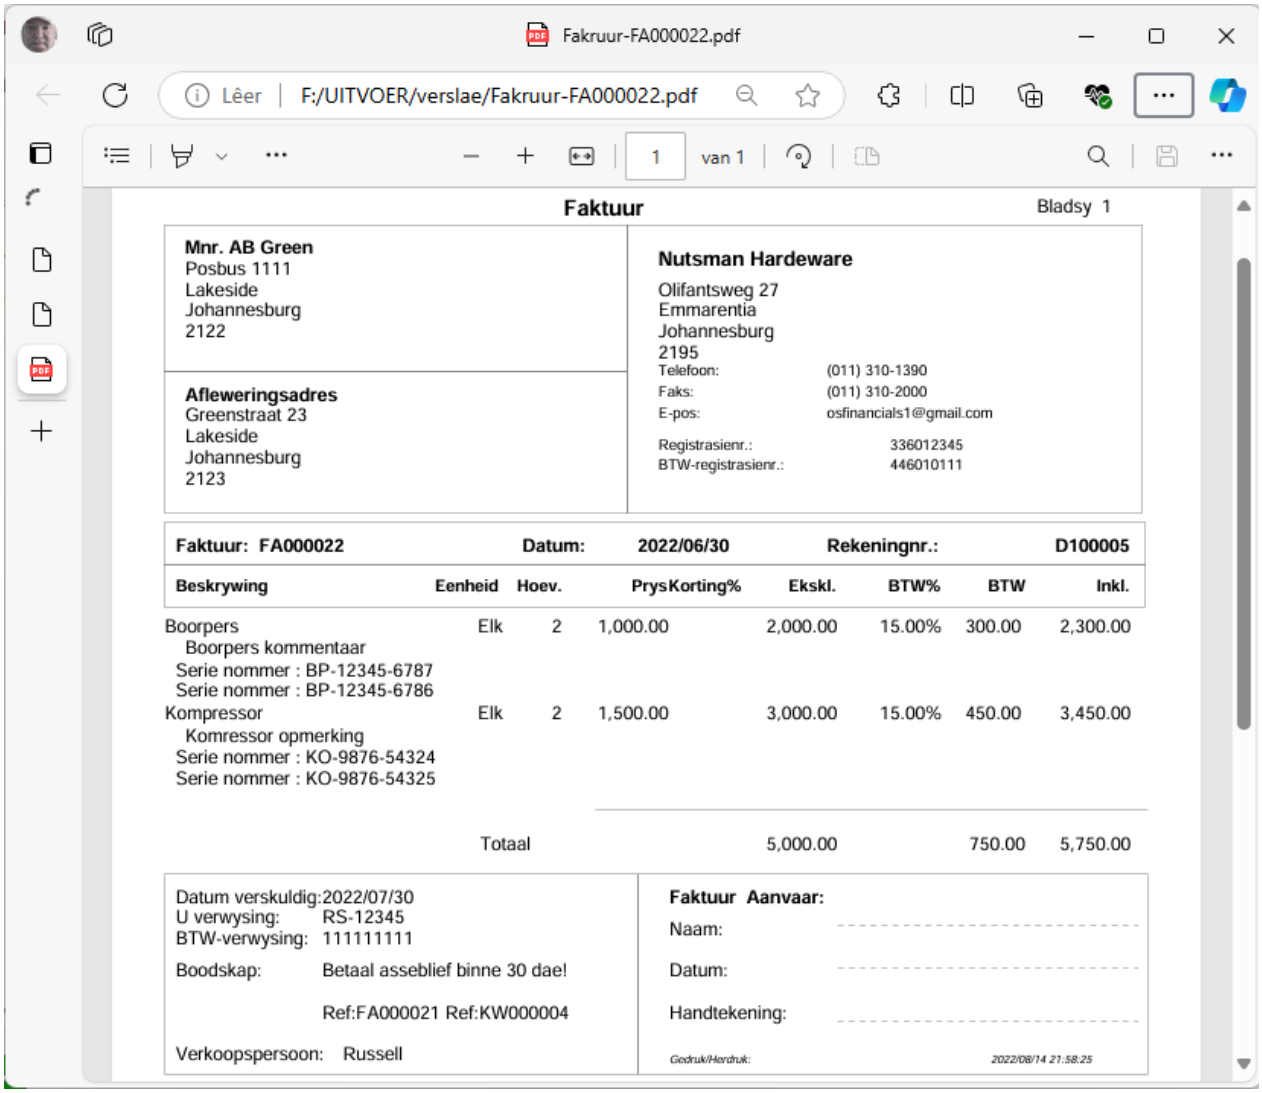
Before fixes

Example of overlapping and untidy presentation in document layout files when a document is saved as an html file and opened in a web browser:



After Fix

The overlapping and untidy presentation in document layout files when a document is saved as an html file and opened in a web browser is fixed:



Created with the Standard Edition of HelpNDoc: Streamline your documentation process with HelpNDoc's HTML5 template

FIXED - Reports layout long descriptions and data - Layout files-Labels-Statements

Company data " SCompanyName {chartype}(64) "

Company name supports up to 64 characters in Setup → Company info - this will print ok on most reports. In the case of Creating a Set of Books from scratch, using the "*Customise your own Set of Books (Advanced)?*" option - for 3-Digits to 8-Digit main accounts in the Chart of Accounts, the Company data " SCompanyName {chartype}(64) " field in the SYSVARS table allows for 64-characters to be entered. Only about 42-characters will print on the debtor statements, creditor remittance advices, layout files. More than 42-characters may not print or overlap with the address details.

The following reports and layout files is adjusted:

Debtor statements

- Reports → Debtors → Debtor statements - Debtor statement - Location : plug_ins\reports\systemreports\TRN_160\TRN_1090\TRN_1090 -
- Reports → Debtors → Debtor statements - Debtor statement - Outstanding - Location : plug_ins\reports\systemreports\TRN_160\TRN_1090\TRN_906552 -

Remittance advises

- Reports → Creditors → Creditor remittance advise - Creditor remittance advise - Location : plug_ins\reports\systemreports\TRN_161\TRN_1089 -
- Reports → Creditors → Creditor remittance advise - Creditor remittance advise - Outstanding - Location : plug_ins\reports\systemreports\TRN_161\TRN_906551 -

Debtor / Creditor - Print labels - FIXED

These labels does not support longer account descriptions and Contact names and needs to be rechecked.

Debtor labels

- Reports → Debtors → Print labels - Delivery address labels - Location : plug_ins\reports\systemreports\TRN_160\TRN_68\TRN_906064 -
- Reports → Debtors → Print labels - Postal address labels - Location : plug_ins\reports\systemreports\TRN_160\TRN_68\TRN_906137 -

Creditor labels

- Reports → Creditors → Print labels - Delivery address labels - Location : plug_ins\reports\systemreports\TRN_161\TRN_68\TRN_906064 -
- Reports → Creditors → Print labels - Postal address labels - Location : plug_ins\reports\systemreports\TRN_161\TRN_68\TRN_906137 -

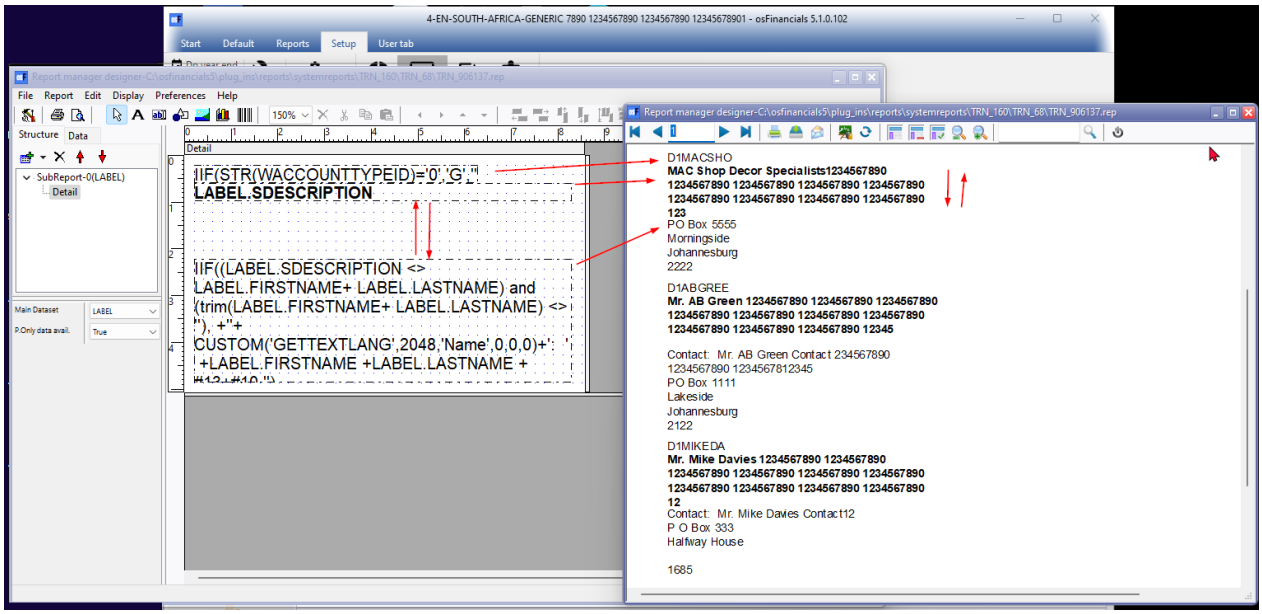
Context menu - Print labels

- Debtors grid - context menu - Reports → Selected debtor label - Location : plug_ins\reports\REPORTS\DEBTOR\reports]LANG_TRN_906062 -
- Debtors grid - context menu - Reports → Selected debtor delivery label - Location : plug_ins\reports\REPORTS\DEBTOR\reports]LANG_TRN_906065 -
- Creditors grid - context menu - Reports → Selected creditor label - Location :

plug_ins\reports\REPORTS\CREDITOR\reports]LANG_TRN_906063 -

- Creditors grid - context menu - Reports → Selected creditor delivery label - Location : plug_ins\reports\REPORTS\CREDITOR\reports]LANG_TRN_906066 -

Example



Combine expressions will contact spaces and auto expand

The combined expressions will only allow to set the FontStyle to Bold or Regular

In Reportman in osFinancials does not support mixed FontStyle control inside the same expression

Studies suggest: Around 5-10% of business names in some countries exceed 60 characters.

```
LABEL.SDESCRIPTION+#13+#10+IIF((LABEL.SDESCRIPTION  <> LABEL.FIRSTNAME+ LABEL.LASTNAME)
 and (trim(LABEL.FIRSTNAME+ LABEL.LASTNAME) <> ''), +''+
CUSTOM('GETTEXTLANG',2048,'Name',0,0,0)+':   '  +LABEL.FIRSTNAME  +LABEL.LASTNAME  +
#13+#10,'')

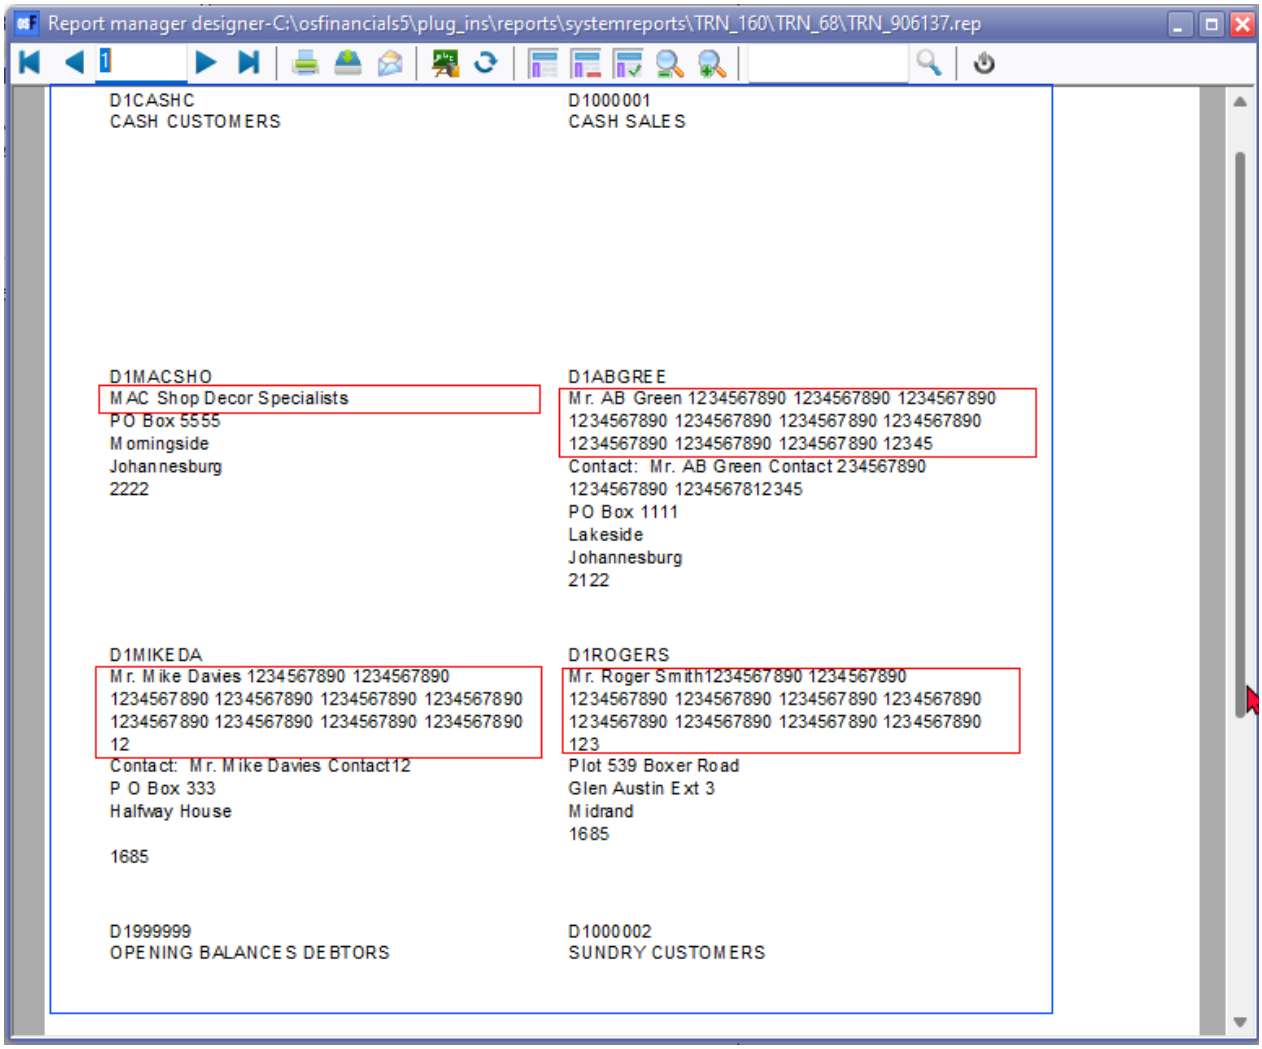
+ LABEL.SPOSTAL1

+  #13+#10  +  LABEL.SPOSTAL2

+  #13+#10  +  LABEL.SPOSTAL3+  #13+#10  +  LABEL.SPOSTALCODE
```

Looking for a solution to add the Bold FontStyle only to be applicable to the first field (LABEL.SDESCRIPTION) and the rest of the combined expression to apply the Regular FontStyle.

Maybe this could be done in the Print condition



Created with the Standard Edition of HelpNDoc: Maximize Your Productivity with a Help Authoring Tool

FIXED - Reports - Numbering format

Stock - Sidebar reports

Value stock account

Can also be printed for selected stock items - Context menu - Print single item.

userreports translation of folders launch systemreports reports

Userreports - Using translations for folders e.g. Tax - TRN_906020 in the userreports folder

Accessing Tax as in this example, from the User reports menu, the Tax reports in the systemreports folder will be accessed.

		Internal report name		
Tax	*TRN_906020*			
	Transactions	*TRN_20069.rep*		
	Tax list debtor with tax id	*TRN_3675.rep*		
	Tax per period	*TRN_906105.rep*		
	Tax report - Reference / Document no.	*TRN_906550.rep*		
	Tax list creditor with tax id	*TRN_906553.rep*		

To Work around this - Need to use

- Choose a different Language label in Tools → Customise language (Setup ribbon) which is not used in the systemreports folder, for example TRN_609 - Tax
- Use Text for the folder name

Restructured - User reports menu = plug_ins\reports\userreports

Folder / Menu	*Report name*		
Custom reports	*Creditor-Purchases.rep*	*2cred-sku-det.rep - Renamed*	*This report prints the Purchases and Supplier return as well as Orders for a selected creditor (supplier / vendor) account.*
	Debtor-Sales.rep	*2deb-sku-det.rep - Renamed*	*This report prints the Invoices and Credit notes as well as Quotes for a selected debtor (customer / client) account.*

Tax	*TRN_609*	*TRN_906583*	*TAX-LIST-RATES.rep*	*Tax list and tax rates with percentages and status (active / inactive). This report is used to indicate if tax (VAT/GST/Sales tax) percentages and status is correct. After import of accounts. the first tax sub-account (tax code) may not include the Tax tab. Zero-rated Tax percentages if not listed, needs to be entered and saved in Setup → Accounts.*

- Remittance 4

These "*Open item selection*" layout files can also be printed from the Remittance plugin on the Default ribbon and edited in Report designer in the " ...\plug_ins\reports\remittance\doctype\layouts " folder

Updated ADMINISTRATIEGEGEVENS

Updated ADMINISTRATIEGEGEVENS to add the SYSVARSEXT table to the sql - This add Website, Mobile and Contact name fields.

First line

```
Select a.*,
```

last line

```
from sysvars,
sysvarsext a
```

Added - Dataset for REMARKS and lined to DOCUMENTREGEL

SQL

```
select scomment from docline_comment where wdocid = :wdocid and wlineid =:wdoclineid
```

Added expression to Detail_2 (Subreport-2)

```
DATASETASSTRING('REMARKS')
```

MSSQL Error DOCUMENTREGEL Dataset

In MSSQL Databases error in doctype - layouts

```
DOCUMENTREGEL:Incorrect syntax near '|'.
```

Current SQL

```
Select
messages.sdescription || coalesce(messages.sExtradescription,'') Description,
WDOCLINEID, WDOCID, WSTOCKID, WLINETYPEID,
WDESCRIPTIONID, FQTYORDERED, FQTYSHIPPED,
FSELLINGPRICE, FITEMDISCOUNT,docline.WTAXID,
FEXCLUSIVEAMT, FINCLUSIVEAMT, FTAXAMOUNT,
docline.DSYSDATE, SUNIT, SSTOCKCODE,
WPROFILEID, WSERIALNOID,
tax.FRate
from docline left join messages on (docline.WDescriptionid = messages.WMessageID)
left join tax on (docline.WTaxID = tax.WAccountID)
where WDocId=:TCVAR_DocID
```

Changed || to +prints in MSSQL databases but produces error in Firebird database types

DOCUMENTREGEL:Dynamic SQL Error
expression evaluation not supported

Change to CONCAT function, which is available in MSSQL and is specifically designed for string concatenation. The + operator can also be used for concatenation, but make sure that the types involved are compatible for concatenation.

This SQL prints in both MSSQL database types and Firebird database types

```
Select
messages.sdescription {concat} coalesce(messages.sExtradescription,'') Description,
WDOCLINEID, WDOCID, WSTOCKID, WLINETYPEID,
WDESCRIPTIONID, FQTYORDERED, FQTYSHIPPED,
FSELLINGPRICE, FITEMDISCOUNT,docline.WTAXID,
FEXCLUSIVEAMT, FINCLUSIVEAMT, FTAXAMOUNT,
docline.DSYSDATE, SUNIT, SSTOCKCODE,
WPROFILEID, WSERIALNOID,
```

```
tax.FRate

from docline left join messages on (docline.WDescriptionid  = messages.WMessageID)

left join tax on (docline.WTaxID = tax.WAccountID)

where WDocId=:TCVAR_DocID
```

Location : ...\plug_ins\reports\remittance\nl\layouts\default.rep

> Could not convert variant of type (UnicodeString) into type (Double)

and within Reportman

> Could not convert variant of type (UnicodeString) into type (Double)
> TODATE=11-10-2006

The error message "*Could not convert variant of type (UnicodeString) into type (Double*)" in Firebird databases suggests that there is an issue with data conversion, particularly involving a Unicode string and a Double data type.

In your provided information, you also mentioned "*TODATE=11-10-2006*." It seems like there might be an attempt to convert a string ("*11-10-2006*") to a Double data type using the TODATE function in Firebird.

Here are a few steps you can take to troubleshoot and resolve the issue:

1. Check the Data Type Compatibility: Ensure that the data types used in your expressions are compatible. If you are using the TODATE function, make sure that the input is a valid date format.

   Example: sql

   ```
   SELECT TODATE('11-10-2006', 'DD-MM-YYYY') FROM YourTable;
   ```

2. Verify Data Formats: Double-check the format of the date string. In the example above, the format is 'DD-MM-YYYY'. If your date string follows a different format, adjust the format accordingly.

3. Handle NULL Values: If your data might contain NULL values, consider adding conditions to handle them appropriately. For instance, use the COALESCE function to replace NULL values with a default or handle them in another way.

4. Explicit Type Conversion: If you're dealing with mixed data types, explicitly convert the data types using appropriate functions. For example, you can use the CAST or CONVERT function to explicitly convert a string to a Double if needed.

   Example: sql

   ```
   SELECT CAST('11-10-2006' AS DOUBLE PRECISION) FROM YourTable;
   ```

5. Review the SQL Statement: Check the entire SQL statement or query for any other potential issues. Look for areas where data types might conflict.

Without seeing the full query or knowing more about the database structure, these are general suggestions. If the issue persists, providing more details about the relevant part of your SQL query and the database schema would be helpful for further assistance.

Page from this link displays correct on can load Firefox and Chrome Web browsers but not in MS Edge - Edge or other browsers may block the manuals page)

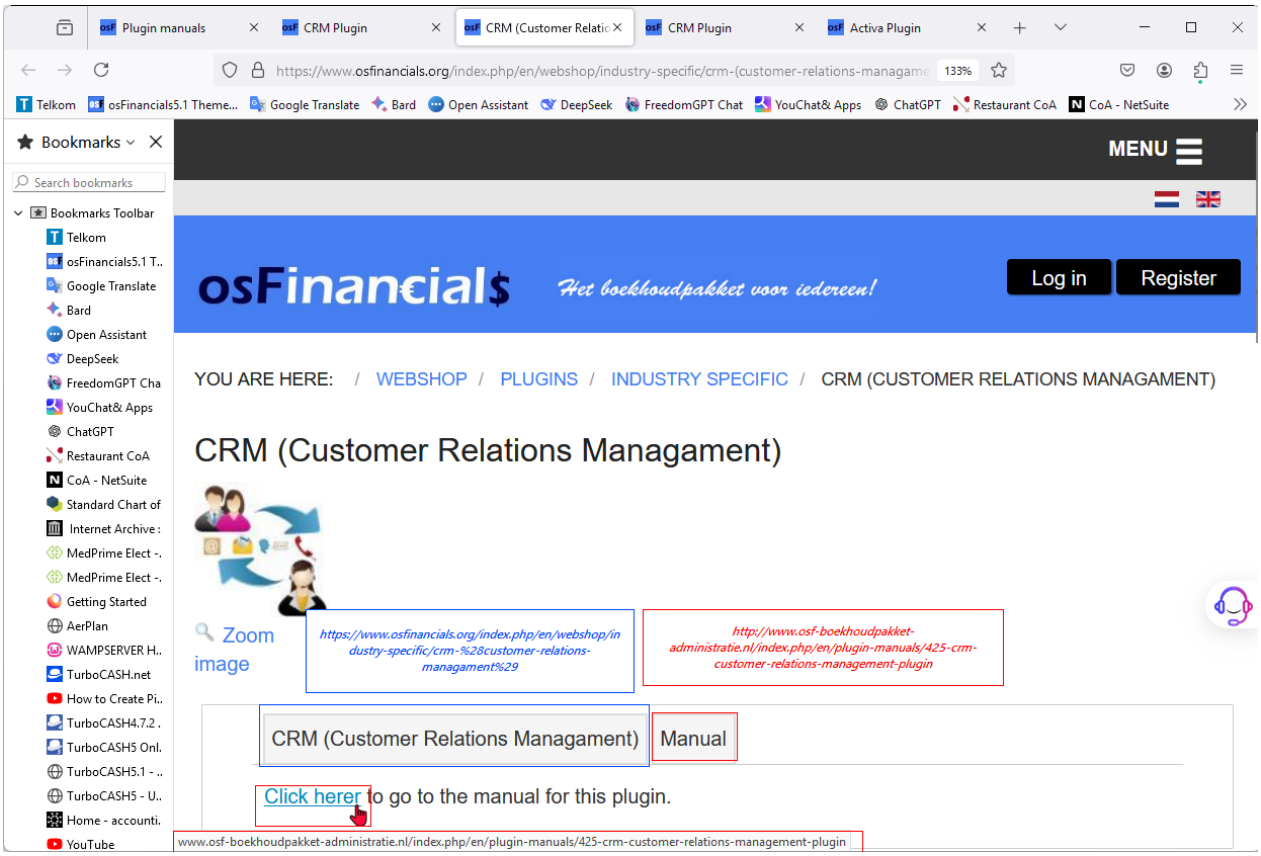
Notes and screenshots

It appears that you're experiencing difficulties accessing links to various Manuals on the osFinancials shop website, particularly those originating from the osf-boekhoudpakket webpages. This issue is specific to Microsoft Edge, where you encounter a 404 error (Category not found) when attempting to access these manuals. In contrast, these links load correctly in Firefox and Chrome web browsers.

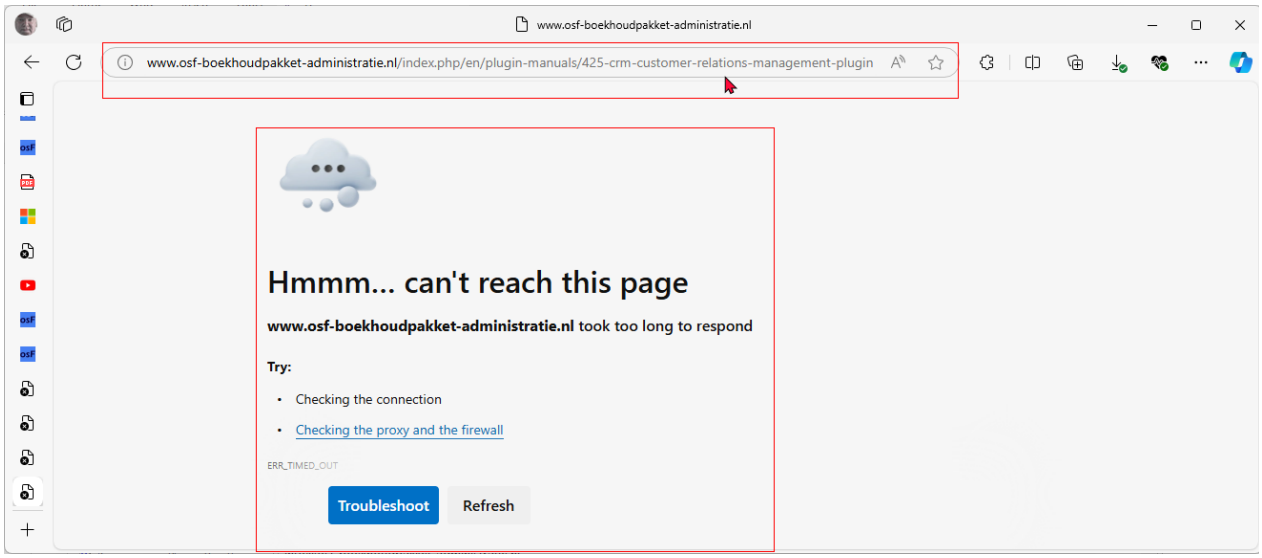
The issue seems to be related to the fact that the manuals webpage links start with `http://`, which may cause compatibility problems in certain web browsers, including Microsoft Edge. In contrast, the osFinancials webshop pages, which start with `https://`, load correctly in most web browsers.

Other users might also encounter similar issues depending on their browser settings. It's recommended to check and adjust your browser settings or use an alternative browser like Firefox or Chrome as a temporary workaround.

Example CRM webshop Webpage - start with https://



Example CRM Webpage - Link to Manual start with http:// - Error in Manuals link on Microsoft Edge



Example CRM Webpage - Link to Manual start with http:// - Manuals link in Chrome refers to "Not secure" but Manuals page loads.

DYNABREG

Register plugins

Register plugins - When you have purchased a plugin and you have received the registration code, you need to enter and add the codes to "*Register the plugins*"-screen.

Created with the Standard Edition of HelpNDoc: Effortlessly optimize your documentation website for search engines

Known-issues - Plugin - Stock Adjustments

ADDED - Document layout files for NON Standard document types

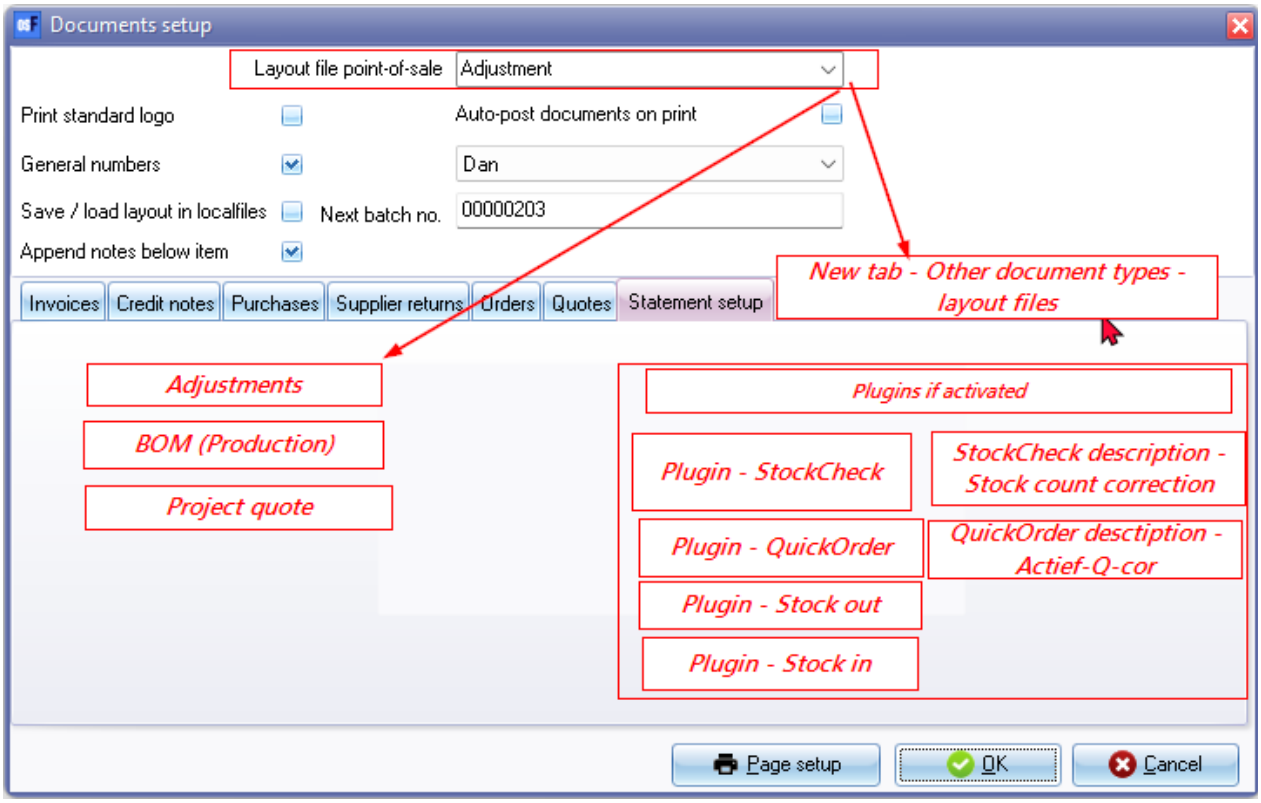
The following Document layout files for NON Standard document types were fixed in osFinancials5.1.0.109 update but not included in osFinancials5.1.0.127 / osFinancials5.1.0.189 update install:

DOCUMENTS/DOCUMENTS - Document layout files updated to fix overlapping labels, remarks, etc. to accommodate databases with larger input fields. Standardised the Company and Tax registration numbers before contact details, etc.

Selecting layout files for dedicated NON-Standard document types

In addition to the global setting for the six standard document types (i.e. Quotes, Invoices, Credit notes, Orders, Purchases and Supplier returns), layout files selected for each document type on the Setup → Documents setup menu (Setup ribbon), the "*Point-of-sale layout file*" field on the Documents setup screen could also be used to change layout files for NON-Standard document types in the osFinancials core and when specific plugins are activated.

For some NON-Standard document types, the , the "*Point-of-sale layout file*" field on the Documents setup screen does not print the selected layout file.

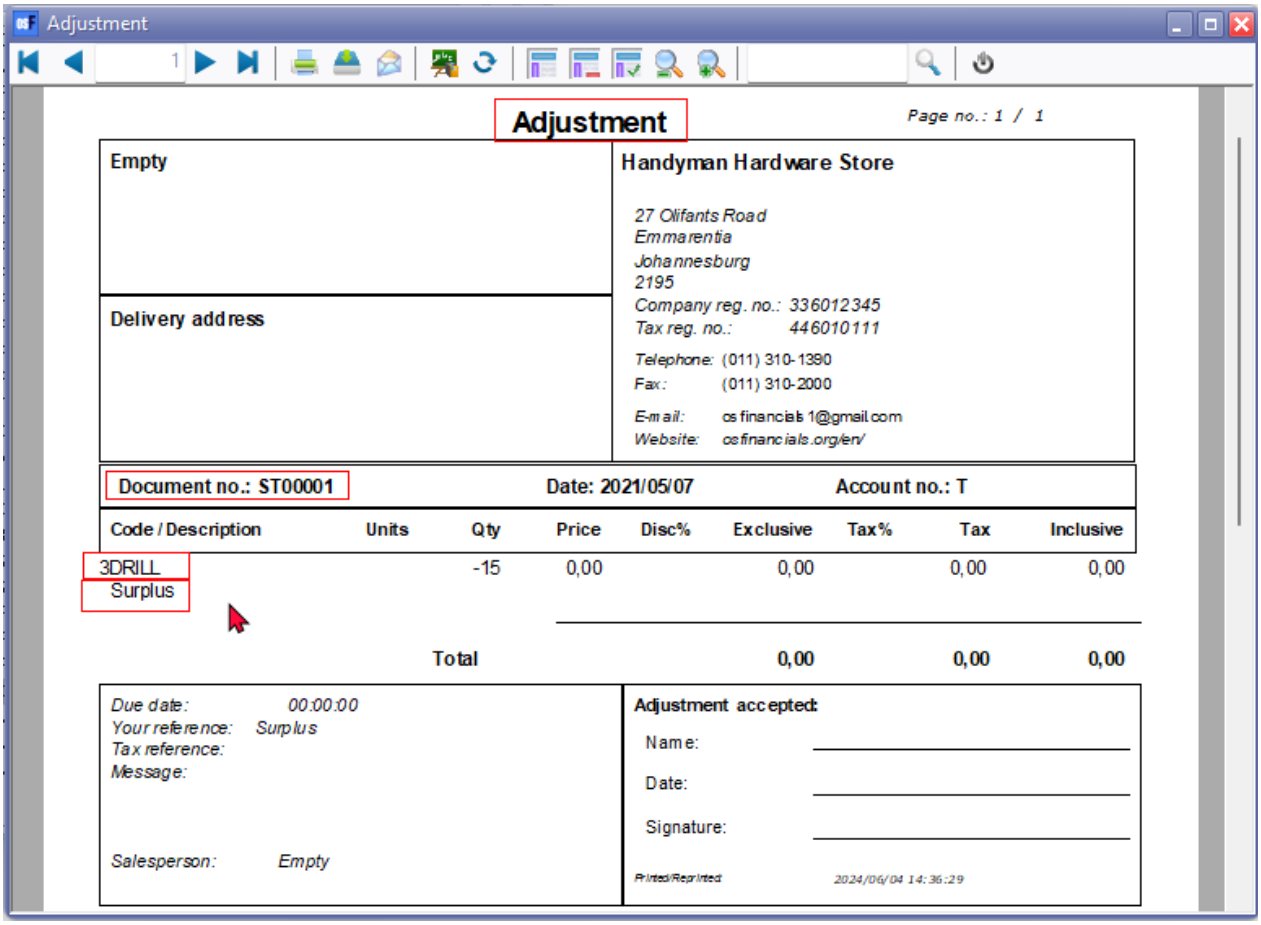


An option to change document numbers and customise descriptions such as "*Stock count correction*" for the StockCount plugin and "*Actief-Q-cor*" for the QuickOrder plugin.

Added : Layout files for NON-Standard document types : osFinanciald core

Adjustment - TRN_1767

Input → Adjust stock - Stock adjustments

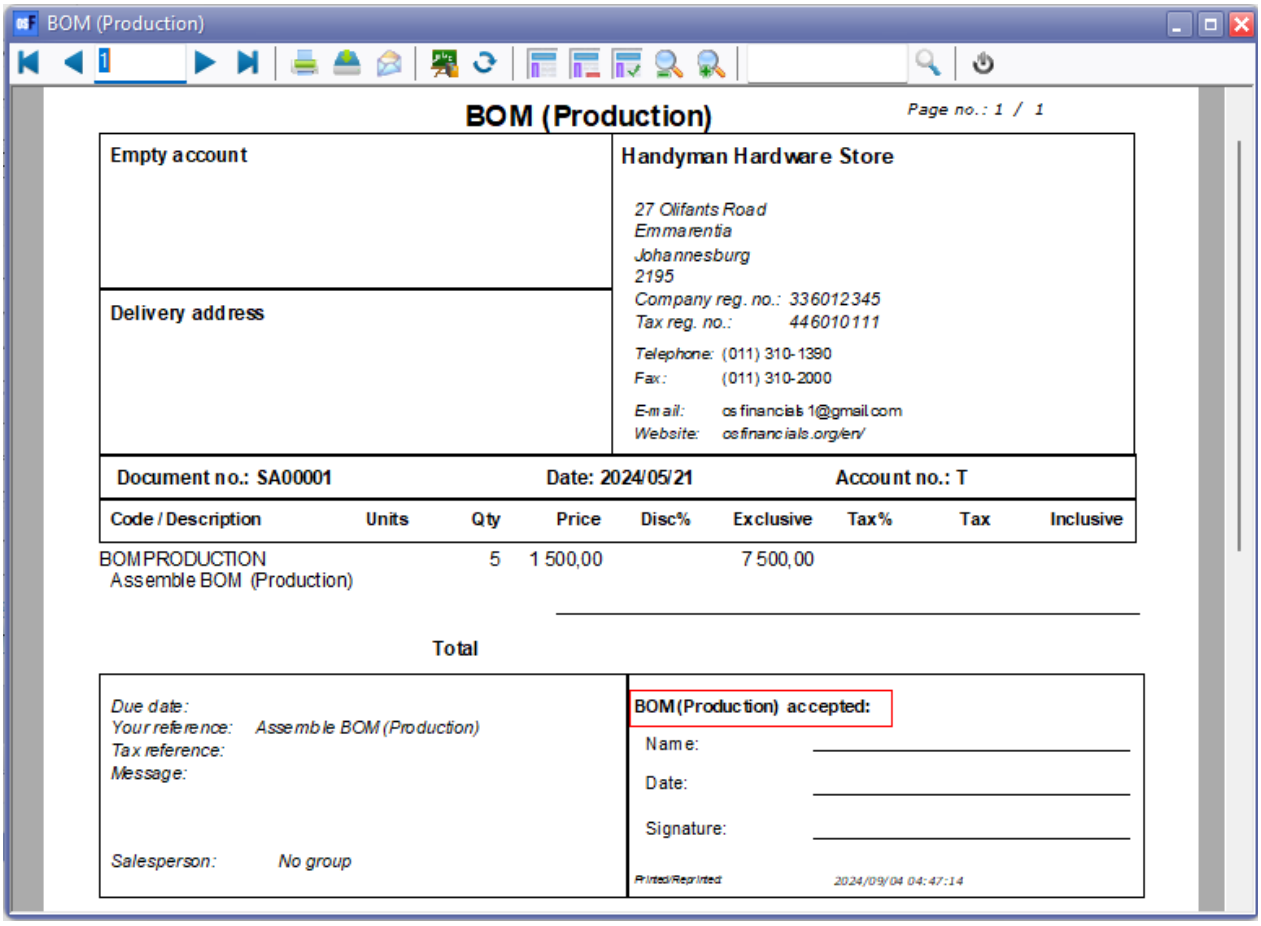


BOM (Production) Stock Item Type - TRN_3266

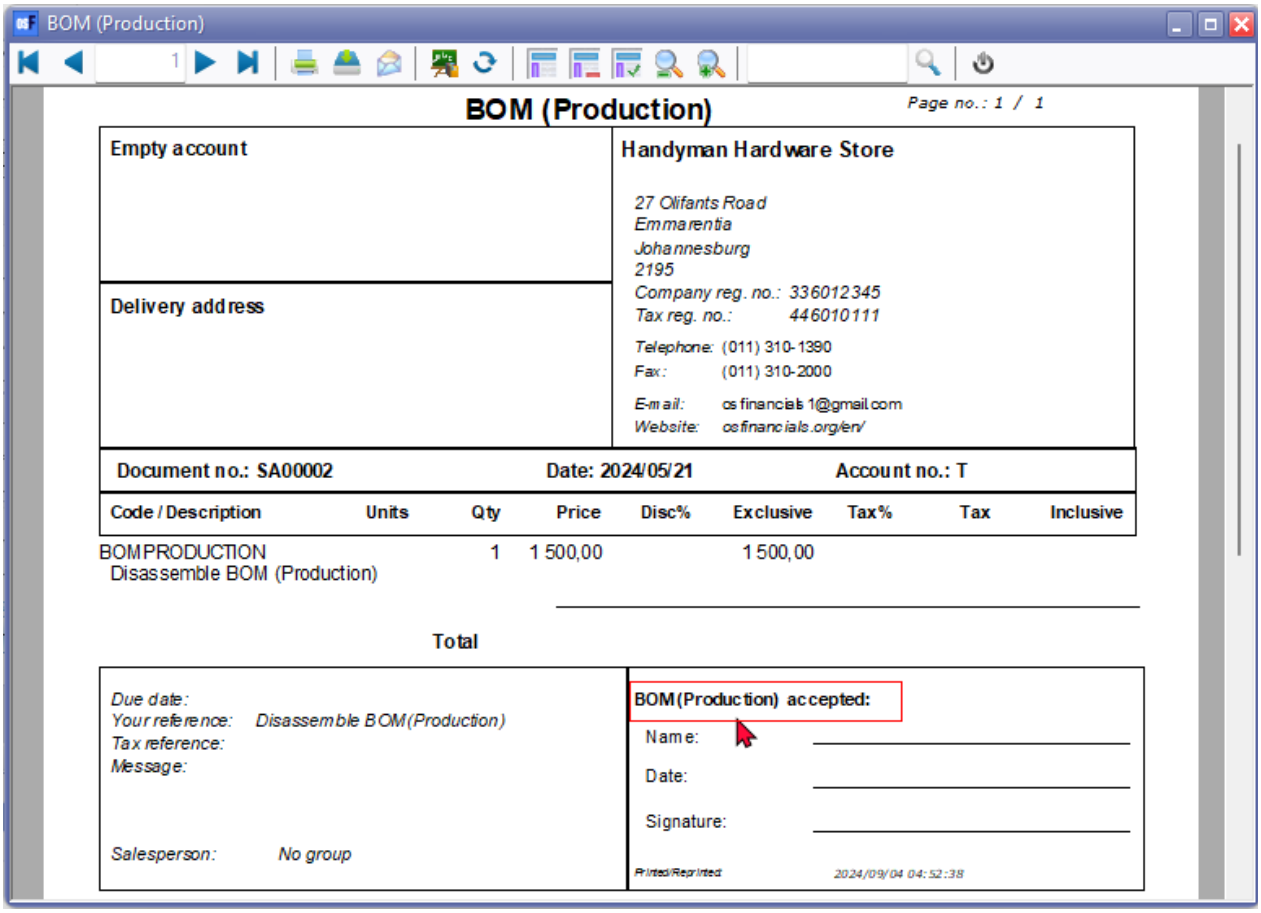
Generated as a posted document for BOM stock items during Assemble or Disassemble options on the context menu of a BOM (Production) stock item type.

Document prefix: "SA" (e.g., "SA00001"), with a similar 7-digit format.

BOM (Production) - Assemble



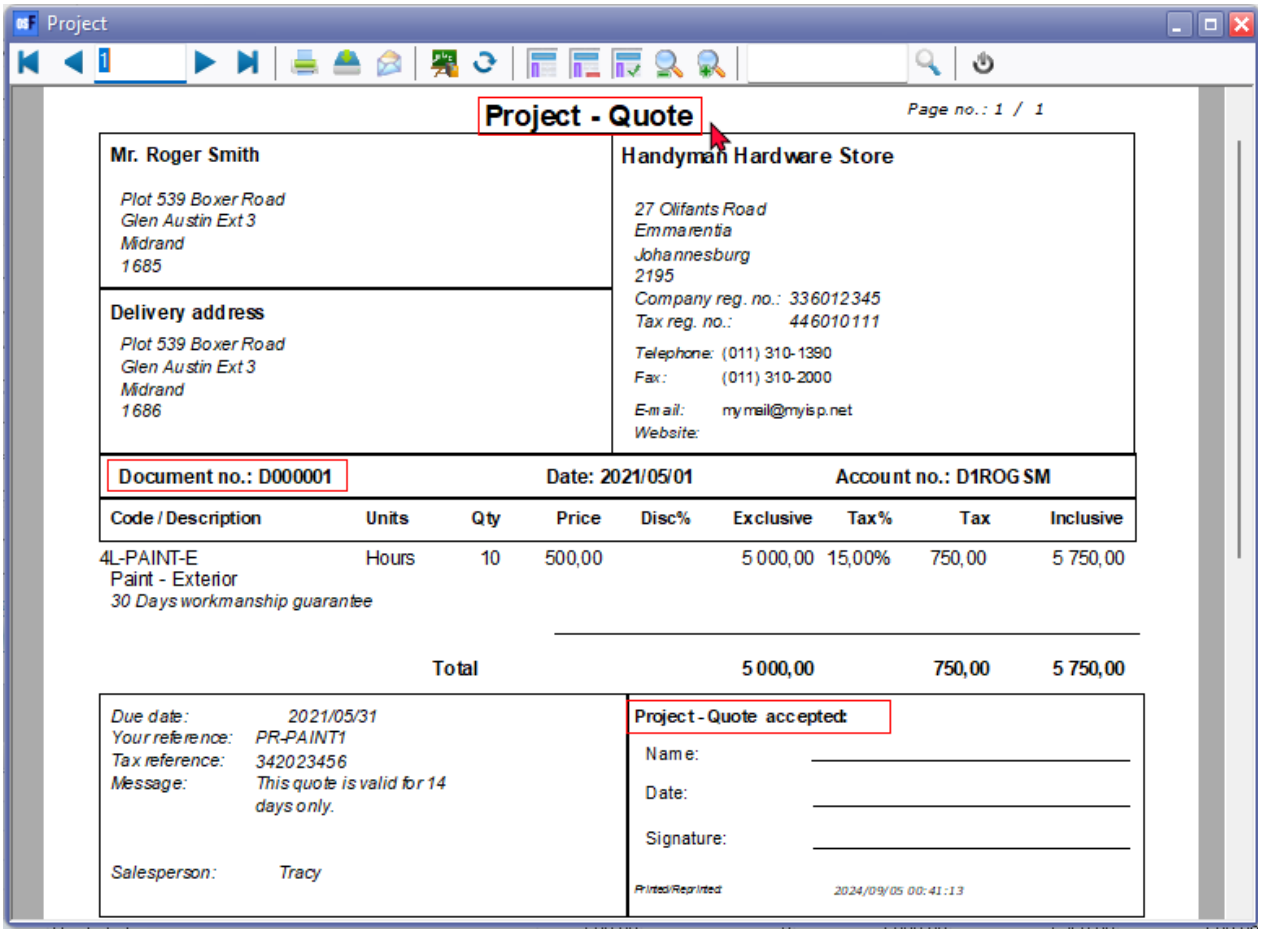
BOM (Production) - Disassemble



Project - TRN_3556 - Project - Quote

Created from the Project Quotes tab for specific Projects.

Document prefix: "D" (e.g., "D000001"), following a 7-digit format.



Layout files for NON-Standard document types : Plugins

Changing the Layout File for Point-of-Sale (POS) Documents

The default setting in the "*Point-of-sale layout file*" field on the "*Documents setup*" screen is "*POS - STARTSP100*," a till slip document layout file. To select a different layout file from the default document layout files included in the osFinancials installation or your own if you have created one, the document layout will be printed in that format.

When you alter the default Point-of-Sale (POS) layout file (or any other selected layout file), the changes will also impact documents generated with specific prefixes in various scenarios:

- *ST - Stock adjustments: Generated when stock quantities are modified within the Input → Adjust stock menu on the Default ribbon, these documents are prefixed with "ST," for example, "ST00001." Notably, the document number consists of 7 digits, including 4 zeros instead of 5.*
- *SA - BOM (Production) stock item type: Document numbers with the "SA" prefix, such as "SA00001," are generated for BOM (Production) stock items when they are Assembled or Disassembled. Similar to stock adjustments, the document number follows a 7-digit format with 4 zeros.*
- *D - Project Quotes: These documents are automatically created with a 7-digit format, starting with "D" followed by 6 numeric digits.*

the "*Point-of-sale layout file*" field on the "*Documents setup*" screen is "*POS -STARTSP100*,"

Print / Reprint document layout files

Documents can be printed/reprinted at any stage. To be able to print documents, you can select the document layout files stored in the " … \ *plug_ins* \ *reports* \ *DOCUMENTS* \ *DOCUMENTS* \ " directory or folder of your osFinancials5 installation on your system.

When you want to customize document layout files according to your requirements, it is recommended to make a copy of the existing document layout file, and save it under your unique name. To be able to select your own document layout files to print, print it must be " … \ *plug_ins* \ *reports* \ *DOCUMENTS* \ *DOCUMENTS* \" directory or file folder of your osFinancials5 installation stored on your system.

Options to print Document layout files

Documents may be printed / reprinted at any stage using the following options on the Default ribbon:

1. Documents - Selection screen (Print button). This will print the documents for the selected document for a specific document type.
2. Debtors (Documents tab) - Select a list on a document and print it. Allows you to search and filter for and locate specific document.
3. Creditors (Documents tab) - Select a list on a document and print it. Allows you to search and filter for and locate specific document.
4. Stock items (Document groups tab of a selected stock item) - Select a document and double-click to print it.
5. Search (Investigator) – Search and double click on a document.

Select layout files

Layout files for Standard document types

The layout files selected for each document type on the Setup → Documents setup menu (Setup ribbon) are the global default layout files that will be used to print documents. You may select up to two (2) Layout files for each document type (i.e. Quotes, Invoices, Credit notes, Orders, Purchases and Supplier returns).

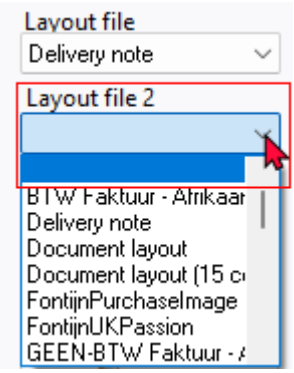
Specific layout files may also be selected on the Default ribbon for:

1. Debtors - Delivery address tab - Each debtor (customer / client) account by selecting a different layout file in the Layout file 1 (Invoices), Layout file 2 (Credit notes), Layout file 3 (Quotes).

2. Creditors - Delivery address tab - Each creditor (supplier / vendor) account by selecting a different layout file in the Layout file 1 (Purchases), Layout file 2 (Supplier return), Layout file 3 (Orders).

The global settings will be over-ruled.

In addition to these settings, you may also select a different layout file when printing documents on the "*Layout file*" fields of the following options (Default ribbon):

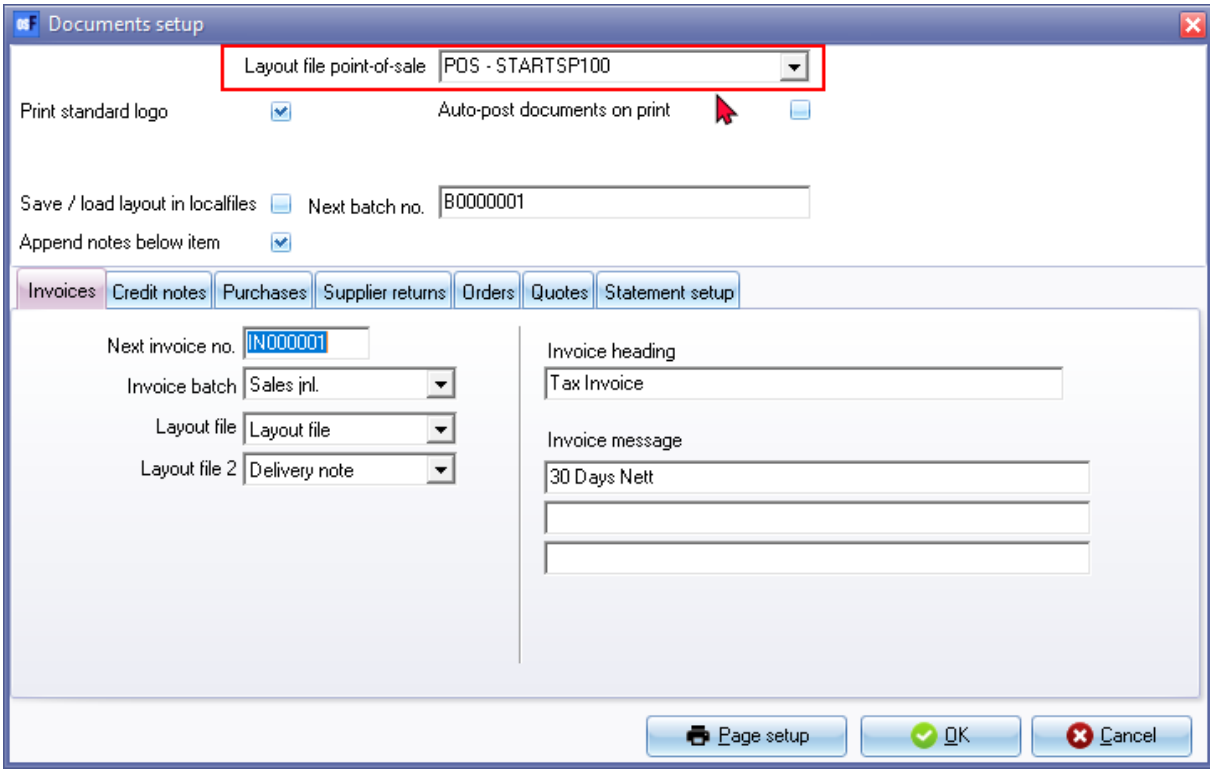


- Documents - Selection screen (Print button) - You may select up to four (4) layout files. If you have selected a layout file for Layout file 2, Layout file 3 and/or Layout file 4, and you no longer want to print these layout files, you can select the blank option.
- Debtors (Documents tab)
- Creditors (Documents tab)

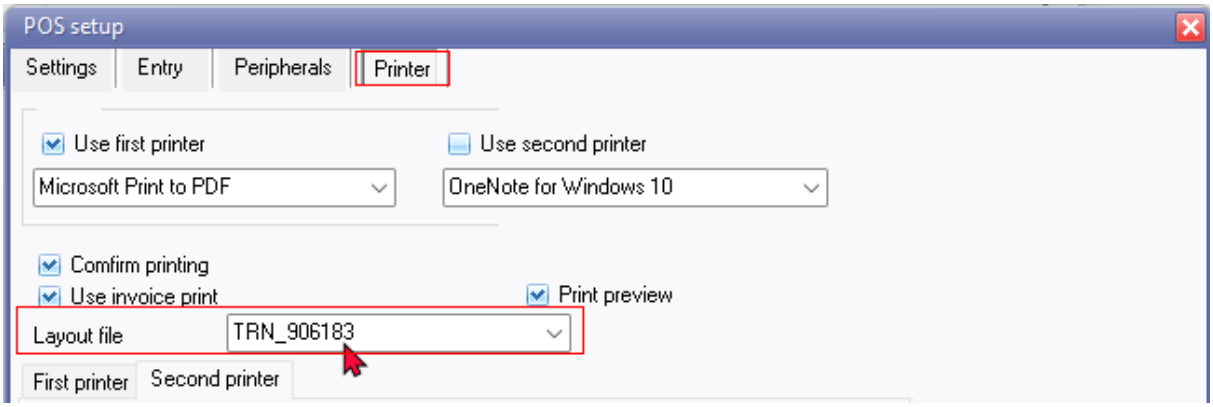
Point-of-sale layout file setting in Documents setup

Standard POS system (Input → POS Invoice [Ctrl+F6])

The default setting in the "*Point-of-sale layout file*" field on the Documents setup screen is "*POS - STARTSP100*," a till slip document layout file. To select a different layout file from the default document layout files included in the osFinancials installation or your own if you have created one, the document layout will be printed in that format. This file is specifically used for till slip documents, printed as "*POS Tax Invoice*" when using the standard POS system (Input → POS Invoice [Ctrl+F6]).



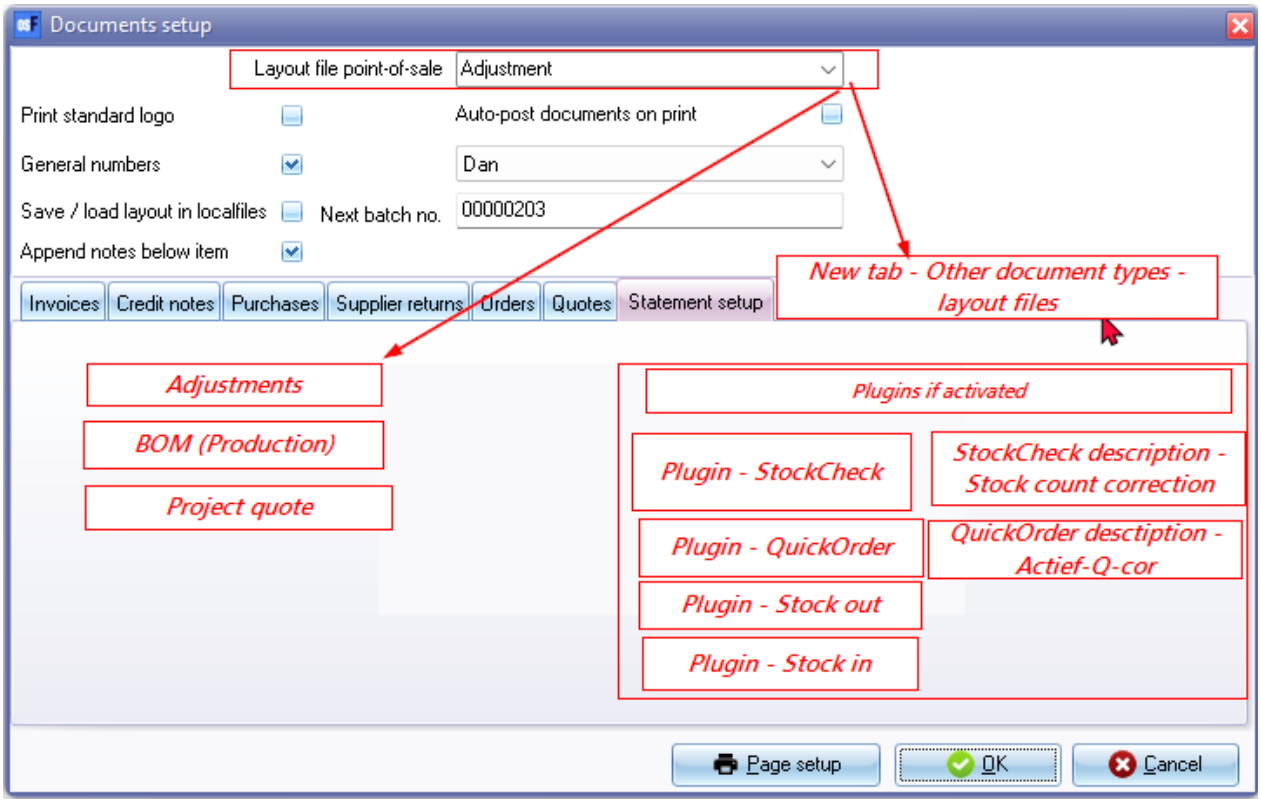
In the central search (Search on the Default ribbon), it will print this "*POS - START-SP100*" (TRN_906183). If any other layout file, is selected. the name of the report is not translated, but will display for example TRN_906183 in Setup → Point of-Sale - Printers tab



Changing the layout file in Setup → Documents setup will update the layout file in Setup → Point of-Sale - Printers tab but it still prints Stock in and Stock out using the POS - START-SP100 (TRN_906183) layout file.

Layout files for NON-Standard document types

In addition to the global setting for the six standard document types (i.e. Quotes, Invoices, Credit notes, Orders, Purchases and Supplier returns), layout files selected for each document type on the Setup → Documents setup menu (Setup ribbon), the "*Point-of-sale layout file*" field on the Documents setup screen could also be used to change layout files for NON-Standard document types in the osFinancials core and when specific plugins are activated.



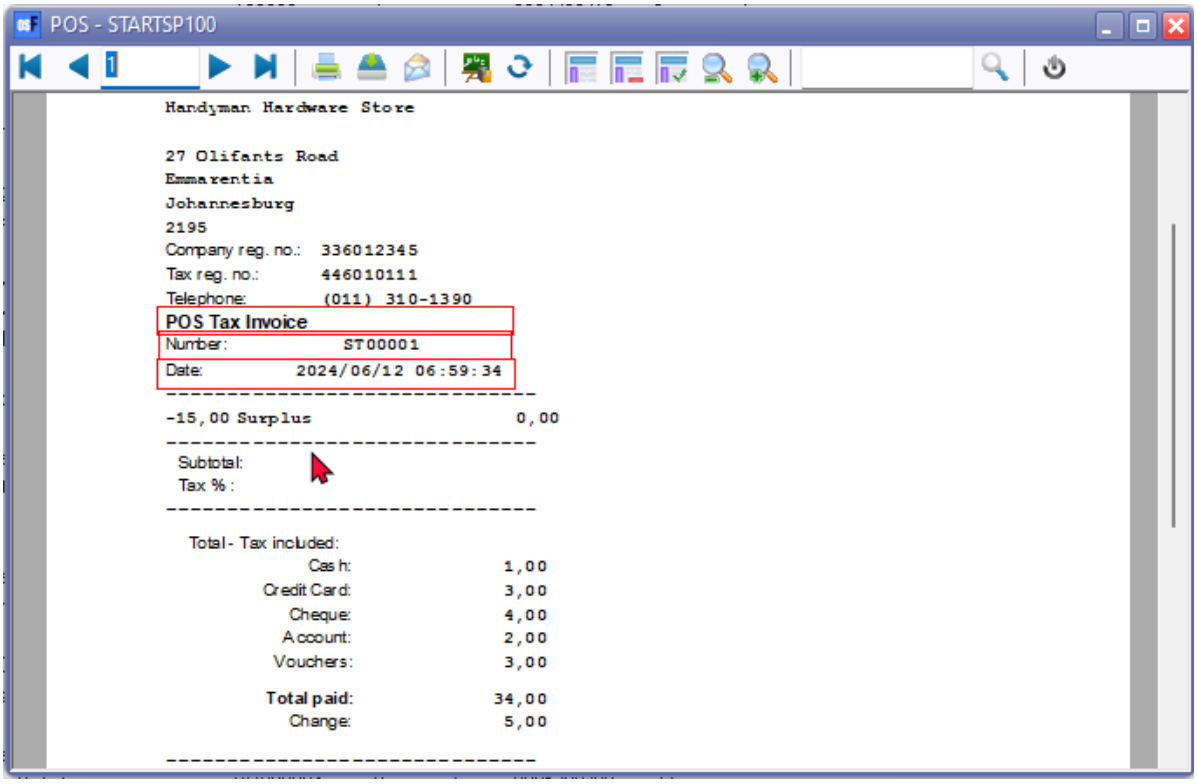
An option to change document numbers and customise descriptions such as "*Stock count correction*" for the StockCount plugin and "*Actief-Q-cor*" for the QuickOrder plugin.

Document Scenarios and Prefixes in the Core

Stock Adjustments (ST)

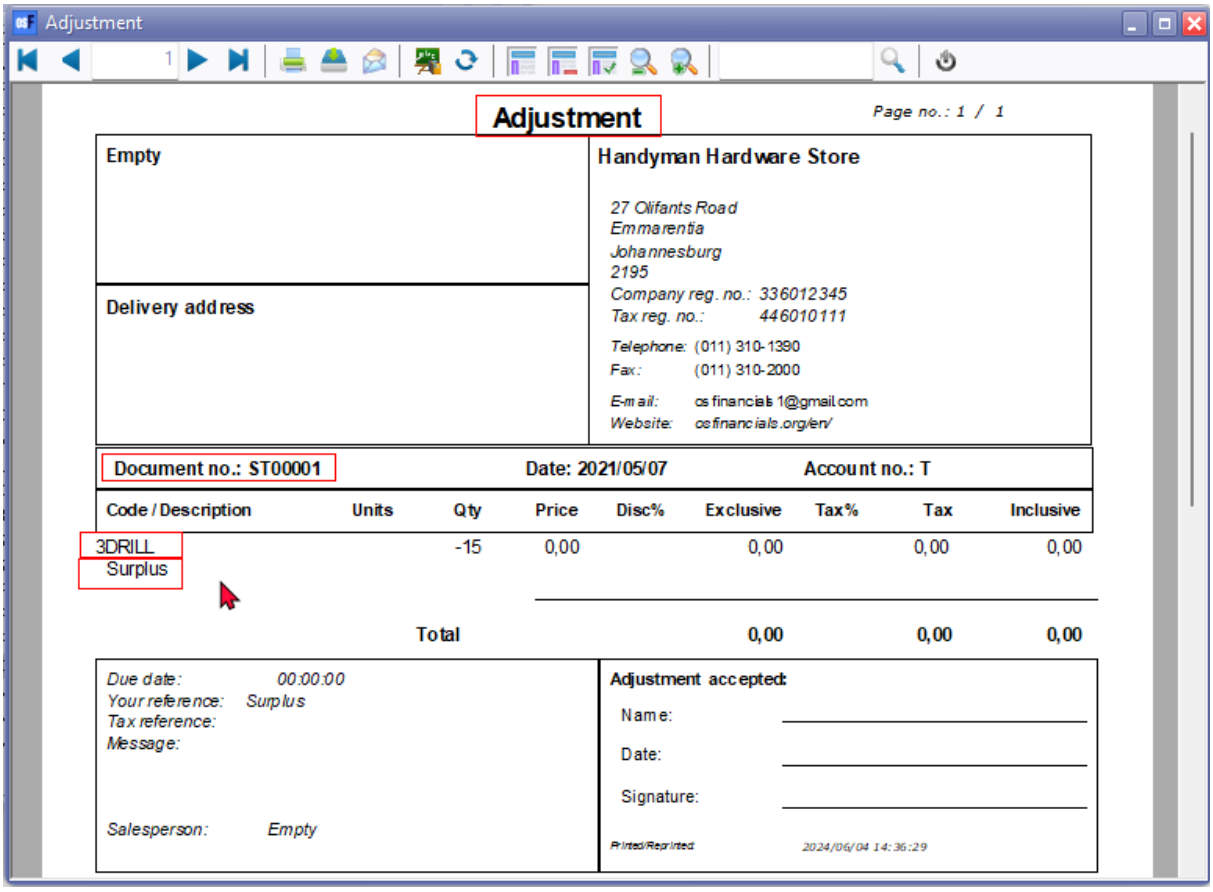
- Generated as a posted document when stock quantities are adjusted (via Input → Adjust stock menu or by manually changing stock quantities on the stock item grid).
- Document prefix: "*ST*" (e.g., "*ST00001*"), with a 7-digit format including 4 zeros.
- Remarks entered in the "*Change remark*" screen (e.g., "*Surplus*" or "*Shortage*") or "*Auto correction*" are reflected in these documents.
- Selecting a different layout file on the "*Point-of-sale layout file*" field of the Documents setup screen, still defaults to the POS Invoice. This setting may not work as the alignment of the Document type on the Document groups tab of the Stock item reflected as Stock- and on the Reports → Stock In / Out reports it is reflected as Stock in. On Search (central search) the Details is reflected as Stock out Details.
- NOTE: The default POS Invoice does not include the Stock code. The Stock description will be replaced with remarks such as "*Surplus*", "*Shortage*" or "*Auto correction*".

Example : Adjustment (POS Layout file)



- NEW Layout file Added: Adjustment - TRN_1767 - This translatable layout file is specifically designed for adjustment documents, ensuring that all necessary details, including the stock code, are accurately represented and the document is correctly labelled as an "*Adjustment.*"

Example : Selecting Adjustment layout file - Adjustment (TRN_1767)



- Selecting Other Layout files to Print Adjustments: To print this document layout file; or other translatable document layout files for these stock adjustments, you can go to the Report designer and select the adjustment document from the Select test document id button and select the layout file such as "*Adjustment*" or any other layout file which includes the stock code such as Document layout (15codes) - (TRN_906277) or NO-TAX Document layout (15codes) - (TRN_906591). NOTE: The following layout files does not include the Stock code:
  - Layout file - (TRN_1910)
  - Document layout - (TRN_3174)
  - NO-TAX Layout file - (TRN_906589)
  - NO-TAX Document layout - (TRN_906590)

  NOTE : The stock code and stock description are not printed on these layout files. As a result, there is no audit trail to link or trace the stock items from these printed layout files.

BOM (Production) Stock Items (SA)

- Generated as a posted document for BOM stock items during Assemble or Disassemble options on the context menu of a BOM (Production) stock item type.
- Document prefix: "*SA*" (e.g., "*SA00001*"), with a similar 7-digit format.
- Selecting a different layout file on the "*Point-of-sale layout file*" field of the Documents setup screen,

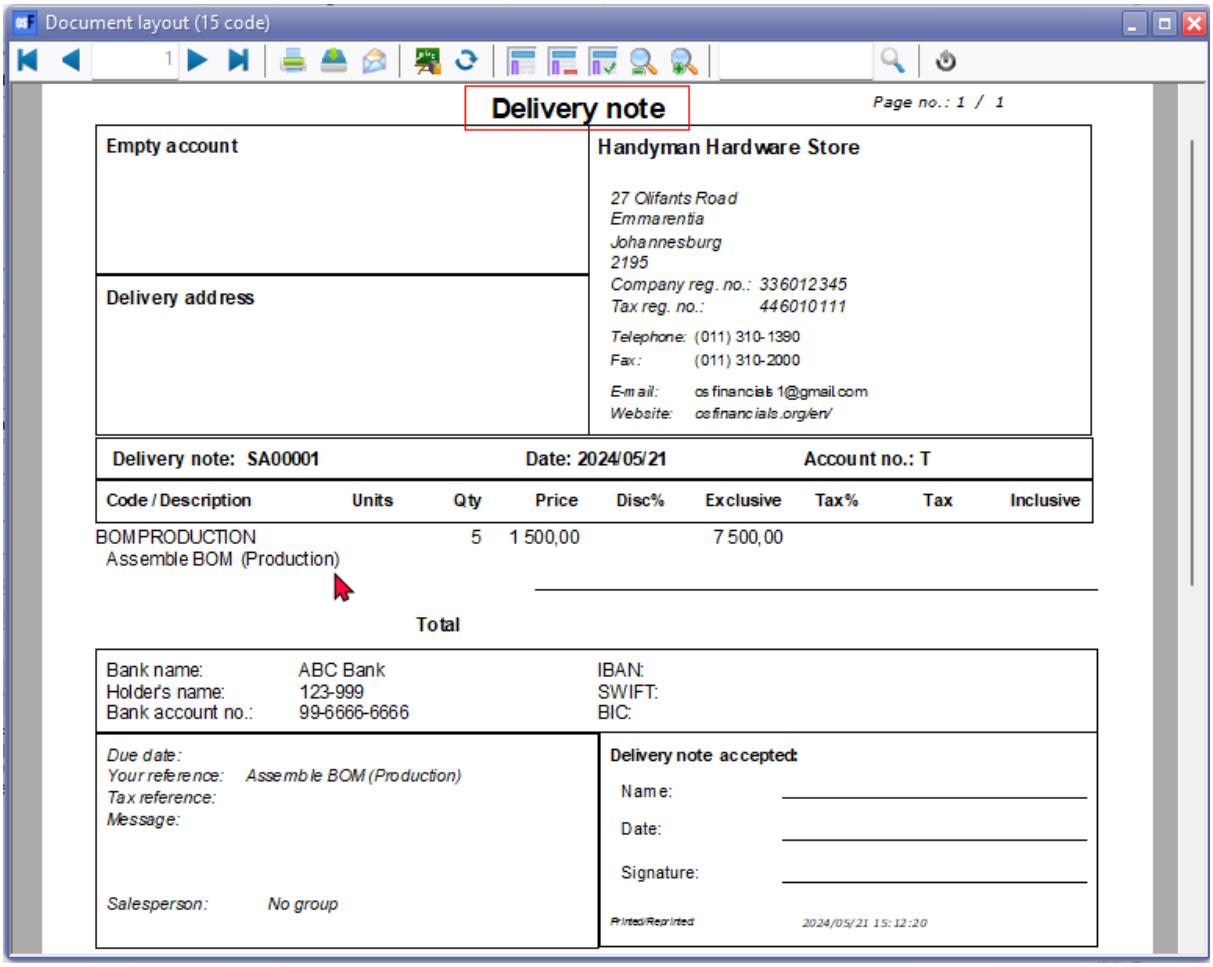
prints the "*Assemble*" or "*Disassemble*" options on the selected document layout file. If a document layout file supporting the "*TYPES.SDESCRIPTION*" document name from the "*TYPES*" table, will print the document name as "*Delivery note*" for "*Assemble*" option and "*Remittance*" for "*Disassemble*" option.

Example : Selecting existing layout files - Types description

Selecting the document layout files, which supports the " *TYPES.SDESCRIPTION*" document name from the "*TYPES*" table, will print the document name as "*Delivery note*" for "*Assemble*" option and "*Remittance*" for "*Disassemble*" option.

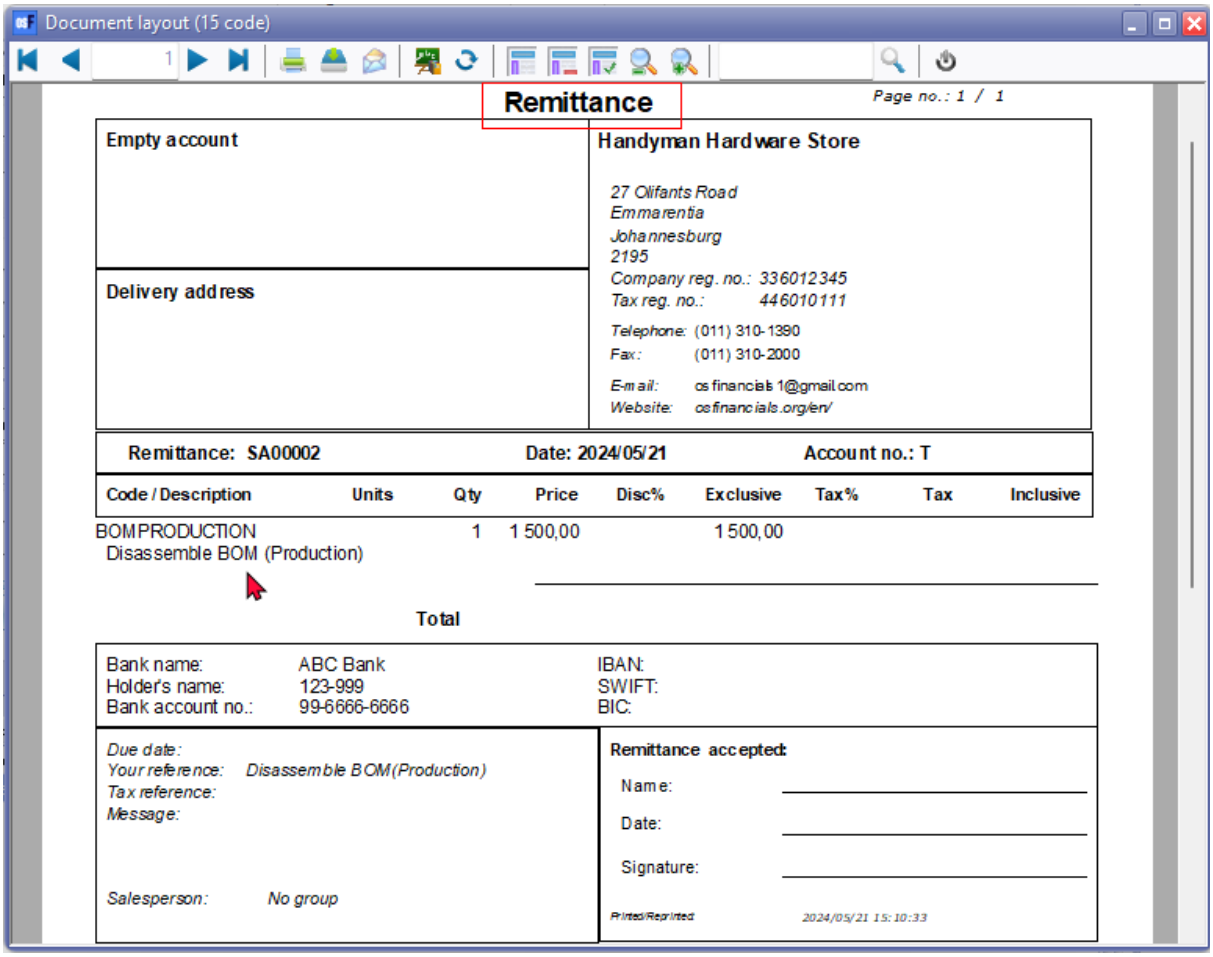
Example : Selecting existing layout files - Types description - Assemble

TYPES table - Delivery note - RecordID = 19 - WTYPEPARENT = 1



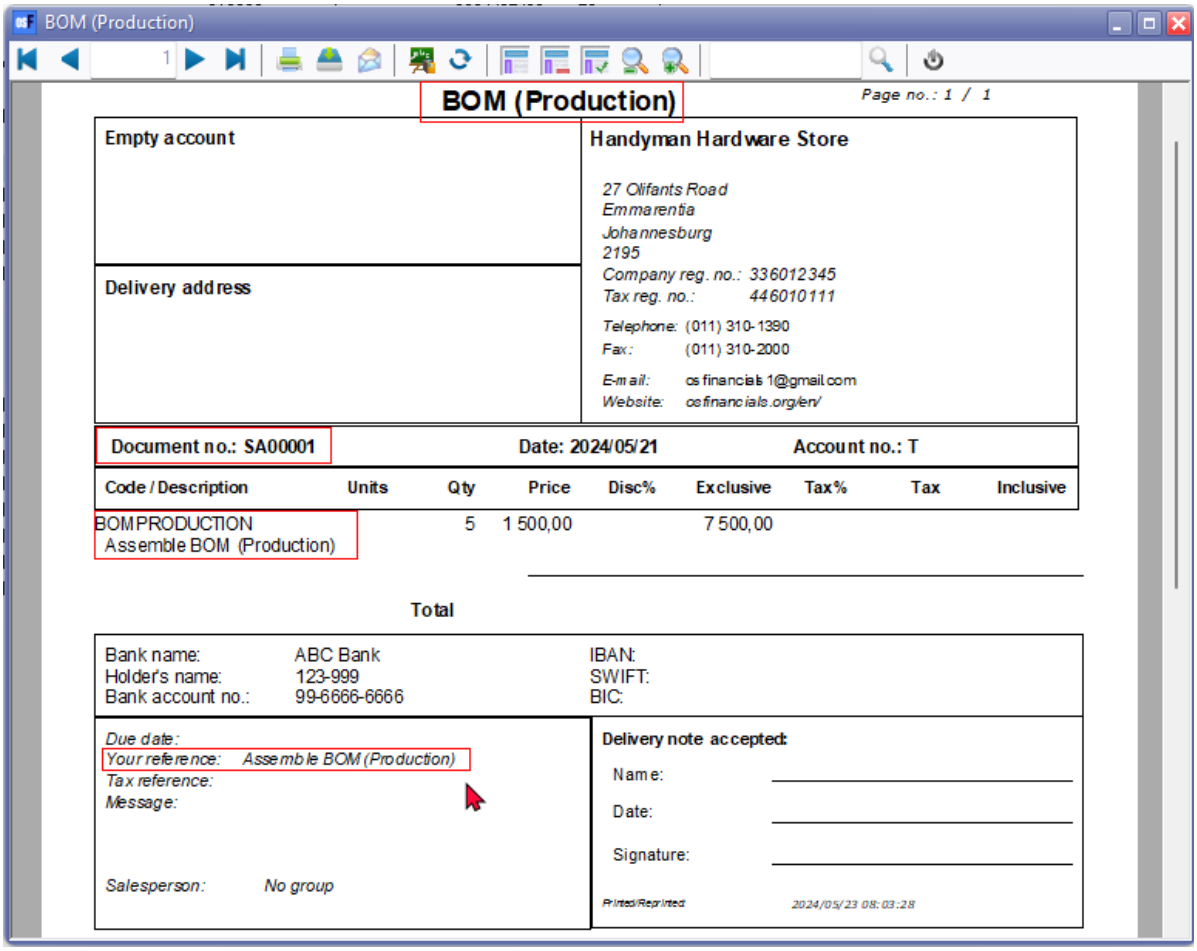
Example : Selecting existing layout files - Types description - Disassemble

TYPES table - Remittance - RecordID = 18 - WTYPEPARENT = 1

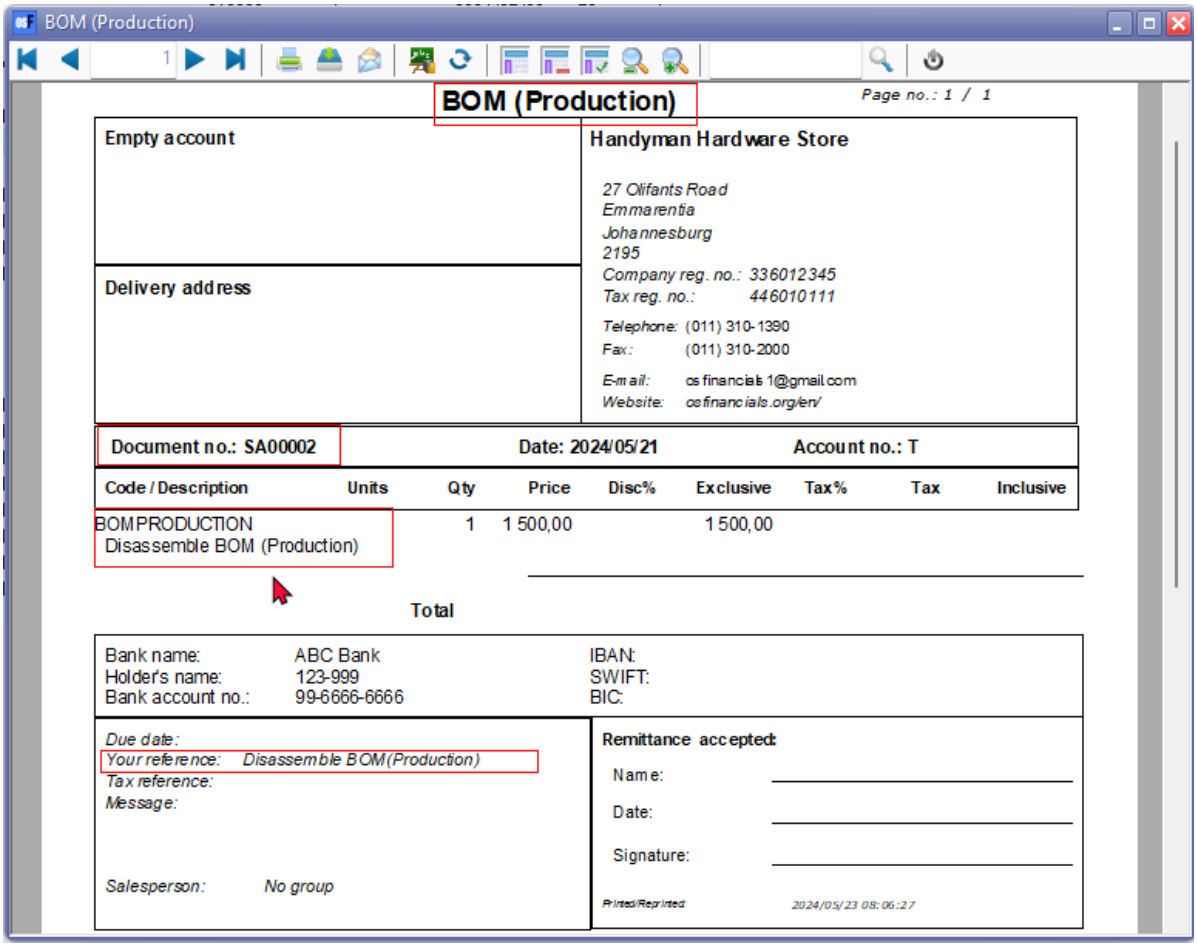


- NEW Layout file Added: BOM (Production) Stock Item Type - TRN_3266 - This translatable layout file will print the document name as BOM (Production) with the applicable "*Assemble*" or "*Disassemble*" options.

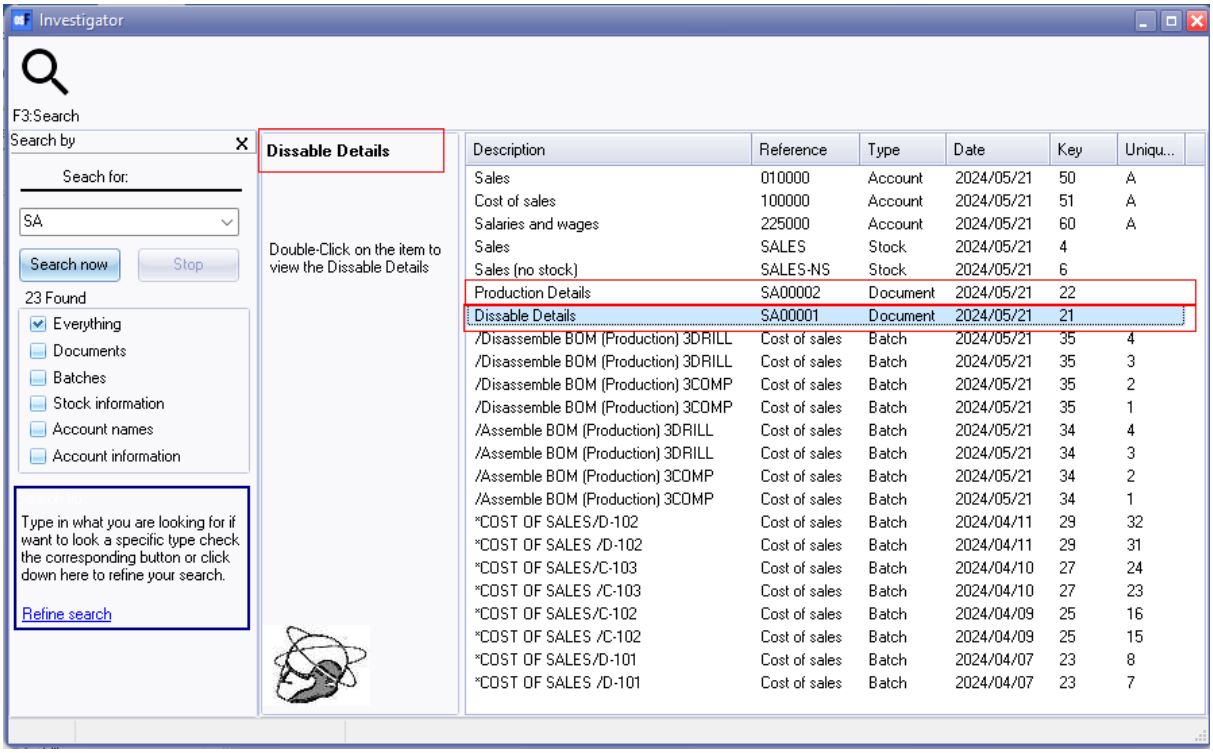
Example : BOM (Production) Assemble - Layout file (TRN_3266)



Example : BOM (Production) Disassemble - Layout file (TRN_3266)

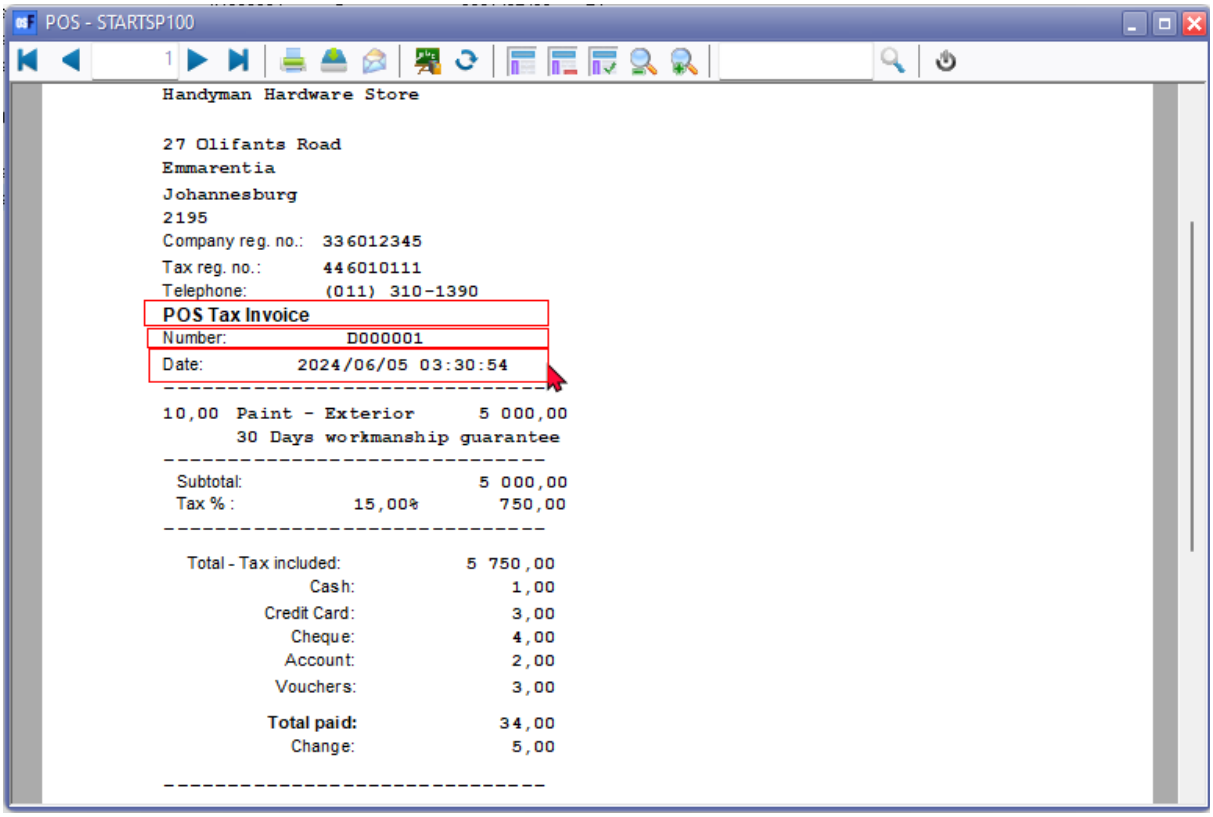


- On Search (central search) the Details is reflected as follows:
  - Dissable Details - Should be "*Production Details*" since the document e.g. "*SA00001*" is created using the "*Assemble*" option. The document type is listed as "*Assemble*" on the Document groups and Transactions tabs of the stock item for the BOM (Production) stock item type and in Reports → Stock In / Out reports.
  - Production Details - Should be "*Disassemble Details*" since the document e.g. "SA00002" is created using the "*Disassemble*" option. The document type is listed as "*Disassemble*" on the Document groups and Transactions tabs of the stock item for the BOM (Production) stock item type and in Reports → Stock In / Out reports.



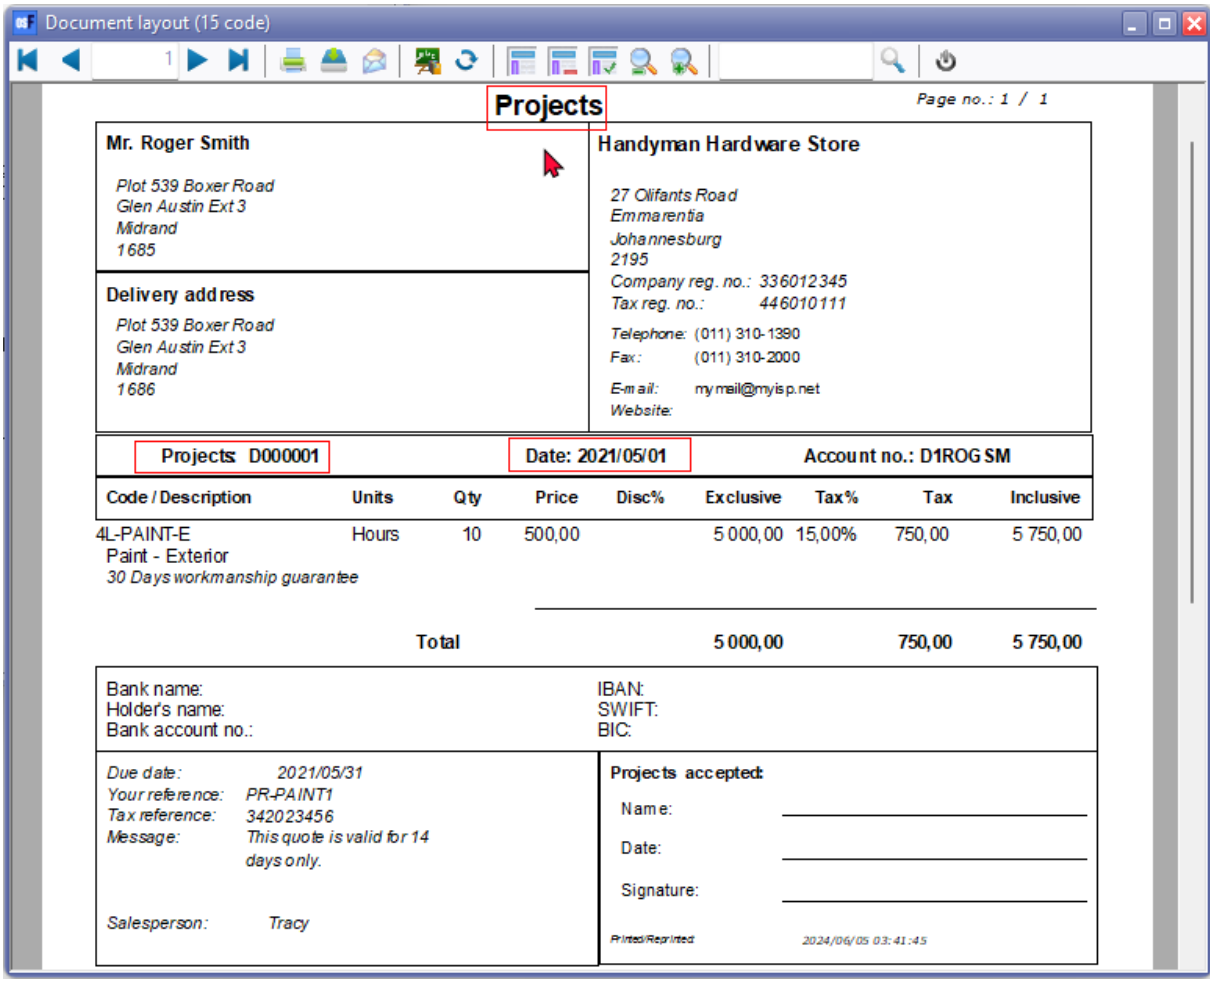
Project Quotes (D)

- Created from the Project Quotes tab for specific Projects.
- Document prefix: "*D*" (e.g., "*D000001*"), following a 7-digit format.

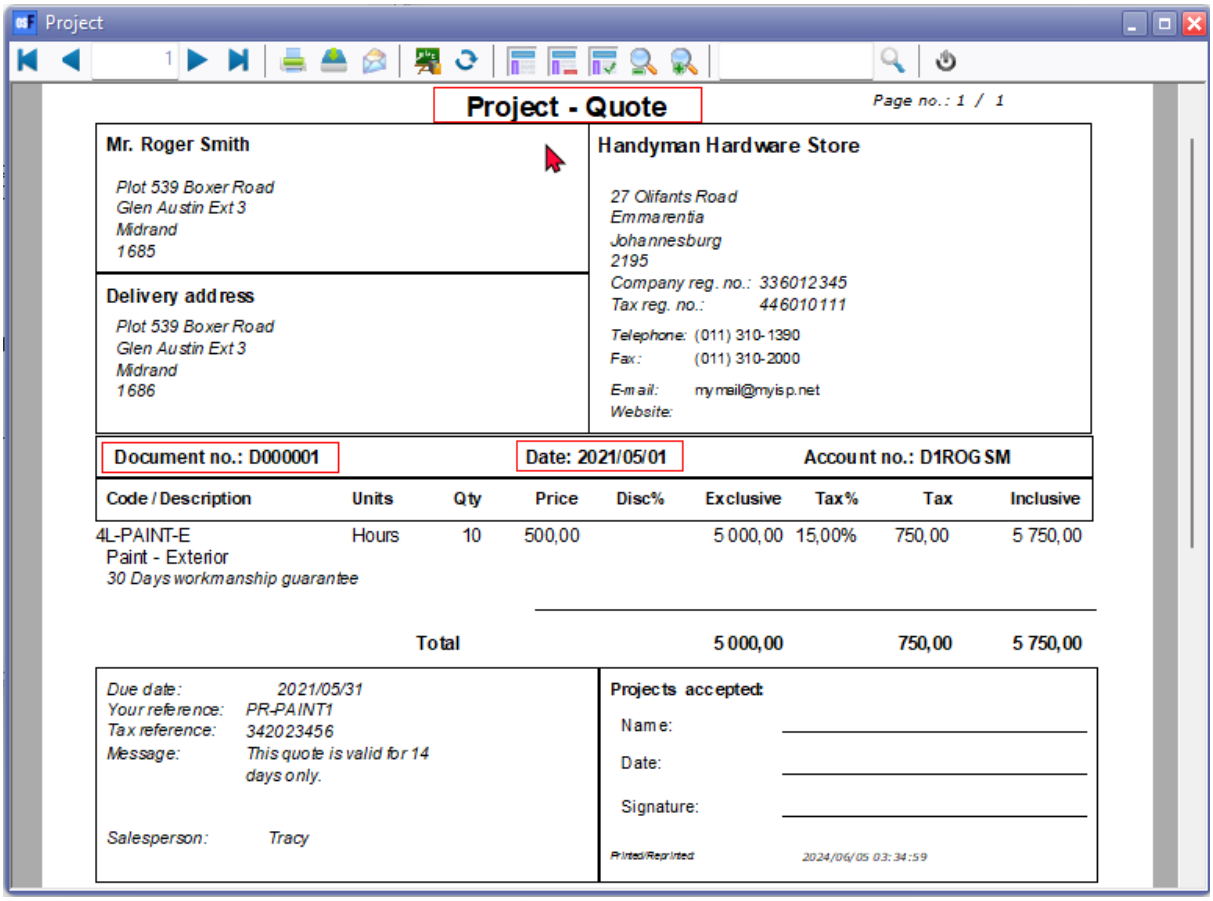


- Selecting a different layout file on the "*Point-of-sale layout file*" field of the Documents setup screen,

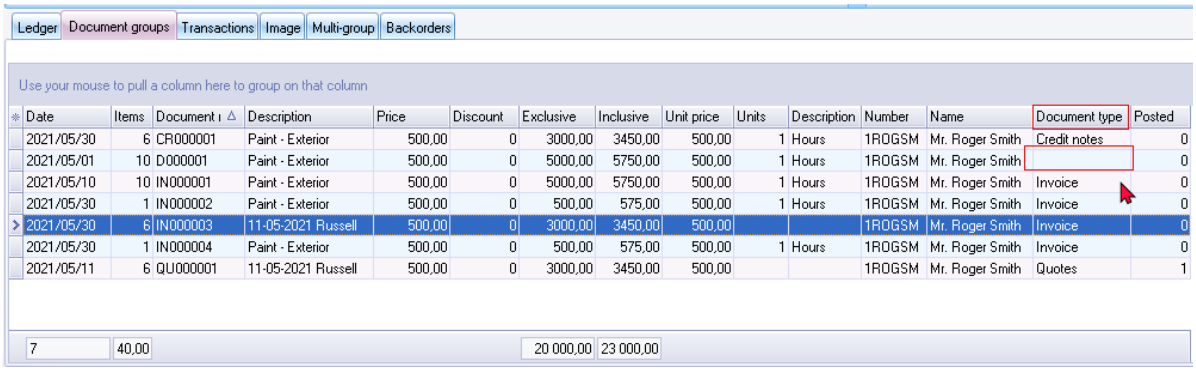
prints the "*Projects*" on the selected document layout file. If a document layout file supporting the "*TYPES.SDESCRIPTION*" document name from the "*TYPES*" table, will print the document name as "*Projects*" for for project quotes. This does not reflect Project quote, except for the document number prefixed by "*D*" (e.g., "*D000001*").



- NEW Layout file Added: Project - TRN_3556 - Project - Quote - This translatable layout file is specifically designed for project quotes documents, ensuring that all necessary details are accurately represented and the document is correctly labelled as an "*Project - Quote*". NOTE: The document name "*Project - Quote"* is singular since it only includes a specific "*Project - Quote*".



- On the Document groups tab of the Stock item and on the Reports → Stock In / Out reports, the Document type is blank (empty). On Search (central search) the Details is reflected as Invoice Details.



Comparison / Notes of Stock adjustments and plugins

Document type *Document*	*Reports -> Stock In / Out Docu*	*Document number prefix*	*Search central - Document type*	*Posted / Unposted*	*Your reference*	*Item description*	*Layout file heading*

	group s tab	ment type

Document Scenarios and Prefixes in Plugins

Various plugins extend the functionality and support for different document types.

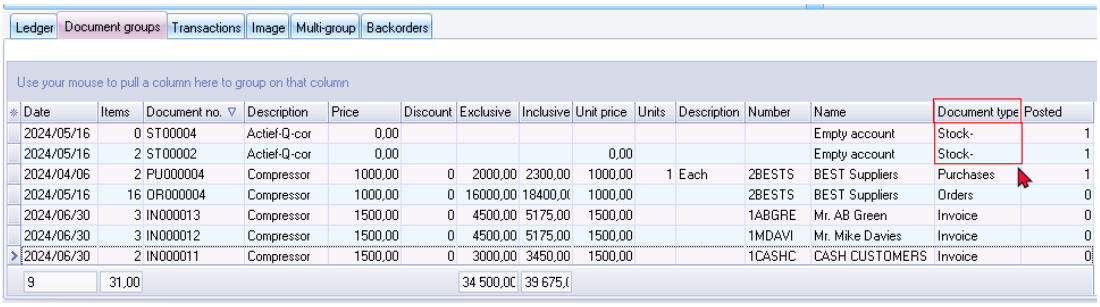
QuickOrder Plugin

Order corrections

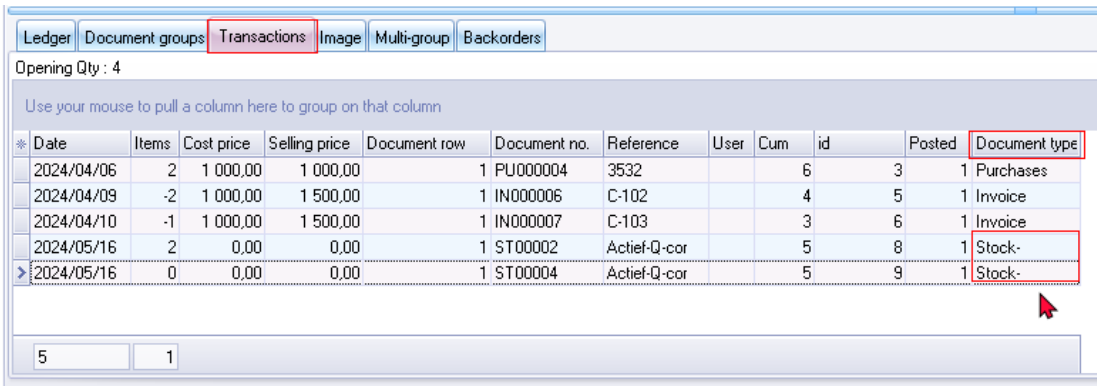
When Stock quantities are adjusted on the StockCount tab (Voorraadtelling tab).

- Document prefix: "*ST*" (e.g., "*ST00001*"), with a 7-digit format including 4 zeros).
- Description: The description is automatically generated as "*Actief-Q-cor*".
- Print Order Corrections:
  - Layout file setting: Selecting a different layout file on the "*Point-of-sale layout file*" field of the Documents setup screen, does not work. It still prints the document using the POS - STARTSP100 "*POS Tax Invoice*" on the selected document layout file.
  - Print options: Can be printed from the following options:
    - Stock item form - Document groups tab: Double-click the document.
    - Stock item form - Transactions tab: Double-click the document.
    - Search (Default ribbon): On the central search, find the reference ("*Actief-Q-cor*"), document number, or prefix ("*ST*"), and double-click on the document. The document type will be indicated as "Stock out Details".
  - Print using different layout file: To print translatable documents for these stock adjustments or corrections, you can go to the Report designer and select the adjustment document from the Select test document id button and select the layout file such as "*Adjustment*" or any other layout file which includes the stock code such as Document layout (15codes) - (TRN_906277) or NO-TAX Document layout (15codes) - (TRN_906591). NOTE: The following layout files does not include the Stock code:
    - Layout file - (TRN_1910)
    - Document layout - (TRN_3174)
    - NO-TAX Layout file - (TRN_906589)
    - NO-TAX Document layout - (TRN_906590)
- Document type: Search (central search) the Details is reflected correctly as Stock out Details and on the Document groups tab and Transactions tab of the Stock item it is reflected as Stock-.

  Stock item - Document groups tab - Document type = Stock-



Stock item - Transactions tab - Document type = Stock-



QuickOrder - Orders

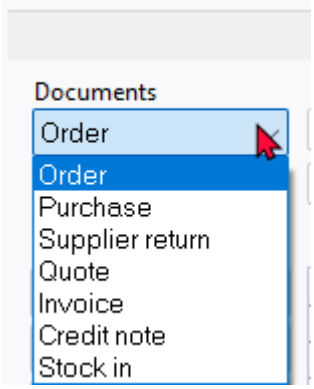
QuickOrder Plugin generates Orders on the Generate (Aanmaken) tab.

- Document prefix: "*ST*" (e.g., "O*R000001*"), with a 8-digit format including 5 zeros).
- Orders will be generated for the default supplier as set in the "*Preferred supplier1*" field of the Stock item form.
- Orders may be edited and confirmed (converted to a purchase document).
- Print Orders: Orders generated by the QuickOrder Plugin will by default print to the layout file selected on the Orders tab within Setup → Documents setup or the layout file selected "*Layout file 3*" field of the Delivery address tab of the Creditor account.

Dynareg Plugins

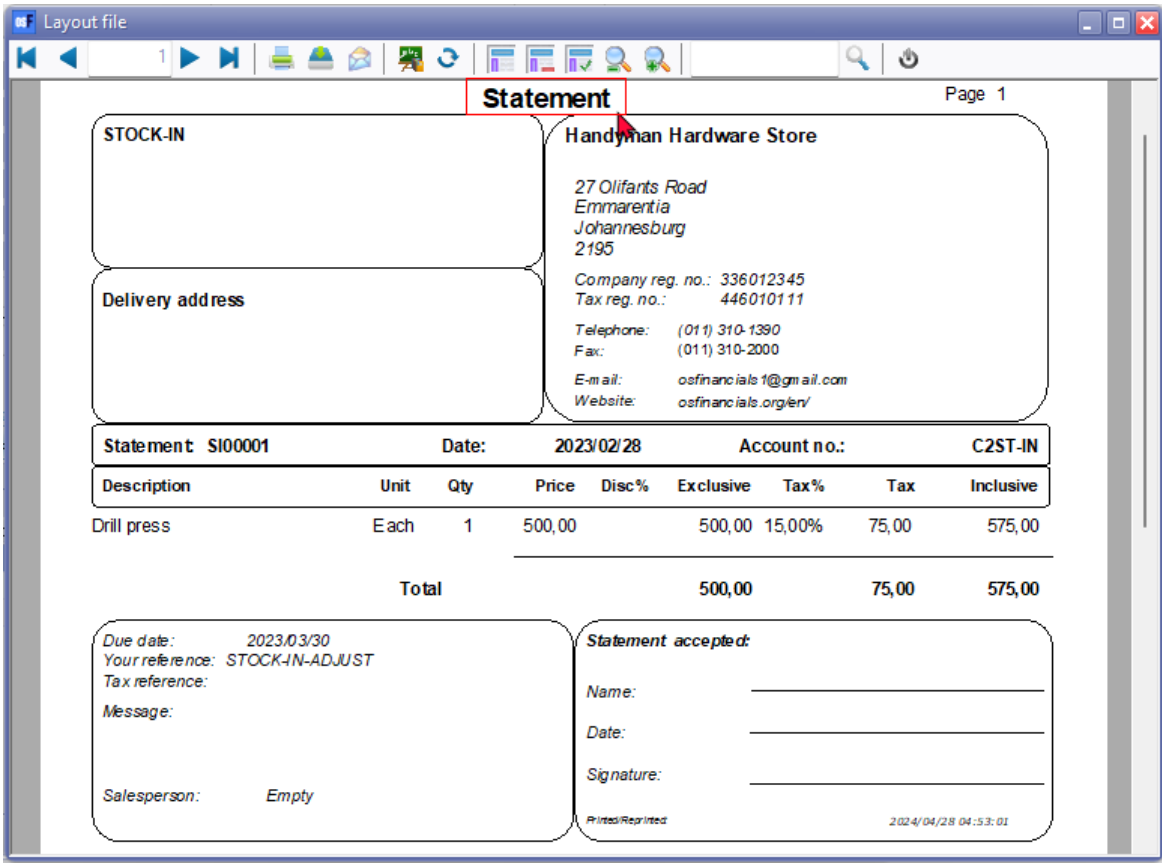
Stock in Document type

- Dynareg - Stock in document type - One additional document type Stock in. Documents processed for the Stock in document type.



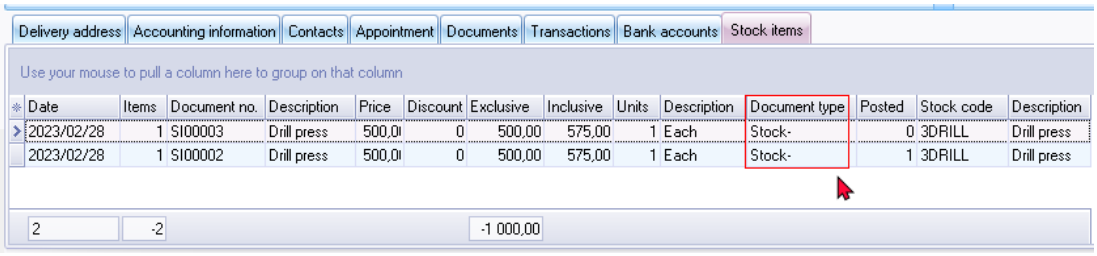
- Document prefix: "*SI*" (e.g., "*SI00001*"), with a 7-digit format including 4 zeros).
- Document type: Stock in - Can be selected on the Document grid in addition to the six standard document types (i.e. Quotes, Invoices, Credit notes, Orders, Purchases and Supplier returns),
- New document: Select creditor account.
- Input menu: Input → Stock out launches the document entry as a separate window and lists all documents processed in the Documents grid for the Stock in document type. The Input → Stock out menu option should read Input → Stock in.
- Print documents: Selecting a different layout file on the "*Point-of-sale layout file*" field of the Documents setup screen, does not work. It still prints the document name as "*Statement*" on the selected document. If a document layout file supporting the "*TYPES.SDESCRIPTION*" document name from the "*TYPES*" table, will print the document name as "*Statement*" for the Stock in document type. To print the Stock in documents, you can select a different layout file from the Documents grid or from the Documents tab of the Creditor account.

> TYPES table - Statement - RecordID = 17 - WTYPEPARENT = 1

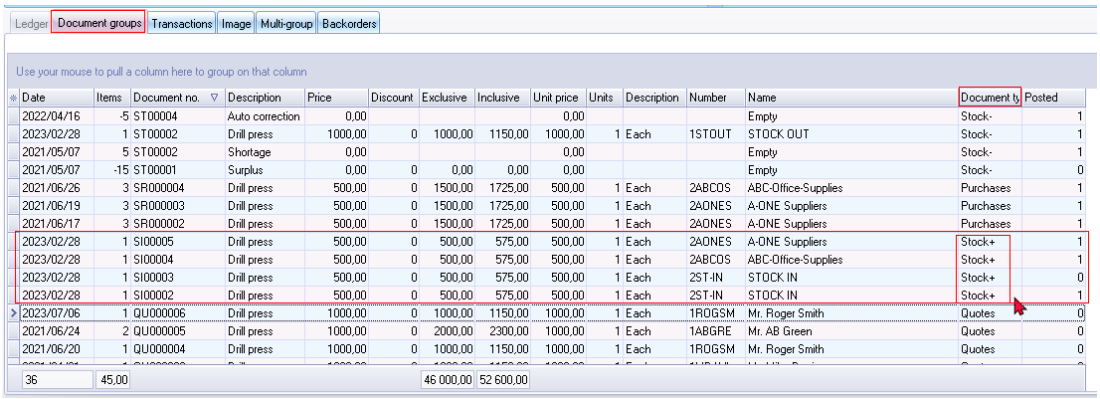


- On Search (central search) the Details is reflected correctly as "Stock in Details" and on the Stock item tabs of the Creditor account, the document type is Stock-. On the Document groups tab of the Stock item it is reflected as Stock+.

Creditors - Stock item tab - Document type = Stock-

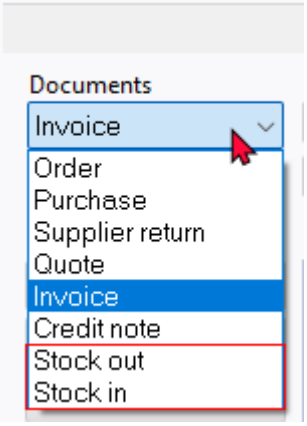


Stock item - Document groups tab - Document type = Stock+



Stock in and Stock out Document types

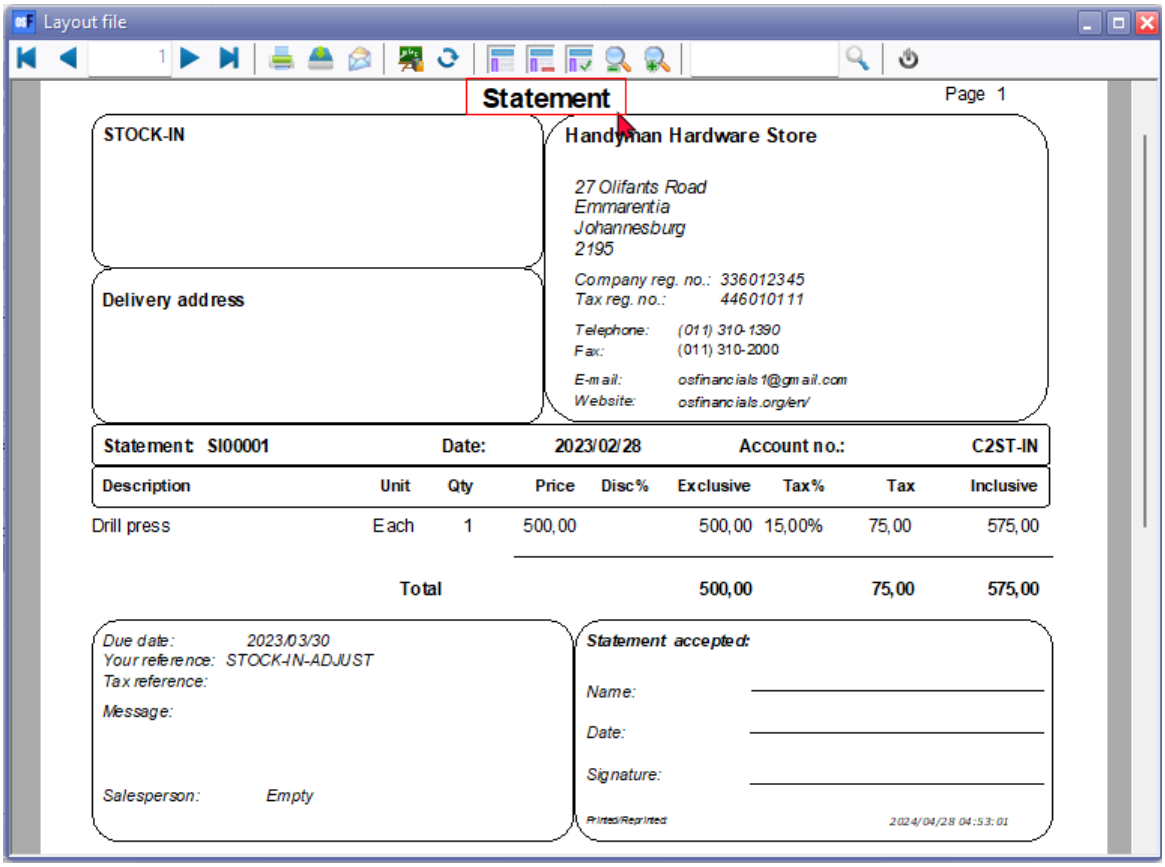
- Dynareg - Stock in and Stock out document type - Two additional document types Stock out and Stock in Documents processed for two document types:



Stock in document type

- Documents processed for the Stock in document type.
    - Document prefix: "*SI*" (e.g., "*SI00001*"), with a 7-digit format including 4 zeros).
    - Print documents: Selecting a different layout file on the "*Point-of-sale layout file*" field of the Documents setup screen, does not work. It still prints the document name as "*Statement*" on the selected document. If a document layout file supporting the "*TYPES.SDESCRIPTION*" document name from the "*TYPES*" table, will print the document name as "*Statement*" for the Stock in document type. To print the Stock in documents, you can select a different layout file from the Documents grid or from the Documents tab of the Creditor account.

TYPES table - Statement - RecordID = 17 - WTYPEPARENT = 1



Stock out document type

Documents processed for the Stock out document type.

- Document prefix: "*ST*" (e.g., "*ST00001*"), with a 7-digit format including 4 zeros).
- Print documents: Selecting a different layout file on the "*Point-of-sale layout file*" field of the Documents setup screen, does not work. It still prints the document name as "*POS Tax Invoice*" on the selected document. If a document layout file supporting the "*TYPES.SDESCRIPTION*" document name from the "*TYPES*" table, will print the document name as "*Statement*" for the Stock in document type. To print the Stock out documents, you can select a different layout file from the Documents grid or from the Documents tab of the Creditor account. .
- Print using different layout file: To print translatable documents for the Stock out document type, you can go to the Report designer and select the adjustment document from the Select test document id button and select the layout file such as "*Stock out*" or any other layout file which includes the stock code such as Document layout (15codes) - (TRN_906277) or NO-TAX Document layout (15codes) - (TRN_906591). NOTE: The following layout files does not include the Stock code:
  - Layout file - (TRN_1910)

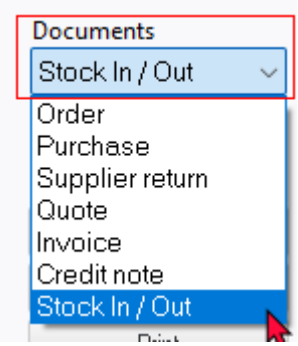
§ Document layout - (TRN_3174)

§ NO-TAX Layout file - (TRN_906589)

§ NO-TAX Document layout - (TRN_906590)

Stock In / Out Document type

- Dynareg - Extra stock of correction document (Stock in / Stock out document type) - One additional Stock In / Out document type. Documents processed for the Stock In / Out document type.



- Document prefix: "*ST*" (e.g., "*ST00001*"), with a 7-digit format including 4 zeros).
- Document type: Stock In / Out - Can be selected on the Document grid in addition to the six standard document types (i.e. Quotes, Invoices, Credit notes, Orders, Purchases and Supplier returns),
- New document: Select debtor account.
- Input menu: Input → Stock in launches the document entry as a separate window. No documents processed for the Stock In / Out document type from the Documents grid, is listed in the document entry as a separate window launched from the Input → Stock in menu and lists all documents processed in the Documents grid for the Stock in document type. New document select debtor account and it creates an Invoice (e.g. IN000025) for the Disassemble document type.
- Same document (Invoice) different Document type - Disassemble on Document groups tab of Stock items and Assemble on Stock item tab of Debtors.

Stock item - Document groups tab - Document type = Disassemble

Layout file document names issues

The plugin prints the layout file selected in the "*Layout file point-of-sale*" field within Setup → Documents setup. This setting does not work for the "*Stock in*" or "*Stock out*" document types By default, the "*Stock in*" or "*Stock out*" will print the till slip layout file "*POS Tax invoice*".

Selecting document layout files for Stock adjustments and Plugins

The Print button on the Documents grid prints specific layout files for Invoices, Credit notes, Purchases, Supplier returns, Quotes, and Orders as configured in the Documents setup.
You may select different document layout files on the Documents grid, or on the Documents tab of Debtor / Creditor accounts.

Document layout files using document name from the "TYPES" table

Certain document layout files support dynamic document names from the "*TYPES.SDESCRIPTION*" field in the "*TYPES*" table. These files adapt the document name based on the document type being printed.

If the following document layout files, which supports the "*TYPES.SDESCRIPTION*" document name from the "*TYPES*" table, is selected:

- Layout file - (TRN_1910) NS
- Document layout - (TRN_3174) NS
- Document layout (15codes) - (TRN_906277)
- NO-TAX Layout file - (TRN_906589) NS
- NO-TAX Document layout - (TRN_906590) NS
- NO-TAX Document layout (15codes) - (TRN_906591)

It will print "*Adjustments*" for the "*Adjustments*" and "*Stock out*" document type and "*Statement*" for the "*Stock in*" document type. In some cases, the document name may be printed as "*Remittance*".

Document layout files using designated document names

Other document layout files use static or translatable expressions for the six standard document types (Invoices, Credit notes, Purchases, Supplier returns, Quotes, and Orders). These expressions do not change dynamically based on the "*TYPES*" table but are predefined for consistency and translation purposes.

Added Dedicated Document Layout Files for Adjustments, BOM (Production), Stock in, and Stock out

To enhance the accuracy and clarity of printed documents, it is suggested that dedicated, translatable document layout files specifically for "*Adjustments*", "*BOM (Production)*" and the "*Stock in*" and "*Stock out*" document types. This addition ensures that each document type is printed with the correct format and naming conventions, reducing the potential for confusion and errors.

Newly Added Document Layout Files

Added : Document layout files for Non-Standard document types

Adjustment - Document Layout File

Certain document layout files support dynamic document names from the "*TYPES.SDESCRIPTION*" field in the "*TYPES*" table. These files adapt the document name based on the document type being printed.

Generated when stock quantities are adjusted (via Input → Adjust stock menu or by manually changing stock quantities on the stock item grid).
These adjustments replaces the stock item description in the document lines in some layout files.
Layout files, such as "POS - START-SP100" (TRN_906183), Layout file (TRN_1910), Document layout (TRN_3174), NO-TAX Layout file (TRN_906589) and NO-TAX Document layout (TRN_906590) don't contain the stock code. When the stock description in some layout files is replaced with entered remarks (e.g., "*Surplus*", "*Shortage*", etc.) or "*Auto correction*" (using the Input → Adjust stock menu or by manually changing stock quantities on the stock item grid), those remarks are displayed on the printed layout file.
For an audit trial to which stock items is included in the adjustments, select the following document layout files:

- Document layout (15codes) - (TRN_906277)
- NO-TAX Document layout (15codes) - (TRN_906591)

Generated when stock quantities are adjusted (via Input → Adjust stock menu or by manually changing stock quantities on the stock item grid).
Document prefix: "*ST*" (e.g., "*ST00001*"), with a 7-digit format including 4 zeros.

Remarks entered in the "*Change remark*" screen (e.g., "*Surplus*" or "*Shortage*") or "*Auto correction*" are reflected in these documents.

Adjustment - TRN_1767

This layout file is specifically designed for adjustment documents, ensuring that all necessary details are accurately represented and the document is correctly labelled as an "Adjustment."

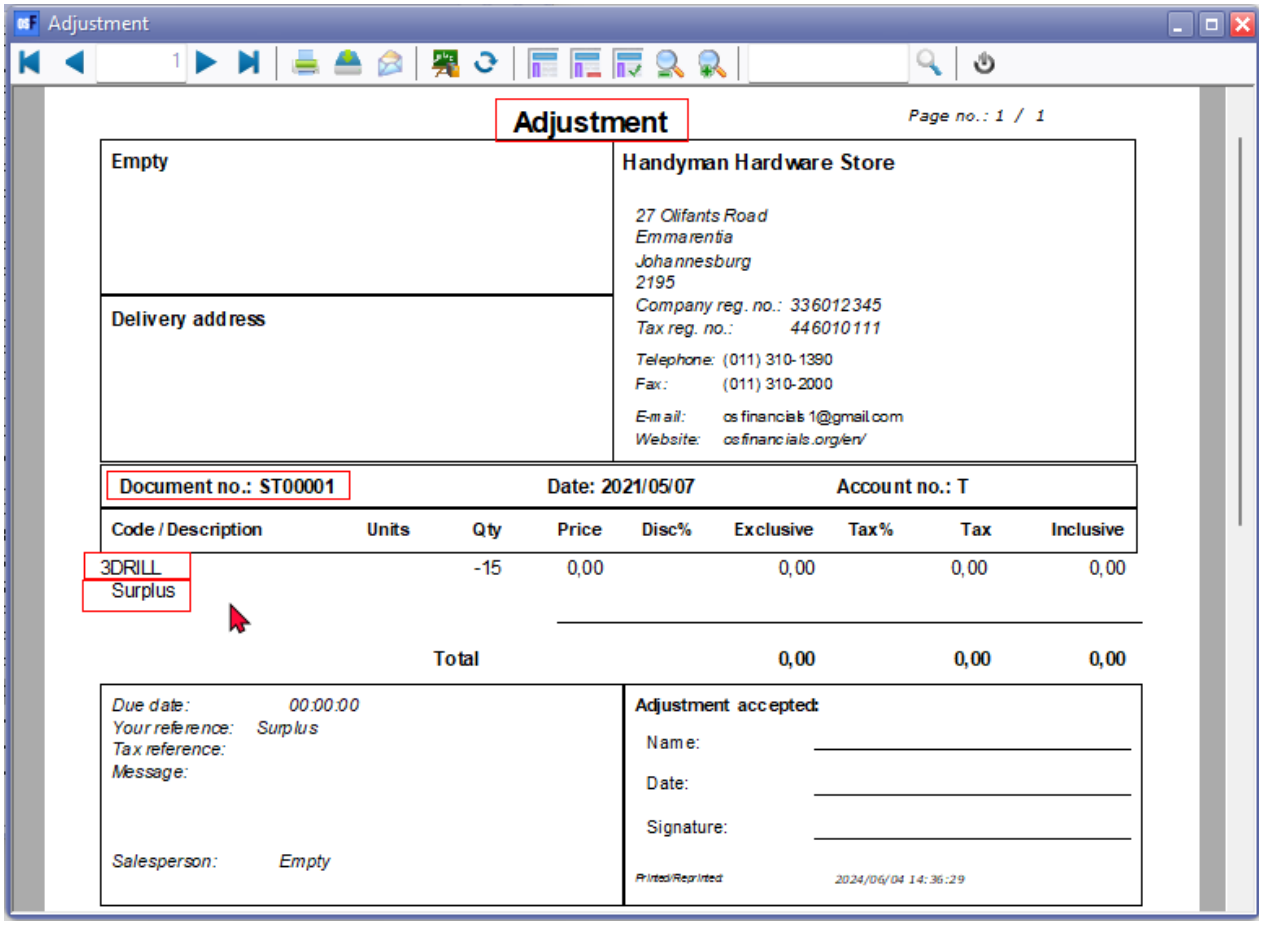
The date reflects the correct transaction date.

Stock code is printed on the layout file. This provides an audit trial linking the "*Adjustment*" document layout file to the adjusted stock item.

Remarks entered in the "*Change remark*" screen (e.g., "*Surplus*" or "*Shortage*") or "*Auto correction*" are reflected in these document layout files.

Example : Adjustment "*Surplus*"

TYPES table - Adjustment - RecordID = 16 - WTYPEPARENT = 1



BOM (Production) - Document Layout File

Added : BOM (Production) Stock Item Type - TRN_3266

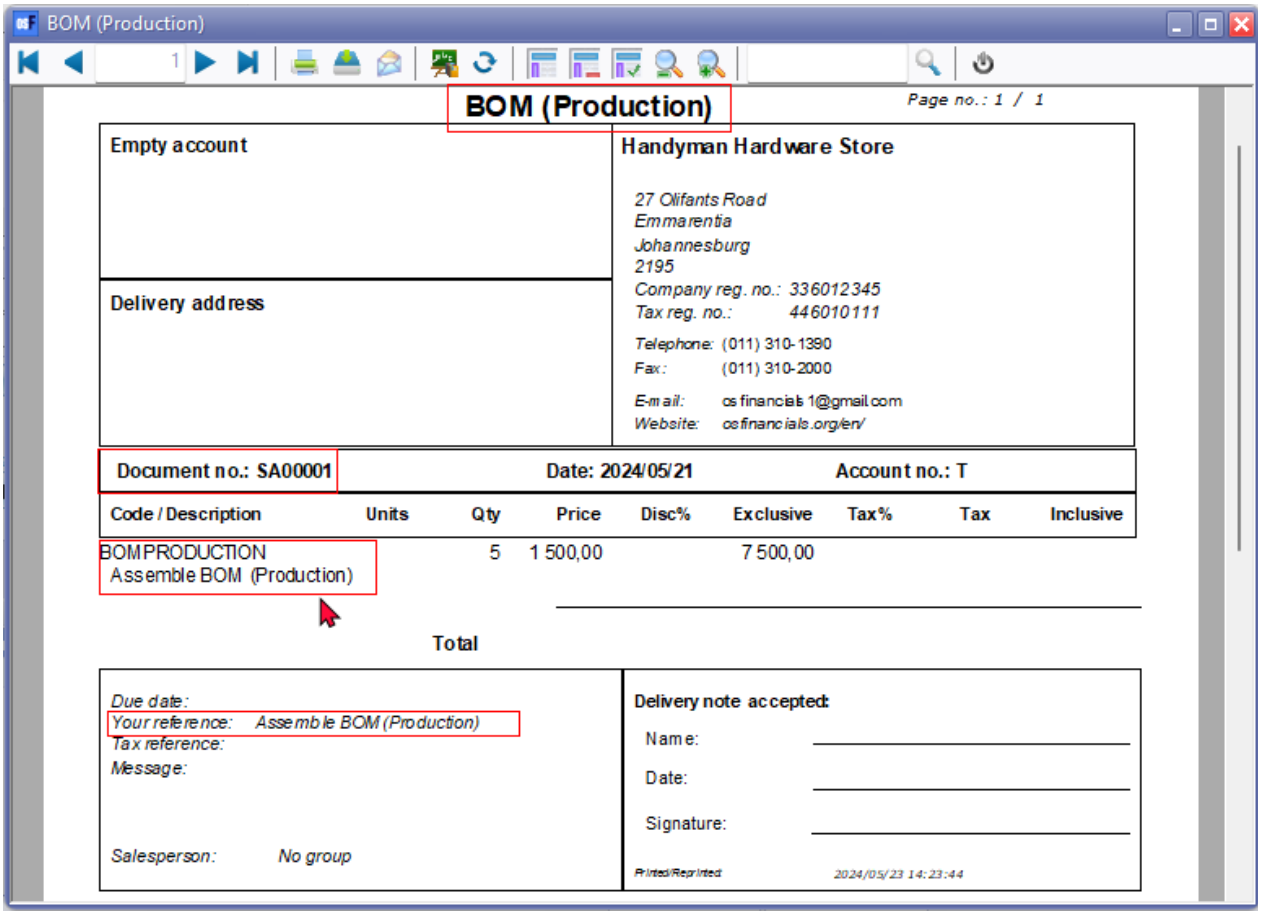
Generated for BOM stock items during Assembly or Disassembly.

Document prefix: "SA" (e.g., "*SA00001*"), with a similar 7-digit format.

Selecting the document layout files, which supports the "*TYPES.SDESCRIPTION*" document name from the "*TYPES*" table, will print the document name as "*Delivery note*" for "*Assemble*" option and "*Remittance*" for "*Disassemble*" option.

To solve this, an additional layout file is added to print the BOM (Production) stock type.

Example : Assemble



Delivery note accepted: in SubReport-1(TAX) - Changed label TRpExpression85 to print BOM (Production accepted :)

```
CUSTOM('GETTEXTLANG',3266,'BOM(Production',CLIENTORDEFLANG.SLANGUAGE,0,0)+'
'+(CUSTOM('GETTEXTLANG',906275,'Accepted',CLIENTORDEFLANG.SLANGUAGE,0,0)+(':  '))
```

```

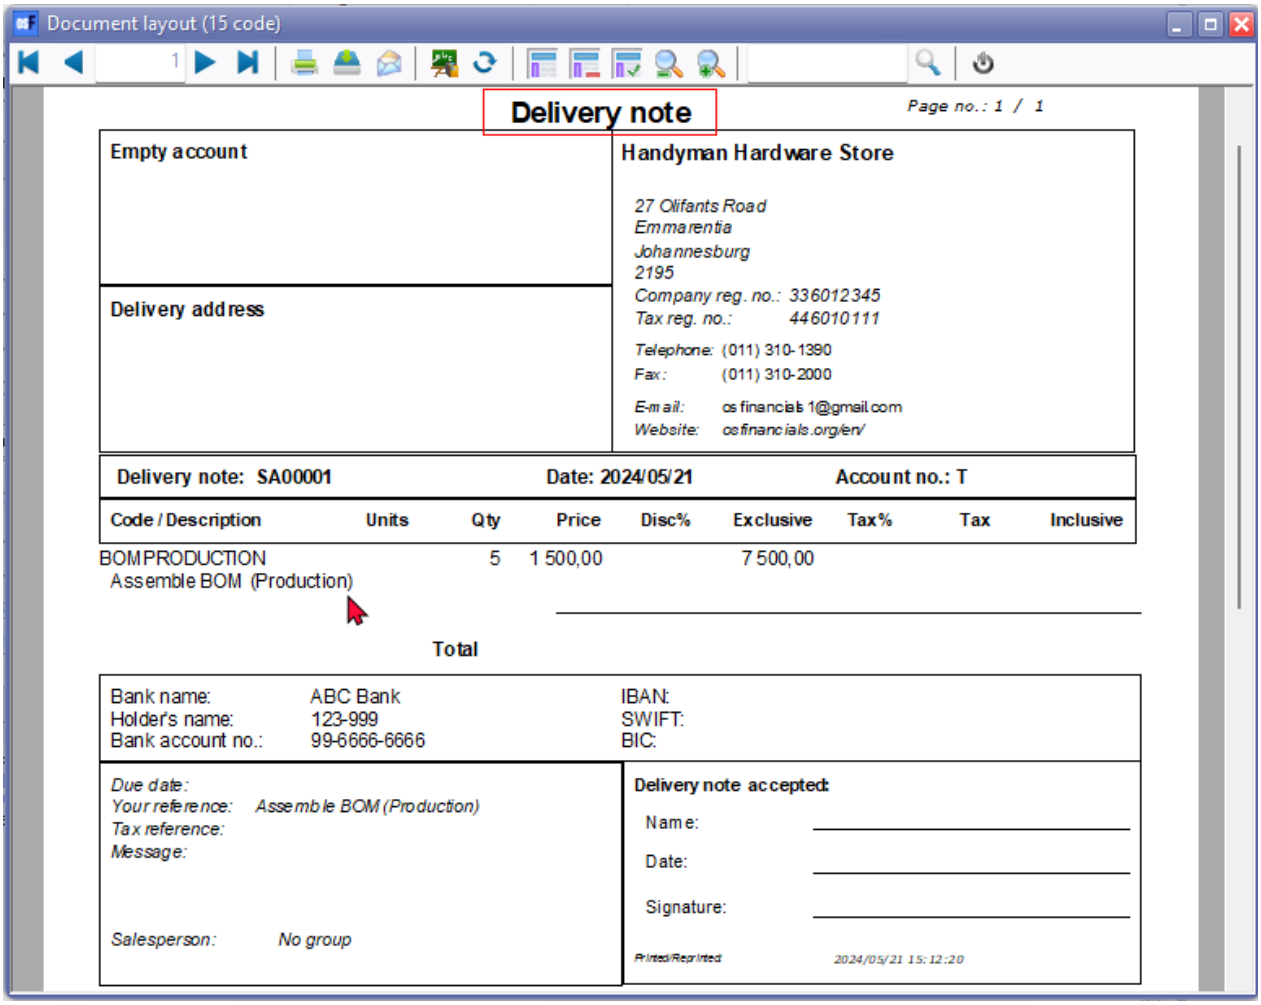
Example : Selecting existing layout files - Types description

Selecting the document layout files, which supports the "*TYPES.SDESCRIPTION*" document name from the "*TYPES*" table, will print the document name as "*Delivery note*" for "*Assemble*" option and "*Remittance*" for "*Disassemble*" option.

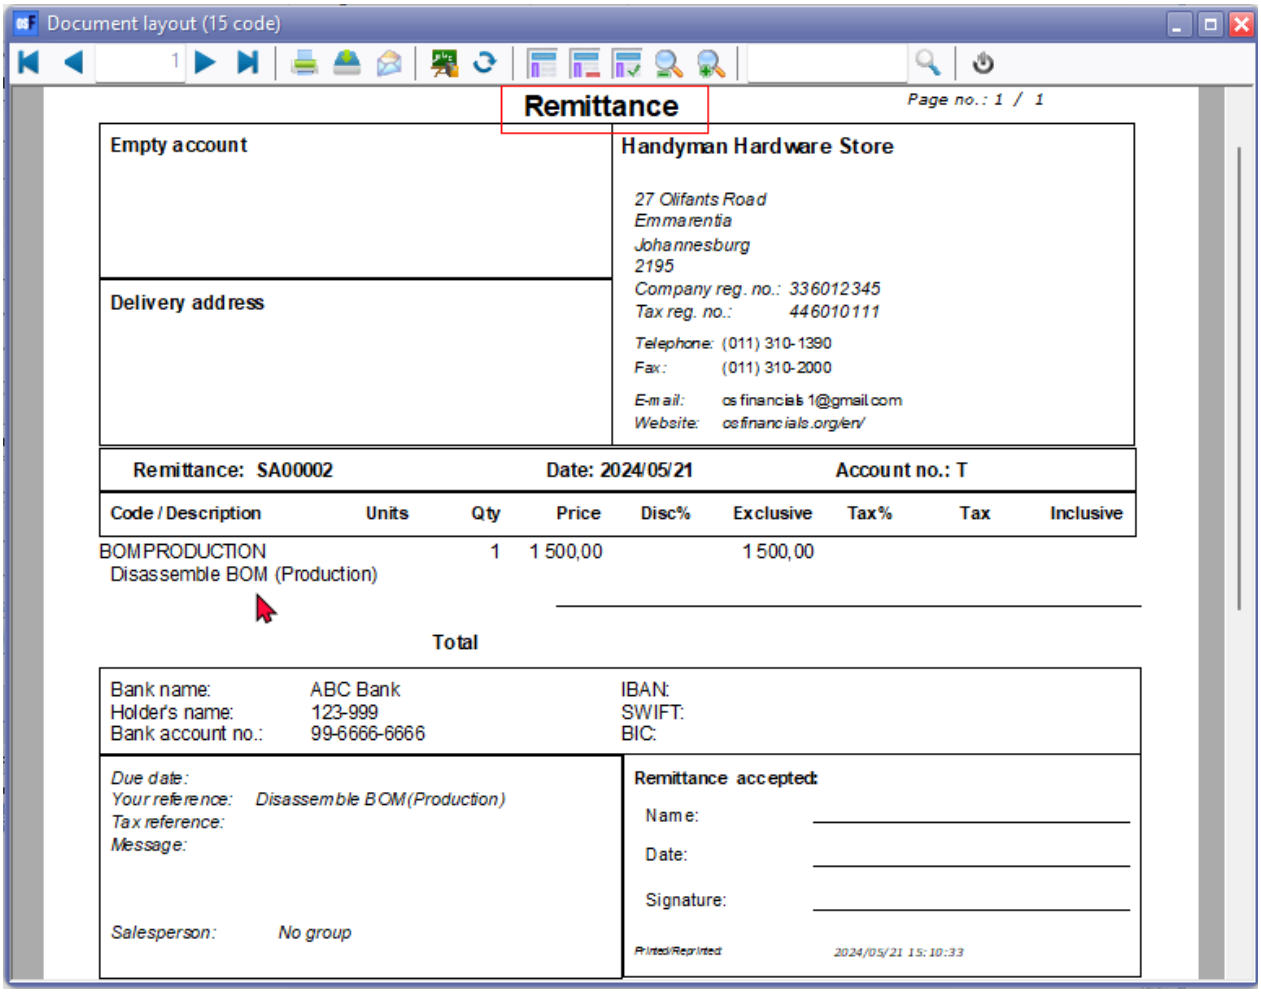
Example : Selecting existing layout files - Types description - Assemble

TYPES table - Delivery note - RecordID = 19 - WTYPEPARENT = 1



Example : Selecting existing layout files - Types description - Disassemble

TYPES table - Remittance - RecordID = 18 - WTYPEPARENT = 1



The document layout file using the "*Layout file point-of-sale*" field within Setup → Documents setup prints the "*Project - Quote*" or "*Projects*" document types By default, the "*Project - Quotes*" or "*Projects*" will print the till slip layout file "*POS Tax invoice*".

Project Quote - Document Layout File

Generated when processing project quotes on the Project Quotes tab for specific projects in addition to the normal quotes standard document type.

Document prefix: "*D*" (e.g., "*D000001*"), with a 7-digit format including 5 zeros.

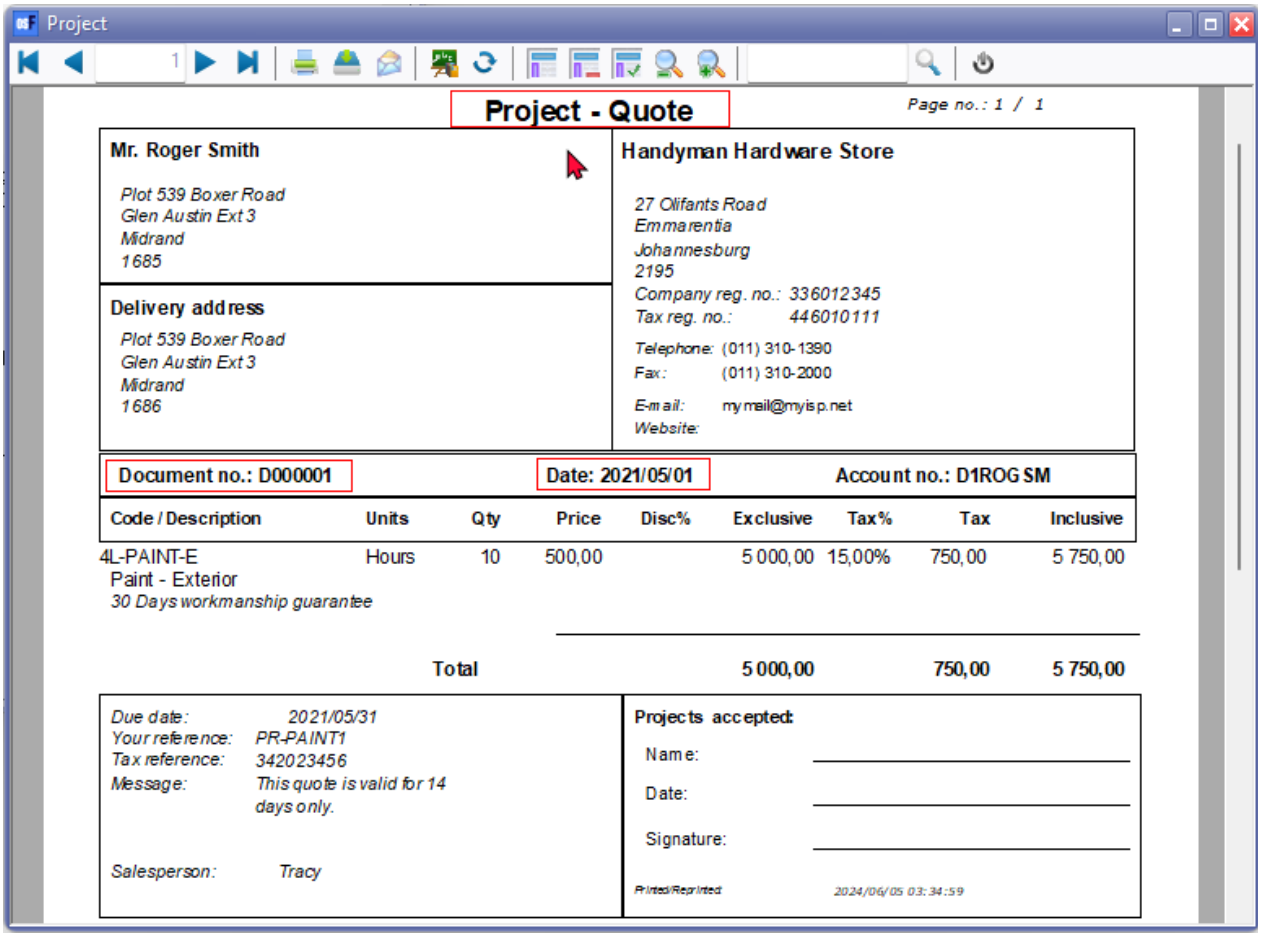
Project - TRN_3556 - Project - Quote

This layout file is specifically designed for project quotes documents, ensuring that all necessary details are accurately represented and the document is correctly labelled as an "*Project - Quote*".

The date reflects the correct transaction date.

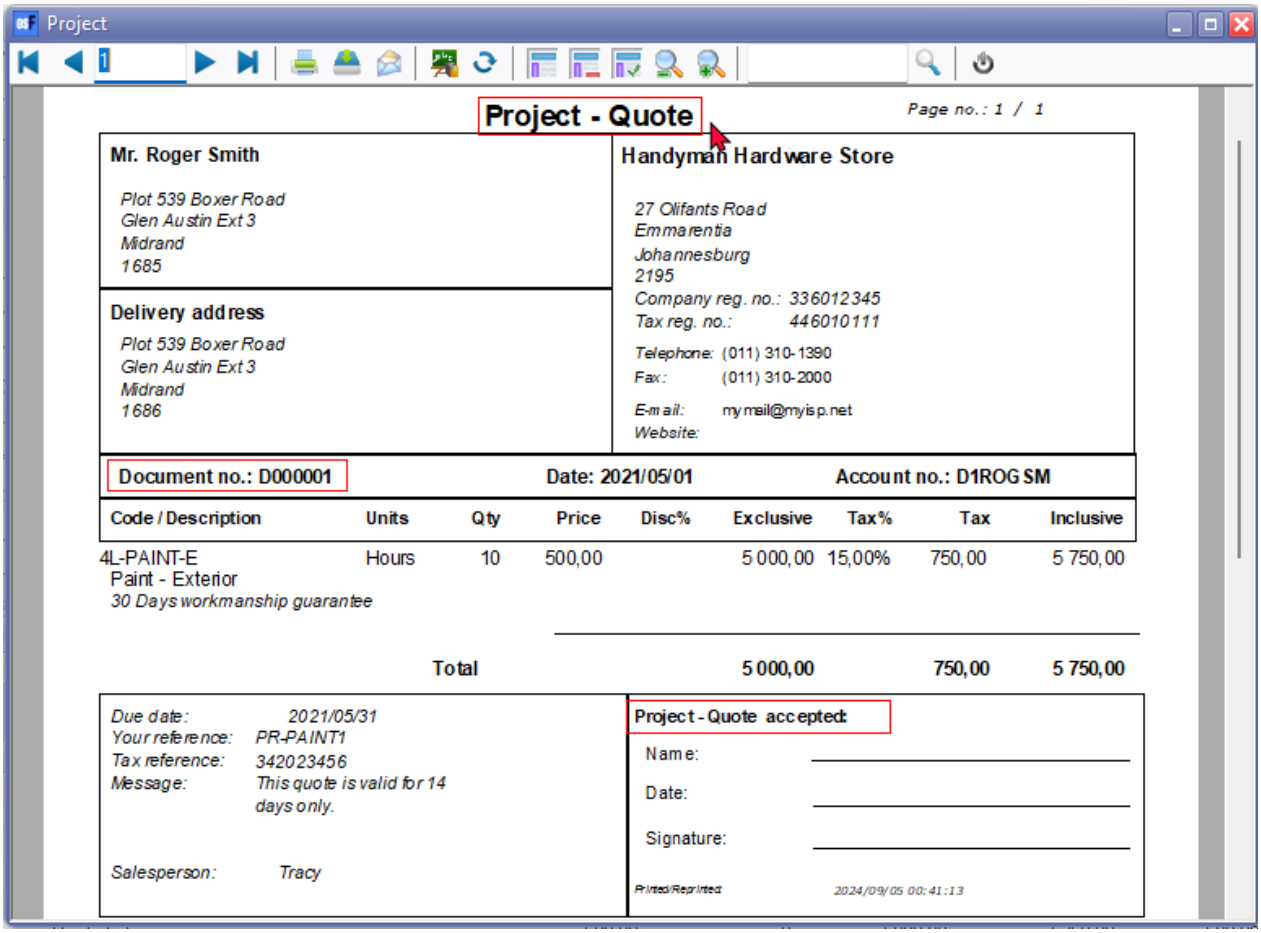
Stock code is printed on the layout file. This provides an audit trial linking the "*Project - Quote*" document layout file to the stock item.

Example : Project - Quote



Projects accepted: in SubReport-1(TAX) - Changed label TRpExpression85 to print Project - Quote accepted:

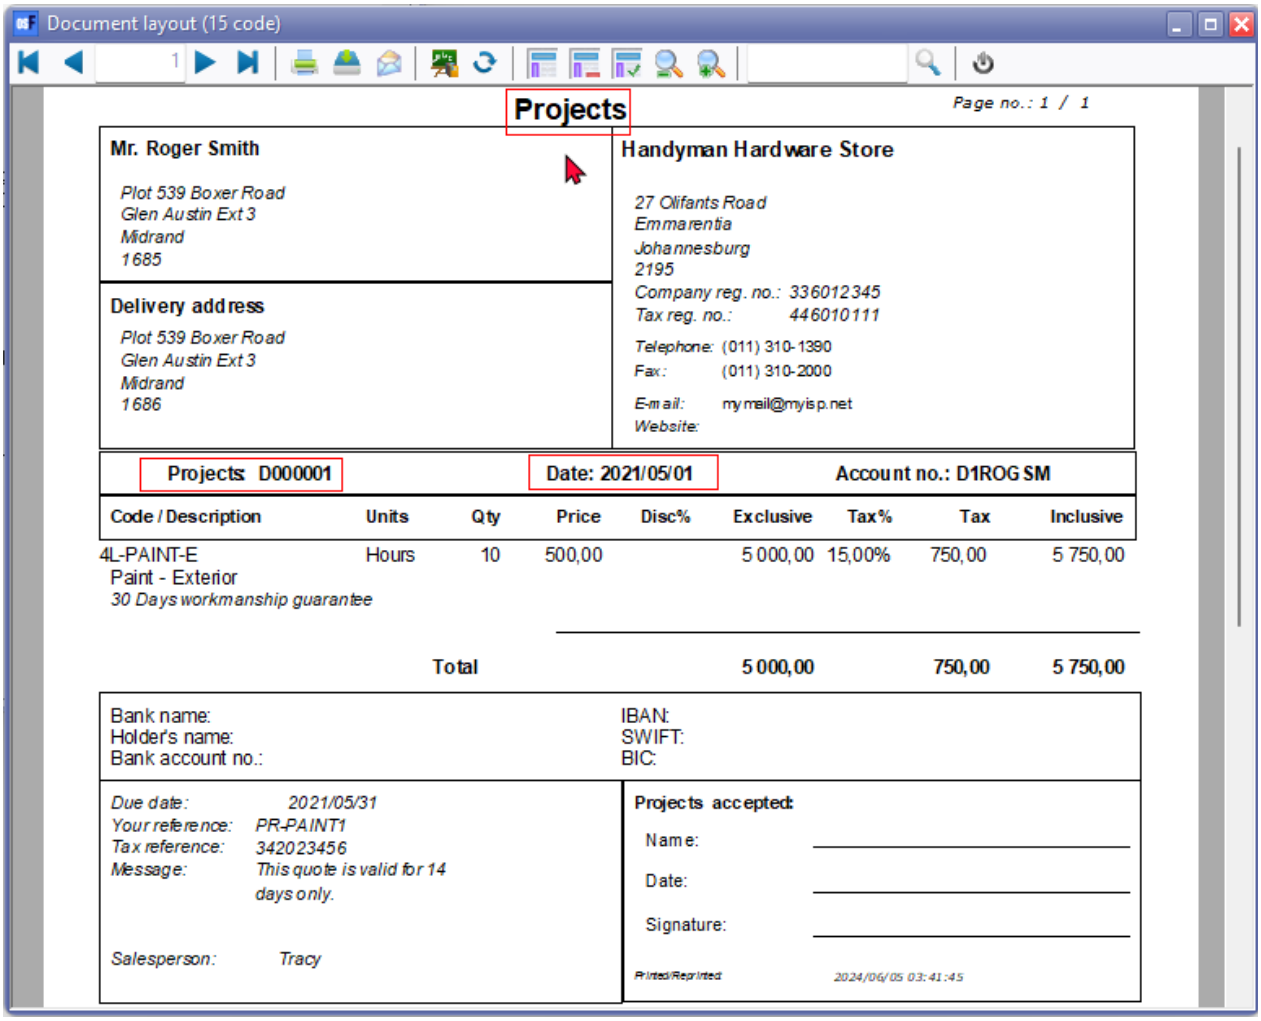
```
CUSTOM('GETTEXTLANG',3556,'Project',CLIENTORDEFLANG.SLANGUAGE,0,0)+'  -
'+CUSTOM('GETTEXTLANG',2169,'Quote',CLIENTORDEFLANG.SLANGUAGE,0,0)+'
'+(CUSTOM('GETTEXTLANG',906275,'Accepted',CLIENTORDEFLANG.SLANGUAGE,0,0)+(':  '))
```



Example : Selecting existing layout files - Types description - Project - Quote

Selecting the document layout files, which supports the "*TYPES.SDESCRIPTION*" document name from the "*TYPES*" table, will print the document name as "*Projects*" for the "*Project - Quote*" option.

TYPES table - Projects - RecordID = 1000 - WTYPEPARENT = 2 (reporting group name)

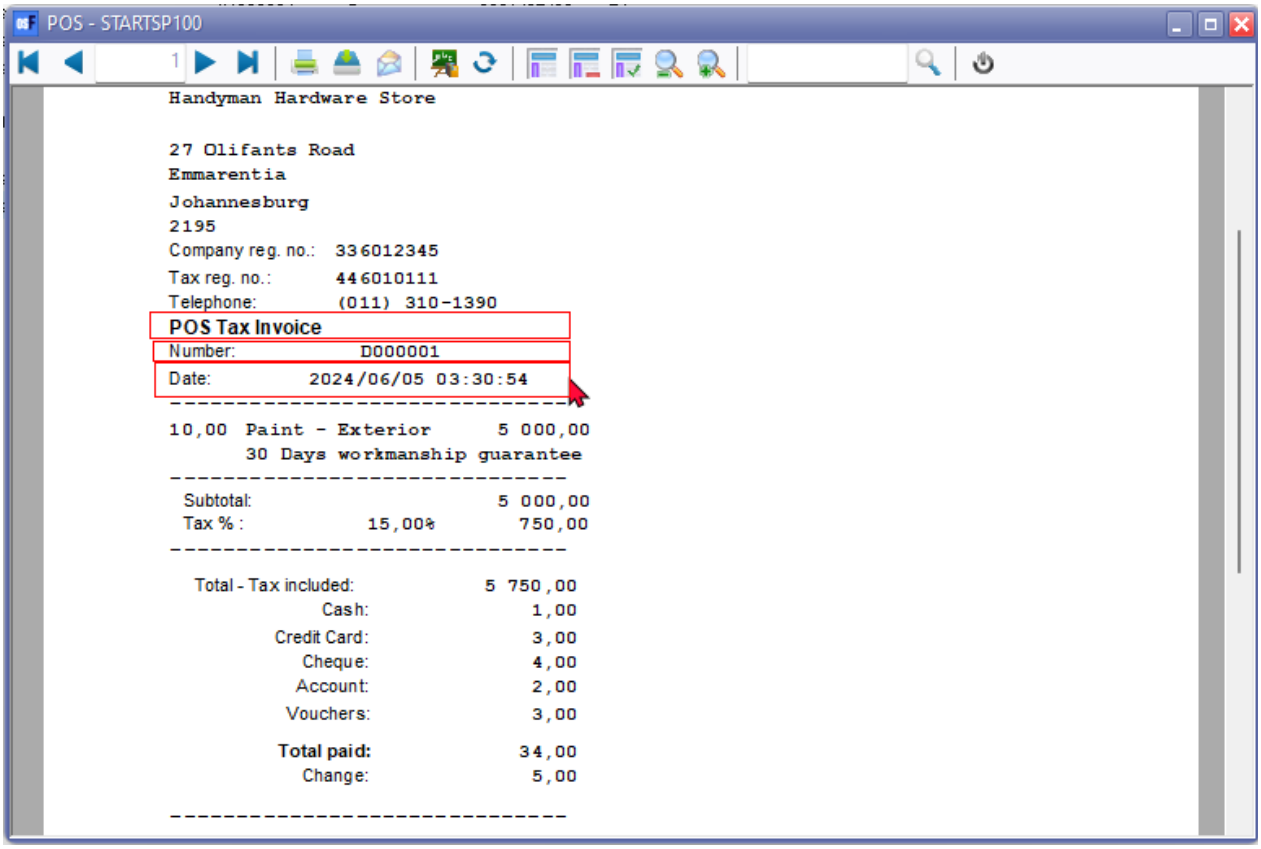


Example : Layout file point-of-sale setting - Not printing the selected layout file

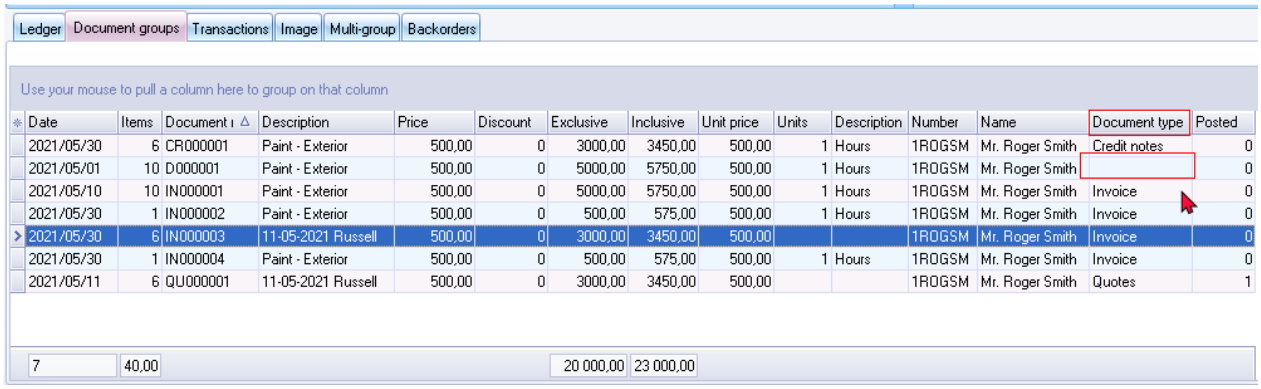
Prints the "*Project - Quote*" document layout file using the "*Layout file point-of-sale*" field within Setup → Documents setup. This setting does not work for the "*Project - Quote*" or "*Projects*" document types By default, the "*Project - Quotes*" or "*Projects*" will print the till slip layout file "*POS Tax invoice*".

This is replicated in the following print options:

- Search (central search) on the Default ribbon.
- Debtors - Documents tab (NOTE: You may select a layout file from the Documents tab)
- Stock item - Document groups tab



The possible reason for this, could be that the Document type column is empty in the Document groups tab of the Stock item and related options:



Added : Plugins - Document layout files for Non-Standard document types

Stock in - Document Layout File

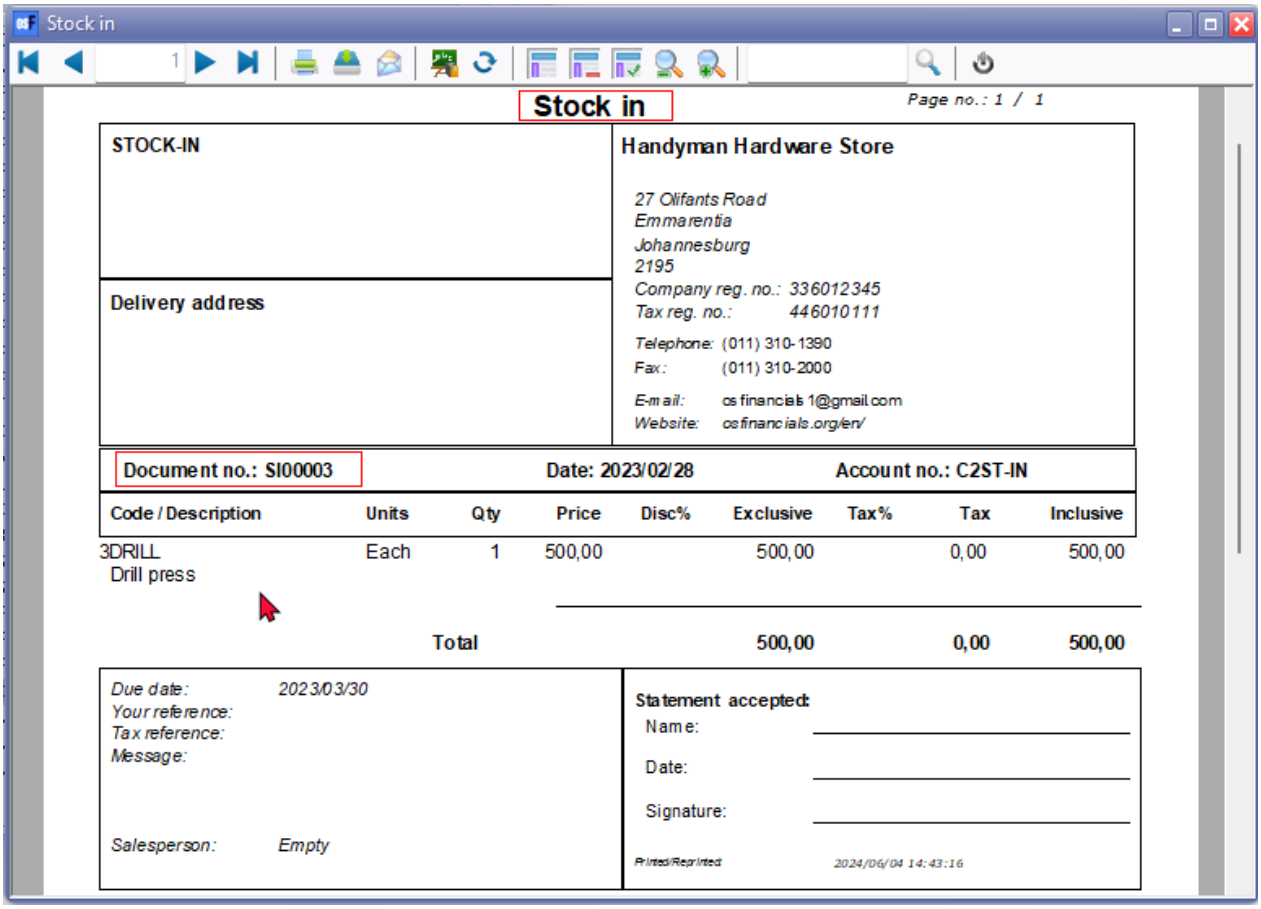
Generated for Stock in document type

Selecting the document layout files, which supports the "*TYPES.SDESCRIPTION*" document name from the "*TYPES*" table, will print the document name as "*Statement*" for "*Stock in*" option.

Document prefix: "*SI*" (e.g., "*SI00001*"), with a similar 7-digit format.

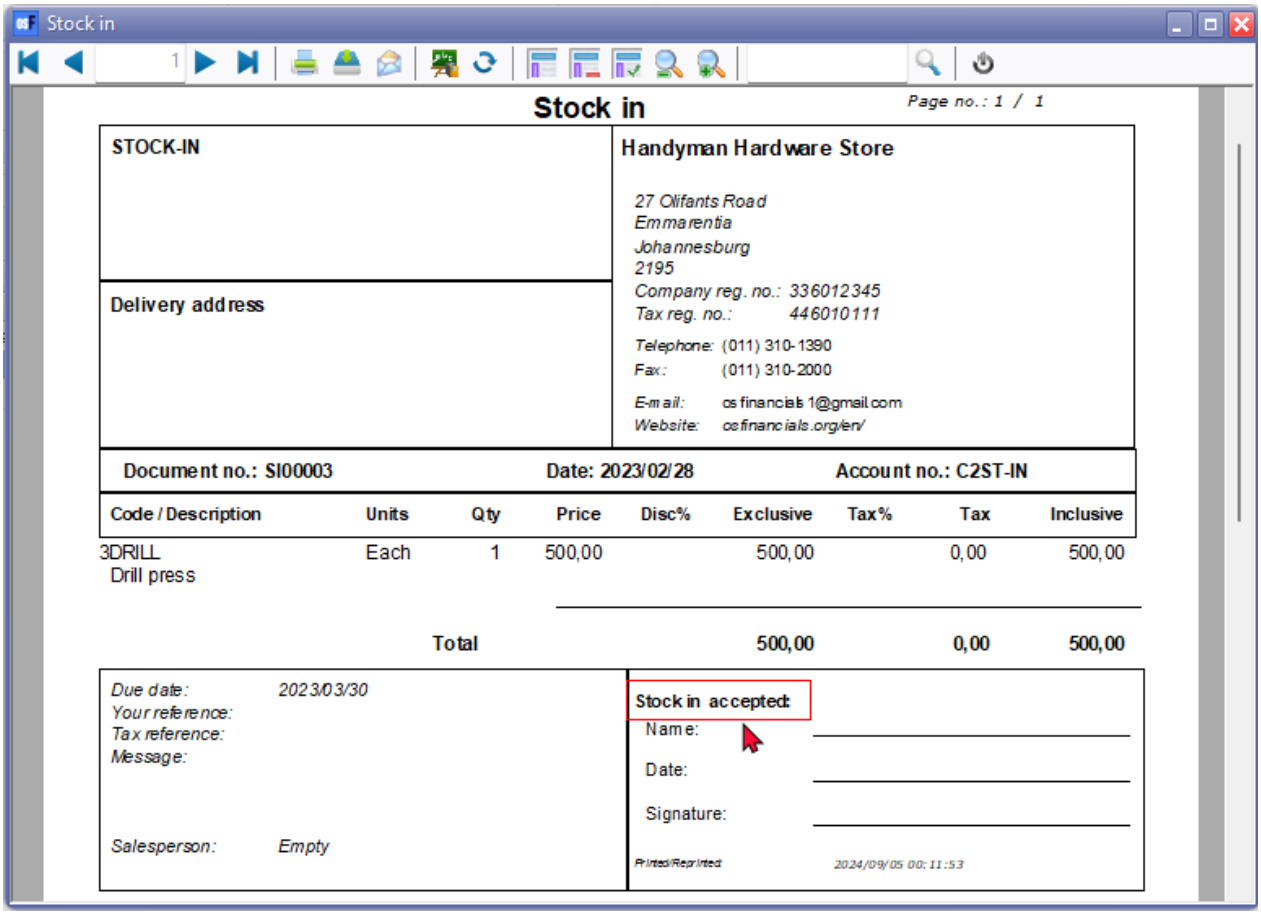
Stock in - TRN_906178

This layout file is dedicated to "*Stock in*" documents, printing them with the appropriate document name and format, thus providing clear and precise documentation of stock intake.



Statement accepted: in SubReport-1(TAX) - Changed label TRpExpression85 to print Stock in accepted:

```
CUSTOM('GETTEXTLANG',906178,'Stock in',CLIENTORDEFLANG.SLANGUAGE,0,0)+'
'+(CUSTOM('GETTEXTLANG',906275,'Accepted',CLIENTORDEFLANG.SLANGUAGE,0,0)+(':  '))
```



Stock out - Document Layout File

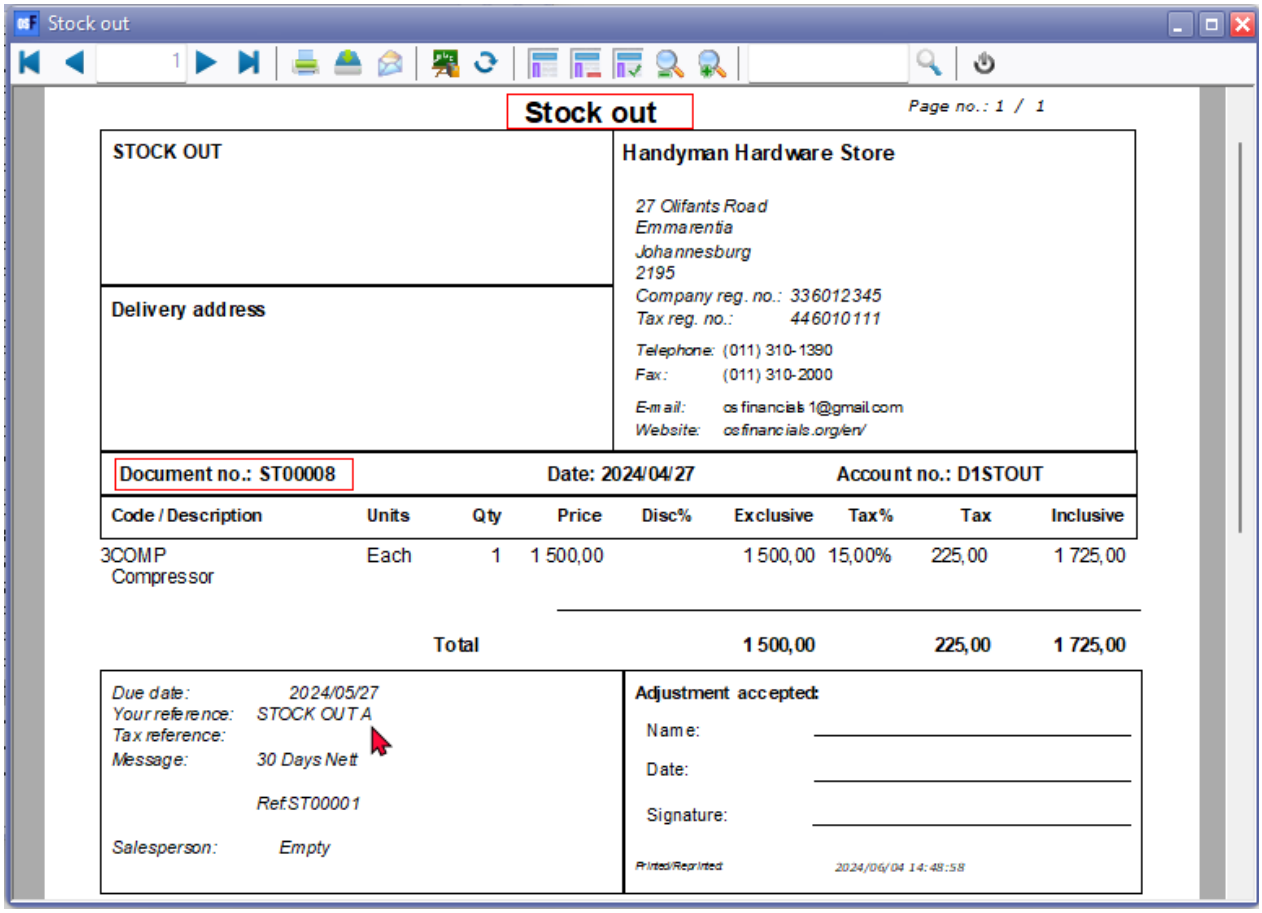
Generated for Stock out document type

Selecting the document layout files, which supports the "*TYPES.SDESCRIPTION*" document name from the "*TYPES*" table, will print the document name as "*Adjustment*" for "*Stock out*" option.

Document prefix: "*ST*" (e.g., "*ST00001*"), with a similar 7-digit format.

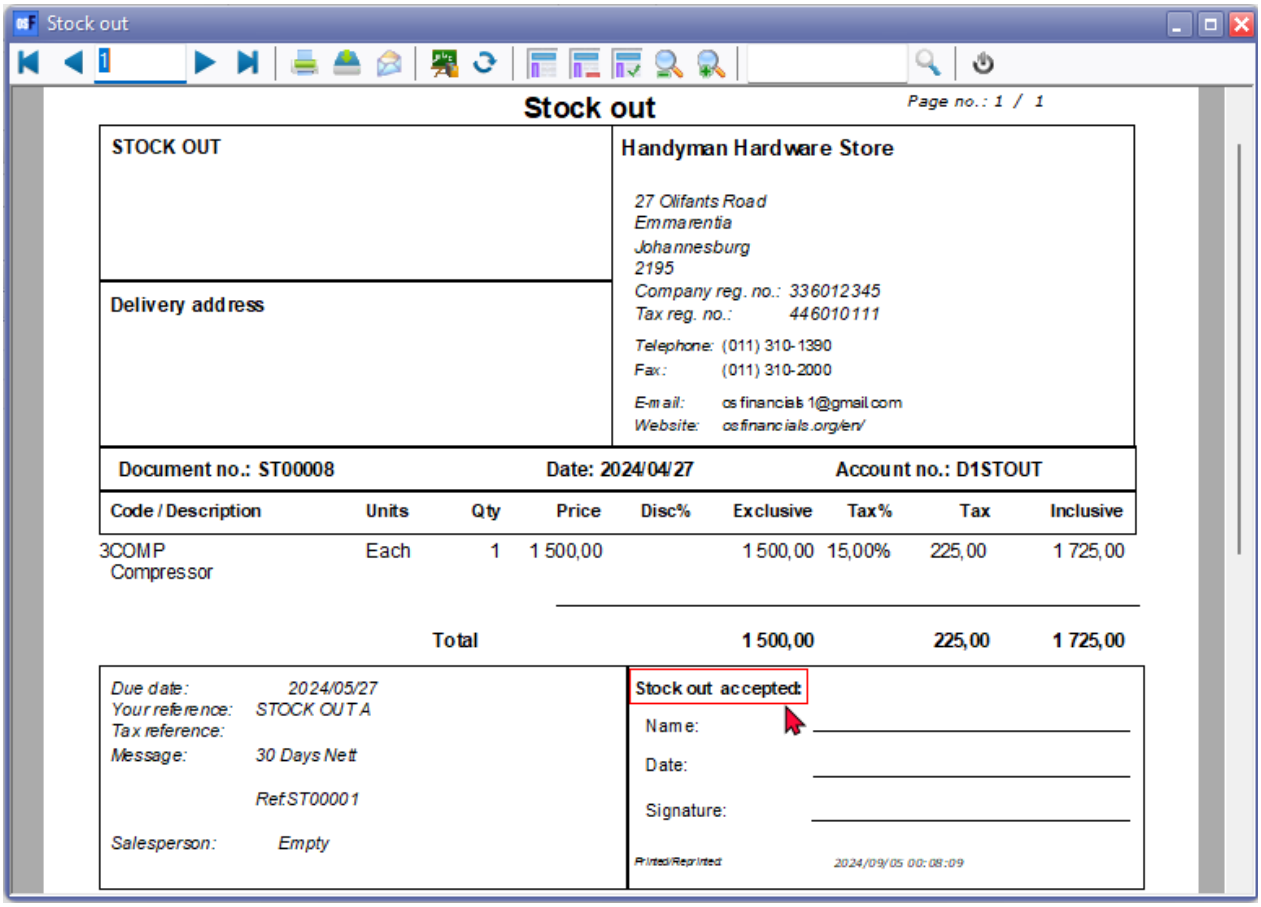
Stock out - TRN_906179

This layout file is tailored for "*Stock out*" documents, ensuring that they are printed with the correct document name and layout, accurately reflecting stock outflow transactions.



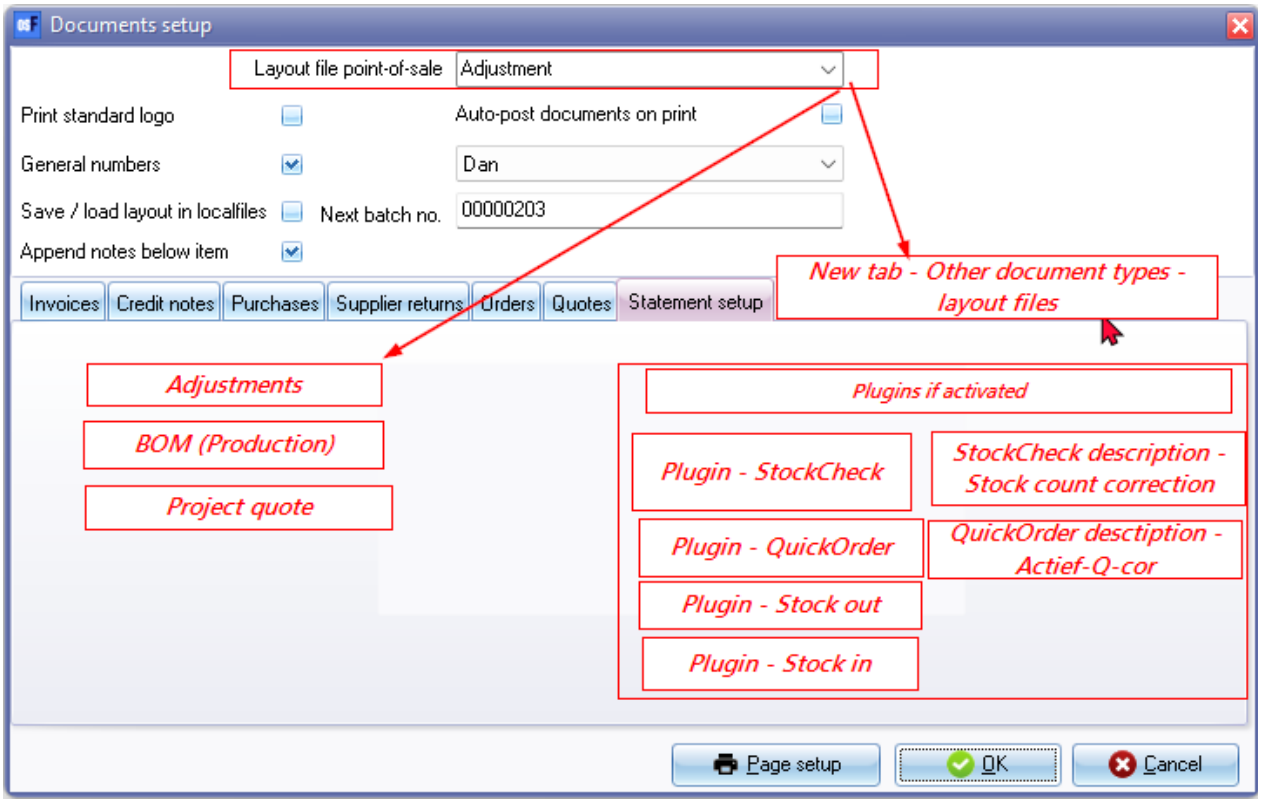
Adjustment accepted: in SubReport-1(TAX) - Changed label TRpExpression85 to print Stock out accepted:

```
CUSTOM('GETTEXTLANG',906179,'Stock in',CLIENTORDEFLANG.SLANGUAGE,0,0)+'
'+(CUSTOM('GETTEXTLANG',906275,'Accepted',CLIENTORDEFLANG.SLANGUAGE,0,0)+(':  '))
```



Important Considerations for Point-of-Sale Layout Files in osFinancials

While configuring the "*Point-of-sale layout file*" in osFinancials5/TurboCASH5 it is crucial to understand its limitations and appropriate use cases. Specifically, POS layout files should not be used for certain documents due to the following reasons:



The following document types will print using the default setting in the "*Point-of-sale layout file*" field on the "*Documents setup*" screen is "*POS -STARTSP100*," a till slip document layout file.

Other features

Changing the Layout File for Point-of-Sale (POS) Documents

The default setting in the "*Point-of-sale layout file*" field on the "*Documents setup*" screen is "*POS -STARTSP100*," a till slip document layout file. To select a different layout file from the default document layout files included in the osFinancials installation or your own if you have created one, the document layout will be printed in that format.

Print layout files for Stock adjustments, BOM (Production, Project - Quotes and Stock in and Stock out document types

The configurations related to printing layout files for different document types, particularly focusing on stock adjustments, stock in, and stock out scenarios. Currently in the Setup → Documents setup, you can only set or select document layout files only for the six standard document types (i.e. Quotes, Invoices, Credit notes, Orders, Purchases and Supplier returns),
Document layout files to print "*Adjustments*" or to print the new "*Stock in*" and / or "*Stock out*" document types, if plugins is activated, cannot be set on the Setup → Documents setup.

- Default layout file setting for Adjustments
  - Currently adjustments made using the Input → Adjust stock menu or by manually changing stock quantities on the stock item grid , prints the layout file selected in the "*Layout file point-of-sale*" field within Setup → Documents setup.
    This means that users using the standard Point-of-sale system on Input → POS Invoice (Ctrl+F6) will print the till slip layout file "*POS - START-SP100*" (TRN_906183) with document name "*POS Tax invoice*".
    In the central search (Search on the Default ribbon), it will also print this "*POS - START-SP100*" (TRN_906183) with document name "*POS Tax invoice*".
    NOTE : Using the Layout file point-of-sale document layout files to print stock adjustments will print the system date and not the document date on which stock corrections or stock adjustments were generated. WARNING: Point-of-sale document layouts might not be ideal for printing stock corrections or stock adjustments "Assemble" and "Disassemble" documents for BOM (Production) item types due to:
    - Date: POS invoices show your system's date, not the actual processing date.
    - Document Name: Might say "POS Tax Invoice" instead of something relevant.
    - Item Description: Some layout files, such as "*POS - START-SP100*" (TRN_906183), don't contain the stock code. When the stock description in some layout files is replaced with entered remarks (e.g., Surplus, Shortage) (using the Input → Adjust stock menu or by manually changing stock quantities on the stock item grid), those remarks are displayed on the printed layout file. In the case of some plugins, such as the StockCheck plugin, it will replace the stock item description with "*Actief-Q-cor*" will be displayed on the printed layout file. This means the printed layout file doesn't indicate which stock item was corrected.
    - Footer: Contains data like cashup amounts, not relevant for stock adjustments, BOM operations, project quotes some actions on some plugins.

    Recommendation: Select a different document layout file for BOM (Production) transactions (Setup →

Documents setup).

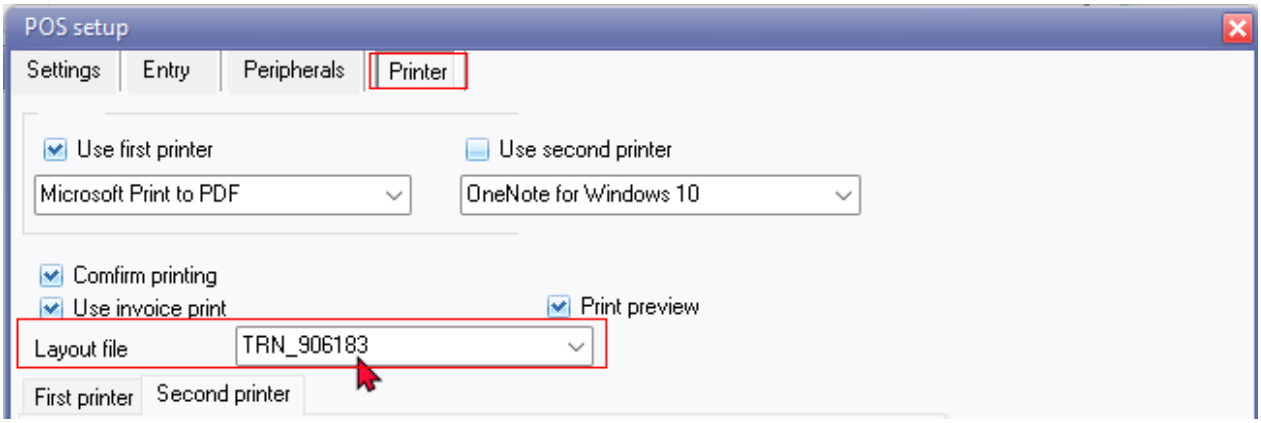
- Stock adjustments (using the Input → Adjust stock menu or by manually changing stock quantities on the stock item grid), the "*POS Tax invoice*" will also be printed for the new "*Stock in*" and / or "*Stock out*" document types, if plugins is activated.
- If the following document layout files, which supports the "*TYPES.SDESCRIPTION*" document name from the "*TYPES*" table, is selected, it will print "*Adjustments*" for the "*Adjustments*" and "*Stock out*" document type and "*Statement*" for the "*Stock in*" document type.
  - Layout file - (TRN_1910)
  - Document layout - (TRN_3174)
  - Document layout (15codes) - (TRN_906277)
  - NO-TAX Layout file - (TRN_906589)
  - NO-TAX Document layout - (TRN_906590)
  - NO-TAX Document layout (15codes) - (TRN_906591)
  - Other available layout files use static or translatable expressions for document layout files of the six standard document types.
- Added layout files for Adjustments / "*Stock in*" and "*Stock out*" document types - For this reason, the following dedicated translatable document layout files is added for Adjustments and the "*Stock in*" and "*Stock out*" document types:
  - Adjustment (TRN_1767)
  - BOM (Production) (TRN_3266)
  - Project - Quotes (TRN_3556)
  - Stock in (TRN_906178)
  - Stock out (TRN_906179)

- Setup → Documents setup - Adjustments - Within Setup → Documents setup, in addition to the six standard document types (invoices, credit notes, quotes, purchases, supplier returns and orders) and extra document tab like Adjustments could be added. On this "*Adjustments*" tab, initially, you would select the "*Adjustment*" layout file for Stock adjustments (using the Input → Adjust stock menu or by manually changing stock quantities on the stock item grid). May need to add options to select a layout file for Projects layout file and BOM (Production (Assemble and Disassemble).
  - If a user activates a plugin that supports "*Stock in*" an extra field would be added where a user can select the "*Stock in*" layout file for the "*Stock in*" document type.
  - Similarly, if a user activates a plugin that supports "*Stock in*" and the "*Stock out*" document types, the "*Stock out*" layout file could be selected for both the "*Stock in*" document layout file and the "*Stock out*" layout file.

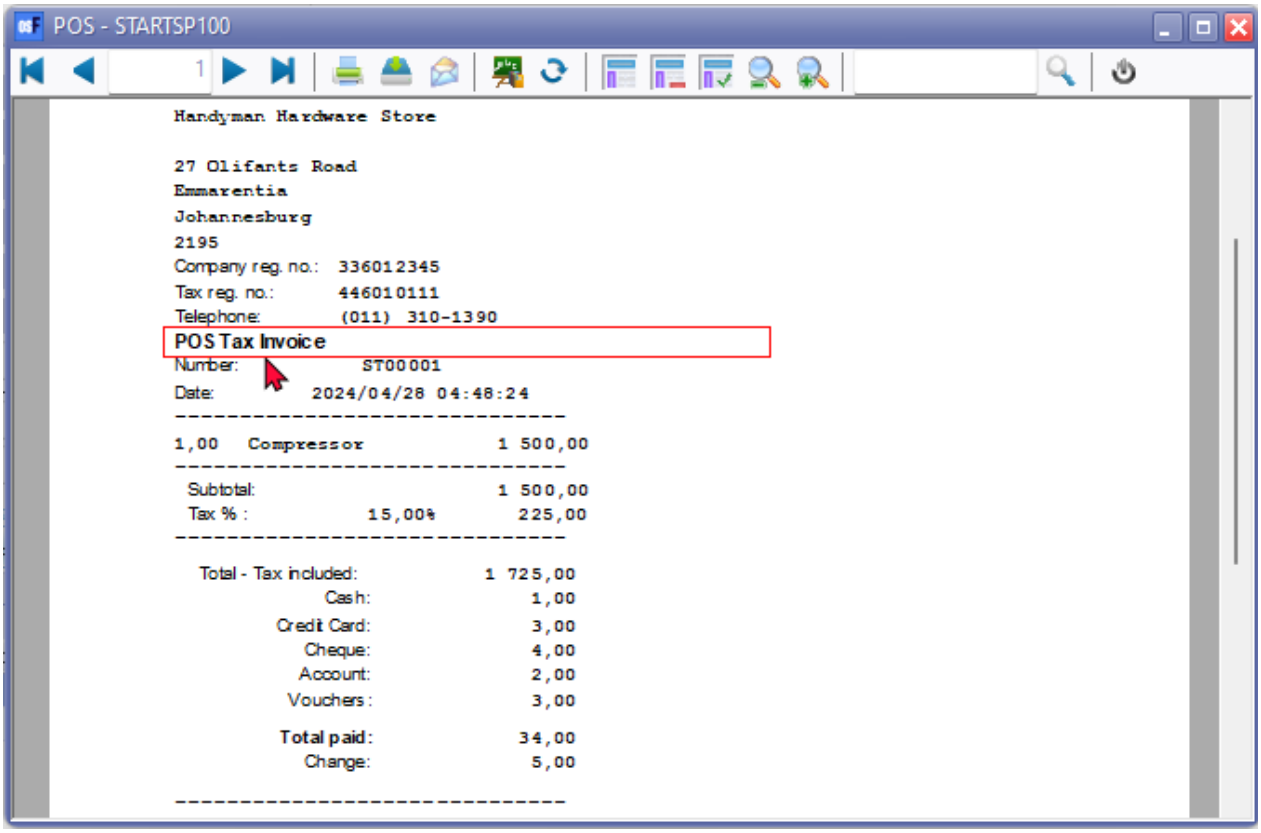
Layout file document names issues

The plugin prints the layout file selected in the "*Layout file point-of-sale*" field within Setup → Documents setup. This setting does not work for the "*Stock in*" or "*Stock out*" document types By default, the "*Stock in*" or "*Stock out*" will print the till slip layout file "*POS Tax invoice*".

In the central search (Search on the Default ribbon), it will print this "*POS - START-SP100*" (TRN_906183). If any other layout file, is selected. the name of the report is not translated, but will display for example TRN_906183 in Setup → Point of-Sale - Printers tab



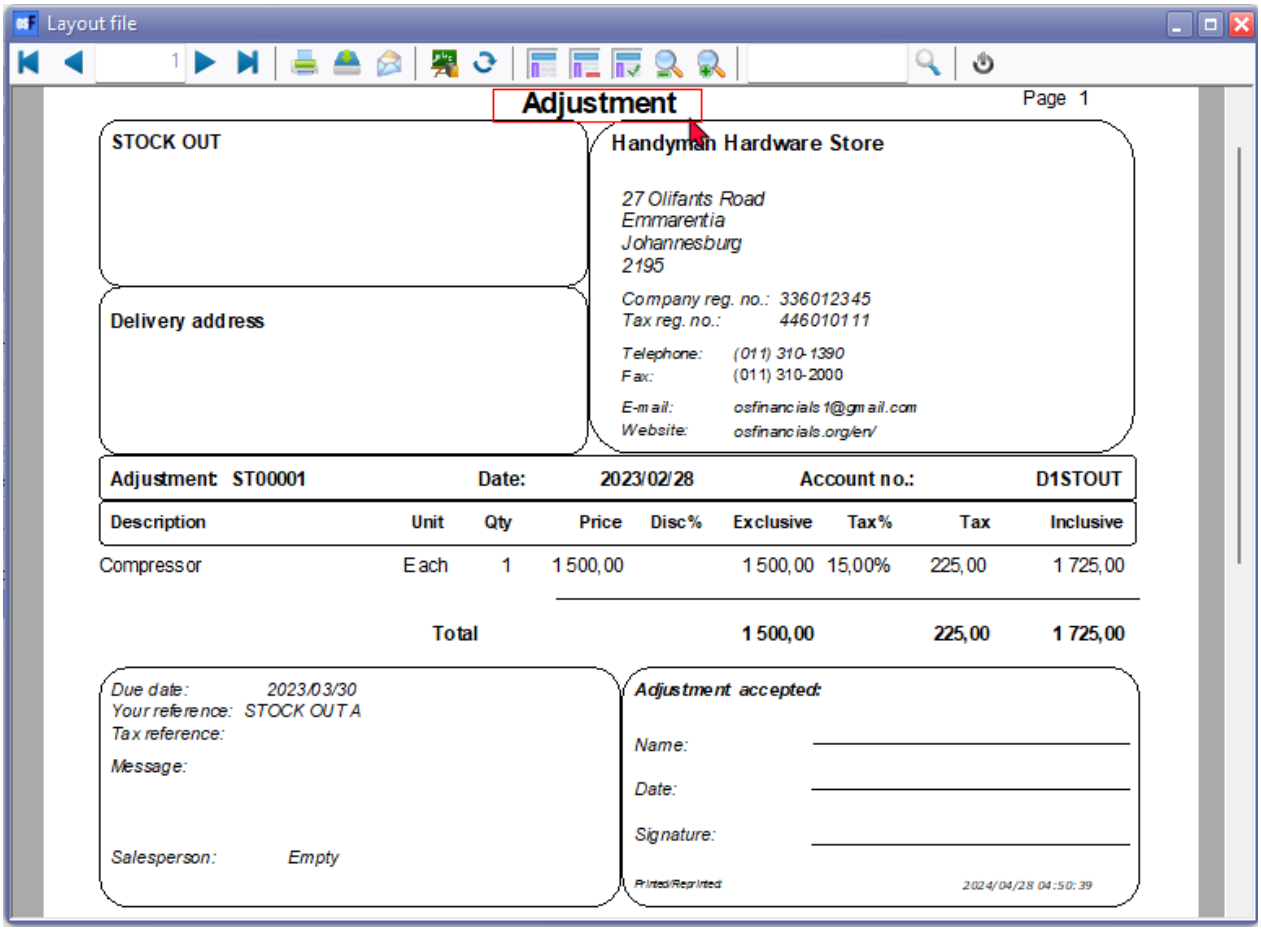
Changing the layout file in Setup → Documents setup will update the layout file in Setup → Point of-Sale - Printers tab but it still prints Stock in and Stock out using the POS - START-SP100 (TRN_906183)layout file.



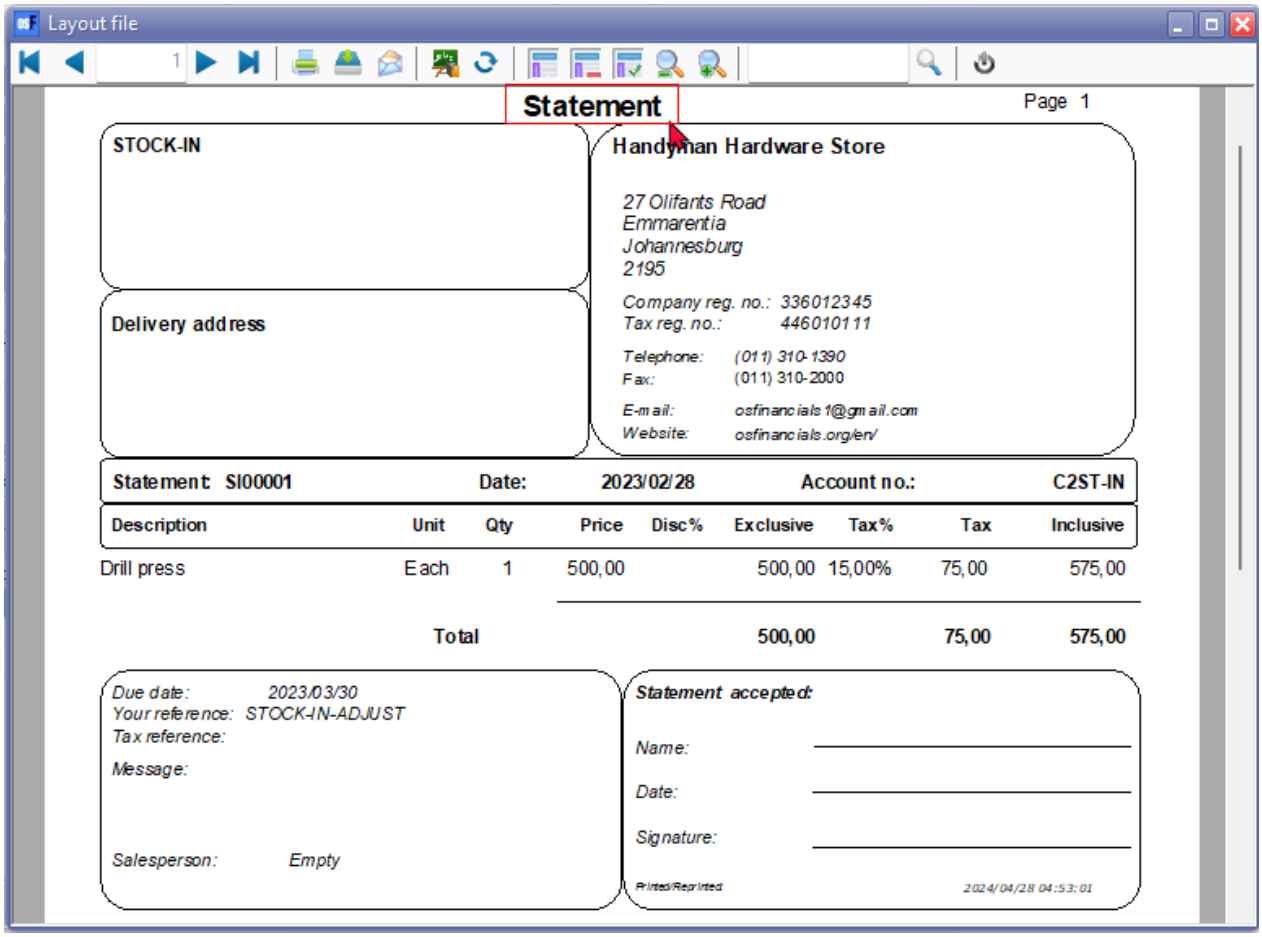
NOTE If "*Layout file*" is selected as the option within Documents setup for other document types, the "*Default*" option on Document grid does not work. You need to select the "*Layout file*" or other layout file. You have the option to choose a different layout file for "*Stock in*" or "*Stock out*" document types.

Layout file - The default "*Layout file*" for all document types, will print the headings in the Types tab on Tools → Customise language.

Stock out - Adjustment



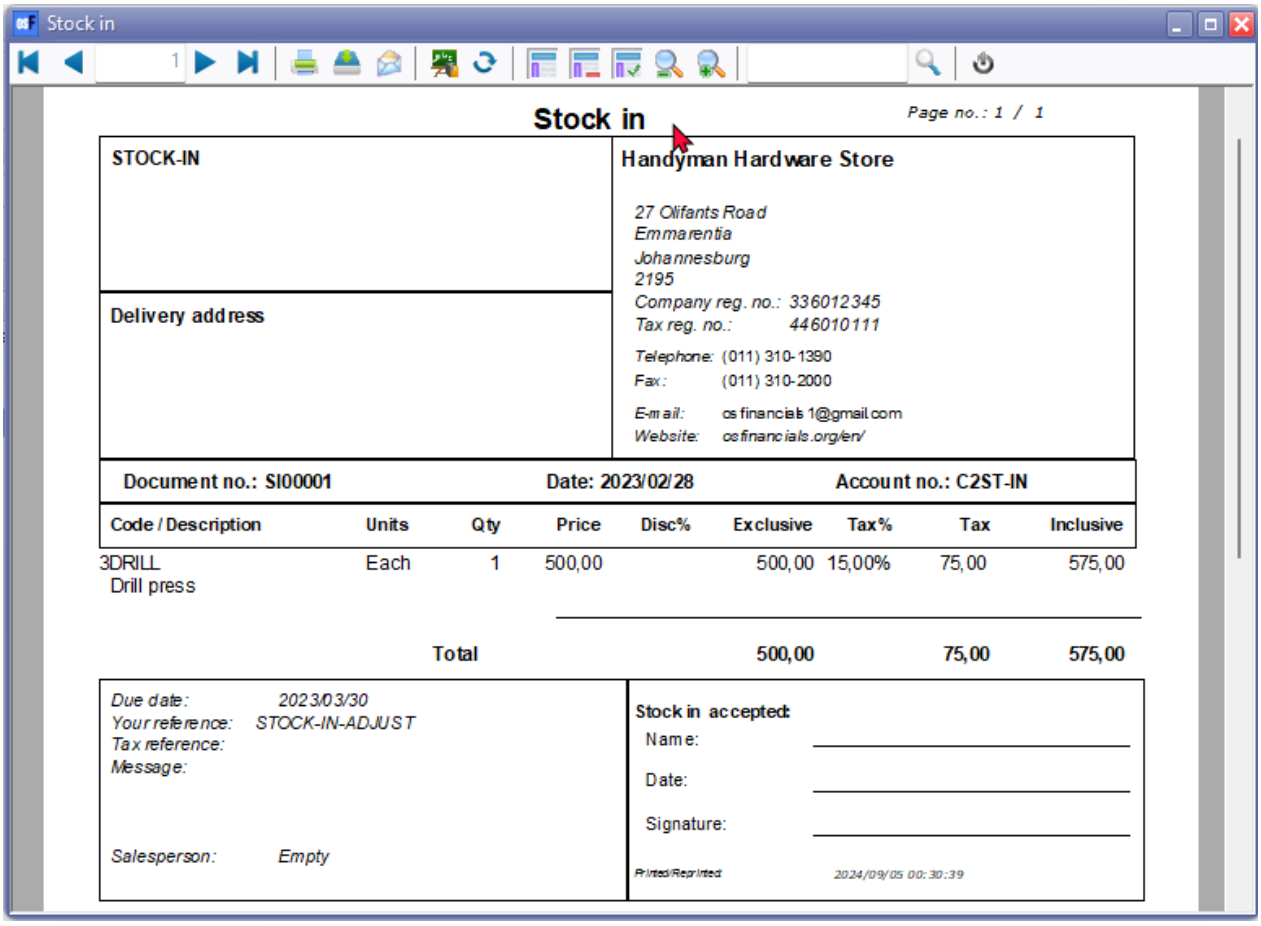
Stock in - Statement



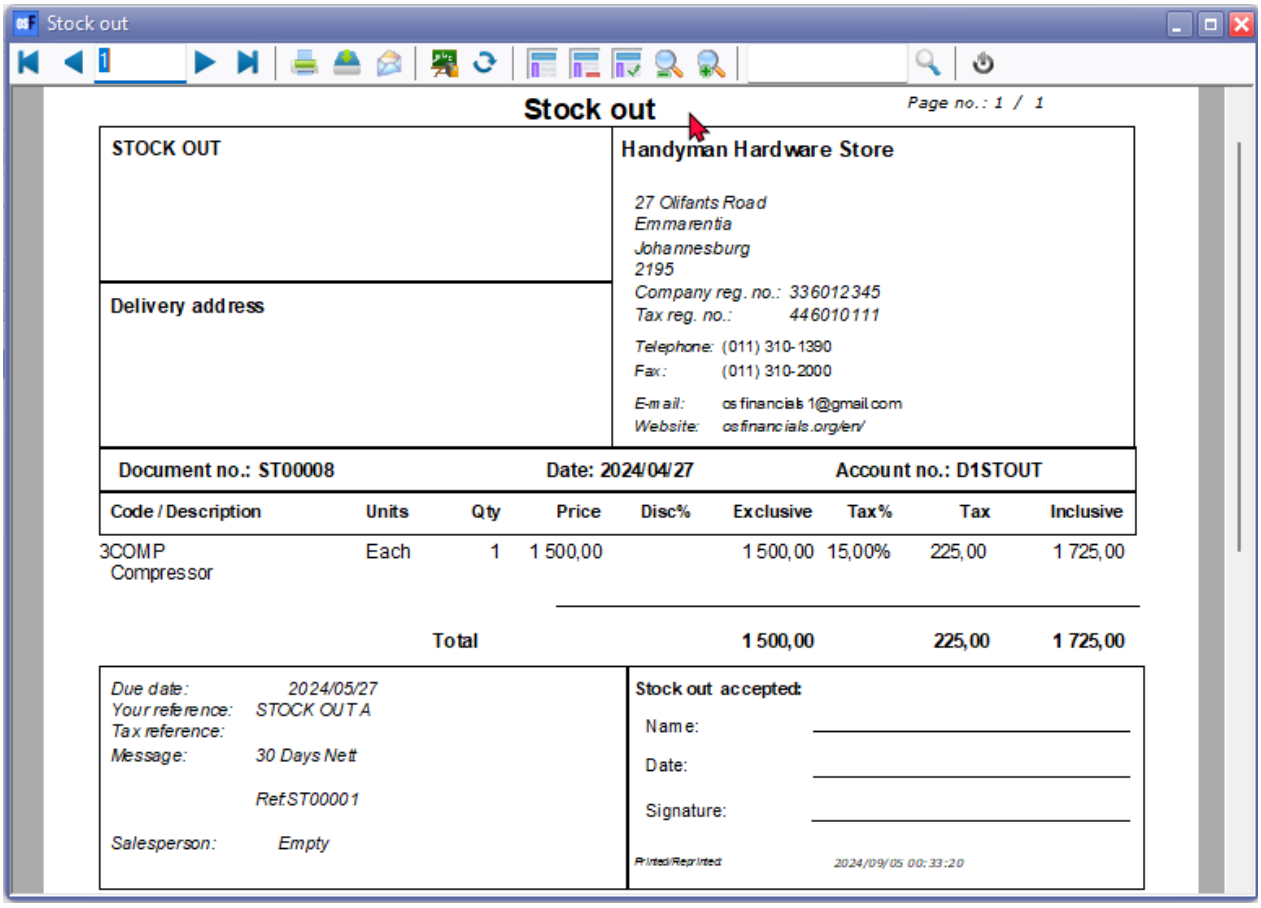
Layout files added for Stock in / Stock out document types

To fix this, added two translatable Document layout files from the Stock in / Stock out document types:

- Stock in (TRN_906178) This layout file may be selected on the Documents grid or Creditors - Documents tab



- Stock out (TRN_906179) This layout file may be selected on the Documents grid or Debtors - Documents tab



BOM (Production) Stock Item Type

Added : TRN_3266 BOM (Production) Stock Item Type

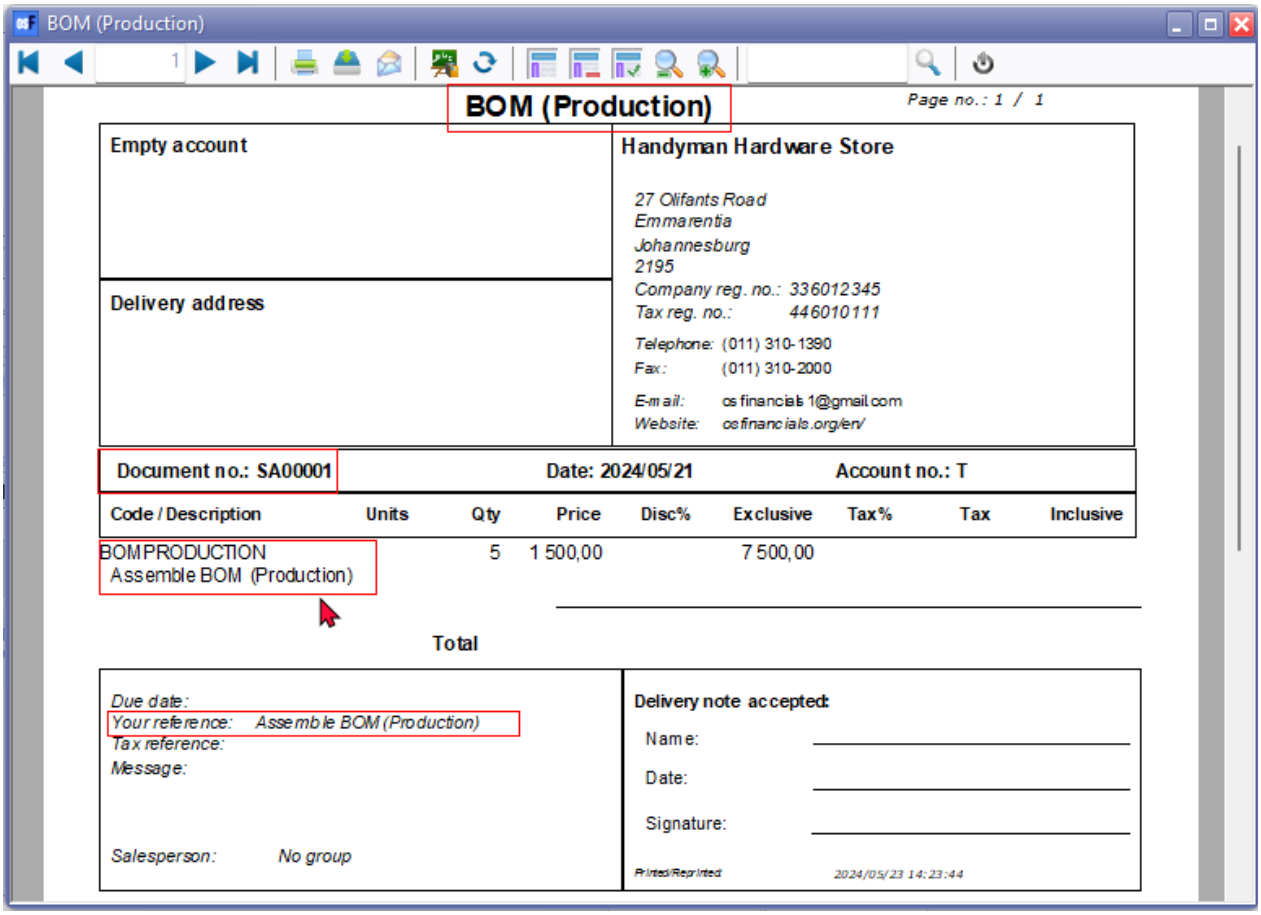
Generated for BOM stock items during Assembly or Disassembly.

Document prefix: "SA" (e.g., "*SA00001*"), with a similar 7-digit format.

Selecting the document layout files, which supports the "*TYPES.SDESCRIPTION*" document name from the "*TYPES*" table, will print the document name as "*Delivery note*" for "*Assemble*" option and "*Remittance*" for "*Disassemble*" option.

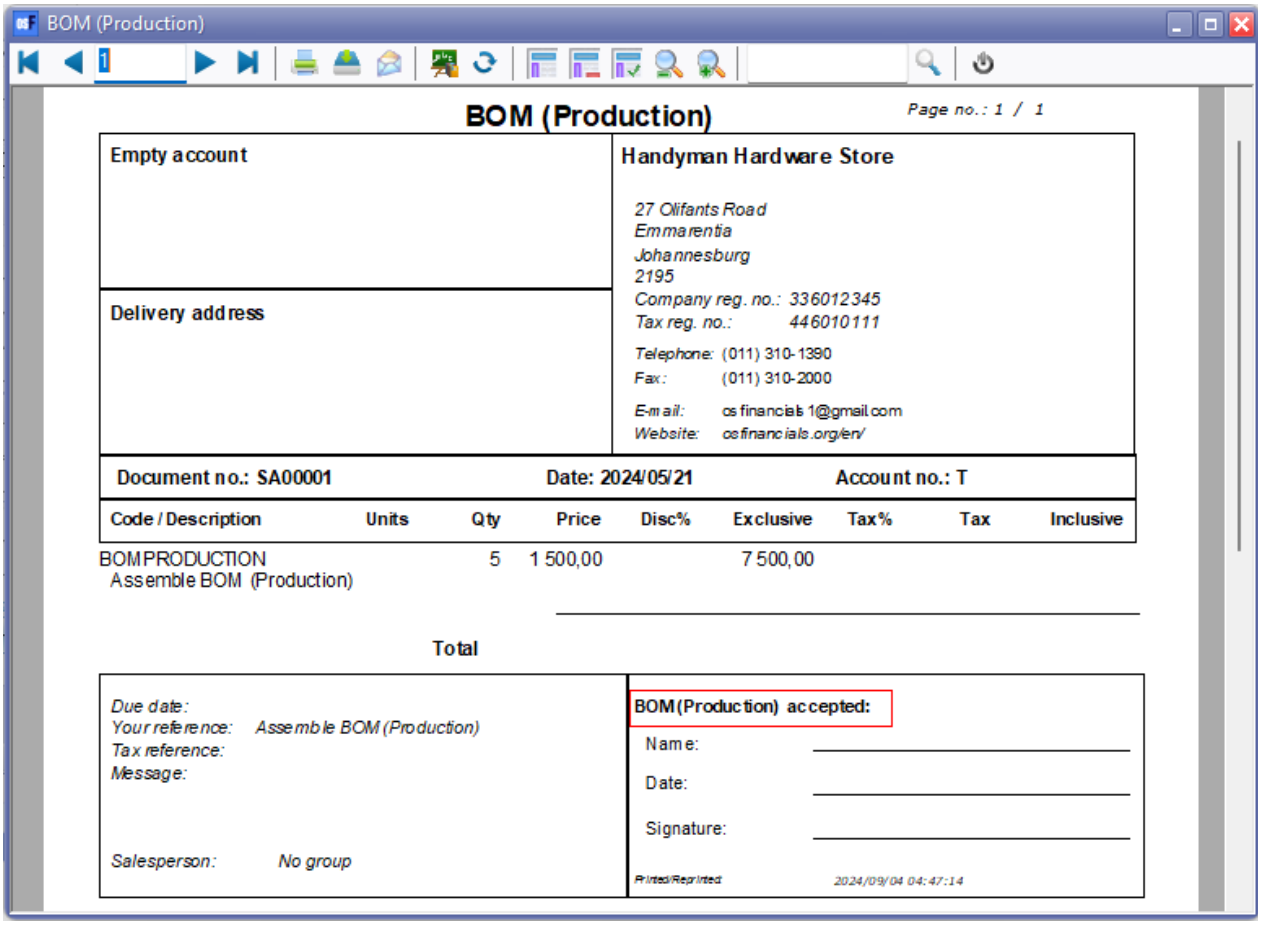
To solve this, an additional layout file is added to print the BOM (Production) stock type.

Example : Assemble

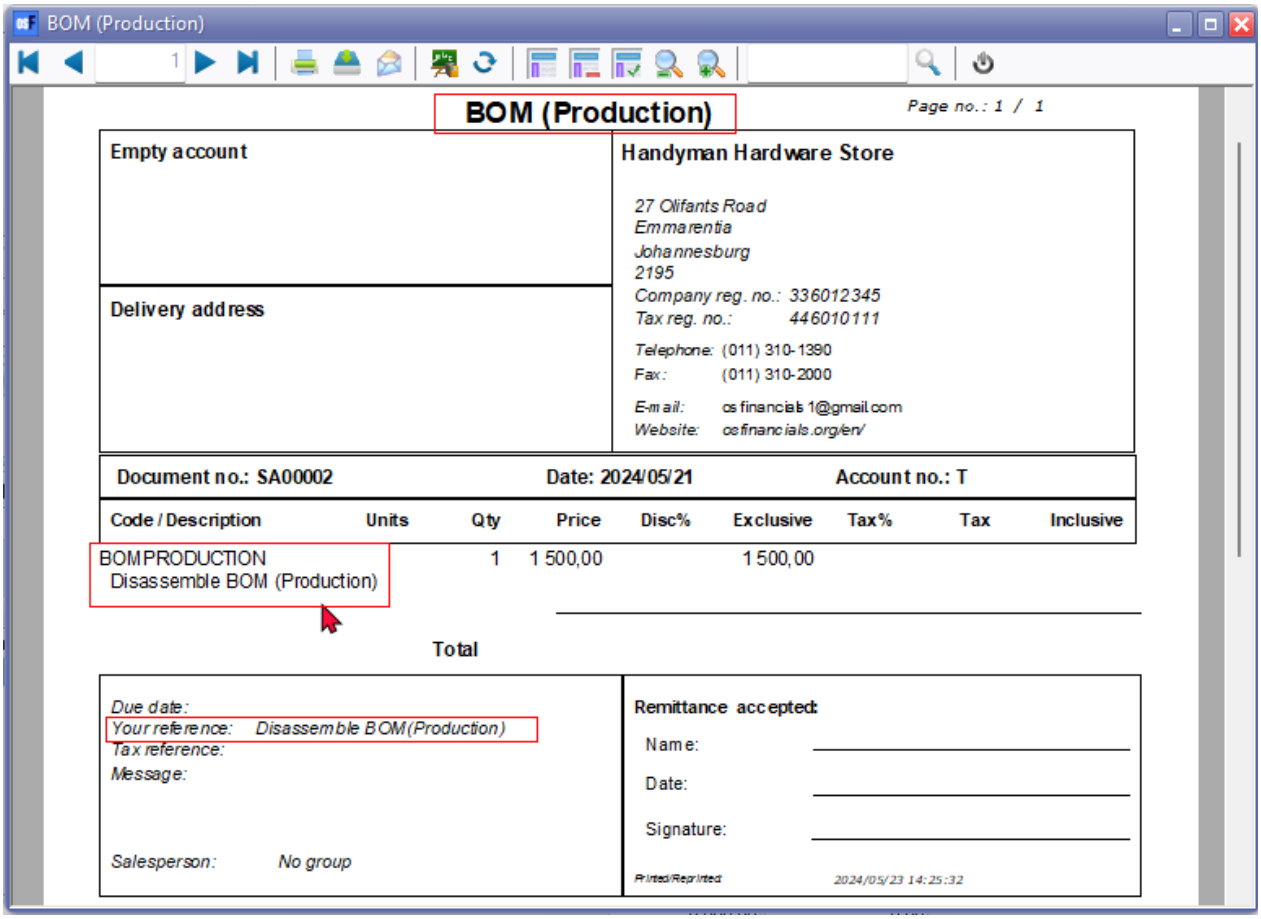


Delivery note accepted: in SubReport-1(TAX) - Changed label TRpExpression85 to print BOM (Production accepted :)

```
CUSTOM('GETTEXTLANG',3266,'BOM(Production',CLIENTORDEFLANG.SLANGUAGE,0,0)+'
'+(CUSTOM('GETTEXTLANG',906275,'Accepted',CLIENTORDEFLANG.SLANGUAGE,0,0)+(':  '))
```

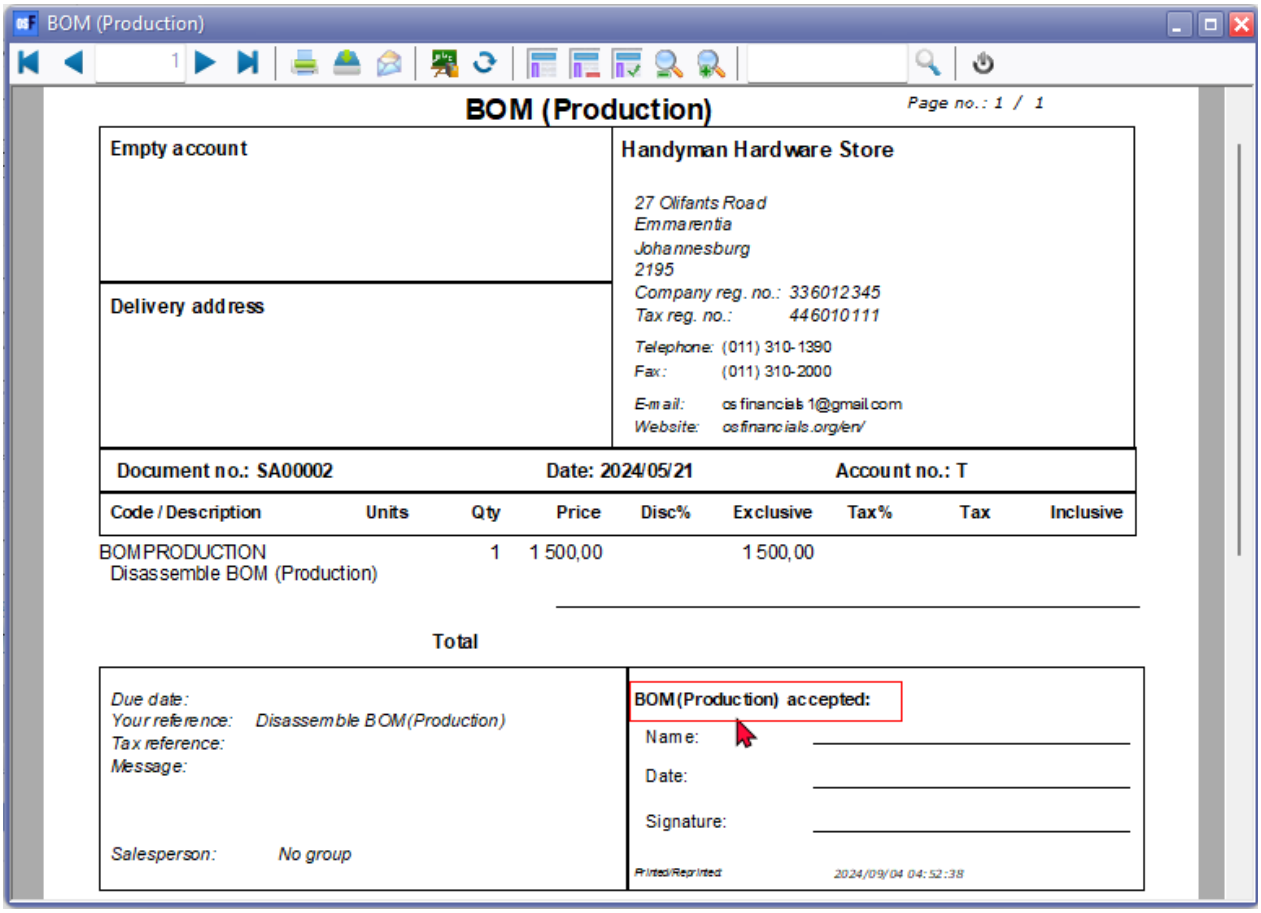


Example : Disassemble



Remittance accepted: in SubReport-1(TAX) - Changed label TRpExpression85 to print BOM (Production accepted :)

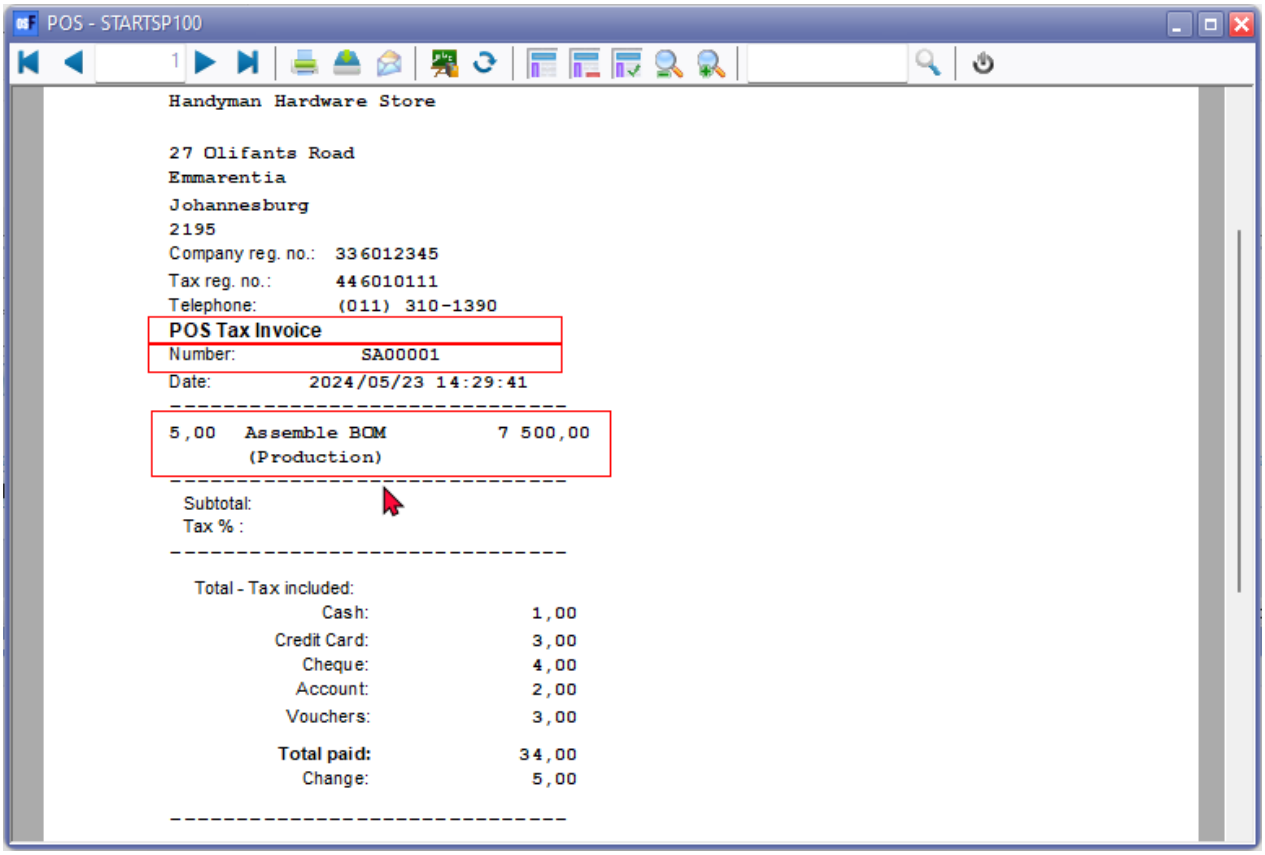
```
CUSTOM('GETTEXTLANG',3266,'BOM(Production',CLIENTORDEFLANG.SLANGUAGE,0,0)+'
'+(CUSTOM('GETTEXTLANG',906275,'Accepted',CLIENTORDEFLANG.SLANGUAGE,0,0)+(':  '))
```



Print a Posted document

You may print selected posted document generated by the "*Assemble*" and "*Disassemble*" of BOM (Production) items from the following options:

- BOM (Production) - Document groups tab : (Double-click to print).
- Search (central search) : Locate these posted document generated by the "*Assemble*" and "*Disassemble*" of BOM (Production) items. (Double-click to print).



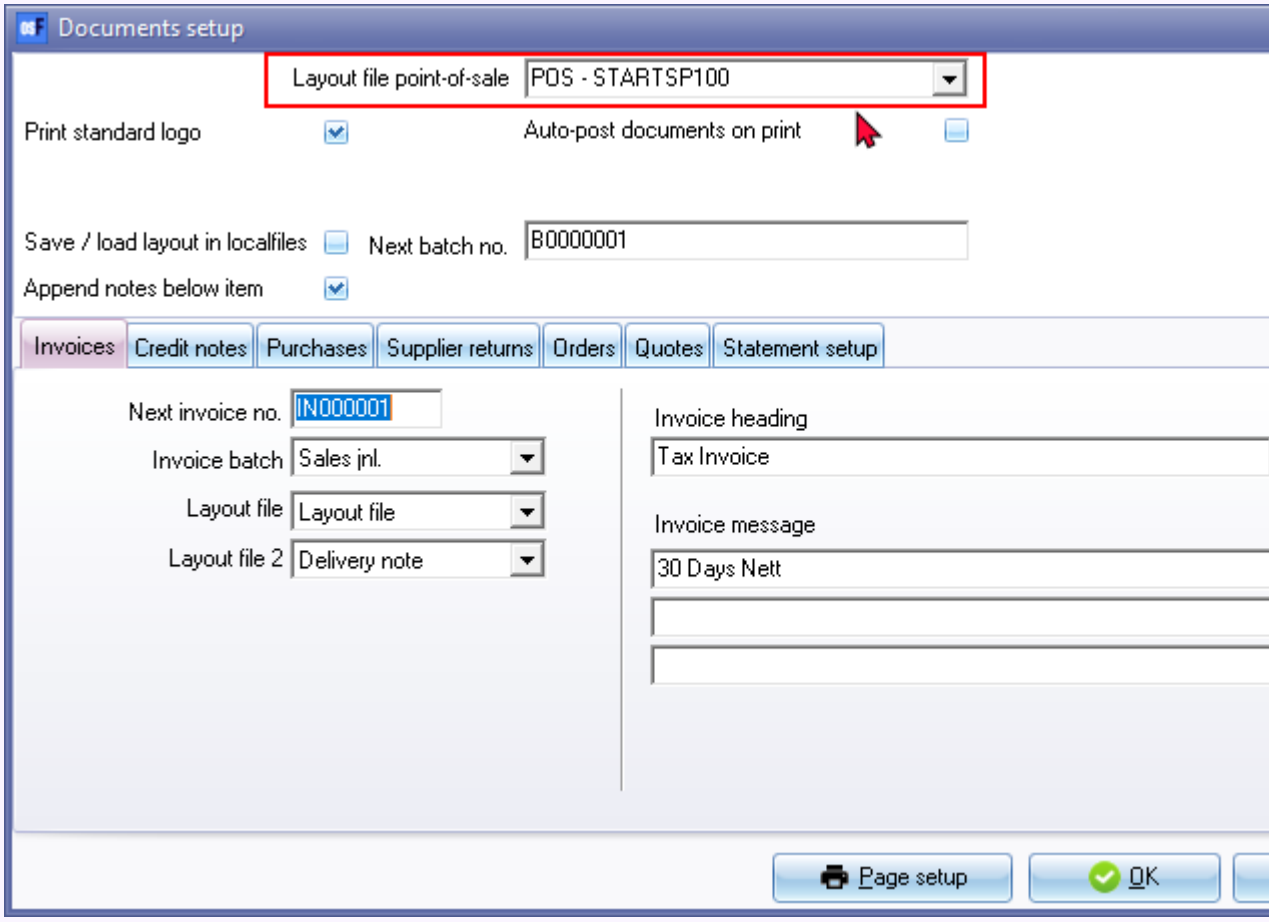
The "*POS Tax Invoice*" will print the correct document number, but will print the system date and time stamp of your operating system and not the actual transaction date.

The default document layout file which will be used to print documents generated by the "Assemble" and "Disassemble" of BO is the "Layout file point-of-sale" selected in Setup → Documents setup.

WARNING: Point-of-sale document layouts might not be ideal for printing "Assemble" and "Disassemble" documents for BOM types due to:

- *Date: POS invoices show your system's date, not the actual processing date.*
- *Document Name: Might say "POS Tax Invoice" instead of something relevant.*
- *Footer: Contains data like cashup amounts, not relevant for BOM operations.*
- *Additional Note: The standard POS (initiated from Input → POS Invoice (CTRL+F6)) uses the "Layout file point-of-sale" Documents setup. If different document layout files is selected, this may change the POS invoicing functionality.*

Recommendation: Select a different document layout file for BOM (Production) transactions (Setup → Documents setup).



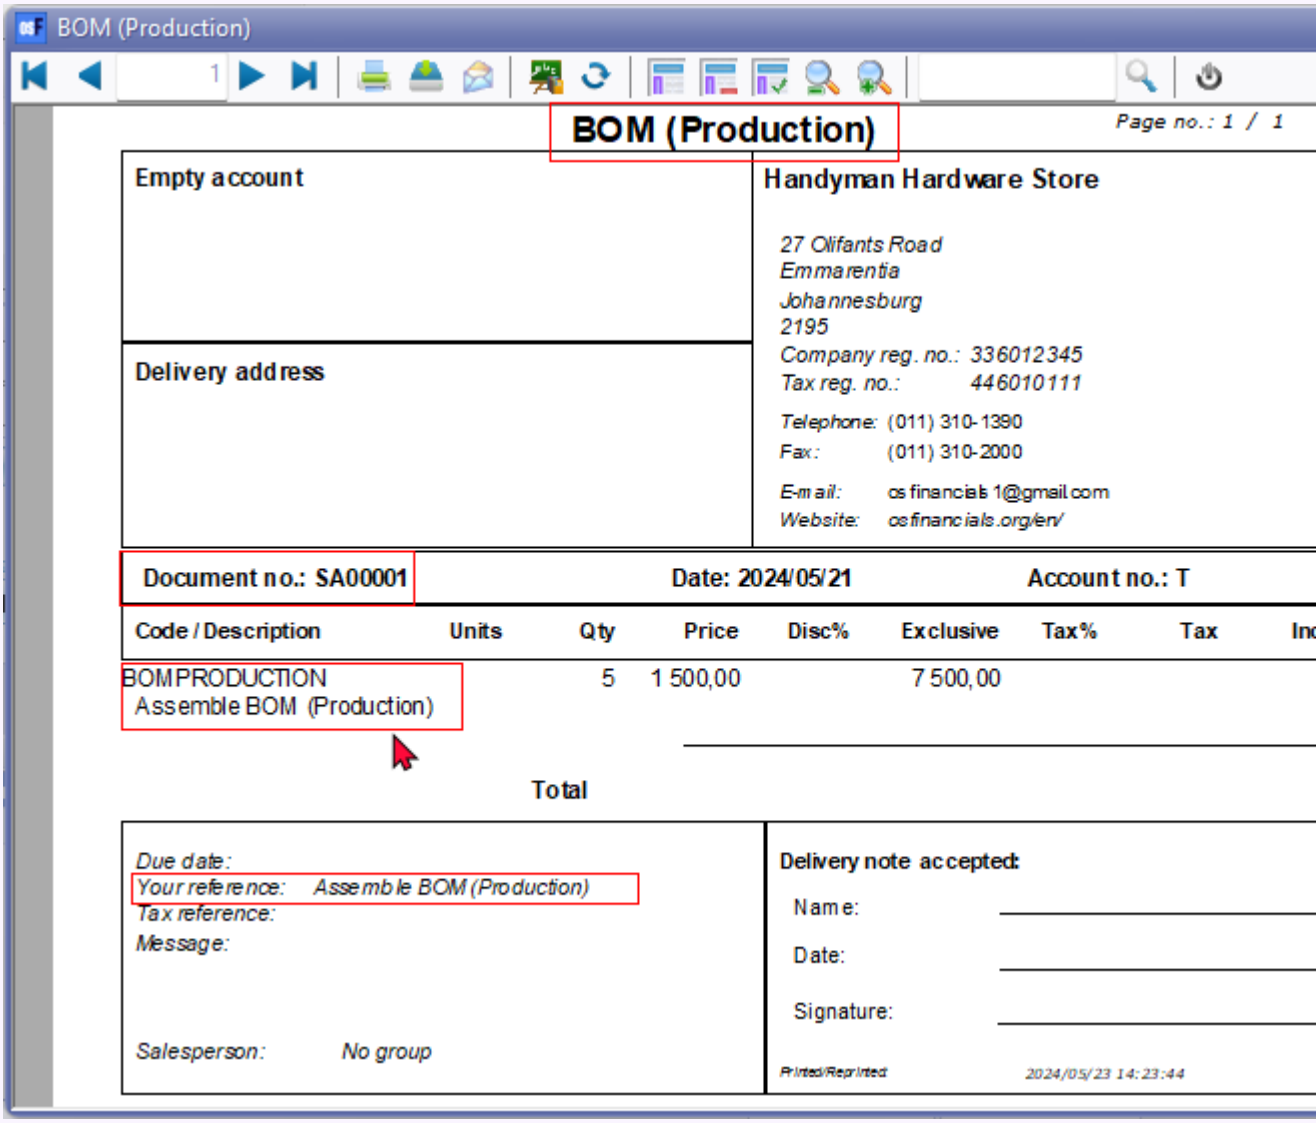
NOTE: Selecting the document layout files, which supports the "TYPES.SDESCRIPTION" document name from the "TYPES" table, document name as "Delivery note" for "Assemble" option and "Remittance" for "Disassemble" option. Selecting the following do will replicate the document names:

- *Layout file - (TRN_1910)*
- *Document layout - (TRN_3174)*
- *Document layout (15codes) - (TRN_906277)*
- *NO-TAX Layout file - (TRN_906589)*
- *NO-TAX Document layout - (TRN_906590)*
- *NO-TAX Document layout (15codes) - (TRN_906591)*

Recommendation: You may select the BOM (Production) Layout file (TRN_3266) for the Stock item type to print layout file "Assembly" or "Disassembly".

Document prefix: "SA" (e.g., "SA00001"), with a similar 7-digit format.

Example : Assemble



Delivery note accepted: in SubReport-1(TAX) - Changed label TRpExpression85 to print BOM (Production accepted :)

```
CUSTOM('GETTEXTLANG',3266,'BOM(Production',CLIENTORDEFLANG.SLANGUAGE,0,0)+'
'+(CUSTOM('GETTEXTLANG',906275,'Accepted',CLIENTORDEFLANG.SLANGUAGE,0,0)+(':  '))
```

Activa plugin - Open old existing books

Firebird error

```
Dynamic SQL Error
SQL error code = -204
Table unknown
ACTIVAREG
At line 1, column 25
```

Activa Plugin Setup

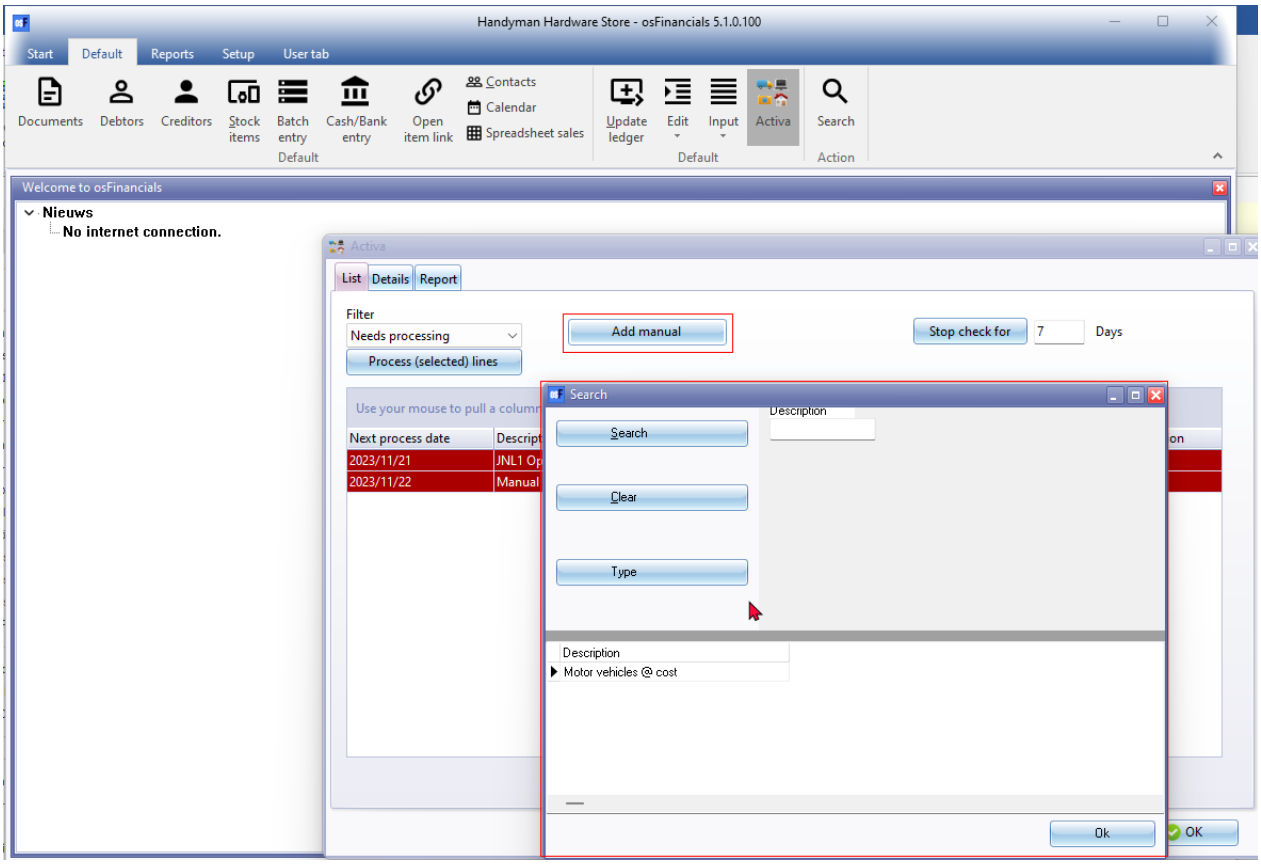
On the Plugins → Financial tools → Activa (Activate Plugins) you can set or add accounts correctly.

On the Default ribbon, Add manual button, the Search screen is static.

Cannot set accounts - Blank Search screen to add accounts

osFinancials5.1.0.4 Also replicated in osFinancials5 (453)

Before in osFinancails4 in could add the accounts - See = Activa Manual -



behind with HelpNDoc

Known issues - Bank import plugin

Balance batch option

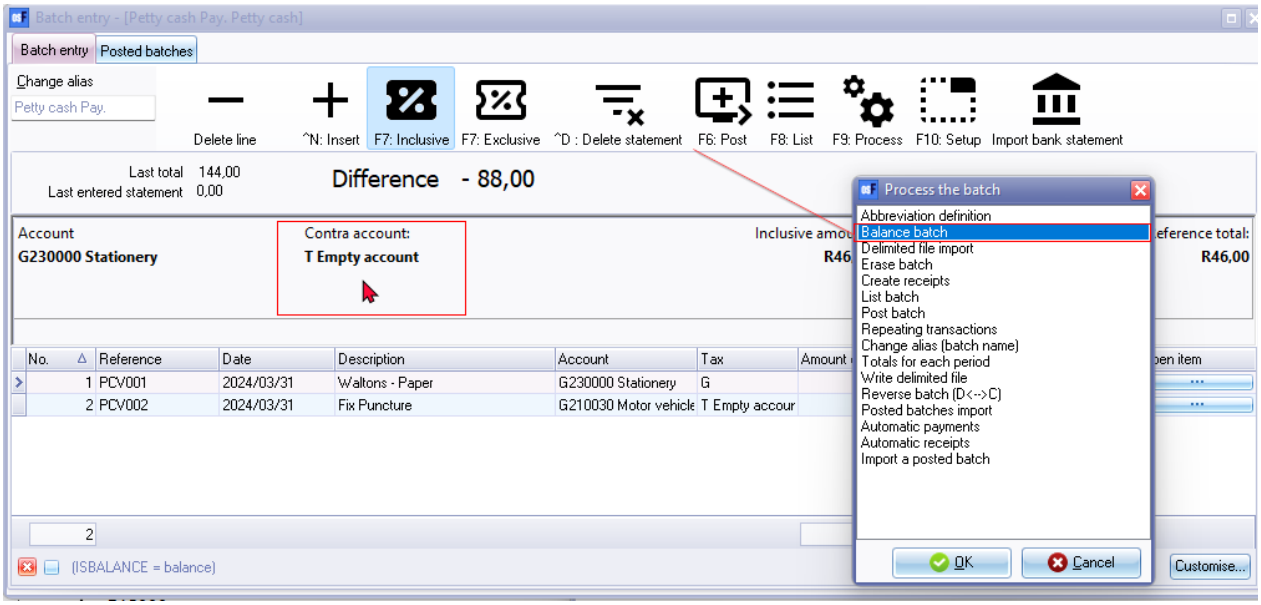
Balancing batches

If a batch is not balanced, the Tax amounts in not included in the F8: Batch list List batch - Unposted batch report. Once batches are balanced, the F8:List on the List batch - Unposted batch report, will include the Tax amounts.

As with normal batches, the F5:Balance icon is accessible on the Batch entry (normal batches for Bank accounts).

In the Bank import there is no F5:Balance icon but it is accessible in the F9:Process and select Balance batch option.

In the Bank import plugin, it only populates the Contra account when a bank account is balanced.



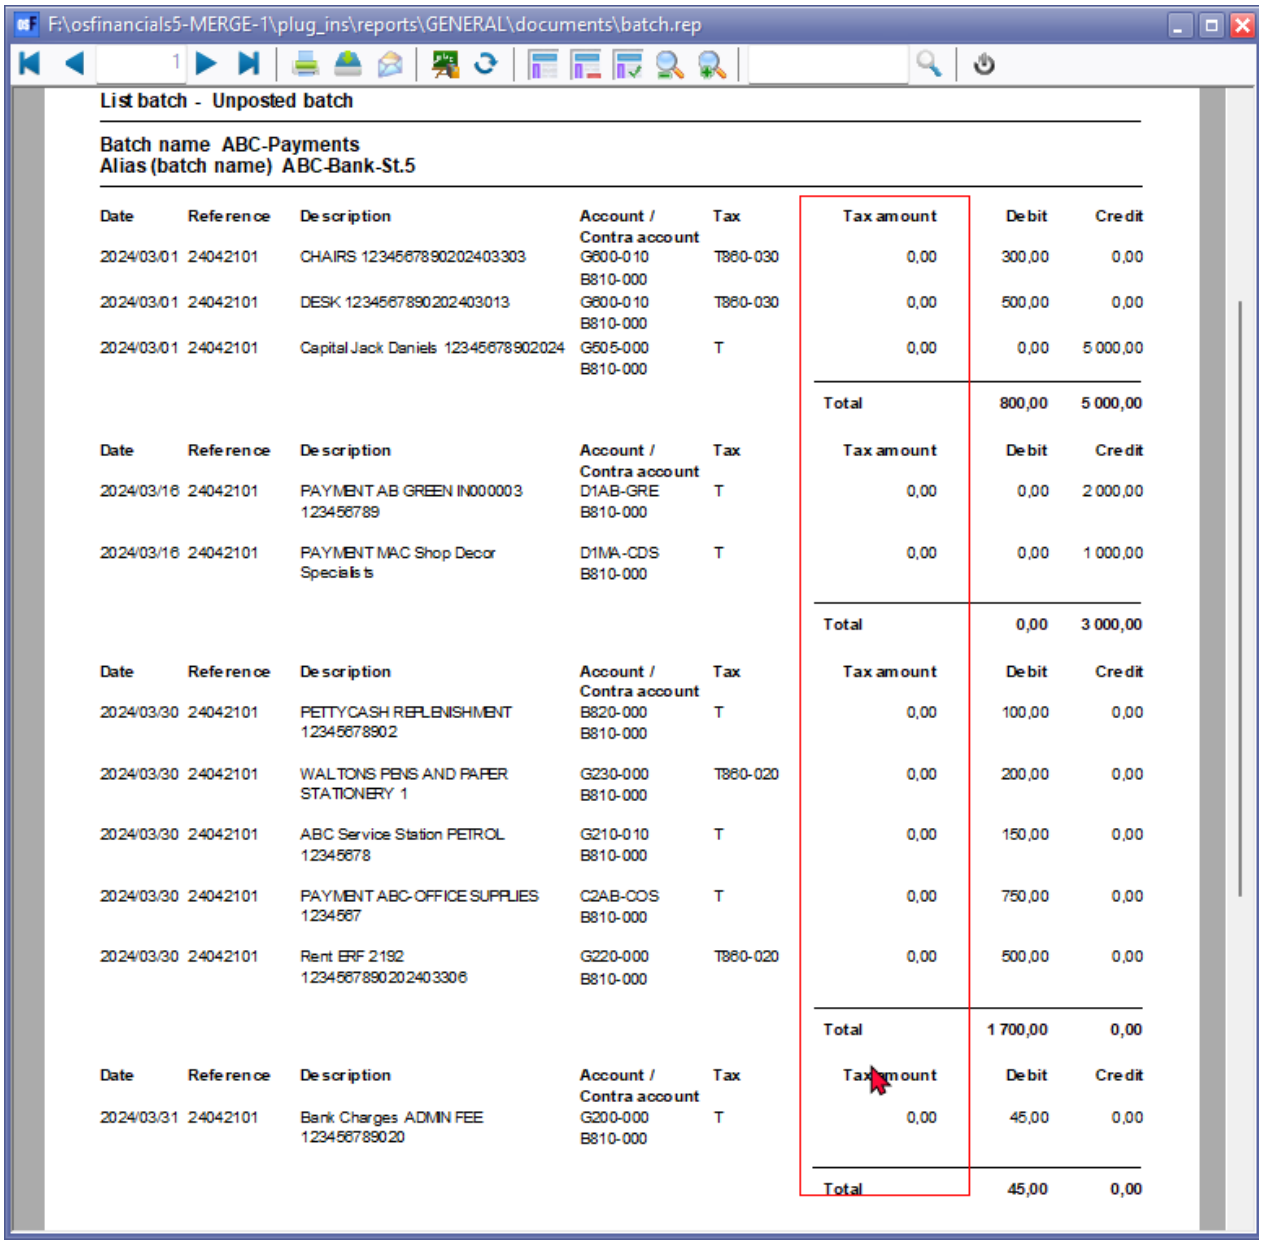
In Firebird databases could not find any issues with dates causing issues with the unbalanced and balanced batches.

Balancing and Posting a Bank Import plugin batch and the Posting the Batch does not duplicate transactions when Posting a Balanced Bank import batch.

Maybe the F5:Balance icon could be moved to the top with the other icons in Bank import plugin batches.

List the transactions in the batch (Exclude Tax amounts)

Once the transactions is imported and allocated to accounts, including Tax (VAT/GST/Sales tax) the Tax amounts is not included in the F8:List on the List batch - Unposted batch report.



List batch - Unposted batch

Batch name ABC-Payments
Alias (batch name) ABC-Bank-St.5

Could not convert variant of type (UnicodeString) into type (Double)

and within Reportman

```
Could not convert variant of type (UnicodeString) into type (Double)
TODATE=11-10-2006
```

The error message "*Could not convert variant of type (UnicodeString) into type (Double*)" in Firebird databases suggests that there is an issue with data conversion, particularly involving a Unicode string and a Double data type.

In your provided information, you also mentioned "*TODATE=11-10-2006*." It seems like there might be an attempt to convert a string ("*11-10-2006*") to a Double data type using the TODATE function in Firebird.

Here are a few steps you can take to troubleshoot and resolve the issue:

1. Check the Data Type Compatibility: Ensure that the data types used in your expressions are compatible. If you are using the TODATE function, make sure that the input is a valid date format.

   Example: sql

   ```
   SELECT TODATE('11-10-2006', 'DD-MM-YYYY') FROM YourTable;
   ```

2. Verify Data Formats: Double-check the format of the date string. In the example above, the format is 'DD-MM-YYYY'. If your date string follows a different format, adjust the format accordingly.

3. Handle NULL Values: If your data might contain NULL values, consider adding conditions to handle them appropriately. For instance, use the COALESCE function to replace NULL values with a default or handle them in another way.

4. Explicit Type Conversion: If you're dealing with mixed data types, explicitly convert the data types using appropriate functions. For example, you can use the CAST or CONVERT function to explicitly convert a string to a Double if needed.

   Example: sql

   ```
   SELECT CAST('11-10-2006' AS DOUBLE PRECISION) FROM YourTable;
   ```

5. Review the SQL Statement: Check the entire SQL statement or query for any other potential issues. Look for areas where data types might conflict.

Without seeing the full query or knowing more about the database structure, these are general suggestions. If the issue persists, providing more details about the relevant part of your SQL query and the database schema would be helpful for further assistance.

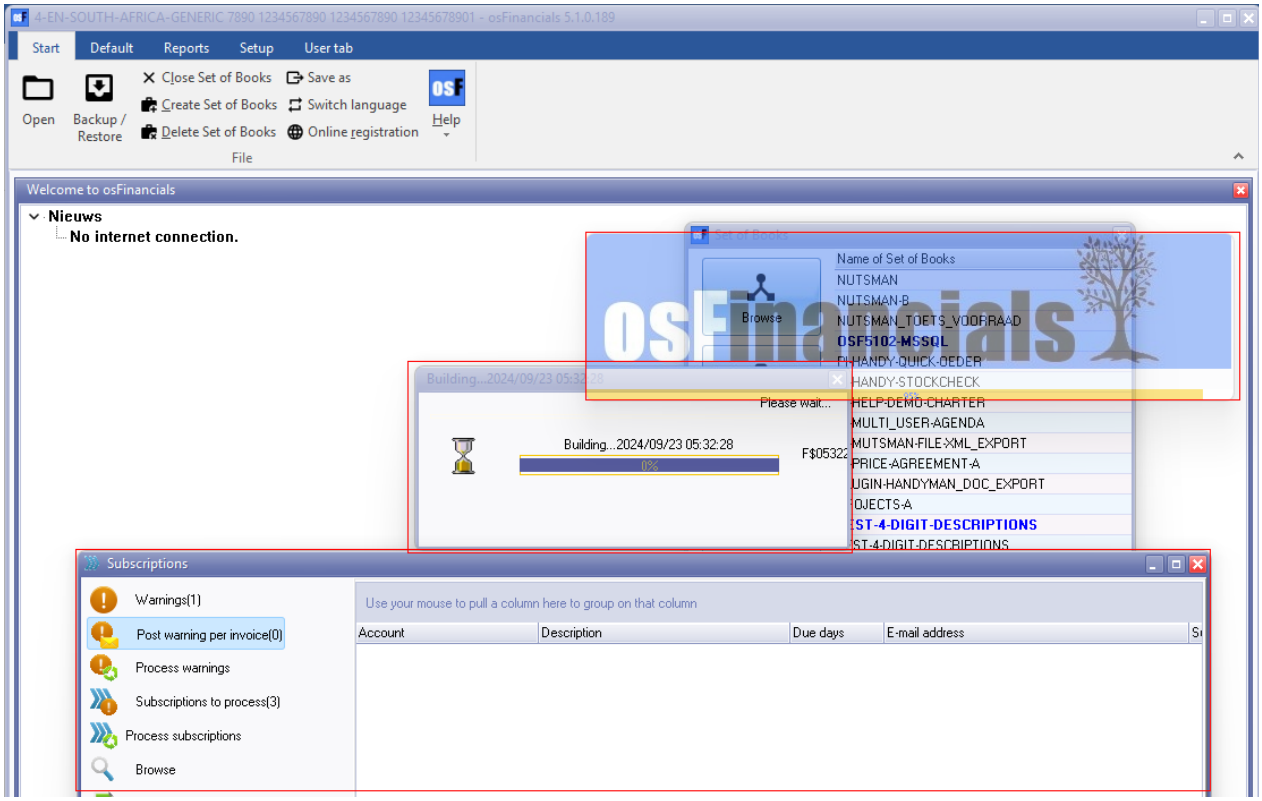
Subscriptions - Splash screen on top

Replicated in osFinancials5.1.0.189 Update install.

If Subscriptions activated and when starting osFinancials5 and opening a Set of Books, the osFinancials splash screen stays on top.

There is a Building process behind the Subscriptions that does not finish.

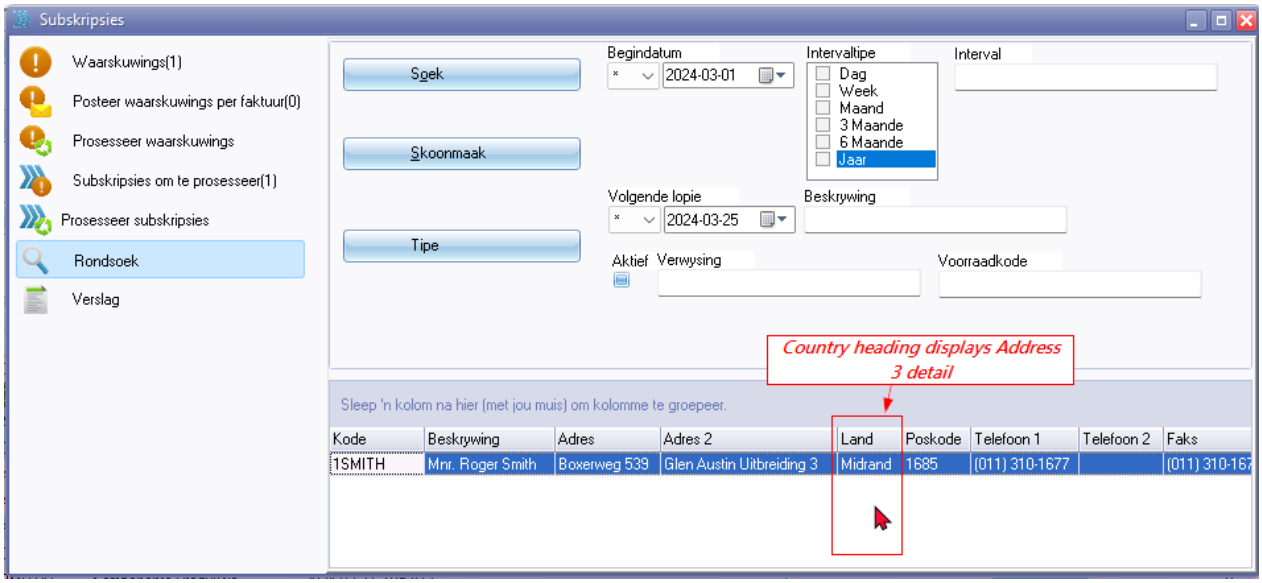


To resolve this, you need to close the Subscriptions screen to complete the Building process.

You may need to Manually launch the Subscriptions from the Default ribbon.

This is only replicated when opening a Set of Books in a new osFinancials session. Reopening the Set of Books in a current session, does not replicate this error.

Subscriptions - Search - Column Country / Address 3



The Country column heading "*Land*" should be Address 3 since the data entered in Address 3 field is displayed in thee Country column.

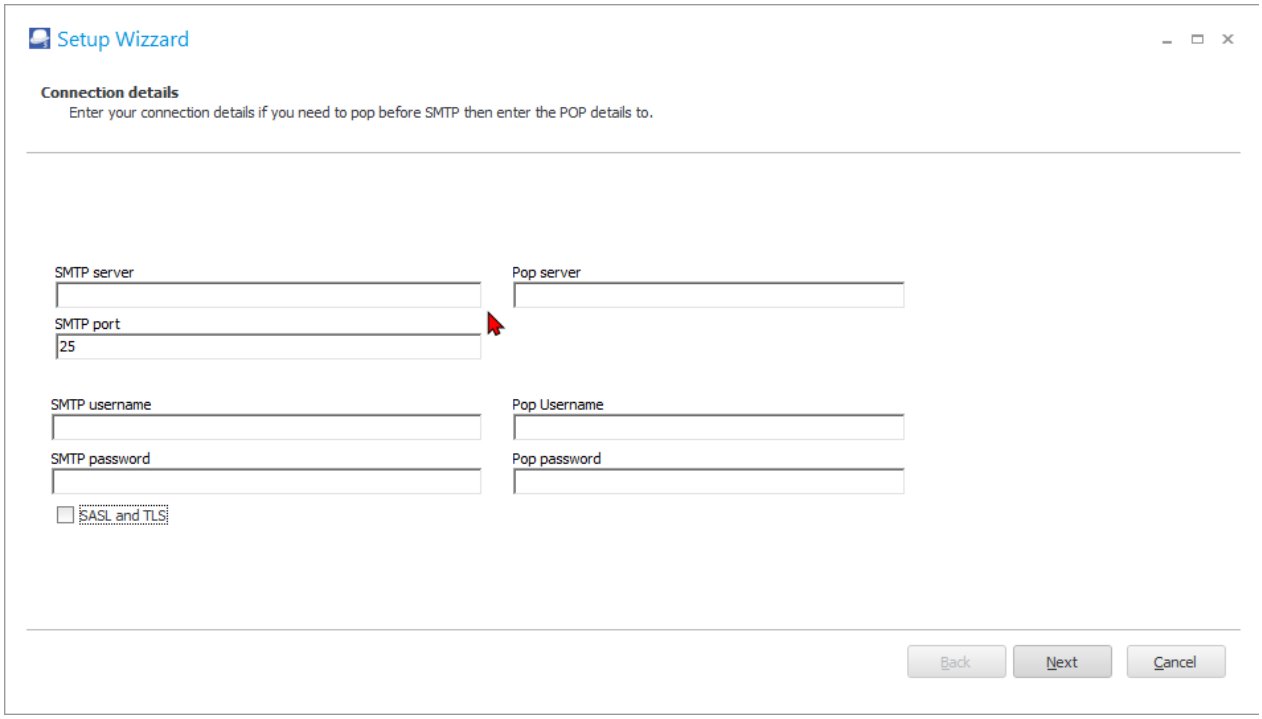
Setup Wizard (Not launched)

In addition to the Settings tab, you may also launch the "*Setup Wizzard*" to configure your connection details, for your SMTP and POP servers:

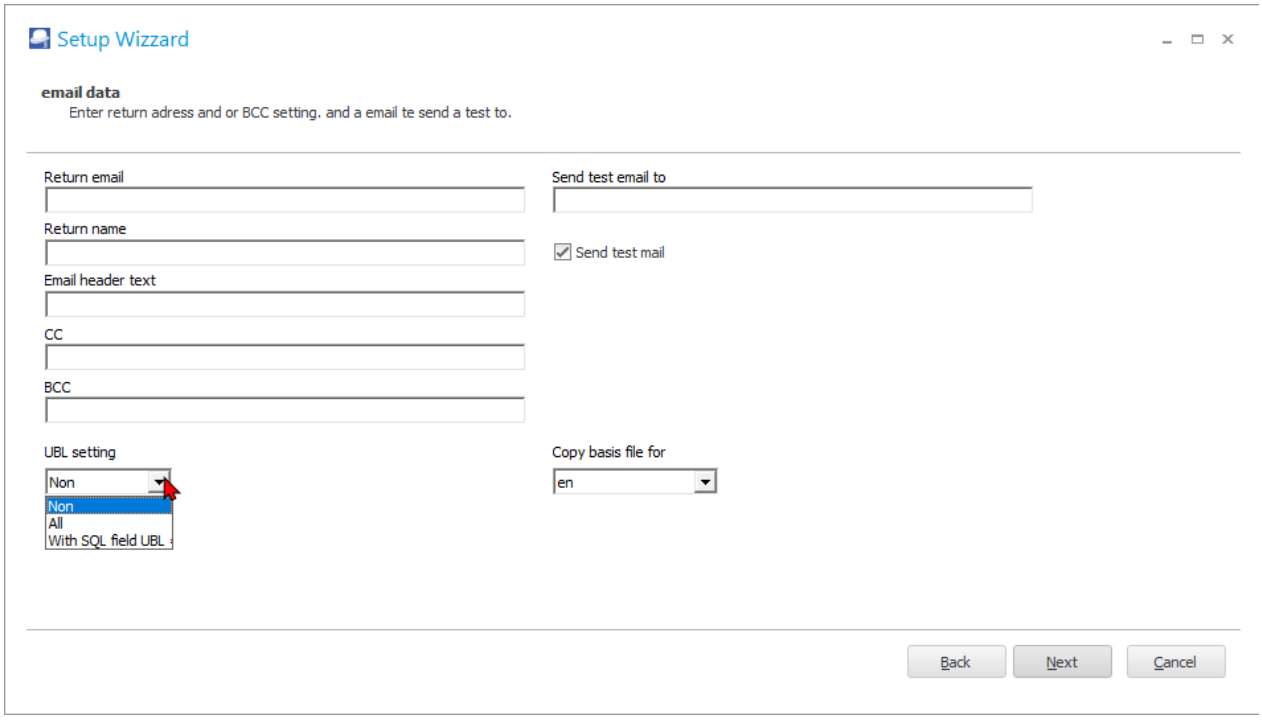


The options, is as follows:

Field	*Description*
SMTP server:	*Enter a valid SMTP (outgoing mail server) as registered with your ISP (Internet Service Provider) for your e-mail account settings.* *Note - with POP before SMTP (usually if you do not send e-mails via your provider) it is best to create an e-mail box that no one else will read. This is because if mail is read with multiple IPS on the mail box, the pop for SMTP will not work properly.* *It is best to use an account that is not used by anyone else.*
SMTP Port:	*The default port is "25". This is determined by the default configuration of your operating system.*
SMTP username:	*Enter the SMTP username as registered with your ISP (Internet Service Provider) for your e-mail account settings.*
SMTP password:	*Enter the SMTP password as registered with your ISP (Internet Service Provider) for your e-mail account settings.*
POP server:	*Enter the POP server as registered with your ISP (Internet Service Provider) for your e-mail account settings.*

POP Username:	*Enter the POP username as registered with your ISP (Internet Service Provider) for your e-mail account settings.*
POP password:	*Enter the POP password as registered with your ISP (Internet Service Provider) for your e-mail account settings.*

Click Next.



The options, is as follows:

Field	*Description*
Return e-mail:	*This field is optional. You may enter your own e-mail address.*
Return name:	*Enter your name.*
E-mail header text:	*Add the text you need to send as the e-mail subject.*
CC: (multiple separate with ;)	*This abbreviation CC "Carbon Copy" indicates secondary recipients of a message. Those recipients who are to receive a copy of a message directed to another. The list of recipients in the CC field is visible to all other recipients of the message.* *Enter a valid e-mail address, if necessary.*
BCC: (multiple separate with ;)	*This abbreviation BCC "Blind Carbon Copy" allows you to send a copy of your correspondence to a third party when you do not want to let the recipient know*

	that you are doing this (or when you do not want the recipient to know the third party's e-mail address). You may also wish to enter this filed, when sending an e-mail to multiple recipients, you can hide their e-mail addresses from each other. *Enter a valid e-mail address, if necessary.*
Send test mail to:	*Here you can enter your own email address for the test.*
Send test mail to:	*Thick this option if a valid e-mail address is entered in the "Send test mail to" field.*
Copy basis file for:	*The default setting is "nl for the Dutch language. Select "en" for English.*
Certificate password:	*If you have selected a certificate, you need to enter a valid password for that certificate.*
UBL:	*From osFinancials version 4.0.0.1102 and TurboCASH5.2 (365) it is possible to send UBL2.0 files with the document.* *The option can be enabled on the settings tab and has 3 settings* • *Do not send UBL (standard)* • *Always send a UBL* • *Based on a UBL field in the dataset that contains the value T.* *The output can be checked for validity via this website* *https://peppol.helger.com/public/locale-en_US/menuitem-validation-bis2* *By default, EUR is used for currency exports.* *For stock unit standard SK is used or the first 2 letters of the stock unit.*

Click Next to check your settings.

If there are any errors, you need to click Back and correct your settings and configuration.

Access violations Plugin - E-MailPro

Access violation – Sudden Internet connection lost

osFinancials 5.0.0.374

osFinancials5/TurboCASH5 - Business Class

Saturday, 24 May 2025- 01:50:47 - osFinancials5 / TurboCASH5-Business Class Help

English Online help Afrikaans Online help

- osFinancials - Videos -

- TurboCASH - Videos - All videos -

osFinancials5/TurboCASH5 Business Class is the most comprehensive accounting software package available on the market today. With its powerful features, intuitive user interface, and support for 87 Sets of Books, it is an all-in-one solution for managing your financial requirements. It is also capable of supporting 79 different languages and tax regimes. With osFinancials5/TurboCASH5, you can easily take control of your finances and achieve success.
Thank you for exploring osFinancials5/TurboCASH5. We wish you all the best in your accounting journey!

osFinancials5/TurboCASH5 - Business Class

After years of development and support for osFinancials and TurboCASH, the current model is no longer working effectively. To address this issue, the team is introducing osFinancials5/TurboCASH5 Business Class a new version with additional features and capabilities.

While osFinancials 4 remains free to use, users seeking more advanced functionality can upgrade to osFinancials5/TurboCASH5 Business Class. This version is available free of charge for users with fewer than 500 transactions or documents. For those with more, a yearly contribution of 50 euros (excluding taxes) or 60 dollars will be required.

For users with existing subscriptions for multi-user or retail POS, the license for osFinancials5/TurboCASH5 Business Class will be included as part of their existing subscription.

Included in the registered version of osFinancials5/TurboCASH5 - Business Class

osFinancials5/TurboCASH5 Subscription

Process unlimited (more than 500) transactions and documents.

Every time an unregistered version of osFinancials5/TurboCASH5 is started, the following confirmation message will be displayed:

- This software is limited to 500 transactions or 500 documents. Please register and buy a license for osFinancials5.1/TurboCASH5-3.
  This copy of osFinancials/TurboCASH is not registered! Do you wish to register it now?

Unregistered versions will allow you to process up to 500 transactions and/or documents. Once this limit is reached, osFinancials5/TurboCASH5 will not allow any processing of transactions, in batches and/or documents.

Once you have registered osFinancials5/TurboCASH5, you will receive an unlocking code and will be able to process further transactions and/or documents.

Plugins included in the osFinancials5/TurboCASH5 Subscription

Bank import

BankImport Plugin -

Licence : Included in osFinancials5/TurboCASH5 Subscription.

Documentation : Help topic.
Documentation : osFinancials website - Bank import plugin -
Documentation : osFinancials website - Bank Reconciliations Plugin -

The Bank Import plugin included with the osFinancials5/TurboCASH5 Subscription is a handy tool for managing and processing the transactions in your bank and credit card accounts. You can download electronic bank statement files directly from your online banking services at your bank or financial institution. After that, you can use the Bank Import plugin to import these bank statements into your bank accounts. This process saves you a lot of time and effort as you do not have to manually enter and process the transactions of your bank accounts and credit card accounts in separate Payment journals and Receipt Journals.

Additionally, the Bank Import Plugin has the ability to use bank references to automatically assign

transactions to the appropriate accounts, This automation not only saves time, but also reduces the risk of human error associated with manual data entry. Overall, using this Bank Import plugin is a smart choice for businesses or individuals who want to optimize their financial workflow within osFinancials5/TurboCASH5.

Document E-mail Pro

Document E-mail Pro Plugin - Manual - Shop -

Licence : Included in osFinancials5 Subscription / TurboCASH5 Subscription.

Documentation : Help topic.

Documentation : osFinancials website - Document email pro plugin -

Document E-mail Pro Plugin - Streamline your document handling and communication processes with our Document Email Pro Plugin. With a licence which is included in osFinancials5 Subscription / TurboCASH5 Subscription, you can effortlessly email invoices, quotes, and more directly from the program.

Customise email layouts to match the document type, ensuring a professional and tailored communication experience for your clients and suppliers. Send multiple documents simultaneously with ease, simplifying your workflow and saving valuable time.

Experience the convenience of sending digital sales and purchase documents in PDF format, enhancing efficiency and communication with customers and suppliers alike. Upgrade your document management with the Document Email Pro Plugin.

Budget Plugin

Budget Plugin - Manual - Shop - Help documentation

Licence : Included in osFinancials5 Subscription.

Effortlessly manage budgets for accounts, cost centres, and projects with the Budget Plugin, now included as a standard feature in the osFinancials5/TurboCASH5 Subscription. Access the Budgets option on the Reports ribbon for seamless integration.

Key Features:

- Flexible Budget Entry: Easily input budgets for accounts, cost centres, and projects directly within the osFinancials5/TurboCASH5 interface. Copy budget figures from the previous year of actual account balances.
- Comprehensive Budgeting: Cover all aspects of financial planning by setting budgets for various entities, including accounts, cost centres, and projects.

- Integrated Solution: Seamlessly integrate budget management into your overall financial workflow within osFinancials5/TurboCASH5.
- Advanced Filtering and Pivot Options: Utilize advanced filtering and pivot functionalities to analyse budget data effectively and gain deeper insights into your financial performance.
- Streamlined Processes: Simplify budgeting tasks and ensure accuracy by leveraging the intuitive interface and advanced features of the Budget Plugin.
- Comprehensive Reporting: Generate budget listing reports (Trial balance, Income statement, Balance sheet, or Standard column balances report types) and budget performance reports (Budget vs Actual to compare the budget figures versus the actual posted transactions). Export reports to spreadsheets and utilize powerful pivot features for in-depth analysis. Print and export budgets in the T-Account viewer.

Enhance your financial planning capabilities and streamline your budgeting processes with the Budget Plugin, empowering you to make informed decisions and drive financial success within your organisation.

Support Contract and Extra Tickets

Support Contract and Extra Tickets - Shop -

Support Contract:

The support contract grants you direct access to our team for issue resolution, subject to a "*fair use*" policy. Support is provided via telephone and/or email. Additionally, you'll receive interim updates of osFinancials where bugs are fixed and new features introduced.

Extra Tickets:

Additional support tickets beyond the "*fair use*" allocation can be purchased at a discounted rate for contract holders.

Please note that development or modification of osFinancials and document layouts are not included in the support contract.

Created with the Standard Edition of HelpNDoc: Easy to use tool to create HTML Help files and Help web sites

Scope of this documentation

osFinancials5/TurboCASH5 Business Class

Saturday, 24 May 2025 - 01:50:47

Differences in osFinancials5 and TurboCASH5

The documentation provided for both osFinancials5 and TurboCASH5 is designed to be comprehensive and applicable to both software versions, despite their minor differences. Here's a summary of the key points and differences:

Shared Source and Primary Differences

- Shared Source: Both osFinancials5 and TurboCASH5 share the same source code, which means they have a lot of common features and functionalities.
- Primary Difference: The primary difference between the two is the base, which influences some of the interface and address formats.

Address Layout Differences

- osFinancials5: The address format is displayed as:
  - Address 1, Postal code, Address 2, Address 3.
- TurboCASH5: The address format is displayed as:
  - Address 1, Address 2, Address 3, and Postal code.

Business Class Subscription

- Basic Subscription: Both versions include processing of more than 500 transactions and some plugins are included in the subscription.
- Plugins: Some plugins are designed specifically for the Dutch market and are not available in TurboCASH5. Plugins designed for the international market are included in both osFinancials5 and TurboCASH5.

Documentation Formats

- EngHelp.chm File: This context-specific help file can be launched using the F1 key from most screens in the osFinancials5 and TurboCASH5 interfaces.
- Online Help: Available in English Online help and Afrikaans Online help, This online help will be updated later and may include additional or updated help topics. This is supplementary to the EngHelp.chm file included in the installations.

Applicability

- Documentation Coverage: The documentation covers all features in both osFinancials5 and TurboCASH5, ensuring that users of either software can find the information they need.
- Screens and Text: While the documentation may refer to osFinancials5 in screenshots and text, the information is generally applicable to TurboCASH5 as well.

Conclusion

The documentation is designed to be flexible and comprehensive, catering to users of both osFinancials5 and TurboCASH5. The minor differences in address formats and available plugins are noted, but the core functionalities and features are shared between the two software versions.

Plugins in osFinancials5 and TurboCASH5

Plugins Specific to TurboCASH5

- Plugins Set to False: Some plugins are specifically designed for the Dutch market and are set to false in TurboCASH5. These plugins are not available in the TurboCASH5 subscription.
- Plugins Menu: The Plugins menu in TurboCASH5 will only list the plugins that are shipped and included with the TurboCASH5 subscription.

Included Plugins in osFinancials5 Subscription / TurboCASH5 Subscription

- EmailInvoice Document E-mail Pro: Allows for the emailing of invoices directly from the software.
- Bank Import: Enabled in Setup → Data parameters by ensuring the "*Default bank reconciliation method*" field is not ticked.

Marketable Plugins

These plugins are functional and can be used with both osFinancials5 and TurboCASH5. Some may require additional licenses.

- Activa: Plugin for managing assets.
- Charter: Specific functionality for generating charts.
- Document Export Import: Allows for the export and import of documents.
- DrillDown: Enables drill-down functionality for detailed data analysis.
- Freefields: Adds customisation of fields to various forms.
- LocationBatchAndSerials: Manages locations, batches, and serial numbers.
- Multimedia: Integrates multimedia elements into the software.
- Multi-user Agenda: Provides a shared agenda for multiple users.
- Remittance: Facilitates remittance processes.
- Price agreement: Manages pricing agreements.
- Subscriptions: Handles subscription-based billing.

Essential Plugins

These plugins are crucial for specific functionalities within osFinancials5 and TurboCASH5.

- ReportMan - Report designer: Essential for customising layout files and reports.
- Register plugins: Adds licenses to plugins.
- SQL Browser: Essential for adding reporting groups when Customising your own Set of Books.
- HandyTools: Advanced tools for experienced users.

Plugins That Cannot Be Disabled

- DYNADBREG: This plugin cannot not be disabled and is essential for certain functionalities within osFinancials5/TurboCASH5.

Summary

The plugins available in TurboCASH5 are tailored to meet the needs of users while excluding those specific to the Dutch market. Both osFinancials5 and TurboCASH5, includes Essential plugins like Report designer, SQL Browser, and HandyTools are included to ensure core functionalities are maintained. Marketable plugins offer additional features that can be licensed as needed, enhancing the osFinancials5 and TurboCASH5 capabilities.

osFinancials5/TurboCASH5 Business Class

After years of development and support of osFinancials and TurboCASH we came to the conclusion the current model does not work. To break through this glass ceiling we are introducing osFinancials5/TurboCASH5 Business Class.

osFinancials 4 / TurboCASH 4 is free to use but if you want more out of your software then osFinancials5/TurboCASH5 Business Class is the version you want to use.

If you have less then 500 transactions / documents you can use this version free of charge. Above that we ask you for a contribution of 50 euro (excl.)/ 60 dollars per year.

If you have any subscription already like multi-user or retail POS, etc., the licence will also be included.

Included in the registered version of osFinancials5/TurboCASH5 - Business Class

osFinancials5/TurboCASH5 Subscription

Process unlimited (more than 500) transactions and documents.

Every time an unregistered version osFinancials5/TurboCASH5 is started, the following confirmation message will be displayed:

> This software is limited to 500 transactions or 500 documents. Please register and buy a licence for osFinancials
> This copy of osFinancials is not registered! Do you wish to register it now?

Unregistered versions will allow you to process up to 500 transactions and /or documents. Once this limit is reached, osFinancials5/TurboCASH5 will not allow any processing of transactions, in batches and/or documents.

Once you have registered osFinancials5/TurboCASH5, you will receive an unlocking code and will be able to process further transactions and or documents.

Bank import

BankImport Plugin -

Licence : Included in osFinancials5/TurboCASH5 Subscription.

Documentation : Help topic.
Documentation : osFinancials website - Bank import plugin -
Documentation : osFinancials website - Bank Reconciliations Plugin -

The Bank Import plugin included with the osFinancials5/TurboCASH5 Subscription is a handy tool for managing and processing the transactions in your bank and credit card accounts. You can download electronic bank statement files directly from your online banking services at your bank or financial institution. After that, you can use the Bank Import plugin to import these bank statements into your bank accounts. This process saves you a lot of time and effort as you do not have to manually enter and process the transactions of your bank accounts and credit card accounts in separate Payment journals and Receipt journals.

Additionally, the Bank Import Plugin has the ability to use bank references to automatically assign transactions to the appropriate accounts, This automation not only saves time, but also reduces the risk of human error associated with manual data entry. Overall, using this Bank Import plugin is a smart choice for businesses or individuals who want to optimize their financial workflow within osFinancials5/TurboCASH5.

Budget Plugin

Budget Plugin - Manual - Shop - Help documentation

Licence : Included in osFinancials5 Subscription / TurboCASH5 Subscription.

Effortlessly manage budgets for accounts, cost centres, and projects with the Budget Plugin, now included as a standard feature in the osFinancials5 Subscription / TurboCASH5 Subscription. Access the Budgets option on the Reports ribbon for seamless integration.

Key Features:

- Flexible Budget Entry: Easily input budgets for accounts, cost centres, and projects directly within the osFinancials5/TurboCASH5 interface. Copy budget figures from the previous year of actual account balances.
- Comprehensive Budgeting: Cover all aspects of financial planning by setting budgets for various entities, including accounts, cost centres, and projects.
- Integrated Solution: Seamlessly integrate budget management into your overall financial workflow within osFinancials5/TurboCASH5.
- Advanced Filtering and Pivot Options: Utilize advanced filtering and pivot functionalities to analyse budget data effectively and gain deeper insights into your financial performance.
- Streamlined Processes: Simplify budgeting tasks and ensure accuracy by leveraging the intuitive interface and advanced features of the Budget Plugin.
- Comprehensive Reporting: Generate budget listing reports (Trial balance, Income statement, Balance sheet, or Standard column balances report types) and budget performance reports (Budget vs Actual to compare the budget figures versus the actual posted transactions). Export reports to spreadsheets and utilize powerful pivot features for in-depth analysis. Print and export budgets in the T-Account viewer.

Enhance your financial planning capabilities and streamline your budgeting processes with the Budget Plugin, empowering you to make informed decisions and drive financial success within your organisation.

Other features

Bulk time entries - See video on Bulk time entries

Bulk time entries may be added for selected debtors (customers / clients) accounts. For example, if a debtor (customer / client) books a training course or workshop for a week, you may schedule the appointments for every day of the week.

These bulk time entries will add the multiple appointments for a selected debtor (customer / client) account to the calendar as hours type events for selected dates and time slots.

Quotes can be created for these events. These quotes can be edited, if necessary and sent to the debtor (customer / client).

Once these appointments are completed, you may convert the quotes to invoices.

Spreadsheet reports osFinancials5/TurboCASH55 and the power of Spreadsheets

- Spreadsheet sales (Default ribbon)

- Spreadsheet reports (Reports ribbon) - See video on Spreadsheet reports.

Spreadsheet Export / Import - See video on Improved Export/Import -

The Spreadsheet Export / Import spreadsheet feature allows to easily export data into spreadsheets, edit the data and import it.

Excel Export / Import is available in the following options:

Setup ribbon:

- Setup → Accounts
- Setup → Groups
- Import Accounts, Import Debtors/Creditors, Import Stock

Default ribbon

- Batch entry (all batches)
- Edit → Repeating transactions
- Stock (Import / Export tab)
- Documents - Context menu - Documents → Spreadsheet import

Ledger analyser 1 and Ledger analyser 2

- *Zoom in / Zoom out + / - buttons added to resize (increase / decrease the font) the reports (i.e. Trial balance, Balance sheet and Income statement) on screen. This Zoom feature is similar to that in Spreadsheets.*
- *Pivot - View, filter and analyse your report on screen, view graphs, customise datasets and types of graphs.*
- *SBR view - Add SBR references for accounts and reporting groups in Setup → Accounts. Once the references are set, and generate reports on screen, click on the SBR view button, check, filter and copy to clipboard. Open your spreadsheet program, and copy the contents into your spreadsheet, save the data, etc.*

Documents - Graph

Click on the Graph button to view the documents in a graph. Use the filter options on the Documents list screen, to view graphs for specific filtered results in documents.

See video on Themes. The values for the themes are set in the colors.ini file in the themes folder. The "Material" theme with black icons (based of SVG (Scalable Vector Graphics) icons is introduced in osFinancials5.1 (Build 518) and TurboCASH5.2 (Build 363).

The Blue, Glass, Silver, Soft-blue theme includes a similar set of icons as in the Material theme (navy-blue icons).

The "Classic" theme (default theme) and "VS2010" theme displays the same set of icons (located in the "...\bin\themes\Classic" folder.

Age analysis See video on new age analysis reporting and open item.

View and choose options for the new Age analysis report on screen and print it on the Reports ribbon and on the Open Item - Due tab (Default ribbon).

Features

osFinancials5/TurboCASH5 Business Class

Saturday, 24 May 2025 - 01:50:47

Some features in the basic version of osFinancials5/TurboCASH5, are:

4K monitor support

osFinancials5/TurboCASH5 supports displays which can handle content in a resolution known as 4K. 4K resolution refers to a display with approximately 4,000 pixels in the horizontal direction, usually specified as 3840 pixels × 2160 lines (8.3 megapixels) or 4096 pixels × 2160 lines (8.8 megapixels). It provides a higher level of detail and clarity compared to lower-resolution displays.

Themes

Selecting supported themes

osFinancials5/TurboCASH5 allows you to personalise the interface by selecting different themes from the Theme menu on the Setup ribbon.

By default, osFinancials5 is installed in the "*Classic*" theme (default theme) and TurboCASH5 is installed in the "*Material-navy*" theme . If you prefer a different look, you can choose the "*Blue, Glass, Silver, Soft-blue" or "VS2010"* theme in osFinancials5/TurboCASH5. These themes feature a navy-blue colour scheme and offer a collection of icons similar to those in the "*Material*" theme. In addition to the Material theme's black icons, you may select other coloured variants such as "*Material-blue, Material-green, Material-maroon, Material-navy"* or *"Material-pink*". Selecting a different theme from the Theme menu allows you to customise the interface to your preferences.

Customising themes

In osFinancials5/TurboCASH5, you have the option to edit the "colors.ini" file to customize various aspects of the theme, including theme style, ribbon colours, tablet mode, and more. To make changes, you can open the "colors.ini" file in your preferred system text editor such as Notepad or Notepad++. Within this file, you can modify the values of the settings to suit your specific requirements.

Custom themes

In osFinancials5, you have the option to easily customise the colour of all 227 icons (in the SVG "*Scalable Vector Graphics*" file format) used in the interface. This customization process can be completed in less than a minute by utilizing a text editor such as Notepad++ and the Search and Replace feature. By replacing the default black colour with a colour of your preference, you can personalise the appearance of the icons in the "*Material*" theme to suit your taste.

If you opt for the "Blue, Glass, Silver," or "Soft-blue" theme in osFinancials5/TurboCASH5, you will encounter a set of icons resembling those found in the "Material" theme, but featuring a navy-blue colour palette. These themes offer an alternative visual presentation with cohesive icons, enabling you to personalise the interface by selecting a different theme from the Theme menu on the Setup ribbon.

Unlimited Sets of Books

Unlimited Sets of Books - In osFinancials5/TurboCASH5, you may create and manage multiple independent Sets of Books (Accounting databases) within the same osFinancials5/TurboCASH5 installation. Each set of books has its own independent chart of accounts, general ledger, subsidiary ledgers, and transactional data.

Languages

osFinancials5/TurboCASH5 is a comprehensive financial management solution that supports multiple languages and tax regimes. With its intuitive user interface and powerful features, it provides an all-in-one solution for managing your financial requirements.

There are 87 Sets of Books (databases) available, which can be downloaded and customised, through the "*Let osFinancials help you to create a Set of Books?*" option, to meet specific language and tax requirements. These Sets of Books are pre-configured with language and terminology specific to certain countries and tax regimes.

When you open a Set of Books, osFinancials5/TurboCASH5 automatically displays the user interface and reports in the associated language. However, you have the flexibility to change the language by selecting from the "Switch language" option.

Furthermore, you can set a specific language as the default for a Set of Books, ensuring consistent language usage throughout the financial management process.

In addition to the pre-configured languages, you have the ability to create your own language and customize it according to your specific needs, industry requirements, and preferred terminology.

Plug-in: Multi-Language accounts

Help topic: Plug-in: Multi-Language accounts - Manual - Shop - Licence : Once-off -

The Multi-Language accounts plugin in osFinancials5/TurboCASH5 provides the functionality to translate ledger, group, and stock (inventory/product) names into multiple languages. This plugin is a separate feature that can be added to osFinancials5/TurboCASH5 to enhance language customisation and support.

With the Multi-Language accounts plugin, you can define translations for various account names, group names, and stock items in different languages. This allows users to work with osFinancials5/TurboCASH5 in their preferred language and ensures that the financial information is accurately represented in the desired language.

The plugin enables you to select different languages for different users, allowing each user to work in their preferred language for accounting purposes. It facilitates multilingual accounting, making it easier for employees and stakeholders who may be more comfortable working with specific languages.

By offering the Multi-Language accounts plugin, osFinancials5/TurboCASH5 enhances its flexibility and adaptability to meet the diverse language requirements of its users, making it a versatile financial management solution for international organizations and users operating in multilingual environments.

Print documents in the language of debtors (customers/clients) and creditors (suppliers/vendors)

osFinancials provides the capability to print documents in the language of debtors (customers/clients) and print documents in the language of creditors (suppliers/vendors). This feature allows you to generate and send sales documents such as quotes, invoices and credit notes and purchase documents such as orders, purchases and supplier returns in the language preferred by your debtors and creditors.

When creating documents, you can set the language preference for each debtor and creditor individually. This ensures that the printed documents are generated in the appropriate language for each party, enhancing communication and facilitating smoother transactions.

By supporting debtor and creditor language preferences, osFinancials5/TurboCASH5 enables you to provide a more personalized and professional experience for your customers and suppliers. It helps to eliminate language barriers and improve clarity in financial communication, which can contribute to stronger business relationships and customer satisfaction.

Whether you need to print documents in multiple languages for a global customer base or cater to specific language preferences of local clients and suppliers, osFinancials5/TurboCASH5 offers the functionality to meet your requirements and streamline your document management process.

RTL (Right-to-Left) languages

osFinancials5/TurboCASH5 has the capability to support RTL (Right-to-Left) languages. RTL languages are languages that are written and read from right to left, such as Arabic, Hebrew, and Persian. osFinancials5/TurboCASH5 ensures that its user interface, reports, and other components are properly aligned and displayed to accommodate RTL language requirements.

By supporting RTL languages, osFinancials5/TurboCASH5 enables users who work with these languages to have a seamless and user-friendly experience. The interface elements, text alignment, and overall layout are designed to cater to the specific reading and writing direction of RTL languages.

This feature enhances the usability and accessibility of osFinancials5/TurboCASH5 for users in regions where RTL languages are prevalent, allowing them to effectively manage their financial tasks in their preferred language orientation.

MSSQL Database type Set of Books

osFinancials5/TurboCASH5 supports both MSSQL (Microsoft SQL Server) and Firebird database types for Sets of Books. To create a basic empty Sets of Books for the MSSQL (Microsoft SQL Server) database type from scratch, you may select the database type in the option to "Customise your own Set of Books (Advanced)?".

Ledger

The general ledger is a core component of the accounting system in osFinancials5/TurboCASH5. It serves as a central repository for recording and storing all financial transactions and budgets of a business. The general ledger contains individual accounts that track various types of financial activities, such as revenue, expenses, assets, liabilities, and equity.

Each account in the general ledger represents a specific category or type of transaction, such as sales, purchases, expenses, etc. Transactions are recorded in the general ledger using a double-entry bookkeeping system, where every transaction has an equal debit and credit entry, ensuring that the accounting equation remains in balance.

Assets = Liabilities + Equity

The general ledger provides a detailed and chronological record of all financial activities, allowing businesses to track and analyse their financial performance. It serves as the foundation for generating important financial reports such as the trial balance, income statement, and balance sheet.

In osFinancials5/TurboCASH5, the general ledger module allows users to create and manage their chart of accounts, record transactions, manage budgets, generate financial reports, and perform other essential

accounting tasks. It provides a comprehensive view of a company's financial position and financial performance. This helps to facilitate accurate and reliable financial management and decision-making.

Accounting standards, Accounting framework and Legislation

osFinancials5/TurboCASH5 offers flexibility in configuring the chart of accounts to comply with various accounting standards, accounting frameworks, and legislation, including the languages applicable to your country. This ensures that you can customize the system to meet the specific requirements and language preferences of your business and the regulatory environment in which you operate. This includes adapting the chart of accounts structure, account classifications, and financial categories to meet the requirements of local accounting practices.

Here's an overview of how osFinancials5/TurboCASH5 supports compliance:

1. Accounting standards: osFinancials5/TurboCASH5 allows you to configure your chart of accounts to align with different accounting standards such as GAAP (Generally Accepted Accounting Principles), IFRS (International Financial Reporting Standards) full, and IFRS for SMEs (Small and Medium-sized Enterprises). This ensures that your financial records and reporting adhere to the specific requirements of the chosen accounting standard.
2. Accounting frameworks: osFinancials5/TurboCASH5 supports the customisation of the chart of accounts to comply with your preferred accounting framework. Whether you follow a specific accounting framework or have unique reporting requirements, osFinancials can be configured to meet those needs. This allows for consistent and standardised financial reporting practices within your organization.
3. Tax regulations: osFinancials5/TurboCASH5 enables you to configure your chart of accounts to comply with tax regulations specific to your country or region. This includes setting up tax accounts, defining tax rates, and ensuring that financial transactions are properly categorized for tax reporting purposes. By aligning with tax regulations, osFinancials5/TurboCASH5 helps you accurately calculate and report taxes.
4. Legal compliance: osFinancials5/TurboCASH5 assists in complying with legal requirements related to financial management and reporting. By configuring the chart of accounts to reflect the applicable legal framework, osFinancials5/TurboCASH5 helps ensure that your financial statements and reports meet the necessary legal standards.

Additionally, osFinancials5/TurboCASH5 allows you to work with the software in different languages. This means that you can choose the language that is applicable to your country or region, making it easier for users to navigate the system, input data, and generate reports in their preferred language.

By providing this flexibility, osFinancials5/TurboCASH5 enables businesses to maintain accurate financial

records, generate compliant financial statements, and meet the reporting obligations in their local accounting standards, frameworks, and legislation while working in their preferred language.

Account groups and Financial Categories

In osFinancials5/TurboCASH5, you can add reporting groups for Account Group 1 and/or Account Group 2 to categorise your accounts further. These groups allow you to classify and organise accounts based on their nature or function. Each account can be mapped or linked to the appropriate reporting group (Account group 1 and/or Account group 2). The category or classification for Balance sheet accounts and Income statement accounts could be as follows:

1. Balance sheet accounts (ledger accounts, bank accounts, and tax accounts for VAT/GST/sales tax) could be linked to the appropriate reporting group (Account Group 1 and/or Account Group 2) such as Cash and cash equivalents, Fixed assets or Non-current assets, PP&E - Property, Plant, and Equipment, Current assets or Non-current assets, Intangible assets, Current liabilities, Non-current liabilities, Long-term liabilities, Equity.
2. Income statement accounts (income accounts and expense accounts) could be linked to the appropriate reporting group (Account Group 1 and/or Account Group 2) such as Operating revenue, Other revenue, Cost of Sales (COS) / Cost of Goods Sold (COGS) / Cost of Services Rendered (COSR), Operating expenses, Non-operating revenue, Non-operating expenses.

Financial categories: Each reporting group can be assigned to one of the five financial categories: assets, liabilities, equity, revenue, and expenses. This ensures that the accounts are properly categorized and aligned with the standard financial reporting structure.

Sequence/order: In the Setup → Groups (Setup ribbon), you have the flexibility to change the sequence order of the reporting groups. This allows you to structure the layout of the chart of accounts in the trial balance, balance sheet, and income statement according to your preferences.

By utilising reporting groups, financial categories, and sequence order, osFinancials5/TurboCASH5 enables you to effectively organize and analyse your chart of accounts, providing a clear representation of your financial data in various financial reports.

Chart of Accounts - Number of digits

Sets of Books - The Chart of Accounts in osFinancials5/TurboCASH5 supports up to 11-digits (8-digits for the main accounts and 3 digits for the sub-accounts). You have the flexibility to choose from a range of templates for Sets of Books, including a 6-digit structure consisting of 3 digits for the main accounts and 3 digits for the sub-accounts. These templates can be downloaded through the "*Let osFinancials help you to create a Set of Books?*" option.

Alternatively, if you prefer to start with a basic empty Sets of Books, you can utilize the "*Customise your own Set of Books (Advanced)?*" option. This advanced feature allows you to define the number of digits, with a maximum of 11 digits (8 digits for the main accounts and 3 digits for the sub-accounts).

The basic Sets of Books created using this option will include the essential three main accounts: Debtor's Control, Creditor's Control, and Retained Earnings. The remaining Chart of Accounts can be fully customized according to your specific requirements. This flexibility enables you to tailor the Sets of Books to suit your unique accounting needs.

Cash books (bank accounts)

In osFinancials5/TurboCASH5, there is no limitation on the number of cash books (bank accounts) you can have in a Set of Books. You can create and manage as many cash books as needed to accommodate your organization's financial requirements. This allows for flexibility in tracking and managing multiple bank accounts within your accounting system.

Cash books, also referred to as bank accounts in osFinancials5/TurboCASH5, are a fundamental component of the accounting system that tracks and manages a company's cash transactions. A cash book represents a specific bank account maintained by the business, typically linked to an actual bank account where cash inflows and outflows occur.

In osFinancials5/TurboCASH5, the cash book module allows users to record and monitor various cash-related activities, including deposits, withdrawals, payments, receipts, and bank transfers. It provides a centralised location to track the movement of funds in and out of specific bank accounts.

Bank import plugin - Bank Reconciliations Plugin Manual - BankImport Plugin Manual - Shop - Licence : Once-off -

The Bank import plugin is included with the osFinancials5 Business Class licence / TurboCASH5 Business Class licence, meaning you have access to it without any additional cost or separate licence requirement.

With the plugin, you can download bank statement files from your online banking app or portal provided by your bank or financial institution. These files can be imported into the appropriate bank accounts (cash books) in osFinancials5/TurboCASH5.

You can download statements for multiple bank accounts and credit cards, as long as you have them linked to your online banking. Each bank account or credit card should have its corresponding Payments and Receipts journals set up in osFinancials5/TurboCASH5.

Importing the bank statements automatically populates the transactions into the Payments and Receipts columns, saving you time and reducing the risk of errors associated with manual entry.

The plugin offers a user-friendly interface with context menus that make it easy to locate, select, and search

for specific transactions, debtors, creditors, or general ledger accounts. This simplifies the navigation and management of your bank transactions.

You can link debit transactions to credit transactions and vice versa, allowing for accurate tracking of outstanding balances and efficient management of payments and receipts. You can also link a portion of a payment or receipt to multiple outstanding transactions if needed.

Additionally, the plugin allows you to link accounts to specific debtors, creditors, or general ledger accounts. This ensures that subsequent bank statement imports automatically allocate transactions correctly based on the predefined account linkages, improving accuracy and saving time.

The plugin utilizes bank references to automatically allocate or link various transactions to the correct accounts in your Set of Books. It supports automatic receipts for debit orders from your debtors and automatic payments for managing supplier payments.

In summary, the Bank import plugin in osFinancials simplifies the import of bank statements, automates transaction allocation, and efficiently manages and reconciles your bank accounts. It reduces manual data entry, improves accuracy, and streamlines your financial management processes.

Reporting groups

osFinancials5/TurboCASH5 supports the usage of up to two reporting groups for various categories such as ledger accounts, debtors, creditors, stock (inventory/products), and documents. This feature allows you to categorize and classify your financial data based on different criteria or attributes that are relevant to your business.

By assigning reporting groups to these entities, you can generate reports and analyse your financial information based on specific groupings. This capability enhances your ability to track and analyse data at a more granular level, providing valuable insights into different aspects of your business operations.

Debtors (customers / clients)

The Debtors feature in osFinancials5/TurboCASH5, is specifically designed to manage and maintain debtor (customer / client) accounts. This feature provides a range of functionalities to effectively manage these accounts and ensure smooth customer relationship management. Here are some key aspects of the Debtors feature:

1. Account Management: You can create new debtor accounts, modify existing ones, delete or disable accounts based on your requirements. This gives you control over the debtor database and allows you to keep it up to date.
2. Account Details: Within each debtor account, you have the flexibility to make changes to various aspects, such as the debtor's name, contact details, addresses, and messages on the debtor form. You

can also manage the delivery address and select specific document layout files on the Delivery address tab. Additionally, you can set accounting and payment terms, including discounts and interest percentage charges, on the Accounting information tab. This ensures that you maintain accurate and up-to-date information for each debtor.

3. Activities Tracking: The Debtors feature allows you to efficiently manage various activities related to debtor accounts. It provides dedicated tabs for tracking Contacts, Appointments, and transactions on the Documents, Transactions, Bank accounts, Backorders and Stock items tabs. These capabilities enable you to gain a comprehensive view of interactions and transactions with each debtor, enhancing your ability to manage and maintain fruitful relationships.
4. Filtering and Search: osFinancials5/TurboCASH5 provides filtering and search options within the Debtors feature, enabling you to easily locate specific debtor accounts based on various criteria such as name, contact details, or other relevant information.
5. Reporting Groups: You can create up to two custom reporting groups for debtor accounts, categorizing them by attributes like geographic regions, customer types, or sales channels. This enables you to generate insightful views of your debtor data. It allows you to slice and dice the information based on multiple dimensions and conduct detailed analysis, providing a comprehensive view of your debtor data and supporting better decision-making and strategic planning.

By leveraging the Debtors feature in osFinancials5/TurboCASH5, you can efficiently manage customer accounts, streamline communication, track transactions, and maintain precise financial records. This enhances customer service, boosts efficiency, and strengthens financial management within your organization.

Creditors (suppliers / vendors)

The Creditors feature in osFinancials5/TurboCASH5 is specifically designed to manage and maintain creditor (supplier/vendor) accounts. This feature provides a range of functionalities to effectively manage these accounts and ensure smooth supplier/vendor relationship management. Here are some key aspects of the Creditors feature:

1. Account Management: You can create new creditor accounts, modify existing ones, delete or disable accounts based on your requirements. This gives you control over the creditor database and allows you to keep it up to date.
2. Account Details: Within each creditor account, you have the flexibility to make changes to various aspects, such as the creditor's name, contact details, addresses, and messages on the creditor form. You can also manage the delivery address and select specific document layout files on the Delivery address tab. Additionally, you can set accounting and payment terms, including discounts and charges, on the Accounting information tab. This ensures that you maintain accurate and up-to-date

information for each creditor.

3. Activities Tracking: The Creditors feature allows you to efficiently manage various activities related to creditor accounts. It provides dedicated tabs for tracking Contacts, Appointments, and transactions on the Documents, Transactions, Bank accounts and Stock items tabs. These capabilities enable you to gain a comprehensive view of interactions and transactions with each creditor, enhancing your ability to manage and maintain fruitful relationships.
4. Filtering and Search: osFinancials provides filtering and search options within the Creditors feature, enabling you to easily locate specific creditor accounts based on various criteria such as name, contact details, or other relevant information.
5. Reporting Groups: You can create up to two custom reporting groups for creditor accounts, categorizing them by attributes like geographic regions, supplier types, or purchase channels. This enables you to generate insightful views of your creditor data. It allows you to slice and dice the information based on multiple dimensions and conduct detailed analysis, providing a comprehensive view of your creditor data and supporting better decision-making and strategic planning.

By leveraging the Creditors feature in osFinancials5/TurboCASH5, you can efficiently manage supplier/vendor accounts, streamline communication, track transactions, and maintain precise financial records. This enhances supplier/vendor relationships, boosts efficiency, and strengthens financial management within your organization.

Contacts

The Contacts feature in osFinancials5/TurboCASH5 refer to individuals or entities associated with debtor (customer/client) and creditor (supplier/vendor) accounts. The Contacts feature allows you to maintain a list and details of contacts linked to these accounts for easy reference and communication.

Contacts play a crucial role in processing sales and purchase documents within osFinancials5/TurboCASH5. They help specify the relevant contact person or entity associated with a particular transaction. Here's how contacts are utilised in the process:

1. Sales documents: When creating sales documents such as invoices, credit notes, quotes, the default contact linked to the debtor (customer/client) account will be automatically selected. This ensures that the appropriate contact is associated with the transaction. The contact specified in the sales document represents the person responsible for the transaction or serves as the primary point of contact for the customer.
2. Purchase documents: Similarly, when generating purchase documents like purchases, supplier returns, orders, the default contact linked to the creditor (supplier/vendor) account will be automatically selected. This ensures that the relevant contact information is associated with the transaction. The

contact specified in the purchase document represents the person responsible for the transaction or serves as the primary point of contact for the supplier.

By assigning the correct contacts to the respective accounts, osFinancials5/TurboCASH5 ensures that the appropriate contact information is readily available when processing sales and purchase transactions. This helps maintain accurate and effective communication with customers, clients, suppliers, and vendors throughout the transactional process.

Including contact information on document layout files for sales and purchase documents is a valuable feature in osFinancials5/TurboCASH5. By printing contacts on these documents, you provide additional information for the recipient or reference, enhancing the clarity and professionalism of the transaction. This ensures that the necessary contact details, such as the name, phone number, email address, or any other relevant information, are readily available for easy communication or reference purposes. It allows recipients to quickly reach out to the relevant contact person or entity in case of any queries, clarifications, or further discussions related to the transaction.

Stock items (Inventory items / products)

The Stock items / Inventory items / products) in osFinancials5/TurboCASH5 features a comprehensive inventory system designed to manage and track stock items, inventory items or products. It supports an unlimited number of stock items and allows for detailed item-specific information. The inventory system also offers up to two reporting groups, enabling efficient data organisation and analysis.

With eleven different stock item types available, osFinancials5/TurboCASH5 provides flexibility in managing various types of products. When processing documents for debtors or creditors, or generating reports, the stock item lookup function helps in selecting the appropriate products. The system utilizes the chosen stock item's details to calculate selling and cost prices based on specified quantities, ensuring accurate pricing information on documents and reports.

The Stock items feature in osFinancials5/TurboCASH5 allows for easy management of inventory items or products. You can create, edit, delete, or disable items as needed, and the feature provides filtering and search options for efficient item location. Within each item, you can make changes to important details such as stock code, description, quantities, reorder levels, and more.

Additionally, the inventory system offers various settings on the Ledger tab and allows for managing activities on the Document groups, Transactions, Image, Multi-group, and Backorders tabs. This comprehensive set of features ensures efficient inventory tracking, accurate pricing, and streamlined document and report generation, making osFinancials5/TurboCASH5 a reliable solution for managing and optimizing your inventory management processes.

Documents

In osFinancials5/TurboCASH5 the Documents feature provides a comprehensive solution for processing and managing sales documents and purchase documents related to debtor (customer/client) and creditor (supplier/vendor) accounts. It offers a range of functionalities to streamline document management and automate source document and transaction generation. Additionally, osFinancials supports the usage of up to two reporting groups for documents. This feature allows you to categorize and classify your documents based on different criteria or attributes that are relevant to you. This categorization and classification feature enhances your document organization capabilities, making it easier to manage and retrieve specific documents when needed. Here's an overview of the key aspects of the Documents feature:

1. Sales documents: This includes (invoices, credit notes, quotes), associated with debtor accounts. You can create, process, and manage these sales documents (invoices, credit notes, quotes) within osFinancials5/TurboCASH5. The Documents option provides a centralized interface to handle all sales documents efficiently. Additionally, the Documents option provides a centralized interface to process sales documents (invoices, credit notes, quotes) for debtors (customers/clients).

2. Purchase documents: This comprises purchases, supplier returns, orders relevant to creditor accounts. Similarly, you can create, process, and manage these purchase documents using the Documents option. It allows for seamless handling of purchase transactions and associated records. Furthermore, the Documents option provides centralized management for purchase documents (purchases, supplier returns, orders) for creditors (suppliers/vendors).

3. Transaction generation: When you create sales documents or purchase documents, osFinancials automatically generates the required transactions and source documents based on the document details. This ensures accurate and consistent recording of financial transactions in your accounting system. Moreover, in addition to the normal processing options, the context menus provide quick access to process various options for easy copying, converting documents, and more to process documents.

4. Layout files: The Documents feature allows you to choose from various layout files for printing or reprinting your sales and purchase documents. You can use the Report designer to customize the appearance and format of these documents to align with your business branding or specific requirements.

5. Print and Reprint: With osFinancials5/TurboCASH5, you have the ability to print or reprint your sales and purchase documents as needed. This allows for easy distribution of invoices, credit notes, quotes, purchases, supplier returns, orders, and delivery notes relevant to your customers, suppliers, or internal stakeholders. Additionally, the powerful grid for documents contains the data for each document, allowing you to filter and search for specific documents according to the criteria you specify.

Overall, the Documents feature in osFinancials5/TurboCASH5 simplifies the management of sales documents and purchase documents. It automates transaction generation, provides options for selecting layout files, and enables printing or reprinting of these documents. By leveraging this functionality, you can streamline your document workflows, ensure accurate financial records, and effectively communicate with your customers and suppliers.

Journals / Batches

The Batch Entry / Journal Entry feature in osFinancials5/TurboCASH5 provides versatile functionality for creating customized batch or journal types tailored to your specific requirements. These batch types enable structured transaction organization, ensuring precise allocation to the appropriate ledger and debtor accounts. Here's an overview of this feature:

1. Batch Types Customization: In osFinancials5/TurboCASH5, you can define various batch types to match your unique needs. While many Sets of Books and templates include standard basic batches like sales journal, purchase journal, payments journal, receipts journal, and general journals (accessible through the "*Let osFinancials help you to create a Set of Books?*" / "*Let TurboCASH help you to create a Set of Books?*" option), osFinancials5/TurboCASH5 allows unlimited specific batch types. Examples of specialise journals, include Payroll journals, Depreciation journals, Fixed assets journals, Accrual journals, or any custom type necessary. Each batch type is designed for specific transaction categories or sets of related transactions, granting precise control over your accounting processes.
2. Batch / Journal Configuration: The Batch Entry / Journal Entry feature offers options to configure settings, reducing errors during batch transaction entry and processing: Journal configuration: The Standard tab and Advanced tab in the "*Options for this batch*" offer several options to configure default settings such as the default Contra account, Tax (VAT/GST/Sales tax) settings and other parameters for each type of journal. Configuring these settings, which reduce errors when processing transactions in journals:
    - Contra Account: Assign each batch (journal) to a specific contra account for easy identification and assignment of transactions to the corresponding contra account. This account will be the balancing account. When you balance the batch, the contra transactions will be generated to this contra account in the journal.
    - Lookup Accounts Configuration: You can set a journal so that you can select all accounts for the general ledger, debtors, creditors or only accounts for the general ledger or only debtors or only creditors in the journal. So for example, in the Sales journal you can choose to list only the debtor accounts in the Lookup and can choose when you enter invoices in the Sales journal. This speeds up the allocation of transactions so that only the relevant account type can be listed and selected.

3. Open Item Transactions: This is particularly useful for matching receipts or payments transactions with outstanding amounts. When you allocate transactions against open item accounts, you can choose to link the transactions against outstanding transactions. Link specific transactions to open item accounts for extra accuracy. This is especially useful for linking receipts or payment transactions with outstanding amounts. For example, when a payment is received from a debtor, you can assign the payment to a specific outstanding invoice.

4. Repeating Transactions: The Repeating transactions feature allows you to enter transactions occurring on a periodic basis (weekly, monthly, quarterly, annually, etc.). Enter transactions once in the Edit → Repeating transactions menu and, when due, process them into the standard batch, edit (if amounts have changed), delete, or add an entry. This time-saving feature simplifies recurring transaction handling.

5. Export and Import Feature: Export posted or unposted batches using delimited file options. osFinancials5/TurboCASH5 also supports Spreadsheet export and Spreadsheet Import options for batch transactions:

    - Posted Batches: Use the Import a posted batch option (F9:Process) of the "*Batch entry*" screen to select a posted batch on the Posted batches tab for import.

    - Spreadsheet Import/Export: osFinancials5/TurboCASH5 supports Excel Workbook (*.xlsx) file type Spreadsheet import and export features. You can export unposted batch transactions and save them as Excel Workbook files, or import batch transactions from saved Excel Workbook files.

    - Unposted Batches: Export batch transactions using the "Write delimited file" option (F9:Process) to create a Comma Separated Value (.csv) file. Import batch transactions via the "Delimited file import" option (F9:Process) by selecting the Comma Separated file (.csv) file.

6. Ledger Updates: You don't need to post or update transactions in batches every time. Close a batch and reopen it as needed to add or edit transactions. When finalizing batch processing and posting to the ledger, osFinancials5/TurboCASH5 automatically updates ledger accounts, including debtor and creditor accounts where applicable. This ensures financial statements, such as the trial balance, balance sheet and the income statement including relevant reports accurately include and reflect these transactions.

By utilising the Batch Entry / Journal Entry feature in osFinancials5/TurboCASH5, you can efficiently manage and allocate transactions across various batch types, maintaining accurate and up-to-date accounting records with precision.

Open item processing

The Open item processing feature in osFinancials is a method used in accounting and financial management to track and manage outstanding or unresolved transactions, often referred to as open items. An open item represents a transaction or a payment that has not yet been fully cleared or reconciled.

In osFinancials5/TurboCASH5, the open item processing module allows businesses to efficiently handle and monitor these open items, ensuring accurate tracking, reconciliation, and resolution of outstanding transactions. The module typically includes the following functionalities:

1. Recording Open Items: Users can enter details of transactions or payments that are not yet fully reconciled or resolved. This may include invoices issued to customers, bills received from suppliers, outstanding payments, or any other transaction that requires further processing.
2. Matching and Reconciliation: The open item processing module enables users to match open items with corresponding transactions or payments. For example, matching a customer payment with an outstanding invoice or reconciling a bank statement with recorded transactions. This helps identify and resolve discrepancies or differences between recorded transactions and actual financial records.
3. Ageing Analysis: The module provides ageing analysis functionality, allowing users to categorize and analyse open items based on their age or duration since the transaction occurred. This helps monitor the time it takes to clear or resolve outstanding items and prioritize actions accordingly.
4. Follow-up and Communication: Users can add notes or comments to open items, facilitating communication and collaboration within the organization. This feature allows employees involved in the resolution process to leave messages, update statuses, or provide additional information related to specific open items.
5. Reporting: The open item processing module offers reporting capabilities to generate summaries and detailed reports on open items. These reports provide insights into the status of outstanding transactions, ageing analysis, unresolved balances, and other relevant information.

By effectively utilizing open item processing in osFinancials5/TurboCASH5, businesses can streamline their reconciliation processes, ensure accuracy in financial records, track and resolve outstanding transactions efficiently, and maintain up-to-date and reliable financial information.

Reports

Ledger analyser

In osFinancials5/TurboCASH5, the Ledger analyser feature offers two options: the Ledger analyser 1 or

Ledger analyser 2 . These options allow users to view, analyse, and print various financial reports, including the Trial balance, Income statement, Balance sheet, Standard column balances, Budget vs actual and This year vs last year report types. You can also generate Budget listing reports using this feature.

Additionally, the Ledger analyser provides six column balance report types that are not directly printable but are available for analysis. In addition to analysis, you can also launch the T-account viewer from the Ledger analyser to print and export transactions for selected accounts and periods. This feature allows you to further examine and manage transactions associated with specific accounts and timeframes. These include Column balances and Column balances D/C for ledger accounts; Column balances debtors and Column balances debtors D/C for all the individual debtor (customer client) accounts; and Column balances creditors and Column balances creditors D/C for all the individual creditor (supplier/vendor) accounts.

When using the Ledger analyser feature, you have the option to export any of these reports to a spreadsheet for further analysis or customisation. Clicking the Export button within the Ledger analyser 1 or Ledger analyser 2 options will generate an "*Export.txt*" file in CSV format. This exported file will automatically open in Microsoft Excel or your preferred spreadsheet program, based on the default program associated with CSV files on your system.

CSV files provide a structured format that is compatible with spreadsheet applications, allowing you to conveniently view and work with the exported financial data. You can save the CSV file in different formats, perform calculations, apply formatting, and utilize various spreadsheet functionalities to analyse the column balances or other exported reports.

In summary, the Ledger analyser feature in osFinancials enables you to generate and export financial reports and column balances to CSV format, which can be opened and further processed in Microsoft Excel or other spreadsheet programs associated with CSV files on your system.

Pivot tables

osFinancials5/TurboCASH5 provides its own built-in pivot table functionality, allowing users to view and analyse reports such as the Trial balance, Income statement, Balance sheet, Standard column balances, Budget vs actual and This year vs last year report types and Budgets directly within osFinancials5/TurboCASH5. This means that you don't necessarily need to export the reports to a spreadsheet to utilise pivot tables.

In addition to the mentioned six report types, you may generate six column balances report types, such as Column balances and Column balances D/C for ledger accounts; Column balances debtors and Column balances debtors D/C for all the individual debtor (customer / client) accounts; and Column balances creditors and Column balances creditors D/C for all the individual creditor (supplier / vendor) accounts in a spreadsheet format to use the built in pivot table functionality in osFinancials5/TurboCASH5.

By using the pivot table feature within osFinancials5/TurboCASH5, you can perform dynamic analysis and customization on the data directly in the software. You can define rows, columns, values, and filters within the pivot table to organize and summarize the data according to your specific needs. This enables you to gain insights, identify patterns, and make informed decisions based on the financial information presented in these reports.

Furthermore, if you choose to export the reports to a spreadsheet, you can still leverage the pivot table functionality within the spreadsheet software to further analyse and manipulate the data. This provides you with the flexibility to use either osFinancials5/TurboCASH5 built-in pivot tables or the pivot table features of your preferred spreadsheet software, depending on your preferences and requirements.

In summary, osFinancials5/TurboCASH5 offers its own pivot table functionality for viewing and analysing reports, and if desired, you can also export the reports to a spreadsheet to utilize the pivot table features of the spreadsheet software. Both options allow you to perform dynamic and customizable analysis on your financial data.

T-Account viewer

The T-Account viewer feature in osFinancials5/TurboCASH5 allows you to view and analyse transactions in a T-account format. A T-Account is a visual representation of an account in bookkeeping, showing the transaction details and debits and credits associated with that account.

With the T-Account viewer, you can select a specific account from your chart of accounts and view all the transactions related to that account. The transactions are organised in a T-account layout, where debits are displayed on the left side and credits on the right side.

The T-account viewer provides a clear and concise overview of the transactions affecting a particular account, allowing you to analyse the account's balance and activity. You can see the transaction details such as the date, description, and amounts for each entry.

This feature is particularly useful for account reconciliation, identifying errors or discrepancies in transactions, and gaining insights into the financial activity of specific accounts. It provides a visual representation of the account's balance and helps in understanding how transactions have impacted the account over time.

The T-account viewer in osFinancials simplifies the process of reviewing and understanding account transactions, facilitating accurate financial analysis and reporting.

T-account viewer access on Reports ribbon

You may access the T-account viewer option or from the Ledger analyser 1 or Ledger analyser 2 options (right-click or double-click on specific accounts or groups) for the Trial balance, Income statement, Balance

sheet, Standard column balances, Budget vs actual and This year vs last year report types on the Reports ribbon.

In addition to the mentioned six report types, you may generate six column balances report types, such as Column balances and Column balances D/C for ledger accounts; Column balances debtors and Column balances debtors D/C for all the individual debtor (customer / client) accounts; and Column balances creditors and Column balances creditors D/C for all the individual creditor (supplier / vendor) accounts in a spreadsheet view.

On any of these six column balances report types, you may select an account and double-click on any period. This will launch the T-Account viewer with a list of all the transactions for the selected account and period. You may print and/or export the transactions.

T-account viewer access on other options

In addition to launching the T- account viewer from the Reports ribbon, you may also launch the T-account viewer from the following options on the Default ribbon:

1. Search - Investigator - Account or Batch type searched items.
2. Debtors - Transactions tab - Click on the Show transactions button
3. Creditors - Transactions tab - Click on the Show transactions button.

T-account viewer for Budget listing

In addition to the Budget vs actual budget performance report, you may list or print the budget figures (Budget listing reports), on the Trial balance, Income statement, Balance sheet, Standard column balances report types.

T-account viewer export

When you click the Export button in the T-account viewer in osFinancials5/TurboCASH5, it will generate an "*Export.txt*" file in CSV (Comma-Separated Values) format. The exported file will automatically open in Microsoft Excel spreadsheet or in your preferred spreadsheet program, depending on the default program associated with CSV files on your system.

CSV files are widely supported by spreadsheet applications, including Microsoft Excel, Google Sheets, and others. By opening the exported CSV file in a spreadsheet program, you can conveniently view and manipulate the transaction data in a tabular format. This allows for further analysis, sorting, filtering, and other operations using the features provided by the spreadsheet software.

You can also save the CSV file in a different format or perform any necessary adjustments before sharing

or utilising the exported data in other applications or processes.

In summary, the T-Account viewer in osFinancials5/TurboCASH5 allows you to export transactions as a CSV file, which can be opened and processed in spreadsheet programs such as Microsoft Excel or other applications associated with CSV files on your system.

Reports menus

Standard reports

The Reports for ledger, debtors, creditors, stock, sales, purchases, sales analysis, purchase analysis, documents, graphs, etc.

Spreadsheet reports

osFinancials5/TurboCASH5 supports the generation of Spreadsheet reports in Excel format, which can be opened in the powerful spreadsheet feature. These reports include:

1. Creditors and Debtors listing: These reports import postal address information into Excel.
2. Transactions per period: This report lists transactions, such as sales invoices, credit notes, purchases, and supplier returns, including transactions processed in journals, for a selected period.
3. General ledger - Budget: Reports on column balances for reporting groups and the current year.
4. General ledger (Transaction totals): Reports on column balances for reporting groups and the current year, displayed in separate columns or rows per period.
5. Sales analysis: Provides insights into stock movement and sales per period.

Users can recalculate the spreadsheet by pressing F9. These spreadsheet reports offer enhanced flexibility for data analysis and customization within osFinancials5/TurboCASH5.

Report designer

The Report designer in osFinancials provides a powerful tool for creating and customising reports according to your specific needs. It is integrated and customised within osFinancials5, utilising the Reportman reporting engine. The Report designer offers a wide range of components, functions, and features to design and modify reports and document layout files.

All reports and document layout files included in your osFinancials5 installation / TurboCASH5 installation are created using the Report manager designer. These reports and layout files are built on the Firebird database type and should also support other database types such as MSSQL.

The reports and document layout files are organized in a file structure in various folders within the

following directory of your osFinancials5 installation / TurboCASH5 installation:

```
"... \plug_ins\reports"
```

Here are the commonly used report categories:

1. Document layout files: The document layout files in osFinancials5/TurboCASH5 are stored in the following folder.

   ```
   "...\plug_ins\reports\DOCUMENTS\DOCUMENTS"
   ```

   Among the shipped document layout files are the "*Layout file, Document layout, Document layout (15-code)*" and "*Delivery note*" layout files. These layout files can be translated using language files.

   The "*Layout file, Document layout, Document layout (15-code)*" files are designed to support various types of sales documents and purchase documents, such as invoices, credit notes, quotes, delivery notes, purchases, supplier returns, and orders. When you open your Set of Books, the layout files will be printed in the language associated with that Set of Books. If you choose to change the language in osFinancials5/TurboCASH5, the layout files will be printed in the selected language.

   Furthermore, you have the flexibility to select from different layout files for printing or reprinting your sales documents and purchase documents. You can even create copies of existing layout files and customize their appearance and format to align with your business branding or meet specific requirements. This allows you to tailor the document layout files according to your preferences and ensure they reflect your desired visual style.

2. Reports menu: The Reports menu in osFinancials5/TurboCASH5 provides access to a comprehensive range of standard reports that are essential for managing various aspects of your business. These reports cover areas such as the ledger, debtors, creditors, stock items, documents, sales, sales analysis, purchases, purchase analysis, and more.

   All of these standard reports are stored in the following folder:

   ```
   " ...\plug_ins\reports\systemreports"
   ```

   The reports are organized into folders and subfolders within this directory to facilitate easy navigation and retrieval.

   To access these reports, you can simply go to the Reports menu on the Reports ribbon. From there, you can explore the different menu options and sub-menu options to locate the specific report you need. The Reports menu provides a convenient and centralised hub for accessing the wide range of reports available in osFinancials5, making it easier for you to generate the necessary financial and operational insights for your business.

3. User reports menu: The User reports menu in osFinancials5 provides a dedicated space for storing

and accessing custom reports that you create or customise according to your specific needs. These User reports are stored in the following folder:

"...\plug_ins\reports\userreports" ,

The User reports is separate from the standard reports folder.

To add your own custom reports, you should place them in the "*userreports*" folder. This folder serves as a repository for your personalised reports, allowing you to organize and manage them effectively.

Once your custom reports are added to the "*userreports*" folder, you can access them from the User reports menu on the Reports ribbon. This menu provides a convenient structure for accessing and printing your custom reports.

The User reports menu includes a range of pre-defined reports such, as Graphs per week or month for Custom reports, Debtors, Creditors, Tax listing, etc. Additionally, there are basic sample reports like Debtor listing and Creditor listing, which serve as tutorials to guide you in creating new reports using the Report designer in the osFinancials5/TurboCASH5 environment. These sample reports demonstrate various features, including parameters, lookups, and more.

The User reports menu empowers you to tailor your reporting capabilities to suit your unique business requirements, allowing you to create, access, and print custom reports seamlessly within the osFinancials5/TurboCASH5 system.

4. Ledger analyser: On the Reports ribbon in osFinancials5, you will find the Ledger analyser options, namely Ledger analyser 1, Ledger analyser 2, and T-Account viewer. These options provide a range of report types for generating and printing various financial statements and analyses.

   The available reports include the Trial balance, Income statement, Balance sheet, Standard column balances, This year vs last year, Budget vs actual, Budget listing and the transactions in the T-Account viewer. These reports offer valuable insights into your financial data and help you analyse the performance and financial position of your business.

   The reports within the Ledger analyser options are stored in the following folder:

   "...\plug_ins\reports\GENERAL\ledgerview"

   It's important to note that these reports are preset and should not be customised. They are designed to provide standard financial analyses and should be used as intended.

   Additionally, the reports generated through the Ledger analyser options can be exported and opened in spreadsheet applications, allowing for further analysis and customisation of the data.

   By utilising the Ledger analyser options, you can easily generate and access a variety of essential financial reports and analyses within osFinancials5/TurboCASH5, providing valuable insights into your

company's financial performance.

5. Spreadsheet reports menu: The Spreadsheet reports menu on the Reports ribbon in osFinancials5/TurboCASH5 provides access to reports that open in the integrated spreadsheet component. These reports are stored and organized in the following folder:

   "...\plug_ins\reports\excelreports" .

   Each report consists of a base.xlsx file, SQL files, and possibly parameter files. It's important to note that these spreadsheet reports cannot be edited using the Report designer tool. The available shipped spreadsheet reports include Creditors listing, Debtors listing, Transactions per period, General ledger - Budget, General ledger (Transaction totals), Sales analysis, and Stock movement.

The Report designer utilises different tables in osFinancials to generate reports. The document outlines the commonly used tables and their relationships to help you build reports effectively.

Overall, the Report designer in osFinancials provides a flexible and comprehensive solution for creating, customising, and managing reports to meet your specific reporting requirements.

Backup / Restore

The Backup / Restore process supports the options

Small backup

Small backup (books) - If you wish to e-mail the backup, you may select the "*Small backup (books)*" option to create a backup of your Set of Books database in a single file only (e.g. books.fdb - for the Firebird database). If this option is selected, no images or other files linked to your Set of Books will not be included in your backup. This will reduce the size of your backup file.

Uni dump

If your Set of Books in osFinancials5/TurboCASH5 is created as a Microsoft SQL Server (MSSQL) database type, the "uni dump" file created as an SQL file type can be used to restore the Set of Books.

The "*uni dump*" file contains SQL statements that represent the structure and data of the database. By executing these SQL statements, you can recreate the database and restore it to its previous state.

To restore a Set of Books from a "*uni dump*" file in osFinancials using MSSQL, you would typically follow these steps:

1. Ensure that you have a compatible version of MSSQL installed and running.
2. Create an empty database in MSSQL that will serve as the destination for the restored Set of Books.

3. Open the "*uni dump*" file in a text editor or an SQL client.
4. Execute the SQL statements from the "uni dump" file in the MSSQL database. This can be done using an SQL client or by running a script.
5. Once the SQL statements have been executed successfully, the Set of Books should be restored in the MSSQL database.

It's important to note that the specific steps and tools for restoring the database from a "*uni dump*" file may vary depending on your environment and the version of MSSQL you are using. It's recommended to consult the documentation or resources specific to your version of MSSQL for accurate instructions on restoring a database from an SQL file. Additionally, it's always a good practice to backup your database before performing any restoration to ensure data integrity.

Budgets

Budgets - New powerful way of processing budget figures in addition to the Budgets processed in the Setup → Accounts on the Setup ribbon,osFinancials5/TurboCASH5 introduces a new and powerful way of processing budget figures (Budgets on the Reports ribbon), enhancing the existing budget functionality available in the Setup → Accounts section of the Setup ribbon.

With this new feature, you can streamline the process of creating and managing budgets within osFinancials5/TurboCASH5. It offers a more dynamic and flexible approach to budgeting, allowing for easier entry and customisation of budget figures. The enhanced budgeting functionality enables you to:

1. Import budget or actual figures from the previous year: The user-friendly interface makes it easy to import and adjust budget figures as needed.. This saves time and ensures consistency across your budgeting process.
2. Allocate budget figures: Allocate enter and adjust budget figures to specific accounts, cost centres, or projects within your organization. This allows for granular budgeting and accurate tracking of expenses and revenues.
3. Adjust budget figures for seasonal fractionation or special events: osFinancials5/TurboCASH5 provides the functionality to enter budget figures, allowing businesses to account for seasonal fluctuations. This feature enables users to adjust and allocate budget amounts based on specific periods or seasons that may experience variations in financial activity. By accommodating seasonal fluctuations in budget planning, businesses can enhance their financial forecasting and decision-making processes. osFinancials allows users to enter budget figures specifically for special events, such as special sales. This feature enables businesses to allocate budget amounts specifically for these events, taking into account the anticipated increase or decrease in sales and expenses during that

time. By incorporating budget figures for special events, businesses can better track and analyse the financial impact of these occasions, aiding in strategic planning and performance evaluation.

4. Grid and Pivot tables - osFinancials5/TurboCASH5 provides several tools for analysing and viewing budget figures, including the Budget Grid, Pivot Table, and various report types.

    a) Budget grid: The Budget grid allows users to filter and organize budget figures entered on the Transactions tab. This feature provides flexibility in analysing specific budget categories, periods, or accounts, enabling users to focus on relevant information.

    b) Pivot table: osFinancials5/TurboCASH5 includes a built-in Pivot table feature that allows users to create dynamic and interactive reports based on budget figures. Pivot tables enable users to summarize, analyse, and manipulate budget data by various dimensions, such as accounts, periods, and categories. This feature provides a powerful tool for in-depth budget analysis and of your budget.

5. Budget listing reports Additionally, osFinancials5/TurboCASH5 offers the built-in pivot table functionality in the the Ledger analyser 1 or Ledger analyser 2 for the report types such as Trial balance, Income statement, Balance sheet, Standard column balances, to generate Budget listing reports for in-depth budget analysis and of your budget in a dynamic and interactive manner. These reports can be generated to print and review budget figures, providing a comprehensive view of the budget's impact on financial statements. These reports offer a structured format for analysing and comparing budgeted amounts across different accounts and periods. Furthermore, if you choose to export the reports to a spreadsheet, you can still leverage the pivot table functionality within the spreadsheet osFinancials5/TurboCASH5 to further analyse and manipulate the data. You may This provides you with the flexibility to use either osFinancials5/TurboCASH5 built-in pivot tables or the pivot table features of your preferred spreadsheet software, depending on your preferences and requirements. You can also export these reports to a spreadsheet program such as Microsoft Excel. This allows for further customization and analysis using the powerful tools and features available in spreadsheet applications.

6. Budget vs. Actual reports: In osFinancials5/TurboCASH5 you may also print and export Budget vs actual and report that compare actual financial data with budgeted figures, providing insights into variances and helping you evaluate performance against your budget targets. On the Reports → Ledger → Budget menu, you may print a budget performance report of the Budget vs realisation report to compare your budget figures to the actual figures for three selected periods.

With the pivot table functionality, users can customize the layout and presentation of the report data, apply filters and groupings, and perform calculations and aggregations. This flexibility enables users to gain deeper insights into the financial information and perform in-depth analysis.

By incorporating this new approach to budgeting, osFinancials empowers businesses to streamline their

budgeting processes, improve accuracy, and gain better visibility into their financial planning and control. Whether it's for annual budgeting, departmental budgets, or project-specific budgets, osFinancials5/TurboCASH5 provides a robust solution to effectively manage and monitor your organization's financial goals.

Calendar

osFinancials5/TurboCASH5 provides comprehensive support for a Calendar feature that includes agenda, contacts, and tasks functionality. With the Calendar feature, you can conveniently schedule and manage various events and appointments, set reminders within your Set of Books.

The Calendar feature in osFinancials5/TurboCASH5 allows you to schedule and manage events and appointments for different categories. These categories include debtor appointments (up to six different categories), creditor appointments, repeating invoices, process quotes and invoices for appointments, and process invoices for bulk time entries. By categorizing your appointments, you can easily distinguish and organize different types of activities within the Calendar.

With the Calendar, you can efficiently manage your schedule, track important appointments with debtors and creditors, set up repeating invoices for recurring transactions, handle process appointments for appointments, and manage bulk time invoices. This comprehensive functionality enables you to streamline your workflow and stay organized within your Set of Books.

Whether you need to keep track of client meetings, follow up on payment schedules, automate recurring invoices, or efficiently process appointments and bulk time invoices, the osFinancials Calendar feature provides a robust solution for managing your scheduling and task management needs.

Multi user Agenda plugin - Manual - Shop - Licence : Commercial : Once-off payment -

The Multi-user Agenda plugin in osFinancials5/TurboCASH5 enhances the functionality of the Calendar by providing support for multiple agendas. This allows you to have separate agendas for each employee, salesperson, or user in your organization. With this plugin, you can create invoices directly from each user's agenda with a simple click, streamlining the invoicing process.

Each agenda within the plugin has its own calendar and task list, providing a dedicated space for managing appointments and tasks. By adding agendas and linking them to specific users, you can easily view and track the appointments of other agendas within osFinancials5/TurboCASH5.

To utilise this plugin, you can create users in the Setup → Access control menu and associate each user with their respective agenda on the Access Control - Others tab. This ensures that each user has access to their own agenda and can manage it accordingly.

The Multi-user Agenda plugin supports ten main categories of events that can be managed for each user's agenda. These categories include:

1. *Appointment (general): Schedule appointments such as meetings with bank managers or lunch appointments.*
2. *Repeating invoices: Schedule and manage the processing of repeating invoices.*
3. *Debtors appointment: Schedule appointments with debtors or customers for specific purposes, such as discussing special arrangements or accounts.*
4. *Creditors appointment: Schedule appointments with creditors or suppliers for purposes like discussing orders or accounts.*
5. *Hours: Schedule and track the hours spent on projects or tasks for invoicing debtors or customers. This feature allows you to generate quotes for the hours and later convert them into invoices.*
6. *Bulk entry: Schedule and manage multiple appointments for salespersons and debtors (customers/clients). It enables the creation of quotes, smooth transition to invoices, and simplifies the workflow for tracking and billing services.*

The Multi-user Agenda plugin provides a comprehensive solution for managing multiple agendas, appointments, and invoicing within osFinancials5/TurboCASH5. It enhances productivity and organization by allowing each user to have their own agenda and streamlining the invoicing process directly from the agendas.

Projects

Projects - osFinancials5/TurboCASH5 provides support for projects, allowing you to effectively track and manage financial activities and expenses associated with specific projects within your organization.

With osFinancials' project functionality, you can create and define individual projects, assign relevant financial transactions and expenses to each project, and track the financial performance and progress of each one.

This feature enables you to accurately allocate costs, track project-related expenses, and monitor the profitability of each project or job. You can easily generate reports and statements that provide detailed insights into the financial status, budget utilization, and overall performance of your projects or jobs.

By utilizing osFinancials5/TurboCASH5 project capabilities, you can make informed decisions, effectively manage resources, and ensure that your projects are on track financially. This functionality is particularly beneficial for organizations that engage in project-based work, such as construction companies, consulting firms, or any business that needs to track and manage financial activities at a project level.

With osFinancials5/TurboCASH5' support for projects or job costing, you can enhance your financial management processes and gain better visibility into the financial aspects of your organization's projects.

Cost centres

Cost centres - osFinancials5/TurboCASH5 provides support for up to two cost centre groups, allowing you to effectively organize and analyse your financial data based on cost centres within your organization.

With the capability to define and assign cost centre groups in osFinancials5/TurboCASH5, you can categorize your expenses, revenues, and other financial transactions according to different cost centres. This enables you to track and analyse the financial performance of specific departments, projects, locations, or any other divisions within your organization.

By assigning transactions to appropriate cost centres, you can generate reports and statements that provide detailed insights into the financial activities and performance of each cost centre group. This information can be valuable for budgeting, decision-making, and evaluating the profitability or efficiency of different areas within your organization.

Whether you need to allocate costs, track expenses, or analyse financial data across multiple cost centres, osFinancials5/TurboCASH5 support for up to two cost centre groups provides you with the flexibility and capability to effectively manage and analyse your organization's financial information.

Document E-mail Pro plugin

The Document E-mail Pro plugin in osFinancials5/TurboCASH5 allows you to send documents by email directly from the program. This plugin is included in the osFinancials5 Business class subscription or can be purchased separately with a once-off licence.

With the Document Email Pro plugin, you can easily send documents such as invoices, quotes, credit notes, and order lists to customers or wholesalers. Different email templates can be created to match the specific document being sent. For example, the email text sent to a customer with an invoice will differ from the text sent to a wholesaler with an order list.

The Document E-mail Pro plugin can also be used in conjunction with other plugins like remittance, subscriptions and newsletter.

When sending documents as email attachments, you have the option to choose different file formats, including PDF and UBL 2.1. Here's an explanation of each format:

1. PDF (Portable Document Format): PDF is a widely used file format that preserves the formatting, fonts, and layout of a document. It ensures that the recipient sees the document exactly as intended, regardless of their software or operating system. PDF files are typically read-only, allowing recipients to view and print the document but not easily edit its content. Sending documents as PDF attachments guarantees compatibility and easy viewing for recipients.
2. UBL 2.1 (Universal Business Language): UBL is an XML-based standard for exchanging business

documents electronically. UBL 2.1 is a specific version of the UBL standard. UBL files follow a predefined structure and contain structured information about various business documents such as invoices, purchase orders, and payment instructions. UBL files are commonly used in business-to-business (B2B) transactions to facilitate automated processing and interoperability between different software systems. By sending documents as UBL 2.1 attachments, you provide recipients with machine-readable data that can be easily processed by their business systems.

When emailing documents, you can attach both a PDF file for human-readable viewing and a UBL 2.1 file for machine-readable data. This offers flexibility to the recipient in interacting with the information based on their specific needs and systems.

Getting started

osFinancials5/TurboCASH5 Business Class

Saturday, 24 May 2025- 01:50:47

---

osFinancials5/TurboCASH5 is a very powerful accounting system with a wide range of features and options.

English Online help -

Afrikaans Online help -

To get started with osFinancials5/TurboCASH5, I understand that I need to first install the software and then open the HANDYMAN Set of Books associated with the default English language.

If I am a registered user of osFinancials5/TurboCASH5, my licence will still be valid for this release. However, if I am a new or unregistered user, I can register for an osFinancials5 subscription / TurboCASH5 subscription, purchase a licence for the desired plugins, or participate in the shared forum to find solutions and participate in discussions.

I also understand that if I am using an unregistered version of osFinancials5/TurboCASH5, there is a limit of 500 transactions or documents. Once this limit is reached, I will need to register and buy a licence to continue processing transactions and documents.

If I already have a Set of Books from osFinancials4, osFinancials5, TurboCASH4, TurboCASH5, or TurboCASH5-2, I can copy it to the "*books*" directory of my osFinancials5 installation / TurboCASH5 installation using File Explorer. Alternatively, I can restore a Set of Books from a valid backup file in osFinancials5/TurboCASH5.

For a new Set of Books, I can download and customize one of the 87 available databases to meet my requirements. If my language or country is not available, I can select any of the available Firebird Sets of Books and linked languages as a free download.

Finally, there are tutorial Sets of Books available in the "*bin/Tutorials*" directory to help me get started with osFinancials5/TurboCASH5.

Welcome to osFinancials5/TurboCASH5 Business class. osFinancials is very extensive accounting system. osFinancials5/TurboCASH5 can cater for various industry specific solutions. A wide range of plugins is available to expand the power and functionality.

osFinancials5/TurboCASH5 supports 79 different languages and tax regimes languages liked to 87 Sets of Books (databases) which may be downloaded and customised to meet your requirements.

Install osFinancials5/TurboCASH5

After installing osFinancials5, / installing TurboCASH5, you may open the HANDYMAN Set of Books associated with the default "*English*" language.

Register osFinancials5/TurboCASH5

Registered users of osFinancials5/TurboCASH5

Registered users of osFinancials5/TurboCASH5 licences will still be valid for this release.

New and unregistered users

New and unregistered users may register osFinancials for:

1. osFinancials5 subscription / TurboCASH5 subscription - The annual subscription includes the bankimport and email document email pro plugins.
2. Webshop - To use any of the powerful plugins, you need to purchase a licence for most of the Plugins. Before you can Register plugins, you first need to Register osFinancials5 / Register TurboCASH5.

3. Forum - On the shared forum, you may find topics (posts), post questions or issues, find solutions and participate in any discussions.

Every time an unregistered version of osFinancials5/TurboCASH5 is started, the following confirmation message will be displayed:

> This software is limited to 500 transactions or 500 documents. Please register and buy a licence for osFinancials5!
> This copy of osFinancials5 is not registered! Do you wish to register it now?

Unregistered versions will allow you to process up to 500 transactions and /or documents. Once this limit is reached, osFinancials5/TurboCASH5 will not allow any processing of transactions, in batches and/or documents.

Once you have registered osFinancials5/TurboCASH5, you will receive an unlocking code and will be able to process further transactions and or documents.

Open a Set of Books in which 500 transactions and or documents have been processed:

> osFinancials5 the limit of 500 transactions or 500 document is reached! Please register and buy a licence.
> Once you have registered osFinancials5, you will receive an unlocking code and will be able to process further transactions and or documents.

Add / Create Sets of Books

Already have Set of Books

osFinancials4 (4.0.0.1093), osFinancials5, TurboCASH4, TurboCASH5 (4.0.0.969) and TurboCASH5-2 Sets of Books do not need to be converted to osFinancials5.

You may copy the Sets of Books using File Explorer to the "*books*" directory of your osFinancials5 installation.

You may also Restore a Set of Books from a valid Backup file in osFinancials5/TurboCASH5.

All available Sets of Books is set to Firebird Version 2.1 - ODS 11.1 database version.

Older databases Sets of Books of exiting users may use mostly Firebird Version 1.5 - ODS 10.1 database version.

These Sets of Books is may be used in osFinancials5/TurboCASH5.

New Set of Books

osFinancials5/TurboCASH5 supports 79 different languages and counties / tax regimes languages liked to 87 Sets of Books (databases) which may be downloaded and customised to meet your requirements.

If the set of books for your language and or country, is not available in the books directory, you may select any of the available Firebird Sets of Books and linked languages available as a free download.

Options to configure your Set of Books for VAT/GST/Sales Tax

VAT/GST/Sales Tax Registration / Cancellation of Registration options:

1. New Registered Vendor in osFinancials: If you're new to osFinancials5/TurboCASH5 and are a registered VAT/GST/Sales Tax vendor, this option is for you. You'll follow the steps to set up your VAT/GST/Sales Tax accounts, configure tax codes and percentages, and customize document layouts to meet your tax jurisdiction's requirements. This ensures accurate tax calculations and proper tax invoicing in your transactions.
2. New User in osFinancials without Tax Registration: If you're new to osFinancials5/TurboCASH5 and not a registered VAT/GST/Sales Tax vendor, this choice is appropriate. You'll need to adjust the system's default settings for tax accounts to reflect your non-registered status. This includes disabling or removing VAT/GST/Sales Tax accounts, configuring layouts to reflect non-taxable transactions, and updating document names if necessary. This option ensures accurate transaction documentation without tax-related elements.
3. Existing User Opting for Tax Deregistration: If you're an existing osFinancials5/TurboCASH5 user who has decided to cancel your VAT/GST/Sales Tax registration, this is your selection. Following this route involves steps to update your tax accounts' status to *'Disabled*,' and possibly remove them if unposted transactions are absent. Additionally, you need to process all tax-related transactions until the date of cancellation of registration, ensuring accurate records. After the date of deregistration, it's crucial to adjust your system to process transactions without Tax (VAT/GST/Sales tax) to reflect the updated tax-related changes accurately. Managing this process diligently will help maintain the integrity of your financial records.

Open Tutorials

Tutorial Sets of Books, will be installed in the "*bin / Tutorials*" directory. you need to click on the Browse icon and select the Sets of Books tutorials.

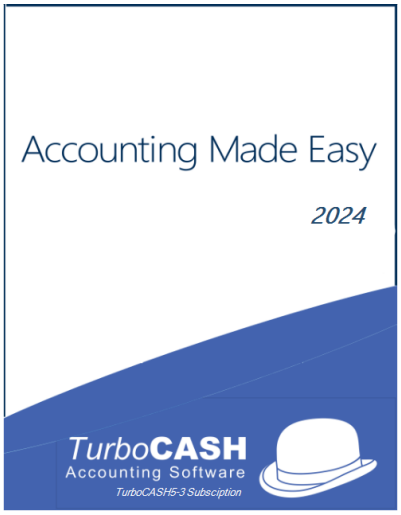
Hands-on Tutorials

osFinancials5 installation provides tutorial Sets of Books in both English and Afrikaans. These tutorial books

allow users to explore different settings, transactions, and reports within the software. Here are the available tutorial sets:

Accounting Made Easy

English tutorials (using separate receipt and payments journals for banking / cash transactions)



The following Set of Books based on this tutorial, is installed in the "…\bin\Tutorials\ENGLISH\" folder:

- *HANDYMAN (No transactions)*
- *HANDYMAN-A (Unposted transactions)*
- *HANDYMAN-B (Posted transactions)*

Accounting Made Easy - Bank Import

English tutorials (using the BankImport plugin for banking / cash transactions)

The following Set of Books based on this tutorial, is installed in the "…\bin\Tutorials\BANK-IMPORT\" folder:

- *HANDY-BANK (No transactions).*
- *HANDY-BANK-A (Unposted transactions)*
- *HANDY-BANK-B (Posted transactions).*
- *HANDY-BANK-UNPOSTED-BANK-STATEMENT – Posted transactions, excluding bank / cash transactions. Bank statement needs to be imported from the "…\bin\Tutorials\BANK-*

Rekeningkunde Met Gemak (Afrikaans)

Afrikaanse handleidings (gebruik aparte ontvangste- en betalingsjoernale vir bank- / kontanttransaksies)

Die volgende Stel Boeke gebaseer op die Afrikaanse handleidings, is in die "…\bin\Tutorials\AFRIKAANS\"-lêergids geïnstalleer:

- *NUTSMAN (Geen transaksies).*
- *NUTSMAN-A (Ongeposteerde transaksies)*
- *NUTSMAN-B (Geposteerde transaksies).*

IMPORT\BANK-STATEMENTS"
folder.

To open the tutorial Sets of Books, installed in the "*bin / Tutorials*" directory, you need to click on the Open icon on the Start ribbon. On the "*Set of Books*" screen, click on the Browse icon and select the desired tutorial Set of Books that you wish to follow.

Additionally, there are other tutorial folders available with relevant files for import into batches. The following folders contains files which may be imported into batches:

- *EXPORTED-BATCH-Delimited-File – Exported batch transactions using the "Write delimited file" option and may be imported into a batch using the "Delimited file import" option (F9:Process icon) on batches.*
- *EXPORTED-BATCH-Spreadsheets – Exported batch transactions in the *.xlsx (Excel 2007-365) file format. These transaction files may be opened in the Spreadsheet import icon on batches, and imported into a selected batch.*

These tutorials are designed to guide users, regardless of their accounting experience, through the basics of accounting and demonstrate how to effectively use osFinancials5/TurboCASH5 for managing business finances. The tutorials cover various aspects, including osFinancials5/TurboCASH5 features, chart of accounts setup, transaction creation, processing sales and purchase documents, and report generation. They also serve as a reference guide to osFinancials5/TurboCASH5.

By the end of these tutorials, users will have gained a solid understanding of the accounting process and will be able to confidently utilize osFinancials5/TurboCASH5 for managing their business finances.

OTHER TUTORIALS

Additionally, there are other tutorials for exploring the activation, processing, and reporting of Cost centres and Projects within osFinancials5/TurboCASH5.

COST-CENTRES

Tutorials / examples to explore the activation, processing and reporting of Cost centres in osFinancials5/TurboCASH5. See - Cost centres in this Help file.

The following Set of Books based on this tutorial, is installed in the "*...\bin\Tutorials\COST-CENTRES*" folder:

- COST-CENTRES-A (transactions and documents not posted to the ledger)
- COST-CENTRES-B (transactions and documents posted to the ledger).

PROJECTS

Tutorials / examples to explore the activation, processing and reporting of Projects in osFinancials5/TurboCASH5. See - Projects in this Help file.

The following Set of Books based on this tutorial, is installed in the "*...\bin\Tutorials\PROJECTS*" folder:

- PROJECTS-A (transactions and documents not posted to the ledger)
- PROJECTS-B (transactions and documents posted to the ledger).

Created with the Standard Edition of HelpNDoc: Create iPhone web-based documentation

System requirements

The system requirements for osFinancials5/TurboCASH5 are as follows:

1. Operating System: A 32-bit or 64-bit Microsoft Windows operating system is required. Supported versions include Windows 98, Windows 2000, Windows ME, Windows NT, Windows XP, Windows Vista, Windows 7, Windows 8, Windows 10, or Windows 11.
2. RAM: For a single-user setup, at least 256 MB of RAM is required. For a multi-user setup, a minimum of 512 MB of RAM is recommended.
3. Hard Disk Space: Approximately 1 GB of available hard disk space is needed to install and run osFinancials5/TurboCASH5.
4. USB Port and Drives: A USB port is required, and available USB drives are needed to save and store backups.
5. Screen Resolution: An SVGA/LCD/LED screen with a resolution of 1440 x 900 or higher is recommended.

Screen Resolution Adjustments: If your device has a screen resolution of 1366 x 768, you may need to adjust your Screen resolution when working in forms or screens such as Documents, Debtors, Creditors, Stock, etc. using the following options:

- *Collapse the ribbons (automatically hide the ribbons)*
- *Set the "Style values for ribbon" to Tablet mode.*

This adjustment ensures proper display and functionality.

6. System Number Format: Configuring the System number format setting to print reports like "*Budget*

vs actual" and "*This year vs last year*".

7. Spreadsheet Software: Microsoft Excel or other spreadsheet programs such as LibreOffice, OpenOffice or UltraOffice should be installed to save reports or export data from the Ledger analyser and other options.

8. Recommended Device: While osFinancials5/TurboCASH5 may run on older devices, it is recommended to use a better device for more secure and efficient operation. Modern devices are significantly more powerful than older ones, making them more suitable for running osFinancials smoothly.

Please note that the information provided here is specific to osFinancials5/TurboCASH5. Always refer to the official documentation and system requirements provided by the osFinancials team to ensure accurate and up-to-date information. Additionally, consider using the most recent and supported operating system and hardware for optimal performance and security.

Created with the Standard Edition of HelpNDoc: Maximize Your Productivity with HelpNDoc's CHM Help File Creation Features

System settings - Screen resolution

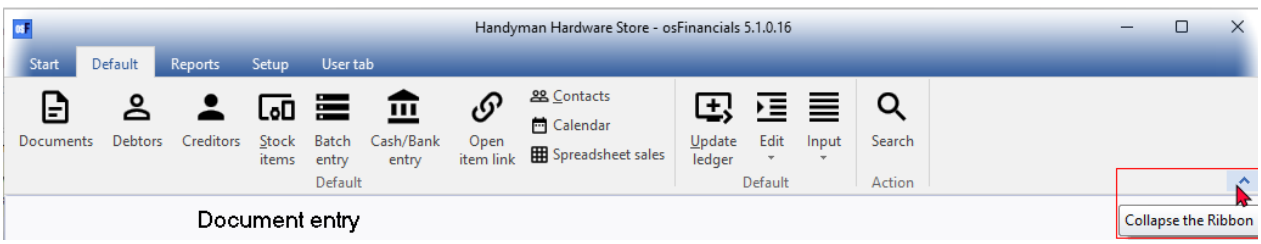
The minimum recommended screen resolution is 1440 x 900 screen or higher).

On devices with a 1366 x 768 screen resolution, you may need to:

- Collapse the ribbons (automatically hide the ribbons) when working in forms or screens such as Documents, Debtors, Creditors, Stock, etc.
- Set the theme to tablet mode - Set the "*Style values for ribbon*" to "*Style=4*" in the Colors.ini file in your theme folder to 4 =2016Tablet

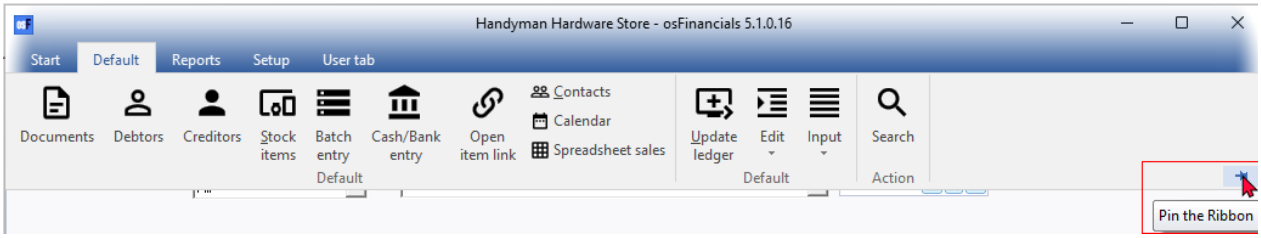
Collapse (hide) ribbons

Double click on a ribbon tab, or click the "*Collapse the ribbon*" option (on the bottom right of the ribbon bar).



If the screens of debtors, creditors, stock items or documents is not displayed correctly, you may need to go to Tools → Close active forms (Setup ribbon) and relaunch the screens when the ribbon is collapsed.

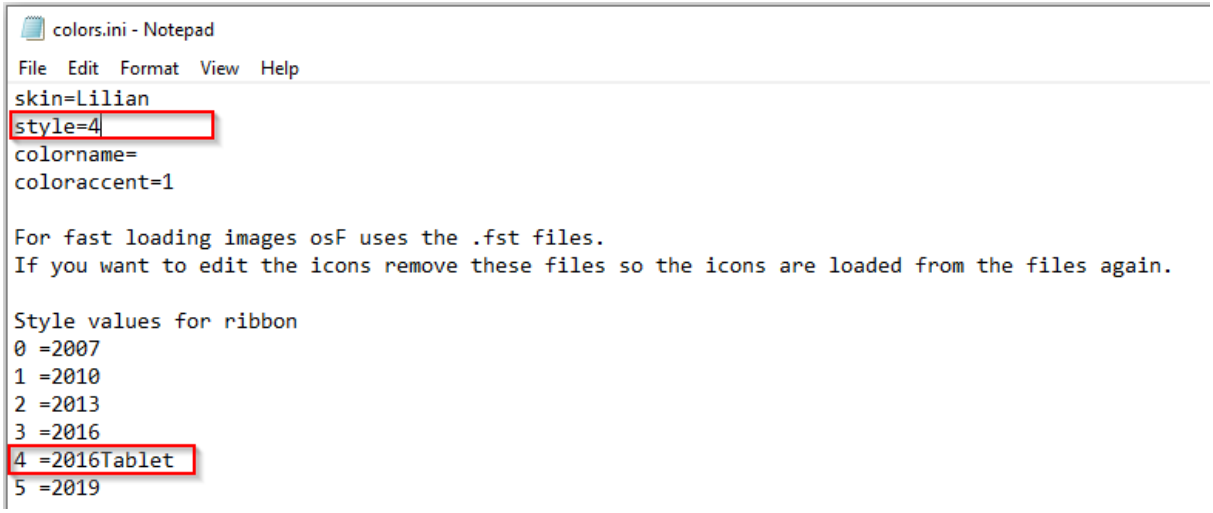
Pin (show) ribbons



Tablet mode setting

To set the ribbon to the Tablet mode:

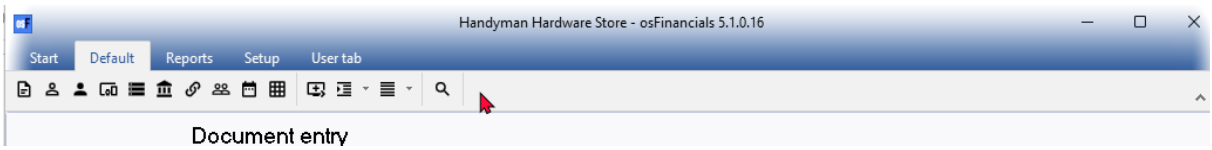
1. Open your selected theme folder in "*... / bin / Themes / Material*" folder (as per this example).
2. Open the "*colors.ini*" file.
3. Change the "*Style values for ribbon*" by replacing "style=x" value with "*style=4*" (where 4 =2016Tablet).



4. Save the "colors.ini" file.

5. Exit osFinancials5/TurboCASH5 and RestartosFinancials5/TurboCASH5 .

6. When osFinancials is restarted, the ribbons will display as follows (Default tab) as per this example).



Created with the Standard Edition of HelpNDoc: Full-featured Help generator

System settings - Number format

You may need to set the number format of your operating system to print some reports.

When printing the "*Budget vs actual*" and "*This year vs last year*" reports, you may encounter the following error message:

"Type conversion error 'Val':Expression TRpExpression46"

Batch processing options - Create receipts (Receipt batches) option - If your system's digit separator is set to a comma and your system's Decimal symbol is set to a period, do not enter a comma as the decimal separator in the "Amount" field.

For example, if an amount of 1150,00 is entered using a comma as a digit separator, it will print and generate the transaction amount as 115,000.00 instead of 1,150.00.

The "*Customize Format - Numbers*" of your Windows operating system number format needs to be set as follows:

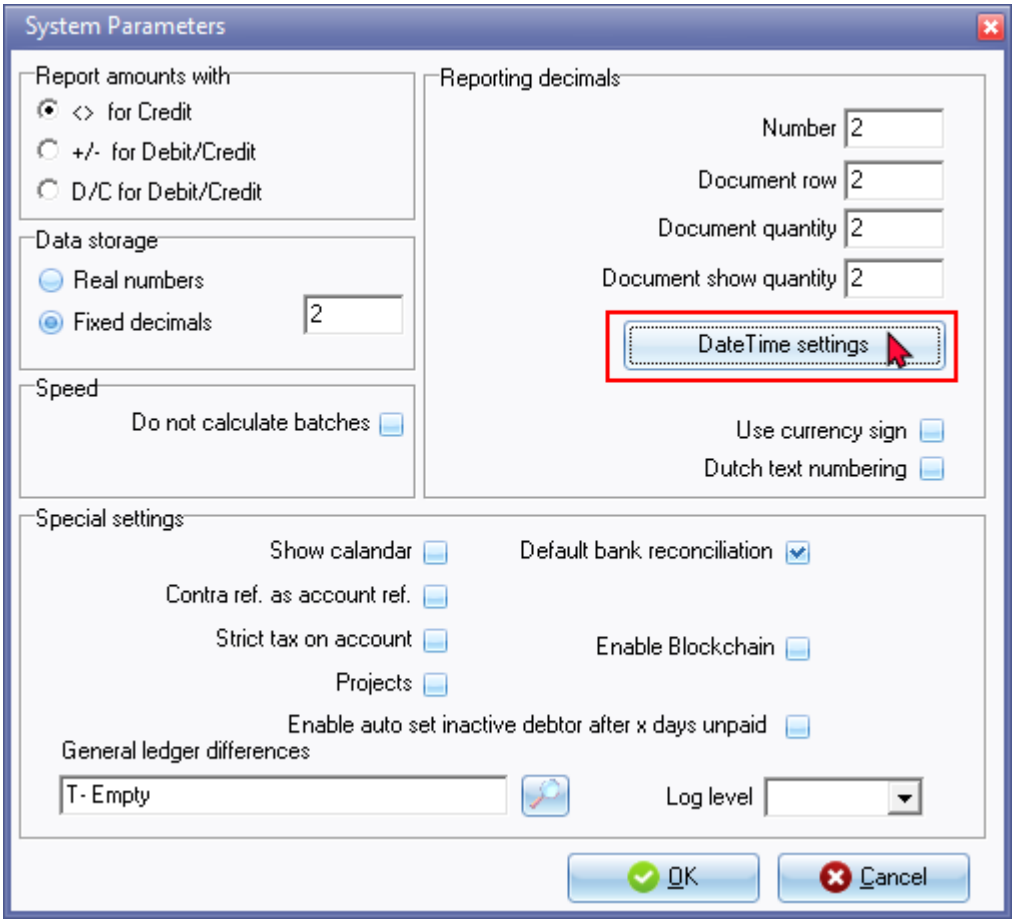
- Decimal symbol - set to period (.)
- Digit grouping symbol - set to comma (,) (If Digit grouping symbol is set to blank it does not print but produces an error.

The Region and Language settings of your operating system should launch if you click on the Setup → Company info - Options - Set Windows date format/style button on the Setup ribbon.

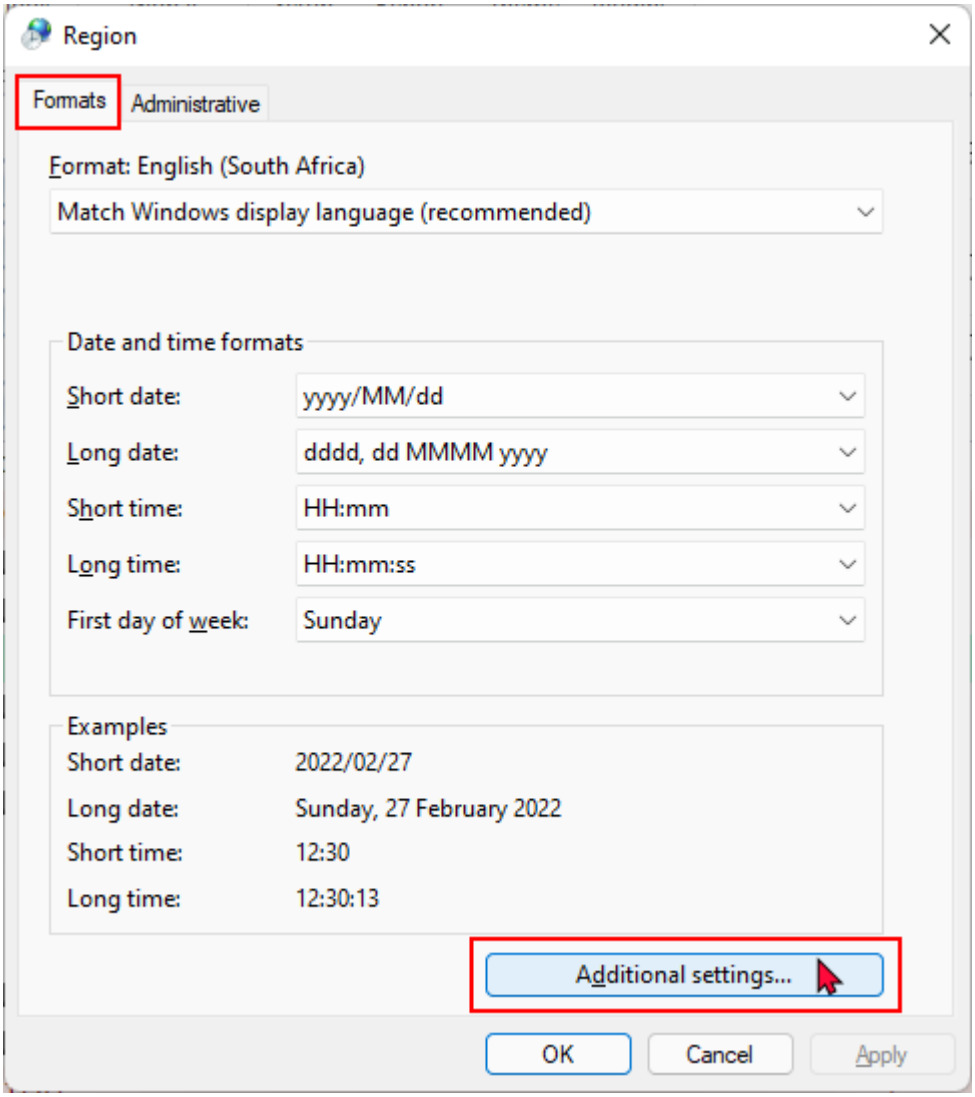
This is a global setting for all Sets of Books on your operating system.

To change the number format of your operating system:

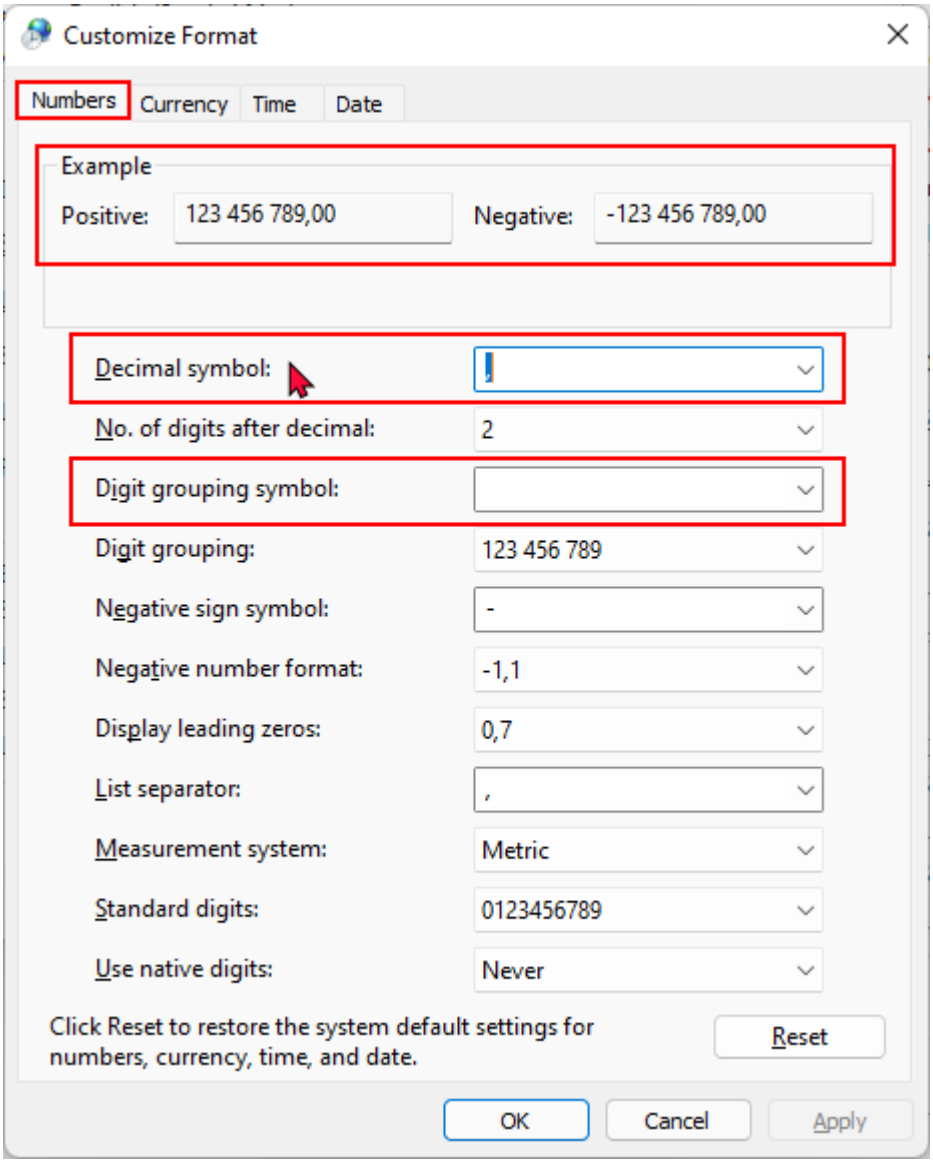
1. In any active (opened) Set of Books, select Setup → System parameters (Setup ribbon).



2. On the "*System Parameters*" click on the DateTime settings button.



3. On the Formats tab, click on the Additional settings ... button.

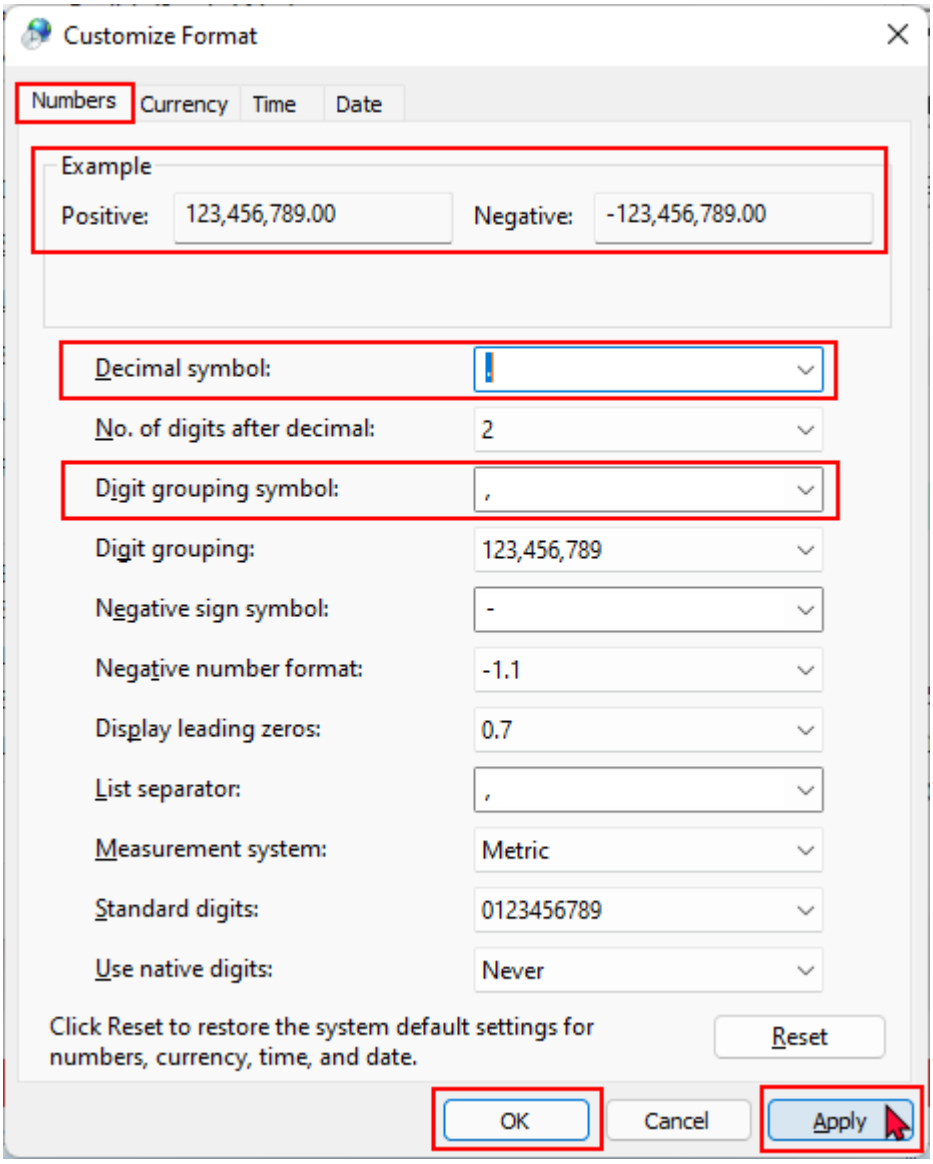


4. On the Numbers tab, the default settings (as per new installaion of Windows or on some new devices), the settings that need to be changed is as follows:

    - Decimal symbol set to period (.)
    - Digit grouping symbol set to comma (,)

> *If Digit grouping symbol is set to blank; and when you click on the Print button of the "Budget vs actual" and "This year vs last year" reports; it does not print but produces same error; i.e.*
>
> "Type conversion error 'Val':Expression TrpExpression46"

5. After changing the number formats, the "*Example*" on the Numbers tab of the "*Customize Format*" screen, should display as follows:



6. Click on the Apply and OK buttons of the "*Customize Format*" - Numbers tab, as well as the "*Region*" - Formats screen.

7. You may need to exit (close) osFinancials5/TurboCASH5 for these changes to be updated when generating and printing reports.

Created with the Standard Edition of HelpNDoc: Revolutionize Your CHM Help File Output with HelpNDoc

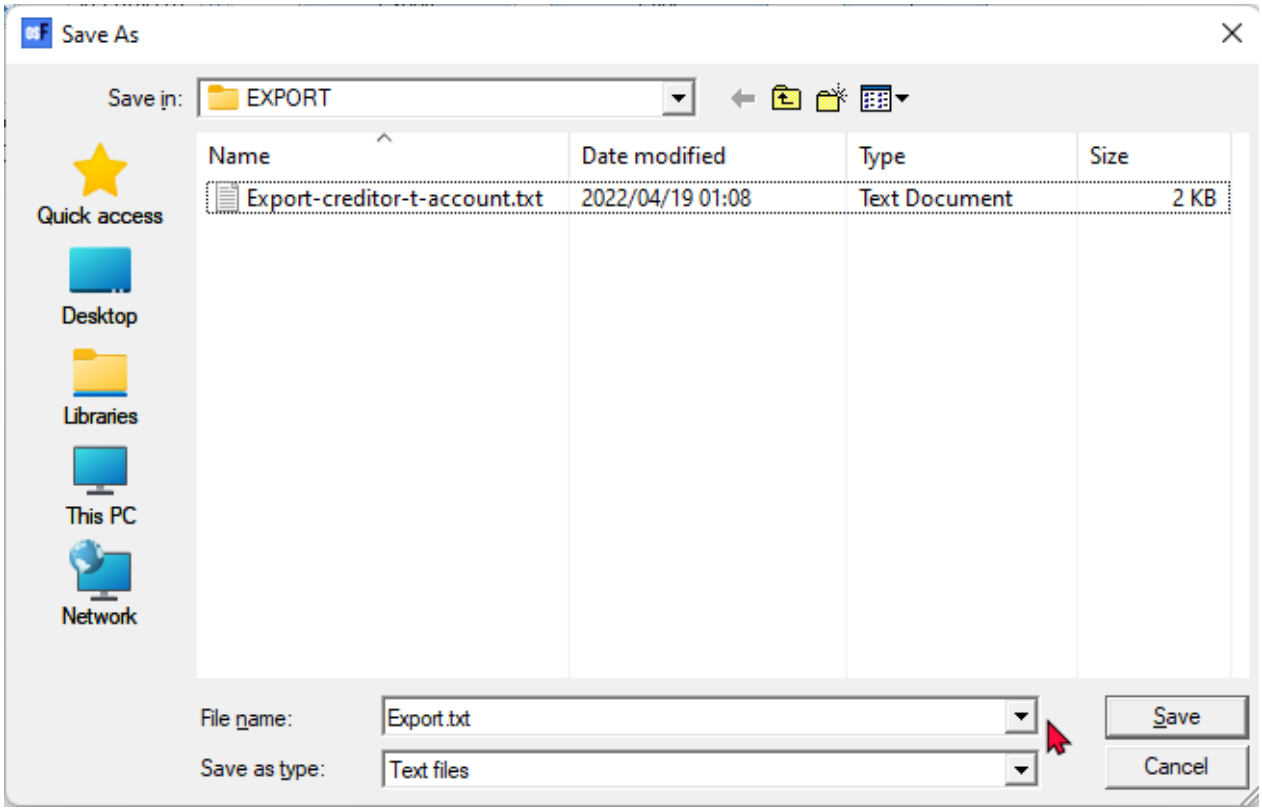
System settings - Default app for csv file types

Open saved Export.txt files in your system's app (program) associated with the CSV (Comma Separated Values) file type

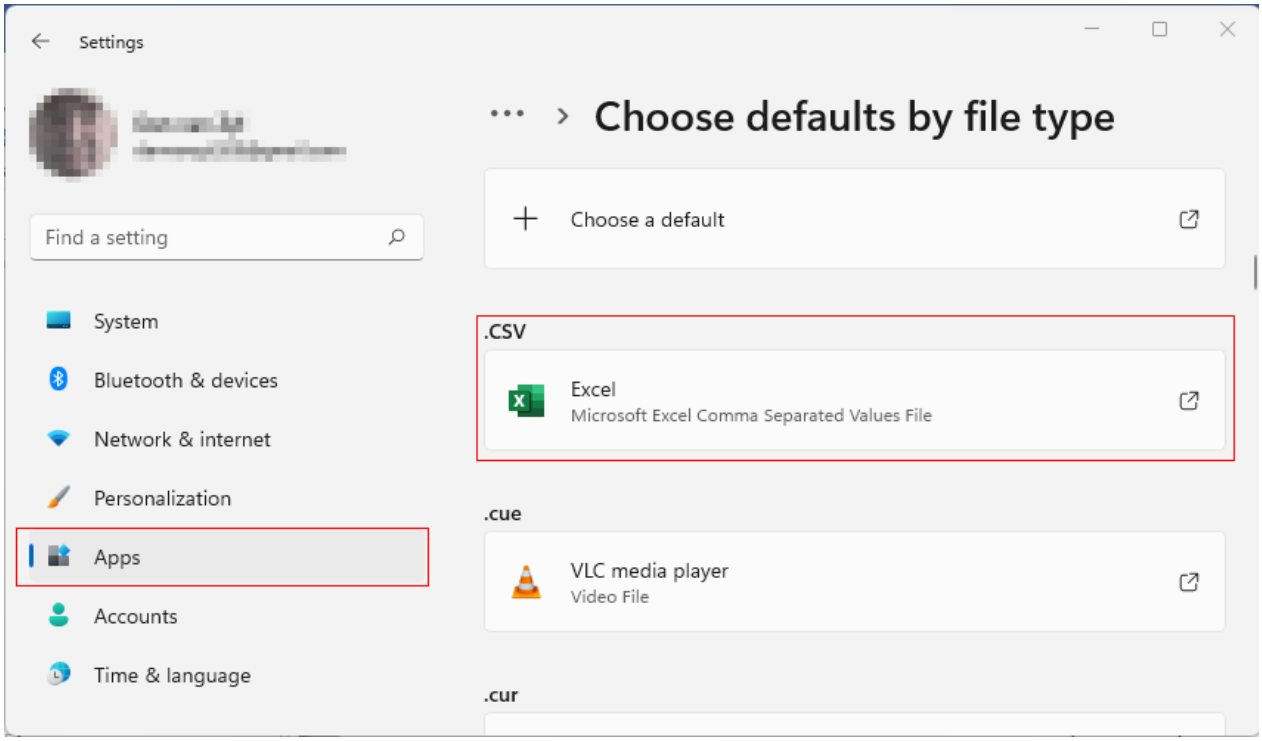
The Export button on the following features will open the saved "*Export.txt*" text file in your system's app (program) associated with the CSV (Comma Separated Values) file type:

- Ledger analyser 1 - Trial balance, Income statement, Balance sheet, Standard column balances (column view of the Trial balance, Income statement and Balance sheet in one report), Budget vs actual, This year vs last year as well as six (6) report types for Column balances. which cannot be printed, but exported to a spreadsheet only.
- T-Account viewer - In addition to launching the T-Account viewer from the Ledger analyser 1 / Ledger analyser 2, on the Reports ribbon; the T-Account viewer may also be accessed on the following options on the Default ribbon:
    - Search - Investigator - Account or Batch type searched items.
    - Debtors - Transactions tab / Creditors - Transactions tab - Click on the Show transactions button.
- Open item link - Totals tab and Transactions tab or a selected open item account.
- Debtors - Export button on the Debtors list screen - You may enter the File name with a *.txt file type extension.
- Creditors - Export button on the Creditors list screen - You may enter the File name with a *.txt file type extension.
- Documents - Export button on the Documents list screen - This will launch the "Save As" screen with the default Export.csv file type.

If you click on Export buttons on various screens, the "*Save As*" screen will be launched to save a comma separated value text file, with the default "*Export.txt*" file name.



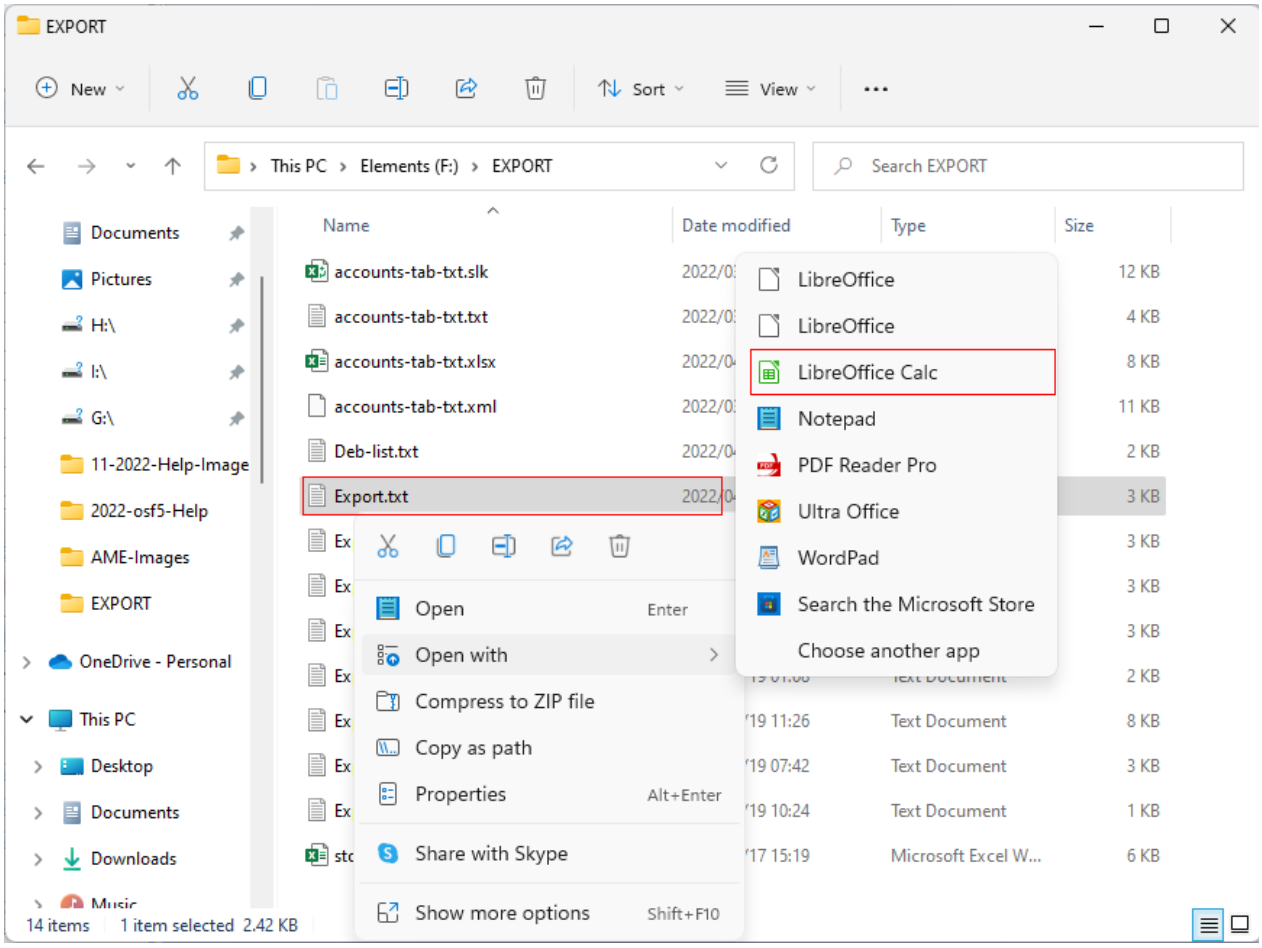
Once you have saved the "*Export.txt*" file with your own file name, the Exported file will, by default open in your system's default app associated with csv files.



Open saved Export.txt files in another app (program) for CSV (Comma Separated Values) file type

If you wish to open saved Export.txt files in another app (program) for CSV (Comma Separated Values) file type, than Microsoft Excel, you may use the spreadsheet components of other apps (programs) e.g. LibreOffice, OpenOffice or UltraOffice installed on your system.

To do this, select the saved Export.txt file and right click on LibreOffice Calc.



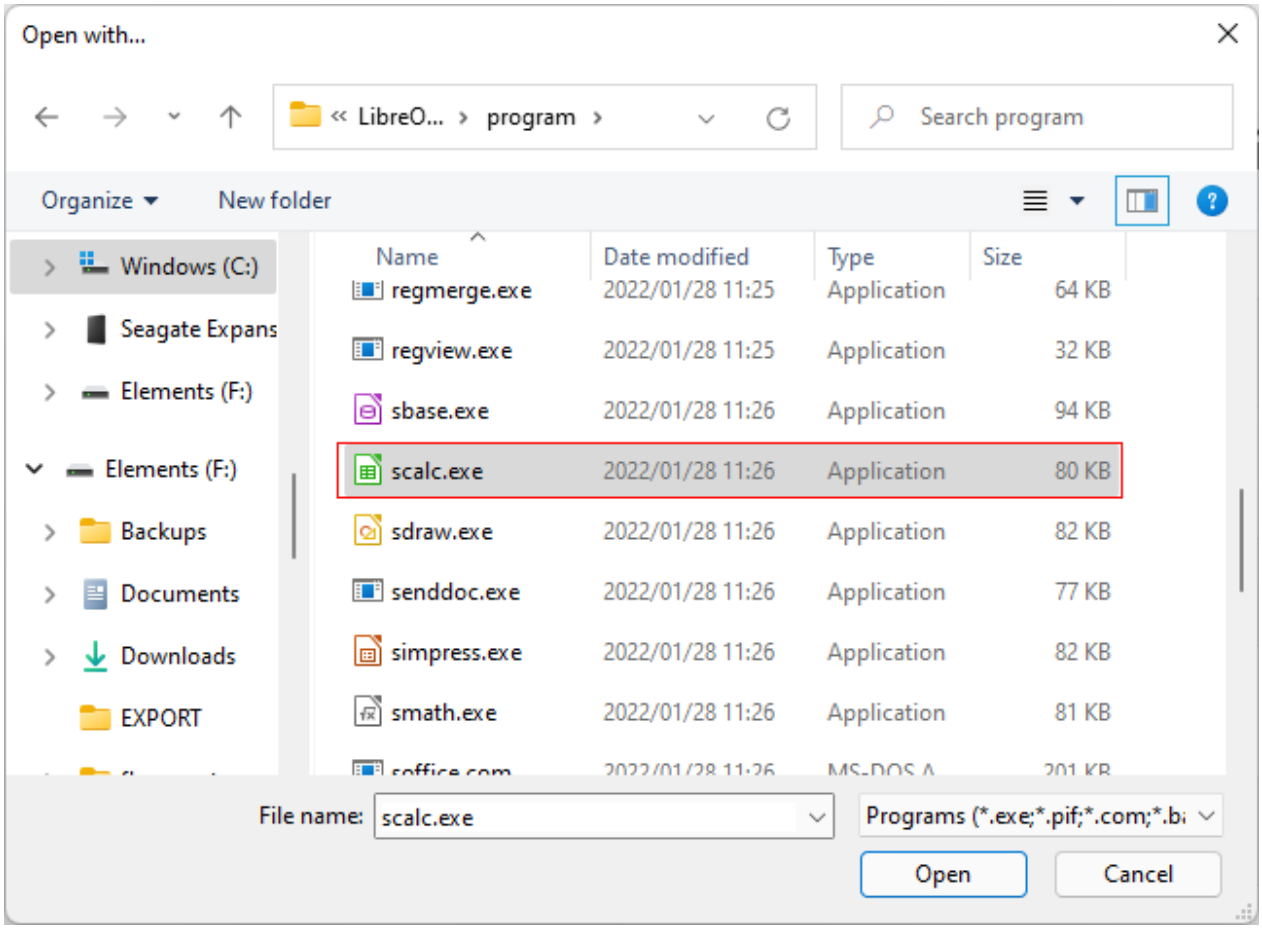
To open a Export.txt file in LibreOffice, it may, by default, open the saved Export.txt file in LibreOffice Writer (Word processing) component instead of the Spreadsheet component LibreOffice Calc.

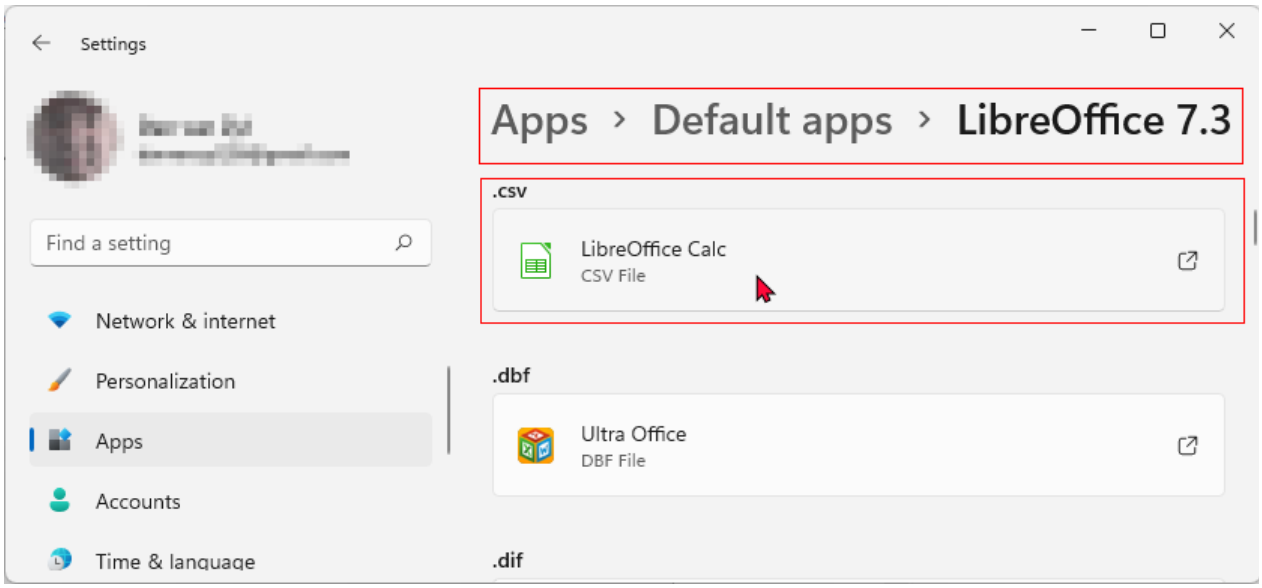
To add LibreOffice Calc to the Open with > context menu, you need to select Choose another app on the context menu.

Go to Look for another app on this PC. On the "*Open with...*" screen, browse to where your preferred app is installed. In this example, LibreOffice install folder is selected.

Go to the program folder and select scalc.exe.

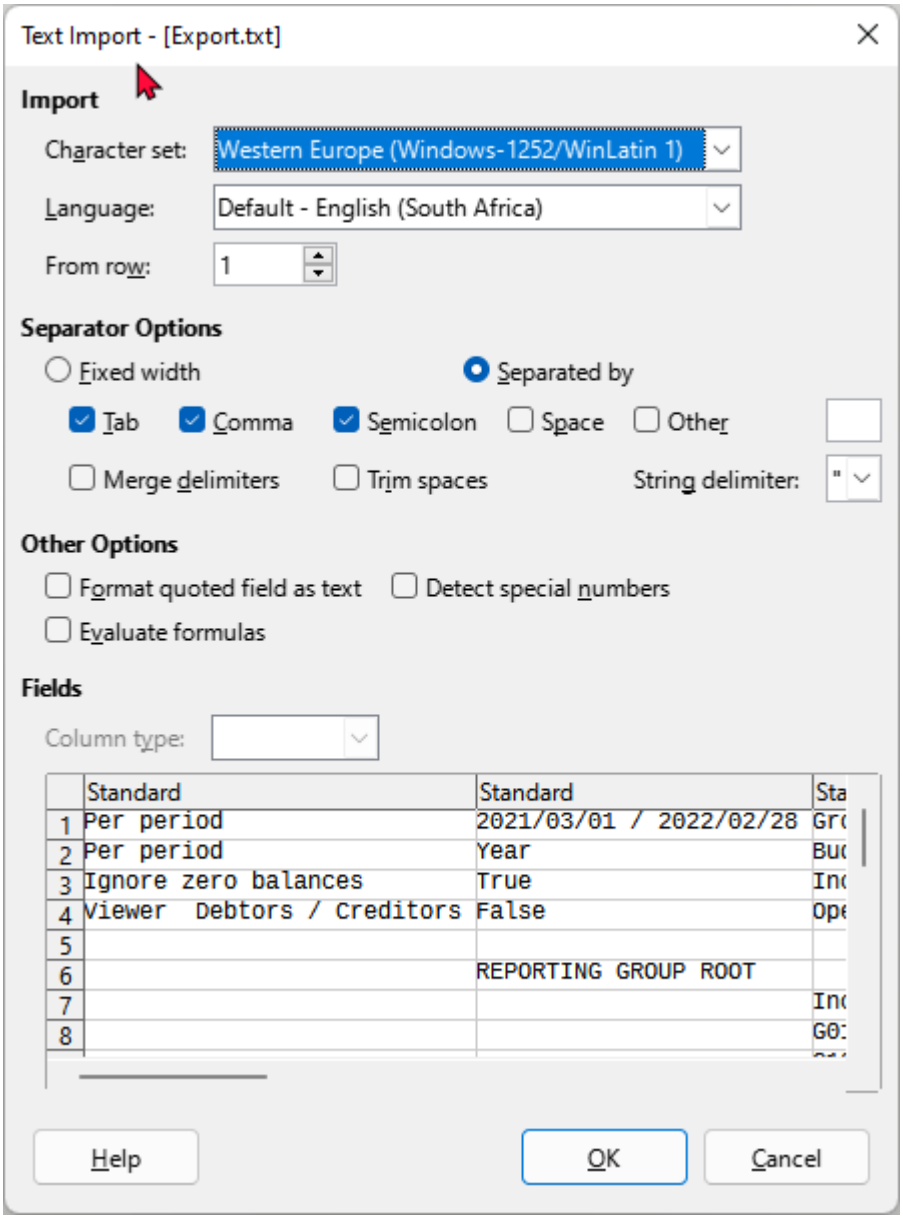
Click Open button and the app will be added to the Open with ... context menu of your system's File Explorer.





Opening a saved Export.txt file in LibreOffice Calc will display the "Text Import - {Export.txt} or [your file name.txt].

You may need to check and configure the options for the Comma Separated Values file.



When you click OK, the file will be opened in a spreadsheet.

Unicode settings in osFinanacials5/TurboCASH5

Install osFinancials5/TurboCASH5 - Added Unicode Setting

We've adjusted the installation script to include a new Unicode setting for Unicode databases. This setting allows you to control the nounicode parameter in the osf.ini file during installation. Additionally, we've added options to update or retain the existing osf.ini file based on your Unicode preferences for your Unicode databases. This allows you to set the Unicode settings via the installation process without editing

the osf.ini file in the osFinancials5 installation's root directory.

If you are using TurboCASH5, you may set the Unicode settings via the installation process without editing the tcash.ini file in the TurboCASH5 installation's root directory.

Unicode Settings in osFinancials5/TurboCASH5

In osFinancials5, the osf.ini (or in TurboCASH the tcash.ini file) includes the setting nounicode=FALSE or nounicode=TRUE to control Unicode settings. Here's what these settings mean:

- Enable Unicode setting: nounicode=FALSE: This setting enables Unicode support. When Unicode is enabled, the software can handle a wide range of characters from different languages, ensuring proper display and processing of multilingual text.
- Disable Unicode setting: nounicode=TRUE: This setting disables Unicode support. When Unicode is disabled, the software may not correctly handle special characters or characters from languages other than the default one.

Enabling Unicode (nounicode=FALSE) is generally recommended if you need to work with multiple languages or special characters to ensure data integrity and proper functionality.

Unicode settings / System locale and Keyboard layout

When would that be necessary to use the nounicode=TRUE setting?

Disabling Unicode support with nounicode=TRUE may be necessary or beneficial in certain specific scenarios. Here are a few examples:

- Legacy Systems: If you are working with older, legacy systems or applications that do not support Unicode, disabling Unicode might be necessary to ensure compatibility. Some older software and databases were designed to work with specific code pages and might not handle Unicode characters correctly.
- Performance Considerations: In some cases, using non-Unicode (single-byte or multi-byte character encodings) can be more efficient in terms of storage and performance, particularly if all the text data falls within a single codepage or character set. Disabling Unicode could reduce the storage size and improve performance for certain operations.
- Specific Language Use: If you are working exclusively with a language or character set that is fully supported by the non-Unicode codepage, and there is no need to handle characters from multiple languages, you might choose to disable Unicode. This can simplify the configuration and maintenance

of osFinancials5/TurboCASH5.

- Data Migration and Conversion: When migrating data from a non-Unicode system to a Unicode system, or vice versa, it might be necessary to temporarily disable Unicode support to ensure data integrity during the conversion process.
- Software Integration: If osFinancials5/TurboCASH5 needs to integrate with other software or systems that do not support Unicode, it might be necessary to disable Unicode to ensure proper data exchange and compatibility.

However, keep in mind that using nounicode=TRUE can lead to limitations in handling special characters and multilingual text. It's generally recommended to use Unicode (nounicode=FALSE) for better flexibility and accuracy in a modern, globalised context.

Ultimately, the decision to enable or disable Unicode support should be based on your specific requirements and the systems you are working with.

How does Unicode settings, System locale (language settings) and keyboard layout relate to these special characters?

Great question! The relationship between Unicode settings, system locale (language settings), and keyboard layout is crucial for typing and displaying special characters correctly. Here's how they interact:

- Unicode is a universal character encoding standard that assigns a unique code to every character, regardless of the platform, program, or language. It ensures that special characters like ê, ë, and Å are represented consistently across different systems and devices.
- System Locale (Language Settings) - System locale determines the language and regional settings for your operating system. It affects the default language for system messages, the date and time format, currency, and other regional preferences.

  When you set your system locale to a specific language, it can also influence the availability and behaviour of certain characters and symbols in applications and text input.

- Keyboard layout defines the arrangement of keys on your keyboard and determines which characters appear when you press specific keys. Different languages and regions have their own keyboard layouts that include characters specific to those languages.

  For example, if your keyboard layout is set to "*US*," you might not see characters like ê or ë directly on the keyboard. However, if you switch to a layout like "*Afrikaans*", "*French*" or "*Dutch*," these characters will be more accessible.

Many operating systems allow you to switch between different keyboard layouts, making it easier to type special characters. You can usually switch layouts via a keyboard shortcut or through the language settings in your system preferences.

- Putting It All Together
    - Unicode ensures that the characters you type are represented correctly in text across different systems.
    - System locale influences how these characters are displayed and interpreted based on your regional settings.
    - Keyboard layout determines the ease of typing these characters by providing access to language-specific keys and shortcuts.

By configuring these settings appropriately, you can seamlessly type and display special characters in any language you need.

If you ever run into issues with special characters not displaying correctly, checking these settings can often help resolve the problem!

In osFinancials5/TurboCASH5 can the Unicode settings have implications and differences in Firebird database types and MSSQL database types?

Unicode settings can have implications and differences when using accounting software like osFinancials5/TurboCASH5 with Firebird and MSSQL databases. Here are some key points to consider:

Firebird Databases (See - Character Sets and Unicode in Firebird)

- Character Sets: Firebird supports various character sets and collations. Properly configuring these settings is crucial to ensure that special characters like *'ê', 'ë'*, and *'Å'* are stored and retrieved correctly.
- Unicode Support: Firebird 2.1 and later versions support Unicode, which allows for the storage of characters from multiple languages. Ensuring that your database is set up to use Unicode can help avoid issues with character encoding. All Sets of Books for the Firebird database type is upgraded from Firebird 1.5 to Firebird 2.1. The updated Sets of Books based on Firebird 2.1 is available in the following options:
    - TurboCASH5 in the bin/Repository folder.
    - osFinancials5.1 - The similar Firebird database type Sets of Books, including Sets of Books for

the Dutch markets, is available as a free download from the Online option in the Creation Wizard (Let osFinancials / TurboCASH help you to create your own Set of Books? from the osFinancials website.

Existing users of osFinancials5/TurboCASH5 running Firebird 1.5 Sets of Books, may need to upgrade their databases from Firebird 1.5 to Firebird 2.1.

MSSQL Databases

- Collation: MSSQL databases use collations to define rules for sorting and comparing characters. Choosing the right collation is important for correctly handling special characters.
- Unicode Support: MSSQL also supports Unicode through the use of `nvarchar` and `nchar` data types, which can store any Unicode character. Ensuring that your database columns are set to use these data types can help maintain character integrity.

Implications

- Data Consistency: Properly configuring Unicode settings ensures that special characters are consistently stored and displayed across different systems and applications.
- Compatibility: Ensuring that both the database and the application are set up to use Unicode can prevent issues with character encoding mismatches, which can lead to data corruption or display issues.
- Performance: While Unicode support is essential for handling multilingual data, it can also have performance implications. Proper indexing and optimisation are necessary to maintain performance levels.

By carefully configuring Unicode settings and ensuring that both your database and application are set up to handle Unicode characters, you can avoid many common issues related to special characters in accounting software.

Codepage settings in osFinancials5/TurboCASH5

Codepage settings in osFiosFinancials5/TurboCASH5 set in the Tools → Customise language option (Setup ribbon) for your selected language.

osFinancials and TurboCASH allow you to customise language settings, including codepage settings, through the Tools → Customise language option (Setup ribbon). This is essential for ensuring that the software correctly displays and processes text in your chosen language, especially for languages with special characters or different writing systems.

By adjusting these settings, you can enhance your user experience and make sure that all financial data and reports are presented accurately, regardless of the language or character set you are using.

Microsoft Windows Codepages

- 874 Thai
- 932 Japanese
- 936 Simplified Chinese
- 949 Korean
- 950 Traditional Chinese
- 1250 Central European
- 1251 Cyrillic
- 1252 Western European
- 1253 Greek
- 1254 Turkish
- 1255 Hebrew
- 1256 Arabic
- 1257 Baltic
- 1258 Vietnamese

Microsoft Windows Codepages are used to map characters to bytes for various languages, ensuring proper display and input of text. Each codepage is designed to handle specific scripts or groups of languages.

For example:

- 1250 Central European includes languages like Polish, Czech, and Hungarian.
- 1251 Cyrillic is used for languages like Russian, Bulgarian, and Serbian.
- 1252 Western European covers languages like English, French, and German.
- 1253 Greek is specifically for the Greek language.
- 1255 Hebrew and 1256 Arabic handle those respective languages and their unique writing systems.

These codepages are essential for ensuring that text is correctly encoded and displayed, especially in applications like accounting software, where accurate representation of financial data in multiple languages is critical.

If you're setting up osFinancials or TurboCASH, choosing the correct codepage for your specific language ensures that all characters are displayed correctly, avoiding any data corruption or display issues.

In osFinancials accounting software supports LTR languages and RTL languages ?

Yes, osFinancials accounting software supports both Left-to-Right (LTR) and Right-to-Left (RTL) languages! This makes it versatile and suitable for users in different regions and linguistic backgrounds.

For TurboCASH5, this RTL setting is not included in the tcash.ini file. However it is included in the osf.ini file.

```
;BIDIMODE=RTL
```

For Left to Right to Left language and interface support, the ;BIDIMODE=RTL may need to be uncommented.

Tests Unicode Settings

TESTS nounicode=TRUE

MSSQL Support - Can open Sets of Books for the MSSQL Database type.

TESTS nounicode=FALSE

MSSQL Support - Can open Sets of Books for the MSSQL Database type. This seems to display the osFinancials5/TurboCASH5 interface and reports correctly.

Prints correctly om all screens and reports tested, including currencies.

Entering an ê (Alt+0136) or ë (Alt+0137) in for example Company name (Registered company names may include these characters, including existing users) does not replicate an error:

NOTE - If data is entered when nounicode=TRUE , the reports do not print correctly - you may have to reenter the data on the forms.

Setup -> Company information

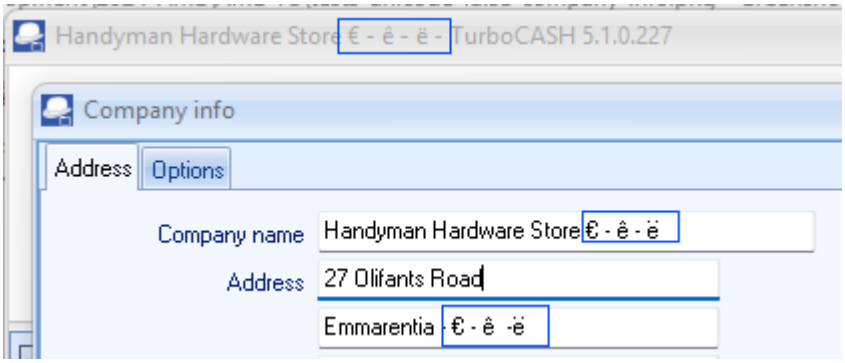
If your data in the forms was entered when nounicode=TRUE and you change the unicode settings to nounicode=FALSE you may need to reenter the special characters, for example; ê (Alt+0136) or ë (Alt+0137). This resolves the display issues in the osFinancials5/TurboCASH5 interface, reports and layout files.

REMEMBER to close and relaunch osFinancials5/TurboCASH5 you have edited the setting in the osf.ini or tcash.ini files.

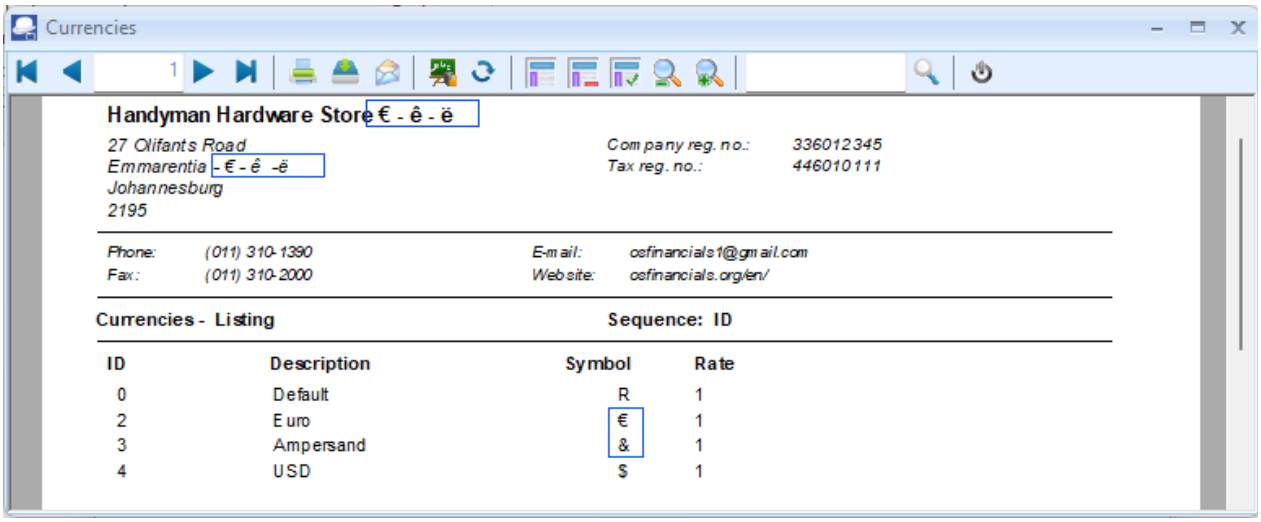
Alternatively you may rerun the osfiancials5/TurboCASH5 installation.

Company info correct display

Company info and titlebar

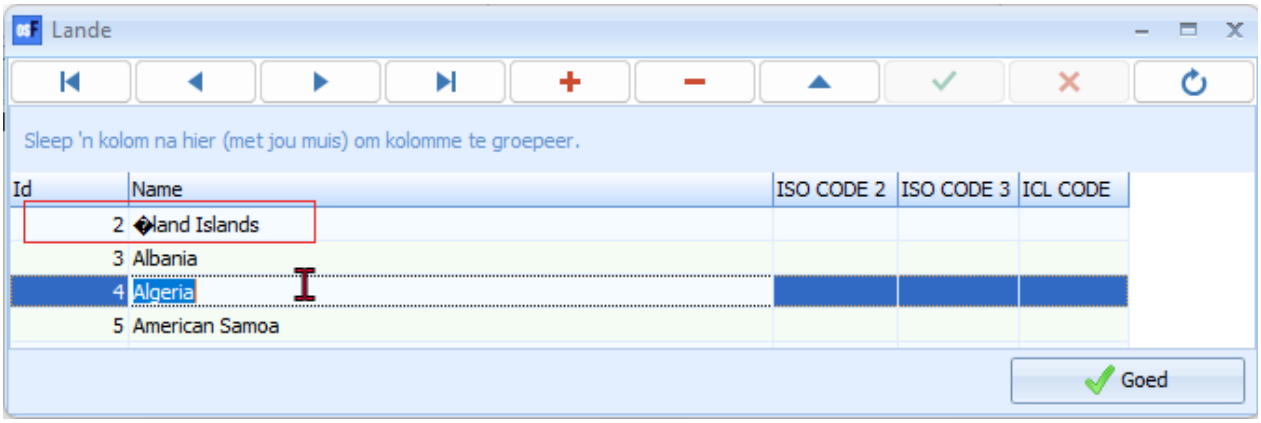


Company info and report Currencies



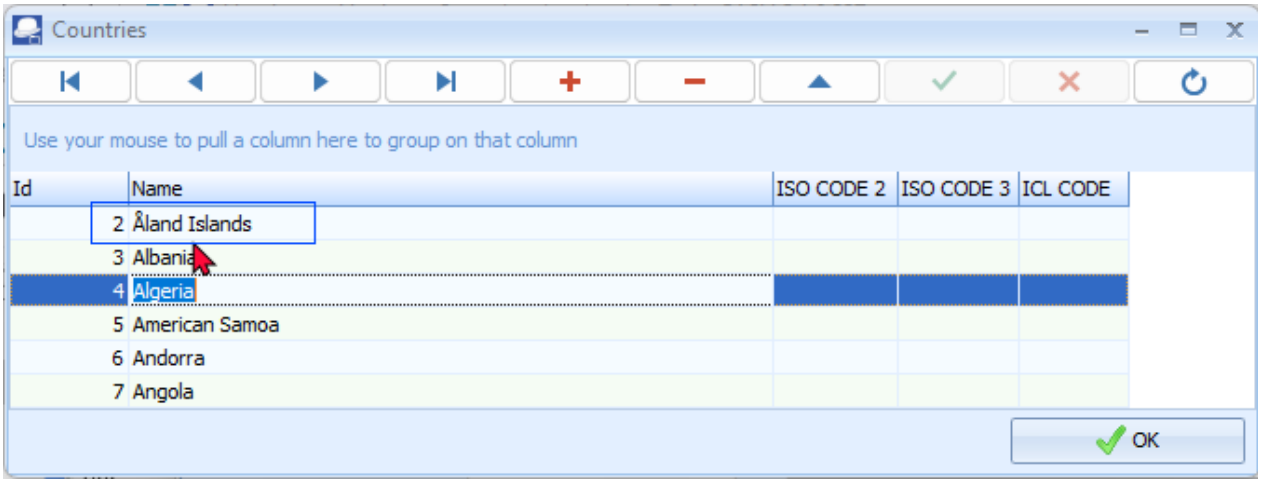
Setup -> Countries

By default, the land Islands will display the character irrespective of your Unicode settings if the nounicode=FALSE (for Firebird database type Set of Books) or nounicode=TRUE (for MSSQL database type Set of Books). Åland does not seem to be included in the countries.xml file in the osfinancials5/TurboCASH5 root installation folder.



Typing special characters can vary depending on your keyboard and operating system. Here are a few methods for typing the Å character in Windows:

1. Using Alt Code:
    - Hold down the `Alt` key.
    - While holding down `Alt`, type `0197` on the numeric keypad.
2. Keyboard Shortcuts:
    - Ensure you're using a keyboard layout that includes Scandinavian characters (like Swedish or Finnish).
    - Press `Shift` + `Ctrl` + `;` and then A.



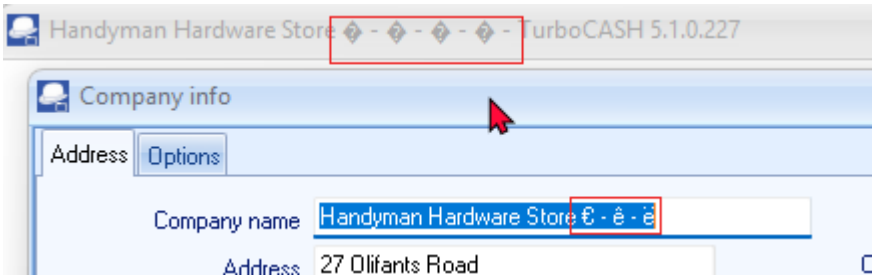
The Åland Islands - This fascinating archipelago belongs to Finland but has a large degree of autonomy. The unique letter “Å” is a telltale sign of the Scandinavian influence.

Errors Firebird database type - nounicode=TRUE

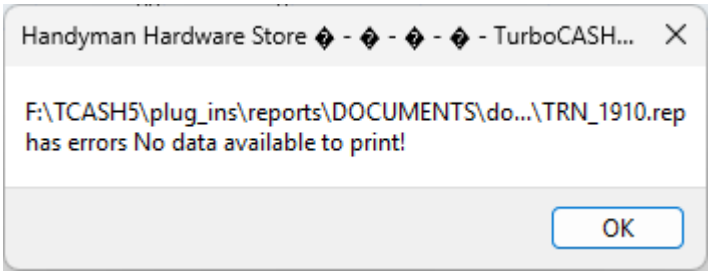
If the Unicode setting is set to nounicode=TRUE and data is entered in forms and screens, it will cause

display errors in the forms, reports and layout files.

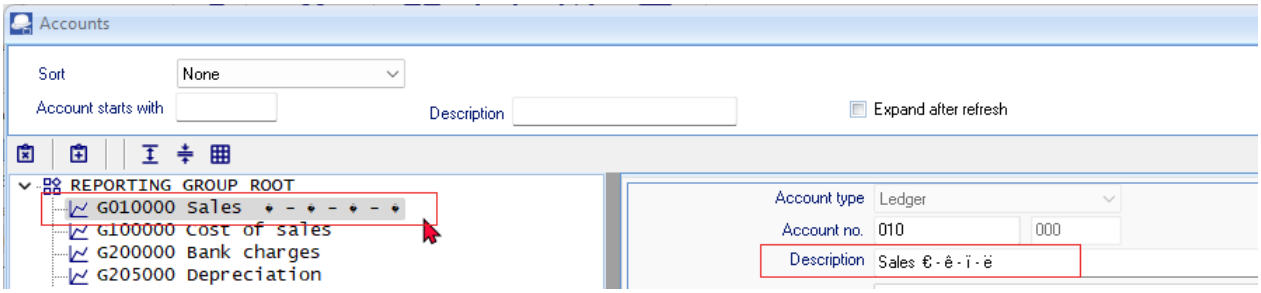
Some screenshots of incorrect data display.



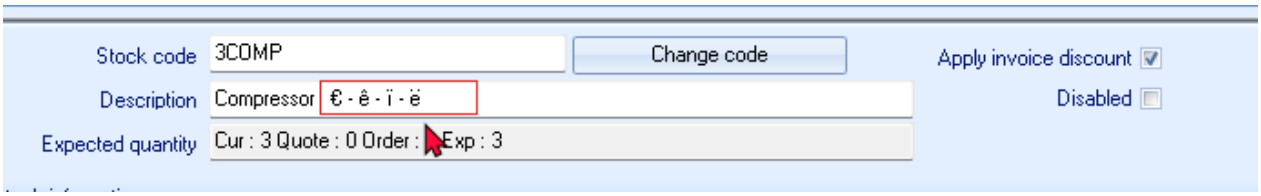
Error in documents, if no items are selected titlebar captions company name displayed incorrectly on all confirmation, warning, error messages across the entire program..



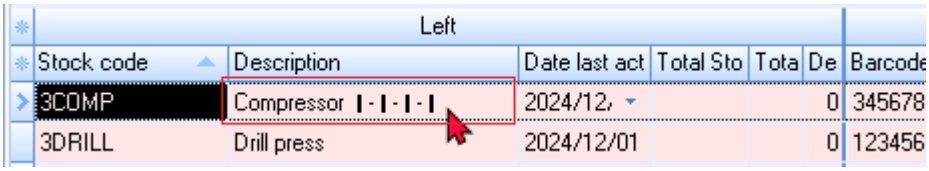
Accounts



Stock



Enter correctly - when saving the record, the characters displays incorrectly on the stock grid.



OLDER UNICODE TESTS

Firebird databases nounicode=TRUE

Retested:

All reports seems to print fine and neat.

Display errors when data is entered in some screens and reports

If the nounicode=TRUE setting is set to true - it also produces incorrect display of data in some screens and reports.

Setup Countries - Displays incorrect character " land Islands "

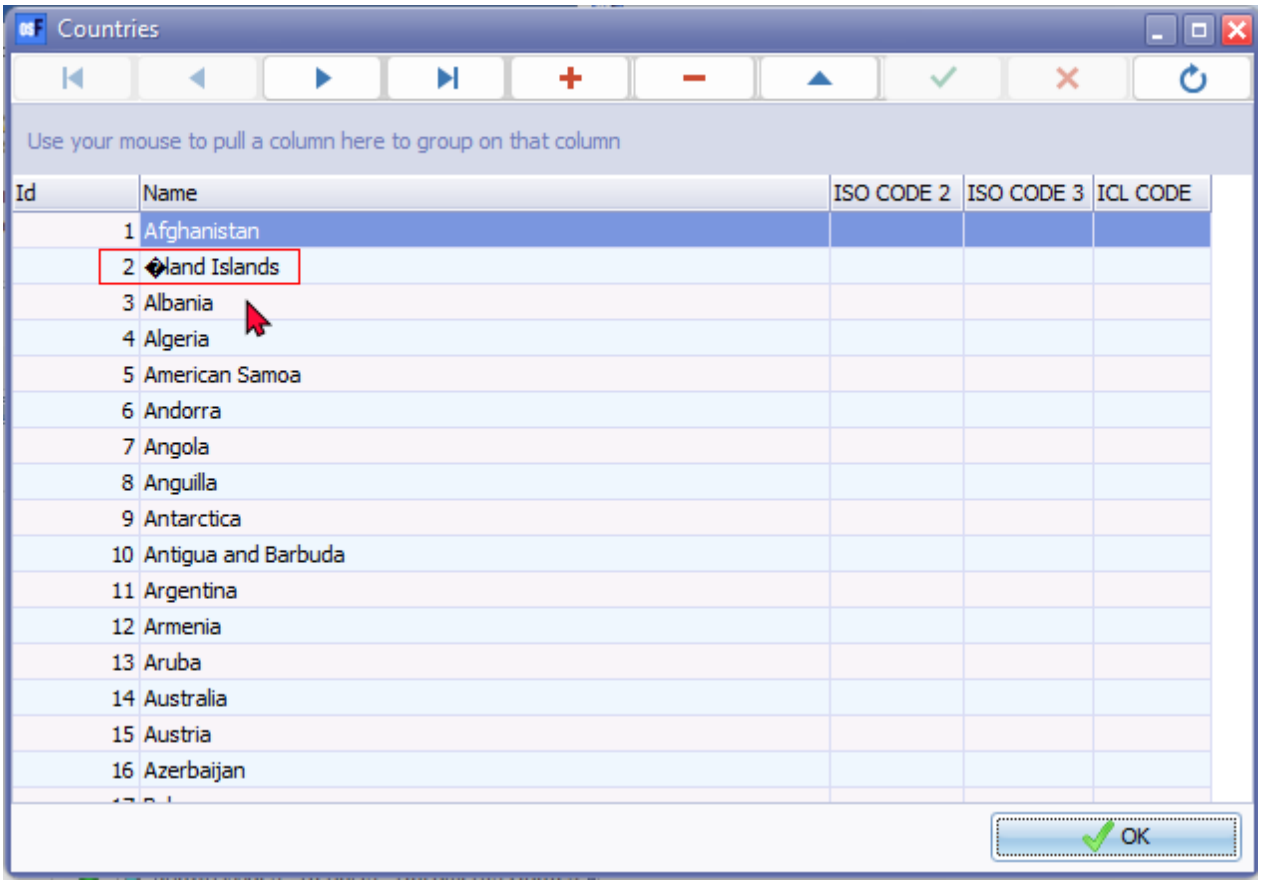
Replicated in osF5.1.100 since osFinancials5.1.0.16 displayed incorrectly, since unicode was introduced.

If the default setting " nounicode=true " is in the osf.ini file, this replicate the error not displaying correctly.

If the default unicode setting in the osf.ini file is changed to " ;nounicode=true " is uncommented or set to false nounicode=false in the osf.ini file, these settings does not change the display of " land Islands ".

land Islands Displays incorrect character irrespective of unicode settings

Setup → Countries



Last version was displaying correctly = Build 453

Currencies

Replicated in osF5.1.100 since osFinancials5.1.0.16 displayed incorrectly, since unicode was introduced.

To use Currencies in osFinancials5 you need to change the osf.ini file

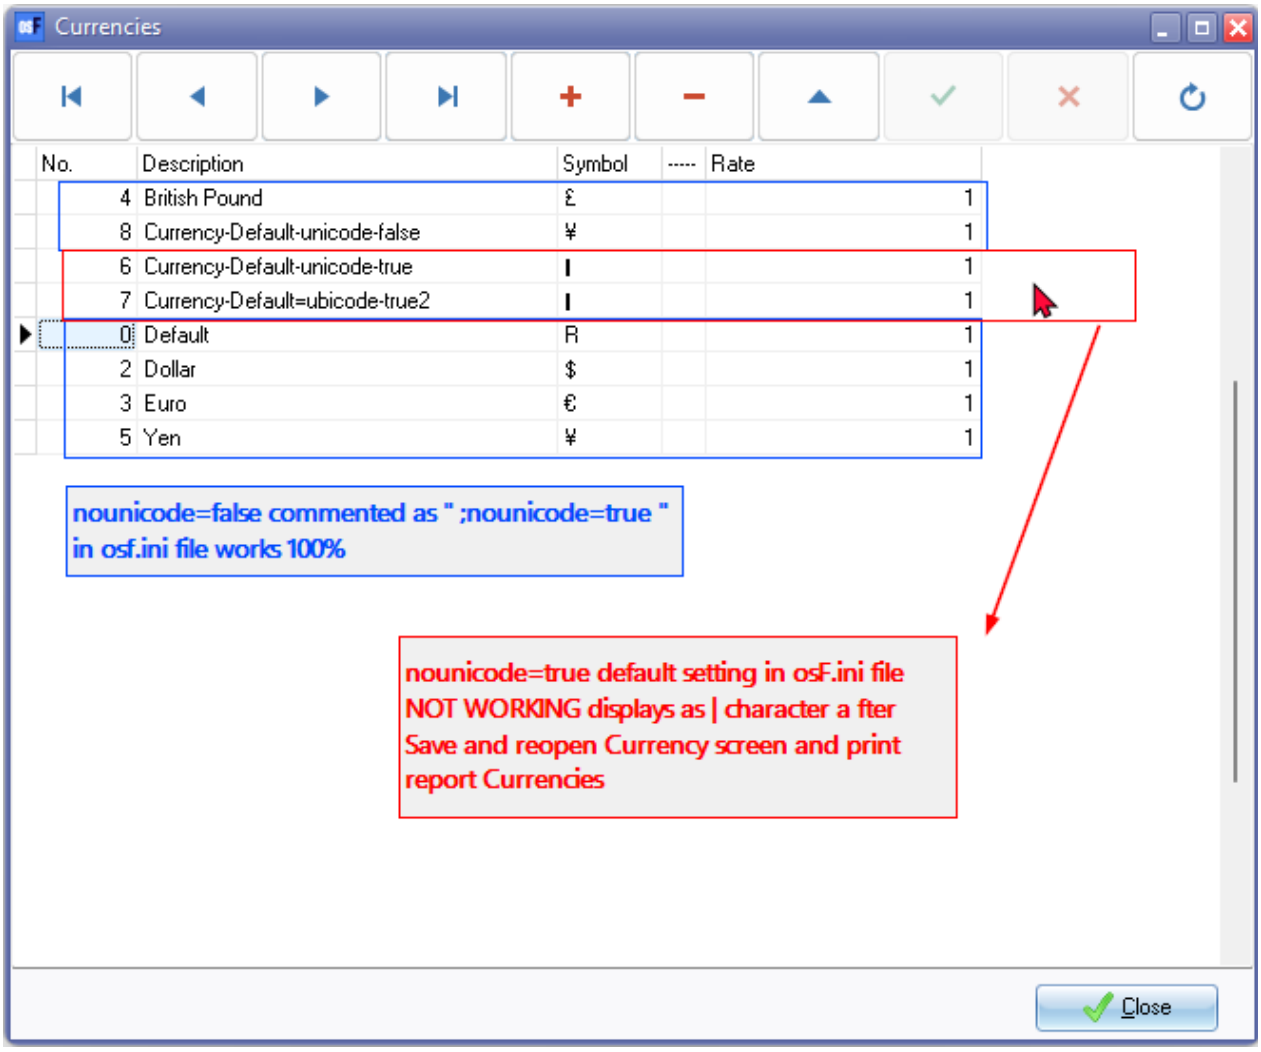
Only works correctly if nounicode=FALSE in the osf.ini file.

If the default setting nounicode=TRUE in the osf.ini file, this replicate the error not displaying correctly.

Default setting nounicode=TRUE in the osf.ini file, this replicate the error not displaying correctly

Euro sign - € - (Alt+0128) Initially it displays correctly, but when the record is saved, it displays a | pipe symbol in the Currency screen.

When printing a report the Euro sign - € id incorrectly displayed as character.

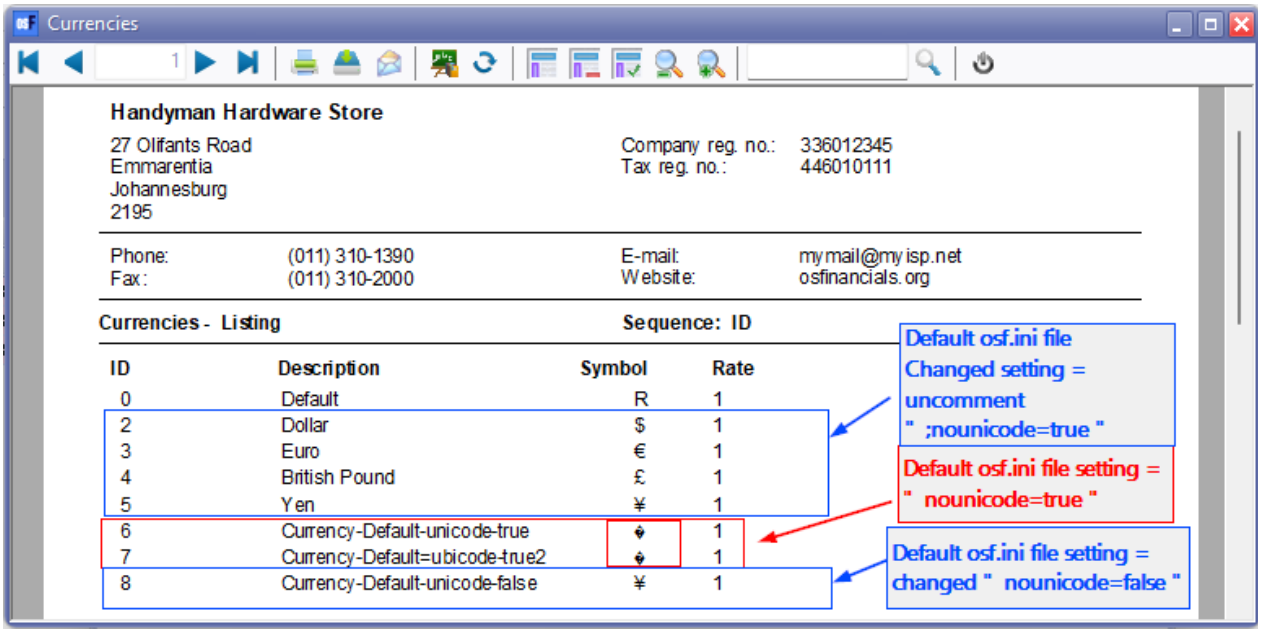


See - Alt Code Shortcuts for Currency Symbols - List of Alt+Numeric keys for generating theCurrencies in the various countries. Example Works if the Alt+0165 for Yen, etc.

To display currencies correctly in Currencies setup and print the Currency report correctly in you need to change the osf.ini file.

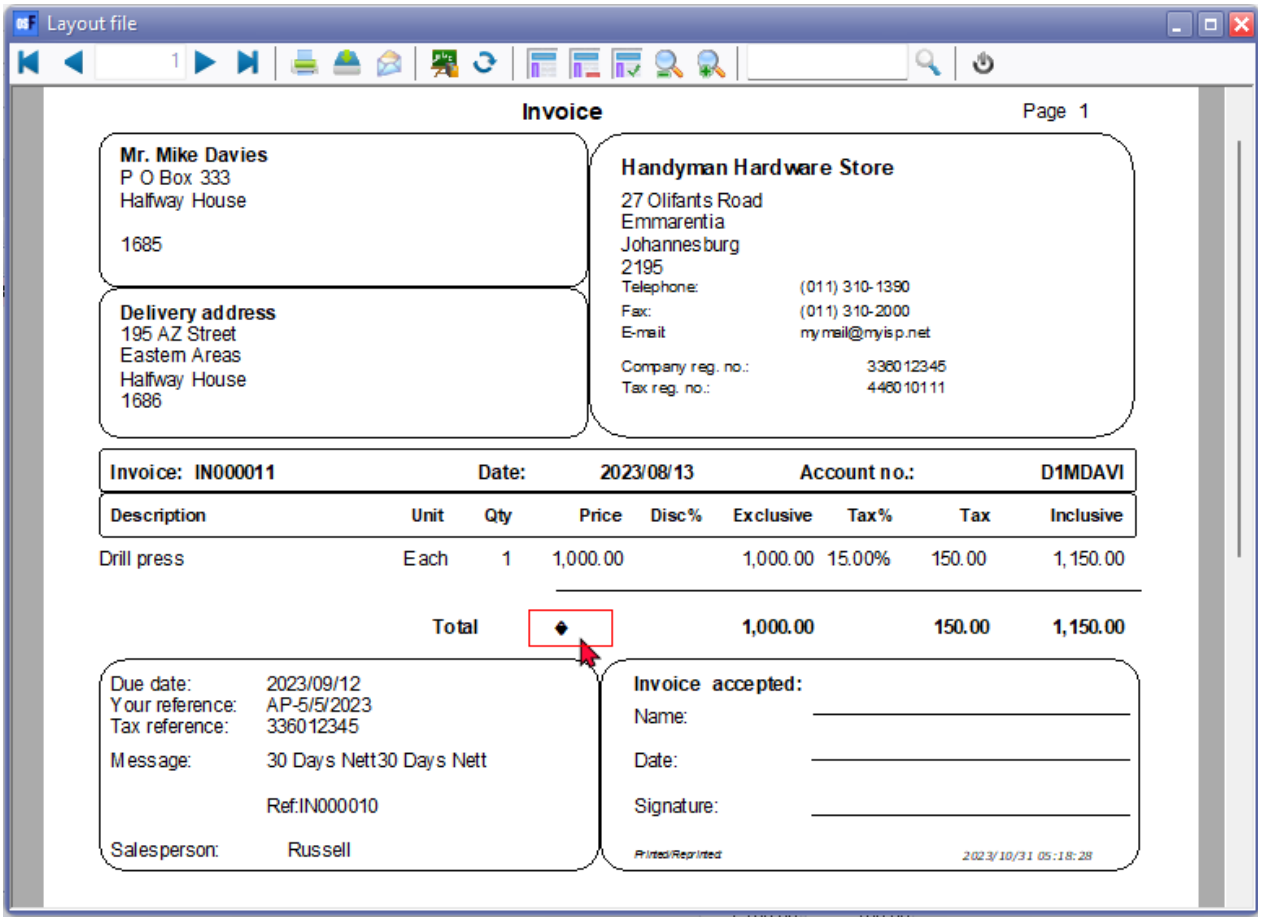
nounicode=TRUE setting set it to false nounicode=FALSE in the osf.ini file

After changing it back to the default setting nounicode=FALSE in the osf.ini file, The error is not replicated and is displayed correctly correctly in Setup → Currencies and Reports → Currencies report or on document layout files.



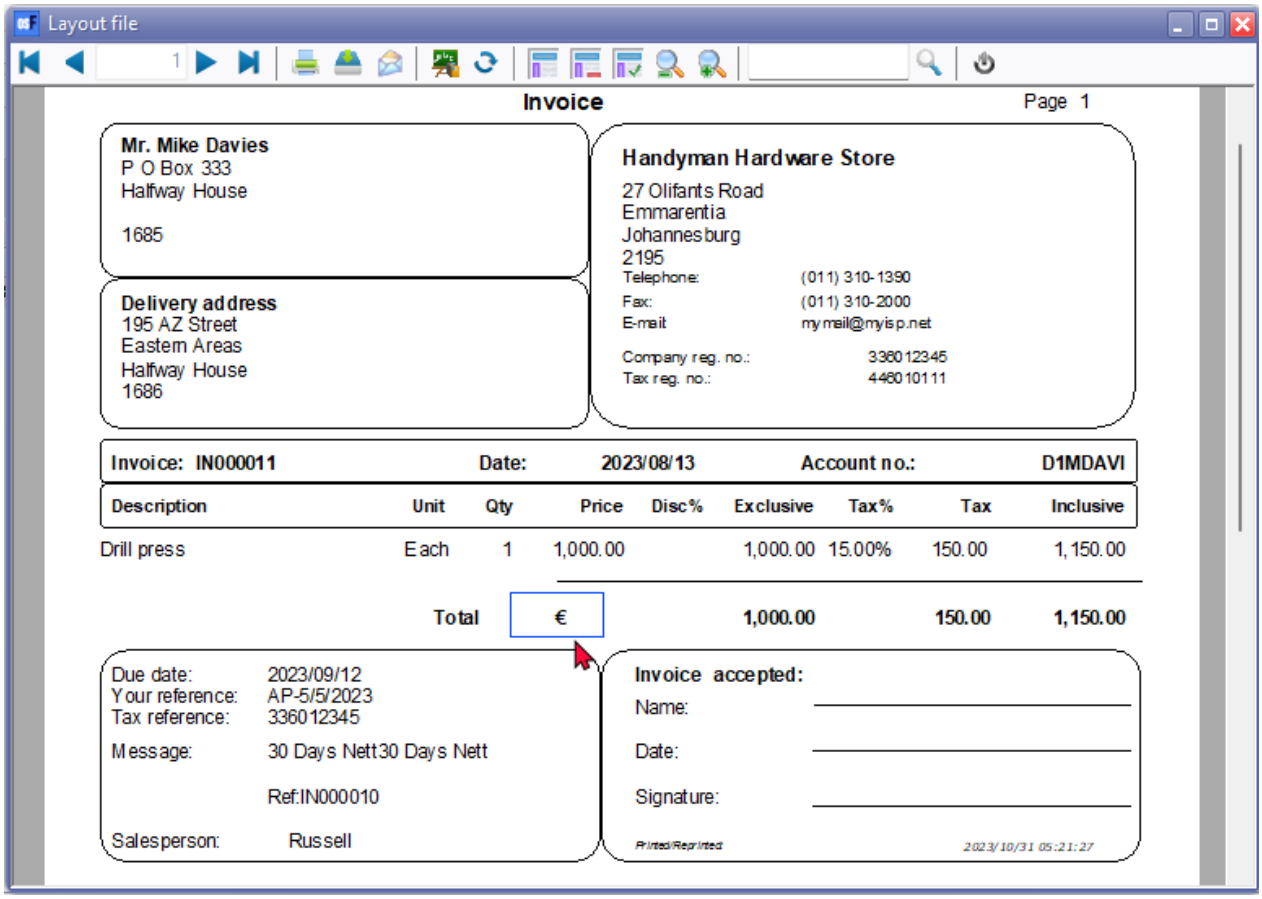
Layout file incorrect

If the default setting nounicode=TRUE in the osf.ini file, this replicate the error not displaying currency symbol correctly.



Layout file correct

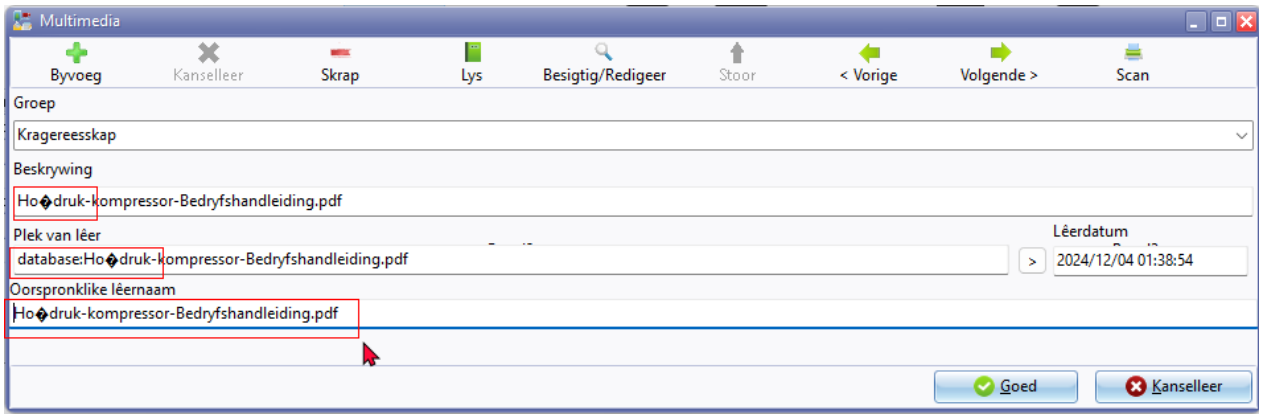
Only works correctly if nounicode=TRUE is set to false nounicode=FALSE in the osf.ini file.



Was correct in osFinancials5 (Build 453)

Plugins Multimedia

Character input ë (Alt+137) displays correctly for added multimedia files in File explorer in the Windows system. When file is added in the Plugins, e.g. Multimedia, the file names displays incorrect characters in the fields loaded in the when nounicode=TRUE



Firebird Database - nounicode=FALSE

If the nounicode=FALSE it does not replicate the errors found in when the nounicode=TRUE

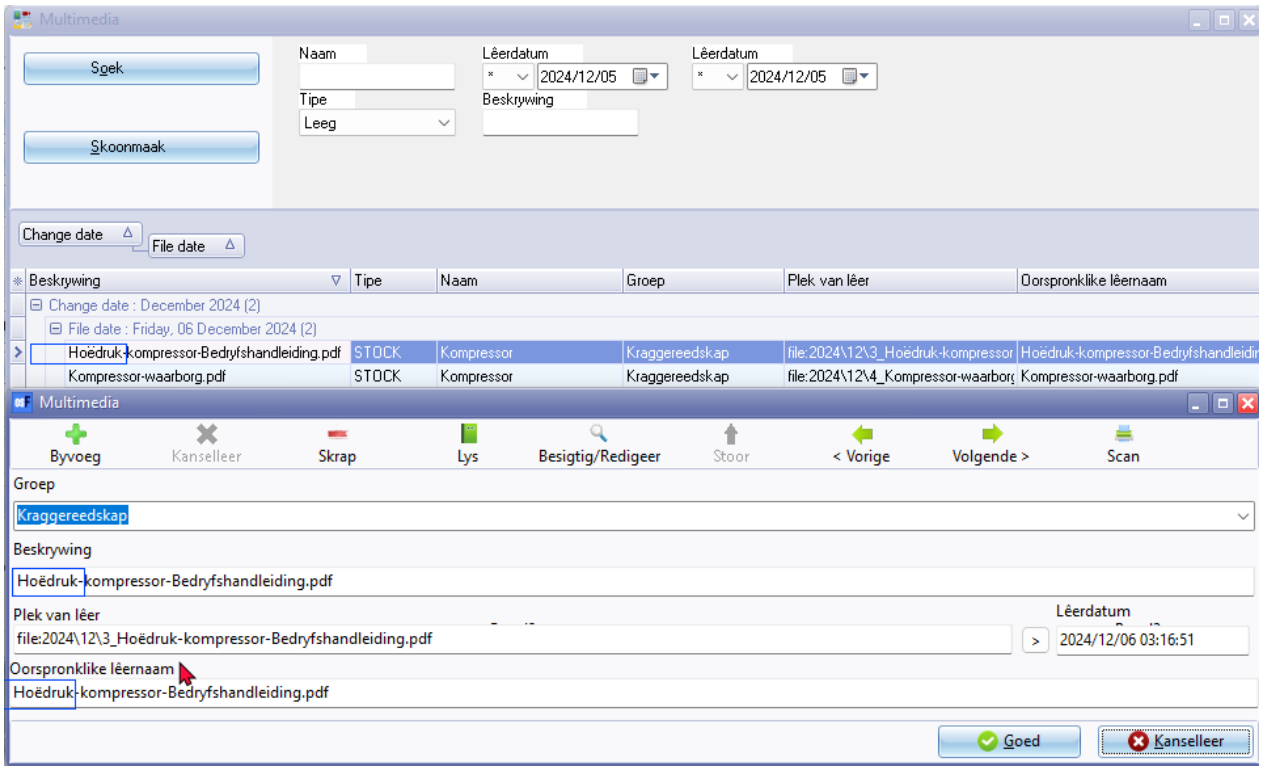
MSSQL databases cannot open in the MSSQL Server. To open and work in MSSQL databases, the Unicode setting must be set to nounicode=TRUE

In Firebird databases the Unicode setting must be set to nounicode=FALSE

Retested:

- Reports : All reports and document layout files including spreadsheet reports print correctly and looks neat.
- Screens : Currencies is fixed but not Countries
- Plugins : Displays correctly

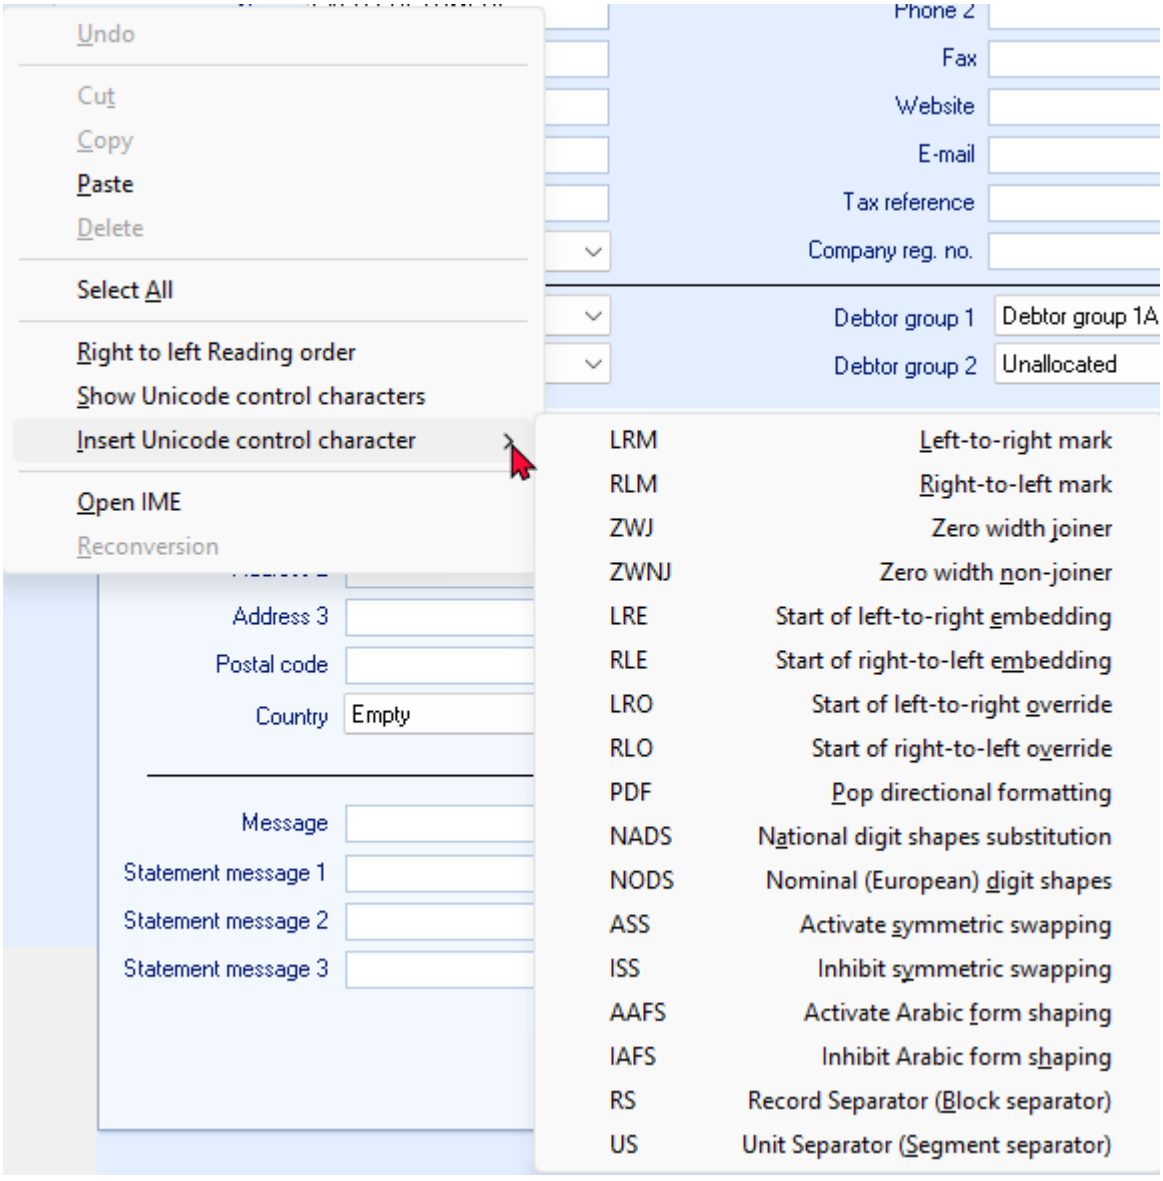
Character input ë (Alt+137) displays correctly for added multimedia files in File explorer in the Windows system. When file is added in the Plugins, e.g. Multimedia, the file names displays correct characters in the fields loaded in the when nounicode=FALSE



Unicode -Context menu on forms

Unicode context menu options of forms

In osFinancials5/TurboCASH5, the context menu on most fields in forms, such as Debtors, Creditors, Stock on the Default ribbon and Accounts, Groups on the Setup menu, include the following context menu items related to Unicode (if Unicode is enabled).



These context menu items in osFinancials5/TurboCASH5, specifically related to Unicode, provide advanced text formatting and control options when working with characters beyond the standard ASCII set.

Explanation of Context Menu Items

Let's break down what each option means and its function:

1. Right to Left Reading Order
    - Function: This option controls the reading direction of the text. When enabled, the text in the field will be displayed and processed from right to left, which is essential for languages like Arabic and Hebrew.
2. Show Unicode Control Characters
    - Function: This option displays invisible Unicode control characters that might be present in the text. These characters can affect text formatting and rendering, so visualizing them can help troubleshoot display issues.
3. Insert Unicode Control Character
    - Function: This allows you to manually insert specific Unicode control characters into the text. These characters are used to fine-tune text direction, shaping, and rendering:
        a) LRM (Left-to-right Mark): Forces the following characters to be displayed left-to-right.
        b) RLM (Right-to-left Mark): Forces the following characters to be displayed right-to-left.
        c) ZWJ (Zero Width Joiner): Connects two characters that might otherwise be separated.
        d) ZWNJ (Zero Width Non-Joiner): Prevents two characters from being connected.
        e) LRE (Start of Left-to-right Embedding): Starts a region of left-to-right text within right-to-left text.
        f) RLE (Start of Right-to-left Embedding): Starts a region of right-to-left text within left-to-right text.
        g) LRO (Start of Left-to-right Override): Overrides the current text direction and sets it to left-to-right.
        h) RLO (Start of Right-to-left Override): Overrides the current text direction and sets it to right-to-left.
        i) PDF (Pop Directional Formatting): Ends a region of embedded text direction.
        j) NADS (National Digit Shapes Substitution): Uses the digit shapes specific to the current locale.
        k) NODS (Nominal (European) Digit Shapes): Uses the standard European digit shapes (0-9).
        l) ASS (Activate Symmetric Swapping): Enables symmetric swapping of characters, which can affect the appearance of certain characters.
        m) ISS (Inhibit Symmetric Swapping): Disables symmetric swapping of characters.
        n) AAFS (Activate Arabic Form Shaping): Enables shaping of Arabic characters based

on their position in the word.

o) IAFS (Inhibit Arabic Form Shaping): Disables shaping of Arabic characters.

p) RS (Record Separator): A block separator character.

q) US (Unit Separator): A segment separator character.

4. Open IME

   - Function: This opens the Input Method Editor (IME), a tool that allows you to input characters from languages that don't have direct keyboard mappings.

5. Reconversion

   - Function: This option is specific to IMEs. It re-analyses the input text and may suggest alternative conversions or corrections.

In Summary

These Unicode-related context menu items in osFinancials5/TurboCASH5 provide powerful tools for handling text in various languages and scripts. They allow you to control text direction, insert special characters, and fine-tune text rendering to ensure accurate and professional-looking results.

Break down and simplify the explanation of the Unicode-related context menu items

These options are designed to help you manage text formatting, especially when working with languages like Arabic or other scripts that require special handling.

---

1. Right to Left Reading Order

   - What It Does:
     - Controls the direction in which text is displayed and processed.
     - When enabled, text is displayed right-to-left (RTL), which is necessary for languages like Arabic and Hebrew.
   - When to Use: Use this when working with RTL languages to ensure text is displayed correctly.

---

2. Show Unicode Control Characters

   - What It Does: Displays invisible Unicode control characters in the text. These characters affect how text is formatted and rendered but are normally hidden.
   - When to Use: Use this to troubleshoot text display issues, such as incorrect text direction or formatting.

3. Insert Unicode Control Character

This option allows you to insert special Unicode characters to control text behavior. Here's a breakdown of the most commonly used ones:

a) LRM (Left-to-right Mark)

- What It Does: Forces the following text to be displayed left-to-right (LTR).
- When to Use: Use this to fix issues where numbers or special characters (like +) are displayed incorrectly in RTL text.

b) RLM (Right-to-left Mark)

- What It Does: Forces the following text to be displayed right-to-left (RTL).
- When to Use: Use this to ensure specific text is displayed in RTL order within LTR text.

c) ZWJ (Zero Width Joiner)

- What It Does: Connects two characters that would otherwise be separated.
- When to Use: Use this in languages like Arabic to join characters that should appear as a single unit.

d) ZWNJ (Zero Width Non-Joiner)

- What It Does: Prevents two characters from being joined.
- When to Use: Use this to keep characters separate when they would normally be joined.

e) LRE (Start of Left-to-right Embedding)

- What It Does: Starts a section of LTR text within RTL text.
- When to Use: Use this to embed LTR text (e.g., phone numbers, URLs) in RTL documents.

f) RLE (Start of Right-to-left Embedding)

- What It Does: Starts a section of RTL text within LTR text.
- When to Use: Use this to embed RTL text (e.g., Arabic phrases) in LTR documents.

g) LRO (Start of Left-to-right Override)

- What It Does: Forces all following text to be displayed LTR, overriding the default

direction.

- When to Use: Use this to ensure a block of text is displayed LTR, even in an RTL context.

h) RLO (Start of Right-to-left Override)

- What It Does: Forces all following text to be displayed RTL, overriding the default direction.
- When to Use: Use this to ensure a block of text is displayed RTL, even in an LTR context.

i) PDF (Pop Directional Formatting)

- What It Does: Ends the effect of the last LRE, RLE, LRO, or RLO.
- When to Use: Use this to return to the default text direction after embedding or overriding.

j) NADS (National Digit Shapes Substitution)

- What It Does: Displays digits in the shapes specific to the current locale (e.g., Arabic-Indic digits).
- When to Use: Use this to display numbers in the local format (e.g., ٠١٢٣ instead of 0123).

k) NODS (Nominal (European) Digit Shapes)

- What It Does: Displays digits in standard European shapes (0-9).
- When to Use: Use this to display numbers in the Western format.

l) ASS (Activate Symmetric Swapping)

- What It Does: Enables swapping of characters that have mirrored forms (e.g., parentheses).
- When to Use: Use this to ensure proper display of mirrored characters in RTL text.

m) ISS (Inhibit Symmetric Swapping)

- What It Does: Disables swapping of mirrored characters.
- When to Use: Use this to prevent unwanted character mirroring.

n) AAFS (Activate Arabic Form Shaping)

- What It Does: Enables shaping of Arabic characters based on their position in a word.
- When to Use: Use this to ensure proper display of Arabic script.

o) IAFS (Inhibit Arabic Form Shaping)

- What It Does: Disables shaping of Arabic characters.
- When to Use: Use this to display Arabic characters in their isolated forms.

p) RS (Record Separator)

- What It Does: Acts as a block separator in text.
- When to Use: Rarely used in everyday text formatting.

q) US (Unit Separator)

- What It Does: Acts as a segment separator in text.
- When to Use: Rarely used in everyday text formatting.

---

4. Open IME

- What It Does: Opens the Input Method Editor (IME), a tool for typing characters in languages that don't have direct keyboard mappings.
- When to Use: Use this to input characters in languages like Chinese, Japanese, or Arabic.

---

5. Reconversion

- What It Does: Re-analyses text input using the IME and suggests alternative conversions or corrections.
- When to Use: Use this to fix or refine text input in complex scripts.

Summary

These Unicode-related context menu items in osFinancials5/TurboCASH5 provide powerful tools for:

- Controlling text direction (RTL/LTR).
- Inserting special characters to fine-tune text rendering.
- Managing complex scripts like Arabic.

- Troubleshooting text display issues.

If you're working with Arabic text or other RTL languages, the LRM (Left-to-right Mark) is particularly useful for fixing issues with numbers or special characters (like +). For example, inserting an LRM before the + sign in a phone number ensures it displays correctly as +966 55 123 4567 instead of 4567 123 55 966+.

Created with the Standard Edition of HelpNDoc: Enhance Your Documentation with HelpNDoc's Advanced Project Analyzer

Install osFinancials5 - Single user

Install osFinancials - Added Unicode Setting

We've adjusted the installation script to include a new Unicode setting for Unicode databases. This setting allows you to control the nounicode parameter in the osf.ini file during installation. Additionally, we've added options to update or retain the existing osf.ini file based on your Unicode preferences for your Unicode databases. This allows you to set the Unicode settings via the installation process without editing the osf.ini file in the osFinancials5 installation's root directory.

Unicode Settings in osFinancials5/TurboCASH5

In osFinancials5, the osf.ini (or in TurboCASH the tcash.ini file) includes the setting nounicode=FALSE or nounicode=TRUE to control Unicode settings. Here's what these settings mean:

- Enable Unicode support: nounicode=FALSE: This setting enables Unicode support. When Unicode is enabled, the software can handle a wide range of characters from different languages, ensuring proper display and processing of multilingual text.
- Disable Unicode support: nounicode=TRUE: This setting disables Unicode support. When Unicode is disabled, the software may not correctly handle special characters or characters from languages other than the default one.

Enabling Unicode (nounicode=FALSE) is generally recommended if you need to work with multiple languages or special characters to ensure data integrity and proper functionality.

Unicode Settings for Older Databases

For existing users with Firebird Databases version 10.1, the new Firebird databases are upgraded to version 11.1 as part of the 2025 installs for osFinancials5.1 and TurboCASH5-3. This upgrade is mandatory

and should be carefully considered, especially for users with older databases.

Default Setting:

To ensure the safest option for users with older databases, we recommend setting the Unicode option to "*checked*" by default. However, it's crucial that users confirm their choice to avoid any unintended changes.

Installation Options:

During the osFinancials installation, you will see the following tick-boxes:

- Unicode Tick Box - Confirmation:

  By checking the Unicode box, you acknowledge that you understand the `unicode` parameter and confirm your choice. This step is designed to prevent any accidental changes without proper consideration. If you leave this checkbox unticked and the select the Unicode checkbox ticked, the Unicode setting will be set as true in the osf.ini file:

  ```
  nounicode=true
  ```

- Unicode Checked - If this checkbox is not selected, a Runtime error message is displayed:

  ```
  "Please check and confirm your unicode option."
  ```

If you need to check both the Unicode and Unicode Check tick-boxes, the Unicode setting will be set as false in the osf.ini file:

```
nounicode=false
```

We strongly advise consulting with a professional before enabling the Unicode setting. This ensures that you fully understand the implications and make an informed decision.

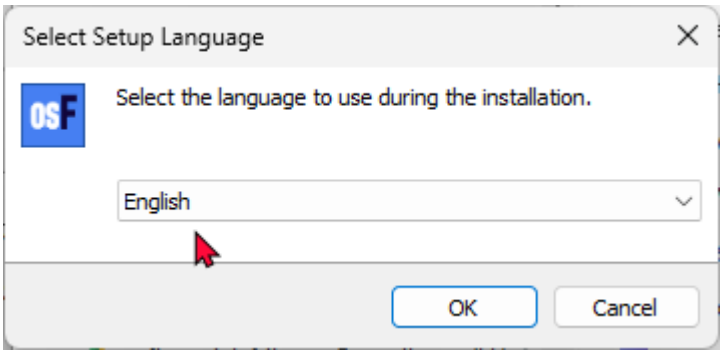
Single user installation

- *This documentation will describe to do a standard installation to run osFinancials5 locally on one computer for 1 user only.*
- *Multi-user installation and configuration are described in the following documentation:*
  - *Multi-user Windows installation*
  - *Multi-user Linux server install*
  - *Multi-user installation (TurboCASH website)*

- *Multi-user is limited in this edition! You will need to buy a multi-user licence.*

To Install osFinancials5 Single-user:

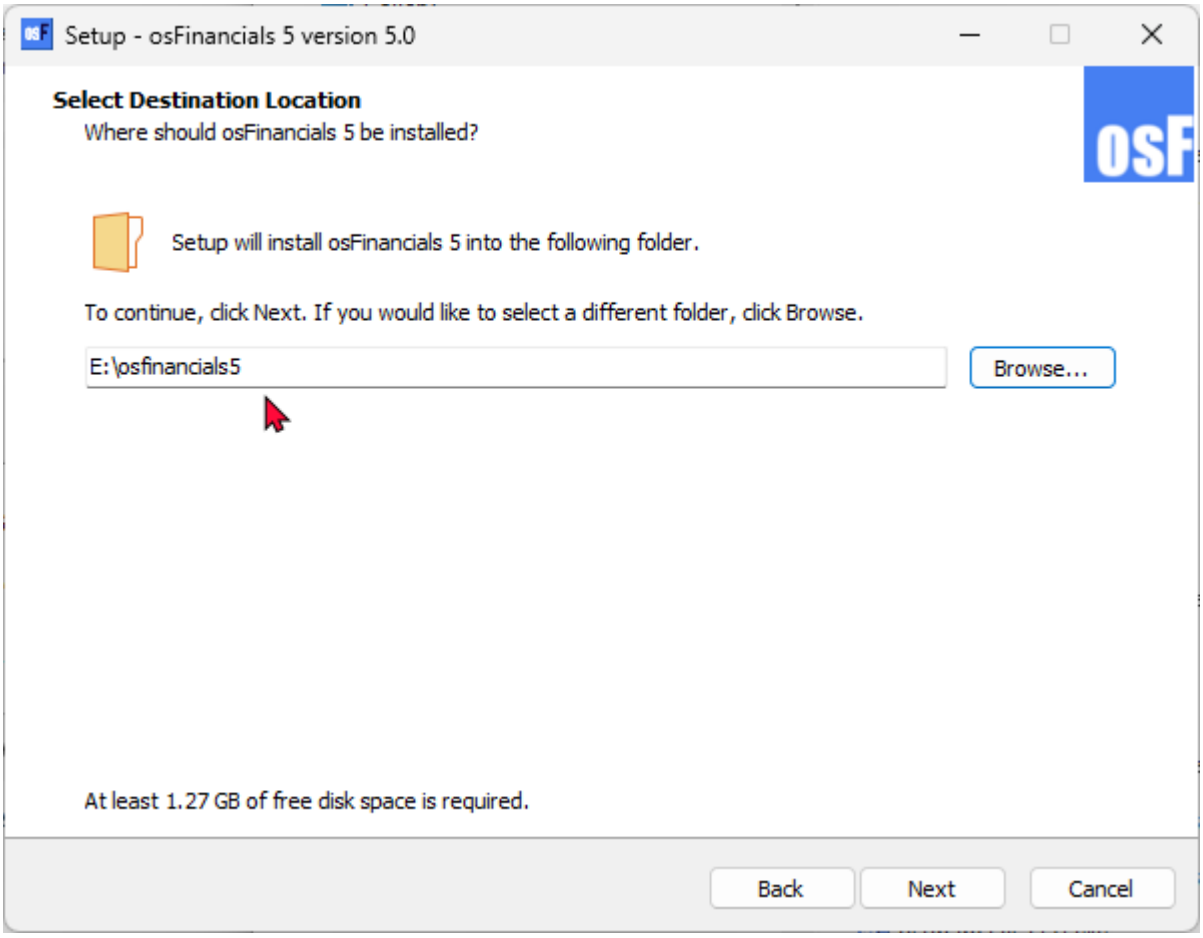
1. Once the osFinancials5 installation file is downloaded, select the file and open it. The "*Select Setup Language*" screen is displayed:



The default installation language is set to English. "Nederlands" language is also available to launch the osFinancials5 install option.

2. Select "*English*" and click OK. The "*License Agreement"* screen will be displayed.

3. Please read the agreement carefully. If you agree with the terms and conditions of the licence agreement, select the "*I accept the agreement*" option and click Next. The "*Select Destination Location"* screen is displayed:



The default path is C:/osFinancials5 on your system's default drive.

You may click on the Browse button to select any other folder than the default path where you wish to install osFinancials5 on the "Browse for Folder" screen.

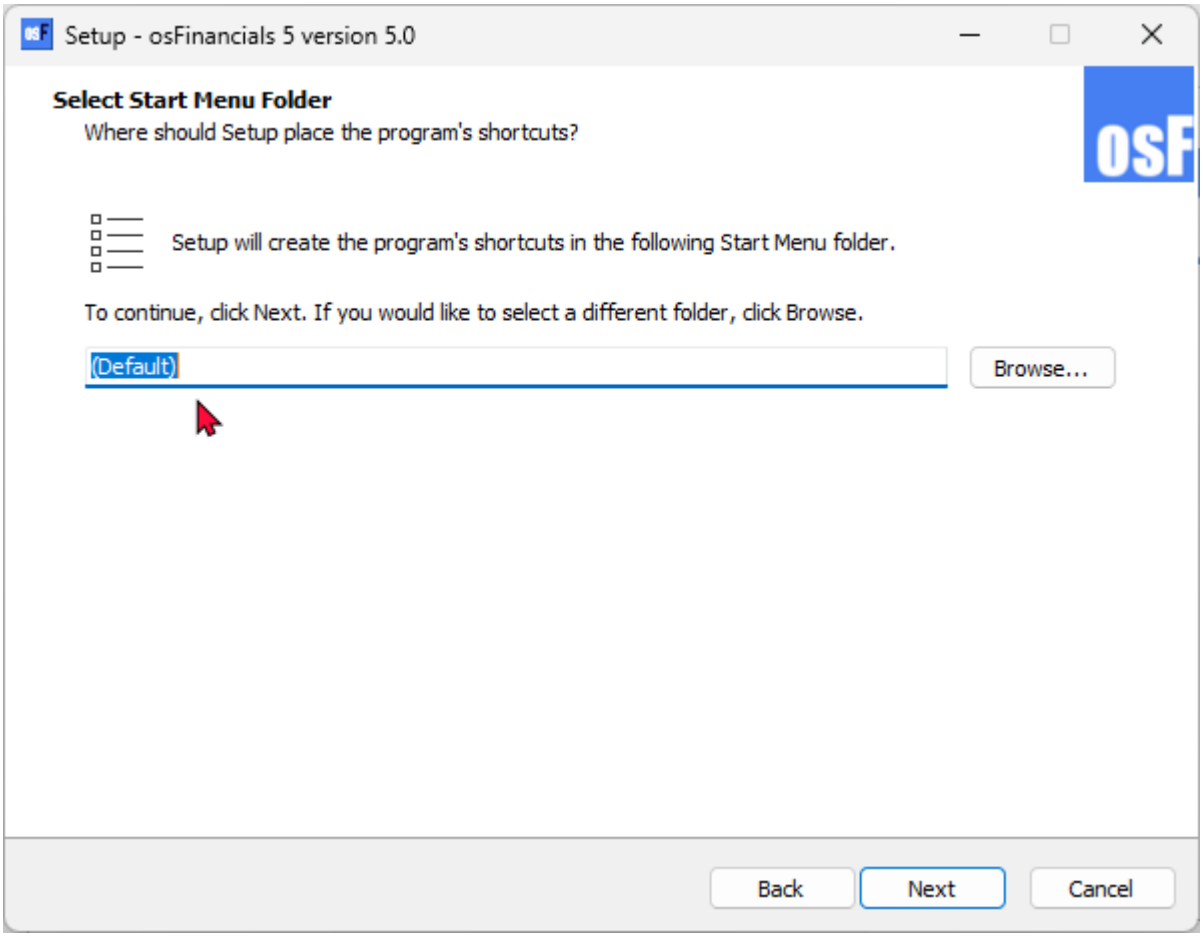
If you need to install osFinancials5 on a device with a small default system drive (e.g. 32GB solid state drive), it is recommended to select a larger drive on your system.

DO NOT Install in PROGRAM (Program Files, Program Files (x86) or Program Data) folders.

If osFinancials5 is installed into the Programs directories (folders) (i.e. Program Files, Program Files (x86) or Program Data folders), it may not run properly. It may cause issues to launch osFinancials5, connection and performance issues with Firebird and FlameRobin, etc.

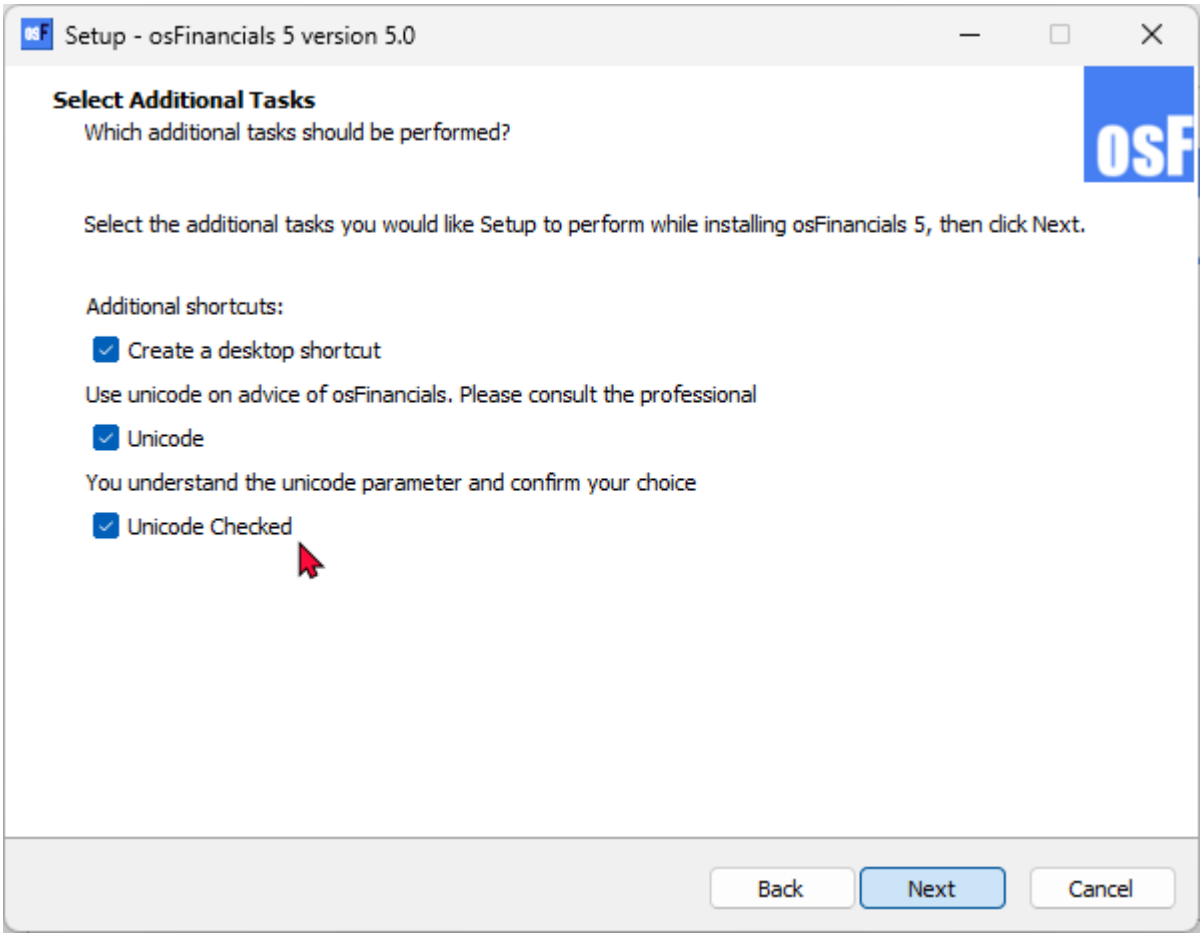
The Program directories is a protected directories of the Windows system.

4. Once finished, click Next. The "*Select Start Menu Folder*" screen is displayed:



5. The default option is "*(Default)*". You may select or specify a different folder.

6. Once finished, click Next. The "*Select Additional Tasks*" screen is displayed:



7. By default, the "*Select Additional Tasks*" options is not selected. The options is as follows:

   a) Additional shortcuts: Select the "*Create a desktop shortcut*", if you wish to add the osFinancials5 icon on your desktop, from where you may start or launch the *osFinancials5* program.

   b) Unicode settings: - Select both the "*Unicode*" and "*Unicode Checked*" options. This will enable Unicode support.

> *We strongly advise consulting with a professional before enabling the Unicode setting. This ensures that you fully understand the implications and make an informed decision.*

> *Unicode Checked - If this mandatory checkbox is not selected, a Runtime error message is displayed:*
>
> "Please check and confirm your unicode option."

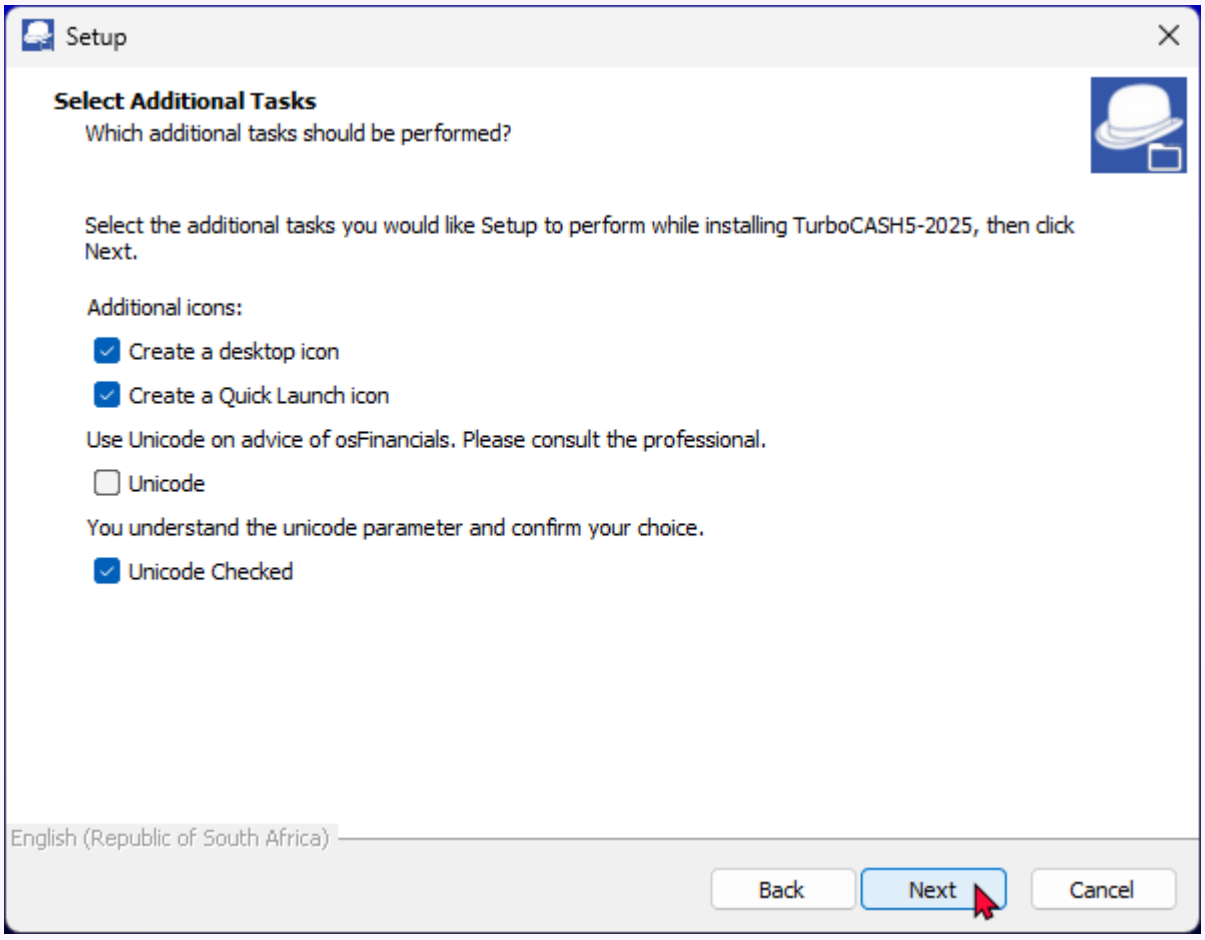
> *To enable Unicode support (recommended for most users), both the "Unicode" and "Unicode*

Checked" tick boxes need to be selected. This option will set the nounicode=FALSE parameter in the osf.ini file.

This is a very important setting, as this will determine the display of special characters in the osFinancials interface, reports document layout files, etc. in most databases.

To Disable Unicode support option, the "Unicode" check box must not be selected. Only the "Unicode Checked" tick box need to be selected.

This setting is intended for users who require non-Unicode support. This option will set the nounicode=TRUE parameter in the osf.ini file.



Using this setting, (Disable Unicode), the system relies on specific codepages to handle text. Some examples would be:

- *French (Codepage 1252): Handles Western European characters, but may have limitations with special symbols unique to other languages.*
- *Spanish (Codepage 1252): Similar to French, it manages Spanish characters well but might struggle with characters from non-Western languages.*

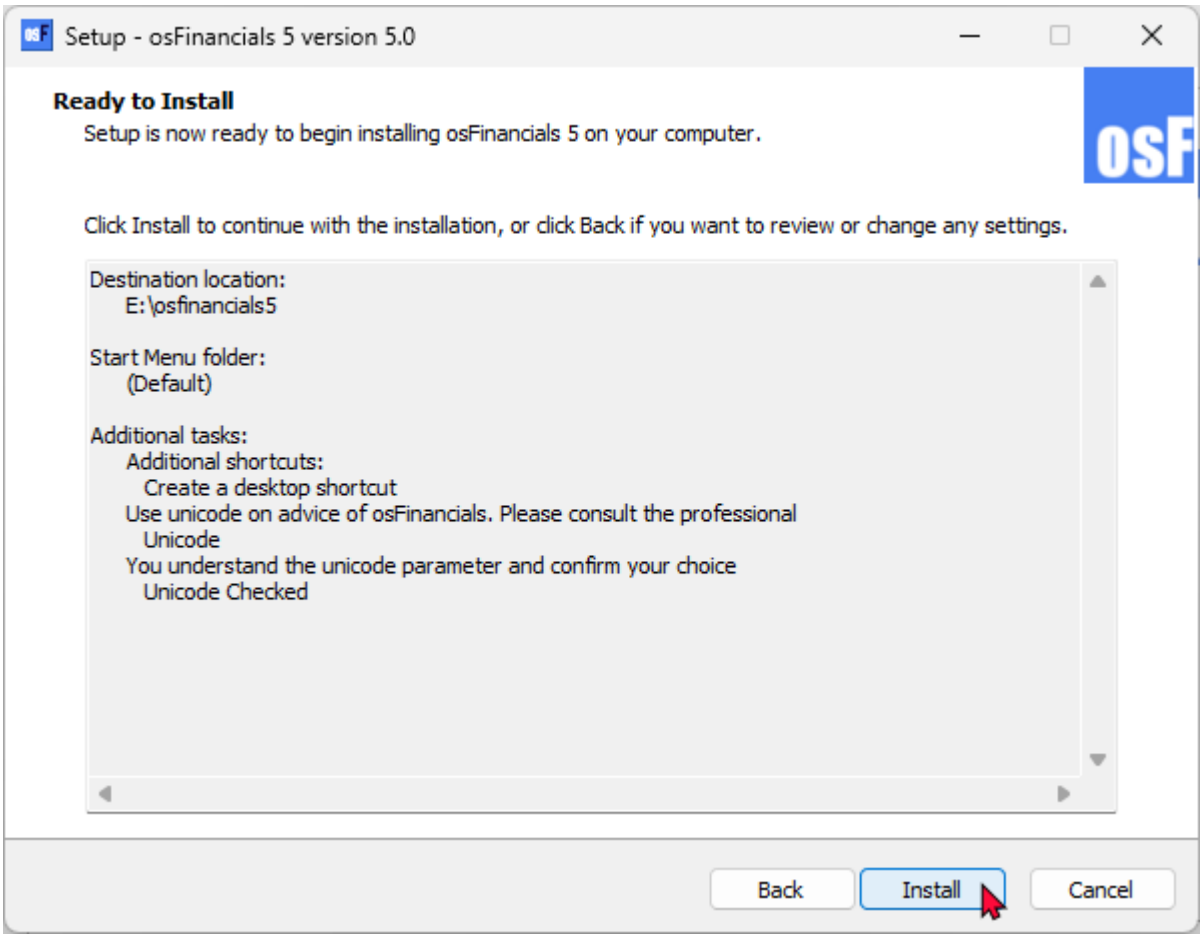
- *Arabic (Codepage 1256): Supports Arabic characters effectively, but may not handle characters from Latin-based languages as efficiently.*

In osFinancials5, the codepage can be set in the Tools → Customise language on the Setup ribbon.

If your Unicode settings, is incorrect, you may re-run the installation process.

Alternatively, you may locate the osf.ini file in the osfinancials5 installation directory and edit the nounicode=true and set it to nounicode=false, and vice versa. In this case you may need to close and restart osfinancials5.

8. Once finished, click Next. The "*Ready to Install*" screen is displayed:



9. Please check the settings.

This is your last chance to change anything to be installed. If you are not satisfied with your selection, click on the Back buttons to change the Installation directory, or the Start menu folder or select / deselect the necessary options.

10. Click on the Install button. The osFinancials5 installation process will start.

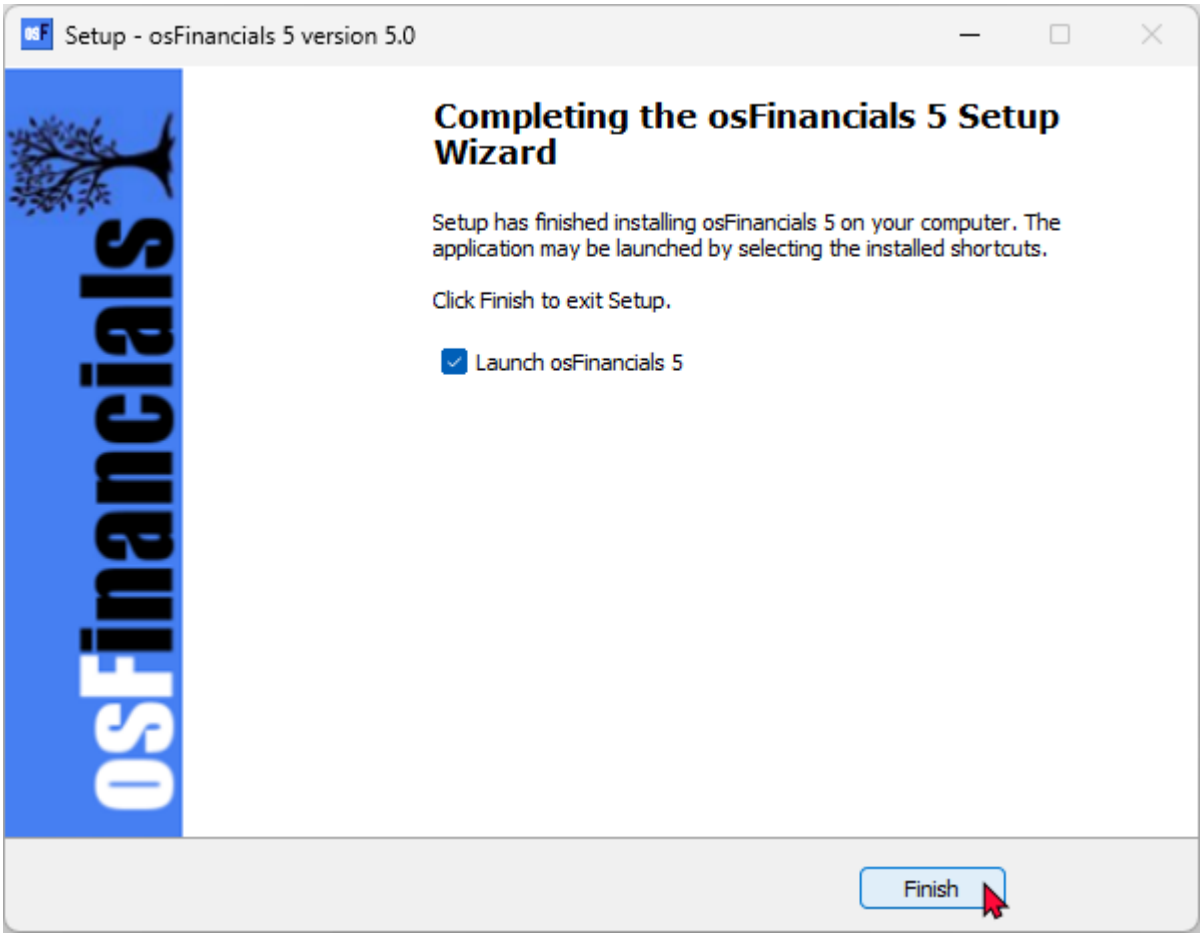
Overwrite confirmation message:

A confirmation message will be displayed if you have installed osFinancials5 over an existing (previous) osFinancials5 installation.

You then need to choose the following actions:

- *Overwrite the existing file - Select this option, the Set of Books will be replaced with the Set of Books in this installation.*
- *Keep the existing file - Select this option, if you have worked (changed or added data) to the Set of Books (with the same Name as installed) and wish to keep the existing Set of Books.*

11. Once the *osFinancials5* installation process is finished, the "*Completing the osFinancials 5 Setup Wizard*" screen is displayed:



12. Please select or deselect (remove the tick) to Launch osFinancials 5 - If this option is selected (ticked), the *osFinancials5* program will automatically be launched, when you click on the Finish button.

13. Once finished selecting or deselecting the necessary options, click on the Finish button. The *osFinancials5* program will be started if you did not remove (deselect) the tick on the "*Launch osFinancials 5*" option.

14. After launching osFinancials, after installation, the "*Set of Books*" screen will be displayed.

Every time an unregistered version of osFinancials5 is started, the following confirmation message will be displayed:

> This software is limited to 500 transactions or 500 documents. Please register and buy a licence for osFinancials5!
> This copy of osFinancials5 is not registered! Do you wish to register it now?

Unregistered versions will allow you to process up to 500 transactions and /or documents. Once this limit is reached, osFinancials5 will not allow any processing of transactions, in batches and/or documents.

Once you have registered osFinancials5, you will receive an unlocking code and will be able to process further transactions and or documents.

After installing osFinancials5, the following optional additional components, is included in the "installs" folder of the osFinancials5 root installation directory:

- *Firebird Version 2.1 - Advanced users may wish to install.*

  Later releases of Firebird Versions 3 and Versions 4 is currently not supported in osFinancials5 databases (Sets of Books).

- *FlameRobin Version 0.9.3 - FlameRobin Database Admin software to manage and explore your osFinancials5 databases (Sets of Books). To use FlameRobin, you need to install Firebird Version 2.1.*

After installing osFinancials5.1 in a new directory - manually migrate your existing data from previous versions

After installing osFinancials5.1 in a new directory, you'll need to manually migrate your existing data from previous versions (osFinancials4, osFinancials5, The following data should be migrated:

1. Set of Books: You have several options:

- Copy: Using File Explorer, copy your Set of Books from the "*books*" folder of your older osFinncials installation to the "*books*" folder of your new osFinancials5.1 installation.
- Save as: Use the "Save as" option on the Start ribbon within your older osFinancials version and select the "*books*" folder within your new osFinancials5.1 installation directory (e.g., osFinancials5-1/books).
- Backup/Restore: Create a backup of your Set of Books in the older osFinancials5 version. Then, restore this backup in the "*books*" directory of your osFinancials5.1 installation.

2. Custom Document Layout Files: Copy any custom document layout files to the following directory in your osFinancials5.1 installation:

```
/plug_ins/reports/DOCUMENTS/DOCUMENTS/
```

3. Custom Reports: Copy any custom reports from your older osFinancials5 version to the "User reports" menu directory in your osFinancials5.1 installation:

```
/plug_ins/reports/userreports
```

Important Note: This migration process is required because osFinancials5.1 are not updates to previous versions; is entirely a new installation.

Created with the Standard Edition of HelpNDoc: iPhone web sites made easy

Install TurboCASH5-3 - Single user

The TurboCASH5-3 installation process should only take a few minutes. During this process you may need to select a few options. The most important options, you may need to select is your country and language, reading and accepting the licence agreement.

Important Note for Existing TurboCASH Users : Installing TurboCASH5-3 or TurboCASH5-2025

If you are currently using a previous version of TurboCASH (e.g., TurboCASH3, TurboCASH4, TurboCASH 4.0.0.969, TurboCASH5, or TurboCASH5-2), it's crucial to understand that TurboCASH5-3 are *not* updates. They are entirely new versions. Therefore, you must not install them in the same directory as your existing TurboCASH installation.

Installing the new versions in the same directory as an older version can lead to errors. For instance, If you install TurboCASH5-3, in an existing directory in which TurboCASH5 4.0.0.969 is installed, you might encounter errors such as:

```
Application Error
Exception EReadError in module rtl150.bpl at 00074FF4.
Error reading TGlobalDataObject.Registration.PluginsChecksum: Property
PluginsChecksum
```

To avoid such issues, please choose a different installation directory for TurboCASH5-3.

Installing TurboCASH5-3 into *any* existing TurboCASH folder (like TCASH, TurboCASH5, TurboCASH5-2, or any other) is likely to cause problems. The core issue is that these are completely new versions, not updates, and they need their own clean installation space. Trying to mix them with older files will almost certainly lead to conflicts and errors.

When installing TurboCASH5-3 or TurboCASH5-2025 into an existing folder, you may see the following warning message:

> Folder Exists
> The folder:
> *C:\TCASH5*
> already exists. Would you like to install to that folder anyway?

If you click Yes, you may encounter problems.

It is strongly recommended that you click "No" and choose a different installation directory. Installing into an existing TurboCASH folder (even if it's for a seemingly related version) can lead to software conflicts and errors. These TurboCASH5-3 are new versions are not updates and require a clean installation.

Unicode Settings

Install TurboCASH - Added Unicode Setting

We've adjusted the installation script to include a new Unicode setting for Unicode databases. This setting allows you to control the nounicode parameter in the tcash.ini file during installation. Additionally, we've added options to update or retain the existing tcash.ini file based on your Unicode preferences for your Unicode databases. This allows you to set the Unicode settings via the installation process without editing the tcash.ini file in the TurboCASH5 installation's root directory.

Unicode Settings in TurboCASH5

In TurboCASH5, the tcash.ini file includes the setting nounicode=FALSE or nounicode=TRUE to control Unicode settings. Here's what these settings mean:

- Enable Unicode support: nounicode=FALSE: This setting enables Unicode support. When Unicode is enabled, TurboCASH5 can handle a wide range of characters from different languages, ensuring proper display and processing of multilingual text.
- Disable Unicode support: nounicode=TRUE: This setting disables Unicode support. When Unicode is disabled, TurboCASH may not correctly handle special characters or characters from languages other than the default one.

Enabling Unicode (nounicode=FALSE) is generally recommended if you need to work with multiple

languages or special characters to ensure data integrity and proper functionality.

See - Unicode settings in osFianacials5/TurboCASH5 for explanation of unicode options and tests.

Install *Turbo*CASH5 single-user

The TurboCASH5 should, by default, install in the TurboCASH5 directory (e.g. C : / TurboCASH5. If you choose to install TurboCASH5 in different directory or folder on your system, DO NOT install TurboCASH5 in any Program files directories.

If you wish to install TurboCASH5 on a device that has a Solid State Drive which is small, e.g. 32GB as the C: drive, you need to select the D: drive that is bigger in size.

This documentation will describe to do a standard installation to run TurboCASH5 locally on one computer for 1 user only.

- *Multi-User installation and configuration will be dealt with in separate documentation.*
- *Multi-user is limited in this edition! You will need to buy a multi-user license.*

After installing TurboCASH5-3, the following optional additional components, is included in the " *installs*" folder of the TurboCASH5-3 root installation directory:

- Firebird Version 2.1 - Advanced users may wish to download and install a later version of the discontinued downloads - Firebird version 2.5.9.

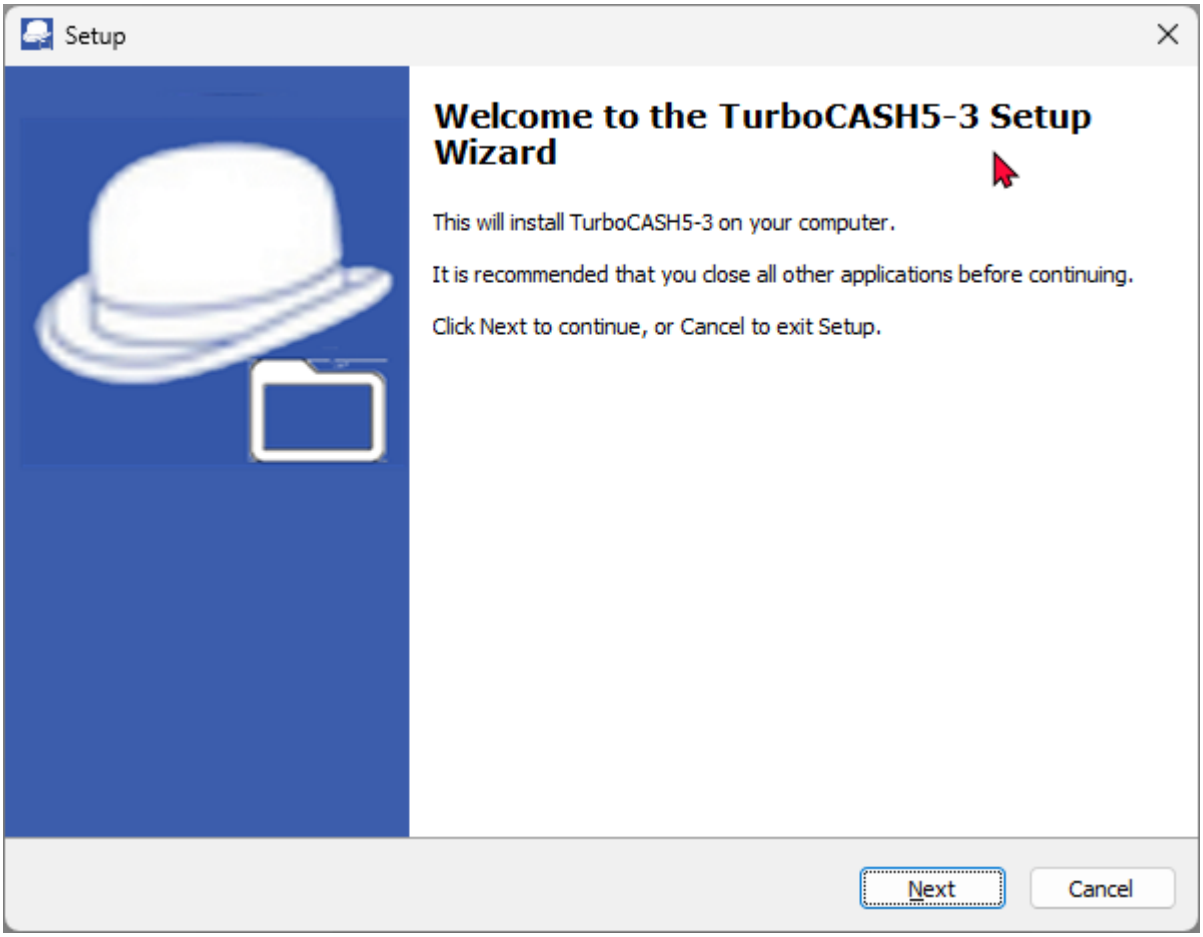
Later releases of Firebird Versions 3 and Versions 4 is currently not supported in TurboCASH5-3 databases (Sets of Books).

- FlameRobin Version 0.9.3 - Advanced users may wish to download and install a later version of FlameRobin (version 0.9.6) FlameRobin Database Admin software to manage and explore your TurboCASH5-3 databases (Sets of Books).

To install *Turbo*CASH5 single-user:

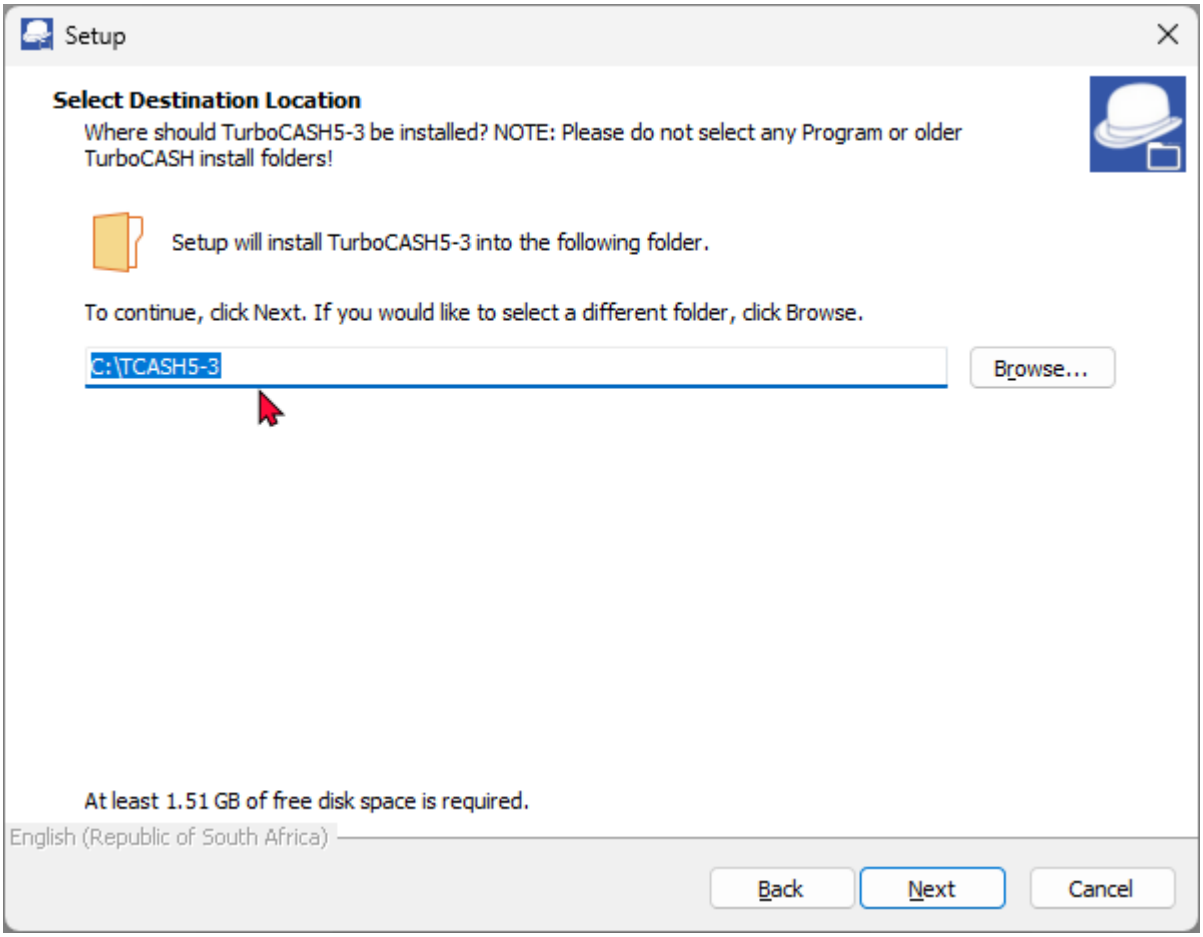
1. Once the TurboCASH5-3 installation file is downloaded, select the file and open it. The "*Select country and language*" screen is displayed:

2. Select your country and language. Click OK. The "*Welcome to the TurboCASH5-3 Setup Wizard"* screen is displayed:



3. Click Next. The "*License Agreement*" screen will be displayed.

4. Please read the agreement carefully. If you agree with the terms and conditions of the license agreement, select the "*I accept the agreement*" option and click Next. The "*Select Destination Location*" screen is displayed:



5. The default path is TCASH5 on your system's default drive, (e.g. C:/TCASH5-3).

When installing TurboCASH5-3 into an existing folder, you may see the following warning message:

> Folder Exists
> The folder:
> *C:\TCASH5*
> already exists. Would you like to install to that folder anyway?

If you click Yes, you may encounter problems.

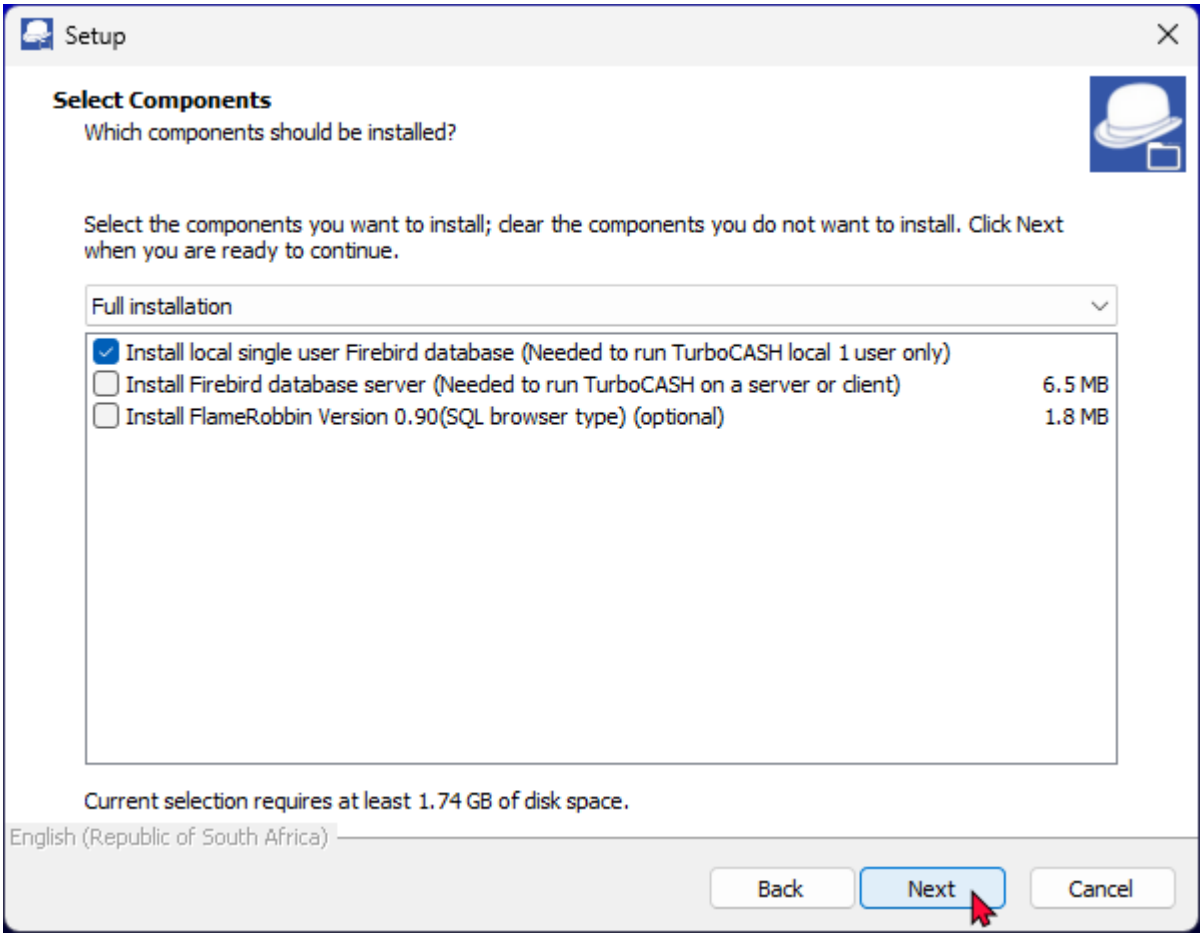
It is strongly recommended that you click "No" and choose a different installation directory. Installing into an existing TurboCASH folder (even if it's for a seemingly related version) can lead to software conflicts and errors. These TurboCASH5-3 is a new version is not an update and require a clean installation.

You may click on the Browse button to select any other folder than the default path where you wish to install TurboCASH5 on the "Browse For Folder" screen.

If you wish to install TurboCASH on a device that has a Solid State Drive which is small e.g. 32GB as the C: drive, you need to select the D: drive that is bigger in size.

You may over type this with your own description, if necessary. This will create an item on the Start → Programs menu list with items for TurboCASH5-3, Uninstall TurboCASH5-3 on your Windows™ Task bar.

6. Once finished, click Next. The "*Select Components*" screen, is displayed:



7. A list of the components will be displayed. Select or deselect (remove the tick) for the following options, if necessary:

   a) Install Firebird Database Server (Needed to run *Turbo*CASH5 local 1 user only) - If you are installing *Turbo*CASH5 for the first time, you need to make sure that this option is selected.

Select this option if you need to run TurboCASH5 locally for 1 user only.

   b) Install Firebird Database Server (Needed to run *Turbo*CASH5 on a server or client).

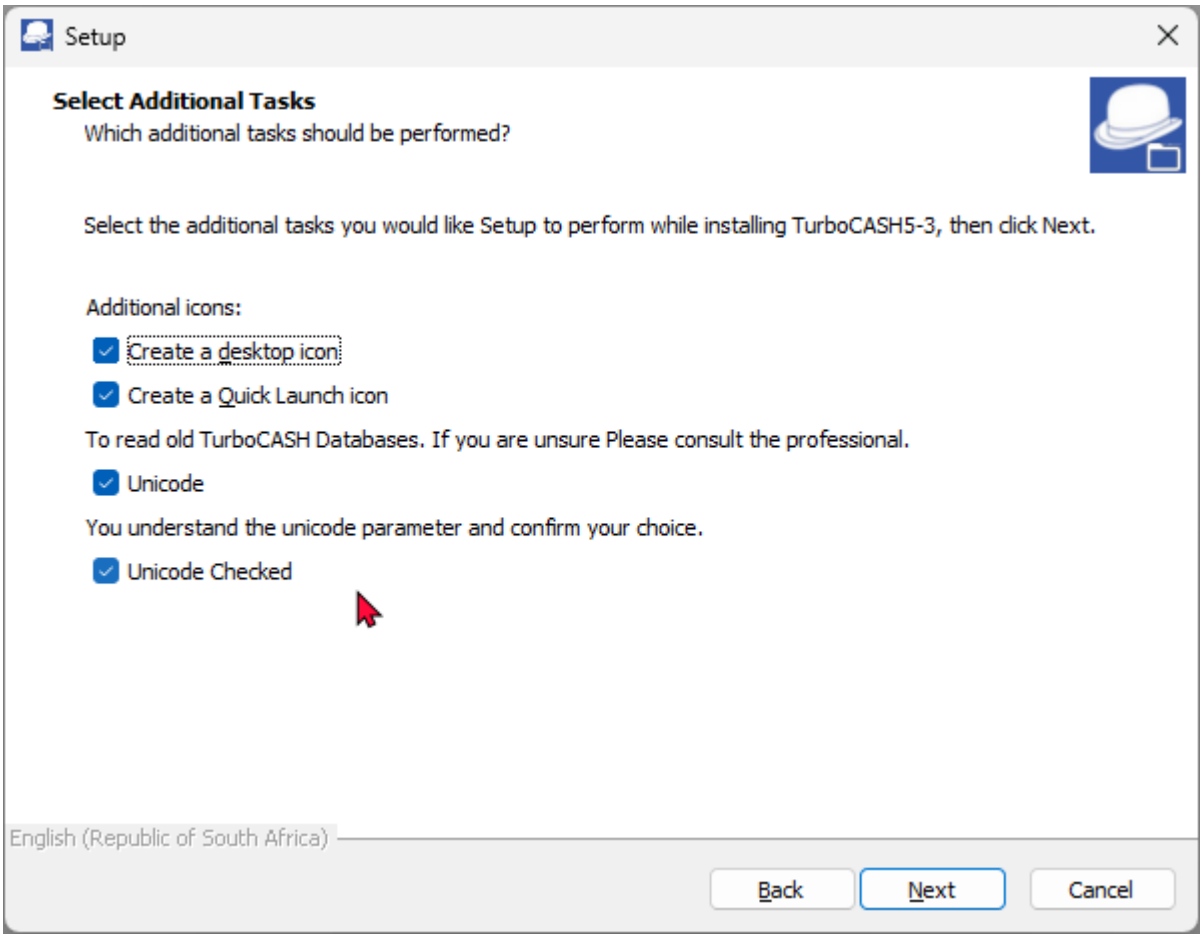
For the purpose of the single-user installation, do not select this option.

c) Install FlameRobin SQL Browser Type - (Optional) - This will install the FlameRobin Database Admin software to manage your *Turbo*CASH5-3 databases (Sets of Books).

For the purpose of the single-user installation, do not select this option.

The FlameRobin software is used to browse, check and edit data. The installation of FlameRobin is optional and is not required to run TurboCASH5-3. The use of FlameRobin is not recommended for users which have insufficient knowledge and expertise.

8. Once finished, selecting the components to be installed, click Next. The "*Select Additional Tasks*" screen is displayed:



9. By default no options are selected. Select the following options, if you wish them to be installed:

a) Create desktop icon - This will create an icon on your desktop from where you may start or launch the *Turbo*CASH5-3 program.

b) Create Quick Launch icon - This will create an icon on your Quick Launch Toolbar on your Windows™ Task bar. You may then start or launch the *Turbo*CASH5-3 program directly from the Quick Launch Toolbar.

c) Unicode settings - Select both the "*Unicode*" and "*Unicode Checked*" options. This will enable Unicode support.

We strongly advise consulting with a professional before enabling the Unicode setting. This ensures that you fully understand the implications and make an informed decision.

Unicode Checked - If this mandatory checkbox is not selected, a Runtime error message is displayed:

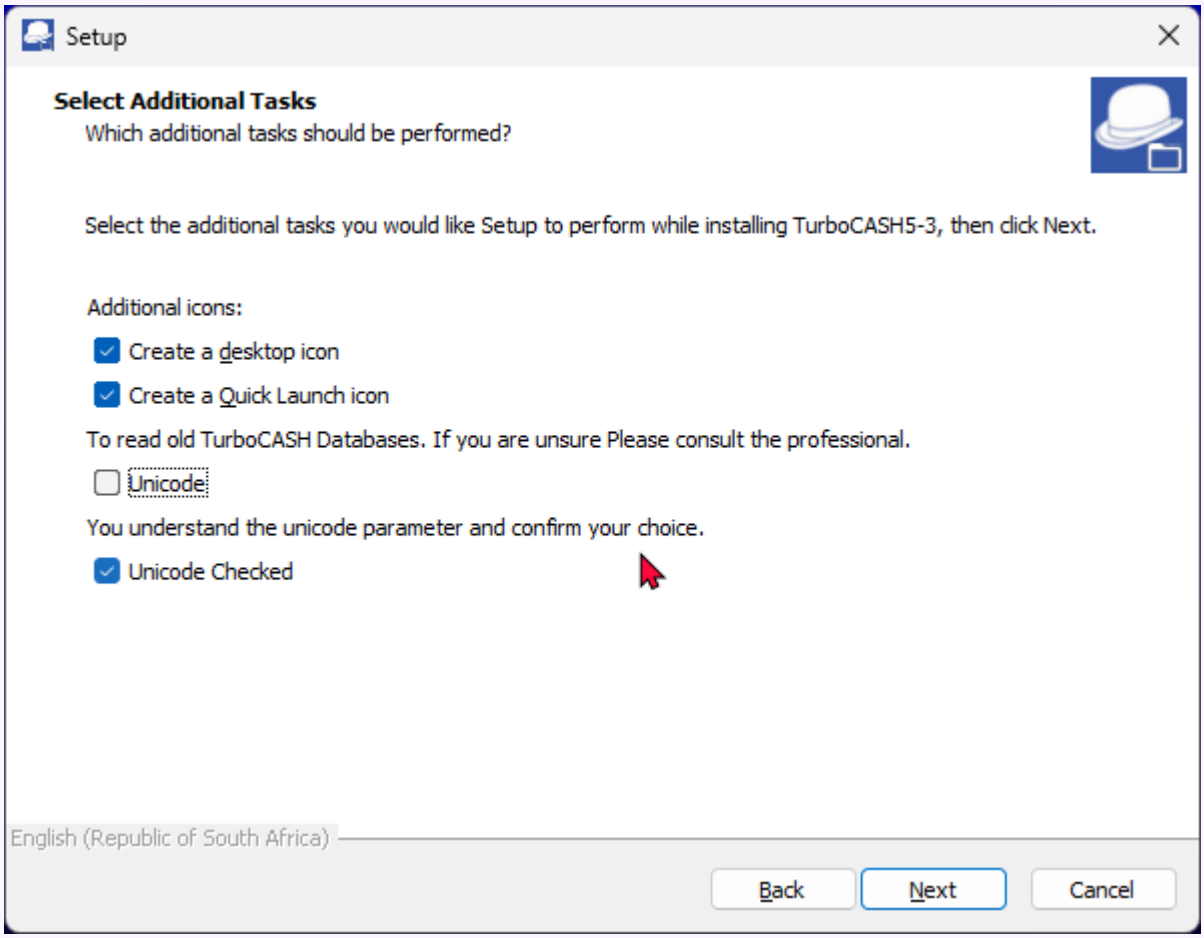
"Please check and confirm your unicode option."

To enable Unicode support (recommended for most users), both the "Unicode" and "Unicode Checked" tick boxes need to be selected. This option will set the nounicode=FALSE parameter in the tcash.ini file.

This is a very important setting, as this will determine the display of special characters in the TurboCASH5 interface, reports document layout files, etc. in most databases.

To Disable Unicode support option, the "Unicode" check box must not be selected. Only the "Unicode Checked" tick box need to be selected.

This setting is intended for users who require non-Unicode support. This option will set the nounicode=TRUE parameter in the tcash.ini file.



Using this setting, (Disable Unicode), the system relies on specific codepages to handle text. Some examples would be:

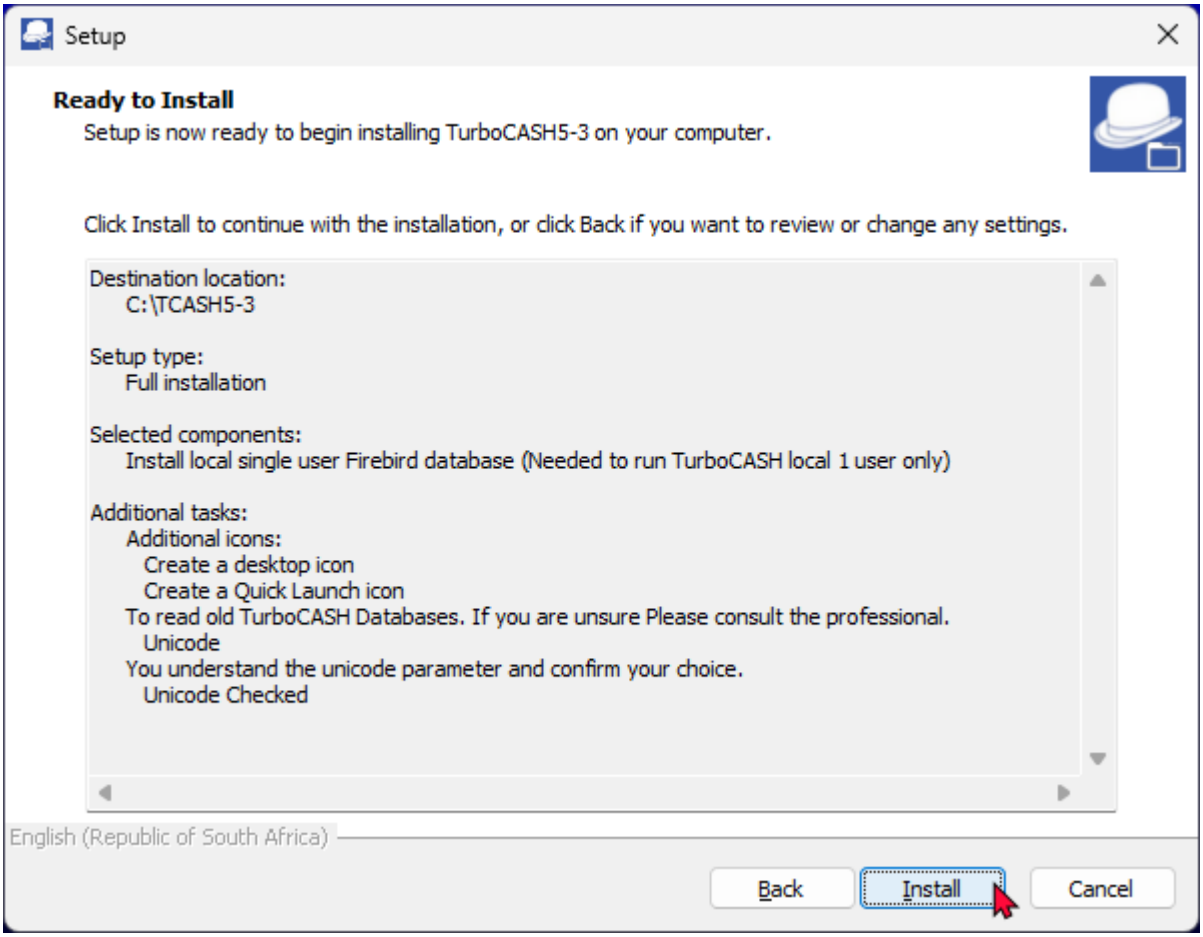
- *French (Codepage 1252): Handles Western European characters, but may have limitations with special symbols unique to other languages.*
- *Spanish (Codepage 1252): Similar to French, it manages Spanish characters well but might struggle with characters from non-Western languages.*
- *Arabic (Codepage 1256): Supports Arabic characters effectively, but may not handle characters from Latin-based languages as efficiently.*

In TurboCASH5, the codepage cannot be set in the Tools → Customise language on the Setup ribbon.

If your Unicode settings, is incorrect, you may re-run the installation process.

Alternatively, you may locate the tcash.ini file in the TurboCASH5 installation directory and edit the nounicode=true and set it to nounicode=false, and vice versa. In this case you may need to close and restart TurboCASH5.-3

10. Once finished, click Next. The "*Ready to Install*" screen is displayed:



11. Please check the following selections to be installed:

    a) Destination location

    b) Setup type

    c) Selected components

    d) Start Menu folder

    e) Additional tasks (icons)

    f) Unicode Settings

This is your last chance to change anything to be installed. If you are not satisfied with your selection, click on the Back buttons to select or deselect the necessary options.

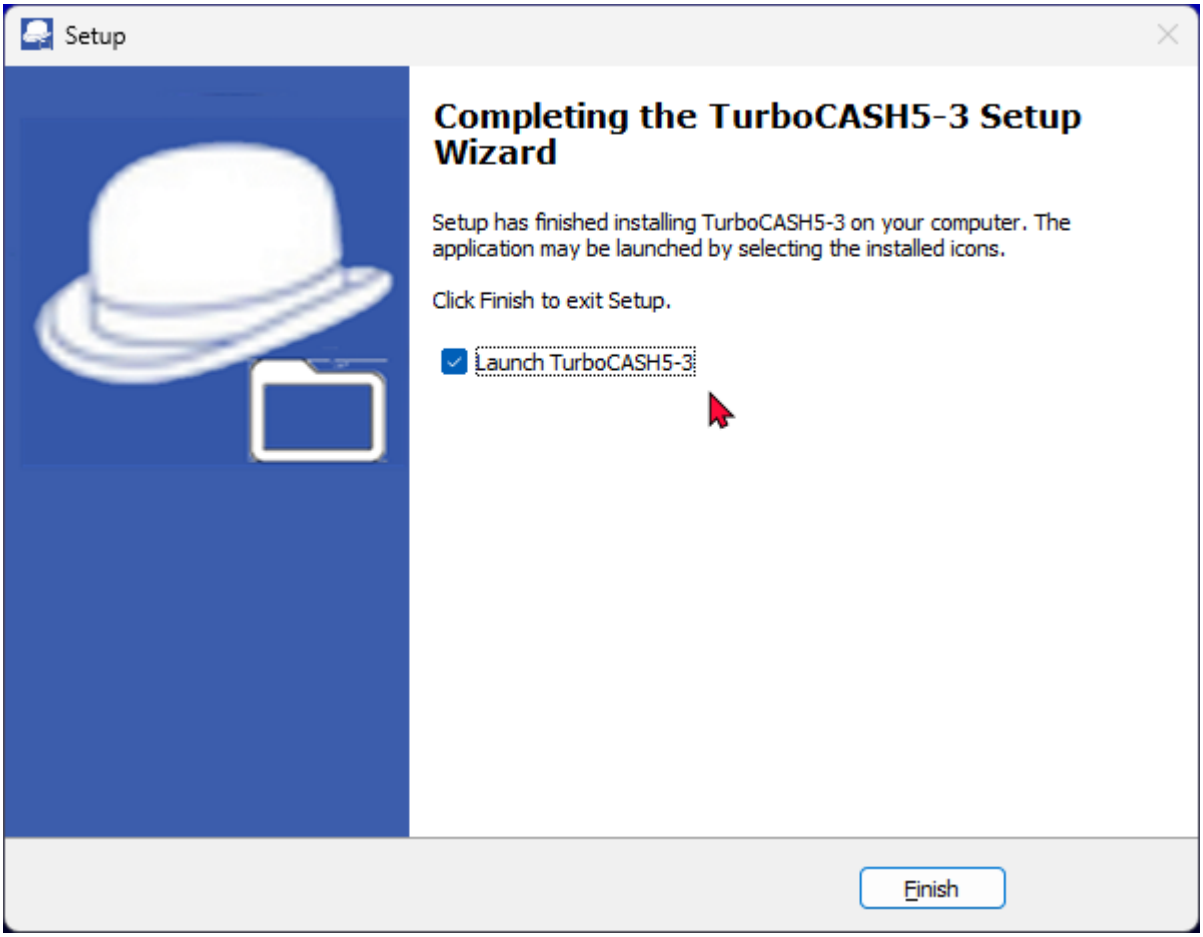
Overwrite confirmation message:

A confirmation message will be displayed if you have installed TurboCASH5 over an existing

(previous) TurboCASH installation. If you have worked (changed or added data) to the Set of Books (with the same Name as installed) and wish to retain the existing Set of Books, click No to retain your existing data. The Set of Books will not be replaced by the installation.

12. If you click on the Yes button, the Set of Books will be replaced with the Set of Books in this installation.

13. Click Install. The *Turbo*CASH5 installation process will start. Once the *Turbo*CASH5-3 installation process is finished, the "*Completing the TurboCASH5-3 Setup Wizard*" screen is displayed:



The following Components will not be listed, if it was not selected in the "Select Components" screen:

- *Install Firebird*
- *Install FlameRobin SQL Browser Type*

14. If the Launch *Turbo*CASH5-3 option is selected, the *Turbo*CASH5-3 program will automatically be launched.

If you do not select this option (remove the tick), you may then launch or start TurboCASH5 from the following options (if selected or where specified): -

- *Desktop icon.*
- *Quick Launch icon (on the Quick Launch Toolbar on your Windows™ Task bar).*
- *Start → Programs → TurboCASH5-3 menu from the Windows™ Start button.*

15. Once finished selecting or deselecting the necessary options, click Finish. The *Turbo*CASH program will be started if you did not remove the tick on the "*Launch TurboCASH5-3*" option.

After installing TurboCASH5-3 in a new directory - manually migrate your existing data from previous versions

After installing TurboCASH5-3 in a new directory, you'll need to manually migrate your existing data from previous versions (TurboCASH4, TurboCASH5, or TurboCASH5-2). The following data should be migrated:

1. Set of Books: You have several options:

   Copy: Using File Explorer, copy your Set of Books from the "*books*" folder of your older TurboCASH installation to the "*books*" folder of your new TurboCASH5-3 installation.
   Save as: Use the "Save as" option on the Start ribbon within your older TurboCASH version and select the "books" folder within your new TurboCASH5-3 installation directory (e.g., `TurboCASH5-3/books`).
   Backup/Restore: Create a backup of your Set of Books in the older TurboCASH version. Then, restore this backup in the "*books*" directory of your TurboCASH5-3 installation.

2. Custom Document Layout Files: Copy any custom document layout files to the following directory in your TurboCASH5-3 installation:

   ```
   /plug_ins/reports/DOCUMENTS/DOCUMENTS/
   ```

3. Custom Reports: Copy any custom reports from your older TurboCASH version to the "User Reports" menu directory in your TurboCASH5-3 installation:

   ```
   /plug_ins/reports/userreports
   ```

Important Note: This migration process is required because TurboCASH5-3 are not updates to previous versions; is entirely a new installation.

Created with the Standard Edition of HelpNDoc: Maximize Your Reach: Convert Your Word Document to an ePub or Kindle eBook

Migrate existing data into TurboCASH5-3

After installing TurboCASH5-3 in a new directory, you'll need to manually migrate your existing data from previous versions (TurboCASH4, TurboCASH5, or TurboCASH5-2). The following data should be migrated:

1. Set of Books: You have several options:
   - Copy: Using File Explorer, copy your Set of Books from the "*books*" folder of your older TurboCASH installation to the "*books*" folder of your new TurboCASH5-3 installation.
   - Save as: Use the "Save as" option on the Start ribbon within your older TurboCASH version and select the "books" folder within your new TurboCASH5-3 installation directory (e.g., `TurboCASH5-3/books`).
   - Backup/Restore: Create a backup of your Set of Books in the older TurboCASH version. Then, restore this backup in the "*books*" directory of your TurboCASH5-3 installation.
2. Custom Document Layout Files: Copy any custom document layout files to the following directory in your TurboCASH5-3 installation:

   ```
   /plug_ins/reports/DOCUMENTS/DOCUMENTS/
   ```

3. Custom Reports: Copy any custom reports from your older TurboCASH version to the "User Reports" menu directory in your TurboCASH5-3 installation:

   ```
   /plug_ins/reports/userreports
   ```

Important Note: This migration process is required because TurboCASH5-3 are not updates to previous versions; is entirely a new installation.

Install osFinancials5 - Updates (Help menu)

Install osFinancials5 Updates from the Help menu

Installation files / changelog link : osFinancials-Turbocash-Business-version

After years of developing and supporting osFinancials and TurboCASH, we have realized that the current model is not sustainable. Therefore, we are introducing a new version called "osFinancials 5 Business" to break through this glass ceiling.

osFinancials 4 will continue to be available for free use. However, if you want to access additional features and functionalities, we recommend upgrading to "osFinancials 5 Business". If your business has fewer than 500 transactions/documents, you can use this version free of charge. For businesses with more than 500 transactions/documents, we ask for a contribution of 50 euros (excluding taxes) or 60 US dollars per year.

If you already have a subscription for a multi-user or retail POS, the osFinancials 5 Business licence will be included.

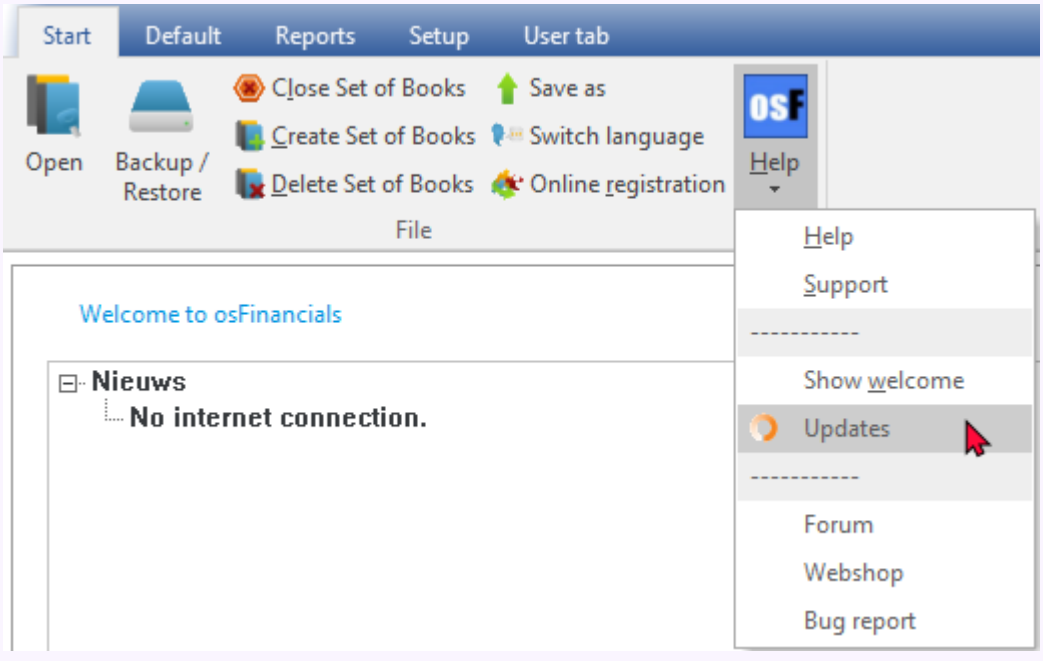
Once you install osFinancials 5 on your system, updates will be released from time to time, containing bug fixes, new features, and other improvements.

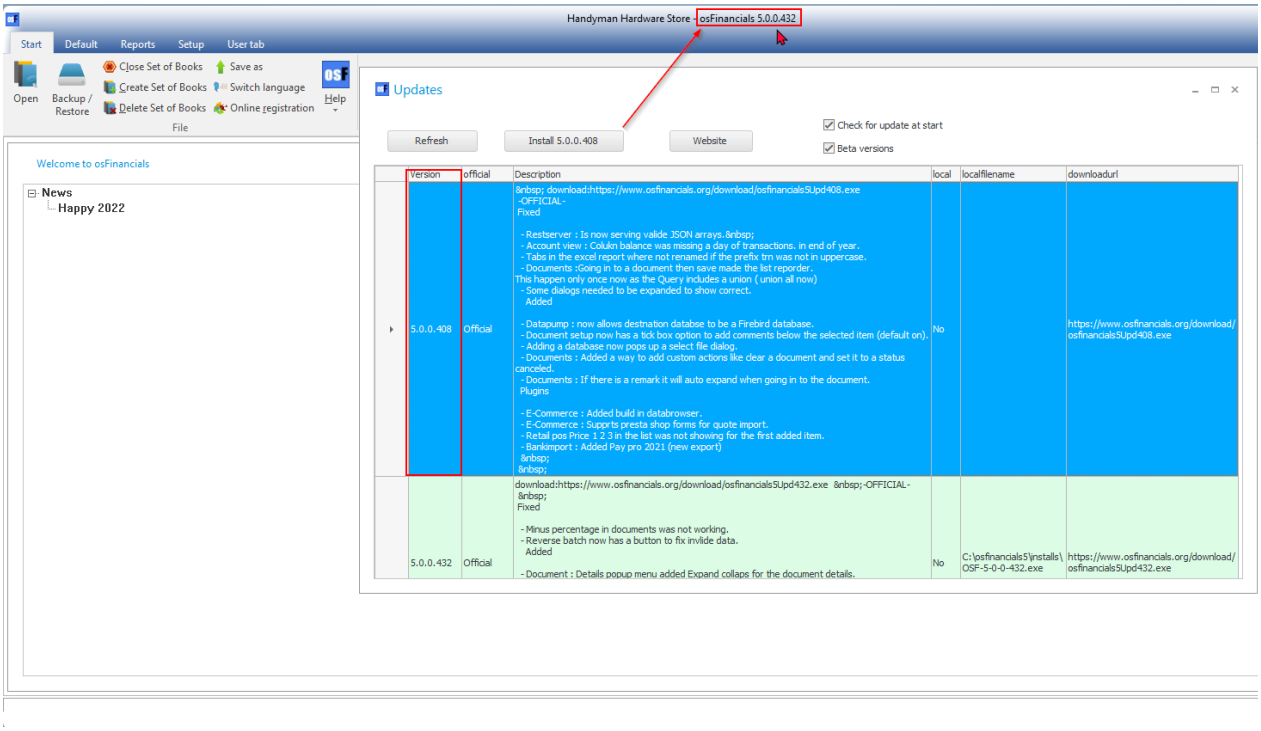
To Install osFinancials 5 Updates

The Update option will list all the installation files available for download. By default, the Update will be launched when starting *osFinancials 5*. To disable the check for update at start, select this field and remove the tick.

It is important to make a backups of your Set of Books. It is strongly recommended that you make a backup copy of the entire installation folder of your existing installation osFinancials 5 before proceeding with the update.

The Updates option may manually be launched from Help → Updates (Start ribbon).





You may select to install the Official versions or Beta versions.

Once you have selected your version, click on the Install (selected version) button. The following confirmation message is displayed:

> This action will close osFinancials5 and install the selected version (e.g. 5.0.0.408 we recommend you make a backup of the whole folder of osFinancials5.
> Do you wish to continue?

If you wish to proceed, tick the option "*I have read this instruction and understand the action!*". The Yes and No buttons will be activated.

If you click on the Yes button (of the confirmation screen), the following process will start:

- Download the install file for the selected version and text file with the change log and store it in the "*.../installs*", e.g. "*D:\osfinancials5\installs* folder of your current osFinancials5 installation.
- Automatically install the selected version and close the current osFinancials5 session.

If there are any other osFinancials5 installation files in the ".../installs" folder of your current osFinancials5 installation, the installation process will not start. The following error message will be displayed:

> The setup files are corrupted. Please obtain a new copy of the program.

Click OK and delete the install files from the installs folder.

Restart osFinancials5 and select the file from the Updates screen and click on the Install (version) button.

Once the installation is finished, you may launch osFinancials 5 from your system.

The selected version of osFinancials5 will be displayed in the title-bar of the selected version of the installed upda

Install Updates - Go back to osFinancials4

Install osFinancials5 Updates from the Help menu - Downgrading to osFinancials4

After years of development and support of osFinancials and TurboCASH we came to the conclusion the current model does not work. To break true this glass ceiling we are introducing "*osFinancials 5 Business*".

osFinancials 4 is free to use but if you want more out of your software then "osFinancials 5 Business" is the

version you want to use.

If you have less then 500 transactions / documents you can use this version free of charge. Above that we ask you for a contribution of 50 euro (excl.)/ 60 dollars per year.

If you have any subscription already like multi-user or retail POS, etc., the licence will also be included.

Once osFinancials5 is installed on your system, Update to osFinancials5 is released from time to time. These updates of osFinancials5, contain certain bugfixes, etc.

If you wish to revert back to the osFinancials 4 (the free to use version of osFinancials), you may use the Update option.

The Update option will list all the installation files available for download. By default, the Update will be launched when starting osFinancials5/TurboCASH5. To disable the check for update at start, select this field and remove the tick.

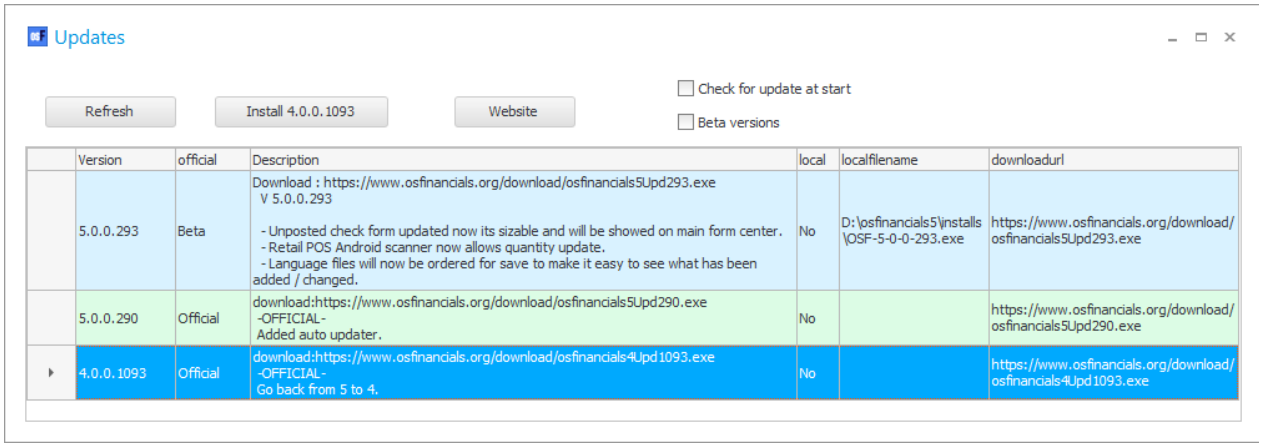
It is important to make a backups of your Set of Books. It is strongly recommended that you make a backup copy of the entire folder of your existing installation before proceeding with the update.

The Updates option may manually be launched from Help → Update (Start ribbon).

To downgrade to osFinancials 4:

Launch the Updates.

Select osFinancials 4.0.0.1093



Click on the Install 4.0.0.1093 button. The following confirmation message is displayed:

"This action will close osFinancials and install version 4.0.0.1093 we recommend you make a backup of the whole folder of osFinancials.
Do you wish to continue?"

If you wish to proceed, tick the option "*I have read this instruction and understand the action!*"

The Yes and No buttons will be activated.

If you click on the Yes button (of the confirmation screen), the following process will start:

- Download the install file for the selected version and text file with the change log and store it in the "*.../installs*", e.g. "*D:\osfinancials5\installs*" folder of your current osFinancials installation.
- Automatically install the osFinancials 4 and close the current osFinancials session.

If there are any other osFinancials installation files in the ".../installs", e.g. "D:\osfinancials5\installs" folder of your current osFinancials installation, the installation process will not start. You may then select the osFinancials 4 file and install it manually.

Once the installation is finished, you may launch 
from your system.

Note the selected osFinancials4.0.0.193 will be displayed in the title-bar.

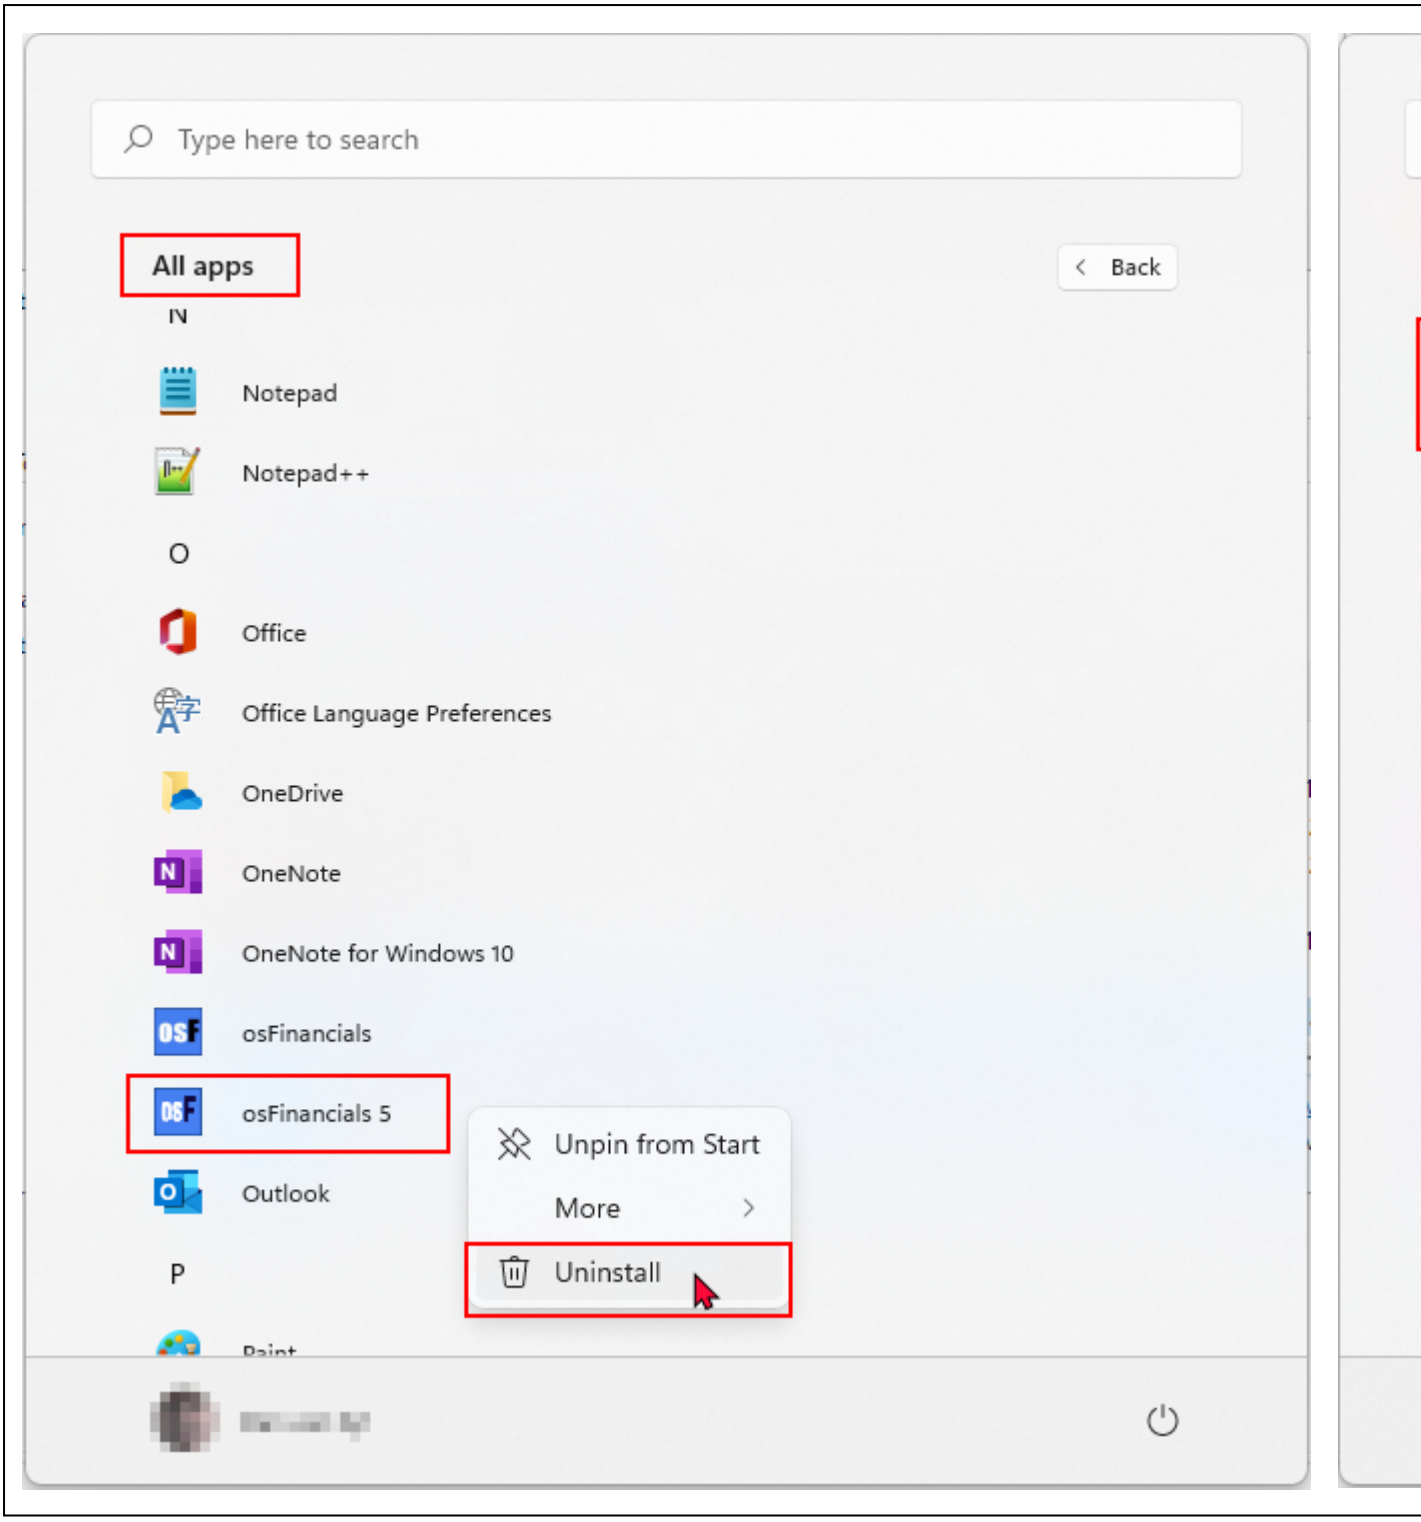
Uninstall osFinancials5

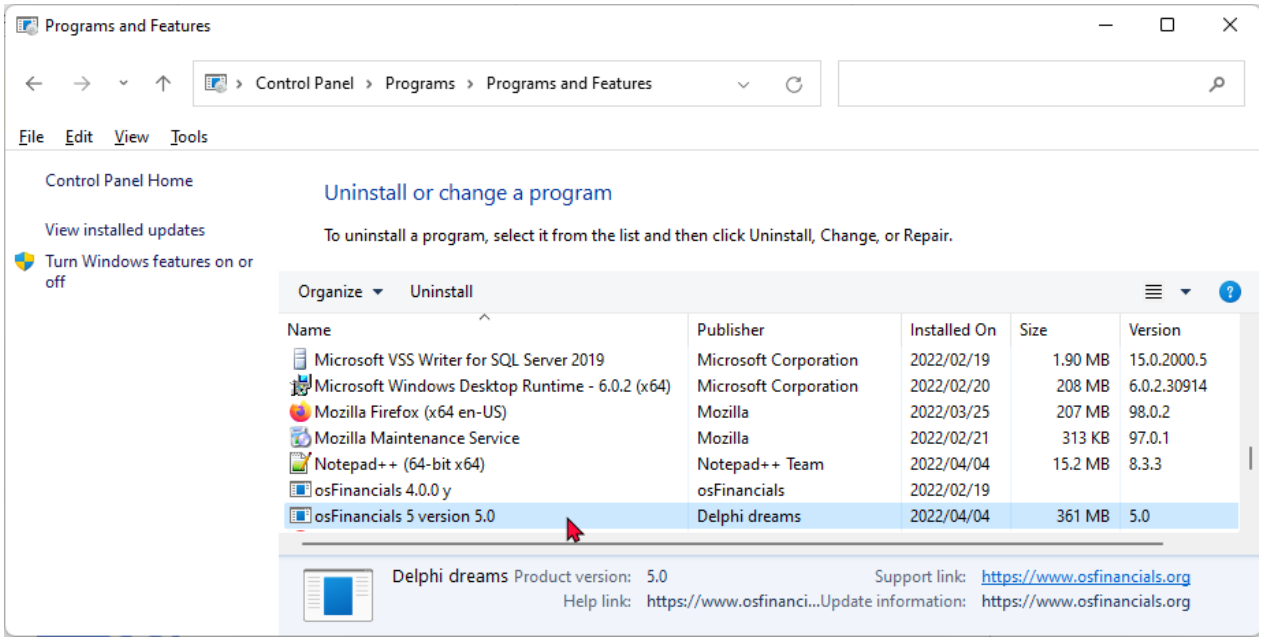
Uninstall osFinancials5

If you need to uninstall osFinancials5, go to the Start button on your Windows Taskbar and select osFinancials5.

All apps option	*Pinned*



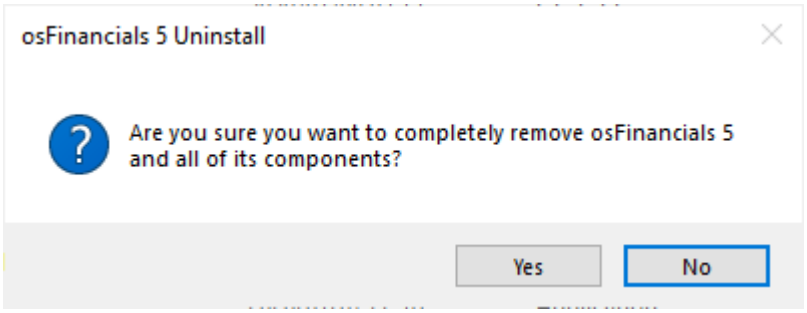
The Program and features - Uninstall or change a program of the Windows Control Panel will be launched.



You may also double-click on the "Uninstall000.exe" file in the Installation folder of osFinancials5.

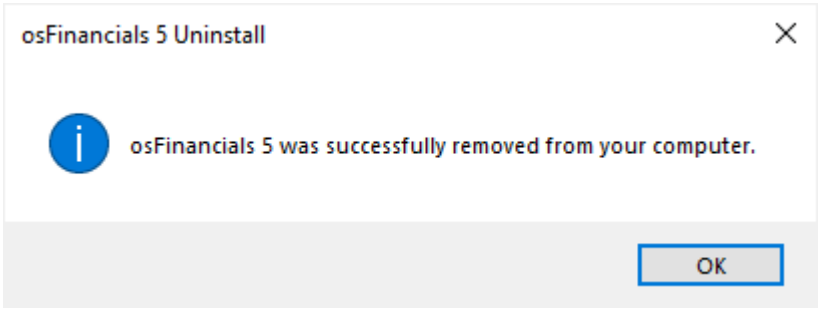
To uninstall osFinancials5:

1. Select osFinancials5 and click on the Uninstall option.



2. Click on the Yes button to uninstall osFinancials5.

3. Wait for the process to complete. Once finished, the following information screen is displayed.



4. Click on the OK button.

5. Once the Uninstall process is finished, you need to use File Explorer or your system's default file

browser to select the osFinancials5 (or other installation directory).

The files which have been created, or edited by the user after the original installation, will not be deleted or removed. Some examples are;

- *books folder - Any Sets of Books created, copied, saved, etc.*
- *Bin/Themes - Any changes to themes (e.g. background pictures, icons, etc.).*
- *plug_ins/reports/ - any reports added after the original installation, etc.*
- *Registration.ini file - Only if you have registered this version of osFinancials5.*

You may need to copy these files somewhere else on your system. If you do not wish to keep these files, you may delete the entire osFinancials5 folder.

Start osFinancials5

Start / Launch osFinancials5

When you first install the full version of osFinancials5 or install updates for it, and you select the "*Launch osFinancials 5*" option on the "*Completing the osFinancials 5 Setup Wizard*" screen, osFinancials5 will automatically start up. However, after that initial launch, you will need to manually launch osFinancials5 each time you want to use it.

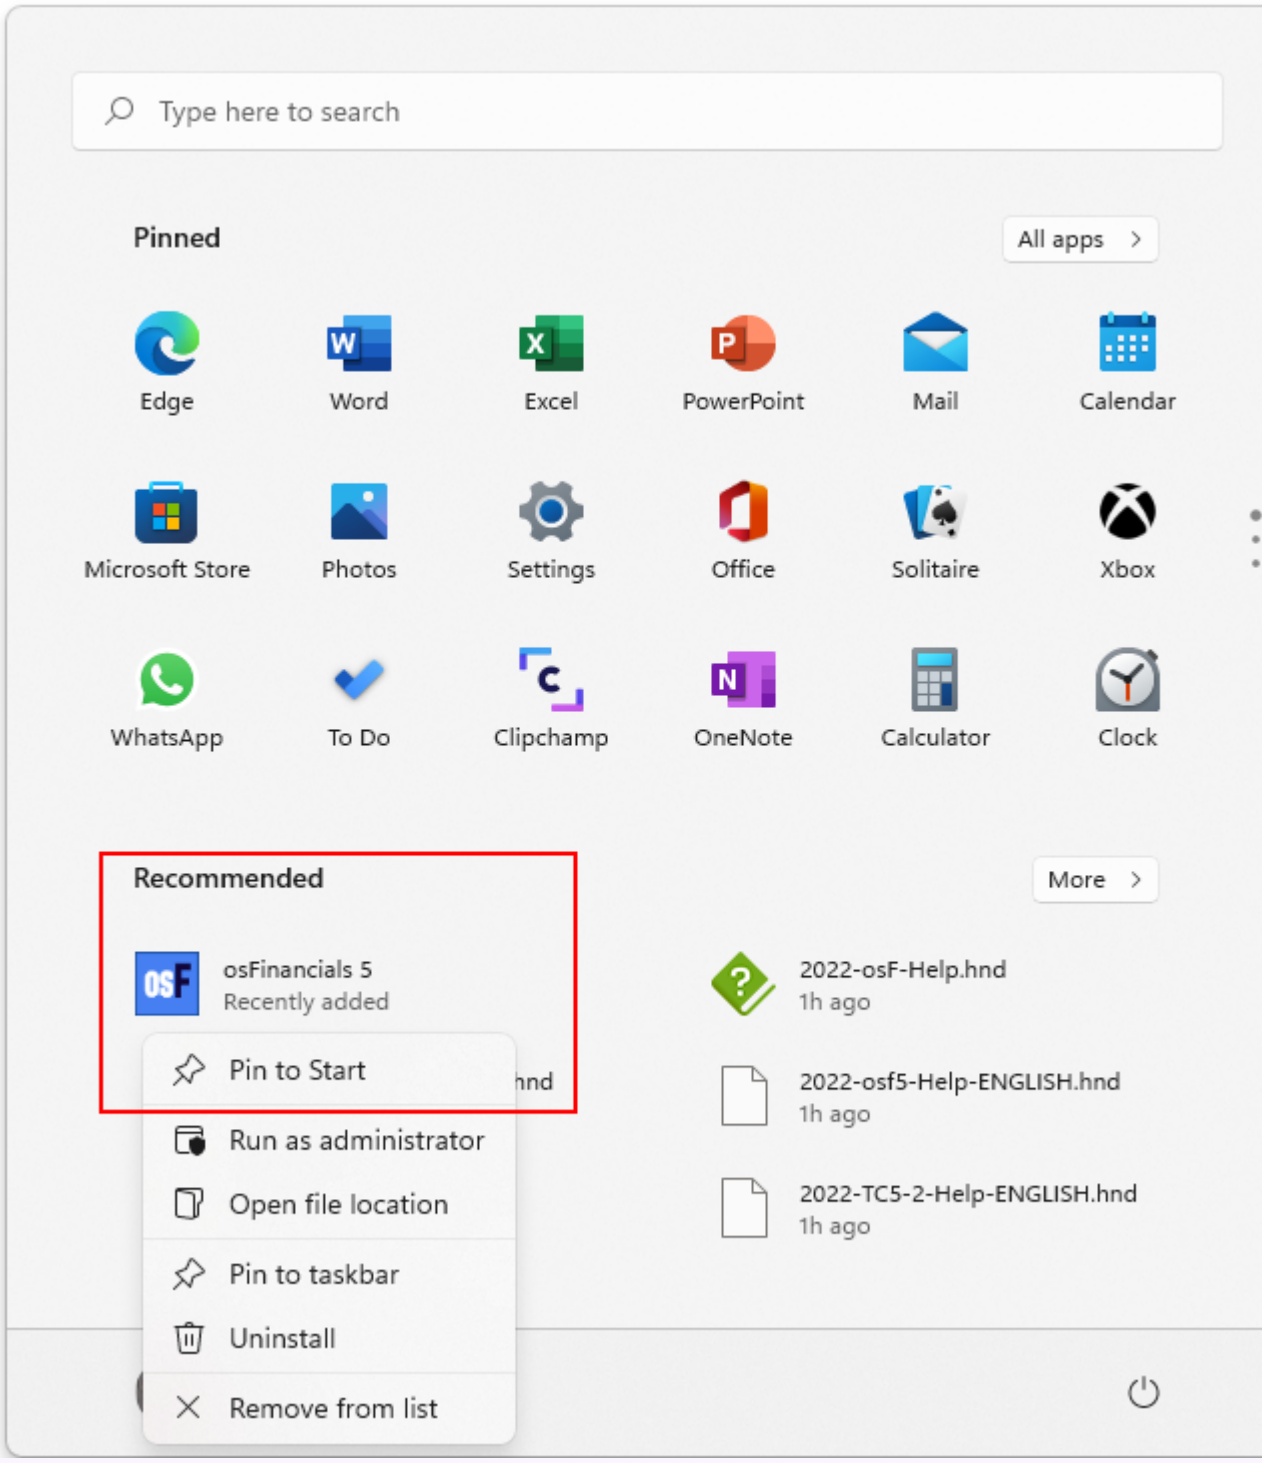
To start osFinancials5:

1. To start osFinancials5, double click on the

icon created for you on your Desktop (if the "*Create a desktop*" icon option was selected during the installation).

   Or select osFinancials5 on the Start menu - All apps (Programs) → osFinancials5 (or Pinned, if you have already pinned osFinancials5 to the Start.

   Pin osFinancials5 to the Quick access area (Windows 11):

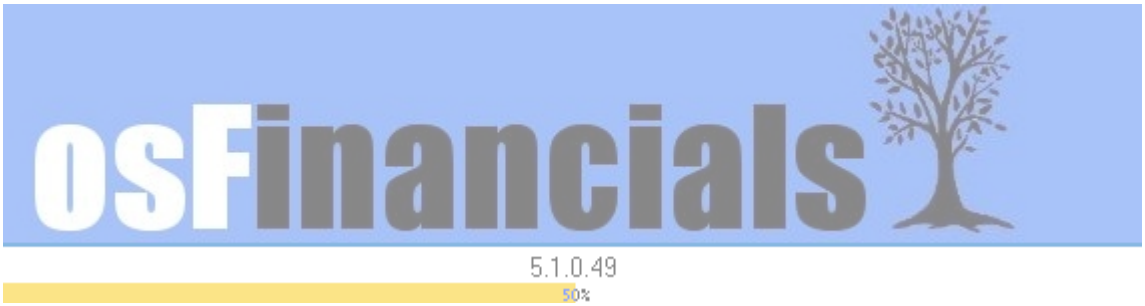


After installation, you may need to add the osFinancials5 to the Quick access area of the Start button.

The osFinancials5 icon should be displayed as Recommended or Recently added. On the osFinancials5 icon, right-click an select Pin to Start.

You may also select to add osFinancials5 to the taskbar (Pin to taskbar).

2. Once osFinancials5 is started, the osFinancials5 splash-screen will display the version number and a progress indicator.



3. Once you have opened osFinancials5, the Start ribbon tab is displayed.

4. Click on the Reports ribbon to load the reports.

At first only the items under the Start ribbon tab is available. Before you can select any of the other ribbon tabs or ribbon options, you will need to "Open a Set of Books" (Click Open on the Start ribbon).

Created with the Standard Edition of HelpNDoc: Easy CHM and documentation editor

Launch osFinancials5 for the first time

Launch osFinancials5 for the first time

In osFinancials5, the interface language will be displayed based on the language associated with the Set of Books for the country. Each Set of Books can have a specific language linked to it, and when you open that Set of Books in osFinancials5, the interface language will be displayed in the language associated with that particular Set of Books by default.

Default languages have already been pre-set for each Set of Books. (Setup → Access control on the Setup ribbon).

When opening a Set of Books, it will automatically load the language file. All screens, reports and layout files are translatable via the language files.

Some languages may not display correctly if your system locale in the Regional and Language Settings option in the Control Panel of your system may not support the language and system locale (unicode).

English is the default (driver language file – used as the basis for translation, and to Customise language files). For example, the American and the English files contain specific label, text, currency and tax terminology for each country.

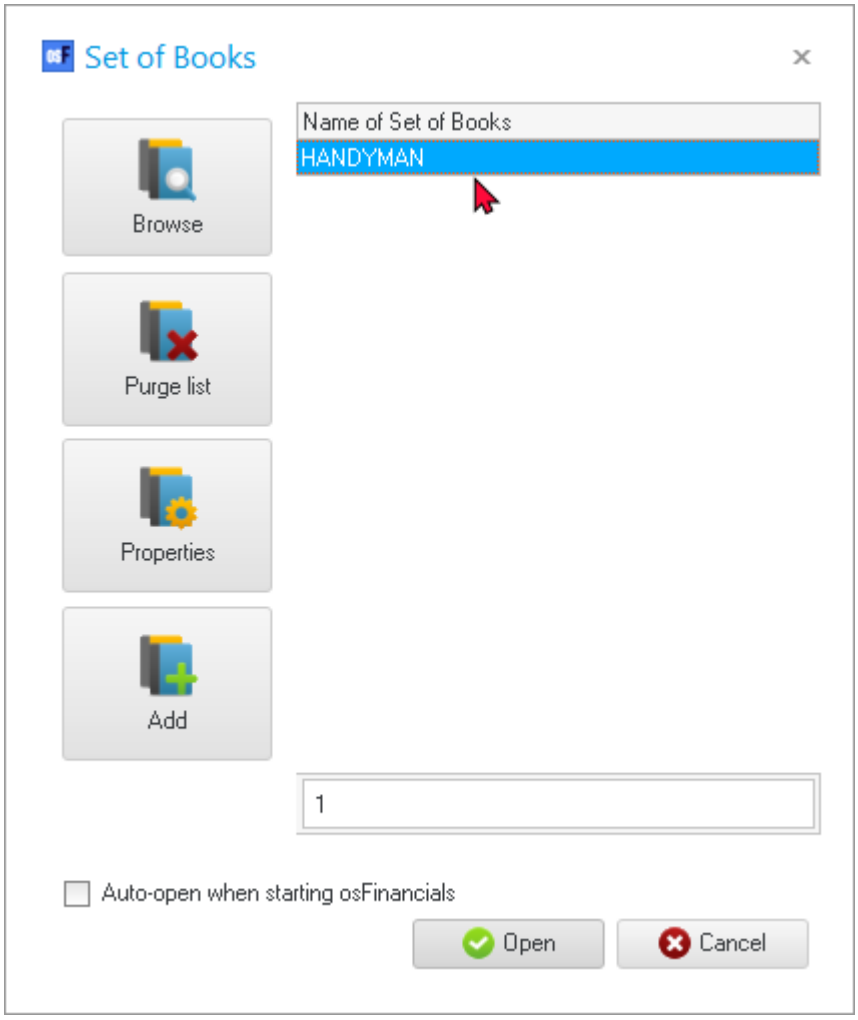
Should you select the incorrect language at this stage, you may change the language in Switch language

on the Start ribbon).

Once osFinancials5 is launched, the "*Set of Books*" screen is displayed. To display the interface of osFinancials5 in the default "*English*" language, select the "*HANDYMAN*" Set of Books and click on the Open button.

Open Set of Books

After a new osFinancials5 installation, the following Sets of Books will be available to open:



To display the interface of osFinancials5 in the default "English" language, select the "HANDYMAN" Set of Books and click on the Open button.

Auto-open when starting osFinancials - Select this option to automatically open a selected Set of Books when you start or launch osFinancials5/TurboCASH5.

Add Sets of Books

By default, osFinancials5 installs with the "books" directory, which includes the "HANDYMAN" Set of Books that opens in English.

The Books are by default installed in the following directories:

- *books - The Sets of Books in this directory, is installed when installing osFinancials5, is HANDYMAN which will open in the English language.*

  If your language or country's Set of Books is not available in the "books" directory, you can download and customize any of the available Firebird Sets of Books and linked languages for free.
  osFinancials5 supports 79 different languages and countries/tax regimes languages linked to 87 Sets of Books (databases), which you can download and customize to meet your requirements.

- *Tutorials*

  - *ENGLISH - The "ENGLISH" folder in the "...bin/Tutorials/" directory includes examples and tutorials to explore osFinancials5 in English. This includes English tutorials (i.e. HANDYMAN (no transactions), HANDYMAN-A (transactions and documents not posted to the ledger) and HANDYMAN-B (transactions and documents posted to the ledger).*
  - *AFRIKAANS - The "AFRIKAANS" folder in the "...bin/Tutorials/" directory includes examples and tutorials to explore osFinancials5 in Afrikaans. This includes Afrikaans tutorials (i.e. NUTSMAN (no transactions), NUTSMAN-A (transactions and documents not posted to the ledger) and NUTSMAN-B (transactions and documents posted to the ledger).*
  - *BANK-IMPORT - The "BANK-IMPORT" folder in the "...bin/Tutorials/" directory includes examples and tutorials to explore the BANK-IMPORT plugin for importing and processing bank statements into your cashbook in osFinancials5 using English. This includes English tutorials (i.e. HANDY-BANK (no transactions), HANDY-BANK-A (transactions and documents not posted to the ledger) and HANDY-BANK-B (transactions and documents posted to the ledger). The HANDY-BANK-UNPOSTED-BANK-STATEMENT (all transactions and documents posted to the ledger, except the bank transactions).*
  - *COST-CENTRES -The "COST-CENTRES" folder in the "...bin/Tutorials/" directory includes examples and tutorials to explore the activation, processing, and reporting of cost centres in osFinancials5.. This includes Cost centre tutorials (i.e. COST-CENTRES-A (transactions and documents not posted to the ledger) and COST-CENTRES-B (transactions and documents posted to the ledger). See - Cost centres in this Help file.*
  - *PROJECTS - The "PROJECTS" folder in the "...bin/Tutorials/" directory includes examples and tutorials to explore the activation, processing, and reporting of projects in*

osFinancials5. This includes Projects tutorials (i.e. PROJECTS-A (transactions and documents not posted to the ledger) and PROJECTS-B (transactions and documents posted to the ledger). See - Projects in this Help file Projects

Register osFinancials5

---

osFinancials and TurboCASH share the same codebase. So we decided to rejoin together to make a single place of content, forum, registrations and a global shop to purchase your products. To get to this, all you need to visit the osFinancials website.

Every time an unregistered version of osFinancials5 is started, the following confirmation message will be displayed:

> This software is limited to 500 transactions or 500 documents. Please register and buy a licence for osFinancials5
> This copy of osFinancials5 is not registered! Do you wish to register it now?

Unregistered versions of osFinancials5 will allow you to process up to 500 transactions and/or documents. Once this limit is reached, osFinancials5 will not allow any processing of transactions, in batches and/or documents.

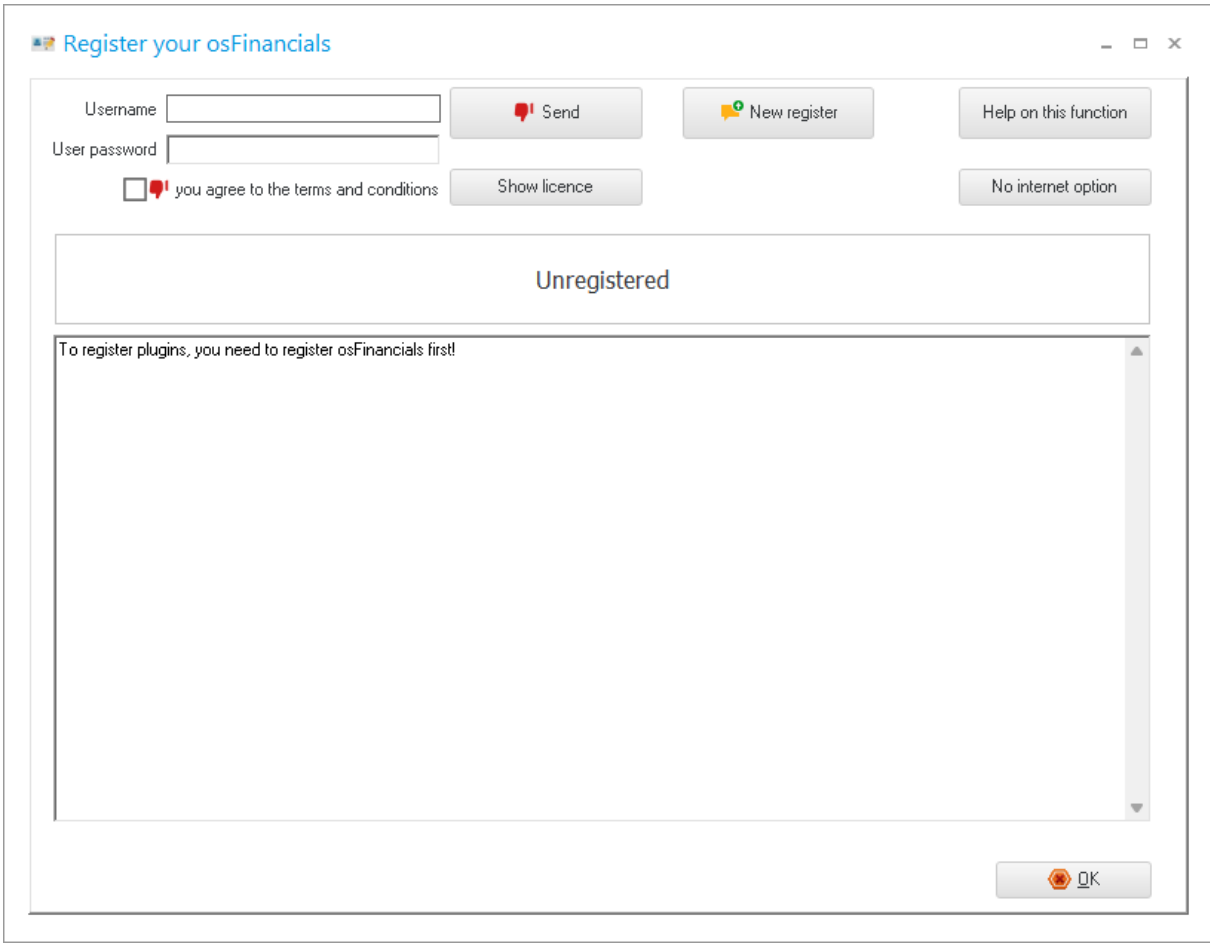
Once you have registered osFinancials5, you will receive an unlocking code and will be able to process further transactions and/or documents.

You need to register osFinancials5 for:

1. osFinancials5 subscription - The annual subscription includes the bankimport and email document email pro plugins.
2. Webshop - To use any of the powerful plugins, you need to purchase a licence for most of the Plugins. Before you can Register Plugins, you first need to Register osFinancials5.
3. Forum - On the shared forum, you may find topics (posts), post questions or issues, find solutions and participate in any discussions.

To register osFinancials5:

1. On the Start ribbon, select Online registration.



2. Enter the Username and password.

3. Click on the Register button. On the register webpage, you need to enter your Name, Username, Password and Email address.

4. Click on the Send button. An information message is displayed:

   "Registration send success!"

5. Click on the OK button. The message "*You have registered successfully!*" (email address and username) as well as the "*Code*" (Serial number) will be displayed below the User password field, Send and Show licence buttons. If you have purchased any plugins, these plugins will be listed in the "*To register plugins, you need to register osFinancials first!*" section of the screen.

Existing registered users may also Reset the password, change the password or access the webshop directly.

Created with the Standard Edition of HelpNDoc: Transform Your Documentation Workflow with HelpNDoc's Intuitive UI

Customise osFinancials5

osFinancials5 installs, by default, in the Classic theme. The Material theme (black icons) is used for most of the topics in this documentation. This is set in Theme on the Setup ribbon.

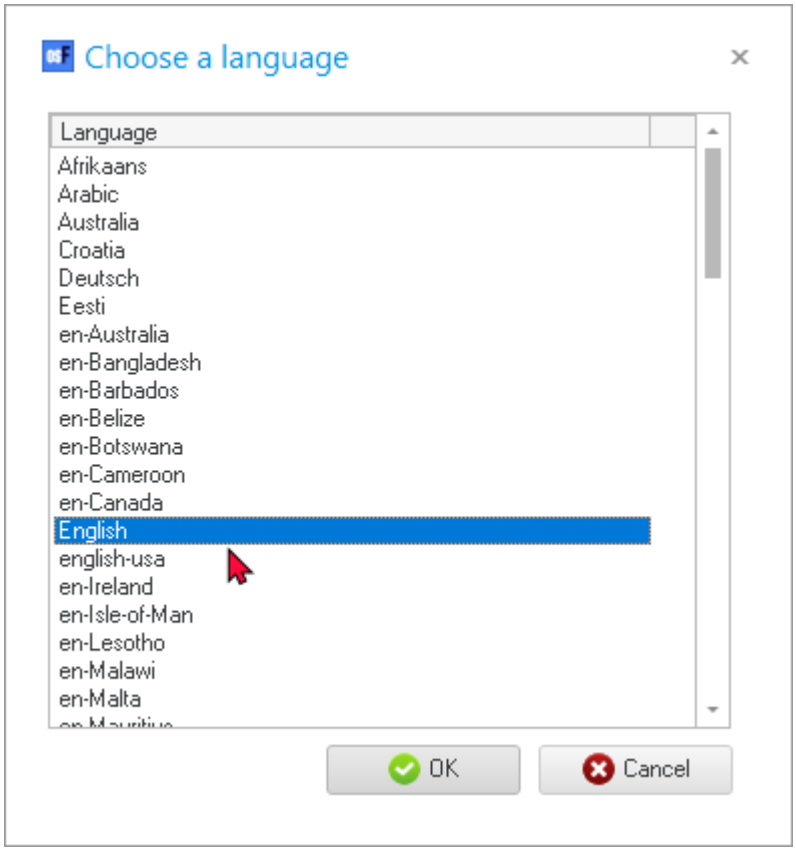
The Blue, Glass, Silver, Soft-blue theme includes a similar set of icons as in the Material theme (navy-blue icons).

The "Classic" theme (default theme) and "VS2010" theme displays the same set of icons (located in the "...\bin\themes\Classic" folder.

The osFinancials interface will display in the default "*English*" language.

osFinancials5 supports 79 different languages and tax regimes languages liked to 87 Sets of Books (databases) which may be downloaded and customised to meet your requirements.

You may Switch language (Start ribbon) to choose a different language.



Depending on the Set of Books template downloaded when Creating a Set of Books (Creation wizard); or downloaded from the Product information → Technical information → Databases page on the osFinancials website); osFinancials will automatically display the interface language of the language file which have already been linked to each Set of Books. (Setup → Access control).

Created with the Standard Edition of HelpNDoc: Maximize Your Productivity with HelpNDoc's CHM Help File Creation Features

Themes

By default, osFinancials5 is installed in the "*Classic*" theme (default theme) and TurboCASH5 is installed in the "*Material-navy*" theme.

If you prefer a different look, you can choose the "*Blue, Glass, Silver or Soft-blue" or "VS2010"* theme in osFinancials5/TurboCASH5. These themes feature a navy-blue colour scheme and offer a collection of icons similar to those in the "*Material*" theme. In addition to the Material theme's black icons, you may select other coloured variants such as "*Material-blue, Material-green, Material-maroon, Material-navy"*or *"Material-pink*".

Selecting a different theme from the Theme menu allows you to customize the interface to your preferences.

The Material theme (black icons) is implemented in osFinancials5. (in build 518). In TurboASH5 the "Material" theme is shipped with TurboCASH5 (build-453)

The "Blue, Glass, Silver" or "Soft-blue" theme includes a similar set of icons as in the Material theme (navy-blue icons).

The "Classic" theme (default theme) and "VS2010" theme displays the same set of icons (located in the "... \bin\themes\Classic" folder.

See video on Themes. The values for the themes are set in the colors.ini file in the themes folder.

For most of these themes, the icons on the ribbons and screens will also change to blend with the selected theme.

The “Material” theme is used for screen captures in this documentation.

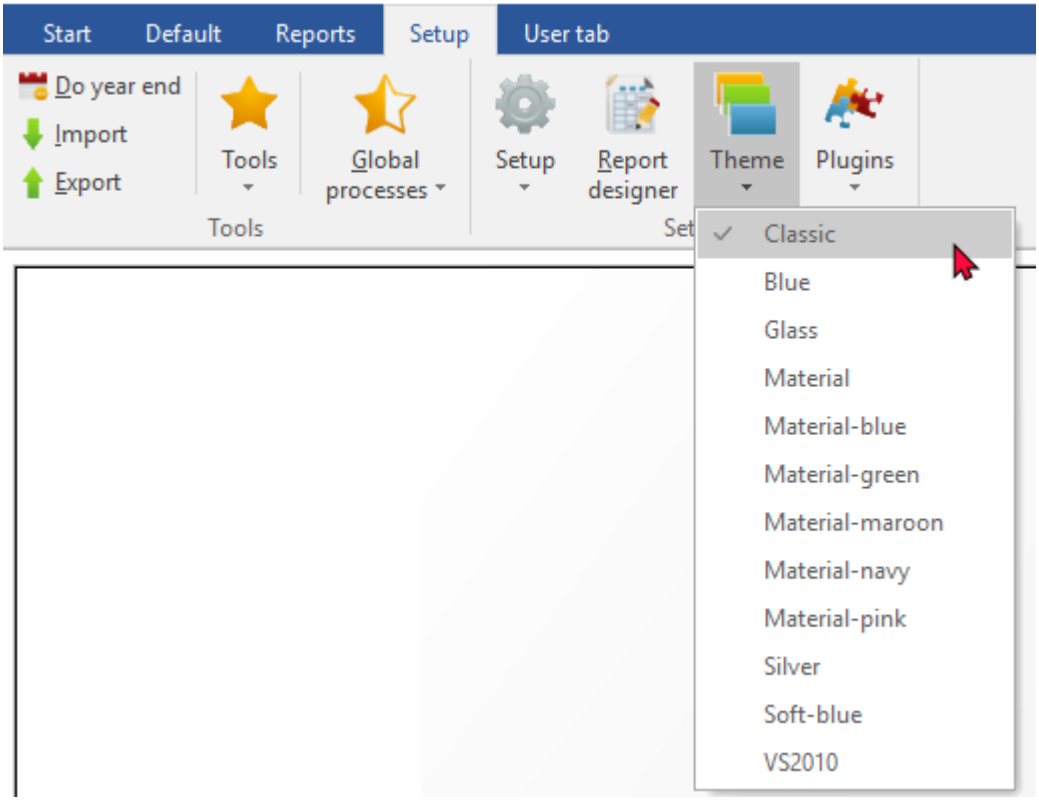
You may change the default Background1.jpg with your own image (photo, logo, products), etc.

Select a theme

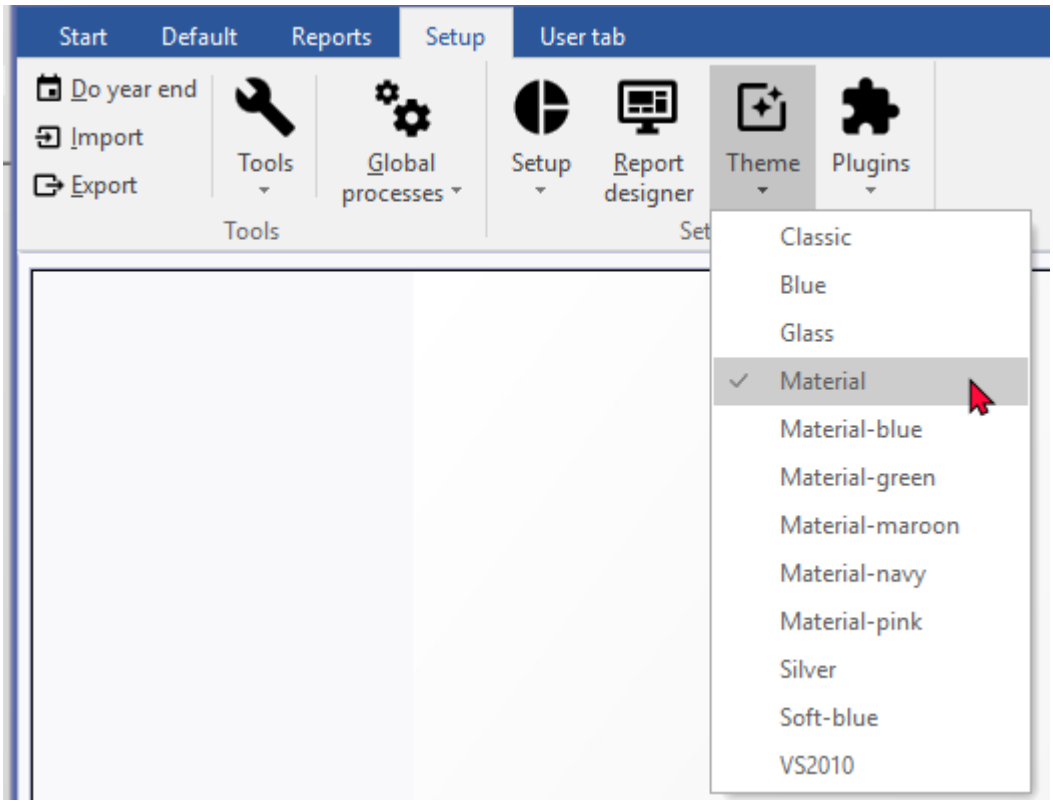
To select a theme:

1. On the Setup ribbon, select Theme and select the theme of your choice.

   osFinancials is by default installed in the "*Classic*" theme.



The "*Material*" theme is selected and used for most screenshots in this documentation.



2. Select the theme you like the best. The program will display the selected matching icon set.

Created with the Standard Edition of HelpNDoc: Eliminate the Struggles of Documentation with a Help Authoring Tool

Themes - New theme -change icon colours at one go

In osFinancials5/TurboCASH5, you have the option to easily customize the colour of all 227 icons (in the SVG "*Scalable Vector Graphics*" file format) used in the interface. This customization process can be completed in less than a minute by utilizing a text editor such as Notepad++ and the Search and Replace feature. By replacing the default black colour with a colour of your preference, you can personalize the appearance of the icons in the "*Material*" theme to suit your taste.

If you opt for the "Blue, Glass, Silver," or "Soft-blue" theme in osFinancials5/ TurboCASH5, you will encounter a set of icons resembling those found in the Material theme, but featuring a navy-blue colour palette. These themes offer an alternative visual presentation with cohesive icons, enabling you to personalize the interface by selecting a different theme from the Theme menu on the Setup ribbon.

Process to customise the colour of icons - Overview

An overview of the process to customize the colour of icons in the osFinancials5/TurboCASH5 interface:

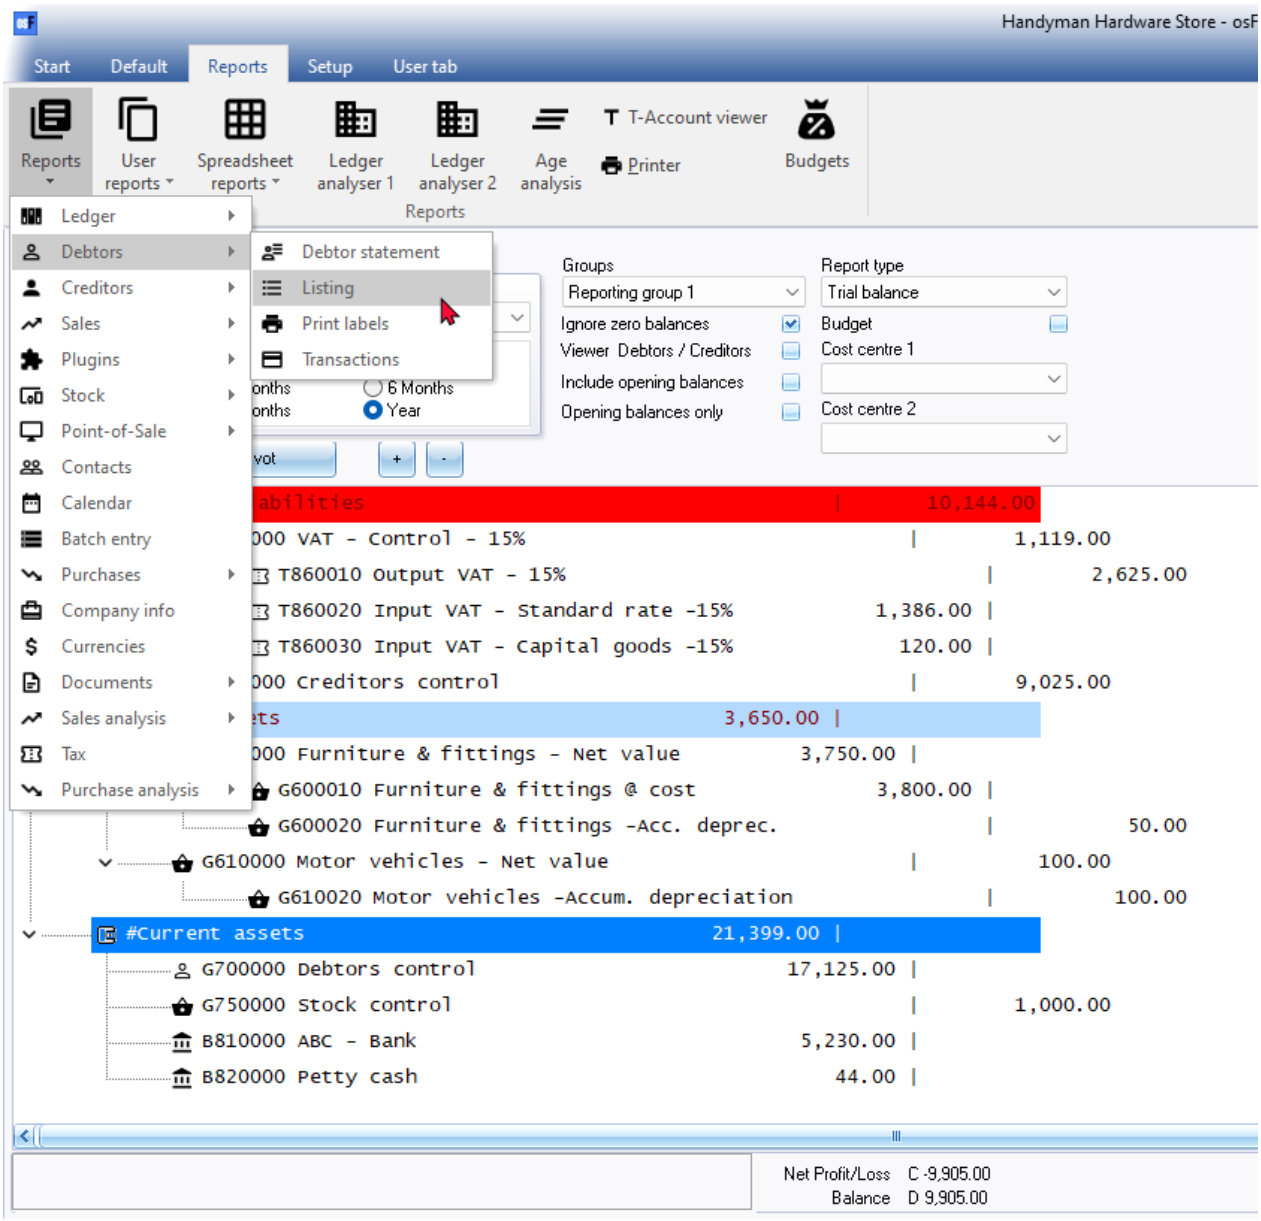
1. Start by creating a copy of the "*Material*" theme folder located in the "*.../bin/themes*" folder of your osFinancials5/TurboCASH5 installation directory.
2. Rename the copied folder to your desired theme name, replacing "*Material - Copy*" with your chosen name.
3. Within your new theme folder, delete the eight files responsible for loading the images (icons). These files will be recreated during the final step of the icon customization process (See step 6).
4. Use a program editor like Notepad++ to open the files in your new theme folder. Look for the hexadecimal colour code "#000000" (representing black) and replace it with the hexadecimal colour code of your choice. This will update the colour of the icons to your preferred colour.
5. Launch osFinancials5/TurboCASH5 and navigate to the Setup ribbon. Select your newly created theme from the Theme menu.
6. Lastly, it is important to create a new image strip loader. Go to Tools → Customise language on the Setup ribbon and follow the instructions to create the new image strip loader.

By following these steps, you can enjoy a customised set of coloured icons in the osFinancials5/TurboCASH5 interface, reflecting your chosen theme and colour scheme.

Process to customize the colour of icons - Detailed steps

The process is as follows:

The black colour icons is displayed in the osFinancials5/TurboCASH5 interface when the default "*Material*" theme is selected.



Close osFinancials5/TurboCASH5.

In your File explorer, navigate to the "*.../bin/themes*" folder of your osFinancials5/TurboCASH5 installation directory.

Select the "*Material*" theme and create a copy of the folder. It should create a new folder "*Material - Copy*"

folder.

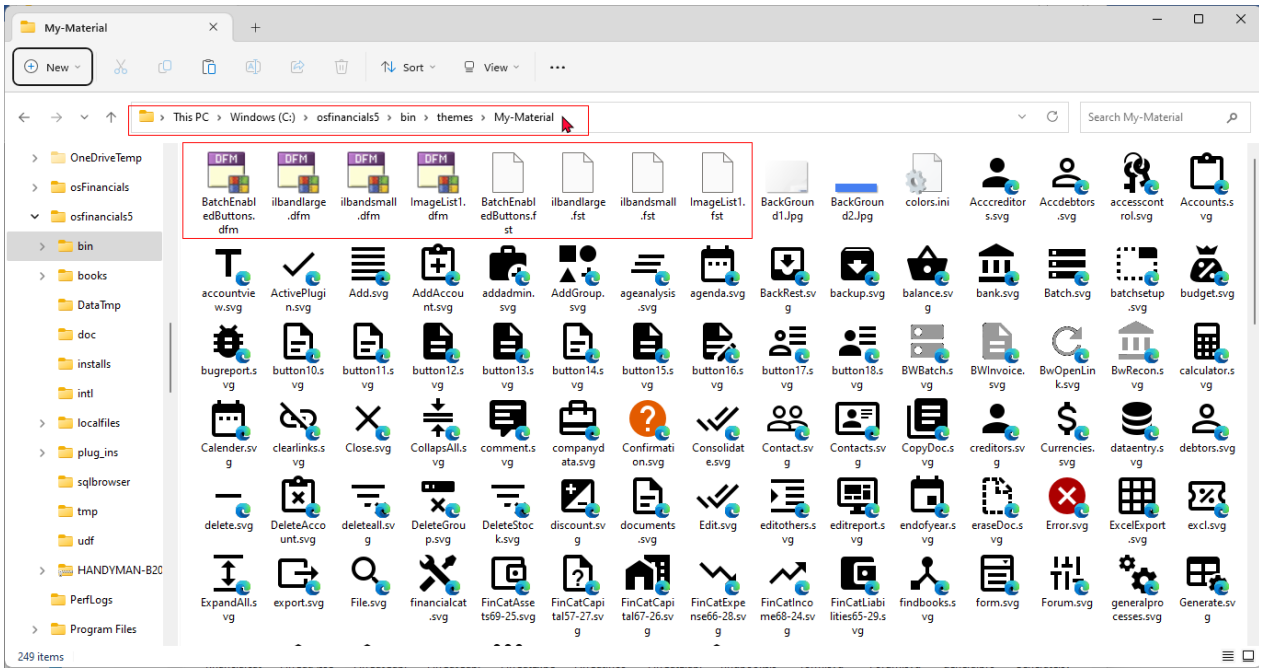
Rename that folder to for your own name., e.g. "*My-Material*".

In your new theme folder, you may wish to change the view settings to View → Medium icons and set the Sort by → Type file type options

Delete the following eight (8) files (4 *.dfm file types: BatchEnabledButtons.dfm, ilbandlarge.dfm, ilbandsmall.dfm, ImageList1.dfm, and 4 *.fst file types: BatchEnabledButtons.fst, ilbandlarge.fst, ilbandsmall.fst, ImageList1.fst). Note in the "Colors.ini" file.

> "For fast loading images osF uses the .fst files.
> If you want to edit the icons remove these files so the icons are loaded from the files again."

Once you have completed changes to your icons, you will need to create an image strip to recreate the deleted files.



Open your Notepad editor - In this example Notepad++ is selected to replace the black colour ("#000000 Color Hex Black") hook in all 227 icon files to the colour of your choice in a few seconds. You may open the "*Colors.ini*" file in your theme folder as in this example with Notepad++

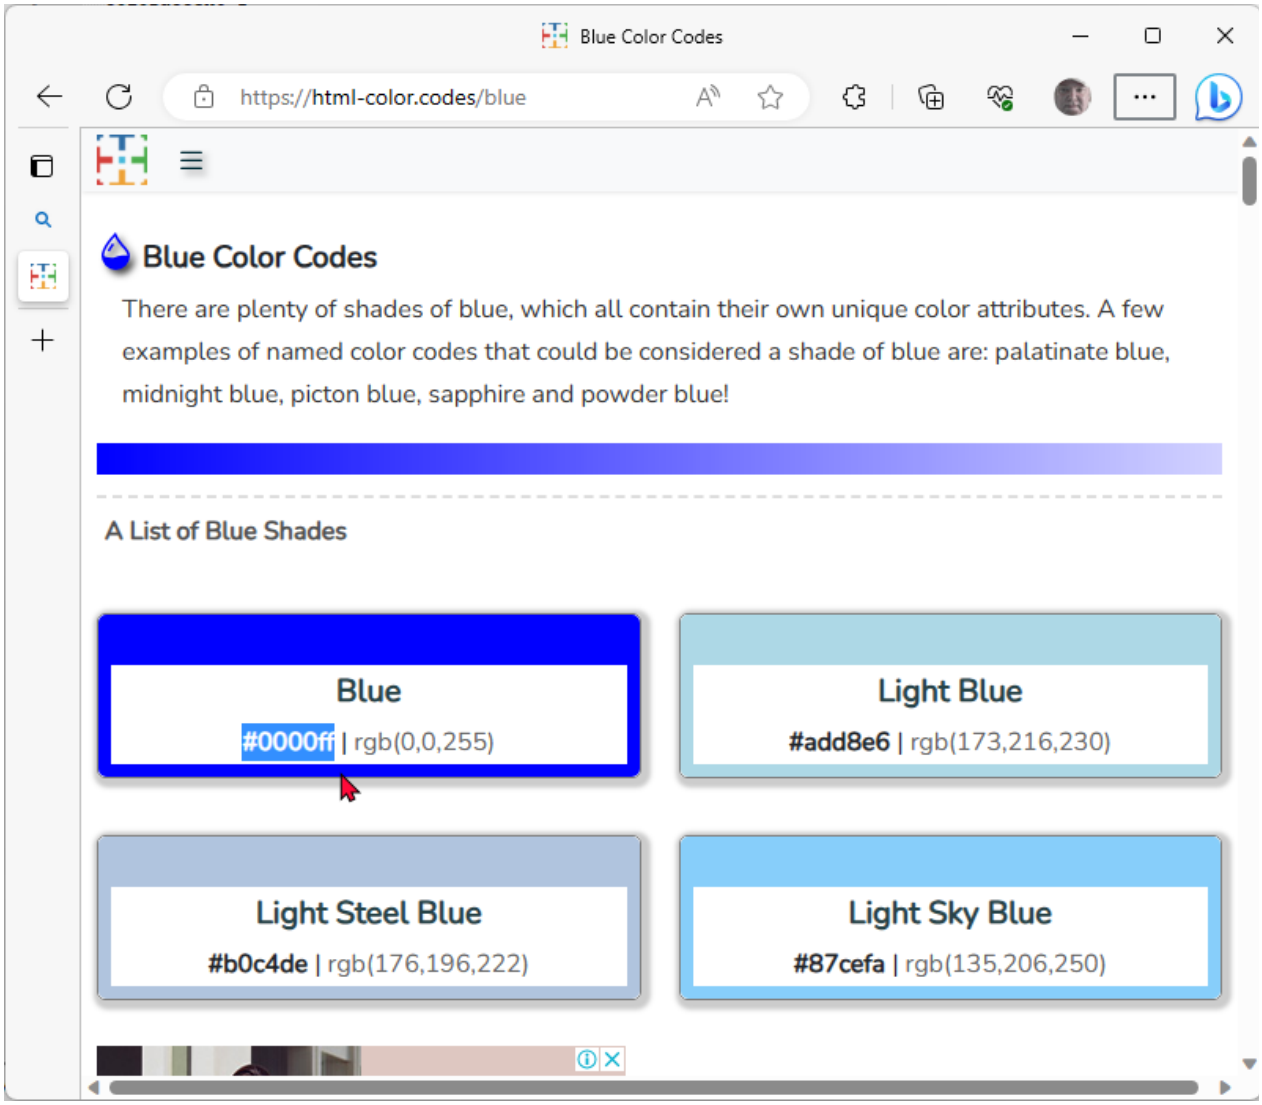
In Notepad++, go to "Search -> Replace"

Click on the Find in Files tab

Select your the of your new theme folder (e.g. "*My-Material*").

In the "*Find what :*" field enter the hex value for black colour, i.e. "#000000"

In the "*Replace with :*" field enter the hex value for the colour of your choice. In this example, the hex value for blue colour, i.e. "#0000ff" is selected.



Blue Color Codes
https://html-color.codes/blue
Blue Color Codes
There are plenty of shades of blue, which all contain their own unique color attributes. A few examples of named color codes that could be considered a shade of blue are: palatinate blue, midnight blue, picton blue, sapphire and powder blue!

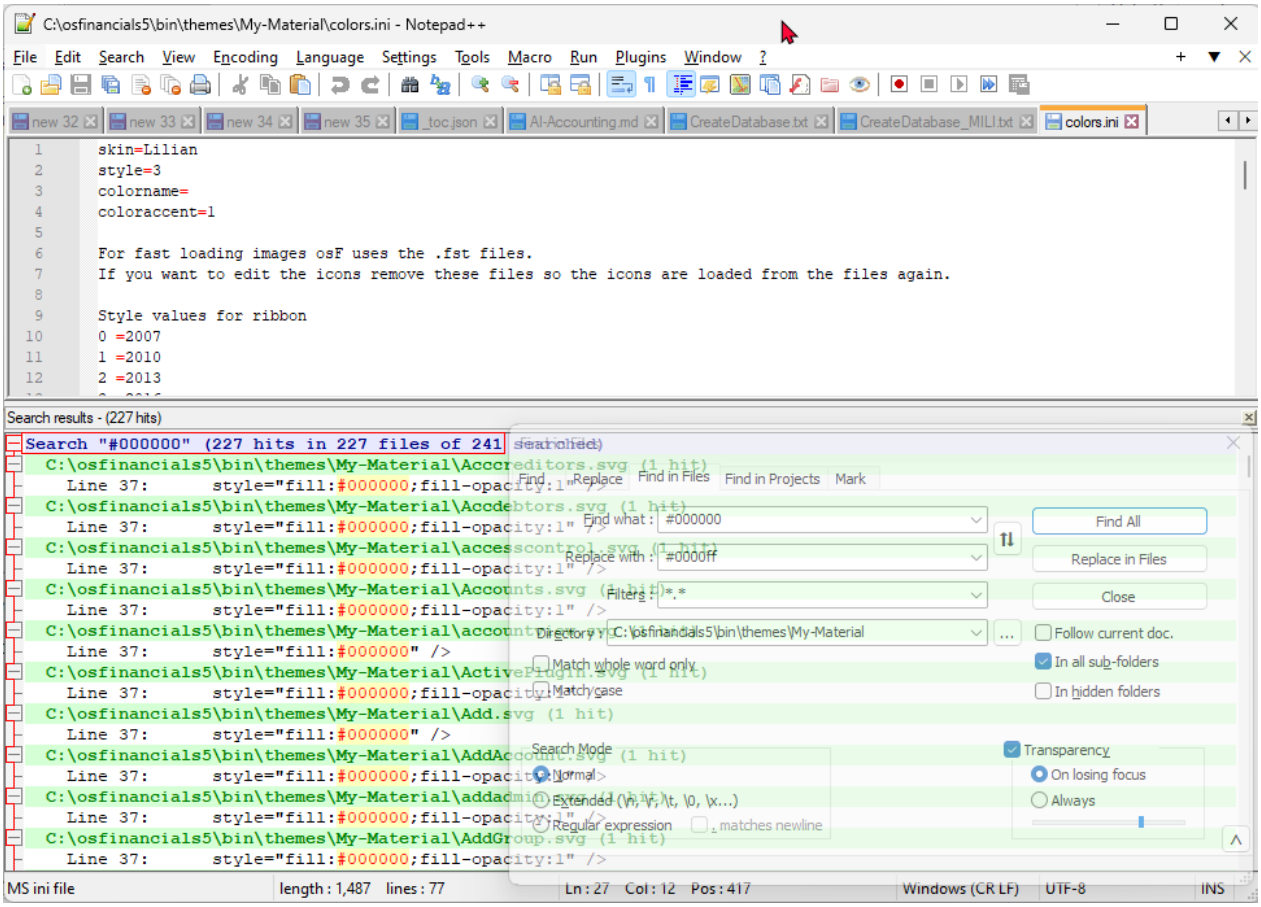
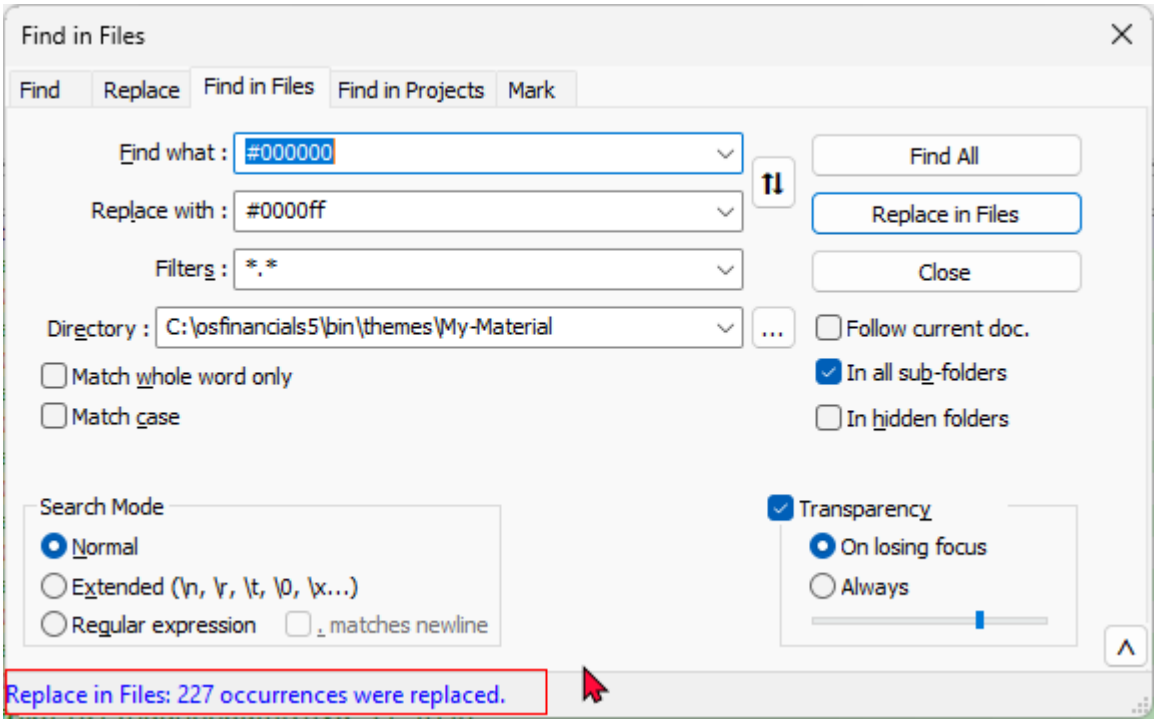
Always

Click on the Find All button to check the number of files to be changed. This should list 227 icon files with the *.svg file extension.

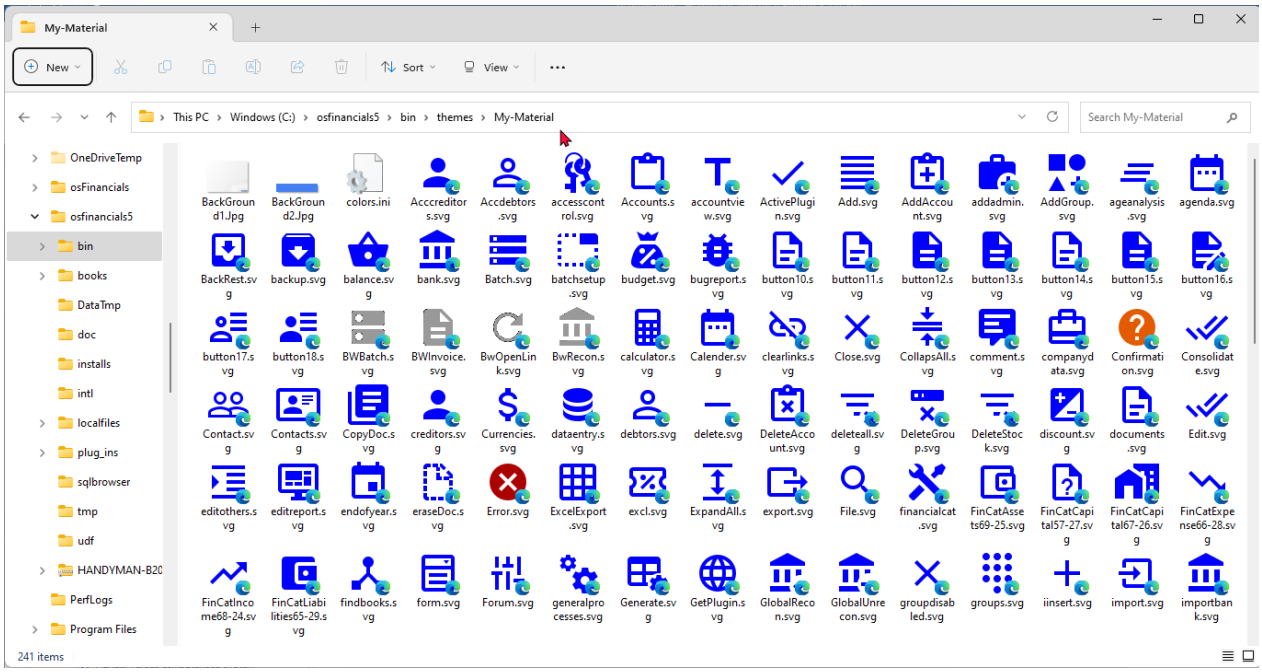


Click on the Replace in Files button. This will replace all of the 227 icon files in one shot.



When you open your new theme folder in your file explorer, all the of the 227 icon files will be displayed in

the new colour as your chosen colour. In this example, blue was used.



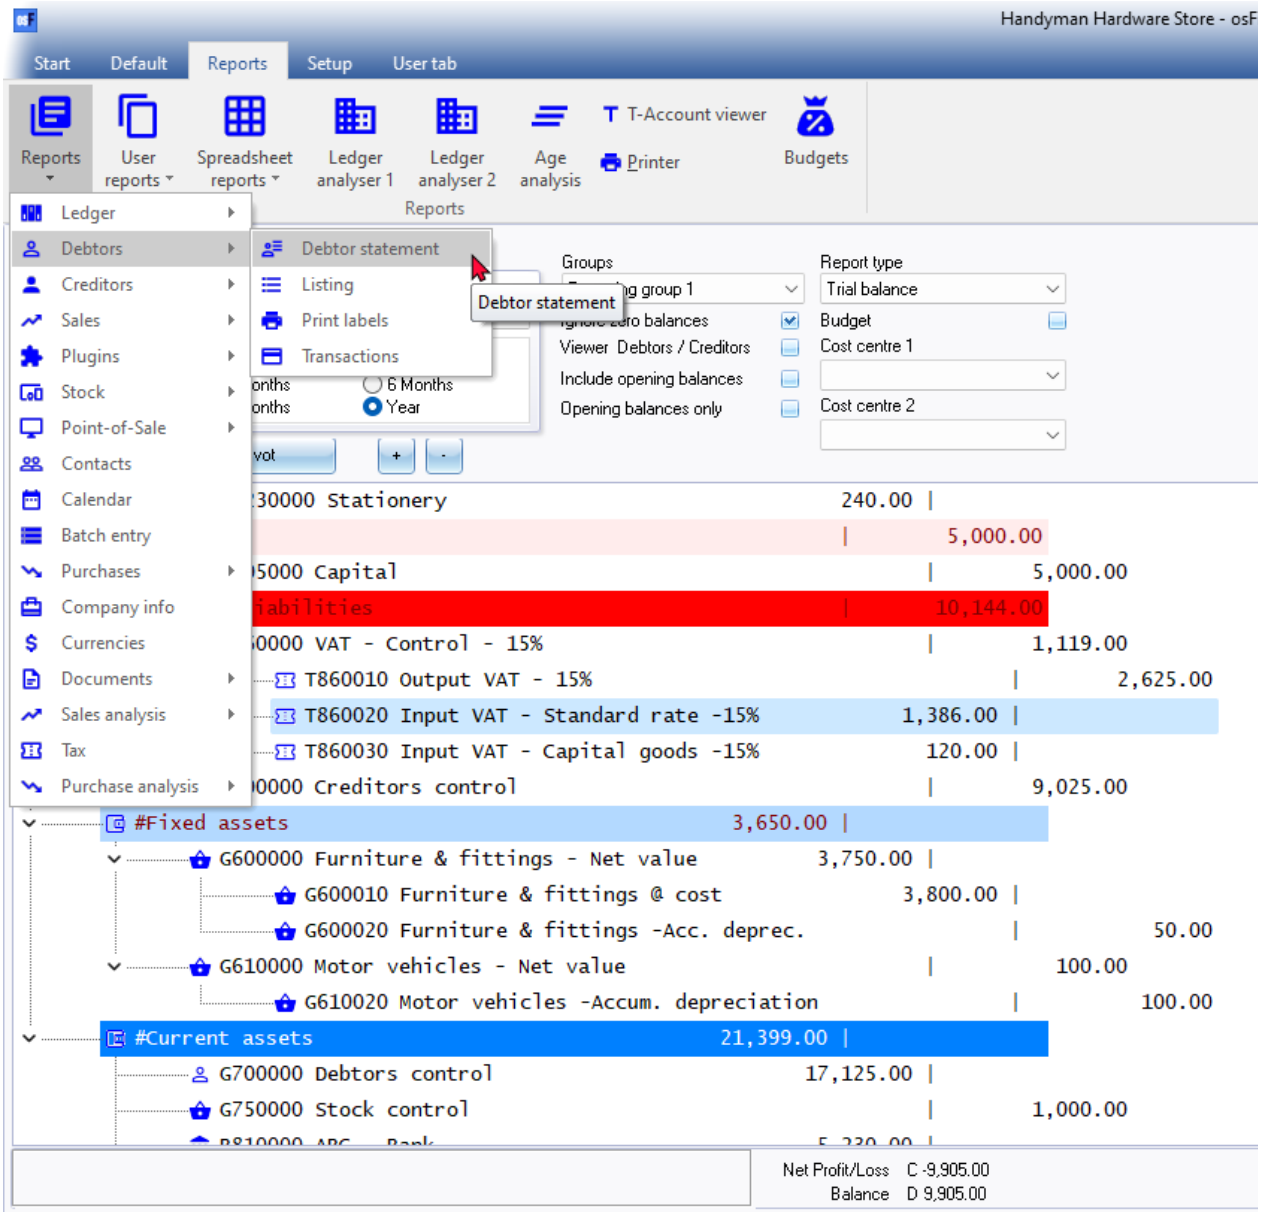
Please note that certain icons in the osFinancials interface will remain unchanged to ensure their visibility and distinctiveness. These include:

1. *Inactive icons:*
   - *BWBatch.svg*
   - *BWInvoice.svg*
   - *NwOpenLink.svg*
   - *BwRecon.svg*
2. *Message dialog icons:*
   - *Confirmation.svg*
   - *Error.svg*
   - *No.svg*
   - *Warning.svg*
   - *yes.svg*
   - *yestoall.svg*
3. *TCASHlogo.svg*

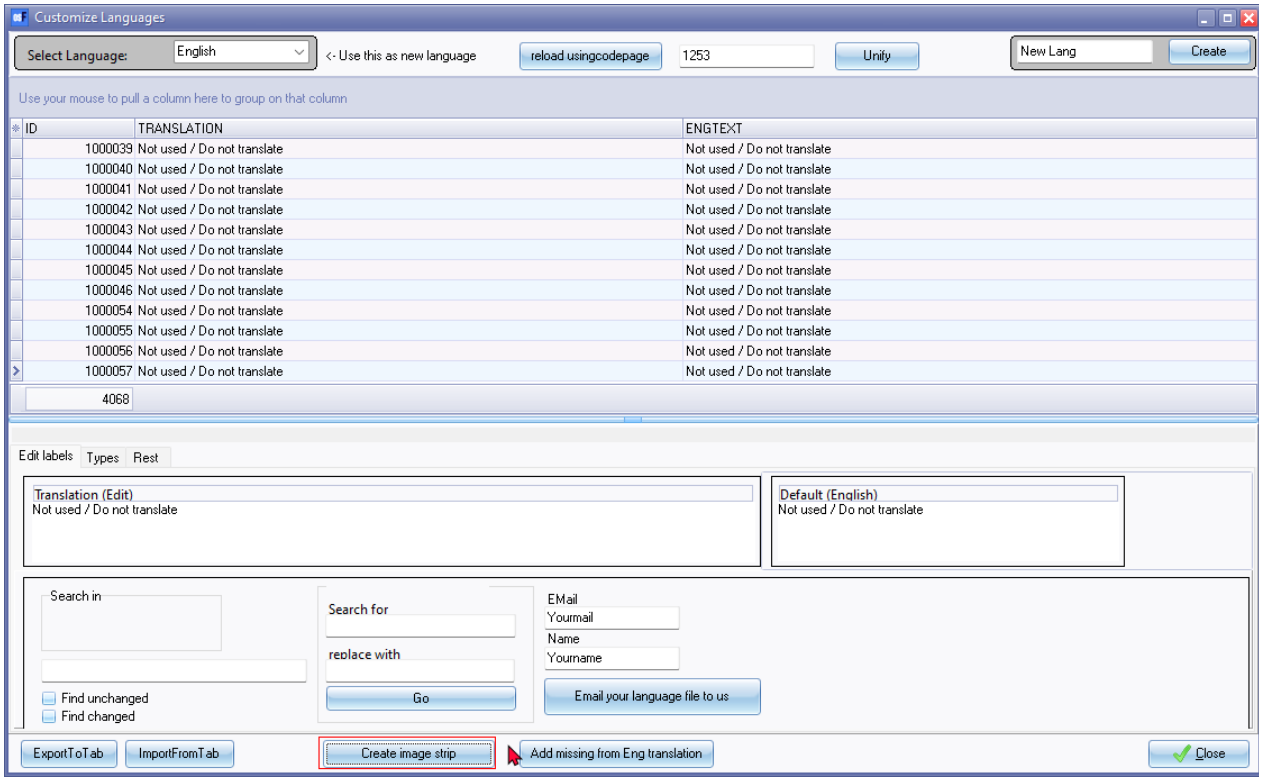
These icons are intentionally retained in their original form and colour to maintain their specific purpose and recognition within the osFinancials5/TurboCASH5 interface.

Once the themes is changed, and displays the correct colour for your liking, you may start osFinancials5 and select your new theme for example"*My-Material*" in the Theme menu on the Setup ribbon.

Your new colour icons should display at this stage, in the osFinancials interface.



The last important step to do, is to create an image strip. To do this, select Tools → Customise language on the Setup ribbon and click on the Create image strip button.



A message will be displayed:

> "Creating new image strip loader"

Click OK.

Close the "*Customize Languages*" screen.

After completing these steps, the eight deleted files (4 *.dfm file types: BatchEnabledButtons.dfm, ilbandlarge.dfm, ilbandsmall.dfm, ImageList1.dfm, and 4 *.fst file types: BatchEnabledButtons.fst, ilbandlarge.fst, ilbandsmall.fst, ImageList1.fst) will be recreated.

Languages

Multi-Language accounts - Manual - Shop - Licence : Once-off -

This plugin makes it possible to translate the ledger and group names in multiple languages. It is already possible to choose different languages for the interface (the buttons). But this plugin makes it possible to do the accounting in different languages. Per user you can select a language, so the user can account in his/her own language. The set of books can be viewed in different languages, therefore it is possible an employee enters information into an English Set of Books and a bookkeeper, auditor, etc. can see the set of books in a set language, e.g. Afrikaans, Dutch, etc.

To display the interface of osFinancials5/TurboCASH5 in the default "English" language, select the "HANDYMAN" Set of Books and click on the Open button.

Should you have selected the incorrect language when installing osFinancials5/TurboCASH5, you may select the language applicable to your country.

The osFinancials5/TurboCASH5 interface will display in the selected language in Switch language (Start ribbon). Depending on the Set of Books template downloaded when Creating a Set of Books (Creation wizard); or downloaded from the Product information → Technical information → Databases page on the osFinancials website); osFinancials5/TurboCASH5 will automatically display the interface language of the language file which have already been linked to each Set of Books. (Setup → Access control).

When opening a Set of Books, it will automatically load the language file. All screens, reports and layout files are translatable via the language files.

The following options are available to change the language:

1. Set the global language: Switch language (Start ribbon) and select the correct language for your country, state, province, etc.
2. Set the language for a specific Set of Books: Setup → Access control - System language field on the Standard security tab (Setup ribbon).
3. Languages may also be customised in Tools → Customise language (Setup ribbon).

You may customise any language for your own personal or industry specific needs.

Switch language

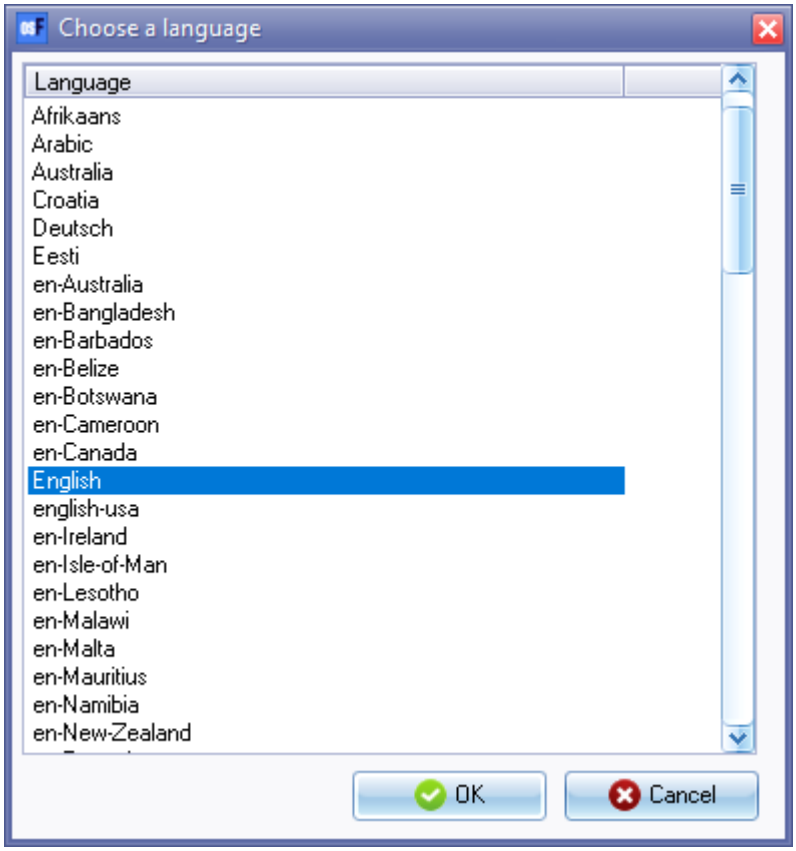
When you install and start osFinancials5/TurboCASH5 for the first time, the select a Language window is displayed on which you may select the language and country. If you have selected the incorrect language / country, when launching osFinancials5/TurboCASH5 for the first time, you may change it.

English - This is the driver language file.

You may customise any language for your own personal or industry specific needs.

To choose a language:

1. On the Start ribbon, select Switch language. The "*Choose a language*" screen is displayed:



2. Select the Language of your choice.

3. Click on the OK button. A progress indicator at the bottom of the screen will display the progress. When the process is completed, the ribbons and the screens will be displayed in the selected language.

Users in Access control can have their language set in the "System lang" field. Upon logging into osFinancials5/TurboCASH5, the user interface and reports will be displayed in the language assigned to that user.

To access the Customise language option:

1. *Right-click in any area of the list of languages (on the "Choose a language" screen).*
2. *Click on the Customize context menu option. This will directly access the selected (highlighted) language on the "Customize Languages" screen (Tools → Customise language menu on the Setup ribbon).*

Customise language

---

osFinancials5/TurboCASH5 offers the flexibility to customise the language used within the software to cater

to specific industries and regional requirements. This customisation allows businesses to tailor the terminologies and labels used in osFinancials5/TurboCASH5 to match their industry jargon, corporate preferences, and local language requirements.

What are the options to customise languages?

Here's how you can customise the language in osFinancials5/TurboCASH5:

1. Editing labels and terminologies: osFinancials5/TurboCASH5 allows you to modify the labels and terminologies used for various fields and functions within osFinancials5/TurboCASH5. For example, you can change the label "*Stock*" to "*Inventory*" if that's the term commonly used in your industry. Similarly, you can edit labels for accounts, transaction types, business processes, and more to align with your industry's specific terms.
2. Customising types: In addition to editing labels, osFinancials5/TurboCASH5 also allows you to customise field types to suit your industry's needs. You may have specific data requirements relevant to your industry that can be modified to streamline data entry and reporting. For example, the default document types in osFinancials5/TurboCASH5 is invoice, credit note and quote for sales documents and purchase, supplier return and order for purchase documents. For example, you can change the Document type for "*Quote*" to "*Estimates*" if that's the term commonly used in your country and industry.
3. Localising for country-specific languages: osFinancials supports various languages to cater to users from different regions. You can choose the language that best matches your country's official language or the language preferred by your employees. This localisation enhances user experience and ensures clear communication within osFinancials5/TurboCASH5.
4. Tax regime customisation: Tax regimes can vary significantly between countries and industries. In osFinancials5/TurboCASH5, you can configure tax settings based on your specific tax requirements, such as Value Added Tax (VAT), Goods and Services Tax (GST), Sales Tax rates, tax codes, tax reporting, and compliance rules.

These changes will customise the user interface elements like buttons, menus, and navigation. Adjusting the interface layout to match your industry's workflow can improve productivity and reduce the learning curve for new users. These changes will also be reflected in the reports and the translatable document layout files.

By customizing the language and settings in osFinancials5/TurboCASH5, businesses can enhance usability, accuracy, and compliance with industry-specific requirements. This customization empowers companies to effectively manage financial data and gain valuable insights for better decision-making and financial control.

What is affected by customising the language?

When you customise the language in osFinancials5/TurboCASH5, the changes you make to labels, field types, and document types will be reflected not only in the user interface but also in the reports and translatable document layout files. This ensures consistency throughout the entire system, providing a seamless experience for users and stakeholders.

Let's explore how these changes are reflected:

1. User interface: The customised language will be visible in the user interface of osFinancials5/TurboCASH5, including menus, buttons, input fields, and other elements. The modified labels and field types will appear according to your preferences, making it easier for users to interact with the software.

2. Reports: Any customisations made to the language, including changes to labels and field types, will be reflected in the reports generated by osFinancials5/TurboCASH5. This means that report headers, column names, and other relevant information will be displayed in the customised language, making the reports more user-friendly and relevant to your business.

3. Translatable document layout files: In osFinancials5/TurboCASH5, document layout files such as the "*Layout file, Document layout file", and the "Document layout (15-codes) file*" are designed to be versatile and support various types of documents such as invoices, credit notes, quotes, purchases, supplier returns, orders. Changing the document types in Tools → Customise language - Types tab on the Setup ribbon, will print as the Document name when these documents are printed. For example, when you make changes to document types, such as renaming "*Quotes*" to "*Estimates*," these changes will be automatically reflected in the respective document layouts.

   The the customised language will be visible in the these mentioned documents types, including the "*Delivery notes"* and "*Point-of-Sale layout files*". These layout files provide the flexibility to customise the appearance and content of documents such as invoices, credit notes, quotes, purchases, supplier returns, orders, delivery notes, and more. osFinancials5/TurboCASH5 allows you to customise the layout of documents such as invoices, quotes, purchase orders, etc. This ensures that the documents generated by osFinancials5/TurboCASH5 use the language you have customized, improving consistency and professionalism in your business communications.

By having consistent language across the entire osFinancials system, you create a more cohesive and efficient financial management experience. Customising the language to align with your industry's terminology and business practices allows your team to work seamlessly with the software, leading to improved productivity and accuracy in financial transactions and reporting.

How to set your customised language file as default?

In osFinancials5/TurboCASH5, you have the option to set or change the default language or your own customized language for the Set of Books through the Switch language option on the Start ribbon. This enables you to have your preferred language automatically loaded whenever you open the Set of Books. After selecting the desired language, save the changes. osFinancials5/TurboCASH5 will now use the selected language as the default whenever you open the Set of Books.

By setting your preferred language or customising the language settings through the Switch language option on the Start ribbon, osFinancials5/TurboCASH5 will display all labels, terminologies, and interface elements, reports and document layout files in the selected language whenever you access your Set of Books. This makes it more convenient and user-friendly, especially when you have customized the language to suit your industry or regional requirements.

How to set language files as default for users?

Users in Access control (Setup → Access control menu on the Setup ribbon) can have their language set in the "*System lang*" field. Upon logging into osFinancials5/TurboCASH5, the user interface and reports will be displayed in the language assigned to that user.

Important notes on Customising language files

The language files in osFinancials5/TurboCASH5 are stored in the **.dfm* file type, and they can be found in the "*...\Bin\Languages*" directory or another directory where osFinancials5/TurboCASH5 is installed. When you first launch osFinancials5/TurboCASH5 after installation, it will automatically display the default language based on the country and language of the Set of Books you selected to open.

However, if you want to use a different language, you can switch to any of the available languages by going to Switch language in the Start ribbon. This allows you to choose from a list of supported languages, including English for various countries, Afrikaans, and others.

When editing language files, it is essential to exercise caution to avoid modifying existing labels in the master language ("English.dfm" file) or an existing layout file. Instead, create a new name for the language file you wish to edit. This ensures that the original language files remain intact, and your customizations are separate and can be easily managed.

If you create or edit a language file with your customisations, it is advisable to save a copy of the language file elsewhere on your system. This precautionary step ensures that you have a backup in case you install an update of osFinancials5/TurboCASH5, uninstall osFinancials5/TurboCASH5 or install new versions that

might not include your customised language file.

Overall, osFinancials provides a straightforward way to switch between different languages and allows users to customize the language settings to match their preferences or regional requirements. By using this feature, businesses can operate efficiently and effectively in their preferred language, making the software more user-friendly and accessible.

Structure of language labels

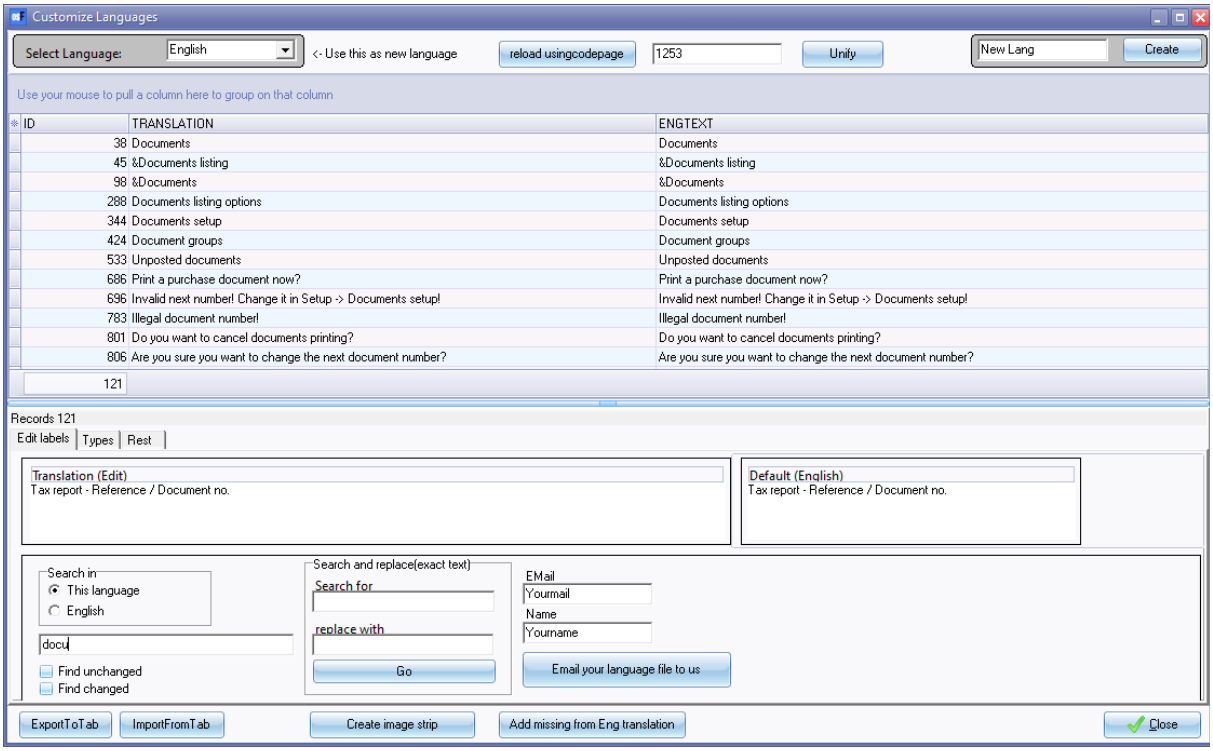
The following series of LabelID's have been reserved for the following:

- 901000 - Plugins - Subscriptions
- 902000 - Plugins - Price agreements
- 903000 - Multimedia
- 906000 - Reportman reports and document layout files
- 1000000 - Welcome screen (discontinued)

Create, Edit language files

To create, Edit or Translate Language Labels or Descriptions:

1. On the Setup ribbon, select Tools → Customise language.



2. The options are as follows:

   a) Language - You may select any of the available languages from the drop-down list. The selected language will be displayed on the list.

   b) Create - If you click on the Create button, new language will be displayed in this field. You may then enter the name for your own language.

   c) Reload using code page - see http://en.wikipedia.org/wiki/Code_page for more information. Some codes that need to be entered for languages, are:

      § 720 – Arabic

      § 737 – Greek

      § 775 – Estonian, Lithuanian and Latvian

      § 855 – Cyrillic

      § 857 – Turkish

      § 860 – Portuguese

      § 861 – Icelandic

      § 862 – Hebrew

- § 863 – French (Quebec French)
- § 865 – Danish/Norwegian
- § 866 – Cyrillic
- § 869 – Greek
- § 874 – Thai

d) Unify - To be advised.

e) ID - The number records of the descriptions that is used by the osFinancials5/TurboCASH5. (This is the label's record number in the Language table.)

f) Message/text - Displays the descriptions of the selected language labels.

g) Default (English) - Displays the original default English. This is the master file, and it is recommended that it should not be amended in any way.

h) Translation (Edit) - You may type in or edit your own translation in this field.

i) Search in - Select to search in the current language or in the English language. You then need to type the word or phrase to search for. You may also further refine your search, to find unchanged words or phrases, to view the unedited labels only.

The number of records matching your search text will be displayed.

You may also click on the Types tab to view the translations of the selected message text (label) in other available languages.

j) Search and Replace - Enter a word or phrase to find. You then need to enter a word or phrase to edit (change the label or message text), and click on the Go button to replace all the words or phrases in the language file.

k) E-mail your language file to us - Once finished creating or editing your language file, click to send the language file to the osFinancials5/TurboCASH5 developers. This will automatically launch your system's default e-mail program and attach your language file in the e-mail message. The developers will then add your language file in the next osFinancials5/TurboCASH5 release.

l) Create image strip - This will create a new image strip for fast loading of icons. For fast

loading images, osFinancials5/TurboCASH5 uses the *.fst (i.e. "*BatchEnabledButtons.fst, ilbandlarge.fst, ilbandsmall.fst*" and "*ImageList1.fst*") files. If you want to edit the icons in a specific theme, remove these files. After editing the icons, you need to click on the Create image strip button, so the icons are loaded from the files again.

m) Add missing from Eng translation - If your language file has less records than the number of records in the English language files, (for example if the English language file has 4061 records; and the language file you are editing or translating has less records than 4071); click on this button to add the missing English labels to your translation file.

3. Click on the Types tab to edit the translations of the Descriptions in the Types table. You may need to edit the following types:

a) Account types (i.e. General ledger, Bank, Tax, Debtor and Creditor).

b) Document types (i.e. Invoice, Credit notes, Purchases, Supplier returns, Quotes and Orders) and Adjustments.

c) Statement and Remittance.

d) Groups names / descriptions (Setup → Groups) (i.e. Account group 1 / 2, Debtor group 1 / 2, Creditor group 1 / 2, Stock group 1 / 2, Document group 1 / 2, Payment type group, Salesperson group, Projects group, Cost Centre 1/ 2 and Languages for Stock.

e) Colour descriptions -

These types have been removed from the Sets of Books in the osFinancials4 Build 1093 installation.

This is not applicable to TurboCASH4 and osFinancials5 series (i.e. Classic, Brilliant, Pastel, Keywest, NewSA and Windows Default).

f) Paper types - Pre-printed, Plain A4, Plain eyeline, Forty and Till slip.

g) User report row types -

This is not applicable to the osFinancials4, osFinancials5 or TurboCASH5 or TurboCASH5.2 (i.e. Account, Blank, Column line, Group 1, Group 1 Detail, Group 2, Group 2 Detail, Single line, Text, Budget, Formula, Last year and This year).

h) Stock - Stock item, Comment, Serial number and Financial entry.

4. Click on the Rest tab to change the Description of Zero account. This is usually the "*Empty*" option in

Lookups, lists, etc. displaying in osFinancials5/TurboCASH5. It is also used for the Groups empty account. This is usually the Unallocated option in Lookups, lists, etc. displaying in osFinancials5/TurboCASH5.

5. Once finished, click on the Close button.

It is strongly recommended that the label, which is edited or entered, is not longer than the "Default English" labels' length. If your label is too long, it may cause some options in the program not to function or display properly. Do not use the Delete button to remove any of the existing edited labels.

E-Mail message file to be included in next release

To E-mail your language file to us

1. Enter your E-mail address and Name on the "*Customize language*" screen.
2. Click on the Email your language file to us button. Your system's default email program will be launched.
3. Check that it is the correct Language file. You may need to enter any content in the message field, if necessary.
4. Click on the Send button of your E-Mail program.

Edit Language files externally

You may export the Language file and edit it in a spreadsheet. Tab Delimited Export and Import -

To create an export file, click on the ExportFromTab button.

When saving the edited file in OpenOffice, select the options save as text and set txt delimiter to empty.

Once the file is saved, you may click on the ImportFromTab button to import the edited text.

Created with the Standard Edition of HelpNDoc: Revolutionize Your CHM Help File Output with HelpNDoc

Customising terminology for VAT/GST/Sales tax

The language associated with each Set of Books determines the specific tax labels used to cater to different countries or tax regulations. For instance, en-UK and en-South Africa use terminology related to VAT, while in South Africa, Afrikaans refers to BTW. Australia and New Zealand use GST-related

terminology, whereas the United States and Canada employ Sales tax terms.

These tax-related labels are visible within the osFinancials5/TurboCASH5 interface when you access a Set of Books. They are also present in reports and document layout files generated by the system.

To adapt the tax terminology to suit your country, jurisdiction, and industry, you can customize and modify the tax-related labels via the *"Customize Languages*" screen. This screen is accessible through the Tools → Customise Language menu on the Setup ribbon.

You may also find it helpful to utilize the search options available. This enables you to search for a specific label either in the currently active language file you're editing or in the default "*English*" language file. This assists you in identifying and modifying specific text to better suit your requirements.

For your convenience, the default "*English*" language file contains a total of 82 tax-related labels, which are listed in the table below:

LabelID	*Description for TAX*
33	*Tax account*
63	*&Tax*
202	*Tax reference*

906258 Supplier return No Tax (15 code)

906259 Order No Tax (15 code)

906265 Tax report

906280 Ledger and tax

906339 Tax and company registration numbers

906550 Tax report - Reference / Document no.

906553 Tax list creditor with tax id

906583 Tax codes - Tax rates

906589 NO-TAX Layout file

906590 NO-TAX Document layout

906591 NO-TAX Document layout (15-code)

If '%s ' is included in a label description in the language file, please refrain from translating this. This placeholder is reserved for specific data that will be dynamically populated within the label. For example, 'Cur : %s Quote : %s Order : %s Exp : %s' signifies that the current, quote, order, and expected quantities will be inserted and displayed within the program.

If you come across "<@APPNAME@>" within a label description, be aware that it will be replaced with "osFinancials" in the program's interface. In your customized language file, which you are currently editing, you have the option to substitute "<@APPNAME@>" with "osFinancials" to accurately reflect the application's name within the interface.

Created with the Standard Edition of HelpNDoc: Maximize Your Documentation Efficiency with a Help Authoring Tool

Customising document type terminology - Invoice

The language associated with each Set of Books determines the specific labels used to cater to different countries or tax regulations. In most languages, the term *'Invoice'* or its equivalent will be displayed. For instance, en-UK and en-South Africa use terminology related to *'Invoice*,' while in South Africa, Afrikaans refers to *'Faktuur'* or *'Fakture'*.

These invoice-related labels are visible within the osFinancials5/TurboCASH5 interface when you access a Set of Books. They are also present in reports and document layout files generated by the system.

To adapt the invoice terminology to suit your country, jurisdiction, and industry, you can customize and modify the invoice-related labels via the "*Customize Languages*" screen. This screen is accessible through the Tools → Customise Language menu on the Setup ribbon.

You may also find it helpful to utilize the search options available. This enables you to search for a specific label either in the currently active language file you're editing or in the default "*English*" language file. This assists you in identifying and modifying specific text to better suit your requirements.

Document type names for layout files that support all document types

osFinancials5/TurboCASH5 supports a single document layout file which utilizes translatable expressions facilitated by language file settings. They dynamically display the appropriate document type names such as "Invoice," "Credit note," "Quote," "Purchase," "Supplier return," or "Order" based on the specific document being printed. The document types are sourced from the "TYPES.SDESCRIPTION" expressions within the layout.

To change the document type names, you need to change the descriptions on the Types tab of the "Customize Languages" screen (accessible from the Tools → Customise Language menu on the Setup ribbon).

Preview of available document layout file samples that support all document types

To assist in choosing a layout file for your needs, you may preview some screenshots of document layout files:

1. *Translatable Document Layout Files with Dynamic Document Types*
    - *"Layout File"*
    - *"Document Layout"*
    - *"Document Layout (15 Code)"*
2. *Translatable Document Layout Files with Dynamic Document Types without VAT/GST/Sales Tax*
    - *"NO-TAX Layout File"*
    - *"NO-TAX Document Layout"*
    - *"NO-TAX Document Layout (15 code)"*

If you are not registered for VAT/GST/Sales tax or have chosen not to opt for voluntary registration, these layout files exclude VAT/GST/Sales tax information. They also dynamically display the appropriate document type names based on the specific type of document being printed.

For your convenience, the default "*English*" language file contains a total of 110 invoice-related labels, which are listed in the table below:

LabelID	*Description for Invoice*
26	*Repeating &invoices*
39	*Delete invoices*
48	*&Invoices*
60	*&Invoices*

If '%s ' is included in a label description in the language file, please refrain from translating this. This placeholder is reserved for specific data that will be dynamically populated within the label. For example, 'Cur : %s Quote : %s Order : %s Exp : %s' signifies that the current, quote, order, and expected quantities will be inserted and displayed within the program.

If you come across "<@APPNAME@>" within a label description, be aware that it will be replaced with "osFinancials" in the program's interface. In your customized language file, which you are currently editing, you have the option to substitute "<@APPNAME@>" with "osFinancials" to accurately reflect the application's name within the interface.

Customising document type terminology - Credit note

The language associated with each Set of Books determines the specific labels used to cater to different countries or tax regulations. In most languages, the term *'Credit note'* or its equivalent will be displayed. For instance, en-UK and en-South Africa use terminology related to *'Credit note'*, while in South Africa, Afrikaans refers to *'Kredietnota'* or *'Kredietnotas'*.

These credit note-related labels are visible within the osFinancials5/TurboCASH5 interface when you access a Set of Books. They are also present in reports and document layout files generated by the system.

To adapt the credit note terminology to suit your country, jurisdiction, and industry, you can customize and modify the credit note-related labels via the "Customize Languages" screen. This screen is accessible through the Tools → Customise Language menu on the Setup ribbon.

You may also find it helpful to utilize the search options available. This enables you to search for a specific label either in the currently active language file you're editing or in the default "*English*" language file. This assists you in identifying and modifying specific text to better suit your requirements.

Document type names for layout files that support all document types

osFinancials5/TurboCASH5 supports a single document layout file which utilizes translatable expressions facilitated by language file settings. They dynamically display the appropriate document type names such as "Invoice," "Credit note," "Quote," "Purchase," "Supplier return," or "Order" based on the specific document being printed. The document types are sourced from the "TYPES.SDESCRIPTION" expressions within the layout.

To change the document type names, you need to change the descriptions on the Types tab of the "Customize Languages" screen (accessible from the Tools → Customise Language menu on the Setup ribbon).

Preview of available document layout file samples that support all document types

To assist in choosing a layout file for your needs, you may preview some screenshots of document layout files:

1. *Translatable Document Layout Files with Dynamic Document Types*
    - *"Layout File"*
    - *"Document Layout"*
    - *"Document Layout (15 Code)"*
2. *Translatable Document Layout Files with Dynamic Document Types without VAT/GST/Sales Tax*
    - *"NO-TAX Layout File"*

- *"NO-TAX Document Layout"*
- *"NO-TAX Document Layout (15 code)"*

If you are not registered for VAT/GST/Sales tax or have chosen not to opt for voluntary registration, these layout files exclude VAT/GST/Sales tax information. They also dynamically display the appropriate document type names based on the specific type of document being printed.

For your convenience, the default "*English*" language file contains a total of 52 credit note-related labels, which are listed in the table below:

LabelID	*Description for Credit note*

Customising document type terminology - Quote

The language associated with each Set of Books determines the specific labels used to cater to different countries or tax regulations. In most languages, the term *'Quote'* or its equivalent will be displayed. For instance, en-UK and en-South Africa use terminology related to *'Quote'*, while in South Africa, Afrikaans refers to *'Kwotasie'* or *'Kwotasies'*. The United States and Canada employ the term *'Estimates'*.

These quote-related labels are visible within the osFinancials5/TurboCASH5 interface when you access a

Set of Books. They are also present in reports and document layout files generated by the system.

To adapt the quote terminology to suit your country, jurisdiction, and industry, you can customize and modify the quote-related labels via the "Customize Languages" screen. This screen is accessible through the Tools → Customise Language menu on the Setup ribbon.

You may also find it helpful to utilize the search options available. This enables you to search for a specific label either in the currently active language file you're editing or in the default "*English*" language file. This assists you in identifying and modifying specific text to better suit your requirements.

Document type names for layout files that support all document types

osFinancials5/TurboCASH5 supports a single document layout file which utilizes translatable expressions facilitated by language file settings. They dynamically display the appropriate document type names such as "Invoice," "Credit note," "Quote," "Purchase," "Supplier return," or "Order" based on the specific document being printed. The document types are sourced from the "TYPES.SDESCRIPTION" expressions within the layout.

To change the document type names, you need to change the descriptions on the Types tab of the "Customize Languages" screen (accessible from the Tools → Customise Language menu on the Setup ribbon).

Customising document type terminology - Supplier return

The language associated with each Set of Books determines the specific labels used to cater to different countries or tax regulations. In most languages, the term *'Supplier return'* or its equivalent will be displayed. For instance, en-UK and en-South Africa use terminology related to *'Supplier return'*, while in South Africa, Afrikaans refers to *'Verskafferretoer'* or *'Verskafferretoere'*.

These purchase-related labels are visible within the osFinancials5/TurboCASH5 interface when you access a Set of Books. They are also present in reports and document layout files generated by the system.

To adapt the *'Supplier return'* document type terminology to suit your country, jurisdiction, and industry, you can customize and modify the *'Supplier return'*-related labels via the "*Customize Languages*" screen. This screen is accessible through the Tools → Customise Language menu on the Setup ribbon.

You may also find it helpful to utilize the search options available. This enables you to search for a specific label either in the currently active language file you're editing or in the default "*English*" language file. This assists you in identifying and modifying specific text to better suit your requirements.

Document type names for layout files that support all document types

osFinancials5/TurboCASH5 supports a single document layout file which utilizes translatable expressions facilitated by language file settings. They dynamically display the appropriate document type names such as "Invoice," "Credit note," "Quote," "Purchase," "Supplier return," or "Order" based on the specific document

being printed. The document types are sourced from the "TYPES.SDESCRIPTION" expressions within the layout.

To change the document type names, you need to change the descriptions on the Types tab of the "Customize Languages" screen (accessible from the Tools → Customise Language menu on the Setup ribbon).

Preview of available document layout file samples that support all document types

To assist in choosing a layout file for your needs, you may preview some screenshots of document layout files:

1. *Translatable Document Layout Files with Dynamic Document Types*
    - *"Layout File"*

Customizing document type terminology - Order

The language associated with each Set of Books determines the specific labels used to cater to different countries or tax regulations. In most languages, the term *'Order'* or its equivalent will be displayed. For instance, en-UK and en-South Africa use terminology related to *'Order'*, while in South Africa, Afrikaans refers to *''Bestelling'* or *'Bestellings'*.

These order-related labels are visible within the osFinancials5/TurboCASH5 interface when you access a Set of Books. They are also present in reports and document layout files generated by the system.

To adapt the order document type terminology to suit your country, jurisdiction, and industry, you can customize and modify the order-related labels via the "*Customize Languages*" screen. This screen is accessible through the Tools → Customise Language menu on the Setup ribbon.

You may also find it helpful to utilize the search options available. This enables you to search for a specific label either in the currently active language file you're editing or in the default "*English*" language file. This assists you in identifying and modifying specific text to better suit your requirements.

Document type names for layout files that support all document types

osFinancials5/TurboCASH5 supports a single document layout file which utilizes translatable expressions facilitated by language file settings. They dynamically display the appropriate document type names such as "Invoice," "Credit note," "Quote," "Purchase," "Supplier return," or "Order" based on the specific document being printed. The document types are sourced from the "TYPES.SDESCRIPTION" expressions within the layout.

To change the document type names, you need to change the descriptions on the Types tab of the "Customize Languages" screen (accessible from the Tools → Customise Language menu on the Setup ribbon).

Preview of available document layout file samples that support all document types

To assist in choosing a layout file for your needs, you may preview some screenshots of document layout files:

1. *Translatable Document Layout Files with Dynamic Document Types*
    - *"Layout File"*
    - *"Document Layout"*
    - *"Document Layout (15 Code)"*
2. *Translatable Document Layout Files with Dynamic Document Types without VAT/GST/Sales Tax*

- *"NO-TAX Layout File"*
- *"NO-TAX Document Layout"*
- *"NO-TAX Document Layout (15 code)"*

If you are not registered for VAT/GST/Sales tax or have chosen not to opt for voluntary registration, these layout files exclude VAT/GST/Sales tax information. They also dynamically display the appropriate document type names based on the specific type of document being printed.

For your convenience, the default "*English*" language file contains a total of 83 order-related labels, which are listed in the table below:

LabelID	*Description for Order*
36	*Order confirmation*
76	*&Backorder listing*
83	*&Reorder report*
221	*Reorder level*
338	*Next order no.*
339	*Order heading*
340	*Order message*
655	*Qty order*
693	*Orders history*
707	*Do you wish to print this order?*
762	*Order no.*
773	*From order*
798	*Orders*
844	*&Backorders*
1019	*Delete orders*

1082 Reorder options

1083 Backorder options

1149 Order accepted

1190 Items on backorder

1191 Backorders

1224 Order no.

1225 Order to convert to purchase

3648 *Orders to deliver list*

3661 *Document without border*

3664 *New order*

21158 *Table and order*

906005 *Order date*

906032 *Order list*

906033 *Outstanding orders*

906036 *Reorder quantities*

906050 *Backorder*

906056 *Bar order*

906057 *Kitchen order*

906135 *Confirmed orders*

906136 *Unconfirmed orders*

906199 Order (no codes)

906205 Order (10 code)

906211 Order (15 code)

906217 Order A4 (no codes)

906223 Order A4 (10 code)

906229 Order A4 (15 code)

906235 Order A4 Plain (no codes)

906241 Order A4 Plain (10 code)

906247 Order A4 Plain (15 code)

906253 Order No Tax (no codes)

906259 Order No Tax (15 code)

906306 Orders per period - Creditor group 1

906307 Orders per period - Creditor group 2

906308 Orders per period - Document group 1

906309 Orders per period - Document group 2

906310 Orders per period - Salesperson

906317 Orders per period - Quantities

906318 Orders per period - Amount

906325 Graph - Orders per week - Quantities

906326 Graph - Orders per week - Amount

906573 Graph - Orders per month - Amount

906574 Graph - Orders per month - Quantities

If '%s ' is included in a label description in the language file, please refrain from translating this. This placeholder is reserved for specific data that will be dynamically populated within the label. For example, 'Cur : %s Quote : %s Order : %s Exp : %s' signifies that the current, quote, order, and expected quantities will be inserted and displayed within the program.

Set language for a Set of Books

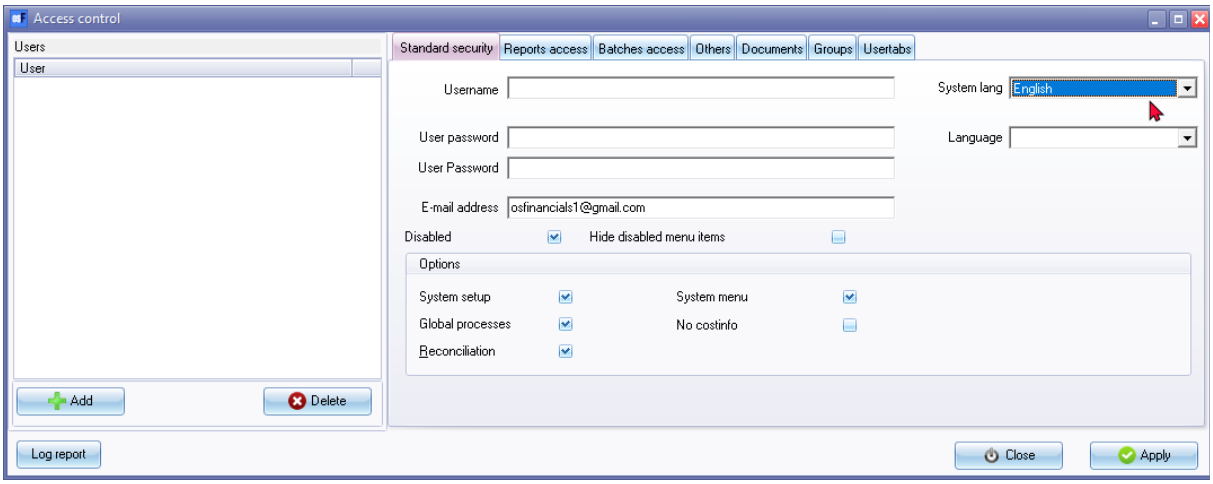
When you open a Set of Books, osFinancials5/TurboCASH5 will automatically load the language file linked to that Set of Books. This ensures that all screens, reports, and document layout files associated with the Set of Books are presented in the selected language.

You may set or change the language file as the default language for a Set of Books. When opening a Set of Books, it will automatically load the language file. All screens, reports and layout files are translatable via the language files.

You may set the language file for each user. When a user Open a Set of Books, the Set of Books will automatically be opened in the language set for that user.

To set a language for an user Set of Books:

1. On the Setup ribbon, select Access control.



2. System lang - The default language set for each user for will be displayed in this field. You may set another language for each of your users. The selected language will be displayed every time a specific user opens the Set of Books.

3. Language - The languages added in the Languages tab in Groups (Setup ribbon) may be selected for the *Multi-Language accounts* plugin. Languages may also be set in the this field for debtors /creditors.

Multi-Language accounts - Manual - Shop - Licence : Once-off -

This plugin makes it possible to translate the ledger and group names in multiple languages. It is already possible to choose different languages for the interface (the buttons). But this plugin makes it possible to do the accounting in different languages. Per user you can select a language, so the user can account in his/her own language. The set of books can be viewed in different languages, therefore it is possible an employee enters information into an English Set of Books and a bookkeeper, auditor, etc. can see the set of books in a set language, e.g. Afrikaans, Dutch, etc.

4. Click on the Apply button to save the changes for this user.

5. Once finished, click on the Close button to exit the "*Access control*" screen.

Created with the Standard Edition of HelpNDoc: From Word to ePub or Kindle eBook: A Comprehensive Guide

Accounting process in osFinancials5

If you choose to work with one of the pre-created Sets of Books in osFinancials5/TurboCASH5, most of the settings and defaults have already been set.

You may download an existing template for your country and language (in a matter of a few seconds about 3 clicks) from the Let osFinancials help you to create a Set of Books - Download option / Let TurboCASH help you to create a Set of Books - Download option.

Each of these Sets of Books is already set to a specific language for your country and language.

See a list of available Firebird Sets of Books and linked languages available as a free download. You may then Customise the Set of Books to meet your own requirements.

Getting started entails little more than the entry of a few basic details and the selection of some basic options:

1. Create your Set of Books - osFinancials5/TurboCASH5 allows you to create a Set of Books within minutes by copying an existing structure.

2. Settings and defaults - osFinancials5/TurboCASH5 will use these parameters and defaults to display and perform certain functions for you.

a) Company info - Enter your contact information and registration details and set the defaults for your Tax (if you are registered for Tax (VAT/GST/Sales tax)).

b) Reporting dates - Set the starting date for your financial year and the accounting periods for which you may generate financial reports.

c) Reporting groups - Add or edit any reporting account groups for your Accounts to further classify the five Financial categories. You may also add up to two (2) reporting groups for your Debtor (customer / client) accounts, Creditor (supplier / vendor) accounts, Stock items (products), Documents, Salespersons.

d) Financial categories - Link your Reporting account groups (e.g. Income, Other income, Expenses, Capital, Long-term liabilities, Current liabilities, Fixed assets and Current assets) to the 5 Financial categories (i.e. Income, Expenses, Capital, Assets and Liabilities).

e) Batch types - Add, edit or delete any batch types (journals) in which you wish to enter transactions.

f) Access control and passwords (Optional) - Set passwords and access control for your users.

g) Internet (Optional) - Configure your e-mail account to send reports, lists and documents over the Internet.

h) Documents setup - Set the Document numbers, messages and check the Batch types for your sales documents (Invoices, Credit notes and Quotes for debtors (customers / clients) and purchase documents (Purchases, Supplier returns and Orders for creditors (suppliers / vendors).

   You may also add a standard message (on the Statement setup tab) to print on all statements you wish to send to your debtors (customers / clients).

i) Salespersons - Add any salespersons that may sell your stock or products.

j) Stock information - Define your selling prices and units of stock. You also need to set the Cost of sales settings for your stock items / inventory items / products.

k) Set preferences -

   i) Printer - Set the default printer and paper sizes.

   ii) System parameters - Set the defaults for both entry and display.

3. Customise your Chart of Accounts - Your Set of Books will have a standard Chart of Accounts, which should reflect all your accounts.

4. Configure your Tax (VAT/GST/Sales tax) to according to your Tax Registration - The status of your Tax (VAT/GST/Sales tax) registration with your Tax authorities, jurisdiction may need some adjustments in the Chart of Accounts.

5. Add Debtor (customer / client) accounts.
6. Add Creditor (supplier / vendor) accounts.
7. Add Stock items (Inventory items / products) - Add your stock items / inventory items / products.
8. Enter Opening Balances for your accounts and trading stock items, if you have any.
9. Start processing your daily transactions in batches (journals) and or documents.
10. Print reports to evaluate your activities.

Created with the Standard Edition of HelpNDoc: Full-featured multi-format Help generator

New to Computers

When choosing a computer system for your accounting what should be considered?

When choosing a computer system for accounting, there are several important factors to consider to ensure that it meets the specific needs of your accounting tasks and provides a smooth and efficient workflow. Here are the key considerations:

1. Accounting Software Compatibility: The computer system should be compatible with the accounting software you plan to use. Verify that the software runs smoothly on the chosen operating system (e.g., Windows, macOS, Linux) and hardware specifications.
2. Performance and Processing Power: For efficient accounting operations, consider a computer with sufficient processing power, RAM, and storage. This will ensure that the accounting software runs smoothly, especially when handling large datasets or complex calculations.
3. Storage Capacity: Accounting involves managing a significant amount of data, so having ample storage space is crucial. Consider whether you need a larger hard drive or if opting for solid-state drives (SSD) for faster data access and improved system responsiveness.
4. Security Features: Accounting data often contains sensitive financial information. Look for computers with robust security features, such as biometric authentication (fingerprint or facial recognition) and encryption, to protect against data breaches.
5. Backup and Recovery: Ensure the computer system has a reliable backup solution to safeguard accounting data. Automatic backup mechanisms or cloud-based storage options can be highly beneficial for data recovery in case of hardware failure or accidental data loss.
6. Display and Screen Size: A large and high-resolution display can enhance productivity by allowing you to view multiple documents or spreadsheets simultaneously. Consider whether a dual-monitor setup

would be beneficial for your accounting tasks.

7. Connectivity Options: Ensure that the computer has sufficient USB ports, HDMI, and other connectivity options to connect peripherals like printers, scanners, external hard drives, etc.
8. Portability (If Needed): If you need to work on the go or in different locations, consider the portability of the computer. Laptops or 2-in-1 devices may be more suitable in such cases.
9. Budget: Set a budget for your computer system and try to find the best balance between performance, features, and cost.
10. Warranty and Support: Choose a reputable brand that offers a good warranty and customer support. This ensures prompt assistance in case of any hardware or software issues.
11. Scalability: Consider whether the computer system can be easily upgraded or expanded in the future to accommodate changing accounting needs.
12. Reviews and Recommendations: Read reviews and seek recommendations from other accounting professionals or businesses to get insights into the performance and reliability of different computer systems.

By considering these factors, you can select a computer system that meets your accounting requirements, enhances productivity, and provides a secure and reliable platform for managing financial data effectively.

What is the considerations in a multi user environment?

For a multi-user accounting environment, additional considerations are needed to ensure the computer system can handle the demands of multiple users accessing accounting software simultaneously. Here are some specific factors to consider in a multi-user setup:

1. Network Infrastructure: A robust and reliable network infrastructure is essential for smooth communication and data sharing between multiple users. Ensure your network supports fast data transfer rates and has sufficient bandwidth to accommodate simultaneous user access.
2. Server Capability: In a multi-user environment, it's often advisable to have a dedicated server to host the accounting software and data. The server should have ample processing power, memory (RAM), and storage capacity to handle multiple user requests efficiently.
3. Server Redundancy: Consider implementing server redundancy to minimize downtime. Redundant hardware, backup power supplies, and RAID configurations can help ensure continuous access to accounting data even in the event of hardware failures.
4. Account Access Control: Implement strict user access controls to protect sensitive financial data. Different users should have appropriate access levels based on their roles and responsibilities within the accounting system.

5. Remote Access and VPN: If users need to access the accounting system remotely, ensure that the server setup supports secure remote access, such as through a Virtual Private Network (VPN).
6. Backup and Disaster Recovery: Implement a robust backup and disaster recovery plan to protect accounting data in case of accidental data loss, system failures, or cybersecurity incidents.
7. Data Synchronization: Ensure that data is synchronized in real-time across all users to avoid conflicts and ensure consistency in financial records.
8. Hardware Compatibility: Ensure that all user devices are compatible with the accounting software and meet the necessary hardware requirements.
9. Performance Testing: Before deploying the system in a production environment, conduct thorough performance testing to ensure that the server and network can handle the expected load.
10. Scalability: Consider the future growth of your business and accounting needs. Choose a system that can scale easily to accommodate additional users and increased data volumes.
11. User Training and Support: Properly train all users on the accounting software and the multi-user setup. Provide ongoing support and assistance to resolve any user-related issues promptly.
12. Software Licensing: Ensure compliance with software licensing requirements for multi-user access. Some accounting software may have specific licensing terms for multiple users.

By addressing these considerations, you can create a stable and efficient multi-user accounting environment that fosters collaboration, data accuracy, and security across your organization. Working with experienced IT professionals can be beneficial to design and implement a reliable multi-user computer system for your accounting needs.

Peripherals

What is peripherals?

Peripherals, in the context of computers and technology, refer to external devices or components that are connected to a computer or other main computing device to expand its capabilities or functionality. These devices serve specific purposes and often complement the central processing unit (CPU) or main system. Peripherals are typically connected to the computer through various ports such as USB, HDMI, or Bluetooth. They can be easily added or removed as needed.

Here are some common examples of peripherals:

1. Keyboard: A device used to input text and commands into a computer.
2. Mouse: A pointing device used to navigate and interact with graphical user interfaces.
3. Monitor: A display device that shows the output from the computer, allowing users to see information and perform tasks.
4. Printer: An output device that produces physical copies of documents or images from the computer.
5. Scanner: An input device used to convert physical documents or images into digital formats that can be stored and manipulated on a computer.
6. External Hard Drive: An additional storage device that is connected to a computer to expand its storage capacity.
7. Speakers: Output devices used to produce sound or audio from the computer.
8. Headphones: Audio output devices worn over the ears to listen to audio privately.
9. Webcam: A camera device used for video conferencing, live streaming, or recording video content on a computer.
10. Microphone: An input device used to capture audio and record voice or other sound inputs.
11. External Optical Drive: An external device used to read CDs, DVDs, or Blu-ray discs.
12. USB Flash Drive: A portable storage device that connects to the computer's USB port to transfer and store data.
13. Graphics Tablet: An input device used by artists and designers to draw directly on the surface of the tablet and have the drawing mirrored on the computer screen.

Peripherals are essential for enhancing the usability and functionality of computers and other devices, allowing users to interact with and utilize technology effectively.

Peripherals for POS systems

Point of Sale (POS) systems are used in various businesses, such as retail stores, restaurants, and hospitality establishments, to process transactions and manage sales. Peripherals for POS systems are external devices that enhance the capabilities of the system and enable efficient and seamless operations. Some common peripherals used with POS systems include:

1. Barcode Scanner: A barcode scanner reads barcodes on products, allowing quick and accurate item identification during the checkout process. This speeds up transactions and reduces the risk of manual entry errors.

2. Receipt Printer: A receipt printer generates printed receipts for customers after a transaction is completed. It provides a tangible record of the purchase and can include details like item names, prices, taxes, and payment method.
3. Cash Drawer: A cash drawer is used to store cash and coins securely during transactions. It is typically connected to the POS system and can be automatically opened after a sale to provide change to customers.
4. Card Reader or Payment Terminal: This peripheral allows customers to make card payments, including credit and debit cards. Modern card readers may also support contactless and mobile payment methods like Apple Pay or Google Pay.
5. Customer Display: A customer display is a screen facing the customer that shows transaction details like the total amount, items purchased, and payment options. It helps customers verify the transaction before completing the payment.
6. Pole Display: A pole display is a similar display to the customer display but is mounted on a pole and often faces the cashier or salesperson. It shows transaction details for verification before finalizing the sale.
7. Kitchen Display System (KDS): In restaurants or food service businesses, a KDS allows the kitchen staff to receive and manage orders electronically. It helps streamline order preparation and reduces the need for paper tickets.
8. Kitchen Printer: Alternatively to a KDS, a kitchen printer can be used to print order tickets in the kitchen. It provides a physical copy of the order to the kitchen staff for preparation.
9. Scale: In businesses that sell products by weight, such as grocery stores or delis, a scale integrated with the POS system ensures accurate pricing and automatic calculation of the total cost.
10. Mobile Devices: Some POS systems support mobile devices like tablets or smartphones, allowing employees to process sales and take orders anywhere on the premises.

These peripherals work in conjunction with the POS software to create a complete and efficient point of sale system. Businesses can choose the peripherals that best suit their specific needs and industry requirements to improve customer service and enhance operational efficiency.

Barcode basics

What is barcodes?

Barcodes are a method of representing data in a visual, machine-readable format. They consist of a series of parallel lines, bars, or dots of varying widths and spacing that encode information. The information encoded in a barcode can be numeric or alphanumeric, and it can represent various types of data, such as product numbers, inventory details, or tracking information.

Barcodes are widely used in various industries and applications, primarily for automating data capture and identification processes. When scanned or read by a barcode scanner or mobile device with a camera, the encoded information is quickly retrieved and processed by computer systems.

There are several types of barcodes, and the most common ones include:

1. UPC (Universal Product Code): Used primarily for retail products, especially in North America.
2. EAN (European Article Numbering): Similar to UPC but used more internationally.
3. Code 39: Widely used in industrial applications and for asset tracking.
4. Code 128: A high-density barcode used in logistics and shipping industries.
5. QR Code (Quick Response Code): A 2D barcode that can store more data, often used in marketing, advertising, and mobile applications.

Barcodes have significantly improved efficiency in supply chain management, inventory control, retail checkout processes, and many other applications where quick and accurate data entry is essential. They have become an integral part of modern business operations, providing a cost-effective and reliable means of tracking and managing information.

What is the validation rules for barcodes?

Validation rules for barcodes ensure that the encoded data is accurate and can be reliably read by barcode scanners or other reading devices. These rules help prevent errors during data entry and scanning processes, ensuring the integrity of the information represented by the barcode. The specific validation rules for barcodes depend on the type of barcode being used. Here are some general principles and considerations:

1. Correct Barcode Type: Ensure that the correct barcode symbology is used for the specific application. Different barcode types have different encoding capacities and formats, so selecting the appropriate type is essential.
2. Valid Characters: Each barcode type has a specific set of characters that can be encoded. Make sure that the data being encoded matches the allowed characters for the chosen barcode format.

3. Length: Check that the data being encoded matches the required length for the specific barcode symbology. Some barcodes have fixed lengths, while others allow variable lengths within certain limits.
4. Checksums: Many barcode types include checksum digits, which are calculated based on the other encoded data. The barcode scanner can use these checksums to validate the accuracy of the scanned data. Ensure that the checksum algorithm is applied correctly during barcode generation and scanning.
5. Quiet Zones: Barcode readers need clear areas (quiet zones) before and after the barcode to accurately read the data. These zones should be free of any printing, text, or other markings to avoid interference with the scanning process.
6. Print Quality: Barcode scanners require well-printed, high-contrast barcodes for accurate reading. Check that the barcode is printed clearly, without smudging, fading, or distortion.
7. Scanning Environment: Ensure that the scanning environment is suitable for barcode reading. Adequate lighting and proper positioning of the scanner are important factors to consider.
8. Encoding Format: Some barcodes can encode data in different formats, such as binary or alphanumeric. Ensure that the correct encoding format is used based on the data being represented.
9. Data Structure: Verify that the data within the barcode follows the required structure for the particular application. For instance, if the barcode is used for product identification, it should include the appropriate product identifiers.

Overall, adhering to these validation rules helps maintain the accuracy and reliability of barcodes, ensuring seamless data capture and processing in various industries and applications.

Which barcodes use the check character(s)?

Several barcodes use check characters (also known as checksums) to enhance data accuracy and reliability during scanning. Check characters are extra digits or characters calculated from the encoded data and are included in the barcode to detect and prevent errors in reading or data entry. When a barcode scanner reads a barcode, it uses the check character to verify that the decoded data matches the expected checksum value. If there is a discrepancy, the scanner can signal an error, and corrective actions can be taken.

Some of the common barcode symbologies that utilize check characters include:

1. Code 39: Code 39 barcodes often include a modulo-43 check character to verify the accuracy of the encoded data.
2. Code 128: Code 128 barcodes can use different types of check characters, such as C, B, and A. Each type of check character serves a specific purpose in error detection.

3. EAN-13: The EAN-13 barcode system used for product identification often includes a check digit at the end. The check digit helps verify the accuracy of the other digits in the barcode.
4. UPC-A: Similar to EAN-13, the UPC-A barcode system used primarily in North America includes a check digit for error detection.
5. ITF-14: The ITF-14 barcode, commonly used for packaging and logistics applications, includes a modulo-10 check digit.
6. MSI (Modified Plessey): MSI barcodes may include a check digit to enhance accuracy.
7. Codabar: Codabar barcodes can use a start/stop character check to ensure proper barcode reading.

It's important to note that not all barcode symbologies include check characters. Some barcode types, like QR codes, do not inherently include a check character, but data redundancy and error correction are built into their design, allowing for error detection and correction.

The inclusion of check characters significantly improves the reliability of barcode scanning and data integrity, making them an essential feature in many barcode systems.

Can you design your own barcodes?

Designing a barcode involves choosing the appropriate barcode symbology, determining the data to be encoded, and using a barcode generator to create the visual representation of the barcode. Here are the general steps you can follow to design your own barcode:

1. Choose the Barcode Symbology: Decide which type of barcode symbology is suitable for your application. Consider factors like the type of data to be encoded, the required data capacity, and the scanning environment.
2. Determine the Data to Encode: Decide what information you want to encode in the barcode, such as product numbers, IDs, or URLs. Different barcode types have specific rules and limitations for the type and length of data they can encode.
3. Select a Barcode Generator: There are various online barcode generators and barcode design software available that can help you create barcodes easily. Some of these tools are free, while others offer more advanced features at a cost.
4. Input Data and Generate Barcode: Enter the data you want to encode into the barcode generator and specify the barcode symbology you have chosen. The generator will create the barcode image for you.
5. Customize the Barcode (Optional): Depending on the generator or software you are using, you might have the option to customize the appearance of the barcode, such as adjusting the size, color, or adding text around the barcode.

6. Save and Print: Once you are satisfied with the design, save the generated barcode in the desired format (e.g., PNG, JPEG) and print it on your desired medium (labels, packaging, etc.).

Please note that when designing barcodes for commercial use or products, it is essential to ensure that the barcodes comply with industry standards and regulations to ensure proper scanning and interoperability with different systems and scanners. Additionally, if you are using barcodes for specific applications like retail products, you might need to obtain a unique identifier (e.g., UPC or EAN) from the appropriate governing organization.

Barcode scanners and Barcode printers?

Barcode Scanners

Barcode scanners are electronic devices used to read and decode information from barcodes. They are commonly used in various industries, including retail, logistics, healthcare, and manufacturing. Barcode scanners are essential for automating data entry processes, tracking inventory, and managing products efficiently.

There are different types of barcode scanners based on their technology and form factor:

1. Handheld Barcode Scanners: These are the most common type of barcode scanners. They are lightweight, portable devices that can be easily held and pointed at barcodes for scanning.
2. Stationary/Countertop Barcode Scanners: These scanners are designed to be fixed in a specific location, such as a retail checkout counter. They are often integrated into the counter or point-of-sale system.
3. Mobile Barcode Scanners: These scanners are built into smartphones or tablets, using the device's camera to scan barcodes. Mobile barcode scanning is popular in inventory management and retail applications.
4. Industrial Barcode Scanners: These rugged scanners are designed for heavy-duty use in industrial environments. They can withstand harsh conditions and are commonly used in warehouses and manufacturing facilities.

Barcode scanners use laser or image-based technology to capture the barcode data. Once scanned, the information is sent to a connected computer, point-of-sale system, or mobile device for further processing and data retrieval.

Barcode Printers

Barcode printers are devices used to produce physical labels or tags with printed barcodes. They are used in a wide range of applications, such as product labelling, shipping labels, asset tracking, and more.

Barcode printers come in different types, and the choice depends on the volume of labels needed, the printing technology, and the label size:

1. Direct Thermal Printers: These printers use heat-sensitive paper to print barcodes. They are ideal for temporary labels and are commonly used in shipping applications.
2. Thermal Transfer Printers: These printers use a ribbon to transfer ink onto the label material. They produce more durable and long-lasting labels, suitable for product and asset labeling.
3. Desktop Printers: Compact and affordable printers suitable for low to medium volume printing needs.
4. Industrial Printers: Sturdy and robust printers designed for high-volume and continuous printing in industrial settings.

Barcode printers can be connected to a computer or integrated into a network, enabling easy label design and printing. Software programs are used to create and format the barcode labels with the necessary information before sending them to the printer for output.

Options to configure barcode scanners and barcode printers?

Configuring barcode scanners and barcode printers involves setting up various parameters and options to ensure optimal performance and compatibility with specific applications. The configuration options may vary depending on the brand and model of the scanner or printer. Here are some common configuration options for barcode scanners and barcode printers:

Barcode Scanners:

1. Data Format: Choose the output data format for scanned barcodes, such as plain text or specific data structures like CSV or XML.
2. Prefix/Suffix: Configure the scanner to add specific characters before or after the scanned data. This is useful for automatically appending identifiers or delimiters.
3. Barcode Symbologies: Enable or disable specific barcode symbologies according to the requirements of your application.
4. Data Validation: Set up the scanner to check the validity of scanned data using checksums or other validation methods.
5. Decode Options: Adjust decode settings, such as sensitivity, resolution, or aiming mode, to improve the scanning performance.
6. Interface Configuration: Configure the scanner's interface (e.g., USB, Bluetooth, RS-232) and adjust communication settings as needed.
7. Beep/Vibration Settings: Customize the scanner's feedback options, like beeping or vibrating, to

indicate a successful scan.

Barcode Printers:

1. Label Size and Orientation: Set up the printer to match the label size and orientation required for your specific labels.
2. Printing Technology: Configure the printer for direct thermal or thermal transfer printing, depending on the label material and durability needed.
3. Print Density and Speed: Adjust the print density and speed settings to optimize the print quality and performance.
4. Barcode Symbology and Height: Select the appropriate barcode symbology and adjust the barcode height to meet your application's requirements.
5. Label Positioning: Fine-tune label positioning to ensure accurate printing on the label material.
6. Label Margins: Define margins for the labels to ensure there is enough space around the barcode for proper scanning.
7. Communication Interfaces: Configure the printer's communication interfaces, such as USB, Ethernet, or serial ports, to connect to the desired devices.
8. Language and Fonts: Choose the language and fonts for label printing, especially if you need to include human-readable text on the labels.
9. Label Design Templates: Some printers come with label design software that allows you to create custom label templates.

Both barcode scanners and barcode printers often come with specific software or programming guides that allow you to access and adjust these configuration options. Manufacturers provide documentation and manuals to help users set up their devices according to their unique requirements.

Printer basics

Types of printers

Printers are devices used to produce physical copies of digital documents, images, or graphics on paper or other printable materials. They are commonly used in offices, homes, and various industries for a wide range of printing needs. There are several types of printers available, including:

1. Inkjet Printers: These printers use liquid ink cartridges to create images or text on paper. They are popular for general-purpose printing, photo printing, and are often more affordable than other types of printers.
2. Laser Printers: Laser printers use a toner cartridge and a laser beam to create images or text on paper. They are known for their fast printing speeds, high-quality text output, and are commonly used in offices for high-volume printing.
3. All-in-One Printers: Also known as multifunction printers, these devices combine the capabilities of a printer, scanner, copier, and sometimes a fax machine, all in one unit. They are versatile and space-saving solutions for homes and offices.
4. 3D Printers: These printers can create three-dimensional objects by depositing material layer by layer. They are commonly used in various industries, including manufacturing, engineering, and healthcare.
5. Thermal Printers: Thermal printers use heat to print on special heat-sensitive paper. They are commonly used in retail environments for printing receipts, labels, and barcodes.
6. Dot Matrix Printers: These printers use a series of pins to create characters by striking an ink ribbon against the paper. They were more popular in the past but are now less common due to their lower print quality and noise.
7. Dye-Sublimation Printers: Dye-sublimation printers use a special ink that turns into a gas when heated, bonding the ink onto the printing surface. They are commonly used for high-quality photo printing.

When choosing a printer, factors to consider include print quality, speed, connectivity options, size, and cost of consumables (e.g., ink or toner cartridges). It's essential to select a printer that matches your specific printing needs and budget.

Cost of ownership and choosing the printer for your business

When choosing a printer for your business, considering the total cost of ownership (TCO) is crucial. The TCO encompasses not only the upfront purchase cost of the printer but also ongoing expenses like consumables (ink, toner, and paper), maintenance, and energy consumption. Here are some factors to consider when evaluating the TCO and choosing the right printer for your business:

1. Printing Volume: Determine your business's average monthly printing volume. Higher printing volumes usually call for more robust and efficient printers. Consider printers designed for higher duty cycles if you have substantial printing needs.
2. Printer Type: Each printer type (inkjet, laser, etc.) has different TCO considerations. Inkjet printers might have a lower upfront cost but can have higher ink costs, especially for high-volume printing.

Laser printers tend to be more cost-effective for larger print jobs.

3. Cost of Consumables: Compare the cost of ink or toner cartridges for the printer models you are considering. Some printers have higher-capacity cartridges that may provide a lower cost per page.
4. Maintenance and Repairs: Research the typical maintenance requirements for the printers you are interested in. Consider the availability and cost of replacement parts if your printer needs repairs.
5. Energy Efficiency: Look for printers with energy-saving features. Energy-efficient printers can significantly reduce your business's electricity bills over time.
6. Multifunction Capability: All-in-one or multifunction printers combine printing, scanning, copying, and sometimes faxing in a single device. If your business requires multiple functions, a multifunction printer might be more cost-effective than buying separate devices.
7. Warranty and Support: Consider the length and coverage of the printer's warranty. Good customer support and readily available service centers can reduce downtime and maintenance costs.
8. Print Quality and Speed: Assess the print quality and speed requirements for your business. For some businesses, high-quality photo printing might be essential, while others may prioritize faster text printing.
9. Networking and Connectivity: Consider printers that offer easy integration with your business's network and various devices. Wireless and mobile printing capabilities can enhance productivity.
10. Longevity and Durability: Choose a printer from a reputable brand known for its reliability and durability. A longer-lasting printer will require fewer replacements and incur lower TCO.
11. Environmental Impact: Eco-friendly printers with energy-saving features and recycling programs can contribute to lower operational costs and environmental responsibility.

By carefully considering the TCO and assessing your business's specific printing needs, you can make a well-informed decision when choosing the right printer. Additionally, reading reviews and seeking recommendations from other businesses in your industry can provide valuable insights into the actual performance and cost-effectiveness of different printer models.

Preventative maintenance for printers

Preventive maintenance is crucial for keeping printers in optimal working condition and prolonging their lifespan. Regular maintenance can help prevent common issues, reduce downtime, and improve print quality. Here are some preventive maintenance tips for printers:

1. Cleaning the Printer: Regularly clean the exterior and interior of the printer. Use a soft, lint-free cloth to wipe dust and dirt off the printer's surfaces. Avoid using abrasive materials or harsh cleaning agents that could damage the printer.

2. Cleaning the Print Heads: If you have an inkjet printer, clean the print heads periodically. Most inkjet printers have a built-in utility for print head cleaning. Follow the printer's manual or software instructions for the cleaning process.
3. Cleaning the Rollers: For laser printers, clean the paper rollers to ensure smooth paper feeding. Consult the printer's manual on how to access and clean the rollers properly.
4. Check for Firmware/Software Updates: Periodically check for firmware updates for your printer model on the manufacturer's website. Keeping the printer's firmware and software up-to-date can improve performance and resolve known issues.
5. Use High-Quality Paper: Use high-quality paper that is suitable for your printer type. Low-quality paper can lead to paper jams, increased wear on printer components, and poor print quality.
6. Replace Consumables Timely: Replace ink or toner cartridges before they completely run out. Running a printer with empty cartridges can cause damage to the print heads in inkjet printers or toner-related issues in laser printers.
7. Maintain Proper Environment: Ensure the printer is placed in a clean and dust-free environment. Avoid exposure to extreme temperatures, direct sunlight, or excessive humidity.
8. Check for Paper Jams: Regularly inspect the printer for any paper jams. If a paper jam occurs, follow the manufacturer's instructions to remove the jam properly.
9. Monitor Printer Usage: Keep track of the printer's usage, especially in office environments. High-volume printers might need more frequent maintenance.
10. Professional Servicing: Consider scheduling professional servicing for your printer, especially if it's a high-end or industrial printer. Professional technicians can perform more in-depth maintenance and identify potential issues.

Remember to always refer to the printer's user manual for specific maintenance instructions tailored to your printer model. By following these preventive maintenance practices, you can ensure your printer operates efficiently and experiences fewer downtime-related problems.

What is printers used for in accounting software?

Printers play a crucial role in accounting software applications by enabling businesses to produce physical copies of financial documents and reports. Here are some common uses of printers in accounting software:

1. Financial Reports: Accounting software generates various financial reports, such as balance sheets, income statements, cash flow statements, and profit and loss statements. These reports are often required for financial analysis, tax purposes, and presenting financial information to stakeholders.

Printing these reports allows accountants and business owners to have physical copies for review and record-keeping.

2. Invoices and Purchase Orders: Accounting software is used to create invoices for customers and purchase orders for vendors. Printing these documents helps in providing hard copies for mailing or record-keeping purposes.
3. Payroll and Payslips: Payroll information, including payslips for employees, is often generated using accounting software. Printing payslips allows businesses to distribute them to employees and maintain a physical record.
4. Bank Reconciliation: Accountants use accounting software to reconcile bank statements with the company's financial records. Printed bank reconciliation reports can be useful for auditing and verification purposes.
5. Checks: Some accounting software can print checks directly, allowing businesses to pay vendors and employees with physical checks. These checks can then be signed and mailed or handed out as needed.
6. Tax Forms: During tax season, accounting software may generate tax forms such as W-2s for employees and 1099s for contractors. Printing these forms ensures compliance with tax regulations and provides necessary documentation for tax filing.
7. General Ledger and Journals: The general ledger and various journals (e.g., sales journal, purchase journal) are essential components of accounting software. Printing these records allows accountants to review and analyze financial transactions.
8. Financial Statements for Meetings: In board meetings, shareholder meetings, or when discussing financial matters with stakeholders, having printed financial statements can be useful for presenting and sharing information.

It's important to note that as technology advances, many businesses are adopting paperless or digital document management practices. Instead of printing documents, they might choose to save them as PDFs or other digital formats for archiving and distribution. This approach can reduce printing costs, storage space, and environmental impact while still providing easy access to necessary financial records.

RFID technology

What is RFID technology?

RFID (Radio Frequency Identification) is a technology that uses radio waves to wirelessly identify and track objects or people. It is based on the principle of using electromagnetic fields to transfer data between an RFID tag and a reader. RFID systems consist of three main components:

1. RFID Tag: The RFID tag is a small electronic device that contains a unique identifier, often called the Electronic Product Code (EPC) or RFID code. It can be passive (without its own power source) or active (with its own power source). Passive tags draw power from the RFID reader's electromagnetic field when it comes within range, while active tags have their own internal power source, allowing them to transmit signals over longer distances.
2. RFID Reader: The RFID reader is a device that emits radio waves and reads the data stored in RFID tags. When an RFID tag enters the reader's range, it receives the tag's unique identifier and can also write information to the tag. The reader is responsible for communication with the RFID tags and relaying the data to a central system.
3. RFID Middleware and Database: The data collected by the RFID reader is typically processed by middleware software that acts as an interface between the reader and the enterprise applications. The middleware helps filter and format the data before passing it on to the relevant systems, such as inventory management, access control, or supply chain management databases.

RFID technology finds applications in various industries and sectors, including:

1. Inventory and Supply Chain Management: RFID helps improve the accuracy and efficiency of inventory tracking, asset management, and supply chain operations by providing real-time visibility into the movement and location of goods.
2. Retail and Logistics: RFID is used in retail stores to track products and prevent theft. It also streamlines the shipping and receiving process by automating data capture and reducing manual efforts.
3. Access Control and Security: RFID-based access control systems are used in buildings, offices, and secure areas to manage employee access and monitor movement.
4. Healthcare: RFID is utilized in hospitals and healthcare facilities to manage medical equipment, track patients, and enhance medication administration processes.
5. Animal Tracking: RFID tags are implanted in livestock and pets for identification and tracking purposes.
6. Library Management: RFID technology helps libraries automate the borrowing and returning of books, improving the overall efficiency of the library system.

RFID technology offers several benefits, including increased efficiency, reduced human error, real-time tracking, and enhanced data accuracy. However, it also raises privacy and security concerns due to the potential for unauthorized access or tracking of individuals and objects. As with any technology, it is essential to implement appropriate security measures to protect the data and ensure its ethical and responsible use.

Can RFID technology be used in a business for Managing Fixed assets and inventory?

Yes, RFID technology can be highly beneficial for managing fixed assets and inventory in a business. RFID provides several advantages over traditional barcode or manual tracking systems, making it a popular choice for asset and inventory management applications. Here are some ways in which RFID is used for this purpose:

1. Improved Efficiency: RFID enables faster and more efficient data capture compared to manual methods. With RFID, assets and inventory can be automatically scanned without line-of-sight requirements, allowing for bulk scanning and reducing the time spent on inventory counts.
2. Real-time Tracking: RFID provides real-time visibility into the location and status of assets and inventory. This ensures accurate and up-to-date information, helping businesses make informed decisions regarding stock levels, reordering, and asset allocation.
3. Accuracy and Reduction of Errors: RFID technology is known for its high accuracy rates compared to traditional methods. It reduces human errors associated with manual data entry, ensuring that the inventory and asset database remain precise.
4. Streamlined Auditing and Compliance: RFID simplifies the auditing process by automating asset and inventory verification. It can aid businesses in complying with regulatory requirements and internal auditing procedures.
5. Theft Prevention and Security: RFID tags can be used in conjunction with access control systems to monitor the movement of assets and inventory, thereby reducing the risk of theft and unauthorized access.
6. Asset Maintenance and Life-cycle Management: RFID tags can be integrated with maintenance systems to track asset service history, warranty periods, and scheduled maintenance, allowing businesses to optimize asset lifecycle management.
7. Analytics and Business Insights: RFID-generated data can be analyzed to identify patterns, optimize stock levels, and make data-driven decisions to improve overall efficiency and profitability.
8. Integration with Enterprise Systems: RFID systems can be seamlessly integrated with existing

enterprise resource planning (ERP) or warehouse management systems (WMS), providing a holistic view of the business's assets and inventory.

While RFID technology offers significant benefits, implementing an RFID-based asset and inventory management system requires careful planning and investment. Businesses need to consider factors such as tag selection, reader placement, and data integration to ensure a successful and efficient deployment.

As with any technology, businesses should also be mindful of data security and privacy concerns when implementing RFID systems. Access controls and encryption should be in place to protect sensitive asset and inventory information from unauthorized access.

ODF (Open Document Format) / PDF (Portable Document Format)

Advantages of ODF documents?

ODF (Open Document Format) documents offer several advantages over other proprietary formats like Microsoft Office's .docx, .xlsx, and .pptx. ODF is an open standard for storing and exchanging electronic documents, including text documents, spreadsheets, and presentations. Here are some key advantages of using ODF documents:

1. Interoperability: ODF is an open standard supported by various office productivity software, including LibreOffice, Apache OpenOffice, UltraOffice, or Calligra Suite. This ensures that ODF documents can be opened and edited across different platforms and software, reducing compatibility issues.
2. Vendor-Neutral: ODF is not tied to any specific vendor or company, making it a vendor-neutral format. This promotes fair competition and avoids vendor lock-in, giving users the freedom to choose different software applications for working with ODF documents.
3. Long-Term Accessibility: As an open standard, ODF is designed to be accessible and usable for an extended period. Its format specifications are publicly available, allowing developers and users to understand the structure of the files, ensuring long-term document access and preservation.
4. No Licensing Costs: Using ODF documents does not require any licensing fees or royalties. This can lead to cost savings for businesses and organizations that opt for open-source office productivity software supporting ODF.
5. Platform Independence: ODF documents can be created, edited, and viewed on different operating systems, such as Windows, macOS, Linux, and more. This cross-platform compatibility makes

collaboration and document sharing easier among users with diverse computing environments.

6. Future-Proofing: Since ODF is an open standard, it is less likely to become obsolete or unsupported in the future. This provides a level of future-proofing for documents created and stored in the ODF format.
7. Reduced File Size: ODF documents tend to have smaller file sizes compared to some proprietary formats, which can help in saving storage space and reducing file transfer times.
8. Security and Privacy: As an open standard, ODF allows security researchers to inspect and scrutinize the format for vulnerabilities. This enhances security and privacy, as potential issues can be identified and fixed promptly.
9. Accessibility Compliance: ODF documents can be made more accessible for users with disabilities, as they allow for structured content and support for assistive technologies.
10. International Standard: ODF is an international standard (ISO/IEC 26300), giving it official recognition and acceptance worldwide.

It's worth noting that while ODF has many advantages, different use cases and organizational requirements may still warrant the use of other file formats. In some scenarios, interoperability with proprietary formats might be necessary due to specific software dependencies or external collaboration needs. Nevertheless, adopting ODF as an open standard can offer significant benefits, especially in promoting data longevity, interoperability, and vendor independence.

Advantages of PDF documents?

PDF (Portable Document Format) documents have become widely popular for various applications due to the numerous advantages they offer. Here are some of the key advantages of using PDF documents:

1. Platform Independence: PDF documents can be viewed and opened on different operating systems, including Windows, macOS, Linux, Android, and iOS, without any compatibility issues. This platform independence ensures that the document's formatting remains consistent across devices.
2. Consistent Formatting: PDFs preserve the original formatting, fonts, images, and layout of a document regardless of the device or software used to open it. This ensures that the document appears the same to all users, avoiding layout discrepancies that may occur with other formats.
3. Security Features: PDF documents can be secured with passwords, encryption, and digital signatures, providing enhanced security for sensitive or confidential information. This makes PDFs suitable for sharing confidential documents securely.
4. Compact File Size: PDFs can compress large files without significant loss of quality, resulting in smaller file sizes compared to other formats. This makes them ideal for efficient document storage and faster

file transfers.

5. Read-Only Format: PDFs are typically read-only, meaning they can be opened and viewed by anyone but cannot be easily edited. This feature is beneficial for distributing documents that should not be altered, ensuring data integrity.
6. Print-Ready: PDFs are print-ready files, meaning they are designed to produce high-quality printouts. The format retains the original resolution and formatting, making it suitable for printing documents like brochures, posters, and professional reports.
7. Hyperlinks and Navigation: PDFs can include hyperlinks, bookmarks, and table of contents, enabling easy navigation within the document. This feature is helpful for lengthy documents, eBooks, and technical manuals.
8. Optical Character Recognition (OCR): PDFs can be made searchable through OCR technology, which converts scanned images or non-searchable text into selectable and searchable text.
9. Annotation and Markup: Users can add comments, highlights, and annotations to PDFs, making it a useful tool for collaborative document review and feedback.
10. Archival Stability: PDF is an ISO standard (ISO 32000-2), providing a level of assurance that the format will remain viable for the long term. This makes PDFs a suitable choice for archiving important documents and ensuring data longevity.
11. Multimedia Support: PDFs can incorporate multimedia elements such as audio, video, and interactive forms, making them suitable for interactive presentations and rich media content.

Overall, PDF documents offer a versatile and reliable format for a wide range of applications, including business documents, academic papers, legal contracts, eBooks, and more. Their ability to maintain document integrity, cross-platform compatibility, and security features make them an essential tool for efficient and secure document sharing and distribution.

Document formats and printing options

What document formats and printing options is used in businesses?

In businesses, various document formats and printing options are used based on the type of document, its purpose, and the specific requirements of the business. Here are some common document formats and

printing options used in businesses:

Document Formats:

1. PDF (Portable Document Format): PDF is widely used for creating documents that need to retain their formatting across different platforms. It is suitable for sharing and printing documents with consistent layout and design.
2. Microsoft Word (.docx): Word documents are commonly used for creating and editing text-based documents, such as letters, memos, reports, and other textual content.
3. Microsoft Excel (.xlsx): Excel spreadsheets are used for organizing and analyzing numerical data, financial calculations, and creating tables or charts.
4. Microsoft PowerPoint (.pptx): PowerPoint is used for creating presentations with slides, graphics, and multimedia elements.
5. Google Docs, Sheets, and Slides: Cloud-based alternatives to Microsoft Office applications, which offer collaborative document editing and sharing capabilities.
6. OpenDocument Format (ODF): An open standard format used for office productivity applications, similar to Microsoft Office formats.
7. Plain Text (.txt): Simple text files used for basic note-taking, code, or data storage.

Printing Options:

1. Single-Sided Printing: Printing on one side of the paper. Suitable for documents with minimal content or when cost-saving is a priority.
2. Double-Sided (Duplex) Printing: Printing on both sides of the paper. Reduces paper usage and is eco-friendly.
3. Color Printing: Printing documents in color to enhance visual appeal, highlight important information, or add graphics.
4. Grayscale Printing: Printing documents without color, using only shades of gray. Useful for saving color ink or when color is unnecessary.
5. High-Quality Printing: Printing with higher resolution and image quality, suitable for documents like marketing materials, presentations, and brochures.
6. Draft Printing: A quick, low-quality print option, often used for proofreading or reviewing documents before the final print.
7. Print to PDF: Converting documents into PDF format directly from the software, useful for sharing documents digitally or archiving.

8. Print Copies: Printing multiple copies of the same document, such as reports or flyers for distribution.
9. Print on Demand: Printing copies of documents as needed instead of large print runs. Useful for personalized materials or small quantities.
10. Wide Format Printing: Printing large-scale documents like posters, banners, or engineering drawings.

The choice of document format and printing options depends on factors such as the document's purpose, audience, distribution method, budget, and environmental considerations. Many businesses opt for a combination of digital formats and print options to meet their specific needs.

Created with the Standard Edition of HelpNDoc: Easily Add Encryption and Password Protection to Your PDFs

Document formats for export options

What document formats for export options is used in businesses?

In businesses, various document formats are commonly used for export options, depending on the type of data being exported and the intended use of the exported file. Exporting data allows businesses to share information with clients, partners, and employees in formats that are compatible with different software and systems. Here are some common document formats used for export options in businesses:

1. PDF (Portable Document Format): PDF is a widely used format for exporting various types of documents. It preserves the formatting, fonts, and layout of the original file, making it an excellent choice for sharing documents that should look consistent across different devices and platforms.
2. CSV (Comma-Separated Values): CSV is a plain-text format used to export tabular data, such as spreadsheets or databases. It is commonly used for data exchange between different software applications and can be easily imported into spreadsheet software.
3. Excel (.xlsx): Microsoft Excel format is widely used for exporting data from databases, accounting software, and other business applications. It allows users to work with the exported data in spreadsheet form, perform calculations, and create charts.
4. Word (.docx): Microsoft Word format is used for exporting text-based documents, such as reports, proposals, and contracts.
5. PowerPoint (.pptx): Microsoft PowerPoint format is used for exporting presentation slides, making it easy to share visual content with others.
6. HTML (Hypertext Markup Language): HTML format is used for exporting content to be displayed on websites or web-based applications. It is commonly used for online publishing and sharing

information on the internet.

7. XML (Extensible Markup Language): XML is a markup language used for exporting structured data that can be easily processed and parsed by other software applications.
8. JSON (JavaScript Object Notation): JSON is a lightweight data interchange format used for exporting and exchanging structured data between different systems and programming languages.
9. RTF (Rich Text Format): RTF is used for exporting formatted text documents that can be opened by various word processing applications.
10. Image Formats (JPG, PNG, GIF): Image formats are used for exporting graphical content, such as charts, diagrams, and illustrations.
11. CAD Formats (DWG, DXF): For businesses dealing with engineering and architectural designs, CAD formats like DWG and DXF are used for exporting technical drawings.

The choice of document format for export depends on factors such as the type of data, the recipient's software compatibility, the need for data structure, and the level of interactivity required. Businesses often provide multiple export options to cater to the preferences and needs of their clients, partners, and stakeholders.

Print on Demand and PDF documents

What is Print on Demand (POD) and PDF documents?

Print on Demand (POD) and PDF documents are two related concepts often used in the context of digital publishing and printing.

Print on Demand (POD)

Print on Demand is a publishing and printing model where copies of a book, document, or other printed materials are produced individually or in small batches in response to specific orders. Instead of printing a large quantity of copies upfront and storing them in inventory, POD allows for printing copies as needed. This approach is particularly useful for self-publishing authors or small publishers, as it reduces upfront costs and eliminates the need for large print runs.

Here's how POD works:

1. Order Placement: When a customer places an order for a book or document, the order is sent to the POD service provider.
2. Printing: The POD service provider prints the requested number of copies using digital printing technology. Each copy is printed on-demand, typically within a short timeframe.
3. Shipping: Once the printing is complete, the printed copies are shipped directly to the customer or the designated recipient.

POD is commonly used for books, manuals, reports, and other types of printed materials. It allows for greater flexibility, reduced wastage, and the ability to keep content up-to-date since revisions can be easily incorporated into new printings.

PDF Documents

A PDF (Portable Document Format) is a file format used to present documents in a manner independent of software, hardware, and operating systems. It was created by Adobe and has become a widely used format for sharing and distributing documents. PDFs preserve the original formatting, fonts, and images of a document, ensuring consistent display across different devices and platforms.

PDF documents are commonly used for various purposes, including:

1. Electronic Distribution: PDFs are often used for distributing digital documents, such as ebooks, reports, whitepapers, and brochures, over the internet or via email.
2. Printing: PDFs are also used for high-quality printing. When a document is saved in PDF format, it ensures that the printed version will retain the intended layout and appearance.
3. Archiving: PDFs are a popular choice for archiving documents due to their stability and compatibility over time.
4. Forms and Contracts: PDFs can be used for creating interactive forms and contracts that users can fill out electronically.

When it comes to POD, PDF documents are often used as the source files for printing. The POD service provider receives the PDF files and uses them to generate the printed copies of the document. This process ensures that the printed version of the document matches the digital version precisely, maintaining consistent formatting and layout.

New to Accounting

Welcome to the world of accounting with osFinancials5/TurboCASH5 accounting software! Whether you are starting a new business or taking over the financial management of an existing one, osFinancials5/TurboCASH5 provides a powerful and easy-to-use accounting solution for your needs. With osFinancials5/TurboCASH5, you can easily manage your finances, keep track of transactions, generate reports, and more. This software is designed to simplify accounting tasks and provide accurate financial information to help you make informed decisions. As a beginner to accounting and osFinancials5/TurboCASH5, we will guide you through the basics of the software and help you get started on your journey towards financial management success.

osFinancials5/TurboCASH5 accounting software can help you save time and reduce errors, allowing you to focus on other important aspects of your business. In this introduction, we will discuss the benefits of using osFinancials5/TurboCASH5 accounting software and how it can help simplify your accounting tasks, even if you have little to no experience with accounting.

Many accounting systems have been marketed as "*easy-to-use*," but their main function is to present financial reports or statements to investors, bank managers, creditors, and consultants in an understandable format. These reports provide crucial financial information that is essential for decision-making.

However, systems that take shortcuts and fail to comply with accounting principles often fail to communicate important financial information to accountants. Accountants have their own language, and if you are not familiar with it, accounting systems like osFinancials5/TurboCASH5 may seem obscure at first. You don't need to be fluent in accounting language, but it's important to understand the basics.

Fortunately, osFinancials5/TurboCASH5 is a Generally Accepted Accounting Practice (GAAP) compliant system. It follows accounting principles and standards that have been widely accepted and adopted by the accounting profession. Moreover, osFinancials5/TurboCASH5 provides steps and features that can guide users in the right direction and minimize the need for extensive accounting knowledge.

Online Help - Documentation

osFinancials5/TurboCASH5 accounting software provides a comprehensive online help system in both English and Afrikaans. This help system is designed to assist users in understanding and navigating the osFinancials5/TurboCASH5 accounting software, as well as to provide guidance on accounting principles and practices. Whether you are new to accounting or an experienced professional, the help system offers a wealth of information to help you get the most out of osFinancials5/TurboCASH5. With easy-to-follow instructions and detailed explanations, the help system is an invaluable resource for anyone using

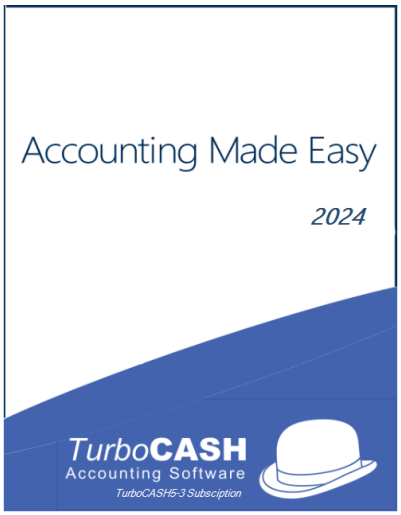
osFinancials5/TurboCASH5 for their accounting needs.

Hands-on Tutorials

osFinancials5/TurboCASH5 installation provides tutorial Sets of Books in both English and Afrikaans. These tutorial books allow users to explore different settings, transactions, and reports within the software. Here are the available tutorial sets:

Accounting Made Easy

English tutorials (using separate receipt and payments journals for banking / cash transactions)



The following Set of Books based on this tutorial, is installed in the "…\bin\Tutorials\ENGLISH\" folder:

- *HANDYMAN (No transactions)*
- *HANDYMAN-A (Unposted transactions)*
- *HANDYMAN-B (Posted transactions)*

Accounting Made Easy - Bank Import

English tutorials (using the BankImport plugin for banking / cash transactions)

The following Set of Books based on this tutorial, is installed in the "…\bin\Tutorials\BANK-IMPORT\" folder:

- *HANDY-BANK (No transactions).*
- *HANDY-BANK-A (Unposted transactions)*
- *HANDY-BANK-B (Posted transactions).*
- *HANDY-BANK-UNPOSTED-*

Rekeningkunde Met Gemak (Afrikaans)

Afrikaanse handleidings (gebruik aparte ontvangste- en betalingsjoernale vir bank- / kontanttransaksies)

Die volgende Stel Boeke gebaseer op die Afrikaanse handleidings, is in die "…\bin\Tutorials\AFRIKAANS\"-lêergids geïnstalleer:

- *NUTSMAN (Geen transaksies).*
- *NUTSMAN-A (Ongeposteerde transaksies)*
- *NUTSMAN-B (Geposteerde transaksies).*

BANK-STATEMENT – Posted transactions, excluding bank / cash transactions. Bank statement needs to be imported from the "…\bin\Tutorials\BANK-IMPORT\BANK-STATEMENTS" folder.

To open the tutorial Sets of Books, installed in the "*bin / Tutorials*" directory, you need to click on the Open icon on the Start ribbon. On the "*Set of Books*" screen, click on the Browse icon and select the desired tutorial Set of Books that you wish to follow.

Additionally, there are other tutorial folders available with relevant files for import into batches. The following folders contains files which may be imported into batches:

- *EXPORTED-BATCH-Delimited-File – Exported batch transactions using the "Write delimited file" option and may be imported into a batch using the "Delimited file import" option (F9:Process icon) on batches.*
- *EXPORTED-BATCH-Spreadsheets – Exported batch transactions in the *.xlsx (Excel 2007-365) file format. These transaction files may be opened in the Spreadsheet import icon on batches, and imported into a selected batch.*

These tutorials are designed to guide users, regardless of their accounting experience, through the basics of accounting and demonstrate how to effectively use osFinancials5/TurboCASH5 for managing business finances. The tutorials cover various aspects, including software features, chart of accounts setup, transaction creation, processing sales and purchase documents, and report generation. They also serve as a reference guide to osFinancials5/TurboCASH5.

By the end of these tutorials, users will have gained a solid understanding of the accounting process and will be able to confidently utilize osFinancials for managing their business finances.

OTHER TUTORIALS

Additionally, there are other tutorials for exploring the activation, processing, and reporting of Cost centres and Projects within osFinancials5/TurboCASH5.

COST-CENTRES

Tutorials / examples to explore the activation, processing and reporting of Cost centres in osFinancials5/TurboCASH5. See - Cost centres in this Help file.

The following Set of Books based on this tutorial, is installed in the "...\bin\Tutorials\COST-CENTRES\" folder:

- COST-CENTRES-A (transactions and documents not posted to the ledger)
- COST-CENTRES-B (transactions and documents posted to the ledger).

PROJECTS

Tutorials / examples to explore the activation, processing and reporting of Projects in osFinancials5/TurboCASH5. See - Projects in this Help file.

The following Set of Books based on this tutorial, is installed in the "...\bin\Tutorials\PROJECTS\" folder:

- PROJECTS-A (transactions and documents not posted to the ledger)
- PROJECTS-B (transactions and documents posted to the ledger).

Created with the Standard Edition of HelpNDoc: Make Documentation a Breeze with a Help Authoring Tool

Importance of accounting

Accounting is important for several reasons:

1. Keeping track of financial transactions: Accounting provides a structured way to keep track of financial transactions such as sales, purchases, expenses, and revenues. Without accounting, it would be difficult to know how much money is coming in and going out of a business, making it hard to make informed decisions.
2. Making informed decisions: Accounting provides the financial information necessary for making informed decisions. For example, a business owner can use financial statements to analyze their company's financial performance, identify areas of improvement, and make decisions that will improve the financial health of their business.
3. Complying with regulations: Accounting is necessary for complying with tax laws and other regulations. Financial records must be kept in accordance with accounting principles and standards, which helps ensure that a business is in compliance with the law.
4. Attracting investors: Investors are often interested in a company's financial performance before making a decision to invest. Accounting provides the necessary financial information to potential investors to make an informed decision about investing in a business.
5. Facilitating communication: Accounting facilitates communication between different stakeholders in a

business, such as managers, employees, investors, and lenders. Financial reports and statements provide a common language for stakeholders to understand a company's financial position and performance.

Overall, accounting is essential for the effective management of a business, compliance with regulations, making informed decisions, and attracting investors. Without accounting, it would be difficult to keep track of financial transactions, assess a company's financial performance, and communicate financial information to stakeholders.

History of accounting

The history of accounting dates back thousands of years, with the earliest known records of accounting practices dating back to ancient civilizations such as Mesopotamia and Egypt. These early accounting systems were primarily manual, involving the use of clay tablets, papyrus scrolls, and other primitive record-keeping methods.

In manual accounting systems, transactions were recorded by hand in a ledger or journal, and account balances were calculated manually using a pen and paper. This process was time-consuming and prone to errors, and it often required a team of trained accountants to manage a company's financial records.

With the advent of computers in the 20th century, accounting systems began to shift towards automation. The first computerized accounting systems were developed in the 1950s and 1960s, and they quickly gained popularity among businesses looking to streamline their financial processes.

During the 1980s and 1990s, accounting software became more sophisticated and widely available, making it easier for businesses to transition from manual bookkeeping to computerized accounting systems. The advantages of computerized accounting systems, such as increased efficiency, accuracy, and productivity, made them a popular choice among businesses of all sizes. As technology continued to advance, computerized accounting systems became even more powerful and customizable, allowing businesses to tailor their financial processes to their specific needs and requirements. Today, computerized accounting systems are the norm for most businesses, and they continue to evolve and improve with advances in technology.

Automated systems like accounting software can process large volumes of data quickly and accurately, which can help reduce the risk of errors that can occur when data is entered manually. This can save business owners and accountants a significant amount of time, allowing them to focus on other important tasks such as analysis, strategy, and decision-making. In addition, automated systems can also provide

real-time insights into a company's financial health, allowing business owners to make informed decisions about their business.

One of the most significant advantages of computerized accounting systems is their ability to generate real-time financial reports, allowing businesses to make informed decisions based on up-to-date financial data. Additionally, computerized systems can help businesses stay compliant with tax laws and other financial regulations, reducing the risk of penalties or legal issues.

Overall, while manual accounting systems have a long and rich history, computerized accounting systems have revolutionized the way businesses manage their finances, making accounting faster, more accurate, and more accessible than ever before.

Accounting process

The accounting process is a set of steps that businesses and organisations follow to record, analyse, and report their financial transactions. It involves several stages, which typically include:

1. Recording transactions: This is the first step in the accounting process, where all financial transactions are documented and recorded in the company's books as they occur. These transactions can include sales, purchases, expenses, and any other financial activity.
2. Classifying transactions: After recording, the transactions are categorised into different accounts based on the type of transaction. Each transaction is classified according to the appropriate account in the chart of accounts. The chart of accounts is a list of all the accounts used by the business to record transactions.
3. Posting transactions: Once the transactions are recorded and classified, they are then posted to the general ledger, which is a master record of all the company's accounts.
4. Adjusting entries: At the end of the accounting period, adjusting entries are made to ensure that the financial statements accurately reflect the company's financial position. These entries may include accruals or deferrals of expenses or revenue.
5. Preparing financial statements: Financial statements, such as the income statement, balance sheet, and statement of cash flows, are then prepared to provide an overview of the company's financial position and performance.
6. Closing the books: After the financial statements are prepared, the books are closed for the accounting period, and the cycle starts again for the next period.

Overall, a computerised accounting system can streamline the accounting process, provide accurate and timely financial information to stakeholders, including investors, creditors, and management, and improve the efficiency of the business.

Created with the Standard Edition of HelpNDoc: Easily create EPub books

Methods of recording

In manual accounting, transactions are recorded by hand using physical documents such as paper ledgers and journals. The process is time-consuming and relies heavily on human effort and accuracy. Here are some key points about manual accounting:

1. Recording: Transactions are manually recorded in journals or books of original entry, such as cash receipts, cash payments, sales, and purchases. This involves writing down the details of each transaction, including the date, description, and amounts.
2. Calculation: Manual calculations are performed to determine the debit and credit amounts for each transaction. This requires careful attention to detail and accuracy in adding, subtracting, and balancing the accounts.
3. Posting: After recording the transactions in the journals, the information is transferred to the general ledger and subsidiary ledgers. Each transaction is posted to the appropriate accounts, updating the balances.
4. Trial Balance: A trial balance is prepared to ensure the equality of debit and credit balances. It lists all the accounts and their balances, serving as a preliminary check on the accuracy of the recorded transactions.
5. Financial Statements: Based on the information from the general ledger, financial statements such as the income statement (profit and loss statement), balance sheet, and cash flow statement are manually prepared. These statements provide an overview of the financial performance and position of the business.
6. Safeguarding Records: In manual accounting, it is important to keep physical records and supporting documents safe from unauthorized access, damage, or loss. This may involve storing documents in secure locations, using lockable cabinets, or implementing backup procedures.

On the other hand, computerized accounting involves using specialized software to automate and streamline the accounting processes. Here are some key points about computerized accounting:

1. Data entry: Financial transactions are entered into the accounting software using a computer. This eliminates the need for manual writing and calculations, reducing the chances of errors.

2. Processing: The accounting software automatically processes the transactions, updates the relevant accounts, and performs calculations. This ensures accuracy and consistency in the accounting records.
3. Financial reports: Computerized accounting systems can generate various financial reports, such as the trial balance, income statement, balance sheet, and various reports, with just a few clicks. These reports can be customized and analyzed more easily than in manual accounting.
4. Automation: Computerized accounting systems automate tasks such as posting transactions, calculating balances, and generating reports. This saves time and reduces the risk of errors.
5. Data Security: Computerized accounting systems provide options for data security and backup. Data can be stored securely and regular backups can be taken to protect against data loss.
6. Scalability: Computerized accounting systems are scalable and can handle a large volume of transactions and data. They can accommodate the growing needs of a business as it expands.

Ultimately, the choice between manual and computerized accounting depends on factors such as the size of the business, the complexity of transactions, available resources, and the need for accuracy and efficiency. Larger businesses with a high volume of transactions generally benefit more from computerized accounting, while smaller businesses may find manual accounting sufficient for their needs.

Manual system

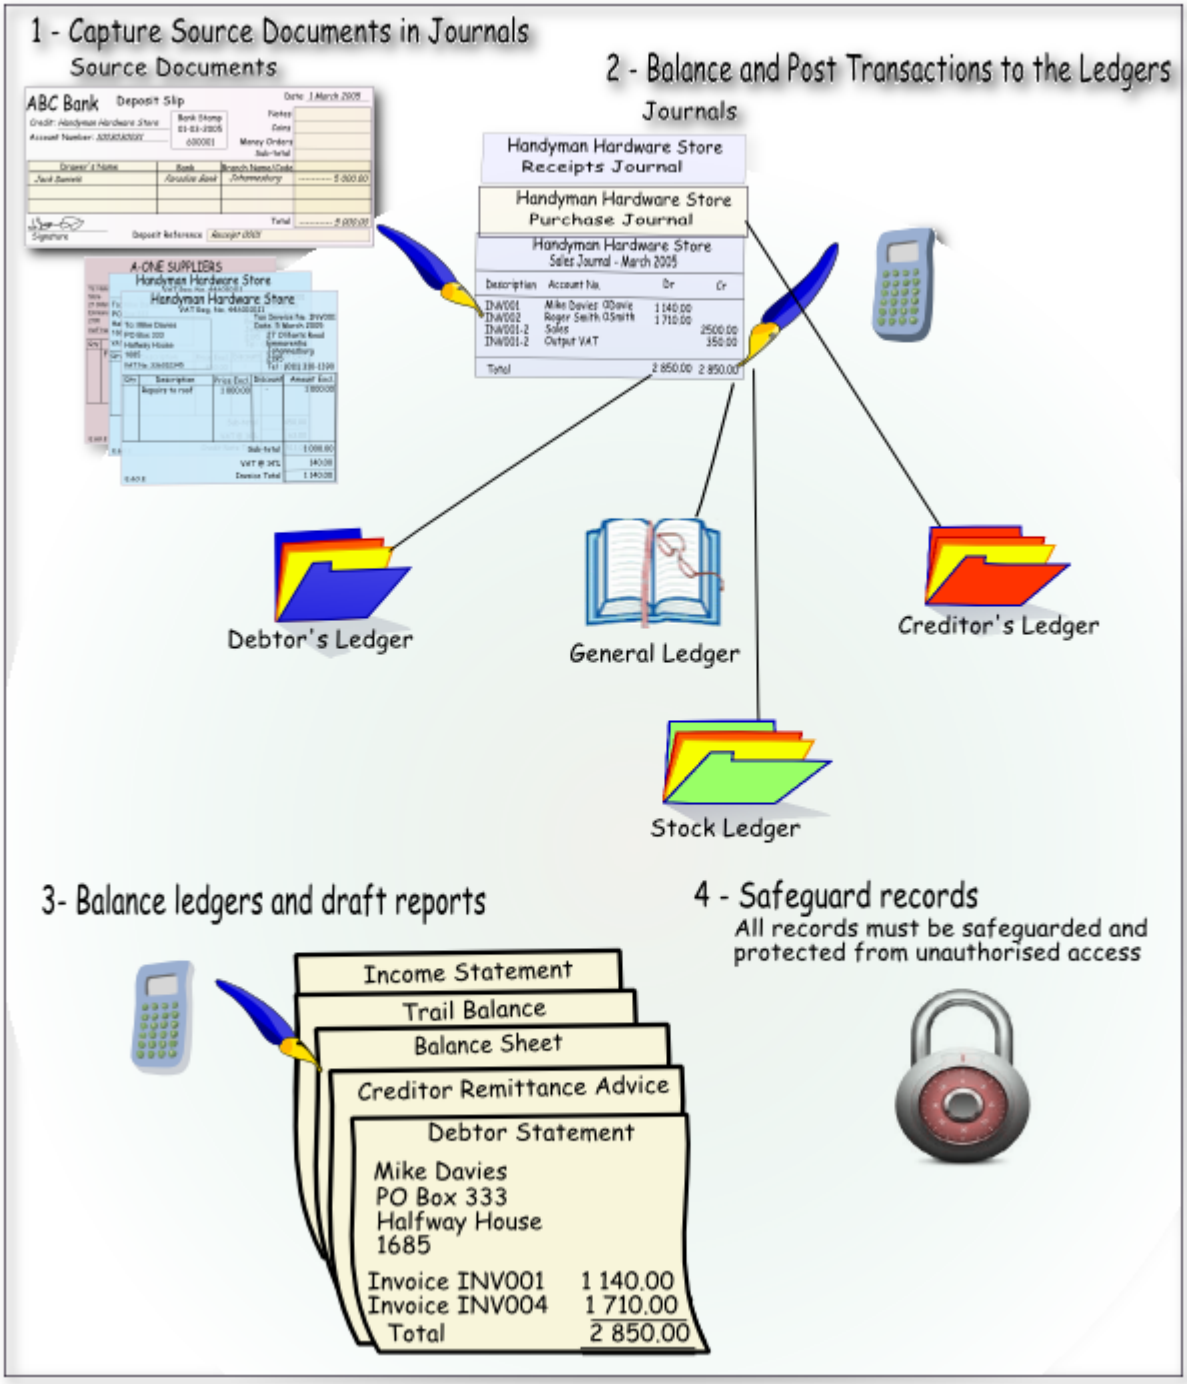
In a manual accounting system, financial transactions are recorded by hand in a journal or ledger. The process typically involves the following steps:

1. Identify the transaction: The first step is to identify the transaction that needs to be recorded, such as a sale, purchase, payment, or receipt of funds.
2. Record the transaction: Once the transaction has been identified, it is recorded in a journal or ledger. This involves writing down the date, amount, and description of the transaction.
3. Post to accounts: The next step is to post the transaction to the appropriate accounts in the ledger. For example, a sale would be recorded in the sales account, while a purchase would be recorded in the purchases account.
4. Reconcile accounts: At the end of a period, the accounts are reconciled to ensure that they balance. This involves comparing the totals of the debits and credits in each account to ensure that they are equal.
5. Prepare financial statements: Finally, the financial statements are prepared based on the information

in the ledger. These may include a balance sheet, income statement, and cash flow statement.

Overall, the manual accounting system can be time-consuming and prone to errors, as it relies on human input and calculations. However, it can be useful for small businesses or individuals who have a limited number of transactions to record.

In a manual accounting system, transactions are recorded and processed using physical documents and handwritten entries. The manual system can be illustrated as follows:



Here is a summary of the basic processes involved in a manual system:

Step	*Process*	*Description*
1.	*Input*	*All transaction data, such as cash slips, deposits, cheques, and invoices, are sorted according to their type. Then, the information from these documents is manually written into specific journals.*
2.	*Process*	*The journals, which contain the recorded transactions, are balanced by ensuring the debits and credits are equal. The information from the journals is then posted manually to the general ledger and subsidiary ledgers. This process can be time-consuming and prone to errors due to manual calculations and entries.*
3.	*Output*	*A trial balance is prepared to verify the accuracy of the recorded transactions by listing the debit and credit balances. Financial reports and statements, including the trial balance, income statement, balance sheet, debtor statements, creditor remittance advice, and others, are then drafted based on the information recorded in the ledgers.*
4.	*Safeguard records*	*It is crucial to protect the books of accounts and supporting documents from unauthorized access, fire, theft, and other risks. Proper measures should be taken to secure physical records to ensure their integrity and availability for future reference.*

Overall, while manual accounting systems can be suitable for small businesses or individuals with a limited number of transactions, they are time-consuming and more susceptible to errors compared to computerized accounting systems.

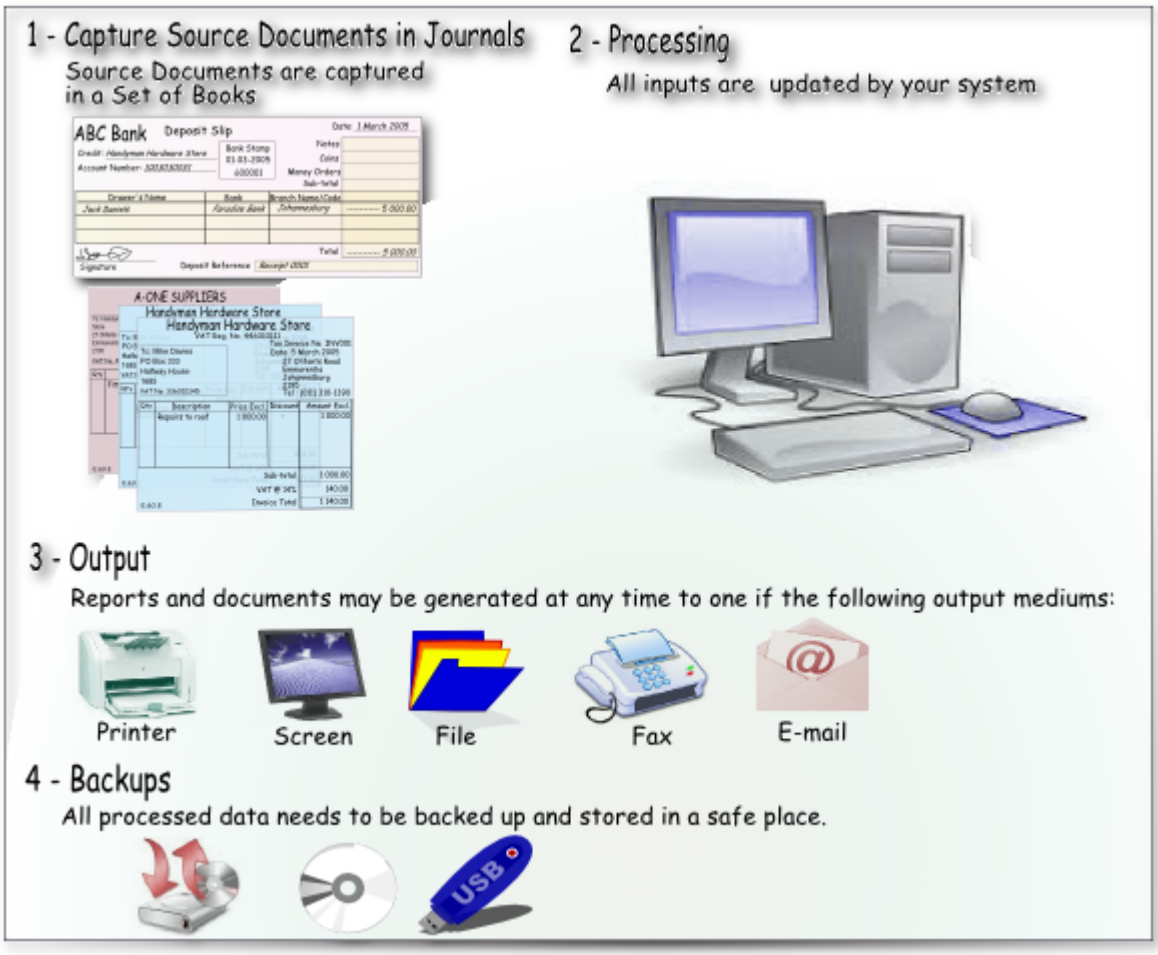
Computerised system

In a computerized accounting system, financial transactions are entered and processed using accounting software such as osFinancials5/TurboCASH5. The system allows for the pre-configuration of the accounting database and includes processes for journal or batch processing, sales documents (quotes, invoices, and credit notes), and purchase documents (orders, purchases, and supplier returns). Transactions are captured and processed in the software, which automatically updates the relevant records when transactions are posted to the ledger.

The computerised system can be illustrated as follows:



The basic processes in a computerised system involves the following steps:

Step	*Process*	*Description*
1.	*Input*	*Identify the transaction from source documents, such as a sale, purchase, payment, or receipt of funds, and enter it into the accounting software using a keyboard and mouse. osFinancials5/TurboCASH5 provides specific forms and templates to guide the user in entering the required information for transactions.* *To capture transactions in osFinancials5/TurboCASH5, there are two options available: journals or batches, and documents.* · *Journals or Batches: osFinancials5/TurboCASH5 allows users to capture transactions using journals or batches. Batch types can be preconfigured to provide specific options that minimize errors during transaction entry. This means that different types of transactions can be grouped together in a batch for easier processing and tracking.* · *Documents: osFinancials5/TurboCASH5 also supports the creation and processing of sales documents (such as quotes, invoices, and credit notes) and purchase documents (such as orders, purchases, and supplier returns). Users can enter the required information for these*

Step	Process	Description
		documents using specific forms and templates provided by osFinancials5/TurboCASH5. Additionally, users have the option to print a source document using document layout files, which allows for easy documentation and record-keeping.
		Both options aim to simplify the process of capturing transactions by providing structured forms, templates, and preconfigured batch types. This helps ensure that the required information is entered accurately and efficiently into the accounting software.
2.	*Process*	*Once the transactions are entered or captured in the respective journals or documents using osFinancials5/TurboCASH5, the transaction data is automatically stored in the system. Users have the option to review and check these journals and documents and make any necessary edits or modifications.*
		After the transactions are captured and reviewed, the next step is to balance the journals. Balancing the journals ensures that the debits and credits of each transaction match and that the accounting equation remains in balance.
		Once the journals are balanced, the processed sales documents (quotes, invoices, credit notes) and purchase documents (orders, purchases, supplier returns) are processed. During this processing, the relevant accounts in the general ledger and subsidiary ledgers, such as the debtor's ledger and creditor's ledger, are automatically updated.
		In addition to updating the financial accounts, the computerized accounting system, like osFinancials5/TurboCASH5, also automatically updates the stock (inventory) records when processing documents. This means that the stock levels and values are adjusted based on the transactions related to purchases, sales, returns, and any other inventory-related activities.
		By automatically updating these records, the computerized accounting system ensures that the financial and inventory information is accurate and reflects the current state of the business. It eliminates the need for manual calculations and reduces the risk of errors or discrepancies in the records.
3.	*Output*	*After the transactions have been processed and posted to the ledger, osFinancials5/TurboCASH5 automatically updates all applicable records. This ensures that the financial information is up to date and accurately reflects the transactions that have taken place.*
		Once the updates are made, osFinancials5/TurboCASH5 provides various outputs and reports that can be easily accessed by the user. These reports can be generated with just a few keystrokes or mouse clicks, making it convenient and efficient to obtain the necessary information. Some of the available reports include:
		• *Trial balance: This report summarizes the balances of all accounts in the general ledger, showing the total debits and credits for each account. It helps in verifying that the*

Step	Process	Description

accounting equation (Assets = Liabilities + Equity) is in balance.

- *Income statement: Also known as the profit and loss statement, this report shows the revenues, expenses, and net income or net loss for a specific period. It provides an overview of the company's financial performance.*
- *Balance sheet: This report presents the financial position of the business at a specific point in time. It includes the assets, liabilities, and equity of the company, giving a snapshot of its financial health.*
- *Debtor statements: These statements provide details of outstanding customer balances, including invoices, payments, and any outstanding amounts. They help in monitoring and managing accounts receivable.*
- *Creditor remittance advises: These reports provide information about amounts owed to suppliers, including invoices, payments, and any outstanding balances. They assist in managing accounts payable.*

These are just a few examples of the reports that osFinancials5/TurboCASH5 offers. There may be additional options and customization features available within the software to cater to specific reporting requirements or preferences.

Spreadsheets - In addition to generating reports within the osFinancials5/TurboCASH5 software, you have the option to export certain reports and data grids to spreadsheets for further analysis or sharing. Here are some key points regarding exporting reports and data from osFinancials:

- *Reports: Reports such as the Trial balance, Income statement and Balance sheet can be exported to spreadsheet formats like Excel or CSV (Comma-Separated Values) files. This allows you to manipulate the data, create custom charts or graphs, and perform additional calculations as needed.*
- *Data grids: Within the software, there are grids that display information on various modules, including Debtors, Creditors, Documents and Stock (Inventory). These grids provide a tabular view of the data, and you have the ability to apply specific filters to refine the displayed information based on your requirements.*
- *Filtering and exporting: Within the data grids, you can apply filters to display specific subsets of data that match your criteria. Once you have applied the desired filters and have the relevant data displayed, you can export the filtered data to a spreadsheet file. This export functionality allows you to work with the data in spreadsheet software for further analysis, reporting, or integration with other systems.*

Step	Process	Description

- *Spreadsheet compatibility: The exported data is typically compatible with popular spreadsheet software like Microsoft Excel, Google Sheets, or other similar applications. This ensures that you can seamlessly import the exported data into these tools without any compatibility issues.*

By exporting reports and data grids to spreadsheet files, you have the flexibility to analyse and manipulate the information further based on your specific needs. This enables you to perform customized calculations, create visualizations, or combine the data with other sources for comprehensive reporting and decision-making purposes.

Pivot tables

osFinancials5/TurboCASH5 provides its own built-in pivot table functionality, allowing users to view and analyse reports such as the Trial Balance, Income statement, Balance sheet, and Budgets directly within the software. This means that you don't necessarily need to export the reports to a spreadsheet to utilize pivot tables.

By using the pivot table feature within osFinancials5/TurboCASH5, you can perform dynamic analysis and customization on the data directly in the software. You can define rows, columns, values, and filters within the pivot table to organize and summarize the data according to your specific needs. This enables you to gain insights, identify patterns, and make informed decisions based on the financial information presented in these reports.

Furthermore, if you choose to export the reports to a spreadsheet, you can still leverage the pivot table functionality within the spreadsheet software to further analyse and manipulate the data. This provides you with the flexibility to use either osFinancials5/TurboCASH5' built-in pivot tables or the pivot table features of your preferred spreadsheet software, depending on your preferences and requirements.

In summary, osFinancials offers its own pivot table functionality for viewing and analyzing reports, and if desired, you can also export the reports to a spreadsheet to utilize the pivot table features of the spreadsheet software. Both options allow you to perform dynamic and customizable analysis on your financial data.

4.	*Backups*	*It is important to safeguard the books of account and supporting documents from unauthorized access, fire, theft, and other risks. Computerized accounting systems often offer features like automatic backups, data encryption, and audit trails to enhance data security and reliability.*

Safeguarding the books of account and supporting documents is crucial to protect sensitive financial information and ensure business continuity. Here are some key considerations:

1. *Unauthorized access: Implement proper access controls to restrict access to the accounting*

Step	Process	Description

system and sensitive data. Use strong passwords, user permissions, and authentication mechanisms to prevent unauthorized individuals from accessing the system.

2. *Fire and theft: Store physical documents and backup files in a secure location that is protected from fire and theft risks. This could include using fireproof safes or off-site storage facilities with appropriate security measures.*
3. *Backup files: Regularly create backups of your accounting database and store them in a safe external location. This could involve using external hard drives, cloud storage, or backup services. Ensure that backups are performed consistently and verify their integrity periodically.*
4. *Disaster recovery plan: Develop a comprehensive disaster recovery plan that outlines procedures for restoring the accounting system in the event of unforeseen circumstances. This plan should include steps for recovering data from backup files and restoring the system to a functional state.*
5. *Test backups and restoration: Periodically test the backup files and restoration process to ensure they are working correctly. This helps identify any issues or discrepancies in the backup files and allows for adjustments or improvements to be made.*
6. *Data encryption: Consider encrypting sensitive financial data to add an extra layer of protection. Encryption ensures that even if unauthorized individuals gain access to the data, they won't be able to decipher or use it without the encryption key.*

By implementing these measures, you can enhance the security and integrity of your accounting system and be prepared to recover quickly in the event of any unforeseen circumstances or data loss.

Overall, the computerised accounting system is faster, more efficient, and less prone to errors than a manual system. It can handle a large number of transactions and provide real-time updates on the financial status of the business.

Created with the Standard Edition of HelpNDoc: Create help files for the Qt Help Framework

Accounting cycle and the transaction cycle

Is there a difference between the accounting cycle and the transaction cycle?

Yes, there is a difference between the accounting cycle and the transaction cycle.

The transaction cycle involves the process of recording and processing business transactions from their occurrence to their inclusion in the financial statements. This includes identifying, measuring, recording, and verifying the transactions. The transaction cycle includes activities such as journalizing, posting, preparing trial balances, and making adjusting entries.

On the other hand, the accounting cycle refers to the process of recording, classifying, and summarizing financial transactions during a specific accounting period. The accounting cycle involves a series of steps that are completed in a specific order, including analyzing and recording transactions, adjusting entries, preparing financial statements, and closing the books.

In summary, the transaction cycle is focused on the process of recording individual transactions, while the accounting cycle is concerned with the overall process of preparing financial statements for a specific accounting period.

The basics of accounting include the accounting equation and transaction cycle

The accounting equation is the foundation of double-entry accounting, which states that assets are equal to liabilities plus equity. This equation must always balance, and any changes to one side of the equation must be reflected in the other side.

The transaction cycle involves the process of recording and processing business transactions, from their occurrence to their inclusion in the financial statements. The transaction cycle begins with the identification of a business transaction, such as a sale or a purchase, which is then analyzed to determine the accounts affected and the amount of the transaction. The transaction is then recorded in a journal or a computer system, posted to the relevant accounts in the general ledger, and a trial balance is prepared to ensure that the accounts are in balance.

Adjusting entries may be made at the end of the accounting period to ensure that the accounts accurately reflect the financial position of the company, and the adjusted account balances are used to prepare financial statements such as the income statement, balance sheet, and cash flow statement. Finally, the temporary accounts are closed and the permanent accounts are updated to prepare for the next accounting period.

By following the accounting equation and transaction cycle, companies can ensure that their financial

records are accurate and up-to-date, which is essential for making informed business decisions.

The accounting cycle

The accounting cycle is the process of recording and processing all financial transactions of a company, from when the transaction occurs, to its representation on the financial statements, to closing the accounts. The accounting cycle consists of eight steps:

1. Transactions - This step involves identifying a business transaction, which can be a sale, purchase, payment, or receipt of funds.
2. Journal Entries
3. Posting
4. Trial Balance
5. Worksheet
6. Adjusting Entries
7. Financial Statements
8. Closing Entries

The transaction cycle

The transaction cycle is a set of procedures that companies follow to ensure that all transactions are recorded accurately and completely1. It includes four stages4:

Authorization

Recording

Verification

Reporting

What is the steps in the accounting cycle?

The steps in the accounting cycle can vary depending on the company and its specific needs, but generally, the accounting cycle involves the following steps:

1. Analyzing and recording transactions: This step involves identifying and recording all business transactions that occurred during the accounting period, using source documents such as invoices,

receipts, and bank statements.

2. Posting to the ledger: In this step, the recorded transactions are posted to the relevant accounts in the general ledger, where all accounts are organized by category.
3. Preparing a trial balance: A trial balance is a listing of all the account balances at a specific point in time. This step helps to ensure that the total debits and credits recorded in the ledger are equal and that the accounts are in balance.
4. Making adjusting entries: Adjusting entries are made to ensure that the accounts accurately reflect the financial position of the company at the end of the accounting period. These entries include accruals, prepayments, and depreciation.
5. Preparing financial statements: The adjusted account balances are used to prepare financial statements such as the income statement, balance sheet, and cash flow statement.
6. Closing the books: This step involves transferring the balances of temporary accounts such as revenue and expenses to the permanent accounts such as retained earnings. This step resets the temporary accounts to zero to prepare for the next accounting period.
7. Post-closing trial balance: This is a final check to ensure that all temporary accounts have been closed and the permanent accounts have been updated.

These steps are repeated each accounting period to ensure accurate and up-to-date financial records.

What is the steps in the transaction cycle?

The transaction cycle involves the process of recording and processing business transactions from their occurrence to their inclusion in the financial statements. The steps in the transaction cycle generally include:

1. Identifying the transaction: This step involves identifying a business transaction, which can be a sale, purchase, payment, or receipt of funds.
2. Analyzing the transaction: In this step, the transaction is analyzed to determine the accounts affected and the amount of the transaction.
3. Recording the transaction: The transaction is recorded in a journal or a computer system to create a permanent record of the transaction.
4. Posting to the ledger: The recorded transaction is posted to the relevant accounts in the general ledger.
5. Preparing a trial balance: A trial balance is prepared to ensure that the total debits and credits recorded in the ledger are equal and that the accounts are in balance.

6. Making adjusting entries: Adjusting entries may be made at the end of the accounting period to ensure that the accounts accurately reflect the financial position of the company.
7. Preparing financial statements: The adjusted account balances are used to prepare financial statements such as the income statement, balance sheet, and cash flow statement.
8. Closing the books: This step involves transferring the balances of temporary accounts such as revenue and expenses to the permanent accounts such as retained earnings. This step resets the temporary accounts to zero to prepare for the next accounting period.

These steps ensure that all business transactions are accurately recorded and included in the financial statements. The transaction cycle is an ongoing process that occurs throughout the accounting period.

Double-entry accounting system

What is the double-entry accounting system?

The double-entry accounting system is a method of recording financial transactions that has been used for centuries by businesses, accountants, and bookkeepers. It is based on the principle that every financial transaction has two equal and opposite effects on the accounting equation, which must be recorded in two accounts.

Under the double-entry accounting system, every transaction is recorded in at least two accounts: a debit account and a credit account. Debits and credits must always balance, meaning that the total amount debited must equal the total amount credited.

For example, let's say that a company receives $1,000 in cash from a customer for a product sale. The double entry accounting system would record this transaction as follows:

- The company's Cash account is debited for $1,000, which increases the Cash balance.
- The company's Sales Revenue account is credited for $1,000, which increases the Sales Revenue balance.

In this example, the debits and credits are equal and balance each other out, which ensures that the company's accounting equation remains in balance.

Assets = Liabilities + Capital

The double entry accounting system is important because it provides a systematic and accurate way to record financial transactions and generate financial statements. It allows businesses to track their financial performance, monitor their cash flow, and make informed financial decisions based on reliable data.

Created with the Standard Edition of HelpNDoc: Full-featured Kindle eBooks generator

Debits and Credits

What are debits and credits?

Debits and credits are the two basic and opposite accounting entries used to record financial transactions in double-entry bookkeeping.

In a financial transaction, there is always an equal amount of debits and credits. Debits represent an increase in assets or a decrease in liabilities or capital, while credits represent a decrease in assets or an increase in liabilities or capital.

For example, if a company purchases inventory for cash, the entry would be a debit to inventory (an increase in the company's assets) and a credit to cash (a decrease in the company's assets).

The following example illustrates debits and credits:

Debit	Credit
The account receiving the value is debited.	The account giving the value is credited.

On 1 March your business sells goods to the value of 100 to a customer, Tom on credit and issues a sales invoice for the transaction:

1. On 1 March the customer receives the goods to the value of 100 from the business.

Debit	*Customer Tom's Account*				Credit
Date	Description	Amount	Date	Description	Amount
1 March	Sales Account - Goods	100			

2. On 1 March the business gives the goods to the value of 100 to the customer.

Debit	***Sales Account***				Credit
Date	Description	Amount	Date	Description	Amount
			1 March	Tom's Account - Goods	100

The customer account is debited and the sales account is credited.

What happens if the customer settles his account with the business on 20 March? Your business will issue a receipt of 100 as a source document.

1. On 20 March Tom gives the money to the value of 100 to the business.

Debit			Customer Tom's Account		Credit
Date	Description	Amount	Date	Description	Amount
			20 March	Bank	100

2. On 20 March the business receives the money to the value of 100 from Tom.

Debit			Bank		Credit
Date	Description	Amount	Date	Description	Amount
20 March	Tom's Account	100			

You will debit the bank and credit the customer account.

Only transactions between the business and another entity (i.e. the purchasing of a computer for office use) should be recorded.

Personal transactions made by the business owner should not be included in the business's accounting records.

This is because the business and the owner are considered separate entities in the eyes of the law.

Created with the Standard Edition of HelpNDoc: Keep Your Sensitive PDFs Safe with These Easy Security Measures

Transaction cycle

What is the transaction cycle?

The transaction cycle in accounting refers to the process of recording financial transactions in a systematic manner. This process typically includes several steps:

1. Identification: This step involves identifying the financial transactions that need to be recorded. Transactions can include purchases, sales, payments, receipts, and other financial activities.
2. Recording: Once the transactions have been identified, they are recorded in a journal. This step involves recording the details of each transaction, such as the date, amount, and accounts involved.

3. Posting: After the transactions have been recorded, they are posted to the appropriate accounts in the general ledger. This step involves transferring the information from the journal to the ledger accounts.

4. Trial balance: A trial balance is prepared to ensure that the total debits equal the total credits. This step is important to identify any errors that may have been made during the recording or posting process.

5. Adjusting entries: Adjusting entries are made to update the accounts for any items that were not recorded during the regular transaction cycle. Examples include depreciation, prepaid expenses, and accruals.

6. Financial statements: Finally, financial statements are prepared to summarize the financial transactions for a specific period. These statements include the income statement and balance sheet. Financial information is the summary of all this financial data into the following two basic reports:

    - Income statement reflecting how well or poor the business or organisation has performed over a specific period.
    - Balance sheet reflecting the business or organisations financial position as at a specific date.
    - Additional summarised information with respect to certain items and budgets may also be necessary to determine performance or financial position.

      osFinancials5/TurboCASH5 contains many of these reports and includes a report designer to supplement your own reports.

The transaction cycle is an important part of the accounting process as it ensures that all financial transactions are recorded accurately and in a timely manner.

The transaction cycle and transactions

Financial data is created through various business transactions, including investments by the owner, purchases of assets, payment of expenses, and sales of goods or services. These transactions impact the accounting equation, which is:

Assets = Capital + Liabilities

This equation must always remain balanced. If assets increase, either capital or liabilities must also increase, and if assets decrease, capital or liabilities must also decrease.

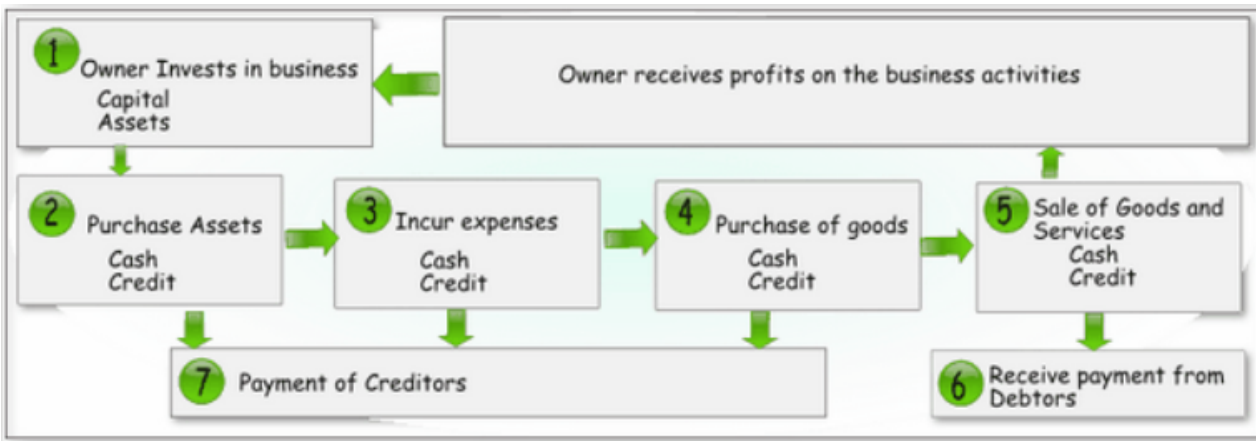
Each type of transaction affects the equation in a specific manner. For instance, when the owner invests

cash, the bank account (asset) and capital increase. If the business purchases an asset with cash, the vehicle (asset) increases and the cash account (asset) decreases. When the business buys assets on credit, the asset account increases and the creditor account (liability) also increases.

In the same vein, if the business incurs expenses and pays for them with cash, the expense account increases and the cash account (asset) decreases. If expenses are incurred on credit, the expense account increases, and the creditor account (liability) also increases. If the business sells services or goods for cash, the cash account (asset) and the income (sales) account increase. When the business sells goods or services on credit, the debtor account (asset) increases, and the sales account (income) also increases.

It is essential to comprehend these basic transactions and their impacts on the accounting equation for effective financial management. This enables businesses to track their financial position and performance accurately and make informed decisions based on that information.

Illustration of common business transactions in the transaction cycle

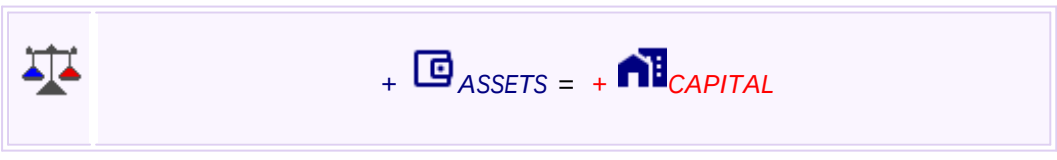


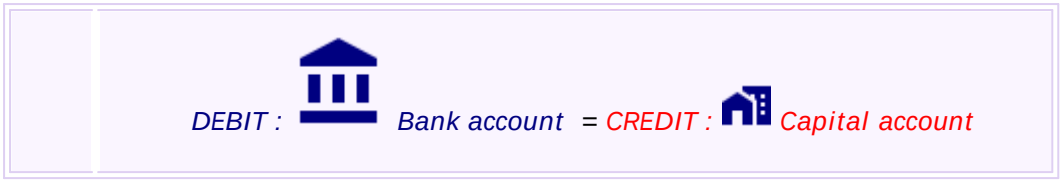
The diagram above provides a clear illustration of common transactions that occur in a business, involving various parties. These basic transactions impact the accounting equation, and their effects can be demonstrated as follows:

Transaction cycle:

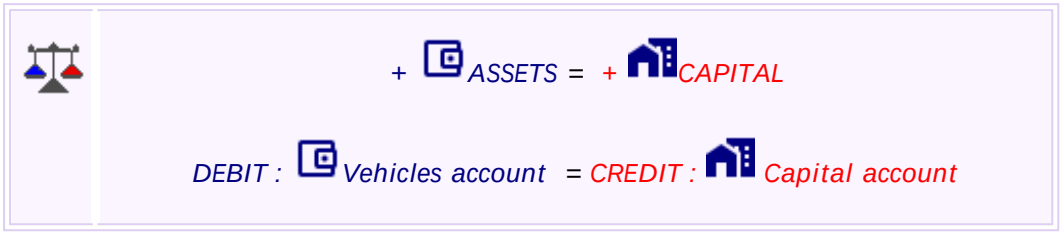
1. The owner invests in the business:

    a) Owner invests cash: When the owner invests cash into the business, both the asset account (cash) and the capital account increase, resulting in an increase in both assets and capital.



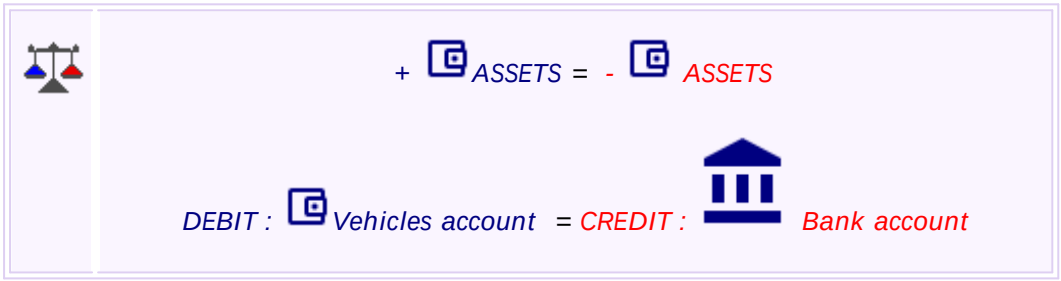


b) Owner invests assets: The business receives an asset e.g. a motor vehicle from the owner and it increases the business assets. On the other hand it also increases the owners interest in the business (Capital).

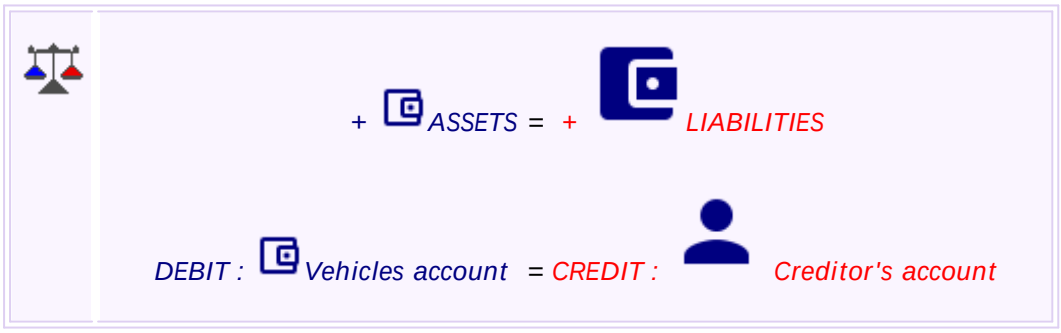


2. Purchase of assets:

a) Purchase of assets and pay cash: The business receives an asset e.g. a motor vehicle, stock; etc. from another party (the supplier) and it increases the business assets. On the other hand it also decreases the assets (cash in the bank).



b) Purchase assets on credit: The business receives an asset e.g. a motor vehicle, etc. from another party (the supplier) and it increases the business assets. On the other hand it also increases the liabilities towards the supplier, which will then be referred to as the creditor.

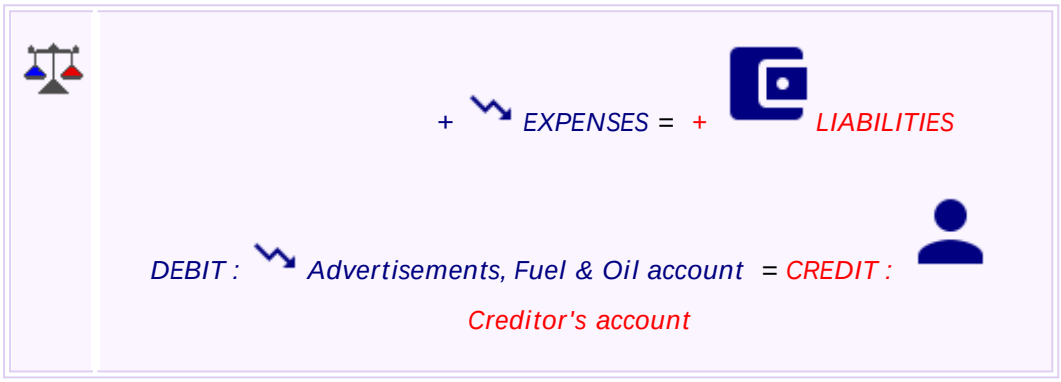


3. Incur expenses:

a) Incur expenses and pay cash: The business receives the value of goods and services, which

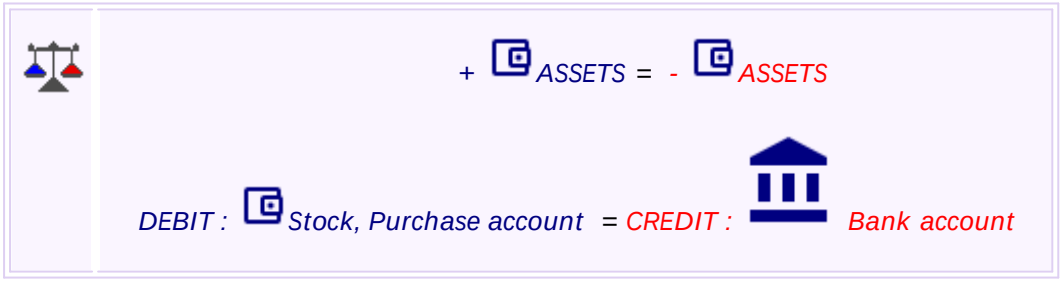
the business will consume or use up in the normal business activities, e.g. placing of an advertisement, fuel for the motor vehicle, etc. and it increases the business nominal accounts, the expense accounts. On the other hand it also decreases the assets (cash in the bank).

b) Incur expenses on credit: The business receives the value of goods and services, which the business will consume or use up in the normal business activities, e.g. placing of an advertisement, fuel for the motor vehicle, etc. and it increases the business nominal accounts, the expense accounts. On the other hand it also increases the liabilities towards the supplier, which will then be referred to as the creditor.



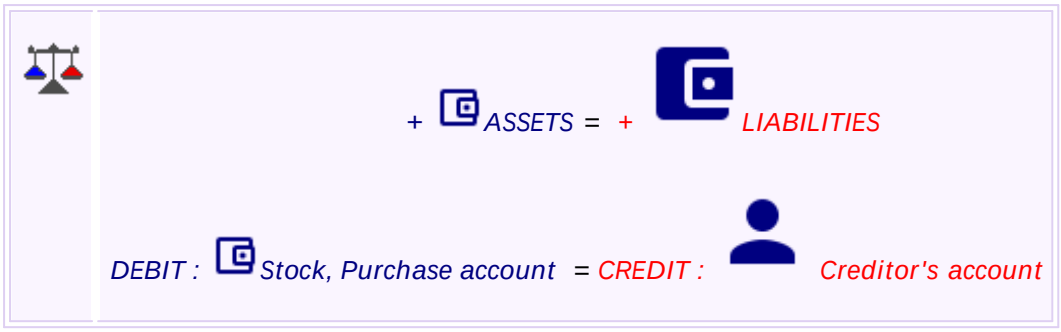
4. Purchase of stock or goods for resale:

a) Purchase of stock or goods and pay cash: The business receives an asset (stock) from another party (the supplier) and it increases the business assets. On the other hand it also decreases the assets (cash in the bank).



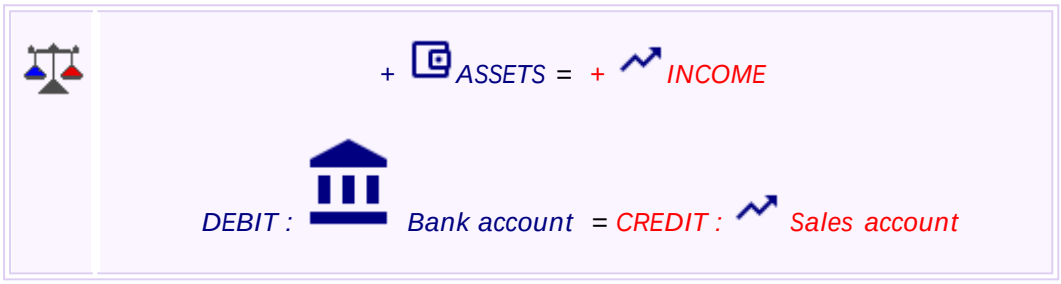
b) Purchase of stock or goods on credit: The business receives an asset (stock) from another party (the supplier) and it increases the business assets. On the other hand it also increases

the liabilities towards the supplier, which will then be referred to as the creditor.

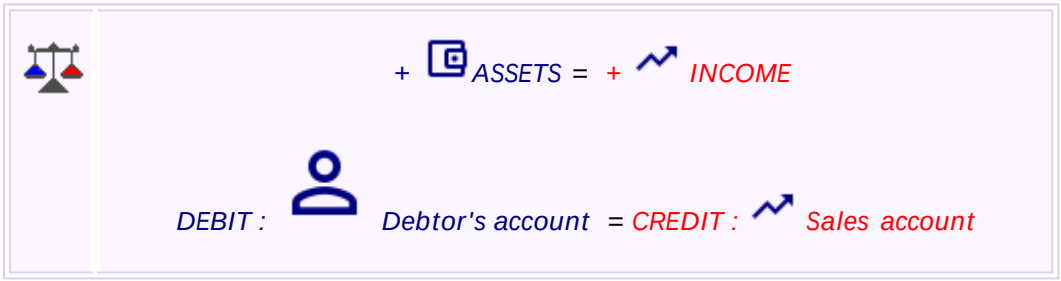


5. Sell services or goods:

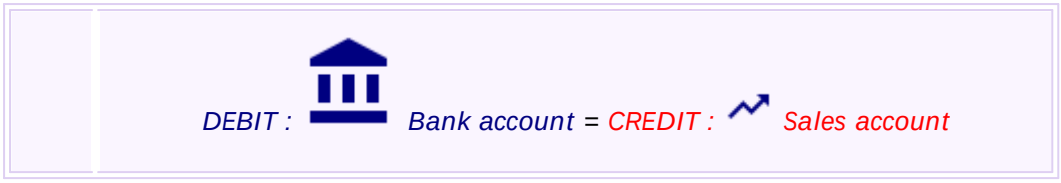
a) Sell services for cash: The business receives an asset (cash) from another party (the customer) and it increases the business assets. On the other hand it also increases the nominal accounts (income).

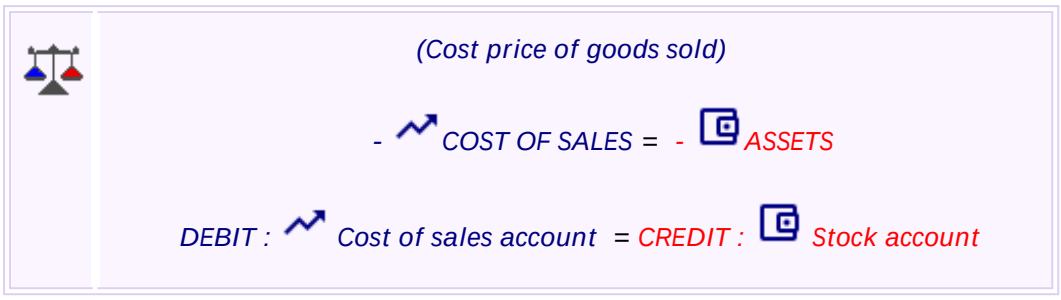


b) Sell services on credit: The business receives an asset (debtor) from another party (the customer) and it increases the business assets. On the other hand it also increases the nominal accounts (income).

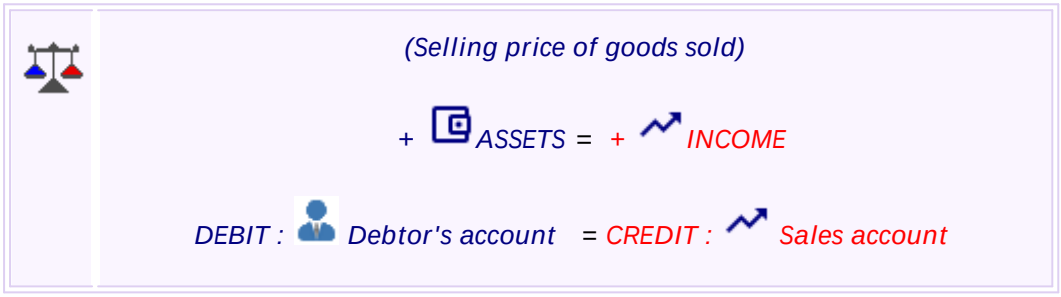


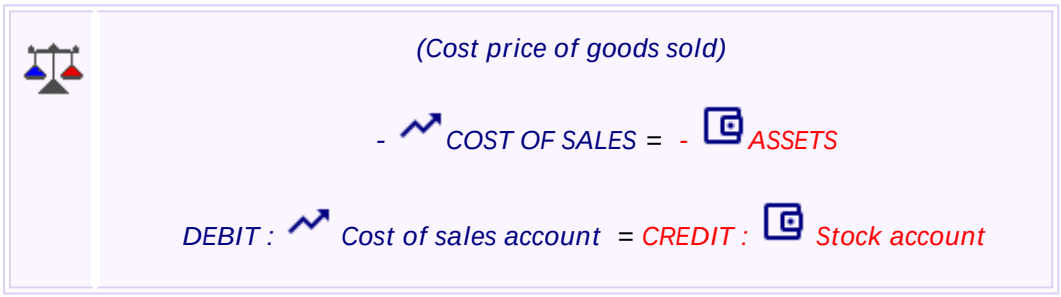
c) Sell trading stock for cash: The business gains an asset (cash) from another party (the customer) and it increases the business assets. On the other hand it also increases the nominal accounts (income). The business loses an asset (stock at cost price) and it decreases the business assets. On the other hand it also decreases the nominal accounts (cost of sales).



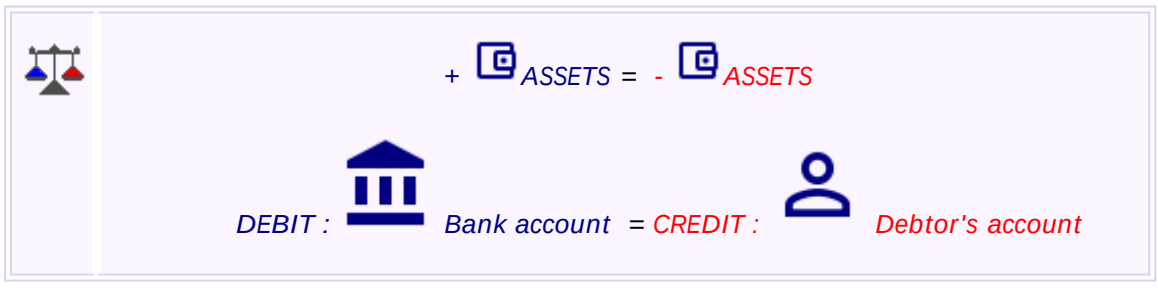


d) Sell stock on credit: The business gains an asset (debtor) from another party (the customer) and it increases the business assets. On the other hand it also increases the nominal accounts (income). The business loses an asset (stock at cost price) and it decreases the business assets. On the other hand it also decreases the nominal accounts (cost of sales).





6. Receive cash from debtors: The business gains an asset (cash) from another party (the customer) and it increases the business assets. On the other hand it also decreases the business assets (debtors).



7. Payment of creditors: The business decreases a liability (creditor) with the money paid to the other

party (the creditor) and it decreases the business assets (cash).

Understanding how these basic transactions affect the accounting equation is essential for proper financial management. It enables businesses to accurately track their financial position and performance, make informed decisions based on that information, and ensure that the accounting equation always remains balanced.

Accounting equation and Financial categories

What is the Accounting equation for the 5 financial categories?

The accounting equation is a fundamental principle in accounting that shows the relationship between a company's assets, liabilities, and capital.

The accounting equation is important because it provides a framework for recording and analysing financial transactions. It helps businesses to understand their financial position and make informed decisions about their operations. The equation is used to prepare financial statements such as the balance sheet, which summarises a company's assets, liabilities, and capital at a given point in time.

The accounting equation, also known as the Balance sheet equation, represents the fundamental relationship between the five financial categories in accounting. The equation is as follows:

Here's a breakdown of what each component represents:

- Assets: These are the economic resources owned or controlled by a business entity. Assets can include

cash, inventory, property, equipment, investments, and accounts receivable. They are classified into two main categories: current assets (short-term) and non-current assets (long-term).

- Liabilities: These are the obligations or debts owed by a business to external parties. Liabilities can include loans, accounts payable, accrued expenses, and long-term debt. Like assets, liabilities are also categorized into current liabilities (short-term) and non-current liabilities (long-term).
- Equity: Also known as owner's equity or shareholders' equity, equity represents the residual interest in the assets of a business after deducting liabilities. It reflects the ownership interest of the owners or shareholders in the business. Equity can be further divided into different components, such as contributed capital (e.g., investments by owners) and retained earnings (accumulated profits or losses retained in the business).

The accounting equation ensures that the resources (assets) owned by a business are financed either by liabilities (obligations to external parties) or by the owners' equity. It demonstrates the fundamental principle of double-entry bookkeeping, where every transaction must have an equal effect on both sides of the equation to maintain balance.

By keeping the accounting equation in balance, businesses can accurately track their financial position, analyse changes in their financial structure, and ensure proper record-keeping and reporting.

How does Income statement financial categories fit in the accounting equation?

The Income statement financial categories, namely Income and Expenses, are an integral part of the accounting equation indirectly.

The Income statement summarizes the revenues and expenses incurred by a business during a specific period. While the accounting equation primarily focuses on the Balance sheet, which represents the financial position of a business at a specific point in time, the Income statement reflects the financial performance of the business over a defined period.

The net income (or net loss) reported on the Income statement ultimately affects the Equity component of the accounting equation. Here's how it fits into the equation:

- Net Income: Net income is calculated by subtracting total expenses from total revenues. If the revenues exceed the expenses, it results in a net income, which increases the Equity component of the accounting equation. Net income represents the profit generated by the business and contributes to the owners' equity or retained earnings.
- Net Loss: Conversely, if the total expenses exceed the total revenues, it results in a net loss, which decreases the Equity component of the accounting equation. Net loss represents the loss incurred by

the business during the period and reduces the owners' equity or retained earnings.

Therefore, the Income statement provides valuable information about the revenues earned and expenses incurred by a business, which directly impacts the owners' equity component of the accounting equation. It showcases the profitability or performance of the business and how it influences the financial position reflected in the equation.

Accounting equation - Balance sheet

In accounting, the balance sheet typically reflects three main types of accounts: proprietary accounts, asset accounts, and liability accounts. These accounts provide a snapshot of the business's worth on a specific date, by showing the value of assets held (such as motor vehicles, stock, equipment and machinery), monies owed, and the capital and loan accounts of the owners. The balance sheet is an important financial statement that provides a summary of a company's financial position, and helps stakeholders make informed decisions about investing, lending, and doing business with the company.

Financial category	*What do they tell us?*	*Examples of accounts*
Proprietary accounts	*Proprietary accounts are used to record all personal transactions between the business owner(s) and the business itself. This includes investments made by the owner(s) into the business, as well as any withdrawals taken out of the business by the owner(s).*	*Capital* *Drawings* *Retained income / earnings*
Asset accounts	*Asset accounts are used to record all of the assets owned by the business, which are used in the course of conducting business activities. This includes tangible assets such as property, plant, and equipment, as well as intangible assets such as patents, trademarks, and goodwill.*	*Land and Buildings* *Vehicles* *Furniture and fittings* *Machinery* *Debtors* *Bank*

		Petty cash Trading stock
Liability accounts	Liability accounts are used to record all of the liabilities of the business, which represent amounts owed by the business to third parties. This includes both short-term liabilities such as accounts payable and long-term liabilities such as loans or bonds payable.	Loans Bank overdrafts Creditors

The balance between the assets and liabilities of the business is an important determinant of the financial health and stability of the business.

CAPITAL = ASSETS – LIABILITIES

The balance sheet is a financial statement that presents a list of all the assets owned by the business and how these assets are financed. It provides a snapshot of the financial position of the business at a specific point in time.

The sources used to finance the assets of the business are listed on the balance sheet under the categories of owner's equity and liabilities. Owner's equity represents the capital invested by the owner in the business, while liabilities represent amounts owed by the business to third parties. Together, owner's equity and liabilities are referred to as the "*sources of financing*" or "*capital employed*".

The assets that the business owns are listed on the balance sheet as the "*employment of capital*". These assets are financed by the capital and liabilities of the business. The balance sheet provides a clear picture of the financial health of the business, by showing the relationship between its assets and the sources used to finance those assets.

Accounting equation - Income statement

The income statement is a financial statement that shows all the income and expense accounts of a business, which are also called nominal accounts. It is divided into two main financial categories: income accounts and expense accounts. It consists of two basic Financial categories:

Financial category	*What do they tell us?*	*Examples of accounts*
Income accounts	*Income accounts represent the sources of income for the business.*	*Sales* *Interest received*
Expense accounts	*On the other hand, expense accounts reflect the expenses incurred by the business in order to generate income.*	*Motor vehicle expenses* *Rent* *Telephone* *Salaries and wages* *Water and Lights*

The difference between the total of the income and the total of the expense accounts will reflect how much profit/loss the business made.

The profit is the return or remuneration the owner or owners of the business receives on their investment in the business. This difference (Profit / Loss) is transferred to the Balance sheet (Retained income / earnings account) as it will increase the owner / owners equity (capital interest) in the business.

PROFIT = INCOME – EXPENSES

Expanded accounting equation - Balance sheet and Income statement

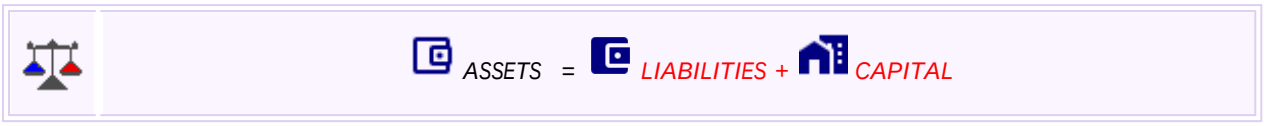
---

The expanded accounting equation takes into account the impact of all transactions on assets, liabilities, capital, income, and expenses. When sales are made, assets such as cash in the bank or accounts receivable increase, along with income. Conversely, expenses like advertising decrease assets, such as cash in the bank, or increase liabilities, like accounts payable. Income increases profit while expenses decrease profit.

Given that most transactions affect both the income statement and balance sheet, it's necessary to look at

the full accounting equation.

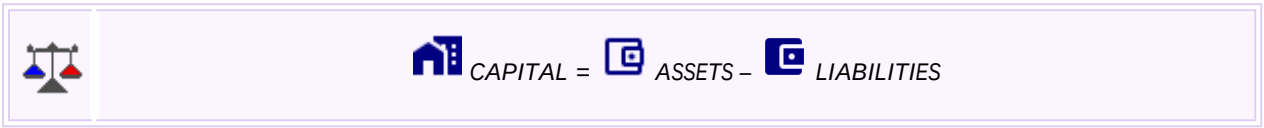
The expanded accounting equation is as follows:



This equation must always be in balance for the financial statements to be accurate.

Balance sheet

The balance sheet is one of the main financial statements that presents the company's financial position at a specific point in time. It shows the assets, liabilities, and equity of the company, and the balance sheet is based on the accounting equation.

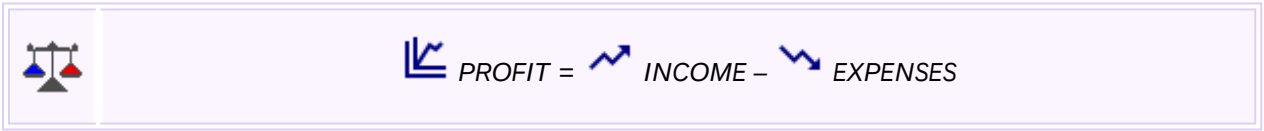


Income statement

The income statement is another important financial statement that reports a company's financial performance over a period of time, typically one year. It summarizes the revenues, expenses, and net income of the company for that period.

The income statement is a crucial financial statement that reports a company's financial performance during a specified period, usually one year. It provides a summary of the company's revenues, expenses, and net income for that period.

The accounting equation plays a vital role in the income statement. The net income reported on the income statement is calculated by subtracting total expenses from total revenues. This net income is then added to the equity section of the balance sheet, affecting the retained earnings balance. Thus, the accounting equation, which states that assets = liabilities + equity, is also impacted by the income statement.



Balance sheet

The balance sheet and income statement are connected through the accounting equation. The net income reported on the income statement affects the equity section of the balance sheet by flowing into the retained earnings balance. Additionally, changes in assets and liabilities on the balance sheet are reflected in the income statement through revenues and expenses.

All transactions impact either assets, liabilities, capital, income, or expense items. Sales increase assets, such as bank or debtors, and income. On the other hand, expenses like advertisements decrease assets, such as cash in the bank, or increase liabilities, like creditors.

Income increases profit, while expenses decrease profit. Since most transactions affect both the income statement and the balance sheet, it's essential to consider the full accounting equation or expand the accounting equation.

Expanded accounting equation

The accounting equation will then be as follows:

Account groups - Financial categories

Each account included in the chart of accounts in osFinancials5/TurboCASH5 Sets of Books (templates) is linked to account groups, which in turn are linked to the five financial categories (INCOME, EXPENSES, CAPITAL, ASSETS, and LIABILITIES).

Each of these financial categories is further divided into groups that classify the financial transactions according to their nature. This provides the basic structure for the chart of accounts to generate various financial reports based on account number or account group 1 or account group 2.

The classification of financial categories and account groups for the income statement and balance sheet is briefly explained in the following topics:

- Account groups - Financial categories - Income statement
- Account groups - Financial categories - Balance sheet

Created with the Standard Edition of HelpNDoc: How to Protect Your PDFs with Encryption and Passwords

Account groups - Financial categories - Income statement

Each of the Income statement Financial categories, which are INCOME and EXPENSES, are further classified into reporting groups for accounts, which are described as follows:

FINANCIAL CATEGORY	*REPORTING GROUPS FOR ACCOUNTS*	*DESCRIPTION*	**DR / CR*
NET PROFIT	*RETAINED INCOME*	*Income received is greater than incurred expenses.*	*CREDIT*
/ NET LOSS		*Incurred expenses are greater than income received.*	*DEBIT*
INCOME	*INCOME*	*This category includes revenue generated from the sale of goods and services.*	*CREDIT*
	OTHER INCOME	*This category includes revenue from ventures and activities outside of the normal business activities.*	*CREDIT*
EXPENSES	*EXPENSES*	*This category includes expenses incurred in the normal business activities to generate income.*	*DEBIT*

RETAINED INCOME, at the beginning of the financial year, the income/expense accounts are zeroed and the resulting balance transferred to the retained income account.

Income / Expense accounts created (in osFinancials5/TurboCASH5) should be assigned to an appropriate reporting group and linked to a financial category in osFinancials5/TurboCASH5.

INCOME or EXPENSES

The Financial results influence the net worth of a business. A profit will increase the capital value of a business; the opposite is true for a loss.

*The DR/CR column in the table indicates whether the account has a debit or credit balance. The NET PROFIT or NET LOSS is calculated by subtracting the total expenses from the total income. At the

beginning of the financial year, the income/expense accounts are zeroed, and the resulting balance is transferred to the RETAINED INCOME account.

Accounts created in osFinancials5/TurboCASH5 should be assigned to an appropriate reporting group and linked to a financial category (INCOME or EXPENSES) in osFinancials5/TurboCASH5. The financial results influence the net worth of a business, with a profit increasing the capital value of a business and a loss decreasing it.

Charts of accounts in osFinancials/TurboCASH

---

osFinancials5/TurboCASH5 provides pre-set Sets of Books (templates) that can be used to create your own Set of Books. These templates are already available to download using the "*Let osFinancials help you to create a Set of Books?*" option / "*Let TurboCASH help you to create a Set of Books?*" option and all necessary settings are pre-configured to make it easier for you. The chart of accounts can be customised according to your business needs and all accounts must be linked to either a Balance sheet or Income statement category. It is recommended to print the Chart of Accounts and verify that all necessary accounts are present. Accounts and sub-accounts can be added, edited or deleted to fit specific requirements.

The "Customize your own Set of Books (Advanced)?" option on the "Creation wizard" screen (Create Set of Books on the Start ribbon), allows you to create a Set of Books with up to 8-digit main accounts.

When creating a Set of Books with the option to choose the number of digits for main accounts, you have the flexibility to select a structure that suits your needs. Here are the available options and the corresponding number of digits for the general ledger main accounts:

4-Digit General ledger main accounts: Enter a 4-digit numeric code for each of the Creditor's control, Debtor's control, and Retained income/earnings accounts (e.g., 2100, 1100, and 3100). This option includes 3-digit sub-accounts as well as 7-Digit account codes for Debtor accounts in the debtors ledger and Creditor accounts in the creditors ledger.

5-Digit General ledger main accounts: Enter a 5-digit numeric code for each of the Creditor's control, Debtor's control, and Retained income/earnings accounts (e.g., 21000, 11000, and 31000). This option includes 3-digit sub-accounts as well as 8-Digit account codes for Debtor accounts in the debtors ledger and

Creditor accounts in the creditors ledger

6-Digit General ledger main accounts: Enter a 6-digit numeric code for each of the Creditor's control, Debtor's control, and Retained income/earnings accounts (e.g., 210000, 110000, and 310000). This option includes 3-digit sub-accounts as well as 9-Digit account codes for Debtor accounts in the debtors ledger and Creditor accounts in the creditors ledger

7-Digit General ledger main accounts: Enter a 7-digit numeric code for each of the Creditor's control, Debtor's control, and Retained income/earnings accounts (e.g., 2100000, 1100000, and 3100000). This option includes 3-digit sub-accounts as well as 10-Digit account codes for Debtor accounts in the debtors ledger and Creditor accounts in the creditors ledger

8-Digit General ledger main accounts: Enter an 8-digit numeric code for each of the Creditor's control, Debtor's control, and Retained income/earnings accounts (e.g., 21000000, 11000000, and 31000000). This option includes 3-digit sub-accounts as well as 11-Digit account codes for Debtor accounts in the debtors ledger and Creditor accounts in the creditors ledger

When designing and planning your Chart of Accounts, it's important to carefully consider and define the codes or numbers for these accounts based on the structure you have chosen. This will help ensure consistency and organization in your financial reporting and analysis.

The "*EN-SOUTHAFRICA*" Set of Books contains a chart of accounts that is divided into two parts: Income statement accounts and Balance sheet accounts for your convenience.

Created with the Standard Edition of HelpNDoc: Full-featured Documentation generator

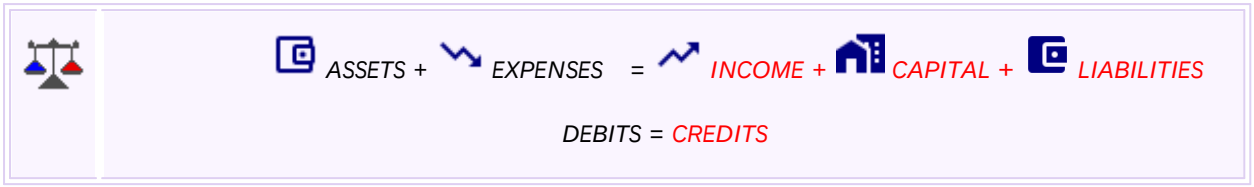
Balance sheet accounts - Chart of accounts

Every transaction has an impact on the assets, liabilities, capital, income, or expense items of an entity. For instance, sales increase assets such as bank balance or debtors and income. On the other hand, expenses like advertising decrease assets (cash in the bank) or increase liabilities (creditors). Income increases the profit, whereas expenses decrease it. Since most transactions affect both the Income statement and the Balance sheet, it is necessary to consider the entire accounting equation or expand it.

The expanded accounting equation is as follows:

This equation shows that the assets of an entity are equal to the sum of its liabilities, capital, income, and expenses. The equation must always balance, which means that the total value of the assets must be equal to the sum of liabilities, capital, income, and expenses. This is a fundamental principle in accounting, and it

ensures that the financial statements are accurate and reliable.



Account	Description	Account Group1	Type

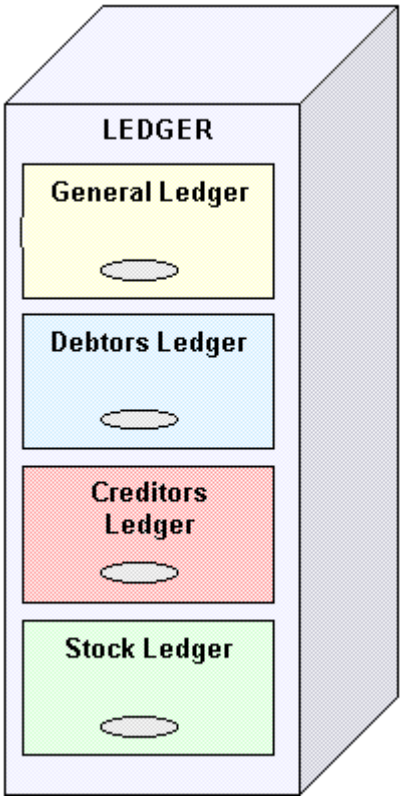
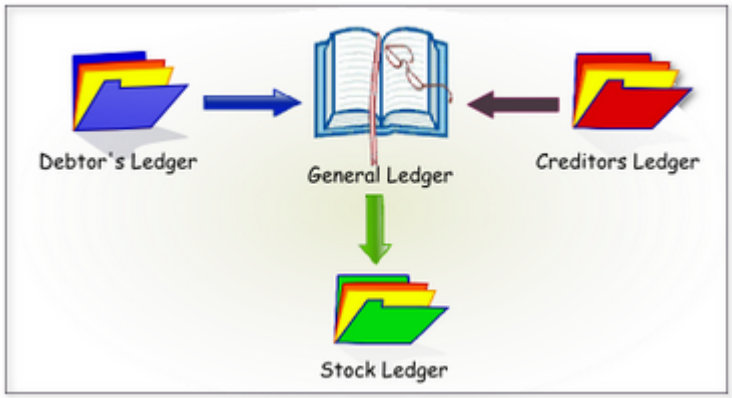
General ledger structure

The Ledger consists of the General ledger (Chart of accounts), the Debtor's ledger; the Creditor's ledger and the Stock ledger. The ledger can be illustrated as follows:



1. General ledger - consists of the Income and Expense accounts and Capital, Assets and Liabilities (Balance sheet) accounts. It also includes a control account for the debtors, creditors and stock items.
2. Debtor's ledger - consists of the individual debtor accounts. Each individual debtor's account contains the contact information, messages and accounting information. The total outstanding balance of all the debtor accounts in the debtor's ledger is automatically updated and reported in the Debtor's control in the General ledger.
3. Creditor's ledger - consists of the individual creditor accounts. Each individual creditor's account contains the contact information, messages and accounting information. The total outstanding balance of all the creditor accounts in the creditor's ledger is automatically updated and reported in the Creditor's control account in the General ledger.
4. Stock ledger - consists of the individual stock item records. Each individual stock item records contain specific information, such as quantities, cost prices, selling prices, units, re-order levels, etc. The total outstanding cost price value of all the stock item records in the stock ledger is automatically updated and reported in the Stock control account in the General ledger. It also includes a control account for the debtors, creditors and stock items.

The outstanding balances of the individual accounts and records in the Debtor's ledger, the Creditor's ledger and the Stock ledger is automatically updated and reported in the respective Control accounts in the General ledger.



Created with the Standard Edition of HelpNDoc: Easily create Qt Help files

Control accounts

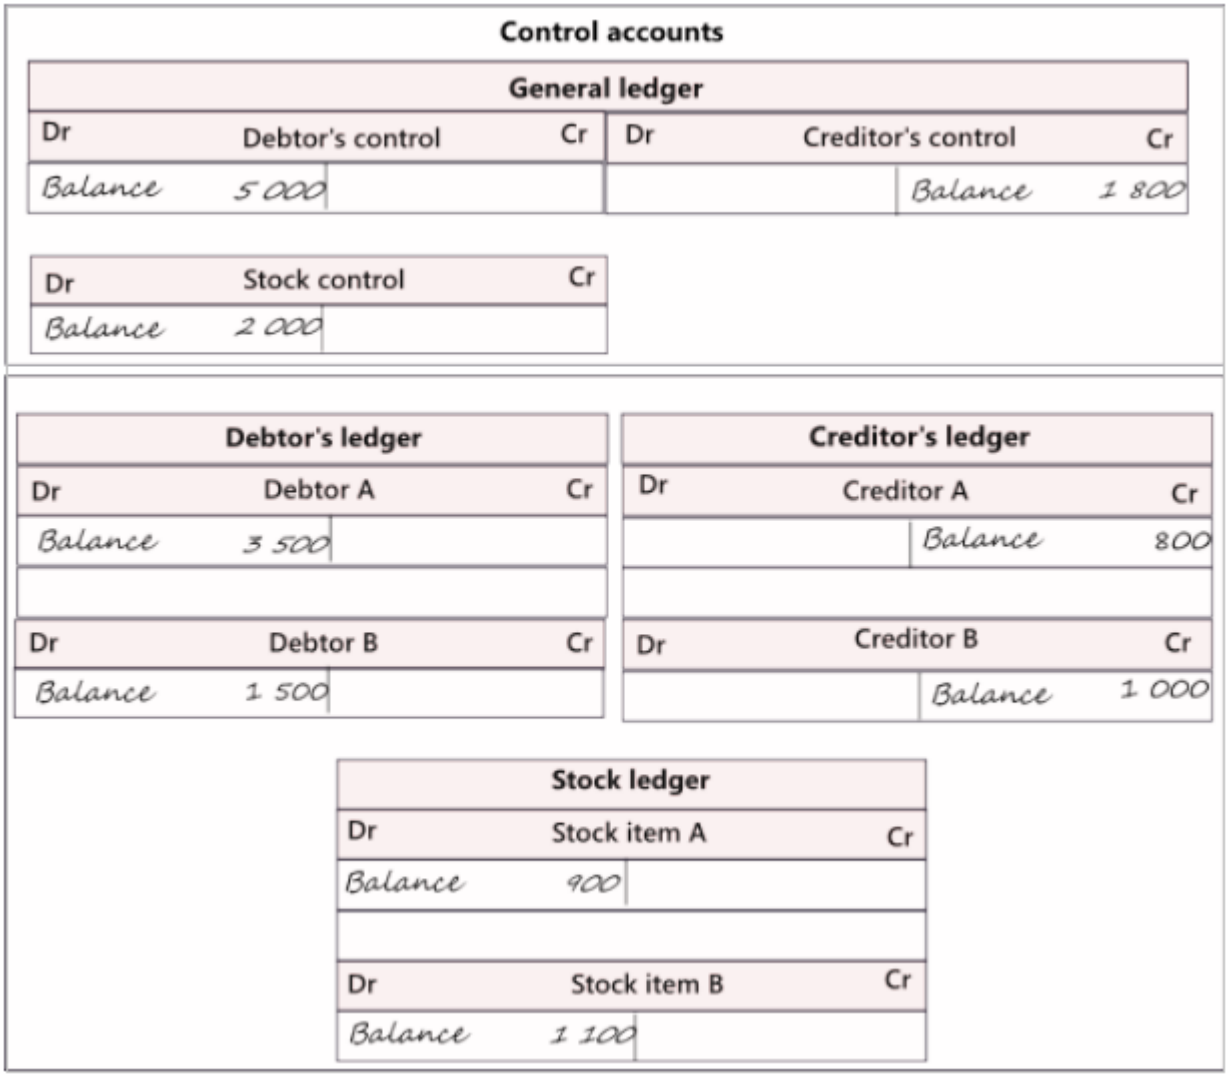
Control accounts are used to keep track of the total amounts owed by debtors and owed to creditors, as well as the total value of stock items. Instead of creating individual ledger accounts for each debtor, creditor, and stock item, a single control account is created in the general ledger. The control account shows the total amounts owed by all debtors or owed to all creditors, and the total value of all stock items.

To keep track of individual debtor accounts, creditor accounts, and stock items, separate subsidiary ledgers are created for each. The subsidiary ledgers contain individual ledger accounts for each debtor, creditor, and stock item. The subsidiary ledgers are managed by the debtors clerk or the purchases department, who maintain the individual ledger accounts for each debtor, creditor, and stock item.

At the end of a period, the balances in the individual ledger accounts are totalled, and the total is compared to the balance in the corresponding control account in the general ledger. If the balances match, it means that all individual ledger accounts have been properly recorded and reconciled. The same principles apply to the purchases department.

Using control accounts and subsidiary ledgers allows for more efficient management of accounting records, especially in large business enterprises with many debtors, creditors, and stock items. It also enables effective credit control and debt collection.

Using control accounts and subsidiary ledgers allows for a more organised and efficient system of managing and storing information about debtors, creditors, and stock items. It also enables businesses to delegate the management of subsidiary ledgers to specific clerks or departments, allowing for greater control and oversight. The subsidiary ledgers and the general ledger can be illustrated as follows:



General ledger - The general ledger is a comprehensive record that includes your chart of accounts, income and expenses, capital, assets, and liabilities. The chart of accounts comprises control accounts for debtor accounts, creditor accounts, and stock items (inventory items) in the form of stock ledgers. The individual subsidiary ledgers, such as the debtor's ledger, creditor's ledger, and stock ledger, contain specific details.

1. Debtor's control account

The debtor's control account is a record in the general ledger that shows the total amount of money owed by all the individual debtors. The balance of the debtor's control account must match the total amount of money owed by each individual debtor, which is obtained from the various subsidiary ledger accounts for each debtor. The subsidiary ledger that tracks the individual balances for each debtor is known as the debtors' ledger.

In the debtors' ledger, you can store transaction details and additional information about each debtor, such as their personal and contact information, credit limit, payment terms, and more. The debtor's

ledger also serves as a register of all the transactions between you and a specific debtor, allowing you to track each purchase and payment made by that debtor.

2. Creditor's control account

The creditor's control account is an account in the general ledger that reflects the total amount owed to all individual creditors. Its balance must equal the total of the creditors' list, which represents the amounts owed by the individual creditors obtained from the individual balances in the various subsidiary ledger accounts for each creditor.

In the creditors' ledger, you can store transaction details and additional information regarding each creditor, such as their personal and contact information, credit limit, terms, etc. The creditors' ledger is also a register of each and every transaction that you and a specific creditor entered into.

3. Stock control account

The stock control account keeps track of the overall value or amount of all the stock items a business has. It's important that the balance of each individual stock item ledger account matches the total value of the stock item list, which is made up of the amounts or values of all the individual stock items obtained from the various subsidiary ledger accounts for each item. This subsidiary ledger is called the stock ledger.

The stock ledger contains transaction details and additional information for each stock item, such as its cost price, selling price, quantity, and location on the shelves. This ledger serves as a record of every stock transaction, including purchases and sales.

Structure of osFinancials

---

osFinancials5/TurboCASH5 is a software that is straightforward to set up and use. You only need to create a Set of Books once, add your master records, set some defaults, and begin processing your transactions. Whenever you need to manage your financial activities, you can generate, print, or export various reports.

The user interface of osFinancials5/TurboCASH5 is designed to be user-friendly and intuitive, making it easy for users to perform most functions with just a few clicks and minimal typing. In certain fields, search facilities are available to help you select transaction details or report selection criteria quickly.

The financial data in osFinancials5/TurboCASH5 is processed, stored, and reported on using a specific structure in the osFinancials5/TurboCASH5 file system:

1. Sets of Books

   The osFinancials file system consists of various components that are used to manage and monitor financial activities for different entities. You can create an unlimited number of Sets of Books, which are sets of computerized files used to enter, process, summarize, and report financial data for a business entity or organization. Each Set of Books is stored in a separate directory or folder on your system, and the list of these Sets of Books is kept in the "*books.fdb*" file.

2. Company info, defaults and settings

   For each Set of Books, the entity's information and defaults or settings are stored. This information is reflected on reports, and the defaults or settings are used to enter, process, and report on the data.

3. Accounting periods

   The accounting periods are used to report on financial activities for a specific period. The financial year is divided into accounting periods, usually representing the calendar months. All transactions of an entity must be recorded in the accounting period in which they occurred. The accounting periods are used to generate reports on the transaction data, and osFinancials5/TurboCASH5 stores the totals and other financial information for any number of years to allow for comparison between reports for this year and last year.

   The "*totals*" table in osFinancials5/TurboCASH5 stores the total amounts for each accounting period of the current year and the previous year. This table is used to cross-reference and ensure that the Set of Books is balanced. For each account, the total of the debits (positive numbers) and credits (negative numbers) for any given period must be equal to zero, as every transaction should have an equal amount debited and credited.

4. Accounts

   The Chart of Accounts is the core component of a Set of Books. This data is kept in the "*accounts*" table, and there are five types of Accounts files specific to each type:

   a) General ledger accounts - Assets, Capital, Liabilities, Income or Expense accounts.

   b) Bank accounts - Cashbook payments and receipts journals.

   c) Creditor accounts - Creditor contact information, remittance advice messages, credit limits, charge amounts, tax references, groups, etc.

   d) Debtor accounts - Debtor contact information, statement messages, credit limits,

charge amounts, interest percentage, tax references, groups, etc.

e) Tax accounts - Percentages for VAT/GST/Sales Tax and effective dates for which these percentages apply.

5. Stock items

   osFinancials5/TurboCASH5 stores specific data of your stock items (inventory items / products) in the "*stock*" table, including codes, descriptions, selling prices, and barcodes, tax accounts, sales, cost of sales, and stock account information.

6. Transactions

   All transactions are entered in batches and documents, such as, invoices, credit notes, purchases and supplier returns), and these batches are posted to the ledger. The information of each transaction is kept in the "*transact*" table, including the batch type, date and period of the transaction, reference number, description, amount, tax amounts, account, and contra account.

7. Documents

   The details of documents such as invoices, credit notes, quotes, purchases, supplier returns, and orders are stored in various tables. These tables contain information about the inventory items and quantities as selected on the documents. When documents are updated or posted to the general ledger, osFinancials5/TurboCASH5 will generate transactions and update the appropriate accounts with these transactions. This saves you the effort of unravelling the complex relationships between transactions.

Research and Development (R&D)

Research & Development (R&D) Section: Exploring Accounting Complexities and Customizing osFinancials

The Research & Development section of the osFinancials5/TurboCASH5 documentation has two primary objectives: to navigate the intricate landscape of accounting complexities and to offer guidance on effectively integrating and customizing a chart of accounts for specific countries, regions, and jurisdictions. This section is intended to be a valuable resource for individuals who are new to accounting, students, and

professionals seeking to optimize their osFinancials5/TurboCASH5 experience.

1. Exploring Accounting Complexities: In this section, we delve into the multifaceted aspects of accounting, including accounting frameworks, standards, taxation regulations, ownership types, and financial reporting practices across the globe. The objective is to provide a comprehensive understanding of the challenges and opportunities posed by these complexities, and how they impact financial reporting and analysis. Key topics covered include:
    - Comparative analysis of accounting frameworks and standards (GAAP, IFRS, local standards) in different regions.
    - Examination of tax implications for various ownership types and financial transactions.
    - Insights into global variations in financial reporting practices and their influence on financial analysis and decision-making.
2. Customizing osFinancials5/TurboCASH5 for Specific Jurisdictions: In this section, we focus on leveraging the capabilities of osFinancials to tailor the chart of accounts to the unique requirements of different countries, regions, and jurisdictions. The goal is to provide practical guidance on designing a chart of accounts that aligns with local regulations, business needs, and reporting standards. Key topics covered include:
    - Understanding the significance of a chart of accounts and its role in financial reporting.
    - Strategies for structuring accounts to accommodate diverse needs and regulatory requirements.
    - Exploring options to integrate taxation considerations, industry-specific practices, and ownership type nuances into the chart of accounts.

Compliance and Professional Advice: While this section aims to provide valuable insights and recommendations, it's crucial to emphasize the importance of compliance with local laws and regulations. Readers are encouraged to consult official tax websites, seek guidance from legal professionals, and collaborate with local accounting experts to ensure adherence to applicable standards and requirements. Ownership type considerations, tax implications, and accounting practices can vary significantly, and professional advice is essential to ensure accurate and compliant financial reporting.

By addressing these objectives, the Research & Development section of the osFinancials5/TurboCASH5 documentation aims to empower users with a deeper understanding of accounting complexities and the tools to customize osFinancials for optimal financial management while adhering to legal and regulatory standards.

Research and Development (R&D) - Key components

The Research and Development (R&D) section of the osFinancials5/TurboCASH5 plays a crucial role in exploring and developing strategies to address the intricate complexities that arise from variations in accounting frameworks, accounting standards, chart of accounts design, account structure concepts, taxation regulations, and ownership types across different global regions. This section aims to provide a comprehensive understanding of these factors and how they impact financial reporting and analysis. Let's break down the key components and objectives of this R&D section:

1. Accounting Frameworks and Standards Research: This involves studying and analysing the various accounting frameworks and standards used in different countries and regions. Different countries may adopt different accounting principles (e.g., Generally Accepted Accounting Principles [GAAP], International Financial Reporting Standards [IFRS], local standards), which can lead to variations in financial reporting practices. The R&D section should explore the similarities, differences, and implications of these frameworks for financial reporting.
2. Branches in Accounting: Detail the various specialized branches of accounting, such as management accounting, cost accounting, and forensic accounting. Explain how each branch serves a specific purpose in providing meaningful insights for decision-making and compliance.
3. Chart of Accounts Design: A chart of accounts is a critical element of financial reporting that defines the structure of accounts used to record financial transactions. The R&D section should research and propose options for designing a chart of accounts that accommodates the diverse needs and reporting requirements of different regions while ensuring consistency and comparability.
4. Account Structure Concepts: Understanding how accounts are structured and classified is essential for accurate financial reporting. This section should delve into the different approaches to structuring accounts, such as by asset type, liability type, equity, revenue, and expense. It should also explore how these concepts vary across regions and their impact on financial analysis.
5. Ownership Types Analysis: Different ownership structures (e.g., sole proprietorship, partnership, corporation) have distinct financial reporting requirements and implications. This part of the R&D section should investigate the advantages, disadvantages, and accounting considerations associated with each ownership type, while highlighting how they differ across global jurisdictions.
6. Trade and Investment Incentives and Regulations: Discuss the impact of trade agreements, investment incentives, and regulations on financial reporting and decision-making. Explain how these factors can influence a company's international operations and financial strategies.
7. Taxation Considerations: Taxation rules and regulations vary significantly across countries, impacting how financial transactions are recorded and reported. This section should examine the tax implications of different ownership types, business structures, and financial transactions, offering insights into how

they affect financial statements and tax liabilities.

8. Tax VAT,GST/Sales Tax: Delve into the intricacies of Value Added Tax (VAT), Goods and Services Tax (GST), and Sales Tax in different regions. Discuss the concepts, calculations, and implications of these types of taxation on financial reporting and business operations.
9. Global Variations in Financial Reporting: This section should provide a comparative analysis of how accounting practices, financial reporting standards, and ownership types vary across different parts of the world. It should highlight the challenges and opportunities posed by these variations and suggest strategies to address them in a comprehensive and harmonized manner.
10. Impact on Financial Analysis and Decision-Making: The R&D section should conclude by discussing how these complexities influence financial analysis and decision-making. It should emphasize the need for accurate, consistent, and transparent financial reporting practices to enable meaningful comparisons and informed business decisions in a global context.
11. Financial Analysis and Valuation: Explore the methodologies and techniques used in financial analysis and valuation, including ratio analysis, discounted cash flow (DCF) analysis, and market comparable analysis. Discuss how these tools are employed to assess a company's financial performance, health, and intrinsic value.
12. Stock / Inventory: Explain the significance of managing and accounting for stock and inventory. Cover topics like inventory valuation methods (FIFO, LIFO, weighted average), inventory turnover ratios, and how different industries handle inventory management.

Overall, the Research and Development section of the Financials documentation should provide valuable insights and recommendations for navigating the intricate landscape of accounting frameworks, standards, chart of accounts design, account structure concepts, taxation, and ownership types across diverse regions. This will help organizations develop effective strategies for maintaining accurate financial records, complying with regulations, and making informed financial decisions on a global scale.

Leveraging the capabilities of the ChatGPT in Research

Leveraging the capabilities of the ChatGPT - AI 3.5 platform can be extremely beneficial for understanding basic complexities in various accounting concepts and applications worldwide. Here's how you can use this platform to aid newcomers to accounting, students, and anyone looking to optimize their financial understanding:

1. Concept Explanation: Use prompts to ask for explanations of fundamental accounting concepts such as assets, liabilities, equity, revenue, and expenses. You can ask for plain language explanations or delve into more technical details as needed.
2. Accounting Standards Comparison: Ask for a comparison between different accounting standards like

GAAP and IFRS. Explore the key differences in how they treat various financial transactions and reporting elements.

3. Chart of Accounts Design: Seek guidance on designing an effective chart of accounts that suits your organization's needs. Ask for pointers on how to structure accounts for different types of transactions.
4. Tax Implications: Inquire about how different ownership types (sole proprietorship, partnership, corporation) impact taxation. Get insights into deductible expenses, tax credits, and how to navigate tax regulations.
5. International Operations: If your business operates globally, you can ask about how to handle currency conversion, translation of financial statements, and accounting for transactions in different countries.
6. Financial Analysis: Request explanations on how financial ratios (e.g., liquidity, profitability, solvency) are calculated and what they indicate about a company's financial health.
7. Costing Methods: Understand different costing methods such as FIFO, LIFO, and weighted average, and their implications on inventory valuation and cost of goods sold.
8. Financial Statement Interpretation: Seek guidance on how to interpret income statements, balance sheets, and cash flow statements to make informed business decisions.
9. Consolidation: If dealing with group or subsidiary companies, ask how to consolidate financial statements to present a comprehensive view of the entire organization's financial position.
10. Ethical Considerations: Explore prompts about ethical considerations in accounting, such as the importance of transparency, avoiding conflicts of interest, and adhering to professional codes of conduct.
11. Accounting Software: Inquire about the use of accounting software, its benefits, and how to choose the right software for your organization's needs.
12. Industry-Specific Accounting: If you're in a specialized industry (e.g., healthcare, manufacturing, technology), ask for insights into industry-specific accounting practices and regulations.

Remember that while ChatGPT can provide valuable explanations and guidance, it's also a good practice to consult official accounting textbooks, resources, and professionals to deepen your understanding and ensure accuracy. Additionally, continuously optimizing your financial knowledge involves staying up-to-date with evolving accounting standards and industry practices.

ChatGPT - AI 3.5 platform - Upgrading to ChatGPT4

The research is based on ChatGPT's last knowledge update in September 2021.

If there have been developments since then, I recommend checking OpenAI's official website or reliable news sources for the latest information on their AI models and platforms. They typically provide announcements about new releases and upgrades.

Common errors made in accounting

There are several common errors that can occur in accounting, including:

1. Data entry errors: These errors occur when transactions are entered incorrectly, such as transposing numbers or recording the wrong amount.
2. Timing errors: These errors occur when transactions are recorded in the wrong period, such as recording a transaction in the wrong month or year.
3. Omission errors: These errors occur when a transaction is not recorded at all, such as forgetting to record a sale or purchase.
4. Reversal errors: These errors occur when debits and credits are reversed, such as debiting an account that should be credited.
5. Overstatement or understatement errors: These errors occur when transactions are recorded with the wrong amount, such as overstating revenue or understating expenses.
6. Duplication errors: These errors occur when a transaction is recorded twice, resulting in an overstatement of assets or income.
7. Incorrect account errors: These errors occur when a transaction is recorded in the wrong account, resulting in misstatements in financial statements.

It is important for businesses to have internal controls in place to prevent these common errors from occurring. Regular review and reconciliation of accounts can help identify and correct any errors that do occur. It is also important to have well-trained accounting staff and to use reliable accounting software, such as osFinancials5/TurboCASH5 to minimize the risk of errors.

osFinancials and Small businesses, Medium sized businesses and Large businesses

---

Accounting software such as osFinancials5/TurboCASH5 how can it be useful to Small businesses, Medium sized businesses and Large businesses?

Accounting software like osFinancials5/TurboCASH5 can be highly beneficial to small, medium-sized, and large businesses by providing a range of features and functionalities that improve financial management, efficiency, and decision-making. Here's how it can be useful to each business size:

1. Small Businesses:
    - User-Friendly Interface: Accounting software designed for small businesses often has a user-friendly interface, making it easy for non-accounting professionals to navigate and use the software effectively.
    - Cost-Effective: Accounting software eliminates the need for manual bookkeeping and reduces the cost of hiring a dedicated accountant or outsourcing accounting tasks.
    - Invoicing and Billing: Small businesses can create professional invoices, track payments, and manage billing efficiently, helping improve cash flow.
    - Expense Tracking: The software allows businesses to record and categorize expenses, providing a clear overview of where money is spent.
    - Tax Compliance: Accounting software can calculate taxes, generate tax reports, and help small businesses meet their tax obligations.
2. Medium-Sized Businesses:
    - Scalability: Accounting software can scale with the growth of a medium-sized business, accommodating a higher volume of transactions and expanding functionalities as needed.
    - Integration: Many accounting software solutions can integrate with other business tools such as CRM systems, inventory management software, and payroll systems, streamlining operations and data flow.
    - Financial Reporting: Medium-sized businesses benefit from comprehensive financial reporting capabilities, providing insights into performance, profitability, and cash flow.
    - Budgeting and Forecasting: Accounting software allows for budget creation and financial forecasting, aiding in planning and decision-making.
    - Inventory Management: Some accounting software includes inventory management features to help medium-sized businesses track stock levels and manage their inventory efficiently.

3. Large Businesses:
    - Enterprise-Level Capabilities: Accounting software for large businesses often offers robust enterprise-level features, handling complex accounting needs, multiple currencies, and international operations.
    - Multi-Entity Support: Accounting software can handle multiple entities or subsidiaries, consolidating financial data for large conglomerates.
    - Customization: Large businesses may have unique accounting requirements, and the software's customization options can accommodate specific needs and workflows.
    - Audit Trail and Security: Advanced accounting software provides strong audit trail features and heightened security measures to protect sensitive financial data.
    - Integration with ERP Systems: Large businesses often integrate accounting software with enterprise resource planning (ERP) systems for seamless data flow across various departments.

In summary, accounting software like osFinancials5/TurboCASH5 is a versatile tool that can be tailored to meet the specific needs of small, medium-sized, and large businesses. It automates accounting processes, improves data accuracy, enhances financial reporting, and facilitates decision-making, regardless of the size and complexity of the organization.

Financial Analysis and Valuation

What is Financial Analysis and Valuation?

Financial Analysis and Valuation is a process used by investors, analysts, and businesses to assess the financial health and value of a company. It involves the examination and interpretation of a company's financial statements, performance metrics, and other relevant data to gain insights into its financial position, profitability, efficiency, and overall viability. The primary objective of financial analysis and valuation is to determine the intrinsic value of a company's securities, such as its stocks or bonds, and make informed investment decisions.

Key components of Financial Analysis and Valuation include:

1. Financial Statements Analysis: Reviewing and analyzing a company's financial statements, including the income statement, balance sheet, and cash flow statement. This involves assessing revenue,

expenses, assets, liabilities, and equity to understand the company's financial performance and position over time.

2. Ratio Analysis: Calculating and interpreting various financial ratios, such as liquidity ratios, profitability ratios, solvency ratios, and efficiency ratios. Ratios provide valuable insights into a company's financial performance and help compare it to industry benchmarks and peers.
3. Time Value of Money (TVM): Understanding the impact of the timing of cash flows on the value of money over time is crucial in investment analysis and financial decision-making.
4. Valuation Models: Using various valuation models to determine the intrinsic value of a company's securities, such as discounted cash flow (DCF) analysis, price-to-earnings (P/E) ratios, price-to-book (P/B) ratios, and others. These models help estimate the fair value of a company's stocks and bonds.
5. Industry and Market Analysis: Considering the company's position within its industry, market trends, competitive landscape, and macroeconomic factors that can impact its financial performance.
6. Risk Assessment: Evaluating the potential risks associated with investing in the company, including financial risks, market risks, operational risks, and regulatory risks.

Financial Analysis and Valuation play a crucial role in investment decision-making, merger and acquisition transactions, financial planning, and corporate strategy. It helps investors and stakeholders make well-informed choices about allocating resources, identifying investment opportunities, and understanding the overall financial health of a company. Additionally, financial analysis and valuation are essential for companies to understand their strengths and weaknesses and make data-driven decisions to improve their financial performance and long-term sustainability.

Financial Ratios

What is Financial Ratios?

Financial ratios are quantitative measures used to analyze and assess a company's financial performance, health, and position. They provide valuable insights into various aspects of a company's operations, profitability, liquidity, solvency, and efficiency. Financial ratios are calculated by dividing one financial metric by another and are expressed as a percentage, a proportion, or a rate.

Financial ratios are essential tools for investors, creditors, management, and other stakeholders as they help in making informed decisions and understanding the overall financial health and performance of a

company. Some common categories of financial ratios include:

1. Liquidity Ratios: Measure a company's ability to meet short-term obligations and assess its liquidity position.
    - Current Ratio: Measures a company's ability to pay its short-term obligations using its current assets. A ratio above 1 indicates the company has more current assets than current liabilities, which is generally seen as a sign of good liquidity.

      Current Assets / Current Liabilities

    - Quick Ratio (Acid-Test Ratio): Similar to the current ratio but excludes inventory from current assets. It provides a more stringent assessment of a company's ability to meet short-term obligations without relying on inventory sales.

      (Current Assets - Inventory) / Current Liabilities

2. Solvency Ratios: Evaluate a company's long-term financial stability and ability to meet long-term debt obligations.
    - Debt-to-Equity Ratio: Measures the proportion of a company's financing that comes from debt compared to equity. A higher ratio indicates higher financial leverage and higher risk.

      Total Debt / Total Equity

    - Debt-to-Assets Ratio: Measures the percentage of a company's assets that are financed by debt. It indicates the level of debt exposure relative to total assets.

      Total Debt / Total Assets

3. Profitability Ratios: Measure a company's ability to generate profits in relation to sales, assets, and equity.
    - Gross Profit Margin: Calculates the percentage of sales revenue that exceeds the cost of goods sold. It reflects the company's ability to produce goods or services efficiently.

      (Gross Profit / Total Revenue) x 100

    - Net Profit Margin: Measures the percentage of each dollar of revenue that represents profit after all expenses, including taxes. It shows how much profit the company earns from its total revenue.

      (Net Income / Total Revenue) x 100

4. Efficiency Ratios: Assess how effectively a company utilizes its assets to generate sales and manage its operations.

- Inventory Turnover: Measures how many times a company sells and replaces its inventory in a given period. A higher turnover ratio indicates efficient inventory management.

  Cost of Goods Sold / Average Inventory

- Accounts Receivable Turnover: Measures how quickly a company collects its accounts receivable from customers. A higher turnover ratio indicates more efficient cash collection.

  Net Credit Sales / Average Accounts Receivable

5. Market Ratios: Provide insights into a company's market value and investors' perceptions.

   - Price-to-Earnings (P/E) Ratio: Compares a company's market value to its book value (net asset value). It indicates whether the stock is overvalued or undervalued based on the company's net worth.

     Market Price per Share / Earnings per Share

   - Price-to-Book (P/B) Ratio: Compares a company's market value to its book value (net asset value). It indicates whether the stock is overvalued or undervalued based on the company's net worth.

     Market Price per Share / Book Value per Share

Financial ratios should be interpreted in the context of the industry, company size, and business model. They are most useful when compared over time (trend analysis) and against industry benchmarks or competitors (benchmarking). Regular analysis of financial ratios helps identify trends, strengths, weaknesses, and potential areas for improvement in a company's financial performance.

These financial ratios are essential tools for assessing a company's financial performance, health, and efficiency. They provide valuable insights to investors, creditors, and management to make informed decisions and evaluate the company's financial standing in comparison to industry benchmarks or competitors.

To optimise the use of financial ratios, it is essential to plan and link your chart of accounts to the correct account classifications and map them to the correct financial categories

Absolutely, optimizing the use of financial ratios requires careful planning and proper organization of a company's chart of accounts. The chart of accounts is a structured list of all the accounts used to record financial transactions in a company's accounting system. By linking the chart of accounts to the correct account classifications and mapping them to the appropriate financial categories, businesses can ensure

accurate financial reporting and effective financial analysis. Here's why it is essential:

1. Consistency in Financial Reporting: By using a well-structured chart of accounts with clear account classifications, financial data can be consistently recorded and reported. This consistency is crucial for making meaningful comparisons over time and across different companies or divisions within an organization.
2. Accurate Financial Analysis: Financial ratios rely on accurate and reliable financial data. Linking accounts to the correct classifications helps ensure that the relevant data is included in the calculations, leading to more accurate financial analysis and performance evaluation.
3. Relevant Financial Categories: Mapping accounts to the correct financial categories is vital for meaningful ratio analysis. For example, when calculating liquidity ratios, it is crucial to include all relevant current assets and current liabilities in the calculations.
4. Ease of Financial Analysis: A well-organized chart of accounts simplifies the process of extracting the required data for ratio analysis. It enables financial analysts to access and analyze the relevant financial information efficiently.
5. Better Decision Making: Properly categorized and mapped financial data allows management to make informed decisions based on accurate financial analysis. It helps identify areas of strength and weakness, enabling the organization to take appropriate actions.
6. Compliance and Auditing: A well-structured chart of accounts aids in meeting regulatory requirements and facilitates auditing processes. Properly classified accounts make it easier to verify financial data and ensure compliance with accounting standards and tax regulations.

To optimize the use of financial ratios, businesses should periodically review and update their chart of accounts to reflect changes in the business's operations and reporting needs. Additionally, ensuring that the accounting team is well-trained on the chart of accounts and its proper usage is essential to maintain data accuracy and consistency.

By implementing these practices, businesses can enhance the effectiveness of financial analysis, make better-informed decisions, and have a solid foundation for financial reporting and planning.

Before analyzing financial ratios, it is important to do the necessary accrual adjustments, depreciation, bad debts, etc.

Absolutely, before analyzing financial ratios, it is essential to make necessary adjustments to the financial statements to ensure that the data accurately reflects the company's financial position and performance. Some of the common adjustments include:

1. Accrual Adjustments: Accrual accounting requires recognizing revenues and expenses when they are

earned or incurred, regardless of when the cash is received or paid. Therefore, adjusting entries are needed to account for accrued revenues (revenues earned but not yet received) and accrued expenses (expenses incurred but not yet paid).

2. Prepaid Expenses and Deferred Revenues: Adjustments may be necessary to recognize prepaid expenses as expenses and deferred revenues as revenues.
3. Depreciation: Depreciation is the systematic allocation of the cost of tangible assets (such as buildings and equipment) over their useful lives. It is a non-cash expense that reduces the book value of assets over time. Adjusting for depreciation ensures that the financial ratios reflect the economic impact of asset usage.
4. Amortization: Similar to depreciation, amortization is the process of allocating the cost of intangible assets (such as patents and copyrights) over their useful lives.
5. Bad Debts: Bad debts arise when customers are unable to pay their credit obligations. Adjusting for bad debts ensures that accounts receivable on the balance sheet are reported at their estimated net realizable value.
6. Inventory Valuation: Inventory may need to be adjusted for obsolescence, spoilage, or lower of cost or market (LCM) considerations.
7. Non-Recurring Items: Extraordinary gains or losses and non-recurring items should be considered for adjustments to provide a clearer picture of the company's ongoing financial performance.
8. Non-Cash Items: Some items, such as stock-based compensation, may not involve cash outflows and may need to be adjusted for proper analysis.

By making these adjustments, financial analysts ensure that the financial ratios are based on consistent and comparable data, providing a more accurate representation of the company's financial health and performance. Moreover, these adjustments help in understanding the underlying economics of the business and provide insights into its ongoing operations.

Are these ratios for small businesses and larger businesses?

The financial ratios mentioned in the previous response can be used for both small businesses and larger businesses. Financial ratios are valuable tools for assessing the financial health and performance of companies of all sizes. However, the significance and interpretation of these ratios may vary based on the specific characteristics of the business and the industry it operates in.

For small businesses, financial ratios can be particularly helpful in providing insights into their liquidity, profitability, and overall financial stability. Small businesses often have limited resources and may face different challenges compared to larger businesses. Therefore, analyzing financial ratios can assist small

business owners in making informed decisions, identifying areas for improvement, and understanding their financial position relative to their goals and competitors.

On the other hand, larger businesses may use financial ratios to assess their operational efficiency, leverage, and market position. Larger companies usually have more complex financial structures, diverse revenue streams, and greater access to capital markets. Financial ratios play a crucial role in helping management, investors, and stakeholders gauge the performance and efficiency of larger businesses.

While the fundamental financial ratios apply to businesses of all sizes, it is essential to consider the scale and scope of operations when interpreting the results. Additionally, industry-specific benchmarks and comparisons with similar-sized companies in the same sector are valuable for obtaining meaningful insights from the ratios.

Ultimately, financial ratios are versatile tools that can be applied across different business sizes and industries to gain a deeper understanding of a company's financial performance and make well-informed decisions.

Liquidity Ratios

Liquidity ratios are financial metrics used to assess a company's ability to meet its short-term obligations and convert assets into cash to fund its immediate needs. These ratios provide insight into the company's short-term liquidity position and its capacity to handle financial challenges or unexpected expenses. Three common liquidity ratios are:

1. Current Ratio (Working Capital Ratio): The Current Ratio (or Working Capital Ratio) measures the company's ability to pay off its current liabilities using its current assets. The formula is:

   Current Ratio = Current Assets / Current Liabilities

   A current ratio above 1 indicates that the company has more current assets than current liabilities and is generally considered financially healthy.

2. Quick Ratio (Acid-Test Ratio): The Quick Ratio is a more stringent liquidity ratio that excludes inventory from current assets. It focuses on the company's ability to pay off its current liabilities using its most liquid assets. The formula is:

   Quick Ratio = (Current Assets - Inventory) / Current Liabilities

   A quick ratio of 1 or higher is generally considered financially healthy.

3. Cash Ratio: The Cash Ratio is the most conservative liquidity ratio, as it only considers the company's cash and cash equivalents to pay off current liabilities. The formula is:

Cash Ratio = Cash and Cash Equivalents / Current Liabilities

A cash ratio of 1 or close to 1 indicates that the company can cover its short-term obligations using only its cash reserves.

Liquidity ratios are essential for creditors, investors, and other stakeholders to assess the company's short-term financial health and its ability to weather financial downturns or unexpected events. It's crucial to interpret these ratios in the context of the company's industry, business model, and specific financial circumstances. Different industries may have varying liquidity requirements, and a single ratio may not provide a complete picture of the company's overall financial condition. Therefore, it's essential to analyze liquidity ratios alongside other financial ratios and indicators for a comprehensive evaluation of the company's financial health.

Created with the Standard Edition of HelpNDoc: Effortlessly Create Encrypted, Password-Protected PDFs

Current Ratio / Working Capital Ratio

The Working Capital Ratio, also known as the current ratio, is a financial metric used to assess a company's short-term liquidity and its ability to meet its current obligations. It measures the company's ability to pay off its current liabilities using its current assets. The formula for calculating the Working Capital Ratio is as follows:

Working Capital Ratio = Current Assets / Current Liabilities

Where:

- Current Assets refer to assets that are expected to be converted into cash or used up within one year from the reporting date. Examples include cash, accounts receivable, inventory, and short-term investments.
- Current Liabilities refer to obligations that are due within one year from the reporting date. Examples include accounts payable, short-term debt, and other short-term liabilities.

The ideal range for the Working Capital Ratio varies across industries, but generally, a ratio of 1.5 or higher is considered healthy. A ratio below 1 implies that the company may have difficulties meeting its short-term obligations, while a ratio significantly higher than 1 may indicate that the company is not efficiently using its short-term assets.

It's essential to interpret the Working Capital Ratio in the context of the specific industry and the company's

unique circumstances. A high ratio may not always be desirable, as it could signify excess idle assets, while a lower ratio may not necessarily mean financial distress if the company can manage its short-term obligations effectively.

As with any financial metric, it's crucial to analyze the Working Capital Ratio in conjunction with other financial ratios and performance indicators to gain a comprehensive understanding of a company's financial health.

Created with the Standard Edition of HelpNDoc: Easily create PDF Help documents

Quick Ratio (Acid-Test Ratio)

The Quick Ratio, also known as the Acid-Test Ratio, is another financial metric used to assess a company's short-term liquidity and its ability to meet its immediate obligations without relying on the sale of inventory. It is a more stringent measure of liquidity than the Working Capital Ratio because it excludes inventory from current assets. The Quick Ratio provides insight into a company's ability to cover its current liabilities using its most liquid assets.

The formula for calculating the Quick Ratio is as follows:

Quick Ratio = (Current Assets - Inventory) / Current Liabilities

Where:

- Current Assets: These are the same as in the Working Capital Ratio and include cash, accounts receivable, short-term investments, and other assets expected to be converted into cash within one year from the reporting date.
- Inventory: This refers to the value of the company's unsold products or goods that are still in the process of being manufactured.
- Current Liabilities: These are the same as in the Working Capital Ratio and represent the obligations due within one year from the reporting date.

The Quick Ratio provides a more conservative measure of a company's short-term liquidity because it excludes inventory, which may not be readily convertible into cash in case of financial difficulties or an economic downturn. Generally, a Quick Ratio of 1 or higher is considered financially healthy, as it indicates that the company can pay off its current liabilities using its most liquid assets without relying on selling inventory.

Similar to the Working Capital Ratio, the ideal Quick Ratio may vary across industries, and it's essential to consider other financial ratios and performance indicators to get a comprehensive view of a company's

financial situation. Companies in industries with more stable and predictable cash flows may have lower Quick Ratios, while those in industries with uncertain or cyclical cash flows may aim for higher Quick Ratios to ensure they can meet their obligations in challenging times.

Created with the Standard Edition of HelpNDoc: Free EPub and documentation generator

Cash Ratio

The Cash Ratio, also known as the Cash Asset Ratio or the Cash Coverage Ratio, is a liquidity ratio that assesses a company's ability to pay off its current liabilities using only its cash and cash equivalents. It provides a conservative measure of a company's short-term liquidity, focusing solely on its most liquid assets.

The formula for calculating the Cash Ratio is as follows:

Cash Ratio = (Cash and Cash Equivalents) / Current Liabilities

Where:

- Cash and Cash Equivalents include cash on hand and highly liquid assets that are easily convertible to cash within a short period, typically within 90 days. Examples include cash in hand, cash in bank accounts, and short-term investments with maturities of 90 days or less.
- Current Liabilities represent the company's obligations that are due within one year from the reporting date. Examples include accounts payable, short-term debt, and other short-term liabilities.

The Cash Ratio indicates how well a company can meet its short-term debt obligations without relying on other current assets, such as accounts receivable or inventory. A higher Cash Ratio implies a stronger ability to pay off current liabilities using only cash and cash equivalents, which is generally considered favourable as it shows a conservative approach to liquidity management.

However, it's essential to interpret the Cash Ratio in the context of the specific industry and the company's unique circumstances. Industries with stable and predictable cash flows may have lower Cash Ratios, while those with uncertain or cyclical cash flows may aim for higher Cash Ratios to ensure they can meet their short-term obligations in challenging times.

Like any financial ratio, the Cash Ratio should be analysed alongside other liquidity ratios and financial performance indicators to gain a comprehensive understanding of a company's financial health and liquidity position.

Solvency Ratios

Solvency ratios are financial metrics that assess a company's long-term financial stability and its ability to meet its long-term debt obligations. These ratios provide insight into a company's capacity to repay its debt and continue its operations in the long run. Some common solvency ratios include:

1. Debt-to-Equity Ratio (D/E): The Debt-to-Equity Ratio measures the proportion of a company's total debt to its total shareholders' equity. The formula is:

Debt-to-Equity Ratio = Total Debt / Total Shareholders' Equity

   A higher debt-to-equity ratio indicates that the company relies more on debt financing, which can increase financial risk. Conversely, a lower ratio suggests a more conservative financing approach.

2. Debt Ratio: The Debt Ratio evaluates the company's total debt in relation to its total assets. The formula is:

Debt Ratio = Total Debt / Total Assets

   A higher debt ratio implies a larger portion of the company's assets is funded by debt, which can be a sign of higher financial leverage and risk.

3. Interest Coverage Ratio: The Interest Coverage Ratio (also known as Times Interest Earned) measures the company's ability to meet its interest payments on outstanding debt. The formula is:

Interest Coverage Ratio = Earnings Before Interest and Taxes (EBIT) / Interest Expense

   A higher interest coverage ratio indicates that the company generates sufficient operating income to cover its interest expenses comfortably.

4. Debt Service Coverage Ratio (DSCR): The Debt Service Coverage Ratio assesses a company's ability to cover its total debt service obligations, including principal and interest payments. The formula is:

DSCR = (Net Operating Income + Depreciation & Amortization) / Total Debt Service

   A DSCR greater than 1 indicates that the company generates enough cash flow to meet its debt service requirements.

Solvency ratios are crucial for investors, lenders, and other stakeholders to gauge the company's long-term financial health and its ability to manage its debt obligations. A company with strong solvency ratios is generally considered more financially stable and less risky.

However, it's essential to analyze solvency ratios in conjunction with other financial indicators and ratios to gain a comprehensive understanding of the company's overall financial position. Moreover, industries with different capital structures and risk profiles may have varying acceptable ranges for these ratios.

Created with the Standard Edition of HelpNDoc: 5 Reasons Why a Help Authoring Tool is Better than Microsoft Word for Documentation

Debt-to-Equity Ratio (D/E)

The Debt-to-Equity Ratio (D/E) is a financial ratio that measures a company's capital structure by comparing its total debt to its total shareholders' equity. It provides insights into the company's financial leverage and the proportion of debt and equity financing used to fund its operations.

The formula for calculating the Debt-to-Equity Ratio is as follows:

Debt-to-Equity Ratio = Total Debt / Total Shareholders' Equity

Where:

- Total Debt refers to the sum of all the company's outstanding debt obligations, including short-term and long-term debt, loans, and other borrowings.
- Total Shareholders' Equity represents the residual interest in the company's assets after deducting liabilities. It includes common equity, preferred equity, retained earnings, and other equity components.

The Debt-to-Equity Ratio provides a view of how much debt a company is using relative to its equity. A higher D/E ratio indicates that the company relies more on debt financing, which can increase financial risk and the company's sensitivity to changes in interest rates. On the other hand, a lower D/E ratio suggests a more conservative financing approach with a larger portion of the company's assets being funded by equity.

Interpretation of the Debt-to-Equity Ratio depends on various factors, including the company's industry, business model, and risk tolerance. Different industries may have varying levels of acceptable leverage, and it's essential to consider the company's specific circumstances when analyzing the ratio.

For example:

- A D/E ratio below 1 suggests that the company has more equity than debt, indicating a lower financial risk and a conservative capital structure.
- A D/E ratio above 1 indicates that the company has more debt than equity, suggesting a higher

financial risk and a leveraged capital structure.

Investors and analysts use the Debt-to-Equity Ratio to assess a company's financial risk and the extent to which it relies on debt financing. However, it should be used in conjunction with other financial ratios and metrics to gain a comprehensive understanding of a company's overall financial health and risk profile.

Debt Ratio

The Debt Ratio, also known as the Debt-to-Assets Ratio, is a financial ratio that measures the proportion of a company's assets that are financed through debt. It provides insights into the company's overall leverage and the extent to which debt is used to fund its operations and acquire assets.

The formula for calculating the Debt Ratio is as follows:

Debt Ratio = Total Debt / Total Assets

Where:

- Total Debt refers to the sum of all the company's outstanding debt obligations, including both short-term and long-term debt, loans, and other borrowings.
- Total Assets represent the total value of all the company's assets, including current and non-current assets.

The Debt Ratio indicates the percentage of a company's assets that are funded by debt. A higher Debt Ratio implies that a larger portion of the company's assets is financed through debt, which can increase financial risk and make the company more sensitive to changes in interest rates or adverse economic conditions.

On the other hand, a lower Debt Ratio suggests that the company relies more on equity financing and has a more conservative capital structure, which may be viewed as less risky.

Interpretation of the Debt Ratio depends on the industry and the company's specific circumstances. Industries with stable and predictable cash flows, such as utilities, may have higher Debt Ratios, while companies in more cyclical industries may aim for lower Debt Ratios to mitigate risk.

For example:

- A Debt Ratio of 0.50 indicates that 50% of the company's assets are financed through debt.
- A Debt Ratio of 0.25 indicates that only 25% of the company's assets are financed through debt.

Investors and analysts use the Debt Ratio to assess a company's level of leverage and its financial risk. However, as with any financial ratio, it should be used in conjunction with other financial metrics and industry analysis to gain a comprehensive understanding of a company's financial health and risk profile.

Created with the Standard Edition of HelpNDoc: Generate EPub eBooks with ease

Interest Coverage Ratio

The Interest Coverage Ratio, also known as the Times Interest Earned (TIE) ratio, is a financial metric used to assess a company's ability to meet its interest obligations on its outstanding debt. It provides insights into the company's capacity to cover its interest expenses with its operating income.

The formula for calculating the Interest Coverage Ratio is as follows:

Interest Coverage Ratio = Earnings Before Interest and Taxes (EBIT) / Interest Expense

Where:

- Earnings Before Interest and Taxes (EBIT) represents the company's operating income before deducting interest and taxes. It indicates how much profit the company generates from its core operations before considering financing and tax-related factors.
- Interest Expense refers to the total interest paid on the company's outstanding debt during a specific period.

The Interest Coverage Ratio quantifies the number of times a company's operating income can cover its interest expenses. A higher Interest Coverage Ratio indicates that the company generates enough operating income to comfortably meet its interest obligations, which suggests lower financial risk and a greater ability to service its debt.

For example:

- An Interest Coverage Ratio of 5 means that the company's EBIT is five times higher than its interest expense, suggesting that it can cover its interest payments five times over.
- An Interest Coverage Ratio of 1 implies that the company's EBIT is just sufficient to cover its interest expenses, leaving little margin for unforeseen events or changes in business conditions.

A low Interest Coverage Ratio may raise concerns for investors and creditors, as it indicates a higher risk of potential difficulties in servicing the company's debt obligations. Companies with low interest coverage may face challenges in obtaining favourable financing terms and might be considered riskier investments.

The Interest Coverage Ratio is an essential financial metric used by investors, creditors, and analysts to

assess a company's financial health and its ability to meet its debt obligations. However, as with any financial ratio, it should be analyzed alongside other performance indicators and industry benchmarks to gain a comprehensive understanding of a company's financial position and risk profile.

Created with the Standard Edition of HelpNDoc: Protect Your Confidential PDFs with These Simple Security Measures

Debt Service Coverage Ratio (DSCR)

The Debt Service Coverage Ratio (DSCR) is a financial metric used to assess a company's ability to meet its debt service obligations, including both principal and interest payments. It is a critical measure for creditors and lenders as it indicates the company's capacity to generate sufficient cash flow to service its debt.

The formula for calculating the Debt Service Coverage Ratio is as follows:

DSCR = (Net Operating Income + Depreciation & Amortization) / Total Debt Service

Where:

- Net Operating Income (NOI) refers to the company's operating income after deducting operating expenses, but before deducting interest and taxes. It represents the cash generated from the company's core operations.
- Depreciation & Amortization are non-cash expenses that are added back to NOI since they do not involve cash outflows.
- Total Debt Service includes all principal and interest payments that the company is required to make on its outstanding debt during a specific period.

The Debt Service Coverage Ratio measures the number of times a company's operating income (including non-cash expenses) can cover its debt service payments. A DSCR greater than 1 indicates that the company generates enough cash flow to comfortably cover its debt obligations, which suggests a lower risk of default.

For example:

- A DSCR of 1.5 means that the company's cash flow is 1.5 times greater than its total debt service, implying a comfortable margin of safety.
- A DSCR of less than 1 suggests that the company's cash flow is not sufficient to meet its debt obligations fully, indicating a higher risk of default.

Lenders and creditors typically require a minimum DSCR when evaluating a company's creditworthiness. The required DSCR may vary depending on the industry, the type of loan or credit facility, and the perceived risk associated with the borrower.

A high DSCR is generally favorable, indicating a strong ability to manage debt, while a low DSCR raises concerns about the company's ability to meet its debt obligations and may affect its borrowing capacity and interest rates.

The Debt Service Coverage Ratio is a critical financial metric used in loan underwriting, credit analysis, and investment decisions. However, it should be used alongside other financial ratios and performance indicators to gain a comprehensive understanding of a company's financial health and debt-servicing capability.

Profitability Ratios

Profitability ratios are financial metrics that assess a company's ability to generate profits and earnings relative to its revenue, assets, equity, and other factors. These ratios provide insights into the company's overall financial performance and its efficiency in generating profits from its operations. Some common profitability ratios include:

1. Gross Profit Margin: The Gross Profit Margin measures the percentage of revenue that exceeds the cost of goods sold. It indicates how efficiently a company produces goods or services. The formula is:

   Gross Profit Margin = (Gross Profit / Revenue) x 100

   A higher gross profit margin is generally desirable as it shows the company is effectively managing its production costs.

2. Operating Profit Margin: The Operating Profit Margin (or Operating Margin) shows the percentage of revenue that remains after deducting operating expenses but before interest and taxes. The formula is:

   Operating Profit Margin = (Operating Profit / Revenue) x 100

   A higher operating profit margin indicates that the company is efficiently managing its operating expenses.

3. Net Profit Margin: The Net Profit Margin measures the percentage of revenue that remains as net profit after all expenses, including taxes and interest. The formula is:

Net Profit Margin = (Net Profit / Revenue) x 100

A higher net profit margin indicates that the company is generating more profit from its revenue.

4. Return on Assets (ROA): Return on Assets calculates how efficiently a company utilizes its assets to generate profit. The formula is:

ROA = (Net Profit / Average Total Assets) x 100

A higher ROA suggests better utilization of assets to generate profit.

5. Return on Equity (ROE): Return on Equity measures how effectively a company generates profits relative to shareholders' equity. The formula is:

ROE = (Net Profit / Average Shareholders' Equity) x 100

A higher ROE indicates better returns for shareholders' investments.

6. Return on Investment (ROI): Return on Investment assesses the return generated on an investment, considering the cost of that investment. The formula is:

ROI = (Net Profit / Investment Cost) x 100

A higher ROI indicates a more favourable return relative to the investment made.

Profitability ratios provide valuable insights into a company's financial performance and can help investors and stakeholders evaluate its profitability and efficiency. It's essential to analyze profitability ratios over time and in comparison to industry benchmarks to gain a comprehensive understanding of a company's financial health and performance.

However, it's important to note that different industries may have different profit margins and return expectations, so it's crucial to consider the context of the company's specific industry and competitive landscape when interpreting these ratios.

Gross Profit Margin

Gross Profit Margin is a financial ratio that measures a company's profitability by expressing the percentage of revenue that exceeds the cost of goods sold (COGS). It provides insight into how efficiently a company is managing its production process and pricing its products or services.

The formula for calculating the Gross Profit Margin is as follows:

Gross Profit Margin = (Gross Profit / Revenue) x 100

Where:

- Gross Profit is the difference between total revenue and the cost of goods sold. It represents the profit generated from core operations before deducting operating expenses, interest, and taxes.
- Revenue refers to the total sales or revenue generated from the sale of goods or services.

The Gross Profit Margin indicates the proportion of each dollar of revenue that remains after accounting for the cost of producing the goods or services. A higher Gross Profit Margin indicates that the company is effectively managing its production costs and generating a higher profit for each dollar of revenue.

For example:

- If a company's gross profit is $200,000, and its revenue is $500,000, the Gross Profit Margin would be (200,000 / 500,000) x 100 = 40%. This means that the company retains 40 cents of gross profit for every dollar of revenue it generates.

The Gross Profit Margin is a crucial indicator of a company's operational efficiency and pricing strategy. It helps businesses and investors understand how well the company can control its production costs and whether it can maintain a competitive advantage in the market.

However, it's essential to consider the Gross Profit Margin in conjunction with other financial ratios and metrics to gain a comprehensive understanding of a company's overall profitability and financial performance.

Different industries may have varying levels of acceptable gross profit margins, so it's essential to compare a company's ratio to industry benchmarks and competitors for a more meaningful analysis.

Operating Profit Margin

Operating Profit Margin, also known as Operating Margin, is a financial ratio that measures a company's profitability from its core operations. It represents the percentage of revenue that remains as operating profit after deducting all operating expenses but before considering interest and taxes.

The formula for calculating the Operating Profit Margin is as follows:

Operating Profit Margin = (Operating Profit / Revenue) x 100

Where:

- Operating Profit (also known as Operating Income or Earnings Before Interest and Taxes - EBIT) refers to the profit generated from the company's core operations before deducting interest and taxes.
- Revenue represents the total sales or revenue generated from the sale of goods or services.

The Operating Profit Margin indicates the company's efficiency in managing its operating expenses and generating profits from its main business activities. A higher Operating Profit Margin implies that the company is effectively controlling its operating costs and generating a larger proportion of profit for each dollar of revenue.

For example:

- If a company's operating profit is $100,000, and its revenue is $500,000, the Operating Profit Margin would be (100,000 / 500,000) x 100 = 20%. This means that the company retains 20 cents of operating profit for every dollar of revenue it generates.

The Operating Profit Margin is a key indicator of a company's operational efficiency and financial health. It helps investors and analysts understand how well the company's core business is performing and how much profit it can generate from its day-to-day operations.

It's important to note that the Operating Profit Margin may vary significantly across industries. Some industries with higher operating costs, such as manufacturing or retail, may typically have lower operating profit margins compared to industries with lower operating costs, such as technology or software.

As with any financial ratio, it's essential to consider the Operating Profit Margin in conjunction with other financial metrics and industry benchmarks to gain a comprehensive view of a company's financial performance and profitability.

Created with the Standard Edition of HelpNDoc: Free help authoring tool

Net Profit Margin

Net Profit Margin, also known as Net Margin, is a financial ratio that measures a company's profitability by expressing the percentage of net income (profit) generated from each dollar of revenue. It provides insights into how efficiently a company manages its operating expenses, interest expenses, taxes, and other costs to generate profit.

The formula for calculating the Net Profit Margin is as follows:

Net Profit Margin = (Net Profit / Revenue) x 100

Where:

- Net Profit (also known as Net Income or Net Earnings) refers to the profit remaining after deducting all expenses, including operating expenses, interest expenses, taxes, and other costs, from the total revenue.
- Revenue represents the total sales or revenue generated from the sale of goods or services.

The Net Profit Margin measures the company's overall profitability after all expenses have been accounted for. A higher Net Profit Margin indicates that the company is efficiently managing its costs and generating a larger proportion of profit from each dollar of revenue.

For example:

- If a company's net profit is $50,000, and its revenue is $500,000, the Net Profit Margin would be (50,000 / 500,000) x 100 = 10%. This means that the company retains 10 cents of net profit for every dollar of revenue it generates.

The Net Profit Margin is a critical indicator of a company's financial performance and efficiency in managing its expenses. It provides valuable insights into the company's ability to control costs, maintain profitability, and generate returns for its shareholders.

As with other financial ratios, it's essential to consider the Net Profit Margin in conjunction with other financial metrics and industry benchmarks to gain a comprehensive view of a company's financial health and profitability.

Comparing the Net Profit Margin to industry peers and historical performance can help assess the company's competitiveness and long-term sustainability. Additionally, changes in the Net Profit Margin over time can indicate trends in the company's profitability and performance.

Created with the Standard Edition of HelpNDoc: Eliminate the Struggles of Documentation with a Help Authoring Tool

Return on Assets (ROA)

Return on Assets (ROA) is a financial ratio that measures a company's profitability in relation to its total assets. It provides insight into how effectively a company is utilizing its assets to generate profit.

The formula for calculating the Return on Assets (ROA) is as follows:

ROA = (Net Income / Average Total Assets) x 100

Where:

- Net Income (also known as Net Profit or Net Earnings) represents the company's profit after deducting all expenses, including operating expenses, interest expenses, taxes, and other costs, from the total revenue.
- Average Total Assets is the average value of the company's total assets over a specific period. It is calculated by adding the total assets at the beginning and end of the period and dividing by 2.

The ROA measures the company's ability to generate earnings from its assets. A higher ROA indicates that the company is effectively utilizing its assets to generate profit. Conversely, a lower ROA suggests that the company is not generating as much profit relative to its asset base.

For example:

- If a company's net income is $50,000, and its average total assets are $500,000, the ROA would be (50,000 / 500,000) x 100 = 10%. This means that the company generates a 10% return on its total assets.

ROA is a crucial financial performance metric for investors, creditors, and management. It helps assess a company's efficiency in generating profit and provides a basis for comparison with industry peers and historical performance. A high ROA is generally desirable, as it indicates that the company is utilizing its assets effectively to generate earnings.

It's essential to interpret ROA in the context of the company's industry and business model. Industries with high capital intensity, such as manufacturing, may have lower ROAs due to significant asset investments. On the other hand, industries with asset-light business models, such as technology companies, may have higher ROAs.

As with any financial ratio, it's essential to consider the ROA in conjunction with other financial metrics and industry benchmarks to gain a comprehensive understanding of a company's financial performance and profitability. Additionally, analyzing trends in ROA over time can provide insights into a company's performance and efficiency improvements.

Created with the Standard Edition of HelpNDoc: Make Documentation Review a Breeze with HelpNDoc's Advanced Project Analyzer

Return on Equity (ROE)

Return on Equity (ROE) is a financial ratio that measures a company's profitability in relation to its shareholders' equity. It provides insight into how effectively a company is generating returns for its

shareholders' investment.

The formula for calculating the Return on Equity (ROE) is as follows:

ROE = (Net Income / Average Shareholders' Equity) x 100

Where:

- Net Income (also known as Net Profit or Net Earnings) represents the company's profit after deducting all expenses, including operating expenses, interest expenses, taxes, and other costs, from the total revenue.
- Average Shareholders' Equity is the average value of the company's shareholders' equity over a specific period. It is calculated by adding the shareholders' equity at the beginning and end of the period and dividing by 2.

The ROE measures the company's ability to generate profit relative to the shareholders' investment in the company. A higher ROE indicates that the company is generating higher returns for its shareholders' equity, which is generally considered favorable.

For example:

- If a company's net income is $50,000, and its average shareholders' equity is $500,000, the ROE would be (50,000 / 500,000) x 100 = 10%. This means that the company generates a 10% return on shareholders' equity.

ROE is a critical financial performance metric for investors, as it helps assess the company's profitability and its ability to generate returns on investment for shareholders. A high ROE is generally considered a positive sign, indicating that the company is effectively utilizing its equity to generate earnings.

It's essential to interpret ROE in the context of the company's industry and business model. Industries with higher capital requirements or lower-profit margins may have lower ROEs, while industries with asset-light business models or higher-profit margins may have higher ROEs.

As with any financial ratio, it's essential to consider the ROE in conjunction with other financial metrics and industry benchmarks to gain a comprehensive understanding of a company's financial performance and profitability. Additionally, analyzing trends in ROE over time can provide insights into a company's performance and efficiency improvements.

Created with the Standard Edition of HelpNDoc: Easily create EPub books

Return on Investment (ROI)

Return on Investment (ROI) is a financial metric used to evaluate the profitability or efficiency of an investment or a business venture. It measures the return or gain on an investment relative to its cost.

The formula for calculating Return on Investment (ROI) is as follows:

ROI = (Net Profit from Investment / Cost of Investment) x 100

Where:

- Net Profit from Investment refers to the gain or profit generated from the investment. It is calculated by subtracting the initial cost of the investment from the final value or returns.
- Cost of Investment represents the initial investment amount or the total cost incurred to acquire the investment.

The ROI is expressed as a percentage, representing the return on the investment relative to the initial cost. A positive ROI indicates that the investment has generated a profit, while a negative ROI suggests a loss.

For example:

- If an investment costs $10,000, and it generates a net profit of $2,000, the ROI would be (2,000 / 10,000) x 100 = 20%. This means that the investment has a 20% return on investment.

ROI is a fundamental metric used by investors, businesses, and financial analysts to assess the success and profitability of an investment. It helps compare the returns from different investment opportunities and make informed decisions on allocating capital.

However, it's essential to consider the time frame and risks associated with the investment when interpreting ROI. A high ROI may not necessarily be the best indicator of the investment's long-term success. Some investments may have a higher ROI but come with higher risk, while others may have a lower ROI but provide stable and consistent returns.

ROI is a versatile metric used in various contexts, including assessing the performance of stocks, real estate investments, marketing campaigns, capital projects, and business expansions. As with any financial metric, ROI should be used alongside other performance indicators and financial ratios to gain a comprehensive understanding of the investment's overall performance and potential.

Efficiency Ratios

Efficiency Ratios, also known as activity ratios, are financial metrics used to assess how effectively a

company manages its assets, liabilities, and other resources to generate sales and revenue. These ratios provide insights into the company's operational efficiency, asset utilization, and overall effectiveness in managing its resources. Some common efficiency ratios include:

1. Inventory Turnover Ratio: The Inventory Turnover Ratio measures how many times a company sells and replaces its inventory within a specific period. The formula is:

Inventory Turnover Ratio = Cost of Goods Sold / Average Inventory

   A higher inventory turnover ratio indicates that the company is efficiently managing its inventory and selling products quickly.

2. Accounts Receivable Turnover Ratio: The Accounts Receivable Turnover Ratio assesses how quickly a company collects its accounts receivable from customers. The formula is:

Accounts Receivable Turnover Ratio = Net Credit Sales / Average Accounts Receivable

   A higher accounts receivable turnover ratio suggests that the company is efficient in collecting payments from customers.

3. Accounts Payable Turnover Ratio: The Accounts Payable Turnover Ratio measures how quickly a company pays off its suppliers. The formula is:

Accounts Payable Turnover Ratio = Purchases / Average Accounts Payable

   A higher accounts payable turnover ratio indicates that the company is managing its payables efficiently.

4. Asset Turnover Ratio: The Asset Turnover Ratio evaluates how efficiently a company utilizes its assets to generate sales. The formula is:

Asset Turnover Ratio = Revenue / Average Total Assets

   A higher asset turnover ratio suggests better utilization of assets to generate revenue.

5. Fixed Asset Turnover Ratio: The Fixed Asset Turnover Ratio measures how efficiently a company uses its fixed assets (such as property, plant, and equipment) to generate sales. The formula is:

Fixed Asset Turnover Ratio = Revenue / Average Fixed Assets

   A higher fixed asset turnover ratio indicates that the company is efficiently using its fixed assets.

6. Total Asset Turnover Ratio: The Total Asset Turnover Ratio combines both the fixed and current asset utilization to measure how effectively all assets generate revenue. The formula is:

Total Asset Turnover Ratio = Revenue / Average Total Assets

A higher total asset turnover ratio implies better overall asset efficiency in generating revenue.

Efficiency ratios help investors and stakeholders assess a company's operational performance and resource management. By comparing these ratios with industry benchmarks and historical performance, one can identify areas where the company is performing well or where improvements might be needed.

However, it's essential to consider efficiency ratios in conjunction with other financial metrics to get a comprehensive view of a company's financial health and performance.

Created with the Standard Edition of HelpNDoc: Create iPhone web-based documentation

Inventory Turnover Ratio

Inventory Turnover Ratio is a financial ratio that measures the efficiency with which a company manages its inventory. It evaluates how quickly a company sells and replaces its inventory over a specific period, typically a year.

The formula for calculating the Inventory Turnover Ratio is as follows:

Inventory Turnover Ratio = Cost of Goods Sold (COGS) / Average Inventory

Where:

- Cost of Goods Sold (COGS) represents the direct costs associated with producing or purchasing the goods that a company sells during a specific period.
- Average Inventory is the average value of the company's inventory over the same period. It is calculated by adding the beginning inventory value and the ending inventory value and then dividing by 2.

The Inventory Turnover Ratio indicates the number of times a company sells its entire inventory during a specific period. A higher Inventory Turnover Ratio implies that the company is efficiently managing its inventory and selling products quickly, which can be beneficial for cash flow and profitability.

For example:

- If a company's Cost of Goods Sold (COGS) is $500,000, and its Average Inventory is $100,000, the Inventory Turnover Ratio would be 500,000 / 100,000 = 5. This means that the company sold and replaced its entire inventory five times during the period.

A low Inventory Turnover Ratio may indicate that the company has excess inventory or is facing challenges in selling its products. Conversely, a very high Inventory Turnover Ratio might suggest that the company is running out of stock frequently, potentially leading to lost sales.

The ideal Inventory Turnover Ratio varies among industries. Some industries, such as fashion or technology, may have faster inventory turnover due to rapidly changing trends, while industries with perishable goods may also have higher turnover rates.

Businesses can use the Inventory Turnover Ratio to assess their inventory management practices and identify areas for improvement. An increase in the ratio may suggest that the company is becoming more efficient in managing its inventory, while a decrease might signal inefficiencies or excess stock.

It's essential to analyze the Inventory Turnover Ratio in conjunction with industry benchmarks and other financial metrics to gain a comprehensive understanding of a company's inventory management performance.

Created with the Standard Edition of HelpNDoc: Maximize Your Documentation Capabilities with a Help Authoring Tool

Accounts Receivable Turnover Ratio

The Accounts Receivable Turnover Ratio is a financial metric that measures how effectively a company is managing its accounts receivable (or credit sales) and collecting payments from customers. It assesses how quickly the company is converting its credit sales into cash.

The formula for calculating the Accounts Receivable Turnover Ratio is as follows:

Accounts Receivable Turnover Ratio = Net Credit Sales / Average Accounts Receivable

Where:

- Net Credit Sales represents the total sales made on credit during a specific period, excluding cash sales.
- Average Accounts Receivable is the average value of accounts receivable over the same period. It is calculated by adding the beginning accounts receivable balance and the ending accounts receivable balance and then dividing by 2.

The Accounts Receivable Turnover Ratio indicates the number of times a company collects its average accounts receivable balance during a specific period. A higher turnover ratio implies that the company is efficiently collecting payments from customers, converting credit sales to cash quickly, and managing its accounts receivable effectively.

For example:

- If a company's Net Credit Sales for the year were $500,000, and its Average Accounts Receivable was $50,000, the Accounts Receivable Turnover Ratio would be 500,000 / 50,000 = 10. This means that the

company collected its average accounts receivable balance 10 times during the year.

A high Accounts Receivable Turnover Ratio is generally favorable, as it indicates effective credit management and timely collections. Conversely, a low ratio may suggest that the company is facing challenges in collecting payments promptly or has lenient credit terms for customers.

Companies can use the Accounts Receivable Turnover Ratio to evaluate their credit policies and collection procedures. A declining ratio over time might indicate worsening credit practices or potential issues with customers' creditworthiness.

It's important to analyze the Accounts Receivable Turnover Ratio in conjunction with industry benchmarks and other financial metrics. Industries with different credit policies and sales cycles may have varying levels of acceptable turnover ratios.

Overall, a healthy and consistent Accounts Receivable Turnover Ratio can positively impact a company's cash flow, liquidity, and working capital management. By improving collection practices, companies can enhance their financial stability and reduce the risk of bad debts.

Accounts Payable Turnover Ratio

The Accounts Payable Turnover Ratio is a financial metric that measures how efficiently a company manages its accounts payable and pays its suppliers. It evaluates how quickly a company is settling its outstanding obligations to suppliers or creditors.

The formula for calculating the Accounts Payable Turnover Ratio is as follows:

Accounts Payable Turnover Ratio = Total Purchases / Average Accounts Payable

Where:

- Total Purchases represents the total value of goods or services purchased on credit during a specific period. It is calculated by adding the beginning accounts payable balance to the total credit purchases made during the period and then subtracting the ending accounts payable balance.
- Average Accounts Payable is the average value of accounts payable over the same period. It is calculated by adding the beginning accounts payable balance and the ending accounts payable balance and then dividing by 2.

The Accounts Payable Turnover Ratio indicates the number of times a company pays its average accounts payable balance during a specific period. A higher turnover ratio suggests that the company is efficiently

managing its payments to suppliers and settling obligations promptly.

For example:

- If a company's Total Purchases during the year were $500,000, and its Average Accounts Payable was $50,000, the Accounts Payable Turnover Ratio would be 500,000 / 50,000 = 10. This means that the company paid its average accounts payable balance 10 times during the year.

A high Accounts Payable Turnover Ratio generally indicates favourable payment practices, which may lead to better supplier relationships and potentially discounts or better terms on future purchases. However, an excessively high ratio might also indicate that the company is paying suppliers too quickly and might be missing out on the benefits of delayed payment terms.

On the other hand, a low ratio might suggest that the company is facing challenges in making timely payments to suppliers, which could affect supplier relationships and might even lead to credit issues.

Analyzing the Accounts Payable Turnover Ratio can help companies evaluate their cash flow management and supplier payment strategies. It's crucial to consider the industry norms and the company's specific business model when interpreting the ratio, as different industries may have different payment practices and supplier relationships.

Overall, a balanced and consistent Accounts Payable Turnover Ratio is desirable, indicating that the company is managing its cash flow effectively and maintaining good relationships with its suppliers.

Asset Turnover Ratio

Asset Turnover Ratio is a financial metric that measures a company's efficiency in utilizing its assets to generate revenue. It evaluates how effectively a company generates sales from its total assets.

The formula for calculating the Asset Turnover Ratio is as follows:

Asset Turnover Ratio = Revenue (or Sales) / Average Total Assets

Where:

- Revenue (or Sales) represents the total sales or revenue generated by the company during a specific period.
- Average Total Assets is the average value of the company's total assets over the same period. It is calculated by adding the total assets at the beginning and end of the period and then dividing by 2.

The Asset Turnover Ratio indicates the amount of revenue generated for each dollar of assets invested. A higher Asset Turnover Ratio suggests that the company is efficiently utilizing its assets to generate sales, while a lower ratio may indicate that the company is not using its assets effectively.

For example:

- If a company's revenue is $1,000,000, and its average total assets are $500,000, the Asset Turnover Ratio would be 1,000,000 / 500,000 = 2. This means that the company generates $2 of revenue for every dollar of assets invested.

The interpretation of the Asset Turnover Ratio depends on the industry and business model. Some industries, such as retail or hospitality, may have higher asset turnover due to their fast-moving nature and lower asset requirements. In contrast, capital-intensive industries, such as manufacturing or utilities, may have lower asset turnover due to higher investments in fixed assets.

A declining Asset Turnover Ratio over time may indicate that the company's sales are not growing proportionately to its asset base, and further analysis might be required to identify the underlying reasons.

Comparing the Asset Turnover Ratio to industry peers and historical performance can provide insights into a company's competitive position and operational efficiency.

Overall, a healthy Asset Turnover Ratio reflects a company's ability to generate revenue efficiently from its assets, which is crucial for maintaining profitability and optimizing the use of resources.

Created with the Standard Edition of HelpNDoc: Experience the Power and Simplicity of HelpNDoc's User Interface

Fixed Asset Turnover Ratio

Fixed Asset Turnover Ratio is a financial metric that measures a company's efficiency in utilizing its fixed assets to generate revenue. It specifically focuses on how effectively a company generates sales from its fixed or long-term assets, such as property, plant, and equipment.

The formula for calculating the Fixed Asset Turnover Ratio is as follows:

Fixed Asset Turnover Ratio = Revenue (or Sales) / Average Net Fixed Assets

Where:

- Revenue (or Sales) represents the total sales or revenue generated by the company during a specific period.
- Average Net Fixed Assets is the average value of the company's net fixed assets over the

same period. It is calculated by adding the net fixed assets at the beginning and end of the period and then dividing by 2.

Net Fixed Assets is calculated as follows:

Net Fixed Assets = Total Fixed Assets - Accumulated Depreciation

The Fixed Asset Turnover Ratio indicates the amount of revenue generated for each dollar of net fixed assets invested. A higher Fixed Asset Turnover Ratio suggests that the company is efficiently using its fixed assets to generate sales, while a lower ratio may indicate that the company is not utilizing its fixed assets effectively.

For example:

- If a company's revenue is $2,000,000, and its average net fixed assets are $1,000,000, the Fixed Asset Turnover Ratio would be 2,000,000 / 1,000,000 = 2. This means that the company generates $2 of revenue for every dollar of net fixed assets invested.

Similar to the Asset Turnover Ratio, the interpretation of the Fixed Asset Turnover Ratio depends on the industry and business model. Capital-intensive industries with substantial fixed asset investments, such as manufacturing or transportation, may have lower fixed asset turnover ratios compared to asset-light industries like technology or service-oriented businesses.

A declining Fixed Asset Turnover Ratio over time may suggest that the company's sales are not growing in proportion to its fixed asset base, which could indicate inefficiencies in asset utilization.

It's essential to compare the Fixed Asset Turnover Ratio to industry peers and historical performance to gain insights into the company's operational efficiency and asset management practices.

A healthy and consistent Fixed Asset Turnover Ratio indicates that the company is effectively leveraging its fixed assets to generate revenue, contributing to overall profitability and return on investment.

Market Ratios

Market ratios, also known as valuation ratios or market multiples, are financial metrics that help investors and analysts assess a company's valuation and its attractiveness as an investment. These ratios use the company's stock market price and other market data to evaluate its performance and potential. Some common market ratios include:

1. Price-to-Earnings Ratio (P/E Ratio): The Price-to-Earnings Ratio compares a company's stock price

with its earnings per share (EPS). The formula is:

P/E Ratio = Stock Price / Earnings per Share

A higher P/E ratio typically indicates that investors are willing to pay more for each dollar of earnings, suggesting a higher expectation for future growth or performance.

2. Price-to-Book Ratio (P/B Ratio): The Price-to-Book Ratio compares a company's stock price with its book value per share, which represents the net asset value of the company. The formula is:

P/B Ratio = Stock Price / Book Value per Share

A higher P/B ratio suggests that the stock is trading at a premium relative to its book value, indicating positive investor sentiment.

3. Dividend Yield: The Dividend Yield measures the percentage of dividends paid per share relative to the stock's current market price. The formula is:

Dividend Yield = Annual Dividend per Share / Stock Price

A higher dividend yield indicates a higher return on investment from dividends.

4. Earnings per Share (EPS): Earnings per Share represents the company's net earnings available to common shareholders divided by the average number of outstanding shares. It is often used as a component in other market ratios.

EPS = Net Earnings / Average Number of Outstanding Shares

Higher EPS typically indicates better profitability on a per-share basis.

5. Price-to-Sales Ratio (P/S Ratio): The Price-to-Sales Ratio compares a company's stock price with its revenue per share. The formula is:

P/S Ratio = Stock Price / Revenue per Share

A higher P/S ratio suggests that investors are willing to pay more for each dollar of revenue, indicating positive market sentiment.

6. Market Capitalization: Market Capitalization represents the total value of a company's outstanding shares of stock. It is calculated by multiplying the stock price by the number of outstanding shares.

Market Capitalization = Stock Price × Number of Outstanding Shares

Market capitalization provides an indication of the company's size in the market.

These market ratios provide valuable information to investors, helping them assess a company's relative value, growth potential, and risk. However, it's essential to use these ratios in conjunction with other

financial metrics and industry analysis to make well-informed investment decisions.

Additionally, market ratios may vary significantly among companies and industries, so it's essential to compare them against industry peers and historical data for a more accurate assessment.

Created with the Standard Edition of HelpNDoc: Effortlessly bring your documentation online with HelpNDoc

Price-to-Earnings Ratio (P/E Ratio)

The Price-to-Earnings Ratio, commonly known as the P/E ratio, is a financial metric used to evaluate the relative valuation of a company's stock. It compares the market price of a company's shares to its earnings per share (EPS).

The formula for calculating the Price-to-Earnings Ratio is as follows:

P/E Ratio = Market Price per Share / Earnings per Share (EPS)

Where:

- Market Price per Share is the current market price of one share of the company's stock.
- Earnings per Share (EPS) is the company's net income (profit) divided by the number of outstanding shares.

The P/E ratio reflects how much investors are willing to pay for each dollar of the company's earnings. It is a measure of investor sentiment and provides insights into market expectations and the perceived growth prospects of the company.

Interpretation of P/E Ratio:

- A high P/E ratio typically suggests that investors have high expectations for the company's future earnings growth. It may indicate that the stock is considered overvalued or that investors are optimistic about the company's prospects.
- A low P/E ratio may imply that investors have lower expectations for future earnings growth or that the stock is undervalued relative to its earnings potential.

The P/E ratio is often used for comparing the valuation of different companies within the same industry or sector. Companies with similar business models and growth prospects are often compared based on their P/E ratios to assess relative attractiveness as investments.

It's important to note that the P/E ratio should not be analyzed in isolation. Investors should consider other financial metrics, the company's growth prospects, industry trends, and market conditions when making

investment decisions.

A high P/E ratio may be justified if the company has strong growth potential, innovative products or services, and a competitive advantage. Conversely, a low P/E ratio may indicate an opportunity to invest in a company with solid fundamentals and undervalued stock.

However, it's essential to exercise caution when using the P/E ratio, as it can be influenced by various factors, including market sentiment, earnings volatility, and accounting practices. As with any financial metric, it is recommended to conduct comprehensive research and analysis before making investment decisions based on the P/E ratio.

Created with the Standard Edition of HelpNDoc: Modernize your help files with HelpNDoc's WinHelp HLP to CHM conversion tool

Price-to-Book Ratio (P/B Ratio)

The Price-to-Book Ratio, commonly known as the P/B ratio, is a financial metric used to evaluate the relative valuation of a company's stock. It compares the market price of a company's shares to its book value per share.

The formula for calculating the Price-to-Book Ratio is as follows:

P/B Ratio = Market Price per Share / Book Value per Share

Where:

- Market Price per Share is the current market price of one share of the company's stock.
- Book Value per Share is the company's total book value (total assets minus total liabilities) divided by the number of outstanding shares.

The P/B ratio provides insights into how the market values a company relative to its net asset value as reported in its financial statements. It indicates whether a stock is trading at a premium (P/B > 1) or a discount (P/B < 1) to its book value.

Interpretation of P/B Ratio:

- A P/B ratio greater than 1 indicates that the market is valuing the company at a premium to its book value. It may suggest that investors have high expectations for the company's future growth and profitability.
- A P/B ratio less than 1 indicates that the market is valuing the company at a discount to its book value. It may suggest that investors have lower expectations for the company's future performance.

Like the P/E ratio, the P/B ratio is often used for comparing the valuation of different companies within the same industry or sector. However, while the P/E ratio focuses on earnings, the P/B ratio focuses on the underlying asset value of the company.

Investors often use the P/B ratio to identify potential value stocks. A low P/B ratio may suggest that the company's stock is undervalued relative to its book value, making it an attractive investment opportunity. However, a low P/B ratio could also indicate underlying issues with the company or industry.

It's important to consider other financial metrics, such as the company's earnings, growth prospects, and debt levels, when using the P/B ratio for investment decisions. Additionally, the P/B ratio may not be as relevant for companies with significant intangible assets, such as technology companies, where a significant portion of the value may not be reflected in the book value.

As with any financial metric, the P/B ratio should be used in conjunction with comprehensive research and analysis to make informed investment decisions.

Dividend Yield

Dividend Yield is a financial ratio that measures the percentage return an investor receives from owning a company's stock in the form of dividends. It is calculated by dividing the annual dividend per share by the current market price per share and then multiplying the result by 100 to express it as a percentage.

The formula for calculating Dividend Yield is as follows:

Dividend Yield = (Annual Dividend per Share / Current Market Price per Share) x 100

Where:

- Annual Dividend per Share represents the total dividends paid by the company to shareholders per share over the course of a year.
- Current Market Price per Share is the current trading price of one share of the company's stock in the stock market.

The Dividend Yield provides insights into the income generated by a stock relative to its current market price. It is especially relevant for income-oriented investors who seek regular dividend payments as a source of income from their investments.

Interpretation of Dividend Yield:

- A higher Dividend Yield indicates that the company is paying a larger proportion of its earnings as

dividends, making it attractive for income-focused investors.

- A lower Dividend Yield suggests that the company is retaining a larger portion of its earnings for reinvestment or other purposes and may not be as appealing to income-focused investors.

It's important to note that Dividend Yield is not the same as the total return on an investment. It only considers the dividend income component and does not take into account the potential price appreciation or depreciation of the stock.

Investors should consider other factors such as the company's dividend policy, financial health, growth prospects, and stability when evaluating the attractiveness of a stock based on its dividend yield. Additionally, companies with higher dividend yields might not always be the best long-term investments if they are sacrificing growth opportunities by distributing too much of their earnings as dividends.

Dividend Yield is a useful metric for comparing the income-generating potential of different stocks, especially within the same industry or sector. However, it should be used in conjunction with other financial metrics and thorough research to make well-informed investment decisions.

Earnings per Share (EPS)

Earnings per Share (EPS) is a fundamental financial metric that represents the portion of a company's profit or earnings attributable to each outstanding share of its common stock. It is a key indicator of a company's profitability on a per-share basis and is widely used by investors and analysts to assess a company's financial performance.

The formula for calculating Earnings per Share (EPS) is as follows:

EPS = (Net Income - Preferred Dividends) / Weighted Average Number of Common Shares Outstanding

Where:

- Net Income represents the company's total earnings after deducting all expenses, taxes, and interest.
- Preferred Dividends represent dividends paid to preferred shareholders (if applicable) and are subtracted from net income to arrive at earnings available to common shareholders.
- Weighted Average Number of Common Shares Outstanding is the average number of

common shares outstanding during a specific period. It considers changes in the number of shares over time, such as stock issuances or repurchases.

EPS is a crucial metric for investors because it allows them to evaluate a company's earnings performance on a per-share basis, regardless of the company's size or capital structure. It helps investors understand how much profit they can expect to earn for each share they own.

Interpretation of Earnings per Share (EPS):

- A higher EPS indicates that the company is generating more earnings per share, which is generally considered positive and may lead to higher stock prices.
- A lower EPS suggests that the company's profitability is lower on a per-share basis, which may result in a lower stock price.

EPS is commonly used to compare the earnings performance of different companies within the same industry or sector. It is also a key component of valuation metrics such as the price-to-earnings (P/E) ratio, where the market price of a company's stock is divided by its EPS to assess its relative valuation.

However, investors should be aware that EPS alone may not provide a complete picture of a company's financial health. Factors such as revenue growth, profit margins, debt levels, and cash flow are also essential in evaluating a company's overall financial performance and investment potential.

Additionally, EPS can be influenced by various accounting practices and non-recurring items, so it's crucial to analyze EPS in conjunction with other financial metrics and consider the company's overall business strategy and outlook.

Created with the Standard Edition of HelpNDoc: Make Documentation Review a Breeze with HelpNDoc's Advanced Project Analyzer

Price-to-Sales Ratio (P/S Ratio)

The Price-to-Sales Ratio, commonly known as the P/S ratio, is a financial metric used to assess the relative valuation of a company's stock in relation to its revenue or sales. It compares the market price per share to the company's revenue per share.

The formula for calculating the Price-to-Sales Ratio is as follows:

P/S Ratio = Market Price per Share / Revenue per Share

Where:

- Market Price per Share is the current trading price of one share of the company's stock in the

stock market.

- Revenue per Share represents the company's total revenue divided by the number of outstanding shares.

The P/S ratio is similar to the Price-to-Earnings (P/E) ratio but focuses on revenue rather than earnings. It is particularly useful for valuing companies that are not yet profitable or have volatile earnings. Since revenue is less subject to accounting manipulations, the P/S ratio can provide a more stable valuation metric.

Interpretation of P/S Ratio:

- A higher P/S ratio suggests that investors are willing to pay a premium for each dollar of the company's revenue, possibly indicating high growth expectations or investor optimism about the company's future prospects.
- A lower P/S ratio may indicate that the market is valuing the company at a discount to its revenue, which could suggest undervaluation or lower growth expectations.

As with any financial metric, it's essential to compare the P/S ratio of a company to industry peers and historical data to gain insights into its relative valuation and growth potential.

The P/S ratio should not be used in isolation to make investment decisions but rather as part of a comprehensive analysis. Other financial metrics, such as profitability, earnings growth, cash flow, and competitive positioning, should also be considered.

The P/S ratio is commonly used in conjunction with other valuation metrics like the P/E ratio or the Price-to-Book (P/B) ratio to gain a more comprehensive understanding of a company's valuation and investment attractiveness.

Overall, the P/S ratio provides valuable information about how the market values a company's revenue relative to its stock price, making it a useful tool for investors seeking to assess the attractiveness of a stock based on its revenue generation.

Created with the Standard Edition of HelpNDoc: Free EBook and documentation generator

Total Asset Turnover Ratio

Total Asset Turnover Ratio is a financial metric that measures a company's efficiency in generating revenue from its total assets, including both current and fixed assets. It evaluates how effectively a company utilizes all of its assets to generate sales.

The formula for calculating the Total Asset Turnover Ratio is as follows:

Total Asset Turnover Ratio = Revenue (or Sales) / Average Total Assets

Where:

- Revenue (or Sales) represents the total sales or revenue generated by the company during a specific period.
- Average Total Assets is the average value of the company's total assets over the same period. It is calculated by adding the total assets at the beginning and end of the period and then dividing by 2.

The Total Asset Turnover Ratio indicates the amount of revenue generated for each dollar of assets invested. A higher Total Asset Turnover Ratio suggests that the company is efficiently using its assets to generate sales, while a lower ratio may indicate that the company is not utilizing its assets effectively.

For example:

- If a company's revenue is $2,000,000, and its average total assets are $1,000,000, the Total Asset Turnover Ratio would be 2,000,000 / 1,000,000 = 2. This means that the company generates $2 of revenue for every dollar of assets invested.

The interpretation of the Total Asset Turnover Ratio depends on the industry and business model. Different industries may have varying levels of acceptable turnover ratios based on their capital intensity and business practices.

A declining Total Asset Turnover Ratio over time may indicate that the company's sales are not growing in proportion to its asset base, and further analysis might be required to identify the underlying reasons.

Comparing the Total Asset Turnover Ratio to industry peers and historical performance can provide insights into a company's operational efficiency and its ability to optimize the use of its assets.

Overall, a healthy and consistent Total Asset Turnover Ratio indicates that the company is effectively leveraging its assets to generate revenue, which contributes to overall profitability and efficiency.

However, it's essential to analyze this ratio in conjunction with other financial metrics and consider the company's specific industry and business circumstances for a comprehensive evaluation.

Created with the Standard Edition of HelpNDoc: Effortlessly optimize your documentation website for search engines

Market Capitalization

Market Capitalization, often referred to as "market cap," is a financial metric used to measure the total value of a publicly traded company. It represents the market value of a company's outstanding shares of stock and is calculated by multiplying the current market price per share by the total number of outstanding shares.

The formula for calculating Market Capitalization is as follows:

Market Capitalization = Current Market Price per Share x Total Number of Outstanding Shares

Where:

- Current Market Price per Share is the current trading price of one share of the company's stock in the stock market.
- Total Number of Outstanding Shares represents the total number of shares of the company's stock that are currently held by shareholders, including both institutional and individual investors.

Market Capitalization is a significant indicator of a company's size and overall value as perceived by the market. It provides insights into the company's relative standing compared to other companies in the market.

Based on Market Capitalization, companies are often categorized into different groups:

1. Large-Cap: Companies with a market capitalization of over several billion dollars are considered large-cap companies. They are typically well-established and have a significant market presence.
2. Mid-Cap: Companies with a market capitalization between a few hundred million dollars to several billion dollars fall into the mid-cap category. They are often in a growth phase and may have more room for expansion.
3. Small-Cap: Companies with a market capitalization of a few million to a few hundred million dollars are classified as small-cap companies. They are generally smaller, less established, and may have higher growth potential but also higher risk.

Market Capitalization is a crucial factor for investors as it influences the investment decisions of various stakeholders, including institutional investors, mutual funds, and index funds. It also plays a role in determining a company's weighting in stock market indices, such as the S&P 500 or the Dow Jones

Industrial Average.

Investors often use Market Capitalization as part of their investment analysis to identify companies of different sizes and risk profiles that align with their investment goals and strategies.

However, it's important to note that Market Capitalization alone does not provide a complete picture of a company's financial health or investment potential, and other financial metrics and qualitative factors should be considered for a comprehensive analysis.

Time Value of Money (TVM)

What is the Time Value of Money?

The Time Value of Money (TVM) is a fundamental financial concept that recognizes the idea that money's value changes over time due to the potential to earn interest or generate returns on investments. In essence, it suggests that a specific amount of money today is worth more than the same amount of money in the future or that receiving money in the future is less valuable than receiving it today.

The concept is based on the principle that money can be invested or put to productive use, earning interest, dividends, or capital gains. Therefore, a sum of money available today has the potential to grow and increase in value over time.

The Time Value of Money is crucial in various financial calculations, including:

1. Present Value (PV): Calculating the current worth of future cash flows or investments. It involves discounting future cash flows to determine their equivalent value today.
2. Future Value (FV): Determining the value of an investment or cash flow at a specific point in the future, considering the impact of interest or investment returns.
3. Net Present Value (NPV): Evaluating the profitability of an investment or project by comparing the present value of its expected future cash flows with the initial investment cost.
4. Internal Rate of Return (IRR): Calculating the rate at which an investment breaks even or generates a specific return over time.
5. Annuities and Loans: Assessing the periodic payments or instalments needed to repay a loan or the value of a series of future cash flows.

By considering the Time Value of Money, individuals and businesses can make better financial decisions, evaluate investment opportunities, and understand the real cost and potential benefits of financial

transactions over time. It is an essential concept in various fields, including finance, accounting, investing, and personal financial planning.

Is there any examples or formulas for Time Value of Money?

The Time Value of Money is best understood through examples and formulas. Let's look at a few common scenarios and the formulas used to calculate the present value, future value, and other related concepts.

1. Future Value of a Lump Sum: The future value (FV) of a lump sum investment can be calculated using the following formula:

   ```
   FV = PV * (1 + r)^n
   ```

   Where: FV = Future Value PV = Present Value (initial investment) r = Interest rate per period (expressed as a decimal) n = Number of periods (time in years or fractions of a year)

2. Present Value of a Lump Sum: The present value (PV) of a lump sum to be received in the future can be calculated using the following formula:

   ```
   PV = FV / (1 + r)^n
   ```

3. Future Value of an Annuity: An annuity is a series of equal payments made or received at regular intervals. The future value of an ordinary annuity can be calculated using the following formula:

   ```
   FV = Pmt * [(1 + r)^n - 1] / r
   ```

   Where: FV = Future Value of the annuity Pmt = Payment amount (equal periodic payment) r = Interest rate per period (expressed as a decimal) n = Number of periods (number of payments)

4. Present Value of an Annuity: The present value of an ordinary annuity can be calculated using the following formula:

   ```
   PV = Pmt * [(1 - (1 + r)^(-n)) / r]
   ```

5. Net Present Value (NPV): The net present value (NPV) is used to determine the profitability of an investment or project. It is the sum of the present values of all cash inflows and outflows associated with the investment. The formula is:

   ```
   NPV = Σ [CFt / (1 + r)^t]
   ```

   Where: NPV = Net Present Value CFt = Cash flow at time t r = Discount rate (opportunity cost of capital) t = Time period

6. Internal Rate of Return (IRR): The internal rate of return (IRR) is the discount rate that makes the NPV of an investment or project equal to zero. It is the rate at which the present value of cash inflows

equals the present value of cash outflows. The IRR is typically calculated using trial and error or using financial calculators/software.

These formulas demonstrate how the Time Value of Money concept is applied in various financial calculations. By using these formulas, individuals and businesses can assess the value of money over time, make informed investment decisions, and evaluate the profitability of projects and investments.

Created with the Standard Edition of HelpNDoc: Elevate your documentation to new heights with HelpNDoc's built-in SEO

Branches in Accounting

What is the Branches in Accounting?

In the field of accounting, there are several branches or specialized areas that cater to different aspects of financial reporting, analysis, and management. Each branch serves a unique purpose and contributes to the overall understanding of an organization's financial health. Here are some of the main branches in accounting:

1. Financial Accounting: Financial accounting is concerned with the preparation and presentation of financial statements for external users, such as investors, creditors, and regulatory authorities. The main financial statements include the income statement, balance sheet, cash flow statement, and statement of changes in equity. Financial accounting follows generally accepted accounting principles (GAAP) or international financial reporting standards (IFRS) to ensure consistency and comparability.
2. Management Accounting: Also known as managerial accounting, this branch focuses on providing internal management with the necessary financial information for decision-making, planning, and controlling business activities. Management accountants analyse data, create budgets, perform cost analysis, and generate reports that help managers make informed decisions to achieve organizational goals.
3. Cost Accounting: As mentioned earlier, cost accounting deals with the recording, analysis, and control of costs related to the production of goods and services. It involves methods such as job costing, process costing, and activity-based costing to ascertain the cost of products or services and helps in cost control and decision-making.
4. Tax Accounting: Tax accounting involves the preparation and filing of tax returns in compliance with tax laws and regulations. Tax accountants assist individuals and businesses in minimizing tax liabilities while ensuring compliance with tax laws.

5. Auditing: Auditing is the examination and verification of an organization's financial records, statements, and internal controls by independent auditors. The primary purpose of auditing is to provide an objective assessment of the financial position and performance of an entity, adding credibility to the financial statements.
6. Forensic Accounting: Forensic accounting combines accounting, investigative skills, and legal knowledge to detect and investigate financial fraud and financial crimes. Forensic accountants may be involved in litigation support, dispute resolution, and conducting fraud examinations.
7. Government and Public Sector Accounting: This branch focuses on accounting principles and practices specific to government entities and the public sector. It includes budgeting, fund accounting, and compliance with governmental accounting standards.
8. Non-profit Accounting: Non-profit accounting involves the unique financial reporting and regulatory requirements for non-profit organizations. It emphasizes transparency and accountability in the use of funds received from donations, grants, and contributions.
9. International Accounting: International accounting deals with accounting practices across different countries and regions. It considers variations in accounting principles and financial reporting standards worldwide.

These branches of accounting demonstrate the diverse roles that accountants play in various sectors and industries. Accountants may specialize in one or more of these areas based on their interests and career goals.

How Accounting software, such as osFinancials5/TurboCASH5 be applied to the branches of accounting?

Accounting software, such as osFinancials5/TurboCASH5, can be applied to various branches of accounting to streamline processes, improve efficiency, and enhance the accuracy of financial data. Here's how accounting software can be used in different branches of accounting:

1. Financial Accounting: Accounting software like osFinancials5/TurboCASH5 is designed to handle the core aspects of financial accounting, such as recording transactions, preparing financial statements (income statement, balance sheet, cash flow statement), and managing general ledger accounts. It automates the process of journal entries, posting, and trial balance preparation, making financial reporting faster and more accurate.
2. Management Accounting: Accounting software can generate detailed reports and financial analysis to support management decision-making. It allows for budgeting, variance analysis, cost allocation, and forecasting, helping management accountants analyse financial data and provide insights for strategic planning.

3. Cost Accounting: Accounting software can assist in tracking and allocating costs to different products, projects, or activities using cost allocation methods like activity-based costing. This helps businesses understand the true cost of their products or services, supporting cost control and pricing decisions.
4. Tax Accounting: Accounting software often includes tax modules that help calculate and prepare tax returns, ensuring compliance with tax laws and regulations. It can handle various tax codes, deductions, and credits, simplifying tax reporting processes.
5. Auditing: Accounting software facilitates the auditing process by providing auditors with easy access to financial data and transaction histories. Auditors can review financial records, conduct tests, and verify transactions efficiently using the software.
6. Government and Public Sector Accounting: Accounting software with fund accounting capabilities is particularly useful for government and public sector entities. It allows for separate tracking of funds and grants, ensuring compliance with budgetary and regulatory requirements.
7. Non-profit Accounting: Accounting software can accommodate the specific needs of non-profit organizations, such as fund accounting, donor tracking, and grant management. It helps non-profits report on restricted and unrestricted funds and demonstrate financial transparency to stakeholders.
8. International Accounting: Accounting software with multi-currency and multi-language capabilities can be beneficial for companies operating in multiple countries, enabling them to manage financial transactions in different currencies and comply with international accounting standards.
9. Forensic Accounting: Accounting software aids forensic accountants in conducting data analysis and identifying anomalies or patterns that may indicate financial fraud or irregularities.
10. Small Business Accounting: Accounting software is commonly used by small businesses to manage their financial transactions, generate invoices, track expenses, and reconcile bank accounts.

In summary, accounting software like osFinancials5/TurboCASH5 is versatile and can be adapted to meet the specific needs of different branches of accounting. It streamlines processes, improves data accuracy, and provides valuable financial information to support decision-making and compliance.

Financial Accounting

What is Financial Accounting?

Financial accounting is a branch of accounting that focuses on the preparation, presentation, and reporting of financial information about an organization's economic activities to external stakeholders. Its primary purpose is to provide a clear and accurate overview of a company's financial performance and position, enabling investors, creditors, regulators, and other interested parties to make informed decisions.

Key features of financial accounting include:

1. Financial Statements: The core output of financial accounting is the preparation of financial statements. These statements summarize the financial position (balance sheet), financial performance (income statement or profit and loss statement), and cash flows (cash flow statement) of the organization over a specific period. The financial statements are prepared in accordance with generally accepted accounting principles (GAAP) or international financial reporting standards (IFRS) to ensure consistency and comparability.
2. External Reporting: The financial statements are primarily intended for external users, such as shareholders, potential investors, creditors, suppliers, government agencies, and the general public. These stakeholders use the information to assess the financial health and performance of the company.
3. Accrual Basis of Accounting: Financial accounting follows the accrual basis of accounting, where transactions are recorded when they occur, not necessarily when the cash is exchanged. This method recognizes revenues and expenses in the period in which they are earned or incurred, regardless of when the actual cash flows take place.
4. Historical Perspective: Financial accounting provides a historical perspective of a company's financial performance and position. It reports on past events and transactions rather than predicting future outcomes.
5. Objective and Neutral: Financial accounting aims to be objective and neutral in presenting financial information. It should provide a fair and unbiased representation of the company's financial affairs.
6. External Audit: Many companies engage external auditors to conduct an independent audit of their financial statements. The auditors review the financial records, internal controls, and financial reporting processes to provide assurance on the accuracy and reliability of the financial statements.
7. Key Users: The primary users of financial accounting information include investors (shareholders and potential investors), creditors (such as banks and suppliers), regulatory authorities (e.g., tax authorities and securities commissions), and analysts (financial analysts and credit rating agencies).

Overall, financial accounting plays a critical role in facilitating transparency and accountability in a company's financial dealings. It ensures that relevant and reliable financial information is available to

external stakeholders, enabling them to assess the company's performance and make informed decisions about their investments, credit offerings, and other interactions with the organization.

Cost Accounting

What is Cost Accounting?

Cost accounting is a branch of accounting that focuses on the recording, analysis, and control of costs incurred in the production of goods or services. It involves the process of collecting, classifying, summarizing, and interpreting various costs to aid management in decision-making, cost control, and performance evaluation.

Objectives of Cost Accounting

The main objectives of cost accounting are as follows:

1. Cost Ascertainment: Determining the total cost involved in the production of goods or the provision of services. This includes direct costs (materials, labor) and indirect costs (overheads).
2. Cost Control: Identifying areas where costs can be controlled or reduced to improve efficiency and profitability.
3. Cost Planning and Budgeting: Preparing cost budgets and forecasts to set targets and allocate resources effectively.
4. Product Pricing: Assisting in determining the selling price of products or services by considering their production costs and desired profit margins.
5. Decision Making: Providing relevant cost information to aid management in making informed decisions about product lines, production methods, pricing strategies, etc.
6. Performance Evaluation: Evaluating the performance of different departments or products based on their costs and revenues.
7. Inventory Valuation: Valuing the closing inventory and its impact on the cost of goods sold in the income statement.

Methods and Techniques in Cost Accounting

Methods and Techniques in Cost Accounting:

1. Job Costing: Assigning costs to specific jobs or projects. This method is used in industries where each job is unique and requires individual costing, such as construction or custom manufacturing.
2. Process Costing: Allocating costs to a continuous production process, where large quantities of identical products are produced, such as in the chemical or food manufacturing industries.
3. Standard Costing: Establishing predetermined cost standards for products and comparing them to actual costs to identify variations and take corrective actions.
4. Activity-Based Costing (ABC): Allocating costs based on the activities that drive them, providing a more accurate understanding of the cost behavior and resource consumption.
5. Marginal Costing: Analysing the impact of changes in production volume on total costs, revenue, and profitability.
6. Absorption Costing: Allocating both variable and fixed manufacturing costs to units of output, which is required for external financial reporting under generally accepted accounting principles (GAAP).

Cost accounting plays a crucial role in helping organisations make sound financial decisions and optimize their operations by identifying cost-effective measures and controlling expenses. It is an essential tool for management in understanding the cost structure of their business and maintaining competitiveness in the market.

Management Accounting

What is Management Accounting?

Management accounting, also known as managerial accounting, is a branch of accounting that focuses on providing financial information and analysis to aid internal decision-making and help management plan, control, and make strategic decisions within an organization. Unlike financial accounting, which is primarily concerned with reporting financial information to external stakeholders, management accounting is geared towards providing relevant, timely, and detailed information to managers within the organization.

Key features and characteristics of management accounting include:

1. Internal Focus: Management accounting is primarily used for internal purposes within the

organization. It provides financial and non-financial information to assist managers in making informed decisions.

2. Forward-looking: While financial accounting primarily deals with historical financial data, management accounting emphasizes forecasting and projecting future financial and operational outcomes.
3. Decision Support: The primary goal of management accounting is to support decision-making processes by providing relevant data, performance metrics, and analysis to aid in evaluating alternatives and selecting the best course of action.
4. Costing and Cost Analysis: Management accounting is often involved in costing products or services, analyzing cost behavior, and understanding cost structures to optimize pricing and resource allocation.
5. Budgeting and Planning: Management accountants are heavily involved in the budgeting process, helping managers set financial goals, create budgets, and compare actual performance against budgeted targets.
6. Performance Evaluation: Management accounting provides performance measurement and variance analysis to assess how well the organization and its units are performing relative to established goals and standards.
7. Strategic Decision Making: It assists in strategic planning and analysis, such as assessing potential investments, evaluating business opportunities, and conducting feasibility studies.
8. Customization: Management accounting reports are tailored to the needs of different levels of management, allowing each level to access information relevant to their specific roles and responsibilities.
9. Flexibility: Unlike financial accounting, which follows strict accounting standards, management accounting systems can be adapted to suit the unique needs and requirements of the organization.

Overall, management accounting is a valuable tool for internal decision-makers to optimize resource allocation, improve operational efficiency, and achieve the organization's objectives effectively. It plays a vital role in helping managers navigate complex business environments and make data-driven decisions to stay competitive and successful.

Tax Accounting

What is Tax Accounting?

Tax accounting is a specialized area of accounting that deals with the preparation, calculation, and reporting of taxes for individuals, businesses, and other entities. The main focus of tax accounting is to ensure compliance with tax laws and regulations while optimizing tax efficiency within the legal framework. Tax accountants or tax professionals help individuals and businesses navigate the complex tax landscape and fulfil their tax obligations accurately.

Key aspects of tax accounting include:

1. Tax Preparation: Tax accountants assist individuals and businesses in preparing and filing their tax returns. This involves gathering financial information, analyzing transactions, applying relevant tax laws and deductions, and calculating the amount of tax owed or refund due.
2. Tax Planning: Tax accountants engage in tax planning strategies to legally minimize tax liabilities. They analyze financial situations and advise clients on the most tax-efficient ways to structure transactions, investments, and operations. This may involve timing income and expenses, utilizing tax credits and deductions, and considering the tax implications of various financial decisions.
3. Compliance: Tax accounting focuses on ensuring that taxpayers comply with the applicable tax laws and regulations. This involves staying up-to-date with changes in tax legislation and making sure that tax returns are filed accurately and on time.
4. Representation: Tax accountants may represent individuals or businesses in their dealings with tax authorities. They can handle communications, audits, and appeals on behalf of their clients to resolve tax-related issues.
5. Tax Research: Tax accountants conduct tax research to interpret complex tax laws and regulations, particularly in cases where there may be ambiguity or specific tax planning needs.
6. Cross-border Taxation: For multinational companies and individuals with international financial activities, tax accounting deals with the complexities of cross-border taxation, including issues related to double taxation agreements and transfer pricing.
7. Compliance with Tax Reporting: Tax accounting also covers compliance with various tax reporting requirements, such as the filing of informational returns, providing documentation for tax credits or deductions claimed, and ensuring adherence to tax-related disclosure rules.
8. Tax Strategy for Businesses: For businesses, tax accounting may involve strategic planning for structuring the business entity, considering tax implications related to mergers and acquisitions, and optimizing the allocation of resources to maximize tax efficiency.

Tax accounting is essential for individuals and businesses alike to ensure accurate tax reporting and to

avoid potential penalties or legal issues related to non-compliance with tax laws. It requires a strong understanding of tax regulations, attention to detail, and staying current with changes in tax legislation to provide the best advice and support to clients.

Forensic Accounting

What is Forensic Accounting?

Forensic accounting is a specialized area of accounting that combines accounting, auditing, and investigative skills to examine financial records and transactions for legal purposes. The primary objective of forensic accountants is to uncover and analyze financial evidence to support or refute claims in legal disputes, investigations, or fraud cases. They play a crucial role in detecting and preventing financial fraud, embezzlement, and other financial crimes.

Key aspects of forensic accounting include:

1. Fraud Investigation: Forensic accountants are often engaged to investigate suspected financial fraud within organizations or in cases involving white-collar crimes. They examine financial records, transactions, and accounting systems to identify irregularities and potential instances of fraud.
2. Litigation Support: Forensic accountants provide support in litigation and legal proceedings by quantifying damages, preparing expert reports, and serving as expert witnesses to explain complex financial matters to judges and juries.
3. Dispute Resolution: In cases of business disputes, such as partnership disagreements or contract disputes, forensic accountants may be called upon to analyze financial data and provide an objective assessment of the financial impact of the dispute.
4. Asset Tracing: Forensic accountants may assist in tracing and identifying hidden or misappropriated assets in cases involving divorce, bankruptcy, or recovery of stolen funds.
5. Business Valuation: Valuation of businesses or assets is another area where forensic accountants apply their expertise, especially when disputes arise over the value of a company or its assets.
6. Anti-Money Laundering (AML) and Compliance: Forensic accountants work with regulatory bodies and financial institutions to identify suspicious financial activities and ensure compliance with anti-money laundering regulations.
7. Due Diligence: In mergers and acquisitions, forensic accountants may conduct financial due diligence

to assess the accuracy and completeness of financial information provided by the target company.

8. Cyber Forensics: With the rise of cybercrime, forensic accountants may also be involved in investigating financial data breaches and digital financial fraud.

Forensic accountants must possess strong analytical and investigative skills, a deep understanding of accounting principles, and knowledge of legal and regulatory frameworks. They work closely with law enforcement agencies, lawyers, and other professionals to uncover financial evidence and support legal cases.

It's important to note that forensic accountants maintain independence and objectivity while conducting their investigations, and their findings are typically presented in a clear and impartial manner to support legal proceedings or dispute resolutions. Their work is vital in maintaining financial integrity, promoting transparency, and bringing financial wrongdoers to justice.

What is Auditing?

Auditing is a systematic examination and verification of an organization's financial records, transactions, processes, and internal controls to assess their accuracy, reliability, and compliance with applicable laws, regulations, and accounting principles. The primary objective of an audit is to provide independent assurance to stakeholders that the financial statements and other information presented by the organization are free from material misstatements and fairly represent the true financial position and performance of the entity.

Key aspects of auditing include:

1. Independence: Auditors must be independent and unbiased. They should not have any financial or personal interest in the organization being audited to maintain objectivity and integrity.

2. Assurance: The audit process aims to provide reasonable assurance, not absolute certainty. Auditors gather sufficient and appropriate evidence to form an opinion on the fairness and reliability of the financial statements.

3. Financial Statement Audit: The most common type of audit is the financial statement audit, where auditors examine the financial statements, including the balance sheet, income statement, cash flow statement, and statement of changes in equity.

4. Compliance Audit: Compliance audits assess whether the organization is adhering to specific laws, regulations, or internal policies.
5. Internal Control Evaluation: Auditors review the organization's internal controls, which are procedures and policies designed to safeguard assets, prevent fraud, and ensure accurate financial reporting.
6. External Audit: External audits are conducted by independent auditors from outside the organization. They are typically required for public companies and may also be performed voluntarily by private companies for additional credibility and assurance.
7. Internal Audit: Internal audits are conducted by internal auditors employed by the organization. They focus on evaluating and improving internal controls, risk management, and operational efficiency.
8. Audit Reports: After completing the audit, auditors issue audit reports summarizing their findings and conclusions. The reports include an opinion on the fairness of the financial statements and, if applicable, recommendations for improvement.
9. Materiality: Auditors consider materiality, which refers to the significance of potential misstatements. Material misstatements are those that could influence the economic decisions of users of the financial statements.
10. Professional Standards: Auditors follow professional standards and guidelines established by auditing standard-setting bodies, such as the International Auditing and Assurance Standards Board (IAASB) and the Public Company Accounting Oversight Board (PCAOB).

Auditing plays a critical role in promoting financial transparency, accountability, and trust in the business world. It provides stakeholders, including investors, creditors, regulators, and the public, with confidence in the accuracy of financial information presented by organizations. The audit process helps detect errors, irregularities, or fraud and encourages organizations to maintain strong internal controls and financial reporting practices.

What is Non-profit Accounting?

Non-profit accounting is a specialized area of accounting that focuses on the financial management and reporting for nonprofit organizations. Unlike for-profit businesses, non-profit organizations have a different set of financial objectives and face unique accounting challenges due to their mission-driven

nature. The primary goal of nonprofit accounting is to accurately track and report financial information while ensuring transparency and accountability in the use of funds for achieving the organization's charitable or social objectives.

Key features of non-profit accounting include:

1. Fund Accounting: Non-profits typically use fund accounting to track financial resources separately based on their specific purposes or restrictions. Funds are often categorized into unrestricted, temporarily restricted, and permanently restricted funds. This method allows donors and stakeholders to understand how funds are allocated and used for different programs or projects.
2. Revenue Recognition: Non-profits receive funding from various sources, including donations, grants, program service fees, and investment income. Proper revenue recognition is essential to align the revenue with the timing of the related expenses and activities.
3. Donor Reporting: Non-profits must report to their donors and funding sources on how their contributions are utilized. Donor reporting often requires detailed information about the organization's programs, expenses, and outcomes.
4. Compliance with Regulations: Non-profit organizations must comply with specific accounting and reporting regulations, which may vary based on their size, activities, and funding sources. Compliance with tax-exempt status requirements is also crucial for maintaining their tax-exempt status.
5. Transparency and Accountability: Non-profit accounting places a strong emphasis on transparency and accountability to donors, beneficiaries, and the public. Clear financial reporting helps demonstrate how resources are used to fulfil the organization's mission.
6. Cost Allocation: Non-profits may engage in cost allocation to distribute shared expenses among different programs or administrative functions fairly.
7. Budgeting and Resource Management: Budgeting is essential in non-profit accounting to plan and manage resources effectively. Nonprofits need to allocate resources efficiently to ensure sustainability and to fulfil their mission.
8. Tax Reporting: Non-profits must comply with tax regulations applicable to their tax-exempt status, which may include filing Form 990 with the Internal Revenue Service (IRS) in the United States.

Examples of non-profit organizations include charities, foundations, religious organizations, educational institutions, healthcare organizations, and social service agencies. The financial statements for non-profits typically include the statement of financial position (balance sheet), statement of activities (income statement), and statement of cash flows.

Non-profit accounting plays a critical role in maintaining the trust of donors and stakeholders by ensuring that financial resources are utilized effectively to achieve the organization's charitable or social objectives.

It also helps non-profit leaders make informed decisions to optimize their impact and fulfil their missions.

International Accounting

What is International Accounting?

International accounting is a branch of accounting that deals with the accounting and financial reporting practices across different countries and jurisdictions. It addresses the challenges and complexities arising from the variations in accounting principles, financial reporting standards, and regulations worldwide.

Key aspects of international accounting include:

1. Harmonization and Convergence: With the increasing globalization of business and investment, there is a growing need for harmonization and convergence of accounting standards. International accounting efforts aim to promote consistency and comparability in financial reporting by encouraging countries to adopt or converge with internationally recognized accounting standards, such as the International Financial Reporting Standards (IFRS) issued by the International Accounting Standards Board (IASB).
2. Comparative Financial Reporting: International accounting enables users to compare financial statements of companies from different countries. It involves analyzing financial statements prepared under different accounting frameworks and converting financial results from one currency to another using appropriate exchange rates.
3. Foreign Currency Translation: International accounting deals with the translation of financial statements of multinational companies from their functional currency (the currency of the primary economic environment in which they operate) to the presentation currency used for consolidated financial reporting.
4. Cross-Border Transactions: International accounting considers the accounting treatment of cross-border transactions, including foreign investments, exports, and imports, and the implications of foreign currency exchange fluctuations on financial results.
5. Cultural and Legal Differences: Accounting practices are influenced by cultural norms and legal requirements in each country. International accounting recognizes the need to adapt financial reporting practices to comply with local laws and regulations while maintaining transparency and comparability.

6. Taxation and Transfer Pricing: International accounting also takes into account the impact of different tax systems and transfer pricing regulations on multinational companies' financial reporting and profitability.
7. Multinational Companies: International accounting is particularly relevant for multinational companies that operate in multiple countries and must prepare consolidated financial statements that comply with various accounting standards and regulations.
8. International Financial Reporting Standards (IFRS) : IFRS is a set of accounting standards used or adopted by more than 140 countries, with some countries requiring its use for all or certain types of companies. IFRS aims to provide a common language for financial reporting globally.

International accounting is essential for facilitating cross-border investments, mergers, and acquisitions, as well as enabling global investors and stakeholders to make informed decisions based on comparable and reliable financial information. It helps organizations understand and navigate the accounting complexities of operating in multiple jurisdictions and supports the goal of global financial transparency and consistency.

Government and Public Sector Accounting

What is Government and Public Sector Accounting?

Government and public sector accounting is a specialized area of accounting that deals with the financial management and reporting of government entities and public sector organizations. It focuses on the unique accounting principles, rules, and regulations applicable to governmental and not-for-profit entities, including federal, state, and local governments, as well as public agencies, educational institutions, and non-governmental organizations (NGOs) operating for public purposes.

Key features of government and public sector accounting include:

1. Fund Accounting: Similar to non-profit accounting, government accounting often uses fund accounting to segregate financial resources based on their sources and purposes. Funds are established to track revenues and expenses related to specific activities, programs, or restrictions.
2. Budgeting and Appropriations: Government accounting emphasizes budgeting as a critical component of financial management. Governments must adhere to budgetary regulations and report on how funds are appropriated and spent in alignment with the approved budgets.
3. Modified Accrual Accounting: Many government entities use modified accrual accounting, a hybrid of

cash and accrual accounting. Under this method, revenues are recognized when measurable and available, while expenses are recognized when incurred.

4. Compliance and Transparency: Governments are subject to stringent regulations and are required to demonstrate transparency in their financial reporting. Accountability to taxpayers and citizens is a significant aspect of government accounting.
5. Government Financial Statements: Government entities prepare comprehensive annual financial reports (CAFRs) that include not only the traditional financial statements but also additional sections such as management's discussion and analysis (MD&A) and notes to the financial statements.
6. Fund Types: Governments have various fund types, including governmental funds (general fund, special revenue funds, capital projects funds, debt service funds), proprietary funds (enterprise funds, internal service funds), and fiduciary funds.
7. Governmental Accounting Standards Board (GASB): The GASB is responsible for establishing accounting and financial reporting standards for governmental entities in the United States. Similarly, other countries may have their own standard-setting bodies for government accounting.
8. Performance Reporting: In addition to financial reporting, government accounting may include performance reporting, which assesses the effectiveness and efficiency of government programs and services.
9. Cost Allocation: Government and public sector accounting may involve allocating costs across various programs and services to assess their true cost and impact on society.
10. Compliance with Legal and Regulatory Requirements: Government entities must comply with specific legal and regulatory requirements related to financial reporting, taxation, and transparency.

Government and public sector accounting is vital for responsible financial management, fiscal planning, and accountability in the use of public funds. It ensures that government organizations operate with financial integrity, fulfil their public service missions, and provide transparent financial information to citizens and stakeholders.

Fund Accounting

What is Fund Accounting?

Fund accounting is a specialized accounting method used by organizations that manage funds or have multiple sources of restricted funding. It is commonly employed by non-profits, government agencies, educational institutions, and investment companies to track and report financial activities related to specific funds, projects, or grants.

The key features of fund accounting include:

1. Segregation of Funds: Each fund is treated as a separate accounting entity, meaning its financial transactions are distinct and do not commingle with other funds.
2. Tracking Restricted Funding: Fund accounting allows organizations to track funds with specific purposes or restrictions, such as donations for a particular project, grant money, or endowment funds.
3. Compliance and Reporting: Fund accounting ensures compliance with legal, regulatory, and donor requirements by accurately recording and reporting financial activities for each fund.
4. Accrual Basis: It typically follows the accrual basis of accounting, where revenues and expenses are recognized when earned or incurred, regardless of cash flow.
5. Inter-fund Transactions: Fund accounting facilitates interfund transactions, which occur when money is transferred between different funds within the same organization.
6. Budgeting: It aids in budget preparation and monitoring, enabling organizations to compare actual financial results against the budget for each fund.
7. Auditing: The separation of funds makes it easier for auditors to verify financial records and ensure the appropriate use of funds.

Fund accounting is essential for transparency and accountability when dealing with diverse funding sources and when there's a need to demonstrate how each fund's resources are utilized. It allows stakeholders to understand how funds are managed and spent, which is particularly crucial for organizations operating with public money or charitable donations.

Who uses Fund Accounting?

Fund accounting is commonly used by various types of organizations that manage funds with specific purposes or restrictions. Some of the key entities that utilize fund accounting include:

1. Non-profit Organizations: Non-profits, including charitable organizations, foundations, religious institutions, and educational institutions, often use fund accounting to manage donations, grants, endowments, and other funding sources dedicated to specific programs or projects.

2. Government Agencies: Government entities, such as municipalities, states, and federal agencies, use fund accounting to manage public funds allocated to specific programs, departments, or projects. This helps ensure accountability and transparency in the use of public funds.
3. Educational Institutions: Schools, colleges, and universities employ fund accounting to manage diverse sources of funding, such as tuition fees, grants, endowments, and donations for various departments, scholarships, or research projects.
4. Investment Companies: Investment firms and mutual funds use fund accounting to track and manage the assets and liabilities of specific funds or portfolios, enabling investors to understand the performance and composition of their investments.
5. Healthcare Organizations: Hospitals, healthcare foundations, and other medical institutions use fund accounting to handle donations, grants, and funds earmarked for medical research, specific healthcare programs, or community health initiatives.
6. Community and Housing Organizations: Community development organizations and housing authorities often use fund accounting to manage funds allocated for affordable housing projects, community development initiatives, or other specific programs.
7. Associations and Clubs: Membership-based organizations, clubs, and professional associations may use fund accounting to track and manage funds received from membership fees, events, sponsorships, or donations for specific purposes.
8. Philanthropic Foundations: Philanthropic foundations and trusts use fund accounting to manage endowments, grants, and donations, ensuring that funds are allocated to projects aligned with their charitable missions.
9. Religious Organizations: Churches, mosques, synagogues, and other religious institutions use fund accounting to manage donations and contributions designated for specific ministries, programs, or community outreach activities.

Fund accounting is essential for these organizations as it allows them to demonstrate responsible stewardship of funds, comply with legal and regulatory requirements, and provide transparency to donors, stakeholders, and beneficiaries about how funds are allocated and used. The segregation of funds and tracking of restricted funding sources help ensure that resources are directed appropriately and in line with the intended purposes.

Trust Accounting

What is Trust Accounting?

Trust accounting is a specific type of financial management used primarily by lawyers, law firms, and financial institutions that handle funds on behalf of their clients or beneficiaries. It involves the administration and proper handling of funds held in trust, where one party (the trustee) holds assets or funds on behalf of another party (the beneficiary) for a specific purpose or under specific conditions.

Key elements of trust accounting include:

1. Fiduciary Duty: The trustee has a legal obligation to act in the best interests of the beneficiary and manage the trust's assets prudently and responsibly.
2. Segregation of Funds: Trust accounting requires the clear separation of trust funds from the trustee's personal funds and other business accounts.
3. Accurate Record-Keeping: Trustees must maintain detailed and accurate records of all financial transactions related to the trust, including deposits, withdrawals, investments, and expenses.
4. Reporting and Communication: Trustees are responsible for providing regular reports to the beneficiaries, keeping them informed about the status of the trust and its assets.
5. Compliance and Regulations: Trust accounting must adhere to specific legal and regulatory requirements, which can vary depending on the jurisdiction and the nature of the trust.
6. Interest and Income Allocation: In cases where the trust generates income (e.g., interest from investments), trust accountants must properly allocate this income among the beneficiaries according to the trust's terms.
7. Distribution of Assets: Trust accounting oversees the proper distribution of trust assets according to the terms and conditions specified in the trust agreement.
8. Audit and Accountability: In many cases, trust accounts are subject to audits to ensure compliance with legal and accounting standards and to verify the accuracy of financial records.

Trust accounting is highly important because it involves managing and protecting assets that belong to others, often with significant legal and financial consequences if mismanaged. Proper trust accounting ensures that the trust's purpose is fulfilled, the beneficiaries' rights are respected, and the trustee's actions align with their fiduciary duty. Failure to adhere to trust accounting principles can lead to legal consequences and damage to the reputation of the trustee and the institution involved.

Who uses Trust Accounting?

Trust accounting is used primarily by professionals and organizations that handle funds on behalf of others, often with a fiduciary duty to act in the best interests of the beneficiaries. Some of the key users of

trust accounting include:

1. Lawyers and Law Firms: Lawyers often hold funds in trust for their clients, such as settlement funds, advance payments, or funds related to real estate transactions. Trust accounting ensures that these funds are managed separately from the lawyer's own funds and are appropriately disbursed to the clients when needed.
2. Financial Institutions: Banks and other financial institutions may act as trustees for various types of trusts, including revocable and irrevocable trusts, and manage the assets and funds held in trust for the beneficiaries.
3. Estate Administrators: Executors or administrators of estates often use trust accounting to manage the assets and funds of the deceased person's estate and distribute them to the rightful heirs and beneficiaries.
4. Investment Firms: Investment companies or asset management firms may manage trusts on behalf of individuals or entities, ensuring proper investment of trust funds according to the terms of the trust.
5. Retirement Plan Administrators: Companies or financial institutions responsible for administering retirement plans, such as 401(k) plans, may use trust accounting to handle the plan's assets on behalf of plan participants and beneficiaries.
6. Non-profit Organizations: Non-profits may manage trust funds donated by individuals or organizations, with specific purposes or conditions attached to their use. Trust accounting ensures that these funds are used in accordance with the donors' intentions.
7. Court-Appointed Guardians: Guardianships often involve managing funds for minors or incapacitated individuals. Trust accounting is used to oversee and account for the financial transactions related to the protected person's assets.
8. Charitable Foundations: Philanthropic foundations may utilize trust accounting to manage endowments and charitable trusts, ensuring that the funds are prudently invested and distributed for charitable purposes.
9. Family Trusts: Families may establish trusts to manage their assets and wealth, provide for future generations, or support charitable causes. Trust accounting helps in administering and distributing these assets according to the trust's provisions.

Trust accounting is crucial in all these cases to maintain accurate records, ensure proper handling of funds, and fulfil fiduciary responsibilities. It provides transparency to beneficiaries and other stakeholders, giving them confidence that their interests are being protected and that the trust's assets are being managed appropriately.

What is the common accounts used for Trusts in a Chart of Accounts?

The accounts used for trusts in a Chart of Accounts can vary depending on the specific nature and purpose of the trust, as well as the reporting requirements and preferences of the organization or individual managing the trust. However, here are some common accounts that are typically used in the Chart of Accounts for trusts:

1. Trust Assets:
    - Cash - This account represents the cash held in the trust.
    - Investments - This account includes various types of investments held by the trust, such as stocks, bonds, mutual funds, real estate, etc.
    - Receivables - Any amounts due to the trust, such as interest, dividends, or loan repayments.
2. Trust Liabilities:
    - Payables - Any amounts owed by the trust, such as expenses or fees.
    - Trust Beneficiaries' Accounts - Individual accounts for each beneficiary, showing their entitlements or distributions from the trust.
3. Income and Expenses:
    - Income - This account records all income earned by the trust, such as interest, dividends, rental income, etc.
    - Expenses - This account includes all expenses related to managing the trust, such as trustee fees, legal fees, administrative costs, etc.
4. Gains and Losses:
    - Capital Gains/Losses - This account tracks gains and losses realized from the sale of investments or assets.
    - Unrealized Gains/Losses - For investments that have not been sold, this account records changes in their market value.
5. Distribution Accounts:
    - Principal Distribution - This account represents distributions made from the principal of the trust.
    - Income Distribution - This account represents distributions made from the income earned by

the trust.

6. Reserves and Designations:
    - Accumulated Income - This account shows the cumulative income earned but not distributed to beneficiaries.
    - Reserve for Contingencies - An account used to set aside funds for unforeseen circumstances or future needs of the trust.
7. Trustee's Fees:
    - Trustee's Compensation - This account records fees or compensation paid to the trustee for managing the trust.

It's important to note that the Chart of Accounts for trusts can be more extensive and may include additional accounts based on the complexity and unique features of the trust. Moreover, the Chart of Accounts should be customized to adhere to accounting principles and any specific legal or regulatory requirements applicable to trusts in the respective jurisdiction.

Is there any specific information that is required to include in documents such as invoices, etc. for Trusts?

Yes, when preparing documents such as invoices for trusts, there are specific pieces of information that should be included to ensure accuracy, compliance, and transparency. The required information may vary depending on the jurisdiction, the type of trust, and the specific circumstances, but some common details to include in invoices for trusts are:

1. Trust Name and Identification: Clearly state the name of the trust and any unique identification number or reference assigned to the trust.
2. Trustee Information: Include the name and contact details of the trustee or trustees responsible for managing the trust.
3. Beneficiary Information: If applicable, mention the names of the beneficiaries entitled to receive distributions from the trust.
4. Invoice Date: Clearly indicate the date the invoice was issued.
5. Invoice Number: Assign a unique invoice number to each invoice for proper tracking and reference.
6. Description of Goods or Services: Provide a detailed description of the goods sold or services rendered to the trust.
7. Quantity and Unit Price: Include the quantity of goods or services provided and the unit price per

item or service.

8. Total Amount: Calculate and display the total amount due for the goods or services provided.
9. Payment Terms: Outline the payment terms, including the due date for payment and any applicable discounts or penalties for early or late payment.
10. Payment Instructions: Provide information on how payments should be made, such as accepted payment methods and the designated bank account for transfers.
11. Tax Information: If applicable, include any taxes or duties that apply to the invoice, along with the relevant tax identification numbers.
12. Legal and Compliance Information: Depending on the jurisdiction, there may be specific legal or regulatory requirements for invoices issued to trusts. Ensure compliance with any relevant regulations or legal obligations.
13. Trust Accounting Details: If the invoice pertains to specific trust expenses or distributions, clearly indicate the trust account numbers or designations related to the transaction.
14. Itemization of Expenses: If the invoice includes various expenses, provide an itemized breakdown to show how the total amount is derived.

It's essential to maintain clear and accurate records of all financial transactions related to the trust, including invoices and payments received. These records help provide transparency and accountability in trust management, which is critical for fulfilling the trustee's fiduciary duty and ensuring compliance with legal and regulatory requirements. Always consult with a legal or financial professional to ensure that the invoices issued for trusts meet all necessary requirements and adhere to applicable laws and guidelines.

Accounting frameworks

What is an accounting framework?

An accounting framework refers to a set of rules, principles, and guidelines that govern the preparation and presentation of financial statements. Accounting frameworks provide a standardized framework for financial reporting, ensuring consistency and comparability in financial statements across different companies and jurisdictions. Examples of accounting frameworks include Generally Accepted Accounting Principles (GAAP) and International Financial Reporting Standards (IFRS).

Is IFRS for SMEs also an accounting framework?

The IFRS for SMEs (International Financial Reporting Standards for Small and Medium-sized Entities) is considered an accounting framework. It is a simplified set of accounting standards specifically designed for small and medium-sized entities (SMEs) that do not have public accountability.

IFRS for SMEs provides a comprehensive set of accounting principles, rules, and guidelines that govern the preparation and presentation of financial statements for SMEs. It covers topics such as recognition, measurement, presentation, and disclosure of various financial elements including assets, liabilities, equity, income, expenses, and cash flows. The aim of IFRS for SMEs is to provide a less complex and more cost-effective financial reporting framework for SMEs compared to the full International Financial Reporting Standards (IFRS) framework.

The adoption of IFRS for SMEs enables SMEs to prepare their financial statements in a consistent and transparent manner, facilitating comparability and understanding of their financial performance and position. It helps SMEs meet the needs of various stakeholders, such as investors, lenders, and regulatory authorities, by providing relevant and reliable financial information.

It's important to note that the application of IFRS for SMEs is subject to local regulations and requirements in each jurisdiction. Some jurisdictions may have made modifications or amendments to the standard to suit their specific legal and regulatory frameworks.

Accounting standards - GAAP vs IFRS

What is the collective name for GAAP and IFRS?

The collective name for Generally Accepted Accounting Principles (GAAP) and International Financial Reporting Standards (IFRS) is "*Accounting Standards*." These are the guidelines and rules that companies and organizations follow when preparing financial statements and reports.

Is GAAP and IFRS applicable to Small businesses?

GAAP (Generally Accepted Accounting Principles) and IFRS (International Financial Reporting Standards) are typically used by larger, publicly traded companies that are required to follow certain accounting standards for financial reporting purposes. However, small businesses may also benefit from using these

accounting standards, particularly if they plan to seek financing or investments from outside sources.

While there are no legal requirements for small businesses to use GAAP or IFRS, using these standards can provide several benefits. First, they provide a consistent framework for financial reporting, which can be useful for comparing financial performance across different companies or industries. Second, using GAAP or IFRS can help small businesses attract investors or lenders who may prefer to work with companies that use recognized accounting standards. Finally, using these standards can help small businesses identify and address financial issues, which can be important for long-term success.

That being said, small businesses may find that using GAAP or IFRS can be costly and time-consuming, particularly if they do not have dedicated accounting staff. In these cases, it may be more practical for small businesses to use simplified accounting methods or standards that are tailored to their specific needs. Ultimately, the decision to use GAAP or IFRS will depend on the specific circumstances of each small business, including their industry, size, and financial reporting needs.

Can accounting software be configured to accommodate both GAAP and IFRS in different databases?

Yes, many accounting software systems can be configured to accommodate both GAAP and IFRS in different databases. This allows companies to maintain separate financial records for each standard, ensuring that they are in compliance with the appropriate accounting rules and regulations. However, it is important to note that while some accounting software may be able to support multiple accounting standards, it may not be able to do so with equal functionality or accuracy. Companies should carefully evaluate their accounting software options and work with their software providers to ensure that their chosen system can accommodate both GAAP and IFRS accounting needs.

What is the main options to consider whether to use GAAP or IFRS?

When considering whether to use GAAP (Generally Accepted Accounting Principles) or IFRS (International Financial Reporting Standards), companies should consider several factors:

1. Geographic location: Companies that operate primarily in the United States may find it more advantageous to use GAAP, while companies that operate globally or have international investors may find it more advantageous to use IFRS.
2. Regulatory requirements: Companies should consider the regulatory requirements of their industry and the countries in which they operate. Some industries may require the use of a specific accounting standard, and certain countries may have specific rules and regulations regarding financial reporting.

3. Investor preferences: Companies should consider the preferences of their investors when choosing an accounting standard. Some investors may prefer GAAP, while others may prefer IFRS.
4. Complexity of transactions: Companies with complex transactions may find it easier to use IFRS, as it is designed to handle more complex accounting issues. However, for simpler transactions, GAAP may be more appropriate.
5. Access to talent: Companies should consider the availability of accounting talent that is trained in either GAAP or IFRS. Depending on the location and industry, one standard may be more prevalent than the other, making it easier to find qualified accounting professionals.

Ultimately, the decision to use GAAP or IFRS will depend on the specific needs and requirements of each company. It is important to carefully evaluate the options and consult with accounting professionals to determine the best course of action.

Which countries use GAAP and which countries use IFRS?

The United States uses Generally Accepted Accounting Principles (GAAP), while many other countries around the world, including most of Europe, Australia, and Canada, use International Financial Reporting Standards (IFRS).
However, some countries may allow companies to choose between using GAAP or IFRS, while others may adopt a modified version of one or both of these standards. It's important to note that accounting standards may also vary based on the industry or sector in which a company operates.

GAAP and IFRS and Tax?

GAAP (Generally Accepted Accounting Principles) and IFRS (International Financial Reporting Standards) are accounting standards used by companies and organizations to prepare financial statements and reports. These standards are focused on financial reporting and disclosure and do not necessarily directly affect tax calculations.

Tax laws, on the other hand, are regulations and rules that govern the assessment and collection of taxes. Tax laws vary by country and can differ from accounting standards. Companies and organizations must comply with both tax laws and accounting standards separately.

While there may be some overlap between accounting standards and tax laws, it is important to understand that they are distinct areas of regulation with different purposes and requirements.

Does the USA use IFRS or GAAP?

In the United States, the generally accepted accounting principles (GAAP) are used for accounting and financial reporting. While the International Financial Reporting Standards (IFRS) are widely used around the

world, including in many developed economies, they are not used in the United States as the primary accounting standard.

However, the Securities and Exchange Commission (SEC) has allowed foreign companies that are listed in the U.S. to prepare their financial statements using IFRS since 2007. In addition, some U.S. companies that have operations in other countries may also prepare their financial statements using IFRS to better align with the reporting standards of their foreign operations.

Overall, while IFRS is not used as the primary accounting standard in the United States, it may be used by some foreign companies listed on U.S. exchanges or by U.S. companies with significant foreign operations.

Does Canada use IFRS or GAAP?

In Canada, both IFRS and GAAP are used in accounting and financial reporting.

Publicly accountable enterprises, such as publicly traded companies and some financial institutions, are required to use IFRS for their financial statements. This requirement was phased in between 2011 and 2014.

Private enterprises, which are typically smaller businesses that are not publicly traded, have the option to use either IFRS or Accounting Standards for Private Enterprises (ASPE), which is a Canadian GAAP standard.

Not-for-profit organizations also have the option to use either IFRS or the Accounting Standards for Not-for-Profit Organizations (ASNFPO), which is a Canadian GAAP standard specifically designed for the not-for-profit sector.

Overall, while both IFRS and GAAP are used in Canada, the specific standard used will depend on the type of organization and its reporting requirements.

Does the United Kingdom use IFRS or GAAP?

In the United Kingdom, both IFRS and UK GAAP (Generally Accepted Accounting Practice) are used in accounting and financial reporting, although there have been recent changes to this.

Historically, UK GAAP has been the standard used by most UK companies for financial reporting, but this has changed in recent years. In 2015, the Financial Reporting Council (FRC) introduced a new standard called FRS 102, which is based on the IFRS framework but tailored specifically for UK companies. FRS 102 replaced most of the previous UK GAAP standards.

In addition, some UK companies are required to use IFRS. Publicly traded companies listed on the London Stock Exchange (LSE) are required to use IFRS for their consolidated financial statements, and some other companies may choose to use IFRS voluntarily.

Overall, while both UK GAAP and IFRS are used in the UK, the specific standard used will depend on the

type of company and its reporting requirements.

Does South Africa use IFRS or GAAP?

In South Africa, both IFRS (International Financial Reporting Standards) and SA GAAP (South African Generally Accepted Accounting Practice) are used in accounting and financial reporting.

For companies that are listed on the Johannesburg Stock Exchange (JSE), IFRS is required for their financial statements. In addition, companies that are subsidiaries of foreign entities or have significant foreign operations may also be required to use IFRS.

For other companies, SA GAAP is the most commonly used standard for financial reporting. SA GAAP is similar to IFRS in many respects, but there are some differences between the two standards. The Companies Act of South Africa requires that all companies must prepare financial statements that are compliant with either IFRS or SA GAAP.

Overall, while both IFRS and SA GAAP are used in South Africa, the specific standard used will depend on the type of company and its reporting requirements.

What is the structure of GAAP Chart of accounts?

The structure of the GAAP (Generally Accepted Accounting Principles) chart of accounts is a standardized system that categorizes and organizes financial transactions for reporting purposes. The chart of accounts is typically broken down into five main categories:

1. Assets: This category includes all items that a company owns and has value, such as cash, accounts receivable, inventory, and property.
2. Liabilities: This category includes all debts and obligations that a company owes, such as accounts payable, loans, and taxes.
3. Equity: This category represents the residual interest in the assets of the company after all liabilities have been paid off. It includes items such as capital stock, retained earnings, and dividends.
4. Revenues: This category includes all income earned by the company, such as sales revenue, service revenue, and interest income.
5. Expenses: This category includes all costs incurred by the company in the process of generating revenue, such as salaries and wages, rent, and utilities.

Within each category, accounts are further organized by subcategories and sub-accounts to provide more detail and specificity. This allows for accurate tracking and reporting of financial transactions and enables companies to make informed decisions based on their financial performance.

What is the structure of IFRS Chart of accounts?

IFRS (International Financial Reporting Standards) does not prescribe a specific chart of accounts structure. Instead, it provides general guidelines and principles that companies can use to develop their own chart of accounts that is relevant and useful for their specific industry and business operations.

However, there are some general principles that are commonly used in developing an IFRS-compliant chart of accounts. These principles include:

1. Classification by type of account: Similar to GAAP, accounts are typically categorized by asset, liability, equity, revenue, and expense.
2. Grouping by business function: Accounts are grouped according to their function within the business, such as sales, marketing, production, and finance.
3. Hierarchical structure: Accounts are arranged in a hierarchical structure, with the most general accounts at the top and more specific accounts at the bottom.
4. Standardization: Accounts are standardized across the organization, with consistent naming conventions and numbering schemes used to avoid confusion and facilitate reporting.

Overall, the structure of an IFRS chart of accounts will vary depending on the needs and requirements of the individual company, but it will generally adhere to these general principles to ensure accurate and effective financial reporting.

Is there an example of IFRS Chart of accounts?

There is no standardized example of an IFRS (International Financial Reporting Standards) chart of accounts as it is up to each individual company to design their own chart of accounts that best fits their business operations and industry. However, an example of a possible IFRS chart of accounts structure could be:

- Assets
    - Non-current assets
        - Property, plant, and equipment
        - Intangible assets
        - Investment properties
        - Other non-current assets
    - Current assets

        - Inventories
        - Trade and other receivables
        - Cash and cash equivalents
        - Other current assets
- Liabilities
    - Non-current liabilities
        - Borrowings
        - Provisions
        - Deferred tax liabilities
        - Other non-current liabilities
    - Current liabilities
        - Trade and other payables
        - Borrowings
        - Provisions
        - Current tax liabilities
        - Other current liabilities
- Equity
    - Share capital
    - Retained earnings
    - Other reserves
- Income
    - Revenue
    - Gains
- Expenses
    - Cost of sales
    - Employee benefits

- Depreciation and amortization
- Impairment losses
- Finance costs
- Other expenses

This is just an example and the specific accounts and subcategories used will vary depending on the needs and operations of each company.

Is there an example of GAAP Chart of accounts?

Yes, there is an example of a GAAP (Generally Accepted Accounting Principles) chart of accounts. While the specific accounts and categories may vary depending on the business and industry, a typical GAAP chart of accounts may include:

- Assets
  - Current assets
    - Cash and cash equivalents
    - Accounts receivable
    - Inventory
    - Prepaid expenses
  - Non-current assets
    - Property, plant, and equipment
    - Intangible assets
    - Investments
    - Other non-current assets
- Liabilities
  - Current liabilities
    - Accounts payable
    - Short-term loans
    - Accrued expenses
    - Unearned revenue

    - Non-current liabilities
        - Long-term debt
        - Pension obligations
        - Deferred tax liabilities
- Equity
    - Common stock
    - Additional paid-in capital
    - Retained earnings
- Revenue
    - Sales revenue
    - Other revenue
- Expenses
    - Cost of goods sold
    - Selling, general, and administrative expenses
    - Research and development expenses
    - Interest expenses
    - Income tax expenses

This is just an example and the specific accounts and subcategories used will vary depending on the needs and operations of each company.

Is there a common example for a chart of accounts of a small businesses?

Yes, there is a common example of a chart of accounts for a small business, which typically includes the following accounts:

- Assets
    - 1000 - Cash on hand
    - 1010 - Cash in bank

- 1020 - Accounts receivable
- 1030 - Inventory
- 1050 - Prepaid expenses

- Liabilities
  - 2000 - Accounts payable
  - 2010 - Accrued expenses
  - 2050 - Customer deposits
- Equity
  - 3000 - Owner's equity
  - 3100 - Retained earnings
- Income
  - 4000 - Sales revenue
  - 4050 - Interest income
- Expenses
  - 5000 - Cost of goods sold
  - 5050 - Rent expense
  - 5100 - Salaries and wages
  - 5150 - Supplies expense
  - 5200 - Telephone and internet
  - 5250 - Advertising and promotion
  - 5300 - Professional fees
  - 5350 - Utilities expense
  - 5400 - Insurance expense
  - 5450 - Depreciation expense
  - 5500 - Taxes and licences

This is just an example, and a small business can customize their chart of accounts to best fit their business

needs and operations.

Are there any recommendations when to use sub-accounts in the chart of accounts?

There are several recommendations for when to use sub-accounts in a chart of accounts:

1. To provide more detail: Sub-accounts can be used to provide more detailed information about a specific account. For example, a company might use a sub-account to track expenses for a specific department or project within a larger expense account.
2. To track multiple locations or divisions: If a company has multiple locations or divisions, sub-accounts can be used to track financial information separately for each location or division. This can help management make more informed decisions about allocating resources and identifying areas for improvement.
3. To comply with regulatory requirements: In some industries, regulatory bodies may require companies to track financial information in a specific way. Sub-accounts can be used to ensure that financial data is recorded and reported in accordance with these requirements.
4. To facilitate financial analysis: Sub-accounts can make it easier to analyze financial data by providing more granular information. For example, a company might use sub-accounts to track sales by product line, making it easier to identify which products are driving revenue growth.
5. To simplify financial reporting: Sub-accounts can be used to simplify financial reporting by grouping related accounts together. For example, a company might use sub-accounts to group all travel-related expenses together, making it easier to prepare financial statements and tax returns.

Overall, the decision to use sub-accounts in a chart of accounts should be based on the specific needs of the organization. While sub-accounts can provide more detail and facilitate financial analysis, they can also add complexity to the chart of accounts and make it more difficult to maintain.

What is the correct spelling for subaccounts (sub-accounts or sub accounts)?

Both "sub-accounts" and "sub accounts" are considered correct spellings, and which one to use may depend on the style guide being followed or personal preference.

Some style guides, such as The Chicago Manual of Style, recommend using a hyphen to join two words that function as a single adjective, such as "sub-" and "accounts". In this case, "sub-accounts" would be the preferred spelling.

Other style guides, such as the Associated Press Stylebook, generally recommend not using a hyphen for compound words that are frequently used together and easily understood, such as "sub accounts". In this case, "sub accounts" would be the preferred spelling.

Ultimately, it is important to be consistent within a document or organization when using spelling and punctuation for compound words like "sub-accounts" or "sub accounts".

What is the difference between Stock and Inventory in general and in specific countries?

In general, "*stock*" and "*inventory*" are often used interchangeably to refer to the goods or materials a company has on hand for sale or production. However, in some specific countries, there may be legal or accounting distinctions between the two terms.

In the United States, for example, "inventory" generally refers to the raw materials, work-in-progress goods, and finished goods a company has on hand for sale. "Stock" is a broader term that can also refer to ownership shares in a company or securities traded on a stock exchange.

In the United Kingdom, the term "*stock*" is commonly used to refer to the goods a company has on hand for sale, while "*inventory*" is a more general term that can include equipment, property, and other assets.

In some other countries, such as Canada and Australia, the terms "*inventory*" and "*stock*" are often used interchangeably.

It's important to note that the specific definitions of "*stock*" and "*inventory*" can vary depending on the context and industry. In general, however, both terms refer to the goods or materials a company has on hand, with "*inventory*" typically used in accounting contexts and "*stock*" used more broadly.

Where does VAT/GST/Sales tax fit in the GAAP Chart of accounts and Financial categories?

Value Added Tax (VAT), Goods and Services Tax (GST), and Sales Tax are types of taxes that are applied to goods and services at different stages of production and distribution.

In the GAAP (Generally Accepted Accounting Principles) Chart of Accounts, VAT, GST, and Sales Tax are typically recorded as part of the "*Taxes Payable*" account, which falls under the "*Liabilities*" category in the financial statements.

When a company makes a sale and collects VAT, GST, or Sales Tax from its customers, it is essentially acting as an agent for the government and holding the tax on behalf of the tax authority. The amount collected is recorded as a liability in the "*Taxes Payable*" account.

When the company remits the collected tax to the tax authority, the " *Taxes Payable*" account is reduced, and the "*Cash*" account is increased by the same amount.

It's worth noting that the specific account names and categories in a Chart of Accounts may vary between companies and industries, but the general principles for recording taxes in financial statements are the same.

Where does VAT/GST/Sales tax fit in the IFRS Chart of accounts and Financial categories?

Under International Financial Reporting Standards (IFRS), VAT/GST/Sales tax would be classified as indirect taxes and recorded as part of the "*Current Liabilities*" category in the financial statements.

Similar to GAAP, when a company makes a sale and collects VAT/GST/Sales tax, it is recorded as a liability in the "*Taxes Payable*" account. When the tax is remitted to the tax authority, the liability is reduced and the "*Cash*" account is increased by the same amount.

However, it's important to note that the IFRS Chart of Accounts may have some differences compared to the GAAP Chart of Accounts, such as in account naming and categorization. Nevertheless, the basic accounting principles and financial reporting requirements for recording taxes under IFRS are similar to those under GAAP.

Which accounts is structured in the Capital or Equity section of the Financial categories?

The Capital or Equity section of the financial categories typically includes accounts that represent the ownership interests in a company. These accounts may include:

1. Common stock: This account represents the portion of the company that is owned by its shareholders.
2. Preferred stock: This account represents a type of stock that typically pays a fixed dividend and has priority over common stock in the event of liquidation.
3. Retained earnings: This account represents the accumulated profits of the company that have not been distributed to shareholders as dividends.
4. Additional paid-in capital: This account represents the amount of money that shareholders have invested in the company in excess of the par value of the stock.
5. Treasury stock: This account represents shares of the company's own stock that have been repurchased and are held by the company.

Accumulated other comprehensive income: This account represents gains and losses that have not yet been recognized in the income statement, such as unrealized gains or losses on investments.

Which accounts is structured in the Capital or Equity section of the Financial categories of a sole proprietorship or partnership?

The Capital or Equity section of the financial categories for a sole proprietorship or partnership typically includes accounts that represent the ownership interests of the owner(s) or partner(s). These accounts may include:

1. Owner's capital account: This account represents the owner's investment in the business, including initial capital contributions and any additional investments made over time.
2. Drawing account: This account represents any withdrawals made by the owner or partners for personal use, which reduces the amount of capital in the business.
3. Partner's capital account: This account represents the investment made by each partner in the business, including initial capital contributions and any additional investments made over time.
4. Partner's drawing account: This account represents any withdrawals made by each partner for personal use, which reduces the amount of capital in the business.
5. Profit and loss sharing accounts: These accounts represent the distribution of profits or losses among the partners, based on their ownership percentage or agreement.
6. Retained earnings: This account represents the accumulated profits of the business that have not been distributed to the owner(s) or partner(s) as withdrawals.

Where does VAT/GST/Sales tax fit in the GAAP Chart of accounts and Financial categories?

Value Added Tax (VAT), Goods and Services Tax (GST), and Sales Tax are types of taxes that are applied to goods and services at different stages of production and distribution.

In the GAAP (Generally Accepted Accounting Principles) Chart of Accounts, VAT, GST, and Sales Tax are typically recorded as part of the "Taxes Payable" account, which falls under the "Liabilities" category in the financial statements.

When a company makes a sale and collects VAT, GST, or Sales Tax from its customers, it is essentially acting as an agent for the government and holding the tax on behalf of the tax authority. The amount collected is recorded as a liability in the "Taxes Payable" account.

When the company remits the collected tax to the tax authority, the "Taxes Payable" account is reduced,

and the "Cash" account is increased by the same amount.

It's worth noting that the specific account names and categories in a Chart of Accounts may vary between companies and industries, but the general principles for recording taxes in financial statements are the same.

Where does VAT/GST/Sales tax fit in the IFRS Chart of accounts and Financial categories?

Under International Financial Reporting Standards (IFRS), VAT/GST/Sales tax would be classified as indirect taxes and recorded as part of the "Current Liabilities" category in the financial statements.

Similar to GAAP, when a company makes a sale and collects VAT/GST/Sales tax, it is recorded as a liability in the "Taxes Payable" account. When the tax is remitted to the tax authority, the liability is reduced and the "Cash" account is increased by the same amount.

However, it's important to note that the IFRS Chart of Accounts may have some differences compared to the GAAP Chart of Accounts, such as in account naming and categorization. Nevertheless, the basic accounting principles and financial reporting requirements for recording taxes under IFRS are similar to those under GAAP.

For Fixed assets and depreciation what is the suggested structure in the Chart of Accounts for GAAP?

For fixed assets and depreciation, the suggested structure in the Chart of Accounts for GAAP includes the following accounts:

1. Fixed Assets: This account is used to record the initial cost of acquiring a fixed asset, such as a building, equipment, or vehicle. The balance of this account represents the net book value of fixed assets that have not yet been depreciated.
2. Accumulated Depreciation: This account is used to record the total amount of depreciation expense that has been recognized for fixed assets. The balance of this account represents the cumulative amount of depreciation that has been charged against fixed assets over time.
3. Depreciation Expense: This account is used to record the periodic depreciation expense for fixed assets. The balance of this account represents the amount of depreciation expense that has been recognized during a specific period, such as a month or year.
4. Gain/Loss on Disposal of Fixed Assets: This account is used to record any gains or losses that result from the sale or disposal of fixed assets. The balance of this account represents the difference between the net book value of the fixed asset at the time of disposal and the amount of cash received

from the sale.

It's important to note that the specific accounts used in the Chart of Accounts for fixed assets and depreciation may vary depending on the industry and the organization's specific needs. However, the above accounts are generally recommended as a starting point for recording and tracking fixed assets and depreciation under GAAP.

Fixed assets book value and Fixed assets at cost and Accumulated depreciation in GAAP?

Fixed assets book value, fixed assets at cost, and accumulated depreciation are all important concepts in GAAP accounting for fixed assets.

- Fixed assets at cost refers to the total amount of money spent to acquire a fixed asset, including any costs associated with acquiring or installing the asset. This includes the purchase price, delivery charges, installation fees, and any other costs directly related to acquiring the asset.
- Accumulated depreciation, on the other hand, is the total amount of depreciation expense that has been recognized for the fixed asset over its useful life. Depreciation is the method used to spread the cost of a fixed asset over its useful life, and is recognized as an expense on the income statement.
- Fixed assets book value is calculated by subtracting accumulated depreciation from the fixed assets at cost. This represents the net book value of the fixed asset, or the amount that the asset is currently worth on the company's balance sheet.

For example, suppose a company purchased a machine for $50,000 and expected it to last for 10 years, with no residual value at the end of its useful life. Using straight-line depreciation, the company would recognize $5,000 in depreciation expense each year, until the accumulated depreciation reached $50,000 after 10 years.

At the end of year 5, the accumulated depreciation would be $25,000 ($5,000 x 5 years). The fixed asset book value would be $25,000 ($50,000 - $25,000), representing the current value of the asset on the company's balance sheet.

Overall, fixed assets book value, fixed assets at cost, and accumulated depreciation are important components of GAAP accounting for fixed assets, and are used to accurately record and report the value and depreciation of fixed assets over time.

Is there a difference in Depreciation and Amortization?

Yes, there is a difference between depreciation and amortization.

Depreciation is the method used to allocate the cost of tangible assets, such as buildings, machinery, and vehicles, over their useful lives. This means that the cost of the asset is spread out over a number of years, with a portion of the cost being recognized as an expense each year.

Amortization, on the other hand, is the method used to allocate the cost of intangible assets, such as patents, trademarks, and copyrights, over their useful lives. Like depreciation, the cost of the intangible asset is spread out over a number of years, with a portion of the cost being recognized as an expense each year.

Both depreciation and amortization are recognized as expenses on the income statement, and reduce the value of the asset on the balance sheet over time. The main difference between the two is that depreciation applies to tangible assets, while amortization applies to intangible assets.

It's important to note that the useful life of an asset and the method of depreciation or amortization used can vary depending on the asset and the organization's accounting policies. In general, straight-line depreciation and straight-line amortization are the most commonly used methods for calculating the annual depreciation or amortization expense for an asset.

Is depreciation the correct term to use for Land and Buildings, or should amortization be used?

Depreciation is the correct term to use for buildings, while land is not depreciated. This is because land is considered to have an indefinite useful life and, therefore, does not decrease in value over time.

On the other hand, buildings are subject to wear and tear and become less valuable over time. Depreciation is a method of allocating the cost of a building over its useful life, reflecting the decrease in value due to factors such as age, wear and tear, and obsolescence.

Amortization, on the other hand, is used for intangible assets such as patents, copyrights, and trademarks. It is a similar concept to depreciation but relates specifically to the allocation of the cost of intangible assets over their useful life.

In summary, while depreciation is the correct term to use for buildings, amortization is used for intangible assets such as patents and copyrights.

Do we use sub-accounts to record fixed assets in GAAP?

Yes, sub-accounts can be used to record fixed assets in GAAP. Using sub-accounts can provide more detail and allow for better tracking of fixed assets.

For example, a company might use sub-accounts to record fixed assets by category or location. This would allow the company to track the value and depreciation of each asset separately, and would make it

easier to identify any issues or discrepancies.

In addition to sub-accounts for fixed assets, other sub-accounts may also be used in the chart of accounts for related expenses, such as maintenance and repair costs, property taxes, and insurance premiums.

Overall, the decision to use sub-accounts for fixed assets in GAAP should be based on the specific needs of the organization and the level of detail required for financial reporting and analysis.

Is there any examples of long-term adjustments in GAAP and IFRS?

Yes, there are several examples of long-term adjustments that may be required under both GAAP and IFRS. Here are a few examples:

1. Long-term investments: If a company has investments in securities or other assets that are expected to be held for more than one year, they may need to be revalued periodically to reflect changes in their fair value. This is required under both GAAP and IFRS.
2. Pension and post-retirement benefits: Companies with defined benefit pension plans or other post-retirement benefit plans may need to make long-term adjustments to account for changes in the plan's assumptions, such as changes in interest rates or life expectancy. This is required under both GAAP and IFRS.
3. Goodwill impairment: If a company acquires another company and pays more than the fair value of its identifiable assets and liabilities, the excess is recorded as goodwill. Under both GAAP and IFRS, the company must periodically test for impairment of the goodwill, which may result in a long-term adjustment.
4. Asset impairments: If the value of a company's assets has declined and it is no longer recoverable, the company may need to recognize an impairment loss. This may include long-lived assets, such as property, plant, and equipment, as well as intangible assets. This is required under both GAAP and IFRS.
5. Restructuring charges: If a company incurs costs associated with a restructuring, such as severance payments or asset write-downs, these costs may need to be recognized as a long-term adjustment under both GAAP and IFRS.

Overall, long-term adjustments are an important part of GAAP and IFRS accounting, and are necessary to ensure that financial statements accurately reflect a company's financial position and performance over time.

Is there any examples of short-term adjustments in GAAP and IFRS?

Yes, there are several examples of short-term adjustments that may be required under both GAAP and IFRS. Here are a few examples:

1. Accruals: If a company has incurred expenses but has not yet paid them, it may need to record an accrual. This is a short-term adjustment that ensures that expenses are recognized in the period in which they are incurred, even if the actual payment is made later.
2. Prepayments: If a company has paid for goods or services in advance, it may need to record a prepayment. This is a short-term adjustment that ensures that the expenses are recognized in the period in which the goods or services are actually received.
3. Provision for bad debts: If a company expects that it will not be able to collect all of the amounts owed to it by customers, it may need to record a provision for bad debts. This is a short-term adjustment that reflects the estimated amount of uncollectible accounts receivable.
4. Inventory valuation: If the value of a company's inventory has declined, the company may need to record an adjustment to reflect the lower value. This is a short-term adjustment that ensures that the value of the inventory is reported accurately on the balance sheet.
5. Deferred revenue: If a company has received payment for goods or services that it has not yet delivered, it may need to record a deferred revenue liability. This is a short-term adjustment that ensures that the revenue is recognized in the period in which the goods or services are actually delivered.

Overall, short-term adjustments are an important part of GAAP and IFRS accounting, and are necessary to ensure that financial statements accurately reflect a company's financial position and performance in the current period.

Where do these examples of short-term adjustments fit in the Chart of accounts for GAAP and IFRS?

The examples of short-term adjustments can fit into various accounts in the Chart of Accounts for both GAAP and IFRS, depending on the nature of the adjustment. Here are some examples:

1. Accruals: These adjustments would typically be recorded in a liability account, such as "*Accrued Expenses*" or "*Accrued Liabilities*".
2. Prepayments: These adjustments would typically be recorded in an asset account, such as "*Prepaid Expenses*" or "*Deferred Charges*".

3. Provision for bad debts: These adjustments would typically be recorded as an expense, such as "Bad Debt Expense," and a contra-asset account, such as "*Allowance for Doubtful Accounts*".
4. Inventory valuation: These adjustments would typically be recorded in an inventory account, such as "*Raw Materials Inventory*" or "*Finished Goods Inventory*."
5. Deferred revenue: These adjustments would typically be recorded as a liability, such as "*Deferred Revenue*" or "*Unearned Revenue*."

Overall, the specific accounts used in the Chart of Accounts for these short-term adjustments will depend on the nature of the adjustment and the specific accounting policies of the company. It is important to have a well-designed Chart of Accounts that accurately reflects the company's financial transactions and makes it easy to prepare financial statements in accordance with GAAP or IFRS.

Which word is the best for salespersons selected on sales documents such as invoices, quotes and credit notes and purchase documents such as purchases, supplier returns and orders?

The word that is commonly used for salespersons on sales documents such as invoices, quotes, and credit notes, as well as purchase documents such as purchases, supplier returns, and orders, is "*Salesperson*" or "*Sales Representative*." This term is widely recognized and commonly used in the business world to identify the person responsible for the sale or purchase transaction. Other possible terms could include "*Sales Agent*," "*Account Executive*," or "*Business Development Manager*," depending on the specific role and responsibilities of the individual.

Is there a recommended Chart of accounts example for countries in South Africa?

There is no one-size-fits-all Chart of Accounts that is recommended for all countries, as each company's accounting needs may vary depending on factors such as their industry, size, and legal requirements. However, there are general guidelines that can be followed when creating a Chart of Accounts for a South African company.

The Chart of Accounts for South African companies typically follows the International Financial Reporting Standards (IFRS) and generally includes the following categories:

1. Assets
2. Liabilities
3. Equity

4. Income
5. Cost of sales
6. Expenses

Each of these categories may have subcategories that are more specific to the company's operations. For example, under "*Assets*," there may be subcategories for *"Cash and cash equivalents*," "*Accounts receivable*," and "*Fixed assets*." Similarly, under "*Expenses*," there may be subcategories for "*Salaries and wages*," "*Rent and utilities*," and "*Marketing and advertising expenses*."

It is also important to consider any industry-specific requirements or regulations that may apply to the company when designing the Chart of Accounts.

Overall, the Chart of Accounts should be designed in a way that accurately reflects the company's financial transactions and makes it easy to prepare financial statements in accordance with the applicable accounting standards. It is recommended to consult with a qualified accountant or accounting firm to help create a Chart of Accounts that meets the company's specific needs and complies with local accounting standards.

Is there a recommended Chart of accounts example for countries in South Africa that is GAAP compliant?

South Africa uses International Financial Reporting Standards (IFRS) as the generally accepted accounting principles (GAAP) for financial reporting. Therefore, the recommended Chart of Accounts example for South African companies that is GAAP compliant is based on IFRS guidelines.

The Chart of Accounts for South African companies typically includes the following categories:

1. Assets
2. Liabilities
3. Equity
4. Income
5. Cost of sales
6. Expenses

Each of these categories may have subcategories that are more specific to the company's operations. For example, under "*Assets*," there may be subcategories for "*Cash and cash equivalents*," "Accounts receivable," and "*Property, plant, and equipment*". Similarly, under "Expenses," there may be subcategories for "*Salaries and wages*," "*Rent and utilities*," and "*Advertising and marketing expenses*."

The Chart of Accounts should be designed to comply with IFRS guidelines and should accurately reflect the company's financial transactions. It is important to work with a qualified accountant or accounting firm to ensure that the Chart of Accounts is tailored to the company's specific needs and complies with local accounting standards.

Differences between GAAP and IFRS

What is the difference of Accounting terminology used in GAAP and IFRS?

GAAP (Generally Accepted Accounting Principles) and IFRS (International Financial Reporting Standards) are two sets of accounting standards used by companies to prepare financial statements. While there are many similarities between GAAP and IFRS, there are also some key differences in the accounting terminology used by the two standards:

1. Revenue recognition: GAAP and IFRS have different rules for when revenue can be recognized. Under GAAP, revenue can be recognized when it is earned, while under IFRS, revenue can be recognized only when it is probable that economic benefits will flow to the company.
2. Inventory valuation: GAAP allows for the use of LIFO (last-in, first-out) inventory accounting, while IFRS does not. Instead, IFRS requires companies to use the FIFO (first-in, first-out) or weighted average cost methods.
3. Financial statement presentation: GAAP and IFRS have different requirements for the presentation of financial statements. For example, GAAP requires a separate statement of comprehensive income, while IFRS allows for comprehensive income to be included in the statement of profit and loss or in a separate statement.
4. Goodwill impairment: GAAP and IFRS have different rules for testing for goodwill impairment. Under GAAP, goodwill is tested for impairment at least annually, while under IFRS, it is tested only when there is an indication of impairment.
5. Lease accounting: GAAP and IFRS have different rules for accounting for leases. Under GAAP, leases are classified as either operating or finance leases, while under IFRS, leases are classified as either finance leases or operating leases.

These are just a few examples of the differences in accounting terminology used by GAAP and IFRS. It is important for companies to be aware of these differences and to ensure that they are using the appropriate accounting standards for their specific needs and requirements.

Differences of between in IFRS (full) and IFRS for SMEs

What is the difference of Accounting terminology used in IFRS (full) and IFRS for SMEs?

The accounting terminology used in IFRS (full) and IFRS for SMEs (International Financial Reporting Standards for Small and Medium-sized Entities) is generally similar, but there are some differences in terminology and terminology usage. The main objective of IFRS for SMEs is to simplify the accounting requirements for SMEs and make them more accessible and cost-effective compared to the full IFRS framework.

Here are some key differences in accounting terminology between IFRS (full) and IFRS for SMEs:

1. Terminology Adaptation: IFRS for SMEs may use simplified or adapted terminology to make it more understandable and applicable to the needs of SMEs. This can include the use of simpler terms or specific terms commonly used in SME contexts.
2. Presentation and Disclosure: IFRS for SMEs may have reduced disclosure requirements compared to full IFRS. This means that certain terminology related to disclosure items in full IFRS may not be present or may be simplified in IFRS for SMEs.
3. Measurement and Recognition: IFRS for SMEs provides simplified measurement and recognition principles compared to full IFRS. This may result in the use of different terms or terminology specific to the simplified requirements of SMEs.
4. Specific Industry Considerations: IFRS for SMEs may provide industry-specific guidance or exemptions for certain industries or activities. This can result in the use of industry-specific terminology or terminology tailored to the needs of specific sectors.

It's important to note that while there may be differences in terminology, the underlying accounting principles and concepts remain consistent across both IFRS (full) and IFRS for SMEs. The aim is to provide a clear and transparent framework for financial reporting, irrespective of the size or complexity of the reporting entity.

Accounting principles - GAAP

osFinancials5/TurboCASH5 is an accounting system used by businesses to keep track of their financial transactions. The main purpose of accounting is to provide financial information in an understandable format to investors, bank managers, creditors, consultants, and others.

There are several basic accounting principles that are followed by most accounting systems, including osFinancials5/TurboCASH5.

By following basic accounting principles, businesses can ensure that their financial information is accurate and reliable. While accounting may seem like a complex language at first, there are tools and resources available, such as osFinancials5/TurboCASH5, that can help simplify the process and minimise the need for extensive accounting knowledge.

What is a definition of accounting principles?

Accounting principles, also known as generally accepted accounting principles (GAAP), refer to a set of guidelines, standards, and concepts that govern the preparation, presentation, and reporting of financial statements. These principles provide a framework for how financial transactions should be recorded, measured, and communicated to users of financial information.

Accounting principles ensure consistency, comparability, and transparency in financial reporting across different organizations and industries. They serve as a common language that enables stakeholders, such as investors, creditors, regulators, and management, to understand and interpret financial information accurately.

These principles are established by accounting standard-setting bodies, regulatory authorities, and professional accounting organizations. They evolve over time to adapt to changing business environments and reflect the needs of financial statement users.

By following accounting principles, businesses can ensure that their financial information is reliable, relevant, and comparable. It helps promote trust, facilitate decision-making, and provide a standardized basis for assessing a company's financial performance and position.

Does the Accounting principles only apply to GAAP; or is it also applicable to IFRS full and IFRS for SMEs?

The term "*accounting principles*" is commonly associated with generally accepted accounting principles (GAAP), which are widely used in the United States. However, the concept of accounting principles extends beyond GAAP and applies to other accounting frameworks as well, including International Financial

Reporting Standards (IFRS).

IFRS is a globally recognized set of accounting standards developed by the International Accounting Standards Board (IASB). Like GAAP, IFRS also encompasses a set of principles, guidelines, and concepts that govern financial reporting. These principles serve a similar purpose as GAAP in providing guidance on how financial transactions should be recorded, measured, and reported.

While there may be some differences between specific accounting principles under GAAP and IFRS, both frameworks share the common objective of ensuring the accuracy, comparability, and transparency of financial statements. Both GAAP and IFRS aim to provide reliable and relevant financial information to users, regardless of their geographical location.

Additionally, IFRS has a specific standard called IFRS for Small and Medium-sized Entities (IFRS for SMEs), which provides simplified accounting principles tailored to the needs of smaller businesses. This standard recognizes that smaller entities may have different reporting requirements and resources compared to larger organizations.

In summary, accounting principles apply to various accounting frameworks, including GAAP and IFRS, and they provide a foundation for the preparation, presentation, and reporting of financial statements in a consistent and reliable manner.

What is accounting principles?

Accounting principles, also known as generally accepted accounting principles (GAAP), refer to a set of guidelines, standards, and concepts that govern the preparation, presentation, and reporting of financial statements. These principles provide a framework for how financial transactions should be recorded, measured, and communicated to users of financial information.

Accounting principles ensure consistency, comparability, and transparency in financial reporting across different organizations and industries. They serve as a common language that enables stakeholders, such as investors, creditors, regulators, and management, to understand and interpret financial information accurately.

These principles are established by accounting standard-setting bodies, regulatory authorities, and professional accounting organizations. They evolve over time to adapt to changing business environments and reflect the needs of financial statement users.

By following accounting principles, businesses can ensure that their financial information is reliable, relevant, and comparable. It helps promote trust, facilitate decision-making, and provide a standardized basis for assessing a company's financial performance and position.

Objectives of Accounting principles

- Provide financial information: The main objective of accounting principles is to provide accurate and reliable financial information about a business's transactions and financial position. This information is essential for decision-making by various stakeholders.
- Ensure transparency: Accounting principles aim to promote transparency by requiring businesses to disclose all relevant financial information and provide a clear picture of their financial activities.
- Facilitate comparability: By following consistent accounting methods and procedures, accounting principles enable stakeholders to compare financial information across different periods and entities.
- Enhance reliability: Accounting principles emphasize the use of objective evidence and reliable measurement methods to ensure that the financial information is trustworthy and free from bias.
- Assist in decision-making: The information generated through accounting principles helps investors, creditors, and other users in making informed decisions regarding their involvement with the business.

Brief explanation of the accounting principles

1. Business entity principle: This principle states that the business's financial transactions should be kept separate from the personal transactions of its owners or stakeholders. The business is treated as a separate legal entity.
2. Going concern principle: This principle assumes that a business will continue to operate in the foreseeable future, allowing it to meet its financial obligations and commitments. It implies that the financial statements are prepared under the assumption that the business will not be liquidated.
3. Monetary unit principle: This principle states that financial transactions should be recorded and reported in a common monetary unit, such as the local currency. It helps in measuring and comparing the financial information accurately.
4. Time period principle: This principle divides the business's activities into specific time periods, such as months, quarters, or years. Financial statements are prepared for these periods to provide useful information for decision-making and analysis.
5. Historical cost principle: This principle requires that assets be recorded at their original cost when they are acquired, regardless of their current market value. It ensures objective and verifiable accounting information.
6. Revenue recognition: This principle outlines when and how revenue should be recognized in the financial statements. Revenue is typically recognized when it is earned, regardless of when the payment is received.

7. Matching principle: This principle states that expenses should be recognized in the same accounting period as the revenue they helped generate. It ensures that the expenses are matched with the revenue they are associated with.
8. Full disclosure principle: This principle requires businesses to provide all necessary information in the financial statements and accompanying notes to ensure transparency and help users make informed decisions.
9. Materiality principle: This principle suggests that insignificant or immaterial amounts can be recorded in a simplified manner, while significant or material amounts should be disclosed and given detailed treatment.
10. Conservatism principle: This principle advises accountants to exercise caution and conservatism when recording uncertain events or transactions. It suggests that potential losses should be recognized earlier than potential gains to avoid overstating financial position or performance.
11. Accrual principle: This principle states that revenue and expenses should be recognized when they are earned or incurred, regardless of when the cash payment is received or made. It focuses on matching revenues and expenses with the accounting period.
12. Consistency principle: This principle requires businesses to use consistent accounting methods and procedures from one period to another. It ensures comparability and reliability of financial information over time.
13. Objectivity principle: This principle emphasizes that financial transactions should be supported by objective evidence, such as receipts, invoices, or bank statements. It ensures reliability and verifiability of the recorded transactions.

Adhering to accounting principles is crucial for businesses to maintain accurate financial records, present reliable financial statements, and meet regulatory requirements. These principles ensure that financial information is prepared consistently, transparently, and objectively.

Additionally, accounting software like osFinancials5/TurboCASH5 can further simplify the process and support businesses in implementing these principles effectively, even without extensive accounting knowledge. By following these principles, businesses can gain a better understanding of their financial performance, improve decision-making, and build trust with stakeholders.

Accounting principles that apply to IFRS full and IFRS for SMEs

---

Is there specific accounting principles that apply to IFRS full and IFRS for SMEs?

There are specific accounting principles that apply to both IFRS (International Financial Reporting Standards) and IFRS for SMEs (International Financial Reporting Standards for Small and Medium-sized Entities). While there is significant overlap between the two frameworks, IFRS for SMEs includes simplified accounting principles specifically designed for smaller entities.

Some of the specific accounting principles that apply to IFRS and IFRS for SMEs include:

1. Accrual basis of accounting: Both frameworks require the recognition of transactions and events when they occur, rather than when cash is received or paid.
2. Substance over form: Transactions are accounted for based on their underlying economic substance rather than merely their legal form.
3. Fair presentation and Compliance with standards: Financial statements should present a true and fair view of the entity's financial position, performance, and cash flows in accordance with the specific requirements of the applicable framework.
4. Going concern: Financial statements are prepared on the assumption that the entity will continue its operations for the foreseeable future, unless there is evidence to the contrary.
5. Prudence: This principle encourages the exercise of caution in uncertain circumstances and the exercise of professional judgment in making estimates and provisions.
6. Materiality: Financial information should be presented and disclosed based on its relevance and importance to the decision-making needs of the users of the financial statements.
7. Cost principle: Assets are initially recognized and measured at their historical cost, although certain exceptions exist for specific types of assets.
8. Substance of Non-exchange transactions: Non-exchange transactions, such as government grants or donations, are accounted for based on their substance and the related conditions.

These are just a few examples of the accounting principles that apply to IFRS and IFRS for SMEs. The specific set of principles and requirements within each framework are more comprehensive and detailed, providing guidance on various aspects of accounting and financial reporting.

Accounting principles that apply to IFRS for SMEs

Is there specific accounting principles that apply to IFRS for SMEs?

The International Financial Reporting Standards for Small and Medium-sized Entities (IFRS for SMEs) is a simplified set of accounting principles specifically designed for small and medium-sized entities. It provides a streamlined framework for financial reporting that takes into account the unique characteristics and needs of SMEs, while still maintaining a high level of transparency and reliability.

The IFRS for SMEs includes specific accounting principles and requirements that SMEs should follow when preparing their financial statements. Some key principles and topics covered in the IFRS for SMEs include:

1. Recognition and measurement of assets, liabilities, equity, income, and expenses: The IFRS for SMEs provides guidance on how to recognize and measure various elements of financial statements, including the initial recognition, subsequent measurement, and derecognition of assets, liabilities, equity, income, and expenses.
2. Presentation and disclosure: The standard outlines the presentation and disclosure requirements for financial statements, including the minimum set of financial statements that should be prepared (such as statement of financial position, statement of comprehensive income, statement of changes in equity, and statement of cash flows) and the information that should be disclosed in the notes to the financial statements.
3. Specific accounting topics: The IFRS for SMEs covers various specific accounting topics, including revenue recognition, leasing, financial instruments, impairment of assets, inventory valuation, employee benefits, income taxes, and others. It provides guidance on how to account for these specific items in a manner suitable for SMEs.
4. Simplifications and exemptions: The IFRS for SMEs includes simplifications and exemptions compared to the full IFRS standards to reduce the reporting burden for SMEs. These simplifications include reduced disclosure requirements and simplified measurement and recognition criteria for certain items.

It's important for SMEs to familiarize themselves with the specific accounting principles and requirements outlined in the IFRS for SMEs and ensure compliance when preparing their financial statements.

IFRS for SME's - Countries - Optional / Mandatory

In which countries is the IFRS for SME's optional and in which countries is it compulsory?

See - IFRS for SMEs around the world -

The International Financial Reporting Standards for Small and Medium-sized Entities (IFRS for SMEs) is not universally adopted and varies by country.

As in 2021, some countries have made the IFRS for SMEs mandatory for SMEs, while others have made it optional. Here are some examples:

Optional:

- Australia
- Canada
- India
- New Zealand
- South Africa

Mandatory:

- European Union member states (including the United Kingdom)
- China
- Hong Kong
- Malaysia
- Pakistan
- Singapore

Please note that this list may not be complete and that the adoption of IFRS for SMEs may change over time. It is recommended to consult with a professional accountant or regulatory body for up-to-date information on the adoption of IFRS for SMEs in a specific country.

Differences in accounting terminology in countries

Does accounting terms and terminology differ from country to country and tax regimes?

Yes, accounting terms and terminology can differ from country to country and tax regimes due to variations in accounting principles, tax laws, and regulations. For example, the Generally Accepted Accounting Principles (GAAP) used in the United States may differ from the International Financial Reporting Standards (IFRS) used in other countries.

Similarly, tax laws and regulations can vary significantly from one country to another, which can impact the way accounting terms and concepts are used and interpreted. It is important for businesses and accountants to be aware of these differences and to ensure that they are using the appropriate accounting terms and principles for their specific location and tax regime.

Accounting in China

Is the IFRS for UK applicable to China?

No, the IFRS for the UK is not applicable to China.

China has its own set of accounting standards known as the Chinese Accounting Standards (CAS).

China - China is included in the IFAD GAAP Convergence Studies. - Accounting standard setter: China Accounting Standards Committee (CASC) ...

While there is some convergence between CAS and IFRS, CAS is the primary set of standards used by Chinese companies.

www.ptl-group.com

Chinese Accounting Standards (CAS)

See - https://www.ptl-group.com/guides/accounting-in-china/ -

See - https://www.ptl-group.com/guides/taxes-paid-by-employers/ -

IFRS Resources

See - https://www.ifrs.org/use-around-the-world/use-of-ifrs-standards-by-jurisdiction/ -

See - IFRS Jurisdiction Profile : China

https://www.ifrs.org/content/dam/ifrs/publications/jurisdictions/pdf-profiles/china-ifrs-profile.pdf

Does China apply IFRS for all companies?

No, China does not apply IFRS for all companies, but some Chinese companies do use IFRS for financial reporting to investors outside of China.

Explanation

- *Chinese Accounting Standards (ASBEs)*

China's national accounting standards, which are substantially similar to IFRS. All companies listed in China must use ASBEs to prepare financial statements.

IFRS

The International Financial Reporting Standards, which are issued by the IASB.
Hong Kong Financial Reporting Standards (HKFRS)
The financial reporting standards used in Hong Kong.
Dual listings
Chinese companies that are listed in both China and other international markets may produce IFRS-compliant financial statements.
Why the difference?

- China's accounting rules are different from IFRS in terms of practical implementation and interpretation.
- IFRS is modelled on developed economies, and it's not clear how it will affect large transitional economies like China.

  See - IFRS adoption in China and foreign institutional investments -

What accounting standards are adopted in China?

China has its own accounting rules referred to as the Chinese Accounting Standards (CAS). Despite substantial convergence between CAS and the International Financial Reporting Standards (IFRS) that most Western investors are used to, practical implementation and interpretation differences remain.

The CAS framework is based on two standards:

- Accounting Standards for Business Enterprises (ASBEs); and
- Accounting Standards for Small Business Enterprises (ASSBEs).

The ASBE standards are significantly converged with the International Financial Reporting Standards (IFRS) and all listed companies in China must comply with the ASBEs for the preparation of their financial statements. Most foreign-invested entities also generally follow the ASBEs.

The ASSBEs are a counterpart of the ASBEs, providing unified standards for small-size enterprises. The ASSBEs use the ASBEs as a reference but are more similar to tax laws in terms of their tax calculation methods, which simplify the process of making adjustments between accounting standards and tax rules. Small-scale enterprises can choose to adopt either the ASBEs or ASSBEs.

Language and currency for reporting

RMB is the base currency for ledgers and financial reports. For enterprises using currencies other than RMB in their business transactions, foreign currencies can be used as the functional currency; however, financial reports are required to be presented in RMB. Furthermore, accounting records must be maintained in Chinese. FIEs can choose to use only Chinese or a combination of Chinese and a foreign language.

Chart of Accounts

Is there sample chart of accounts for Accounting Standards for Small Business Enterprises (ASSBEs)?

While there isn't a single, universal sample chart of accounts specifically tailored to ASSBEs, here's a basic framework you can adapt based on your business's specific needs and the applicable ASSBE requirements:

Assets:

- Cash: Bank accounts, petty cash
- Accounts Receivable: Money owed by customers
- Inventory: Goods held for sale
- Prepaid Expenses: Expenses paid in advance (e.g., insurance, rent)
- Fixed Assets: Property, plant, and equipment (less accumulated depreciation)

Liabilities:

- Accounts Payable: Money owed to suppliers
- Short-Term Loans Payable: Loans due within a year
- Long-Term Loans Payable: Loans due beyond a year
- Accrued Expenses: Expenses incurred but not yet paid

Equity:

- Owner's Capital: Initial investment and additional contributions
- Retained Earnings: Accumulated profits less dividends

Revenue:

- Sales Revenue: Income from sales of goods or services
- Other Income: Interest, rental income, etc.

Expenses:

- Cost of Goods Sold: Direct costs of producing goods sold
- Selling Expenses: Costs related to marketing and sales
- General and Administrative Expenses: Overhead costs (e.g., rent, utilities, salaries)

Remember:

- Tailor to Your Business: Adjust the chart to match your specific operations and industry.
- Consider ASSBE Requirements: Ensure your chart aligns with the specific requirements and disclosures outlined in the ASSBEs.
- Use a Chart of Accounts Software: Consider using accounting software to automate the process and ensure accuracy.

Where to Find More Information:

- Accounting Software Providers: Many accounting software programs come with pre-built chart of accounts templates that you can customize.
- Consult with an Accountant: An accountant can provide tailored advice and help you create a chart of accounts that meets your specific needs and complies with ASSBEs.

By carefully considering these factors, you can create a comprehensive and effective chart of accounts for your small business under the ASSBEs framework.

Is there sample chart of accounts for Accounting Standards for Business Enterprises (ASBEs)?

- Consult with an Accountant: An accountant can provide tailored advice and help you create a chart of accounts that meets your specific needs and complies with ASBEs.

By carefully considering these factors, you can create a comprehensive and effective chart of accounts for your business under the ASBEs framework.

Chinese 4-CAS-GENERIC Set of Books Debug

Good job - Need to look at the following:

Inno Install script for Chinese

Currently we have the following languages to install TurboCASH5

Folders that contain the tcash.ini files:

chs- Chinese simplified

cht - Chinese traditional

Innoscript language files:

ChineseSimp.isl

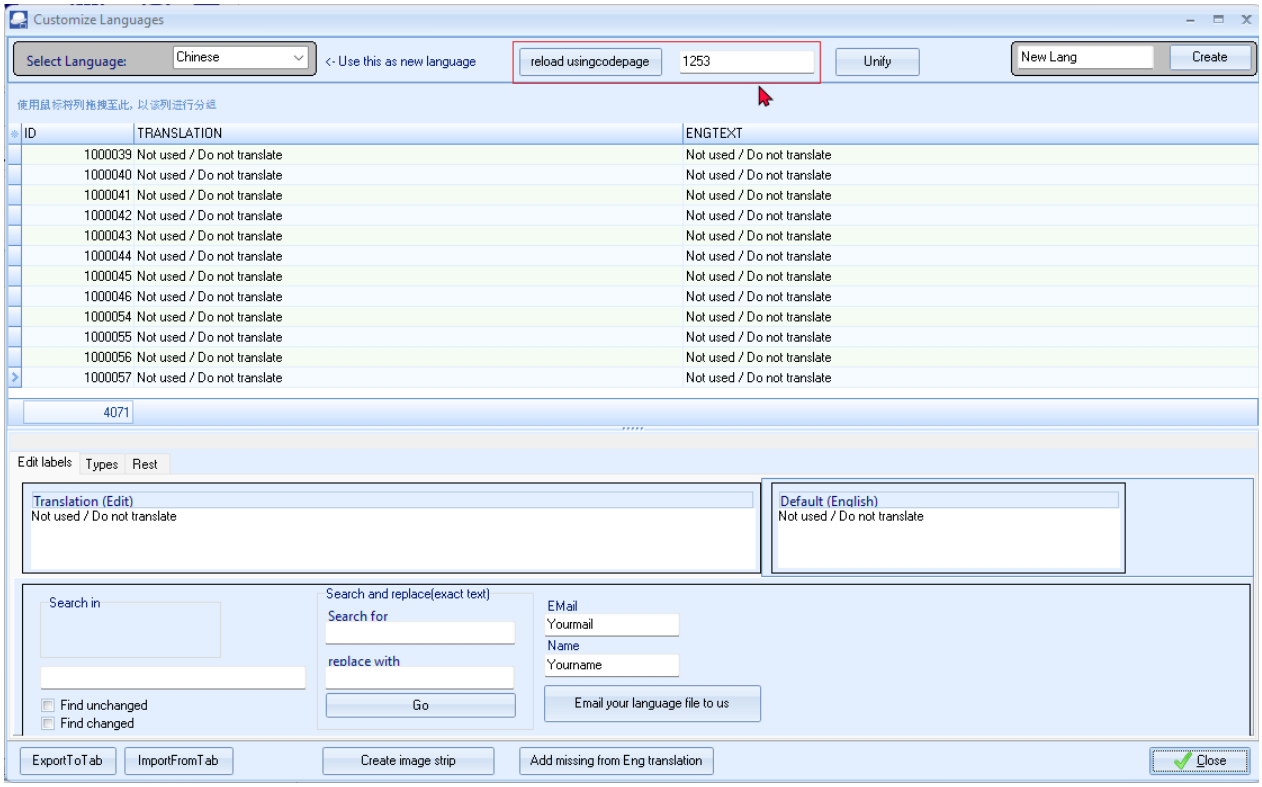
ChineseTrad.isl

Important to select the correct language folder and innoScript language files which is inline with the Chinese.dfm language file. Should it be Chinese simplified or Chinese traditional.

Language : Chinese.dfm - Codepage setting

Language : Chinese.dfm - Codepage - Tools -> Customize Language

The default codepage is 1253



What is codepage 1253 and is it applicable to the China?

Codepage 1253 is specifically designed for the Greek language. [1] It's a character encoding standard used to represent text in the modern Greek alphabet, including accented letters, punctuation marks, and special symbols.[2]

It is not applicable to the Chinese language. Chinese languages (Simplified and Traditional) require different code pages, such as GB2312, GBK, GB18030 (for Simplified Chinese) and Big5, CNS 11643 (for Traditional Chinese).

Key Points:

- Codepage 1253: For modern Greek.[3]
- Chinese Languages: Use different code pages like GB2312, GBK, GB18030, Big5, and CNS 11643.
- Unicode: The preferred standard for modern systems, supporting all languages, including Chinese and Greek.

I hope this clarifies the distinction!

- https://learn.microsoft.com/en-us/windows/win32/intl/code-page-identifiers -

What is the Codepages for Chinese languages?

The most common code pages for Chinese languages are:

- Simplified Chinese:
  - GB2312: A national standard for mainland China, covering a subset of simplified Chinese characters.
  - GBK: An extension of GB2312, supporting a larger set of characters.
  - GB18030: A more recent standard that includes a wider range of characters, including those used in minority languages in China.
- Traditional Chinese:
  - Big5: A widely used encoding for traditional Chinese, primarily in Taiwan and Hong Kong.
  - CNS 11643: A national standard for Taiwan, supporting a comprehensive set of traditional Chinese characters.

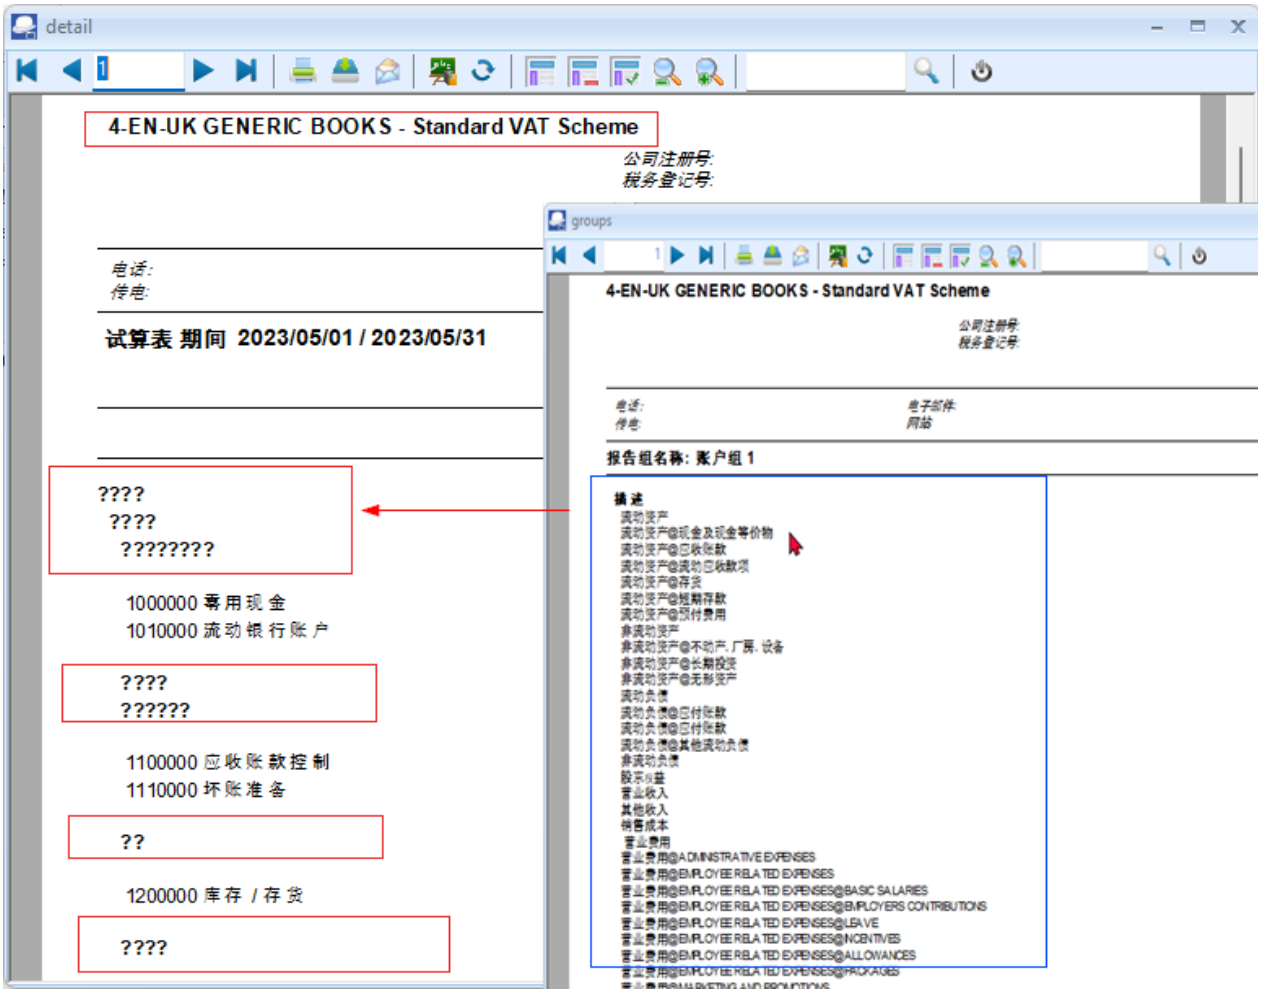
It's important to note that:

- Unicode: The preferred encoding for modern systems is Unicode (specifically UTF-8), which supports all languages and scripts.
- Code pages are often legacy encodings. While they may still be used in some older systems, Unicode is generally the recommended standard for new applications and data exchange.

Display of Chinese characters on screens, forms / reports

Print Setup -> Groups and Ledger analyser 1/2

Print button in Print Setup -> Groups seems to print correctChinese characters, but in the Ledger analyser 1/2 it prints the characters with question marks ????



On the Accounts, Groups, etc. forms seems to display in the Chinese characters correctly.

Setup menu

Setup -> Company Info

Name of Set of Books refers to "4-EN-UK GENERIC BOOKS - Standard VAT Scheme"

Setup -> Reporting dates

Reporting dates refer to January - to December - may need to be translated.

Chart of accounts

VAT GST/Sales tax in China

Currently the VAT in the Chart of Accounts is based on the UK VAT - Standards= cgeme reflecting tax percentages of 20%, etc.

The correct term for the sales tax in China is Value Added Tax (VAT).[1]

See - https://taxsummaries.pwc.com/quick-charts/value-added-tax-vat-rates -

China has a multi-tiered VAT system with different rates:[2]

See - https://wise.com/gb/vat/china -

- Standard Rate: 13% (applies to most goods and services)[3]
  See - https://wise.com/gb/vat/china -
- Reduced Rates: 9% and 6% (for specific goods and services like certain agricultural products, transportation, and some services)

Note: The specific VAT rates and their applicability can change, so it's essential to refer to the latest official information from the Chinese tax authorities for the most accurate and up-to-date details.

Organizing payroll accounts in China

Here's a possible structure for organizing payroll accounts in China, keeping in mind that specific requirements might vary:

I. Expense Accounts

- 501000 Salaries Expense
  - 501010 Basic Salary
  - 501020 Overtime Pay
  - 501030 Bonuses
  - 501040 Allowances (e.g., housing, transportation)
- 502000 Payroll Taxes Expense
  - 502010 Pension Insurance - Employer Portion
  - 502020 Medical Insurance - Employer Portion
  - 502030 Unemployment Insurance - Employer Portion
  - 502040 Work Injury Insurance - Employer Portion
  - 502050 Maternity Insurance - Employer Portion
  - 502060 Housing Fund - Employer Portion
- 503000 Employee Benefits Expense
  - 503010 Medical Insurance - Employee Portion
  - 503020 Housing Fund - Employee Portion
  - 503030 Other Employee Benefits (e.g., life insurance, meal subsidies)

II. Balance Sheet Accounts

- 211000 Accrued Salaries Payable
- 212000 Payroll Taxes Payable
    - 212010 Pension Insurance Payable
    - 212020 Medical Insurance Payable
    - 212030 Unemployment Insurance Payable
    - 212040 Work Injury Insurance Payable
    - 212050 Maternity Insurance Payable
    - 212060 Housing Fund Payable
- 213000 Withholding Taxes Payable

Key Considerations:

- Chart of Accounts Design: This structure provides a basic framework. You should adapt it to your specific needs and the level of detail required for your accounting system.
- Coding System: Implement a consistent coding system (e.g., alphanumeric) for easy identification and reporting.
- Internal Controls: Establish strong internal controls to ensure accuracy and prevent fraud in payroll processing.[1] See - https://www.unit21.ai/fraud-aml-dictionary/payroll-fraud#:~:text=Strong%20internal%20controls%20that%20restrict,used%20to%20manage%20threats%20more -
- Regular Reviews: Regularly review and update your payroll account structure to reflect changes in regulations and business requirements.

Disclaimer: This information is for general guidance only and should not be considered professional accounting advice.

It is strongly recommended consulting with a qualified accounting professional or tax advisor in China for specific guidance on payroll accounting and tax requirements. They can help you design a Chart of Accounts that meets your specific needs and complies with all applicable regulations.

Designing a Chart of Accounts

Steps when Designing a chart of accounts from scratch

Designing a chart of accounts from scratch is a crucial step in setting up a robust and efficient accounting system for your business. The chart of accounts organizes and categorises your financial transactions, making it easier to track and analyse your company's financial performance. Here are some steps to consider when designing a Chart of Accounts in osFinancials:

1. Understand Accounting Standards and Framework and Legislation : Begin by familiarizing yourself with the accounting standards and frameworks, Legal Requirements and Tax Regulations, Legislation Regarding Business Ownership and Structure, Labour Laws and Employment Regulations and any applicable matters regarding the nature of your business and the industry and jurisdiction in which it operates. Let's delve into the significance of each aspect:
    - Accounting Standards and Frameworks: Different countries may follow specific accounting principles and frameworks, such as Generally Accepted Accounting Principles (GAAP) or International Financial Reporting Standards (IFRS). Complying with these standards ensures that your financial statements are prepared in a consistent and transparent manner, making it easier for stakeholders to understand your company's financial performance. Adhering to recognized accounting standards also facilitates comparisons with other companies and builds credibility with investors, creditors, and regulatory authorities.
    - Legal Requirements and Tax Regulations : Each country has its own set of legal requirements and tax regulations that businesses must follow. Understanding these regulations is crucial for ensuring compliance and avoiding potential legal and financial risks. Specific attention should be given to areas such as Value Added Tax (VAT), Goods and Services Tax (GST), Sales Tax, Income Tax, and other taxes applicable to your business activities. Non-compliance with tax regulations can lead to penalties and other consequences, so it's essential to be well-informed and stay up-to-date with changes in tax laws.
    - Legislation Regarding Business Ownership and Structure: Depending on the type of business ownership and legal structure (e.g., sole proprietorship, partnership, corporation), there may be specific legal requirements and obligations to consider. The Companies Act or other relevant legislation governs the formation, management, and dissolution of companies. Similarly, for non-profit organizations (NGOs/NPOs), there may be additional regulatory requirements specific to their operations and funding sources.

- Labour Laws and Employment Regulations: Compliance with labour laws and employment regulations is essential for businesses with employees. These laws cover areas such as wages, working hours, benefits, health and safety, and employment contracts. Failure to comply with labour laws can result in legal liabilities and damage to the company's reputation.

Incorporating these considerations into your accounting and financial management processes ensures that your business operates ethically and within the legal framework of the country and industry. It also helps you maintain accurate financial records, prepare reliable financial statements, and comply with tax obligations, providing a solid foundation for sustainable growth and success. Seeking professional advice from accountants or legal experts familiar with your country's regulations can be beneficial in ensuring compliance and proper financial management.

2. Creating a Chart of Accounts from scratch: When creating a Set of Books from (Using the "*Customise your own Set of Books (Advanced)?*" option in osFinancials5/TurboCASH5. The basic Chart of Accounts will only include three basic control accounts (i.e. Debtors control account, Creditors control account and Retained earnings). You need to add an Inventory Control account into the Chart of Accounts when setting up osFinancials5/TurboCASH5. These are essential control accounts that help track and manage specific financial activities within your business. Let's take a closer look at each of these control accounts:

   - Debtors Control Account: The Debtors Control Account is used to track the amounts owed to your business by customers who have purchased goods or services on credit. It serves as a summary of all outstanding accounts receivable balances. Each individual customer's outstanding balance is recorded in a subsidiary ledger, while the total of all outstanding balances is reflected in the Debtors Control Account in the general ledger. This control account helps monitor and manage your company's accounts receivable effectively.
   - Creditors Control Account: The Creditors Control Account is used to track the amounts your business owes to suppliers or vendors for goods or services purchased on credit. Similar to the Debtors Control Account, individual supplier balances are recorded in a subsidiary ledger, while the total of all outstanding balances is maintained in the Creditors Control Account in the general ledger. This control account enables you to manage and keep track of your company's accounts payable.
   - Retained Earnings Account: The Retained Earnings Account is used to track the accumulated profits or losses earned by the company since its inception, minus any dividends or distributions paid to shareholders. It represents the portion of the company's profits that have been retained within the business rather than distributed to shareholders. The Retained Earnings Account is an essential component of the equity section in the balance sheet.
   - Inventory Control Account: The Inventory Control Account is used to monitor the value of

your company's inventory or stock items. It represents the total value of all inventory items held by the company and is a critical account for managing inventory levels and cost of goods sold (COGS). Like the other control accounts, individual item details are maintained in a subsidiary ledger, while the summarized total is reflected in the Inventory Control Account in the general ledger.

Incorporating these control accounts in osFinancials5/TurboCASH5 ensures that your financial data is well-organized, easy to track, and provides valuable insights into your business's financial health. Subsidiary ledgers help provide more detailed information for each account, while control accounts in the general ledger provide a summarised view, allowing for better financial management and reporting.

3. Add Accounts to the Chart of Accounts

   - Identify Account Groups and Classifications: Create account groups based on your accounting standards and framework. Common account groups include assets, liabilities, equity, income, and expenses. Within each group, establish relevant classifications to further organize the accounts. For example, under assets, you may have subgroups like current assets, fixed assets, and intangible assets. These groups are added in the Setup → Groups menu on the Setup ribbon).
   - Align with Your Business Plan and Products: Ensure that your Chart of Accounts aligns with your business plan and reflects the nature of your business operations. Consider the products or services you offer and the revenue and expense categories associated with them. For instance, if you sell multiple product lines, you may want separate income accounts for each product to track their individual performance.
   - Add Accounts and Link to Account Groups: Once you have defined your account groups and classifications, start adding specific accounts. Include accounts for cash, accounts receivable, accounts payable, inventory, sales, salaries, rent, etc. Assign each account to its appropriate group and classification. These Accounts are added in the Setup → Accounts menu on the Setup ribbon).
   - Map Accounts to Financial Categories: Map your accounts to the five main financial categories: assets, liabilities, equity, income, and expenses. This step ensures that transactions are correctly classified in financial statements generated by osFinancials5/TurboCASH5. These groups is can be linked to the financial categories in the Setup → Financial categories menu on the Setup ribbon).

   After you have created the accounts and linked them to account groups, and linked accounting groups to financial categories, you can print the structure of your ledger accounts according to Reporting group 1 or Reporting group 2 in a list of accounts or trial balance, income statement

and balance sheet. If any adjustments are needed, you can do them at this stage.

4. Customise language: osFinancials5/TurboCASH5 offers the flexibility to customise the language used within your Set of Books to cater to specific industries and regional requirements. This customisation allows businesses to tailor the terminologies and labels used in osFinancials to match their industry jargon, corporate preferences, and local language requirements. By setting your preferred language or customizing the language settings through the Setup → Access control menu on the Setup ribbon, osFinancials5/TurboCASH5 will display all labels, terminologies, and interface elements in the selected language whenever you access your Set of Books and print reports or documents. This makes it more convenient and user-friendly, especially when you have customised the language to suit your industry or regional requirements.
5. Review and Refine: Periodically review and refine your chart of accounts as your business grows or undergoes changes. Ensure that it remains relevant and useful for financial reporting and analysis.
6. Test and Implement: Before fully implementing the Chart of Accounts, test it with some sample transactions to ensure it works as intended and captures the necessary information accurately.

By following these steps, you can create a well-structured chart of accounts in osFinancials5/TurboCASH5 supports your business's financial management needs and facilitates accurate reporting and decision-making.

Chart of Accounts - Definition and objectives

What is the chart of accounts?

A Chart of Accounts is a structured list of all the individual accounts used by a company to record its financial transactions. It serves as a systematic classification or organizational tool for categorizing and tracking financial information. The chart of accounts provides a framework for organizing and summarizing financial data, financial activities and resources enabling businesses to track income, expenses, assets, liabilities, and equity.

Each account in the Chart of Accounts represents a specific financial category, such as assets, liabilities, equity, revenue, and expenses. These accounts are assigned unique identifiers or codes, known as account numbers, to facilitate their identification and classification.

The Chart of Accounts typically includes a hierarchical structure, where accounts are organized into different levels and sub-levels based on their nature and relationship. The top level often consists of broad

categories such as assets, liabilities, equity, revenue, and expenses. These categories are further broken down into subcategories and individual accounts for more specific classification.

The purpose of the Chart of Accounts is to provide a standardized framework for recording financial transactions and generating financial reports. It helps in capturing and organising financial data accurately, enabling businesses to track their financial activities, analyse performance, and prepare financial statements like the balance sheet, income statement, and cash flow statement.

Designing a well-structured and tailored Chart of Accounts is crucial for effective financial management, reporting, and analysis. It allows businesses to have a clear overview of their financial position, understand the sources and uses of funds, and make informed decisions based on reliable financial information.

What are the objectives of a chart of accounts?

The objectives of a chart of accounts are as follows:

1. Organize financial information: The primary objective of a Chart of Accounts is to organize financial information in a structured manner. It establishes a standardized system for classifying and recording transactions, allowing for easy retrieval and analysis of financial data. It helps in categorizing transactions into different account types, such as assets, liabilities, equity, revenue, and expenses, allowing for better organization and management of financial data.
2. Facilitate accurate recording: A well-designed Chart of Accounts ensures that financial transactions are recorded accurately and consistently. Each account represents a specific financial element, which helps in correctly classifying and posting transactions to the appropriate account. It provides a standardized system for capturing financial information, which simplifies the process of recording transactions and generating financial reports.
3. Support financial reporting: A well-designed Chart of Accounts supports the preparation of financial statements and other financial reports. It provides the foundation for generating meaningful reports by grouping similar accounts together and allowing for efficient summarisation and analysis of financial data. These reports help in making informed decisions, identifying trends, and evaluating the financial health of the organization.
4. Enable financial analysis: The structure of a Chart of Accounts allows for effective and meaningful financial analysis. It allows businesses to generate reports that provide insights into their financial performance, profitability, liquidity, and other key metrics. These reports help in making informed decisions, identifying trends, and evaluating the financial health of the organisation. The Chart of Accounts enhances communication and collaboration within an organisation and with external stakeholders. It provides a common language for discussing financial matters and facilitates the sharing of financial information among departments, management, investors, auditors, and other stakeholders.

5. Facilitate regulatory compliance and tax reporting: The Chart of Accounts helps businesses meet regulatory and legal requirements by providing a framework for recording and reporting financial information. It ensures that financial statements are prepared in accordance with applicable accounting standards and regulations. This supports transparency, accuracy, and compliance in financial reporting. It facilitates the accurate reporting of financial information for statutory filings, tax purposes, and external audits.
6. Support management decision-making: The Chart of Accounts plays a crucial role in providing financial information for managerial decision-making. It allows management to track and analyse key financial metrics, monitor expenses, evaluate profitability, and make informed business decisions based on reliable and relevant data.
7. Adaptability and scalability: The Chart of Accounts should be designed to accommodate the evolving needs of the organisation. It should be flexible enough to adapt to changes in the business structure, operations, and reporting requirements. The Chart of Accounts should also support scalability, allowing for the addition of new accounts or modification of existing accounts as the organization grows or undergoes changes.

Overall, the objectives of a Chart of Accounts revolve around providing a systematic and standardized framework for organizing, recording, reporting, analysing, and communicating financial information within an organization in a consistent and meaningful manner.

While there is no universally standardized chart of accounts that applies to all businesses, including specific recommended account numbers, the accounts and account codes provide you with a general structure and some commonly used accounts in the chart of accounts. You can adapt this structure to fit your specific business needs,, accounting procedures and accounting practices, industry specific requirements, jurisdiction, country specific legislation and terminology industries, etc.

Chart of Accounts - Number of digits

Is a 3-digit number Chart of accounts good for both Small businesses?

A 3-digit number Chart of Accounts may be suitable for small businesses, depending on the complexity of their operations and financial reporting needs.

Small businesses may have simpler financial transactions and reporting requirements compared to larger organisations. Therefore, a 3-digit Chart of Accounts may be sufficient to accurately categorise financial transactions and produce meaningful financial reports.

However, it is important for small businesses to consider their specific financial reporting needs and regulatory requirements. If the business operates in an industry with specific reporting requirements or regulations, a more detailed Chart of Accounts may be necessary to meet those requirements.

Ultimately, the number of digits used in the Chart of Accounts should be based on the specific needs of the business. It is important to ensure that the Chart of Accounts is organized in a logical and consistent manner to facilitate accurate financial reporting and analysis, regardless of the number of digits used.

Is a 3-digit number Chart of accounts good for both GAAP and IRFS?

The use of a 3-digit number Chart of Accounts may not be sufficient for both GAAP and IFRS, as it may not provide enough detail for accurate financial reporting and analysis.

While there is no specific requirement for the number of digits in the Chart of Accounts for either GAAP or IFRS, it is common for the Chart of Accounts to have at least four digits. This allows for greater detail and specificity in categorizing financial transactions, which can be important for accurate financial reporting and analysis.

A 3-digit Chart of Accounts may be suitable for smaller or less complex organizations, but larger and more complex organizations may require a more detailed Chart of Accounts to accurately capture and categorise financial transactions.

Ultimately, the number of digits used in the Chart of Accounts will depend on the specific needs and requirements of the organisation, as well as any regulatory requirements for financial reporting. It is important to ensure that the Chart of Accounts is organized in a logical and consistent manner to facilitate accurate financial reporting and analysis.

What number of digits should be in Chart of accounts for GAAP and IRFS?

There is no specific number of digits that is required for the Chart of Accounts in either GAAP or IFRS. The number of digits used can vary depending on the needs and complexity of the organization. However, it is common for the Chart of Accounts to have at least four digits, with each digit representing a different level of detail or classification.

For example, the first digit may represent the category of account (such as assets, liabilities, equity, revenue, or expenses), the second digit may represent the subcategory within that category, the third digit may represent the specific account within that subcategory, and the fourth digit may represent a further breakdown of the specific account.

Ultimately, the number of digits used in the Chart of Accounts will depend on the organization's specific needs and the level of detail required for financial reporting and analysis. It is important to ensure that the Chart of Accounts is organized in a logical and consistent manner to facilitate accurate financial reporting and analysis.

Chart of Accounts structure - Numbering - Sub-accounts - Grouping

The ideal account structure for a chart of accounts isn't fixed and should align with your business's size, nature, and complexity. However, some general guidelines can be followed:

1. Numbering System: Employ a numbering system for easy transaction identification. Small businesses often use three-digit numbers for primary accounts, while larger businesses opt for four-digit numbers to accommodate future account expansion.
2. Grouping Accounts: Organize accounts into ranges based on their type and function. For instance, Assets can start with numbers in the 1 range, Liabilities with numbers in the 2 range, Equity accounts in the 3 range, revenue accounts for Operating revenue in the 4 range, and expenses for Operating expenses in the 5-7 range. Additionally, assign the 8 range for Non-Operating revenue and the 9 range for Non-Operating expenses.
3. Sub-Accounts: Utilize sub-accounts to further categorize main accounts into specific subcategories. For example, employ a three-digit sub-account to indicate the department or division associated with the primary account. Sub-accounts can also help track various projects, locations, or activities within a primary account.

Some recommendations and tips to plan your Chart of Accounts according to your selection on the number of main account digits

In addition to the standard 3-Digit General Ledger Chart of Accounts in most Sets of Books (which is available as a download on the option "*Let osFinancials help you to create a Set of Books?*" option / "*Let TurboCASH help you to create a Set of Books?*" option), you have the flexibility to craft your own custom Sets of Books using the "*Customise your own Set of Books (Advanced)?*" option. This feature is available for both the Firebird and MSSQL database types. These custom Sets of Books will include only three essential

control accounts: Debtors control, Creditors control, and Retained Earnings.

These advanced options empower you to tailor your main account and sub-account structures to meet your specific requirements, regardless of your industry or unique needs. Here are the available options:

- 4-Digit main accounts and 3-Digit sub-accounts: This template allows for more detailed main accounts with four digits, coupled with three-digit sub-accounts for further subcategorization.
- 5-Digit main accounts and 3-Digit sub-accounts: For even finer granularity, this template provides five-digit main accounts and three-digit sub-accounts.
- 6-Digit main accounts and 3-Digit sub-accounts: If you require highly detailed accounting, this template offers six-digit main accounts with three-digit sub-accounts.
- 7-Digit main accounts and 3-Digit sub-accounts: Taking detail to the next level, this template features seven-digit main accounts alongside three-digit sub-accounts.
- 8-Digit main accounts and 3-Digit sub-accounts: For the utmost level of detail, this template includes eight-digit main accounts in conjunction with three-digit sub-accounts.

These options grant you the flexibility to select the level of granularity that aligns best with your specific accounting needs when creating Sets of Books in either the Firebird or MSSQL database types.

A 4-Digit main accounts and 3 Digit sub-accounts in a Chart of Accounts, Is there any recommendations for an account structure?

A 4-digit main accounts and 3-digit sub-accounts structure in a chart of accounts provides limited granularity and detail. Here are some recommendations for structuring your accounts:

1. Identify your main account categories: Start by identifying the main categories of accounts that you want to track. For example, you may have categories for assets, liabilities, equity, revenue, and expenses.
2. Assign the first digit to the main account categories: Use the first digit of the account number to identify the main account category. For example, all asset accounts could start with the number 1, all liability accounts could start with the number 2, and so on.
3. Assign the next three digits to the individual accounts: Use the next three digits of the account number to identify individual accounts within each category. For example, an individual accounts receivable account could be numbered 110, and an individual accounts payable account could be numbered 210.
4. Assign the next three digits to subcategories: Use the next three digits of the account number to identify the subcategory of the individual account. For example, all accounts receivable sub-accounts

could start with the number 110100, and all accounts payable sub-accounts could start with the number 210100.

5. Consider adding a leading digit for multiple entities: If you have multiple entities, you may want to consider adding a leading digit to differentiate the account numbers for each entity. For example, all account numbers for entity A could start with the number 1, and all account numbers for entity B could start with the number 2.

By following these recommendations, you can create a basic and straightforward chart of accounts that provides a limited level of detail for financial reporting and analysis. However, keep in mind that with this structure, you may not have enough detail for complex financial analysis and reporting.

A 5-Digit main accounts and 3 Digit sub-accounts in a Chart of accounts, Is there any recommendations for an account structure?

A 5-digit main accounts and 3-digit sub-accounts structure in a chart of accounts provides moderate granularity and detail. Here are some recommendations for structuring your accounts:

1. Identify your main account categories: Start by identifying the main categories of accounts that you want to track. For example, you may have categories for assets, liabilities, equity, revenue, and expenses.
2. Assign the first two digits to the main account categories: Use the first two digits of the account number to identify the main account category. For example, all asset accounts could start with the number 10, all liability accounts could start with the number 20, and so on.
3. Assign the next three digits to the individual accounts: Use the next three digits of the account number to identify individual accounts within each category. For example, an individual accounts receivable account could be numbered 10010, and an individual accounts payable account could be numbered 20010.
4. Assign the next three digits to subcategories: Use the next three digits of the account number to identify the subcategory of the individual account. For example, all accounts receivable sub-accounts could start with the number 100110, and all accounts payable sub-accounts could start with the number 200110.
5. Consider adding a leading digit for multiple entities: If you have multiple entities, you may want to consider adding a leading digit to differentiate the account numbers for each entity. For example, all account numbers for entity A could start with the number 1, and all account numbers for entity B could start with the number 2.

By following these recommendations, you can create a structured and organized chart of accounts that provides a moderate level of detail for financial reporting and analysis.

A 6-Digit main accounts and 3 Digit sub-accounts in a Chart of accounts, Is there any recommendations for an account structure?

A 6-digit main accounts and 3-digit sub-accounts structure in a chart of accounts can still provide a high level of granularity and detail in your financial reporting. Here are some recommendations for structuring your accounts:

1. Identify your main account categories: Start by identifying the main categories of accounts that you want to track. For example, you may have categories for assets, liabilities, equity, revenue, and expenses.
2. Assign the first two digits to the main account categories: Use the first two digits of the account number to identify the main account category. For example, all asset accounts could start with the number 10, all liability accounts could start with the number 20, and so on.
3. Assign the next four digits to the individual accounts: Use the next four digits of the account number to identify individual accounts within each category. For example, an individual accounts receivable account could be numbered 101000, and an individual accounts payable account could be numbered 201000.
4. Assign the next three digits to subcategories: Use the next three digits of the account number to identify the subcategory of the individual account. For example, all accounts receivable sub-accounts could start with the number 101100, and all accounts payable sub-accounts could start with the number 201100.
5. Consider adding a leading digit for multiple entities: If you have multiple entities, you may want to consider adding a leading digit to differentiate the account numbers for each entity. For example, all account numbers for entity A could start with the number 1, and all account numbers for entity B could start with the number 2.

By following these recommendations, you can create a structured and organized chart of accounts that provides detailed information for financial reporting and analysis.

A 7-Digit main accounts and 3 Digit sub-accounts in a Chart of accounts, Is there any recommendations for an account structure?

A 7-digit main accounts and 3-digit sub-accounts structure in a chart of accounts provides even more granularity and detail than a 6-digit main accounts structure. Here are some recommendations for structuring your accounts:

1. Identify your main account categories: Start by identifying the main categories of accounts that you want to track. For example, you may have categories for assets, liabilities, equity, revenue, and

expenses.

2. Assign the first three digits to the main account categories: Use the first three digits of the account number to identify the main account category. For example, all asset accounts could start with the number 100, all liability accounts could start with the number 200, and so on.
3. Assign the next four digits to the individual accounts: Use the next four digits of the account number to identify individual accounts within each category. For example, an individual accounts receivable account could be numbered 1001000, and an individual accounts payable account could be numbered 2001000.
4. Assign the next three digits to subcategories: Use the next three digits of the account number to identify the subcategory of the individual account. For example, all accounts receivable sub-accounts could start with the number 1001100, and all accounts payable sub-accounts could start with the number 2001100.
5. Consider adding a leading digit for multiple entities: If you have multiple entities, you may want to consider adding a leading digit to differentiate the account numbers for each entity. For example, all account numbers for entity A could start with the number 1, and all account numbers for entity B could start with the number 2.

By following these recommendations, you can create a highly detailed and organized chart of accounts that provides extensive information for financial reporting and analysis.

An 8-Digit main accounts and 3 Digit sub-accounts in a Chart of accounts, Is there any recommendations for an account structure?

An 8-digit main accounts and 3-digit sub-accounts structure in a chart of accounts can provide a high level of granularity and detail in your financial reporting. Here are some recommendations for structuring your accounts:

1. Identify your main account categories : Start by identifying the main categories of accounts that you want to track. For example, you may have categories for assets, liabilities, equity, revenue, and expenses.
2. Assign the first two digits to the main account categories: Use the first two digits of the account number to identify the main account category. For example, all asset accounts could start with the number 10, all liability accounts could start with the number 20, and so on.
3. Assign the next two digits to subcategories: Use the next two digits of the account number to identify the subcategory of the main account. For example, all accounts receivable sub-accounts could start with the number 1100, and all accounts payable sub-accounts could start with the number 2100.

4. Assign the last three digits to the individual accounts: Use the last three digits of the account number to identify individual accounts within each subcategory. For example, an individual accounts receivable account could be numbered 110001, and an individual accounts payable account could be numbered 210001.

5. Consider adding a leading digit for multiple entities: If you have multiple entities, you may want to consider adding a leading digit to differentiate the account numbers for each entity. For example, all account numbers for entity A could start with the number 1, and all account numbers for entity B could start with the number 2.

By following these recommendations, you can create a structured and organized chart of accounts that provides detailed information for financial reporting and analysis.

Chart of Accounts - Sub-accounts

What is Sub-accounts in a Chart of Accounts?

A Chart of Accounts is a structured list that includes the names and unique codes for all accounts. It's used to categorize and record financial transactions within an organization. This chart is a fundamental component of a company's financial accounting system, facilitating the organization and tracking of financial data.

In osFinancials5/TurboCASH5, sub-accounts can be created and used for any account, with the exception of three control accounts: Debtors control (Accounts receivable), Creditors control (Accounts payable), and Retained earnings account. Sub-accounts help further categorize and provide detailed information about specific accounts to meet specific organizational needs.

Sub-accounts are hierarchical, linked to parent accounts or main accounts, and provide a more detailed and organized structure within the Chart of Accounts. They allow for specific components of a main account. For instance, the main account "*Vehicle Expenses*" can be subdivided using sub-accounts to record specific costs related to motor vehicles, including Fuel, Licence Fees, Insurance, Maintenance, Repairs, and more. This breakdown helps with budgeting and facilitates the management of the main account's total within the sub-accounts' details.

Are there any recommendations when to use sub-accounts in the chart of accounts?

In osFinancials5/TurboCASH5, you can use Main accounts with a range of 3 to 8 digits in the Chart of Accounts. Additionally, osFinancials5/TurboCASH5 allows you to include 3-digit Sub-accounts, as needed, for each Main account based on your specific requirements.

There are several recommendations for when to use sub-accounts in a chart of accounts:

1. To provide more detail: Sub-accounts can be used to provide more detailed information about a specific account. For example, a company might use a sub-account to track expenses for a specific department or project within a larger expense account.
2. To track multiple locations or divisions: If a company has multiple locations or divisions, sub-accounts can be used to track financial information separately for each location or division. This can help management make more informed decisions about allocating resources and identifying areas for improvement.
3. To comply with regulatory requirements: In some industries, regulatory bodies may require companies to track financial information in a specific way. Sub-accounts can be used to ensure that financial data is recorded and reported in accordance with these requirements.
4. To facilitate financial analysis: Sub-accounts can make it easier to analyze financial data by providing more granular information. For example, a company might use sub-accounts to track sales by product line, making it easier to identify which products are driving revenue growth.
5. To simplify financial reporting: Sub-accounts can be used to simplify financial reporting by grouping related accounts together. For example, a company might use sub-accounts to group all travel-related expenses together, making it easier to prepare financial statements and tax returns.

Overall, the decision to use sub-accounts in a chart of accounts should be based on the specific needs of the organization. While sub-accounts can provide more detail and facilitate financial analysis, they can also add complexity to the chart of accounts and make it more difficult to maintain.

Example : Sub-accounts for a Main account Expense

The exact structure and naming conventions for sub-accounts in a Chart of Accounts can vary between organizations, depending on their specific needs and accounting practices.

Here's an example to illustrate how sub-accounts work within a Chart of Accounts:

Account	*Account name /*	*Amount*

code	Description		
G6800-000	Motor Vehicle Expenses	Main account (Total of the balances of all Sub accounts)	$ 4.000
G6800-010	Fuel and oil	Sub-account - Tracks expenses related to Fuel and oil	$ 1,000
G6800-020	Vehicle - Insurance	Sub-account - Tracks expenses related to insurance premiums paid for motor vehicles.	$ 1,200
G6800-030	Vehicle - Maintenance and repairs	Sub-account - Tracks expenses related to maintenance and repairs paid for motor vehicles.	$ 800
G6800-040	Vehicle - Registration and Licence fees	Sub-account - Tracks expenses related to registration and licence fees paid for motor vehicles.	$ 700
G6800-050	Vehicle - Tolls and parking fees	Sub-account - Tracks expenses related to toll fees and parking fees paid for motor vehicles.	$ 300
G6800-060	Vehicle - Traffic fines / Vehicle violation expenses	Sub-account - Tracks expenses related to traffic fines and traffic violations paid for motor vehicles.	$0

In this example, "*Motor Vehicle Expenses*" is a parent account or main account in the Chart of Accounts, and it has several sub-accounts that provide more detail about different expense categories.

Sub-accounts help organizations track their financial transactions with greater precision and facilitate the preparation of financial statements, such as the income statement and balance sheet, by breaking down income and expenses into specific categories. This hierarchical structure also makes it easier to monitor and analyse financial performance at various levels of detail.

This example of sub-accounts in a Chart of Accounts offers a clear illustration of how sub-accounts are used to provide detailed information and structure within the Chart of Accounts.

Example : Sub-accounts for a Main account Assets

Another example of sub-accounts within a Chart of Accounts, particularly related to tracking assets. This

example highlights the use of sub-accounts to break down and track the value and details of assets over time. In this case, it's specifically related to motor vehicles as an asset.

The hierarchical structure helps in providing a comprehensive view of the assets on the financial statements. To summarize:

Account code	*Account name / Description*		*Amount*
G1540000	*Vehicles - Book value*	*Main account (This account tracks the Book value of Motor vehicles)*	*$50,000*
G1540010	*Vehicles at cost*	*Sub-account - Tracks the cost of purchase transactions of the assets.*	*$100,000*
G1540020	*Accumulated depreciation - Vehicles*	*Sub-account - Tracks the depreciation accumulated over the lifespan of the motor vehicle.*	*$50,000*

The total value of the main account, "*Vehicles - Book value of Motor vehicles*" would be $50,000, which can be reported on financial statements such as the balance sheet. Sub-accounts, in this case, provide the necessary breakdown to understand how the book value is derived from the cost of purchase and the accumulated depreciation.

The total value of the main account, "*Motor Vehicles - Net Value*" represents the book value or holding value of the asset (in this example $50,000) and is derived by subtracting the accumulated depreciation (in this example $50,000) from the asset's cost (in this example $100,000). It provides a clear reflection of the net value of the motor vehicles on the balance sheet.

Sub-accounts, in this case, provide the necessary breakdown to understand how the book value is derived from the cost of purchase and the accumulated depreciation.

This structure allows organizations to effectively manage and report the value and condition of their assets in a clear and detailed manner, which is essential for financial management and compliance with accounting standards.

Example : Sub-Accounts for a Main Account - Tax VAT/GST/Sales Tax

In the Chart of Accounts, the Tax (VAT/GST/Sales tax) accounts are typically maintained under the "VAT - Control" main account, categorized under "*Current Liabilities*" on the Balance Sheet. Individual tax accounts within the "VAT - Control" account are created as sub-accounts to represent different tax types. These sub-accounts detail Output tax and Input tax percentages and calculate these taxes as either exclusive or inclusive percentages of transaction amounts.

Structure within the Chart of Accounts:

Account code / Tax code	Account name / Description		Tax percentage	Account type	Amount
G850-000	VAT - Control - 15%	Main account - This main account, indicated with a "G" prefix. This main account summarizes VAT payable to the tax authority.	Not applicable	General ledger Balance sheet	70
T860-010	Output VAT - 15%	Sub-account for Output tax. Contains transactions and Output VAT charged on sales at a rate of 15%.	15%	Tax type	
T860-020	Input VAT - Standard rate -15%	Sub-account for Input VAT on standard goods. Contains transactions and Input VAT levied on purchases at a rate of 15%.	15%	Tax type	
T860-030	Input VAT - Capital goods -15%	Sub-account for Input VAT on capital goods. Contains transactions and Input VAT levied on purchases at a rate of 15%.	15%	Tax type	
T860-040	Zero-rated VAT - 0%	Sub-account for Zero-rated VAT. Contains transactions and Input VAT levied on purchases for goods with a rate of 0%.	0%	Tax type	
G850-100	VAT - Payment - 15%	This sub-account, indicated with a "G" prefix, is a sub-account under "VAT CONTROL ACCOUNT - 15%". This sub-account records all payments to be remitted to the tax authority if Output VAT exceeds Input VAT, as well as refunds received from the tax authority if Input VAT exceeds Output VAT.	Not applicable	General ledger Balance sheet	

- Prefixes for Tax Codes: VAT codes or sub-accounts, indicated with a "*T*" prefix, specifying the applicable VAT code's percentage (e.g., 15% or 0%).
- General Ledger Accounts:
    - VAT - Control Account- 15%: This main account, indicated with a "G" prefix, is a General ledger -Balance sheet sub-account. Under this "VAT - Control - 15%" account, sub-accounts is

created as a "*Tax*" type account which the percentages for VAT is specified.

- VAT Payment Account - 15%: This sub-account, indicated with a "G" prefix, is a General ledger -Balance sheet sub-account under "VAT - Control - 15%" main account. It records payments to be remitted to the tax authority and refunds received, depending on the VAT balance.

Note that this example is a simplified version, specific to the South African Revenue Services (SARS), and may not cover all aspects. It illustrates the fundamental structure of VAT accounts in the Chart of Accounts within osFinancials5/TurboCASH5. It's essential to tailor the structure of VAT sub-accounts to align with VAT returns based on your specific circumstances and requirements.

Tax regulations and VAT schemes can vary significantly from one country to another. Even within a single country, different VAT schemes and regulations may apply to specific businesses and circumstances.

In the United Kingdom (UK), for instance, there are various VAT schemes, including the Standard VAT Scheme, the Flat Rate VAT Scheme, the Cash Accounting Scheme, and more. Each of these schemes has its own rules and requirements, and businesses may choose the one that best suits their needs.

When setting up a Chart of Accounts and sub-accounts for VAT in osFinancials5/TurboCASH5 it's essential to consider the specific VAT schemes, rules, and reporting requirements relevant to your country and your business type. This might involve customizing the Chart of Accounts and sub-accounts to align with your unique circumstances, ensuring that you can accurately track, calculate, and report VAT in compliance with local regulations.

The following examples of the "Full Structure of VAT accounts and VAT-codes in the Chart of Accounts" and the alignment to the relevant fields or boxes on VAT Returns"or VAT-declarations is available in this documentation:

- *Value Added Tax (VAT) - South Africa - The "Full Structure of VAT accounts in the Chart of Accounts and the VAT Return" The stricture South African VAT-accounts and VAT-codes of the Chart of Accounts is aligned with the VAT201-return.*
- *Value Added Tax (VAT) - United Kingdom - Various schemes for VAT may be applicable for various scenarios. The most commonly used VAT Standard rate scheme is documented as an example of the VAT-account and VAT-codes structure in Chart of Accounts for the United Kingdom (UK) to match the various Boxes on the UK VAT return.. "VAT Standard Rate Scheme - Structure of VAT Accounts in the Chart of Accounts"*

Working with a knowledgeable accountant or tax advisor who is familiar with the tax laws in your country can be extremely helpful in setting up your Chart of Accounts to meet your VAT reporting and compliance needs.

Control Accounts and Sub-Accounts

Debtors Control (Accounts Receivable)

The Debtor Control Account represents the total accounts receivable owed by all debtors (customers/clients) and is typically displayed in the General Ledger. Individual debtor accounts are housed in a subsidiary ledger, commonly referred to as the "*Debtors Ledger*" or "*Accounts Receivable Ledger*".

In the General Ledger:

- The Debtor Control Account serves as a summary account, displaying the total accounts receivable owed by all debtors (customers/clients). This account is reported in the "*Current Assets*" section of the Balance Sheet.

In the Debtors Ledger:

- The individual debtor accounts are maintained in the subsidiary ledger, often referred to as the "*Debtors Ledger*" or "*Accounts Receivable Ledger*".
- The total amount in the "*Debtors Ledger*" must always balance with the outstanding amount in the "*Debtors Control*" or "*Accounts Receivable*" account in the General Ledger.

Each debtor's account within the Debtors Ledger functions as a sub-account of the Debtor Control Account, providing detailed information about the specific amounts owed by each customer. This includes transactions, balances, and relevant details.

Each individual debtor account contains specific information, such as contact details, postal and delivery addresses, accounting terms (e.g., settings for open item accounts, discount and interest percentages, charge amounts, fixed amounts, and more).

Using sub-accounts for individual debtors in the Debtors Ledger facilitates the tracking of amounts owed by different customers and allows for specific and detailed management of accounts receivable. This breakdown is essential for effective management and collection of outstanding debts.

A range of reports is available to manage debtor accounts in the Debtors Ledger, such as listings, transactions, credit control, ageing reports, and statements.

This structure ensures a clear separation between the summary account (Debtor Control Account) in the General Ledger and the detailed individual debtor accounts in the subsidiary ledger, enhancing the management and tracking of accounts receivable.

Creditors Control (Accounts Payable)

The Creditors Control Account represents the total accounts payable owed to all creditors (suppliers) and

is typically displayed in the General Ledger. Individual creditor accounts are maintained in a subsidiary ledger, commonly referred to as the "*Creditors Ledger*" or "*Accounts Payable Ledger*".

In the General Ledger:

- The Creditors Control Account functions as a summary account, displaying the total accounts payable owed to all creditors (suppliers). This account is reported in the "*Current liabilities*" section of the Balance Sheet.

In the Creditors Ledger:

- The individual creditor accounts are housed in the subsidiary ledger, often referred to as the "*Creditors Ledger*" or "*Accounts Payable Ledger*".
- The total amount in the "*Creditors Ledger*" must always balance with the outstanding amount in the "*Creditors Control*" or "*Accounts Payable*" account in the General Ledger.

Each creditor's account within the Creditors Ledger serves as a sub-account of the Creditor Control Account, offering detailed information about the specific amounts owed to each supplier. This includes transactions, balances, and relevant details.

Each individual creditor account contains specific information, such as contact details, postal and delivery addresses, accounting terms (e.g., settings for open item accounts, charge amounts, and more).

Using sub-accounts for individual creditors in the Creditors Ledger aids in tracking amounts owed to different suppliers and allows for specific and detailed management of accounts payable. This breakdown is vital for effectively managing and making payments for outstanding debts to suppliers.

A range of reports is available to manage creditor accounts in the Creditors Ledger, such as listings, transactions, credit control, ageing reports, and remittance advises.

This structure ensures a clear separation between the summary account (Creditors Control Account) in the General Ledger and the detailed individual creditor accounts in the subsidiary ledger, enhancing the management and tracking of accounts payable.

Chart of Accounts - Recommendations to configure - GAAP and IFRS

What recommendations is suggested to configure a chart of accounts, accounting groups and financial categories to accommodate GAAP or IFRS?

When setting up a database chart of accounts, accounting groups, and financial categories to accommodate Generally Accepted Accounting Principles (GAAP) or International Financial Reporting Standards (IFRS), the following recommendations may be considered:

1. Start with a standardized chart of accounts: Both GAAP and IFRS have standard chart of accounts that can be used as a starting point. A standardized chart of accounts will ensure consistency in reporting and facilitate financial analysis.
2. Use a hierarchical structure: Organize accounts in a hierarchical structure that reflects the company's organizational structure. This will provide a logical and easy-to-understand framework for financial reporting.
3. Group accounts by type: Categorize accounts based on their type, such as assets, liabilities, equity, revenue, and expenses. This will ensure that financial statements are organized in accordance with GAAP or IFRS.
4. Use standard accounting codes: Assign standardized accounting codes to each account to facilitate data entry and analysis. Standard codes will also make it easier to compare financial data across different organizations and industries.
5. Consider local regulations: Depending on the country or region where the company operates, there may be local regulations that affect the chart of accounts and financial reporting. Consider these regulations when setting up the database.
6. Allow for flexibility: Allow for some flexibility in the chart of accounts to accommodate changes in the company's organizational structure or accounting needs. This will help ensure that the chart of accounts remains relevant and useful over time.

By following these recommendations, companies can set up a database chart of accounts, accounting groups, and financial categories that is compliant with GAAP or IFRS and provides a solid foundation for financial reporting and analysis.

What recommendations is suggested to configure a chart of accounts, accounting groups and financial categories to accommodate IFRS for SMEs?

When configuring a chart of accounts, accounting groups, and financial categories to accommodate IFRS for SMEs, the following recommendations can be considered:

1. Understand the IFRS for SMEs: Familiarize yourself with the requirements and principles outlined in the IFRS for SMEs. Gain a clear understanding of the specific accounting treatments and disclosures required for various transactions and events.
2. Follow the framework: Structure your chart of accounts, accounting groups, and financial categories in accordance with the framework provided by the IFRS for SMEs. This ensures consistency and compliance with the standard.
3. Use standard account codes: Adopt standard account codes and numbering conventions that align with the IFRS for SMEs. This facilitates easier identification and categorization of accounts.
4. Reflect reporting requirements: Consider the reporting requirements of the IFRS for SMEs when designing your chart of accounts. Ensure that the accounts and categories capture the necessary information to prepare the required financial statements, such as the statement of financial position, statement of comprehensive income, statement of changes in equity, and statement of cash flows.
5. Consider industry-specific needs: Take into account any industry-specific considerations when configuring your chart of accounts. Some industries may have unique requirements or specific reporting needs that should be accommodated in the chart of accounts structure.
6. Maintain flexibility: Design your chart of accounts in a way that allows for future changes or updates. As your business evolves or new accounting standards are introduced, having a flexible chart of accounts can facilitate adjustments without significant disruptions.
7. Seek professional advice: If you're unsure about specific requirements or need assistance in configuring your chart of accounts, consider consulting with an accounting professional or an expert knowledgeable in IFRS for SMEs. They can provide guidance tailored to your specific business and help ensure compliance with the standard.

Remember, the configuration of the chart of accounts should be aligned with the specific needs of your business, while still adhering to the principles and requirements of IFRS for SMEs.

Chart of Accounts - Legislation ownership

What legislation for ownership types a accounting database (Chart of Accounts) should be considered?

The legislation for ownership types and their impact on accounting databases, including the Chart of Accounts, can also vary depending on the country and jurisdiction in which the business is located.

For example, in some countries, there may be different legal structures for businesses, such as sole proprietorships, partnerships, limited liability companies, and corporations. Each of these structures has different rules and regulations regarding financial reporting and accounting practices, which can impact the chart of accounts.

In addition, the ownership type can also impact the chart of accounts in terms of the level of detail required for financial reporting. For example, a sole proprietorship may have a simpler chart of accounts compared to a corporation with multiple subsidiaries and complex financial transactions.

Overall, businesses should consult with their local accounting and legal professionals to ensure they are following the applicable laws and regulations related to their ownership type and accounting practices, including the chart of accounts.

The legislation for setting up an accounting database, including a Chart of Accounts, can vary depending on the country and jurisdiction in which the business is located. Generally, there are laws and regulations that businesses need to follow when it comes to financial reporting, including the way they organize and present financial information.

In many countries, there are accounting standards and regulations that specify the minimum requirements for the Chart of Accounts. For example, in the United States, the Generally Accepted Accounting Principles (GAAP) provide guidance on how to structure the chart of accounts.

In addition to accounting standards, businesses may also need to comply with tax laws and regulations that impact the chart of accounts. For example, in some countries, there are specific tax codes that businesses must use when categorizing their financial transactions in the chart of accounts.

Overall, when setting up a chart of accounts, businesses should consult with their local accounting and tax

professionals to ensure they are following the applicable laws and regulations.

What legislation for ownership types a accounting database (Chart of Accounts) should be considered?

Chart of Accounts - Business ownership

What is the types of ownership of a business?

There are several types of ownership structures for a business, including:

1. Sole proprietorship: A business owned and operated by one individual. The owner has full control over the business and is personally responsible for all debts and liabilities.
2. Partnership: A business owned and operated by two or more individuals. Partners share profits and losses, and each partner is personally responsible for the debts and liabilities of the partnership.
3. Limited Liability Company (LLC): A business structure that provides limited liability protection for its owners (called members). This means that the members are not personally responsible for the debts and liabilities of the business.
4. Corporation: A legal entity that is separate from its owners (called shareholders). The corporation is responsible for its own debts and liabilities, and shareholders' liability is limited to the amount of their

investment in the corporation.

5. Cooperative: A business owned and operated by its members, who share in the profits and decision-making of the business. Cooperatives can take many forms, including agricultural cooperatives, credit unions, and housing cooperatives.
6. Franchise: A business model where an individual (the franchisee) is granted the right to operate a business using the trademark, products, and services of another company (the franchisor) in exchange for fees and royalties.

The type of ownership structure chosen for a business can have legal and financial implications, and it's important to consider the benefits and drawbacks of each option before making a decision.

Is there specific legislation required for the ownership structures of a business?

Yes, there are often specific laws and regulations that govern the ownership structures of businesses.

For example, in the United States, the formation of corporations is governed by state laws, and each state has its own statutes that outline the requirements for incorporating a business. Similarly, the creation and operation of LLCs are regulated by state law, and each state has its own LLC statutes that specify the requirements for forming and running an LLC.

Partnerships are generally governed by state law as well, and some states require partnerships to register with the state or file certain documents with the state to operate legally.

Additionally, there are federal laws and regulations that apply to certain types of businesses, such as franchises, that must be followed.

Overall, it's important for business owners to understand the legal requirements and regulations that apply to their chosen ownership structure in order to operate their business legally and effectively.

Business ownership types how do these types of ownership reflect in the Chat of accounts?

There are several types of business ownership, including sole proprietorship, partnership, limited liability company (LLC), and corporation. The type of ownership will affect the way that the company's financial transactions are recorded in the chart of accounts.

1. Sole Proprietorship: In a sole proprietorship, the business is owned by a single person. The chart of accounts for a sole proprietorship will typically include accounts for revenue, expenses, assets, liabilities, and owner's equity.

2. Partnership: In a partnership, the business is owned by two or more people. The chart of accounts for a partnership will typically include accounts for revenue, expenses, assets, liabilities, and partner's equity.
3. Limited Liability Company (LLC): An LLC is a type of business ownership that combines the liability protection of a corporation with the tax benefits of a partnership. The chart of accounts for an LLC will typically include accounts for revenue, expenses, assets, liabilities, and members' equity.
4. Corporation: A corporation is a separate legal entity from its owners, and it can be owned by shareholders. The chart of accounts for a corporation will typically include accounts for revenue, expenses, assets, liabilities, and shareholders' equity.

In general, the chart of accounts for each type of ownership will be similar in terms of the accounts included, but the names and details of the accounts may differ slightly. It's important to tailor the chart of accounts to the specific needs of the business, regardless of the type of ownership.

What are the common legal requirements for businesses or organisations?

The specific legal requirements for businesses or organizations can vary depending on the country, industry, and type of business. However, there are some common legal requirements that most businesses or organizations need to comply with. These may include:

1. Business registration: Most businesses are required to register with the government and obtain a business licence or permit to operate legally.
2. Taxation: Businesses are typically required to register with the tax authorities and pay taxes on their income, as well as collect and remit taxes on behalf of employees or customers.
3. Employment laws: Businesses must comply with labor laws and regulations, including minimum wage requirements, overtime rules, and anti-discrimination laws.
4. Health and safety regulations: Businesses may be subject to health and safety regulations that govern workplace conditions and employee safety.
5. Data protection and privacy laws: Businesses that collect or process personal data may be subject to data protection and privacy laws that govern how they handle this information.
6. Environmental regulations: Businesses may be required to comply with environmental regulations that govern how they manage waste, emissions, and other environmental impacts.
7. Intellectual property laws: Businesses may need to protect their intellectual property rights through patents, trademarks, or copyrights, and may be subject to laws governing these rights.

These are just a few examples of the common legal requirements that businesses or organizations may need to comply with. It's important for business owners to understand the specific legal requirements that apply to their industry aBusiness ownership types how do these types of ownership reflect in the Chat of accounts?

Chart of accounts and business ownership

There are several types of business ownership, including sole proprietorship, partnership, limited liability company (LLC), and corporation. The type of ownership will affect the way that the company's financial transactions are recorded in the chart of accounts.

1. Sole Proprietorship: In a sole proprietorship, the business is owned by a single person. The chart of accounts for a sole proprietorship will typically include accounts for revenue, expenses, assets, liabilities, and owner's equity.
2. Partnership: In a partnership, the business is owned by two or more people. The chart of accounts for a partnership will typically include accounts for revenue, expenses, assets, liabilities, and partner's equity.
3. Limited Liability Company (LLC): An LLC is a type of business ownership that combines the liability protection of a corporation with the tax benefits of a partnership. The chart of accounts for an LLC will typically include accounts for revenue, expenses, assets, liabilities, and members' equity.
4. Corporation: A corporation is a separate legal entity from its owners, and it can be owned by shareholders. The chart of accounts for a corporation will typically include accounts for revenue, expenses, assets, liabilities, and shareholders' equity.

In general, the chart of accounts for each type of ownership will be similar in terms of the accounts included, but the names and details of the accounts may differ slightly. It's important to tailor the chart of accounts to the specific needs of the business, regardless of the type of ownership.

What information should a business display on its reports and invoices?

A business report and invoice should include certain key information to ensure that it is clear and informative for the recipient. The specific information that should be included may vary depending on the type of business and the nature of the transaction, but here are some common elements that are typically included:

1. Business name and logo: The report or invoice should clearly display the name and logo of the business to identify the sender.

2. Contact information: The report or invoice should include the business's contact information, including a phone number, email address, and physical address.
3. Date: The date of the report or invoice should be clearly displayed to identify when the transaction occurred.
4. Invoice or report number: A unique invoice or report number should be assigned and displayed on the document to track and reference the transaction.
5. Itemized list: For an invoice, an itemized list of products or services provided should be included, along with their prices and quantities. For a report, relevant data and information should be presented in an organized and logical manner.
6. Payment terms: The invoice should include the payment terms, including the due date, acceptable forms of payment, and any applicable discounts or late fees.
7. Tax information: If applicable, the invoice should include the amount of taxes charged and any tax identification numbers associated with the business.
8. Terms and conditions: The report or invoice may include additional terms and conditions related to the transaction, such as warranties or return policies.

By including these key elements, a business report or invoice can effectively communicate important information and facilitate efficient and accurate transactions.nd location in order to operate their business legally and avoid potential penalties or legal issues.

In addition to this, what specific information regarding the business ownership should be printed on reports?

The specific information regarding the business ownership that should be printed on reports may vary depending on the type of report and the jurisdiction in which the business operates. However, here are some common pieces of information that may be relevant:

1. Legal business name: The legal business name should be included on all reports, as it identifies the entity responsible for the transaction.
2. Business structure: The type of business structure, such as sole proprietorship, partnership, limited liability company (LLC), or corporation, should be clearly indicated on the report.
3. Business address: The business address should be included on the report, as it identifies the location of the business.
4. Business registration number: The business registration number, such as a tax ID number or employer identification number (EIN), should be included on the report as required by law.

5. Ownership information: For a partnership or corporation, the names of the owners or shareholders should be included on the report, along with the percentage of ownership for each.
6. Board of directors: For a corporation, the names of the board of directors should be included on the report.
7. Licences and permits: If the business is required to hold any licences or permits to operate in a particular jurisdiction, these should be listed on the report.

Including this information on business reports can help to establish the identity and ownership of the business, which is important for legal and regulatory compliance purposes.

What are the legal requirements and structure of a chart of accounts for a Non-Profit-Organisation?

The legal requirements and structure of a chart of accounts for a non-profit organization may vary depending on the country or region in which the organization operates. In general, a chart of accounts is a listing of all the accounts used in an organization's financial accounting system, and it provides a framework for organizing financial transactions and preparing financial reports.

Here are some general considerations for creating a chart of accounts for a non-profit organization:

1. Legal Requirements: It is important to check with the relevant regulatory bodies in your country or region to determine any legal requirements for a chart of accounts for a non-profit organization. For example, in the United States, non-profit organizations are required to follow the Financial Accounting Standards Board (FASB) guidelines for non-profit accounting.
2. Structure: The structure of a non-profit organization's chart of accounts should reflect the specific activities and financial transactions of the organization. It should be designed to track revenues and expenses by program or activity, and to differentiate between restricted and unrestricted funds.
3. Accounts: The chart of accounts should include accounts for all financial transactions related to the organization's operations, including revenue, expenses, assets, liabilities, and equity. Accounts should be grouped together in a logical manner and assigned a unique account number for easy reference and tracking.
4. Fund Accounting: Non-profit organizations typically use fund accounting, which means that the organization's finances are divided into different funds based on the source of the funds or the purpose of the funds. The chart of accounts should reflect these different funds and provide a way to track financial transactions within each fund.
5. Reporting: The chart of accounts should be designed to facilitate the preparation of financial reports, including the statement of financial position (balance sheet), statement of activities (income statement),

and statement of cash flows. The accounts should be organized in a way that makes it easy to generate these reports and to provide detailed information about the organization's financial position and activities.

Overall, the chart of accounts for a non-profit organization should be designed to provide a clear and accurate picture of the organization's financial position and activities, and to meet any legal requirements for financial reporting. It should be regularly reviewed and updated to ensure that it remains relevant and useful for the organization's financial management and reporting needs.

What types of companies, for example Limited Liability Company (LLC), is there in various countries?

There are many different types of companies that exist in various countries, each with its own unique legal structure, governance rules, and tax implications. Here are some examples of common types of companies in different countries:

1. United States:
    - Limited Liability Company (LLC): A popular type of company that offers limited liability protection to its owners (known as members) while being treated as a pass-through entity for tax purposes.
    - Corporation: A company that is treated as a separate legal entity from its owners (known as shareholders) and offers limited liability protection. It can be taxed as a separate entity or as a pass-through entity if it elects to be taxed as an S-Corporation.
    - Partnership: A company owned by two or more individuals who share profits and losses. Partnerships can be general partnerships, limited partnerships, or limited liability partnerships.
2. United Kingdom:
    - Private Limited Company (Ltd): A company that is privately owned and offers limited liability protection to its owners (known as shareholders).
    - Public Limited Company (PLC): A company that is publicly traded and offers limited liability protection to its owners.
    - Limited Liability Partnership (LLP): A company structure that offers limited liability protection to its owners while being taxed as a partnership.
3. Canada:
    - Corporation: A company that is treated as a separate legal entity from its owners (known as shareholders) and offers limited liability protection. It can be taxed as a separate entity or as a

pass-through entity if it elects to be taxed as a Canadian Controlled Private Corporation (CCPC).

- Cooperative: A company owned and controlled by its members, who share profits and decision-making.
- Sole Proprietorship: A company owned by a single individual who is responsible for all of its debts and liabilities.

4. Australia:
    - Proprietary Limited Company (Pty Ltd): A company that is privately owned and offers limited liability protection to its owners (known as shareholders).
    - Public Company (Limited) (Ltd): A company that is publicly traded and offers limited liability protection to its owners.
    - Partnership: A company owned by two or more individuals who share profits and losses. Partnerships can be general partnerships, limited partnerships, or limited liability partnerships.

These are just a few examples of the many different types of companies that exist in different countries. The legal structure and governance rules for each type of company can vary widely depending on the country and the industry in which the company operates.

What types of companies, for example Limited Liability Company (LLC), is there in South Africa?

In South Africa, there are several types of companies that can be registered under the Companies Act of 2008. Here are some examples of common types of companies in South Africa:

1. Private Company (Pty) Ltd: This is the most common type of company in South Africa. A private company can have between one and 50 shareholders and is not allowed to offer its shares to the public. The shareholders have limited liability for the company's debts, and the company's shares cannot be freely traded on the stock exchange.
2. Public Company (Ltd): A public company can offer its shares to the public and is listed on the stock exchange. It can have an unlimited number of shareholders, and its shares can be freely traded on the stock exchange. The shareholders have limited liability for the company's debts.
3. Personal Liability Company (Inc): A personal liability company is similar to a private company, but the shareholders have personal liability for the company's debts. This type of company is often used by professional service providers, such as doctors or lawyers.
4. Non-Profit Company (NPC): A non-profit company is a company that is not-for-profit and is

established to promote a public benefit. It can be registered as either a public or private company, but it cannot distribute its profits to its members or shareholders.

5. State-Owned Company (SOC): A state-owned company is a company that is wholly or partially owned by the South African government. These companies are established to provide public services or to undertake commercial activities on behalf of the government.

These are some of the most common types of companies in South Africa. The legal requirements, governance rules, and tax implications for each type of company can vary, so it's important to consult with a qualified professional when deciding which type of company is best for your business.

1. Fixed assets
    - 1000 Buildings
    - 1100 Equipment
    - 1200 Vehicles
    - 1300 Furniture and fittings
    - 1400 Land and buildings
    - 1500 Computer software
    - 1600 Investments in subsidiaries
2. Current assets
    - 2000 Bank and cash
    - 2100 Accounts receivable

- 2200 Inventory
- 2300 Prepaid expenses
- 2400 Investments in shares

3. Liabilities
    - 3000 Bank loans
    - 3100 Trade creditors
    - 3200 Taxation payable
    - 3300 Other creditors
    - 3400 Loans from directors
4. Shareholder's equity
    - 4000 Ordinary shares
    - 4100 Share premium
    - 4200 Retained earnings
5. Revenue
    - 5000 Sales revenue
    - 5100 Other revenue
6. Cost of sales
    - 6000 Direct materials
    - 6100 Direct labour
    - 6200 Factory overheads
7. Operating expenses
    - 7000 Selling and distribution expenses
    - 7100 Administrative expenses
8. Other income and expenses
    - 8000 Gain or loss on sale of assets
    - 8100 Interest income or expense

- 8200 Foreign exchange gain or loss

9. Taxation
    - 9000 Corporation tax
    - 9100 Deferred tax

This is just a sample Chart of Accounts, and businesses can customize it based on their individual requirements. It is recommended that businesses seek the advice of a professional accountant or bookkeeper when setting up their Chart of Accounts to ensure it is accurate and compliant with UK GAAP.

What is the recommended financial categories and account groups for accounts in the United Kingdom Chart of Accounts?

The recommended financial categories and account groups for the United Kingdom Chart of Accounts may vary depending on the specific needs of the organization. However, there are some general categories and groups that are commonly used in UK accounting practices.

1. Assets: This includes all the resources owned by the organization, such as cash, investments, property, plant, and equipment.
2. Liabilities: This includes all the obligations owed by the organization, such as loans, accounts payable, and accrued expenses.
3. Equity: This represents the residual interest in the assets of the organization after deducting liabilities.
4. Revenue: This includes all the income earned by the organization, such as sales revenue, interest income, and other operating income.
5. Expenses: This includes all the costs incurred by the organization, such as wages, rent, utilities, and supplies.

Some account groups that may be used within these categories include:

1. Cash and bank accounts: This includes all the accounts used to manage the organization's cash and bank transactions.
2. Accounts receivable and payable: This includes all the accounts used to manage the organization's sales and purchases.
3. Fixed assets: This includes all the accounts used to manage the organization's property, plant, and equipment.
4. Revenue accounts: This includes all the accounts used to record the organization's income from various sources.

5. Expense accounts: This includes all the accounts used to record the organization's costs associated with its operations.
6. Tax accounts: This includes all the accounts used to manage the organization's tax obligations.
7. Equity accounts: This includes all the accounts used to record the organization's equity transactions, such as share capital, retained earnings, and dividends.

Overall, the recommended financial categories and account groups for the United Kingdom Chart of Accounts should be tailored to meet the specific needs of the organization and should comply with UK accounting standards and regulations.

What is a full list of accounts suggested in the chart of accounts for UK?

The Chart of Accounts for the UK may vary depending on the industry and specific needs of the business, but here is a general list of accounts that may be included:

1. Assets:
    - Current assets:
        - Cash
        - Bank accounts
        - Accounts receivable
        - Inventory
        - Prepaid expenses
    - Non-current assets:
        - Property, plant, and equipment
        - Investments
        - Goodwill
2. Liabilities:
    - Current liabilities:
        - Accounts payable
        - Short-term loans
        - Accrued expenses

- Non-current liabilities:
  - Long-term loans
  - Deferred tax liabilities
  - Pension liabilities

3. Equity:
   - Share capital
   - Retained earnings
4. Revenue:
   - Sales revenue
   - Interest income
   - Other revenue
5. Expenses:
   - Cost of goods sold
   - Salaries and wages
   - Rent and utilities
   - Depreciation and amortization
   - Marketing and advertising
   - Taxes and licences
   - Interest expense
   - Other expenses

Again, this is a general list and may vary depending on the specific needs of the business. It's always a good idea to consult with an accountant or financial advisor to determine the best Chart of Accounts for your business.

What is examples of operating expenses and administrative expenses?

Operating expenses are expenses directly related to the production and sale of goods or services, while administrative expenses are costs associated with the general management and administration of the

business. Here are some examples of operating expenses and administrative expenses:

1. Operating expenses:
    - Cost of goods sold (COGS)
    - Raw materials
    - Manufacturing labor
    - Freight and shipping
    - Sales commissions
    - Marketing and advertising expenses
    - Rent and utilities for production facilities
    - Repairs and maintenance for production equipment
    - Packaging materials
    - Supplies used in production
2. Administrative expenses:
    - Salaries and wages of administrative staff
    - Rent and utilities for administrative offices
    - Office supplies and equipment
    - Accounting and legal fees
    - Insurance premiums
    - Travel and entertainment expenses for management
    - Depreciation and amortization of non-production assets
    - Information technology expenses such as software and hardware for office use
    - Property taxes and other government fees

It's important to note that some expenses may be classified as both operating and administrative, depending on the nature of the expense and the industry in which the business operates.

What is Selling and distribution expenses?

Selling and distribution expenses are costs associated with marketing, selling, and distributing products or

services. These expenses are typically considered as operating expenses and include:

1. Sales commissions: Commissions paid to sales representatives who generate revenue for the company.
2. Advertising and promotion: Costs associated with promoting and advertising products or services to potential customers, such as print and online ads, billboards, and sponsorship.
3. Freight and shipping: Expenses incurred to transport products from the production facility to the customer, including freight charges, packing materials, and handling fees.
4. Distribution expenses: Costs associated with distributing products to customers, such as warehouse rent, employee salaries, and other related costs.
5. Sales salaries and benefits: Salaries, bonuses, and other benefits paid to sales staff and other personnel involved in the sales and distribution process.
6. Travel expenses: Costs associated with traveling to meet with customers or attend sales conferences, trade shows, or other sales-related events.
7. Customer service expenses: Costs associated with providing customer service, such as call centre expenses, warranty claims, and product returns.
8. Bad debts: Expenses associated with customers who fail to pay their invoices.

Selling and distribution expenses are important to track as they can significantly impact a company's profitability and overall financial health.

What accounts is suggested for payroll in the UK?

For payroll accounting in the UK, some of the key accounts that may be used include:

1. Wages and salaries: This account is used to record the gross amount of wages and salaries paid to employees, including any overtime, bonuses, or other compensation.
2. Employer National Insurance Contributions: This account is used to record the amount of employer national insurance contributions payable to HM Revenue and Customs (HMRC), which is calculated based on the gross salaries and wages paid to employees.
3. Employee National Insurance Contributions: This account is used to record the amount of employee national insurance contributions withheld from employee salaries and wages, which must be paid to HMRC on a monthly basis.
4. PAYE (Pay-as-you-earn) payable: This account is used to record the amount of PAYE tax withheld from employee salaries and wages, which must be paid to HMRC on a monthly basis.

5. Pension contributions: This account is used to record any employer contributions to employee pension schemes, as well as any employee contributions made through salary sacrifice arrangements.
6. Student loan repayments: This account is used to record any student loan repayments made by employees, which are withheld from employee salaries and wages and paid to HMRC on a monthly basis.
7. Other deductions and benefits: This account is used to record any other deductions or benefits provided to employees, such as childcare vouchers, cycle-to-work schemes, or health insurance.

These accounts may be used in conjunction with other accounts in the company's chart of accounts to provide a comprehensive record of payroll transactions and related expenses. It is important to consult with a qualified accountant or payroll specialist to ensure that payroll accounts are set up and managed correctly in accordance with UK regulations and requirements.

Which accounts is Income statement and balance sheet accounts in the Chart of Accounts for payroll transactions in the UK?

In the Chart of Accounts for payroll transactions in the UK, the Income Statement accounts are typically used to record revenues, expenses, gains, and losses related to payroll transactions. The Balance Sheet accounts are used to track the assets, liabilities, and equity related to payroll transactions.

Here's an example of the Income Statement and Balance Sheet accounts that could be used in the Chart of Accounts for payroll transactions in the UK:

Income Statement accounts:

4000 - Gross Pay

4010 - Employee National Insurance Contributions

4020 - Employer National Insurance Contributions

4030 - PAYE Income Tax

4040 - Pension Contributions

4050 - Other Payroll Deductions

4060 - Payroll Processing Fees

4070 - Payroll Software Costs

4080 - Payroll Training Costs

4090 - Other Payroll Expenses

Balance Sheet accounts:

1000 - Cash and Bank

1010 - Accounts Receivable

1020 - Employee Loans and Advances

1500 - Employee PAYE Tax and National Insurance Payable

1510 - Pension Contributions Payable

1520 - Other Payroll Deductions Payable

2000 - Employee Salaries Payable

2010 - Employer National Insurance Contributions Payable

2020 - Other Payroll Expenses Payable

2500 - Employee Loans and Advances Payable

These accounts can be customized based on the specific needs of the business, but they provide a basic framework for recording and tracking payroll transactions in the UK.

United Kingdom (UK) - Standard Chart of Accounts (SCOA)

Is there a sample of a chart of accounts for the UK?

Yes, there are several samples of chart of accounts available for businesses operating in the United Kingdom. However, the specific chart of accounts that a business uses will depend on factors such as the nature of the business, its industry, and its accounting practices.

In the UK, the most commonly used chart of accounts is the Standard Chart of Accounts (SCOA), which is used by many businesses, including those in the public sector. The SCOA is a comprehensive framework that provides a standardised structure for financial reporting.

The SCOA includes several categories, such as assets, liabilities, equity, income, and expenses. Within each category, there are subcategories that provide additional detail for financial reporting purposes. For example, under the expenses category, there may be subcategories for salaries and wages, rent, utilities, and advertising expenses.

In addition to the SCOA, businesses may also use other industry-specific charts of accounts or customize

their own based on their specific needs and accounting practices.

It's important to note that the chart of accounts should be regularly reviewed and updated to ensure it accurately reflects the business's financial transactions and complies with applicable laws and regulations.

Is there an example of a Standard Chart of Accounts (SCOA) for the UK?

Yes, there is an example of a Standard Chart of Accounts (SCOA) for the UK. The SCOA provides a standardized framework for financial reporting and includes several categories and subcategories to organize financial transactions.

Here is an example of the SCOA for the UK:

Assets:

1000 - Current assets

1100 - Property, plant, and equipment

1200 - Investment property

1300 - Intangible assets

1400 - Other assets

Liabilities:

2000 - Current liabilities

2100 - Trade and other payables

2200 - Borrowings

2300 - Provisions

2400 - Other current liabilities

2500 - Taxation

Equity:

3000 - Share capital and reserves

3100 - Share capital

3200 - Other reserves

3300 - Retained earnings

Income:

4000 - Income

4100 - Sales

4200 - Interest received

4300 - Dividends received

4400 - Other income

Expenses:

5000 - Cost of sales

5100 - Direct costs

5200 - Depreciation and amortization

5300 - Overheads

5400 - Interest paid

5500 - Taxation

5600 - Other expenses

This is just one example of the SCOA for the UK, and it's important to note that businesses may customize their own chart of accounts based on their specific needs and accounting practices.

South Africa - Chart of Accounts - SA GAAP and SA GAAP for SMEs

---

SA GAAP for SMEs

South African Generally Accepted Accounting Practice for Small and Medium-sized Entities (SA GAAP for SMEs) is a set of accounting principles and standards specifically tailored for small and medium-sized businesses in South Africa.

SA GAAP for SMEs provides simplified accounting and reporting requirements compared to the full version of SA GAAP, which is based on International Financial Reporting Standards (IFRS).

SA GAAP for SMEs aims to meet the financial reporting needs of smaller entities while considering their resource constraints and the specific characteristics of their operations. It provides a more cost-effective

and less complex framework for financial reporting, enabling SMEs to prepare meaningful financial statements that accurately reflect their financial performance and position.

The key features of SA GAAP for SMEs include:

1. Simplified recognition and measurement: The standard provides simplified criteria for recognizing and measuring assets, liabilities, income, and expenses. It allows for a more straightforward approach compared to the detailed requirements of full SA GAAP/IFRS.
2. Reduced disclosure requirements: SA GAAP for SMEs has streamlined disclosure requirements compared to the full version of SA GAAP/IFRS. This reduces the reporting burden on SMEs while still providing relevant and essential information to users of financial statements.
3. Flexibility in presentation: The standard allows for flexibility in the presentation of financial statements, enabling SMEs to present information in a format that best suits their business and user needs.
4. Exemptions and simplifications: SA GAAP for SMEs provides certain exemptions and simplifications in areas such as goodwill, business combinations, deferred taxes, and complex financial instruments. These exemptions and simplifications help ease the reporting requirements for SMEs.

SA GAAP for SMEs is designed to strike a balance between providing useful financial information and reducing the reporting burden on small and medium-sized entities. It enables SMEs to comply with the local accounting and reporting requirements in South Africa while considering their unique circumstances. However, it's important to note that SA GAAP for SMEs may not be suitable for all entities, and some SMEs may choose to adopt full SA GAAP/IFRS depending on their specific needs and circumstances.

What is the differences between SA GAAP and SA GAAP for SMEs?

The differences between SA GAAP (South African Generally Accepted Accounting Practice) and SA GAAP for SMEs (South African Generally Accepted Accounting Practice for Small and Medium-sized Entities) lie primarily in the complexity, reporting requirements, and applicable accounting standards. Here are the key distinctions:

1. Applicability:
    - SA GAAP: SA GAAP is designed for larger entities, including publicly traded companies, financial institutions, and organizations with complex operations. It follows the full set of International Financial Reporting Standards (IFRS) as adopted by South Africa.
    - SA GAAP for SMEs: SA GAAP for SMEs is specifically tailored for small and medium-sized entities, which generally have fewer reporting resources and less complex operations. It provides a simplified framework based on IFRS, with certain modifications and simplifications

to suit the needs of SMEs.

2. Reporting Requirements:
    - SA GAAP: SA GAAP requires entities to adhere to comprehensive reporting requirements, including detailed disclosure notes, comprehensive financial statement presentation, and various complex accounting standards and principles.
    - SA GAAP for SMEs: SA GAAP for SMEs offers reduced reporting requirements compared to SA GAAP. It provides simplified recognition and measurement criteria, streamlined disclosure requirements, and flexibility in financial statement presentation. It aims to strike a balance between providing meaningful financial information and reducing the reporting burden for SMEs.
3. Complexity:
    - SA GAAP: SA GAAP encompasses the full set of IFRS, which can be complex and extensive. It includes detailed guidance on various accounting topics, such as revenue recognition, financial instruments, leases, and employee benefits.
    - SA GAAP for SMEs: SA GAAP for SMEs simplifies the accounting and reporting requirements, making it less complex compared to SA GAAP. It provides exemptions, simplifications, and reduced disclosure requirements in areas such as goodwill, business combinations, deferred taxes, and complex financial instruments.
4. Chart of Accounts:
    - SA GAAP: SA GAAP follows a standardized chart of accounts framework, which provides specific guidance and codes for different account categories and sub-categories.
    - SA GAAP for SMEs: SA GAAP for SMEs does not provide a specific standard or example chart of accounts. SMEs have more flexibility to design their own chart of accounts based on their specific industry, nature of operations, and reporting needs.

It's important to note that while SA GAAP for SMEs provides simplifications and reduced requirements, SMEs may still choose to adopt SA GAAP (full IFRS) if it better suits their needs or if they have specific reporting obligations, such as being a subsidiary of a larger company or seeking international investors.

What is the differences between SA GAAP for SMEs and IFRS for SMEs in South Africa?

In South Africa, there is a distinction between SA GAAP for SMEs (South African Generally Accepted Accounting Practice for Small and Medium-sized Entities) and IFRS for SMEs (International Financial

Reporting Standards for Small and Medium-sized Entities). Here are the key differences between the two:

1. Applicability:
    - SA GAAP for SMEs: SA GAAP for SMEs is specifically designed for small and medium-sized entities operating in South Africa. It takes into account the local legal and regulatory requirements, as well as the specific characteristics and reporting needs of SMEs in the South African context.
    - IFRS for SMEs: IFRS for SMEs is an international accounting standard developed by the International Accounting Standards Board (IASB) specifically for small and medium-sized entities worldwide. It aims to provide a simplified set of accounting and reporting requirements that are suitable for SMEs globally.
2. Basis and Framework:
    - SA GAAP for SMEs: SA GAAP for SMEs is based on the full version of SA GAAP, which in turn is closely aligned with the International Financial Reporting Standards (IFRS) framework. SA GAAP for SMEs incorporates modifications and simplifications to align with the reporting needs and resource constraints of SMEs in South Africa.
    - IFRS for SMEs: IFRS for SMEs is a separate stand-alone standard developed by the IASB. It is a simplified version of full IFRS, specifically tailored to the needs and capabilities of SMEs globally. It provides a streamlined framework with reduced complexity compared to full IFRS.
3. Reporting Requirements:
    - SA GAAP for SMEs: SA GAAP for SMEs offers simplified reporting requirements compared to the full version of SA GAAP. It includes exemptions, simplifications, and reduced disclosure requirements in various accounting areas to reduce the reporting burden on SMEs while still providing relevant and meaningful financial information.
    - IFRS for SMEs: IFRS for SMEs provides a streamlined set of accounting and reporting requirements specifically designed for SMEs. It eliminates many of the detailed and complex requirements of full IFRS. It focuses on key principles and areas relevant to SMEs while providing a more cost-effective reporting framework.
4. Recognition and Measurement:
    - SA GAAP for SMEs: SA GAAP for SMEs follows the recognition and measurement principles of the full version of SA GAAP, which are closely aligned with IFRS. However, it may incorporate modifications and simplifications specific to SMEs in South Africa.
    - IFRS for SMEs: IFRS for SMEs provides simplified recognition and measurement criteria compared to full IFRS. It allows for more straightforward approaches in areas such as revenue

recognition, property, plant and equipment, financial instruments, and leases.

It's important to note that while SA GAAP for SMEs is specifically tailored for SMEs in South Africa, SMEs also have the option to adopt IFRS for SMEs if it better suits their needs, particularly if they have international operations or reporting obligations outside of South Africa. The choice between the two depends on factors such as the entity's size, industry, international operations, and reporting requirements.

Is there a standard or example chart of accounts for SA GAAP for SMEs?

In South Africa, there isn't a specific standard or example chart of accounts provided by the South African Institute of Chartered Accountants (SAICA) or any other regulatory body for SA GAAP for SMEs. Unlike the full version of SA GAAP or IFRS, which provides a detailed chart of accounts framework, SA GAAP for SMEs offers more flexibility for SMEs to design their own chart of accounts based on their specific industry, nature of operations, and reporting needs.

However, there are general guidelines and best practices that can be followed when creating a chart of accounts for SMEs under SA GAAP. Here are some key considerations:

1. Relevant account categories: Identify the main categories of accounts needed for your business, such as assets, liabilities, equity, revenue, and expenses. Within these categories, further sub-categories can be created as required.
2. Industry-specific accounts: Consider any specific accounts or categories relevant to your industry. Different industries may have unique reporting requirements, such as inventory accounts for manufacturing businesses or client trust accounts for legal firms. Tailor your chart of accounts to capture these industry-specific transactions.
3. Numbering system: Develop a logical numbering system for your accounts to make it easier to navigate and locate specific accounts. This can include using a hierarchical numbering system where the first digit represents the main category and subsequent digits represent sub-categories or specific accounts.
4. Consistency and comparability: Ensure consistency in account names and numbering across different periods and financial statements. This allows for easier comparability and analysis of financial information over time.
5. Scalability: Design a chart of accounts that can accommodate the future growth and expansion of your business. Consider including accounts that may be required as your business evolves, such as new product lines, additional locations, or expanded operations.

While there isn't a prescribed standard chart of accounts for SA GAAP for SMEs, it's advisable to consult

with an experienced accountant or financial professional who can provide guidance and assist in designing a chart of accounts that aligns with your business's specific needs and reporting requirements.

Is there a GAAP compliant Chart of Accounts structure for South Africa

Yes, there is a GAAP compliant Chart of Accounts structure for South Africa. The Generally Accepted Accounting Practice (GAAP) in South Africa is based on the International Financial Reporting Standards (IFRS). The South African Institute of Chartered Accountants (SAICA) provides guidance on the structure and content of a Chart of Accounts that is compliant with GAAP.

The SAICA recommends that a Chart of Accounts in South Africa should have the following sections:

1. Assets
2. Liabilities
3. Equity
4. Income
5. Cost of Sales
6. Expenses
7. Other Income and Expenses
8. Taxation

Each section should be further broken down into specific accounts, such as cash, accounts receivable, accounts payable, revenue, salaries, and so on. The specific accounts used may vary depending on the nature of the business.

It's important to note that while there is a recommended structure for a Chart of Accounts in South Africa, the actual accounts used may differ from one business to another based on their individual requirements and industry-specific reporting requirements.

Is there a sample Chart of Accounts in South Africa?

Yes, there are sample charts of accounts available that businesses in South Africa can use as a reference. However, the specific accounts used may vary depending on the nature of the business, the size of the company, and the industry in which it operates.

Here is a sample Chart of Accounts based on the SAICA's recommended structure:

1. Assets

- 1000 Cash and cash equivalents
- 1100 Accounts receivable
- 1200 Inventory
- 1300 Prepaid expenses
- 1400 Property, plant, and equipment
- 1500 Investments
- 1600 Other assets

2. Liabilities
    - 2000 Accounts payable
    - 2100 Accrued expenses
    - 2200 Short-term debt
    - 2300 Long-term debt
    - 2400 Other liabilities
3. Equity
    - 3000 Share capital
    - 3100 Retained earnings
4. Income
    - 4000 Sales revenue
    - 4100 Other revenue
5. Cost of Sales
    - 5000 Cost of goods sold
6. Expenses
    - 6000 Salaries and wages
    - 6100 Rent and utilities
    - 6200 Advertising and marketing
    - 6300 Insurance

- 6400 Repairs and maintenance
- 6500 Supplies and materials
- 6600 Depreciation
- 6700 Interest expense

7. Other Income and Expenses
    - 7000 Gain or loss on sale of assets
    - 7100 Foreign exchange gain or loss
    - 7200 Miscellaneous income and expenses
8. Taxation
    - 8000 Current income tax
    - 8100 Deferred income tax

This is just a sample Chart of Accounts, and businesses can customize it based on their individual requirements. It is recommended that businesses seek the advice of a professional accountant or bookkeeper when setting up their Chart of Accounts to ensure it is accurate and compliant with GAAP.

What is the recommended financial categories and account groups for accounts in the South African Chart of Accounts?

The South African Chart of Accounts is a standardized list of financial accounts that businesses in South Africa can use to organize their financial transactions. Here are some recommended financial categories and account groups that can be used in the South African Chart of Accounts:

1. Assets: This category includes all the resources that a business owns and controls. It includes subcategories such as:
    - Current assets (e.g. cash, accounts receivable, inventory)
    - Fixed assets (e.g. property, plant, and equipment)
    - Intangible assets (e.g. patents, trademarks, goodwill)
2. Liabilities: This category includes all the financial obligations that a business owes to others. It includes subcategories such as:
    - Current liabilities (e.g. accounts payable, taxes payable, short-term loans)
    - Long-term liabilities (e.g. long-term loans, bonds, mortgages)

3. Equity: This category includes the owners' investment in the business. It includes subcategories such as:
    - Share capital (e.g. common shares, preferred shares)
    - Retained earnings (e.g. accumulated profits or losses)
4. Income: This category includes all the revenue earned by the business. It includes subcategories such as:
    - Sales revenue (e.g. revenue from the sale of goods or services)
    - Other income (e.g. interest income, rental income)
5. Expenses: This category includes all the costs incurred by the business. It includes subcategories such as:
    - Cost of sales (e.g. the cost of producing or acquiring the goods sold)
    - Operating expenses (e.g. rent, salaries, utilities)
    - Depreciation and amortization (e.g. the cost of using up fixed assets and intangible assets over time)

These financial categories and account groups can be further customized and refined to suit the specific needs of each business. It is important to consult with a professional accountant or bookkeeper to ensure that the chart of accounts is set up correctly and accurately reflects the business's financial transactions.

What is the recommended financial categories and account groups for accounts in the South African Chart of Accounts?

The recommended financial categories and account groups for the South African Chart of Accounts may vary depending on the specific needs of the organization. However, there are some general categories and groups that are commonly used in South African accounting practices.

1. Assets: This includes all the resources owned by the organization, such as cash, investments, property, plant, and equipment.
2. Liabilities: This includes all the obligations owed by the organization, such as loans, accounts payable, and accrued expenses.
3. Equity: This represents the residual interest in the assets of the organization after deducting liabilities.
4. Revenue: This includes all the income earned by the organization, such as sales revenue, interest income, and other operating income.

5. Expenses: This includes all the costs incurred by the organization, such as wages, rent, utilities, and supplies.

Some account groups that may be used within these categories include:

1. Cash and bank accounts: This includes all the accounts used to manage the organization's cash and bank transactions.
2. Accounts receivable and payable: This includes all the accounts used to manage the organization's sales and purchases.
3. Fixed assets: This includes all the accounts used to manage the organization's property, plant, and equipment.
4. Revenue accounts: This includes all the accounts used to record the organization's income from various sources.
5. Expense accounts: This includes all the accounts used to record the organization's costs associated with its operations.
6. Tax accounts: This includes all the accounts used to manage the organization's tax obligations.
7. Equity accounts: This includes all the accounts used to record the organization's equity transactions, such as share capital, retained earnings, and dividends.

Overall, the recommended financial categories and account groups for the South African Chart of Accounts should be tailored to meet the specific needs of the organization and should comply with South African accounting standards and regulations.

Payroll in South Africa

What accounts is suggested for payroll in South Africa?

For payroll accounting in South Africa, some of the key accounts that may be used include:

1. Salaries and wages: This account is used to record the gross amount of salaries and wages paid to employees, including any overtime, bonuses, or other compensation.
2. Employee benefits: This account is used to record any employer contributions to employee benefits, such as pension funds, medical aid, or other fringe benefits.
3. PAYE (Pay-as-you-earn) payable: This account is used to record the amount of PAYE tax withheld from employee salaries and wages, which must be paid to the South African Revenue Service (SARS) on a monthly basis.
4. UIF (Unemployment Insurance Fund) payable: This account is used to record the amount of UIF

contributions withheld from employee salaries and wages, which must be paid to the Department of Labour on a monthly basis.

5. SDL (Skills Development Levy) payable: This account is used to record the amount of SDL contributions payable by employers, which are used to fund training and skills development programs.
6. Employee loans and advances: This account is used to record any loans or advances made to employees, such as salary advances or loans for education or housing.
7. Employee payroll taxes and levies: This account is used to record any other payroll taxes or levies payable by employers, such as COIDA (Compensation for Occupational Injuries and Diseases Act) contributions or UIF COVID-19 TERS (Temporary Employer/Employee Relief Scheme) payments.

These accounts may be used in conjunction with other accounts in the company's chart of accounts to provide a comprehensive record of payroll transactions and related expenses. It is important to consult with a qualified accountant or payroll specialist to ensure that payroll accounts are set up and managed correctly in accordance with South African regulations and requirements.

Payroll Employers Contributions an Employees contributions

In general, the employer's contributions to employee benefits, such as pension contributions or health insurance premiums, are recorded as expense accounts. These contributions are considered part of the overall compensation package provided by the employer. On the other hand, employees' contributions to benefits programs are typically treated as deductions from their gross salaries and are not recorded as separate expense accounts.

Regarding Pay-As-You-Earn (PAYE), it is a system for withholding and remitting income tax from employees' salaries on behalf of the tax authority. The amount withheld represents the employees' income tax liability. In the chart of accounts, PAYE is recorded as a current liability, reflecting the obligation to remit the withheld taxes to the tax authority.

To summarize:

- Employer contributions to employee benefits: Recorded as expense accounts.
- Employees' contributions to benefits: Generally not recorded as separate expense accounts.
- Pay-As-You-Earn (PAYE) taxes: Recorded as a current liability.

It's important to note that specific accounting practices may vary based on the jurisdiction and accounting standards followed. It is advisable to consult with an accounting professional or refer to the applicable regulations for accurate guidance in your specific context.

South Africa - Chart of Accounts - Small business

Sample outline of a Chart of Accounts for a South African Small business?

For a South African small business, the Chart of Accounts (COA) should be straightforward, yet comprehensive enough to manage the financial transactions and reporting needs of the business. Here's a sample outline of a Chart of Accounts for a South African small business:

1. Assets
    - 1.1 Current Assets
        - 1.1.1 Cash on Hand
        - 1.1.2 Cash in Bank
        - 1.1.3 Petty Cash
        - 1.1.4 Accounts Receivable (Outstanding customer invoices)
        - 1.1.5 Inventory (if applicable)
        - 1.1.6 Prepaid Expenses
        - 1.1.7 Other Current Assets
    - 1.2 Non-Current Assets
        - 1.2.1 Property and Buildings (if owned by the business)
        - 1.2.2 Furniture and Fixtures
        - 1.2.3 Equipment (computers, machinery, etc.)
        - 1.2.4 Vehicles (if used for business purposes)
        - 2.5 Other Non-Current Assets
        - 2.5.1 Long-Term Investments
        - 2.5.2 Long-Term Notes Receivable
        - 2.5.3 Deferred Tax Assets
        - 2.5.4 Security Deposits

- § 2.5.5 Long-Term Prepaid Expenses
- § 2.5.6 Mineral Rights
- § 2.5.7 Leasehold Improvements
- § 2.5.8 Deferred Charges
- § 2.5.9 Long-Term Deposits
- § 2.5.10 Deferred Financing Costs

- o 1.3 Intangible Assets
  - § 1.3.1 Patents
  - § 1.3.2 Licences
  - § 1.3.3 Trademarks
  - § 1.3.4 Copyrights
  - § 1.3.5 Goodwill (if applicable)
  - § 1.3.6 Other Intangible Assets

2. Liabilities

- o 2.1 Current Liabilities
  - § 2.1.1 Accounts Payable (Outstanding bills and expenses)
  - § 2.1.2 Accrued Liabilities (e.g., Salaries payable, utilities)
  - § 2.1.3 Short-Term Loans and Borrowings (if applicable)
  - § 2.1.4 Credit Card Payables
  - § 2.1.5 Value Added Tax (VAT) Payable (if applicable)
    - · 2.1.5.1 Output VAT (VAT on Sales)
    - · 2.1.5.2 Input VAT (VAT on Purchases)
    - · 2.1.5.3 Input VAT (VAT on Capital goods)
    - · 2.1.5.4 Zero Rated VAT (Sales with 0% VAT)
    - · 2.1.5.5 VAT Bad Debts (Uncollectible VAT on Sales)
  - § 2.1.6 Payroll or Salaries and Wages Payable

- 2.1.6.1 Pay-As-You-Earn (PAYE) Tax
- 2.1.6.2 Pension Fund Contributions Payable
- 2.1.6.3 Medical Aid Contributions Payable
- 2.1.6.4 Other Payroll Deductions

§ 2.1.7 Other Current Liabilities

o 2.2 Non-Current Liabilities

§ 2.2.1 Long-Term Loans and Borrowings (if applicable)

§ 2.2.2 Lease Liabilities (if applicable)

§ 2.2.3 Other Non-Current Liabilities

3. Equity
   - o 3.1 Owner's Capital
   - o 3.2 Retained Earnings
   - o 3.3 Drawings or Dividends (if applicable)
   - o 3.4 Other Equity Items
4. Income
   - o 4.1 Sales Revenue (Income from products or services sold)
   - o 4.2 Interest Income (e.g., from bank accounts)
   - o 4.3 Other Income
5. Cost of Goods Sold (COGS)
   - o 5.1 Beginning Inventory (if applicable)
   - o 5.2 Purchases (Cost of goods acquired for resale or materials used)
   - o 5.3 Ending Inventory (if applicable)
   - o 5.4 Cost of Services (Direct costs related to service delivery, if applicable)
   - o 5.5 Gross Profit
6. Expenses
   - o 6.1 Salaries and Wages

- 6.2 Rent and Lease Expenses
- 6.3 Utilities (Electricity, Water, etc.)
- 6.4 Office Supplies
- 6.5 Advertising and Promotion
- 6.6 Bank Fees and Interest Expenses
- 6.7 Repairs and Maintenance
- 6.8 Travel and Transportation Expenses
- 6.9 Professional Fees (e.g., accounting, legal)
- 6.10 Insurance
- 6.11 Depreciation and Amortization
- 6.12 Other Operating Expenses

7. Taxes
    - 7.1 Value Added Tax (VAT) Payable (if applicable)
    - 7.2 Pay-As-You-Earn (PAYE) Tax (if applicable)
    - 7.3 Other Taxes
8. Other Comprehensive Income
    - 8.1 Foreign Currency Translation Gains/Losses (if applicable)
    - 8.2 Other Items
9. Gains and Losses
    - 9.1 Gain on Sale of Assets (if applicable)
    - 9.2 Loss on Impairment of Assets (if applicable)
10. Inter-Account Transactions
    - 10.1 Transfers between Bank Accounts (if applicable)
11. Project or Job Income and Expenses
    - 11.1 Project A
        - 11.1.1 Income

- § 11.1.2 Expenses
- o 11.2 Project B
  - § 11.2.1 Income
  - § 11.2.2 Expenses
- o 11.3 Other Projects or Jobs

Please note that the above COA is a general outline and can be customized to suit the specific operations and financial reporting needs of the South African small business. It is essential to consult with a qualified accountant or financial expert to ensure compliance with South African accounting standards and regulations for small businesses.

Value Added Tax (VAT)

For the VAT-related accounts:

- Output VAT (VAT on Sales): This account tracks the VAT amount charged to customers on sales of goods and services. The percentage for Output VAT is the standard VAT rate, which is prescribed by the South African Revenue Service (SARS). As of my knowledge cutoff in September 2021, the standard VAT rate in South Africa is 15%.
- Input VAT (VAT on Purchases): This account records the VAT paid on purchases of goods and services from suppliers. Businesses can claim Input VAT as a credit against their Output VAT liability. The percentage for Input VAT is also the standard VAT rate, which is 15%.
- Input VAT (VAT on Purchases - Capital goods): In South Africa, when a business purchases capital goods (such as machinery, equipment, vehicles, etc.) that are used in the business for an extended period, they are entitled to claim Input VAT on these purchases as part of their Input Tax Credit. Therefore, Input VAT should encompass both VAT on regular purchases (goods and services used in day-to-day operations) and VAT on capital goods.

  It's important to accurately track and account for Input VAT on capital goods to ensure compliance with VAT regulations and to maximize VAT recoveries for the business. As always, businesses should consult with a qualified tax professional to ensure proper accounting treatment and adherence to the latest VAT rules and regulations.
- Zero Rated VAT (Sales with 0% VAT): Some goods and services are considered zero-rated for VAT purposes. This means that VAT is still applicable, but the rate is 0%. Examples of zero-rated goods may include basic food items, certain medical supplies, and exports of goods. The percentage for Zero Rated VAT is 0%.

- VAT Bad Debts (Uncollectible VAT on Sales): If a customer fails to pay an invoice, and the debt is considered bad (uncollectible), businesses can claim relief on the VAT previously accounted for on that invoice. This is known as VAT Bad Debts. The percentage for VAT Bad Debts is the standard VAT rate, which is 15%.

Please note that tax regulations can change, so it's important to verify the current VAT rates and regulations with the South African Revenue Service (SARS) or a qualified tax professional. Additionally, businesses should adjust their Chart of Accounts as needed to comply with any updates in tax laws or accounting standards.

South Africa - Chart of Accounts - Manufacturing

Sample outline of a Chart of Accounts for a South African Manufacturing business?

A Chart of Accounts (COA) is a structured list of all the accounts and categories used to organize a company's financial transactions. For a South African manufacturing business, the COA needs to reflect the specific needs and requirements of the industry and the country's accounting practices. Here's a sample outline of a Chart of Accounts for a South African manufacturing business:

1. Assets
    - 1.1 Current Assets
        - 1.1.1 Cash and Cash Equivalents
        - 1.1.2 Accounts Receivable
        - 1.1.3 Inventory (Raw materials, work in progress, finished goods)
        - 1.1.4 Prepaid Expenses
        - 1.1.5 Other Current Assets
    - 1.2 Non-Current Assets
        - 1.2.1 Property, Plant, and Equipment (Land, Buildings, Machinery, etc.)
        - 1.2.2 Intangible Assets (Patents, Trademarks, Software, etc.)
        - 1.2.3 Long-Term Investments
        - 1.2.4 Other Non-Current Assets
2. Liabilities
    - 2.1 Current Liabilities
        - 2.1.1 Accounts Payable
        - 2.1.2 Short-Term Loans and Borrowings
        - 2.1.3 Accrued Liabilities
        - 2.1.4 Taxes Payable
        - 2.1.5 Other Current Liabilities
    - 2.2 Non-Current Liabilities
        - 2.2.1 Long-Term Loans and Borrowings

        - § 2.2.2 Deferred Tax Liabilities
        - § 2.2.3 Other Non-Current Liabilities

3. Equity
    - o 3.1 Share Capital
        - § 3.1.1 Ordinary Shares
        - § 3.1.2 Preference Shares
    - o 3.2 Retained Earnings
    - o 3.3 Other Equity Items
4. Income
    - o 4.1 Sales Revenue
    - o 4.2 Cost of Goods Sold (COGS)
    - o 4.3 Gross Profit
    - o 4.4 Operating Revenue (if applicable)
    - o 4.5 Operating Expenses
        - § 4.5.1 Selling and Marketing Expenses
        - § 4.5.2 General and Administrative Expenses
        - § 4.5.3 Research and Development Expenses
    - o 4.6 Operating Profit
    - o 4.7 Other Income (e.g., interest income, rental income)
5. Expenses
    - o 5.1 Cost of Goods Sold (COGS)
        - § 5.1.1 Direct Materials
        - § 5.1.2 Direct Labor
        - § 5.1.3 Factory Overhead
    - o 5.2 Selling and Marketing Expenses
        - § 5.2.1 Advertising and Promotion
        - § 5.2.2 Sales Commissions

- 5.3 General and Administrative Expenses
  - 5.3.1 Salaries and Wages
  - 5.3.2 Rent and Utilities
  - 5.3.3 Office Supplies
- 5.4 Research and Development Expenses
- 5.5 Other Operating Expenses

6. Cost of Sales
7. Taxation
   - 7.1 Current Tax
   - 7.2 Deferred Tax
8. Other Comprehensive Income
   - 8.1 Foreign Currency Translation Gains/Losses
   - 8.2 Unrealized Gains/Losses on Investments
   - 8.3 Other Items
9. Gains and Losses
   - 9.1 Gain on Sale of Assets
   - 9.2 Loss on Impairment of Assets
10. Intercompany Transactions
    - 10.1 Intercompany Revenue
    - 10.2 Intercompany Expenses
11. Dividends
12. Subsidiary and Associate Companies

Please note that the above COA is a general outline and can be tailored to meet the specific needs and reporting requirements of the manufacturing business. Additionally, it's essential to consult with a qualified accountant or financial expert to ensure compliance with South African accounting standards and regulations.

New Zealand - Chart of Accounts - NZ IFRS

What is a suggested Chart of Accounts according to the New Zealand Chart of Accounts, based on the New Zealand International Financial Reporting Standards (NZ IFRS)?

The suggested Chart of Accounts for a business in New Zealand based on the New Zealand International Financial Reporting Standards (NZ IFRS) typically includes the following main categories:

1. Assets: This category includes accounts related to the resources that a business owns or controls, such as cash, accounts receivable, inventory, and property, plant, and equipment.
2. Liabilities: This category includes accounts related to the obligations that a business owes to others, such as accounts payable, loans, and other forms of debt.
3. Equity: This category includes accounts related to the ownership interest in a business, such as share capital and retained earnings.
4. Income: This category includes accounts related to the revenue earned by a business, such as sales revenue, interest income, and rental income.

5. Expenses: This category includes accounts related to the costs incurred by a business in generating revenue, such as cost of goods sold, operating expenses, and interest expenses.

Within each of these main categories, the accounts are usually identified by a three-digit code, with the first digit indicating the category and the last two digits indicating the specific account within the category.

The specific accounts included in the Chart of Accounts can vary depending on the nature of the business and its financial reporting requirements. It is important to consult with an accountant or bookkeeper to determine the most appropriate Chart of Accounts for your business.

Is there a sample chart of accounts for New Zealand?

Yes, there are sample charts of accounts available for businesses in New Zealand. The specific accounts used may vary depending on the nature of the business, the size of the company, and the industry in which it operates.

Here is a sample Chart of Accounts based on the New Zealand Generally Accepted Accounting Principles (GAAP):

1. Assets
    - 1000 Cash and bank accounts
    - 1100 Accounts receivable
    - 1200 Inventory
    - 1300 Prepaid expenses
    - 1400 Property, plant and equipment
    - 1500 Investments
    - 1600 Other assets
2. Liabilities
    - 2000 Accounts payable
    - 2100 Accrued expenses
    - 2200 Short-term debt
    - 2300 Long-term debt
    - 2400 Other liabilities
3. Shareholder's equity

- 3000 Share capital
- 3100 Retained earnings

4. Revenue
    - 4000 Sales revenue
    - 4100 Other revenue
5. Cost of sales
    - 5000 Cost of goods sold
6. Expenses
    - 6000 Salaries and wages
    - 6100 Rent and utilities
    - 6200 Advertising and marketing
    - 6300 Insurance
    - 6400 Repairs and maintenance
    - 6500 Supplies and materials
    - 6600 Depreciation
    - 6700 Interest expense
7. Other income and expenses
    - 7000 Gain or loss on sale of assets
    - 7100 Foreign exchange gain or loss
    - 7200 Miscellaneous income and expenses
8. Taxation
    - 8000 Current income tax
    - 8100 Deferred income tax

This is just a sample Chart of Accounts, and businesses can customize it based on their individual requirements. It is recommended that businesses seek the advice of a professional accountant or bookkeeper when setting up their Chart of Accounts to ensure it is accurate and compliant with New Zealand GAAP.

What is the recommended financial categories and account groups for these accounts in the New Zealand Chart of Accounts?

The New Zealand Chart of Accounts is a standardized list of financial accounts that businesses in New Zealand can use to organize their financial transactions. Here are some recommended financial categories and account groups that can be used in the New Zealand Chart of Accounts:

1. Assets: This category includes all the resources that a business owns and controls. It includes subcategories such as:
    - Current assets (e.g. cash, accounts receivable, inventory)
    - Fixed assets (e.g. property, plant, and equipment)
    - Intangible assets (e.g. patents, trademarks, goodwill)
2. Liabilities: This category includes all the financial obligations that a business owes to others. It includes subcategories such as:
    - Current liabilities (e.g. accounts payable, taxes payable, short-term loans)
    - Long-term liabilities (e.g. long-term loans, bonds, mortgages)
3. Equity: This category includes the owners' investment in the business. It includes subcategories such as:
    - Share capital (e.g. common shares, preferred shares)
    - Retained earnings (e.g. accumulated profits or losses)
4. Income: This category includes all the revenue earned by the business. It includes subcategories such as:
    - Sales revenue (e.g. revenue from the sale of goods or services)
    - Other income (e.g. interest income, rental income)
5. Expenses: This category includes all the costs incurred by the business. It includes subcategories such as:
    - Cost of goods sold (e.g. the cost of producing or acquiring the goods sold)
    - Operating expenses (e.g. rent, salaries, utilities)
    - Depreciation and amortization (e.g. the cost of using up fixed assets and intangible assets

over time)

These financial categories and account groups can be further customized and refined to suit the specific needs of each business. It is important to consult with a professional accountant or bookkeeper to ensure that the chart of accounts is set up correctly and accurately reflects the business's financial transactions.

What accounts is suggested for payroll in New Zealand?

In New Zealand, the following accounts are commonly used to record payroll transactions in the chart of accounts:

1. Salaries and wages: This account is used to record the gross wages and salaries paid to employees.
2. PAYE payable: This account is used to record the amount of tax withheld from employee wages, which must be paid to the Inland Revenue Department (IRD) on behalf of the employee.
3. KiwiSaver payable: This account is used to record the employer's contributions to the employee's KiwiSaver account, which is a government-approved retirement savings plan.
4. Employee loan payable: This account is used to record any loans or advances made to employees.
5. Employee deduction payable: This account is used to record deductions from employee wages such as union dues, charitable donations, or voluntary insurance contributions.
6. Holiday pay payable: This account is used to record the amount of holiday pay owed to employees, which must be paid out when the employee takes a holiday or at the end of their employment.
7. Accrued payroll: This account is used to record any payroll expenses that have been incurred but not yet paid, such as salaries and wages for the current pay period that will be paid in the following pay period.
8. Bank account: This account is used to record the transactions related to the company's payroll bank account, including deposits and withdrawals for payroll-related expenses.

It is important to tailor the chart of accounts to the specific needs of the business and to ensure compliance with local regulations. Consulting with a professional accountant or payroll provider can be helpful in setting up an effective payroll system and chart of accounts for New Zealand businesses.

Australia - Chart of Accounts - Australian Accounting Standards

---

What is a suggested Australian Chart of Accounts is based on the Australian Accounting Standards and is used by businesses in Australia?

The suggested Chart of Accounts for a business in Australia based on the Australian Accounting Standards typically includes the following main categories:

1. Assets: This category includes accounts related to the resources that a business owns or controls, such as cash, accounts receivable, inventory, and property, plant, and equipment.
2. Liabilities: This category includes accounts related to the obligations that a business owes to others, such as accounts payable, loans, and other forms of debt.
3. Equity: This category includes accounts related to the ownership interest in a business, such as share capital and retained earnings.
4. Revenue: This category includes accounts related to the income earned by a business, such as sales revenue, interest income, and rental income.
5. Expenses: This category includes accounts related to the costs incurred by a business in generating revenue, such as cost of goods sold, operating expenses, and interest expenses.

Within each of these main categories, the accounts are usually identified by a four-digit code, with the first two digits indicating the category and the last two digits indicating the specific account within the category.

The specific accounts included in the Chart of Accounts can vary depending on the nature of the business and its financial reporting requirements. It is important to consult with an accountant or bookkeeper to determine the most appropriate Chart of Accounts for your business.

Is there a sample chart of accounts for Australia?

Yes, there are sample charts of accounts available for businesses in Australia. The specific accounts used may vary depending on the nature of the business, the size of the company, and the industry in which it operates.

Here is a sample Chart of Accounts based on the Australian Accounting Standards:

1. Assets
    - 1000 Cash at bank
    - 1100 Accounts receivable
    - 1200 Inventory

- 1300 Prepaid expenses
- 1400 Property, plant, and equipment
- 1500 Investments
- 1600 Other assets

2. Liabilities
    - 2000 Accounts payable
    - 2100 Accrued expenses
    - 2200 Short-term debt
    - 2300 Long-term debt
    - 2400 Other liabilities
3. Equity
    - 3000 Share capital
    - 3100 Retained earnings
4. Revenue
    - 4000 Sales revenue
    - 4100 Other revenue
5. Cost of sales
    - 5000 Cost of goods sold
6. Expenses
    - 6000 Salaries and wages
    - 6100 Rent and utilities
    - 6200 Advertising and marketing
    - 6300 Insurance
    - 6400 Repairs and maintenance
    - 6500 Supplies and materials
    - 6600 Depreciation

- 6700 Interest expense

7. Other income and expenses
    - 7000 Gain or loss on sale of assets
    - 7100 Foreign exchange gain or loss
    - 7200 Miscellaneous income and expenses
8. Taxation
    - 8000 Current income tax
    - 8100 Deferred income tax

This is just a sample Chart of Accounts, and businesses can customize it based on their individual requirements. It is recommended that businesses seek the advice of a professional accountant or bookkeeper when setting up their Chart of Accounts to ensure it is accurate and compliant with Australian Accounting Standards.

NOTE: The accounts "Taxation - 8000 Current income tax" and "Taxation - 8100 Deferred income tax" are applicable to various types of business ownership, including corporations and certain partnerships. They are typically used to record tax-related transactions and obligations.

In the case of sole proprietorships, the taxation accounts mentioned above may not be relevant or commonly used. Sole proprietorships are typically treated as pass-through entities for tax purposes, meaning the business owner reports and pays taxes on their personal income tax return rather than having separate business tax accounts.

However, it's important to note that tax requirements and regulations can vary by jurisdiction. In some countries, even sole proprietorships may have specific tax reporting obligations or may need to account for certain tax-related transactions. Therefore, it's always advisable to consult with a tax professional or accountant familiar with the specific tax laws in the relevant jurisdiction to determine the appropriate accounts to be included in the Chart of Accounts for a sole proprietorship or any other type of business ownership.

What is the recommended financial categories and account groups for accounts in the Australia Chart of Accounts?

The Australian Chart of Accounts is a standardized list of financial accounts that businesses in Australia can use to organize their financial transactions. Here are some recommended financial categories and account groups that can be used in the Australian Chart of Accounts:

1. Assets: This category includes all the resources that a business owns and controls. It includes subcategories such as:
    - Current assets (e.g. cash, accounts receivable, inventory)
    - Non-current assets (e.g. property, plant, and equipment)
    - Intangible assets (e.g. patents, trademarks, goodwill)
2. Liabilities: This category includes all the financial obligations that a business owes to others. It includes subcategories such as:
    - Current liabilities (e.g. accounts payable, taxes payable, short-term loans)
    - Non-current liabilities (e.g. long-term loans, bonds, mortgages)
3. Equity: This category includes the owners' investment in the business. It includes subcategories such as:
    - Share capital (e.g. common shares, preferred shares)
    - Retained earnings (e.g. accumulated profits or losses)
4. Income: This category includes all the revenue earned by the business. It includes subcategories such as:
    - Sales revenue (e.g. revenue from the sale of goods or services)
    - Other income (e.g. interest income, rental income)
5. Expenses: This category includes all the costs incurred by the business. It includes subcategories such as:
    - Cost of sales (e.g. the cost of producing or acquiring the goods sold)
    - Operating expenses (e.g. rent, salaries, utilities)
    - Depreciation and amortization (e.g. the cost of using up fixed assets and intangible assets over time)

These financial categories and account groups can be further customized and refined to suit the specific needs of each business. It is important to consult with a professional accountant or bookkeeper to ensure that the chart of accounts is set up correctly and accurately reflects the business's financial transactions.

What is VAT / GST rates in Australia?

As in September 2021, the Goods and Services Tax (GST) rate in Australia is 10%. The GST is a value-added tax applied to most goods and services consumed in Australia.

It's important to note that tax rates and regulations can change over time, so it's advisable to consult official sources or the Australian Taxation Office (ATO) for the most up-to-date information on VAT/GST rates in Australia.

What is business activity statements (BAS) ?

Business Activity Statements (BAS) are a reporting requirement for businesses in Australia. They are used to report and pay various tax obligations to the Australian Taxation Office (ATO). BAS statements are typically lodged on a monthly, quarterly, or annual basis, depending on the business's turnover and reporting obligations.

The BAS includes information about the business's income, expenses, and GST (Goods and Services Tax) collected and paid. It covers various taxes and obligations, including:

1. Goods and Services Tax (GST): Businesses registered for GST must report the GST they have collected from sales and claim GST credits on eligible business expenses.
2. Pay as You Go (PAYG) Withholding: This involves reporting and remitting the amounts withheld from employees' wages for income tax purposes.
3. Pay as You Go (PAYG) Instalments: Businesses making regular payments towards their expected income tax liability may need to report and pay PAYG instalments.
4. Fringe Benefits Tax (FBT): If a business provides fringe benefits to employees or associates, they may need to report and pay FBT.
5. Wine Equalization Tax (WET): Applicable to businesses involved in the production or wholesale of wine.
6. Luxury Car Tax (LCT): This applies to businesses that sell or import luxury cars.

By lodging a BAS, businesses ensure compliance with their tax obligations and provide the ATO with accurate financial information. The frequency of BAS lodgement depends on the business's turnover, with larger businesses typically required to lodge on a monthly basis.

Is there a chart of accounts based on Business Activity Statements (BAS) ?

The Business Activity Statement (BAS) is a reporting requirement in Australia that encompasses various tax obligations. While the BAS provides a structure for reporting and paying taxes, it doesn't prescribe a specific chart of accounts.

The chart of accounts is a financial organizational tool that helps categorize and record transactions within a business. It provides a systematic framework for classifying and tracking financial activities. The specific accounts included in a chart of accounts can vary depending on the nature of the business, its industry, and reporting requirements.

However, when preparing the financial statements for BAS reporting, businesses typically utilize a chart of accounts that aligns with the relevant accounting standards and regulations. This includes accounts for income, expenses, assets, liabilities, and equity, which are necessary for generating accurate financial information for BAS reporting purposes.

While there isn't a specific chart of accounts prescribed by the BAS, businesses can customize their chart of accounts to ensure compliance with the reporting requirements and capture the necessary information for the BAS lodgement. It's essential to consult with accounting professionals or refer to accounting standards and regulations specific to your jurisdiction to design a suitable chart of accounts that meets the BAS reporting needs.

What accounts is suggested for payroll in Australia?

In Australia, the following accounts are commonly used to record payroll transactions in the chart of accounts:

1. Salaries and wages: This account is used to record the gross wages and salaries paid to employees.
2. Employee benefits expense: This account is used to record the cost of employee benefits such as superannuation contributions, sick leave, annual leave, and long service leave.
3. Payroll tax expense: This account is used to record the employer's share of payroll taxes, which include taxes such as the Payroll Tax, the Superannuation Guarantee Charge (SGC), and the Medicare Levy Surcharge.
4. PAYG withholding payable: This account is used to record the amount of tax withheld from employee wages, which must be paid to the Australian Taxation Office (ATO) on behalf of the employee.
5. Superannuation payable: This account is used to record the employer's contributions to employee superannuation funds.
6. Employee loan payable: This account is used to record any loans or advances made to employees.
7. Employee deduction payable: This account is used to record deductions from employee wages such as union dues, charitable donations, or voluntary insurance contributions.
8. Accrued payroll: This account is used to record any payroll expenses that have been incurred but not yet paid, such as salaries and wages for the current pay period that will be paid in the following pay period.

9. Bank account: This account is used to record the transactions related to the company's payroll bank account, including deposits and withdrawals for payroll-related expenses.

It is important to tailor the chart of accounts to the specific needs of the business and to ensure compliance with local regulations. Consulting with a professional accountant or payroll provider can be helpful in setting up an effective payroll system and chart of accounts for Australian businesses.

Which accounting standards is applicable to businesses in Canada?

As of ChatGPT's last update in September 2021, the accounting standards applicable to businesses in Canada are primarily governed by the Accounting Standards for Private Enterprises (ASPE) and the Accounting Standards for Not-for-Profit Organizations (ASNPO). These standards are issued by the Accounting Standards Board (AcSB) of the Canadian Institute of Chartered Accountants (CICA).

1. Accounting Standards for Private Enterprises (ASPE): ASPE applies to private companies, which are typically smaller and privately held businesses. ASPE provides specific accounting principles and guidelines for preparing financial statements in accordance with Canadian Generally Accepted Accounting Principles (GAAP) for private enterprises.
2. Accounting Standards for Not-for-Profit Organizations (ASNPO): ASNPO sets out the accounting

principles for not-for-profit organizations, including charities and other non-profit entities. It provides guidance on how to report financial transactions and activities for these types of organizations.

In addition to ASPE and ASNPO, publicly accountable enterprises in Canada, such as publicly traded companies and certain financial institutions, are required to follow the International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board (IASB). IFRS is also used in many other countries worldwide.

It's important to note that accounting standards and regulations can change over time, so I recommend checking with the Canadian Accounting Standards Board or consulting with a qualified accounting professional for the most up-to-date information on accounting standards applicable to businesses in Canada.

Example Chart of Accounts Structure - Canada

Below is a sample outline of a Chart of Accounts for a Canadian company. Please note that the specific accounts may vary based on the company's industry, size, and reporting requirements. Additionally, account numbering conventions may differ between companies, so the numbering used here is just one example.

1. Assets
    - 1.1 Current Assets
        - 1.1.01 Cash and Cash Equivalents
        - 1.1.02 Accounts Receivable
        - 1.1.03 Inventory
        - 1.1.04 Prepaid Expenses
    - 1.2 Non-Current Assets
        - 1.2.01 Property, Plant, and Equipment
        - 1.2.02 Intangible Assets
        - 1.2.03 Investments
        - 1.2.04 Long-term Receivables
        - 1.2.05 Deferred Tax Assets
2. Liabilities
    - 2.1 Current Liabilities

        - § 2.1.01 Accounts Payable
        - § 2.1.02 Short-term Loans
        - § 2.1.03 Accrued Liabilities
        - § 2.1.04 Current Portion of Long-term Debt
    - o 2.2 Non-Current Liabilities
        - § 2.2.01 Long-term Loans
        - § 2.2.02 Deferred Tax Liabilities
        - § 2.2.03 Other Non-Current Liabilities
        - § 2.2.04 Long-term Debt

3. Equity
    - o 3.1 Share Capital
        - § 3.1.01 Common Shares
        - § 3.1.02 Preferred Shares
    - o 3.2 Retained Earnings
    - o 3.3 Additional Paid-In Capital
    - o 3.4 Other Comprehensive Income
4. Revenue
    - o 4.1 Sales Revenue
    - o 4.2 Service Revenue
    - o 4.3 Interest Income
    - o 4.4 Other Operating Revenue
5. Cost of Sales (Cost of Goods Sold)
    - o 5.1 Direct Labor
    - o 5.2 Raw Materials
    - o 5.3 Manufacturing Overheads
6. Expenses
    - o 6.1 Salaries and Wages

- 6.2 Rent and Utilities
- 6.3 Advertising and Marketing
- 6.4 Insurance
- 6.5 Repairs and Maintenance
- 6.6 Supplies and Materials
- 6.7 Depreciation and Amortization
- 6.8 Interest Expense
- 6.9 Taxes and Licences
- 6.10 Bad Debts
- 6.11 Other Operating Expenses

7. Other Income and Expenses
    - 7.1 Gain/Loss on Sale of Assets
    - 7.2 Foreign Exchange Gains/Losses
    - 7.3 Investment Income
    - 7.4 Non-operating Income/Expense
8. Equity Reserve (Optional)
    - 8.1 Capital Reserve
    - 8.2 Revaluation Reserve
    - 8.3 Treasury Stock

Please keep in mind that this is a simplified example, and the actual Chart of Accounts used by a Canadian company may have additional accounts or different sub-categories based on their specific requirements. As always, consulting with an accountant or financial professional familiar with Canadian accounting standards and tax regulations is recommended for tailoring the Chart of Accounts to your company's needs.

What accounts is suggested for payroll in Canada?

There are several accounts that businesses in Canada may use to properly track and manage payroll-related transactions. Some suggested accounts include:

1. Salaries and Wages Expense: This account is used to record the gross wages and salaries paid to employees during a specific period.
2. CPP Payable: This account is used to track the employer and employee portions of the Canada Pension Plan contributions withheld from employees' paychecks.
3. EI Payable: This account is used to track the employer and employee portions of Employment Insurance premiums withheld from employees' paychecks.
4. Income Tax Payable: This account is used to track the amounts of federal and provincial income tax withheld from employees' paychecks.
5. XPP Payable: This account is used to track any extra payroll expenses incurred by a business, such as overtime pay or bonuses, that have not yet been paid to employees.
6. Employee Benefits Payable: This account is used to track any employee benefits owed to employees, such as vacation pay, sick pay, or health insurance premiums.

Properly tracking payroll-related transactions in these accounts is important for accurately reporting payroll expenses, remitting payroll taxes to the government, and ensuring timely payment of employee wages and benefits. It is important to consult with an accountant or bookkeeper to determine the most appropriate accounts for your business's specific payroll needs.

Is there any sub accounts suggested to control Payroll expenses in the balance sheet?

Yes, there are several sub-accounts that businesses in Canada may use to control payroll expenses in the balance sheet. Some suggested sub-accounts include:

1. Gross Payroll: This account is used to track the total amount of salaries and wages paid to employees during a specific period, before any deductions are made for payroll taxes, benefits, or other expenses.
2. Payroll Taxes Payable: This account is used to track the amounts of CPP, EI, and income tax withheld from employees' paychecks and owed to the government.
3. Employee Benefits Payable: This account is used to track the amounts owed to employees for benefits such as vacation pay, sick pay, or health insurance premiums.
4. XPP Payable: This account is used to track any extra payroll expenses incurred by a business, such as overtime pay or bonuses, that have not yet been paid to employees.
5. Net Payroll: This account is used to track the amount of salaries and wages paid to employees after all deductions have been made for payroll taxes, benefits, and other expenses.
6. Wages Payable: This account is used to track the amounts owed to employees for regular wages or

salaries.

Properly tracking payroll expenses in these sub-accounts can help businesses to better control their payroll costs, manage their cash flow, and ensure compliance with payroll regulations. It is important to consult with an accountant or bookkeeper to determine the most appropriate sub-accounts for your business's specific payroll needs.

XPP Payable and CPP Payable is there a difference?

Yes, there is a difference between XPP Payable and CPP Payable.

XPP Payable refers to the extra payroll expenses that have been incurred by a business but have not yet been paid to its employees, such as overtime pay, bonuses, or other forms of additional compensation.

On the other hand, CPP Payable refers to the amounts of Canada Pension Plan contributions that have been withheld from employees' paychecks but have not yet been remitted to the government. Both employers and employees are required to contribute to the CPP program through CPP premiums.

While XPP Payable and CPP Payable are both payroll-related liabilities that businesses must track and remit on time, they represent different types of expenses. XPP Payable is an additional expense incurred by the business, while CPP Payable represents the employer and employee contributions to a mandatory government program.

What accounts is suggested for payroll in USA?

In the USA, common accounts used for payroll include:

1. Salaries and Wages Payable: This account is used to record the amount of salaries and wages owed to employees for work performed but not yet paid.
2. Payroll Taxes Payable: This account is used to record the amounts of federal, state, and local payroll taxes that are withheld from employees' paychecks and are owed to the appropriate tax authorities.
3. Employee Benefits Payable: This account is used to record the amounts owed to employees for benefits such as health insurance, retirement plans, and other employee benefits.
4. Accrued Vacation and Sick Pay: This account is used to record the amount of paid time off that employees have earned but not yet taken.
5. Advances from Employees: This account is used to record any amounts advanced to employees and will be deducted from future paychecks.
6. Payroll Clearing: This account is used to reconcile the amounts paid to employees with the amounts recorded in the various payroll accounts.

It is important to note that the specific accounts used may vary depending on the company's accounting practices and chart of accounts. Companies should consult with their accountants or financial advisors to determine the appropriate accounts for their specific circumstances.

Which of these accounts is expense accounts and which accounts is current liabilities?

Of the accounts listed in the previous answer, the following are expense accounts:

1. Salaries and Wages Expense: This account is used to record the amount of salaries and wages earned by employees during a specific period.
2. Payroll Taxes Expense: This account is used to record the amounts of federal, state, and local payroll taxes that are incurred by the employer based on employee wages.
3. Employee Benefits Expense: This account is used to record the cost of providing employee benefits

such as health insurance, retirement plans, and other benefits.

4. Accrued Vacation and Sick Pay Expense: This account is used to record the expense associated with paid time off that employees have earned but not yet taken.

The following account is a current liability:

Salaries and Wages Payable: This account is used to record the amount of salaries and wages owed to employees for work performed but not yet paid. It represents a current liability because it is a debt that is expected to be paid within one year.

The following accounts could be either an expense account or a current liability depending on their balance:

- Payroll Taxes Payable: This account is used to record the amounts of federal, state, and local payroll taxes that are withheld from employees' paychecks and are owed to the appropriate tax authorities. It represents a current liability because it is a debt that is expected to be paid within one year, but it could also be considered an expense account if the employer is required to pay these taxes on its own.
- Advances from Employees: This account is used to record any amounts advanced to employees and will be deducted from future paychecks. It could represent a current liability if the amount advanced is expected to be repaid within one year, but it could also be considered an expense account if the amount advanced is not expected to be repaid.

What s FUTA Payable?

FUTA stands for the Federal Unemployment Tax Act, which is a federal law that requires employers to pay a tax to fund unemployment benefits for eligible workers. FUTA Payable refers to the amount of federal unemployment tax that an employer owes to the government but has not yet paid. The FUTA tax rate is a percentage of the first $7,000 of each employee's wages, and the rate may vary depending on the state where the employer operates. Employers are required to report their FUTA liability on their quarterly federal tax return, and any unpaid FUTA liability may result in penalties and interest charges.

What is SUTA?

SUTA stands for State Unemployment Tax Act, which is a state-level tax that employers must pay to fund unemployment benefits for eligible workers in their state. Each state has its own SUTA tax rate and wage base, which may vary depending on the size of the employer and the industry in which they operate. Employers are typically required to register with their state's workforce agency and pay SUTA taxes on a quarterly basis. The SUTA tax is based on a percentage of the wages paid to employees during a certain period, and the funds collected are used to provide unemployment benefits to eligible workers who have

lost their jobs through no fault of their own. Employers who fail to pay their SUTA taxes or who do not comply with state reporting requirements may be subject to penalties and interest charges.

1030 Payroll Checking Account - Which transactions is processed in this account?

The Payroll Checking Account (1030) is typically used to process transactions related to payroll. This account is used to record the deposits of funds from the employer's bank account to cover payroll expenses, as well as the payments made to employees via direct deposit or checks. The following transactions are typically processed in this account:

1. Deposit of funds to cover payroll expenses: This includes the deposit of funds from the employer's bank account to cover the total payroll expense for a specific period.
2. Payment of wages to employees: This includes the payment of wages and salaries to employees via direct deposit or checks.
3. Payment of payroll taxes: This includes the payment of federal, state, and local payroll taxes that are withheld from employees' paychecks and are owed to the appropriate tax authorities.
4. Payment of employee benefits: This includes the payment of employee benefits such as health insurance premiums, retirement plan contributions, and other benefits.
5. Reconciliation of account balances: This includes the reconciliation of the Payroll Checking Account balance with the total payroll expense for the period, as well as the verification of the accuracy of individual employee paychecks and the payroll tax calculations.

It is important to note that the specific transactions processed in this account may vary depending on the company's payroll processes and accounting practices. Companies should consult with their accountants or financial advisors to determine the appropriate transactions to process in this account.

Example and notes for a 4-digit Chart of Accounts

Control accounts when creating a Set of Books from scratch

In osFinancials5/TurboCASH5, when creating a Set of Books from scratch using the "*Customize your own Set of Books (Advanced)?*" option in the "*Creation wizard*", you have the flexibility to define your chart of accounts according to your specific needs and requirements.

As part of this customization process, you will have the opportunity to set the number of main digits for your accounts, ranging from 3 to 8 digits. Additionally, you will specify the account numbers for three main control accounts: the Creditors control account, Debtors control account, and Retained earnings account.

1. The Creditors control account is a general ledger account that represents the total amount owed to the company by its creditors or suppliers. It serves as a summary account for all individual creditor accounts and helps track the company's outstanding payables.
2. The Debtors control account, on the other hand, is a general ledger account that represents the total amount owed to the company by its debtors or customers. It acts as a summary account for all individual debtor accounts and aids in monitoring the company's receivables.
3. The Retained earnings account, reflects the cumulative net earnings or profits of the company that have been retained and reinvested in the business. It represents the portion of equity that is derived from the company's profitability and serves as a financial record of the accumulated profits over time.

By defining these main control accounts during the Set of Books creation process, you can structure your chart of accounts and design the account numbering system that aligns with your specific accounting practices and reporting requirements.

Account number	*Description*	*Notes*
G2000-000	*Creditor's control*	*The Creditor's control account, also known as the Accounts payable control account or Creditor's control ledger account, is a general ledger account used to track and summarize the total amount owed to creditors or suppliers by a business.* *It represents the outstanding balances of individual creditor accounts in the accounts payable subsidiary ledger. The subsidiary ledger contains detailed information about each specific creditor, such as their name, contact details, and transaction history.* *The purpose of the Creditor's control account is to provide a summary of all the amounts owed to creditors at any given time. It helps businesses monitor their payable balances, track payment due dates, and ensure accurate financial reporting.* *Transactions related to purchases on credit from suppliers, invoice payments, and adjustments are recorded in both the subsidiary ledger (creditor accounts) and the Creditor's control account in the general ledger. The balances of individual creditor accounts are periodically reconciled with the balance in the Creditor's control account to ensure accuracy.*

		The Creditor's control account is an important component of a business's financial records, enabling effective management of accounts payable and ensuring timely payment to creditors.
G1100-000	*Debtor's control*	*The Debtor's control account, also known as the Accounts receivable control account or Debtor's control ledger, is a general ledger account used to track and summarize the total amount owed by debtors or customers to a business.* *Similar to the Creditor's control account, the Debtor's control account represents the outstanding balances of individual debtor accounts in the accounts receivable subsidiary ledger. The subsidiary ledger contains detailed information about each specific debtor, including their name, contact details, and transaction history.* *The primary purpose of the Debtor's control account is to provide a summary of all the amounts owed by customers at any given time. It helps businesses monitor their receivable balances, track payment due dates, and ensure accurate financial reporting.* *Transactions related to sales on credit to customers, receipt of customer payments, and adjustments are recorded in both the subsidiary ledger (debtor accounts) and the Debtor's Control Account in the general ledger. The balances of individual debtor accounts are periodically reconciled with the balance in the Debtor's Control Account to ensure accuracy.* *The Debtor's Control Account plays a crucial role in managing a business's accounts receivable, allowing for effective tracking of customer balances and timely collection of payments. It provides valuable information for cash flow management, credit control, and financial analysis.*
G3900-000	*Retained earnings*	*The Retained earnings account, also known as the Accumulated earnings account or Earnings surplus, is a general ledger account that represents the cumulative net earnings or profits of a company that have been retained and reinvested in the business rather than distributed to shareholders as dividends.* *Retained earnings are generated from the company's net income, which is calculated by deducting expenses from revenues. Instead of distributing all of the net income to shareholders, a portion of it is retained within the company. This retained portion is added to the Retained earnings account.* *The Retained earnings account serves as a financial record of the company's accumulated profits over time. It reflects the cumulative value of the company's retained earnings from its inception until the present. The*

account is adjusted at the end of each accounting period to reflect changes in net income and any dividends declared.

The Retained earnings account is an important component of the company's equity section on the balance sheet. It represents the portion of equity that is derived from the company's profitability and retained within the business. Retained earnings can be used for various purposes, such as reinvesting in the business, funding expansion projects, reducing debt, or distributing dividends in the future.

The balance in the Retained earnings account is carried forward from one accounting period to the next. It serves as a source of funding for future growth and helps to enhance the company's financial stability and flexibility. The account also provides insights into the historical profitability and financial performance of the company.

Basic outline for a 4-digit main accounts chart of accounts

The outline for the chart of accounts is a general framework that can be applicable to various accounting systems, including IFRS for SMEs. It covers different categories of accounts that are commonly found in financial reporting. While the account ranges and specific names may vary depending on the company and reporting requirements, the general structure remains similar.

The suggested outline includes:

1. Asset accounts (1000 - 1999): Accounts representing various types of assets owned or controlled by the business, such as cash, receivables, inventory, and fixed assets. They include cash, short-term investments, accounts receivable, inventory, prepaid expenses, property, plant, and equipment, intangible assets, investments, and other assets.
2. Liability accounts (2000 - 2999): Accounts representing the financial obligations or debts of the business to external parties, including payables, borrowings, and accrued liabilities. They include accounts payable, accrued expenses, short-term borrowings, long-term borrowings, deferred revenue, and other current and long-term liabilities.
3. Equity accounts (3000 - 3999): Accounts representing the equity portion of the company's capital structure, depending on the type of business ownership (sole proprietorship, partnership, corporation, LLC). For a sole proprietorship, they typically include owner's capital, owner's drawings, and retained earnings. In a partnership, they include partner's capital accounts, partner's drawings, partner's profit and loss allocation, and retained earnings. In a corporation, they include common stock, preferred stock, additional paid-in capital, retained earnings, and treasury stock. In a limited liability company (LLC), they include member's capital accounts, member's drawings, member's profit and loss

allocation, and retained earnings.

4. Revenue accounts (4000 - 4999): Accounts representing the income or revenue generated by the company's primary business activities. They include operating revenue, which is directly related to the core operations, and other revenue, which includes income from sources incidental or peripheral to the main operations.
5. Cost of Goods Sold (COGS) accounts (5000 - 5999): Accounts reflecting the direct costs associated with producing or acquiring the goods or services sold by the company. The specific account names may vary, such as Cost of Sales (COS) or Cost of Services Rendered (SOSR), depending on the nature of the business.
6. Expense accounts (6000 - 7999): Accounts representing the operating expenses incurred by the business in its day-to-day operations. They include wages, rent, utilities, materials, and other expenses directly related to the revenue-generating activities.
7. Non-operating revenue accounts (8000 - 8999): Accounts recording income or revenue generated by the business that is not directly related to its core operations. It includes sources of income that are incidental, peripheral, or non-recurring in nature.
8. Non-operating expenses accounts (9000 - 9999): Accounts reflecting expenses incurred by the business that are not directly related to its core operations. They typically arise from activities outside the normal operations and are separate from operating expenses.

This summary is a general outline of the typical accounts found within each range.

It's important to customize and adjust this chart of accounts and reporting framework to suit your business's specific requirements and comply with the relevant reporting standards, tax regulations, and accounting frameworks in your jurisdiction and country. Factors such as your business ownership type, industry, and other specific needs should be considered when adapting the chart of accounts and reporting framework to ensure accurate and relevant financial reporting for your business.

Expanded outline for a 4-digit main accounts chart of accounts

The following expanded summary serves as a general guide outlining the common accounts within each range. It includes account groups or classifications linked to financial categories like assets, liabilities, equity, income, and expenses. This summary provides a recommended numbering template to follow when designing and numbering your accounts.

The chart of accounts is based on a four-digit numbering system, which helps organize all your accounts. Here’s the most common numbering template to follow when designing and numbering your accounts:

- Asset accounts (1000 - 1999): Assets are economic resources that are owned or controlled by a

business or individual and are expected to provide future benefits. In accounting, assets are recorded on a balance sheet and represent the value of what an entity owns. Assets can take various forms, including cash, inventory, property, equipment, investments, and intellectual property.

Asset accounts in the range of 1000-1999 typically represent various types of assets on a company's balance sheet. Here's a concise summary of these asset accounts:

1. Cash and Cash Equivalents (1000-1099): This account includes cash on hand, demand deposits, and highly liquid short-term investments that can be readily converted into cash.
2. Short-term Investments (1100-1199): These accounts cover investments in securities and other financial instruments that are expected to be converted into cash within a relatively short period, typically one year or less.
3. Accounts Receivable (1200-1299): This account represents amounts owed to the company by its customers or clients for goods sold or services rendered on credit.
4. Inventory (1300-1399): This account includes the cost of raw materials, work-in-progress, and finished goods held by the company for sale or production.
5. Prepaid Expenses (1400-1499): This account represents expenses that have been paid in advance but have not yet been incurred or used. Examples include prepaid insurance, prepaid rent, or prepaid subscriptions.
6. Property, Plant, and Equipment (1500-1599): This account encompasses the tangible assets used in the business, such as land, buildings, machinery, vehicles, and furniture.
7. Intangible Assets (1600-1699): These accounts capture non-physical assets, such as patents, copyrights, trademarks, goodwill, and intellectual property, which provide long-term value to the business.
8. Investments (1700-1799): This account includes long-term investments in equity securities, bonds, and other financial instruments that are not expected to be converted into cash within the next year.
9. Other Assets (1800-1999): This account serves as a catch-all category for any additional assets that don't fit into the above classifications. It may include items like deferred tax assets, advances to suppliers, or miscellaneous assets.

It's important to note that the specific account numbers and classifications may vary depending on the company's chart of accounts and reporting framework. The above summary provides a general overview of common asset accounts within the given range.

- Liability accounts (2000 - 2999): Liabilities are obligations or debts that a business or individual owes to external parties. They represent the claims or obligations that others have on the assets of the

entity. In accounting, liabilities are recorded on the balance sheet and reflect the financial obligations that need to be fulfilled in the future.

The range of accounts from 2000 to 2999 typically represents liability accounts in the chart of accounts. These accounts capture the various types of financial obligations or debts that a business owes to external parties. Here is a concise summary of common liability accounts within this range:

1. Accounts Payable (2000-2099): This account represents the amount owed to suppliers or vendors for goods or services received on credit. It includes unpaid invoices and bills that are due to be paid.
2. Accrued Expenses (2100-2199): These are expenses that have been incurred but not yet paid or recorded in the accounting system. They include accrued wages, accrued interest, and accrued utilities.
3. Short-term Borrowings (2200-2299): This account captures short-term loans or borrowings that are due within one year or the normal operating cycle of the business. It includes bank loans, lines of credit, and short-term notes payable.
4. Long-term Borrowings (2300-2399): This account represents long-term loans or borrowings that extend beyond the next year. It includes long-term bank loans, bonds payable, and other long-term debt obligations.
5. Deferred Revenue (2400-2499): Also known as unearned revenue, this account records the amount received in advance from customers for goods or services that are yet to be delivered. It represents an obligation to provide the products or services in the future.
6. Other Current Liabilities (2500-2599): This category includes various short-term financial obligations that do not fit into specific accounts mentioned above. It may include items such as accrued taxes, customer deposits, and other short-term liabilities.
7. Other Long-term Liabilities (2600-2699): Similar to other current liabilities, this category captures long-term financial obligations that are not classified under specific accounts. It may include items such as deferred tax liabilities, long-term customer deposits, and other long-term liabilities.

These are just a few examples of common liability accounts within the 2000-2999 range. The specific accounts and their numbering may vary depending on the organization's chart of accounts and industry-specific requirements.

- Equity accounts (3000 - 3999): The complexity of required accounts for the equity financial category in the chart of accounts can vary depending on the type of business ownership. Here is a brief summary of the accounts typically used for equity in different types of business ownership:

1. Sole Proprietorship:
    - § Owner's Capital: Represents the owner's investment in the business.
    - § Owner's Drawings: Records withdrawals made by the owner for personal use.
    - § Retained Earnings: Accumulated profits or losses that have been retained in the business.
2. Partnership:
    - § Partner's Capital Accounts: Each partner has a separate capital account to track their investment in the partnership.
    - § Partner's Drawings: Records withdrawals made by partners for personal use.
    - § Partner's Profit and Loss Allocation: Tracks the allocation of profits or losses among partners based on their agreed-upon sharing ratios.
    - § Retained Earnings: Accumulated profits or losses that have been retained in the partnership.
3. Corporation:
    - § Common Stock: Represents the ownership interest of common shareholders.
    - § Preferred Stock: Represents the ownership interest of preferred shareholders, if applicable.
    - § Additional Paid-in Capital: Records the amount received from shareholders in excess of the par value of the shares.
    - § Retained Earnings: Accumulated profits or losses that have not been distributed to shareholders as dividends.
    - § Treasury Stock: Represents shares of the corporation's own stock that have been repurchased and are held by the corporation.
4. Limited Liability Company (LLC):
    - § Member's Capital Accounts: Each member has a separate capital account to track their investment in the LLC.
    - § Member's Drawings: Records withdrawals made by members for personal use.
    - § Member's Profit and Loss Allocation: Tracks the allocation of profits or losses among members based on their agreed-upon sharing ratios.
    - § Retained Earnings: Accumulated profits or losses that have been retained in the LLC.

The complexity of these accounts may vary depending on the specific requirements of the business and any additional factors applicable to the industry or jurisdiction. It is important to consult with an accountant or financial professional to ensure the chart of accounts accurately reflects the equity structure and financial reporting needs of the specific business ownership type.

- Revenue accounts (4000 - 4999):
    - Operating revenue are the revenue generated through the primary business activities or core operations by a business. It represents the income earned from the sale of goods, provision of services, or other activities directly related to the main operations of the business.
    - Other revenue refers to income or revenue generated by a company from sources other than its primary business activities or core operations. It includes income that is incidental or peripheral to the main operations of the company. It is often considered as supplementary or ancillary revenue. Examples of accounts that can be categorized as "Other Revenue" and are not necessarily non-operating revenue. These accounts represent income or revenue generated from sources that are not directly related to the company's primary business activities. Here are some examples:
        1. Dividend Income: Income received from owning shares of other companies, typically in the form of dividends.
        2. Donations or Gifts: Any non-business-related contributions or gifts received.
        3. Gain on Sale of Assets: Profits realized from the sale of non-inventory assets like property, equipment, or investments. When a company sells its assets, such as property, equipment, or investments, at a price higher than their carrying value, the difference between the sale proceeds and the book value is recognized as a gain and recorded as Other Revenue.
        4. Insurance Proceeds / Insurance Reimbursements: Amounts received from insurance claims due to unexpected events or losses. If a company receives insurance reimbursements for claims related to damages, losses, or liabilities, the amount received would be classified as Other Revenue.
        5. Interest Income: Interest earned on bank deposits, loans to others, or any interest-bearing securities.
        6. Foreign Exchange Gains: Gains resulting from favourable currency exchange rate fluctuations. Companies that engage in international transactions may have foreign currency exchange gains when converting foreign currencies back to the reporting currency.

7. Recovery of Bad Debts: Income obtained from previously written-off bad debts that have now been recovered.
8. Rental Income: Revenue generated from leasing out property, equipment, or other assets. If a company owns properties or assets that are rented out to third parties, the rental income generated from those assets would be considered as Other Revenue.
9. Royalties and Licensing Fees: Income earned from granting the use of intellectual property, trademarks, or patents.If a company licences its intellectual property, such as patents, trademarks, or copyrights, to other entities in exchange for royalties, the income received from those royalties would fall under Other Revenue.
10. Miscellaneous Income: Any other sources of income that do not fit into the primary revenue categories.

Other Income" is a general accounting term used to classify revenue or income that does not arise from a company's primary business operations or core activities. It includes various non-operating or incidental sources of income that are not directly related to the sale of goods or services.

Other Income is typically recorded in a separate section of the income statement or profit and loss statement, apart from the main revenue from operations. It is essential to segregate Other Income to provide a clear picture of the business's primary revenue-generating activities and any additional income streams.

It's important to note that the specific items included under Other Income will depend on the nature of the business and its operations. Some companies may have more diverse sources of other income than others. Accurate recording and proper classification of Other Income are crucial for transparent financial reporting and analysis.

As with any accounting terminology, it's always best to refer to the organization's accounting policies and consult with a qualified accountant or financial professional for clarity and accuracy in financial reporting.

These examples demonstrate that Other Revenue accounts can encompass a variety of income sources that are not directly related to the company's core operations. It's important to note that the specific accounts and classifications may vary depending on the industry and the company's individual circumstances.

- Cost of Goods Sold (COGS) (5000 - 5999): Gross profit is calculated by subtracting the COS, COGS, or SOSR from the revenue generated from the sale of goods or services. It represents the profit generated from the core operations of the business before considering other operating expenses. Gross profit provides insight into the efficiency and profitability of a company's primary revenue-

generating activities.

- Cost of Sales (COS): Cost of Sales is a broader term that encompasses the cost associated with both goods and services sold by a company. It includes the direct costs incurred in producing or providing the products or services, such as raw materials, labour, and overhead costs. COS is typically used in service-oriented businesses where goods are not the primary focus.
- Cost of Goods Sold (COGS): COGS specifically refers to the direct costs incurred in producing or acquiring the goods that are sold by a company. It includes the cost of raw materials, direct labour, and manufacturing overhead directly associated with the production of goods. COGS is primarily used in manufacturing, retail, and distribution businesses.
- Cost of Services Rendered (SOSR): SOSR is similar to COGS but applies specifically to service-based businesses. It represents the direct costs associated with providing services to customers, such as labour, subcontractor fees, and any other expenses directly related to delivering the services.

- Expense accounts (6000 - 7999): Operating expenses are expenses incurred by a business in the ordinary course of its operations, such as wages, rent, utilities, and materials. These expenses are directly related to the revenue-generating activities of the business and are subtracted from revenue to arrive at operating income.
- Non-operating revenue (8000 - 8999): Non-operating revenue refers to income or revenue generated by a business that is not directly related to its core operations or primary business activities. It includes sources of income that are incidental, peripheral, or non-recurring in nature. Non-operating revenue typically arises from activities that are outside the day-to-day operations of the business.
- Non-operating expenses (9000 - 9999): Non-operating expenses refer to expenses incurred by a business that are not directly related to its core operations or primary business activities. These expenses are typically incidental, peripheral, or non-recurring in nature. Non-operating expenses arise from activities that are outside the day-to-day operations of the business. They are usually separate from the expenses directly associated with producing or delivering goods or services. Non-operating expenses are expenses that are not directly related to the core revenue-generating activities of the business. They typically arise from activities outside of the normal operations, such as interest expense, foreign exchange losses, or one-time charges. Non-operating expenses are reported separately from operating expenses and are taken into account when calculating net income.

The sample chart of account numbers serves as a guideline and helps you understand the different accounts that should be established and the procedure for adding new account numbers.

Balance sheet

In osFinancials5/TurboCASH5, the Balance sheet accounts represent the Assets, Liabilities, and Equity items of a company. These accounts can be further organised and classified by utilising up to two account groups, namely Account group 1 and Account group 2. You can configure these account groups in the Setup → Groups menu on the Setup ribbon. It is important to link these account groups to the corresponding financial categories in the Setup → Financial categories menu on the Setup ribbon.

G2000-000	*Creditor's control*	*The Creditor's control account, also known as the Accounts payable control account or Creditor's control ledger account, is a general ledger account used to track and summarize the total amount owed to creditors or suppliers by a business.* *It represents the outstanding balances of individual creditor accounts in the accounts payable subsidiary ledger. The subsidiary ledger contains detailed information about each specific creditor, such as their name, contact details, and transaction history.* *The purpose of the Creditor's control account is to provide a summary of all the amounts owed to creditors at any given time. It helps businesses monitor their payable balances, track payment due dates, and ensure accurate financial reporting.* *Transactions related to purchases on credit from suppliers, invoice payments, and adjustments are recorded in both the subsidiary ledger (creditor accounts) and the Creditor's control account in the general ledger. The balances of individual creditor accounts are periodically reconciled with the balance in the Creditor's control account to ensure accuracy.* *The Creditor's control account is an important component of a business's financial records, enabling effective management of accounts payable and ensuring timely payment to creditors.*
G1100-000	*Debtor's control*	*The Debtor's control account, also known as the Accounts receivable control account or Debtor's control ledger, is a general ledger account used to track and summarize the total amount owed by debtors or customers to a business.* *Similar to the Creditor's control account, the Debtor's control account represents the outstanding balances of individual*

		debtor accounts in the accounts receivable subsidiary ledger. The subsidiary ledger contains detailed information about each specific debtor, including their name, contact details, and transaction history. *The primary purpose of the Debtor's control account is to provide a summary of all the amounts owed by customers at any given time. It helps businesses monitor their receivable balances, track payment due dates, and ensure accurate financial reporting.* *Transactions related to sales on credit to customers, receipt of customer payments, and adjustments are recorded in both the subsidiary ledger (debtor accounts) and the Debtor's Control Account in the general ledger. The balances of individual debtor accounts are periodically reconciled with the balance in the Debtor's Control Account to ensure accuracy.* *The Debtor's Control Account plays a crucial role in managing a business's accounts receivable, allowing for effective tracking of customer balances and timely collection of payments. It provides valuable information for cash flow management, credit control, and financial analysis.*
G3900-000	*Retained earnings*	*The Retained earnings account, also known as the Accumulated earnings account or Earnings surplus, is a general ledger account that represents the cumulative net earnings or profits of a company that have been retained and reinvested in the business rather than distributed to shareholders as dividends.* *Retained earnings are generated from the company's net income, which is calculated by deducting expenses from revenues. Instead of distributing all of the net income to shareholders, a portion of it is retained within the company. This retained portion is added to the Retained earnings account.* *The Retained earnings account serves as a financial record of the company's accumulated profits over time. It reflects the cumulative value of the company's retained earnings from its inception until the present. The account is adjusted at the end of each accounting period to reflect changes in net income and any dividends declared.*

The Retained earnings account is an important component of the company's equity section on the balance sheet. It represents the portion of equity that is derived from the company's profitability and retained within the business. Retained earnings can be used for various purposes, such as reinvesting in the business, funding expansion projects, reducing debt, or distributing dividends in the future.

The balance in the Retained earnings account is carried forward from one accounting period to the next. It serves as a source of funding for future growth and helps to enhance the company's financial stability and flexibility. The account also provides insights into the historical profitability and financial performance of the company.

ASSET ACCOUNTS - 1000 - 1999

CASH AND CASH EQUIVALENTS (1000 - 1099) - These accounts represents the actual cash on hand, as well as cash equivalents that can be quickly converted into cash, such as cash on hand, bank accounts or short-term investments.

G1000-000 Petty cash

B1010-000 Current bank account

CURRENT ASSETS (1100 - 1499) - These are the assets of a business that are expected to be converted into cash or used up within one year or within the normal operating cycle of the business, whichever is longer. They are resources that can be readily converted into cash or used to support the ongoing operations of the business. These current assets are typically used by the company in its day-to-day operations or are expected to be converted into cash within a relatively short period.

G1100-000 Debtor's control

Debtor's control represents the total outstanding receivables owed to a company by its customers. When a company extends credit to its customers, it creates accounts receivable, which are recorded as assets on the balance sheet. The debtor's control account is a summary or aggregate account that captures the total amount of accounts receivable owed to the company.

The debtor's control account is typically used in conjunction with individual customer accounts or subsidiary ledgers. Each customer's outstanding balance is recorded separately in their respective customer accounts, while the debtor's control account provides a summarized view of all the outstanding

		receivables. *As payments are received from customers, the debtor's control account is updated to reflect the reduced balances of accounts receivable. The account is debited when new sales are made on credit and credited when payments are received.* *The debtor's control account helps the company monitor and manage its receivables effectively. It provides a centralized view of the overall receivables position, enabling management to assess the creditworthiness of customers, track payment trends, and take appropriate actions for collection.* *It's important to regularly reconcile the debtor's control account with the individual customer accounts to ensure accuracy and identify any discrepancies. Reconciliation helps identify any errors, unrecorded payments, or disputes that need resolution.* *The debtor's control account is a key component of the company's financial statements, particularly the balance sheet, where it is reported as a current asset. It provides important information about the company's liquidity, credit risk, and the value of outstanding receivables.* *It's recommended to consult with an accountant or financial professional to determine the specific treatment and accounts to be used for the debtor's control account in your business's chart of accounts. They can provide guidance based on your company's specific needs and accounting practices.*
G1110-000	*Provision for doubtful debts*	*Provision for doubtful debts is an estimate made by a company to account for potential losses from customers who may default on their payment obligations. When a company extends credit to customers or sells goods or services on credit, there is a risk that some customers may not fulfil their payment obligations, leading to bad debts.* *To account for this risk, companies create a provision for doubtful debts on their balance sheet. The provision is based on historical data, past payment patterns, creditworthiness of customers, and other relevant factors. It represents the amount that the company expects to write off as bad debts or be unable to collect from customers.* *The provision for doubtful debts is typically calculated as a percentage of accounts receivable or based on specific*

		customer balances. The purpose of this provision is to anticipate and account for the potential losses in the financial statements, providing a more accurate representation of the company's financial position. *The provision for doubtful debts is reported as a contra-asset account on the balance sheet, reducing the value of accounts receivable. It is a conservative accounting approach that recognizes the risk of bad debts and ensures that the financial statements reflect the estimated collectability of receivables.* *When actual bad debts occur, the company writes off the specific amounts from the provision for doubtful debts and reduces the accounts receivable balance accordingly. This adjustment reflects the actual losses incurred by the company.* *It's important for businesses to regularly review and update the provision for doubtful debts to ensure it remains appropriate and reflective of the company's credit risk. Factors such as changes in customer payment behaviour, economic conditions, and specific customer circumstances may require adjustments to the provision.* *It's recommended to consult with an accountant or financial professional to determine the specific treatment and accounts to be used for the provision for doubtful debts in your business's chart of accounts.*
G1200-000	*Stock / Inventory*	*Stock or inventory includes the raw materials, work-in-progress (partially completed goods), and finished goods that a company holds. It represents the goods that are available for sale to customers or are used in the production process.* *Inventory is an essential component of various businesses, such as retailers, manufacturers, wholesalers, and distributors. It enables these businesses to meet customer demand, fulfil orders, and generate revenue.* *The stock/inventory account is used to track the quantity and value of the goods held by the company. It includes the cost of acquiring or producing the inventory, which consists of direct costs (such as materials and labour) and indirect costs (such as overhead expenses).* *Inventory is typically classified into different categories based on its nature or stage of completion. Common inventory*

		categories include raw materials, work-in-progress, and finished goods. Each category may have its specific accounts or sub-accounts to track the related inventory items. *The stock/inventory account is updated regularly to reflect the changes in quantity and value of the inventory. This includes recording purchases, sales, returns, adjustments for damaged or obsolete goods, and any other inventory-related transactions.* *Accurate inventory management is crucial for businesses to ensure sufficient stock levels, minimize holding costs, prevent stock-outs or overstocking, and optimize cash flow. It involves inventory valuation methods, such as First-In-First-Out (FIFO), Last-In-First-Out (LIFO), or weighted average cost, to determine the cost of goods sold and the value of remaining inventory.* *The stock/inventory account is reported as a current asset on the balance sheet, representing the value of inventory held at a specific point in time. It's important to conduct regular physical inventory counts or use inventory management systems to reconcile the recorded inventory balances with the actual stock on hand.* *The specific accounts and classifications for stock/inventory may vary depending on the company's industry, size, and accounting practices. It's recommended to consult with an accountant or financial professional to determine the appropriate structure and accounts for tracking inventory in your business's chart of accounts.*
G1300-000	*Accrued revenue / Outstanding revenue*	*Accrued revenue is revenue that has been earned but not yet received or recorded. It occurs when a company provides goods or services to a customer, but the payment or recognition of the revenue is delayed beyond the normal billing cycle. The company recognizes the revenue in its financial statements even though the cash has not been received.* *Examples of accrued revenue include:* • *Services rendered: A service-based company may provide services to a client but bill them at the end of the month or project.*

- *Rent income: If a company owns rental properties, it may accrue rent revenue when it's earned, even if the tenant pays at a later date.*
- *Interest income: Financial institutions may accrue interest income on loans or investments that have not yet been paid or received.*
- *Commission income: Sales representatives or agents may earn commissions based on sales made, but the actual payment may be delayed.*

Accrued revenue is recorded as an asset on the balance sheet and recognized as revenue on the income statement. The company creates an adjusting entry to increase the accounts receivable or accrued revenue account and recognizes the corresponding revenue.

Accrued revenue is important for accurate financial reporting as it reflects the company's true financial performance, even if the cash is not yet received. It allows businesses to properly recognize revenue in the period it was earned, matching revenue with the expenses incurred to generate that revenue.

G1350-000	*Prepaid expenses / Expenses paid in advance*	*Prepaid expenses are costs that have been paid in advance but have not yet been consumed or used. They represent future expenses that have been prepaid to ensure the availability of goods, services, or benefits over a specific period of time. Prepaid expenses are recorded as assets on the balance sheet until they are gradually recognized as expenses over the periods to which they relate.*

Examples of prepaid expenses include:

- *Prepaid Rent: Payment made in advance for rent on a property or facility.*
- *Prepaid Insurance: Premiums paid upfront for insurance coverage extending beyond the current accounting period.*
- *Prepaid Subscriptions: Payments made in advance for magazine subscriptions, software licences, or other subscription-based services.*
- *Prepaid Maintenance: Costs paid in advance for*

maintenance services or contracts.

- *Prepaid Advertising: Amounts paid upfront for advertising campaigns or marketing services.*
- *Prepaid Supplies: Costs of supplies or inventory items purchased in advance and used gradually over time.*

Prepaid expenses are gradually recognized as expenses through an adjusting entry process. As time passes or the benefits are consumed, the prepaid expenses are expensed, reducing the asset account and increasing the corresponding expense account.

Properly tracking and managing prepaid expenses is essential for accurate financial reporting and budgeting. It ensures that expenses are recognized in the appropriate accounting periods and helps in determining the true profitability of a business. Consulting with an accountant or financial professional can provide further guidance on the specific treatment and accounts to be used for prepaid expenses in your business's chart of accounts.

G1400-000 Short-term - Deposits

PP&E - PROPERTY, PLANT, AND EQUIPMENT (1500 - 1699) - This account represents tangible assets such as land, buildings, machinery, equipment, and vehicles that are used in the business operations to generate revenue. These assets are expected to be used for more than one accounting period and are not intended for resale.

PP&E includes various types of assets, such as land, buildings, machinery, vehicles, furniture, and equipment. These assets are essential for the company's day-to-day operations and are typically necessary to produce goods, provide services, or support the business activities.

PP&E is recorded on the balance sheet at its original cost, which includes the purchase price, transportation costs, installation costs, and any other costs directly attributable to acquiring and preparing the asset for use. Over time, the value of PP&E is systematically reduced through depreciation, reflecting the wear and tear, obsolescence, or decline in value of the assets.

The purpose of recording PP&E is to track the company's investment in long-term productive assets and to provide information about their value, usage, and depreciation over time. The value of PP&E is typically disclosed on the balance sheet, and any changes in the value or disposal of these assets are recorded in the income statement or statement of cash flows.

Proper management and maintenance of PP&E is crucial for businesses to ensure the continued efficiency and productivity of their operations. Regular assessments, maintenance, and periodic revaluations are performed

to ensure that the carrying value of these assets is appropriate and reflects their true economic value.

G1510-000	*Furniture & Fittings*
G1510-010	*Furniture & Fittings at cost*
G1510-020	*Accumulated depreciation - Furniture & Fittings*
G1520-000	*Equipment*
G1520-010	*Equipment at cost*
G1520-020	*Accumulated depreciation - Equipment*
G1530-000	*Computer equipment*
G1530-010	*Computer equipment at cost*
G1530-020	*Accumulated depreciation - Computer equipment*
G1540-000	*Vehicles*
G1540-010	*Vehicles at cost*
G1540-020	*Accumulated depreciation - Vehicles*
G1600-000	*Land and Buildings*
G1600-010	*Land and Buildings at cost*
G1600-020	*Land and Buildings - Improvements*
G1600-030	*Amortisation - Land and Buildings*

OTHER NON-CURRENT ASSETS (1700-1799) - Other Non-Current Assets is a category in the Chart of Accounts that includes a wide range of items that are important for a company's operations, growth, and

revenue generation. These assets are expected to provide economic benefits to the company over an extended period of time, typically beyond one year.

This category is designed to capture any non-current assets that don't fit into the standard asset classifications like property, buildings, equipment, vehicles, and intangible assets. It allows businesses to account for specific long-term assets that are unique or industry-specific and may not be adequately represented in the standard asset categories.

Some examples of assets that could be included in "Other Non-Current Assets" are:

G1700-000	*Long-term - investments*	*These accounts tracks investments in other companies, bonds, or long-term securities that are not readily convertible into cash within one year.*
G1710-000	*Long-term - Notes receivable*	*Loans made to other parties, which will be repaid over an extended period, beyond one year.*
G1720-000	*Deferred Tax assets*	*Tax benefits that the business expects to realize in the future due to temporary differences between accounting and tax treatment.*
G1730-000	*Security deposits*	*Deposits made to landlords or service providers that will be refundable at a later date, typically when a lease or contract ends.*
G1740-000	*Long-term - Prepaid expenses*	*Prepaid expenses that will be utilized over more than one year, such as long-term insurance premiums.*
G1750-000	*Mineral rights*	*Rights to extract minerals or resources from land owned by the business.*
G1760-000	*Leasehold improvements*	*Improvements made to leased premises, which are amortized over the lease term.*
G1770-000	*Deferred charges*	*Costs incurred that will be expensed over time, such as organization costs or startup expenses.*
G1780-000	*Long-term - Deposits*	*Deposits held with suppliers or vendors that will be used over an extended period.*
G1790-000	*Deferred Financing costs*	*Costs related to obtaining long-term financing, which are amortized over the loan term.*

The inclusion of "Other Non-Current Assets" in the Chart of Accounts allows businesses to provide more

comprehensive financial reporting and accurately represent the composition of their long-term assets. If the business has unique or industry-specific assets that don't fit into the standard asset categories, they can be appropriately grouped under "Other Non-Current Assets" for better accounting and reporting.

It's important to note that the specific assets included under "Other Non-Current Assets" will depend on the nature of the business and its operations.

It's important to note that the specific assets included under "Other Non-Current Assets" will depend on the nature of the business and its operations. If the business has unique or industry-specific assets that don't fit into the standard asset categories, they can be appropriately grouped under "Other Non-Current Assets" for better accounting and reporting.

As always, it's advisable to consult with a qualified accountant to ensure the Chart of Accounts accurately represents the business's financial position and meets reporting requirements.

INTANGIBLE ASSETS (1800-1999)- Intangible assets are non-physical assets that lack a physical substance but have value and provide economic benefits to a business. Unlike tangible assets, which can be seen or touched, intangible assets are more conceptual or intellectual in nature. They represent legal or contractual rights, intellectual property, brand recognition, or other intangible qualities that contribute to a company's value and competitive advantage.

Intangible assets are typically recorded on the balance sheet at their acquisition cost or fair value if acquired through a business combination. They are amortized over their estimated useful lives, reflecting the gradual consumption or expiration of their economic benefits. However, certain intangible assets with indefinite useful lives, such as goodwill, are not amortized but are subject to periodic impairment assessments.

Managing and protecting intangible assets is important for businesses to safeguard their competitive advantages, maintain brand value, and ensure legal compliance. Proper valuation, strategic utilization, and adequate legal protection of these assets are essential for maximizing their value and contributing to the overall success of a business.

Examples of intangible assets include:

	Brand names	*This account records the names or labels by which a business is recognized and distinguished in the market. It represents the reputation, image, and goodwill associated with a particular brand. Brand names can be highly valuable assets as they contribute to customer recognition, loyalty, and the ability to differentiate products or services from competitors.*
G1900-000	*Copyrights*	*This account records the cost or value of copyrights held by the business, which protect original literary, artistic, or musical works.*
	Customer lists	*Customer lists are databases or records of existing or potential*

		customers, including their contact information, purchasing history, preferences, and other relevant data. They are valuable assets that help businesses maintain and grow their customer base.
	Franchise rights	*This account represents the value of franchise rights obtained by the business, allowing it to operate under a recognized brand and business model.*
G1910000	*Goodwill*	*Goodwill represents the value of a company's reputation, customer relationships, and brand recognition. It is typically recorded when a company acquires another business for a price higher than the fair value of its identifiable tangible and intangible assets.* *This account represents the excess of the purchase price of a business over the fair value of its identifiable net assets.*
	Intellectual property	*This includes patents, trademarks, copyrights, and trade secrets. These assets protect a company's innovations, inventions, brand names, logos, creative works, and proprietary information.*
G1920000	*Patents*	*This account captures the cost or value of patents held by the business, which provide exclusive rights to a specific invention or innovation.*
	Software and Licences	*Software programs, computer codes, and licences are intangible assets used in technology-driven businesses. They enable companies to operate their systems, provide services, or develop products.*
G1930000	*Trademarks & Brands*	*Brand names or trademarks are distinctive names, logos, symbols, or designs associated with a company's products or services. They help differentiate a company's offerings from competitors and build customer loyalty.*

LIABILITIES ACCOUNTS - (2000 - 2999)

CURRENT LIABILITIES (2000 - 2499) - Current Liabilities refer to the obligations or debts of a company that are expected to be settled within a short-term period, typically within one year or the normal operating cycle of

the business, whichever is longer. Current Liabilities represent the company's short-term financial obligations that are due in the near future.

These obligations arise as a result of the company's day-to-day operations and can include accounts payable (amounts owed to suppliers for goods or services), short-term loans, accrued expenses (such as wages or taxes payable), current portion of long-term debt (the portion of long-term debt due within the next year), and any other short-term liabilities.

Current Liabilities are important for assessing a company's liquidity and its ability to meet its short-term financial obligations. They are typically settled using current assets or by generating additional revenue from ongoing operations. Monitoring and managing current liabilities is crucial for maintaining the financial health and stability of a business.

G2000-000	*Creditor's control*	*Creditor's control is a liability account that records the amounts owed by a company to its creditors. It reflects the company's unpaid invoices or bills for purchases made on credit. These could include purchases of inventory, raw materials, equipment, or services used in the business operations.* *When a company receives goods or services from a creditor without making an immediate payment, an accounts payable entry is recorded. The amount owed is added to the creditor's control account, which serves as a central record of all outstanding payables. As payments are made to creditors, the accounts payable balance is reduced accordingly.* *The creditor's control account provides a summary of the company's total outstanding liabilities to creditors at a given point in time. It helps the company monitor and manage its payment obligations, ensuring timely payments and maintaining good relationships with suppliers.* *In the chart of accounts, the creditor's control account is typically classified under current liabilities, as it represents obligations that are expected to be settled within one year. It is usually grouped with other accounts payable or trade payable accounts.* *It's important for businesses to effectively manage their creditor's control account to ensure accurate tracking of their outstanding payables and to avoid late payment penalties or strained relationships with suppliers.* *Please note that the specific accounts and classifications related to creditor's control may vary depending on the company's accounting practices and industry. It's advisable to*

		consult with an accountant or financial professional to determine the appropriate structure and accounts for tracking creditor's control in your business's chart of accounts.
G2100-000	*Accrued expenses / Outstanding expenses*	*These are expenses that have been incurred but not yet paid or recorded in the accounting records. They represent expenses that are owed by the business at the end of an accounting period, even though the actual payment has not been made.*
G2150-000	*Deferred revenue / Unearned revenue*	*This account represents the amount of revenue that has been received in advance but has not yet been recognized as earned. It arises when a company receives payment from a customer before delivering goods or providing services. The unearned revenue is initially recorded as a liability since the company still owes the customer the corresponding goods or services. As the goods are delivered or services are provided, the revenue is gradually recognized and transferred from the unearned revenue account to the appropriate revenue account.*
G2200-000	*Credit cards payable*	*G2200-000 - Credit cards payable as a current liability - Can you give a brief summary for the following accounts and its purpose* *Here is a brief summary of the accounts related to Credit Cards Payable as a current liability:* • *G2200-000: Credit Cards Payable (Control Account) - This is the control account that represents the total outstanding balances owed to credit card companies by the business. It serves as an overall summary of the credit card liabilities.* • *T2200-010: Credit Card 1 Payable - This account represents the outstanding balance owed to a specific credit card company or issuer, such as Visa or Mastercard. It captures the amount owed and tracks the liability associated with that particular credit card.* • *T2200-020: Credit Card 2 Payable - Similar to the previous account, this account represents the outstanding balance owed to another credit card company or issuer. It is used to*

		track the liability associated with the specific credit card. • *T2200-XXX: Additional Credit Card Payable Accounts - Depending on the number of credit cards used by the business, additional accounts may be created to represent the outstanding balances for each credit card. The account numbers would follow a similar pattern, such as T2200-030, T2200-040, and so on.* *The purpose of these accounts is to accurately record and track the amounts owed to credit card companies. As the business makes purchases or incurs expenses using credit cards, the corresponding amounts are recorded as liabilities in the appropriate credit card payable accounts. When payments are made to credit card companies, the balances are reduced accordingly.* *It's important to reconcile these accounts regularly with credit card statements to ensure accuracy and to make timely payments to avoid any additional charges or interest.*
G225-000	*Short-term loans*	
G2300-000	*SALARIES AND WAGES CONTROL (PAYROLL CONTROL)*	*These accounts are typically used to record and track the various payroll-related liabilities that arise from employee compensation and deductions. They help maintain accurate records of amounts owed and ensure proper disbursement of salaries, taxes, insurance premiums, contributions, loans, and other payroll-related obligations. It's important to consult with a payroll specialist or accountant to ensure compliance with relevant payroll regulations and reporting requirements.* *Purpose: The Payroll Control account serves as a control account to track the overall payroll liabilities and payments. It acts as a summary account for the individual payroll-related accounts.*
G2300-010	*Employee Salaries Payable*	*Purpose: This account represents the amount of salaries and wages owed to employees but not yet paid. It reflects the current liability for the salaries and wages that have been*

		earned by employees but not yet disbursed.
G2300-020	*PAYE Income Tax Payable*	*Purpose: This account tracks the amount of income tax that has been withheld from employees' salaries and wages but not yet remitted to the tax authorities. It represents the current liability for the income tax withheld from employees' earnings.*
G2300-030	*Health Insurance Premiums*	*Purpose: This account represents the current liability for health insurance premiums that are deducted from employees' salaries and wages but not yet paid to the insurance provider. It reflects the amount owed for health insurance coverage for employees.*
G2300-040	*National Insurance Contributions Payable*	*Purpose: This account tracks the current liability for National Insurance contributions (social security contributions) that are deducted from employees' salaries and wages (as well as the employers contribution) but not yet remitted to the relevant government agency. It represents the amount owed for social security benefits for employees.*
G2300-050	*Pension Contributions Payable*	*Purpose: This account represents the current liability for pension contributions that are deducted from employees' salaries and wages but not yet contributed to the pension scheme or fund. It reflects the amount owed for employees' retirement savings.*
G2300-060	*Employee Loans and Advances*	*Purpose: This account tracks the current liability for loans or advances provided to employees by the company. It represents the amount owed by employees for loans or advances received and is payable to the company.*
G2300-070	*Other Payroll Deductions Payable (Unions / garnishee orders)*	*Purpose: This account captures other payroll deductions that are withheld from employees' salaries and wages for purposes such as union dues or garnishee orders. It represents the current liability for these deductions that are owed to the respective parties.*
G2400-000	*VAT-CONTROL ACCOUNT*	*Purpose: The VAT-Control Account serves as a control account that tracks the overall VAT liabilities and payments. It acts as a summary account for the individual VAT accounts related to output VAT and input VAT.*

		These accounts are commonly used in VAT accounting systems to accurately track VAT liabilities and payments. The specific VAT rates may vary depending on the applicable tax regulations in your country or region. It's important to consult with a tax professional or accountant to ensure proper compliance with VAT reporting and recording requirements.
T2400-010	*Output VAT (Sales) - 20%*	*Purpose: This account tracks the output VAT charged on sales transactions at a 20% rate. It represents the VAT amount collected from customers on taxable sales.*
T2400-020	*Output VAT (Sales) - 5%*	*Purpose: Similar to the previous account, this account tracks the output VAT charged on sales transactions at a 5% rate. It represents the VAT amount collected from customers on taxable sales subject to a lower VAT rate.*
T2400-030	*Output VAT (Sales) - 0%*	*Purpose: This account tracks the output VAT charged on sales transactions that are zero-rated for VAT purposes. It represents the VAT amount collected from customers on sales transactions that have a 0% VAT rate.*
T2400-110	*Input VAT (Purchases) - 20%*	*Purpose: The Input VAT (Purchases) - 20% account tracks the VAT incurred on purchases at a 20% rate. It represents the VAT amount paid to suppliers on taxable purchases.*
T2400-120	*Input VAT (Purchases) - 5%*	*Purpose: Similar to the previous account, this account tracks the input VAT incurred on purchases at a 5% rate. It represents the VAT amount paid to suppliers on taxable purchases subject to a lower VAT rate.*
T2400-130	*Input VAT (Purchases) - 0%*	*Purpose: This account tracks the input VAT incurred on purchases that are zero-rated for VAT purposes. It represents the VAT amount paid to suppliers on purchases that have a 0% VAT rate.*
G2400-300	*VAT PAYABLE*	*Purpose: The VAT Payable account represents the net VAT liability of the business. It reflects the difference between the output VAT collected from customers and the input VAT paid to suppliers. It is usually settled periodically with the tax authorities.*

G2450-000	*Suspense account*	

NON-CURRENT LIABILITIES (2500 - 2999) - Non-current liabilities, also known as Long-term liabilities, refer to the obligations or debts of a company that are not expected to be settled within a short-term period, typically longer than one year or the normal operating cycle of the business. Non-current liabilities represent the company's long-term financial obligations that are due over an extended period of time.

Non-current Liabilities are important for assessing the long-term financial obligations and solvency of a company. They represent the portion of a company's debt or obligations that are not due for repayment in the immediate future. Monitoring and managing non-current liabilities are essential for ensuring the company's long-term financial stability and ability to meet its long-term obligations.

Some common examples of Non-Current Liabilities are:

G2500-000	*Long-term loans and borrowings*	*This includes loans and debts with a maturity date beyond one year, such as bank loans or bonds.*
	Lease Liabilities	*Obligations arising from long-term leases, such as operating leases or finance leases (capital leases).*
	Deferred Tax Liabilities	*Tax obligations that will be payable in future periods due to temporary differences between accounting and tax treatment.*
	Pension Liabilities	*Long-term obligations to pay pensions and other retirement benefits to employees.*
	Long-Term Debts to Suppliers	*Long-term payables to suppliers for deferred payment arrangements.*
	Deferred Revenue	*Advance payments or deposits received from customers for goods or services to be delivered in the future.*
	Other Non-Current Liabilities	*Any other long-term liabilities that don't fit into the standard categories but are expected to be paid off beyond one year.* *Other Non-Current Liabilities" is a category in the Chart of Accounts where businesses can include any long-term liabilities that do not fit into the more common classifications. These are specific obligations that are expected to be paid off over an extended period, typically beyond one year, but may not fall under the standard Non-Current Liability categories. Here are some examples of what could be included under*

"Other Non-Current Liabilities":

1. *Deferred Charges: Costs incurred that will be amortized or expensed over time, such as organization costs or startup expenses.*
2. *Long-Term Deposits Received: Deposits received from customers or other parties that will be refundable after an extended period, often for large projects or contracts.*
3. *Deferred Credits: Liabilities created when the company receives payments in advance for services or goods that will be delivered or fulfilled later.*
4. *Long-Term Warranty Obligations: Obligations to provide warranty services or repairs beyond the standard warranty period.*
5. *Deferred Compensation: Liabilities for deferred compensation plans or employee benefits that will be paid out over time.*
6. *Long-Term Bonus or Incentive Payments: Liabilities for bonuses or incentives that will be paid out to employees or management over an extended period.*
7. *Long-Term Lease Obligations: Lease liabilities for long-term operating leases or finance leases (capital leases).*
8. *Long-Term Deferred Revenue: Advance payments received for goods or services to be delivered over an extended period.*
9. *Long-Term Environmental Liabilities: Obligations for environmental cleanup or remediation efforts that extend beyond the current year.*
10. *Long-Term Contingent Liabilities: Obligations that may arise from legal disputes or other potential liabilities, with settlement expected beyond one year.*

It's important to note that the specific liabilities included under "Other Non-Current Liabilities" will depend on the nature of the business and its operations. This category provides flexibility for businesses to account for unique or less common long-term liabilities that don't fit into the standard classifications.

As always, businesses should consult with a qualified accountant or financial expert to ensure accurate recording and reporting of "Other Non-Current Liabilities" in accordance with accounting standards and regulations.

EQUITY ACCOUNTS - (3000 - 3999)

EQUITY - Equity, also known as Shareholders' Equity or Owner's Equity, represents the residual interest in the assets of a company after deducting its liabilities. It represents the ownership interest of the company's shareholders or owners.

Equity is a financial category in the chart of accounts that captures the contributions made by the owners (such as investments or capital contributions) and the accumulated profits or losses of the company over time. It reflects the net worth of the company and represents the claim on the company's assets by its owners.

Equity can be further divided into various components, such as share capital, retained earnings, and other comprehensive income. Share capital represents the amount of capital contributed by the shareholders, while retained earnings reflect the accumulated profits or losses that have been retained in the business.

Equity is an important indicator of a company's financial health and stability. It provides a measure of the company's net worth and the owners' stake in the company's assets. It also serves as a source of funding for the company's operations and growth, as retained earnings can be reinvested back into the business.

Changes in equity can occur through various transactions, such as the issuance or repurchase of shares, the distribution of dividends, net income or loss from operations, and other comprehensive income or loss. Monitoring and analyzing equity is crucial for assessing the financial position and performance of a company.

This example, the accounts, is listed For a Sole proprietor.

It's important to note that retained earnings for a sole proprietorship may not have the same level of complexity as those for a corporation, as there are no separate shareholders or dividend distributions involved. Instead, any profits or losses generated by the business directly impact the sole proprietor's equity in the business, including the retained earnings.

For a sole proprietorship. te accounts, is as follows:

G3000-000	*Capital*	*This account represents the initial investment made by the sole proprietor in the business. It reflects the owner's equity stake in the business and serves as a source of funding for the company's operations. Any subsequent capital contributions made by the owner can also be recorded in this account.*

G3100-000	*Additional capital*	*This account is used to record any additional capital contributions made by the sole proprietor during the course of business. It represents the additional investments made by the owner to increase their equity stake in the business.*
G3200-000	*Drawings*	*This account is used to record the withdrawals or distributions made by the sole proprietor from the business for personal use. It represents the amounts taken out of the business by the owner for personal expenses or other purposes unrelated to the business operations.*
G3900-000	*Retained Earnings*	*This account captures the accumulated profits or losses that have been retained in the business. It represents the portion of the company's earnings that have not been distributed to the owner as dividends or drawings. Retained earnings increase when the business generates net income and decrease when there are net losses or when dividends are paid.*

Income statement

In osFinancials5/TurboCASH5, the Income statement accounts represent the Income and Expense items of a company. These accounts can be further organised and classified by utilising up to two account groups, namely Account group 1 and Account group 2. You can configure these account groups in the Setup → Groups menu on the Setup ribbon. It is important to link these account groups to the corresponding financial categories in the Setup → Financial categories menu on the Setup ribbon.

REVENUE (4000 - 4399)

OPERATING REVENUE (4000 - 4999) - Operating revenue are the revenue generated through the primary business activities or core operations by a business. It represents the income earned from the sale of goods, provision of services, or other activities directly related to the main operations of the business.

G4000-000 Sales revenue

OTHER REVENUE (4500 - 4999) - Other revenue refers to income or revenue generated by a company from sources other than its primary business activities or core operations. It includes income that is incidental or

peripheral to the main operations of the company.

Unlike operating revenue, which is derived from the company's primary activities, other revenue represents additional sources of income that may arise from non-operating activities, one-time events, or secondary business ventures. It is often considered as supplementary or ancillary revenue.

G4400-000	*Interest earned*	*Interest earned is a component of other revenue and refers to the income a business earns from interest-bearing financial instruments, such as bank deposits, loans made to others, bonds, or other interest-bearing investments. It represents the return or compensation received by the business for lending money or having funds deposited with a financial institution.* *Interest earned is typically recorded as revenue in the financial statements of a business. It is categorized as other revenue because it is not directly related to the primary operations or core activities of the business. Instead, it represents income generated from the surplus funds or financial assets of the business.* *Examples of interest earned include the interest received on savings accounts, interest earned on loans made to customers or suppliers, or interest earned on investments in interest-bearing securities. The amount of interest earned depends on the interest rate applied to the financial instrument and the principal amount involved.* *Interest earned is typically recognized over time as it accrues or as it becomes due. It is reported on the income statement of the business, contributing to the overall revenue generated by the business.*
G4500-000	*Sales discounts*	*Sales discounts are a component of other revenue and refer to the reductions in the selling price offered to customers as an incentive to encourage prompt payment or to promote sales. They represent a reduction or deduction from the original sales amount and are provided to customers as a reward for paying their invoices early or within a specified time period.* *Sales discounts are typically expressed as a percentage of the total invoice amount or as a specific amount. The purpose of offering sales discounts is to motivate customers to pay their invoices quickly, which helps*

improve the cash flow of the business and reduces the risk of bad debts.

When a customer takes advantage of a sales discount and makes payment within the discount period, the discount amount is recorded as a reduction in revenue and is classified as other revenue. It is considered a reduction in the selling price and is reflected in the financial statements as a contra-revenue account.

Sales discounts are a type of deduction or reduction in the selling price of goods or services offered by a business. They are often used as an incentive to encourage prompt payment or to attract customers. Sales discounts represent a decrease in revenue for the business, but they are recorded as part of other revenue in the financial statements.

Sales discounts are typically offered to customers who pay their invoices or bills within a specified period of time, known as the discount period. The discount is a percentage or a fixed amount that is subtracted from the total sales price. By providing a discount, the business aims to motivate customers to settle their payments earlier, improving cash flow and reducing the risk of bad debts.

For example, a business may offer a 2% discount to customers who pay their invoices within 10 days of the invoice date. If the total invoice amount is $1,000, the customer would be eligible for a $20 discount if they pay within the discount period.

When a customer takes advantage of a sales discount, the discounted amount is recorded as a reduction in revenue on the income statement. This reduction is included as part of other revenue to reflect the impact of discounts on the overall financial performance of the business.

Sales discounts are important for businesses to manage their accounts receivable effectively and encourage timely payments. They can help improve customer relationships and provide an incentive for repeat business. However, it's essential for businesses to carefully monitor and analyse

		the impact of sales discounts on their profitability and financial performance.
G4300-000	*Finance charge income*	*Finance charge income refers to the revenue earned by a business from charging interest or fees on outstanding customer balances or overdue payments. When customers or clients fail to make timely payments on their credit accounts, loans, or other financial obligations, the business may apply finance charges as a penalty or compensation for the delay in payment.* *The finance charges typically include interest charges, late payment fees, or other penalties assessed on the outstanding balances. These charges serve as a way for the business to earn additional income for the extended credit period or the inconvenience caused by the late payment.* *The finance charge income is recognized as revenue in the financial statements of the business and is typically recorded separately from the sales or service revenue. It represents the earnings derived from the financial services provided by the business, such as extending credit or offering financing options.* *The specific treatment and account classification for finance charge income may vary depending on the accounting policies and chart of accounts used by the business. It's important to follow the relevant accounting standards and guidelines to accurately record and report finance charge income.*

COS (Cost of Sales), COGS (Cost of Goods Sold), and SOSR (Cost of Services Rendered) are all related to the calculation of gross profit. Here's a brief explanation of each:

- *Cost of Sales (COS): Cost of Sales is a broader term that encompasses the cost associated with both goods and services sold by a company. It includes the direct costs incurred in producing or providing the products or services, such as raw materials, labor, and overhead costs. COS is typically used in service-oriented businesses where goods are not the primary focus.*
- *Cost of Goods Sold (COGS): COGS specifically refers to the direct costs incurred in producing or acquiring the goods that are sold by a company. It includes the cost of raw materials, direct labor, and*

manufacturing overhead directly associated with the production of goods. COGS is primarily used in manufacturing, retail, and distribution businesses.

- *Cost of Services Rendered (SOSR): SOSR is similar to COGS but applies specifically to service-based businesses. It represents the direct costs associated with providing services to customers, such as labour, subcontractor fees, and any other expenses directly related to delivering the services.*

Gross profit is calculated by subtracting the COS, COGS, or SOSR from the revenue generated from the sale of goods or services. It represents the profit generated from the core operations of the business before considering other operating expenses. Gross profit provides insight into the efficiency and profitability of a company's primary revenue-generating activities.

====

COST OF GOODS SOLD - Cost of Goods Sold (COGS) is an expense category in the income statement that calculates the direct costs associated with the production or acquisition of the goods or services sold by a company. It includes the costs directly attributed to the production process, such as raw materials, direct labour, and manufacturing overhead.

COGS is calculated by subtracting the ending inventory from the sum of the beginning inventory and purchases or production costs during a specific accounting period. The resulting figure represents the cost of the goods that have been sold during that period.

The concept of COGS is primarily applicable to businesses that deal with physical goods, such as retailers, manufacturers, and wholesalers. For service-based companies, the equivalent concept is often referred to as the Cost of Services Rendered (COSR).

COGS is a crucial metric in determining a company's gross profit, which is calculated by subtracting COGS from the revenue generated by the sale of goods or services. It represents the profit made by the company before considering other operating expenses.

In the chart of accounts, Cost of Goods Sold is typically classified as an expense account and categorized under the operating expenses section. It is commonly grouped with other expense accounts related to the cost of sales or production.

Accurately tracking and managing COGS is essential for businesses to determine their profitability, assess pricing strategies, and make informed decisions about inventory management and production processes.

It's important to note that the specific accounts and classifications related to COGS may vary depending on the company's accounting practices and industry. It's advisable to consult with an accountant or financial professional to determine the appropriate structure and accounts for tracking COGS in your business's chart of accounts.

COST OF SALES - Cost of Sales (COS), also known as Cost of Revenue, is an expense category in the income statement that captures the direct costs directly associated with the sales of goods or services by a company. It includes the costs related to the production, acquisition, or delivery of the products or services that were sold.

COS encompasses the costs directly attributed to the production or acquisition process, such as raw materials, direct labour, and manufacturing overhead. Additionally, it may include other costs incurred in the sales process, such as shipping or packaging expenses, direct sales commissions, or certain marketing expenses.

The calculation of COS typically involves determining the direct costs associated with the production or acquisition of the goods or services sold during a specific accounting period. This may involve taking into account the beginning inventory, purchases or production costs, and adjusting for the ending inventory to arrive at the total cost of sales.

COS is an essential component in calculating a company's gross profit. Gross profit is obtained by subtracting the COS from the revenue generated by the sale of goods or services. It reflects the profitability of a company's core operations before considering other operating expenses.

In the chart of accounts, Cost of Sales is typically classified as an expense account and categorized under the operating expenses section. It is often grouped with other accounts related to the cost of production, acquisition, or delivery of goods or services.

It's important to note that the specific accounts and classifications related to Cost of Sales may vary depending on the company's accounting practices and industry. It's advisable to consult with an accountant or financial professional to determine the appropriate structure and accounts for tracking Cost of Sales in your business's chart of accounts.

COST OF SERVICES RENDERED (COSR) - Cost of Services Rendered (COSR) refers to the expenses directly associated with providing services to customers or clients. It represents the costs incurred by a business in delivering its services and is analogous to the concept of Cost of Goods Sold (COGS) for a product-based business.

COSR includes various expenses related to the production or delivery of services, such as labour costs, direct materials or supplies used in providing the services, subcontractor fees, overhead costs, and any other direct costs specifically attributable to the services rendered. These expenses are incurred during the process of providing services to generate revenue.

By subtracting the COSR from the revenue generated by services, a business can calculate its gross profit or gross margin. This figure represents the profitability of the services provided before accounting for other operating expenses.

It's important to note that the specific accounts and classifications within COSR can vary depending on the nature of the services and the accounting practices of the business. It's recommended to consult with an accountant or financial professional to determine the appropriate accounts and structure for recording COSR in your specific accounting system.

G5000-000	*Cost of Sales*
G5200-000	*Stock (Inventory) shortages / surplus*

G5300-000 *Freight charges*

Short-term assets (Current assets) and Long-term assets (Non-current assets)

What is Current assets and Non-current assets?

Current assets and non-current assets are two major categories of assets found on a company's balance sheet or statement of financial position. These categories help to classify assets based on their liquidity and expected holding period. Here's an overview of each:

1. Current Assets: Current assets are assets that are expected to be converted into cash or used up within the company's operating cycle or one year, whichever is longer. The operating cycle refers to the time it takes for a company to convert its inventory into cash through its normal business operations. Current assets are typically used for day-to-day operations and represent the company's short-term resources. Examples of current assets include:
    - Cash and Cash Equivalents: Physical cash, bank balances, and highly liquid investments with maturities of three months or less.
    - Accounts Receivable: Amounts owed to the company by its customers for goods sold or services rendered on credit.
    - Inventory: The value of goods or raw materials held for resale or production.
    - Prepaid Expenses: Amounts paid in advance for goods or services that will be received or consumed in the future.
2. Non-current Assets (Long-term Assets): Non-current assets, also known as long-term assets, are assets that are not expected to be converted into cash or used up within the company's operating cycle or one year. These assets are held for the long term and are essential for the company's ongoing operations and future growth. Examples of non-current assets include:
    - Property, Plant, and Equipment: Tangible assets such as buildings, machinery, equipment, and land used in the company's operations.
    - Investments: Long-term investments in other companies' stocks, bonds, or equity instruments.

- Intangible Assets: Non-physical assets, such as patents, trademarks, copyrights, and goodwill.
- Long-term Investments in Bonds: Bonds or debt securities that the company intends to hold for an extended period.
- Deferred Tax Assets: Tax benefits that the company will realize in future periods due to temporary differences between accounting and tax rules.

Classifying assets into current and non-current categories provides valuable information about a company's short-term liquidity and its ability to meet current obligations (current assets) and its long-term financial position and capacity for growth (non-current assets). Investors, creditors, and stakeholders use this information to evaluate a company's financial health and assess its ability to manage its assets effectively.

Current assets

There are several other accrual accounts that can be classified under current assets on a company's balance sheet. Current assets are those that are expected to be converted into cash or used up within one year or the operating cycle of the business, whichever is longer. Accrual accounts represent expenses or revenues that have been incurred or earned but have not yet been paid or received, respectively. Here are some common accrual accounts that fall under current assets:

1. Accounts Receivable: This represents the amount of money owed to the company by its customers for goods sold or services rendered on credit. It is a claim that the company has on its customers for payment.
2. Inventory: This includes the value of goods or raw materials held by the company for the purpose of resale or production. It comprises finished goods, work-in-progress, and raw materials.
3. Short-term Investments: These are investments made by the company in securities that are expected to be converted into cash within a short period, usually less than one year.
4. Prepaid Expenses: As you mentioned, prepaid expenses are amounts paid in advance for goods or services that will be received or consumed in the future. These are considered assets because they represent economic benefits to be received later.
5. Notes Receivable: Similar to accounts receivable, notes receivable represent written promises of payment from customers or other parties. However, they are formal, written agreements that include specific terms such as interest rates and maturity dates.
6. Accrued Revenues: These are revenues that have been earned but not yet billed to customers or received in cash. For example, a company may have completed a service or delivered goods but has

not yet issued an invoice to the customer.

7. Other Current Assets: This category may include various other short-term assets that do not fit into the above categories. It can encompass items like prepaid taxes, prepaid insurance (if not already included in prepaid expenses), and other prepaid items.

It's important to note that the specific accounts and their names may vary depending on the accounting practices and reporting standards used by the company. The classification of accounts under current assets provides valuable information to stakeholders about a company's short-term liquidity and its ability to meet its current obligations.

What is Short-term investments (Current Asset) and Long-term investment (Non-Current Asset)?

The account "*Investments*" is not inherently classified as a long-term asset or a short-term asset solely based on its name. The classification of this account depends on the company's specific accounting policies and the nature of the investments held.

In accounting, investments can be classified into two main categories: current investments and non-current (or long-term) investments.

1. Current Investments: Current investments are short-term investments that are readily convertible to cash and are intended to be held for a short period, typically less than one year. These investments are actively managed, and their purpose is often to earn a return on excess cash or funds that are not immediately needed for operational purposes. Examples of current investments include marketable securities, Treasury bills, and short-term government or corporate bonds.

2. Non-current (Long-term) Investments: Non-current investments are long-term investments that are intended to be held for a more extended period, usually more than one year. These investments are not readily convertible to cash and are generally held for strategic purposes, to gain significant influence or control over another company, or to earn a return on investment over an extended period. Non-current investments are often accounted for using the equity method or the cost method, depending on the level of influence or ownership. Examples of non-current investments include equity investments in other companies, long-term bonds, and real estate held for investment purposes.

To determine whether the account "*1500 Investments*" is classified as a long-term asset or a short-term asset, you need to refer to the company's financial statements and notes to the financial statements. There, you will find details about the nature of the investments held in this account and how the company has classified them based on their intended holding period and purpose. The balance sheet or statement of financial position will provide information on whether the investments are classified as current assets or non-current assets.

Notes receivable - Is this a Current Asset or a Non-Current Asset?

Notes receivable can be classified as either a current asset or a non-current asset, depending on the maturity or due date of the notes.

1. Current Asset: If the notes receivable are expected to be collected or converted into cash within the company's operating cycle or one year, whichever is longer, then they are classified as a current asset. The operating cycle is the time it takes for a company to convert its inventory into cash through the normal course of business. For example, if a company issues short-term notes receivable that are due for repayment within the next year, those notes would be considered a current asset.
2. Non-current Asset: If the notes receivable have a maturity date or due date beyond the company's operating cycle or one year, then they are classified as a non-current asset. These are notes receivable that will not be collected or converted into cash within the next year. Instead, they represent the long-term portion of the receivables that the company expects to realize over an extended period.

It's important for the company to differentiate between current and non-current assets in its financial statements to provide relevant information about its liquidity and the timing of cash flows. Investors, creditors, and stakeholders use this information to assess the company's financial health, its ability to meet short-term obligations, and its long-term financial stability.

Is there examples of Notes receivable as a Current asset or a Non-current asset?

Let's look at examples of "*Notes Receivable*" classified as both a current asset and a non-current asset:

1. Current Asset - Example: Short-term Promissory Note: Let's say a company lends money to a customer and receives a promissory note in return, which states that the customer will repay the loan in six months. Since the maturity date of the promissory note is within one year, it is considered a current asset. The company expects to receive the payment within its operating cycle or one year, making it part of its current assets on the balance sheet.
2. Non-current Asset - Example: Long-term Loan Agreement: In this scenario, a company extends a long-term loan to a business partner, and the repayment period specified in the loan agreement is five years from the date of the loan disbursement. Since the maturity date of the loan is beyond the company's operating cycle or one year, the loan is classified as a non-current asset. The company expects to receive the repayment over an extended period, making it part of its non-current assets on the balance sheet.

So, whether "*Notes Receivable*" is considered a current asset or a non-current asset depends on the specific terms and maturity dates of the promissory notes or loans held by the company. If the notes will

be collected or converted into cash within one year or the operating cycle, they are classified as current assets. If the maturity date extends beyond one year, they are classified as non-current assets.

Prepaid Expenses and Accrued Revenue - Is usually a Current asset - Can this be a long-term asset?

Prepaid expenses and accrued revenue are typically classified as current assets on a company's balance sheet because they are related to future economic benefits expected to be realized within the next operating cycle or one year. However, there are specific scenarios where they can be classified as long-term assets, depending on their nature and timing.

1. Prepaid Expenses (Current Asset): Prepaid expenses represent payments made in advance for goods or services that will be received or consumed over time in the future. Since these expenses will provide economic benefits within the next operating cycle or one year, they are considered current assets. Examples of prepaid expenses include prepaid rent, prepaid insurance, and prepaid subscriptions.
2. Accrued Revenue (Current Asset): Accrued revenue refers to revenue that has been earned but not yet billed or received in cash. It arises when a company provides goods or services to a customer but has not yet issued an invoice for the transaction. Since the revenue is earned and will be converted into cash within the next operating cycle or one year, it is classified as a current asset.

However, in some unique circumstances, prepaid expenses and accrued revenue can be classified as long-term assets. Here are a few examples:

1. Long-Term Prepaid Expenses: If a company makes payments for goods or services that will provide economic benefits for more than one year, the prepaid expenses may be considered long-term assets. For instance, if a company pays for a long-term software licence that covers a period of three years, the prepaid expense for the entire license period would be classified as a long-term asset.
2. Long-Term Contractual Accrued Revenue: In some cases, accrued revenue may be recognized based on long-term contractual agreements that extend beyond one year. For example, a company may provide ongoing maintenance services to a customer under a multi-year service contract. The accrued revenue for the full service period may be recognized as a long-term asset.

It's essential for companies to carefully assess the timing and nature of prepaid expenses and accrued revenue to determine their appropriate classification as either current assets or long-term assets. The classification should be in line with the company's accounting policies and consistent with accounting principles and reporting standards.

Short-term liabilities (Current liabilities) / Long-term liabilities (Non-current liabilities)

What is Short-term debt (Current Liability) and Short-term debt (Non-Current Liability)?

Current liabilities and non-current liabilities are two categories of obligations or debts that a company owes to external parties. These liabilities are reported on the balance sheet or statement of financial position and represent the company's financial obligations as of a specific date.

1. Current Liabilities: Current liabilities are obligations that are expected to be settled within the company's operating cycle or one year, whichever is longer. Operating cycle refers to the time it takes for a company to convert its inventory into cash through the normal course of business. Current liabilities typically include:
    - Accounts Payable: Money owed by the company to its suppliers or vendors for goods or services purchased on credit.
    - Short-term Loans and Borrowings: Any loans or borrowings due for repayment within the next year.
    - Accrued Liabilities: Expenses that have been incurred but not yet paid, such as wages payable, taxes payable, and utility bills.
    - Short-term Provisions: Amounts set aside to cover expected liabilities or expenses that are likely to be settled within the next year.
    - Dividends Payable: Amounts owed to shareholders for declared dividends that have not yet been paid.
2. Non-current Liabilities: Non-current liabilities, also known as long-term liabilities, are obligations that are not expected to be settled within the company's operating cycle or one year. Non-current liabilities typically include:
    - Long-term Loans and Borrowings: Loans or borrowings due for repayment beyond the next year.
    - Bonds Payable: Long-term debt securities issued by the company.
    - Deferred Tax Liabilities: Taxes that will become payable in the future due to temporary differences between accounting and tax rules.
    - Long-term Provisions: Amounts set aside to cover long-term liabilities or expenses expected

to be settled beyond one year.

It's essential for investors, creditors, and stakeholders to pay attention to a company's current and non-current liabilities to assess its financial health and liquidity. A company with a large proportion of short-term liabilities compared to its current assets may face challenges in meeting its obligations in the short term. On the other hand, non-current liabilities provide insight into the company's long-term financial obligations and its ability to manage debt over an extended period.

Example - Short-term debt (Current Liability) and Short-term debt (Non-Current Liability)

Short-term debt (Current Liability): Short-term debt refers to borrowings or financial obligations that are due for repayment within the next operating cycle or one year, whichever is longer. This category typically includes debts that a company must settle in the short term. Here's an example:

Example: Bank Revolving Credit Line A company obtains a revolving credit line from a bank with a limit of $50,000. They use $30,000 of the credit line to cover temporary cash flow needs. Since the company expects to repay this amount within the next year, it will be classified as "2200 Short-term debt" in the company's financial statements.

Long-term debt (Non-Current Liability): Long-term debt represents borrowings or financial obligations that are not due for repayment within the next operating cycle or one year. These debts have longer repayment terms, usually extending beyond one year. Here's an example:

Example: Corporate Bonds A company issues corporate bonds to raise funds for expansion. The bonds have a maturity period of five years, meaning the company will make periodic interest payments and repay the principal amount at the end of five years. Since the repayment period is beyond one year, these bonds will be classified as "2300 Long-term debt" on the company's balance sheet.

It's important to note that the specific examples and amounts will vary for each company. The classification of short-term debt and long-term debt depends on the maturity dates of the liabilities and the company's accounting practices. Companies need to ensure accurate and transparent reporting of their debt obligations in their financial statements to provide stakeholders with a clear understanding of their financial position.

Operating expenses and Non-operating expenses

What is a definition of Operating expenses and Non-operating expenses?

Operating expenses are expenses incurred by a business in the ordinary course of its operations, such as wages, rent, utilities, and materials. These expenses are directly related to the revenue-generating activities of the business and are subtracted from revenue to arrive at operating income.

Non-operating expenses, on the other hand, are expenses that are not directly related to the primary business activities of the company, such as interest expense, foreign exchange losses, and one-time charges. These expenses do not affect the company's operating income and are typically reported separately from operating expenses on the income statement.

Is Non-Operating Revenue and Non-Operating Expense accounts in the Income statement section in the chart of accounts?

Yes, Non-Operating Revenue and Non-Operating Expense accounts are typically included in the Income Statement section of the chart of accounts. These accounts capture revenues and expenses that are not directly related to the core operating activities of the business.

Non-Operating Revenue accounts record any revenue generated from sources outside of the primary operations of the business, such as rental income, interest income, or gains from the sale of assets.

Non-Operating Expense accounts, on the other hand, capture expenses that are not directly related to the core operations of the business, such as interest expense, foreign exchange losses, or one-time charges.

By including these accounts in the chart of accounts, businesses can track and analyze the financial impact of non-operating activities separately from their operating activities, providing a clearer picture of the overall financial performance of the company.

Can donations and contributions be an operating expense and when is it a non-operating expense?

Donations and contributions can be classified as both operating and non-operating expenses, depending on the nature of the donation or contribution.

If the donation or contribution is directly related to the normal course of business operations, such as a donation to a charity that aligns with the company's mission or a contribution to an employee retirement plan, then it may be considered an operating expense and recorded as such.

On the other hand, if the donation or contribution is not directly related to the normal course of business operations, such as a one-time donation to a disaster relief fund or a contribution to a political campaign,

then it may be considered a non-operating expense and recorded as such.

It is important to carefully consider the nature of each donation or contribution to determine how it should be classified in the company's financial statements.

Can litigation expenses be an operating expense and when is it a non-operating expense?

Litigation expenses can be either an operating or non-operating expense, depending on the nature of the expense.

If the litigation expenses are incurred in the ordinary course of business operations, such as legal fees associated with contract disputes or employment issues, they would be considered operating expenses and would be included in the income statement as such.

However, if the litigation expenses are incurred as a result of a one-time event or unusual circumstance, such as a settlement payment related to a lawsuit or legal fees associated with a merger or acquisition, they would be considered non-operating expenses and would be reported separately on the income statement as such.

It is important to note that the classification of litigation expenses as operating or non-operating is based on the specific circumstances surrounding the expense and can vary from company to company.

Can Bad Debt expenses be an operating expense and when is it a non-operating expense?

Bad debt expenses can be considered an operating expense if they are related to the company's primary business activities, such as the sale of goods or services on credit. However, if the bad debt expense is related to an investment or other non-primary business activity, it may be classified as a non-operating expense. Ultimately, the classification will depend on the specific circumstances of the expense and the company's accounting policies.

Can bank charges and depreciation as a Non-Operating Expense accounts in the chart of accounts the same as Operating Expense?

Bank charges and depreciation can be recorded as either Operating Expenses or Non-Operating Expenses in the chart of accounts, depending on how they are classified.

Bank charges can be considered as an Operating Expense if they are directly related to the company's day-to-day operations, such as fees for processing payments or maintaining accounts. However, if the bank charges are associated with financing activities, such as interest expense on loans, they may be classified as Non-Operating Expenses.

Depreciation, on the other hand, is typically recorded as an Operating Expense since it represents the decline in value of assets used in the company's operations. However, if the depreciation relates to non-operating assets, such as idle equipment or investment properties, it may be classified as a Non-Operating Expense.

Amortization

Amortization could that be an expense account?

Yes, amortization is typically recorded as an expense account in the chart of accounts. Amortization refers to the systematic allocation of the cost of intangible assets over their useful life. Examples of intangible assets that may be subject to amortization include patents, copyrights, trademarks, and software.

When an intangible asset is acquired, its cost is spread out over its estimated useful life through periodic amortization expense. This expense is recorded in the income statement and reduces the reported net income. The amortization expense is calculated based on the asset's cost, estimated useful life, and any residual value.

It's important to note that amortization is distinct from depreciation, which is the allocation of the cost of tangible assets over their useful life. Depreciation is typically associated with property, plant, and equipment (PP&E), while amortization is specifically related to intangible assets.

The specific account number for amortization may vary depending on the chart of accounts used by the organization, but it is commonly found in the range of operating expenses or non-operating expenses.

Could Amortization be a operating expense or a non operating expense?

Amortization can be classified as either an operating expense or a non-operating expense, depending on the nature of the intangible asset being amortized and its relevance to the core operations of the business.

If the amortization expense is directly associated with the production or sale of goods or services, it is generally considered an operating expense. For example, if a company develops and sells software, the amortization of the software development costs would be classified as an operating expense.

On the other hand, if the amortization expense is related to non-core activities or non-recurring items, it may be considered a non-operating expense. For instance, if a company incurs amortization expenses for the acquisition of a trademark or a patent that is not directly tied to its main business operations, it would typically be categorized as a non-operating expense.

The classification of amortization as an operating or non-operating expense ultimately depends on the specific circumstances and accounting policies of the company. It is important to consult relevant accounting standards and guidelines, as well as seek professional advice, to determine the appropriate classification for amortization in a particular context.

Profit loss on sale of assets

Gain on Sale of Assets can that be reported on Non-operating revenue as well as Other operating revenue on the income statement?

Yes, the gain on the sale of assets can be reported under both non-operating revenue and other operating revenue on the income statement, depending on the nature of the gain and the company's accounting policies.

If the gain on the sale of assets is considered to be incidental or non-recurring in nature and is not directly related to the core operations of the business, it is typically classified as non-operating revenue. Non-operating revenue represents income generated from activities that are not considered the primary source of revenue for the company.

However, if the gain on the sale of assets is related to the regular course of business operations or is considered part of the company's core activities, it can be reported as other operating revenue. Other operating revenue includes income earned from activities that are integral to the company's primary operations but are not directly related to the sale of goods or services.

The specific classification of the gain on the sale of assets as non-operating revenue or other operating revenue depends on the company's accounting policies, industry norms, and the materiality and frequency of such gains. It is important for companies to disclose their accounting policies and provide clear explanations in their financial statements to ensure transparency and consistency in reporting.

Loss on Sale of Assets can that be reported on Non-operating expense as well as Other operating expenses on the income statement?

Yes, the loss on the sale of assets can be reported under both non-operating expenses and other operating expenses on the income statement, depending on the circumstances surrounding the loss and the company's accounting policies.

If the loss on the sale of assets is considered to be incidental or non-recurring in nature and is not directly related to the core operations of the business, it is typically classified as a non-operating expense. Non-operating expenses represent costs or losses incurred from activities that are not considered the primary source of expenses for the company.

However, if the loss on the sale of assets is related to the regular course of business operations or is considered part of the company's core activities, it can be reported as other operating expenses. Other operating expenses include costs or losses incurred from activities that are integral to the company's primary operations but are not directly related to the production of goods or services.

The specific classification of the loss on the sale of assets as non-operating expenses or other operating expenses depends on the company's accounting policies, industry norms, and the materiality and frequency of such losses. It is important for companies to disclose their accounting policies and provide clear explanations in their financial statements to ensure transparency and consistency in reporting.

Expense classifications

What is Selling and Distribution Expenses?

"*Selling and Distribution Expenses*" is a category of expenses in a company's financial statements that encompasses costs associated with the selling, marketing, and distribution of its products or services. These expenses are incurred to promote and deliver the company's offerings to customers and are essential for generating sales and revenue. In the Chart of Accounts, "*Selling and Distribution Expenses*" is typically classified as a part of operating expenses.

The components included in "*Selling and Distribution Expenses*" may vary depending on the nature of the business and its industry. Some common items that fall under this category include:

1. Sales and Marketing Expenses: These expenses cover costs related to advertising, promotions, sales commissions, sales salaries, sales incentives, trade shows, and other marketing activities aimed at attracting customers and increasing sales.
2. Distribution Costs: This includes expenses associated with the transportation, warehousing, and delivery of products to customers or retailers. It also involves the costs of setting up and maintaining a distribution network, including logistics expenses.
3. Customer Support and Service: Costs related to customer support, technical assistance, warranties, and after-sales service are also part of "Selling and Distribution Expenses."
4. Packaging and Branding: Expenses incurred for packaging materials, design, and branding activities that enhance the presentation and appeal of the products to customers.
5. Bad Debts: In some cases, bad debts resulting from uncollectible sales may be included in this category.
6. Sales and Distribution Software and Systems: Expenses related to sales and distribution software, customer relationship management (CRM) systems, and sales-related technologies.
7. Samples and Demonstrations: Costs associated with providing product samples, demonstrations, or trial offers to potential customers.
8. Sales Allowances and Returns: Provision for potential product returns or allowances to customers.

These expenses are crucial for companies aiming to promote their products effectively, reach their target market, and ensure timely delivery of goods or services to customers. Proper management of selling and distribution expenses is essential for optimizing sales performance, customer satisfaction, and overall profitability.

It's important to note that the specific breakdown of "Selling and Distribution Expenses" may differ between companies based on their unique business models, industry practices, and accounting policies. As such, the Chart of Accounts can be tailored to capture the distinct expenses relevant to each organization's operations.

What is "General and Administrative Expenses"?

"General and Administrative Expenses" is a category of expenses in a company's financial statements that encompasses various costs associated with running the day-to-day operations and management of the business. These expenses are essential for supporting the overall functioning of the organization but are not directly linked to the production of goods or the delivery of services. In the Chart of Accounts, "*General*

and Administrative Expenses" is typically classified as a part of operating expenses.

The components included in "*General and Administrative Expenses*" may vary depending on the size, nature, and industry of the business. Some common items that fall under this category include:

1. Salaries and Wages: Compensation paid to administrative staff, management, and other non-production employees who contribute to the general operations of the company.
2. Rent and Utilities: Costs related to office space, utilities (electricity, water, etc.), property taxes, and building maintenance.
3. Office Supplies: Expenses for stationery, printing materials, and other office supplies required for day-to-day administrative tasks.
4. Professional Fees: Payments to external consultants, legal advisors, auditors, and other professionals hired to provide expert services to the company.
5. Insurance: Premiums for various types of insurance coverage, such as general liability insurance, property insurance, and worker's compensation insurance.
6. Communication Costs: Expenses for telephone services, internet connectivity, and postal/courier services.
7. Travel and Entertainment: Costs related to business travel, meals, and entertainment expenses incurred by employees during company-related activities.
8. Depreciation of Administrative Assets: The allocation of the cost of administrative assets (e.g., office equipment, computers) over their useful life.
9. Office Maintenance and Repairs: Costs for repairs and maintenance of office equipment, facilities, and other administrative assets.
10. Training and Development: Expenses related to employee training, workshops, and professional development programs.
11. Office Equipment Leasing: Costs associated with leasing office equipment instead of purchasing it outright.
12. Office Security: Expenditures on security services, surveillance systems, and access control to protect office premises and assets.

These expenses are necessary for the overall management and support functions of the company, ensuring that administrative tasks are efficiently handled and the organization can operate smoothly. Proper management and control of general and administrative expenses are crucial for optimizing cost structures, maintaining financial stability, and improving the company's profitability.

Again, it's important to note that the specific breakdown of "*General and Administrative Expenses*" may differ

between companies based on their unique business models, industry practices, and accounting policies. The Chart of Accounts can be customized to accurately capture the distinct expenses relevant to each organization's administrative operations.

What is "Finance Costs"?

"*Finance Costs*" refer to the expenses incurred by a company in connection with its borrowing or financing activities. These costs are associated with obtaining and servicing various forms of debt, such as loans, bonds, and other forms of financing used to fund the company's operations and investments. In the financial statements, "*Finance Costs*" are typically classified as part of the company's operating expenses or as interest expenses in the income statement.

The components included in "*Finance Costs*" may vary depending on the company's financing arrangements and the types of debt it utilizes. Some common items that fall under this category include:

1. Interest Expense: The primary component of finance costs is the interest paid on outstanding loans or bonds. This includes both short-term and long-term interest payments.
2. Bank Charges and Fees: Fees charged by financial institutions for various services, such as loan processing fees, commitment fees, and other banking-related charges.
3. Amortization of Financing Costs: For certain financing arrangements, companies may incur costs related to setting up loans or bonds. These costs are spread over the term of the debt through amortization.
4. Foreign Exchange Losses: Finance costs may include foreign exchange losses incurred on foreign-denominated loans or financing instruments due to fluctuations in exchange rates.
5. Fair Value Changes: For certain financial instruments, such as derivatives, changes in their fair value may result in finance costs.
6. Penalty Charges: Penalties imposed for late or missed payments on debt obligations.

Finance costs are an essential aspect of a company's financial management as they impact its overall cost of capital and can significantly affect profitability and cash flow. It's crucial for businesses to carefully manage their debt levels and financing terms to minimize the impact of finance costs on their financial performance.

In contrast to "*Finance Costs*," "*Operating Expenses*" represent the day-to-day expenses of running the business that are not directly related to financing activities. Examples of operating expenses include salaries, rent, utilities, marketing expenses, and other costs necessary for the company's regular operations.

As with other financial metrics, the specific breakdown of finance costs may differ between companies

based on their financing arrangements and accounting policies. It's essential to accurately classify and disclose finance costs in financial statements to provide a clear and transparent view of a company's financial performance and obligations.

Insurance proceeds

Insurance Proceeds is a Non-operating expense - Can this also be an operating expense?

Insurance proceeds are typically not classified as expenses, but rather as income or revenue. Insurance proceeds represent funds received by a company as a result of an insurance claim or settlement, and they are generally recorded as a separate line item on the income statement.

In the context of non-operating expenses, insurance proceeds would not be classified as such. Non-operating expenses are typically associated with costs or losses incurred from activities that are not considered the primary source of expenses for the company. Insurance proceeds, on the other hand, represent a recovery or reimbursement of costs or losses, rather than an actual expense.

However, it's worth noting that insurance expenses, such as insurance premiums paid by the company, can be considered operating expenses. Insurance premiums are regular payments made by the company to an insurance provider to maintain insurance coverage for various risks. These premiums are classified as operating expenses since they are directly related to the ongoing operations of the business.

In summary, insurance proceeds are not classified as operating expenses, but rather as income or revenue when received. Insurance expenses, in the form of insurance premiums, can be classified as operating expenses.

Insurance Proceeds is a Non-operating revenue - Can this also be an operating revenue ?

Insurance proceeds are typically classified as non-operating revenue rather than operating revenue. Non-operating revenue represents income generated from sources that are not directly related to the core operations of a business. Insurance proceeds, in this context, refer to the funds received by a company as

a result of an insurance claim or settlement.

Operating revenue, on the other hand, pertains to the income generated from the primary activities of a business, such as sales of goods or services. It represents the revenue directly linked to the core operations and primary sources of income for the company.

While it is possible for a company's operations to involve insurance-related activities as part of its core business, such as an insurance company or brokerage, in most cases, insurance proceeds would be considered non-operating revenue. They represent funds received as a result of unforeseen events or incidents, such as insurance claims for property damage, loss, or liability, which are not directly related to the day-to-day operations of the business.

Therefore, in the majority of cases, insurance proceeds would be classified as non-operating revenue rather than operating revenue.

Insurance proceeds should that be recorded to determine gain or loss on the disposal of fixed assets?

No, insurance proceeds should not be recorded to determine gain or loss on the disposal of fixed assets.

When a fixed asset is disposed of, the gain or loss on the disposal is typically calculated by comparing the proceeds from the disposal (e.g., the selling price) with the carrying value of the asset (e.g., the original cost minus accumulated depreciation). Insurance proceeds, on the other hand, represent the funds received from an insurance claim or settlement due to an insured event such as damage or loss of an asset.

Insurance proceeds are not directly related to the disposal of fixed assets but rather serve to compensate for the loss or damage incurred. They are meant to restore the company's financial position to what it would have been if the insured event had not occurred.

Therefore, when determining the gain or loss on the disposal of fixed assets, insurance proceeds should not be included in the calculation. The gain or loss should be based solely on the selling price and the carrying value of the asset. Insurance proceeds should be recorded separately as non-operating revenue in the financial statements.

Suspense accounts

What is a suspense account and what is it used for?

A suspense account is a temporary account used to hold transactions or balances temporarily until they can be properly classified or allocated to their appropriate accounts. It is a tool used in accounting to temporarily accommodate transactions that cannot be immediately identified or allocated to specific accounts.

Here are some key points about suspense accounts:

1. Temporary holding: Suspense accounts are used as temporary placeholders for transactions or balances that require further investigation or clarification before they can be properly recorded or allocated.
2. Unidentified or misallocated transactions: Suspense accounts are typically used when there is uncertainty or ambiguity regarding the proper classification or allocation of a transaction. For example, if a payment is received without sufficient information to determine the specific account it should be credited to, it may be temporarily recorded in a suspense account until the correct account can be identified.
3. Resolution and adjustment: Suspense accounts should not be left unresolved indefinitely. It is important to investigate and reconcile the transactions or balances in suspense accounts promptly. Once the appropriate information or allocation is determined, the transactions should be properly recorded or allocated to their respective accounts, and the balances in the suspense account should be cleared.
4. Balancing purposes: In some cases, suspense accounts may be used to temporarily balance financial statements or trial balances when there are discrepancies or errors that need to be resolved.
5. Transparency and accuracy: While suspense accounts serve as a temporary solution, it is essential to identify and rectify the underlying issues causing the need for a suspense account. Timely resolution ensures the accuracy and transparency of financial records.

Suspense accounts should be regularly monitored and cleared to ensure that all transactions are properly recorded and allocated. It is important to investigate and resolve any issues that lead to the use of suspense accounts to maintain accurate financial reporting.

What is Suspense accounts and clearing accounts - Is this a current liability?

Suspense Accounts: A suspense account is a temporary account used to record transactions or entries when there is uncertainty or a lack of information about the appropriate account to which the entry should be posted. It acts as a holding or clearing account until the correct information is obtained and the transaction can be properly allocated to the relevant account. Suspense accounts are typically used as a temporary solution to avoid delays in the accounting process.

For example, if a company receives a payment from a customer but is unsure which specific account the payment belongs to, it may initially post the transaction to a suspense account. Later, when the appropriate details are clarified, the transaction can be moved from the suspense account to the correct account, such as accounts receivable or revenue.

Clearing Accounts: A clearing account is a temporary account used to process and reconcile transactions between two other accounts. It acts as an intermediary account to facilitate the transfer of funds or transactions from one account to another. Clearing accounts are commonly used in situations where multiple transactions need to be grouped together for efficient processing.

For example, if a company has several payments from customers that are received through different payment methods (e.g., cash, credit card, bank transfer), it may use a clearing account to temporarily pool these payments before allocating them to the appropriate individual customer accounts. Once the payments are grouped together in the clearing account, they can be easily reconciled and distributed to the respective customer accounts.

Current Liability Classification: Both suspense accounts and clearing accounts are not considered current liabilities. They are temporary accounts used for administrative and reconciliation purposes within the accounting system. As such, they do not represent obligations or liabilities of the company to external parties.

Instead, suspense accounts and clearing accounts are part of the company's internal accounting processes. They are used to facilitate accurate and organized financial record-keeping and do not directly impact the company's financial position or obligations to external stakeholders.

Is there a specific category to link these accounts?

Suspense accounts and clearing accounts are both considered temporary or intermediary accounts used to facilitate accounting processes, but they serve different purposes. They may be linked or associated with specific categories or types of transactions within a company's accounting system. Here's how they are typically linked or categorized:

Suspense Accounts: Suspense accounts are usually linked to transactions or entries that are temporarily recorded when there is uncertainty about the appropriate account to which the entry should be posted. These accounts are often used in the following situations:

1. Unidentified or Misallocated Transactions: When a transaction lacks complete or accurate information, such as a missing invoice number or customer name, it may be initially recorded in a suspense account until the correct details are obtained.
2. Timing Differences: Sometimes, transactions occur near the end of an accounting period, and there might not be enough time to allocate them properly to the correct accounts. In such cases, the transactions might be temporarily recorded in a suspense account and later reallocated in the next accounting period.
3. Accounting Errors: When errors are discovered in the accounting process, the corrective entry may be posted to a suspense account until the error is rectified.
4. System or Data Migration: During system upgrades or data migrations, transactions may be temporarily recorded in suspense accounts until they can be correctly integrated into the new system.

Clearing Accounts: Clearing accounts are generally used for grouping and reconciling multiple transactions before transferring them to their final destination. They are commonly employed in the following scenarios:

1. Multiple Payments or Receipts: When a company receives multiple payments or receipts that need to be distributed to individual customer accounts, a clearing account is used to temporarily hold these transactions until they are matched and allocated.
2. Bank Reconciliations: Clearing accounts can be used to reconcile bank transactions, especially when there are timing differences between the company's records and the bank statement.
3. Inter-company Transactions: In large organizations with multiple subsidiaries, a clearing account may be used to process intercompany transactions before they are eliminated in the consolidation process.

The specific categories or names of suspense accounts and clearing accounts may vary from one company to another, depending on their accounting systems and practices. Properly managing suspense and clearing accounts is crucial for maintaining accurate financial records and ensuring that all transactions are correctly allocated to their respective accounts.

Commissions paid

Commissions paid can this account be used for commissions paid not to employees and the Bonusses and commissions payroll expense account be used to pay commissions on the payroll?

Yes, the "Commissions Paid" account can be used to record commissions paid to individuals or entities who are not employees of the company. This account is typically used to track and report the expenses related to commissions paid to non-employees, such as independent sales agents, brokers, or contractors.

On the other hand, the "Bonuses and Commissions" payroll expense account is generally used to record commissions that are paid to employees as part of their regular payroll. This account is specifically designated for recording the compensation-related expenses associated with bonuses and commissions paid to employees.

By using separate accounts, one for commissions paid to non-employees and another for employee bonuses and commissions, you can differentiate between the two types of expenses in your financial records. This separation allows for better tracking, analysis, and reporting of the company's commission-related expenditures.

It's important to maintain clear and accurate documentation of commission payments, whether to employees or non-employees, to ensure proper recording and reporting in accordance with accounting standards and regulations.

I see the employee commissions may need to be included in their tax certificates?

Yes, if employees receive commissions as part of their compensation, those commissions may need to be included in their tax certificates or other tax-related documents. The specific requirements for reporting commissions on tax certificates can vary depending on the tax regulations of the country or jurisdiction in which the employees are located.

Typically, commissions paid to employees are considered taxable income and should be reported as such for income tax purposes. The employer is responsible for accurately calculating and reporting the commission amounts on the employees' tax certificates or payroll documentation.

It is recommended to consult with a tax professional or accounting advisor familiar with the tax laws and regulations in your specific jurisdiction to ensure compliance with the reporting requirements related to employee commissions and to accurately reflect them in the employees' tax documentation.

Subsistence and travel allowances and advances

What methods are commonly used for subsistence and travel allowances and advances and recording of the transactions?

Subsistence and travel allowances are common forms of employee reimbursements for expenses incurred during business travel or other work-related activities. Advances may also be provided to employees to cover anticipated expenses prior to travel. Here are some methods that are commonly used for subsistence and travel allowances and advances, as well as the recording of these transactions:

1. Per diem rates: One common method for calculating subsistence allowances is to use per diem rates. These rates are set by the company or government agency and represent a fixed amount that employees can claim for meals, lodging, and incidental expenses while on business travel. Per diem rates are often set based on the location of the travel and can vary depending on the time of year.
2. Receipt-based reimbursement: Another common method is to reimburse employees for actual expenses incurred during business travel. In this method, employees must provide receipts or other documentation for expenses such as meals, lodging, transportation, and other expenses incurred during travel. The company then reimburses the employee for the actual expenses, up to a pre-determined limit.
3. Advances: Companies may also provide advances to employees to cover anticipated expenses during business travel. These advances are typically reconciled against actual expenses incurred by the employee, with any excess returned to the company and any shortfall repaid by the employee.
4. Recording transactions: The recording of subsistence and travel allowances and advances typically involves creating a separate account for each type of expense in the company's chart of accounts. These accounts may include categories such as travel, lodging, meals, and incidentals. Transactions related to subsistence and travel allowances and advances are recorded in these accounts, with appropriate documentation attached to support each transaction.

In addition to these methods, many companies use expense management software to automate the process of tracking and reimbursing employee expenses. These software systems can help reduce errors and streamline the reimbursement process, saving time and improving accuracy.

Is Travel & Subsistence an expense account and which tariffs apply in different countries?

Yes, "*Travel & Subsistence*" is typically recorded as an expense account in the chart of accounts. It represents the costs incurred by employees for business-related travel, including transportation, accommodation, meals, and other related expenses.

Regarding tariffs or rates applicable to travel and subsistence expenses, it varies depending on the country and its specific regulations. Each country may have its own tax laws, guidelines, and reimbursement rates for travel and subsistence expenses.

For example, in the United States, the Internal Revenue Service (IRS) provides guidelines and reimbursement rates known as the "*per diem rates*" for various locations. These rates specify the maximum amount that can be reimbursed for lodging, meals, and incidental expenses without the need for detailed receipts.

Similarly, other countries may have their own tax authorities or government agencies that set guidelines and rates for travel and subsistence expenses. These rates may vary based on factors such as location, duration of travel, and the purpose of the trip.

It is essential to consult the tax laws and regulations of the specific country in question or seek guidance from a qualified tax professional to determine the applicable tariffs or rates for travel and subsistence expenses.

Discounts allowed

What types of discounts are there?

There are several types of discounts that businesses may offer to customers, including:

1. Cash discount: A discount offered to customers who pay for their purchases in cash, rather than using credit or another form of payment.
2. Trade discount: A discount offered to customers who are part of a particular trade or industry. Trade discounts are often used to encourage bulk purchases or to incentivize repeat business.
3. Quantity discount: A discount offered to customers who purchase a large quantity of goods or services. Quantity discounts are often used to incentivize bulk purchases or to clear inventory.

4. Seasonal discount: A discount offered during a particular season or time of year, often to clear out inventory or to encourage sales during a slow period.
5. Promotional discount: A discount offered as part of a marketing or promotional campaign, often to introduce a new product or to encourage customers to try a product or service.
6. Early payment discount: A discount offered to customers who pay their bills early or before the due date. Early payment discounts are often used to incentivize prompt payment and improve cash flow.
7. Loyalty discount: A discount offered to customers who have been loyal to a business or who have made repeat purchases over a certain period of time. Loyalty discounts are often used to incentivize customer retention and build brand loyalty.

The specific types of discounts offered by a business may vary depending on the industry, the target customer base, and the overall business strategy.

Where would discounts allowed be processed in the Chart of accounts and what is the basic transactions?

Discounts allowed would typically be processed in the chart of accounts under a separate account code, such as "*Discounts Allowed*" or "*Sales Discounts.*" This account would be classified as a contra revenue account, which means that it reduces the amount of revenue reported on the income statement.

The basic transaction for discounts allowed involves reducing the revenue earned from a sale by the amount of the discount. For example, if a customer purchases goods with a list price of $1,000 and is offered a 10% discount, the total revenue earned from the sale would be $900 ($1,000 - $100 discount).

The journal entry to record this transaction would be:

- Debit: Cash or Accounts Receivable (depending on the payment method)
- Credit: Revenue Credit: Discounts Allowed

In this entry, the revenue account is credited for the net amount earned from the sale, while the Discounts Allowed account is credited for the amount of the discount given to the customer. The cash or accounts receivable account is debited for the amount received from the customer.

By recording discounts allowed in a separate account, businesses can track the amount of discounts given to customers and analyze their impact on revenue and profitability.

Discounts Allowed account would that be a balance sheet account or a income statement account?

The Discounts Allowed account is typically an income statement account.

It is a contra revenue account, meaning it is used to reduce the amount of revenue reported on the income statement. This account is used to record the discounts that a business offers to its customers, which are deducted from the total revenue earned from sales.

The Discounts Allowed account is an expense that reduces the gross revenue, which results in the net revenue reported on the income statement. This net revenue reflects the total revenue earned from sales, minus the cost of goods sold and any other expenses associated with generating revenue, including discounts allowed.

It is important to note that the balance in the Discounts Allowed account is a debit balance, as it represents a reduction in revenue. At the end of the accounting period, this balance is transferred to the income statement to be subtracted from the gross revenue earned during that period.

Where would discounts received be processed in the Chart of accounts and what is the basic transactions?

Discounts received would typically be processed in the chart of accounts under a separate account code, such as "Discounts Received" or "Purchase Discounts." This account would be classified as a revenue account.

The basic transaction for discounts received involves reducing the cost of goods purchased by the amount of the discount. For example, if a business purchases goods with a list price of $1,000 and is offered a 5% discount for prompt payment, the total cost of goods purchased would be $950 ($1,000 - $50 discount).

The journal entry to record this transaction would be:

- Debit: Purchases Credit: Cash or Accounts Payable (depending on the payment method)
- Credit: Discounts Received

In this entry, the purchases account is debited for the gross amount of the purchase, while the Discounts Received account is credited for the amount of the discount received from the supplier. The cash or accounts payable account is credited for the net amount paid to the supplier.

By recording discounts received in a separate account, businesses can track the amount of discounts received from suppliers and analyze their impact on expenses and profitability.

Trade discounts - does this type of discount need to be recorded?

Trade discounts are a type of discount that is offered by a supplier to a customer, based on the quantity or volume of goods purchased. These discounts are usually offered as a percentage off the list price of the goods and are often used to incentivize customers to buy in larger quantities.

In accounting, trade discounts are not typically recorded as a separate transaction. Instead, the net price of the goods, after the trade discount has been applied, is recorded as the purchase price or the sales price, depending on the transaction.

For example, if a supplier offers a customer a trade discount of 10% off the list price of goods with a list price of $1,000, the net price of the goods would be $900 ($1,000 - $100 discount). The customer would then record the purchase of the goods at the net price of $900, rather than recording a separate transaction for the trade discount.

Similarly, if a business offers a trade discount to a customer, the net price of the goods, after the discount has been applied, would be recorded as the sales price. The customer would then record the purchase of the goods at the net price, rather than recording a separate transaction for the trade discount.

It is important to note that trade discounts are different from cash discounts, which are offered for prompt payment and are typically recorded as separate transactions in accounting.

What is the difference between trade discounts and cash discounts?

Trade discounts and cash discounts are two different types of discounts that businesses may offer or receive.

Trade discounts are discounts that are offered by a supplier to a customer based on the quantity or volume of goods purchased. These discounts are usually a percentage off the list price of the goods and are designed to incentivize customers to purchase larger quantities. Trade discounts are not typically recorded as a separate transaction in accounting. Instead, the net price of the goods after the trade discount has been applied is recorded as the purchase price or sales price, depending on the transaction.

Cash discounts, on the other hand, are discounts that are offered to customers for prompt payment. For example, a business may offer a customer a 2% discount if they pay their invoice within 10 days of the invoice date. Cash discounts are recorded as a separate transaction in accounting and are deducted from the gross amount of the sale to arrive at the net amount received by the business.

The main difference between trade discounts and cash discounts is that trade discounts are used to incentivize customers to purchase larger quantities of goods, while cash discounts are used to encourage

prompt payment by customers. Additionally, trade discounts are not typically recorded as separate transactions, while cash discounts are recorded as a deduction from the gross sale amount.

Discounts received

What types of discount received is there?

There are various types of discounts that a business can receive, depending on the nature of the transaction and the terms negotiated with the supplier. Here are some common types of discounts received:

1. Trade discounts: Trade discounts are reductions in the listed or catalog price of goods or services offered by suppliers to businesses. These discounts are usually based on the volume or quantity of purchases made or on established trade agreements. Trade discounts are not recorded as income or revenue but are rather treated as a reduction in the cost of purchases.
2. Cash discounts: Cash discounts, also known as prompt payment discounts or early payment discounts, are incentives offered to customers for paying their invoices early or within a specified time period. For example, a supplier may offer a discount of 2% if payment is made within 10 days of the invoice date. Cash discounts are recorded as a reduction in the expense or accounts payable when the payment is made.
3. Quantity discounts: Quantity discounts are discounts provided based on the quantity of goods or services purchased. These discounts encourage customers to buy larger quantities, often resulting in lower per-unit costs. Quantity discounts can be negotiated with suppliers based on the volume of purchases or predetermined quantity thresholds.
4. Seasonal or Promotional discounts: Seasonal or promotional discounts are temporary price reductions offered by suppliers to promote sales during specific periods or for specific products or services. These discounts are often associated with holidays, special events, or product launches. They can be a percentage reduction or a specific amount off the regular price.
5. Rebates: Rebates are discounts provided by suppliers after the completion of a specific condition or action. For example, a supplier may offer a rebate to a customer who achieves a certain sales target or purchases a specific quantity of goods within a specified period. Rebates are typically claimed by the customer and are recorded as a reduction in expenses or accounts payable.

It's important for businesses to carefully track and record the different types of discounts received, as they

can impact the cost of goods sold, expense recognition, and overall financial performance. Proper documentation and accounting treatment are necessary to accurately reflect the discounts received in the financial statements.

What is discount received?

Discount received refers to a reduction in the purchase price of goods or services granted by a supplier to a customer as an incentive or reward for prompt payment or other favourable terms. It is a form of trade discount offered to encourage early settlement of an invoice or to promote customer loyalty.

When a business receives a discount from a supplier, it means that the supplier is reducing the amount payable by the business for the goods or services provided. The discount received is typically expressed as a percentage or a specific amount deducted from the original invoice amount.

For accounting purposes, the discount received is recorded as a reduction in the cost of the purchases or expenses incurred by the business. It is treated as a reduction in the expense rather than as income. The discount received is usually recognized as a separate line item in the financial statements or recorded as a deduction on the purchase invoice.

The accounting entry to record a discount received is typically as follows:

1. When the purchase is initially recorded:
    - Debit: Purchases or Expense Account
    - Credit: Accounts Payable or Cash (depending on the payment method)
2. When the discount is received and applied:
    - Debit: Accounts Payable (for the discounted amount)
    - Debit: Discount Received (for the amount of the discount)
    - Credit: Cash (if the payment is made in cash) or Accounts Payable (if the payment is made through credit)

By recording the discount received separately, businesses can track and analyse the impact of discounts on their financial performance and evaluate the effectiveness of their discount policies or supplier relationships.

Is trade discounts received from a supplier recorded?

Yes, trade discounts received from a supplier are typically recorded in the accounting records of a business. However, it's important to note that trade discounts are not recognized as income or revenue. Instead, they are treated as a reduction in the cost of purchases or expenses.

When a trade discount is received, the business will record the transaction in its accounting system. The specific recording method can vary depending on the accounting framework and practices followed by the business. Here is a common approach:

1. Initial Purchase Recording:
    - Debit: Purchases or Expense Account (for the gross amount before the trade discount)
    - Credit: Accounts Payable or Cash (depending on the payment method)
2. Recognition of Trade Discount:
    - Debit: Accounts Payable (for the reduced amount after the trade discount)
    - Credit: Trade Discounts Received (for the amount of the trade discount)

In this entry, the accounts payable is reduced by the amount of the trade discount, reflecting the lower amount payable to the supplier. The trade discounts received account is credited to capture the value of the trade discount received. The trade discounts received account is usually presented as a separate line item in the financial statements or as a deduction on the purchase invoice.

Recording trade discounts received separately allows businesses to track and analyse the impact of trade discounts on their financial performance and assess the effectiveness of their discount arrangements with suppliers. It provides transparency and helps in evaluating the overall cost structure and profitability of the business.

Delivery charges

What is Delivery charges?

Delivery charges refer to the fees or costs incurred by a company or individual to transport goods or services from one location to another. These charges are associated with the logistics and transportation of goods to their intended destinations, whether it's delivering products to customers, moving inventory between warehouses, or distributing goods to retailers.

Delivery charges can vary depending on various factors, including the distance of transportation, the weight and volume of the goods, the mode of transportation (e.g., courier, truck, air freight), and the urgency of delivery (e.g., standard shipping, express delivery).

For businesses engaged in selling products, delivery charges are often an essential aspect of the supply

chain and can impact customer satisfaction and the overall cost of goods sold. Companies may choose to absorb the delivery charges into the product's selling price or pass them on to customers as separate charges.

Types of Delivery Charges:

1. Shipping Charges: These charges apply to the transportation of goods from the seller's location to the customer's delivery address. Shipping charges can be calculated based on factors like distance, package weight, and shipping method selected by the customer.
2. Freight Charges: Freight charges are associated with the transportation of larger shipments or bulk goods. They are commonly used in the context of commercial shipments that require specialized freight carriers.
3. Handling Fees: Handling fees may be added to cover the cost of packaging, processing, and preparing goods for shipment. These fees may apply to both individual customers and business-to-business transactions.
4. Delivery Surcharge: A delivery surcharge may be imposed for deliveries to remote or difficult-to-access locations, which require additional effort or specialized transportation arrangements.
5. Express Delivery Charges: For expedited or express shipping services that guarantee quicker delivery times, additional charges may apply.

Delivery charges are an integral part of businesses' shipping and logistics operations and need to be managed effectively to ensure timely and cost-efficient deliveries. For customers, understanding delivery charges is crucial when making purchasing decisions, as it can impact the total cost of the goods they are buying.

Can delivery charges part of "Other income" or Operating expenses?

The classification of delivery charges as "*Other Income*" or "*Operating Expenses*" depends on the nature and purpose of these charges within a company's business activities. Let's examine how delivery charges may be treated in each category:

1. Other Income: Delivery charges can be classified as "Other Income" if they represent revenue generated by the company from providing delivery services to customers or other businesses. In this case, the delivery charges are considered an ancillary or secondary source of income for the company.

   For example, if a company operates an online store and charges customers for delivery services when they purchase products, the delivery charges would be considered as "Other Income." The amount received from customers for delivery services would be added to the company's revenue under this

category.

2. Operating Expenses: On the other hand, delivery charges may be treated as "*Operating Expenses*" if they represent costs incurred by the company to deliver goods to customers. In this case, the delivery charges are considered a part of the company's operating costs directly related to its main business activities.

   For instance, if a company incurs expenses for shipping and delivering products to customers, these expenses are classified as "Operating Expenses." These costs are subtracted from the company's revenue to calculate its operating profit or loss.

3. Determining the Appropriate Classification: To determine the appropriate classification for delivery charges, consider the role of delivery services in the company's overall business model. If delivery charges are an essential component of the company's revenue-generating activities, they should be included as "*Other Income*." Conversely, if delivery charges represent costs incurred in the process of providing goods to customers, they should be categorized as "*Operating Expenses*."

It's crucial for companies to maintain accurate financial records and adhere to proper accounting principles when classifying various items in their financial statements. The classification of delivery charges has implications for financial analysis, tax reporting, and decision-making, so it's essential to ensure consistency and transparency in accounting practices. If there is uncertainty about how to classify specific charges, consulting with an accountant or financial professional can provide guidance and ensure compliance with accounting standards.

Delivery charge expenses - could that also be as Cost of Goods Sold (COGS)?

Yes, delivery charge expenses can be considered as part of the Cost of Goods Sold (COGS) under certain circumstances. The treatment of delivery charges as COGS depends on whether these expenses are directly associated with the production or purchase of goods that the company sells.

COGS represents the direct costs incurred in producing or acquiring the goods that a company sells to its customers. It typically includes the cost of raw materials, direct labour, and other directly attributable production costs. If delivery charges are directly tied to the production or purchase of goods and are necessary to get the products to the company's premises or customers, they can be included as part of the COGS.

Here are a few scenarios where delivery charges could be considered as part of COGS:

1. Delivery of Raw Materials: If the company incurs delivery charges for transporting raw materials to its manufacturing facility, and these raw materials are used to produce the goods that the company sells, then the delivery charges can be treated as part of COGS.

2. Shipping of Finished Goods: If the company pays for shipping and delivery of the finished goods to customers as part of the sales process, and these delivery charges are directly linked to the sale of the goods, they can be included as part of COGS.
3. Direct Purchase Costs: If the company purchases goods for resale and pays delivery charges as part of the purchase transaction, these charges can be added to the cost of the goods and included in COGS.

It's important to note that not all delivery charges are classified as COGS. If delivery charges are related to general administrative expenses, such as delivering documents or office supplies, they are not part of COGS but are treated as regular operating expenses.

Properly categorising expenses, including delivery charges, is crucial for accurate financial reporting and understanding the true cost of goods sold. If there is uncertainty about how to classify specific delivery charges, consulting with an accountant or financial professional can provide guidance and ensure compliance with accounting principles.

Directors' remuneration

What is Directors' remuneration?

Directors' remuneration refers to the compensation, fees, and benefits paid to the directors of a company for their services and responsibilities as members of the board of directors. Directors are individuals elected or appointed by shareholders to oversee the management and strategic decision-making of the company. They play a crucial role in setting the company's direction, ensuring its compliance with laws and regulations, and safeguarding the interests of shareholders.

Directors' remuneration can take various forms, and the specific components may vary depending on the company's size, industry, and corporate governance practices. Some common elements of directors' remuneration include:

1. Director's Salaries: This is the fixed regular payment or annual salary paid to executive directors for their day-to-day involvement in managing the company's operations.
2. Director's Fees: Non-executive directors, who are not involved in the daily management of the company, may receive fees for attending board meetings, committee meetings, and other company-related activities.

3. Bonuses: Some companies offer performance-based bonuses to directors, linked to the achievement of specific financial or strategic targets.
4. Share-Based Payments: Directors may receive stock options, restricted stock units, or other equity-based compensation as part of their remuneration package.
5. Benefits: Directors may receive various benefits, such as health insurance, retirement contributions, car allowances, and other fringe benefits.
6. Pension Contributions: Companies may contribute to pension funds or retirement plans on behalf of their directors.
7. Perquisites (Perks): Certain non-cash benefits or perquisites, such as club memberships or travel allowances, may be provided to directors.

Directors' remuneration is a significant aspect of corporate governance and is subject to scrutiny by shareholders, regulators, and other stakeholders. Companies are required to disclose the details of directors' remuneration in their financial statements and annual reports to ensure transparency and accountability.

In some jurisdictions, there are specific regulations or guidelines governing directors' remuneration, particularly for publicly listed companies. These regulations aim to ensure that director remuneration is fair, reasonable, and aligned with the company's performance and long-term interests.

The level of directors' remuneration can vary widely based on factors such as the company's financial performance, industry norms, corporate governance practices, and the directors' responsibilities and qualifications. It is ultimately the responsibility of the company's board of directors or remuneration committee to determine appropriate remuneration packages for directors, taking into account these various factors and the interests of shareholders.

For a company, directors remuneration would be recorded as a separate item under Operating expenses - What would the structure and accounts for Directors remuneration be?

The structure and accounts for recording directors' remuneration would typically be categorized under the operating expenses section of a company's income statement. Directors' remuneration refers to the compensation and benefits paid to the company's directors for their services as board members. It includes various forms of payments, such as salaries, fees, bonuses, and other benefits. Below are the key accounts that might be used to record directors' remuneration:

1. Director's Salaries: This account records the fixed monthly or annual salaries paid to the company's directors for their services as executives or non-executive directors.

2. Director's Fees: If directors receive fees for attending board meetings or serving on committees, this account is used to record those payments.
3. Director's Bonuses: If directors are entitled to receive bonuses based on company performance or specific targets, this account is used to track those bonus payments.
4. Director's Benefits: This account includes non-cash benefits or perquisites provided to directors, such as health insurance, car allowances, housing allowances, and other fringe benefits.
5. Retirement Contributions: If the company contributes to retirement funds or pension plans on behalf of directors, this account is used to record those contributions.
6. Director's Share-Based Payments: If directors receive share options or equity-based compensation as part of their remuneration, this account is used to track the value of those share-based payments.
7. Social Security Contributions: The company may be required to contribute to social security schemes on behalf of its directors. This account records those contributions.
8. Payroll Taxes: This account includes any payroll taxes, such as income tax withheld at source, related to directors' remuneration.

These accounts are typically combined to calculate the total remuneration expense for directors, which is then included in the overall operating expenses of the company. Directors' remuneration is an important component of corporate governance and is subject to disclosure and transparency requirements in financial statements and annual reports.

It's important to note that the specific account names and structure may vary from one company to another based on their accounting practices and reporting requirements. Companies should adhere to relevant accounting standards and regulations when recording and disclosing directors' remuneration. Additionally, for publicly listed companies, there may be additional disclosure requirements regarding directors' remuneration in the notes to the financial statements.

Financial Intelligence Centre Act (FICA)

What is FICA?

FICA stands for the Financial Intelligence Centre Act, which is a piece of legislation in South Africa that aims to combat money laundering, terrorist financing, and other financial crimes. The act was enacted in 2001 and has since been amended to strengthen the country's anti-money laundering and counter-terrorism

financing (AML/CFT) framework.

The main objectives of the FICA are to:

1. Identify and Verify Customers: FICA requires financial institutions and accountable institutions to identify and verify the identity of their customers or clients when establishing business relationships or conducting occasional transactions.
2. Report Suspicious Transactions: FICA mandates financial institutions and accountable institutions to report any transactions that they suspect to be related to money laundering, terrorist financing, or other criminal activities to the Financial Intelligence Centre (FIC).
3. Record Keeping: FICA requires institutions to maintain records of customer identification and transaction information for a specified period to enable effective monitoring and compliance with the law.
4. Customer Due Diligence (CDD): Financial institutions are required to perform risk-based customer due diligence to understand their customers' activities and ensure that they are not involved in illegal or suspicious transactions.
5. Reporting of Cash Transactions: FICA requires financial institutions to report cash transactions exceeding certain thresholds to the FIC. This helps in monitoring large cash movements and detecting potential money laundering activities.

FICA places obligations on a wide range of entities, including banks, financial services providers, attorneys, accountants, estate agents, and casinos, among others. These entities are referred to as "accountable institutions" under the FICA. They play a critical role in the fight against financial crime by identifying and reporting suspicious activities to the FIC.

The Financial Intelligence Centre (FIC) is the regulatory body responsible for overseeing and enforcing compliance with the FICA in South Africa. The FIC receives, analyzes, and disseminates financial intelligence to law enforcement agencies to support their efforts in combating financial crimes.

FICA is an essential component of South Africa's efforts to maintain a robust financial system and prevent illicit financial activities. By imposing strict measures to identify customers, report suspicious transactions, and maintain proper records, FICA aims to protect the integrity of the country's financial sector and deter criminals from exploiting financial institutions for illegal purposes.

Is there any specific accounts in the Chart of Accounts related to FICA?

In the Chart of Accounts of a company or organization, there are generally no specific accounts directly related to FICA (Financial Intelligence Centre Act) compliance. FICA is a regulatory framework in South Africa

that imposes obligations on financial institutions and accountable institutions to combat money laundering and terrorist financing. It focuses on customer identification, verification, reporting of suspicious transactions, and record-keeping requirements.

While there might not be specific accounts in the Chart of Accounts dedicated to FICA, the accounting processes and records play a crucial role in ensuring compliance with the FICA regulations. Some aspects of FICA compliance are reflected indirectly in various accounts and transactions. Here are some examples:

1. Suspicious Transaction Reporting: If the company is an accountable institution under FICA and identifies a suspicious transaction, the process of reporting it to the Financial Intelligence Centre may involve documenting the details of the transaction and any related customer accounts.
2. Customer Due Diligence: The customer identification and verification process required by FICA might involve recording customer details, identification documents, and other relevant information in the accounting system.
3. Record-Keeping: FICA mandates the retention of records related to customer identification, transactions, and suspicious activities. These records might be stored in the company's accounting system or other databases.
4. Compliance Costs: The expenses incurred by the company to ensure compliance with FICA requirements, such as implementing systems for customer due diligence, staff training, and enhanced monitoring, would be recorded in appropriate expense accounts.

While FICA compliance is not directly reflected in specific accounts within the Chart of Accounts, it does have a significant impact on the company's overall accounting and reporting processes. Companies that are subject to FICA regulations need to maintain proper records and documentation to demonstrate their compliance with the law. Additionally, they may need to engage with auditors and regulatory authorities to ensure adherence to FICA requirements.

It's essential for companies to have well-designed internal controls and accounting procedures to comply with FICA and other relevant anti-money laundering and counter-terrorism financing regulations. Professional advice from accountants, auditors, or legal experts can be sought to ensure appropriate FICA compliance measures are in place.

In which countries does FICA or related legislation apply?

The term "FICA" specifically refers to the Financial Intelligence Centre Act, which is a piece of legislation in South Africa. FICA is designed to combat money laundering, terrorist financing, and other financial crimes in South Africa. It establishes measures for customer identification, verification, and reporting of suspicious transactions for various accountable institutions, including financial institutions, attorneys, accountants, estate agents, and casinos.

It's important to note that FICA is specific to South Africa and may not apply to other countries. Different countries have their own anti-money laundering (AML) and counter-terrorism financing (CTF) laws and regulations that are tailored to their specific legal and financial systems.

In other countries, similar legislation and regulations exist to address AML and CTF concerns, but they have different names and legal frameworks. Some examples of AML/CTF legislation in other countries include:

1. USA: The United States has the Bank Secrecy Act (BSA) and the USA PATRIOT Act, which impose AML and CTF obligations on financial institutions.
2. Canada: Canada has the Proceeds of Crime (Money Laundering) and Terrorist Financing Act (PCMLTFA) to combat money laundering and terrorist financing.
3. United Kingdom: The UK has the Money Laundering Regulations, which outline the AML and CTF requirements for various businesses and professions.
4. Australia: Australia has the Anti-Money Laundering and Counter-Terrorism Financing Act (AML/CTF Act) to address money laundering and terrorist financing risks.
5. European Union: The EU has various directives and regulations, such as the Fourth Anti-Money Laundering Directive (AMLD4) and the Fifth Anti-Money Laundering Directive (AMLD5), which are implemented by member states.
6. Singapore: Singapore has the Corruption, Drug Trafficking and Other Serious Crimes (Confiscation of Benefits) Act and the Terrorism (Suppression of Financing) Act to address AML and CTF concerns.

These are just a few examples of AML/CTF legislation in different countries. Each country's laws and regulations aim to ensure that financial systems are not misused for illegal purposes and to promote transparency and integrity in financial transactions. Companies and institutions operating in multiple jurisdictions must comply with the relevant AML/CTF regulations in each country where they conduct business.

Federal Insurance Contributions Act (FICA)

FICA (Federal Insurance Contributions Act) - Which countries uses this legislation - Is there similar legislation?

The term "*FICA*" specifically refers to the Federal Insurance Contributions Act, and it is a United States federal law. FICA is the legislation that governs the collection of Social Security and Medicare taxes in the

United States. Therefore, FICA is not used in other countries.

However, other countries have their own social security and healthcare contribution systems, which may be similar in concept but operate under different names and legal frameworks. These systems are designed to provide social insurance and healthcare benefits to citizens and residents. Here are some examples of similar legislation in other countries:

1. Canada: In Canada, the social security program is known as the Canada Pension Plan (CPP) and the Employment Insurance (EI) program. The contributions made by employees and employers are used to fund retirement, disability, and survivor benefits, as well as employment insurance for those who lose their jobs.
2. United Kingdom: In the UK, the social security system includes National Insurance contributions, which fund various benefits such as the State Pension, Jobseeker's Allowance, and Maternity Allowance.
3. Australia: In Australia, the social security system includes contributions to the Superannuation Guarantee, which is used to provide retirement benefits to eligible employees.
4. Germany: In Germany, social security contributions are made to various funds, including those for pension insurance, health insurance, unemployment insurance, and long-term care insurance.
5. Japan: In Japan, social security contributions fund various benefits, including the National Pension and Health Insurance systems.

Each country's social security and healthcare contribution systems are unique and tailored to the specific needs and priorities of that nation. They typically aim to provide financial security and support to individuals in various life situations, such as retirement, disability, unemployment, and medical needs.

It's important for individuals and businesses to be aware of the social security and healthcare contribution requirements in their respective countries to ensure compliance with the law and to avail themselves of the benefits provided by these systems.

Accrued – FICA

The account "*Accrued – FICA*" likely refers to an accounting entry used to record the accrual of FICA (Federal Insurance Contributions Act) taxes that are owed by a company but not yet paid. FICA taxes are a combination of Social Security tax and Medicare tax imposed on employees and employers in the United States to fund the Social Security and Medicare programs.

The term "*Accrued*" indicates that the taxes have been incurred or earned but not yet paid or remitted to the relevant tax authorities. Accrual accounting recognizes income and expenses when they are earned or incurred, regardless of when the actual cash transaction takes place.

In the context of payroll accounting, a company is responsible for withholding FICA taxes from its

employees' wages and also contributes an employer portion of the tax. The company must remit both the employee and employer portions of FICA taxes to the Internal Revenue Service (IRS) on a regular basis.

When accounting for FICA taxes, a company may use an accrual entry to recognize the portion of FICA taxes owed to the employees and the government for the current accounting period but not yet paid. This allows the company to accurately reflect its financial obligations and liabilities related to payroll taxes.

The entry to record the accrual of FICA taxes might look like this:

Debit: Payroll Expense

Credit: Accrued – FICA

In this entry, "*Payroll Expense*" represents the total FICA taxes (both the employee and employer portions) incurred during the accounting period. The credit to "*Accrued – FICA*" signifies the amount of FICA taxes accrued but not yet paid.

The accrued FICA taxes will later be reversed and settled when the company actually pays the payroll taxes to the tax authorities, typically during the next payroll tax reporting period. Accrued FICA taxes are typically reported as a current liability on the company's balance sheet until they are paid.

It's important to note that the specific account numbers and names in the Chart of Accounts can vary between companies and accounting systems. The example provided above is a general illustration of how accrued FICA taxes might be recorded in the company's accounting records.

Risk management

What is risk management?

Risk management is the process of identifying, assessing, and mitigating or managing potential risks that could affect an individual, organization, project, or any other endeavour. Risks are uncertainties or events that have the potential to impact objectives, goals, or outcomes in a negative way. The goal of risk management is to minimize the negative impact of these uncertainties while maximizing the opportunities for positive outcomes.

Key steps in the risk management process include:

1. Risk Identification: This involves identifying potential risks that could affect the project, organization, or goal. Risks can come from various sources, including financial, operational, legal, technological, environmental, and more.

2. Risk Assessment: Once risks are identified, they are assessed in terms of their likelihood of occurring and the potential impact they could have. This assessment helps prioritize which risks need the most attention.
3. Risk Analysis: Risk analysis involves diving deeper into the identified risks to understand their root causes, potential consequences, and potential interdependencies. This helps in developing effective strategies for risk mitigation.
4. Risk Mitigation Planning: In this step, strategies and plans are developed to either prevent risks from occurring or to minimize their impact if they do occur. Mitigation strategies can include preventive measures, contingency plans, risk transfer (such as insurance), and risk avoidance.
5. Implementation: The risk mitigation strategies are put into action. This might involve making operational changes, investing in technology, developing backup plans, or any other necessary actions.
6. Monitoring and Review: Risks and risk management strategies need to be continuously monitored to ensure they remain relevant and effective. New risks might emerge, or the impact of existing risks could change, requiring adjustments to the risk management plan.
7. Communication: Clear communication of risks and risk management plans is crucial to ensure that all stakeholders are aware of potential issues and understand how they will be addressed.

Risk management is not just about avoiding negative outcomes but also about capitalizing on opportunities. By identifying and managing risks effectively, organizations and individuals can improve decision-making, allocate resources wisely, and enhance their ability to achieve their objectives in an uncertain environment.

Various industries, including finance, project management, healthcare, and information technology, employ risk management to safeguard their operations and investments. Different frameworks and methodologies are used to implement risk management, such as ISO 31000, COSO ERM, and PMI's Project Risk Management framework. The approach taken depends on the specific context and goals of the entity or project involved.

What is the components of risk management in accounting?

In the context of accounting, risk management involves identifying and addressing financial risks that could impact an organization's financial statements, operations, and overall financial health. The components of risk management in accounting typically include:

1. Risk Identification: This is the process of identifying potential financial risks that an organization may face. These risks could include credit risk (default by customers or counterparties), liquidity risk (inability to meet short-term financial obligations), market risk (fluctuations in interest rates, exchange rates, and commodity prices), operational risk (internal processes and systems failures), and

regulatory compliance risk (failure to adhere to financial reporting and legal requirements).

2. Risk Assessment and Analysis: Once risks are identified, they need to be assessed and analyzed to determine their potential impact on the organization's financial performance, financial position, and cash flow. This involves estimating the likelihood of the risk occurring and the potential magnitude of its impact.
3. Risk Mitigation Strategies: After assessing risks, organizations develop strategies to mitigate or manage these risks. For example, they might implement credit policies to minimize the risk of default by customers, establish cash reserves to address liquidity risk, use hedging strategies to manage market risk, and improve internal controls to mitigate operational risk.
4. Internal Controls: Internal controls are mechanisms put in place to ensure accurate financial reporting, safeguard assets, and prevent fraud. They play a crucial role in managing financial risks. Examples of internal controls include segregation of duties, authorization and approval procedures, and regular reconciliations.
5. Financial Reporting: Clear and accurate financial reporting is essential for risk management. Transparent financial statements provide stakeholders with information about the organization's financial position, performance, and any potential risks that might impact its future prospects.
6. Contingency Planning: Contingency planning involves preparing for potential adverse events. Organizations develop contingency plans that outline steps to take if a risk materializes. For instance, a company might have a contingency plan for a sudden economic downturn or a significant disruption in its supply chain.
7. Risk Monitoring and Review: Regular monitoring of financial risks is essential to ensure that mitigation strategies are effective and up-to-date. Organizations need to adapt their risk management efforts as the business environment evolves and new risks emerge.
