8. Stakeholder Communication: Effective communication with stakeholders, including investors, lenders, regulators, and employees, is vital. Transparent communication about the organization's risk exposure and risk management strategies helps build trust and confidence.
9. Compliance and Regulatory Risk: Adhering to accounting standards and regulatory requirements is a critical aspect of risk management in accounting. Non-compliance can lead to financial penalties, legal issues, and reputational damage.
10. Technology and Cybersecurity Risk: With the increasing reliance on technology, organizations need to address risks related to data security, cybersecurity, and potential disruptions to digital systems.
11. Ethical Considerations: Managing ethical risks is also important in accounting, as unethical behaviour can lead to financial misstatements, legal consequences, and reputational damage.

It's important to note that the components of risk management in accounting can vary depending on the size of the organization, the industry it operates in, and the specific risks it faces. Effective risk management requires collaboration among various departments, including finance, operations, legal, and compliance, to ensure a holistic approach to identifying, assessing, and mitigating risks.

Internal control

What is internal control?

Internal control refers to the set of policies, procedures, and practices implemented within an organization to safeguard assets, ensure the accuracy and reliability of financial information, promote operational efficiency, and achieve the organization's objectives. It is a crucial aspect of corporate governance and risk management, designed to provide reasonable assurance that the organization's resources are used effectively and that operations are conducted in compliance with relevant laws and regulations.

Key elements of internal control include:

1. Risk Assessment: Identifying and analyzing potential risks that could affect the achievement of organizational goals and objectives.
2. Control Environment: Establishing a positive tone at the top of the organization that emphasizes the importance of internal control and ethical behavior.
3. Control Activities: Implementing specific policies, procedures, and practices to mitigate identified risks and ensure the integrity of financial and operational processes.
4. Information and Communication: Ensuring that relevant and timely information is communicated both vertically and horizontally throughout the organization.
5. Monitoring: Regularly assessing the effectiveness of internal control measures and making necessary adjustments to address changing circumstances and risks.

Internal control can encompass a wide range of activities and mechanisms, including segregation of duties, authorization and approval procedures, physical safeguards, access controls, reconciliations, reviews and approvals, and internal audits.

The objectives of internal control are threefold:

1. Efficiency and Effectiveness: Ensuring that operations and processes are carried out efficiently, promoting optimal resource utilization and maximizing productivity.

2. Reliability of Financial Reporting: Providing reasonable assurance that financial statements and other financial information are accurate, complete, and free from material misstatements.
3. Compliance: Ensuring that the organization complies with applicable laws, regulations, and internal policies, reducing the risk of legal and regulatory violations.

Internal control is not a one-time activity but an ongoing process that requires continuous monitoring, evaluation, and improvement. It involves collaboration between different levels of management and employees to establish a strong control environment that fosters ethical behaviour and accountability. Effective internal control contributes to the overall success and sustainability of the organization by minimizing risks and providing stakeholders with confidence in the organization's operations and financial reporting.

Credit notes and Debit notes

What is Credit notes and Debit notes?

Credit notes and debit notes are both financial documents used in accounting to record adjustments in transactions and correct errors in invoices or billing. They are commonly used in business-to-business (B2B) transactions and can be issued by both sellers and buyers.

1. Credit Note: A credit note is a document issued by a seller to a buyer when there is an overcharge or an error in the original invoice. It serves to decrease the amount owed by the buyer to the seller. The reasons for issuing a credit note can vary, such as goods returned by the buyer, incorrect pricing, quantity discrepancies, or any other adjustments needed to the original invoice.

   For example, if a company sells goods to a customer for $1,000 but later realizes that they overcharged by $100, they would issue a credit note to the customer for $100. The customer can then deduct this amount from their outstanding balance.

2. Debit Note: A debit note, on the other hand, is a document issued by a buyer to a seller when there is an undercharge or an error in the original invoice. It serves to increase the amount owed by the buyer to the seller. Like credit notes, the reasons for issuing debit notes can vary, such as the seller undercharging for goods or services, billing mistakes, or any other adjustments required.

   For example, if a company receives goods from a supplier and the supplier undercharges them by $50, the buyer will issue a debit note to the supplier for $50. This additional amount will be added to the outstanding balance that the buyer owes to the supplier.

In both cases, credit notes and debit notes help in maintaining accurate and transparent accounting records, ensuring that financial transactions are correctly documented and any discrepancies are appropriately addressed. They serve as supporting documents and are often used during the process of reconciling accounts between buyers and sellers.

Purchase Returns and Purchase Discounts

Purchase Returns and Purchase Discounts list of account codes or account categories used in accounting or financial management systems. These codes are typically part of a chart of accounts, which is a standardized list of accounts that a business uses to categorize its financial transactions. Each account code corresponds to a specific type of financial transaction or activity. Here's what each of these accounts represents:

1. G5900-000 - Purchase Returns: This account is used to track returns of goods or products that a business has purchased from its suppliers. When a business returns a purchase, it records the transaction in this account to reflect a reduction in the cost of goods purchased. Depending on your company's accounting policies and jurisdiction, you may need to configure the default contra account if you wish to allocate supplier returns to an account different from the default purchase account in most Sets of Books templates available in osFinancials5/TurboCASH5.
2. G5950-000 - Purchase Discounts: This account is used to track discounts received by a business for early payment of its bills or invoices from suppliers. When a business takes advantage of purchase discounts by paying its bills early, it records the discount amount in this account to reflect the savings achieved.

These account codes are part of a structured accounting system and help businesses accurately record and categorize their financial transactions for reporting and analysis purposes. The specific codes and account names may vary between businesses and accounting systems, but they generally serve similar purposes across different organizations.

Sales Allowances and Sales Discounts

Sales Allowances and Sales Discounts are part of a chart of accounts used in accounting and financial management systems. Here's what each of these accounts represents:

1. G4800-000 - Sales Allowances: This account is used to track allowances granted to customers for issues such as damaged goods, defects, or other reasons that lead to a reduction in the sale price. Sales allowances are essentially deductions from the total sales revenue due to concessions made to customers after a sale has been completed. Depending on your company's accounting policies and jurisdiction, you may need to configure the default contra account if you wish to allocate credit notes to an account different from the default sales account in most Sets of Books templates available in osFinancials5/TurboCASH5.
2. G4900-000 - Sales Discounts: This account is used to record discounts offered to customers as an incentive for early payment. When a customer takes advantage of a sales discount by paying their invoice early, the discount amount is recorded in this account. Sales discounts are often expressed as a percentage of the invoice total and are intended to encourage prompt payment.

These account codes help businesses keep track of various adjustments to their sales revenue, whether it's due to allowances made to customers or discounts offered to encourage timely payment. Properly categorizing these transactions is essential for accurate financial reporting and analysis.

Customer Returns and Credit notes - Default Contra account

Customer Returns and Credit notes

When a customer returns goods and a credit note is issued, the accounting treatment typically depends on the reason for the return and the specific accounting policies of the company. Credit notes can be offset against different accounts, and the choice often depends on the nature of the return and the impact on the company's financial statements. Two common approaches are:

1. Offset Against Sales Revenue (Sales Account): If the returned goods are being credited back to the customer, and the company is reducing its reported sales revenue, the credit note can be offset against the sales account. This is often the case when the returned goods are being deducted from the total sales revenue because they were sold in error, were damaged, or for some other reason that requires a reduction in sales.

   For example, if a customer returns $100 worth of goods, the company could reduce its sales revenue by $100 by offsetting it against the sales account.
2. Offset Against Sales Allowances: If the credit note represents a concession or allowance given to the customer (e.g., for damaged goods or a pricing dispute), it is commonly offset against the "Sales Allowances" account. This reduces the net sales revenue reported in the financial statements.

For example, if a customer is granted a $20 allowance for damaged goods, the $20 credit note would be offset against the "Sales Allowances" account to reflect the reduction in sales revenue.

The choice between these two options depends on the company's accounting policies, the specific circumstances of the return, and how the company wants to present its financial statements. Both approaches are acceptable and can be used depending on what makes the most sense for accurate financial reporting.

It's important for a company to have clear and consistent accounting policies in place for handling returns and credit notes to ensure accurate and transparent financial reporting. These policies should be in line with generally accepted accounting principles (GAAP) or International Financial Reporting Standards (IFRS) if applicable in the company's jurisdiction.

Set default contra account for Credit notes

In osFinancials5/TurboCASH5, the default configuration for handling invoices and credit notes involves utilizing the Sales Journal. Consequently, by default, credit notes are set to offset against the Sales Account.

However, should you wish to utilize a different account, like the Sales Allowances account, to offset credit notes instead of the Sales Account, you will need to follow these steps within osFinancials:

1. Navigate to the Setup menu and select Batch types from the options provided on the Setup ribbon. Here, you can create a specific journal, such as the Sales Returns journal.
2. Within the "*Options for this batch*," you can specify the contra account as "Sales Allowances" or any other specific account distinct from the Sales Account.
3. Access the Setup menu again, this time selecting Document setup from the options on the Setup ribbon. On the Credit notes tab, you can designate the Sales Returns journal as the desired journal for credit note transactions.

This approach aligns with established accounting practices where businesses often employ separate journals or accounts to meticulously track returns, allowances, and discounts, ensuring the precision of financial reporting and facilitating thorough analysis.

It remains essential to tailor osFinancials5/TurboCASH5 to conform to your company's unique accounting policies and reporting criteria. This flexibility to configure contra accounts for various transaction types, such as sales returns and allowances, empowers businesses to uphold the accuracy and transparency of their financial records.

Purchase Returns and Credit Notes issued by Suppliers

If a supplier returns goods sold a credit note is issued - could the supplier be offset against the purchase account - or would it commonly be offset against "Purchase Allowances:"

When a supplier returns goods, and a credit note is issued by the supplier, the accounting treatment typically depends on the nature of the return and the specific accounting policies of the company. Credit notes issued by suppliers can be offset against different accounts, and the choice often depends on the circumstances surrounding the return:

1. Offset Against the Purchase Account : If the credit note from the supplier represents a reduction in the cost of goods purchased or a refund for goods returned due to defects or other reasons, it can be offset against the relevant purchase account. This approach effectively reduces the cost of the goods initially recorded in the purchase account.

   For example, if a company originally recorded a purchase of $1,000 worth of goods from a supplier and later received a credit note for $200 due to returned goods or a pricing adjustment, the credit note could be offset against the purchase account, reducing the recorded purchase cost to $800.

2. Offset Against Purchase Allowances (or Purchase Returns): If the credit note represents a concession or allowance given by the supplier, such as a discount or rebate for early payment or for accepting goods with minor defects, it is commonly offset against an account like "Purchase Allowances" or "Purchase Returns." This approach reduces the net cost of purchases.

   For example, if a supplier offers a $50 allowance for goods with minor defects, the $50 credit note would be offset against the "Purchase Allowances" or "Purchase Returns" account.

The choice between these two options depends on the company's accounting policies, the specific circumstances of the return, and how the company wants to present its financial statements. Just like with customer returns, it's important for a company to have clear and consistent accounting policies for handling supplier returns and credit notes to ensure accurate financial reporting. These policies should align with relevant accounting standards and guidelines in the company's jurisdiction.

Set default contra account for Supplier returns

In osFinancials5/TurboCASH5, the default configuration for handling purchases and supplier returns involves utilizing the Purchase Journal. Consequently, by default, supplier returns (credit notes issued by

suppliers) are set to offset against the Purchase Account.

However, should you wish to utilize a different account, like the Purchase Allowances account, to offset supplier returns instead of the Purchase Account, you will need to follow these steps within osFinancials:

1. Navigate to the Setup menu and select Batch types from the options provided on the Setup ribbon. Here, you can create a specific journal, such as the Purchase Returns journal.
2. Within the "*Options for this batch*," you can specify the contra account as "Purchase Allowances" or any other specific account distinct from the Purchase Account.
3. Access the Setup menu again, this time selecting Document setup from the options on the Setup ribbon. On the Supplier returns tab, you can designate the Purchase Returns journal as the desired journal for supplier return transactions.

This approach aligns with established accounting practices where businesses often employ separate journals or accounts to meticulously track returns, allowances, and discounts, ensuring the precision of financial reporting and facilitating thorough analysis.

It remains essential to tailor osFinancials5/TurboCASH5 to conform to your company's unique accounting policies and reporting criteria. This flexibility to configure contra accounts for various transaction types, such as supplier returns and allowances, empowers businesses to uphold the accuracy and transparency of their financial records.

List of Accounts - Classification

Basic outline for a 4-digit main accounts chart of accounts

The outline for the chart of accounts is a general framework that can be applicable to various accounting systems, including IFRS for SMEs. It covers different categories of accounts that are commonly found in financial reporting. While the account ranges and specific names may vary depending on the company and reporting requirements, the general structure remains similar.

The suggested outline includes:

1. Asset accounts (1000 - 1999): Accounts representing various types of assets owned or controlled by the business, such as cash, receivables, inventory, and fixed assets. They include cash, short-term investments, accounts receivable, inventory, prepaid expenses, property, plant, and equipment, intangible assets, investments, and other assets.

2. Liability accounts (2000 - 2999): Accounts representing the financial obligations or debts of the business to external parties, including payables, borrowings, and accrued liabilities. They include accounts payable, accrued expenses, short-term borrowings, long-term borrowings, deferred revenue, and other current and long-term liabilities.
3. Equity accounts (3000 - 3999): Accounts representing the equity portion of the company's capital structure, depending on the type of business ownership (sole proprietorship, partnership, corporation, LLC). For a sole proprietorship, they typically include owner's capital, owner's drawings, and retained earnings. In a partnership, they include partner's capital accounts, partner's drawings, partner's profit and loss allocation, and retained earnings. In a corporation, they include common stock, preferred stock, additional paid-in capital, retained earnings, and treasury stock. In a limited liability company (LLC), they include member's capital accounts, member's drawings, member's profit and loss allocation, and retained earnings.
4. Revenue accounts (4000 - 4999): Accounts representing the income or revenue generated by the company's primary business activities. They include operating revenue, which is directly related to the core operations, and other revenue, which includes income from sources incidental or peripheral to the main operations.
5. Cost of Goods Sold (COGS) accounts (5000 - 5999): Accounts reflecting the direct costs associated with producing or acquiring the goods or services sold by the company. The specific account names may vary, such as Cost of Sales (COS) or Cost of Services Rendered (SOSR), depending on the nature of the business.
6. Expense accounts (6000 - 7999): Accounts representing the operating expenses incurred by the business in its day-to-day operations. They include wages, rent, utilities, materials, and other expenses directly related to the revenue-generating activities.
7. Non-operating revenue accounts (8000 - 8999): Accounts recording income or revenue generated by the business that is not directly related to its core operations. It includes sources of income that are incidental, peripheral, or non-recurring in nature.
8. Non-operating expenses accounts (9000 - 9999): Accounts reflecting expenses incurred by the business that are not directly related to its core operations. They typically arise from activities outside the normal operations and are separate from operating expenses.

This summary is a general outline of the typical accounts found within each range.

Structure - Sequences of Accounts

It's important to customize and adjust this chart of accounts and reporting framework to suit your business's specific requirements and comply with the relevant reporting standards, tax regulations, and

accounting frameworks in your jurisdiction and country. Factors such as your business ownership type, industry, and other specific needs should be considered when adapting the chart of accounts and reporting framework to ensure accurate and relevant financial reporting for your business.

The organization of accounts, including expense accounts, in a financial chart of accounts can vary widely from one organization to another. While there is no universal rule that dictates the order of account names in an alphabetical sequence, it's essential to structure the chart of accounts in a way that makes sense for the specific needs of your organization and facilitates financial reporting.

Common approaches to organizing expense accounts in a chart of accounts include:

1. Numerical Sequence: Some organizations prefer to assign account codes or numbers sequentially, making it easier to manage and reference accounts systematically. This approach doesn't necessarily require alphabetical order.
2. Alphabetical Order: You can choose to list account names in alphabetical order. This can be helpful for quickly locating specific accounts and may align well with the alphabetical arrangement of income statement categories like "Salaries and Wages," "Amortization," "Depreciation," and "Professional Fees."
3. Functional or Grouping Approach: Many organizations group accounts based on their function or type. For example, you might have a group for all personnel-related expenses, a group for depreciation and amortization, a group for professional fees, and so on. Within each group, you can choose to order accounts alphabetically or based on their importance or frequency of use.
4. Customized for Specific Needs: Some organizations customize their chart of accounts to align with their unique business operations or industry requirements. This may result in a hybrid approach that combines numerical sequencing, alphabetical ordering, and functional grouping.

Ultimately, the goal of structuring a chart of accounts is to make financial reporting, analysis, and decision-making more efficient and meaningful for your organization. You should choose an approach that suits your organization's specific needs, accounting practices, and reporting requirements. The key is to maintain consistency and clarity so that financial information can be easily understood and utilized.

List of Accounts - Assets

What is a brief description of Assets and how is it classified?

Assets are economic resources owned or controlled by an individual, organization, or entity that have the

potential to provide future economic benefits. They represent items of value that can be used to generate revenue, reduce liabilities, or contribute to the organization's overall financial well-being. Assets play a crucial role in the financial health and performance of any entity, as they form the basis for its operations and growth.

Assets can be classified into two main categories based on their nature and expected holding period:

1. Current Assets: Current assets are short-term assets that are expected to be converted into cash or used up within one operating cycle, typically one year. These assets are crucial for the day-to-day operations of the business and include:
    - Cash and Cash Equivalents: Physical currency, cash in bank accounts, and highly liquid investments with maturities of three months or less.
    - Accounts Receivable: Amounts owed to the organization by customers or clients for goods or services provided on credit.
    - Inventory: Represents the value of goods held for resale or raw materials used in production.
    - Prepaid Expenses: Represents advance payments made for goods or services that will be received in the future.
    - Short-Term Investments: Investments with maturities beyond three months but less than one year.
2. Non-Current (or Long-Term) Assets: Non-current assets are long-term assets that are expected to provide economic benefits for more than one operating cycle, usually beyond one year. These assets are essential for the organization's strategic growth and include:
    - Property, Plant, and Equipment (PP&E): Tangible assets like land, buildings, machinery, and vehicles used in the organization's operations.
    - Intangible Assets: Non-physical assets with long-term value, such as patents, copyrights, trademarks, and goodwill.
    - Investments: Long-term investments in other companies, subsidiaries, or joint ventures.
    - Long-Term Receivables: Amounts owed to the organization with a longer-term repayment schedule.
    - Deferred Tax Assets: Tax benefits expected to be realized in future tax periods.

Asset classification is vital for financial reporting and analysis, as it provides insights into the organization's liquidity, solvency, and overall financial position. Properly managing and utilizing assets is essential for achieving financial goals and sustaining long-term success.

List of accounts in charts of accounts for assets?

Here's an alphabetical list of common asset accounts that you might find in a chart of accounts, along with brief descriptions of each account:

1. Accounts Receivable: Amounts owed to the organization by customers or clients for goods or services provided on credit.
2. Cash: Represents the physical cash held by the organization, including cash in hand and cash in bank accounts.
3. Marketable Securities: Investments in financial instruments that can be easily bought, sold, or traded in the financial markets.
4. Inventory: Represents the value of goods held for resale or raw materials used in production.
5. Prepaid Expenses: Represents advance payments made for goods or services that will be received in the future.
6. Fixed Assets: Tangible assets with a long-term useful life, such as land, buildings, machinery, and equipment.
7. Accumulated Depreciation: Represents the cumulative depreciation of fixed assets over their useful life.
8. Intangible Assets: Non-physical assets with long-term value, such as patents, trademarks, copyrights, and goodwill.
9. Investments: Long-term investments in other companies or entities.
10. Loans Receivable: Amounts lent to other parties, typically with a longer-term repayment schedule.
11. Notes Receivable: Promissory notes or written promises to pay a specific amount on a specified date.
12. Petty Cash: Represents a small amount of cash set aside for minor expenses.
13. Prepaid Rent: Represents rent payments made in advance for future periods.
14. Supplies: Represents the value of office or operational supplies held by the organization.
15. Work in Progress: Represents the value of partially completed projects or production processes.
16. Land: The cost of land owned by the organization for operational or investment purposes.
17. Buildings: The cost of buildings owned by the organization for operational or investment purposes.
18. Equipment: The cost of equipment, such as machinery and tools, used in the organization's operations.

19. Vehicles: The cost of vehicles owned by the organization for business purposes.
20. Goodwill: Represents the excess of the purchase price of an acquired business over the fair value of its net assets.

Please note that this list is not exhaustive, and the specific accounts used in a chart of accounts can vary based on the organization's industry, size, and accounting practices. Additionally, some organizations may have more specific asset accounts tailored to their unique needs and operations. The chart of accounts should be structured to provide clear and accurate information for financial reporting and decision-making.

What is a brief description of Fixed Assets and how is it classified?

Fixed assets, also known as long-term assets or non-current assets, are tangible or intangible assets that a company holds for long-term use in its business operations rather than for sale. These assets are not intended for conversion into cash or consumption within one operating cycle, and their useful life typically extends beyond one year.

Brief Description of Fixed Assets:

Fixed assets can take various forms and play a crucial role in a company's operations. Some common types of fixed assets include:

1. Tangible Fixed Assets: These are physical assets that have a tangible form. Examples include:
    - Property, Plant, and Equipment (PP&E): Includes land, buildings, machinery, vehicles, and equipment used in the production and delivery of goods and services.
    - Furniture and Fixtures: Includes office furniture, fixtures, and fittings used in the workplace.
    - Computer Hardware: Includes desktops, laptops, servers, and other computer equipment used in the company's operations.
2. Intangible Fixed Assets: These are non-physical assets that lack a physical form but have long-term value to the company. Examples include:
    - Intellectual Property: Includes patents, copyrights, trademarks, and trade secrets that grant the company exclusive rights to its creations or innovations.
    - Goodwill: Represents the excess of the purchase price over the fair value of net assets acquired in a business combination.

Classification of Fixed Assets:

Fixed assets are classified based on their nature and use. They are typically grouped into the following categories:

1. Tangible Fixed Assets: This category includes all physical assets, such as property, plant, equipment, and vehicles.
2. Intangible Fixed Assets: This category includes non-physical assets, such as intellectual property, goodwill, and software.

Fixed assets are recorded on the company's balance sheet under the non-current assets section. They are reported at historical cost less accumulated depreciation (for tangible assets) or amortization (for intangible assets). Depreciation and amortization are used to allocate the cost of fixed assets over their estimated useful lives to reflect their gradual consumption or obsolescence.

Properly managing fixed assets is crucial for companies to ensure they can effectively conduct their business operations, maintain competitiveness, and generate future revenue. Additionally, keeping accurate records of fixed assets helps in financial reporting, taxation, and decision-making processes.

List of accounts in charts of accounts for plant, property and equipment

Here's an alphabetical list of common plant, property, and equipment (PP&E) accounts that you might find in a chart of accounts, along with brief descriptions of each account:

1. Accumulated Depreciation - Buildings: Represents the cumulative depreciation of buildings over their useful life.
2. Accumulated Depreciation - Equipment: Represents the cumulative depreciation of equipment over its useful life.
3. Accumulated Depreciation - Vehicles: Represents the cumulative depreciation of vehicles over their useful life.
4. Buildings: Represents the cost of buildings owned by the organization for operational or investment purposes.
5. Equipment: Represents the cost of equipment, such as machinery and tools, used in the organization's operations.
6. Land: The cost of land owned by the organization for operational or investment purposes.
7. Leasehold Improvements: Represents the cost of improvements made to leased property.

8. Vehicles: The cost of vehicles owned by the organization for business purposes.

Please note that the specific PP&E accounts used in a chart of accounts can vary based on the organization's industry, size, and accounting practices. Additionally, the chart of accounts should be tailored to provide accurate and relevant information for financial reporting and analysis. Proper accounting of PP&E is essential for assessing an organization's capital investments and determining the depreciation expense, which impacts the income statement and overall financial health.

List of Accounts - Current Assets

What is a brief description of Current Assets and how is it classified?

Current assets are a category of assets on a company's balance sheet that are expected to be converted into cash or used up within one operating cycle or one year, whichever is longer. These assets are vital for the day-to-day operations of the business and provide liquidity and flexibility in meeting short-term obligations and expenses.

Brief Description of Current Assets:

Current assets typically include the following types of assets:

1. Cash and Cash Equivalents: This includes physical cash, balances in bank accounts, and highly liquid investments with a maturity of three months or less.
2. Accounts Receivable: Represents amounts owed to the company by customers or clients for goods or services provided on credit.
3. Inventory: Represents the value of goods held for resale or raw materials used in the production process.
4. Prepaid Expenses: Represents payments made in advance for goods or services that will be received in the future.
5. Short-Term Investments: Includes investments with maturities beyond three months but less than one year.

Classification of Current Assets:

Current assets are typically classified in the order of their liquidity, with the most liquid assets listed first. The specific order may vary between companies and accounting practices, but a common classification is as follows:

1. Cash and Cash Equivalents: This is the most liquid asset and is always listed first.
2. Short-Term Investments: These are investments that are relatively liquid and close to their maturity date.
3. Accounts Receivable: Represents the amounts to be collected from customers, arranged in order of their expected collection.
4. Inventory: Represents the value of goods held for sale, categorized based on the stage of completion or saleability.
5. Prepaid Expenses: Represents payments made in advance for goods or services, which will be consumed within one year.

Current assets provide insights into a company's short-term liquidity, its ability to meet short-term obligations, and its operational efficiency. They are essential for the smooth functioning of the business and play a crucial role in managing cash flow and working capital. Analysing the composition and trends of current assets helps investors, creditors, and management assess the company's financial health and short-term financial strength.

List of accounts in charts of accounts for current assets?

Here's an alphabetical list of common current asset accounts that you might find in a chart of accounts, along with brief descriptions of each account:

1. Accounts Receivable: Amounts owed to the organization by customers or clients for goods or services provided on credit.
2. Cash and Cash Equivalents: Represents the physical cash held by the organization and highly liquid investments with maturities of three months or less.
3. Inventory: Represents the value of goods held for resale or raw materials used in production.
4. Marketable Securities: Investments in financial instruments that can be easily bought, sold, or traded in the financial markets.
5. Notes Receivable: Represents promissory notes or written promises to pay a specific amount on a specified date.

6. Prepaid Expenses: Represents advance payments made for goods or services that will be received in the future.
7. Short-Term Investments: Represents investments with maturities beyond three months but less than one year.
8. Supplies: Represents the value of office or operational supplies held by the organization.

Please note that the specific current asset accounts used in a chart of accounts can vary based on the organization's industry, size, and accounting practices. Additionally, the chart of accounts should be tailored to provide accurate and relevant information for financial reporting and analysis. Current assets are important indicators of an organization's liquidity and operational efficiency and are crucial for short-term financial decision-making.

List of Accounts - Intangible Assets

What is a brief description of Intangible Assets and how is it classified?

Intangible assets are assets that lack physical substance but have identifiable value and long-term utility to a company. These assets represent non-physical resources or rights that provide future economic benefits to the business. Unlike tangible assets, intangible assets cannot be seen or touched, but they contribute to the company's competitive advantage, revenue generation, and overall value.

Brief Description of Intangible Assets:

Intangible assets can take various forms and play a crucial role in a company's operations and success. Some common types of intangible assets include:

1. Intellectual Property (IP): This includes patents, copyrights, trademarks, and trade secrets that grant the company exclusive rights to its inventions, creations, brands, or proprietary knowledge.
2. Goodwill: Represents the excess of the purchase price of a business acquisition over the fair value of its identifiable net assets. It arises from factors such as customer loyalty, brand reputation, and the company's overall reputation.
3. Software: Represents the value of purchased or internally developed software applications and

computer programs.

4. Licenses and Franchises: Represents the rights to use certain intellectual property or business methods granted by a licensor or franchisor.
5. Customer Lists and Relationships: Represents the value derived from established customer relationships, client lists, or customer databases.

Classification of Intangible Assets:

Intangible assets are typically classified into two main categories based on their nature and how they are acquired:

1. Purchased Intangible Assets: These are intangible assets acquired through a purchase or acquisition. They are recorded at their historical cost, including any acquisition costs, and are subject to amortization over their estimated useful life.
2. Internally-Generated Intangible Assets: These are intangible assets developed or created by the company internally. Generally, internally-generated intangible assets are expensed as incurred and not capitalized, except in certain specific circumstances where specific accounting criteria are met.

Intangible assets are reported on the company's balance sheet under the non-current assets section. They are listed after tangible assets, such as property, plant, and equipment. Like tangible assets, intangible assets are subject to periodic impairment assessments to ensure their carrying value is not overstated and to adjust their value based on their actual performance and economic benefits.

Properly identifying, valuing, and managing intangible assets are crucial for companies to protect their intellectual property, build brand value, and maintain a competitive edge in the market. Intangible assets can significantly contribute to a company's long-term success and financial performance.

List of accounts in charts of accounts for intangible assets?

Here's an alphabetical list of common intangible asset accounts that you might find in a chart of accounts, along with brief descriptions of each account:

1. Copyrights: Represents exclusive rights granted to authors or creators of original works.
2. Franchise Rights: Represents the rights granted to franchisees to operate under a franchisor's brand and business model.
3. Goodwill: Represents the excess of the purchase price of an acquired business over the fair value of its net assets.
4. Intellectual Property: Represents the collective value of patents, copyrights, trademarks, and trade secrets owned by the organization.

5. Licenses: Represents permissions granted by an authority to carry out specific activities or use specific resources.
6. Patents: Represents exclusive rights granted to inventors for their inventions.
7. Software: Represents the cost of acquiring or developing computer software for internal use.
8. Trademarks and Trade Names: Represents distinctive symbols, names, or logos associated with the organization's brand.

Please note that the specific intangible asset accounts used in a chart of accounts can vary based on the organization's industry, size, and accounting practices. Additionally, the chart of accounts should be tailored to provide accurate and relevant information for financial reporting and analysis. Intangible assets can play a significant role in an organization's value, and proper accounting and reporting of these assets are essential for financial decision-making.

List of Accounts - Liabilities

What is a brief description of Liabilities and how is it classified?

Liabilities are financial obligations or debts that a business or organization owes to external parties. They represent the claims on the organization's assets by creditors and other stakeholders. Liabilities arise from past transactions or events, and the organization has an obligation to settle these debts in the future, either by providing goods or services or by making cash payments.

Brief Description of Liabilities:

Liabilities can take various forms and represent different types of obligations. Some common types of liabilities include:

1. Accounts Payable: Amounts owed to suppliers or vendors for goods or services purchased on credit.
2. Notes Payable: Formal written promises to repay borrowed funds on specified terms.
3. Loans and Borrowings: Represents amounts borrowed from financial institutions or lenders.
4. Accrued Liabilities: Expenses incurred but not yet paid, such as salaries, taxes, or utilities.
5. Deferred Revenue: Represents cash received from customers for goods or services not yet delivered or rendered.

6. Long-Term Debt: Debts or obligations that are due beyond one year.
7. Contingent Liabilities: Potential liabilities that may arise from uncertain events, such as pending lawsuits or warranties.

Classification of Liabilities:

Liabilities are classified based on their maturity and the timeline for settlement. They are typically grouped into two main categories:

1. Current Liabilities: These are obligations that are expected to be settled within one operating cycle or one year, whichever is longer. Current liabilities represent short-term debts that the organization will pay off in the near future. Common examples include accounts payable, accrued liabilities, and short-term loans.
2. Non-Current (or Long-Term) Liabilities: These are obligations that are due beyond one year or the operating cycle. Non-current liabilities represent long-term debts that the organization will settle over an extended period. Common examples include long-term loans, bonds, and deferred tax liabilities.

Proper classification of liabilities is essential for financial reporting and analysis, as it helps stakeholders understand the organization's debt obligations, liquidity, and financial health. By monitoring and managing liabilities effectively, organizations can ensure they meet their financial commitments and maintain a stable financial position.

List of accounts in charts of accounts for liabilities?

Here's an alphabetical list of common liability accounts that you might find in a chart of accounts, along with brief descriptions of each account:

1. Accounts Payable: Amounts owed to vendors or suppliers for goods or services received but not yet paid.
2. Accrued Liabilities: Represents expenses incurred but not yet paid or recorded, such as accrued salaries or accrued interest.
3. Bank Loans Payable: Represents long-term loans from financial institutions or banks.
4. Bonds Payable: Represents long-term debt securities issued by the organization.
5. Customer Deposits: Represents advance payments received from customers for goods or services to be delivered in the future.
6. Deferred Revenue: Represents payments received in advance for goods or services not yet provided.
7. Income Tax Payable: Represents taxes owed to tax authorities based on taxable income.

8. Interest Payable: Represents interest owed on outstanding loans or debt.
9. Long-Term Debt: Represents long-term loans or debt obligations with maturities beyond one year.
10. Notes Payable: Represents promissory notes or written promises to pay a specific amount on a specified date.
11. Payroll Liabilities: Represents amounts withheld from employee salaries for taxes, benefits, and other deductions.
12. Sales Tax Payable: Represents taxes collected from customers on behalf of taxing authorities.
13. Short-Term Debt: Represents short-term loans or debt obligations with maturities within one year.
14. Unearned Revenue: Represents payments received in advance for goods or services not yet provided.
15. Warranty Liabilities: Represents the estimated future cost of fulfilling warranty obligations for products sold.

Please note that this list is not exhaustive, and the specific liability accounts used in a chart of accounts can vary based on the organization's industry, size, and accounting practices. Additionally, some organizations may have more specific liability accounts tailored to their unique needs and operations. The chart of accounts should be structured to provide clear and accurate information for financial reporting and decision-making.

- Liability accounts (2000 - 2999): Liabilities are obligations or debts that a business or individual owes to external parties. They represent the claims or obligations that others have on the assets of the entity. In accounting, liabilities are recorded on the balance sheet and reflect the financial obligations that need to be fulfilled in the future.

  The range of accounts from 2000 to 2999 typically represents liability accounts in the chart of accounts.

These accounts capture the various types of financial obligations or debts that a business owes to external parties. Here is a concise summary of common liability accounts within this range:

1. Accounts Payable (2000-2099): This account represents the amount owed to suppliers or vendors for goods or services received on credit. It includes unpaid invoices and bills that are due to be paid.
2. Accrued Expenses (2100-2199): These are expenses that have been incurred but not yet paid or recorded in the accounting system. They include accrued wages, accrued interest, and accrued utilities.
3. Short-term Borrowings (2200-2299): This account captures short-term loans or borrowings that are due within one year or the normal operating cycle of the business. It includes bank loans, lines of credit, and short-term notes payable.
4. Long-term Borrowings (2300-2399): This account represents long-term loans or borrowings that extend beyond the next year. It includes long-term bank loans, bonds payable, and other long-term debt obligations.
5. Deferred Revenue (2400-2499): Also known as unearned revenue, this account records the amount received in advance from customers for goods or services that are yet to be delivered. It represents an obligation to provide the products or services in the future.
6. Other Current Liabilities (2500-2599): This category includes various short-term financial obligations that do not fit into specific accounts mentioned above. It may include items such as accrued taxes, customer deposits, and other short-term liabilities.
7. Other Long-term Liabilities (2600-2699): Similar to other current liabilities, this category captures long-term financial obligations that are not classified under specific accounts. It may include items such as deferred tax liabilities, long-term customer deposits, and other long-term liabilities.

These are just a few examples of common liability accounts within the 2000-2999 range. The specific accounts and their numbering may vary depending on the organization's chart of accounts and industry-specific requirements.

List of Accounts - Equity / Capital

What is equity or capital?

Equity, also referred to as capital or owner's equity, represents the residual interest in an organization's assets after deducting its liabilities. In simple terms, it is the portion of the organization's value that belongs to its owners or shareholders. Equity reflects the ownership stake of the shareholders in the company and represents the total value of assets that are financed by the owners' contributions and retained earnings.

Equity can be calculated using the following formula:

```
Equity = Total Assets - Total Liabilities
```

The components of equity include:

1. Paid-In Capital: Also known as contributed capital, it represents the amount of capital contributed by shareholders through the issuance of common and preferred shares.
2. Retained Earnings: This portion of equity comprises the accumulated profits or losses retained in the company over time after deducting dividends paid to shareholders.
3. Treasury Stock: Represents shares of the company's own stock that have been repurchased and are held by the company itself.
4. Other Comprehensive Income: Includes gains and losses from certain financial instruments that are not recognized in the income statement but are included in equity.

Equity is a crucial element in the balance sheet of an organization and provides insight into the owners' claims on the company's assets. It serves as a measure of the company's financial health and solvency, indicating how much of its assets are funded by investors rather than borrowed funds. Additionally, equity serves as a source of funding for future business activities and investments. As the company grows and generates profits, retained earnings increase, contributing to the growth of equity and shareholder value.

In which countries is Equity used and in which countries is Capital used?

The terms "*equity*" and "*capital*" are used interchangeably in many countries to refer to the ownership interest or ownership stake in a company. Both terms essentially represent the same concept of the residual interest in the assets of an entity after deducting liabilities. They signify the total value that belongs to the owners or shareholders.

The usage of "*equity*" and "*capital*" can vary based on regional language, business practices, and legal terminology. However, in the context of business and finance, both terms are widely recognized and used

across various countries.

1. Equity: The term "*equity*" is commonly used in the United States, Canada, the United Kingdom, and many other countries around the world. It is widely used in accounting, finance, and corporate governance to refer to the ownership interest of shareholders in a company.
2. Capital: The term "*capital*" is also widely used across the world to refer to the funds contributed by shareholders to start or operate a business. It can be used interchangeably with "*equity*" to represent the financial interest of the owners in a company.

In summary, both "*equity*" and "*capital*" are widely used and recognized terms to describe ownership interests in companies, and they are used interchangeably in many countries. The specific usage of these terms may vary based on regional language and business practices, but their underlying meaning remains the same.

In which countries does Stock apply and in which countries does Shares apply?

The terms "*stock*" and "*shares*" are used interchangeably in many countries to refer to ownership interests in a company. However, there are some regional differences in how these terms are commonly used. It's important to note that the usage of these terms may vary, and the legal and accounting definitions can differ from colloquial usage.

In general, "*stock*" is a term more commonly used in the United States and Canada, while "*shares*" is a term more commonly used in the United Kingdom and other Commonwealth countries.

1. Stock (United States and Canada): In the United States and Canada, the term "stock" is often used to refer to ownership interests in a corporation. For example, a company's ownership may be divided into common stock and preferred stock. Common stock represents ownership with voting rights, while preferred stock typically represents ownership with preferential treatment in terms of dividends and other benefits. The total value of a company's outstanding stock is often referred to as its "market capitalization."
2. Shares (United Kingdom and Commonwealth Countries) : In the United Kingdom and other Commonwealth countries, the term "shares" is commonly used to refer to ownership interests in a company. For example, a company may issue ordinary shares or preference shares. Ordinary shares typically carry voting rights and are the most common type of shares issued. Preference shares, similar to preferred stock in the United States, may have preferential rights to dividends and assets in case of liquidation.

Despite these regional differences in common usage, both terms essentially refer to the same concept of ownership in a company. The legal definitions and regulations related to ownership interests in

corporations are generally similar across countries, but the specific terminology may vary. Companies and investors should be aware of the local legal and regulatory requirements related to the issuance and ownership of stock or shares in their respective jurisdictions.

List of accounts in charts of accounts for equity?

Here's an alphabetical list of common equity accounts that you might find in a chart of accounts, along with brief descriptions of each account:

1. Common Stock: Represents the par value or stated value of shares issued to shareholders.
2. Preferred Stock: Represents shares with preferential rights, such as priority dividends or liquidation preference.
3. Additional Paid-in Capital: Represents the amount received from shareholders in excess of the par value of shares issued.
4. Retained Earnings: Represents accumulated profits or losses retained in the company after dividends and distributions.
5. Treasury Stock: Represents shares of the company's own stock that have been repurchased and held by the company.
6. Stock Dividends Distributable: Represents dividends declared in the form of additional shares to be distributed to shareholders.
7. Accumulated Other Comprehensive Income: Represents unrealized gains and losses from certain financial instruments.
8. Contributed Capital: Represents capital contributions made by shareholders, owners, or partners.
9. Capital Surplus: Represents additional amounts received from shareholders for specific purposes.
10. Deficit: Represents a negative balance in retained earnings due to cumulative net losses.
11. Common Stock Subscribed: Represents shares of common stock that have been promised to be purchased by investors.
12. Donated Capital: Represents contributions of capital from donors or benefactors for specific purposes.
13. Equity Compensation: Represents the value of stock options or other equity-based compensation plans.
14. Opening Balances Equity: Represents the equity balance carried forward from the previous accounting period.

Please note that the specific equity accounts used in a chart of accounts can vary based on the organization's legal structure, reporting requirements, and accounting practices. Additionally, some organizations may have more detailed equity accounts based on their unique equity transactions and ownership arrangements. The chart of accounts should be tailored to provide accurate and relevant information for financial reporting and analysis.

Stock / Shares - Terminology - Depending on Jurisdictions

The specific accounts used to represent equity can vary depending on the jurisdiction, accounting framework, and accounting standards followed by an organization. Different countries have different legal requirements and reporting standards that may influence the naming and classification of equity accounts in the financial statements.

While the concepts of equity, such as common stock, preferred stock, retained earnings, and treasury stock, are widely recognized and used in accounting, the actual account names and classifications may differ based on regional or legal requirements.

For example, in some jurisdictions, the term "*share capital*" may be used instead of "*common stock*" or "*equity capital*." Similarly, the accounting standards may have specific requirements for the presentation and disclosure of equity-related accounts.

Some other examples of equity-related accounts that may be applicable in certain jurisdictions or accounting frameworks include:

- Share Premium: Represents the amount received by a company from the issuance of shares above their nominal or par value.
- Capital Reserves: Represents funds set aside for specific purposes, such as legal reserves or specific business investments.
- Retained Earnings Appropriated for Legal Reserve: Represents retained earnings allocated for legal reserve requirements.
- Dividends Payable: Represents dividends declared by the company but not yet paid to shareholders.
- Dividends Payable to Non-Controlling Interests: Represents dividends owed to minority shareholders or non-controlling interests in subsidiaries.
- Other Comprehensive Income: Represents items of income and expense that bypass the income statement and are directly recorded in equity.

The specific accounts and their names may also vary depending on the organizational structure, industry, and accounting practices followed by the company.

It's essential for organizations to comply with the applicable accounting standards and legal requirements in their jurisdiction while preparing their financial statements and reporting equity-related transactions accurately.

In the equity section of the balance sheet, the business ownership type will determine the structure of the accounts in the Equity section?

Yes, the business ownership type can influence the structure of accounts in the equity section of the balance sheet. The structure of the equity section may vary depending on whether the business is a sole proprietorship, partnership, or corporation.

1. Sole Proprietorship: In a sole proprietorship, the business is owned and operated by a single individual. The equity section typically includes the following accounts:
    - Owner's Capital: Represents the owner's initial investment in the business and any additional capital contributions made over time.
    - Owner's Drawings: Represents withdrawals or distributions taken by the owner for personal use.

    In a sole proprietorship, the equity section may be relatively straightforward, consisting mainly of the owner's capital and drawings accounts.
2. Partnership: In a partnership, the business is owned and operated by two or more individuals or entities. The equity section may include the following accounts:
    - Partner's Capital Accounts: Separate capital accounts are maintained for each partner, reflecting their initial investments and share of profits or losses.
    - Partner's Drawings: Represents withdrawals or distributions taken by each partner for personal use.

    Partnership equity sections are more complex than sole proprietorships as they need to account for the capital contributions and profit-sharing among multiple partners.
3. Corporation: In a corporation, the business is a separate legal entity owned by shareholders. The equity section of a corporation's balance sheet may include the following accounts:
    - Common Stock: Represents the par value or stated value of the common shares issued to shareholders.
    - Preferred Stock: Represents the par value or stated value of preferred shares issued to

shareholders, if applicable.

- Additional Paid-In Capital: Represents the amount received above the par value when issuing stock.
- Retained Earnings: Represents accumulated profits or losses retained in the company over time.
- Treasury Stock: Represents shares of the company's own stock repurchased and held by the company.

Corporations have more complex equity sections due to the various classes of shares, additional paid-in capital, and the ability to buy back and hold their own stock as treasury stock.

In summary, the ownership structure of the business, whether sole proprietorship, partnership, or corporation, will influence the accounts included in the equity section of the balance sheet to reflect the respective ownership interests and capital contributions of the owners or shareholders.

List of accounts in charts of accounts for other revenue?

Here's an alphabetical list of common other revenue accounts that you might find in a chart of accounts, along with brief descriptions of each account:

1. Gain on Foreign Exchange: Represents gains realized from favourable exchange rate fluctuations when dealing with foreign currencies.
2. Gain on Sale of Assets: Represents gains realized from selling assets, such as property, equipment, or investments.
3. Gain on Sale of Investments: Represents gains realized from selling investments, such as stocks or bonds.
4. Gain on Sale of Subsidiaries: Represents gains realized from selling subsidiary companies.
5. Interest Income: Revenue earned from interest on loans, investments, or bank deposits.
6. Miscellaneous Other Revenue: Revenue from various sources that do not fit into other specific categories.

7. Other Operating Income: Revenue generated from sources other than primary business activities.

Please note that the specific other revenue accounts used in a chart of accounts can vary based on the organization's industry, size, and accounting practices. The chart of accounts should be tailored to provide accurate and relevant information for financial reporting and analysis.

List of accounts in charts of accounts for operating revenue?

You can group or classify the Operating Revenue accounts into several categories based on their nature and purpose.

You can group or classify operating revenue accounts, closely tied to your core business operations, it's operating income; into several categories based on their nature and purpose. Here are some common categories for operating revenue accounts:

1. Product Sales Revenue: Sales revenue from the sale of physical products your company manufactures or sells.
2. Service Revenue: Revenue generated from providing services to clients or customers.
3. Subscription Revenue: Revenue from subscription-based services or products.
4. Licensing and Royalty Revenue: Income from licensing your intellectual property or collecting royalties.
5. Rental and Leasing Revenue: Income from renting or leasing out assets, such as property or equipment.
6. Advertising Revenue: Revenue generated from advertising services or partnerships.
7. Commission Revenue: Income earned from acting as an intermediary or broker in transactions.
8. Interest and Dividend Income: Revenue from investments in interest-bearing securities or dividends from stock holdings.
    1. Interest from operating bank accounts is typically included in the "Interest and Dividend Income" category if it represents income earned from investments in interest-bearing securities. However, it's important to distinguish between interest income from regular business operations and interest income earned from surplus cash or investments. interest from Operating Bank Accounts (Regular Business Operations): If the interest income is earned as part of your company's regular business operations, such as interest earned on a checking or savings account used for daily cash management, it's considered operating revenue. In this case, it would not be classified as non-operating income.
    2. Interest from Investments (Non-Operating Income) : If the interest income is earned from

investments made with surplus cash or excess funds that are not directly tied to your core business operations, it would be classified as non-operating income. This typically includes interest from investments in certificates of deposit (CDs), bonds, or other interest-bearing securities.

In summary, whether interest income is categorized as operating or non-operating depends on the source and purpose of the funds generating the interest. If the funds are closely tied to your core business operations, it's operating income; if they represent investments or excess cash, it's non-operating income. Always consult with your accounting and finance professionals to ensure proper classification in your financial reporting.

9. Consulting and Professional Services Revenue: Revenue from consulting or professional services provided to clients.
10. Franchise Fees: Income from franchise fees paid by franchisees.
11. Donations and Grants: Revenue received from charitable donations or grants.
12. Royalty Income: Income earned from licensing intellectual property or copyrighted material.
13. Online Sales and E-commerce Revenue: Revenue generated from online sales and e-commerce activities.
14. Government Grants and Contracts: Income received from government grants, contracts, or subsidies.
15. Other Operating Revenue: Miscellaneous operating revenue not covered by the above categories.

These categories should provide a framework for organizing your operating revenue accounts. Depending on your specific business and industry, you may need to create additional categories or subcategories to accurately represent the sources of your operating revenue.

===

Here's an alphabetical list of common operating revenue accounts that you might find in a chart of accounts, along with brief descriptions of each account:

1. Consulting Revenue: Revenue generated from providing consulting services to clients or customers.
2. Interest Income: Revenue earned from interest on loans, investments, or bank deposits.
3. Membership Dues: Revenue received from individuals or organizations as membership fees.
4. Rental Income: Revenue earned from renting out property, equipment, or assets.
5. Sales Revenue: Revenue generated from the sale of goods or services.
6. Service Revenue: Revenue earned from providing services to clients or customers.

7. Subscriptions Revenue: Revenue received from subscription-based products or services.
8. Royalty Income: Revenue earned from royalties on intellectual property, such as books, music, or patents.
9. Commission Income: Revenue earned as a commission for facilitating sales or transactions.
10. Licensing Fees: Revenue received for granting others the right to use the organization's intellectual property or brand.
11. Advertising Revenue: Revenue earned from advertising services or space.
12. Sponsorship Revenue: Revenue received from sponsors for promoting their products or brands.
13. Freight and Shipping Revenue: Revenue earned from charging customers for shipping or freight services.
14. Gain on Sale of Assets: Represents gains realized from selling assets, such as property, equipment, or investments.
15. Miscellaneous Income: Revenue from various sources that do not fit into other specific categories.

Please note that this list is not exhaustive, and the specific operating revenue accounts used in a chart of accounts can vary based on the organization's industry, size, and accounting practices. Additionally, some organizations may have more detailed revenue accounts based on their specific revenue streams and business activities. The chart of accounts should be tailored to provide accurate and relevant information for financial reporting and analysis.

Non-Operating Revenue Accounts Categories

Can you can group or classify the Non-Operating Revenue accounts into several categories based on their nature and purpose?

Certainly, you can group or classify non-operating revenue accounts into several categories based on their nature and purpose. Non-operating revenue typically includes income or gains that are not directly related to a company's core business activities. Here are some common categories for non-operating revenue accounts:

1. Investment Income:
    - Interest income from investments in bonds, certificates of deposit (CDs), or other interest-bearing securities.
    - Dividend income from investments in stocks and equity securities.

2. Rental Income: Income from renting out properties, equipment, or other assets not used in the company's primary operations.
3. Gain on Sale of Assets: Gains realized from selling non-core assets, such as real estate, equipment, or investments.
4. Insurance Proceeds: Proceeds received from insurance claims, including property damage, liability claims, or business interruption insurance.
5. Settlements and Legal Awards: Income received as a result of legal settlements, judgments, or awards.
6. Foreign Exchange Gains: Gains resulting from favourable foreign exchange rate movements.
7. Other Non-Operating Income: Miscellaneous non-operating income that doesn't fit into the above categories.
8. Discontinued Operations: Revenue generated from operations that have been discontinued or sold.
9. Government Grants (Non-Operating): Grants received from government entities that are not related to the company's core operations.
10. Donations and Gifts (Non-Operating): Non-operating revenue received in the form of charitable donations or gifts.
11. Extraordinary Gains: One-time or extraordinary gains that are unusual and infrequent in nature.
12. Other Income from Non-Operating Activities: Income from non-operating activities or sources not covered by the above categories.

These categories should help you organize your non-operating revenue accounts. Keep in mind that the specific accounts you use may vary depending on your company's unique financial activities and reporting requirements.

List of accounts in charts of accounts for non-operating revenue?

Here's an alphabetical list of common non-operating revenue accounts that you might find in a chart of accounts, along with brief descriptions of each account:

1. Dividend Income: Revenue earned from dividends received on investments in other companies.
2. Interest Income: Revenue earned from interest on loans, investments, or bank deposits.
3. Gain on Sale of Investments: Represents gains realized from selling investments, such as stocks or bonds.
4. Gain on Sale of Assets: Represents gains realized from selling assets, such as property, equipment,

or investments.

5. Rental Income: Revenue earned from renting out property, equipment, or assets.
6. Royalty Income: Revenue earned from royalties on intellectual property, such as books, music, or patents.
7. Miscellaneous Non-Operating Income: Revenue from various non-operating sources that do not fit into other specific categories.

Please note that the non-operating revenue accounts may not be as extensive as the operating revenue accounts since non-operating revenue typically includes income from occasional or non-core activities. Additionally, the specific non-operating revenue accounts used in a chart of accounts can vary based on the organization's industry, size, and accounting practices. The chart of accounts should be tailored to provide accurate and relevant information for financial reporting and analysis.

List of Accounts - Expenses

What is a brief description of Expenses and how is it classified?

Expenses are the costs incurred by a business or organization in its day-to-day operations to generate revenue and maintain its activities. In accounting, expenses are recorded on the income statement and

represent the outflow or consumption of assets (such as cash or goods) to support the production of goods or services.

Brief Description of Expenses:

Expenses include various items that reduce the organization's income and profitability. They can be classified into several categories based on their nature and function. Some common types of expenses include:

1. Cost of Goods Sold (COGS): Represents the direct costs associated with producing goods or services sold by the organization. It includes expenses like raw materials, labour, and manufacturing overhead.
2. Operating Expenses: These are the day-to-day expenses incurred to run the business and include items like salaries, rent, utilities, office supplies, marketing, and administrative expenses.
3. Depreciation and Amortization: These represent the allocation of the cost of long-term assets (tangible and intangible) over their useful life to reflect their gradual consumption or obsolescence.
4. Interest Expense: Represents the cost of borrowing money or interest paid on loans and outstanding debt.
5. Taxes: Includes income taxes and other taxes paid by the organization.
6. Other Expenses: May include one-time or infrequent expenses not categorized under the above headings.

Classification of Expenses:

Expenses are classified based on their relationship to the organization's core operations and their accounting treatment. They are typically grouped in the income statement into the following categories:

- Cost of Goods Sold (COGS): This category includes expenses directly associated with the production of goods or services. It is subtracted from the total revenue to calculate the gross profit.
- Operating Expenses: These expenses are related to the general operations of the business and are further categorized into selling, general, and administrative expenses (SG&A).
- Non-Operating Expenses: These are expenses not directly related to the primary business activities, such as interest expense and income taxes.

The classification of expenses helps in understanding the cost structure of the organization, assessing its profitability, and identifying areas where cost control and efficiency improvements can be made. Proper classification of expenses is essential for accurate financial reporting and analysis.

List of accounts in charts of accounts for operating expenses?

Here's an alphabetical list of common operating expense accounts that you might find in a chart of accounts, along with brief descriptions of each account:

1. Advertising and Marketing Expenses: Costs incurred for advertising campaigns, marketing materials, and promotional activities.
2. Bad Debt Expense: Represents the estimated portion of accounts receivable that is unlikely to be collected.
3. Cost of Goods Sold (COGS): The direct cost of producing goods or services sold by the organization.
4. Depreciation Expense: Represents the allocation of the cost of tangible assets over their useful life.
5. Employee Benefits Expense: Costs related to employee benefits, such as health insurance, retirement plans, and paid time off.
6. Insurance Expense: Costs incurred for various insurance coverages, such as property insurance, liability insurance, etc.
7. Office Supplies Expense: Costs for office consumables like pens, paper, and other supplies.
8. Payroll Expenses: Includes wages, salaries, and associated costs, such as payroll taxes and benefits.
9. Rent Expense: Costs incurred for renting office space or facilities.
10. Repairs and Maintenance Expenses: Costs for maintaining and repairing equipment, machinery, and facilities.
11. Research and Development (R&D) Expenses: Costs incurred for research and development activities to create new products or improve existing ones.
12. Salaries and Wages: Represents the payroll costs associated with employees' regular working hours.
13. Selling and Distribution Expenses: Costs incurred for selling and distributing goods or services, such as sales commissions and shipping expenses.
14. Travel and Entertainment Expenses: Costs for business travel, meals, and entertainment.
15. Utilities Expense: Costs incurred for electricity, water, gas, and other utilities.
16. Website and Software Expenses: Costs related to website development, hosting, and software licenses.

Please note that this list is not exhaustive, and the specific operating expense accounts used in a chart of accounts can vary based on the organization's industry, size, and accounting practices. Additionally, some organizations may have more detailed expense accounts based on their specific cost structures and

business activities. The chart of accounts should be tailored to provide accurate and relevant information for financial reporting and analysis.

List of accounts in charts of accounts for non-operating expenses?

Here's an alphabetical list of common non-operating expense accounts that you might find in a chart of accounts, along with brief descriptions of each account:

1. Interest Expense: Expenses incurred from interest on loans, credit lines, or other borrowed funds.
2. Loss on Sale of Investments: Represents losses realized from selling investments, such as stocks or bonds.
3. Loss on Sale of Assets: Represents losses realized from selling assets, such as property, equipment, or investments.
4. Impairment Charges: Expenses recorded when the value of an asset declines significantly and is deemed impaired.
5. Foreign Exchange Losses: Expenses resulting from unfavourable exchange rate fluctuations when dealing with foreign currencies.
6. Legal and Settlement Costs: Expenses related to legal disputes, settlements, or legal advice.
7. Miscellaneous Non-Operating Expenses: Expenses from various non-operating activities that do not fit into other specific categories.

Please note that the non-operating expense accounts may not be as extensive as the operating expense accounts since non-operating expenses typically arise from occasional or one-time events. Additionally, the specific non-operating expense accounts used in a chart of accounts can vary based on the organization's industry, size, and accounting practices. The chart of accounts should be tailored to provide accurate and relevant information for financial reporting and analysis.

Classification of operating expenses according to groups

You can group or classify these operating expenses into several categories based on their nature and purpose. Here's a suggested grouping:

1. Professional Services Expenses:
    - G6000000 Accounting fees
    - G6050000 Audit fees
    - G6600000 Legal fees
    - G6650000 License fees
    - G6950000 Professional fees
    - G7100800 Payroll processing fees
    - G7100810 Payroll software costs
    - G7100820 Payroll training costs
    - G7100830 Other payroll expenses
2. Financial Expenses:
    - G6100000 Bad debts
    - G6300000 Depreciation
    - G6400000 Finance charges
    - G6550000 Interest paid
3. Employee-related Expenses:

- G7100000 Salaries and wages expenses (break down further if necessary)
  - G7100010 Basic salaries
  - G7100020 Basic wages
  - G7100030 Overtime pay
  - G7100040 Incentives - Bonuses
  - G7100050 Incentives - Commissions
  - G7100100 Allowance - Cellphone
  - G7100110 Allowance - Housing
  - G7100120 Allowance - Meals
  - G7100130 Allowance - Transport
  - G7100140 Allowance - Uniforms
  - G7100200 Leave - Annual leave
  - G7100210 Leave - Sick leave
  - G7100220 Leave - Parental leave
  - G7100300 Retrenchment Packages
  - G7100310 Severance Packages
  - G7100400 Employers contributions (UIF, SDL, Workman's Compensation Fund, Medical Aid, Pension / Retirement Fund)

4. Office and Administrative Expenses:
   - G6150000 Bank charges
   - G6200000 Cleaning services
   - G6850000 Office expenses
   - G7150000 Stationery
5. Marketing and Promotion Expenses:
   - G6750000 Marketing and advertising expenses
6. Transportation Expenses:
   - G6800000 Motor vehicle expenses (break down further if necessary)

- G6800010 Fuel and oil
- G6800020 Vehicle - Insurance
- G6800030 Vehicle - Maintenance and repairs
- G6800040 Vehicle - Registration and Licence fees
- G6800050 Vehicle - Tolls and parking fees
- G6800060 Vehicle - Traffic fines / Vehicle violation expenses

7. Facility and Property Expenses:
    - G6700000 Maintenance
    - G7000000 Repairs
    - G7050000 Rent paid
    - G7300000 Utilities (including electricity, water, gas, etc.)
8. General Expenses:
    - G7250000 Travel and subsistence
    - G7300000 Utilities
    - G7200000 Subscriptions
    - G6250000 Commissions paid (depending on the nature of commissions, this might also fall under another category)
9. Miscellaneous Expenses:
    - G6350000 Entertainment
    - G6450000 Gifts and donations
    - G6900000 Printing

This grouping should help provide a clearer overview of your operating expenses, making it easier for financial reporting and analysis. Depending on your specific accounting and reporting needs, you may further refine these categories.

Administrative expenses - would this fit in with the list of te response?

ChatGPT

Yes, administrative expenses would fit within the list provided in the response. Administrative expenses

typically include costs associated with running the administrative functions of a business. You can group various expenses related to administration under the "Office and Administrative Expenses" category:

Office and Administrative Expenses:

- G6150000 Bank charges
- G6200000 Cleaning services
- G6850000 Office expenses
- G7150000 Stationery
- Administrative salaries and wages (if applicable)

If you have specific administrative expenses that are not covered by the categories listed, you can create subcategories or add them under "Office and Administrative Expenses" for reporting purposes.

Office and Administrative expense

Office and Administrative Expenses would typically include salaries and wages related to administrative staff, while Salaries and wages could also include employees in other departments, including Sales and Marketing.

To clarify:

Office and Administrative Expenses:

- G6150000 Bank charges
- G6200000 Cleaning services
- G6850000 Office expenses
- G7150000 Stationery
- Administrative salaries and wages (related to administrative staff)

Salaries and Wages Expenses (Sales and Marketing):

- G7100000 Salaries and wages expenses (sales and marketing staff)

This way, you can allocate salaries and wages to specific departments or functions within your business for more accurate financial reporting and analysis.

MARKETING AND PROMOTIONS as Operating expenses - Sample of accounts

Certainly, here are some sample accounts that can be classified under "Marketing and Promotions" as part of your operating expenses:

1. Advertising Expenses:
    - G6750010 Advertising campaigns
    - G6750020 Online advertising (e.g., Google Ads, Facebook Ads)
    - G6750030 Print advertising (e.g., newspaper, magazine ads)
    - G6750040 Outdoor advertising (e.g., billboards, signage)
2. Promotional Expenses:
    - G6750050 Promotional materials (e.g., flyers, brochures, pamphlets)
    - G6750060 Promotional events and sponsorships
    - G6750070 Product samples and giveaways
    - G6750080 Merchandising expenses (e.g., point-of-sale displays) *
3. Marketing Research and Analysis:
    - G6750090 Market research expenses
    - G6750100 Customer surveys and feedback
    - G6750110 Marketing analytics tools and software
4. Public Relations Expenses:
    - G6750120 PR campaigns and activities
    - G6750130 Media relations
    - G6750140 Press releases
5. Digital Marketing Expenses:
    - G6750150 Website maintenance and updates
    - G6750160 Email marketing expenses
    - G6750170 Social media advertising and management
6. Event Marketing Expenses:

- G6750180 Event planning and execution
- G6750190 Trade show expenses
- G6750200 Conferences and seminars

7. Creative and Design Costs:
    - G6750210 Graphic design services
    - G6750220 Video production
    - G6750230 Copywriting and content creation
8. Marketing Agency Fees:
    - G6750240 Marketing agency fees (if outsourcing marketing services)

These accounts represent various expenses related to marketing and promotional activities. Depending on the specific needs and structure of your business, you can further customize these accounts to align with your financial reporting and analysis requirements.

* G6750080 Merchandising expenses (e.g., point-of-sale displays) - Here's why merchandising expenses are typically classified as operating expenses:

1. Consumable Nature: Expenses related to point-of-sale displays, marketing materials, and promotional items are typically considered consumable and have a short-term benefit. They are used up or consumed in the process of promoting products or services, which is why they are treated as current period expenses.
2. Matching Principle: Accounting follows the matching principle, which dictates that expenses should be recognized in the same period as the revenues they help generate. In the case of promotional expenses like point-of-sale displays, the costs are incurred to drive immediate sales or brand visibility, and therefore, they are recognized as expenses in the period when they are incurred.
3. Conservatism: From an accounting perspective, it's generally conservative to recognize expenses as they are incurred rather than capitalizing them as assets. Capitalizing such expenses as assets would mean spreading the costs over multiple accounting periods, which may not accurately reflect the costs associated with the revenue generated in the current period.

However, there can be exceptions, especially if certain promotional materials have a more enduring benefit or if they meet specific criteria to be considered as capitalizable assets. This determination should be made in accordance with accounting standards and the specific circumstances of your business. If you believe that certain promotional expenses should be treated as assets, it's important to consult with your accountant or financial advisor and ensure that you are in compliance with applicable accounting regulations.

In most cases, though, merchandising expenses, including point-of-sale displays, are considered operating expenses because they are incurred for the primary purpose of promoting products and generating immediate sales.

TRAINING as Operating expenses - Sample of accounts

Some sample accounts that can be classified under "*Training*" as part of your operating expenses:

1. Employee Training:
    - GXXX0010 Employee orientation and onboarding
    - GXXX0020 Employee skill development programs
    - GXXX0030 Training workshops and seminars for staff
    - GXXX0040 Leadership and management training
    - GXXX0050 Diversity and inclusion training
    - GXXX0060 Health and safety training
    - GXXX0070 Compliance and regulatory training
    - GXXX0080 Software and technology training for employees
2. Sales and Marketing Training:
    - GXXX0100 Sales team training
    - GXXX0110 Marketing team training
    - GXXX0120 Product knowledge training for sales and marketing
    - GXXX0130 Customer service training
3. Customer Training:
    - GXXX0200 Customer training and support
    - GXXX0210 Training materials for customers
    - GXXX0220 Online customer training platforms
4. Supplier and Vendor Training:
    - GXXX0300 Supplier/vendor training and development
5. Technical and IT Training:
    - GXXX0400 IT staff training

- GXXX0410 Software and system training
- GXXX0420 Cybersecurity training

6. Compliance and Safety Training:
    - GXXX0500 Ongoing compliance training
    - GXXX0510 Workplace safety training
    - GXXX0520 Environmental compliance training
7. Professional Development:
    - GXXX0600 Professional certifications and licenses
    - GXXX0610 Industry-specific training
8. Training Materials and Resources:
    - GXXX0700 Training materials and supplies
    - GXXX0710 Training software and platforms
    - GXXX0720 Training books and resources
9. Training Facilities and Equipment:
    - GXXX0800 Training room rental
    - GXXX0810 Training equipment purchase or rental
10. External Training Services:
    - GXXX0900 External training providers and consultants
    - GXXX0910 Training service contracts

These accounts cover a wide range of training-related expenses that businesses may incur. Depending on your specific needs and the complexity of your training programs, you can customize and further detail these accounts to align with your financial reporting and analysis requirements.

Stock / Inventory

In which countries is Stock used and in which countries is Inventory used?

The terms "*stock*" and "*inventory*" are used differently in various countries, and the usage can depend on regional language and business practices. It's important to note that these terms may have different meanings in different contexts, and the specific terminology used can vary based on the local customs and conventions.

1. Stock: In some countries, particularly in the United Kingdom and other Commonwealth nations, the term "*stock*" is often used to refer to inventory or goods held for sale by a business. For example, a retailer might use the term "*stock*" to describe the goods available for purchase in their store. In this context, "*stock*" is synonymous with "*inventory*" and represents the physical items a business holds to meet customer demand.
2. Inventory: In many other countries, including the United States, Canada, and other parts of the world, the term "*inventory*" is more commonly used to refer to goods held for sale. Businesses use the term "*inventory*" to represent the raw materials, work-in-progress, and finished goods that are part of their production and sales process.

In both cases, "*stock*" and "*inventory*" essentially refer to the same concept of goods held by a business for sale or production purposes. However, the terminology used can vary depending on the region and local business practices.

It's important for businesses and individuals to be aware of the terminology used in their respective countries or regions and understand the context in which these terms are used to avoid any confusion.

Is Inventory or Stock used in South Africa?

In South Africa, the term "*inventory*" is commonly used to refer to goods held by a business for sale or production purposes. The term "*stock*" is not as commonly used in the business context in South Africa to refer to inventory.

South African businesses and accounting practices generally follow international accounting standards and terminology, where "*inventory*" is the standard term used to describe the physical items held by a business, including raw materials, work-in-progress, and finished goods.

Therefore, if you are referring to goods held by a business in South Africa, it is more appropriate to use the term "*inventory*" rather than "*stock*." This terminology is consistent with global accounting practices and ensures clarity and understanding in financial reporting and business communication.

Inventory systems

What types of inventory systems are there?

There are several types of inventory systems that businesses use to manage their inventory levels and keep track of their stock. The choice of inventory system depends on the nature of the business, the size of the inventory, and the level of complexity required for inventory management. Some common types of inventory systems include:

1. Periodic Inventory System: In this system, businesses physically count their inventory at regular intervals, such as weekly, monthly, or annually. The cost of goods sold (COGS) and inventory levels are updated periodically based on these physical counts. This method is simple and suitable for small businesses with relatively low inventory levels.
2. Perpetual Inventory System: In a perpetual inventory system, inventory levels are continuously updated in real-time as sales and purchases are made. This is typically done using software and barcoding systems. The system automatically adjusts the inventory and COGS whenever a sale or purchase is recorded. It provides a more accurate and up-to-date view of inventory levels.
3. Just-In-Time (JIT) Inventory System: The JIT inventory system aims to minimize inventory carrying costs by ordering and receiving inventory only when it is needed for production or sale. Businesses maintain very low inventory levels and rely on a tightly coordinated supply chain to receive new inventory as needed.
4. ABC Inventory System: The ABC inventory system categorizes inventory items based on their value and importance. "A" items are high-value and high-importance items, "B" items are moderately important, and "C" items are low-value and low-importance. This system helps businesses prioritize their inventory management efforts and allocate resources efficiently.
5. EOQ (Economic Order Quantity) Model: The EOQ model calculates the optimal order quantity to minimize total inventory costs, including holding costs and ordering costs. The goal is to find the right balance between ordering in large quantities to reduce unit costs and ordering only what is necessary to avoid excessive inventory holding costs.
6. Stock Keeping Units (SKU) System: SKUs are unique codes assigned to each different item in inventory. The SKU system helps businesses track and identify individual products, variations, or different packaging sizes accurately.

7. Backorder System: In a backorder system, businesses accept customer orders even when the item is not currently in stock. The item is then backordered, and the customer is notified of the delay. This system helps businesses avoid losing sales due to temporary stockouts.
8. Dropshipping: In a dropshipping system, businesses don't hold physical inventory but instead transfer customer orders and shipment details to a manufacturer, wholesaler, or another retailer who then ships the products directly to the customer. This system reduces the need for businesses to maintain their inventory.

Each inventory system has its advantages and disadvantages, and businesses choose the one that best aligns with their specific needs, size, and operations. Effective inventory management is crucial for optimizing costs, meeting customer demand, and maximizing profitability.

---

What is inventory valuation?

Inventory valuation is the process of determining the monetary value of a company's inventory (i.e., the goods held for sale or used in the production of goods for sale) at a specific point in time. It is a crucial aspect of financial reporting and is essential for calculating the cost of goods sold (COGS) and the value of ending inventory on the balance sheet.

There are several methods used to value inventory, and the choice of method can have significant effects on a company's financial statements and profitability. The most common inventory valuation methods include:

1. First-In, First-Out (FIFO): This method assumes that the oldest inventory items are sold first. The cost of goods sold is based on the cost of the earliest purchases, and the ending inventory is valued at the cost of the most recent purchases.
2. Last-In, First-Out (LIFO): This method assumes that the most recent inventory items are sold first. The cost of goods sold is based on the cost of the most recent purchases, and the ending inventory is valued at the cost of the earliest purchases. LIFO is not allowed in all accounting standards and is less commonly used in some countries due to tax implications.
3. Weighted Average Cost: This method calculates the average cost of all inventory items available for sale during a specific period and applies that average cost to the cost of goods sold and ending inventory.

4. Specific Identification: This method values each individual item of inventory separately based on its actual cost.

The choice of inventory valuation method can have significant impacts on a company's financial statements, tax liabilities, and profitability. It is essential for businesses to consistently apply the chosen method and disclose the method used in their financial statements to ensure transparency and comparability of financial information.

Inventory valuation is especially important in industries where inventory represents a significant portion of the assets, such as retail, manufacturing, and wholesale businesses. Properly valuing inventory allows businesses to determine the true cost of goods sold, track inventory turnover, and make informed decisions about pricing, production, and inventory management.

What is LIFO and FIFO?

LIFO (Last-In, First-Out) and FIFO (First-In, First-Out) are two commonly used inventory valuation methods that businesses use to determine the cost of goods sold (COGS) and the value of ending inventory. These methods are used to account for the flow of inventory items in and out of a business.

1. LIFO (Last-In, First-Out): In the LIFO method, the assumption is that the last items added to the inventory are the first ones sold. In other words, the most recently acquired inventory is considered to be sold first. As a result, the cost of goods sold (COGS) is calculated using the cost of the most recent purchases, while the ending inventory is valued at the cost of the earliest purchases. LIFO is often used in periods of rising prices because it results in a higher cost of goods sold, which can lead to lower taxable income.
2. FIFO (First-In, First-Out): In the FIFO method, the assumption is that the first items added to the inventory are the first ones sold. In other words, the oldest inventory is considered to be sold first. As a result, the cost of goods sold (COGS) is calculated using the cost of the oldest purchases, while the ending inventory is valued at the cost of the most recent purchases. FIFO is often used in periods of rising prices because it results in a lower cost of goods sold, which can lead to higher taxable income.

To better understand LIFO and FIFO, let's consider an example:

Example: Suppose a company purchases 100 units of a product at different prices:

- January 1: 50 units at $10 each
- March 1: 30 units at $12 each
- June 1: 20 units at $15 each

At the end of the year, the company has sold 80 units of the product. Using LIFO and FIFO, we calculate the cost of goods sold and the value of ending inventory:

- LIFO Calculation: COGS = (20 units x $15) + (30 units x $12) + (30 units x $10) = $600 Ending Inventory = 20 units x $10 = $200
- FIFO Calculation: COGS = (50 units x $10) + (30 units x $12) = $900 Ending Inventory = 20 units x $15 = $300

As you can see, the LIFO method results in a lower ending inventory value but a higher cost of goods sold compared to the FIFO method. The choice between LIFO and FIFO can have significant effects on a company's financial statements and tax liabilities, and the method selected must be consistently applied over time. Different countries may have specific regulations on which inventory valuation method businesses are allowed to use for tax reporting purposes.

Inventory valuation - which is followed by various accounting standards?

Various accounting standards allow businesses to use different inventory valuation methods, but the most commonly followed methods are:

1. International Financial Reporting Standards (IFRS): IFRS allows businesses to use either the FIFO or weighted average cost methods for inventory valuation. Under IFRS, LIFO is not allowed.
2. Generally Accepted Accounting Principles (GAAP) - United States: In the United States, businesses following US GAAP have the option to use any of the following inventory valuation methods: FIFO, LIFO, and weighted average cost. LIFO is a popular choice among US companies for tax purposes.
3. ASPE (Accounting Standards for Private Enterprises) - Canada: In Canada, businesses following ASPE can use the FIFO, LIFO, or weighted average cost methods for inventory valuation. However, LIFO is less common in Canada due to its impact on tax calculations.
4. UK GAAP (Generally Accepted Accounting Practice) - United Kingdom: UK GAAP allows businesses to use either the FIFO or weighted average cost methods for inventory valuation. LIFO is not commonly used in the UK.
5. Indian Accounting Standards (Ind AS): Ind AS allows businesses to use any of the following inventory

valuation methods: FIFO, weighted average cost, and specific identification.

6. Chinese Accounting Standards (CAS): In China, businesses are required to use the FIFO method for inventory valuation.

It's important to note that while these accounting standards provide guidance on inventory valuation methods, businesses must consistently apply the chosen method and disclose the method used in their financial statements. Additionally, some countries or industries may have specific regulations or restrictions on the inventory valuation method used for tax reporting purposes. As a result, businesses should consult with accounting professionals or tax advisors to ensure compliance with applicable regulations and accounting standards.

Inventory valuation - LIFO and FIFO -which is followed in South Africa?

As of ChatGPT's last update in September 2021, South Africa follows the First-In, First-Out (FIFO) method for inventory valuation. The use of Last-In, First-Out (LIFO) for inventory valuation is not permitted in South Africa.

The International Financial Reporting Standards (IFRS) are adopted in South Africa for financial reporting by companies listed on the Johannesburg Stock Exchange (JSE). Under IFRS, FIFO is one of the accepted methods for inventory valuation. LIFO is not allowed under IFRS and is not commonly used in South Africa for financial reporting purposes.

It's important to note that accounting regulations and standards can change over time, so it's always best to consult with accounting professionals or refer to the latest accounting guidelines issued by relevant authorities in South Africa to ensure compliance with the current inventory valuation methods.

COS, COGS and COSR

What is cost of sales?

Cost of sales, also known as cost of goods sold (COGS), is the direct cost incurred by a company to produce or purchase the goods or services that it sells to customers. It represents the expenses directly associated with the production or acquisition of the products that are subsequently sold.

The cost of sales includes various expenses related to the production process or the purchase of

inventory, such as:

1. Cost of Raw Materials: This includes the cost of the materials and components used in the manufacturing process.
2. Direct Labour Costs: This includes the wages and benefits paid to employees directly involved in the production or assembly of goods.
3. Manufacturing Overhead: These are indirect costs associated with production, such as utilities, factory rent, and depreciation of manufacturing equipment.
4. Purchase Cost: For companies that don't manufacture their own products, the cost of sales includes the purchase price of goods from suppliers.
5. Shipping and Freight Costs: These are the expenses incurred to transport goods from the manufacturer or supplier to the company's warehouse or directly to customers.

Cost of sales is an essential component of the income statement (profit and loss statement) and is deducted from the company's total revenue to calculate gross profit. Gross profit represents the difference between revenue and the cost of sales and reflects the profitability of a company's core operations before considering other operating expenses.

The formula to calculate gross profit is:

```
Gross Profit = Total Revenue - Cost of Sales
```

The accuracy and management of cost of sales are critical for businesses to ensure proper pricing of products, effective inventory management, and overall financial performance analysis. It also plays a significant role in determining a company's gross margin, which is the percentage of revenue remaining after deducting the cost of sales.

What is COS, COGS and COSR?

COS, COGS, and COSR are abbreviations used in accounting and business to refer to different concepts related to the cost of sales or cost of goods sold. While they are related, they have specific meanings and contexts in which they are used:

1. COS (Cost of Sales):
    - COS is a general term that refers to the total cost incurred by a business to produce or acquire the goods or services that it sells to customers. It includes all the direct and indirect costs associated with the production or purchase of goods or services, such as raw materials, direct labour, manufacturing overhead, shipping costs, and any other expenses directly related to the production process.

2. COGS (Cost of Goods Sold):
    - COGS is a specific line item on the income statement (profit and loss statement) that represents the direct costs associated with the production or purchase of goods that were sold during a specific accounting period. It includes the costs of raw materials, direct labour, and manufacturing overhead. COGS is used to calculate gross profit, which is the difference between total revenue and COGS. Gross profit reflects the profitability of a company's core operations before considering other operating expenses.
3. COSR (Cost of Services Rendered):
    - COSR is a specific line item on the income statement (profit and loss statement) that represents the direct costs incurred by a service-based business to provide services to its customers. Similar to COGS (Cost of Goods Sold) for businesses that sell physical products, COSR is the equivalent for service-based businesses.

In summary, COS is a general term referring to the total cost of producing or acquiring goods or services for sale, COGS is a specific line item on the income statement representing the direct costs of goods sold during a specific period, and COSR is the equivalent for service-based businesses These concepts are important for businesses to assess their profitability, cost management, and overall financial performance.

COSR as in Cost of Services Rendered?

COSR can also stand for "Cost of Services Rendered" in some contexts.

The Cost of Services Rendered typically includes expenses such as:

1. Direct Labour Costs: The wages and benefits paid to employees who directly provide the services to customers.
2. Materials and Supplies: The cost of any materials or supplies used in delivering the services.
3. Subcontractor Costs: If the business hires subcontractors or freelancers to provide certain services, their costs may be included in the COSR.
4. Other Direct Costs: Any other direct costs specifically related to rendering the services to customers.

Just like COGS, the COSR is an important factor in calculating the profitability of a service-based business. It is deducted from the total revenue generated from services to determine the gross profit from services rendered. Gross profit from services indicates the efficiency of the business's operations and provides insights into the overall financial performance of the service-based company.

COSR (Cost of Sales Ratio)

COSR is a financial ratio that measures the percentage of sales revenue that is consumed by the cost of sales (COGS). It is calculated by dividing COGS by total sales revenue and multiplying by 100 to express the result as a percentage. The COSR is used to assess the efficiency of a company's cost management and production processes. A lower COSR indicates that a company is able to generate more profit from its sales revenue, while a higher COSR may indicate higher production or purchasing costs relative to revenue.

Work in Progress (WIP)

What is Work in Progress?

"*Work in Progress*" (WIP) refers to partially completed projects or goods that are still in the process of production or construction but have not yet been finished or delivered to the customer. It is an important concept in accounting and business management, particularly in industries that involve long-term projects or the manufacturing of goods.

In the context of accounting, Work in Progress represents the value of costs incurred on unfinished projects or goods at a specific point in time. These costs include direct materials, direct labour, and manufacturing or production overheads that have been allocated to the incomplete items. Work in Progress is considered an asset on the company's balance sheet because it represents the value of work that has been done but not yet converted into finished products or delivered to customers.

Here are some examples of how Work in Progress can apply in different industries:

1. Construction Industry: In construction, Work in Progress represents the value of buildings or infrastructure projects that are still under construction. It includes the cost of materials, labour, and overheads incurred in the construction process.
2. Manufacturing Industry: In manufacturing, Work in Progress refers to the value of partially finished goods that are still on the production line and have not been completed or moved to the finished goods inventory.
3. Service Industry: In the service industry, Work in Progress may refer to ongoing projects or services that are in progress but not yet completed or billed to the customer.

Recording Work in Progress is essential for accurate financial reporting. Companies need to account for the costs incurred on partially completed projects to properly assess the value of work done and the

associated revenue and expenses. As the projects or goods are completed, the costs are transferred to the finished goods inventory or recognized as revenue when delivered to customers.

Work in Progress is also a key indicator of a company's operational efficiency and productivity. Monitoring the value of Work in Progress helps management track the progress of ongoing projects, identify potential bottlenecks, and manage resources effectively to meet project timelines and customer demands.

It's important to note that the specific accounting treatment of Work in Progress may vary depending on the accounting standards used by the company and the nature of the industry in which it operates.

How would Work in Progress (WIP) reflect in the Chart of Accounts?

"*Work in Progress*" (WIP) is typically represented as an asset in the Chart of Accounts of a company. It is categorized under current assets or non-current assets, depending on the time it takes to complete the projects or convert the WIP into finished goods. The specific account number and name in the Chart of Accounts may vary between companies, but here are some common examples:

1. 1130 Work in Progress (WIP) - Current Assets: This account is used to track the value of work in progress that is expected to be completed and converted into finished goods or delivered to customers within the next accounting period. It represents the costs incurred on partially completed projects or goods that are in the production process.
2. 1135 Work in Progress (WIP) - Non-Current Assets: This account is used to track the value of work in progress that will take longer than the next accounting period to complete. It represents long-term projects or production activities that are expected to span multiple accounting periods.

The Work in Progress accounts mentioned above can be further subdivided based on specific projects or types of WIP if the company deals with multiple ongoing projects or has different WIP categories.

As the projects or production processes are completed, the costs associated with the Work in Progress are transferred to the appropriate accounts. For example:

- For manufacturing companies, completed WIP is transferred to the Finished Goods Inventory account when the goods are fully produced and ready for sale.
- For construction companies, completed WIP is transferred to the Fixed Assets or Property, Plant, and Equipment accounts when the construction projects are completed.

It's important to note that the Chart of Accounts is customizable and can vary between companies based on their specific business activities and accounting requirements. The examples provided here are general illustrations of how WIP might be represented in the Chart of Accounts. Companies may choose to use different account numbers, names, or subcategories based on their internal reporting needs and

accounting practices.

Would Work in Progress (WIP) reflect Cost of Sales in the Chart of Accounts?

No, "*Work in Progress*" (WIP) does not reflect in the Cost of Sales (also known as Cost of Goods Sold or COGS) in the Chart of Accounts. WIP and COGS are two separate and distinct concepts in accounting, and they serve different purposes in financial reporting.

1. Work in Progress (WIP): As mentioned earlier, WIP is the value of partially completed projects or goods that are still in the process of production or construction but have not yet been finished or delivered to the customer. WIP is considered an asset on the company's balance sheet because it represents the value of work that has been done but not yet converted into finished products or delivered to customers. WIP is part of the company's inventory and is usually categorized as a current asset or a non-current asset, depending on the expected completion time of the projects or goods.
2. Cost of Sales (COGS): COGS represents the direct costs incurred by a company to produce or acquire the goods or services sold to customers during a specific accounting period. COGS includes the costs of raw materials, direct labour, and manufacturing or production overhead directly related to the production of goods or provision of services. COGS is an expense on the income statement and is subtracted from the company's revenue to calculate its gross profit.

The key difference between WIP and COGS is that WIP represents the value of unfinished projects or goods, which have not yet been sold, while COGS represents the costs associated with the goods that have been sold during a specific period.

When the WIP is completed and converted into finished goods, the costs associated with it will be included in the COGS when those finished goods are sold to customers. Until the completion of WIP, the costs incurred are considered assets, and they only become expenses (COGS) when the goods are sold.

To summarize, WIP and COGS are separate elements in the Chart of Accounts, with WIP being an asset representing partially completed projects or goods, and COGS being an expense representing the direct costs associated with the goods sold during a specific accounting period.

Amortization

What is Amortization?

Amortization is a financial term that refers to the process of spreading the cost of an intangible asset over its useful life. It is a systematic allocation of the asset's cost, similar to depreciation for tangible assets. Intangible assets are assets that lack physical substance but have value due to their contractual or legal rights, intellectual property, or other factors.

The purpose of amortization is to match the cost of acquiring or creating an intangible asset with the benefits it provides over time. As the asset generates benefits, its cost is gradually recorded as an expense on the income statement. This helps in accurately reflecting the asset's consumption or decline in value over time.

Common examples of intangible assets subject to amortization include:

1. Patents: Exclusive rights granted to inventors to protect their inventions from being used, made, or sold by others without permission.
2. Copyrights: Exclusive rights granted to authors, artists, or creators to protect their original works (e.g., books, music, software).
3. Trademarks: Distinctive symbols, names, or logos that identify and distinguish products or services from those of competitors.
4. Franchise Rights: Rights granted by a franchisor to a franchisee to operate under their brand and business model.
5. Licenses: Permissions granted by an authority to carry out specific activities or use specific resources.

The process of amortization involves dividing the cost of the intangible asset (minus any estimated residual value) over its estimated useful life. The result is the annual amortization expense, which is recognized in the financial statements over the asset's useful life.

It's essential to note that amortization is different from depreciation, which is the systematic allocation of the cost of tangible assets (such as buildings, machinery, and equipment) over their useful life. Both amortization and depreciation are crucial accounting practices that help organizations accurately represent the consumption of assets and their impact on financial performance.

What is the transactions for amortization?

The transactions for amortization involve recording the periodic allocation of the cost of an intangible asset as an expense over its useful life. Let's take an example of a patent to understand the transactions for amortization:

Assuming a company purchased a patent for $60,000 with an estimated useful life of 5 years and no

estimated residual value. The company would record the following transactions for amortization:

1. Initial Purchase of Patent:

Patent Account (Intangible Asset)	Cash/Bank Account (Payment)
Debit: $60,000	Credit: $60,000

2. Annual Amortization Expense (Straight-line method):

   The straight-line method evenly distributes the cost of the patent over its useful life. So, the annual amortization expense would be $60,000 / 5 = $12,000.

Amortization Expense Account (Operating Expense)	Accumulated Amortization Account (Contra-Asset)
Debit: $12,000	Credit: $12,000

At the end of Year 1, the company's financial statements would show the following balances:

Balance Sheet

- Intangible Assets:
  - Patent: $48,000 ($60,000 - $12,000)

Income Statement

- Operating Expenses:
  - Amortization Expense: $12,000

The process of amortization will continue each year until the end of the asset's useful life or until the asset is fully amortized.

Please note that the above example uses the straight-line method of amortization, which allocates an equal amount of the asset's cost each year. Other methods like the declining balance method or units-of-production method can also be used depending on the organization's accounting policies and the asset's pattern of usage or consumption.

RICA and related laws

RICA

RICA stands for "*Regulation of Interception of Communications and Provision of Communication-Related Information Act*." It is a South African law that was enacted to regulate the interception of communications and the handling of communication-related information to protect the privacy and security of communications in the country.

The main objectives of RICA are to:

1. Protect Privacy: RICA aims to protect the privacy and confidentiality of communications by regulating how and when interceptions of communications can be conducted.
2. Combat Crime and Security Threats: The law facilitates the lawful interception of communications by law enforcement agencies in cases of serious crimes and security threats, subject to appropriate judicial oversight.
3. Prevent Unauthorized Access: RICA seeks to prevent unauthorized access to communication-related information, including call records and subscriber information.

Key provisions of RICA include:

1. Registration of SIM Cards: RICA requires all users of mobile phones and other communication devices to register their SIM cards with their personal information. This helps law enforcement trace and identify users when necessary.
2. Interception of Communications: The law provides procedures and requirements for law enforcement agencies to lawfully intercept communications, such as phone calls or messages, during investigations related to serious crimes.
3. Handling of Communication-Related Information: RICA sets out guidelines for the lawful access and handling of communication-related information by law enforcement and other authorized entities.
4. Judicial Oversight: RICA emphasizes the importance of judicial oversight to ensure that interception orders are only granted when justified and necessary for the investigation of serious crimes or national security concerns.
5. Data Retention: RICA requires communication service providers to retain certain communication-related information for a specified period, which can be accessed by authorized entities as part of investigations.

It's important to note that RICA is specific to South Africa and does not apply in other countries. Similar legislation may exist in other jurisdictions to regulate communication interception and protect privacy. The goal of RICA is to strike a balance between the need for law enforcement and security agencies to access communication-related information for legitimate reasons and the protection of individual privacy rights.

How can RICA help to secure a business or organizations resources?

RICA (Regulation of Interception of Communications and Provision of Communication-Related Information Act) can help secure a business or organization's resources in several ways:

1. Verification of Customer Identities: RICA requires telecommunications service providers to verify the identities of their customers before providing telecommunication services. This verification process helps ensure that the services are used by legitimate individuals or entities and not by malicious actors seeking to engage in illegal activities.
2. Prevention of Unauthorized Access: RICA places an emphasis on data protection and privacy. Telecommunications service providers are required to implement security measures to safeguard customer information from unauthorized access or use. This helps prevent unauthorized individuals from gaining access to sensitive data or using telecommunication services for fraudulent purposes.
3. Monitoring Suspicious Activities: RICA allows law enforcement and authorized agencies to intercept communications in specific circumstances, such as during investigations related to serious crimes or national security threats. This monitoring capability can help identify and prevent criminal activities, thereby enhancing the security of businesses and organizations.
4. Legal Enforcement Against Wrongdoers: RICA enables law enforcement agencies to gather evidence through lawful interception of communications, which can be crucial in prosecuting criminals and wrongdoers. This legal enforcement can act as a deterrent to potential threats and enhance the overall security environment.
5. Assistance in Incident Response: In case of security incidents or emergencies, RICA-compliant telecommunication service providers may cooperate with law enforcement authorities to provide critical information and aid in incident response efforts. This collaboration can help mitigate the impact of security breaches and expedite the resolution of issues.
6. Reduction of Fraudulent Activities: By verifying customer identities and monitoring suspicious activities, RICA can help reduce fraudulent activities conducted through telecommunication channels. This can protect businesses and organizations from financial losses and reputational damage caused by fraudulent schemes.
7. Protection against Terrorism and Cybersecurity Threats: RICA's provisions on lawful interception and information sharing can contribute to national security efforts by detecting and preventing terrorist activities and cybersecurity threats that may use telecommunication networks.
8. Safeguarding Intellectual Property: In some cases, RICA may assist businesses in investigating and addressing issues related to intellectual property infringement conducted through telecommunication

channels.

It's important to note that while RICA can play a role in securing businesses and organizations, security measures should not solely rely on telecommunication-related regulations. Comprehensive security strategies should encompass various aspects, such as cybersecurity measures, physical security, access controls, employee training, and incident response protocols.

Businesses and organizations can enhance their overall security posture by implementing a multi-layered security approach that considers RICA compliance as one of the components to protect their valuable resources, data, and operations.

RICA - Is there similar regulations and legislation in other countries or jurisdictions?

Yes, there are similar regulations and legislation in other countries and jurisdictions that govern the interception of communications and the handling of communication-related information. These laws are often referred to as "*Interception of Communications*" or "*Telecommunications Surveillance*" laws and are designed to protect privacy rights while allowing lawful access to communications for specific purposes, such as criminal investigations and national security.

The specific names and details of these laws may vary from country to country, but their underlying objectives are often similar to those of RICA in South Africa. Some examples of similar legislation in other countries include:

1. United States: In the United States, the main legislation governing electronic surveillance and communications interception is the "*Electronic Communications Privacy Act*" (ECPA). The ECPA includes provisions on the interception of wire, oral, or electronic communications, and it sets forth guidelines for the use of electronic surveillance by law enforcement agencies.
2. United Kingdom: In the United Kingdom, the relevant legislation is the "*Regulation of Investigatory Powers Act*" (RIPA), which provides the legal framework for the interception of communications, the acquisition of communications data, and the conduct of covert surveillance.
3. European Union: Within the European Union, data protection and privacy laws, such as the General Data Protection Regulation (GDPR), apply to the processing of personal data, including communications data. Additionally, individual EU member states may have specific laws on telecommunications surveillance.
4. Canada: In Canada, the "*Personal Information Protection and Electronic Documents Act*" (PIPEDA) includes provisions related to the interception of communications and the protection of personal information.
5. Australia: In Australia, the "*Telecommunications (Interception and Access) Act*" governs the interception

of communications and the access to telecommunications data by law enforcement and intelligence agencies.

6. India: India has the "*Telegraph Act*" and the "*Information Technology Act*" (IT Act) that address interception of communications and the use of electronic evidence.

These are just a few examples, and many other countries have their own specific legislation concerning communications interception and data privacy. The exact provisions and scope of these laws can differ significantly depending on each country's legal system, cultural norms, and approach to balancing privacy rights with legitimate law enforcement and national security interests.

Businesses operating in multiple jurisdictions or providing telecommunication services across borders must ensure compliance with the relevant laws and regulations in each country where they operate or offer services. It's essential for businesses to be aware of the legal requirements and obligations related to communications interception and data privacy to avoid potential legal and reputational risks.

Taxes - Types

Important - Tax compliance

Ignorance of the law is not a valid defense for non-compliance. It's essential for individuals and businesses to ensure they understand and adhere to the accounting standards, frameworks, and tax regulations applicable in their country or jurisdiction. Consulting with relevant authorities, tax professionals, accountants, and legal experts is a prudent approach to avoid legal and financial consequences related to non-compliance. Staying informed and proactive in meeting legal obligations is crucial for maintaining the integrity and sustainability of any business or financial endeavor.

What is taxes and what types of taxes are used in the various countries?

Taxes are compulsory financial contributions imposed by governments on individuals, businesses, and other entities to fund public services and government activities. Taxes are a primary source of revenue for governments and play a crucial role in funding infrastructure, education, healthcare, defense, and other essential services that benefit society.

Types of taxes can vary significantly from one country to another, but some common types of taxes found

in various countries include:

1. Income Tax: Income tax is levied on individuals and businesses based on their earnings or profits. It may be progressive, meaning the tax rate increases with income levels.
2. Corporate Tax: Corporate tax is imposed on the profits of businesses and corporations. The tax rate may vary depending on the country's tax laws and the size of the company.
3. Value Added Tax (VAT)/Goods and Services Tax (GST): VAT or GST is a consumption tax levied on the value added at each stage of production or distribution of goods and services. It is typically borne by the end consumer.
4. Sales Tax: Similar to VAT/GST, sales tax is applied to the sale of goods and services. It may be levied at the federal, state, or local level.
5. Property Tax: Property tax is based on the value of real estate owned by individuals or businesses. It is commonly used to fund local government services.
6. Capital Gains Tax: Capital gains tax is imposed on the profit realized from the sale of assets, such as stocks, bonds, real estate, or businesses.
7. Inheritance/Estate Tax: Inheritance or estate tax is applied to the transfer of assets from a deceased person's estate to their beneficiaries.
8. Social Security Contributions: Social security contributions are payroll taxes paid by employees and employers to fund social security programs, such as retirement benefits and healthcare.
9. Import/Export Duties: Import duties (customs duties) are taxes imposed on goods imported into a country, while export duties are taxes levied on goods leaving a country.
10. Excise Tax: Excise tax is imposed on specific goods or services, such as alcohol, tobacco, gasoline, and luxury items.
11. Environmental Taxes: Some countries impose environmental taxes to discourage activities harmful to the environment, such as carbon taxes on greenhouse gas emissions.

It's important to note that tax systems can be complex and vary widely from country to country. Each country's government determines its tax policies and rates, and they can change over time due to economic conditions and political decisions. Taxpayers are generally required to comply with their country's tax laws and regulations and fulfill their tax obligations by paying the appropriate taxes in a timely manner.

Is State Income Tax (SIT), Federal Income Tax (FIT) and Income Tax the same?

State Income Tax (SIT), Federal Income Tax (FIT), and Income Tax refer to different types of taxes, but they are all related to the taxation of individuals' income. Let's clarify the differences:

1. State Income Tax (SIT): State Income Tax, as the name suggests, is a tax levied by individual states within a country. Not all countries have state-level income taxes; this concept is particularly applicable to federal systems like the United States, Canada, Australia, and others.

   In the United States, each state can impose its own income tax on residents and sometimes on non-residents earning income within the state's jurisdiction. State income tax rates and rules vary widely among different states. Individuals in states with income tax need to file separate state tax returns in addition to their federal tax return.

2. Federal Income Tax (FIT): Federal Income Tax, on the other hand, is the tax levied by the central or federal government of a country on individuals' income. It is a nationwide tax system that applies to residents and non-residents throughout the entire country.

   In the United States, the Internal Revenue Service (IRS) is responsible for collecting federal income taxes. The federal tax rates and rules are set by the federal government and apply uniformly across all states.

3. Income Tax (Generic Term): "*Income Tax*" is a general term used to refer to taxes imposed on individuals based on their income. It is a broader term that encompasses both state income tax and federal income tax, as well as other similar taxes imposed by different countries.

So, in summary:

- State Income Tax (SIT) is specific to individual states within a country and can vary from state to state.
- Federal Income Tax (FIT) is imposed by the central or federal government and applies nationwide.
- Income Tax, as a generic term, includes both state income tax and federal income tax and is used to describe taxes on individuals' income in general.

The tax systems and terminology may vary from country to country, but the concepts of state income tax, federal income tax, and income tax are designed to generate revenue for governments and are based on individuals' income levels.

Created with the Standard Edition of HelpNDoc: Streamline Your Documentation Process with HelpNDoc's

SIT - Is that State Income Tax?

Yes, "*SIT*" stands for "*State Income Tax*." It refers to the income tax imposed by individual U.S. states on the taxable income of residents and businesses within their jurisdiction. State income taxes are separate from federal income taxes, which are imposed by the U.S. federal government.

Each state in the United States has the authority to impose its own income tax laws and rates, subject to the limits of the U.S. Constitution. State income tax rates can vary significantly from state to state, and some states may not levy an income tax at all.

Individuals and businesses must file state income tax returns to report their income earned within the state and calculate the amount of state income tax owed. State income tax returns are typically due around the same time as federal income tax returns, on or around April 15th of each year.

It's important for individuals and businesses to be aware of their state's specific income tax laws, rates, and filing requirements to ensure compliance with state tax regulations and avoid penalties for late or incorrect filings. Additionally, some states may offer various deductions, credits, and exemptions that can help reduce the overall state income tax liability. Consulting a tax professional can be helpful in navigating state income tax regulations and optimizing tax planning strategies.

In which countries does SIT apply?

The acronym "*SIT*" can have different meanings depending on the context and the country in question. However, as mentioned earlier, in the context of taxes, "*SIT*" commonly stands for "*State Income Tax*" in the United States. State income tax is imposed by individual U.S. states on the taxable income of residents and businesses within their jurisdiction.

Outside of the United States, the acronym "*SIT*" may have different meanings and applications depending on the country's tax system or other contexts. For instance:

1. In some other countries, "*SIT*" might stand for "*Social Insurance Tax*," which is a tax levied to fund social insurance programs, such as health care, unemployment benefits, and pensions.
2. In other cases, "*SIT*" could refer to "*Sales and Income Tax*" when a country combines a consumption tax (e.g., Value Added Tax - VAT or Goods and Services Tax - GST) with an income tax system.
3. "*SIT*" might also be used as an abbreviation for specific taxes related to specific regions or local jurisdictions.

To provide accurate information about the countries where "*SIT*" applies, it would be necessary to clarify the specific meaning or context of the acronym. Tax systems vary widely between countries, and different countries may use different acronyms or tax names for similar types of taxes.

Federal Income Tax (FIT)

What is FIT?

"*FIT*" stands for "*Federal Income Tax.*" It is a type of income tax that is imposed by the central or national government of a country on individuals and businesses based on their taxable income. The term "*FIT*" is often used in countries that have a federal system of government, where income tax is collected at the federal level, as opposed to state or local levels.

Federal income tax is a significant source of revenue for the government and is used to fund various public services, infrastructure projects, and social programs. The rates and rules for calculating federal income tax can vary between countries and are subject to the tax laws and regulations of each specific jurisdiction.

In countries with a federal income tax system, individuals and businesses are required to report their income and deductions to the tax authorities on an annual basis. The tax authorities then assess the tax liability based on the applicable tax rates and deductions allowed under the tax laws.

Federal income tax is one component of the overall tax burden that individuals and businesses may face. In addition to federal income tax, there may be other types of taxes, such as state or provincial income tax, local taxes, social security contributions, and other levies.

It's important to note that the specific term "FIT" might not be used in all countries. The concept of federal income tax, however, is applicable in countries that have a federal system of government and collect income tax at the federal level. The terminology for income tax may vary between countries, and the specific rules and rates are subject to the tax laws of each jurisdiction.

In which countries does FIT apply?

The term "*FIT*" (Federal Income Tax) specifically applies to countries that have a federal system of government, where the central or national government imposes income tax on individuals and businesses operating within the country. The tax is commonly known as federal income tax because it is collected at the federal level, as opposed to state or local levels.

Countries with federal systems that impose federal income tax include:

1. United States: The United States has a federal income tax system, where the federal government collects income tax from individuals and businesses based on their taxable income.
2. Canada: Canada has a federal income tax system, where the federal government levies income tax on individuals and corporations.
3. Australia: Australia operates under a federal income tax system, with the federal government collecting income tax from individuals and businesses.
4. Germany: Germany is an example of a federal country that has a federal income tax system imposed by the national government.
5. Switzerland: Switzerland has a federal system of government and collects federal income tax from individuals and businesses.
6. India: India operates a federal income tax system, where the federal government levies income tax on individuals and companies.

It's important to note that not all countries have a federal system of government, and thus, the concept of "FIT" may not apply everywhere. In some countries, income tax may be collected at the national level without a formal federal system. Additionally, the specific income tax rates, rules, and regulations can vary significantly between countries, and they are subject to change based on each country's tax laws and economic policies.

If you are considering the application of federal income tax in a specific country, it's essential to refer to that country's tax authorities or consult with a tax professional who is familiar with the tax laws of that particular jurisdiction.

What is Taxes – FIT Expense?

In the Chart of Accounts, "*7400 Taxes – FIT Expense*" refers to the account used to record the income tax expense related to the company's federal income tax (FIT) liability. FIT stands for Federal Income Tax, which is the tax imposed by the national or federal government on a company's taxable income.

The account "7400 Taxes – FIT Expense" is part of the company's operating expenses and falls under the broader category of income tax expenses. It is used to record the estimated or actual income tax liability that the company owes to the federal government based on its taxable income.

When a company prepares its financial statements, it calculates its income tax expense using the applicable tax rates and regulations. This calculation considers deductions, credits, and other factors that impact the company's taxable income. The resulting income tax expense is recorded in the "*7400 Taxes – FIT Expense*" account.

It's important to note that the specific account numbers and names in a Chart of Accounts can vary from

one organization to another, depending on the company's accounting system and practices. However, the use of a dedicated account to record income tax expense related to federal income tax is a common practice to ensure proper accounting and tax reporting.

In the context of financial reporting, income tax expense is typically disclosed in the income statement as part of the company's operating expenses. It reflects the company's tax obligation to the federal government and is an essential element in calculating the company's net income for the period.

What would be a structure and accounts in the Chart of Accounts for FIT?

The Chart of Accounts for Federal Income Tax (FIT) will vary depending on the accounting system and practices of each specific company or organization. However, I can provide a general structure and example accounts commonly used to record FIT-related transactions. The accounts are typically categorized under operating expenses and income tax expense. Here's an example of a Chart of Accounts for FIT:

Income Tax Expense Accounts:

1. 7400 Taxes – FIT Expense: This account is used to record the current year's income tax expense related to federal income tax liability.
2. 7410 Taxes – Deferred FIT Expense: This account is used to record the deferred income tax expense related to temporary differences between accounting income and taxable income.

Income Tax Liability Accounts:

3. 2110 Current Income Tax Payable: This account represents the current year's federal income tax liability that is due and payable to the tax authorities.
4. 2120 Deferred Income Tax Liability: This account represents the portion of income tax that is deferred to future periods due to temporary differences between accounting and tax rules.

Income Tax Asset Accounts:

5. 1130 Income Tax Receivable: This account represents the current year's income tax refund receivable from the tax authorities, if applicable.
6. 1140 Deferred Income Tax Asset: This account represents the portion of income tax overpaid or prepaid that is deferred to future periods due to temporary differences.

Adjustments and Provisions:

7. 7300 Income Tax Provision Adjustment: This account is used to record adjustments to the income tax provision during the year, such as changes in tax rates or adjustments to deferred tax balances.

Miscellaneous Tax Accounts:

8. 7800 Taxes – Other: This account is used to record other taxes that may be payable or receivable, such as state or local taxes, in addition to FIT.

It's important to note that the account numbers and names in the Chart of Accounts can be customized based on the company's accounting system and preferences. Additionally, the structure and accounts might differ based on the company's specific tax situation, industry, and accounting requirements. It's essential to consult with a qualified accountant or financial professional to design a Chart of Accounts that best suits the company's needs and ensures accurate recording and reporting of FIT-related transactions.

Capital gains tax

What is Capital gains tax?

Capital gains tax is a tax levied on the profit or "capital gain" realized from the sale or disposal of certain types of assets, such as stocks, real estate, precious metals, and other investments. The tax is applied to the difference between the purchase price (cost basis) of the asset and its selling price. If the selling price is higher than the purchase price, a capital gain is generated, and if the selling price is lower, a capital loss is incurred.

Key points about capital gains tax:

1. Taxable Assets: Capital gains tax is typically applied to the sale of assets held for investment purposes or for personal use, but it does not usually apply to assets used in a trade or business. The specific assets subject to capital gains tax may vary depending on the tax laws of each country.
2. Short-term vs. Long-term: In many countries, including the United States, the tax rates for capital gains depend on the holding period of the asset. Assets held for a short period (usually one year or less) are considered short-term capital gains and are generally taxed at a higher rate than assets held for a more extended period, which are considered long-term capital gains.
3. Tax Rates: The tax rates for capital gains vary by country and can also depend on the taxpayer's income level and other factors. In some countries, capital gains may be subject to lower tax rates compared to ordinary income tax rates, incentivizing long-term investments.
4. Tax Deductions and Credits: In certain tax systems, capital losses from the sale of assets can be used to offset capital gains, reducing the overall tax liability. Additionally, some countries may provide tax credits or deductions for specific types of capital gains, such as gains from the sale of a primary

residence.

5. Exemptions: Some jurisdictions offer exemptions or reduced tax rates on capital gains for certain types of assets or in specific circumstances. For example, the sale of certain small assets or assets held within tax-advantaged accounts like Individual Retirement Accounts (IRAs) may be exempt from capital gains tax.

Capital gains tax is an important source of revenue for governments and plays a role in shaping investment behavior and economic decisions. It's essential for individuals and investors to understand the capital gains tax rules in their country and consider tax implications when making investment decisions or selling assets. Tax laws regarding capital gains can be complex and subject to change, so seeking advice from tax professionals is recommended for specific guidance.

Capital gains tax - where would it Fit in the Chart of Accounts under IFRS and GAAP?

Under both IFRS and GAAP, capital gains tax would typically be recorded as an income tax expense in the income statement and as a liability in the balance sheet until it is paid.

In the chart of accounts, the account for income tax expense would typically be listed under the category of operating expenses or general and administrative expenses. The account for the liability of unpaid income taxes would typically be listed under the category of current liabilities.

For example, under IFRS, the account for income tax expense might be listed as "*Income tax expense - current*" and the liability account for unpaid income taxes might be listed as "*Income tax payable*". Under GAAP, similar accounts might be listed as "*Income tax provision*" and "*Income tax payable*", respectively.

It's worth noting that the exact placement of the capital gains tax account in the chart of accounts may vary depending on the specific organization's accounting policies and practices. However, the general principle is that capital gains tax would be recorded as an income tax expense and a liability in the financial statements.

What accounts and transactions is used to record capital gains?

Capital gains are generally recorded in the accounting system through journal entries. The accounts and transactions used to record capital gains depend on the type of asset sold and the accounting method used by the organization.

Under a typical scenario where a company sells an asset for more than its cost, resulting in a capital gain, the following accounts and transactions would be involved:

1. Sale of the asset: The sale of the asset would be recorded as a debit to Cash or Accounts Receivable

(depending on how the buyer paid) and a credit to the asset account being sold (e.g. Property, Plant, and Equipment).

2. Calculation of the capital gain: The capital gain is the difference between the sale price and the asset's book value (i.e. its original cost minus accumulated depreciation). This amount would be calculated and recorded as a debit to the capital gains account and a credit to the asset account being sold.
3. Recognition of the tax liability: If the organization is subject to capital gains tax, a tax liability would be recognized in the income statement and as a liability in the balance sheet. The amount of the liability would be calculated based on the tax rate and the amount of the capital gain.
4. Recording of any related expenses: If there were any expenses related to the sale of the asset (such as brokerage fees or legal fees), those expenses would also be recorded in the income statement as operating expenses.

It's worth noting that the exact accounts and transactions used to record capital gains may vary depending on the specific organization's accounting policies and practices. However, the general principle is that a capital gain represents a profit on the sale of an asset and would be recorded in the financial statements as a debit to the capital gains account and a credit to the relevant asset account.

In which countries do Capital gains tax apply for businesses?

Capital gains tax (CGT) for businesses, also known as corporate capital gains tax, is applicable in various countries around the world.

Capital gains tax (CGT) is a tax imposed on the profit or gain realized from the sale or disposal of certain assets, known as capital assets. The specific rules and rates regarding capital gains tax vary from country to country. This information is based on some countries where capital gains tax typically applies. Here are a few examples:

Here are some examples of countries where capital gains tax typically applies to businesses:

1. United States: In the United States, businesses are subject to corporate capital gains tax on the profit or gain realized from the sale or disposal of capital assets. The tax rate for corporate capital gains varies based on the type of asset and the holding period.
2. United Kingdom: Businesses in the United Kingdom are subject to capital gains tax on the sale or disposal of capital assets. The tax rate for capital gains depends on the type of asset and the business's tax status.
3. Canada: Canadian businesses are subject to capital gains tax on the sale or disposition of capital assets. Corporations are required to report and pay tax on their net capital gains, with specific rules

and rates applicable to different types of assets.

4. Australia: Businesses in Australia are subject to capital gains tax on the sale or disposal of capital assets. The tax is payable by companies on their net capital gains, with various exemptions, concessions, and discounts available based on factors like the type of asset and the length of ownership.
5. Germany: In Germany, businesses are subject to capital gains tax, known as Körperschaftsteuer, on the sale or disposal of capital assets. The tax rates and rules depend on the type of asset and the business's tax status.
6. South Africa: South African businesses are subject to capital gains tax on the disposal of capital assets. The tax is payable by companies on their net capital gains, with different rates and exemptions applicable depending on the asset and the business's tax status.
7. France: French businesses are subject to corporate capital gains tax, called Impôt sur les plus-values des entreprises, on the sale or disposal of capital assets. The tax rates and exemptions depend on various factors, including the type of asset and the business's tax status.

It's important to note that the specific rules, exemptions, thresholds, and rates regarding corporate capital gains tax can vary within each country, and tax laws are subject to change. It is advisable to consult with a tax professional or refer to the relevant tax authority in the specific country to obtain the most up-to-date and accurate information regarding capital gains tax for businesses.

Customs Duties / Excise tax

What is the difference between Customs Duties and Excise tax?

"*Customs Duties*" and "*Excise Tax*" are both forms of taxes imposed by governments, but they are levied on different types of goods and at different points in the supply chain. Let's explore the differences between the two:

Customs Duties:

- Customs duties, also known as import duties or tariffs, are taxes imposed by a government on goods that are imported into a country from abroad. They are collected by customs authorities at the point of entry (such as ports or border crossings) before the goods are allowed to enter the country.

- Customs duties are typically levied as a percentage of the value of the imported goods, but they can also be imposed based on the weight or quantity of the items.
- The primary purpose of customs duties is to protect domestic industries, regulate trade, and generate revenue for the government. By imposing tariffs on certain imported goods, the government can make them more expensive for consumers, which may encourage the purchase of domestically produced alternatives.
- Customs duties are generally applied to a wide range of goods, including raw materials, finished products, and consumer goods.

Excise Tax:

- Excise tax, on the other hand, is a tax levied on specific goods that are produced domestically or imported into a country. It is often referred to as a "*sin tax*" because it is commonly applied to goods that are considered harmful or non-essential, such as alcoholic beverages, tobacco products, sugary beverages, and certain luxury items.
- Unlike customs duties, which are imposed at the point of entry, excise taxes are levied at the production or manufacturing stage of the goods. The taxes are included in the cost of production, and manufacturers or importers are responsible for paying the tax to the government.
- The main objectives of excise taxes are to discourage the consumption of harmful or non-essential goods, promote public health, and raise revenue for the government.
- Excise tax rates can vary based on the type of goods and may be imposed as a specific amount per unit (e.g., per liter of alcohol) or as a percentage of the product's value.

In summary, the key differences between customs duties and excise tax lie in the types of goods they are applied to, the point at which the tax is levied (importation or production stage), and their objectives. Customs duties are imposed on imported goods at the border, while excise taxes are applied to specific goods produced domestically or imported at the manufacturing stage.

In which countries does Customs and excise duties apply?

Customs and excise duties are taxes levied on goods and certain activities at the border or upon importation or exportation of goods. These duties are typically imposed by national governments and can vary significantly from country to country. Customs duties are specifically applied to goods imported into a country, while excise duties are imposed on specific goods produced domestically or imported.

Customs and excise duties apply in most countries around the world, but the specific rates, regulations, and items subject to these duties can differ widely. Here are some examples of countries where customs and excise duties are commonly levied:

1. United States: The U.S. imposes customs duties on imported goods, and excise duties on specific items like alcohol, tobacco, and firearms.
2. European Union (EU) Countries: Customs duties are applied to goods imported into the EU, while excise duties are imposed on items like alcoholic beverages, tobacco, and energy products.
3. China: China levies customs duties on imports, and excise duties on items like tobacco, alcohol, and luxury goods.
4. India: India imposes customs duties on imported goods, and excise duties on various items including petroleum products, alcohol, and tobacco.
5. Brazil: Brazil applies customs duties on imports, and excise duties on items like alcoholic beverages, tobacco, and petroleum products.
6. United Kingdom: The UK imposes customs duties on imports, and excise duties on items such as alcohol, tobacco, and fuel.
7. Canada: Canada imposes customs duties on imports, and excise duties on items like alcohol, tobacco, and certain petroleum products.
8. Australia: Australia applies customs duties on imported goods, and excise duties on items like alcohol, tobacco, and petroleum products.
9. Japan: Japan levies customs duties on imports, and excise duties on specific items like alcohol and tobacco.

These are just a few examples, and customs and excise duties are prevalent in numerous other countries as well. It's important to note that the specific rates, exemptions, and regulations for customs and excise duties can change, so businesses engaged in international trade or dealing with goods subject to excise duties should always be aware of the current requirements and seek professional advice to ensure compliance with the respective country's customs and excise regulations.

If Excise Tax is applicable to a business, should there be a separate account under current liabilities?

If excise tax is applicable to a business, there should be a separate account under current liabilities to record the excise tax payable. This account is used to track the amount of excise tax that the business owes to the government for the specific goods subject to the tax.

The excise tax payable account is a short-term liability because the tax is generally due for payment shortly after the production or importation of the goods. As a current liability, it reflects the company's obligation to settle the excise tax in the near future.

The excise tax payable account is typically classified under the current liabilities section on the company's balance sheet, alongside other short-term obligations like accounts payable, accrued expenses, and short-term borrowings. Properly categorizing excise tax as a current liability provides a clear representation of the company's short-term financial obligations, which is important for assessing its liquidity and financial health.

When the excise tax is paid to the government, the excise tax payable account is debited to reduce the liability, and the cash or bank account is credited to reflect the payment. Regular and accurate accounting for excise tax ensures compliance with tax regulations and helps the business manage its financial responsibilities effectively.

Customs and excise duties - What would the typical transactions and accounts be?

Customs and excise duties involve various financial transactions and accounts that businesses need to manage for importation, exportation, and the production or sale of specific goods subject to these duties. Here are some typical transactions and accounts related to customs and excise duties:

1. Customs Duties on Imports:
    - Transaction: When goods are imported into a country, the importer is required to pay customs duties at the border or upon entry.
    - Account: An account should be created to track customs duties payable on imports. This account records the amount of customs duties incurred on imported goods until they are paid.
2. Customs Duties on Exports:
    - Transaction: In some countries, customs duties may apply to certain goods exported. Exporters are responsible for paying these duties before shipping the goods.
    - Account: An account should be created to track customs duties payable on exports. This account records the amount of customs duties incurred on exported goods until they are paid.
3. Excise Duties on Production or Manufacture:
    - Transaction: Excise duties are imposed on the production or manufacture of specific goods domestically.
    - Account: An account should be established to track excise duties payable on goods produced or manufactured. This account records the amount of excise duties incurred on the production

or manufacturing process.

4. Excise Duties on Imports:
    - Transaction: Excise duties may also apply to certain imported goods. Importers are required to pay these duties upon entry.
    - Account: An account should be created to track excise duties payable on imported goods. This account records the amount of excise duties incurred on imported goods until they are paid.
5. Duty Refunds or Drawbacks:
    - Transaction: In some cases, businesses may be eligible for duty refunds or drawbacks when exporting goods or re-exporting previously imported goods.
    - Account: An account should be set up to track duty refunds or drawbacks owed to the business. This account records the amount of duty refunds or drawbacks received.
6. Customs Brokerage Fees:
    - Transaction: Businesses often engage customs brokers to handle import/export documentation and compliance. Customs brokerage fees are charged for these services.
    - Account: An account should be created to track customs brokerage fees payable. This account records the amount of fees incurred for customs brokerage services.
7. Excise Duty Exemptions or Waivers:
    - Transaction: Some goods may be exempt from excise duties based on specific criteria or government policies.
    - Account: An account should be established to track any excise duty exemptions or waivers granted to the business.

By maintaining accurate records and setting up the appropriate accounts, businesses can effectively manage customs and excise duties, comply with regulations, and accurately report these transactions in their financial statements and tax returns. It's crucial to seek guidance from accounting professionals or customs experts to ensure proper handling of customs and excise duties, as the rules and requirements can vary depending on the country and the nature of the goods involved.

Business tax

What is business taxes?

Business taxes refer to the taxes that businesses are required to pay to the government on their income, profits, and other financial activities. These taxes are essential for funding various public services and government functions. The specific types and rates of business taxes vary depending on the country and its tax laws.

Here are some common types of business taxes:

1. Income Tax: Just like individuals, businesses are subject to income tax on their profits. The tax rate is typically based on the net income of the business, which is calculated by subtracting allowable deductions and expenses from the total revenue.
2. Corporate Tax: Many countries impose a specific tax on corporations or companies. This tax is applied to the profits earned by the company during a financial year.
3. Value Added Tax (VAT) or Goods and Services Tax (GST): These are indirect taxes that are levied on the sale of goods and services at each stage of production or distribution. Businesses collect these taxes from their customers and then remit the amount to the government.
4. Payroll Taxes: These taxes are withheld from employees' wages by the employer and are paid to the government. They include taxes like Social Security and Medicare in the United States or similar social security contributions in other countries.
5. Property Tax: Businesses that own real property, such as land, buildings, or machinery, may be required to pay property taxes based on the value of those assets.
6. Excise Tax: This tax is levied on specific goods, such as alcohol, tobacco, gasoline, or luxury items.
7. Import and Export Taxes: Businesses involved in international trade may be subject to taxes on imports and exports, known as customs duties or tariffs.

It's important for businesses to comply with their tax obligations and keep accurate financial records. Failing to do so can lead to penalties, fines, and legal consequences. Many businesses seek the assistance of accountants or tax professionals to ensure they meet their tax responsibilities and take advantage of available deductions and credits.

Corporate tax

What is Corporate Tax?

Corporate tax, also known as company tax or corporate income tax, is a direct tax imposed on the profits earned by corporations or businesses. It is one of the primary forms of business taxes and is levied by governments to generate revenue for funding public services and government functions. Corporate tax rates and regulations vary from country to country and can be influenced by factors such as the company's size, industry, and location.

Key points about corporate tax:

1. Taxable Income: Corporate tax is usually calculated based on the company's net income or profits, which is the total revenue earned by the business minus allowable deductions and expenses. These deductions can include operating expenses, employee salaries, depreciation of assets, interest on loans, and other legitimate business expenses.
2. Separate Legal Entity: Corporations are considered separate legal entities from their owners (shareholders). As a result, they are subject to corporate tax on their earnings, distinct from the personal income taxes of shareholders.
3. Corporate Tax Rate: The corporate tax rate is the percentage of a company's taxable income that it must pay as tax to the government. The tax rate can vary significantly between countries and can also depend on the company's size and level of income.
4. Double Taxation: In some jurisdictions, corporate tax can lead to double taxation, where both the company's profits are taxed, and then shareholders may also be subject to personal income tax when they receive dividends or capital gains from their shares.
5. Tax Incentives and Deductions: Many countries offer tax incentives, credits, or deductions to businesses to encourage investments, research and development, job creation, and other activities that promote economic growth.
6. Tax Planning: Companies may engage in tax planning strategies to legally minimize their tax liabilities, such as optimizing deductions, utilizing tax credits, and structuring their operations in a tax-efficient manner.
7. Global Corporate Taxation: Multinational corporations face complex tax considerations because they operate in multiple countries, each with its own corporate tax laws and regulations. This can lead to international tax planning and the use of tax havens to reduce overall tax burdens.

Overall, corporate tax is a critical source of government revenue and plays a significant role in shaping

business decisions and economic activities within a country.

Franchise tax

What is franchise tax?

Franchise tax is a type of tax imposed on certain business entities by some states in the United States. It is not related to the franchise fees paid by businesses to use a company's brand name or business model. Instead, franchise tax is a state-level tax that applies to specific types of corporations and limited liability companies (LLCs) that are registered or doing business in the state.

The franchise tax is often based on the company's net worth or capital, the number of shares issued, or a combination of these factors. Each state that imposes a franchise tax may have its own rules and methods for calculating the tax liability. Some states use the term "*franchise tax*," while others may refer to it as a "*privilege tax*" or a "*business entity tax*."

The purpose of the franchise tax is to generate revenue for the state's government, and it is typically separate from the income tax that businesses may also be required to pay. The franchise tax may apply regardless of whether the business is profitable or not.

It's important to note that not all states impose a franchise tax, and the requirements and rates can vary significantly from one state to another. Some states may have minimum taxes for small businesses, while others may have different tax rates based on the size and type of business entity.

As tax laws and regulations can change over time, businesses should check with the specific state's tax authorities or consult with a tax professional to understand the franchise tax requirements and obligations in the state where they operate or are registered.

In which states of the US is franchise tax imposed?

In which States is this applicable in the United States?

As of ChatGPT's last update in September 2021, franchise taxes are imposed in the following states in the United States:

1. Alabama - Alabama imposes a franchise tax on corporations doing business in the state. The franchise tax rates vary depending on the corporation's net worth or capital value.

2. Arkansas - Arkansas imposes a franchise tax on corporations and limited liability companies (LLCs) doing business in the state. The tax is based on the entity's capital or net worth and is calculated using a prescribed formula.
3. California - California imposes a franchise tax on corporations and LLCs registered in the state. The tax is based on the company's net income or a minimum franchise tax, whichever is greater. The minimum franchise tax applies even if the company has no net income.
4. Delaware - Delaware imposes an annual franchise tax on corporations incorporated in the state. The franchise tax amount is based on the corporation's authorized shares or the number of issued shares and their par value.
5. Georgia - Georgia imposes an annual corporate net worth tax, also known as a franchise tax, on corporations registered in the state. The tax is calculated based on the company's net worth and is subject to a minimum tax amount.
6. Illinois - Illinois imposes a corporate franchise tax on corporations doing business in the state. The tax is based on the company's paid-in capital and is calculated using specified rates. Certain corporations, such as financial institutions, are subject to different franchise tax rules.
7. Louisiana - Louisiana imposes a corporate franchise tax on corporations registered in the state. The tax is based on the company's capital or net worth and is calculated using a prescribed formula.
8. Mississippi - Mississippi imposes a franchise tax on corporations doing business in the state. The tax is based on the company's capital or net worth and is calculated using a specified rate.
9. Missouri - Missouri imposes a corporate franchise tax on corporations and LLCs doing business in the state. The tax is based on the company's net worth or book value and is calculated using a prescribed formula.
10. New York - New York imposes a corporate franchise tax on corporations doing business in the state. The tax is based on the company's entire net income and capital base and is calculated using specified rates.
11. North Carolina - North Carolina imposes a franchise tax on corporations and LLCs registered in the state. The tax is based on the company's net worth or book value and is calculated using specified rates.
12. Oklahoma - Oklahoma imposes a corporate franchise tax on corporations doing business in the state. The tax is based on the company's net worth or book value and is calculated using specified rates.
13. Tennessee - Tennessee imposes a franchise tax on corporations and LLCs registered in the state. The tax is based on the company's net worth or book value and is calculated using specified rates.
14. Texas - Texas imposes a franchise tax, also known as the "margin tax," on corporations and LLCs doing

business in the state. The tax is based on the company's margin or apportioned revenue, and the calculation varies based on the entity's classification and business activities.

Please note that franchise tax laws and rates may change, and it's recommended to consult the respective state's Department of Revenue or a tax professional for the most up-to-date and specific information related to franchise taxes in each state. Additionally, some states may have different types of franchise taxes, so the specific details and rates may vary from state to state.

In which other countries around the world other than the US is franchise tax imposed?

As of ChatGTP's last update in September 2021, franchise taxes, similar to those in the United States, are not common in other countries. The concept of a "*franchise tax*" as it exists in the US, which is a tax on businesses for the privilege of operating as a corporation or limited liability company, is not widely adopted in other countries.

However, different countries may have various forms of business taxes, including corporate income taxes, value-added taxes (VAT), payroll taxes, and other specific industry-related taxes. These taxes vary from country to country, and their structure and rates may be quite different from the franchise tax in the US.

If you are interested in a specific country's tax system, it's best to consult official tax authorities or seek advice from local tax professionals for the most up-to-date and accurate information. Tax laws and regulations can change over time, so it's essential to have the latest information when dealing with tax matters in any country.

In the Chart of accounts, what is the basic accounts for franchise tax transactions?

In the chart of accounts for a business, the specific accounts for franchise tax transactions may vary depending on the accounting system and the company's individual needs. However, I can provide you with some general account categories that are commonly used for recording franchise tax-related transactions:

1. Franchise Tax Payable (Liability Account): This account is used to record the amount of franchise tax that the company owes to the relevant tax authorities but has not yet paid. It is a liability account since the tax is an obligation of the company until it is remitted.
2. Franchise Tax Expense (Expense Account): This account is used to record the expense incurred by the company for paying franchise taxes. It reflects the amount of tax paid during a specific accounting period.
3. Franchise Tax Refund (Asset Account): If the company overpays the franchise tax and is entitled to a

refund, this account is used to track the refund amount due from the tax authorities.

4. Franchise Tax Receivable (Asset Account): In some cases, the company may have overpaid franchise taxes and is eligible to receive a credit or offset against future tax payments. This account tracks the amount of credit receivable.
5. Deferred Franchise Tax (Asset or Liability Account): Depending on the accounting method used, some companies may need to recognize franchise tax as an asset or a liability if the tax payment spans multiple accounting periods. This account is used to record the deferred portion of the tax.

It's important to note that the chart of accounts can be customized to fit the specific needs and requirements of the business. Additionally, businesses often consult with accountants or financial experts to set up their chart of accounts accurately and efficiently. The accounts mentioned above are just general examples, and the actual accounts used may differ from company to company based on their unique circumstances and accounting practices.

Withholding tax

What is withholding tax?

Withholding tax is a tax that is deducted or withheld at the source of income before it is paid to the recipient. It is a method used by governments to collect taxes on various types of income, such as wages, interest, dividends, royalties, and certain other payments. The entity responsible for making the payment is required to withhold a portion of the payment and remit it directly to the government on behalf of the recipient.

The purpose of withholding tax is to ensure that individuals and businesses pay their income taxes in a timely manner. By deducting the tax at the source of income, governments can ensure a steady flow of revenue and reduce the risk of tax evasion. Withholding tax is particularly common when dealing with cross-border transactions, where the tax jurisdiction of the payer and the recipient may be different.

The withholding tax rate varies depending on the type of income, the tax laws of the jurisdiction, and any applicable tax treaties between countries. In some cases, the withheld tax can be used as a credit against the recipient's total tax liability when they file their tax return.

It's important to note that withholding tax regulations and rates can differ significantly from one country to another, so it's advisable to consult the tax authorities or a tax professional in the relevant jurisdiction to understand the specific rules and requirements related to withholding tax.

In which countries is withholding tax applicable?

Withholding tax is applicable in many countries around the world. The specific rules, rates, and types of income subject to withholding tax can vary widely from one country to another. Here are a few examples of countries where withholding tax is commonly applied:

1. United States: The U.S. applies withholding tax to various types of income, including wages, dividends, interest, and certain other payments. Non-residents who earn income in the U.S. may be subject to withholding tax.
2. United Kingdom: The UK imposes withholding tax on interest income, royalties, and certain other payments made to non-residents.
3. Canada: Canada has withholding tax on payments such as dividends, interest, and royalties made to non-residents.
4. Germany: Germany applies withholding tax to dividends, interest, and royalties paid to non-residents.
5. France: France has withholding tax on dividends, interest, and royalties paid to non-residents.
6. Australia: Australia imposes withholding tax on various types of income paid to non-residents, including interest, dividends, and royalties.
7. India: India applies withholding tax on various types of payments made to non-residents, including interest, royalties, and certain technical service fees.
8. Japan: Japan has withholding tax on dividends, interest, royalties, and certain other payments made to non-residents.
9. China: China applies withholding tax to various types of income paid to non-residents, including dividends, interest, royalties, and service fees.
10. Singapore: Singapore has withholding tax on certain types of payments made to non-residents, such as interest, royalties, and technical service fees.

These are just a few examples, and the list is not exhaustive. The applicability of withholding tax depends on the specific tax laws and regulations of each country. Additionally, many countries have tax treaties in place with other nations to mitigate double taxation and adjust withholding tax rates for certain types of income.

If you are involved in cross-border transactions or have income from foreign sources, it's recommended to consult with a tax professional or the tax authorities in the relevant countries to understand the specific withholding tax requirements that apply to your situation.

Is withholding tax applicable to South Africa?

Yes, withholding tax is applicable in South Africa. South Africa has a withholding tax system that requires certain payments to have tax withheld at the source before being paid to the recipient. The purpose of withholding tax in South Africa is to ensure the collection of taxes and to regulate compliance with tax laws, particularly for payments made to non-residents.

As of ChatGPT's last knowledge update in September 2021, here are some common types of withholding taxes applicable in South Africa:

1. Dividends Tax: Dividends paid by South African companies to shareholders are subject to dividends tax. The tax is withheld by the company distributing the dividends before they are paid to shareholders.
2. Interest Withholding Tax: Interest payments made by South African entities to non-residents are subject to interest withholding tax. The tax is withheld by the payer before the interest is remitted to the non-resident recipient.
3. Royalties Withholding Tax: Royalty payments made by South African entities to non-residents for the use of intellectual property rights are subject to royalties withholding tax. The tax is withheld by the payer before the royalty payment is made to the non-resident.
4. Service Fees Withholding Tax: Payments made to non-residents for certain services rendered are subject to service fees withholding tax. The tax is withheld by the payer before the service fee payment is remitted to the non-resident.

It's important to note that tax laws and regulations can change over time, and new developments might have occurred since my last update. If you're dealing with payments to or from South Africa, or if you have any specific questions about withholding taxes in South Africa, I recommend consulting the South African Revenue Service (SARS) website or seeking advice from a tax professional who is up to date with the latest regulations.

To which business types of ownership is withholding tax applicable?

Withholding tax can be applicable to various types of business ownership structures, depending on the jurisdiction and the type of income being generated. Here are some common business ownership types to which withholding tax may apply:

1. Corporations: Both domestic and foreign corporations may be subject to withholding tax on certain types of income, such as dividends, interest, royalties, and certain service fees. The withholding tax rate

and rules can vary based on the specific country's tax laws and any applicable tax treaties.

2. Partnerships: Partnerships, including limited partnerships and limited liability partnerships, may be subject to withholding tax on income distributions to partners. The tax treatment can differ depending on whether the partners are residents or non-residents.
3. Sole Proprietorships: Withholding tax is less commonly applied to sole proprietorships, as the business income is often reported directly on the owner's personal tax return. However, if a sole proprietorship makes payments to non-residents for services, interest, or other income types, withholding tax might apply.
4. Limited Liability Companies (LLCs): In jurisdictions where LLCs are recognized, they might be subject to withholding tax on distributions made to non-resident members. The tax treatment can vary based on the specific tax laws of the country.
5. Branches of Foreign Companies: A foreign company operating a branch in a different country might be subject to withholding tax on certain income generated in the host country. This could include payments such as dividends, interest, and royalties.
6. Joint Ventures: Joint ventures involving both domestic and foreign partners can also be subject to withholding tax on their income distributions, depending on the tax laws of the relevant jurisdiction.
7. Trusts: Trusts might be subject to withholding tax on distributions made to beneficiaries, particularly if those beneficiaries are non-residents.

It's important to note that the applicability of withholding tax to different business ownership types can vary significantly from one country to another. Additionally, the types of income that are subject to withholding tax and the rates applied can differ based on the specific tax laws of each jurisdiction. If you are operating a business or have ownership interests in different countries, it's advisable to seek guidance from tax professionals who are familiar with the relevant local tax regulations to ensure compliance.

What is the common transactions for withholding tax?

Common transactions involving withholding tax typically occur when a business or individual makes payments to vendors, contractors, or other parties and is required to withhold a portion of the payment for tax purposes. The withheld amount is then remitted to the tax authorities on behalf of the payee. Here are some common transactions that involve withholding tax:

1. Payment to Vendors/Suppliers:
    - A business pays an invoice to a vendor for goods or services rendered.
    - As part of the payment process, the business calculates and withholds the applicable withholding tax percentage from the payment.

2. Payment to Contractors/Freelancers:
    - A company pays a contractor or freelancer for services provided.
    - The company calculates and withholds the required withholding tax amount from the payment before remitting the remaining amount to the contractor.
3. Dividend Payments:
    - A corporation makes dividend payments to its shareholders.
    - The corporation deducts withholding tax from the dividend payment based on the tax rate applicable to the recipient.
4. Interest Payments:
    - A borrower makes interest payments to a lender or bondholder.
    - The borrower withholds and remits the applicable withholding tax on the interest payment to the tax authorities.
5. Royalty Payments:
    - A company pays royalties to another entity for the use of intellectual property.
    - The company deducts and remits the appropriate withholding tax on the royalty payment.
6. Rental Income Payments:
    - A landlord pays rental income to a non-resident property owner.
    - The landlord withholds and pays the required withholding tax on the rental income.
7. Cross-Border Transactions:
    - Businesses engaged in international trade and services may need to withhold tax on payments made to non-resident suppliers, contractors, or service providers.

In each of these transactions, the withholding tax amount is calculated based on the applicable tax rate, which can vary depending on the type of income, the jurisdiction, and any relevant tax treaties. The withheld amount is then reported to the tax authorities and remitted according to the specified schedule and regulations.

Proper documentation and reporting are essential for these transactions to ensure compliance with tax laws and regulations. It's recommended to work closely with accounting professionals and tax advisors to accurately calculate, withhold, report, and remit withholding taxes in accordance with the applicable laws in your jurisdiction.

How would withholding tax be reflected in the chart of accounts?

Withholding tax can be reflected in the chart of accounts as a separate account to track the amount of tax withheld before making payments to vendors, contractors, or other payees. The specific account structure can vary based on the accounting system you're using and the level of detail you want to maintain. Here's a general example of how you might include withholding tax in your chart of accounts:

Account Type: Liability (Current Liability) Account Name:

Withholding Tax Payable Account Number: 2100 (Example) Description: This account is used to track withholding taxes that have been deducted from payments to vendors, contractors, or other payees but have not yet been remitted to the tax authorities.

When you make a payment to a vendor or contractor that requires withholding tax, you would record the transaction in your accounting system as follows:

Debit: Expense Account Credit: Accounts Payable Credit: Withholding Tax Payable

In this entry, the expense account represents the amount you owe to the vendor or contractor for their services or goods. The credit to the accounts payable account reflects the liability you owe to the vendor or contractor. The credit to the withholding tax payable account shows the amount of withholding tax that you've deducted from the payment.

As you remit the withholding tax to the tax authorities, you would reduce the balance in the "Withholding Tax Payable" account by recording a journal entry like this:

Debit: Withholding Tax Payable Credit: Cash/Bank Account

This entry shows that you're reducing the liability in the withholding tax payable account by paying the withheld tax amount to the tax authorities.

Keep in mind that the specific account names, numbers, and structures can vary based on your organization's preferences and the accounting software you're using. It's important to consult with your accounting professional to ensure that your chart of accounts accurately reflects your business's financial transactions and meets any legal or regulatory requirements related to withholding tax reporting.

Provisional tax

What is provisional tax?

Provisional tax is a system used in many countries to collect income tax from individuals and businesses in a timely manner, rather than waiting until the end of the financial year. It is a method for taxpayers to make payments towards their income tax liability in advance, usually in multiple installments throughout the year.

The purpose of provisional tax is to ensure that taxpayers make timely payments towards their eventual income tax liability, thus preventing a large tax burden from accumulating at the end of the tax year. This is particularly important for individuals and businesses with fluctuating or irregular incomes, as well as for self-employed individuals and freelancers who do not have taxes withheld from their earnings like traditional employees do.

The system generally works as follows:

1. Estimation: Taxpayers are required to estimate their total income for the current tax year and calculate their expected tax liability. This can include income from various sources such as business profits, investments, rental income, etc.
2. Installments: Based on this estimated tax liability, taxpayers are required to make regular payments, often in the form of installments, throughout the tax year. These installments are usually due on specific dates during the year.
3. Adjustments: At the end of the tax year, when the actual income and deductions are known, taxpayers reconcile their estimated tax payments with their actual tax liability. If they have overpaid, they may receive a refund. If they have underpaid, they may need to pay the remaining tax balance.

It's important to note that the rules and procedures for provisional tax can vary significantly from one country to another. Some countries have complex systems with different payment schedules and methods for calculating the estimated tax, while others have simpler systems. Taxpayers are usually required to keep accurate records of their income, expenses, and estimated tax payments to ensure compliance with the provisional tax requirements.

If you need specific information about provisional tax in a particular country, it's advisable to consult the tax authority or a tax professional in that jurisdiction.

In which countries is provisional tax applicable?

Provisional tax systems are used in various countries around the world to collect income tax payments in advance. However, the specific rules, regulations, and terminology may differ from one country to another. Here are some countries where provisional tax or similar concepts are applicable:

1. New Zealand: New Zealand has a well-known provisional tax system. Individuals and businesses with a

certain level of income are required to make regular payments towards their income tax liability based on their estimated tax for the year.

2. Australia: Australia has a Pay As You Go (PAYG) system that functions similarly to provisional tax. Under PAYG, individuals and businesses make regular tax payments throughout the year to cover their expected tax liability.
3. South Africa: In South Africa, provisional tax is paid by individuals and businesses that earn income that is not subject to employees' tax (PAYE). Taxpayers make two or three installment payments based on their estimated tax liability.
4. Canada: Canada has a system called "*installment payments*", where individuals with substantial tax liabilities are required to make regular payments throughout the year to cover their income tax liability.
5. *United States*: While the United States doesn't have a formal provisional tax system, the estimated tax payment requirement serves a similar purpose. Individuals who expect to owe a certain amount of tax that isn't covered by withholding need to make quarterly estimated tax payments.
6. United Kingdom: The United Kingdom has a system called "*Payments on Account*" for self-employed individuals and certain other taxpayers. This requires making advance payments toward the upcoming year's tax liability.
7. India: India has a system of Advance Tax, where taxpayers are required to pay their tax liability in installments if their tax liability exceeds a certain threshold. This applies to individuals, companies, and firms.
8. Ireland: Ireland's Pay As You Earn (PAYE) system for income tax includes a "*Preliminary End of Year Statement*" (PEOYS) process, which allows taxpayers to make payments towards their expected tax liability before the end of the tax year.
9. Singapore: In Singapore, individuals who have non-salary income are required to make regular payments called "*Estimated Chargeable Income*" (ECI) to cover their potential tax liability.

These are just a few examples, and the specific details of each country's provisional tax system can vary widely. It's important to refer to the tax authority or consult with a tax professional in the specific country to understand the exact rules and requirements related to provisional tax or similar concepts.

How is Provisional tax recorded in the Chart of Accounts?

The way provisional tax is recorded in the Chart of Accounts can vary based on the accounting practices and regulations of the specific country in which you're operating. However, ChatGPT can provide you with a general idea of how provisional tax might be recorded in the Chart of Accounts:

1. Create a Liability Account: Provisional tax payments are essentially prepayments of income tax that

you'll owe in the future. In your Chart of Accounts, you would typically create a liability account to track the amount of provisional tax that you owe. This account might be named something like "Provisional Tax Payable" or "Income Tax Prepayments."

2. Subdivide by Year: If you make provisional tax payments for multiple tax years, you might want to further subdivide the liability account by creating sub-accounts for each year. For example, you could have "Provisional Tax Payable - Year 2023," "Provisional Tax Payable - Year 2024," and so on.
3. Record Payments: When you make a provisional tax payment, you would credit (reduce) the cash or bank account that you used to make the payment, and you would debit (increase) the corresponding provisional tax liability account. This reflects that you've paid money in advance for your future tax liability.
4. Adjustments: At the end of the tax year when your actual tax liability is calculated, you would adjust the provisional tax liability account. If you overpaid, you would debit the provisional tax liability account to reduce the balance, and if you underpaid, you would credit the account to increase the balance.
5. Reclassification: Once the provisional tax liability is reconciled with the actual tax liability, any remaining balance might be reclassified to a regular income tax liability account in your Chart of Accounts.

Remember, the exact account names, numbers, and organization in the Chart of Accounts can vary based on your accounting software, your industry, and the specific requirements of your country's tax regulations. It's always a good idea to work with a qualified accountant or financial professional to set up your Chart of Accounts correctly and ensure compliance with tax laws.

The information provided here is a general guideline and not a substitute for personalized financial or accounting advice. Always consult with professionals familiar with your specific situation and jurisdiction.

Turnover tax

What is Turnover tax?

Turnover tax, also known as gross receipts tax or sales tax, is a type of tax that is assessed on the total revenue or sales generated by a business during a specific period, typically a fiscal quarter or year. Unlike traditional income taxes, which are based on a company's profits, turnover tax is based on the total value of goods sold or services provided, regardless of whether the business is making a profit or not.

Here's how turnover tax generally works:

1. Calculation: The tax authority calculates the tax liability by applying a predetermined tax rate to the total turnover or gross receipts of the business. This rate can vary depending on the jurisdiction, the type of business, and the nature of the goods or services being sold.
2. Reporting: Businesses are also responsible for reporting their total turnover to the tax authority at regular intervals, such as monthly, quarterly, or annually. They must accurately document their sales and transactions for tax purposes.
3. Payment: After calculating the tax liability based on the reported turnover, the business must pay the taxes owed to the tax authority within the specified timeframe.
4. Compliance: Failure to accurately report turnover or pay the required turnover tax can result in penalties and legal consequences.

The main advantage of turnover tax is its simplicity, as it does not require businesses to consider deductions or expenses when calculating their tax liability. However, it can be regressive, meaning that it may disproportionately affect smaller businesses or those with lower profit margins.

It's important to note that the specific rules and rates for turnover tax can vary widely from one jurisdiction to another, and some regions may not have turnover tax systems at all. Businesses should consult with their local tax authorities or seek professional advice to understand how turnover tax applies to their specific situation.

In which countries is Turnover tax applicable?

Turnover tax, or similar taxes based on sales or gross receipts, may be applicable in various countries around the world. However, the specific name, rules, and rates of such taxes can vary significantly from one country to another. Here are a few examples of countries where turnover taxes or similar taxes are used:

1. South Africa: South Africa has a Turnover tax It is based on a business's total turnover or sales, and is submitted using the TT03 Return, where businesses report their total turnover, and the tax liability is calculated based on this turnover.
2. Russia: Russia has a turnover-based tax known as the "Unified Tax on Imputed Income." This tax is applied to certain types of businesses and is calculated based on the estimated income or turnover of the business.
3. Kenya: Kenya has a turnover tax that is applied to small businesses with annual turnovers below a certain threshold. This tax is designed to simplify the tax system for small businesses.
4. Slovenia: Slovenia has a turnover tax called the "Simplified Business Tax." It is applicable to certain

small businesses and is based on their turnover.

5. Taiwan: Taiwan has a turnover tax called the "Business Tax," which is applied to the turnover generated by businesses engaged in various industries.

It's important to note that turnover taxes can take various forms and names in different countries, and they may apply to specific types of businesses or under certain conditions. Additionally, the rates and thresholds for turnover taxes can vary widely. Businesses operating in a particular country should consult with local tax authorities or seek professional advice to understand the specific turnover tax regulations that apply to their situation.

What is the considerations for taxes in the Chart of Accounts and financial reporting?

General guidance on how businesses should consider taxes and other charges in their chart of accounts and financial statements.

1. Chart of Accounts: When creating a chart of accounts, businesses should include accounts to capture the various taxes, levies, and charges that apply to their specific jurisdiction and industry. This may include accounts for income tax, sales tax/VAT, payroll taxes, property taxes, customs duties, and other relevant taxes and charges.

2. Accrual Accounting: Businesses that use accrual accounting will need to make adjustments to their financial statements to recognize taxes and charges in the period they are incurred, regardless of when they are paid. For example, if income tax is payable for the current financial year but will be paid in the next year, an adjusting entry should be made to recognize the tax expense in the current year's financial statements.

3. Specific Industry Considerations: Some industries may have specific taxes or levies that apply to them. For example, certain environmental taxes or industry-specific levies may need to be accounted for separately in the chart of accounts.

4. Different Levels of Government: Businesses operating in certain countries may need to account for taxes and charges imposed by the central government, provincial or state governments, and local municipalities. Each level of government may have its own tax rates and regulations.

5. Accounting Standards: The chart of accounts and financial statements should comply with the relevant accounting standards applicable in the jurisdiction. International Financial Reporting Standards (IFRS) or Generally Accepted Accounting Principles (GAAP) may be followed, depending on the country and industry.
6. Compliance and Reporting: Businesses should ensure they are compliant with all tax and charge regulations, including timely payment and accurate reporting to the relevant government authorities.
7. Consultation with Professionals: Given the complexity of taxes and charges, businesses should seek guidance from tax professionals, accountants, or financial advisors to ensure their chart of accounts and financial statements accurately reflect the applicable taxes and charges.

It's important for businesses to stay informed about the specific taxes and charges that apply to their jurisdiction and industry and to tailor their chart of accounts and financial reporting accordingly. This will ensure accurate financial statements and compliance with relevant tax and regulatory requirements.

Taxes in South Africa

South Africa (ZA) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in South Africa (ZA):

1. Value-Added Tax (VAT):
    - VAT is a consumption tax applied to the supply of goods and services in South Africa.
    - The standard VAT rate is 15%, and it applies to most goods and services, with some exceptions.
    - Certain essential items, such as basic foodstuffs and healthcare services, may be zero-rated or exempt from VAT.
    - Registered businesses are required to collect VAT on behalf of the government and submit regular VAT returns.
2. Income Tax:
    - South Africa has a progressive income tax system, with higher income earners paying higher

tax rates.

- Individual taxpayers are subject to personal income tax, while businesses are subject to corporate income tax.
- There are various tax deductions, rebates, and credits available to individuals and businesses.
- Tax rates and brackets may change from year to year, so it's important to stay updated on the latest changes.

3. Capital Gains Tax (CGT):
   - Capital gains tax is applied to the profit made from the sale of assets, such as property, shares, and investments.
   - Individuals and businesses are required to pay CGT on the disposal of assets.
   - Different rates and exemptions may apply depending on the type of asset and the taxpayer's status.
4. Dividends Tax:
   - Dividends tax is applied to dividends paid to shareholders.
   - The tax rate is currently 20%, but lower rates or exemptions may apply in certain cases, such as for qualifying companies.
5. Secondary Tax on Companies (STC):
   - The Secondary Tax on Companies (STC), also known as the "*dividend tax*," was a tax levied on dividends declared and paid by South African companies to shareholders.
   - As of April 1, 2012, STC was replaced by the Dividends Tax, which is a tax on dividends declared and paid by companies to shareholders.
6. Estate Duty and Donations Tax:
   - Estate duty is a tax levied on the estate of a deceased person, with rates varying based on the value of the estate.
   - Donations tax is applied to certain gifts and donations made during a person's lifetime.
   - Both taxes are aimed at transferring wealth between generations and discouraging tax avoidance through gifting.
7. Customs and Excise:
   - Customs and excise duties are applied to imported and locally produced goods, as well as

specific goods like alcohol, tobacco, and petroleum products.

- These taxes are collected by the South African Revenue Service (SARS) at the border or point of production.

8. Payroll Taxes:
    - Employers are required to deduct Pay-As-You-Earn (PAYE) tax from employees' salaries and remit it to SARS.
    - Employers also contribute to the Unemployment Insurance Fund (UIF) and the Skills Development Levy (SDL).
9. COID Contributions:
    - COID (Compensation for Occupational Injuries and Diseases) contributions are payments made by employers to provide compensation to employees who are injured, contract diseases, or die in the course of their employment.
    - Employers are required to register with the Compensation Fund and make these contributions to cover potential workplace-related injuries or illnesses.
10. Tax Filing and Compliance:
    - Individuals and businesses are required to register for tax with SARS and comply with the relevant tax obligations.
    - Tax returns are typically filed annually, and payment due dates may vary depending on the type of tax.

Please note that tax laws and regulations can change over time, so it's essential to consult the South African Revenue Service (SARS) or a tax professional for the most up-to-date and specific information related to the tax system in South Africa.

Local and provincial taxes and charges

In addition to the national taxes mentioned earlier, South Africa has various local and provincial taxes and charges levied by municipalities and provincial governments. These taxes and charges are used to fund local and regional services and infrastructure development. Here are some common examples:

Local Municipality Taxes and Charges:

1. Property Rates: Property rates are local taxes levied on property owners by municipalities based on the assessed value of their properties. The rates vary depending on the location and type of property.
2. Sewerage and Sanitation Charges: Municipalities may charge property owners for the provision of

sewerage and sanitation services.

3. Refuse Removal Charges: Property owners may be charged for the collection and disposal of refuse and waste.
4. Water and Electricity Charges: Municipalities provide water and electricity services and charge consumers based on their usage.
5. Special Levies: In certain situations, municipalities may impose special levies on property owners to fund specific projects or improvements within a specific area.
6. Business Licenses and Permits: Businesses operating within a municipality may be required to obtain licenses or permits, for which fees are charged.

Provincial Taxes and Charges:

1. Transfer Duty: In addition to the national transfer duty, some provinces may impose their own transfer duty on the purchase of immovable property.
2. Vehicle License and Registration Fees: Vehicle owners pay registration fees to the relevant provincial authorities for licensing their vehicles.
3. Gambling Taxes: Provinces may impose taxes on gambling activities within their jurisdictions.
4. Environmental Taxes and Levies: Some provinces may introduce environmental taxes and levies to fund environmental conservation and sustainability initiatives.

It's important to note that the specific local and provincial taxes and charges may vary depending on the region and local regulations. Each municipality and province may have its own set of taxes, charges, and fees, which are used to provide essential services and maintain local infrastructure.

As these taxes and charges may change over time, individuals and businesses should consult with their local municipality and provincial authorities or seek advice from tax professionals to stay informed about the current local and provincial tax obligations in South Africa.

United Kingdom (UK) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in the United Kingdom (UK):

1. Value Added Tax (VAT):
    - VAT is a consumption tax applied to the supply of goods and services.
    - The standard VAT rate is 20%, but there are reduced rates (5% and 0%) for certain goods and services.
    - Some goods and services, such as essential food items, are exempt from VAT.
2. Income Tax:
    - The UK has a progressive income tax system, where higher income earners pay higher tax rates.
    - Individual taxpayers are subject to income tax on their earnings from various sources, including employment, self-employment, and investments.
    - The tax rates and thresholds for income tax can change annually in the UK's budget.
3. National Insurance Contributions (NICs):
    - NICs are contributions paid by employees, employers, and self-employed individuals to fund state benefits and pensions.
    - NICs are separate from income tax and are based on the individual's earnings.
4. Capital Gains Tax (CGT):
    - CGT is applied to the profit made from selling assets, such as property, investments, and valuable possessions.
    - Individuals and businesses are subject to CGT, with different rates and exemptions based on factors like the type of asset and the taxpayer's status.
5. Corporation Tax:
    - Businesses are subject to corporation tax on their profits.
    - The corporation tax rate can change and may vary depending on the size of the company and the level of profits.
6. Inheritance Tax:
    - Inheritance tax is applied to the estate of a deceased person.
    - The tax rate is currently 40% on the value of the estate above a certain threshold.
    - There are exemptions and reliefs available for certain transfers and gifts.
7. Stamp Duty and Stamp Duty Land Tax:

- Stamp duty is applied to certain transactions, such as buying shares or land.
- Stamp Duty Land Tax (SDLT) is a tax on property transactions.
- Different rates and thresholds apply depending on the nature of the transaction.

8. Customs and Excise:
    - Customs duties and excise duties are applied to imported and locally produced goods, as well as specific products like alcohol, tobacco, and petroleum.
9. Council Tax:
    - Council tax is a local tax levied by local authorities to fund local services.
    - The amount of council tax depends on the valuation band of the property and the local authority's rate.
10. Vehicle Excise Duty (VED):
    - Vehicle Excise Duty, commonly known as road tax or car tax, is a tax payable on most vehicles used or parked on public roads in the UK.
    - The amount of VED is determined by factors such as the vehicle's emissions, fuel type, and date of registration.
11. Climate Change Levy (CCL):
    - The Climate Change Levy is an environmental tax applied to energy use in businesses and industrial processes.
    - It is designed to encourage energy efficiency and reduce greenhouse gas emissions.
12. Tax Filing and Compliance:
    - Individuals and businesses are required to register for tax with HM Revenue & Customs (HMRC) and comply with their tax obligations.
    - Tax returns are typically filed annually, and payment due dates may vary depending on the type of tax.

Please note that tax laws and regulations can change over time, so it's important to consult HM Revenue & Customs (HMRC) or a tax professional for the most up-to-date and specific information related to the tax system in the United Kingdom.

In addition to taxes in United Kingdom - what is local taxes and charges?

In the United Kingdom, local taxes and charges are levied by local authorities and are separate from the national taxes imposed by the central government. These local taxes and charges are used to fund local services and infrastructure development. The specific taxes and charges can vary depending on the region, as different local authorities may have their own funding needs and priorities. Here are some common examples of local and provincial taxes and charges in the UK:

Local Council Taxes:

- Council Tax: Council tax is a local property tax levied by local authorities in England, Scotland, and Wales. It is based on the value of residential properties and the number of occupants. Each property is placed in a specific council tax band, and the tax rates vary by band and local authority.

Business Taxes and Charges:

- Business Rates: Business rates, also known as non-domestic rates, are a tax on non-residential properties used for business purposes, such as offices, shops, and factories. The rates are based on the rateable value of the property and are set by the local authority.

Other Local Charges:

- Parking Charges: Local authorities may charge for parking in certain areas, such as city centers or designated parking zones.
- Planning Fees: Local authorities charge fees for planning applications and other planning-related services.
- Licensing Fees: Businesses may be required to obtain various licenses from local authorities, and fees are charged for these licenses.
- Garden Waste Collection: Some local authorities charge a fee for the collection of garden waste.
- Resident Parking Permits: Local residents may be required to pay for parking permits in residential areas with controlled parking zones.

It's important to note that the specific local taxes and charges can vary by region and may be subject to change. Different local authorities have the flexibility to set their own rates and fees to meet their local funding needs. Businesses and individuals should check with their local authority to understand the local taxes and charges that apply in their specific area.

In addition to the local taxes and charges, the UK also has devolved administrations in Scotland, Wales,

and Northern Ireland, each with its own tax-raising powers and responsibilities for certain areas of taxation and public services. These devolved administrations may have additional taxes and charges specific to their regions.

Taxes in Australia

Australia (AU) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Australia (AU):

1. Goods and Services Tax (GST):
    1. GST is a broad-based consumption tax applied to most goods and services in Australia.
    2. The standard GST rate is 10% on the value of goods and services consumed.
    3. Certain goods and services, such as basic food items, medical services, and education, may be GST-free or input-taxed.
2. Goods and Services Tax (GST) on Imported Goods :
    - Since July 1, 2018, Australia applies the Goods and Services Tax (GST) to imported goods with a value of AUD 1,000 or less.
    - Overseas businesses that meet certain registration requirements are required to collect and remit GST on these imported goods.
3. Income Tax:
    - Australia has a progressive income tax system, with higher income earners paying higher tax rates.
    - Individual taxpayers are subject to income tax on their earnings from various sources, including employment, business, and investments.
    - The tax rates and income thresholds for income tax can change annually in the federal budget.
4. Capital Gains Tax (CGT):
    - CGT is applied to the profit made from selling assets, such as property, investments, and

valuable possessions.

- Individuals and businesses are subject to CGT, with different rates and exemptions based on factors like the type of asset and the taxpayer's status.

5. Fringe Benefits Tax (FBT):
   - FBT is applied to non-cash benefits provided by employers to employees as part of their remuneration package.
   - Employers are responsible for paying FBT on these benefits at a rate equivalent to the top marginal tax rate.
6. Superannuation Contributions Tax:
   - Superannuation is the Australian retirement savings system, and contributions to super funds are subject to tax concessions.
   - Contributions made to super funds are generally taxed at a concessional rate, and withdrawals in retirement may be tax-free or subject to concessional rates.
7. Customs and Excise:
   - Customs duties and excise duties are applied to imported and locally produced goods, as well as specific products like alcohol, tobacco, and petroleum.
8. Medicare Levy:
   - The Medicare Levy is a 2% tax applied to most taxpayers to help fund Australia's public healthcare system (Medicare).
   - Some taxpayers may be exempt or receive a reduction based on their income and circumstances.
9. Medicare Levy Surcharge (MLS):
   - The Medicare Levy Surcharge is an additional tax applied to high-income earners who do not have private hospital insurance.
   - The surcharge aims to encourage individuals to take out private health insurance and relieve pressure on the public health system.
10. Payroll Tax:
    - Payroll tax is a state and territory tax applied to the wages paid by employers.
    - It is imposed when the total wages paid by an employer exceed a certain threshold.
    - The payroll tax rates and thresholds can vary by state and territory.

11. Pay As You Go (PAYG) Withholding:
    1. PAYG withholding is a system where employers deduct income tax from employees' salaries and remit it to the Australian Taxation Office (ATO).
    2. Employers are also required to withhold the Medicare Levy and the Temporary Budget Repair Levy, if applicable.
12. Stamp Duty:
    1. Stamp duty is applied to certain transactions, such as buying shares, property, or certain agreements.
    2. Stamp duty rates and thresholds can vary based on the type of transaction and the state or territory.
13. Land Tax:
    1. Land tax is a state and territory tax applied to the value of land holdings.
    2. It is typically payable by owners of land, and the rates and thresholds can vary by state or territory.
14. Tax Filing and Compliance:
    - Individuals and businesses are required to register for tax with the Australian Taxation Office (ATO) and comply with their tax obligations.
    - Tax returns are typically filed annually, and payment due dates may vary depending on the type of tax.

Please note that tax laws and regulations can change over time, so it's important to consult the Australian Taxation Office (ATO) or a tax professional for the most up-to-date and specific information related to the tax system in Australia.

In addition to taxes in Australia - what is council taxes and charges?

In Australia, local and provincial taxes and charges are levied by local councils and state governments, respectively. These taxes and charges are separate from the federal taxes imposed by the central government. Local councils and state governments use these revenues to fund various services and projects at the local and state levels. The specific taxes and charges can vary depending on the state and local government area. Here are some common examples of local and state taxes and charges in Australia:

Local Council Taxes and Charges:

1. Council Rates: Council rates, also known as property rates, are a type of property tax levied by local councils on residential and commercial properties. The rates are based on the assessed value of the property and are used to fund local services and infrastructure, such as rubbish collection, parks, libraries, and community facilities.
2. Garbage and Recycling Charges: Some local councils charge fees for rubbish and recycling collection services.
3. Parking Fees: Local councils may charge fees for parking in certain areas, such as central business districts or metered parking zones.
4. Development Application Fees: Local councils charge fees for processing development applications for construction or renovation projects.

State Government Taxes and Charges:

1. Payroll Tax: Payroll tax is a state-based tax on the wages paid by businesses when their total payroll exceeds a certain threshold. Each state sets its own payroll tax rates and thresholds.
2. Stamp Duty: Stamp duty is a state tax on various transactions, such as property transfers, motor vehicle registrations, and certain financial transactions.
3. Land Tax: Land tax is a state-based tax on the value of land owned by individuals or entities above a certain threshold. The rates and thresholds vary by state.
4. Motor Vehicle Registration Fees: States collect fees for motor vehicle registration, driver's licenses, and other motor vehicle-related services.
5. Fines and Penalties: State governments may impose fines and penalties for various offences, such as traffic violations and non-compliance with regulations.
6. Gambling Taxes: Some states impose taxes on gambling activities within their jurisdictions.
7. Taxes on Specific Industries: Some states may impose specific taxes or levies on certain industries, such as mining or gambling.

It's important to note that the specific local and state taxes and charges can vary significantly depending on the state and local government area. Each state and local council has its own tax laws and regulations. Businesses and individuals should check with their local council and state revenue departments to understand the local and state taxes and charges that apply in their specific area.

Additionally, tax laws and charges may change over time, so it's essential to stay informed about any updates or changes in the local and state tax landscape. Consulting with local authorities and tax professionals can help ensure compliance with local and state tax obligations in Australia.

Taxes in New Zealand

New Zealand (NZ) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in New Zealand (NZ):

1. Goods and Services Tax (GST):
    - GST is a broad-based consumption tax applied to most goods and services in New Zealand.
    - The standard GST rate is 15% on the value of goods and services consumed.
    - Certain goods and services, such as financial services and residential rent, are exempt from GST.
2. Income Tax:
    - New Zealand has a progressive income tax system, with higher income earners paying higher tax rates.
    - Individual taxpayers are subject to income tax on their earnings from various sources, including employment, business, and investments.
    - The tax rates and income thresholds for income tax can change annually in the government's budget.
3. Capital Gains Tax (CGT):
    - As of my last update, New Zealand did not have a comprehensive capital gains tax on all assets.
    - However, gains on certain types of property, such as residential rental properties, may be subject to income tax.
4. Accident Compensation Levy (ACC):
    - The ACC levy is applied to fund New Zealand's no-fault accident compensation scheme.
    - It is applied to most income and collected alongside income tax.
5. Customs and Excise:

- Customs duties and excise duties are applied to imported and locally produced goods, as well as specific products like alcohol, tobacco, and petroleum.

6. Pay As You Earn (PAYE):
    - PAYE is the system by which employers deduct income tax from employees' salaries and remit it to the Inland Revenue Department (IRD).
7. KiwiSaver:
    - KiwiSaver is a voluntary retirement savings scheme that includes tax incentives for contributing to a KiwiSaver account.
    - Contributions to KiwiSaver may be deducted from an individual's taxable income.
8. Fringe Benefit Tax (FBT):
    - FBT is applied to non-cash benefits provided by employers to employees as part of their remuneration package.
    - Employers are responsible for paying FBT on these benefits at a rate equivalent to the top marginal tax rate.
9. Stamp Duty:
    - As of my last update, New Zealand does not have a comprehensive stamp duty on documents or transactions. However, there may be specific duties or levies in certain circumstances.
10. Land Transfer Tax:
    - In New Zealand, land transfer tax is known as "Land Transfer Tax" or "LTT."
    - LTT is applied to the transfer of land ownership and is payable by the purchaser.
    - The LTT rates and thresholds can vary based on factors such as the value of the property and the type of transaction.
11. Provisional Tax:
    - Provisional tax is a system for paying income tax in instalments throughout the year.
    - Individuals and businesses estimate their income for the year and make payments based on these estimates.
    - The actual tax liability is reconciled when the annual tax return is filed.
12. Gift Duty:
    - As of ChatGPT's last update, New Zealand abolished gift duty in 2011.

- Previously, gift duty was applied to certain gifts or transfers of property made during a person's lifetime.

13. Tax Filing and Compliance:
    - Individuals and businesses are required to register for tax with the Inland Revenue Department (IRD) and comply with their tax obligations.
    - Tax returns are typically filed annually, and payment due dates may vary depending on the type of tax.

Please note that tax laws and regulations can change over time, so it's important to consult the Inland Revenue Department (IRD) or a tax professional for the most up-to-date and specific information related to the tax system in New Zealand.

In addition to taxes in New Zealand - what is local and provincial taxes and charges?

In New Zealand, local and provincial taxes and charges are levied by local authorities and regional councils, respectively. These taxes and charges are separate from the national taxes imposed by the central government. Local and regional governments use these revenues to fund various services and projects at the local and regional levels. The specific taxes and charges can vary depending on the region. Here are some common examples of local and provincial taxes and charges in New Zealand:

Local Government Taxes and Charges:

- Property Rates: Property rates, also known as property taxes, are levied by local authorities (city or district councils) on real estate properties. The rates are based on the value of the property and are used to fund local services and infrastructure.
- Water Rates: Local councils may charge water rates to cover the cost of providing water supply and wastewater services to properties.
- Sewerage Rates: Local councils may charge sewerage rates to cover the cost of providing sewerage and wastewater services.
- Rubbish and Recycling Collection Fees: Some local authorities charge fees for rubbish and recycling collection services.
- Licensing Fees: Businesses may be required to obtain licenses from local authorities, and fees are charged for these licenses.
- Building Consent Fees: Local councils charge fees for processing building consent applications for

construction or renovation projects.

Provincial (Regional Council) Taxes and Charges:

- Regional Fuel Tax: Some regional councils have the authority to impose a regional fuel tax on petrol and diesel to fund transportation projects in their regions.
- Regional Rates: Regional councils may levy rates on properties within their regions to fund regional services and projects.
- Consent Fees: Regional councils may charge fees for resource consents related to activities that have environmental impacts.
- Water Quality and Resource Management Charges: Some regional councils may charge levies or fees related to water quality monitoring and resource management.

It's important to note that the specific local and provincial taxes and charges can vary depending on the region and local government policies. Each local authority and regional council has its own tax and charge structure. Businesses and individuals should check with their local council and regional council to understand the local and provincial taxes and charges that apply in their specific area.

Additionally, tax laws and charges may change over time, so it's essential to stay informed about any updates or changes in the local and regional tax landscape. Consulting with local authorities and professionals can help ensure compliance with local and provincial tax obligations in New Zealand.

Taxes in Canada

Canada (CA) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Canada (CA):

1. Goods and Services Tax (GST) / Harmonized Sales Tax (HST):
    - GST is a federal consumption tax applied to most goods and services in Canada.
    - HST is a combined tax that includes both the federal GST and provincial/territorial sales tax, applied in provinces that have harmonized their sales tax with the GST.
2. Sales Taxes:

- In addition to the GST and HST, some provinces have their own sales taxes, such as the PST in British Columbia and Manitoba.

3. Federal Income Tax:
    - Federal income tax is imposed by the Canadian government on individuals and businesses.
    - The tax rates are progressive, meaning higher income levels are subject to higher tax rates.
4. Provincial Income Tax:
    - Provinces and territories in Canada also levy their own income taxes in addition to the federal tax.
    - Provincial tax rates vary, and some provinces have separate brackets and deductions.
5. Provincial and Territorial Taxes:
    - Provinces and territories have their own income tax systems, including their own tax rates and brackets.
    - Some provinces also have their own sales taxes, such as the Provincial Sales Tax (PST) or the Quebec Sales Tax (QST).
6. Income Tax:
    - Canada has a progressive income tax system, with tax rates increasing as income levels rise.
    - Individuals are subject to federal and provincial/territorial income taxes on their earnings from various sources, including employment, self-employment, and investments.
7. Payroll Taxes:
    - Payroll taxes include contributions to the Canada Pension Plan (CPP) and Employment Insurance (EI) by employees and employers.
    - Employers also deduct federal and provincial income taxes from employees' salaries and remit them to the government.
8. Employment Insurance (EI) and Canada Pension Plan (CPP):
    - Employees and employers contribute to the Employment Insurance (EI) program, which provides temporary financial assistance to workers who lose their jobs.
    - Contributions are also made to the Canada Pension Plan (CPP), which provides retirement, disability, and survivor benefits.
9. Property Tax:

- Property tax is levied by municipalities on the value of real property, including homes and commercial properties.
- Rates and assessment methods vary by municipality.

10. Estate Tax and Probate Fees:
    - As of ChatGPT's last update, Canada does not have a federal estate tax, but some provinces may have estate administration taxes (often referred to as probate fees) on the value of an estate's assets.
11. Corporate Tax:
    - Corporations operating in Canada are subject to federal and provincial/territorial corporate income taxes.
    - The corporate tax rates can vary depending on the type of income and the jurisdiction.
12. Capital Gains Tax:
    - Capital gains are generally subject to taxation in Canada, with some exemptions for gains on the sale of a primary residence.
    - Fifty percent of capital gains are included in a taxpayer's income for tax purposes.
13. Excise and Customs Duties:
    - Excise duties are applied to certain goods, such as alcohol, tobacco, and gasoline.
    - Customs duties are levied on imported goods based on their value and classification.
14. Foreign Account Reporting:
    - Canadian residents are required to report their foreign financial accounts and certain foreign property holdings if they meet specific thresholds.
    - Non-compliance with reporting requirements can result in penalties.
15. Tax Filing and Compliance:
    - Individuals and businesses are required to file tax returns annually.
    - The due dates for filing tax returns and making tax payments vary depending on the type of tax and the taxpayer's circumstances.

Please note that tax laws and regulations can change over time, so it's important to consult the Canada Revenue Agency (CRA) or a tax professional for the most up-to-date and specific information related to the tax system in Canada.

In addition to taxes in Canada - what is municipalities and provincial governments taxes and charges?

In Canada, local and provincial taxes and charges are levied by municipalities and provincial governments, respectively. These taxes and charges are separate from the federal taxes imposed by the central government. Local and provincial governments use these revenues to fund various services and projects at the local and provincial levels. The specific taxes and charges can vary depending on the province and municipality. Here are some common examples of local and provincial taxes and charges in Canada:

Local Government Taxes and Charges:

- Property Taxes: Property taxes are levied by municipalities on real estate properties, including residential and commercial properties. The tax rates are based on the assessed value of the property and are used to fund local services such as schools, police, fire departments, and infrastructure projects.
- Business Taxes and Licensing Fees: Municipalities may impose taxes or require businesses to obtain licenses to operate within their boundaries. The fees and taxes vary by municipality.
- Local Improvement Levies: In some cases, municipalities may levy additional taxes or fees on properties in specific areas to fund local improvement projects, such as road construction or utility upgrades.
- Parking Fees: Municipalities may charge fees for parking in certain areas, such as downtown areas or public parking lots.
- Recreation Fees: Municipalities may charge fees for the use of recreational facilities, parks, and community centers.
- Waste Collection Fees: Some municipalities charge fees for waste collection and disposal services.

Provincial Government Taxes and Charges:

- Provincial Income Tax: Most provinces in Canada impose their own income tax on individuals and corporations, in addition to the federal income tax.
- Provincial Sales Tax (PST): Some provinces have a provincial sales tax that is levied on the sale of goods and services within their jurisdiction, in addition to the federal Goods and Services Tax (GST).
- Fuel Taxes: Provinces may levy taxes on gasoline, diesel, and other fuels to fund transportation and infrastructure projects.
- Vehicle Registration and Licensing Fees: Provinces collect fees for vehicle registration, driver's

licenses, and other motor vehicle-related services.

- Health and Education Levies: Some provinces have specific levies or fees dedicated to funding healthcare and education services.
- Environment Fees: Provinces may impose environmental levies or fees to fund environmental protection and conservation initiatives.

It's important to note that the specific local and provincial taxes and charges can vary significantly depending on the province and municipality. Each province and municipality has its own tax laws and regulations. Businesses and individuals should check with their local government and provincial revenue departments to understand the local and provincial taxes and charges that apply in their specific area.

Additionally, tax laws and charges may change over time, so it's essential to stay informed about any updates or changes in the local and provincial tax landscape. Consulting with local authorities and tax professionals can help ensure compliance with local and provincial tax obligations in Canada.

Taxes in United States of America (USA)

United States (US) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in the United States (US):

1. Federal Income Tax:
    - The United States has a progressive federal income tax system, meaning higher income levels are subject to higher tax rates.
    - Income tax rates vary based on filing status and income level.
2. State Income Tax:
    - Many states impose their own income taxes, with rates and regulations varying by state.
    - Some states have a flat tax rate, while others have graduated rates.
3. Sales and Use Tax:
    - Sales tax is levied by state and local governments on the sale of goods and services at the

point of sale.

- Use tax is applicable when taxable goods are purchased from out-of-state sellers and used within the state.

4. Payroll Taxes:
    - Employees and employers contribute to Social Security and Medicare programs through payroll taxes.
    - Social Security taxes are subject to an annual wage base limit.
5. Capital Gains Tax:
    - Capital gains tax is applied to profits from the sale of assets such as stocks, real estate, and investments.
    - Long-term capital gains receive preferential tax rates.
6. Estate and Gift Tax:
    - The federal government imposes estate and gift taxes on certain large transfers of wealth.
    - Exemptions and tax rates can change over time.
7. Corporate Tax:
    - Corporations are subject to federal corporate income tax on their profits.
    - Corporate tax rates and deductions can vary based on factors such as income and industry.
8. Property Tax:
    - Property tax is levied by local governments on real property, such as land and buildings.
    - Rates vary by jurisdiction and property value.
9. Excise Taxes:
    - Excise taxes are levied on specific goods, such as alcohol, tobacco, fuel, and certain luxury items.
10. Foreign Account Reporting:
    - US citizens and residents with foreign financial accounts are required to report them to the Internal Revenue Service (IRS).
    - Non-compliance can result in penalties.
11. Alternative Minimum Tax (AMT):

- The AMT is an additional tax calculation that aims to ensure taxpayers with certain deductions still pay a minimum amount of tax.

12. Online Sales Tax:

    - The US Supreme Court's "*Wayfair*" decision allows states to impose sales tax on online sales even if the seller has no physical presence in the state.

Please note that tax laws and regulations can change over time, so it's important to consult the Internal Revenue Service (IRS) or a tax professional for the most up-to-date and specific information related to the tax system in the United States.

In addition to taxes in United State of America - what is local and state taxes and charges?

In the United States, local and provincial taxes and charges are levied by local governments and state governments, respectively. These taxes and charges are separate from the federal taxes imposed by the central government. Local and state governments use these revenues to fund various services and projects at the local and state levels. The specific taxes and charges can vary significantly depending on the state and locality. Here are some common examples of local and state taxes and charges in the USA:

Local Taxes and Charges:

- Property Taxes: Property taxes are levied by local governments on real estate properties, including residential and commercial properties. The tax rates are based on the assessed value of the property and are used to fund local services like schools, police, and fire departments.
- Sales Taxes: Sales taxes are imposed by many cities, counties, and other local jurisdictions on the sale of goods and services within their boundaries. The rates can vary widely from one locality to another.
- Occupancy Taxes: Occupancy taxes, also known as hotel or lodging taxes, are charged by local governments on hotel room rentals and short-term accommodations.
- Local Business Taxes: Some local jurisdictions may impose taxes or license fees on businesses operating within their boundaries.
- Motor Vehicle Taxes: Local governments may collect taxes or registration fees on motor vehicles, including cars, trucks, and motorcycles.
- Local Service Fees: Local governments may charge fees for specific services, such as waste collection, parking, and recreation facilities.

State Taxes and Charges:

- State Income Tax: Most states impose a state income tax on individuals and businesses, with rates and brackets varying by state.
- State Sales Tax: State governments typically levy a sales tax on the sale of goods and services within their borders. The state sales tax rates can differ from one state to another.
- State Business Taxes: States may have corporate income taxes or other business taxes that apply to businesses operating within their jurisdictions.
- State Motor Vehicle Taxes and Fees: States collect taxes and fees on motor vehicle registrations, titles, and driver's licenses.
- State Fuel Taxes: States impose taxes on gasoline and diesel fuel to fund transportation infrastructure projects.
- State Excise Taxes: Some states levy excise taxes on specific goods, such as alcohol, tobacco, and fuel.

It's important to note that the specific local and state taxes and charges can vary significantly depending on the state and locality. Each state and local jurisdiction has its own tax laws and regulations. Businesses and individuals should check with their local government and state revenue departments to understand the local and state taxes and charges that apply in their specific area. Additionally, tax laws and rates may change over time, so it's essential to stay informed about any updates or changes in the tax landscape.

---

What is Sales Tax?

Sales tax is a type of consumption tax imposed by governments on the sale of goods and services. It is typically collected by businesses on behalf of the government and is added to the purchase price of taxable items or services. When a customer buys a taxable product or service, they pay the sales tax in addition to the actual cost of the item.

The rate of sales tax can vary depending on the jurisdiction, such as country, state, county, or city. Different regions may have different sales tax rates, and some areas may have no sales tax at all. Sales tax rates are usually represented as a percentage of the total purchase price.

Businesses are responsible for collecting the sales tax from customers and then remitting it to the appropriate government authority. This revenue is an essential source of income for governments and is

used to fund public services and infrastructure, such as schools, roads, healthcare, and other government programs.

It is essential for businesses and consumers to be aware of the applicable sales tax rates in their area to ensure compliance with tax laws and to avoid any penalties for non-compliance. Sales tax is one of the primary methods governments use to generate revenue and is a crucial component of a country's or region's tax system.

In which countries is Sales Tax applicable?

Sales tax or a similar form of consumption tax is applicable in many countries around the world. However, it's important to note that the specific name, structure, and regulations of such taxes may vary from country to country. Here are some common forms of sales tax and their equivalent names in different countries:

1. Value Added Tax (VAT): VAT is a widely used form of sales tax applied in many countries, including most of Europe, Asia, and Africa. Some of the countries with VAT systems include:
    - United Kingdom
    - Germany
    - France
    - Spain
    - Italy
    - China
    - India
    - South Africa
2. Goods and Services Tax (GST): Similar to VAT, GST is another common form of sales tax applied in some countries, including:
    - Canada
    - Australia
    - New Zealand
    - Singapore
3. Sales and Use Tax: In the United States, sales tax is levied at the state level, and in some cases, at the local level. Each state determines its sales tax rates and regulations. There is no national sales tax in

the U.S., but the tax is applied on the sale of goods and some services at the state and local levels.

4. Consumption Tax: Some countries use a generic term like "*consumption tax*" to describe their sales tax system. For example:
    - Japan applies a Consumption Tax.
    - South Korea has a Value Added Tax, but it is commonly referred to as a Consumption Tax.

It's important to remember that tax systems and regulations can change, so it's best to consult official government sources or tax professionals for the most up-to-date information on sales tax in specific countries. Additionally, some countries may have exemptions or reduced rates for certain goods and services, making their sales tax systems more complex.

What is Use Tax?

"*Use tax*" is a companion tax to sales tax and is applicable in some regions or countries. It is designed to complement the sales tax by ensuring that the government can collect taxes on purchases made outside the jurisdiction that would have been subject to sales tax if purchased within that jurisdiction. The use tax is typically levied on the use, storage, consumption, or other enjoyment of taxable goods and services that were acquired from outside the taxing jurisdiction.

The need for a use tax arises when a resident or business in a specific jurisdiction purchases taxable goods or services from an out-of-state or foreign seller where no sales tax was collected at the time of purchase. If the same goods or services were purchased within the taxing jurisdiction, they would have been subject to sales tax.

For example, let's say a person living in a state with a sales tax rate of 6% purchases a high-value item from an online retailer located in a different state that does not charge sales tax. In this case, the purchaser may be required to pay a use tax on that item to their home state's tax authorities, equivalent to the sales tax rate, to make up for the tax revenue that would have been collected if the item were purchased locally.

Use tax laws are often enforced to ensure that local businesses and retailers are not at a disadvantage compared to out-of-state or online sellers who may not charge sales tax. It helps maintain a level playing field for businesses and ensures that the appropriate tax revenue is collected regardless of where the purchase is made.

It's important for individuals and businesses to be aware of use tax requirements in their jurisdiction and report and remit the use tax when applicable. Similar to sales tax, use tax rates and regulations can vary depending on the jurisdiction, so it's best to consult official government sources or tax professionals for specific guidance.

In which countries does VAT/GST/Sales Tax thresholds exist?

Value Added Tax (VAT), Goods and Services Tax (GST), and Sales Tax thresholds exist in various countries around the world. These thresholds are the minimum sales or turnover amounts at which businesses are required to register for and charge VAT, GST, or Sales Tax. Below are some examples of countries where such thresholds are implemented:

1. South Africa: South Africa has a Value Added Tax (VAT) system, and the VAT registration threshold was ZAR 1 million in annual taxable supplies as of ChatGPT's last update.
2. United Kingdom: In the UK, businesses must register for VAT if their taxable turnover exceeds the VAT registration threshold. As of ChatGPT's last update in September 2021, this threshold was £85,000 in a 12-month period. However, tax thresholds and regulations may change, so it's important to check for the most current information.
3. United States: The United States does not have a federal VAT or GST system. Instead, it relies on sales taxes, which are administered at the state level. Each state sets its own sales tax rules, including any thresholds for registration and collection. Thresholds may vary significantly from state to state.
4. Canada: Canada has a federal Goods and Services Tax (GST) and Harmonized Sales Tax (HST) system. As of ChatGPT's last update, the threshold for GST registration was CAD 30,000 in annual worldwide taxable supplies for most businesses, but this may vary based on the type of business and location.
5. Australia: Australia has a Goods and Services Tax (GST) system, and businesses with annual turnover of AUD 75,000 or more must register for GST.
6. European Union (EU): In the EU, each member country has its own VAT thresholds and rules. For intra-EU trade, businesses may need to register for VAT in each country where they surpass the threshold for distance selling (EUR 35,000 or EUR 100,000, depending on the country).
7. India: India has a Goods and Services Tax (GST) system, and the threshold for GST registration varies by state. As of ChatGPT's last update, the threshold was INR 40 lakhs (INR 20 lakhs for special category states) in annual turnover for most businesses.

It's important to note that tax laws and thresholds may change over time, and they can vary by industry, type of business, and location. Additionally, some countries may have multiple tax rates and exemptions based on the type of goods or services being provided. Therefore, businesses should regularly monitor and comply with the tax regulations of the countries in which they operate to ensure proper VAT, GST, or Sales Tax registration and collection.

In which countries does not use VAT/GST/Sales Tax?

As of ChatGPT's last update in September 2021, several countries do not have a Value Added Tax (VAT), Goods and Services Tax (GST), or Sales Tax system. Instead, they may use alternative tax structures to generate revenue for the government. Some of these countries include:

1. Bahrain: Bahrain does not have a VAT or GST system. However, it implemented a 5% VAT system in January 2019, becoming the last Gulf Cooperation Council (GCC) country to introduce VAT.
2. Oman: As of ChatGPT's last update, Oman did not have a VAT or GST system. However, like Bahrain, it was planning to introduce a 5% VAT system in the future.
3. Saudi Arabia: Saudi Arabia introduced a 5% VAT system in January 2018, becoming one of the GCC countries to implement VAT.
4. United Arab Emirates: The UAE implemented a 5% VAT system in January 2018.
5. Qatar: As of ChatGPT's last update, Qatar did not have a VAT or GST system. However, it was also planning to introduce a 5% VAT system in the future.
6. Brunei: Brunei does not have a VAT or GST system.
7. Cayman Islands: The Cayman Islands does not have a VAT or GST system.
8. Monaco: Monaco does not have a VAT or GST system.
9. Panama: Panama does not have a VAT or GST system.
10. United States (Sales Tax): The United States does not have a national VAT or GST system. Instead, it relies on sales taxes, which are administered at the state level. There is no federal sales tax, and each state has its own rules and rates for sales tax.

It's important to note that tax systems can change over time, and some countries may introduce VAT, GST, or Sales Tax systems in the future to generate revenue and fund public services. Therefore, it is always best to check for the most current tax regulations and updates in each country where business operations are conducted.

VAT/GST/Sales tax schemes

What is VAT/GST/Sales tax schemes?

VAT/GST/Sales tax schemes, also known as alternative or special tax schemes, are specific methods of calculating and reporting value-added tax (VAT), goods and services tax (GST), or sales tax that differ from the standard tax system. These schemes are designed to simplify tax compliance for certain types of businesses or transactions.

The primary objective of these schemes is to provide businesses with alternative ways of accounting for taxes, making it easier for them to calculate and report their tax liability. Some common types of VAT/GST/Sales tax schemes include:

1. Flat Rate Scheme: Under this scheme, businesses pay a fixed percentage of their turnover as tax instead of calculating tax on each individual transaction. This simplifies the tax accounting process, especially for small businesses.
2. Cash Accounting Scheme: This scheme allows businesses to account for tax based on cash receipts and payments rather than invoiced amounts. It can help with cash flow management, particularly for businesses that deal with delayed payments.
3. Annual Accounting Scheme: With this scheme, businesses submit tax returns and make payments on an annual basis, rather than quarterly or monthly. It reduces the frequency of tax reporting for eligible businesses.
4. Margin Scheme: This scheme is commonly used for the sale of second-hand goods, works of art, antiques, or collectibles. Tax is calculated based on the margin between the purchase price and the selling price, rather than the full selling price.
5. Tour Operators Margin Scheme (TOMS): TOMS is applicable to businesses that buy and sell travel services, such as package holidays. Tax is calculated on the margin of the services provided rather than the full selling price.
6. Simplified Tax Accounting Methods: Some countries offer simplified methods of calculating tax for specific types of businesses, such as retailers, hotels, or restaurants.
7. Exemption Schemes: Certain industries or activities may be exempt from tax or have a reduced tax rate under specific circumstances.

Each country may have its own set of VAT/GST/Sales tax schemes with specific eligibility criteria and rules. The availability of these schemes and their conditions may also change over time based on government policies and tax regulations.

Businesses should carefully consider their eligibility and the potential benefits of using a VAT/GST/Sales tax scheme. They are advised to seek guidance from accounting professionals or tax advisors to determine

the most suitable scheme for their specific circumstances and to ensure compliance with tax laws and regulations.

Which countries use VAT schemes?

Value Added Tax (VAT) schemes, also known as alternative or special VAT schemes, are used in several countries around the world to simplify VAT reporting and compliance for certain types of businesses or transactions. These schemes may differ from the standard VAT system and may be optional or mandatory depending on the country. Here are some examples of countries that use specific VAT schemes:

1. United Kingdom: The UK has various VAT schemes, including the Flat Rate Scheme, Cash Accounting Scheme, and Annual Accounting Scheme, which provide alternative methods of calculating and reporting VAT for eligible businesses.
2. Australia: Australia offers the Cash Accounting Scheme, which allows small businesses with an annual turnover below a certain threshold to report GST on a cash basis rather than an accrual basis.
3. New Zealand: New Zealand has several GST schemes, including the Payments Basis Scheme and the Hybrid Basis Scheme, which provide alternative methods of accounting for GST for certain businesses.
4. European Union (EU) Member States: Within the EU, each member state may have specific VAT schemes for certain industries or activities, such as the Margin Scheme for second-hand goods, works of art, and antiques.
5. India: India has a composition scheme under its Goods and Services Tax (GST) regime, allowing small businesses to pay a fixed percentage of turnover as tax and file simplified returns.
6. Canada: Canada has the Quick Method, a simplified accounting method for calculating GST/HST (Goods and Services Tax/Harmonized Sales Tax) for small businesses.
7. Singapore: Singapore offers the GST Flat Rate Scheme for certain businesses to simplify their GST reporting and claim input tax credits.

It's important to note that the availability and conditions of VAT schemes may vary from country to country, and they may be subject to change based on government policies and tax regulations. Businesses should consult with local tax authorities or seek advice from tax professionals to determine if they are eligible to use any specific VAT schemes in their respective countries.

Invoice - Requirements

Requirements for Invoices

What is the basic requirements of an invoice for NON Registered VAT/GST/Sales tax vendors?

The basic requirements for an invoice for non-registered VAT/GST/Sales tax vendors may vary depending on the jurisdiction and specific regulations. However, in general, here are some common elements that are often required on an invoice for non-registered vendors:

1. Header Information:
    - Date of the invoice.
    - A unique invoice number or reference.
    - Your business name and contact information.
    - The recipient's name and contact information (if applicable).
2. Description of Goods or Services:
    - A clear and accurate description of the goods or services provided.
    - The quantity of the goods or the duration of the service.
    - The price per unit or service rate.
3. Total Amount:
    - The total amount payable for the goods or services.
    - Any applicable discounts or deductions.
4. Terms of Payment:
    - Payment terms and due date.
    - Accepted forms of payment (e.g., cash, check, bank transfer).
5. Currency:
    - The currency in which the transaction is conducted (if applicable).
6. Additional Charges:
    - Any additional charges such as shipping, handling, or taxes (if applicable).
7. Business Information:

- Your business's legal status (sole proprietorship, partnership, etc.).
- Your business registration number (if applicable).

8. Customer Information:
    - The customer's name and address (if applicable).
9. Transaction Details:
    - The date the goods or services were delivered or completed (if applicable).
    - Any relevant terms or conditions related to the transaction.
10. Contact Information:
    - Contact details for customer inquiries or disputes.

It's important to note that the specific requirements for invoices may vary from one jurisdiction to another, and they can change over time. Additionally, some jurisdictions may have different requirements for registered and non-registered vendors. Therefore, it's recommended to consult the relevant tax authorities or a professional accountant in your jurisdiction to ensure that your invoices comply with the applicable regulations.

What is the basic requirements of a Tax invoice?

A tax invoice is a formal document issued by a seller to a buyer that provides details of a taxable transaction, including the amount of tax charged. The basic requirements of a tax invoice can vary by jurisdiction, but they generally include the following information:

1. Seller's Information: The name, address, and contact information of the seller (supplier) must be clearly stated on the tax invoice.
2. Buyer's Information: The name, address, and contact information of the buyer (recipient) should be included on the invoice.
3. Invoice Number: A unique identification number for the invoice, which helps both parties keep track of transactions.
4. Invoice Date: The date when the invoice is issued.
5. Description of Goods or Services: A clear description of the goods sold or services provided, including quantity, unit price, and any applicable codes or identifiers.
6. Quantity: The quantity of goods or services being supplied.
7. Unit Price: The price per unit of the goods or services.

8. Total Amount: The total amount payable for the goods or services before taxes.
9. Tax Amount: The amount of tax charged, broken down by type (e.g., VAT, GST, sales tax).
10. Tax Identification Number: The seller's tax identification number (e.g., VAT number, GST number) that is used for tax reporting purposes.
11. Tax Rate: The rate at which the tax is charged.
12. Currency: The currency in which the transaction is conducted.
13. Payment Terms: The terms of payment, including due date and accepted payment methods.
14. Additional Charges: Any additional charges, such as shipping fees or handling charges, should be clearly indicated.
15. Total Amount Payable: The total amount payable by the buyer, including the tax and any additional charges.
16. Terms and Conditions: Any specific terms and conditions related to the transaction, such as return policy or warranty information.
17. Date of Supply: The date on which the goods were supplied or services were rendered.
18. Signature: Depending on the jurisdiction, a signature or electronic verification from the seller may be required.

It's important to note that the specific requirements for a tax invoice can vary by country and jurisdiction. Businesses should ensure that their tax invoices comply with the regulations and guidelines set by the relevant tax authorities. Failure to issue proper tax invoices may result in penalties or legal consequences. If you have questions about the requirements for tax invoices in your jurisdiction, it's recommended to consult with a tax professional or the relevant tax authority.

Currency: Is this applicable to international transactions only?

The inclusion of the currency in a tax invoice is not necessarily limited to international transactions. While it's especially important for international transactions to specify the currency to avoid any confusion, including the currency in the tax invoice can also be relevant for domestic transactions under certain circumstances. Here's why:

1. Cross-Border Transactions: In international transactions, specifying the currency is essential to avoid any misunderstandings or mistakes related to exchange rates and currency conversions.
2. Multi-Currency Transactions: In some cases, businesses may operate in regions where multiple currencies are accepted. Even within a single country, certain areas or industries might commonly use a different currency. Specifying the currency ensures clarity and accuracy.

3. Accounting and Reporting: For businesses that handle transactions in multiple currencies, including the currency in the tax invoice can help with accurate accounting and financial reporting. It helps businesses keep track of different currency transactions and conversions.
4. Transparency: Even in domestic transactions, some businesses may prefer to specify the currency to provide transparency to their customers and stakeholders.
5. Legal and Regulatory Compliance: In certain jurisdictions, tax laws might require the currency to be specified on invoices, regardless of whether the transaction is domestic or international.

Ultimately, the decision to include the currency on a tax invoice depends on the specific context and the practices within a particular business and jurisdiction. If you have any doubts about whether to include the currency on your tax invoices, it's advisable to consult with a tax professional or legal expert who is familiar with the regulations in your area.

The name of an Invoice in South Africa?

In osFinancials5/TurboCASH5, the name of the Invoice is "Invoice" in most of the template Set of Books. This may not required to amend the name "*Invoice*" to "*Tax Invoice*", "*VAT Invoice*".

In South Africa as the name of a invoice "*Contains the words "Tax Invoice", "VAT Invoice" or "Invoice*" according to the South African Revenue Services (SARS) .

This is optional to change the Name of the "*Invoice*" to "*Tax Invoice*", "*VAT Invoice*", etc. This may apply to other Tax jurisdictions.

If your the Tax requirements for your jurisdiction prescribes a specific name for Invoice, you may change the name of the document type. The following options is available in osFinancials:

- Change the name on translatable document layout files: However, If you need to change the description of Invoice, for Invoice on translatable document layout files, you need to do this on the Types tab of "Customise Languages:" (Tools → Customise Language menu on the Setup ribbon).
- Designing customised layout files: The name of the document may need to include specific terms like "*Tax Invoice*" or "*VAT Invoice*", based on the requirements of your tax jurisdiction. Ensure that the document name aligns with the regulations.

Keep in mind that specific formatting and content requirements may vary based on the regulations in your jurisdiction, so it's always a good idea to consult with a tax professional or authority to ensure that your documents meet the necessary standards.

What is the difference between an Invoice or an abridged tax invoice?

An "*Invoice*" and an "*Abridged Tax Invoice*" are terms often used in the context of taxation and accounting, particularly when dealing with value-added tax (VAT) or goods and services tax (GST) systems. These terms have specific meanings and implications based on the regulations of the jurisdiction in which they are used.

- Invoice: An invoice is a detailed document that provides a record of a transaction between a seller and a buyer. It typically includes information such as the names and contact information of both parties, a description of the goods or services sold, the quantity, the price per unit, the total amount payable, and any applicable taxes. In the context of taxation, an invoice serves as proof of the transaction and is used for various purposes, including record-keeping, accounting, and compliance with tax laws. An invoice issued in a VAT or GST system usually includes the tax amount charged separately from the net amount.
- Abridged Tax Invoice: An abridged tax invoice is a simplified version of a regular invoice that may be used for specific situations, often in business-to-business (B2B) transactions. In some tax systems, an abridged tax invoice may be used when the total value of the transaction falls below a certain threshold, or when specific conditions are met. This type of invoice typically includes key information such as the seller's name, the buyer's name, a description of the goods or services, the total amount payable, and the tax amount. Unlike a full invoice, an abridged tax invoice may not include all the detailed information that a regular invoice provides.

The purpose of an abridged tax invoice is to simplify the documentation process for smaller transactions or transactions where the buyer is registered for VAT or GST and is eligible to claim input tax credit. It's important to note that the rules and requirements for using abridged tax invoices vary by jurisdiction, so it's essential to consult the specific tax regulations in your country or region to understand when and how abridged tax invoices can be used.

As always, when dealing with invoicing and tax matters, it's recommended to consult with a tax professional or authority to ensure compliance with local regulations and requirements.

Does thresholds apply for an Invoice or an abridged tax invoice?

Thresholds can apply to both regular invoices and abridged tax invoices, but the specific thresholds and their applicability can vary depending on the tax regulations of the jurisdiction in question. Here's how thresholds might apply to each type of invoice:

- Regular Invoice Thresholds: In some tax systems, there might be thresholds that determine when businesses are required to issue regular invoices that include detailed information about the

transaction, including the tax amount. Below a certain transaction value, businesses may not be required to issue detailed invoices. Instead, they might be allowed to use simplified documents or receipts. These thresholds are often intended to reduce administrative burdens for smaller transactions.

- Abridged Tax Invoice Thresholds: Abridged tax invoices are often used in specific cases, such as business-to-business transactions where the buyer is eligible to claim input tax credits. These simplified invoices may be allowed for transactions below a certain threshold value. This threshold can vary by jurisdiction and is typically designed to streamline documentation for smaller transactions while still ensuring adequate tax reporting.

It's important to note that the thresholds and requirements for both regular invoices and abridged tax invoices can differ widely from one jurisdiction to another. Some jurisdictions might not use abridged tax invoices at all, while others might have specific rules about when they can be used and what information they must contain.

If you're dealing with invoices and tax matters, it's advisable to consult the tax authorities or a tax professional in your specific jurisdiction to understand the rules, thresholds, and requirements that apply to your situation.

VAT/GST/Sales Tax - Configure Chart of Accounts

What is Registering / Cancellation of Registration for VAT/GST/Sales Tax?

Registering for VAT/GST/Sales Tax: Registering for VAT/GST/Sales Tax involves the formal process of enrolling as a tax vendor with the relevant tax authority in your jurisdiction. When your business reaches a specified sales threshold, you are required to collect and remit taxes on behalf of the government. The registration process typically includes providing essential business details, obtaining a unique tax identification number, and understanding the tax rates and regulations applicable to your industry. Registering ensures compliance with tax laws, allows you to collect tax from customers, and entitles you to claim input tax credits.

Cancellation of Registration for VAT/GST/Sales Tax: Cancellation of registration for VAT/GST/Sales Tax entails formally informing the tax authority that you will no longer be conducting taxable activities. This could be due to various reasons, such as ceasing business operations or falling below the minimum sales

threshold. Upon cancellation, you are no longer required to collect tax from customers or remit it to the government. The process may involve settling any outstanding tax liabilities, updating your accounting records, and adjusting your system settings to reflect the change in your tax status. It's important to follow the proper procedures to avoid any penalties or complications related to tax compliance.

Options to Register / Cancel Registration for VAT/GST/Sales Tax

VAT/GST/Sales Tax Registration / Cancellation of Registration options:

1. New Registered Vendor in osFinancials5/TurboCASH5: If you're new to osFinancials5/TurboCASH5 and are a registered VAT/GST/Sales Tax vendor, this option is for you. You'll follow the steps to set up your VAT/GST/Sales Tax accounts, configure tax codes and percentages, and customize document layouts to meet your tax jurisdiction's requirements. This ensures accurate tax calculations and proper tax invoicing in your transactions.
2. New User in osFinancials5/TurboCASH5 without Tax Registration: If you're new to osFinancials5/TurboCASH5 and not a registered VAT/GST/Sales Tax vendor, this choice is appropriate. You'll need to adjust the system's default settings for tax accounts to reflect your non-registered status. This includes disabling or removing VAT/GST/Sales Tax accounts, configuring layouts to reflect non-taxable transactions, and updating document names if necessary. This option ensures accurate transaction documentation without tax-related elements.
3. Existing User Opting for Tax Deregistration: If you're an existing osFinancials5/TurboCASH5 user who has decided to cancel your VAT/GST/Sales Tax registration, or if you have been served a notice of cancellation of registration from your tax authority. Following this route involves steps to update your tax accounts' status to *'Disabled*,' and possibly remove them if unposted transactions are absent. Additionally, you need to process all tax-related transactions until the date of cancellation of registration, ensuring accurate records. After the date of deregistration, it's crucial to adjust your system to process transactions without Tax (VAT/GST/Sales tax) to reflect the updated tax-related changes accurately. Managing this process diligently will help maintain the integrity of your financial records.

> *Before you start to process any transactions and documents or link your Stock items / Inventory items / Products to the Output and Input tax accounts, you need to check your tax codes and percentages (If you are registered as a VAT/GST/Sales Tax vendor).*

Steps to configure the template Set of Books for VAT/GST/Sales Tax

> *As a new user to osFinancials5/TurboCASH5, before you start processing any transactions in journals batches (journals) or to process and transactions in documents it is advisable to review and edit the Chart of Accounts.*

In cases where you have met the compulsory threshold for VAT/GST/Sales tax registration or have chosen to opt for voluntary registration as a VAT/GST/Sales tax vendor, there are steps to follow when dealing with VAT/GST/Sales tax codes in a template Set of Books:

1. VAT/GST/Sales Tax accounts: If you are registered as a VAT/GST/Sales Tax vendor, you need to review the basic VAT/GST/Sales Tax accounts included in the "*Current liabilities*" section in the Chart of Accounts of your selected template Set of Books, downloaded from the "*Let osFinancials help you to create a Set of Books?*" option. You need to add additional Tax codes and edit the existing tax percentages for your Tax regime and jurisdiction. To do this, navigate to the Setup → Accounts menu on the Setup ribbon.

   > *You may print a "Tax code - Tax rates" report on the User reports → Tax menu on the Reports ribbon to print a list of Tax codes and their respective percentages and the status whether the Tax code is enabled or disabled).*

2. VAT/GST/Sales Tax Registration number: Enter the VAT/GST/Sales Tax registration number in the "*Tax reg. no.*" field on the Setup → Company Info (Address tab).

3. VAT/GST/Sales Tax - Document Headings: The decision to modify the document name should be guided by the legal requirements and guidelines of your tax jurisdiction to ensure compliance with invoicing regulations. By default, the document type "*Invoice*" will print on document layout files for the following documents will print on document layout files as follows:

    - Change Document Headings: Change the "*Invoice*" to "*Tax Invoice*" for your specific country or jurisdiction and/or industry (Setup → Documents setup menu on the Setup ribbon). Check the headings for the other document types (Credit notes, Quotes, Purchases, Supplier returns and Orders), and change the headings, if necessary.

    - Change the Names of Document Types: You may need to change the appropriate document type names such as *"Invoice," "Credit note", "Quote", "Purchase", "Supplier return"*, or *"Order"* for your specific country or jurisdiction and/or industry. These document type names will display in the osFinancials5/TurboCASH5 interface and will print on " *Translatable Document Layout Files with Dynamic Document Types*" such as "*Layout file*", "*Document layout*" and "*Document layout (15 code)*" document layout files.

    - POS Tax Invoice: "*POS Tax Invoice*" will be printed on the "POS-SP100", POS 1 and POS 2 document layout files. To Change the "*POS Tax Invoice*" label, you need to go to Tools → Customise language on the Setup ribbon and change the description of "*LabelID - 906014*".

4. Select Document Layout Files: By default, "*Layout file*" is pre-selected in Set of Books templates. The default "*Layout file*" supports Tax (VAT/GST/Sales Tax) related expressions and label descriptions. If you are registered as a Tax (VAT/GST/Sales Tax) vendor, you may select other *Translatable Document Layout Files with Dynamic Document Types*, such as "*Document layout*" and "*Document layout (15 code)*" document layout files, which includes tax related expressions and labels.

5. Stock items/Inventory items Tax classes: When planning, designing and adding your stock/inventory system, you may create Tax classes to link your stock items (goods/services/products) to a Output tax and Input tax codes (including your Sales, Cost of Sales and Stock control accounts). You may need to add tax classes for each of your stock items and link them to the appropriate tax codes (including zero-rated and exempt tax codes).

You may print a "Tax classes report" report on the Reports → Stock item listing - Tax classes menu (Reports ribbon) to print a list of Tax classes for Output tax, Input tax and their respective sales, cost of sales and stock control accounts.

VAT/GST/Sales Tax - New to osFinancials without Tax Registration

If you are New to osFinancials5/TurboCASH5 without VAT/GST/Sales Tax Registration

If you're new to osFinancials5/TurboCASH5 and not a registered VAT/GST/Sales Tax vendor, this choice is appropriate. You'll need to adjust the system's default settings for tax accounts to reflect your non-registered status. This includes disabling or removing VAT/GST/Sales Tax accounts, configuring layouts to reflect non-taxable transactions, and updating document names if necessary. This option ensures accurate transaction documentation without tax-related elements.

VAT/GST/Sales tax codes - Template (Set of Books)

Most template Set of Books, downloaded from the "*Let osFinancials help you to create a Set of Books?*" option, already includes basic VAT/GST/Sales tax accounts in the "*Current liabilities*" section in the Chart of Accounts.

Before you start to process any transactions and documents or link your Stock items / Inventory items / Products to the Output and Input tax accounts, you need to select the "No tax" code.

Steps to configure the template Set of Books for VAT/GST/Sales Tax

As a new user to osFinancials5/TurboCASH5, before you start processing any transactions in journals batches (journals) or to process and transactions in documents it is advisable to review and edit the Chat of Accounts.

In cases where you have not met the compulsory threshold for VAT/GST/Sales tax registration or have chosen not to opt for voluntary registration as a VAT/GST/Sales tax vendor, there are steps to follow when dealing with VAT/GST/Sales tax codes in a template Set of Books:

1. VAT/GST/Sales Tax accounts: If you are not registered as a VAT/GST/Sales Tax vendor, you need to review the basic VAT/GST/Sales Tax accounts included in the "*Current liabilities*" section in the Chart of Accounts of your selected template Set of Books, downloaded from the "*Let osFinancials help you to create a Set of Books?*" option. You need to set the "*Status*" of the VAT/GST/Sales Tax accounts to "*Disabled*" (Setup → Accounts menu on the Setup ribbon).

Delete or set VAT/GST/Sales Tax accounts as disabled:

If you have not processed any transactions in Batches (Journals or Documents), you may choose to delete these VAT/GST/Sales Tax accounts. The option to keep these VAT/GST/Sales Tax accounts, but to disable them, allows you to review enable and edit the VAT/GST/Sales Tax accounts when you need to registered as a VAT/GST/Sales Tax vendor.

You may print a "Tax code - Tax rates" report on the User reports → Tax menu on the Reports ribbon to print a list of Tax codes and their respective percentages and the status whether the Tax code is enabled or disabled).

2. VAT/GST/Sales Tax Registration number: Do not enter the VAT/GST/Sales Tax registration number in the "*Tax reg. no.*" field on the Setup → Company Info (Address tab) should be left blank, as you are not registered as a vendor for these taxes. If you have a different registration number or certificate related to tax exemptions, you should enter that information. It's important to accurately reflect your tax status and provide any relevant registration numbers or certificates to ensure compliance with tax regulations.

3. VAT/GST/Sales Tax - Document Headings: The decision to modify the document name should be guided by the legal requirements and guidelines of your tax jurisdiction to ensure compliance with invoicing regulations. By default, the document type "*Invoice*" will print on document layout files for the following documents will print on document layout files as follows:

    - Change Document Headings: Change the "*Invoice*" to "*Tax Invoice*" for your specific country or jurisdiction and/or industry (Setup → Documents setup menu on the Setup ribbon). Check the headings for the other document types (Credit notes, Quotes, Purchases, Supplier returns and Orders), and change the headings, if necessary.

    - Change the Names of Document Types: You may need to change the appropriate document type names such as *"Invoice," "Credit note", "Quote", "Purchase", "Supplier return",* or *"Order"* for your specific country or jurisdiction and/or industry. These document type names will display in the osFinancials5/TurboCASH5 interface and will print on " *Translatable NOTAX Document Layout Files with Dynamic Document Types*" such as "*Layout file*", "*Document layout*" and "*Document layout (15 code)*" document layout files.

    - POS Tax Invoice: "*POS Tax Invoice*" will be printed on the "*POS-STARTSP100, POS 1*" and "*POS 2*" document layout files. If you need to change the "*POS Tax Invoice*" label, you need to go to Tools → Customise language on the Setup ribbon and change the description of "*LabelID - 906014*".

4. Select Document Layout Files: By default, "*Layout file*" is pre-selected in Set of Books templates. The

default "*Layout file*" supports Tax (VAT/GST/Sales Tax) related expressions and label descriptions. If you are not registered as a Tax (VAT/GST/Sales Tax) vendor, you may select the *Translatable NO-TAX Document Layout Files with Dynamic Document Types*, such as "*NO-TAX Layout file*", "*NO-TAX Document layout*" and "*NO-TAX Document layout (15 code)*" document layout files, which excludes tax related expressions and labels.

5. Stock items/Inventory items Tax classes: When planning, designing and adding your stock/inventory system, you may create Tax classes to link your stock items (goods/services/products) to your Sales, Cost of Sales and Stock control accounts). Since the Output tax and Input tax codes, is not applicable in these cases, you may need to select the "*Empty*" option for Output tax and Input tax codes. (Setup → Stock information menu (Tax classes tab) on the Setup ribbon).

> *You may print a "Tax classes report" report on the Reports → Stock item listing - Tax classes menu (Reports ribbon) to print a list of Tax classes for Output tax, Input tax and their respective sales, cost of sales and stock control accounts. The Output tax and Input Tax code should be empty.*

VAT/GST/Sales Tax - Existing User Opting for Tax Deregistration

---

Deregister for VAT/GST/Sales Tax - Steps in osFinancials

If you're an existing osFinancials5/TurboCASH5 user who has decided to cancel your VAT/GST/Sales Tax registration, this is your selection. Following this route involves steps to update your tax accounts' status to *'Disabled*,' and possibly remove them if unposted transactions are absent. Additionally, you need to process all tax-related transactions until the date of cancellation of registration, ensuring accurate records. After the date of deregistration, it's crucial to adjust your system to process transactions without Tax (VAT/GST/Sales tax) to reflect the updated tax-related changes accurately. Managing this process diligently will help maintain the integrity of your financial records.

If you do not comply with the requirements for Voluntary Registration or if you apply for de-registration, or for some other reason your registration is cancelled, the Tax Authority will send you a notice of your actual cancellation date.

After this date, you may not use the VAT/GST/Sales Tax number again and all VAT/GST/Sales (Output Tax less the Input Tax) (on transactions before or on the date of cancellation of VAT/GST/Sales Tax must be submitted on a return and a final payment must be done to the Tax Authority. If you continue to process

transactions after the cancellation date, you will need to select "*No Tax*" code for all transactions.

If your business ceases or you stop trading you need to consult with your tax authority or accountant, since there may be some specific requirements with regard to the keeping or disposing of assets, etc. and your final VAT returns /GST returns /Sales Tax returns and payments.

To Cancel VAT/GST/Sales Tax Registration in osFinancials5/TurboCASH5:

The following procedure needs to be followed in the case of Cancellation of Registration (if you do not stop trading):

1. VAT/GST/Sales Tax Configuration: Once you have received a notification of the cancellation or deregistration of VAT/GST/Sales Tax from your Tax Authority, note the date of cancellation or deregistration of VAT?GST/Sales Tax.
2. Capture and process transactions until date of cancellation of VAT/GST/Sales Tax Registration:
    - Batch (journal) processing: You need to capture an process all transactions in batches (journals) and post (update) the batches (journals) containing transactions up to the date of deregeistration (Batch entry / Journal entry on the Default ribbon).
    - Repeating Batch (journal) Transactions: Import repeating batch transactions into normal batches and process (if necessary) batches. (Edit → Repeating transactions menu on the Default ribbon).
    - Document processing You need to process any documents (post) Documents (Invoices, Credit notes, Purchases, Supplier returns documents for this date. In some cases you need to check and finalize the Quotes and convert them to Invoices and Orders and convert them them to Purchase documents. (Documents on the Default ribbon).
    - Repeating Invoices: Process any repeating invoices up to the date of deregeistration (Edit → Repeating invoices menu on the Default ribbon).
3. Configure Tax accounts after date of cancellation of VAT Registration:
    - Tax Accounts Status: Set the "*Status*" of Tax codes or Tax accounts to "*Disabled*" to prevent further selecting the transactions on the Tax lookup when processing the transactions. (Setup → Accounts menu on the Setup ribbon). In Batches (journals) you may select the "No tax" option on the Options for this batch (F:10) to hide the Tax column and Tax lookup in batches (journals).

You will not be allowed to delete these Tax accounts if transactions was already processed for the VAT accounts. You still need to print reports from the historical data.

- Stock items / Inventory items / Products: Your Stock items Inventory items Products will still display the Output tax / Input Tax codes with the respective percentages., including Zero-rated and Exempt tax codes with a 0%. Create a Tax class with a "*No Tax*" code (Setup → Stock information menu - Tax classes tab on the Setup ribbon).
- Link Stock items / Inventory items / Products to the "No Tax" tax class: Stock items on the Default ribbon. You may edit individual stock items, or more conveniently, use the Stock item grid to filter and link multiple Stock items / Inventory items / Products.

Note: If you use different accounts or sub accounts for Sales, Cost of Sales and Stock control you need to create a Tax class for each of your accounts with the "No Tax" code.

4. Edit unposted transactions in batches after the date of cancellation of VAT Registration:
   - Unposted Batches (journals): If you have processed unposted transactions in bathes (journals) and documents after the deregistration date you need to edit these transactions to change these transactions to the "*No Tax*" code.
   - Unposted Documents: In the case of documents, after the deregistration date, you may need to reselect the Stock items / Inventory items / Products to the "*No Tax*" (if necessary).
5. VAT / GST Reference number / Tax Invoice:
   - Remove VAT/GST Registration number: Remove your VAT/GST/Sales Tax Registration Number in the Tax Reg. No. field on the Setup → Company Info (Address tab) menu. Make sure that you have printed or stored all unprinted documents in a PDF format for future reference) before and on deregistration date.
   - Change Document Headings: Change the "*Tax Invoice*" to "*Invoice*" (Setup → Documents setup menu on the Setup ribbon). Check the headings for the other document types (Credit notes, Quotes/Estimates, Purchases, Supplier returns and Orders), and change the headings, if necessary.
   - Layout files: Select a Layout file for "*No Tax*" in the following options:
     - § Global setting in Setup → Documents setup menu on the Setup ribbon. If you have any specific layout files selected for specific debtor accounts or creditor accounts, select the "*No Tax*" layout files. (Delivery address tab of Debtors / Delivery address tab of Creditors on the Default ribbon).
     - § Debtors - Delivery address tab: If you have any specific layout files selected for specific debtor (customer/client) accounts for Layout file 1 (Invoices), Layout file 2 (Credit notes) and/or Layout file 3 (Quotes/Estimates), select the "*No Tax*" layout files.

- § Creditors - Delivery address tab: If you have any specific layout files selected for specific creditor (supplier/vendor) accounts for Layout file 1 (Purchases), Layout file 2 (Supplier returns) and/or Layout file 3 (Orders), select the "*No Tax*" layout files.
- § Documents - If Layout file 1, Layout file 2, Layout file 3 and/or Layout file 4 is selected, you need to select the "*No Tax*" layout files.

6. VAT/GST/Sales Tax Reconciliation / Returns / Accounts:

- o VAT/GST/Sales Tax Returns: The final VAT return should include all transactions until the data of deregistration.
- o VAT reconciliation: Perform a final VAT reconciliation to ensure that all VAT transactions are accounted for correctly before deregistration.
- o VAT/GST/Sales Tax Control Account: The VAT / GST Control Account should display a zero balance after the amount matching with your VAT return is paid to the tax authority. If an refund is due by the Tax authority, the amount should be matching your VAT/GST return. Once the refund is received from the Tax authority, the VAT/GST/Sales Tax control account will reflect a zero balance. as there are no outstanding VAT liability or receivable after deregistration.
- o VAT/GST/Sales Tax Payment Account Set the VAT/GST/Sales Tax Payment account's "*Status*" to "*Disabled*". (Setup → Accounts menu on the Setup ribbon).

> *You may print a "Tax code - Tax rates" report on the User reports → Tax menu on the Reports ribbon to print a list of Tax codes and their respective percentages and the status whether the Tax code is enabled or disabled).*

It's advisable to consult with your local tax authority or an accountant to ensure proper compliance with tax regulations during the cancellation process.

VAT/GST/Sales tax codes - Template (Set of Books)

Most template Set of Books, downloaded from the "*Let osFinancials help you to create a Set of Books?*" option, already includes basic VAT/GST/Sales tax accounts in the Current Liabilities section in the Chart of Accounts.

Before you start to process any transactions and documents or link your Stock items / Inventory items / Products to the Output and Input tax accounts, you need to check your tax codes and percentages (If you are registered as a VAT/GST/Sales Tax vendor).

If you are registered as a VAT/GST/Sales Tax vendor, you need to check that the all the relevant Tax codes and percentages applicable to your country and jurisdiction is correct and reflect the correct percentages and aligns with your VAT/GT/Sales tax return. You may need to add or delete any tax codes, where necessary. Note if Zero-rated tax or exempt tax is applicable to your country or jurisdiction needs to be included with a 0%. (Setup → Accounts menu on the Setup ribbon).

Tip: You may print a "*Tax code - Tax rates*" report on the User reports → Tax menu on the Reports ribbon to print a list of Tax codes and their respective percentages and the status whether the Tax code is enabled or disabled).

Register for VAT

What is requirements and changes in osFinancials5/TurboCASH5 when a business register for VAT?

When a business registers for Value Added Tax (VAT), there are several requirements and changes that may need to be implemented in osFinancials5/TurboCASH5 to ensure compliance with VAT regulations. Here are some key considerations:

1. VAT Configuration: The accounting software should have a VAT configuration option where you can set the applicable VAT rates and any specific VAT rules based on your business activities. You'll need to enter the standard VAT rate, zero-rated VAT rate, exempt VAT rate, and any other applicable rates.
2. VAT Accounts: Ensure that the Chart of Accounts in osFinancials5/TurboCASH5 includes all the necessary VAT accounts, such as Output VAT, Input VAT, VAT on Imports, VAT Adjustments, VAT Bad Debt Relief, VAT on Assets and Disposals, etc. These accounts will be used to accurately record VAT-related transactions.
3. VAT Invoices and Reports: The accounting software should be able to generate VAT invoices and reports required for VAT compliance. Ensure that the VAT amount is correctly calculated and displayed on invoices and reports.
4. VAT Calculation: The accounting software should be capable of automatically calculating the VAT amount on sales and purchases based on the applicable VAT rates. This calculation should be accurate and in compliance with VAT regulations.
5. Reverse Charge Mechanism: If your business deals with reverse charge transactions, where the

recipient accounts for VAT instead of the supplier, the accounting software should support this mechanism and correctly account for the VAT.

6. VAT Returns: osFinancials5/TurboCASH5 should have the functionality to generate VAT returns, including the VAT amounts collected and paid, and assist in completing the required VAT forms accurately.
7. VAT Payment and Refund: The software should help track VAT payments to be made to the tax authorities or refunds to be claimed, ensuring proper cash flow management.
8. VAT Compliance Reporting: The accounting software should provide reports that assist with VAT compliance, such as VAT control reports, VAT audit trails, and VAT reconciliation reports.
9. VAT Documentation: Make sure you have access to the necessary documentation and guides provided by osFinancials5/TurboCASH5 or third-party resources to understand the VAT functionality and how to correctly set it up in the software.

When implementing VAT in accounting software, it's crucial to thoroughly review the software's VAT features, consult with accounting professionals or tax advisors, and perform thorough testing to ensure accurate VAT calculations and compliance with VAT regulations specific to your country or jurisdiction. Keep in mind that tax laws and requirements may change, so it's essential to keep the software updated and be aware of any updates or changes related to VAT.

What is requirements and changes in osFinancials5/TurboCASH5 when a business deregister for VAT?

When a business deregisters for Value Added Tax (VAT), there are several requirements and changes that may need to be implemented in osFinancials5/TurboCASH5 to reflect the new VAT status accurately. Here are some key considerations:

1. VAT Configuration: Update the VAT configuration in osFinancials5/TurboCASH5 to indicate that the business is no longer registered for VAT. This may involve changing VAT rates to zero and updating any VAT-related settings.
2. VAT Accounts: Depending on the country's tax regulations, you may need to close or modify specific VAT accounts that are no longer applicable after deregistration. For example, you may need to close the Output VAT and Input VAT accounts.
3. VAT Invoices and Reports: Modify the layout of invoices and reports to indicate that the business is no longer VAT-registered. Remove or update any VAT-related information, such as the VAT number, from invoices and reports.
4. VAT Returns: Ensure that osFinancials is configured to stop generating VAT returns since the business

is no longer required to submit them after deregistration.

5. VAT Control Account: Adjust the VAT Control Account to zero out the balance, as there should be no outstanding VAT liability or receivable after deregistration.
6. VAT Reconciliation: Perform a final VAT reconciliation to ensure that all VAT transactions are accounted for correctly before deregistration.
7. VAT Payment and Refund: If there are any pending VAT payments or refunds, ensure that they are accounted for and settled appropriately before deregistration.
8. Reverse Charge Mechanism: If your business was dealing with the Reverse Charge Mechanism, update osFinancials5/TurboCASH5 to reflect that this mechanism is no longer applicable.
9. Accounting Treatment: Review the accounting treatment of sales and purchases to ensure that VAT is no longer considered in financial transactions.
10. Compliance Reporting: Remove any VAT compliance reporting functionalities from osFinancials5/TurboCASH5, as the business is no longer required to report VAT.
11. Record Keeping: Retain all necessary VAT records for the required period as per the tax regulations.

It's crucial to follow the deregistration process as specified by the local tax authorities and comply with any reporting requirements related to the deregistration. Before making any changes in osFinancials5/TurboCASH5, businesses should consult with accounting professionals or tax advisors to ensure that the correct adjustments are made and that the business remains compliant with tax laws.

Additionally, businesses should retain records of their VAT deregistration for future reference and potential tax audits.

VAT/GST/Sales - Compulsory registration / Voluntary registration

---

Compulsory registration for VAT/GST/Sales Tax?

What is Compulsory registration for VAT/GST/Sales Tax?

Compulsory registration for VAT/GST/Sales Tax refers to the legal requirement imposed by tax authorities on businesses to enrol as tax vendors and collect sales tax or value-added tax (VAT) from their customers. This requirement is triggered when a business's taxable turnover exceeds a specified threshold

determined by the tax jurisdiction. Once the threshold is crossed, the business becomes obligated to register for VAT/GST/Sales Tax, regardless of whether it is engaged in the provision of goods or services.

Compulsory registration aims to ensure that businesses generating a certain level of revenue contribute their share of taxes to the government. This helps fund public services, infrastructure, and other government initiatives. Once registered, the business is responsible for charging the appropriate tax rate on eligible transactions, maintaining accurate records, and remitting the collected tax to the tax authority within specified timelines.

Businesses that fail to comply with the compulsory registration requirement may face penalties, fines, or legal action. It's important for businesses to monitor their turnover and be aware of the thresholds set by their jurisdiction to avoid any potential non-compliance issues.

In which countries is Compulsory registration for VAT/GST/Sales Tax applicable?

Compulsory registration for VAT/GST/Sales Tax is applicable in many countries around the world. The specific rules and thresholds for compulsory registration can vary significantly from one country to another. Here are some countries where compulsory registration for VAT/GST/Sales Tax is commonly applicable:

1. European Union (EU) Member States: Most EU countries have VAT systems that include compulsory registration thresholds.
2. United Kingdom: The UK has its own VAT system with compulsory registration thresholds.
3. Australia: The Australian Goods and Services Tax (GST) system includes compulsory registration thresholds.
4. Canada: Canada has a federal Goods and Services Tax (GST) and Provincial Sales Tax (PST) systems with thresholds for registration.
5. India: India has a Goods and Services Tax (GST) system with compulsory registration thresholds.
6. South Africa: South Africa has a Value Added Tax (VAT) system with thresholds for compulsory registration.
7. New Zealand: New Zealand has a Goods and Services Tax (GST) system with compulsory registration thresholds.
8. Singapore: Singapore's Goods and Services Tax (GST) system includes compulsory registration thresholds.
9. Malaysia: Malaysia has a Goods and Services Tax (GST) system with thresholds for compulsory registration.

10. Brazil: Brazil has a Value Added Tax (VAT) system known as ICMS, which includes compulsory registration thresholds.
11. China: China has a Value Added Tax (VAT) system with thresholds for compulsory registration.
12. Japan: Japan has a Consumption Tax system with thresholds for compulsory registration.

These are just a few examples, and there are many other countries around the world where compulsory registration for VAT/GST/Sales Tax applies. It's important to note that the rules and thresholds can vary widely, so businesses should consult their local tax authorities for specific information related to their jurisdiction.

Voluntary registration for VAT/GST/Sales Tax

What is Voluntary registration for VAT/GST/Sales Tax?

Voluntary registration for Value Added Tax (VAT), Goods and Services Tax (GST), or Sales Tax refers to the option available to businesses to register for these taxes even if their turnover or sales do not exceed the threshold for compulsory registration. In many countries, there is a specific threshold limit above which businesses are required to register for VAT/GST/Sales Tax, and below which registration is optional or voluntary.

Voluntary registration allows businesses to proactively opt into the VAT/GST/Sales Tax system, even if they are not legally obligated to do so. This can have several benefits and implications:

Benefits:

- Input Tax Credit: Once registered, businesses can claim input tax credits for the VAT/GST/Sales Tax they pay on their purchases. This reduces the overall tax burden on the business.
- Credibility: Voluntarily registering for VAT/GST/Sales Tax can enhance a business's credibility, especially when dealing with other registered businesses or government entities.
- Competitive Advantage: Being registered for VAT/GST/Sales Tax can provide a competitive advantage over non-registered competitors, as customers may prefer to deal with registered businesses.
- Business Expansion: Voluntary registration may be beneficial for businesses that anticipate exceeding the threshold in the near future or plan to expand their operations.

Implications:

- Tax Collection: Once registered, the business becomes responsible for collecting VAT/GST/Sales Tax from its customers and remitting it to the tax authorities.

- Compliance Obligations: Voluntary registration comes with compliance responsibilities, including issuing tax invoices, maintaining records, and filing periodic tax returns.
- Costs and Administrative Burden: There may be additional administrative costs associated with VAT/GST/Sales Tax compliance, such as record-keeping and reporting requirements.
- Liability: Registered businesses must ensure they charge the correct amount of tax and remit it on time. Any errors or late payments can result in penalties.

The decision to voluntarily register for VAT/GST/Sales Tax should be carefully considered, taking into account the specific business circumstances, industry, and future plans. Some businesses may choose voluntary registration to take advantage of input tax credits and enhance their market position, while others may prefer to delay registration until they reach the compulsory threshold to avoid the associated compliance obligations and costs.

As tax laws and regulations can vary significantly between countries, businesses should consult with local tax authorities or seek advice from accounting professionals or tax advisors to understand the implications and requirements of voluntary registration in their specific jurisdiction.

In which countries have the option to register voluntarily for VAT/GST/Sales Tax?

The option for voluntary registration for Value Added Tax (VAT), Goods and Services Tax (GST), or Sales Tax is available in various countries around the world. In these countries, businesses have the choice to register for VAT/GST/Sales Tax even if their turnover or sales do not exceed the threshold for compulsory registration. This allows businesses to voluntarily become part of the VAT/GST/Sales Tax system, which can have certain benefits and implications. Here are some examples of countries where voluntary registration is commonly allowed:

1. United Kingdom: In the UK, businesses with taxable turnover below the VAT registration threshold can choose to register voluntarily for VAT. As of ChatGPT's last update in September 2021, the registration threshold was £85,000.
2. Australia: Australia also offers voluntary GST registration for businesses with annual turnover below the GST registration threshold. As of ChatGPT's last update, the GST registration threshold was AUD $75,000.
3. New Zealand: In New Zealand, businesses with turnover below the GST registration threshold can voluntarily register for GST. As of ChatGPT's last update, the GST registration threshold was NZD $60,000.
4. Canada: Canada allows businesses with sales below the GST/HST registration threshold to voluntarily register for GST/HST.

5. Singapore: Singapore offers voluntary GST registration for businesses with annual turnover below the compulsory registration threshold. As of ChatGPT's last update, the GST registration threshold was SGD $1 million.
6. India: In India, businesses with turnover below the compulsory GST registration threshold can voluntarily register for GST.
7. South Africa: South Africa allows voluntary VAT registration for businesses with turnover below the compulsory VAT registration threshold. As of ChatGPT's last update, the VAT registration threshold was ZAR R1 million.

It's essential for businesses to carefully consider the implications of voluntary registration, as it means they will be required to charge VAT/GST/Sales Tax on their sales and may also be eligible to claim input tax credits on their purchases. Voluntary registration can have both advantages and disadvantages, and businesses should weigh the benefits against the administrative burden and costs associated with compliance.

As tax regulations may change over time, it is advisable to consult with local tax authorities or seek advice from accounting professionals or tax advisors to understand the current requirements and implications of voluntary registration in each specific country.

Key points when adding tax codes and the format of your VAT return

Absolutely, when setting up tax codes in your Chart of Accounts, it's important to consider the format and requirements of your VAT return. The tax codes you use in osFinancials5/TurboCASH5 should align with the boxes (fields) and codes used in your VAT return to ensure accurate reporting and compliance with tax regulations. Here are some key points to consider:

1. Box Alignment / Field Alignment: Each box on your VAT return corresponds to specific types of transactions. The tax codes you use should match the box numbers on your VAT return. This alignment helps ensure that the amounts recorded in your accounts can be easily transferred to the correct boxes on the return.
2. VAT Rates: The tax codes should accurately represent the VAT rates that apply to different types of transactions. Ensure that the tax rates in your tax codes match the rates specified by tax authorities.

3. Specific Transactions: Some boxes on the VAT return might relate to specific types of transactions, such as Reverse Charge or Goods and Services subject to different rates. Make sure your tax codes cover these specific scenarios.
4. Additional Information: Some VAT returns may require additional information or notes for certain transactions. Consider adding relevant notes or references in your Chart of Accounts to help with reporting.
5. Changes in Regulations: VAT regulations can change, and tax authorities may update the format of VAT returns. Stay informed about any changes and update your Chart of Accounts and tax codes accordingly.
6. Consultation: If you're uncertain about how to structure your tax codes to align with your VAT return, consider consulting with accounting professionals or tax advisors. They can provide guidance based on their expertise and knowledge of current regulations.
7. Regular Reconciliation: Regularly reconcile the amounts in your tax codes with the totals reported on your VAT return. This helps catch any discrepancies and ensures accurate reporting.

By considering the format of your VAT return when setting up tax codes, you can streamline your reporting process, reduce the risk of errors, and ensure that your financial records accurately reflect your tax obligations. Keep in mind that accurate VAT reporting is crucial for compliance and maintaining the financial health of your business.

Tax Code Numbering Structure: Flexibility

Adding flexibility to your tax code numbering structure by leaving spaces for additional tax codes is a smart approach. This ensures that your Chart of Accounts remains adaptable to changes in legislation, new VAT classifications, or unforeseen requirements. Here's how you could incorporate this idea into your tax code numbering structure:

1. Structured Tax Code Numbers: Establish a structured numbering system for your tax codes. For example, as you mentioned, use numbers like "*T2400-010*" and "*T2400-020*" for Output Tax categories.
2. Reserved Spaces: Leave reserved or unused numbers within your structured sequence to allow for the addition of new tax codes without disrupting the existing structure. For instance, you could leave gaps like "*T2400-030*" and "*T2400-040*" to accommodate future tax codes.
3. Flexibility for Changes: If tax regulations change or new VAT classifications are introduced, you can easily insert new tax codes within the reserved spaces without renumbering existing codes.
4. Documentation and Consistency: Keep documentation that explains the purpose of each reserved space and any potential scenarios for future tax code additions.

5. Review and Update: Periodically review your tax code structure to assess whether new codes are needed due to changes in legislation or business requirements.

6. Professional Guidance: If you're unsure about the best approach for structuring your tax code numbers, consider seeking advice from accounting professionals or tax advisors who are familiar with VAT regulations and requirements.

By leaving reserved spaces for additional tax codes, you're proactively planning for potential changes and ensuring that your Chart of Accounts remains adaptable and compliant with evolving VAT regulations. This flexibility can save you time and effort in the long run while allowing your accounting system to accommodate new tax-related scenarios seamlessly.

VAT/GST/Sales Tax - Selecting the No Tax Code

Selecting the Empty option as No Tax Code

Transactions that do not involve Tax (VAT/GST/Sales tax) should typically be recorded using the "*Empty*" option as the "*No Tax*" code, depending on how your Set of Books in osFinancials5/TurboCASH5 labels it. These transactions are not included in the Tax (VAT/GST/Sales tax) return because they don't have a Tax (VAT/GST/Sales tax) component. Here are some examples of transactions that usually do not have VAT and should be recorded using an "*Empty*" option as the "*No Tax*" code:

1. Opening Balances: Transactions related to opening balances, such as the transfer of account balances from a previous accounting period or accounting system, generally do not have Tax (VAT/GST/Sales tax) implications.

2. Payments Received from Debtors: When you receive payments from your customers (debtors), the payment amount usually corresponds to the invoice amount without any additional Tax (VAT/GST/Sales tax).

3. Payments Made to Creditors: Payments made to your suppliers (creditors) for goods or services usually do not include Tax (VAT/GST/Sales tax) because Tax (VAT/GST/Sales tax) is usually accounted for when the purchase invoice is recorded.

4. Adjustments: Certain accounting adjustments, like correcting entries, may not involve Tax (VAT/GST/Sales tax). For example, adjusting entries to correct errors in accounts might not have Tax (VAT/GST/Sales tax) implications.

5. Accruals: Accruals represent expenses or revenues that have been incurred but not yet recorded. These transactions are usually recorded without Tax (VAT/GST/Sales tax).
6. Internal Transfers: Transfers of funds or assets within your organization, such as between different bank accounts or departments, generally do not involve Tax (VAT/GST/Sales tax).
7. General Journal Entries: Journal entries for internal bookkeeping purposes, such as reclassifications or allocations, may not have Tax (VAT/GST/Sales tax) implications.
8. Depreciation: Entries related to depreciation of assets do not involve Tax (VAT/GST/Sales tax).
9. Dividend Payments: When paying dividends to shareholders, the payment amount is typically not subject to Tax (VAT/GST/Sales tax).
10. Loan Transactions: Transactions related to loans, interest payments, and repayments usually do not involve Tax (VAT/GST/Sales tax).
11. Employee Salaries: Payments made to employees as salaries usually do not include Tax (VAT/GST/Sales tax).
12. Interest Income: Income earned from interest on savings or investments may not include Tax (VAT/GST/Sales tax).

Remember that specific circumstances and regulations may vary, so it's essential to review each transaction type in the context of your business and the applicable Tax (VAT/GST/Sales tax) rules. If you're unsure about the Tax (VAT/GST/Sales tax) treatment of certain transactions, it's a good idea to consult with an accounting professional or tax advisor to ensure accurate and compliant recording.

Selecting the "*No Tax*" code in osFinancials5/TurboCASH5 when processing transactions

Transactions that do not involve Tax (VAT/GST/Sales tax) should typically be recorded using an "*Empty*" or "*No Tax*" code, depending on how your Set of Books in osFinancials5/TurboCASH5 labels it. In osFinancials when processing transactions in batches (journals) and documents (sales documents such as invoices, credit notes, quotes, point-of-sales invoices, and purchase documents such as purchases, supplier returns and orders) you need to select the "*Empty*" option as the "*No Tax*" code.

Selecting the "No Tax" code in osFinancials5/TurboCASH5 in Batch processing

In osFinancials5/TurboCASH5, you may configure specific batches (journals) to hide the Tax lookup and Tax column to process transactions that are not Tax (VAT/GST/Sales tax)-related. This is particularly useful when all transactions within a batch do not involve VAT.

However, if "Exempt" or "Zero-rated" tax is applicable to certain transactions, you need to select the appropriate tax codes from the Tax lookup.

You can hide the Tax (VAT/GST/Sales tax) lookup and Tax (VAT/GST/Sales tax) column in all batches (journals) in the following scenarios:

1. New User in osFinancials5/TurboCASH5 without Tax Registration: If you're new to osFinancials5/TurboCASH5 and not a registered VAT/GST/Sales Tax vendor.
2. Existing User Opting for Tax Deregistration: If you're an existing osFinancials5/TurboCASH5 user who has decided to cancel your VAT/GST/Sales Tax registration, or if you have been served a notice of cancellation of registration from your tax authority.

Using Tax classes to link specific items to the "No Tax" code

In osFinancials5/TurboCASH5, when configuring your inventory (stock items / products), you may use the Tax classes to link (pre-configure) such items on which "*No Tax*" code is applicable to specific items.

Using Tax classes to link specific items to the "*Empty*" option as the "*No Tax*" code in osFinancials5/TurboCASH5 is a useful approach for configuring your inventory, especially when dealing with products or items that are not subject to Tax (VAT/GST/Sales tax). This allows you to pre-configure items that consistently fall under the "*No Tax*" category, ensuring that the correct tax treatment is applied automatically during transactions.

By associating items with the appropriate Tax classes, you streamline the process of recording transactions for those items, as the system will automatically apply the "*Empty*" option as the "*No Tax*" code when those items are included in documents such as sales invoices, credit notes, and purchase orders. This helps to reduce manual errors and ensures consistent and accurate Tax (VAT/GST/Sales tax) treatment across your inventory.

Using Tax classes in this manner also provides an efficient way to manage items that have consistent tax treatment, freeing up time for your financial team to focus on more complex transactions and tasks.

Zero-rated and Exempt VAT classifications

For transactions that are subject to either zero-rated or exempt Tax (VAT/GST/Sales tax) classifications, it's essential to select the appropriate tax code that aligns with your tax authority's regulations and guidelines. These transactions may not involve the standard rate of VAT, but they still require accurate recording and reporting in accordance with the specific Tax (VAT/GST/Sales tax) classification they fall under.

The distinction between "*Zero-rated*" and "*Exempt*" Tax (VAT/GST/Sales tax) classifications is important because they have different implications for Tax (VAT/GST/Sales tax) recovery on related expenses. Zero-

rated supplies allow for the recovery of Input Tax (VAT/GST/Sales tax), while exempt supplies generally do not.

When processing transactions, always choose the correct tax code that corresponds to the Tax (VAT/GST/Sales tax) classification applicable to the transaction. This ensures that your Tax (VAT/GST/Sales tax) records accurately reflect the nature of the transaction and comply with your tax authority's requirements. If you're uncertain about which tax code to use for a particular transaction, consulting with tax professionals or referring to your tax authority's guidelines is recommended.

Reverse Charge Mechanism - Reverse Charge Mechanism

What is the Reverse Charge Mechanism for VAT/GST?

The Reverse Charge Mechanism (RCM) is a tax rule used in some countries' value-added tax (VAT) or goods and services tax (GST) systems. Under the Reverse Charge Mechanism, the responsibility for accounting and reporting the tax shifts from the supplier of goods or services to the recipient (buyer) of those goods or services. This means that the recipient becomes liable for paying the VAT/GST directly to the tax authorities, instead of the supplier charging and remitting the tax.

The Reverse Charge Mechanism is typically applied in the following scenarios:

1. Imports: When a business imports goods from another country, the Reverse Charge Mechanism requires the importer (recipient) to account for and pay the VAT/GST on the imported goods directly to the tax authorities. This ensures that the tax is collected by the country where the goods are consumed, rather than the country of origin.
2. Services from Overseas Suppliers: When a business receives services from a supplier located in another country, the recipient of the services is often required to account for and pay the VAT/GST on those services under the Reverse Charge Mechanism.
3. Certain Domestic Transactions: In some countries, the Reverse Charge Mechanism may also be applied to specific domestic transactions, such as construction services, where the recipient of the services becomes responsible for reporting and paying the VAT/GST.

The Reverse Charge Mechanism is designed to prevent tax evasion and ensure that VAT/GST is collected on cross-border transactions and certain domestic transactions where the supplier is not located in the same country as the recipient. It places the responsibility for tax compliance on the recipient, who will

include the VAT/GST amount in their own VAT/GST return and remit the tax to the tax authorities.

It's important for businesses to be aware of the Reverse Charge Mechanism rules in their respective countries and properly account for and report the VAT/GST when it applies to their transactions. Compliance with the Reverse Charge Mechanism is essential to avoid penalties and ensure accurate tax reporting.

In which countries is the Reverse Charge Mechanism for VAT/GST applied?

The Reverse Charge Mechanism for VAT/GST is commonly used in various countries around the world. It's important to note that the application and specific rules of the mechanism can vary from country to country. As of ChatGPT's last update in September 2021, here are some countries where the Reverse Charge Mechanism for VAT/GST is commonly applied:

1. European Union (EU) Member States: The Reverse Charge Mechanism is commonly used within the EU for intra-community transactions to prevent double taxation and simplify cross-border trade.
2. United Kingdom (UK): The Reverse Charge Mechanism is used in the UK for certain supplies of goods and services, including construction services.
3. Australia: Australia applies the Reverse Charge Mechanism for imported services and digital products purchased by Australian businesses from non-resident suppliers.
4. Canada: Canada applies the Recipient-Driven VAT system, which is a type of reverse charge mechanism, for certain imported services.
5. Singapore: The Reverse Charge Mechanism applies to certain imported services and goods in Singapore.
6. India: The Reverse Charge Mechanism is used in India for specific goods and services, where the recipient is responsible for paying the tax to the government.
7. New Zealand: New Zealand applies the Reverse Charge Mechanism for imported services and other specified transactions.
8. Malaysia: The Reverse Charge Mechanism is applied in Malaysia for certain imported services.
9. South Africa: South Africa applies the Reverse Charge Mechanism for certain imported services.
10. Norway: Norway applies the Reverse Charge Mechanism for certain imported services.
11. Switzerland: The Reverse Charge Mechanism is used in Switzerland for specific transactions, including cross-border services.

12. Turkey: Turkey applies the Reverse Charge Mechanism for certain goods and services.
13. Ukraine: Ukraine applies the Reverse Charge Mechanism for imported services and certain transactions.

Please note that tax laws and regulations can change, and the applicability of the Reverse Charge Mechanism may vary based on the specific circumstances and transactions. It's advisable to consult the tax authorities of each country or a tax professional for the most up-to-date and accurate information regarding the Reverse Charge Mechanism for VAT/GST.

Is the Reverse Charge Mechanism applicable to Sales Tax and Use Tax?

The Reverse Charge Mechanism is typically associated with Value Added Tax (VAT) and Goods and Services Tax (GST) systems, rather than with Sales Tax and Use Tax systems. While both Sales Tax and Use Tax systems and VAT/GST systems are consumption-based taxes, they operate differently and have distinct mechanisms.

In Sales Tax and Use Tax systems (common in the United States), the tax is generally collected at the point of sale by the seller and remitted to the tax authorities. There is usually no direct concept of the Reverse Charge Mechanism in these systems. Instead, the responsibility for collecting and remitting the tax falls on the seller, not the buyer.

In VAT/GST systems, including the Reverse Charge Mechanism, the tax liability can be shifted from the seller to the buyer in certain circumstances. This can occur when the buyer is liable to account for the tax instead of the seller, typically for cross-border transactions or specific goods and services.

It's important to note that tax terminology and mechanisms can vary between countries, and the Reverse Charge Mechanism may have different names or concepts in different jurisdictions. If you're looking for information specific to a certain jurisdiction or tax system, it's recommended to consult the local tax authority or a tax professional for accurate guidance.

Reverse Charge Mechanism for the VAT - Is this applicable to South Africa?

Yes, the Reverse Charge Mechanism is applicable in South Africa, and businesses that engage in reverse charge transactions must account for VAT under this mechanism. The Reverse Charge Mechanism in South Africa is commonly referred to as the "*Imported Services VAT*" system.

Under the Imported Services VAT system, if a South African VAT-registered business acquires services from a foreign supplier that is not registered for VAT in South Africa, the recipient (buyer) of the services is

responsible for accounting for the VAT on those imported services. In other words, the recipient must self-assess the VAT and include it in their VAT return as both the output tax and the input tax.

This means that the recipient of the services must calculate the VAT on the imported services and account for it as follows:

1. Include the VAT amount as both output tax (VAT payable) on their VAT return's output tax section.
2. Simultaneously, claim the same VAT amount as input tax (VAT refundable) on their VAT return's input tax section.

By doing so, the business accounts for the VAT on the imported services without the foreign supplier having to register for VAT in South Africa.

For example, if a South African business acquires services from a foreign supplier for R10,000, and the VAT rate is 15%, the business must calculate and account for the VAT as follows:

- Output VAT (VAT Payable) = R10,000 * 15% = R1,500
- Input VAT (VAT Refundable) = R10,000 * 15% = R1,500

The business will then report both the R1,500 as output tax (VAT Payable) and the R1,500 as input tax (VAT Refundable) on their VAT return, resulting in a neutral VAT impact.

To comply with the Imported Services VAT system, businesses in South Africa should ensure that their accounting software supports the Reverse Charge Mechanism and allows for the proper recording and reporting of VAT on imported services. This feature enables businesses to accurately account for the VAT on such transactions and remain compliant with South African VAT regulations.

Value Added Tax (VAT) in South Africa

South Africa currently applies a Value Added Tax (VAT) system. VAT is a consumption tax that is levied on the supply of goods and services within the country.

Here are some key points about VAT in South Africa:

1. VAT Rate: The standard VAT rate in South Africa is 15%. This means that when consumers purchase goods or services, they pay an additional 15% of the purchase price as VAT.
2. Registration Threshold: Businesses that provide taxable goods and services must register for VAT

with the South African Revenue Service (SARS) if their total taxable supplies exceed a certain threshold. As of ChatGPT's last update, the threshold for VAT registration was ZAR 1 million in a 12-month period. This means that businesses whose annual taxable turnover exceeds ZAR 1 million are required to register for VAT.

3. Input Tax Credit: Registered businesses can claim input tax credits for the VAT they have paid on their business expenses. This allows businesses to offset the VAT they pay on purchases against the VAT they collect on sales, resulting in a net VAT liability or refund.

4. VAT Exemptions and Zero-Rating: Some goods and services are exempt from VAT, while others are subject to a 0% VAT rate. Exempt supplies do not attract VAT, and businesses making exempt supplies cannot claim input tax credits. Zero-rated supplies, on the other hand, are still subject to VAT, but at a 0% rate. This means that businesses can claim input tax credits for zero-rated supplies.

5. VAT Returns: Registered businesses are required to submit regular VAT returns to SARS, usually on a bi-monthly basis. The VAT returns detail the VAT collected on sales and the VAT paid on purchases.

It's essential for businesses operating in South Africa to comply with the VAT regulations, including registration, record-keeping, and timely filing of VAT returns. Non-compliance can result in penalties and interest charges.

Please note that tax laws and regulations can change, so it is recommended to check the official website of the South African Revenue Service (SARS) or consulting with a tax professional for the most up-to-date information regarding VAT in South Africa.

What is registration/cancellation of registration for VAT?

Registration for Value Added Tax (VAT): Registration for VAT involves the formal process of registering as a VAT entrepreneur with the South African Revenue Service - Please consult - " *Value Added Tax*" section of the South African Revenue Service (SARS)'s website. There are basically two options to register for VAT:

1. Compulsory Registration: When your business reaches a certain turnover threshold or taxable supplies (which is currently R1 million), you are obliged to register for VAT within 21 working days from the date on which the R1 million is or will be exceeded.

2. Voluntary Registration: A person can also choose to voluntarily register for VAT if the value of taxable supplies made or to be made is less than R1 million, but under certain circumstances has exceeded R50 000 in the past 12-month period. The registration process usually includes providing essential business details, obtaining a unique VAT identification number and understanding the VAT rates and regulations applicable to your industry.

   Registration ensures compliance with VAT laws, enables you to collect tax from customers, and gives you the right to claim input tax credits.

3. Cancellation of registration for Value Added Tax (VAT) : Cancellation of VAT registration may happen in the following circumstances:
    - A VAT-vendor can apply in writing for cancellation of a VAT registration where the value of taxable supplies will be less than the mandatory registration threshold of R1 million in any consecutive 12-month period.
    - The Commissioner can cancel a VAT registration under certain circumstances.

Sets of Books Templates - Simplified Structure of VAT Accounts in the Chart of Accounts and the VAT-Return

osFinancials5/TurboCASH5 supports 79 different languages and tax regimes languages such as 87 Sets of Books (databases) that can be downloaded and customized to meet your requirements.

If you are a new user of osFinancials5/TurboCASH5, you can download the "*EN-SOUTHAFRICA*" Set of Books or of the industry-specific Set of Books (namely, *"FARMING, SERVICE, CHURCH, MEDICAL, MANUFACTURING, RETAIL*" or "*WORKSHOP*") from select the available Firebird database Sets of Books and linked languages available as a free download, the basic Chart of Accounts which already includes basic Output and Input VAT accounts and VAT codes is already pre-configured. There are also Manual Sets of Books namely HANDYMAN, HANDYMAN-A and HANDYMAN-B available for English which illustrate the basic transactions where VAT is involved.

These English-language versions of the Sets of Books, can be downloaded free of charge from the available Firebird database Sets of Books and linked languages that are available. While the Afrikaans-language Set of Books will contain "*Belasting op Toegevoegde Waarde (BTW)*", the English-language Set of Books will contain "*Value Added Tax (VAT)*". osFinancials5/TurboCASH5 has already included for your basic Output VAT and Input VAT account as sub-accounts of the VAT control account as an "*Current liabilities*" in the master "*templates*".

The following basic simplified VAT accounts have already been created for the purposes of this documentation:

Tutorial Sets of Books HANDYMAN, HANDYMAN-A and HANDYMAN-B and *Documentation in in this Help file*			*EN-SOUTH-AFRICA Sets of Books template*		
Account code/ *Tax-code*	*Description*	*Tax-rate*	*Account code/* *Tax-code*	*Account code*	*VAT-Rate*

G850-000	*VAT - Control - 15%*	*Not applicable*	*G950-000*	*VAT CONTROL ACCOUNT - 15%*	*NVT*
T860-010	*Output VAT - 15%*	*15%*	*T950-005*	*Output VAT - 15%*	*15%*
T860-020	*Input VAT - Standard rate -15%*	*15%*	*T950-010*	*Input VAT - Standard rate -15%*	*15%*
T860-030	*Input VAT - Capital goods -15%*	*15%*	*T950-020*	*Input VAT - Capital goods -15%*	*15%*
T860-040	*Zero-rated VAT - 0%*	*0%*	*T950-030*	*Zero-rated VAT - 0%*	*0%*
G850-100	*VAT - Payment - 15%*	*Not applicable*	*G950-100*	*VAT PAYMENT ACCOUNT - 15%*	*NVT*

The Output VAT codes and Input VAT codes were created as sub-accounts under the "*VAT CONTROL ACCOUNT - 15%*" and included in the "*Current liabilities*" account group in the Chart of Accounts in the Set of Books. VAT codes or rather sub-accounts are indicated with a "*T*" prefix on which the applicable VAT code's percentage must be specified whether it is at 15% or 0% percent, for example in the case of zero rate VAT.

Finally, a General Ledger account "*VAT PAYMENT ACCOUNT - 15%*" (indicated with a "*G*" prefix) was also created as a sub-account under the "*VAT CONTROL ACCOUNT - 15%*" (indicated with a "*G*" prefix).

The "*VAT PAYMENT ACCOUNT - 15%*" is the account in which all payments that must be remitted to the South African Revenue Service (SARS) (if the Output VAT is more than the Input VAT) as well as refunds received from the South African Revenue Service (SARS) is received (if the Input VAT is more than the Output VAT), is recorded.

The balances of the "*VAT CONTROL ACCOUNT - 15%*" are as follows:

- A credit balance on the "*VAT CONTROL ACCOUNT - 15%*" means that the Output VAT is more than the Input VAT, which consequently normally shows that VAT is owed to the South African Revenue Service (SARS).
- A debit balance on the "VAT CONTROL ACCOUNT - 15%" means that the Input VAT is more than the Output VAT and that there is VAT from the South African Revenue Service (SARS) recoverable or refundable.

The transactions of the "VAT PAYMENT ACCOUNT - 15%" are as follows:

- Debit transactions - Payments owed to the South African Revenue Service (SARS) are debited against this account when the payment is made from the payment journal linked to the Bank Account. This amount should be indicated on the VAT return (VAT-201), for the period of the VAT return, as the amount you must pay to SARS.
- Credit transactions - Refunds received from the South African Revenue Service (SARS) are credited to this account and credited when the payment is received from the receipt journal linked to the Bank account. This amount should be shown on the VAT return (VAT-201), for the period of the VAT return, as owed to you by SARS.

In addition to these basic Tax codes or Tax accounts, within the "*VAT CONTROL ACCOUNT - 15%*" main account, you can create further sub-accounts to accommodate the respective classifications and/or tax percentages in respect of Output VAT and Input VAT to help you complete the VAT returns and make the correct payments to the tax authority.

Full Structure of VAT Accounts in the Chart of Accounts and the VAT-Return

In the Chart of Accounts, Value Added Tax (VAT) payable is typically included in the "*Current liabilities*" section of the Balance sheet. This account represents the VAT that the business has collected on sales but has not yet remitted to the tax authorities.

To simplify matters, in this example, the Output VAT and Input VAT, the sub-accounts or tax codes are organized in a way that matches the VAT codes and account numbers with the corresponding sections of the VAT201 return.

To ensure proper accounting and alignment with the VAT return, it's important to structure VAT sub-accounts (VAT codes) for the various rates that apply, within the VAT Control account. The VAT Control account, G2400-000, reflects the net balance due to SARS. A credit balance implies that the VAT is payable to SARS.

The breakdown of the VAT payable account includes the following sub-accounts (T-codes) (T is the prefix for Tax account type) to provide more detailed information about different types of VAT:

Output VAT (supplied by you):

1. T2400-010 - Output VAT- Standard rate - 15% (VAT on Sales): Field 1 on the VAT return. Standard rate (excluding capital goods and/or services and accommodation). This sub-account records the VAT that the business has charged on its sales transactions. It represents the VAT collected from customers.
2. T2400-015 - Output VAT- Capital goods - 15% (VAT on Sales): Field 1A on the VAT return. Standard

rate (only capital goods and/or services). This sub-account records the VAT that the business has charged on its sales transactions only for capital goods and/or services supplied by you at the standard rate, . This field must reflect the consideration received in respect of:

- Sale of capital goods and/or services (e.g. Sale of land and buildings, plant and machinery, intellectual property).
- VAT on assets upon termination of registration.

3. T2400-020 - Output VAT- Zero rate - 0% (VAT on Sales): Field 2 on the VAT return. Zero rate (excluding goods exported). - This sub-account is used to record sales that are subject to a 0% VAT rate. Even though no VAT is charged on these sales, they still need to be accounted for separately.
4. T2400-025 - Output VAT- Zero rate - 0% - Exported goods (VAT on Sales): Field 2A on the VAT return. - Zero rate (only exported goods). Zero Rated VAT (Sales with 0% VAT): This sub-account is used to record sales only exported goods that are subject to a 0% VAT rate. Even though no VAT is charged on these sales, they still need to be accounted for separately.
5. T2400-030 - VAT- Exempt and Non supplies - 0% (VAT on Sales): Field 3 on the VAT return. - Exempt and non-supplies The amount of exempt supplies or non-supplies supplied by you must be completed in Field 3. This sub-account is used to record sales of exempt supplies or non-supplies.
   - Exempt supplies are transactions on which no output tax is levied, and no input tax relating to the expenditure on these supplies may be deducted.
   - Examples of exempt supplies include financial services, donated goods or services by an association not for gain, residential accommodation, the letting of leasehold land, and other specified items.

   In a tax code or VAT sub-account, the tax rate for exempt supplies and non-supplies should be set at 0%. This indicates that although these supplies are subject to VAT reporting, they are taxed at a 0% rate, meaning that no actual VAT amount is charged to the customer on these transactions.

   By using a 0% tax rate for exempt supplies and non-supplies, businesses can distinguish them from standard-rated supplies (which have a positive VAT rate) and zero-rated supplies (which have a 0% VAT rate but still allow for VAT recovery on input purchases). This differentiation is crucial for accurate VAT reporting, as well as for proper treatment of input VAT claims related to taxable supplies.

   Remember that even though no VAT is charged on exempt supplies and non-supplies, they still need to be accounted for separately in the VAT return. Additionally, businesses should ensure that they don't claim any input VAT deductions related to these supplies, as no VAT is recoverable on them.
6. T2400-050 - Accommodation (VAT on Sales): Field 5 on the VAT return. Supply of accommodation. Commercial accommodation provided for a full period of more than 28 days. The VAT exclusive

amount of accommodation supplied not exceeding 28 days must be completed in Field 7. The total value (VAT excluded) in respect of accommodation supplied for a period equal to or less than 28 days (full period) must be reported in Field 7. This sub-account is used to record the supply of commercial accommodation provided for a full period of more than 28 days.

Please note that the VAT treatment of commercial accommodation services can be intricate, and it's crucial for businesses to correctly record and report these transactions to comply with VAT regulations.

7. T2400-100 - VAT- Adjustments - Change in use and export of second-hand goods: Field 10 on the VAT return. Change in use and export of second-hand goods.
8. T2400-120 - VAT- Adjustments - Field 12 on the VAT return. – Other and imported services

Input VAT (supplied to you): This sub-account records the VAT that the business has paid on its purchases of goods and services. It represents the VAT that the business can potentially recover or offset against the output VAT.

9. T2400-140 - Input VAT- Capital goods - 15%: Field 14 on the VAT return. Capital goods and/or services supplied to you
10. T2400-145 - Input VAT- Capital goods - Imported - 15% Field 14A on the VAT return. Capital goods imported by you. This sub-account records the VAT that the business has paid on its purchases of capital goods. It represents the VAT that the business can potentially recover or offset against the Output VAT.
11. T2400-150 - Input VAT - Standard rate - 15% (VAT on Purchases) Field 15 on the VAT return. Other goods and/or services supplied to you (not capital goods). This sub-account records the VAT that the business has paid on its purchases of goods and services. It represents the VAT that the business can potentially recover or offset against the output VAT.
12. T2400-155 - Input VAT - Standard rate - Imported (VAT on Purchases): Field 15A on the VAT return. Other goods imported by you (not capital goods)
13. T2400-160 - VAT - Adjustments - Change in use - Imported (VAT on Purchases): Field 16 on the VAT return. Change in use The VAT amount in respect of the change in use must be completed in Field 16. Only the VAT amount in respect of:
    - Goods and services previously applied for non-taxable purposes and now wholly or partially applied for taxable purposes.
    - An increase in the extent of application of use of goods and / or services for taxable purposes.
14. T2400-170 - VAT Adjustments Bad Debts (Uncollectible VAT on Sales): Field 17 on the VAT return.

This sub-account is used to record the VAT that becomes uncollectible due to bad debts. When a customer does not pay their invoice, the VAT that was previously charged on the sale may need to be reversed or adjusted to reflect the uncollectible status. NOTE: "The VAT amount in respect of bad debts must be completed in Field 17. Fill in only the VAT amount in respect of irrecoverable debts on which VAT was levied during the sale. Only applies if registered under the invoice basis of VAT" according to SARS.

15. T2400-180 - VAT Adjustments - Other. Field 18 on the VAT return - This sub-account is used to record various VAT adjustments on credit notes, debit notes, and changes in accounting basis.
    - The VAT amount in respect of credit notes issued by the business should be reported in Field 18 on the VAT return. Credit notes are issued when a supplier refunds money to a customer or reduces the value of a previous sale, and the VAT amount associated with the credit note needs to be adjusted on the VAT return.
    - The VAT amount in respect of debit notes received by the business should also be reported in Field 18 on the VAT return. Debit notes are received from suppliers when they reduce the value of a previous purchase, and the VAT amount associated with the debit note requires adjustment on the VAT return.
    - Additionally, this sub-account includes any other VAT adjustments related to a change in accounting basis that may impact the VAT calculations and reporting. These adjustments may arise due to changes in the business's VAT accounting methods or other relevant factors that affect the VAT amount.

    Properly accounting for credit notes, debit notes, and changes in accounting basis is crucial to ensure accurate VAT reporting. By using this sub-account and corresponding Field 18 on the VAT return, businesses can accurately reflect any necessary adjustments to the VAT amounts associated with these transactions. As always, it's essential to adhere to the tax regulations and guidelines of the relevant jurisdiction to maintain compliance with VAT reporting requirements.

Totals on the VAT201 return:

- TOTAL A - Field 13 - Total Output Tax: Total Output Tax must be equal to the sum of Fields (4+4A+9+11+12). This amount is automatically calculated on the VAT201 Declaration.
- TOTAL B - Field 19 - Total Input Tax: Total Input Tax must be equal to the sum of Fields (14+14A+15+15A+16+17+18). This amount is automatically calculated on the VAT201 Declaration.
- Field 20 – VAT Payable /Refundable (Total A - Total B) must be equal to the difference between Fields 13 and 19. This amount is automatically calculated on the VAT201 Declaration. If the difference between Field 13 and 19 is less than zero, then the minus (-) sign must be added in the first block before the amount entered in the field. The minus sign (-) will indicate that a refund is due. If Field 20

has no minus sign (-) before the amount, then the amount indicates that payment is due.

Diesel refunds

In the Sample Chart of Accounts in this documentation, (Sets of Books templates) only includes the following on the VAT201 return:

- *Output VAT accounts and Tax codes for Total A - Output Tax of field 13 Field - This amount is automatically calculated on the VAT201 Declaration. based on the declarations submitted in Fields 4+4A+9+11+12.*
- *Input VAT accounts and Tax codes for Total B - Input Tax of field 20 Field - This amount is automatically calculated on the VAT201 Declaration. based on the declarations submitted in Fields 14+14A+15+15A+16+17+18.*

On the VAT201 return Fields 21 to Field 38 "CALCULATION OF DIESEL REFUND IN TERMS OF THE CUSTOMS AND EXCISE ACT" is excluded form the Sample Chart of Accounts in this documentation (Sets of Books templates) on the VAT201 return

If Diesel refunds is applicable to your business or industry, you need to create additional accounts for the relevant sections or categories (i.e. "Land," "Offshore," "Rail & Harbour services," and "Peak Power Plant") to assist you to complete the correct details on the Diesel refunds section of the VAT-return.

It is once again important when dealing with complex tax matters like VAT refunds and specific sections of tax returns, it's wise to rely on the expertise of professionals who are well-versed in tax regulations and can provide tailored guidance for your unique business circumstances.

Additionally, there is the VAT Payment Account, G2400-200, which is used to record payments in cases where the Output VAT exceeds the Input tax. This represents the VAT payable as submitted on the VAT return, and any payments to SARS would be recorded to this account.

Conversely, if the Input VAT exceeds the Output VAT, resulting in a tax refund due from SARS, the refund received would be recorded to the VAT Payment Account, G2400-200.

In addition to this example and text, it is important to note that this is a basic structure of the VAT Accounts. Depending on the complexities for the nature of your business, such as exporting of taxable supplies, importing of taxable supplies, second-hand goods, accommodation, adjustments, etc., you may need to add additional tax codes applicable to your business.

This well-organized structure ensures that VAT liabilities are accurately accounted for and helps businesses in complying with tax regulations while maintaining clear records for reporting and analysis.

Overall, the explanation provides a comprehensive understanding of how VAT is accounted for in the Chart of Accounts for South Africa, and the breakdown of sub-accounts offers valuable insights into the different

components of VAT transactions.

It's important for businesses to maintain accurate records and ensure that VAT liabilities are correctly calculated and reported in compliance with the tax regulations in South Africa. As always, consulting with accounting professionals or tax experts can provide further guidance and ensure proper adherence to the tax laws and regulations related to VAT.

Is there any VAT Schemes in South Africa?

As of ChatGPT's last update in September 2021, South Africa does not have specific VAT schemes like some other countries have, such as the UK's Flat Rate Scheme or Australia's Cash Accounting Scheme. In South Africa, the Value Added Tax (VAT) system follows a standard method, and all VAT-registered businesses charge VAT on their taxable supplies and claim input tax credits on their eligible business purchases.

The standard VAT rate in South Africa is a flat rate that applies to most goods and services. There are certain supplies that may be exempt from VAT, such as certain financial services, residential property rentals, and some basic food items. Additionally, there are specific zero-rated supplies that are subject to a 0% VAT rate, such as certain basic food items, export of goods, and certain services provided to non-residents.

Businesses in South Africa are required to register for VAT if their annual taxable turnover exceeds the threshold set by the South African Revenue Service (SARS). Once registered, businesses charge VAT on their taxable supplies, keep appropriate records, and submit regular VAT returns to SARS.

It's essential for businesses to accurately account for VAT in their Chart of Accounts, ensuring that VAT collected from customers is correctly recorded under Output VAT and that VAT paid on purchases is correctly recorded under Input VAT.

Please note that tax laws and regulations are subject to change, so it's always best to consult with a tax professional or visit the South African Revenue Service (SARS) website for the most up-to-date information regarding VAT in South Africa.

VAT on Bad debts?

VAT on bad debts refers to the treatment of Value Added Tax (VAT) when a business is unable to recover the VAT it has previously charged on sales to customers who subsequently fail to pay their debts, resulting in the debts becoming "bad" or uncollectible. In many tax systems, including the VAT system in various countries, there are specific provisions that address the treatment of bad debts for VAT purposes.

The treatment of VAT on bad debts can vary depending on the specific rules of each country's VAT system, but some common approaches include:

1. Bad Debt Relief: Many VAT systems allow businesses to claim a deduction or refund for the VAT previously charged and remitted to the tax authorities on sales that have turned into bad debts. This is often referred to as "*bad debt relief*" or "*VAT bad debt relief*." The relief essentially reduces the VAT liability of the business, helping to avoid double taxation on the unpaid amounts.
2. Conditions for Bad Debt Relief: The conditions for claiming bad debt relief may vary by country, but they generally include requirements such as:
    - The debt must have been written off as uncollectible by the business.
    - The debt must be overdue for a specific period (e.g., six months) from the due date of payment.
    - The business must have taken reasonable steps to recover the debt.
    - The VAT on the bad debt must have been previously accounted for and paid to the tax authorities.
3. Adjustment Period: Some countries have specific rules regarding the timing of bad debt relief. There may be a waiting period after which a business can claim the relief, ensuring that the debt is genuinely uncollectible before the VAT is adjusted.
4. Partial Bad Debts: In certain cases, where only a portion of the debt is deemed uncollectible, businesses may be able to claim relief only for the VAT applicable to the uncollectible portion.

It's important to note that the rules and procedures for VAT on bad debts can be complex and may vary from country to country. Businesses should follow the specific guidelines provided by their country's tax authority and maintain proper records and documentation to support any claims for bad debt relief.

As tax laws are subject to change, businesses should consult with tax professionals or tax authorities in their jurisdiction for the most up-to-date and accurate information on VAT treatment of bad debts.

Special Notes: Import of General Ledger Accounts and VAT Accounts

When you import a Chart of Accounts into your own or new Set of Books, it is important to pay particular attention to the following:

1. Text file - Import - General ledger accounts - The following require special attention:
    - First sub-account - The Tax tab on the first VAT code (e.g. Output VAT - 15% (T850010) is missing after import. You will need to delete the first VAT sub-account and recreate it as a VAT account type and the VAT percentage must be entered.

- Zero rate - VAT codes - Zero rate VAT with a VAT percentage of "*0%*" can be blank. You will need to reconfirm the "*0%*" as the VAT percentage.
- Inactive VAT Codes - The inactive VAT codes in your source Import text file may be imported as "*Active*". If there are any VAT accounts or VAT codes that you do not use, you can their status as "Inactive" or delete them.

2. Spreadsheet - Import - General ledger accounts - When you import accounts from the spreadsheet option, all sub-accounts can be imported as main accounts. You will need to delete the VAT codes (as main accounts) and recreate your VAT sub-accounts or VAT codes and key in the correct VAT percentages on the VAT tab. Above and beyond the VAT related accounts, will you must also check the other accounts in your ledger that contain sub-accounts and perform the necessary actions.

You can print a "Tax codes - Tax rates" report on the User Reports → Tax menu on the Reports ribbon to print a list of VAT codes and their respective percentages. The status of whether the VAT code is "Active" or "Inactive" will also be indicated on this report. Tax percentages with a zero-rate will be Imported as a blank percentage.

Goods and Services Tax (GST) - Australia

Goods and Services Tax (GST) in Australia

As of ChatGPT's last update in September 2021, Australia applies a Goods and Services Tax (GST) instead of Value Added Tax (VAT). The GST is a broad-based consumption tax levied on the supply of most goods, services, and other items in Australia.

Here are some key points about the GST in Australia:

1. GST Rate: The standard GST rate in Australia is 10%. This means that when consumers purchase most goods and services, they pay an additional 10% of the purchase price as GST.
2. Taxable Supplies: The GST applies to most goods and services provided by businesses, including sales of goods, services, imports, and certain intangible supplies. However, some supplies may be GST-free or input-taxed, meaning GST is not charged on them or the GST paid on related expenses cannot be claimed as an input tax credit.
3. GST Registration: Businesses with an annual turnover of AUD 75,000 or more (AUD 150,000 or more

for non-profit organizations) are required to register for GST with the Australian Taxation Office (ATO). Once registered, businesses must charge GST on their taxable supplies and can claim input tax credits for the GST paid on their business expenses.

4. Business Activity Statement (BAS): Registered businesses must lodge regular Business Activity Statements with the ATO, typically on a monthly or quarterly basis, to report their GST transactions. The BAS includes information on GST collected (output tax) and GST paid on expenses (input tax), and the net amount is remitted to the ATO.

5. Input Tax Credits: Registered businesses can claim input tax credits for the GST they have paid on their business expenses. This allows businesses to offset the GST they pay on purchases against the GST they collect on sales, resulting in a net GST liability or refund.

6. GST Exemptions: Some goods and services are exempt from GST, meaning they are not subject to the tax. Common exemptions include basic food items, some medical and health services, and certain educational services.

7. GST on Imported Goods: As of July 1, 2018, Australia introduced the "*GST on Low-Value Imported Goods*" (also known as "low-value imported goods GST"), which applies GST to certain low-value goods imported by consumers into Australia.

It's essential for businesses operating in Australia to understand and comply with the GST regulations, including registration, reporting, and remittance requirements. As tax laws can change, businesses should consult with the Australian Taxation Office or tax professionals for the most up-to-date information regarding the GST in Australia.

Is there any GST Schemes in Australia?

Yes, there are several Goods and Services Tax (GST) schemes in Australia. These schemes are designed to simplify GST reporting for specific types of businesses and transactions. The main GST schemes in Australia include:

1. Standard GST Scheme: This is the standard GST scheme that applies to most businesses in Australia. Under this scheme, businesses charge GST on their taxable sales (output GST) and claim GST credits for the GST included in the price of goods and services they acquire for their business (input GST). GST returns are usually filed on a regular basis, either monthly, quarterly, or annually, depending on the business's turnover.

2. Cash Accounting Scheme: Businesses with an annual turnover of less than AUD $10 million can choose to use the cash accounting scheme. Under this scheme, businesses account for GST when they receive payment for their sales or when they make payments for their purchases. This can help with cash flow management for small businesses.

3. Accruals Accounting Scheme: This is the default scheme for businesses with an annual turnover of AUD $10 million or more. Under this scheme, GST is accounted for when an invoice is issued or received, regardless of whether payment has been made. Most larger businesses in Australia use this scheme.
4. Simplified GST Accounting Methods: There are several simplified accounting methods available for specific types of businesses, such as the cash basis, annual apportionment, and the 1/11th basis. These methods simplify the calculation and reporting of GST for certain business activities.
5. Margin Scheme: The margin scheme is applicable to certain transactions involving real property (e.g., property development or sales). Under this scheme, GST is calculated based on the margin (the difference between the selling price and the purchase price) rather than the full selling price.
6. Tourist Refund Scheme (TRS): The TRS allows overseas visitors to claim a refund of the GST paid on goods purchased in Australia, subject to certain conditions.

It's important for businesses to select the most appropriate GST scheme based on their turnover, the nature of their transactions, and their reporting preferences. Businesses are advised to seek guidance from accounting professionals or tax advisors to determine the best GST scheme for their specific circumstances.

Structure of GST Accounts in the Chart of Accounts for the Australia

In the Chart of Accounts for businesses in Australia, Goods and Services Tax (GST) accounts are structured to accurately record and report GST-related transactions.

Standard GST Scheme

The structure of GST accounts for the Standard GST Scheme may vary depending on the size and complexity of the business, but here is a common framework:

1. GST Control Account (Current Liabilities):
    - 2000 - GST Control: This is the main GST Control account that tracks the GST amounts payable or refundable to the Australian Taxation Office (ATO). It represents the net balance due to or from the ATO. A credit balance implies that the GST is recoverable from the ATO, while a debit balance indicates GST is payable to the ATO.
2. GST on Sales (Output Tax):
    - 2001 - GST on Sales: This account records the GST charged on sales made by the business. It represents the GST collected from customers and is payable to the ATO.

3. GST on Purchases (Input Tax Credit):
    - 2002 - GST on Purchases: This account records the GST paid on purchases made by the business. It represents the GST that can be claimed as input tax credits (ITC) from the ATO.
4. GST on Imports:
    - 2003 - GST on Imports: This account records the GST paid on goods imported into Australia from overseas. The GST on imports is usually paid directly to the Australian Customs and Border Protection Service (ACBPS).
5. GST Adjustments:
    - 2004 - GST Adjustments: This account is used to record any adjustments or corrections to previously reported GST amounts, such as bad debts, errors, or changes in taxable supplies.
6. GST on Acquisitions from Overseas Suppliers:
    - 2005 - GST on Acquisitions: This account records the GST on goods and services acquired from overseas suppliers. The GST on acquisitions is self-assessed by the business and included in the GST return.
7. GST on Capital Assets:
    - 2006 - GST on Capital Assets: This account is used to record GST on the acquisition of capital assets, such as machinery, equipment, or property.
8. GST on Disposals of Capital Assets:
    - 2007 - GST on Disposals: This account records GST on the disposal of capital assets.
9. GST Bad Debt Relief:
    - 2008 - GST Bad Debt Relief: This account records the GST amounts that are claimed as bad debt relief when customers fail to pay their invoices.

It's important to note that the above structure is a general framework, and businesses may have additional sub-accounts or variations based on their specific needs and the complexity of their GST transactions. Properly organizing and maintaining GST accounts in the Chart of Accounts ensures accurate GST reporting and compliance with ATO regulations in Australia. Businesses are encouraged to consult with accounting professionals or tax advisors to set up their Chart of Accounts effectively and ensure compliance with GST requirements.

Cash Accounting Scheme

In Australia, the Cash Accounting Scheme for Goods and Services Tax (GST) allows eligible businesses to

account for GST on a cash basis, which means GST is accounted for and paid only when the business receives payment from customers. Here is a common structure of VAT accounts in the Chart of Accounts for businesses in Australia that use the Cash Accounting Scheme:

1. GST Collected (Current Liability):
    - Account Code: 2XXX
    - Description: This account is used to record the GST collected from customers. It represents the GST amount that the business has charged on sales but has not yet remitted to the Australian Taxation Office (ATO). The balance of this account reflects the net GST payable to the ATO.
2. GST Paid (Current Asset):
    - Account Code: 1XXX
    - Description: This account is used to record the GST paid on purchases made by the business. It represents the GST that the business can claim as input tax credits. The balance of this account reflects the net GST refundable from the ATO.
3. GST Adjustment:
    - Account Code: 3XXX
    - Description: This account is used to record any adjustments or corrections to previously reported GST amounts. It may include adjustments for bad debts, errors, or changes in the business's GST status.
4. GST Refund Due:
    - Account Code: 1XXX.X
    - Description: This sub-account is used to track any GST refund due to the business. It reflects the amount of GST that the business has paid on purchases and is eligible for a refund from the ATO.
5. GST Payable:
    - Account Code: 2XXX.X
    - Description: This sub-account is used to track any GST payable by the business. It reflects the amount of GST that the business has collected from customers and needs to remit to the ATO.
6. GST Paid on Imports:

- Account Code: 1XXX.XX
- Description: This sub-account is used to record the GST paid on imports of goods into Australia. It represents the GST that the business needs to remit to the ATO on imported goods.

7. GST Adjustments - Imports:
   - Account Code: 3XXX.XX
   - Description: This sub-account is used to record any adjustments or corrections related to GST on imports.
8. GST Suspense:
   - Account Code: 4XXX
   - Description: This account is used to temporarily record GST amounts that are not yet allocated to specific transactions or accounts.

It's important to note that the account codes and descriptions mentioned above are examples, and the actual structure of VAT accounts may vary depending on the specific needs and preferences of the business. Businesses using the Cash Accounting Scheme should configure their Chart of Accounts in their accounting software accordingly to accurately record and report GST transactions in compliance with Australian tax regulations. Additionally, businesses should consult with accounting professionals or tax advisors to ensure that they understand the requirements and implications of using the Cash Accounting Scheme for GST.

Accruals Accounting Scheme

In Australia, the Accruals Accounting Scheme for Goods and Services Tax (GST) is the standard method of accounting for GST. Under this scheme, businesses account for GST based on the date of invoice issuance or receipt, regardless of when the payment is made. Here is a common structure of VAT accounts in the Chart of Accounts for businesses in Australia that use the Accruals Accounting Scheme:

1. GST Collected (Current Liability):
   - Account Code: 2XXX
   - Description: This account is used to record the GST collected from customers. It represents the GST amount that the business has charged on sales and needs to remit to the Australian Taxation Office (ATO). The balance of this account reflects the net GST payable to the ATO.
2. GST Paid (Current Asset):

- Account Code: 1XXX
- Description: This account is used to record the GST paid on purchases made by the business. It represents the GST that the business can claim as input tax credits. The balance of this account reflects the net GST refundable from the ATO.

3. GST Adjustment:
   - Account Code: 3XXX
   - Description: This account is used to record any adjustments or corrections to previously reported GST amounts. It may include adjustments for bad debts, errors, or changes in the business's GST status.
4. GST Refund Due:
   - Account Code: 1XXX.X
   - Description: This sub-account is used to track any GST refund due to the business. It reflects the amount of GST that the business has paid on purchases and is eligible for a refund from the ATO.
5. GST Payable:
   - Account Code: 2XXX.X
   - Description: This sub-account is used to track any GST payable by the business. It reflects the amount of GST that the business has collected from customers and needs to remit to the ATO.
6. GST Paid on Imports:
   - Account Code: 1XXX.XX
   - Description: This sub-account is used to record the GST paid on imports of goods into Australia. It represents the GST that the business needs to remit to the ATO on imported goods.
7. GST Adjustments - Imports:
   - Account Code: 3XXX.XX
   - Description: This sub-account is used to record any adjustments or corrections related to GST on imports.
8. GST Suspense:

- Account Code: 4XXX
- Description: This account is used to temporarily record GST amounts that are not yet allocated to specific transactions or accounts.

It's important to note that the account codes and descriptions mentioned above are examples, and the actual structure of VAT accounts may vary depending on the specific needs and preferences of the business. Businesses using the Accruals Accounting Scheme should configure their Chart of Accounts in their accounting software accordingly to accurately record and report GST transactions in compliance with Australian tax regulations. Additionally, businesses should consult with accounting professionals or tax advisors to ensure that they understand the requirements and implications of using the Accruals Accounting Scheme for GST.

Simplified GST Accounting Methods

In Australia, businesses that have an annual turnover of less than AUD $10 million may be eligible to use the Simplified GST Accounting Methods. These methods simplify the way GST is accounted for, making it easier for smaller businesses to manage their GST obligations. Here is a common structure of GST accounts in the Chart of Accounts for businesses in Australia that use the Simplified GST Accounting Methods:

1. GST Collected (Current Liability):
    - Account Code: 2XXX
    - Description: This account is used to record the GST collected from customers. It represents the GST amount that the business has charged on sales and needs to remit to the Australian Taxation Office (ATO). The balance of this account reflects the net GST payable to the ATO.
2. GST Paid (Current Asset):
    - Account Code: 1XXX
    - Description: This account is used to record the GST paid on purchases made by the business. It represents the GST that the business can claim as input tax credits. The balance of this account reflects the net GST refundable from the ATO.
3. GST Adjustment:
    - Account Code: 3XXX
    - Description: This account is used to record any adjustments or corrections to previously reported GST amounts. It may include adjustments for bad debts, errors, or changes in the business's GST status.

4. GST Refund Due:
    - Account Code: 1XXX.X
    - Description: This sub-account is used to track any GST refund due to the business. It reflects the amount of GST that the business has paid on purchases and is eligible for a refund from the ATO.
5. GST Payable:
    - Account Code: 2XXX.X
    - Description: This sub-account is used to track any GST payable by the business. It reflects the amount of GST that the business has collected from customers and needs to remit to the ATO.
6. GST Paid on Imports:
    - Account Code: 1XXX.XX
    - Description: This sub-account is used to record the GST paid on imports of goods into Australia. It represents the GST that the business needs to remit to the ATO on imported goods.
7. GST Adjustments - Imports:
    - Account Code: 3XXX.XX
    - Description: This sub-account is used to record any adjustments or corrections related to GST on imports.
8. GST Suspense:
    - Account Code: 4XXX
    - Description: This account is used to temporarily record GST amounts that are not yet allocated to specific transactions or accounts.

It's important to note that the account codes and descriptions mentioned above are examples, and the actual structure of GST accounts may vary depending on the specific needs and preferences of the business. Businesses using the Simplified GST Accounting Methods should configure their Chart of Accounts in their accounting software accordingly to accurately record and report GST transactions in compliance with Australian tax regulations. Additionally, businesses should consult with accounting professionals or tax advisors to ensure that they understand the requirements and implications of using the Simplified GST Accounting Methods.

Margin Scheme

In Australia, the Margin Scheme is a special method of calculating Goods and Services Tax (GST) on the sale of certain types of property, such as second-hand goods, real property, or other specified items. When using the Margin Scheme, GST is calculated based on the difference between the selling price and the original purchase price, rather than the full selling price. Here is a common structure of GST accounts in the Chart of Accounts for businesses in Australia that use the Margin Scheme:

1. Margin Scheme Sales (Current Revenue):
    - Account Code: 4XXX
    - Description: This account is used to record the sales made under the Margin Scheme. It represents the revenue generated from the sale of items eligible for the Margin Scheme.
2. Margin Scheme GST Payable (Current Liability):
    - Account Code: 2XXX
    - Description: This account is used to record the GST payable on Margin Scheme sales. It represents the GST amount that the business needs to remit to the Australian Taxation Office (ATO) based on the margin between the selling price and the original purchase price.
3. Margin Scheme GST Adjustment:
    - Account Code: 3XXX
    - Description: This account is used to record any adjustments or corrections related to the Margin Scheme GST. It may include adjustments for errors or changes in the business's Margin Scheme calculations.
4. Margin Scheme GST Refund Due (Current Asset):
    - Account Code: 1XXX.X
    - Description: This sub-account is used to track any GST refund due to the business under the Margin Scheme. It reflects the amount of GST that the business has paid on eligible purchases and is eligible for a refund from the ATO.
5. Margin Scheme GST Payable (Current Liability):
    - Account Code: 2XXX.X
    - Description: This sub-account is used to track any GST payable by the business on Margin Scheme sales. It reflects the amount of GST that the business needs to remit to the ATO based on the margin.

6. Margin Scheme GST Suspense:
    - Account Code: 5XXX
    - Description: This account is used to temporarily record GST amounts that are not yet allocated to specific transactions or accounts under the Margin Scheme.

It's important to note that the account codes and descriptions mentioned above are examples, and the actual structure of GST accounts may vary depending on the specific needs and preferences of the business. Businesses using the Margin Scheme should configure their Chart of Accounts in their accounting software accordingly to accurately record and report GST transactions in compliance with Australian tax regulations. Additionally, businesses should consult with accounting professionals or tax advisors to ensure that they understand the requirements and implications of using the Margin Scheme for GST.

Tourist Refund Scheme (TRS)

The Tourist Refund Scheme (TRS) allows eligible tourists to claim a refund of the Goods and Services Tax (GST) and Wine Equalisation Tax (WET) paid on certain goods purchased in Australia. Businesses that sell goods to tourists eligible for the TRS may need to account for the GST and WET on these sales differently in their Chart of Accounts. Here is a common structure of GST accounts in the Chart of Accounts for businesses in Australia that deal with the Tourist Refund Scheme:

1. TRS Sales (Current Revenue):
    - Account Code: 4XXX
    - Description: This account is used to record the sales made to tourists eligible for the TRS. It represents the revenue generated from the sales of goods that qualify for the TRS.
2. TRS GST Payable (Current Liability):
    - Account Code: 2XXX
    - Description: This account is used to record the GST payable on TRS sales. It represents the GST amount that the business needs to remit to the Australian Taxation Office (ATO) based on the sales to TRS-eligible tourists.
3. TRS WET Payable (Current Liability):
    - Account Code: 2XXX.X
    - Description: This sub-account is used to track the WET payable on sales of wine to TRS-eligible tourists. It represents the WET amount that the business needs to remit to the ATO.
4. TRS GST Adjustment:

- Account Code: 3XXX
- Description: This account is used to record any adjustments or corrections related to the GST on TRS sales. It may include adjustments for errors or changes in the business's TRS calculations.

5. TRS GST Refund Due (Current Asset):
   - Account Code: 1XXX.X
   - Description: This sub-account is used to track any GST refund due to the business from the ATO for TRS sales. It reflects the amount of GST that the business has paid on eligible purchases related to TRS sales and is eligible for a refund from the ATO.
6. TRS GST Payable (Current Liability):
   - Account Code: 2XXX.X
   - Description: This sub-account is used to track any GST payable by the business on TRS sales. It reflects the amount of GST that the business needs to remit to the ATO based on the sales to TRS-eligible tourists.
7. TRS GST Suspense:
   - Account Code: 5XXX
   - Description: This account is used to temporarily record GST amounts that are not yet allocated to specific transactions or accounts related to TRS sales.

It's important to note that the account codes and descriptions mentioned above are examples, and the actual structure of GST accounts may vary depending on the specific needs and preferences of the business. Businesses that participate in the Tourist Refund Scheme should configure their Chart of Accounts in their accounting software accordingly to accurately record and report GST and WET transactions in compliance with Australian tax regulations. Additionally, businesses should consult with accounting professionals or tax advisors to ensure that they understand the requirements and implications of dealing with the Tourist Refund Scheme.

GST Return in Australia

What blocks or fields appears on the GST return in Australia?

As of ChatGPT's last update in September 2021, the Goods and Services Tax (GST) return in Australia includes the following blocks or fields:

1. Business and Contact Information: This section requires the business's name, ABN (Australian

Business Number), GST registration status, and contact details.

2. GST Turnover: The total value of sales, other supplies, and taxable importations for the tax period. This is used to determine the applicable GST rate.
3. GST on Sales: This section includes the GST amount collected on sales and other supplies made during the tax period.
4. GST on Purchases: This field includes the GST amount paid on purchases and other expenses during the tax period.
5. Capital Purchases: Any capital purchases made during the tax period that are eligible for GST credit.
6. Non-capital Purchases: This section includes non-capital purchases on which you can claim a GST credit.
7. Export Sales: The value of GST-free sales or other supplies made for export purposes.
8. Other GST-Free Sales: The value of other GST-free sales or supplies made during the tax period.
9. Input Taxed Sales: The value of sales or supplies that are input taxed (not subject to GST).
10. Total GST Payable: This is the net GST amount calculated as GST on Sales minus GST on Purchases, considering any adjustments.
11. Luxury Car Tax (LCT): If applicable, the LCT payable on luxury cars.
12. Wine Equalisation Tax (WET): If applicable, the WET payable on wine sales.
13. Fuel Tax Credits: If eligible, this section includes the credits for fuel tax that can be claimed.
14. Other Taxes: Any other taxes or adjustments that need to be reported.
15. Total Amount Payable or Refundable: The final amount to be paid to the ATO (Australian Taxation Office) or refunded, considering all GST amounts and credits.

Please note that tax regulations may change over time, so it's essential to refer to the latest guidelines and forms provided by the Australian Taxation Office (ATO) for the most up-to-date information. If you are preparing a GST return, it's always a good idea to seek professional advice or use official resources to ensure compliance with current tax laws.

Full Reporting - GST Returns

The GST return full reporting requirements for businesses in Australia with a GST turnover of $10 million or more, reporting and paying GST quarterly. Below are the specific fields (labels) that need to be reported on the activity statement each quarter:

- G1: Total sales - The total value of all sales made during the tax quarter.

- G2: Export sales - The value of GST-free sales or other supplies made for export purposes.
- G3: Other GST-free sales - The value of other GST-free sales or supplies made during the tax quarter.
- G10: Capital purchases - The total value of capital purchases made during the tax quarter that are eligible for GST credit.
- G11: Non-capital purchases - The total value of non-capital purchases on which you can claim a GST credit during the tax quarter.
- 1A: GST on sales - The total amount of GST collected on sales and other supplies made during the tax quarter.
- 1B: GST on purchases - The total amount of GST paid on purchases and other expenses during the tax quarter.

Additionally, if the business has obligations or entitlements related to Wine Equalisation Tax (WET), Luxury Car Tax (LCT), or Fuel Tax Credits (FTC), the following labels must also be reported each quarter:

- 1C: Wine Equalisation Tax (WET) - If applicable, the WET payable on wine sales.
- 1D: Luxury Car Tax (LCT) - If applicable, the LCT payable on luxury cars.
- 1E: Fuel Tax Credits (FTC) - If eligible, this label includes the credits for fuel tax that can be claimed.
- 1F: FTC adjustments - Any adjustments to Fuel Tax Credits.
- 7C: WET payable - If applicable, the WET payable for the tax quarter.
- 7D: LCT payable - If applicable, the LCT payable for the tax quarter.

It's important for businesses to accurately report and calculate their GST and related taxes on their activity statements to comply with Australian tax regulations. For specific details and instructions on reporting methods, businesses should refer to official resources provided by the Australian Taxation Office (ATO) or consult with a qualified tax professional.

Simpler BAS reporting method GST Returns

Under the Simpler BAS reporting method in Australia, businesses with a GST turnover of less than $10 million are required to report less information on their quarterly Business Activity Statement (BAS) but still calculate and pay their GST amounts quarterly. The reporting requirements for the Simpler BAS are as follows:

- G1: Total sales - The total value of all sales made during the tax quarter.
- 1A: GST on sales - The total amount of GST collected on sales and other supplies made during the tax

quarter.

- 1B: GST on purchases - The total amount of GST paid on purchases and other expenses during the tax quarter.

The following information does not need to be reported under the Simpler BAS method:

- G2: Export sales - The value of GST-free sales or other supplies made for export purposes.
- G3: Other GST-free sales - The value of other GST-free sales or supplies made during the tax quarter.
- G10: Capital purchases - The total value of capital purchases made during the tax quarter that are eligible for GST credit.
- G11: Non-capital purchases - The total value of non-capital purchases on which you can claim a GST credit during the tax quarter.

If a business has obligations or entitlements related to Wine Equalisation Tax (WET), Luxury Car Tax (LCT), or Fuel Tax Credits (FTC), the following labels must also be reported each quarter:

- 1C: Wine Equalisation Tax (WET) - If applicable, the WET payable on wine sales.
- 1D: Luxury Car Tax (LCT) - If applicable, the LCT payable on luxury cars.
- 1E: Fuel Tax Credits (FTC) - If eligible, this label includes the credits for fuel tax that can be claimed.
- 1F: FTC adjustments - Any adjustments to Fuel Tax Credits.
- 7C: WET payable - If applicable, the WET payable for the tax quarter.
- 7D: LCT payable - If applicable, the LCT payable for the tax quarter.

For businesses that qualify for the GST instalments method, they can choose to pay quarterly GST instalments that are calculated by the Australian Taxation Office (ATO) and report their actual GST information annually on an annual GST return. This method is available to businesses with an aggregated turnover of less than $10 million or non-business entities with a GST turnover of $2 million or less.

As tax regulations can change, it's essential to refer to the latest guidelines and resources provided by the ATO for the most up-to-date information and compliance. Businesses are encouraged to seek professional advice or use official resources to ensure accurate reporting and compliance with current tax laws.

Goods and Services Tax (GST) - New Zealand

Goods and Services Tax (GST) in New Zealand

As of ChatGPT's last update in September 2021, New Zealand applies a Goods and Services Tax (GST). The GST is a broad-based consumption tax levied on the supply of most goods, services, and other items in New Zealand.

Here are some key points about the GST in New Zealand:

1. GST Rate: The standard GST rate in New Zealand is 15%. This means that when consumers purchase most goods and services, they pay an additional 15% of the purchase price as GST.
2. Taxable Supplies: The GST applies to most goods and services supplied by businesses, including sales of goods, services, imports, and certain intangible supplies. Some supplies may be GST-exempt, meaning GST is not charged on them, or they may be zero-rated, in which case they are subject to GST at a 0% rate.
3. GST Registration: Businesses with an annual turnover of NZD 60,000 or more are required to register for GST with the Inland Revenue Department (IRD). Once registered, businesses must charge GST on their taxable supplies and can claim input tax credits for the GST paid on their business expenses.
4. GST Returns: Registered businesses must file regular GST returns with the IRD, typically on a bi-monthly, six-monthly, or annual basis, depending on their GST turnover. The GST returns report the GST collected (output tax) and GST paid on expenses (input tax). The net amount is either remitted to the IRD or refunded.
5. Input Tax Credits: Registered businesses can claim input tax credits for the GST they have paid on their business expenses. This allows businesses to offset the GST they pay on purchases against the GST they collect on sales, resulting in a net GST liability or refund.
6. GST on Imported Goods and Services: Goods and services imported into New Zealand are generally subject to GST. For low-value imported goods (valued up to NZD 1,000), offshore suppliers may be required to register for and collect GST on behalf of the New Zealand Customs Service.
7. GST on Digital Services: As of October 1, 2016, non-resident suppliers of digital services (e.g., streaming services, software downloads) to New Zealand consumers are required to register for and charge GST on these services.

It's important for businesses operating in New Zealand to understand and comply with the GST regulations, including registration, reporting, and remittance requirements. As tax laws can change, businesses should consult with the Inland Revenue Department or tax professionals for the most up-to-date information regarding the GST in New Zealand.

Is there any GST Schemes in New Zealand?

Yes, there are several Goods and Services Tax (GST) schemes in New Zealand. These schemes are designed to simplify GST reporting for specific types of businesses and transactions. The main GST schemes in New Zealand include:

1. Standard GST Scheme: This is the standard GST scheme that applies to most businesses in New Zealand. Under this scheme, businesses charge GST on their sales (output GST) and claim GST on their purchases (input GST). GST returns are usually filed on a regular basis, either monthly, two-monthly, or six-monthly, depending on the business's turnover.
2. Payments Basis Scheme: Businesses with an annual turnover of less than NZD $2 million can opt for the payments basis scheme. Under this scheme, businesses only account for GST when they receive payment for their sales or when they make payments for their purchases. This can help with cash flow management for small businesses.
3. Invoice Basis Scheme: This is the default scheme for businesses with an annual turnover of NZD $24 million or more. Under this scheme, GST is accounted for when an invoice is issued or received, regardless of whether payment has been made. Most larger businesses in New Zealand use this scheme.
4. Hybrid Basis Scheme: Some businesses may use a hybrid of the payments basis and invoice basis schemes. This means they account for GST on a payments basis for some transactions and on an invoice basis for others.
5. Non-Residents GST Scheme: This scheme applies to non-resident businesses that make taxable supplies in New Zealand. Non-resident businesses are required to register for GST under this scheme if they exceed the registration threshold for non-residents.
6. Margin Scheme: The margin scheme is applicable to certain transactions involving land or other specified assets. Under this scheme, GST is calculated based on the margin (the difference between the selling price and the purchase price) rather than the full selling price.
7. Tourist Refund Scheme (TRS): The TRS allows tourists and visitors to New Zealand to claim a refund of GST paid on goods purchased in New Zealand, subject to certain conditions.

It's important for businesses to select the most appropriate GST scheme based on their turnover, the nature of their transactions, and their cash flow requirements. Businesses are advised to seek guidance from accounting professionals or tax advisors to determine the best GST scheme for their specific circumstances.

Structure of GST Accounts in the Chart of Accounts for New Zealand

In the Chart of Accounts for businesses in New Zealand, Goods and Services Tax (GST) accounts are structured to accurately record and report GST-related transactions.

Standard GST Scheme

The structure of GST accounts for the Standard GST Scheme may vary depending on the size and complexity of the business, but here is a common framework:

1. GST Control Account (Current Liabilities):
    - 251 - GST Control: This is the main GST Control account that tracks the GST amounts payable or refundable to the New Zealand Inland Revenue Department (IRD). It represents the net balance due to or from the IRD. A credit balance implies that the GST is recoverable from the IRD, while a debit balance indicates GST is payable to the IRD.
2. GST on Sales (Output Tax):
    - 252 - GST on Sales: This account records the GST charged on sales made by the business. It represents the GST collected from customers and is payable to the IRD.
3. GST on Purchases (Input Tax Credit):
    - 253 - GST on Purchases: This account records the GST paid on purchases made by the business. It represents the GST that can be claimed as input tax credits (ITC) from the IRD.
4. GST on Imports:
    - 254 - GST on Imports: This account records the GST paid on goods imported into New Zealand from overseas. The GST on imports is usually paid to the New Zealand Customs Service.
5. GST Adjustments:
    - 255 - GST Adjustments: This account is used to record any adjustments or corrections to previously reported GST amounts, such as bad debts, errors, or changes in taxable supplies.
6. GST on Capital Assets:
    - 256 - GST on Capital Assets: This account is used to record GST on the acquisition of capital assets, such as machinery, equipment, or property.
7. GST on Disposals of Capital Assets:

- 257 - GST on Disposals: This account records GST on the disposal of capital assets.

8. GST on Acquisitions from Overseas Suppliers:
    - 258 - GST on Acquisitions: This account records the GST on goods and services acquired from overseas suppliers. The GST on acquisitions is self-assessed by the business and included in the GST return.
9. GST Bad Debt Relief:
    - 259 - GST Bad Debt Relief: This account records the GST amounts that are claimed as bad debt relief when customers fail to pay their invoices.

It's important to note that the above structure is a general framework, and businesses may have additional sub-accounts or variations based on their specific needs and the complexity of their GST transactions. Properly organizing and maintaining GST accounts in the Chart of Accounts ensures accurate GST reporting and compliance with IRD regulations in New Zealand. Businesses are encouraged to consult with accounting professionals or tax advisors to set up their Chart of Accounts effectively and ensure compliance with GST requirements.

Payments Basis Scheme

In New Zealand, the Payments Basis Scheme is an alternative method of accounting for Goods and Services Tax (GST). Under this scheme, businesses account for GST based on the date they receive payment for goods and services, rather than the date of the invoice. Here is a common structure of GST accounts in the Chart of Accounts for businesses in New Zealand that use the Payments Basis Scheme:

1. GST Collected (Current Liability):
    - Account Code: 2XXX
    - Description: This account is used to record the GST collected from customers. It represents the GST amount that the business has charged on sales and needs to remit to the New Zealand Inland Revenue (IRD). The balance of this account reflects the net GST payable to the IRD.
2. GST Paid (Current Asset):
    - Account Code: 1XXX
    - Description: This account is used to record the GST paid on purchases made by the business. It represents the GST that the business can claim as input tax credits. The balance of this account reflects the net GST refundable from the IRD.
3. GST Adjustment:

- Account Code: 3XXX
- Description: This account is used to record any adjustments or corrections related to previously reported GST amounts. It may include adjustments for bad debts, errors, or changes in the business's GST status.

4. GST Refund Due (Current Asset):
    - Account Code: 1XXX.X
    - Description: This sub-account is used to track any GST refund due to the business. It reflects the amount of GST that the business has paid on purchases and is eligible for a refund from the IRD.
5. GST Payable (Current Liability):
    - Account Code: 2XXX.X
    - Description: This sub-account is used to track any GST payable by the business. It reflects the amount of GST that the business has collected from customers and needs to remit to the IRD.
6. GST Suspense:
    - Account Code: 4XXX
    - Description: This account is used to temporarily record GST amounts that are not yet allocated to specific transactions or accounts.

It's important to note that the account codes and descriptions mentioned above are examples, and the actual structure of GST accounts may vary depending on the specific needs and preferences of the business. Businesses using the Payments Basis Scheme should configure their Chart of Accounts in their accounting software accordingly to accurately record and report GST transactions in compliance with New Zealand tax regulations. Additionally, businesses should consult with accounting professionals or tax advisors to ensure that they understand the requirements and implications of using the Payments Basis Scheme for GST.

Invoice Basis Scheme

In New Zealand, the Invoice Basis Scheme is the default method of accounting for Goods and Services Tax (GST). Under this scheme, businesses account for GST based on the date of the invoice issued for goods and services, regardless of when the payment is received. Here is a common structure of GST accounts in the Chart of Accounts for businesses in New Zealand that use the Invoice Basis Scheme:

1. GST Collected (Current Liability):

- Account Code: 2XXX
- Description: This account is used to record the GST collected from customers. It represents the GST amount that the business has charged on sales and needs to remit to the New Zealand Inland Revenue (IRD). The balance of this account reflects the net GST payable to the IRD.

2. GST Paid (Current Asset):
   - Account Code: 1XXX
   - Description: This account is used to record the GST paid on purchases made by the business. It represents the GST that the business can claim as input tax credits. The balance of this account reflects the net GST refundable from the IRD.
3. GST Adjustment:
   - Account Code: 3XXX
   - Description: This account is used to record any adjustments or corrections related to previously reported GST amounts. It may include adjustments for bad debts, errors, or changes in the business's GST status.
4. GST Refund Due (Current Asset):
   - Account Code: 1XXX.X
   - Description: This sub-account is used to track any GST refund due to the business. It reflects the amount of GST that the business has paid on purchases and is eligible for a refund from the IRD.
5. GST Payable (Current Liability):
   - Account Code: 2XXX.X
   - Description: This sub-account is used to track any GST payable by the business. It reflects the amount of GST that the business has collected from customers and needs to remit to the IRD.
6. GST Suspense:
   - Account Code: 4XXX
   - Description: This account is used to temporarily record GST amounts that are not yet allocated to specific transactions or accounts.

It's important to note that the account codes and descriptions mentioned above are examples, and the

actual structure of GST accounts may vary depending on the specific needs and preferences of the business. Businesses using the Invoice Basis Scheme should configure their Chart of Accounts in their accounting software accordingly to accurately record and report GST transactions in compliance with New Zealand tax regulations. Additionally, businesses should consult with accounting professionals or tax advisors to ensure that they understand the requirements and implications of using the Invoice Basis Scheme for GST.

Hybrid Basis Scheme

In New Zealand, the Hybrid Basis Scheme is an option for some businesses to account for Goods and Services Tax (GST) using a combination of the Payments Basis and Invoice Basis methods. Under the Hybrid Basis Scheme, businesses account for GST on different transactions using either the Payments Basis or the Invoice Basis, depending on the nature of the transaction. Here is a common structure of GST accounts in the Chart of Accounts for businesses in New Zealand that use the Hybrid Basis Scheme:

1. GST Collected (Current Liability):
    - Account Code: 2XXX
    - Description: This account is used to record the GST collected from customers on transactions subject to the Invoice Basis. It represents the GST amount that the business has charged on sales and needs to remit to the New Zealand Inland Revenue (IRD) for these transactions. The balance of this account reflects the net GST payable to the IRD for Invoice Basis transactions.
2. GST Paid (Current Asset):
    - Account Code: 1XXX
    - Description: This account is used to record the GST paid on purchases made by the business on transactions subject to the Invoice Basis. It represents the GST that the business can claim as input tax credits for these transactions. The balance of this account reflects the net GST refundable from the IRD for Invoice Basis transactions.
3. GST Collected (Payments Basis) (Current Liability):
    - Account Code: 2XXX.X
    - Description: This sub-account is used to record the GST collected from customers on transactions subject to the Payments Basis. It represents the GST amount that the business has charged on sales and needs to remit to the IRD for these transactions. The balance of this sub-account reflects the net GST payable to the IRD for Payments Basis transactions.
4. GST Paid (Payments Basis) (Current Asset):

- Account Code: 1XXX.X
- Description: This sub-account is used to record the GST paid on purchases made by the business on transactions subject to the Payments Basis. It represents the GST that the business can claim as input tax credits for these transactions. The balance of this sub-account reflects the net GST refundable from the IRD for Payments Basis transactions.

5. GST Adjustment:
    - Account Code: 3XXX
    - Description: This account is used to record any adjustments or corrections related to previously reported GST amounts for both Invoice Basis and Payments Basis transactions. It may include adjustments for bad debts, errors, or changes in the business's GST status.
6. GST Suspense:
    - Account Code: 4XXX
    - Description: This account is used to temporarily record GST amounts that are not yet allocated to specific transactions or accounts.

It's important to note that the account codes and descriptions mentioned above are examples, and the actual structure of GST accounts may vary depending on the specific needs and preferences of the business. Businesses using the Hybrid Basis Scheme should configure their Chart of Accounts in their accounting software accordingly to accurately record and report GST transactions in compliance with New Zealand tax regulations. Additionally, businesses should consult with accounting professionals or tax advisors to ensure that they understand the requirements and implications of using the Hybrid Basis Scheme for GST.

Non-Residents GST Scheme

In New Zealand, the Non-Residents GST Scheme is designed for non-resident businesses that make supplies of goods and services in New Zealand and are required to register for Goods and Services Tax (GST) under certain circumstances. Non-resident businesses can choose to use the Non-Residents GST Scheme to simplify their GST compliance. Here is a common structure of GST accounts in the Chart of Accounts for non-resident businesses using the Non-Residents GST Scheme in New Zealand:

1. GST Collected (Non-Residents Scheme) (Current Liability):
    - Account Code: 2XXX
    - Description: This account is used to record the GST collected from customers in New Zealand under the Non-Residents GST Scheme. It represents the GST amount that the non-resident

business has charged on sales and needs to remit to the New Zealand Inland Revenue (IRD) under this scheme. The balance of this account reflects the net GST payable to the IRD.

2. GST Paid (Non-Residents Scheme) (Current Asset):
    - Account Code: 1XXX
    - Description: This account is used to record the GST paid on purchases made by the non-resident business in New Zealand under the Non-Residents GST Scheme. It represents the GST that the non-resident business can claim as input tax credits under this scheme. The balance of this account reflects the net GST refundable from the IRD.
3. GST Adjustment:
    - Account Code: 3XXX
    - Description: This account is used to record any adjustments or corrections related to previously reported GST amounts under the Non-Residents GST Scheme. It may include adjustments for bad debts, errors, or changes in the non-resident business's GST status.
4. GST Refund Due (Current Asset):
    - Account Code: 1XXX.X
    - Description: This sub-account is used to track any GST refund due to the non-resident business under the Non-Residents GST Scheme. It reflects the amount of GST that the non-resident business has paid on purchases and is eligible for a refund from the IRD.
5. GST Payable (Current Liability):
    - Account Code: 2XXX.X
    - Description: This sub-account is used to track any GST payable by the non-resident business under the Non-Residents GST Scheme. It reflects the amount of GST that the non-resident business has collected from customers and needs to remit to the IRD.
6. GST Suspense:
    - Account Code: 4XXX
    - Description: This account is used to temporarily record GST amounts that are not yet allocated to specific transactions or accounts.

It's important to note that the account codes and descriptions mentioned above are examples, and the actual structure of GST accounts may vary depending on the specific needs and preferences of the non-resident business. Businesses using the Non-Residents GST Scheme should configure their Chart of

Accounts in their accounting software accordingly to accurately record and report GST transactions in compliance with New Zealand tax regulations. Additionally, non-resident businesses should consult with accounting professionals or tax advisors to ensure that they understand the requirements and implications of using the Non-Residents GST Scheme for GST.

Margin Scheme

In New Zealand, the Margin Scheme is a special scheme that allows registered businesses to calculate Goods and Services Tax (GST) on the profit margin made on certain second-hand goods, land transactions, and other specified supplies. Here is a common structure of GST accounts in the Chart of Accounts for businesses in New Zealand that use the Margin Scheme:

1. Margin Scheme Sales (Current Liability):
    - Account Code: 2XXX
    - Description: This account is used to record sales made under the Margin Scheme. It represents the total value of supplies subject to the Margin Scheme, and the GST is calculated based on the profit margin instead of the full sale value. The balance of this account reflects the net GST payable to the New Zealand Inland Revenue (IRD) for Margin Scheme sales.
2. Margin Scheme GST (Current Liability):
    - Account Code: 2XXX.X
    - Description: This sub-account is used to calculate and record the GST amount payable under the Margin Scheme. The GST is calculated based on the margin, which is the difference between the purchase price and the selling price of the second-hand goods or specified supplies subject to the Margin Scheme.
3. Margin Scheme Purchases (Current Asset):
    - Account Code: 1XXX
    - Description: This account is used to record purchases made under the Margin Scheme. It represents the total value of second-hand goods or specified supplies acquired for resale under the Margin Scheme. The balance of this account reflects the net GST refundable from the IRD for Margin Scheme purchases.
4. Margin Scheme GST Refund (Current Asset):
    - Account Code: 1XXX.X
    - Description: This sub-account is used to track any GST refund due to the business for Margin

Scheme purchases. The GST refund is calculated based on the margin and represents the GST paid on the difference between the purchase price and the selling price of the second-hand goods or specified supplies.

5. GST Adjustment:
    - Account Code: 3XXX
    - Description: This account is used to record any adjustments or corrections related to previously reported GST amounts under the Margin Scheme. It may include adjustments for bad debts, errors, or changes in the business's GST status for Margin Scheme transactions.
6. GST Suspense:
    - Account Code: 4XXX
    - Description: This account is used to temporarily record GST amounts that are not yet allocated to specific transactions or accounts, including those related to the Margin Scheme.

It's important to note that the account codes and descriptions mentioned above are examples, and the actual structure of GST accounts may vary depending on the specific needs and preferences of the business. Businesses using the Margin Scheme should configure their Chart of Accounts in their accounting software accordingly to accurately record and report GST transactions in compliance with New Zealand tax regulations. Additionally, businesses should consult with accounting professionals or tax advisors to ensure that they understand the requirements and implications of using the Margin Scheme for GST.

Tourist Refund Scheme (TRS)

In New Zealand, the Tourist Refund Scheme (TRS) allows eligible overseas tourists to claim a refund of the Goods and Services Tax (GST) paid on goods purchased in New Zealand, which they intend to take out of the country with them. However, the TRS process is managed by New Zealand Customs, and businesses are not directly involved in the refund process. Therefore, there are typically no specific GST accounts in the Chart of Accounts for businesses related to the TRS.

For businesses that make sales to tourists eligible for the TRS, the GST treatment remains the same as for any other sale. Businesses will charge GST on the goods sold to eligible tourists, and these GST amounts will be recorded in the regular GST accounts as part of their normal GST reporting.

Here is a common structure of GST accounts in the Chart of Accounts for businesses in New Zealand that may interact with the TRS:

1. GST Collected (Current Liability):
    - Account Code: 2XXX

- Description: This account is used to record the GST collected from all sales made by the business, including sales to eligible tourists under the TRS. It represents the total GST charged on all taxable supplies made by the business, and the balance of this account reflects the net GST payable to the New Zealand Inland Revenue (IRD) for all sales.

2. GST Paid (Current Asset):
    - Account Code: 1XXX
    - Description: This account is used to record the GST paid on all purchases made by the business, including purchases related to goods sold to eligible tourists. It represents the total GST that the business can claim as input tax credits for all purchases, and the balance of this account reflects the net GST refundable from the IRD.
3. GST Adjustment:
    - Account Code: 3XXX
    - Description: This account is used to record any adjustments or corrections related to previously reported GST amounts. It may include adjustments for bad debts, errors, or changes in the business's GST status for all transactions.
4. GST Suspense:
    - Account Code: 4XXX
    - Description: This account is used to temporarily record GST amounts that are not yet allocated to specific transactions or accounts.

Remember that businesses should configure their Chart of Accounts in their accounting software according to their specific needs and compliance requirements. Additionally, businesses should consult with accounting professionals or tax advisors to ensure accurate GST reporting and compliance with New Zealand tax regulations, especially when dealing with international transactions and eligible tourists under the Tourist Refund Scheme.

GST return in New Zealand

What blocks or fields appears on the GST return in New Zealand?

As of ChatGPT's last update in September 2021, the GST (Goods and Services Tax) return in New Zealand typically includes the following blocks or fields:

1. Business Information: This includes the business name, IRD (Inland Revenue Department) number, and the GST registration status.

2. Income: This section requires you to report the total value of taxable supplies (sales) made during the period.

3. Expenses: Here, you declare the total value of GST-exclusive expenses incurred for business purposes during the period.

4. Output Tax: This field is calculated automatically based on the sales made (Income) and the applicable GST rate.

5. Input Tax: This field is calculated automatically based on the expenses claimed (Expenses) and the applicable GST rate.

6. GST Payable (or Refundable): The difference between Output Tax and Input Tax will determine whether you owe GST to the IRD (GST Payable) or are eligible for a GST refund (GST Refundable).

7. Payments or Refunds: In this section, you will enter any additional tax payments made or GST refunds received during the return period.

8. Other GST adjustments: Any adjustments to GST that need to be made, such as corrections for previous periods, should be included here.

9. Final Amount Payable (or Refundable): This is the net amount of GST that you will need to pay to the IRD or that will be refunded to you.

It's important to note that tax regulations can change over time, and there might have been updates or changes to the GST return in New Zealand since my last update. I recommend checking with the New Zealand Inland Revenue or a tax professional to get the most up-to-date and accurate information.

Value Added Tax (VAT) in United Kingdom

As of ChatGPT's last update in September 2021, the United Kingdom (UK) applies a Value Added Tax (VAT). The VAT is a consumption tax levied on the supply of goods and services in the UK.

Here are some key points about the VAT in the United Kingdom:

1. VAT Rates: The UK has different VAT rates for different types of goods and services. The standard VAT rate is 20%, which applies to most goods and services. However, there are reduced rates, such as 5% for certain items like home energy, children's car seats, and women's sanitary products, and a zero rate, which applies to certain essential items like most food, books, and public transport.

2. VAT Registration: Businesses with a taxable turnover that exceeds the VAT registration threshold must register for VAT with Her Majesty's Revenue and Customs (HMRC). As of ChatGPT's last update, the VAT registration threshold was £85,000, but this threshold may change, so it's essential to check the current threshold with HMRC.
3. VAT Returns: Registered businesses are required to file regular VAT returns with HMRC. The frequency of VAT returns depends on the size of the business. Typically, VAT returns are filed quarterly, but some businesses may be eligible to file annually or on a monthly basis.
4. Input Tax and Output Tax: Businesses can claim input tax credit for the VAT they have paid on their business expenses. At the same time, they must charge output tax on the VAT they collect from their customers. The difference between output tax and input tax is the net VAT liability, which is either remitted to or refunded by HMRC.
5. VAT on Imports and Exports: VAT is also applicable to imports and exports of goods and services. Imports are subject to import VAT, while exports are usually zero-rated, meaning VAT is not charged on them.
6. Making Tax Digital (MTD): The UK has implemented Making Tax Digital, a digital system for VAT reporting. It requires VAT-registered businesses with a taxable turnover above the VAT threshold to keep digital records and submit VAT returns using MTD-compatible software.
7. VAT MOSS: For businesses selling digital services to consumers in other EU countries, the VAT Mini One Stop Shop (VAT MOSS) scheme allows them to account for VAT on these cross-border sales in one EU member state rather than registering for VAT in each country separately.

It's essential for businesses operating in the UK to understand and comply with the VAT regulations, including registration, record-keeping, and reporting requirements. As tax laws can change, businesses should consult with HMRC or tax professionals for the most up-to-date information regarding VAT in the United Kingdom.

What is the Tax Schemes for VAT in the United Kingdom?

As of ChatGPT's last update in September 2021, the United Kingdom (UK) follows the Value Added Tax (VAT) system for taxation. The VAT system in the UK includes several schemes designed to simplify VAT reporting and compliance for businesses. Some of the main VAT schemes in the UK are:

1. Standard VAT Scheme: This is the default VAT scheme for most businesses in the UK. Under this scheme, businesses charge VAT on their sales (output VAT) and reclaim VAT on their purchases (input VAT). VAT returns are usually submitted quarterly, and the difference between output VAT and input VAT is paid to or refunded by HM Revenue & Customs (HMRC).
2. Flat Rate Scheme (FRS): The Flat Rate Scheme is designed to simplify VAT reporting for small

businesses. Instead of accounting for the difference between output VAT and input VAT, businesses pay a fixed percentage of their gross turnover to HMRC as VAT. The percentage varies depending on the business's industry, and it allows the business to keep the difference between the fixed rate and the actual VAT charged to customers.

3. Cash Accounting Scheme: The Cash Accounting Scheme allows eligible businesses to account for VAT on the basis of cash received and paid, rather than on invoice dates. This can help businesses with their cash flow as they only pay VAT on customer payments actually received, and they can only reclaim VAT on supplier payments actually made.
4. Annual Accounting Scheme: The Annual Accounting Scheme is designed to simplify VAT administration for small businesses. Instead of submitting quarterly VAT returns, businesses only need to submit one annual return. During the year, they make interim payments based on an estimated VAT liability, and at the end of the year, they reconcile the payments with the actual liability.
5. VAT Margin Scheme: The VAT Margin Scheme is used for businesses that sell second-hand goods, works of art, antiques, or collectibles. Instead of accounting for VAT on the full selling price, businesses only pay VAT on the difference between the selling price and the purchase price (the margin).
6. Tour Operators Margin Scheme (TOMS): TOMS is used by tour operators when calculating VAT on certain travel services. It is applied to businesses that buy and sell travel services, such as package holidays, and it allows them to account for VAT on the margin of the services provided.

It's important for businesses to choose the most appropriate VAT scheme based on their specific circumstances. The VAT schemes aim to simplify the VAT reporting process and help businesses manage their VAT obligations more efficiently. However, businesses should be aware of the eligibility criteria and specific rules for each scheme, as they may vary depending on the size and nature of the business. Businesses are encouraged to seek advice from tax professionals to ensure they comply with the correct VAT scheme and meet all VAT reporting requirements in the UK.

Structure of VAT Accounts in the Chart of Accounts for the United Kingdom

In the Chart of Accounts for businesses in the United Kingdom, Value Added Tax (VAT) accounts are typically structured to accurately record and report VAT-related transactions.

Standard VAT Scheme

The structure of VAT accounts is commonly used for businesses following the Standard VAT Scheme in the United Kingdom. The Standard VAT Scheme is the default and most common VAT scheme used by businesses, especially those with larger turnovers.

Under the Standard VAT Scheme, businesses charge VAT on their sales (output VAT) and reclaim VAT on their purchases (input VAT). The VAT accounts mentioned in the structure reflect this process, with separate accounts for output VAT on sales, input VAT on purchases, and additional accounts for specific VAT-related transactions, such as VAT on imports, VAT on EU acquisitions, reverse charge VAT, VAT adjustments, VAT bad debt relief, and VAT on assets and disposals.

While the structure of VAT accounts is generally applicable to businesses using the Standard VAT Scheme, it's important to note that the Chart of Accounts may vary depending on the specific needs and nature of each business. Smaller businesses or businesses with simpler operations may have a more streamlined Chart of Accounts, while larger or more complex businesses may have a more detailed and comprehensive Chart of Accounts to accurately record their financial transactions and VAT-related activities.

As always, businesses are advised to seek guidance from accounting professionals or tax advisors to ensure their Chart of Accounts and VAT accounting practices comply with the applicable VAT regulations and reporting requirements in the United Kingdom.

The structure of VAT accounts may vary depending on the size and complexity of the business, but here is a common framework based on the Standard VAT Scheme:

1. VAT Control Account (Current Liabilities) : 2200 - VAT Control: This is the main VAT Control account that tracks the VAT amounts payable or refundable to HM Revenue & Customs (HMRC). It represents the net balance due to or from HMRC. A credit balance implies that the VAT is recoverable from HMRC, while a debit balance indicates VAT is payable to HMRC.
2. VAT on Sales (Output VAT): 2201 - Output VAT: This account records the VAT charged on sales made by the business. It represents the VAT collected from customers and is payable to HMRC.
3. VAT on Purchases (Input VAT): 2202 - Input VAT: This account records the VAT paid on purchases made by the business. It represents the VAT that can be reclaimed from HMRC.
4. VAT on Imports: 2203 - VAT on Imports: This account records the VAT paid on goods imported from countries outside the European Union (EU). The VAT on imports is usually paid directly to HMRC.
5. VAT on Acquisitions from EU Suppliers : 2204 - VAT on EU Acquisitions: This account records the VAT on goods acquired from suppliers in EU member states. The VAT on acquisitions is self-accounted for by the business and is included in the VAT return.
6. VAT on Reverse Charge Supplies: 2205 - Reverse Charge VAT: This account records the VAT on reverse charge supplies, where the recipient of the goods or services accounts for the VAT instead of the supplier.
7. VAT Adjustments: 2206 - VAT Adjustments: This account is used to record any adjustments or corrections to previously reported VAT amounts, such as bad debts, errors, or changes in accounting methods.

8. VAT Bad Debt Relief: 2207 - VAT Bad Debt Relief: This account records the VAT amounts that are claimed as bad debt relief when customers fail to pay their invoices.
9. VAT on Assets and Disposals: 2208 - VAT on Assets and Disposals: This account is used to record VAT on capital assets and disposals of assets.

It's important to note that the above structure is a general framework, and businesses may have additional sub-accounts or variations based on their specific needs and the complexity of their VAT transactions. Properly organizing and maintaining VAT accounts in the Chart of Accounts ensures accurate VAT reporting and compliance with HMRC regulations in the United Kingdom. Businesses are encouraged to consult with accounting professionals or tax advisors to set up their Chart of Accounts effectively and ensure compliance with VAT requirements.

Flat Rate Scheme (FRS)

When a business in the United Kingdom opts to use the Flat Rate Scheme (FRS) for VAT, the structure of VAT accounts in the Chart of Accounts may differ from the Standard VAT Scheme. The Flat Rate Scheme is designed to simplify VAT reporting for small businesses by applying a fixed percentage to the gross turnover as the VAT liability to be paid to HM Revenue & Customs (HMRC). Under the FRS, businesses are not required to record the input VAT on purchases and cannot reclaim input VAT, except for certain capital assets.

The typical structure of VAT accounts for businesses using the Flat Rate Scheme may include the following:

1. VAT Control Account (Current Liabilities): This is the main VAT Control account that tracks the VAT amounts payable or recoverable from HMRC. The VAT liability or refund is based on the fixed percentage of the gross turnover.
2. Flat Rate VAT Payable: This account records the VAT payable to HMRC under the Flat Rate Scheme. It is calculated based on the fixed percentage of the gross turnover, and it represents the difference between the output VAT charged to customers and the fixed rate VAT to be paid.
3. VAT on Sales (Output VAT): This account records the VAT charged on sales made by the business, similar to the Standard VAT Scheme. However, under the FRS, the output VAT is not linked to the VAT payable.
4. VAT Adjustments: This account is used to record any adjustments or corrections to previously reported VAT amounts, such as bad debts, errors, or changes in accounting methods. Adjustments may still be necessary, even under the Flat Rate Scheme.
5. Capital Goods Scheme (CGS) Adjustment: Under the FRS, businesses are allowed to reclaim input VAT on capital assets exceeding £2,000, including VAT-inclusive costs, if the standard rules for capital goods scheme apply. This account records any adjustments related to capital goods scheme input VAT

reclaim.

It's important to note that businesses using the Flat Rate Scheme do not typically maintain separate accounts for input VAT on purchases since they are not allowed to reclaim input VAT, except for the specific circumstances related to capital assets. Additionally, the Flat Rate Scheme may have different fixed percentages based on the business's industry, so the specific rates applied will vary.

As with any accounting practices, businesses are advised to seek guidance from accounting professionals or tax advisors to ensure their Chart of Accounts and VAT accounting comply with the regulations and requirements of the Flat Rate Scheme in the United Kingdom.

VAT - Cash Accounting Scheme

When a business in the United Kingdom chooses to use the Cash Accounting Scheme for VAT, the structure of VAT accounts in the Chart of Accounts will be adjusted to accommodate this method of accounting. The Cash Accounting Scheme allows eligible businesses to account for VAT on the basis of cash received and paid, rather than on invoice dates. This can help businesses with their cash flow, as they only pay VAT on customer payments actually received, and they can only reclaim VAT on supplier payments actually made.

The typical structure of VAT accounts for businesses using the Cash Accounting Scheme may include the following:

1. VAT Control Account (Current Liabilities): This is the main VAT Control account that tracks the VAT amounts payable or recoverable from HM Revenue & Customs (HMRC). The VAT liability or refund is based on the cash received and paid, rather than on invoice dates.
2. Output VAT on Cash Sales: This account records the VAT on cash sales made by the business. Under the Cash Accounting Scheme, VAT is accounted for when the payment is received from the customer, not when the invoice is issued.
3. Input VAT on Cash Purchases: This account records the VAT on cash purchases made by the business. VAT is accounted for when the payment is made to the supplier, not when the invoice is received.
4. VAT Adjustments: This account is used to record any adjustments or corrections to previously reported VAT amounts under the Cash Accounting Scheme, such as bad debts or changes in accounting methods.
5. VAT on Sales (Output VAT): Similar to the Standard VAT Scheme, this account records the VAT charged on credit sales made by the business. However, under the Cash Accounting Scheme, the output VAT is not linked to the VAT payable until the cash is received from the customer.
6. VAT on Purchases (Input VAT): Similar to the Standard VAT Scheme, this account records the VAT paid on credit purchases made by the business. However, under the Cash Accounting Scheme, the input VAT is not linked to the VAT reclaimable until the cash is paid to the supplier.

The Cash Accounting Scheme may not be suitable for all businesses, and there are specific eligibility criteria and turnover thresholds that must be met to use this scheme. As always, businesses are advised to seek guidance from accounting professionals or tax advisors to ensure their Chart of Accounts and VAT accounting practices comply with the regulations and requirements of the Cash Accounting Scheme in the United Kingdom.

VAT - Annual Accounting Scheme

When a business in the United Kingdom chooses to use the Annual Accounting Scheme for VAT, the structure of VAT accounts in the Chart of Accounts will be tailored to accommodate this scheme. The Annual Accounting Scheme is designed to simplify VAT reporting for businesses by submitting only one annual VAT return instead of quarterly returns. Businesses make interim payments based on an estimated VAT liability throughout the year, and then reconcile the payments with the actual liability at the end of the year.

The typical structure of VAT accounts for businesses using the Annual Accounting Scheme may include the following:

1. VAT Control Account (Current Liabilities): This is the main VAT Control account that tracks the VAT amounts payable or recoverable from HM Revenue & Customs (HMRC). The VAT liability or refund is based on the interim payments made during the year and the actual liability calculated at the end of the year.
2. VAT Due on Sales: This account records the VAT due on sales made by the business throughout the year. The business makes interim payments based on this account.
3. VAT Reclaimed on Purchases: This account records the VAT reclaimed on purchases made by the business throughout the year. The business makes interim payments based on this account.
4. VAT Adjustments: This account is used to record any adjustments or corrections to previously reported VAT amounts under the Annual Accounting Scheme, such as adjustments for errors or changes in accounting methods.
5. VAT on Sales (Output VAT): This account records the VAT charged on credit sales made by the business throughout the year. The business includes this in the VAT due on sales account for interim payments.
6. VAT on Purchases (Input VAT): This account records the VAT paid on credit purchases made by the business throughout the year. The business includes this in the VAT reclaimed on purchases account for interim payments.
7. Annual VAT Liability or Refund: This account represents the final VAT liability or refund at the end of the year after reconciling the interim payments with the actual liability.

The Annual Accounting Scheme may be beneficial for businesses with a predictable or steady turnover, as it helps with cash flow management by spreading VAT payments throughout the year. However, businesses should carefully consider their eligibility and turnover threshold before choosing this scheme.

As always, businesses are advised to seek guidance from accounting professionals or tax advisors to ensure their Chart of Accounts and VAT accounting practices comply with the regulations and requirements of the Annual Accounting Scheme in the United Kingdom.

VAT Margin Scheme

When a business in the United Kingdom uses the VAT Margin Scheme, the structure of VAT accounts in the Chart of Accounts will be tailored to accommodate this scheme. The VAT Margin Scheme is designed for businesses that sell second-hand goods, works of art, antiques, or collectibles. Under this scheme, businesses calculate VAT based on the difference between the selling price and the purchase price (the margin) rather than the full selling price.

The typical structure of VAT accounts for businesses using the VAT Margin Scheme may include the following:

1. VAT Control Account (Current Liabilities): This is the main VAT Control account that tracks the VAT amounts payable or recoverable from HM Revenue & Customs (HMRC) based on the VAT Margin Scheme calculations.
2. VAT on Margin Sales: This account records the VAT on sales made under the VAT Margin Scheme. The VAT is calculated based on the margin between the selling price and the purchase price.
3. VAT Adjustments: This account is used to record any adjustments or corrections to previously reported VAT amounts under the VAT Margin Scheme, such as adjustments for errors or changes in accounting methods.
4. Margin Sales: This account records the sales made under the VAT Margin Scheme. It includes the selling prices and the corresponding margins.
5. Margin Purchases: This account records the purchase costs of the goods sold under the VAT Margin Scheme. It includes the cost prices and the corresponding margins.
6. VAT Margin Liability: This account represents the final VAT liability calculated based on the margins of the sales and purchases under the scheme.

Businesses using the VAT Margin Scheme should keep detailed records of the goods bought and sold under the scheme, including the purchase cost and the selling price, as this information is crucial for calculating the VAT liability correctly.

As always, businesses are advised to seek guidance from accounting professionals or tax advisors to

ensure their Chart of Accounts and VAT accounting practices comply with the regulations and requirements of the VAT Margin Scheme in the United Kingdom.

VAT - Tour Operators Margin Scheme (TOMS)

When a business in the United Kingdom operates under the Tour Operators Margin Scheme (TOMS), the structure of VAT accounts in the Chart of Accounts will be adjusted to accommodate this specific scheme. The TOMS is designed for businesses that buy and sell travel services, such as package holidays, and it allows them to calculate VAT on the margin of the services provided, rather than on the full selling price.

The typical structure of VAT accounts for businesses using the Tour Operators Margin Scheme (TOMS) may include the following:

1. VAT Control Account (Current Liabilities): This is the main VAT Control account that tracks the VAT amounts payable or recoverable from HM Revenue & Customs (HMRC) based on the TOMS calculations.
2. VAT on TOMS Sales: This account records the VAT on sales made under the Tour Operators Margin Scheme. The VAT is calculated based on the margin between the selling price and the cost of the travel services.
3. VAT Adjustments: This account is used to record any adjustments or corrections to previously reported VAT amounts under the TOMS, such as adjustments for errors or changes in accounting methods.
4. TOMS Sales: This account records the sales made under the Tour Operators Margin Scheme. It includes the selling prices and the corresponding margins.
5. TOMS Purchase Costs: This account records the cost of the travel services purchased by the business for resale under the TOMS. It includes the cost prices and the corresponding margins.
6. TOMS Margin Liability: This account represents the final VAT liability calculated based on the margins of the TOMS sales and purchase costs.

Businesses using the Tour Operators Margin Scheme must keep detailed records of the travel services bought and sold under the scheme, including the purchase costs and the selling prices, as this information is essential for calculating the VAT liability correctly.

As always, businesses are advised to seek guidance from accounting professionals or tax advisors to ensure their Chart of Accounts and VAT accounting practices comply with the regulations and requirements of the Tour Operators Margin Scheme (TOMS) in the United Kingdom.

How would the Tax accounts as mentioned tie up to the Boxes 1 to Box 9 in the UK VAT Return on the Standard VAT Rate?

In the UK VAT Return, the tax accounts mentioned in the Chart of Accounts would tie up to the different boxes on the VAT Return as follows:

1. Box 1: Output VAT - Standard rate (T2400-010) This box represents the total VAT charged on sales made by the business at the standard rate of 20%. The value in this box would be the sum of all transactions recorded under the tax account T2400-010 (Output VAT - Standard rate - 20%).
2. Box 2: Output VAT - Reduced rate (T2400-015) This box represents the total VAT charged on sales made by the business at the reduced rate of 5%. The value in this box would be the sum of all transactions recorded under the tax account T2400-015 (Output VAT - Reduced rate - 5%).
3. Box 3: Output VAT - Zero rated - This box represents the total VAT charged on sales made by the business at a 0% VAT rate. The value in this box would be the sum of all transactions recorded under the tax accounts T2400-030 (Output VAT - Zero Rated Income - 0%), T2400-040 (Output VAT - Zero Rated EU Goods - 0%), and T2400-050 (Output VAT - Zero Rated EU Services - 0%).
4. Box 4: VAT on purchases - This box represents the total VAT paid on purchases made by the business. The value in this box would be the sum of all transactions recorded under the tax accounts T2400-100 (Input VAT - Standard rate - 20%), T2400-115 (Input VAT - Reduced rate - 5%), T2400-120 (Input VAT - EU Acquisitions - 20% - Reverse charged), T2400-130 (Input VAT - EU Acquisitions (Zero Rated) - 0%), T2400-140 (Input VAT - Exempt Expenses - 0%), T2400-150 (Input VAT - Reverse Charge Expenses - 20%), T2400-160 (Input VAT - VAT on Imports - 100%), T2400-170 (Input VAT - Zero Rated EU Expenses - 0%), and T2400-180 (Input VAT - Zero Rated Expenses - 0%).
5. Box 5: Net VAT due (or reclaimed) (calculated) This box represents the difference between Box 3 (Total VAT on sales) and Box 4 (Total VAT on purchases). If Box 3 is greater than Box 4, the difference is the VAT due to HMRC. If Box 4 is greater than Box 3, the difference is the VAT reclaimable from HMRC.
6. Box 6: Total value of sales (excluding VAT) This box represents the total value of all sales made by the business, excluding VAT. It is not directly related to any specific tax account.
7. Box 7: Total value of purchases (excluding VAT) This box represents the total value of all purchases made by the business, excluding VAT. It is not directly related to any specific tax account.
8. Box 8: Total value of supplies of goods to other EU countries (excluding VAT) This box represents the total value of goods supplied by the business to other EU countries, excluding VAT. It is not directly related to any specific tax account.
9. Box 9: Total value of acquisitions of goods from other EU countries (excluding VAT) This box

represents the total value of goods acquired by the business from other EU countries, excluding VAT. It is not directly related to any specific tax account.

The tax accounts mentioned in the Chart of Accounts are used to record and track the VAT amounts related to different types of transactions, which are then reported in the appropriate boxes on the VAT Return. Properly categorizing and recording these transactions is essential to ensure accurate VAT reporting and compliance with the UK tax regulations.

VAT Standard Rate Scheme - Structure of VAT Accounts in the Chart of Accounts

In the Chart of Accounts, Value Added Tax (VAT) payable is typically included in the Current Liabilities section of the Balance Sheet. This account represents the VAT that the business has collected on sales but has not yet remitted to the tax authorities.

To ensure proper accounting and alignment with the VAT return, it's important to structure VAT sub-accounts (VAT codes) for the various rates that apply, within the VAT Control account. The VAT Control account, G2400-000, reflects the net balance due to HM Revenue & Customs (HMRC). A credit balance implies that the VAT is payable to HM Revenue & Customs (HMRC).

The breakdown of the VAT payable account includes the following sub-accounts (T-codes) (T is the prefix for Tax account type) to provide more detailed information about different types of VAT.

The standard structure of the VAT accounts (Tax code sub-accounts) consists of four sections in the Chart of Accounts: Output VAT Codes and Input VAT Codes sections.

1. Output VAT Codes:
    - T2400-010 - Output VAT - Standard rate - 20% (VAT on Sales) This account records the VAT charged on standard-rated sales made by the business. Standard-rated supplies typically attract a VAT rate of 20%.
    - T2400-015 - Output VAT - Reduced rate - 5% (VAT on Sales) This account records the VAT charged on reduced-rated sales made by the business. Reduced-rated supplies typically attract a lower VAT rate of 5%.
    - T2400-020 - Output VAT - Exempt Income - 0%: This account is used to record sales that are exempt from VAT. No VAT is charged on exempt supplies, and the input tax on related expenses is not recoverable.
    - T2400-030 - Output VAT - Zero Rated Income - 0% This account is used to record sales that are subject to a 0% VAT rate. Although no VAT is charged on zero-rated supplies, businesses can recover input VAT on related expenses.

- T2400-040 - Output VAT - Zero Rated EU Goods - 0% This account is specific to transactions involving the supply of goods to other European Union (EU) countries at a 0% VAT rate.
- T2400-050 - Output VAT - Zero Rated EU Services - 0%: This account is specific to transactions involving the supply of services to other European Union (EU) countries at a 0% VAT rate.
- T2400-070 - Adjustment - Bad Debt Relief - 20%: This account is used to record the VAT amount that becomes uncollectible due to bad debts. It is an adjustment to reduce the Output VAT liability on the VAT return.
- T2400-075 - Adjustment - Bad Debt Relief - 5%: This account is used to record the VAT amount that becomes uncollectible due to bad debts. It is an adjustment to reduce the Output VAT liability on the VAT return.

  Please note that specific rules and procedures may apply to claiming Bad Debt Relief, and businesses need to meet certain conditions to be eligible for the relief. It's crucial to follow the regulations and maintain proper documentation to support the claim for bad debt relief. As always, consulting with accounting professionals familiar with the UK VAT rules and requirements can help businesses correctly apply Bad Debt Relief in their VAT reporting and align it with the UK VAT returns.

2. Input VAT Codes:
   - 2400-100 - Input VAT - Standard rate - 20%: This account records the VAT paid on purchases of goods and services subject to the standard VAT rate of 20%.
   - 2400-115 - Input VAT - Reduced rate - 5%: This account records the VAT paid on purchases of goods and services subject to the reduced VAT rate of 5%.
   - 2400-120 - Input VAT - EU Acquisitions (20%) - Reverse charge This account is used for VAT on goods acquired from other EU countries, where the recipient accounts for the VAT using the reverse charge mechanism.
   - 2400-130 - Input VAT - EU Acquisitions (Zero Rated) - 0%: This account is used for VAT on goods acquired from other EU countries at a 0% VAT rate.
   - 2400-140 - Input VAT - Exempt Expenses - 0%: This account is used to record expenses that are exempt from VAT. No input VAT can be recovered on exempt expenses.
   - 2400-150 - Input VAT - Reverse Charge Expenses (20%) This account is used for VAT on services received where the recipient accounts for the VAT using the reverse charge mechanism.

- 2400-160 - Input VAT - VAT on Imports - 100%: This account records the VAT paid on goods imported from countries outside the EU.
- 2400-170 - Input VAT - Zero Rated EU Expenses - 0% This account is specific to VAT on services received from other EU countries at a 0% VAT rate.
- 2400-180 - Input VAT - Zero Rated Expenses - 0% This account is specific to VAT on services received at a 0% VAT rate (outside the EU).

Additionally, there is the VAT Payment Account, G2400-500, which is used to record payments in cases where the Output VAT exceeds the Input tax. This represents the VAT payable as submitted on the VAT return, and any payments to HM Revenue & Customs (HMRC) would be recorded to this account.

Conversely, if the Input VAT exceeds the Output VAT, resulting in a tax refund due from HM Revenue & Customs (HMRC), the refund received would be recorded to the VAT Payment Account, G2400-500.

In addition to this example and text, it is important to note that this is a basic structure of the VAT Accounts. Depending on the complexities for the nature of your business, such as exporting of taxable supplies, importing of taxable supplies, vat schemes, adjustments, etc., you may need to add additional tax codes applicable to your business.

This well-organized structure ensures that VAT liabilities are accurately accounted for and helps businesses in complying with tax regulations while maintaining clear records for reporting and analysis.

Overall, the explanation provides a comprehensive understanding of how VAT is accounted for in the Chart of Accounts for the United Kingdom, and the breakdown of sub-accounts offers valuable insights into the different components of VAT transactions.

It's important for businesses to maintain accurate records and ensure that VAT liabilities are correctly calculated and reported in compliance with the tax regulations in the United Kingdom. As always, consulting with accounting professionals or tax experts can provide further guidance and ensure proper adherence to the tax laws and regulations related to VAT.

The specific structure of the Chart of Accounts may vary depending on the business's needs, industry, and the complexity of its VAT transactions. It's important to organize the accounts in a way that makes sense for the business's financial reporting and compliance requirements. Additionally, regular updates and adjustments may be necessary to accommodate changes in VAT regulations and the business's operations.

Additional Tax Codes and Tax Rates

Additional tax rates and specific VAT scenarios applicable to businesses using the VAT Flat rate scheme

Additional Tax Codes - Flat rate scheme: (additional accounts based on specific VAT schemes and regulations)

- 2400-200 - Flat rate @ 15% VAT on Capital Sales: This tax rate of 15% is applied to record VAT on the sales of fixed assets when a business is using the VAT flat rate scheme.
- 2400-210 - Flat rate @ 20% VAT on Capital Sales: This tax rate of 20% is also applied to record VAT on the sales of fixed assets under the VAT flat rate scheme.
- 2400-220 - Flat rate @ 20% VAT on Capital Purchases: This tax rate of 20% is used to record VAT on the purchases of fixed assets when a business is using the VAT flat rate scheme.

NOTE: 2400-200 - Flat rate @ 15% VAT on Capital Sales is the percentage correct for the Flat Tate scheme in a UK Chart of Accounts?

The percentage of 15% for "*VAT on Capital Sales*" as part of the additional tax codes in a Chart of Accounts seems to be incorrect for the VAT flat rate scheme in the United Kingdom. In the UK's VAT flat rate scheme, businesses charge VAT to their customers at a fixed rate based on their industry sector. However, the percentage rate is typically higher than the standard VAT rate to simplify accounting for small businesses.

The VAT flat rate scheme rates vary depending on the business's industry, and they are generally higher than the standard VAT rate to account for both the VAT on sales and the VAT on expenses in a single flat rate. For example, a business might apply a flat rate of 12% or 14.5% (as an example) for its sector, and this rate would be used for both output VAT (sales) and input VAT (purchases).

The actual flat rate percentage applicable to a business would depend on the specific industry sector it falls under as defined by HM Revenue & Customs (HMRC). Therefore, it's important for businesses to check the correct VAT flat rate applicable to their industry and ensure that they apply the correct rate to their sales and purchases when using the VAT flat rate scheme.

As VAT regulations and rates can change over time, it's essential for businesses to keep updated with the latest information from HMRC or consult with a qualified tax professional to ensure accurate and compliant reporting in their Chart of Accounts and VAT returns.

Additional tax rates and specific VAT scenarios applicable to businesses using the VAT Domestic Reverse Charge mechanism

Additional tax rate for the Domestic Reverse Charge (DRC): (Use the VAT domestic reverse charge for building and construction services).

- 2400-300 - Domestic Reverse Charge @ 20% (VAT on Income): This tax rate of 20% is used to record the VAT on income when the domestic reverse charge mechanism applies for specific types of transactions.
- 2400-310 - Domestic Reverse Charge @ 20% (VAT on Expenses): This tax rate of 20% is used to record the VAT on expenses when the domestic reverse charge mechanism applies. Under the reverse charge, the recipient of the services accounts for the VAT instead of the supplier.
- 2400-320 - Domestic Reverse Charge @ 5% (VAT on Income): This tax rate of 5% is used to record the VAT on income when the domestic reverse charge mechanism applies to certain transactions with a reduced rate.
- 2400-330 - Domestic Reverse Charge @ 5% (VAT on Expenses): This tax rate of 5% is used to record the VAT on expenses when the domestic reverse charge mechanism applies to certain transactions with a reduced rate.

The domestic reverse charge regulation is a mechanism used in some countries where the responsibility for reporting and paying VAT shifts from the supplier to the recipient for certain types of supplies. This often applies to business-to-business transactions to combat VAT fraud and ensure that VAT is correctly accounted for.

It's important for businesses to accurately apply these additional tax rates in their accounting systems and VAT returns as per the regulations and guidelines set by the relevant tax authority. Additionally, it's recommended to consult with a qualified tax professional to ensure compliance with the specific VAT rules and requirements applicable to the business's circumstances.

Capital Goods Scheme (CGS)

VAT in UK is there a difference between standard and capital goods?

Yes, in the United Kingdom's Value Added Tax (VAT) system, there is a distinction between standard-rated VAT and capital goods scheme (CGS) when it comes to certain types of purchases. Here's an overview of the difference between these two concepts:

1. Standard-Rated VAT: Standard-rated VAT is the regular rate of VAT applied to most goods and services in the UK. As of ChatGPT's knowledge cutoff date in September 2021, the standard rate of VAT in the UK is usually 20%. This rate is applied to most consumer goods and services, with a few exceptions like zero-rated items (such as most food and children's clothing) and reduced-rated items (such as domestic fuel and power at 5% VAT).
2. Capital Goods Scheme (CGS): The Capital Goods Scheme is a mechanism within the UK VAT system that is specifically designed to address the input tax recovery on certain capital assets. These assets are expected to have a long-lasting benefit to a business. When a business acquires or constructs a capital asset, such as real estate or machinery, the input VAT (VAT paid on purchases) can usually be recovered over time. The CGS helps to ensure that the recovery of input tax is aligned with the actual use of the asset for business purposes over its useful life.

Under the CGS, businesses need to make adjustments to their input VAT claims over time based on changes in the use of the capital asset. If the business's use of the asset changes, adjustments are made to the input tax claim to reflect the actual proportion of the asset's use for business purposes. This prevents overrecovery or underrecovery of input VAT on assets that have both business and non-business use.

It's important to note that VAT regulations and rates can change, and specific rules and procedures related to standard-rated VAT and the Capital Goods Scheme may have evolved since my last update in September 2021. If you're seeking the most up-to-date and accurate information on VAT in the UK, I recommend consulting the official HM Revenue & Customs (HMRC) website or seeking advice from a tax professional.

Where would the "Capital Goods Scheme (CGS)" fit in the chart of accounts and the UK VAT return?

In the context of the Chart of Accounts and the UK VAT return, the "*Capital Goods Scheme (CGS)*" would typically involve specific accounting entries and adjustments to accurately reflect the recovery of input VAT on capital assets over their useful life. Here's how the CGS might fit into these components:

1. Chart of Accounts: Within the Chart of Accounts, you might create specific accounts to track the input VAT related to capital assets subject to the Capital Goods Scheme. These accounts would help you monitor the recovery of input VAT as adjustments are made over time. For example:
    - Input VAT on Capital Assets (a liability account): This account would be used to initially record the input VAT paid on the acquisition or construction of capital assets.
    - CGS Adjustment - Increase (an expense account): This account would be used to record adjustments that increase the input VAT recovery due to changes in the business's use of the capital asset.

- CGS Adjustment - Decrease (a revenue account): This account would be used to record adjustments that decrease the input VAT recovery due to changes in the business's use of the capital asset.

2. UK VAT Return: On the UK VAT return, the Capital Goods Scheme adjustments would be reported in the appropriate boxes to ensure accurate VAT recovery and compliance. The specific boxes where CGS adjustments are reported can vary based on the current VAT return format. However, as of ChatGPT's last update in September 2021, these adjustments are generally reported in boxes 4 and 7 of the VAT return:
    - Box 4 (Input tax): This box is used to report the total input tax recoverable on purchases and expenses. CGS adjustments that increase the input VAT recovery would be added to this box.
    - Box 7 (Total value of purchases): This box is used to report the total value of purchases before VAT. CGS adjustments that decrease the input VAT recovery would be subtracted from this box.

It's important to note that the VAT return and reporting requirements can change, and specific adjustments related to the Capital Goods Scheme may have evolved since my last update.

Keep in mind that accurate and compliant reporting of the Capital Goods Scheme requires a solid understanding of VAT regulations and proper accounting practices. It's advisable to work with a qualified accountant or financial professional who is knowledgeable about VAT and can assist you in setting up your Chart of Accounts and reporting accurately on your VAT return.

Is "Capital Goods Scheme (CGS)" part of the Standard VAT Scheme?

Yes, the "*Capital Goods Scheme (CGS)*" is a part of the standard VAT scheme in the United Kingdom. The CGS is a specific mechanism within the standard VAT scheme that addresses the recovery of input VAT (VAT paid on purchases) on capital assets over their useful life.

Under the standard VAT scheme, businesses account for VAT on their sales and purchases according to the standard VAT rates, record their transactions in the VAT return, and make payments or claims for VAT based on the net difference between their output tax (VAT collected from customers) and input tax (VAT paid to suppliers).

The Capital Goods Scheme is designed to ensure that the recovery of input tax on capital assets accurately reflects their business use over time. As capital assets like real estate or machinery may be used for both business and non-business purposes, the CGS involves making adjustments to input VAT claims to align with the actual use of these assets for business purposes.

The CGS requires businesses to periodically review the use of capital assets and make adjustments to the input VAT recovery if the business use changes. These adjustments are then reported on the VAT return as

part of the standard VAT reporting process.

In summary, while the Capital Goods Scheme is a specific aspect of the standard VAT scheme in the UK, it introduces additional considerations and adjustments to the VAT reporting process for businesses that acquire or construct capital assets.

Capital Goods Scheme (CGS) and the Flat Rate Scheme

The "*Capital Goods Scheme (CGS)*" and the "Additional Tax Codes - Flat rate scheme" you mentioned are separate concepts within the UK VAT system. Let's clarify the relationship between these two:

1. Capital Goods Scheme (CGS):
    - The CGS is a mechanism designed to adjust the recovery of input VAT on capital assets over their useful life.
    - It applies to businesses that acquire or construct capital assets like real estate or machinery, and ensures that the input VAT recovery accurately reflects the business use of these assets.
    - Adjustments under the CGS are made to input VAT claims over time based on changes in the use of the capital asset.
    - CGS adjustments are typically reported on the standard VAT return.
2. Additional Tax Codes - Flat Rate Scheme:
    - The VAT Flat Rate Scheme is an alternative way for small businesses to calculate and pay VAT.
    - Under the Flat Rate Scheme, businesses apply a fixed VAT rate to their gross turnover and pay the calculated amount to HMRC.
    - The "*Additional Tax Codes*" you mentioned (e.g., 2400-200, 2400-210, 2400-220) appear to represent different tax codes for recording VAT on capital sales and purchases under the VAT Flat Rate Scheme.
    - These tax codes are used to account for VAT on the sales and purchases of fixed assets when a business is using the Flat Rate Scheme.
    - The VAT rates associated with these tax codes (15% and 20%) correspond to the fixed VAT rates used in the Flat Rate Scheme.

In summary, while both the Capital Goods Scheme and the VAT Flat Rate Scheme are part of the UK VAT system, they address different aspects of VAT calculation and reporting. The Capital Goods Scheme focuses on adjusting input VAT recovery on capital assets over time, while the VAT Flat Rate Scheme provides an alternative method for calculating and paying VAT for eligible businesses.

What is EC Acquisitions (20%) EC Acquisitions (Zero Rated)?

EC Acquisitions (20%) and EC Acquisitions (Zero Rated) refer to specific types of purchases made by a business in the context of the European Union (EU) value-added tax (VAT) system. These terms are applicable when a business in one EU member state purchases goods or services from a supplier in another EU member state.

1. EU Acquisitions (20%): This term refers to purchases of goods or services from another EU member state where the supplier charges VAT at the standard rate of 20%. The purchasing business will account for the VAT on these acquisitions in their own country at the applicable standard rate. The VAT amount paid on these acquisitions is generally recoverable as input tax in the VAT return of the purchasing business.
2. EU Acquisitions (Zero Rated): This term refers to purchases of goods or services from another EU member state where the supplier charges VAT at a rate of 0%. The purchasing business will account for the VAT on these acquisitions in their own country at a zero rate. While the supplier does charge VAT at 0%, the VAT amount is effectively neutral, and no actual VAT is paid to the supplier. The purchasing business may still need to report these acquisitions in their VAT return but at the zero rate.

It's important to note that the rules and terminology may vary slightly between different EU member states, and businesses should ensure they understand the specific requirements and obligations for EU Acquisitions in their country. Additionally, businesses engaged in cross-border transactions within the EU should keep proper documentation and records to comply with VAT regulations and claim any eligible VAT refunds or input tax credits appropriately. Consulting with tax advisors or professionals familiar with the VAT rules in the specific EU member state is advisable to ensure accurate VAT reporting and compliance.

"EC Acquisitions (20%) EC Acquisitions (Zero Rated)" Is there any other VAT such as Reduced rate (5%) or Exempt VAT applicable?

Yes, in addition to the standard rate, there are other VAT rates and exemptions that may be applicable in the European Union (EU) and other countries with VAT systems. The most common ones include:

1. Reduced Rate (e.g., 5%, 7%, 10%): Some goods and services may be subject to a reduced rate of VAT, which is lower than the standard rate. Reduced rates are often applied to essential goods and services to make them more affordable and to promote certain economic activities. The specific items eligible for reduced rates vary between countries and are subject to each country's VAT regulations.
2. Zero-Rated VAT: Zero-rated VAT means that goods or services are subject to VAT at a rate of 0%. While the supplier still accounts for VAT on these transactions, the actual VAT amount charged is zero. Zero-rated VAT is often applied to certain goods and services that are considered essential or to

support specific sectors such as food, medicine, or exports.

3. Exempt VAT: Some goods and services may be exempt from VAT altogether. Unlike zero-rated items, exempt items do not attract any VAT, and the supplier does not charge VAT on these transactions. However, businesses making exempt supplies may not be entitled to reclaim the input VAT paid on related purchases.
4. Mixed Supplies: Some businesses may provide a combination of goods and services, some of which are subject to standard VAT, reduced VAT, or zero-rated VAT, while others may be exempt. Handling the VAT treatment for mixed supplies can be more complex and may require careful consideration of the specific rules and regulations.

It's essential for businesses to correctly identify the VAT rates applicable to their supplies and purchases to ensure accurate VAT reporting and compliance. The VAT rates and exemptions may vary between countries, so businesses operating in multiple jurisdictions need to be aware of the rules in each location where they trade. Additionally, maintaining proper documentation and accurate records is crucial for VAT compliance and to support any claims for input tax credits or VAT refunds. Businesses should consult with tax advisors or professionals familiar with the VAT regulations in their country to ensure they are adhering to the correct VAT rates and requirements.

What is the MTD VAT Return?

MTD VAT Return refers to the Making Tax Digital (MTD) for VAT initiative introduced by HM Revenue & Customs (HMRC) in the United Kingdom. It is part of the UK government's efforts to modernize and digitize the tax system, making it easier for businesses and individuals to manage their taxes online.

Under the MTD for VAT, businesses with a taxable turnover above the VAT threshold (currently £85,000) are required to keep digital records of their VAT transactions and submit their VAT returns electronically using compatible accounting software. This means that businesses must use MTD-compatible software to maintain their VAT records and report their VAT information directly to HMRC through the digital platform.

The key features of MTD VAT Return include:

1. Digital Record-Keeping: Businesses must use MTD-compatible accounting software to maintain digital records of all their VAT transactions, including sales, purchases, and expenses.
2. Quarterly Reporting: Businesses submit their VAT returns on a quarterly basis through the MTD digital platform. The submission process is done electronically, and manual submission through the HMRC website is no longer allowed for businesses mandated to use MTD.
3. VAT Account: Businesses must also keep a digital VAT account that summarizes their VAT liability and payments for each VAT period.

4. VAT Payment: VAT payments are still made as before, but the reporting and record-keeping processes are digital under MTD.

MTD for VAT aims to improve the accuracy and efficiency of VAT reporting, reduce errors, and provide businesses with a clearer view of their VAT position. It also streamlines the interaction between businesses and HMRC, making the tax compliance process more streamlined and less prone to errors.

It's essential for affected businesses to ensure they are compliant with MTD for VAT requirements by using MTD-compatible accounting software and maintaining digital records of their VAT transactions. Businesses can check with HMRC or their accounting software providers to confirm that they are using the appropriate software for MTD compliance.

European Union (EU) value-added tax (VAT) system

What is the European Union (EU) value-added tax (VAT) system?

The European Union (EU) value-added tax (VAT) system is a harmonized tax framework that governs the collection and administration of VAT within the member states of the European Union. VAT is a consumption tax levied on the value added to goods and services at each stage of production or distribution. It is ultimately borne by the final consumer, but businesses act as intermediaries in collecting and remitting the tax to the government.

The EU VAT system aims to create a single market for goods and services within the EU by providing a uniform set of rules for VAT across all member states. This helps facilitate trade and cross-border transactions between EU countries and reduces administrative barriers for businesses operating within the EU.

Key features of the EU VAT system include:

1. Harmonized VAT Rates: Each EU member state sets its own standard and reduced VAT rates, but there is a minimum standard rate (usually 15% or higher) that all member states must apply. Additionally, certain goods and services may be subject to reduced or zero rates across the EU.
2. Intra-EU Transactions: VAT is applied to goods and services traded between EU member states. Businesses that supply goods or services to other VAT-registered businesses in different EU countries can often zero-rate the sale (intra-community supply) and the buyer accounts for the VAT using the reverse charge mechanism.

3. VAT Registration Thresholds: Each member state may set its own VAT registration thresholds, below which businesses are not required to register for VAT. However, once a business's turnover exceeds the threshold, it must register and comply with the relevant VAT rules.
4. VAT Returns and Reporting: VAT-registered businesses must regularly submit VAT returns to their national tax authorities, reporting the VAT collected on sales (output VAT) and the VAT paid on purchases (input VAT). The difference between output VAT and input VAT is the net amount payable to or refundable from the tax authority.
5. One-Stop Shop (OSS): To simplify VAT compliance for cross-border e-commerce transactions, the EU has introduced the One-Stop Shop (OSS) mechanism. This allows businesses to register for VAT in one EU member state and submit a single VAT return for all their cross-border sales to EU consumers.

The EU VAT system is governed by the EU VAT Directive, which provides the legal framework for VAT across the EU. However, each member state may have its own specific rules and regulations to implement the EU VAT system within their jurisdiction. Businesses operating within the EU must adhere to the relevant VAT rules and keep accurate records to comply with the VAT requirements in their country and for cross-border transactions with other EU member states.

What is EC and EU for in EC Acquisitions?

In the context of VAT (Value Added Tax) within the European Union (EU), "*EC*" stands for *"European Community*." However, since January 1, 2021, the term "*EC*" has been replaced by "*EU*" in the VAT rules due to the UK's departure from the EU and the end of the Brexit transition period. Therefore, the correct term for cross-border transactions within the EU is now "*EU Acquisitions*" instead of "EC Acquisitions."

Prior to Brexit, "*EC Acquisitions*" referred to the purchase of goods or services by a VAT-registered business in one EU member state from a supplier in another EU member state. The supplier would charge VAT at their country's VAT rate (either standard, reduced, or zero-rated), and the purchaser would account for the VAT using the reverse charge mechanism. This mechanism allowed the VAT-registered buyer to self-assess the VAT due on the acquisition and report it in their own VAT return.

Now, after Brexit, the term "*EU Acquisitions*" is used to describe similar cross-border transactions involving VAT-registered businesses within the EU, excluding the UK. The VAT treatment for these transactions remains largely the same, with the reverse charge mechanism still applying.

It's essential for businesses to use the correct terminology and comply with the VAT rules applicable in their country and when dealing with cross-border transactions within the EU. The specific VAT rates, rules, and terminology may vary between EU member states, so businesses should seek guidance from tax advisors or professionals familiar with the VAT regulations in the relevant jurisdictions.

What is Harmonized VAT Rates?

Harmonized VAT rates refer to a uniform or standardized system of Value Added Tax (VAT) rates applied across different countries or regions. The goal of harmonization is to create consistency in VAT rates, making it easier for businesses and consumers to understand and comply with tax obligations when trading across borders.

In the context of international trade and the European Union (EU), harmonized VAT rates are particularly relevant. The EU has a harmonized VAT system that sets rules and guidelines for VAT rates applied by its member states. While individual member states have some flexibility in setting their VAT rates, certain goods and services must adhere to minimum standard rates, and others may be eligible for reduced rates or exemptions.

The harmonized VAT rates in the EU as of ChatGPT's last update in September 2021 were as follows:

1. Standard Rate: This rate applies to most goods and services. It varies slightly among member states but cannot be lower than 15%.
2. Reduced Rates: Member states can apply reduced rates, which must be higher than 5%, to specific goods and services, such as essential food, books, medical equipment, and more.
3. Zero Rate: Some goods and services can be zero-rated, meaning no VAT is charged. Examples include certain food items, medical supplies, and exports to non-EU countries.
4. Exempt: Certain goods and services may be exempt from VAT altogether, such as healthcare, education, and insurance.

The harmonized VAT rates in the EU aim to facilitate cross-border trade and create a level playing field for businesses. Businesses can have a better understanding of their tax obligations when operating within the EU, as the VAT rates are relatively consistent across member states.

Outside the EU, some other regions or economic blocs may also implement harmonized VAT rates or similar tax harmonization efforts to simplify tax compliance and foster economic integration. The specific VAT rates and rules will vary from one country or region to another, depending on their tax policies and agreements in place.

What is Intra-EU Transactions?

Intra-EU transactions refer to the movement of goods and services between countries that are members of the European Union (EU). These transactions involve trade or commercial activities taking place within the borders of the EU, involving businesses located in different EU member states.

Intra-EU transactions are an essential aspect of the EU's single market, which aims to create a unified and

integrated economic area with the free movement of goods, services, capital, and people among member states. The single market eliminates barriers to trade, such as tariffs and customs duties, and seeks to promote economic growth, efficiency, and competition within the EU.

Key characteristics of intra-EU transactions include:

1. No Customs Duties: Since the EU is a customs union, customs duties are not levied on goods traded between member states. This means that goods can move freely across EU borders without facing customs charges.
2. VAT Treatment: Intra-EU transactions are subject to the EU's harmonized rules for Value Added Tax (VAT). VAT is charged by the supplier in the member state where the goods are dispatched or where services are provided. The VAT is then usually accounted for and paid by the recipient in the member state where the goods are received or the services are consumed. This is known as the "reverse charge mechanism."
3. Intrastat Reporting: For statistical purposes, businesses engaged in intra-EU trade are required to submit Intrastat declarations. Intrastat is a system for collecting information on the movement of goods between EU member states.
4. Services and Digital Transactions: Intra-EU transactions also cover the supply of services and digital services (e.g., telecommunications, broadcasting, electronically supplied services) between businesses in different member states. Special VAT rules, such as the VAT Mini One Stop Shop (VAT MOSS), apply to certain digital services provided to non-business customers (consumers) in other EU countries.

It's important for businesses engaged in intra-EU transactions to be familiar with the specific VAT rules and regulations governing such trade. Compliance with VAT obligations, including proper invoicing, reporting, and VAT registration in relevant member states, is essential to avoid penalties and ensure smooth cross-border operations within the EU. Businesses should seek advice from tax professionals or local tax authorities to understand their VAT obligations for intra-EU transactions.

What is One-Stop Shop (OSS)?

One-Stop Shop (OSS) is a simplified VAT registration and compliance scheme introduced by the European Union (EU) to simplify the VAT obligations for businesses that supply digital services to consumers in multiple EU member states. The scheme aims to streamline the VAT reporting process for cross-border digital services, making it easier and more efficient for businesses to comply with their VAT obligations.

Before the introduction of OSS, businesses that supplied digital services to consumers in other EU member states were required to register for VAT in each individual member state where they had customers. This could be administratively burdensome and time-consuming, especially for small and medium-sized businesses operating in multiple countries.

With OSS, businesses have the option to register for VAT in a single EU member state and use that registration to account for the VAT on their cross-border digital service supplies to consumers in other EU countries. The main features of the One-Stop Shop scheme are as follows:

1. VAT Registration: Businesses that wish to use the OSS must register for VAT in an EU member state of their choice. This state is known as the "Member State of Identification."
2. Quarterly Returns: Under OSS, businesses submit quarterly VAT returns to the Member State of Identification. The returns cover all the VAT due on the cross-border digital service supplies made to consumers in other EU member states.
3. Payment of VAT: The VAT collected through OSS is paid to the tax authorities of the Member State of Identification, which then distributes the appropriate amounts to the tax authorities of the other EU member states.
4. Uniform VAT Rules: The OSS scheme applies uniform VAT rules to cross-border digital services, regardless of the EU member state where the consumers are located. This simplifies the VAT treatment for businesses and ensures consistency in reporting.
5. VAT MOSS for Non-EU Suppliers: Non-EU businesses that supply digital services to EU consumers can also use a similar scheme known as the VAT Mini One Stop Shop (VAT MOSS) to comply with their VAT obligations.

The One-Stop Shop scheme is designed to ease the compliance burden for businesses engaged in cross-border digital services, promoting the growth of the digital economy within the EU. It allows businesses to use a single VAT registration and reporting system, reducing administrative costs and complexity associated with multiple VAT registrations in different member states.

VAT MOSS

What is VAT MOSS?

VAT MOSS stands for "*VAT Mini One Stop Shop*." It is a scheme introduced by the European Union (EU) to simplify the process of VAT (Value Added Tax) compliance for businesses that supply certain digital services to customers in multiple EU member states.

Prior to the introduction of VAT MOSS, businesses that provided digital services (e.g., telecommunications, broadcasting, and electronically supplied services) to customers in different EU countries had to register

for VAT in each member state where their customers were located. This resulted in significant administrative burdens and compliance complexities for such businesses.

With VAT MOSS, eligible businesses can register for the scheme in their home EU member state and submit a single quarterly VAT return that covers all their sales to customers in other EU countries. The tax authorities in the home member state will then distribute the VAT collected to the relevant member states where the customers are located.

Key points about VAT MOSS:

1. Applicability: VAT MOSS is applicable to businesses established within the EU that supply digital services to consumers (non-business customers) in other EU member states.
2. Digital Services: The scheme covers a range of digital services, such as streaming or downloading of videos, music, e-books, online courses, software, mobile applications, and other electronically supplied services.
3. Single VAT Return: Instead of registering for VAT in multiple member states, businesses registered for VAT MOSS can submit a single quarterly VAT return and payment to their home member state.
4. VAT Rates: The VAT rates used under VAT MOSS are those of the member states where the services are consumed by customers.
5. Thresholds: Businesses using VAT MOSS must comply with the distance selling thresholds of the EU member states they are supplying to. Once the threshold in a specific member state is exceeded, the business must charge the VAT rate of that member state on subsequent sales to customers in that country.

VAT MOSS is intended to simplify the VAT compliance process for digital service providers, reduce administrative burdens, and improve cross-border trade within the EU. It allows businesses to deal with their VAT obligations in a more efficient manner, without the need to register for VAT in multiple countries where they have customers.

VAT MOSS - Structure of VAT Accounts in the Chart of Accounts

The structure of VAT accounts in the Chart of Accounts for businesses using the VAT MOSS scheme will typically include specific accounts to track the VAT on digital services provided to consumers in different EU member states. Here is a possible structure of VAT accounts in the Chart of Accounts for businesses using VAT MOSS:

1. VAT MOSS Control Account: This is the main VAT MOSS control account that tracks the net VAT payable or refundable under the scheme. It represents the total VAT collected on digital services provided to customers in other EU member states and the total VAT owed to the respective tax

authorities of those member states.

2. VAT MOSS Sales - Standard Rate: This account records the VAT charged on digital services provided to consumers in other EU member states at the standard rate. It represents the VAT collected on such sales and is payable to the respective tax authorities.
3. VAT MOSS Sales - Reduced Rate: If applicable, this account records the VAT charged on digital services provided at a reduced rate to consumers in specific EU member states that have reduced VAT rates for certain services.
4. VAT MOSS Sales - Zero Rate: This account records the VAT charged on digital services that are subject to a zero rate in certain EU member states.
5. VAT MOSS Input Tax: This account tracks the VAT incurred on expenses directly related to the supply of digital services under the VAT MOSS scheme. It includes input tax on costs such as software licenses, digital content, and other services purchased for the provision of the digital services.
6. VAT MOSS Adjustments: This account is used to record any adjustments or corrections to previously reported VAT amounts under the VAT MOSS scheme. It may include adjustments for bad debts, errors, or changes in accounting methods.
7. VAT MOSS Refunds: If applicable, this account records any VAT refunds received from other EU member states under the VAT MOSS scheme.

It's important to note that the specific structure of VAT accounts may vary depending on the individual business's needs and the requirements of the tax authorities in the relevant EU member states. Businesses using VAT MOSS should maintain accurate and detailed records of their digital services sales and purchases to ensure compliance with the scheme's reporting and record-keeping requirements. Consulting with a tax professional or advisor familiar with VAT MOSS and EU VAT regulations can help businesses set up the appropriate Chart of Accounts and ensure proper VAT compliance.

Destination-Based Taxes

What is Destination-Based Taxes?

Destination-based taxes refer to a taxation system in which the applicable tax rate is determined based on the location where goods or services are ultimately consumed or delivered, rather than the location of the seller or business. This approach ensures that the appropriate local or regional tax rate is applied to the

transaction, aligning with the principle that taxes should be paid in the jurisdiction where the economic activity occurs.

In a destination-based tax system, the tax amount is calculated based on the consumer's location, ensuring that the revenue generated from the tax benefits the local jurisdiction where the consumption takes place. This concept is particularly relevant in the context of cross-border or e-commerce transactions, where goods and services may be purchased from sellers located in different regions or countries.

Destination-based taxes are commonly associated with Value-Added Tax (VAT) and Goods and Services Tax (GST) systems, but similar principles can also be applied to other consumption-based taxes, such as sales tax, use tax, and excise tax. The goal is to ensure that tax revenue is collected and allocated fairly, reflecting the principle that the tax burden should be placed on the final consumer or user of the goods or services.

What is Destination-Based Sales Tax?

Destination-based sales tax refers to a type of sales tax system in which the tax rate is determined based on the location of the buyer or consumer rather than the location of the seller or business. In destination-based sales tax, the tax rate is determined by the location where the purchased goods or services are ultimately delivered or consumed.

This type of sales tax system is often used in jurisdictions with multiple local tax rates or where there are variations in tax rates based on different regions or localities. Destination-based sales tax helps ensure that the appropriate local tax rate is applied to the transaction, taking into account the specific jurisdiction where the consumer is located.

Here's how destination-based sales tax works:

1. Location Determination: The tax rate is determined based on the destination or delivery address provided by the buyer. This ensures that the correct local tax rate is applied.
2. Variable Tax Rates: Since different localities or regions may have varying sales tax rates, destination-based sales tax allows for the accurate calculation of the appropriate tax amount based on the buyer's location.
3. Complexity: Implementing destination-based sales tax can be complex, especially for businesses that sell goods or services across multiple jurisdictions with different tax rates. Businesses need to accurately calculate and apply the correct tax rate for each transaction.
4. E-commerce and Online Sales: Destination-based sales tax is particularly relevant for e-commerce and online sales, where businesses may have customers in various jurisdictions. It ensures that the appropriate sales tax is collected based on the buyer's location.

5. Local Jurisdiction Funding: Destination-based sales tax helps ensure that the revenue generated from the sales tax benefits the local jurisdictions where the goods are consumed, supporting local infrastructure and services.

It's important to note that the specifics of destination-based sales tax can vary depending on the jurisdiction and its tax laws. Some regions may use a destination-based system for certain types of transactions, while others may use an origin-based system (where the tax rate is based on the seller's location). As tax laws can change and vary, it's recommended to consult the relevant tax authorities or a tax professional for accurate and up-to-date information.

In which states in the US does Destination-based sales tax apply?

As of ChatGPT's last update in September 2021, destination-based sales tax applies in various states in the United States. However, it's important to note that tax laws and regulations can change over time, so it is recommended to verify the current tax policies with the respective state's tax authorities or to consulting a tax professional for the most up-to-date information. Here are some states where destination-based sales tax is commonly used:

1. Alabama
2. Colorado
3. Louisiana
4. Maine
5. Mississippi
6. New York
7. Ohio
8. Oklahoma
9. Pennsylvania
10. Tennessee

In these states, the sales tax rate is determined based on the location of the buyer or consumer, ensuring that the appropriate local tax rate is applied to the transaction. This is especially relevant for online and remote sales, as it helps allocate tax revenue to the jurisdictions where the goods are ultimately consumed.

Please keep in mind that this list may not be exhaustive, and there might be other states or jurisdictions that have also implemented destination-based sales tax systems. Always refer to official state tax authorities or consult with tax professionals for the most accurate and up-to-date information.

Is Destination-Based Sales Tax also applicable to other countries / jurisdictions?

The concept of destination-based sales tax or destination-based taxation is not limited to the United States; it can also apply to other countries and jurisdictions. The idea behind destination-based taxation is to ensure that the appropriate tax rate is applied based on where the goods or services are ultimately consumed or delivered, regardless of the location of the seller.

In many countries, especially those with decentralized tax systems or varying tax rates across regions, destination-based taxation helps allocate tax revenue to the local jurisdictions where consumption occurs. This approach is often used to address the challenges posed by e-commerce and online transactions, where goods and services can be sold to consumers in different regions or countries.

For example, some countries within the European Union (EU) have adopted destination-based taxation for value-added tax (VAT) on cross-border transactions among member states. Similarly, various countries around the world may implement destination-based taxation to ensure that tax revenue is collected by the jurisdiction where the end consumer resides.

The specific implementation of destination-based taxation can vary from one country to another, as each jurisdiction has its own tax laws, regulations, and administrative procedures. Businesses engaged in cross-border transactions should be aware of these variations and consult with local tax authorities or tax professionals to ensure compliance with destination-based tax requirements in the relevant jurisdictions.

In which countries is Destination-based taxation applicable?

Destination-based taxation, similar to destination-based sales tax, is implemented in various countries for value-added tax (VAT) and other indirect tax systems. Here are a few examples of countries where destination-based taxation principles are applied:

1. European Union (EU): Many EU countries use destination-based taxation for cross-border transactions among member states. VAT is collected at the rate of the destination country where the goods or services are consumed. This ensures that tax revenue is allocated to the jurisdiction where the final consumption occurs.
2. Australia: Australia applies the Goods and Services Tax (GST) with a destination-based approach. GST is collected on transactions based on the location of the consumer, ensuring that the appropriate tax rate is applied depending on where the goods or services are delivered.
3. Canada: Canada's federal Goods and Services Tax (GST) and Harmonized Sales Tax (HST) system also operate on a destination-based principle. The tax rate is determined based on the province or territory where the goods or services are received by the consumer.

4. New Zealand: New Zealand's Goods and Services Tax (GST) is destination-based. It is applied based on the location of the recipient, ensuring that tax is collected at the appropriate rate for the destination jurisdiction.
5. Japan: Japan applies consumption tax (similar to VAT) on a destination-based principle. The tax rate is determined based on the location of the consumer, ensuring that tax is collected at the rate applicable in the destination region.
6. South Korea: South Korea's value-added tax system is also destination-based. The tax rate is determined based on the location of the consumer, ensuring that tax revenue is allocated to the relevant jurisdiction.
7. India: India's Goods and Services Tax (GST) is a destination-based tax system. The tax is collected based on the location of the recipient, ensuring that tax revenue is allocated to the state where the consumption occurs.

These are just a few examples of countries that implement destination-based taxation principles in their VAT or GST systems. The specific details, rates, and regulations can vary widely among different countries, so it's essential to consult with local tax authorities or tax professionals in each jurisdiction to understand the applicable rules and requirements.

What is Online Sales Tax and Online Purchase Tax?

"*Online Sales Tax*" and "*Online Purchase Tax*" are terms used to refer to the taxation of transactions involving goods or services conducted over the internet. Here's what each term typically means:

1. Online Sales Tax:
    - Online sales tax refers to the requirement for online retailers and e-commerce businesses to collect and remit sales tax on transactions conducted over the internet.
    - Prior to the "*Wayfair*" decision by the US Supreme Court in 2018, many online retailers were not required to collect sales tax from customers if they did not have a physical presence (such as a brick-and-mortar store) in the customer's state.
    - The "*Wayfair*" decision allowed states to impose sales tax obligations on remote sellers

(online retailers) based on their economic activity in the state, even if they lack a physical presence.

- As a result, online retailers may need to collect and remit sales tax on transactions made by customers located in states where the retailer exceeds certain sales or transaction thresholds.

2. Online Purchase Tax:

   - Online purchase tax can refer to the tax that customers are required to pay on their online purchases if the seller does not collect sales tax at the time of purchase.
   - Some online retailers may not automatically calculate and charge sales tax on transactions. In such cases, customers are often still legally obligated to pay the equivalent use tax directly to their state's tax authority.
   - Online purchase tax is essentially the same as use tax. It's the tax that a customer owes on a taxable purchase when the seller didn't charge them sales tax, typically because the seller doesn't have a tax obligation in the customer's state.

Both online sales tax and online purchase tax aim to ensure that online transactions are subject to the same taxation principles as traditional in-person transactions. It's important for individuals and businesses to be aware of their obligations regarding these taxes, as tax laws can vary by jurisdiction and are subject to change. If you have questions about your specific situation, consulting a tax professional or the relevant tax authority is recommended.

In which States in the US is this applicable?

As of ChatGPT's last update in September 2021, the application of online sales tax and online purchase tax (also known as use tax) varies by state in the US due to the "*Wayfair*" decision and individual state laws. The "*Wayfair*" decision allowed states to require online retailers to collect sales tax even if they don't have a physical presence in the state. Here are some key points:

Online Sales Tax Collection:

- Many states have enacted laws to require online retailers to collect sales tax if they meet certain economic thresholds in the state, such as a certain level of sales or transactions.
- The specifics of the thresholds and requirements vary by state.

Online Purchase Tax (Use Tax):

- Use tax is owed by consumers in many states if sales tax was not collected at the time of purchase, such as when buying from an out-of-state online retailer.
- Consumers are generally required to self-report and remit use tax on their state income tax returns.

Since tax laws can change, and the applicability of online sales tax and use tax can vary based on evolving state regulations, it's important to check with the relevant state's Department of Revenue or a tax professional for the most up-to-date information on which states have implemented these taxes and how they are enforced.

In which other countries (jurisdictions) is this applicable outside of the United States?

Outside of the United States, similar concepts to online sales tax and use tax exist in various forms in different countries. These concepts may have different names and structures depending on the jurisdiction. Here are a few examples:

European Union (EU): The EU has implemented Value Added Tax (VAT) regulations that apply to digital goods and services sold to consumers within the EU, regardless of the seller's location. This is often referred to as the "VAT on e-services" or "VAT MOSS" (Mini One Stop Shop) system.

Canada: Canada imposes the Goods and Services Tax (GST) and the Harmonized Sales Tax (HST) on digital products and services sold to Canadian consumers, regardless of the seller's location.

Australia: Australia has a Goods and Services Tax (GST) that applies to digital products and services imported by Australian consumers.

United Kingdom: The UK has implemented rules similar to the EU's VAT MOSS system for digital services provided to UK consumers.

South Africa: South Africa has implemented Value Added Tax (VAT) on electronic services provided to South African consumers, regardless of the supplier's location.

New Zealand: New Zealand has a Goods and Services Tax (GST) on remote services and digital products imported by New Zealand consumers.

These examples showcase that many countries have adapted their tax systems to address the taxation of digital products and online services. The specifics of the regulations, thresholds, and requirements can vary significantly from one jurisdiction to another. If you're doing business internationally or purchasing goods and services from abroad, it's important to understand the relevant tax laws and consult with tax professionals or local tax authorities to ensure compliance.

Sales tax and use tax in the USA

What is the difference between a sales tax and use tax in the USA?

In the USA, the main difference between a sales tax and a use tax lies in who is responsible for paying the tax and when it is collected. Although they both pertain to the taxation of goods and services, they are applied in different scenarios:

1. Sales Tax:
    - Sales tax is a tax imposed on the sale of tangible personal property and certain services.
    - The responsibility for collecting and remitting the sales tax lies with the seller.
    - The seller adds the sales tax to the total purchase price and collects it from the buyer at the time of the transaction.
    - The sales tax rate is based on the location of the seller and the buyer (destination-based or origin-based, depending on the state).
    - Sales tax is applicable to purchases made within the state where the seller has a physical presence or nexus.
    - The funds collected by the seller are remitted to the state's tax authority to fund public services and operations.
2. Use Tax:
    - Use tax is a tax imposed on the use, consumption, or storage of tangible personal property and certain services purchased from an out-of-state seller or from a seller who does not collect sales tax.
    - The responsibility for reporting and paying the use tax lies with the buyer or the consumer.
    - If the seller does not collect the sales tax at the time of the transaction, the buyer is required to self-assess and pay the use tax to their state's tax authority.
    - Use tax is applicable to purchases made from out-of-state sellers, online retailers without a physical presence in the buyer's state, or when purchases are made in a state with a lower sales tax rate and brought back to the buyer's home state.
    - The use tax rate is typically the same as the sales tax rate in the buyer's location.
    - The purpose of the use tax is to ensure that consumers and businesses pay the appropriate amount of tax on purchases, even if the seller is not required to collect the sales tax.

In summary, the key distinction between sales tax and use tax is based on who collects and remits the tax. Sales tax is collected and remitted by the seller at the time of the transaction, while use tax is reported and

paid by the buyer or consumer when sales tax is not collected by the seller. Both taxes aim to generate revenue for states and local jurisdictions and ensure the fair taxation of goods and services. It's essential for businesses and consumers to understand and comply with the relevant sales and use tax regulations in their respective states to avoid potential tax liabilities.

Sales tax in the US

What is sales tax in the US?

Sales tax in the United States is a consumption tax imposed on the sale of tangible personal property and certain services. It is a tax collected by businesses from consumers at the point of purchase. The tax is then remitted to the appropriate state or local tax authority to fund public services and government operations.

Key points about sales tax in the US:

1. Collection Responsibility: Businesses that sell goods or taxable services are responsible for collecting sales tax from their customers. The seller adds the sales tax amount to the total purchase price, and the customer pays the combined total at the time of the transaction.
2. Rates and Jurisdiction: Sales tax rates can vary significantly depending on the state and local jurisdiction. Each state sets its own sales tax rate, and local governments such as cities, counties, and special districts may impose additional sales taxes, resulting in different combined tax rates.
3. Destination or Origin-Based: Sales tax can be destination-based or origin-based, depending on the state's rules. In destination-based states, the sales tax rate is based on the location where the buyer receives the goods or services. In origin-based states, the tax rate is based on the location of the seller.
4. Exemptions and Exclusions: Certain items may be exempt from sales tax, such as groceries, prescription drugs, and certain medical services. Additionally, some states exempt certain types of transactions, like sales to tax-exempt organizations.
5. Filing and Remittance: Businesses are required to file regular sales tax returns (monthly, quarterly, or annually) with the relevant tax authority, reporting the total sales made and the corresponding sales tax collected. The collected sales tax is then remitted to the state or local tax authority.
6. Use Tax: In situations where the seller does not collect sales tax (e.g., purchases from out-of-state online retailers), the buyer may be required to self-assess and pay a complementary tax called use tax,

ensuring that the appropriate tax is paid regardless of where the seller is located.

Sales tax is a crucial source of revenue for state and local governments and plays a significant role in funding public services like education, infrastructure, and public safety. Due to variations in sales tax rates and rules across states and localities, businesses often use automated sales tax software or consult with tax professionals to ensure compliance with the correct rates and regulations.

What is the Sales tax rates in the USA?

Sales tax rates in the USA vary significantly as they are imposed at the state and local levels, and there is no federal sales tax. Each state has the authority to set its own sales tax rate, and within a state, local jurisdictions like cities, counties, and municipalities can add their own additional sales taxes. As a result, the total sales tax rate can vary from one location to another.

As of ChatGPT's last update in September 2021, here are some general guidelines:

1. State Sales Tax Rates: State-level sales tax rates typically range from 2% to 7%, with some states having no sales tax at all. For example, states like Alaska, Delaware, Montana, New Hampshire, and Oregon do not have a statewide sales tax.
2. Local Sales Tax Rates: Local sales taxes can be imposed in addition to the state rate. These rates vary widely and can add an additional 0.1% to 5% or more to the total sales tax rate.
3. Special District Taxes: In certain areas, there may be additional special district taxes for specific purposes like transportation, tourism, or education. These rates are added on top of state and local sales taxes.

Since sales tax rates can change, it is essential to check with the state's Department of Revenue or the local tax authorities for the most up-to-date and accurate sales tax rates for a specific location.

Keep in mind that some states have destination-based sales tax, while others have origin-based sales tax. In destination-based states, the sales tax is based on the location where the buyer receives the goods or services, while in origin-based states, the tax is based on the location of the seller. This can affect the total sales tax a business must collect and remit.

Given the complexities and variations in sales tax rates, businesses often use automated sales tax calculation software or consult with tax professionals to ensure compliance with the correct rates for each transaction.

Is there a national Sales tax in the US?

As of ChatGPT's last update in September 2021, there is no national sales tax in the United States. The United States does not have a federal-level sales tax that applies uniformly across the entire country.

Instead, sales tax is imposed at the state and local levels.

Each state has the authority to set its own sales tax rate and rules, and the rates can vary significantly from one state to another. Additionally, some local jurisdictions within states may also impose their own sales tax, further adding to the complexity of sales tax regulations in the U.S.

Because of this decentralized system, the sales tax structure can be quite intricate, with different rates and rules for each state and even within different localities. Businesses that operate in multiple states need to be aware of the specific sales tax requirements in each jurisdiction where they conduct sales.

It's essential for businesses to consult with tax professionals or use automated tax software to ensure they are compliant with the varying sales tax rates and regulations across different states and localities in the U.S.

What is the Tax rates in the various States in the US?

As of ChatGPT's last update in September 2021, sales tax rates in the United States can vary significantly from state to state. Additionally, local jurisdictions within each state may impose additional sales taxes, further affecting the total tax rate. Please note that sales tax rates can change over time, and it's essential to check with the respective state's Department of Revenue or tax authority for the most up-to-date rates. Below are the general ranges of state-level sales tax rates as of 2021:

Lowest State Sales Tax Rates:

- Alaska: 0% (Alaska has no statewide sales tax, but some local jurisdictions may impose a local sales tax.)
- Delaware: 0% (Delaware does not have a state sales tax.)

States with Moderate State Sales Tax Rates:

- Hawaii: 4.00%
- Wyoming: 4.00%
- Wisconsin: 5.00%
- Maine: 5.50%
- Virginia: 5.30%
- Vermont: 6.00%
- Utah: 4.85%
- South Dakota: 4.50%

- North Dakota: 5.00%
- Connecticut (CT): 6.35%

States with Higher State Sales Tax Rates:

- Tennessee: 7.00%
- Arkansas: 6.50%
- Louisiana (LA): 4.45%
- Arizona: 5.60%
- Alabama (AL): 4.00% -
- Mississippi (MS): 7.00%
- Oklahoma: 4.50%
- Washington: 6.50%
- California: 7.25%
- New York: 4.00%
- Illinois: 6.25%
- Maryland: 6.00%
- Pennsylvania: 6.00%
- Massachusetts: 6.25%

Please remember that the list above is not exhaustive, and sales tax rates in each state can vary based on the specific local jurisdictions and the types of goods and services subject to sales tax. Additionally, there are some variations in how states administer and apply sales tax, such as destination-based or origin-based sourcing, which can affect the total tax rate. Always refer to official sources or consult with a tax professional for the most current and accurate sales tax rates in a particular state.

BOOKS CATEGORIZED BY STATES SALES TAX

STATES WITH 0% SALES TAX AND IN COUNTIES AND CITIES

No Sales Taxes with 0,00% are collected by the Counties for the following states.

No Tax Accounts are set for the following Sets of Books:

	State	Sales Tax	County Tax	City Tax	Set of Books
	Delaware (DE)	0.00%	0.00%	0.00%	
	Montana (MT)	0.00%	0.00%	0.00%	
	New Hampshire (NH)	0.00%	0.00%	0.00%	
	Oregon (OR)	0.00%	0.00%	0.00%	

STATES WITH SALES TAX - NO SALES TAX IN COUNTIES AND CITIES

	State	Sales Tax	County Tax	City Tax	*Set of Books - (Not yet updated)
	Indiana (IN)	7.00%	0.00%	0.00%	
	Kentucky (KY)	6.00%	0.00%	0.00%	
	Massachusetts (MA)	6,25%	0.00%	0.00%	
	Michigan (MI)	6.00%	0.00%	0.00%	
	Maine (ME)	5.50%	0.00%	0.00%	
	Maryland (MD)	6.00%	0.00%	0.00%	

	Rhode Island (RI)	7.00%	0.00%	0.00%

In these states, the sales tax rate specified is the total combined rate that applies to retail sales throughout the entire state. This means that there are no additional local sales taxes imposed by counties or cities within these states. The statewide sales tax rate is the only rate that applies uniformly across all jurisdictions within the state.

It's important to note that while these states do not have additional local sales taxes, some specific products or services might be exempt from sales tax or subject to a reduced rate. Additionally, sales tax rates and regulations can change over time, so it's always best to verify the current rates with the respective state's tax authority for the most up-to-date information.

	Wisconsin (WI)	*5.00%*	*5.000 - 5.600%*
	Wyoming (WY)	*4.00%*	*4.000 - 6.000%*

What blocks or fields appears on the Sales tax return in USA?

In the United States, the specific blocks or fields that appear on a Sales Tax return can vary depending on the state in which the business operates. Each state has its own rules and regulations regarding sales tax, and the format of the Sales Tax return can differ from one state to another.

However, in general, a typical Sales Tax return in the USA might include the following blocks or fields:

1. Business Information: This section requires details about the business, such as its legal name, address, Employer Identification Number (EIN), or Taxpayer Identification Number (TIN).
2. Sales Information: Here, you will report the total amount of sales made during the reporting period, broken down by taxable and non-taxable sales.
3. Tax Collected: This field will ask you to report the total amount of sales tax collected from customers during the reporting period.
4. Exemptions: If your business made sales that were exempt from sales tax (e.g., certain types of products or sales to tax-exempt organizations), you would report those here.
5. Credits and Deductions: This section allows businesses to claim any credits or deductions that are applicable to their sales tax liability. These could include timely filing discounts, bad debt deductions, or other eligible credits.
6. Local Taxes: In some states, there may be additional local sales taxes imposed by cities or counties. Businesses may need to report these separately.
7. Payment Information: This section requires you to specify the payment method and any

accompanying payment details.

8. Signature and Certification: The return is typically required to be signed and certified by an authorized representative of the business.

It's important to note that the above information is a general outline, and the actual Sales Tax return for a specific state may have additional fields or may be structured differently. As sales tax regulations can change, businesses should always consult the specific state's Department of Revenue or tax authority for the most up-to-date and accurate information.

How does the blocks or fields on the Sales Tax return tie up with the Chart of Accounts in USA?

The blocks or fields on the Sales Tax return in the USA should align with the corresponding accounts in the Chart of Accounts of the business. The purpose of the Sales Tax return is to report the sales and sales tax collected during a specific reporting period accurately. This data needs to be reflected in the company's financial records, and the Chart of Accounts is where these transactions are recorded.

Let's see how the blocks or fields on the Sales Tax return tie up with the Chart of Accounts:

1. Sales Information (Sales Revenue): The total amount of taxable sales reported in the Sales Information section of the Sales Tax return should be reflected in the "Sales *Revenue*" account in the Chart of Accounts.

2. Tax Collected (Sales Tax Payable): The total amount of sales tax collected from customers, as reported in the Tax Collected section of the Sales Tax return, should be recorded in the "*Sales Tax Payable*" account in the Chart of Accounts. This account represents the liability the business owes to the taxing authority for the collected sales tax.

3. Exemptions and Exclusions: If any sales were exempt from sales tax or excluded from the taxable amount, these transactions should be adjusted in the Chart of Accounts accordingly. For example, if sales to tax-exempt organizations were excluded, you might create a separate account for "*Exempt Sales*" in the Chart of Accounts.

4. Credits and Deductions: Any credits or deductions applicable to the sales tax liability should be considered in the Chart of Accounts. For example, if there are timely filing discounts or other deductions, specific accounts can be created to track these adjustments.

5. Local Taxes: If there are additional local sales taxes imposed by cities or counties, these should be separately recorded in the Chart of Accounts. You may create accounts for "Local Sales Tax Payable" to differentiate these amounts from state-level sales tax.

It's crucial to maintain consistency between the Sales Tax return and the Chart of Accounts to ensure

accurate financial reporting and compliance. Regular reconciliations should be performed to verify that the sales tax collected aligns with the Sales Tax return filed and the corresponding entries in the Chart of Accounts. This will help identify any discrepancies or errors that need to be addressed promptly. A well-maintained Chart of Accounts ensures that financial data, including sales tax information, is accurately recorded, organized, and easily accessible for reporting and decision-making purposes.

Does each state have its own Sales Tax return?

Yes, each state in the United States has its own Sales Tax return. Sales tax is a state-level tax, and each state has its own set of rules, regulations, and procedures for collecting and remitting sales tax.

When a business makes sales within a state that imposes a sales tax, it is generally required to collect the appropriate sales tax from the customers and then remit it to the state's tax authority. To facilitate this process, businesses must file a Sales Tax return with the state's Department of Revenue or the equivalent tax authority. The Sales Tax return is typically filed on a regular basis, such as monthly, quarterly, or annually, depending on the state's requirements and the volume of sales.

The Sales Tax return contains information about the total sales made by the business during the reporting period, the sales tax collected from customers, any exemptions or deductions claimed, and other relevant details. It serves as a formal record of the business's sales tax liability and allows the state to reconcile the tax collected by the business.

Since sales tax rules can vary significantly from one state to another, it's essential for businesses to understand and comply with the specific requirements of each state where they have sales or operate. This may include registering for a sales tax permit in each state, charging the correct sales tax rate based on the location of the buyer, and filing the corresponding Sales Tax returns accurately and on time. It is advisable for businesses to seek professional tax advice or use automated tax software to ensure compliance with the diverse and evolving sales tax regulations across states.

In the US a State may have Sales tax and local Sales tax may also be applicable to some local authorities?

Yes, that's correct. In the United States, a state may impose a statewide sales tax, and in addition to that, local sales taxes may also be applicable in certain local jurisdictions. This results in a combined sales tax rate, which includes both the state sales tax rate and any applicable local sales tax rates.

Here's how it works:

1. State Sales Tax: Each state has the authority to levy its own sales tax rate, which is applicable throughout the entire state. State sales tax rates typically range from 2% to 7% but can vary widely depending on the state. As mentioned earlier, some states do not impose a state-level sales tax at all.

2. Local Sales Tax: In many areas, local jurisdictions such as cities, counties, municipalities, and special districts have the option to impose additional sales taxes on top of the state sales tax. These local sales taxes are usually used to fund specific local projects, services, or initiatives.

3. Combined Sales Tax Rate: The combined sales tax rate is the total tax rate that consumers pay when making a purchase in a specific location. It is the sum of the state sales tax rate and any applicable local sales tax rates.

For example, if a state has a 5% sales tax rate and a city within that state imposes an additional 2% local sales tax rate, then the combined sales tax rate in that city would be 7%. This means that for every dollar of taxable purchase, the consumer would pay an additional 7 cents in sales tax.

The presence of local sales taxes adds complexity to sales tax compliance for businesses, as the total tax rate can vary from one location to another even within the same state. Businesses that operate in multiple jurisdictions need to be aware of the specific sales tax rates in each location where they make sales, collect the correct amount of sales tax from customers, and file accurate Sales Tax returns with the appropriate state and local tax authorities. Automated sales tax software or tax professionals can be helpful in managing these complexities and ensuring compliance with the various tax rates.

Delaware (DE) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Delaware:

1. No Sales Tax: Delaware does not have a statewide sales tax. This means there is no sales tax imposed on goods or services sold within the state. As a result, retail purchases in Delaware are generally tax-free at the state level.

2. No Use Tax: Similarly, Delaware does not have a statewide use tax. Use tax is typically applied when residents or businesses purchase taxable items from out-of-state sellers who do not collect the state's sales tax. In Delaware, there is no use tax applicable to such transactions.

3. Corporate Income Tax: Delaware is known for its favorable business climate and attracts many corporations due to its corporate-friendly tax laws. The state imposes a corporate income tax on corporations doing business in Delaware.

4. Franchise Tax: Delaware imposes an annual franchise tax on corporations incorporated in the state.

The franchise tax amount is based on the corporation's authorized shares or the number of issued shares and their par value.

5. Personal Income Tax: Delaware levies a personal income tax on individuals residing in the state. The income tax rates are graduated, meaning that higher income levels are subject to higher tax rates.
6. Property Taxes: Delaware imposes property taxes on real property, such as land and buildings. Property tax rates vary by county and are levied by the local governments.
7. Limited Business Taxation: Besides the corporate income tax, Delaware does not impose a state-level sales tax, gross receipts tax, or inventory tax, making it attractive to businesses.
8. Estate Tax: Delaware does not have its own estate tax. However, it does have a "pick-up" tax, which means that it can collect a portion of the federal estate tax paid by the estate.
9. Tax-Friendly Trust Laws: Delaware is known for its trust-friendly laws, making it a popular state for establishing trusts.
10. No Vehicle Sales Tax: Delaware does not impose a sales tax on vehicle purchases, making it a tax-free state for buying cars.

It's important to note that tax laws are subject to change, and it's recommended to consult the Delaware Division of Revenue or a tax professional for the most up-to-date and specific information related to taxes in Delaware.

Delaware (DE) - Sales Tax

As of ChatGPT's last update in September 2021, Delaware (DE) is one of the few states in the United States that does not have a statewide sales tax or use tax.

Delaware is known for its business-friendly environment, and one of the factors contributing to this reputation is its lack of a sales tax. This means that there is no sales tax imposed on the retail sale of goods or services within the state, making it an attractive destination for shopping and conducting business.

Additionally, Delaware does not have a use tax, which means there is no tax imposed on items purchased from out-of-state retailers for use, storage, or consumption within the state.

While Delaware does not have a statewide sales or use tax, it's important to note that other taxes, such as income taxes, property taxes, and gross receipts taxes, may still apply to businesses and individuals in the state.

As tax laws can change over time, I recommend checking with the Delaware Division of Revenue or consulting with a tax professional for the most current and accurate information on Delaware's tax policies and obligations.

Delaware (DE) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Delaware does not impose a statewide sales tax or use tax. This makes Delaware one of the few states in the United States that does not have a sales tax at the state level.

Sales Tax: Delaware has no statewide sales tax on goods or services sold within the state. Therefore, there is no state sales tax rate to be applied to retail purchases. This tax-free status is often promoted by the state, and it makes Delaware a popular destination for shoppers seeking tax-free purchases.

Use Tax: Similarly, Delaware does not have a statewide use tax. Use tax is typically applied when residents or businesses purchase taxable items from out-of-state sellers who do not collect the state's sales tax. In Delaware, since there is no state sales tax, there is no use tax applicable to such transactions.

Local Taxes: While Delaware does not have a state-level sales or use tax, it's important to note that some local jurisdictions in Delaware may impose certain local taxes, such as property taxes. However, these local taxes are distinct from sales and use taxes and are not applicable to retail transactions.

Overall, the absence of a state sales tax and use tax in Delaware simplifies the tax structure for businesses and consumers within the state. It's essential to be aware of any local taxes that may apply to specific business activities or property ownership in certain areas of the state.

Please note that tax laws are subject to change, and it's essential to consult the Delaware Division of Revenue or a tax professional for the most up-to-date and specific information related to taxes in Delaware.

Sales tax / Use tax - Montana (MT)

Montana (MT) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Montana:

1. No Sales Tax: Montana does not have a statewide sales tax. This means there is no sales tax imposed on goods or services sold within the state. As a result, retail purchases in Montana are generally tax-free at the state level.
2. No Use Tax: Similarly, Montana does not have a statewide use tax. Use tax is typically applied when residents or businesses purchase taxable items from out-of-state sellers who do not collect the state's

sales tax. In Montana, there is no use tax applicable to such transactions.

3. Individual Income Tax: Montana imposes an individual income tax on residents and non-residents who earn income in the state. The state has multiple tax brackets with varying tax rates based on income levels.
4. Corporate Income Tax: Montana levies a corporate income tax on corporations conducting business in the state. The corporate tax rates vary depending on the company's taxable income.
5. Property Taxes: Montana imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and vary by county.
6. Gasoline Tax: Montana imposes a gasoline tax on fuel purchases, which contributes to funding road and transportation infrastructure.
7. Lodging Facility Use Tax: Montana imposes a lodging facility use tax on accommodations provided by hotels, motels, and other lodging establishments.
8. Estate Tax: Montana does not have its own estate tax. However, it does have a "pick-up" tax, which means that it can collect a portion of the federal estate tax paid by the estate.
9. No Vehicle Sales Tax: Montana does not impose a sales tax on vehicle purchases, making it a tax-free state for buying cars.
10. Local Option Taxes: While Montana does not have a statewide sales tax, some local jurisdictions in the state may impose certain local taxes, such as resort taxes or local option taxes. These local taxes are distinct from sales and use taxes and are limited in scope.

It's important to note that tax laws are subject to change, and it's recommended to consult the Montana Department of Revenue or a tax professional for the most up-to-date and specific information related to taxes in Montana.

Montana (MT) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Montana (MT) is another state in the United States that does not have a statewide sales tax or use tax. This means that there is no sales tax imposed on the retail sale of goods or services, and there is no use tax on items purchased for use, storage, or consumption in the state.

Montana's lack of a statewide sales tax is notable and contributes to the state's reputation for being tax-friendly for consumers and businesses. As a result, there is no need for businesses to collect sales tax from customers or for residents to pay sales tax on their purchases within the state.

It's important to note that while Montana does not have a statewide sales tax, it does have other taxes and fees, such as property taxes and income taxes. Additionally, some local jurisdictions within the state may

impose certain local taxes or fees on specific items or services, but there is no statewide sales or use tax.

As tax laws and regulations can change over time, I recommend checking with the Montana Department of Revenue or consulting with a tax professional for the most current and accurate information on Montana's tax policies.

Montana (MT) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Montana does not impose a statewide sales tax or use tax. This makes Montana one of the states in the United States that does not have a general sales tax at the state level.

Sales Tax: Montana has no statewide sales tax on goods or services sold within the state. Therefore, there is no state sales tax rate to be applied to retail purchases. This tax-free status is often promoted by the state, and it makes Montana a popular destination for shoppers seeking tax-free purchases.

Use Tax: Similarly, Montana does not have a statewide use tax. Use tax is typically applied when residents or businesses purchase taxable items from out-of-state sellers who do not collect the state's sales tax. In Montana, since there is no state sales tax, there is no use tax applicable to such transactions.

Local Taxes: While Montana does not have a state-level sales or use tax, it's important to note that some local jurisdictions in Montana may impose certain local taxes, such as resort taxes or local option taxes. However, these local taxes are distinct from sales and use taxes and are typically limited in scope.

Overall, the absence of a state sales tax and use tax in Montana simplifies the tax structure for businesses and consumers within the state. It's essential to be aware of any local taxes that may apply to specific business activities or property ownership in certain areas of the state.

Please note that tax laws are subject to change, and it's essential to consult the Montana Department of Revenue or a tax professional for the most up-to-date and specific information related to taxes in Montana.

Montana - Special Sales Tax Rates

As of ChatGPT's last update in September 2021, Montana does not have a statewide sales tax or any special sales tax rates. The state of Montana does not impose a general sales tax on goods or services sold within its borders. Therefore, there are no special sales tax rates in addition to the standard state sales tax rate because there is no state sales tax applied to retail purchases.

Montana is known for being one of the states in the United States with no general sales tax, making it a popular destination for shoppers seeking tax-free purchases. There are no variations in the sales tax rate based on the type of goods or services purchased, the location of the transaction, or any other factors.

Additionally, Montana does not have a use tax, which is typically applied when residents or businesses purchase taxable items from out-of-state sellers who do not collect the state's sales tax. Since there is no sales tax in Montana, there is no corresponding use tax applicable to such transactions.

It's important to note that while Montana does not have a sales tax, the state may still have other types of taxes, such as property taxes and business taxes, which are unrelated to sales tax.

For the most current and accurate information regarding taxes in Montana, including any potential local taxes or other tax obligations, it's recommended to consult the Montana Department of Revenue or a tax professional. They can provide the latest information on tax regulations and requirements in Montana.

Montana Taxes - Key points

As of March 23, 2023, the information on Montana taxes indicates that Montana does not have a general-use sales tax. This means there is no statewide sales tax on goods or services sold within the state.

Here are some key points regarding Montana taxes:

Montana Businesses Purchasing Goods for Resale:

- If you are a Montana business purchasing goods for resale, you can use the Montana Business Registry Resale Certificate when making purchases from out-of-state vendors.
- The completed resale certificate can be given to the vendor, and they may accept it as a substitute "resale certificate," exempting the transaction from the state's sales, use, or transaction tax. However, the vendor is not required to accept it.
- Some states, including Washington, may have their state-specific form or additional requirements for resale certificates.

Montana Residents Shopping in Another State:

- Montana residents working or shopping in a state with a sales tax should contact that state's Department of Revenue to learn about their rules for exempting non-residents from the tax.
- Montana residents cannot claim another state's sales tax on their Montana income tax return.

The Wayfair Decision and Online Sales Tax:

- The US Supreme Court's Wayfair decision allows states to collect sales tax from taxpayers located outside the state if there is a sufficient connection between the taxpayer and the state.
- The Wayfair decision does not affect Montana's purchasing goods or services online because Montana does not have a general sales tax.

- Montana's do not generally owe sales tax to another state, but exceptions may exist for other taxes (e.g., federal taxes on airline tickets, state and local taxes on hotel or rental car bookings).
- Montana businesses selling products online to buyers in states with sales tax requirements, such as South Dakota, may need to collect and remit sales taxes for those states.

Overall, Montana's tax system is unique in that it does not impose a general sales tax. It's essential for Montana businesses and residents to be aware of their tax obligations when dealing with other states that have sales tax requirements, especially when making online sales to customers in those states. For specific tax advice and compliance information, it's recommended to consult a tax professional.

Sales tax / Use tax - New Hampshire (NH)

New Hampshire (NH) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in New Hampshire:

1. No Sales Tax: New Hampshire does not have a statewide sales tax. This means there is no sales tax imposed on goods or services sold within the state. As a result, retail purchases in New Hampshire are generally tax-free at the state level.
2. No Use Tax: Similarly, New Hampshire does not have a statewide use tax. Use tax is typically applied when residents or businesses purchase taxable items from out-of-state sellers who do not collect the state's sales tax. In New Hampshire, there is no use tax applicable to such transactions.
3. No Individual Income Tax: New Hampshire is one of the few states that do not impose an individual income tax on wages and salaries. However, it does tax interest and dividends earned by residents at a flat rate.
4. No General Corporate Income Tax: New Hampshire does not have a general corporate income tax on profits earned by corporations. However, it does impose a Business Profits Tax (BPT) and a Business Enterprise Tax (BET) on certain businesses.
5. Property Taxes: New Hampshire imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and vary by municipality.
6. Meals and Rooms Tax: New Hampshire imposes a Meals and Rooms Tax on prepared meals,

beverages, and accommodations provided by hotels, restaurants, and other establishments.

7. No Estate Tax: New Hampshire does not have its own estate tax. Additionally, it does not have a "pick-up" tax, meaning it does not collect a portion of the federal estate tax paid by the estate.
8. No Vehicle Sales Tax: New Hampshire does not impose a sales tax on vehicle purchases, making it a tax-free state for buying cars.
9. Keno Tax: New Hampshire has a tax on Keno, a type of lottery game.
10. Local Taxes: While New Hampshire does not have a broad-based state sales tax, some local jurisdictions in the state may impose certain local taxes or fees.

It's important to note that tax laws are subject to change, and it's recommended to consult the New Hampshire Department of Revenue Administration or a tax professional for the most up-to-date and specific information related to taxes in New Hampshire.

New Hampshire (NH) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, New Hampshire (NH) is another state in the United States that does not have a statewide sales tax or use tax. This means that there is no sales tax imposed on the retail sale of goods or services, and there is no use tax on items purchased for use, storage, or consumption in the state.

Like Oregon, New Hampshire's lack of a statewide sales tax is notable and contributes to the state's reputation for being tax-friendly for consumers and businesses. This can be advantageous for both residents and visitors, as they are not required to pay additional sales tax on most purchases made within the state.

It's important to note that while New Hampshire does not have a statewide sales tax, it does have other taxes and fees, such as property taxes and business taxes. Additionally, some local jurisdictions within the state may impose local taxes on specific items or services, such as meals and rooms taxes in certain areas.

As tax laws and regulations can change over time, I recommend checking with the New Hampshire Department of Revenue Administration or consulting with a tax professional for the most current and accurate information on New Hampshire's tax policies.

New Hampshire (NH) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, New Hampshire does not impose a statewide sales tax or use tax. This makes New Hampshire one of the states in the United States that does not have a sales tax at the state level.

Sales Tax: New Hampshire has no statewide sales tax on goods or services sold within the state.

Therefore, there is no state sales tax rate to be applied to retail purchases. This tax-free status is often promoted by the state, and it makes New Hampshire a popular destination for shoppers seeking tax-free purchases.

Use Tax: Similarly, New Hampshire does not have a statewide use tax. Use tax is typically applied when residents or businesses purchase taxable items from out-of-state sellers who do not collect the state's sales tax. In New Hampshire, since there is no state sales tax, there is no use tax applicable to such transactions.

Local Taxes: While New Hampshire does not have a state-level sales or use tax, it's important to note that some local jurisdictions in New Hampshire may impose certain local taxes, such as property taxes. However, these local taxes are distinct from sales and use taxes and are not applicable to retail transactions.

Sales tax / Use tax - Oregon (OR)

Oregon (OR) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Oregon:

1. No Sales Tax: Oregon does not have a statewide sales tax. This means there is no sales tax imposed on goods or services sold within the state. As a result, retail purchases in Oregon are generally tax-free at the state level.
2. No Use Tax: Similarly, Oregon does not have a statewide use tax. Use tax is typically applied when residents or businesses purchase taxable items from out-of-state sellers who do not collect the state's sales tax. In Oregon, there is no use tax applicable to such transactions.
3. Individual Income Tax: Oregon levies an individual income tax on residents and non-residents who earn income in the state. The state has multiple tax brackets with varying tax rates based on income levels.
4. Corporate Income Tax: Oregon imposes a corporate income tax on corporations conducting business in the state. The corporate tax rates vary depending on the company's taxable income.
5. Property Taxes: Oregon imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and vary by county.
6. Excise Taxes: Oregon imposes excise taxes on certain products, such as alcohol, tobacco, and gasoline.
7. Estate Tax: Oregon has an estate tax that applies to estates with a value above a certain threshold. The tax rates are progressive, and the estate tax is separate from the federal estate tax.
8. No Vehicle Sales Tax: Oregon does not impose a sales tax on vehicle purchases, making it a tax-free state for buying cars.
9. Marijuana Tax: Oregon imposes a tax on the sale of recreational marijuana products.
10. No Local Option Taxes: Oregon does not have local option sales taxes, allowing for a uniform tax structure throughout the state.

It's important to note that tax laws are subject to change, and it's recommended to consult the Oregon

Department of Revenue or a tax professional for the most up-to-date and specific information related to taxes in Oregon.

Oregon (OR) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Oregon (OR) is one of the few states in the United States that does not have a statewide sales tax or use tax. This means that there is no sales tax imposed on the retail sale of goods or services, and there is no use tax on items purchased for use, storage, or consumption in the state.

The absence of a sales tax in Oregon is a unique aspect of its tax system compared to most other states. This is often highlighted as one of the reasons why Oregon has a reputation for being a tax-friendly state, particularly for consumers and businesses who are not required to factor in sales tax when making purchases or sales.

However, it's important to note that there may be other taxes and fees applicable in Oregon, such as income taxes, property taxes, and certain local taxes. It's advisable to check with the Oregon Department of Revenue or consult with a tax professional for the most up-to-date information on Oregon's tax laws and regulations.

Oregon (OR) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Oregon does not impose a statewide sales tax or use tax. This makes Oregon one of the few states in the United States that does not have a sales tax at the state level.

Sales Tax: Oregon has no statewide sales tax on goods or services sold within the state. As a result, there is no state sales tax rate to be applied to retail purchases, making Oregon a popular destination for shoppers seeking tax-free purchases.

Use Tax: Similarly, Oregon does not have a statewide use tax. Use tax is typically applied when residents or businesses purchase taxable items from out-of-state sellers who do not collect the state's sales tax. In Oregon, since there is no state sales tax, there is no use tax applicable to such transactions.

Local Taxes: While Oregon does not have a state-level sales or use tax, it's important to note that some local jurisdictions in Oregon may impose certain local taxes, such as business taxes or property taxes. However, these local taxes are distinct from sales and use taxes and are not applicable to retail transactions.

Overall, the absence of a state sales tax and use tax in Oregon simplifies the tax structure for businesses and consumers within the state. However, it's important to be aware of any local taxes that may apply to specific business activities or property ownership in certain areas of the state.

Please note that tax laws are subject to change, and it's essential to consult the Oregon Department of Revenue or a tax professional for the most up-to-date and specific information related to taxes in Oregon.

Oregon - Special Sales Tax Rates

As of ChatGPT's last update in September 2021, Oregon does not have a statewide sales tax, and therefore, there are no special sales tax rates in addition to the standard state sales tax rate because there is no state sales tax applied to goods or services sold within Oregon.

Oregon is one of the few states in the United States that does not impose a sales tax at the state level. As a result, there are no variations in the sales tax rate based on the type of goods or services purchased, the location of the transaction, or any other factors. Retail purchases in Oregon are generally tax-free at the state level.

However, it's important to note that some local jurisdictions in Oregon may impose certain local taxes, such as business taxes or property taxes. These local taxes are distinct from sales taxes and are not applicable to retail transactions.

Since there is no state sales tax in Oregon, there are no state sales tax exemptions or special sales tax rates to consider. Retailers and consumers in Oregon do not need to calculate or collect sales tax on their transactions.

It's essential to be aware of the specific tax regulations and requirements in Oregon, particularly related to local taxes, business taxes, and property taxes. For the most current and accurate information regarding taxes in Oregon, it's recommended to consult the Oregon Department of Revenue or a tax professional. They can provide the latest information on local taxes and any specific regulations that may be applicable in Oregon.

Sales tax / Use tax - Alabama (AL)

Alabama (AL) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Alabama:

1. Sales Tax: Alabama imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 4%, but some local jurisdictions may also impose

additional sales taxes, which can result in varying total sales tax rates in different areas of the state.

2. Use Tax: Alabama also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Alabama for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.
3. Individual Income Tax: Alabama imposes an individual income tax on residents and non-residents who earn income in the state. The state has multiple tax brackets with varying tax rates based on income levels.
4. Corporate Income Tax: Alabama imposes a corporate income tax on corporations conducting business in the state. The corporate tax rates vary depending on the company's taxable income.
5. Franchise Tax: Alabama imposes a franchise tax on corporations doing business in the state. The franchise tax rates vary depending on the corporation's net worth or capital value.
6. Property Taxes: Alabama imposes property taxes on real and tangible personal property, such as land, buildings, and vehicles. Property tax rates are determined at the local level and can vary by county.
7. Motor Vehicle Taxes and Fees: Alabama imposes various taxes and fees on motor vehicles, including sales tax on vehicle purchases, annual registration fees, and "*ad valorem*" taxes based on the vehicle's value.
8. Excise Taxes: Alabama imposes excise taxes on certain products, such as alcohol, tobacco, and gasoline.
9. Simplified Sellers Use Tax (SSUT): Alabama offers a program called Simplified Sellers Use Tax for qualifying remote sellers. It allows certain out-of-state sellers to collect and remit a flat 8% sales tax on their Alabama sales in lieu of the varying local sales tax rates.
10. Local Taxes: In addition to the state-level taxes, some local jurisdictions in Alabama may impose additional taxes, such as local option sales taxes and occupational taxes.
11. Estate Tax: Alabama does not have its own estate tax, but it conforms to the federal estate tax laws.

It's important to note that tax laws are subject to change, and it's recommended to consult the Alabama Department of Revenue or a tax professional for the most up-to-date and specific information related to taxes in Alabama.

Alabama (AL) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Alabama imposes both a sales tax and a use tax on various goods and services. Here are some key points about the Alabama Sales Tax and Use Tax:

Sales Tax:

1. Sales Tax Rate: The state sales tax rate in Alabama is 4%. Additionally, some counties and municipalities may impose additional local sales taxes, which means the total sales tax rate can be higher in certain areas. The combined state and local sales tax rates can range from 4% to 11% or higher, depending on the location.
2. Exemptions: Some items and services may be exempt from Alabama's sales tax. Common exemptions include prescription drugs, groceries, medical equipment, and sales to tax-exempt organizations.
3. Filing and Payment: Businesses that make sales subject to Alabama's sales tax are required to register with the Alabama Department of Revenue and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
4. Online Sales: Alabama has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

1. Use Tax Rate: The use tax rate in Alabama is the same as the sales tax rate, which is 4%. The use tax is applicable when residents or businesses in Alabama purchase taxable items from out-of-state sellers who do not collect Alabama sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
2. Filing and Payment: Individuals and businesses in Alabama are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
3. Online Purchases: As mentioned above, use tax in Alabama is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Please note that tax laws are subject to change, and it's essential to consult the Alabama Department of Revenue or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Alabama.

Alabama- Special Sales Tax Rates

As of ChatGPT's last update in September 2021, Alabama does not have any special sales tax rates in

addition to the standard state sales tax rate. The state sales tax rate in Alabama is 4%, and this rate applies uniformly to most taxable transactions throughout the state.

However, Alabama does allow counties and municipalities to impose additional local sales taxes, which means the total sales tax rate can be higher in certain areas. These local sales taxes are known as county and city sales taxes, and they are in addition to the state sales tax.

The combined state and local sales tax rates can vary from 4% to 11% or higher, depending on the specific county and city where the taxable transaction occurs. Each county and city in Alabama has the authority to set its own local sales tax rate, and the rate may differ even within the same county.

Local sales tax revenues are used to fund various local government initiatives, such as infrastructure projects, public services, and community development. It's essential to be aware of the specific tax rates applicable in your area and for the goods or services you are buying or selling.

For the most current and accurate information regarding Alabama's sales tax rates, exemptions, and any other relevant tax regulations, it's recommended to consult the Alabama Department of Revenue or a tax professional. They can provide the latest information on local sales tax rates and any specific local taxes or exemptions that may be applicable in Alabama.

Alabama - Sales Tax and Use Tax in local jurisdictions

As of ChatGPT's last update in September 2021, Alabama imposes both a state sales tax and allows local jurisdictions to levy additional sales taxes. This means that the combined sales tax rate can vary depending on the specific county and municipality where the taxable transaction occurs.

State Sales Tax: The state sales tax rate in Alabama is 4%. The state sales tax is applicable to most taxable transactions throughout the state on goods and certain services, subject to exemptions.

Local Sales Tax: In addition to the state sales tax, local jurisdictions in Alabama have the authority to impose their own local sales taxes. These local sales taxes are often referred to as city and county sales taxes. The rates and applicability of local sales taxes can vary depending on the specific county and city or town where the transaction takes place.

Local sales tax rates can range from 0% to 7.5% or higher, depending on the location. Each county and municipality has the discretion to set its own local sales tax rate or choose not to impose one at all.

Use Tax: As for use tax, Alabama applies the same rate as the sales tax rate, which is 4%. The use tax is applicable when residents or businesses in Alabama purchase taxable items from out-of-state sellers who do not collect Alabama sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.

It's essential to be aware of the specific sales tax rates applicable in your area and for the goods or

services you are buying or selling. For the most current and accurate information regarding Alabama's sales tax rates, exemptions, and any other relevant tax regulations, it's recommended to consult the Alabama Department of Revenue or a tax professional. They can provide the latest information on state and local sales tax rates, use tax requirements, and any specific local taxes or exemptions that may be applicable in Alabama.

Alabama - Sales Tax - Notes

As of ChatGPT's last update in September 2021, Alabama imposes a sales and use tax on various goods and services. Here are some key points about the Alabama Sales and Use Tax:

1. Sales Tax Rate: The state sales tax rate in Alabama is 4%. However, local jurisdictions (cities and counties) may also impose additional sales taxes, which means the total sales tax rate can be higher in some areas. The combined state and local sales tax rates can range from 4% to 11%.
2. Use Tax: Alabama also has a use tax, which is applicable when residents or businesses in the state purchase taxable items from out-of-state sellers who do not collect Alabama sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
3. Exemptions: Certain items and services may be exempt from Alabama's sales and use tax. Common exemptions include prescription drugs, groceries, agricultural equipment, and manufacturing machinery used directly in production.
4. Filing and Payment: Businesses that make sales subject to Alabama's sales tax are required to obtain a sales tax license from the Alabama Department of Revenue (ADOR) and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
5. Simplified Seller Use Tax Program (SSUT): Alabama offers a simplified program for remote sellers (out-of-state sellers without a physical presence in Alabama) to voluntarily collect and remit sales tax. This program allows eligible remote sellers to collect a flat 8% use tax on their sales to Alabama customers, rather than dealing with varying local tax rates.
6. Online Sales: Alabama has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Please note that tax laws are subject to change, and it's essential to consult the Alabama Department of Revenue or a tax professional for the most up-to-date and specific information related to sales and use tax in Alabama.

Sales tax / Use tax - Alaska (AK)

Alaska (AK) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Alaska:

1. No Statewide Sales Tax or Individual Income Tax: Alaska does not have a statewide sales tax or individual income tax. This makes it one of the few states in the United States with no state-level sales or income taxes.
2. Local Sales Taxes: While Alaska does not have a statewide sales tax, some local jurisdictions within the state may impose local sales taxes. These local taxes are limited in scope and vary by location.
3. No Statewide Use Tax: Alaska does not have a statewide use tax. Use tax is typically applied when residents or businesses purchase taxable items from out-of-state sellers who do not collect the state's sales tax. In Alaska, there is no use tax applicable to such transactions.
4. Property Taxes: Alaska does have property taxes imposed at the local level. However, the state has unique provisions related to property tax, and the property tax rates and assessments vary significantly depending on the municipality.
5. No Statewide Personal Property Tax: Alaska does not impose a statewide personal property tax on assets such as vehicles, boats, or personal belongings.
6. No Vehicle Sales Tax: Alaska does not have a statewide sales tax on vehicle purchases, making it a tax-free state for buying cars.
7. Oil and Gas Revenue: Alaska derives a significant portion of its revenue from oil and gas taxes and royalties due to its rich natural resources.
8. Permanent Fund Dividend: Alaska residents are eligible to receive an annual payment known as the Permanent Fund Dividend, which is funded from the state's oil revenues.
9. Excise Taxes: Alaska imposes excise taxes on certain products, such as alcohol, tobacco, and motor fuel.
10. No Estate Tax: Alaska does not have its own estate tax. Additionally, it does not have a "*pick-up*" tax, meaning it does not collect a portion of the federal estate tax paid by the estate.

It's important to note that tax laws are subject to change, and it's recommended to consult the Alaska Department of Revenue or a tax professional for the most up-to-date and specific information related to

taxes in Alaska.

Alaska (AK) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Alaska does not have a statewide sales tax. This means there is no state-level sales tax applied to goods or services sold within Alaska.

However, it's essential to note that some local jurisdictions in Alaska do have the authority to impose local sales taxes. These local sales taxes are determined by individual municipalities (cities and boroughs) within the state. As a result, the presence and rates of sales taxes can vary depending on the specific location.

Since Alaska does not have a statewide sales tax, the sales tax rates, if applicable, are entirely determined by the local governments. It's crucial to check with the local municipality where a taxable transaction occurs to determine if a local sales tax applies and at what rate.

As for use tax, Alaska also does not have a statewide use tax. Use tax is typically applied to taxable items purchased outside of the state and used within the state when no sales tax was collected at the time of purchase. Since there is no statewide sales tax in Alaska, there is generally no statewide use tax either.

However, some local jurisdictions may have specific use tax requirements or regulations related to certain transactions. As with sales tax, it's essential to check with the local municipality where a taxable transaction occurs to determine if any use tax applies.

Keep in mind that tax laws can change, and it's essential to consult the Alaska Department of Revenue or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Alaska, particularly at the local level.

Alaska - Special Sales Tax Rates

As of ChatGPT's last update in September 2021, Alaska does not have a statewide sales tax, and therefore, there are no special sales tax rates in addition to the standard state sales tax rate because there is no state sales tax applied to goods or services sold within Alaska.

However, it's important to note that some local jurisdictions in Alaska do have the authority to impose local sales taxes. These local sales taxes are determined by individual municipalities (cities and boroughs) within the state. As a result, the presence and rates of sales taxes can vary depending on the specific location.

If a local sales tax is applicable, it will be specific to the particular municipality where the taxable transaction occurs. Each city or borough that imposes a local sales tax sets its own rate, rules, and regulations related to sales tax.

Since Alaska does not have a statewide sales tax, the sales tax rates, if applicable, are entirely determined by the local governments. It's crucial to check with the local municipality where a taxable transaction occurs

to determine if a local sales tax applies and at what rate.

For the most current and accurate information regarding sales tax rates, exemptions, and any other relevant tax regulations in Alaska, especially at the local level, it's recommended to consult the Alaska Department of Revenue or a tax professional. They can provide the latest information on local sales tax rates and any specific local taxes or exemptions that may be applicable in Alaska.

Alaska - Sales Tax - Notes

Alaska (AK) does not have a state-wide sales tax, and the total sales tax rate varies depending on the local jurisdictions within the state.

Municipal governments in Alaska have the authority to impose local sales taxes, which results in different sales tax rates in different cities, counties, and special districts. The sales tax rates can range from 0.00% in some cities like Anchorage and Fairbanks to as high as 9.5% in places like Seldovia.

For example, in Seldovia, the total sales tax rate is 9.5%, which is a combination of the 3% Kenai Peninsula Borough sales tax and the 6.5% Seldovia city tax.

Since sales tax rates can vary significantly within Alaska, it's essential for businesses and consumers to be aware of the specific sales tax rate in their respective locations to ensure accurate tax collection and reporting.

It's also crucial to note that tax rates can change over time due to local tax rate adjustments or changes in tax laws. Therefore, it's always best to verify the current rates with the Alaska Department of Revenue or consult respective local tax authorities for the most up-to-date and accurate sales tax rates and regulations in specific areas within Alaska.

Alaska - Sales Tax and Use Tax in local jurisdictions

Alaska - Sales Tax and Use Tax in local jurisdictions

As of ChatGPT's last update in September 2021, Alaska does not have a statewide sales tax. However, some local jurisdictions within the state do have the authority to impose local sales taxes. These local sales taxes are determined by individual municipalities (cities and boroughs) and are not applicable across the entire state.

Local Sales Tax: The presence and rates of sales taxes can vary depending on the specific location within Alaska. Each city or borough that imposes a local sales tax sets its own rate, rules, and regulations related to sales tax. Some localities may have a sales tax, while others may not have one at all.

It's crucial to check with the local municipality where a taxable transaction occurs to determine if a local sales tax applies and at what rate. The local government's official website or the Alaska Department of

Revenue can be helpful resources for finding information about local sales taxes.

Use Tax: As for use tax, Alaska also does not have a statewide use tax. Use tax is typically applied to taxable items purchased outside of the state and used within the state when no sales tax was collected at the time of purchase. Since there is no statewide sales tax in Alaska, there is generally no statewide use tax either.

However, some local jurisdictions may have specific use tax requirements or regulations related to certain transactions. As with sales tax, it's essential to check with the local municipality where a taxable transaction occurs to determine if any use tax applies.

Please note that tax laws are subject to change, and it's essential to consult the Alaska Department of Revenue or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Alaska, particularly at the local level. Local jurisdictions may update their tax regulations, so it's essential to verify the latest information from the appropriate authorities.

Sales tax / Use tax - Arizona (AZ)

Arizona (AZ) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Arizona:

1. Sales Tax: Arizona imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 5.6%. In addition to the state sales tax, some local jurisdictions may impose additional sales taxes, resulting in varying total sales tax rates in different areas of the state.
2. Use Tax: Arizona also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Arizona for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.
3. Individual Income Tax: Arizona levies an individual income tax on residents and non-residents who earn income in the state. The state has multiple tax brackets with varying tax rates based on income levels.
4. Corporate Income Tax: Arizona imposes a corporate income tax on corporations conducting business in the state. The corporate tax rates vary depending on the company's taxable income.

5. Franchise Tax: Arkansas imposes a franchise tax on corporations and limited liability companies (LLCs) doing business in the state. The tax is based on the entity's capital or net worth and is calculated using a prescribed formula.
6. Property Taxes: Arizona imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and can vary by county.
7. Vehicle Taxes and Fees: Arizona imposes various taxes and fees on motor vehicles, including transaction privilege tax (TPT) on vehicle sales, registration fees, and vehicle license taxes based on the vehicle's value.
8. Excise Taxes: Arizona imposes excise taxes on certain products, such as tobacco and alcohol.
9. Transaction Privilege Tax (TPT): Arizona has a unique tax called the Transaction Privilege Tax, which is a type of gross receipts tax that applies to businesses for the privilege of conducting business in the state. It is similar to a sales tax but is imposed on the seller rather than the buyer.
10. No Estate Tax: Arizona does not have its own estate tax. Additionally, it does not have a "pick-up" tax, meaning it does not collect a portion of the federal estate tax paid by the estate.
11. No Local Income Tax: Arizona does not allow local jurisdictions to impose their own income taxes.

It's important to note that tax laws are subject to change, and it's recommended to consult the Arizona Department of Revenue or a tax professional for the most up-to-date and specific information related to taxes in Arizona.

Arizona (AZ) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Arizona imposes both a sales tax and a use tax on various goods and services. Here are some key points about the Arizona Sales Tax and Use Tax:

Sales Tax:

1. Sales Tax Rate: The state sales tax rate in Arizona is 5.6%. Additionally, some cities and counties may impose an additional local sales tax, which means the total sales tax rate can be higher in certain areas. The combined state and local sales tax rates can range from 5.6% to 11.2% or higher, depending on the location.
2. Exemptions: Some items and services may be exempt from Arizona's sales tax. Common exemptions include prescription drugs, groceries, medical equipment, and sales to tax-exempt organizations.
3. Filing and Payment: Businesses that make sales subject to Arizona's sales tax are required to register with the Arizona Department of Revenue and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.

4. Online Sales: Arizona has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

1. Use Tax Rate: The use tax rate in Arizona is the same as the sales tax rate, which is 5.6%. The use tax is applicable when residents or businesses in Arizona purchase taxable items from out-of-state sellers who do not collect Arizona sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
2. Filing and Payment: Individuals and businesses in Arizona are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
3. Online Purchases: As mentioned above, use tax in Arizona is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Please note that tax laws are subject to change, and it's essential to consult the Arizona Department of Revenue or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Arizona.

Arizona - Special Sales Tax Rates

As of ChatGPT's last update in September 2021, Arizona does not have any special sales tax rates in addition to the standard state sales tax rate. The state sales tax rate in Arizona is 5.6%, and this rate applies uniformly to most taxable transactions throughout the state.

Arizona does have local sales taxes that are imposed by cities and counties. These local sales taxes are in addition to the state sales tax and can vary depending on the location. The combined state and local sales tax rates can range from 5.6% to 11.2% or higher, depending on the city or county where the taxable transaction occurs.

Each city and county in Arizona has the authority to set its own local sales tax rate, and the rate may differ even within the same county. Local sales tax revenues are used to fund various local government initiatives, such as infrastructure projects, public services, and community development.

It's important to be aware of the specific tax rates applicable in your area and for the goods or services you are buying or selling. For the most current and accurate information regarding Arizona's sales tax rates, exemptions, and any other relevant tax regulations, it's recommended to consult the Arizona Department of Revenue or a tax professional. They can provide the latest information on sales tax rates

and any specific local taxes or exemptions that may be applicable in Arizona.

Arizona - Sales Tax - Notes

As of ChatGPT's last update in September 2021, Arizona imposes a sales and use tax on various goods and services. Here are some key points about the Arizona Sales and Use Tax:

1. Sales Tax Rate: The state sales tax rate in Arizona is 5.6%. However, cities and counties may impose additional sales taxes, so the total sales tax rate can vary depending on the location. The combined state and local sales tax rate can range from 5.6% to 11.2%.
2. Use Tax: Arizona also has a use tax, which is applicable when residents or businesses in the state purchase taxable items from out-of-state sellers who do not collect Arizona sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
3. Transaction Privilege Tax: In Arizona, the sales tax is often referred to as the Transaction Privilege Tax (TPT). This is because Arizona imposes a tax on the privilege of doing business in the state, rather than just taxing the final retail sale. The TPT applies to the gross receipts of businesses, which means it affects various business activities beyond traditional retail sales.
4. Exemptions: Some items and services are exempt from Arizona's Transaction Privilege Tax. Common exemptions include prescription drugs, groceries, certain types of machinery and equipment used in manufacturing, and sales to the U.S. government.
5. Filing and Payment: Businesses that make sales subject to Arizona's Transaction Privilege Tax are required to obtain a TPT license from the Arizona Department of Revenue (ADOR) and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file TPT returns, reporting the gross receipts and the corresponding tax due.
6. Online Sales: Arizona, like many other states, has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit the Transaction Privilege Tax.

Please note that tax laws are subject to change, and it's essential to consult the Arizona Department of Revenue or a tax professional for the most up-to-date and specific information related to sales and use tax in Arizona.

Sales tax / Use tax - Arkansas (AR)

Arkansas (AR) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Arkansas:

1. Sales Tax: Arkansas imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 6.5%. In addition to the state sales tax, some local jurisdictions may impose additional sales taxes, resulting in varying total sales tax rates in different areas of the state.
2. Use Tax: Arkansas also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Arkansas for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.
3. Individual Income Tax: Arkansas levies an individual income tax on residents and non-residents who earn income in the state. The state has multiple tax brackets with varying tax rates based on income levels.
4. Corporate Income Tax: Arkansas imposes a corporate income tax on corporations conducting business in the state. The corporate tax rates vary depending on the company's taxable income.
5. Property Taxes: Arkansas imposes property taxes on real and personal property, such as land, buildings, and vehicles. Property tax rates are determined at the local level and can vary by county.
6. Motor Vehicle Taxes and Fees: Arkansas imposes various taxes and fees on motor vehicles, including sales tax on vehicle purchases, annual registration fees, and excise taxes based on the vehicle's value.
7. Excise Taxes: Arkansas imposes excise taxes on certain products, such as alcohol, tobacco, and gasoline.
8. Severance Taxes: Arkansas imposes severance taxes on natural resources, such as oil, gas, and minerals, extracted from the state.
9. No Estate Tax: Arkansas does not have its own estate tax. Additionally, it does not have a "pick-up" tax, meaning it does not collect a portion of the federal estate tax paid by the estate.
10. No Vehicle Sales Tax: Arkansas does not impose a separate sales tax on vehicle purchases, but the purchase of a motor vehicle is subject to the state sales tax.

It's important to note that tax laws are subject to change, and it's recommended to consult the Arkansas Department of Finance and Administration or a tax professional for the most up-to-date and specific

information related to taxes in Arkansas.

Arkansas (AR) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Arkansas imposes both a sales tax and a use tax on various goods and services. Here are some key points about the Arkansas Sales Tax and Use Tax:

Sales Tax:

1. Sales Tax Rate: The state sales tax rate in Arkansas is 6.5%. Additionally, some cities and counties may impose an additional local sales tax, which means the total sales tax rate can be higher in certain areas. The combined state and local sales tax rates can range from 6.5% to 11.5% or higher, depending on the location.
2. Exemptions: Some items and services may be exempt from Arkansas's sales tax. Common exemptions include prescription drugs, groceries, medical equipment, and sales to tax-exempt organizations.
3. Filing and Payment: Businesses that make sales subject to Arkansas's sales tax are required to register with the Arkansas Department of Finance and Administration and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
4. Online Sales: Arkansas has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

1. Use Tax Rate: The use tax rate in Arkansas is the same as the sales tax rate, which is 6.5%. The use tax is applicable when residents or businesses in Arkansas purchase taxable items from out-of-state sellers who do not collect Arkansas sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
2. Filing and Payment: Individuals and businesses in Arkansas are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
3. Online Purchases: As mentioned above, use tax in Arkansas is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Please note that tax laws are subject to change, and it's essential to consult the Arkansas Department of

Finance and Administration or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Arkansas.

Arkansas - Special Sales Tax Rates

As of ChatGPT's last update in September 2021, Arkansas does not have any special sales tax rates in addition to the standard state sales tax rate. The state sales tax rate in Arkansas is 6.5%, and this rate applies uniformly to most taxable transactions throughout the state.

However, it's important to note that Arkansas does allow local jurisdictions, such as cities and counties, to impose local sales taxes on top of the state sales tax rate. These local sales taxes are known as local option sales taxes and are used to fund various local government initiatives, such as infrastructure projects, public services, and community development.

The combined state and local sales tax rates in Arkansas can range from 6.5% to 11.5% or higher, depending on the city or county where the taxable transaction occurs. Each city and county has the authority to set its own local sales tax rate, and the rate may differ even within the same county.

It's essential to be aware of the specific tax rates applicable in your area and for the goods or services you are buying or selling. For the most current and accurate information regarding Arkansas's sales tax rates, exemptions, and any other relevant tax regulations, it's recommended to consult the Arkansas Department of Finance and Administration or a tax professional. They can provide the latest information on sales tax rates and any specific local taxes or exemptions that may be applicable in Arkansas.

Sales tax / Use tax - California (CA)

California (CA) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in California:

1. Sales Tax: California imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The statewide base sales tax rate is 7.25%. In addition to the state sales tax, some local jurisdictions may impose additional sales taxes, resulting in varying total sales tax rates in different areas of the state. The total sales tax rate can be higher than 7.25% in certain cities and counties.

2. Use Tax: California also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into California for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.
3. Individual Income Tax: California levies an individual income tax on residents and non-residents who earn income in the state. The state has a progressive income tax system with multiple tax brackets and rates based on income levels.
4. Corporate Income Tax: California imposes a corporate income tax on corporations conducting business in the state. The corporate tax rates vary depending on the company's taxable income.
5. Franchise Tax: California imposes a franchise tax on corporations and LLCs registered in the state. The tax is based on the company's net income or a minimum franchise tax, whichever is greater. The minimum franchise tax applies even if the company has no net income.
6. Property Taxes: California imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and are based on the assessed value of the property.
7. Vehicle Taxes and Fees: California imposes various taxes and fees on motor vehicles, including sales tax on vehicle purchases, annual registration fees, and vehicle license fees based on the vehicle's value.
8. Excise Taxes: California imposes excise taxes on certain products, such as gasoline, alcohol, and tobacco.
9. Estate Tax: California does not have its own estate tax. However, it conforms to the federal estate tax laws.
10. Local Taxes: In addition to the state-level taxes, some local jurisdictions in California may impose additional taxes, such as local sales taxes or local income taxes.
11. Special District Taxes: Certain areas in California may impose special district taxes to fund specific projects or services, such as public safety, transportation, or education.

It's important to note that tax laws are subject to change, and it's recommended to consult the California Department of Tax and Fee Administration (CDTFA) or a tax professional for the most up-to-date and specific information related to taxes in California.

California (CA) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, California imposes a sales tax and use tax on various goods and services. Here are some key points about the California Sales Tax and Use Tax:

Sales Tax:

1. Sales Tax Rate: The state sales tax rate in California is 7.25%. Additionally, some local jurisdictions (cities and counties) may impose additional local sales taxes, which means the total sales tax rate can be higher in certain areas. The combined state and local sales tax rates can range from 7.25% to 10.25%.
2. Exemptions: Some items and services may be exempt from California's sales tax. Common exemptions include prescription drugs, groceries, certain medical equipment, and sales to tax-exempt organizations.
3. Filing and Payment: Businesses that make sales subject to California's sales tax are required to register with the California Department of Tax and Fee Administration (CDTFA) and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
4. Online Sales: California has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

1. Use Tax Rate: The use tax rate in California is also 7.25%. The use tax is applicable when residents or businesses in the state purchase taxable items from out-of-state sellers who do not collect California sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
2. Filing and Payment: Individuals and businesses in California are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
3. Online Purchases: As mentioned above, use tax in California is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Please note that tax laws are subject to change, and it's essential to consult the California Department of Tax and Fee Administration (CDTFA) or a tax professional for the most up-to-date and specific information related to sales tax and use tax in California.

Sales and Use Tax - Components

In California, retailers engaged in business are required to register with the California Department of Tax and Fee Administration (CDTFA) and collect and remit the state's sales tax. The sales tax applies to all retail sales of goods and merchandise unless specifically exempted by law.

In addition to the state sales tax, California also imposes a use tax. The use tax is generally applied to the storage, use, or other consumption of goods purchased from retailers in transactions not subject to the sales tax. It also applies to purchases made by California consumers from out-of-state retailers, including purchases made by mail order, telephone, or internet.

The sales and use tax rate in a specific location in California comprises three components:

1. State tax rate: The statewide base sales tax rate set by the state government.
2. Local tax rate: Some cities and counties impose additional local sales taxes, which are added to the state tax rate.
3. District tax rate: Certain local jurisdictions may also impose additional district taxes, resulting in varying total tax rates across different locations.

The revenue from state sales and use taxes contributes to the state's General Fund, which funds various government programs and services. Additionally, specific allocations of the sales and use tax revenue are provided to cities, counties, and other local jurisdictions within the state to support their respective budgets and services.

What is the Tax rates in the State of California?

As of ChatGPT's last update in September 2021, the sales tax rate in the state of California can vary depending on the location due to the addition of local sales taxes. California has a statewide base sales tax rate, and local jurisdictions, such as cities and counties, may impose additional sales taxes. The combined sales tax rate is the total rate that consumers pay, including both the state and local taxes.

As of 2021, the statewide base sales tax rate in California is 7.25%. However, the combined sales tax rate can range from 7.25% to 10.25% or even higher in some special districts.

It's important to note that sales tax rates can change over time, and specific local jurisdictions may have their own adjustments to the rate. Additionally, some products or services may be subject to special tax rates or exemptions. For the most up-to-date and accurate information on California's current sales tax rates, I recommend checking the California Department of Tax and Fee Administration (CDTFA) website or consulting with a tax professional.

In the State of California - what is the additional sales tax rates and taxes imposed by local jurisdictions, such as cities and counties?

As of ChatGPT's last update in September 2021, the state of California has a statewide base sales tax rate of 7.25%. However, additional sales taxes can be imposed by local jurisdictions, such as cities and

counties, on top of the state rate. These additional local taxes are known as district taxes.

The combined sales tax rate in California includes both the state rate and any applicable district taxes. The total sales tax rate can vary depending on the specific location of the transaction, as different cities and counties may have different district tax rates.

The additional district taxes in California can range from 0.10% to 3.00% or more, depending on the local jurisdiction's requirements. Some areas may have multiple district taxes imposed by different local agencies.

For example, if you were to make a purchase in a city or county with a 2.00% district tax rate, the combined sales tax rate would be 7.25% (state) + 2.00% (district) = 9.25%.

To find the exact sales tax rate for a specific location within California, you can use the California Department of Tax and Fee Administration (CDTFA) website or contact the local tax authority for the city or county where the purchase is made. Local tax rates can change over time, so it's essential to verify the current rates to ensure accurate tax collection and reporting. Additionally, businesses that operate in multiple locations within California may need to collect and remit different sales tax rates depending on the customer's location.

Sales tax / Use tax - Colorado (CO)

Colorado (CO) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Colorado:

1. Sales Tax: Colorado imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The state sales tax rate is 2.9%. In addition to the state sales tax, some local jurisdictions may impose additional sales taxes, resulting in varying total sales tax rates in different areas of the state.
2. Use Tax: Colorado also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Colorado for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.
3. Individual Income Tax: Colorado levies an individual income tax on residents and non-residents who earn income in the state. The state has a flat income tax rate of 4.55% for all income levels.

4. Corporate Income Tax: Colorado imposes a corporate income tax on corporations conducting business in the state. The corporate tax rates vary depending on the company's taxable income.
5. Property Taxes: Colorado imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and are based on the assessed value of the property.
6. Vehicle Taxes and Fees: Colorado imposes various taxes and fees on motor vehicles, including sales tax on vehicle purchases, registration fees, and specific ownership tax based on the vehicle's age and taxable value.
7. Excise Taxes: Colorado imposes excise taxes on certain products, such as gasoline, tobacco, and marijuana.
8. Estate Tax: Colorado does not have its own estate tax. Additionally, it does not have a "pick-up" tax, meaning it does not collect a portion of the federal estate tax paid by the estate.
9. No Local Income Tax: Colorado prohibits local jurisdictions from imposing their own income taxes.
10. Special District Taxes: Certain areas in Colorado may impose special district taxes to fund specific projects or services, such as transportation improvements or public safety initiatives.

It's important to note that tax laws are subject to change, and it's recommended to consult the Colorado Department of Revenue or a tax professional for the most up-to-date and specific information related to taxes in Colorado.

Colorado (CO) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Colorado imposes a sales tax and use tax on various goods and services. Here are some key points about the Colorado Sales Tax and Use Tax:

Sales Tax:

1. Sales Tax Rate: The state sales tax rate in Colorado is 2.9%. Additionally, local jurisdictions (cities, counties, and special districts) may impose additional sales taxes, which means the total sales tax rate can be higher in certain areas. The combined state and local sales tax rates can range from 2.9% to 11.2%, depending on the specific location.
2. Exemptions: Some items and services may be exempt from Colorado's sales tax. Common exemptions include prescription drugs, groceries, certain medical equipment, and sales to tax-exempt organizations.
3. Filing and Payment: Businesses that make sales subject to Colorado's sales tax are required to obtain a sales tax license from the Colorado Department of Revenue and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales

volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.

4. Online Sales: Colorado has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

1. Use Tax Rate: The use tax rate in Colorado is the same as the sales tax rate, which is 2.9%. The use tax is applicable when residents or businesses in the state purchase taxable items from out-of-state sellers who do not collect Colorado sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
2. Filing and Payment: Individuals and businesses in Colorado are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
3. Online Purchases: As mentioned above, use tax in Colorado is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Please note that tax laws are subject to change, and it's essential to consult the Colorado Department of Revenue or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Colorado.

Colorado - Sales and Use tax - Notes

As of ChatGPT's last update in September 2021, Colorado imposes a sales and use tax on various goods and services. Here are some key points about the Colorado Sales and Use Tax:

1. Sales Tax Rate: The state sales tax rate in Colorado is 2.9%. Additionally, local jurisdictions (cities, counties, and special districts) may impose their own sales taxes, which vary by location. The total sales tax rate, including state and local taxes, can range from 2.9% to 11.2% depending on the specific location.
2. Home Rule Cities: Colorado has both home rule cities and state-collected cities. Home rule cities have the authority to administer and collect their own sales taxes independently of the state. This means that the sales tax rate and regulations may differ between different cities within the state.
3. Use Tax: Colorado also has a use tax, which is applicable when residents or businesses in the state purchase taxable items from out-of-state sellers who do not collect Colorado sales tax. The purchaser

is then responsible for paying the corresponding use tax directly to the state.

4. Exemptions: Some items and services are exempt from Colorado's sales and use tax. Common exemptions include prescription drugs, groceries, and certain agricultural items.

5. Filing and Payment: Businesses that make sales subject to Colorado's sales tax are required to obtain a sales tax license from the Colorado Department of Revenue and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.

6. Online Sales: Colorado has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

7. Special District Taxes: In addition to state and local sales taxes, some areas in Colorado may have special district taxes that apply to specific goods or services. These district taxes are separate from the state and local taxes and may vary by location.

Please note that tax laws are subject to change, and it's essential to consult the Colorado Department of Revenue or a tax professional for the most up-to-date and specific information related to sales and use tax in Colorado.

Colorado Sales and Use Tax - Components

As of ChatGPT's last update in September 2021, the Colorado sales and use tax consists of several components that contribute to the total tax rate. Here are the main components:

1. State Sales and Use Tax: The state of Colorado imposes a base sales and use tax rate of 2.9%. This is the primary tax rate that applies to most taxable transactions in the state.

2. Local Sales and Use Tax: In addition to the state tax, local jurisdictions (cities, counties, and special districts) in Colorado have the authority to impose their own sales and use taxes. These local taxes vary depending on the specific location and can range from 0% to several percentage points. The total local tax rate varies depending on the sum of the local sales and use taxes applicable in a particular area.

3. Regional Transportation District (RTD) Tax : In areas that are part of the Regional Transportation District (RTD), an additional sales and use tax is imposed to fund public transportation services. As of ChatGPT's last update, the RTD tax rate is 1%. This tax is only applicable in specific areas within the state.

4. Scientific and Cultural Facilities District (SCFD) Tax: In counties that are part of the Scientific and

Cultural Facilities District, an additional sales and use tax is imposed to support scientific and cultural organizations. As of ChatGPT's last update, the SCFD tax rate is 0.1%.

5. Special District Taxes: Some special districts in Colorado may levy additional sales and use taxes for specific purposes, such as fire protection, public safety, or recreational facilities. These taxes are only applicable in the specific districts that impose them.

When making a purchase in Colorado, the total sales tax rate you pay is the combination of the state sales tax rate, any applicable local sales tax rates, and any other district-specific taxes that apply to your location.

Please note that tax rates are subject to change, and it's essential to verify the current rates with the Colorado Department of Revenue or a tax professional for the most up-to-date information on sales and use tax components in Colorado.

Sales tax / Use tax - Connecticut (CT)

Connecticut (CT) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Connecticut (CT):

1. Sales Tax: Connecticut imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 6.35%. However, certain items, such as groceries, prescription drugs, and medical devices, may be exempt from the sales tax.
2. Use Tax: Connecticut also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Connecticut for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.
3. Individual Income Tax: Connecticut levies an individual income tax on residents and non-residents who earn income in the state. The state has a progressive income tax system with tax rates ranging from 3% to 6.99% based on income levels.
4. Corporate Income Tax: Connecticut imposes a corporate income tax on corporations conducting business in the state. The corporate income tax rates range from 7.5% to 10.0% based on taxable income.

5. Property Taxes: Connecticut imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and can vary significantly by municipality.
6. Vehicle Taxes and Fees: Connecticut imposes various taxes and fees on motor vehicles, including sales tax on vehicle purchases, registration fees, and a property tax based on the value of the vehicle.
7. Estate Tax: Connecticut has its own estate tax, separate from the federal estate tax. The Connecticut estate tax applies to estates with a value above a certain threshold, and the tax rates range from 10% to 12%.
8. Local Income Tax: Connecticut allows municipalities to impose a local income tax on residents' earned and unearned income. However, as of my last update, no municipality has implemented a local income tax.
9. Tax Credits and Incentives: Connecticut offers various tax credits and incentives to individuals and businesses, such as the Earned Income Tax Credit (EITC) for low-income individuals and tax incentives for businesses investing in certain areas or creating jobs.

It's important to note that tax laws are subject to change, and it's recommended to consult the Connecticut Department of Revenue Services or a tax professional for the most up-to-date and specific information related to taxes in Connecticut.

Connecticut (CT) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Connecticut imposes a sales tax and use tax on various goods and services. Here are some key points about the Connecticut Sales Tax and Use Tax:

Sales Tax:

1. Sales Tax Rate: The state sales tax rate in Connecticut is 6.35%. Additionally, some local jurisdictions (cities and towns) may impose an additional local sales tax, which means the total sales tax rate can be higher in certain areas. The combined state and local sales tax rates can range from 6.35% to 6.99%.
2. Exemptions: Some items and services may be exempt from Connecticut's sales tax. Common exemptions include prescription drugs, groceries, certain medical equipment, and sales to tax-exempt organizations.
3. Filing and Payment: Businesses that make sales subject to Connecticut's sales tax are required to register with the Connecticut Department of Revenue Services and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
4. Online Sales: Connecticut has adopted economic nexus laws for online sales. This means that

businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

1. Use Tax Rate: The use tax rate in Connecticut is also 6.35%. The use tax is applicable when residents or businesses in the state purchase taxable items from out-of-state sellers who do not collect Connecticut sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
2. Filing and Payment: Individuals and businesses in Connecticut are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
3. Online Purchases: As mentioned above, use tax in Connecticut is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Please note that tax laws are subject to change, and it's essential to consult the Connecticut Department of Revenue Services or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Connecticut.

Connecticut Department of Revenue Services about Sales Tax and Use Tax in Connecticut

Here's a summary of the key points:

Sales Tax in Connecticut:

- The state sales tax rate in Connecticut is 6.35%.
- It applies to the retail sale, lease, or rental of most goods and taxable services.
- Retailers are required to register for a Sales and Use Tax Permit with the Department of Revenue Services (DRS) if they engage in selling tangible personal property, taxable services, or operating hotels, motels, lodging houses, or bed and breakfast establishments.
- The permit must be displayed conspicuously for customers to see.
- Vendors selling at flea markets, craft shows, trade shows, or similar events in Connecticut, even for one day, must also obtain a permit and display it at their booth or table.
- Manufacturers, wholesalers, and retailers must obtain a permit for selling in the state.

- Building contractors, including subcontractors, must obtain a Sales and Use Tax Permit before providing any services, even if the services provided are not taxable or if the contract is with a tax-exempt entity.
- Failure to obtain a tax permit may result in fines or penalties.

Use Tax in Connecticut:

- The Use Tax is imposed on taxable purchases made by businesses or individuals for use in Connecticut when sales tax was not collected at the time of purchase.
- The use tax rate is the same as the sales tax rate, which is 6.35%.
- Businesses not required to register for sales tax should still register to pay business use tax.

Special Sales Tax Rates:

Some specific transactions have different sales tax rates, such as:

- 1% for certain computer and data processing services and canned software electronically accessed or transferred for business use.
- 2.99% for sales of vessels, motors for vessels, trailers used for transporting a vessel, and dyed diesel fuel sold by a marine dock exclusively for marine purposes.
- 4.5% for sales of motor vehicles to nonresident members of the armed forces stationed on full-time active duty in Connecticut.
- 7.35% for sales of meals and certain beverages.
- 7.75% for certain high-value motor vehicles, jewelry, clothing, footwear, handbags, luggage, umbrellas, wallets, and watches.
- 9.35% for short-term rental or leasing of passenger motor vehicles (30 consecutive calendar days or less).

Please note that tax laws and rates can change, and it's essential to verify the current rates and regulations with the Connecticut Department of Revenue Services or consult with a tax professional for accurate and up-to-date information.

Connecticut - Special Sales Tax Rates

As of ChatGPT's last update in September 2021, Connecticut does not have any special sales tax rates in addition to the standard state sales tax rate. The state sales tax rate in Connecticut is 6.35%, and this rate applies uniformly to most taxable transactions throughout the state.

Connecticut does not have local option sales taxes or special district taxes that impose additional sales taxes on specific goods, services, or locations. Therefore, the 6.35% state sales tax rate is the only sales tax rate that applies to most taxable sales in Connecticut.

It's important to note that tax laws can change, and it's possible that new legislation or updates may have been implemented since my last update. For the most current and accurate information regarding Connecticut's sales tax rates, exemptions, and any other relevant tax regulations, it's recommended to consult the Connecticut Department of Revenue Services or a tax professional. They can provide the latest information on sales tax rates and any specific local taxes or exemptions that may be applicable in Connecticut.

Sales tax / Use tax - Florida (FL)

Florida (FL) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Florida:

1. Sales Tax: Florida imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 6%. However, there are some exceptions to the general rate, such as a reduced rate of 3% for sales of new mobile homes, 4% for amusement machine receipts, 5.5% for the rental, lease, or license of commercial real property, and 6.95% for electricity.
2. Use Tax: Florida also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Florida for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.
3. No Individual Income Tax: Florida is one of the few states that do not impose an individual income tax on wages and salaries.
4. No Corporate Income Tax on Regular C Corporations: Florida does not impose a corporate income tax on regular C corporations. However, there is a corporate income tax on certain financial institutions and utility companies.
5. No Estate Tax: Florida does not have its own estate tax. Additionally, it does not have a "pick-up" tax, meaning it does not collect a portion of the federal estate tax paid by the estate.
6. Property Taxes: Florida imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and can vary by county.

7. Communication Services Tax (CST): Florida imposes a Communication Services Tax on services such as telecommunications, cable, satellite, and VoIP services.
8. Documentary Stamp Tax: Florida imposes a documentary stamp tax on various documents, such as deeds, promissory notes, and mortgages.
9. Gross Receipts Tax: Florida has a gross receipts tax on certain businesses, including rental car companies, commercial rentals, and certain tobacco products.
10. No Local Income Tax: Florida prohibits local jurisdictions from imposing their own income taxes.

It's important to note that tax laws are subject to change, and it's recommended to consult the Florida Department of Revenue or a tax professional for the most up-to-date and specific information related to taxes in Florida.

Florida (FL) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Florida imposes both a sales tax and a use tax on various goods and services. Here are some key points about the Florida Sales Tax and Use Tax:

Sales Tax:

1. Sales Tax Rate: The state sales tax rate in Florida is 6%. Additionally, some counties may impose an additional discretionary sales surtax, which means the total sales tax rate can be higher in certain areas. The combined state and local sales tax rates can range from 6% to 8.5% or higher, depending on the county.
2. Exemptions: Some items and services may be exempt from Florida's sales tax. Common exemptions include prescription drugs, certain groceries, medical equipment, and sales to tax-exempt organizations.
3. Filing and Payment: Businesses that make sales subject to Florida's sales tax are required to register with the Florida Department of Revenue and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
4. Online Sales: Florida has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

1. Use Tax Rate: The use tax rate in Florida is the same as the sales tax rate, which is 6%. The use tax is applicable when residents or businesses in Florida purchase taxable items from out-of-state sellers who do not collect Florida sales tax. The purchaser is then responsible for paying the corresponding

use tax directly to the state.

2. Filing and Payment: Individuals and businesses in Florida are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.

3. Online Purchases: As mentioned above, use tax in Florida is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Please note that tax laws are subject to change, and it's essential to consult the Florida Department of Revenue or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Florida.

Florida - Special Sales Tax Rates

As of ChatGPT's last update in September 2021, Florida does not have any special sales tax rates in addition to the standard state sales tax rate. The state sales tax rate in Florida is 6%, and this rate applies uniformly to most taxable transactions throughout the state.

Florida does have a discretionary sales surtax, also known as the local option sales tax, which is imposed by many counties. This surtax is in addition to the state sales tax and varies by county. The discretionary sales surtax is used to fund various county and local government initiatives, such as infrastructure projects, public services, and education.

The combined state sales tax and discretionary sales surtax rates can range from 6.5% to 8.5% or higher, depending on the county where the taxable transaction occurs. Each county has the authority to set its own discretionary sales surtax rate, and the rate may differ even within the same region.

It's important to be aware of the specific tax rates applicable in your area and for the goods or services you are buying or selling. For the most current and accurate information regarding Florida's sales tax rates, exemptions, and any other relevant tax regulations, it's recommended to consult the Florida Department of Revenue or a tax professional. They can provide the latest information on sales tax rates and any specific local taxes or exemptions that may be applicable in Florida.

Florida - Sales Tax - Notes

As of ChatGPT's last update in September 2021, Florida imposes a sales and use tax on various goods and services. Here are some key points about the Florida Sales and Use Tax:

1. Sales Tax Rate: The state sales tax rate in Florida is 6%. Additionally, local jurisdictions (counties) may

impose their own discretionary sales surtax, which can add up to an additional 2.5%. The total sales tax rate, including state and local taxes, can range from 6% to 8.5% depending on the specific location.

2. Use Tax: Florida also has a use tax, which is applicable when residents or businesses in the state purchase taxable items from out-of-state sellers who do not collect Florida sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
3. Exemptions: Some items and services are exempt from Florida's sales and use tax. Common exemptions include prescription drugs, groceries, medical equipment, and agricultural products.
4. Filing and Payment: Businesses that make sales subject to Florida's sales tax are required to register with the Florida Department of Revenue (DOR) and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
5. Online Sales: Florida has not adopted an economic nexus law for online sales. However, it does require out-of-state sellers with a substantial number of sales in the state to collect and remit sales tax, provided they have sufficient nexus under other provisions of the law.
6. Resale Certificates: Businesses that purchase goods for resale are eligible for a resale certificate. This certificate allows them to buy goods without paying sales tax on those items. Instead, they will collect sales tax when they sell the goods to the end consumer.

Please note that tax laws are subject to change, and it's essential to consult the Florida Department of Revenue or a tax professional for the most up-to-date and specific information related to sales and use tax in Florida.

Florida Sales and Use Tax - Additional information

Here are some more key points:

1. Sales Tax Exceptions: The general state sales tax rate in Florida is 6%, but there are exceptions with different rates for specific items or services. For example:
    - Retail sales of new mobile homes have a reduced tax rate of 3%.
    - Amusement machine receipts are taxed at a rate of 4%.
    - The rental, lease, or license of commercial real property is taxed at a rate of 5.5%.
    - Electricity is subject to a higher tax rate of 6.95%.
2. Discretionary Sales Surtax: Many Florida counties impose a discretionary sales surtax, also known as

a county tax, in addition to the state sales tax. The county surtax rate is added to the state sales tax rate and applies to most transactions subject to sales or use tax. The surtax rate varies by county and is applied to taxable items or services delivered into the county. Different rates may apply to motor vehicles and mobile homes based on the purchaser's home address.

3. Use Tax: Florida's use tax is due when sales tax was not paid at the time of purchase. This tax applies to the use or consumption of taxable goods or services in situations such as buying a taxable item in Florida without paying sales tax, using a tax-exempt item for personal use or business purposes, or bringing a taxable item from outside Florida without paying sales tax on it.
4. Transient Rental Taxes: In addition to the state sales and use tax and discretionary sales surtax, some Florida counties may impose local option transient rental taxes on short-term rentals or leases of accommodations. These taxes apply to hotels, motels, apartments, rooming houses, mobile home parks, RV parks, condominiums, and timeshare resorts for rental terms of six months or less. The local transient rental taxes are often reported and remitted directly to the local government, while sales tax and discretionary sales surtax on transient rentals are reported and remitted to the Florida Department of Revenue.

It's important to keep in mind that tax laws can change, and it's advisable to verify the most current information with the Florida Department of Revenue or a tax professional for any updates or specific questions regarding sales and use tax in Florida.

Georgia (GA) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Georgia:

1. Sales Tax: Georgia imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 4%. In addition to the state sales tax, some local jurisdictions may impose additional sales taxes, resulting in varying total sales tax rates in different areas of the state.
2. Use Tax: Georgia also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Georgia for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.

3. Individual Income Tax: Georgia levies an individual income tax on residents and non-residents who earn income in the state. The state has a graduated income tax system with six tax brackets and rates ranging from 1% to 5.75% based on income levels.
4. Corporate Income Tax: Georgia imposes a corporate income tax on corporations conducting business in the state. The corporate tax rates vary depending on the company's taxable income.
5. Franchise Tax: Georgia imposes an annual corporate net worth tax, also known as a franchise tax, on corporations registered in the state. The tax is calculated based on the company's net worth and is subject to a minimum tax amount.
6. Property Taxes: Georgia imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and can vary by county.
7. Vehicle Taxes and Fees: Georgia imposes various taxes and fees on motor vehicles, including sales tax on vehicle purchases, ad valorem taxes based on the vehicle's value, and annual registration fees.
8. Excise Taxes: Georgia imposes excise taxes on certain products, such as alcohol, tobacco, and motor fuel.
9. Estate Tax: Georgia does not have its own estate tax. Additionally, it does not have a "pick-up" tax, meaning it does not collect a portion of the federal estate tax paid by the estate.
10. Local Option Sales Tax: Some counties in Georgia may impose a Local Option Sales Tax (LOST) or Special Purpose Local Option Sales Tax (SPLOST) for specific projects or local funding needs.
11. No Local Income Tax: Georgia does not allow local jurisdictions to impose their own income taxes.

It's important to note that tax laws are subject to change, and it's recommended to consult the Georgia Department of Revenue or a tax professional for the most up-to-date and specific information related to taxes in Georgia.

Georgia (GA) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Georgia imposes a sales tax and use tax on various goods and services. Here are some key points about the Georgia Sales Tax and Use Tax:

Sales Tax:

1. Sales Tax Rate: The state sales tax rate in Georgia is 4%. However, some local jurisdictions (counties and cities) may impose additional local sales taxes, which means the total sales tax rate can be higher in certain areas. The combined state and local sales tax rates can range from 4% to 8%.
2. Exemptions: Some items and services may be exempt from Georgia's sales tax. Common exemptions include prescription drugs, groceries, certain medical equipment, and sales to tax-exempt

organizations.

3. Filing and Payment: Businesses that make sales subject to Georgia's sales tax are required to register with the Georgia Department of Revenue and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
4. Online Sales: Georgia has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

1. Use Tax Rate: The use tax rate in Georgia is also 4%. The use tax is applicable when residents or businesses in Georgia purchase taxable items from out-of-state sellers who do not collect Georgia sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
2. Filing and Payment: Individuals and businesses in Georgia are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
3. Online Purchases: As mentioned above, use tax in Georgia is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Please note that tax laws are subject to change, and it's essential to consult the Georgia Department of Revenue or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Georgia.

Georgia - Special Sales Tax Rates

As of ChatGPT's last update in September 2021, Georgia has special sales tax rates for certain types of transactions. These special rates apply in addition to the standard state sales tax rate of 4% and any applicable local sales taxes. Here are some of the special sales tax rates in Georgia:

1. Local Option Sales Tax: Some counties and cities in Georgia impose a local option sales tax on top of the state sales tax rate. The local option sales tax rates vary by location and can range from 1% to 4%.
2. Special Purpose Local Option Sales Tax (SPLOST): Certain counties in Georgia have implemented a SPLOST, which is an additional 1% sales tax to fund specific local projects, such as infrastructure improvements or capital projects.
3. Special District Taxes: In some areas, additional sales taxes may apply to support specific districts or

projects. These special district taxes can vary based on the location and purpose of the tax.

4. Hotel-Motel Excise Tax: Georgia imposes an excise tax on hotel and motel accommodations. The tax rate can vary by location and may apply in addition to the regular sales tax rate.
5. Motor Fuel Tax: Georgia imposes specific taxes on motor fuel sales. These taxes are generally included in the fuel's retail price and are not collected at the point of sale separately.
6. Telecommunications Tax: There is a state tax on telecommunications services in Georgia, which applies to charges for telephone and other communication services.
7. Admissions and Amusement Tax: Certain entertainment and amusement activities, such as admission to sporting events, concerts, or amusement parks, may be subject to an additional tax.

It's important to note that the application of special sales tax rates can vary depending on the specific location and type of transaction. For businesses and consumers, it's essential to be aware of the specific tax rates applicable in their area and for the goods or services they are buying or selling.

Please keep in mind that tax laws are subject to change, and it's crucial to verify the most up-to-date information with the Georgia Department of Revenue or a tax professional to ensure compliance with current tax rates and regulations.

Georgia - Sales Tax - Notes

As of ChatGPT's last update in September 2021, Georgia imposes a sales and use tax on various goods and services. Here are some key points about the Georgia Sales and Use Tax:

1. Sales Tax Rate: The state sales tax rate in Georgia is 4%. Additionally, local jurisdictions (counties and municipalities) may impose their own local option sales taxes, which can add up to an additional 4%. The total sales tax rate, including state and local taxes, can range from 4% to 8% depending on the specific location.
2. Use Tax: Georgia also has a use tax, which is applicable when residents or businesses in the state purchase taxable items from out-of-state sellers who do not collect Georgia sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
3. Exemptions: Some items and services are exempt from Georgia's sales and use tax. Common exemptions include prescription drugs, certain medical equipment, groceries, and sales to the U.S. government.
4. Filing and Payment: Businesses that make sales subject to Georgia's sales tax are required to register for a sales tax permit with the Georgia Department of Revenue (DOR) and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the

corresponding tax collected.

5. Online Sales: Georgia has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

6. Special Sales Tax Rates: Certain products and services may have special sales tax rates in Georgia. For example, motor fuel is subject to a separate excise tax and is not included in the general sales tax rate.

Please note that tax laws are subject to change, and it's essential to consult the Georgia Department of Revenue or a tax professional for the most up-to-date and specific information related to sales and use tax in Georgia.

Sales tax / Use tax - Idaho (ID)

Idaho (ID) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Idaho:

1. Sales Tax: Idaho imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 6%. In addition to the state sales tax, some local jurisdictions may impose additional sales taxes, resulting in varying total sales tax rates in different areas of the state.

2. Use Tax: Idaho also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Idaho for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.

3. Individual Income Tax: Idaho levies an individual income tax on residents and non-residents who earn income in the state. The state has several tax brackets with rates ranging from 1.125% to 6.925% based on income levels.

4. Corporate Income Tax: Idaho imposes a corporate income tax on corporations conducting business in the state. The corporate tax rates vary depending on the company's taxable income.

5. Property Taxes: Idaho imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and can vary by county.

6. Vehicle Taxes and Fees: Idaho imposes various taxes and fees on motor vehicles, including sales tax

on vehicle purchases, registration fees, and a motor vehicle excise tax based on the vehicle's value.

7. Excise Taxes: Idaho imposes excise taxes on certain products, such as gasoline, tobacco, and alcohol.
8. Estate Tax: Idaho does not have its own estate tax. Additionally, it does not have a "pick-up" tax, meaning it does not collect a portion of the federal estate tax paid by the estate.
9. No Local Income Tax: Idaho does not allow local jurisdictions to impose their own income taxes.
10. Grocery Tax Credit: Idaho provides a grocery tax credit to offset the impact of the state sales tax on food purchased for home consumption. Eligible individuals and families can claim this credit on their income tax returns.

It's important to note that tax laws are subject to change, and it's recommended to consult the Idaho State Tax Commission or a tax professional for the most up-to-date and specific information related to taxes in Idaho.

Idaho (ID) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Idaho imposes a sales tax and use tax on various goods and services. Here are some key points about the Idaho Sales Tax and Use Tax:

Sales Tax:

1. Sales Tax Rate: The state sales tax rate in Idaho is 6%. This is the primary tax rate that applies to most taxable transactions in the state.
2. Exemptions: Some items and services may be exempt from Idaho's sales tax. Common exemptions include prescription drugs, groceries, certain medical equipment, and sales to tax-exempt organizations.
3. Filing and Payment: Businesses that make sales subject to Idaho's sales tax are required to register with the Idaho State Tax Commission and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
4. Online Sales: Idaho has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

1. Use Tax Rate: The use tax rate in Idaho is also 6%. The use tax is applicable when residents or businesses in Idaho purchase taxable items from out-of-state sellers who do not collect Idaho sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.

2. Filing and Payment: Individuals and businesses in Idaho are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
3. Online Purchases: As mentioned above, use tax in Idaho is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Please note that tax laws are subject to change, and it's essential to consult the Idaho State Tax Commission or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Idaho.

Idaho - Special Sales Tax Rates

As of ChatGPT's last update in September 2021, Idaho does not have any special sales tax rates in addition to the standard state sales tax rate. The state sales tax rate in Idaho is 6%, and this rate applies uniformly to most taxable transactions throughout the state.

Unlike some other states, Idaho does not have local option sales taxes or special district taxes that impose additional sales taxes on specific goods, services, or locations. Therefore, the 6% state sales tax rate is the only sales tax rate that applies to most taxable sales in Idaho.

However, it's important to note that tax laws can change, and it's possible that new legislation or updates may have been implemented since my last update. For the most current and accurate information regarding Idaho's sales tax rates, it's recommended to consult the Idaho State Tax Commission or a tax professional. They can provide the latest information on sales tax rates, exemptions, and any other relevant tax regulations in the state of Idaho.

Idaho - Sales and Use tax - Notes

As of ChatGPT's last update in September 2021, Idaho imposes a sales and use tax on various goods and services. Here are some key points about the Idaho Sales and Use Tax:

1. Sales Tax Rate: The state sales tax rate in Idaho is 6%. Additionally, there may be local option taxes imposed by counties or cities, which can vary the total sales tax rate in specific areas.
2. Use Tax: Idaho also has a use tax, which is applicable when residents or businesses in the state purchase taxable items from out-of-state sellers who do not collect Idaho sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
3. Exemptions: Some items and services may be exempt from Idaho's sales and use tax. Common

exemptions include prescription drugs, groceries, and certain agricultural products.

4. Filing and Payment: Businesses that make sales subject to Idaho's sales tax are required to register for a seller's permit with the Idaho State Tax Commission and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
5. Online Sales: Idaho has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.
6. Destination-Based Sales Tax: In Idaho, the sales tax rate is generally based on the destination of the sale. This means that the applicable tax rate is determined by the location where the goods are delivered or services are performed.
7. Special Sales Tax Rates: Some specific items and services may have special sales tax rates in Idaho. For example, there are specific tax rates for lodging and alcoholic beverages.

Please note that tax laws are subject to change, and it's essential to consult the Idaho State Tax Commission or a tax professional for the most up-to-date and specific information related to sales and use tax in Idaho.

Sales tax / Use tax - Illinois (IL)

Illinois (IL) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Illinois:

1. Sales Tax: Illinois imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 6.25%. In addition to the state sales tax, there may be additional local sales taxes imposed by counties and municipalities, resulting in varying total sales tax rates in different areas of the state.
2. Use Tax: Illinois also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Illinois for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.

3. Individual Income Tax: Illinois levies an individual income tax on residents and non-residents who earn income in the state. As of my last update, the individual income tax rates are 4.95% for individuals and 7% for corporations.
4. Corporate Income Tax: Illinois imposes a corporate income tax on corporations conducting business in the state. The corporate income tax rate is 7% for regular corporations and 1.5% for S corporations.
5. Franchise Tax: Illinois imposes a corporate franchise tax on corporations doing business in the state. The tax is based on the company's paid-in capital and is calculated using specified rates. Certain corporations, such as financial institutions, are subject to different franchise tax rules.
6. Property Taxes: Illinois imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and can vary significantly by county and municipality.
7. Vehicle Taxes and Fees: Illinois imposes various taxes and fees on motor vehicles, including sales tax on vehicle purchases, registration fees, and a vehicle use tax based on the purchase price.
8. Excise Taxes: Illinois imposes excise taxes on certain products, such as gasoline, tobacco, and alcohol.
9. Estate Tax: Illinois had its own estate tax, commonly known as the "Illinois death tax." As of my last update, the estate tax applied to estates with a value over $4 million, with rates ranging from 0.8% to 16%.
10. No Local Income Tax: Illinois does not allow local jurisdictions to impose their own income taxes.
11. No Tax on Retirement Income: Illinois does not tax retirement income, such as Social Security benefits, pensions, and retirement account distributions.

It's important to note that tax laws are subject to change, and it's recommended to consult the Illinois Department of Revenue or a tax professional for the most up-to-date and specific information related to taxes in Illinois.

Illinois (IL) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Illinois imposes both a sales tax and a use tax on various goods and services. Here are some key points about the Illinois Sales Tax and Use Tax:

Sales Tax:

1. Sales Tax Rate: The state sales tax rate in Illinois is 6.25%. Additionally, some local jurisdictions (counties and municipalities) impose additional local sales taxes, which means the total sales tax rate can be higher in certain areas. The combined state and local sales tax rates can range from 6.25% to 11%.

2. Exemptions: Some items and services may be exempt from Illinois' sales tax. Common exemptions include prescription drugs, groceries, certain medical equipment, and sales to tax-exempt organizations. It's essential to review the Illinois Department of Revenue's guidelines for a comprehensive list of exemptions.
3. Filing and Payment: Businesses that make sales subject to Illinois' sales tax are required to register with the Illinois Department of Revenue and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
4. Online Sales: Illinois has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

1. Use Tax Rate: The use tax rate in Illinois is the same as the sales tax rate, which is 6.25%. The use tax is applicable when residents or businesses in Illinois purchase taxable items from out-of-state sellers who do not collect Illinois sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
2. Filing and Payment: Individuals and businesses in Illinois are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
3. Online Purchases: As mentioned above, use tax in Illinois is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Please note that tax laws are subject to change, and it's essential to consult the Illinois Department of Revenue or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Illinois.

Illinois- Special Sales Tax Rates

As of ChatGPT's last update in September 2021, Illinois has several special sales tax rates in addition to the standard state sales tax rate. The state sales tax rate in Illinois is 6.25%, but certain areas and specific transactions may have additional local or regional sales taxes. Here are some of the special sales tax rates in Illinois:

1. Local Option Sales Tax: Many counties and municipalities in Illinois impose a local option sales tax on top of the state sales tax rate. The local option sales tax rates can vary by location and can range from

0.25% to 2.75% or higher.

2. Regional Transportation Authority (RTA) Tax: In the metropolitan Chicago area, which includes Cook, DuPage, Kane, Lake, McHenry, and Will counties, an additional 1% RTA sales tax is imposed to support the Regional Transportation Authority's operations.
3. Home Rule Sales Tax: Some municipalities in Illinois have been granted home rule authority, which allows them to impose additional sales taxes beyond the state and local option rates. The home rule sales tax rates can vary depending on the municipality.
4. Special District Taxes: In certain areas, additional sales taxes may be imposed to fund specific districts or projects, such as public safety, education, or infrastructure improvements.
5. Retailers' Occupation Tax (ROT) and Service Occupation Tax (SOT): In addition to the state sales tax, Illinois imposes retailers' occupation tax and service occupation tax on certain sales and services. These taxes are collected by the retailer and vary based on the type of product or service being sold.
6. Prepared Food and Beverage Tax: Some localities in Illinois impose an additional tax on prepared food and beverages sold in restaurants or other dining establishments.

It's important to note that the application of special sales tax rates can vary depending on the specific location and type of transaction. For businesses and consumers, it's essential to be aware of the specific tax rates applicable in their area and for the goods or services they are buying or selling.

Please keep in mind that tax laws are subject to change, and it's crucial to verify the most up-to-date information with the Illinois Department of Revenue or a tax professional to ensure compliance with current tax rates and regulations.

Illinois - Sales and Use tax - Notes

As of ChatGPT's last update in September 2021, Illinois imposes a sales and use tax on various goods and services. Here are some key points about the Illinois Sales and Use Tax:

1. Sales Tax Rate: The state sales tax rate in Illinois is 6.25%. Additionally, local jurisdictions (municipalities and counties) may impose additional sales taxes, which means the total sales tax rate can be higher in some areas. The combined state and local sales tax rates can range from 6.25% to 11% depending on the specific location.
2. Use Tax: Illinois also has a use tax, which is applicable when residents or businesses in the state purchase taxable items from out-of-state sellers who do not collect Illinois sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
3. Exemptions: Some items and services may be exempt from Illinois' sales and use tax. Common exemptions include prescription drugs, groceries, certain medical equipment, and sales to tax-exempt

organizations.

4. Filing and Payment: Businesses that make sales subject to Illinois' sales tax are required to register for a Retailer's Occupation Tax (ROT) certificate with the Illinois Department of Revenue (IDOR) and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
5. Online Sales: Illinois has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.
6. Destination-Based Sales Tax: In Illinois, the sales tax rate is generally based on the destination of the sale. This means that the applicable tax rate is determined by the location where the goods are delivered or services are performed.
7. Service Occupation Tax: In addition to the Retailers' Occupation Tax (ROT), Illinois also has a Service Occupation Tax (SOT) that applies to certain services, such as dry cleaning, repair services, landscaping, and others.

Please note that tax laws are subject to change, and it's essential to consult the Illinois Department of Revenue or a tax professional for the most up-to-date and specific information related to sales and use tax in Illinois.

Sales tax / Use tax - Indiana (IN)

Indiana (IN) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Indiana (IN):

1. Sales Tax: Indiana imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 7%. However, there may be additional local sales taxes imposed by counties and municipalities, resulting in varying total sales tax rates in different areas of the state.
2. Use Tax: Indiana also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Indiana for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.

3. Individual Income Tax: Indiana levies an individual income tax on residents and non-residents who earn income in the state. The state has a flat income tax rate of 3.23% as of my last update.
4. Corporate Income Tax: Indiana imposes a corporate income tax on corporations conducting business in the state. The corporate tax rate is also a flat rate of 5.25% as of ChatGPT's last update.
5. Property Taxes: Indiana imposes property taxes on real and personal property, such as land, buildings, and vehicles. Property tax rates are determined at the local level and can vary significantly by county and municipality.
6. Vehicle Taxes and Fees: Indiana imposes various taxes and fees on motor vehicles, including sales tax on vehicle purchases, registration fees, and an excise tax based on the vehicle's value.
7. Excise Taxes: Indiana imposes excise taxes on certain products, such as gasoline, tobacco, and alcohol.
8. Inheritance Tax: Indiana repealed its inheritance tax, and as of ChatGPT's last update, there is no inheritance tax imposed by the state.
9. No Local Income Tax: Indiana does not allow local jurisdictions to impose their own income taxes.
10. Tax Credits and Incentives: Indiana offers various tax credits and incentives to individuals and businesses, such as the Earned Income Tax Credit (EITC) for low-income individuals and tax incentives for businesses investing in certain areas or creating jobs.

It's important to note that tax laws are subject to change, and it's recommended to consult the Indiana Department of Revenue or a tax professional for the most up-to-date and specific information related to taxes in Indiana.

Indiana (IN) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Indiana imposes a sales tax and use tax on various goods and services. Here are some key points about the Indiana Sales Tax and Use Tax:

Sales Tax:

1. Sales Tax Rate: The state sales tax rate in Indiana is 7%. Additionally, some local jurisdictions (counties and municipalities) may impose additional local option sales taxes, which means the total sales tax rate can be higher in certain areas. The combined state and local sales tax rates can range from 7% to 9%.
2. Exemptions: Some items and services may be exempt from Indiana's sales tax. Common exemptions include prescription drugs, groceries, certain medical equipment, and sales to tax-exempt organizations.
3. Filing and Payment: Businesses that make sales subject to Indiana's sales tax are required to register

for a Retail Merchant Certificate with the Indiana Department of Revenue and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.

4. Online Sales: Indiana has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

1. Use Tax Rate: The use tax rate in Indiana is also 7%. The use tax is applicable when residents or businesses in the state purchase taxable items from out-of-state sellers who do not collect Indiana sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
2. Filing and Payment: Individuals and businesses in Indiana are required to report and remit use tax on their Indiana income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
3. Online Purchases: As mentioned above, use tax in Indiana is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Please note that tax laws are subject to change, and it's essential to consult the Indiana Department of Revenue or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Indiana.

Indiana's county tax rates

The state sales tax rate for Indiana is 7%. However, counties and municipalities within Indiana may impose additional taxes on specific transactions. Here are some types of taxes that may be levied at the county level:

1. County Innkeeper's Tax (CIT): This tax is imposed on lodging services, typically hotels, motels, and other accommodations. The tax rate for CIT varies by county and may not be applicable in all counties.
2. Food and Beverage Tax (FAB): This tax is imposed on the sale of prepared food and beverages in certain areas. The FAB tax rate varies by county and may also be applicable in some municipalities within the counties.
3. Local Income Tax (LIT): All counties in Indiana have a Local Income Tax (LIT) rate. LIT is a tax imposed on the income of individuals and businesses within the county. The LIT rate may differ from one county

to another.

Please note that county tax rates may change over time, and it's essential to refer to the Indiana Department of Revenue (DOR) or the specific county's official website for the most up-to-date and accurate tax rate information for County Innkeeper's Tax (CIT), Food and Beverage Tax (FAB), and Local Income Tax (LIT) in Indiana.

Indiana - Special Sales Tax Rates

As of ChatGPT's last update in September 2021, Indiana does not have any special sales tax rates in addition to the standard state sales tax rate. The state sales tax rate in Indiana is 7%, and this rate applies uniformly to most taxable transactions throughout the state.

Indiana does not have local option sales taxes or special district taxes that impose additional sales taxes on specific goods, services, or locations. Therefore, the 7% state sales tax rate is the only sales tax rate that applies to most taxable sales in Indiana.

It's important to note that tax laws can change, and it's possible that new legislation or updates may have been implemented since my last update. For the most current and accurate information regarding Indiana's sales tax rates, exemptions, and any other relevant tax regulations, it's recommended to consult the Indiana Department of Revenue or a tax professional. They can provide the latest information on sales tax rates and any specific local taxes or exemptions that may be applicable in Indiana.

Sales tax / Use tax - Iowa (IA)

Iowa (IA) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Iowa:

1. Sales Tax: Iowa imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 6%. In addition to the state sales tax, there may be additional local option sales taxes imposed by counties and municipalities, resulting in varying total sales tax rates in different areas of the state.
2. Use Tax: Iowa also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Iowa for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.

3. Individual Income Tax: Iowa levies an individual income tax on residents and non-residents who earn income in the state. The state has nine income tax brackets, with rates ranging from 0.33% to 8.53% based on income levels.
4. Corporate Income Tax: Iowa imposes a corporate income tax on corporations conducting business in the state. The corporate income tax rates range from 5.5% to 12% based on taxable income.
5. Property Taxes: Iowa imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and can vary significantly by county and municipality.
6. Vehicle Taxes and Fees: Iowa imposes various taxes and fees on motor vehicles, including sales tax on vehicle purchases, registration fees, and annual vehicle fees.
7. Excise Taxes: Iowa imposes excise taxes on certain products, such as gasoline, tobacco, and alcohol.
8. Inheritance Tax: Iowa has an inheritance tax that applies to certain transfers of property after a person's death. The tax rates depend on the relationship between the decedent and the beneficiary.
9. No Local Income Tax: Iowa does not allow local jurisdictions to impose their own income taxes.
10. Tax Credits and Deductions: Iowa offers various tax credits and deductions to individuals and businesses, such as the Earned Income Tax Credit (EITC) for low-income individuals and the Research Activities Credit for eligible research and development expenses.

It's important to note that tax laws are subject to change, and it's recommended to consult the Iowa Department of Revenue or a tax professional for the most up-to-date and specific information related to taxes in Iowa.

Iowa (IA) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Iowa imposes both a sales tax and a use tax on various goods and services. Here are some key points about the Iowa Sales Tax and Use Tax:

Sales Tax:

1. Sales Tax Rate: The state sales tax rate in Iowa is 6%. Additionally, some local jurisdictions (cities and counties) may impose an additional local option sales tax, which means the total sales tax rate can be higher in certain areas. The combined state and local sales tax rates can range from 6% to 7%.
2. Exemptions: Some items and services may be exempt from Iowa's sales tax. Common exemptions include prescription drugs, certain food items, medical equipment, and sales to tax-exempt organizations. Iowa also provides exemptions for manufacturing machinery and equipment.
3. Filing and Payment: Businesses that make sales subject to Iowa's sales tax are required to register with the Iowa Department of Revenue and collect the appropriate tax from their customers. The filing

frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.

4. Online Sales: Iowa has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

1. Use Tax Rate: The use tax rate in Iowa is the same as the sales tax rate, which is 6%. The use tax is applicable when residents or businesses in Iowa purchase taxable items from out-of-state sellers who do not collect Iowa sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
2. Filing and Payment: Individuals and businesses in Iowa are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
3. Online Purchases: As mentioned above, use tax in Iowa is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Please note that tax laws are subject to change, and it's essential to consult the Iowa Department of Revenue or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Iowa.

Iowa - Special Sales Tax Rates

As of ChatGPT's last update in September 2021, Iowa does not have any special sales tax rates in addition to the standard state sales tax rate. The state sales tax rate in Iowa is 6%, and this rate applies uniformly to most taxable transactions throughout the state.

Iowa does not have local option sales taxes or special district taxes that impose additional sales taxes on specific goods, services, or locations. Therefore, the 6% state sales tax rate is the only sales tax rate that applies to most taxable sales in Iowa.

It's important to note that tax laws can change, and it's possible that new legislation or updates may have been implemented since my last update. For the most current and accurate information regarding Iowa's sales tax rates, exemptions, and any other relevant tax regulations, it's recommended to consult the Iowa Department of Revenue or a tax professional. They can provide the latest information on sales tax rates and any specific local taxes or exemptions that may be applicable in Iowa.

Iowa - Sales Tax - Notes

As of ChatGPT's last update in September 2021, Iowa imposes a sales and use tax on various goods and services. Here are some key points about the Iowa Sales and Use Tax:

1. Sales Tax Rate: The state sales tax rate in Iowa is 6%. Additionally, some local jurisdictions (cities and counties) may impose an additional local option sales tax, which means the total sales tax rate can be higher in certain areas. The combined state and local sales tax rates can range from 6% to 7%.
2. Use Tax: Iowa also has a use tax, which is applicable when residents or businesses in the state purchase taxable items from out-of-state sellers who do not collect Iowa sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
3. Exemptions: Some items and services may be exempt from Iowa's sales and use tax. Common exemptions include prescription drugs, certain medical equipment, groceries, and purchases made by tax-exempt organizations.
4. Filing and Payment: Businesses that make sales subject to Iowa's sales tax are required to obtain a sales tax permit from the Iowa Department of Revenue and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
5. Online Sales: Iowa has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.
6. Destination-Based Sales Tax: In Iowa, the sales tax rate is generally based on the destination of the sale. This means that the applicable tax rate is determined by the location where the goods are delivered or services are performed.
7. Special Sales Tax Rates: Some specific items and services may have special sales tax rates in Iowa. For example, there are specific tax rates for hotel accommodations and the rental of vehicles.

Please note that tax laws are subject to change, and it's essential to consult the Iowa Department of Revenue or a tax professional for the most up-to-date and specific information related to sales and use tax in Iowa.

Sales tax / Use tax - Kansas (KS)

Kansas (KS) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Kansas:

1. Sales Tax: Kansas imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 6.5%. In addition to the state sales tax, there may be additional local sales taxes imposed by counties and municipalities, resulting in varying total sales tax rates in different areas of the state.
2. Use Tax: Kansas also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Kansas for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.
3. Individual Income Tax: Kansas levies an individual income tax on residents and non-residents who earn income in the state. The state has three income tax brackets, with rates ranging from 3.1% to 5.7% based on income levels.
4. Corporate Income Tax: Kansas imposes a corporate income tax on corporations conducting business in the state. The corporate tax rates range from 4% to 7% based on taxable income.
5. Property Taxes: Kansas imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and can vary significantly by county and municipality.
6. Vehicle Taxes and Fees: Kansas imposes various taxes and fees on motor vehicles, including sales tax on vehicle purchases, registration fees, and motor vehicle excise tax.
7. Excise Taxes: Kansas imposes excise taxes on certain products, such as gasoline, tobacco, and alcohol.
8. No Estate Tax: Kansas does not have its own estate tax. Additionally, it does not have a "pick-up" tax, meaning it does not collect a portion of the federal estate tax paid by the estate.
9. No Local Income Tax: Kansas does not allow local jurisdictions to impose their own income taxes.
10. Tax Credits and Incentives: Kansas offers various tax credits and incentives to individuals and businesses, such as the Child and Dependent Care Credit, the Low-Income Student Scholarship Program, and tax incentives for businesses investing in certain areas or creating jobs.

It's important to note that tax laws are subject to change, and it's recommended to consult the Kansas Department of Revenue or a tax professional for the most up-to-date and specific information related to taxes in Kansas.

Kansas (KS) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Kansas imposes both a sales tax and a use tax on various goods and services. Here are some key points about the Kansas Sales Tax and Use Tax:

Sales Tax:

1. Sales Tax Rate: The state sales tax rate in Kansas is 6.5%. Additionally, some local jurisdictions (counties and cities) may impose additional local sales taxes, which means the total sales tax rate can be higher in certain areas. The combined state and local sales tax rates can range from 6.5% to 10.5% or higher, depending on the location.
2. Exemptions: Some items and services may be exempt from Kansas' sales tax. Common exemptions include prescription drugs, groceries, certain medical equipment, and sales to tax-exempt organizations. Additionally, Kansas provides various exemptions for manufacturing machinery and equipment.
3. Filing and Payment: Businesses that make sales subject to Kansas' sales tax are required to register with the Kansas Department of Revenue and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
4. Online Sales: Kansas has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

1. Use Tax Rate: The use tax rate in Kansas is the same as the sales tax rate, which is 6.5%. The use tax is applicable when residents or businesses in Kansas purchase taxable items from out-of-state sellers who do not collect Kansas sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
2. Filing and Payment: Individuals and businesses in Kansas are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
3. Online Purchases: As mentioned above, use tax in Kansas is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Please note that tax laws are subject to change, and it's essential to consult the Kansas Department of

Revenue or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Kansas.

Kansas - Special Sales Tax Rates

As of ChatGPT's last update in September 2021, Kansas does not have any special sales tax rates in addition to the standard state sales tax rate. The state sales tax rate in Kansas is 6.5%, and this rate applies uniformly to most taxable transactions throughout the state.

Kansas does not have local option sales taxes or special district taxes that impose additional sales taxes on specific goods, services, or locations. Therefore, the 6.5% state sales tax rate is the only sales tax rate that applies to most taxable sales in Kansas.

Kansas - Sales and Use tax - Notes

As of ChatGPT's last update in September 2021, Kansas imposes a sales and use tax on various goods and services. Here are some key points about the Kansas Sales and Use Tax:

1. Sales Tax Rate: The state sales tax rate in Kansas is 6.5%. Additionally, local jurisdictions (cities, counties, and special taxing districts) may impose additional sales taxes, which means the total sales tax rate can be higher in certain areas. The combined state and local sales tax rates can range from 6.5% to 11.5% depending on the specific location.
2. Use Tax: Kansas also has a use tax, which is applicable when residents or businesses in the state purchase taxable items from out-of-state sellers who do not collect Kansas sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
3. Exemptions: Some items and services may be exempt from Kansas' sales and use tax. Common exemptions include prescription drugs, groceries, certain medical equipment, and sales to tax-exempt organizations.
4. Filing and Payment: Businesses that make sales subject to Kansas' sales tax are required to register with the Kansas Department of Revenue and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.

5. Online Sales: Kansas has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.
6. Food Sales Tax: In Kansas, food sales tax is lower than the general sales tax rate. As of my last update, food sales tax is 6.5%, while the general sales tax rate is also 6.5%. However, some localities may have additional taxes on food sales.
7. Compensating Use Tax: Kansas imposes a compensating use tax on goods and services purchased outside of the state when the seller does not collect Kansas sales tax.

Please note that tax laws are subject to change, and it's essential to consult the Kansas Department of Revenue or a tax professional for the most up-to-date and specific information related to sales and use tax in Kansas.

Sales tax / Use tax - Kentucky (KY)

Kentucky (KY) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Kentucky (KY):

1. Sales Tax: Kentucky imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 6%. In addition to the state sales tax, there may be additional local sales taxes imposed by cities and counties, resulting in varying total sales tax rates in different areas of the state.
2. Use Tax: Kentucky also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Kentucky for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.
3. Individual Income Tax: Kentucky levies an individual income tax on residents and non-residents who earn income in the state. The state has six income tax brackets, with rates ranging from 2% to 5%. Additionally, there is a limited deduction for certain retirement income.
4. Corporate Income Tax: Kentucky imposes a corporate income tax on corporations conducting business in the state. The corporate income tax rates range from 4% to 6.25% based on taxable income.
5. Property Taxes: Kentucky imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and can vary significantly by county and municipality.

6. Vehicle Taxes and Fees: Kentucky imposes various taxes and fees on motor vehicles, including sales tax on vehicle purchases, registration fees, and a motor vehicle usage tax based on the vehicle's value.
7. Excise Taxes: Kentucky imposes excise taxes on certain products, such as gasoline, tobacco, and alcohol.
8. No Estate Tax: Kentucky does not have its own estate tax. Additionally, it does not have a "pick-up" tax, meaning it does not collect a portion of the federal estate tax paid by the estate.
9. No Local Income Tax: Kentucky does not allow local jurisdictions to impose their own income taxes.
10. Tax Credits and Incentives: Kentucky offers various tax credits and incentives to individuals and businesses, such as the Earned Income Tax Credit (EITC) for low-income individuals and tax incentives for businesses creating jobs and investing in certain areas.

It's important to note that tax laws are subject to change, and it's recommended to consult the Kentucky Department of Revenue or a tax professional for the most up-to-date and specific information related to taxes in Kentucky.

Kentucky (KY) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Kentucky imposes a sales tax and use tax on various goods and services. Here are some key points about the Kentucky Sales Tax and Use Tax:

Sales Tax:

1. Sales Tax Rate: The state sales tax rate in Kentucky is 6%. Additionally, some local jurisdictions (cities and counties) may impose additional local sales taxes, which means the total sales tax rate can be higher in certain areas. The combined state and local sales tax rates can range from 6% to 7%.
2. Exemptions: Some items and services may be exempt from Kentucky's sales tax. Common exemptions include prescription drugs, groceries, certain medical equipment, and sales to tax-exempt organizations.
3. Filing and Payment: Businesses that make sales subject to Kentucky's sales tax are required to register with the Kentucky Department of Revenue and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
4. Online Sales: Kentucky has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

1. Use Tax Rate: The use tax rate in Kentucky is also 6%. The use tax is applicable when residents or businesses in the state purchase taxable items from out-of-state sellers who do not collect Kentucky sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
2. Filing and Payment: Individuals and businesses in Kentucky are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
3. Online Purchases: As mentioned above, use tax in Kentucky is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Please note that tax laws are subject to change, and it's essential to consult the Kentucky Department of Revenue or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Kentucky.

Kentucky - Special Sales Tax Rates

As of ChatGPT's last update in September 2021, Kentucky does not have any special sales tax rates in addition to the standard state sales tax rate. The state sales tax rate in Kentucky is 6%, and this rate applies uniformly to most taxable transactions throughout the state.

Kentucky does not have local option sales taxes or special district taxes that impose additional sales taxes on specific goods, services, or locations. Therefore, the 6% state sales tax rate is the only sales tax rate that applies to most taxable sales in Kentucky.

Sales tax / Use tax - Louisiana (LA)

Louisiana (LA)- Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in

Louisiana:

1. Sales Tax: Louisiana imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 4.45%. However, when combined with local sales taxes imposed by parishes (counties) and municipalities, the total sales tax rate can vary and may be higher than the state rate.
2. Use Tax: Louisiana also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Louisiana for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.
3. Individual Income Tax: Louisiana levies an individual income tax on residents and non-residents who earn income in the state. The state has three income tax brackets, with rates ranging from 2% to 6% based on income levels.
4. Corporate Income Tax: Louisiana imposes a corporate income tax on corporations conducting business in the state. The corporate income tax rates range from 4% to 8% based on taxable income.
5. Franchise Tax: Louisiana imposes a corporate franchise tax on corporations registered in the state. The tax is based on the company's capital or net worth and is calculated using a prescribed formula.
6. Property Taxes: Louisiana imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and can vary significantly by parish.
7. Vehicle Taxes and Fees: Louisiana imposes various taxes and fees on motor vehicles, including sales tax on vehicle purchases, registration fees, and ad valorem taxes based on the vehicle's value.
8. Excise Taxes: Louisiana imposes excise taxes on certain products, such as gasoline, tobacco, and alcohol.
9. No Estate Tax: Louisiana does not have its own estate tax. Additionally, it does not have a "pick-up" tax, meaning it does not collect a portion of the federal estate tax paid by the estate.
10. No Local Income Tax: Louisiana does not allow local jurisdictions to impose their own income taxes.
11. Tax Credits and Incentives: Louisiana offers various tax credits and incentives to individuals and businesses, such as the Earned Income Tax Credit (EITC) for low-income individuals and tax incentives for businesses investing in certain areas or creating jobs.

It's important to note that tax laws are subject to change, and it's recommended to consult the Louisiana Department of Revenue or a tax professional for the most up-to-date and specific information related to taxes in Louisiana.

Louisiana (LA) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Louisiana imposes both a sales tax and a use tax on various goods and services. Here are some key points about the Louisiana Sales Tax and Use Tax:

Sales Tax:

1. Sales Tax Rate: The state sales tax rate in Louisiana is 4.45%. Additionally, some local jurisdictions (parishes) may impose additional local sales taxes, which means the total sales tax rate can be higher in certain areas. The combined state and local sales tax rates can range from 4.45% to 11.45% or higher, depending on the location.
2. Exemptions: Some items and services may be exempt from Louisiana's sales tax. Common exemptions include groceries, prescription drugs, certain medical equipment, and sales to tax-exempt organizations. Additionally, Louisiana provides various exemptions for manufacturing machinery and equipment.
3. Filing and Payment: Businesses that make sales subject to Louisiana's sales tax are required to register with the Louisiana Department of Revenue and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
4. Online Sales: Louisiana has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

1. Use Tax Rate: The use tax rate in Louisiana is the same as the sales tax rate, which is 4.45%. The use tax is applicable when residents or businesses in Louisiana purchase taxable items from out-of-state sellers who do not collect Louisiana sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
2. Filing and Payment: Individuals and businesses in Louisiana are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
3. Online Purchases: As mentioned above, use tax in Louisiana is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Please note that tax laws are subject to change, and it's essential to consult the Louisiana Department of Revenue or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Louisiana.

Louisiana - Special Sales Tax Rates

As of ChatGPT's last update in September 2021, Louisiana does not have any special sales tax rates in addition to the standard state sales tax rate. The state sales tax rate in Louisiana is 4.45%, and this rate applies uniformly to most taxable transactions throughout the state.

Louisiana does not have local option sales taxes or special district taxes that impose additional sales taxes on specific goods, services, or locations. Therefore, the 4.45% state sales tax rate is the only sales tax rate that applies to most taxable sales in Louisiana.

However, it's important to note that local jurisdictions in Louisiana may have additional taxes on certain items or services. For example, some parishes (counties) in Louisiana impose a parish sales tax on top of the state sales tax rate. The combined state and local sales tax rates can vary depending on the location.

It's essential to be aware of the specific tax rates applicable in your area and for the goods or services you are buying or selling. For the most current and accurate information regarding Louisiana's sales tax rates, exemptions, and any other relevant tax regulations, it's recommended to consult the Louisiana Department of Revenue or a tax professional. They can provide the latest information on sales tax rates and any specific local taxes or exemptions that may be applicable in Louisiana.

Maine (ME) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Maine (ME):

1. Sales Tax: Maine imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 5.5%. However, certain items, such as groceries, prescription drugs, and some agricultural products, may be exempt from the sales tax.
2. Use Tax: Maine also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Maine for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.
3. Individual Income Tax: Maine levies an individual income tax on residents and non-residents who earn income in the state. The state has a progressive income tax system with tax rates ranging from

5.8% to 7.15% based on income levels.

4. Corporate Income Tax: Maine imposes a corporate income tax on corporations conducting business in the state. The corporate income tax rate is 8.93% on net income up to $3 million, and 3.5% on net income over $3 million.
5. Property Taxes: Maine imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and can vary significantly by municipality.
6. Vehicle Taxes and Fees: Maine imposes various taxes and fees on motor vehicles, including excise tax based on the vehicle's value, registration fees, and title fees.
7. Estate Tax: Maine has its own estate tax, separate from the federal estate tax. The Maine estate tax applies to estates with a value above a certain threshold, and the tax rates range from 8% to 12%.
8. No Local Income Tax: Maine does not allow local jurisdictions to impose their own income taxes.
9. Tax Credits and Incentives: Maine offers various tax credits and incentives to individuals and businesses, such as the Earned Income Tax Credit (EITC) for low-income individuals and tax credits for certain industries and job creation.
10. Property Tax Relief Programs: Maine offers property tax relief programs for certain individuals, such as the Homestead Exemption and the Property Tax Fairness Credit, which provide assistance to eligible homeowners and renters.

It's important to note that tax laws are subject to change, and it's recommended to consult the Maine Revenue Services or a tax professional for the most up-to-date and specific information related to taxes in Maine.

Maine (ME) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Maine imposes a sales tax and use tax on various goods and services. Here are some key points about the Maine Sales Tax and Use Tax:

Sales Tax:

1. Sales Tax Rate: The state sales tax rate in Maine is 5.5%. Additionally, some local jurisdictions (municipalities) may impose additional local option sales taxes, which means the total sales tax rate can be higher in certain areas. The combined state and local sales tax rates can range from 5.5% to 8%.
2. Exemptions: Some items and services may be exempt from Maine's sales tax. Common exemptions include prescription drugs, groceries, certain medical equipment, and sales to tax-exempt organizations.

3. Filing and Payment: Businesses that make sales subject to Maine's sales tax are required to register with the Maine Revenue Services and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
4. Online Sales: Maine has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

1. Use Tax Rate: The use tax rate in Maine is also 5.5%. The use tax is applicable when residents or businesses in the state purchase taxable items from out-of-state sellers who do not collect Maine sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
2. Filing and Payment: Individuals and businesses in Maine are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
3. Online Purchases: As mentioned above, use tax in Maine is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Please note that tax laws are subject to change, and it's essential to consult the Maine Revenue Services (MRS). or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Maine.

Maine- Special Sales Tax Rates

As of ChatGPT's last update in September 2021, Maine does not have any special sales tax rates in addition to the standard state sales tax rate. The state sales tax rate in Maine is 5.5%, and this rate applies uniformly to most taxable transactions throughout the state.

Maine does not have local option sales taxes or special district taxes that impose additional sales taxes on specific goods, services, or locations. Therefore, the 5.5% state sales tax rate is the only sales tax rate that applies to most taxable sales in Maine.

It's important to note that tax laws can change, and it's possible that new legislation or updates may have been implemented since my last update. For the most current and accurate information regarding Maine's sales tax rates, exemptions, and any other relevant tax regulations, it's recommended to consult the Maine Revenue Services (MRS) or a tax professional. They can provide the latest information on sales tax rates and any specific local taxes or exemptions that may be applicable in Maine.

What is the difference between sales tax and use tax and service provider tax in Maine?

Sales Tax, Use Tax, and Service Provider Tax are different types of taxes applied in Maine based on specific transactions and activities. Here's a brief explanation of each:

1. Sales Tax: Sales tax is a tax levied on the sale of tangible personal property and, in some cases, certain services within the state of Maine. When a business sells taxable goods or services to a customer, the business is required to collect the sales tax from the customer at the time of the sale. The collected sales tax is then remitted to the state's tax authorities. The sales tax rate in Maine is 5.5%, with the potential for additional local option taxes in certain areas.
2. Use Tax: Use tax is a complementary tax to sales tax and is applicable when taxable goods or services are purchased outside of Maine and brought into the state for use, storage, or consumption. If the seller did not collect Maine sales tax at the time of purchase, the buyer is responsible for paying the equivalent use tax directly to the state. Use tax ensures that out-of-state purchases are subject to a tax similar to the sales tax on in-state purchases, preventing tax avoidance through cross-border transactions.
3. Service Provider Tax: The service provider tax is a specific tax applicable to certain services provided by businesses in Maine. It is not a tax on the sale of tangible personal property but rather on services rendered. The service provider tax rate in Maine is 5.5%. It applies to specific services, such as lodging and accommodation services, rental of living quarters or sleeping accommodations, certain prepared food and drink services, certain rental and leasing of tangible personal property, and various personal and professional services.

In summary:

- Sales tax is a tax on the sale of taxable goods and services within the state of Maine, collected by the seller from the customer at the time of the transaction.
- Use tax is a tax on the use, storage, or consumption of taxable goods or services purchased outside Maine, paid directly by the buyer to the state if sales tax was not collected at the time of purchase.
- Service Provider Tax is a tax on specific services provided within Maine, applied by businesses that offer the specified taxable services.

Each of these taxes serves a different purpose and applies to different transactions, ensuring that both in-state and out-of-state purchases are appropriately taxed. Please note that tax laws can change, and it's crucial to verify the latest information with the Maine Revenue Services (MRS) or a tax professional.

Maine - Sales Tax, Use Tax and Service Provider Tax - Notes

Maine's sales tax and service provider tax.

Sales Tax in Maine: Maine imposes a sales tax on the retail sale of tangible personal property and certain services. The sales tax is collected by retailers from customers and is considered a "*trust fund*" tax. This means that retailers collect the tax on behalf of the state and hold it in trust until it is remitted to the Maine Revenue Services (MRS).

The exact sales tax rate may vary depending on the location and type of sale, as some municipalities may impose additional local taxes. Retailers are required to timely file their sales tax returns and remit the collected sales tax to the state.

Use Tax in Maine: Maine also has a use tax, which is imposed on the use, storage, or consumption of tangible personal property in the state when sales tax has not been paid on the purchase. The use tax is generally applicable to purchases made from out-of-state sellers who do not collect Maine sales tax.

Service Provider Tax: In addition to the sales tax, Maine imposes a service provider tax on certain services. The service provider tax applies to specific services provided in Maine, and the tax rate may vary depending on the type of service.

Filing and Payment Deadlines: The deadline for filing and remitting Maine sales tax is generally unchanged, even in times of economic strain. Retailers are encouraged to file their sales tax returns on time, and an extension to file does not extend the deadline for remitting the collected sales tax to the state.

If retailers cannot compute the actual sales tax amount to remit, they may still timely file their return and remit an estimated sales tax based on their filing history. They can later file an amended return to reconcile the correct tax owed.

For specific questions or assistance with Maine's sales tax, service provider tax, or use tax, retailers and taxpayers can contact the Maine Revenue Services (MRS) Sales Tax Division or Compliance Division using the provided contact information.

As with any tax matters, it is essential for businesses and individuals in Maine to comply with the relevant tax laws and regulations, and when in doubt, seek advice from a tax professional to ensure proper compliance.

Sales tax / Use tax - Maryland (MD)

Maryland (MD) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Maryland (MD):

1. Sales Tax: Maryland imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 6%. However, certain items, such as groceries, prescription drugs, and residential energy, may be exempt from the sales tax.
2. Use Tax: Maryland also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Maryland for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.
3. Individual Income Tax: Maryland levies an individual income tax on residents and non-residents who earn income in the state. The state has a progressive income tax system with tax rates ranging from 2% to 5.75% based on income levels.
4. Corporate Income Tax: Maryland imposes a corporate income tax on corporations conducting business in the state. The corporate income tax rates range from 8.25% to 8.75% based on taxable income.
5. Property Taxes: Maryland imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and can vary significantly by county and municipality.
6. Vehicle Taxes and Fees: Maryland imposes various taxes and fees on motor vehicles, including excise tax based on the vehicle's value, registration fees, and title fees.
7. Estate Tax: Maryland has its own estate tax, separate from the federal estate tax. The Maryland estate tax applies to estates with a value above a certain threshold, and the tax rates range from 0.8% to 16%.
8. No Local Income Tax: Maryland does not allow local jurisdictions to impose their own income taxes.
9. Tax Credits and Incentives: Maryland offers various tax credits and incentives to individuals and businesses, such as the Earned Income Tax Credit (EITC) for low-income individuals and tax credits for certain industries and job creation.
10. Sales Tax Holidays: Maryland occasionally offers sales tax holidays during which certain qualifying items, such as back-to-school supplies, are exempt from the sales tax for a limited time.

It's important to note that tax laws are subject to change, and it's recommended to consult the Maryland Comptroller's Office or a tax professional for the most up-to-date and specific information related to taxes in Maryland.

Maryland (MD) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Maryland imposes a sales tax and use tax on various goods and services. Here are some key points about the Maryland Sales Tax and Use Tax:

Sales Tax:

1. Sales Tax Rate: The state sales tax rate in Maryland is 6%. This is the primary tax rate that applies to most taxable transactions in the state.
2. Exemptions: Some items and services may be exempt from Maryland's sales tax. Common exemptions include prescription drugs, groceries, certain medical equipment, and sales to tax-exempt organizations.
3. Filing and Payment: Businesses that make sales subject to Maryland's sales tax are required to register with the Maryland Comptroller's Office and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
4. Online Sales: Maryland has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

1. Use Tax Rate: The use tax rate in Maryland is also 6%. The use tax is applicable when residents or businesses in the state purchase taxable items from out-of-state sellers who do not collect Maryland sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
2. Filing and Payment: Individuals and businesses in Maryland are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
3. Online Purchases: As mentioned above, use tax in Maryland is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Please note that tax laws are subject to change, and it's essential to consult the Maryland Comptroller's Office or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Maryland.

Maryland - Special Sales Tax Rates

As of ChatGPT's last update in September 2021, Maryland does not have any special sales tax rates in addition to the standard state sales tax rate. The state sales tax rate in Maryland is 6%, and this rate applies uniformly to most taxable transactions throughout the state.

Maryland does not have local option sales taxes or special district taxes that impose additional sales taxes on specific goods, services, or locations. Therefore, the 6% state sales tax rate is the only sales tax rate that applies to most taxable sales in Maryland.

It's important to note that tax laws can change, and it's possible that new legislation or updates may have been implemented since my last update. For the most current and accurate information regarding Maryland's sales tax rates, exemptions, and any other relevant tax regulations, it's recommended to consult the Maryland Comptroller's Office or a tax professional. They can provide the latest information on sales tax rates and any specific local taxes or exemptions that may be applicable in Maryland.

Maryland - Sales and Use tax - Notes

The sales tax rate in the state of Maryland is 6.00%. Businesses in Maryland are required to collect this 6% sales tax from customers whenever a taxable purchase is made. The sale of tangible personal property is generally taxable, while the sale of services is generally not taxable, except for certain taxable services provided by law.

It's important to note that while the state of Maryland imposes a statewide sales tax rate of 6.00%, the total sales tax rate that customers pay may be higher in some locations due to additional local taxes. Each city in each county collects the sales tax on behalf of the state of Maryland, which means that there may be local sales taxes imposed on top of the state rate, depending on the specific location of the transaction.

Local sales tax rates can vary, and the total combined sales tax rate may be higher than 6% in certain areas of Maryland. Businesses should verify the exact sales tax rate for each location where they make sales to ensure accurate tax collection and reporting. It's always recommended to consult with the Maryland Comptroller's Office or the local tax authority for the most up-to-date and accurate sales tax rates and regulations in the state.

Sales tax / Use tax - Massachusetts (MA)

Massachusetts (MA) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Massachusetts:

1. Sales Tax: Massachusetts imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 6.25%. Some items, such as groceries and prescription drugs, may be exempt from the sales tax.
2. Use Tax: Massachusetts also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Massachusetts for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.
3. Individual Income Tax: Massachusetts levies an individual income tax on residents and non-residents who earn income in the state. The state has a flat income tax rate of 5.00% as of my last update.
4. Corporate Income Tax: Massachusetts imposes a corporate income tax on corporations conducting business in the state. The corporate income tax rate is also a flat rate of 8.00% as of my last update.
5. Property Taxes: Massachusetts imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and can vary significantly by city and town.
6. Vehicle Taxes and Fees: Massachusetts imposes various taxes and fees on motor vehicles, including sales tax on vehicle purchases, registration fees, and an annual excise tax based on the value of the vehicle.
7. Excise Taxes: Massachusetts imposes excise taxes on certain products, such as gasoline, tobacco, and alcohol.
8. Estate Tax: Massachusetts has its own estate tax, separate from the federal estate tax. The Massachusetts estate tax applies to estates with a value above a certain threshold, and the tax rates range from 0.8% to 16%.
9. No Local Income Tax: Massachusetts does not allow local jurisdictions to impose their own income taxes.
10. Tax Credits and Deductions: Massachusetts offers various tax credits and deductions to individuals and businesses, such as the Earned Income Tax Credit (EITC) for low-income individuals and various credits for renewable energy and job creation.

It's important to note that tax laws are subject to change, and it's recommended to consult the Massachusetts Department of Revenue or a tax professional for the most up-to-date and specific information related to taxes in Massachusetts.

Massachusetts (MA) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Massachusetts imposes a sales tax and use tax on various goods and services. Here are some key points about the Massachusetts Sales Tax and Use Tax:

Sales Tax:

1. Sales Tax Rate: The state sales tax rate in Massachusetts is 6.25%. This is the primary tax rate that applies to most taxable transactions in the state.
2. Exemptions: Some items and services may be exempt from Massachusetts' sales tax. Common exemptions include prescription drugs, groceries, clothing, certain medical equipment, and sales to tax-exempt organizations.
3. Filing and Payment: Businesses that make sales subject to Massachusetts' sales tax are required to register with the Massachusetts Department of Revenue and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
4. Online Sales: Massachusetts has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

1. Use Tax Rate: The use tax rate in Massachusetts is also 6.25%. The use tax is applicable when residents or businesses in the state purchase taxable items from out-of-state sellers who do not collect Massachusetts sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
2. Filing and Payment: Individuals and businesses in Massachusetts are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
3. Online Purchases: As mentioned above, use tax in Massachusetts is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

In summary, Massachusetts does not have additional local or district-specific components for the sales tax and use tax. The tax rates are consistent statewide, and there are no separate local or regional taxes levied on top of the state rates.

Please note that tax laws are subject to change, and it's essential to consult the Massachusetts Department of Revenue or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Massachusetts.

Massachusetts - Special Sales Tax Rates

As of ChatGPT's last update in September 2021, Massachusetts does not have any special sales tax rates in addition to the standard state sales tax rate. The state sales tax rate in Massachusetts is 6.25%, and this rate applies uniformly to most taxable transactions throughout the state.

Massachusetts does not have local option sales taxes or special district taxes that impose additional sales taxes on specific goods, services, or locations. Therefore, the 6.25% state sales tax rate is the only sales tax rate that applies to most taxable sales in Massachusetts.

It's important to note that tax laws can change, and it's possible that new legislation or updates may have been implemented since my last update. For the most current and accurate information regarding Massachusetts's sales tax rates, exemptions, and any other relevant tax regulations, it's recommended to consult the Massachusetts Department of Revenue or a tax professional. They can provide the latest information on sales tax rates and any specific local taxes or exemptions that may be applicable in Massachusetts.

Sales tax / Use tax - Michigan (MI)

Michigan (MI) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Michigan (MI):

1. Sales Tax: Michigan imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 6%. However, there are exemptions for certain items, such as groceries and prescription drugs.
2. Use Tax: Michigan also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Michigan for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.
3. Individual Income Tax: Michigan levies an individual income tax on residents and non-residents who earn income in the state. The state has a flat income tax rate of 4.25%.

4. Corporate Income Tax: Michigan imposes a corporate income tax on corporations conducting business in the state. The corporate income tax rate is 6.25% of taxable income.
5. Property Taxes: Michigan imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and can vary significantly by municipality.
6. Vehicle Taxes and Fees: Michigan imposes various taxes and fees on motor vehicles, including sales tax on vehicle purchases, registration fees, and a vehicle-specific tax known as the Vehicle Registration Tax.
7. Excise Taxes: Michigan imposes excise taxes on certain products, such as gasoline, tobacco, and alcohol.
8. Estate Tax: Michigan does not have its own estate tax. Additionally, it does not have a "pick-up" tax, meaning it does not collect a portion of the federal estate tax paid by the estate.
9. No Local Income Tax: Michigan does not allow local jurisdictions to impose their own income taxes.
10. Tax Credits and Incentives: Michigan offers various tax credits and incentives to individuals and businesses, such as the Homestead Property Tax Credit for eligible homeowners and tax incentives for businesses investing in certain areas or creating jobs.

It's important to note that tax laws are subject to change, and it's recommended to consult the Michigan Department of Treasury or a tax professional for the most up-to-date and specific information related to taxes in Michigan.

Michigan (MI) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Michigan imposes a sales tax and use tax on various goods and services. Here are some key points about the Michigan Sales Tax and Use Tax:

Sales Tax:

1. Sales Tax Rate: The state sales tax rate in Michigan is 6%. Additionally, some local jurisdictions (cities, townships, and counties) may impose additional local sales taxes, which means the total sales tax rate can be higher in certain areas. The combined state and local sales tax rates can range from 6% to 7.75%.
2. Exemptions: Some items and services may be exempt from Michigan's sales tax. Common exemptions include prescription drugs, groceries, certain medical equipment, and sales to tax-exempt organizations.
3. Filing and Payment: Businesses that make sales subject to Michigan's sales tax are required to register with the Michigan Department of Treasury and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales

volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.

4. Online Sales: Michigan has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

1. Use Tax Rate: The use tax rate in Michigan is also 6%. The use tax is applicable when residents or businesses in the state purchase taxable items from out-of-state sellers who do not collect Michigan sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
2. Filing and Payment: Individuals and businesses in Michigan are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
3. Online Purchases: As mentioned above, use tax in Michigan is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Please note that tax laws are subject to change, and it's essential to consult the Michigan Department of Treasury or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Michigan.

Michigan- Special Sales Tax Rates

As of ChatGPT's last update in September 2021, Michigan does not have any special sales tax rates in addition to the standard state sales tax rate. The state sales tax rate in Michigan is 6%, and this rate applies uniformly to most taxable transactions throughout the state.

Michigan does not have local option sales taxes or special district taxes that impose additional sales taxes on specific goods, services, or locations. Therefore, the 6% state sales tax rate is the only sales tax rate that applies to most taxable sales in Michigan.

It's important to note that tax laws can change, and it's possible that new legislation or updates may have been implemented since my last update. For the most current and accurate information regarding Michigan's sales tax rates, exemptions, and any other relevant tax regulations, it's recommended to consult the Michigan Department of Treasury or a tax professional. They can provide the latest information on sales tax rates and any specific local taxes or exemptions that may be applicable in Michigan.

Mississippi (MS) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Mississippi:

1. Sales Tax: Mississippi imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 7%. Some items, such as groceries and prescription drugs, may be subject to a reduced sales tax rate of 3%.
2. Use Tax: Mississippi also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Mississippi for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.
3. Individual Income Tax: Mississippi levies an individual income tax on residents and non-residents who earn income in the state. The state has three income tax brackets, with rates ranging from 3% to 5%.
4. Corporate Income Tax: Mississippi imposes a corporate income tax on corporations conducting business in the state. The corporate income tax rate is 5.0% on the first $5,000 of taxable income and 3.0% on taxable income over $5,000.
5. Franchise Tax: Mississippi imposes a franchise tax on corporations doing business in the state. The tax is based on the company's capital or net worth and is calculated using a specified rate.
6. Property Taxes: Mississippi imposes property taxes on real and personal property, such as land, buildings, and vehicles. Property tax rates are determined at the local level and can vary significantly by county and municipality.
7. Vehicle Taxes and Fees: Mississippi imposes various taxes and fees on motor vehicles, including sales tax on vehicle purchases, registration fees, and an ad valorem tax based on the vehicle's value.
8. Excise Taxes: Mississippi imposes excise taxes on certain products, such as gasoline, tobacco, and alcohol.
9. Estate Tax: Mississippi does not have its own estate tax. Additionally, it does not have a "pick-up" tax, meaning it does not collect a portion of the federal estate tax paid by the estate.
10. No Local Income Tax: Mississippi does not allow local jurisdictions to impose their own income taxes.

11. Tax Credits and Incentives: Mississippi offers various tax credits and incentives to individuals and businesses, such as the Earned Income Tax Credit (EITC) for low-income individuals and tax incentives for businesses creating jobs and investing in certain areas.

It's important to note that tax laws are subject to change, and it's recommended to consult the Mississippi Department of Revenue or a tax professional for the most up-to-date and specific information related to taxes in Mississippi.

Mississippi (MS) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Mississippi imposes a sales tax and use tax on various goods and services. Here are some key points about the Mississippi Sales Tax and Use Tax:

Sales Tax:

1. Sales Tax Rate: The state sales tax rate in Mississippi is 7%. Additionally, some local jurisdictions (cities and counties) may impose additional local sales taxes, which means the total sales tax rate can be higher in certain areas. The combined state and local sales tax rates can range from 7% to 9%.
2. Exemptions: Some items and services may be exempt from Mississippi's sales tax. Common exemptions include prescription drugs, groceries, certain medical equipment, and sales to tax-exempt organizations.
3. Filing and Payment: Businesses that make sales subject to Mississippi's sales tax are required to register with the Mississippi Department of Revenue and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
4. Online Sales: Mississippi has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

1. Use Tax Rate: The use tax rate in Mississippi is also 7%. The use tax is applicable when residents or businesses in the state purchase taxable items from out-of-state sellers who do not collect Mississippi sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
2. Filing and Payment: Individuals and businesses in Mississippi are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. They can provide the latest information on sales tax rates and any specific local taxes or exemptions that may be applicable in Mississippi.

Mississippi - Sales and Use tax - Notes

As of ChatGPT's last update in September 2021, Mississippi imposes a sales and use tax on various goods and services. Here are some key points about the Mississippi Sales and Use Tax:

1. Sales Tax Rate: The state sales tax rate in Mississippi is 7%. Additionally, some local jurisdictions (cities and counties) may impose additional sales taxes, which means the total sales tax rate can be higher in certain areas. The combined state and local sales tax rates can range from 7% to 9%.

2. Use Tax: Mississippi also has a use tax, which is applicable when residents or businesses in the state purchase taxable items from out-of-state sellers who do not collect Mississippi sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.

3. Exemptions: Some items and services may be exempt from Mississippi's sales and use tax. Common exemptions include prescription drugs, groceries, certain medical equipment, and sales to tax-exempt organizations.

4. Filing and Payment: Businesses that make sales subject to Mississippi's sales tax are required to register with the Mississippi Department of Revenue and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
5. Online Sales: Mississippi has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.
6. Destination-Based Sales Tax: In Mississippi, the sales tax rate is generally based on the destination of the sale. This means that the applicable tax rate is determined by the location where the goods are delivered or services are performed.
7. Special Sales Tax Rates: Some specific items and services may have special sales tax rates in Mississippi. For example, there are specific tax rates for hotel accommodations, car rentals, and certain luxury items.

Please note that tax laws are subject to change, and it's essential to consult the Mississippi Department of Revenue or a tax professional for the most up-to-date and specific information related to sales and use tax in Mississippi.

Sales tax / Use tax - Missouri (MO)

Missouri (MO) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Missouri (MO):

1. Sales Tax: Missouri imposes a state sales tax on the sale of tangible personal property and certain services. The state sales tax rate is 4.225%. However, local jurisdictions (counties and cities) may impose additional sales taxes, resulting in varying total sales tax rates.
2. Use Tax: Use tax is due when tangible personal property is purchased from out-of-state retailers and brought into Missouri for use or consumption. Individuals and businesses are responsible for reporting and remitting use tax on their state income tax return.
3. Income Tax: Missouri levies a state income tax on individuals and corporations. The individual income tax rates are progressive and range from 1.5% to 5.4% depending on income levels.

4. Property Tax: Missouri assesses property taxes on real property (land and buildings) and personal property (vehicles, boats, etc.). Property tax rates and assessment practices can vary by county and local jurisdiction.
5. Corporate Income Tax: Missouri imposes a corporate income tax on corporations doing business in the state. Corporate income tax rates range from 4.0% to 6.25% depending on income levels.
6. Franchise Tax: Missouri imposes a corporate franchise tax on corporations and LLCs doing business in the state. The tax is based on the company's net worth or book value and is calculated using a prescribed formula.
7. Local Taxes: Local governments in Missouri may impose additional taxes, such as local sales taxes and property taxes.
8. Vehicle Taxes: Missouri has a personal property tax on vehicles, based on their value.
9. Online Sales Tax: Missouri has adopted economic nexus laws following the "*Wayfair*" decision, requiring out-of-state sellers to collect and remit sales tax if they meet certain sales or transaction thresholds.
10. Other Taxes: Missouri may have other taxes and fees, such as motor fuel tax, tobacco tax, and more.

Please note that tax laws and regulations can change, and it's important to consult the Missouri Department of Revenue or a tax professional for the most up-to-date and specific information related to the tax system in Missouri.

Missouri (MO) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, here are some key points about the sales tax and use tax in Missouri (MO):

Sales Tax:

- Missouri imposes a state sales tax on the sale of tangible personal property and certain services.
- The state sales tax rate is 4.225%.
- However, local jurisdictions (counties, cities, and special taxing districts) may impose additional sales taxes, resulting in varying total sales tax rates.
- Sales tax is collected from the purchaser at the time of sale, and the seller is responsible for remitting the collected tax to the Missouri Department of Revenue.

Use Tax:

- Use tax is due when tangible personal property is purchased from out-of-state retailers and brought

into Missouri for use or consumption.

- This tax is intended to ensure that items purchased outside the state and used in Missouri are subject to the same taxation as items purchased within the state.
- Individuals and businesses are responsible for reporting and remitting use tax on their state income tax return.
- Use tax rates are the same as the state sales tax rate of 4.225%.

Online Sales Tax (*Wayfair* Decision):

- Following the "*Wayfair*" decision, Missouri has adopted economic nexus laws that require out-of-state sellers to collect and remit sales tax if they meet certain economic thresholds in terms of sales or transactions in the state.
- Remote sellers that exceed these thresholds are required to register with the Missouri Department of Revenue and collect and remit sales tax on their sales to Missouri customers.

Exemptions and Special Rules:

- Missouri provides certain exemptions from sales tax for specific items, such as groceries, prescription medications, and manufacturing equipment.
- Some counties and cities may impose additional taxes on specific goods or services, so it's important to be aware of local regulations.

Please note that tax laws and regulations can change, and it's important to consult the Missouri Department of Revenue or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Missouri.

Sales tax / Use tax - Nebraska (NE)

Nebraska (NE) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Nebraska (NE):

1. Sales Tax: Nebraska imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 5.5%. Additionally, local jurisdictions such as

cities and counties can impose their own local sales taxes, resulting in varying total sales tax rates in different areas of the state.

2. Use Tax: Nebraska also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Nebraska for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.
3. Individual Income Tax: Nebraska levies an individual income tax on residents and non-residents who earn income in the state. The state has a progressive income tax system with tax rates ranging from 2.46% to 6.84%.
4. Corporate Income Tax: Nebraska imposes a corporate income tax on corporations conducting business in the state. The corporate income tax rates range from 5.58% to 7.81% based on taxable income.
5. Property Taxes: Nebraska imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and can vary significantly by county and municipality.
6. Vehicle Taxes and Fees: Nebraska imposes various taxes and fees on motor vehicles, including sales tax on vehicle purchases, registration fees, and a motor vehicle excise tax based on the vehicle's value.
7. Inheritance Tax and Estate Tax: Nebraska has an inheritance tax on certain transfers of property upon a person's death. The tax rates vary based on the relationship between the deceased and the heir. Nebraska does not have an estate tax.
8. No Local Income Tax: Nebraska does not impose a statewide local income tax.
9. Tax Credits and Incentives: Nebraska offers various tax credits and incentives to individuals and businesses, including credits related to renewable energy, job creation, and more.

It's important to note that tax laws are subject to change, and it's recommended to consult the Nebraska Department of Revenue or a tax professional for the most up-to-date and specific information related to taxes in Nebraska.

Nebraska (NE) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Nebraska imposes a sales tax and use tax on various goods and services. Here are some key points about the Nebraska Sales Tax and Use Tax:

Sales Tax:

1. Sales Tax Rate: The state sales tax rate in Nebraska is 5.5%. However, the total sales tax rate can vary due to additional local sales taxes imposed by cities and counties. These local sales taxes can range from 0.5% to 2%, resulting in a combined state and local sales tax rate that can be higher than the

general state rate.

2. Exemptions: Certain items and services may be exempt from Nebraska's sales tax. Common exemptions include prescription drugs, groceries, and sales to tax-exempt organizations.
3. Filing and Payment: Businesses that make sales subject to Nebraska's sales tax are required to register with the Nebraska Department of Revenue and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
4. Online Sales: Nebraska has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

1. Use Tax Rate: The use tax rate in Nebraska is also 5.5%. The use tax is applicable when residents or businesses in Nebraska purchase taxable items from out-of-state sellers who do not collect Nebraska sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
2. Filing and Payment: Individuals and businesses in Nebraska are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
3. Online Purchases: Use tax in Nebraska is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Please note that tax laws are subject to change, and it's essential to consult the Nebraska Department of Revenue or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Nebraska.

Sales tax / Use tax - New York (NY)

New York (NY) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in New

York (NY):

1. Sales Tax: New York imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 4%. However, when combined with local sales taxes imposed by counties and municipalities, the total sales tax rate can vary and may be higher than the state rate. In some areas, the total sales tax rate can reach up to 8.875%.
2. Use Tax: New York also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into New York for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.
3. Individual Income Tax: New York levies an individual income tax on residents and non-residents who earn income in the state. The state has several income tax brackets with rates ranging from 4% to 8.82% based on income levels.
4. Corporate Income Tax: New York imposes a corporate income tax on corporations conducting business in the state. The corporate tax rates range from 6.5% to 10.9% based on taxable income.
5. Franchise Tax: New York imposes a corporate franchise tax on corporations doing business in the state. The tax is based on the company's entire net income and capital base and is calculated using specified rates.
6. Property Taxes: New York imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and can vary significantly by county and municipality.
7. Vehicle Taxes and Fees: New York imposes various taxes and fees on motor vehicles, including sales tax on vehicle purchases, registration fees, and a motor vehicle use tax based on the vehicle's value.
8. Estate Tax: New York has its own estate tax, separate from the federal estate tax. The New York estate tax applies to estates with a value above a certain threshold, and the tax rates range from 3.06% to 16%.
9. No Local Income Tax: New York does not allow local jurisdictions to impose their own income taxes.
10. Tax Credits and Deductions: New York offers various tax credits and deductions to individuals and businesses, such as the Child and Dependent Care Credit, the Earned Income Tax Credit (EITC), and tax incentives for certain industries and job creation.
11. Metropolitan Commuter Transportation Mobility Tax (MCTMT): New York City and some surrounding counties impose an additional payroll tax on certain employers known as the MCTMT. This tax is used to fund mass transit services in the region.

It's important to note that tax laws are subject to change, and it's recommended to consult the New York State Department of Taxation and Finance or a tax professional for the most up-to-date and specific

information related to taxes in New York.

New York (NY) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, New York imposes a sales tax and use tax on various goods and services. Here are some key points about the New York Sales Tax and Use Tax:

Sales Tax:

1. Sales Tax Rate: The state sales tax rate in New York is 4%. However, local jurisdictions (counties and cities) can impose additional sales taxes, which means the total sales tax rate can be higher in certain areas. The combined state and local sales tax rates can range from 4% to 8.875%, depending on the specific location.
2. Exemptions: Some items and services may be exempt from New York's sales tax. Common exemptions include prescription drugs, groceries, certain medical equipment, and sales to tax-exempt organizations.
3. Filing and Payment: Businesses that make sales subject to New York's sales tax are required to register with the New York State Department of Taxation and Finance and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
4. Online Sales: New York has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

1. Use Tax Rate: The use tax rate in New York is also 4%. The use tax is applicable when residents or businesses in the state purchase taxable items from out-of-state sellers who do not collect New York sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
2. Filing and Payment: Individuals and businesses in New York are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
3. Online Purchases: As mentioned above, use tax in New York is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Please note that tax laws are subject to change, and it's essential to consult the New York State Department

of Taxation and Finance or a tax professional for the most up-to-date and specific information related to sales tax and use tax in New York.

New York - Special Sales Tax Rates

As of ChatGPT's last update in September 2021, New York does not have any special sales tax rates in addition to the standard state sales tax rate. The state sales tax rate in New York is 4%, and this rate applies uniformly to most taxable transactions throughout the state.

New York does have local sales tax rates, which vary by county and city. Local jurisdictions in New York are allowed to impose additional sales taxes on top of the state rate. The combined state and local sales tax rates can range from 4% to 8.875% or higher, depending on the location.

In addition to the state and local sales taxes, some localities in New York may impose special district taxes or additional taxes on specific items or services. These special district taxes can vary by location and purpose.

For example, in New York City, there is an additional 0.375% Metropolitan Commuter Transportation District (MCTD) tax that applies to sales of certain items and services. This tax is used to fund public transportation services in the metropolitan region.

It's essential to be aware of the specific tax rates applicable in your area and for the goods or services you are buying or selling. For the most current and accurate information regarding New York's sales tax rates, exemptions, and any other relevant tax regulations, it's recommended to consult the New York State Department of Taxation and Finance or a tax professional. They can provide the latest information on sales tax rates and any specific local taxes or exemptions that may be applicable in New York.

New York - Sales and Use tax - Notes

As of ChatGPT's last update in September 2021, New York imposes a sales and use tax on various goods and services. Here are some key points about the New York Sales and Use Tax:

1. Sales Tax Rate: The state sales tax rate in New York is 4%. However, local jurisdictions (counties and cities) may impose additional sales taxes, which means the total sales tax rate can be higher in some areas. The combined state and local sales tax rates can range from 4% to 8.875% depending on the specific location.
2. Use Tax: New York also has a use tax, which is applicable when residents or businesses in the state purchase taxable items from out-of-state sellers who do not collect New York sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
3. Exemptions: Some items and services may be exempt from New York's sales and use tax. Common

exemptions include prescription drugs, most groceries, certain medical equipment, and sales to tax-exempt organizations.

4. Filing and Payment: Businesses that make sales subject to New York's sales tax are required to register for a Certificate of Authority from the New York State Department of Taxation and Finance and collect the appropriate tax from their customers. The filing frequency (quarterly or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
5. Online Sales: New York has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.
6. Special Sales Tax Rates: New York has different tax rates for various types of transactions. For instance, there are special rates for hotel occupancy, car rentals, and certain luxury items.
7. Sales Tax Exemption Certificates: Businesses purchasing items for resale or for tax-exempt purposes can use sales tax exemption certificates to avoid paying sales tax on those purchases.

Please note that tax laws are subject to change, and it's essential to consult the New York State Department of Taxation and Finance or a tax professional for the most up-to-date and specific information related to sales and use tax in New York.

New York - State Rate - County/City Rates

Sales tax / Use tax - North Carolina (NC)

North Carolina (NC) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in North Carolina (NC):

1. Sales Tax: North Carolina imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 4.75%. Additionally, local jurisdictions such as counties and municipalities can impose their own local sales taxes, resulting in varying total sales tax rates in different areas of the state.
2. Use Tax: North Carolina also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into North Carolina for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.
3. Individual Income Tax: North Carolina levies an individual income tax on residents and non-residents who earn income in the state. The state has a progressive income tax system with tax rates ranging from 5.25% to 5.499%.
4. Corporate Income Tax: North Carolina imposes a corporate income tax on corporations conducting business in the state. The corporate income tax rate is 2.5% for the 2021 tax year and will decrease to 2.0% for the 2022 tax year.
5. Franchise Tax: North Carolina imposes a franchise tax on corporations and LLCs registered in the state. The tax is based on the company's net worth or book value and is calculated using specified rates.
6. Property Taxes: North Carolina imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and can vary significantly by county and municipality.
7. Vehicle Taxes and Fees: North Carolina imposes various taxes and fees on motor vehicles, including sales tax on vehicle purchases, registration fees, and a highway use tax based on the vehicle's value.
8. Excise Taxes: North Carolina imposes excise taxes on various items such as tobacco products, alcoholic beverages, gasoline, and motor fuels. The rates for these taxes can vary.
9. Inheritance Tax and Estate Tax: North Carolina phased out its estate tax, and it does not have an inheritance tax.
10. Local Income Tax: North Carolina does not impose a statewide local income tax.
11. Local Taxes: In addition to state taxes, local governments in North Carolina can impose additional taxes or fees, such as local sales taxes, property taxes, and other local assessments.
12. Tax Credits and Incentives: North Carolina offers various tax credits and incentives to individuals and

businesses, including credits related to job creation, research and development, and more.

It's important to note that tax laws are subject to change, and it's recommended to consult the North Carolina Department of Revenue or a tax professional for the most up-to-date and specific information related to taxes in North Carolina.

North Carolina (NC) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, North Carolina imposes a sales tax and use tax on various goods and services. Here are some key points about the North Carolina Sales Tax and Use Tax:

Sales Tax:

- Sales Tax Rate: The state sales tax rate in North Carolina is 4.75%. Additionally, there are local sales taxes imposed by counties and municipalities, which can result in varying total sales tax rates across the state.
- Exemptions: Some items and services may be exempt from North Carolina's sales tax. Common exemptions include prescription drugs, groceries, and sales to tax-exempt organizations.
- Filing and Payment: Businesses that make sales subject to North Carolina's sales tax are required to register with the North Carolina Department of Revenue and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
- Online Sales: North Carolina has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

- Use Tax Rate: The use tax rate in North Carolina is also 4.75%. The use tax is applicable when residents or businesses in North Carolina purchase taxable items from out-of-state sellers who do not collect North Carolina sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
- Filing and Payment: Individuals and businesses in North Carolina are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
- Online Purchases: Use tax in North Carolina is relevant to out-of-state purchases and online

purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Please note that tax laws are subject to change, and it's essential to consult the North Carolina Department of Revenue or a tax professional for the most up-to-date and specific information related to sales tax and use tax in North Carolina.

North Carolina (NC) - Sales Tax and Use Tax - Notes

As of ChatGPT's last update in September 2021, here's information about North Carolina's sales tax and use tax:

- Sales Tax: North Carolina imposes a general sales tax on most retail sales of tangible personal property and certain services. The state's base sales tax rate is 4.75%. However, the actual total sales tax rate can be higher due to additional local sales taxes imposed by counties and municipalities. Local sales tax rates can vary across different areas of the state.

  It's important to note that North Carolina has a few exemptions from the sales tax. Common exemptions include prescription medications, most groceries, and some types of medical equipment. However, the specifics of exemptions can vary, and it's advised to check with the North Carolina Department of Revenue or a tax professional for accurate and up-to-date information.

- Use Tax: Use tax is a companion to the sales tax and is designed to ensure that individuals and businesses don't avoid paying sales tax by making purchases from out-of-state vendors that do not collect North Carolina sales tax. If you buy taxable items for use in North Carolina from an out-of-state vendor and the vendor doesn't collect North Carolina sales tax, you are generally required to report and pay use tax on those purchases. Use tax is usually at the same rate as the state sales tax.

In practical terms, use tax is often applicable to online purchases, catalog purchases, or purchases made out of state. Individuals and businesses are expected to self-report and remit the use tax when applicable.

It's important to keep in mind that tax laws and rates can change, so for the most current and accurate information about North Carolina's sales tax and use tax, you should consult the North Carolina Department of Revenue or seek advice from a tax professional.

Sales tax / Use tax - Ohio (OH)

Ohio (OH) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Ohio (OH):

1. Sales Tax: Ohio imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 5.75%. Additionally, local jurisdictions such as counties and municipalities can impose their own local sales taxes, resulting in varying total sales tax rates in different areas of the state.
2. Use Tax: Ohio also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Ohio for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.
3. Individual Income Tax: Ohio levies an individual income tax on residents and non-residents who earn income in the state. The state has a progressive income tax system with tax rates ranging from 0.5% to 4.797%.
4. Corporate Income Tax: Ohio does impose a corporate income tax on corporations doing business in the state. The corporate income tax rate is a flat rate of 10%. This tax is calculated based on the net income of corporations.
5. Commercial Activity Tax (CAT): Ohio also imposes a commercial activity tax (CAT) on businesses conducting business in the state. The CAT is based on the gross receipts of the business, rather than its net income. The CAT has a minimum tax threshold, which means that businesses with gross receipts below a certain level may be exempt from paying the tax.
6. Property Taxes: Ohio imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and can vary significantly by county and school district.
7. Vehicle Taxes and Fees: Ohio imposes various taxes and fees on motor vehicles, including sales tax on vehicle purchases, registration fees, and a vehicle excise tax based on the vehicle's value.
8. Excise Taxes: The state imposes excise taxes on items such as cigarettes, tobacco products, and motor fuels.
9. Inheritance Tax and Estate Tax: Ohio phased out its estate tax in 2013, and it does not have an

inheritance tax.

10. Local Income Tax: Some local jurisdictions in Ohio impose local income taxes on earned income. The rates and rules vary by locality.
11. Municipal Income Tax: Many cities in Ohio levy their own municipal income tax on individuals who live or work within their city limits. The rates and rules can vary widely from one municipality to another.
12. School District Income Tax: Some school districts in Ohio have their own income tax rates, which are collected alongside the state and municipal income taxes.
13. Tax Credits and Incentives: Ohio offers various tax credits and incentives to individuals and businesses, including credits related to job creation, research and development, and more.

It's important to note that tax laws are subject to change, and it's recommended to consult the Ohio Department of Taxation or a tax professional for the most up-to-date and specific information related to taxes in Ohio.

Ohio (OH) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Ohio imposes a sales tax and use tax on various goods and services. Here are some key points about the Ohio Sales Tax and Use Tax:

Sales Tax:

- Sales Tax Rate: The state sales tax rate in Ohio is 5.75%. Additionally, there are county and transit authority sales taxes that can result in varying total sales tax rates in different areas of the state.
- Exemptions: Some items and services may be exempt from Ohio's sales tax. Common exemptions include prescription drugs, groceries, and sales to tax-exempt organizations.
- Filing and Payment: Businesses that make sales subject to Ohio's sales tax are required to register with the Ohio Department of Taxation and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
- Online Sales: Ohio has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

- Use Tax Rate: The use tax rate in Ohio is also 5.75%. The use tax is applicable when residents or businesses in Ohio purchase taxable items from out-of-state sellers who do not collect Ohio sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.

- Filing and Payment: Individuals and businesses in Ohio are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
- Online Purchases: Use tax in Ohio is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Please note that tax laws are subject to change, and it's essential to consult the Ohio Department of Taxation or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Ohio.

Sales tax / Use tax - Oklahoma (OK)

Oklahoma (OK) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Oklahoma (OK):

1. Sales Tax: Oklahoma imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 4.5%. Additionally, local jurisdictions such as cities and counties can impose their own local sales taxes, resulting in varying total sales tax rates in different areas of the state.
2. Use Tax: Oklahoma also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Oklahoma for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.
3. Individual Income Tax: Oklahoma levies an individual income tax on residents and non-residents who earn income in the state. The state has a progressive income tax system with tax rates ranging from 0.5% to 5%.
4. Corporate Income Tax: Oklahoma imposes a corporate income tax on corporations conducting business in the state. The corporate income tax rate is 6%.
5. Franchise Tax: Oklahoma imposes a corporate franchise tax on corporations doing business in the state. The tax is based on the company's net worth or book value and is calculated using specified rates.

6. Property Taxes: Oklahoma imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and can vary significantly by county and school district.
7. Vehicle Taxes and Fees: Oklahoma imposes various taxes and fees on motor vehicles, including excise taxes based on the vehicle's value, registration fees, and a 3.25% excise tax on the purchase price of vehicles.
8. Excise Taxes: The state imposes excise taxes on items such as gasoline, tobacco products, and alcoholic beverages.
9. Inheritance Tax and Estate Tax: Oklahoma does not have an inheritance tax or an estate tax.
10. No Local Income Tax: Oklahoma does not allow local jurisdictions to impose their own income taxes.
11. Tax Credits and Incentives: Oklahoma offers various tax credits and incentives to individuals and businesses, including credits related to job creation, research and development, and more.

It's important to note that tax laws are subject to change, and it's recommended to consult the Oklahoma Tax Commission or a tax professional for the most up-to-date and specific information related to taxes in Oklahoma.

Oklahoma (OK) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Oklahoma imposes a sales tax and use tax on various goods and services. Here are some key points about the Oklahoma Sales Tax and Use Tax:

Sales Tax:

- Sales Tax Rate: The state sales tax rate in Oklahoma is 4.5%. Additionally, local sales taxes imposed by cities and counties can result in varying total sales tax rates in different areas of the state.
- Exemptions: Some items and services may be exempt from Oklahoma's sales tax. Common exemptions include prescription drugs, groceries, and sales to tax-exempt organizations.
- Filing and Payment: Businesses that make sales subject to Oklahoma's sales tax are required to register with the Oklahoma Tax Commission and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
- Online Sales: Oklahoma has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

- Use Tax Rate: The use tax rate in Oklahoma is also 4.5%. The use tax is applicable when residents or businesses in Oklahoma purchase taxable items from out-of-state sellers who do not collect Oklahoma sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.

Sales tax / Use tax - Rhode Island (RI)

Rhode Island (RI) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Rhode Island (RI):

1. Sales Tax: Rhode Island imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 7%. However, there are exemptions for certain items, such as groceries and prescription drugs.
2. Use Tax: Rhode Island also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Rhode Island for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.
3. Individual Income Tax: Rhode Island levies an individual income tax on residents and non-residents who earn income in the state. The state has a progressive income tax system with tax rates ranging from 3.75% to 5.99% based on income levels.
4. Corporate Income Tax: Rhode Island imposes a corporate income tax on corporations conducting business in the state. The corporate income tax rates range from 3.5% to 9.0% based on taxable

income.

5. Property Taxes: Rhode Island imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and can vary significantly by municipality.
6. Vehicle Taxes and Fees: Rhode Island imposes various taxes and fees on motor vehicles, including excise tax based on the vehicle's value, registration fees, and a vehicle-specific tax known as the Vehicle Value Commission (VVC) tax.
7. Estate Tax: Rhode Island has its own estate tax, separate from the federal estate tax. The Rhode Island estate tax applies to estates with a value above a certain threshold, and the tax rates range from 0.8% to 16%.
8. No Local Income Tax: Rhode Island does not allow local jurisdictions to impose their own income taxes.
9. Tax Credits and Incentives: Rhode Island offers various tax credits and incentives to individuals and businesses, such as the Rhode Island Earned Income Tax Credit (RI EITC) for low-income individuals and tax incentives for businesses investing in certain areas or creating jobs.

It's important to note that tax laws are subject to change, and it's recommended to consult the Rhode Island Division of Taxation or a tax professional for the most up-to-date and specific information related to taxes in Rhode Island.

Rhode Island (RI) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Rhode Island imposes a sales tax and use tax on various goods and services. Here are some key points about the Rhode Island Sales Tax and Use Tax:

Sales Tax:

1. Sales Tax Rate: The state sales tax rate in Rhode Island is 7%. This is the primary tax rate that applies to most taxable transactions in the state.
2. Exemptions: Some items and services may be exempt from Rhode Island's sales tax. Common exemptions include prescription drugs, groceries, certain medical equipment, and sales to tax-exempt organizations.
3. Filing and Payment: Businesses that make sales subject to Rhode Island's sales tax are required to register with the Rhode Island Division of Taxation and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
4. Online Sales: Rhode Island has adopted economic nexus laws for online sales. This means that

businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

1. Use Tax Rate: The use tax rate in Rhode Island is also 7%. The use tax is applicable when residents or businesses in Rhode Island purchase taxable items from out-of-state sellers who do not collect Rhode Island sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
2. Filing and Payment: Individuals and businesses in Rhode Island are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
3. Online Purchases: As mentioned above, use tax in Rhode Island is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Please note that tax laws are subject to change, and it's essential to consult the Rhode Island Division of Taxation or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Rhode Island.

Rhode Island - Special Sales Tax Rates

As of ChatGPT's last update in September 2021, Rhode Island does not have any special sales tax rates in addition to the standard state sales tax rate. The state sales tax rate in Rhode Island is 7%, and this rate applies uniformly to most taxable transactions throughout the state.

Unlike some other states, Rhode Island does not have local option sales taxes or special district taxes that impose additional sales taxes on specific goods, services, or locations. Therefore, the 7% state sales tax rate is the only sales tax rate that applies to most taxable sales in Rhode Island.

However, it's important to note that tax laws can change, and it's possible that new legislation or updates may have been implemented since my last update. For the most current and accurate information regarding Rhode Island's sales tax rates, exemptions, and any other relevant tax regulations, it's recommended to consult the Rhode Island Division of Taxation or a tax professional. They can provide the latest information on sales tax rates and any specific local taxes or exemptions that may be applicable in Rhode Island.

Rhode Island - Sales and Use tax - Notes

Information about Rhode Island's sales tax and use tax.

1. Sales Tax in Rhode Island: Rhode Island imposes a 7% sales tax on the retail sale, rental, or lease of many goods and services. Retail sales refer to sales where the property or service sold will be used and not resold in the regular course of business. Retailers are responsible for collecting the sales tax from their customers and remitting it directly to the state.

   In addition to the sales tax, there is also a 6% hotel tax on the rental of rooms in hotels, motels, or lodging houses.

2. Use Tax in Rhode Island: Rhode Island also has a use tax, which is imposed at 7% on the storage, use, or consumption of tangible personal property in the state. The use tax applies when property is purchased from a retailer who is not authorized to collect the sales tax or when the tax has not been paid on the property.

For example, if a person purchases a taxable item from an out-of-state retailer that does not collect Rhode Island sales tax, they are required to pay the use tax directly to the state. The use tax is also applicable in cases of casual sales, such as when a motor vehicle is purchased from a non-licensed dealer.

It's important to note that the use tax rate is the same as the sales tax rate (7%), and it is intended to ensure that individuals and businesses pay the appropriate amount of tax on purchases, regardless of where the seller is located.

Exemptions may apply to certain casual sales, such as those made between members of the immediate family.

As with any tax matters, individuals, businesses, and retailers in Rhode Island should comply with the relevant tax laws and regulations, and when in doubt, seek advice from a tax professional to ensure proper compliance.

Sales tax / Use tax - Pennsylvania (PA)

Pennsylvania (PA) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Pennsylvania (PA):

1. Sales Tax: Pennsylvania imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 6%. However, certain items such as food, clothing, prescription drugs, and some services may be exempt from the sales tax.
2. Use Tax: Pennsylvania also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Pennsylvania for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.
3. Individual Income Tax: Pennsylvania levies an individual income tax on residents and non-residents who earn income in the state. The state has a flat income tax rate of 3.07%.
4. Corporate Income Tax: Pennsylvania imposes a corporate net income tax on corporations conducting business in the state. The corporate net income tax rate is 9.99% of net income.
5. Property Taxes: Pennsylvania imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and can vary significantly by school district and municipality.
6. Vehicle Taxes and Fees: Pennsylvania imposes various taxes and fees on motor vehicles, including sales tax on vehicle purchases, registration fees, and a motor vehicle excise tax.
7. Inheritance Tax and Estate Tax: Pennsylvania imposes an inheritance tax on the transfer of property upon a person's death. The tax rates vary based on the relationship between the deceased and the heir. Pennsylvania does not have an estate tax.
8. No Local Income Tax: Pennsylvania allows local jurisdictions to impose their own local income taxes on earned income, but not all areas have local income taxes.
9. Tax Credits and Incentives: Pennsylvania offers various tax credits and incentives to individuals and businesses, including credits related to education, historic preservation, and more.

It's important to note that tax laws are subject to change, and it's recommended to consult the Pennsylvania Department of Revenue or a tax professional for the most up-to-date and specific information related to taxes in Pennsylvania.

Pennsylvania (PA) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Pennsylvania imposes a sales tax and use tax on various goods and services. Here are some key points about the Pennsylvania Sales Tax and Use Tax:

Sales Tax:

- Sales Tax Rate: The state sales tax rate in Pennsylvania is 6%. Additionally, there may be local sales taxes imposed by certain counties and municipalities, which can result in varying total sales tax rates in

different areas of the state.

- Exemptions: Some items and services may be exempt from Pennsylvania's sales tax. Common exemptions include prescription drugs, groceries, and sales to tax-exempt organizations.
- Filing and Payment: Businesses that make sales subject to Pennsylvania's sales tax are required to register with the Pennsylvania Department of Revenue and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
- Online Sales: Pennsylvania has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

- Use Tax Rate: The use tax rate in Pennsylvania is also 6%. The use tax is applicable when residents or businesses in Pennsylvania purchase taxable items from out-of-state sellers who do not collect Pennsylvania sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
- Filing and Payment: Individuals and businesses in Pennsylvania are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
- Online Purchases: Use tax in Pennsylvania is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Please note that tax laws are subject to change, and it's essential to consult the Pennsylvania Department of Revenue or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Pennsylvania.

Sales tax / Use tax - Tennessee (TN)

Tennessee (TN) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Tennessee (TN):

1. Sales Tax: Tennessee imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 7%. Additionally, local jurisdictions such as counties and municipalities can impose their own local sales taxes, resulting in varying total sales tax rates in different areas of the state.
2. Use Tax: Tennessee also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Tennessee for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.
3. Individual Income Tax: Tennessee does not impose a state-level individual income tax on earned income. However, it does impose a tax on certain types of income, such as interest and dividends. This tax is known as the "Hall Income Tax," and the rate is 1%.
4. Corporate Income Tax: Tennessee imposes a franchise and excise tax on corporations conducting business in the state. The tax is calculated based on a business's net earnings and tangible property.
5. Franchise Tax: Tennessee imposes a franchise tax on corporations and LLCs registered in the state. The tax is based on the company's net worth or book value and is calculated using specified rates.
6. Property Taxes: Tennessee imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and can vary significantly by county and municipality.
7. Vehicle Taxes and Fees: Tennessee imposes various taxes and fees on motor vehicles, including sales tax on vehicle purchases, registration fees, and a motor vehicle privilege tax.
8. Inheritance Tax and Estate Tax: Tennessee does not have an inheritance tax or an estate tax.
9. No Local Income Tax: Tennessee does not allow local jurisdictions to impose their own income taxes.
10. Tax Credits and Incentives: Tennessee offers various tax credits and incentives to businesses, including credits related to job creation, research and development, and more.

It's important to note that tax laws are subject to change, and it's recommended to consult the Tennessee Department of Revenue or a tax professional for the most up-to-date and specific information related to taxes in Tennessee.

Tennessee (TN) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Tennessee imposes a sales tax and use tax on various goods and services. Here are some key points about the Tennessee Sales Tax and Use Tax:

Sales Tax:

- Sales Tax Rate: The state sales tax rate in Tennessee is 7%. Additionally, there may be local sales taxes imposed by municipalities and counties, which can result in varying total sales tax rates in different areas of the state.
- Exemptions: Some items and services may be exempt from Tennessee's sales tax. Common exemptions include prescription drugs, groceries, and sales to tax-exempt organizations.
- Filing and Payment: Businesses that make sales subject to Tennessee's sales tax are required to register with the Tennessee Department of Revenue and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
- Online Sales: Tennessee has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

- Use Tax Rate: The use tax rate in Tennessee is also 7%. The use tax is applicable when residents or businesses in Tennessee purchase taxable items from out-of-state sellers who do not collect Tennessee sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
- Filing and Payment: Individuals and businesses in Tennessee are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
- Online Purchases: Use tax in Tennessee is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Sales tax / Use tax - Texas (TX)

Texas (TX) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Texas (TX):

1. Sales Tax: Texas imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 6.25%. Additionally, local jurisdictions such as cities, counties, and special purpose districts can impose their own local sales taxes, resulting in varying total sales tax rates in different areas of the state. The total sales tax rate can vary widely across the state.
2. Use Tax: Texas also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Texas for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.
3. Individual Income Tax: Texas does not impose a state-level individual income tax on residents' earned income. This absence of an income tax is one of the key features of Texas' tax system.
4. Corporate Income Tax: Texas imposes a franchise tax on corporations conducting business in the state. The franchise tax is calculated based on a business's margin, with different rates for different types of businesses.
5. Franchise Tax: Texas imposes a franchise tax, also known as the "margin tax," on corporations and LLCs doing business in the state. The tax is based on the company's margin or apportioned revenue, and the calculation varies based on the entity's classification and business activities.
6. Property Taxes: Texas imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and can vary significantly by county and school district.
7. Vehicle Taxes and Fees: Texas imposes various taxes and fees on motor vehicles, including sales tax on vehicle purchases, registration fees, and a motor vehicle sales and use tax.
8. Inheritance Tax and Estate Tax: Texas does not have an inheritance tax or an estate tax.
9. No Local Income Tax: Texas does not allow local jurisdictions to impose their own income taxes.
10. Tax Credits and Incentives: Texas offers various tax incentives to businesses, including credits related to research and development, job creation, and more.

It's important to note that tax laws are subject to change, and it's recommended to consult the Texas Comptroller of Public Accounts or a tax professional for the most up-to-date and specific information related to taxes in Texas.

Texas (TX) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Texas imposes a sales tax and use tax on various goods and services. Here are some key points about the Texas Sales Tax and Use Tax:

Sales Tax:

- Sales Tax Rate: The state sales tax rate in Texas is 6.25%. Additionally, there may be local sales taxes imposed by cities, counties, and special purpose districts, which can result in varying total sales tax rates in different areas of the state.
- Exemptions: Some items and services may be exempt from Texas's sales tax. Common exemptions include prescription drugs, groceries, and sales to tax-exempt organizations.
- Filing and Payment: Businesses that make sales subject to Texas's sales tax are required to register with the Texas Comptroller of Public Accounts and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
- Online Sales: Texas has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

- Use Tax Rate: The use tax rate in Texas is also 6.25%. The use tax is applicable when residents or businesses in Texas purchase taxable items from out-of-state sellers who do not collect Texas sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
- Filing and Payment: Individuals and businesses in Texas are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
- Online Purchases: Use tax in Texas is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Please note that tax laws are subject to change, and it's essential to consult the Texas Comptroller of Public Accounts or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Texas.

Sales tax / Use tax - Utah (UT)

Utah (UT) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Utah (UT):

1. Sales Tax: Utah imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 4.85%. Additionally, local jurisdictions such as counties and municipalities can impose their own local sales taxes, resulting in varying total sales tax rates in different areas of the state.
2. Use Tax: Utah also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Utah for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.
3. Individual Income Tax: Utah levies an individual income tax on residents and non-residents who earn income in the state. The state has a flat income tax rate of 4.95%.
4. Corporate Income Tax: Utah imposes a corporate income tax on corporations conducting business in the state. The corporate income tax rate is also 4.95%.
5. Property Taxes: Utah imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and can vary significantly by county.
6. Vehicle Taxes and Fees: Utah imposes various taxes and fees on motor vehicles, including sales tax on vehicle purchases, registration fees, and property taxes on vehicles.
7. Inheritance Tax and Estate Tax: Utah does not have an inheritance tax or an estate tax.
8. No Local Income Tax: Utah does not allow local jurisdictions to impose their own income taxes.
9. Tax Credits and Incentives: Utah offers various tax credits and incentives to individuals and businesses, including credits related to education, renewable energy, and more.

It's important to note that tax laws are subject to change, and it's recommended to consult the Utah State Tax Commission or a tax professional for the most up-to-date and specific information related to taxes in

Utah.

Utah (UT) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Utah imposes a sales tax and use tax on various goods and services. Here are some key points about the Utah Sales Tax and Use Tax:

Sales Tax:

- Sales Tax Rate: The state sales tax rate in Utah is 4.85%. Additionally, there may be local sales taxes imposed by counties and municipalities, which can result in varying total sales tax rates in different areas of the state.
- Exemptions: Some items and services may be exempt from Utah's sales tax. Common exemptions include prescription drugs, groceries, and sales to tax-exempt organizations.
- Filing and Payment: Businesses that make sales subject to Utah's sales tax are required to register with the Utah State Tax Commission and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
- Online Sales: Utah has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

- Use Tax Rate: The use tax rate in Utah is also 4.85%. The use tax is applicable when residents or businesses in Utah purchase taxable items from out-of-state sellers who do not collect Utah sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
- Filing and Payment: Individuals and businesses in Utah are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
- Online Purchases: Use tax in Utah is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Please note that tax laws are subject to change, and it's essential to consult the Utah State Tax Commission or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Utah.

Sales tax / Use tax - Vermont (VT)

Vermont (VT) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Vermont (VT):

1. Sales Tax: Vermont does not impose a state-level sales tax. As a result, there is no general sales tax imposed on the retail sale of tangible personal property or services at the state level.
2. Use Tax: Since Vermont does not have a state sales tax, there is no corresponding use tax imposed on the purchase of goods brought into the state.
3. Individual Income Tax: Vermont levies an individual income tax on residents and non-residents who earn income in the state. The state has a progressive income tax system with tax rates ranging from 3.35% to 8.75% based on income levels.
4. Corporate Income Tax: Vermont imposes a corporate income tax on corporations conducting business in the state. The corporate income tax rates range from 6.0% to 8.5% based on taxable income.
5. Property Taxes: Vermont imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and can vary significantly by municipality.
6. Vehicle Taxes and Fees: Vermont imposes various taxes and fees on motor vehicles, including a purchase and use tax based on the vehicle's purchase price, registration fees, and a local option tax.
7. Inheritance Tax and Estate Tax: Vermont has an estate tax that applies to estates with a value exceeding a certain threshold. The tax rates range from 0.8% to 16%. Vermont does not have an inheritance tax.
8. No Local Income Tax: Vermont does not allow local jurisdictions to impose their own income taxes.
9. Tax Credits and Incentives: Vermont offers various tax credits and incentives to individuals and businesses, including credits related to child care, energy efficiency, and more.

It's important to note that tax laws are subject to change, and it's recommended to consult the Vermont Department of Taxes or a tax professional for the most up-to-date and specific information related to taxes in Vermont.

Vermont (VT) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Vermont imposes a sales tax and use tax on various goods and services. Here are some key points about the Vermont Sales Tax and Use Tax:

Sales Tax:

- Sales Tax Rate: The state sales tax rate in Vermont is 6%. Additionally, there may be local option taxes imposed by municipalities, which can result in varying total sales tax rates in different areas of the state.
- Exemptions: Some items and services may be exempt from Vermont's sales tax. Common exemptions include prescription drugs, groceries, and sales to tax-exempt organizations.
- Filing and Payment: Businesses that make sales subject to Vermont's sales tax are required to register with the Vermont Department of Taxes and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
- Online Sales: Vermont has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

- Use Tax Rate: The use tax rate in Vermont is also 6%. The use tax is applicable when residents or businesses in Vermont purchase taxable items from out-of-state sellers who do not collect Vermont sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
- Filing and Payment: Individuals and businesses in Vermont are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.

Virginia (VA) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Virginia:

1. Sales Tax:
    - Virginia imposes a state sales tax on most retail sales, leases, and rentals of goods, as well as some services.
    - The general state sales tax rate is 4.3%, and additional local sales taxes may apply in certain localities.
2. Use Tax:
    - Use tax is applicable when sales tax was not paid at the time of purchase, such as for online purchases from out-of-state sellers.
    - It is the responsibility of individuals and businesses to report and remit use tax.
3. Income Tax:
    - Virginia has a progressive income tax system with tax rates ranging from 2% to 5.75%.
    - Income tax is levied on both individuals and corporations.
4. Property Tax:
    - Local governments in Virginia assess property taxes on real property (land and buildings) and personal property (vehicles, boats, etc.).
    - Property tax rates and assessments vary by locality.
5. Corporate Income Tax:
    - Virginia levies a corporate income tax on corporations doing business in the state.
    - Corporate income tax rates vary based on income levels and can range from 2.0% to 6.75%.
6. Estate Tax:
    - Virginia had an estate tax, but it was phased out, and it's no longer applicable as of January 1, 2008.

7. Local Taxes:
    - Localities may impose additional taxes, such as local sales taxes, local business taxes, and more.
8. Business License Tax:
    - Virginia localities may impose business license taxes on businesses operating within their jurisdictions.
9. Vehicle Taxes:
    - Virginia has a personal property tax on vehicles, which is assessed by local governments based on the value of the vehicle.
10. Online Sales Tax:
    - Virginia has adopted economic nexus laws for online sales, requiring out-of-state sellers to collect and remit sales tax if they meet certain sales thresholds.
    - Virginia follows the US Supreme Court's "Wayfair" decision and may require remote sellers to collect and remit sales tax on online transactions.

Please keep in mind that tax laws and regulations can change, so it's important to consult the Virginia Department of Taxation or a tax professional for the most up-to-date and specific information related to the tax system in Virginia.

Virginia (VA) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, here are some key points about the sales tax and use tax in Virginia:

Sales Tax:

- Virginia imposes a state sales tax on retail sales, leases, and rentals of most goods and some services.
- The general state sales tax rate is 4.3%. However, certain localities may impose additional local sales taxes, which can vary.
- Sales tax is collected at the point of sale, and businesses are required to collect and remit the appropriate amount to the Virginia Department of Taxation.
- Some items are exempt from sales tax, such as prescription drugs, groceries, and certain medical equipment.

Use Tax:

- Use tax is due when Virginia sales tax was not paid at the time of purchase, such as when purchasing items online from out-of-state sellers.
- If you buy a taxable item from another state and use it in Virginia, you may owe use tax on that purchase.
- Individuals are responsible for reporting and paying use tax on their individual income tax returns.
- Businesses are also required to remit use tax on their sales and purchases.

Please note that tax laws can change, and it's important to consult the Virginia Department of Taxation or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Virginia.

Sales tax / Use tax - Washington (WA)

Washington (WA) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Washington (WA):

1. Sales Tax: Washington imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 6.5%. Additionally, local jurisdictions such as cities and counties can impose their own local sales taxes, resulting in varying total sales tax rates in different areas of the state. The total sales tax rate can vary widely across the state.
2. Use Tax: Washington also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Washington for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.
3. Business and Occupation (B&O) Tax: Washington has a unique tax structure for businesses known as the Business and Occupation (B&O) tax. It is levied on the gross receipts of businesses and varies depending on the type of business activity. Different rates apply to different industries.
4. Property Taxes: Washington imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and can vary significantly by county. The property tax system also includes measures to limit annual increases in assessed values.

5. Vehicle Taxes and Fees: Washington imposes various taxes and fees on motor vehicles, including sales tax on vehicle purchases, excise taxes based on the vehicle's value, and registration fees.
6. No Individual Income Tax: Washington does not impose a state-level individual income tax on residents' earned income. This absence of an income tax is one of the key features of Washington's tax system.
7. No Corporate Income Tax: Washington does not impose a corporate income tax on corporations conducting business in the state.
8. Inheritance Tax and Estate Tax: Washington does not have an inheritance tax or an estate tax.
9. No Local Income Tax: Washington does not allow local jurisdictions to impose their own income taxes.
10. Tax Credits and Incentives: Washington offers various tax incentives to businesses, including credits related to research and development, job creation, and more.

It's important to note that tax laws are subject to change, and it's recommended to consult the Washington Department of Revenue or a tax professional for the most up-to-date and specific information related to taxes in Washington.

Washington (WA) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Washington imposes a sales tax and use tax on various goods and services. Here are some key points about the Washington Sales Tax and Use Tax:

Sales Tax:

- Sales Tax Rate: The state sales tax rate in Washington is 6.5%. Additionally, there may be local sales taxes imposed by cities, counties, and other local jurisdictions, which can result in varying total sales tax rates in different areas of the state.

Sales tax / Use tax - Wisconsin (WI)

Wisconsin (WI) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Wisconsin (WI):

1. Sales Tax: Wisconsin imposes a state-level sales tax on the retail sale of tangible personal property and certain services. The general state sales tax rate is 5%. However, there may be additional local sales taxes imposed by counties and municipalities, resulting in varying total sales tax rates in different areas of the state.

2. Use Tax: Wisconsin also has a use tax, which is applied when tangible personal property is purchased out-of-state and brought into Wisconsin for use, storage, or consumption. If sales tax was not paid at the time of purchase, the purchaser owes use tax on the value of the property.
3. Individual Income Tax: Wisconsin levies an individual income tax on residents and non-residents who earn income in the state. The state has a progressive income tax system with tax rates ranging from 3.54% to 7.65% based on income levels.
4. Corporate Income Tax: Wisconsin imposes a corporate income tax on corporations conducting business in the state. The corporate income tax rates range from 4.0% to 7.9% based on taxable income.
5. Property Taxes: Wisconsin imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level and can vary significantly by municipality.
6. Vehicle Taxes and Fees: Wisconsin imposes various taxes and fees on motor vehicles, including registration fees, license plate fees, and a vehicle-specific tax known as the Title and Registration (T&R) fee.
7. Inheritance Tax and Estate Tax: Wisconsin does not impose an inheritance tax or an estate tax. As of my last update, both the inheritance tax and the estate tax have been eliminated.
8. No Local Income Tax: Wisconsin does not allow local jurisdictions to impose their own income taxes.
9. Tax Credits and Incentives: Wisconsin offers various tax credits and incentives to individuals and businesses, including the Homestead Credit for eligible homeowners and credits related to child care, education, and more.

It's important to note that tax laws are subject to change, and it's recommended to consult the Wisconsin Department of Revenue or a tax professional for the most up-to-date and specific information related to taxes in Wisconsin.

Wisconsin (WI) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Wisconsin imposes a sales tax and use tax on various goods and services. Here are some key points about the Wisconsin Sales Tax and Use Tax:

Sales Tax:

- Sales Tax Rate: The state sales tax rate in Wisconsin is 5%. Additionally, there may be county sales taxes and stadium district taxes imposed by certain counties and municipalities, which can result in varying total sales tax rates in different areas of the state.
- Exemptions: Some items and services may be exempt from Wisconsin's sales tax. Common

exemptions include prescription drugs, groceries, and sales to tax-exempt organizations.

- Filing and Payment: Businesses that make sales subject to Wisconsin's sales tax are required to register with the Wisconsin Department of Revenue and collect the appropriate tax from their customers. The filing frequency (monthly, quarterly, or annually) depends on the business's sales volume. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
- Online Sales: Wisconsin has adopted economic nexus laws for online sales. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to collect and remit sales tax.

Use Tax:

- Use Tax Rate: The use tax rate in Wisconsin is also 5%. The use tax is applicable when residents or businesses in Wisconsin purchase taxable items from out-of-state sellers who do not collect Wisconsin sales tax. The purchaser is then responsible for paying the corresponding use tax directly to the state.
- Filing and Payment: Individuals and businesses in Wisconsin are required to report and remit use tax on their state income tax return if they made purchases without paying sales tax. This typically applies to out-of-state purchases, internet purchases, and other transactions where sales tax was not collected at the time of purchase.
- Online Purchases: Use tax in Wisconsin is relevant to out-of-state purchases and online purchases where sales tax was not collected. Individuals and businesses are required to report and remit the use tax on these transactions when filing their state income tax return.

Please note that tax laws are subject to change, and it's essential to consult the Wisconsin Department of Revenue or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Wisconsin.

Sales tax / Use tax - Wyoming (WY)

Wyoming (WY) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Wyoming (WY):

1. Sales Tax: Wyoming does not have a state-level sales tax. As a result, there is no general sales tax imposed on the retail sale of tangible personal property or services at the state level.
2. Use Tax: Since Wyoming does not have a state sales tax, there is no corresponding use tax imposed on the purchase of goods brought into the state.
3. Individual Income Tax: Wyoming does not impose an individual income tax on residents' or non-residents' earned income. This absence of an income tax is one of the key features of Wyoming's tax system.
4. Corporate Income Tax: Similar to individual income tax, Wyoming does not impose a corporate income tax on corporations conducting business in the state.
5. Property Taxes: Wyoming imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the local level, and the state has relatively low property tax rates compared to other states.
6. Vehicle Taxes and Fees: Wyoming imposes various taxes and fees on motor vehicles, including registration fees, license plate fees, and certain excise taxes.
7. Inheritance Tax and Estate Tax: Wyoming does not impose an inheritance tax or an estate tax. This means there are no state-level taxes on the transfer of property upon death.
8. No Local Income Tax: Wyoming does not allow local jurisdictions to impose their own income taxes.
9. Severance Taxes: Wyoming relies significantly on revenue from severance taxes, which are levied on the extraction of natural resources such as oil, gas, coal, and minerals.
10. Tax Credits and Incentives: Wyoming offers various tax credits and incentives to individuals and businesses, including incentives related to agriculture, manufacturing, and energy production.

It's important to note that tax laws are subject to change, and it's recommended to consult the Wyoming Department of Revenue or a tax professional for the most up-to-date and specific information related to taxes in Wyoming.

Wyoming (WY) - Sales Tax and Use Tax

As of ChatGPT's last update in September 2021, Wyoming imposes a sales tax and use tax on various goods and services. Here are some key points about the Wyoming Sales Tax and Use Tax:

Sales Tax:

- Sales Tax Rate: The state sales tax rate in Wyoming is 4%. However, Wyoming is one of the few states that does not impose a statewide sales tax on most goods and services. Instead, local jurisdictions have the option to impose a local sales and use tax, which can result in varying total

sales tax rates in different areas of the state.

- Exemptions: Wyoming does not impose a statewide sales tax on most goods and services, but local jurisdictions that have opted for a local sales tax may have exemptions for certain items.
- Filing and Payment: Businesses in areas with a local sales tax in Wyoming are required to register with the Wyoming Department of Revenue and collect the appropriate tax from their customers. The filing frequency and process depend on the local jurisdiction's rules. Businesses must file sales tax returns, reporting the total sales made and the corresponding tax collected.
- Online Sales: Wyoming does not have statewide economic nexus laws for online sales due to the absence of a statewide sales tax. However, local jurisdictions with local sales taxes may have their own rules for taxing online sales.

Use Tax:

- Wyoming does not have a statewide use tax. The concept of a use tax is closely tied to the presence of a sales tax, which Wyoming does not have at the state level. However, individuals and businesses may still be subject to local use taxes in areas with local sales taxes.
- Online Purchases: The absence of a statewide sales tax means that Wyoming residents are not generally required to pay sales or use tax on purchases made within the state. However, they may still be subject to any local sales taxes imposed by their jurisdiction.

Please note that tax laws are subject to change, and it's essential to consult the Wyoming Department of Revenue or a tax professional for the most up-to-date and specific information related to sales tax and use tax in Wyoming.

General Excise Tax / Use tax - Hawaii (HI)

Hawaii (HI) - Tax system key points

As of ChatGPT's last update in September 2021, here are some key points about the tax system in Hawaii:

1. General Excise Tax (GET): Hawaii has a unique tax called the General Excise Tax (GET). It is a broad-based tax imposed on business activities rather than on sales to consumers. The GET is applied to almost all business transactions, including sales of goods and services, and is levied at different rates depending on the type of business activity. The statewide general excise tax rate is 4%.

2. Transient Accommodations Tax (TAT): Hawaii imposes a Transient Accommodations Tax (TAT) on hotel and other transient accommodations, such as vacation rentals. The TAT rate is 10.25% as of my last update.
3. Sales Tax: Hawaii does not have a traditional state-level sales tax as most other states do. Instead, it relies on the General Excise Tax, which is applied to business activities at different rates.
4. Individual Income Tax: Hawaii levies an individual income tax on residents and non-residents who earn income in the state. The state has multiple tax brackets with rates ranging from 1.4% to 11% based on income levels.
5. Corporate Income Tax: Hawaii imposes a corporate income tax on corporations conducting business in the state. The corporate tax rates vary depending on the company's taxable income.
6. Property Taxes: Hawaii imposes property taxes on real property, such as land and buildings. Property tax rates are determined at the county level and can vary by location.
7. Vehicle Taxes and Fees: Hawaii imposes various taxes and fees on motor vehicles, including a registration fee based on the vehicle's weight, an annual vehicle weight tax, and a county surcharge.
8. Estate Tax: Hawaii has its own estate tax, which is separate from the federal estate tax. The Hawaii estate tax applies to estates with a value above a certain threshold, and the tax rates range from 10% to 20%.
9. No Local Income Tax: Hawaii does not allow local jurisdictions to impose their own income taxes.
10. No Use Tax: Hawaii does not have a separate use tax. The General Excise Tax applies to both sales and use of goods and services.

It's important to note that tax laws are subject to change, and it's recommended to consult the Hawaii Department of Taxation or a tax professional for the most up-to-date and specific information related to taxes in Hawaii.

Hawaii (HI) - General Excise Tax and Use Tax

As of ChatGPT's last update in September 2021, Hawaii imposes a general excise tax (GET) instead of a traditional sales tax. The Hawaii General Excise Tax is a broad-based tax that applies to various business activities, including the sale of goods and services. Here are some key points about the Hawaii General Excise Tax:

1. General Excise Tax Rate: The Hawaii General Excise Tax rate is not a fixed percentage like a traditional sales tax. Instead, there are different rates depending on the type of business activity. As of my last update, the standard tax rates are as follows:
    - 4% on the retail sale of tangible personal property and certain services.

- 0.5% on wholesale transactions.
- 0.15% on insurance commissions.
- 4.5% on businesses engaged in certain activities, such as the sale of alcohol for consumption on the premises or selling rental motor vehicles.

2. Island Districts: Hawaii's excise tax rates may vary within different island districts. For example, the county of Honolulu has an additional surcharge on the general excise tax, making the total rate higher in that district.
3. Exemptions: Some items and transactions may be exempt from the Hawaii General Excise Tax. However, the GET is generally broader in scope than traditional sales taxes, so many business activities are subject to taxation.
4. Filing and Payment: Businesses are required to register for a GET license with the Hawaii Department of Taxation and report their gross receipts regularly. The filing frequency (monthly, quarterly, or semi-annually) is based on the amount of gross receipts generated by the business.
5. Use Tax: Unlike many other states, Hawaii does not have a separate use tax. Instead, the GET applies to both sales and the use of tangible personal property and services.
6. Online Sales: Hawaii has adopted economic nexus laws for remote sellers. This means that businesses with a certain level of sales or transactions in the state, even if they have no physical presence there, may be required to register for a GET license and collect and remit the tax.

Please note that tax laws are subject to change, and it's essential to consult the Hawaii Department of Taxation or a tax professional for the most up-to-date and specific information related to the General Excise Tax in Hawaii.

Use tax in the US

What is use tax in the US?

In the United States, use tax is a tax imposed on the use, consumption, or storage of tangible personal property or certain services when the seller does not collect sales tax at the time of the transaction. Use tax is often referred to as the counterpart of sales tax and is designed to ensure that consumers and businesses pay the appropriate amount of tax on purchases, even if the seller is located outside the

buyer's state or jurisdiction.

The key points to understand about use tax are as follows:

1. Out-of-State Purchases: Use tax applies when a buyer makes a purchase from a seller located outside their state, and the seller is not required to collect sales tax in the buyer's state due to a lack of physical presence or nexus.
2. Online Purchases: One common scenario where use tax comes into play is when consumers make purchases from out-of-state online retailers that do not have a physical presence in their state.
3. Mail-Order Purchases: Use tax also applies to purchases made from out-of-state mail-order catalogs or retailers.
4. Cross-Border Shopping: Use tax is relevant when consumers travel to a different state with a lower sales tax rate, make purchases there, and bring the items back to their home state.
5. Business Purchases: Businesses may also be subject to use tax when they purchase taxable items from sellers outside their state's jurisdiction.

The use tax rate is typically the same as the sales tax rate in the buyer's location, and it is based on the value of the purchased goods or services. The use tax rate may include the state tax rate and any applicable local taxes, depending on the buyer's location.

To ensure compliance, individuals and businesses are required to self-assess and pay the use tax owed to their state's tax authority. This is typically done by filing a use tax return, and the frequency of filing may vary by state. The use tax return allows the taxpayer to report the purchases subject to use tax and calculate the amount owed based on the applicable tax rates.

The goal of use tax is to prevent the avoidance of sales tax by making purchases from out-of-state sellers and to level the playing field between local businesses and remote sellers. Since tax laws can be complex and vary by state, it is advisable for individuals and businesses to seek advice from a tax professional to ensure proper compliance with use tax regulations.

Use tax return in the US

In the United States, a use tax return is a tax form that individuals and businesses are required to file to report and remit the use tax owed on purchases made from out-of-state sellers or for items used in a way that is subject to use tax. Use tax is a complementary tax to the sales tax and is designed to ensure that consumers pay the appropriate amount of tax on purchases, regardless of whether the seller collects the sales tax at the time of the transaction.

Use tax applies in situations where a seller does not have a physical presence (nexus) in the buyer's state and, therefore, is not required to collect sales tax. Instead, the responsibility falls on the buyer to self-

assess and pay the use tax on these purchases.

Common scenarios where use tax may be applicable include:

1. Online Purchases: When consumers make purchases from out-of-state online retailers that do not collect sales tax.
2. Mail-Order Purchases: When consumers buy goods from out-of-state mail-order catalogs.
3. Cross-Border Shopping: When consumers make purchases in a state with a lower sales tax rate and bring the items back to their home state.
4. Business Purchases: When businesses buy taxable items from sellers outside their state's jurisdiction.

The use tax rate is usually the same as the sales tax rate in the buyer's location, but it applies to out-of-state purchases that are subject to sales tax if the sale occurred within the buyer's state. If the local sales tax rate varies based on the buyer's location, the use tax rate will reflect the specific local rate applicable to the buyer.

To report and pay the use tax owed, individuals and businesses typically file a use tax return with their state's tax authority. The frequency of filing may vary by state, but it is often done annually with the state income tax return or through a separate use tax return form.

It's essential for individuals and businesses to understand their state's use tax laws and requirements to ensure compliance with the appropriate tax obligations. As tax laws can be complex and subject to change, seeking advice from a tax professional is recommended for accurate reporting and remittance of use tax.

Trade and Investment Incentives and Regulations

What is Trade and Investment Incentives and Regulations?

Trade and Investment Incentives and Regulations refer to a set of government policies, measures, and regulations aimed at promoting international trade, attracting foreign direct investment (FDI), and stimulating economic growth. These incentives and regulations are designed to create a favourable business environment, support specific industries or regions, and encourage businesses to engage in cross-border trade and investment activities.

Here's a breakdown of what Trade and Investment Incentives and Regulations may entail:

1. Trade Incentives:

- Customs Duties Reduction or Elimination: Governments may offer tariff reductions or exemptions on certain imported goods to lower the cost of imports and encourage international trade.
- Free Trade Agreements (FTAs): Bilateral or multilateral agreements between countries that reduce or eliminate tariffs and other trade barriers, promoting free flow of goods and services.
- Export Promotion Schemes: Incentives such as export subsidies, export tax refunds, or export credit facilities provided to boost exports and enhance competitiveness in the global market.
- Trade Finance Support: Governments may offer financial support, guarantees, or insurance to facilitate trade transactions and reduce risks for exporters and importers.

2. Investment Incentives:
   - Tax Incentives: Governments may provide tax holidays, reduced corporate income tax rates, or tax credits to attract foreign investment and encourage domestic capital expenditure.
   - Foreign Direct Investment (FDI) Policies: Regulations to streamline foreign investment procedures, protect investor rights, and offer incentives for specific industries or regions.
   - Investment Promotion Agencies: Entities set up to attract and facilitate foreign investment by providing information, support, and guidance to potential investors.
3. Special Economic Zones (SEZs) and Development Zones:
   - Industrial Development Zones (IDZs): Specific geographic areas with special economic regulations and incentives to promote industrial growth, attract FDI, and create jobs.
   - Economic Development Zones (EDZs): Similar to IDZs, these zones offer various incentives to encourage economic activities and development.
4. Diesel Rebates and Excise Tax Refunds:
   - Diesel Rebates: Refunds or reductions on excise duties or taxes on diesel fuel used for specific purposes, such as farming, mining, or off-road activities.
   - Excise Tax Refunds: Reimbursements or credits provided for excise taxes paid on certain goods produced domestically or imported.
5. Regulatory Reforms:
   - Trade Facilitation Measures: Simplifying customs procedures, reducing paperwork, and implementing efficient logistics systems to expedite cross-border trade.

- Business Registration and Licensing Reforms: Streamlining business registration and licensing processes to encourage entrepreneurship and investment.

Trade and Investment Incentives and Regulations play a crucial role in attracting foreign investment, promoting exports, creating jobs, and boosting economic development. Governments use these measures to enhance their country's competitiveness, integrate into the global economy, and foster sustainable economic growth. The specific incentives and regulations vary from country to country, and businesses looking to benefit from these measures should thoroughly research and understand the relevant policies and requirements in the countries they operate or plan to invest in.

Accounts for Trade and Investment Incentives and Regulations in the Chart of Accounts

The relevant accounts for Trade and Investment Incentives and Regulations in the Chart of Accounts is essential for several reasons:

1. Accurate Documentation: Creating specific accounts for trade and investment incentives allows businesses to accurately document the financial transactions related to these incentives. Proper documentation is crucial for compliance, audit purposes, and providing transparent financial reports.
2. Regulatory Compliance: By setting up dedicated accounts, businesses can ensure that they comply with the specific regulations and reporting requirements associated with each type of incentive. It helps them keep track of the incentives claimed or availed and maintain a clear audit trail.
3. Transparency and Accountability: Separate accounts for trade and investment incentives facilitate transparency in financial reporting. It enables stakeholders, including investors, regulators, and tax authorities, to easily identify and understand the impact of these incentives on the business's financial performance.
4. Internal Control and Monitoring: Having designated accounts helps businesses monitor the utilization of incentives and ensures that they are used for the intended purposes. This strengthens internal control and minimizes the risk of non-compliance or misuse of incentives.
5. Tax and Financial Reporting: Maintaining proper accounts allows businesses to accurately calculate tax liabilities, claim tax benefits, and prepare financial statements in accordance with accounting standards and regulations.
6. Incentive Optimization: By tracking the utilization of incentives through dedicated accounts, businesses can analyze the effectiveness of various incentives and make informed decisions on how to optimize their benefits.
7. Ease of Auditing: During external audits, having segregated accounts for incentives simplifies the

process for auditors to review and verify the accuracy of incentive-related transactions.

8. Cross-Border Transactions: For businesses engaged in international trade and investment, separate accounts for customs duties, tax refunds, and other trade-related transactions help manage the complexities of cross-border activities.
9. Financial Planning: Having dedicated accounts allows businesses to monitor the financial impact of incentives, helping them plan and forecast their future financial positions more effectively.

Including the relevant accounts for Trade and Investment Incentives and Regulations in the Chart of Accounts demonstrates the business's commitment to proper financial management and compliance. It also ensures that the business can take full advantage of the incentives offered by the government while adhering to the specific regulations and accounting standards in their jurisdiction. As accounting practices and regulations can evolve, businesses should continuously review and update their Chart of Accounts to align with any changes in the incentive schemes or reporting requirements.

Consulting with accounting professionals who are familiar with the Trade and Investment Incentives and Regulations

Consulting with accounting professionals who are familiar with the Trade and Investment Incentives and Regulations specific to a business's jurisdiction is crucial for effectively managing financial operations within designated areas and availing the available incentives. These professionals can provide valuable guidance and ensure that the business complies with all relevant regulations and accounting standards related to these incentives.

The complexity of trade and investment incentives, customs and excise duties, tax rebates, and various regulations in different countries necessitates expert advice to navigate the intricacies of these incentive schemes. Accounting professionals well-versed in these areas can help businesses with the following:

1. Incentive Eligibility: Determine which incentives apply to the business based on its activities, industry, and location.
2. Record-keeping: Set up and maintain appropriate accounts in the Chart of Accounts to accurately record transactions related to incentives, ensuring proper documentation for compliance and audits.
3. Claiming Incentives: Assist in the proper claiming and utilization of incentives, ensuring businesses receive the maximum benefits available to them.
4. Reporting and Compliance: Ensure that the business's financial statements and tax returns are prepared in accordance with relevant regulations and accounting standards, taking into account the impact of incentives.
5. Regulatory Updates: Keep the business informed about changes in incentive schemes, customs

regulations, and tax laws, helping them adapt their financial operations accordingly.

6. Risk Mitigation: Identify and address potential risks associated with incentive utilization and compliance, helping the business avoid penalties or adverse consequences.
7. Strategic Planning: Provide financial planning advice, considering the impact of incentives on the business's short-term and long-term financial goals.
8. Cross-Border Transactions: For businesses engaged in international trade and investment, accounting professionals can assist in navigating the complexities of cross-border transactions, including customs duties and tax implications.

By collaborating with accounting professionals who possess expertise in Trade and Investment Incentives and Regulations, businesses can optimize their financial operations, benefit from available incentives, and ensure adherence to the specific requirements of their jurisdiction. This partnership helps to build a strong financial foundation and supports the business's growth and success within designated areas and special economic zones.

Diesel refunds

What is a diesel refund, diesel tax refund or diesel fuel tax rebate?

A diesel refund, also known as a diesel tax refund or diesel fuel tax rebate, is a mechanism by which certain businesses or industries can claim a reimbursement or credit for the excise tax paid on diesel fuel used for specific purposes. The refund is typically provided by the government as an incentive to support certain sectors, encourage economic activities, and reduce the overall cost burden on businesses that heavily rely on diesel fuel.

The eligibility and regulations for diesel refunds vary from country to country, and the types of industries or activities that may qualify can differ significantly. Generally, industries that consume large amounts of diesel for specific purposes, such as farming, mining, fishing, forestry, construction, and certain off-road machinery, are more likely to be eligible for diesel refunds.

To claim a diesel refund, businesses are usually required to maintain detailed records of their diesel purchases and usage, as well as meet specific criteria defined by the tax authorities. The refund amount is often calculated based on the volume of diesel used for eligible activities, and it may be provided as a reimbursement, credit against future tax liabilities, or other forms of incentives.

By providing diesel refunds, governments aim to support key industries, stimulate economic growth, and offset some of the costs associated with using diesel fuel for essential purposes. It can also help businesses in eligible sectors remain competitive and contribute to job creation and development.

As diesel refund schemes are subject to specific regulations and requirements, businesses seeking to claim a diesel refund should carefully review the relevant tax laws and consult with tax professionals to ensure compliance and maximize the benefits available to them.

Calculation of diesel refund, diesel tax refund or diesel fuel tax rebate

The tax codes and accounts mentioned earlier primarily focused on Value Added Tax (VAT) and its related transactions. However, for some businesses engaged in specific activities, such as those involving the use of diesel in certain industries, additional records and accounts may be required to calculate and claim refunds in terms of the Customs and Excise Act.

In the case of businesses that are eligible for a diesel refund, additional documentation and accounting processes may be necessary to accurately calculate and report the refund amount. These processes can vary depending on the nature of the business activities and the specific regulations governing diesel refunds in the respective country.

Here's a general outline of what might be involved for the calculation of a diesel refund:

1. Records and Invoices: Businesses may need to maintain detailed records of diesel purchases, including invoices and receipts, to substantiate the fuel expenses and determine the eligible refund amount.
2. Fuel Usage Tracking: The business may need to track and record the usage of diesel for eligible activities, as not all diesel usage may qualify for a refund.
3. Calculation of Refund: Based on the eligible fuel usage, the business would calculate the refund amount according to the prescribed rates and rules under the Customs and Excise Act.
4. Specific Accounts: Depending on the complexity of the calculations and the size of the business, specific accounts may be created to track the diesel refund-related transactions separately.
5. Submission of Refund Claims: The business would submit the refund claims to the relevant tax authorities following the prescribed procedures and deadlines.
6. Reconciliation and Compliance: Regular reconciliation of diesel purchases, usage, and refund claims with the records in the books of accounts would be necessary to ensure compliance and accuracy.

It's important to note that the specific requirements for diesel refunds can vary significantly depending on

the country's tax laws, the industry, and the type of diesel usage involved. Therefore, businesses should seek guidance from tax professionals or relevant authorities to ensure compliance with the Customs and Excise Act and to set up the appropriate accounting procedures to manage diesel refund-related transactions effectively.

As this example is specific to diesel refunds, businesses in other industries or with different types of activities may have other specific tax-related requirements that must be addressed separately.

The "CALCULATION OF DIESEL REFUND IN TERMS OF THE CUSTOMS AND EXCISE ACT" items is included below the VAT section of the VAT201 Return / Declaration that needs to be calculated.

If the "*CALCULATION OF DIESEL REFUND IN TERMS OF THE CUSTOMS AND EXCISE ACT*" items are included below the VAT section of the VAT201 Return/Declaration, it means that businesses are required to calculate and report diesel refunds as a separate section of the VAT return.

In this case, the VAT201 Return would include both the VAT-related information as described in the earlier responses (i.e., the VAT sub-accounts and corresponding fields for output VAT, input VAT, adjustments, etc.) and a separate section dedicated to the calculation of diesel refunds in accordance with the Customs and Excise Act.

The specific details and requirements for calculating the diesel refund would be outlined in this additional section, and businesses would need to provide the necessary records, data, and calculations to support their refund claims.

Since diesel refunds involve complex calculations and are subject to specific regulations, it's essential for businesses to carefully follow the instructions provided by the tax authorities and maintain accurate records to support their refund claims.

To ensure compliance and accuracy in reporting both the VAT-related information and the diesel refund calculation, businesses should seek professional advice from tax experts or accountants familiar with the Customs and Excise Act and the specific requirements for diesel refunds in their country. This will help ensure that the VAT201 Return is completed correctly, and the diesel refund claim is accurately calculated and reported.

It is probably more related to farming and mining sectors

Diesel refunds are indeed commonly associated with the farming and mining sectors, as well as other industries that use diesel for specific purposes, such as construction, transportation, and certain off-road

machinery.

In these sectors, diesel is often used for agricultural machinery, mining vehicles, generators, and other equipment. Due to the significant diesel consumption in these operations, some countries may have provisions that allow businesses in these sectors to claim partial or full refunds on the excise duties paid on diesel used for qualifying activities.

As mentioned earlier, the specific regulations, eligibility criteria, and refund calculation methodologies can vary from country to country. The process for claiming diesel refunds may involve additional documentation, record-keeping, and calculations to demonstrate eligible usage and ensure compliance with the applicable tax laws.

To properly handle diesel refunds, businesses operating in the farming, mining, or related sectors should:

1. Understand Eligibility: Familiarize themselves with the specific eligibility criteria for claiming diesel refunds in their country and industry.
2. Track Diesel Usage: Maintain accurate records of diesel purchases and track the usage of diesel for eligible activities.
3. Apply Correct Rates: Use the correct refund rates or percentages as specified in the relevant tax regulations.
4. Maintain Supporting Documentation: Keep all invoices, receipts, and relevant documentation as evidence to support refund claims.
5. Comply with Filing Requirements: Adhere to the prescribed filing procedures and deadlines for submitting diesel refund claims.
6. Seek Professional Advice: Consult with tax advisors or experts who are knowledgeable about diesel refunds in the respective country to ensure compliance and optimize the refund process.

Given the complexity of diesel refund calculations and the potential impact on business costs, it's essential for companies in the farming and mining sectors, or any industry eligible for diesel refunds, to handle these claims accurately and efficiently. Working closely with tax professionals can help ensure that businesses maximize their eligible refunds while meeting all regulatory requirements.

In which counties may this apply?

The eligibility for diesel refunds and the specific regulations governing them can vary significantly from country to country. While diesel refunds are common in some regions, they may not be applicable or may have different conditions in others. Here are some examples of countries where diesel refunds or similar schemes are known to be implemented or have been considered:

1. South Africa: The Diesel Refund Scheme is available for certain sectors like mining, farming, forestry,

and off-road activities.

2. Australia: The Fuel Tax Credit (FTC) scheme allows businesses to claim credits for the fuel tax (which includes diesel) used in eligible activities, including agriculture, mining, and forestry.
3. Canada: Some provinces offer tax exemptions or rebates on diesel used for certain off-road purposes or primary production activities.
4. United States: Certain states may provide exemptions or refunds on diesel taxes for agricultural or off-road use.
5. United Kingdom: Red Diesel (rebated gas oil) is used in certain sectors, such as agriculture, fishing, and non-road mobile machinery, and is subject to a reduced tax rate.
6. European Union: Some EU member states may offer reduced tax rates or exemptions for diesel used in agriculture and certain off-road activities.
7. India: Diesel is subject to various tax rates depending on its usage, with certain sectors like agriculture and fishing often enjoying lower rates.

It's important to note that this list is not exhaustive, and the regulations and eligibility criteria for diesel refunds may change over time. Additionally, each country's scheme may have different requirements, rates, and qualifying activities. Therefore, businesses operating in the farming, mining, or related sectors should refer to their country's specific tax laws, customs, and excise regulations, or seek guidance from tax professionals to understand the eligibility and process for claiming diesel refunds in their respective jurisdictions.

Industrial Development Zones and Economic Development Zones

What is Industrial Development Zones and Economic Development Zones?

Industrial Development Zones (IDZs) and Economic Development Zones (EDZs) are special geographic areas that governments create to promote economic growth, attract investments, and facilitate industrial and commercial activities. These zones are designed to provide various incentives and benefits to businesses and investors, encouraging them to establish operations within the designated areas. The specific terms and regulations associated with IDZs and EDZs can vary depending on the country or

region.

1. Industrial Development Zones (IDZs):
    - IDZs are geographical areas typically located near ports, airports, or major transportation hubs, making them strategically positioned for trade and export activities.
    - The main objective of IDZs is to attract foreign direct investment (FDI) and boost the domestic industrial and manufacturing sectors.
    - Incentives in IDZs often include tax breaks, customs duty exemptions or reductions, streamlined regulatory processes, access to infrastructure, and other financial and non-financial benefits to attract businesses.
    - Companies that set up operations in IDZs can take advantage of these incentives to enhance their competitiveness and profitability in the global market.
2. Economic Development Zones (EDZs):
    - EDZs are broader economic development areas that encompass various zones, including industrial zones, technology parks, free trade zones, and more.
    - The goal of EDZs is to promote economic growth and development in specific regions or across the entire country by attracting investments and stimulating business activities.
    - Like IDZs, EDZs also offer a range of incentives and benefits to businesses and investors. These may include tax incentives, duty exemptions, simplified regulations, access to infrastructure and utilities, and enhanced support services.
    - In some cases, EDZs may have a more diversified focus, aiming to encourage not only industrial and manufacturing activities but also services, trade, technology, research, and development.

Both IDZs and EDZs play a crucial role in attracting investments, creating employment opportunities, and fostering economic development in regions where these zones are established. By providing a favorable business environment and incentives, governments seek to stimulate economic growth, increase export potential, and enhance competitiveness on the global stage. The specific terms, regulations, and benefits offered in IDZs and EDZs can vary significantly depending on the country's economic policies and development goals.

In which countries may IDZs, EDZs apply?

Industrial Development Zones (IDZs) and Economic Development Zones (EDZs) are established in various countries around the world to promote economic growth and attract investments. The availability and

characteristics of these zones can vary from one country to another. Here are some examples of countries where IDZs and EDZs are commonly found or have been established:

1. South Africa: South Africa has several Industrial Development Zones (IDZs) strategically located in different provinces to encourage industrial development, job creation, and export-oriented manufacturing.
2. China: China has numerous Special Economic Zones (SEZs) that offer various incentives and benefits to businesses, including tax breaks, streamlined customs procedures, and access to infrastructure.
3. United Arab Emirates: The UAE has numerous Free Zones, which are similar to Economic Development Zones, offering tax exemptions, full foreign ownership, and other advantages to businesses.
4. India: India has Special Economic Zones (SEZs) that provide tax benefits, simplified regulatory procedures, and infrastructure support to promote exports and industrial development.
5. Singapore: Singapore has several Free Trade Zones (FTZs) and Free Trade Areas (FTAs) that offer tax incentives and customs duty exemptions to facilitate international trade and logistics.
6. United States: The U.S. has Foreign Trade Zones (FTZs) that provide various cost-saving benefits for companies engaged in international trade and manufacturing.
7. Turkey: Turkey has Organized Industrial Zones (OIZs) that offer benefits like tax incentives and customs duty exemptions to promote industrial development.
8. Brazil: Brazil has Industrial Districts and Economic Development Areas that provide tax incentives and support for industrial activities.
9. Malaysia: Malaysia has Free Industrial Zones (FIZs) that offer tax exemptions and other advantages for export-oriented industries.
10. Mexico: Mexico has Maquiladora Zones that provide tax benefits to manufacturing companies producing goods for export.

It's important to note that this list is not exhaustive, and many other countries have established similar zones to promote economic development and attract investments. The specific names, characteristics, and incentives offered in these zones can differ widely depending on the economic policies and development goals of each country.

If businesses are interested in exploring opportunities within IDZs, EDZs, or other similar zones, they should research the specific regulations and benefits offered by the relevant countries and consult with legal and financial advisors to understand the implications and requirements for setting up operations in these zones.

Accounts for IDZs and EDZs in the Chart of Accounts

Absolutely, including accounts in the Chart of Accounts to track transactions related to Industrial Development Zones (IDZs), Economic Development Zones (EDZs), or any other special economic zones is essential for proper reporting and compliance. By creating specific accounts for these zones, businesses can accurately record and monitor the financial transactions associated with their activities within these designated areas.

Here are some key points to consider when incorporating IDZs and EDZs in the Chart of Accounts:

1. Clear Identification: Assign unique codes or names to the accounts that represent transactions specific to IDZs, EDZs, or any other special economic zones. This will make it easier to distinguish them from regular accounts and enable accurate reporting.
2. Differentiation of Incentives: If the IDZs or EDZs offer tax incentives, customs duty exemptions, or other benefits, ensure that separate accounts are created to track these incentives. This will help in accurately calculating tax savings and benefits.
3. Tracking Eligible Expenses: If businesses can claim tax credits or deductions on specific expenses within the zones, create accounts to track those expenses separately. This will facilitate easy identification and calculation of eligible deductions.
4. Reporting and Compliance: Ensure that all transactions related to the IDZs or EDZs are correctly recorded in the designated accounts. This will help businesses in meeting reporting requirements and tax compliance obligations.
5. Supporting Documentation: Maintain proper supporting documentation for transactions within the zones. This may include invoices, receipts, permits, and any other documents necessary to substantiate the claims for benefits or incentives.
6. Regular Reconciliation: Regularly reconcile the transactions recorded in the accounts related to the special economic zones with the overall financial records to ensure accuracy and consistency.

By incorporating these specific accounts in the Chart of Accounts, businesses can ensure that they accurately report and track financial activities within IDZs, EDZs, or other special economic zones. This will help in maximizing the benefits and incentives offered by the zones while staying compliant with the relevant tax regulations and reporting requirements. It is essential to seek advice from accounting and tax professionals to set up the Chart of Accounts correctly and meet all regulatory obligations related to these zones.

IDZs and EDZs - What would the typical transactions and accounts be?

In the context of Industrial Development Zones (IDZs) and Economic Development Zones (EDZs), businesses engaged in activities within these designated areas may have specific transactions and accounts related to their operations. These zones typically offer various incentives, benefits, and streamlined processes to attract investments and promote economic growth. Here are some typical transactions and accounts that businesses may encounter within IDZs and EDZs:

1. Lease or Rental Agreements:
    - Transaction: Businesses operating within IDZs or EDZs may enter into lease or rental agreements with the zone authorities or landlords to secure space for their operations.
    - Account: An account should be created to track lease or rental expenses for the facilities or land used within the zone.
2. Infrastructure Charges or Contributions:
    - Transaction: Some IDZs or EDZs may impose infrastructure charges or require businesses to make financial contributions towards the development and maintenance of shared infrastructure within the zone.
    - Account: An account should be established to track infrastructure charges or contributions payable by the business.
3. Customs and Excise Duties:
    - Transaction: Businesses importing or exporting goods within IDZs or EDZs may still be subject to customs and excise duties, depending on the country's regulations.
    - Account: Separate accounts should be maintained to track customs duties payable on imports, customs duties receivable on exports, and excise duties payable on specific goods produced or imported within the zone.
4. Tax Incentives and Benefits:
    - Transaction: Businesses within IDZs or EDZs may be eligible for tax incentives, including reduced corporate income tax rates, exemptions, or tax holidays.
    - Account: An account should be created to track tax benefits and incentives availed by the business, including deferred tax liabilities resulting from these incentives.
5. Sales and Purchases within the Zone:

- Transaction: Businesses operating within IDZs or EDZs may engage in sales and purchases of goods and services with other companies within the same zone.
- Account: Separate accounts should be maintained to track sales revenue and purchases made within the zone.

6. Investment Subsidies or Grants:
   - Transaction: In some cases, businesses may receive investment subsidies or grants from the zone authorities or the government to support their operations within IDZs or EDZs.
   - Account: An account should be established to track investment subsidies or grants received by the business.
7. Zone Administrative Fees:
   - Transaction: Businesses operating within IDZs or EDZs may be required to pay administrative fees to the zone authorities for various services or compliance purposes.
   - Account: An account should be created to track administrative fees payable to the zone authorities.
8. Job Creation or Training Incentives:
   - Transaction: Some IDZs or EDZs may offer incentives to businesses for job creation, training programs, or skills development initiatives.
   - Account: An account should be set up to track expenses related to job creation or training activities, as well as any incentives received for these efforts.

It's essential for businesses operating within IDZs or EDZs to have a clear accounting system that reflects the unique transactions and incentives offered within these zones. Properly tracking these transactions and maintaining accurate records will ensure compliance with zone regulations, optimize the benefits available, and facilitate transparent financial reporting. As always, consulting with accounting professionals familiar with the regulations and requirements of IDZs and EDZs can help businesses effectively manage their financial operations within these designated areas.

Incentives for generation and use of green energy

Incentives for generation and use of green energy

Many countries and governments offer various incentives to encourage the generation and use of green energy as part of their efforts to promote energy security, reduce carbon emissions, and transition to more sustainable energy sources. These incentives are designed to make green energy technologies more accessible and financially viable, ultimately supporting the growth of renewable energy infrastructure. Some common incentives for generating green energy include:

1. Feed-in Tariffs (FiTs): FiTs guarantee a fixed payment or premium rate for renewable energy producers (such as solar, wind, or biomass) for each kilowatt-hour (kWh) of electricity they generate. This provides long-term price certainty and revenue stability for renewable energy projects, making them attractive to investors and developers.
2. Renewable Energy Certificates (RECs): RECs, also known as green certificates or tradable green certificates, represent the environmental attributes of one megawatt-hour (MWh) of electricity generated from renewable sources. Renewable energy producers can sell these certificates to electricity retailers or consumers to demonstrate their commitment to supporting renewable energy.
3. Tax Credits and Incentives: Governments often offer tax credits or deductions for businesses or individuals investing in renewable energy projects. These tax incentives can significantly reduce the upfront costs and improve the financial viability of green energy installations.
4. Grants and Subsidies: Governments may provide grants or subsidies to support the development and deployment of renewable energy technologies. These funds can be used to cover a portion of the project costs or provide financial support for research and development in the renewable energy sector.
5. Net Metering: Net metering allows renewable energy system owners to receive credits for the excess electricity they generate and feed back into the grid. These credits can be used to offset electricity purchases during periods when renewable energy generation is insufficient.
6. Green Bonds and Financing: Green bonds are a form of financing used to fund environmentally friendly projects, including renewable energy developments. Investors purchase green bonds, and the proceeds are used to support green energy initiatives.
7. Priority Grid Access: Some jurisdictions grant renewable energy projects priority access to the electricity grid, ensuring that green energy is given preference in feeding electricity into the system over traditional fossil fuel sources.
8. Low-interest Loans: Governments or financial institutions may offer low-interest loans or favorable financing terms for renewable energy projects to help reduce the overall project costs.
9. Green Energy Targets and Mandates: Some countries implement renewable energy targets or

mandates that require a certain percentage of electricity to come from renewable sources. Meeting these targets may make green energy generation more economically attractive for energy producers.

These incentives vary from country to country and may be subject to specific eligibility criteria and time-frames. Businesses and individuals interested in green energy projects should consult with local energy authorities, renewable energy associations, or financial experts to understand the available incentives and how to make the most of them while contributing to a sustainable energy future.

In which countries and governments does the incentives to encourage the generation and use of green energy apply?

Incentives to encourage the generation and use of green energy apply in various countries and governments around the world. The specific incentives and their availability can differ significantly from one country to another, as each nation designs its policies and programs based on its energy goals, environmental commitments, and economic considerations. Here are some examples of countries and regions where green energy incentives are commonly offered:

1. Germany: Germany has been a global leader in promoting renewable energy. It offers feed-in tariffs (FiTs) for solar, wind, and biomass projects, providing stable and attractive returns to renewable energy producers.
2. United States: In the United States, incentives for green energy vary at the federal, state, and local levels. The federal government offers tax credits and grants for renewable energy projects, and several states have their own incentive programs.
3. China: China is a major player in renewable energy deployment. The country provides various incentives, including subsidies, feed-in tariffs, and favourable financing options, to support the growth of solar and wind power.
4. India: India has ambitious renewable energy targets and offers incentives such as Viability Gap Funding (VGF), Generation-Based Incentive (GBI), and capital subsidies to promote green energy adoption.
5. Japan: Japan offers feed-in tariffs for solar, wind, and other renewable energy sources to encourage the development of clean energy projects.
6. United Kingdom: The UK provides financial support through Contracts for Difference (CfD) and Renewables Obligation Certificates (ROCs) to incentivize renewable energy generation.
7. Canada: Canada offers various federal and provincial incentives, including tax credits, grants, and low-interest loans, to promote renewable energy projects.
8. Australia: Australia offers incentives such as the Small-scale Renewable Energy Scheme (SRES) for

solar systems and large-scale renewable energy targets to encourage green energy generation.

9. Brazil: Brazil provides feed-in tariffs and tax incentives for renewable energy projects, particularly in the areas of hydropower and bioenergy.
10. South Africa: South Africa offers tax incentives, feed-in tariffs, and competitive bidding programs to support the growth of renewable energy, particularly in the solar and wind sectors.
11. European Union: The EU member states collectively implement various green energy incentives and targets, including feed-in tariffs and renewable energy certificates.

It's important to note that the availability and nature of green energy incentives can change over time, depending on the policy priorities of each country. Additionally, some countries may offer specific incentives or grants targeted at certain types of renewable energy technologies or specific regions with energy development goals.

For businesses or individuals interested in green energy projects, it is crucial to research and stay up-to-date on the latest incentives and programs available in their respective countries. Consulting with local energy authorities or renewable energy associations can provide valuable insights into the specific incentives and how to leverage them effectively.

Accounts for green energy incentives in the Chart of Accounts

Yes, including the relevant accounts related to green energy incentives in the Chart of Accounts is crucial for proper reporting and documentation of the financial transactions associated with these incentives. Properly tracking and reporting these incentives in the accounting system ensures transparency, compliance, and accurate financial statements. Here's why it's important to include these accounts in the Chart of Accounts:

1. Compliance and Transparency: Designated accounts for green energy incentives enable businesses to segregate and accurately report the financial impact of these incentives. This ensures compliance with relevant regulations and enhances the transparency of financial reporting.
2. Record-keeping and Audit Trail: By maintaining specific accounts, businesses can keep detailed records of transactions related to green energy incentives. This creates a clear audit trail, facilitating verification during internal or external audits.
3. Accurate Financial Reporting: Including these accounts in the Chart of Accounts ensures that the financial statements accurately reflect the benefits derived from green energy incentives. This supports better decision-making and financial planning.
4. Incentive Utilization Tracking: Separate accounts help businesses monitor the utilization of green energy incentives, ensuring they are properly applied and contribute to the business's financial

performance.

5. Tax and Regulatory Compliance: Having designated accounts makes it easier to calculate tax benefits and comply with reporting requirements related to green energy incentives, reducing the risk of errors or omissions.
6. Internal Management and Analysis: By isolating the financial impact of green energy incentives, businesses can assess the effectiveness of these incentives in achieving their environmental and financial goals.
7. Budgeting and Forecasting: Specific accounts allow businesses to budget and forecast their financials more accurately, considering the impact of green energy incentives on their cash flows and profitability.
8. Cross-Reference with Incentive Programs: Linking these accounts to specific incentive programs or policies simplifies the cross-referencing process, aiding in tracking the benefits derived from each program.
9. Comprehensive Financial Picture: Including green energy incentive accounts provides a comprehensive view of the business's environmental and financial performance, demonstrating its commitment to sustainable practices.

When implementing green energy projects and availing relevant incentives, businesses should work closely with accounting professionals to ensure the Chart of Accounts aligns with the specific requirements of the incentive programs and the country's regulations. Properly documenting and reporting green energy incentives not only ensures compliance but also enhances the business's reputation as a responsible and environmentally conscious entity.

Green energy incentives - What would the typical transactions and accounts be?

Typical transactions and accounts related to green energy incentives will vary based on the specific incentive programs, regulations, and accounting practices of each country or region. However, here are some common transactions and accounts that businesses may encounter when availing green energy incentives:

1. Feed-in Tariff (FiT) Incentives:
    - Transaction: Receiving payments for the electricity generated from renewable energy sources at a fixed tariff rate.
    - Account: "*FiT Revenue*" or "*Renewable Energy Income*" (Income account) to record the revenue generated from selling electricity at the feed-in tariff rate.

2. Renewable Energy Certificates (RECs):
    - Transaction: Generating Renewable Energy Certificates for each megawatt-hour (MWh) of renewable energy produced.
    - Account: "*Renewable Energy Certificate (REC) Asset*" (Asset account) to track the number of certificates earned and "REC Revenue" (Income account) when the certificates are sold.
3. Tax Incentives:
    - Transaction: Claiming tax credits or deductions for investments in renewable energy projects.
    - Account: "*Green Energy Tax Credit*" or "*Renewable Energy Tax Deduction*" (Expense account) to track the tax benefits received.
4. Grants and Subsidies:
    - Transaction: Receiving financial support through grants or subsidies for renewable energy initiatives.
    - Account: "*Green Energy Grant*" or "*Renewable Energy Subsidy*" (Income account) to record the funds received.
5. Net Metering:
    - Transaction: Offset of electricity consumption with excess energy generated and fed back into the grid.
    - Account: "*Net Metering Credit*" or "*Renewable Energy Offset*" (Income account) to track the credits received for excess energy supplied.
6. Green Bonds and Financing:
    - Transaction: Raising funds through the issuance of green bonds for renewable energy projects.
    - Account: "*Green Bond Proceeds*" or "*Renewable Energy Financing*" (Liability account) to record the funds raised.
7. Infrastructure Investment Incentives:
    - Transaction: Claiming tax incentives or grants for investing in renewable energy infrastructure development.
    - Account: "*Green Infrastructure Investment Credit*" (Expense account) to track the benefits received.
8. Renewable Energy Project Costs:

- Transaction: Capitalizing expenses related to the development and construction of renewable energy projects.
- Account: "*Renewable Energy Project Assets*" (Asset account) to track the capitalization of project costs.

9. Research and Development (R&D) Incentives:
    - Transaction: Claiming R&D tax credits for renewable energy technology innovation.
    - Account: "*Green Energy R&D Tax Credit*" (Expense account) to record the benefits received.

It's important to note that the naming and categorization of accounts may vary depending on the business's accounting system and practices. The specific accounts may also be adjusted to comply with the financial reporting standards of the country or region.

Businesses should work closely with accounting professionals to identify the most appropriate accounts for tracking green energy incentives and ensure accurate and compliant financial reporting.

Government assistance and support for crises

Governments often provide various forms of assistance and support to help businesses and organizations get back on their feet after facing challenges such as economic downturns, natural disasters, or other crises. These support measures aim to promote economic recovery, preserve jobs, and revitalize industries. Some common examples of how governments help businesses and organizations include:

1. Financial Support and Grants: Governments may offer financial assistance in the form of grants, loans, or subsidies to help businesses cover operational costs, invest in new equipment or technology, and maintain their workforce during difficult times.
2. Tax Relief and Incentives: Tax relief measures, such as temporary reductions or deferrals of taxes, can provide businesses with much-needed breathing space. Governments may also introduce tax incentives to encourage specific investments or business activities that support economic recovery.
3. Employment Support Programs: Governments may implement programs to support employee retention and job creation. These programs may include wage subsidy schemes or training initiatives to help businesses retain and upskill their workforce.

4. Access to Credit and Financing: Governments may collaborate with financial institutions to offer special credit facilities or loan guarantees to businesses, making it easier for them to access capital and credit during challenging times.
5. Industry-Specific Support: In some cases, governments may offer targeted support to specific industries that have been severely impacted by a crisis. This could include tailored assistance packages, regulatory changes, or sector-specific grants.
6. Business Advisory Services: Governments may provide advisory services to help businesses navigate challenges, access resources, and develop recovery strategies. These services may include training, mentorship, and counselling.
7. Infrastructure Investment: Governments may initiate public infrastructure projects to stimulate economic activity and create new opportunities for businesses.
8. Easing Regulatory Burdens: During times of crisis, governments may streamline or temporarily suspend certain regulations and bureaucratic processes to help businesses operate more efficiently and with greater flexibility.
9. Export Promotion and Market Access: Governments may offer support to businesses seeking to expand their markets through export promotion initiatives, trade missions, or market access facilitation.
10. Public-Private Partnerships: Collaboration between the public and private sectors can lead to joint initiatives that support business recovery and foster economic growth.

It's important to note that the specific assistance measures and their availability can vary significantly from one country to another and depend on the nature of the crisis being faced. Government support may be short-term or longer-term, depending on the severity of the situation and the government's overall economic policy objectives.

During periods of crisis, it is essential for businesses and organizations to stay informed about the support programs and resources available to them and actively engage with government agencies and business associations to take advantage of available assistance.

Chart of Accounts - government assistance and support

When businesses receive government assistance and support to navigate through economic downturns, natural disasters, or other crises, they need to ensure strict adherence to the regulations and guidelines set by the government or relevant authorities. Adhering to these regulations is crucial for maintaining transparency, accountability, and compliance with the terms and conditions of the support programs. One essential aspect of ensuring compliance is aligning the Chart of Accounts accordingly to accurately record and track the financial transactions related to the government assistance. Here are some considerations

for aligning the Chart of Accounts:

1. Separate Accounts for Government Assistance: Create specific accounts in the Chart of Accounts to track the government assistance received. These accounts should clearly differentiate between grants, subsidies, loans, or other forms of support and should be labeled appropriately.
2. Detailed Reporting: Ensure that the Chart of Accounts allows for detailed reporting on how the government assistance is utilized. This may involve creating sub-accounts or cost centers to categorize expenses related to the support received.
3. Tax Implications: Consider the tax implications of the government assistance and set up accounts to accurately record any tax reliefs, deferrals, or adjustments that may result from the support.
4. Regulatory Compliance: Be aware of any specific regulatory requirements related to government assistance, such as reporting deadlines or eligibility criteria. Ensure that the Chart of Accounts enables proper tracking and reporting in line with these requirements.
5. Segregation of Funds: If the government assistance involves the allocation of specific funds for particular purposes, segregate these funds in the Chart of Accounts to prevent commingling with regular operational funds.
6. Audit and Accountability: Design the Chart of Accounts in a way that facilitates easy auditing and provides a clear trail of how the government support is utilized. This level of accountability is essential to maintain transparency and build trust with relevant authorities.
7. Updates and Changes: Keep the Chart of Accounts flexible to accommodate any updates or changes to the government support programs. As regulations or assistance terms evolve, businesses may need to modify their Chart of Accounts accordingly.
8. Data Integrity: Ensure data integrity and accuracy in the Chart of Accounts by implementing proper controls and reconciliation processes. This will help maintain the reliability of financial information related to government assistance.

By aligning the Chart of Accounts with the regulations and requirements related to government assistance, businesses can effectively track and manage the funds received, demonstrate compliance, and fulfill their reporting obligations. This level of financial diligence not only helps businesses benefit from the support offered but also ensures responsible and accountable use of public resources during times of crisis or economic challenges.

Pandemics such as Covid

Are there any examples of how governments help businesses and organizations to get on their feet with a pandemic such as Covid-19?

Yes, governments around the world have implemented various measures to help businesses and organizations get back on their feet during the Covid-19 pandemic. The pandemic had a profound impact on economies, leading to widespread disruptions and financial challenges for businesses. Some examples of how governments provided assistance and support to businesses during the Covid-19 pandemic include:

1. Financial Relief Packages: Many governments introduced financial relief packages that included grants, loans, and subsidies to help businesses cover operational costs and maintain their workforce. These packages aimed to provide immediate financial support and bridge the gap during periods of economic uncertainty.
2. Wage Subsidies and Job Retention Schemes: Several countries implemented wage subsidy programs to encourage employers to retain their employees during the pandemic. These subsidies helped businesses keep their workforce employed, even if their operations were temporarily affected.
3. Tax Deferrals and Payment Extensions: Governments offered tax deferrals and extensions on tax payments to ease the immediate financial burden on businesses. This provided businesses with more time to manage their cash flow during challenging periods.
4. Industry-Specific Support: Some governments provided targeted support to industries that were particularly hard-hit by the pandemic. For example, sectors like hospitality, tourism, and entertainment received specific assistance measures tailored to their needs.
5. Access to Credit and Financing: Governments collaborated with financial institutions to offer credit facilities, loan guarantees, or low-interest loans to businesses that needed capital to continue their operations.
6. Rent Relief and Commercial Eviction Bans: To ease the burden on businesses facing rent obligations, some governments implemented rent relief programs or banned commercial evictions during specific periods of the pandemic.
7. Health and Safety Guidelines: Governments issued health and safety guidelines for businesses to follow to protect their employees and customers from the spread of Covid-19. Compliance with these guidelines was often essential for businesses to continue operating during the pandemic.
8. Digital Transformation Support: Governments encouraged businesses to adopt digital technologies to adapt to the new normal. Some provided grants or training programs to help businesses transition

to online operations and e-commerce.

9. Support for Small and Medium Enterprises (SMEs) : Many governments recognized the importance of SMEs and provided special support programs tailored to their unique needs, as they often faced more significant challenges during the pandemic.
10. Recovery and Revitalization Initiatives: As the pandemic situation improved in some regions, governments launched recovery and revitalization initiatives to stimulate economic activity and help businesses rebound.

It's important to note that the specific measures and extent of government support varied across countries and regions, depending on the severity of the pandemic and each government's fiscal capacity and policy priorities. Governments continuously adapted their assistance programs based on the evolving nature of the pandemic and its economic impact.

Overall, the aim of these support measures was to provide businesses with the necessary resources and stability to weather the crisis, protect jobs, and contribute to economic recovery in the aftermath of the Covid-19 pandemic.

Pandemics such as Covid-19 had a global impact - In which countries was affected

As of ChatGPT's last update in September 2021, the Covid-19 pandemic had a significant global impact, affecting nearly every country in the world. It spread rapidly and led to widespread health, social, and economic disruptions. The impact of the pandemic varied from country to country based on factors such as population density, healthcare infrastructure, government response measures, and adherence to public health guidelines.

It is essential to note that the situation regarding the Covid-19 pandemic is dynamic, and the impact may have evolved since ChatGPT's last update. However, as of September 2021, some of the countries that were particularly affected by the Covid-19 pandemic included:

1. United States: The United States experienced a high number of Covid-19 cases and fatalities, making it one of the most affected countries in terms of both infections and deaths.
2. Brazil: Brazil also experienced a significant impact, with a high number of Covid-19 cases and fatalities.
3. India: India faced a severe surge in Covid-19 cases during the second wave of the pandemic, which strained its healthcare system and led to numerous deaths.
4. United Kingdom: The United Kingdom faced several waves of the pandemic, leading to substantial disruptions in healthcare, social life, and the economy.

5. Italy: Italy was one of the early epicenters of the pandemic in Europe and faced a high number of Covid-19 cases and deaths.
6. Spain: Spain also experienced a significant impact during the early stages of the pandemic, with high infection rates and fatalities.
7. France: France faced multiple waves of Covid-19, leading to healthcare challenges and economic disruptions.
8. Russia: Russia experienced a high number of Covid-19 cases and implemented various measures to contain the spread of the virus.
9. China: China, where the pandemic originated, was one of the first countries to be affected and implemented strict measures to control the spread of the virus.

It's important to recognize that Covid-19's impact was not limited to these countries alone. The pandemic had a global reach, affecting economies, healthcare systems, and daily life in nearly every nation around the world. Governments and international organizations worked together to address the challenges posed by the pandemic, develop vaccines, and implement public health measures to mitigate its effects.

For the most current information on the global impact of Covid-19, it is recommended to refer to updated sources such as the World Health Organization (WHO), the Centers for Disease Control and Prevention (CDC), and other reputable health agencies.

Chart of Accounts - Pandemics such as Covid

Pandemics, such as the Covid-19 pandemic, can have significant financial implications for businesses, governments, and individuals. In the context of the Chart of Accounts, various accounts may be relevant to track the financial effects of pandemics:

1. Revenue Accounts:
    - Sales - Pandemic Impact: This account can be used to track the revenue generated during the pandemic period. It may include specific products or services that saw increased or decreased demand due to the pandemic.
2. Expense Accounts:
    - Staff Wages - Pandemic Relief: This account can be used to track any additional wages or benefits provided to staff during the pandemic, such as hazard pay or special relief packages.
    - Healthcare Expenses: This account can be used to track expenses related to providing healthcare benefits or medical supplies to employees and customers during the pandemic.
    - Remote Work Expenses: This account can be used to track additional expenses incurred to

facilitate remote work arrangements, such as purchasing equipment or software.

- Cleaning and Sanitization: This account can be used to track expenses related to increased cleaning and sanitization efforts in workplaces and public spaces.
- Insurance Claims - Business Interruption: This account can be used to track insurance claims made for business interruption or other losses caused by the pandemic.
- Contingency Fund Utilization: If the organization maintains a contingency fund, this account can be used to record the utilization of funds to address pandemic-related expenses.

3. Liabilities:
   - Provisions for Pandemic Costs: This account can be used to record estimated costs and liabilities associated with the pandemic, such as potential legal claims or refunds to customers.
4. Assets:
   - Inventory - Perishable Goods: If the business deals with perishable goods, this account can be used to track the value of inventory that may be at risk of spoilage due to disruptions caused by the pandemic.
   - Remote Work Equipment: This account can be used to track the value of equipment purchased for remote work arrangements.
   - Accounts Receivable - Pandemic Impact: This account can be used to track outstanding receivables that may have been affected by the pandemic, such as delayed payments from customers.
5. Equity:
   - Reserves - Pandemic Relief: This account can be used to track any specific equity reserves set aside to address pandemic-related financial challenges.

It's important to note that the Chart of Accounts should be adapted to the specific needs and circumstances of each organization. Additionally, financial reporting and accounting for pandemics may require compliance with specific accounting standards and regulations that address the unique circumstances presented by such events. Properly accounting for the financial effects of a pandemic can help businesses and organizations make informed decisions, manage resources effectively, and demonstrate transparency in financial reporting.

Disaster Management and Acts of God

Disaster management and Acts of God are related to how individuals, organizations, and governments respond to and mitigate the impacts of natural or human-induced disasters. Let's explore each of these concepts:

1. Disaster Management: Disaster management refers to the coordinated efforts and strategies put in place to prepare for, respond to, and recover from disasters. Disasters can include natural disasters like earthquakes, floods, hurricanes, wildfires, and tsunamis, as well as human-induced disasters like industrial accidents, terrorist attacks, and pandemics. The key components of disaster management include:
    - Preparedness: Planning and organizing resources, infrastructure, and personnel in advance to effectively respond to disasters. This includes creating emergency response plans, conducting drills and exercises, and establishing communication systems.
    - Response: Immediate actions taken to address the emergency when a disaster occurs. This involves search and rescue operations, providing medical aid, and coordinating emergency services.
    - Recovery: The process of restoring and rebuilding communities after a disaster. This includes rehabilitation, reconstruction, and support for affected individuals and businesses.
    - Mitigation: Strategies to reduce the impact of future disasters. This can involve implementing building codes, constructing flood barriers, promoting sustainable land use, and raising awareness about disaster risk reduction.
2. Acts of God: The term "*Acts of God*" is often used in insurance and legal contexts to describe events that are beyond human control and are not caused by human actions. Acts of God are typically considered natural disasters or catastrophic events caused by forces of nature. These events are unforeseen, unexpected, and cannot be prevented or avoided. Examples of Acts of God include earthquakes, lightning strikes, volcanic eruptions, hurricanes, and tornadoes.

In insurance contracts, "*Acts of God*" are usually specified as events for which coverage may be provided, depending on the type of insurance policy. It is essential for individuals and businesses to understand their insurance coverage and whether it includes protection against Acts of God.

It's worth noting that disaster management is focused on preparing for and responding to disasters, whether they are natural or human-induced. Acts of God, on the other hand, specifically refer to

uncontrollable and unforeseen natural events. Both concepts are essential in understanding how societies and organizations cope with and recover from adverse events that can significantly impact communities, economies, and the environment.

Are there any examples of how governments help businesses and organizations to get on their feet?

Yes, governments often play a crucial role in providing support and assistance to businesses and organizations to help them get back on their feet after facing challenges such as economic downturns, natural disasters, or other adverse events. Here are some examples of how governments can help businesses during difficult times:

1. Financial Assistance and Grants: Governments may offer financial assistance in the form of grants, low-interest loans, or subsidies to help businesses cover immediate expenses or invest in recovery efforts. These funds can be directed towards rebuilding infrastructure, restocking inventory, or supporting employee wages.
2. Tax Relief and Incentives: Governments may provide tax relief measures, such as tax breaks, deferred tax payments, or tax credits, to ease the financial burden on businesses during challenging periods. These incentives can improve cash flow and make it easier for businesses to recover.
3. Business Recovery Funds: Governments may establish dedicated funds to support businesses affected by specific events, like natural disasters or economic crises. These funds can be used to provide targeted assistance and ensure a more rapid recovery for impacted businesses.
4. Employment Support: To prevent lay-offs and maintain employment levels, governments may implement wage subsidy programs that help businesses retain their workforce during chllenging times.
5. Access to Credit and Financing: Governments can collaborate with financial institutions to provide businesses with easier access to credit and financing options. This helps businesses secure the necessary capital to restart operations and invest in growth.
6. Support for Innovation and Diversification: In times of crisis, governments may encourage businesses to innovate and diversify their operations to adapt to changing market conditions. Funding programs or initiatives may be put in place to support research and development, technology adoption, and market expansion.
7. Streamlined Regulatory Processes: Governments can expedite permitting and licensing processes to help businesses resume operations more quickly after a disruption. Reducing bureaucratic hurdles can speed up recovery efforts.
8. Industry-Specific Assistance: In sectors heavily impacted by adverse events, governments may

provide tailored support to address unique challenges faced by those industries. This could include support for tourism, agriculture, healthcare, or other sectors directly affected by disasters or crises.

9. Training and Skills Development: To help businesses rebuild and thrive, governments may offer training programs and skill development initiatives to equip workers with new competencies aligned with emerging opportunities.
10. Public-Private Partnerships (PPPs): Governments can partner with private businesses and organizations to pool resources, expertise, and knowledge to jointly address recovery challenges.

It's essential to note that the type and extent of government assistance may vary depending on the severity and nature of the crisis and the country's financial capacity. Governments often work in collaboration with local authorities, non-governmental organizations, and international partners to implement these support measures effectively. Businesses should proactively seek information about available government assistance programs and engage with relevant agencies to access the support they need during challenging times.

Disaster Management and Acts of God - Accounts for governments support and assistance in the Chart of Accounts

In a Chart of Accounts for a government entity or a business that receives government support and assistance for disaster management and acts of God, the accounts related to such support and assistance would typically be categorized under specific revenue and expense accounts. Here are some typical accounts that may be included:

1. Revenue Accounts:
    - Grants - Disaster Relief: This account is used to record the revenue received from the government as grants specifically designated for disaster relief efforts and assistance in the aftermath of acts of God.
    - Subsidies - Disaster Management: This account is used to record any subsidies received from the government to support ongoing disaster management activities or to cover costs associated with preparedness and prevention measures.
    - Emergency Funding: This account is used to record any emergency funding received from the government during times of crises caused by natural disasters or acts of God.
2. Expense Accounts:
    - Disaster Relief Expenditures: This account is used to track all expenses related to providing relief and assistance to individuals, communities, or businesses affected by disasters and acts of God.

- Disaster Recovery Costs: This account is used to record expenses incurred during the recovery and reconstruction phase following a disaster or act of God.
- Preparedness and Prevention Costs: This account is used to track expenses related to measures taken to prepare for potential disasters and mitigate their impact on communities and infrastructure.
- Emergency Response Expenses: This account is used to record expenses incurred during immediate emergency response efforts when disaster strikes.

3. Other Accounts:

- Contingency Reserve: This account is used to set aside funds as a contingency reserve to be utilized for disaster management and acts of God if needed.
- Catastrophe Fund: Some governments or businesses may maintain a separate fund specifically designated to cover expenses related to catastrophic events, including acts of God.

It's important to note that the specific accounts and their names may vary depending on the organization's structure, accounting practices, and the nature of government support and assistance received. Additionally, the Chart of Accounts should align with any applicable accounting standards and reporting requirements.

Having these specific accounts in the Chart of Accounts helps the organization track and report on the financial impact of disaster management efforts and acts of God, ensuring transparency and accountability in the use of government support and assistance. It also allows for effective financial planning and budgeting for future disaster-related events.

SASRIA - South African Special Risks Insurance Association

What is SASRIA?

SASRIA, also known as the South African Special Risks Insurance Association, is a state-owned, non-profit insurance company based in South Africa. It was established in 1979 by the South African government to provide insurance coverage for special risks that are not typically covered by standard insurance policies offered by private insurers.

The primary function of SASRIA is to offer insurance coverage against certain politically motivated or politically motivated-related risks, as well as acts of terrorism, riots, strikes, civil commotion, public

disorder, and malicious damage. These risks are often excluded from standard insurance policies, making it essential for businesses and individuals to seek coverage from a specialized insurer like SASRIA.

Key features of SASRIA and its coverage include:

1. Non-Profit Nature: SASRIA operates on a non-profit basis, and any excess premiums collected are used to strengthen the association's reserves and enhance its ability to meet claims.
2. Mandatory Coverage: Certain types of insurance, such as motor insurance and property insurance for commercial properties, may require compulsory SASRIA coverage in South Africa.
3. Affordable Premiums: SASRIA's premiums are generally considered affordable, and its coverage provides an extra layer of protection against politically motivated risks and acts of terrorism.
4. Special Risks Coverage: SASRIA provides coverage for a wide range of special risks, including damage to property and assets resulting from riots, strikes, and civil unrest.
5. Catastrophic Events: SASRIA plays a critical role in offering insurance coverage against catastrophic events that can have significant financial implications for businesses and individuals.
6. Public Liability Coverage: SASRIA's coverage extends to public liability, protecting insured parties against third-party claims arising from the covered risks.
7. Commercial and Personal Policies: SASRIA coverage is available for both commercial and personal policies, providing protection for various types of assets and risks.

It's important to note that SASRIA is specific to South Africa and serves as an important mechanism to protect businesses, properties, and assets against politically motivated risks and civil unrest. As a state-owned entity, SASRIA operates under the regulations and guidelines set by the South African government and fulfils a critical role in the country's insurance landscape.

Is is SASRIA compulsory for businesses in South Adrica?

Yes, SASRIA (South African Special Risks Insurance Association) is compulsory for businesses in South Africa. SASRIA provides insurance coverage for special risks, such as damage caused by riots, strikes, civil commotion, terrorism, and malicious damage. While many standard insurance policies in South Africa cover common risks like fire, theft, and natural disasters, they do not typically include coverage for damage caused by civil unrest, riots, and acts of terrorism.

To address this gap in insurance coverage, the South African government made SASRIA coverage mandatory for businesses and other entities in the country. This requirement ensures that businesses are protected against specific risks related to civil unrest and acts of terrorism, which are unique to certain regions and periods of time.

The compulsory nature of SASRIA coverage means that businesses operating in South Africa must include

SASRIA insurance in their risk management and insurance portfolios. Businesses are required to pay a premium based on their specific risk profile, which allows them to access SASRIA coverage for the designated special risks.

Compliance with SASRIA requirements is essential for businesses to avoid potential financial liabilities and losses resulting from events covered by SASRIA. By obtaining this coverage, businesses can better protect their assets, operations, and stakeholders from the potential impact of civil unrest and other special risks specified in the SASRIA policy.

Is similar insurance compulsory in other countries?

The requirement for similar insurance coverage, similar to SASRIA in South Africa, is not universal across all countries. The need for specialized insurance coverage for risks like civil unrest, riots, terrorism, and malicious damage can vary depending on the specific risk landscape and the prevalence of such events in each country. As a result, not all countries have a compulsory insurance scheme like SASRIA.

However, some countries do have specific insurance arrangements or government-backed insurance programs that address unique risks or provide coverage for events that are not typically covered by standard insurance policies. These programs are often designed to address risks that may be more prevalent in certain regions or industries.

Examples of similar insurance programs in other countries include:

1. Terrorism Risk Insurance Programs: Some countries, especially those at higher risk of terrorism, have established government-backed or public-private partnership terrorism insurance programs. These programs provide coverage for losses resulting from acts of terrorism.
2. Natural Disaster Insurance Pools: Countries located in regions prone to natural disasters, such as earthquakes, hurricanes, or floods, may have established insurance pools or government-backed programs to provide coverage for damages resulting from these events.
3. Riots and Civil Unrest Coverage: In regions with a history of civil unrest or political instability, insurers may offer specialized insurance policies that cover damage resulting from riots, strikes, and civil commotion.
4. War Risk Insurance: In some cases, businesses operating in areas with heightened geopolitical risks or conflicts may seek war risk insurance coverage to protect against losses related to war, armed conflict, or political violence.

The availability and compulsory nature of such insurance programs depend on the country's legal and regulatory framework, its assessment of risk exposures, and the specific needs of the economy and society. Some countries may rely on private insurance markets to address these risks, while others may implement government-supported initiatives to ensure adequate coverage.

If businesses operate in countries other than South Africa, they should investigate the specific insurance requirements and risk landscape of those regions to determine the need for any specialized or compulsory insurance coverage related to civil unrest, terrorism, or other unique risks. Local insurance providers and regulatory authorities can provide valuable information and guidance on insurance options available in each respective country.

How do SASRIA fit in a Chart of Accounts - What would the typical transactions and accounts be?

In a Chart of Accounts, SASRIA would typically be categorized as an insurance expense account. Since SASRIA provides insurance coverage for special risks, the premiums paid to SASRIA would be recorded as an expense to the business or organization.

Here's how SASRIA would fit into a Chart of Accounts, along with some typical transactions and accounts:

1. Chart of Accounts Category:
    - Insurance Expense: This is the category under which the SASRIA premium expenses would be recorded.
2. Typical Account for SASRIA Premiums:
    - Insurance Expense - SASRIA: This account would be used to record the premium expenses paid to SASRIA for coverage against special risks, such as riots, strikes, civil commotion, public disorder, terrorism, and malicious damage.
3. Typical Transactions:
    - Payment of SASRIA Premium: When the business makes the premium payment to SASRIA for the insurance coverage, the transaction would be recorded as a debit to the "Insurance Expense - SASRIA" account and a credit to the bank or cash account.
    - Monthly/Quarterly/Annual Adjustment: Depending on the frequency of premium payments, the "Insurance Expense - SASRIA" account would be adjusted accordingly to reflect the expense for the specific period.
4. Additional Accounts:
    - It's important to note that in addition to the SASRIA premium expense, the business may have other insurance expenses related to standard insurance coverage for assets, liability, motor vehicles, etc. Each type of insurance coverage would have a separate expense account in the Chart of Accounts.
    - For example:

- Insurance Expense - Property Insurance
- Insurance Expense - General Liability Insurance
- Insurance Expense - Motor Vehicle Insurance

It's essential to tailor the Chart of Accounts to the specific needs and complexities of the business or organization. The accounts mentioned above are general examples, and the actual structure may vary depending on the industry, size, and unique insurance requirements of the entity.

By allocating the SASRIA premium expenses to a specific account, businesses can accurately track their insurance costs and understand the financial impact of this special risk coverage. Properly categorizing the insurance expenses ensures transparent financial reporting and facilitates the management's ability to make informed decisions about risk management and insurance coverage.

SASRIA Premiums - Accrual basis

When recording SASRIA premiums on an accrual basis in the Chart of Accounts, you would follow the principles of accrual accounting, which recognizes revenue and expenses when they are earned or incurred, regardless of when the cash transactions occur. Here's how SASRIA premiums would be recorded on an accrual basis:

1. Accrual Accounting Principle:
    - Under accrual accounting, SASRIA premiums would be recognized as an expense in the accounting period when the insurance coverage is effective and the business incurs the liability for the premium. This is the period during which the risk coverage is provided, regardless of whether the actual payment has been made.
2. Typical Account for SASRIA Premiums on Accrual Basis:
    - Insurance Expense - SASRIA: This account is used to record the accrued SASRIA premium expense for the accounting period.
3. Recording the Accrual:
    - At the end of each accounting period (month, quarter, or year), the business will accrue the SASRIA premium expense for the coverage provided during that period.
    - To record the accrual, the business will make the following adjusting entry:

        Debit: Insurance Expense - SASRIA (Income Statement Account)
        Credit: Accrued Liabilities - SASRIA Premium (Balance Sheet Account)

    The debit to the "*Insurance Expense - SASRIA*" account recognizes the expense in the income statement, and the credit to the "Accrued Liabilities - SASRIA Premium" account establishes the liability for the

unpaid premium.

4. Payment of Accrued SASRIA Premium:

   When the business makes the actual payment of the accrued SASRIA premium, a separate journal entry is made to reflect the payment:

   Debit: Accrued Liabilities - SASRIA Premium (Balance Sheet Account)
   Credit: Bank or Cash Account (Balance Sheet Account)

   This entry reduces the liability for the accrued premium and reflects the cash outflow for the payment.

5. Reversal of Accrual (If Applicable):

   If the business makes the premium payment before the end of the accounting period to which the accrual applies, a reversal entry may be required to avoid double counting the expense.

   Debit: Accrued Liabilities - SASRIA Premium (Balance Sheet Account)
   Credit: Insurance Expense - SASRIA (Income Statement Account)

   This entry eliminates the accrual for the portion of the premium already paid.

By using the accrual basis to record SASRIA premiums, the financial statements will accurately reflect the expenses incurred during each accounting period, providing a more accurate picture of the business's financial performance and obligations related to insurance coverage. Accrual accounting helps in matching revenues and expenses in the appropriate accounting periods, improving the overall financial reporting accuracy.

SASRIA - Is there similar regulations and legislation in other countries or jurisdictions?

SASRIA (South African Special Risks Insurance Association) is a unique state-owned insurance association in South Africa that provides coverage for special risks, such as damage caused by riots, strikes, civil commotion, terrorism, and malicious damage. While SASRIA is specific to South Africa, there are similar entities and insurance coverage options available in some other countries, particularly in regions prone to certain types of risks. These entities are often established to provide insurance coverage for risks that are not typically covered by standard insurance policies.

Although the specific names and structures of such insurance entities may vary, they serve similar functions in providing coverage for special risks. Some examples of similar entities in other countries include:

1. Terrorism Risk Insurance Programs: In some countries, governments have established terrorism risk insurance programs to provide coverage against losses resulting from acts of terrorism. These programs are often designed to complement private insurance coverage for terrorism-related risks.

2. Riots and Civil Commotion Coverage: Some insurers in regions with a history of civil unrest or political instability may offer specialized insurance policies that cover damage resulting from riots, strikes, and civil commotion.
3. Natural Disaster Insurance Pools: In areas prone to natural disasters such as earthquakes, hurricanes, or floods, some countries have established insurance pools or government-backed programs to provide coverage for damages resulting from these events.
4. Specialized Insurance Programs: Certain regions or industries may have unique risks that are not adequately covered by standard insurance policies. As a result, specialized insurance programs or associations may be established to address these specific risks.

It's important to note that the availability of such specialized insurance coverage varies from country to country and depends on the prevalent risks and the government's approach to managing these risks. Additionally, the legal and regulatory frameworks that govern insurance entities differ in each jurisdiction.

For businesses operating in regions with unique risks that may not be fully covered by standard insurance, it is crucial to conduct thorough risk assessments and explore available insurance options to adequately protect their assets and operations. Consulting with insurance professionals familiar with the local market and regulatory environment can help businesses make informed decisions about their insurance needs.

osFinancials5/TurboCASH5 Program

The osFinancials5/TurboCASH5 program is easy to use with a user-friendly graphical interface. When launching osFinancials5/TurboCASH5 for the first time, the osFinancials5/TurboCASH5 program will be displayed in the language linked to a Set of Books, when a Set of Books is opened in osFinancials5/TurboCASH5 is launched for the first time.

For the purposes of this documentation, the images (screenshots) are displayed in the default English language.

By default, osFinancials5 will be displayed in the "Classic" theme. You may select another theme (i.e. "Blue, Glass, Material, Silver, Soft-blue" or "VS2010") on Theme (Setup ribbon) to change the appearance of osFinancials5/TurboCASH5.

The Material-navy theme (black icons) is used for screen captures in the rest of this documentation.

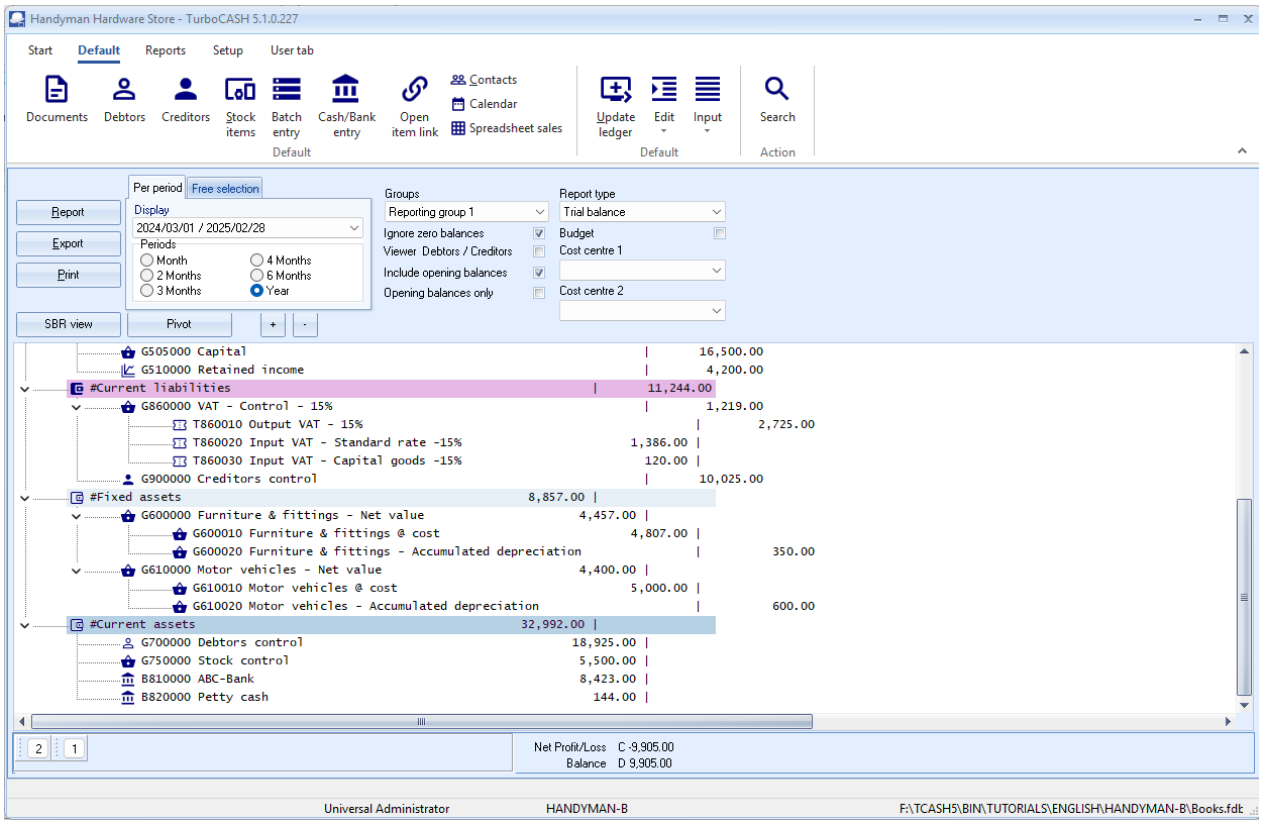
The Blue, Glass, Silver, Soft-blue theme includes a similar set of icons as in the Material theme (navy-blue

icons).

The "Classic" theme (default theme) and "VS2010" theme displays the same set of icons (located in the "... \bin\themes\Classic" folder.

Most of the program options can be easily accessed by one or more mouse-clicks or by pressing a few buttons on the keyboard.

osFinancials5/TurboCASH5 offers many features and options. To enhance your effectiveness and efficiency to perform your tasks in the program, it is important that you can access the required options as quickly and effortlessly as possible. The osFinancials5/TurboCASH5 program screen will be briefly discussed:



The design of the osFinancials5 user-interface (UI) offers you different options, which displays information and/or allows you to access the different features and options:

1. Title bar – Displays the Company name of the opened (active) Set of Books and the name and the version of osFinancials5/TurboCASH5 program.

2. Ribbon bar - Displays the ribbon tabs (i.e. Start, Default, Reports, Setup and User tab).

You may press the F1 key on most screens, fields and tabs to launch the associated (context-sensitive help) topic.

3. Ribbons – The functions and features and utilities are grouped in five Ribbon tabs. These are:

    a) Start - Open, Register (will be displayed until yourosFinancials5/TurboCASH5 is registered), Backup / Restore, Delete Set of Books, Create Set of Books, Save as (Set of Books), Close Set of Books, Switch language and Help (menu list).

    b) Default – Documents, Debtors, Creditors, Stock items, Batch entry, Reconciliation, Open item link, Contacts, Calendar, Update ledger, Edit (menu list), Input (menu list), Search.

    c) Reports – Reports (menu list), User reports (menu list), Spreadsheet reports (menu list), Ledger analyser 1, Ledger analyser 2, T-Account viewer, Printer.

    d) Setup – Company info, Documents, Groups, Stock information, Reporting dates, Access control, Batch types, Salesperson, Printer, Workflow setup, Setup (menu list), Report designer, Import, Export and Tools (menu list).

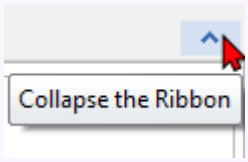
    e) User tab – This tab is by default not activated. The user tab is a quick menu to manage (customise) the menus, most frequently used. It can be grouped into up to six (6) groups. If users are added in Setup → Access control, it will store the custom menus for each user. There are two (2) options to activate this tab, i.e.:

        i) Auto learn – Tick this option to add the last accessed options to the User tab.

        ii) Edit – Add / Remove the options to be displayed in the User tab.

Show / Hide Ribbon options

You may also hide or show the ribbon options using the Collapse and Pin icons on the bottom of the right-hand corner of the ribbon options strip:



"Collapse the Ribbon" - this will hide the ribbon options strip.

"Pin the Ribbon" - this will show the ribbon options strip.

4. Status bar – The following is displayed in the Statusbar:

    a) User Name – Universal Administrator will be displayed when a Set of Books with no users and passwords. If users and passwords were set in Setup → Access control, it will display User and the user's name.

b) Name of Books - The Name of the opened (active) Set of Books is displayed in the fourth section.

c) Path of the Set of Books - The full path of the opened Set of Books is displayed in the last section.

Most of these program options are only accessible if a valid Set of Books are opened. If no Set of Books are opened, only the Start ribbon tab will be displayed. The Default, Reports, Setup and User tab ribbons will be inactive.

On the Start ribbon, the Open, Backup / Restore, Delete Set of Books, Create Set of Books, Switch language and Exit osFinancials5 options will be accessible.

You need to have a Set of Books opened to access the Register and Save as options.

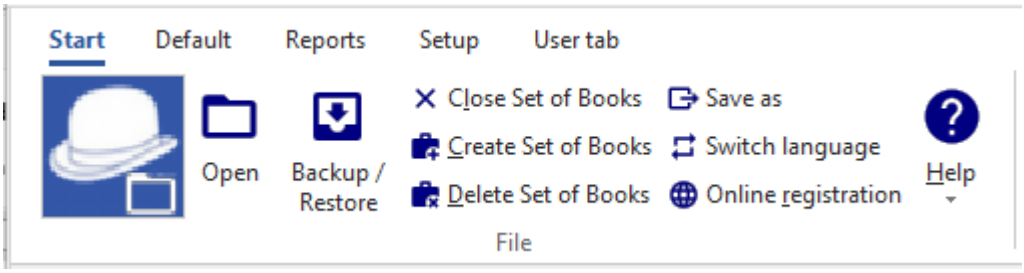
Ribbons

The functions and features and utilities are grouped in five Ribbon tabs.



Show / Hide Ribbon options

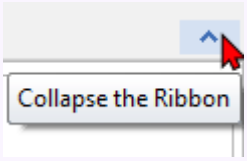
You may need some extra space when working with, Documents, Stock, Debtors, Creditors, Ledger analyser, etc.

To Auto hide the ribbons options, double-click on any of the ribbon tabs. This will hide the options on the ribbon and only display the ribbon tabs and auto-resize (larger) the screens in osFinancials5/TurboCASH5. You may then click on a ribbon tab to select and access the options. Once you have selected an option, the ribbon options will auto hide and only display the ribbon tabs.

To Show the ribbon options and resize the screens (smaller), you may double-click on a ribbon tab .

Show / Hide Ribbon options

You may also hide or show the ribbon options using the "Collapse the ribbon" and "Pin the ribbon" icons on the bottom of the right-hand corner of the ribbon options strip:



"Collapse the Ribbon" - this will hide the ribbon options strip.

"Pin the Ribbon" - this will show the ribbon options strip.

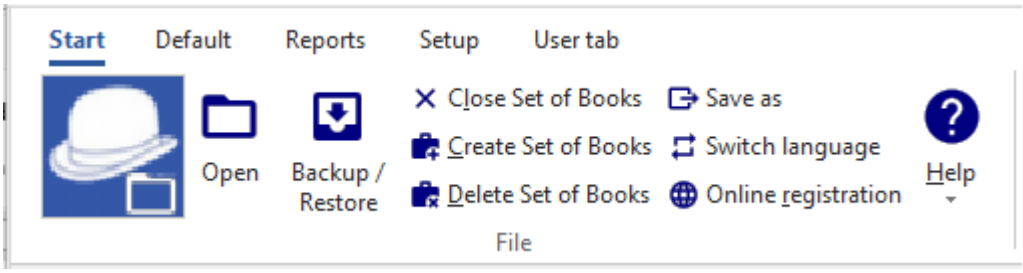
These ribbon tabs are:

1. Start - This ribbon tab is used to manage your sets of books, backups, registration and language.
2. Default -
    a) Records - Debtors, creditors, contacts, stock items, appointments, tasks, etc.
    b) Processing of transactions in sales documents (i.e. invoices, credit notes and quotes) and purchase documents (i.e. purchases, supplier returns and orders), batches (journals), managing open item accounts (adjust payment dates and/or process receipts / remittance advice for payments and/or refunds, etc.
    c) Periodic processing – Open item, Reconciliation, Repeating transactions Repeating invoices.
    d) Search – Search for data in the central search and print transactions and documents, etc.
3. Reports - Print reports, User reports, Spreadsheet reports, Ledger analyser, T-account viewer, Age analysis, Printer setup, etc.
4. Setup - This ribbon tab is used to access the Setup, Tools, Global processes, Themes and Plugins.
5. User tab - This ribbon tab is a custom (quick menu). It is used to manage user navigation in a Set of Books. You may select (tick) the "*Auto-learn*" feature to add the last accessed options in up to six (6) groups.

Created with the Standard Edition of HelpNDoc: Easily create Web Help sites

Start ribbon

The Start is used to manage your sets of books, backups, registration and language.



The following nine options are available:

1. Open - This option allows you to open an existing Set of Books, which is essentially a collection of financial data and records that you have previously created / saved.

2. Backup / Restore - With this option, you can create a backup file of your current Set of Books, which is useful for data recovery in case of loss or corruption. You can also restore a Set of Books from a valid backup file.

3. Close Set of Books - This option allows you to close the currently opened Set of Books. Once the Set of Books is closed, you will not be able to access any of its data or records until you reopen it.

4. Create Set of Books - You may use the different options available when creating a new Set of Books in osFinancials:

    a) Copy an existing Set of Books - With this option, you can create a new Set of Books by making an exact copy of an existing one. This includes all of the data contained within the Set of Books. You simply select the Set of Books you want to copy and the system will create a new one in a directory of your choosing.

    b) Let osFinancials help you to create a Set of Books - This option allows you to create a new Set of Books by selecting a selected Set of Books as a template. The program will then guide you through the process of setting up your new Set of Books. You can also download pre-existing Sets of Books for your specific country or industry as templates to use as a starting point. See a list of the Sets of Books available for a download.

    c) Create a Set of Books (Advanced) - This option is intended for more advanced users who want to create a new Set of Books from scratch. In addition to the Firebird database type, you can also select to create a Set of Books using the MSSQL database type. This option provides more flexibility and control over the structure and content of your new Set of Books.

5. Delete Set of Books - If you no longer need a particular Set of Books, you can use this option to permanently delete it.

6. Save as - This option is used to save a copy of the currently opened Set of Books with a different name.

7. Switch language - With this option, you can change the language used in the osFinancials5/TurboCASH5 program.

8. Online registration - This option will take you to the "*Register your osFinancials / Register your TurboCASH*" screen where you can register your copy of osFinancials5/TurboCASH5 online.

9. Help -

    a) Help - This option will launch the context-sensitive Help file and display support information respectively. You can use the Help file to get more information on any particular feature or option in osFinancials5/TurboCASH5. You may press F1 to launch the help file from most screens and fields to launch the topic relating to that screen or field. This help system is designed to assist users in understanding and navigating the osFinancials accounting software, as well as to provide guidance on accounting principles and practices.

    b) Support - This option will provide you with contact information for technical assistance.

    c) Show welcome - This option will display the latest news and updates related to osFinancials5/TurboCASH5.

    d) Updates - Once you install osFinancials5/TurboCASH5 on your system, updates will be released from time to time, containing bug fixes, new features, and other improvements. You may use the "*Updates*" option to install an updated version of osFinancials5/TurboCASH5.

    e) Forum - With this option, you can access the osFinancials forum where you can ask questions or search for solutions to issues that other users have faced.

    f) Webshop - This option will take you to the osFinancials webshop where you can purchase additional features or support services.

    g) Bug report - This will land on the osFinancials Forum page where you can report any bugs or issues you encounter while using the program.

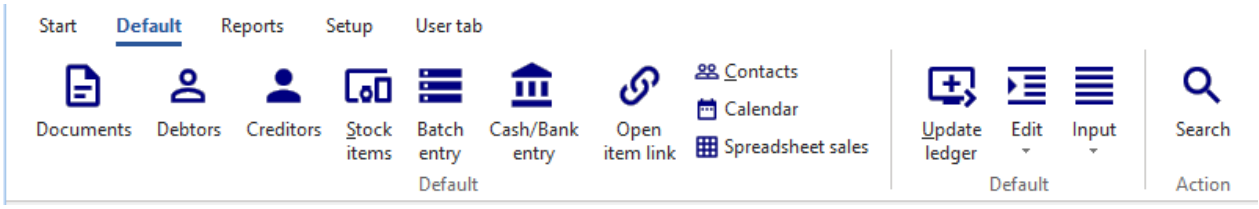
Default ribbon

The Default ribbon in osFinancials5/TurboCASH5 is used to manage various aspects of your business operations.

- Master files – It includes tools for managing master files such as debtors, creditors, contacts, stock items, appointments, and more.
- Transactions - You can also use this ribbon to process transactions, including sales documents (invoices, credit notes, quotes) and purchase documents (purchases, supplier returns, orders), as well as batches (journals).
- Periodic processing – Additionally, the Default ribbon provides tools for periodic processing, such as open item management, cash-book transactions, and repeating transactions or invoices.
- Search – The search function allows you to search for data in a central search and print transactions and documents as needed.



The Default ribbon offers fourteen (14) options to process and manage various aspects of the Set of Books:

1. Documents - The Documents feature allows you to process and manage sales documents like invoices, credit notes, and quotes for your debtor (customer / client) accounts Similarly, you can process and manage purchase documents like purchases, supplier returns and orders for your creditor (supplier / vendor) accounts. The Documents option allows you to manage all these documents, and it automatically generates the required transactions and source documents. Additionally, you can print, reprint, and choose from various layout files for these documents.
2. Debtors - The Debtors feature allows you to manage debtor (customer/ client) accounts. You can create new accounts, edit existing ones, delete or disable accounts as needed. This feature also provides filtering and search options to locate specific debtor (customer/ client) accounts. Within a debtor (customer/ client) account, you can make changes to the name, contact details, addresses,

messages, accounting information, and payment terms. You can also manage various activities, such as Contacts, Appointments or tracking transactions, on the Documents, Transactions, Bank accounts, Backorders and Stock items tabs. Overall, the Debtors feature is designed to help you efficiently manage and track customer or client accounts, allowing you to provide better service and ensure accurate financial records.

3. Creditors - The Creditors feature allows you to manage creditor (supplier / vendor) accounts. You can create new accounts, edit existing ones, delete or disable accounts as needed. This feature also provides filtering and search options to locate specific creditor (supplier / vendor) accounts. Within a creditor (supplier / vendor) account, you can make changes to the name, contact details, addresses, messages, accounting information, and payment terms. You can also manage various activities, such as Contacts, Appointments or tracking transactions, on the Documents, Transactions, Bank accounts and Stock items tabs. The overall purpose of the Creditors feature is to enable you to efficiently manage and track creditor (supplier / vendor) accounts, which in turn allows you to provide better service and ensure accurate financial records.

4. Stock items - The Stock items feature allows you to manage your inventory items or products. You have the ability to create new stock items or products, edit existing ones, delete or disable items as needed. The feature provides filtering and search options to help you locate specific items. Within each item, you can make changes to the stock code, description, extra description, quantities, reorder levels and more. You can also manage various settings on the Ledger tab and various activities on the Document groups, Transactions, Image, Multi-group, and Backorders tabs. By using the Stock Items feature, you can efficiently manage and track your inventory, providing better service and ensuring accurate financial records.

5. Batch entry - Batch entry is a process of entering multiple transactions into batches or journals, and then processing those transactions in the selected batch or journal. This feature enables you to import multiple transactions at once from a spreadsheet or an exported file, instead of manually entering and processing each transaction. This helps to streamline financial and accounting processes, especially for businesses or organizations with high volumes of transactions. Additionally, you can print a posted batch type report for selected batches (journals).

6. Cash / Bank entry - Reconcile transactions is processed (entered form bank statements) in separate payment batches and receipt batches (linked to a bank account). (If the "*Default bank reconciliation*" option is selected).

Bank import plugin - Bank Reconciliations Plugin Manual - BankImport Plugin Manual - Shop - The Bank import plugin licence is included in the 7. osFinancials5/TurboCASH5 Business class subscription.

The Bank import plugin is a tool that can be added to the software to import bank transactions and save users time on data entry. Bank statements can be imported into a single cash-book journal (combined payments journal and receipts journal). The imported transactions can be easily linked to debtor, creditor, or other accounts, and payments can be linked to specific invoices with just a few clicks. To activate this feature, go to Setup ribbon, select Setup → System Parameters..

7. Open item link - Process and edit links for open item accounts, adjust payment dates, and process receipts or payments.

8. Contacts - Create and edit contact persons and print a contact list.

9. Calendar - The calendar / planner allows you to manage (schedule, add, edit, delete) events (appointments, debtor appointments, creditor appointments, repeating invoices and to generate quotes / invoices for events). It also allows you to (add / edit / delete) contacts and tasks.

10. Spreadsheet sales - Process sales in a spreadsheet

11. Update ledger - Update (post) sales documents (i.e. invoices and credit notes) and purchase documents (i.e. purchases and supplier returns) and batches to the ledger.

12. Edit - Access the following four (4) options:

    a) Backorders - Add, edit and delete backorders for stock items.

    b) Repeating transactions - Enter / edit transactions in batches of a recurring nature.

    c) Repeating invoices - Generate and process invoices of an recurring nature.

    d) Documents (delete) - Delete sales documents (i.e. invoices, credit notes and quotes) and purchase documents (i.e. purchases, supplier returns and orders).

13. Input - Access the following ten (10) options:

    a) Confirm - Confirm and convert quotes to invoices and orders to purchases.

    b) Adjust stock - Access the Edit Stock screen. You may edit stock items, adjust quantities, prices, etc.

    c) Invoices - Invoices are created for debtors (customers / clients). This will generate a source document which can be printed. The Invoice, can be edited before it is posted (updated) to the ledger.

    When an Invoice is posted (updated) to the ledger, the transactions in the Sales journal will automatically be generated.

d) Quotes - You may need to produce a quote for your debtors (customers / clients). When the quote is accepted, you may confirm the quote (convert the Quote to an Invoice).

e) Credit notes - Credit notes are created for debtors (customers / clients) to correct a transaction or an exiting Invoice or to cancel the Invoice. This will generate a source document which can be printed. The Credit notes, can be edited before it is posted (updated) to the ledger.

When a Credit note is posted (updated) to the ledger, the transactions in the Sales journal (or Sales returns journal) will automatically be generated.

f) Purchases - Purchase documents are created creditors (suppliers). This will generate a source document which can be printed. The Purchase document, can be edited before it is posted (updated) to the ledger.

When a purchase document is posted (updated) to the ledger, the transactions in the Purchase journal will automatically be generated.

g) Supplier returns - Supplier returns are created creditors (suppliers) to correct a transaction or an exiting Purchase or to cancel the Purchase. This will generate a source document which can be printed. The Supplier returns, can be edited before it is posted (updated) to the ledger.

When a Supplier return is posted (updated) to the ledger, the transactions in the Purchase journal (or Purchase returns journal) will automatically be generated.

h) Orders - You may need to place an order with any of your creditors (suppliers). When the goods are received or services are provided, you may confirm the order against the actual goods received and the original order. You will do this by converting the Order to a Purchase document.

i) POS Invoice - If the standard Point-of-Sales is configured, for the Set of Books, you may run and manage a point-of-sales shift and process point-of-sale invoices.

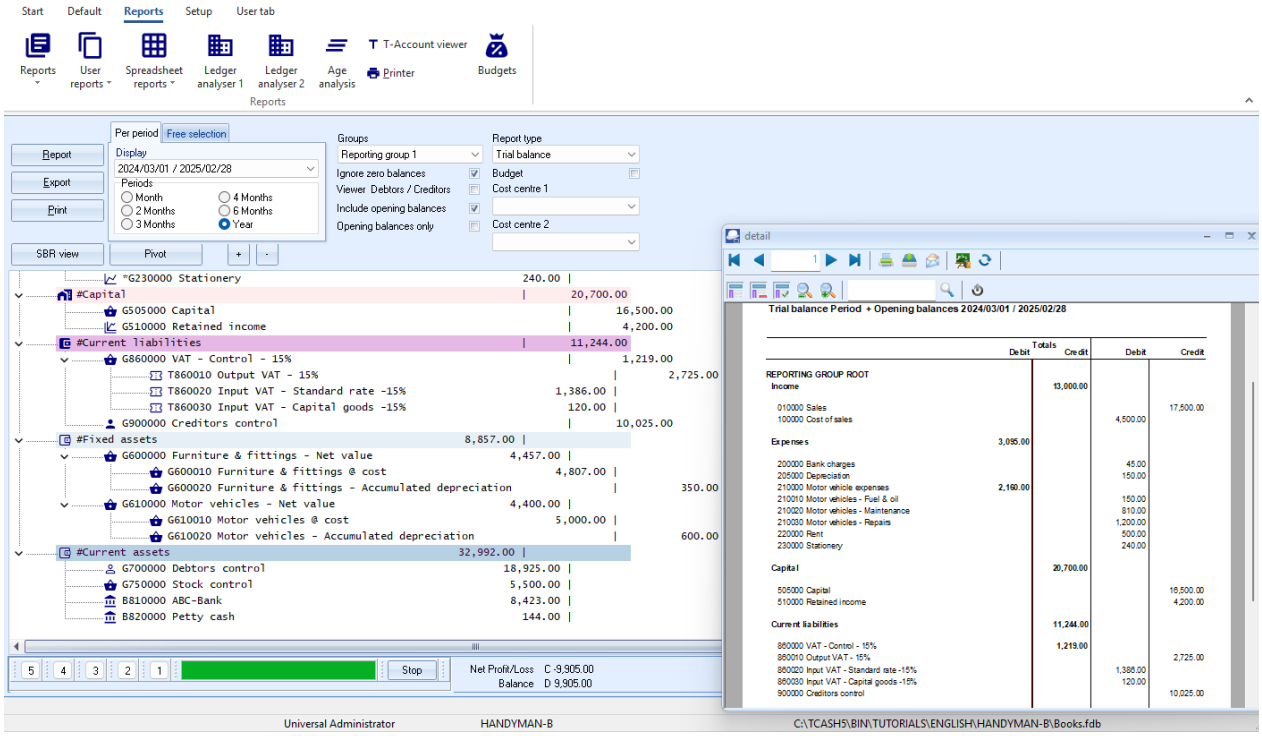
j) Checking for unposted items - This will list any batches and documents with transactions that have not yet been posted (updated) to the ledger.

14. Search - Launch the central search (Investigator) to search and filter for data in the Set of Books.

Created with the Standard Edition of HelpNDoc: Full-featured Help generator

Reports ribbon

The Reports ribbon is used to access all Reports, User reports, Spreadsheet reports and reports in the Ledger analyser 1 / Ledger analyser 2 and T-Accounts can be accessed and printed and even exported and opened in a Spreadsheet. It is also used to process and analyse Budgets access to the Printer setup.



Buttons 5, 4, 3, 2 and 1 at the bottom of the report - is shortcut keys to the last accessed T-Account viewer options or Pivot options. These shortcuts will be cleared when you close active forms, or when you open the Set of Books.

In addition to the Printer and Budgets options, the reports is grouped into the seven (7) options:

1. Reports - List the reports in the following groups:

    a) Ledger - You may print the Budget vs actual (3 periods) report, List the General ledger accounts (Chart of accounts) and Transaction reports.

    b) Debtors - You may print various age analysis reports, various listing reports, address labels, transaction reports, debtor statements and ageing analysis reports.

    c) Creditors - You may print various age analysis reports, various listing reports, address labels, transaction reports and creditor remittance advises and ageing analysis reports.

    d) Stock - Reorder reports, listing reports, stock movements, backorder reports. You may also print labels (barcodes).

e) Contacts - Lists the details of all your contacts.

f) Calendar - Print the appointments (events) (i.e. Appointment, Debtor appointment, Creditor appointment and Hours) that was scheduled in the Calendar / Planner.

g) Batch entry - Print the transactions of posted invoices, credit notes purchase and supplier return documents as well as posted batch transactions (i.e. sales journal, purchase journal, payments journals, receipts journals, general journals, etc.).

h) Documents - Lists your documents, such as invoices, credit notes, purchases, supplier returns documents, orders and quotes or a selection of documents or for a selected period.

i) Tax - If you are registered as a Tax (VAT/GST/Sales tax) vendor, you need to print and view reports for a specific period for all your Tax (VAT/GST/Sales tax) or for a specific tax code such as Input Tax (VAT/GST/Sales tax), Output Tax (VAT/GST/Sales tax), Zero-rated Tax (VAT/GST/Sales tax), etc.

j) Sales - Various reports are available to analyse your sales documents. Print Graphs, Debtors, Sales and Items reports for Invoices, Credit notes and Quotes.

k) Sales analysis - You may print reports for five (5) reporting groups (i.e. Debtor group 1, Debtor group 2, Document group 1, Document group 2 and Salespersons) for each sales documents (i.e. quotes, invoices and credit notes). You may also print sales per product for stock group 1 or stock group 2 reports for sales documents.

l) Purchases - Various reports are available to analyse your purchase documents. Print Graphs, Creditors, Purchases and Items reports for Purchase and Supplier return documents as well as Orders.

m) Purchase analysis - You may print reports for five (5) reporting groups (i.e. Creditor group 1, Creditor group 2, Document group 1, Document group 2 and Salespersons) for each purchase documents (i.e. orders, purchases and supplier returns). You may also print purchases per product for stock group 1 or stock group 2 reports for purchase documents.

n) Company info - You may print the details of the bank accounts or the company information, messages and cost of sales settings.

o) Currencies - If you process Multi-currency documents (i.e. Invoices, Credit notes and Quotes for debtors (customers / clients) or Purchases, Supplier returns and Orders for creditors (suppliers / vendors). you may print a list of the "*Currencies*" (added / edited in the Setup → Currencies menu on the Setup ribbon.

p) Plugins - Price agreement report for the Price agreement plugin.

q) Point-of-sale - Sales and Receipt reports for the plugin point-of-sale systems (if you

purchased and use the HorecaPOS or RetailPOS point-of-sale systems).

2. User reports - Any other reports that are under construction. Users may add their own reports in the …\plug_ins\reports\userreports folder.

> *You may use Report designer on the Setup ribbon to create, add or edit document layout files and reports. You may add your own reports to be accessible from the User reports menu.*
>
> - *User reports is stored in the …\plug_ins\reports\userreports filder.*
> - *Document layout files is stored in the …\plug_ins\reports\DOCUMENTS\DOCUMENTS folder.*

3. Spreadsheet reports - The following reports will be opened in the powerful spreadsheet feature in osFinancials5/TurboCASH5:

   a) Creditors - The Creditors → Listing - List postal addresses report will be imported into the spreadsheet.

   b) Debtors - The Debtors → Listing - List postal addresses report will be imported into the spreadsheet.

   c) Transactions per period - List the transactions in posted batches and documents (i.e. sales documents (Invoices and Credit notes) and Purchase documents (Purchases and Supplier returns)) for a selected period in a spreadsheet.

   d) General ledger - Budget

      i) Column balances this year - Reporting group 1

      ii) Column balances this year - This year

   e) General ledger (Transaction totals)

      i) Column balances this year - Reporting group 1

      ii) Column balances this year - This year Column balances

   f) Sales analysis

      i) Stock movement

      ii) Sales per period

4. Ledger analyser 1 - Trial balance, Income statement, Balance sheet, Standard column balances (column view of the Trial balance, Income statement and Balance sheet in one report), Budget vs actual, This year vs last year as well as Column balances.

Export button for all Report types on Ledger analyser 1 / Ledger analyser 2 -

You may save the export file as Text files (.txt) (default file type); or as CSV files (*.csv) (Comma Separated Values) file type. This will automatically open (launch) the exported file in the program associated with the selected file type:*

- *Text files e.g. (Export.txt) - This should automatically open the exported text file of your system's default text file program associated with Text file type (*.txt) file types (e.g. Notepad, etc). You need to close the exported text file and launch your spreadsheet program. In your spreadsheet program, Open the text file to launch the "Text Import" options.*
- *CSV files e.g. (Export.csv) - This should automatically open the "Text Import" options of your system's default spreadsheet program associated with Comma Separated Value file type (*.csv) file types (e.g. Microsoft Excel, LibreOffice Calc, OpenOffice Calc, Ultra Office, etc.).*

5. Ledger analyser 2 - The same reports are available as for the Ledger analyser 1, but it gives you another option to generate. print or export different views and reports.
6. Age analysis - View and choose options for the Age analysis report on screen and print it on the Reports ribbon and on the Open item link - Due tab (Default ribbon).
7. T-Account viewer - Analyse, print and export transactions for specific accounts, etc. You may also export the transactions in the T-Account viewer to spreadsheets.

Column balances - Report types on Ledger analyser 1 / Ledger analyser 2 - The column balances report types will list the transactions of a selected account for each period of Last year and This year in a spreadsheet format.

You may select an account and double-click on any period. This will launch the T-Account viewer with a list of all the transactions for the selected period. You may be print and/or export the transactions.

The following six (6) column balances report types is available:

1. *Column balances - Lists all ledger account balances in a spreadsheet view. These are the ledger accounts reported in the Trial balance (this includes both the accounts reported in the Income statement and Balance sheet).*
2. *Column balances debtors - Lists the balances of all the individual debtor (customer / client) accounts (Debtors on the Default ribbon) in a spreadsheet view. The total of these accounts are reported in the Debtor's control account on the Trial balance and the Balance sheet.*
3. *Column balances creditors - Lists the balances of all the individual creditor (supplier / vendor) accounts (Creditors on the Default ribbon) in a spreadsheet view. The total of these accounts*

are reported in the Creditor's control account on the Trial balance and the Balance sheet.

4. *Column balances D/C - Lists all debit and credit ledger account balances in a spreadsheet view. These are the accounts reported in the Trial balance (this includes both the accounts reported in the Income statement and Balance sheet).*
5. *Column balances debtors D/C - Lists the debit and credit account balances of all the individual debtor (customer / client) accounts (Debtors on the Default ribbon) in a spreadsheet view. The total of these accounts are reported in the Debtor's control account on the Trial balance and the Balance sheet.*
6. *Column balances creditors D/C - Lists all debit and credit balances of all the individual creditor (supplier / vendor) accounts (Creditors on the Default ribbon) in a spreadsheet view. The total of these accounts are reported in the Creditor's control account on the Trial balance and the Balance sheet.*

8. Printer - Setup and configure the printers on your system.
9. Budgets - You may process your budget figures, copy "*Budget figures from the previous year*" or from "*Actual figures from the previous year*". You may view, filter and analyse the budget figures in the Pivot feature.

This is in addition to the standard option to process budgets in Setup → Accounts (Setup ribbon).

Created with the Standard Edition of HelpNDoc: Maximize Your CHM Help File Capabilities with HelpNDoc

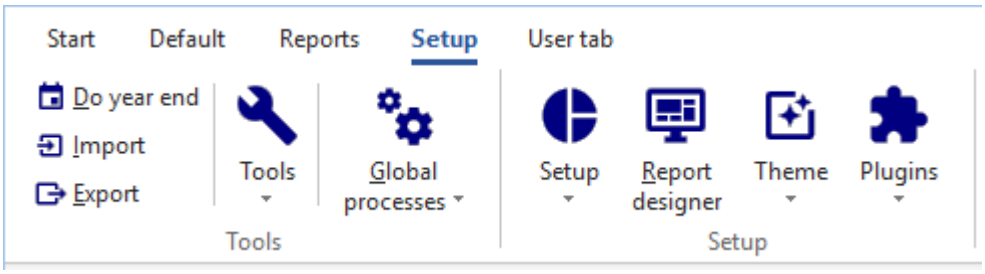
Setup ribbon

In osFinancials5/TurboCASH5, the Setup ribbon tab provides access to several key features, including the Setup, Tools, Global processes, Themes, and Plugins. These features are designed to enable you to customize your Set of Books and streamline your financial processes.

By accessing the Setup option, you can configure your Set of Books to meet the unique requirements of your business, including setting up your company information, document settings, reporting groups, accounts, and taxes. The Tools option allows you to access various tools that can help you manage your data, including backup and restore options, data import and export features, and more. The Global processes option provides access to batch processing functions, such as posting documents, running reports, and updating stock levels. The Themes option enables you to customize the appearance of your accounting system, while the Plugins option allows you to add additional features and functionality to your system. With the Setup ribbon tab, you can easily manage all aspects of your accounting system and

ensure that your financial data is accurate, up-to-date, and organized.

The Setup ribbon tab is used to access the Setup, Tools, Global processes, Themes and Plugins.



The following nine options (9) options are available:

1. Do year end - This option allows you to close off all nominal accounts (income and expense accounts) and transfer their balances for the current financial year to the Retained Income/Earnings account. The start date and the reporting dates for the financial year will also be created for the new financial year.

2. Import - Import accounts, debtors, creditors, documents and stock from specific file formats.

3. Export - Export accounts, debtors, creditors, documents, stock and posted batches to specific file formats.

4. Tools - Access the following five (5) options:

    a) Blockchain - By default not activated.

    > See *video on osFinancials and Blockchain*.

    b) Data integrity check - This option allows you to run a check on the integrity of your data and generate a corresponding report. By selecting this option, you can verify that your data is accurate and free of errors that could cause issues in your Set of Books. Once the check is complete, you can print the "*Data integrity check report*" to review the results and take any necessary corrective action.

    c) Customise language - Customise (edit, change and translate) language files. This option allows you to edit, change, and translate language files. By selecting this option, you can customise the language used in osFinancials5/TurboCASH5 to better suit your needs or preferences. This might involve making changes to existing language files, translating the osFinancials5/TurboCASH5 into a different language, or creating entirely new language files.

    d) Close active forms - This option allows you to close any open forms or screens within the Set of Books, such as the Documents, Debtors, Creditors, or Stock items screens. By selecting this option, you can quickly close all active forms.

e) Activate plugins - By default, no plugins is activated when osFinancials5/TurboCASH5 is installed. This option allows you to activate / deactivate all plugins, registered plugins or specific plugins. The activated plugins will be available from the Plugins menu (on the Setup ribbon).

5. Global processes - The following four (4) options are available:

   i) Clear / Reset - This option allows you to clear all transactions and balances in a Set of Books. By selecting this option, you will effectively reset the Set of Books, deleting all transactions and balances. However, you also have the option to retain all documents and set them to unposted status.

   ii) Copy from a Set of Books - This option allows allows you to copy data from a chosen Set of Books into the currently active (open) Set of Books. By selecting this option, all the existing data in the active Set of Books will be replaced with the data from the selected Set of Books.

   iii) Reverse posted batch / document - This feature enables you to reverse or cancel transactions in posted batches (journals) and documents.

      - Reverse posted batch (Journal) - This feature allows you to cancel transactions that were processed in batches (journals) which have already been updated (posted) to the ledger. By selecting this option, all the transactions that were previously updated (posted) to the ledger will be cancelled and removed from the transaction file.

        The cancelled transactions will be automatically imported to the selected batch (journal). At this point, you have the option to either erase or delete the entire batch (journal). If you wish to keep the cancelled (reversed) batch, you can edit and correct the transactions, balance the batch, print the batch list, and post it to the ledger.

      - Reverse posted document - This feature cancels the documents as well as any transactions that were generated by the documents (such as invoices and credit notes, purchases, and supplier returns) after they were updated (posted) to the ledger. The cancelled (reversed) document can then be accessed as an unposted document, which you can edit in the Documents section of the Default ribbon and then post (update) to the ledger. If you do not need to update (post) the document to the ledger, you may also choose to delete it using the Edit → Delete - Documents. option on the Default ribbon.

6. Setup -

a) Company info - Enter the company information (name, address telephone, fax numbers e-mail address) and registration numbers for the Company and VAT/GST/Sales Tax, if applicable.

i) You also need to set the default tax method and output method for reports (to screen, printer, file, e-mail or fax).

ii) Load your logo or picture, which you wish to be displayed on the documents.

iii) Set the default currency format and date format in your Windows Operating System.

b) Reporting dates - This option allows you to set the start date of your financial year and define the periods within it. By selecting this option, you can specify when your financial year begins and ends, as well as how it is divided into reporting periods. Additionally, you can close a specific period or year for posting transactions to the ledger, effectively preventing any further changes or updates to that time period. This can be useful for ensuring the accuracy and integrity of your financial records.

c) Documents setup - Settings for sales documents (i.e. invoices, credit notes and quotes) and purchase documents (i.e. purchases, supplier returns and orders). Set the defaults for documents, such as the numbers, batch types, headings and messages and document layout files.

On the Statements setup tab, you may enter a global message to be printed on Debtor statements (Reports → Debtors → Outstanding (Reports ribbon).

d) Accounts - Edit, Add or Delete General ledger accounts, Bank accounts and Tax accounts. Budget figures are also entered, edited or deleted for accounts.

Budget figures may also be processed in the Budgets option on the Reports ribbon. You may also view and analyse budget figures using the Pivot feature.

e) Groups - Set up to 2 Groups for ledger Accounts, Debtors, Creditors, Stock items and Documents for generating reports.

f) Stock information - The following settings are available:

i) Selling prices - Enter (edit) the descriptions for up to 3 selling prices. You may set the default selling price 1 / 2 / 3 which will be used globally when processing documents.

ii) Cost of sales - Set the parameters for Cost of sales (account, batch type, whether you will be using average or latest cost).

iii) Documents setup - This also contains various settings when processing documents and/or working with stock.

iv) Unit size - Specify the unit descriptions and sizes to be displayed in stock item screens and on layout files.

v) Tax classes - Create add, edit Tax classes (Account classes) to which you may select Input Tax codes, Output Tax codes, Sales, Cost of sales and Stock control accounts.

g) Batch types - Create or delete batch types or journals in which you wish to enter transactions. Batch types also need to be linked to sales documents (i.e. invoices and credit notes) and purchase documents (i.e. purchases and supplier returns) on Setup Documents.

h) Access control - Set the passwords, users and access to certain menus for each of your users.

i) Salesperson - Add or remove any salespersons, which will be processing sales documents (i.e. invoices, credit notes and quotes) and purchase documents (i.e. purchases, supplier returns and orders) or cashiers operating Point-of-Sale.

j) Financial categories - Link your Ledger Account groups to Assets, Capital, Expenses, Income or Liabilities.

k) System parameters - Select the indicators for debit and credit, number of decimals to be displayed on reports and documents as well as the number of decimals to be stored. You may also select to display the default system currency symbol.

l) Internet - This option enables you to configure your Internet settings so that you can send reports, statements, and lists to any person or organization via email. To do this, you will need to specify your email's outgoing mail server as set up by your Internet Service Provider on your computer system.

m) Countries - Add and manage the ISO CODE2 and ISO CODE3 as well as ICL CODES for each country. See Country codes.

n) Currencies - You may add / edit currencies and the exchange rates. When processing documents, you may select the currency. This will automatically calculate the prices for that currency.

o) Point-of-Sale - Set the Point-of-Sale parameters, configure printers, peripherals, etc.

p) Workflow Setup -

Workflow plugin - Manual - Shop - Licence : Once-off -

The workflow plugin allows you to record the steps or processes of a task.

The different screens osFinancials5/TurboCASH5 can be created such as the stock screen or debtors / creditors and documents. This allows you to record almost every conceivable process (steps) in a task, visualize and gain instant insight wherever you are in the process and what steps have been taken before.

A step can be assigned to a user and an administrator can see all workflow steps not done (outstanding steps) and possibly assign a task to a user. Outstanding transitions that are possible after showing the step.

Workflow is a knowledge system that can gain your knowledge or just to share it with others. This allows you to formalize your business and capture the steps in an automated system.

Another advantage is that you retain a better overview of your running processes and you have historical data at hand.

q) Printer - Select the default settings for printing reports and documents.

7. Report designer - Edit existing reports and layout files for documents. You may also create and edit your own reports and layout files.

8. Themes - This option enables you to customize the appearance of your accounting system, By default, osFinancials5 is installed in the "*Classic*" theme (default theme), while TurboCASH5 is installed by default in the "*Material-navy*" theme. You may select the "*Material Blue, Glass, Silver, Soft-blue*" or "*VS2010*" theme to be displayed in the program. You may also add your own favourite background pictures.

If you choose to use the "Classic" or "VS2010" theme, the icons that will be displayed will be those from the Classic theme icon set.

However, if you choose to use one of the following themes: "Blue, Glass, Silver", or "Soft-blue", a different set of icons in SVG file format will be displayed in Navy blue colour. On the other hand, if you select the "Material" theme, the same set of icons will be displayed but in the colour Black.

The screenshots in this documentation are captured using the "Material" theme.

9. Plugins - By default, no plugins are listed on this menu. Only activated plugins will be listed.

Most of these plugins are licenced under commercial licences. You need to purchase a licence on which a registration code and instructions will be mailed to you to unlock the full features of these plugins. Multi-User and Plugins need to be registered in Plugins → Tools → Register Plugins on the Setup ribbon.

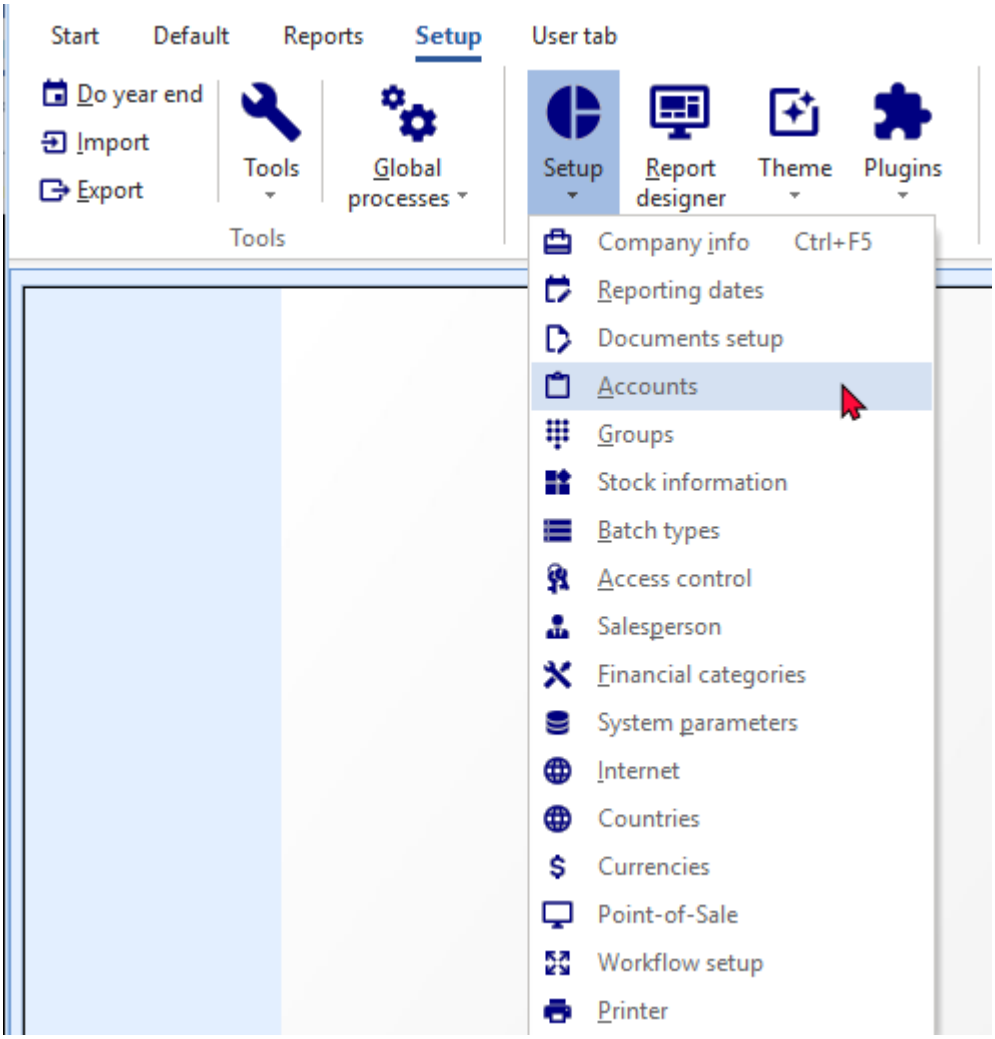
Setup menu

In osFinancials5/TurboCASH5, the Setup menu provides access to a range of options that enable you to configure your Set of Books according to your specific business needs.

To access the Setup menu:

1. On the Setup ribbon, select Setup. A list of the menu options will be displayed.



2. Select one of the available options:

   a) Company info - Enter the company information (name, address telephone, fax numbers e-mail address) and registration numbers for the Company and VAT/GST/Sales Tax, if applicable.

      i) You also need to set the default tax method and output method for reports (to screen, printer, file, e-mail or fax).

      ii) Load your logo or picture, which you wish to be displayed on the documents.

      iii) Set the default currency format and date format in your Windows Operating System.

   b) Reporting dates - Set the start date of your financial year and the periods in a financial year. You may also close a specific period or year for posting transactions to the ledger.

   c) Documents setup - Settings for sales documents (i.e. invoices, credit notes and quotes) and purchase documents (i.e. purchases, supplier returns and orders). Set the defaults for documents, such as the numbers, batch types, headings and messages and document layout files.

On the Statements setup tab, you may enter a global message to be printed on Debtor statements.

d) Accounts - Edit, Add or Delete General ledger accounts, Bank accounts and Tax accounts. Budget figures are also entered, edited or deleted for accounts.

> *Budget figures may also be processed in the Budgets option on the Reports ribbon. You may also view and analyse budget figures using the Pivot feature.*

e) Groups - Set up to 2 Groups for ledger Accounts, Debtors, Creditors, Stock items and Documents for generating reports.

f) Stock information - The following settings are available:

i) Selling prices - Enter (edit) the descriptions for up to 3 selling prices. You may set the default selling price 1 / 2 / 3 which will be used globally when processing documents.

ii) Cost of sales - Set the parameters for Cost of sales (account, batch type, whether you will be using average or latest cost).

iii) Documents setup - This also contains various settings when processing documents and/or working with stock.

iv) Unit size - Specify the unit descriptions and sizes to be displayed in stock item screens and on layout files.

v) Tax classes - Create add, edit Tax classes (Account classes) to which you may select Input Tax codes, Output Tax codes, Sales, Cost of sales and Stock control accounts.

g) Batch types - Create or delete batch types or journals in which you wish to enter transactions. Batch types also need to be linked to sales documents (i.e. invoices and credit notes) and purchase documents (i.e. purchases and supplier returns) on Setup Documents.

h) Access control - Set the passwords, users and access to certain menus for each of your users.

i) Salesperson - Add or remove any salespersons, which will be processing sales documents (i.e. invoices, credit notes and quotes) and purchase documents (i.e. purchases, supplier returns and orders) or cashiers operating Point-of-Sale.

j) Financial categories - Link your Ledger Account groups to Assets, Capital, Expenses, Income or Liabilities.

k) System parameters - Select the indicators for debit and credit, number of decimals to be

displayed on reports and documents as well as the number of decimals to be stored. You may also select to display the default system currency symbol.

l) Internet - This option enables you to configure your Internet settings so that you can send reports, statements, and lists to any person or organization via email. To do this, you will need to specify your email's outgoing mail server as set up by your Internet Service Provider on your computer system.

m) Countries - Add and manage the ISO CODE2 and ISO CODE3 as well as ICL CODES for each country. See Country codes.

n) Currencies - You may add / edit currencies and the exchange rates. When processing documents, you may select the currency. This will automatically calculate the prices for that currency.

o) Point-of-Sale - Set the Point-of-Sale parameters, configure printers, peripherals, etc.

p) Workflow Setup -

Workflow plugin - Manual - Shop - Licence : Once-off -

The workflow plugin allows you to record the steps or processes of a task.

The different screens osFinancials5/TurboCASH5 can be created such as the stock screen or debtors / creditors and documents. This allows you to record almost every conceivable process (steps) in a task, visualize and gain instant insight wherever you are in the process and what steps have been taken before.

A step can be assigned to a user and an administrator can see all workflow steps not done (outstanding steps) and possibly assign a task to a user. Outstanding transitions that are possible after showing the step.

Workflow is a knowledge system that can gain your knowledge or just to share it with others. This allows you to formalize your business and capture the steps in an automated system.

Another advantage is that you retain a better overview of your running processes and you have historical data at hand.

q) Printer - Select the default settings for printing reports and documents.

Created with the Standard Edition of HelpNDoc: Converting Word Documents to eBooks: A Step-by-Step Guide with HelpNDoc

Company info

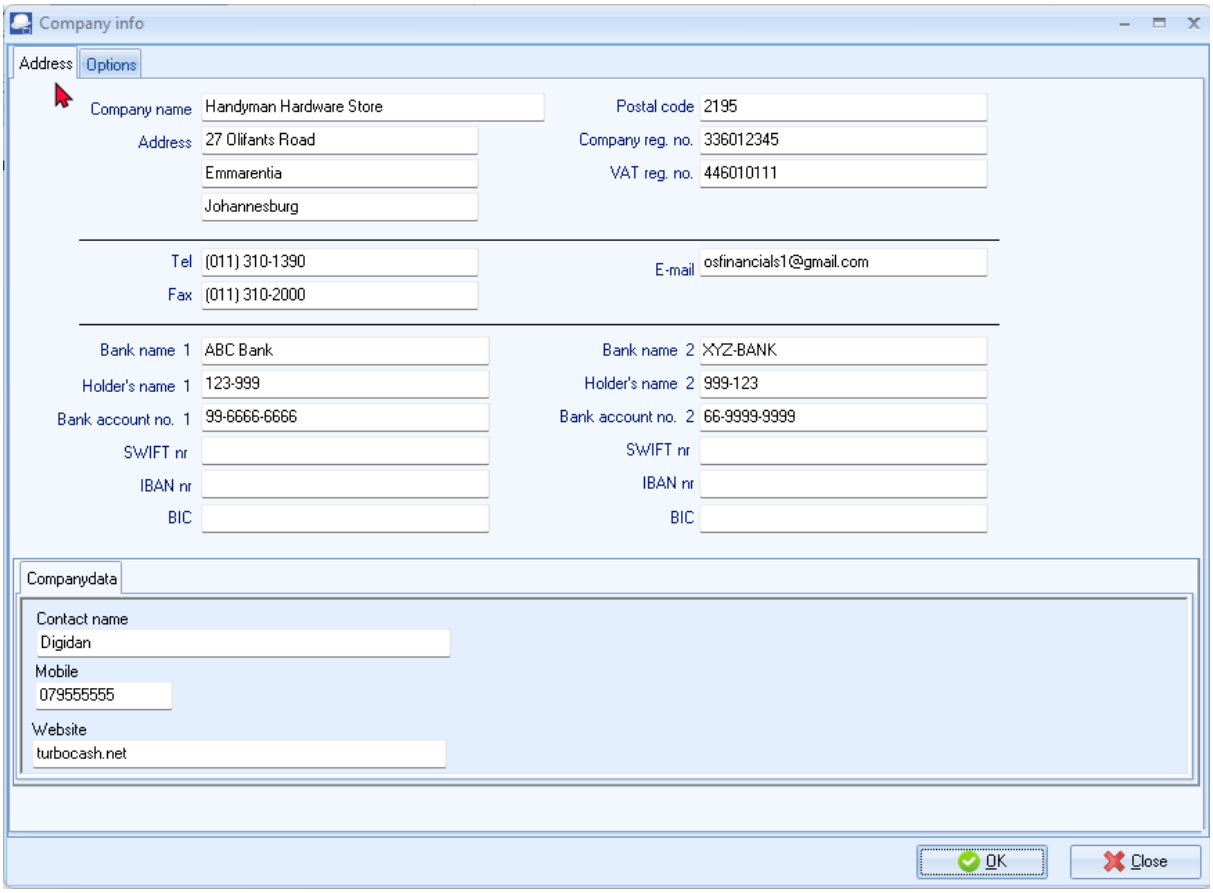
In osFinancials5/TurboCASH5, the Company Information option is available for entering all the necessary details related to your business, such as the address, email address, contact numbers, company registration number, and tax registration number. These details will be displayed on all reports, statements, and lists, ensuring that your business information is readily available to anyone who needs it.

Additionally, it is important to set the Windows default date and currency formats to ensure that your data is displayed correctly.

Furthermore, you have the option to load a logo picture, which can be displayed on your documents and statements. This feature enables you to personalize your documents with your company logo, which can help to increase brand recognition and create a more professional appearance for your business. By using these features, you can ensure that your company information is accurate and up-to-date, and that your documents are customised to reflect your business branding.

To enter and set the Company info and defaults:

1. On the Setup ribbon, select Setup → Company info (Ctrl+F5).



2. Check the details of the company.

Company Reg. No.

If you are registered as a company, a close corporation or a non-profit organisation, the relevant registration number must be entered.

Tax Reg. No.

If you are registered as a VAT/GST/Sales Tax vendor, the VAT/GST/Sales Tax registration number must be entered.

Bank name 1 / 2, Holder's name (Branch code) 1 / 2, Bank account no. 1 / 2, SWIFT 1 / 2 and/or IBAN 1 / 2. may be entered if available.

Your banking information can be used on the BankInvoice layout file or you may add these on your layout files, in the Report designer (accessed from the Reports ribbon or Setup ribbon).

3. Banking Details (Optional). You may enter up to two (2) fields for the following:

   a) Bank name - Enter the name of the bank, if available.

   b) Holder's name - Enter the branch code, if available.

   c) Bank account number - Enter the bank account number, if available.

   d) SWIFT - (Society for Worldwide Interbank Financial Telecommunication). Enter, if available.

SWIFT - See http://en.wikipedia.org/wiki/SWIFT / http://www.theswiftcodes.com/

SEPA - (Single Euro Payments Area) - See - http://en.wikipedia.org/wiki/Single_Euro_Payments_Area

   e) IBAN - (International Bank Account Number). Enter, if available.

See http://en.wikipedia.org/wiki/International_Bank_Account_Number

   f) BIC - (Bank Identifier Code). Enter, if available.

This banking information is added and available to print on the Document layout file (15 codes) and Statements for debtor (customer / client) accounts. You may add these banking details to your own layout files, in the Report designer (accessed from the Setup ribbon).

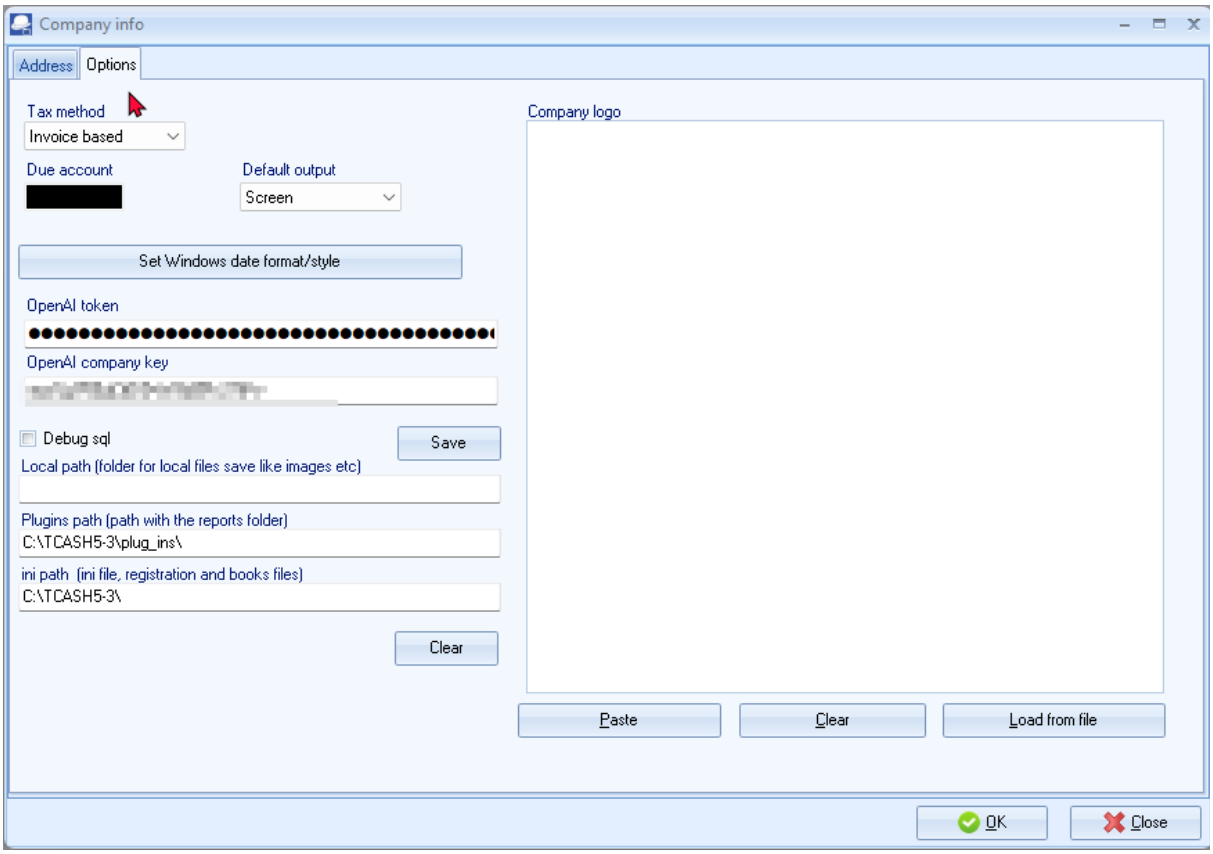
3. Additional Data (Optional). Enter a contact name, mobile telephone number and or your company's

website.

This information can be added to reports and layout files, in the Report designer (accessed from Setup ribbon).

These fields were created (added) using the FreeFields Plugin. This Plugin is available as a commercial plugin.

4. Click on the Options button. The "*Company info - Options"* screen is displayed:



5. The Tax method is by default set to Invoice based. For the purposes of this documentation, the Invoice based Tax method is used.

6. Select your Default output options for screen, printer, file, fax or e-mail. For the purposes of this tutorial, select "*Screen*".

7. Company Logo leave blank for the purposes of this documentation.

If you have a company logo or picture, which includes the address, you may right-click on the Company logo to load the logo from a valid file format on your system.

This logo can be selected to display on documents (invoices, etc.) and statements.

8. Click on the Set Windows date format/style button to set the date format of your operating system.

> *This option does not work on Linux or Apple operating systems. The settings for this, should be done via the specifics of that operating systems.*

> *If the Set Windows date format/style button does not launch your operating system's (version of Windows™), Regional Settings, you need to open the Regional and Language Settings in the Control Panel to set the format of the Short Date and the correct Currency Symbol.*

> *It is important to check your Windows Date Format, since this format will determine the format in which you will enter your dates for your transactions.*
>
> *It will also determine the format in which your dates will be displayed in the lookup facilities, screens, reports, debtor statements, etc.*
>
> *The date for 1 March 2021 may be displayed in one of the following formats:*
>
> W *YY/MM/DD - 24/03/01*
>
> W *DD/MM/YY - 01/03/24*
>
> W *YYYY/MM/DD - 2024/03/01*
>
> W *DD/MM/YYYY - 01/03/2024*
>
> *The YYYY/MM/DD (2021/03/01) is the format, which is used in this help file.*

9. OpenAI token / OpenAI company key: At the moment, OpenAI and ETL is implemented in the Bank import plugin. In the Bank import plugin, an OpenAI import tab with the System prompt and a user prompt to convert raw bank statement data to a JSON file type. You can enter a user prompt to convert the data.

> *The transformation is guided by system prompts and user prompts are updated and stored in the root directory of your osFinancials5.1 or TurboCASH5-3 installation folder:*
>
> - *oaccounting_banksystemprompt.txt*
> - *oaccounting_bankuserprompt.txt*

If you need to use the OpenAI and ETL (Extract, Transform, Load) functionality in osFinancials5.1 or TurboCASH5-3, you need to enter your valid OpenAI credentials. OpenAI Credentials:

- OpenAI token: Enter your valid OpenAI API token. This token is provided when you subscribe to OpenAI's services.

- OpenAI company key: Enter your OpenAI company key, which is also provided as part of your OpenAI subscription.
- Save the Settings: Click Save to store your OpenAI token and OpenAI company key. Then, click OK to close the window.
- Credentials Storage: Your OpenAI token and company key will be securely stored in the Registry of your local machine under the osFinancials5 folder. This allows the credentials to be used across any Set of Books in both osFinancials5.1 and TurboCASH5-3.
- Verification: Once the credentials are saved, the OpenAI and ETL functionalities should be activated and ready for use within the osFinancials5.1 or TurboCASH5-3.

Important Notes:

- *Ensure that your OpenAI token and company key are valid and active. If you encounter any issues, double-check the credentials and your OpenAI subscription status.*
- *The credentials are stored locally on your machine, so if you move to a different computer, you will need to re-enter the credentials on osFinancials5.1 or TurboCASH5-3 in that machine.*

By following these steps, you should be able to successfully activate OpenAI and ETL functionalities in osFinancials5.1 or TurboCASH5-3.

10. Click on the OK button to save your changes.

Created with the Standard Edition of HelpNDoc: Easily create Help documents

Reporting dates

This option allows you to set the start date of your financial year and define the periods within it. By selecting this option, you can specify when your financial year begins and ends, as well as how it is divided into reporting periods.

Additionally, you can close a specific period or year for posting transactions to the ledger, effectively preventing any further changes or updates to that time period. This can be useful for ensuring the accuracy and integrity of your financial records.

It is important to set up the reporting dates or accounting periods for your financial year. You can select specific reporting periods to print financial statements and other reports, or to filter and export the data in spreadsheets. Typically, this is done on an annual basis, but you can also choose reporting periods that

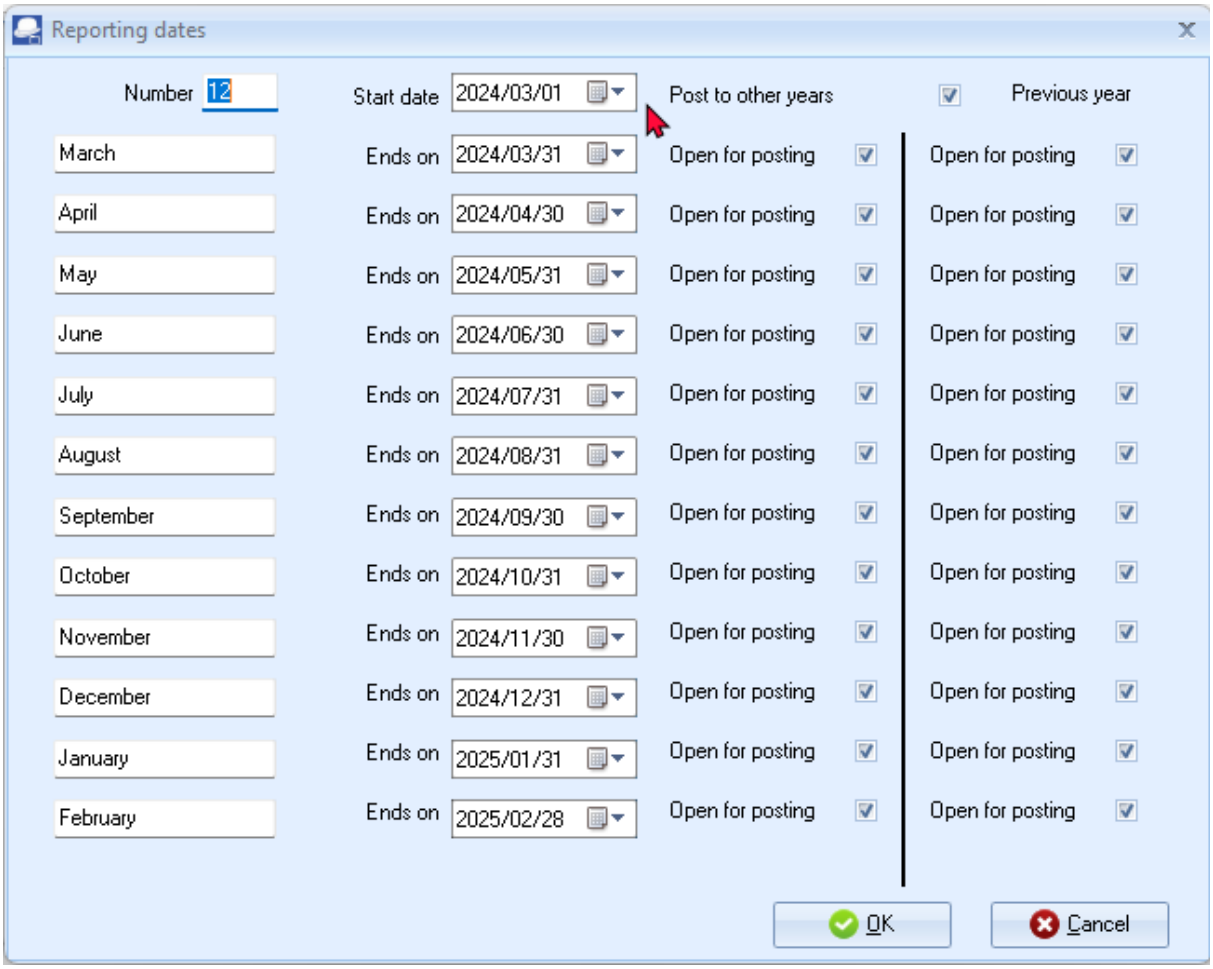
cover 6 months, 4 months, 3 months, 2 months, or 1 month, depending on your needs.

You can choose to have anywhere from 1 to 13 reporting dates in a year, depending on your needs. These dates help you organize your financial data and generate reports on your entity's financial activities, performance, and position.

If you want to prevent any further posting to a previous reporting period, you can restrict posting for that period or for the entire previous year. However, you'll still be able to view the transactions and details for these "*Closed*" periods.

To set Reporting dates:

1. On the Setup ribbon, select Setup → Reporting dates.



2. To set up your reporting dates in osFinancials5/TurboCASH5, you'll need to select the following options:

    a) Number - This is the number of reporting dates, or financial periods, for which you can enter transactions and view reports. Usually, businesses use 12 periods to cover each calendar month in a financial year (i.e. 1 year).

However, small businesses with minimal transactions may choose to use 6-month periods.

b) Start date - This is the starting date of your financial year. You'll need to enter the date from which you want your reporting periods to begin.

c) Post to other years - By default, this option is ticked, allowing you to process transactions, budgets, and other entries to any of the financial years preceding the financial year in the "*Start date*" field. If you uncheck this box, you won't be able to post anything to the previous financial years.

d) Previous year - By default, this option is ticked, allowing you to process transactions, budgets, and other entries to the previous financial year preceding the this year's reporting periods. If you uncheck this option, you can prevent posting to the previous financial year preceding the this year's reporting periods. This is a helpful feature if you want to avoid inadvertent modifications to data from the previous financial year by users.

e) Open for posting - These options allows you to select specific period(s) in the Post to other years and Previous year columns. last By default, this option is ticked, allowing you to process transactions, budgets, and other entries to the financial periods that ends on the periods specified in the "*Ends on*" field. If you uncheck this box for specific period(s), you won't be able to post anything to that financial period(s) for Post to other years and/or Previous year .

3. If you click on the OK button.

If you choose a number of reporting periods that is different from the default of 12, the "Reporting dates" screen will adjust to show only the number of periods you have entered. You can then customize the descriptions of these periods (for example, using calendar months like "January" to "December") to match your specific needs. These descriptions will appear in the Periods lookup facility for both the current year and the previous year, as well as on reports.

In this documentation, we use the yyyy/MM/dd format (such as 2024/03/01) for short dates. However, you can change the date style or format in your system to display short dates in the way that best suits your needs on screens, reports, and documents in osFinancials5/TurboCASH5.

If the date in your system is beyond the date of the last period indicated on the "Reporting dates" screen, you will receive a prompt to perform a year-end process (Do year end on the Setup ribbon).

Groups

Reporting groups refer to a collection of items or entities that are grouped together for reporting or analysis purposes.

These groups are typically defined based on some common characteristics, such as geographical location, product line, department, or business unit.

In finance and accounting, reporting groups are used to aggregate financial data and create reports that provide insights into the financial performance of an organization.

The osFinancials5/TurboCASH5 supports up to two (2) reporting groups for accounts, debtors, creditors, stock, documents. and cost centres. The reporting groups feature in osFinancials5/TurboCASH5 offers a powerful and user-friendly system for filtering and sorting data. This system is much quicker and more efficient than other methods, and allows users to group, sort, and filter data on most screens in a Set of Books with just a few mouse clicks. This feature is particularly useful for managing and analysing data, and makes it easy to print and group data on reports, pivot tables, spreadsheets, and other types of documents. Overall, the reporting groups feature in osFinancials5/TurboCASH5 helps users to work more efficiently and effectively with their data, saving time and improving accuracy.

You may set up to two (2) reporting groups for the following features:

1. Accounts - You have the option to create two (2) reporting groups (Account group 1 and/or Account group 2) that can be used to categorise the various types of accounts in your chart of accounts, including ledger, bank and tax accounts. Each account must be linked to one of these reporting groups in order to be properly classified.

   These reporting groups can be linked to a financial category that will help structure your options for viewing, analysing, and printing financial reports such as the trial balance, income statement and balance sheet.

2. Debtors - You may set up to two (2) reporting groups for your debtors (customers / clients). These groups allows you to group or categorise the debtor (customer / client) accounts on which you would like to report. These groups can be linked to each debtor (customer / client) account for better reporting.

3. Creditors - You may set up to two (2) reporting groups for your creditors (suppliers / vendors). These groups allows you to group or categorise the creditor (supplier / vendor) accounts on which you would like to report. These groups can be linked to each creditor (supplier / vendor) account for better reporting.

4. Stock items - You may set up to two (2) reporting groups for your stock items (products). Stock groups allows you to group or categorise the stock items (products) on which you would like to report. These stock groups can be linked to each stock item (product) for better reporting. analysing and managing of your inventory (products).

5. Documents - You can set up to two (2) reporting groups for your documents, which can categorize them based on their types, such as invoices, credit notes, quotes, purchases, supplier returns, and orders. These document groups can be linked to each document for further reporting and analysis.

6. Cost centres - You can create up to two (2) reporting groups for cost centres, which can be activated in batches (journals) and/or documents. If you create only one (1) reporting group for cost centres, then only one cost centre group will be available in batches (journals) and/or documents.

   Once the batches and/or documents are posted (updated to the ledger), you can select to print reports for each cost centre from the Reports ribbon. By categorizing your cost centres, you can easily track your assets, liabilities, expenses and allocate costs to specific departments or centres.

Groups may also be set for following features:

1. Salespersons - You can add salespersons in Setup → Salesperson (Setup ribbon), and they will automatically be listed in the Salespersons groups. You can also edit the salespersons in the groups as needed. When processing sales documents, such as invoices, credit notes, and quotes, as well as purchase documents, such as purchases, supplier returns, and orders, you can select the relevant salesperson. When printing various reports, you can view salespersons.

2. Projects - You can create reporting groups to manage and track your projects. These project groups can be activated in batches (journals) and/or documents, and once the batches (journals) and/or documents are posted (updated to the ledger), you can generate reports for each project.

3. Languages - You may add different languages to your Set of Books. These languages can be selected in the "*Language*" field on Setup → Access control (Standard security tab) (Setup ribbon), and it will add a Languages tab on the stock items.

Multi-Language accounts - Manual - Shop - Licence : Once-off -

This plugin enables users to translate ledger and group names into multiple languages, allowing for accounting to be done in different languages. Users can select their preferred language, and the osFinancials5/TurboCASH5 user-interface as well as the data in the Set of Books can be viewed in different languages.

This feature is especially useful for businesses with employees who speak different languages or for international businesses. Employees can enter information in their preferred language (for

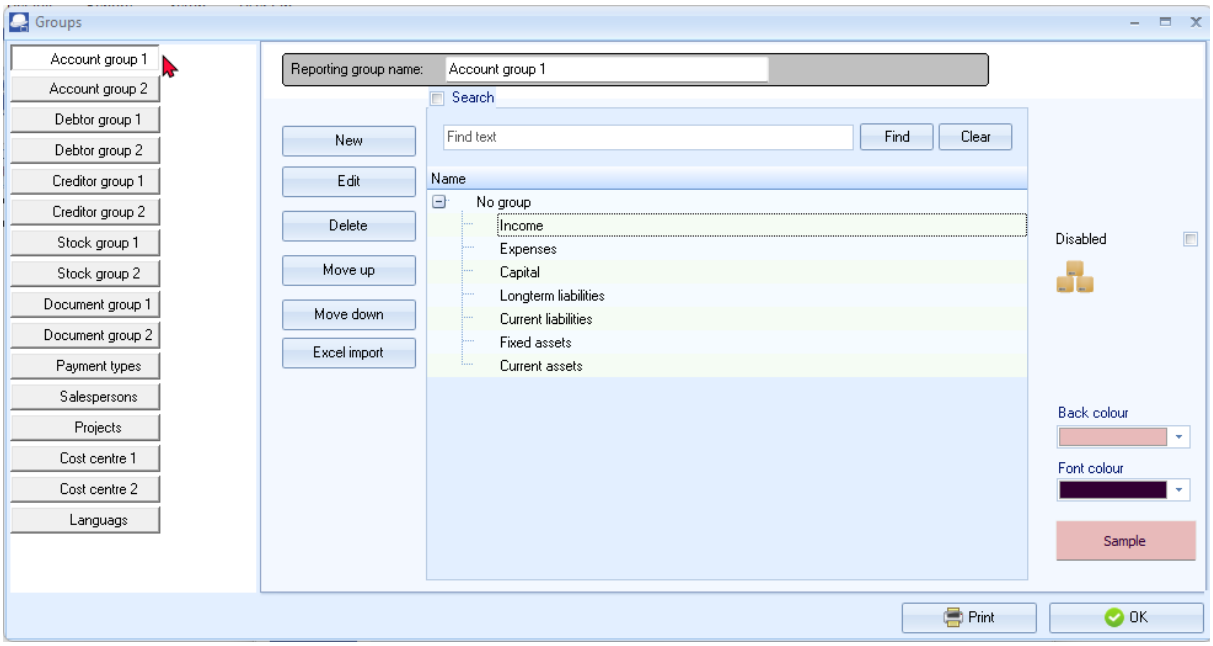
example English), while bookkeepers or auditors can view the set of books in a different language, for example, Afrikaans, Dutch, etc.

By using this plugin, businesses can improve communication and efficiency, and ensure that all users have access to information in their preferred language.

4. Payment types - To be advised.

To add and set reporting groups:

On the Setup ribbon, select Setup → Groups.



Created with the Standard Edition of HelpNDoc: Elevate Your Documentation Process with HelpNDoc's Advanced Features

Salespersons

When processing sales documents, such as invoices, credit notes, and quotes, as well as purchase documents, such as purchases, supplier returns, and orders, you can select the relevant salesperson. When printing various reports, you can view salespersons.

Examples of reporting groups for salespersons

Some examples of groups that can be used for salespersons:

1. Sales territories: You can create reporting groups based on sales territories or geographical regions. For example, you can have reporting groups for North America, Europe, Asia-Pacific, etc. This allows you to track and compare the sales performance of different territories.
2. Product lines: Another option is to group salespersons based on the product lines they handle. You can create reporting groups for specific product categories or types, such as electronics, clothing, or furniture. This helps in analysing the sales performance of each product line and identifying top-performing salespersons for each category.
3. Customer segments: You can assign salespersons to reporting groups based on the customer segments they focus on. For instance, you can have reporting groups for retail customers, corporate clients, or specific industries like healthcare or technology. This allows you to evaluate the sales performance and effectiveness of salespersons in different customer segments.
4. Sales teams: If you have multiple sales teams within your organization, you can create reporting groups to represent each team. This helps in tracking the performance of individual sales teams and comparing their results. It also allows for effective team management and resource allocation.
5. Sales channels: If your salespersons operate through different channels, such as direct sales, online sales, or distribution partners, you can assign them to reporting groups based on these channels. This enables you to analyse the sales performance across different channels and assess the effectiveness of each salesperson in their respective channel.

These examples illustrate how reporting groups for salespersons in osFinancials5/TurboCASH5 can be used to organize and analyse sales data. By assigning salespersons to appropriate groups, you can evaluate their performance, identify sales trends, and make data-driven decisions to drive business growth.

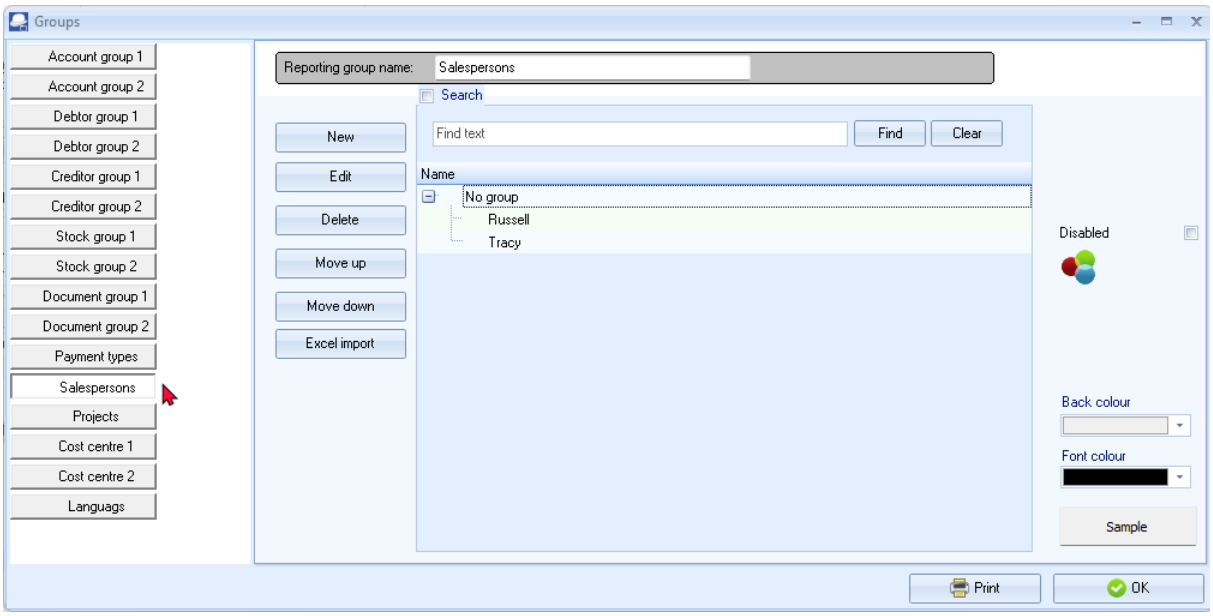
You can add salespersons in Setup → Salesperson (Setup ribbon), and they will automatically be listed in the Salespersons groups. You can also edit the salespersons in the groups as needed.

Define reporting groups for salespersons

To add / edit /delete salespersons:

1. On the Setup ribbon, select Setup → Groups. The "*Groups (Account group 1)"* default screen will be displayed.

2. Select "*Salespersons*".



If you want to organize your salespersons based on different criteria such as sales territories, product lines, customer segments, sales teams, sales channels, or any other relevant factors, you can create groups to categorise them accordingly. By assigning salespersons to specific groups, you can achieve better organisation, management, and analysis of sales activities and performance. This segmentation enables you to easily track and evaluate the performance of salespersons within each group, helping you optimise sales strategies and make informed business decisions.

You may set different sequences for each reporting group in which the groups and salespersons are listed on reports, etc. This is done by selecting the groups on the list and use the Move up or Move down buttons.

3. If you wish to rename the Reporting group name - Salespersons, over-type the description with your new description. This will change the description of the button for Salespersons.

4. To add a new Group to the root directory or list, select the "*REPORTING GROUP ROOT*" on the list and click on the New button.

5. Enter the name of your next salesperson and click on "*REPORTING GROUP ROOT*" on the list.

6. Repeat the process until you have entered all the Salespersons, etc.

7. Click on the OK button to save your changes and close (exit) this screen.

You may click on the Print button to print a list of your salespersons.

Created with the Standard Edition of HelpNDoc: Transform Your Help Documentation Process with a Help Authoring Tool

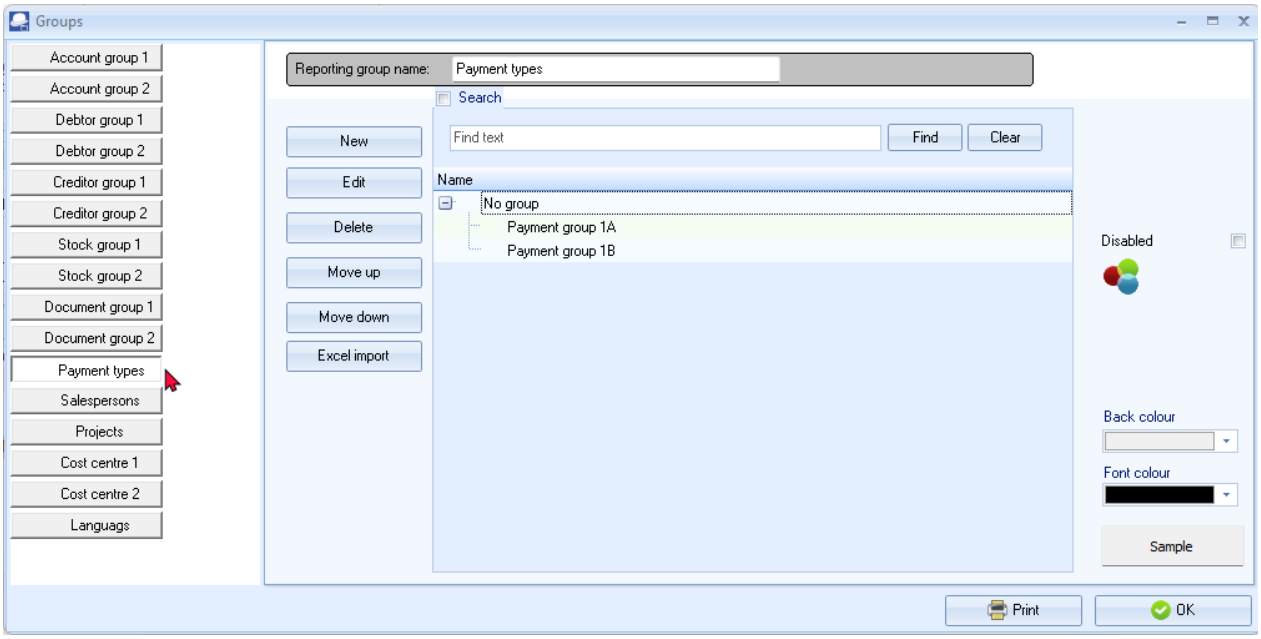
Payment types

Payment types - To be advised.

Some examples of reporting groups for payment types:

1. Cash payments: This group can include all payment types that involve cash transactions, such as cash payments made to suppliers or cash refunds issued to customers.
2. Bank payments: This group can include payment types that involve transactions made through bank accounts, such as electronic fund transfers, checks, or online payments.
3. Credit card payments: This group can include payment types that involve credit card transactions, including payments received from customers via credit card or payments made to suppliers using a company credit card.
4. Online payment services: This group can include payment types that involve online payment platforms or services, such as PayPal, Stripe, or other similar payment gateways.
5. Direct debit payments: This group can include payment types where funds are debited directly from a customer's bank account, such as recurring automatic payments or instalment plans.
6. Wire transfers: This group can include payment types that involve wire transfers, typically used for international transactions or large-value payments.
7. Voucher payments: This group can include payment types that involve the use of vouchers or gift cards, such as redeeming customer vouchers or making supplier payments using prepaid vouchers.
8. Payment plan instalments: This group can include payment types that involve instalment payment plans, allowing customers to pay for products or services in multiple instalments over a specified period.

These are just a few examples, and the actual reporting groups for payment types can be customized and tailored to fit the specific needs and requirements of a business.



Created with the Standard Edition of HelpNDoc: Easily create Web Help sites

Languages

The Language groups allows you to add Languages. These languages can be selected in the Language field on Access control (Standard security tab) on the Setup ribbon.

It will add a Languages tab on the Stock items (Default ribbon).

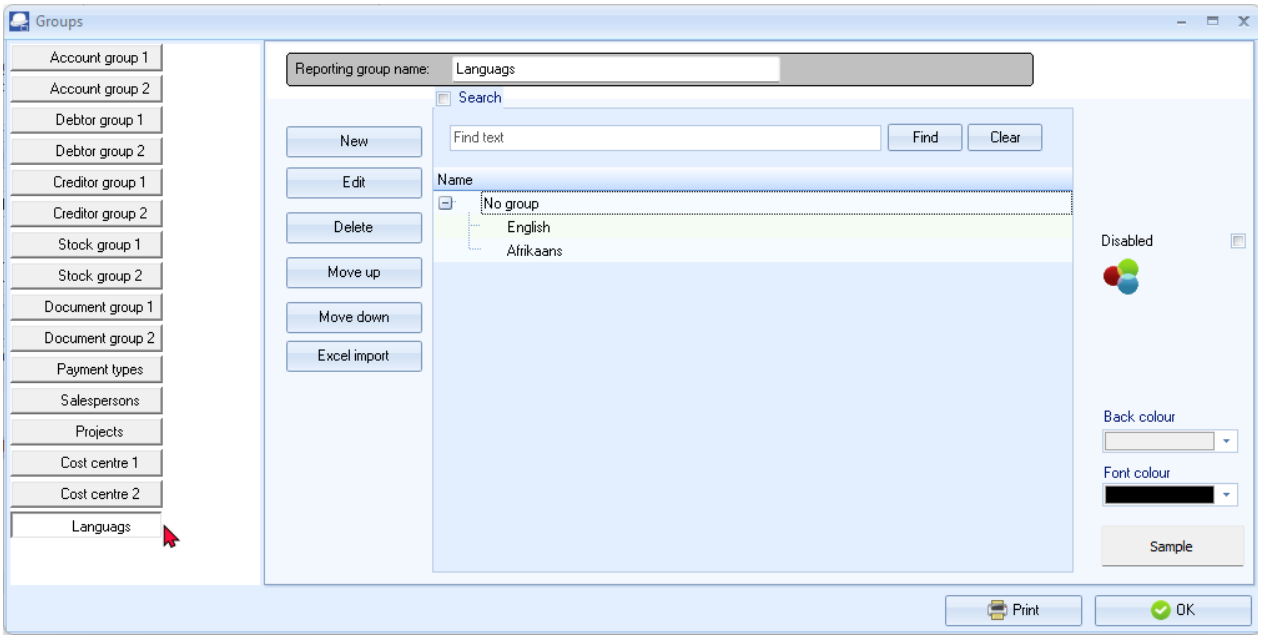
Multi-Language accounts - Manual - Shop - Licence : Once-off -

This plugin makes it possible to translate the ledger and group names in multiple languages. It is already possible to choose different languages for the interface (the buttons). But this plugin makes it possible to do the accounting in different languages. Per user you can select a language, so the user can account in his/her own language. The set of books can be viewed in different languages, therefore it is possible an employee enters information into an English Set of Books and a bookkeeper, auditor, etc. can see the set of books in a set language, e.g. Afrikaans, Dutch, etc.

To add / edit /delete Language groups:

1. On the Setup ribbon, select Setup → Groups. The "*Groups (Account group 1)*" default screen will be displayed.

2. Select "*Languages*".



If you have created a Set of Books from scratch (using the "Create Set of Books (Advanced)" option for Firebird database types or the "Create Set of Books (Advanced)" option for MSSQL database types), the Languages group will not be available.

You need to manually add the Project group to the TYPES table

See topics in this Help file : -

- *Steps after creating the Set of Books (Advanced) - Add missing Groups and Paper types in the Types table.*
- *Reportman - References - Groups.*

You may set different sequences for each reporting group in which the languages are listed on reports, etc. This is done by selecting the groups on the list and use the Move up or Move down buttons.

3. If you wish to rename the Reporting group name - Languages, over-type the description with your new description. This will change the description of the button for Languages.
4. To add a new Group to the root directory or list, select the "*REPORTING GROUP ROOT*" on the list and click on the New button.
5. Enter the name of your next Language and click on "*REPORTING GROUP ROOT*" on the list.
6. Repeat the process until you have entered all the Languages, etc.
7. Click on the OK button to save your changes and close (exit) this screen.

You may click on the Print button to print a list of your languages.

Created with the Standard Edition of HelpNDoc: Say Goodbye to Documentation Headaches with a Help Authoring Tool

System parameters

This option allows you to set the options and parameters in which osFinancials5/TurboCASH5 should store and display amounts and numbers to be displayed on screens, reports and documents and special settings.

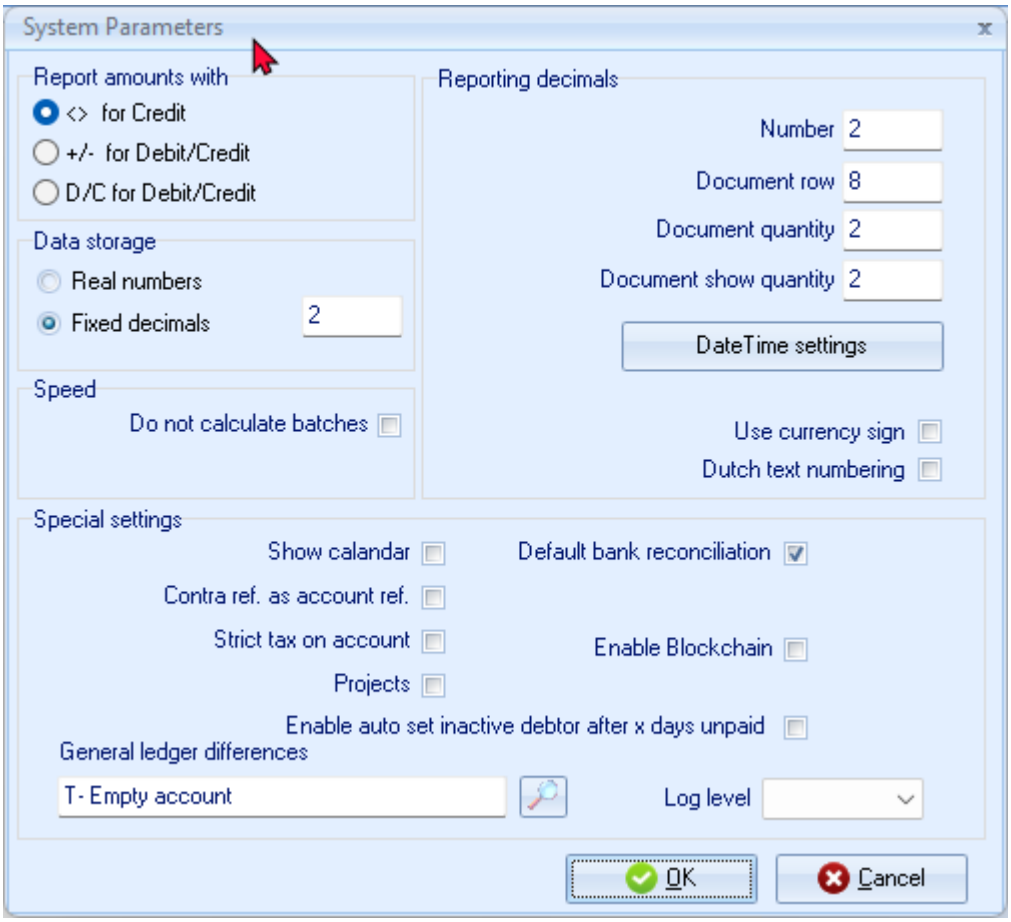
The following error may occur, when printing "Budget vs actual" and/or "This year vs last year "reports:

"Type conversion error 'Val':Expression TRpExpression46"

You need to set the "Number Format" of your operating system to resolve this issue.

To access the System parameters settings:

1. On the Setup ribbon, select Setup → System parameters.



2. If necessary, change the following options:

    a) Report amounts with - This setting is not applicable to osFinancials5/TurboCASH5.

    b) Data storage - Select Fix decimals and specify the number decimals in which numbers and amounts should be rounded off. If you select Real numbers, the numbers and amounts will be stored in osFinancials5/TurboCASH5 with an "*unlimited*" number of decimals. In cases where percentages are calculated on amounts, e.g. VAT/GST/Sales Tax, you may select to fix the number of decimals to limit any rounding differences.

    c) Reporting decimals -

        i) Number - Specify the number of decimals to be displayed on reports. It is recommended that this be set to 2.

        ii) Document row - Specify the number of decimals to be displayed on documents. It is recommended that this be set to 2.

iii) Document quantity - Specify the number of decimals to be displayed on document quantities. It is recommended that this be set to 2.

iv) Document show Quantity - It is recommended that this be set to 2.

v) Date / Time Settings - This will launch the Regional and language options in which you may configure or set the formats of your operating system. (See – Setup → Company info - Options).

vi) Use currency sign - Select to use the currency symbol as set in the Regional Settings of your Operating System to be displayed on screens, reports and documents.

vii) Dutch text numbering - All other countries should leave this blank. This should only be selected if the amounts in words are written in different rules to that of the English language, as is the case in the Netherlands language. The amount in figures and words is used by osFinancials5/TurboCASH5 in the Create receipts option of Receipt journals.

d) Speed - Do not calculate batches - By default, the totals of batches are calculated each time you access the Batch type selection screen to select a Batch type. Selecting this option will turn this automatic calculation off.

e) Special settings -

i) Show calendar - By default, the calendar will not be displayed when opening a Set of Books. You need to manually launch it on the Calendar (Default ribbon). If you select this field (tick), the Calendar will then be automatically displayed each time you Open the Set of Books.

ii) No warning unposted - This option is not applicable to osFinancials5/TurboCASH5.

iii) Contra ref. as account ref. - By default, this option (Contra reference as account reference) is not selected. This is the global settings for batches.

iv) Strict tax on account - By default, this option is not selected. This is the global settings for batches.

v) Projects - By default the Projects feature is not enabled. If this option is selected, it will activate the Projects on Projects (Default ribbon).

vi) Default bank reconciliation method - This option is selected, by default, to do bank reconciliation in the default method in separate payments and receipt batches linked to a bank account. If you wish to import transactions from bank statements in Bank

reconciliation, you need to de-select (remove the tick) in this field.

The Bank import plugin allows you to import the transactions from your bank statement and allocate these transactions to the accounts.

vii) Block chain - Activate block chain.

See video on osFinancials and Blockchain.

vii) Enable auto set inactive debtor after x days unpaid - To be advised.

viii) General ledger differences - You may create a general ledger account (Setup → Accounts) and select that account in this field. If there any rounding differences, it will be posted to this account.

ix) Log level – "*Off*" is the default setting. It may be set up to level 7. You may print the Log report in Setup → Access control.

3. Click OK.

Created with the Standard Edition of HelpNDoc: Free Kindle producer

Internet

This option enables you to configure your Internet settings so that you can send reports, statements, and lists to any person or organization via email. To do this, you will need to specify your email's outgoing mail server as set up by your Internet Service Provider on your computer system.

You can also test your email server and view the test log file from this option. It is necessary to perform internet setup in order to send document layout files. If the Internet setup is not completed, an information message will be displayed.

"Internet setup information is incorrect! Run Setup -> Setup -> Internet."

If you wish to:

- Send document layout files form the Documents tab on Debtors form the Documents tab on Creditors (Default ribbon) via email to any person or institution.
- If you have set up any other users on the system, that user's User ID (that is logged on in this Set of Books) and their e-mail address will be displayed on this screen.

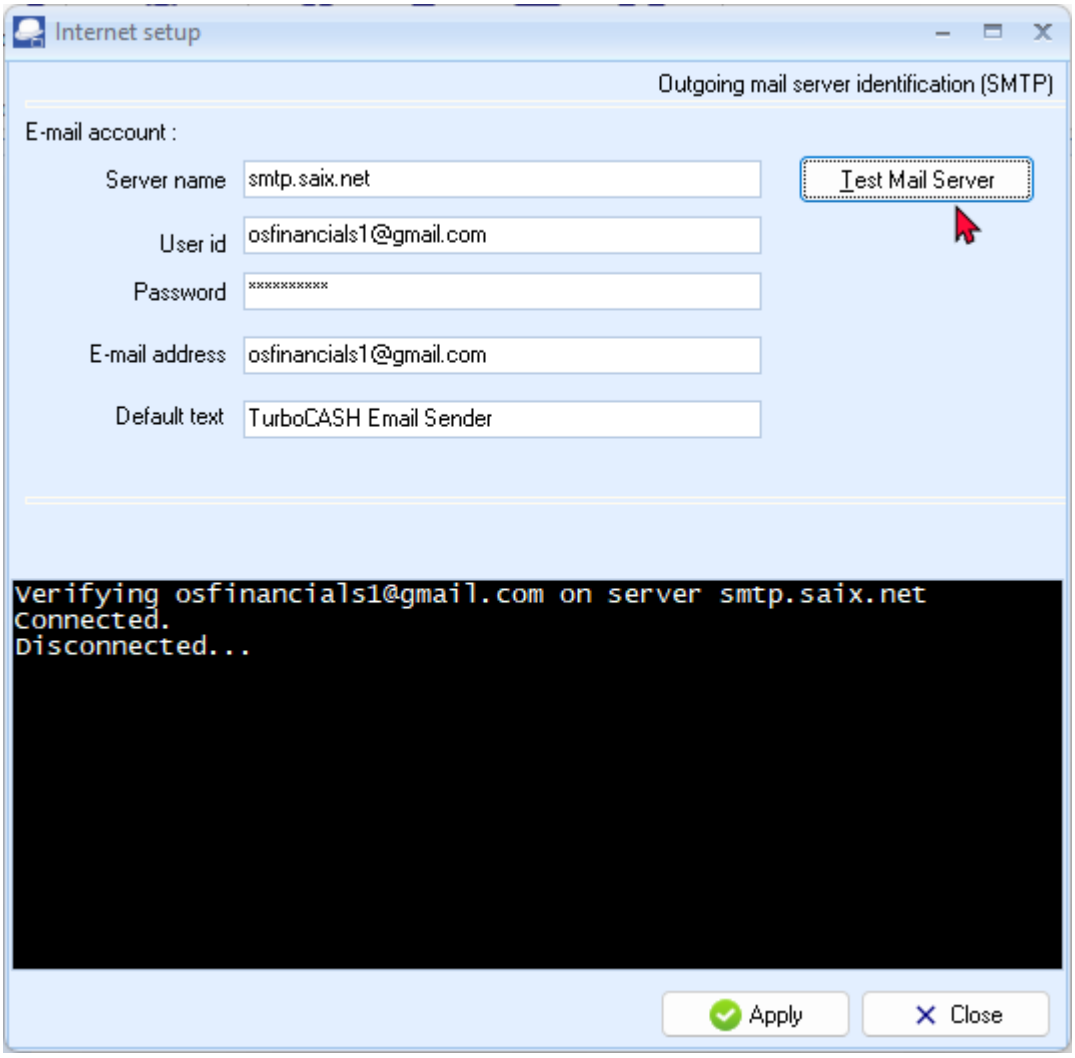
Note this option will only be available to the users that have been granted access privileges for "System Setup" in Setup → Access control (Setup ribbon) but all users, with a valid e-mail address will be able to send reports, lists and documents on the Internet.

This option allows you to set up your Internet connection in order to send reports, lists and documents to any person or institution by e-mail. You need to specify your e-mail's outgoing mail server, as setup in your e-mail account on your computer system by your Internet Service Provider (ISP).

You need to then test your E-mail server, and view the test log file from this option, before you can send any reports, lists and documents via e-mail. The test to your e-mail server must be successful before this option will work.

To configure the Internet:

1. On the Setup ribbon, select Setup → Internet.



2. Enter your E-mail account's outgoing mail server's identification as provided by your Internet Service Provider (with whom you already have an account).

3. Enter your User ID and a valid Password as provided by your Internet Service Provider (with whom you already have an account).

4. Default Text is displayed in the "*Subject*" field on the "*Sending E-mail and Fax Report*" screen. This *Sending E-mail and Fax Report*" screen, is launched if you click on the Print button when the Send report to E-mail or Fax option is selected. You may over type this with your own text (subject), if necessary.

5. Click on the Test Mail Server button. This will test your e-mail connection. If successful, a similar result would be displayed:

   "Verifying osfinancials1@gmail.com on server smtp.saix.net
   Connected.
   Disconnected..."

6. View the results of your settings for the e-mail server. If your e-mail server is set correctly, a similar result should be displayed:

   "Test Finished. Success ."

7. Once the test is finished, a confirmation e-mail is sent to the Inbox of your system's default e-mail program.

8. Click on the Apply button.

9. Click on the Close button to close this screen.

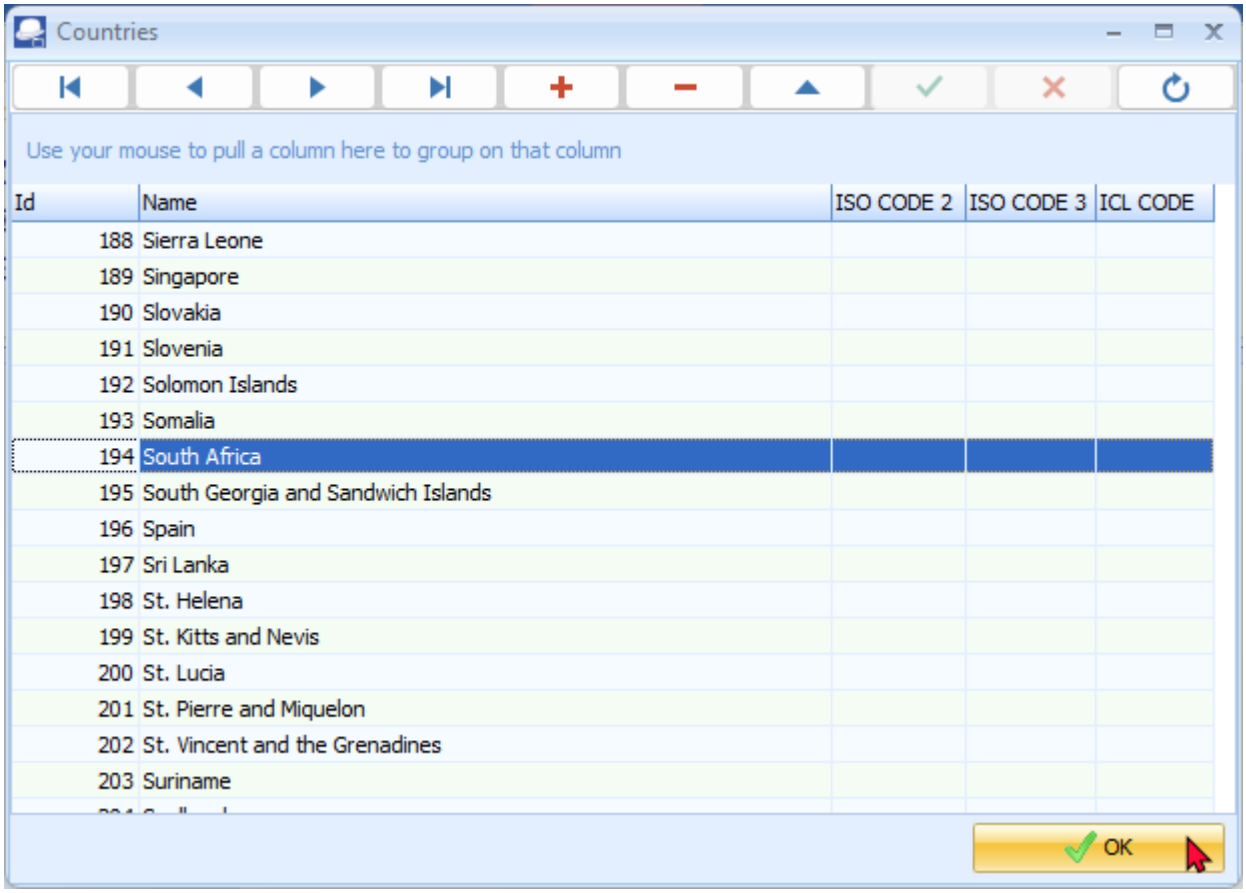
- *Server Name - You may enter a name for your outgoing mail server, which can be up to 30 characters long and can include both letters and special characters.*
- *User ID - You may enter a user ID for your email account, which can be up to 20 characters long and can include both letters and special characters. If you have previously entered user IDs in the "Setup → Access control" section, the user ID of the currently logged-in user will be displayed here. You cannot change user IDs in this field and can only modify them in the " Setup → Access Control" section.*
- *E-Mail Address - This field displays your registered email address, which can be up to 30 characters long and can include both letters and special characters. If your email address is not displayed, you need to create a user and enter the email address in the "Setup → Access control" section. You can also enter your email address in the "Setup → Company Info" section on the Address tab.*

Created with the Standard Edition of HelpNDoc: Converting Word Docs to eBooks Made Easy with HelpNDoc

Countries

ISO CODE2 and ISO CODE3 are codes used to represent countries and regions. ISO CODE2 is a two-letter code, and ISO CODE3 is a three-letter code.

Add and manage the ISO CODE2 and ISO CODE3 as well as ICL CODES for each country. See Country codes.



ISO CODE2 and ISO CODE3 are standardized codes used to represent countries and regions, created by the International Organization for Standardization (ISO). Here's a brief overview of their uses:

-

- ISO CODE2: This is a two-letter code (e.g., "US" for the United States, "JP" for Japan) used in various international contexts, such as internet domains (.us, .jp), vehicle registration plates, and international shipping.
- ISO CODE3: This is a three-letter code (e.g., "USA" for the United States, "JPN" for Japan) used in more specific contexts like international data exchange, customs declarations, and financial services.
- ICL CODE This is likely industry-specific codes that complement the ISO codes for more detailed categorization and management.

These codes ensure consistency and clarity in global communication. Managing these codes in software like osFinancials5 and TurboCASH5 helps standardize country and region identifiers across various modules and reports.

Created with the Standard Edition of HelpNDoc: Why Microsoft Word Isn't Cut Out for Documentation: The Benefits of a Help Authoring Tool

Currencies

In osFinancials5/TurboCASH5, users have the capability to engage in international transactions, purchasing goods from foreign suppliers and selling goods to customers in foreign countries. osFinancials5/TurboCASH5 allows users to process and print documents in foreign currencies. However, before they can do so, it is necessary to add and/or update the currencies in the Set of Books.

The Currencies feature in osFinancials5/TurboCASH5 is particularly beneficial for businesses dealing with international transactions, streamlining financial processes for processing and printing sales documents and purchase documents in various currencies.

Currencies functionality overview

Here's a breakdown of the functionalities:

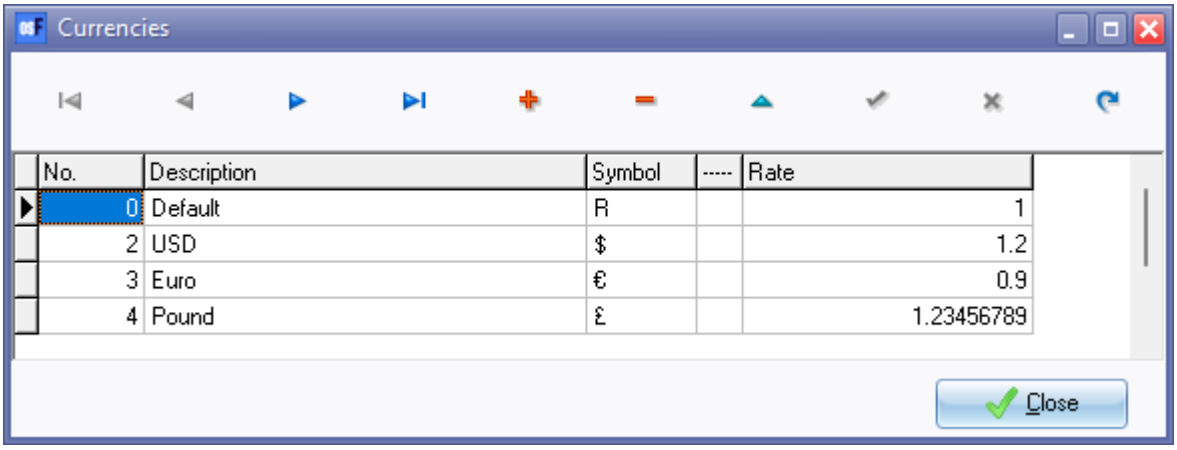
1. Add / Edit / Delete Currencies: osFinancials5/TurboCASH5 allows users to manage a list of currencies. You may add new currencies, edit existing ones (e.g., update exchange rates), and also remove currencies that are no longer needed.
2. Processing Multi-currency Documents: Once the currencies is added and or updated, users can select the currency applicable to their debtors (customers/clients) when processing sales documents such as invoices, credit notes, and quotes. When processing purchase documents such as purchases, supplier returns, and orders, users can select or specify the currency applicable to their for creditors (suppliers / vendors).
3. Printing Currency in Document Layouts: Once a currency is selected for a specific document, osFinancials5/TurboCASH5 incorporates this information into the document layout files. This means that the selected currency will be visibly printed on the documents, ensuring clarity and transparency in financial transactions.
4. Printing a List of Currencies in Reports: You may print a "*Currencies - Listing*" report in the Reports → Currencies menu.

Overall, this currency management and multi-currency document handling feature set are valuable for

businesses and organizations that deal with international transactions and need to manage financial records in different currencies. It streamlines the process, ensures accuracy, and facilitates transparency in financial dealings.

To add currencies:

1. On the Setup ribbon, select Setup → Currencies.



2. Click on the add icon to create a new record.

3. Enter the description, currency symbol and currency rate.

> *Alt Code Shortcuts for Currency Symbols - Example Works if the Alt+0165 for the Japanese Yen, etc.*

4. Click on the save icon.

Created with the Standard Edition of HelpNDoc: Make Documentation Review a Breeze with HelpNDoc's Advanced Project Analyzer

Point-of-Sale

Point-of-Sale can be set up only if you are selling stock items. Improved security and access control has been added for users to access or start a Point-of-Sale session or shift.

You may now link the salespersons (cashiers) added in Setup → Salesperson to users on the Others tab - Setup → Access control. This feature will add more security when users access or start a Point-of-Sale invoicing session.

Webshop

The following Point-of-Sales products are available at out webshop:

W *HorecaPOS*

W *RetailPOS*

W *POSDisplay*

Created with the Standard Edition of HelpNDoc: Maximize Your Productivity with HelpNDoc's Efficient User Interface

Printer

This option allows you to select the default printer (from any available printers set up / configured on your system).

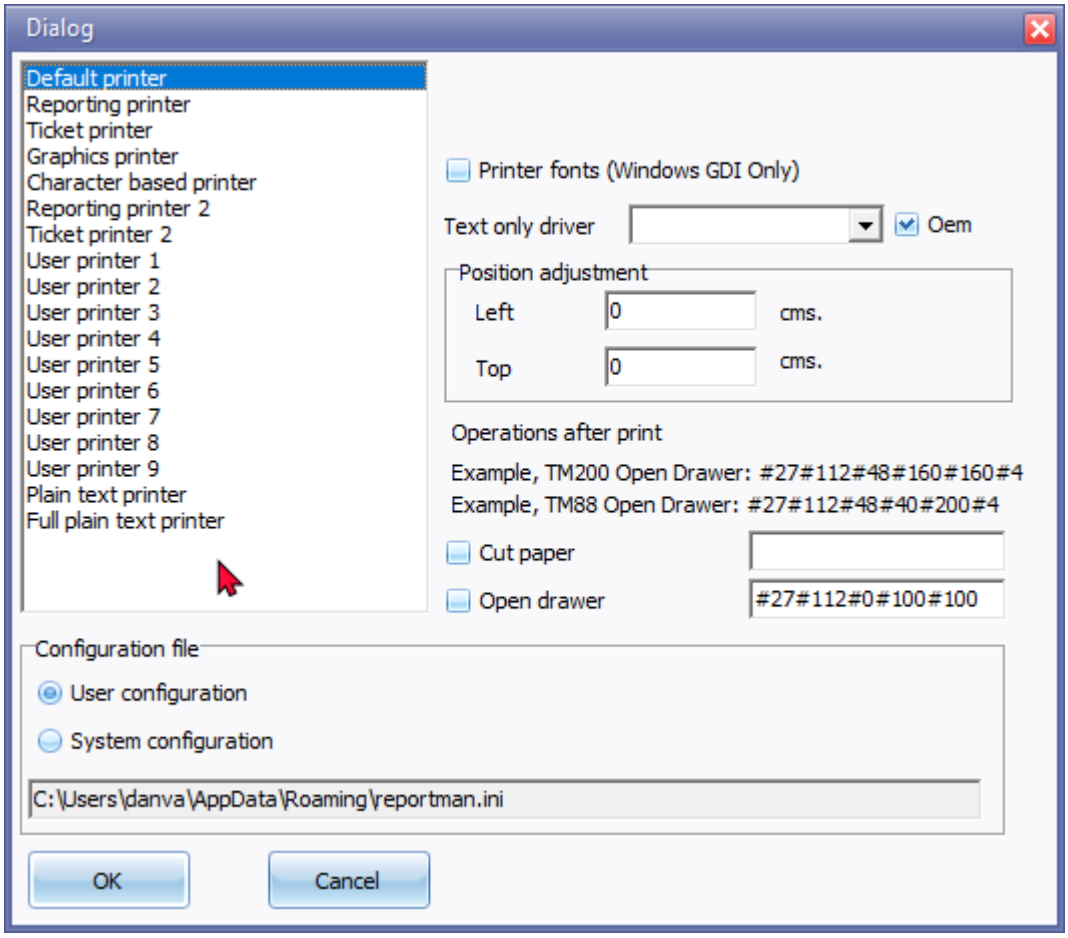
To select the printer:

1. On the Reports ribbon or the Setup ribbon, select Printer.

This "Dialog"-screen may also be launched from the following options:

- *Print setup tab - click on the Configure printers button.*
- *Page setup button op Setup → Setup documents (Setup ribbon).*

2. The "*Dialog*" screen is automatically displayed:



Configuration file options - Location:

- *User configuration - e.g. - "C:\Users\danva\AppData\Roaming\reportman.ini"*
- *System configuration - e.g. - "C:\ProgramData\reportman.ini"*

On the "*Dialog*" window, you may: -

1. Select one of the following printers; Default printer, Reporting printer, Reporting printer 2, Ticket printer, Ticket printer 2, Graphics printer, Character based printer, User printer 1 - 9, Plain text printer or Full plain text printer.
2. Printer Fonts (Windows GDI Only) - The Microsoft Windows graphics device interface (GDI).
3. Text driver only - You may select a print driver from the list (i.e. "*PLAIN, EPSON, EPSON-MASTER, EPSON-ESCP, EPSON-ESCPQ, IBMPROPRINTER, EPSONTMU210, EPSONTMU210CUT, EPSONTM88II, EPSONTM88IICUT, HP-PCL, VT100*" of "*PLAINFULL*".

Oem (Original Equipment Manufacturers) tick to use the drivers from the hardware manufacturers.

4. Position adjustment - Optional - You may enter a value for the left and top of the page.

5. Operations after print -

    - Cut paper -

    - Open drawer -

6. Configuration file - Printer configuration file - Report Manager Designer will use a Printer configuration file, only used in printer selection.

Configuration file options - Location:

- *User configuration - e.g. - "C:\Users\danva\AppData\Roaming\reportman.ini"*
- *System configuration - e.g. - "C:\ProgramData\reportman.ini"*

This configuration file will be searched as Documents & Settings\Local Config\All Users\reporman.ini, if not found it will create or use Documents & Settings\Local Config\YourUserName\reporman.ini

---

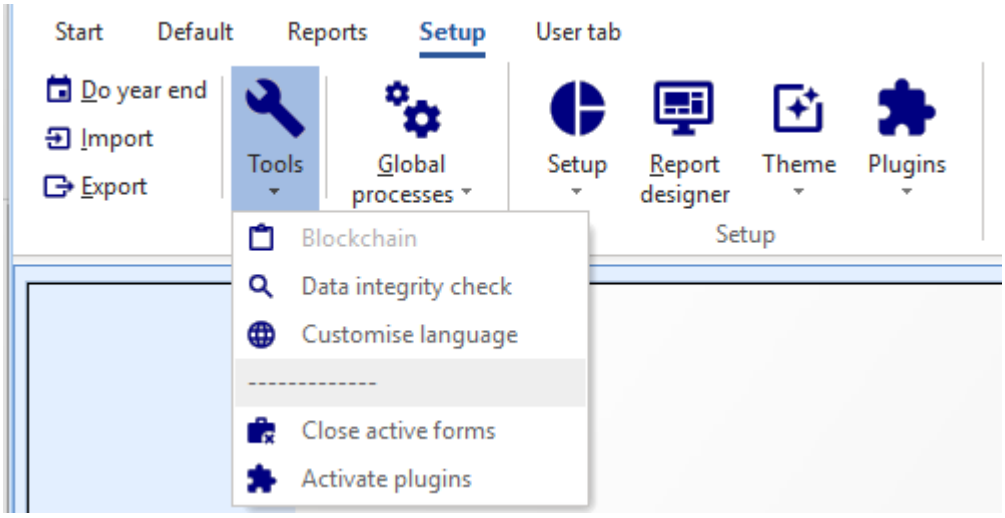
Created with the Standard Edition of HelpNDoc: 5 Reasons Why a Help Authoring Tool is Better than Microsoft Word for Documentation

Tools

This menu allows you to perform a Data integrity check, customise a language for your specific needs or industry. You may close any active screens, etc. in the Set of Books. You may also activate various utilities and plugins / extensions.

To access the Tools menu:

1. On the Setup ribbon, select Tools. A list of the menu options will be displayed.



2. Select one of the available options:

   a) Blockchain - By default, Blockchain is not activated. Blockchain needs to be activated in the Setup → System parameters on the Setup ribbon.

   > *See video on osFinancials and Blockchain.*

   b) Data integrity check - Run a Data integrity check and print a Data integrity check report.

   c) Customise language - Customise (edit, change and translate) language files.

   d) Close active forms - Close any open forms (e.g. Documents, Debtors, Creditors, Stock items screens, etc.)

   e) Activate plugins - By default, no plugins is activated when osFinancials5/TurboCASH5 is installed. This option allows you to activate / deactivate all plugins, registered plugins or specific plugins. The activated plugins will be available from the Plugins menu (on the Setup ribbon).

> *Most of these plugins are licenced under commercial licences. You need to purchase a licence on which a registration code and instructions will be mailed to you to unlock the full features of these plugins. Multi-User and Plugins need to be registered in Plugins → Tools → Register plugins menu (Setup ribbon).*

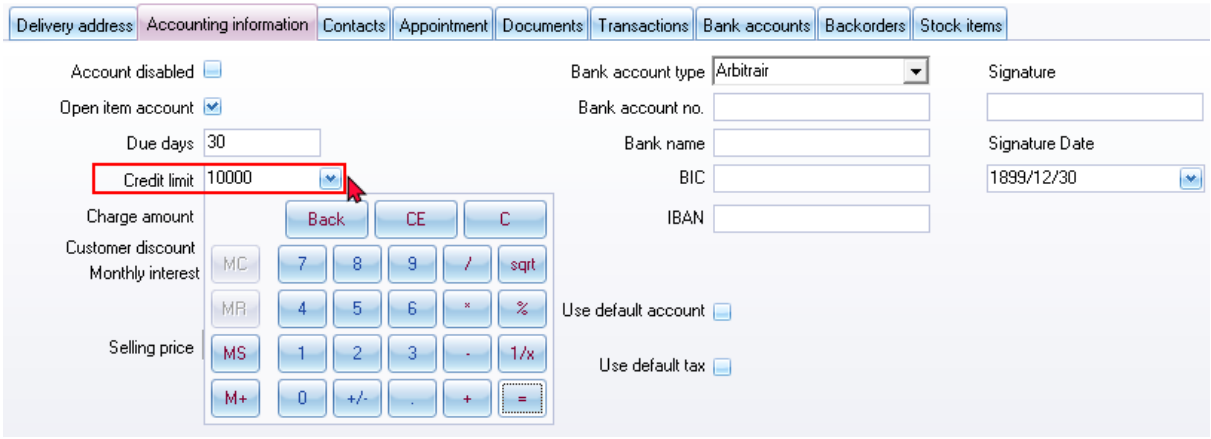
Created with the Standard Edition of HelpNDoc: Experience the Power and Simplicity of HelpNDoc's User Interface

Calculator

The Calculator is not available on the Setup ribbon (*Tools*) in osFinancials5/TurboCASH5. The calculator is integrated on specific amount fields, on which you may perform certain calculations and transfer the results into the amount fields.

To access the Calculator:

1. The Calculator's buttons may also be launched from the Credit limit and Charge amount fields of the Accounting information tab of the Debtor / Creditor accounts.



> *When focus on certain amount fields, you may press the Ctrl + F4) keys to launch the Calculator.*

2. You may do your calculations. Once a calculation has been completed, the result is transferred to the input field.

Created with the Standard Edition of HelpNDoc: Produce online help for Qt applications

Close active forms

If any of the Debtor, Creditor, Stock item edit screens or Document entry screens are open, you may click on the Tools → Close active forms (Setup ribbon), to close all or any of these screens.

Created with the Standard Edition of HelpNDoc: Create cross-platform Qt Help files

Global processes menu

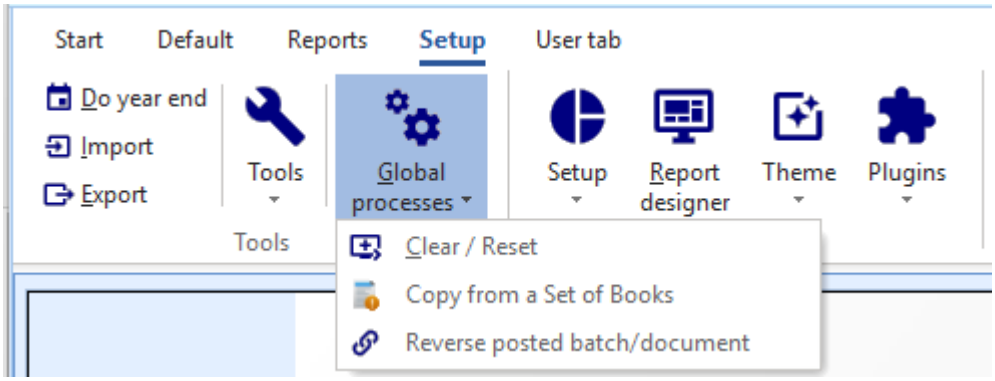
This menu allows you to perform global processes in a Set of Books, such as to Clear / Reset a Set of Books, Copy from a Set of Books and reverse transactions in posted batches (journals) and/or documents.

It is advisable to create a backup of your current Set of Books before accessing any options on the Global processes menu.

Additionally, it is crucial to be absolutely certain before performing any of these functions. Once these options are executed, they cannot be easily reversed or cancelled. The only way to undo any changes made is to restore the Set of Books from the backup.

To access the Global processes menu:

1. On the Setup ribbon, select Global processes. A list of the three (3) menu options will be displayed.



2. Select one of the three (3) available options:

   a) Clear / Reset - This option allows you to clear all transactions and balances in a Set of Books. By selecting this option, you will effectively reset the Set of Books, deleting all transactions and balances. However, you also have the option to retain all documents and set them to unposted status.

   b) Copy from a Set of Books - This option allows allows you to copy data from a chosen Set of Books into the currently active (open) Set of Books. By selecting this option, all the existing data in the active Set of Books will be replaced with the data from the selected Set of Books.

   c) Reverse posted batch / document - Reverse posted batch / document - This feature enables you to reverse or cancel transactions in posted batches (journals) and documents.

      - Reverse posted batch (Journal) - This feature allows you to cancel transactions that were processed in batches (journals) which have already been updated (posted) to the ledger. By selecting this option, all the transactions that were previously updated (posted) to the ledger will be cancelled and removed from the transaction file.

        The cancelled transactions will be automatically imported to the selected batch (journal). At this point, you have the option to either erase or delete the

entire batch (journal). If you wish to keep the cancelled (reversed) batch, you can edit and correct the transactions, balance the batch, print the batch list, and post it to the ledger.

- Reverse posted document - This feature cancels the documents as well as any transactions that were generated by the documents (such as invoices and credit notes, purchases, and supplier returns) after they were updated (posted) to the ledger. The cancelled (reversed) document can then be accessed as an unposted document, which you can edit in the Documents section of the Default ribbon and then post (update) to the ledger. If you do not need to update (post) the document to the ledger, you may also choose to delete it using the Edit → Delete - Documents. option on the Default ribbon.

Created with the Standard Edition of HelpNDoc: Free Kindle producer

Clear/Reset

This option allows you to clear all transactions and balances in a Set of Books. By selecting this option, you will effectively reset the Set of Books, deleting all transactions and balances. However, you also have the option to retain all documents and set them to unposted status.

This process is similar to the Delete Set of Books option from the Start ribbon, as all data related to transactions and batch entries will be permanently removed from the system.

The only difference is that if you use the Global processes → Clear/Reset option from the Setup ribbon, you will still be able to access the Set of Books from the Open Set of Books option on the Start ribbon. All the original setup data for your Set of Books, such as accounts, stock and selling prices, debtor and creditor accounts, contacts, reporting groups, etc., will still be available.

It is highly recommended to create sufficient backups of your data before using this option. In case you accidentally use the Global processes → Clear / Reset option on the Setup ribbon, you will need to restore your Set of Books from the backup disks. Additionally, you may need to manually enter any transactions that were not included in your last backup until you have used the Clear / Reset option, unless you have not processed any transactions since your last backup.

Before clearing or resetting a Set of Books from your system, it is crucial to ensure that all necessary reports have been printed and retained, along with supporting documents such as slips, cheques, invoices, etc. This

is essential to substantiate your profit from the business and ensure compliance with tax return requirements.

As a small business owner, you must keep all necessary records for five (5) years, starting from the date of receipt of the last applicable tax return for audit and record purposes. Additionally, there may be other legislative and/or statutory requirements that apply to your specific business type and/or industry.

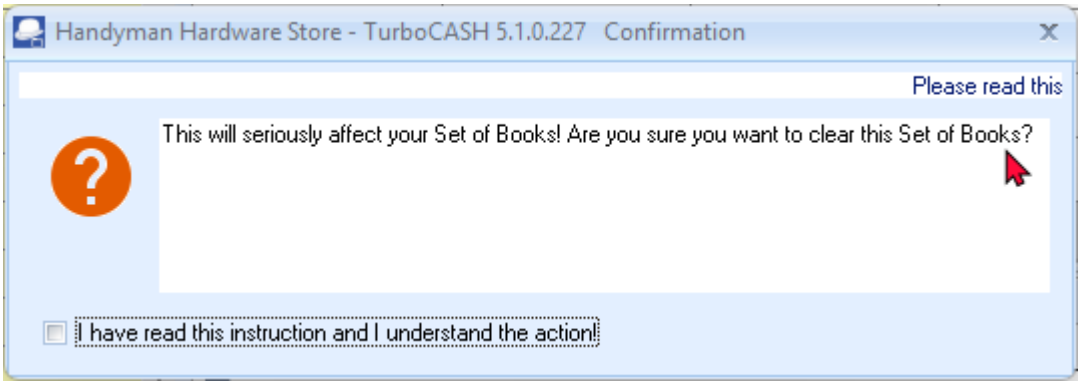
It is essential to be absolutely certain before using the Clear / Reset option on a Set of Books, as this action will permanently delete all transactions, balances, stock quantities, and cost prices.

There are two options to clear or reset a Set of Books:

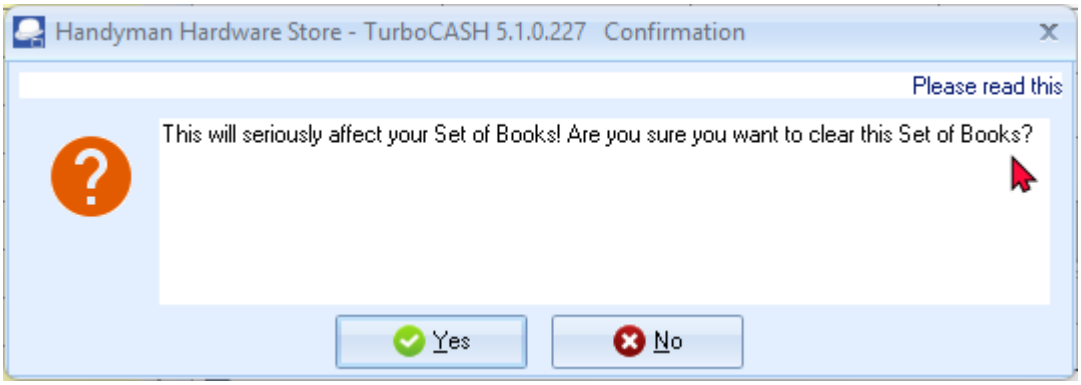
1. Clear / Reset all transactions and balances in a Set of Books. No transactions, documents or any balances will be available in the Set of Books.
2. To Clear / Reset all the transactions and and retain all sales documents (i.e. invoices, credit notes, quotes) and all purchase documents (purchases, supplier returns and orders).

To Clear / Reset all transactions and balances:

1. On the Setup ribbon, select Global processes → Clear / Reset menu. The following confirmation screen is displayed:

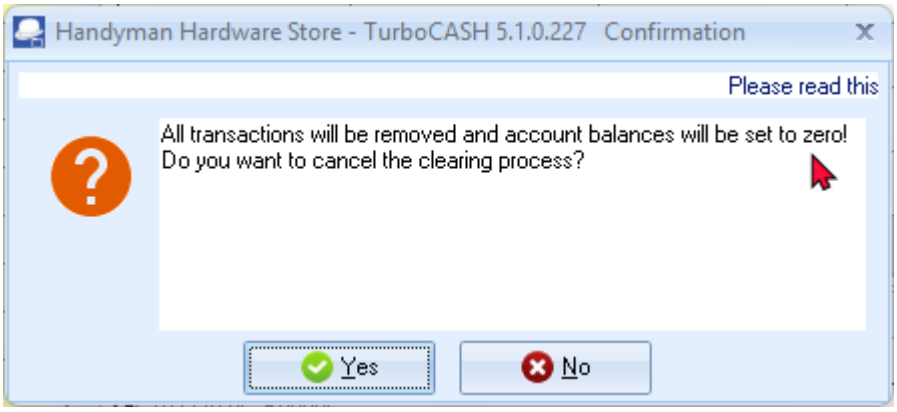


2. If you are absolutely sure, tick the "*I have read this instruction and understand the action!*" field. The Yes and No buttons will be available on this screen.



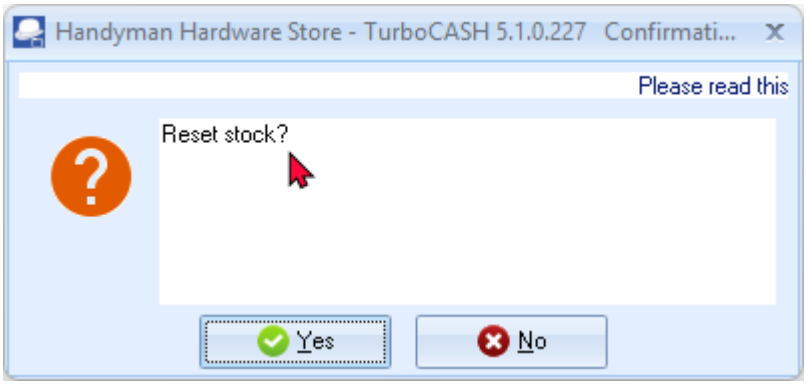
If you click on the No button, the process will be cancelled.

3. Click on the Yes button only if you are absolutely sure. Another confirmation screen is displayed:



On this screen you have the last chance to cancel the clearing process. If you click on the Yes button, the process will be terminated.

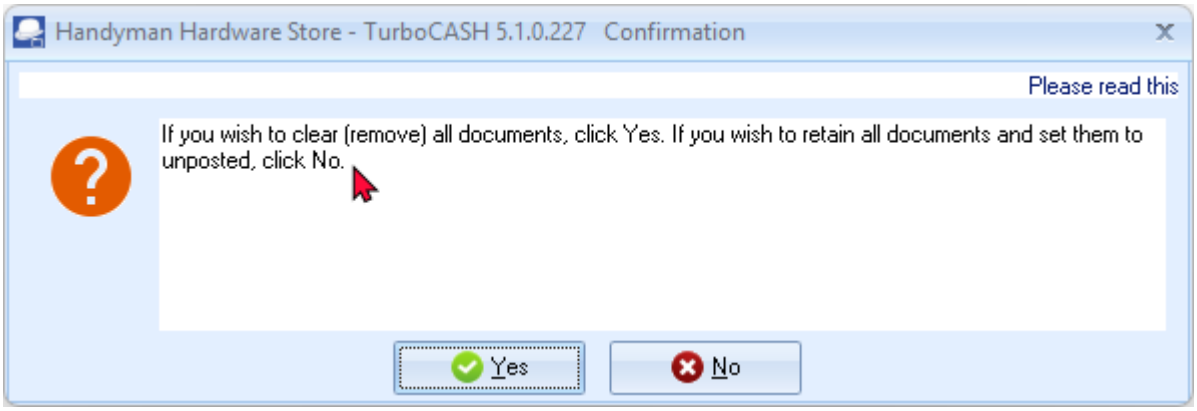
4. Click on the No button to clear / reset the Set of Books. The following confirmation screen is displayed:



5. If you do not want to reset clear the quantities, etc. of stock items, click on the No button.

If you click on the Yes button, all stock values will permanently be lost.

6. The following confirmation screen is displayed:



7. If you click on the Yes button, all transactions, documents and balances in a Set of Books will be deleted. No transactions, documents or any balances will be available in the Set of Books.

If you click on the No button, all the transactions and balances will be cleared reset to zero. All sales documents (i.e. invoices, credit notes, quotes) and all purchase documents (purchases, supplier returns and orders) will be retained and be available in Documents (Default ribbon).

Reverse posted batch/document

This feature allows you to reverse or cancel the transactions entered or imported into batches (journals), and or a selected document, which have already been updated (posted) to the ledger.

W Reverse posted batch (Journal) - This feature allows you to cancel transactions that were processed in batches (journals) which have already been updated (posted) to the ledger. By selecting this option, all the transactions that were previously updated (posted) to the ledger will be cancelled and removed from the transaction file.

The cancelled transactions will be automatically imported to the selected batch (journal). At this point, you have the option to either erase or delete the entire batch (journal). If you wish to keep the cancelled (reversed) batch, you can edit and correct the transactions, balance the batch, print the batch list, and post it to the ledger.

- Reverse posted document - This feature cancels the documents as well as any transactions that were generated by the documents (such as invoices and credit notes, purchases, and supplier returns) after they were updated (posted) to the ledger. The cancelled (reversed) document can then be accessed as an unposted document, which you can edit in the Documents section of the Default ribbon and then post (update) to the ledger. If you do not need to update (post) the document to the ledger, you may also choose to delete it using the Edit → Delete - Documents. option on the Default ribbon.

Created with the Standard Edition of HelpNDoc: Easy EBook and documentation generator

Copy from Set of Books

This option allows you to copy all the data from one Set of Books to another. By selecting this option, you replace all the existing data in the active Set of Books (opened Set of Books) with the data from the selected Set of Books.

The copying process includes copying settings, master files (such as accounts, debtors, creditors, and stock items), transactions in batches/journals (both posted and unposted), documents (both updated and not updated), budgets, repeating transactions, and more. Essentially, it duplicates the entire content of one Set of Books into another.

It's important to note that this feature overwrites any existing data in the target Set of Books. Therefore, you should exercise caution when using this option, as it can result in the loss of any data that was previously present in the target Set of Books.

If you try to copy a Set of Books into the same destination source (selected) set of Books, an error message will be displayed:

```
Dest and source are the same!C:\TCASH5\BIN\TUTORIALS\ENGLISH\HANDYMAN-B\
```

By using the "*Copy from a Set of Books?*" option, you can create two identical Sets of Books on your system with the same data, reports, and other information. It can be useful when you want to create a backup or have multiple copies of a Set of Books for different purposes.

Remember to carefully review and verify your actions before proceeding with the copying process to ensure that you don't unintentionally overwrite or lose any important data.

If you want to create a new Set of Books, you can use the following options on the Start ribbon tab:

1. *Create Set of Books ("Copy an existing Set of Books?" option): This option enables you to create a new Set of Books by making a copy of an existing one. When you select this option, you will be prompted to*

choose an existing Set of Books as the source. osFinancials5/TurboCASH5 will create a duplicate of the selected Set of Books, including its settings, master files, transactions, documents, budgets, and other data. You can then modify the newly created Set of Books as needed.

2. *Save as: This option allows you to save a copy of an existing Set of Books with a different name and/or location. This option is useful if you want to create a backup or create a copy of an existing Set of Books without modifying the original. When you choose this option, you need to specify the name and/or location for the copied Set of Books.*

Both options provide ways to create new Sets of Books based on existing ones, either by making a direct copy or by saving a copy with a different name and/or location. These options help streamline the process of creating new Sets of Books and provide flexibility in managing your financial data.

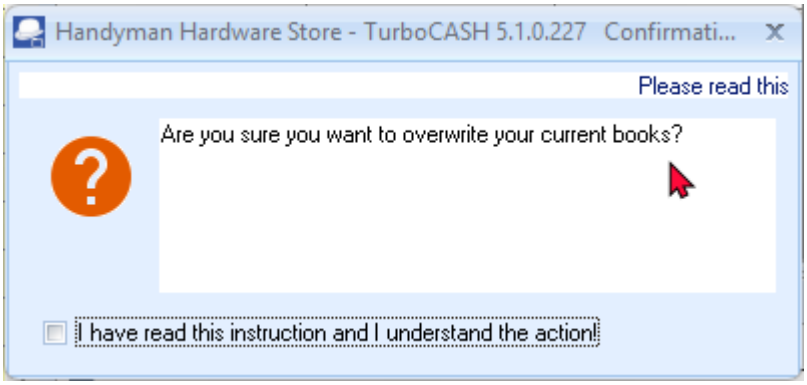
It's crucial to exercise caution and follow important precautions before using the "Copy from a Set of Books" feature in osFinancials5/TurboCASH5. There are some potential risks involved in the copying process. Here are the precautions you should take:

1. *Ensure that the correct Set of Books is opened: Before initiating the copy process, verify that you have the correct Set of Books opened in osFinancials5/TurboCASH5. Double-checking ensures that you don't accidentally copy data into the wrong Set of Books.*
2. *Create backups of the Set of Books: It's highly recommended to create backups of your active Set of Books before performing any irreversible operations. Backups serve as a safety net in case any issues or data loss occur during the copying process. Having a backup allows you to restore the previous state of your Set of Books if needed.*
3. *Perform a Data integrity check: Before copying data from another Set of Books, it's essential to ensure that the Set of Books you wish to copy from is in a good state and not corrupted. You can run a Data integrity check on the source Set of Books to verify its integrity and resolve any potential issues beforehand.*

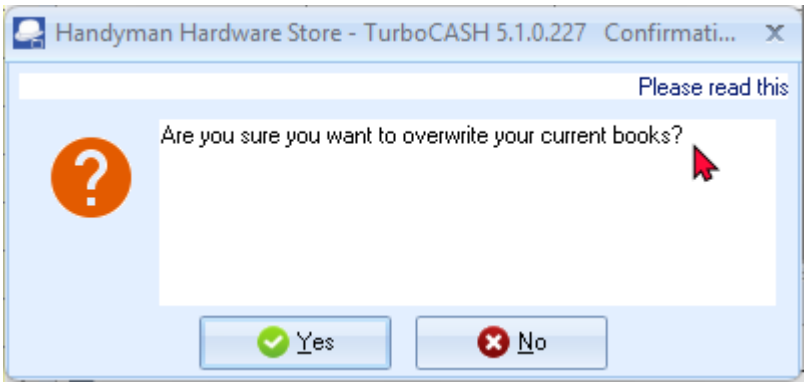
By following these precautions, you can minimize the risks associated with the copying process and ensure the integrity and safety of your data. It's always wise to proceed with caution when performing any irreversible actions that can potentially overwrite or replace existing data.

To copy data from another Set of Books:

1. On the Setup ribbon, select Global processes → Copy from Set of Books. The following confirmation screen is displayed:



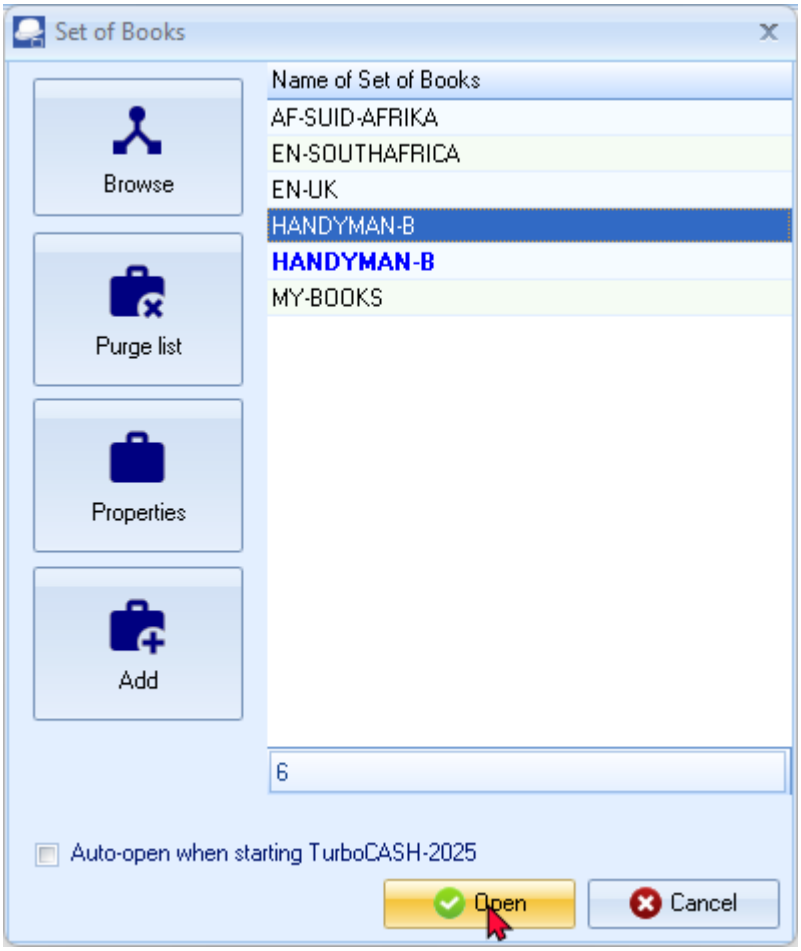
2. If you are absolutely sure, tick the "*I have read this instruction and understand the action!*" field. The Yes and No buttons will be available on this screen.



3. Click on the Yes button only if you are absolutely sure.

> *On this screen you have the last chance to cancel the clearing process. If you click on the No button, the process will be terminated.*

4. Click on the Yes button to replace all the data in the open (active) Set of Books. The *Set of Books* screen (the same screen as the one to Open a Set of Books) is displayed:



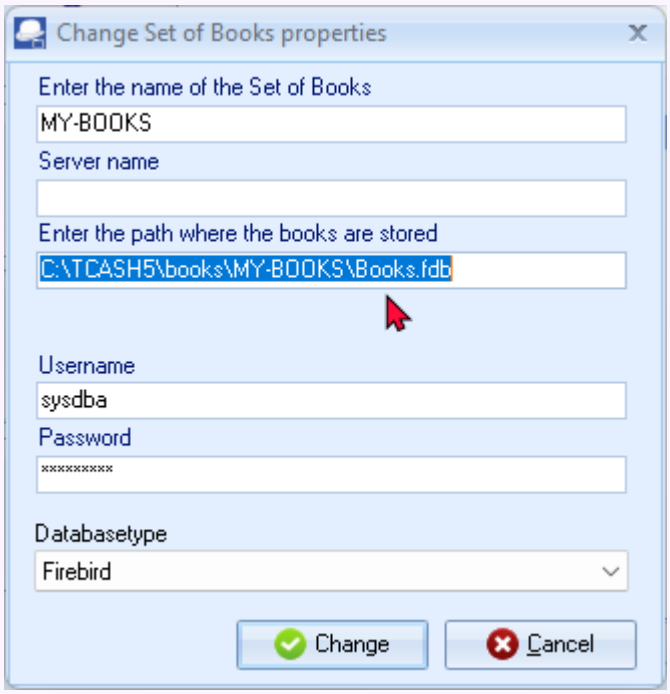
You may click on the Browse button to locate and Open a Set of Books, stored elsewhere on your system.

If a Set of Books is not located in the .../books or other directory where osFinancials5/TurboCASH5 is installed, (elsewhere on your system) the name of the Set of Books is displayed in a blue colour.

5. Select the Set of Books which you would like to copy the data from.

If the Set of Books you need to copy from, is not listed on the Set of Books screen, click on the Browse icon to select from any other Directory.

You may click on the Properties icon to view the holding Directory for the Set of Books selected on the list. If you click on the Properties icon, the following screen is displayed:



Once done, click on the Cancel button to close (exit) this screen.

6. Click on the Open button. All the data in the selected Set of Books will be imported (replace all existing data) into the Set of Books you are working in.

Once this process is finished, it is recommended that: -

W *Do a Data integrity check on the Set of Books you wish to copy from, to check that the Set of Books is not corrupted.*

W *Generate some reports to check that the data is correct. You may, for example, print a trial balance on both Sets of Books to compare the figures.*

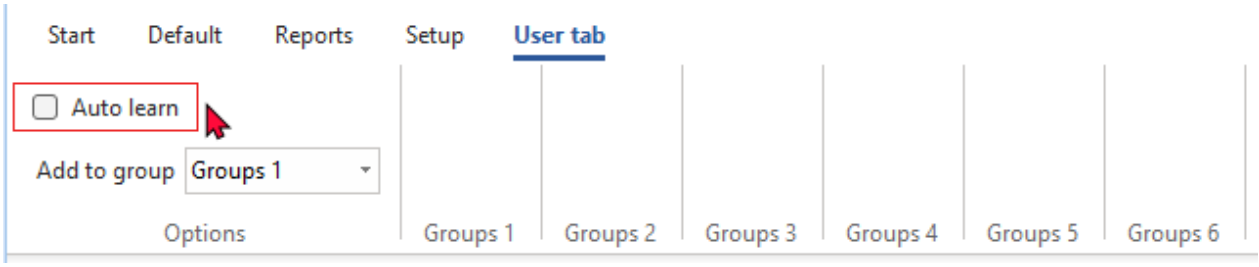
User tab ribbon

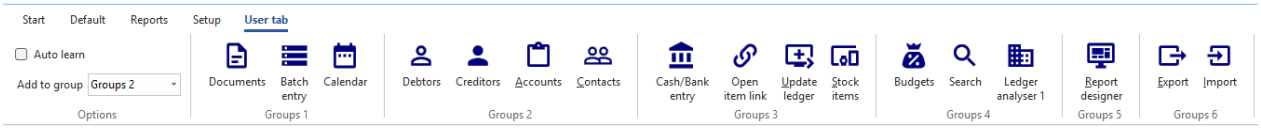
The User tab ribbon in osFinancials5/TurboCASH5 is a customisable quick menu that allows you to manage user navigation in up to six groups within a Set of Books. This makes it convenient for users to access their frequently used features.



Activating the Auto-learn feature: The "Auto-learn" feature, when selected (ticked), automatically adds the last accessed options to the User tab ribbon in up to six (6) groups. This makes it convenient for users to access their frequently used features.

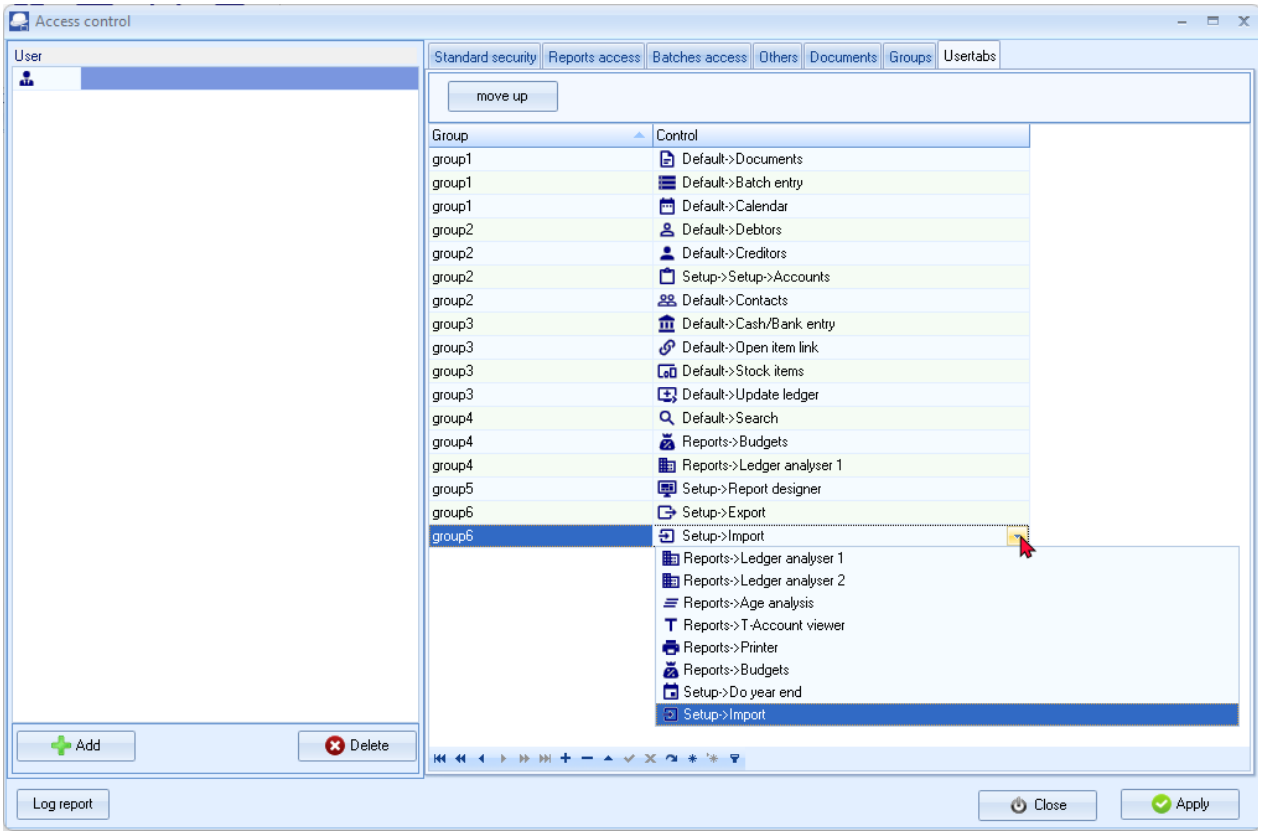
Deactivating Auto-learn feature: Once you have populated the User tab ribbon with the desired shortcuts, you can deactivate the "*Auto-learn*" feature by removing the tick from the "*Auto-learn*" field. This ensures that the User tab ribbon retains the manually selected options and doesn't automatically update based on the last accessed features.

Default ribbon: By default, when opening the Set of Books, the Default ribbon is displayed. However, if the User tab ribbon is activated and configured, it will automatically display the User tab ribbon instead of the Default ribbon upon opening the Set of Books.



Manually configure the User tab ribbon: The User tab ribbon may be changed or set manually in the Usertabs tab on the Setup → Access control (Setup ribbon).

Filter options: The User tab ribbon also provides filter options, allowing you to create filter files, save them, and load them as needed. This helps in managing and organising data based on specific criteria.



Removing Control icons: If any of the Control icons are added, you may remove it from the "User tab". For example, "Do year-end" is only performed once a year, you may select a different feature to replace it, or simply delete it from the list.

By customizing the User tab ribbon, you can streamline user navigation, enhance efficiency, and tailor the interface to match the specific needs and preferences of each user in a Set of Books.

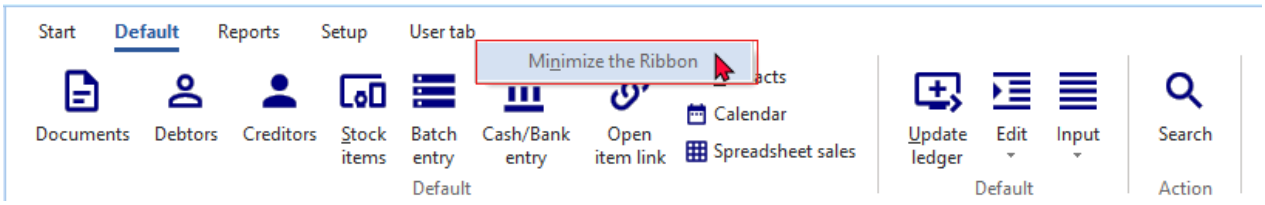
Show / Hide ribbon options

To hide the Ribbon options

Select any of the ribbon tabs.

Right-click and select "*Minimize the ribbon*" (a tick will be added before this option).



To show the Ribbon options

Select any of the ribbon tabs.

Right-click and select "*Minimize the ribbon*" (the tick before this option will be removed).

Show / Hide Ribbon - Double click

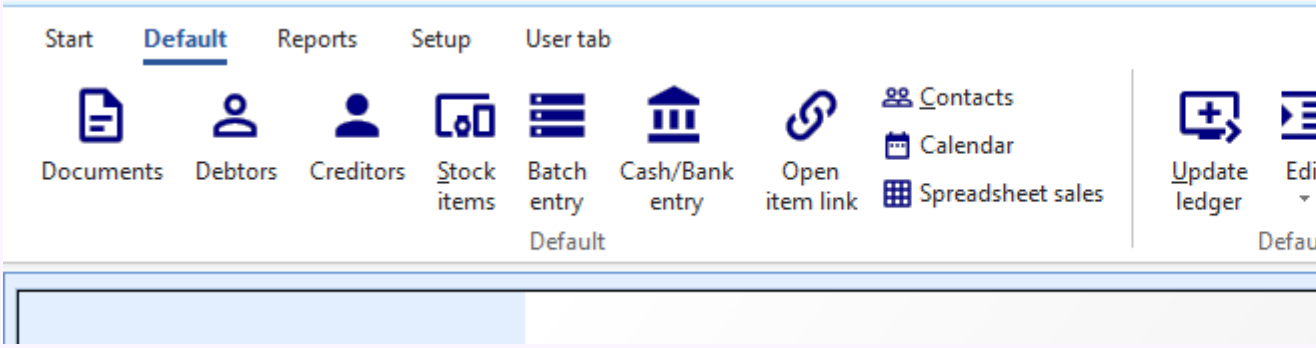
You may also double-click on any of the Ribbon tabs to show or hide the ribbon options

Show / Hide Ribbon options

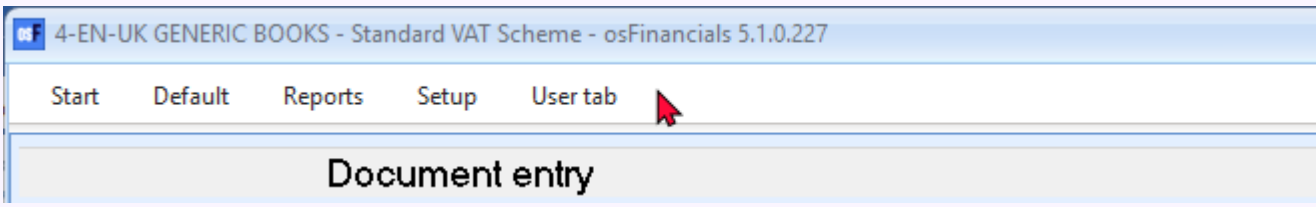
Collapse the ribbons

You may also hide or show the ribbon options using the "Collapse the ribbon" and "Pin the ribbon" icons on the bottom of the r

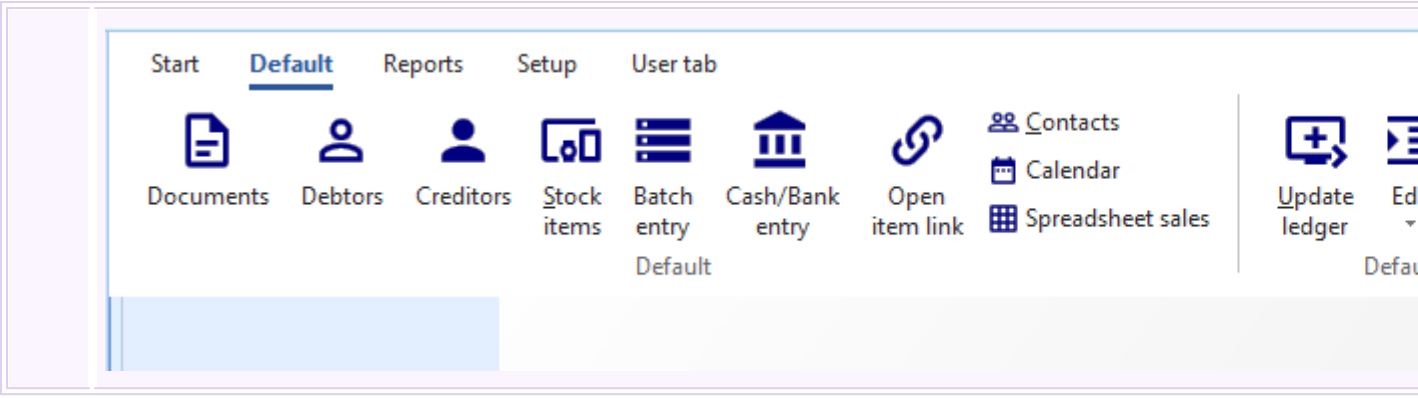
"Collapse the Ribbon" - this will hide the ribbon options strip.



Collapsed ribbon



Pin the ribbons - this will show (add) the ribbon options strip.



If the screens of debtors, creditors, stock items or documents is not displayed correctly, you may need to go to Tools → Close active forms (Setup ribbon) and relaunch the screens when the ribbon is collapsed.

Created with the Standard Edition of HelpNDoc: Easily create PDF Help documents

Resizing screens

By default, all sections of screens are docked (maximised). If you see the following button on a screen, you may click to undock (maximise) resize a screen or to dock (minimise) the screen.

To maximise the Transactions tab and/or Debit / Credit transactions section of the screen, click on the *button to maximise the Transactions tab. You may also click and drag any part of the screen up / or down.* 
Show / Hide Ribbon options

You may need some extra space when working with, Documents, Stock, Debtors, Creditors, Ledger analyser, etc.

To Auto hide the ribbons options, double-click on any of the ribbon tabs. This will hide the options on the ribbon and only display the ribbon tabs and auto-resize (larger) the screens in osFinancials5/TurboCASH5. You may then click on a ribbon tab to select and access the options. Once you have selected an option, the ribbon options will auto hide and only display the ribbon tabs.

To Show the ribbon options and resize the screens (smaller), you may double-click on a ribbon tab.

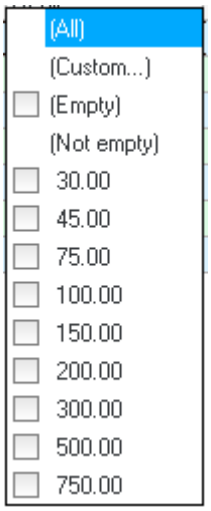
Filters

Filter Options in Column Headings

The grid is very powerful because of its sophisticated easy to use filter and sort features does this quicker than any other way. It has the ability to group, sort and filter any data column(s) on most screens in a Set of Books with only a view mouse clicks.

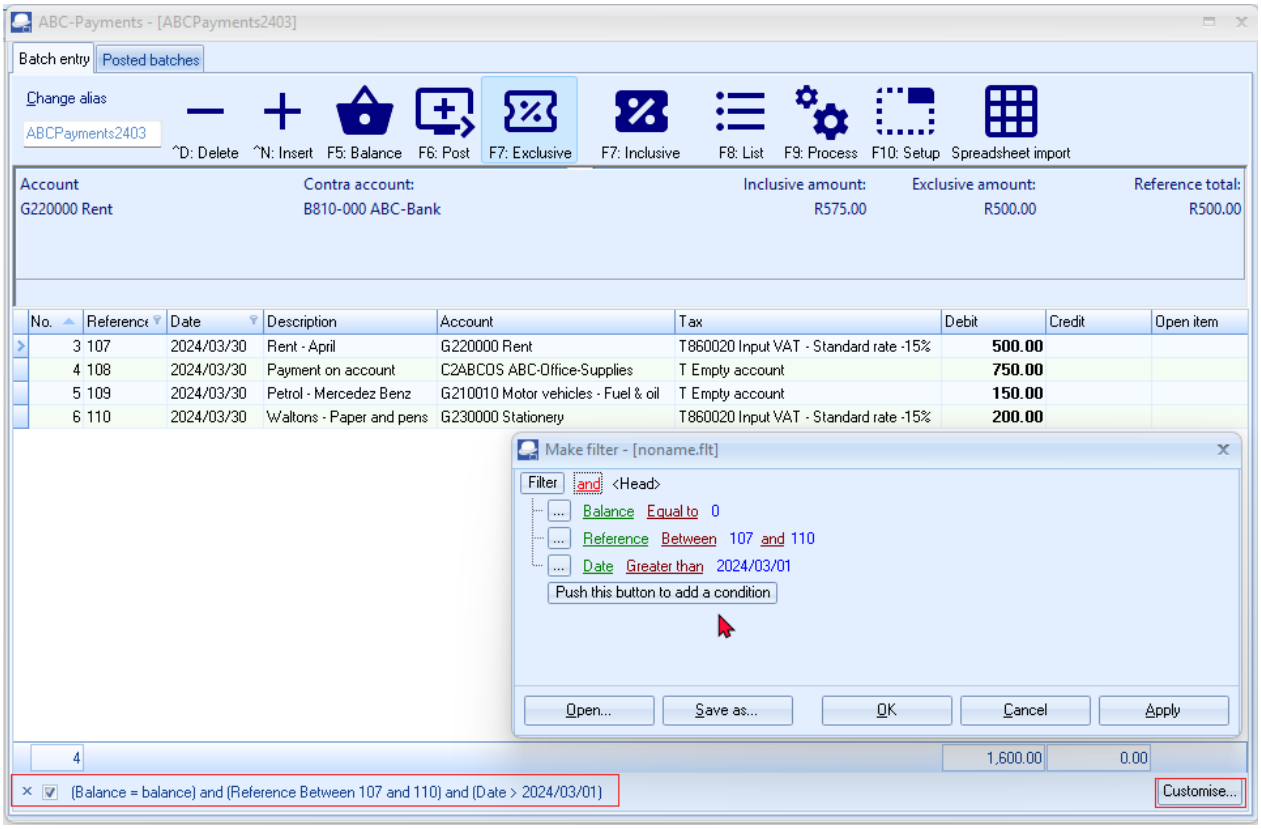
If you need to view or find specific data, there are carious option available to locate and find your data. Some of the options are:



- Sort - Click on a column heading to sort and list the data ascending or descending sequence. All the data is by default displayed ascending; from the smallest to the highest value (e.g. a-z or 0-9) according to the record number (e.g. line number in a batch, etc.) To change the sort order from ascending (e.g. a-z or 0-9) to descending (e.g. z-a or 9-0) select a column and click on it. If you click on it again it will change back to ascending sequence.
- Drag and Drop Columns - You may click on a column and drag it to the left or to the right to change the sequence your data is displayed on screens.
- Filter - Click in the arrow to list the data in a specific column. A list displaying the data, as well as an All option and a Custom... option in the selected column will be displayed. For example, if amounts are entered in a batch entry screen, all the amounts will be listed. By adding a tick next to a specific amount, only transactions, matching that amount will be listed.
- Custom - You can easily build customised filters according to your needs. These filter files can be saved and opened for future use.

Custom Filters

Once you have selected an option on a list, the your selection will be displayed at the bottom section of the Batch entry screen as follows:



You may click on the Customise option on a column list or click on the Customise button to:

1. Make a filter (add or delete conditions and groups).
2. Save a filter.
3. Open a filter.

Make a Custom Filter

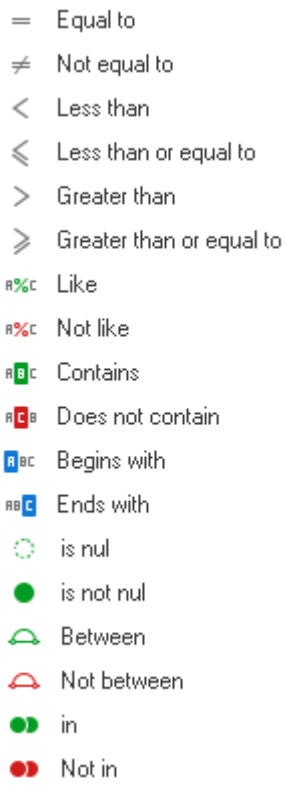
To make a filter:

1. Click on the Customise option on a column list or click on the Customise button.
2. Select an operator (i.e. and, or, and not, or not).
3. Click on the Filter button (or on the ... button) and select one of the following options on the context menu:
    a) New condition
    b) New group
    c) Delete row (If you click on the Filter button, you may delete all rows (conditions and groups)).

4. Select a column from the list of available data applicable to the screen. In this example, the Date is selected.
5. Select a filter condition. In this example, the Between is selected. Another field is opened to select another date.
6. Once you have created your conditions or groups, click on the Apply button.
7. Click on the OK button to close and exit this Make filter screen.

Conditions

1. Equal to - list or display all values which is the same as the specified value.
2. Not equal to - list or display all values which is not the same as the specified value.
3. Less than - list or display all values smaller than the specified value.
4. Less than or equal to - list or display all values smaller or equal to the specified value.
5. Greater than - list or display all values greater than the specified value.
6. Greater than or equal to - list or display all values greater or equal to the specified value.
7. Like - list all values similar to the specified value.
8. Not like - list all values not similar to the specified value.
9. Contains - list all values which contains (includes) the specified value.



10. Does not contain - list all values which does not contain (excludes) the specified value.
11. Begins with - list all values which starts with the specified value.
12. Ends with - list all values which ends with the specified value.
13. Is null - excludes any value entered, will not be listed or displayed.
14. Is not null - is not zero - any value which is not equal to zero will be listed or displayed.
15. Between - Specify specific values, etc. to include only matching values. (For example, between

reference numbers 105 and 111 will exclude any lower numbers than 105 and higher numbers than 111).

16. Not between - Specify specific values, etc. to exclude values. (For example, Not between reference numbers 105 and 111 will exclude these numbers and will list any lower numbers than 105 and higher numbers than 111).

17. In - In a specified value.

18. Not in - Not in a specified value.

If a Date for a column condition is selected, additional conditions will be available (i.e. is this month, is this year, is next 7 days, is next week, is next 14 days, is next two weeks, is next 30 days, is next month, is future, is this week, is yesterday, is today, is last 7 days, is last week, is last 14 days, is last two weeks, is last 30 days, is last month, is last year, is past, is this week, etc.

Save Custom Filter Files

To Save a Custom Filter file:

1. Once you have sorted or filtered your data with the Make filter utility, click on the Save as... button. The "*Save active filter as*" screen will be displayed.

2. Select a Directory in which you wish to save the custom filter file.

3. Enter a file name.

4. Click on the Save button to save the Filter in a (*.*flt*) Filter file format. You may then at any later stage open the saved *.flt file.

Open Custom Filter Files

To Open a Saved a Custom Filter file:

1. Once you have sorted or filtered your data with the Make filter utility, click on the Open... button. The "*Open saved filter as*" screen will be displayed.

2. Select a Directory in which you have saved the custom filter file.

3. Select a valid filter file.

4. Click on the Open button. The selected filter file's name will be displayed in the titlebar of the make filter screen.

books

The Set of Books in this directory, is installed when installing osFinancials5/TurboCASH5, is HANDYMAN which will open in the English language.

Tutorials

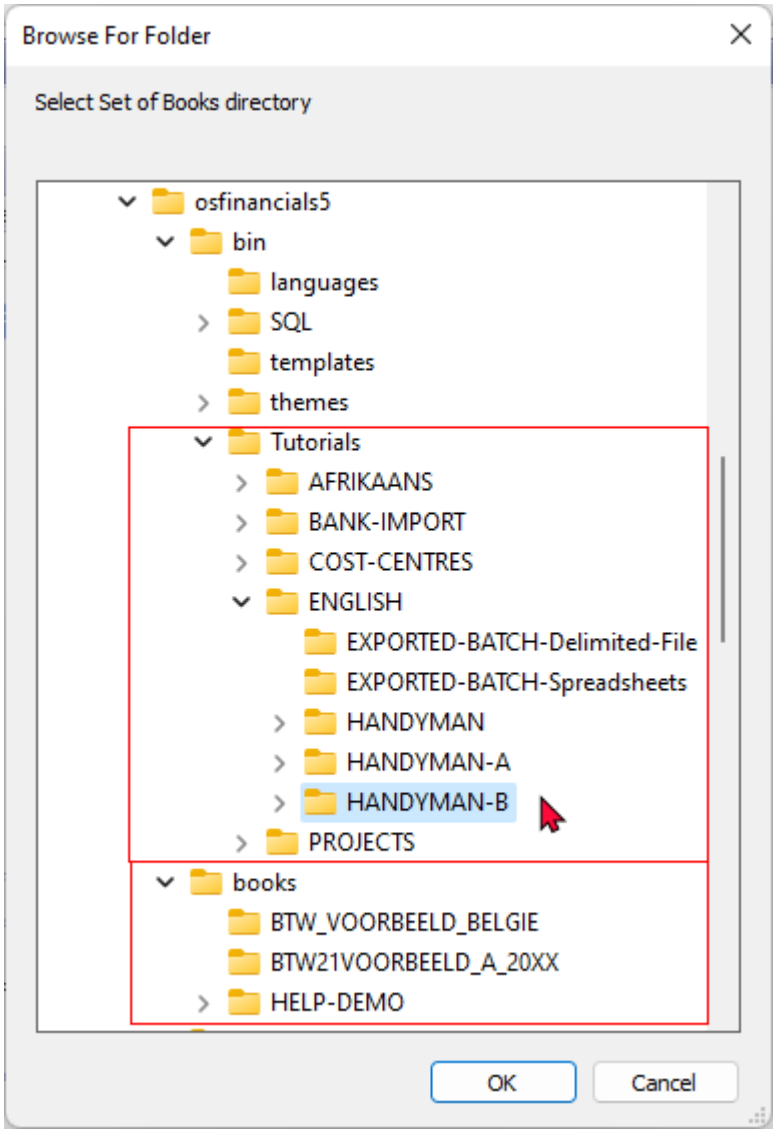
Tutorial Sets of Books, will be installed in the "*bin / Tutorials*" directory. To follow these tutorials, you need to click on the Browse icon (of the Open Set of Books screen) and select the Sets of Books tutorials.

ENGLISH

English tutorials (using the default payments and receipt batches for banking / cash transactions):

The following Set of Books based on this tutorial, is installed in the "... \bin\Tutorials\ENGLISH\" folder:

- HANDYMAN (No transactions)
- HANDYMAN-A (Unposted)
- HANDYMAN-B (Posted)



The following folders contains files which may be imported into batches:

- *EXPORTED-BATCH-Delimited-File – Exported batch transactions using the "Write delimited file" option and may be imported into a batch using the "Delimited file import" option (F9:Process icon) on batches.*
- *EXPORTED-BATCH-Spreadsheets – Exported batch transactions in the *.xlsx (Excel 2007-365) file format. These transaction files may be opened in the Spreadsheet import icon*

on batches, and imported into a selected batch.

BANK-IMPORT Plugin - English tutorials

English tutorials (using the BankImport plugin for banking / cash transactions):

The following Set of Books based on this tutorial, is installed in the "...\bin\Tutorials\BANK-IMPORT\" folder:

- HANDY-BANK (No transactions).
- HANDY-BANK-A (Unposted transactions in batches and documents, except the Payments and Receipt batches, which is cleared for the Bank account and the Petty cash).
- HANDY-BANK-B (Posted transactions in batches and documents, including the imported bank statement and processed Petty cash transactions).
- HANDY-BANK-UNPOSTED-BANK-STATEMENT – All transactions in batches and documents have been posted. The sample Bank statement in the "*...\bin\Tutorials\BANK-IMPORT\BANK-STATEMENTS*" folder needs to be imported and Petty cash transactions needs to be processed).

AFRIKAANS

The following Set of Books based on the Afrikaans tutorial, is installed in the "*...\bin\Tutorials\AFRIKAANS*\" folder.

- NUTSMAN (No transactions).
- NUTSMAN-A (Unposted)
- NUTSMAN-B (Posted).

COST-CENTRES

Tutorials / examples to explore the activation, processing and reporting of Cost centres in osFinancials5/TurboCASH5. See - Cost centres in this Help file.

The following Set of Books based on this tutorial, is installed in the "*...\bin\Tutorials\COST-CENTRES*\" folder:

- COST-CENTRES-A (transactions and documents not posted to the ledger)
- COST-CENTRES-B (transactions and documents posted to the ledger).

PROJECTS

Tutorials / examples to explore the activation, processing and reporting of Projects in osFinancials5/TurboCASH5. See - Projects in this Help file.

The following Set of Books based on this tutorial, is installed in the "...\bin\Tutorials\PROJECTS\" folder:

- PROJECTS-A (transactions and documents not posted to the ledger)
- PROJECTS-B (transactions and documents posted to the ledger).

Support

Support information

This option will provide you with contact information for technical assistance.

To display osFinancials5 Support information:

1. On the Start ribbon, select Help → Support.

2. Check the necessary details.
3. Click on the OK button, or press the Enter key on your keyboard, if you do not wish to link to the Website. You may also press the Esc key on your keyboard to exit this screen.

You may, from this screen, connect to the osFinancials Website directly by clicking on the Internet address (blue link) osFinancials support page.

Access to osFinancials website

- https://www.osfinancials.org/nl/ - Netherlands

- https://www.osfinancials.org/en/ - English

Support Contract and Extra Tickets

Support Contract and Extra Tickets - Shop -

Support Contract:

The support contract grants you direct access to our team for issue resolution, subject to a "*fair use*" policy. Support is provided via telephone and/or email. Additionally, you'll receive interim updates of osFinancials5/TurboCASH5 where bugs are fixed and new features introduced.

Extra Tickets:

Additional support tickets beyond the "*fair use*" allocation can be purchased at a discounted rate for contract holders.

Please note that development or modification of osFiosFinancials5/TurboCASH5 document layouts are not included in the support contract.

Created with the Standard Edition of HelpNDoc: Easily create CHM Help documents

Show welcome

The "*Welcome to osFinancials*" screen will by default be displayed. It will list the latest News from osFinancials.

To close or exit the "*Welcome to osFinancials*" screen, click on X (close).

To display the "*Welcome to osFinancials*" screen again, select Help → Show welcome on the Start ribbon.

You may set the Calendar as the default to launch in stead of the "Welcome to osFinancials" screen, when you open a Set of Books.

Created with the Standard Edition of HelpNDoc: Effortlessly Edit and Export Markdown Documents

Forum

You may access and view the latest and older Forum posts as well as various categories. Should you have a query or an issue, you may search and will probably find a solution to your query or issue.

If not, you may post your query or issue. Registered osFinancials users will soon help by posting answers or solutions to your query or issue.

To access the forum:

On the Start ribbon, select Help → Forum.

An information message will be displayed for unregistered users.

> "You are not yet registered to post on our forum! You will need to register osFinancials to use that username password to login to our forum or shop."

The Forum webpage is launched.

Manage Sets of Books

Options to manage Sets of Books in osFinancials5/TurboCASH5

There are several options on the Start ribbon to manage Sets of Books (databases) in osFinancials5 / TurboCASH5, including:

1. Open Set of Books: Clicking on the Open icon on the Start ribbon allows you to select and access a specific Set of Books from the list of valid Sets of Books. The list includes Sets of Books located in the "books" folder of the osFinancials5/TurboCASH5 installation directory and any Sets of Books stored in other locations that have been added to the list.
2. Close Set of Books: The Close Set of Books option on the Start ribbon allows you to close the currently active/opened Set of Books.
3. Create Set of Books: The "*Creation wizard*" provides three options to copy and create a Set of Books:
    - Copy an existing Set of Books?: This option enables you to create a new Set of Books by making an exact copy of an existing one, including all the data it contains. You can select the Set of Books you want to copy and specify the directory for the new Set of Books.
    - Let osFinancials help you to create a Set of Books?: / Let TurboCASH help you to create a Set of Books?: This option guides you through the process of setting up a new Set of Books using an existing Set of Books as a template. You can also download pre-existing Sets of Books as templates for your country or industry.

      After downloading a Set of Books (template) using the "Let osFinancials help you to create a Set of Books?" option, the "Save as" screen will be launched, allowing you to save the template in a directory of your choosing.

      You can also view a list of available Sets of Books available for a download to use as templates for your new Set of Books.

      After downloading a Set of Books, the Set of Books (template) will automatically open in the language associated with the country and language of the Set of Books.
    - Create a Set of Books (Advanced)?: This option is for advanced users who want to create a new Set of Books from scratch. It allows you to choose the database type (Firebird or MSSQL) and set a maximum of 8-digit account codes, providing more flexibility in creating the Set of Books structure.

      When creating, or copying a Set of Books, the default number of characters for the account codes is pre-determined by the selected Set of Books. Most Sets of Books currently use 3-digit account codes as their default setting.

> *However, if you choose the "Create a Set of Books (Advanced)?" option, you can select a maximum of 8-digit account codes, providing more flexibility in creating a Set of Books that suits your needs.*

4. Save as: This option allows you to save a Set of Books to a different directory or folder on your system. It creates a copy of the Set of Books with a new name and location, without affecting the original data.
5. Delete Set of Books: Deleting a Set of Books permanently removes all data within it. It is important to have backups, print necessary reports, and retain supporting documents before deleting a Set of Books, as the information may be required for tax returns or other legal purposes.

These options provide flexibility in managing Sets of Books in osFinancials5/TurboCASH5, including creating new ones, copying existing ones, saving copies, and deleting Sets of Books.

Options to Backup or Copy a Set of Books in osFinancials5/TurboCASH5

In addition to the Backup/Restore feature, you can create exact copies of existing Sets of Books or templates that are installed in your osFinancials5/TurboCASH5 …/books directory.

The following options are available in osFinancials5/TurboCASH5 for backing up or copying a Set of Books:

1. Backup / Restore: This option is available on the Start ribbon. It allows you to create backups of your Set of Books and restore them when needed. You can select the backup option to create a backup file and choose the restore option to restore a previously created backup.
2. Save as: This option is also available on the Start ribbon. It enables you to create a copy of an existing Set of Books with a new name and/or a new location. This is useful when you want to create a duplicate or backup of a Set of Books.
3. Create Set of Books: This option is found in the "*Copy an existing Set of Books?*" option of the "*Creation wizard*" on the Start ribbon. It allows you to create a new Set of Books based on an existing one. You can select an existing Set of Books and provide a new name and/or location for the copied Set of Books.
4. Tools → Global processes → Copy from a Set of Books: This menu-option is available on the Setup ribbon. It provides a feature for copying a Set of Books from an existing one. You can select the source Set of Books and specify the name and/or location for the copied Set of Books.

These options allow you to create backups or copies of Sets of Books in osFinancials5/TurboCASH5, either by directly saving them as new files or by using existing Sets of Books as templates. Each option provides

flexibility in terms of naming, location, and source for the copied Set of Books.

Open Set of Books

Every time an unregistered version of osFinancials5/TurboCASH5 is started, the following confirmation message will be displayed:

> This software is limited to 500 transactions or 500 documents. Please register and buy a licence for osFinancials5!
> This copy of osFinancials5 is not registered! Do you wish to register it now?

Unregistered versions will allow you to process up to 500 transactions and /or documents. Once this limit is reached, osFinancials5/TurboCASH5 will not allow any processing of transactions, in batches and/or documents.

Once you have registered osFinancials5/TurboCASH5, you will receive an unlocking code and will be able to process further transactions and or documents.

Open a Set of Books in which 500 transactions and or documents have been processed:

osFinancials5/TurboCASH5 the limit of 500 transactions or 500 document is reached! Please register and buy a licence.

Once you have registered osFinancials5, you will receive an unlocking code and will be able to process further transactions and or documents.

Accessing Budgets (Reports ribbon) in a Set of Books in which 500 transactions and or documents have been processed:

> This software is limited to 500 transactions or 500 documents! Please register and buy a licence for osFinancials5.

Once you have registered osFinancials5/TurboCASH5, you will receive an unlocking code and will be able to process further budgets.

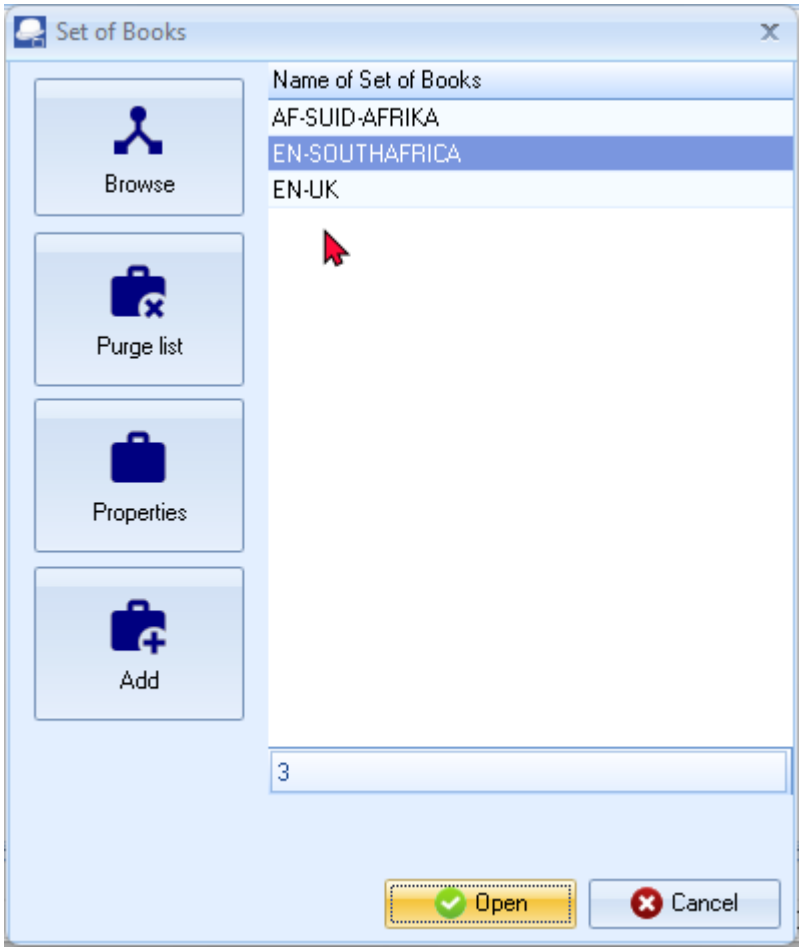
To access the Set of Books option in osFinancials5/TurboCASH5, you need to click on the Open icon on the Start ribbon. This option will display a list of all valid Sets of Books (databases) that are located in the "*books*" folder of the osFinancials5 installation folder. Additionally, it will also show any Sets of Books that are stored in other locations, such as on a different part of the hard disk or on a mapped drive on the

network, which have been added to the list. The path or directory of these Sets of Books can be set in the Properties of the Set of Books.

Open Set of Books screen

To open a Set of Books:

1. On the Start ribbon, select Open Set of Books (Alt + O). The "*Set of Books*" screen is displayed:



Blue - Font colour

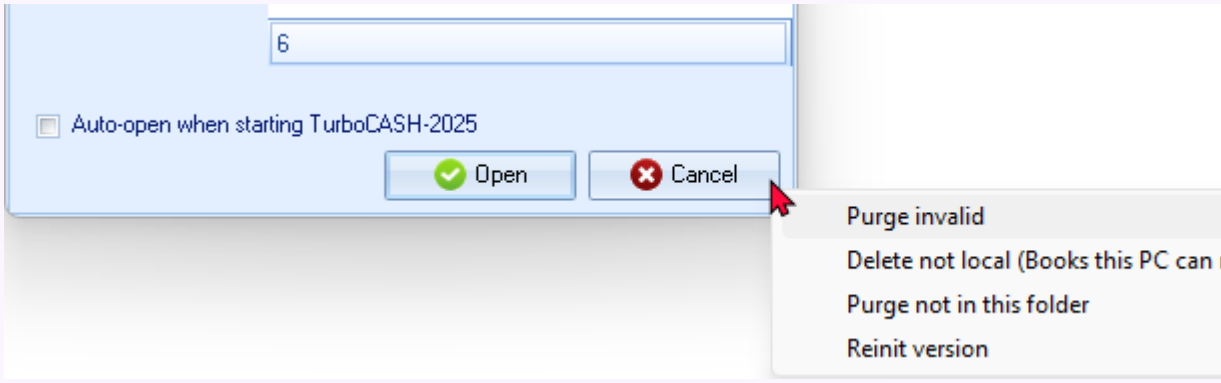
This indicates indicates that a Set of Books is not located in the same directory (books folder) where osFinancials5/TurboCASH5 is installed. Instead, it is located elsewhere on your system.

Red - Font colour

When a Set of Books (which is located elsewhere on your system) is deleted or its folder is moved to a different location, the font color of the Set of Books name turns red.

This also happens when the drive or network where the Set of Books is stored becomes unavailable or unmounted.

You may right-click on the Cancel button remove invalid Set of Books in the Open Set of Books screen.



2. Select the Set of Books which you would like to open.

3. Click on the Open button.

If you click on the Cancel button, no Sets of Books will be opened.

Year-end confirmation

Should you open the Set of Books, and the date of the end of the year, is in the past, a confirmation message will be displayed, for example;

> This year Ends on 2022/02/28
> Today 2022/04/04
> Warning, this date does not fall into any of this or last year's reporting dates!
> Do year end?

You need to adjust the Start of the financial year in one of the following options on the Setup ribbon:

- *Setup → Reporting dates (if no transactions were processed for the Set of Books).*
- *Do year end.*

Icons on Open Set of Books screen

Browse

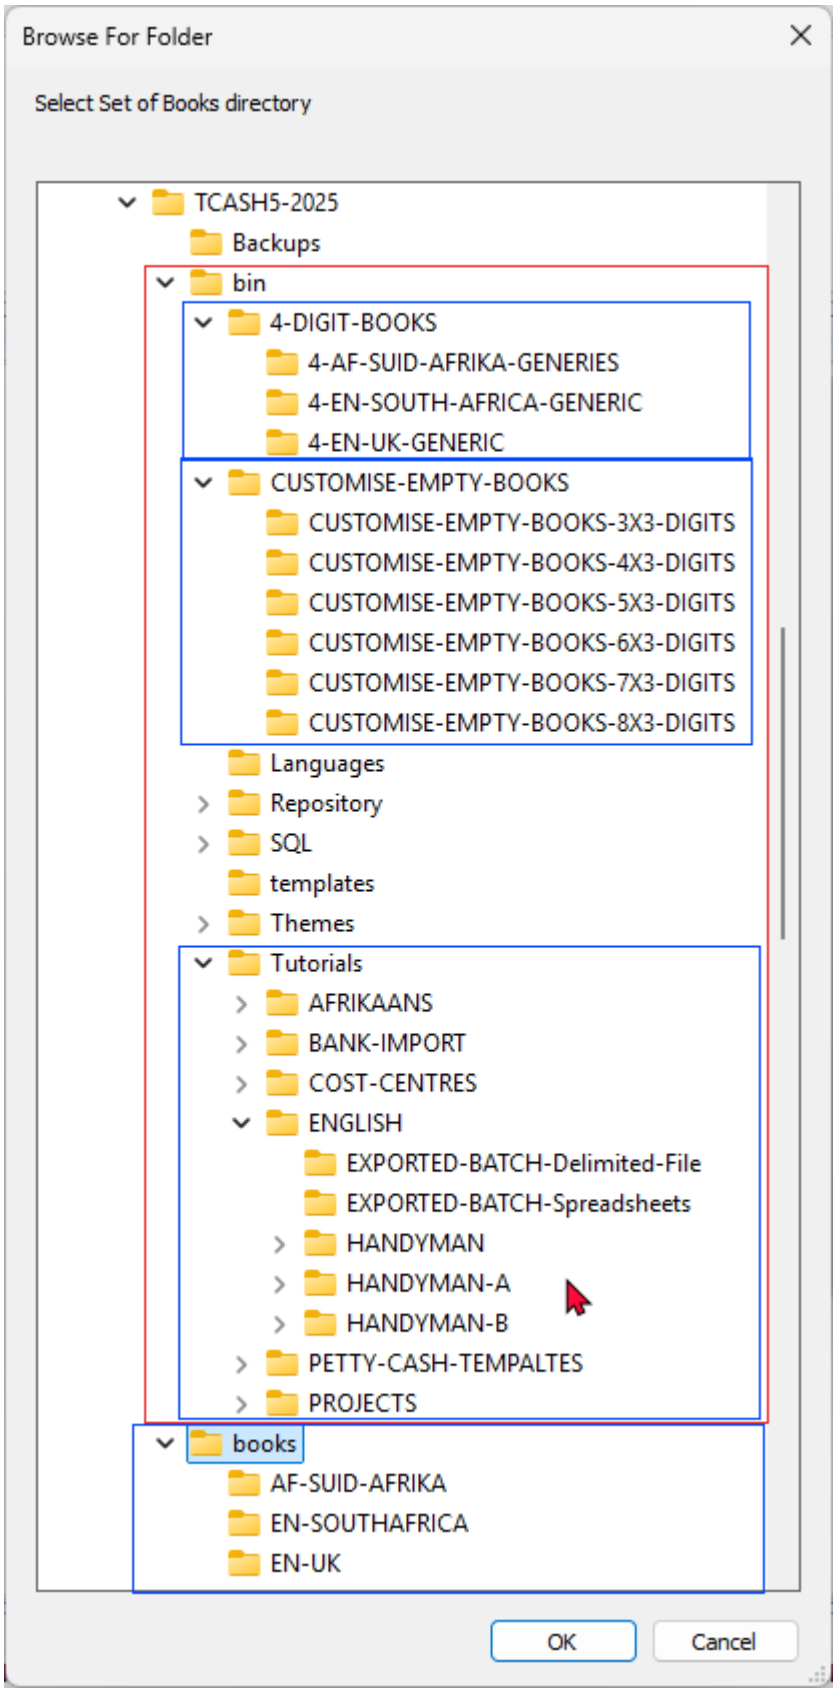
The Browse icon will allow you to add a Set of Books to the list.

If the Set of Books you want to open is stored in a location other than the "*books*" folder in the

osFinancials5/TurboCASH5 installation folder, you can use the Browse icon to locate and select it. Clicking on the Browse icon will allow you to navigate to the directory or folder where the Set of Books is stored and select it from there.

To browse and add a valid osFinancials5/TurboCASH5 Set of Books to the Set of Books list:

1. If you click on the Browse button, you may select from any other directory. The '*Browse for Folder*' screen is displayed.
2. You must pick a valid osFinancials5/TurboCASH5 Set of Books. If the directory does not contain a valid Set of Books, it will not be added to the list.



The Books are by default installed in the following directories:

1. books directory - The Sets of Books in the "books" directory are installed during the

osFinancials5/TurboCASH5 installation. The specific sets of books depend on the country and language you have chosen during the installation process.

> If the set of books for your language and or country, is not available in the books directory, you may select any of the available Firebird Sets of Books and linked languages available as a free download.
> osFinancials5/TurboCAH5 supports 79 different languages and counties / tax regimes languages liked to 87 Sets of Books (databases) which may be downloaded and customised to meet your requirements.

2. bin directory - The bin directory consists of the following three folders:
    - 4-DIGIT-BOOKS - These Sets of Books consists of a 4-Digit main accounts with 3-Digit sub-accounts with a Chart of accounts supporting larger descriptions and fields. These Sets of Books is based on the Firebird database type. The following Sets of Books, based on the "CUSTOMISE-EMPTY-BOOKS-4X3-DIGITS.zip" (with a 4-digit main accounts and 3 digit sub-accounts) were created:
        - 4-EN-SOUTH-AFRICA-GENERIC: This generic Set of Books includes 4-digit main account and 3-digit sub-account codes, based on the South African Chart of Accounts. It incorporates specific South African terminology and includes the structure of South African VAT-accounts and VAT-codes, aligned with the VAT201-return.
        - 4-AF-SUID-AFRIKA-GENERIES.: This generic Set of Books includes 4-digit main account and 3-digit sub-account codes, based on the South African Chart of Accounts in Afrikaans. It incorporates specific South African terminology and includes the structure of South African VAT-accounts and VAT-codes (Belasting op Toegevoegde Waarde (BTW) Suid-Afrika (Afrikaans), aligned with the VAT201-return.
        - 4-EN-UK-GENERIC: This generic Set of Books includes 4-digit main account and 3-digit sub-accounts, based on the United Kingdom (UK) Chart of Accounts. It incorporates specific UK terminology and includes Value Added Tax (VAT) - United Kingdom accounts based on the VAT Standard rate scheme. The VAT-account and VAT-codes structure in the Chart of Accounts is designed to match the various boxes on the UK VAT return. NOTE: Various schemes for VAT may be applicable for various scenarios.
    - CUSTOMISE-EMPTY-BOOKS - (Pre-configured Firebird databases) - Only includes 3 control accounts (Retained earnings / Debtors control and Creditors control). The field length for Account descriptions and Groups description length is set to 128 characters. The "TYPES" table with Paper types and may need to add the Groups for Cost centre 1 / Cost centre 2 / Projects and Languages. The basic journals (such as Sales journal, Purchase journal and General

journal) have been added and the basic settings for documents (such as Invoices, Credit notes, Quotes, Purchases, Supplier returns and Orders) is already set.

The basic Sets of Books created using this option will include the essential three main accounts: Debtor's Control, Creditor's Control, and Retained Earnings. The remaining Chart of Accounts can be fully customised according to your specific requirements. This flexibility enables you to tailor the Sets of Books to suit your unique accounting needs. You may select the templates consisting 3- to 8-digits number of digits for main accounts to customise for your specific requirements.

- Tutorials
  - ENGLISH - The …bin/Tutorials/ ENGLISH folder contains some tutorials / examples to explore osFinancials5/TurboCASH5 in the English language. The English tutorials (i.e. HANDYMAN (no transactions), HANDYMAN-A (transactions and documents not posted to the ledger) and HANDYMAN-B (transactions and documents posted to the ledger).
  - AFRIKAANS - The …bin/Tutorials/ AFRIKAANS folder contains some tutorials / examples to explore osFinancials5/TurboCASH5 in the Afrikaans language. The Afrikaans tutorials (i.e. NUTSMAN (no transactions), NUTSMAN-A (transactions and documents not posted to the ledger) and NUTSMAN-B (transactions and documents posted to the ledger).
  - BANK-IMPORT - The …bin/Tutorials/ BANK-IMPORT folder contains some tutorials / examples to explore the BANK-IMPORT plugin to import and process Bank statements into your cashbook in osFinancials5/TurboCASH5 using the English language. The English tutorials (i.e. HANDY-BANK (no transactions), HANDY-BANK-A (transactions and documents not posted to the ledger) and HANDY-BANK-B (transactions and documents posted to the ledger). The HANDY-BANK-UNPOSTED-BANK-STATEMENT (all transactions and documents posted to the ledger, except the bank transactions).
  - COST-CENTRES - The …bin/Tutorials/ COST-CENTRES folder contains some tutorials / examples to explore the activation, processing and reporting of Cost centres in osFinancials5/TurboCASH5. The Cost centre tutorials (i.e. COST-CENTRES-A (transactions and documents not posted to the ledger) and COST-CENTRES-B (transactions and documents posted to the ledger). See - Cost centres in this Help file.
  - PROJECTS - The …bin/Tutorials/ PROJECTS folder contains some tutorials / examples to explore the activation, processing and reporting of Projects in osFinancials5/TurboCASH5. The Projects tutorials (i.e. PROJECTS-A (transactions and documents not posted to the ledger) and PROJECTS-B (transactions and documents

posted to the ledger). See - Projects in this Help file Projects

Purge list

The Purge list icon is used to remove a selected Set of Books from the list, but it does not delete the Set of Books from the directory. It's important to note that you cannot purge a Set of Books located in the osFinancials5/TurboCASH5 directory (books folder). To remove a Set of Books from the books folder, you need to use the Delete Set of Books option located on the Start ribbon. If you want to remove a Set of Books from the list but keep the Set of Books, you will need to move the entire Set of Books folder out of the osFinancials5/TurboCASH5 directory using File Explorer or any other file/folder management program.

When you click on the Purge icon, the following confirmation message will be displayed:

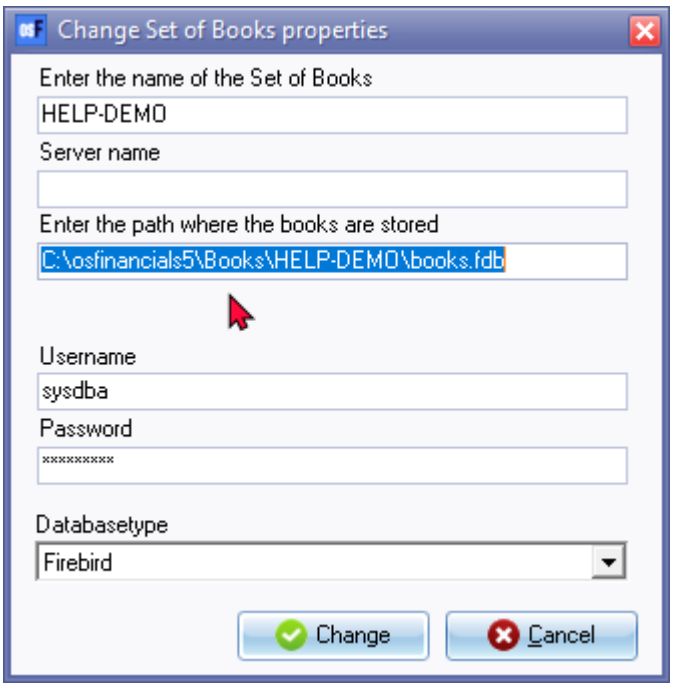
> "This will seriously affect your Set of Books! Are you sure you want to clear this Set of Books?"

Properties

The Properties icon displays the name of the Set of Books (e.g. "*MYBOOKS*") and its holding directory in the list.

> e.g. C:\osFinancials5\books\MYBOOKS\books.fdb.

1. If you select a Set of Books and click on the Properties icon, the following screen is displayed:



2. If you need to change any of the properties for the Set of Books, follow these steps:

    a) Enter the name of the Set of Books - Enter a valid name for the Set of Books.

b) Server - If osFinancials5 is configured as a Multi-user product, enter the server details.

c) Enter the path where the Set of Books are stored - Enter the path or directory where the Set of Books is stored on your system..

d) Username - Enter a valid username for the Set of Books

e) Password - Enter a valid password for the Set of Books.

f) Databasetype - Select the appropriate database type from the following options:

a) Firebird - This is the default database type for all Sets of Books included in the osFinancials5 installation in the "books" and the "...bin/Tutorials" folder. Sets of Books (Firebird database type) may also be downloaded when you create a Set of Books using the "*Let osFinancials help you to create a Set of Books?*" / "*Let TurboCASH help you to create a Set of Books?*" option.

b) SharedDisk (Firebird) - For sharing in multi user setup for multi-user environment for Firebird databases.

c) MSSQL - Microsoft SQL server -

d) Mysql - Not fully supported.

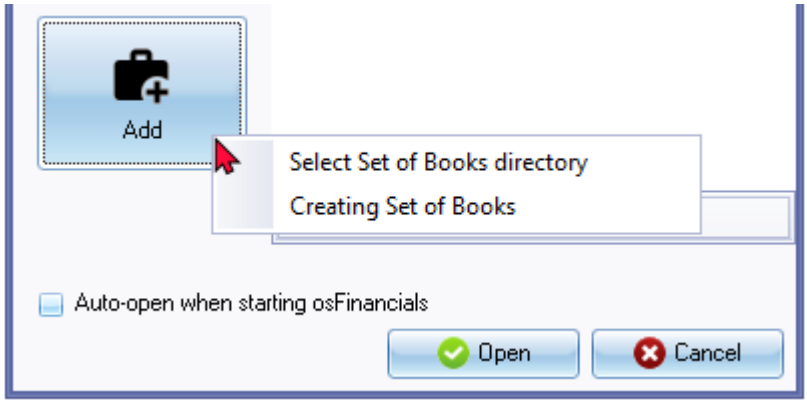
e) Postgress - Not fully supported.

Database type - Firebird is the default for all Sets of Books included in the install. You may create MySQL databases (see - My SQL database online manual) and Postgress databases (see - Postgress database online manual).

3. Once done, click on the Change button to save the changes and to exit or close this screen.

Add

If you click on the Add icon, the following two (2) options is displayed:

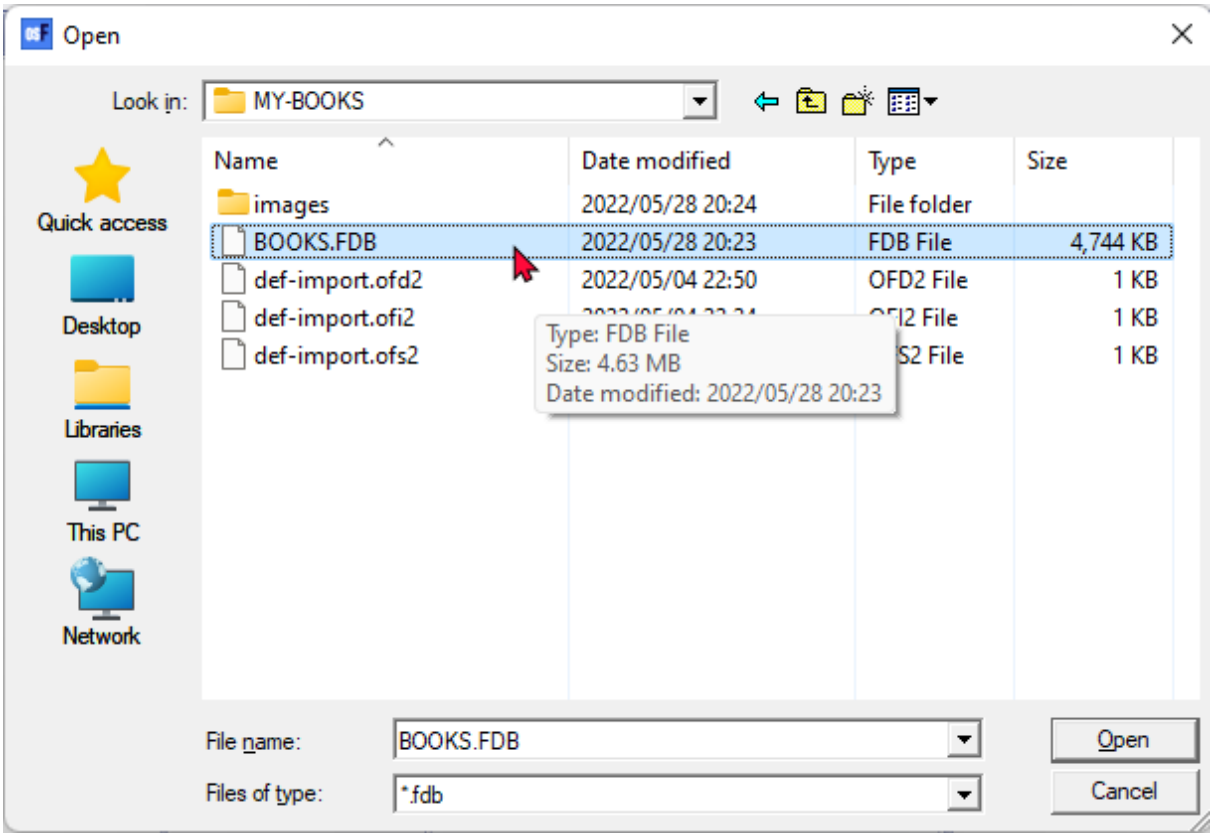


1. Select Set of Books directory - On this screen, you need to enter the name of the Set of Books, Server name, path, user name and password.

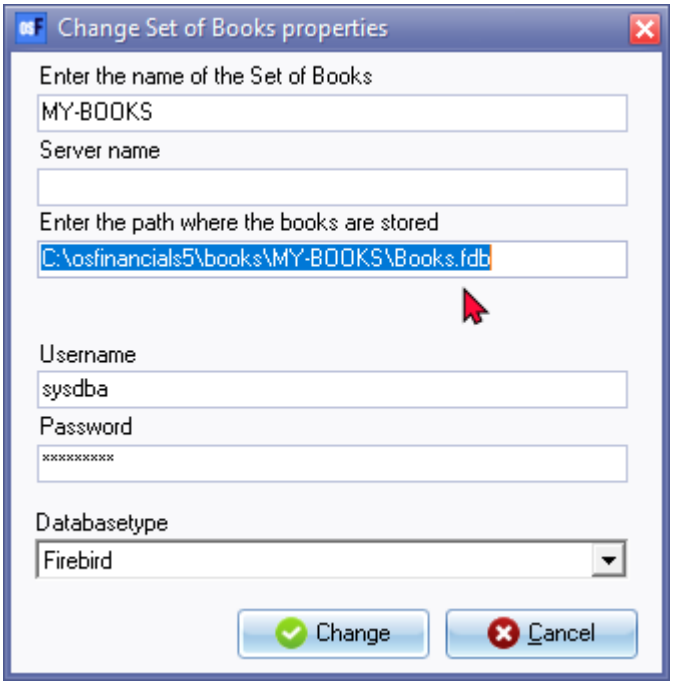
2. Creating Set of Books - Launch the Creation wizard (Start → Create Set of Books (F10)) on which you may create a set of books, copy a set of books, etc.

To change the Set of Books properties:

1. If you click on the Add icon, and select the "*Select Set of Books directory*" option, the "*Open*" screen is displayed:



2. Select a valid database (*.fdb - Firebird database) on your system and click on the Open button. The "*Change Set of Books properties*" screen is displayed:



3. If you need to change any of the properties for the Set of Books, enter the following:

    a) Enter the name of the Set of Books - Enter a valid name for the Set of Books.

    b) Server - This works, if osFinancials5 is configured as a Multi-user product.

    c) Enter the path where the books are stored - Enter the path (i.e. directory (folder)) where the Set of Books is stored on your system.

    d) Username - Enter a valid username for the Set of Books

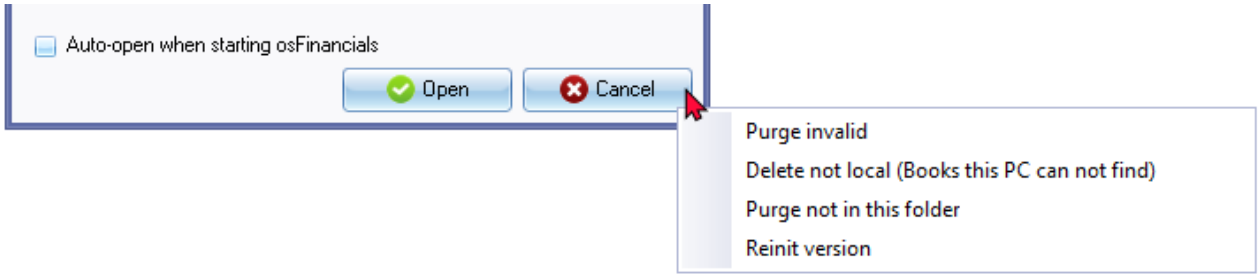
    e) Password - Enter a valid password for the Set of Books.

> *Database type - Firebird is the default for all Sets of Books included in the install. You may create MySQL databases (see - My SQL database online manual) and Postgress databases (see - Postgress database online manual).*

4. Once done, click on the Change button to save the changes and to exit or close this screen.

Cancel button (right-click context menu)

The Cancel button on the Set of Books screen has a right-click context menu that provides four options:



1. Purge invalid - This option deletes Sets of Books that are listed in Red - Font colour on the "*Set of Books*" open screen, indicating that they are either deleted, moved to another location, or stored on an unavailable or unmounted drive or network.

2. Purge not in this folder - This option does not delete the files from the directory. Sets of Books located in the "*books*" folder of the osFinancials5/TurboCASH5 directory cannot be purged using this option. To remove them, use the Delete Set of Books option in the Start ribbon.

3. Delete not local (Books this PC can not find) - This option removes Sets of Books that are not available on the current device.

4. Reinit version - This option updates the database of the selected Set of Books. Once finished, a confirmation message will be displayed.

   Database version updated.

Sets of Books - Download

Sets of Books - Installed in osFinancials5/TurboCASH5

The sets of books in the "*books*" directory are installed during the osFinancials5/TurboCASH5 installation. The specific sets of books depend on the country and language you have chosen during the installation process.

Sets of Books (Templates) available for download

osFinancials and TurboCASH users may download these Sets of Books (templates) free in a matter of a few seconds (using the option, Let osFinancials / TurboCASH help you to create a Set of Books). It takes only 3 clicks to download a Set of Books.

After downloading a Set of Books, the Set of Books (template) will automatically open in the language

associated with the country and language.

The Sets of Books are linked to languages. These languages are pre-set for each Set of Books in the "System language" field on Setup → Access control.

All Sets of Books (templates) is consists of a 3-digit main account and 3-digit sub accounts, except for the following Sets of Books (templates):

	Books with 4-digit main account and 3 -digit-sub-accounts			*Books with 5-digit main account and 3 -digit-sub-accounts*	
		Language			*Language*
	EN-CANADA-CORPORATION	*en-Canada*		*EN-USA*	*english-usa*
	EN-CANADA-OTHER	*en-Canada*		*EN-USA CALIFORNIA*	*english-usa*
	BE_Books (Belgium)	*Nederlands*

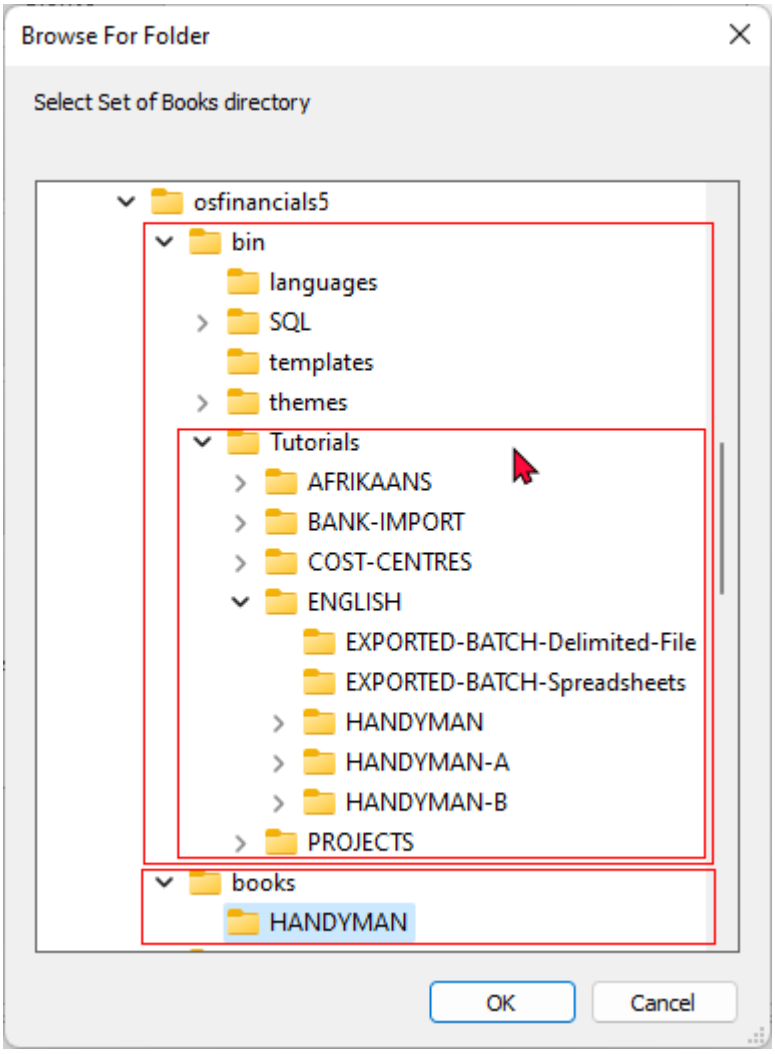
Sets of Books - Turorials

books directory

The sets of books in the "*books*" directory are installed during the osFinancials5/TurboCASH5 installation. The specific sets of books depend on the country and language you have chosen during the installation process.



Tutorials

To open the tutorial sets of books installed in the "*bin/Tutorials*" directory, click the Open icon on the Start ribbon. On the "*Set of Books*" screen, click the Browse icon and select the desired tutorial set of books to follow.

ENGLISH

English tutorials (using the default payments and receipt batches for banking / cash transactions):

The following Set of Books based on this tutorial, is installed in the "...\bin\Tutorials\ENGLISH\" folder:

- HANDYMAN (No transactions)
- HANDYMAN-A (Unposted)
- HANDYMAN-B (Posted)

The following folders contains files which may be imported into batches:

- *EXPORTED-BATCH-Delimited-File – Exported batch transactions using the "Write delimited file" option and may be imported into a batch using the "Delimited file import" option (F9:Process icon) on batches.*
- *EXPORTED-BATCH-Spreadsheets – Exported batch transactions in the *.xlsx (Excel 2007-365) file format. These transaction files may be opened in the Spreadsheet import icon on batches, and imported into a selected batch.*

BANK-IMPORT Plugin - English tutorials

English tutorials (using the BankImport plugin for banking / cash transactions):

The following Set of Books based on this tutorial, is installed in the "...\bin\Tutorials\BANK-IMPORT\" folder:

- HANDY-BANK (No transactions).
- HANDY-BANK-A (Unposted transactions in batches and documents, except the Payments and Receipt batches, which is cleared for the Bank account and the Petty cash).
- HANDY-BANK-B (Posted transactions in batches and documents, including the imported bank statement and processed Petty cash transactions).
- HANDY-BANK-UNPOSTED-BANK-STATEMENT – All transactions in batches and documents have been posted. The sample Bank statement in the "*...\bin\Tutorials\BANK-IMPORT\BANK-STATEMENTS*" folder needs to be imported and Petty cash transactions needs to be processed).

AFRIKAANS

The following Set of Books based on the Afrikaans tutorial, is installed in the "*...\bin\Tutorials\AFRIKAANS*" folder.

- NUTSMAN (No transactions).
- NUTSMAN-A (Unposted)
- NUTSMAN-B (Posted).

COST-CENTRES

Tutorials / examples to explore the activation, processing and reporting of Cost centres in osFinancials5/TurboCASH5. See - Cost centres in this Help file.

The following Set of Books based on this tutorial, is installed in the "*...\bin\Tutorials\COST-CENTRES*" folder:

- COST-CENTRES-A (transactions and documents not posted to the ledger).
- COST-CENTRES-B (transactions and documents posted to the ledger).

PROJECTS

Tutorials / examples to explore the activation, processing and reporting of Projects in osFinancials5/TurboCASH5. See - Projects in this Help file.

The following Set of Books based on this tutorial, is installed in the "*...\bin\Tutorials\PROJECTS*" folder:

- PROJECTS-A (transactions and documents not posted to the ledger).
- PROJECTS-B (transactions and documents posted to the ledger).

Close Set of Books

This option allows you to close the currently open Set of Books.

To close a Set of Books:

1. On the Start ribbon, select Close Set of Books.

It's important to regularly backup your Set of Books to prevent data loss.

Created with the Standard Edition of HelpNDoc: Free Kindle producer

Delete Set of Books

If you want to remove a Set of Books permanently from your osFinancials5/TurboCASH5 system, you should be absolutely certain that you want to do so, as all data contained within the Set of Books will be permanently lost. Before deleting a Set of Books from your system, it is important to ensure that you have printed all necessary reports and retained any supporting documents, such as slips, invoices, etc., which will help substantiate your profit (or loss) from the business. This information may be required for your tax returns or other legal purposes. Therefore, it is crucial to make sure that you have all the necessary documentation before deleting a Set of Books.

This operation can not be reversed! If you have deleted a Set of Books by mistake, you need to restore it from a backup file!

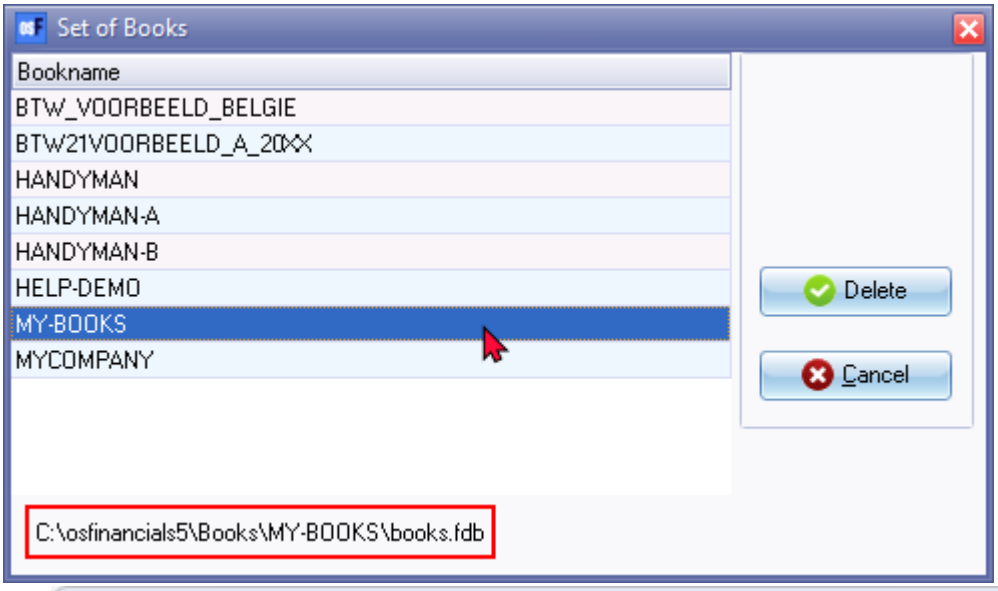
It is important to remember that even if you are a small business, you are required to keep the necessary records for at least five years starting from the date you received the last applicable tax return. This is to comply with audit and record-keeping requirements.

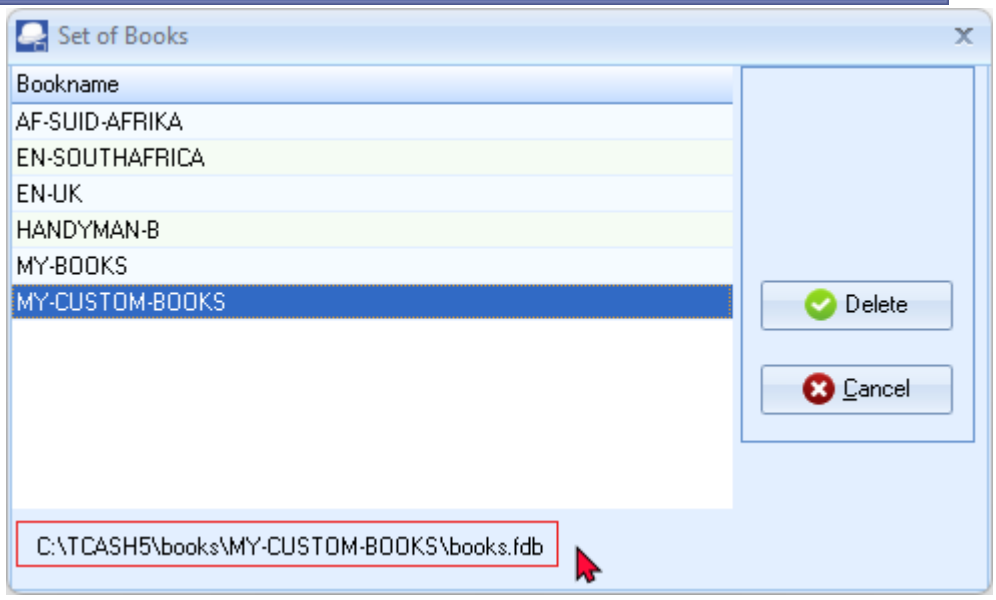
Additionally, if there are other statutory prescriptions that apply to your business, you should also comply with them. Therefore, it is crucial to maintain accurate and complete records and ensure that you retain them for the required period of time to meet legal obligations.

After you have taken all necessary steps and are absolutely certain that you want to proceed with the deletion of a Set of Books, you may then delete it from your system.

To delete a Set of Books:

1. On the Start ribbon, select Delete Set of Books. The following "*Set of Books*" screen, reflecting the list of all Set of Books, is displayed:





The location or full path of the selected Set of Books is displayed. Before you click the Delete button, make absolutely sure that the correct Set of Books is selected.

Red - Font colour

This indicates that a Set of Books (elsewhere on your system) is deleted or the Set of Books folder is moved somewhere else on your system. It may also indicate that the drive or network on which the Set of Books is stored, is not available or mounted.

Blue - Font colour

This indicates that a Set of Books is not located in the directory where osFinancials5/TurboCASH5 is installed, but elsewhere on your system.

2. Select the Set of Books, and click on the Delete button. The following confirmation message is

displayed:

> Are you sure you want to delete the MY-BOOKS set of accounts?"

3. If you are sure, click on the Yes button. Another confirmation message is displayed:

> The Set of Books MY-BOOKS will permanently be removed from disk!
> Do you want to cancel the deletion?

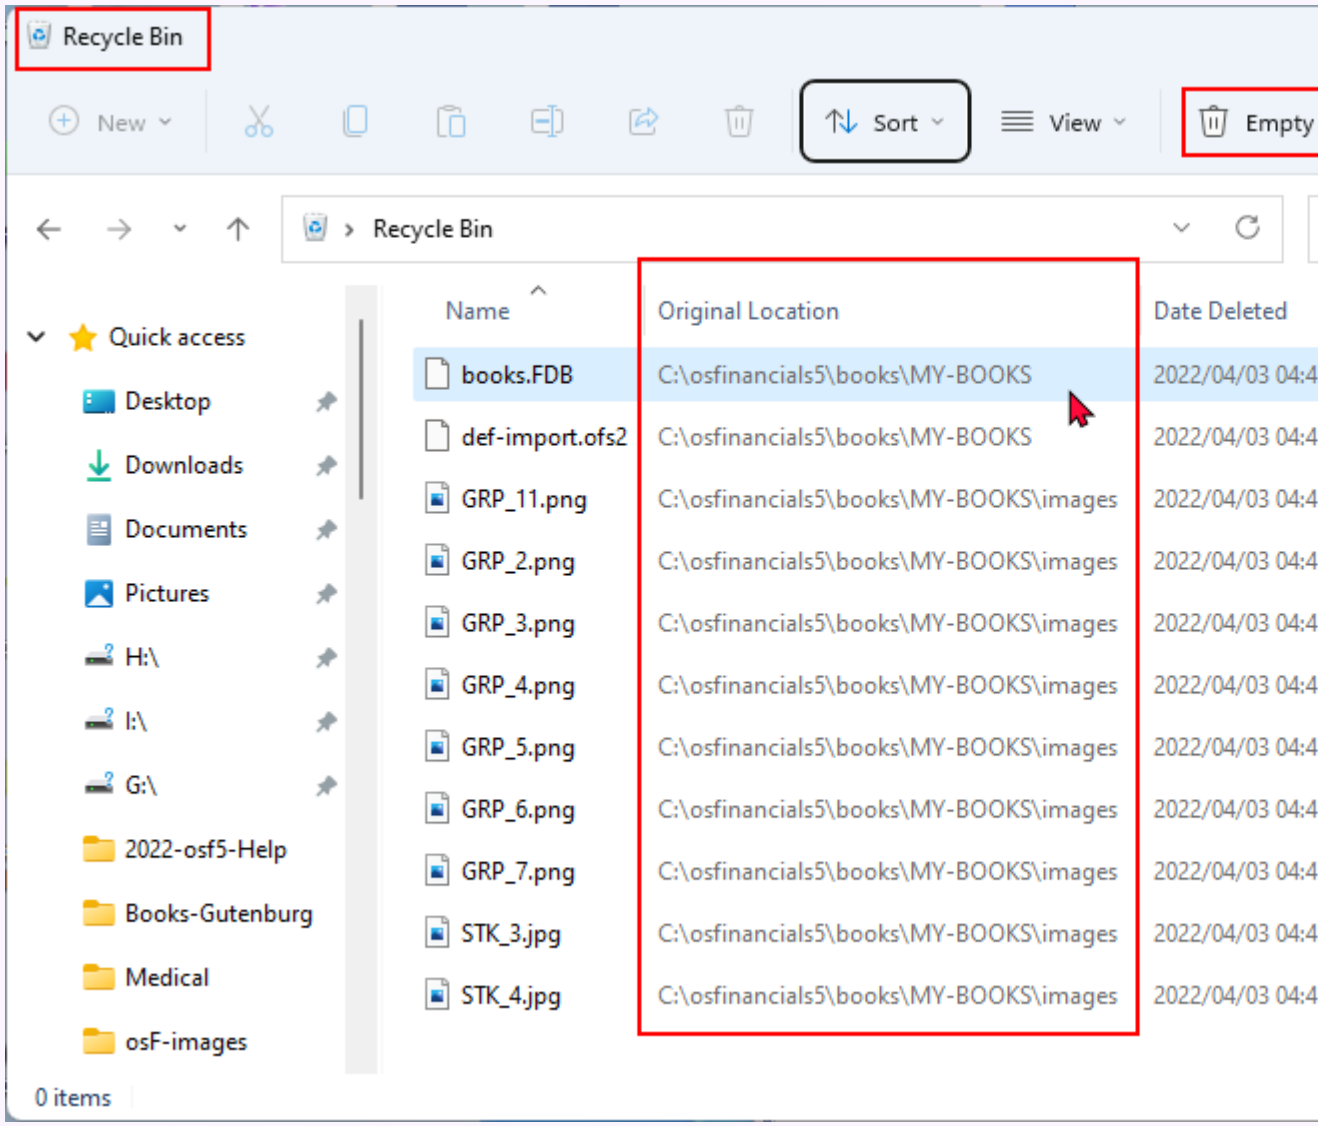
4. On this screen you have the option to cancel the deletion process. If you click on the Yes button, the process will be terminated. If you click on the No button, the Set of Books will be permanently deleted.

5. Wait for the deletion process to finish. The following information message is displayed:

> "Set of Books C:\osFinancials5\books\MY-BOOKS\books.fdb deleted!" or
> "Set of Books C:\TurboCASH5\books\MY-BOOKS\books.fdb deleted!" or

6. Click on the OK button.

Once the Set of Books is deleted, the contents of the folder with the name of the Set of Books maybe emptied and the files of the
your Operating System.



You may need to: -

W *The Set of Books should by default be deleted. You may check in the books folder (e.g."C:\osfinancials5\books\MY-BOOKS delete the folder, if not deleted. (If this action is not done, you will not be able to create or save a Set of Books with exactly t*

W *Empty the Recycle Bin of your Operating System.*

If the Set of Books is not too large for your Recycle Bin, all the files for the deleted Set of Books will be transferred to your Recycle Bin. You then need to click on the Recycle Bin icon on your desktop and empty the Recycle Bin to make more space available on your hard disk.

Should you have any Set of Books open on the system whilst deleting a Set of Books, osFinancials5 will automatically close any Set of Books on your system at this stage.

Created with the Standard Edition of HelpNDoc: Experience the Power and Ease of Use of a Help Authoring Tool

Exit osFinancials5

It is recommended that you create regular backups of your data before exiting osFinancials5/TurboCASH5. The decision of whether or not to make a backup depends on the amount of data that you have entered.

To exit (close) osFinancials5/TurboCASH5:

1. Click on the 
button on the top right-hand corner of the osFinancials5/TurboCASH5 title bar.

   You may also press the Alt and Q keys.

   If no Set of Books are opened, the osFinancials5/TurboCASH5 program will be closed.

2. osFinancials5 will automatically close any Set of Books that is open. The following information message will be displayed:

   osFinancials5 would like to remind you that:
   It is good practice to make regular backups and archive copies of your Sets of Books to prevent loss of data.
   Do you wish to close osFinancials5?

3. Take note of this information, and click on the Yes button, only if you are absolutely sure that you wish to exit (close) osFinancials5/TurboCASH5.

   It is recommended that you Backup the Set of Books and store it in a safe place.

   If you click on the No button, osFinancials5 will not close. You may then perform the necessary backups e.g. to a different location before exiting (closing) the program. You may then close the Set of Books and exit osFinancials5/TurboCASH5.

Created with the Standard Edition of HelpNDoc: Create Professional CHM Help Files with HelpNDoc's Easy-to-

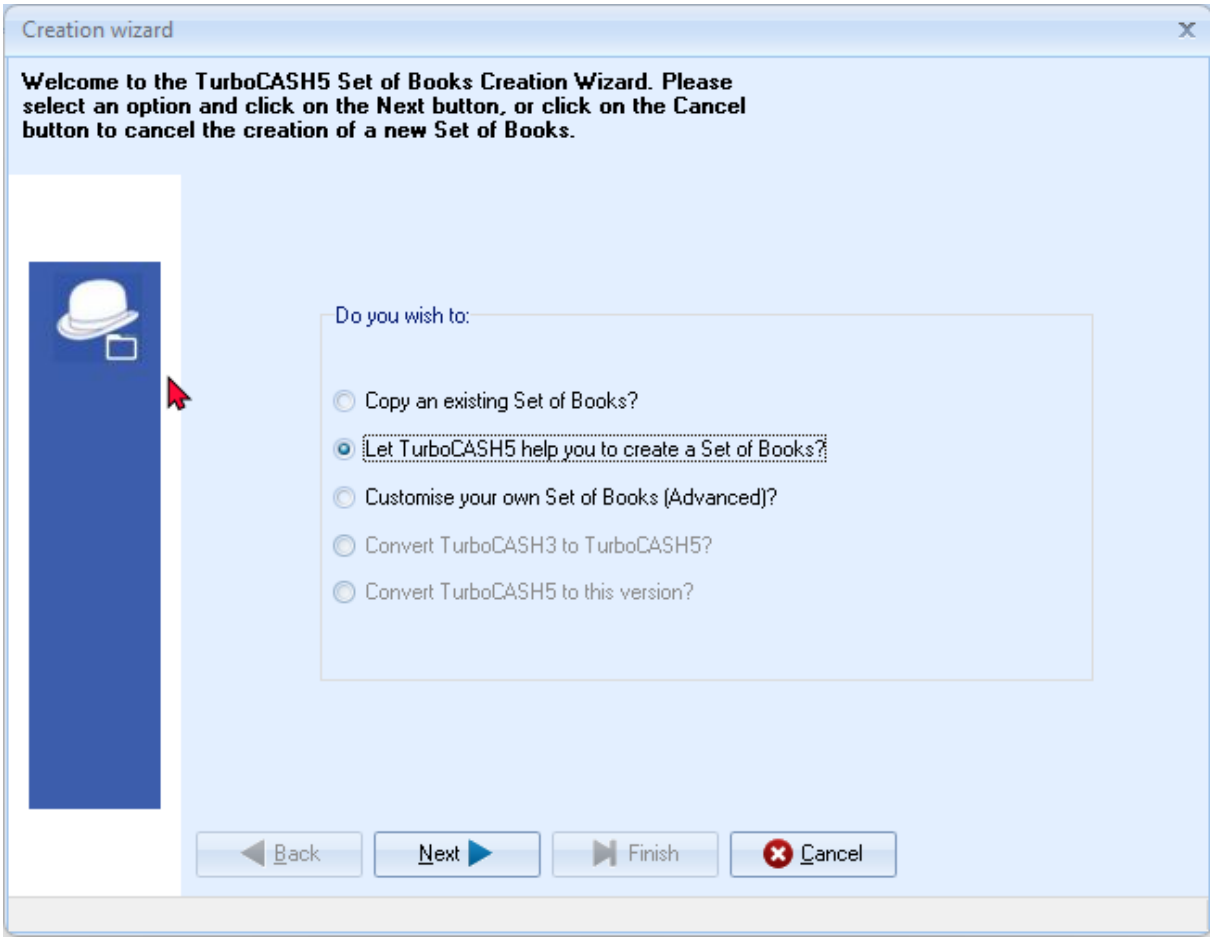
Use Tool

Create Set of Books

You may create exact copies from existing sets of books, templates on your system. The following options are available:

- Save as (Start ribbon).
- Create Set of Books (Copy an existing Set of Books? option on the "*Creation wizard*") (Start ribbon).
- Tools → Global processes → Copy from a Set of Books (Setup ribbon).

On the Start ribbon, you can select the Create Set of Books option or simply press the F10 key on your keyboard to use any of the following options on the "*Creation wizard*":



You may use the different options available when creating a new Set of Books in osFinancials:

1. Copy an existing Set of Books? - This option allows you to create a new Set of Books by making an exact copy of an existing one, including all the data it contains. You can select the Set of Books you want to copy, and the system will create a new one in a directory of your choice.

2. Let TurboCASH5 help you to create a Set of Books? - This option lets you create a new Set of Books by selecting an existing Set of Books as a template. osFinancials5/TurboCASH5 will then guide you through the process of setting up your new Set of Books. You can also download pre-existing Sets of Books for your specific country or industry as templates to use as a starting point.

After downloading a Set of Books (template) using the "Let TurboCASH5 help you to create a Set of Books?" option, the "Save as" screen will be launched, allowing you to save the template in a directory of your choosing.

You can also view a list of available Sets of Books available for a download to use as templates for your new Set of Books.

After downloading a Set of Books, the Set of Books (template) will automatically open in the language associated with the country and language of the Set of Books.

3. Create a Set of Books (Advanced)? - This option is intended for more advanced users who want to create a new Set of Books from scratch. You can select either the Firebird or MSSQL database type, providing more flexibility and control over the structure and content of your new Set of Books. You can also choose to set a maximum of 8-digit account codes, giving you more flexibility in creating a Set of Books that best suits your needs.

When creating, converting, or copying a Set of Books, the default number of characters for the account codes is determined by the selected Set of Books. Most Sets of Books currently use 3-digit account codes as their default setting.

However, if you choose the "Create a Set of Books (Advanced)?" option , you can select a maximum of 8-digit account codes, providing more flexibility in creating a Set of Books that suits your needs.

Created with the Standard Edition of HelpNDoc: Write EPub books for the iPad

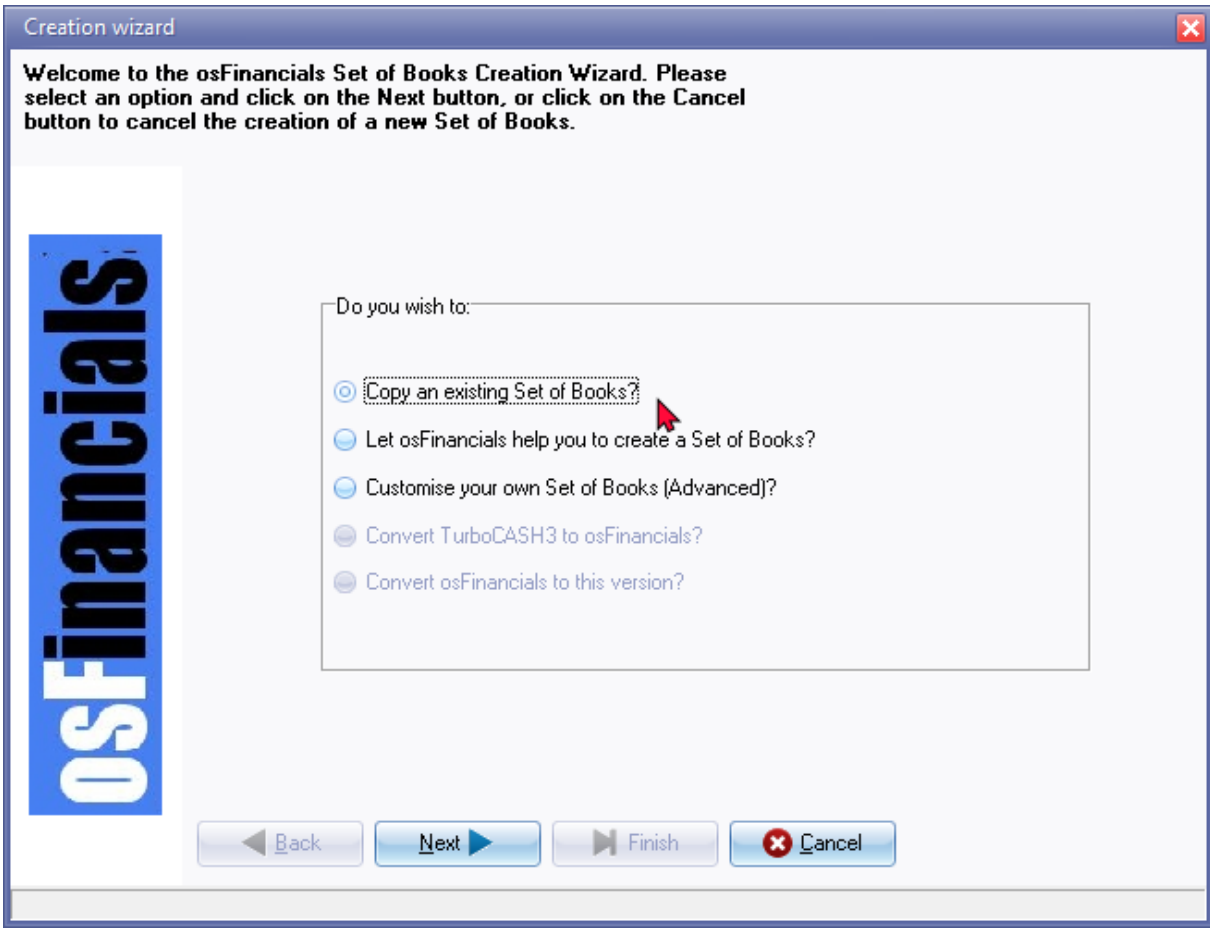
Copy an existing Set of Books

This option allows you to create a new Set of Books by making an exact copy of an existing one, including all the data it contains. You can select the Set of Books you want to copy, and the system will create a new one in a directory of your choice.

This new Set of Books can be accessed within the osFinancials5/TurboCASH5 program, even if it is not created in the osFinancials5/TurboCASH5 directory. You may keep your Set of Books in any mapped directory, i.e. on a local or network drive.

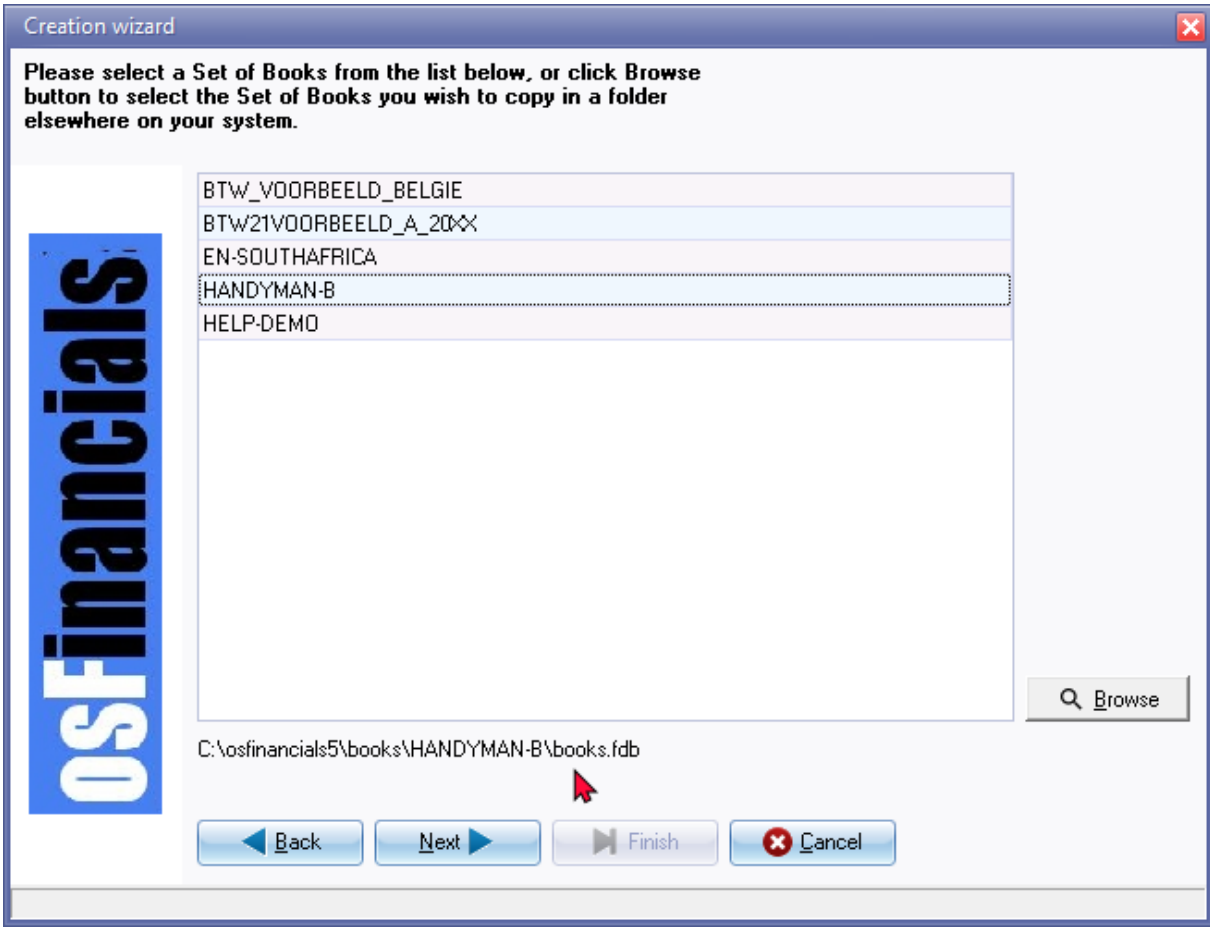
To create a copy of a Set of Books:

1. On the Start ribbon, you can select the Create Set of Books option or simply press the F10 key on your keyboard.



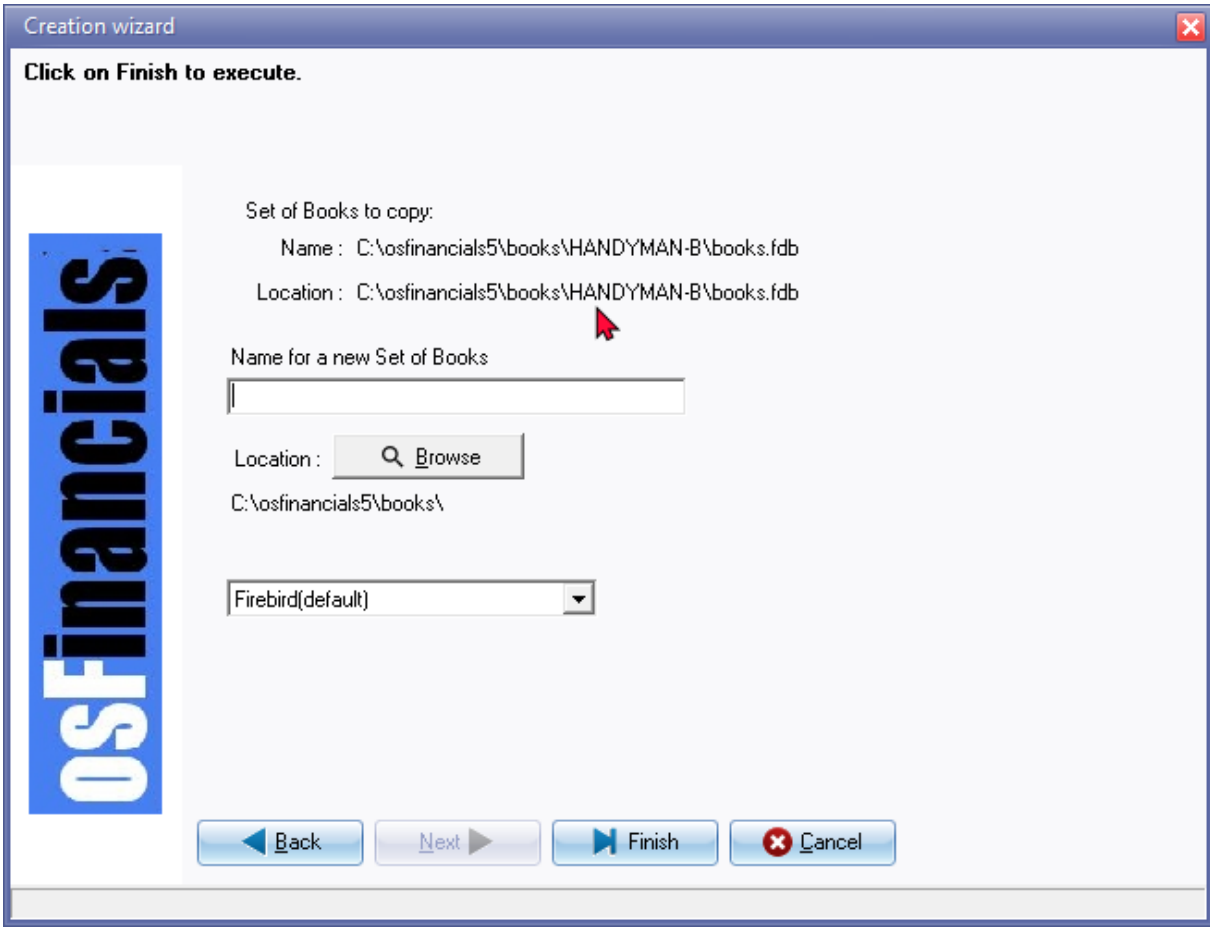
2. osFinancials5/TurboCASH5 automatically defaults to the option "*Let osFinancials help you to create a Set of Books?*", as this is the recommended option for most users. Select the "*Copy an existing Set of Books?*" option.

3. Click on the Next button.



4. Select any of the available Set of Books on your system. If you do not find the Set of Books on the list, you may click on the Browse button to find a Set of Books from the "*Pick a directory*" screen.

5. Click on the Next button.



6. Enter the name for your new Set of Books.

> *The name must not already exist and may not be longer than 50 characters. This name will help you to identify your Set of Books on your system and you will need to select this name, whenever you need to open the Set of Books or perform some other functions on the Set of Books.*

> *The Directory in which you create the Set of Books is displayed underneath the Location Browse button. It will usually be the default directory in which osFinancials5/TurboCASH5 is installed, or the directory which you have specified when you installed* osFinancials5/TurboCASH5. *If you wish to create your Set of Books in any other directory or location on your system, you may click on the Browse button to select any folder or drive on the "Pick a directory" screen.*

7. Click on the Finish button. A confirmation message is displayed:

> Are you sure you want to create the MY-BOOKS Set of Books?

8. To confirm that you want to create the Set of Books, click on the Yes button. An information message

> MY-BOOKS Set of Books created!

9. Click OK. The new Set of Books, which is a copy of another Set of Books, is automatically opened and ready to work in.

Year-end confirmation

Should you open the Set of Books, and the date of the end of the year, is in the past, a confirmation message will be displayed, for example;

> This year Ends on 2022/02/28
> Today 2022/04/04
> Warning, this date does not fall into any of this or last year's reporting dates!
> Do year end?

You need to adjust the Start of the financial year in one of the following options on the Setup ribbon:

- *Setup → Reporting dates (if no transactions were processed for the Set of Books).*
- *Do year end.*

If you have created a copy of an existing Set of Books, which already has transactions and balances:

If you do wish to have a clean Set of Books with no transactions and balances, you may need to clear / reset the transactions and balances in the Set of Books. (See Global processes → Clear / Reset on the Setup ribbon). All the master files (accounts, etc.) will be available and you may then enter your own transactions and balances in the new Set of Books.

This is similar to Save as option on the Start ribbon), where you may save an exact copy of an existing Set of Books with a new name.

You may also copy all the settings and data of an existing Set of Books into a new Set of Books using Global processes → Copy from a Set of Books on the Setup ribbon.

Let osFinancials5/TurboCASH5 help you to create a Set of Books

---

osFinancials5/TurboCASH5 will guide you through the steps to create a new Set of Books with the "*Creation wizard*" in a matter of minutes.

It is a good idea to check that you have all the necessary information regarding your business at hand

before starting to create your Set of Books.

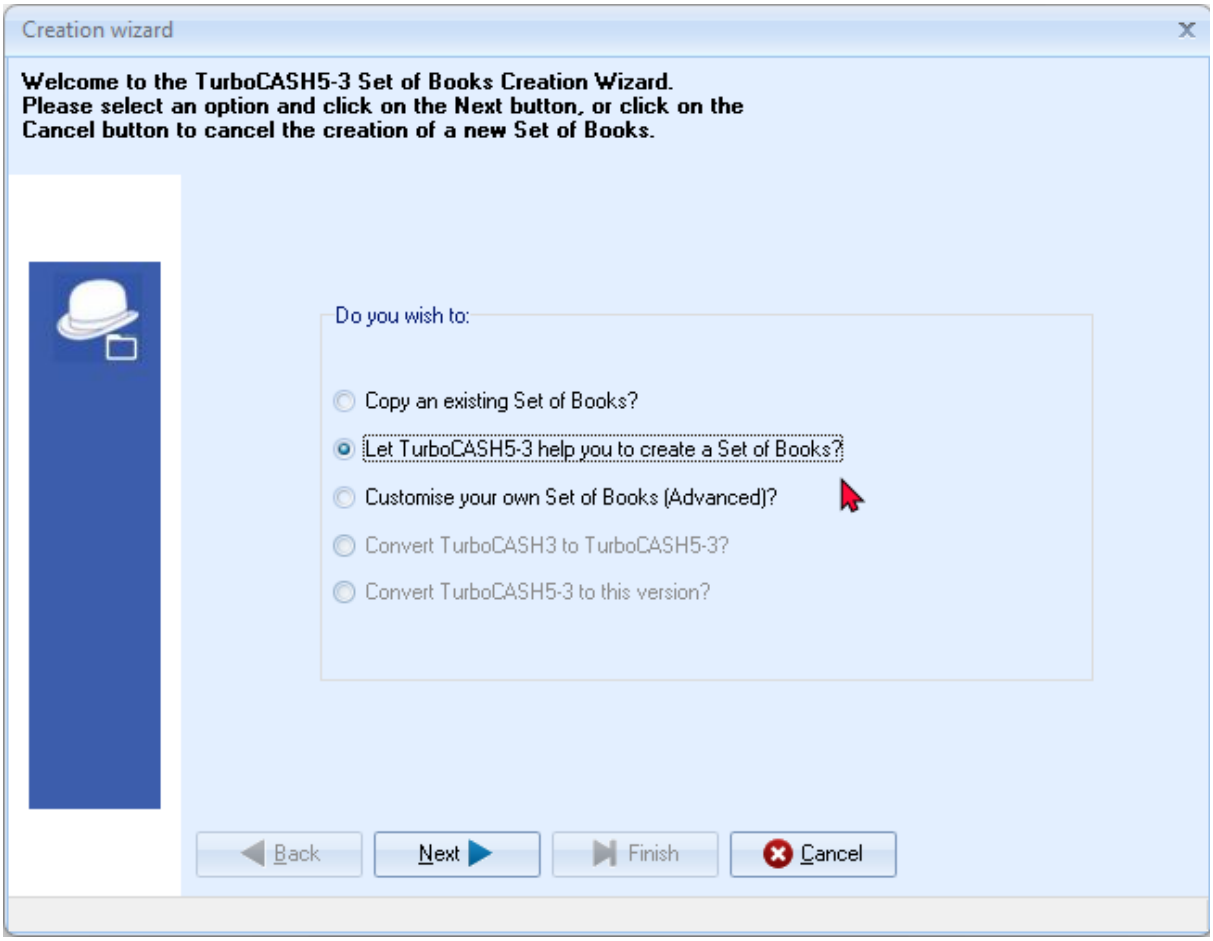
Once you have the necessary information available, you may proceed to create your Set of Books. Should you not have all the information available at this stage, you may go back and enter or change some of the information at a later stage.

The following options to create a Set of Books using the "*Let osFinancials help you to create a Set of Books?" / "Let TurboCASH help you to create a Set of Books?" wizard*, is available:

- To create a Set of Books using a template on your system.
- To create a Set of Books downloading a template from osFinancials5.

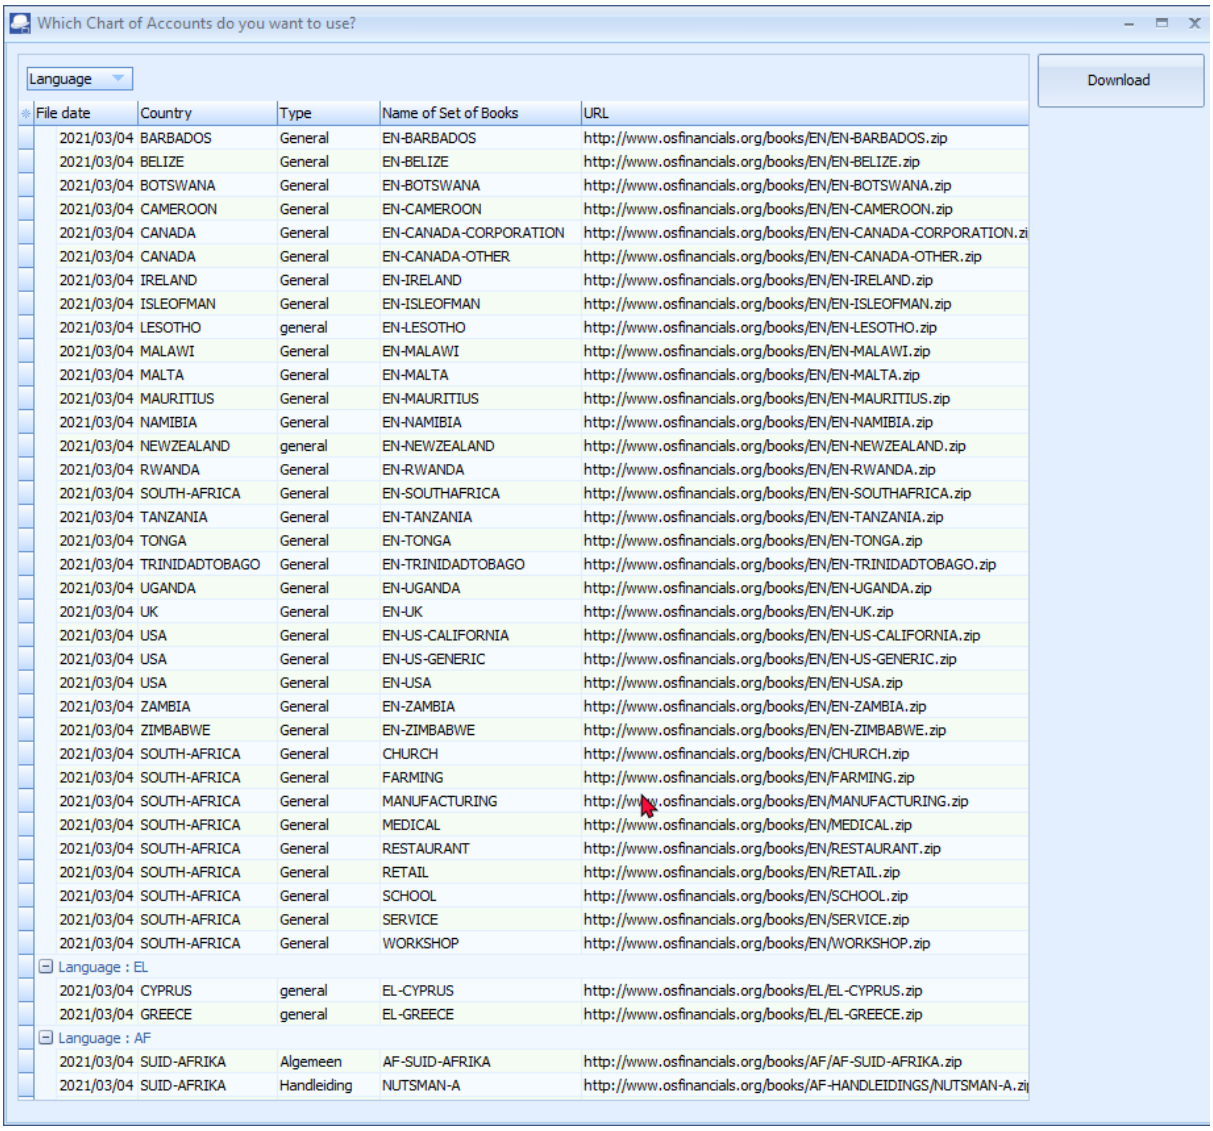
To create a Set of Books using a template:

1. On the Start ribbon, you can select the Create Set of Books option or simply press the F10 key on your keyboard.



2. osFinancials5.1 automatically defaults to the option "*Let osFinancials help you to create a Set of Books?"* or in TurboCASH5-3 "*Let TurboCASH5-3 help you to create a Set of Books?"* as this is the recommended option for most users. You only need to check that it is selected.

3. Click on the Next button. The Download books - "*Which Chart of Accounts do you want to use?*" screen will automatically be launched, if you have an Internet connection:



osFinancials5/TurboCASH5 supports 79 different languages and counties / tax regimes languages liked to 87 Sets of Books (databases) which may be downloaded and customised to meet your requirements.

If the set of books for your language and or country, is not available in the books directory, you may select any of the available Firebird Sets of Books and linked languages available as a free download.

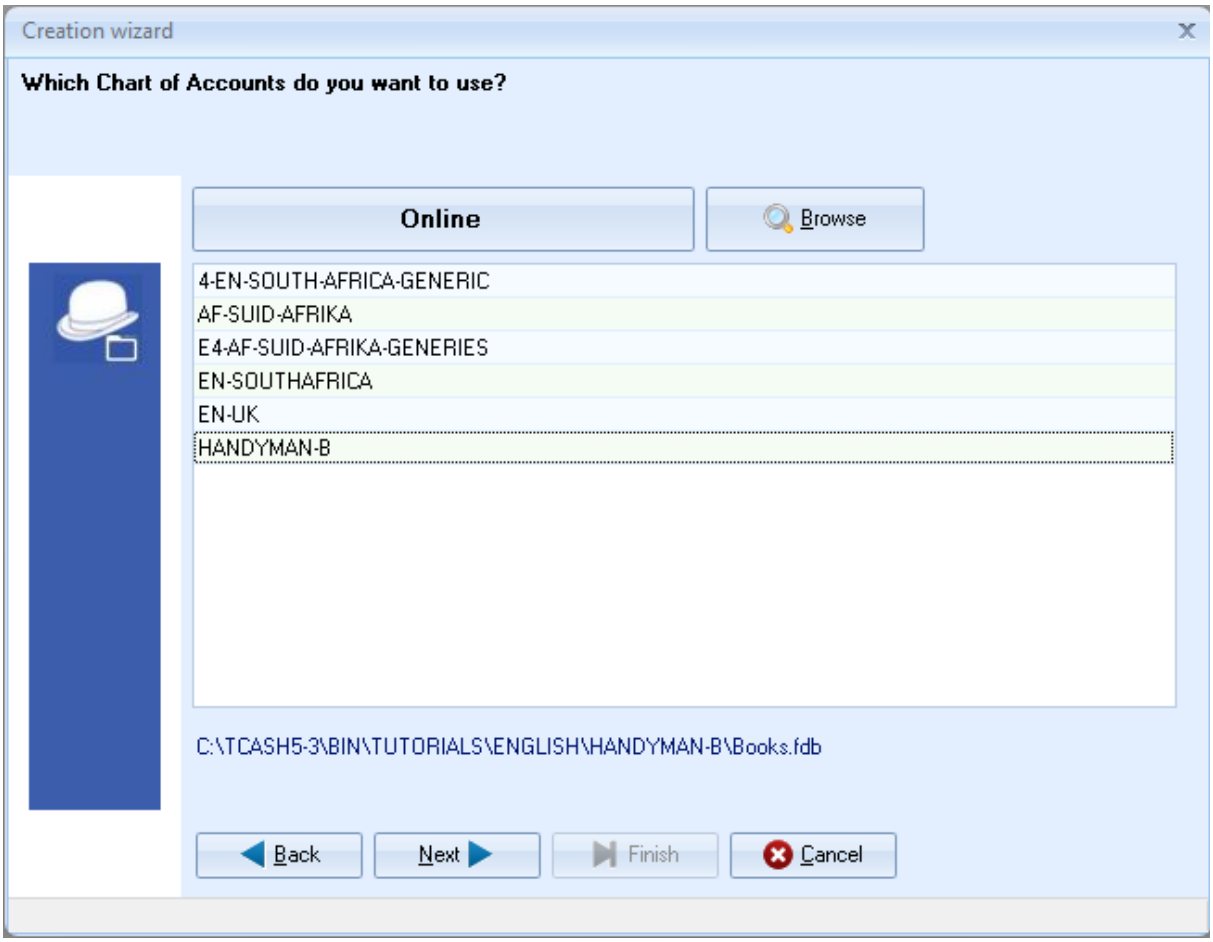
If you do not wish to use this online option, exit the "Which Chart of Accounts you wish to use?" Download screen.

You may click the Browse button, to select another Set of Books on your system.

The Directory in which you will create the Set of Books is displayed underneath the Location

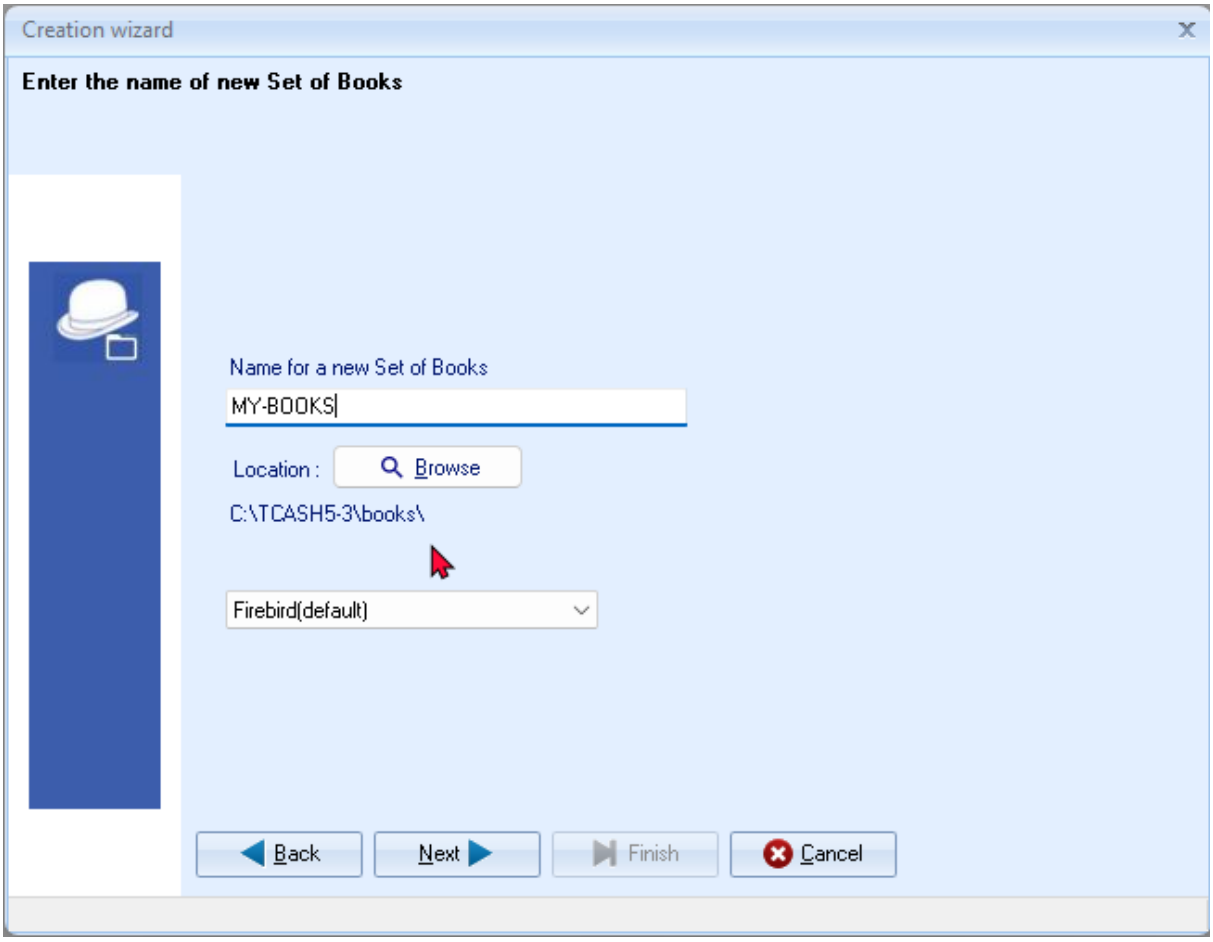
Browse button. It will usually be the default directory in which osFinancials5.1/TurboCASH5-3 is installed or other directory, which you have specified when you have installed osFinancials5.1/TurboCASH5-3.

If you wish to create your Set of Books in any other directory or location on your system, you may click on the Browse button to select any folder or drive on the Pick a directory screen.



4. Select a Set of Books (template).

5. Click on the Next button.



6. Enter the name for your new Set of Books.

The name must not already exist and may not be longer than 50 characters. This name will help you to identify your Set of Books on your system and you will need to select this name, whenever you need to open the Set of Books or perform some other functions on the Set of Books.

The Directory in which you will create the Set of Books is displayed underneath the Location Browse button. It will usually be the default directory in whichosFinancials5/TurboCASH5 is installed or other directory, which you have specified when you have installed osFinancials5. If you wish to create your Set of Books in any other directory or location on your system, you may click on the Browse button to select any folder or drive on the "Pick a directory" screen.

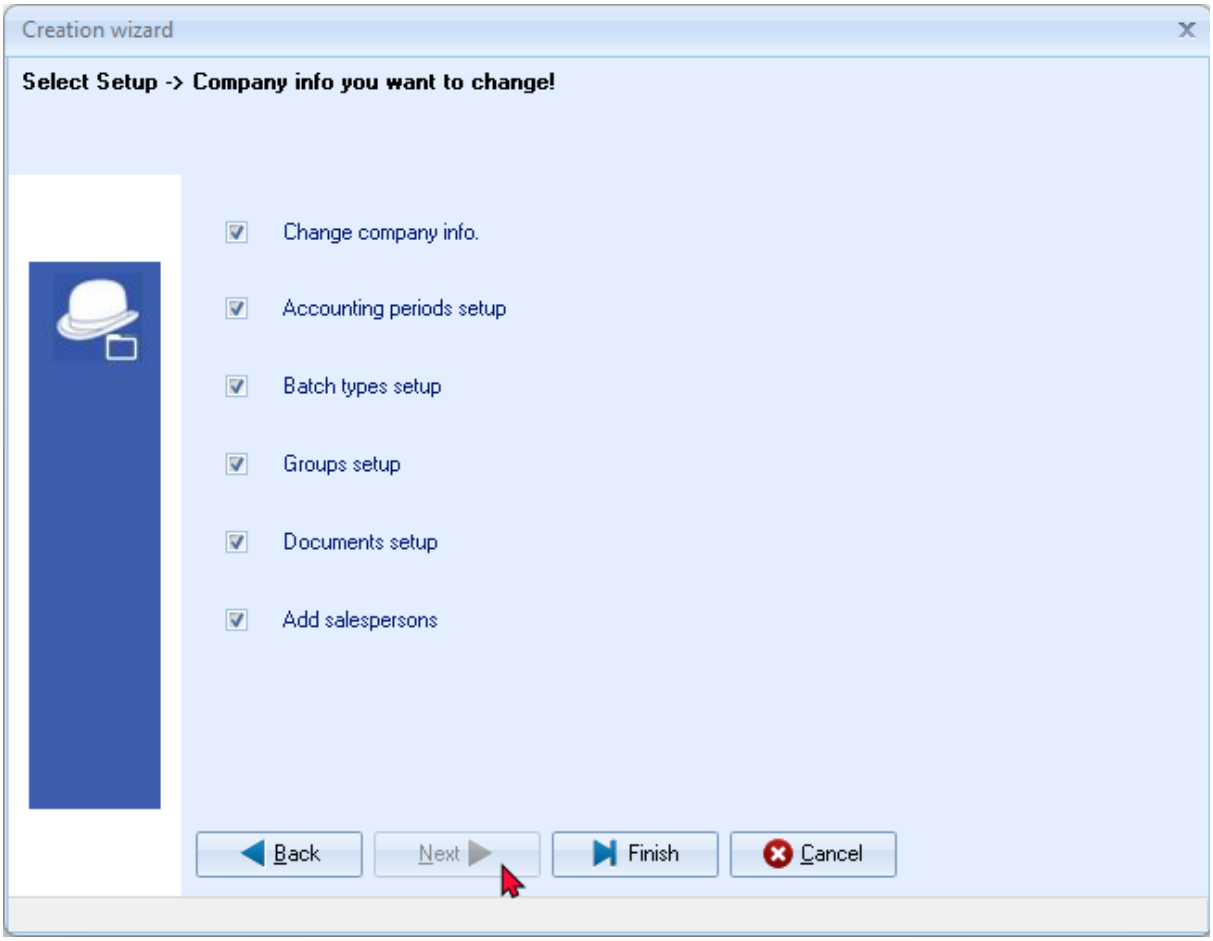
Database type - Firebird is the default for all Sets of Books included in the install and Sets of Books available for download.

Microsoft SQL Server (MSSQL) Database types is also introduced in osFinancials5 (518). Also implemented in TurboCASH5-3.

You may create MySQL databases (see - My SQL database online manual) and Postgress databases (see - Postgress database online manual).

> *NOTE: In addition to the Firebird database types, only the Microsoft SQL Server (MSSQL) Database types is supported.*

7. Click on the Next button.



8. By default, all options is selected. It is recommended that you keep all setup options selected to confirm or change the basic settings. The screens, based on this selection, will launch when you click on the Finish button. The confirmation message will be displayed.

> "Are you sure you want to create the MY-BOOKS Set of Books?" (where "MY-BOOKS" is the name of the Set of Books entered)

9. Click on the Yes button. The following screens from the Setup ribbon will automatically be displayed as selected on the last screen of the Creation wizard.

10. Enter and select the necessary information and settings for the following screens:

    a) Company info - Enter all your business' details such as the address, e-mail address, contact numbers and Company and Tax Registration numbers, which you need to display on all documents, reports, and lists. You may also select whether your default output option for

documents, reports and lists are on: screen, printer, file, e-mail or fax. You may also load a logo picture to be displayed on your reports or documents, and set your Windows operating system's default date and currency formats.

b) Reporting dates - Set up the number of reporting dates required, and the start date of your financial year period. The periods or dates will be displayed in the format in which you have set your Windows Operating System's default date on the previous screen.

c) Batch types - Check the default batch types, add (create) new batch types, delete an existing batch type, or change the name of existing batch types in which you wish to enter and update or post your transactions to the ledger.

d) Groups - Set up to two Reporting groups for your General ledger, Debtors, Creditors accounts, Stock and Document groups.

e) Documents setup - This option allows you to set up your documents Invoices, Credit notes, Quotes, Orders, Purchases and Supplier return documents, you wish to hand to customers (debtors) or suppliers (creditors) when you sell, or quote, or order and purchase, stock items and services.

f) Stock information - Set the selling price descriptions, default selling price, cost of sales, options for documents, unit sizes, tax classes, etc. This option should be used if you use stock and/or wish to generate documents (Invoices, Credit notes, Quotes, Orders, Purchases and Supplier returns).

g) Salesperson - This option allows you to enter or add the salespersons who will be processing documents.

11. After the last setup screen (i.e. Salesperson) is closed, the new Set of Books, is automatically opened and ready to work in.

Created with the Standard Edition of HelpNDoc: Easily create PDF Help documents

Let osFinancials5/TurboCASH5 help you to create a Set of Books - Download

---

osFinancials5/TurboCASH5 will guide you through the steps to create a new Set of Books with the "*Creation wizard*" in a matter of minutes.

It is a good idea to check that you have all the necessary information regarding your business at hand before starting to create your Set of Books.

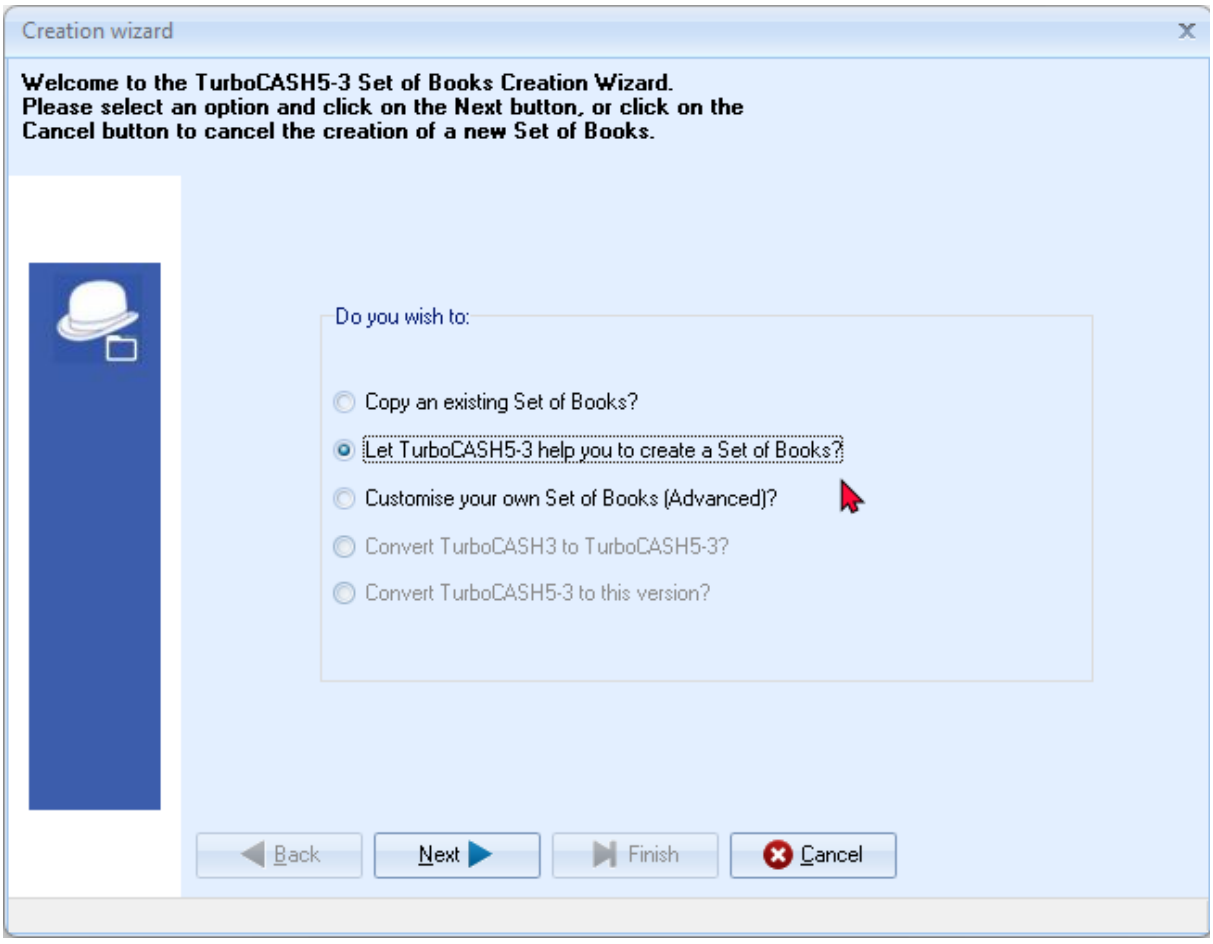
Once you have the necessary information available, you may proceed to create your Set of Books. Should you not have all the information available at this stage, you may go back and enter or change some of the information at a later stage.

The following options to create a Set of Books using the "*Let osFinancials5-1 help you to create a Set of Books?" / "Let TurboCASH5-3 help you to create a Set of Books?" wizard*, is available:

- To create a Set of Books using a template on your system.
- To create a Set of Books downloading a template from osFinancials5.

To create a Set of Books downloading a template:

1. On the Start ribbon, you can select the Create Set of Books option or simply press the F10 key on your keyboard.



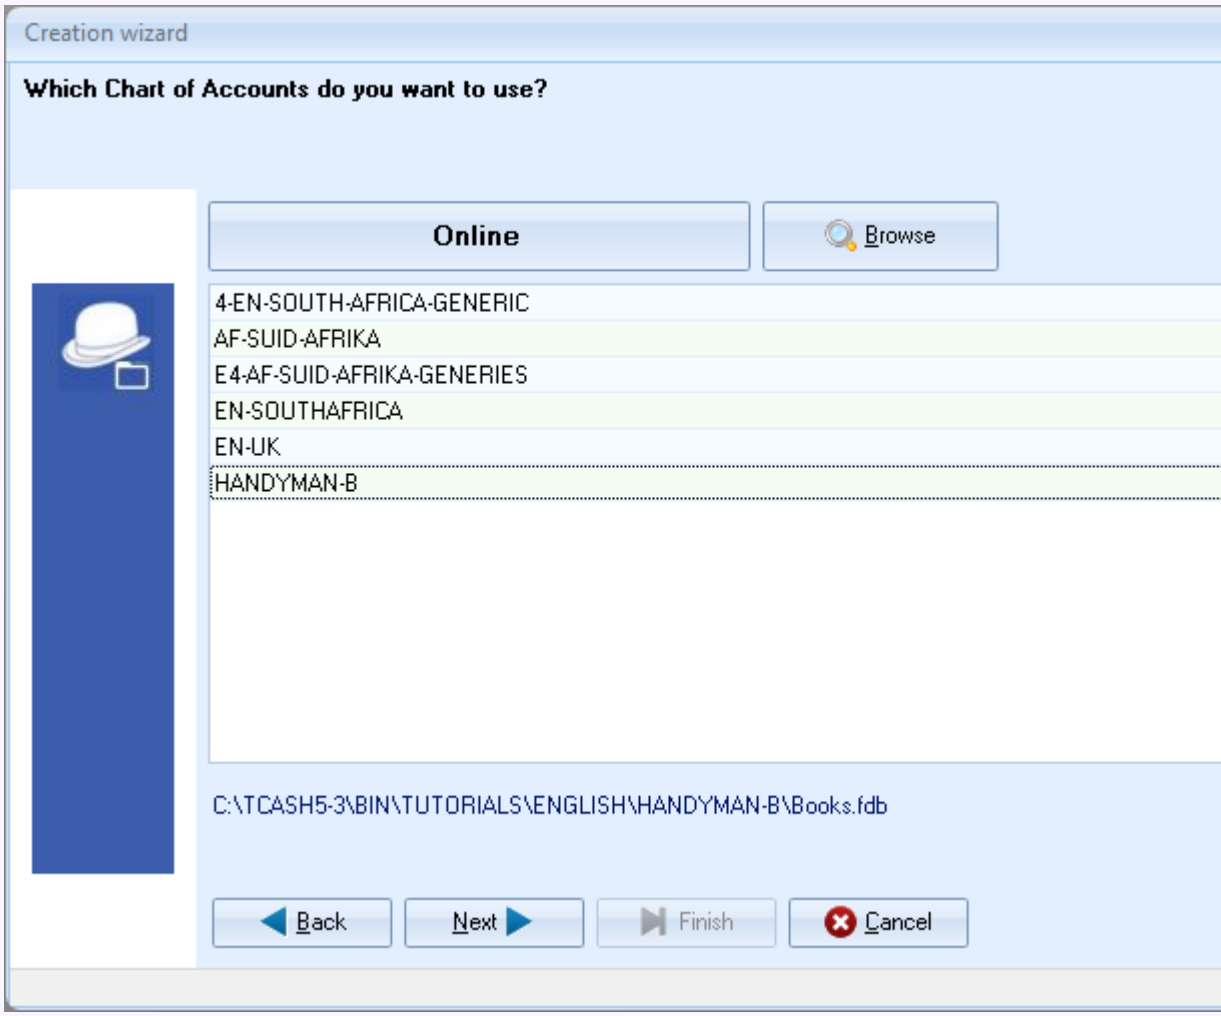
2. osFinancials5.1 automatically defaults to the option "*Let osFinancials help you to create a Set of Books?"* or in TurboCASH5-3 "*Let TurboCASH5-3 help you to create a Set of Books?"* as this is the recommended option for most users. You only need to check that it is selected.

3. Click on the Next button. The "*Which Chart of Accounts do you want to use?*" screen on which you may

select a Set of Books (template) for your country, language. country or industry to download will automatically be launched, if you have an internet connection.

4. If you do not wish to download a Set of Books from the osFinancials website, you may close this online screen on the titlebar.

If you do not have an Internet connection, clicking on the Online button will automatically close. You may click on the button to elect a Set of Books in your osFinancials5.1/TurboCASH5-3 installation folder.



5. If you have an Internet connection, "*Which Chart of Accounts do you want to use?*" download screen will automatically be launched.

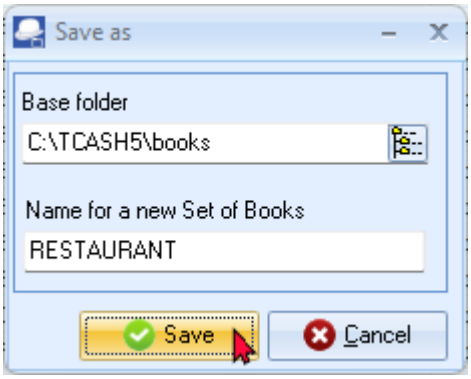
osFinancials5/TurboCASH5 supports 79 different languages and counties / tax regimes languages liked to 87 Sets of Books (databases) which may be downloaded and customised to meet your requirements.

If the set of books for your language and or country, is not available in the books directory, you may select any of the available Firebird Sets of Books and linked languages available as a free download.

6. Select the Chart of Accounts (Set of Books) and click on the Download button. Once the download, is completed, the "*Save as*" screen will display the Name of the selected downloaded Set of Books.



7. Enter a unique name for the Set of Books.

> *If the name for the new Set of Books already exists, an information message is displayed:*
>
> That Set of Books already exists! Please re-enter!
>
> *Enter a new name for the Set of Books.*

8. Click Save. The following information message is displayed:

Set of Books created!

9. Click OK. The Set of Books will automatically be opened.

> *Year-end confirmation*
>
> *Should you open the Set of Books, and the date of the end of the year, is in the past, a confirmation message will be displayed, for example;*
>
> This year Ends on 2022/02/28
> Today 2022/04/04
> Warning, this date does not fall into any of this or last year's reporting dates!
> Do year end?
>
> *You need to adjust the Start of the financial year in one of the following options on the Setup ribbon:*
>
> - *Setup → Reporting dates (if no transactions were processed for the Set of Books).*
> - *Do year end.*

10. To complete and configure the downloaded Set of Books for your needs, it is recommended that you first check enter, add and select the necessary information and settings:

    a) Accounts - Check the Chart of Accounts. Add any accounts required. You may also Disable or Delete any accounts that you do not require. Specific attention is required with the following

account types:

i) Tax accounts - Check that the correct tax codes and tax percentages are applicable to your country. You may need to change the descriptions, add tax codes, change the tax percentages, etc.

ii) Bank accounts - Rename an existing bank account, check your Payments and Receipt batches linked to the bank account. Add any additional bank accounts or delete unnecessary bank accounts.

b) Company info - Enter all your business' details such as the address, e-mail address, contact numbers and Company and Tax Registration numbers, which you need to display on all documents, reports, and lists. You may also select whether your default output option for documents, reports and lists are on: screen, printer, file, e-mail or fax. You may also load a logo picture to be displayed on your reports or documents, and set your Windows operating system's default date and currency formats.

c) Reporting dates - This option allows you to set up the number of reporting dates required, and the start date of your financial year period. The periods or dates will be displayed in the format in which you have set your Windows Operating System's default date on the previous screen.

d) Batch types - This option allows you to create, delete an existing batch type, or change the name of an existing batch type in which you wish to enter and update or post your transactions to the ledger.

e) Groups - This option allows you to set up to two Reporting groups for your General ledger, Debtors, Creditors accounts, Stock and Document groups.

f) Documents setup - This option allows you to set up your documents Invoices, Credit notes, Quotes, Orders, Purchases and Supplier return documents, you wish to hand to customers (debtors) or suppliers (creditors) when you sell, or quote, or order and purchase, stock items and services.

g) Salesperson - This option allows you to enter or add the salespersons who will be processing documents.

h) Stock items - Add your stock items (inventory items / products).

i) Debtors - Add your debtor (customer / client) accounts.

j) Creditors - Add your creditor (supplier / vendor) accounts.

Created with the Standard Edition of HelpNDoc: Full-featured EPub generator

Customise your own Set of Books (Advanced)

In osFinancials5/TurboCASH5, when creating a Set of Books from scratch using the "*Customise your own Set of Books (Advanced)?*" option in the "*Creation wizard*", you have the flexibility to define your chart of accounts according to your specific needs and requirements. It is important to consider some steps when designing you own Chart of Accounts.

Basic Sets of Books for the Firebird database is included in the bin/CUSTOMIE-EMPTY-BOOKS folder of your osFinancials5.1/TurboCASH-3 installation. The following Sets of Books (templates) with longer field lengths and only the three basic control accounts is available in the bin/CUSTOMIE-EMPTY-BOOKS folder:

1. *CUSTOMISE-EMPTY-BOOKS-3X3-DIGITS*
2. *CUSTOMISE-EMPTY-BOOKS-4X3-DIGITS*
3. *CUSTOMISE-EMPTY-BOOKS-5X3-DIGITS*
4. *CUSTOMISE-EMPTY-BOOKS-6X3-DIGITS*
5. *CUSTOMISE-EMPTY-BOOKS-7X3-DIGITS*
6. *CUSTOMISE-EMPTY-BOOKS-8X3-DIGITS*

Select a CUSTOMIE-EMPTY-BOOKS template:

- *Copy an existing Set of Booksc Use this option and use the Browse button to navigate to the bin/CUSTOMIE-EMPTY-BOOKS folder. Enter the name of your Set of Books.*
- *Save as: Open a Set of Books and use the Browse button to navigate to the bin/CUSTOMIE-EMPTY-BOOKS folder. Once the CUSTOMISE SET OF BOOKS template of your choice is opened, go the Save as option on the Start ribbon and save your Set of Books with your own name in the books directory.*

Key features:

- *Description length increased and Added missing entries in the Types table.*
- *Changed the number of characters in the Descriptions (Account description and Groups description) to 128 characters.*

Should you need any further field length adjustments for osFinancials and TurboCASH, please visit the osFinancials webshop.

Accounts:

These Sets of Books only include the 3 control accounts (i.e. Debtors control + Creditors control + Retained

earnings) accounts in the Chart of Accounts.

You may change these three control account numbers and descriptions to meet your specific requirements. It is recommended that you do it before you add or import your ledger. accounts.

See - Designing a Chart of Accounts in this documentation.

Updated Types table:

- *Added: Groups for Projects -1000, Cost centre 1 -1002, Cost centre 2 - 1003 and Languages -1004.*
- *Added: Paper types - 55 - Till slip and 56 New plain paper types.*

When creating a Set of Books using the "*Customise your own Set of Books (Advanced)?*" option, you begin with a clean slate and have to build your chart of accounts from scratch. The initial setup process will only include three main control accounts: the Debtor's control account, Creditor's control account, and Retained earnings account.

As part of this customisation process, you will have the opportunity to set the number of main digits for your accounts, ranging from 3 to 8 digits. Additionally, you will specify the account numbers for three main control accounts: the Creditors control account, Debtors control account, and Retained earnings account.

1. *The Creditors control account is a general ledger account that represents the total amount owed to the company by its creditors or suppliers. It serves as a summary account for all individual creditor accounts and helps track the company's outstanding payables.*
2. *The Debtors control account, on the other hand, is a general ledger account that represents the total amount owed to the company by its debtors or customers. It acts as a summary account for all individual debtor accounts and aids in monitoring the company's receivables.*
3. *The Retained earnings account, reflects the cumulative net earnings or profits of the company that have been retained and reinvested in the business. It represents the portion of equity that is derived from the company's profitability and serves as a financial record of the accumulated profits over time.*

By defining these main control accounts during the Set of Books creation process, you can structure your chart of accounts and design the account numbering system that aligns with your specific accounting practices and reporting requirements.

To complete the setup and create a comprehensive chart of accounts, you will need to define and link all the necessary accounts in your organisation. This includes creating and setting up Ledger accounts, Bank accounts, Creditor accounts, Debtor accounts, and Tax accounts. You have the flexibility to customize the account structure and naming conventions based on your specific requirements.

Additionally, you will also need to create and configure other elements such as Batch types, Groups, and

any other accounts or settings that are relevant to your business operations. This allows you to tailor the Set of Books to suit your organisation's needs and ensure accurate financial management and reporting.

By going through the setup process and defining the necessary accounts, you establish the foundation for recording and managing financial transactions within osFinancials5/TurboCASH5, enabling you to effectively track and analyse your company's financial activities.

Choosing the number of digits for main accounts

See - Chart of Accounts - Optimising 4-,5-,6-,7- and 8-digit main accounts - Some recommendations and tips to plan your Chart of Accounts according to your selection on the number of Main account digits -

Choosing the appropriate number of digits for main accounts is an important consideration when setting up your Chart of Accounts in osFinancials5/TurboCASH5. The number of digits determines the level of detail and granularity in your account numbering system.

When creating your Set of Books, you will be prompted to select the number of main account digits. For example, if you choose a 4-digit main accounts Chart of Accounts, the and you have initially assigned the following account numbers: 1100 for the Debtor's control account, 2100 for the Creditor's control account, and 3100 for the Retained earnings account. These are default account codes that can be modified later if needed.

The selection of main account digits impacts the structure and organization of your Chart of Accounts. Here are some recommendations and tips to consider:

- 4-digit main accounts: This option provides a concise and compact Chart of Accounts, it can be suitable for small and medium enterprises as well as larger organizations that need to comply with various accounting frameworks and standards such as GAAP US, GAAP UK, SA GAAP, NZ GAAP, IFRS (full), IFRS for SMEs, and others based on their jurisdiction and accounting needs. However, it's important to note that this option may have limitations in accommodating detailed account classifications or sub-categories.
- 5 to 8-digit main accounts: These options offer greater offer greater flexibility and granularity in your Chart of Accounts. These options allow for more detailed account classifications and sub-categories, making them beneficial for larger organizations or those with complex accounting requirements. With these options, you can design a Chart of Accounts that aligns precisely with your financial reporting needs and internal management requirements.

It's crucial to consider your organization's size, complexity, and reporting needs when choosing the number of main account digits. By selecting the appropriate option, you can ensure that your Chart of Accounts supports accurate financial reporting, compliance with accounting standards, and effective management of your organization's financial data.

When creating a Set of Books with the option to choose the number of digits for main accounts, you have the flexibility to select a structure that suits your needs. Here are the available options and the corresponding number of digits for the general ledger main accounts:

4-Digit General ledger main accounts: Enter a 4-digit numeric code for each of the Creditor's control, Debtor's control, and Retained income/earnings accounts (e.g., 2100, 1100, and 3100). This option includes 3-digit sub-accounts as well as 7-Digit account codes for Debtor accounts in the debtors ledger and Creditor accounts in the creditors ledger.

5-Digit General ledger main accounts: Enter a 5-digit numeric code for each of the Creditor's control, Debtor's control, and Retained income/earnings accounts (e.g., 21000, 11000, and 31000). This option includes 3-digit sub-accounts as well as 8-Digit account codes for Debtor accounts in the debtors ledger and Creditor accounts in the creditors ledger

6-Digit General ledger main accounts: Enter a 6-digit numeric code for each of the Creditor's control, Debtor's control, and Retained income/earnings accounts (e.g., 210000, 110000, and 310000). This option includes 3-digit sub-accounts as well as 9-Digit account codes for Debtor accounts in the debtors ledger and Creditor accounts in the creditors ledger

7-Digit General ledger main accounts: Enter a 7-digit numeric code for each of the Creditor's control, Debtor's control, and Retained income/earnings accounts (e.g., 2100000, 1100000, and 3100000). This option includes 3-digit sub-accounts as well as 10-Digit account codes for Debtor accounts in the debtors ledger and Creditor accounts in the creditors ledger

8-Digit General ledger main accounts: Enter an 8-digit numeric code for each of the Creditor's control, Debtor's control, and Retained income/earnings accounts (e.g., 21000000, 11000000, and 31000000). This option includes 3-digit sub-accounts as well as 11-Digit account codes for Debtor accounts in the debtors ledger and Creditor accounts in the creditors ledger

When planning your Chart of Accounts, it's important to carefully consider and define the codes or numbers for these accounts based on the structure you have chosen. This will help ensure consistency and organization in your financial reporting and analysis.

After creating your Set of Books, you still have the flexibility to change the account codes or numbers in the Chart of Accounts. In the Setup → Accounts menu on the Setup ribbon, you can modify the account codes to align with your specific requirements, including the codes for the Creditor's control, Debtor's control, and Retained income/earnings accounts (e.g., 2100, 1100, and 3100 in the example of the 4-Digit General ledger main accounts). This initial stage allows you to plan and design your chart of accounts according to your needs.

However, it's important to note that once you start processing functions such as entering transactions or budgets, you may not be allowed to change the account codes or numbers. Therefore, careful consideration and planning during the initial setup stage is crucial to ensure accurate financial structure and reporting.

By carefully selecting the number of main account digits and customizing the account codes in the Chart of Accounts, you can optimize the organization and usability of your financial data within osFinancials5/TurboCASH5.

Defining Account groups and Financial categories

Before creating and setting up Ledger accounts, Bank accounts, Creditor accounts, Debtor accounts, and Tax accounts in osFinancials5/TurboCASH5, it is recommended to define the basic classification of accounts using Account Group 1 or Account Group 2. This helps organize and categorize your accounts based on their nature or function.

In the Setup → Groups menu on the Setup ribbon, you can add Account Group 1 or Account Group 2 and assign them meaningful names that represent different account classifications. For example, you can create groups for fixed assets, cash and receivables, current assets, current liabilities, equity, operating expenses, operating revenue, non-operating expenses, non-operating revenue, etc. These groups provide a structured framework for organising your accounts.

After creating the account groups, you can map or link them to the five financial categories: Assets, Liabilities, Equity, Income, and Expenses in the Setup → Financial categories menu on the Setup ribbon. This mapping ensures that the accounts are correctly classified within the financial framework of your organisation.

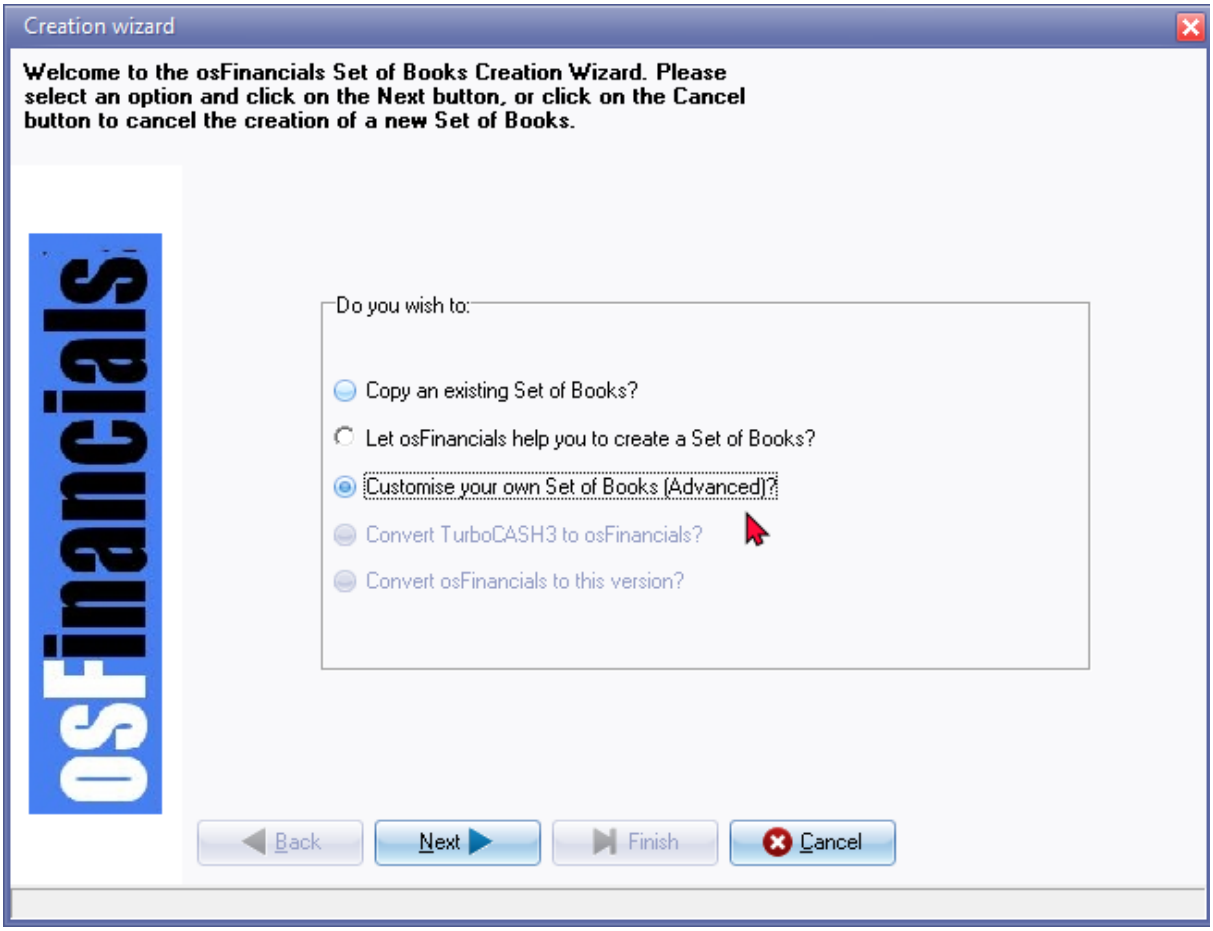
When you proceed to create and set up Ledger accounts, Bank accounts, and Tax accounts in the Setup → Accounts menu, you will have the option to select the appropriate Account Group 1 and/or Account Group 2 for each account. By associating the accounts with their respective account groups, you establish a hierarchical structure that allows for easier navigation and analysis of financial information.

By properly defining and linking account groups, you lay the foundation for accurate financial reporting and analysis within osFinancials5/TurboCASH5, enabling you to effectively track and manage your organisation's financial data.

Process to create a Set of Books using the Customize your own Set of Books (Advanced) option

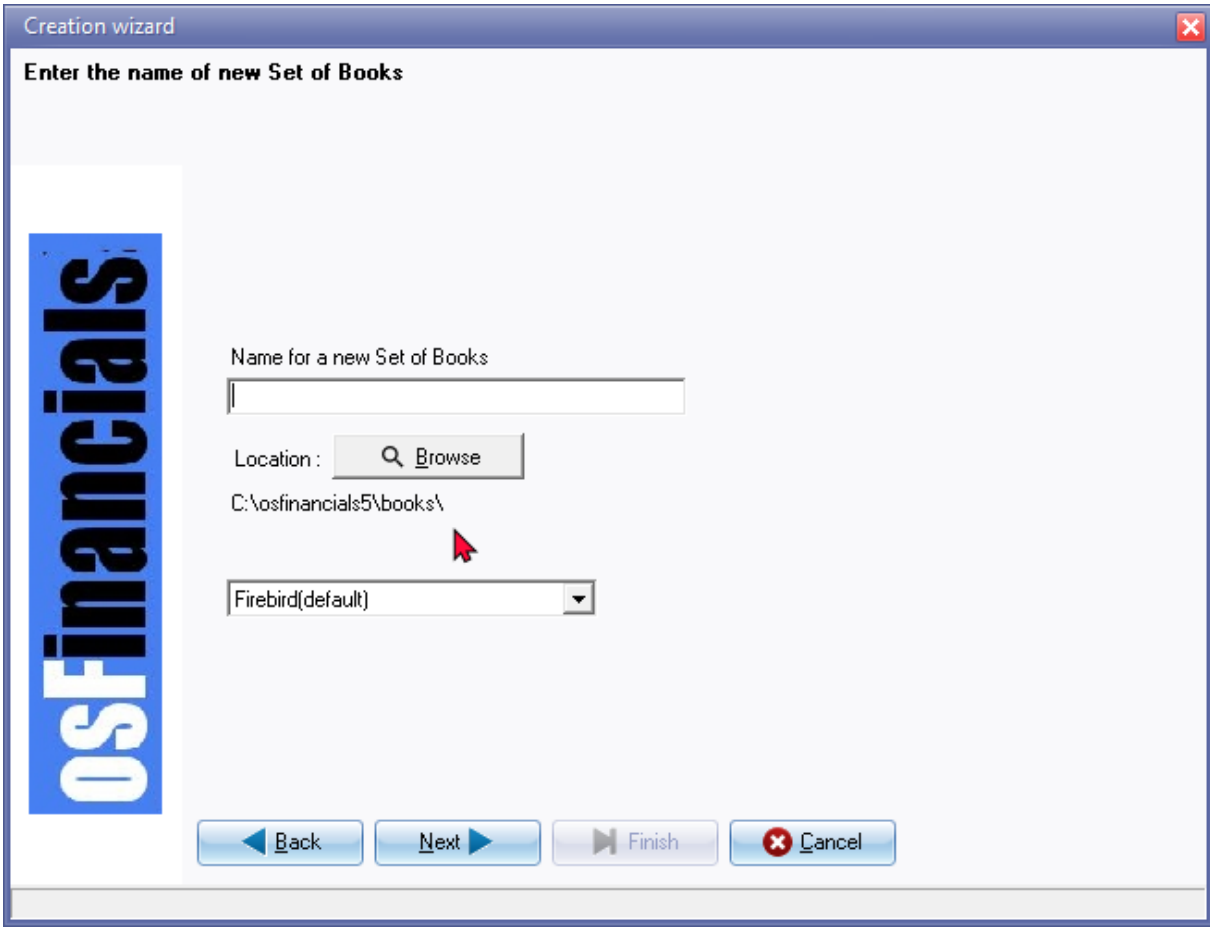
To create a Set of Books using the Advanced option:

1. On the Start ribbon, you can select the Create Set of Books option or simply press the F10 key on your keyboard.



2. osFinancials5 / TurboCASH automatically defaults to the option "*Let osFinancials help you to create a Set of Books?*"/ "*Let TurboCASH help you to create a Set of Books?*" , as this is the recommended option for most users. Select the "*Create a Set of Books (Advanced)?*" option.

3. Click on the Next button.

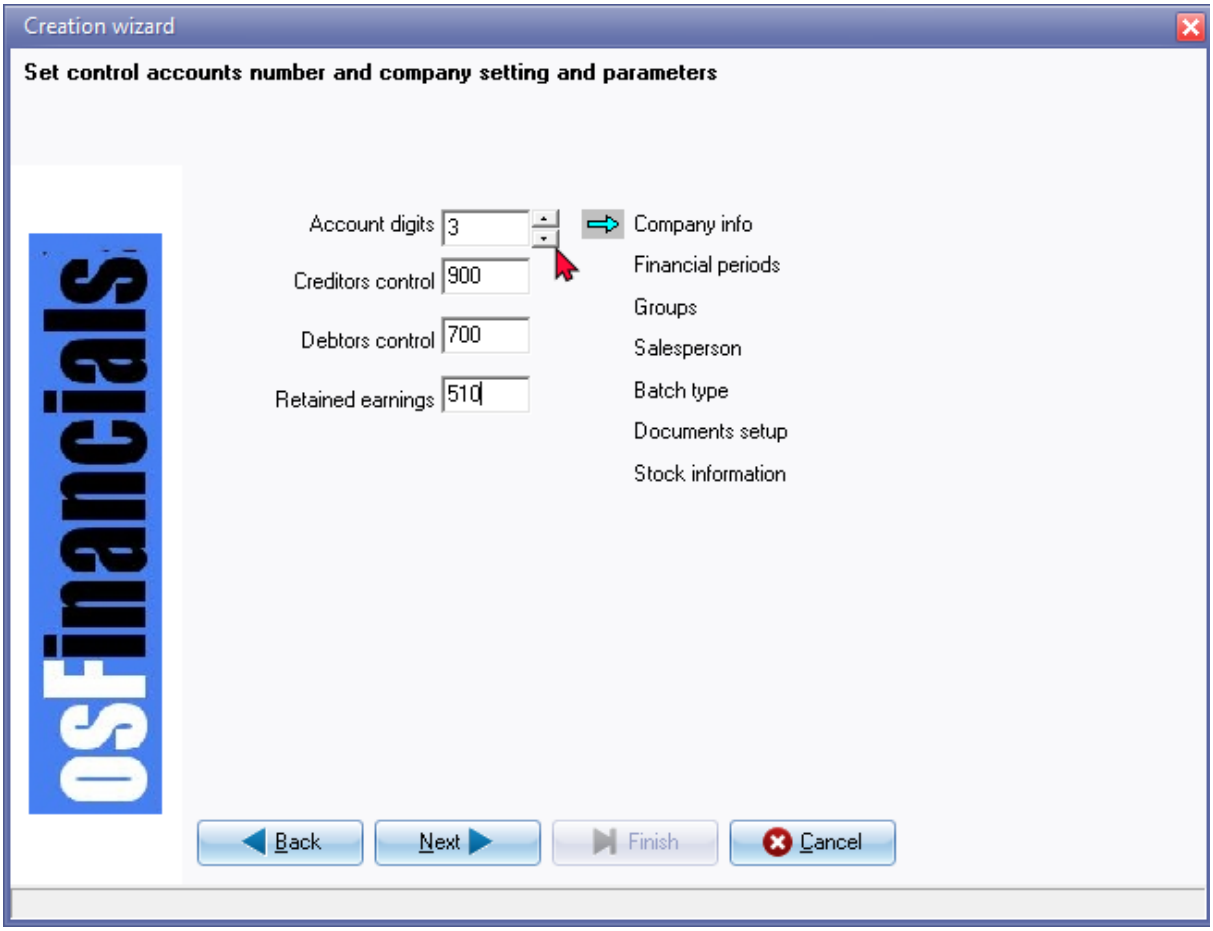


4. Enter the name for your Set of Books.

> *The name must not already exist and may not be longer than 50 characters. This name will help you to identify the Set of Books on your system. You will need to select this name whenever you need to open the Set of Books or perform some other functions on the Set of Books.*

> *The Directory in which you create the Set of Books is displayed underneath the Location Browse button. It will usually be the default directory (e.g. "C: \ osfinancials5 \ books" folder in which osFinancials5/TurboCASH5 is installed or directory, which you have specified when you installed osFinancials5/TurboCASH5. If you wish to create your Set of Books in any other directory or location on your system, you may click on the Browse button, if desired, to select any folder or drive on the "Pick a directory" screen.*

5. Check the location where you wish to create the Set of Books is correct, and click on the Next button.



6. Account digits: The default number of account Digits is 3. Select the desired number of digits for your general ledger main accounts. This will determine the structure and length of the account codes for the Creditor's control, Debtor's control, and Retained income/earnings accounts.

7. Account codes: Enter the numeric code for each of these accounts based on the chosen number of digits. For example, in a 4-digit structure, you would enter codes like 2100, 1100, and 3100.

When creating a Set of Books with the option to choose the number of digits for main accounts, you have the flexibility to select a structure that suits your needs. Here are the available options and the corresponding number of digits for the general ledger main accounts:

4-Digit General ledger main accounts: Enter a 4-digit numeric code for each of the Creditor's control, Debtor's control, and Retained income/earnings accounts (e.g., 2100, 1100, and 3100). This option includes 3-digit sub-accounts as well as 7-Digit account codes for Debtor accounts in the debtors ledger and Creditor accounts in the creditors ledger.

5-Digit General ledger main accounts: Enter a 5-digit numeric code for each of the Creditor's control, Debtor's control, and Retained income/earnings accounts (e.g., 21000, 11000, and 31000). This option includes 3-digit sub-accounts as well as 8-Digit account codes for Debtor accounts in the debtors ledger and Creditor accounts in the creditors ledger

6-Digit General ledger main accounts: Enter a 6-digit numeric code for each of the Creditor's

control, Debtor's control, and Retained income/earnings accounts (e.g., 210000, 110000, and 310000). This option includes 3-digit sub-accounts as well as 9-Digit account codes for Debtor accounts in the debtors ledger and Creditor accounts in the creditors ledger

7-Digit General ledger main accounts: Enter a 7-digit numeric code for each of the Creditor's control, Debtor's control, and Retained income/earnings accounts (e.g., 2100000, 1100000, and 3100000). This option includes 3-digit sub-accounts as well as 10-Digit account codes for Debtor accounts in the debtors ledger and Creditor accounts in the creditors ledger

8-Digit General ledger main accounts: Enter an 8-digit numeric code for each of the Creditor's control, Debtor's control, and Retained income/earnings accounts (e.g., 21000000, 11000000, and 31000000). This option includes 3-digit sub-accounts as well as 11-Digit account codes for Debtor accounts in the debtors ledger and Creditor accounts in the creditors ledger

When planning your Chart of Accounts, it's important to carefully consider and define the codes or numbers for these accounts based on the structure you have chosen. This will help ensure consistency and organization in your financial reporting and analysis.

However, it's important to note that once you start processing functions such as entering transactions or budgets, you may not be allowed to change the account codes or numbers. Therefore, careful consideration and planning during the initial setup stage is crucial to ensure accurate financial structure and reporting.

8. Click on the Next button to initiate each of the set up options listed on the right-hand side of the "Creation wizard" screen. Enter and select the necessary information and settings for the following screens:

    a) Company info - Enter all your business' details such as the address, e-mail address, contact numbers and Company and Tax Registration numbers, which you need to display on all documents, reports, and lists. You may also select the Tax method applicable to your VAT/GST/Sales Tax registration, whether your default output option for documents, reports and lists are on: screen, printer, file, e-mail or fax. You may also load a logo picture to be displayed on your reports or documents, and set your Windows operating system's default date and currency formats.

    b) Reporting dates - This option allows you to set up the number of reporting dates required, and the start date of your financial year period. The periods or dates will be displayed in the format in which you have set your Windows Operating System's default date on the previous screen.

The start date of the financial year is the first day of the calendar month in which the Set

of Books (Advanced option) is created.

For example, it it is created on 20 August 2021, the Start date is 1 August 2021, etc.

Before the "Reporting dates" screen is launched, a message will be displayed.

Periods are not there

Click on OK to launch the "Reporting dates" screen.

c) Batch types - This option allows you to create, delete an existing batch type, or change the name of an existing batch type in which you wish to enter and update or post your transactions to the ledger.

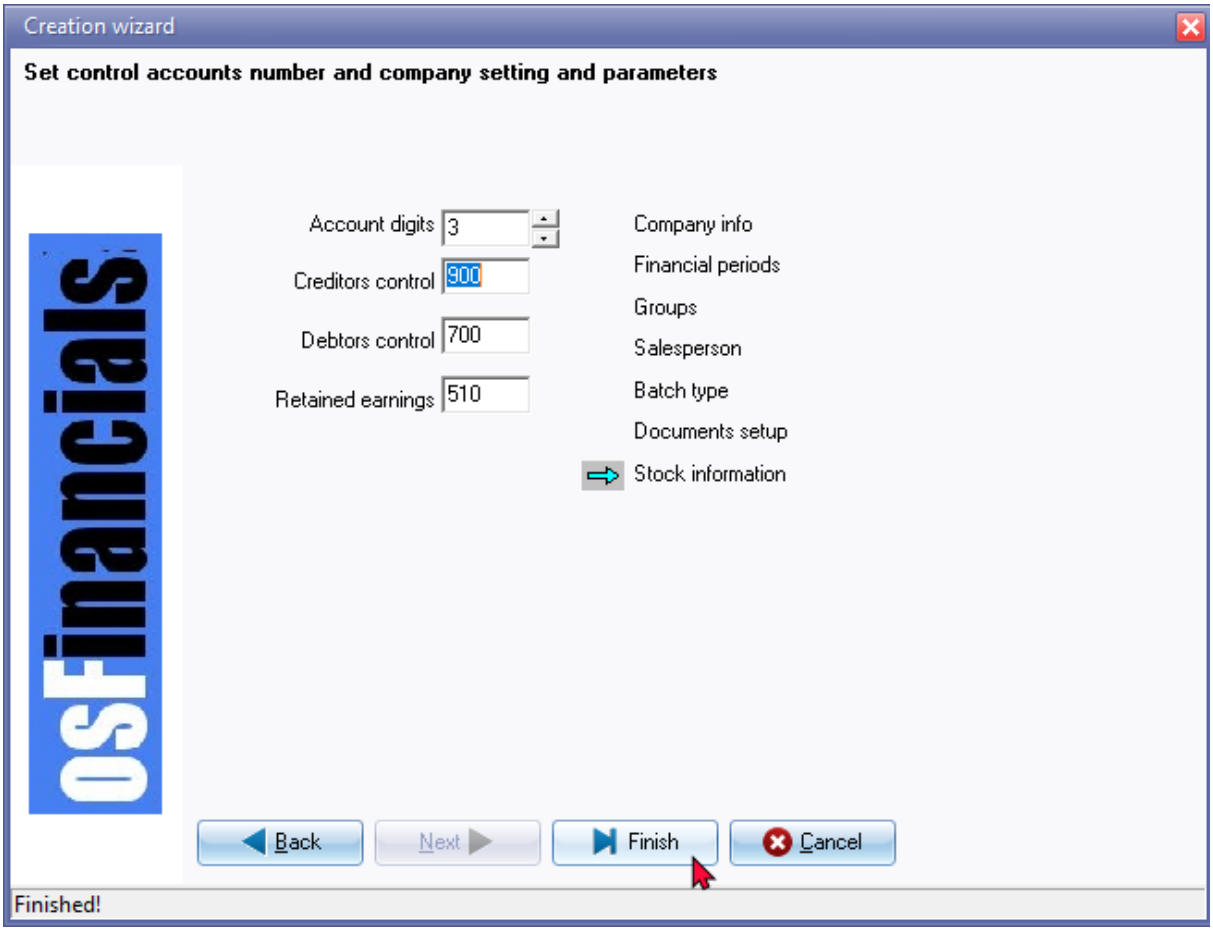
d) Groups - This option allows you to set two Reporting groups for your General ledger accounts, Debtors, Creditors, Stock and Document groups.

e) Salesperson - This option allows you to enter the salespersons names who will be selling your stock items, or selling services.

f) Documents setup - This option allows you to set up your documents Invoices, Credit notes, Quotes, Orders, Purchases and Supplier return documents, you wish to hand to customers (debtors) or suppliers (creditors) when you sell, or quote, or order and purchase, physical stock items and services set up in your stock item code file.

g) Stock information - The option allows you to define the units of stock you sell and the selling price descriptions and to set the Cost of sales parameters. This option should only be used if you use stock and/or wish to generate documents (Invoices, Credit notes, Quotes, Orders, Purchases and Supplier returns).

9. After the last setup screen (i.e. Stock information) is closed, the Next button will change to the Finish button.



10. Click on the Finish button. The new Set of Books will automatically be opened automatically and now ready to work in.

Before you begin processing transactions, make sure to create your general ledger accounts, bank accounts, tax accounts, debtor accounts, creditor accounts, and review or modify your settings and parameters to ensure accuracy and efficiency.

Steps after creating the Set of Books (Advanced)

Deactivate / Activate the Bank import plugin

By default, the Bank import plugin setting activated.

The "*Default bank reconciliation*" option (Setup → System parameters on Setup ribbon) is not selected.

Bank import plugin - Bank Reconciliations Plugin Manual - BankImport Plugin Manual - Shop - The Bank import plugin is included in the osFinancials5/TurboCASH5 subscription.

The Bankimport plugin will import bank transactions and save you hours of data entry. You can simply link transactions to your debtors, creditors or other accounts. And with a simple mouse click link the

payments to the right invoices.

Needs to be activated on the Setup ribbon, select Setup → System Parameters.

If you do not intend to wish to use the Bank import plugin at this stage, you need to turn the Bank import plugin off (Tick (select) the "*Default bank reconciliation*" field in Setup → System parameters (Setup ribbon).

The Bank import plugin can be activated as it is included in the osFinancials5/TurboCASH5 subscription.

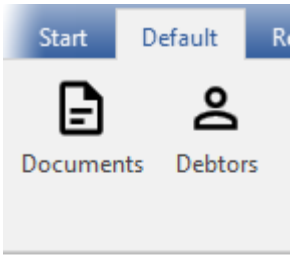
If the Bank import plugin is not activated, separate Payments and Receipt batches will be created on the Bank tab when you create (add) Bank accounts in Setup → Accounts (Setup ribbon).

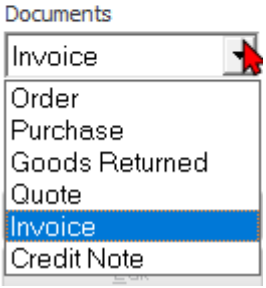
Customise labels for Document types

You may need to customise labels and fix records.

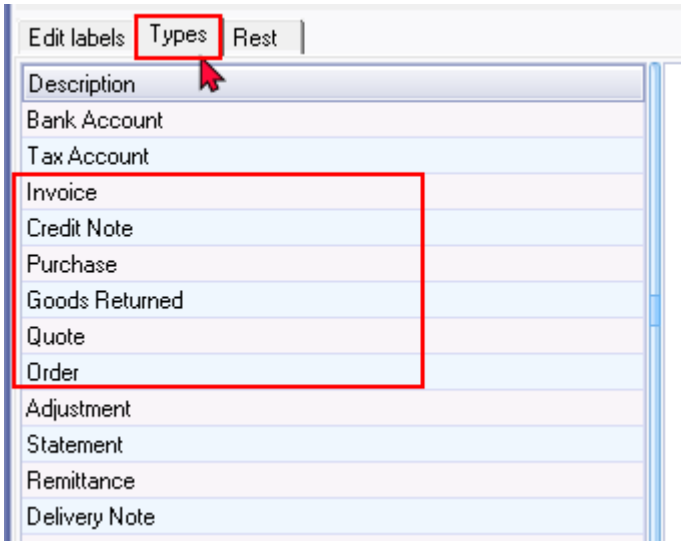
Change the descriptions on the Types tab on Tools → Customise languages (Setup ribbon). If you have a different language than English, you need to translate the descriptions for your language or specific requirements.

Document types5





"*Goods Returned*" - change to Supplier return to be consistent with the other labels in the language file.



The Document type (i.e. Invoice, Credit note, Quote, Purchase, Supplier return or Order) is stored and edited 1n the Tools → Customize language (Setup ribbon).

It should print the Document type (i.e. Invoice, Credit note, Quote, Purchase, Supplier return or Order) as this is more correct for the recipient of these documents.

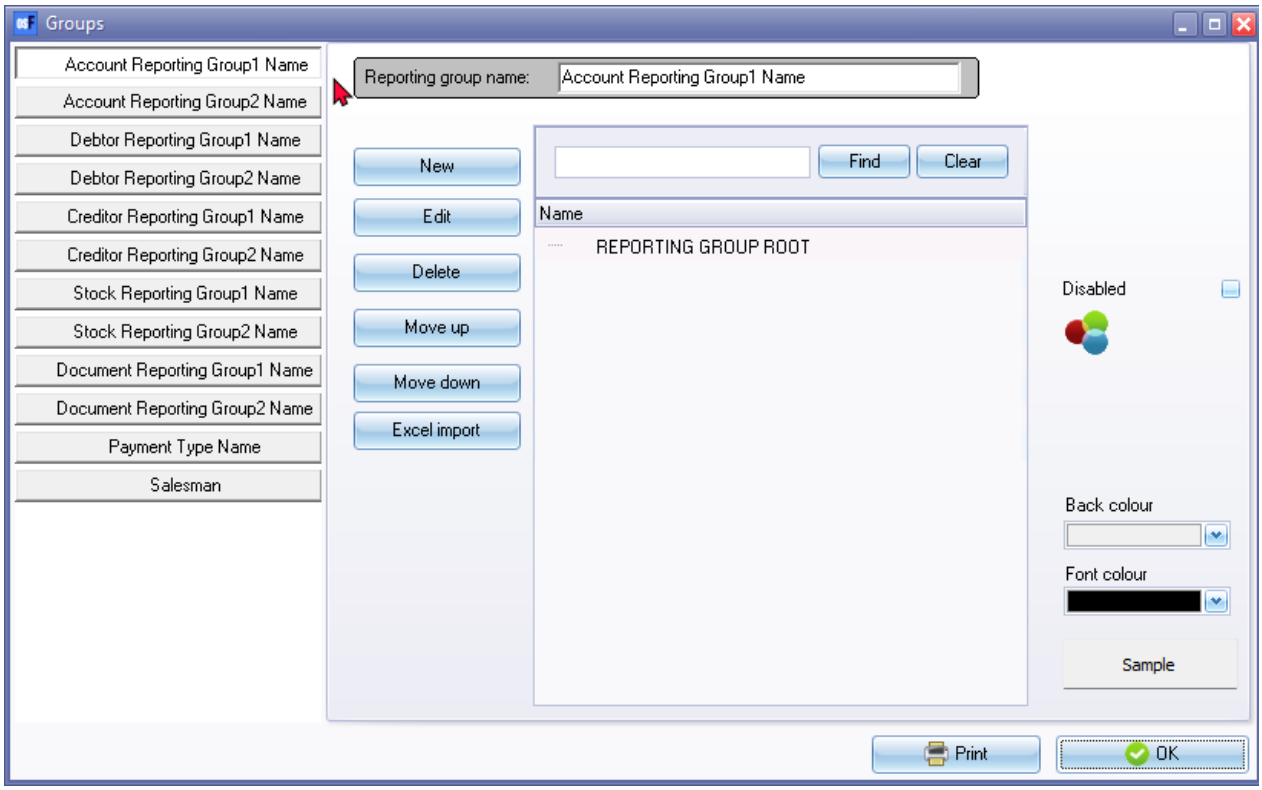
If you need to print documents using the document layout files supporting one (1) Layout file for all document types), it is recommended that the Document types are edited and/or translated to the singular

in the Types tab Tools → Customize language menu (Setup ribbon).

Change Edit Groups

Change the reporting group names (descriptions) of the Groups (Setup ribbon).

You may also add groups for reporting groups, if necessary.



The name must not already exist and may not be longer than 50 characters. This name will help you to identify the Set of Books on your system. You will need to select this name whenever you need to open the Set of Books or perform some other functions on the Set of Books.

The following groups are not included if the Set of Books was created using Create Set of Books (Advanced) option:

- Projects - You may create groups for Projects. These Projects may be activated in batches and documents. Once the batches and/or documents are posted (updated to the ledger), you may generate various reports for each Projects on the Sidebar of the Default menu.
- Cost centre 1 and/or Cost centre 2 -
- Languages - *Multi-Language accounts*

Multi-Language accounts - Manual - Shop - Licence : Once-off -

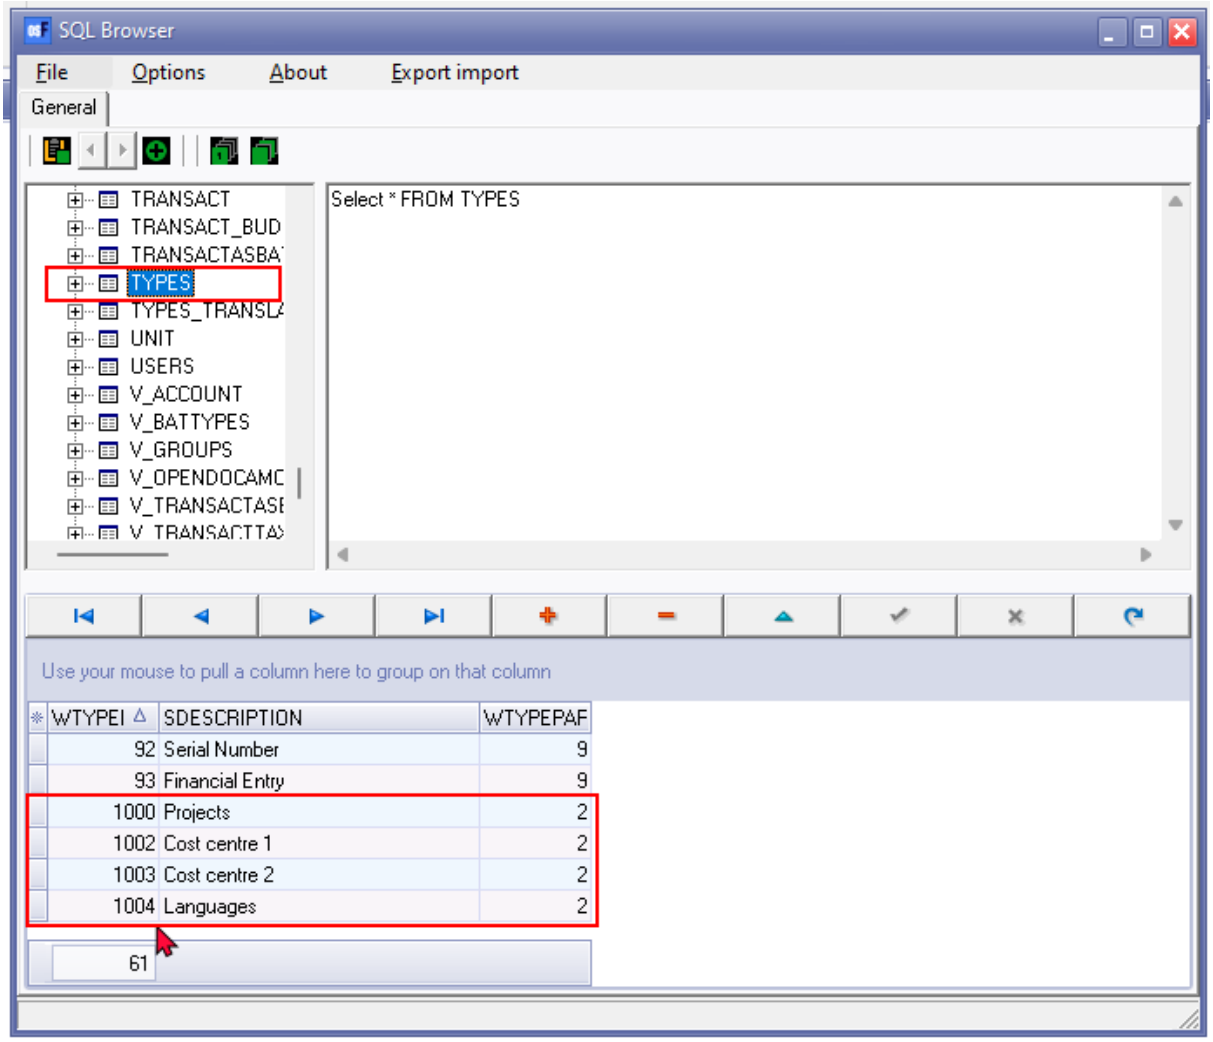
This plugin makes it possible to translate the ledger and group names in multiple languages. It is already possible to choose different languages for the interface (the buttons). But this plugin makes it possible to do the accounting in different languages. Per user you can select a language, so the user can account in his/her own language. The set of books can be viewed in different languages, therefore it is possible an employee enters information into an English Set of Books and a bookkeeper, auditor, etc. can see the set of books in a set language, e.g. Afrikaans, Dutch, etc.

Add missing Groups and Paper types in the Types table

To add missing groups:

If you intend to use Projects, Cost centres and/or Multi-language Set of Books, you need to add these Groups manually:

1. Activate the SQLBrowser plugin in Tools → Activate plugins (Setup ribbon)
2. Launch the SQLBrowser plug-in Plugins → Tools → SQLBrowser (Setup ribbon).
3. Select the "*TYPES*" table.
4. Right-click and select "*Open*" on the context menu.



5. Select the last record WTYPEID - 93 in the TYPES table. Insert or Add a new record (you may also use the down arrow on your keyboard).

6. Add Groups - Optional - If you are planning to use any of the following features in osFinancials5/TurboCASH5, you may add the groups, as required. To do this, type the following records and type 2 in the WTYPEPARENT column:

    § 1000 - Projects

    § 1002 - Cost centre 1

    § 1003 - Cost centre 2

    § 1004 - Languages

7. Add Paper types - Type the following records and type 5 in the WTYPEPARENT column:

    § 55 - Till slip

    § 56 - New plain

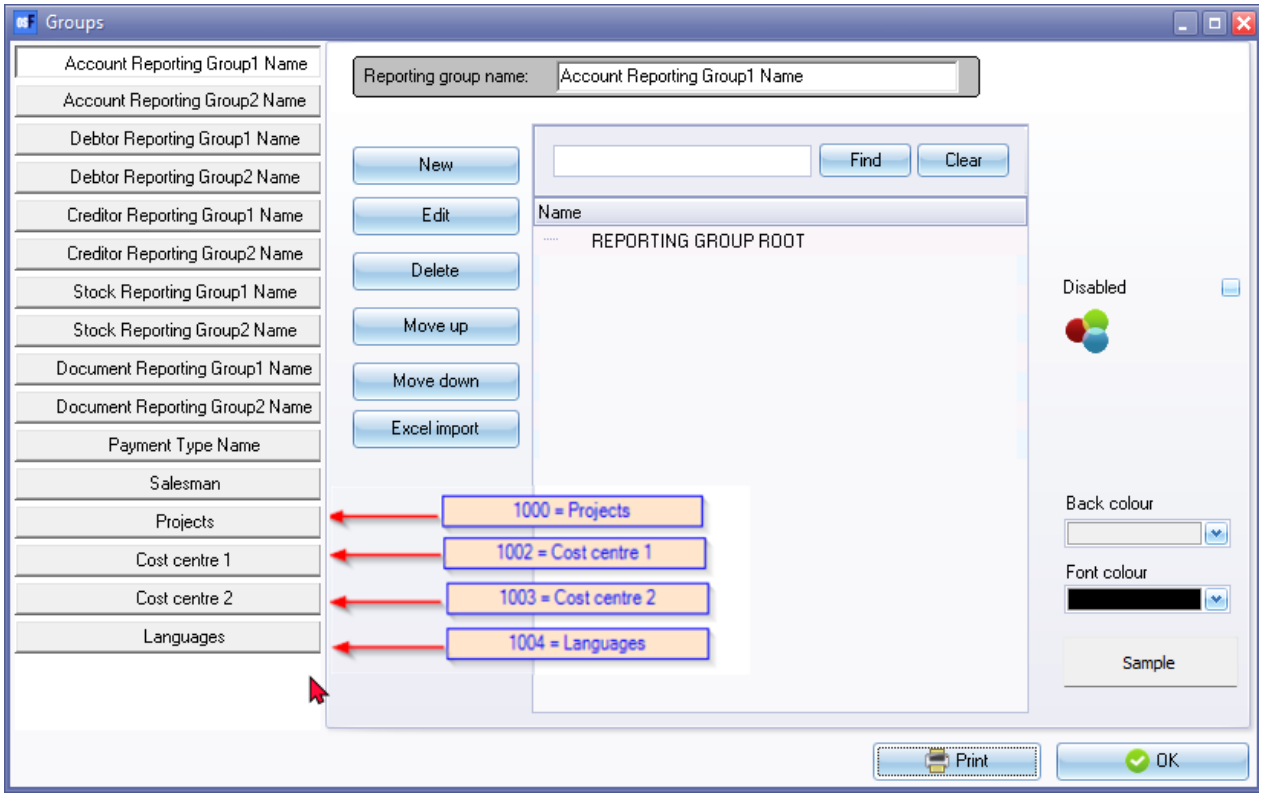
The number of records in the "TYPES" table is 55 records. After adding the 4 records for the groups and the 2 records for the paper types, the number of records in the "TYPES" table should be 61 records.

8. Close the SQLBrowser

SQLBrowser - Manual - Shop - Licence : Once-off -

Activate the SQLBrowser plug-in Tools → Activate Plugins (select Tools → SQLBrowser and click Activate plugin) on the Setup ribbon.

The groups will be added on Setup → Groups



Before you can start any processing, you need to set up your general ledger accounts, bank account, tax accounts, accounts receivable (debtor accounts), accounts payable (creditor accounts), etc. create and check or change your settings and parameters. This should not take much time, but can save you a lot of extra work and frustration, as the key to success in your processing and reports is in setting up the osFinancials5/TurboCASH5 program.

Customise your own Set of Books (Advanced)? - Set Books - Properties

Length of description fields and the basic control accounts

The basic features of your customized Set of Books with the "*Customise your own Set of Books (Advanced)?*" -option should be as follows:

1. Length of description fields - The default length of description fields for accounts is 64 characters and groups are up to 30 characters for group names. The group descriptions are more than 50 characters.
2. Account codes - Character length and the default control accounts. Depending on your choice of the number of digits for account codes, during the creation of your own Set of Books, the number of characters for the control accounts and the debtor accounts as well as the creditor accounts will be as follows:

Number of digits *Account code*	*Retained earnings*	*Debtors control*	*Creditors control*	*Number of account code digits - Debtor accounts*	*Number of account code digits - Creditor accounts*
3X3-DIGITS	*G510-000*	*G700-000*	*G900-000*	*D + 5-characters D00001*	*C + 5-characters C00000*
4X3-DIGITS	*G3100-000*	*G1100-000*	*G2000-000*	*D + 6-characters D000001*	*C + 6-characters C000000*
5X3-DIGITS	*G31000-000*	*G11000-000*	*G20000-000*	*D + 7-characters D0000001*	*C+ 7-characters C0000000*
6X3-DIGITS	*G310000-000*	*G110000-000*	*G200000-000*	*D + 8-characters D00000001*	*C + 8-characters C00000000*
7X3-DIGITS	*G3100000-000*	*G1100000-000*	*G2000000-000*	*D + 9-characters D000000001*	*C + 9-characters - C000000000*
8X3-DIGITS	*G31000000-000*	*G11000000-000*	*G20000000-000*	*D + 10-characters - D0000000001*	*C + 10-characters - C0000000000*

Customise your own Set of Books - Configure Set of Books

Language settings

If you have created your custom Set of Books in "*English*" as the default language, the osFinancials5/TurboCASH5 interface will be displayed in "*English*". If the osFinancials5/TurboCASH5 interface is displayed in the language of your choice, you can select a different available language in the "*Switch language*" (Start ribbon).

Set the default language for your Set Books - You can choose your language and country in Setup → Access control. When you reopen your Set of Books, the language in the osFinancials interface, reports, etc. will be displayed in your selected language.

Customise your own language

If you want to customise your own language, you can select your language in Tools → Customise language (Setup ribbon).

It is strongly recommended that the label, which is edited or entered, is not longer than the default "English" labels' length. If your label is too long, it may cause some options in the program not to function or display properly. Do not use the Delete button to remove any of the existing edited labels.

Care must be taken to ensure that existing labels or descriptions in the main language, i.e. "English" not be modified. You must create a copy of the "English" or other selected language and rename it with a new name. You may use your own language file to edit.

If you decide to adapt a selected language file for your own specific industry or specific needs and want to modify these labels accordingly, it is important that you use a copy of the language file. This will prevent your language file from being overwritten when you reinstall osFinancials5/TurboCASH5, or install osFinancials update download files, or install osFinancials updates through the Help menu.

Customise the "TYPES"-tab

The entries on the "*Types*"-tab in Tools → Customise language (Setup ribbon) is database specific and will update the "*TYPES*" table in your Set of Books. You may edit, translate or change the descriptions as necessary.

- Reporting groups - The default descriptions for the reporting groups is available in English as "*Account Reporting Group1 Name*", etc, , After adding the 4 reporting groups for Projects, Cost centre 1, Cost centre 2 and Languages, these 16 reporting groups, you may change, edit, translate these descriptions on the "*Types*"-tab in Tools → Customise language (Setup

ribbon). These reporting group names may also be reviewed, changes, edited, translated in Setup → Groups according to your specific requirements for your country language or industry. The common reporting group names in most databases, is "Account group 1, Account group 2, Debtor group 1, Debtor group 2, Creditor group 1, Creditor group 2, Stock group 1, Stock group 2, Document group 1, Document group 2, Payment types, Salespersons, Projects, Cost centre 1, Cost centre 2 and Languages".

- Document types - The default descriptions for the standard 6 document types is "*Invoice", "Credit note", "Purchase", "Goods Returned*", "*Quote",* and "*Order*" . You may change, edit, translate the descriptions for the standard 6 document types for sales documents (Invoices, Credit notes and Quotes and for purchase documents (Purchases, Supplier returns and Orders) to match your specific requirements for your country language, tax regime or industry in the Types tab.

  In your language file, you may search and edit / translate the language labels for each of these document types. These matching descriptions are also displayed in the "*English*" language file. If you want to change or edit the labels according to your personal needs, you can make a copy of the "*English*" language file and feel free to translate the language labels for the document types according to your specific requirements, preferences and industry. You then also search for and modify and adapt the language labels for each of these document types in your own language file.

- Tax terminology - Tax account is the default description for VAT/GST/Sales tax/Consumption tax in the Types tab. You may change this description for your country language, tax regime or industry. In your language file, you may search and edit / translate the language labels for the for the tax terminology.

Customise the "Rest"-tab

The Customize language - Rest tab entries on this tab is database specific.

Change descriptions of the "*Description of Zero account*" and "*Group empty account*". The 2 change buttons only saves 1 description. Work around change both to "*Empty*".

General ledger accounts

Accounts Setup → Accounts - Only the 3 control accounts (i.e. Debtors control + Creditors control + Retained earnings) accounts in the Chart of Accounts is included in the Chart of Accounts.

You cannot delete these 3 control accounts. An error message will be displayed:

"You cannot delete a control account!"

You can edit the account code and description for each of these 3 control accounts, if necessary.

Depending on your choice of the number of digits for account codes, during the creation of your own Set of Books, the number of characters for the control accounts will be as follows:

Number of digits Account code	*Retained earnings*	*Debtors control*	*Creditors control*
3X3-DIGITS	*G510-000*	*G700-000*	*G900-000*
4X3-DIGITS	*G3100-000*	*G1100-000*	*G2000-000*
5X3-DIGITS	*G31000-000*	*G11000-000*	*G20000-000*
6X3-DIGITS	*G310000-000*	*G110000-000*	*G200000-000*
7X3-DIGITS	*G3100000-000*	*G1100000-000*	*G2000000-000*
8X3-DIGITS	*G31000000-000*	*G11000000-000*	*G20000000-000*

Control accounts - You can edit the account code and account description for each of these 3 control accounts.

It is important to note that you need to keep in mind that these control accounts need to be linked to account groups and financial categories:

Control account name	*Financial category*	*Account groups*
Retained earnings	*Capital*	*Equity / Capital*
Debtors control	*Assets*	*Current assets*
Creditors control	*Liabilities*	*Current liabilities*

If you import general ledger accounts from a Tab delimited file, you may:

- Change the account codes and descriptions to meet your specific requirements and needs. In the case of accounts, which contains sub-accounts, you cannot change the sub-accounts account codes. You first need to delete the sub-accounts and rename the account codes and account descriptions and recreate sub-accounts where necessary.

- Review your imported ledger accounts descriptions. You may use longer account descriptions (longer than the default 35-characters or 64-characters) , where necessary.
- Disabled (inactive) accounts imported - review and decide to keep these disabled (inactive) accounts or delete them if not required.
- Tax (VAT/GST/Sales tax) accounts - The first sub-account (tax code) may not include the Tax tab and Tax percentage - You need to delete and recreate the tax account (tax code) as a Tax account. Zero-rated Tax codes. You need to confirm the percentage.
- If Account groups 1 and / or Account group 2 is imported, these account groups may not be linked to the 5 financial categories. You may need to link these account groups to the 5 financial categories.

Imported or copied text in osFinancials screens from external files - Account / Group descriptions in Accounts description lines in batches

When importing or copying text for account. group descriptions or any other screens, or forms, the fields from external programs such as spreadsheet, word documents, etc. the hyphenation character "–" may be displayed as a pipe character " | " in lookups and some screens or as " " in some screens and in reports, document layout files, etc.

For example, Motor vehicles Net value if copied or imported into Setup - Accounts as Motor vehicles – Net value (with the hyphenation format) it will be displayed as Motor vehicles Net value on some screens and in reports and as Motor vehicles | Net value on lookup screens.

You need to use the dash sign "-" to be displayed correctly.

Solution:

To ensure hyphens display correctly in osFinancials5 / TurboCASH, use the standard dash character ("-") instead of the hyphenation character when copying or importing text from external files.

Debtor / Creditor accounts

Depending on your choice of the number of digits for account codes, during the creation of your own Set of Books, the number of digits for the account codes of debtor accounts and creditor accounts will be as follows:

Number of digits Account code	*Number of account code digits - Debtor accounts*	*Number of account code digits - Creditor accounts*
3X3-DIGITS	*D + 5-characters D00001*	*C + 5-characters C00000*
4X3-DIGITS	*D + 6-characters D000001*	*C + 6-characters C000000*

5X3-DIGITS	*D + 7-characters D0000001*	*C+ 7-characters C0000000*
6X3-DIGITS	*D + 8-characters D00000001*	*C + 8-characters C00000000*
7X3-DIGITS	*D + 9-characters D000000001*	*C + 9-characters - C000000000*
8X3-DIGITS	*D + 10-characters - D0000000001*	*C + 10-characters - C0000000000*

When creating or adding Debtor accounts and Creditor accounts, it is important that you use a different prefix for the account codes:

The first Debtor code (e.g. D00001, etc.), will automatically be generated. It is important to prefix Debtor codes with a unique prefix. In this documentation, the accounts is prefixed as follows:

- *Debtor code = 1*
- *Creditor code = 2*

The reason for this, is that the account prefix is not always available when selecting accounts on some screens and reports. For example, if a Debtor code is D00001 and a Creditor code is C00001, and you select the Debtor code, it may set the Creditor code when selecting the contra account in the "Options for this batch" (F10:Setup) on "Batch entry" screens on "Batch entry" screens.

Company information

Only "*osFinancials5.1.0.127*" / TurboCASH5.1.0.227 (osFinancials5/TurboCASH5 and the version number) will be displayed in the title bar, unless you have already entered your company name in the Company info screen during the creation of the Set of Books. Review and enter the name and contact details as well as the relevant registration numbers of your business in the Setup → Company info (Setup ribbon).

Financial year and accounting periods

The default start of the financial year is on the first day of the month in which you created your set of books. For example, if you created your Set of Books on 20 March 2024, the start of the financial year will automatically be set as "*1 March 2024*". You can change this in Setup → Reporting dates for the beginning of your financial year and set the accounting periods.
If you selected a different language than the English languages, for example, "*Afrikaans*" as the language to create your Set of Books in, the months of the year should already be displayed in "*Afrikaans*". You may need to review and edit or translate the months of your financial year, if necessary.

Batches (Journals)

No batch types (journal types) are included in your customised Set Books. You will need to add your own

batch types (journal types) in Setup → Batch types (Setup ribbon) to meet your specific needs and requirements. The basic journals, are the "*Sales journal*", "*Purchase journal*" and the "*General journal*".

Receipts journals and Payments journals for Bank accounts and Petty cash accounts

When you add or create a Bank account and Petty cash account, the Receipts journals and Payments journals will be created and added and linked to each Bank account and Petty cash account.

The "*Sales journal*", should be linked to the Invoices and Credit notes document types in Documents setup. This will update the transactions generated with the Invoices and Credit notes in the Sales journal to the ledger.

The "*Purchase journal*", should be linked to the Purchases and Supplier returns document types in the Documents setup. This will update the transactions generated with the Purchases and Supplier returns in the Purchase journal to the general ledger.

You can use any number of journal types as you deem necessary to group and process your transactions. In addition to the general journal, you may add specific journals for; cost of sales, adjustments, depreciation, payroll, etc. to accommodate your specific needs and requirements.

Documents setup

The defaults settings in the Setup → Documents setup is as follows:

1. Global settings - Documents setup
    - Layout file point-of-sale : "*DefaultA4*" is the default setting and is not available in the " ... *\plug_ins\reports\DOCUMENTS\DOCUMENTS*" folder. You may change the default layout file to "*POS - STARTSP100*".
    - Append notes below item: By default this option is selected. The default sequence in which the document lines will be displayed on document entry forms and printed in document layout files, is Item/Remark/Comment. If you deselect this option, the sequence in which the document lines will be displayed on document entry forms and printed in document layout files, will be Comment, Item, Remark.
    - Auto-post documents on print: By default this option is not selected. This means that you need to manually launch the Update ledger option to post or update documents to the ledger.
2. Settings for specific document types. The basic configuration for each document type, is as follows:

Field	*Sales documents*			*Purchase documents*		
Document	*Invoice*	*Credit note*	*Quote*	*Purchase*	*Purchase*	*Orders*

type					*returns*	
Next Document number	*I0N000001*	*C0000001*	*Q0000001*	*P0000001*	*R0000001*	*OR000001*
Batch type						
Layout file						
Layout file 2	-	-	-	-	-	-
Heading	*Tax Invoice no.*	*Credit note no.*	*Quote No*	*GRV No*	*Goods Returned No*	*Order No*
Message 1/2/3	-	-	-	-	-	-

Customise / translate notes:

You may need to customise, change and translate the following to suit your specific preferences and needs:

- Next Document number - This is an 8-character alphanumeric field. You may use prefixes for each document type. Prefixes will make it easier to identify the document type in searches and filters, on reports and on exported data in spreadsheets. The character prefixes for each document number are in English. You can change the document numbers for each type of document to suit your specific preferences and needs.
- Batch types - No batch types or journals are available at this stage. You will need to select the default journals in which the documents will be posted (updated) to the ledger. If you have already created journals earlier during the creation of your advanced Set of Books, you can select the "*Sales journal*" for Invoices and Credit notes and the "*Purchase journal*" for Purchases and Supplier returns. If not, you will first need to create the journal types in Setup → Batch types (Setup ribbon) such as "*Sales journal*" and "*Purchase journal*". Journals do not apply to Quotes and Orders.
- Layout file - You can select "*Layout file*" at this stage for all document types. The "Layout file" is one standard generic layout file that applies to all document types (Invoices, Credit notes, Quotes, Purchases, Supplier returns and Orders) and is translated via the language files. The layout file selected is a global setting. You may also select custom or other layout files as defaults for specific debtor or creditor accounts.
- Layout file 2 - This option is not selected. You may select other layout files or the delivery note to

print after the Layout file.

- Headings - You may change the headings of each document headings to match your country language, tax regime or industry.
- Messages - No messages is available at this stage. You may enter up to 3 lines as a global message (for each document type) that will be displayed on the "*Message*" fields of the document entry screens and printed on document layout files for each document type. Custom messages may be set as default for specific debtor or creditor accounts.
- Statement message - You can enter up to 3 lines of statement messages in the Statement setup tab. This is a global standard message that will appear on all debtor account statements.

Additional settings for documents

Post / Confirm and Delete buttons on Documents grid - By default, only the New, Edit and Print buttons are available on the Documents grid screen's sidebar. You may add the Posting and Delete buttons underneath the Print button. To add the Posting and Delete buttons to the Document grid screen, select (tick) the "*Document posting*" field on the Documents tab in Setup → Access control.

Stock items / Inventory items

Before you add or import your stock items / inventory items / products you may need to configure some important basic settings such as Cost of sales, Create tax classes / account classes and Selling prices.

At this point, your chart of accounts (general ledger accounts) should have already been finalised.

Activate Cost of Sales

By default cost of sales is not activated. You need to configure cost of sales as follows:

1. Cost of Sales journal - Create a cost of sales batch (journal) type (Setup → Batch types) to update the transactions for cost of sales to the ledger when you post documents.
2. Cost of sales settings (Setup → Stock information) - Select the following:
    - Create cost of sales - To activate cost of sales, select (tick) the "*Create cost of sales*" tick box.
    - Cost of sales batch - Select the Cost of sales batch (journal) in which the cost of sales transactions will be posted.
    - Use "*Average cost*" or "*Latest cost*" option.

> *The method you use to calculate the value of your stock is crucial for determining its impact on your profit and loss figures. It is important to consider whether to use the "average cost" or the "latest cost" method.*

If you are unsure which method to use, it is recommended that you seek guidance from your accountant.

Create tax classes / account classes

At this point, your chart of accounts (general ledger accounts) should have already been finalised.

You need to link each stock item / inventory item / product to the applicable ledger accounts (i.e. Input tax, Output tax, Sales account, Cost of sales account and Stock control account).

Tax classes may be set and linked to each category of tax and various tax rates such as Output tax, Input tax - Standard rate, Input tax - Capital goods, Zero rated goods, Exempt supplies applicable to the stock items / inventory items / products in your country and tax jurisdiction, etc.

Tax classes is defined and managed in the Tax classes tab in Setup → Stock information. When you create add or import your stock items / inventory items / products you may select a pre-configured Tax class to automatically link the 5 accounts (i.e. Input tax, Output tax, Sales account, Cost of sales account and Stock control account) applicable to the stock item / inventory item / product.

Selling prices

osFinancials5/TurboCASH5 supports up to 3 selling prices (i.e. Selling price 1, Selling price 2 and Selling price 3). You may change the descriptions of these selling prices on the "Selling price descriptions" section of the Default tab of Setup → Stock information to suit your specific requirements and set one of these Selling prices as the default Selling price (global setting) for your Set of Books.

In addition to this, you may set one of these Selling prices as the default Selling price on the Accounting information tab for specific debtor (customer / client) accounts.

Price agreement plugin - Manual - Shop - Licence : Once-off -

In addition to the standard 3 selling prices in odFinancials, Price agreement plugin, allows you to set up to five (5) levels of quantity discounts that can be applied to specific debtors or groups of debtors. Additionally, you can set a special price for individual debtors per product. These prices will overrule the default Selling price 1 / 2 / 3 and can be set per debtor (customer / client). The price agreement may also be activated for creditor (supplier / vendor) accounts.

Units of stock

Add and define the units such as each, hours, etc. for your stock items / inventory / products. You may add these descriptions on the Units tab in Setup → Stock information.

Reporting groups - Stock group 1 / Stock group 2

In osFinancials5/TurboCASH5, you have the option to set up to 2 reporting groups for your stock items / inventory items / products, allowing you to categorise search, filter and report on your products more effectively. These reporting groups provide a way to organize and analyse your inventory based on specific criteria.

You may add these Stock groups in Setup → Groups can be linked to each stock item (inventory item / product).

Set the Calendar as default

You have the option to activate the Calendar to be launched instead of the Welcome screen whenever you open a Set of Books, This means that the Calendar will be automatically displayed as the default screen.

Converting Sets of Books

Add Sets of Books

Already have Set of Books

TurboCASH4, TurboCASH5 (4.0.0.969), osFinancials4 (4.0.0.1093) Sets of Books do not need to be converted to osFinancials5/TurboCASH5.

You may copy the Sets of Books using File Explorer to the "*books*" directory of your osFinancials5/TurboCASH5 installation.

You may also Restore a Set of Books from a valid Backup file in osFinancials5/TurboCASH5.

New Set of Books

If you are new to osFinancials5/TurboCASH5, you may download an existing template for your country and language from the Let osFinancials help you to create a Set of Books - Download option. See a list of available Firebird Sets of Books and linked languages available as a free download.

New to Accounting and osFinancials

Download Tutorials - Basic Tutorials is available from the Let osFinancials help you to create a Set of Books - Download option.

Conversion

If you need to convert your data from other accounting packages, the following options is available on the osFinancials Webshop:

- *Basic conversion* -

- *Extensive conversion* -

- *Convert Sets of Books to Microsoft SQL Server database.*

Created with the Standard Edition of HelpNDoc: Full-featured Documentation generator

Save as

The "*Save as*" option in osFinancials5/TurboCASH5 allows you to save a Set of Books to any directory or folder on your system. To use this option, you must have a Set of Books open and select the option to save the entire Set of Books with a different name in the directory of your choice. This allows you to create a copy of the Set of Books with a new name in a different location without affecting the original data.

The "Save as" screen will also be launched if you download one of the free Sets of Books (templates) (using the option, Let osFinancials help you to create a Set of Books / Let TurboCASH5 help you to create a Set of Books)

After downloading a Set of Books, the Set of Books (template) will automatically open in the language associated with the country and language.

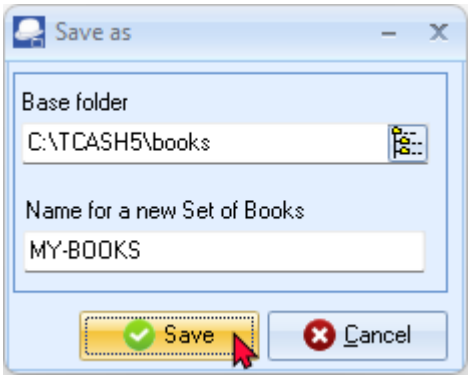
See a list of the Sets of Books available for a download.

To save a Set of Books as:

1. On the Start ribbon, Open the Set of Books which you need to save under a new name.

If you already have an open Set of Books, please make sure that it is the actual Set of Books you wish to save. If not, close the Set of Books and open the Set of Books you wish to save.

2. On the Start ribbon, select Save as (Ctrl + S). The "*Save as*" screen is displayed:



3. The default or installation Directory, in which osFinancials5/TurboCASH5 is installed, will be displayed.

If you wish to Save the Set of Books in another Directory or location on your system, you may click on the Folder icon on the right hand side of the Directory field. The "Browse for Folder" screen will be displayed on which you may then select a valid directory or folder on your system in which you wish to Save the Set of Books.

4. Enter a name in which you wish to save your Set of Books. The name for the Set of Books must not already exist.

5. Click on the Save button. The full Set of Books will be saved into the specific directory with the specified name. When this process is finished, an information message will be displayed.

"Set of Books copied"

6. Click on the OK button to close (exit) the "*Save as*" screen.

7. The source Set of Books will be opened.

To open the Saved Set of Books, click on Open (Start ribbon) and select the new saved (copied) Set of Books can then be selected from the list.

Data integrity check

This option allows you to run a check on the integrity of your data and generate a corresponding report. By selecting this option, you can verify that your data is accurate and free of errors that could cause issues in your Set of Books. Once the check is complete, you can print the "*Data integrity check report*" to review the results and take any necessary corrective action.

The Data integrity check should be performed on a regular basis. It is recommended that you perform this check at regular intervals and after performing major changes to your Set of Books. It is good practice to perform a Data integrity check on your Set of Books before you make a Backup and after you have restored from a Set of Books.

Performing a Data integrity check on a regular basis is essential for maintaining the accuracy and reliability of your financial records. It is recommended that you perform this check at regular intervals and after making any major changes to your Set of Books.

It is also good practice to perform a Data integrity check on your Set of Books before making a Backup, as well as after restoring from a Set of Books.

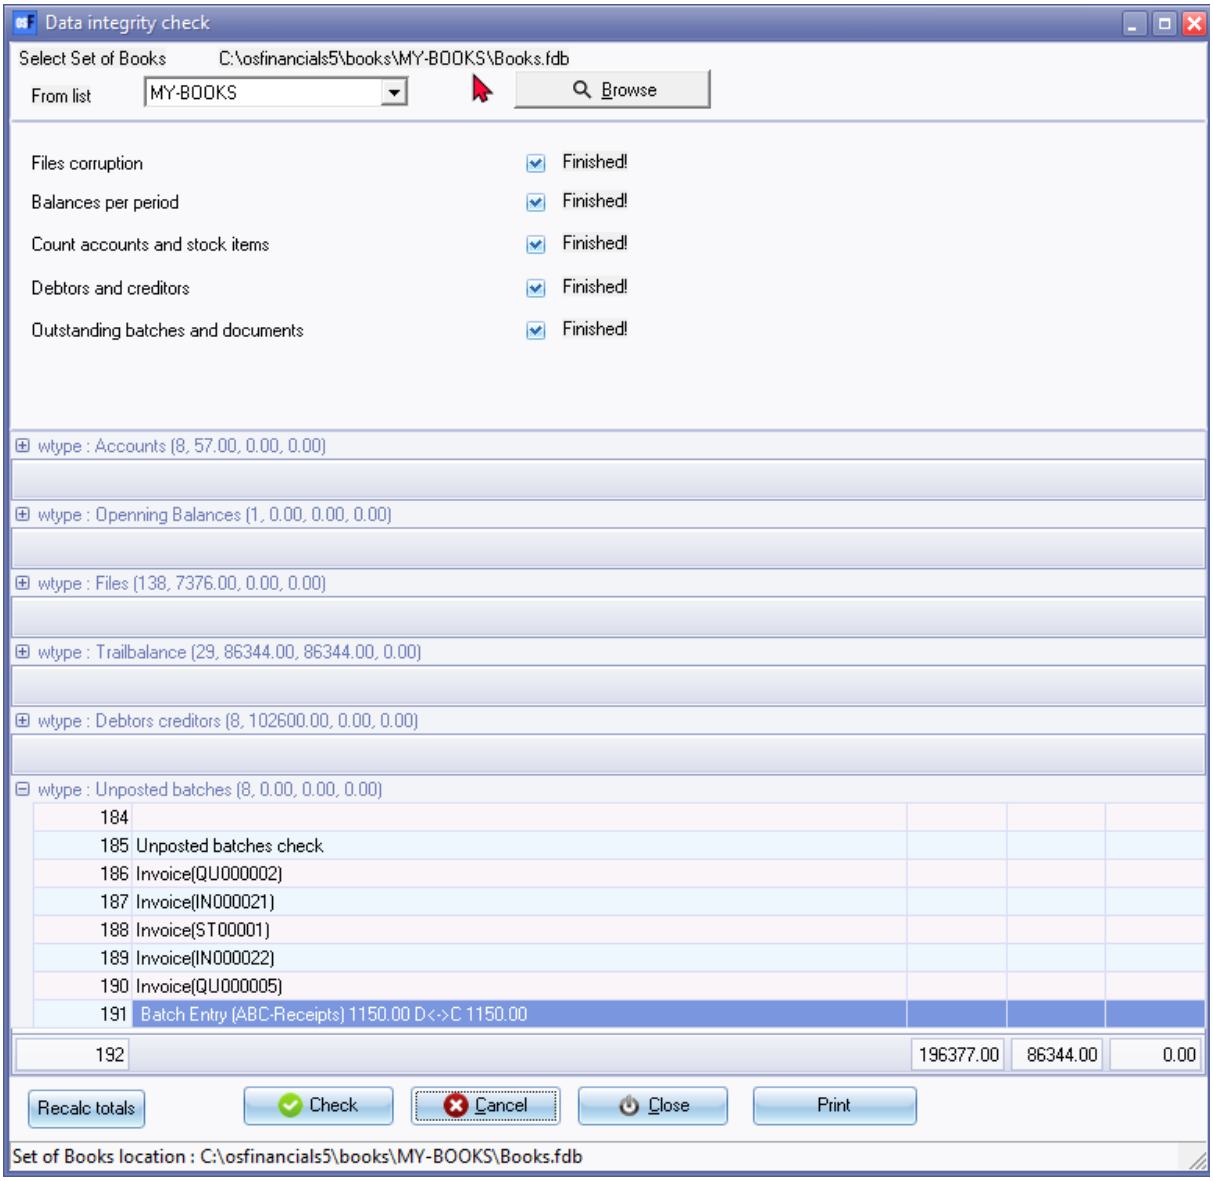
By regularly checking your data for integrity issues, you can help ensure that your financial records remain accurate and up-to-date.

If you are operating in a multi-user environment (i.e. in a networked environment and other users are using the same Set of Books as you are) then ALL users need to exit the Set of Books before the Data integrity check is started.

Run the data integrity check

To perform a data integrity check:

1. On the Setup ribbon, select Tools → Data integrity check.



2. Select one of the available options:

    a) Select a Set of Books by clicking on the From List down arrow (drop-down list) and select an available Set of Books.

> *If the Set of Books on which you wish to perform the data integrity check is open on the system, the Data integrity check will be performed for that Set of Books.*
>
> *If no Set of Books is open on the system, the Data integrity check will be performed for the Set of Books that was open before the Data integrity check was initiated, unless another Set of Books is selected.*
>
> *The full path or directory and name of the selected Set of Books on which the Data integrity check is to be performed, if the Check button is clicked on, will be displayed directly under the Data integrity check title bar.*

b) Select the type of function, the data integrity check has to perform. It is recommended that in most cases, all of these functions should be selected (with a tick).

3. Click on the Check button and the process will be performed. The word *Finished* will be displayed next to each function when the process for that function is completed. When the whole process is completed, you may click on the Print button to print the Data integrity check report.

4. Click on the Close button.

5. Study the report to determine if there is any data corruption or errors.

Check for any errors on the report. If there are any errors, see if you can fix these errors. If these errors cannot be fixed, the Set of Books may have to be restored from your last backup disks. You may have to re-enter some data from the last backup to the last transaction entered before the problem/s arose.

View data integrity check reports

The Data integrity check report consists of the following five (5) basic sections:

1. Files check - List all the tables in the database (Set of Books).

2. Accounts check - This specifies the number of Account master files created for each Account type (General ledger, Debtors, Creditors, Bank and Tax accounts) in Setup → Accounts (Setup ribbon). The number of Accounts for Debtors indicates the number of Debtor accounts in the Debtors ledger and the number of Accounts for Creditors indicates the number of Creditor accounts in the Creditors ledger. The total of all account types (ledger, bank, tax, debtor and creditor) in the Set of Books will be displayed.

3. Trial balance check - This will list the Accounting Periods and the Debit Totals and Credit Totals and Balances for each period. If there are any balances (i.e. the Debit and Credit Totals for an Accounting period do not balance), it indicates that the data may be corrupt for the specific accounting period in which the Balance is displayed.

4. Debtors / Creditor check (Control accounts check) - This will indicate the balances for the Full Amount, Control account and the Outstanding Amount for the Debtors and Creditors. These three amounts must be in balance and must balance with the Debtor's control account or the Creditor's control account in the Balance sheet or Trial balance.

5. Unposted batches check - This will only be displayed if there are any documents and batches or journals which have not yet been posted to the ledger. If you have set any users (Setup → Access control on the Setup ribbon), the name of the user will also be displayed.

If the differences or corruption is not fixed, you may need to Restore the Set of Books from a previous backup. It is advisable not to continue entering transactions until the current Set of Books is repaired.

Backup / Restore Sets of Books

What is a Backup file in osFinancials?

A backup file is a copy of data in a Set of Books in osFinancials5/TurboCASH5 that is stored separately in case the original data is lost or becomes inaccessible. The backup file is essentially a snapshot of the original data at a particular point in time, and it can be used to restore the data in a Set of Books in case of data loss, corruption, or system failure.

They are typically stored on an external device or in a remote location to protect against disasters like fire, theft, or hardware failure that could damage or destroy the original data.

Backup files can be created manually or automatically on a scheduled basis. Manual backups require the user to initiate the backup process, while automatic backups are configured to run automatically at regular intervals.

In summary, backup files are essential for ensuring data integrity and availability in case of data loss or system failure. They provide a way to recover data and restore system functionality quickly and efficiently.

Options to store backup files

Backup files can be stored in a variety of locations, depending on your needs and preferences. Here are some common options:

1. External hard drive: You can store backup files on an external hard drive that is connected to your computer or server. This provides a physical backup that is easily accessible and can be quickly restored if needed.

2. Cloud storage: You can store backup files in cloud storage services such as Google Drive, Dropbox, or OneDrive. This provides an off-site backup that is accessible from anywhere with an internet connection and can protect against physical disasters like fire or theft.

3. Network-attached storage (NAS): You can store backup files on a NAS device that is connected to your network. This provides a centralized backup solution that can be easily accessed by multiple devices.

4. Tape backup: You can store backup files on magnetic tapes that are stored in a secure location. This is a traditional backup method that is still used in some organizations because of its durability and reliability.

5. USB drive: You can store backup files on a USB drive that is stored in a secure location. This is a portable backup solution that can be easily transported and used to restore data on different devices.

6. Optical media: Optical media such as CDs, DVDs, and Blu-ray discs can be used to store backup files.

Overall, the choice of storage location for backup files depends on your needs for accessibility, security, and reliability. It is recommended to store backup files in at least two separate locations to ensure redundancy and protect against data loss.

Options to Backup or Copy a Set of Books in osFinancials

In addition to the Backup/Restore feature, you can create exact copies of existing Sets of Books or templates that are installed in yourosFinancials5/TurboCASH5 …/books directory.

The following options are available in osFinancials5/TurboCASH5 for backing up or copying a Set of Books:

1. Backup / Restore: This option is available on the Start ribbon. It allows you to create backups of your Set of Books and restore them when needed. You can select the backup option to create a backup file and choose the restore option to restore a previously created backup.

2. Save as: This option is also available on the Start ribbon. It enables you to create a copy of an existing Set of Books with a new name and/or a new location. This is useful when you want to create a duplicate or backup of a Set of Books.

3. Create Set of Books: This option is found in the "*Copy an existing Set of Books?*" section of the "*Creation wizard*" on the Start ribbon. It allows you to create a new Set of Books based on an existing one. You can select an existing Set of Books and provide a new name and/or location for the copied Set of Books.

4. Tools → Global processes → Copy from a Set of Books: This menu-option is available on the Setup ribbon. It provides a feature for copying a Set of Books from an existing one. You can select the source Set of Books and specify the name and/or location for the copied Set of Books.

These options allow you to create backups or copies of Sets of Books in osFinancials5/TurboCASH5, either by directly saving them as new files or by using existing Sets of Books as templates. Each option provides

flexibility in terms of naming, location, and source for the copied Set of Books.

Created with the Standard Edition of HelpNDoc: Streamline Your Documentation Creation with a Help Authoring Tool

Backup a Set of Books

The Backup / Restore feature allows you to create a backup of your data in a Set of Books onto a disk or hard drive, or other selected location, in a compressed tcBackup.zip file. There are two (2) options for creating a backup file:

1. Normal backup, which includes all files in the Set of Books folder (including images and PDFs),
2. Small backup (books), which only includes the database file (e.g. books.fdb) and excludes all other files.

Backup files are created to restore a Set of Books to the exact state it was in when the backup file was created. Backups are essentially copies of your data that you create on a regular basis to ensure that you have a recent version of your data in case of any issues or errors.

As a general rule, it's a good practice to back up your data often, preferably upon closing the program. While backing up to your hard disk is also a good practice, it's best to store your backups on a different device than your computer to protect against data loss in case of a hard drive failure or a system failure.

You will need backups:

- *In case of file corruption, hardware failures and other errors.*
- *Send backup files via e-mail*

It's also a good practice to complete a backup in the following instances:

- Prior to performing any major processes, such as Delete Set of Books on the Start ribbon or performing global processes like (Clear/Reset or Do year end., Reverse posted batches / documents) on the Setup ribbon.
- Old data on your previous version of osFinancials5/TurboCASH5 or other accounting package prior to conversion to osFinancials5/TurboCASH5.
- Import data from exported files - If errors or inconsistencies occur after importing data from an exported file, you may need to restore the Set of Books.

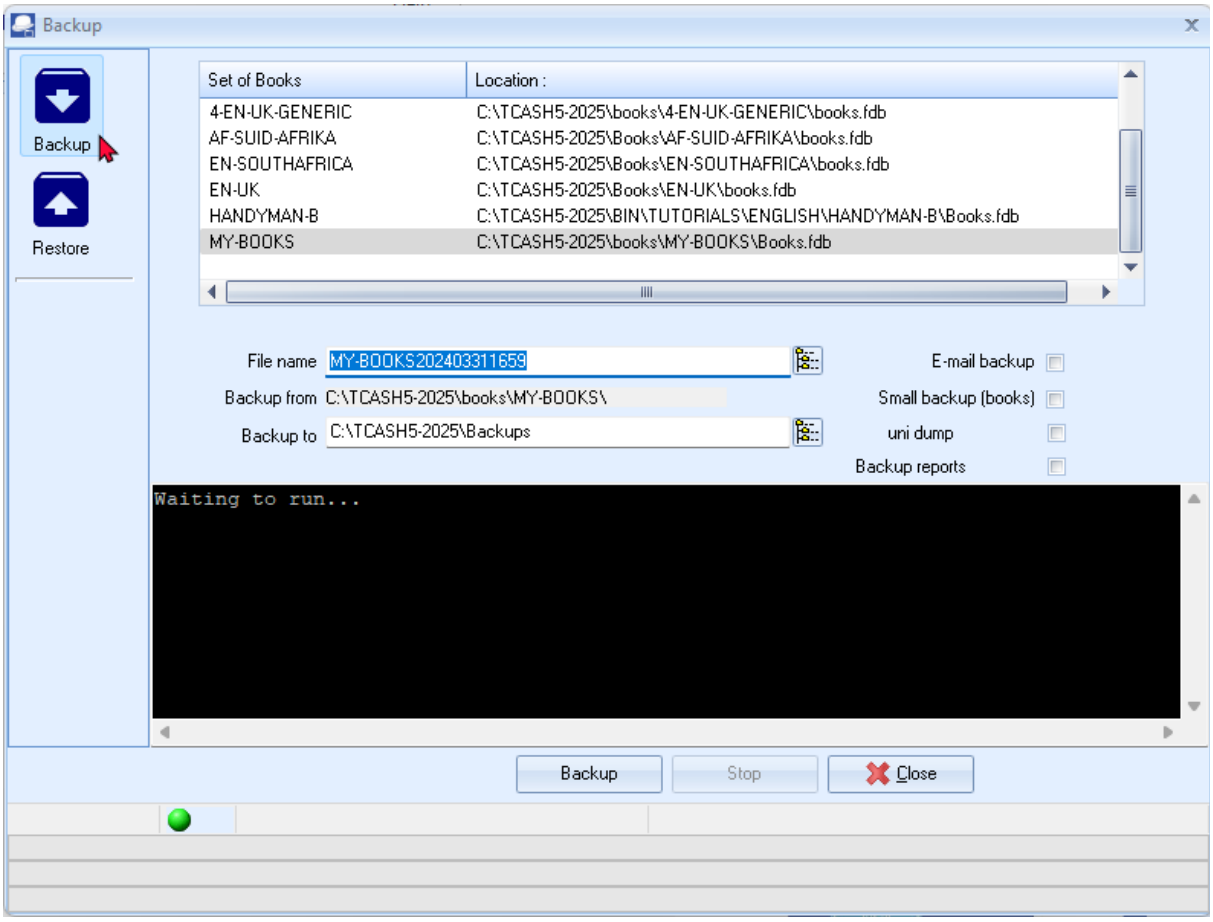
W Depending on your volume of work, it's recommended to create backups. The following is recommended:

- § 2 - 3 sets daily re-used weekly or every 3rd to 4th day.
- § 2 weekly sets - re-used every 3rd week.
- § 12 Monthly sets - done at the end of each month, and re-used each year.
- § 1 set prior to and after year-end that is kept permanently.

To restore your data, you'll need the same backup disks or backup files on your hard drive. Without regular backups, you may have to re-enter thousands of transactions and other important information.

To create a Backup file:

1. On the Start ribbon, select Backup / Restore. If a Set of Books is open on your system, osFinancials5/TurboCASH5 will automatically close the Set of Books and the "*Backup Set of Books*" screen is displayed:



2. Select the Backup option, if not already selected.

If no Set of Books are opened, the Restore button is automatically selected.

If a Set of Books are opened, the Backup button is automatically selected.

3. Select the Name of the Set of Books you wish to Backup.

4. You may over type the Backup file name with a name of your own.

The date and time of your operating system is automatically inserted in the file name (e.g. MY-BOOKS202204050538) after the default file name.

(In this example, the date and time format is YYYYMMDD followed by the Hour and Minutes). The format may differ if your operating system's short date style or format is set different).

5. Select the folder (drive, etc.) to Backup to.

6. If you need to create a small backup, tick the "*Small backup (books)*" option.

If you wish to e-mail the backup, you may select the "Small backup (books)" option to create a backup of your Set of Books database in a single file only (e.g. books.fdb - for the firebird database).

If this option is selected, no images or other files linked to your Set of Books will not be included in your backup. This will reduce the size of your backup file.

7. Click on the Backup button to start the backup process. While the Backup process is running, the files are backed up from and added on your backup disk or location on your hard drive or network drive will be displayed. When the backup process is completed, an information screen will be displayed.

```
The Backup process is completed!
```

The information in the *Backup* process will be displayed, for example:

```
Starting backup...
  100%
12 Files compressed
Backup completed...
```

8. Click on the OK button and click on the Close button on the "*Backup Set of Books*" screen. You may also press the Esc key on your keyboard.

Backup a Set of Books to E-mail

To use the "*E-mail backup*" option to send a Set of Books to email, you need to ensure that your computer system is properly set up and that you have an active Internet account with your Internet Service Provider.

If you select the "*E-mail backup*" option on the "*Backup Set of Books*" screen in osFinancials5/TurboCASH5, a backup file of your Set of Books will be created automatically and attached to your system's default email application.

From there, you can compose an email message, add recipients, and send the email with the backup file attached.

It's important to ensure that the backup file is securely transmitted and that the recipients are authorized to access the data. You may also want to consider encrypting the backup file or using a secure email service to protect the data during transmission.

If your system is not configured for Microsoft Outlook, the following message will be displayed:

> "You need to create a Microsoft Outlook profile. In Microsoft Windows, go to the Control Panel and open Mail. Click Show Profiles, and then click Add."

Click OK and configure Microsoft Outlook.

If your system is not configured for Microsoft Outlook, you may create the backup file and attach it to your e-mail message. If you do not have Microsoft Outlook configured on your system, you can still create a backup file and attach it manually to your preferred email application.

To send a backup file via e-mail:

1. Select the "*E-mail backup*" option on the Backup Set of Books screen.

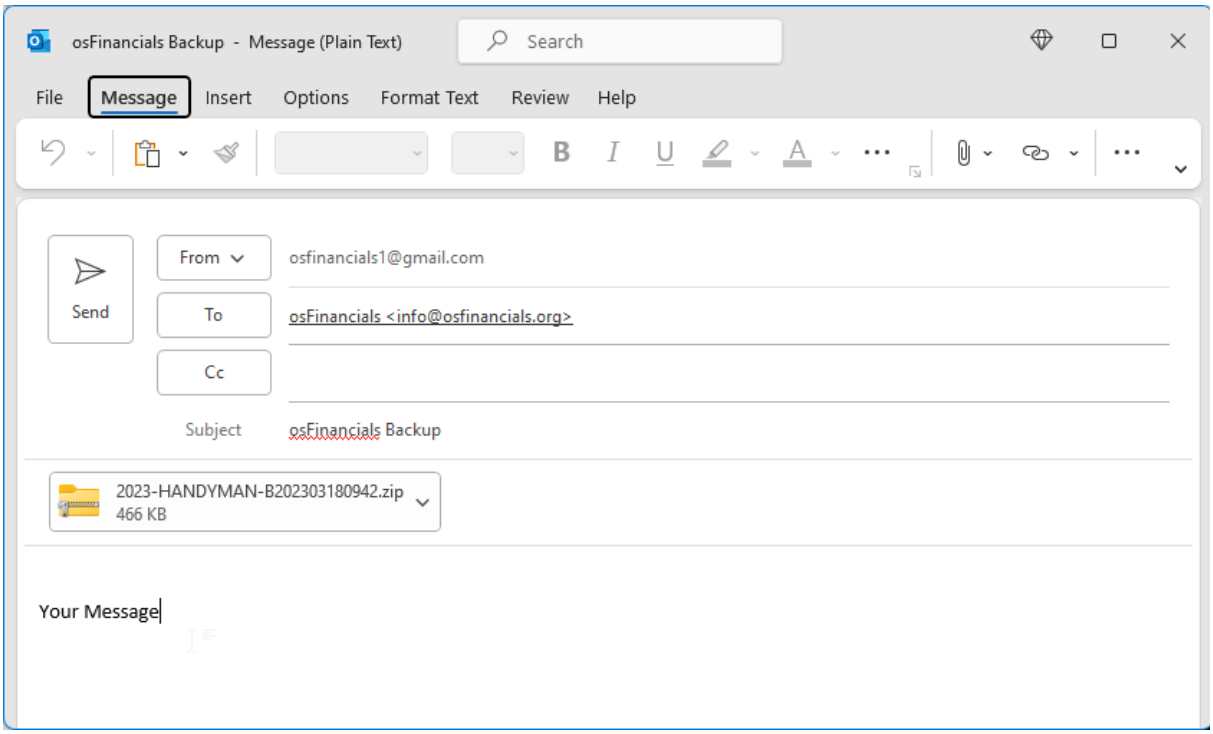
   You can choose the "Small backup (books)" option to create a backup of your Set of Books database as a single file, such as "books.fdb" for the Firebird database type. However, if you select this option, any images or other files that are linked to your Set of Books will not be included in the backup. This will help to reduce the size of your backup file.

2. When the backup process is finished, your e-mail program will automatically be launched.

3. The e-mail address of osFinancials5/TurboCASH5 will automatically be entered in this field. Should you wish to change it to a different e-mail address, (e.g. that of your auditor or consultant), you may enter

a valid e-mail address to that field. The email address of osFinancials5/TurboCASH5 will be automatically added to this field.

However, if you want to use a different email address, such as that of your auditor or consultant, you can replace the osFinancials5/TurboCASH5 email address with the desired email address in the "To" field provided. Just make sure to enter a valid, trusted and correct recipient's email address.



4. Add a description to the subject if you wish (e.g. your company name).

5. The file is automatically attached to the e-mail message.

You can attach additional documents to the email message. However, please note that your Internet Service Provider may have a limit on the size of your email message, including attachments, typically around 1.2MB. If your message exceeds this limit, it may not be delivered to the recipient and instead may be returned to you.

6. Enter your message.

7. Click on the Send button.

Created with the Standard Edition of HelpNDoc: Full-featured Kindle eBooks generator

Restore a Set of Books

option allows you to restore data for a specific Set of Books from a valid backup file located on your hard drive or in a valid folder on your system. This option also decompresses or unzips the files contained in the backup file.

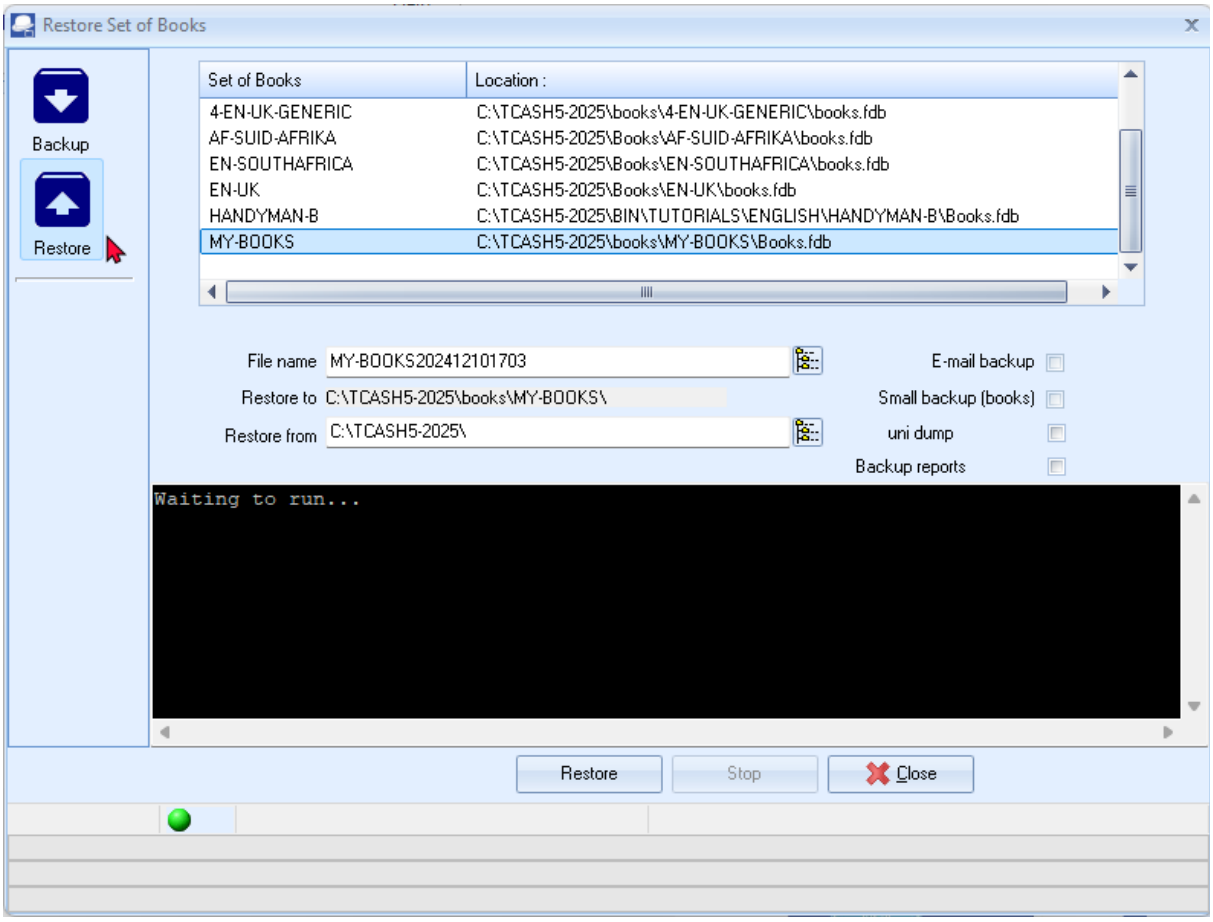
To restore a Set of Books from a backup, a valid backup file (tcBackup.zip) must exist. If your data becomes corrupt for any reason, restoring from backup can fix the issue. However, you will need to re-enter all the data that was entered after the date of the last backup.

Regularly backing up your data is important as it can save a lot of work in the event of data corruption or loss. If you don't make regular backups, you may have to re-enter thousands of transactions and information related to the general ledger, debtor, creditor, and stock.

It's also important to keep a record of your backup files and label them to prevent restoring a Set of Books from an incorrect backup file. Keeping a record of which data is backed up and which is not can also prevent you from re-entering data that's already on your backup files.

To Restore a Set of Books:

1. On the Start ribbon, select Backup / Restore. If a Set of Books is open on your system, the Set of Books will automatically be closed and the Backup Set of Books screen is displayed:



2. Select the Restore option. The "*Backup Set of Books*" screen will change to the "*Restore Set of Books*" screen.

3. Select the Name of the Set of Books you wish to restore.

4. Select the folder (drive, etc.) to Restore from.

> *You can also select the folder on your hard drive or network drive where your backup data is stored by browsing for a folder. To do this, click on the icon located on the right-hand side of the "Restore to" field.*
>
> *This will open the "Browse For Folder - Select backup target" screen. From here, select a valid folder and click on the OK button.*

5. Click on the Restore button. The following confirmation message is displayed:

> Restore from backup
> New No
> WARNING this will overwrite your current Set of Books! Are you sure you want to continue?

6. If you click Yes, another confirmation message will be displayed.

> This will seriously affect your Set of Books! Are you sure you want to clear this Set of Books?

7. Select (tick) the "*I have read this instruction and I understand the action!*" The Yes and No buttons will be activated. If you click on the No button, the process will be cancelled. Click on the Yes button, if you are absolutely sure. The following information message will be displayed.

> Your Set of Books will be restored in:
> C:\TurboCASH5-2025\books\MY-BOOKS\
> Do you wish to continue?

8. If you click on the No button, the process will be cancelled. Click on the Yes button, the restore process will be started. When the restore process is completed, an information message will be displayed.

> The Restore process is completed!

If the "Small backup (books)" option was not selected on the "Backup Set of Books" screen, any images that are linked to Groups and Stock items will also be included in the backup file and will be restored when the backup is restored.

9. Click on the OK button and click on the Close button on the "*Backup Set of Books*" screen.

You may also press the Esc key on your keyboard to exit the Backup Set of Books screen.

Should a backup file not exist in the selected directory, an error message will be displayed:

> Backup file not found in
> C:\TurboCASH5-2025\Backups\MY-BOOKS202204050538.zip

Click OK and select the correct backup file in zip format.

Accounts (Ledger)

What is the chart of accounts?

The chart of accounts is a systematic arrangement of all the accounts that a business uses to record its

financial transactions. It encompasses a comprehensive list of accounts tailored to fit the specific needs of each business. These accounts are linked to account groups, which classify them according to their nature, such as fixed assets, non-current assets, current assets, current liabilities, long-term liabilities, revenue, equity or capital, operating revenue, non-operating revenue, operating expenses, non-operating expenses, cost of sales, and more.

The chart of accounts is structured to align accounts with five financial categories: assets, liabilities, equity (capital), revenue (income), and expenses. By linking or mapping accounts to these financial categories, businesses ensure consistency and accuracy in financial records. The chart of accounts serves as a standardized structure for organizing financial information, facilitating the management and analysis of a business's financial data. It is a systematic arrangement of all the accounts that a business needs to prepare its financial statements, including the such as the trial balance, income statement and balance sheet.

The specific account groups and their links to financial categories may vary depending on the applicable accounting standards, such as Generally Accepted Accounting Principles (GAAP), International Financial Reporting Standards (IFRS), IFRS for SMEs (International Financial Reporting Standards for Small and Medium-sized Entities). or other jurisdiction-specific frameworks. Adhering to these accounting standards ensures compliance and facilitates consistent financial reporting across entities.

In summary, the chart of accounts is an essential tool for financial reporting and analysis. It provides a standardized structure for organizing financial information, ensures consistency and accuracy in financial records, and can be customized to meet the specific needs of a business based on its size, industry, and accounting requirements.

The accounting framework aligned with the chart of accounts, when processing transactions the accounting standards prescribes the treatment of transactions?

The accounting framework aligned with the chart of accounts provides the guidelines and principles for how transactions should be recorded and treated in financial statements. Accounting standards, such as GAAP or IFRS, prescribe the specific rules and principles that determine how transactions should be recognized, measured, and presented in financial statements.

When processing transactions, businesses follow the accounting standards to ensure that the financial information accurately reflects the financial position, performance, and cash flows of the company. The accounting standards dictate the appropriate accounting treatment for various types of transactions, such as revenue recognition, expense recognition, asset valuation, and liability measurement.

By adhering to the accounting standards, businesses maintain consistency and comparability in their

financial reporting. This allows stakeholders, including investors, creditors, and regulatory bodies, to understand and analyse the financial information in a standardized and meaningful way.

The alignment of the chart of accounts with the accounting framework ensures that transactions are recorded and classified correctly, following the prescribed rules and principles of the applicable accounting standards. This helps ensure the accuracy and reliability of the financial statements and promotes transparency and trust in the financial reporting process.

Existing users of osFinancias/TurboCASH

You may add your Set of Books (database) in the books directory of your osFinancials5/TurboCASH5 installation directory.

Where to get osFinancials5/TurboCASH5 Sets of Books (templates)?

If you're new to osFinancials5/TurboCASH5, the initial step would be to choose a suitable Set of Books that matches your country, language, industry and requirements. If you opt to use one of the pre-made Sets of Books in osFinancials5/TurboCASH5, most of the settings and defaults will already be configured.

You can easily download a template for your country and language by selecting the "*Let osFinancials help you to create a Set of Books?* / "*Let TurboCASH5 help you to create a Set of Books?*" - *Download*" option, which takes only a few clicks. You can view a list of available Firebird Sets of Books and linked languages available as a free download. You can then customise the Set of Books to meet your specific requirements.

In TurboCASH5, you may click on the Browse button of the Open Set of Books option and select similar Sets of Books from the "...\bin\Repository" folder.

To get started, you need to provide a few basic details and select some basic options. This process is simple and straightforward.

Steps to Customise a Set of Books (template)

Once you have downloaded a Set of Books (template), the first steps is to view and analyse the existing chart of accounts, groups and financial categories and change it to suit your specific requirements.

View analyse and print the chart of accounts

After opening a Set of Books, you may print a list of the chart of accounts from the following options:

- Reports → Ledger → Listing menu. You may select to print the chart of accounts in various sequences: account code, account description, account type, reporting group 1 or reporting group 2. ,

- Ledger analyser 1 / Ledger analyser 2 - Trial balance - "Ignore zero balances" option not selected. The default "Groups" is none. This will list all the Ledger accounts (Chart of accounts) according to the account code. To preview how the Chart of accounts is structured and linked to Financial categories, Account group 1 and Account group 2, select Reporting groups 1 or Reporting group 2.

Customise the chart of accounts

The next step is to customise the Chart of accounts for your specific requirements

It is important to plan the Chart of accounts and to link accounts to account reporting groups and financial categories, since this is the core of managing your budgets, business activities and managing your business on the financial reports, such as the trial balance, income statement and balance sheet.

The chart of accounts is further structured by linking each account to a reporting groups (Account group 1 and/or Account group 2). Each of these Account groups needs to be linked to a financial category.

In osFinancials5/TurboCASH5, the chart of accounts lists all the accounts (ledger, bank and tax account types) in the general ledger which is either reported in the Trial balance, Income statement and Balance sheet.

The first step, after installing osFinancials5/TurboCASH5, is to find a Set of Books (template) that matches your requirements.

Once you have selected your Set of Books, go to Save as on the Start ribbon, to edit your Chart of accounts.

The accounts structure in all of the Set of Books templates, available as a free download, when you create a Set of Books using the / "*Let TurboCASH5 help you to create a Set of Books?*" on the Creation wizard, consists of 3-digit main accounts and 3-digit sub-accounts, except for the following Sets of Books:

	Books with 4-digit main account and 3 - digit-sub-accounts		*Books with 5-digit main account and 3 - digit-sub-accounts*
	EN-CANADA-CORPORATION		*EN-USA*
	EN-CANADA-OTHER		*EN-USA CALIFORNIA*

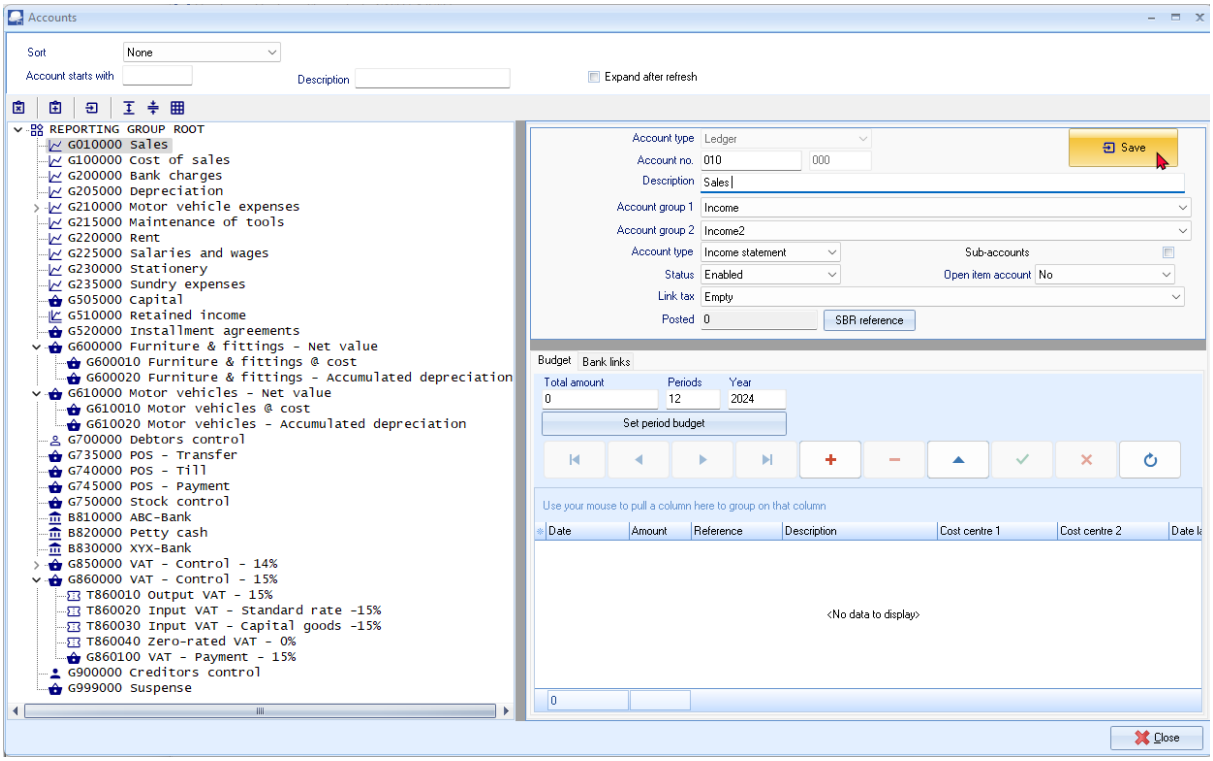
After opening a Set of Books, you may print a list of the Chart of accounts from the following options:

- *Reports → Ledger → Listing menu.*
- *Ledger analyser 1 / Ledger analyser 2 - Trial balance - "Ignore zero balances" option not selected. The default "Groups" is none. This will list all the Ledger accounts (Chart of accounts) according to the account code. To preview how the Chart of accounts is structured and linked to Financial categories, Account group 1 and Account group 2, select Reporting groups 1 or Reporting group 2.*

All ledger accounts, including budgets is maintained in the Budgets on the Reports ribbon or in the Setup → Accounts on the Setup ribbon. Once your chart of accounts is set and linked, you may edit your chart of accounts:

1. Ledger accounts - Income and Expense and Balance sheet account types; which include the following account types:
2. Bank accounts - Bank accounts, including Petty cash accounts
3. Tax accounts - Correct tax rates and terminology for your country. If Tax rates changes, you need to change the tax rates.
4. Budgets - Enter and edit budget figures. Budgets may also be entered and edited in the Setup → Accounts on the Setup ribbon.

If you have added a Financial entry stock item type, you may select a general ledger account, debtor (customer / client) account or a creditor (supplier / vendor) account from the Accounts lookup when processing documents.



It is important to note the types of accounts, which will be reflecting in your List of Accounts (Chart of accounts) as you will create, edit and delete accounts in Setup → Accounts (Setup ribbon):

Account type	*Brief description of the Account type*
Bank accounts	*Bank accounts should be linked to a Receipts and Payment Journal batch.*
General ledger accounts	*Accounts are aligned to either an Income / Expense or Balance sheet account type.* *The Balance sheet account type, needs to include the following 3 control accounts;* W *Retained income / earnings.* W *Creditor's control account.* W *Debtor's control account.*
Tax accounts	*Accounts containing the Tax percentages and dates for which those tax percentages are effective. These are the Output Tax and Input Tax codes.*

These are country specific and should contain the VAT / GST / Sales Tax terminology and codes as prescribed by the tax authority of your specific country.

Creditor (supplier / vendor) and Debtor (customer / client) accounts, are created, edited or deleted in Default ribbon.

Menu option	*Brief description of the account type*
Creditors	*Creditor (supplier) accounts containing the details of the creditors, remittance advice messages, contacts, land terms. It also contains detail of processed transactions and a list of purchase documents (i.e. Purchases, Supplier returns and Orders).* *The total of all individual accounts in the Creditor's ledger will be displayed as the Creditor's control account in the General ledger.*
Debtors	*Debtor (customer / client) accounts containing the details of the debtors, statement messages and terms. It also contains detail of processed transactions and a list of sales documents (i.e. Invoices, Credit notes, Quotes and Point-of-Sale Invoices).* *The total of all individual accounts in the Debtor's ledger will be displayed as the Debtor's control account in the General ledger.*

Planning your Chart of Accounts

When planning the Chart of accounts in osFinancials5/TurboCASH5, you should follow the following guidelines:

- Increment each account number by either 5 or 10 to allow for future additions.
- Try to list accounts in alphabetical order.
- Group similar accounts in similar predefined ranges, such as 600-699 for Fixed assets.
- List accounts in the order you want them to appear in reports.

osFinancials5/TurboCASH5 allows for 999 main accounts in a 3-digit Set of Books. Each account can have up to 999 sub-accounts, which should be sufficient for most businesses.

Some Sets of Books may have 4-digit main, and 5-digit main accounts. The option to "Customise your own Set of Books (Advanced)?" on the Creation wizard (Create Set of Books on the Start ribbon)), allows you to create your own Set of Books from scratch. This will then ask you to specify the number of digits for accounts (from 3 to 8-digits). You need to enter the following 3 control accounts;

W *Retained income / earnings.*

W *Creditor's control account.*

W *Debtor's control account.*

The following ranges (based on the 3-digit main account codes) are an example that you can follow to group accounts:

Description	*Range*	*Group*
Total Chart	*001-999*	
Income	*001-099*	*Income*
Expenses	*200-499*	*Expenses*
Capital	*500-599*	*Capital*
Retained earnings / income	*500-599*	*Capital*
Fixed assets	*600-699*	*Fixed assets*
Current assets	*700-899*	*Current assets*
Current liabilities	*900-999*	*Current liabilities*
Tax codes for Tax main account	*850-860*	*Current liabilities*

Bank account + Positive balance	*810*	*Current assets*
Bank account – Negative balance (O/D)	*910*	*Current liabilities*

In the Setup → Accounts section, you can create, edit, and delete general ledger, bank, and tax accounts, as well as enter and edit budget figures for accounts. You must link accounts to Account groups 1 and/or Account group 2, which must be linked to Financial categories.

You can create Reporting groups in Setup → Accounts and link them to Financial categories for the Balance sheet (i.e., Assets, Capital, Liabilities) and Financial categories for the Income statement (i.e., Income and Expenses).

In addition to this, you may create Account group 1 and/or Account group 2 in Setup → Groups and link them to Financial categories. These Account groups may also be linked to Financial categories in Setup → Financial categories.

Considerations when designing a chart of accounts

Considerations when designing a chart of accounts

Designing a chart of accounts is an important step in setting up an accounting system for a business. The chart of accounts provides a framework for organizing and categorizing financial transactions and helps in generating accurate financial reports. When designing a chart of accounts, there are several factors to consider:

1. Legal and regulatory requirements: Take into account the tax legislation, accounting standards, and frameworks mandated by the regulatory authorities in your country. Ensure that your chart of accounts aligns with these requirements to facilitate accurate reporting and compliance.
2. Business type: Consider the legal structure of your business (sole proprietorship, partnership, corporation, etc.) and any specific reporting requirements applicable to your business type. This may include separate categories for equity accounts, distributions, dividends, or partner capital accounts, depending on the structure.
3. Organizational structure: Take into account the structure of your organization, including any

subsidiaries or departments that require separate reporting. Determine whether you need separate accounts for each entity or if a consolidated approach is sufficient.

4. Reporting requirements: Identify the financial reports you need to generate for internal and external stakeholders. Ensure that your chart of accounts aligns with the reporting requirements of regulatory authorities, tax agencies, and other relevant parties.
5. Industry-specific needs: Different industries have unique financial requirements and operational activities. Tailor your chart of accounts to reflect the specific needs of your industry. For example, a manufacturing business may have separate accounts for raw materials, work-in-progress, and finished goods, while a service-based business may focus more on revenue accounts and service-related expenses.
6. Operational activities: Consider the nature of your business operations and the key financial activities involved. Identify the essential accounts that reflect your revenue streams, expenses, assets, liabilities, and equity. Determine the level of detail required to track and analyze your financial transactions effectively.
7. Future scalability: Anticipate the growth and expansion of your business. Design your chart of accounts with scalability in mind, allowing for the addition of new accounts or reporting categories as your business evolves.
8. Consistency and standardization: Maintain consistency and standardization in your chart of accounts to ensure accurate and meaningful financial analysis and reporting. Use clear and concise account names and numbering systems that are easy to understand and navigate.
9. Integration with accounting software: If you're using accounting software, ensure that your chart of accounts aligns with the software's capabilities and structure. This will facilitate seamless data entry, reporting, and analysis.
10. Collaboration with accounting professionals: Consult with accounting professionals, such as certified public accountants (CPAs) or financial advisors, who can provide guidance based on their expertise and industry knowledge. They can help ensure that your chart of accounts meets regulatory requirements and best practices.

It's important to strike a balance between having a comprehensive chart of accounts that captures all necessary information and keeping it manageable and user-friendly. Regular review and adjustment of the chart of accounts may be necessary as the business evolves and financial reporting needs change.

Regularly review and update your chart of accounts as your business evolves and financial reporting needs change. It's important to strike a balance between capturing necessary financial information and maintaining a manageable and user-friendly structure for day-to-day accounting operations.

Is there any legal requirements for SMEs?

Legal requirements for SMEs (Small and Medium Enterprises) can vary depending on the country and the specific industry. However, there are some common legal considerations that SMEs generally need to address. Here are a few examples:

1. Business registration: SMEs are typically required to register their business with the appropriate government authorities. This may involve obtaining a business license, tax identification number, or other permits based on the jurisdiction.
2. Tax compliance: SMEs must comply with tax regulations and fulfil their tax obligations. This includes filing tax returns, remitting taxes (such as income tax, sales tax, or value-added tax), and maintaining proper tax records.
3. Employment laws: SMEs need to comply with labour laws and regulations related to hiring, employing, and managing their workforce. This includes adhering to minimum wage requirements, providing employee benefits, following workplace safety standards, and respecting labour rights.
4. Financial reporting: SMEs are typically required to maintain accurate financial records and prepare financial statements in accordance with applicable accounting standards or regulations. These financial statements may need to be submitted to regulatory authorities or made available to stakeholders such as tax authorities, investors, or lenders.
5. Intellectual property protection: SMEs should be aware of intellectual property laws and consider protecting their intellectual property assets, such as trademarks, copyrights, or patents, to safeguard their unique products, services, or brand identity.
6. Consumer protection: Depending on the nature of the SME's business, there may be consumer protection laws and regulations in place. These laws aim to ensure fair business practices, protect consumer rights, and regulate product safety, labeling, warranties, or refund policies.
7. Data protection and privacy: SMEs that handle personal data or operate online may need to comply with data protection and privacy laws. This includes safeguarding customer information, obtaining necessary consent for data collection and processing, and following data breach notification requirements.

It's important for SMEs to consult with legal professionals or business advisors who have expertise in local laws and regulations. They can provide specific guidance tailored to the SME's jurisdiction and industry, helping ensure compliance with legal requirements and minimizing legal risks.

Account groups

In osFinancials5/TurboCASH5, you can create multiple groups to meet your specific requirements. These account groups are linked to financial categories and play a crucial role in structuring the layout of the Trial balance, Income statement and Balance sheet. By organizing and categorizing your financial data effectively, these account reporting groups and their links to financial categories provide a structured framework for generating accurate financial reports.

What is Account groups and Financial categories in the Chart of Accounts?

Account groups and Financial categories play a significant role in aligning the Chart of Accounts with accounting standards such as GAAP (Generally Accepted Accounting Principles), IFRS (International Financial Reporting Standards), and IFRS for SMEs (International Financial Reporting Standards for Small and Medium-sized Entities). While the specific terminology and requirements may vary across jurisdictions, the general principles remain consistent. Here's a general definition of these terms in relation to accounting standards:

1. Account groups: Account groups represent logical classifications or categories of related accounts within the Chart of Accounts. They provide a structured framework for organizing and grouping accounts based on their characteristics, functions, or purpose. The account groups assist in generating accurate financial statements and facilitate analysis, reporting, and compliance with accounting standards. The specific account groups within the Chart of Accounts may vary depending on the nature of the business, industry practices, and specific accounting standards applicable in the jurisdiction.
2. Financial categories: Financial categories refer to the classification of accounts based on their nature or financial statement presentation requirements. These categories typically include Assets, Liabilities, Equity, Revenue, Expenses relevant classifications specified by accounting standards. Financial categories ensure the appropriate grouping and presentation of accounts in the financial statements to comply with accounting standards. They provide consistency and comparability of financial information across different entities, enabling stakeholders to analyse and interpret financial data in a standardised manner.

Account groups and financial categories are designed to align the Chart of Accounts with the prescribed accounting standards in various jurisdictions. The specific requirements and terminology may differ based on the applicable accounting framework. Therefore, it is important to consult the relevant accounting standards (such as GAAP, IFRS, IFRS for SMEs, etc.) specific to the jurisdiction in order to understand the detailed guidelines for defining and implementing account groups and financial categories within the Chart of Accounts.

In osFinancials5/TurboCASH5, you have the flexibility to create multiple groups to meet your specific requirements. These account groups are linked to the financial categories. These account reporting groups and their link to financial categories play a crucial role in structuring the layout of the Trial balance, Income statement and Balance sheet. They help organize and categorize your financial data effectively.

Defining Account groups and Financial categories

Before creating and setting up or or when editing Ledger accounts, Bank accounts, and Tax accounts in osFinancials5/TurboCASH5, it is recommended to define the basic classification of accounts using Account group 1 or Account group 2. This helps organize and categorize your accounts based on their nature or function.

In the Setup → Groups menu on the Setup ribbon, you can add Account group 1 or Account group 2 and assign them meaningful names that represent different account classifications. For example, you can create groups for fixed assets, cash and receivables, current assets, current liabilities, equity, operating expenses, operating revenue, non-operating expenses, non-operating revenue, etc. These groups provide a structured framework for organising your accounts.

After creating the account groups, you can map or link them to the five financial categories: Assets, Liabilities, Equity, Income, and Expenses in the Setup → Financial categories menu on the Setup ribbon. This mapping ensures that the accounts are correctly classified within the financial framework of your organisation.

When you proceed to create and set up Ledger accounts, Bank accounts, and Tax accounts in the Setup → Accounts menu, you will have the option to select the appropriate Account group 1 and/or Account group 2 for each account. By associating the accounts with their respective account groups, you establish a hierarchical structure that allows for easier navigation and analysis of financial information on the Trial balance, Income statement and Balance sheet, etc.

By properly defining and linking account groups, you lay the foundation for accurate financial reporting and analysis within osFinancials5/TurboCASH5, enabling you to effectively track and manage your organisation's financial data.

Options to define Account groups and Financial categories

In osFinancials5/TurboCASH5, you have the option to set up two (2) Reporting groups for your General ledger accounts, including Bank accounts and Tax accounts. To configure these groups, you can utilize the following menu options on the Setup ribbon:

1. Setup → Groups: This menu option allows you to define and configure Reporting groups. Reporting groups are used to categorize and classify accounts based on specific criteria or classifications. You

can assign accounts to different Reporting groups to facilitate reporting and analysis. By organizing accounts into groups, you can easily generate financial reports and statements based on these groupings.

2. Setup → Accounts: Under this menu option, you can create and manage your accounts within the Chart of Accounts. This includes setting up General ledger accounts, Bank accounts, Tax accounts, Creditor accounts, Debtor accounts, and more. Here, you can define the account codes, descriptions, account types, and other relevant details for each account.

It is recommended to set up Reporting groups in order to enhance the organization and analysis of your financial data. By utilising the Accounts and Groups options on the Setup ribbon, you can effectively manage and structure your Chart of Accounts to meet your reporting and analysis requirements.

Financial categories and Account groups - Outline

The Account groups in osFinancials5/TurboCASH5 serve as a means to further classify and categorize your accounts based on the main financial categories of Income, Expenses, Capital, Assets, and Liabilities, which are part of the accounting equation.

Each of the main financial categories can be divided into specific Account groups that align with the nature of the transactions and activities within your business. Here are some examples of how the main financial categories can be further divided:

1. Assets: (Balance sheet accounts)
    - Fixed assets (Immovable assets): These are long-term assets that have a physical form and provide value to the business over an extended period, such as buildings, land, vehicles, and machinery.
    - Current assets (Movable assets): These are short-term assets that can be easily converted into cash within a year, including cash on hand, inventory, accounts receivable, and short-term investments.

        > *The Debtors control account (Accounts receivable account) should be lined or mapped to the Current assets account group.*

    - Intangible assets These are valuable resources that lack physical substance but possess long-term value and contribute to the business's financial performance. They represent non-physical assets that provide economic benefits over an extended period. such as intellectual property, goodwill, licenses and permits, customer relationships, client brands.
2. Liabilities: (Balance sheet accounts)

- Long-term liabilities: These are obligations that extend beyond one year, such as loans, mortgages, or bonds.
- Current liabilities: These are short-term obligations that need to be settled within a year, such as accounts payable, credit card debt, or accrued expenses.

> *The Creditors control account (Accounts payable account) should be lined or mapped to the Current liabilities account group.*

3. Capital: (Balance sheet accounts)
   - The contribution or investment from the owner(s): This represents the funds or assets contributed by the business owner(s) to establish or operate the business. The specific groups within Capital will depend on the type of ownership structure, such as Company, Close Corporation, Partnership, or Sole Proprietorship.

> *The Retained earnings account (Retained income account) should be lined or mapped to the Capital or Equity financial category.*

4. Income: (Income statement accounts)
   - Income from normal business activities: This includes revenue generated from sales, consulting services, or any other core business operations.
   - Other income: This includes income received from sources other than the normal business activities, such as interest earned.

5. Expenses: (Income statement accounts)
   - Expenses incurred during normal business activities: This includes costs related to rent, utilities, salaries, advertising, and other day-to-day operational expenses.
   - Expenses of a Capital nature: These are expenses related to the acquisition or improvement of long-term assets, such as property, equipment, or software.

In osFinancials5/TurboCASH5, you have the flexibility to create any number of Account groups that align with your specific requirements. These Account Reporting groups play a crucial role in structuring the layout of the Trial balance, and financial statements, including the Income statement and Balance sheet. Additionally, you can choose to generate General ledger transaction reports for specific Account groups, allowing you to focus on relevant accounts for reporting and analysis purposes.

Options to link account groups to financial categories

When setting up your account groups and linking them to financial categories, you have two options available on the Setup ribbon. Here's a breakdown of each option:

1. Option 1: Setup → Accounts: This option allows you to link account groups to financial categories.
2. Option 2: Setup → Financial categories: The second option involves linking account groups to financial categories.

Both options provide flexibility in managing and organizing your financial data. The choice between them depends on your preference and the level of granularity you require for categorizing your accounts and account groups.

Options to preview the structure of your Chart of Accounts

To preview or print a list of your general ledger accounts, including bank accounts and tax accounts, which you ave lined to account groups and financial categories, you may print a list of accounts linked to account groups from the following options on the Reports ribbon:

1. Reports → Ledger → Listing menu: Print or view the report in "*Account code, Account description Account type*" (Ledger, Bank and Tax accounts) or "*Account group 1*" or "*Account group 2*" sequence.
2. Ledger analyser 1 or Ledger analyser 2: You may select the Trial balance to view all accounts, Income statement to view only the insome and expense accounts or Balance sheet to view only the balance sheet accounts. You may select to print may select the Groups as "*None*" to print accounts according to the account code or "*Reporting group 1*" or "*Reporting group 2*" options.

This will provide a preview of how the account groups and financial categories are printed on the reports, providing a preview of your Chart of Accounts based on your desired accounting framework.

Options to change the structure of your Chart of Accounts

If you need to change the layout and structure on which the Trial balance, Income statement and Balance sheet groups and financial categories are printed on financial reports, you may change the sequence in the following options on the Setup ribbon:

1. Setup → Accounts: On the Accounts screen select the Reporting group 1 or Reporting group 2 sort option and then use the Move up or Move down options.
2. Setup → Groups: On the Groups screen select the Account group 1 or Account group 2 sort option and then use the Move up or Move down buttons.

These options will change the sequence and structure of accounts linked or mapped to account groups and financial categories.

By adjusting the sequence of account groups using these options, you can modify the layout and structure of financial reports such as the Trial balance, Income statement and Balance sheet. These changes will affect how the account groups and financial categories are printed on the reports, providing a preview of your Chart of Accounts based on your desired accounting framework.

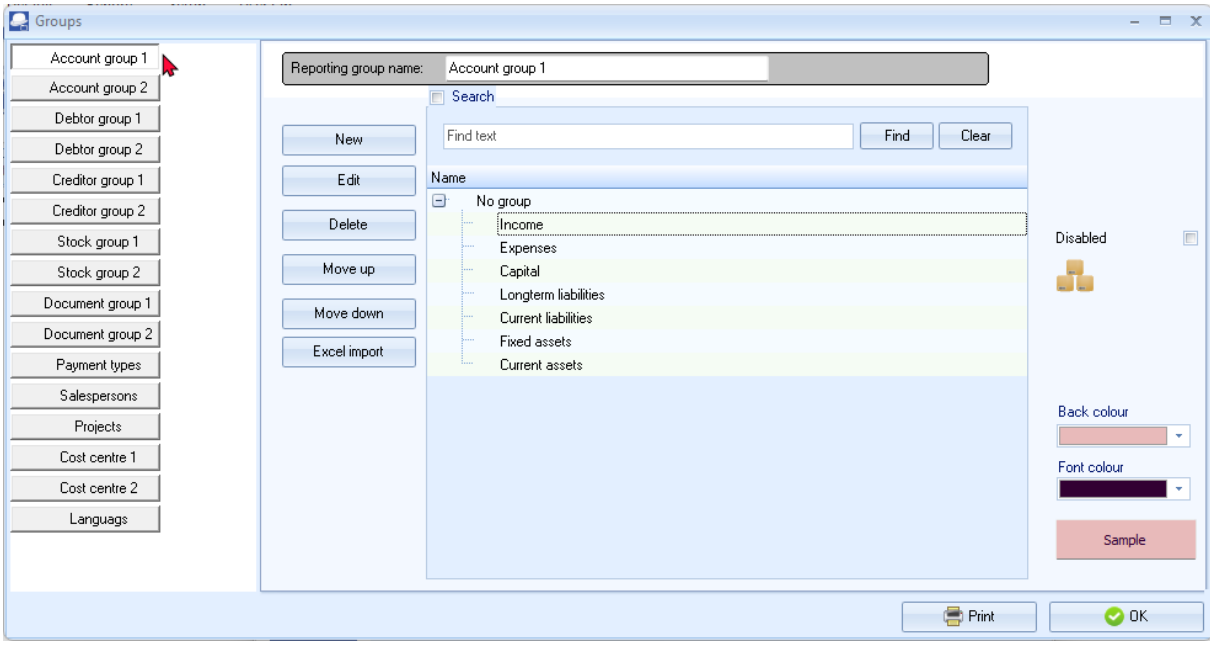
Account groups (Setup - Groups)

You have the option to create two (2) reporting groups (Account group 1 and/or Account group 2) that can be used to categorise the various types of accounts in your chart of accounts, including ledger, bank and tax accounts. Each account must be linked to one of these reporting groups in order to be properly classified.

These reporting groups can be linked to a financial category that will help structure your options for viewing, analysing, and printing financial reports such as the Trial balance, Income statement and Balance sheet,

To set reporting groups for General ledger accounts:

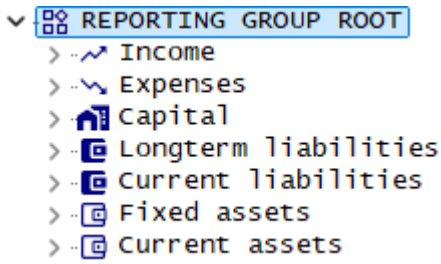
1. On the Setup ribbon, select Setup → Groups. The "*Groups (Account group 1)*" default screen is displayed:

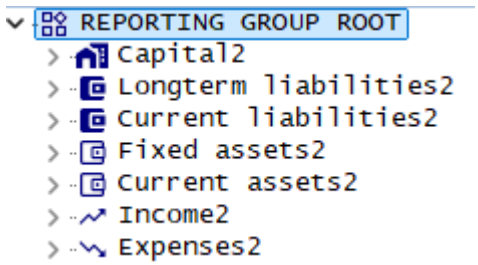


You may set different sequences for each reporting group in which the groups and accounts are listed on reports, etc. This is done by selecting the groups on the list and use the Move up or Move down buttons.

You may also change the sequence of the groups to structure of your Chart of Accounts in Setup → Accounts by selecting the Reporting group 1 or Reporting group 2 sort option and then use the Move up or Move down options.

By adjusting the sequence of account groups using these options, you can modify the layout and structure of financial reports such as the Trial balance, Income statement and Balance sheet, These changes will affect how the account groups and financial categories are printed on the reports, providing a preview of your Chart of Accounts based on your desired accounting framework.

Account group 1	*Account group 2*
	




2. If you wish to rename the Reporting group name - Account group 1, over-type the description with your new description. This will change the description of the button for Account group 1.

3. To add a new Group to the root directory or list, select the "*REPORTING GROUP ROOT*" on the list and click on the New button.

4. Enter the name of your Account group and click on "*REPORTING GROUP ROOT*" on the list.

5. Repeat the process until you have entered all the Account groups, etc.

6. If you need to add Reporting group 2 for Account groups, click on the Account group 2 button and repeat the process as for Account group 1.

7. Click on the OK button to save your changes and close (exit) this screen.

You may click on the Print button to print a list of your general ledger account groups.

You may set colours to display on the T-Account viewer. To do this, click on the Back colour button to set the rows background colour and the Font colour button to set the Font colour.

To retain and save the selected colors, you also need to set both the "Back color" and the "Font color".

Options to preview the structure of your Chart of Accounts:

To preview or print a list of your general ledger accounts, including bank accounts and tax accounts, which you ave lined to account groups and financial categories, you may print a list of accounts linked to account groups from the following options on the Reports ribbon:

1. *Reports → Ledger → Listing menu: Print or view the report in "Account code, Account description Account type" (Ledger, Bank and Tax accounts) or "Account group 1" or "Account group 2" sequence.*
2. *Ledger analyser 1 or Ledger analyser 2: You may select the Trial balance to view all accounts, Income statement to view only the insome and expense accounts or Balance sheet to view only the balance sheet accounts. You may select to print may select the Groups as "None" to print accounts according to the account code or "Reporting group 1" or "Reporting group 2" options.*

This will provide a preview of how the account groups and financial categories are printed on the reports, providing a preview of your Chart of Accounts based on your desired accounting framework.

Account groups (Setup - Accounts)

The process for creating and managing reporting groups for Account Group 1 and Account Group 2 in the Setup → Accounts menu and linking account groups to financial categories:

1. Creating or Deleting Reporting Groups in Setup - Accounts Menu:
    - Access the Setup → Accounts menu.
    - Within this menu, you have the ability to create or delete reporting groups for Account Group 1 and Account Group 2.
    - By creating reporting groups, you can further categorize and organize your accounts within these account groups based on your specific requirements.
    - Similarly, if needed, you can delete existing reporting groups that are no longer necessary.
2. Linking Account Groups to Financial Categories in Setup → Accounts Menu:
    - While in the Setup - Accounts menu, you can also link account groups to financial categories such as Assets, Capital, Expenses, Income, or Liabilities.

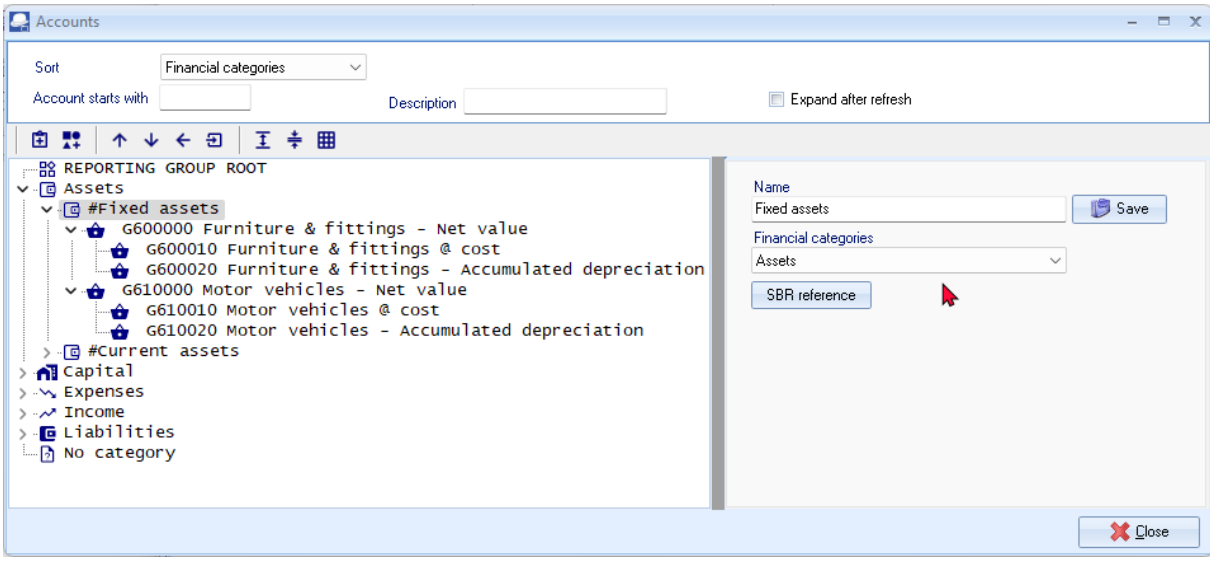
- This step allows you to associate each account group with its corresponding financial category to ensure accurate reporting and categorization of accounts.
- By linking account groups to financial categories, you establish a relationship between the groups and the broader financial classification framework.

To summarize, in the Setup - Accounts menu, you have the ability to create, delete, and manage reporting groups for Account Group 1 and Account Group 2. Additionally, you can link these account groups to the appropriate financial categories to ensure accurate categorization of your accounts within the chosen accounting framework.

You may set up to two Reporting groups for your Accounts. Account groups allows you to group or categorise the accounts on which you would like to report. Each Account group need to linked to a Financial category to structure the options to view, analyse and print the financial reports (i.e. the Trial balance, Income statement and Balance sheet, etc.).

To set reporting groups for General ledger accounts:

1. On the Setup ribbon, select Setup → Accounts.
2. Select "*Financial categories*, *Reporting group 1*" or "*Reporting group2*" in the "*Sort*" field.

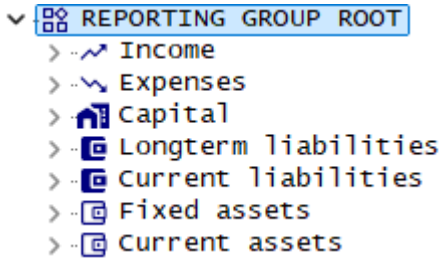


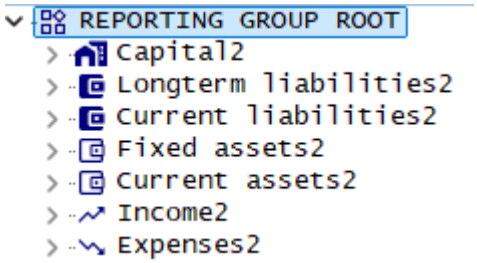
3. To add a new group, click on the Add:Group icon. Enter the name for the Group.
4. Select a Group and select a Financial category (i.e. Assets, Capital, Expenses, Income or Liabilities) from the list.
5. Click on the Save button.
6. Repeat the process for all the Account groups.

7. Once finished with Reporting group 1, select Reporting group 2 and repeat the link process.

The Save button will only be displayed (next to the Name) field, once any any changes are made.

You need to click on the Save button. If you do not do this, your changes will be lost.

Account group 1	Account group 2
	




Options to preview the structure of your Chart of Accounts:

To preview or print a list of your general ledger accounts, including bank accounts and tax accounts, which you ave lined to account groups and financial categories, you may print a list of accounts linked to account groups from the following options on the Reports ribbon:

1. *Reports → Ledger → Listing menu: Print or view the report in "Account code, Account description Account type" (Ledger, Bank and Tax accounts) or "Account group 1" or "Account group 2" sequence.*
2. *Ledger analyser 1 or Ledger analyser 2: You may select the Trial balance to view all accounts, Income statement to view only the insome and expense accounts or Balance sheet to view only the balance sheet accounts. You may select to print may select the Groups as "None" to print accounts according to the account code or "Reporting group 1" or "Reporting group 2" options.*

This will provide a preview of how the account groups and financial categories are printed on the reports, providing a preview of your Chart of Accounts based on your desired accounting framework.

Options to change the structure of your Chart of Accounts:

If you need to change the layout and structure on which the Trial balance, Income statement and Balance sheet groups and financial categories are printed on financial reports, you may change the sequence in the following options on the Setup ribbon:

1. *Setup → Accounts: On the Accounts screen select the Reporting group 1 or Reporting group 2 sort option and then use the Move up or Move down options.*
2. *Setup → Groups: On the Groups screen select the Account group 1 or Account group 2 sort option and then use the Move up or Move down buttons.*

These options will change the sequence and structure of accounts linked or mapped to account groups and financial categories.

By adjusting the sequence of account groups using these options, you can modify the layout and structure of financial reports such as the Trial balance, Income statement and Balance sheet. These changes will affect how the account groups and financial categories are printed on the reports, providing a preview of your Chart of Accounts based on your desired accounting framework.

Financial categories

Options to link account groups to financial categories

Financial categories are a way to group accounts into categories that are relevant for financial reporting. In osFinancials5/TurboCASH5, financial categories are used to generate reports for the balance sheet and income statement. Financial categories include assets, liabilities, capital, income, and expenses.

When setting up accounts in osFinancials5/TurboCASH5, they can be linked to financial categories so that they can structure the financial reports. By properly categorizing accounts into financial categories, businesses can get a clear picture of their financial position and performance.

Once your Reporting groups for Account group 1 and/or Account group 2 is added, you need to link these to one of the Assets, Capital, Expenses, Income or Liabilities financial categories.

The following two (2) options, on the Setup ribbon, are available to link the financial categories:

1. Setup → Financial categories.
2. Setup → Accounts.

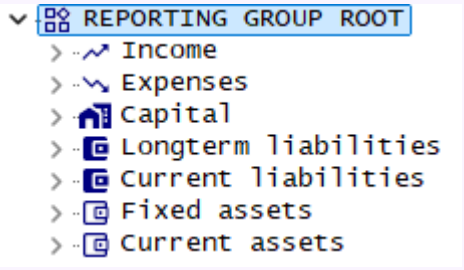
The basic account groups should already be pre-set for a Set of Books, and you may add, edit or delete any of these groups in Setup → Groups on the Account group 1 and/or Account group 2, before linking them to financial categories.

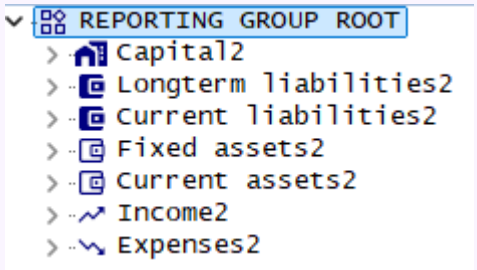
- Assets, Capital and Liabilities are Balance sheet financial categories, and
- Income and Expenses are Income statement financial categories.

It is important to base this linkage, to the respective categories, on the accounting equation.

Account groups - Reporting group 1 and 2 – The sequence in which the groups and accounts are listed, may be changed by selecting the groups on the list and use the Move up or Move down buttons.

In this example, two (2) Reporting groups 1 and 2 is set to different sequences:

Reporting group 1	*Reporting group 2*
	




This will enable you to print general ledger reports (i.e. Trial balance, Income statement, Balance sheet, Chart of Accounts), to list accounts and balances to be listed according to Reporting group 1 or according to Reporting group 2 sequences.

Created with the Standard Edition of HelpNDoc: Maximize Your Documentation Output with HelpNDoc's Advanced Project Analyzer

Financial categories (Setup - Accounts)

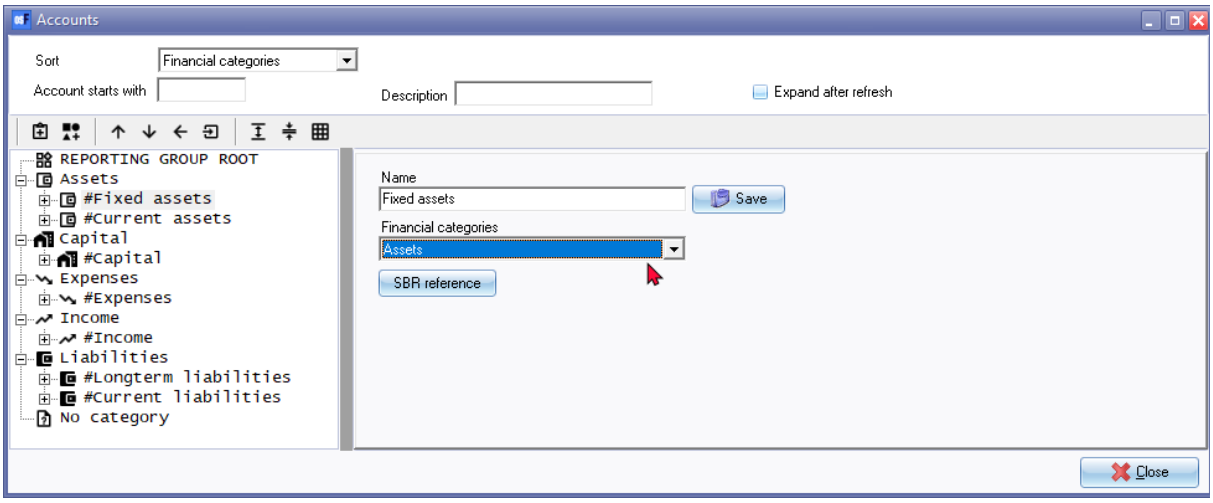
In osFinancials5/TurboCASH5, you can create up to two (2) reporting groups for your accounts. Account groups allow you to categorize and group your accounts based on how you want to report on them. Each account group needs to be linked to a financial category in order to structure the financial reports such as the trial balance, income statement, and balance sheet. By properly categorizing and grouping your accounts, you can more easily analyse and understand your financial data.

Account reporting groups may also be linked to financial categories on the Setup → Financial categories (Setup ribbon).

To link Groups to Financial categories using the Accounts screen:

1. On the Setup ribbon, select Setup → Accounts. The Groups as created on Account groups - Reporting group 1 will be listed in the "*Accounts*" screen.

2. Select "*Financial categories*" in the "*Sort*" field.



3. Select a Group and select a Financial category (i.e. Assets, Capital, Expenses, Income or Liabilities) from the list.

4. Click on the Save button.

5. Repeat the process for all the Account groups.

6. Once finished with Reporting group 1, select Reporting group 2 and repeat the link process.

The Save button will only be displayed (next to the Financial category name) field, once any any changes are made.

You need to click on the Save button. If you do not do this, your changes will be lost.

Account groups - Reporting group 1 and 2 – The sequence in which the groups and accounts are listed, may be changed by selecting the groups on the list and use the Move up or Move down icons.

Account group 1	*Account group 2*
REPORTING GROUP ROOT Income Expenses Capital Longterm liabilities Current liabilities Fixed assets Current assets	REPORTING GROUP ROOT Capital2 Longterm liabilities2 Current liabilities2 Fixed assets2 Current assets2 Income2 Expenses2

Options to preview the structure of your Chart of Accounts:

To preview or print a list of your general ledger accounts, including bank accounts and tax accounts, which you ave lined to account groups and financial categories, you may print a list of accounts linked to account groups from the following options on the Reports ribbon:

1. *Reports → Ledger → Listing menu: Print or view the report in "Account code, Account description Account type" (Ledger, Bank and Tax accounts) or "Account group 1" or "Account group 2" sequence.*
2. *Ledger analyser 1 or Ledger analyser 2: You may select the Trial balance to view all accounts, Income statement to view only the insome and expense accounts or Balance sheet to view only the balance sheet accounts. You may select to print may select the Groups as "None" to print accounts according to the account code or "Reporting group 1" or "Reporting group 2" options.*

This will provide a preview of how the account groups and financial categories are printed on the reports, providing a preview of your Chart of Accounts based on your desired accounting framework.

Options to change the structure of your Chart of Accounts:

If you need to change the layout and structure on which the Trial balance, Income statement and Balance sheet groups and financial categories are printed on financial reports, you may change the sequence in the following options on the Setup ribbon:

1. *Setup → Accounts: On the Accounts screen select the Reporting group 1 or Reporting group 2 sort option and then use the Move up or Move down options.*
2. *Setup → Groups: On the Groups screen select the Account group 1 or Account group 2 sort option and then use the Move up or Move down buttons.*

These options will change the sequence and structure of accounts linked or mapped to account groups and financial categories.

By adjusting the sequence of account groups using these options, you can modify the layout and structure of financial reports such as the Trial balance, Income statement and Balance sheet. These changes will affect how the account groups and financial categories are printed on the reports, providing a preview of your Chart of Accounts based on your desired accounting framework.

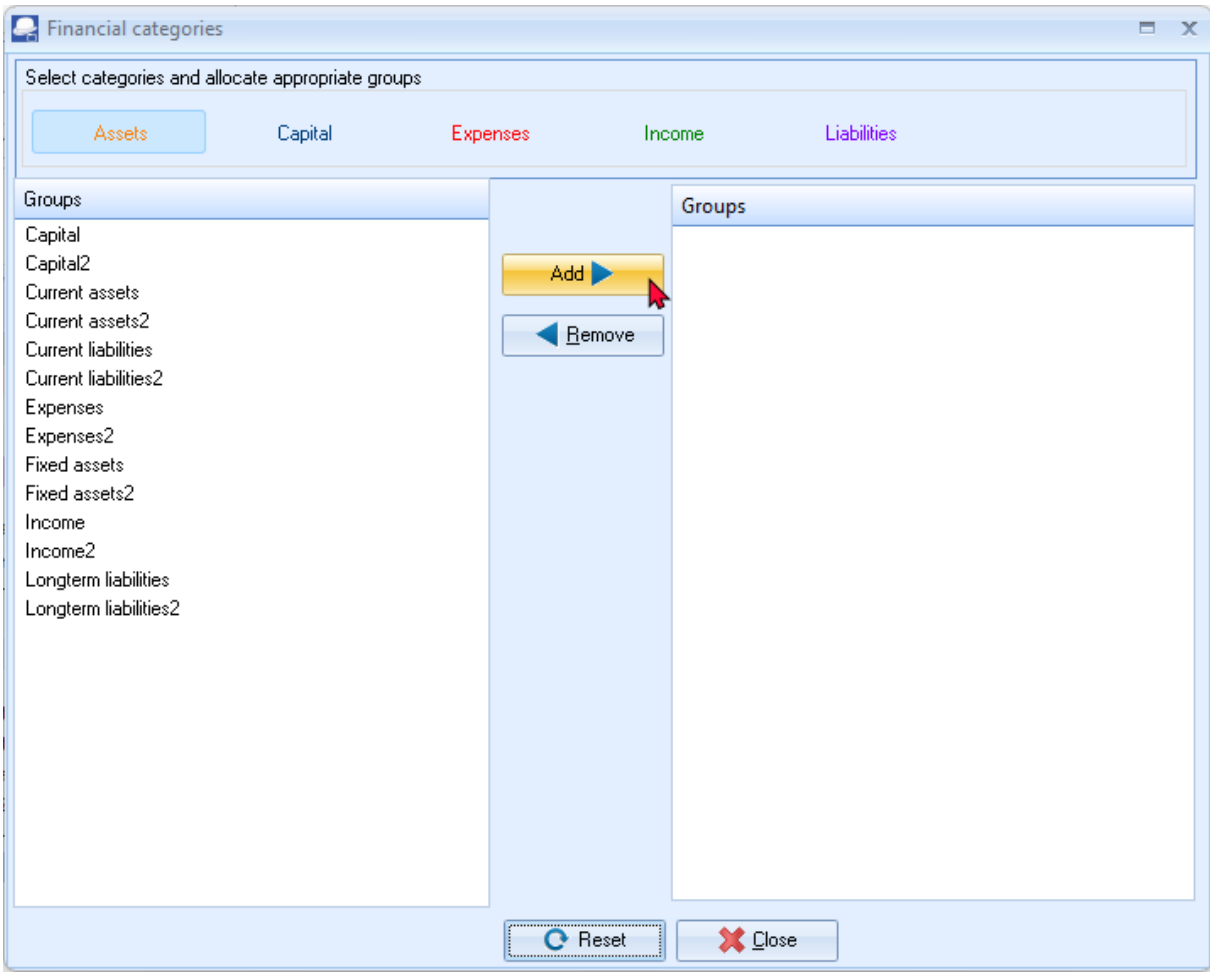
Financial categories (Setup)

You may set up to two (2) Reporting groups for your Accounts. Account groups allows you to group or categorise the accounts on which you would like to report. Each Account group need to linked to a Financial category to structure the options to view, analyse and print the financial reports (i.e. Trial balance, Income statement, Balance sheet, etc.).

Account reporting groups may also be linked to financial categories on the Setup → Accounts (Setup ribbon).

To link Reporting groups to Financial categories:

1. On the Setup ribbon, select Setup → Financial categories.



All your available account reporting groups will be listed. If you notice that not all account groups are available, you have to exit this screen and do the necessary amendments in Setup → Groups.

2. Select a category (Assets, Capital, Expenses, Income or Liabilities).

3. Select a group from the group list, and click on the Add button.

You may select more than one group. To do this, press the Ctrl or Shift key and while keeping it sown, use the mouse to select another group.

4. Repeat the process until you have no more items in the group list.

The following is a basic guideline of how groups should be linked to the Financial categories:

W *- Assets - Fixed assets, Current assets*

W *- Capital - Capital (for Sole Proprietorships and Partnerships), Share Capital (for Companies), Members Contributions (for Close Corporations)*

W *- Expenses - Expenses*

W *- Income - Income, Other income*

W *- Liabilities - Long-term liabilities, Current liabilities.*

For example, in the category Assets, select Fixed assets and click on the Add button, select Current assets and click on the Add button. The groups will be moved from the group list and be listed in the right hand side of the screen.

These selected groups are no longer available to be added to any other category. Click on each of these categories (Capital, Expenses, Income or Liabilities) and repeat the process for each of these categories, if necessary. At the end of this process you should not have any Groups available on the left-hand side of the screen.

5. Once you have completed the process, click on the Cancel button.

6. Click on the Yes button, and start again linking the groups to their respective category.

If you have added incorrect groups to a specific financial category, simply select the incorrect group from the list on the right hand side of your screen, and click on the Remove button. The option will now be available to link to another financial category.

To clear or reset all the linked groups to the Financial categories (Assets, Capital, Expenses, Income and Liabilities), click on the Reset button. An information message will be displayed:

> "This will radically alter your data! We recommend that you stop and make a backup! Do you wish to continue?"

You then need to start all over again to link a group.

Edit - Accounts

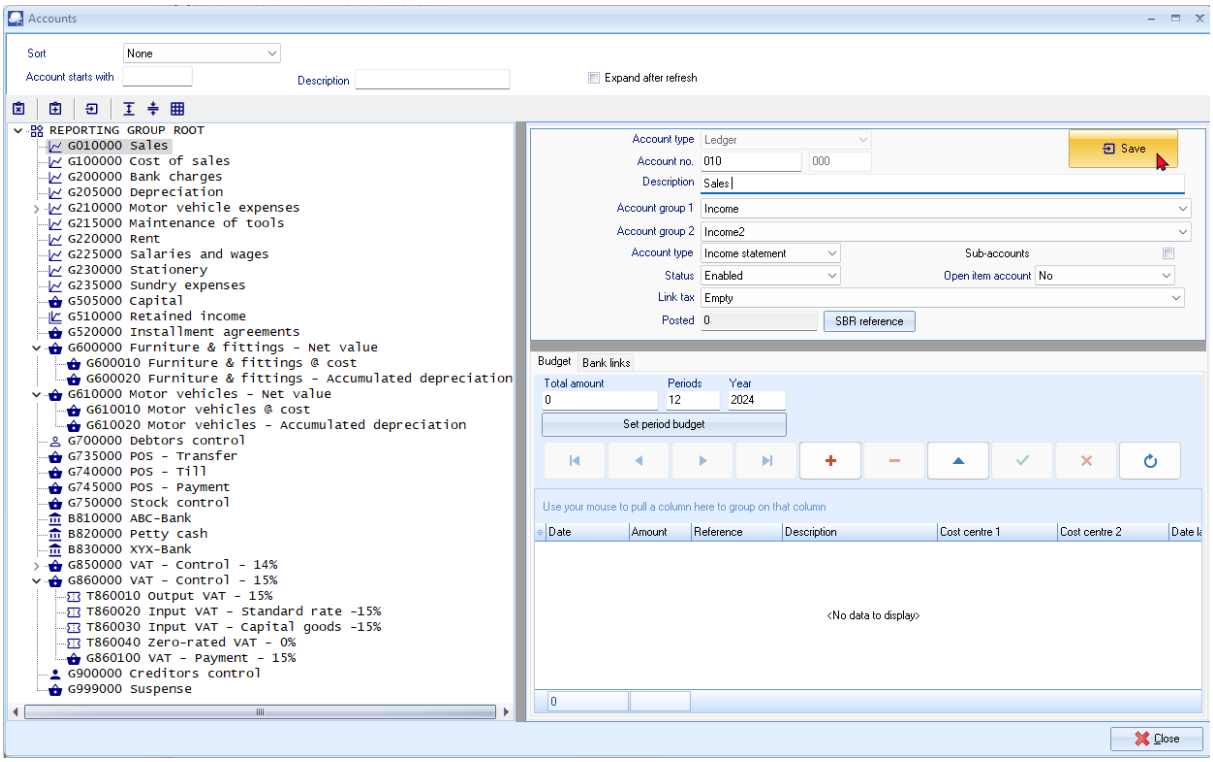
Spreadsheet export

Accounts may be exported to the Excel Export / Import spreadsheet feature.

This option is used to add, edit or delete general ledger accounts. Should you no longer need an account, but cannot or do not wish to delete it, you may disable the ledger account.

To access Accounts:

1. On the Setup ribbon, select Setup → Accounts. The "*Accounts*" screen; listing your available accounts, is displayed:

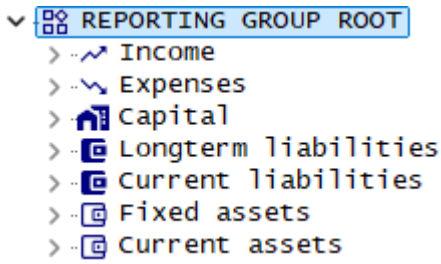


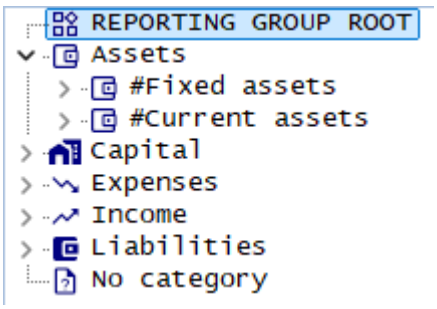
2. You may filter and search for Accounts and Account groups as follows:

Search / Filter Option	*Description*
Sort:	*The default is None. - This will list all accounts according to the Account number (Code).*

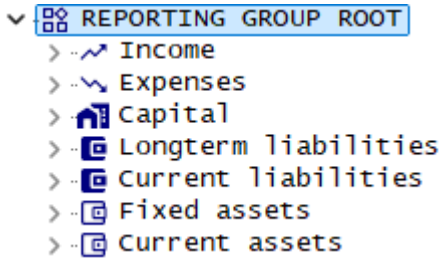
	You may select to sort / list accounts according to Reporting group 1 or Reporting group 2 or Financial categories.
Account starts with:	*Filter your accounts by entering the first digit of the account number (code). For example, entering 2 will list only those account numbers starting with 2 (e.g. 200 to 299). To filter the list further, you may, for example, enter 21 to list only those accounts from 210 to 219.*
Description:	*Enter any character in the Account name (description). Only those accounts containing that character will be listed (e.g. B will list all accounts containing the character b. By typing BANK in this field, only the Accounts containing bank in the account name (description) field will be listed.*
Expand after refresh:	*If this field is selected, the expanded list of accounts will be displayed (when clicking on the Refresh icon (or clicking on the Refresh item on the context menu).*

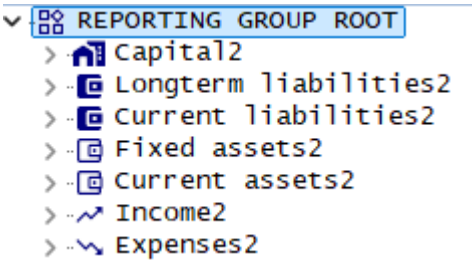
The icons indicates the following:

Account groups	*Financial categories*
	




Account groups - Reporting group 1 and 2 – The sequence in which the groups and accounts are listed, may be changed in Setup → Groups. This is done by selecting the groups on the list and use the Move up or Move down buttons.

Account group 1	*Account group 2*
	


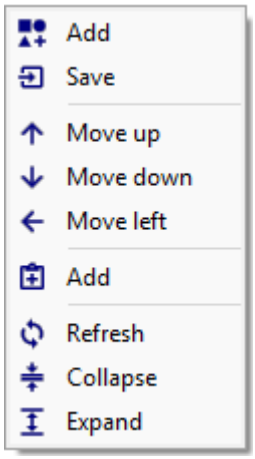


Icons for accounts:

Icon	Account type	Reported on	Description
	Income	*Income statement*	*Income – Expenses = Net Profit / Loss*
	Expense		
	Assets	*Balance sheet*	*What you own = Assets*
	Liability	*Balance sheet*	*What you owe to others = Liabilities*
	Bank	*Balance sheet*	*Current assets*
	Tax	*Balance sheet*	*Current liabilities (Output Tax – Input Tax)*
	Retained income / earnings	*Balance sheet*	*Capital (Profit / Loss – Previous Years)*
	Debtor's control account	*Balance sheet*	*Debtor's control = Current assets*
	Creditor's control account	*Balance sheet*	*Creditor's control = Current liabilities*

Processing Icons and Context menus:

Account groups	Accounts



W *Add Group.*

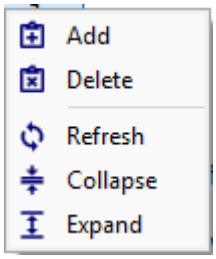
W *Save - Save changes.*

W *Delete a selected Group Account / Sub-account.*

W *Move selected Group up 1 entry.*

W *Move selected Group down 1 entry.*

W *Move selected Group to the left.*



W *Add Account / Add Sub-account.*

W *Delete a selected Account / Sub-account.*

W *Refresh the items on the Groups / Accounts list.*

W *Collapse the expanded Groups / Accounts list.*

W *Expand the short list of Accounts and Groups.*

W *Add new Account / Add new Sub-account.*

W *Refresh the Groups / Accounts list.*

W *Collapse the expanded Groups / Accounts list.*

W *Expand the short list of Accounts and Groups.*

The Delete icon (option) will not be available for the following accounts:

W *Accounts which has any transactions processed (posted). The Posted field display a value of more than 0.*

W *The Retained income / earnings account.*

W *The Delete icon (option) is available for Debtor's control account and Creditor's control account. Trying to delete these control accounts, will produce an Error message:*

"You cannot delete a control account!"

Field	*Description*
Account type:	*Select the following options:* 1. *Ledger Income / Expense , Asset / Liability / Capital accounts and Retained income / earnings and Debtor's control and Creditor's control accounts.*

2. *Bank account will allow you to link a Payments and Receipts batch on the Bank tab.*

3. *Tax account will allow you to set the tax percentage for (VAT/GST/Sales Tax) and specific tax settings.*

This field may only be selected for a new account. For existing accounts; this field will be disabled.

Account number: *This consists of 2 parts. The first block is for the main account; and the second block for the sub-account.*

Description: *The description for the account which will be used to lookup (select) accounts. This is also the description which will be displayed on reports.*

Group1: *This is used to group and classify the accounts on reports.*

Group2: *This is used to group and classify the accounts on reports.*

Type: *Balance sheet - (i.e Capital, Liabilities and Assets) or Income statement accounts (i.e. Income or Expense).*

Balance sheet accounts retains the balances of the previous financial year (opening balances).

Income statement – these accounts are closed off during the Year-end process and the balance (Net Profit / Loss) is transferred to the Retained income / earnings account.

Sub-accounts: *Select this option to create a main account. Once this option is selected, you first need to click on the Save button before you are allowed to create sub-accounts for that main account. You may then create sub-accounts for this main account.*

You will not be allowed to process (post) any transactions; or enter / edit any budget figures to the main account. All transactions and budget figures are entered on sub-accounts. The total of these individual sub-accounts will add up to the main account.

To delete a main account, you first need to delete all sub-accounts.

Status: *By default, all accounts are enabled (active). Once you have any transactions processed (posted) on a main account, you may not delete the main account.*

You may then select the disabled option to block a selected account or sub-account. This will disable; or set the selected account's status to inactive). This will produce error messages to remind you that the account or sub-account is disabled, when trying to process (post) transactions to the disabled account or sub-account.

Open item *By default all accounts are set to "No". If you select the "Yes" option, you may select to link (match) a*

account:	*receipt transaction to a debit transaction; or a payment transaction to a credit transaction, etc.* *This facility is useful when, for example, you need to control specific payments to specific transactions and specific receipts to specific transactions.*
Posted:	*This field indicates the number of transactions processed (posted) for the selected account. Once any transactions have been processed (posted) (the value is more than 0), you will not be allowed to delete the account.*
Use link tax:	*Link a Tax account to a ledger account. This will then be the default tax account when selecting the ledger account when processing transactions in the payments journal, receipts journal or other journals (batches).*

Only the Account type, Account number, Description, Group 1 and Group 2 fields will be displayed for control accounts; i.e. (Retained income / earnings) and Debtor's control and Creditor's control accounts).

The Save button will only be displayed (next to the Description (Account name) field), once any account is created or any field of an existing selected account is changed.

You need to click on the Save button. If you do not do this, your changes will be lost.

Edit Bank accounts

You may have more than one Bank account and wish to add this to your Chart of accounts. osFinancials5/TurboCASH5 will have set up a Bank account for you in your selected template. (In this example, account number "*810-000 - Current Bank account*" is used).

Examples of cash books (bank accounts) in osFinancials5/TurboCASH5 could include:

- Checking account - This cash book represents a primary bank account used for daily transactions and general banking activities.
- Savings account - This cash book represents a bank account specifically designated for savings and accumulation of funds.
- Petty cash - This cash book is used to track and manage small cash transactions and expenses within

an organization.

- Credit card account - This cash book represents a bank account associated with a credit card, used for tracking credit card transactions and payments.
- Loan account - This cash book represents a bank account associated with a loan, used for tracking loan payments and balances.
- Investment account - This cash book represents a bank account used for managing investments, such as stocks, bonds, or mutual funds.
- Foreign currency account - This cash book represents a bank account denominated in a foreign currency, used for managing transactions and balances in that currency.
- Escrow account - This cash book represents a bank account used for holding funds in trust for specific purposes, such as real estate transactions or legal settlements.
- Trust account - This cash book represents a bank account used for holding funds in trust on behalf of clients or beneficiaries.
- Expense reimbursement account - This cash book represents a bank account used for tracking and reimbursing employee expenses.

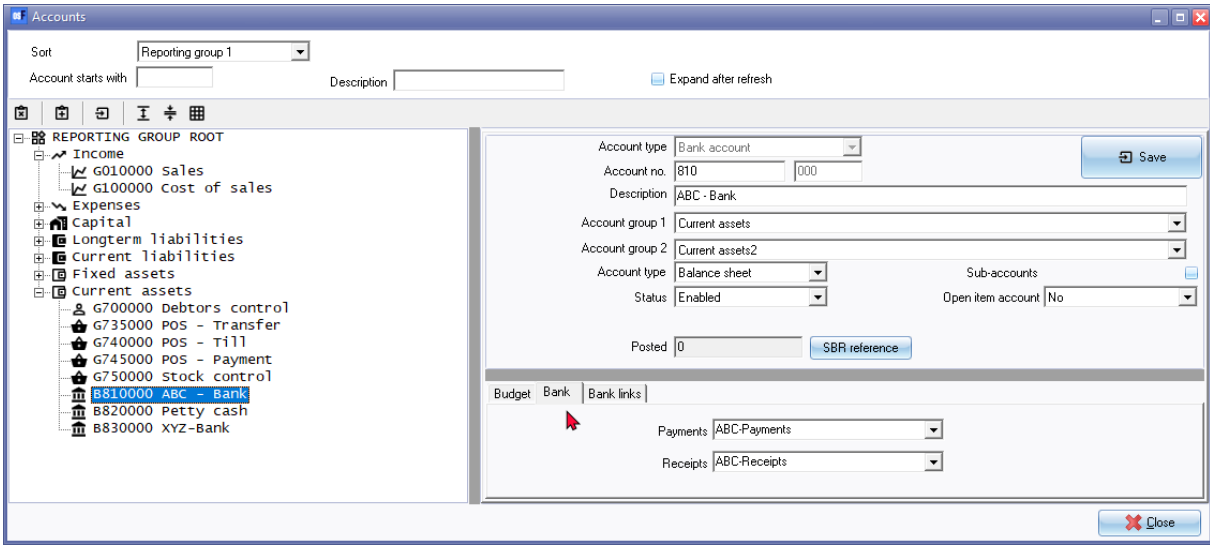
These are just a few examples, and the specific cash books will depend on the needs and requirements of your organisation.

If you wish to change the Bank account description and batches name you my edit the account and batch types.

Bank accounts must be linked to a unique Payments and Receipts batch. You may create a new Payments and Receipts batch can create on the Bank tab when creating a new Bank account. You may edit the Batch type descriptions in Setup → Batch types.

To change a Bank account:

1. On the Setup ribbon, select Setup → Accounts. The *Accounts* screen; listing your available accounts will be displayed.
2. Select the "*810-000 - Current Bank account*" ("*Current assets" – Reporting group*).



2. In the "*Description*" field, replace "*Current bank account*" with the new Bank account description e.g. "*ABC-Bank*".

3. Click on the Bank tab.

4. Enter the unique name for the Payments and Receipts batches, e.g. "*ABC-Payments*" and the "*ABC-Receipts*". This will automatically add (create) the batch types which may be edited in Setup → Batch types.

> *Bank import plugin - Is included in the osFinancials5/TurboCASH5 Subscription - Bank Reconciliations Plugin Manual - BankImport Plugin Manual -*
>
> *If the "Default bank reconciliation method" option is not selected (tick removed) on the Setup → System parameters (Setup ribbon); the Payments and Receipts batch fields will be combined. You may then select either the Payments journal or the Receipts journal.*
>
>
>

5. Click on the Save button.

Create Bank accounts

On Accounts, you may create a new bank account, change the descriptions of an existing account, or to delete an existing account.

You may have more than one Bank account and wish to add this to your Chart of Accounts. osFinancials5/TurboCASH5 will have set up a Bank account for you in your selected template. (In this example, account number "*810-000 - Current Bank account*" is used).

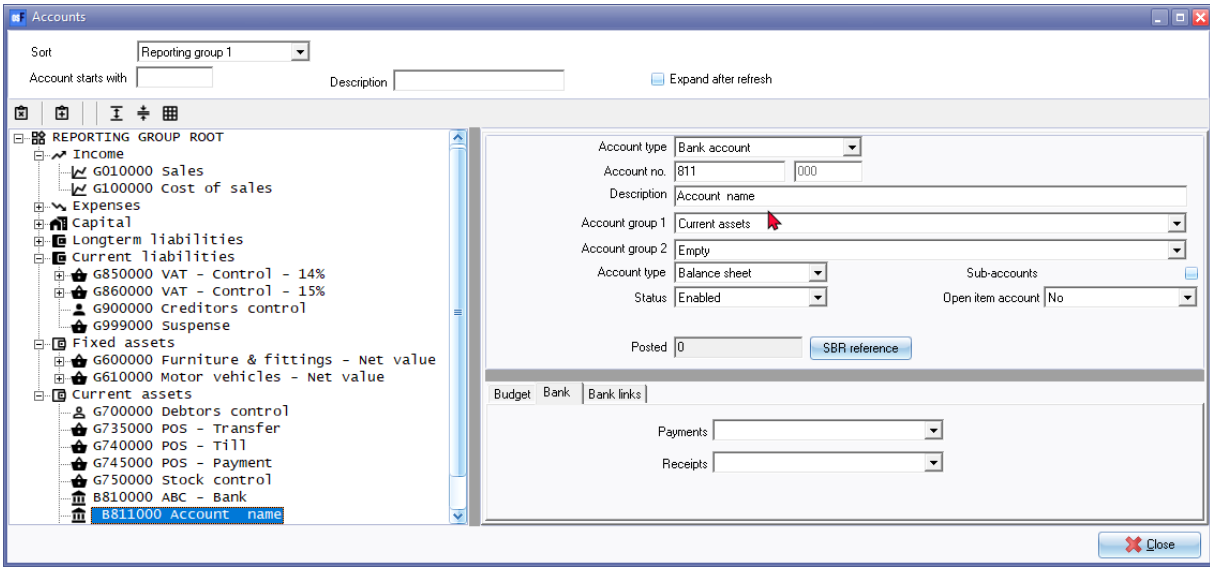
If you wish to add another Bank account remember that in planning your Chart of Accounts you would like accounts of a similar nature to be grouped together.

Bank accounts must be linked to a unique Payments and Receipts batch. You may create a new Payments and Receipts batch can create on the Bank tab when creating a new Bank account. You may edit the Batch type descriptions in Setup → Batch types.

To create a new Bank account:

1. On the Setup ribbon, select Setup → Accounts. The *Accounts* screen; listing your available accounts will be displayed.

2. Select the last Bank account (e.g. "*B820000 - Petty cash*") (*Current assets – Reporting group*).



3. Click on the (Add:Account) icon (or select the Add on the context menu). An entry for the new bank account is displayed as "*G821 Account name*" on the Account list (the next Bank account code (incremented by 1), for example "*820000*" is selected, the next Bank account code will be "*821000*").

4. Enter or select the following:

    a) Account type - Select "*Bank Account*".

    b) Account no. - The main account "*821*" is displayed and cannot be edited. Type "*830*" in the account field.

    c) Description - Replace "*Account name*" with the new Bank account description e.g. "*XYZ-Bank*".

d) Account group 1 - Select the "*Current assets*" Account group.

e) Account group 2 - Select Account group 2, if not selected.

f) Account type - Select "*Balance sheet*", since the Bank account needs to be reported on the Balance sheet.

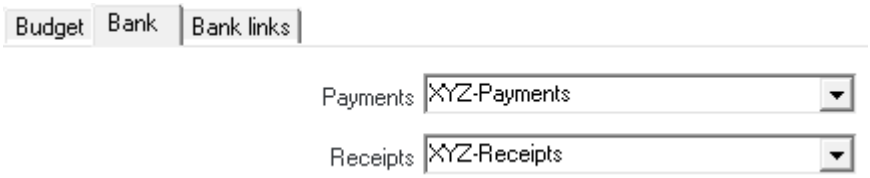
g) Sub-accounts - This field should not be selected, since bank accounts may not have sub-accounts.

> *If you select (tick) this field, the Bank tab will not be displayed. You will not be allowed to link the bank account to its own receipts and payments batch.*

h) Status - "*Enabled*" (default) should be selected.

i) Open item account - "*No*" (default) should be selected.

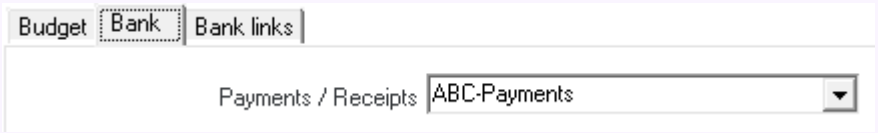
5. Click on the Bank tab.



6. Enter the unique name for the Payments and Receipts batches, e.g. "*XYZ Payments*" and the "*XYZ Receipts*". This will automatically add (create) the batch types which may be edited in Setup → Batch types.

> *If you select any existing payments and/or receipts batch, an error message will be displayed.*
>
> "Batch is linked to another bank. Please enter a unique name."
>
> *Click on the OK button and enter a new name for the Payments and Receipt batches.*

> *Bank import plugin - Is included in the osFinancials5/TurboCASH5 Subscription - Bank Reconciliations Plugin Manual - BankImport Plugin Manual -*
>
> *If the "Default bank reconciliation method" option is not selected (tick removed) on the Setup → System parameters (Setup ribbon); the Payments and Receipts batch fields will be combined. You may then select either the Payments journal or the Receipts journal.*



Once any transactions is posted (updated to the ledger) for a selected bank account; you cannot change the Payments or Receipts batches.

7. Click on the Save button.

The icon will change from *(Assets / Liabilities) to* *(Bank account).*

Create / Edit Tax accounts

Sets of Books and Tax (VAT/GST/Sales Tax) terminology

You need to use this option whenever you wish to create a new Tax account or Tax code for VAT/GST/Sales Tax (Output Tax as well as Input Tax).

You may also change the descriptions of an existing account, change the percentages on your various tax types and percentages whenever the legislation is amended, or to delete an existing account.

The Tax codes and percentages, which apply for VAT/GST/Sales Tax, are prescribed by VAT/GST/Sales Tax or Tax Legislation and may be amended from time to time by the Tax Authorities.

Being registered for VAT/GST/Sales Tax, you will have two basic accounts, i.e. Output Tax that is charged when selling services or goods, and Input Tax when you purchase from another registered VAT/GST/Sales Tax vendor.

osFinancials5/TurboCASH5 will have setup an Output VAT/GST/Sales Tax and an Input VAT/GST/Sales Tax account as sub-accounts of the VAT/GST/Sales Tax Control account as Current liabilities for you in the templates.

The Tax codes and percentages differ from country to country and you may be required to change the percentages and create new codes whenever the legislation changes.

English (Default language file) refers to Tax. If you select the following English languages, it will refer to the following tax terminology:

English VAT	English GST	English Sales Tax / Consumption Tax
en-Bangladesh	en-Australia	en-American (Sales Tax)
en-Barbados	en-Belize	en-Tonga (Consumption Tax)
en-Botswana	en-New-Zealand	
en-Cameroon		
en-Ireland		
en-Isle-of-Man		
en-Lesotho		
en-Malawi		
en-Malta		
en-Mauritius		
en-Namibia		
en-Rwanda		
en-South-Africa		
en-Tanzania		
en-Trinadad		

en-Uganda

en-UK

en-Zambia

en-Zimbabwe

It is of utmost importance that you create these codes and percentages correctly to suit your needs and the requirements of legislation applicable to your country. You have to create, or add the Tax accounts (Tax codes), which you will need to fill in your VAT/GST/Sales Tax return. will print the necessary Tax or VAT/GST/Sales Tax reports for your Tax codes.

These Tax codes, or Tax accounts, should be created as sub-accounts. Before you can create the Tax codes you need the following two General ledger accounts created in Setup → Accounts (Setup ribbon):

1. *VAT/GST/Sales Tax Control account - the main account which will be used as a totalling account for the Tax codes.*
2. *VAT/GST/Sales Tax Payments account - the sub-account which you need to allocate your Tax payable (as submitted on your VAT/GST/Sales Tax returns) when you make payments in the payments journal to the Tax Authorities.*

In cases where the Input Tax is more than the Output Tax, you need to allocate the refunds received from the Tax Authorities in the receipts journal.

Sets of Books Templates - Simplified Structure of VAT Accounts in the Chart of Accounts and the VAT-Return

osFinancials5 / TurboCASH supports 79 different languages and tax regimes languages such as 87 Sets of Books (databases) that can be downloaded and customized to meet your requirements.

If you are a new user of osFinancials5/TurboCASH5, you can download the "*EN-SOUTHAFRICA*" Set of Books or of the industry-specific Set of Books (namely, *"FARMING, SERVICE, CHURCH, MEDICAL, MANUFACTURING, RETAIL*" or "*WORKSHOP*") from select the available Firebird database Sets of Books and linked languages available as a free download, the basic Chart of Accounts which already includes basic Output and Input VAT accounts and VAT codes is already pre-configured. There are also Manual Sets of Books namely HANDYMAN, HANDYMAN-A and HANDYMAN-B available for English which illustrate the

basic transactions where VAT is involved.

These English-language versions of the Sets of Books, can be downloaded free of charge from the available Firebird database Sets of Books and linked languages that are available. While the Afrikaans-language Set of Books will contain "*Belasting op Toegevoegde Waarde (BTW)*", the English-language Set of Books will contain "*Value Added Tax (VAT)*". osFinancials5/TurboCASH5 has already included for your basic Output VAT and Input VAT account as sub-accounts of the VAT control account as an "*Current liabilities*" in the master "*templates*".

The following basic simplified VAT accounts have already been created for the purposes of this documentation:

Tutorial Sets of Books HANDYMAN, HANDYMAN-A and HANDYMAN-B and *Documentation in in this Help file*			*EN-SOUTH-AFRICA Sets of Books template*		
Account code/ *Tax-code*	*Description*	*Tax-rate*	*Account code/* *Tax-code*	*Account code*	*VAT-Rate*
G850-000	*VAT - Control - 15%*	*Not applicable*	*G950-000*	*VAT CONTROL ACCOUNT - 15%*	*NVT*
T860-010	*Output VAT - 15%*	*15%*	*T950-005*	*Output VAT - 15%*	*15%*
T860-020	*Input VAT - Standard rate -15%*	*15%*	*T950-010*	*Input VAT - Standard rate -15%*	*15%*
T860-030	*Input VAT - Capital goods -15%*	*15%*	*T950-020*	*Input VAT - Capital goods -15%*	*15%*
T860-040	*Zero-rated VAT - 0%*	*0%*	*T950-030*	*Zero-rated VAT - 0%*	*0%*
G850-100	*VAT - Payment - 15%*	*Not applicable*	*G950-100*	*VAT PAYMENT ACCOUNT - 15%*	*NVT*

The Output VAT codes and Input VAT codes were created as sub-accounts under the "*VAT CONTROL ACCOUNT - 15%*" and included in the "*Current liabilities*" account group in the Chart of Accounts in the Set of Books. VAT codes or rather sub-accounts are indicated with a "*T*" prefix on which the applicable VAT code's percentage must be specified whether it is at 15% or 0% percent, for example in the case of zero rate VAT.

Finally, a General Ledger account "*VAT PAYMENT ACCOUNT - 15%*" (indicated with a "*G*" prefix) was also created as a sub-account under the "*VAT CONTROL ACCOUNT - 15%*" (indicated with a "*G*" prefix).

The "*VAT PAYMENT ACCOUNT - 15%*" is the account in which all payments that must be remitted to the South African Revenue Service (SARS) (if the Output VAT is more than the Input VAT) as well as refunds received from the South African Revenue Service (SARS) is received (if the Input VAT is more than the Output VAT), is recorded.

The balances of the "*VAT CONTROL ACCOUNT - 15%*" are as follows:

- A credit balance on the "*VAT CONTROL ACCOUNT - 15%*" means that the Output VAT is more than the Input VAT, which consequently normally shows that VAT is owed to the South African Revenue Service (SARS).
- A debit balance on the "VAT CONTROL ACCOUNT - 15%" means that the Input VAT is more than the Output VAT and that there is VAT from the South African Revenue Service (SARS) recoverable or refundable.

The transactions of the "VAT PAYMENT ACCOUNT - 15%" are as follows:

- Debit transactions - Payments owed to the South African Revenue Service (SARS) are debited against this account when the payment is made from the payment journal linked to the Bank Account. This amount should be indicated on the VAT return (VAT-201), for the period of the VAT return, as the amount you must pay to SARS.
- Credit transactions - Refunds received from the South African Revenue Service (SARS) are credited to this account and credited when the payment is received from the receipt journal linked to the Bank account. This amount should be shown on the VAT return (VAT-201), for the period of the VAT return, as owed to you by SARS.

In addition to these basic Tax codes or Tax accounts, within the "*VAT CONTROL ACCOUNT - 15%*" main account, you can create further sub-accounts to accommodate the respective classifications and/or tax percentages in respect of Output VAT and Input VAT to help you complete the VAT returns and make the correct payments to the tax authority.

The following examples of the "Full Structure of VAT accounts and VAT-codes in the Chart of Accounts" and the alignment to the relevant fields or boxes on VAT Returns"or VAT-declarations is available in this documentation:

- *Value Added Tax (VAT) - South Africa - The "Full Structure of VAT accounts in the Chart of Accounts and the VAT Return" The stricture South African VAT-accounts and VAT-codes of the Chart of Accounts is aligned with the VAT201-return.*

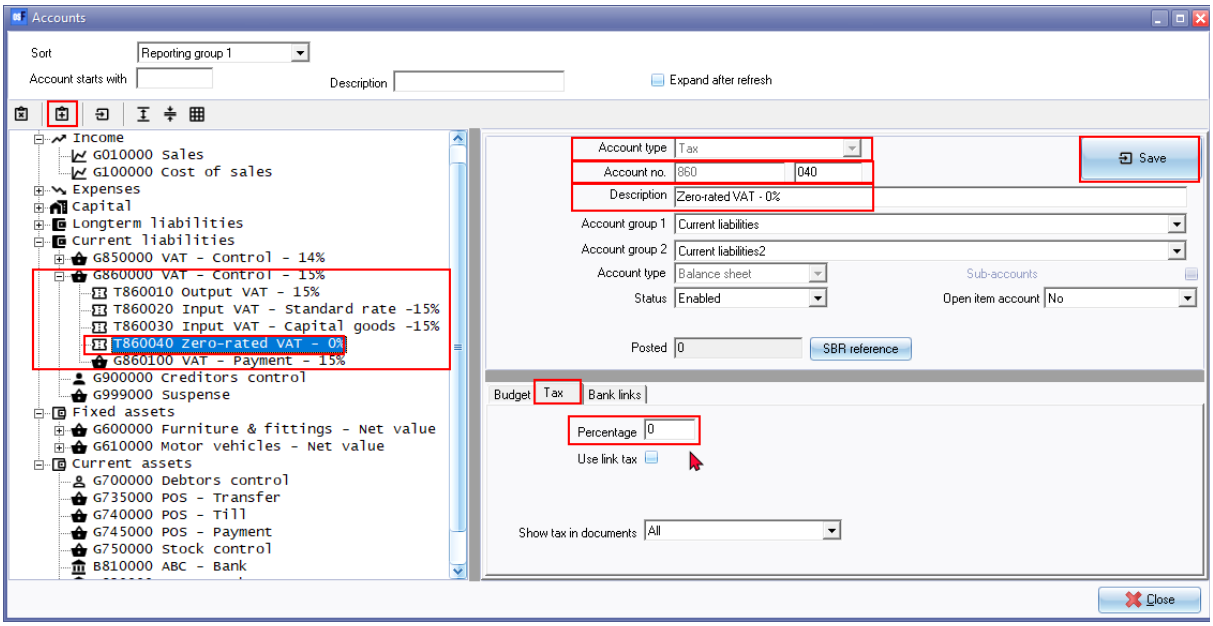
- *Value Added Tax (VAT) - United Kingdom - Various schemes for VAT may be applicable for various scenarios. The most commonly used VAT Standard rate scheme is documented as an example of the VAT-account and VAT-codes structure in Chart of Accounts for the United Kingdom (UK) to match the various Boxes on the UK VAT return.. "VAT Standard Rate Scheme - Structure of VAT Accounts in the Chart of Accounts"*

Create Tax accounts (Tax Codes)

To create a new Tax account (Tax Code):

1. On the Setup ribbon, select Setup → Accounts. The *Accounts* screen; listing your available accounts will be displayed.

2. Select the Tax Control account (as in this case, "*G860-000 VAT Control account*").



2. Click on the (Add:Account) icon (or select the Add on the context menu). An entry for the new Ledger account is displayed (e.g. "*G850 000 Account name*" on the Account list. The Tax code is a Sub-account for the Tax main account (i.e. " *VAT Control account*").

3. Enter or select the following:

   a) Account type - Select "*Tax account*".

   b) Account no. - The Main account "*860*" is displayed and cannot be edited. Type "*040*" in the sub-account field.

   c) Description - Replace *Account name* with the new Tax code description e.g. "*Zero-rated VAT –*

0%".

d) Account group 1 - "*Current liabilities*" should be displayed. This is the Account group which is linked to the Main account.

e) Account group 2 - Select Account group 2, if not selected.

f) Account type - "*Balance sheet*" should be displayed. This field cannot be selected, since the Main account is a Balance sheet account type.

g) Sub-accounts - This field cannot be selected, since this is a sub-account.

h) Status - "*Enabled*" (default) should be selected.

i) Open item account - "*No*" (default) should be selected.

4. Click on the Tax tab.

   a) Enter the Percentage "*0*" for the purposes of this example.

   b) Use Link Tax - To be advised.

   c) Show tax in documents - To be advised.

5. Click on the Save button. The account will automatically be placed in the correct structure of the Account list.

The icon will change from *(Assets / Liabilities) to* *(Tax account).*

Delete accounts

You may delete a ledger (income/expense, bank or tax) account if the account has no transactions and/or balances.

You may disable a ledger (income/expense, bank or tax) account to block (prevent) posting of any documents or batch transactions for the ledger (income/expense, bank or tax) account.

Delete accounts

The *Delete icon (option) will not be available for the following accounts:*

- *Accounts which has any transactions processed (posted). The Posted field display a value of more than 0.*
- *The* *Retained income / earnings account.*
- *The* *Delete icon (option) is available for* *Debtor's control account and* *Creditor's control account. Trying to delete these control accounts, will produce an Error message:*

"You cannot delete a control account!".

To delete a Ledger (Income/Expense, Bank or Tax) account:

1. On the Setup ribbon, select Setup → Accounts.
2. Select the account, and click on the Delete icon. A confirmation message will be displayed.

"Do you want to delete?"

3. Once again, make sure it is absolutely the correct ledger (income/expense, bank or tax) account.
4. Click on the Yes button. This will permanently remove the ledger (income/expense, bank or tax) account.

Delete Main accounts:

If an account has sub-accounts, you first need to delete the sub-accounts, before you can delete the main account.

Delete Bank accounts:

If a Bank account is deleted, you may need to delete the Payments and Receipt batches (Setup → Batch types (Setup ribbon).

Disable accounts

To disable a Ledger (Income/Expense, Bank or Tax) account:

If a ledger (income/expense, bank or tax) account has transactions and/or balances, you cannot delete it. In the "*Posted*" field, the number of transactions processed (posted) for the selected account will be displayed. Once any transactions have been processed (posted) (the value is more than 0), you will not be allowed to delete the account.

1. On the Setup ribbon, select Setup → Accounts.
2. Select the account.
3. Select Disabled in the "*Status*" field and click on the Save button. This will block posting of any documents or batch transactions for the ledger (income / expense, bank or tax) account.
4. Click on the Save button.

Export / Import - General ledger accounts

You may export and import general ledger accounts (chart of accounts).

This feature may be used to import ledger accounts (chart of accounts) into:

- Into the same Set of Books.
- Into a different Set of Books.
- Into a new Set of Books - Created from scratch - Create your own Set of Books (Advanced)? option for Firebird database types.
- Into a new Set of Books - Created from scratch - Create your own Set of Books (Advanced)? option for Microsoft SQL sever (MSSQL) database types.

Before you may import ledger accounts in a new Set of Books, you need to do the necessary setup and configuration.

Once this is done, you may start to import ledger accounts from a saved "Excel Workbook (.xlsx) file type or from a saved the "Tab delimited" (*.txt) file.*

These accounts (Chart of Accounts) are maintained in Setup → Accounts (Setup ribbon).

Reports for the accounts (Chart of Accounts) are printed in Reports → Ledger → Listing - Chart of Accounts (Reports ribbon).

Before using this feature, it is recommended to print the report.

Export / Import options on Setup ribbon

To be able to import the data for Account records, you need to created a "*Tab delimited*" export file in the Export (Setup ribbon).

It is recommended that the accounts (chart of accounts) is exported in the "*Tab delimited*" (*.txt) file format. This file format may be used to import the "*Tab delimited*" (*.txt) file format in the Import (Setup ribbon).

Spreadsheet export / import

osFinancials5/TurboCASH5 supports the "*Excel Workbook (*.xlsx)* file type Spreadsheet import and export feature.

- Spreadsheet export - You may export ledger accounts and save it as a "*Excel Workbook (*.xlsx) file type.*
- Spreadsheet import - You may import ledger accounts from a saved "*Excel Workbook (*.xlsx) file type.*

Created with the Standard Edition of HelpNDoc: Maximize Your PDF Protection with These Simple Steps

Export General ledger accounts (Setup ribbon)

All the information of each account, as entered in Setup → Accounts (Setup ribbon) (includes specific data for general ledger, bank and tax accounts), will be exported in the selected file format.

It is recommended that the accounts (chart of accounts) is exported in the "*Tab delimited*" (*.txt) file format. This file format may be used to import the "*Tab delimited*" (*.txt) file format in the Import (Setup ribbon).

It is recommended to print the report from the source Set of Books (Reports → Ledger → Listing - Chart of Accounts (Reports ribbon).

Disabled accounts (Status set as Disabled) will be included in the export file.

After importing the general ledger accounts, all inactive ("Disabled") accounts will be imported as active ("Enabled"). After Import you need to decide whether to keep them as active accounts or do the following in Setup → Accounts (Setup ribbon):

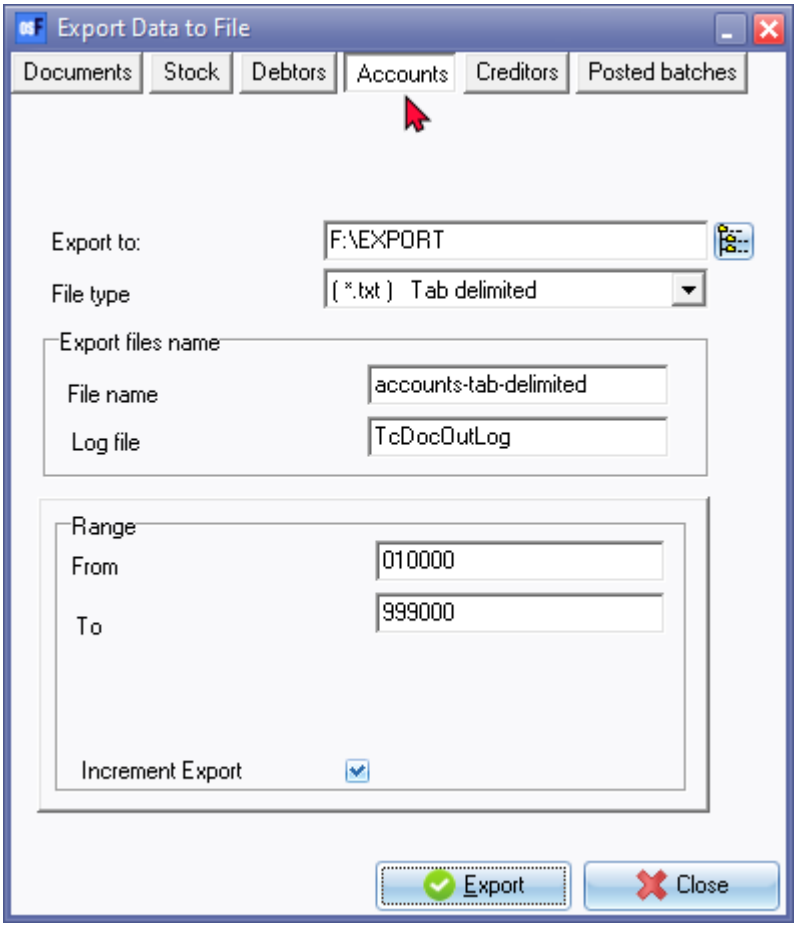
- *Set the status as inactive ("Disabled").*

- *Delete the Accounts*

To export accounts from a Set of Books:

1. On the Setup ribbon, select Export.

2. Click on the Accounts button.



3. Select and/or enter the following:

   a) Export to - The installation directory in which osFinancials5/TurboCASH5 is installed, will be displayed. You may click on the Browse icon to select a folder on the "*Browse for Folder*" screen. You may then select any available folder, or drive, on your system into which you wish to export the data.

   b) File type - Select to export the file in the XML Database (*XML), Comma Separated Variable (*CSV), Lotus Spreadsheet file (*WK1), MS Excel Spreadsheet (*XLS), or any other format available on your system from the list.

> *It is recommended that the "(*.txt) Tab delimited" file type is selected to Import general ledger accounts.*

It will create the following export file types for the export file name:

**.txt - Tab delimited text file - Recommended for Import on the Setup ribbon.*

**.slk - Can be opened in spreadsheets of LibreOffice, OpenOffice or UltraOffice). You may save it as a a Microsoft Excel file.*

**.xml - Can be opened in your system's default web browser or Notepad.*

c) Export files name - Enter the File name. You need to select this file at a later stage when you wish to import the file, or analyse the data in a spreadsheet.

d) Log file - Enter the Log file name.

e) Range - From / To - The Accounts lookup will be automatically initiated. Select any range of accounts to include in the export file.

f) Increment Export - Leave this option blank.

4. Click on the Export button to create the export file, and save it in the specified directory.

The information for the General ledger accounts, which will be exported, is:

- *Account ID (Ledger account, Bank or Tax account).*
- *Description or name of account.*
- *Account code.*
- *Income / Expense or Balance sheet indicator.*
- *Sub-Accounts Indicator.*
- *Account Reporting groups 1 and 2.*
- *Start and End Dates (only applicable to Tax (VAT/GST/Sales Tax) accounts).*
- *Rate - percentage (only applicable to Tax (VAT/GST/Sales Tax) accounts).*
- *Receipts and payments batch (only applicable to Bank accounts).*

Created with the Standard Edition of HelpNDoc: Streamline Your Documentation Process with HelpNDoc's Project Analyzer

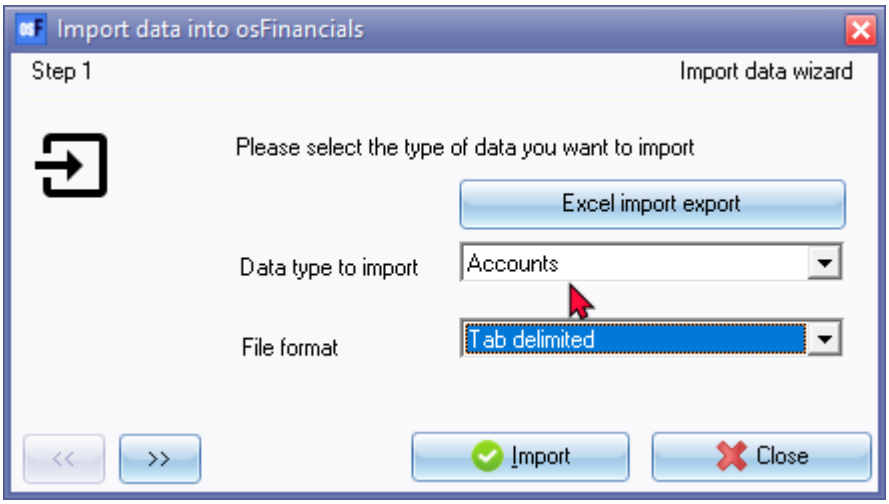
Import General ledger accounts (Setup ribbon)

This option will allow you to import data for Account records from a valid file format into an existing Set of Books.

To be able to import the data for Account records, you need to have created a "*Tab delimited*" (*.txt) export file in the Export (Setup ribbon).

To import accounts into a Set of Books:

1. On the Setup ribbon, select Import.



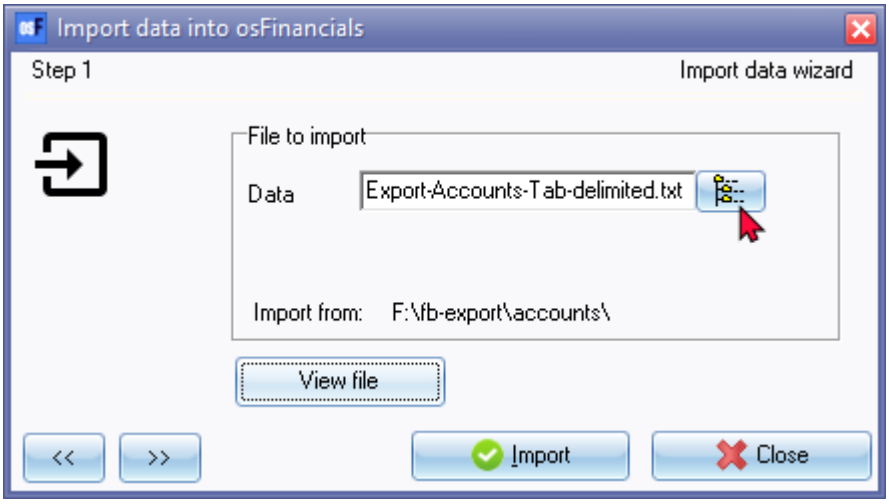
2. Select Accounts as the "*Data type to import*".

3. Select the "*Tab delimited*" (recommended) file type to import.

> *Other file types created with the export as "Tab delimited" file type, is SLK, XML Database File (*.XML), which is stored in your exported folder.*

> *Other available file types, is:" (*.TXF) TurboCASH Exchange File , (*.WK1) Lotus Spreadsheet File, (*.Xml) Xml Database, Comma separated values" and "Windows list separator values".*

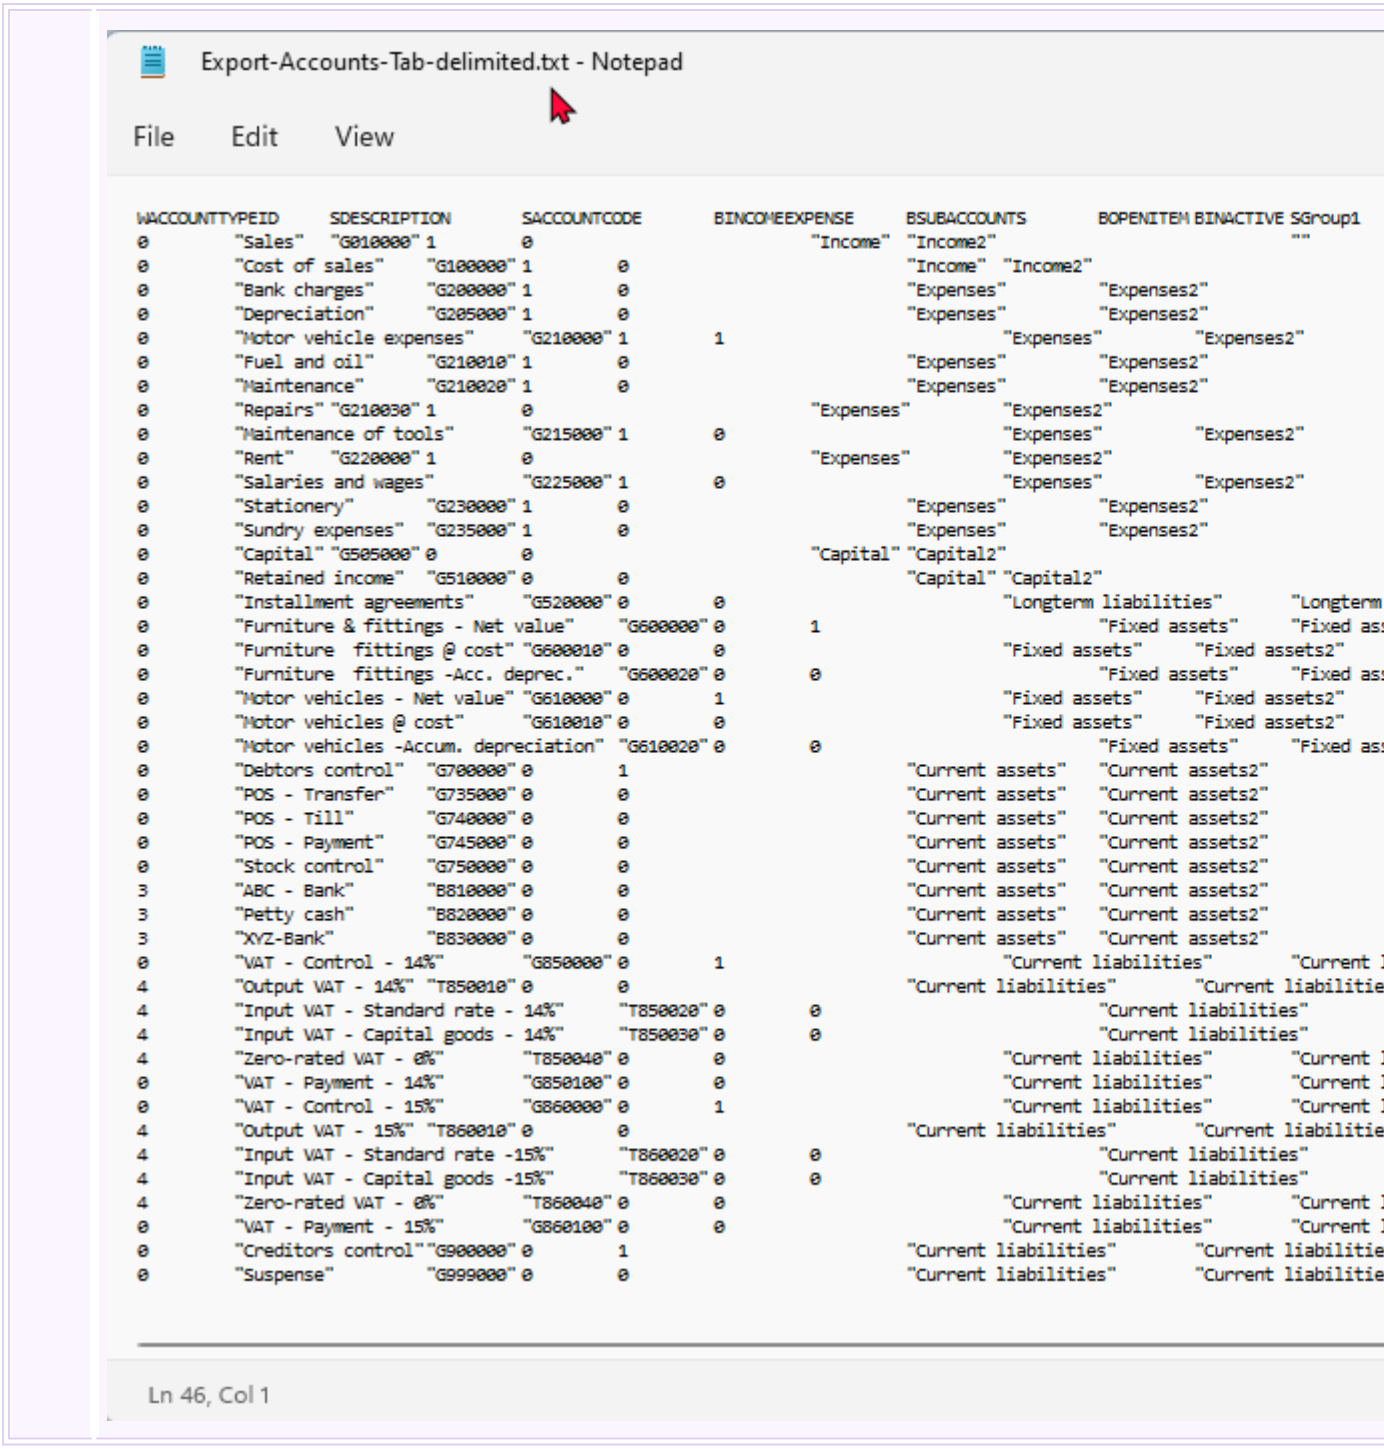
4. Click on the >> button to locate the data file.



5. Click on the button to locate the data file.

Optional - You may click on the View file button to view the file in your system's default app (program) associated with th

An example of the exported Tab Delimited text file is as follows:



Export-Accounts-Tab-delimited.txt - Notepad

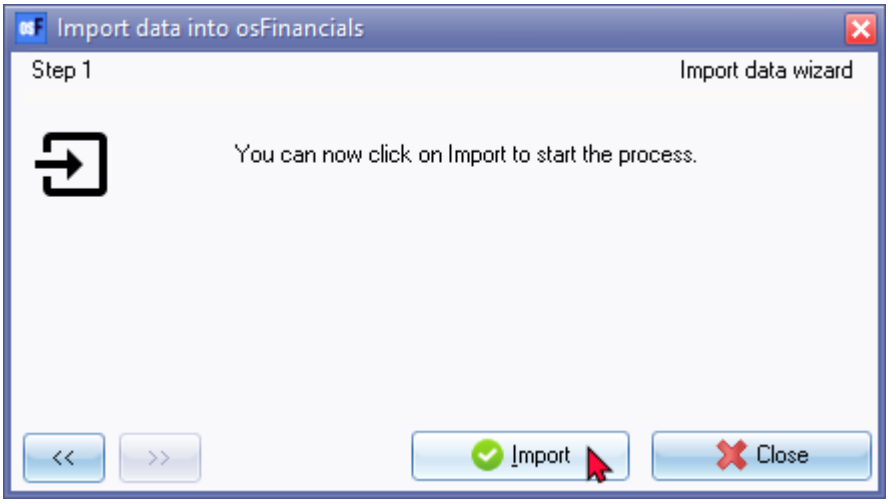
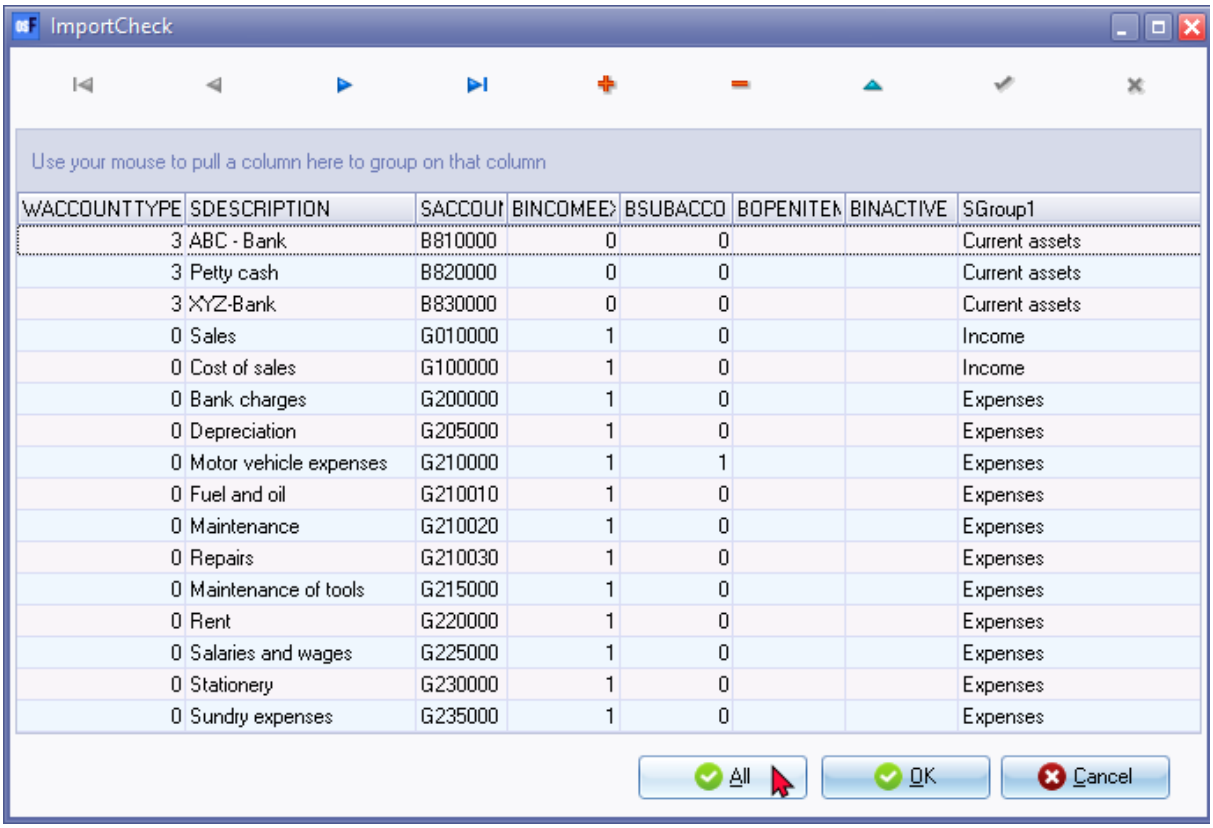
Ln 46, Col 1

6. Click on the button.



7. Click on the Import button. The "*ImportCheck*" screen is displayed:



WACCOUNTTYPE	SDESCRIPTION	SACCOUI	BINCOMEE	BSUBACCO	BOPENITEM	BINACTIVE	SGroup1
3	ABC - Bank	B810000	0	0			Current assets
3	Petty cash	B820000	0	0			Current assets
3	XYZ-Bank	B830000	0	0			Current assets
0	Sales	G010000	1	0			Income
0	Cost of sales	G100000	1	0			Income
0	Bank charges	G200000	1	0			Expenses
0	Depreciation	G205000	1	0			Expenses
0	Motor vehicle expenses	G210000	1	1			Expenses
0	Fuel and oil	G210010	1	0			Expenses
0	Maintenance	G210020	1	0			Expenses
0	Repairs	G210030	1	0			Expenses
0	Maintenance of tools	G215000	1	0			Expenses
0	Rent	G220000	1	0			Expenses
0	Salaries and wages	G225000	1	0			Expenses
0	Stationery	G230000	1	0			Expenses
0	Sundry expenses	G235000	1	0			Expenses

You may use the record buttons to add, delete or change the accounts on the "ImportCheck" screen. You may then click on the All or OK buttons to import the accounts.

The values of the data in the "ImportCheck" screen, listing the general ledger accounts, is as follows:

- *ACCOUNTTYPEID - Account type - 0=General ledger, 3=Bank accounts and 4=Tax accounts.*
- *SDESCRIPTION - Account description (Name).*
- *SACCOUNTCODE - Account number (Code).*

W *BINCOMEEXPENSE - 1=Income / Expenses, 2=General ledger (Tax and Bank accounts is by default a Balance sheet Account).*

W *BSUBACCOUNTS - 1=Sub-accounts, 0=No Sub-accounts.*

W *BOPENITEM - Column values is blank.*

W *BINACTIVE - Column values is blank.*

W *SGroup1 - Account group 1 Description*

W *SGroup2 - Account group 2 Description*

W *DSTARTDATE - Start Date - (only applicable to Account type 4 only (i.e. Tax accounts)).*

W *DENDDATE - End Date - (only applicable to Account type 4 only (i.e. Tax accounts)).*

W *FRATE - Tax Rate (Percentage) - (only applicable to Account type 4 only (i.e. Tax accounts)).*

W *SReceipt - Receipts journal - (only applicable to Account type 3 only (i.e. Bank accounts)).*

W *SPayment - Payments journal - (only applicable to Account type 3 only (i.e. Bank accounts)).*

W *SCurrency - Currency (Not used).*

BOPENITEM column is blank. All accounts for which the "Open item account" was set as "Yes" is set to "No" is blank. This will import any Open accounts as normal accounts.

You may need to identify and set these accounts as a "Open item account".

BINACTIVE column is blank. All accounts for which the "Status" is set to "Disabled" is blank. This will import any "Disabled (inactive) accounts as "Enabled" (active) accounts.

You need to Delete these accounts; or set them as "Disabled" (inactive) after importing these accounts.

Bank accounts - WACCOUNTTYPEID column is "3". If Bank accounts is imported, it will create Payments bathes and/or Receipt batches for each bank account depending on the Default bank reconciliation method setting (Setup - System parameters on the Setup ribbon).

You may select to delete the Bank accounts on the "ImportCheck" screen.

If these Bank accounts is not deleted on the "ImportCheck" screen, it will import the Bank accounts, as well as the Payments bathes and/or Receipt batches associated with each of the Bank accounts.

You may then need to delete these Bank accounts, as well as its associated Payments bathes and/or Receipt batches associated with each of the Bank accounts and create (add) your own Bank accounts and associated Payments bathes and/or Receipt batches.

8. Once the import process is finished an information message will be displayed.

   "Data file import completed!"

9. Click on the OK button.

10. Go to the Reports ribbon and select Reports → Ledger → Listing menu to check that the ledger accounts are correct.

Blocked accounts - If accounts status is set to disabled, these accounts will be imported. Note the status of disabled accounts is set to enabled. For example, if you have changed the Tax rates, and do not wish to use these old accounts, you may delete these accounts or disable them.

The Reporting groups for Account groups 1 and Account group 2, will also be imported in the Setup → Groups.

11. If you need to edit the ledger accounts, go to the Setup ribbon and select Accounts.

After Import

Link Account group 1 / Account group 2 to Financial categories

If Account group 1 and or Account group 2 is imported into your Set of Books, these Account groups should be linked to the imported general ledger accounts in Setup → Accounts (Setup ribbon).

These Account groups may not be linked to the 5 Financial categories (i.e. Assets, Liabilities, Capital, Income and Expenses).

You may need to link the Account groups to the Financial categories (on the Setup ribbon) in the following two (2) options:

1. Setup → Financial categories.
2. Setup → Accounts.

The basic account groups should already be included in your imported Set of Books, and you may add, edit or delete any of these groups in Setup → Groups on the Account group 1 and/or Account group 2, before linking them to financial categories.

The sequence in which the groups and accounts are listed, may be changed by selecting the groups on the list and use the Move up or Move down buttons.

This will enable you to structure your general ledger reports (i.e. Trial balance, Income statement, Balance sheet, Chart of Accounts), according to your specific reporting needs.

Disabled (Inactive) Accounts

If the status of Accounts were set as Disabled in the source Set of Books from which the Export file was exported, the Disabled accounts will be imported as "Enabled". You may need to:

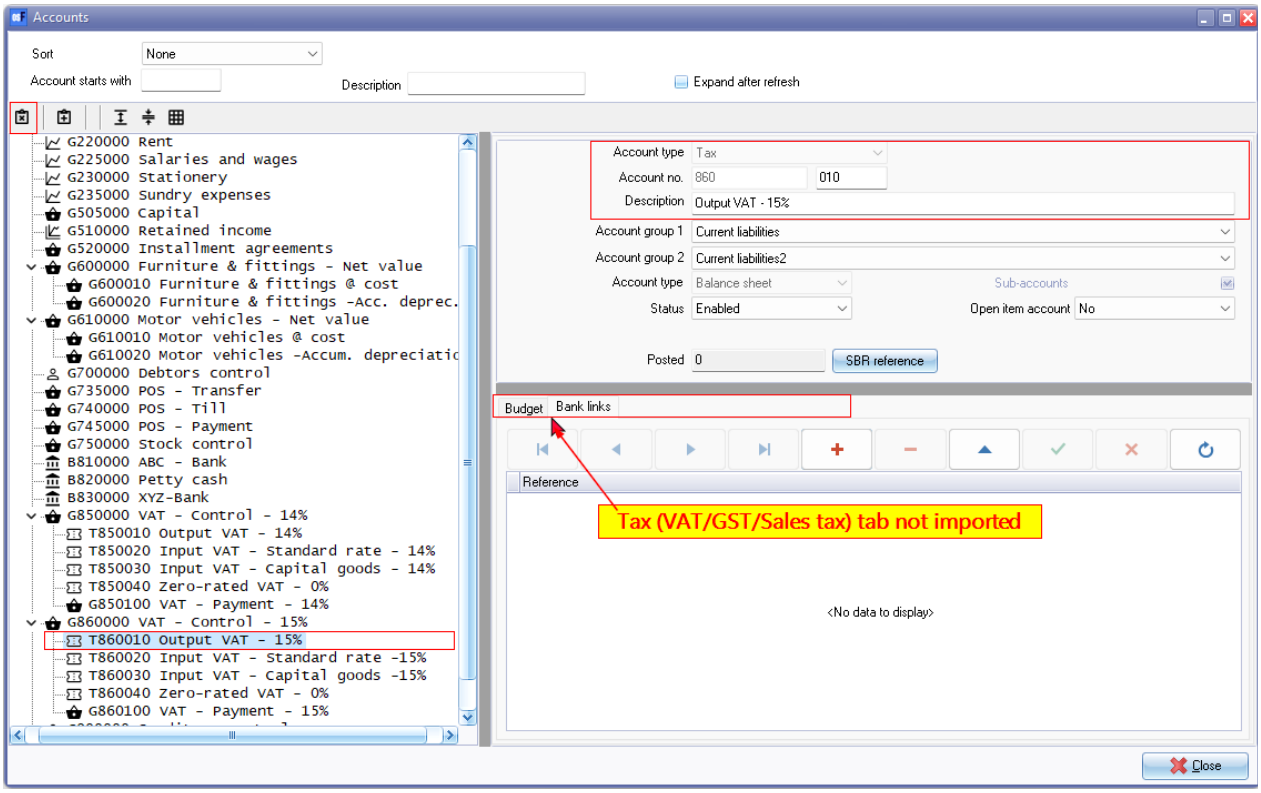
- Delete the "*Disabled*" accounts, if you do not wish to keep these accounts; or
- Keep the Status of these Accounts as "Enabled" (active); or set the Status of these Accounts as "*Disabled*" (inactive).

Tax (VAT/GST/Sales tax) Accounts / Codes

It is important to check the Tax (VAT/GST/Sales tax accounts and Tax percentages, before you process any transactions in batches and/or documents.

Recreate Tax (VAT/GST/Sales tax) codes with missing Tax tab

The Tax tab on the first Tax code (e.g. Output VAT - 14% (T850010) and Output VAT - 15% (T850010) is missing after Import.

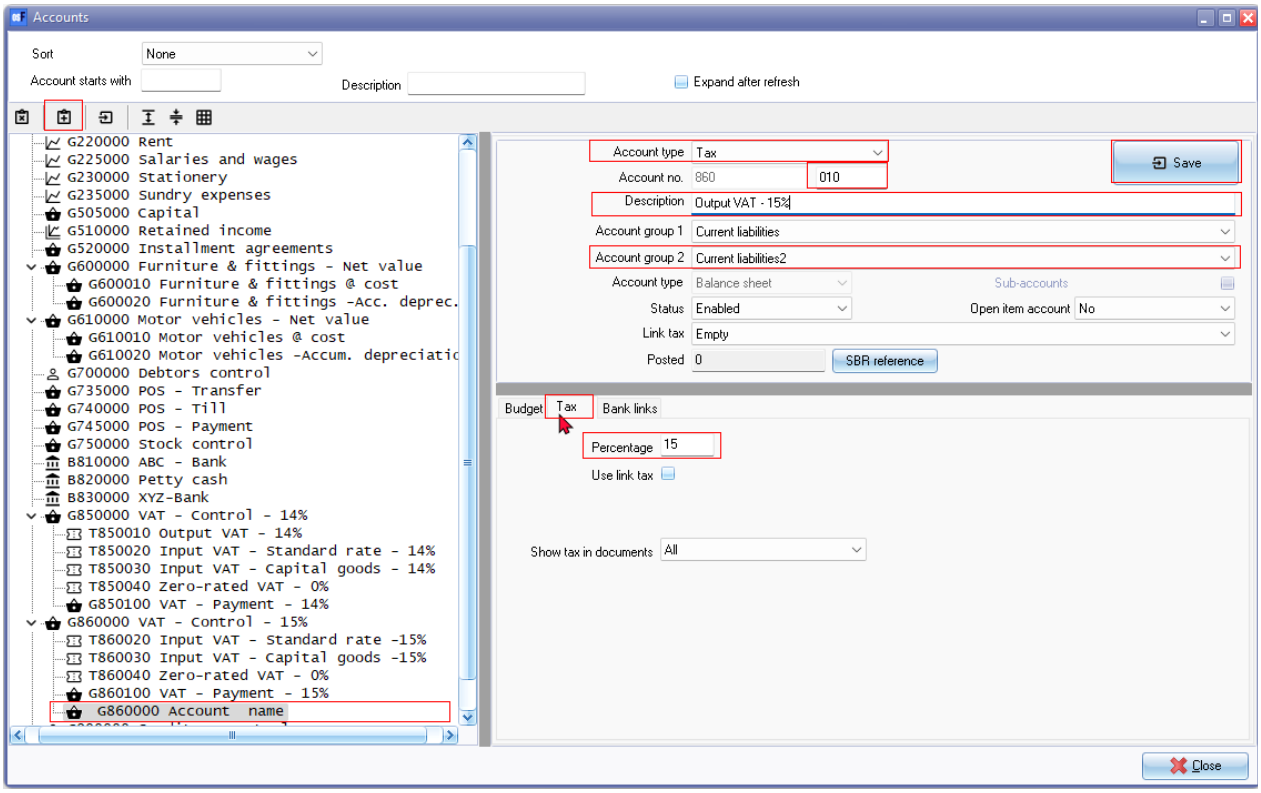


Select the Tax code (e.g. T860010) and Copy the Description (e.g. Output VAT - 15%) to your clipboard.

Click on the Delete icon.

Select the Tax control account (e.g. VAT - Control - Output VAT - 15%) (main account).

Click on the Add icon.



A new Ledger account will be added. Select the following:

- Account type - Select Tax.
- Account number - Change the "000" in the Sub-account section with "010". You may use the same sub account code as the deleted Tax account.
- Description - Enter the name of your Output tax account (or paste from your clipboard).
- Account group 2 - If Account group 2 is used in the in the other accounts, you need to reselect Account group 2.
- On the Tax tab, enter the Tax percentage (e.g. 15) and click on the Save button.

The Account name will change to "*Output VAT - 15%*" (as in this example) and the Ledger icon will change to the Tax icon.

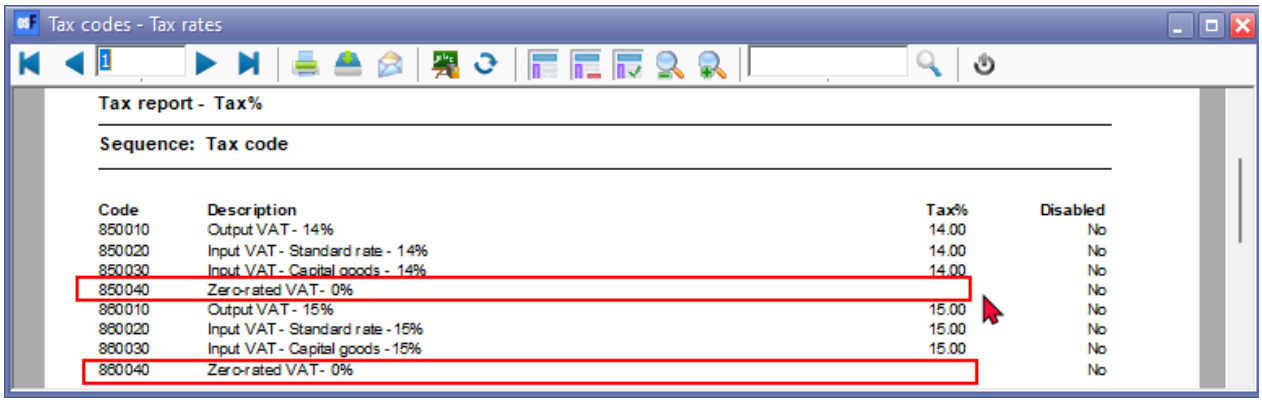
Zero -rated Tax (VAT/GST/Sales tax) accounts - Confirm Zero percentage

Zero- rated Tax (VAT/GST/Sales tax) with a Tax percentage of "*0%*" may be blank.

On the Tax codes - Tax rates report (User reports → Tax on the Reports ribbon), Tax percentages with a

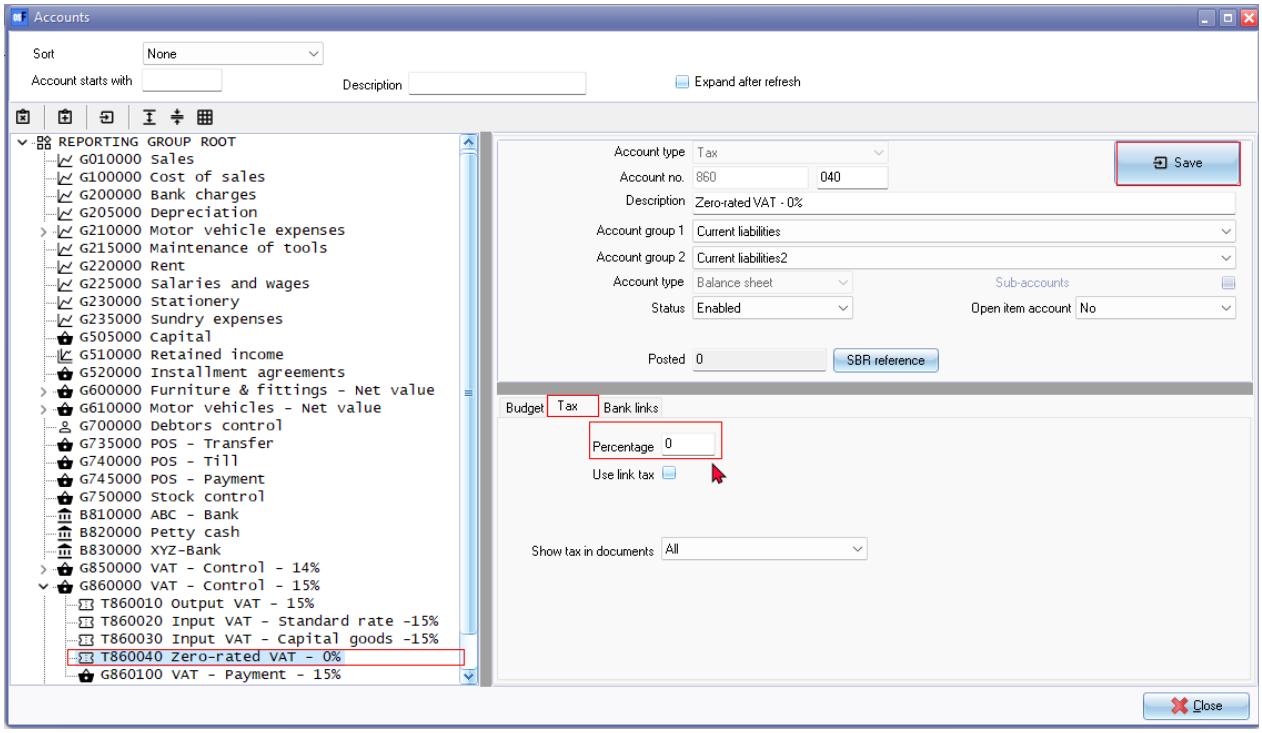
zero-rate will be Imported as a blank percentage.

This may cause the Zero rated Tax (VAT/GST/Sales tax) selected in processing transactions in Batches and/or Documents not to display correctly on Tax reports.

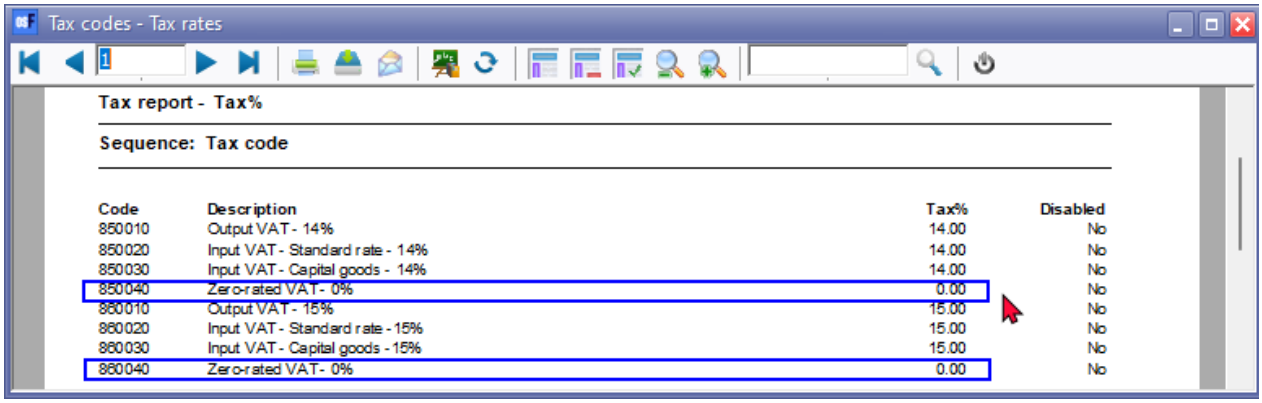


To fix this; select the Zero-rated Tax (VAT/GST/Sales tax) account.

Overtype the Tax percentage with "*0*" and click Save.



After confirming Zero-rated "0" tax percentages (tax rates) the Tax rates should be correctly listed as "*0*" percentage.

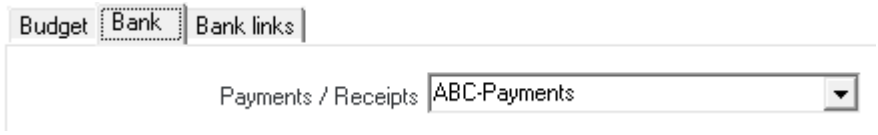


Delete / Add Bank Accounts

If Bank accounts is imported, it will create a Payments batch/ Receipts batch for each Bank account / Petty Cash account.

It is recommended that the Bank Accounts, as well as the Imported batch types be deleted and recreated.

If a blank Set of Books was created; using the "*Customise your own Set of Books (Advanved)?*" option on the "Creation wizard", the setting for the Bank import plugin, will be activated. This means, that by default, the "*Default bank reconciliation method*" option is not selected (Setup → System parameters) and the Bank account will be linked to a combined Payments and Receipt batch.



If you do not wish to use the Bank import plugin, to import bank statements, (and manually process bank transactions is a separate Payments batch and Receipts batch), the "*Default bank reconciliation method*" option is need to be selected (Setup → System parameters).

Open exported text file - Spreadsheet

To illustrate the exported fields and data, the exported text file is opened in a spreadsheet.

Once the text file is saved, you need to launch your spreadsheet application i.e Excel, OpenOffice, LibreOffice, Ultra Office, etc.

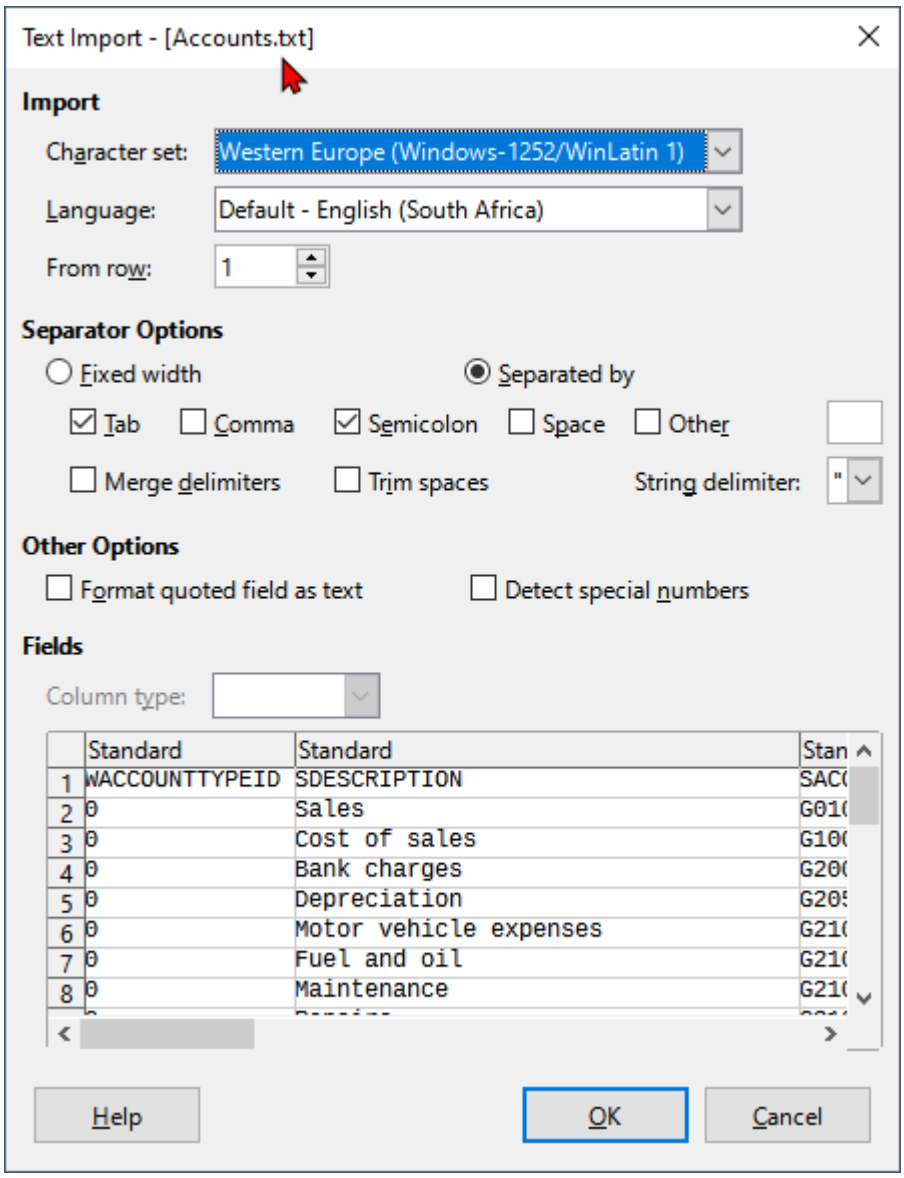
If you do not enter and save the Export.txt file name, you may replace existing (previously exported) files.

*If the exported Text (*txt) file is opened (active), and you are trying to open the export file with the same name, a similar error message as the following will be displayed:*

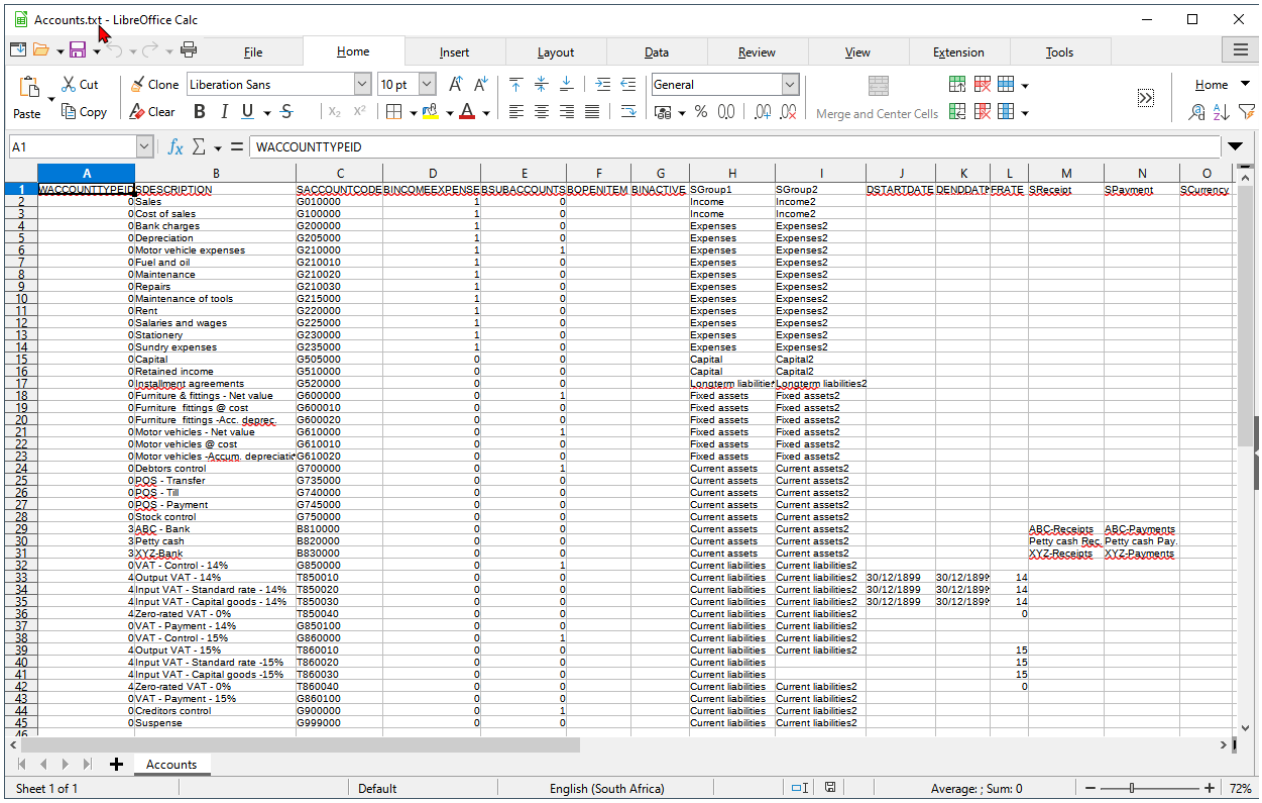
> Cannot create file "D:\Export\Export.txt"

The process cannot access the file because it is being used by another process.

On your spreadsheet application, open the accounts saved text (*.txt) file and confirm your tab delimited settings ("*Separator Options*") on the "*Text Import*" screen.



This will open your exported text file of the accounts in a spreadsheet. An example of the exported file opened in "*LibreOffice Calc*" spreadsheet, is as follows:



WACCOUNTTYPEID	SDESCRIPTION	SACCOUNTCODE	BINCOMEEXPENSE	BSUBACCOUNTS	BOPENITEM	BINACTIVE	SGroup1	SGroup2	DSTARTDATE	DENDDATE	FRATE	SReceipt	SPayment	SCurrency

Import Accounts - Spreadsheet Export / Import

osFinancials5/TurboCASH5 supports the "*Excel Workbook (*.xlsx)* file type Spreadsheet import and export feature.

- Spreadsheet export - You may export ledger accounts and save it as a "*Excel Workbook (*.xlsx) file type.*
- Spreadsheet import - You may import ledger accounts from a saved "*Excel Workbook (*.xlsx) file type.*

This feature may be used to import ledger accounts into:

- Into the same Set of Books.
- Into a different Set of Books.
- Into a new Set of Books - Created from scratch - Create your own Set of Books (Advanced)? option for Firebird database types.
- Into a new Set of Books - Created from scratch - Create your own Set of Books (Advanced)? option for Microsoft SQL sever (MSSQL) database types.

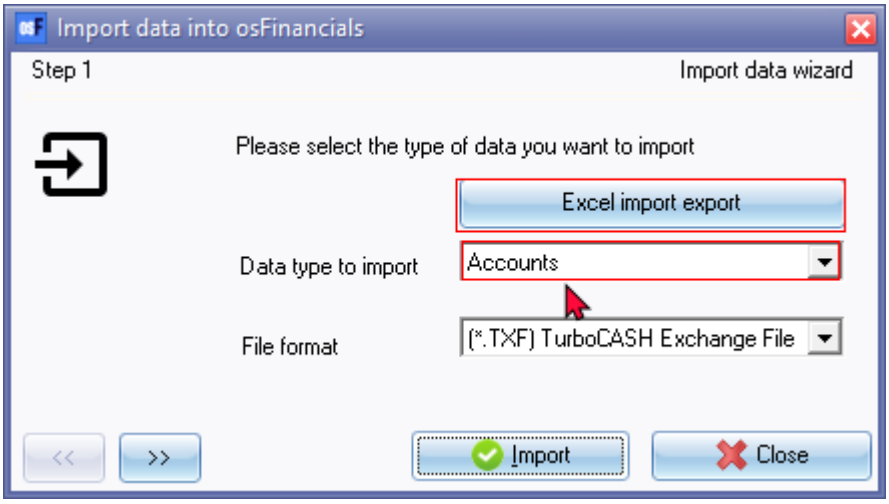
Before you may import ledger accounts in a new Set of Books, you need to do the necessary setup and configuration.

Once this is done, you may start to import ledger accounts from a saved "Excel Workbook (.xlsx) file type.*

You may access the "*Data Import Export*" feature from the following options:

- Setup → Accounts (Setup ribbon).

- Import option on the Setup ribbon.



Select Accounts as the "*Data type to import*". Click on the Excel import export button. The "*Data Import Export*" spreadsheet will displayed column headings for the Accounts (without any data).

Spreadsheet - Export - General ledger accounts

This option will allow you to import your Accounts (Chart of accounts) file from a valid an Excel spreadsheet in the Excel Workbook (xlsx) file format. You may then add new accounts, edit existing accounts and import it back into another Set of Books.

Reports for the accounts (Chart of Accounts) are printed in Reports → Ledger → Listing - Chart of Accounts (Reports ribbon).

Before using this feature, it is recommended to print the report.

If you make any changes in the Excel spreadsheet, and Import it, these changes will be reflected.

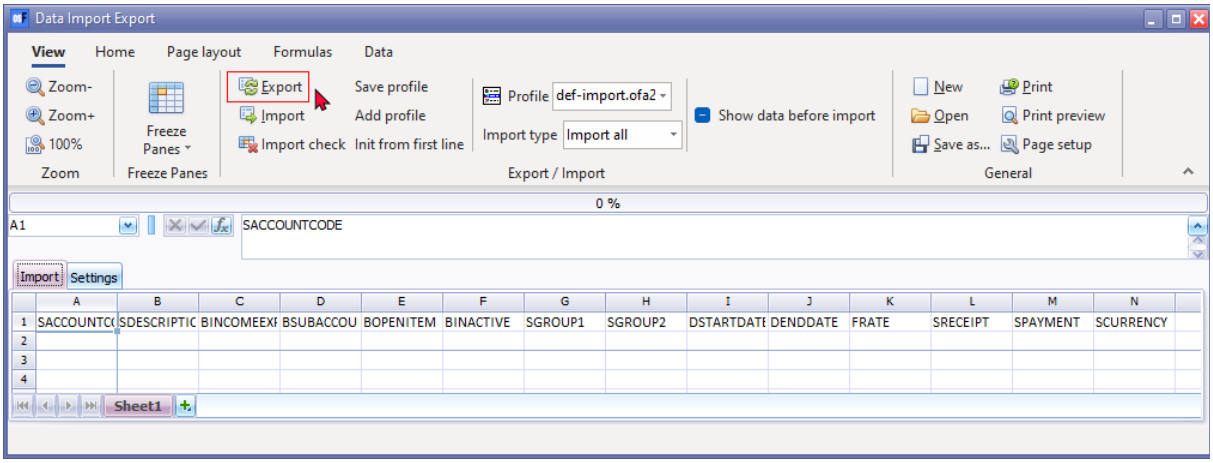
To import Accounts from a Excel Workbook (xlsx) file:

Select the Set of Books which contains the Accounts (Chart of accounts) you need to export.

To export accounts to a spreadsheet:

1. In the source Set of Books from which you wish to export the Accounts to a spreadsheet file, go to Setup → Accounts (Setup ribbon).

2. Click on the Spreadsheet icon. A blank "*Data Import Export*" spreadsheet will be displayed with the column headings of the "*Accounts*" table.



3. Click on the Export icon on the "*Data Import Export*" screen. All the "*accounts*" (chart of accounts) is exported (populated) in the spreadsheet.

Spreadsheet - Import - General ledger accounts

Select the Set of Books which contains the Accounts (Chart of accounts) you need to export.

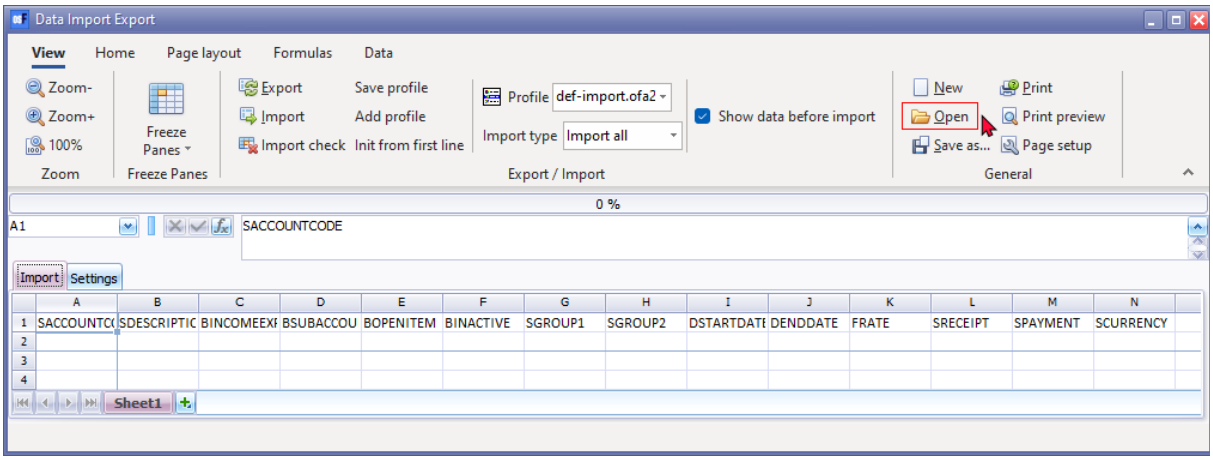
This option will allows you to import data for Account records from a valid Excel Workbook (*.xlsx) file format into an existing Set of Books.

To be able to import the data for Account records, you need to create a valid spreadsheet export file in the Excel Workbook (*.xlsx) file format from a Set of Books, you wish to import your system in the Export or Setup → Accounts menu (Setup ribbon).

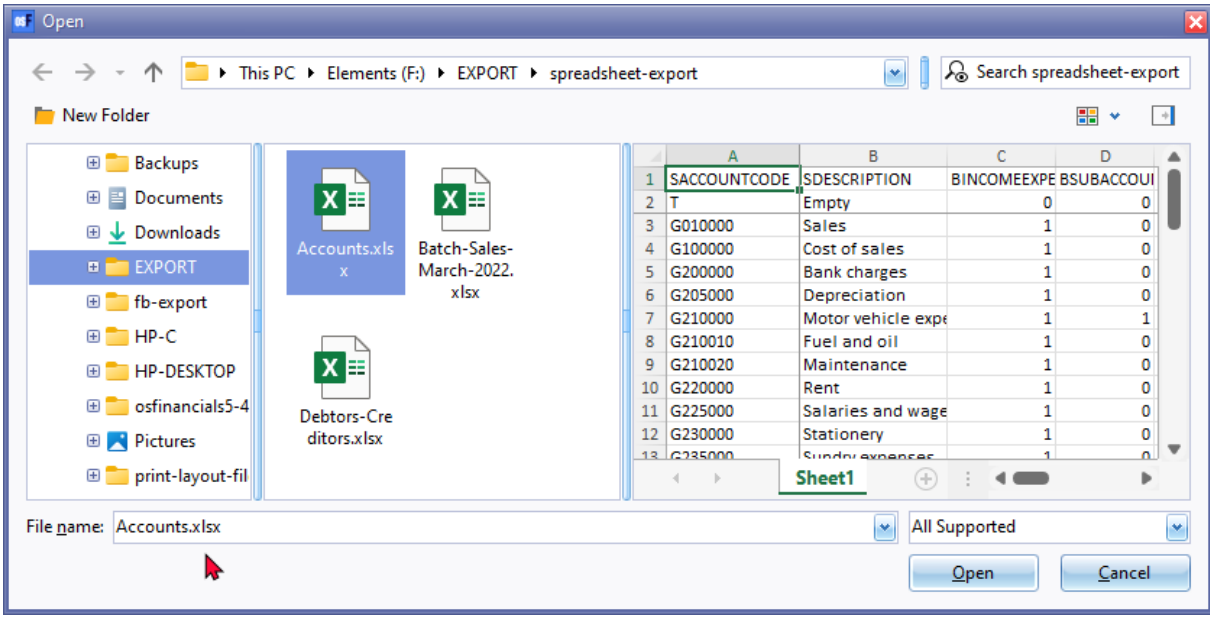
To import accounts to a spreadsheet:

1. In the Set of Books in which which you wish to import the Accounts to a spreadsheet file, go to Setup → Accounts (Setup ribbon).

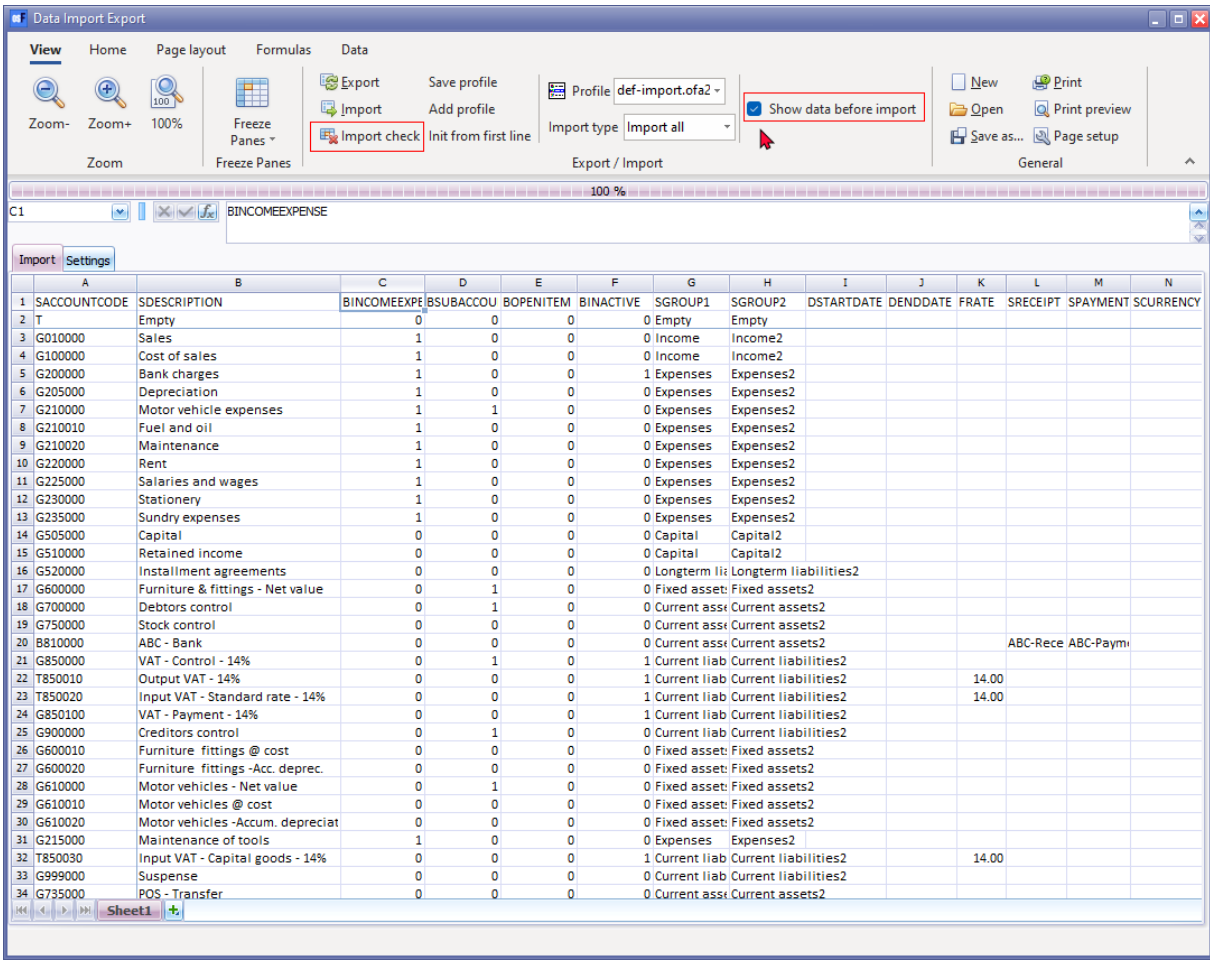
2. Click on the Spreadsheet icon. A blank "*Data Import Export*" spreadsheet will be displayed with the column headings of the "*Accounts*" table.



3. Click on the Open icon on the "*Data Import Export*" screen.



4. Locate a valid Excel Workbook (*.xlsx) saved file and click on the Open button. All the "*accounts*" (chart of accounts) included in the exported file is populated in the spreadsheet.



5. To do a import check of the imported file, select (tick) the "*Show data before import*" option and click on the Import check icon.

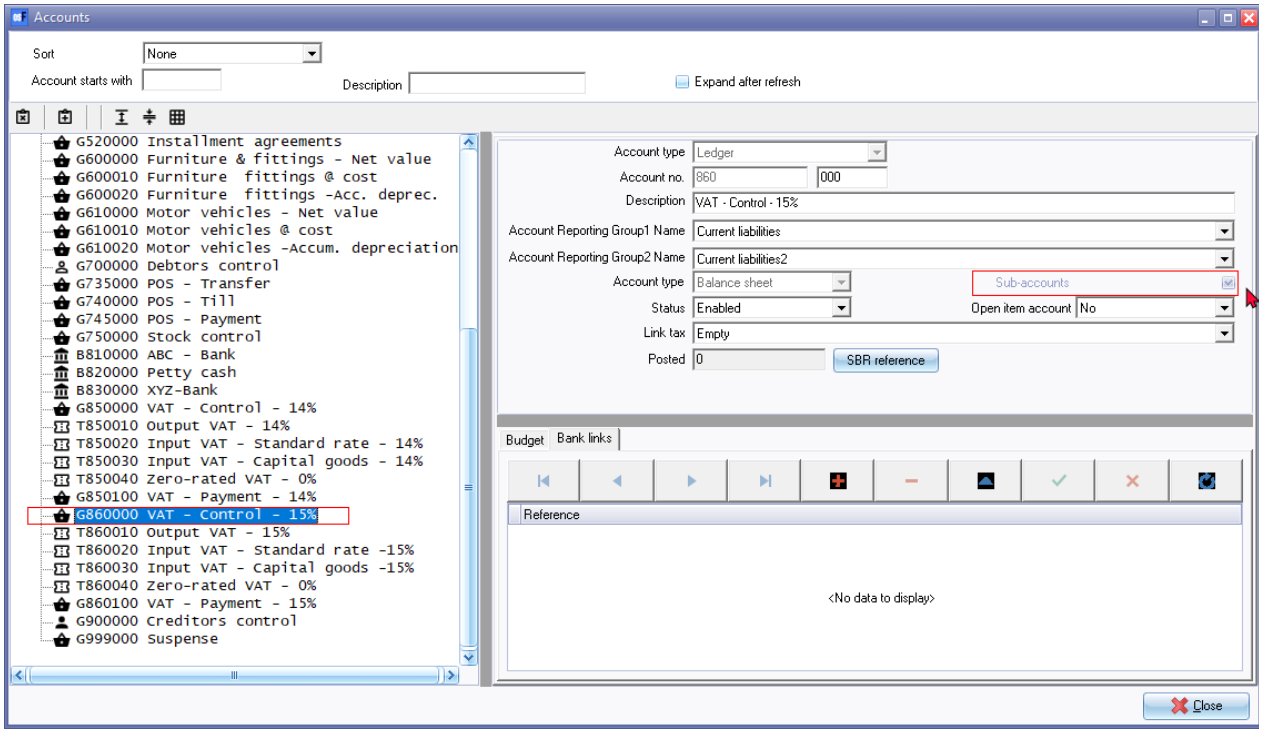
8. Once the import process is finalised, Column A will be displayed in a green background colour.

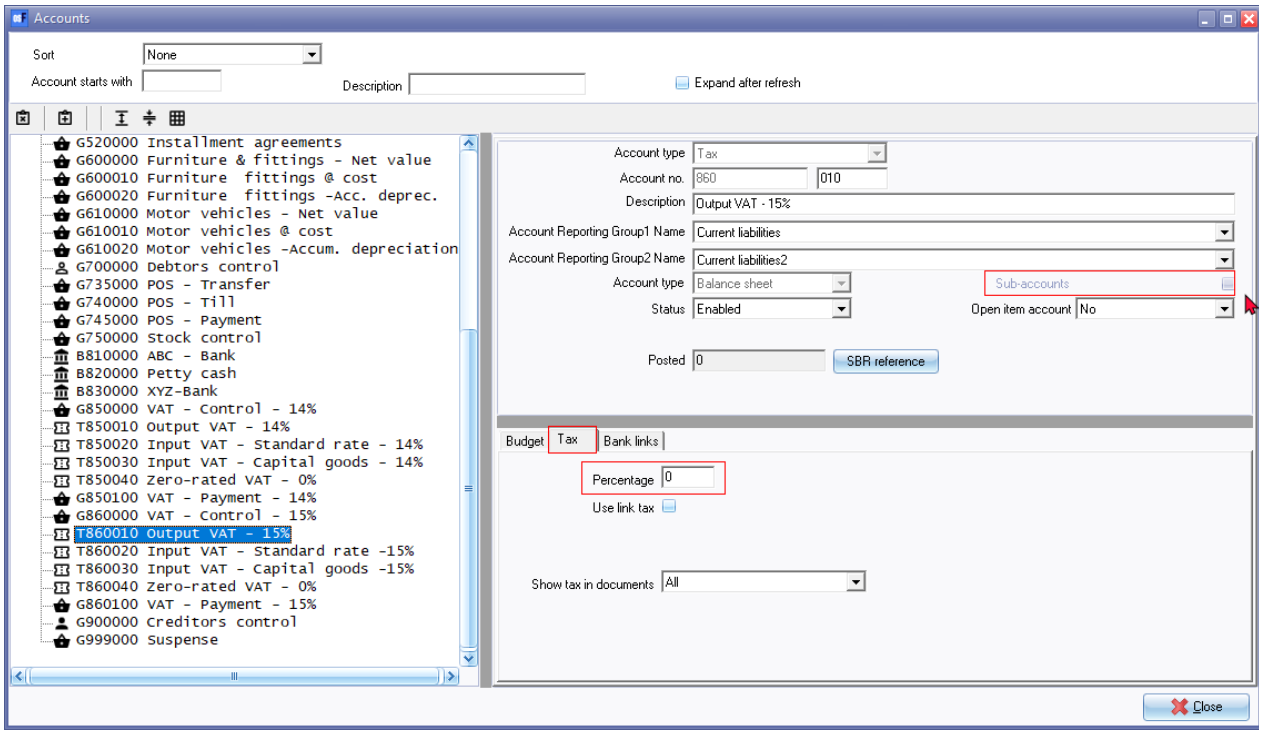
9. Close the "*Data Import Export*" spreadsheet screen. The "*Accounts*" screen will list the imported chart of accounts.

After import

Imports accounts but no Sub accounts, etc. Sub-accounts greyed out but ticked for Main accounts

Imports tax accounts with Tax tabs but no tax percentages.





Created with the Standard Edition of HelpNDoc: Easy CHM and documentation editor

Change Tax rates

This topic is listed to illustrate the process for changes in Tax percentages. Some of the screens, themes and periods are not in line with the rest of the documentation.

Change Tax rates

The Tax authorities may impose changes in the VAT (GST/Sales tax) rates. For example, in South Africa, the South African Revenue Services (SARS), changed the VAT rate from 14% to 15% on 1 April 2018.

References / Resources

SARS - *FAQs: Increase in the VAT rate from 1 April 2018*.

SARS – *Pocket Guide on the VAT rate increase on 1 April 2018*. The following is a list of topics explained in detail:

- RATE CHANGE
- TRANSACTION DATE
- PRICES QUOTED OR ADVERTISED
- AGREEMENTS
- SALES AND BILLING SYSTEMS, ISSUING OF CASH REGISTER SLIPS, TAX INVOICES, DEBIT AND CREDIT NOTES
- RECEIPT OF QUOTES, TAX INVOICES, CASH REGISTER SLIPS DEBIT OR CREDIT NOTES
- IMPORTATION OF GOODS
- ACCOUNTING SYSTEMS
- VAT201 RETURNS
- RATE SPECIFIC RULES

SARS – *VAT201 – Return Example*.

GOLEGAL - *VAT rate increase: What you need to consider*.

Moneyweb - *VAT increase: Practical issues for companies to consider*.

In osFinancials5/TurboCASH5, the VAT accounts need to accommodate two VAT rates.

An invoice may even reflect a rate of 14% and 15% depending if the goods were supplied or services rendered before 31 March 2018 or after 1 April 2018. An example would be where a service provider charges subscriptions in advance April 2018, but usage (e.g. calls) are charged in arrears March 2018.

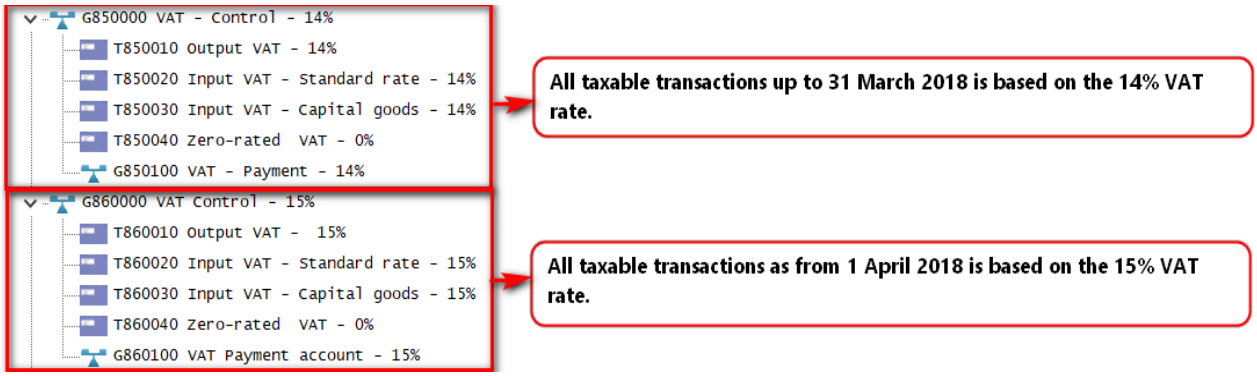
Configure TurboCASH5 / osFinancials

Tax Accounts

In this example, the VAT rate is based on 14% in March 2018 and increased to 15% in 1 April 2018.

For the transition period and thereafter; it is recommended that a total new structure of Tax accounts (including the 2 Tax ledger accounts (i.e. VAT – Control and VAT – Payment accounts), similar to the14% structure is replicated.

An example of the 14% Tax accounts and the 15% Tax accounts.



This method makes it easier for reporting, managing and processing tax transactions.

Another method is where Tax accounts are added within the existing VAT structure.

See TurboCASH VAT Changeover video

An example to incorporate the Tax (VAT) accounts into the existing structure of the Chart of accounts:

- *T850050 – Output VAT – 15%*
- *T850060 – Input VAT – Standard rate - 15%*
- *T850070 – Input VAT – Capital goods – 15%*

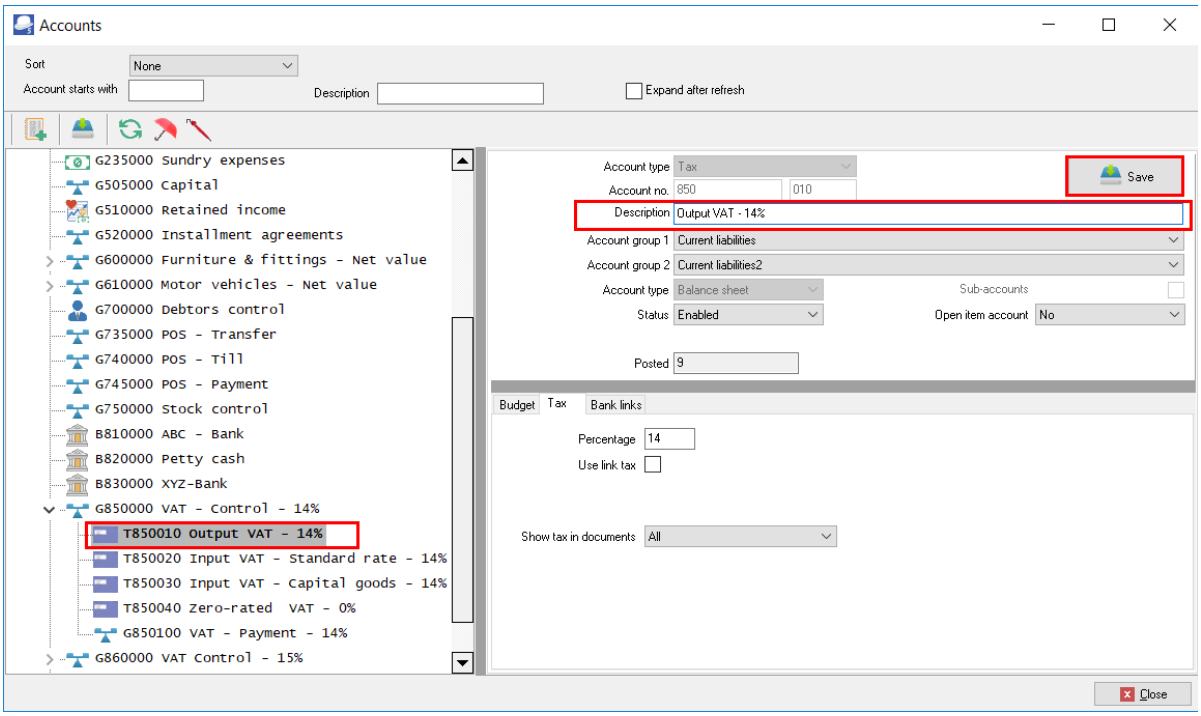
Change the Descriptions of existing Tax Accounts to 14%

Add or Change the Descriptions of the Tax Accounts (i.e. Output - VAT Control, the VAT Payment account, as well as all Tax accounts to 14%) to reflect the existing percentage applicable (until 31 March 2018).

To change the Descriptions of Output and Input tax accounts to 14%:

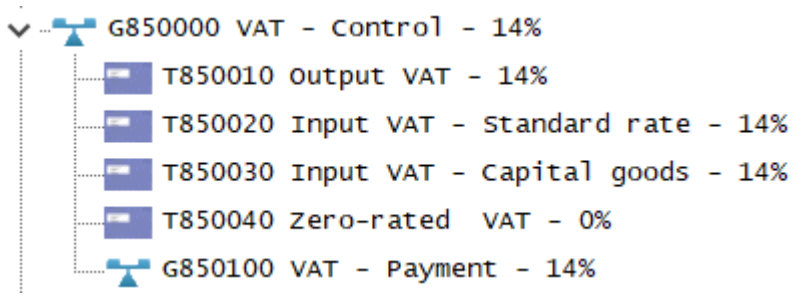
1. On the Setup ribbon, select Setup → Accounts.

2. Select a Tax account.



3. In the "*Description*" field, add "- *14%*" to "*Output VAT - 14%*".

4. Click the Save button to save the changes. After all the account descriptions is changed, the 14% accounts should display as follows:



Add new VAT - Control and VAT - Payments - 15% accounts

This is only applicable if a new Structure is set for the Tax accounts (i.e. VAT - Control, the VAT - Payment account (as Ledger accounts), as well as all Tax accounts to 15%) to reflect the 15% percentage applicable (as from 1 April 2018).

Add new VAT - Control account at 15% as a Ledger Main account

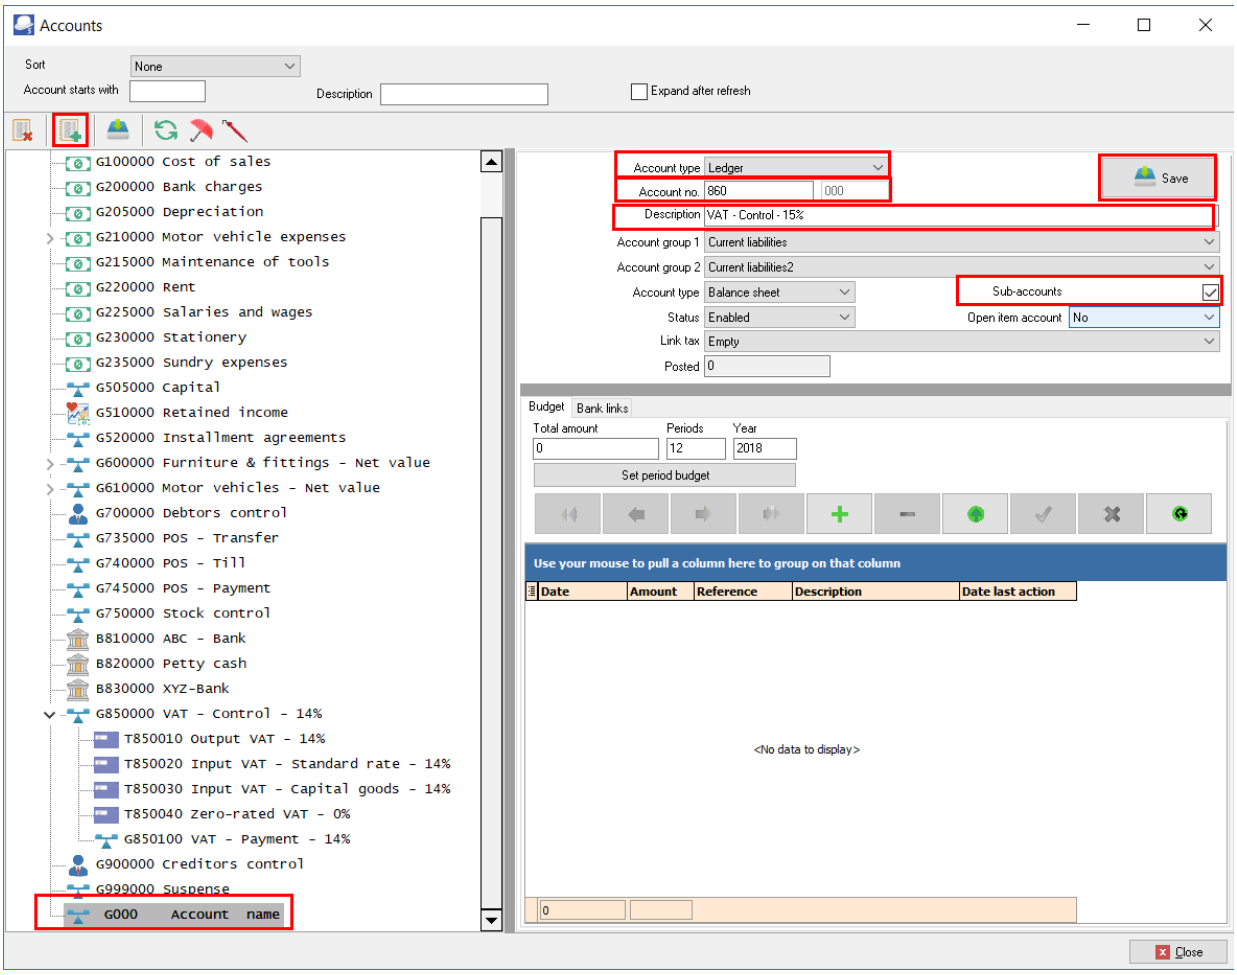
The VAT – Control – 15% account is the Main account under which the VAT – Payment – 15% as a Ledger

account type as well as Tax account type for each Tax codes (VAT codes) at 15% as well as the Zero-rated Tax codes (VAT codes) will be processed, managed and reported on. Transactions on which the 15% VAT rate is applicable from 1 April 2018, are selected and posted (updated to the ledger).

To Add a new VAT Control as a Ledger Main account for 15%:

1. On the Setup ribbon, select Setup → Accounts.

2. Select the "*REPORTING GROUP ROOT*" and click on the (Add:Account) icon (or select the Add on the Context menu). An entry for the new ledger account is displayed as "*G000 000 Account name*" on the Account list.



3. Enter or select the following:

   a) Account type - Select "*Ledger*".

   b) Account no. - Change "*100*" in the sub accounts field of the "Account no." field to "*860*".

   c) Description - Replace "*Account name*" with "*VAT Control – 15%*".

   d) Account group 1 - If you have set up "*Account group 1*", select your account group e.g.

"*Current liabilities*".

e) Account group 2 - If you have set up "*Account group 2*", select your account group e.g. "*Current liabilities2*".

f) Type - "*Balance sheet*" should be displayed.

g) Sub accounts - Select (tick) this option. This is the new main account under which a Ledger sub account for the Tax payments and Tax accounts for each of VAT accounts will be added for the 15%.

h) Status -"*Enabled*" (default) should be selected.

i) Open item account - "*No*" (default) should be selected.

j) Link tax - "*Empty*" (default) should be selected.

4. Click on the Save button. When you save the "*VAT - Control - 15%*" account, if will automatically be listed after the 14% Tax accounts.

Add new VAT Payment account at 15% as a Ledger Sub account

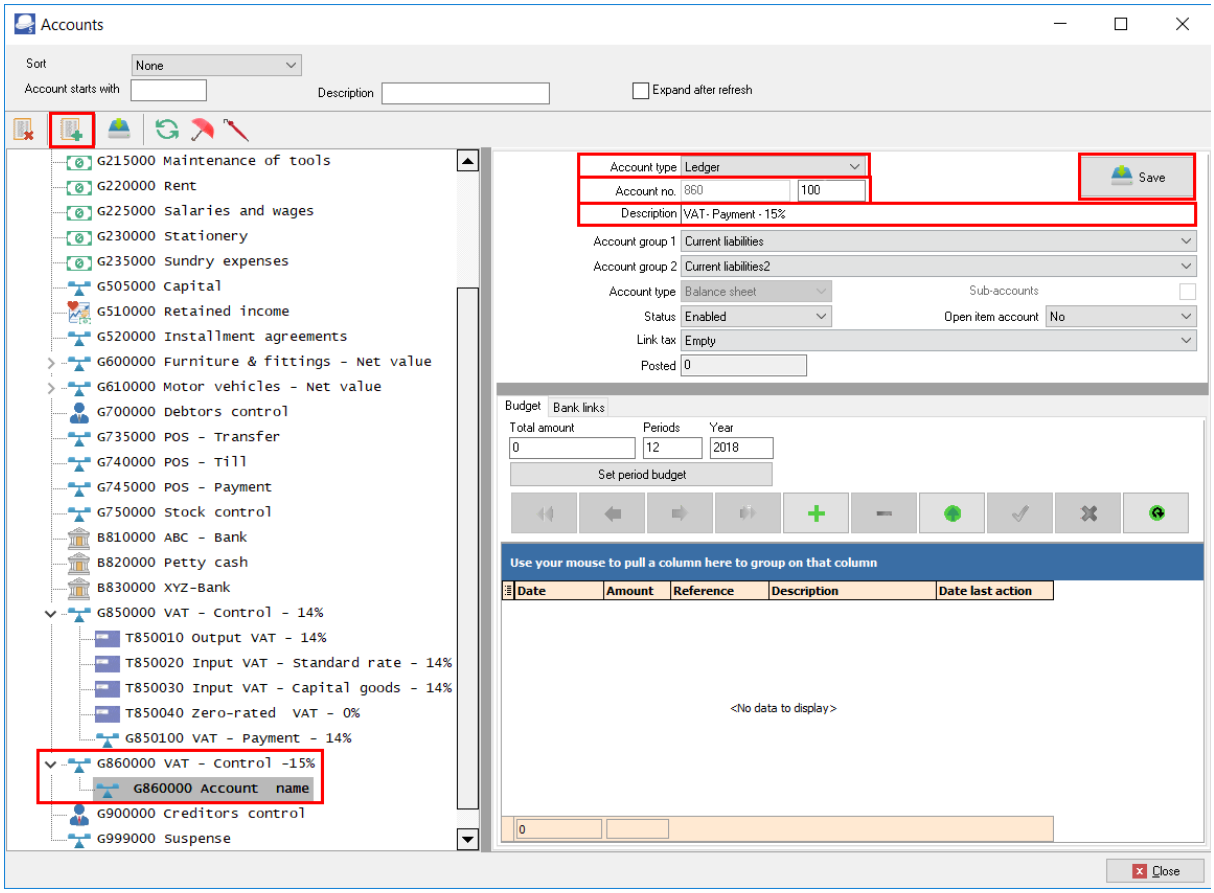
The VAT – Payment – 15% as a Ledger account type on which the payment to SARS is recorded. All payments to SARS for transactions, on which the 15% VAT rate is applicable from 1 April 2018, should be paid and recorded in the from this VAT – Payment – 15% account.

All payments to SARS for transactions, on which the 14% VAT rate is applicable on or before 31 March 2018, should be paid and recorded in the VAT – Payment – 14% account.

To Add a new VAT Payment - Ledger Sub account for 15%:

1. On the Setup ribbon, select Setup → Accounts.

2. Select the "*G860000" VAT Control – 15%*" account and click on the (Add:Account) icon (or select the Add on the Context menu). An entry for the new ledger account is displayed as "*G860 000 Account name*" on the Account list.



3. Enter or select the following:

    a) Account type - Select "*Ledger*".

    b) Account no. - The main account "*860*" in the of the "*Account no.*" field cannot be changed. Change the "*Sub accounts*" field from "*000*" to "*100*".

    c) Description - Replace "*Account name*" with "*VAT - Payment – 15%*".

    d) Account group 1 - If you have set up "*Account group 1*", select your account group, e.g. "*Current liabilities*".

    e) Account group 2 - If you have set up "*Account group 2*", select your account group, e.g. "*Current liabilities2*".

    f) Type - "*Balance sheet*" should be displayed.

    g) Sub accounts - This option cannot be selected, since this is a sub account of the VAT - Control - 15% main account.

    h) Status -"*Enabled*" (default) should be selected.

    i) Open item account - "No" (default) should be selected.

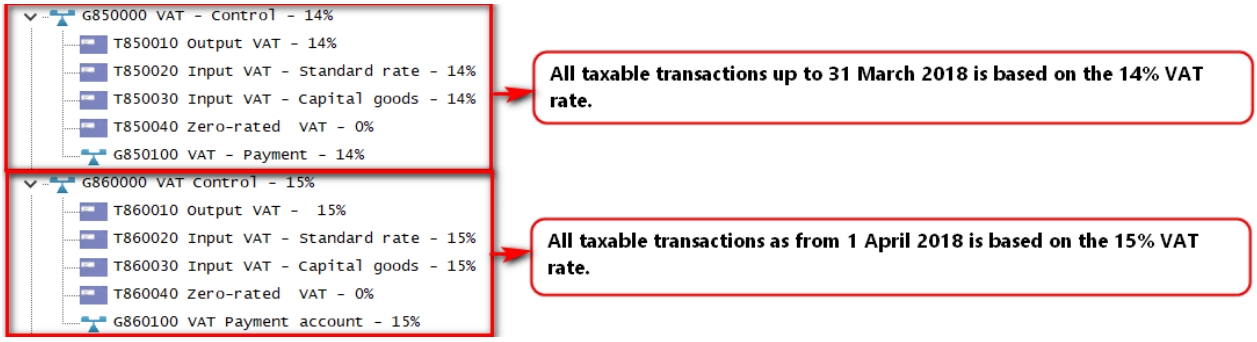
    j) Link tax - "*Empty*" (default) should be selected.

4. Click on the Save button.

Add new Tax codes (Tax accounts) for Each Tax type at 15%.

Your Set of Books in TurboCASH need to be configured to is able to accommodate the different rates. Transactions need to be processed at the new VAT rate of 15% as from 1 April 2018, and at VAT rate of 14% as up to 31 March 2018.

All "*Enabled*" Tax / VAT codes are listed in the Tax lookup in the "*Tax*" column. Transactions are taxable at the VAT rate of 14% up to 31 March 2018, and transactions as from 1 April 2018 are taxable at the VAT rate of 15%.

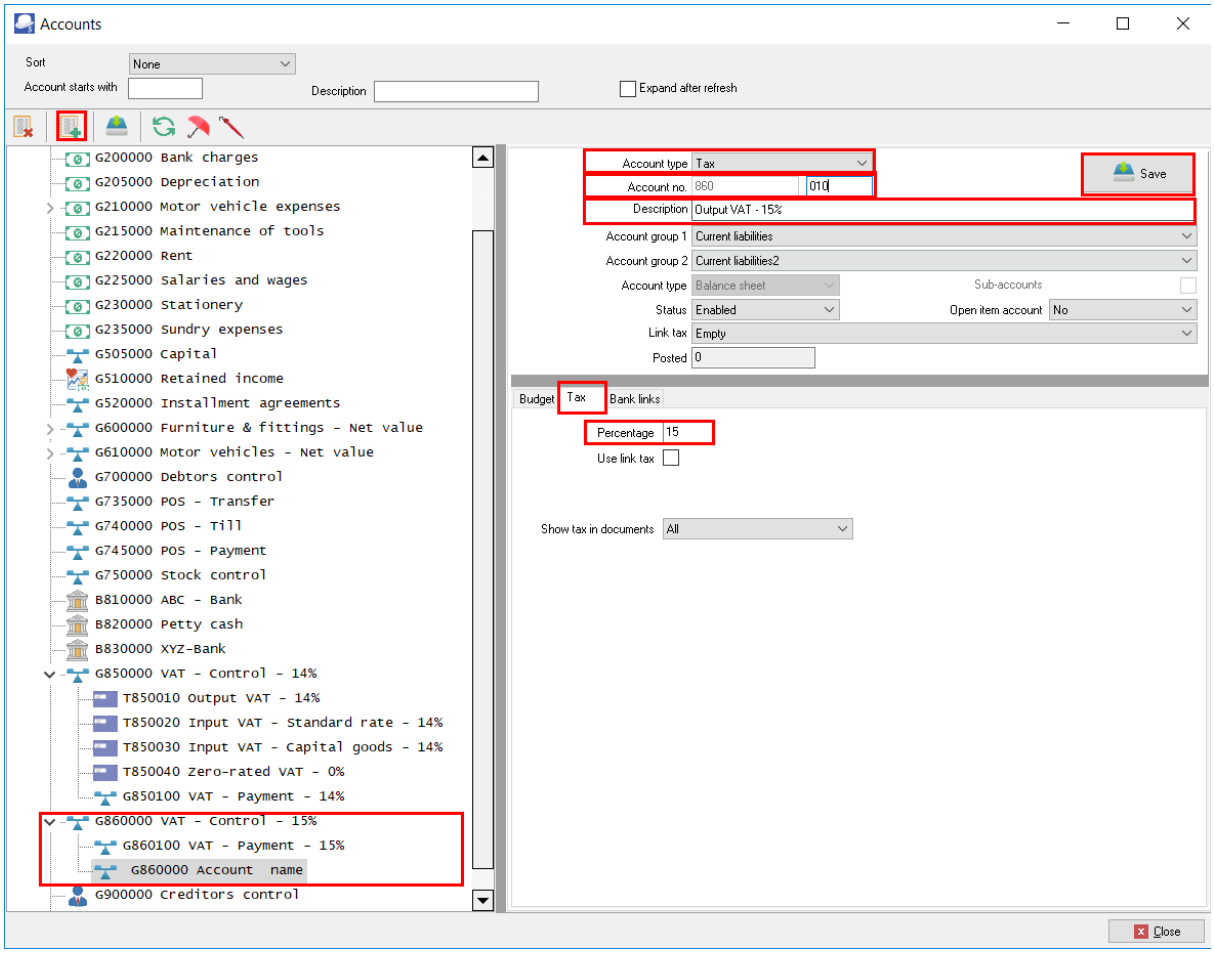


To Add a VAT accounts – Tax Sub account for 15%:

1. On the Setup ribbon, select Setup → Accounts.

2. Select the Tax Control Account (as in this case, "*G860-000 VAT Control Account*") and click on the (Add:Account) icon (or select the Add option on the Context menu).

3. An entry for the new ledger account is displayed as "*G860 000 Account name*" on the Account list. The reason for this is that we need to create a Tax code, which is a Sub-account for the Tax main account (i.e. "*VAT Control – 15% account*").



4. Enter or select the following:

   a) Account type - Select “Tax (VAT/GST/Sales tax)”.

   b) Account no. - The Main account “*860*” is displayed and the sub accounts number field enter “*010*”.

   c) Description - Replace “*Account name*” with “*Output VAT – 15%*”.

   d) Account group 1 - If you have set up “*Account group 1*”, select your account group, e.g. “*Current liabilities*”. This is the Account group which is linked to the main account.

   e) Account group 2 - If you have set up “*Account group 2*”, select your account group, e.g. “*Current liabilities2*”. This is the Account group which is linked to the main account.

   f) Type - “*Balance sheet*” should be displayed. This field cannot be selected, since the main account is a Balance sheet type account.

   g) Sub-accounts - This field cannot be selected, since this is a sub-account.

   h) Status - “*Enabled*” (default) should be selected.

   i) Open item account - “No” (default) should be selected.

j) Link tax - “Empty” (default) should be selected.

5. Click on the Tax tab.

a) Percentage - Enter the percentage as “*15*”.

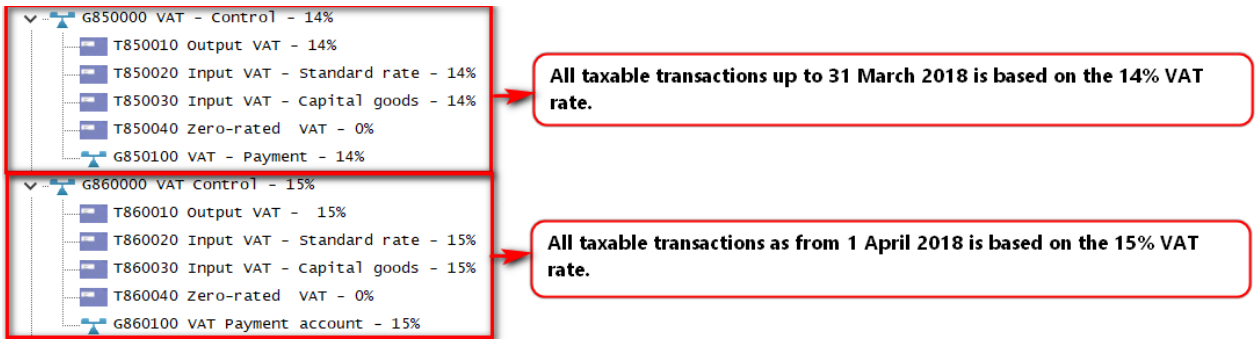
b) Use link tax - Do not select this option.

c) Show tax in documents – Leave the option as “*All*” for the purpose of this tutorial.

6. Click on the Save button.

Add new Tax type accounts at 15% similar to the 14% tax type accounts, including the Zero-rated tax type accounts

An example of the Tax accounts - 14% as well as the Tax accounts - 15%, in the Chart of accounts, is as follows:



Stock items

Each Stock item is linked to up to 5 accounts, i.e. the Input tax, Output tax, Sales, Cost of sales and Stock control accounts. The Output and Input Tax at the 15% Vat rate needs to be linked to each Stock item.

Tax classes in Stock - create a new Tax class

To save time to select up to 5 accounts, for each stock type, use Tax classes in Stock to link the Input tax, Output tax, Sales, Cost of sales and Stock control accounts.

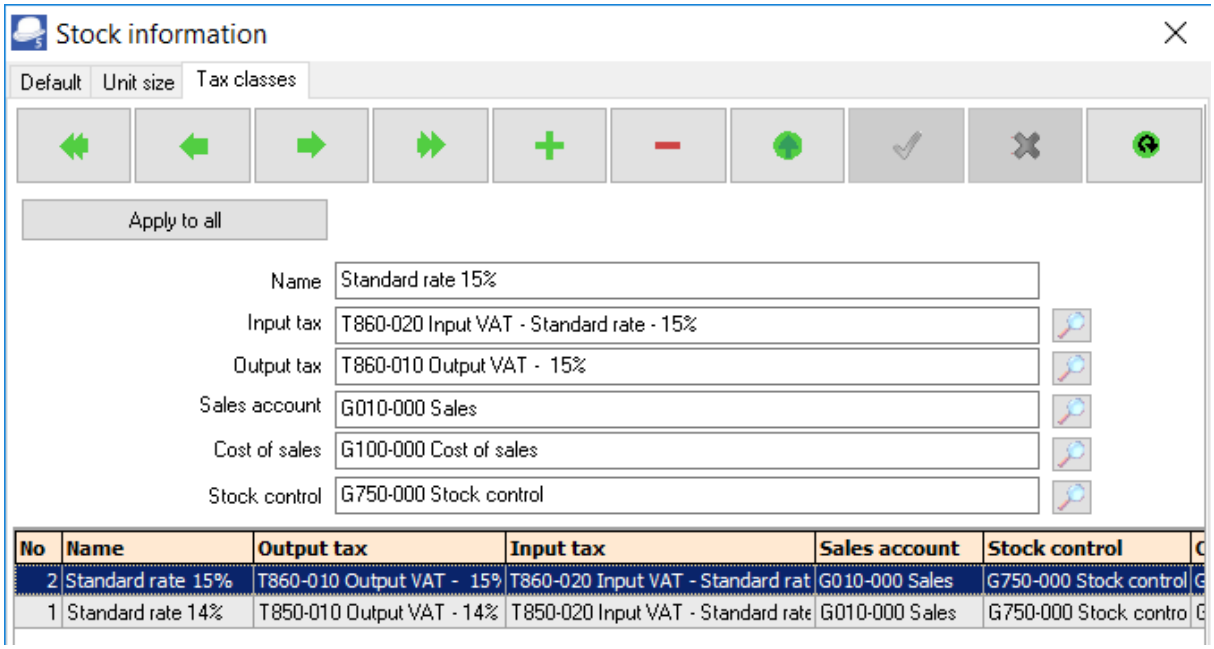
To create a new Tax class:

1. On the Setup ribbon, select Stock information.

2. Click on the Tax classes tab.

If “English” as the default language is used, Tax classes will be displayed.

If you have selected, "en-South-Africa" the Tax classes description, will reflect VAT classes.



3. Select the existing Tax class and add 14% to the Name field, if not displayed as 14%.
4. Click to save the changes.
5. Click to add a new Tax class.
6. Enter the Name (description) e.g. "*Standard rate 15%*" for the tax class.
7. Select the following accounts:
    a) Input Tax - Select the Input tax account, i.e. Input VAT – Standard rate – 15% (*860-020*).
    b) Output Tax - Select the Output tax account, i.e. Output VAT – 15% (*860-010*).
    c) Sales account - Select the Sales account (*010-000*).
    d) Cost of sales - Select the Cost of sales account (*100-000*).
    e) Stock control - Select the Stock control account (*750-000*).
8. Click to save the changes.
9. Click on the OK button to close the "*Stock information*" screen.

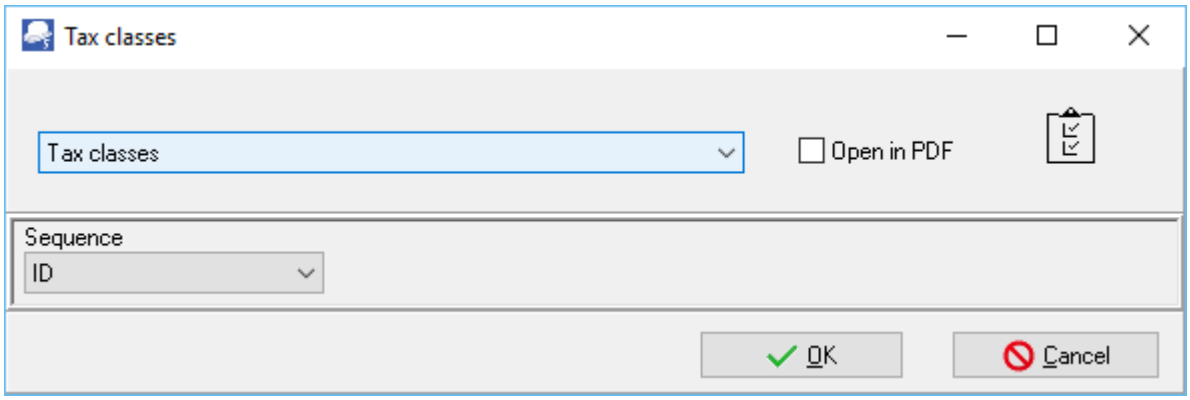
Print a list of the Tax classes

When a stock item is linked to a tax class, it will disable the Lookup button on the Ledger tab of the Stock

items screen (Default ribbon) for a selected stock item. It will automatically set the Input tax and Output tax, Sales, Cost of sales and Stock control account fields without having to select them for each stock item.

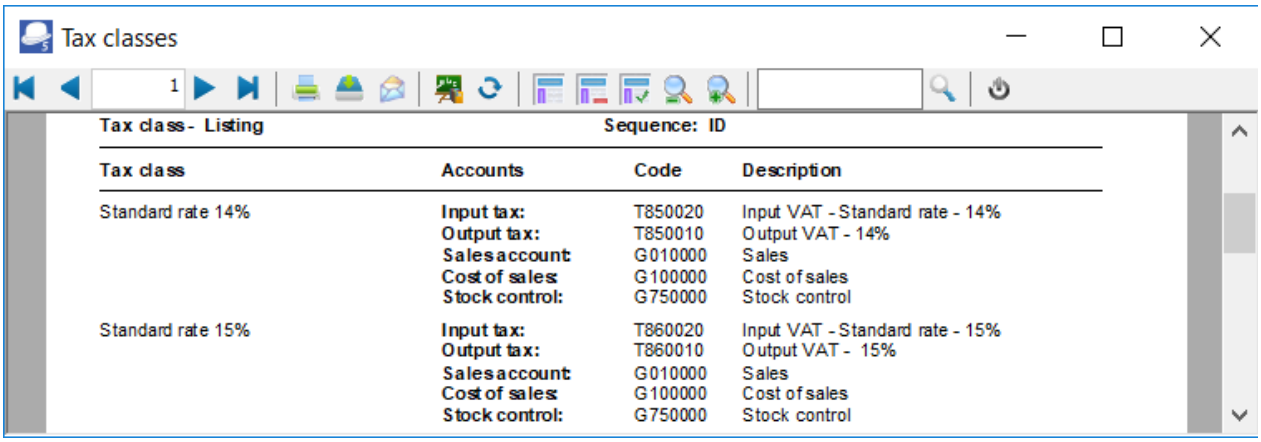
To print Stock item listing - Tax classes reports:

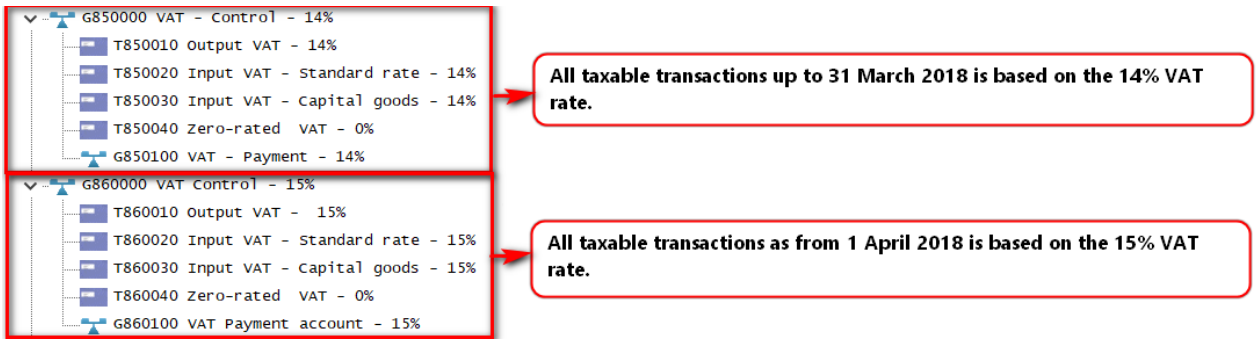
1. On the Reports ribbon, select Reports → Stock → Stock item listing.
2. Select "*Tax classes*" report.



3. Select the Sequence (i.e. ID (record Id) or description) for the sequence to list the tax classes.
4. Click on the OK button.

An example of the Stock item listing - "*Tax class - Listing*" report, is as follows:



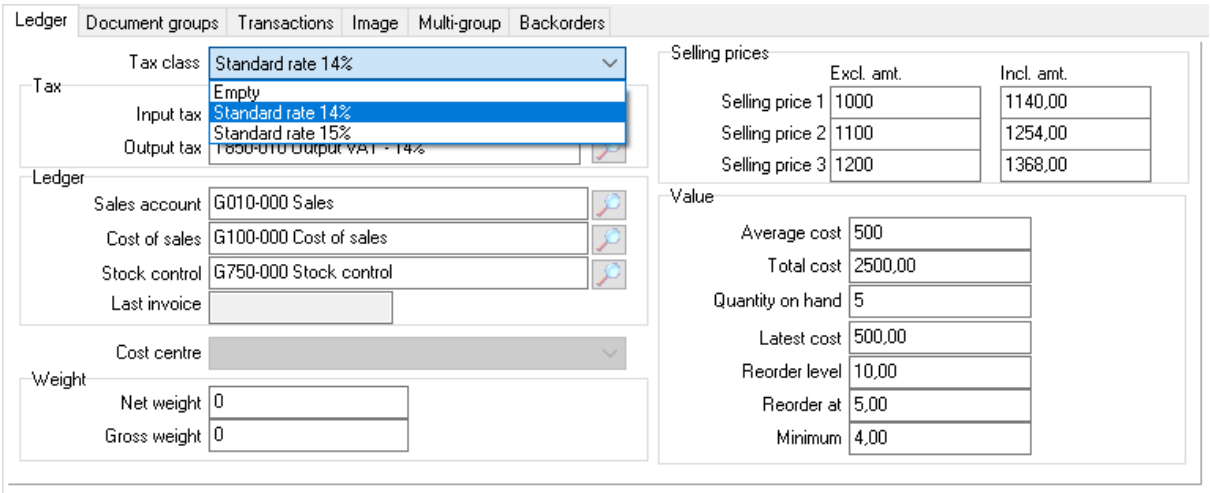


The next step is to link the accounts to the stock items.

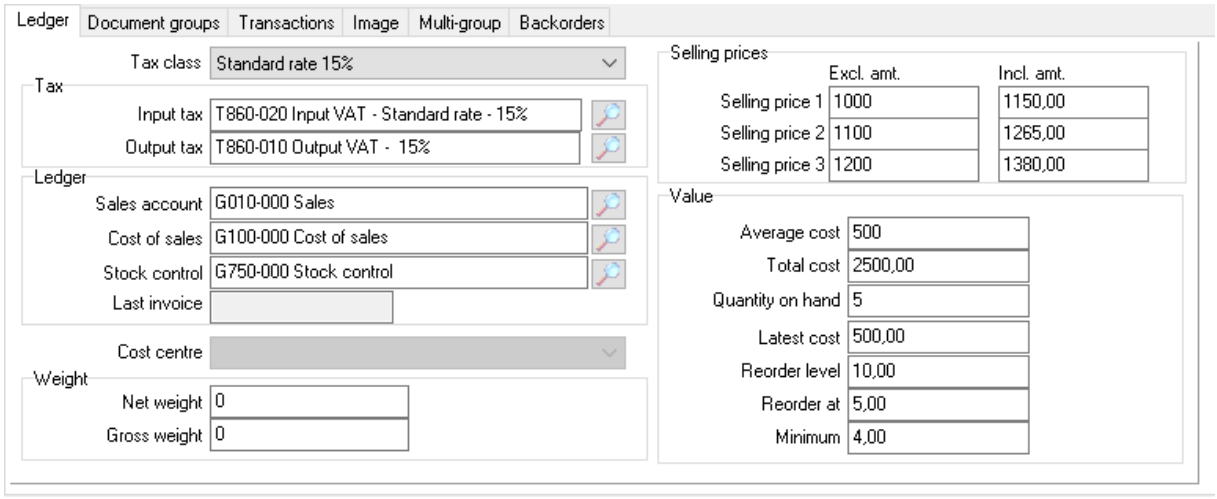
Link Tax classes to Stock items

To change Input and Output tax accounts from 14% to 15%:

1. On the Default ribbon, select Stock items.
2. Select a Stock item.
3. Click on the Ledger tab.

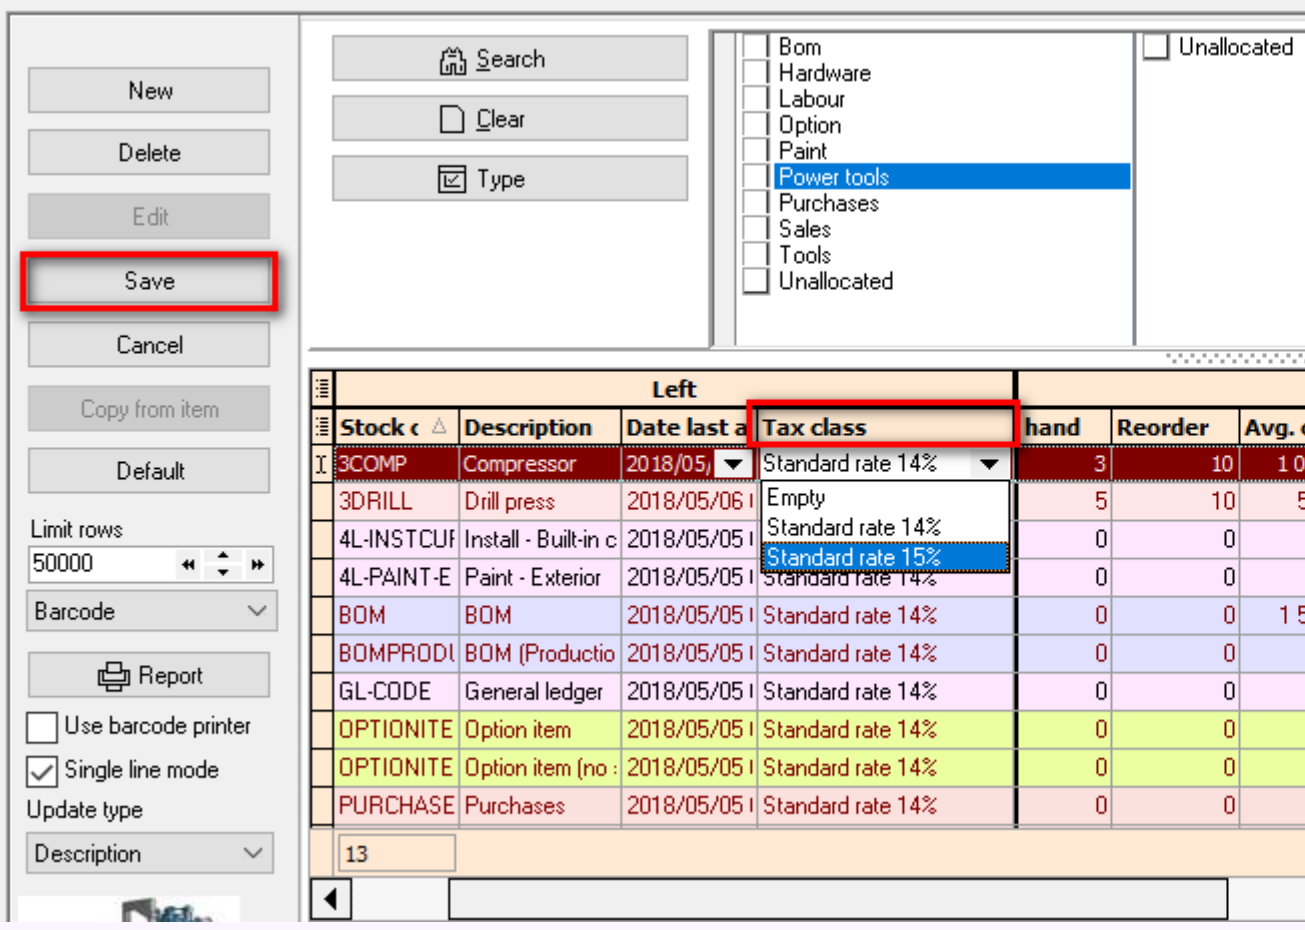


4. Tax class, select "*Standard rate 15%*".
5. Click on the Save button. The inclusive amount will automatically be updated with the new tax rate.



6. Repeat the process for all the stock items.

You may also change the tax classes on the grid view. In this example, the Tax class column was dragged from the Right to the



Select the Stock item and Tax class Standard rate 15% and click on the Save button.

Repeat the process for all the stock items.

Disable / Block posting transactions at the 14% VAT rate

Once all the 14% taxable transactions is processed and finalised, you may:

- Disable the tax accounts to prevent any transactions being posted (updated) to the ledger, to the 14% tax accounts, or available for selection on lookup screens and lists, while entering transactions in Batches and Documents, and/or;
- Block the Period March 2018 in which the 14% tax rate is applicable. This will not allow you to post (update) any transactions to the ledger at at the 14% Tax rate.

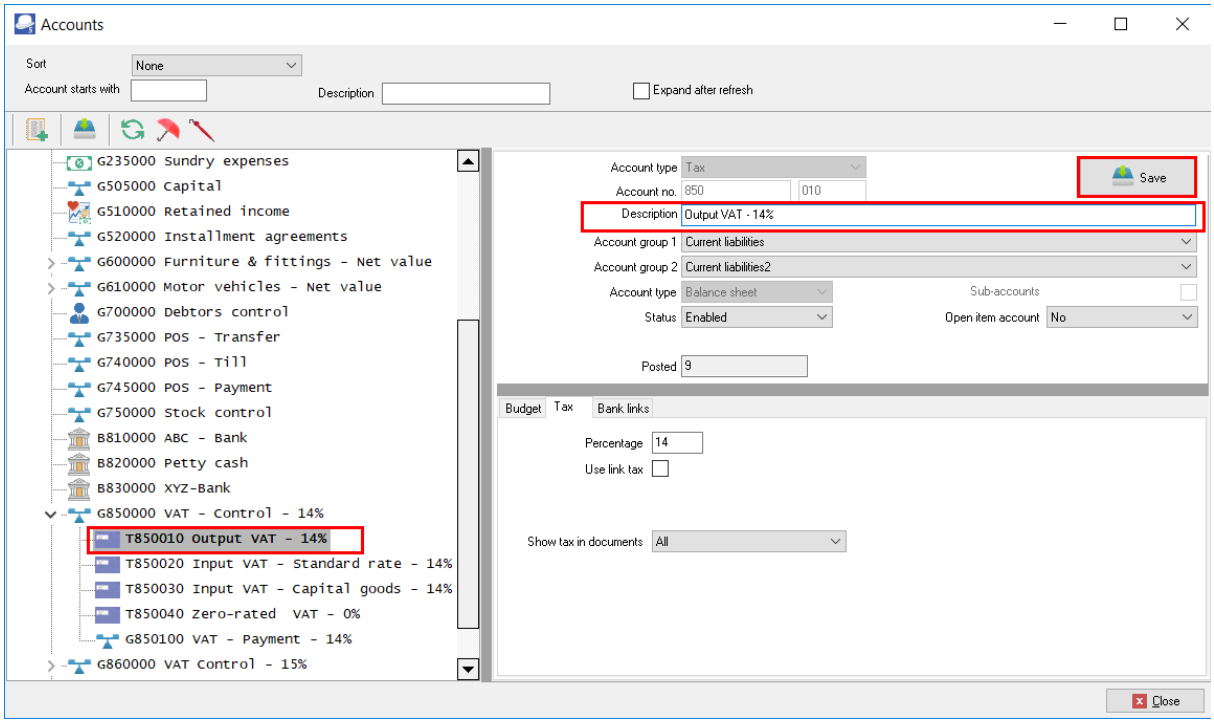
Disable Tax accounts at 14%

If the "*Status*" field of a ledger account is set to "*Disabled*" for a ledger account (Setup ribbon, select Setup → Accounts), it will not allow you to post (update) the batch or document to the ledger.

Before you disable old tax accounts at 14%, make absolutely sure that the taxable transactions at 14%, is correct and posted (updated) to the ledger. All purchase documents (i.e. Purchases and Supplier returns), as well as sales documents (i.e. Invoices and Credit notes) is correct and posted (updated) to the ledger at the Tax rate of 14%.

To disable Input and Output tax accounts from 14%:

1. On the Setup ribbon, select Setup → Accounts.
2. Select a Tax account.

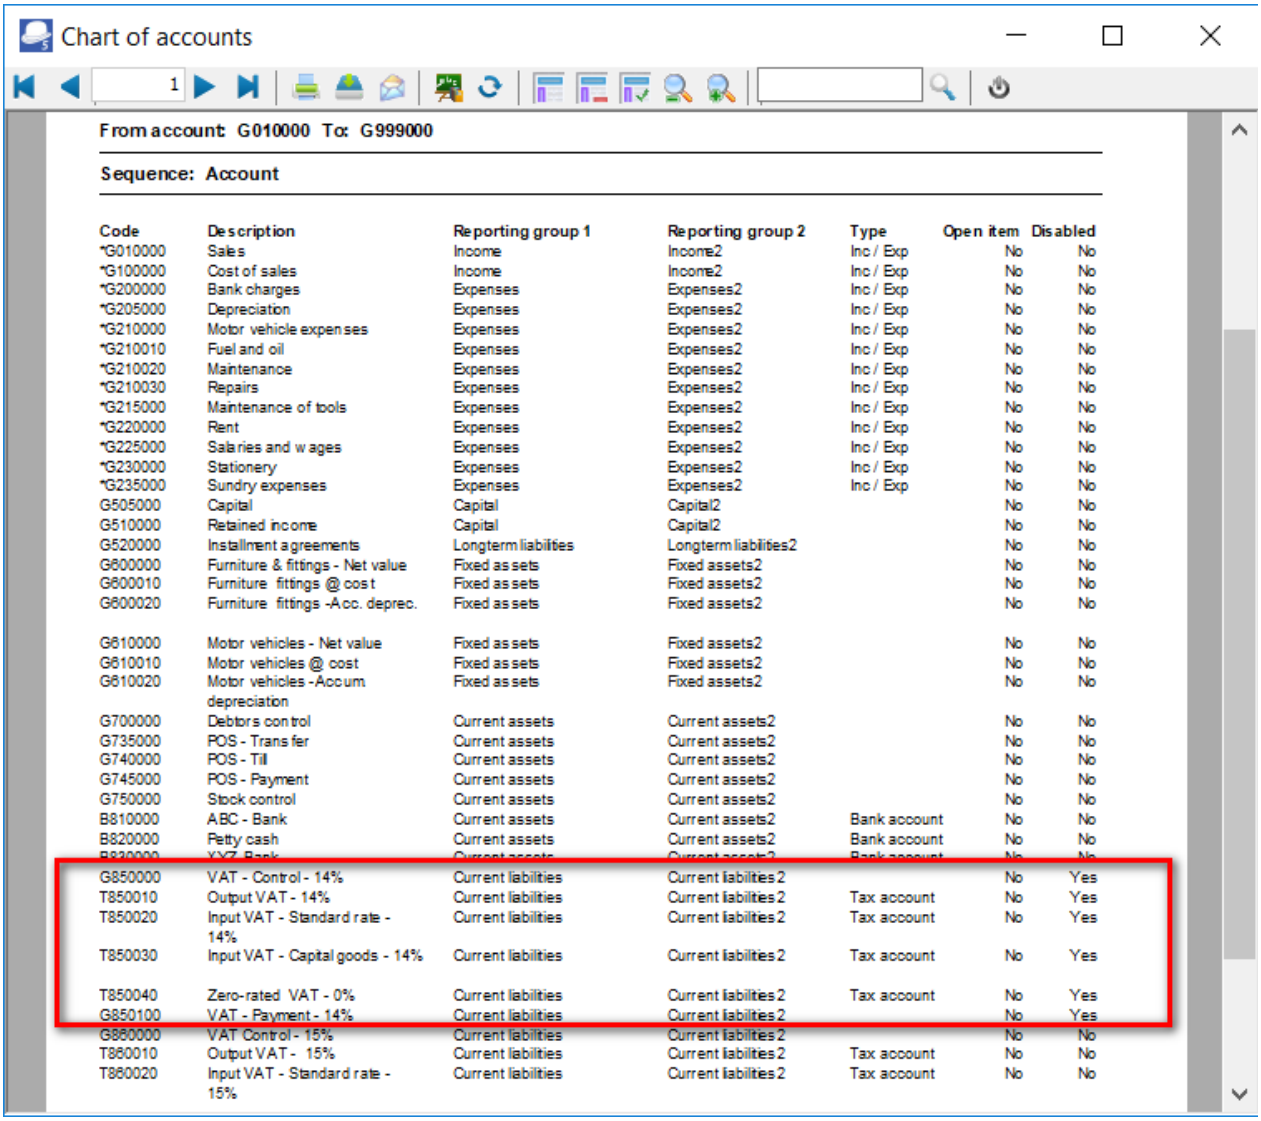


3. In the “*Status*” field, select “*Disabled*”.

4. Click the Save button to save the changes.

Print or view Disabled accounts

On the Reports ribbon, select Reports → Ledger → Chart of accounts. The Disabled accounts is displayed as "*Yes*" in the "*Disabled*" column.



From account: G010000 To: G999000

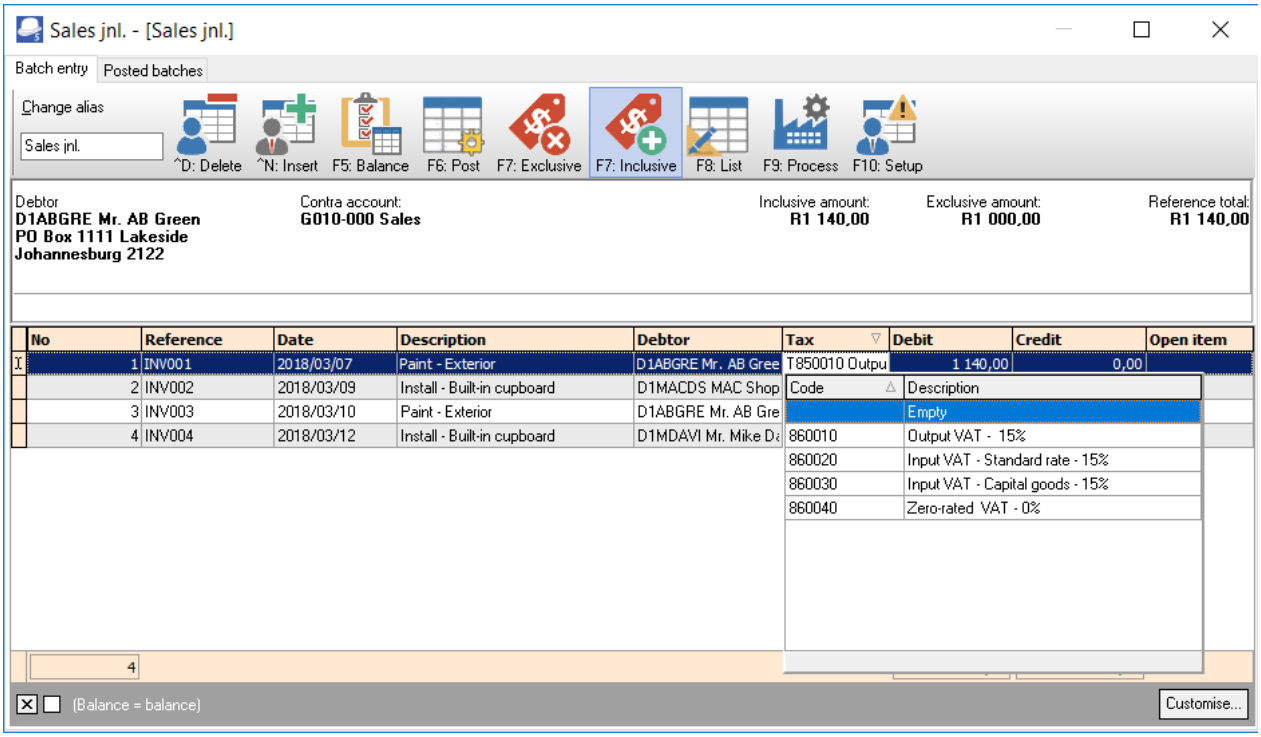
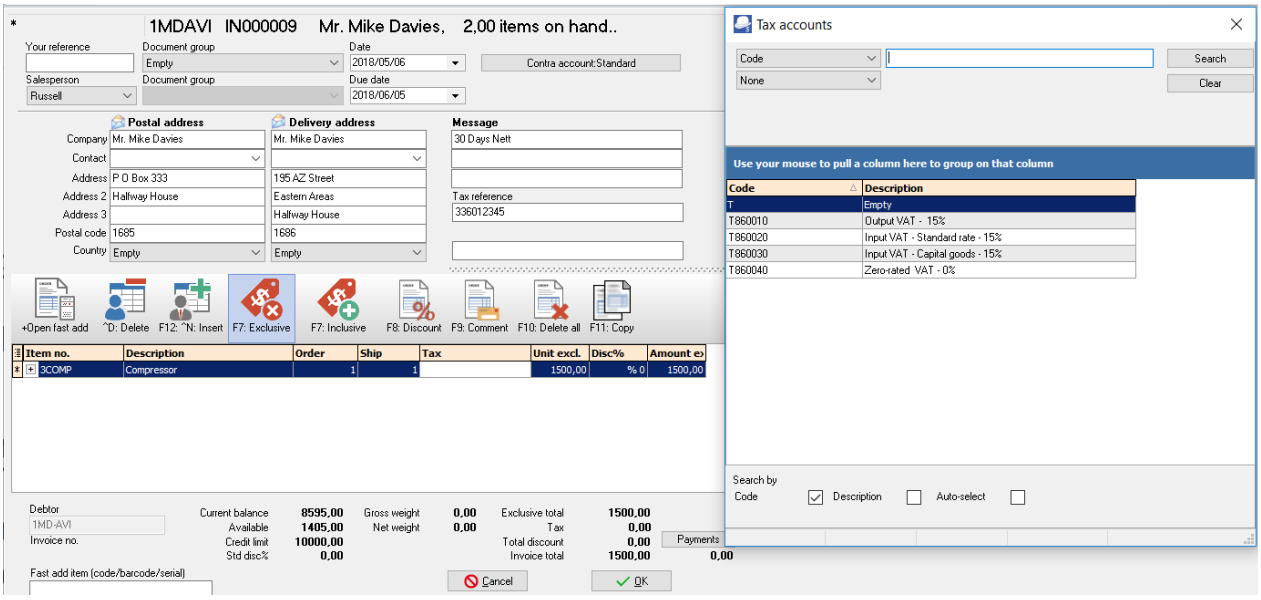
Disabled Tax accounts will not be listed on the Tax account lookup in Batches



Disabled Tax accounts will not be listed on the Tax account lookup in Documents



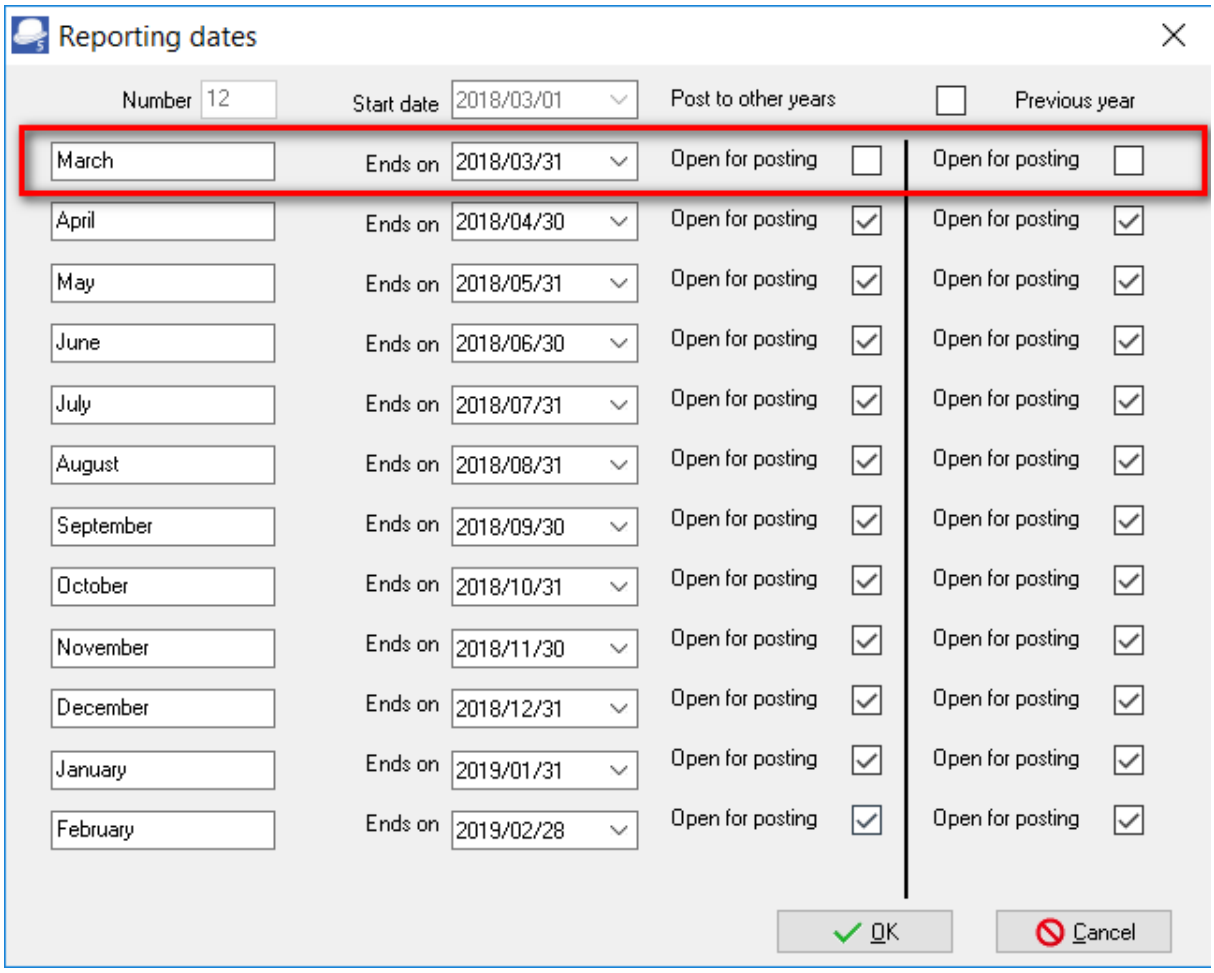
Disable posting to period March 2018

Block the Period March 2018 in which the 14% tax rate is applicable. This will not allow you to post (update) any transactions to the ledger at at the 14% Tax rate.

All purchase documents (i.e. Purchases and Supplier returns), as well as sales documents (i.e. Invoices and Credit notes) is correct and posted (updated) to the ledger at the Tax rate of 14%.

Disable posting to period March 2018:

1. On the Setup ribbon, select Reporting dates.



2. Select "*March 2018*" period "*Ends on"* and remove the tick in the "*Open for Posting*" fields.

3. Click on the OK button to save the changes.

Processing Transactions

During the transition period, you may need to use both the tax rates, i.e. 14% or 15%, depending on whether the transaction(s) is taxable on or before 31 March 2018 at 14%; or from 1 April 2018 at 15%.

In TurboCASH, the VAT accounts need to accommodate two VAT rates. An invoice may even reflect a rate of 14% and 15% depending if the goods were supplied or services rendered on or before 31 March 2018 or from 1 April 2018.

An example would be where a service provider charges subscriptions in advance April 2018 at 15%, but usage (e.g. calls) are charged in arrears March 2018 at 14%.

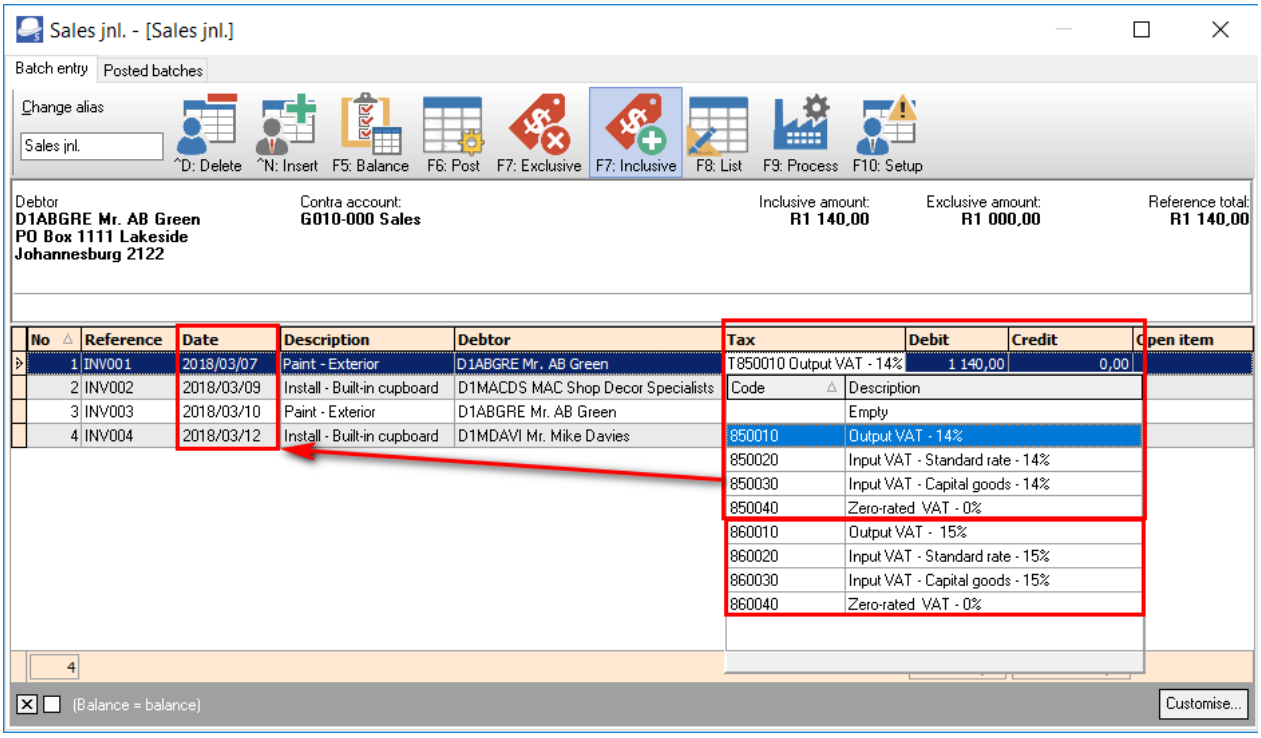
Processing transactions in Batches

When processing transactions in Batch entry on the Default tab, you need to make absolutely sure that the correct Tax / VAT code is selected.

By default, all accounts is "*Enabled*". All Tax / VAT codes are listed in the Tax lookup in the "*Tax*" column. Once the transitional period where all the transactions up to 31 March 2018 at 14% is posted (updated) to the ledger, you may disable the 14% Tax / VAT accounts (Setup ribbon, Setup → Accounts). The 14% rate Tax / VAT accounts will not be listed on the Tax lookup screens.

If you have a Zero-rated VAT – 0% Tax account, in the 14% structure (e.g. "850040 Zero-rated VAT – 0%"), you also need to disable Zero-rated VAT – 0% Tax account.

The 14% VAT rate (e.g. "*850000*" account range) are normally applicable to transactions up to 31 March 2018, in the "*Date*" column.



The 15% VAT rate (e.g. "*860000*" account range) is normally applicable to transactions as from 1 April 2018, in the "*Date*" column.

Processing transactions in Documents

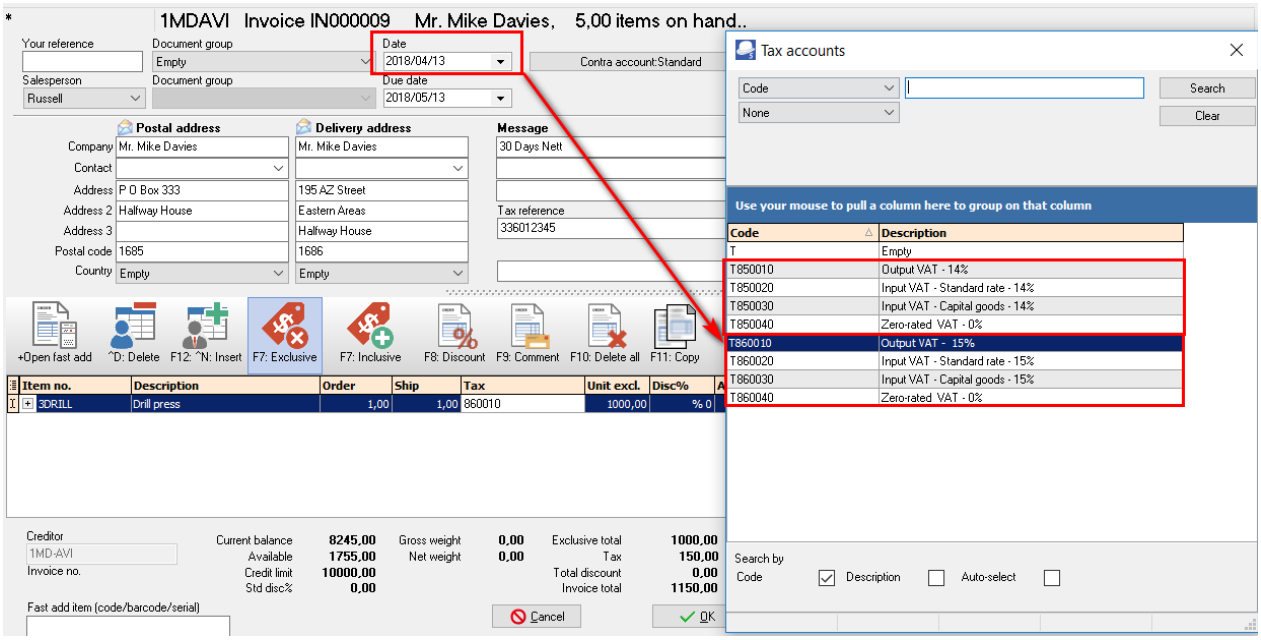
When processing transactions in Documents on the Default tab in purchase documents (i.e. Purchases

and Supplier returns), as well as sales documents (i.e. Invoices and Credit notes), you need to make absolutely sure that the correct Tax / VAT code is selected.

By default, all accounts is "*Enabled*". All Tax / VAT codes are listed in the Tax lookup in the "*Tax*" column. Once the transitional period where all the transactions up to 31 March 2018 at 14% is posted (updated) to the ledger, you may disable the 14% Tax / VAT accounts (Setup ribbon, Setup → Accounts). The 14% rate Tax / VAT accounts will not be listed on the Tax lookup screens.

If you have a Zero-rated VAT – 0% Tax account, in the 14% structure (e.g. "850040 Zero-rated VAT – 0%"), you also need to disable Zero-rated VAT – 0% Tax account.

The 14% VAT rate (e.g. "*850000*" account range) are normally applicable to transactions up to 31 March 2018, in the "*Date*" column.



The 15% VAT rate (e.g. "*860000*" account range) is normally applicable to transactions as from 1 April 2018, in the "*Date*" column.

Tax reports

Before you print tax reports to submit your Tax (VAT/GST/Sales tax) returns, you need to post (update) all batch transactions and documents (i.e. invoices, credit notes, purchase and supplier return documents) for the tax period.

The following tax reports are available:

1. Tax per period report – This report is used to complete the Tax (VAT/GST/Sales tax) returns. It will list

a summary of the Output tax less the Input tax and the total tax payable / refundable.

2. Tax report - Reference / Document no. - This report will list the details of accounts and transactions of all posted (updated) batch and document transactions, on which Tax (VAT/GST/Sales tax is applicable. It will display the Tax code and description as well as the contra accounts for each transaction.

3. Tax list debtor with tax id - This report will list a total exclusive of tax, tax amount and inclusive amount of tax) for the Invoices *less* Credit notes for debtor (customer / client) accounts for selected period(s) or date(s). It will also display the Company and Tax registration numbers for each for debtor (customer / client) accounts.

4. Tax list creditor with tax id - This report will list a total exclusive of tax, tax amount and inclusive amount of tax) for the Purchase documents *less* Supplier returns for creditor (supplier / vendor) accounts for selected period(s) or date(s). It will also display the Company and Tax registration numbers for each for creditor (supplier / vendor) accounts.

The Tax excluded and Tax amount in the Report total of the Tax report - Reference / Document no. report, should balance with the Total - Output tax – Input tax of the Tax per period report, if the same periods are selected.

It is recommended that these tax reports are printed and archived (PDF) for record and audit purposes.

Tax per period report

This report is used to complete the Tax (VAT/GST/Sales tax) returns. It will list a summary of the Output tax less the Input tax and the total tax payable / refundable.

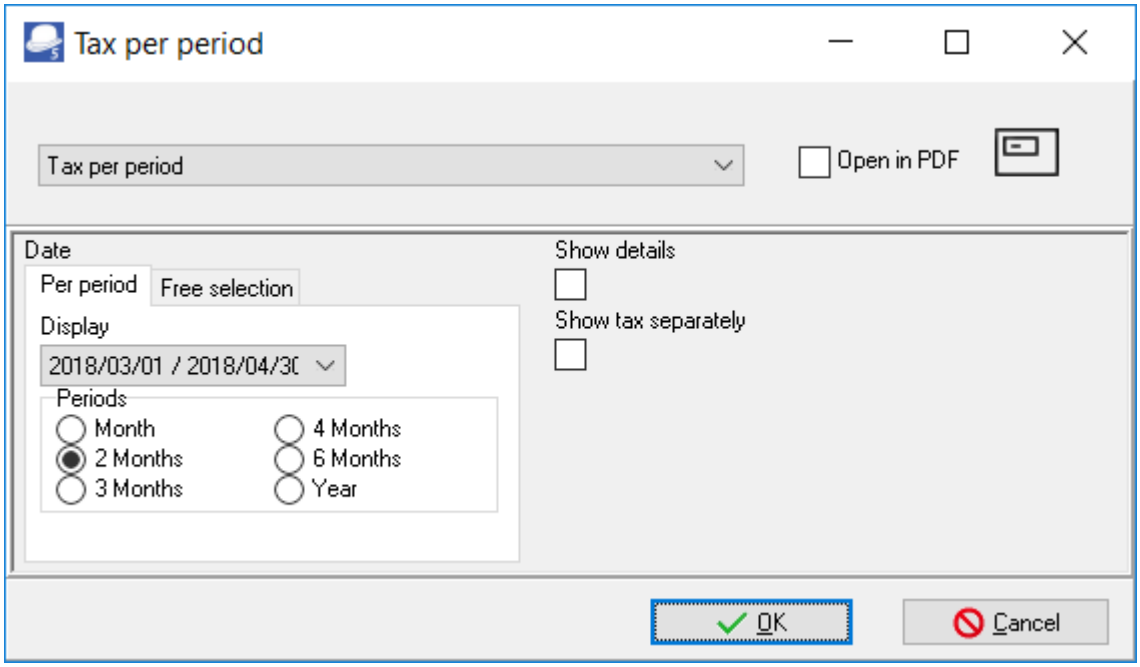
An option is available to list all transactions and documents including the account code, account description, country and tax reference of the debtor (customer / client) or creditor (supplier / vendor) account (if applicable).

To print tax per period reports:

1. On the Reports ribbon, select Reports → Tax.

2. Select the Tax per period report. The *"Tax list debtor with tax id" report* is the default report.

3. Select the "*Tax per period*" report.



4. Select the following:

    a) Per period - Tick on "*2 Months*" and select "*2018/03/01 / 2018/04/30*".

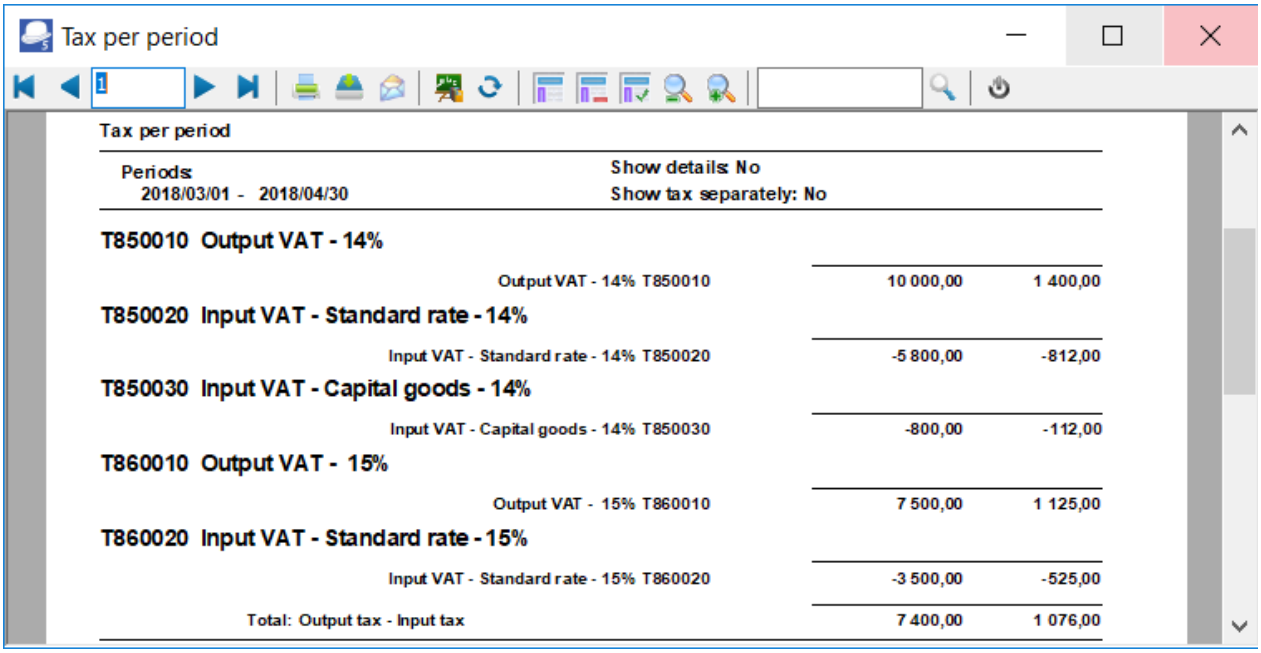
    b) Show details - Leave blank. By default, this option is not selected. It will only list the totals exclusive of Tax (VAT/GST/Sales Tax) for each tax code.

    If this option is selected, it will list all transactions and documents including the account code, account description, country and tax reference of the debtor or creditor account (if applicable).

    c) Show tax separately - Leave blank. By default, this option is not selected. If this option is selected, each tax code will print on a new page. It is recommended, that this option should only be selected, when the "*Show details*" option is selected.

5. Click on the OK button.

An example of the "*Tax per period*" (no details) report, is as follows:

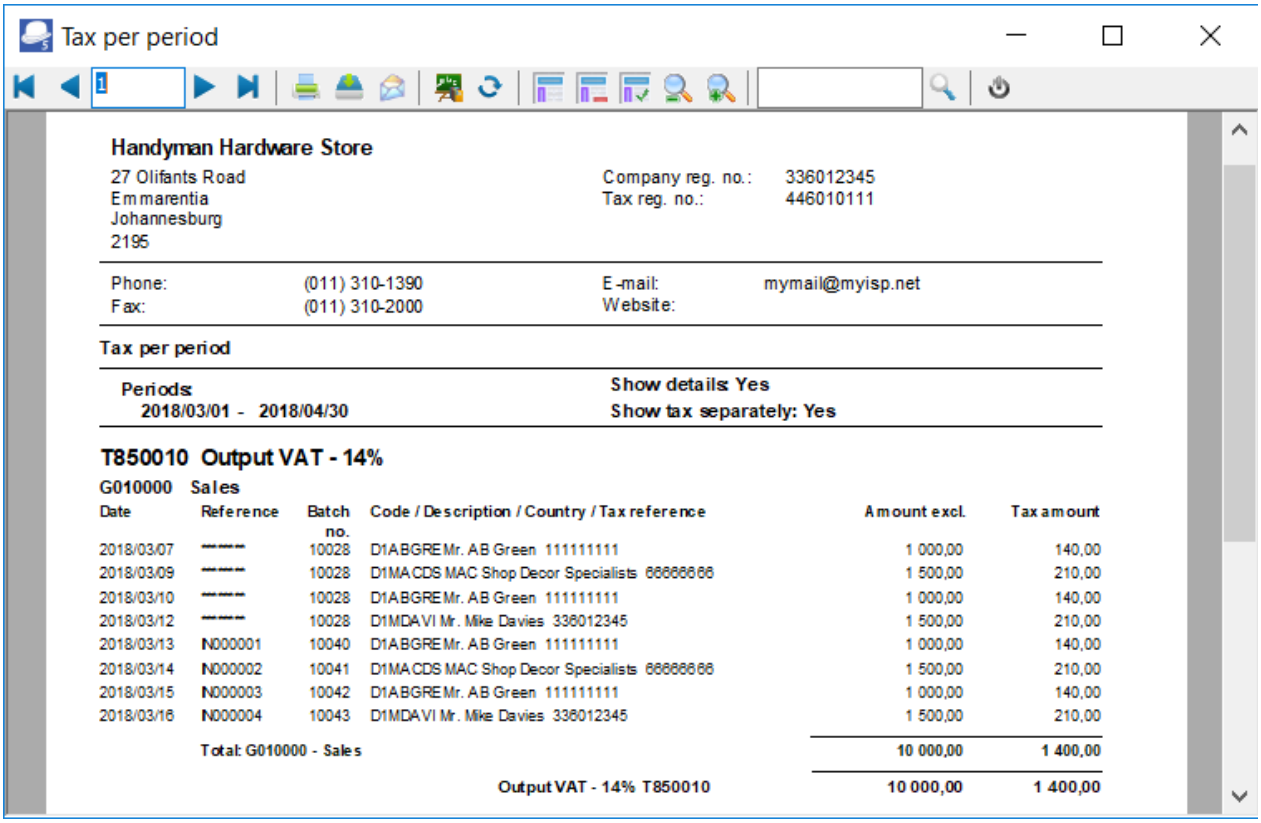


It is recommended that the details should also be printed and saved for record purposes.

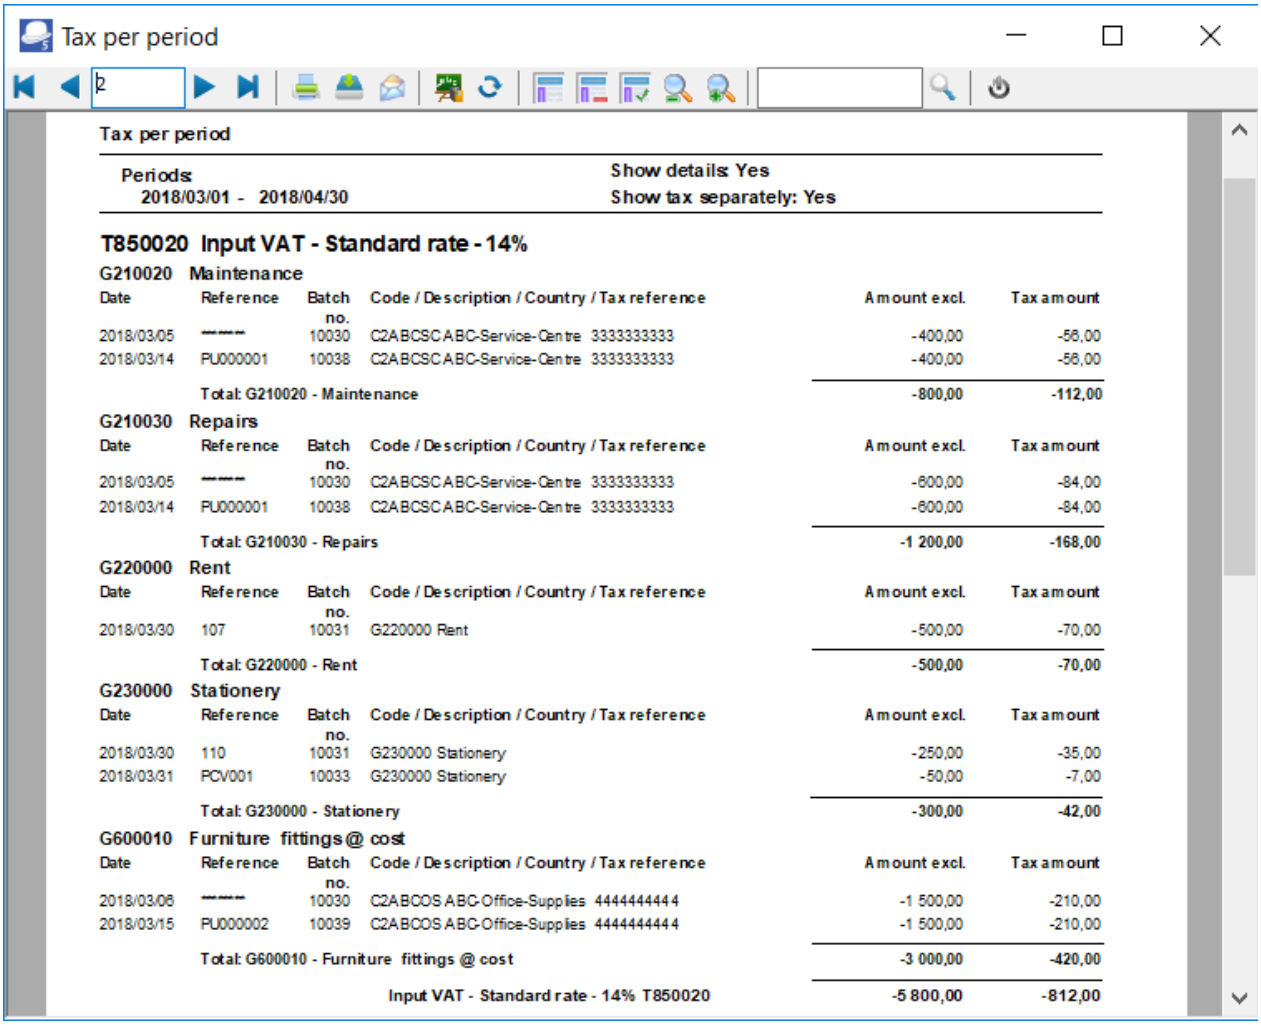
It is important to print the details to check the details of your transactions.

The detailed tax report ("*Show details*" and "*Show tax separately*" options selected) for the same period, is as follows:

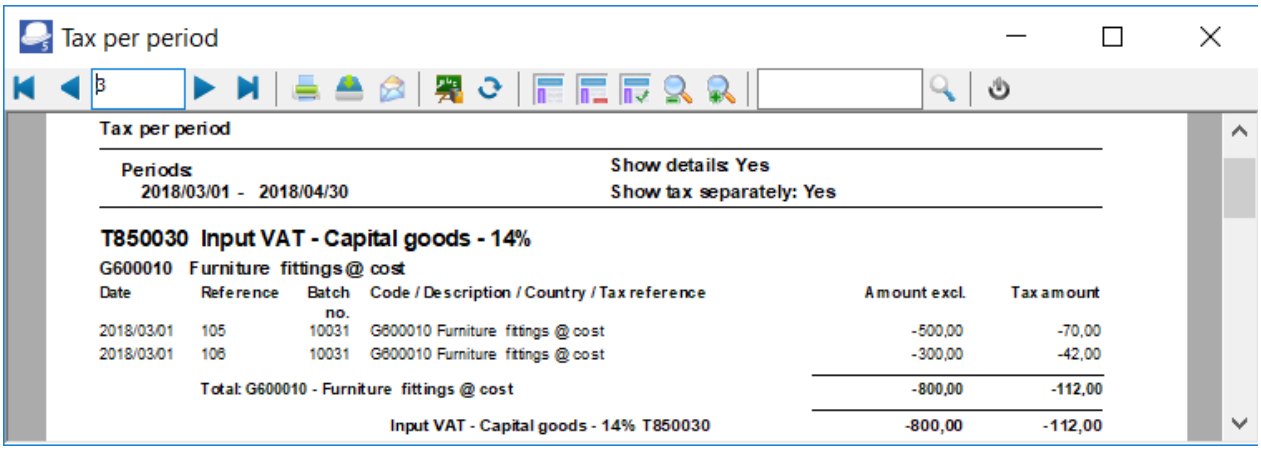
Page 1 – Output tax - 14%



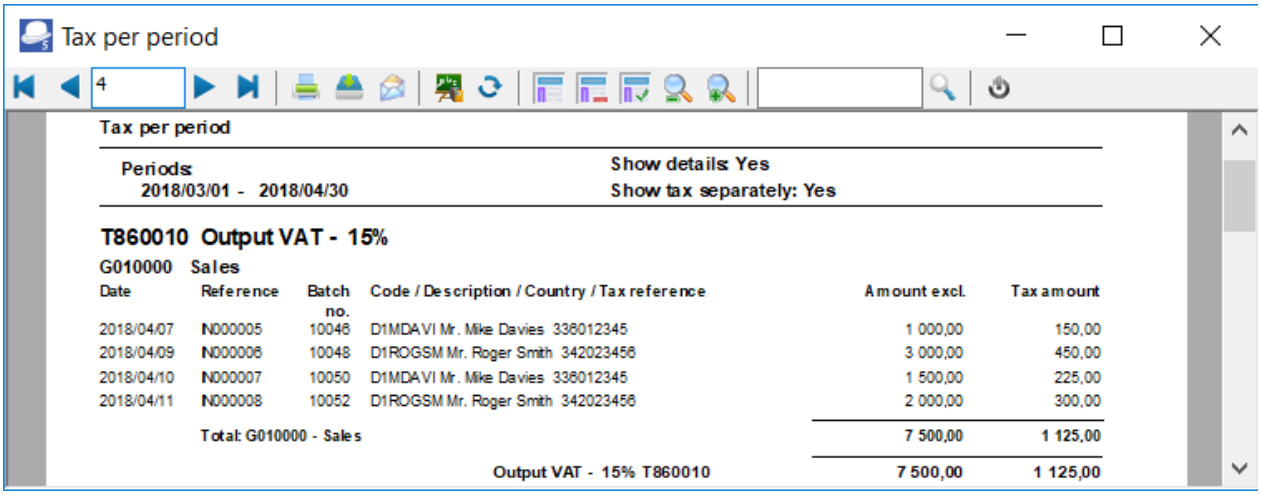
Page 2 – Input tax – Standard rate -14%



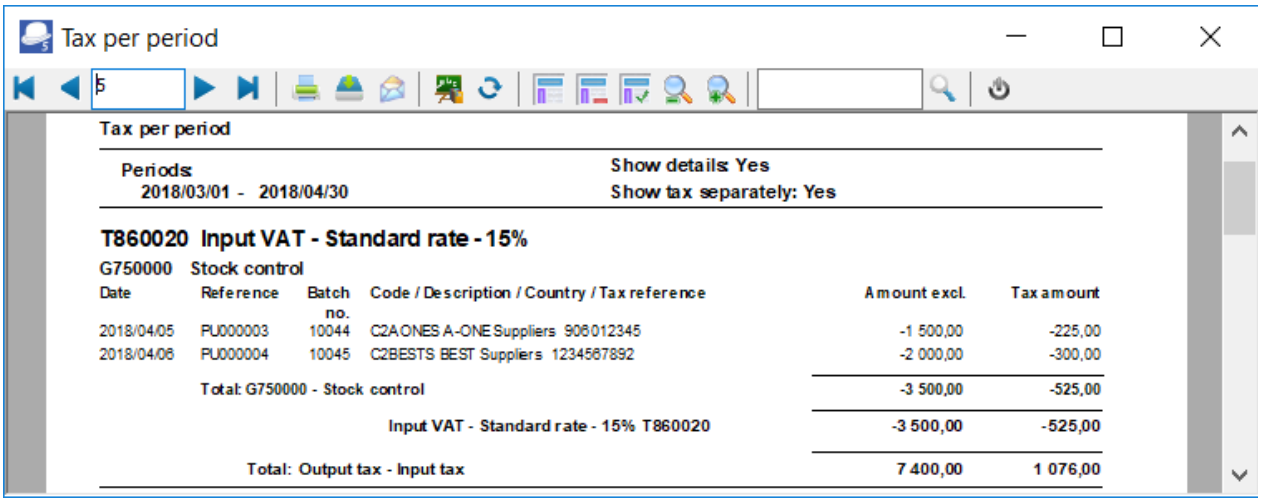
Page 3 – Input tax – Capital goods - 14%



Page 4 – Output tax – 15%



Page 5 – Input tax – Standard rate -15%



The Tax excluded and Tax amount in the Report total of the Tax report - Reference / Document no. report, should balance with the Total - Output tax – Input tax of the Tax per period report, if the same periods are selected.

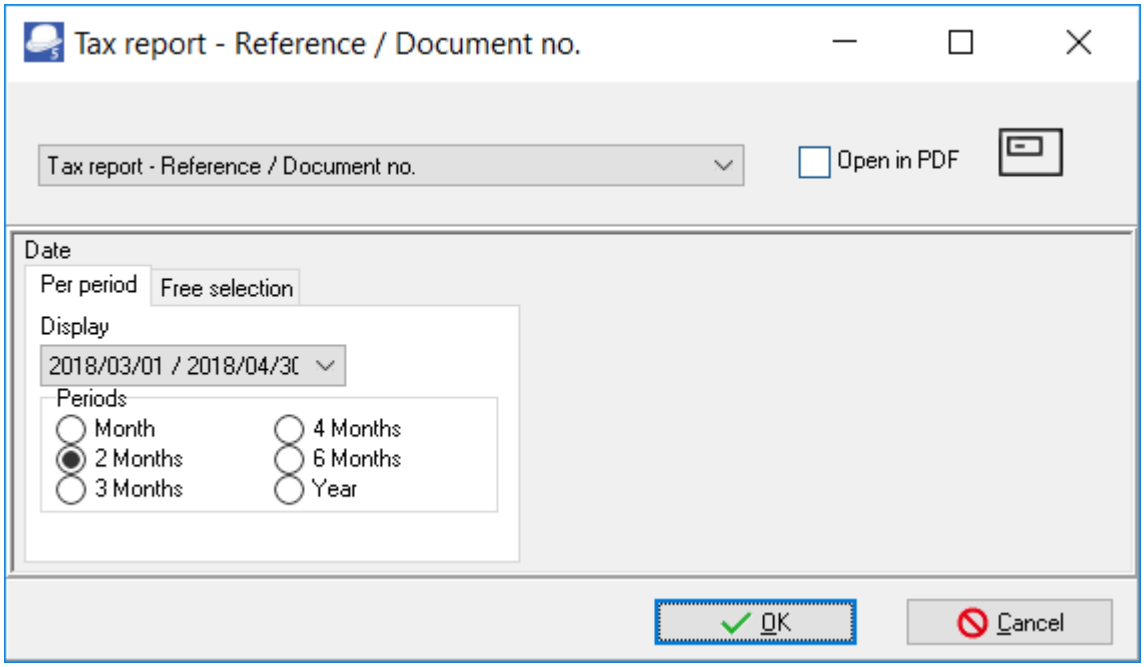
Tax report - Reference / Document no.

This report will list the details of accounts and transactions of all posted (updated) batch and document transactions, on which Tax (VAT/GST/Sales tax is applicable. It will display the Tax code and description as well as the contra accounts for each transaction. If the same periods is selected as on the Tax per period report, the Exclusive and Tax amount totals should balance.

To print tax reference /document no. reports:

1. On the Reports ribbon, select Reports → Tax.
2. Select the Tax per period report. The *"Tax list debtor with tax id" report* is the default report.

3. Select the "*Tax report – Reference / Document no.*" report.

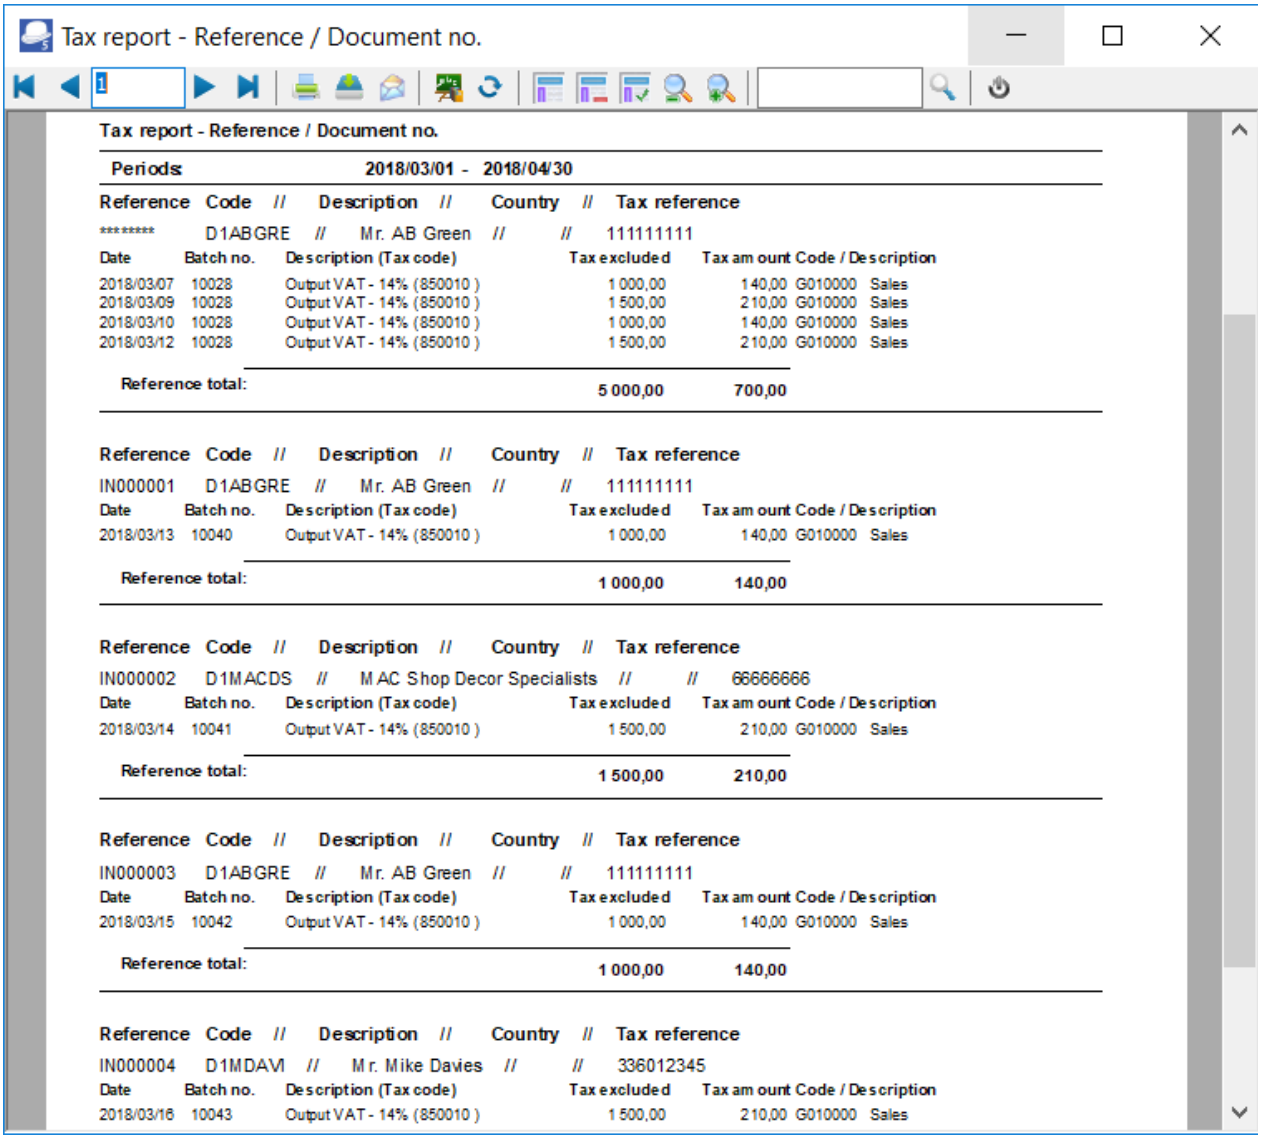


4. Select the following on "*2 Months*" and select "*2018/03/01 / 2018/04/30*".

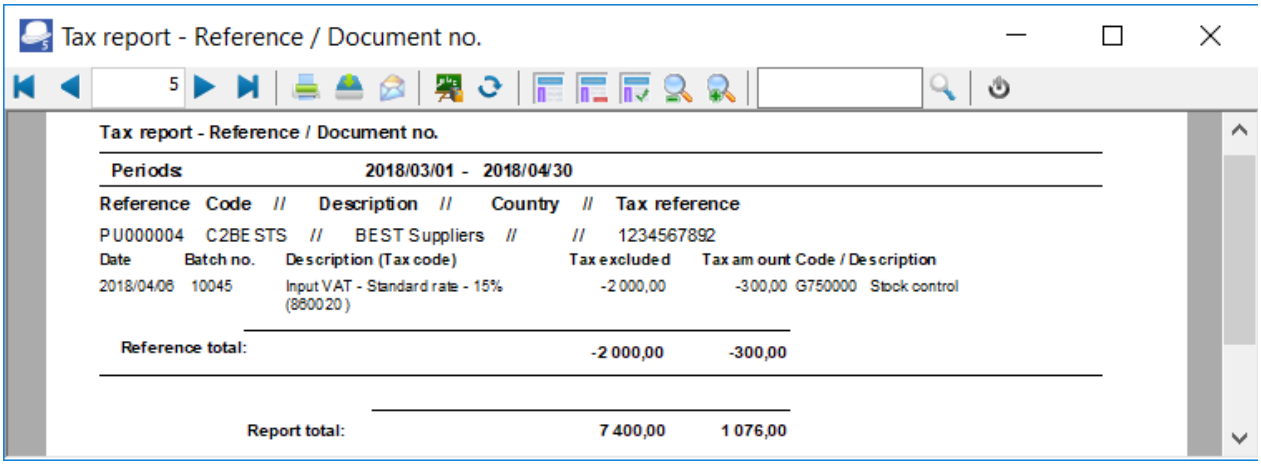
5. Click on the OK button.

An example of the "*Tax report – Reference / Document no.*" report, is as follows:

Page 1 -



Page 5 – (Last page) Totals



Once again, the Tax excluded and Tax amount in the Report total of the Tax report - Reference /

Document no. report, should balance with the Total - Output tax – Input tax of the Tax per period report, if the same periods are selected.

Debtor (customer / client) accounts

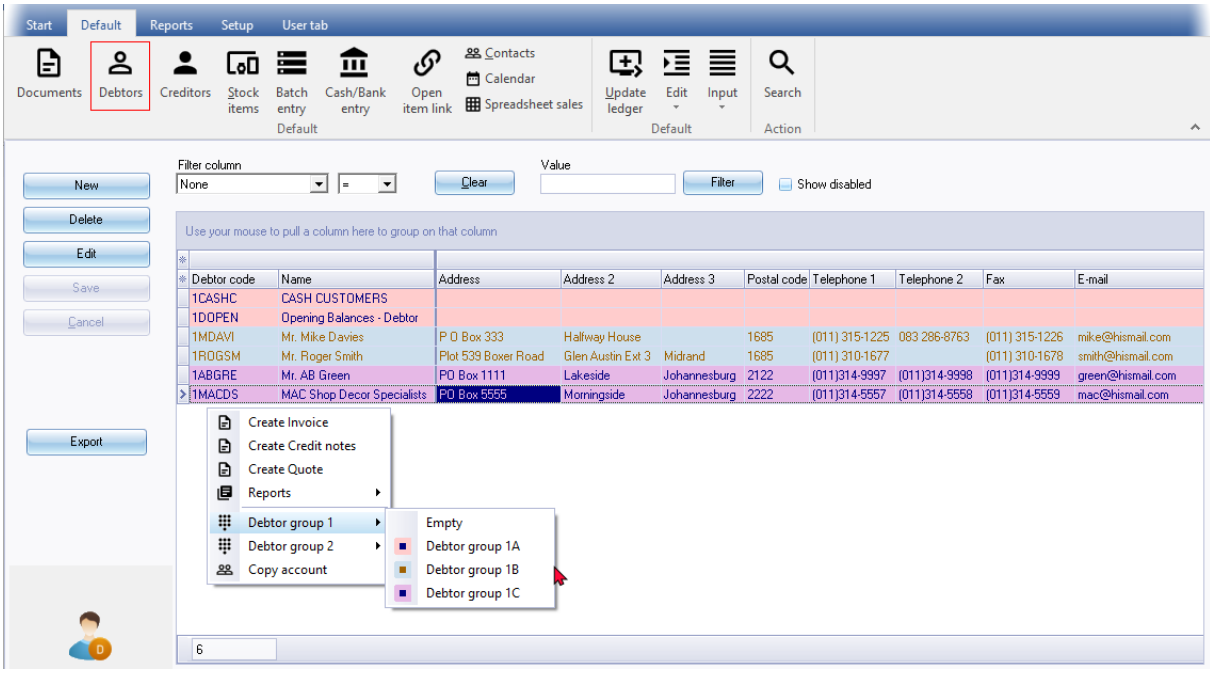
The Debtors feature in osFinancials5/TurboCASH5, is specifically designed to manage and maintain debtor (customer / client) accounts. This feature provides a range of functionalities to effectively manage these accounts and ensure smooth customer relationship management. Here are some key aspects of the Debtors feature:

1. Account Management: You can create new debtor accounts, modify existing ones, delete or disable accounts based on your requirements. This gives you control over the debtor database and allows you to keep it up to date.
2. Account Details: Within each debtor account, you have the flexibility to make changes to various aspects, such as the debtor's name, contact details, addresses, and messages on the debtor form. You can also manage the delivery address and select specific document layout files on the Delivery address tab. Additionally, you can set accounting and payment terms, including discounts and interest percentage charges, on the Accounting information tab. This ensures that you maintain accurate and up-to-date information for each debtor.
3. Activities Tracking: The Debtors feature allows you to efficiently manage various activities related to debtor accounts. It provides dedicated tabs for tracking Contacts, Appointments, and transactions on the Documents, Transactions, Bank accounts, Backorders and Stock items tabs. These capabilities enable you to gain a comprehensive view of interactions and transactions with each debtor, enhancing your ability to manage and maintain fruitful relationships.
4. Filtering and Search: osFinancials5/TurboCASH5 provides filtering and search options within the Debtors feature, enabling you to easily locate specific debtor accounts based on various criteria such as name, contact details, or other relevant information.
5. Reporting Groups: You can create up to two custom reporting groups for debtor accounts, categorizing them by attributes like geographic regions, customer types, or sales channels. This enables you to generate insightful views of your debtor data. It allows you to slice and dice the information based on multiple dimensions and conduct detailed analysis, providing a comprehensive view of your debtor data and supporting better decision-making and strategic planning.

By leveraging the Debtors feature in osFinancials5/TurboCASH5, you can efficiently manage customer accounts, streamline communication, track transactions, and maintain precise financial records. This enhances customer service, boosts efficiency, and strengthens financial management within your organization.

To access the Debtors selection screen:

1. On the Default ribbon, select Debtors (F4). The "*Debtor accounts*" screen is displayed:



2. Once a debtor (customer / client) account is selected, you may view and manage the activities in the following tabs:

   a) Contacts - Add / edit / delete contactpersons.

   b) Appointments - View a list of events or appointments scheduled in the Calendar.

   c) Documents - View a list of the posted as well as the unposted sales documents (Quotes, Invoices, Point-of-Sales Invoices and Credit notes). You may select a document and print it. You may also print a Posted batches report for the posted sales documents (Invoices, Point-of-Sales Invoices and Credit notes).

   d) Transactions - View a list of the transactions posted in batches as well as sales documents (Invoices, Point-of-Sales Invoices and Credit notes). You may select a transaction and print a Posted batches report and print the transactions in the T-Account viewer.

   e) Bank accounts - Manage references for the Bank import plugin.

   f) Backorders - View a list all backorders for the selected debtor (customer / client) account.

You may add / edit or delete backorders.

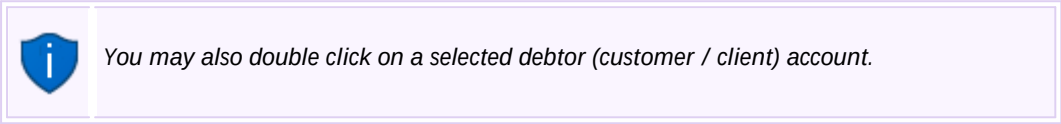
g) Stock items - View a list of the products (stock items) in posted as well as unposted sales documents (i.e. Invoices, Credit notes and Quotes) for the selected debtor (customer / client) account.

3. Buttons –

a) New – Create a new debtor (customer / client) account.

b) Delete – Delete remove a selected debtor (customer / client) account.

c) Edit – Add or change the details of a selected debtor (customer / client) account.



d) Save – Save any changes to a selected debtor (customer / client) account.

e) Cancel – Cancel will revert to the previous values. Any changes will not be saved.

f) Export - Export the view of your debtor data as displayed in the list of debtors (customer / client) accounts. Only those records matching your sort, search and filter options will be exported.

3. Search Filter –

a) Filter Column - None is the default. You may select any of the available items (columns), (e.g. Debtor code, Name, Contact Person, Debtor group 1, Debtor group 2, Address 1, Address 2, Address 3, Postal code, Telephone 1, Telephone 2, Fax, E-mail, Bank account type, Bank account no., Last invoice, Reference, Due days, Debtor group 1 Sort, Debtor group 2 Sort, Delivery address, Delivery address2, Delivery address 3, Delivery address postal code, Delivery address country, X, etc.).

b) Like – Default operator. Others that may be selected is <, >, <=, >=, <>.

c) Value – Enter the text e.g. city, telephone numbers, postal code etc.

d) Filter button – Click to filter / search for your criteria.

e) Clear button – Click to clear / reset the filter / search for your criteria.

f) Show Disabled - By default, this option is not selected (not ticked). Only those active (enabled) debtor (customer / client) accounts will be listed. Select (tick) this option to include those

inactive (disabled) (Account disabled field selected (ticked) on the Accounting information tab) debtor (customer / client) accounts.

4. Line count – This will display the number of records (debtor (customer / client) accounts) that is available on the list. This will display the number of records (rows / debtor (customer / client) accounts) that matches your filter / search criteria.

5. Context menu – The following options are available:

    a) Create Invoice – A new Invoice (Document entry screen) will be launched for the selected debtor (customer / client) account.

    b) Create Credit note – A new Credit note (Document entry screen) will be launched for the selected debtor (customer / client) account.

    c) Create Quote – A new Quote (Document entry screen) will be launched for the selected debtor (customer / client) account.

    d) Reports – You may print postal or delivery address labels for selected debtor(s) (customer(s) / client(s)). You may also print these labels from the Reports → Debtors → Print labels (Reports ribbon).

    e) Debtor group 1 / 2 - Change the reporting group 1 or 2.

    f) Copy account - Create a new account from a selected account.

Debtor groups

This option allows you to set up to two Reporting groups for your Debtors (customers / clients). Debtor groups allows you to group or categorise the Debtors accounts on which you would like to report. Reporting groups for debtors can vary depending on the specific needs and requirements of your business.

These Debtor groups can be linked to each debtor (customer/ client) account.

- *You may use the context menu option on the debtors grid to set or change the reporting groups for Debtor group 1 and/or Debtor group 2 for selected debtor account(s).*

- *You may use the debtors grid to filter, search or group debtor accounts.*
- *You may print Debtor listing reports and Print labels for postal addresses and delivery addresses for all or only for debtor accounts linked to a selected debtor group or groups.*
- *You may print Sales analysis reports for Debtor group 1 or Debtor group 2.*

Examples of reporting groups for debtors (customers / clients)

Here are a few examples of reporting groups that you can use for debtor accounts:

1. Customer type: You can create reporting groups based on the type of customers or clients you have. For example, you may have reporting groups such as "*Retail customers*," "*Wholesale customers*," or "*Corporate clients*."
2. Geographic region: If you serve customers from different geographic regions, you can create reporting groups based on their locations. This can be helpful for analysing regional sales or managing relationships with customers in specific areas.
3. Sales channel: If you sell your products or services through different channels, you can create reporting groups to track and analyse sales performance for each channel. This could include groups like "*Online sales*," "*Retail store sales*," or "*Direct sales*."
4. Payment terms: You can create reporting groups based on the payment terms agreed upon with your debtors. This allows you to track and analyse the payment behaviour of different groups. For example, you might have reporting groups for "*Cash sales*," "*Credit sales*," or "*Instalment payments*."
5. Sales representative: If you have a sales team responsible for different territories or customer segments, you can create reporting groups based on the sales representatives. This can help in assessing individual performance and analysing sales by representative.
6. Customer rating: If you have a rating system to evaluate the creditworthiness or loyalty of your customers, you can create reporting groups based on their ratings. This allows you to identify high-value or high-risk customers. For example, you might have reporting groups for "*Gold customers*," "*Silver customers*," or "*Preferred customers*."

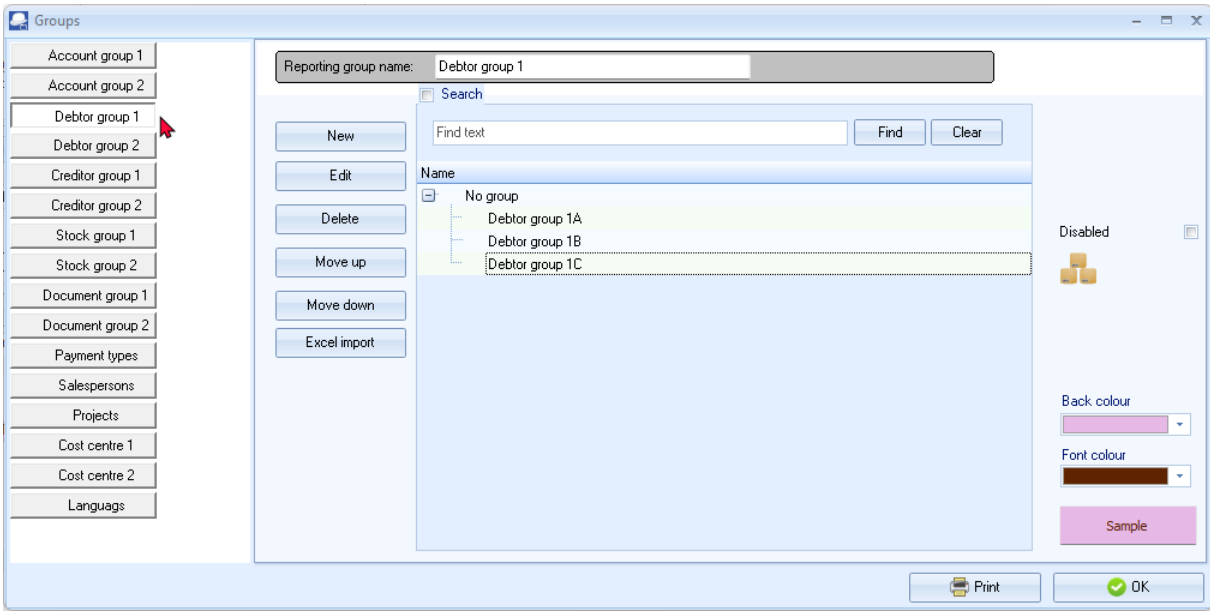
These are just a few examples, and you can customize reporting groups based on the unique characteristics and needs of your business. The goal is to create groups that allow you to analyse and report on debtor data in a meaningful way, enabling you to make informed decisions and effectively manage your customer relationships.

Define reporting groups for debtors (customers / clients)

To set reporting groups for Debtor accounts:

1. On the Setup ribbon, select Setup → Groups. The "*Groups (Account group 1)"* default screen will be displayed.

2. Click on the Debtor group 1 button.



3. If you wish to rename the Reporting group name - Debtor group 1, over-type the description with your new description. This will change the description of the button for Debtor group 1.

4. To add a new Group to the root directory or list, select the *REPORTING GROUP ROOT* on the list and click on the New button.

5. Enter the name of your Debtor group 1 and click on "*REPORTING GROUP ROOT*" on the list.

6. Repeat the process until you have entered all the Debtor groups, etc.

> *Adding sub groups for debtor groups*
>
> *Select a Debtor group, for example; "Debtor group 1A" and click on the New button. Enter the name of your sub group.*

7. If you need to add Reporting group 2 for Debtors, click on the Debtor group 2 button and repeat the process as for Debtor group 1.

8. Click on the OK button to save your changes and close (exit) this screen.

Changing the sequence of groups for debtors

Select a Debtor group, for example; "Debtor group 1B" and click on the Move up or Move down button. This will list the debtor group according to your preferred sequence.

You may click on the Print button to print a list of your debtor groups.

You may set colours to display on the Debtor accounts List screen. To do this, click on the Back colour button to set the rows background colour and the Font colour button to set the Font colour.

To retain and save the selected colors, you also need to set both the "Back color" and the "Font color".

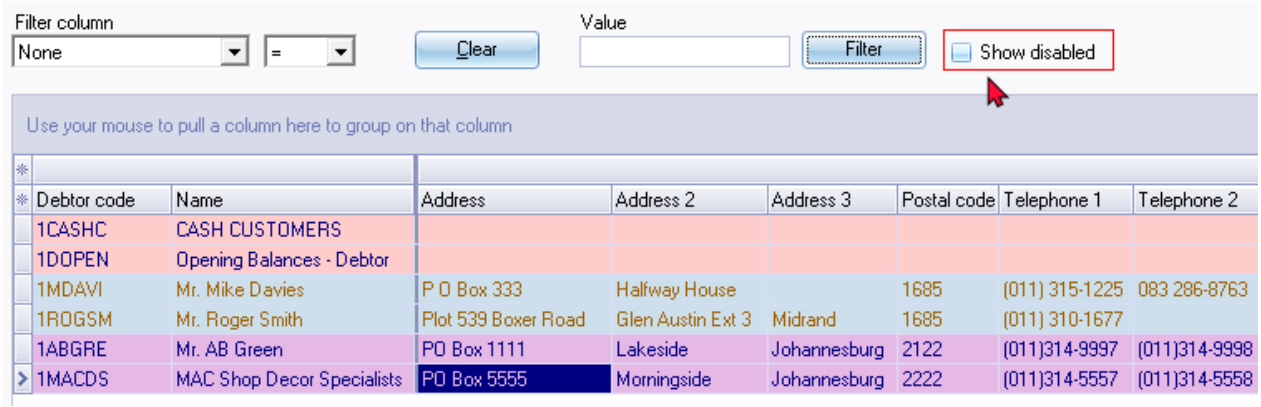
Debtors filter and search options

The osFinancials5/TurboCASH5 grid has a powerful and user-friendly filtering and sorting system that makes it quicker and easier than other methods. With just a few mouse clicks, you can group, sort, and filter any column(s) of data on most screens in a Set of Books. This feature is very useful and efficient for managing and analysing data.

Account disabled

By default, only active debtor (customer / client) accounts will be listed when launching the Debtors on the Debtor list screen.

To list the debtor (customer / client) accounts which have been set to "*Disabled*" on the Accounting information tab, you need to tick the "*Show disabled*" tick box and click on the Filter button.



Debtor code	Name	Address	Address 2	Address 3	Postal code	Telephone 1	Telephone 2
1CASHC	CASH CUSTOMERS						
1DOPEN	Opening Balances - Debtor						
1MDAVI	Mr. Mike Davies	P O Box 333	Halfway House		1685	(011) 315-1225	083 286-8763
1ROGSM	Mr. Roger Smith	Plot 539 Boxer Road	Glen Austin Ext 3	Midrand	1685	(011) 310-1677	
1ABGRE	Mr. AB Green	PO Box 1111	Lakeside	Johannesburg	2122	(011)314-9997	(011)314-9998
1MACDS	MAC Shop Decor Specialists	PO Box 5555	Morningside	Johannesburg	2222	(011)314-5557	(011)314-5558

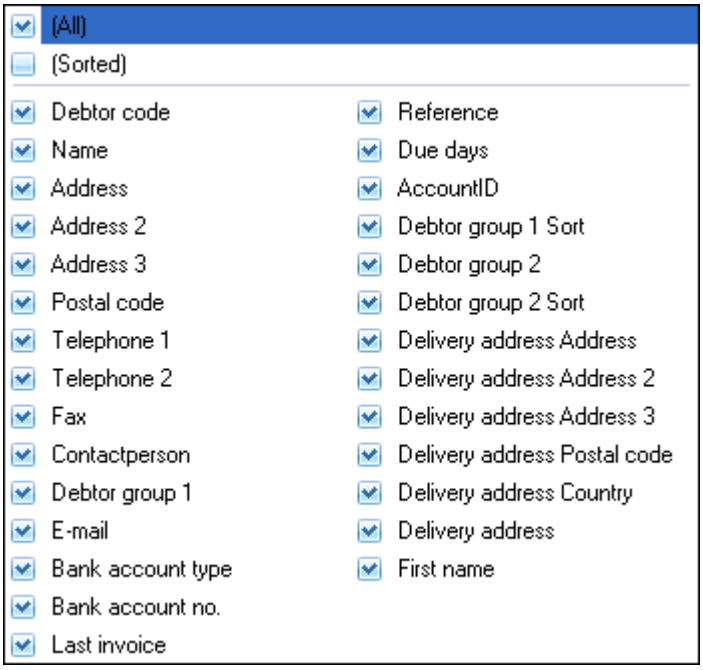
The "Debtor listing - Credit control listing (Credit limit vs Current balance) as at..." report will display if a debtor (customer / client) account is disabled, or enabled.

If the "Show disabled" option is selected, and if you Close active forms or when you reopen the Set of Books, it will by default list only the active (enabled) debtor (customer / client) accounts.

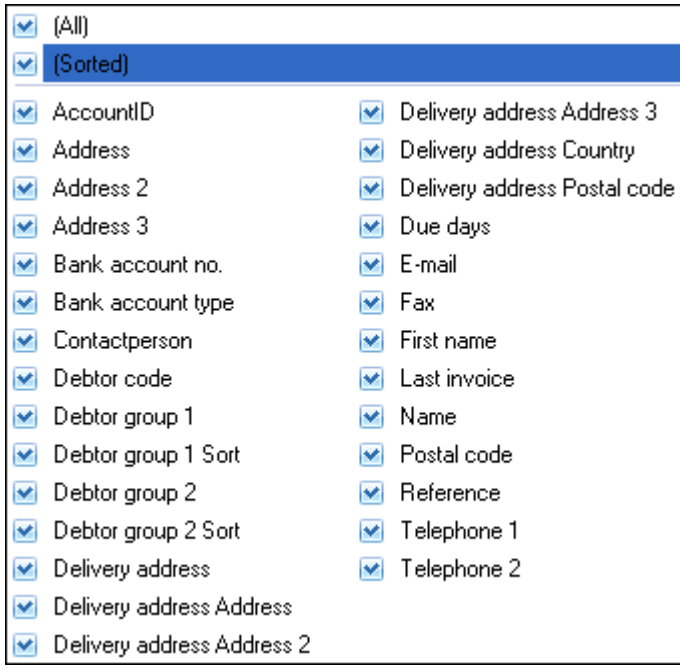
Search by options

You may use the filter options to find a specific debtor (customer / client) account, or all accounts with the same values, in any of the twenty-eight (28) columns:

Default



Sorted (selected) - Alphabetical list



To search for specific debtor (customer / client) accounts:

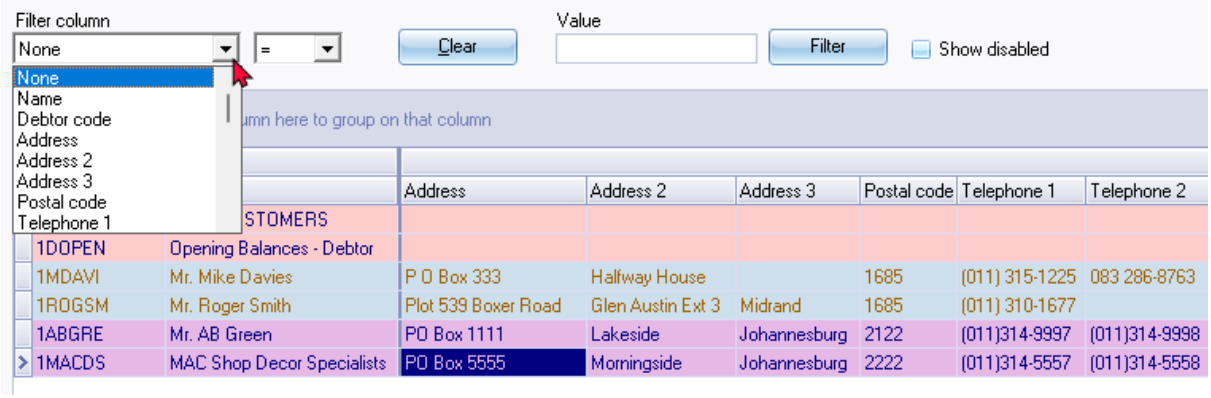
1. The filter options will display only those debtor (customer / client) accounts in your search or filter criteria. To do this, you may:

   a) Search by - The default option is none. It will list all the column headings. You may select any of these as an option.

   b) Like - Operator to find all debtor (customer / client) accounts with the same value, values greater than, smaller than, greater than or equal to, smaller than or equal to the values you have selected, or wish to enter.

   c) Value - Enter the value for the field type you have selected, for example, Postal code (if you

have selected "*Postal code*" as the "*Search by*" option).



2. Once you have selected or specified the search criteria, click on the Filter button. Only those debtor (customer / client) accounts as in your search or filter criteria or options will be listed.

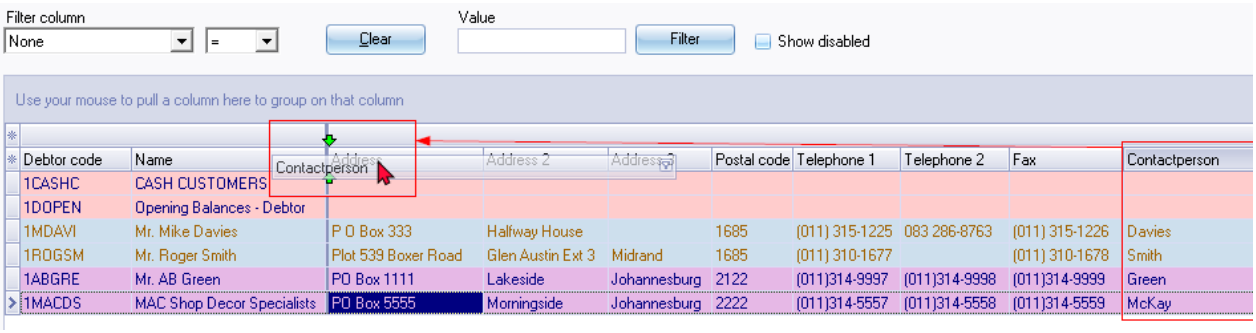
3. If you need to clear your filter options and values, click on the Clear button. You may also click on any of the column headings to change the sorting sequence of the debtor (customer / client) accounts listed.

You may also search for debtor (customer / client) accounts in the "Investigator" screen (Search (Default ribbon)).

Column headings

All the data for each of your debtor (customer / client) accounts are listed in twenty-eight (28) columns. To view change the sequence in which the data is displayed, you may use the following options:

- Scroll bars - Scroll to the right or to the left on the horizontal scroll bar to view the information.
- Sequence of rows - Click on any of the column headings to change the sorting sequence of the debtor (customer / client) accounts listed in the descending or ascending sequence.
- Sequence of columns - Click on a column heading and drag it to the right or to the left to change the sequence in which the columns need to be displayed.



You may drag and drop any of the columns on the data band to the left band and the columns from the left band to the data band, to customise the grid for your requirements.

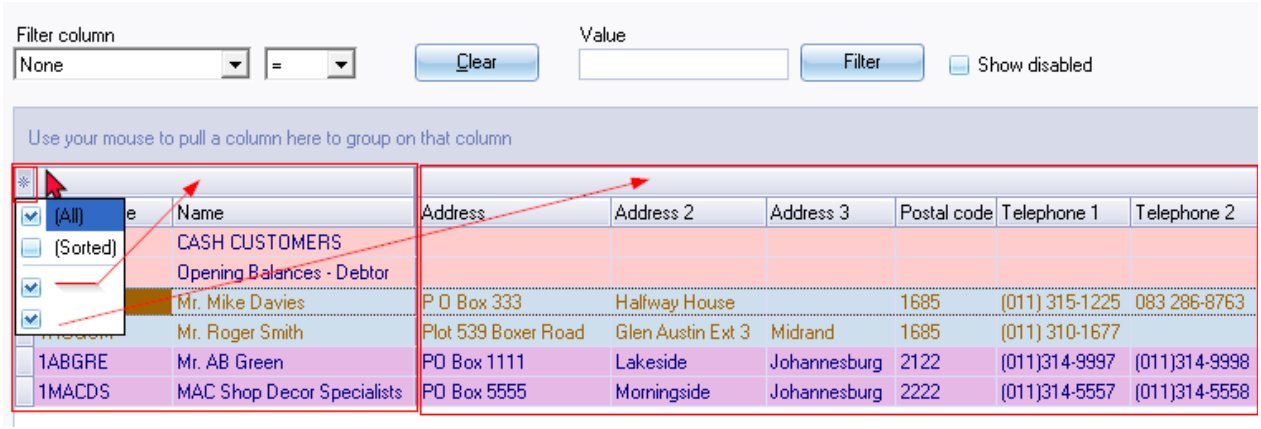
The sequence of the columns as set will be retained if you close active forms or when you reopen the Set of Books.

Show / hide bands

All the data for each of your debtor (customer / client) accounts are listed in twenty-eight (28) columns. It is listed in two (2) bands:

Left band - Contains the Debtor code and Name.

Data band - Contains the rest of the data columns.



You may drag and drop any of the columns on the data band to the left band and the columns from the left band to the data band, to customise the grid for your requirements.

To hide the columns on the Left band, remove the tick in the first block.

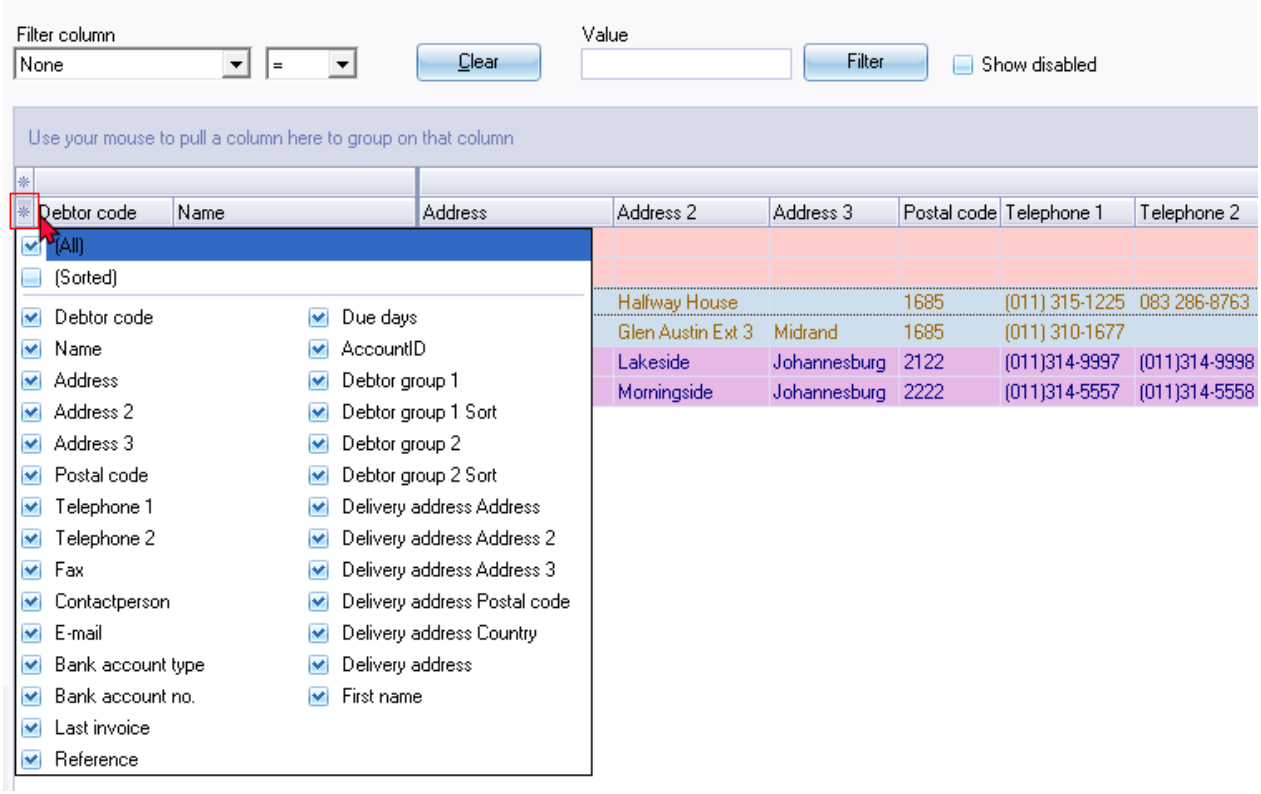
To hide the columns on the Data band, remove the tick in the second block.

Show / hide columns

Click on the second block - Column headings - All the columns will be listed.

Remove the ticks for the columns to hide or select the columns you need to display.

You may use the Up arrows and/or the Down arrows Right or Left arrows keys to navigate the fields. You may use the Space bar to deselect (remove the tick) or to reselect (tick a field again).

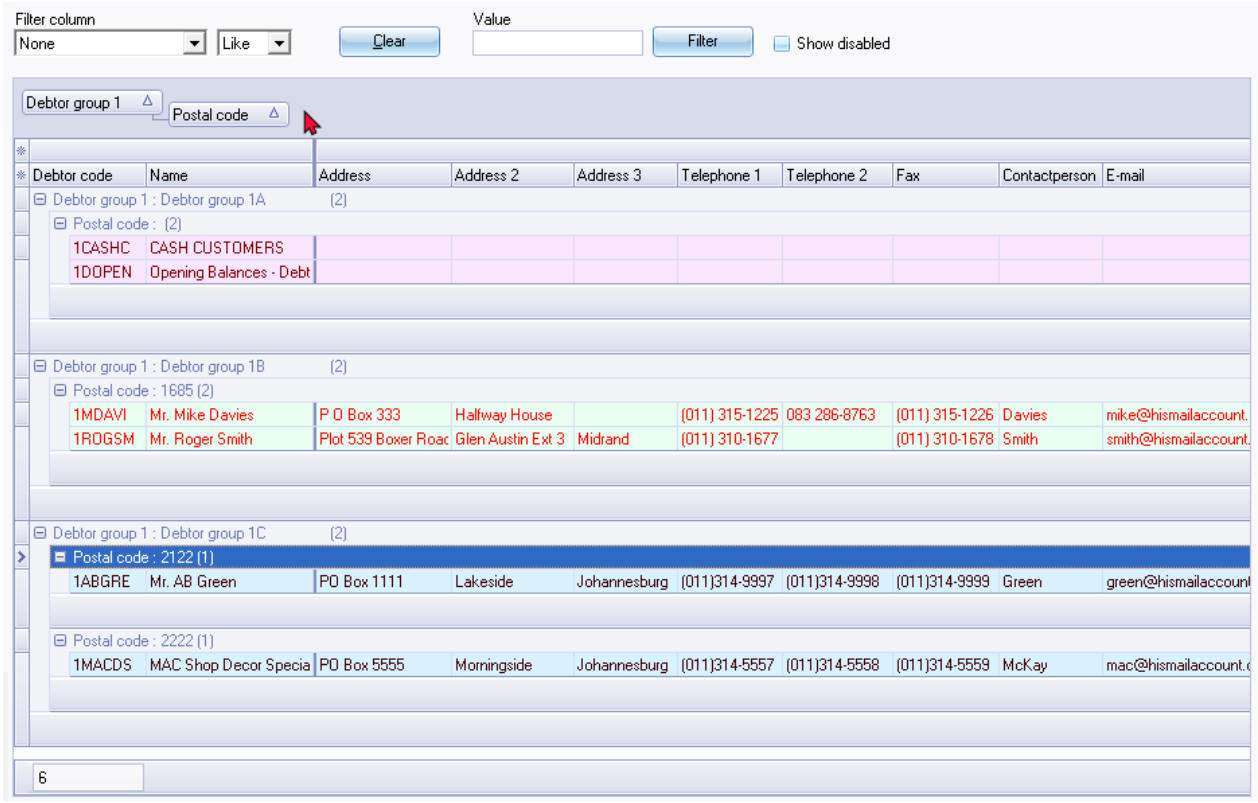


Group columns

You may drag any column heading to the column header "*Use your mouse to pull a column here to group on that column*" will be displayed and the similar data in columns will be grouped.

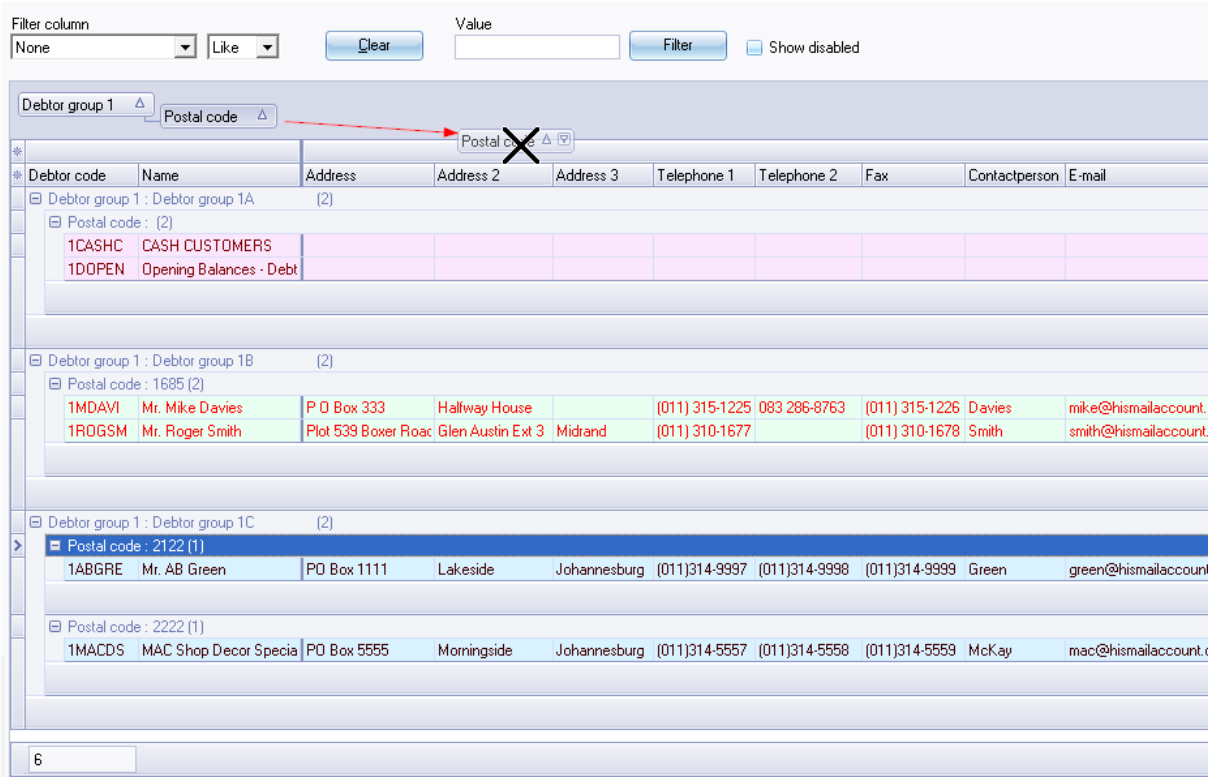
Select a column and click on it. While holding the mouse button down, drag it to the "*Use your mouse to pull a column here to group on that column*" bar. Select any other column to drag and drop it on the the "*Use your mouse to pull a column here to group on that column*" bar. You may select as many columns, as necessary, to group your data.

You may also drag and drop these columns to the right or left to change the grouping of these columns.



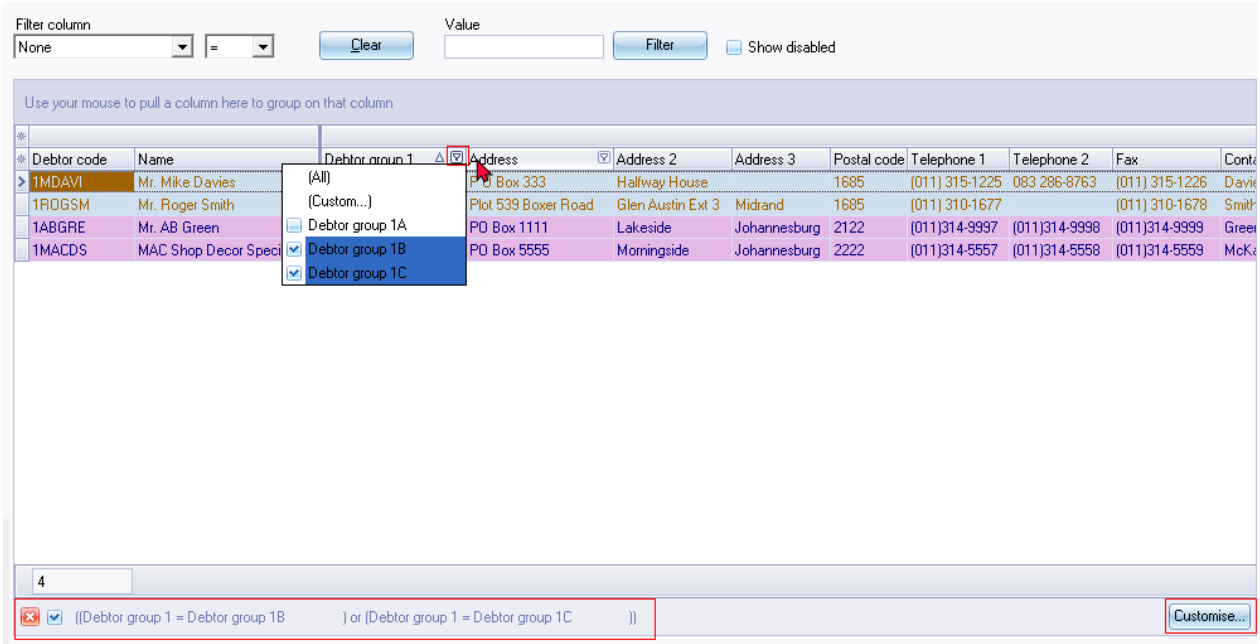
To remove a column from the "*Use your mouse to pull a column here to group on that column*" bar, you may use the following two (2) options:

1. Select the column heading (e.g., "*Postal code*") on the "*Use your mouse to pull a column here to group on that column*" bar, and drag it to the first line (above the column headings). When the mouse pointer change to a big X, drop it. The column will automatically be placed in the correct default sequence (or the place of the previous saved grid layout).
2. If you wish to change the column to a specific place, select the column heading (e.g., "*Postal code*") on the "*Use your mouse to pull a column here to group on that column*" bar, and drag it to the second line (column headings). When you drop it, the column will be added to the selected position or sequence of the columns.



Filter options : Column headings

If you need to view or find specific data, there are various options available to locate and find your data. Some of the options are:



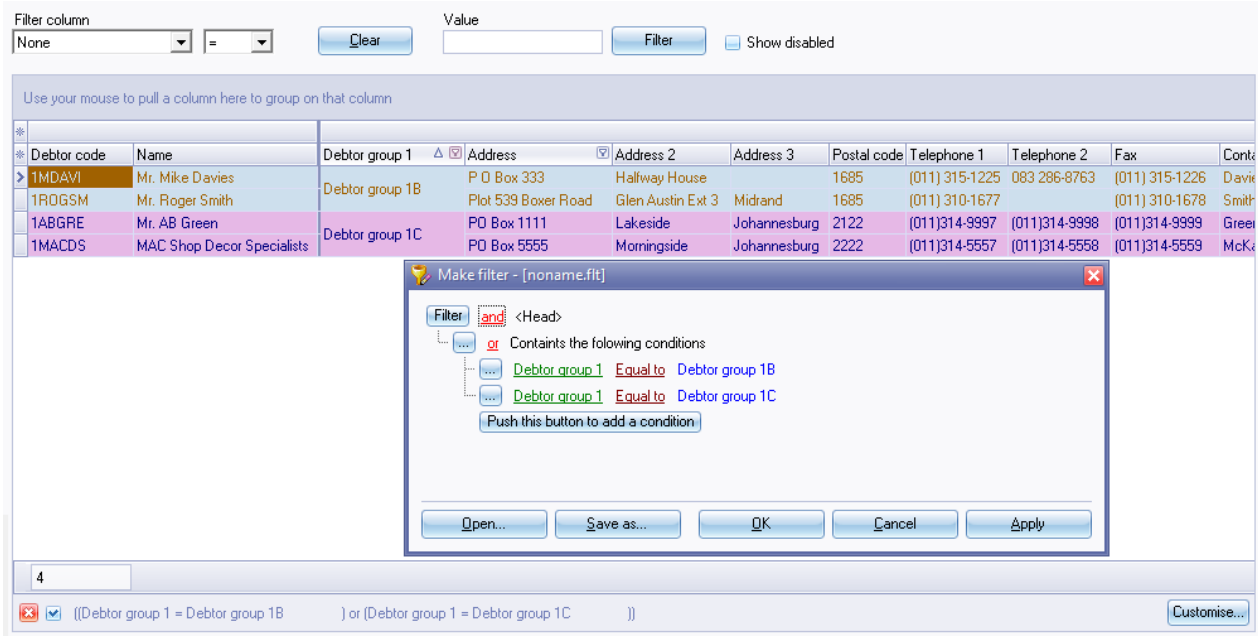
- Sort - Click on a column heading to sort and list the data ascending or descending sequence. All the data is by default displayed ascending; from the smallest to the highest value (e.g. a-z or 0-9)

according to the record number (e.g. line number in a batch, etc.) To change the sort order from ascending (e.g. a-z or 0-9) to descending (e.g. z-a or 9-0) select a column and click on it. If you click on it again it will change back to ascending sequence.

- Drag and drop columns - You may click on a column and drag it to the left or to the right to change the sequence your data is displayed on screens.
- Filter - Click in the arrow to list the data in a specific column. A list displaying the data, as well as an All option and a Custom... option in the selected column will be displayed. By adding a tick next to a specific data, only the data, matching that amount will be listed.
- Custom - You can easily build customised filters according to your needs. These filter files can be saved and opened for future use.

Custom filters

Once you have selected data from the list in a column, the your selection will be displayed at the bottom section of the Debtors list screen as follows:



- To temporarily clear the filter (show all records, remove the tick. To show the filtered records, add the tick again.

- To delete the filter, click on the close icon.

You may click on the (Custom...) option on a column list; or click on the Customise... button to:

1. Make a filter (add or delete conditions and groups).

2. Save a filter.

3. Open a filter.

Make a custom filter

To make a filter:

1. Click on the (Custom...) option on a column list; or click on the Customise button.

2. Select an operator (i.e. and, or, and not, or not).

3. Click on the Filter button (or on the ... button) and select one of the following options on the context menu:

    a) New Condition

    b) New Group

    c) Delete row (If you click on the Filter button, you may delete all rows (conditions and groups)).

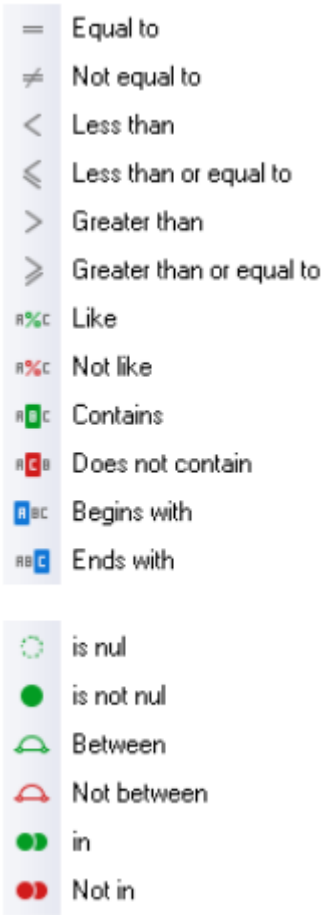
4. Select a column from the list of available data applicable to the screen.

5. Select a filter condition. In this example, the Between is selected. Another field is opened to select another date.

6. Once you have created your conditions or groups, click on the Apply button.

7. Click on the OK button to close and exit this "*Make filter*" screen.

Conditions



1. Equal to - list or display all values which is the same as the specified value.
2. Not equal to - list or display all values which is not the same as the specified value.
3. Less than - list or display all values smaller than the specified value.
4. Less than or equal to - list or display all values smaller or equal to the specified value.
5. Greater than - list or display all values greater than the specified value.
6. Greater than or equal to - list or display all values greater or equal to the specified value.
7. Like - list all values in the table similar to the specified value.
8. Not like - list all values in the table not similar to the specified value.
9. Contains - list all values in the table, which contains specified value.
10. Does not contain - list all values in the table, which does not contain specified value.
11. Begins with - starts with the specified value in the table.
12. Ends with - ends with the specified value in the table.
13. Is null - excludes any value entered, will not be listed or displayed.
14. Is not null - is not zero - any value which is not equal to zero will be listed or displayed.
15. Between - Specify specific values, etc. to include only matching values.
16. Not between - Specify specific values, etc. to exclude values.
17. In - In a specified value.
18. Not in - Not in a specified value.

Save custom filter files

To save a custom filter file:

1. Once you have sorted or filtered your data with the Make filter utility, click on the Save as... button. The "*Save active filter*" screen will be displayed.
2. Select a Directory in which you wish to save the custom filter file.
3. Enter a file name.
4. Click on the Save button to save the Filter in a (*.flt) Filter file format. You may then at any later stage open the saved *.flt file.

Open custom filter files

To open a saved a custom filter file:

1. Once you have sorted or filtered your data with the Make filter utility, click on the Open... button. The "*Open a saved filter*" screen will be displayed.
2. Select a Directory in which you have saved the custom filter file.
3. Select a valid filter file.
4. Click on the Open button. The selected filter file's name will be displayed in the titlebar of the "*Make filter*" screen.

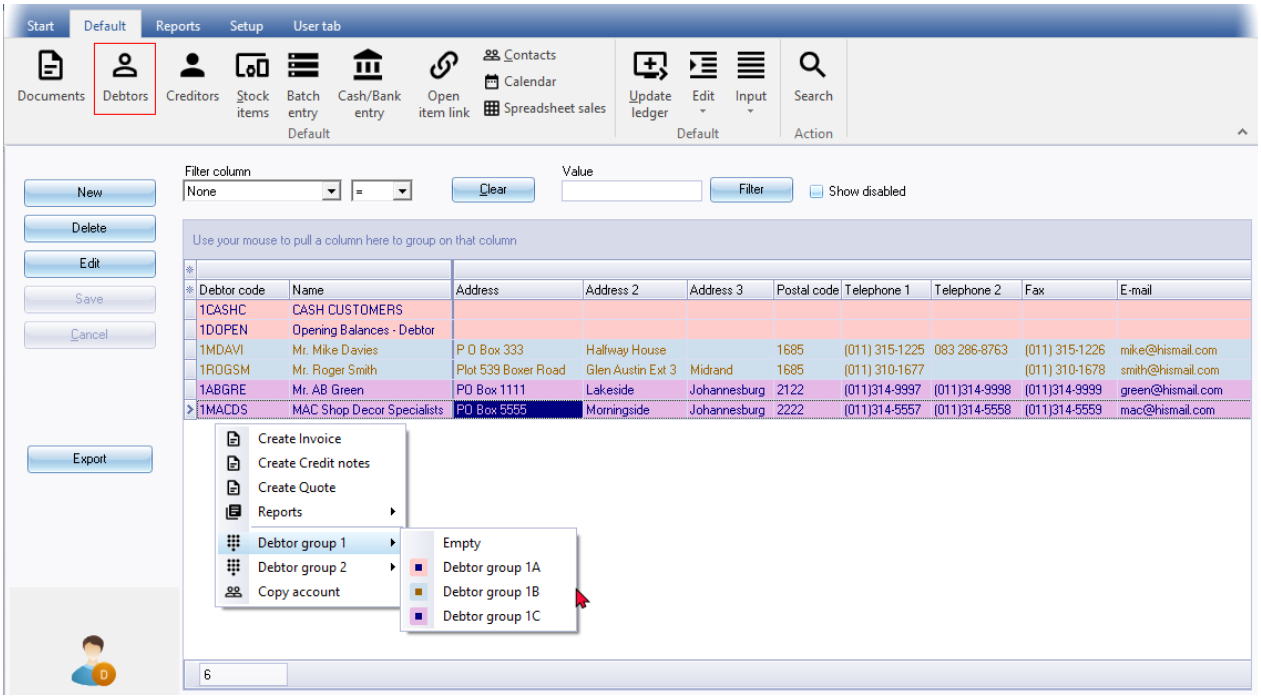
Debtor - Context menu

Right-click to display the following context menu:



The following options are available:

1. Create Invoice – A new Invoice (Document entry) will be launched for the selected debtor (customer / client) account.
2. Create Credit note – A new Credit note (Document entry) will be launched for the selected debtor (customer / client) account.
3. Create Quote – A new Quote (Document entry) will be launched for the selected debtor (customer / client) account.
4. Reports – You may print postal or delivery address labels for selected debtor(s) (customer(s) / client(s)). You may also print these labels from the Reports → Debtor → Print labels (Reports ribbon).
5. Debtor group 1 / 2 - Change the reporting group 1 or 2.
6. Copy account - Create a new account from a selected account.

Created with the Standard Edition of HelpNDoc: Single source CHM, PDF, DOC and HTML Help creation

Debtor Context menu - Set Debtor group 1/2

You may change the Debtor group 1 and/or Debtor group 2 for selected debtor (customer / client) account(s).

To change the Debtor group 1 or 2:

1. On the Debtors (Debtors list screen) (Default ribbon), select the debtor (customer / client) account(s).

> *If you need to select multiple debtor (customer / client) account(s), press the Ctrl or Shift key and click on each debtor (customer / client) account, for which you need to change the debtor reporting group.*

2. Right-click and select "*Debtor group 1*" or "*Debtor group 2*" on the context menu.

3. Select "*Empty*" or the available debtor group from the sub-menu. The "*Debtor group 1*" or "*Debtor group 2*" will change on reports.

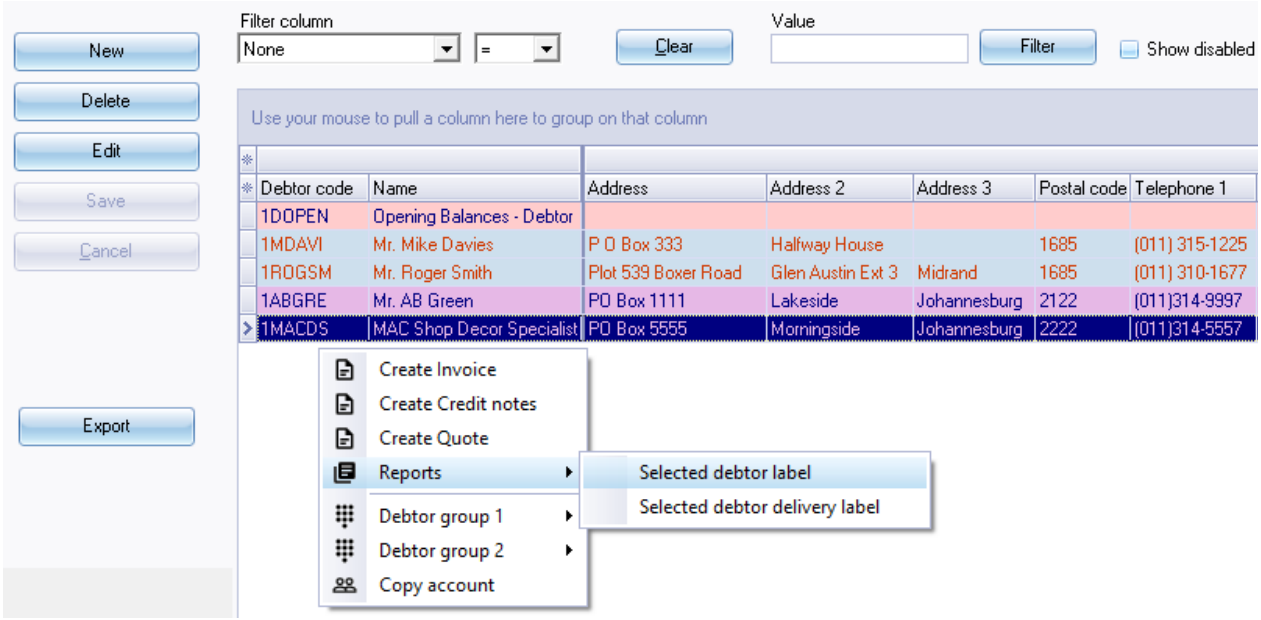
Debtor - Context menu - Reports

The "*Reports*" context menu option allows you to print postal or delivery address labels for a selected debtor (customer / client) account.

To print labels for a selected debtor (customer / client) account:

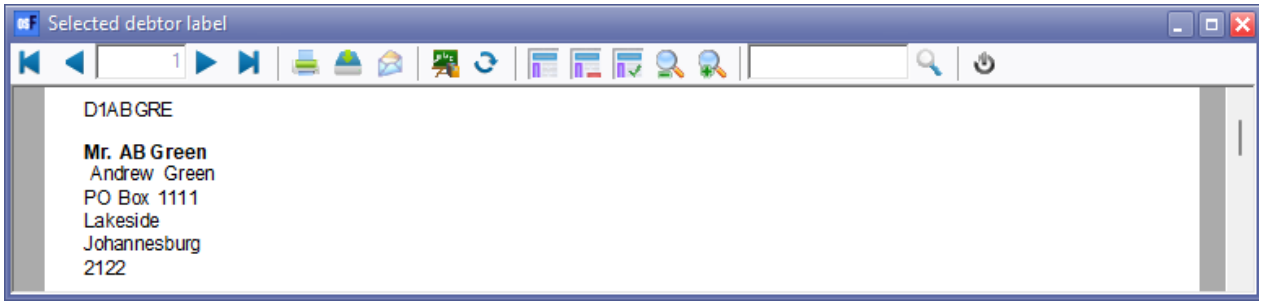
1. On the "*Debtors*" list screen, select a debtor (customer / client) account.

2. Right-click and select "*Reports → Selected debtor label*" option or the select "*Reports → Selected debtor delivery label*" option on the context menu. This will print the postal address label or the delivery address label of the selected debtor (customer / client) account.

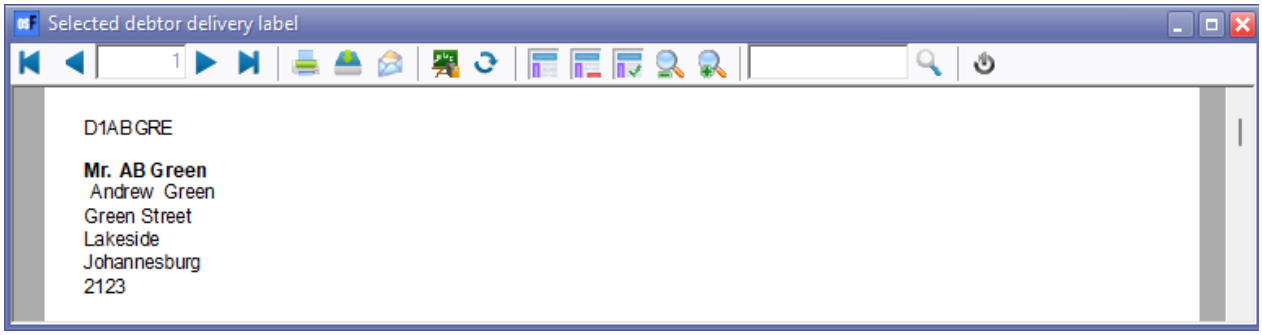


You will only be allowed to print the postal address label or delivery address label for one selected debtor (customer / client) account at a time.

An example of a printed postal address labels, is as follows:



An example of a printed delivery address labels, is as follows:



You may also print the Postal address labels or Delivery address labels for debtor (customer / client) accounts from the Reports → Debtors → Print labels (Reports ribbon).

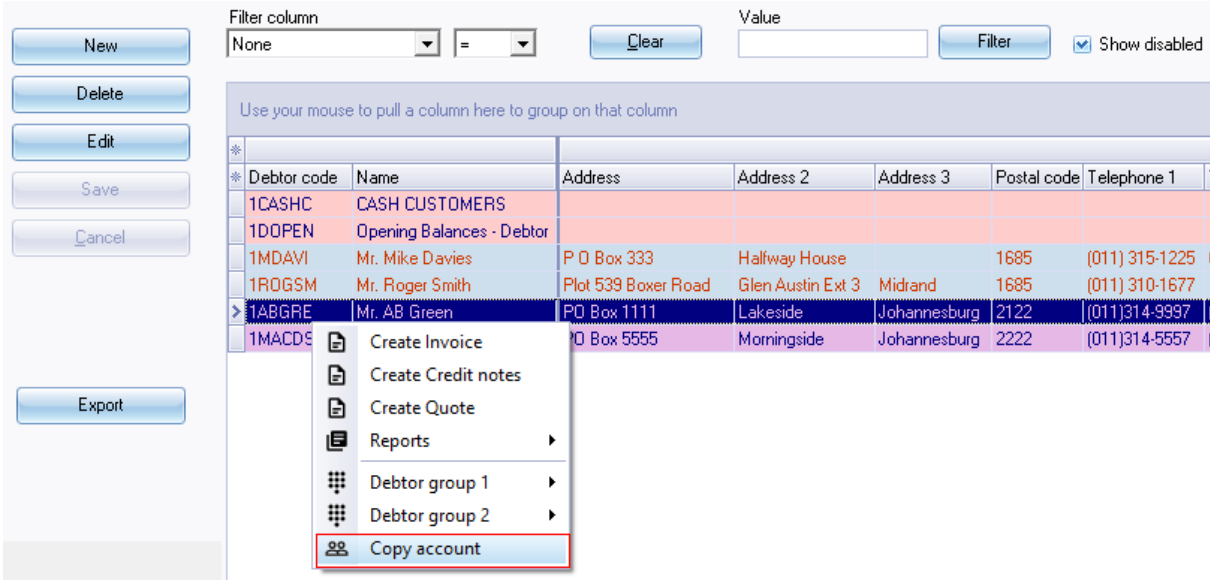
Debtor - Context menu - Copy account

The "*Copy account*" context menu option allows you to create a copy of a selected debtor (customer / client) account.

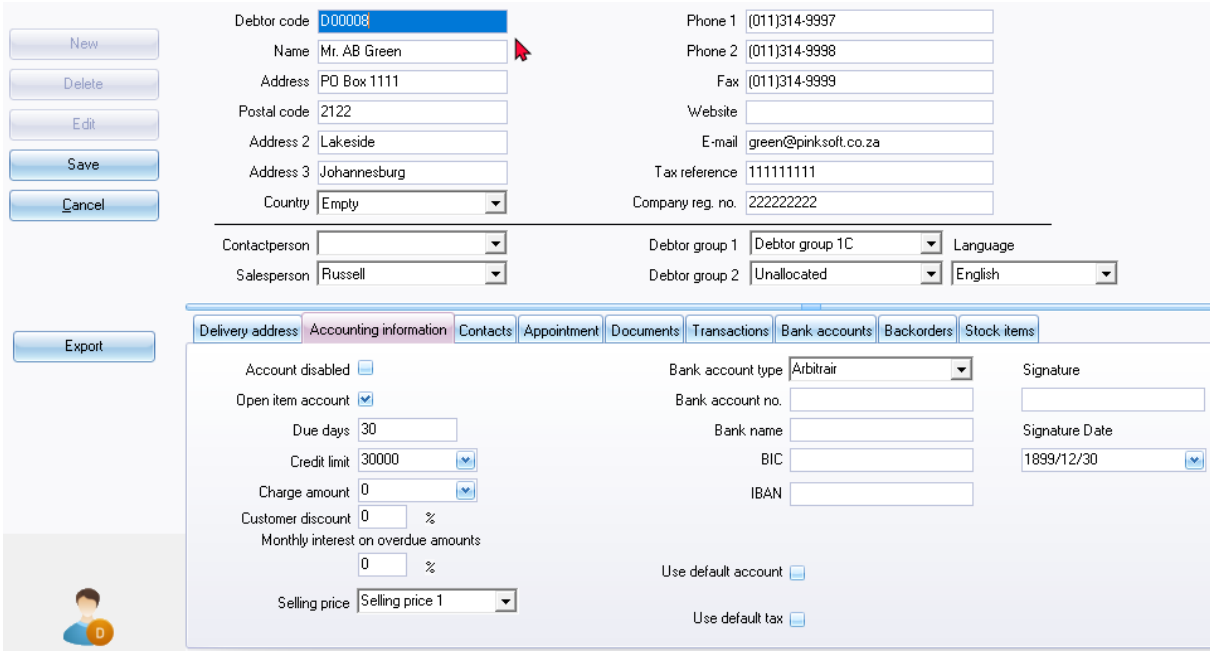
To copy a selected debtor (customer / client) account:

1. On the "*Debtors*" list screen, select a debtor (customer / client) account.

2. Right-click and select the "*Copy account*" option on the context menu.



3. This will create a copy of the of the selected debtor (customer / client) account.



4. Enter the Debtor code.

> *The next Debtor code (e.g. D00008, etc.), will automatically be generated. It is important to prefix Debtor codes with a unique prefix. In this documentation, the accounts is prefixed as follows:*
>
> *Debtor code = 1*
>
> *Creditor code = 2*
>
> *The reason for this, is that the account prefix is not always available when selecting accounts on some screens and reports. For example, if a Debtor code is D00001 and a Creditor code is C00001, and you select the Debtor code, it may set the Creditor code when selecting the contra account in the "Options for this batch" (F10:Setup) on "Batch entry" screens.*

5. Edit the copied fields, where necessary.

> *Note the following:*
>
> - *The contact person is not copied on the new account.*
> - *On the Accounting information tab, all the terms and conditions (e.g. Due days, Credit limit, Charge amount, Customer discount percentage, Monthly interest of overdue amounts percentage, etc.) is copied.*
> - *No information is copied on the Contacts, Appointment, Documents, Transactions, Bank accounts, Backorders and Stock items tabs.*

Debtor accounts edit form

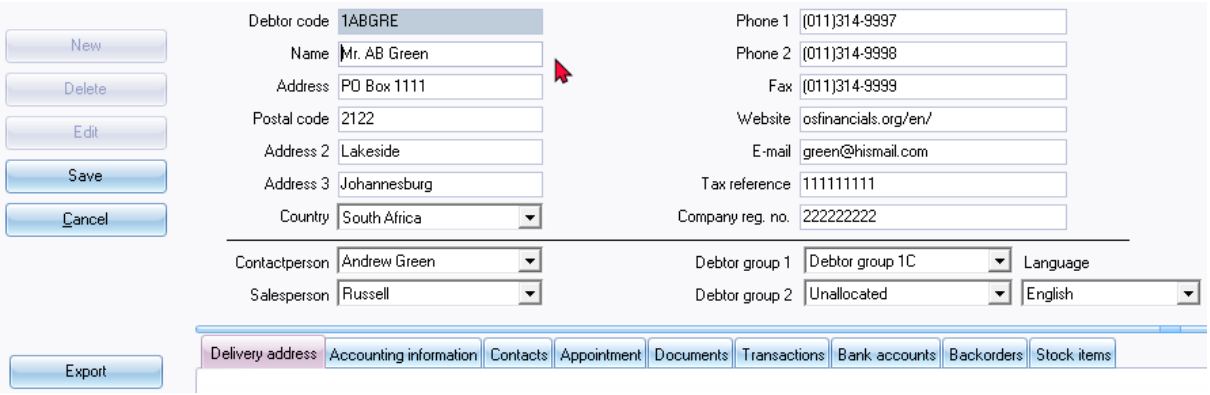
To create add / edit a Debtor (customer / client) account:

1. If you do not find a debtor (customer / client) account, you may add it by clicking on the New button. You only need to replace the Debtor code, enter the Name and save it. The rest of the fields are optional, but it is recommended that you fill in as much details as possible.

The next Debtor code (e.g. D00006, etc.), will automatically be generated. It is important to prefix Debtor codes with a unique prefix. In this documentation, the accounts is prefixed as follows:

- *Debtor code = 1*
- *Creditor code = 2*

The reason for this, is that the account prefix is not always available when selecting accounts on some screens and reports. For example, if a Debtor code is D00001 and a Creditor code is C00001, and you select the Debtor code, it may set the Creditor code when selecting the contra account in the "Options for this batch" (F10:Setup) on "Batch entry" screens on "Batch entry" screens.



The following nine (9) tabs are used to enter and/or edit settings and check additional useful information to manage debtor (customer / client) accounts:

- *Delivery address - Delivery address, Address 2, Address 3, Postal code, Country, Message, Message 1, Message 2 and Message 3 and Layout files for Invoices, Credit notes and Quotes.*
- *Accounting information - Account disabled, Open item account, Due days (Payment date), Credit limit, Charge amount, Customer discount (percentage), Monthly interest on overdue amounts (percentage), Selling prices, Bank account (i.e. Bank account type, Bank account no., Bank name and Branch code), Use default account and Use default tax.*

- *Contacts - Any contacts linked to the debtor (customer / client) account will be listed. You may also add, edit, delete and search for contacts. An auto-copy feature allows you to copy the searched contacts details, which may be edited if required.Any contacts linked to the debtor (customer / client) account will be listed. Contacts may also be maintained (managed) in the in the Contacts and Calendar on the Default ribbon.*
- *Appointments - Any events or appointments have been scheduled in the Calendar (Default ribbon) for that debtor (customer / client) account will be listed.*
- *Documents - Any sales documents (Quotes, Invoices and Credit notes) that have been processed for that debtor (customer / client) account will be listed.*
- *Transactions - Any Debit and Credit transactions have been processed for that debtor (customer / client) account will be listed.*
- *Bank accounts – This is used for the Bank import plugin.*
- *Backorders – This tab will list all backorders for the debtor (customer / client) account.*
- *Stock items – This tab will list all the posted as well as unposted documents (i.e. invoices, credit notes and quotes) for the selected debtor (customer / client) account.*

Plugins (e.g. Price agreements and Subscriptions), which may be purchased separately will be added as tabs on debtor (customer / client) accounts. These will be dealt with in separate documentation.

2. Enter and/or select the following options:

a) Debtor code - It is automatically generated.

The Debtor code is automatically generated when you click on the New button. It is prefixed with a D, followed by 5 numeric characters. You may overtype this with your own to suit your specific requirements.

If you have created a Set of Books (Advanced option), and have set the Account code to:

- *4-digits, you may enter a 7-digit Account code (a prefix followed by 6 characters).*
- *5-digits, you may enter a 8-digit Account code (a prefix followed by 7 characters).*
- *6-digits, you may enter a 9-digit Account code (a prefix followed by 8 characters).*
- *7-digits, you may enter a 10-digit Account code (a prefix followed by 9 characters).*

- *8-digits, you may enter a 11-digit Account code (a prefix followed by 10 characters).*

b) Name - Enter the name (description) for the debtor (customer / client).

c) Address - Enter up to 3 address lines.

d) Postal code - Enter the postal code or zip code.

e) Country - You may select the Country from the list, if necessary.

f) Phone 1 - Enter the phone number.

g) Phone 2 - Enter the phone number, if available.

h) Fax - Enter the fax number, if available.

i) Website - Enter the website address, if available.

You may double-click on this field to access the website of the debtor (customer / client) in your system's default web browser.

j) E-mail - Enter the e-mail address, if available.

You may double-click on this field to launch the a new message to the debtor (client / customer) in your system's default mail app / program.

k) Tax Reference - If debtor (customer / client) are exempt from tax, or registered for VAT/GST/Sales Tax, that tax reference should be entered in this field.

l) Company Reg. No. - Enter, if available.

m) Contact Person - Select a Contact Person from the list.

If no Contact Person is available, you need create it on the Contacts tab.

n) Salesperson - Select the salesperson for the debtor (customer / client) account. All salespersons, if created on the Setup ribbon Setup → Salesperson (or Setup → Groups (Salespersons) , will be listed.

If you are not generating sales documents (Quotes, Invoices, Credit notes or Point-of-Sales Invoices), you may leave this blank.

o) Debtor group 1 / 2 - The Reporting group to which you wish this debtor (customer / client) to be allocated.

> *The description of Debtor group 1 and/or Debtor group 2 you have entered on the "Reporting group name" field on the Debtor groups tab - Setup → Groups may be reflected on this screen.*

p) Language - The list of language files in Switch language (Start ribbon) as maintained in Tools → Customise language (Setup ribbon) will be listed. You may select a preferred language for the debtor (customer / client). If the standard translatable document layout files are selected, the documents (i.e. invoices, credit notes and quotes) will be printed in the selected language for debtor (customer / client) account.

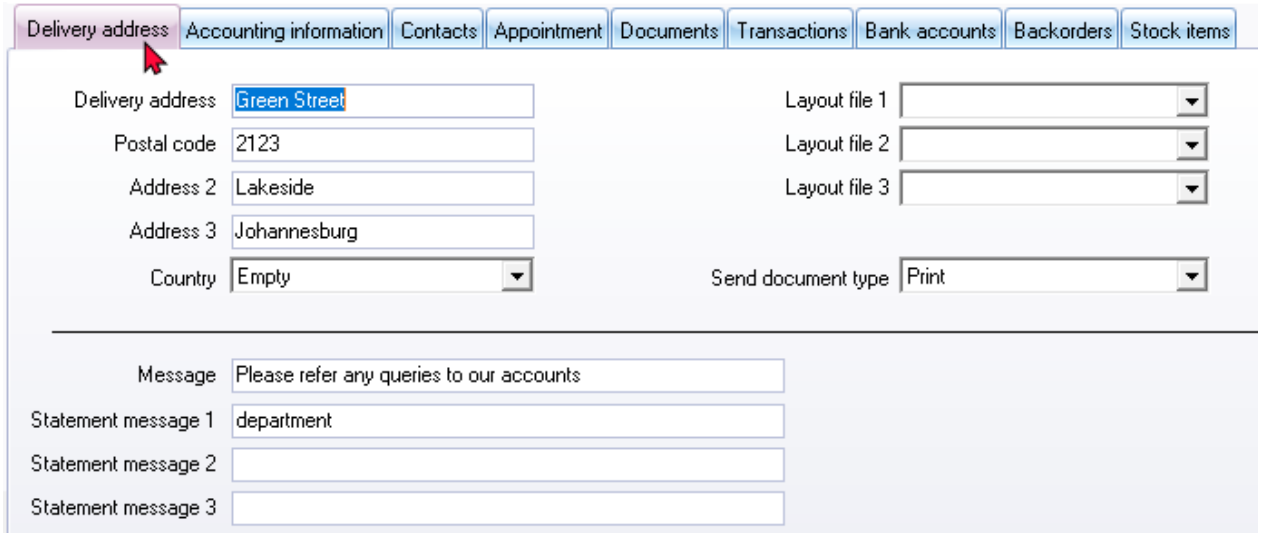
3. Click on the Delivery address tab and/or Accounting information tab to enter additional information, select settings and accounting terms.

Created with the Standard Edition of HelpNDoc: Revolutionize Your CHM Help File Output with HelpNDoc

Debtor accounts - Delivery address tab

Delivery address tab - Enter delivery address, and messages and settings for layout files.

1. The Delivery address tab is the default when accessing the Debtors on the Default ribbon.



2. Enter and/or select the following on the "*Delivery address*" tab, if necessary:

a) Delivery address, Address 2, Address 3 - Enter up to 3 address lines.

b) Postal code - Enter the postal code or zip code.

c) Country - Default is *Empty*. You may select the Country.

d) Message, Message 1, Message 2 and Message 3 - Enter the message for the debtor (customer / client) account. This message will be displayed on Statements printed in Reports → Reports → Debtors → Statements.

> *This statement message is only applicable for the selected debtor (customer / client) account. You may also enter a global statement message to be displayed on statements for all debtor (customer / client) accounts in Setup → Documents setup - Statementstab.*

e) Layout files

> *If no layout files have been selected for the debtor (customer / client) on this tab, the default settings as set for Invoices, Credit notes and Quotes (Setup → Documents setup) will be used.*

(i) Layout file 1 - Invoice - Layout file - If you have a specific Invoice layout file for the this debtor (customer / client), you may select it.

(ii) Layout file 2 -Credit note - Layout file - If you have a specific Credit note layout file for the this debtor (customer / client), you may select it.

(iii) Layout file 3 - Quote - Layout file - If you have a specific Quote layout file for the this debtor (customer / client), you may select it.

f) Send document type - This is only applicable to the E-mailPro plugin. Print document is the default. Other options are; Print document and send email or Email. To use this feature, you need to activate and purchase the E-mailPro plugin and need to set it to print to a printer.

3. Click on the Accounting information tab to enter and select settings and accounting terms.

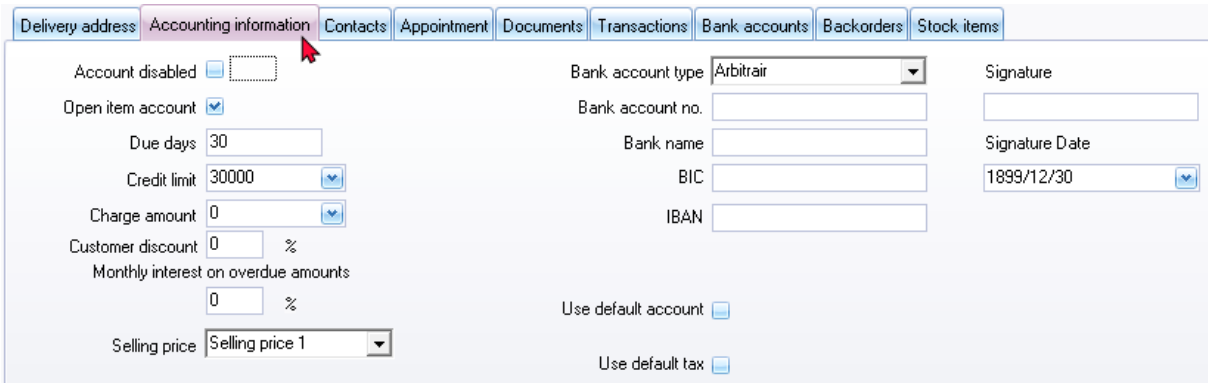
4. Once finished, click on the Save button.

Created with the Standard Edition of HelpNDoc: Generate Kindle eBooks with ease

Debtor accounts - Accounting information tab

Accounting information tab contains settings for a specific debtor.

1. Click on the Accounting information tab.



2. Enter and/or select the following, if necessary:

   a) Account disabled - This field should not be selected (ticked) if you wish to enter and post transactions to the debtor (customer / client) account. Select (tick) this field if you wish to disable the debtor (customer / client) account (e.g. if you no longer do business with this debtor (customer / client)). osFinancials5/TurboCASH5 will allow you to enter transactions for the debtor (customer / client), but it will not allow you to post transactions to the debtor (customer / client) account. However, you will still be able to view reports for the debtor (customer / client).

   b) Open item account - Select (tick) this field if you wish to allocate or link receipts or credit notes (credit transactions) to a particular invoice or debit transaction. If this field is left blank, the Balance B/F (brought forward) posting method will be used, where payments received or credit notes issued are allocated against the oldest outstanding amount.

   c) Due days - Enter the number of days for the credit facility granted to the debtor (customer / client).

> *This date will be used to calculate the date when payments are to be received from debtor (customer / client) on sales documents (i.e. invoices, credit notes or quotes) and via the electronic payment system in the Automatic receipts batch processing option. It will also print on sales documents (i.e. invoices, credit notes or quotes).*

   d) Credit limit - Enter the credit limit which you have agreed and granted to your debtor (customer / client). When you are processing transactions, osFinancials5/TurboCASH5 will warn you if the debtor is exceeding this credit limit.

> *It will also display the Available balance (i.e. Current balance minus the Credit limit) on sales document entry screens (i.e. Invoices, Credit notes or Quotes).*

The Calculator's buttons may also be launched from the Credit limit field.

e) Charge amount - Enter an amount as agreed upon when you have granted the credit facility to your debtor (customer / client).

You may generate Multiple Transactions - Debtors with charge amount option in any Batch type or Journal (except the Receipts and Payments batch types). When you post this Batch,osFinancials5/TurboCASH5 will debit (increase the debtor (customer / client) account) for each of the debtor (customer / client) accounts with the amount specified in this field and credit a specified account (e.g. Income account).

The Calculator's buttons may be launched from the Charge amount field.

f) Customer discount - You may enter a percentage for the debtor (customer / client) discount which you wish to allow to the specific debtor (customer / client).

The discount will automatically be calculated on the selected selling price of a selected stock item (if the "Allow invoice discount field is selected on the Stock items (Default ribbon)) when sales documents (i.e. invoices, credit notes or quotes) are created or edited for the selected debtor (customer / client).

g) Monthly interest on overdue amounts (percentage) - The percentage of the monthly interest on overdue accounts that will be charged to the debtor (customer / client).

If the annual interest is 18%, you would enter 1.5% (18 / 12 months) for the monthly interest. Another example, if the annual interest rate you wish to charge is 24% (24 / 12 months), you would enter 2 %).

You may generate Multiple Entries - Interest on overdue debtors option - in any Batch type or Journal (except the Receipts and Payments batch types). osFinancials5/TurboCASH5 will calculate the interest for the number of overdue days for each debtor (customer / client) account for which you have entered an amount in this field.

When you post this Batch,osFinancials5/TurboCASH5 will debit (increase the debtor (customer / client) account) for each of the debtor (customer / client) accounts with the amount specified in this field and credit a specified account (e.g. Interest Income account).

h) Selling prices - You may select any one of the three (3) available selling prices as the default selling price for this debtor (customer / client).

If you have changed the descriptions of your selling prices 1 / 2 / 3 in Setup → Stock information, your own descriptions will be displayed on the list.

i) Bank account type - Select *Arbitrair* or *11 Proof*. This is for electronic payments received from debtor (customer / client) accounts via the electronic banking system.

11-Proof - See - http://nl.wikipedia.org/wiki/Elfproef

Arbitrair - Random - not controlled

j) Bank account no. - Enter the bank account number, if available.

k) Bank name - Enter the bank account name, if available.

l) BIC - (Bank Identifier Code). Enter, if available.

m) IBAN - (International Bank Account Number). Enter, if available.

See - http://en.wikipedia.org/wiki/International_Bank_Account_Number

n) Signature - Enter, if available.

SWIFT - (Society for Worldwide Interbank Financial Telecommunication) - See - http://en.wikipedia.org/wiki/SWIFT / http://www.theswiftcodes.com/

SEPA - (Single Euro Payments Area) - See - http://en.wikipedia.org/wiki/Single_Euro_Payments_Area

o) Signature date - Enter, if available.

p) Stock file override - By default, the Stock file override settings is not activated. If necessary, select the following:

i) Use default account - By default, the "*Use default account* " option is not selected. The Sales account, as selected on the on Stock items (Default ribbon), will be used when invoices or credit notes for the debtor (customer / client) is updated (posted) to the ledger.

If you activate the Use default account settings, you need to select a different account on the Accounts lookup facility.

When invoices or credit notes for the debtor (customer / client) is updated (posted) to the ledger, the selected Sales account for this Stock item will be ignored and the sales transaction will be updated (posted) to the specified

account for the debtor (customer / client).

ii) Use default tax - By default, the "*Use default tax*" option is not selected. The Output Account, as selected on the on Stock items (Default ribbon), will be used when invoices or credit notes for the debtor (customer / client) is updated (posted) to the ledger.

If you activate the Use default tax settings, you need to select a different VAT/GST/Sales Tax account or code on the Tax Lookup.

When invoices or credit notes for the debtor (customer / client) is updated (posted) to the ledger, the selected Tax account or code for this Stock item will be ignored and the Output VAT/GST/Sales Tax transaction will be updated (posted) to the specified VAT/GST/Sales Tax account or code for the debtor (customer / client).

Do not select this option, if you are not registered for VAT/GST/Sales Tax, or if multiple Tax codes (accounts) is applicable to the transactions with the debtor (customer / client).

If you do not generate sales documents (Invoices, Credit notes and Quotes), the selling prices and customer discount fields are not applicable.

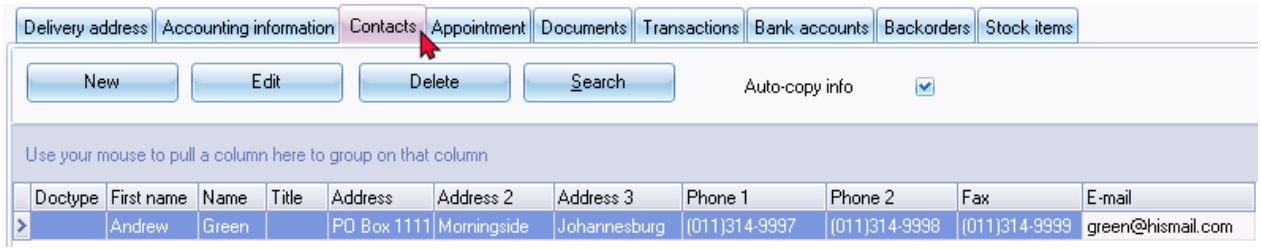
3. Click on the Save button.

Created with the Standard Edition of HelpNDoc: Streamline Your Documentation Creation with a Help Authoring Tool

Debtor accounts - Contacts tab

You may add, delete or enter contact persons for the debtor (customer / client). A list of all contact persons linked to the selected debtor (customer / client) account, you have created, edited or deleted, in the following options on the Default ribbon:

- Calendar
- Contacts



This will display the First name, Name, Address, Address 2, Address 3, Phone 1, Phone 2, Fax and E-mail address.

The options are as follows:

New - This will open a blank contactperson screen.

Edit - This will open the selected contact's details screens.

Delete - Delete a selected contact.

Search - This will initiate a similar screen as in the Contacts (Default ribbon) listing all contacts. You can then select a specific contact. You can also use the "*Auto-copy info*" option to copy the details of a selected contact.

Deleted contact persons will be removed from this list.

Created with the Standard Edition of HelpNDoc: Transform Your Word Doc into a Professional-Quality eBook with HelpNDoc

Debtor accounts - Appointments tab

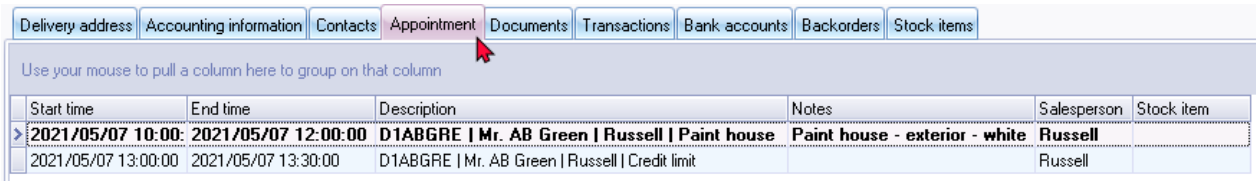
In osFinancials5/TurboCASH5, the "*Debtor accounts - Appointments*" tab allows you to view and manage appointments specifically related to a selected debtor (customer/client) account. This tab provides a centralised view of all scheduled debtor appointments that have been added in the Calendar (Default ribbon).

By accessing the "*Debtor accounts - Appointments*" tab, you will be able to see a comprehensive list of all debtor appointments/events that have been scheduled in the Calendar. This includes appointments for meetings, discussions, notes, or any other relevant activities associated with your debtor account.

If any Bulk time entries were processed for a selected debtor (customer/client) account these entries will only be listed on the "*Debtor accounts - Appointments*" tab, once you generated quotes on the "Create invoices for hours" button.

All scheduled Debtor appointments (events) added in the Calendar (Default ribbon) for the selected

debtor (customer / client) account will be listed here.



If you double click on a selected appointment, the Bulk time entry screen will be launched. You may select the dates edit reschedule, add notes, etc. and set reminders, etc.

When you use the Bulk time entry feature to add time entries for a selected debtor account, those entries are initially recorded but not directly listed on the "Debtor accounts - Appointments" tab. However, once you proceed to generate quotes for the hours using the "Create invoices for hours" button on the Calendar, the bulk time entries will be transformed into quotes.

Therefore, to see the bulk time entries reflected on the "Debtor accounts - Appointments" tab, it is necessary to generate quotes for those hours using the "Create invoices for hours" button in osFinancials5/TurboCASH5.

At this point, the quotes created from the bulk time entries will be listed on the "Debtor accounts - Appointments" tab.

The Repeating invoices event will not be listed in the "Debtor accounts - Appointments" tab. The Repeating invoices event will not be listed in the Reports → Calendar report.

You may click on the column headings (i.e. Description or Notes) to change the sort sequence from the ascending to the descending sequence.

You may click on any of the column headings (i.e. Start time, End time, Description or Notes) and drag it to the left or right to change the sequence in which to display the columns.

Created with the Standard Edition of HelpNDoc: Streamline your documentation process with HelpNDoc's WinHelp HLP to CHM conversion feature

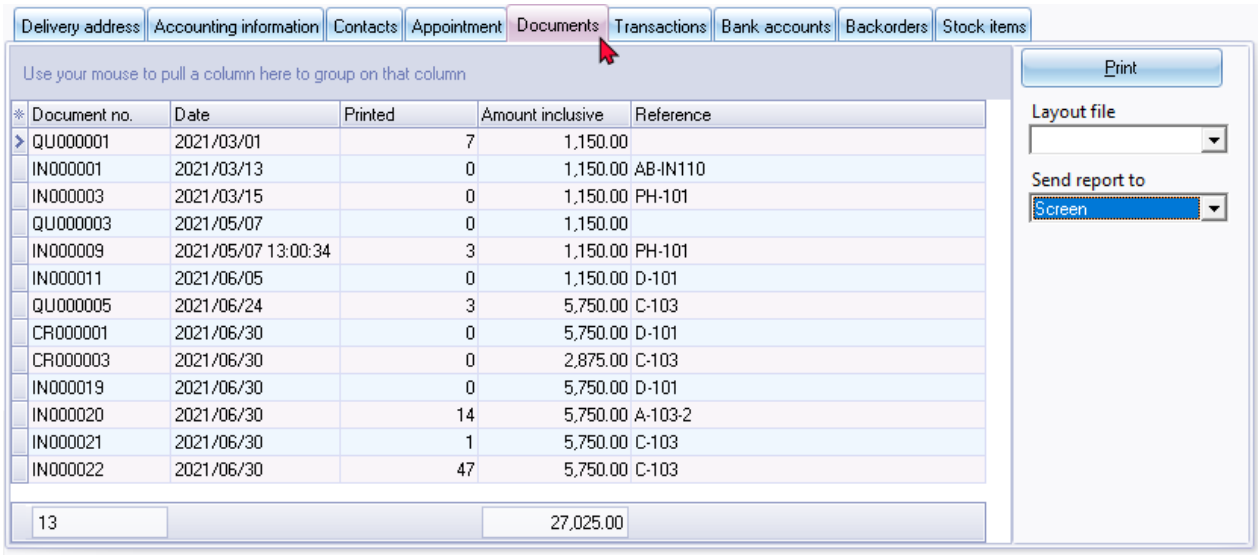
Debtor accounts - Documents tab

All sales documents (i.e. Invoices, Credit notes, Quotes and/or POS Invoices) which have been processed for the selected debtor (customer / client) account will be listed here.

To maximise the Documents tab and/or Debit / Credit transactions section of the screen, click on the

button to maximise the Documents tab. You may also click and drag any part of the screen

up / or down.



The options are as follows:

1. Print button - This will print the selected document to the default or selected output method.

   You may also double-click on a selected document to print it.

2. Layout file - This is by default blank. The selected document will be printed using the layout file as selected for each document type (i.e. Invoices, Credit notes and Quotes) in Documents setup (Setup → Documents setup).

   If specific layout files is selected on the Delivery address tab of a debtor (customer / client) account, te layout files will be used to print the selected documents.

   You may change the layout file by selecting a layout file from the list.

   These layout files are stored in the ...\plug_ins\reports\DOCUMENTS\DOCUMENTS directory of your system.

3. Send report to - The default option as set in the "*Output Method*" field on Setup → Company info (Options) or Setup → Access control (Reports access tab). You any change this to any other option (i.e. "*Screen, Printer, File, E-mail*" or "*Fax*"), if required.

   You may click on the column headings (i.e. Document number, Date, Description or Reference) to

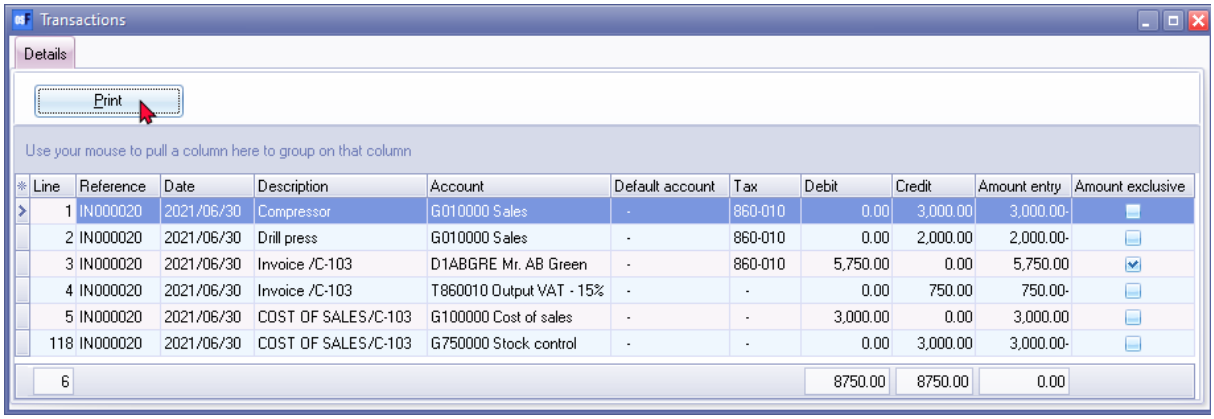
change the sort sequence from the ascending to the descending sequence.

You may also click and drag any of the column headings to the left or right to change the sequence in which the columns are to be displayed.

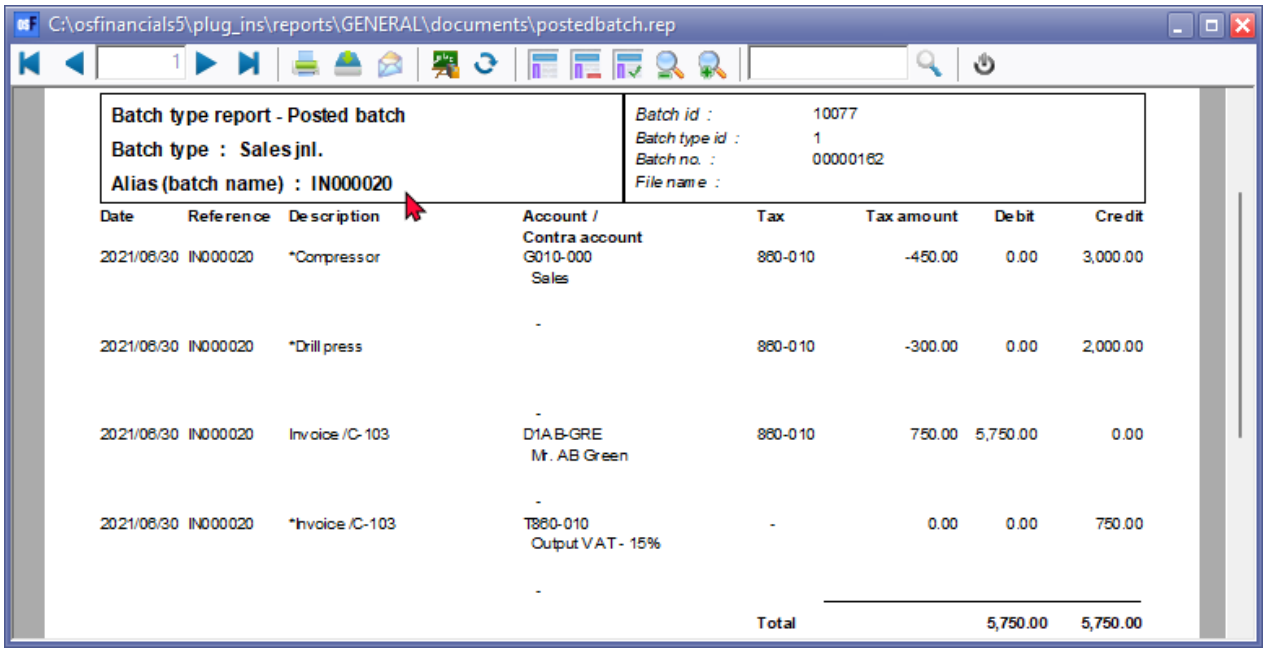
View Transactions - Show transact context menu

The Documents tab lists all posted and unposted documents (i.e. Invoices, Credit notes and Quotes. The Show transactions context menu option will not do anything, if an order or an unposted document is selected.

1. Select a document (Invoices or Credit notes) and right-click, select Show transactions. The posted batch transactions will be displayed in the "*Transactions*" screen.



2. Click on the Print button to print the posted batch transactions, if required.



Created with the Standard Edition of HelpNDoc: Transform your help documentation into a stunning website

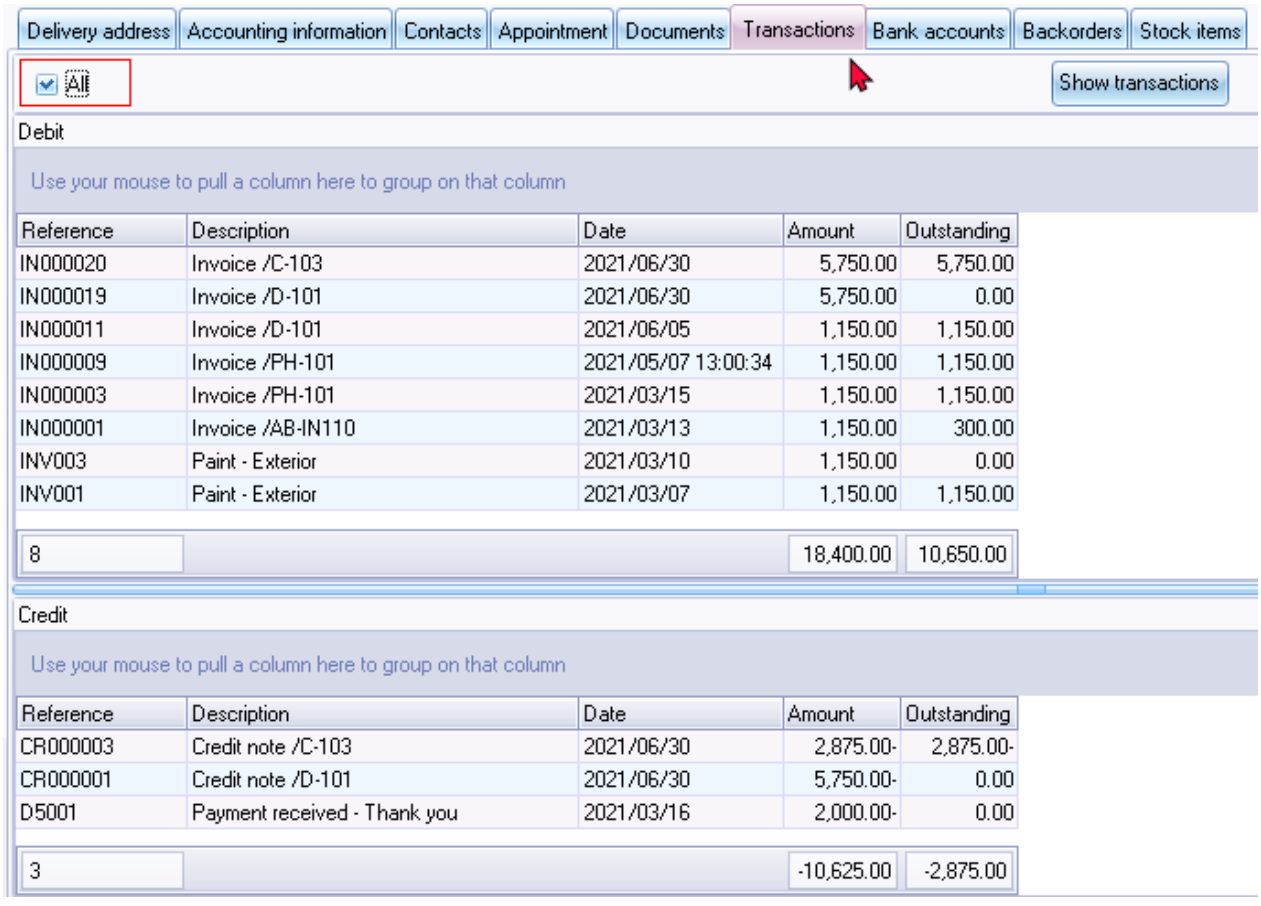
Debtor accounts - Transactions tab

Any transactions which have been processed (posted documents and posted batches) for that debtor (customer / client) account will be listed:

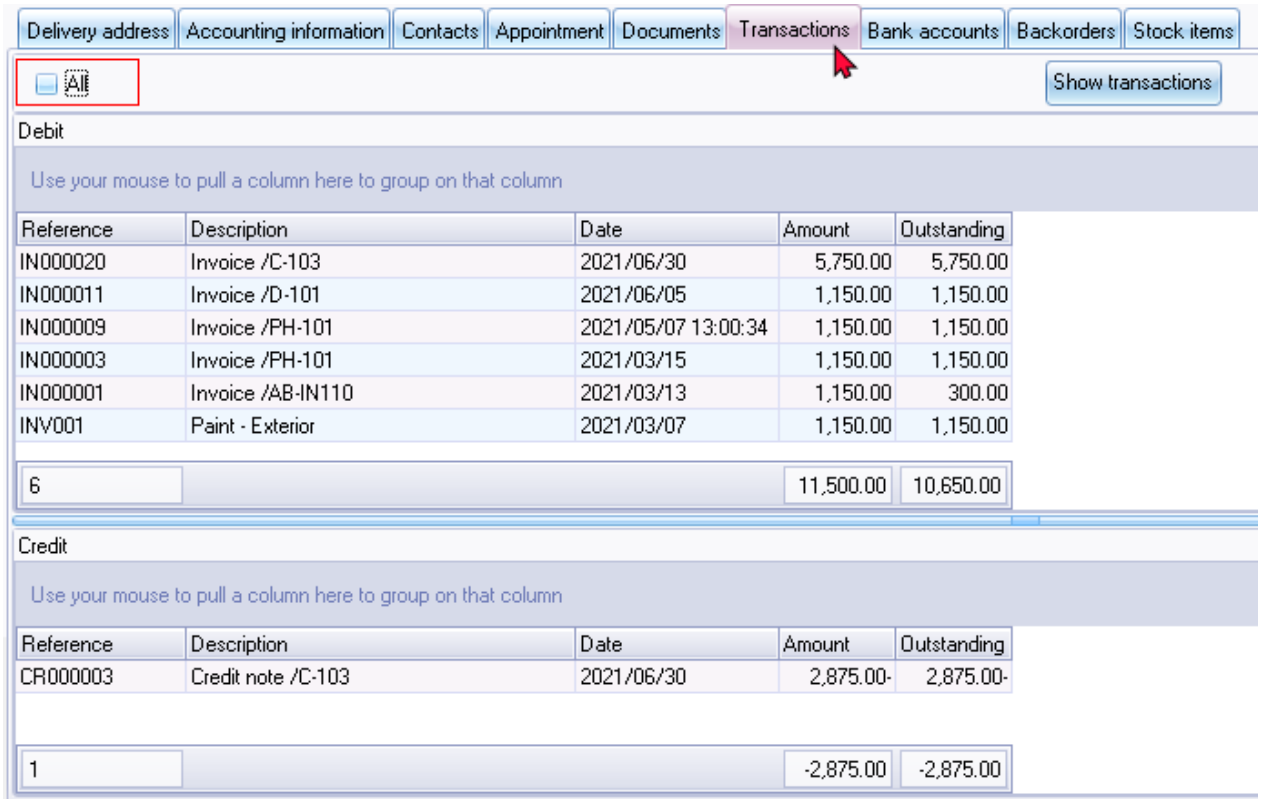
- Batch (Journal) Transactions which have been updated (posted) to the ledger.
- Document Transactions (i.e. Invoices and Credit notes) which have been updated (posted) to the ledger.

To maximise the Transactions tab and/or Debit / Credit transactions section of the screen, click on the *button to maximise the Transactions tab. You may also click and drag any part of the screen up / or down.*

All selected - All transactions listed. Those transactions, which are fully linked or settled, will display an 0.00 amount in the Outstanding column:



All not selected - This is the default option. Only those with outstanding amounts will be listed:



Before sending statements to your debtors (customers / clients), it is recommended that any amounts in the credit section be linked to any outstanding invoices or debit transactions.

If the debtor (customer / client) account is not set as an open item, account, all transactions will be listed.

It will list transactions as follows:

1. Debit - Documents (i.e. Invoices and POS Invoices), Sales journal, Generate multiple transactions (Interest on overdue debtors, Debtors with charge amount, Fixed amount to all debtors), Opening Balances take-on, etc. It will list any transactions, for which amounts are entered in the Debit column of batches.

2. Credit - Documents (i.e. Credit notes), Sales returns journal, Receipts journal, Generate multiple transactions (Balance debtors with amount), etc. It will list any transactions, for which amounts are entered in the Credit column of batches.

You may click on the column headings (i.e. Reference, Description, Date, Amount or Outstanding) to change the sort sequence from the ascending to the descending sequence.

You may also click and drag any of the column headings to the left or right to change the sequence in which the columns are to be displayed.

Before sending debtor statements, it is recommended that any amounts in the credit section be linked to any outstanding invoices or debit transactions.

View Transactions - Show transactions context menu

1. Select a transaction and click on the Show transactions context menu.
2. On the "*Transactions*" screen, click on the Print button.

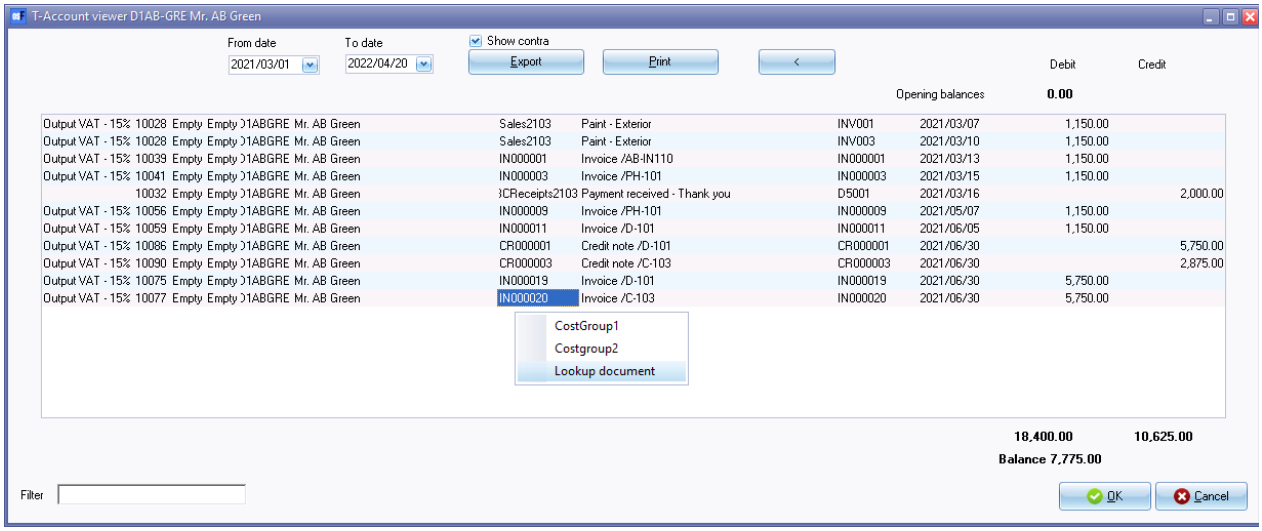
View Transactions - Show Transactions button

T-Account viewer

1. Click on the Show transactions button.
2. Enter or select a start date and an end date, if necessary. Click on the Print button to print the transactions, if required.



You may double-click on a selected batch number to view only the transactions for the selected document. For example, if you need to view and print the transactions for Invoice "IN000020" only, double-click on the batch number "10077"

Show contra - By default, this option is not selected. The contra accounts will not be printed in the "ledgerdetail" report when you click on the Print button.

Show contra option selected you may view the Contra accounts in the T-Account-viewer. If you click on the Export button, the contra accounts will be included in Column A of a Spreadsheet.

The Contra accounts consists of the following, separated by a comma:

"G010000 Sales,T860010 Output VAT - 15%"

Documents

- *Ledger account and account description set as the contra account of the batch type linked to the document type. (i.e. Contra account of the Sales jnl linked to Invoice and Credit note document types in Setup documents).*
- *Tax account (tax code) and description as linked to the Output tax (VAT/GST/Sales tax) on the Ledger tab of the Stock item selected on the Document lines.*

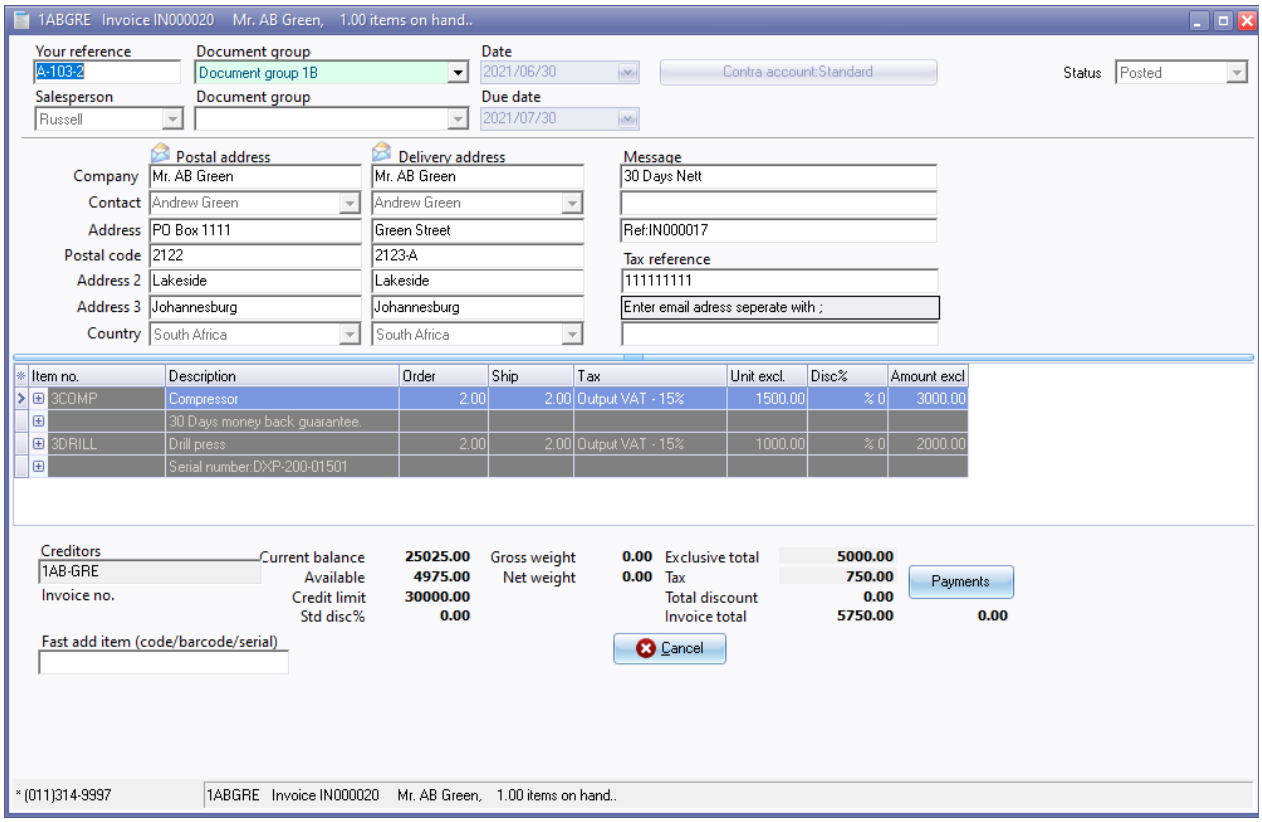
Batches

- *Ledger account and account description of the contra account selected in Batch setup generated as balancing entries; or selected in the "Account" column for Batch transactions.*
- *Tax account (tax code) and description as selected in the "Tax" column for Batch transactions and/or generated as balancing entries.*

Lookup document

You may right-click on a selected document and select "*Lookup document*" on the context menu of the "*T-Account viewer*".

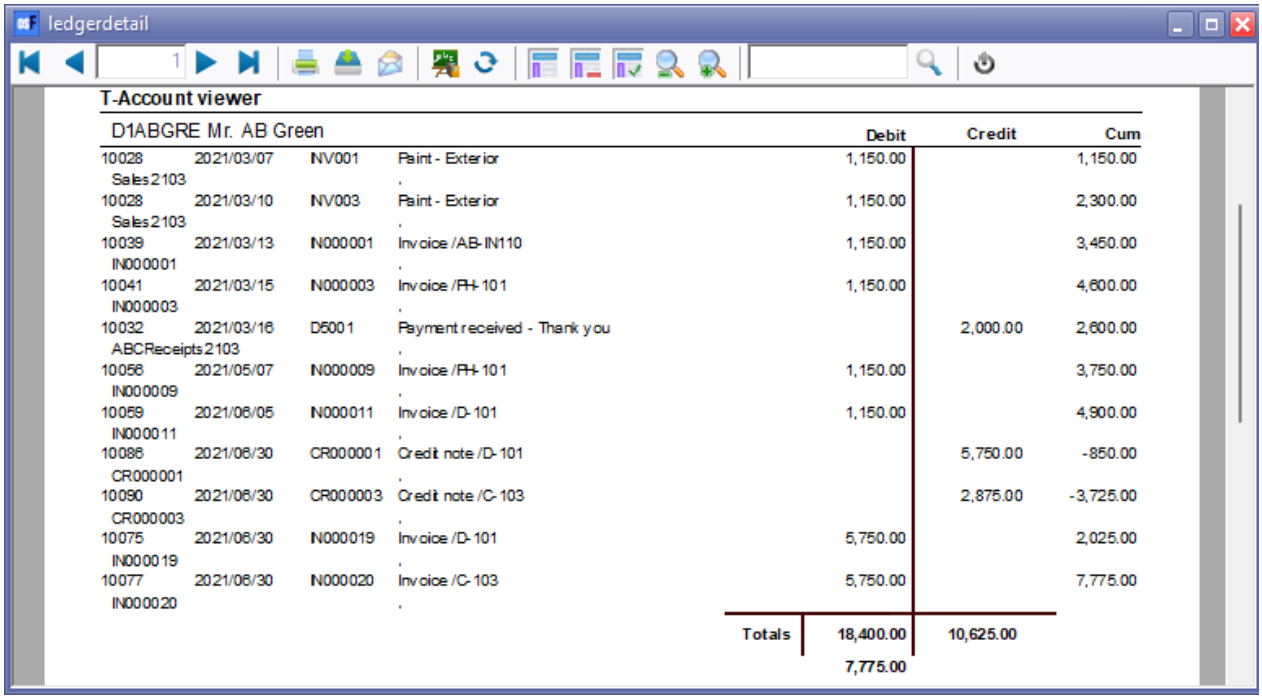
The posted document will be displayed in a stand alone "*Document entry*" screen.



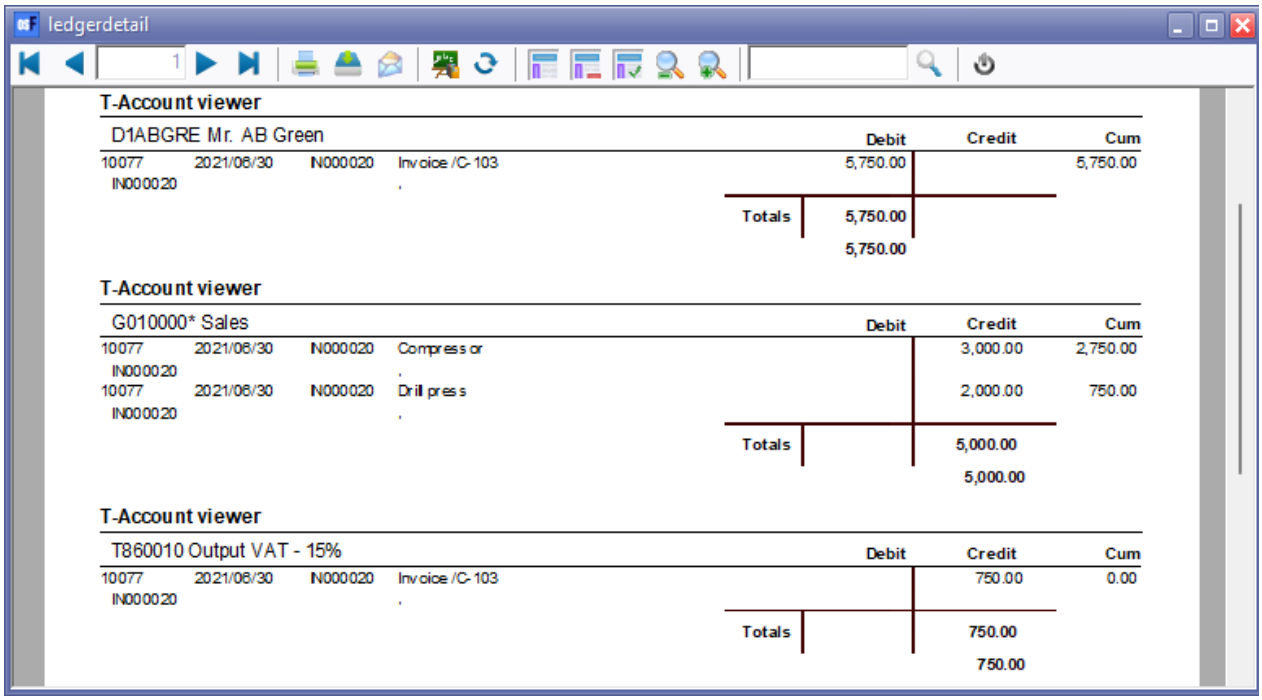
You will not be allowed to edit or change the posted document.

T-Account viewer - Print transactions

To print the transactions, in the "*T-Account viewer*", click on the Print button.



View a specific selected batch transaction (e.g. Invoice "*IN000020*" (batch number "*10077).*



T-Account viewer - Export transactions

To export the transactions, in the "*T-Account viewer"*, click on the Export button. This will export the transactions, as selected displayed in the T-Account viewer, as a comma separated text file as a "*Export.txt*" file. The Exported file will automatically be opened in your in your system's app (program) associated with the CSV (Comma Separated Values) file types.

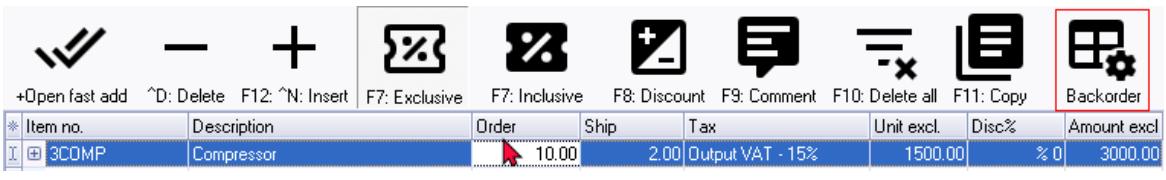
Debtor accounts - Backorders tab

This tab will list all backorders for the debtor (customer / client) account. Backorders will automatically be listed here when processing documents or added / edited from the following options:

- When processing invoices in Input → Documents (Default ribbon), and the debtor (customer / client) orders more than is actually invoiced, it will be recorded in the backorder facility.
- An example where the quantity entered in the "*Order*" field is more than the quantity entered in the "*Ship*" field, is as follows:



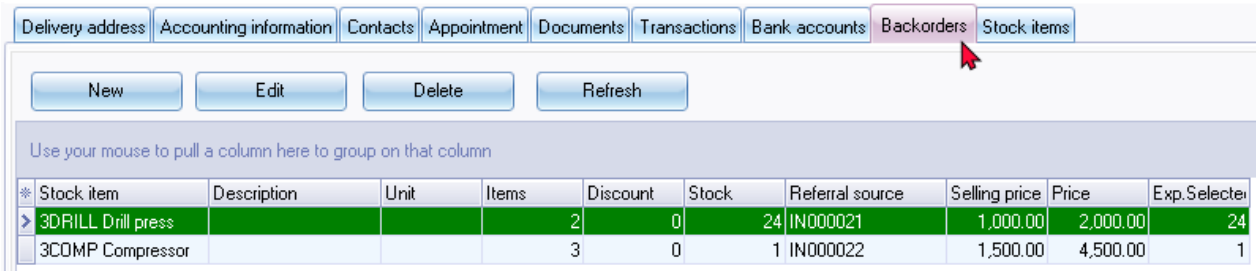
You may also click on the Backorder icon to edit backorders when processing invoices and quotes.

The insufficient quantities (e.g. 10 – 2 = 8, as per this example) will be added to the backorder

feature.

The Backorders may be accessed from the following options on the (Default ribbon).

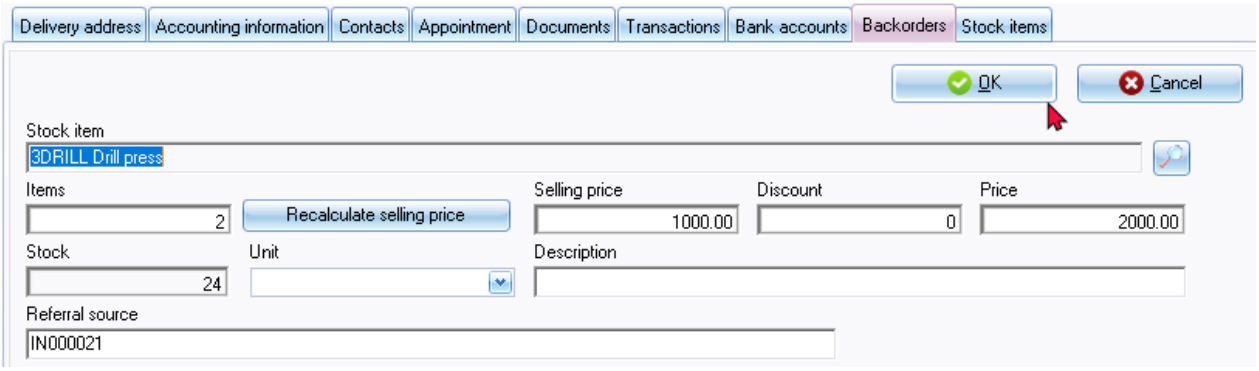
- Stock items – List of backorders for the selected stock item.
- Input → Backorders – List of backorders for all stock items.



Sorting and Rearranging Columns:

- *You can click on the column headings (such as Stock item, Description, Unit, Items, Discount, Stock, Referral source, Selling price, Price, and Exp. Selected) to change the sort sequence from ascending to descending order.*
- *To rearrange the sequence in which the columns are displayed, you can click and drag any of the column headings to the left or right.*

You may also add a new backorder, edit an existing backorder or delete a backorder.



If the Backorders screen is launched from Input → Documents → Backorders, both the Debtor as well as the Stock item will be displayed. You may select them, if necessary.

Click on the New button to add a new backorder item or on the Edit button to edit a selected backorder. The fields are as follows:

- Stock item – The stock item code and description will be displayed for existing backorders. For new backorders, select the stock item.

- Items – The quantity is automatically displayed as the difference of the quantity entered in the "*Order*" field and the quantity entered in the "*Ship*" field of documents. For new backorders, enter the quantity.

- Recalculate selling price – This button will clear the Discount percentage and recalculate the Selling price to the original selling price (Price).

- Selling price and Price – This is the prices per item. The Selling price is the amount after the discount percentage and the Price is the price excluding any discount.

The Selling price and Price displayed is the prices for a single item.

- Discount – The Discount will be displayed if the percentage is entered on the "*Customer discount*" field on the Accounting information tab of the debtor (customer / client) account and the "*Apply invoice discount*" field is selected (ticked) on Stock items (Default ribbon).

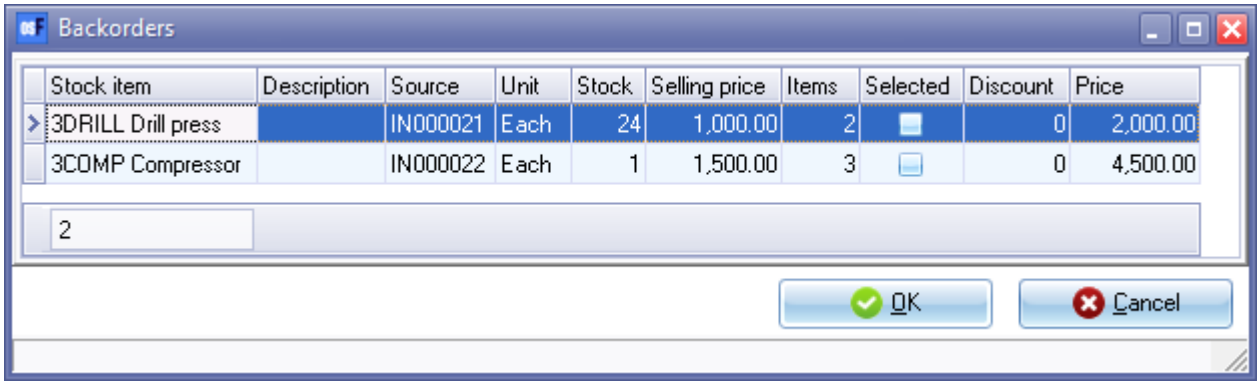
- Stock – (Exp.Selected column on the Backorders tab – List view). This is the quantity of stock items on hand. The quantities in this field will be updated if:

    - Documents are posted (updated) to the ledger (e.g. credit notes, purchases and supplier returns).

    - Stock item adjustments – If the quantities "*On Hand*" field is updated / changed on the Stock items (Default ribbon).

- Referral Source – This will automatically be updated with the Invoice number in which the quantity entered in the "*Order*" field is more than the quantity entered in the "*Ship*" field.

When processing a new Invoice for a debtor (customer / client) account (with outstanding Backorders), the "*Backorders*" screen is automatically displayed:



If you select an item (tick the Selected field), the following is updated:

- Transferred to the Document line.
- Removed from the backorder records and reports.

Created with the Standard Edition of HelpNDoc: Maximize Your Productivity with HelpNDoc's CHM Help File Creation Features

Debtor accounts - Stock items tab

This tab will list all the posted as well as unposted documents (i.e. invoices, credit notes and quotes) for the selected debtor (customer / client) account.

To maximise the Stock items tab and/or Debit / Credit transactions section of the screen, click on the  *button to maximise the Stock items tab. You may also click and drag any part of the screen up / or down.*

Delete Debtor accounts

You may delete a debtor (customer / client) account if the account has no transactions and/or balances.

You may disable a debtor (customer / client) account to block (prevent) posting of any documents or batch transactions for the debtor (customer / client). You may need to do this, if you are no longer doing business with the debtor (customer / client), or if the account is overdue, etc.

Delete accounts

To delete a Debtor (customer / client) account:

1. On the "*Debtor accounts*" list screen, select the account.

If you wish to delete more than one (1) debtor (customer / client) account at a time, press the Ctrl key and keep it down while selecting the other debtor (customer / client) accounts to delete with a mouse click.

2. Click on the Delete button. A confirmation message is displayed.

"Are you sure you want to delete this account?"

Make sure absolutely sure that the correct debtor (customer / client) account is selected.

3. Click on the Yes button. A confirmation message is displayed:

   "Account deleted!"

4. Click on the OK button. This will permanently remove the debtor (customer / client) account.

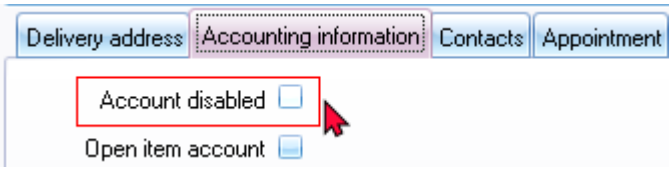
Disable accounts

To disable a Debtor (customer / client) account:

1. If the debtor (customer / client) account has transactions and/or balances, you cannot delete it. A similar error message, is displayed:

   "1MDAVI Mr. Mike Davies
   This account has balances, cannot be deleted!"

2. Click on the OK button. To block posting of any documents or batch transactions for the debtor (customer / client), click on the Edit button and Accounting information tab.



3. Select (tick) the "*Account disabled*" field.

4. Click on the Save button.

Created with the Standard Edition of HelpNDoc: Make Documentation a Breeze with HelpNDoc's Clean and Efficient User Interface

Export / Import Debtor accounts

You may export and import debtor (customer / client) accounts and creditor (supplier / vendor).

This feature may be used to import debtor (customer / client) accounts and creditor (supplier / vendor) into:

- Into the same Set of Books.
- Into a different Set of Books.
- Into a new Set of Books - Created from scratch - Create your own Set of Books (Advanced)? option for

Firebird database types.

- Into a new Set of Books - Created from scratch - Create your own Set of Books (Advanced)? option for Microsoft SQL sever (MSSQL) database types.

Before you may import debtor (customer / client) accounts and creditor (supplier / vendor) accounts in a new Set of Books, you need to do the necessary setup and configuration.

Once this is done, you may start to import ledger accounts from a valid saved file type.

The debtor (customer / client) accounts (Chart of Accounts) are maintained in Debtors (Default ribbon).

The creditor (supplier / vendor) accounts (Chart of Accounts) are maintained in Creditors (Default ribbon).

Reports for the accounts (Chart of Accounts) are printed in Reports → Ledger → Listing - Chart of Accounts (Reports ribbon).

Before using this feature, it is recommended to print the report.

Export / Import options on Setup ribbon

To be able to import the data for debtor (customer / client) accounts and creditor (supplier / vendor) accounts, you need to created a "*Tab delimited*" (*.txt) export file in the Export (Setup ribbon).

It is recommended that the debtor (customer / client) accounts and creditor (supplier / vendor) accounts is exported in the "*Tab delimited*" (*.txt) file format. This file format may be used to import the "*Tab delimited*" (*.txt) file format in the Import (Setup ribbon).

Spreadsheet export / import

osFinancials5/TurboCASH5 supports the "*Excel Workbook (*.xlsx)* file type Spreadsheet import and export feature.

- Spreadsheet export - You may export debtor (customer / client) accounts and creditor (supplier / vendor) accounts and save it as a "*Excel Workbook (*.xlsx) file type.*
- Spreadsheet import - You may import debtor (customer / client) accounts and creditor (supplier / vendor) accounts from a saved "*Excel Workbook (*.xlsx) file type.*

Created with the Standard Edition of HelpNDoc: Free PDF documentation generator

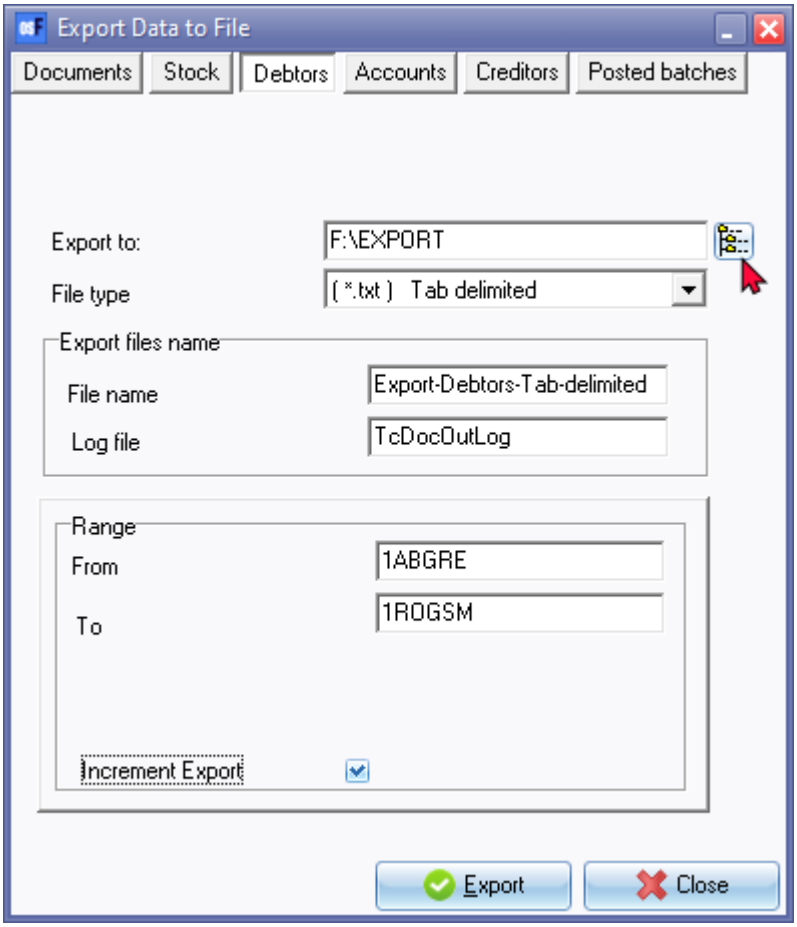
Export Debtor accounts

All the information for each account as entered in Debtors (Default ribbon) (includes specific data for debtor accounts), will be exported in the selected file format.

Disabled debtor (customer / client) accounts ("Account disabled" field selected (ticked) on the Accounting information tab) will be excluded from the export file.

To export Debtor (customer / client) accounts:

1. On the Setup ribbon, select Export.
2. Click on the Debtors button.



3. Select and/or enter the following:

    a) Export to - The installation directory in which osFinancials5/TurboCASH5 is installed, will be displayed. You may click on the Browse icon to select a folder on the *Browse for Folder* screen. You may then select any available folder, or drive, on your system into which you wish to export the data.

b) File type - Select to export the file in the XML Database (*XML), Comma Separated Variable (*CSV), Lotus Spreadsheet File (*WK1), MS Excel Spreadsheet (*XLS), or any other format available on your system from the list.

> *It is recommended that the "(*.txt) Tab delimited" file type is selected to Import debtor (customer / client) accounts.*
>
> *It will create the following export file types for the export file name:*
>
> **.txt - Tab delimited text file - Recommended for Import on the Setup ribbon.*
>
> **.slk - Can be opened in spreadsheets of LibreOffice, OpenOffice or UltraOffice). You may save it as a a Microsoft excel file.*
>
> **.xml - Can be opened in your system's default web browser or Notepad.*

c) Export files name - Enter the File name. You need to select this file at a later stage when you wish to import the file, or analyse the data in a spreadsheet.

d) Log file - Enter the Log file name.

e) Range - From / To - The Debtors lookup will be automatically initiated. Select any range of accounts to include in the export file.

f) Increment Export - Leave this option blank.

4. Click on the Export button to create the export file, and save it in the specified directory.

> *The information for the Debtors, which will be exported, is:*
>
> - *Account code.*
> - *Description or name.*
> - *Contact persons.*
> - *Account code.*
> - *Postal and Delivery addresses.*
> - *Two Telephone numbers and Fax number.*
> - *E-mail addresses.*
> - *Credit limits.*
> - *Charge amounts.*
> - *Discount.*

- *Monthly interest percentage.*
- *Discount.*
- *Disabled account indicator.*
- *Open item debtor indicator.*
- *Statement messages.*
- *Reporting groups 1 and 2.*
- *Salespersons.*
- *The last date a transaction was entered for the debtor accounts, will also be included into the selected export file.*

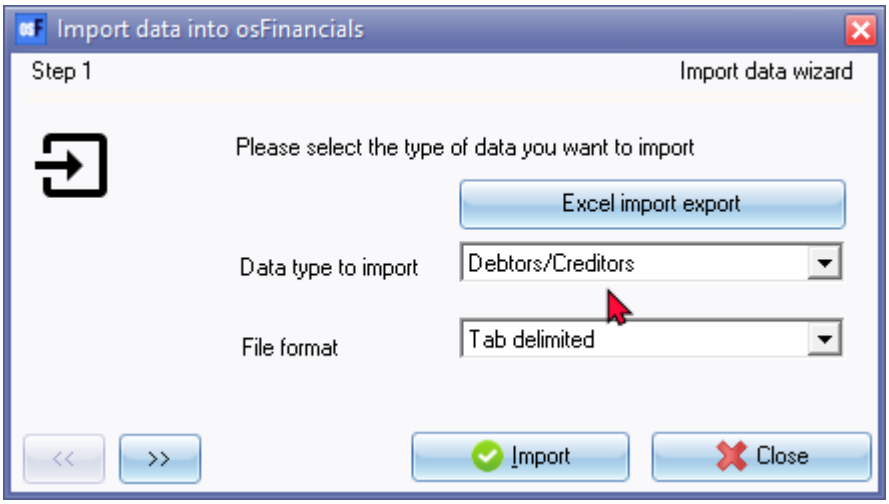
Import Debtor accounts

This option will allow you to import data for debtor (customer / client) records from a valid file format into an existing Set of Books. To be able to import the data for debtor (customer / client) records, you need to have created a valid "*Tab delimited*" file on your system in Export (Setup ribbon).

To import Debtor (customer / client) accounts:

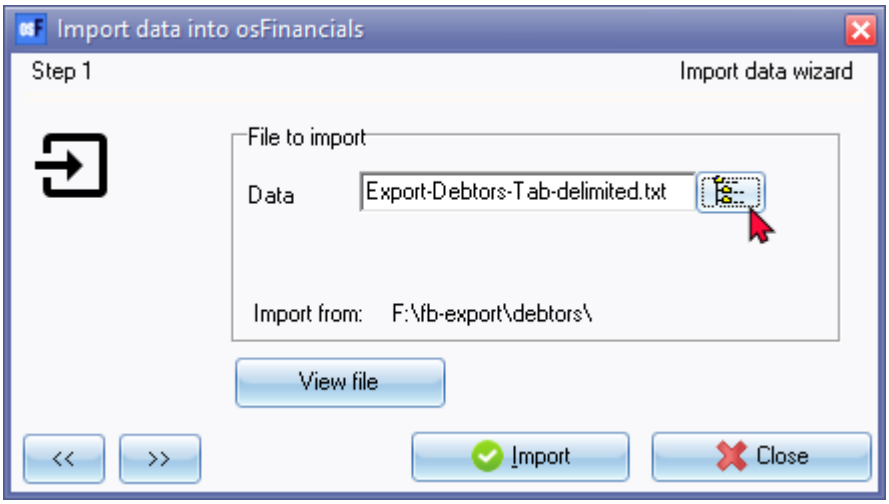
1. On the Setup ribbon, select Import. The "*Import Data into osFinancials*" screen is displayed:



2. Select Debtors/Creditors as the "*Data type to import*".

3. Select the "*Tab delimited*" (recommended) option.

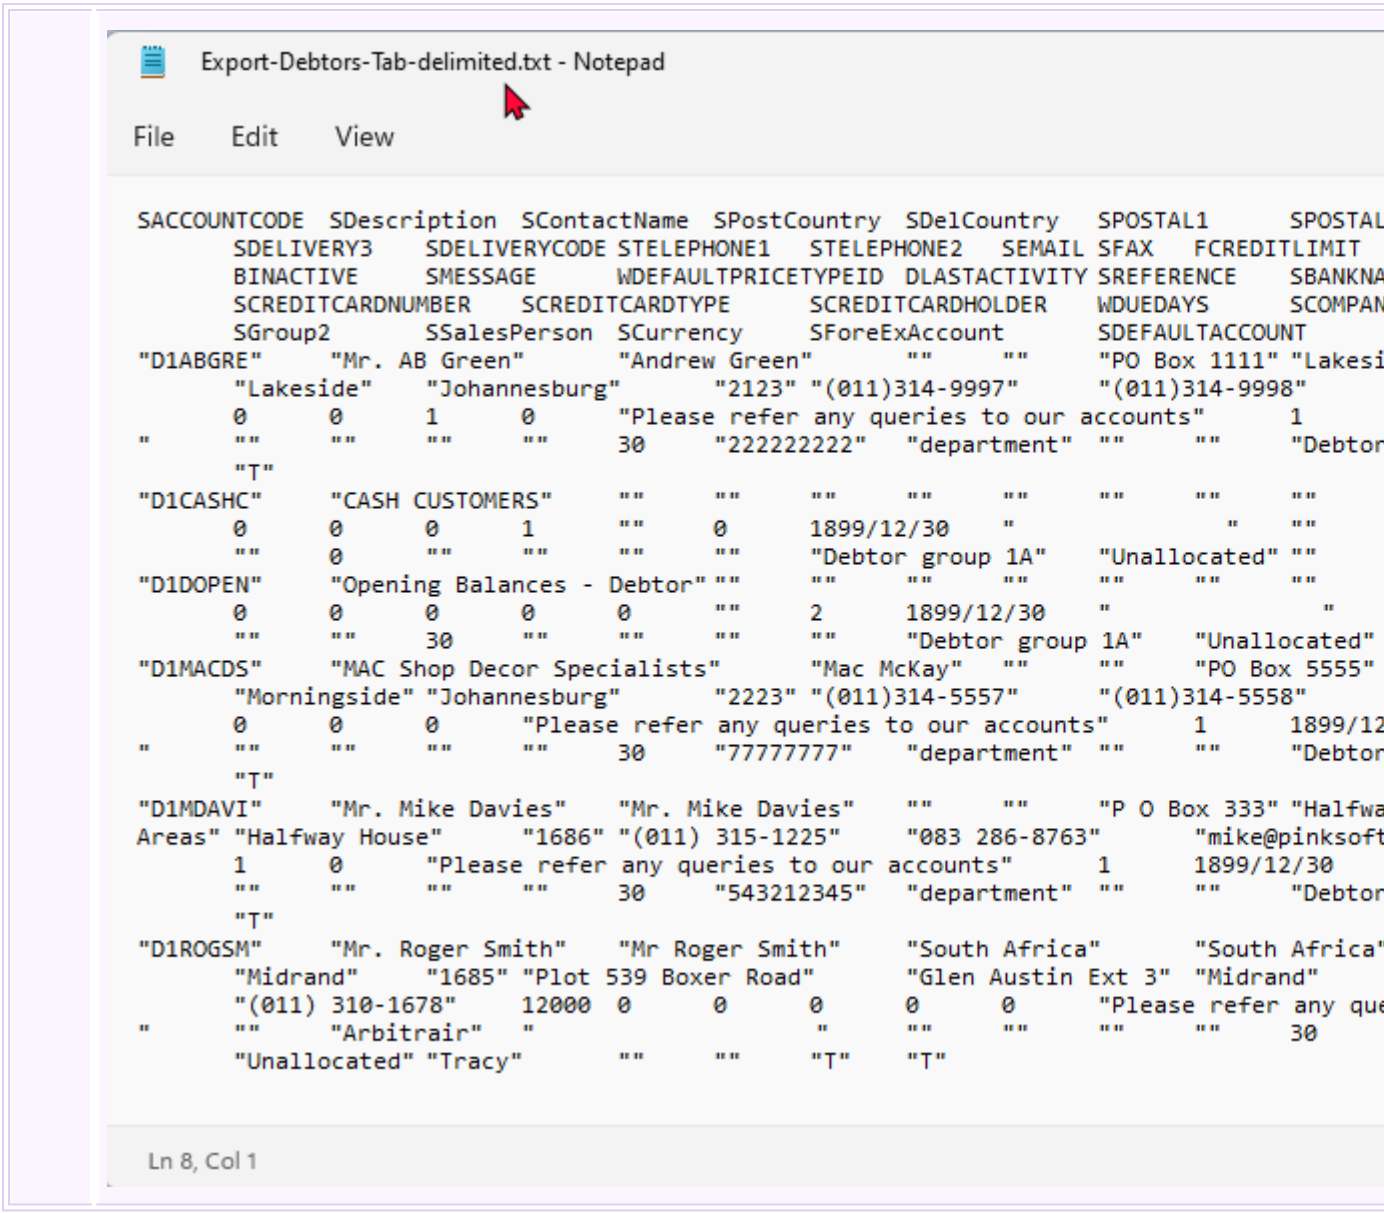
4. Click on the >> button to locate the data file. The following screen is displayed:



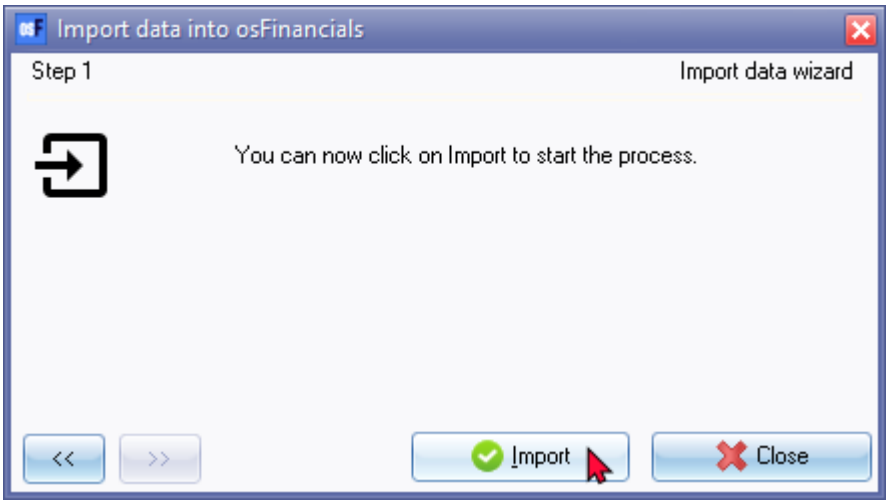
5. Click on the button to locate the data file.

Optional - You may click on the View file button to view the file in your system's default app (program) associated with th

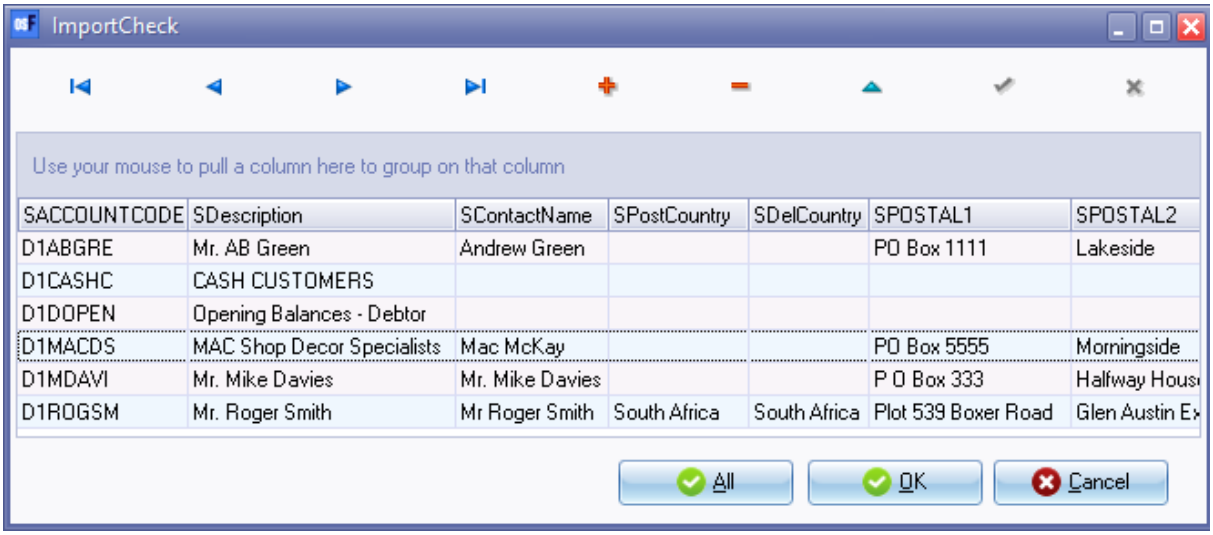
An example of the exported Tab Delimited text file is as follows:



6. Click on the >> button. The following screen is displayed:



7. Click on the Import button. The "*ImportCheck*" screen is displayed



8. You may use the record buttons to add, delete or change the debtor (customer / client) accounts on the "*ImportCheck*" screen. You may then click on the All or OK buttons to import the debtor (customer / client) accounts.

9. Once the import process is finished an information message is displayed:

   "Data file import completed!"

10. Click on the OK button.

11. Go to the Reports ribbon and select Reports → Debtors → Listing menu to check that the debtor (customer / client) accounts are correct.

12. If you need to edit the debtor (customer / client) accounts, go to the Default ribbon and select Debtors.

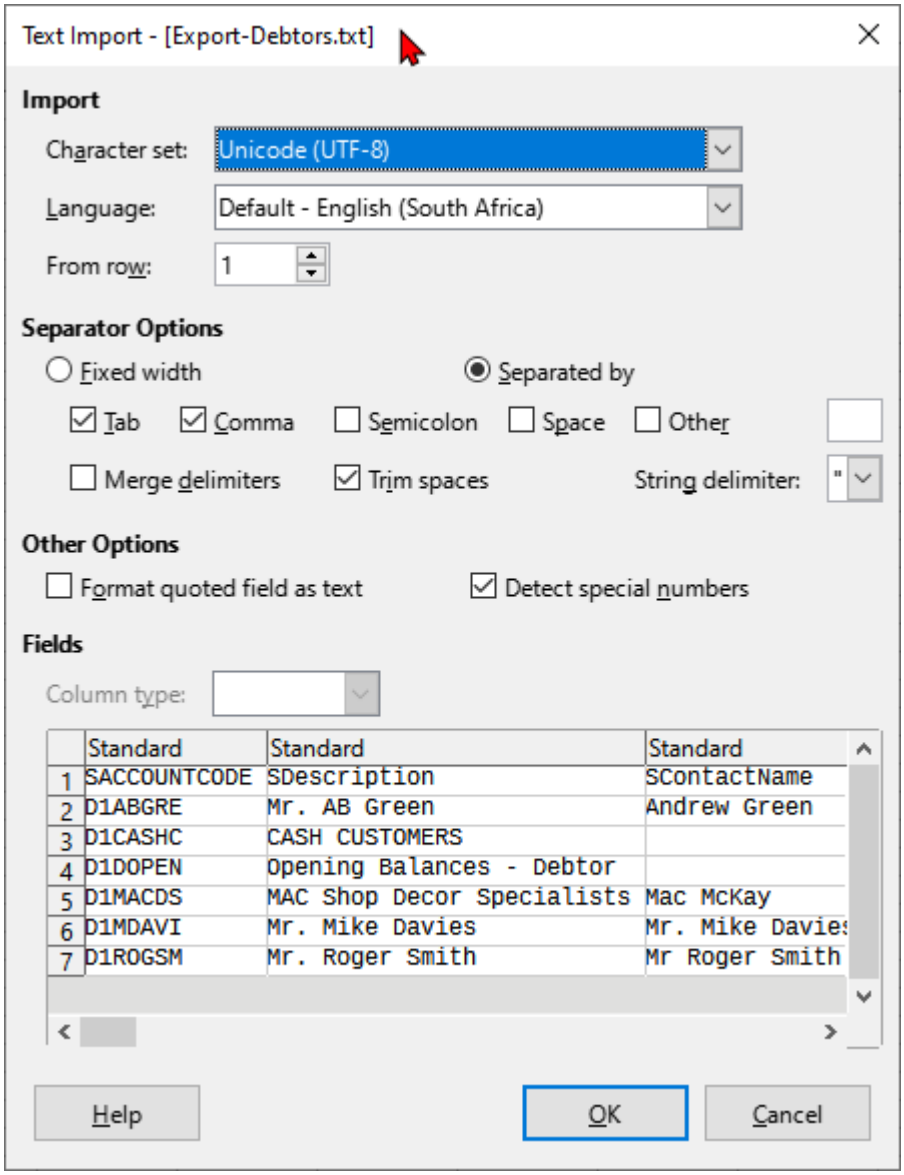
Created with the Standard Edition of HelpNDoc: Streamline Your CHM Help File Creation with HelpNDoc

Export Debtor accounts - Open text file in spreadsheet

To illustrate the exported fields and data, the exported text file (created on the Export option of the Setup ribbon) is opened in a spreadsheet.

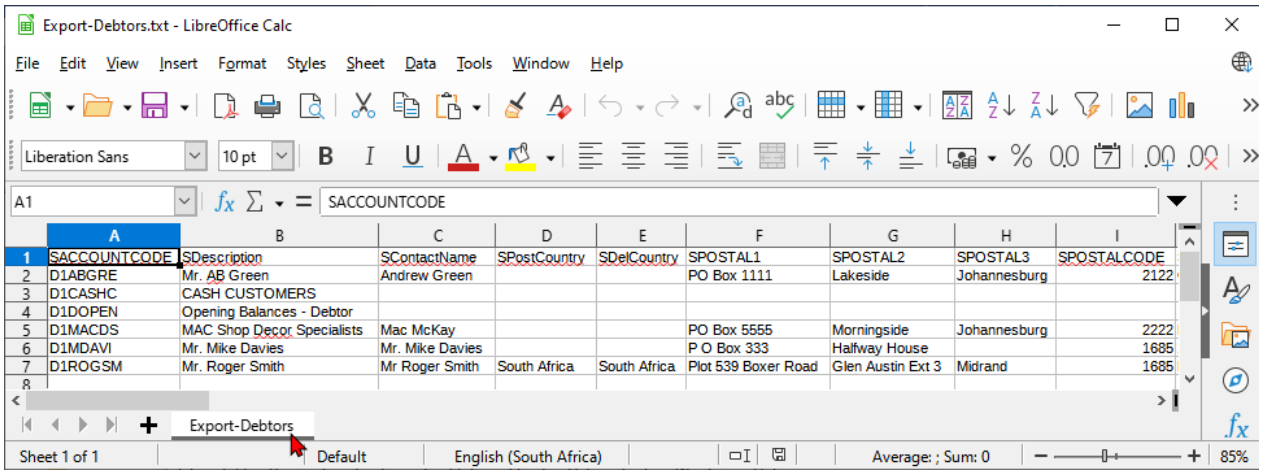
If the exported text file does not open in Microsoft Excel; or if you do not have Microsoft Excel installed on your system, you may open the file with OpenOffice, LibreOffice, Ultra Office, etc.

On your spreadsheet application, open the debtor (customer / client) accounts saved text (*.txt) file and confirm your tab delimited settings on the "*Text Import*" screen.



This will open your exported text file of the selected debtor (customer / client) accounts in a spreadsheet.

An example of the exported file opened in "*LibreOffice Calc*" spreadsheet, is as follows:



The exported data will be exported in forty-six (46) columns:

Column	Column heading	Source / fields	Field location (main form / tab)	
A	SACCOUNTCODE	Debtor code	Main form	String (6)

Export Debtor accounts - Export grid

The Export button of the sidebar of the "*Debtor accounts*" list screen, will create a text file (tab delimited), which will open in your system's default Microsoft Excel (if installed on your system).

Export options

To export debtor (customer / client) accounts:

On Debtors (Default ribbon).

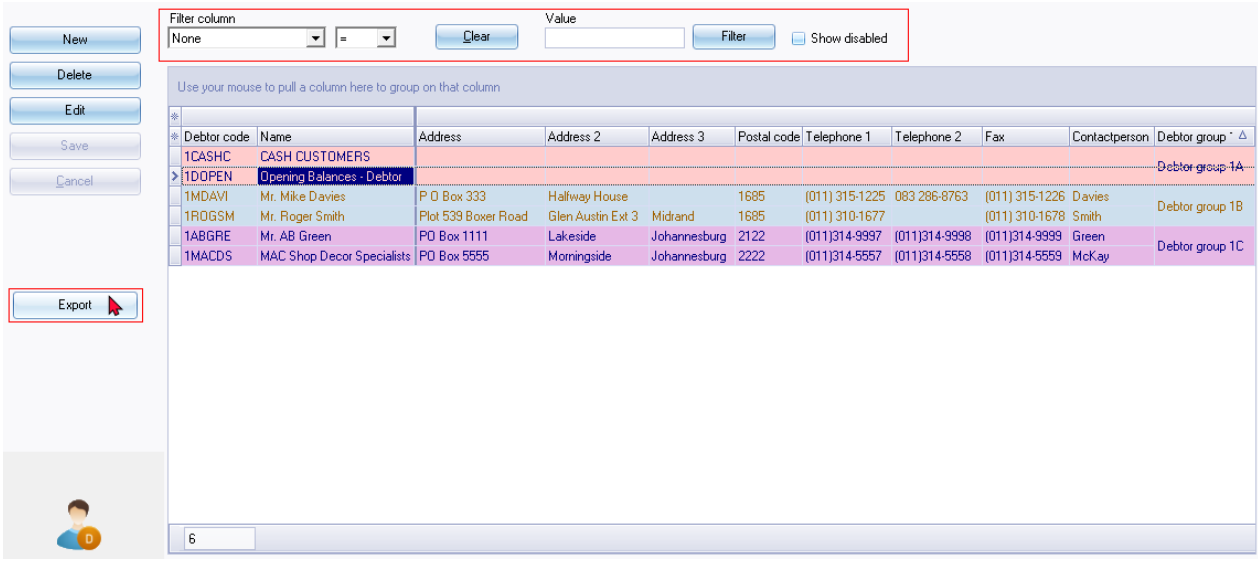
Select the Filter and search options in the Filter column and click on the Filter button to include only those filter criteria to be included in the Export file.

By default, the export file will include all the debtor (customer / client) accounts (excluding disabled accounts).

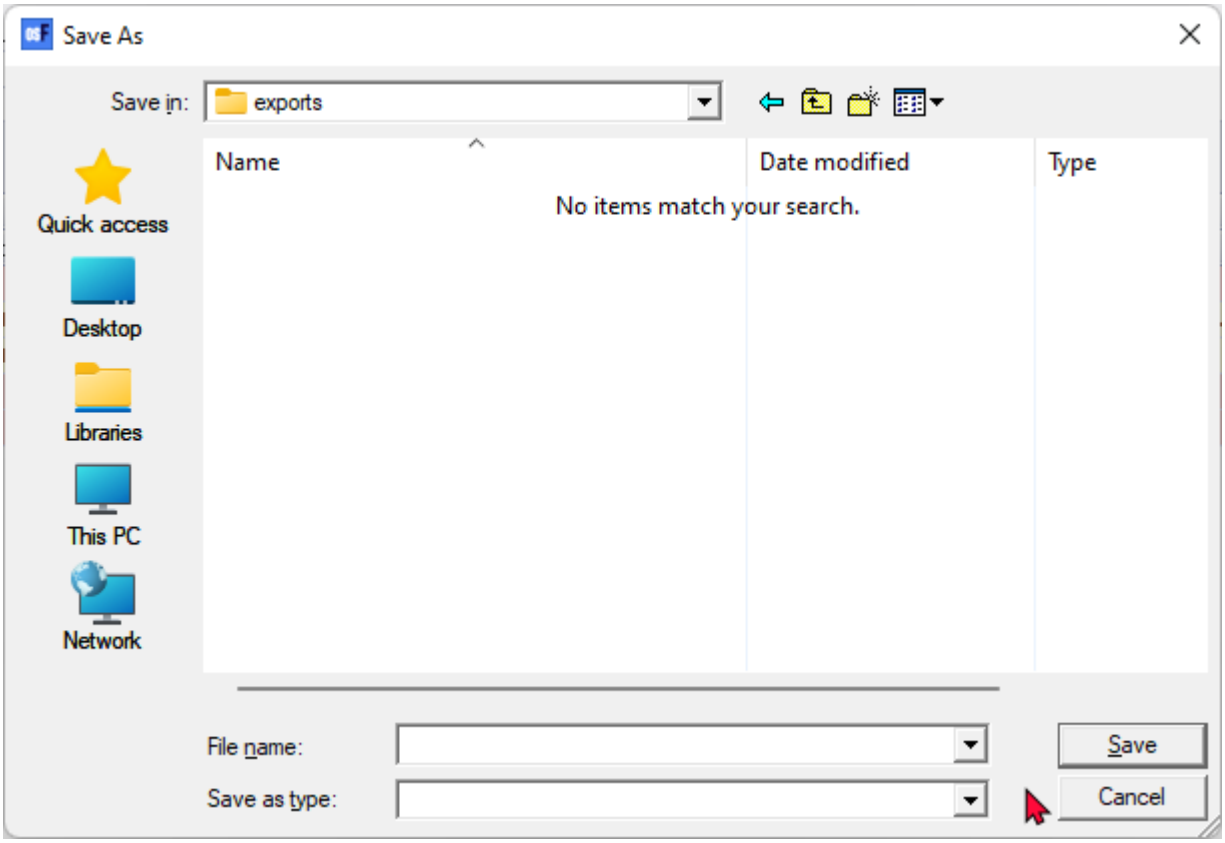
To include disabled debtor (customer / client) accounts in the export file, you need to select the "Show

disabled" option, and click on the Filter button.

Click on the Export button.



The "*Save As*" screen is displayed:



Enter a name to save the file.

"Save as type :" options will be empty. A text (.txt) file type will automatically be created with your file name.*

If you do not enter a unique name in the selected folder, and save the export.txt file name, you may replace existing (previously exported) files.

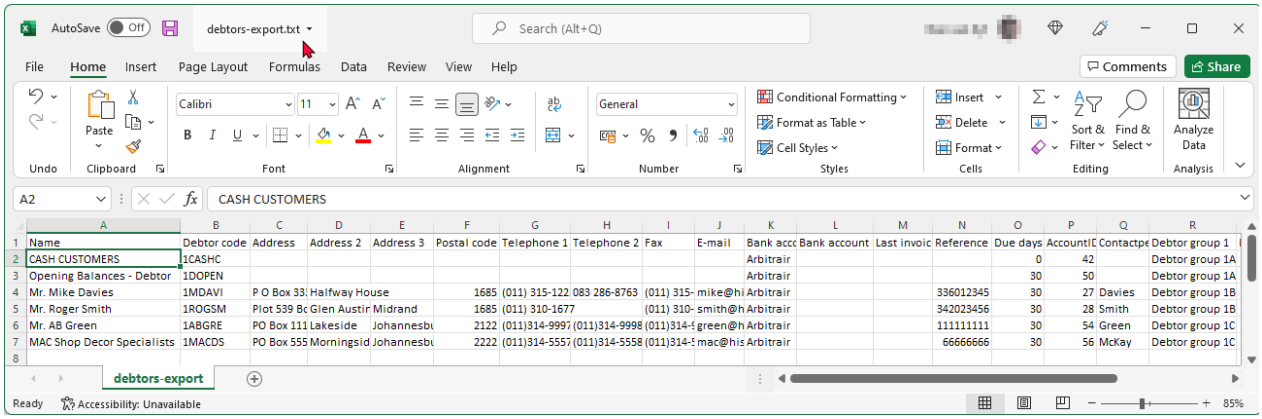
If an existing exported file is opened, and you are trying to save a export file with the same name, a similar error message as the following will be displayed:

> Cannot create file "F:\exports\your-file-name.txt". The process cannot access the file because it is being used by another process.

Click on the Save button.

Example : Exported text file - Microsoft Excel

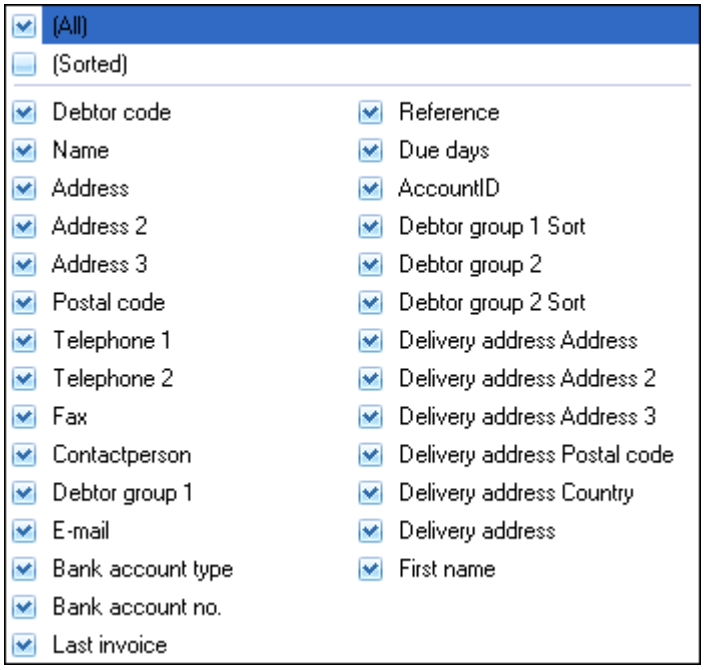
In this example, the exported file is automatically opened in "*Microsoft Excel*":



Only those accounts matching your filter and search criteria in the Filter column options, will be included in the export file.

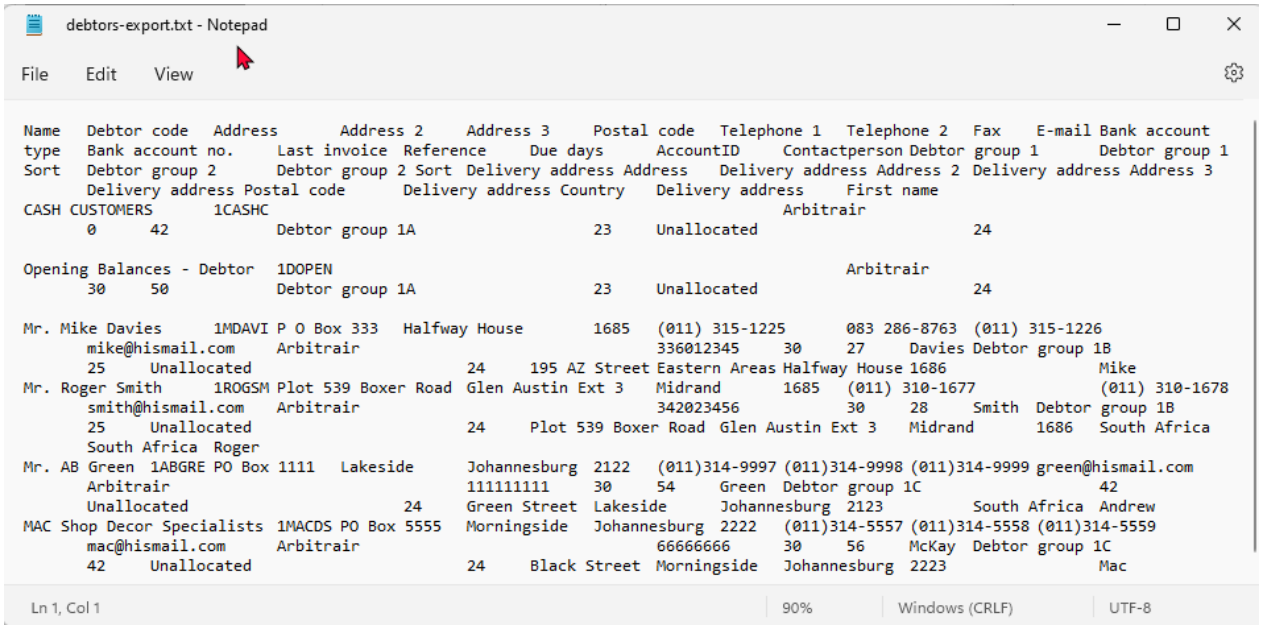
For example, if the postal code (zip code), is specified, only those accounts for the specific postal code will be included in the export file.

All the columns will be exported in the default sequence.



Example : Exported text file - Notepad

An example, of the exported text file file opened in your systems default program associated with *.txt files (e.g. "*Notepad*") is as follows:



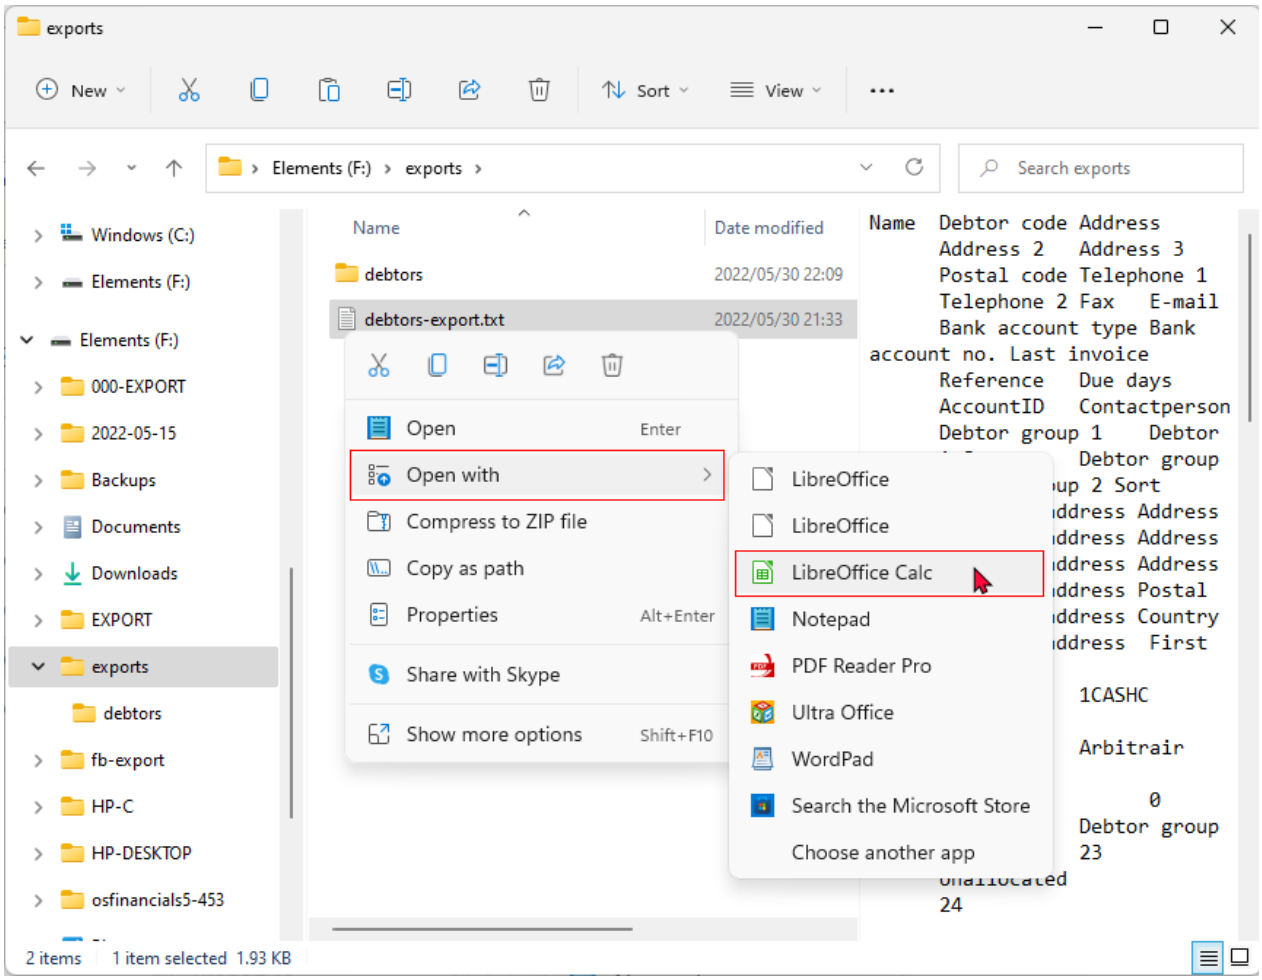
Example : Exported text file - LibreOffice Calc

If the exported text file does not open in Microsoft Excel; or if you do not have Microsoft Excel installed on

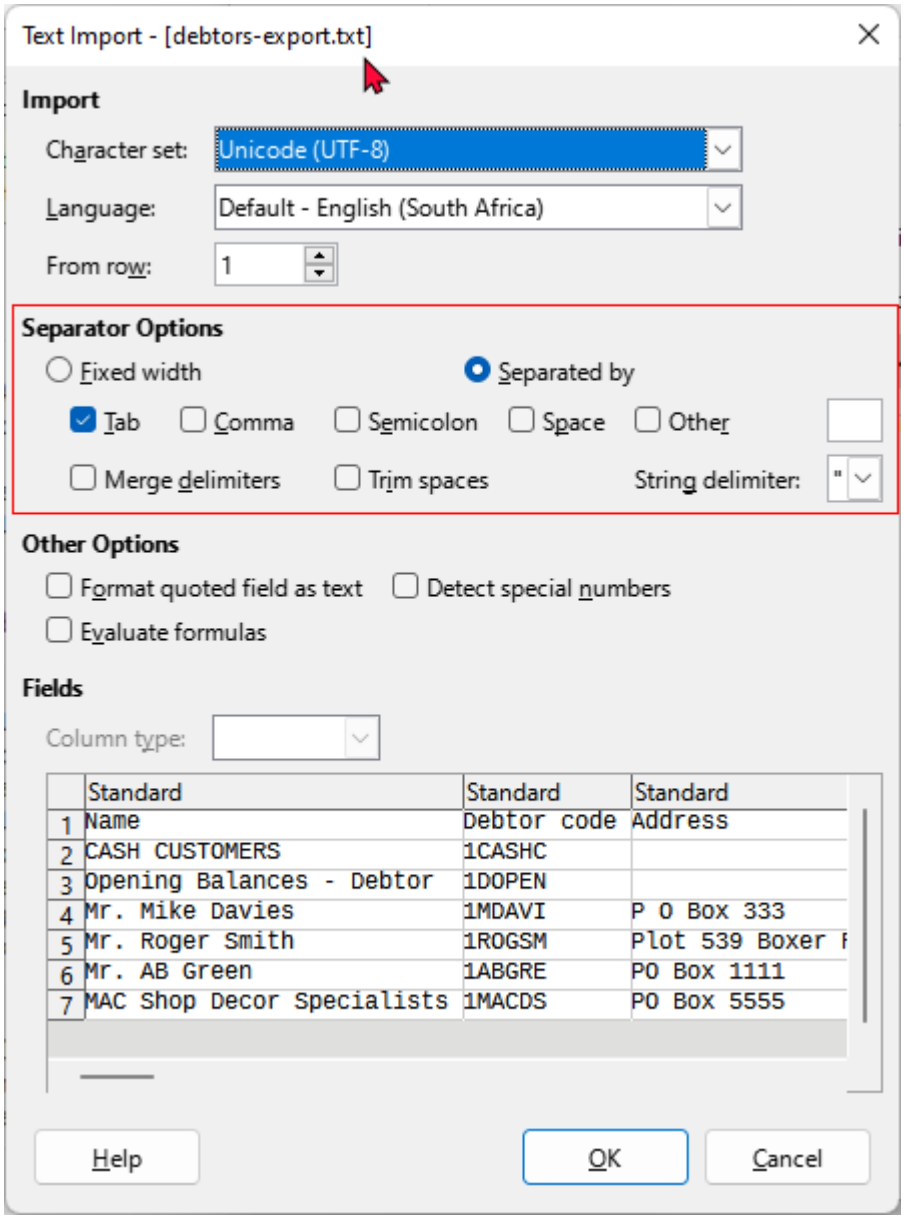
your system, you may open the file with OpenOffice, LibreOffice, Ultra Office, etc.

Locate the exported text file in your System's File Explorer.

In this example, Open with > LibreOffice Calc is selected. The "*Text Import*" screen is selected.

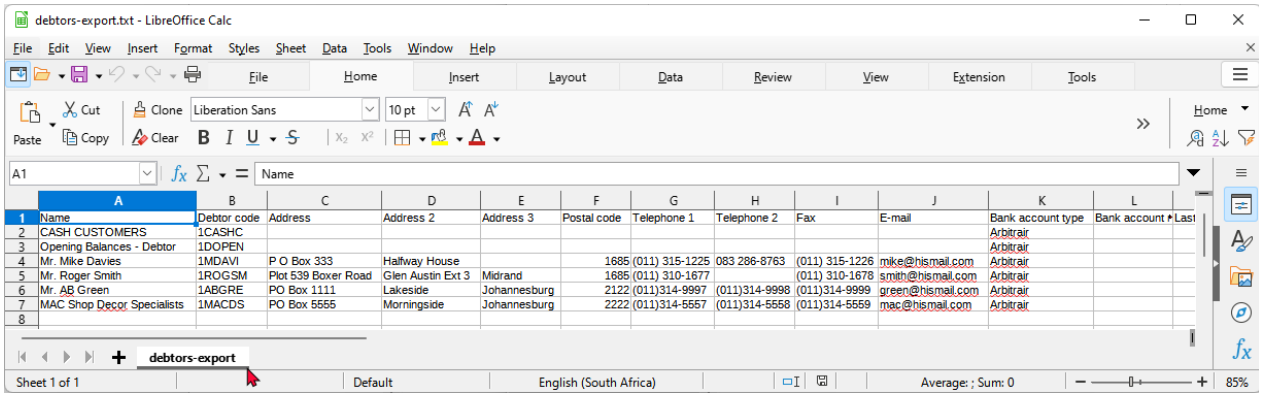


If LibreOffice and not LibreOffice Calc is selected, the exported text file will open in LibreOffice Writer as a text file.



Separator options - Separated by

Tab is the only option which should be selected for this exported text file. This may differ for some other report types.



Created with the Standard Edition of HelpNDoc: Elevate Your Documentation Process with HelpNDoc's Advanced Features

Spreadsheet Export / Import - Debtor / Creditor accounts

osFinancials5/TurboCASH5 supports the "*Excel Workbook (*.xlsx) file type* Spreadsheet export and import feature.

- Spreadsheet export - You may export debtor (customer / client) accounts and creditor (supplier / vendor) accounts and save it as a "*Excel Workbook (*.xlsx) file type.*
- Spreadsheet import - You may import debtor (customer / client) accounts and creditor (supplier / vendor) accounts from a saved "*Excel Workbook (*.xlsx) file type.*

This feature may be used to import debtor (customer / client) accounts and creditor (supplier / vendor) accounts into:

- Into the same Set of Books.
- Into a different Set of Books.
    - Created from scratch - Create your own Set of Books (Advanced)? option for Firebird database types
    - Created from scratch - Create your own Set of Books (Advanced)? option for Microsoft SQL sever (MSSQL) database types.

> *Before you may import debtor (customer / client) accounts and creditor (supplier / vendor) accounts in a new Set of Books, you need to do the necessary setup and configuration.*
>
> *Once this is done, you may start to import debtor (customer / client) accounts and creditor (supplier / vendor) accounts from a saved "Excel Workbook (*.xlsx) file type.*

After import

> *To check the imported account details, you may print the necessary listing reports for debtor (customer / client) accounts and listing reports for creditor (supplier / vendor) accounts from the Set of Books in which you created the export file.*

You may go to Debtors (Default ribbon) to view and/or edit the imported debtor (customer / client) accounts.

You may go to Creditors (Default ribbon) to view and/or edit the imported creditor (supplier / vendor) accounts.

Created with the Standard Edition of HelpNDoc: Benefits of a Help Authoring Tool

Spreadsheet - Export - Debtors / Creditor accounts

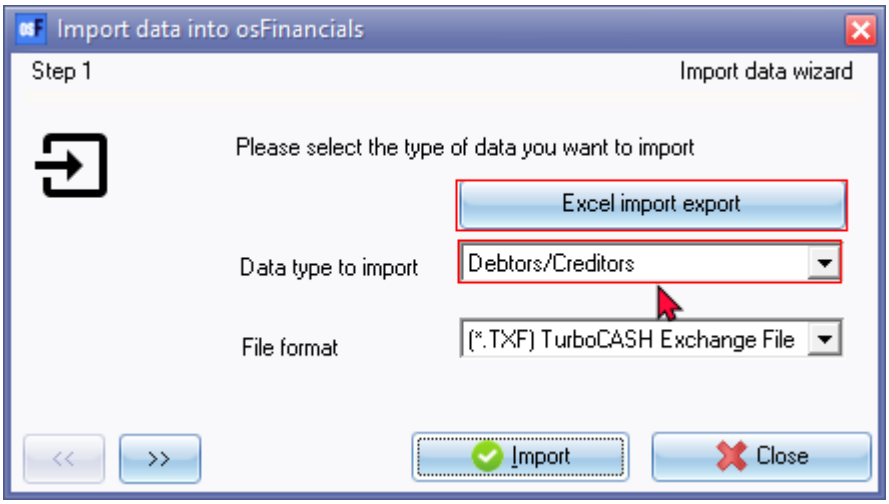
This option will allow you to Export your debtor (customer / client) accounts and creditor (supplier / vendor) accounts into an Excel spreadsheet. You may then add new debtor (customer / client) accounts, edit existing debtor (customer / client) accounts and import it back into your stock code file.

The debtor (customer / client) accounts are maintained in Debtors (Default ribbon).

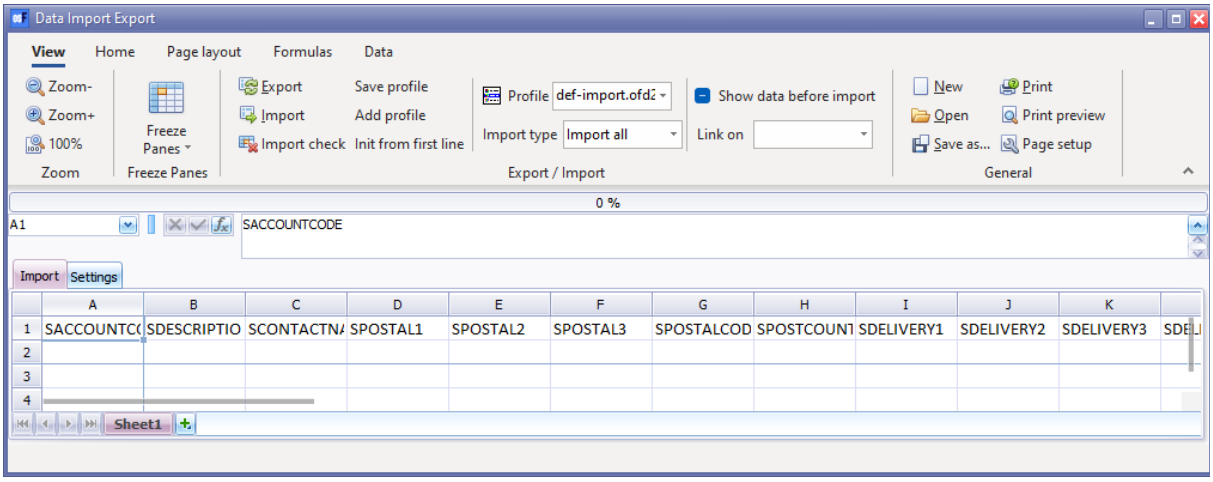
The creditor (supplier / vendor) accounts are maintained in Creditors (Default ribbon).

To export debtor (customer / client) and creditor (supplier / vendor) accounts to a Excel Workbook (xlsx) file:

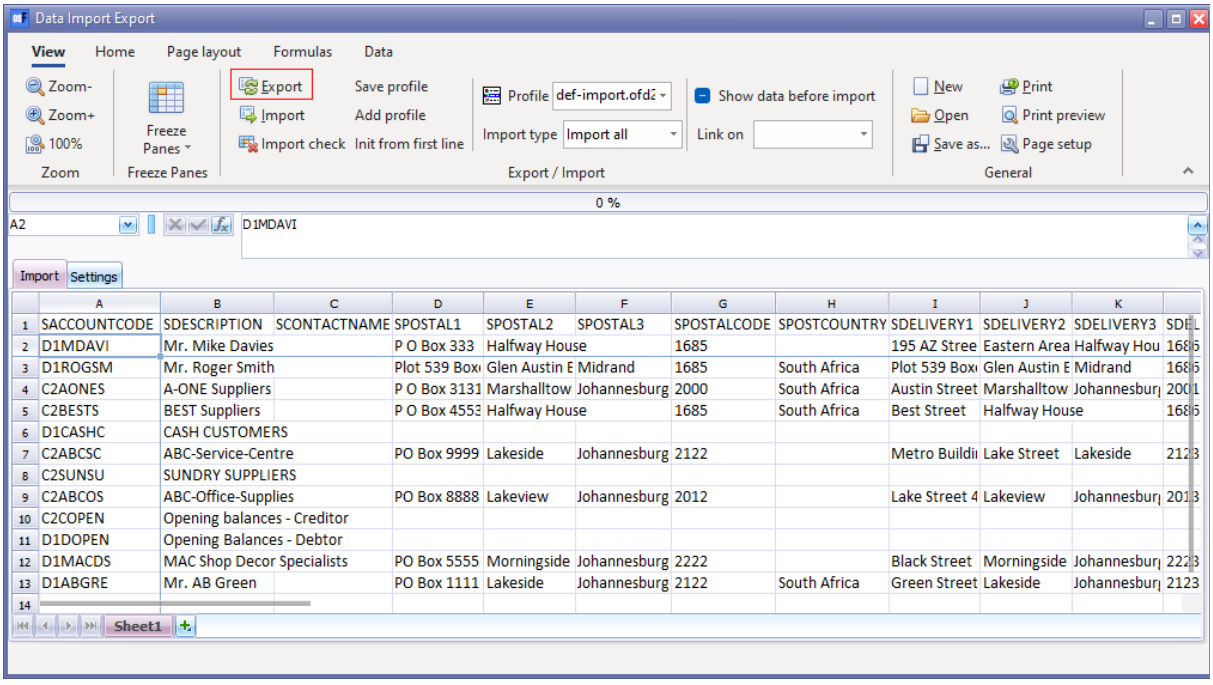
1. On the Setup ribbon, select Import.
2. Select "*Debtors/Creditors*".



3. Click on the Excel import export button. The Excel spreadsheet will be displayed with the column headings (database table) for the debtor (customer / client) accounts and creditor (supplier / vendor) accounts (without any data).

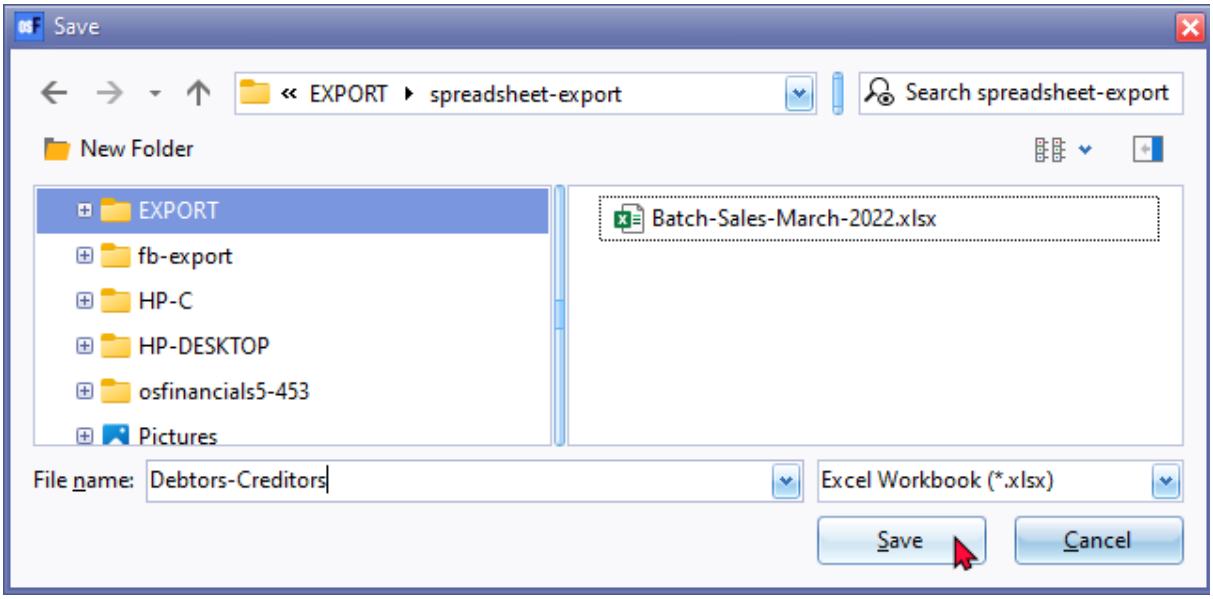


4. Click on the Export icon. The data from your debtor (customer / client) accounts and creditor (supplier / vendor) accounts will be imported (populated) into the spreadsheet.



5. You may add new accounts, edit the accounts, change the addresses, credit limits, charge amounts, etc., whatever field, is necessary.

6. Click on the Save as... icon (View ribbon) to save the data in the "*Data Import Export*" spreadsheet as an "*Excel Workbook (*.xlsx)*" file.



7. Select the folder and enter a name for the file.

8. Click on the Save button.

9. Click on the Close icon in the titlebar of the "*Data Import Export*" screen.

Spreadsheet columns

The data of the debtor (customer / client) accounts and creditor (supplier / vendor) accounts are imported (populated) in forty-six (46) columns in the spreadsheet, and is as follows:

		Field name	*Values*	*Comments*
	A	*SACCOUNTCODE*	*Account code prefixed by account type:* *C = Creditors* *D = Debtors*	*When creating creditor or debtor accounts, the code should start (prefixed). Another example is :* *1 = Debtors* *2 = Creditors*
	B	*SDESCRIPTION*	*Alpha-numeric*	*Name or description of debtor / creditor account*
	C	*SCONTACTNAME*	*Alpha-numeric*	*Name or description of contact*
	D	*SPOSTAL1*	*Alpha-numeric*	*Postal address 1*
	E	*SPOSTAL2*	*Alpha-numeric*	*Postal address 2*

	F	SPOSTAL3	Alpha-numeric	Postal address 3
	G	SPOSTALCODE	Alpha-numeric	Postal code / Zip code
	H	SPOSTCOUNTRY	Alpha-numeric	Country
	I	SDELIVERY1	Alpha-numeric	Delivery address 1
	J	SDELIVERY2	Alpha-numeric	Delivery address 2
	K	SDELIVERY3	Alpha-numeric	Delivery address 3
	L	SDELIVERYCODE	Alpha-numeric	Delivery code / zip code
	M	SDELCOUNTRY	Alpha-numeric	Country
	N	STELEPHONE1	Alpha-numeric	Telephone 1
	O	STELEPHONE2	Alpha-numeric	Telephone 2
	P	SEMAIL	Alpha-numeric	E-mail address
	Q	SFAX	Alpha-numeric	Fax number
	R	FCREDITLIMIT	Numeric	Credit limit
	S	FCHARGEAMOUNT	Numeric	Charge amount (Generate multiple transactions) in Batches.

Spreadsheet - Import - Debtors / Creditor accounts

This option will allow you to import creditor (supplier / vendor) accounts from a valid an Excel spreadsheet in the Excel Workbook (xlsx) file format. You may then add new creditor (supplier / vendor) accounts, edit existing creditor (supplier / vendor) accounts and import it back into your Set of Books.

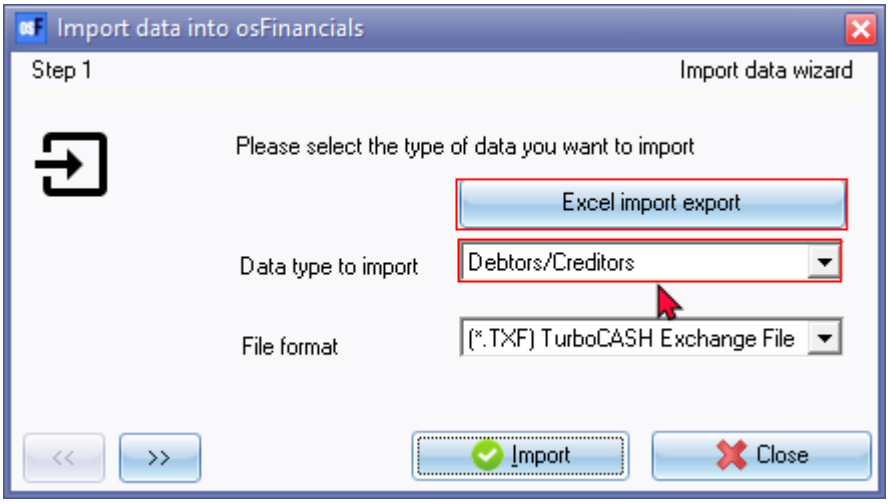
To export debtor (customer / client) and/or creditor (supplier / vendor) accounts to a Excel Workbook (xlsx) file:

1. Open the Set of Books in which, you wish to import debtor (customer / client) accounts and creditor

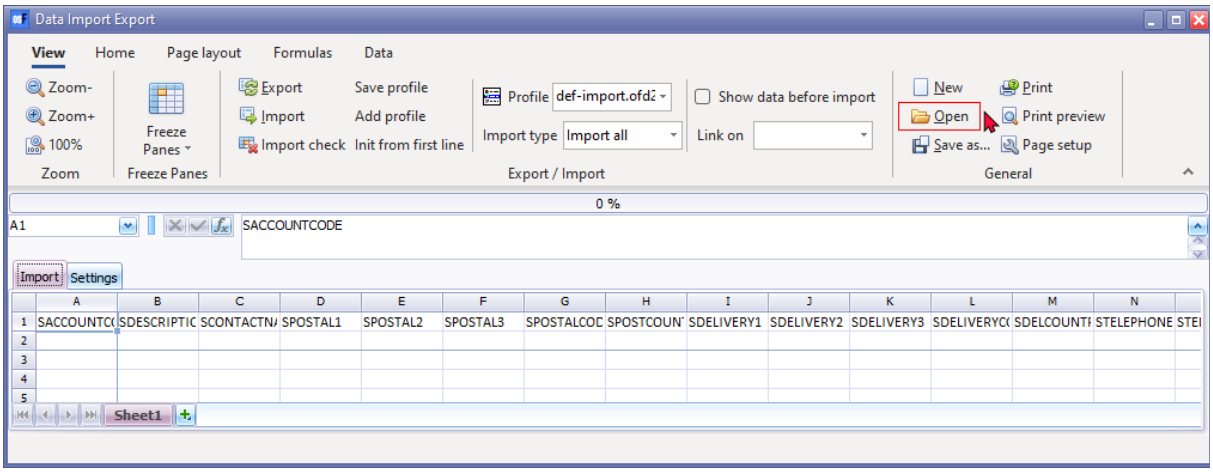
(supplier / vendor) accounts from a valid a spreadsheet export file.

2. On the Setup ribbon, select Import.

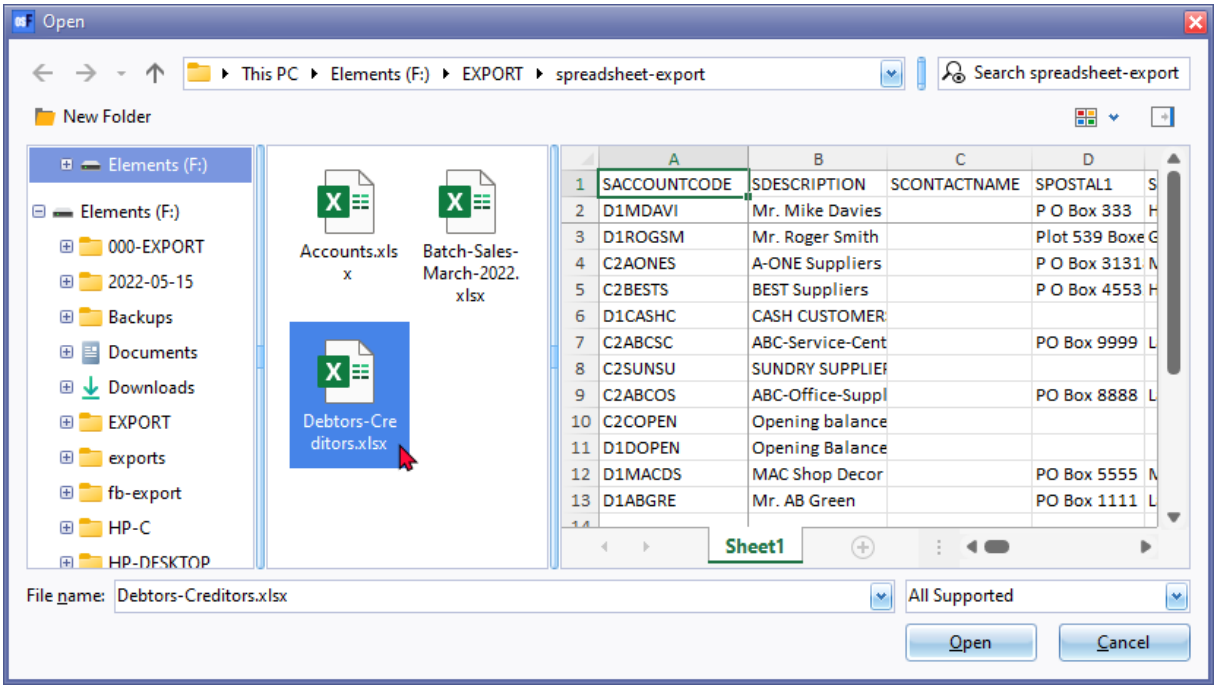
3. Select Debtors/Creditors as the "*Data type to import*".



4. Click on the Excel import export button. The Excel spreadsheet will be displayed with the column headings (database table) for the debtor (customer / client) accounts and creditor (supplier / vendor) accounts (without any data).

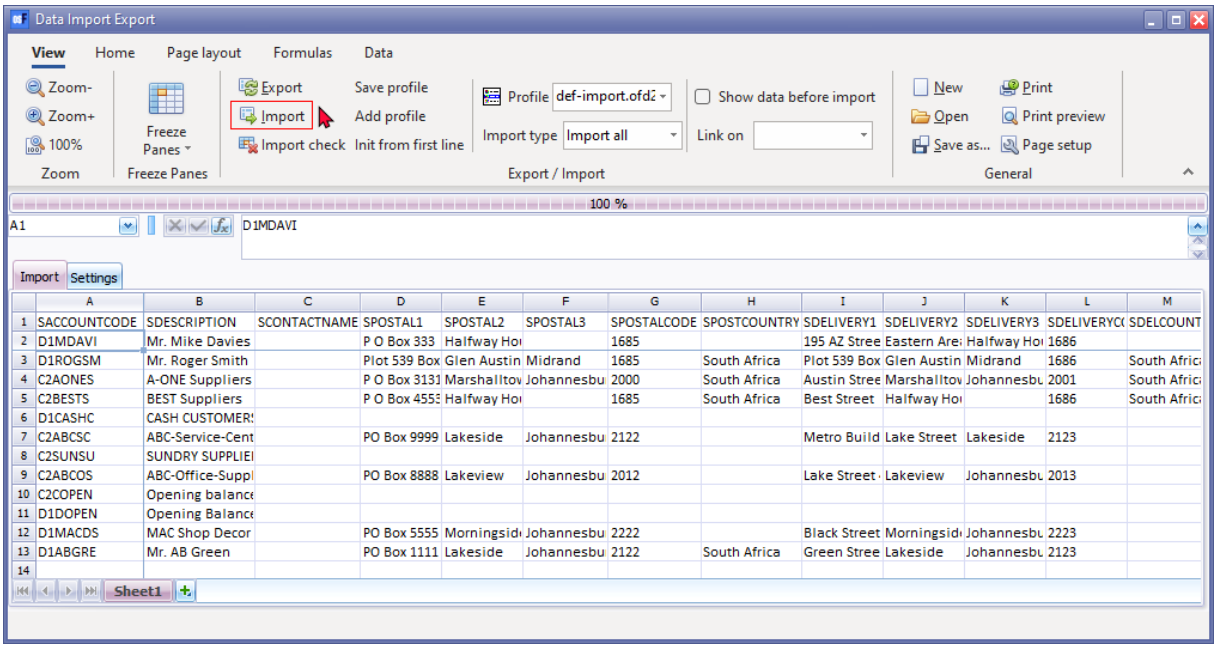


5. On the "*Data Import Export*" screen, click on the Open icon to select a valid Excel Workbook (*.xlsx) file.



You may click on the "Show preview pane" icon on the "Open" screen to display a preview of the selected file to open (import) in the "Data Import Export" screen..

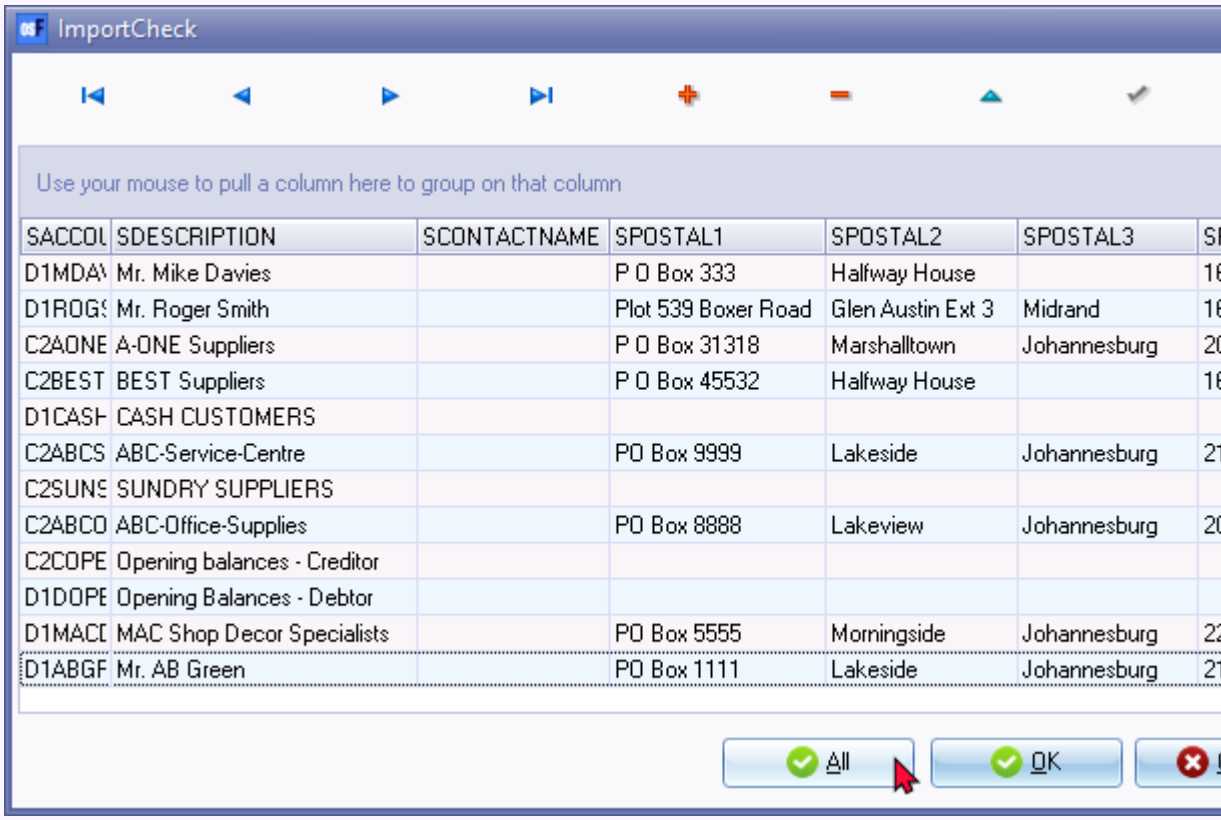
7. The data of the debtor (customer / client) accounts and creditor (supplier / vendor) accounts included in the valid Excel Workbook (xlsx) file, will be imported (populated) into the spreadsheet ("*Data Import Export*" screen).



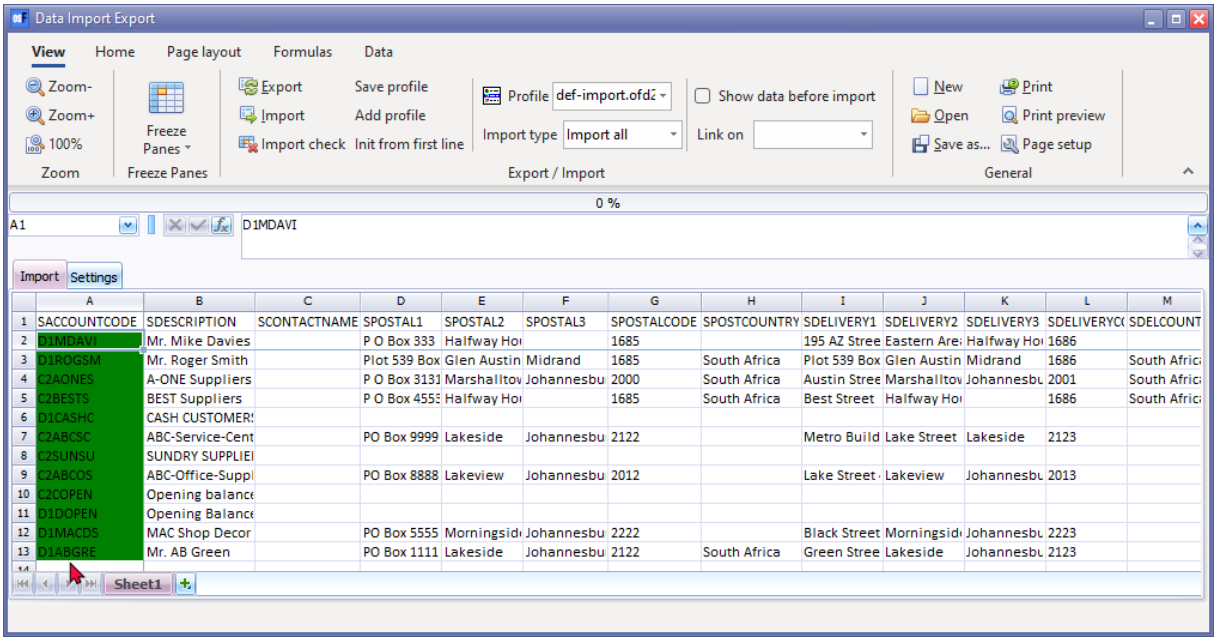
7. Click on the Import icon.

Optional - Show data before import setting

The "ImportCheck" screen (if the Import the "Show data before import" option was selected (ticked) on the "Data Import Exp screen) is displayed:



Click on the All or OK buttons to start the import process.



8. Once the import process is finalised, Column A will be in a green background colour.

9. Close the "*Data Import Export*" spreadsheet screen.

10. You may go to Debtors (Default ribbon) to view and/or edit the imported debtor (customer / client) accounts. You may go to Creditors (Default ribbon) to view and/or edit the imported creditor (supplier / vendor) accounts.

Creditor (supplier / vendor) accounts

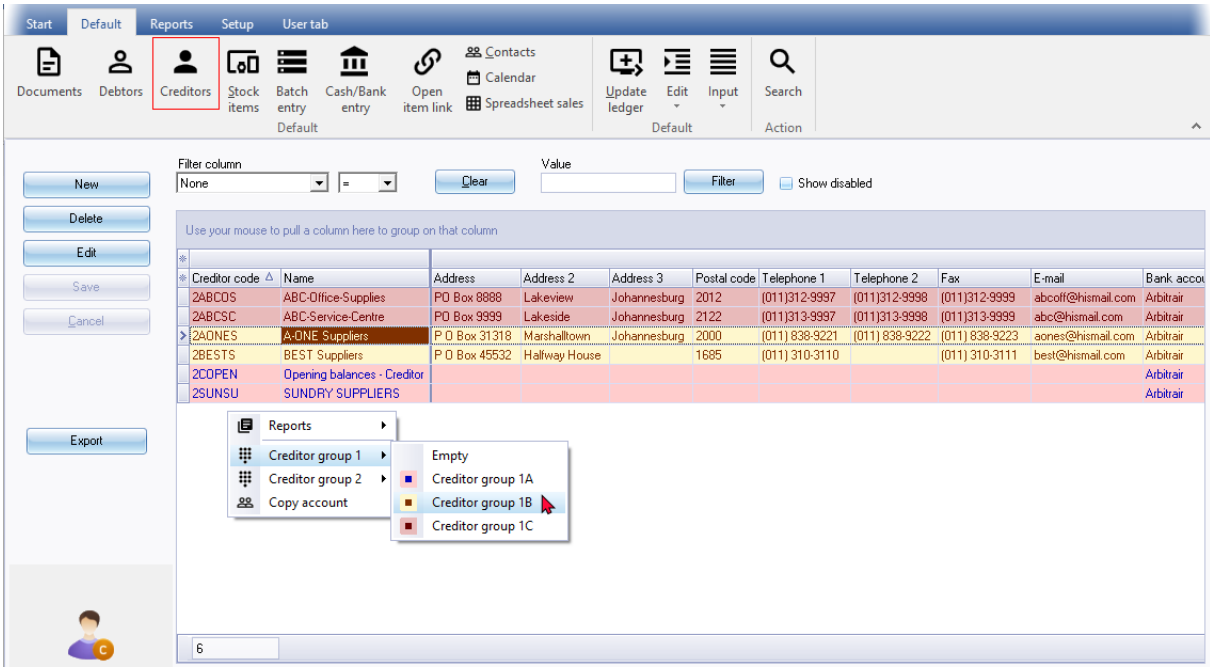
The Creditors feature in osFinancials5/TurboCASH5 is specifically designed to manage and maintain creditor (supplier/vendor) accounts. This feature provides a range of functionalities to effectively manage these accounts and ensure smooth supplier/vendor relationship management. Here are some key aspects of the Creditors feature:

1. Account Management: You can create new creditor accounts, modify existing ones, delete or disable accounts based on your requirements. This gives you control over the creditor database and allows you to keep it up to date.
2. Account Details: Within each creditor account, you have the flexibility to make changes to various aspects, such as the creditor's name, contact details, addresses, and messages on the creditor form. You can also manage the delivery address and select specific document layout files on the Delivery address tab. Additionally, you can set accounting and payment terms, including discounts and charges, on the Accounting information tab. This ensures that you maintain accurate and up-to-date information for each creditor.
3. Activities Tracking: The Creditors feature allows you to efficiently manage various activities related to creditor accounts. It provides dedicated tabs for tracking Contacts, Appointments, and transactions on the Documents, Transactions, Bank accounts and Stock items tabs. These capabilities enable you to gain a comprehensive view of interactions and transactions with each creditor, enhancing your ability to manage and maintain fruitful relationships.
4. Filtering and Search: osFinancials5/TurboCASH5 provides filtering and search options within the Creditors feature, enabling you to easily locate specific creditor accounts based on various criteria such as name, contact details, or other relevant information.
5. Reporting Groups: You can create up to two custom reporting groups for creditor accounts, categorizing them by attributes like geographic regions, supplier types, or purchase channels. This enables you to generate insightful views of your creditor data. It allows you to slice and dice the information based on multiple dimensions and conduct detailed analysis, providing a comprehensive view of your creditor data and supporting better decision-making and strategic planning.

By leveraging the Creditors feature in osFinancials5/TurboCASH5, you can efficiently manage supplier/vendor accounts, streamline communication, track transactions, and maintain precise financial records. This enhances supplier/vendor relationships, boosts efficiency, and strengthens financial management within your organization.

To access the Creditor selection screen:

1. On the Default ribbon, select Creditors (F5). The "*Creditor accounts*" screen is displayed:



2. Once a creditor (supplier / vendor) account is selected, you may view and manage the activities in the following tabs:

   a) Contacts - Add / edit / delete contactpersons.

   b) Appointments - View a list of events or appointments scheduled in the Calendar.

   c) Documents - View a list of the posted as well as the unposted purchase documents (i.e. Purchases, Supplier returns and Orders). You may select a document and print it. You may also print a Posted batches report for the posted purchase documents (i.e. Purchases, Supplier returns and Orders).

   d) Transactions - View a list of the transactions posted in batches as well as purchase documents (i.e. Purchases, Supplier returns and Orders). You may select a transaction and print a Posted batches report and print the transactions in the T-Account viewer.

   e) Bank accounts - Manage references for the Bank import plugin.

   f) Stock items - View a list of the products (stock items) in posted as well as unposted purchase

documents (i.e. Purchases, Supplier returns and Orders) for the selected creditor (supplier / vendor) account.

3. Buttons –

   a) New – Create a new creditor (supplier / vendor) account.

   b) Delete – Delete remove a selected creditor (supplier / vendor) account.

   c) Edit – Add or change the details of a selected creditor (supplier / vendor) account.

   You may also double click on a selected creditor (supplier / vendor) account.

   d) Save – Save any changes to a selected creditor (supplier / vendor) account.

   e) Cancel – Cancel will revert to the previous values. Any changes will not be saved.

   f) Export - Export the view of your debtor data as displayed in the list of creditors (supplier) accounts. Only those records matching your sort, search and filter options will be exported.

4. Search Filter –

   a) Filter Column - None is the default. You may select any of the available items (columns), (e.g. Creditor code, Name, Contact Person, Creditor group 1, Creditor group 2, Address 1, Address 2, Address 3, Postal code, Telephone 1, Telephone 2, Fax, E-mail, Bank account type, Bank account no., Last invoice, Reference, Due days, Creditor group 1 Sort, Creditor group 2 Sort, Delivery address, Delivery address2, Delivery address 3, Delivery address postal code, Delivery address country, X, etc.).

   b) Like – Default operator. Others that may be selected is <, >, <=, >=, <>.

   c) Value – Enter the text e.g. city, telephone numbers, postal code etc.

   d) Filter button – Click to filter / search for your criteria.

   e) Clear button – Click to clear / reset the filter / search for your criteria.

   f) Show disabled - By default, this option is not selected (not ticked). Only those active (enabled) creditor (supplier / vendor) accounts will be listed. Select (tick) this option to include those inactive (disabled) (Account disabled field selected (ticked) on the Accounting information tab) creditor (supplier / vendor) accounts.

5. Line count – This will display the number of records (creditor (supplier / vendor) accounts) that is

available on the list. This will display the number of records (rows / creditor (supplier / vendor) accounts) that matches your filter / search criteria.

6. Context menu – The following options are available:

   a) Reports – You may print postal or delivery address labels for selected creditor(s) (supplier(s)). You may also print these labels from the Reports → Creditor → Print labels (Reports ribbon).

   b) Creditor group 1 / 2 - Change the reporting group 1 or 2.

   c) Copy account - Create a new account from a selected account.

Created with the Standard Edition of HelpNDoc: Upgrade Your Documentation Process with a Help Authoring Tool

Creditor groups

This option allows you to set up to two Reporting groups for your Creditors (suppliers / vendors). Creditor groups allows you to group or categorise the Creditor accounts on which you would like to report. Reporting groups for creditors can vary depending on the specific needs and requirements of your business.

These Creditor groups can be linked to each creditor (supplier / vendor) account.

- *You may use the context menu option on the creditors grid to set or change the reporting groups for Creditor group 1 and/or Creditor group 2 for selected creditor account(s).*
- *You may use the creditors grid to filter, search or group creditor accounts.*
- *You may print Creditor listing reports and Print labels for postal addresses and delivery addresses for all or only for creditor accounts linked to a selected creditor group or groups.*
- *You may print Purchase analysis reports for Creditor group 1 or Creditor group 2.*

Examples of reporting groups for creditors (suppliers / vendors)

Here are a few examples of reporting groups that you can use for creditor accounts:

1. Industry: You can create reporting groups based on the industries or sectors your creditors belong to. For example, you may have reporting groups such as "IT Suppliers," "Marketing Services," or "Office Supplies."

2. Geographic region: If you work with creditors from different geographic regions, you can create reporting groups based on their locations. This can be helpful for analysing regional expenses or managing relationships with regional suppliers.

3. Payment terms: You can create reporting groups based on the payment terms agreed upon with your creditors. For instance, you might have reporting groups such as "*Net 30 Days*," "*Net 60 Days*," or "*Early Payment Discount*."

4. Vendor type: If you deal with different types of vendors or suppliers, you can categorize them using reporting groups. This could include groups like "*Manufacturers*," "*Wholesalers*," or "*Service providers*."

5. Contractual agreements: If you have specific contracts or agreements in place with certain creditors, you can create reporting groups to track and manage those relationships. For example, you might have reporting groups for "*Preferred suppliers*" or "*Exclusive suppliers*."

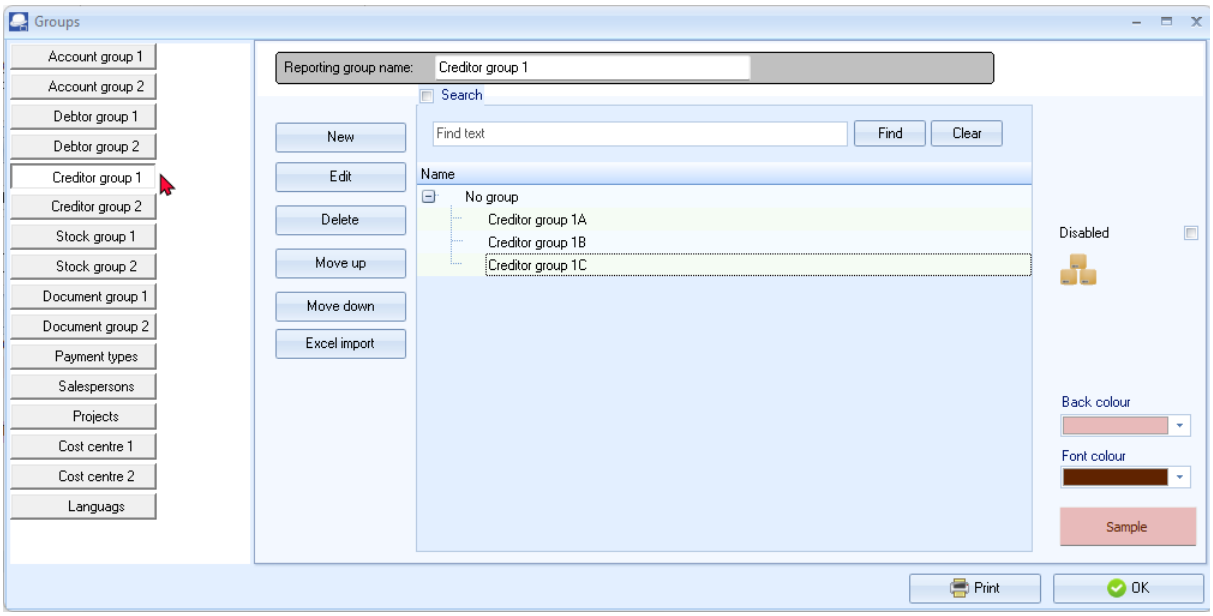
Remember, these are just examples, and you can customize reporting groups based on the unique characteristics and needs of your business. The goal is to create groups that allow you to analyse and report on creditor data in a meaningful way that supports your financial management and decision-making processes.

Define reporting groups for creditors (suppliers / vendors)

To set reporting groups for Creditor accounts:

1. On the Setup ribbon, select Setup → Groups. The "*Groups (Account group 1)"* default screen will be displayed..

2. Click on the Creditor group 1 button.



3. If you wish to rename the Reporting group name - Creditor group 1, over-type the description with your new description. This will change the description of the button for Creditor group 1.

4. To add a new Group to the root directory or list, select the "*REPORTING GROUP ROOT*" on the list and click on the New button.

5. Enter the name of your Creditor group 1 and click on "*REPORTING GROUP ROOT*" on the list.

6. Repeat the process until you have entered all the Creditor groups, etc.

> *Adding sub groups for creditor groups:*
>
> *Select a Creditor group, for example; "Creditor group 1A" and click on the New button. Enter the name of your sub group.*

7. If you need to add Reporting group 2 for Creditors, click on the Creditor group 2 button and repeat the process as for Creditor group 1.

8. Click on the OK button to save your changes and close (exit) this screen.

> *Changing the sequence of groups for creditors:*
>
> *Select a Creditor group, for example; "Creditor group 1B" and click on the Move up or Move down button. This will list the creditor group according to your preferred sequence.*

> *You may click on the Print button to print a list of your creditor groups.*

> *You may set colours to display on the Creditor accounts grid screen. To do this, click on the Back colour button to set the rows background colour and the Font colour button to set the Font colour.*
>
> *To retain and save the selected colors, you also need to set both the "Back color" and the "Font color".*

Creditors filter and search options

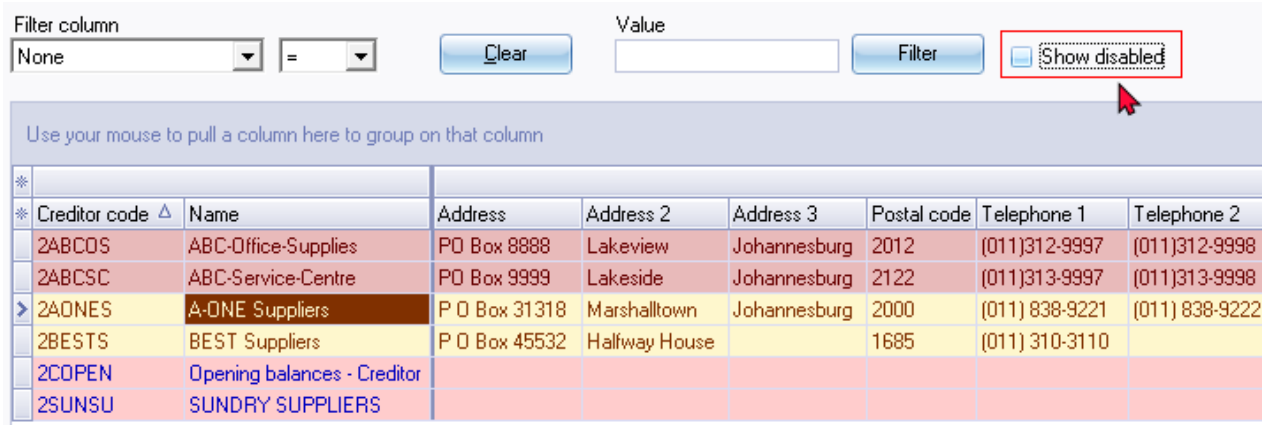
The osFinancials5/TurboCASH5 grid has a powerful and user-friendly filtering and sorting system that makes it quicker and easier than other methods. With just a few mouse clicks, you can group, sort, and

filter any column(s) of data on most screens in a Set of Books. This feature is very useful and efficient for managing and analysing data.

Account disabled

By default, only active creditor (supplier / vendor) accounts will be listed when launching the Creditors on the Creditor list screen.

To list the creditor (supplier / vendor) accounts which have been set to "*Disabled*" on the Accounting information tab, you need to tick the "*Show disabled*" tick box and click on the Filter button.



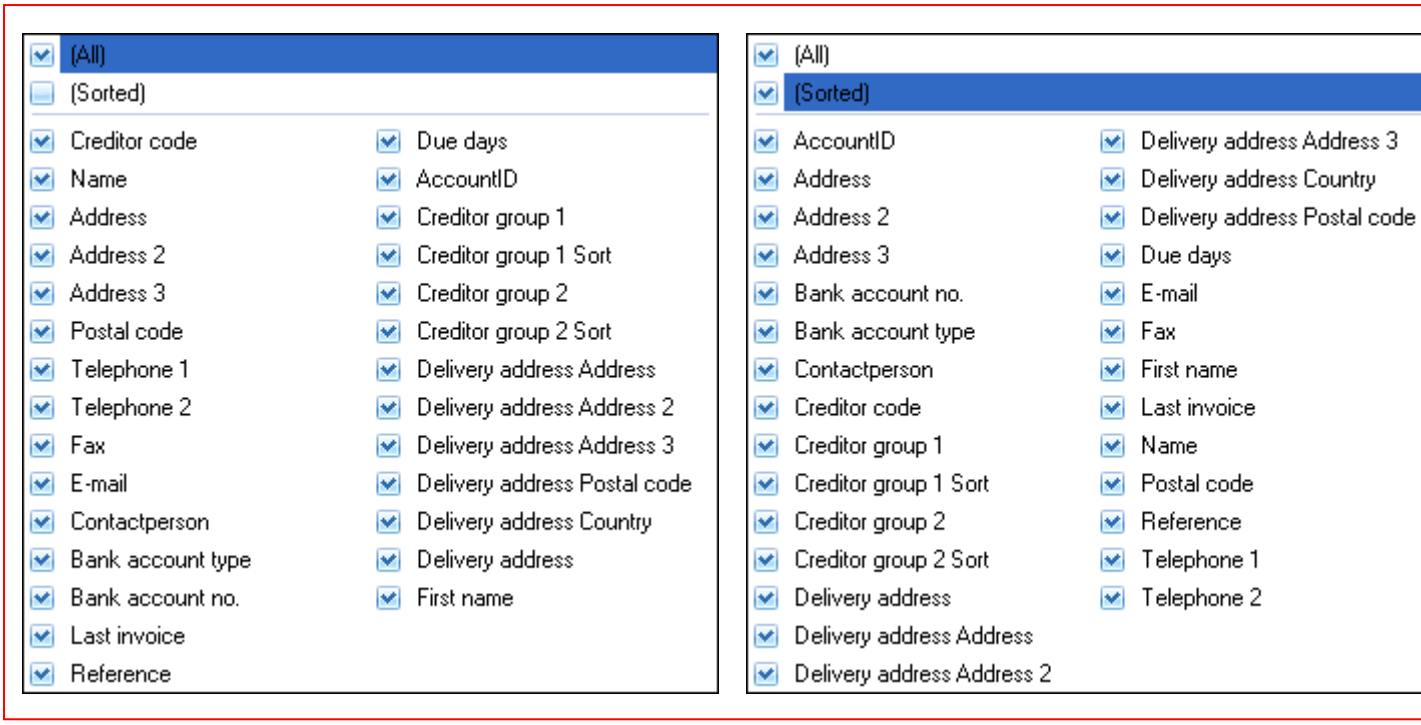
The "Creditor - Credit control listing (Credit limit vs Current balance) as at..." report will display if a creditor (supplier / vendor) account is disabled, or enabled.

If the "Show disabled" option is selected, and if you close active forms or when you reopen the Set of Books, it will by default list only the active (enabled) creditor (supplier / vendor) accounts.

Search by options

You may use the filter options to find a specific document, or all documents with the same values, in any of the twenty-eight (28) columns:

Default	*Sorted (selected) - Alphabetical list*



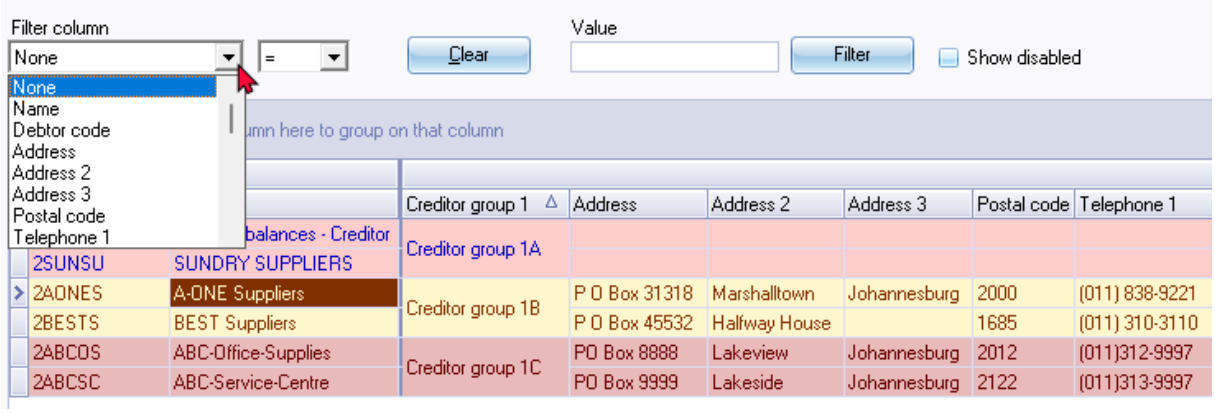
To search for specific creditor (supplier / vendor) accounts:

1. The filter options will display only those creditor (supplier / vendor) accounts in your search or filter criteria. To do this, you may:

   a) Search by - The default option is none. It will list all the column headings. You may select any of these as an option.

   b) Like - Operator to find all documents with the same value, values greater than, smaller than, greater than or equal to, smaller than or equal to the values you have selected, or wish to enter.

   c) Value - Enter the value for the field type you have selected, for example, Postal code (if you have selected "*Postal code*" as the "*Search by*" option).



2. Once you have selected or specified the search criteria, click on the Filter button. Only those creditor

(supplier / vendor) accounts as in your search or filter criteria or options will be listed.

3. If you need to clear your filter options and values, click on the Clear button. You may also click on any of the column headings to change the sorting sequence of the creditor (supplier / vendor) accounts listed.

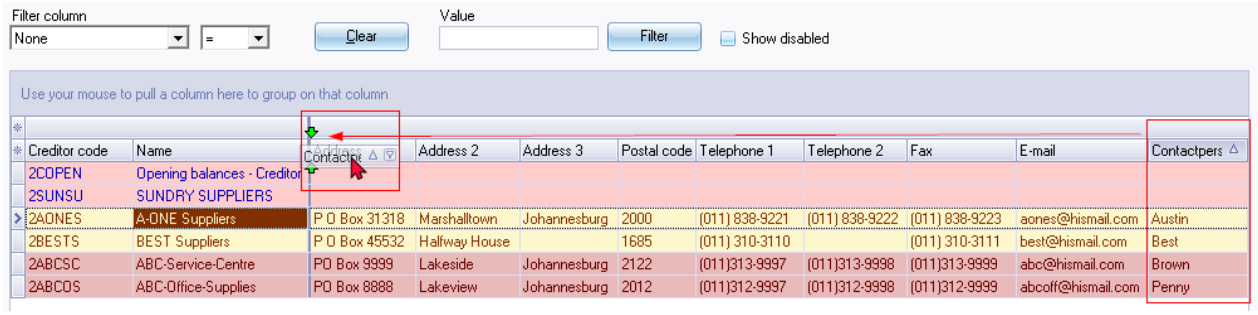
The "Line count" will show the number of records (creditor (supplier / vendor) accounts) that matches your search or filter criteria.

You may also search for creditor (supplier / vendor) accounts in the "Investigator" screen (Search (Setup ribbon)).

Column headings

All the data for each of your creditor (supplier / vendor) accounts are listed in twenty-eight (28) columns. To view change the sequence in which the data is displayed, you may use the following options:

- Scroll bars - Scroll to the right or to the left on the horizontal scroll bar to view the information.
- Sequence of rows - Click on any of the column headings to change the sorting sequence of the creditor (supplier / vendor) accounts listed in the descending or ascending sequence.
- Sequence of columns - Click on a column heading and drag it to the right or to the left to change the sequence in which the columns need to be displayed.



You may drag and drop any of the columns on the data band to the left band and the columns from the left band to the data band, to customise the grid for your requirements.

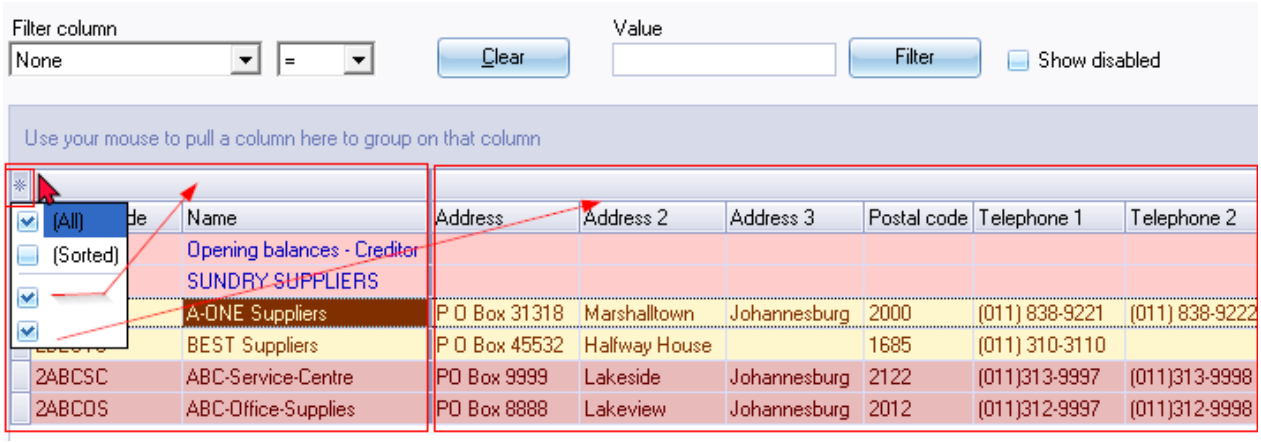
The sequence of the columns as set will be retained if you close active forms or when you reopen the Set of Books.

Show / hide bands

All the data for each of your creditor (supplier / vendor) accounts are listed in twenty-eight (28) columns. It is listed in two (2) bands:

Left band - Contains the Creditor code and Name.

Data band - Contains the rest of the data columns.



You may drag and drop any of the columns on the data band to the left band and the columns from the left band to the data band, to customise the grid for your requirements.

To hide the columns on the Left band, remove the tick in the first block.

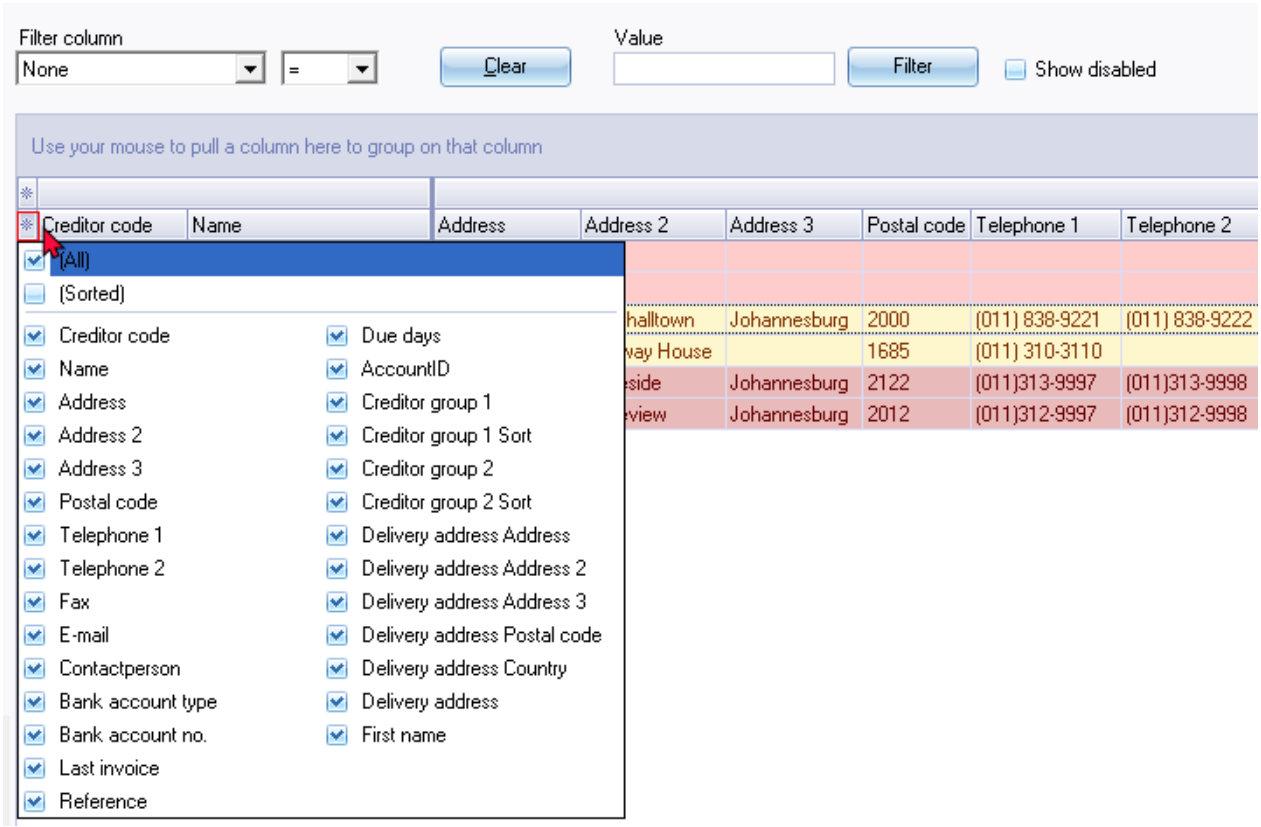
To hide the columns on the Data band, remove the tick in the second block.

Show / hide columns

Click on the second block - Column headings - All the columns will be listed.

Remove the ticks for the columns to hide or select the columns you need to display.

You may use the Up arrows and/or the Down arrows Right or Left arrows keys to navigate the fields. You may use the Space bar to deselect (remove the tick) or to reselect (tick a field again).

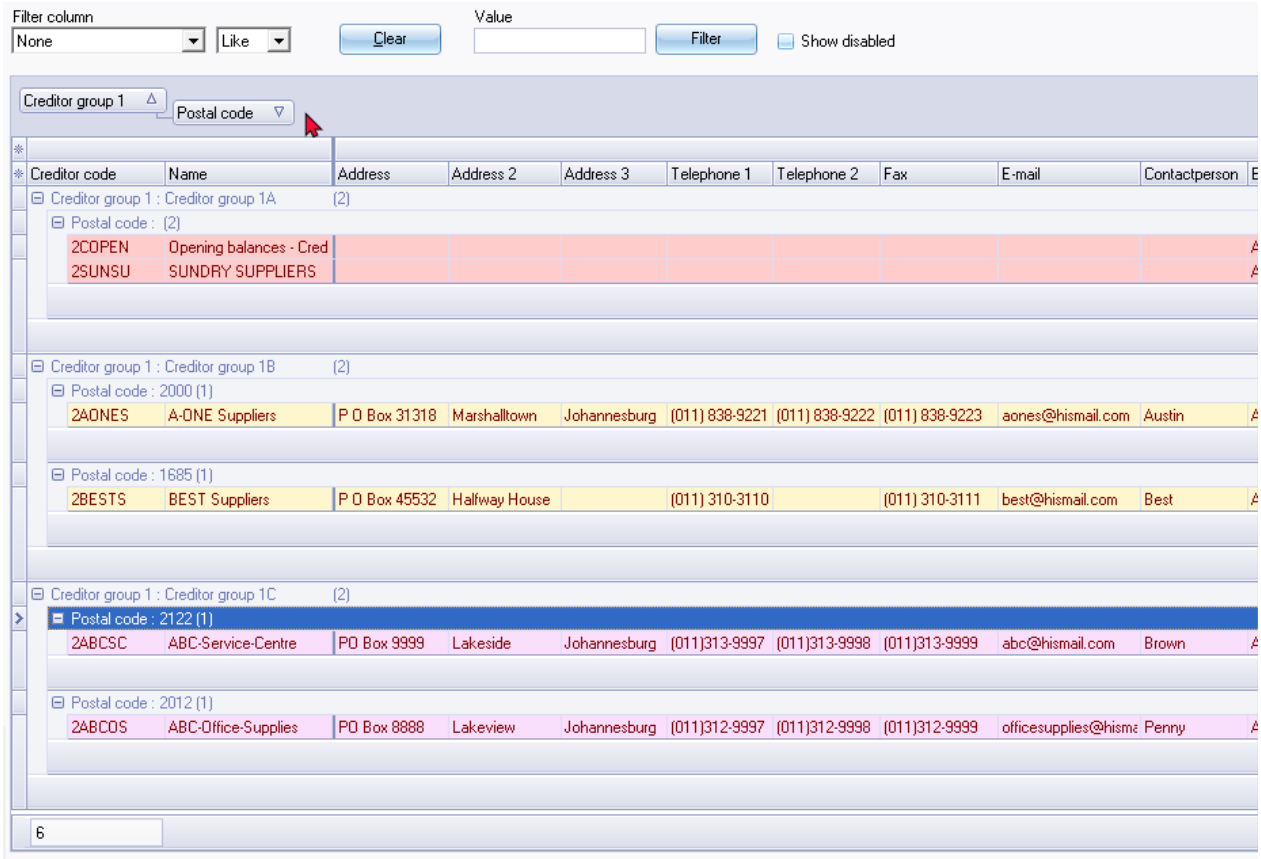


Group columns

You may drag any column heading to the column header "*Use your mouse to pull a column here to group on that column*" will be displayed and the similar data in columns will be grouped.

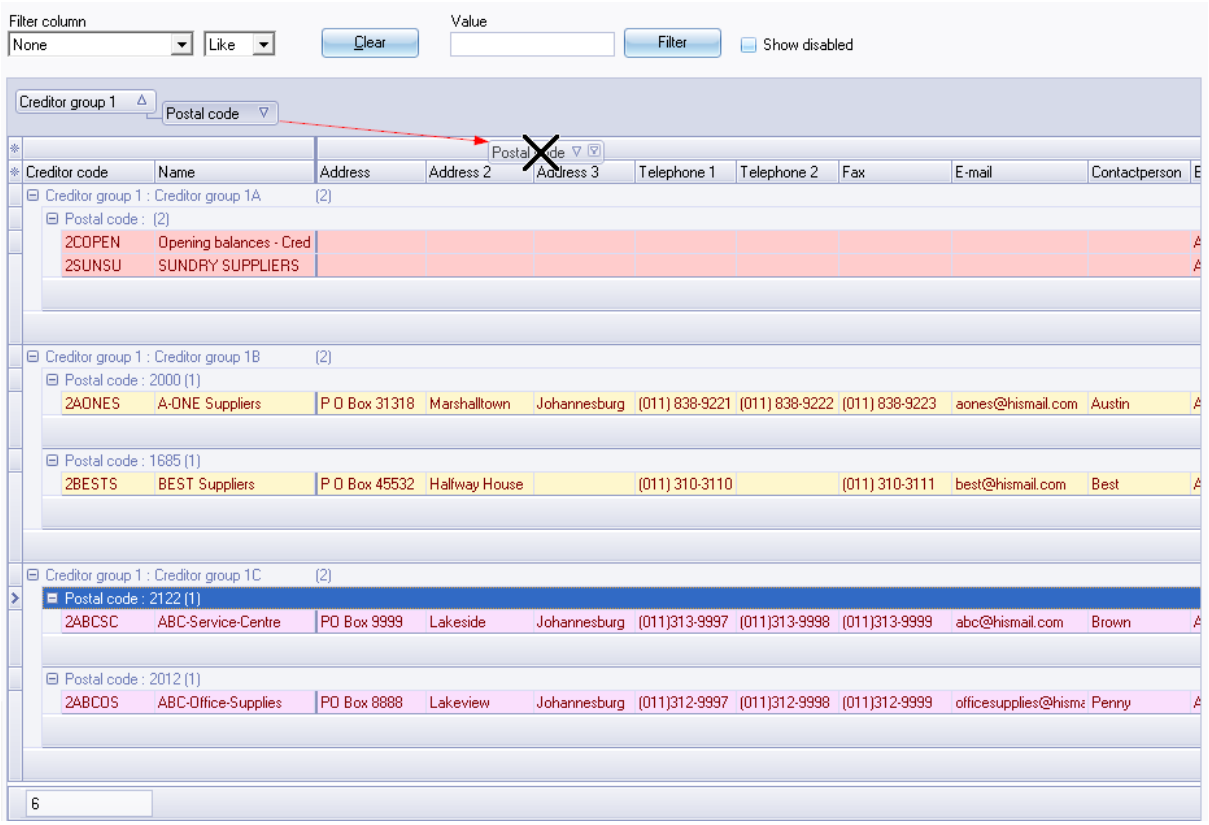
Select a column and click on it. While holding the mouse button down, drag it to the "*Use your mouse to pull a column here to group on that column*" bar. Select any other column to drag and drop it on the the "*Use your mouse to pull a column here to group on that column*" bar. You may select as many columns, as necessary, to group your data.

You may also drag and drop these columns to the right or left to change the grouping of these columns.



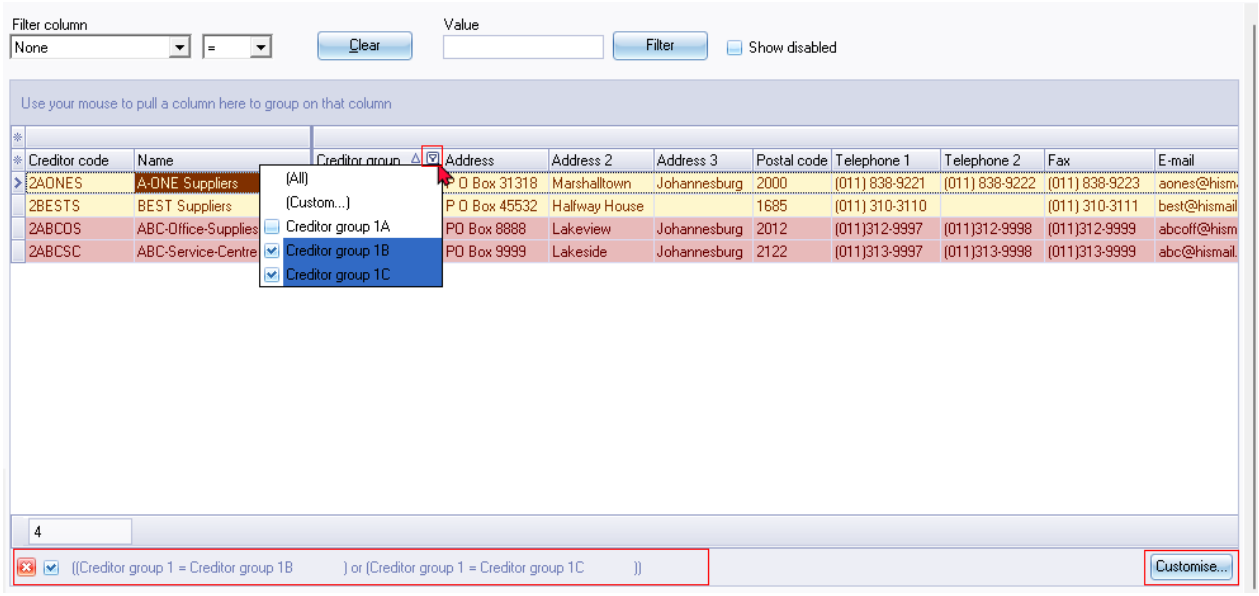
To remove a column from the "*Use your mouse to pull a column here to group on that column*" bar, you may use the following two (2) options:

1. Select the column heading (e.g., "*Postal code*") on the "*Use your mouse to pull a column here to group on that column*" bar, and drag it to the first line (above the column headings). When the mouse pointer change to a big X, drop it. The column will automatically be placed in the correct default sequence (or the place of the previous saved grid layout).
2. If you wish to change the column to a specific place, select the column heading (e.g., "*Postal code*") on the "*Use your mouse to pull a column here to group on that column*" bar, and drag it to the second line (column headings). When you drop it, the column will be added to the selected position or sequence of the columns.



Filter options : Column headings

If you need to view or find specific data, there are various options available to locate and find your data. Some of the options are:



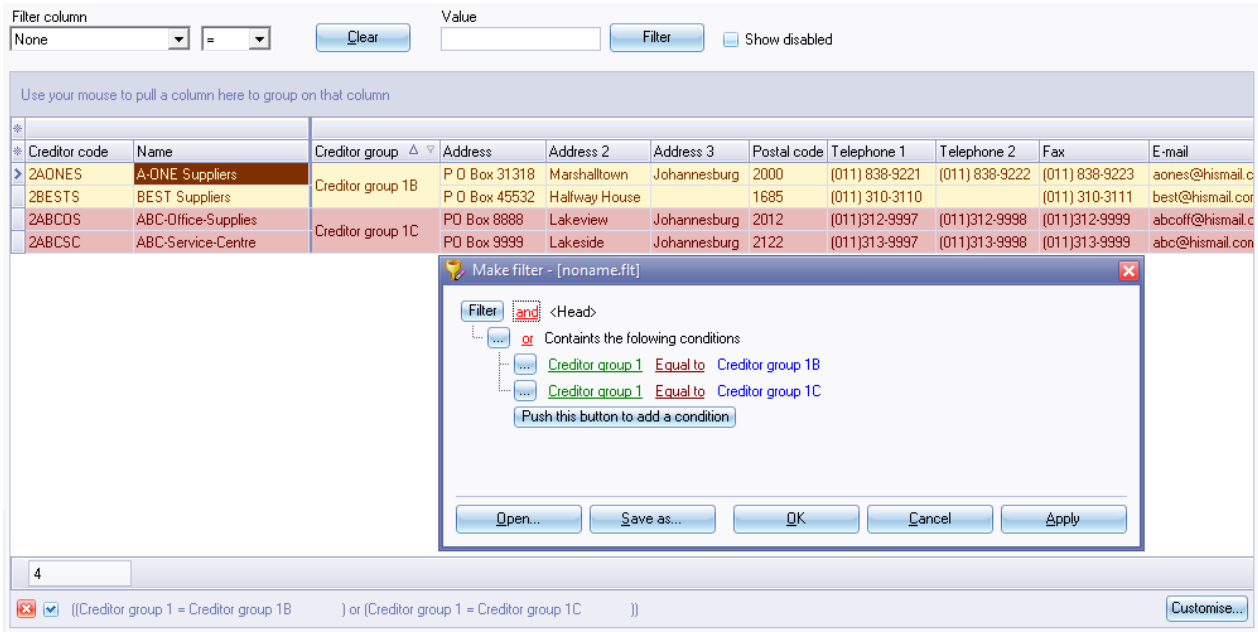
- Sort - Click on a column heading to sort and list the data ascending or descending sequence. All the data is by default displayed ascending; from the smallest to the highest value (e.g. a-z or 0-9) according to the record number (e.g. line number in a batch, etc.) To change the sort order from

ascending (e.g. a-z or 0-9) to descending (e.g. z-a or 9-0) select a column and click on it. If you click on it again it will change back to ascending sequence.

- Drag and drop columns - You may click on a column and drag it to the left or to the right to change the sequence your data is displayed on screens.
- Filter - Click in the arrow to list the data in a specific column. A list displaying the data, as well as an All option and a Custom... option in the selected column will be displayed. By adding a tick next to a specific data, only the data, matching that amount will be listed.
- Custom - You can easily build customised filters according to your needs. These filter files can be saved and opened for future use.

Custom filters

Once you have selected data from the list in a column, the your selection will be displayed at the bottom section of the "*Creditors list*" screen as follows:



To temporarily clear the filter (show all records, remove the tick. To show the filtered records, add the tick again.

- To delete the filter, click on the close icon.

You may click on the (Custom...) option on a column list; or click on the Customise... button to:

1. Make a filter (add or delete conditions and groups).

2. Save a filter.

3. Open a filter.

Make a custom filter

To make a filter:

1. Click on the (Custom...) option on a column list; or click on the Customise button.

2. Select an operator (i.e. and, or, and not, or not).

3. Click on the Filter button (or on the ... button) and select one of the following options on the context menu:

    a) New Condition

    b) New Group

    c) Delete row (If you click on the Filter button, you may delete all rows (conditions and groups)).

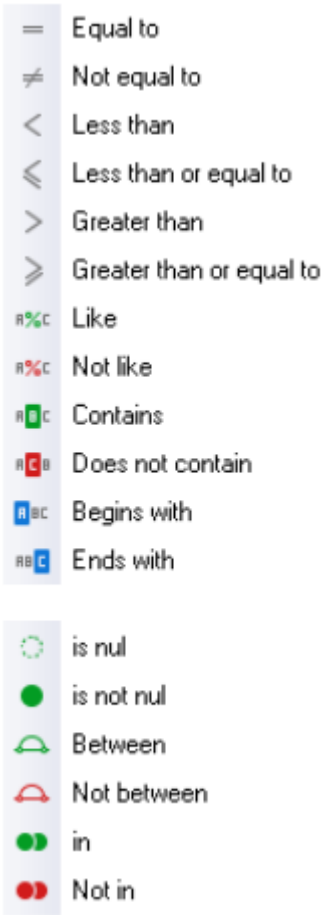
4. Select a column from the list of available data applicable to the screen.

5. Select a filter condition. In this example, the Between is selected. Another field is opened to select another date.

6. Once you have created your conditions or groups, click on the Apply button.

7. Click on the OK button to close and exit this "*Make filter*" screen.

Conditions



1. Equal to - list or display all values which is the same as the specified value.
2. Not equal to - list or display all values which is not the same as the specified value.
3. Less than - list or display all values smaller than the specified value.
4. Less than or equal to - list or display all values smaller or equal to the specified value.
5. Greater than - list or display all values greater than the specified value.
6. Greater than or equal to - list or display all values greater or equal to the specified value.
7. Like - list all values in the table similar to the specified value.
8. Not like - list all values in the table not similar to the specified value.
9. Contains - list all values in the table, which contains specified value.
10. Does not contain - list all values in the table, which does not contain specified value.
11. Begins with - starts with the specified value in the table.
12. Ends with - ends with the specified value in the table.
13. Is null - excludes any value entered, will not be listed or displayed.
14. Is not null - is not zero - any value which is not equal to zero will be listed or displayed.
15. Between - Specify specific values, etc. to include only matching values.
16. Not between - Specify specific values, etc. to exclude values.
17. In - In a specified value.
18. Not in - Not in a specified value.

Save custom filter files

To save a custom filter file:

1. Once you have sorted or filtered your data with the Make filter utility, click on the Save as... button. The "*Save active filter*" screen will be displayed.
2. Select a Directory in which you wish to save the custom filter file.
3. Enter a file name.
4. Click on the Save button to save the Filter in a (*.flt) Filter file format. You may then at any later stage open the saved *.flt file.

Open custom filter files

To open a saved a custom filter file:

1. Once you have sorted or filtered your data with the Make filter utility, click on the Open... button. The "*Open a saved filter*" screen will be displayed.
2. Select a Directory in which you have saved the custom filter file.
3. Select a valid filter file.

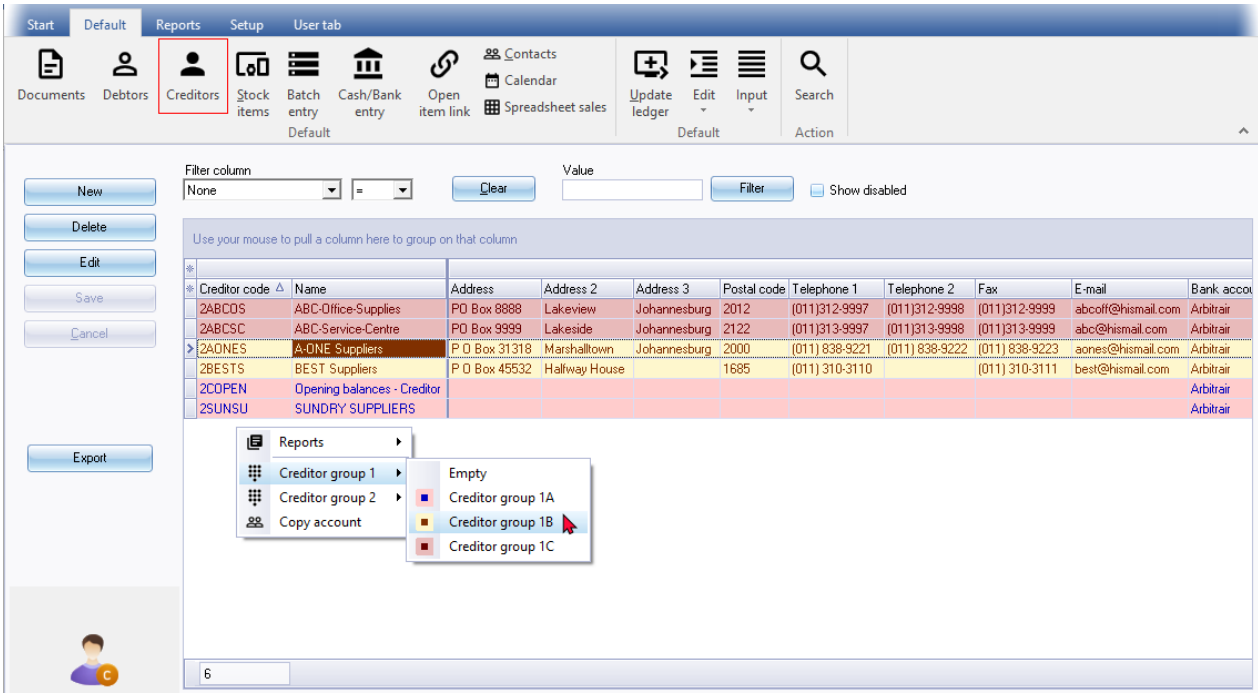
---

4. Click on the Open button. The selected filter file's name will be displayed in the titlebar of the "*Make filter*" screen.

Created with the Standard Edition of HelpNDoc: Full-featured Help generator

Creditor - Context menu

Right-click to display the following context menu:



The following options are available:

1. Reports – You may print postal or delivery address labels for selected creditor(s) (supplier(s)). You may also print these labels from the Reports → Creditor → Print labels (Reports ribbon).

2. Creditor group 1 / 2 - Change the reporting group 1 or 2.

3. Copy account - Create a new account from a selected account.

Created with the Standard Edition of HelpNDoc: Elevate Your CHM Help Files with HelpNDoc's Advanced Customization Options

Creditor - Context menu - Set Creditor Group 1/2

You may change the Creditor group 1 and/or Creditor 2 for selected creditor (supplier / vendor) account(s).

To change the Creditor group 1 or 2:

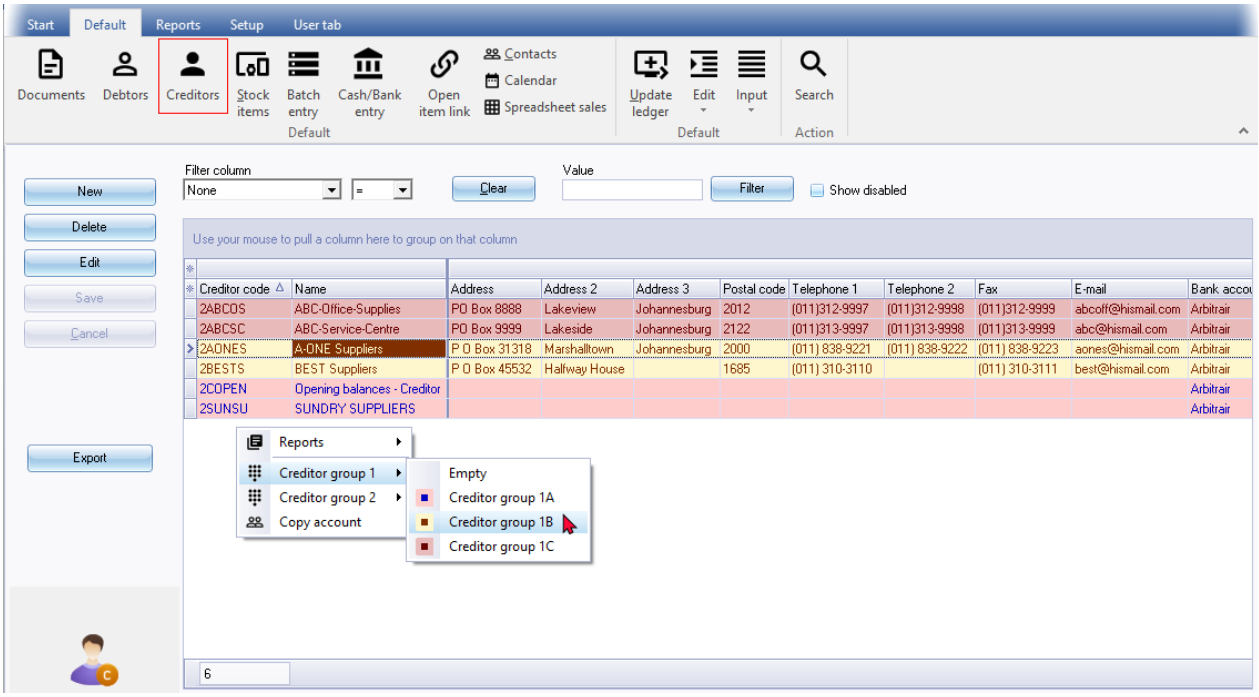
1. On the Creditors (Creditors list screen) (Default ribbon), select the creditor (supplier / vendor) account(s).

> *If you need to select multiple* creditor (supplier / vendor) account(s), *press the Ctrl or Shift key and click on each* creditor (supplier / vendor) account, *for which you need to change the*

	creditor reporting group.

2. Right-click and select "*Creditor group 1*" or "*Creditor group 2*" on the context menu.

3. Select "*Empty*" or the available creditor group from the sub-menu. The "*Creditor group 1*" or "*Creditor group 2*" will change on reports.



Created with the Standard Edition of HelpNDoc: Easily create EBooks

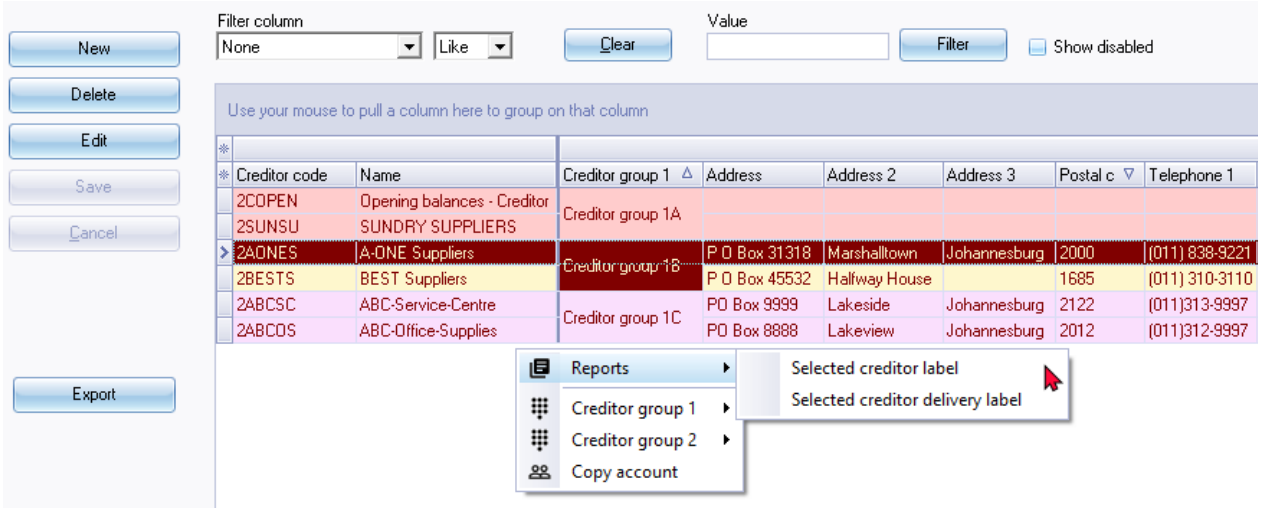
Creditor - Context menu - Reports

The "*Reports*" context menu option allows you to print postal or delivery address labels for a selected creditor (supplier / vendor) account.

To print labels for a selected creditor (supplier / vendor) account:

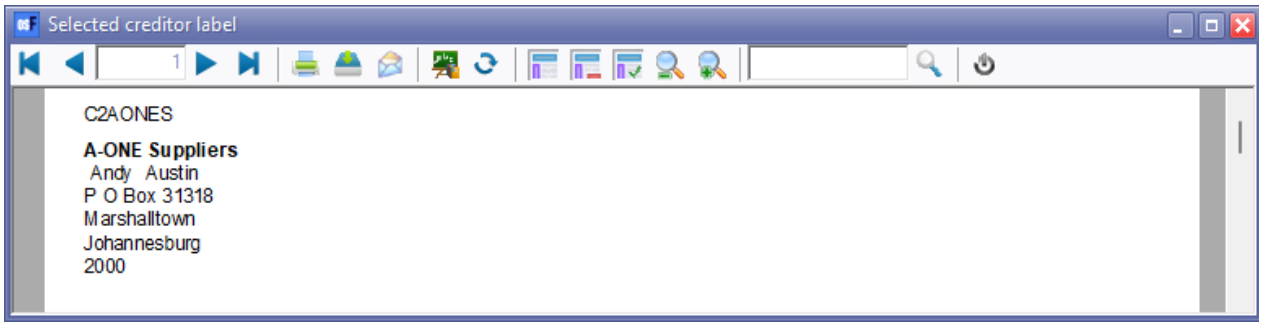
1. On the "*Creditors*" list screen, select a creditor (supplier / vendor) account.

2. Right-click and select "*Reports → Selected creditor label*" option or the select "*Reports → Selected creditor delivery label*" option on the context menu. This will print the postal address label or the delivery address label of the selected creditor (supplier / vendor) account.

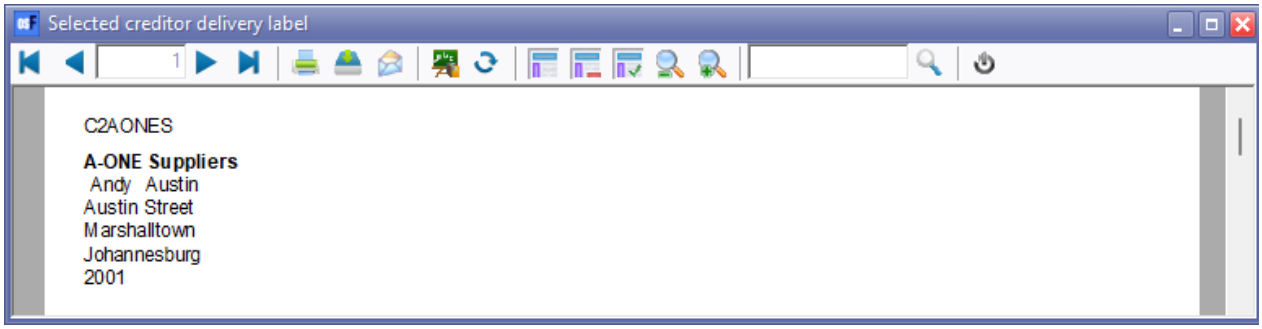


You will only be allowed to print the postal address label or delivery address label for one selected creditor (supplier / vendor) account at a time.

An example of a printed postal address labels, is as follows:



An example of a printed delivery address labels, is as follows:



You may also print the Postal address labels or Delivery address labels for creditor (supplier / vendor) accounts from the Reports → Creditors → Print labels (Reports ribbon).

Created with the Standard Edition of HelpNDoc: Revolutionize Your Documentation Review with HelpNDoc's Project Analyzer

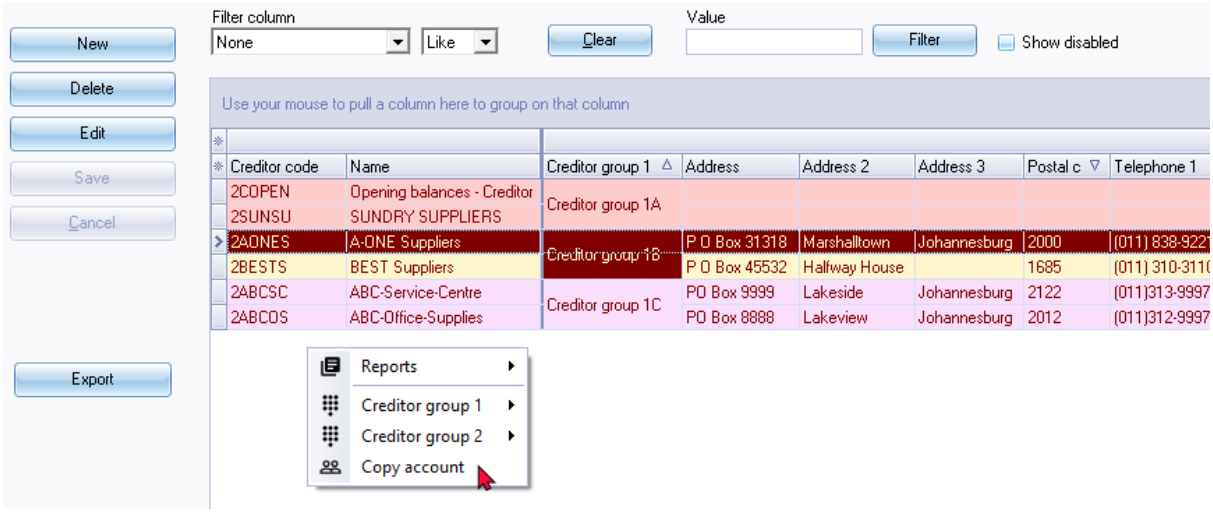
Creditor - Context menu - Copy account

The "*Copy account*" context menu option allows you to create a copy of a selected creditor (supplier / vendor) account.

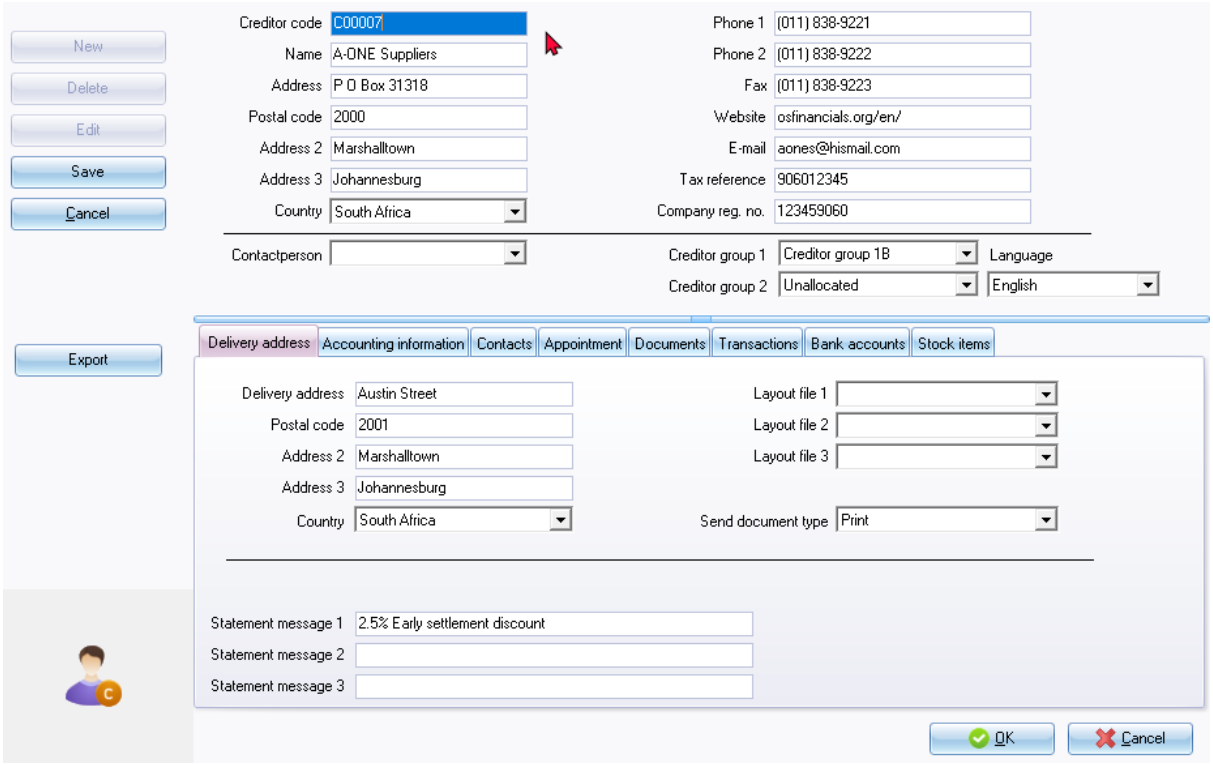
To copy a selected creditor (supplier / vendor) account:

1. On the "*Creditors*" list screen, select a creditor (supplier / vendor) account.

2. Right-click and select the "*Copy account*" option on the context menu.



3. This will create a copy of the of the selected creditor (supplier / vendor) account.



4. Enter the Creditor code.

The next Creditor code (e.g. D00008, etc.), will automatically be generated. It is important to prefix Creditor codes with a unique prefix. In this documentation, the accounts is prefixed as follows:

Debtor code = 1

Creditor code = 2

The reason for this, is that the account prefix is not always available when selecting accounts on some screens and reports. For example, if a Debtor code is D00001 and a Creditor code is C00001, and you select the Debtor code, it may set the Creditor code when selecting the contra account in the "Options for this batch" (F10:Setup) on "Batch entry" screens.

If you have created a Set of Books (Advanced option), and have set the Account code to:

W *4-digits, you may enter a 7-digit Account code (a prefix followed by 6 characters).*

W *5-digits, you may enter a 8-digit Account code (a prefix followed by 7 characters).*

W *6-digits, you may enter a 9-digit Account code (a prefix followed by 8 characters).*

W *7-digits, you may enter a 10-digit Account code (a prefix followed by 9 characters).*

W *8-digits, you may enter a 11-digit Account code (a prefix followed by 10 characters).*

5. Edit the copied fields, where necessary.

Note the following:

- *The contact person is not copied on the new account.*
- *On the Accounting information tab, all the terms and conditions (e.g. Due days, Credit limit, Charge amount, etc.) is copied.*
- *No information is copied on the Contacts, Appointment, Documents, Transactions, Bank accounts, and Stock items tabs.*

Created with the Standard Edition of HelpNDoc: Produce online help for Qt applications

Creditor accounts edit form

To create add / edit a creditor (supplier / vendor) account:

1. If you do not find a creditor (supplier / vendor) account, you may add it by clicking on the New button.

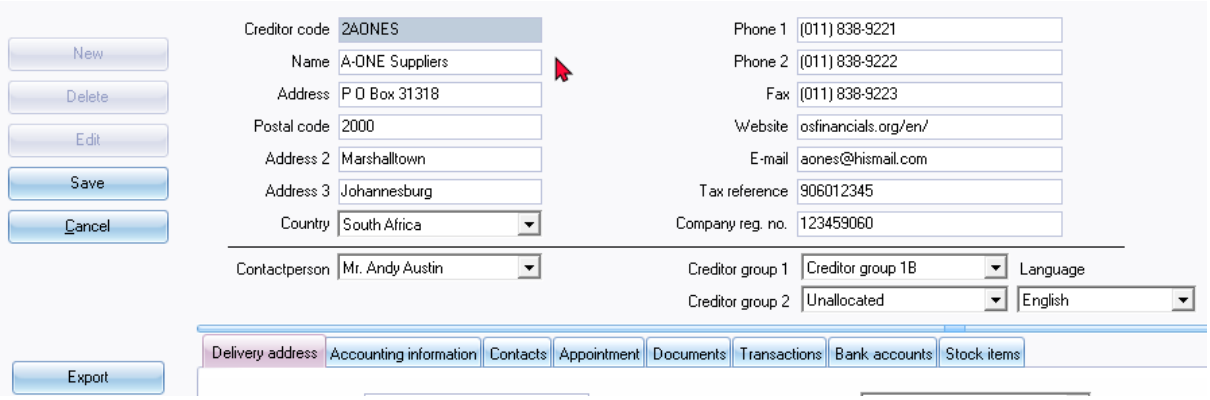
It will launch the blank creditor (supplier / vendor) account with the next account number (i.e. C000001, etc.). You only need to replace the Creditor code, enter the Name and save it. The rest of the fields are optional, but it is recommended that you fill in as much details as possible.

The next Creditor code (e.g. C00006, etc.), will automatically be generated. It is important to prefix Creditor codes with a unique prefix. In this documentation, the accounts is prefixed as follows:

Debtor code = 1

Creditor code = 2

The reason for this, is that the account prefix is not always available when selecting accounts on some screens and reports. For example, if a Debtor code is D00001 and a Creditor code is C00001, and you select the Debtor code, it may set the Creditor code when selecting the contra account in the "Options for this batch" (F10:Setup) on "Batch entry" screens.



The following eight (8) tabs are used to enter and/or edit settings and check additional useful information to manage creditor (supplier / vendor) accounts:

- *Delivery address - Delivery address, Address 2, Address 3, Postal code, Country, Message, Message 1, Message 2 and Message 3 and Layout files for Orders, Purchases and Supplier return documents.*
- *Accounting information - Account disabled, Open item account, Due days (Payment date), Credit limit, Charge amount, Bank account (i.e. Bank account type, Bank account no., Bank name and Branch code), Use default account, Use default tax and Debtor code.*
- *Appointments - Any events or appointments have been scheduled in Calendar (Default ribbon) for that creditor (supplier / vendor) account will be listed.*
- *Documents - Any purchase documents (Orders, Purchases and Supplier return documents) have been processed for that creditor (supplier / vendor) account will be listed.*
- *Transactions - Any Debit and Credit transactions have been processed for that creditor (supplier / vendor) account will be listed.*

- *Bank accounts – This is used for the Bank import plugin.*
- *Stock items – This tab will list all the posted as well as unposted documents (i.e. purchase documents, supplier returns and orders) for the selected creditor (supplier / vendor) account.*

Plugins (e.g. Price agreements and Subscriptions), which may be purchased separately will be added as tabs on creditor (supplier / vendor) accounts. These will be dealt with in separate documentation.

2. Enter and/or select the following options:

a) Creditor code - It is automatically generated.

The *Creditor code* is automatically generated when you click on the New button. It is prefixed with a C, followed by 5 numeric characters. You may overtype this with your own to suit your specific requirements.

If you have created a Set of Books (Advanced option), and have set the Account code to:

- *4-digits, you may enter a 7-digit Account code (a prefix followed by 6 characters).*
- *5-digits, you may enter a 8-digit Account code (a prefix followed by 7 characters).*
- *6-digits, you may enter a 9-digit Account code (a prefix followed by 8 characters).*
- *7-digits, you may enter a 10-digit Account code (a prefix followed by 9 characters).*
- *8-digits, you may enter a 11-digit Account code (a prefix followed by 10 characters).*

b) Name - Enter the name (description) for the creditor (supplier / vendor).

c) Address - Enter up to 3 address lines.

d) Postal code - Enter the postal code or zip code.

e) Country - You may select the Country from the list, if necessary.

f) Phone 1 - Enter the phone number.

g) Phone 2 - Enter the phone number, if available.

h) Fax - Enter the fax number, if available.

i) Website - Enter the website address, if available.

You may double-click on this field to access the website of the creditor (supplier / vendor) in your system's default web browser.

j) E-mail - Enter the e-mail address, if available.

You may double-click on this field to launch the a new message to the creditor (supplier / vendor) in your system's default mail app / program.

k) Tax Reference - If creditors (suppliers) are exempt from tax, or registered for VAT/GST/Sales Tax, that tax reference should be entered in this field.

l) Company Reg. No. - Enter, if available.

m) Contact Person - Select a Contact Person from the list.

If no Contact Person is available, you need create it on the Contacts tab.

n) Creditor group 1 / 2 - The Reporting group to which you wish this creditor (supplier / vendor) to be allocated.

The description of Creditor group 1 and/or Creditor 2 you have entered on the "Reporting group name" field on the Creditor groups tab - Setup → Groups may be reflected on this screen.

o) Language - The list of language files in Switch language (Start ribbon) as maintained in Tools → Customise language (Setup ribbon) will be listed. You may select a preferred language for the creditor (supplier / vendor). If the standard translatable document layout files are selected, the documents (i.e. purchases, supplier returns and orders) will be printed in the selected language for creditor (supplier / vendor) account.

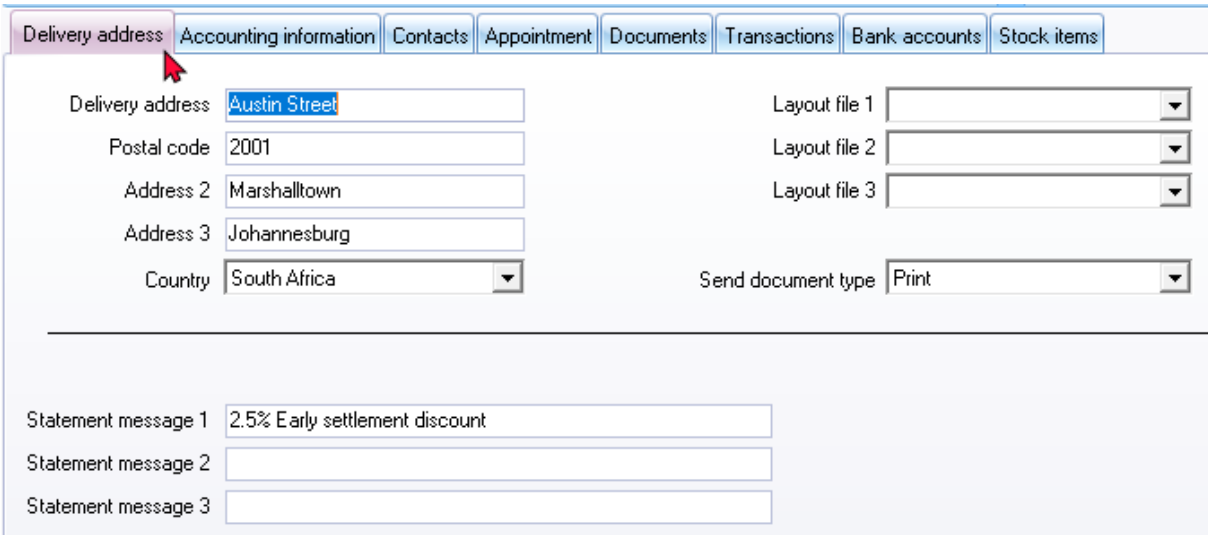
3. Click on the Delivery address tab and/or Accounting information tab to enter additional information, select settings and accounting terms.

Created with the Standard Edition of HelpNDoc: Free CHM Help documentation generator

Creditor accounts - Delivery address tab

Delivery address tab - Enter delivery address, and messages and settings for layout files.

1. The Delivery address tab is the default when accessing the Creditors (Default ribbon).



2. Enter and/or select the following on the *Delivery address* tab, if necessary:

   a) Delivery address, Address 2, Address 3 - Enter up to 3 address lines.

   b) Postal code - Enter the postal code or zip code.

   c) Country - Default is *Empty*. You may select the Country.

   d) Message, Message 1, Message 2 and Message 3 - Enter the message for the creditor (supplier / vendor) account. This message will be displayed on remittance advises printed in Reports → Creditors → Remittance advises (Reports ribbon).

   e) Layout files

      If no layout files have been selected for the creditor (supplier / vendor) on this tab, the default settings as set for Purchases, Supplier returns and Orders (Setup → Documents setup) will be used.

      i) Layout file 1 – Purchases - Layout file - If you have a specific purchase layout file for the this creditor (supplier / vendor), you may select it.

      ii) Layout file 2 – Supplier returns - Layout file - If you have a specific Supplier returns layout file for the this creditor (supplier / vendor), you may select it.

      iii) Layout file 3 – Orders - Layout file - If you have a specific Order layout file for the this creditor (supplier / vendor), you may select it.

   f) Send document type - This is only applicable to the E-mailPro plugin. Print document is the default. Other options are; Print document and send email or Email. To use this feature, you need to activate and purchase the E-mailPro plugin and need to set it to print to a printer.

3. Click on the Accounting information tab to enter and select settings and accounting terms.

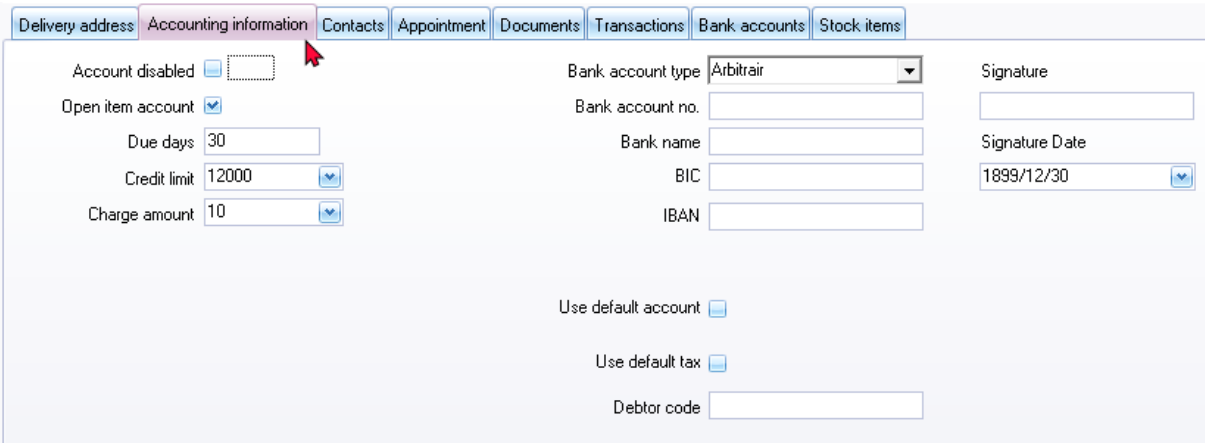
4. Once finished, click on the Save button.

Created with the Standard Edition of HelpNDoc: Easily create EBooks

Creditor accounts - Accounting information tab

Accounting information tab contains settings for a specific creditor.

1. Click on the Accounting information tab.



2. Enter and/or select the following, if necessary:

   a) Account disabled - This field should not be selected (ticked) if you wish to enter and post transactions to the creditor (supplier / vendor) account. Select (tick) this field if you wish to disable the creditor (supplier / vendor) account (e.g. if you no longer do business with this creditor (supplier / vendor)). osFinancials5/TurboCASH5 will allow you to enter transactions for the creditor (supplier / vendor), but it will not allow you to post transactions to the creditor (supplier / vendor) account. However, you will still be able to view reports for the creditor (supplier / vendor).

   b) Open item account - Select (tick) this field if you wish to allocate or link payments or supplier returns (debit transactions) to a particular purchase or credit transaction. If this field is left blank, the Balance B/F (brought forward) posting method will be used, where payments made or supplier returns made are allocated against the oldest outstanding amount.

   c) Due days - Enter the number of days for the credit facility granted by the creditor (supplier / vendor).

> *This date will be used to calculate the date when payments are to be made to creditors*

(suppliers) on purchase documents (i.e. purchases or supplier returns) and via the electronic payment system in the Automatic payments batch processing option. It will also print on purchase documents (i.e. (i.e. purchases, supplier returns or orders).

d) Credit limit - Enter the credit limit granted by the creditor (supplier / vendor). When you are processing transactions, osFinancials5/TurboCASH5 will warn you if you are exceeding the credit limit for the creditor (supplier / vendor).

It will also display the Available balance (i.e. Current balance minus the Credit limit) on purchase document entry screens (i.e. purchases, supplier returns and orders).

The Calculator's buttons may also be launched from the Credit limit field.

e) Charge amount - Enter an amount as agreed upon with your creditor (supplier / vendor).

You may generate Multiple Transactions - Creditors with charge amount option in any Batch type or Journal (except the Receipts and Payments batch types). When you post this Batch, osFinancials5/TurboCASH5 will credit (increase the creditor (supplier / vendor) account) for each of the creditor (supplier / vendor) accounts with the amount specified in this field and debit a specified account (e.g. Expense account).

The Calculator's buttons may be launched from the Charge amount field.

f) Bank account type - Select *Arbitrair* or *11 Proof*. This is for electronic payments made to creditor (supplier / vendor) accounts via the electronic banking system.

11-Proof - See - http://nl.wikipedia.org/wiki/Elfproef

Arbitrair - Random - not controlled

g) Bank account no. - Enter the bank account number, if available.

h) Bank name - Enter the bank account name, if available.

i) BIC - (Bank Identifier Code). Enter, if available.

See - http://en.wikipedia.org/wiki/International_Bank_Account_Number

j) IBAN - (International Bank Account Number)

See - http://en.wikipedia.org/wiki/International_Bank_Account_Number

k) Signature - Enter, if available.

SWIFT - (Society for Worldwide Interbank Financial Telecommunication) - See - http://en.wikipedia.org/wiki/SWIFT / http://www.theswiftcodes.com/

SEPA - (Single Euro Payments Area) - See - http://en.wikipedia.org/wiki/Single_Euro_Payments_Area

l) Signature date - Enter, if available.

m) Debtor code - Enter the debtor (customer / client) code for the creditor (supplier / vendor), if available.

n) Stock file override - By default, the Stock file override settings is not activated. If necessary, select the following:

i) Use default account - By default, the "*Use default account*" option is not selected. The Purchase account, as selected on Stock items (Default ribbon), will be used when purchase documents or orders for the creditor (supplier / vendor) is updated (posted) to the ledger.

If you activate the Use default account settings, you need to select a different account on the Accounts lookup facility.

When purchases or supplier returns for the creditor (supplier / vendor) is updated (posted) to the ledger, the selected Purchase account for this Stock item will be ignored and the purchase transaction will be updated (posted) to the specified account for the creditor (supplier / vendor)).

ii) Use default tax - By default, the "*Use default tax*" option is not selected. The Input Tax account, as selected on Stock items (Default ribbon), will be used when purchases or supplier returns for the creditor (supplier / vendor) is updated (posted) to the ledger.

If you activate the Use default tax settings, you need to select a different VAT/GST/Sales Tax account or code on the Tax Lookup.

When purchases or supplier returns for the creditor (supplier / vendor) is updated (posted) to the ledger, the selected Tax account or code for this Stock item will be ignored and the Input VAT/GST/Sales Tax transaction will be updated (posted) to the specified VAT/GST/Sales Tax account or code for the creditor (supplier /

vendor).

Do not select this option, if you are not registered for VAT/GST/Sales Tax, or if multiple Tax codes (accounts) is applicable to the transactions with the creditor (supplier / vendor).

3. Click on the Save button.

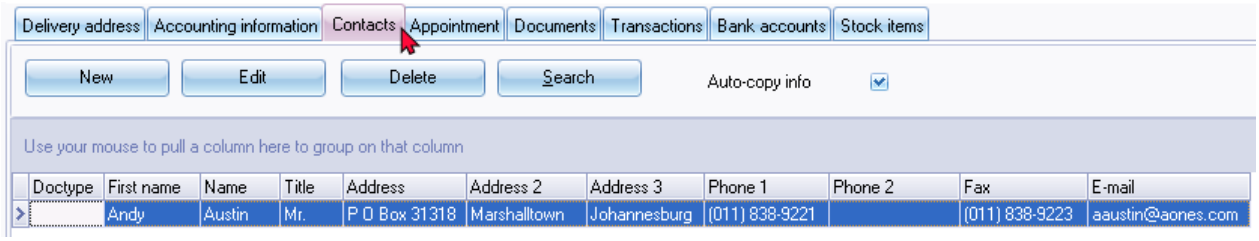
Creditor accounts - Contacts tab

You may add, delete or enter contact persons for the creditor (supplier / vendor). A list of all contact persons linked to the selected creditor (supplier / vendor) account, you have created, edited or deleted, in the following options on the Default ribbon:

- Calendar
- Contacts



This will display the First name, Name, Address, Address 2, Address 3, Phone 1, Phone 2, Fax and E-mail address.

The options are as follows:

New - This will open a blank contactperson screen.

Edit - This will open the selected contact's details screens.

Delete - Delete a selected contact.

Search - This will initiate a similar screen as in the Contacts (Default ribbon) listing all contacts. You can then select a specific contact. You can also use the "*Auto-copy info*" option to copy the details of a selected contact.

Deleted contact persons will be removed from this list.

Created with the Standard Edition of HelpNDoc: Make Your PDFs More Secure with Encryption and Password Protection

Creditor accounts - Appointments tab

In osFinancials5/TurboCASH5, the "*Creditor accounts - Appointments*" tab allows you to view and manage appointments specifically related to a selected creditor (supplier/vendor) account. This tab provides a centralised view of all scheduled creditor appointments that have been added in the Calendar (Default ribbon).

By accessing the "*Creditor accounts - Appointments*" tab, you will be able to see a comprehensive list of all creditor appointments/events that have been scheduled in the Calendar. This includes appointments for meetings, discussions, notes, or any other relevant activities associated with your creditor account.

You may click on the column headings (i.e. Description or Notes) to change the sort sequence from the ascending to the descending sequence.

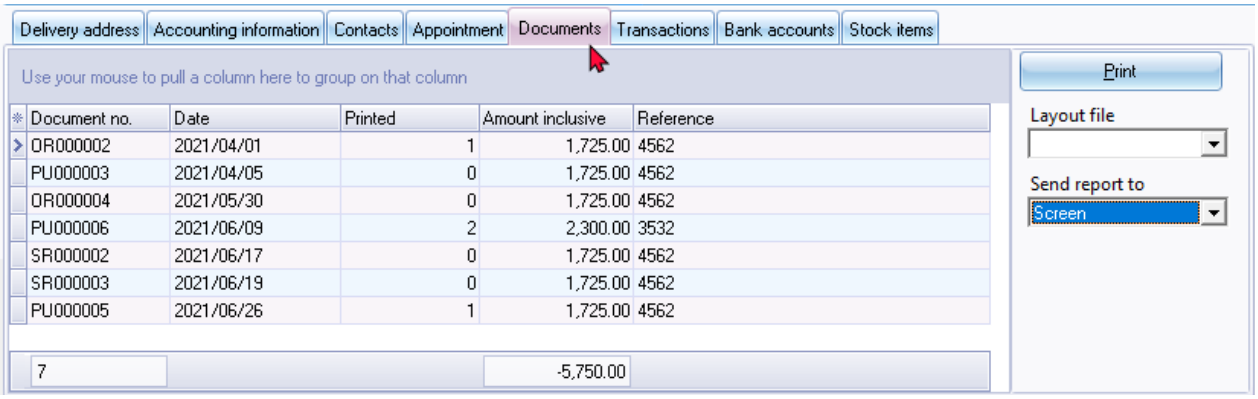
You may click on any of the column headings (i.e. Start time, End time, Description or Notes) and drag it to the left or right to change the sequence in which to display the columns.

Created with the Standard Edition of HelpNDoc: From Word to ePub or Kindle eBook: A Comprehensive Guide

Creditor accounts - Documents tab

All purchase documents (i.e. Purchases, Supplier returns and/or Orders) which have been processed for the selected creditor (supplier / vendor) account will be listed here. These documents need not to be updated (posted) to the ledger.

To maximise the Documents tab and/or Debit / Credit transactions section of the screen, click on the *button to maximise the Documents tab. You may also click and drag any part of the screen up / or down.* 



The options are as follows:

1. Print button - This will print the selected document to the default or selected output method.

   You may also double-click on a selected document to print it.

2. Layout file - This is by default blank. The selected document will be printed using the layout file as set in Setup → Documents setup for Purchases, Supplier returns and Orders.

   You may change the layout file by selecting your own layout file from the list. These layout files are stored in the

   ...\plug_ins\reports\DOCUMENTS\DOCUMENTS directory of your system.

3. Send report to - The default option as set in the "*Output method*" field on Setup → Company info (Options) or Setup → Access control (Reports access). You any change this to any other option (i.e. Screen, Printer, File, E-mail or Fax), if required.

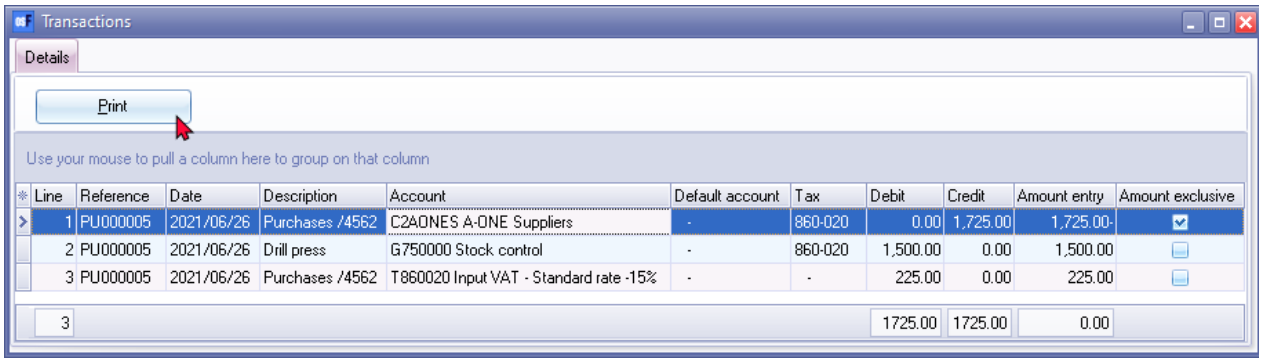
   You may click on the column headings (i.e. Document number, Date, Description or Reference) to change the sort sequence from the ascending to the descending sequence.

   You may also click and drag any of the column headings to the left or right to change the sequence in which the columns are to be displayed.

View Transactions - Show transact context menu

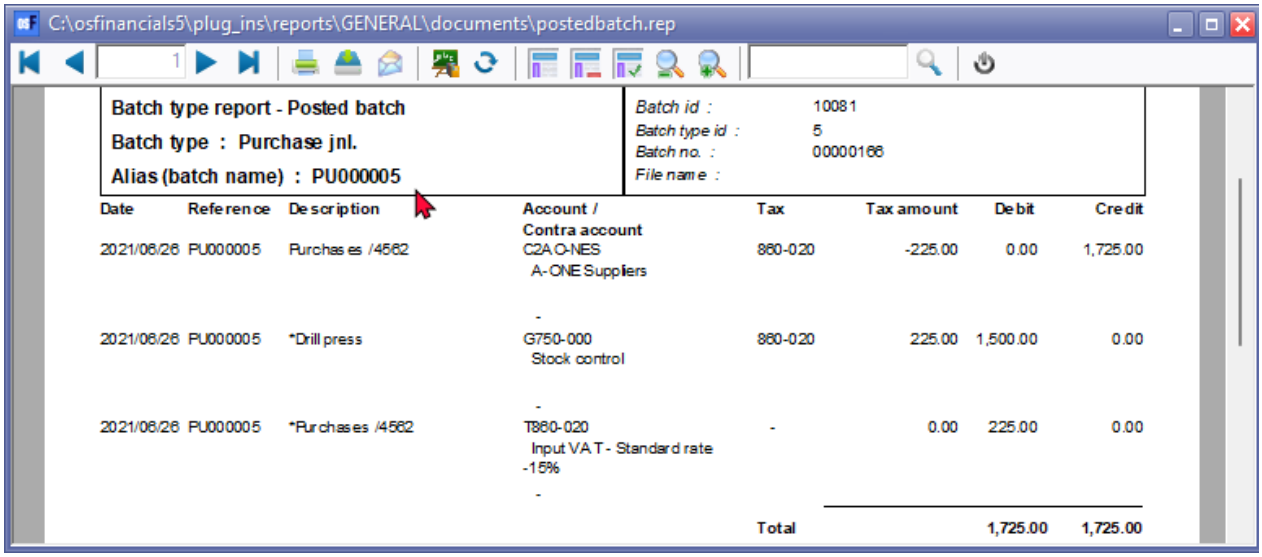
1. Select a transaction and click on the Show transactions context menu.
2. On the "*Transactions*" screen, click on the Print button.

> *The Documents tab lists all posted and unposted documents and orders. The Show transactions context menu option will not do anything, if an order or an unposted document is selected.*



The Amount Exclusive values are as follows:

- 0 = Amount Exclusive
- 1 = Amount Inclusive



Created with the Standard Edition of HelpNDoc: Easily create Web Help sites

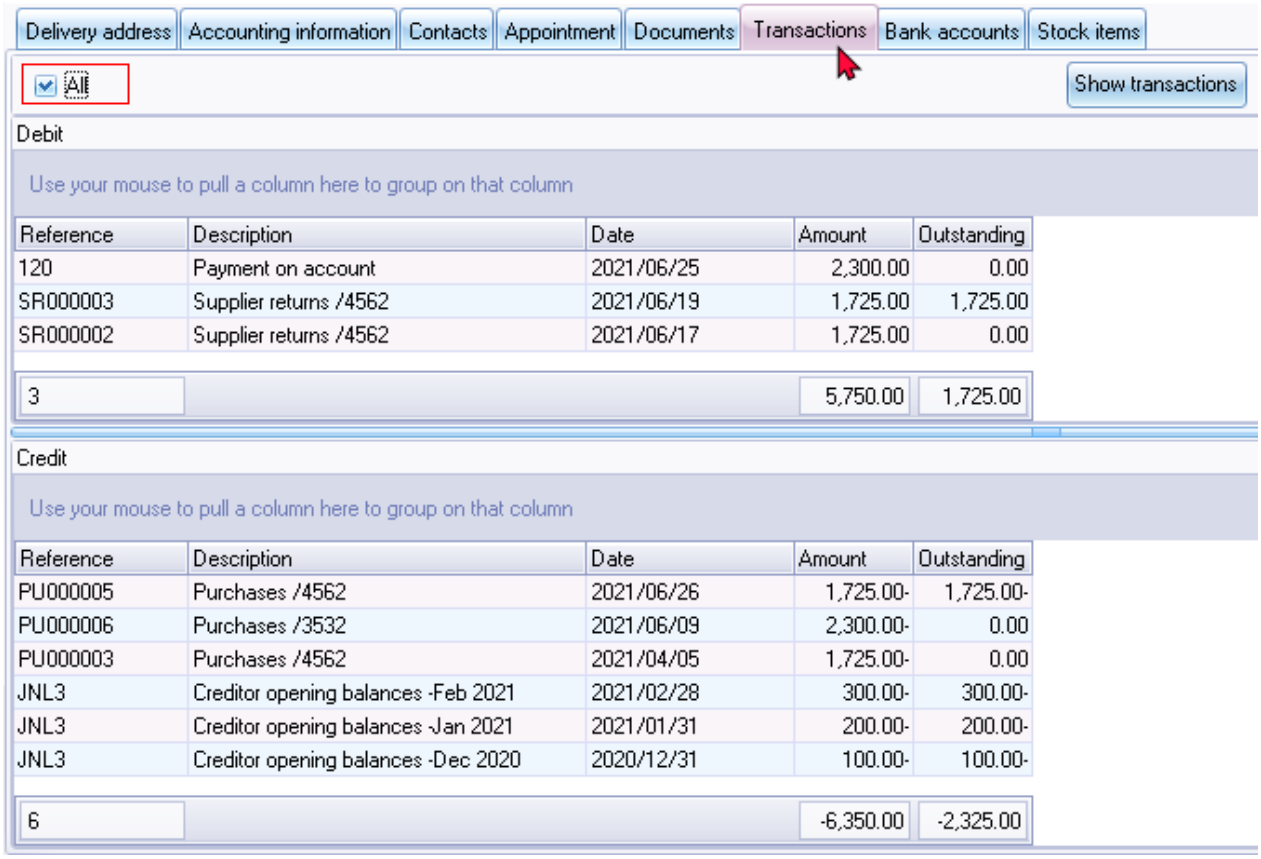
Creditor accounts - Transactions tab

Any transactions which have been processed for that creditor (supplier / vendor) account will be listed:

- Batch (Journal) transactions which have been updated (posted) to the ledger.
- Document transactions (i.e. Purchases and Supplier returns) which have been updated (posted) to the ledger.

To maximise the Transactions tab and/or Debit / Credit transactions section of the screen, click on the  *button to maximise the Transactions tab. You may also click and drag any part of the screen up / or down.*

All selected - All transactions listed. Those transactions which are fully linked or settled, will display an 0.00 amount in the Outstanding column:

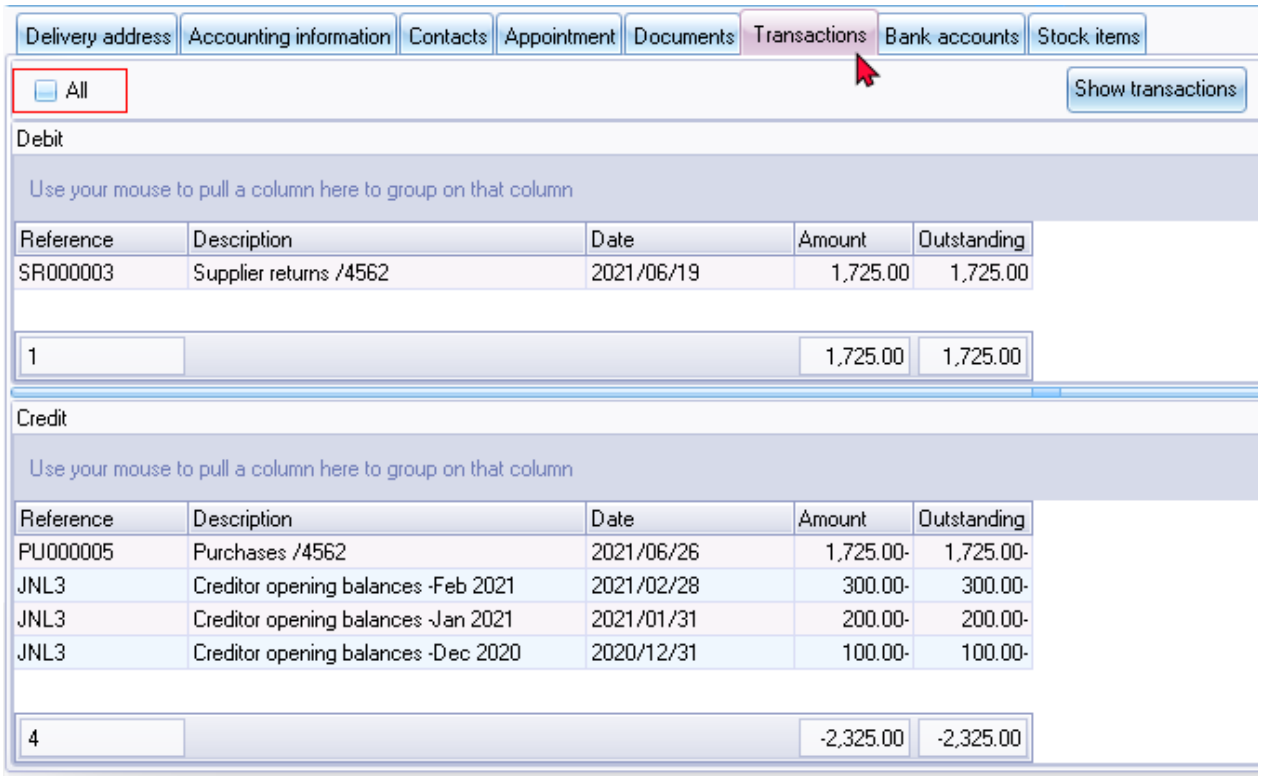


All -

By default, this option is not selected. If a creditor account is set to Open item account (Accounting information tab) only the transactions which are not linked (matched) in the Open item feature (i.e. amounts in the Outstanding column smaller or larger than 0.00), will be listed.

All - If you select this option, all the transactions which are linked (matched) in the Open item feature (i.e. amounts in the Outstanding column = 0.00), will be listed.

All not selected - This is the default option. Only those with outstanding amounts will be listed:



Before sending remittance advises to your creditors (suppliers) , it is recommended that any amounts in the debit section be linked to any outstanding invoices or credit transactions.

If the creditor (supplier / vendor) account is not set as an open item, account, all transactions will be listed.

It will list transactions as follows:

1. Debit - Documents (i.e. Supplier returns), Purchase returns journal, Payments journal, Opening Balances take-on, etc. It will list any transactions, for which amounts are entered in the Debit column of batches.
2. Credit - Documents (i.e. Purchases), Purchase journal, Generate multiple transactions (Creditors with charge amount), Opening Balances take-on, etc. It will list any transactions, for which amounts are entered in the Credit column of batches.

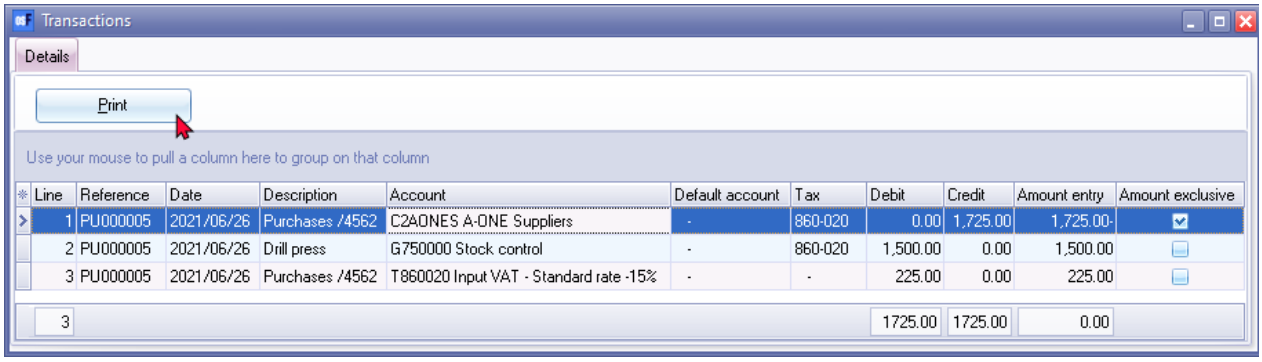
You may click on the column headings (i.e. Reference, Description, Date, Amount or Outstanding) to change the sort sequence from the ascending to the descending sequence.

You may also click and drag any of the column headings to the left or right to change the sequence in which the columns are to be displayed.

View Transactions - Show transactions context menu

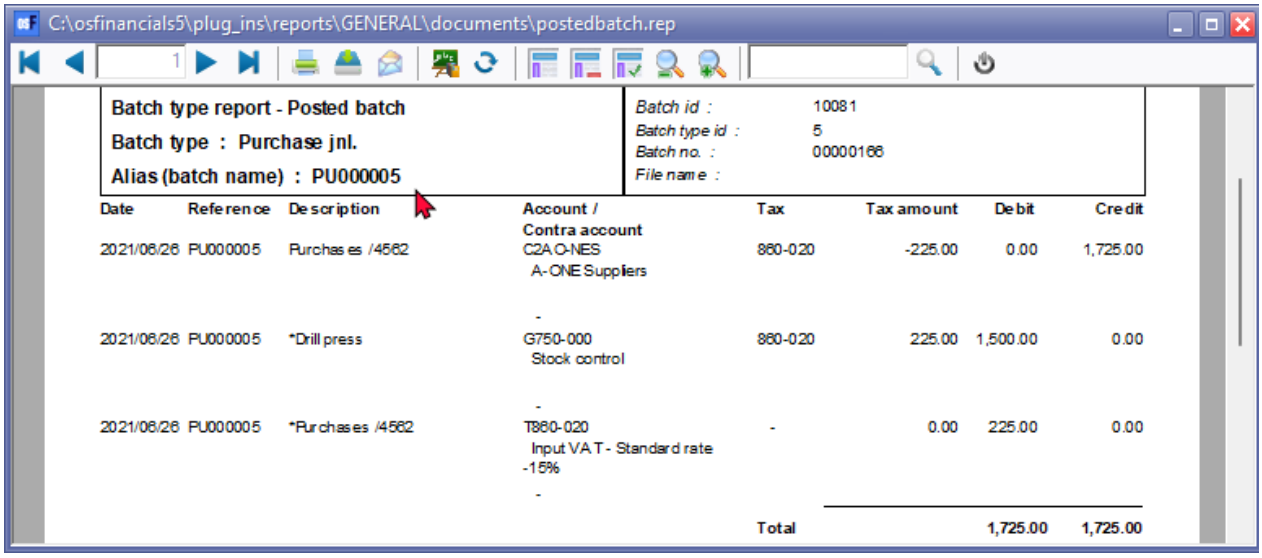
1. Select a transaction and click on the Show transactions context menu.
2. On the "*Transactions*" screen, click on the Print button.

> *The Documents tab lists all posted and unposted documents and orders. The Show transactions context menu option will not do anything, if an order or an unposted document is selected.*



The Amount exclusive values are as follows:

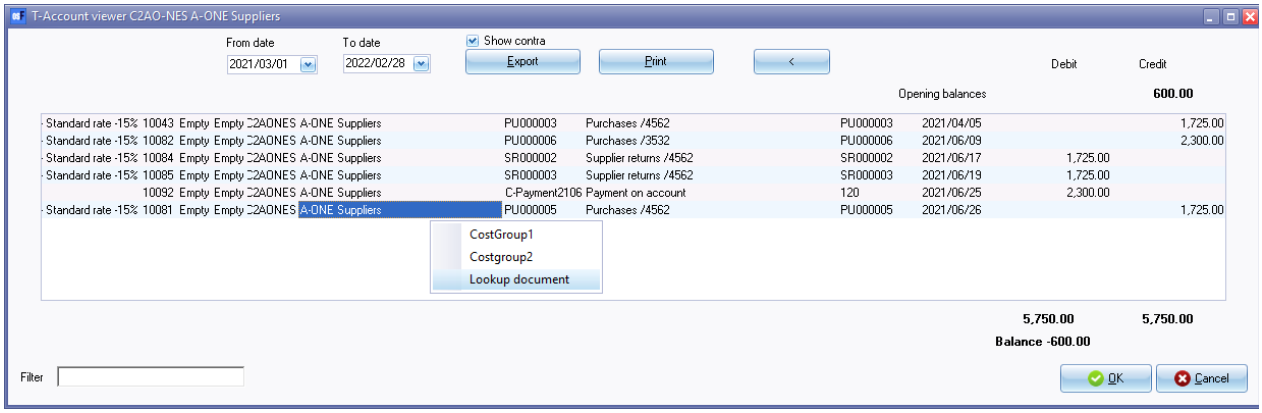
- 0 = Amount exclusive
- 1 = Amount inclusive



View Transactions - Show Transactions button

T-Account viewer

1. Click on the Show transactions button.
2. Enter or select a start date and an end date, if necessary. Click on the Print button to print the transactions, if required.



You may double-click on a selected batch number to view only the transactions for the selected document. For example, if you need to view and print the transactions for Supplier return "PU000005" only, double-click on the batch number "10081"

Show contra - By default, this option is not selected. The contra accounts will not be printed in the "ledgerdetail" report when you click on the Print button.

Show contra option selected you may view the Contra accounts in the T-Account-viewer. If you click on the Export button, the contra accounts will be included in Column A of a Spreadsheet.

The Contra accounts consists of the following, separated by a comma:

"G750000 Stock control,T860020 Input VAT - Standard rate -15%"

Documents

- *Ledger account and account description set as the contra account of the batch type linked to the document type. (i.e. Contra account of the Purchase jnl linked to Purchase and Supplier return document types in Setup documents).*
- *Tax account (tax code) and description as linked to the Input tax (VAT/GST/Sales tax) on the Ledger tab of the Stock item selected on the Document lines.*

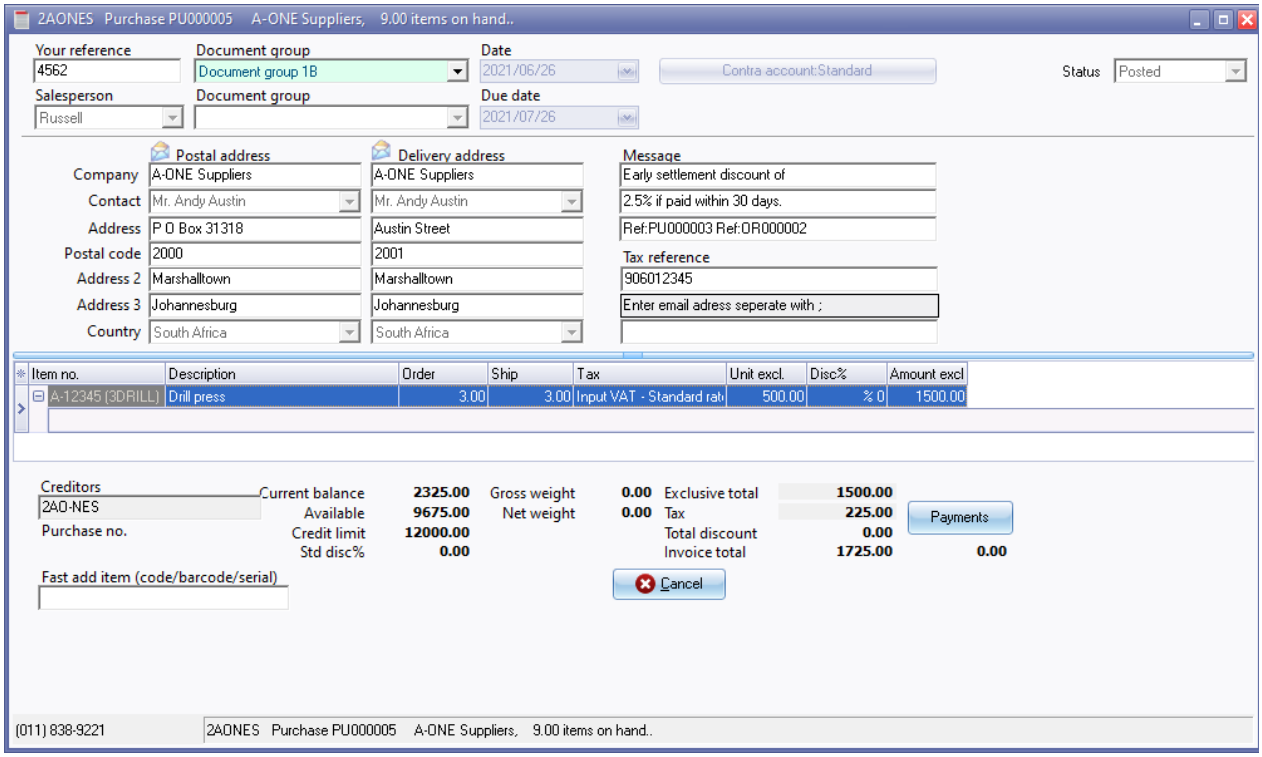
Batches

- *Ledger account and account description of the contra account selected in Batch setup generated as balancing entries; or selected in the "Account" column for Batch transactions.*
- *Tax account (tax code) and description as selected in the "Tax" column for Batch transactions and/or generated as balancing entries.*

Lookup document

You may right-click on a selected document and select "*Lookup document*" on the context menu of the "*T-Account viewer*".

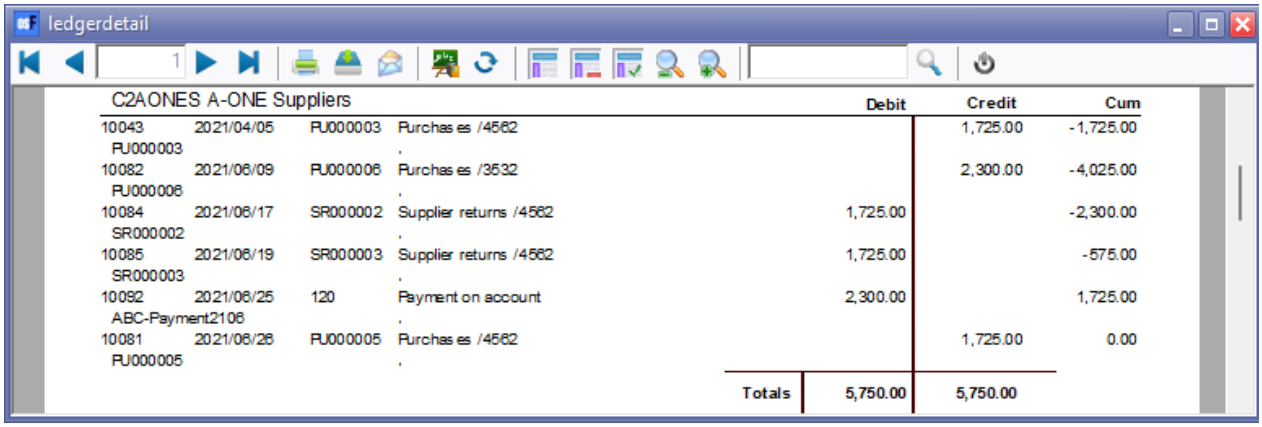
The posted document will be displayed in a stand alone "*Document entry*" screen.



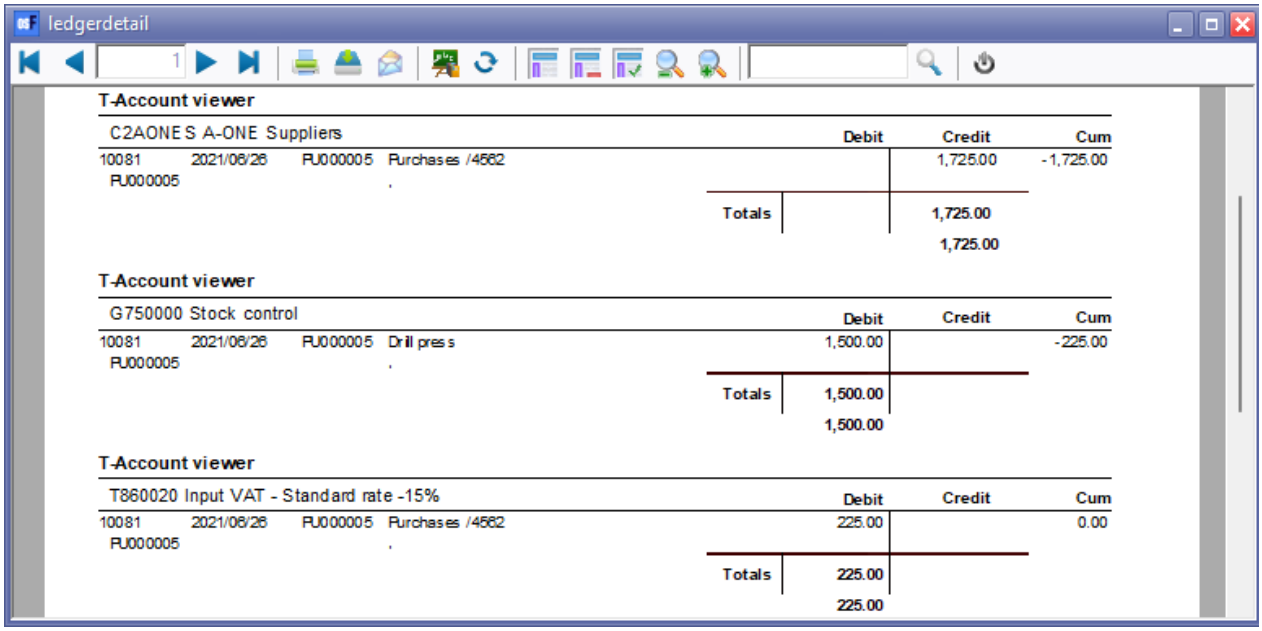
You will not be allowed to edit or change the posted document.

T-Account viewer - Print transactions

To print the transactions, in the "*T-Account viewer*", click on the Print button.



View a specific selected batch transaction (e.g. Supplier return "*PU000005*" (batch number "*10081)*



T-Account viewer - Export transactions

To export the transactions, in the "*T-Account viewer*", click on the Export button. This will export the transactions, as selected displayed in the T-Account viewer, as a comma separated text file as a "*Export.txt*" file. The Exported file will automatically be opened in your in your system's app (program) associated with the CSV (Comma Separated Values) file types.

Delete Creditor accounts

You may delete a creditor (supplier / vendor) account if the account has no transactions and/or balances.

You may disable a creditor (supplier / vendor) account to block (prevent) posting of any documents or batch transactions for the creditor (supplier / vendor). You may need to do this, if you are no longer doing business with the creditor (supplier / vendor), etc.

Delete accounts

To delete a Creditor (supplier / vendor) account:

1. On the Creditor (supplier / vendor) accounts, select the account.

   If you wish to delete more than one (1) creditor (supplier / vendor) account at a time, press the Ctrl key and keep it down while selecting the other creditor (supplier / vendor) accounts to delete with a mouse click.

2. Click on the Delete button. A confirmation message is displayed:

   "Are you sure you want to delete this account?"

   Make sure absolutely sure that the correct creditor (supplier / vendor) account is selected.

3. Click on the Yes button. A confirmation message is displayed:

   "Account deleted!"

4. Click on the OK button. This will permanently remove the creditor (supplier / vendor) account.

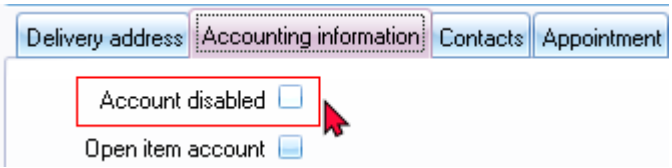
Disable accounts

To disable a Creditor (supplier / vendor) account:

1. If the creditor (supplier / vendor) account has transactions and/or balances, you cannot delete it. A similar error message is displayed:

"2AONES A-ONE Suppliers
This account has balances, cannot be deleted!"

2. Click on the OK button. To block posting of any documents or batch transactions for the creditor (supplier / vendor), click on the Edit button and Accounting information tab.



3. Select (tick) the "*Account disabled*" field.

4. Click on the Save button. You may delete a creditor (supplier / vendor) account if the account has no transactions and/or balances.

Export / Import Creditor accounts

Created with the Standard Edition of HelpNDoc: Maximize Your Documentation Efficiency with a Help Authoring Tool

Export Creditor accounts

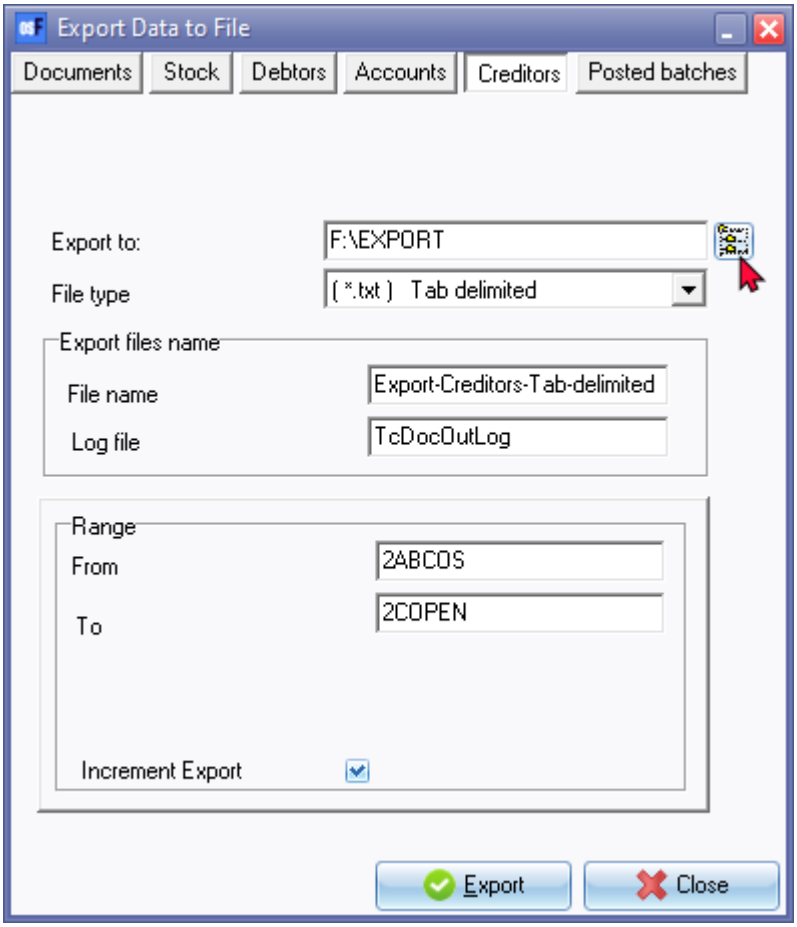
Using this facility, you may also export certain data for the creditor (supplier / vendor) accounts in an open Set of Books to XML Database format, or any available format on your system.

All the information regarding each account as entered in the Creditors (Default ribbon) menu (includes specific data for creditor accounts), will be exported in the selected file format.

To export Creditors (supplier / vendor) accounts:

1. On the Setup ribbon, select Export.

2. Click on the Creditors button.



3. Select and/or enter the following:

   a) Export to - The installation directory in which osFinancials5/TurboCASH5 is installed, will be displayed. You may click on the Browse icon to select a folder on the "*Browse for Folder*" screen. You may then select any available folder, or drive, on your system into which you wish to export the data.

   b) File type - Select to export the file in the XML Database (*XML), Comma Separated Variable (*CSV), Lotus Spreadsheet File (*WK1), MS Excel Spreadsheet (*XLS), or any other format available on your system from the list.

> *It is recommended that the "(*.txt) Tab delimited" file type is selected to Import general ledger accounts.*
>
> *It will create the following export file types for the export file name:*
>
> **.txt - Tab delimited text file - Recommended for Import on the Setup ribbon.*
>
> **.slk - Can be opened in spreadsheets of LibreOffice, OpenOffice or UltraOffice). You may save it as a a Microsoft excel file.*
>
> **.xml - Can be opened in your system's default web browser or Notepad.*

c) Export files name - Enter the File name. You need to select this file at a later stage when you wish to import the file, or analyse the data in a spreadsheet.

d) Log file - Enter the Log file name.

e) Range - From / To - The Creditors lookup will be automatically initiated. Select any range of accounts to include in the export file.

f) Increment Export - Leave this option blank.

4. Click on the Export button to create the export file, and save it in the specified directory.

The information for the Creditors, which will be exported, is:

- *Account code.*
- *Description or name.*
- *Contact persons.*
- *Postal and Delivery addresses.*
- *Two Telephone numbers and Fax number.*
- *E-mail addresses.*
- *Credit limits.*
- *Charge amounts.*
- *Discount.*
- *Disabled account indicator.*
- *Remittance advise messages.*
- *Open item creditor indicator.*
- *Reporting groups 1 and 2.*
- *The last date a transaction was entered for the creditor accounts, will also be included into the selected export file.*

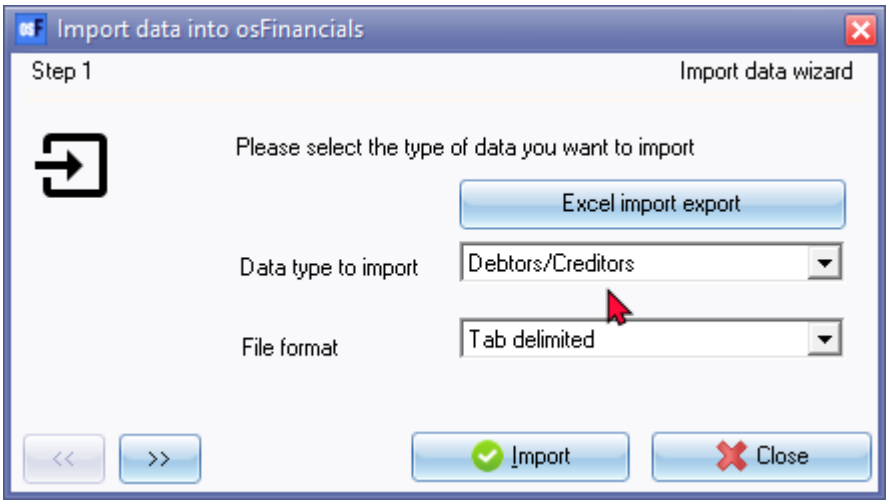
Created with the Standard Edition of HelpNDoc: Create cross-platform Qt Help files

Import Creditor accounts

This option will allow you to import data for creditor (supplier / vendor) records from a valid file format into an existing Set of Books. To be able to import the data for creditor (supplier / vendor) records, you need to have created a valid "*Tab delimited*" file on your system in Export (Setup ribbon)

To import Creditor (supplier / vendor) accounts:

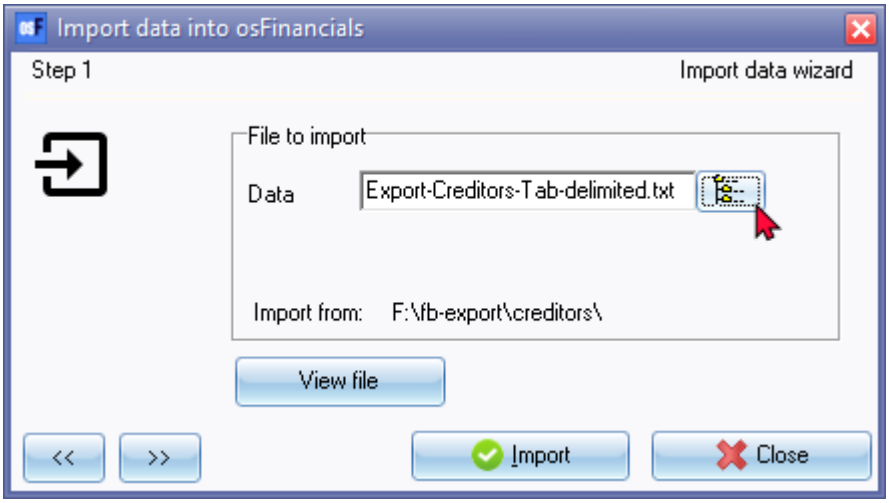
1. On the Setup ribbon, select Import. The "*Import Data into osFinancials*" screen is displayed:



2. Select Debtors/Creditors as the "*Data type to import*".

3. Select the "*Tab delimited*" (recommended) option.

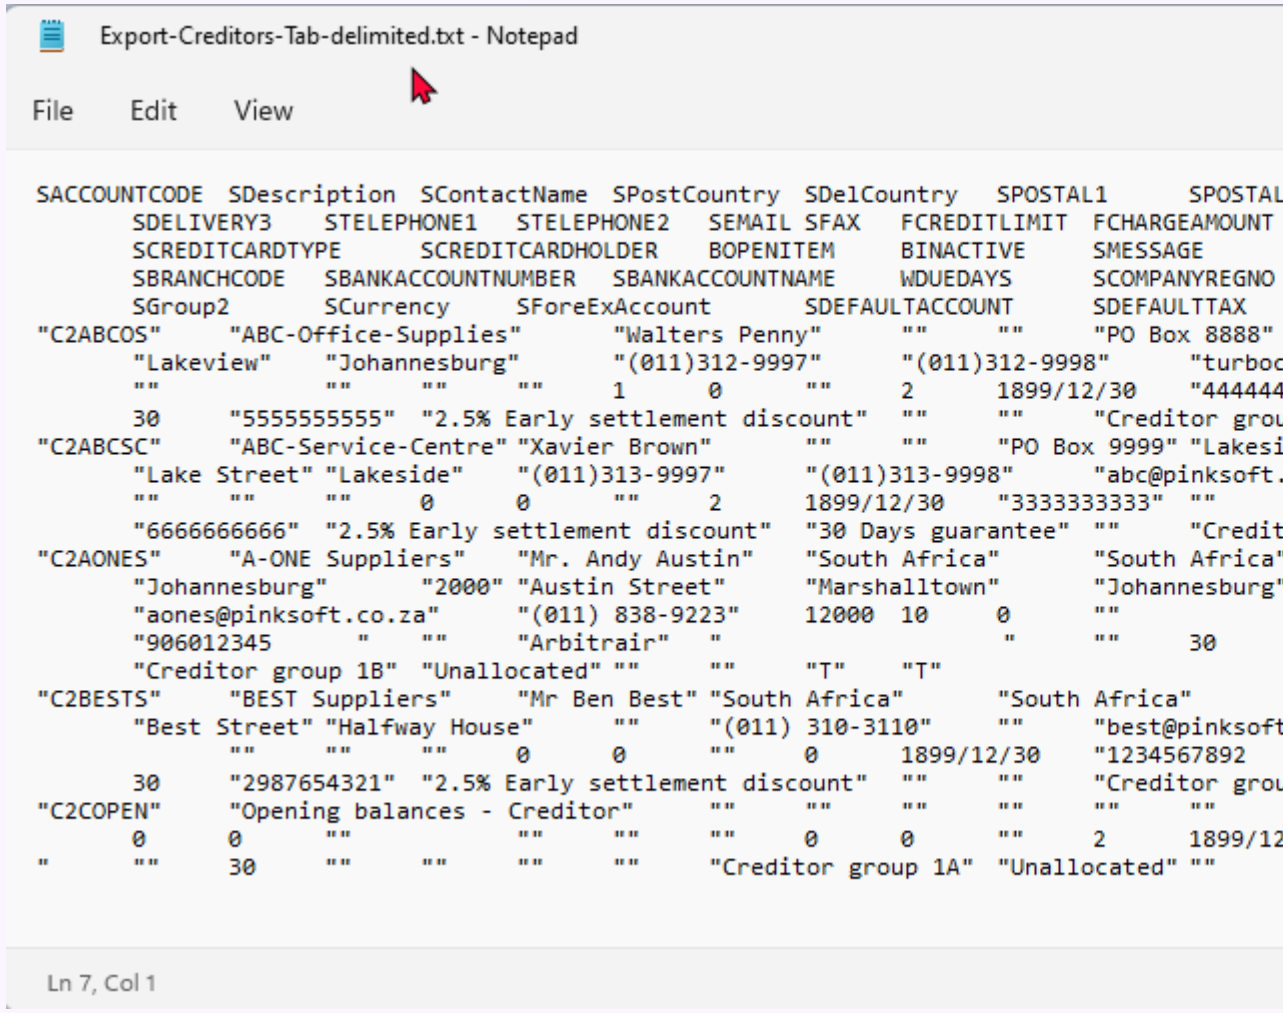
4. Click on the >> button to locate the data file. The following screen is displayed:



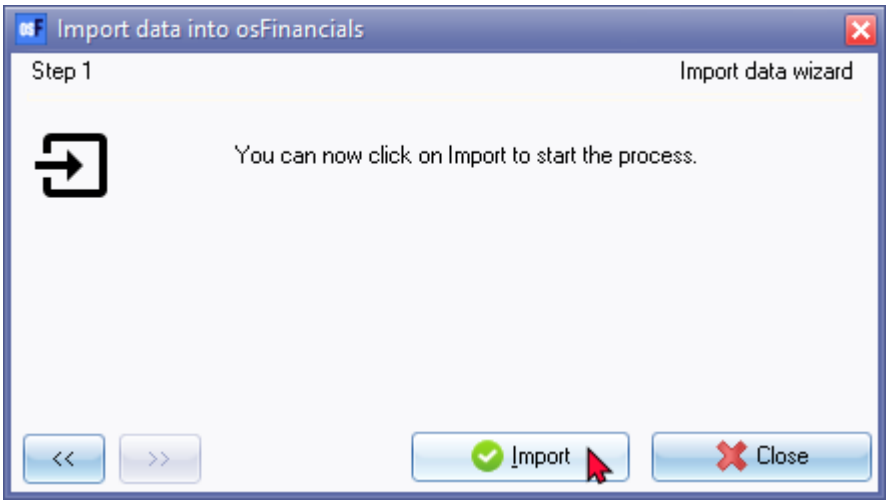
5. Click on the button to locate the data file.

Optional - You may click on the View file button to view the file in your system's default app (program) associated with th

An example of the exported Tab Delimited text file is as follows:



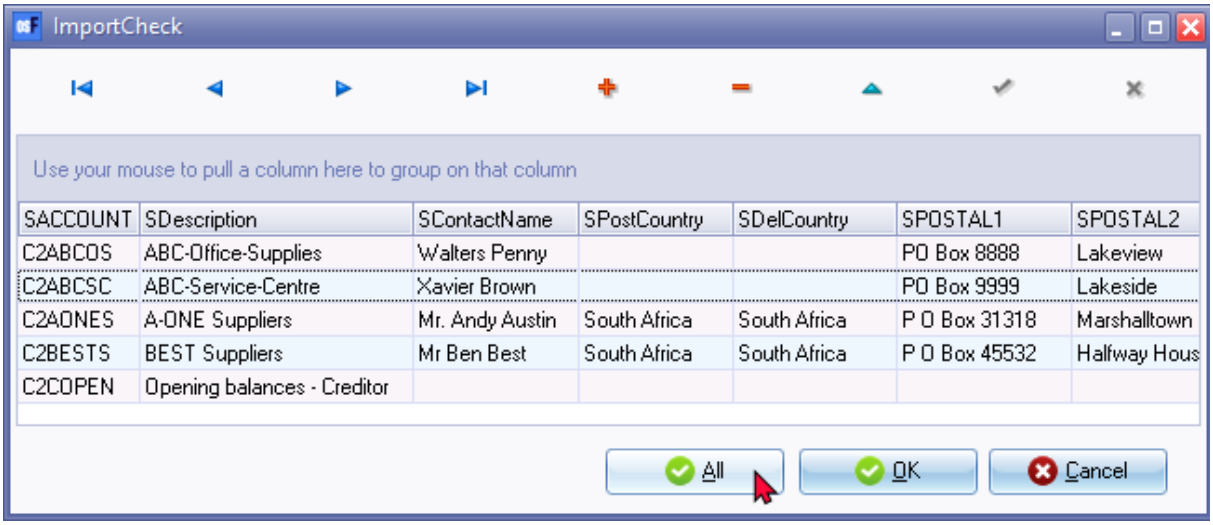
6. Click on the >> button. The following screen is displayed:



7. Click on the Import button. The following message is displayed:

Field SSalesPerson not found in import!

8. Click on the OK button. The "*ImportCheck*" screen is displayed:



9. You may use the record buttons to add, delete or change the creditor (supplier / vendor) accounts records on the "*ImportCheck*" screen. You may then click on the All or OK buttons to import the creditor (supplier / vendor) accounts.

10. Once the import process is finished an information message is displayed:

"Data file import completed!"

11. Click on the OK button.

12. Go to the Reports ribbon and select Reports → Creditors → Listing menu to check that the creditor (supplier / vendor) accounts are correct.

13. If you need to edit the creditor (supplier / vendor) accounts, go to the Default ribbon and select Creditors.

Created with the Standard Edition of HelpNDoc: Full-featured Help generator

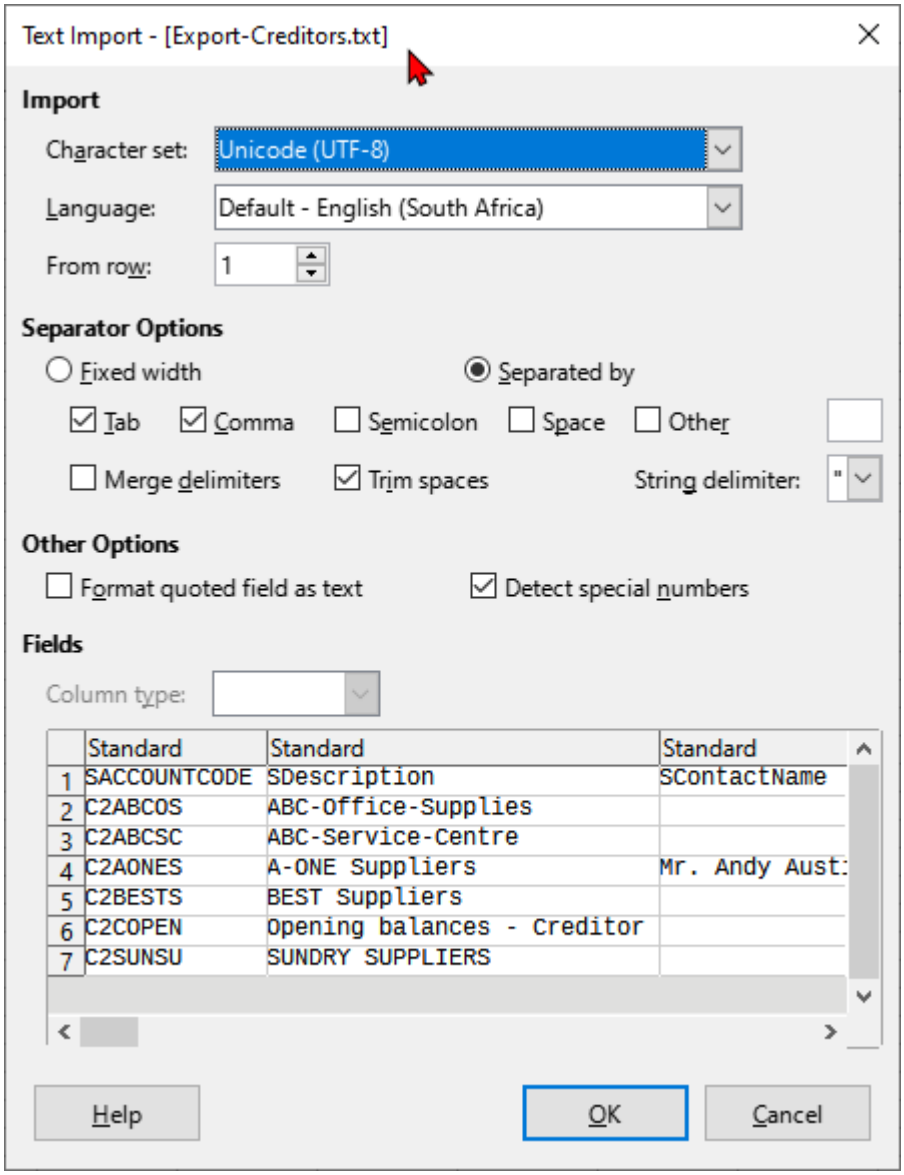
Export Creditor accounts - Open text file in spreadsheet

To illustrate the exported fields and data, the exported text file (created on the Export option of the Setup ribbon) is opened in a spreadsheet.

If the exported text file does not open in Microsoft Excel; or if you do not have Microsoft Excel installed on your system, you may open the file with OpenOffice, LibreOffice, Ultra Office, etc.

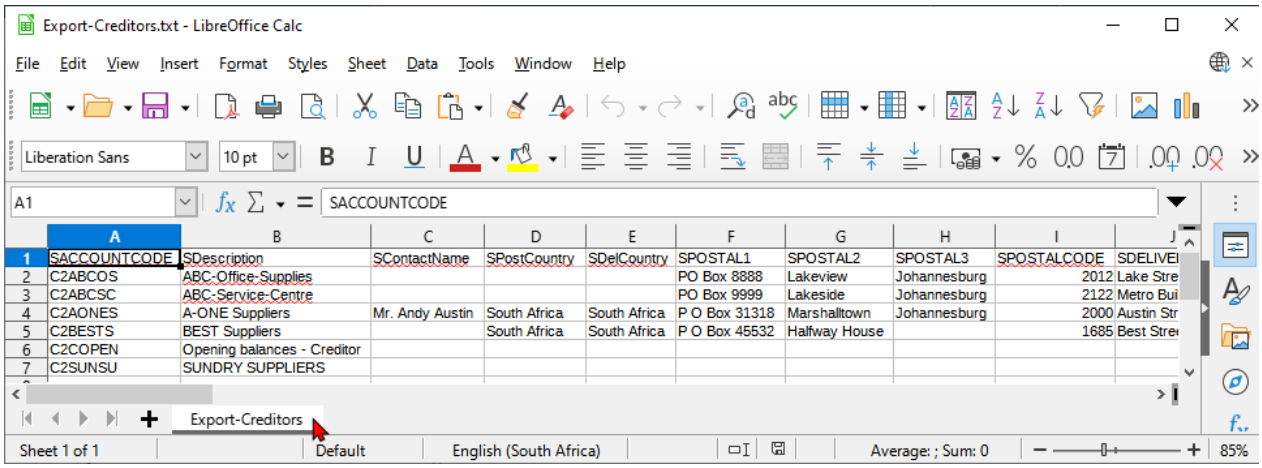
On your spreadsheet application, open the creditor (supplier / vendor) accounts saved text (*.txt) file and

confirm your tab delimited settings on the "*Text Import*" screen.



This will open your exported text file of the selected creditor (supplier / vendor) accounts in a spreadsheet.

An example of the exported file opened in "*LibreOffice Calc*" spreadsheet, is as follows:



The exported data will be exported in forty-five (45) columns:

Column	*Column heading*	*Source / fields*	*Field location (main form / tab)*

Export Creditor accounts - Export grid

The Export button of the sidebar of the "*Creditor accounts*" list screen, will create a text file (tab delimited), which will open in your system's default Microsoft Excel (if installed on your system).

Export options

To export creditor (supplier / vendor) accounts:

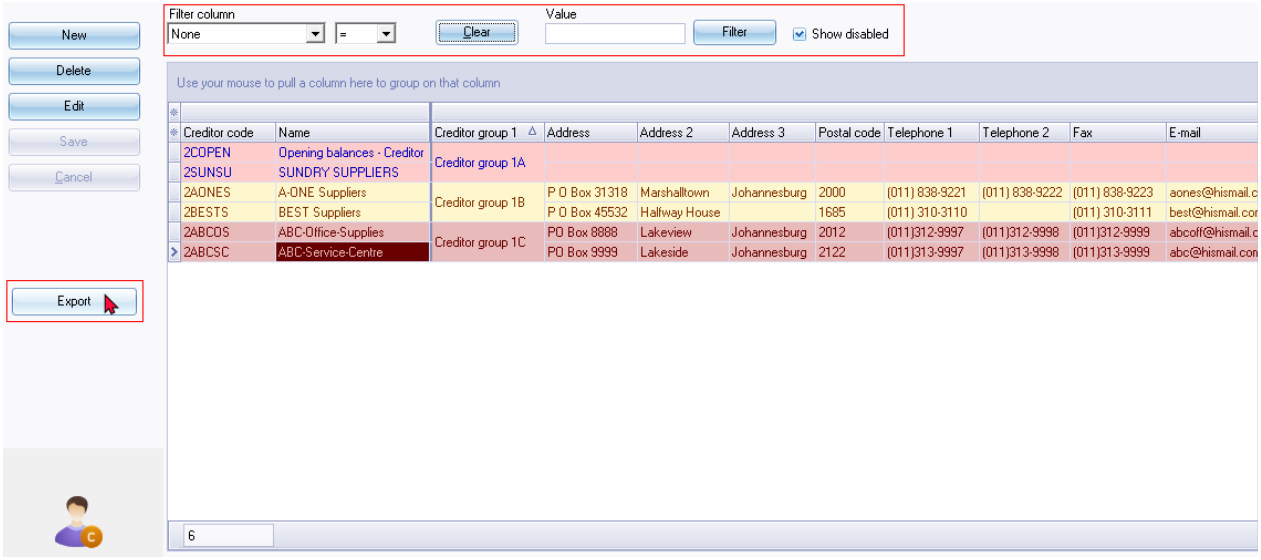
On Creditors (Default ribbon).

Select the Filter and search options in the Filter column and click on the Filter button to include only those filter criteria to be included in the Export file.

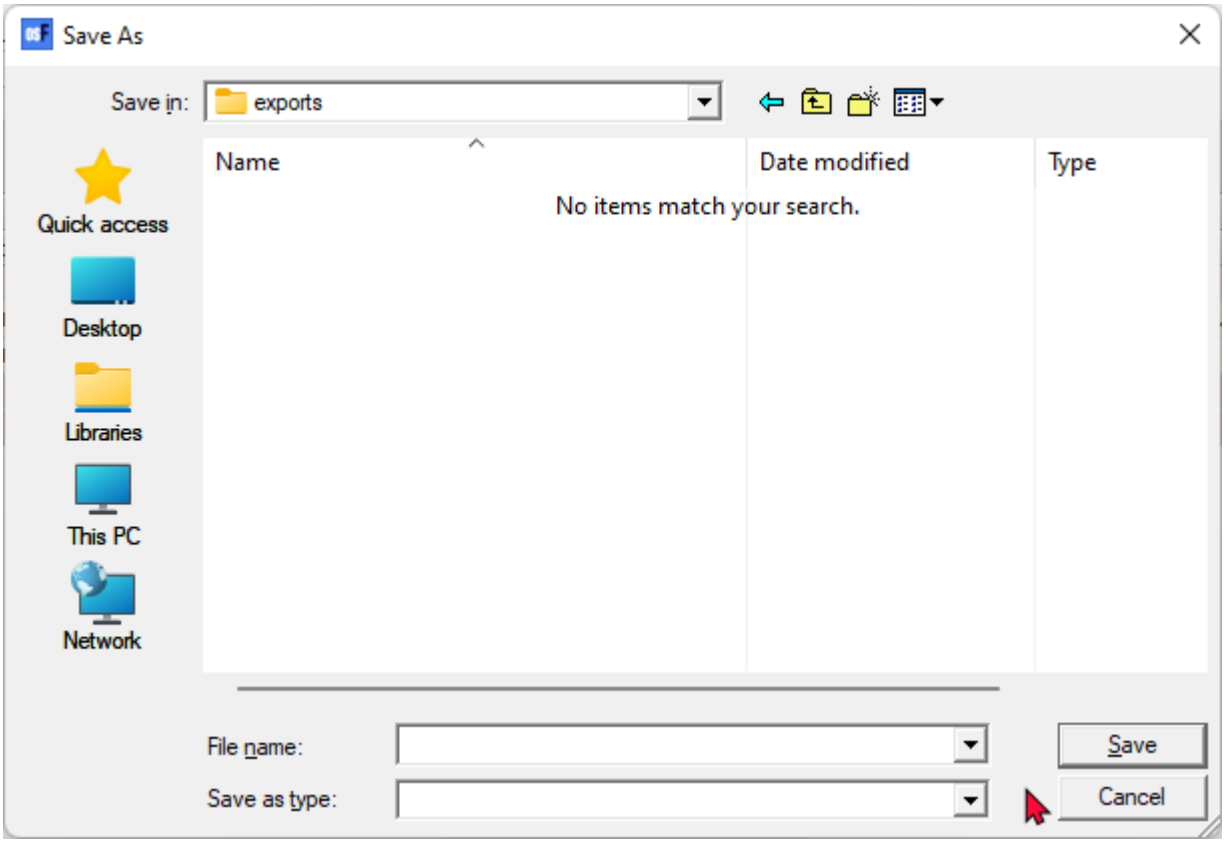
By default, the export file will include all the creditor (supplier / vendor) (excluding disabled accounts).

To include disabled creditor (supplier / vendor) accounts in the export file, you need to select the "Show disabled" option, and click on the Filter button.

Click on the Export button.



The "*Save As*" screen is displayed:



Enter a name to save the file.

"Save as type :" options will be empty. A text (.txt) file type will automatically be created with your file name.*

If you do not enter a unique name in the selected folder, and save the export.txt file name, you may replace existing (previously exported) files.

If an existing exported file is opened, and you are trying to save a export file with the same name, a similar error message as the following will be displayed:

> Cannot create file "F:\exports\your-file-name.txt". The process cannot access the file because it is being used by another process.

Click on the Save button.

Example : Exported text file - Microsoft Excel

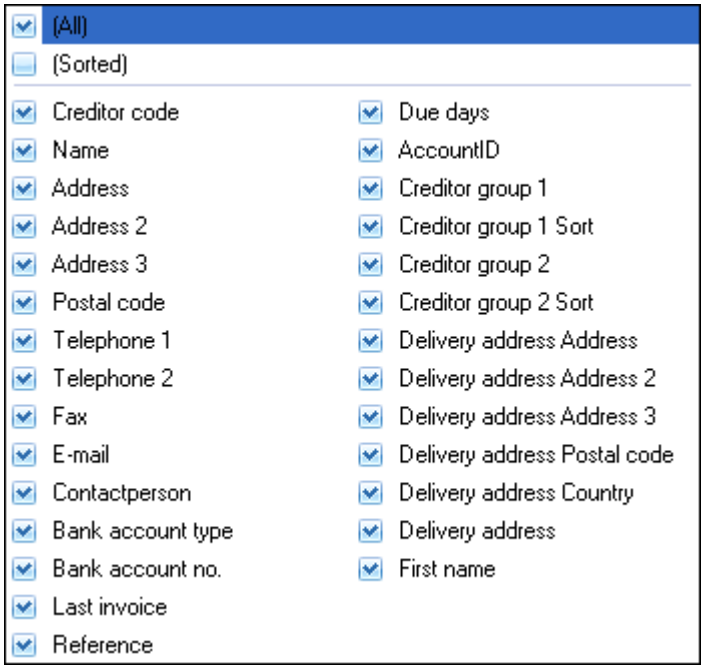
In this example, the exported file is automatically opened in "*Microsoft Excel*":

	Name	Creditor code	Address	Address 2	Address 3	Postal code	Telephone 1	Telephone 2	Fax	E-mail	Bank accour	Bank accc	Last invoi	Reference	Due days
2	Opening balances - Creditor	2COPEN									Arbitrair				30
3	SUNDRY SUPPLIERS	2SUNSU									Arbitrair				30
4	A-ONE Suppliers	2AONES	P O Box 3	Marshallto	Johannesburg	2000	(011) 838-922	(011) 838-922	(011) 83	aones@h	Arbitrair			906012345	30
5	BEST Suppliers	2BESTS	P O Box 4	Halfway House		1685	(011) 310-3110		(011) 31	best@his	Arbitrair			1234567892	30
6	ABC-Office-Supplies	2ABCOS	PO Box 8	Lakeview	Johannesburg	2012	(011)312-9997	(011)312-999	(011)31	abcoff@h	Arbitrair			4444444444	30
7	ABC-Service-Centre	2ABCSC	PO Box 9	Lakeside	Johannesburg	2122	(011)313-9997	(011)313-999	(011)31	abc@hisr	Arbitrair			3333333333	30

Only those accounts matching your filter and search criteria in the Filter column options, will be included in the export file.

For example, if the postal code (zip code), is specified, only those accounts for the specific postal code will be included in the export file.

All the columns will be exported in the default sequence.



Example : Exported text file - Notepad

An example, of the exported text file file opened in your systems default program associated with *.txt files (e.g. "*Notepad*") is as follows:

```
Name   Creditor code Address      Address 2    Address 3    Postal code  Telephone 1  Telephone 2  Fax    E-mail Bank account type
       Bank account no.    Last invoice  Reference    Due days     AccountID    Contactperson Creditor group 1    Creditor group 1

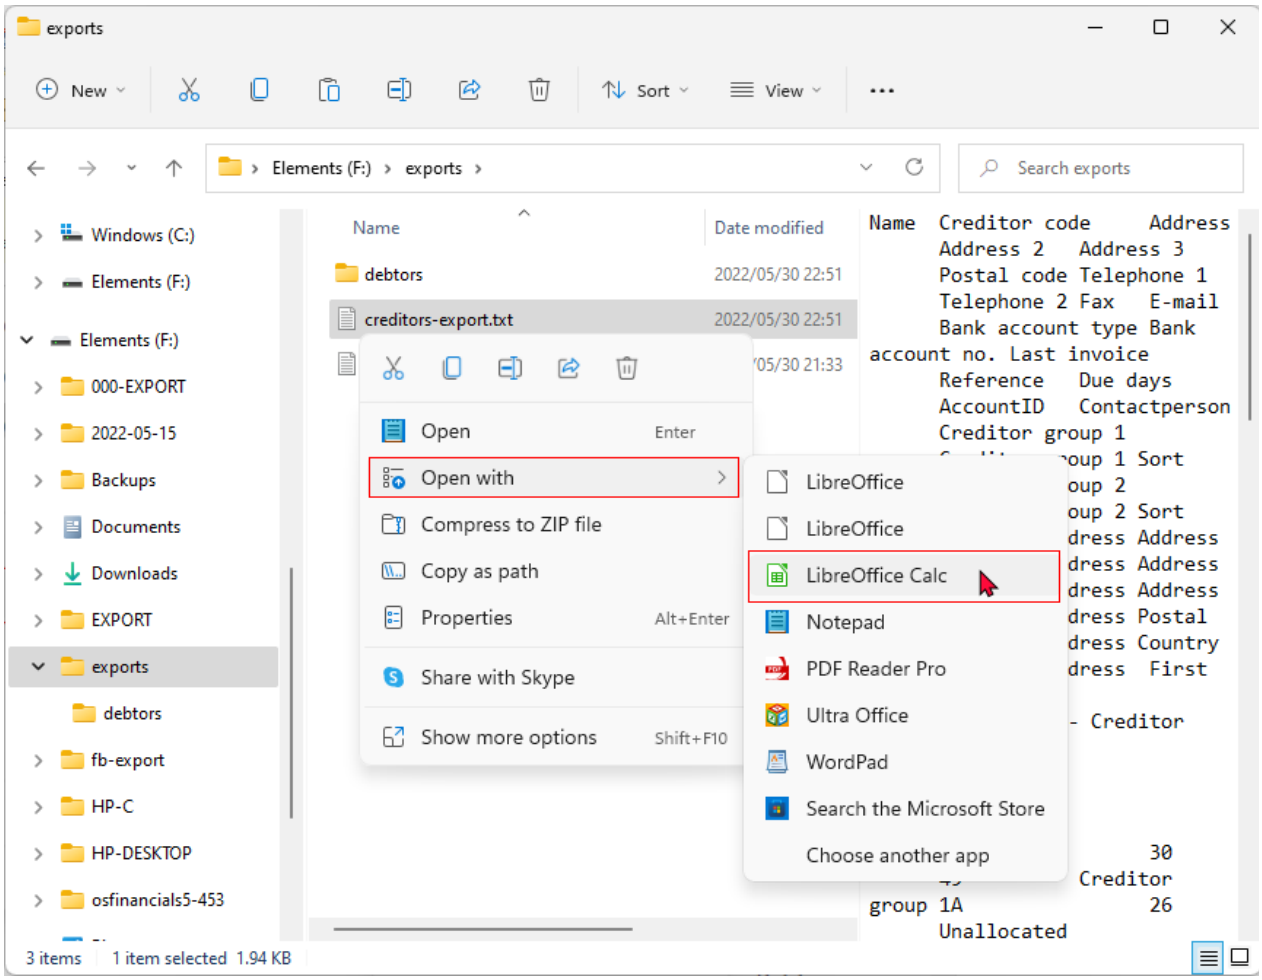
Example : Exported text file - LibreOffice Calc

If the exported text file does not open in Microsoft Excel; or if you do not have Microsoft Excel installed on

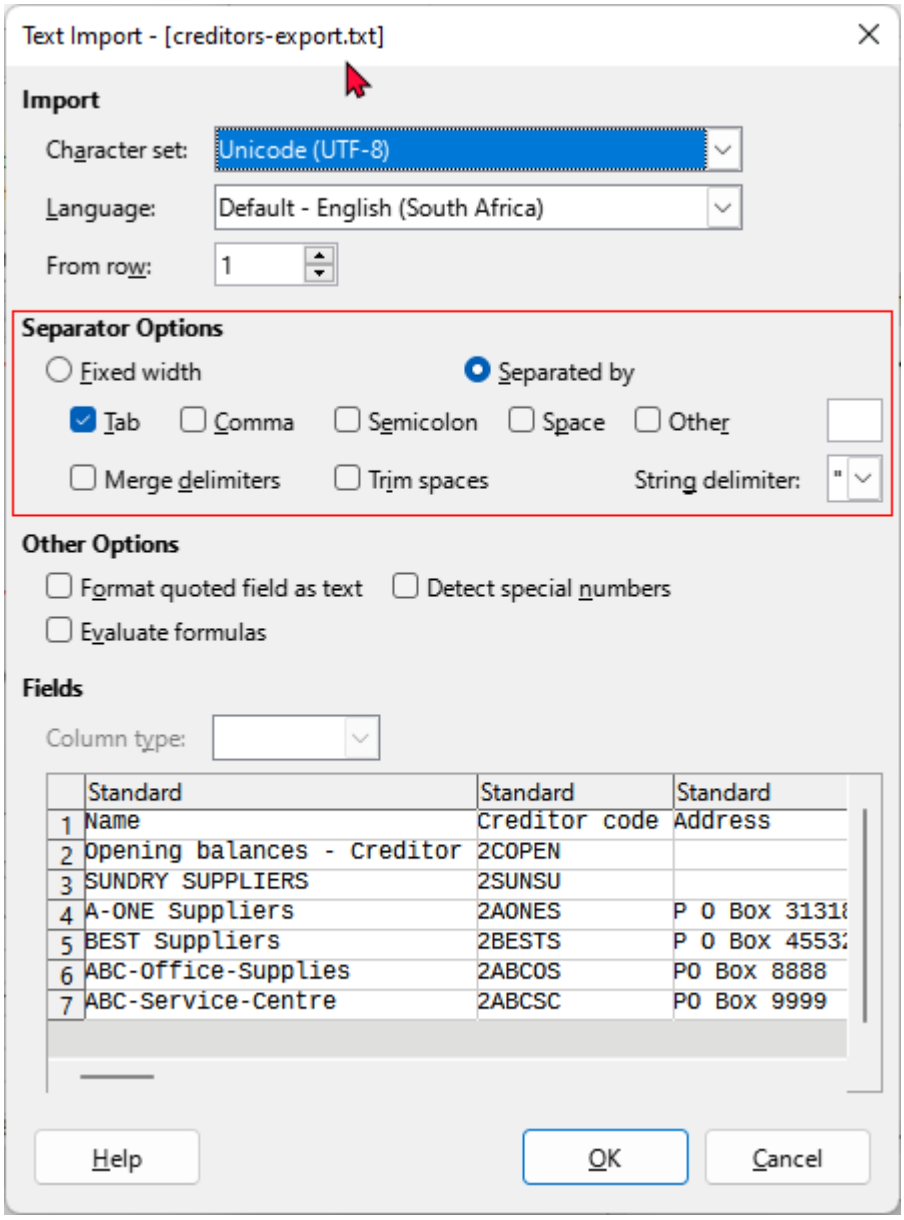
your system, you may open the file with OpenOffice, LibreOffice, Ultra Office, etc.

Locate the exported text file in your System's File Explorer.

In this example, Open with > LibreOffice Calc is selected. The "*Text Import*" screen is selected.



If LibreOffice and not LibreOffice Calc is selected, the exported text file will open in LibreOffice Writer as a text file.



Separator options - Separated by

Tab is the only option which should be selected for this exported text file. This may differ for some other report types.

Spreadsheet Export / Import - Debtor / Creditor accounts

osFinancials5/TurboCASH5 supports the "*Excel Workbook (*.xlsx) file type* Spreadsheet export and import feature.

- Spreadsheet export - You may export debtor (customer / client) accounts and creditor (supplier / vendor) accounts and save it as a "*Excel Workbook (*.xlsx) file type.*
- Spreadsheet import - You may import debtor (customer / client) accounts and creditor (supplier / vendor) accounts from a saved "*Excel Workbook (*.xlsx) file type.*

This feature may be used to import debtor (customer / client) accounts and creditor (supplier / vendor) accounts into:

- Into the same Set of Books.
- Into a different Set of Books.
  - Created from scratch - Create your own Set of Books (Advanced)? option for Firebird database types
  - Created from scratch - Create your own Set of Books (Advanced)? option for Microsoft SQL sever (MSSQL) database types.

> *Before you may import debtor (customer / client) accounts and creditor (supplier / vendor) accounts in a new Set of Books, you need to do the necessary setup and configuration.*
>
> *Once this is done, you may start to import debtor (customer / client) accounts and creditor (supplier / vendor) accounts from a saved "Excel Workbook (*.xlsx) file type.*

After import

To check the imported account details, you may print the necessary listing reports for debtor (customer / client) accounts and listing reports for creditor (supplier / vendor) accounts from the Set of Books in which you created the export file.

You may go to Debtors (Default ribbon) to view and/or edit the imported debtor (customer / client) accounts.

You may go to Creditors (Default ribbon) to view and/or edit the imported creditor (supplier / vendor) accounts.

Contacts

The Contacts feature in osFinancials5/TurboCASH5 refer to individuals or entities associated with debtor (customer/client) and creditor (supplier/vendor) accounts. The Contacts feature allows you to maintain a list and details of contacts linked to these accounts for easy reference and communication.

Contacts play a crucial role in processing sales and purchase documents within osFinancials5/TurboCASH5. They help specify the relevant contact person or entity associated with a particular transaction. Here's how contacts are utilised in the process:

1. Sales documents: When creating sales documents such as quotes, invoices, and credit notes, the default contact linked to the debtor (customer/client) account will be automatically selected. This ensures that the appropriate contact is associated with the transaction. The contact specified in the sales document represents the person responsible for the transaction or serves as the primary point of contact for the customer.
2. Purchase documents: Similarly, when generating purchase documents like orders, purchases and supplier returns, the default contact linked to the creditor (supplier/vendor) account will be automatically selected. This ensures that the relevant contact information is associated with the transaction. The contact specified in the purchase document represents the person responsible for the transaction or serves as the primary point of contact for the supplier.

By assigning the correct contacts to the respective accounts, osFinancials5/TurboCASH5 ensures that the appropriate contact information is readily available when processing sales and purchase transactions. This helps maintain accurate and effective communication with customers, clients, suppliers, and vendors

throughout the transactional process.

Contacts will also be printed on document layout files for sales documents such as quotes, invoices, and credit notes as well as purchase documents such as orders, purchases and supplier returns providing additional information for the recipient or reference.

Including contact information on document layout files for sales and purchase documents is a valuable feature in osFinancials5/TurboCASH5. By printing contacts on these documents, you provide additional information for the recipient or reference, enhancing the clarity and professionalism of the transaction. This ensures that the necessary contact details, such as the name, phone number, email address, or any other relevant information, are readily available for easy communication or reference purposes. It allows recipients to quickly reach out to the relevant contact person or entity in case of any queries, clarifications, or further discussions related to the transaction.

In osFinancials5/TurboCASH5, the Contacts: feature will list all the contacts, where you can manage and maintain contact information for debtors (customers/clients) and creditors (suppliers/vendors). You may add new contacts, update contact details, delete contacts and print a list of all the contacts in your Set of Books.

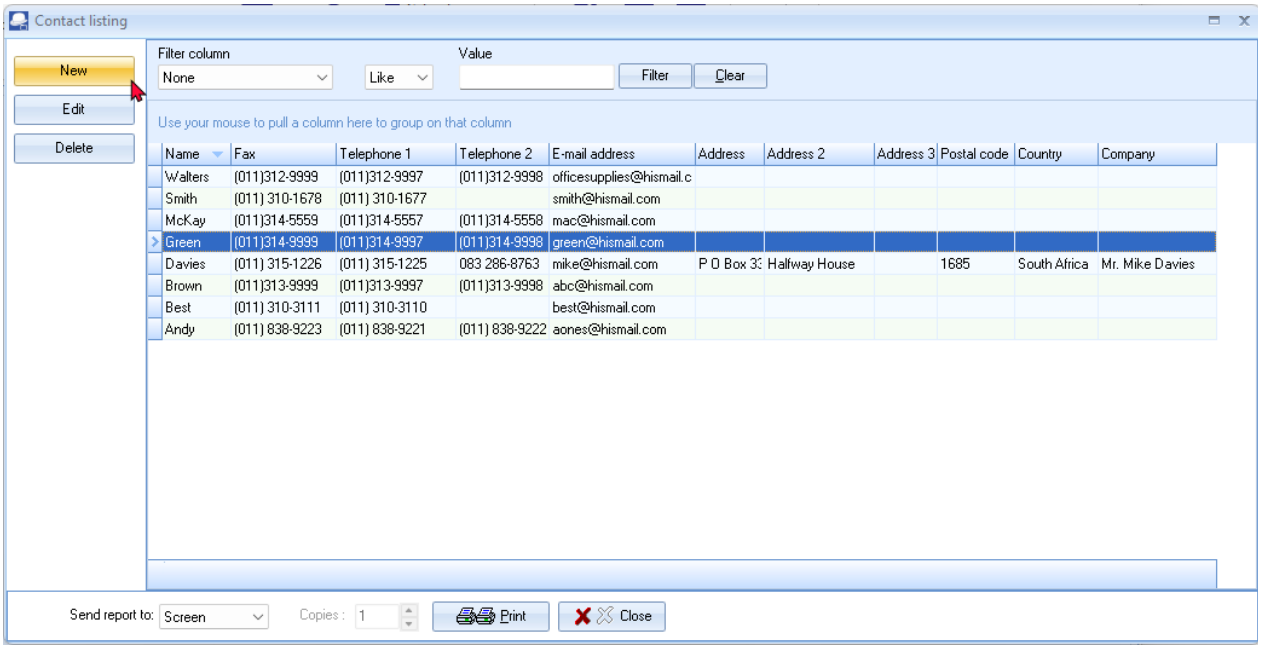
Additionally, you may maintain and manage contacts on the following options on the Default ribbon.

1. Debtors - Contacts tab: This tab specifically focuses on managing contacts associated with debtor accounts. You can add, edit, or delete contacts linked to debtor accounts, ensuring that the contact details are up to date.
2. Creditors - Contacts tab: Similar to the Debtors - Contacts tab, this tab is dedicated to managing contacts associated with creditor accounts. You can modify the contact information for your suppliers/vendors to maintain accurate records.
3. Calendar - Contacts feature: provides the ability to manage contacts, ensuring that any changes made to contact information are reflected across the system. The following options on the Default ribbon allow you to create, edit, or delete contacts, with all updates being synchronized with the Contacts in the Calendar.

By utilising these options, you can conveniently manage contacts within osFinancials5/TurboCASH5, ensuring that all contact information remains consistent and accessible across different sections in a Set of Books.

To create / add / edit / delete / print contacts:

1. On the Default ribbon, select Contacts.



Click the Print button to print a list of all Contacts. This report may also be printed in Reports → Contacts (Reports ribbon). This report will list all contacts for debtors (customers/clients) as well as contacts for creditors (suppliers/vendors). It offers a consolidated view of all contacts in your Set of Books.

To list only the contacts for debtor (customer / client) accounts, you need to print it in Reports → Debtors → Listing - Contacts menu (Reports ribbon). This report specifically focuses on contacts related to debtors (customers/clients). It provides a listing of contacts associated with your debtor accounts.

To list only the contacts for creditor (supplier / vendor) accounts, you need to print it in Reports → Creditors → Listing - Contacts menu (Reports ribbon). This report specifically lists contacts related to creditors (suppliers/vendors). It presents a comprehensive view of contacts associated with your creditor accounts.

Stock (Inventory / Products)

The Stock items / Inventory items / products) in osFinancials5/TurboCASH5 features a comprehensive inventory system designed to manage and track stock items, inventory items or products. It supports an unlimited number of stock items and allows for detailed item-specific information. The inventory system also offers up to two reporting groups, enabling efficient data organisation and analysis.

With eleven different stock item types available, osFinancials5/TurboCASH5 provides flexibility in managing

various types of products. When processing documents for debtors or creditors, or generating reports, the stock item lookup function helps in selecting the appropriate products. The system utilizes the chosen stock item's details to calculate selling and cost prices based on specified quantities, ensuring accurate pricing information on documents and reports.

In addition to the Financial entry stock item type, which allows for processing both sales and purchase documents by selecting ledger accounts, you can choose from various other stock item types when working with sales documents (such as Quotes, Invoices and Credit notes). These options include "Default, Sales, Sales (No stock), Option item, Option item (No stock), BOM (Bill of Materials), BOM (Bill of Materials) - Production" or "Linked item" stock item types.

Similarly, when processing purchase documents (like Orders, Purchases, and Supplier returns), you have the flexibility to select from stock item types, including " Default, Purchases, Purchases (No stock), Option item, Option item (No stock), BOM (Bill of Materials), BOM (Bill of Materials) - Production" or "Linked item" stock item types.

The Stock items feature in osFinancials5/TurboCASH5 allows for easy management of inventory items or products. You can create, edit, delete, or disable items as needed, and the feature provides filtering and search options for efficient item location. Within each item, you can make changes to important details such as stock code, description, quantities, reorder levels, and more.

Additionally, the inventory system offers various settings on the Ledger tab and allows for managing activities on the Document groups, Transactions, Image, Multi-group, and Backorders tabs. This comprehensive set of features ensures efficient inventory tracking, accurate pricing, and streamlined document and report generation, making osFinancials5/TurboCASH5 a reliable solution for managing and optimizing your inventory management processes.

Overall, osFinancials5's inventory system offers a comprehensive solution for managing and tracking stock items (inventory items) or products, allowing for efficient inventory tracking, accurate cost and selling price calculation, and streamlined document and report generation.

Serials-Batches-Location plugin : Licence :- Manual - Shop - Licence : Once-off - Added the Serials and Batches to document layout files and 2 reports (i.e. On hand and Stock movement report).

The "Serials-Batches-Location" plugin in osFinancials5/TurboCASH5 appears to be a tool designed to manage and track inventory, specifically serial numbers, batches, and locations.

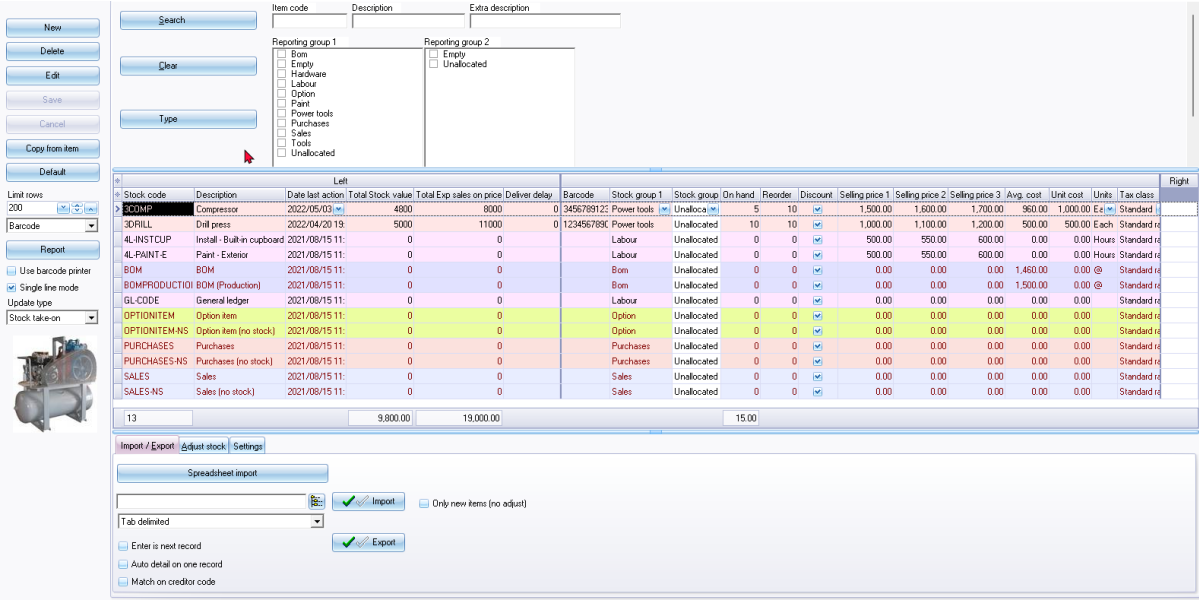
Features:

1. *Serial : Allows for tracking individual serial numbers, suitable for items like phones or computers. You can track manufacturing dates or production dates and sell by dates or expiry dates.*
2. *Batch/Location : Enter batch numbers and quantities and have the possibility to move between locations. You can track manufacturing dates or production dates and sell by dates or expiry dates.*

3. *Location : Just location management. Focuses on managing item locations in your shop, store, or warehouse. You can add locations (e.g., bin, aisle number, row) where you store stock items if needed.*

To access Stock items:

1. On the Default ribbon, select Stock items (F12).



2. Buttons – The following buttons are available:

   a) New – Create a new stock item.

   b) Delete – Delete remove a selected stock item.

   c) Edit – Edit / change a selected stock item.

> *You may also double click on a selected stock item.*

   d) Save – Save any changes to a stock item.

   e) Cancel – Cancel will revert to the previous values. Any changes will not be saved.

   f) Copy from item – This will create an exact copy of a selected stock item. You only need to enter the Stock code and change / edit the necessary fields.

> *You may also select the stock item type. The fields that are not applicable to a selected stock item type, will be disabled / enabled.*

   g) Default / Advanced mode – This will display the Export / Import, Adjust stock and Settings

tabs. Clicking on the Default button, the button's caption will change to display Advanced mode. This will hide the Export / Import, Adjust stock and Settings tabs. In the Advanced mode, you may enter / edit data (values) of stock items (like you would in a spreadsheet).

3. Limit rows - The default is "*200*" records to be listed displayed on this screen. If necessary, you may change that.

4. Reports – Prints the selected report type for the selected stock item(s) only. If you need to include all items, click on the Report button.

> *These barcodes or the Yagoda barcodes may also be printed from the Reports → Stock → Print labels (Reports ribbon).*

> *These reports are designed using the Reportman. These reports are located in the "... \plug_ins\reports\REPORTS\STOCK" directory.*

> *There are two (2) options to print these reports, i.e.:*
>
> - *Click on the Report button – to include all stock items in the reports.*
> - *Right-click on a selected item, and select Print single item option from the context menu.*

5. Use barcode printer – Select this option if you have a barcode printer configured and setup on your system; and you need to print the Barcodes (i.e. Barcode or Yagoda barcode) report type from the list.

6. Single line mode - This option has three (3) basic settings:

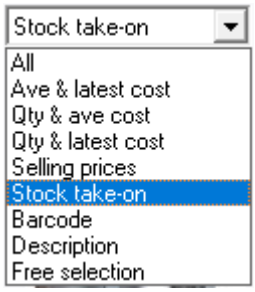
   a) If this field is selected (ticked) and the Advanced mode (Export / Import, Adjust stock and Settings tabs displayed), each stock item record will be listed in a single row.

   b) If this field is not selected (not ticked) and the Advanced mode (Export / Import, Adjust stock and Settings tabs displayed), a fixed right pane column (similar to the left pane on which the stock code and date last action columns are by default displayed) will be added. You may drag any column between the left and right panes to be added.

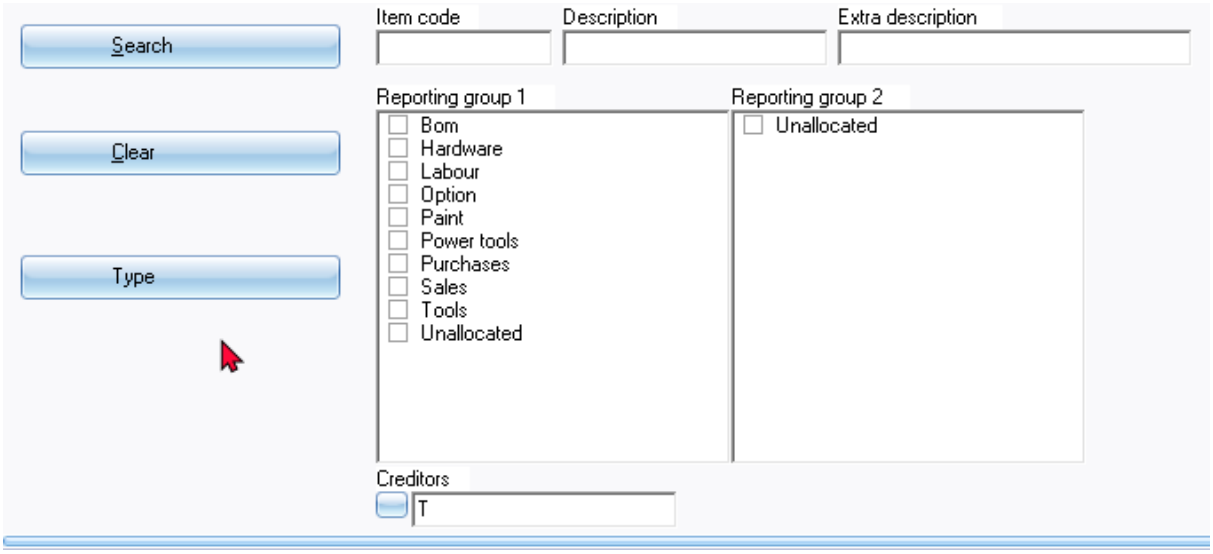
   c) If this field is selected (ticked) and the Default mode (Export / Import, Adjust stock and Settings tabs not displayed), each stock item record will be listed in a single row.

   d) If this field is not selected (not ticked) and the Advanced mode (Export / Import, Adjust stock and Settings tabs displayed), the fields for stock item records will be grouped in some columns (e.g. Units, Stock group1 / 2, Stock item type, Cost centres, etc.).

7. Update type - The following options are available to change (group) the columns:



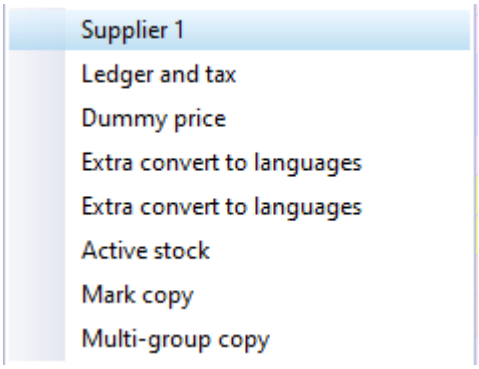
8. Search filter / options – Filter by entering the Item Code, Description or Extra description and/or by selecting (ticking) the Reporting group 1 / 2. If you click on the Search button, the only those stock items that matches your search / filter criteria will be listed. If you click on the Type button, you may select Item Code, Description, Extra description, Reporting group 1, Reporting group 2 or Creditor.



If the "Creditor" option is selected in the "Type" field, you may select the Creditor account on the Lookup. This will list those stock items which are linked to the creditor (supplier / vendor) account in the "Preferred supplier 1" (Default Supplier 1) field of a Stock item.

9. Context menu – The following options are available:

   - Print single item – Prints the selected report type for the selected stock item(s) only. If you need to include all items, click on the Report button.
   - Copy – The following options to process Supplier 1 and Purchase Sales Stock Tax are available:
     - Copy from / init and Paste to / perform on selected rows:



§ Stock item - Similar than the Copy from item button. – This will create an exact copy of a selected stock item. You only need to enter the Stock code and change / edit the necessary fields.

- Reporting group 1 - Change the reporting group of a stock item, if Reporting group 1 was set for Stock items (as added in Setup → Groups - Stock group 1 on the Setup ribbon).

> *The colours of the rows (list of stock items) will be changed, if set in Reporting group 1.*

- Reporting group 2 – Change the reporting group of a document, if Reporting group 2 was set for Stock items (as added in Setup → Groups - Stock group 2 on the Setup ribbon).
- Mass check - This option will run a check on all stock items. The stock item form will be automatically opened and closed for each stock item.

10. Grid totals - This will display the line count (number of records in rows / stock items) that is available on the list. The number of records will indicate the number of records that matches your filter / search criteria.

Planning stock codes

Stock items are essential for managing goods, services, and products. They are used when processing sales documents such as invoices, credit notes and quotes as well as purchase documents such as purchases, supplier returns and orders.

Planning the structure of stock codes is important for efficient stock control. A well-organised structure based on the layout of stores and business needs will simplify the management of stock items.

Careful planning of stock codes can simplify the processing of documents, such as selecting stock items for stock lookups, and for point-of-sale invoices by selecting stock items on the POS lookup. Additionally, having a structured stock code system can aid in organizing and generating reports, such as sales analysis and purchase analysis reports, when the stock code sequence is selected.

In osFinancials5/TurboCASH5, there are several options available to optimize the control and management of stock items; i.e.:

- Stock item type – You may create up to eleven (11) stock types, with "*Default*" being the standard type used for trading stock.
- Stock code – Use up to 15 alpha-numerical characters. You may also change the Stock code when you edit existing Stock items.
- Reporting groups - You may set up to two (2) reporting groups for your stock items (products). Stock groups allows you to group or categorise the stock items (products) on which you would like to report. These stock groups can be linked to each stock item (product) for better reporting, analysing and managing of your inventory (products).
- Sub-accounts - Sub-accounts can also be created for sales, cost of sales, and stock control accounts and linked to each stock item.

> *Stock can be categorised into different groups by using a prefix in the stock code. This allows for the sales, cost of sales, and stock control accounts to be divided into sub-accounts for each category of stock. Each stock item can then be associated with the appropriate sub-account for its specific category.*
>
> *In addition, each stock item can be linked to different tax types to account for varying VAT/GST/Sales Tax rates.*

Created with the Standard Edition of HelpNDoc: Single source CHM, PDF, DOC and HTML Help creation

Stock item types

---

osFinancials5/TurboCASH5 provides for eleven different stock item types, each with its own set of required data and settings to be entered or selected when creating a new stock item. The type of stock item you select when creating it will determine what data needs to be entered or selected.

For example, the Purchase (no stock) stock item type requires the selection of a default Input Tax account and a Purchase account, but does not allow for the selection of the Output Tax and Sales account.

Additionally, this type of stock item will not appear on the Item lookup when processing sales documents such as invoices, point-of-sale invoices, credit notes, and quotes.

For example, if you select the Purchases (no stock) stock item type, it will allow you to set the default Input Tax account and a Purchase account. It will not allow you to select the Output Tax and Sales account. When processing sales documents, (i.e. Invoices, Point-of-Sale Invoices, Credit notes and Quotes), the Purchases (no stock) type stock items will not be listed on the Item lookup.

The eleven (11) stock item types are:

1. Default – Used for trading stock and requires the selection of the Sales, Cost of sales, and Stock control accounts. It can also be linked to the Input and Output Tax accounts. In this documentation, two (2) trading stock items, namely a Compressor and a Drill Press, is used as examples.
2. Sales – Used for non-trading stock and requires the selection of a Sales account only. It can only be linked to the Output Tax account.
3. Sales (no stock) – Used for non-trading stock and requires the selection of a Sales account only. It can only be linked to the Output Tax account.
4. Purchases – Used for non-trading stock and requires the selection of the Cost of sales and the Stock control or Purchase account. It can only be linked to the Input Tax account, and no selling prices can be entered.
5. Purchases (no stock) – Used for non-trading stock and requires the selection of the Cost of sales and the Stock control or Purchase account. It can only be linked to the Input Tax account, and no selling prices can be entered.
6. Financial entry – Cannot select the Sales, Cost of sales and Stock control accounts. Once you select this stock item type when processing documents, the Accounts lookup will be displayed. You may then select any general ledger account on the Accounts lookup. You need to select the Input as well as Output Tax accounts for this stock item type. Selling prices can also be entered.
7. Option item – Used for items with options such as colour and size. The available options are defined in the Setup options on Stock information (Setup ribbon) and linked to the Options stock item type (Stock items - Options tab on the Default ribbon). When processing documents, the available options list will be launched from which you can specify quantities and select the options.
8. Option item (no stock) – Similar to the Option item with stock, but does not allow every entry to have a sales price, cost price, quantity, and minimum stock level. This will also be used in generating purchases on supplier 1. The Setup options on Stock information (Setup ribbon) need to be defined.
9. BOM – Bills of Materials – Allows the addition of other stock items or products consisting of various other stock items (components) and/or services, etc. to the BOM list. The BOM stock item is the

finished product. For trading stock, the cost of sales and stock control accounts are controlled via the default stock items linked to the BOM item. An example would be the components of a computer system which are used to make the complete system, which is then sold as a finished product.

10. BOM (Production) – Similar to the BOM stock item type, with a feature that allows for the assembly (specify the quantities) of finished items or disassemble a specified quantity of finished items.
11. Linked Sale - To be advised.

Each stock item type serves a unique function, ensuring precise data entry and configuration to meet specific business needs. Choose the appropriate type based on the nature of the product or service to streamline inventory management and financial tracking in osFinancials5/TurboCASH5.

Created with the Standard Edition of HelpNDoc: Effortlessly upgrade your WinHelp HLP help files to CHM with HelpNDoc

Stock groups

In osFinancials5/TurboCASH5, you have the option to set up to two (2) reporting groups for your stock items or inventory items, allowing you to categorise and report on your products more effectively. These reporting groups provide a way to organize and analyse your inventory based on specific criteria.

These Stock groups can be linked to each stock item (inventory item / product).

- *You may use the context menu option on the stock grid to set or change the reporting groups for Stock group 1 and/or Stock group 2 for selected stock item(s).*
- *You may use the stock grid to filter, search or group stock items.*
- *You may print Stock reports and Print barcodes for all or only for stock items linked to a selected Stock group or groups.*
- *You may print Sales analysis reports for Stock group 1 or Stock group 2.*

Examples of reporting groups for stock items / inventory items / products

Here are some examples of reporting groups that you can use for stock items:

1. Product category: You can create reporting groups based on the category or type of products you offer. For instance, if you sell electronics, you might have reporting groups like *"Computers," "Mobile*

Devices," "Audio Equipment," etc.

2. Brand or Manufacturer: Another option is to create reporting groups based on the brand or manufacturer of your products. This can be useful for tracking sales and performance by brand. For example, you could have reporting groups like *"Samsung," "Apple," "Sony,"* etc.

3. Product line: If you offer multiple product lines, you can create reporting groups to differentiate them. For instance, if you sell clothing, you might have reporting groups like "*Men's Apparel," "Women's Apparel," "Children's Apparel*," etc.

4. Location: Reporting groups based on the location of your products can be helpful for inventory management and sales analysis. This is particularly useful if you have multiple warehouses or stores. Examples of reporting groups could be *"Warehouse A," "Store Branch 1," "Online Store,"* etc.

5. Sales channel: If you sell your products through various channels, you can set up reporting groups to track sales performance across those channels. This could include groups like *"Retail Stores," "E-commerce," "Wholesale,"* etc.

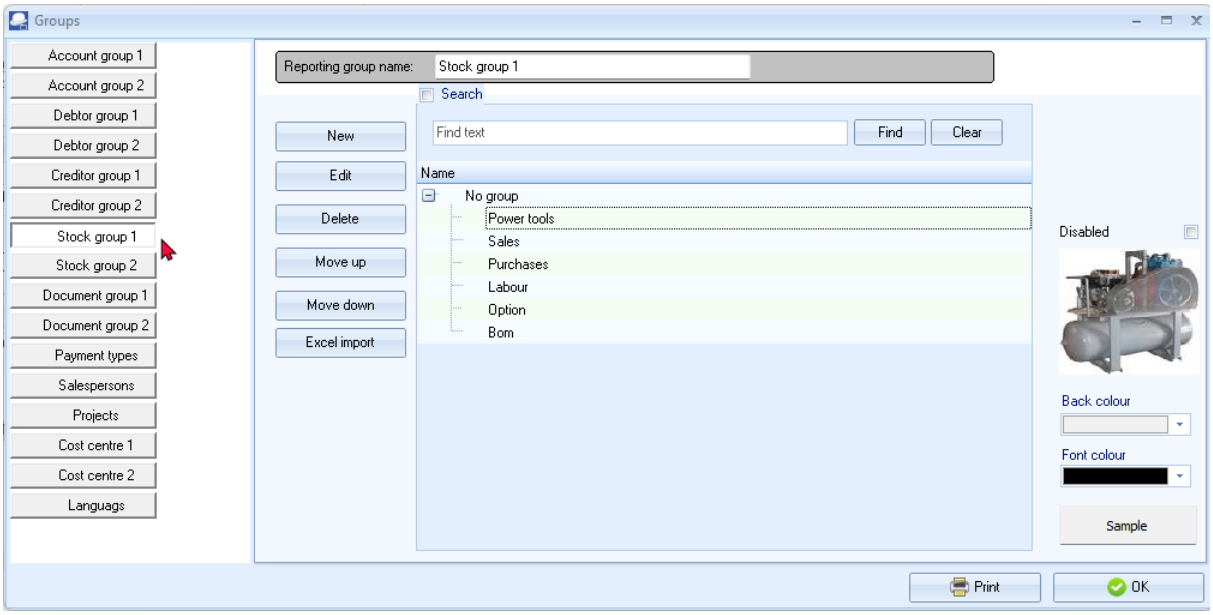
These are just a few examples, and you can customise the reporting groups in osFinancials to fit your specific business needs. By assigning stock items to the appropriate reporting groups, you can generate reports that provide insights into your inventory, sales, and performance based on the defined categorisation.

Define groups for stock items / inventory items / products

To set reporting groups for stock items:

1. On the Setup ribbon, select Setup → Groups. The "*Groups* (*Account group 1)"* default screen will be displayed.

2. Click on the Stock group 1 button.



3. If you wish to rename the Reporting group name - Stock group 1, over-type the description with your new description. This will change the description of the button for Stock group 1.

4. To add a new Group to the root directory or list, select the "*REPORTING GROUP ROOT*" on the list and click on the New button.

5. Enter the name of your Stock group 1 and click on "*REPORTING GROUP ROOT*" on the list.

6. Repeat the process until you have entered all the Stock groups, etc.

> *Adding sub groups for stock items:*
>
> *Select a Stock group, for example; "Power tools" and click on the New button. Enter the name of your sub group.*

7. If you need to add Reporting group 2 for Stock, click on the Stock group 2 button and repeat the process as for Stock group 1.

8. Click on the OK button to save your changes and close (exit) this screen.

> *Changing the sequence of groups for stock items:*
>
> *Select a Stock group, for example; "Power tools" and click on the Move up or Move down button. This will list the stock group according to your preferred sequence.*

> *You may click on the Print button to print a list of your stock groups.*

You may set colours to display on the Stock item list screen. To do this, click on theBack colour button to set the rows background colour and the Font colour button to set the Font colour.

To retain and save the selected colors, you also need to set both the "Back color" and the "Font color".

Created with the Standard Edition of HelpNDoc: Full-featured EPub generator

Stock information

You should use this option if you need to create sales documents such as quotes, invoices, and credit notes, as well as purchase documents such as purchases, supplier returns, and orders.

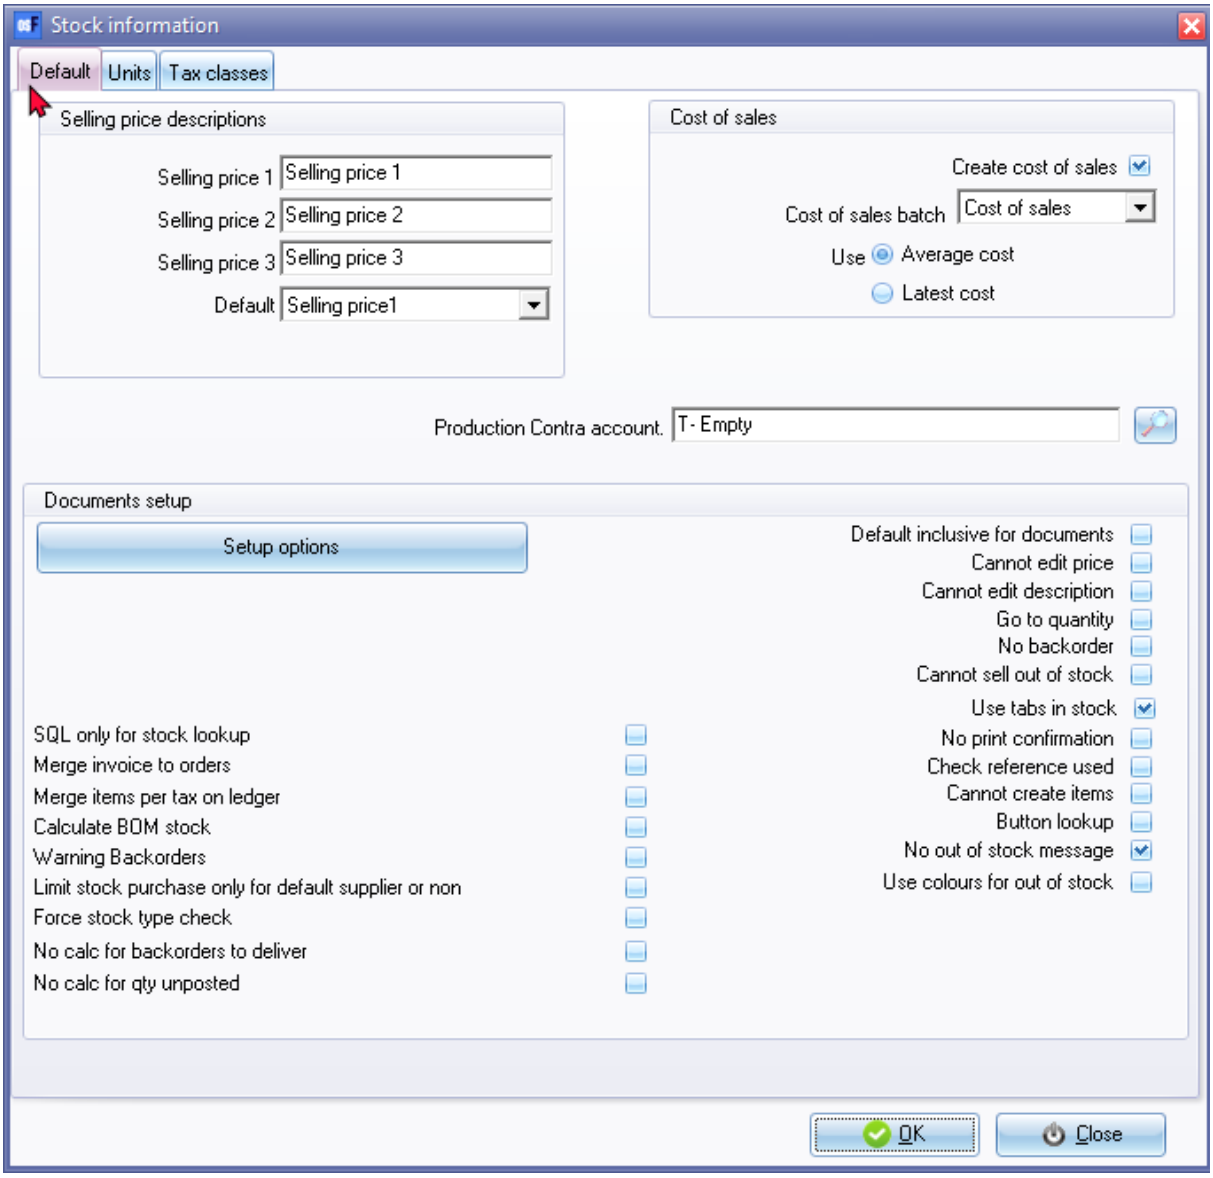
The "*Stock information*" screen is divided into three tabs: Default, Units, and Tax classes.

The Default tab has three groups: Selling price descriptions, Cost of sales, and Documents setup.

1. Selling price descriptions group allows you to change the name for up to three (3) selling prices and select the default selling price for stock items.
2. Cost of sales group lets you activate cost of sales and select the method such as average cost or latest cost and the batch (journal) to which the cost of sales will be posted.
3. Documents setup group allows you to configure settings related to document processing and stock items.

To set the Stock information and Cost of sales parameters:

1. On the Setup ribbon, select Setup → Stock information.



2. Selling price descriptions –

    a) Selling price descriptions – The Default (Selling price 1, Selling price 2, Selling price 3) is displayed. You may over-type these with your own.

    b) Default – The default selling price as the global setting. You may select any of the 3 Selling prices.

> *You may set a different selling price for specific debtor (customer / client) accounts on the Accounting information tab - Debtors (Default ribbon).*

3. Cost of sales settings – This is applicable to the "*Default*" (trading stock) and some other stock item types only. Select the following:

    a) Create cost of sales – To activate cost of sales, select (tick) the "*Create cost of sales*" tick box.

b) Cost of sales batch – Select the Cost of sales batch (journal) in which the cost of sales transactions will be posted.

c) Use "*Average cost*" or "*Latest cost*" option.

> *The method you use to calculate the value of your stock is crucial for determining its impact on your profit and loss figures. It is important to consider whether to use the "average cost" or the"latest cost" method.*
>
> *If you are unsure which method to use, it is recommended that you seek guidance from your accountant.*

4. Production contra account - If you use Bill of Materials (BOM Production) stock item type, you need to select a contra account.

5. Documents setup – The rest of the options (tick boxes) are used to set and configure document processing. Select (tick) these options; if necessary.

> *The Options setup button only need to be used to create options for the Option item and Option item (no stock) stock types.*

6. Click on the Units tab - to add or edit the unit descriptions for stock items. These are selected when you create or edit stock items and will display on reports and layout files.

   a) Add – Enter these and click on the Add button.

   b) Delete - Select a description from the list and click on the Delete button.

7. Click on the Tax classes tab to set the default Tax accounts and ledger accounts. You may then select a Tax class when you create or edit stock items.

8. Click on the OK button to save your changes and close or exit this screen.

Units

What is units relating to stock items / inventory items and products?

In the context of stock items or inventory items, "units" refers to the quantity or measurement used to quantify and track the physical count of those items. It represents the individual items or the smallest discrete units in which the stock is measured, purchased, and sold.

The term "*units*" can vary depending on the nature of the stock items or products. It could refer to items like pieces, boxes, cartons, bottles, kilograms, litres, meters, or any other appropriate unit of measurement based on the characteristics of the items being tracked. The choice of units depends on the specific industry, product type, and standard practices within that particular business or market.

For example, in a retail store, units could represent individual items such as a single shirt, a pack of batteries, or a case of soft drinks. In a manufacturing setting, units might refer to components or sub-assemblies used in the production process. The choice of units allows for accurate inventory management, pricing, and tracking of stock levels.

Examples of Units

What is common examples of Units for stock items in which stock items are purchased and sold?

Common examples of units or unit sizes for stock items in which stock items are purchased and sold can include:

1. Pieces or Units: This is the most basic unit of measurement and refers to individual items or products.
2. Boxes or Cartons: Stock items may be packaged in boxes or cartons containing a specific quantity of units.
3. Pallets: In the case of bulk products or larger items, stock items may be measured and sold by the pallet.
4. Gallons or Litres: For liquids or fluids, units of measurement can include gallons or litres.
5. Pounds or Kilograms: Weight-based units such as pounds or kilograms are commonly used for items sold by weight.
6. Yards or Meters: Length-based units like yards or meters are relevant for products sold by length or size.
7. Cases: Some items are sold in cases, which typically contain a predetermined number of units.

These are just a few examples, and the units or unit sizes used for stock items can vary depending on the nature of the products and the industry in which they are being bought and sold.

What is common examples of Units for non-physical items in which stock items are purchased and sold?

When it comes to non-physical items or intangible goods that are purchased and sold, there are various units or unit sizes that can be used to measure them. Here are some common examples:

1. Licenses: Units of measurement for software licenses or intellectual property rights can include "User Licenses," "Seat Licenses," "Site Licenses," or "Enterprise Licenses." These units represent the number of users or locations covered by the license.
2. Subscriptions: For subscription-based services or digital content, units such as "Monthly Subscriptions," "Annual Subscriptions," or "Tiered Subscriptions" are often used. These units indicate the duration or level of access to the service or content.
3. Data Usage: In the telecommunications or internet service provider industry, units like "Data Volume" or "Data Units" are used to measure the amount of data consumed or allocated.
4. Consulting Services: Units can be used to measure consulting services, such as "Consulting Hours," "Consulting Sessions," or "Project Engagements." These units represent the time or sessions dedicated to providing consulting expertise.
5. Digital Downloads: For digital products like e-books, music tracks, or video files, units such as "Downloads," "Songs," or "Video Views" can be used to quantify the number of times the item is accessed or downloaded.
6. Virtual Currency: In virtual economies or online gaming, units like "*Virtual Coins," "Points*," or "*Credits*" are used to represent the currency used within the system.

These examples illustrate how units or unit sizes can be applied to non-physical items to facilitate their purchase and sale, taking into account the specific nature and characteristics of each product or service.

Labour - Is hours also used as a unit of measurement?

Hours can be used as a unit of measurement or unit size when it comes to labour. In certain industries or businesses where labour is billed or tracked based on time, hours can be used to quantify the amount of work or effort put into a particular task or project. For example, in consulting firms, freelance work, or service-based businesses, the unit of measurement for labour may be hours. It allows for accurate tracking, billing, and estimation of labour costs and efforts.

Each and Hours is that also used for products?

Units such as "*Each*" and "*Hours*" are typically not used as units of measurement for physical products themselves, but they can be associated with certain aspects related to the products.

- "*Each*" is often used as a generic unit when the quantity or unit of measurement is not specified or when dealing with individual items. For example, when selling miscellaneous or unique items where each item is different, the unit may be labelled as "*Each*" to indicate that it refers to one item without specifying a specific measurement.
- "*Hours*" is commonly used to measure the duration or time spent on a service or labour-related task rather than a physical product. For example, in industries such as consulting, maintenance, or professional services, the unit of measurement for billing purposes may be "*Hours*" to reflect the time spent providing the service.

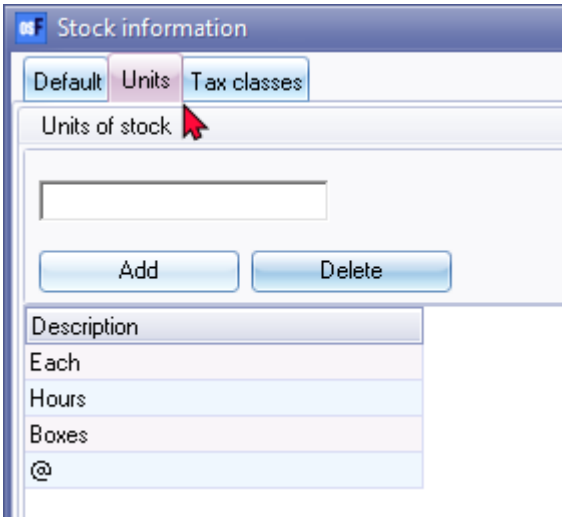
So, while "*Each*" and "*Hours*" are not typically used to measure physical products directly, they can have relevance in certain contexts related to products, such as specifying quantities or measuring service-related aspects.

Add unit descriptions

In osFinancials5/TurboCASH5 you can add unit descriptions to manage the stock items / inventory items or products you purchase and sell. When creating or editing stock items (Stock items on the Default ribbon) you can assign these units to specific stock items / inventory items or products. These unit descriptions will be printed in some reports as well as in document layout files for sales documents (i.e. quotes, invoices, credit notes and delivery notes) for purchase documents (i.e. orders, purchases and supplier returns).

To add unit descriptions:

1. On the Setup ribbon, select Setup → Stock information. Navigate to the Units tab.



2. Enter the Units of stock / product description.

3. Click on the Add button. The Description will be added to the list.

4. Click on the OK button to exit the "*Stock information*" screen.

By managing unit descriptions in osFinancials5/TurboCASH5, you can ensure accurate representation of stock units in reports and documents, facilitating effective inventory management and sales transactions.

Delete unit descriptions

If you want to delete a unit description, you can click on the Delete button. A confirmation message will be displayed:

> "Are you sure ?"

If you are not sure, click on the No button.

If you click on the Yes button, the unit description will permanently be removed from the list.

This will affect all reports and printing or reprinting of layout files supporting unit size descriptions. This deletion will impact reports and the printing or reprinting of layout files that use the unit descriptions.

If you accidentally delete a unit description and want to restore it, you need to follow these steps:

1. *Go to the Setup → Stock information menu on the Setup ribbon.*
2. *Add the unit description.*
3. *Go to Stock items on the Default ribbon and re-link the stock items to the new unit description.*
4. *This re-linking will apply to all printing or reprinting of layout files that support unit size descriptions.*

Note that already posted documents will not include the unit size descriptions. To print the unit size on

unposted documents, you need to edit the documents and reselect the stock item.

Units on document layout files

The Unit size will be displayed on the Default → Stock items, Reports → Stock items and on the following layout files:

Added the Unit Description to the following Layout files:

- Tutorial-Invoice
- Layout file - (TRN_1910)
- Document layout (15 codes) - (TRN_906277)
- Delivery note - (TRN_1313)

You may add the unit description to your own layout files. See - Reportman - Add Unit Descriptions to Layout files.

Created with the Standard Edition of HelpNDoc: Free EPub producer

Add Account / Tax classes

The Tax Classes tab in the Stock information section enables you to create and manage account classes/tax classes. Tax classes consist of five (5) accounts that are associated with the Ledger tab of stock items on the Default ribbon.

You may add Account classes or Tax Classes stock item type for each of the Tax (VAT/GST/Sales tax) items for example, standard rate, capital goods, zero rated, exempt goods, etc.) which is prescribed by your tax authority.

You may also use Account classes or Tax Classes to assign various stock items to various Sales accounts, Cost of Sales accounts and Stock control accounts.

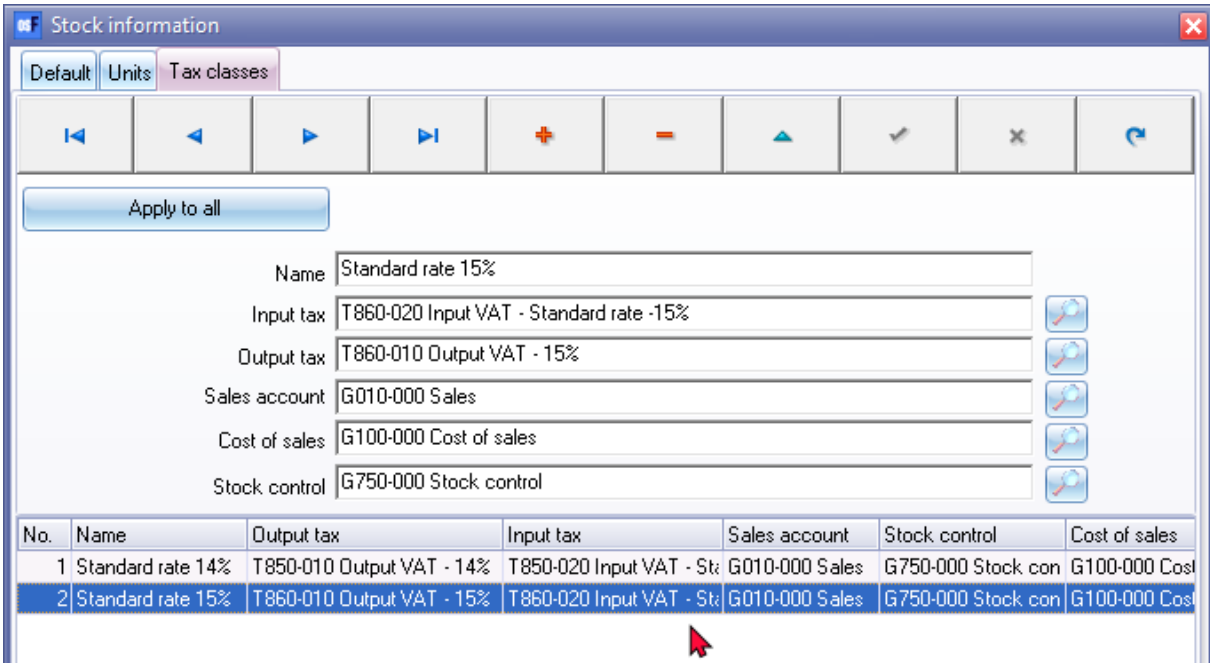
When you link a stock item to a tax class, it automatically populates the Input Tax, Output Tax, Sales, Cost of Sales, and Stock control account fields on the Ledger tab for that specific stock item. This eliminates the need to manually select these accounts for each individual stock item.

By utilising tax classes, the Lookup button on the Ledger tab of stock items is disabled, as the tax class already defines the appropriate accounts for taxation and accounting purposes. This simplifies the process of assigning accounts to stock items, ensuring consistency and accuracy in tax calculations and financial reporting.

To set Stock Tax classes:

1. On the Setup ribbon, select Setup → Stock information. The "*Stock information*" screen will be displayed.

2. Click on the Tax classes tab.



3. Click (Add) to add a new tax class.

4. Enter the Name (description) for the tax class.

5. Select the following accounts:

    a) Input Tax - Select the Input Tax account.

> *If you are not registered for VAT/GST/Sales Tax, you may leave the Input Tax accounts blank.*

> *You may activate the Use default tax - Stock file override settings on the Creditors (Accounting information tab (Default ribbon)) for a creditor (supplier / vendor) account, and select a different VAT/GST/Sales Tax account or code on the Tax lookup for*

that creditor (supplier / vendor).

When purchase documents or supplier returns documents for the creditor (supplier / vendor) is updated (posted) to the ledger, the selected Input Tax account for this Stock item will be ignored and the purchase transaction will be updated (posted) to the specified Input Tax account for the creditor (supplier / vendor).

b) Output Tax - Select the Output Tax account.

If you are not registered for VAT/GST/Sales Tax, you may leave the Output Tax accounts blank.

You may activate the Use default tax - Stock file override settings on the Debtors (Accounting information tab (Default ribbon)) for a debtor (customer / client) account, and select a different VAT/GST/Sales Tax account or code on the Tax lookup for that debtor (customer / client).

When invoices or credit notes for the debtor (customer / client) is updated (posted) to the ledger, the selected Output Tax account for this Stock item will be ignored and the purchase transaction will be updated (posted) to the specified Output Tax account for the debtor (customer / client).

c) Sales - Select the Sales account.

If you have more than one Sales account, or use Sub-accounts, you may select the applicable Account or Sub-account for each of your Stock items.

d) Cost of sales - Select the Cost of sales account.

If you have more than one Cost of sales account, or use Sub-accounts, you may select the applicable Account or Sub-account for each of your Stock items.

e) Stock control - Select the Stock control account.

If you have more than one Stock control account, or use Sub-accounts, you may select the applicable Account or Sub-account for each of your Stock items.

6. Click (Save) to save the new tax class.

7. Click on the OK button on the "*Stock information*" screen.

8. Go to the Stock items and select a stock item from the list.

9. Click on the Ledger tab of the selected stock item and select the Tax class from the list.

10. All the accounts linked to the Tax classes tab - Setup → Stock information will be linked to the applicable account fields on the Ledger tab of the selected stock item.

Once you have created Tax classes, and selected a Tax class from the list on the Ledger tab of stock items, you may change them and click on the Apply to All button. This will update all stock items with the new accounts selected (changed) for the each stock item linked to the Tax class.

Tax class report

You may print a list of your Tax classes in the Reports → Stock → Stock item listing menu and select the Tax classes report.

Create Cost of sales

Before initiating any document processing in osFinancials5/TurboCASH5, it is crucial to ensure that all settings pertaining to Stock items, Cost of sales, and Documents are accurately configured.

During the initial setup of your Set of Books, it is essential to either input a purchase transaction or conduct a stock take-on for each stock item before entering any invoices. This step allows osFinancials5/TurboCASH5 to capture the cost price of each stock item.

The cost price plays a vital role in updating the Cost of sales and Stock accounts when an invoice is generated.

Failing to provide a cost price will result in the Cost of sales account being updated with a zero amount, which can lead to an inflated gross profit figure.

It is imperative that the required accounts and settings are properly configured before engaging in purchasing and selling activities involving trading stock items within your Set of Books.

Neglecting this step may yield inaccurate results in osFinancials5/TurboCASH5, such as missing Cost of sales transactions upon posting to the ledger or incorrect calculation of the cost of sales using average cost instead of the latest cost.

Use “average cost” or “latest cost” setting:

The selection between "using average cost" or "latest cost" is a critical setting that significantly impacts the valuation of your stockand could impact your profit and loss figures.. If you are uncertain about which method to choose, it is advisable to consult with your accountant, as the value assigned to your stock can have implications on your profit and loss figures.

Average cost” or Latest cost” setting and accounting frameworks and standards:

The choice between using "average cost" or "latest cost" for calculating the Cost of sales is an important decision that should align with the applicable accounting framework and standards, such as GAAP (Generally Accepted Accounting Principles), IFRS (International Financial Reporting Standards) full, or IFRS for SMEs (Small and Medium-sized Enterprises), depending on the jurisdiction.

Different accounting frameworks may have specific guidelines regarding the valuation of inventory and determining the cost to be allocated to the Cost of sales. These guidelines aim to ensure consistency, accuracy, and comparability in financial reporting.

To adhere to the appropriate accounting framework and standard, it is advisable to consult with your accountant or financial advisor. They can provide guidance on selecting the most suitable cost calculation method (average cost or latest cost) based on the specific requirements of your jurisdiction and the nature of your business operations.

Average cost” or Latest cost” setting and accounting frameworks and standards - Examples:

Both average cost and latest cost can be used as cost calculation methods for inventory valuation and Cost of sales in various accounting standards. The choice between these methods depends on the specific requirements and principles outlined in each accounting standard. Here are some examples:

1. *Generally Accepted Accounting Principles (GAAP): Under GAAP, both average cost and latest cost methods can be used. The specific application may vary depending on the country and the relevant accounting principles adopted within that jurisdiction.*
2. *International Financial Reporting Standards (IFRS): IFRS provides guidelines for inventory valuation but does not prescribe a specific cost calculation method. Entities following IFRS have the flexibility to choose between average cost and latest cost based on their specific circumstances and the requirements of the standard.*

It's important to note that the choice of cost calculation method should be consistent and applied in a manner that faithfully represents the financial position and performance of the company. It is recommended to consult with a qualified accountant or financial professional to determine the appropriate cost method based on the applicable accounting standards and the specific requirements of your business.

The transactions for the Default (trading stock) stock item type is as follows:

Trading stock items (Default stock item type)	
Purchases (Purchase journal)	*Invoices (Sales journal)*
DR - Stock item (net cost price - Input Tax Excluded) *DR - Input Tax (% of purchase price)* *CR - Creditor (full amount - Input Tax Included)*	*DR - Debtor (full amount - Output Tax Included)* *CR - Sales (selling price - Output Tax Excluded)* *CR - Output Tax (% of selling price)*
	Cost of sales journal
	DR - Cost of sales (cost price) *CR - Stock (cost price)*

The transactions for Supplier returns (Credit notes received from creditors (suppliers)) are exactly the opposite than those of purchase documents (Invoices received from creditors (suppliers)).

The transactions for Credit notes (issued to debtors (customers / clients)) are exactly the opposite than those of Invoices.

Trading stock items (Default stock item type)	
Supplier returns (Purchase journal)	*Credit notes (Sales journal)*
DR - Creditor (full amount - Input Tax Included) *CR - Stock item (cost price - Input Tax Excluded)* *CR - Input Tax (% of purchase price)*	*DR - Sales (selling price - Output Tax Excluded)* *DR - Output Tax (% of selling price)* *CR - Debtor (full amount - Output Tax Included)*
	Cost of sales journal
	DR - Stock (cost price) *CR - Cost of sales (cost price)*

All other stock types (excluding the Bills of Materials (BOM) stock item type), have no cost of sales transactions.

The Bills of Materials (BOM) and the Bills of Materials (Production) (BOM (Production)) stock types, are usually linked to trading stock items (components).

Created with the Standard Edition of HelpNDoc: Streamline Your Documentation Process with HelpNDoc's Project Analyzer

Cost of Sales and FIFO / LIFO

Before initiating any document processing in osFinancials5/TurboCASH5, it is crucial to ensure that all settings pertaining to Stock items, Cost of sales, and Documents are accurately configured.

Cost price setting and calculation of Cost of Sales

During the initial setup of your Set of Books, it is essential to either input a purchase transaction or conduct a stock take-on for each stock item before entering any invoices. This step allows osFinancials5/TurboCASH5 to capture the cost price of each stock item. The cost price plays a vital role in updating the Cost of sales and Stock accounts when an invoice is generated. Failing to provide a cost price will result in the Cost of sales account being updated with a zero amount, which can lead to an inflated gross profit figure.

It is imperative that the required accounts and settings are properly configured before engaging in purchasing and selling activities involving trading stock items within your Set of Books. Neglecting this step may yield inaccurate results in osFinancials5/TurboCASH5, such as missing Cost of sales transactions upon posting to the ledger or incorrect calculation of the cost of sales using average cost instead of the latest cost.

The selection between using "*average cost*" or "*latest cost*" is a critical setting that significantly impacts the valuation of your stock. If you are uncertain about which method to choose, it is advisable to consult with your accountant, as the value assigned to your stock can have implications on your profit and loss figures.

Cost of sales - Using "average cost" or "latest cost" setting

Cost of sales - Using "*average cost*" or "*latest cost*" is a critical setting that you may take note of when following the accounting framework and standard e.g. GAAP, IFRS full, IFRS for SMEs depending on the jurisdiction

Indeed, the choice between using "*average cost*" or "*latest cost*" for calculating the Cost of sales is an important decision that should align with the applicable accounting framework and standards, such as GAAP (Generally Accepted Accounting Principles), IFRS (International Financial Reporting Standards) full, or IFRS for SMEs (Small and Medium-sized Enterprises), depending on the jurisdiction.

Different accounting frameworks may have specific guidelines regarding the valuation of inventory and determining the cost to be allocated to the Cost of sales. These guidelines aim to ensure consistency,

accuracy, and comparability in financial reporting.

To adhere to the appropriate accounting framework and standard, it is advisable to consult with your accountant or financial advisor. They can provide guidance on selecting the most suitable cost calculation method (average cost or latest cost) based on the specific requirements of your jurisdiction and the nature of your business operations.

In which accounting standard is average cost or latest cost followed?

Both average cost and latest cost can be used as cost calculation methods for inventory valuation and Cost of sales in various accounting standards. The choice between these methods depends on the specific requirements and principles outlined in each accounting standard. Here are some examples:

1. Generally Accepted Accounting Principles (GAAP): Under GAAP, both average cost and latest cost methods can be used. The specific application may vary depending on the country and the relevant accounting principles adopted within that jurisdiction.
2. International Financial Reporting Standards (IFRS): IFRS provides guidelines for inventory valuation but does not prescribe a specific cost calculation method. Entities following IFRS have the flexibility to choose between average cost and latest cost based on their specific circumstances and the requirements of the standard.

It's important to note that the choice of cost calculation method should be consistent and applied in a manner that faithfully represents the financial position and performance of the company. It is recommended to consult with a qualified accountant or financial professional to determine the appropriate cost method based on the applicable accounting standards and the specific requirements of your business.

Is the use of average cost and latest cost related to FIFO and LIFO?

Yes, the use of average cost and latest cost can be related to the inventory valuation methods of FIFO (First-In, First-Out) and LIFO (Last-In, First-Out).

FIFO assumes that the first items purchased or produced are the first ones sold. Under FIFO, the cost of inventory sold is based on the oldest or earliest purchases, while the ending inventory is valued at the most recent purchases. This generally results in the Cost of sales being calculated using the oldest cost prices, which may be considered similar to the average cost method.

LIFO, on the other hand, assumes that the last items purchased or produced are the first ones sold. Under LIFO, the cost of inventory sold is based on the most recent purchases, while the ending inventory is valued

at the oldest or earliest purchases. This generally results in the Cost of sales being calculated using the most recent cost prices, which may be considered similar to the latest cost method.

While average cost and latest cost methods are not strictly defined by the FIFO or LIFO principles, they can align with the cost flow assumptions used in these methods. Average cost represents an average of all costs incurred, while latest cost represents the most recent cost incurred.

It's important to note that the use of FIFO and LIFO, as well as the choice between average cost and latest cost, may be subject to specific accounting regulations and requirements in different jurisdictions. It's advisable to consult with a qualified accountant or financial professional to determine the appropriate inventory valuation method based on the applicable accounting standards and regulations in your specific region.

Is the use of average cost related to FIFO or LIFO?

The use of average cost is not directly related to either FIFO (First-In, First-Out) or LIFO (Last-In, First-Out). Average cost is a separate inventory valuation method that calculates the cost of inventory as an average of the costs of all items in stock.

Under the average cost method, the cost of inventory is determined by dividing the total cost of goods available for sale by the total number of units available for sale. This average cost per unit is then used to value both the Cost of sales and the ending inventory.

In contrast, FIFO assumes that the first items purchased or produced are the first ones sold, while LIFO assumes that the last items purchased or produced are the first ones sold. Both FIFO and LIFO methods assign specific costs to the inventory based on the order of acquisition or production.

While average cost can provide a smoothed and consistent valuation for inventory, it is not tied to the specific flow assumptions of FIFO or LIFO. The choice between average cost, FIFO, or LIFO depends on factors such as the nature of the business, industry practices, applicable accounting standards, and regulatory requirements.

Is the use of latest cost related to FIFO or LIFO?

The use of the latest cost method is more closely related to the LIFO (Last-In, First-Out) inventory valuation method.

Under the LIFO method, the assumption is that the most recently acquired or produced items are the first ones sold. Therefore, when calculating the cost of goods sold, the cost assigned to each unit is based on the most recent cost of acquiring or producing inventory. This approach can result in a better reflection of current market prices and cost changes.

In the context of the latest cost method, the cost assigned to inventory is based on the most recent or latest cost incurred to acquire or produce the items. This method allows for greater responsiveness to changes in the cost of inventory, as it values the inventory based on the most up-to-date costs. This can be particularly useful in industries where the cost of inventory fluctuates frequently.

While there is a relationship between the use of the latest cost method and the LIFO inventory valuation method, it's important to note that they are not interchangeable. The LIFO method involves specific assumptions and requirements for inventory accounting, including the need to maintain detailed records of the order of acquisition or production. The use of the latest cost method, on the other hand, focuses on valuing inventory based on the most recent costs incurred without necessarily adhering to the strict LIFO requirements.

Selling prices

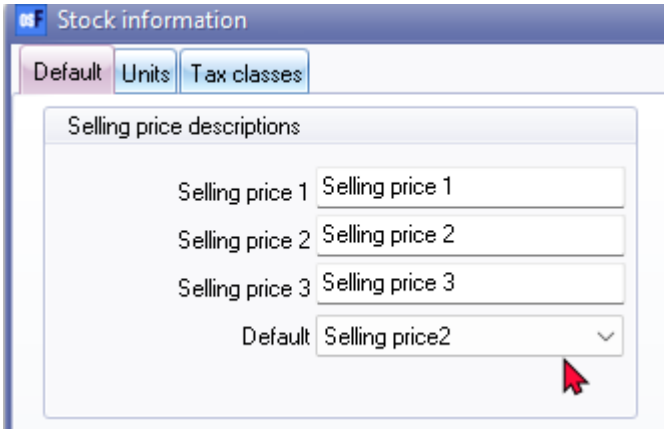
Selling price descriptions in osFinancials5/TurboCASH5

Price agreement plugin - Manual - Shop - Licence : Once-off -

In addition to the standard 3 selling prices in osFinancials5/TurboCASH5, Price agreement plugin, allows you to set up to five (5) levels of quantity discounts that can be applied to specific debtors or groups of debtors. Additionally, you can set a special price for individual debtors per product. These prices will overrule the default Selling price 1 / 2 / 3 and can be set per debtor (customer / client). The price agreement may also be activated for creditors (suppliers / vendors).

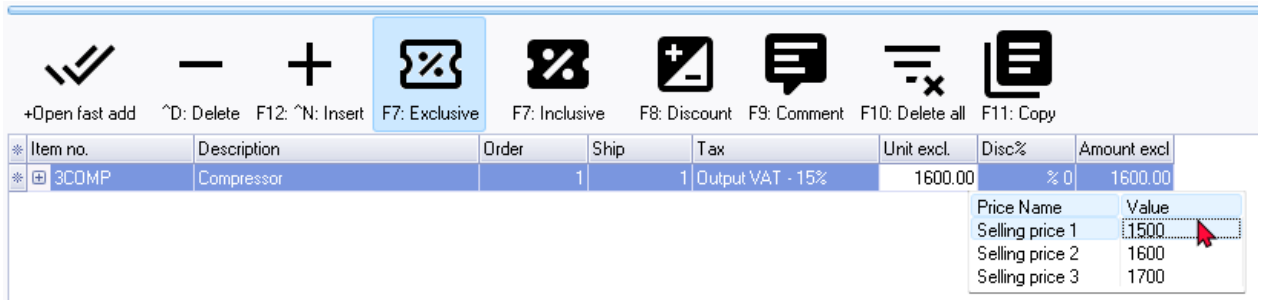
Global selling prices

osFinancials5/TurboCASH5 supports up to 3 selling prices (i.e. Selling price 1, Selling price 2 and Selling price 3). You may change the descriptions of these selling prices on the "Selling price descriptions" section of the Default tab of Setup → Stock information to suit your specific requirements and set one of these Selling prices as the default Selling price (global setting) for your Set of Books.



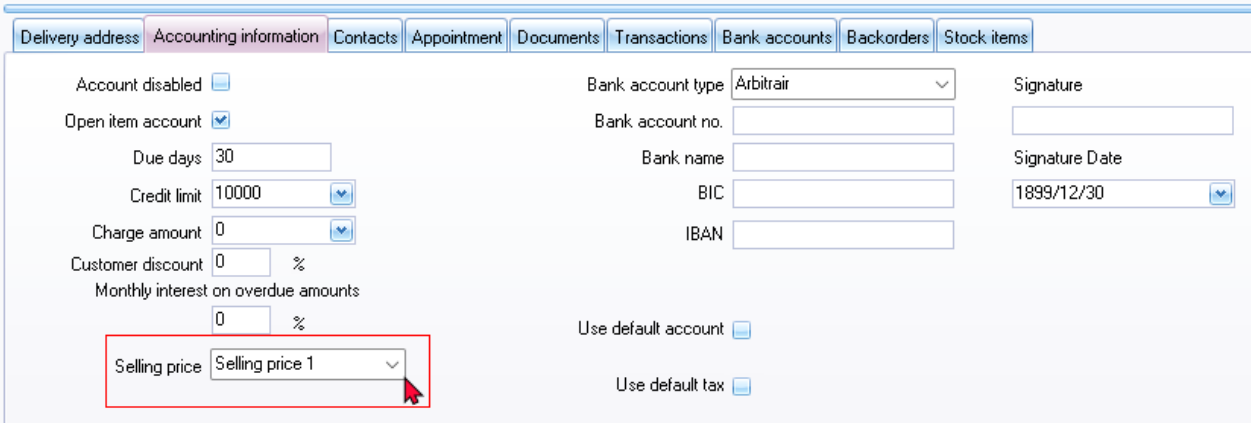
These selling price descriptions will be displayed in the osFinancials5/TurboCASH5 interface, stock items and reports in the following options:

- Stock item grid and stock item form
- Documents - when processing sales documents (i.e. invoices, credit notes and quotes), these selling price descriptions may be used to select a different selling price than the default selling price.



Default selling price for debtors

In addition to this, you may set one of these Selling prices as the default Selling price on the Accounting information tab for specific debtor (customer / client) accounts.



Examples of Selling price descriptions

Selling price descriptions in osFinancials5/TurboCASH5 can vary based on the specific needs and industry of the user. These descriptions are typically used to differentiate between different pricing tiers, discounts, or special offers. Here are some examples of selling price descriptions:

1. Standard Price: Regular selling price without any discounts or promotions.
2. Wholesale Price: The price offered to wholesale buyers or bulk purchasers.
3. Retail Price: The price at which the product is sold to end consumers through retail channels.

Here are some more examples of selling price descriptions:

1. Promotional Price: A temporarily reduced price for a specific period or promotion.
2. Member Price: Exclusive pricing for members or subscribers to a loyalty program.
3. Contract Price: Agreed-upon price for products or services under a contractual agreement.
4. Volume Discount Price: Price reduction based on the quantity purchased, encouraging bulk buying.
5. Seasonal Price: Pricing that varies according to seasons or specific times of the year.
6. Bundle Price: Combined pricing for a package or bundle of related products.
7. Clearance Price: Heavily discounted price to clear out excess or outdated inventory.
8. Special Event Price: Pricing for special events or occasions, often with limited-time offers.
9. Preferred Customer Price: Discounted price for preferred or loyal customers.
10. Tiered Pricing: Differentiated prices based on customer tiers, such as bronze, silver, and gold levels.

These descriptions are just examples, and users can customize them according to their business requirements. It's important to choose descriptions that make it easy for users to understand and select the appropriate selling price for each inventory item.

Options setup

If you wish to create the Option item and Option item (no stock) stock types, you may select items that are a combination of options (like colour and size) options.

These options are then linked to the Options stock item type (Stock items on the Default ribbon). When

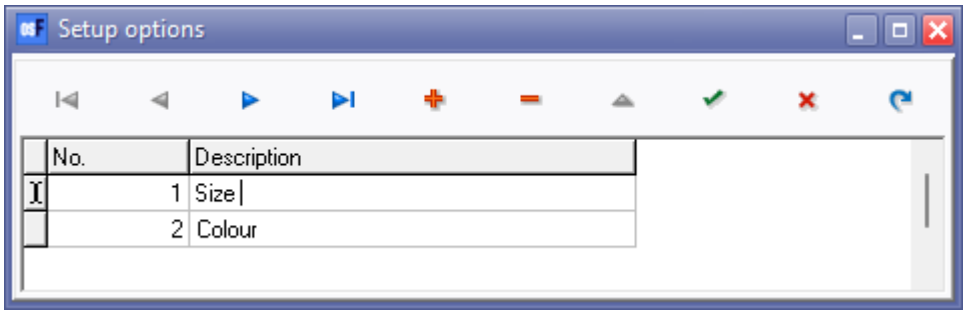
processing documents, the available options (options list) will be launched from the quantity fields when selecting documents.

The Options with stock allows every entry to have a sales price, cost price, quantity and minimum stock level. This will also be used in generating purchases on supplier 1.

To create / add Options for option items:

1. On the Setup ribbon, select Setup → Stock information. The "*Stock information*" screen will be displayed.

2. Click on the Setup options button. The "*Setup options*" screen is displayed:

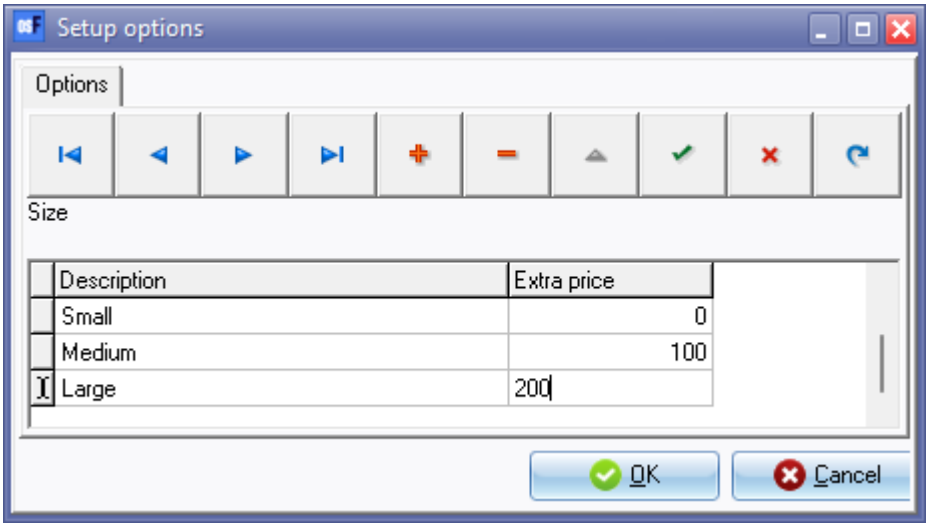


3. Click on the (Add) button. A record number will automatically be assigned. Enter the name for the Option, e.g. Colour, Size, etc.

4. Click on the (Save) icon.

5. Double-click on the item to add the list of options and the extra prices. This may be the size, colours, etc. The selling price of the first option (default option) should be zero, as this is the default selling price of the stock item to which this is linked. The extra prices for the other options (on the options list) are the extra prices to be added to the stock items default selling price.

6. Once finished with the options list, click on the OK button to save the list.



7. Close the "*Setup options*" screen (click Close button on the title bar).
8. Close the "*Stock information*" screen and return to the Stock items screen (Default ribbon). You may then link this option on the Options tab of the Stock item.

Created with the Standard Edition of HelpNDoc: Experience the Power and Simplicity of HelpNDoc's User Interface

Stock item list screen

---

osFinancials5/TurboCASH5 features a robust inventory system that allows users to store an unlimited number of stock items (inventory items) or products in the stock ledger. Each stock item has specific details associated with it. The inventory system allows for the structuring of stock items into up to two (2) reporting groups, which aids in data organisation and analysis.

osFinancials5/TurboCASH5 also offers eleven different stock item types to choose from, providing flexibility in managing various types of products.

When processing documents for debtors or creditors or selecting stock items for reports, the stock item lookup function is utilised to choose the appropriate products. The selected stock item's details are then used to calculate the selling and cost prices based on the specified quantity, and this information is displayed on the respective documents and reports.

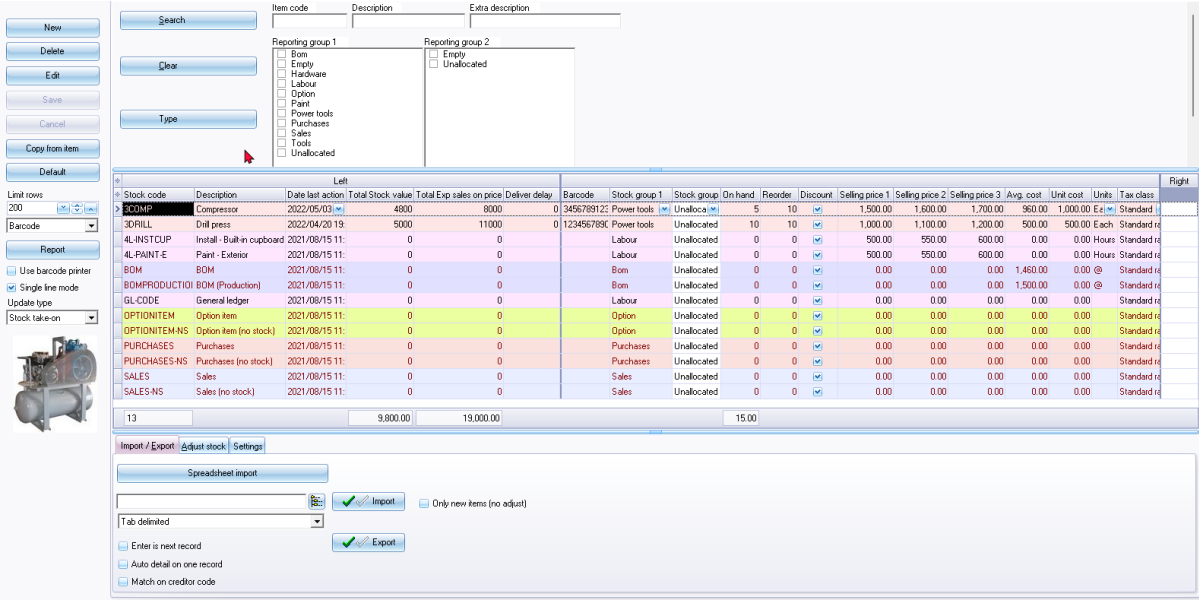
Overall, osFinancials5's inventory system offers a comprehensive solution for managing and tracking stock items (inventory items) or products, allowing for efficient inventory tracking, accurate cost and selling price calculation, and streamlined document and report generation.

The Stock items feature allows you to manage your inventory items or products. You have the ability to create new stock items or products, edit existing ones, delete or disable items as needed. The feature provides filtering and search options to help you locate specific items.

Within each item, you can make changes to the stock code, description, extra description, quantities, reorder levels and more. You can also manage various settings on the Ledger tab and various activities on the Document groups, Transactions, Image, Multi-group, and Backorders tabs.

To access Stock items:

1. On the Default ribbon, select Stock items (F12).



2. Buttons – The following buttons are available:

   a) New – Create a new stock item.

   b) Delete – Delete remove a selected stock item.

   c) Edit – Edit / change a selected stock item.

   > *You may also double click on a selected stock item.*

   d) Save – Save any changes to a stock item.

   e) Cancel – Cancel will revert to the previous values. Any changes will not be saved.

   f) Copy from item – This will create an exact copy of a selected stock item. You only need to enter the Stock code and change / edit the necessary fields.

   > *You may also select the stock item type. The fields that are not applicable to a selected stock item type, will be disabled / enabled.*

   g) Default / Advanced mode – This will display the Export / Import, Adjust stock and Settings tabs. Clicking on the Default button, the button's caption will change to display Advanced mode. This will hide the Export / Import, Adjust stock and Settings tabs. In the Advanced mode, you may enter / edit data (values) of stock items (like you would in a spreadsheet).

3. Limit rows - The default is "*200*" records to be listed displayed on this screen. If necessary, you may change that.

4. Reports – Prints the selected report type for the selected stock item(s) only. If you need to include all items, click on the Report button.

> *These barcodes or the Yagoda barcodes may also be printed from the Reports → Stock → Print labels (Reports ribbon).*

> *These reports are designed using the Reportman. These reports are located in the "... \plug_ins\reports\REPORTS\STOCK" directory.*

> *There are two (2) options to print these reports, i.e.:*
>
> - *Click on the Report button – to include all stock items in the reports.*
> - *Right-click on a selected item, and select Print single item option from the context menu.*

5. Use barcode printer – Select this option if you have a barcode printer configured and setup on your system; and you need to print the Barcodes (i.e. Barcode or Yagoda barcode) report type from the list.

6. Single line mode - This option has three (3) basic settings:

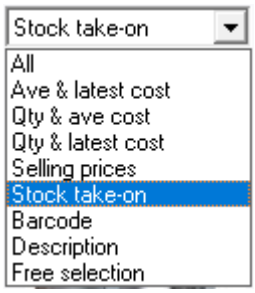
   a) If this field is selected (ticked) and the Advanced mode (Export / Import, Adjust stock and Settings tabs displayed), each stock item record will be listed in a single row.

   b) If this field is not selected (not ticked) and the Advanced mode (Export / Import, Adjust stock and Settings tabs displayed), a fixed right pane column (similar to the left pane on which the stock code and date last action columns are by default displayed) will be added. You may drag any column between the left and right panes to be added.

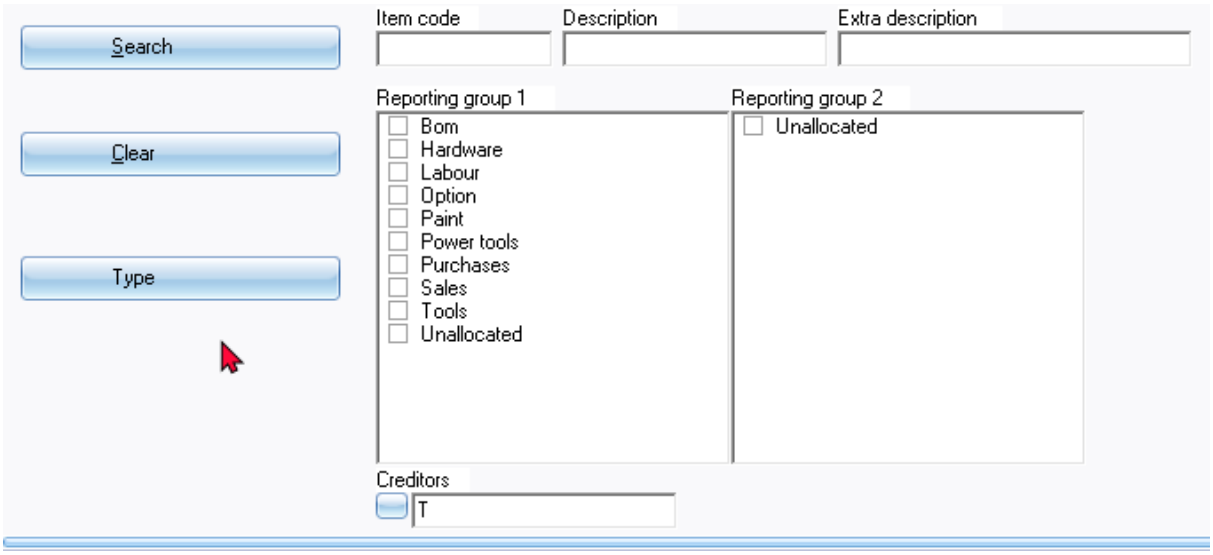
   c) If this field is selected (ticked) and the Default mode (Export / Import, Adjust stock and Settings tabs not displayed), each stock item record will be listed in a single row.

   d) If this field is not selected (not ticked) and the Advanced mode (Export / Import, Adjust stock and Settings tabs displayed), the fields for stock item records will be grouped in some columns (e.g. Units, Stock group1 / 2, Stock item type, Cost centres, etc.).

7. Update type - The following options are available to change (group) the columns:



8. Search filter / options – Filter by entering the Item Code, Description or Extra description and/or by selecting (ticking) the Reporting group 1 / 2. If you click on the Search button, the only those stock items that matches your search / filter criteria will be listed. If you click on the Type button, you may select Item Code, Description, Extra description, Reporting group 1, Reporting group 2 or Creditor.



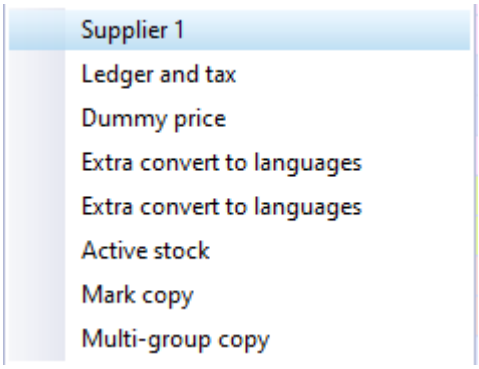
If the "Creditor" option is selected in the "Type" field, you may select the Creditor account on the Lookup. This will list those stock items which are linked to the creditor (supplier / vendor) account in the "Preferred supplier 1" (Default Supplier 1) field of a Stock item.

9. Context menu – The following options are available:

   - Print single item – Prints the selected report type for the selected stock item(s) only. If you need to include all items, click on the Report button.

   - Copy – The following options to process Supplier 1 and Purchase Sales Stock Tax are available:

     - Copy from / init and Paste to / perform on selected rows:



§ Stock item - Similar than the Copy from item button. – This will create an exact copy of a selected stock item. You only need to enter the Stock code and change / edit the necessary fields.

- Reporting group 1 - Change the reporting group of a stock item, if Reporting group 1 was set for Stock items (as added in Setup → Groups - Stock group 1 on the Setup ribbon).

> *The colours of the rows (list of stock items) will be changed, if set in Reporting group 1.*

- Reporting group 2 – Change the reporting group of a document, if Reporting group 2 was set for Stock items (as added in Setup → Groups - Stock group 2 on the Setup ribbon).

- Mass check - This option will run a check on all stock items. The stock item form will be automatically opened and closed for each stock item.

> *If the BOM (Production) stock item type is selected, the following context menu options, is available:*
>
> · *Disassemble*
>
> · *Assemble*

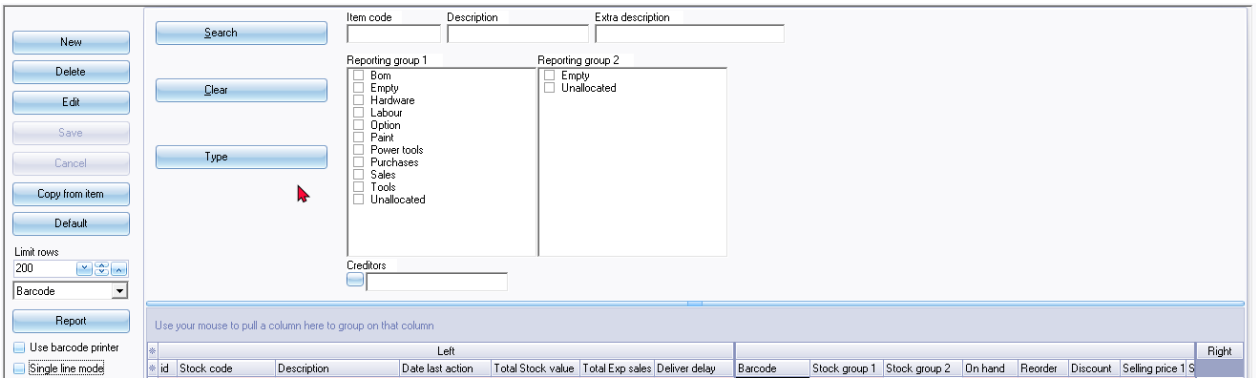
10. Grid totals - This will display the line count (number of records in rows / stock items) that is available on the list. The number of records will indicate the number of records that matches your filter / search criteria.

Created with the Standard Edition of HelpNDoc: Write EPub books for the iPad

Filter options (Stock)

The osFinancials5/TurboCASH5 grid has a powerful and user-friendly filtering and sorting system that makes it quicker and easier than other methods. With just a few mouse clicks, you can group, sort, and filter any column(s) of data on most screens in a Set of Books. This feature is very useful and efficient for managing and analysing data.

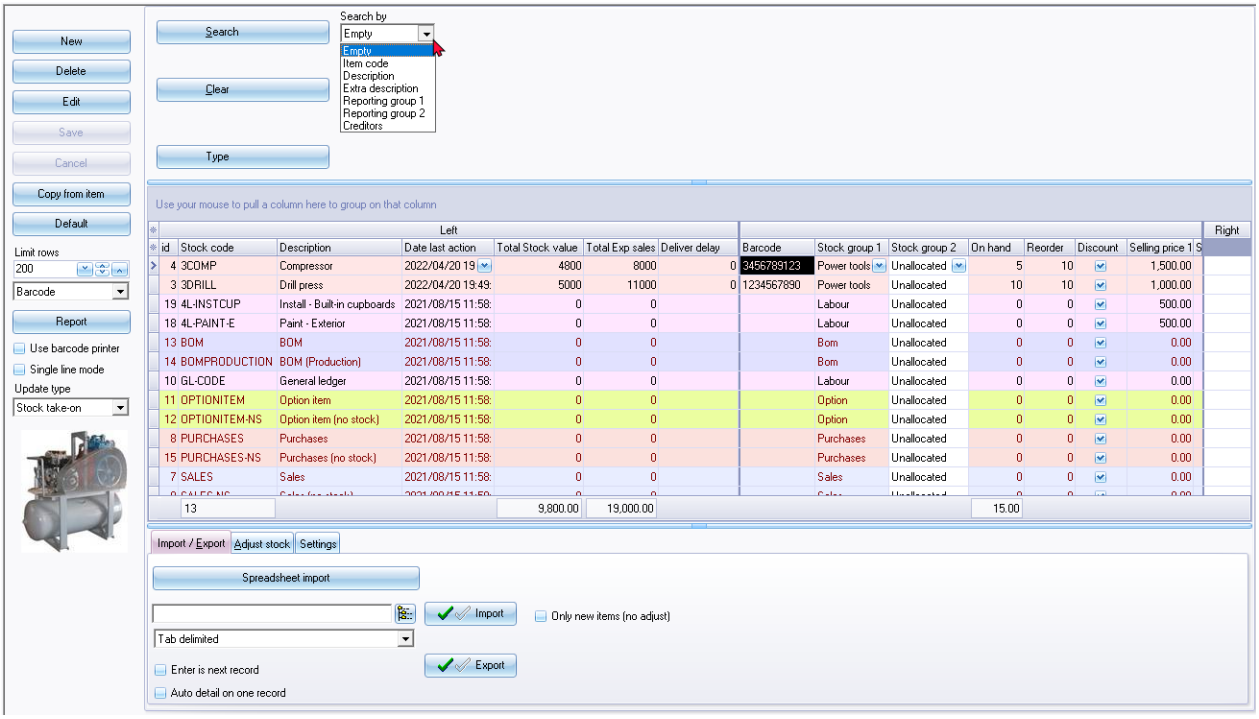
Type



You may enter or search for a stock item using the following options:

- Item code - enter a valid item code.
- Description - Enter a description or part of the description.
- Extra description - Enter a extra description or part of the extra description.
- Reporting group 1 / 2 - All stock item groups as set in Groups (Setup ribbon) will be listed. Select (tick) to list only those stock items linked to a selected stock reporting group.
- Creditor - If preferred suppliers is selected on stock items, you may lookup a creditor to view only those stock items linked to a supplier.

If you click on the Type button, you may select Item code, Descriptions, Extra description, Reporting group 1, Reporting group 2 or Creditors.



Column headings

All the data for each of your stock items are listed in columns. To view change the sequence in which the data is displayed, you may:

- Scroll bars - Scroll to the right or to the left on the horizontal scroll bar to view the information.
- Sequence of rows - Click on any of the column headings to change the sorting sequence of the stock items listed in the descending or ascending sequence.
- Sequence of columns - Click on a column heading and drag it to the right or to the left to change the sequence in which the columns need to be displayed.

The "Line count" will show the number of records (stock items) that matches your search or filter criteria.

You may also search for stock items in the "Investigator" (Search on the Default ribbon).

The column headings are grouped into three (3) bands:

- *Left - Click on a column and drag the column to the desired position.*
- *Data - You may also drag it to the right band or to the left band.*
- *Right - By default this band is empty. Any number of columns can be dragged to that band.*

Created with the Standard Edition of HelpNDoc: Say Goodbye to Documentation Headaches with a Help Authoring Tool

Stock list screen - Default mode

The stock item list screen has two (2) mode options available:

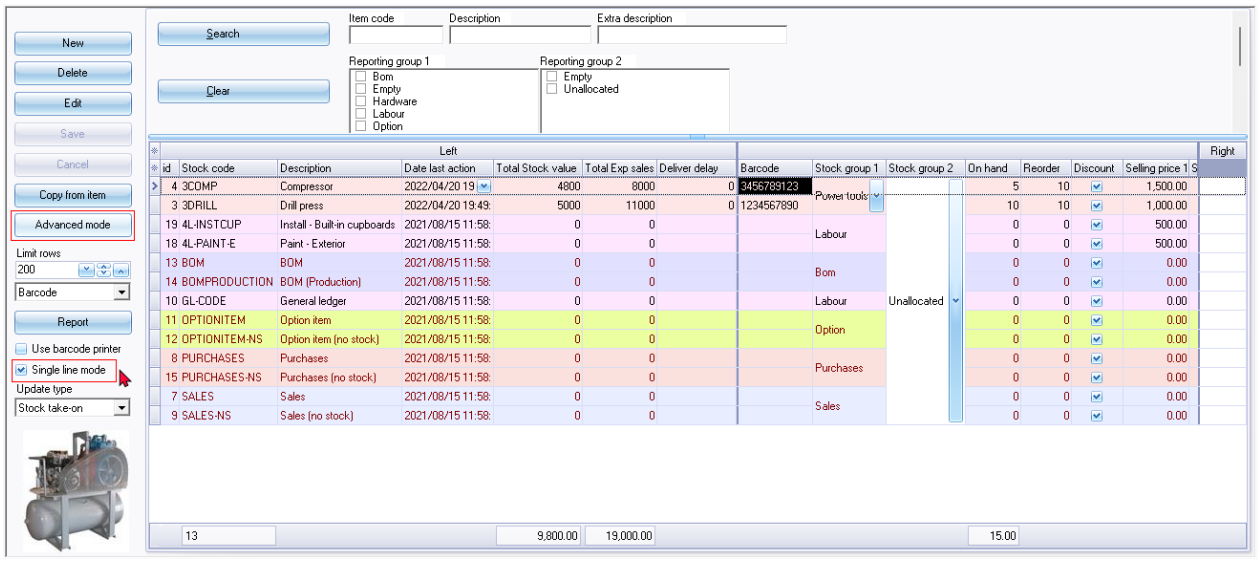
- Default mode option - This is a plain list view of the stock items on which the data in the columns is not editable.
- Advanced mode option - This mode will enable the following options:
    - The data in the columns on the stock item grid can be edited (like you would in a spreadsheet).
    - Add the Export / Import, Adjust stock and Settings tabs.

By default, the "*Single line mode*" option is selected (ticked). The details for each of the stock items in the list will display in a single line.

If this option is selected, a column header "*Use your mouse to pull a column here to group on that column*" will be displayed and the similar data in columns can be grouped.

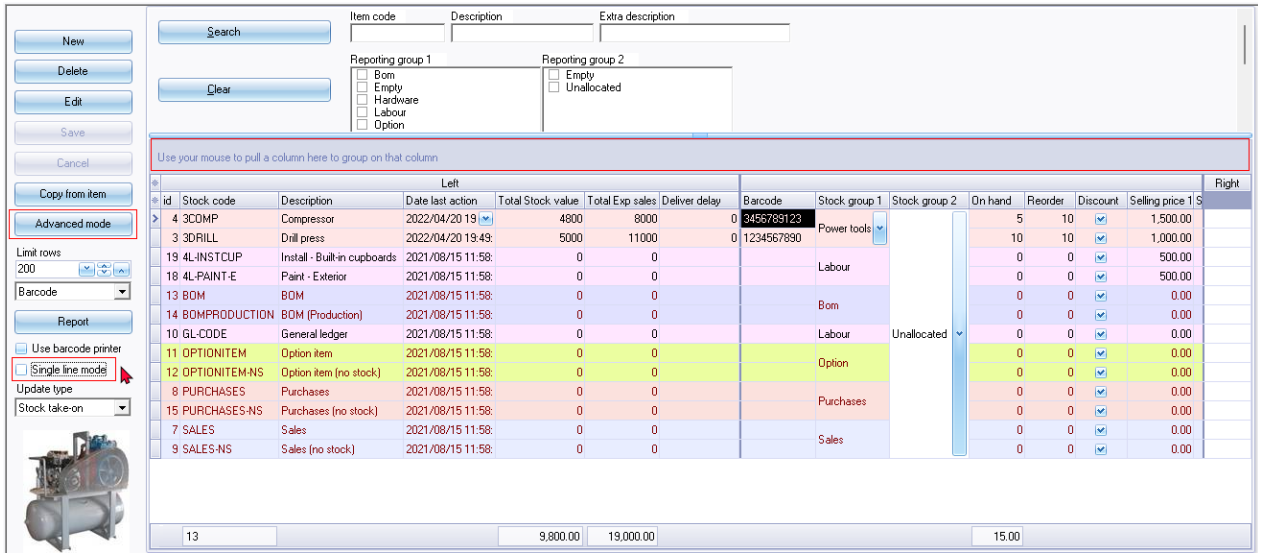
Default mode : Single line mode - Selected

The details for each of the stock items in the list will display in a single line.



Default mode : Single line mode - Not selected

If the "*Single line mode*" option is not selected a column header "*Use your mouse to pull a column here to group on that column*" will be displayed and the similar data in columns can be grouped.



The column headings are grouped into three (3) bands:

- *Left - Click on a column and drag the column to the desired position.*
- *Data - You may also drag it to the right band or to the left band.*
- *Right - By default this band is empty. Any number of columns can be dragged to that band.*

Stock list screen - Advanced mode

The stock item list screen has two (2) mode options available:

- Default mode option - This is a plain list view of the stock items on which the data in the columns is not editable.
- Advanced mode option - This mode will enable the following options:
    - The data in the columns on the stock item grid can be edited (like you would in a spreadsheet).

- Add the Export / Import, Adjust stock and Settings tabs.

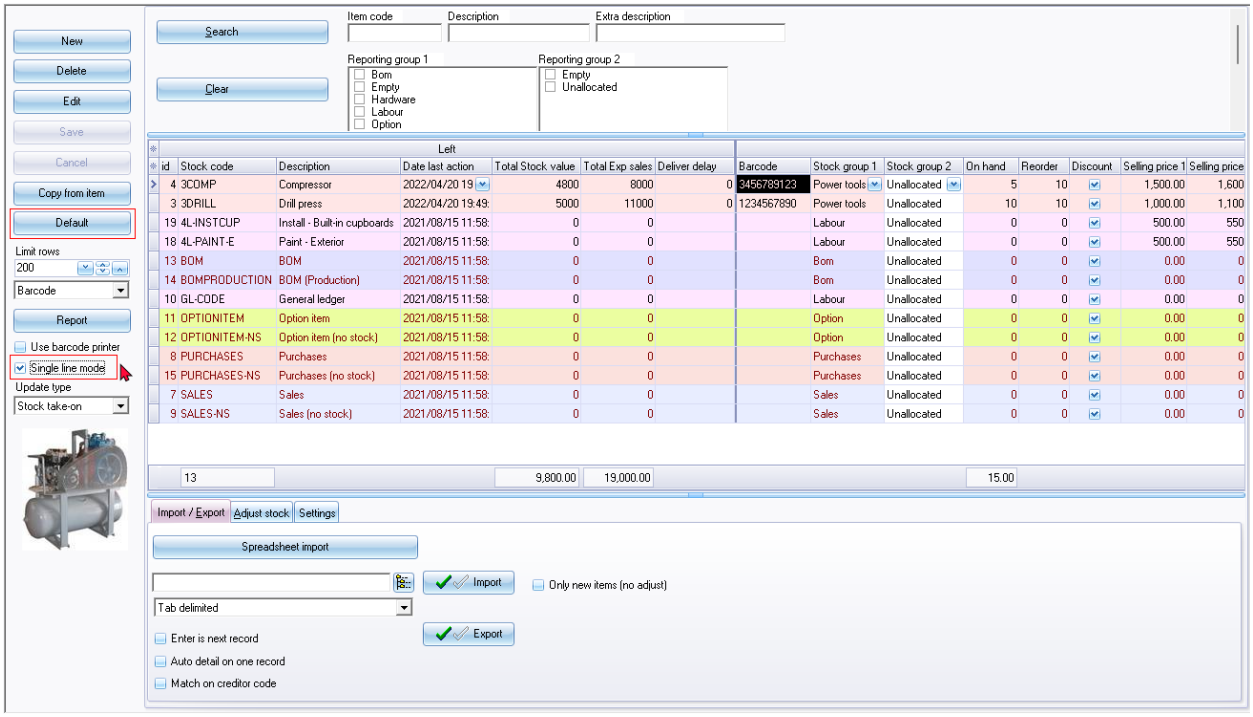
By default, the "*Single line mode*" option is selected (ticked). The details for each of the stock items in the list will display in a single line.

If this option is selected, a column header "*Use your mouse to pull a column here to group on that column*" will be displayed and the similar data in columns can be grouped.

Advanced mode : Single line mode - Selected

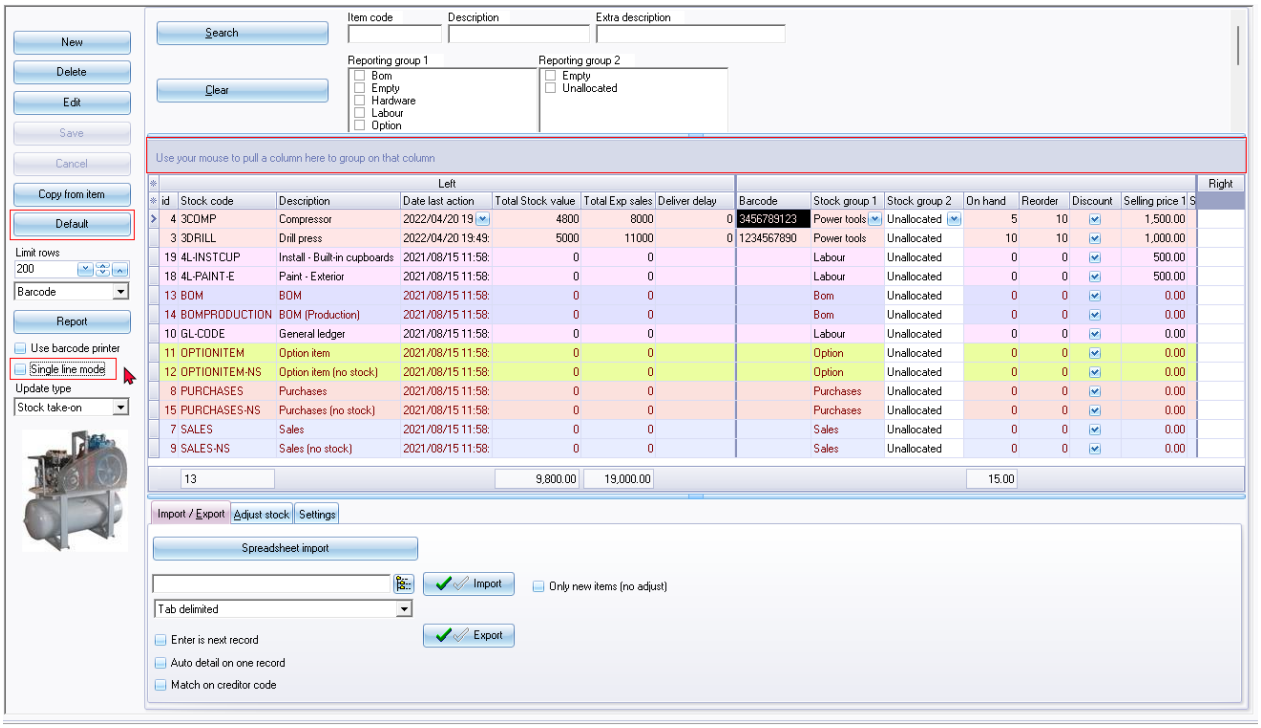
If the "*Advanced mode*" option is selected, the Advanced mode button's caption, will change to Default. It will enable the following options:

- The data in the columns on the stock item grid can be edited.
- Add the Export / Import, Adjust stock and Settings tabs.



Advanced mode : Single line mode - Not selected

The data for each of the stock items in the list can not be edited. You need to select a stock item and edit the details in the Stock item form.



The column headings are grouped into three (3) bands:

- *Left - Click on a column and drag the column to the desired position.*
- *Data - You may also drag it to the right band or to the left band.*
- *Right - By default this band is empty. Any number of columns can be dragged to that band.*

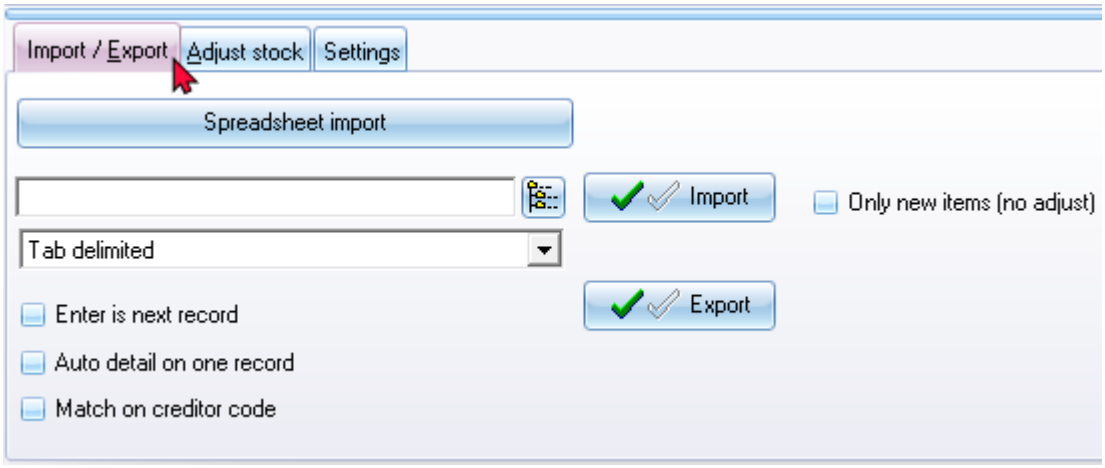
Import / Export tab

The Import / Export tab on the on the Stock item list screen will only be available when the mode in set to Default. In the Advanced mode is not selected, the Import / Export tab will not be displayed.

The stock item screen may also be launched as a floating screen from the Input → Adjust stock menu on the Default ribbon.



The options, is as follows:

1. Spreadsheet import -
    - Spreadsheet export - You may export stock items and save it as a "*Excel Workbook (*.xlsx) file type.*
    - Spreadsheet import - You may import stock items from a saved "*Excel Workbook (*.xlsx) file type.*
2. Export - Create an Export file in the "*Tab delimited (*.txt)*" (default - recommended).

    Stock items may also be exported in Export - Stock items (Setup ribbon).

3. Import - Import a valid file exported via the Import option.

    Stock items may also be imported from Import - Stock items (Setup ribbon).

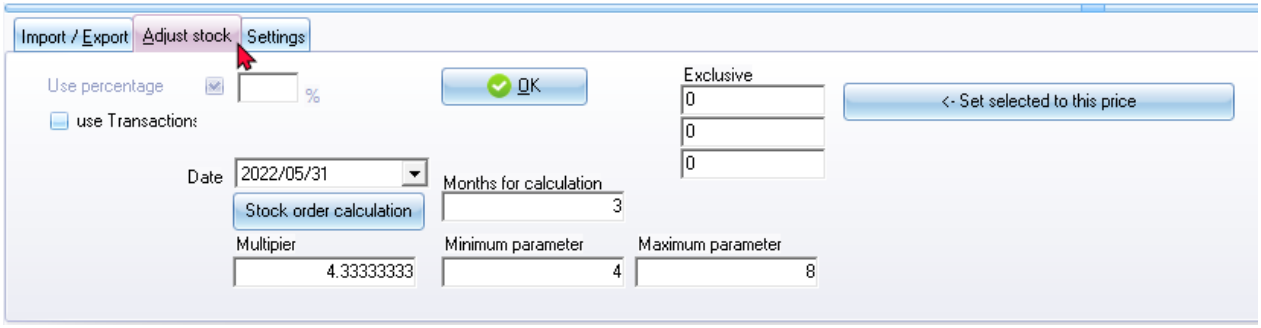
4. Enter is next record - To be advised.
5. Auto detail on one record - To be advised.
6. Match on creditor code - To be advised.

Created with the Standard Edition of HelpNDoc: News and information about help authoring tools and software

Adjust stock tab

The Adjust stock tab on the on the Stock item list screen will only be available when the mode in set to Default. In the Advanced mode is not selected, the Adjust stock tab will not be displayed.

The stock item screen may also be launched as a floating screen from the Input → Adjust stock menu on the Default ribbon.



To adjust selling prices for all stock items:

1. Select the first stock item from the list.
2. The percentage in the "*Use percentage*" field, is inactive.
3. Use transactions - To be advised.
4. Enter or select the date ("*Date*" field).
5. Click on the OK button. All selling prices will automatically be adjusted by the specified percentage.

To adjust specified selling prices for stock items:

1. Select the stock item from the list.
2. Enter the selling prices 1 / 2 and 3 in the "*Exclusive*" field.
3. Enter or select the date ("*Date*" field).
4. Click on the <-Set selected to this price button. A confirmation message will be displayed.

   "Edit price?"

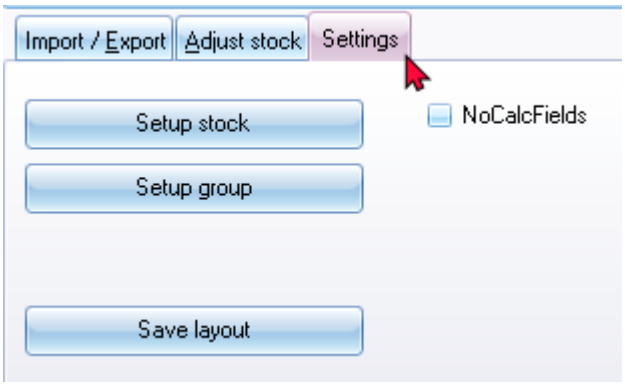
5. Click on the Yes button, if you need to change the selling prices.

Created with the Standard Edition of HelpNDoc: Free iPhone documentation generator

Settings tab

The Settings tab on the on the Stock item list screen will only be available when the mode in set to Default mode. If the Advanced mode is not selected, the Settings tab will not be displayed.

The stock item screen may also be launched as a floating screen from the Input → Adjust stock menu on the Default ribbon.



The Settings tab allows quick access to the following options:

1. Setup stock – This will launch the Stock information screen. On this screen, you may set the units of stock, change the selling price descriptions, set the default selling price. Cost of sales parameters may also be set for the Default (Trading stock) stock item type. You may also configure document processing options.

2. Setup group – This will launch the "*Groups*" screen (Groups on the Setup ribbon). On this screen, you may add Reporting groups (i.e. Stock group 1 and/or Stock group 2). These may be used to search and filter your stock items and to print reports.

3. NoCalcFields - No calculation of fields. This option is by default selected (ticked). It this option is not selected (tick removed), it will change the values of certain fields.

4. Save layout - This button will save the "*Stock items*" list screen grid layout.

To save your column preferences, you may click on the Save layout on the Settings tab in the Advanced mode. Your view and grid layout preferences will be available when you close active forms or close and reopen the Set of Books and access Stock items again.

Created with the Standard Edition of HelpNDoc: What is a Help Authoring tool?

Show / Hide columns

To save your column preferences, you may click on the Save layout on the Settings tab in the Advanced mode. Your view and grid layout preferences will be available when you close active forms or close and reopen the Set of Books and access Stock items again.

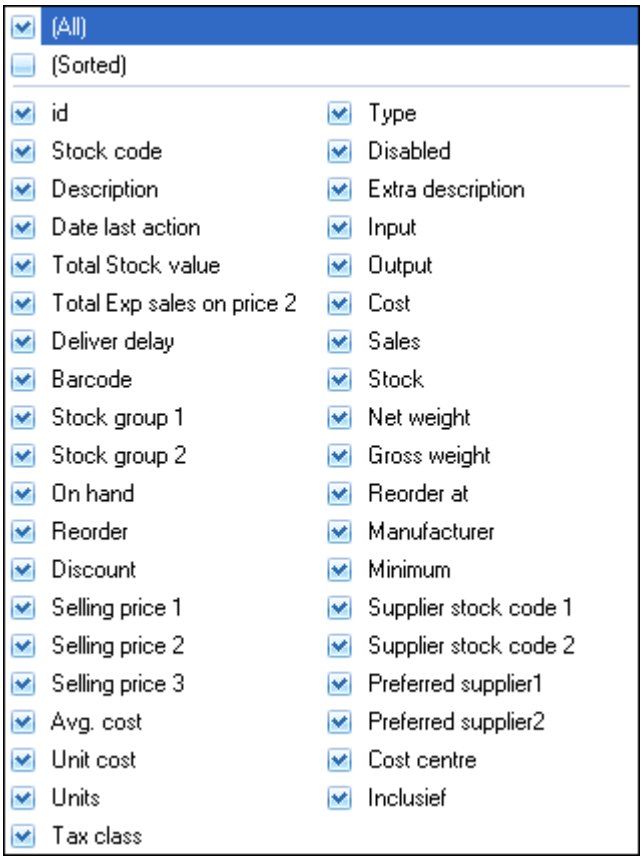
By default, all thirty-nine (39) columns will be displayed and listed in the Stock item list screen for each stock item type.

The data in columns is grouped in to three (3) bands:

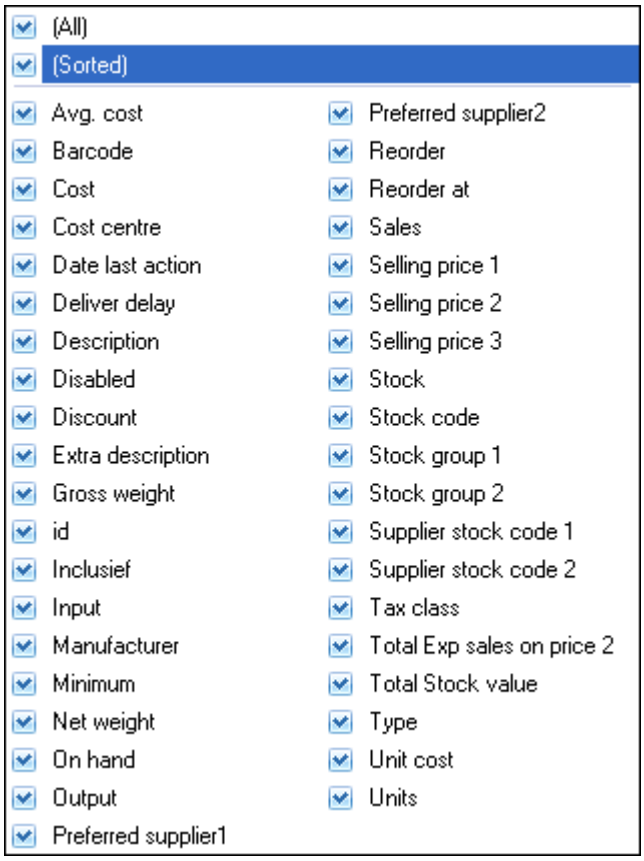
1. Left - Lists the id (stock record id), Stock code, Description, Date last action, Total stock value, Total Expected sales on price 2, and delivery delay.

2. Data - Barcode, Stock group 1, Stock group 2, On hand, Reorder, Avg. cost, Unit cost, Discount, Selling price 1, Selling price 2, Selling price 3, Units, Tax class, Type, Disabled, Extra description, Input (tax account code), Output (tax account code), Cost (Cost of sales account code), Sales (account code), Stock (account code), Net weight, Gross weight, Reorder at, Manufacturer, Minimum Salesperson, Supplier stock code 1, Supplier stock code 2, Preferred supplier 1, Preferred supplier 2 and Cost centre.

Default



Sorted (selected) - Alphabetical list



3. Right - This band is by default blank. You may drag any column or columns from the Left band or the Data band to the Right band.

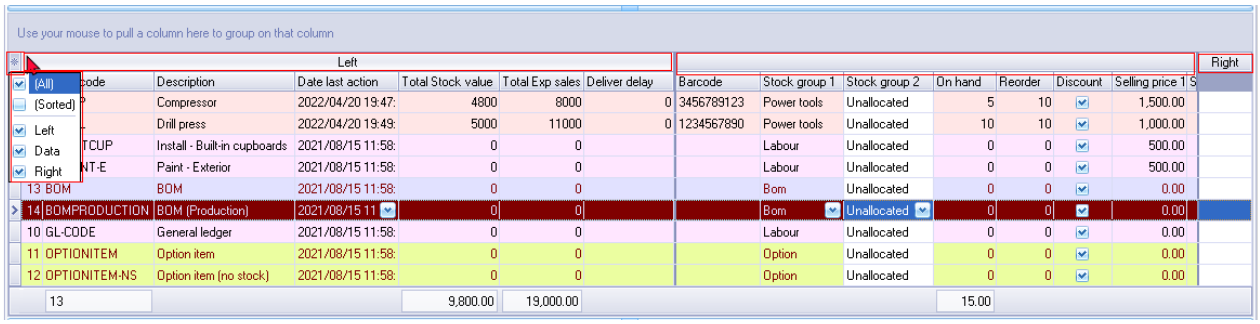
You may drag and drop any of the columns on the left band to the right band and the columns from the right band to the left band, to customise the grid for your requirements.

Hide / Show bands

Left band - Remove the tick in the first tick box. This will hide the id (stock record id), Stock code, Description, Date last action, Total stock value, Total Expected sales on price 2, and delivery delay columns.

Data band - Remove the tick in the second tick box. This will hide all columns in the data band.

Right band - Remove the tick in the third tick box. This will hide all columns in the right band (if any columns were dragged to the right band).



The column headings are grouped into three (3) bands:

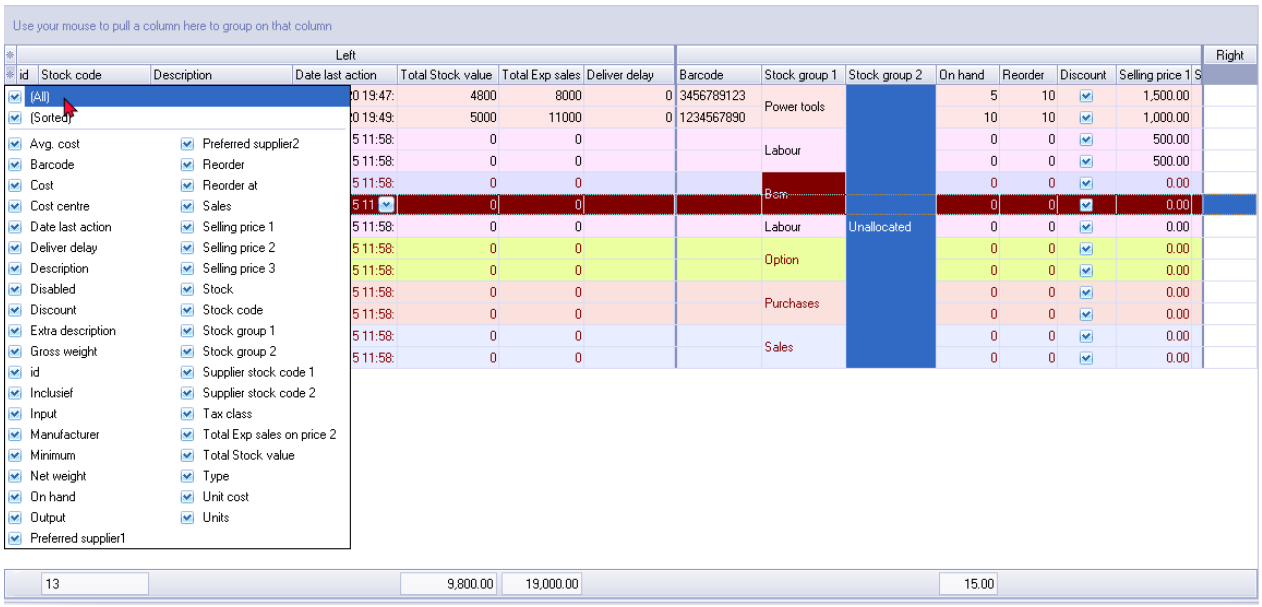
- *Left - Click on a column and drag the column to the desired position.*
- *Data - You may also drag it to the right band or to the left band.*
- *Right - By default this band is empty. Any number of columns can be dragged to that band.*

Hide / Show columns

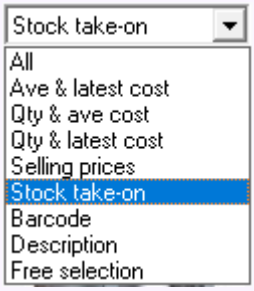
Click on the second block - Column headings - A list of the fields will be listed.

Remove the ticks for the columns to hide or select the columns you need to display.

You may use the Up arrows and/or the Down arrows Right or Left arrows keys to navigate the fields. You may use the Space bar to deselect (remove the tick) or to reselect (tick a field again).

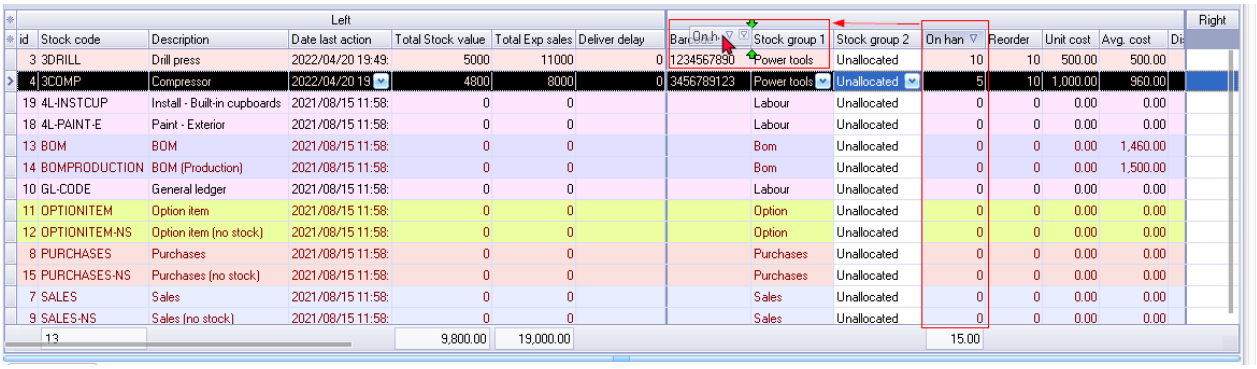


You may change sequence in which the data in the columns is displayed by selecting one of the following options on the Update type:



Drag columns

Click on a column heading and drag it to the right or to the left to change the sequence in which the columns need to be displayed.



Created with the Standard Edition of HelpNDoc: Enhance Your Documentation with HelpNDoc's Advanced Project Analyzer

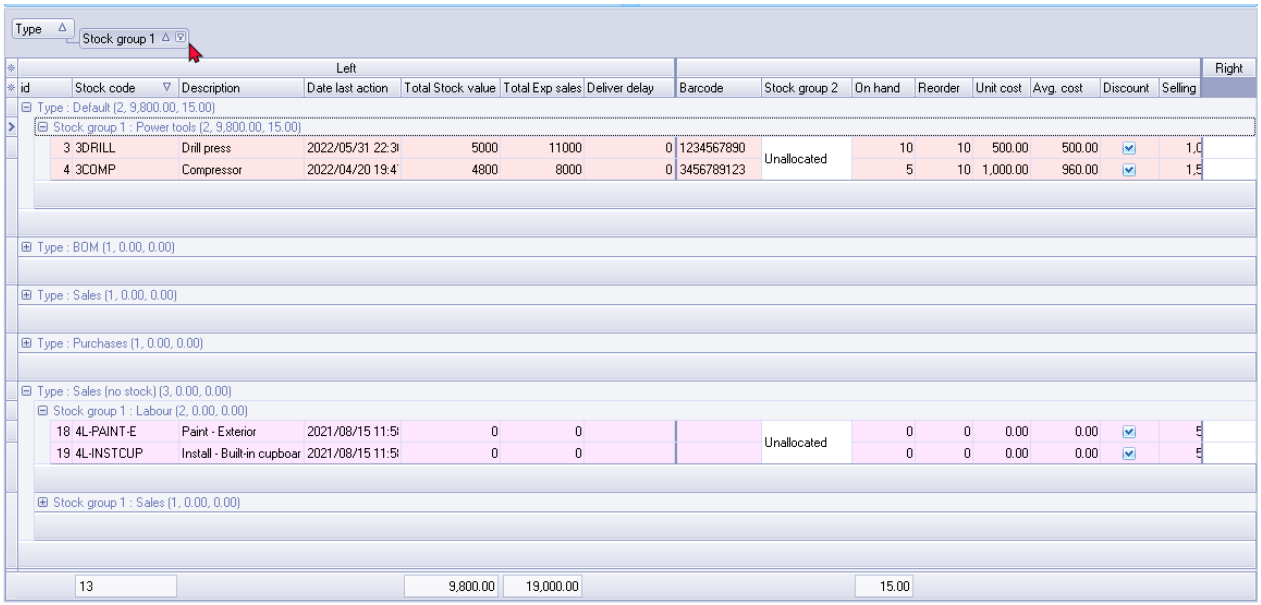
Group columns

If the “*Single line mode*” option is not selected (tick removed), a column header "*Use your mouse to pull a column here to group on that column*" will be displayed and the similar data in columns can be grouped.

Group columns

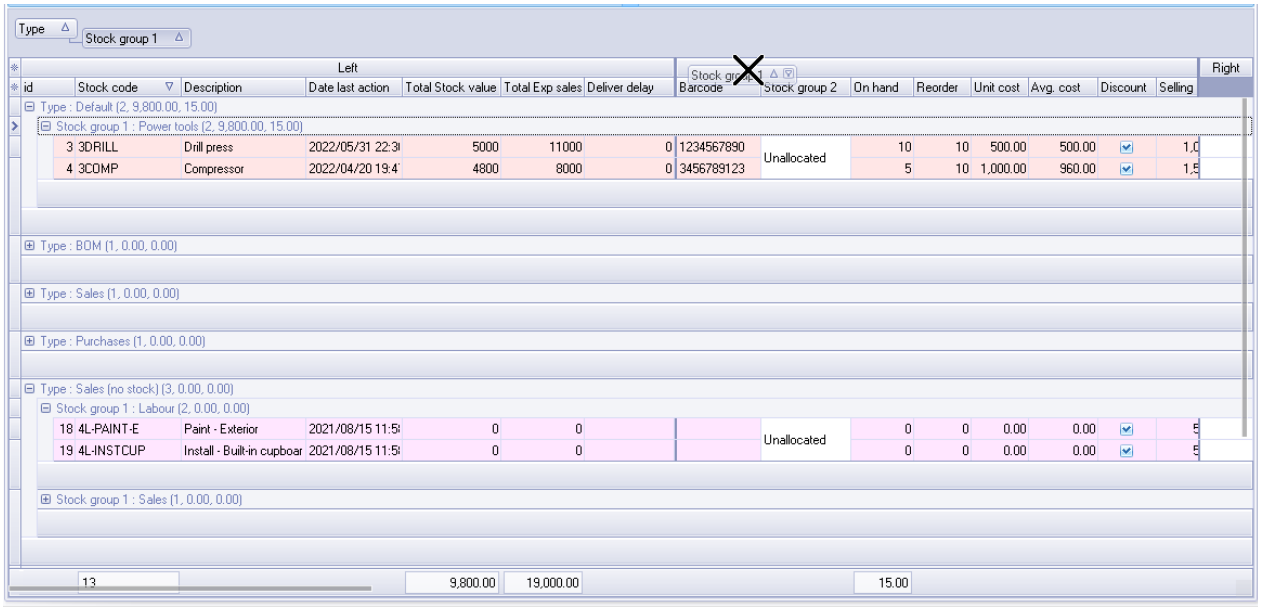
Select a column and click on it. While holding the mouse button down, drag it to the column header bar "*Use your mouse to pull a column here to group on that column*". Select any other column to drag and drop it on column header bar. You may select as many columns, as necessary, to group your data.

You may also drag and drop these columns to the right or left to change the grouping of these columns.



Remove grouped columns

To remove a column from column header bar "*Use your mouse to pull a column here to group on that column*", you may use the following two (2) options:



1. Select the column heading (e.g., “*Stock group 1*”) on column header bar "*Use your mouse to pull a column here to group on that column*", and drag it to the first line (above the column headings). When the mouse pointer change to a big X, drop it. The column will automatically be placed in the correct default sequence (or the place of the previous grid layout).
2. If you wish to change the column to a specific place, select the column heading (e.g., “*Stock group 1*”) on column header bar "*Use your mouse to pull a column here to group on that column*", and drag it to the second line (column headings). When you drop it, the column will be added to the selected position or sequence of the columns.

Print single item (context menu)

Prints directly to default printer and not to the Reportman preview screen.

In this example, the system's default printer is set to "*Microsoft print to PDF*" where you need to enter a file name to save the file print as "*PDF Document (*pdf)*" file type on the " *Save Print Output As*" screen.

Report button

Prints the report for all stock items.

Created with the Standard Edition of HelpNDoc: 5 Reasons Why a Help Authoring Tool is Better than Microsoft Word for Documentation

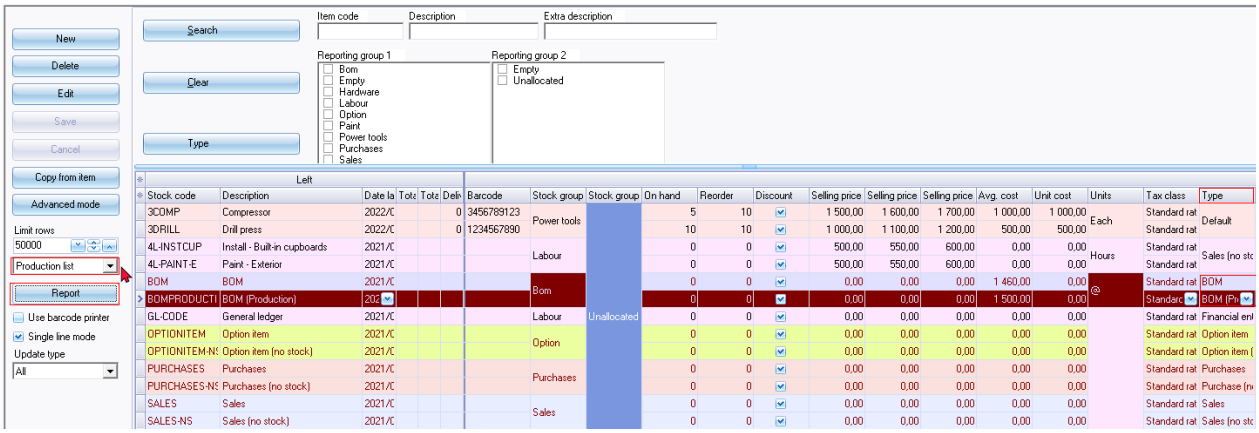
Print single item - Production list

Production list - Stock grid reports

Production list report lists the transactions of all items (other stock item types) linked to the BOM and BOM (Production) stock item type on the BOM tab.

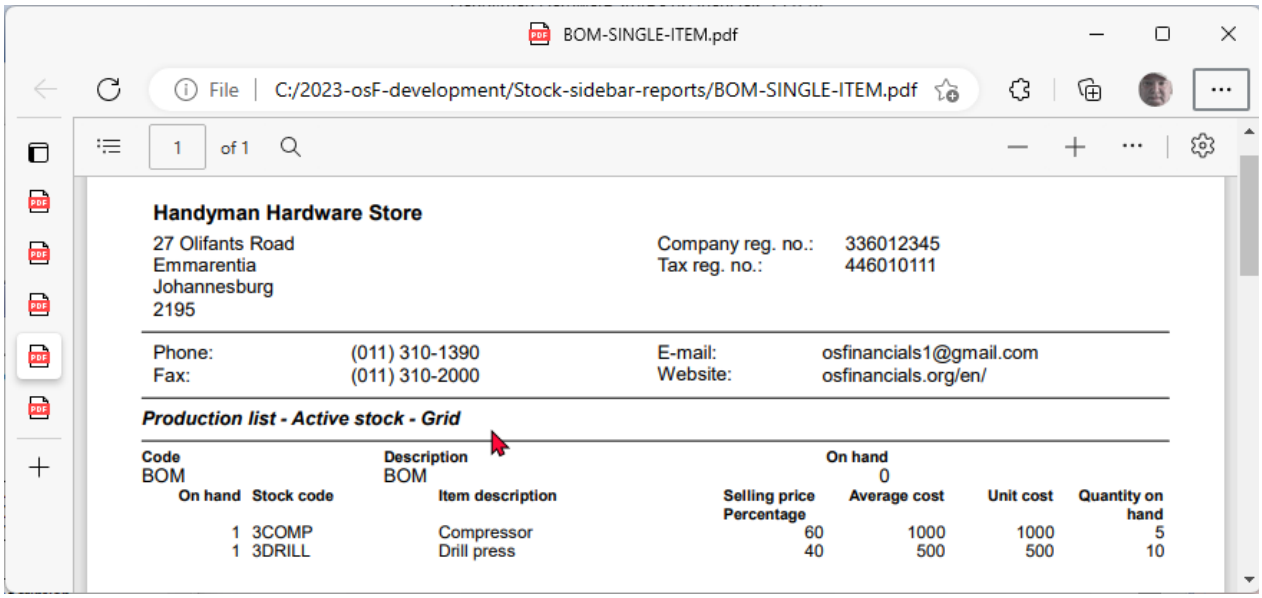
This report will only list the active stock items. Disabled (inactive) stock items will be excluded from this report.

Production list options



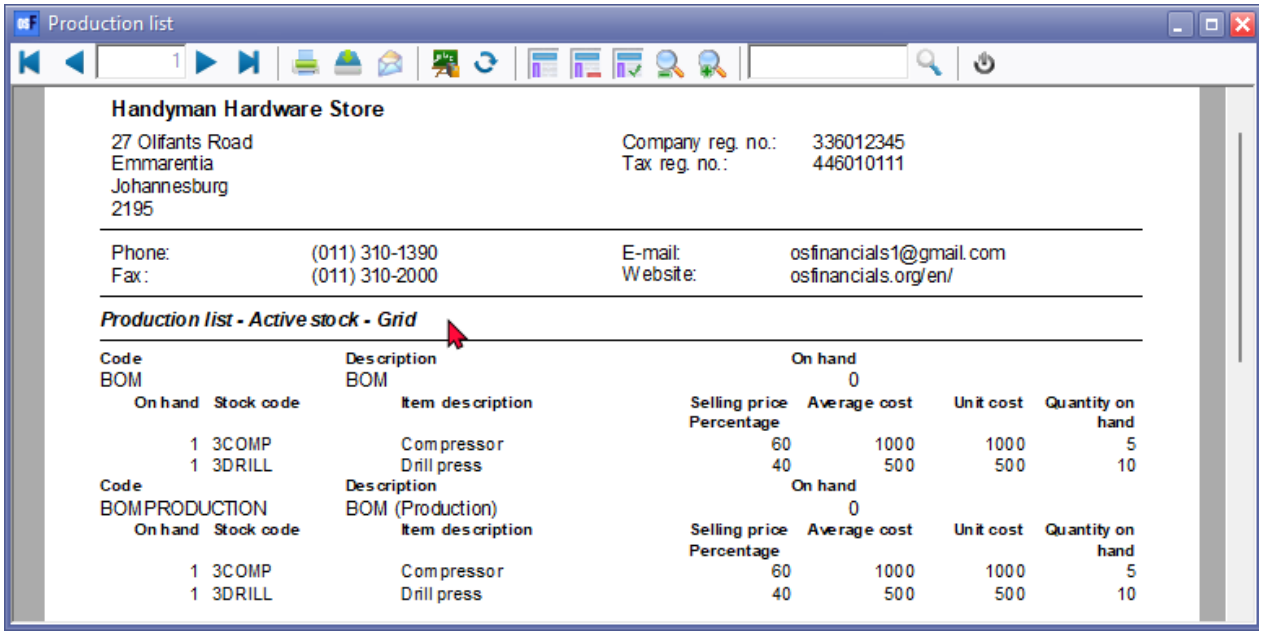
Print singe item (context menu)

The Print singe item (context menu option) will only print the selected Stock item, if the Stock item type is BOM and BOM (Production).



Report button

The report will print all active Stock items for the BOM and BOM (Production) stock item types.



Created with the Standard Edition of HelpNDoc: Easy Qt Help documentation editor

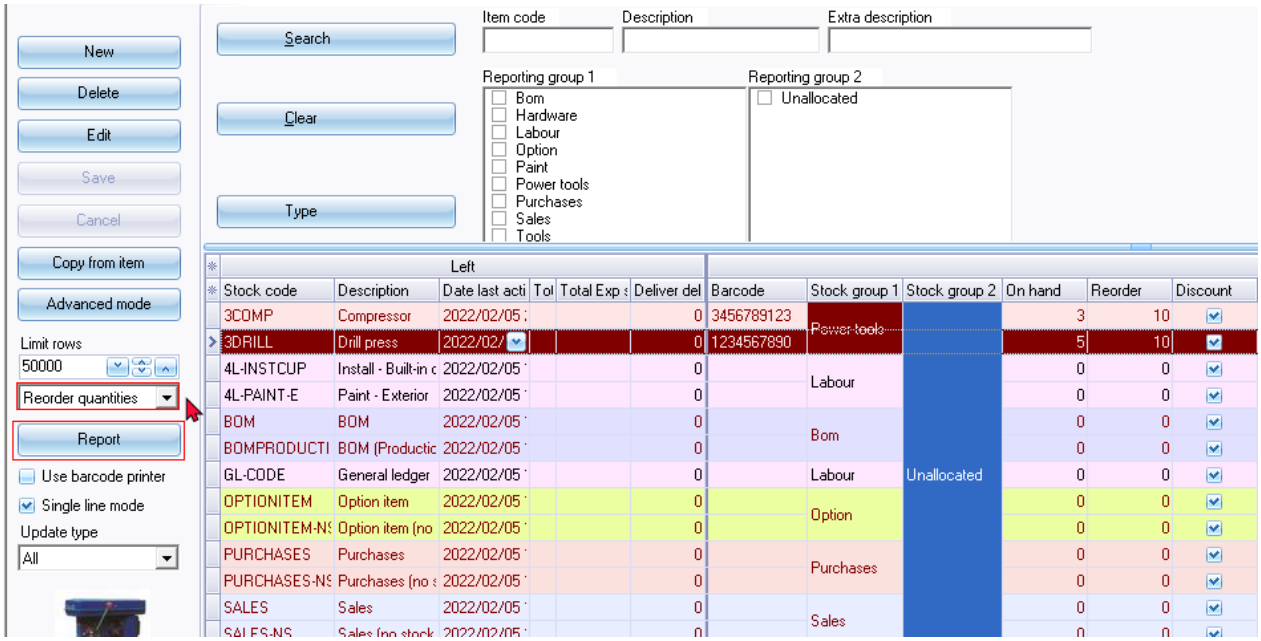
Print single item - Reorder quantities

Reorder quantities - Stock grid reports

The "*Reorder quantities*" report will list the Stock code, Stock description, Quantity on hand, Unposted Invoices/Purchases, Reorder level and quantity to order for each stock item.

You may select the "Reorder report" or the "Current stock levels" report on the Reports → Stock → Reorder menu (Reports ribbon). You may select a specific stock item or a range of stock items; or all stock items linked to a specific Stock reporting group 1.

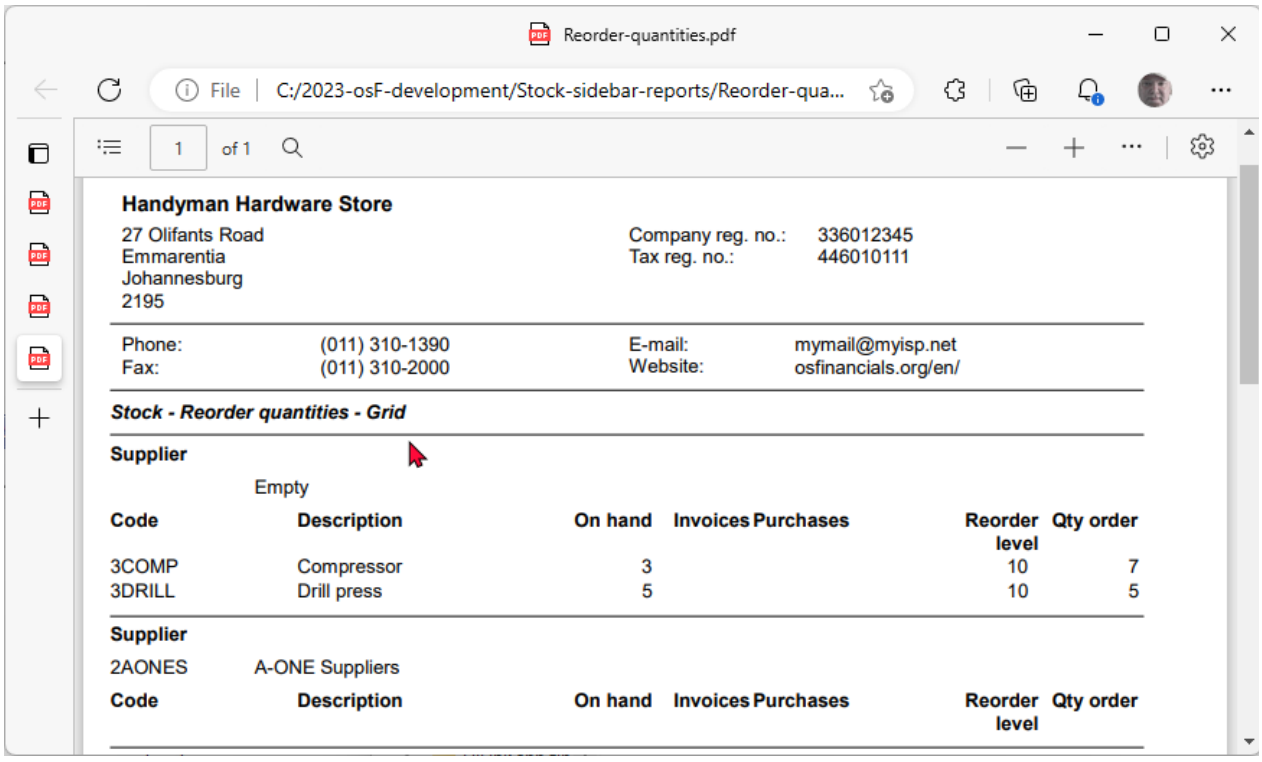
Reorder quantities options



Print single item (context menu)

Prints directly to default printer and not to the Reportman preview screen.

In this example, the system's default printer is set to "*Microsoft print to PDF*" where you need to enter a file name to save the file print as "*PDF Document (*pdf)*" file type on the " *Save Print Output As*" screen.



Report button

Prints the report for all stock items.

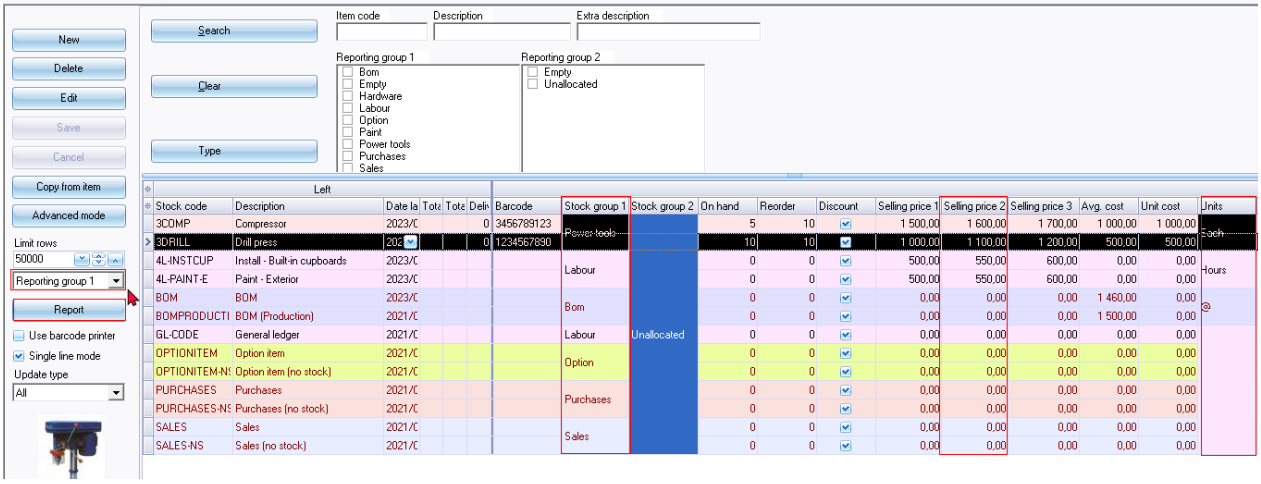
Print single item - Reporting group 1

Reporting group 1 - Stock grid reports

The Reporting group 1 for stock items, will list the Stock code, Stock description, Quantity on hand as well as Selling price 2 for each stock item. These stock items will be grouped and listed for each Stock reporting group 1 and the Unit description.

You may select the "All Selling prices" or the "Stock item listing" report on the Reports → Stock → Stock item listing menu (Reports ribbon) to print all three (3) selling prices. You may select a specific stock item or a range of stock items; or all stock items linked to a specific Stock reporting group 1.

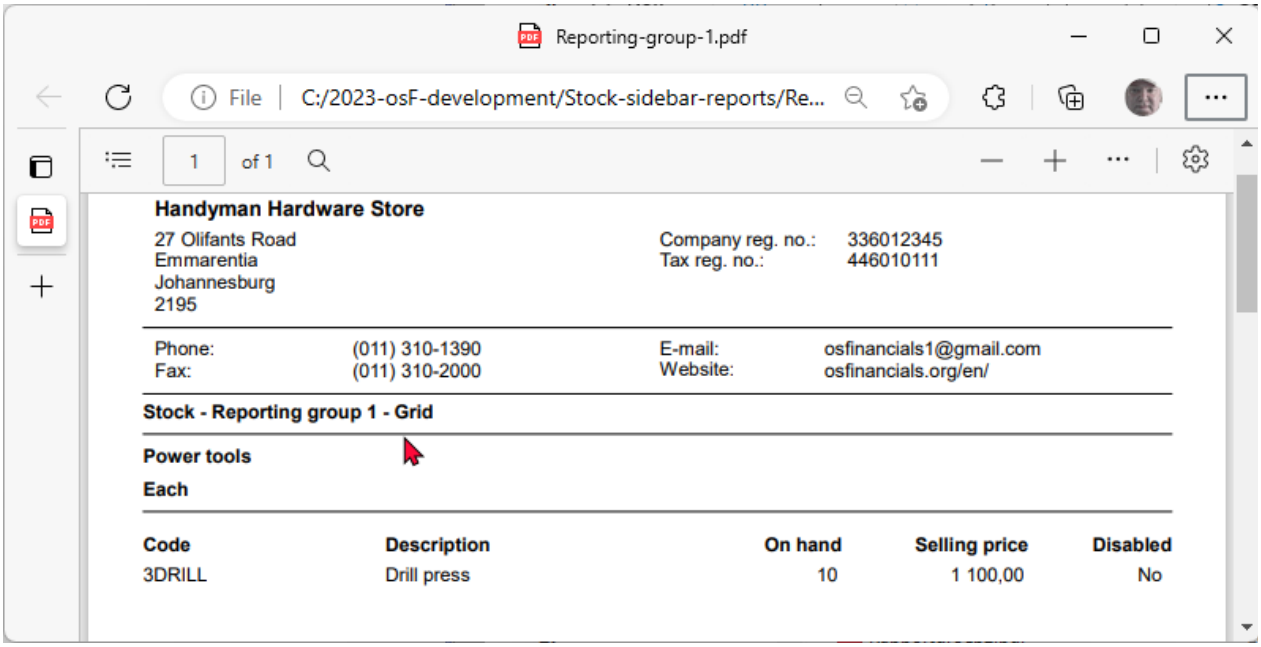
Reporting group 1 options



Print single item (context menu)

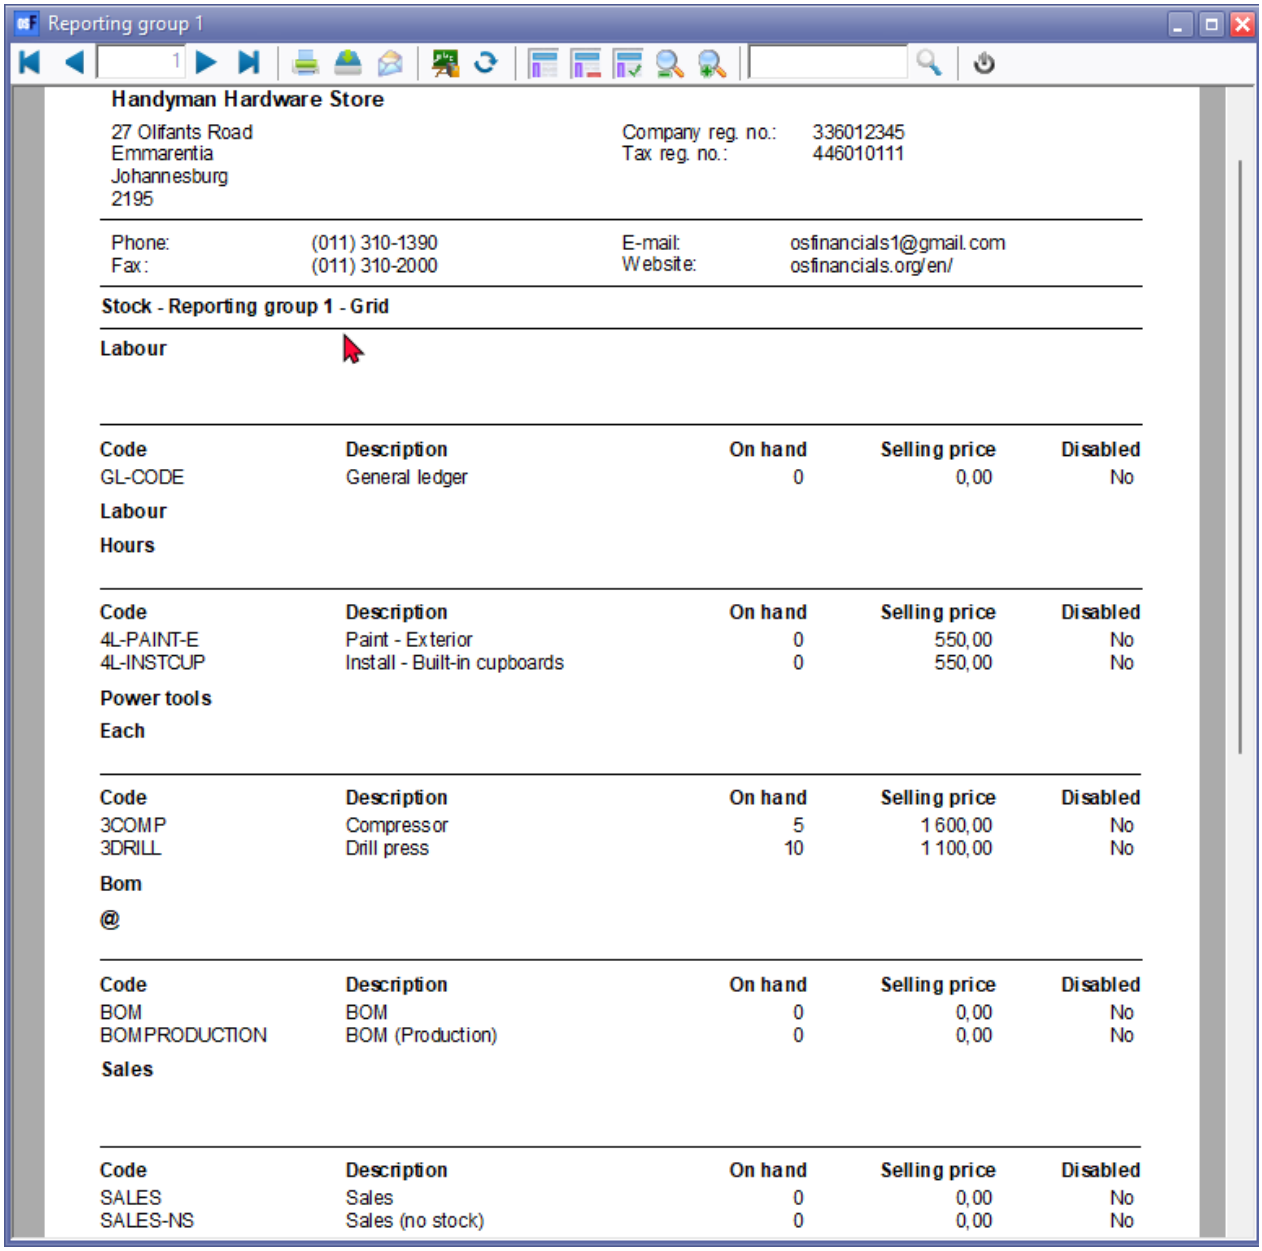
Prints directly to default printer and not to the Reportman preview screen.

In this example, the system's default printer is set to "*Microsoft print to PDF*" where you need to enter a file name to save the file print as "*PDF Document (*pdf)*" file type on the " *Save Print Output As*" screen.



Report button

Prints the report for all stock items.



Created with the Standard Edition of HelpNDoc: Maximize Your Documentation Output with HelpNDoc's Advanced Project Analyzer

Print single item - Reporting group 2

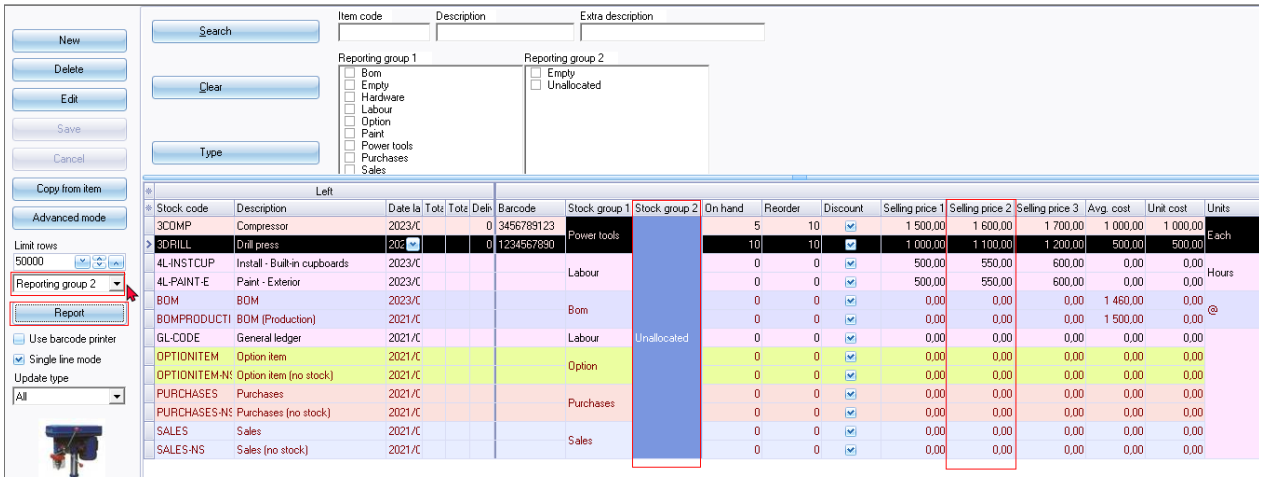
Reporting group 2 - Stock grid reports

The Reporting group 2 for stock items, will list the Stock code, Stock description, Quantity on hand as well as Selling price 2 for each stock item. These stock items will be grouped and listed for each Stock

reporting group 1 and the Unit description.

You may select the "All Selling prices" or the "Stock item listing" report on the Reports → Stock → Stock item listing menu (Reports ribbon) to print all three (3) selling prices. You may select a specific stock item or a range of stock items.

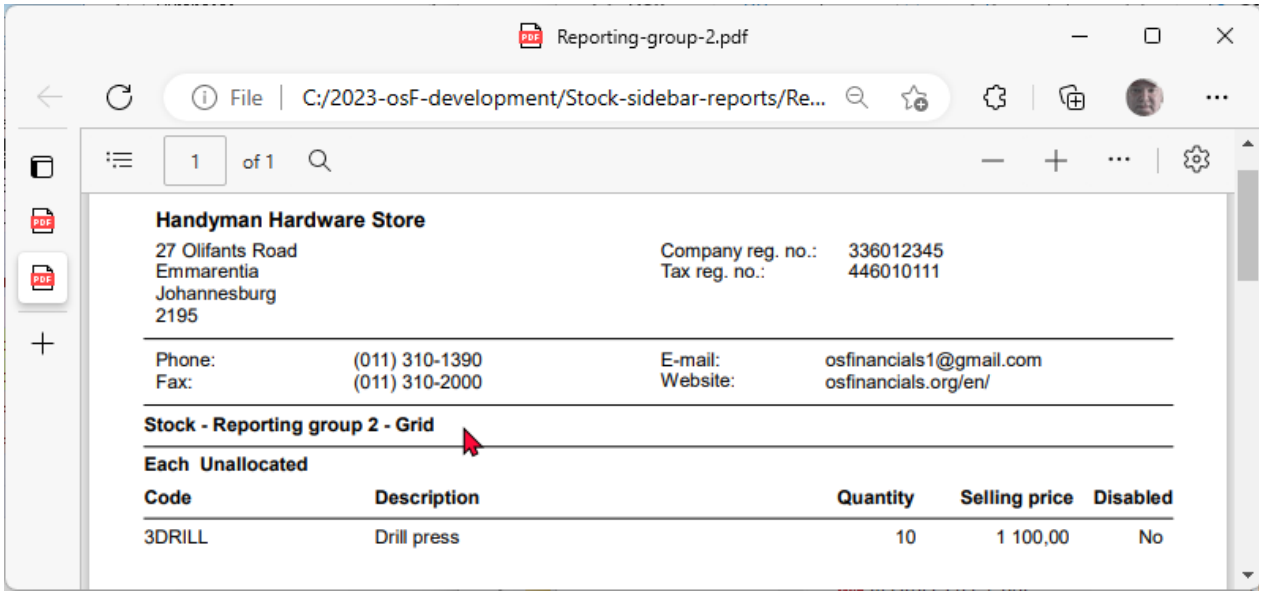
Reporting group 2 options



Print single item (context menu)

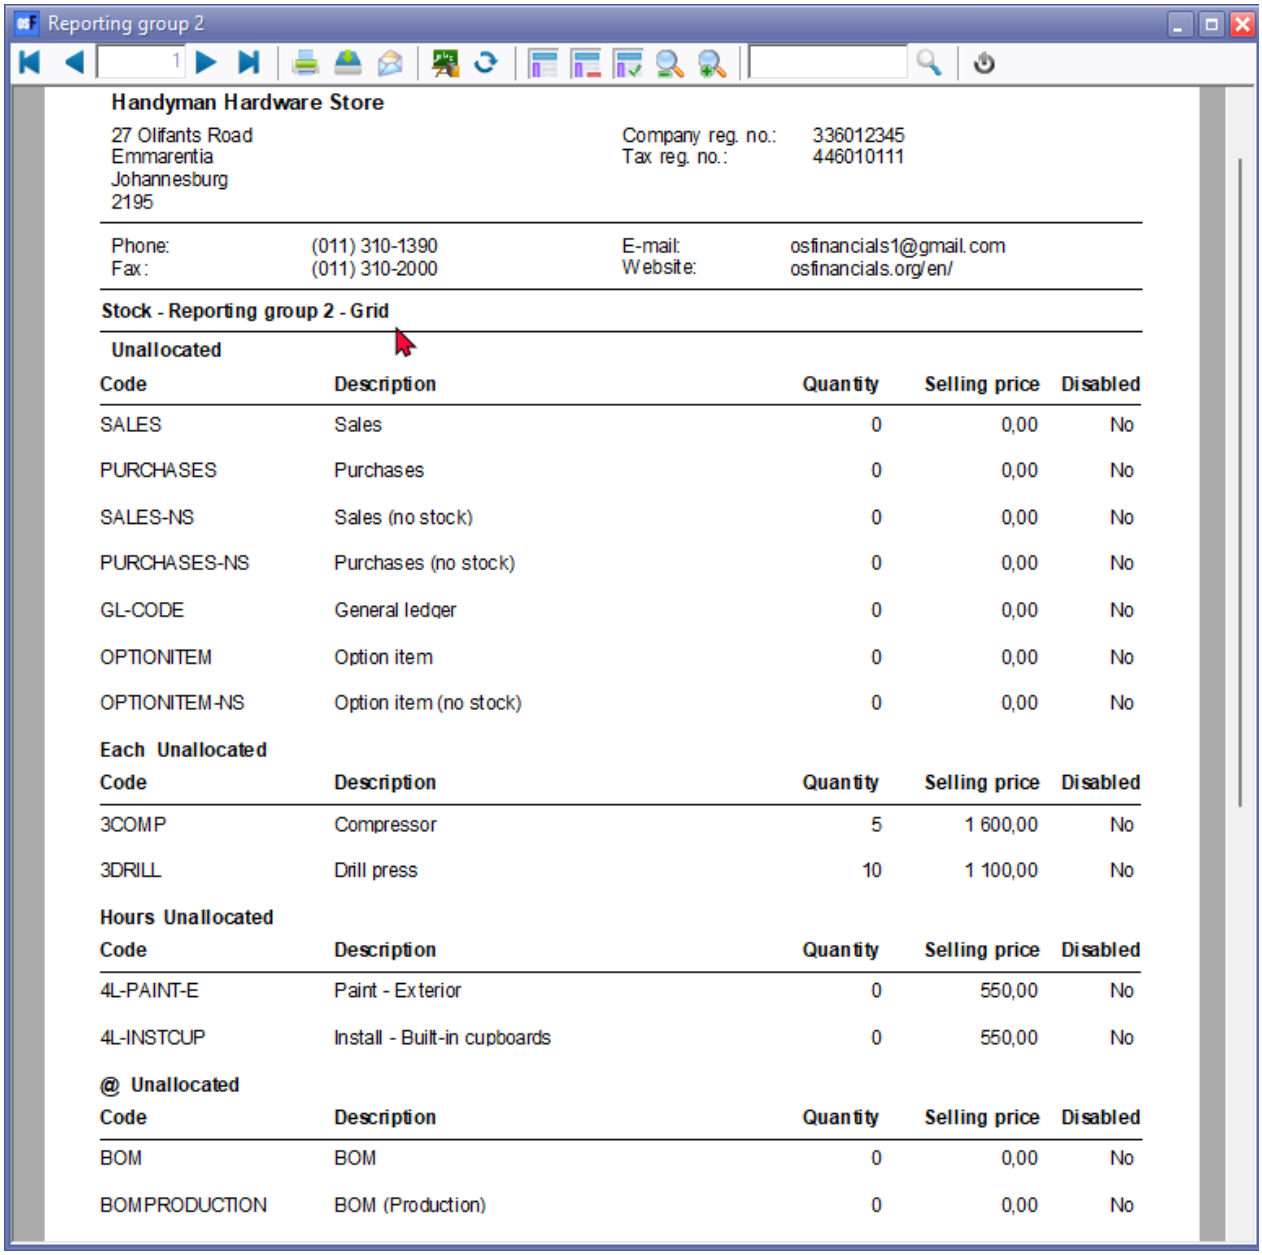
Prints directly to default printer and not to the Reportman preview screen.

In this example, the system's default printer is set to "*Microsoft print to PDF*" where you need to enter a file name to save the file print as "*PDF Document (*pdf)*" file type on the " *Save Print Output As*" screen.



Report button

Prints the report for all stock items.



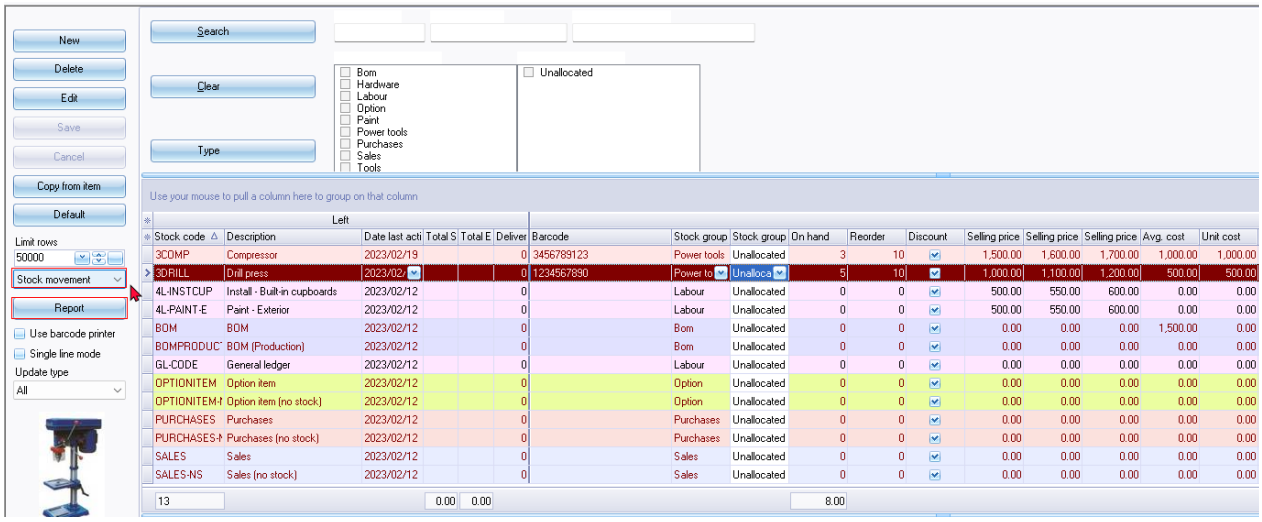
Created with the Standard Edition of HelpNDoc: Produce Kindle eBooks easily

Print single item - Stock movement

Stock movement - Stock grid reports

The "*Stock movement*" report will list the Stock code, Stock description, Quantities and Average cost for a selected stock item.

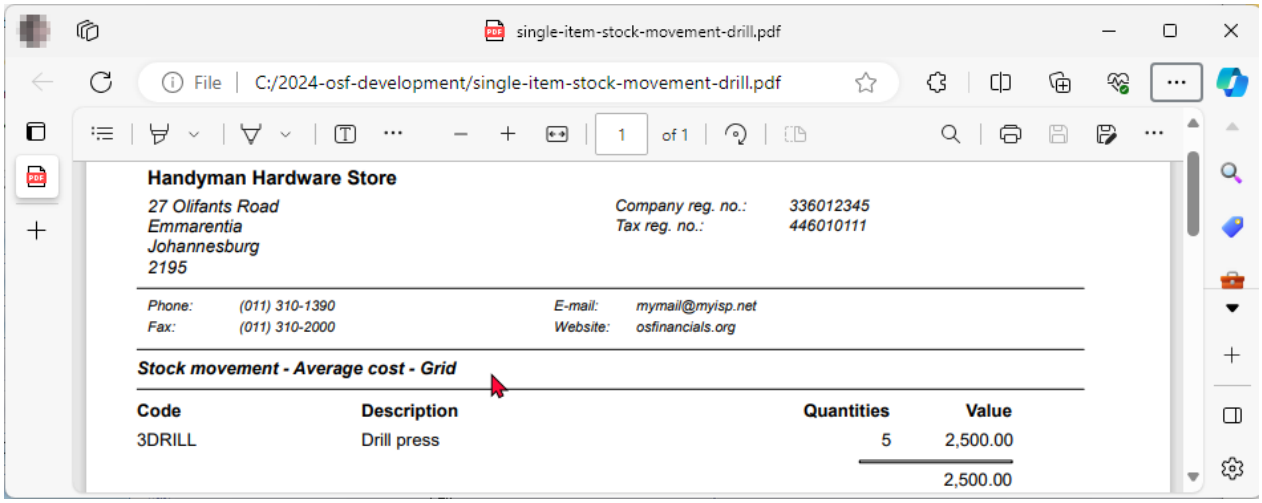
Stock movement options



Stock movement (context menu)

Prints directly to default printer and not to the Reportman preview screen.

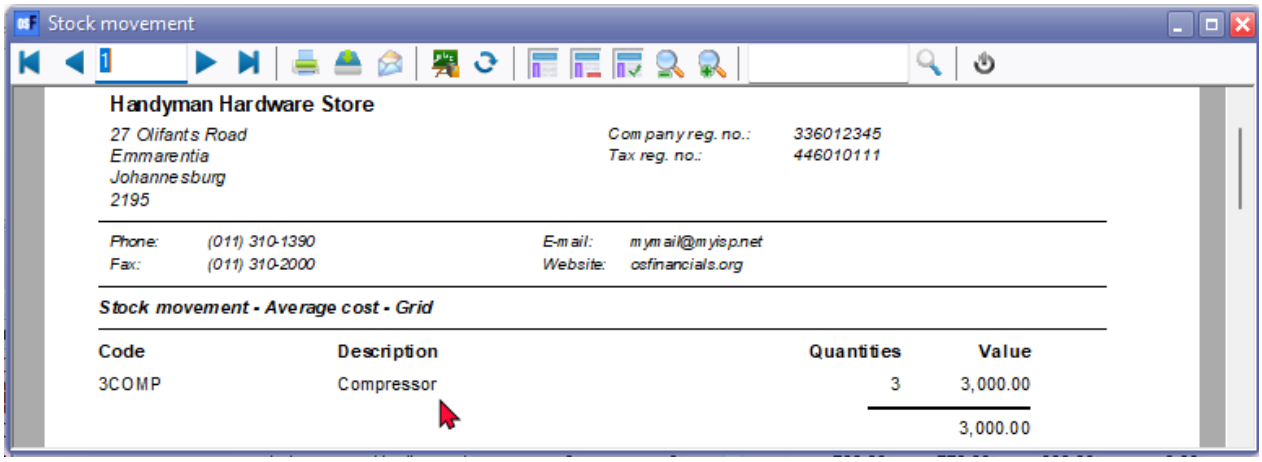
In this example, the system's default printer is set to "*Microsoft print to PDF*" where you need to enter a file name to save the file print as "*PDF Document (*pdf)*" file type on the " *Save Print Output As*" screen.



Report button

Irrespective of the stock item selected on the stock grid, it always prints the first available stock item on the list.

In this example, the first item on the stock grid (i.e. "*Compressor*" is printed while the "*Drill press*" is selected.



Created with the Standard Edition of HelpNDoc: Easily create EBooks

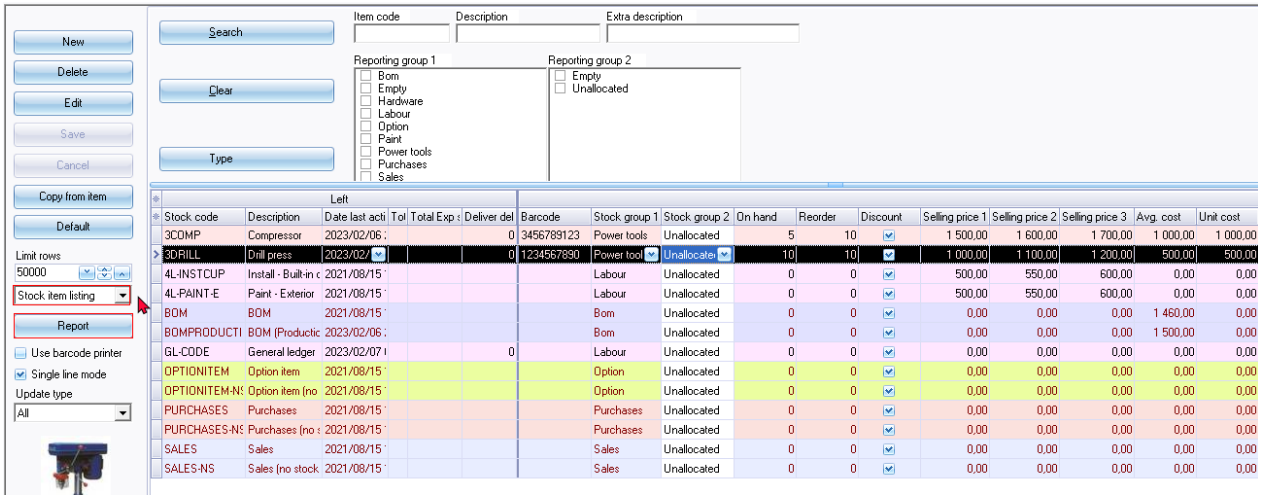
Print single item - Stock item listing

Stock item listing - Stock grid reports

The "*Stock item* listing" report, will list the Stock code, Stock description, Quantity on hand, the Unit description and the total value for each stock item. All active (enabled) Stock items as well as inactive (disabled) Stock items will be listed.

You may select the "Stock item listing" report on the Reports → Stock → Stock item listing menu (Reports ribbon). You can choose to print a report for a specific stock item or a range of stock items. You can also filter the report to include only stock items that are linked to selected stock groups for stock group 1.

Stock item listing options



Stock item listing (context menu)

Prints directly to default printer and not to the Reportman preview screen.

In this example, the system's default printer is set to "*Microsoft print to PDF*" where you need to enter a file name to save the file print as "*PDF Document (*pdf)*" file type on the " *Save Print Output As*" screen.

Created with the Standard Edition of HelpNDoc: Effortlessly Create High-Quality Help Documentation with a Help Authoring Tool

Set Stock reporting group 1/2

You may change the Stock group 1 and/or Stock group 2 for selected stock item(s).

To change the Stock group 1 or Stock group 2:

1. On the Default ribbon, select Stock items. Select the stock item(s), right-click on Stock group 1 or Stock group 2 context menu.

2. Select empty or the available Stock group from the sub-menu. The Stock group 1 or 2 will change on the reports.

Created with the Standard Edition of HelpNDoc: Easily create Qt Help files

Copy / Paste

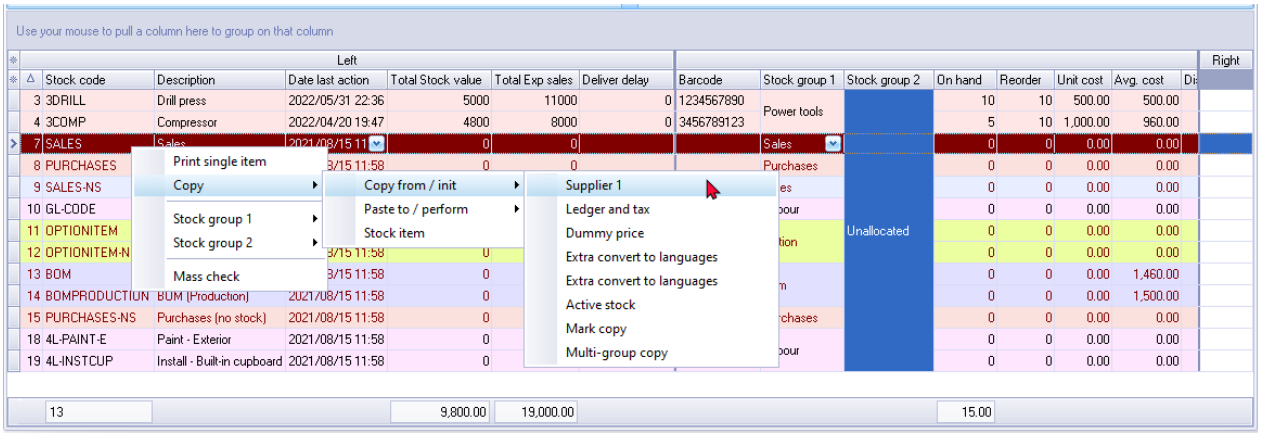
You may copy the specific data of a selected stock item and paste (replace) the data of selected stock item(s).

To copy and paste data from a stock item to other stock item(s):

1. On the Default ribbon, select Stock items.
2. Select the stock item, from which you need to copy data.
3. Right-click and select the "*Copy from / init*" (initiate) option on the context menu.
4. Select the stock item(s) to which you wish to paste the data.

> *If you need to select multiple stock items, press the Ctrl or Shift key and click on each stock item, for which you need to paste (replace) the selected data.*

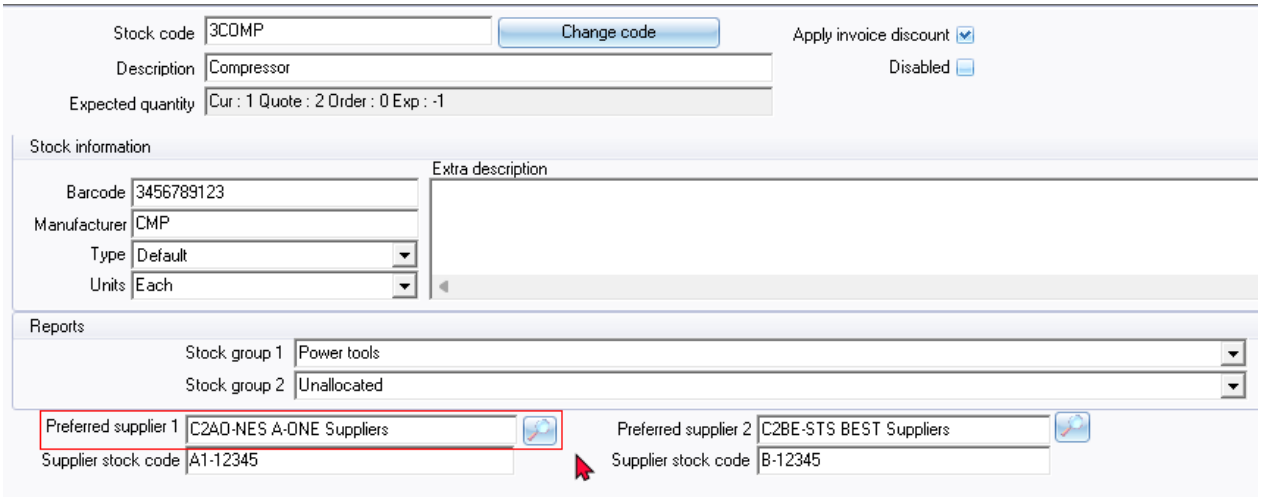
5. Right-click and select the "*Paste to / init*" (initiate) option on the context menu.



> *Stock item - This option is another option to the Copy from item button. This will launch a new Stock item edit form with the data of the selected source stock item. You need to enter a stock code and edit the copied stock item, where necessary.*

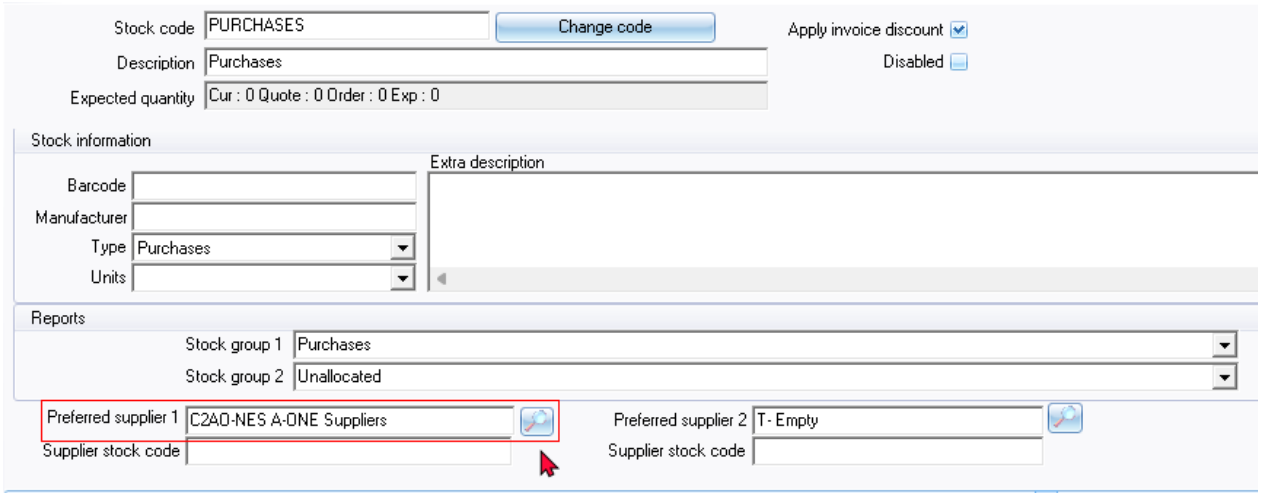
Copy / Paste Supplier 1

The preferred supplier 1 account as selected on the selected source stock item will be copied to (replace) the "*Preferred supplier 1*" field of the selected stock item(s).



When the "*Paste to / init*" (initiate) option on the context menu, is selected, A confirmation message will be displayed:

> Replace old data for &Supplier 1?



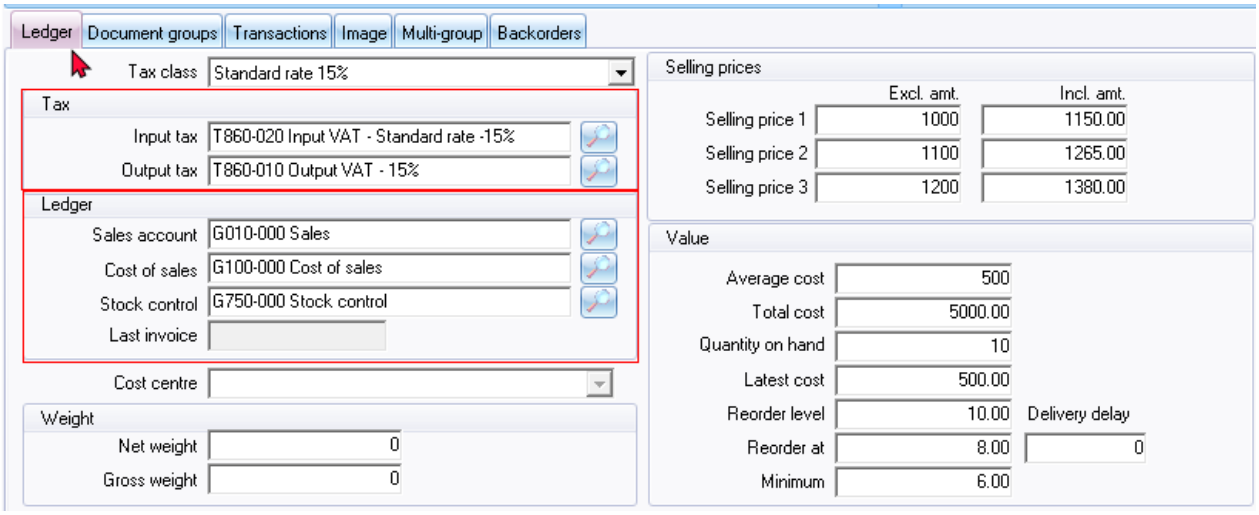
The Supplier stock code for preferred supplier 1 will not be copied (replaced).

Copy / Paste Ledger and Tax

The Tax class, Tax (Input tax and Output tax) and Ledger (Sales account, Cost of sales and Stock control) accounts as set on the Ledger tab of the selected source stock item will be copied to (replace) the Tax class and Input tax Output tax and Ledger accounts of the selected stock item(s).

When the "*Paste to / init*" (initiate) option on the context menu, is selected, a confirmation message is displayed:

> Replace old data for &Ledger and tax?

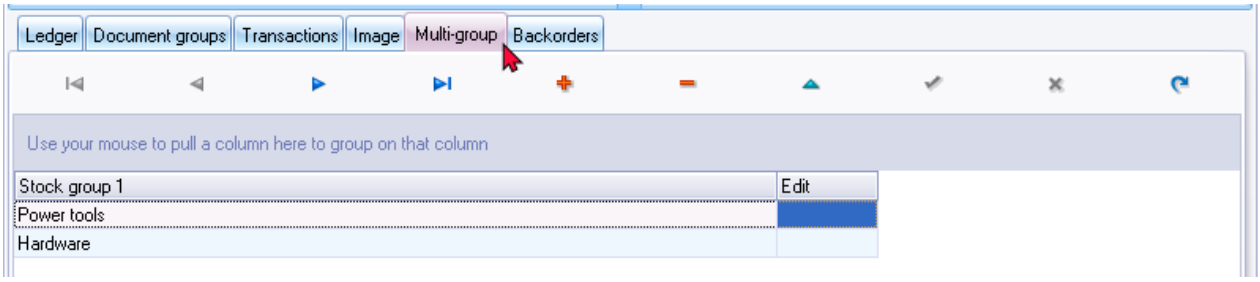


Copy / Paste Multi-group

The reporting groups as set on the Multi-group tab of the selected source stock item will be copied to (replace) the groups of the selected stock item(s).

When the "*Paste to / init*" (initiate) option on the context menu, is selected, a confirmation message is displayed:

> Replace old data for M&ulti-group copy?



Copy / Paste Active stock

To be advised.

When the "*Paste to / init*" (initiate) option on the context menu, is selected, a confirmation message is displayed:

> Replace old data for &Active stock?

Extra convert to languages

To be advised.

For this option, the Languages needs to be added in Groups (Setup ribbon). These languages can be selected in the "*Language*" field on Access control (Standard security tab) on the Setup ribbon. It will add a Languages tab on the Stock items (Default ribbon).

When the "*Paste to / init*" (initiate) option on the context menu, is selected, a confirmation message is displayed:

```
Replace old data for &Extra convert to languages?
```

Dummy price

Copy Dummy price produce the following SQL error:

```
Dynamic SQL Error
SQL error code = -204
Table unknown
STOCK_EXTRADATA
At line 1, column 39
Select FDUMMYQTY from STOCK_EXTRADATA where WStockid = 4
```

Mark copy

Copy Mark copy produce the following SQL error:

```

Mass check

This option will run a check on all stock items.

This process may take some time.

To do a mass check on stock items:

1. On the Default ribbon, select Stock items.
2. Select "*Mass check*" option on the context menu.
3. The stock item form will be automatically opened and closed for each stock item.
4. When the mass check process is finished, a confirmation message is displayed:

   "Check finished:"

5. Click OK.

Created with the Standard Edition of HelpNDoc: Streamline Your Documentation Process with HelpNDoc's Project Analyzer

Copy from a Stock item

This option will open a Stock screen with the necessary data from a selected Stock item. Before you can create the new Stock item with the copied data, you need to at least enter a Stock code and Save it. You may enter and/or select the options for the blank fields, as necessary. If necessary you may also edit or change any of the copied data.

The data that will be copied from a selected Stock item, may depend on the on the Stock item type.

To create a new stock item - Copy from item:

1. On the Default ribbon, select Stock items (F12).
2. Select the Stock item from the list.
3. Make absolutely sure that it is the correct Stock item to be copied.

To view more details of the selected Stock item, you may:

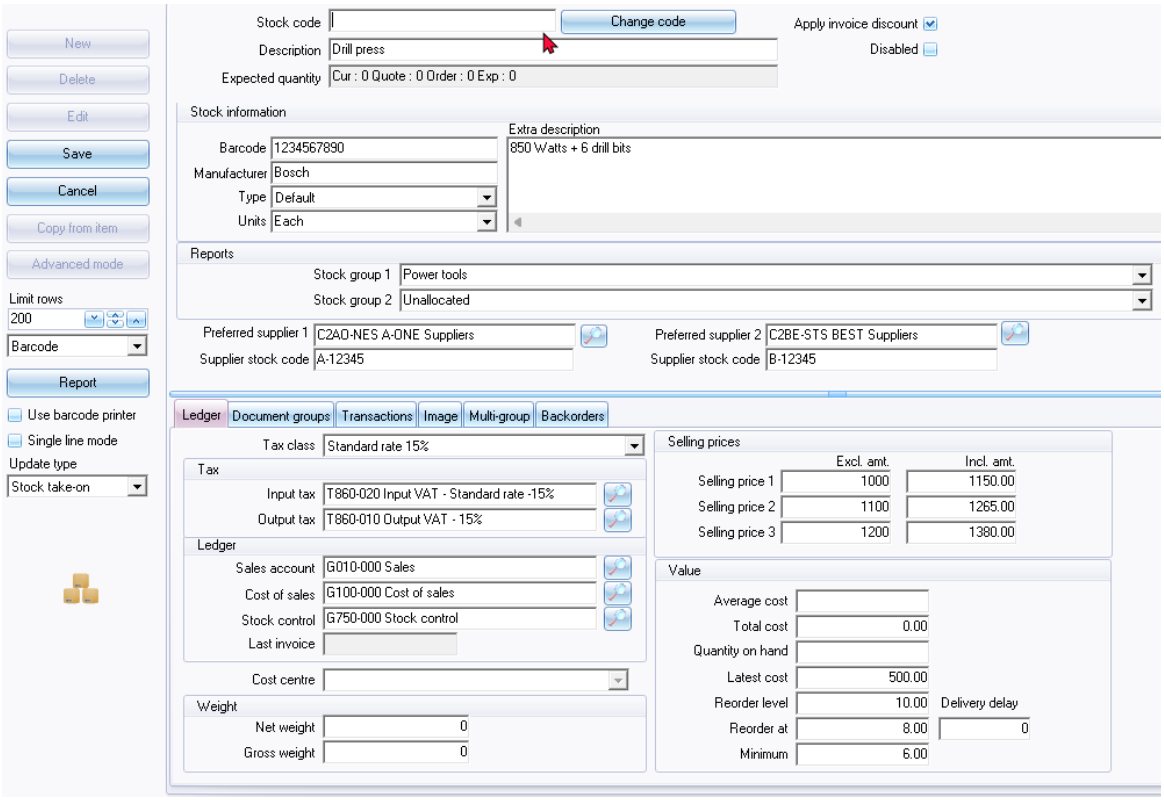
- *Click on the Edit button - or double-click on the selected stock item.*

- *Use the horizontal scroll bar to view the data of the selected stock items in columns.*

4. Click on the Copy from item button.

You may right-click and select the Copy → Stock item from the context menu.

The Stock item screen with basically all the data from the selected Stock item screen will be displayed as follows:



5. Enter the new Stock code.

6. Enter the necessary details in the fields, as required. You may also edit the copied data, where necessary.

7. Click on the Save button to save this stock item.

It copy the following fields :

- *Stock description*
- *Barcode*
- *Manufacturer*

- *Extra description*
- *Expected quantity (values will be set to 0 (zero)*
- *Type (You need to select the stock item type)*
- *Units*
- *Apply invoice discount (tick)*
- *Stock group 1*
- *Stock group 2*
- *Preferred supplier 1 account and stock code.*
- *Preferred supplier 2 account and stock code.*
- *Ledger*
    - *Tax classes (Sales account / Cost of sales account / Stock control account)*
    - *Weight (Net and Gross)*
    - *Selling prices 1/2/3*
    - *Latest cost*
    - *Reorder level*
    - *Reorder at*
    - *Minimum*

What it does not copy:

- *Stock code*
- *Ledger*
    - *Average cost*
    - *Total cost*
    - *Quantity on hand*
    - *Last invoice*
- *Document groups*

- *Transactions*
- *Image (does not copy the correct image but the default image)*
- *Multigroup*
- *Descriptions (Language) (copies the groups but not the Descriptions and the text).*

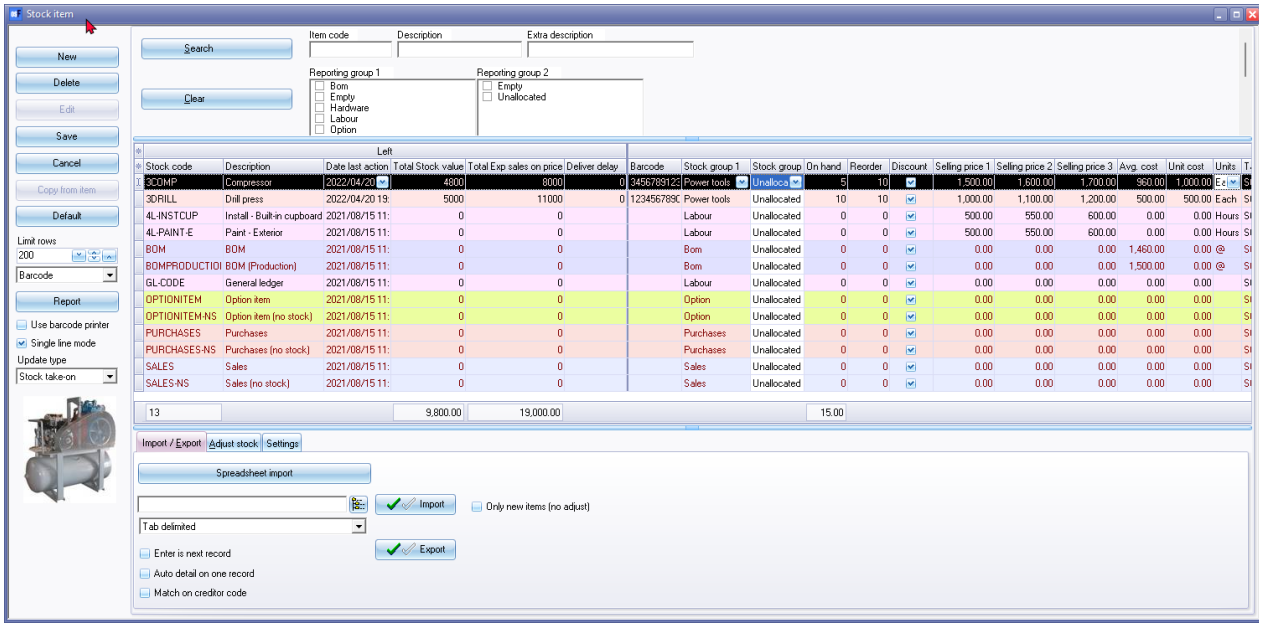
Adjust stock menu

The stock item screen may also be launched from Stock items on the Default ribbon.

To access the Stock item - Adjustments:

1. On the Default ribbon, select Input → Adjust stock. The "*Stock item*" floating screen is displayed:



Created with the Standard Edition of HelpNDoc: From Word to ePub or Kindle eBook: A Comprehensive Guide

Stock items edit form

The stock entry form is basically similar for all stock items (inventory items) for all stock item types. Depending on the selected stock item type, some fields on the Ledger tab, may be disabled and some fields may be hidden.

For some stock item types, additional tabs may be added, e.g. Option items, BOM and Linked items.

When you process documents, you need to select a stock item.

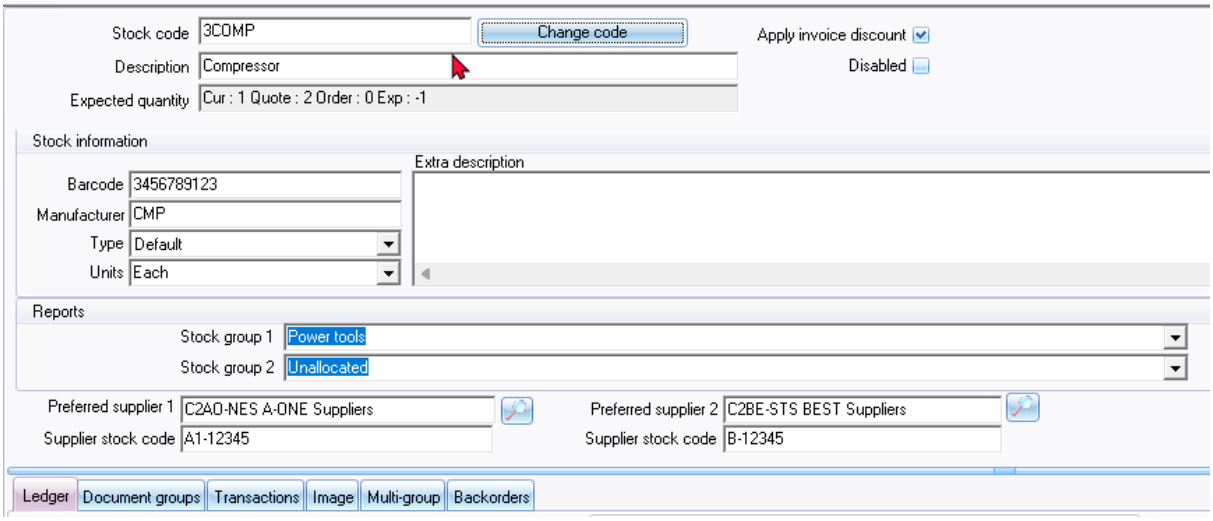
The document type for Sales documents (Quotes, Invoices and Credit notes) and for Purchase documents (Orders, Purchases and Supplier returns) will list only specific stock item types in the stock item lookup.

To edit stock items:

1. On the Default ribbon, select Stock items (F12).

2. Select a stock item and click on the Edit button.

> *You may also double click on a selected stock item to open the stock item form.*



3. Enter and select the following:

   a) Stock code - Enter any code for your purchase stock item. You may enter a stock code of up to 15 characters.

   > *You need to plan the Stock item codes to optimise this facility in .*

   b) Description - Enter a description for the purchase stock item.

c) Barcode - Enter the barcode, if applicable.

> *The EAN13 Barcode validates for 13 numbers (the last number is a checksum number). If the Barcode is incorrect, the labels will not be printed.*

d) Manufacturer - You may enter any additional information or description of the manufacturer (e.g. the name of the manufacturer). This is optional.

e) Type - Default is the default stock item type.

> *The default stock item type is recommended for trading stock. If it is not trading stock, you may select one of the following stock types:*
>
> - *Financial entry*
> - *Sales*
> - *Sales (no stock)*
> - *Purchases*
> - *Purchases (no stock)*
>
> *In addition to the above-mentioned stock types, you may also select the following stock types:*
>
> - *Options*
> - *Option item*
> - *Option item (no stock)*
> - *Bill of Materials (BOM)*
> - *BOM*
> - *BOM (Production)*
> - *Linked Sale*

> *Once a transaction has been processed for a stock item, this field will be disabled.*

f) Unit size - Leave blank or select any unit e.g. each, hours, boxes, etc., which you wish to be displayed on your purchase documents. These Units of your Stock items such as: each, hours, boxes, etc., are setup in Setup →Stock information.

g) Disabled - By default, all Stock items are active (enabled) when Stock items are created or edited. Select this field if you (or any of your salespersons) do not want to process any documents for a Service Stock item. Select this field to hide the Stock item from the Stock item lookup when processing new documents. This will speed up document processing.

You will still be able to update (post) any unposted documents, which include transactions for the disabled Stock item, to the ledger.

You may select the disabled Stock items on the Stock item lookup when generating Stock, Sales analysis and Purchase analysis reports and view the transactions of disabled Stock items.

You may de-select this field at any stage, when necessary to continue processing documents for the Stock item.

h) Apply invoice discount - Do not select. This is applicable to debtor (customer / client) accounts, as the percentage customer discount is specified on the Accounting information tab - Default → Debtors.

i) Extra description - You may enter any additional information or description (up to 255 characters) for the stock item, as necessary. This is optional.

j) Reports - Groups 1 / 2 - The reporting group to which you wish this Stock item to be allocated.

The description of Stock group 1 or 2 you have entered on the "Reporting group name" field on the Stock groups tab on Setup → Groups may be reflected in this list.

k) Preferred supplier 1 - The main creditor (supplier / vendor) you purchase stock items from, may be selected. You may enter the supplier's stock code, if applicable.

l) Preferred supplier 2 - If you have a backup or alternative supplier, you may select the creditor (supplier / vendor) and enter the supplier's stock code, if applicable.

4. Click on the Ledger tab, if not already displayed.

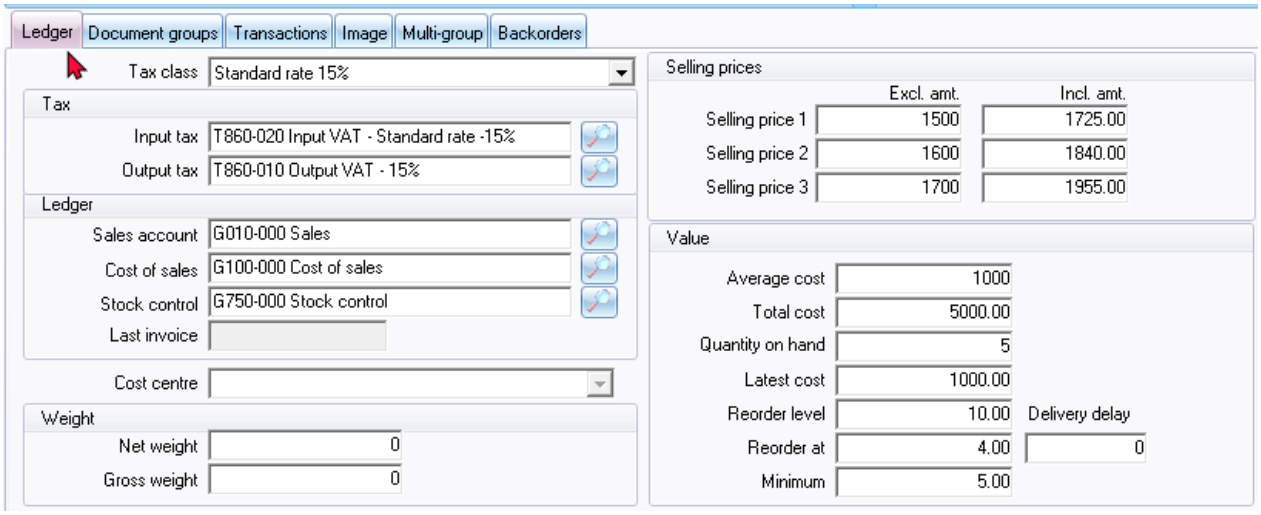
Created with the Standard Edition of HelpNDoc: Full-featured EPub generator

Stock items - Ledger tab

The Ledger tab is used to link the stock item (inventory item) to accounts, specify sales prices and values (costs and number of items).

The Ledger tab, is the default tab when selecting a stock item (inventory item).

Click on the Ledger tab, if not already displayed.



The options, is as follows:

1. Tax

    a) Output Tax - Select the Output VAT/GST/Sales Tax account which you will use for your Sales.

    b) Input Tax - Select the Input VAT/GST/Sales Tax account which you will use for your Purchases. If this is a Zero-rated Stock item which is exempted from VAT/GST/Sales Tax, select the Input Zero Rated Tax Code.

> *If you are not registered for VAT/GST/Sales Tax, or if VAT/GST/Sales Tax is not applicable to this purchase item, select the "Empty" option as the "No Tax" code and this field will be blank.*

> *You may activate the Use default tax - Stock file override settings on the Creditors (Accounting information tab (Default ribbon)) for a Creditor (supplier / vendor) account, and select a different VAT/GST/Sales Tax account or code on the Tax lookup facility for that creditor (supplier / vendor).*
>
> *When purchase documents or supplier returns documents for the creditor (supplier / vendor) is updated (posted) to the ledger, the selected Input Tax account for this Stock item will be ignored and the purchase transaction will be updated (posted) to the specified Input Tax account for the creditor (supplier / vendor).*

2. Weight

    c) Gross weight -

    d) Net weight -

3. Ledger

    a) Sales - Select the applicable Purchase account from the lookup.

    If you have more than one Sales account, or use Sub-accounts, you may select the applicable Account or Sub-account for each of your Stock items.

    b) Cost of sales - Select the applicable Purchase account from the lookup.

    If you have more than one Cost of sales account, or use Sub-accounts, you may select the applicable Account or Sub-account for each of your Stock items.

    c) Stock control - Select the Stock control account from the lookup. This may be an Expense account, for example, stationery, if stationery is purchased.

    If you have more than one Purchase account, or use Sub-accounts, you need to select the applicable Account or Sub-account for the Purchase Item.

    You may activate the Use default account - Stock file override settings on the Creditors (Accounting information tab (Default ribbon)) for a Creditor (supplier / vendor) account, and select a different account on the Tax lookup facility for that creditor (supplier / vendor).

    When purchase documents or supplier returns documents for the creditor (supplier / vendor) is updated (posted) to the ledger, the selected Stock control and Cost of sales account for this Stock item will be ignored and the purchase transaction will be updated (posted) to the specified Input Tax account for the creditor (supplier / vendor).

    d) Last invoice - Field inactive. The date of the last purchase or other document generated on which the Stock item was selected. This field will not display any date if it is a new item, or if no Stock items have been selected on any documents.

4. Values

e) Average cost - Field inactive. The average cost price of your Stock item cannot be entered at this stage. When you process purchases, the Average cost Price will be automatically updated.

f) Total cost - Field inactive. The total cost price of your Stock item cannot be entered at this stage. When you process purchases, the Total cost price will be automatically updated.

g) Latest cost - The latest cost price of your Stock item can now be entered. When you process purchases, the Latest cost Price will be automatically updated.

> *Once you have created your new Stock items, you may enter the cost prices and quantities in the Stock take-on option of Stock items (Default ribbon) (or the Adjust stock tab of the Stock item selection screen), if you have any Stock item records on a previous accounting system.*

h) Quantity on hand - The quantity, or number of Stock items on hand, can be entered at this stage. When do the stock take-on (for trading stock - default stock item type), or process purchases, the quantities will be automatically updated.

i) Reorder level - Enter the reorder quantity level.

j) Reorder at - Enter the quantity level when you need to reorder.

k) Minimum - Enter the minimum quantity of stock items on hand before reordering.

l) Delivery delay - To be advised.

5. Click on the Save button to save this stock item.

Created with the Standard Edition of HelpNDoc: Easy CHM and documentation editor

Stock items - Document groups tab

This will list all sales documents (i.e. Invoices, Point-of-Sale Invoices, Credit notes and Quotes) as well as any purchase documents (Purchases, Supplier returns and Orders) on which the stock item was selected.

These will only include documents, which have been updated (posted) to the ledger. Only Quotes which have been converted to Invoices and Orders which have been converted to Purchase documents, will be listed.

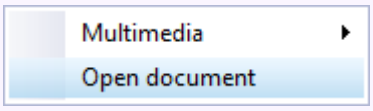
The document numbers for Invoices, Credit notes, Quotes, Purchases, Supplier returns and Orders, as prefixed in the Documents setup (Setup ribbon), makes it easy to identify the document type.

In addition to these standard document numbers, the following documents may be included:

- *Stock adjustments - Document numbers prefixed with "ST" is a 7-digit document number. These are automatically generated when doing stock adjustments (changes in the quantities on hand). These stock adjustments does not show any transactions and it prints a blank Posted batch type reports.*
- *BOM (Production) stock type - Assemble / Disassemble context menu options - Document numbers prefixed with"SA" will be a 7-digit number.*
- *Project Quote - Document numbers prefixed with"D" will be a 7-digit number.*

You may double-click on a selected document to print the selected document.

You may use the context menu (right-click) to open selected document(s).



Unposted document = 0. This will open the unposted document form, which may be viewed and may be edited.

Posted documents = 1. This will open the posted document form, which may be viewed but cannot be edited.

You may click on the column headings to change the sort sequence from the ascending to the descending sequence.

You may also click and drag any of the column headings to the left or right to change the sequence in which

the columns are to be displayed.

The columns are as follows:

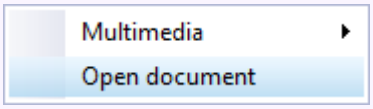
1. Date – The date on which the documents are generated and updated (posted) to the ledger.
2. Items – This displays the number of items quantities as specified in the Quantity Ship field of document lines.
3. Document no. - The document number as automatically generated.

If document numbers were not prefixed for each document type, with IN, CR, QU, PU, SR and OR, it would virtually be impossible to identify the correct document type.

4. Description – The description (name) of the Stock item.
5. Price – The price is as follows:
    a) Cost price of each item (Exclusive of Input Tax) for purchase documents (i.e. Purchases, Supplier returns and Orders).
    b) Selling price of each item (Exclusive of Output Tax) for sales documents (i.e. Invoices, Point-of-Sale Invoices and Credit notes).
6. Discount – The discount percentage as entered in the discount column for the stock item.
7. Unit Price – The price is as follows:
    a) Cost price of each item (Exclusive of Input Tax) for purchase documents (i.e. Purchases, Supplier returns and Orders).
    b) Selling price of each item (Exclusive of Output Tax) for sales documents (i.e. Invoices, Point-of-Sale Invoices and Credit notes).The cost price of each item (Exclusive of Input Tax).
8. Exclusive – The selling price (for sales documents) exclusive of Output Tax or the purchase price (for purchase documents) exclusive of Input Tax for the number of items (unit price x quantity) minus the discount amount.
9. Inclusive - The selling price (for sales documents) inclusive of Output Tax or the purchase price (for purchase documents) inclusive of Input Tax for the number of items (unit price x quantity) minus the discount amount.
10. Posted - 1 = Posted and Unposted = 0.

You may use the context menu (right-click) to open selected document(s).

You may use the context menu (right-click) to open selected document(s).



Unposted document = 0. This will open the unposted document form, which may be viewed and may be edited.

Posted documents = 1. This will open the posted document form, which may be viewed but cannot be edited.

If document numbers were not prefixed for each document type, with IN, CR, PU and SR it would virtually be impossible to identify the correct document type.

Selling prices 1 / 2 / 3 as selected on sales documents. If not selected on sales documents, these will automatically be used from the following settings:

- *Global Setting – The Default selling price as selected in Setup → Stock information.*
- *The Selling price as selected on the Accounting information tab of a selected Debtor account.*

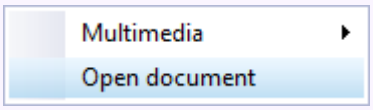
You may use the context menu (right-click) to open selected document(s).



Posted documents = 1. This will open the posted document form, which may be viewed but cannot be edited.

You may click on the column headings to change the sort sequence from the ascending to the descending sequence.

You may also click and drag any of the column headings to the left or right to change the sequence in which the columns are to be displayed.

The columns are as follows:

1. Date – The date on which the documents are generated and updated (posted) to the ledger.
2. Items – This displays the number of items quantities as specified in the Quantity Ship field of document lines.
    a) Positive Quantities - Purchases and Credit notes – (Stock In).
    b) Negative Quantities – Invoices and Supplier returns (Stock Out).
3. Cost price – The cost price of each item (Exclusive of Input Tax).

In the case of Purchases and Supplier returns, the cost price and selling price will be the same.

4. Selling price – The selling price of each item (Exclusive of Output Tax).

In the case of Purchases and Supplier returns, the cost price and selling price will be the same.

5. Document row - To be advised.
6. Document no. - The document number as automatically generated.

If document numbers were not prefixed for each document type, with IN, CR, PU and SR it would virtually be impossible to identify the correct document type.

Selling prices 1 / 2 / 3 as selected on sales documents. If not selected on sales documents, these will automatically be used from the following settings:

- *Global Setting – The Default selling price as selected in Setup → Stock information.*
- *The Selling price as selected on the Accounting information tab of a selected Debtor account (Debtors (Default ribbon)).*

7. Reference - The reference number as added in the "*Your reference*" field of the document.
8. User - The name of the User if added in Setup → Access control (Setup ribbon).
9. Cumulative - The cumulative quantities
10. Posted - Value = 1 - The document is posted (updated) to the ledger.
11. Document type - Invoices, Credit notes, Purchases and Supplier returns.

Created with the Standard Edition of HelpNDoc: Enhance Your Documentation with HelpNDoc's Advanced Project Analyzer

Stock items - Image tab

You may add or delete an image for the stock item. This image will be available to display on the Button lookup mode, when processing sales documents (i.e. Invoices, Credit notes, Quotes and Point-of-Sales Invoices) as well as purchase documents (i.e. Purchases, Supplier returns and Orders).

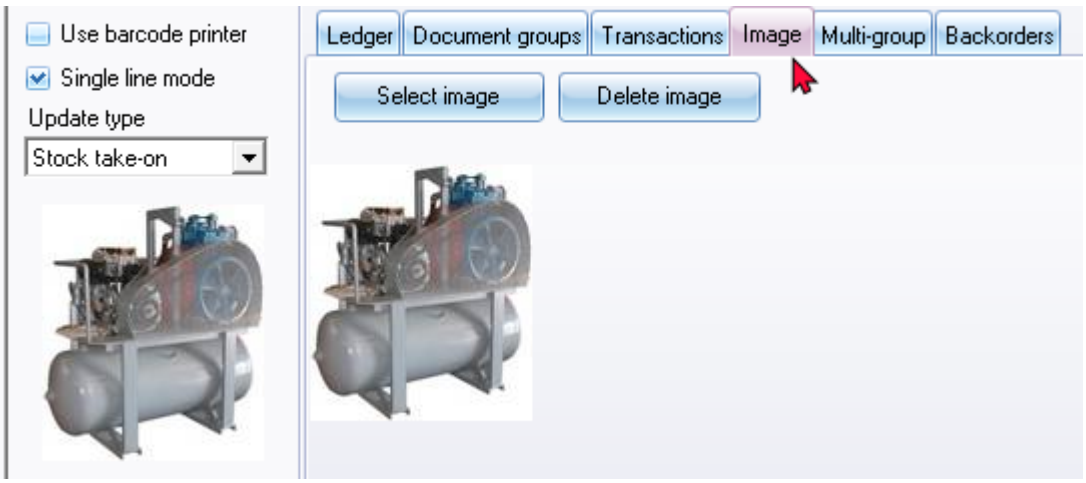
You may add or delete an image for the stock item. This image will display on the following screens:

- Lookup Stock items - *Button lookup* mode, when processing sales documents (i.e. Invoices, Credit notes, Quotes and Point-of-Sales Invoices) as well as purchase documents (i.e. Purchases, Supplier returns and Orders).
- Stock item List screen - When selecting or scrolling on the list of stock items, it will display at the bottom left of the Side bar.

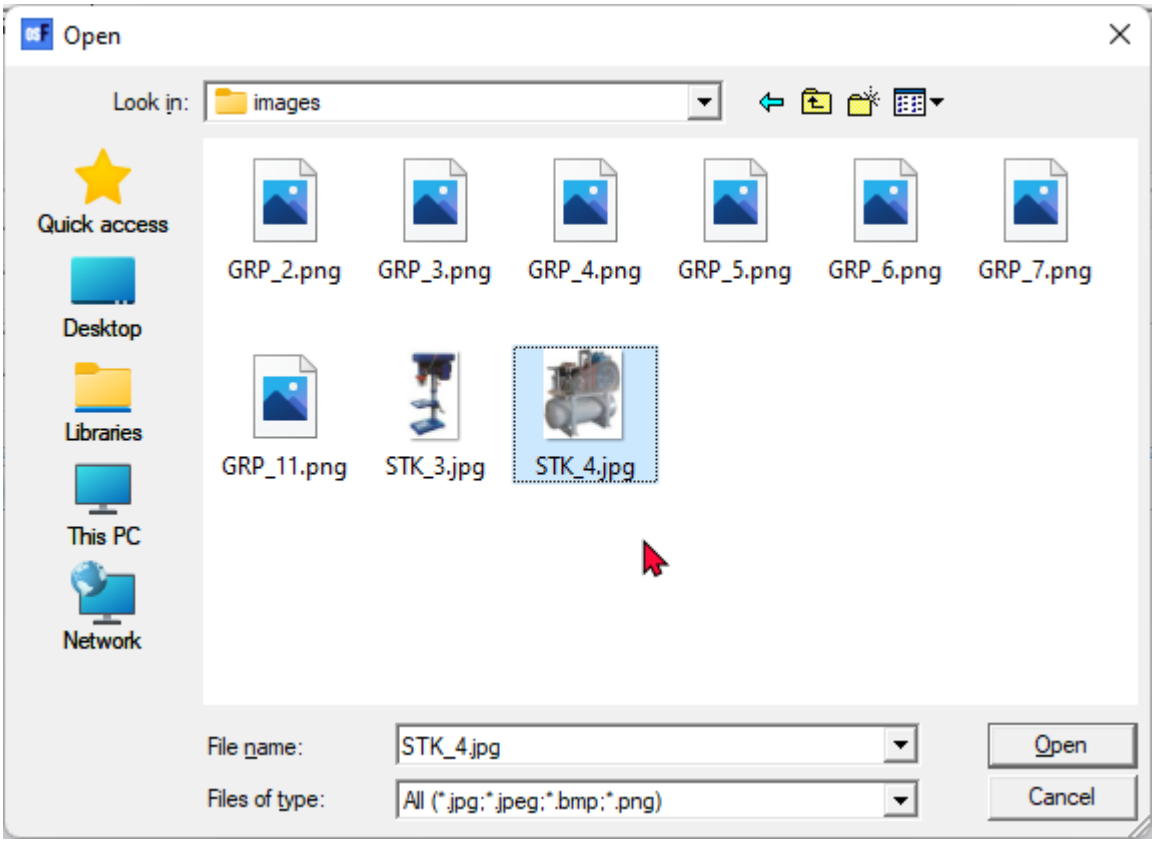
Add images

To select an image for a Stock item:

1. Go to Stock items and select a Stock item from the list.
2. Click on the Images tab.



3. Click on the Select Image button. The "*Open"* screen is displayed:



4. Select an image and click on the Open button.

5. Click Save.

*Images need to be in the *.jpg, *.jpeg, *.bmp or *.png file formats.*

After loading the Images, you need to Save the Stock item before the image will be displayed on the sidebar of the Stock item.

Delete images

To delete an image:

1. Click on the Delete button.

2. A confirmation message is displayed:

   "Do you wish to delete this image?"

3. Click OK.

Button lookup

To enable (activate) the Button lookup:

1. On the Setup ribbon, select Stock information menu.
2. Select (tick) the "*Button lookup*" field.
3. Click on the OK button. The Button lookup screen is displayed when selecting stock items while processing documents.

The default size of images is 120px width x 40px height. You may change the size of the buttons in Plugins → Point-of-Sale → HorecaPOS (Setup ribbon).

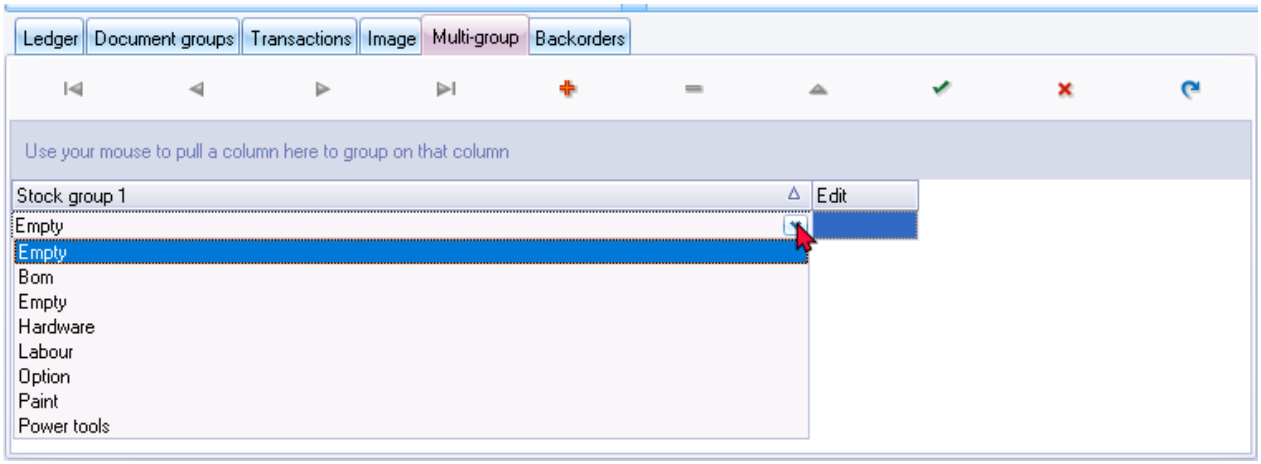
Groups - Images and colours

The Button lookup may be configured by adding images of your product groups and setting colours (background and font) in Setup → Groups (Stock group 1).

Created with the Standard Edition of HelpNDoc: Make Help Documentation a Breeze with a Help Authoring Tool

Stock items - Multi-group tab

This option allows you to set multiple groups to the selected stock item. The main Reporting group 1 (Stock group 1) is selected on the Reports Reporting group 1 section of the Edit Stock screen. The same list of the available Reporting group 1 (Setup → Groups (Stock group 1)) will be listed and may also be linked to the stock item.



Created with the Standard Edition of HelpNDoc: Elevate Your Help Documentation with a Help Authoring Tool

Stock items - Backorders tab

When processing invoices in Documents (Default ribbon), and the debtor (customer / client) orders more than is actually invoiced, it will be recorded in the backorder facility.

Backorder records and reports will only be updated when the Invoices are posted (updated) to the ledger.

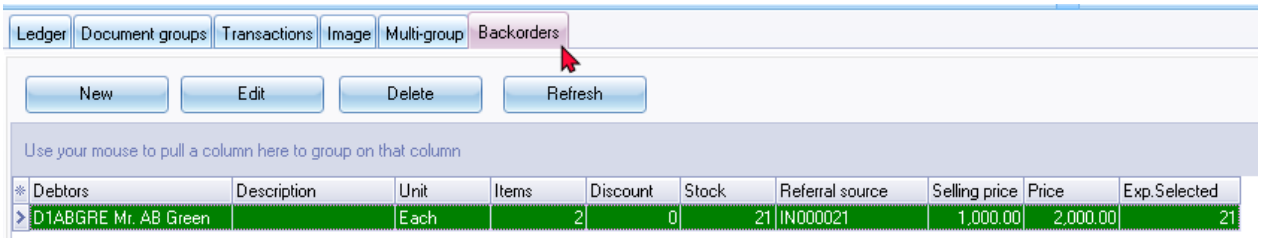
An example where the quantity entered in the "*Qty Order*" field is more than the quantity entered in the "*Qty Ship*" field, is as follows:

You may also click on the Backorder icon to edit backorders when processing invoices and quotes.

The insufficient quantities (e.g. 10 – 2 = 8, as per this example) will be added to the backorder feature. The following options, on the Default ribbon, are available to manage (view / add / edit / delete) backorders:

1. Stock items (Backorders tab) – List of backorders for the selected stock item.
2. Debtors (Backorders tab) – List of backorders for the selected debtor (customer / client) account.
3. Input → Backorders Outstanding – List of backorders for all stock items.

The Backorder report may be printed in Reports → Stock → Backorder (Reports ribbon). This will launch the Backorders options screen on which you may select the range of Stock items to include / exclude from the report.



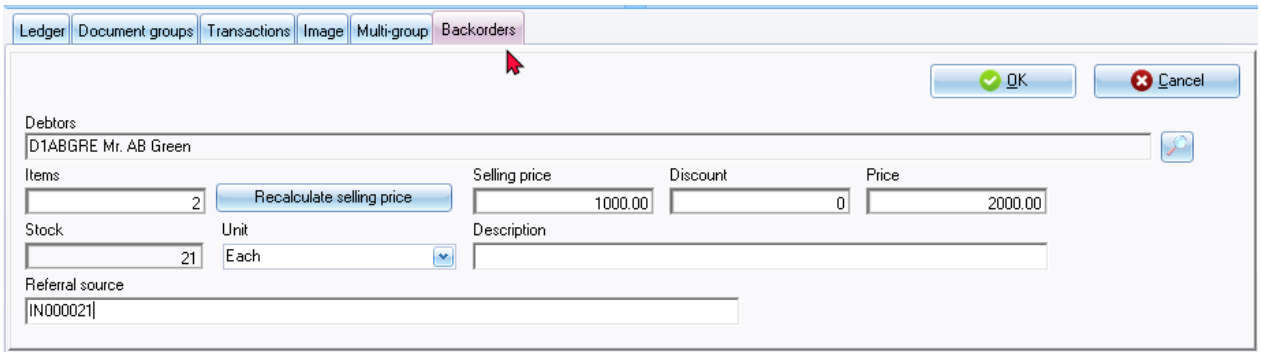
Sorting and Rearranging Columns:

- *You can click on the column headings (such as Stock item, Description, Unit, Items, Discount, Stock, Referral source, Selling price, Price, and Exp. Selected) to change the sort sequence from ascending to*

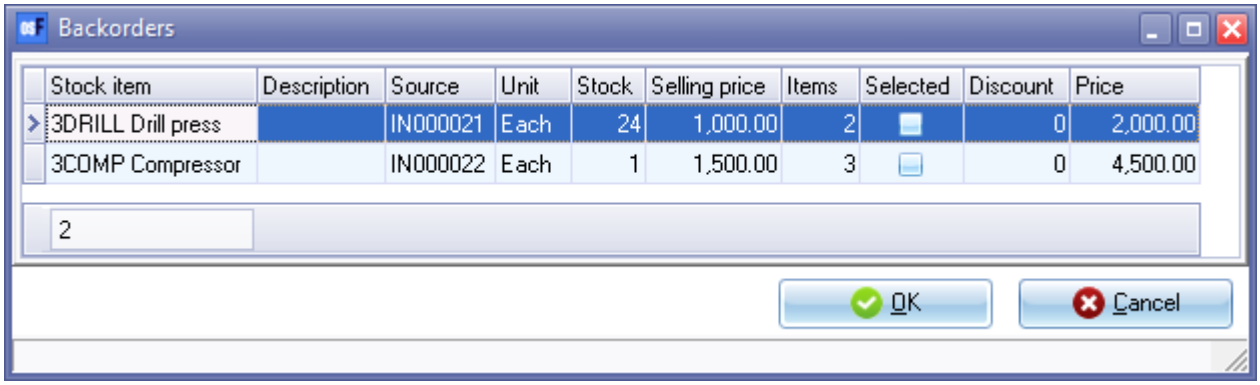
descending order.

- *To rearrange the sequence in which the columns are displayed, you can click and drag any of the column headings to the left or right.*

Add / Edit Backorders



When processing Invoices and you select the Stock item on backorder, the invoicing screen, the Backorders Outstanding screen is displayed:

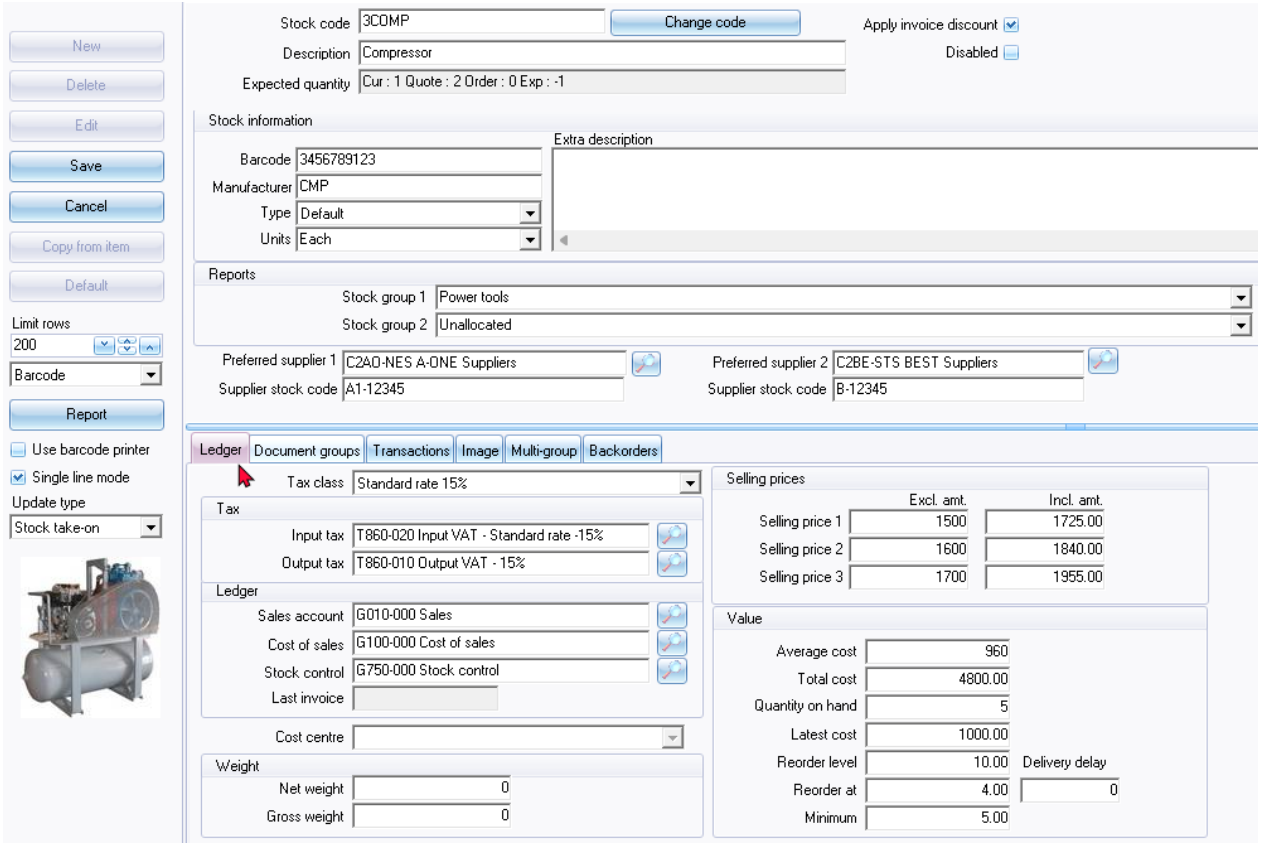


If you select this item, the entry will be removed from the backorder records and reports.

Created with the Standard Edition of HelpNDoc: Easy CHM and documentation editor

Use tabs for stock

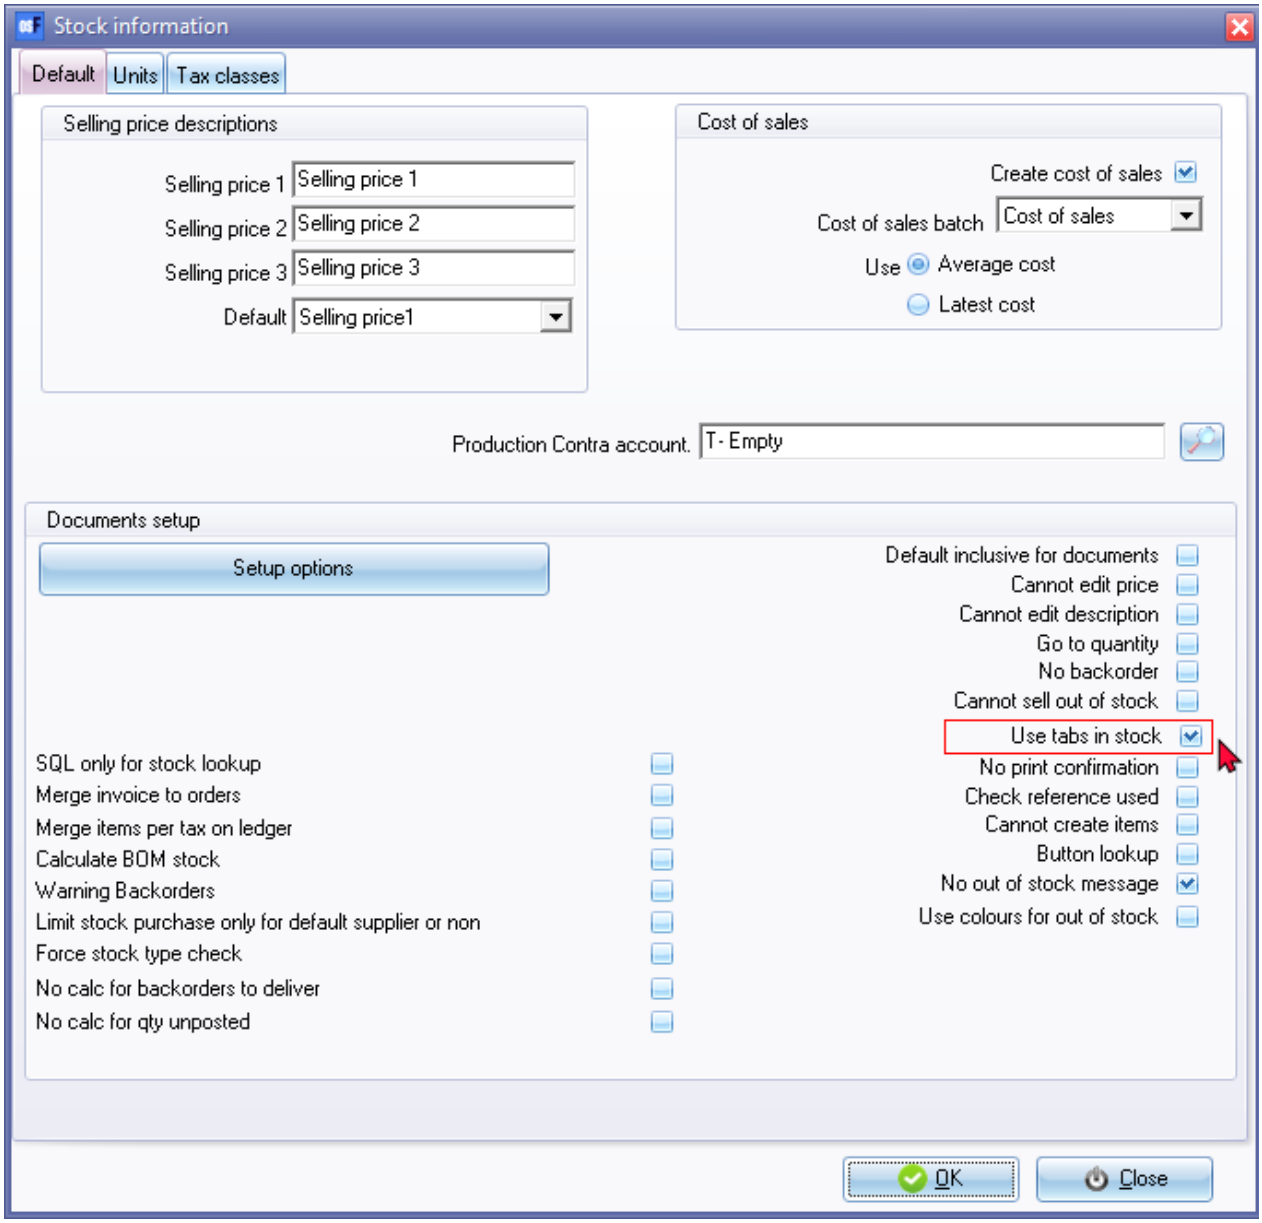
By default, the Stock item screen for a selected stock item, will display the Ledger, Document groups, Image, Multi Groups and Backorders tabs below the Stock information section.



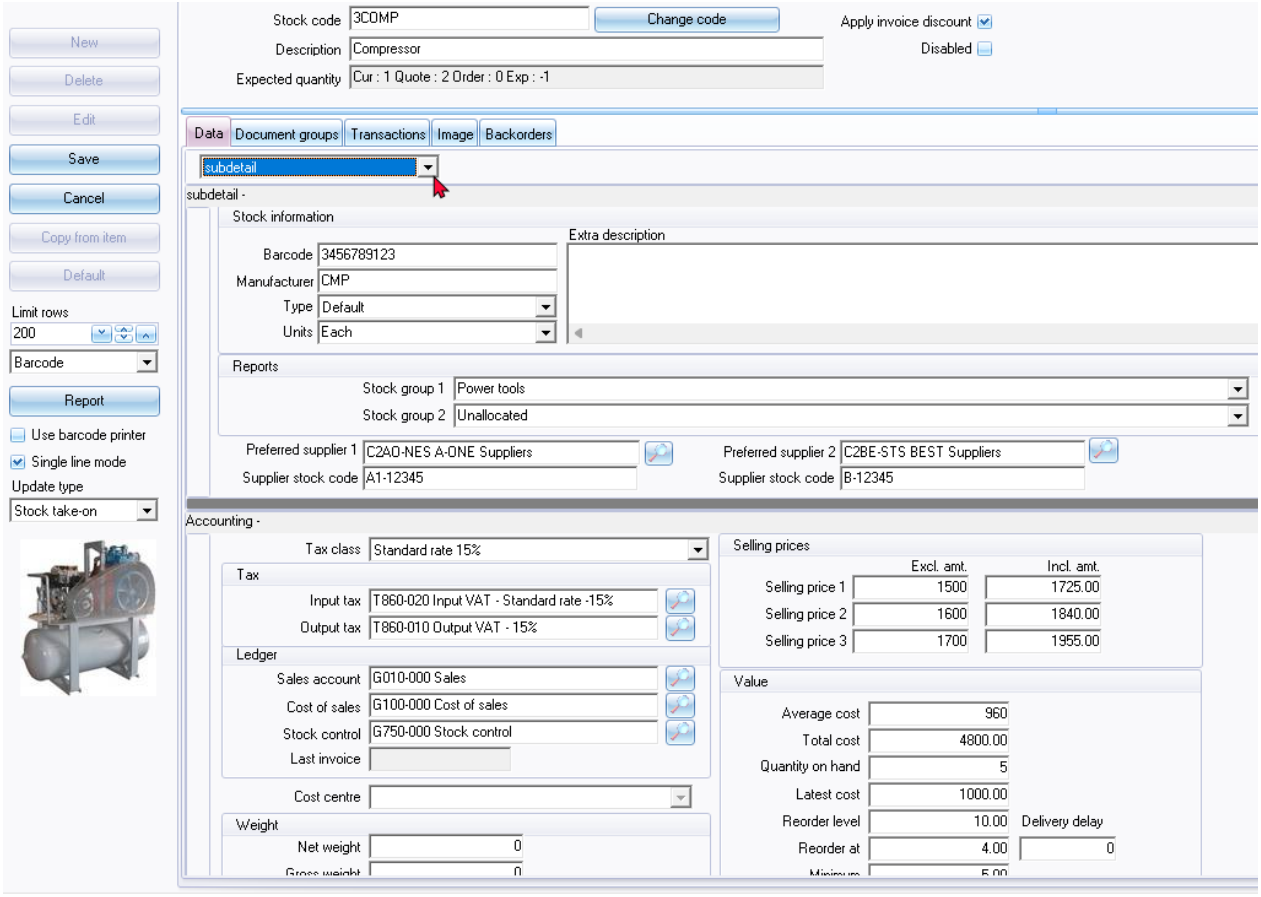
To change the interface of the Stock item screen:

1. On the Setup ribbon, select Stock information.

2. On the "*Stock information*" screen, deselect (remove the tick) in the "*Use tabs in stock*" field.



3. Click on the OK button. The Stock item screen for a selected Stock item will display a Data tab on which you may click + to expand (or - to collapse) the Stock information (Stock main form), Accounting (Ledger tab) and the Multigroup tabs. change as follows:



You may need to go to the Tools → Close active forms (Setup ribbon), to close the Stock item screen before the changes will take effect.

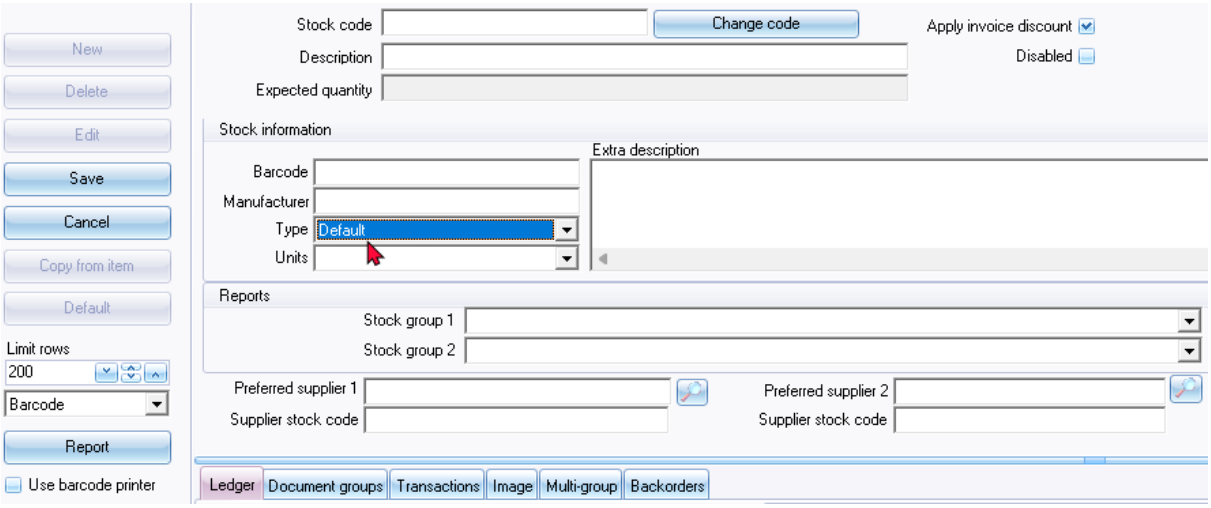
Create / Edit Stock items - Trading stock - Default

The Default Stock item type is used for Trading stock items. The Cost of sales settings for these are important as these may have an impact on your gross profit.

To create a Default stock item:

1. On the Default ribbon, select Stock items (F12).

2. Click on the New button. A blank Stock form, "*Default*" stock item type is displayed:



3. Enter and select the following:

   a) Stock code - Enter any code for your purchase stock item. You may enter a stock code of up to 15 characters.

   > *You need to plan the Stock item codes to optimise this feature in osFinancials5/TurboCASH5.*

   b) Description - Enter a description for the purchase stock item.

   c) Barcode - Enter the barcode, if applicable.

   > *The EAN13 Barcode validates for 13 numbers (the last number is a checksum number). If the Barcode is incorrect, the labels will not be printed.*

   d) Manufacturer - You may enter any additional information or description of the manufacturer (e.g. the name of the manufacturer). This is optional.

   e) Type - Default is the default stock item type.

   > *The default stock item type is recommended for trading stock. If it is not trading stock, you may select one of the following stock types:*
   >
   > - *Financial entry*

- *Sales*
- *Sales (no stock)*
- *Purchases*
- *Purchases (no stock)*

In addition to the above-mentioned stock types, you may also select the following stock types:

- *Options*
  - *Option item*
  - *Option item (no stock)*
- *Bill of Materials (BOM)*
  - *BOM*
  - *BOM (Production)*
- *Linked Sale*

Once a transaction has been processed for a stock item, this field will be disabled.

f) Unit size - Leave blank or select any unit e.g. each, hours, boxes, etc. which you wish to be displayed on your purchase documents. These Units of your Stock items such as: each, hours, boxes, etc. are setup in Setup → Stock information.

g) Disabled - By default, all Stock items are active (enabled) when Stock items are created or edited. Select this field if you (or any of your salespersons) do not want to process any documents for a Service Stock item. Select this field to hide the Stock item from the Stock item lookup when processing new documents. This will speed up document processing.

You will still be able to update (post) any unposted documents, which include transactions for the disabled Stock item, to the ledger.

You may select the disabled Stock items on the Stock item lookup when generating Stock, Sales analysis and Purchase analysis reports and view the transactions of disabled Stock items.

You may de-select this field at any stage, when necessary to continue processing documents for the Stock item.

h) Apply invoice discount - Do not select. This is applicable to debtor (customer / client) accounts, as the percentage customer discount is specified on the Accounting information tab.

i) Extra description - You may enter any additional information or description (up to 255 characters) for the stock item, as necessary. This is optional.

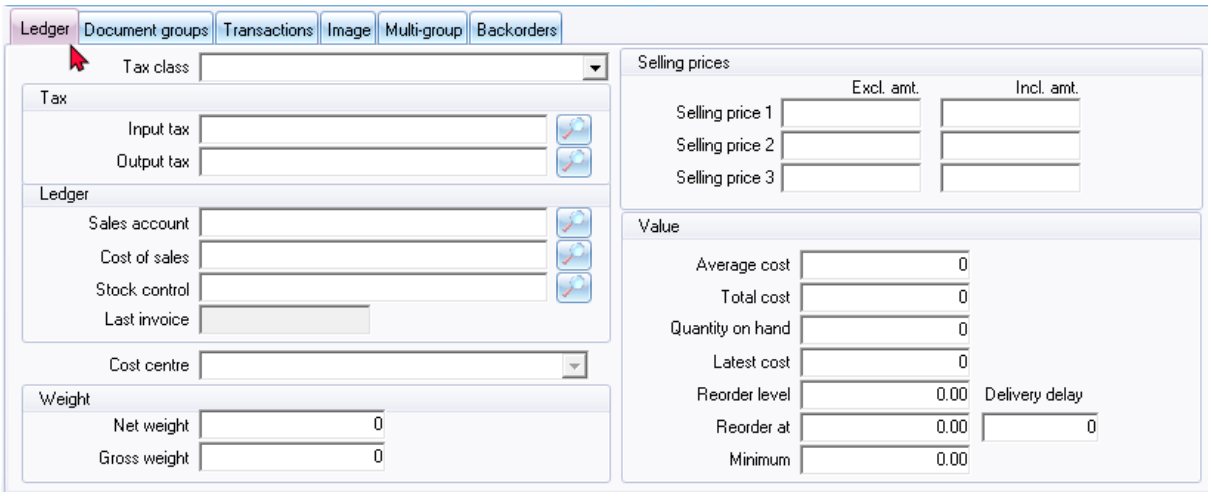
j) Reports - Stock group 1 / 2 - The reporting group to which you wish this Stock item to be allocated.

The description of Stock group 1 or 2 you have entered on the "Reporting group name" field on the Stock groups tab - Setup → Groups may be reflected in this list.

k) Preferred supplier 1 - The main creditor (supplier / vendor) you purchase stock items from, may be selected. You may enter the supplier's stock code, if applicable.

l) Preferred supplier 2 - If you have a backup or alternative supplier, you may select the creditor (supplier / vendor) and enter the supplier's stock code, if applicable.

4. Click on the Ledger tab, if not already displayed.



5. Enter or select the following options:

a) Tax class - If you have created tax classes, select the tax class. The Tax class will automatically add the Input Tax and Output Tax accounts in the Tax section, the Sales account, Cost of sales and Stock control accounts in the Ledger section.

b) Last invoice - Field inactive. The date of the last purchase or other document generated on

which the Stock item was selected. This field will not display any date if it is a new item, or if no Stock items have been selected on any documents.

c) Default cost group - This is by default inactive. If you have created and activated cost centres, these may be selected.

d) Weight

i) Gross weight - Enter, if applicable.

ii) Net weight - Enter, if applicable.

e) Selling prices - Enter the Selling price 1/2/3 exclusive or inclusive of Tax. The inclusive of VAT/GST/Sales Tax will be calculated based on the percentage entered in your Output Tax account. (if you selected that account in advance).

This description should reflect your selling price descriptions as you have entered in Setup → Stock information.

If you have for example entered: "Retail", "Wholesale" and "Cash" for these Selling prices, the Selling price 1 / 2 / 3 will be respectively displayed as such.

The amounts as entered in these fields will be displayed on Invoices, Credit notes and Quotes. When the cursor is displayed on the Amount fields, you may select any of the available selling prices you wish to charge your debtors (customers / clients).

f) Values

i) Average cost - Field inactive. The average cost price of your Stock item cannot be entered at this stage. When you process purchases, the Average cost Price will be automatically updated.

ii) Total cost - Field inactive. The total cost price of your Stock item cannot be entered at this stage. When you process purchases, the Total cost price will be automatically updated.

iii) Quantity on hand - Field inactive. The quantity, or number of Stock items on hand, cannot be entered at this stage. When you process purchases, the quantities will be automatically updated.

iv) Latest cost - The latest cost price of your Stock item can now be entered. When you

process purchases, the Latest cost Price will be automatically updated.

Once you have created your new Stock items, you may enter the cost prices and quantities in the Stock take-on option in Stock items, if you have any Stock item records on a previous accounting system.

v) Reorder level - The minimum level of stock that you wish to keep on hand for this Stock item. In the case of Stock item codes for the purchase of services, this field should be left blank.

vi) Reorder at - Specify the quantity of stock to be available when you need to reorder stock.

vii) Minimum - Specify the minimum quantity of stock to be on hand.

i) Delivery delay - To be advised.

6. Click on the Save button to save this stock item. The "*Stock item"* grid (default) screen will be displayed.

Create / Edit Stock items - Sales

The disabled and inactive options for the Sales and the Sales (no stock) stock item type are the same. If you select this Sales or the Sales (no stock) stock item type on an invoice or a credit note, no Cost of sales transactions would be generated. You will also not be allowed to specify the re-order level and select the Cost of sales, Stock control and Input Tax accounts.

Should you need to generate invoices and credit notes to customers (debtors) for services, fees, charges or other sales which is not trading stock, you may create a Sales or Sales (no stock) stock item type. You may generate invoices and credit notes for these non trading stock items only or add these item codes to an invoice or credit note containing physical Stock items.

Some examples where you would create a Sales or Sales stock item type, is the following:

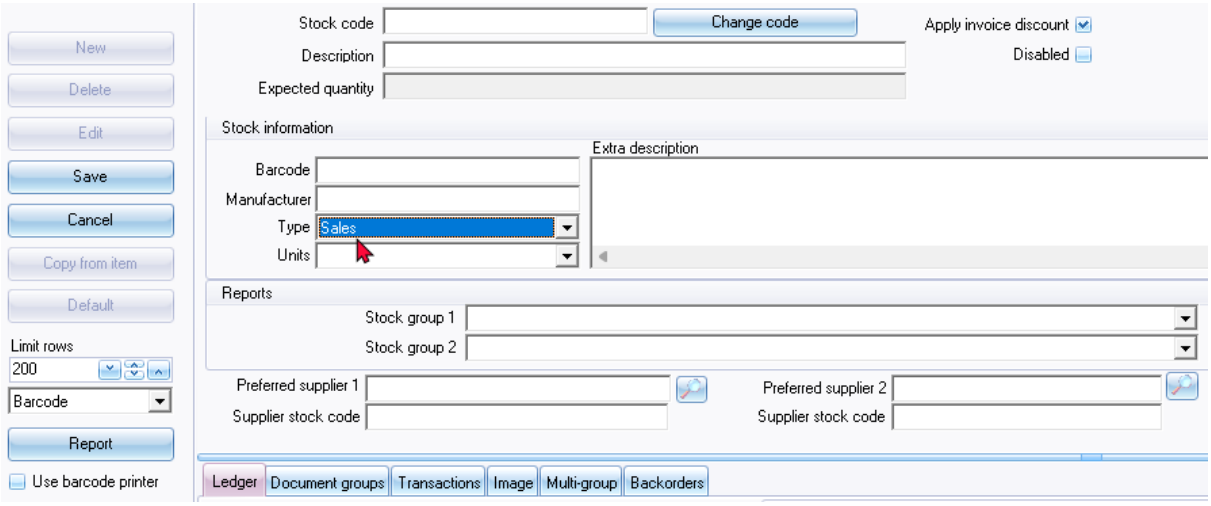
- Invoicing services such as labour, consulting fees, etc.
- Invoicing carting fees, delivery fees, other charges, etc.

To create a Stock item - Sales:

1. On the Default ribbon, select Stock items (F12).

2. Click on the New button. A blank Stock form will be displayed.

3. Select the "*Sales*" stock item type. The Stock entry form is displayed as follows:



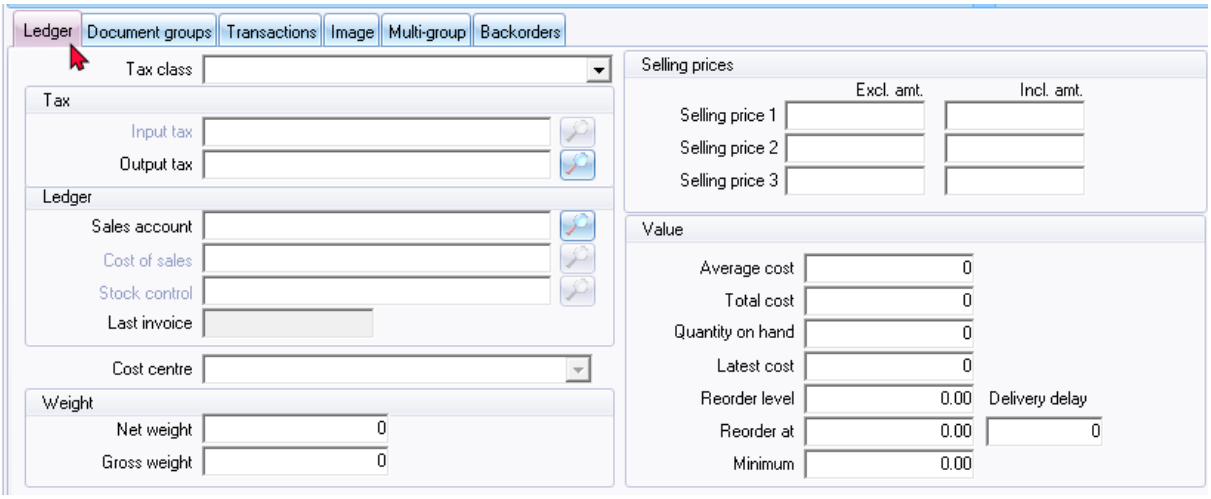
4. Enter the Stock code, Description, Barcode, Manufacturer and Extra description as required.

5. Select the Unit size.

6. Apply invoice discount - This is applicable to debtor (customer / client) accounts, as the percentage customer discount is specified on the Accounting information tab.

7. Reports - Stock group 1 / 2 - The reporting group to which you wish this Stock item to be allocated.

8. Click on the Ledger tab, if not already displayed.



9. Enter or select the following options:

    a) Tax class - If you have created tax classes, select the tax class. The Tax class will automatically add the Input Tax and Output Tax accounts in the Tax section, the Sales account, Cost of sales and Stock control accounts in the Ledger section.

The Input Tax account field is disabled. The Cost of sales and Stock control account fields are disabled.

b) Last invoice - Field inactive. The date of the last purchase or other document generated on which the Stock item was selected. This field will not display any date if it is a new item, or if no Stock items have been selected on any documents.

c) Default cost group - This is by default inactive. If you have created and activated cost centres, these may be selected.

d) Weight

i) Gross weight - Enter, if applicable.

ii) Net weight - Enter, if applicable.

e) Selling prices - Enter the Selling price 1/2/3 exclusive or inclusive of Tax. The inclusive of VAT/GST/Sales Tax will be calculated based on the percentage entered in your Output Tax account. (if you selected that account in advance).

This description should reflect your selling price descriptions as you have entered in Setup →Stock Information.

If you have for example entered: "Retail", "Wholesale" and "Cash" for these Selling prices, the Selling price 1 / 2 / 3 will be respectively displayed as such.

The amounts as entered in these fields will be displayed on Invoices, Credit notes and Quotes. When the cursor is displayed on the Amount fields, you may select any of the available selling prices you wish to charge your debtors (customers / clients).

f) Values

i) Average cost - Field inactive. The average cost price of your Stock item cannot be entered at this stage. When you process purchases, the Average cost Price will be automatically updated.

ii) Total cost - Field inactive. The total cost price of your Stock item cannot be entered at this stage. When you process purchases, the Total cost price will be automatically updated.

iii) Quantity on hand - Field inactive. The quantity, or number of Stock items on hand, cannot be entered at this stage. When you process purchases, the quantities will be automatically updated.

iv) Latest cost - The latest cost price of your Stock item can now be entered. When you process purchases, the Latest cost Price will be automatically updated.

v) Reorder level - The minimum level of stock that you wish to keep on hand for this Stock item. In the case of Stock item codes for the purchase of services, this field should be left blank.

vi) Reorder at - Specify the quantity of stock to be available when you need to reorder stock.

vii) Minimum - Specify the minimum quantity of stock to be on hand.

i) Delivery delay - To be advised.

10. Click on the Save button to save this stock item. The "*Stock item*" grid (default) screen will be displayed.

This description should reflect your selling price descriptions as you have entered in Setup → Stock information.

If you have for example entered: "Retail", "Wholesale" and "Cash" for these Selling prices, the Selling price 1 / 2 / 3 will be respectively displayed as such.

The amounts as entered in these fields will be displayed on Invoices, Credit notes and Quotes. When the cursor is displayed on the Amount fields, you may select any of the available selling prices you wish to charge your debtors (customers / clients).

f) Values

i) Average cost - Field inactive. The average cost price of your Stock item cannot be entered at this stage. When you process purchases, the Average cost Price will be automatically updated.

ii) Total cost - Field inactive. The total cost price of your Stock item cannot be entered at this stage. When you process purchases, the Total cost price will be automatically updated.

iii) Quantity on hand - Field inactive. The quantity, or number of Stock items on hand, cannot be entered at this stage. When you process purchases, the quantities will be automatically updated.

iv) Latest cost - The latest cost price of your Stock item can now be entered. When you process purchases, the Latest cost Price will be automatically updated.

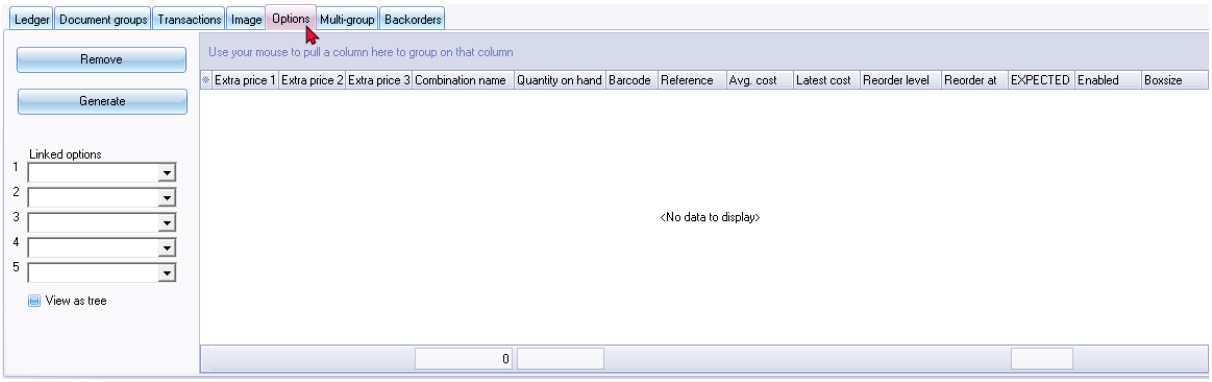
v) Reorder level - The minimum level of stock that you wish to keep on hand for this Stock item. In the case of Stock item codes for the purchase of services, this field should be left blank.

vi) Reorder at - Specify the quantity of stock to be available when you need to reorder stock.

vii) Minimum - Specify the minimum quantity of stock to be on hand.

i) Delivery delay - To be advised.

12. Click on the Options tab, if not already displayed.



13. Select the Options as added in the Setup options (Setup → Stock information).

14. Click on the Generate button to generate a list from the options list. It will generate the Combination Name and the Extra Price.

15. Click on the Save button to save this stock item. The "*Stock item*" grid (default) screen will be displayed.

Create / Edit Stock items - Option item (no stock)

Options Item allows items that are a combination of options (like colour and size) options can be defined in Setup → Stock information - (Default tab). The Setup Options button will launch the screens where the options can be added.

These options are then linked to the Options (no stock) stock item type (Stock items on the Default ribbon). When processing documents, the available options (options list) will be launched from the quantity fields when selecting documents.

It induces a Option item (no stock) that you can use to select options with 1 item without having lots of sub items.

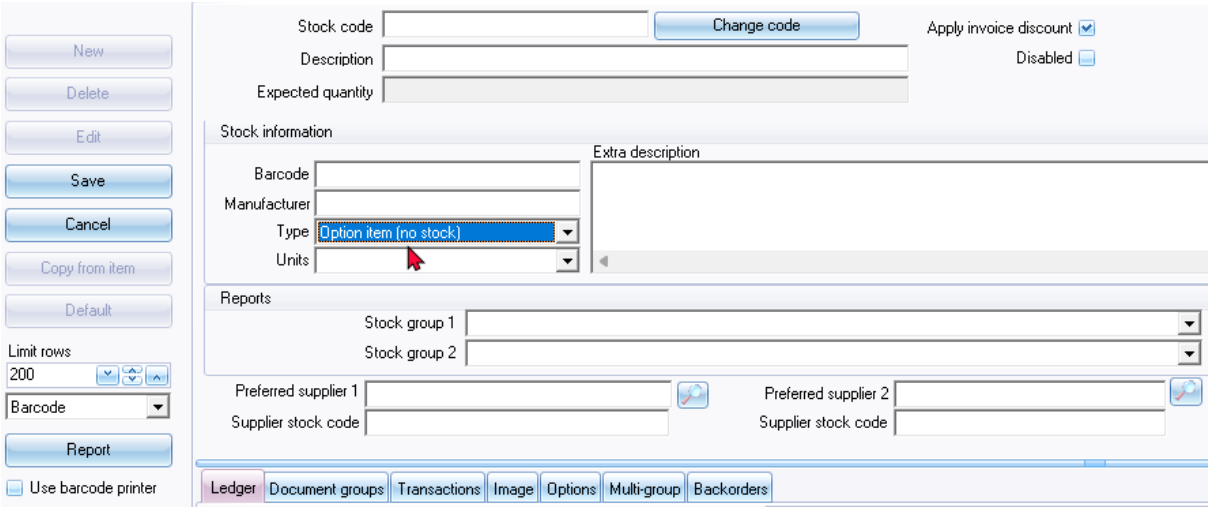
See - Option item

To create an Option (no stock) stock item:

1. On the Default ribbon, select Stock items (F12).

2. Click on the New button. A blank Stock form will be displayed.

3. Select the "*Option item (no stock)"* stock item type. The Stock entry form is displayed as follows:



4. Enter the Stock code, Description, Barcode, Manufacturer and Extra description as required.

5. Select the Unit size.

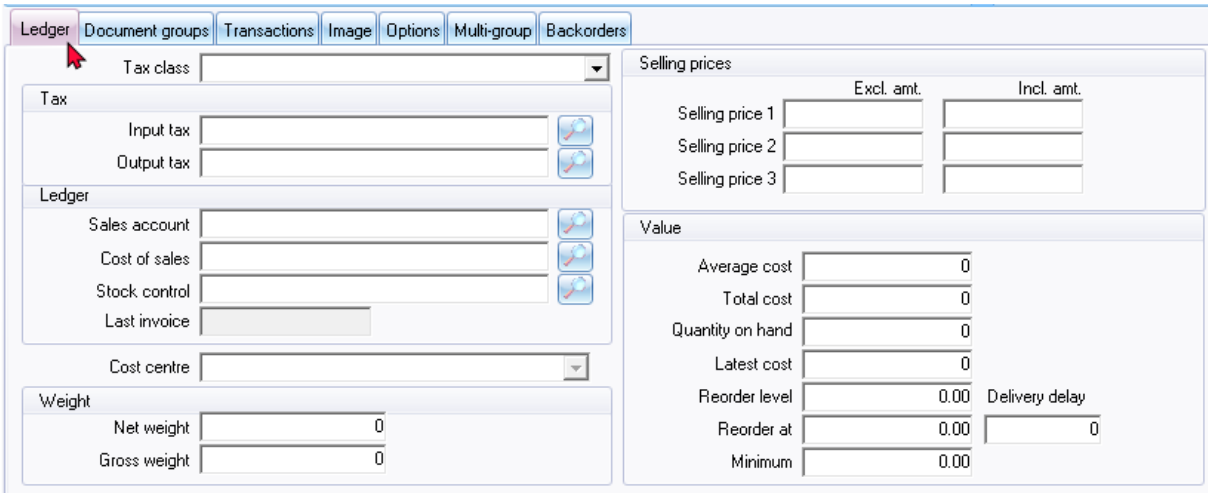
6. Apply invoice discount - This is applicable to debtor (customer / client) accounts, as the percentage customer discount is specified on the Accounting information tab Debtors (Default ribbon).

7. Reports - Stock group 1 / 2 - The reporting group to which you wish this Stock item to be allocated.

7. Preferred supplier 1 - Optional - Select a creditor (supplier / vendor) account and enter a supplier stock code if applicable.

8. Preferred supplier 2 - Optional - Select a creditor (supplier / vendor) account and enter a supplier stock code if applicable.

9. Click on the Ledger tab, if not already displayed.



10. Enter or select the following options:

a) Tax class - If you have created tax classes, select the tax class. The Tax class will automatically add the Input Tax and Output Tax accounts in the Tax section, the Sales account, Cost of sales and Stock control accounts in the Ledger section.

b) Last invoice - Field inactive. The date of the last purchase or other document generated on which the Stock item was selected. This field will not display any date if it is a new item, or if no Stock items have been selected on any documents.

c) Default cost group - This is by default inactive. If you have created and activated cost centres, these may be selected.

d) Weight

   i) Gross weight - Enter, if applicable.

   ii) Net weight - Enter, if applicable.

e) Selling prices - Enter the Selling price 1/2/3 exclusive or inclusive of Tax. The inclusive of VAT/GST/Sales Tax will be calculated based on the percentage entered in your Output Tax account. (if you selected that account in advance).

This description should reflect your selling price descriptions as you have entered in Setup → Stock information.

If you have for example entered: "Retail", "Wholesale" and "Cash" for these Selling prices, the Selling price 1 / 2 / 3 will be respectively displayed as such.

The amounts as entered in these fields will be displayed on Invoices, Credit notes and Quotes. When the cursor is displayed on the Amount fields, you may select any of the available selling prices you wish to charge your debtors (customers / clients).

f) Values

   i) Average cost - Field inactive. The average cost price of your Stock item cannot be entered at this stage. When you process purchases, the Average cost Price will be automatically updated.

   ii) Total cost - Field inactive. The total cost price of your Stock item cannot be entered at this stage. When you process purchases, the Total cost price will be automatically updated.

iii) Quantity on hand - Field inactive. The quantity, or number of Stock items on hand, cannot be entered at this stage. When you process purchases, the quantities will be automatically updated.

iv) Latest cost - The latest cost price of your Stock item can now be entered. When you process purchases, the Latest cost Price will be automatically updated.

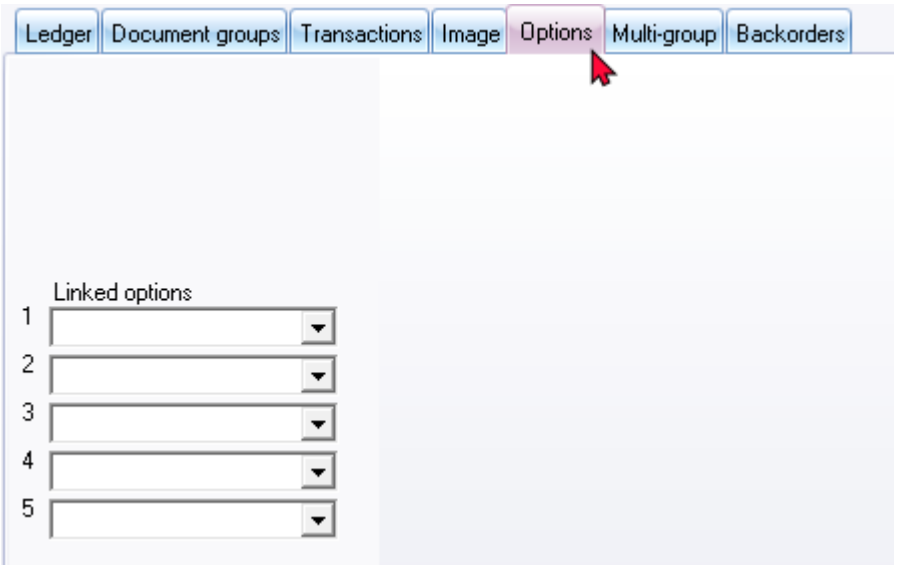
v) Reorder level - The minimum level of stock that you wish to keep on hand for this Stock item. In the case of Stock item codes for the purchase of services, this field should be left blank.

vi) Reorder at - Specify the quantity of stock to be available when you need to reorder stock.

vii) Minimum - Specify the minimum quantity of stock to be on hand.

i) Delivery delay - To be advised.

11. Click on the Options tab, if not already displayed.



12. Select the Options as added in the Setup options (Setup → Stock information).

13. Click on the Save button to save this stock item. The "*Stock item*" grid (default) screen will be displayed.

Create / Edit Stock items - BOM

You need to select the BOM (Bills of Materials) option if you are selling Stock items or products consisting

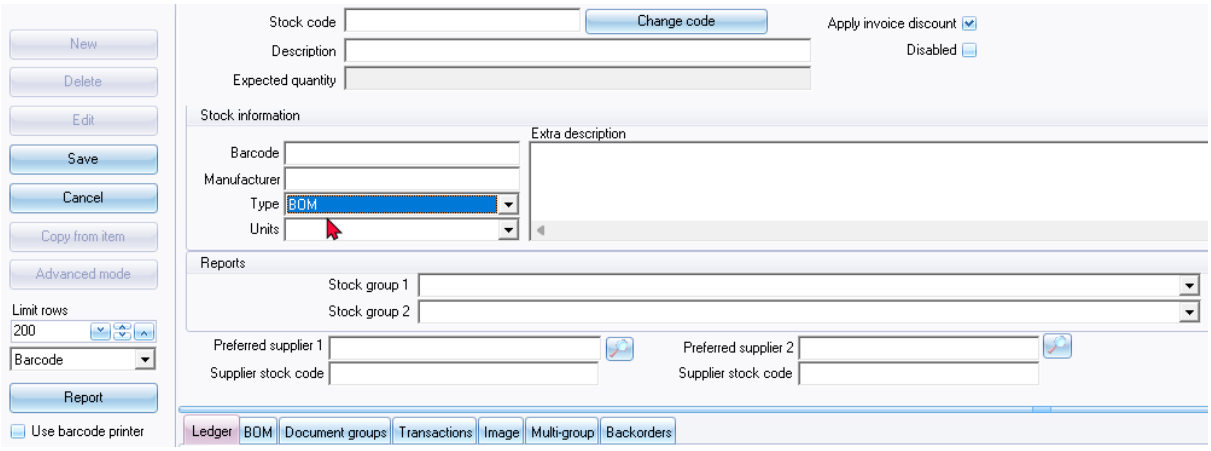
of various other Stock items (components) and some services, etc. This option allows you to link existing Stock items and non-physical Stock items to the finished product.

For example, if you wish to sell a complete spraying kit (consisting of a compressor, 2 high pressure pipes and a spray gun), you may select and add these components (existing Stock items) to your finished product.

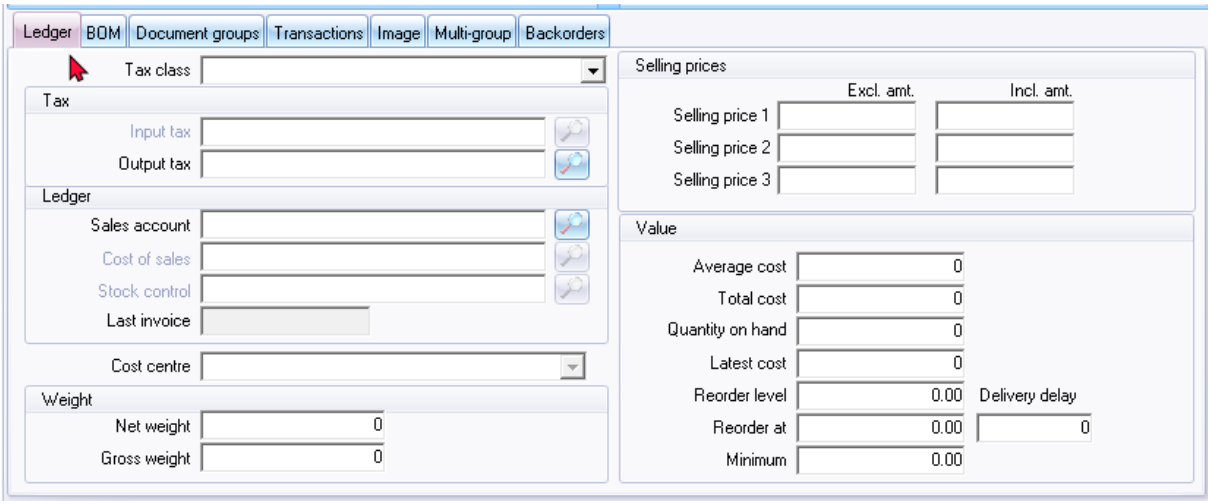
You will also not be allowed to specify the re-order level and select thae Cost of sales, Stock control and Input Tax accounts.

To create a stock item for Bills of Materials (BOM):

1. On the Default ribbon, select Stock items (F12).
2. Click on the New button. A blank Stock form will be displayed.
3. Select the "*BOM*" stock item type. The Stock entry form is displayed as follows:



4. Enter the Stock code, Description, Barcode, Manufacturer and Extra description as required.
5. Select the Unit size.
6. Apply invoice discount - This is applicable to debtor (customer / client) accounts, as the percentage customer discount is specified on the Accounting information tab Debtors (Default ribbon).
7. Reports - Stock group 1 / 2 - The reporting group to which you wish this Stock item to be allocated.
8. Preferred supplier 1 - Optional - Select a creditor (supplier / vendor) account and enter a supplier stock code if applicable.
9. Preferred supplier 2 - Optional - Select a creditor (supplier / vendor) account and enter a supplier stock code if applicable.
10. Click on the Ledger tab, if not already displayed.



11. Enter or select the following options:

a) Tax class - If you have created tax classes, select the tax class. The Tax class will automatically add the Input Tax and Output Tax accounts in the Tax section, the Sales account, Cost of sales and Stock control accounts in the Ledger section.

> *The Input Tax account field is disabled. The Cost of sales and Stock control account fields are disabled.*

b) Last invoice - Field inactive. The date of the last purchase or other document generated on which the Stock item was selected. This field will not display any date if it is a new item, or if no Stock items have been selected on any documents.

c) Default cost group - This is by default inactive. If you have created and activated cost centres, these may be selected.

d) Weight

i) Gross weight - Enter, if applicable.

ii) Net weight - Enter, if applicable.

e) Selling prices - Enter the Selling price 1/2/3 exclusive or inclusive of Tax. The inclusive of VAT/GST/Sales Tax will be calculated based on the percentage entered in your Output Tax account. (if you selected that account in advance).

> *This description should reflect your selling price descriptions as you have entered in Setup → Stock information.*

If you have for example entered: "Retail", "Wholesale" and "Cash" for these Selling prices, the Selling price 1 / 2 / 3 will be respectively displayed as such.

The amounts as entered in these fields will be displayed on Invoices, Credit notes and Quotes. When the cursor is displayed on the Amount fields, you may select any of the available selling prices you wish to charge your debtors (customers / clients).

f) Values

i) Average cost - Field inactive. The average cost price of your Stock item cannot be entered at this stage. When you process purchases, the Average cost Price will be automatically updated.

ii) Total cost - Field inactive. The total cost price of your Stock item cannot be entered at this stage. When you process purchases, the Total cost price will be automatically updated.

iii) Quantity on hand - Field inactive. The quantity, or number of Stock items on hand, cannot be entered at this stage. When you process purchases, the quantities will be automatically updated.

iv) Latest cost - The latest cost price of your Stock item can now be entered. When you process purchases, the Latest cost Price will be automatically updated.

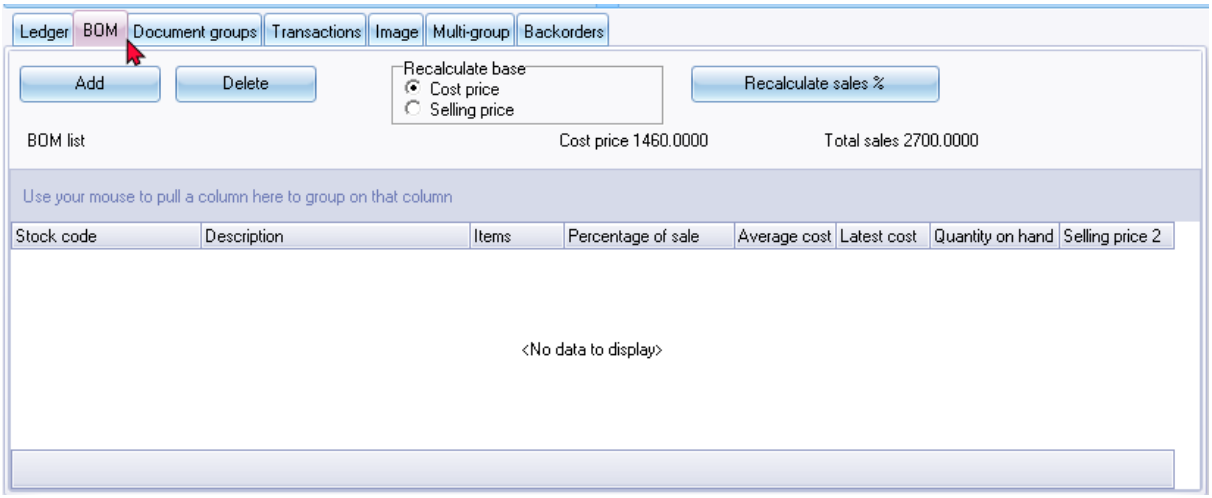
v) Reorder level - The minimum level of stock that you wish to keep on hand for this Stock item. In the case of Stock item codes for the purchase of services, this field should be left blank.

vi) Reorder at - Specify the quantity of stock to be available when you need to reorder stock.

vii) Minimum - Specify the minimum quantity of stock to be on hand.

i) Delivery delay - To be advised.

12. Click on the BOM tab, if not already displayed.



13. Click on the Add button to select an item on the Stock item lookup. Repeat this process until all the items (components) have been added to the list.

> *If more than 1 Stock item is included in the finished product, you need to enter the quantities to be included in the finished product.*

> *To delete (remove) an item from the BOM List, select the item on the list and click on the Delete button.*

14. Once you have added the BOM items to the list, enter the quantities of the components for each item. The values in the *Average cost, Latest cost* and *Quantities on Hand* fields will automatically be displayed for each stock item. The total Cost price value will also be automatically calculated (sum of the number of items x cost price for each item).

15. Select Cost price or Selling price option in the *Calculate Base* field. Click on the Recalculate Sales % button. This will calculate the Percentage of Sales for each item on the BOM List.

16. Click on the Save button to save this stock item. The "*Stock item"* grid (default) screen will be displayed.

Create / Edit Stock items - BOM (Production)

BOM (Production) stock item type

The BOM (Production) stock item type is used when you are selling stock items or products that consist of various other stock items (components) and services. This allows you to link existing physical and non-

physical stock items to create a finished product.

Manufacturing and BOM (Production) Stock Item Type

The Manufacturing process would specifically apply to the BOM (Production) stock item type. This is because BOM (Production) includes features that are essential for manufacturing processes, such as the ability to assemble and disassemble products. Here's a detailed explanation:

BOM (Production) Stock Item Type and Manufacturing:

- Manufacturing Focus: BOM (Production) is designed to handle the manufacturing process where components and services are combined to create finished products.
- Assembly: Allows for specifying and combining quantities of various components to form a finished product. This reflects the manufacturing process of creating new products from raw materials or parts.
- Disassembly: Enables breaking down finished products back into their individual components, which can be necessary for various manufacturing and inventory management scenarios.
- Inventory Management: Tracks the usage and adjustments of components and finished products, ensuring accurate inventory control during manufacturing operations.

Conclusion:

- BOM (Bills of Materials): Generally used for tracking and managing items that consist of various components and services.
- BOM (Production): Specifically tailored for manufacturing processes, providing features to assemble and disassemble items, crucial for creating and managing finished products from various components.

Therefore, the Manufacturing process applies specifically to the BOM (Production) stock item type due to its specialized features for handling the complexities of production.

Instructions for BOM (Production) Stock Item Type: Assemble / Disassemble

Before you proceed with the assembly or disassembly of BOM (Production) stock items, you need to perform the following preliminary steps:

Add Stock items as BOM (Production) stock item type

Add Stock items as BOM (Production) stock item type : On the BOM tab of the BOM (Production) stock item type, add or the link existing physical and non-physical stock items to create a finished product on the BOM list. On the BOM tab, you need to configure to recalculate the base (on cost price or selling price). You may also recalculate the sales percentage.

Select a BOM (Production) Contra Account

The BOM (Production) stock item type, will add the Assembly and Disassembly features as context menu options which include the ability to:

- Assemble: Specify and combine quantities of components to create finished items.
- Disassemble: Specify and break down quantities of finished items back into components.

The Assemble and Disassemble context menu options will process transactions to the "*BOM (Production) Contra account*" will record the transactions when the you:

- Assemble: Specify and combine quantities of components to create finished items from the BOM. This will debit the "*BOM (Production) Contra account*" and credit the "*Stock control account*" .
- Disassemble: Specify and break down quantities of finished items from the BOM list back into components. This will debit the "*Stock control account*" and credit the "*BOM (Production) Contra account*".

If the BOM (Production) contra account is not selected, the system will display an information message:

"Please setup production contra account in Stock setup."

To select the BOM (Production) contra account, navigate to Setup → Stock information and select the ledger account.

You will not be allowed to specify the re-order level and select the Cost of sales, Stock control and Input Tax accounts.

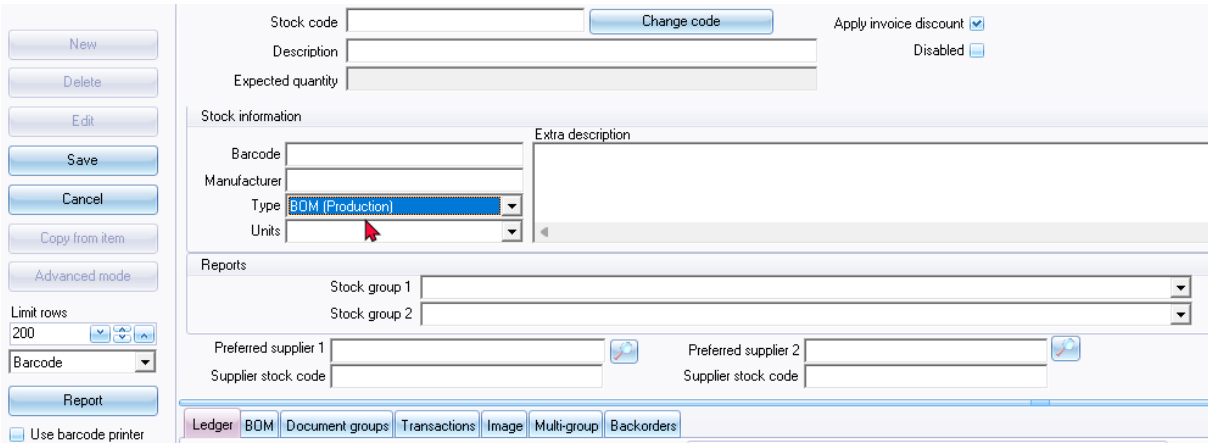
Create (Add) stock items for Bills of Materials - Production (BOM (Production)

To create a stock item for Bills of Materials - Production (BOM (Production):

1. On the Default ribbon, select Stock items (F12).

2. Click on the New button. A blank Stock form will be displayed.

3. Select the "*BOM (Production)*" stock item type. The Stock entry form is displayed as follows:



4. Enter the Stock code, Description, Barcode, Manufacturer and Extra description as required.

5. Select the Unit size.

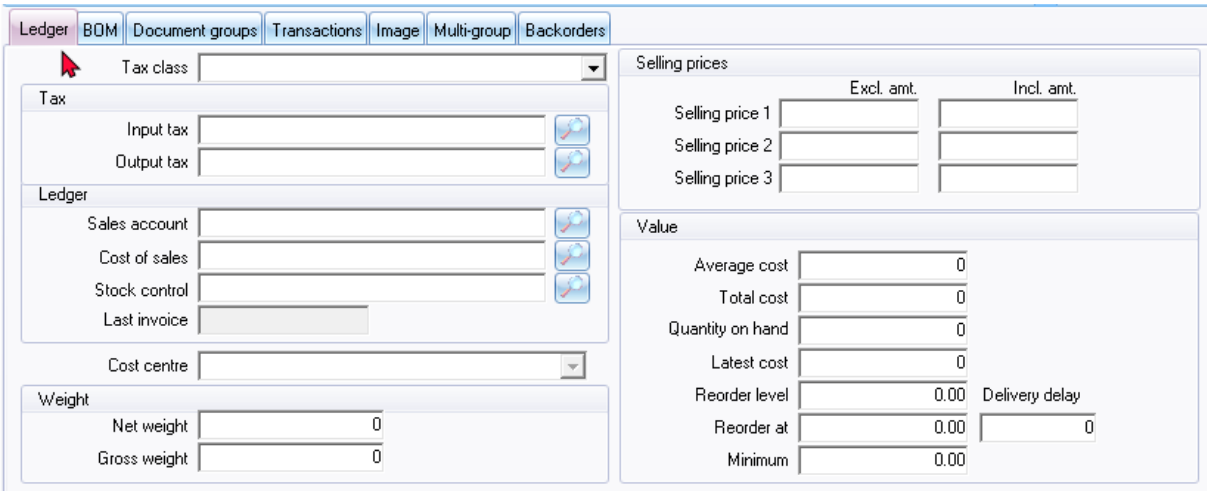
6. Apply invoice discount - This is applicable to debtor (customer / client) accounts, as the percentage customer discount is specified on the Accounting information tab - Debtors (Default ribbon).

7. Reports - Stock group 1 / 2 - The reporting group to which you wish this Stock item to be allocated.

8. Preferred supplier 1 - Optional - Select a creditor (supplier / vendor) account and enter a supplier stock code if applicable.

9. Preferred supplier 2 - Optional - Select a creditor (supplier / vendor) account and enter a supplier stock code if applicable.

10. Click on the Ledger tab, if not already displayed.



11. Enter or select the following options:

a) Tax class - If you have created tax classes, select the tax class. The Tax class will automatically add the Input Tax and Output Tax accounts in the Tax section, the Sales account, Cost of sales and Stock control accounts in the Ledger section.

b) Last invoice - Field inactive. The date of the last purchase or other document generated on which the Stock item was selected. This field will not display any date if it is a new item, or if no Stock items have been selected on any documents.

c) Default cost group - This is by default inactive. If you have created and activated cost centres, these may be selected.

d) Weight

   i) Gross weight - Enter, if applicable.

   ii) Net weight - Enter, if applicable.

e) Selling prices - Enter the Selling price 1/2/3 exclusive or inclusive of Tax. The inclusive of VAT/GST/Sales Tax will be calculated based on the percentage entered in your Output Tax account. (if you selected that account in advance).

This description should reflect your selling price descriptions as you have entered in Setup → Stock information.

If you have for example entered: "Retail", "Wholesale" and "Cash" for these Selling prices, the Selling price 1 / 2 / 3 will be respectively displayed as such.

The amounts as entered in these fields will be displayed on Invoices, Credit notes and Quotes. When the cursor is displayed on the Amount fields, you may select any of the available selling prices you wish to charge your debtors (customers / clients).

f) Values

   i) Average cost - Field inactive. The average cost price of your Stock item cannot be entered at this stage. When you process purchases, the Average cost Price will be automatically updated.

   ii) Total cost - Field inactive. The total cost price of your Stock item cannot be entered at this stage. When you process purchases, the Total cost price will be automatically updated.

iii) Quantity on hand - Field inactive. The quantity, or number of Stock items on hand, cannot be entered at this stage. When you process purchases, the quantities will be automatically updated.

iv) Latest cost - The latest cost price of your Stock item can now be entered. When you process purchases, the Latest cost Price will be automatically updated.

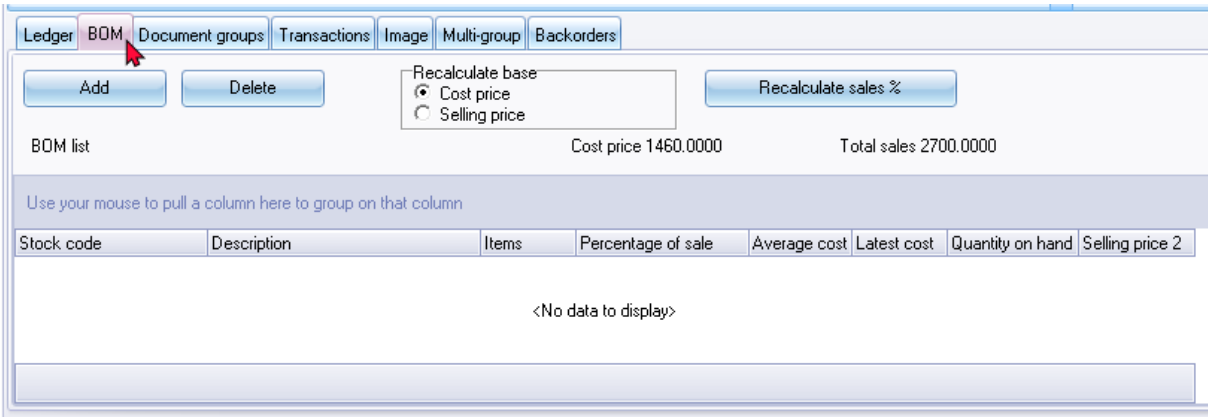
v) Reorder level - The minimum level of stock that you wish to keep on hand for this Stock item. In the case of Stock item codes for the purchase of services, this field should be left blank.

vi) Reorder at - Specify the quantity of stock to be available when you need to reorder stock.

vii) Minimum - Specify the minimum quantity of stock to be on hand.

i) Delivery delay - To be advised.

12. Click on the BOM tab, if not already displayed.



13. Click on the Add button to select an item on the Stock item lookup. Repeat this process until all the items (components) have been added to the list.

If more than 1 Stock item is included in the finished product, you need to enter the quantities to be included in the finished product.

To delete (remove) an item from the BOM List, select the item on the list and click on the Delete button.

14. Once you have added the BOM items to the list, enter the quantities of the components for each item. The values in the *Average cost, Latest cost* and *Quantities on Hand* fields will automatically be displayed for each stock item. The total Cost price value will also be automatically calculated (sum of the number

of items x cost price for each item).

15. Select Cost price or Selling price option in the *Calculate Base* field. Click on the Recalculate Sales % button. This will calculate the Percentage of Sales for each item on the BOM List.

16. Click on the Save button to save this stock item. The "*Stock item - List view*" (default) screen will be displayed.

BOM (Production) Assemble / Disassemble

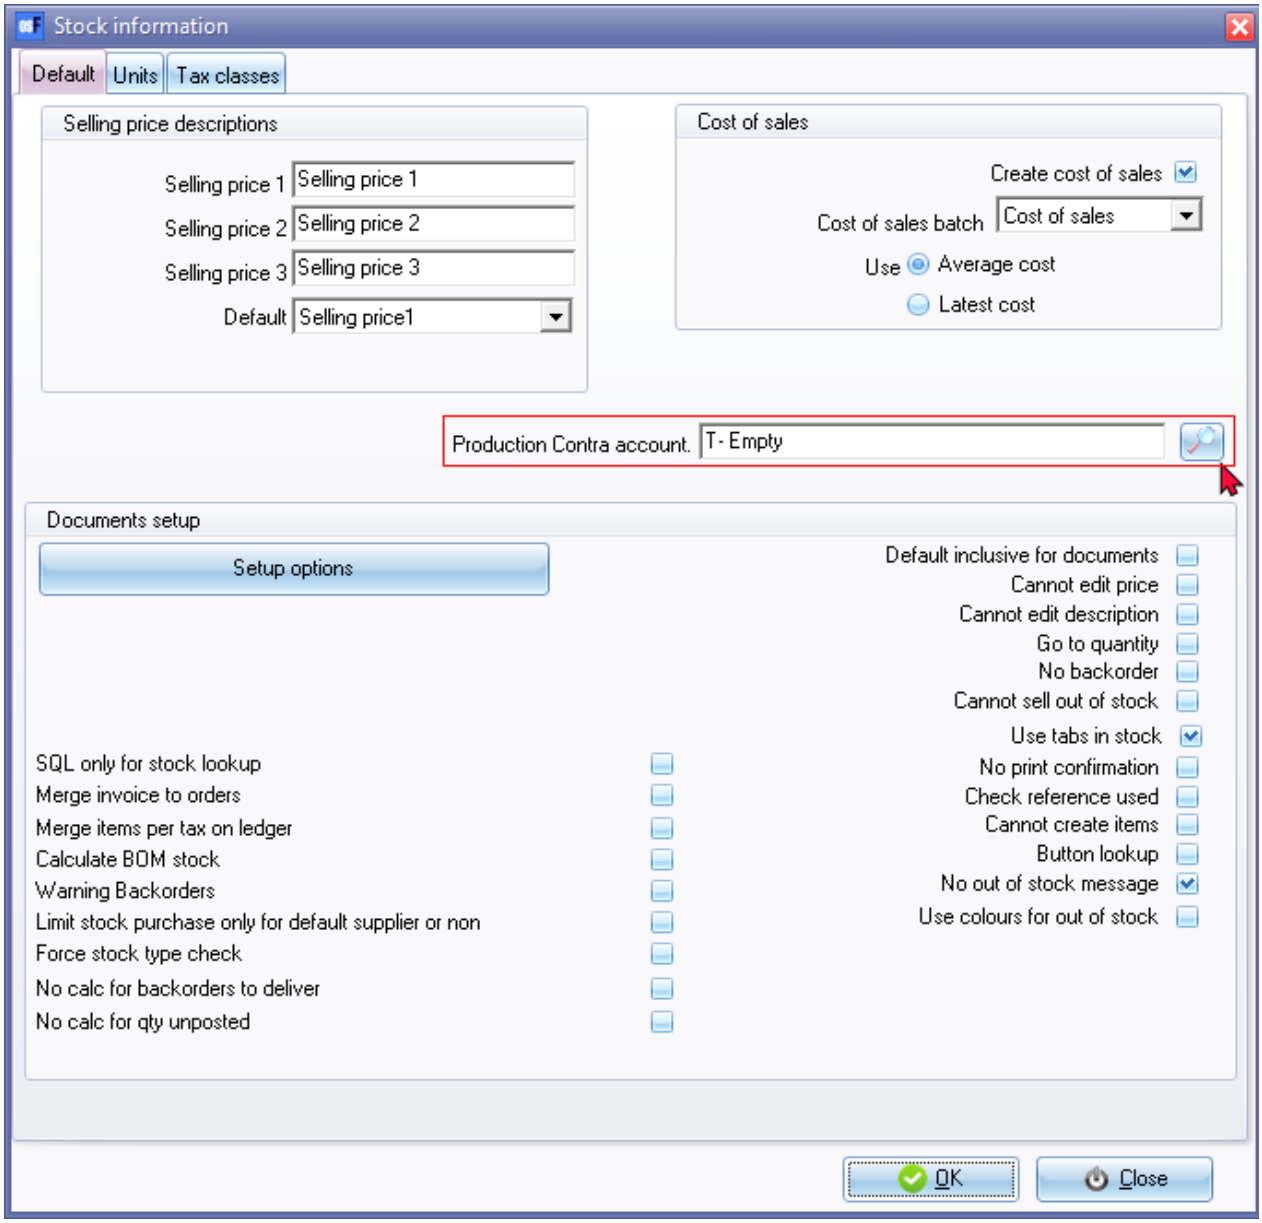
Before you may process the assemble / disassemble options for the "*BOM (Production)*" stock item, you need to add the stock items and do some basic settings.

Select a BOM (Production) contra account

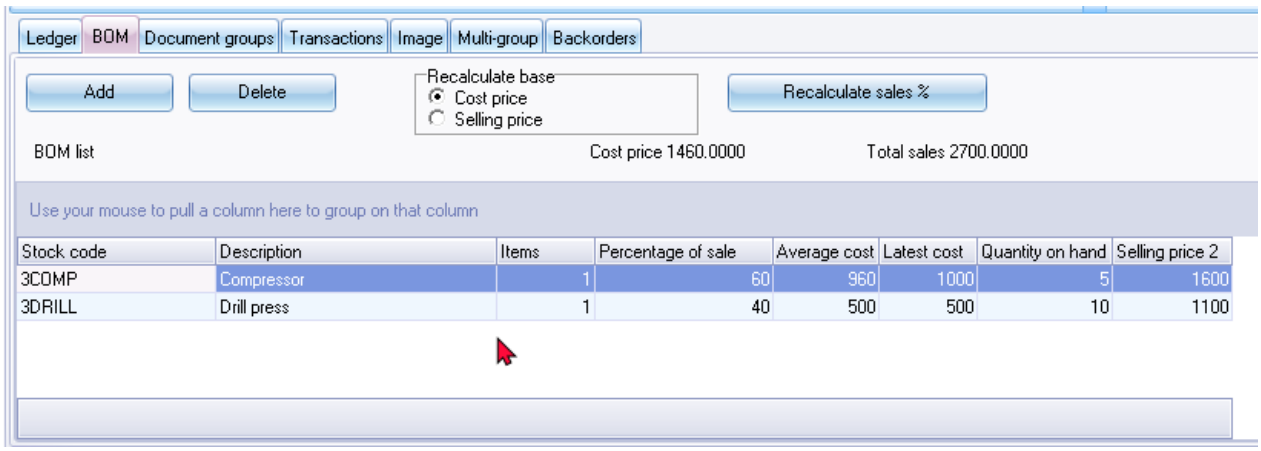
If the BOM (Production) contra account is not selected, an information message is displayed:

"Please setup production contra account in Stock setup."

Add a BOM (Production) contra account in Setup → Stock information.



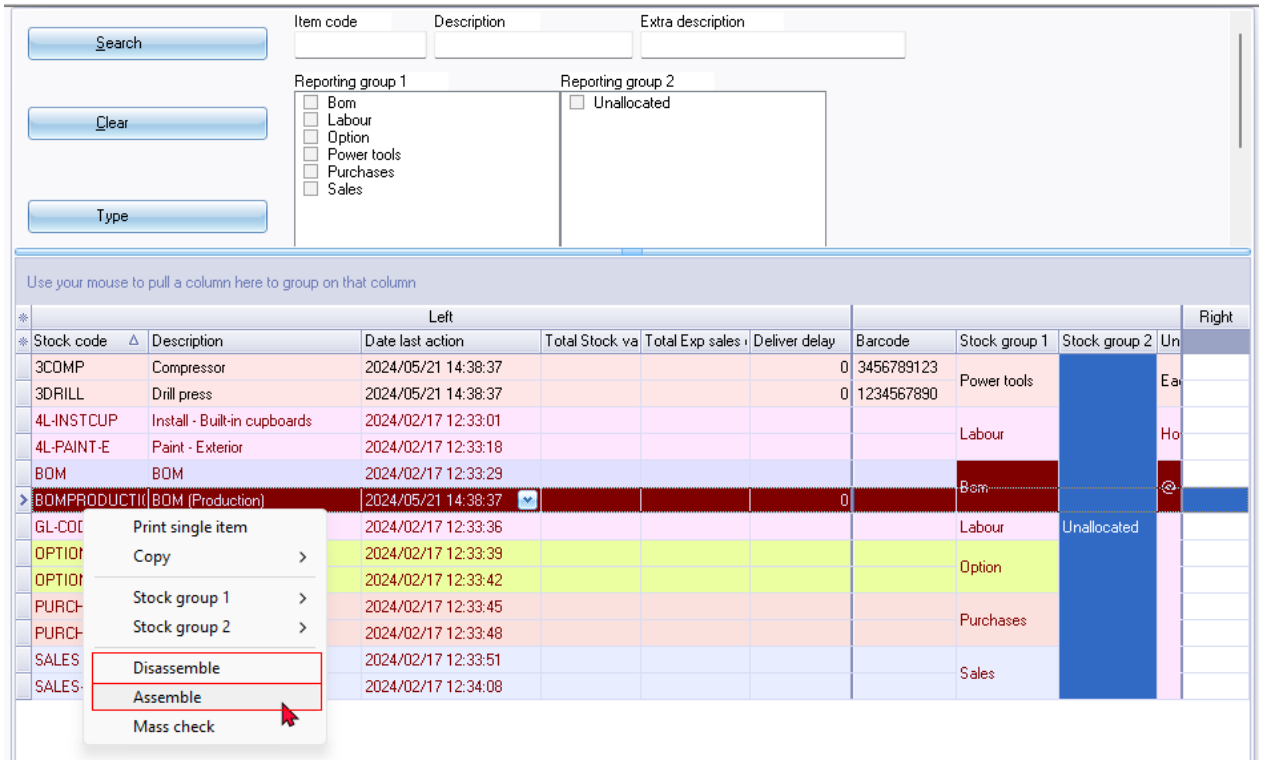
Add the stock items



Assemble and Disassemble BOM (Production) stock item type

Once this you have finished adding and configuring your items (products) pm the BOM tab, you may select the "*Assemble*" or "*Disassemble*" on the context menu for the "*BOM (Production)*" stock item type.

IMPORTANT : This will automatically generate a document and post (update the ledger) the transactions based on your configuration, for the items (products) on your BOM list.

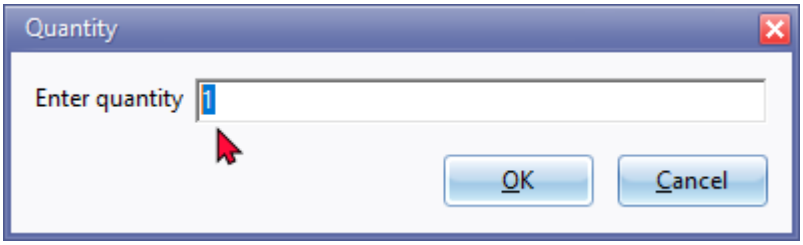


Assemble BOM (Production) item

To assemble BOM (Production) item:

1. Select the "*BOM (Production)*" item on the "*Stock item"* grid.

2. Right-click on a selected stock item (BOM (Production) stock item type) and select the " *Assemble"* option on the context menu. The "*Quantity"* screen is displayed:



3. Enter the quantity and click on the OK button. The confirmation screen will list the details of the assembly:

```
Processing lvl 0  BOMPRODUCTION BOM (Production)
Processing lvl 1  3COMP Compressor
Processing trans qty:5  3COMP Compressor
Processing lvl 1  3DRILL Drill press
Processing trans qty:5  3DRILL Drill press
Processing trans qty:-5  BOMPRODUCTION BOM (Production)
Processing costofsale:5  BOMPRODUCTION BOM (Production)
Processing costofsale:5  BOMPRODUCTION BOM (Production)
Processing costofsale:5  3COMP Compressor
Processing costofsale:5  BOMPRODUCTION BOM (Production)
Processing costofsale:5  3DRILL Drill press
```

4. Click OK to update quantities to BOM (Production) stock item and post transactions. A posted document with prefix *'SA'* (e.g., *'SA00001'*) will be generated for "*Assemble*".

Disassemble BOM (Production) item

Once you have assembled items, you may disassemble quantities.

To disassemble BOM (Production) item:

1. Select the"*BOM (Production)*" item on the "*Stock item - List view*" (default) screen.

2. Right-click and select the "*Assemble*" option on the context menu. The "*Quantity*" screen is displayed:

3. Enter the quantity and click on the OK button. The confirmation screen will list the details of the disassembly:

```
Processing lvl 0  BOMPRODUCTION BOM (Production)
Processing lvl 1  3COMP Compressor
Processing trans qty:1  3COMP Compressor
Processing lvl 1  3DRILL Drill press
Processing trans qty:1  3DRILL Drill press
Processing trans qty:-1  BOMPRODUCTION BOM (Production)
Processing costofsale:1  BOMPRODUCTION BOM (Production)
Processing costofsale:1  BOMPRODUCTION BOM (Production)
Processing costofsale:1  3COMP Compressor
```

```
Processing costofsale:1  BOMPRODUCTION BOM (Production)
Processing costofsale:1  3DRILL Drill press
```

4. Click OK to update quantities to BOM (Production) stock item and post transactions. A posted document with prefix *'SA'* (e.g., *'SA00001'*) will be generated for "*Disassemble*".

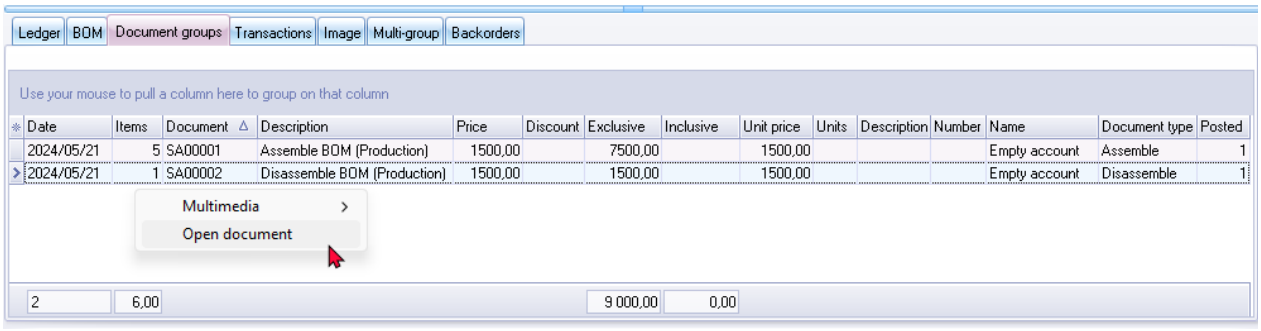
BOM (Production) Document groups / Transactions tabs

The "*Assemble*" and "*Disassemble*" functions for BOM (Production) items create posted documents. These transactions will be listed under the Document groups tab and the Transactions tab.

Documents generated by these functions will have a document prefix "*SA*" (e.g., "*SA00001*"), using a similar 7-digit format.

BOM (Production) Document Groups Tab

The Document Groups tab for BOM (Production) stock items shows documents related to assembly and disassembly. These documents are automatically posted when you perform the Assemble and Disassemble actions.

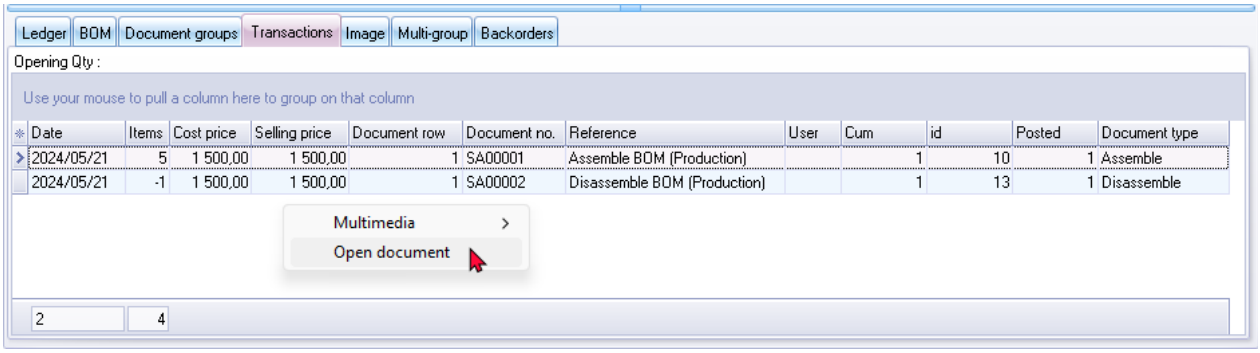


On the Document groups tab, you can:

- Print a document: Double-click on the document to print it.
- Open a posted document: Right-click on the document and select "*Open document*" from the context menu.

BOM (Production) Transactions Tab

The Transactions tab includes posted documents generated by the assembly and disassembly of BOM (Production) items.



On the Transactions tab, you can:

- Open a posted document: Right-click on the document and select "Open document" from the context menu.

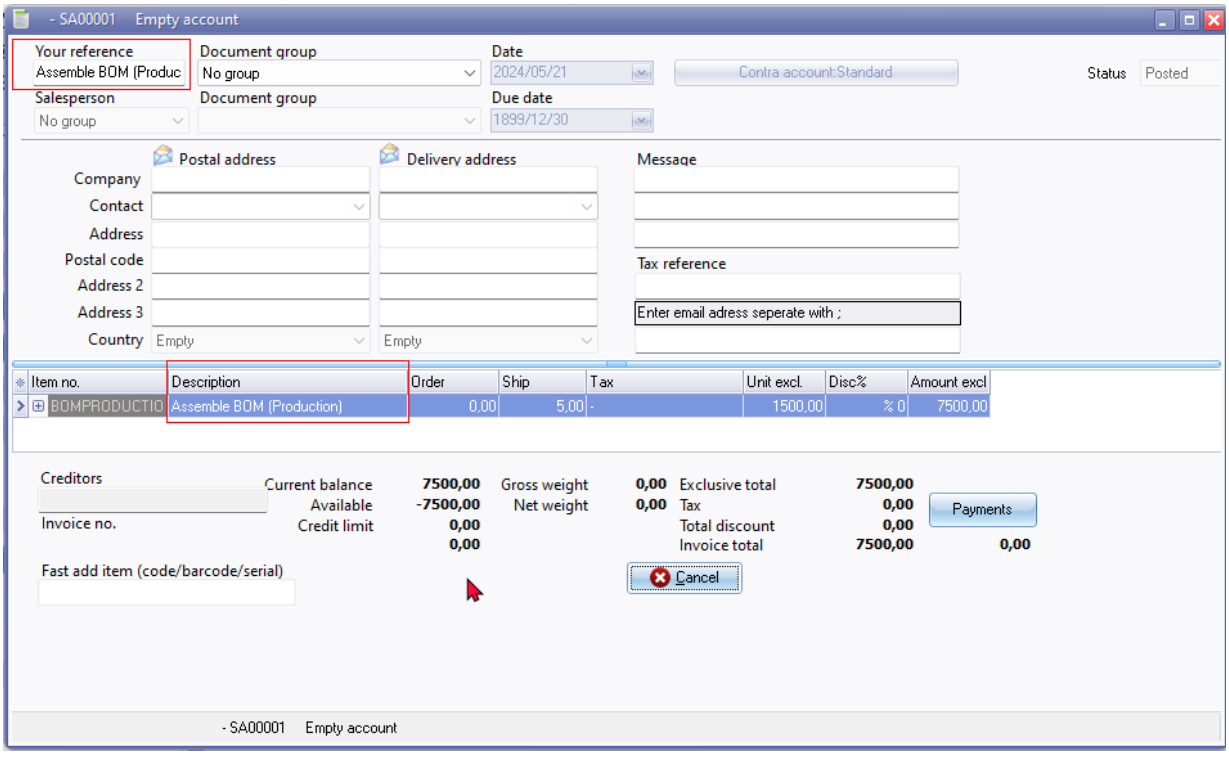
By following these instructions, you can efficiently manage and review the documents and transactions related to the assembly and disassembly of BOM (Production) items.

Viewing Posted Documents for BOM (Production) Items

Opening a Posted document

On the BOM (Production) Document groups and Transactions tabs, you can open posted documents generated by the "*Assemble*" and "*Disassemble*" functions as follows:

1. Right-click on the desired document.
2. Select "Open document" from the context menu.



Identifying the Document type

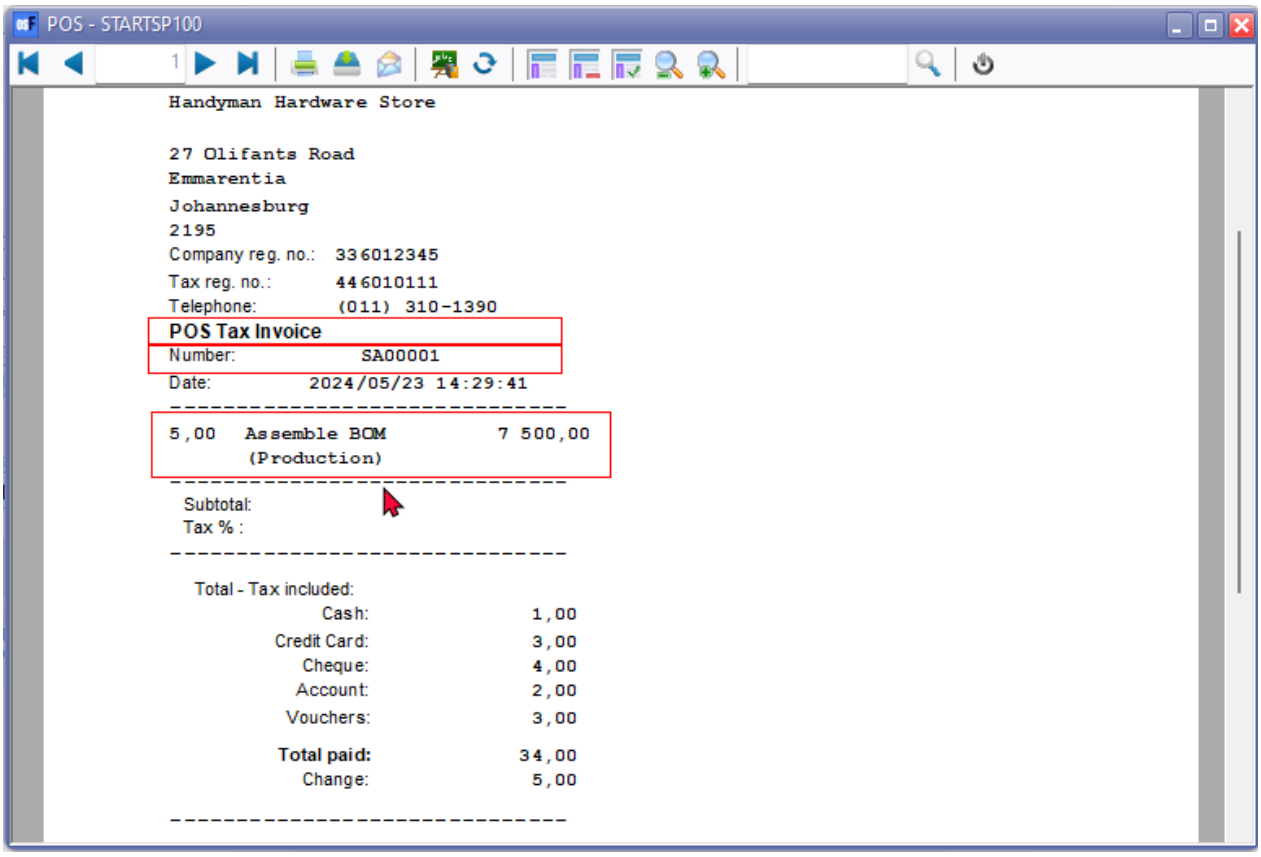
- The "*Your reference*" field and the "*Description*" column in the posted document will indicate whether the document was generated using the "*Assemble*" or "*Disassemble*" options for BOM (Production) items.
- Documents generated by these functions will have a document prefix "SA" (e.g., "SA00001"), using a similar 7-digit format.

By using these steps, you can easily access and identify the specific documents related to the assembly and disassembly of BOM (Production) items.

Print a Posted document

You may print selected posted document generated by the "*Assemble*" and "*Disassemble*" of BOM (Production) items from the following options:

- BOM (Production) - Document groups tab : (Double-click to print).
- Search (central search) : Locate these posted document generated by the "*Assemble*" and "*Disassemble*" of BOM (Production) items. (Double-click to print).



The "*POS Tax Invoice*" will print the correct document number, but will print the system date and time

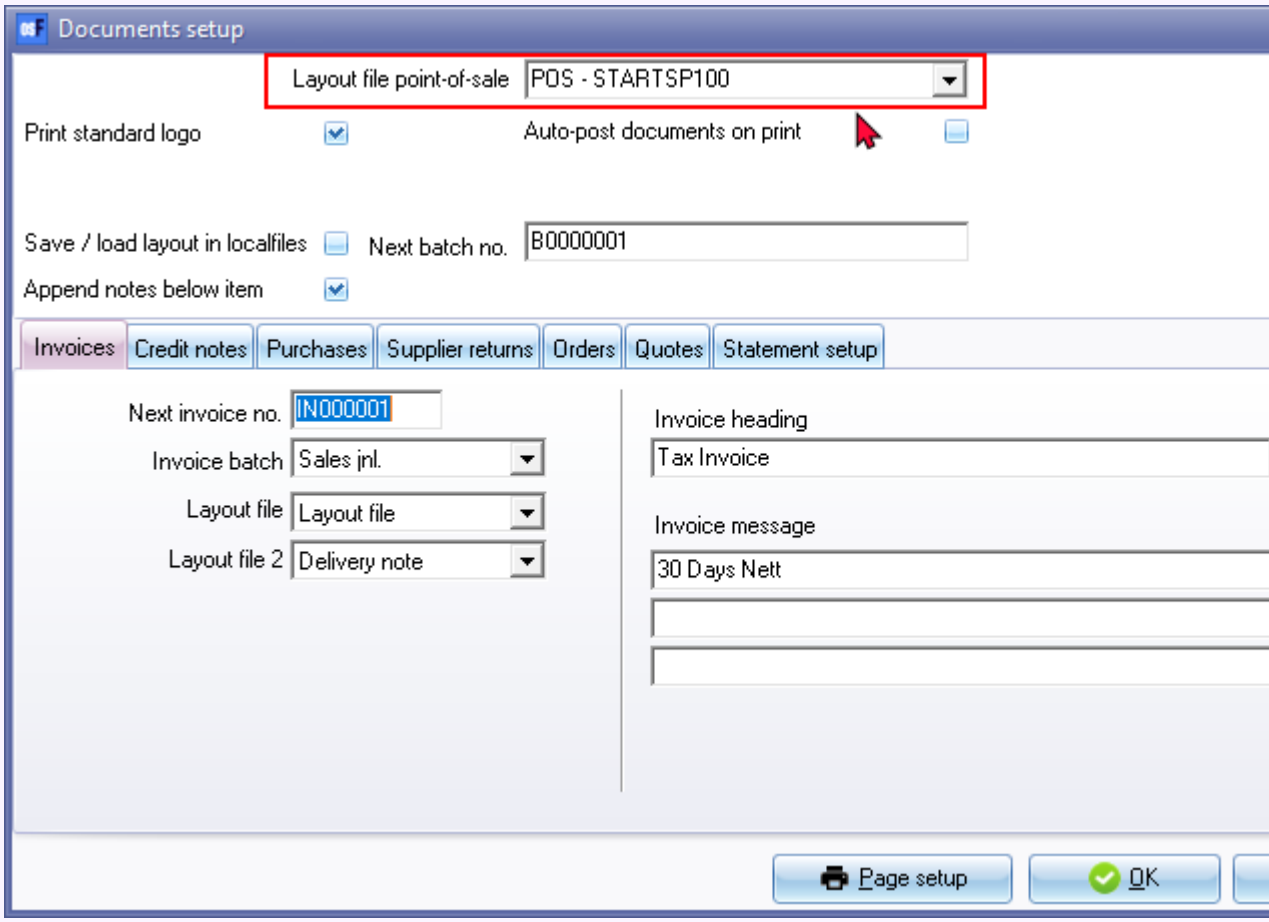
stamp of your operating system and not the actual transaction date.

The default document layout file which will be used to print documents generated by the "Assemble" and "Disassemble" of BO is the "Layout file point-of-sale" selected in Setup → Documents setup.

WARNING: Point-of-sale document layouts might not be ideal for printing "Assemble" and "Disassemble" documents for BOM types due to:

- *Date: POS invoices show your system's date, not the actual processing date.*
- *Document Name: Might say "POS Tax Invoice" instead of something relevant.*
- *Footer: Contains data like cashup amounts, not relevant for BOM operations.*

Recommendation: Select a different document layout file for BOM (Production) transactions (Setup → Documents setup).



NOTE: Selecting the document layout files, which supports the "TYPES.SDESCRIPTION" document name from the "TYPES" table, document name as "Delivery note" for "Assemble" option and "Remittance" for "Disassemble" option. Selecting the following do will replicate the document names:

- *Layout file - (TRN_1910)*
- *Document layout - (TRN_3174)*

- *Document layout (15codes) - (TRN_906277)*
- *NO-TAX Layout file - (TRN_906589)*
- *NO-TAX Document layout - (TRN_906590)*
- *NO-TAX Document layout (15codes) - (TRN_906591)*

Recommendation: You may select the BOM (Production) Layout file (TRN_3266) for the Stock item type to print layout file "Assembly" or "Disassembly".

Document prefix: "SA" (e.g., "SA00001"), with a similar 7-digit format.

Viewing BOM (Production) Transactions

The transactions generated by assembling and disassembling BOM (Production) items are posted to the "BOM (Production) Contra account" as configured in Setup → Stock Information.

These transactions are recorded in the ledger and can be viewed through various reports and tools. Here's how you can view, print, and export these transactions:

1.

1. Reports Menu: To view these transactions, navigate to the Reports menu and select Reports → Ledger → Transactions. You can choose from the following reports:
    - Transactions
    - Transactions - Standard

- Transactions - Extra details

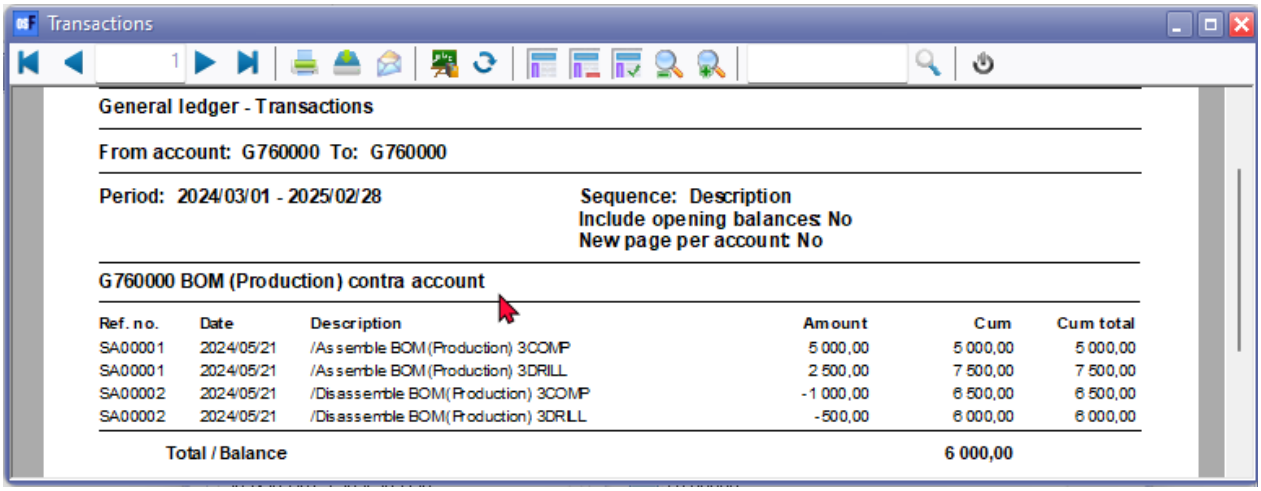
2. Batch entry: Cost of Sales journal: Open the Batch entry (F2) and select Cost of Sales journal. In the Cost of Sales journal, click on the posted batches tab and select the batch. You can print the transactions in the "*Batch type report - Posted batch*".

3. T-Account Viewer: Access the T-Account viewer and select the "*BOM (Production) Contra account*". This allows you to view, print, and export the transactions.

4. Ledger Analyser: Alternatively, you can print a Trial Balance in Ledger Analyser 1 or Ledger Analyser 2. Double-click on the desired account or use the "*Show details*" option from the context menu to view detailed transactions.

5. Central Search: To locate specific assemble or disassemble transactions or document numbers. In the search results, double-click on the Batch type to display the transactions in the T-Account viewer.

Example : Ledger transactions - BOM (Production) Contra account



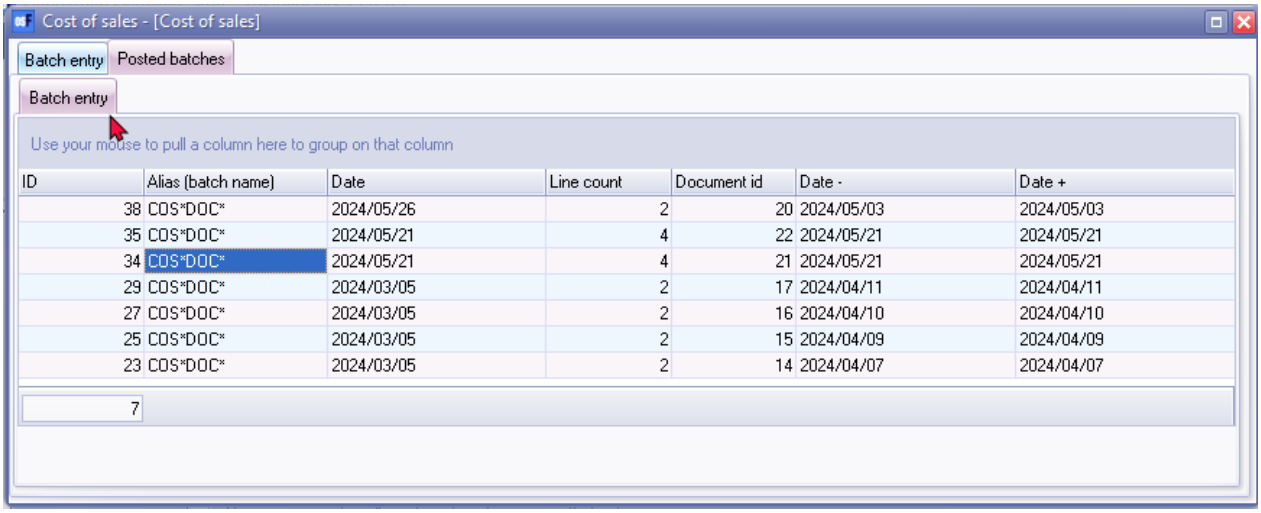
BOM (Production) - Assemble and Disassemble options will automatically generate transactions, which is posted to the ledger.

The Document no. for a BOM (Production) - Assemble and Disassemble options is automatically generated as a seven-digit number (consisting of a prefix SA followed by 5 numerical digits).

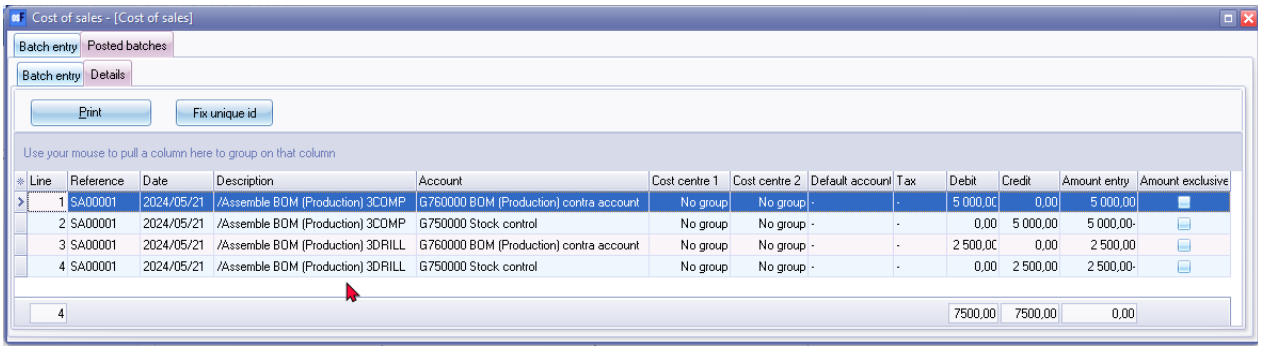
The Document type is "Assemble" or "Disassemble"

Example : Batch type report - Posted batch - BOM (Production) Batch transactions

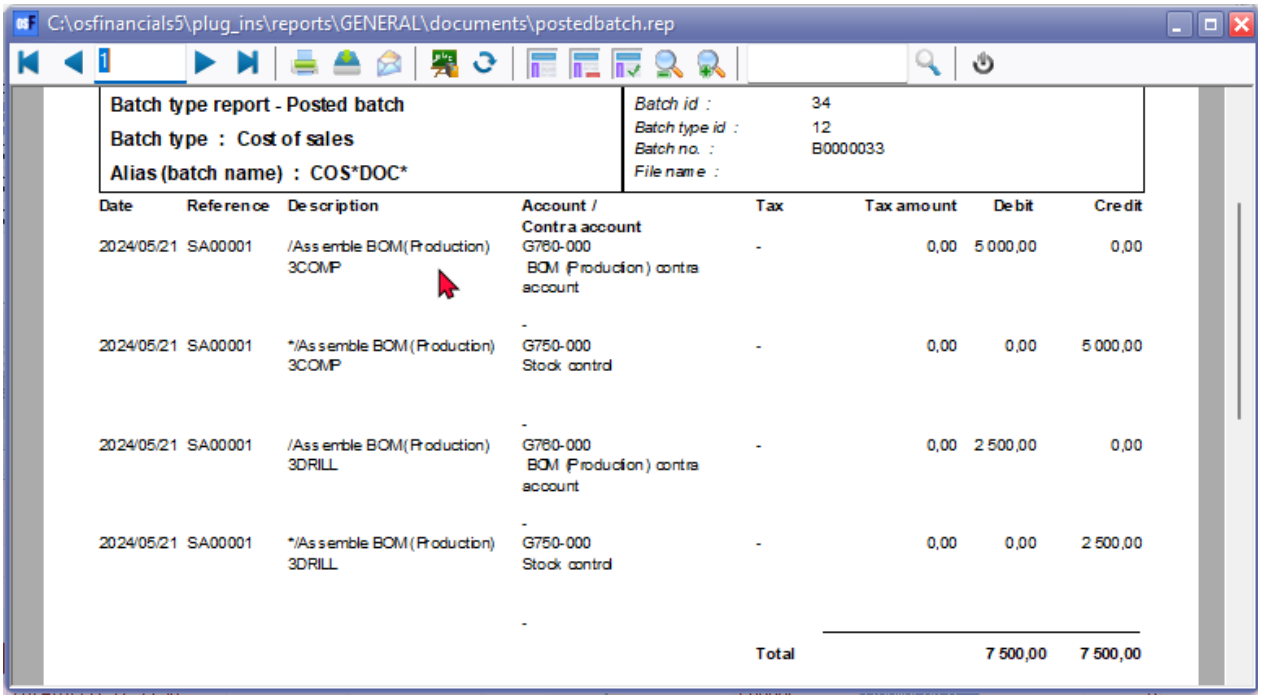
Open the Batch entry (F2) and select Cost of Sales journal. In the Cost of Sales journal, click on the posted batches tab and select the batch.



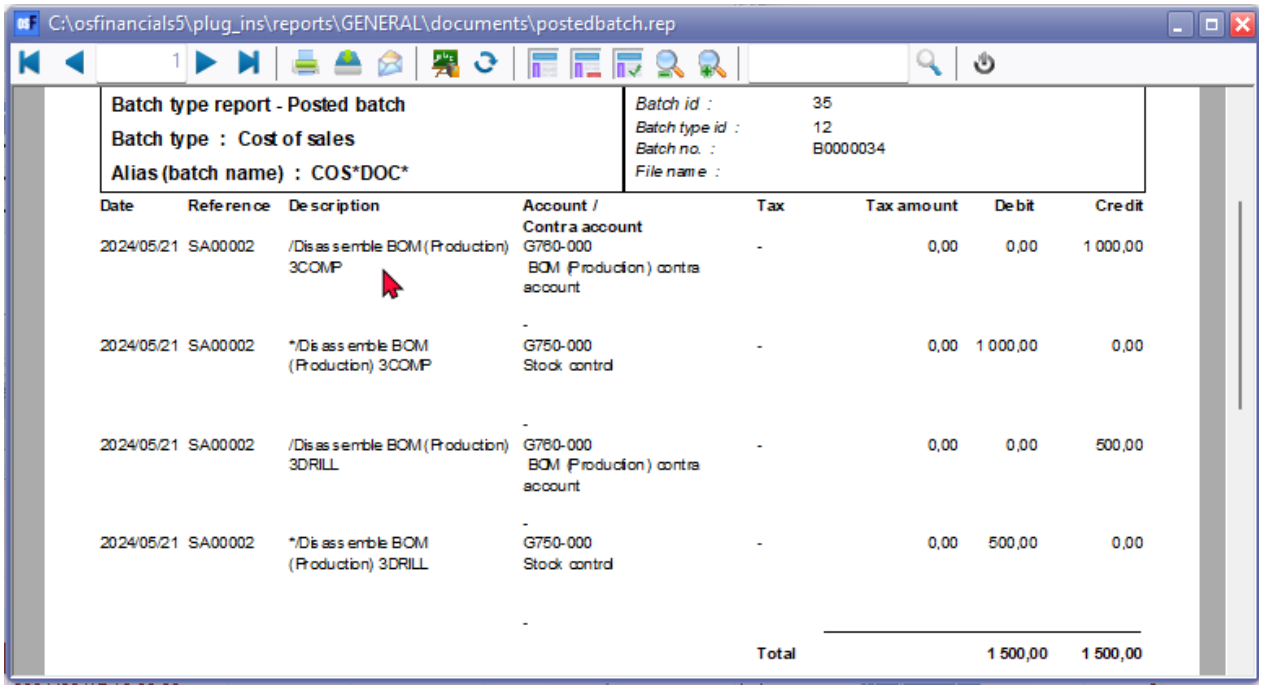
Click the Print button to print the transactions in the "*Batch type report - Posted batch*".



Example : Batch type report - Posted batch report - Assemble transactions



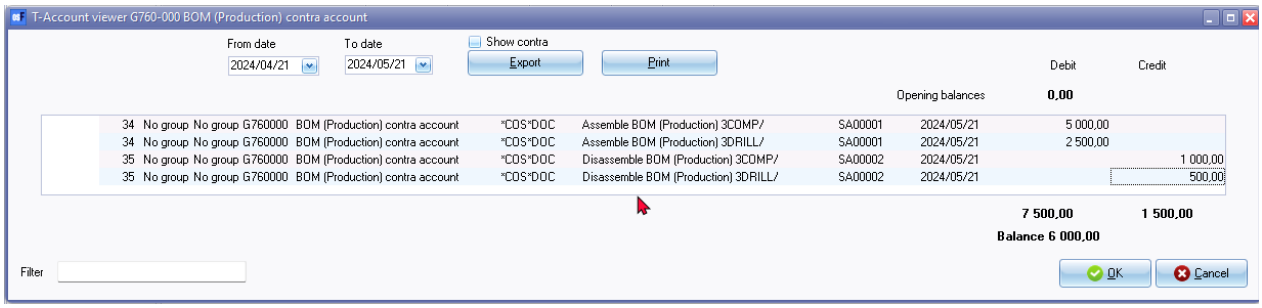
Example : Batch type report - Posted batch report - Disassemble transactions



T-Account viewer

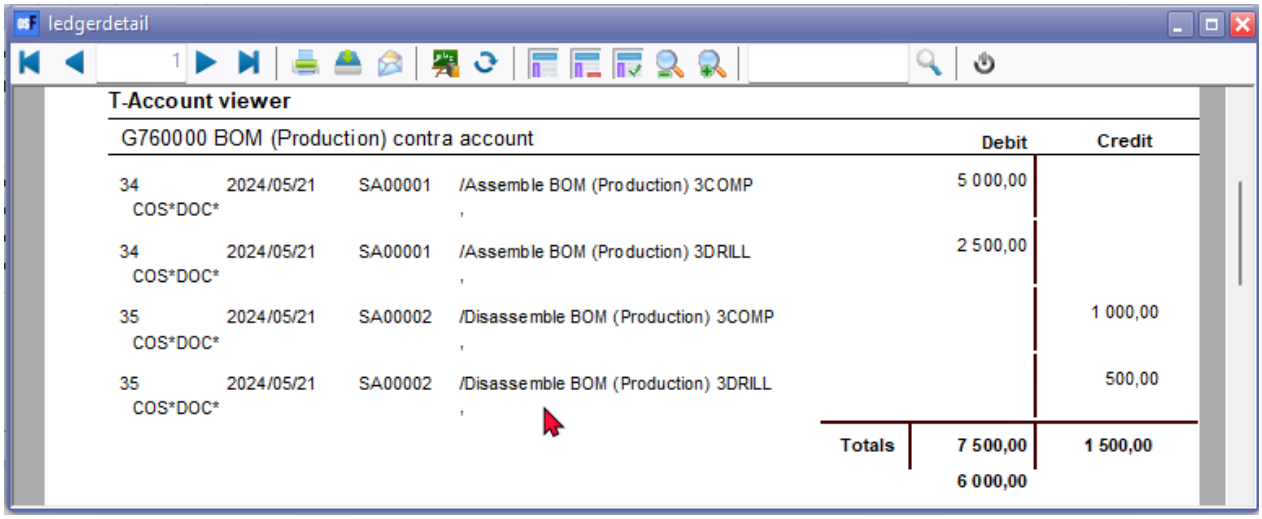
In addition to the transaction reports on the Reports menu; you may view, print and export transactions in the T-Account viewer from the following options.

- T- Account viewer : On the reports menu, select the T-Account viewer icon and select the "*BOM (Production) Contra account*".
- Alternatively, you may print a Trial balance in the Ledger analyser 1 / Ledger analyser 2 and double-click or use the "*Show details*" option on the context menu.



You may filter the transactions by batch number, e,g, "*34*" or "*35*".

Click on the Print button to print a T-account view of the transactions.

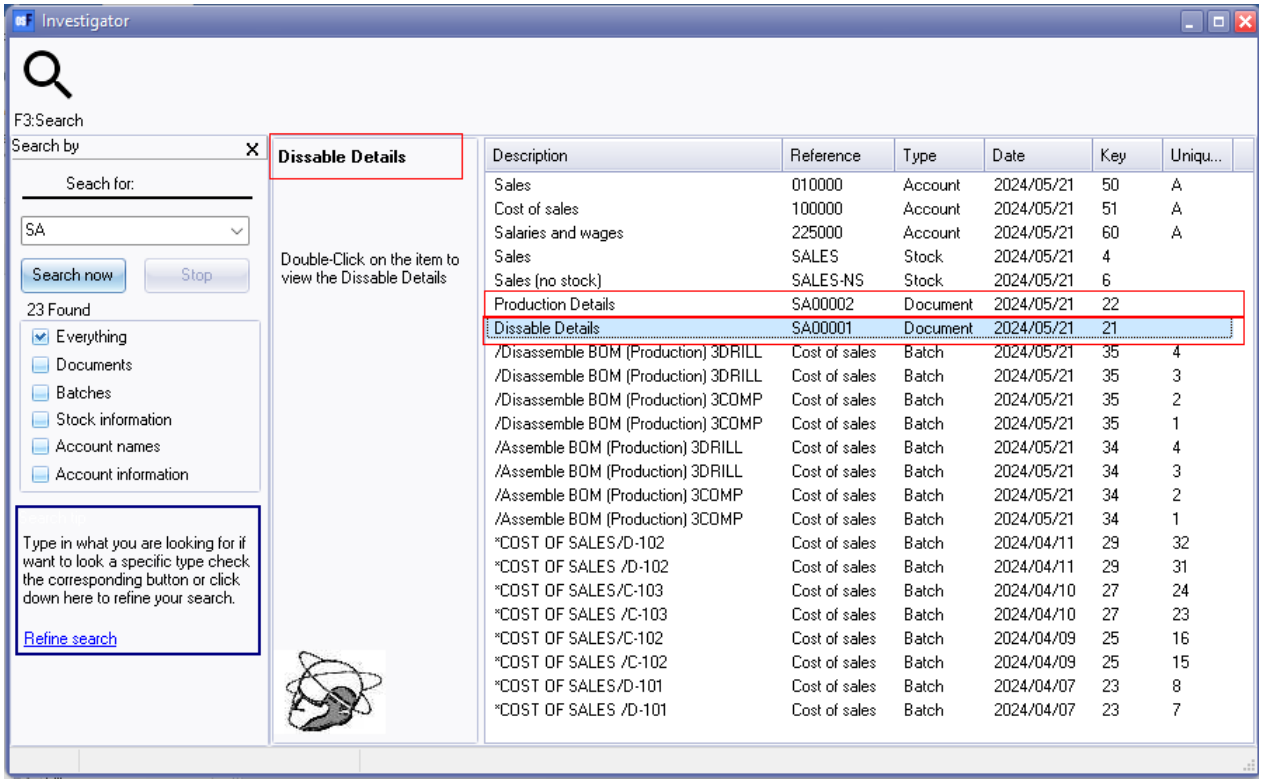


Should you wish to export these transactions to a spreadsheet click Export. If you need to include Contra accounts, in your spreadsheet, select the "*Show contra*" option

Search (Central search)

To locate specific assemble or disassemble transactions or document numbers:

- Search for keywords such as "*assemble*", "*disassemble*", or document numbers starting with "*SA*".
- In the search results, double-click on the "*Batch*" type to display the transactions in the T-Account viewer.
- To print a document, double-click on a document for the "*Document*" type.



NOTE: On the Search (central search), the "*Description*" column for the "*Document*" type, is indicated as follows:

- Dissable Details - Should be "*Production Details*" since the document e.g. "*SA00001*" is created using the "*Assemble*" option. The document type is listed as "*Assemble*" on the Document groups and Transactions tabs of the stock item for the BOM (Production) stock item type.
- Production Details - Should be "*Disassemble Details*" since the document e.g. "*SA00002*" is created using the "*Disassemble*" option. The document type is listed as "*Disassemble*" on the Document groups and Transactions tabs of the stock item for the BOM (Production) stock item type.

Search Description Inaccuracy:

- Central Search shows "*Dissable Details*" for "Assemble" documents (e.g., "SA00001"). This should be *"Production Details*".
- Conversely, "*Production Details*" are shown for "*Disassemble*" documents (e.g., "SA00002"). This should be "*Disassemble Details*".

Correct Descriptions:

- "*Assemble*" documents: Use "*Production Details*".
- "*Disassemble*" documents: Use "*Disassemble Details*".

These descriptions are consistent with the document types listed on the stock item's "Document groups" and "Transactions" tabs (BOM (Production) stock item type).

Delete stock items

You may delete a stock item, if it has no transactions and/or balances.

You may disable a stock item to hide the stock item from the stock lookup when processing documents. Disabled stock items will still be included on the stock lookup when printing reports.

You may need to do this, if you are no longer use the stock item, the stock item is discontinued, etc.

Delete items

To delete a stock item:

1. On the Stock items, select the stock item, and click on the Delete button. A confirmation message is displayed:

   "Are you sure you want to delete this stock item?"

   Make sure absolutely sure that the correct stock item is selected.

2. Click on the Yes button. The stock item will be permanently removed (deleted).

Disable items

If you cannot delete a stock item, if it has no transactions and/or balances you may disable or set the stock item as inactive.

Advantages of Disabling or Setting a Stock Item to Inactive:

1. Organization: Disabling stock items that are no longer in use such as discontinued items, helps keep your inventory database organized and decluttered.
2. Accuracy: By removing inactive items from the selection options, you reduce the chances of users mistakenly selecting them for new transactions.
3. Focus: Keeping only active items visible can streamline the selection process for users, allowing them to focus on items that are relevant to current operations.
4. Compliance: In some cases, regulatory or internal compliance requirements may necessitate the removal of certain items from active circulation. Disabling them ensures adherence to these requirements.

Ultimately, the decision to disable or set a stock item to inactive should be made based on factors such as current usage, future plans, and organizational policies, while considering the balance between organization and operational efficiency.
When processing sales and purchase documents,

To disable a stock item:

1. If the stock item has transactions and/or balances, you cannot delete it. An information message is displayed:

"3COMP You cannot delete this stock item! It has transactions! 12 PU000004"
(3COMP is the stock code and PU000004 is the last processed document number as per this example).

2. To hide the stock item from the stock item lookup when processing documents, select the stock item and click on the Edit button.
3. Tick the Disabled field.
4. Click on the Save button.

Export / Import - Stock items

Created with the Standard Edition of HelpNDoc: Free help authoring environment

Export - Stock items (Setup ribbon)

This feature is additional to the powerful Report Export facility in which all reports for Stock items in osFinancials5/TurboCASH5 may be exported, and saved in any available format on your system, such as Word Processing (Text), Spreadsheets, etc. Using this facility, you may also export the data of your Stock items in an open Set of Books to XML Database format, or any available format on your system.

You may then open the other applications to which the exported data is saved, and work in the applications, such as OpenOffice.org Calc, Lotus 123, Microsoft Excel, etc. You may edit the data for your Stock items in a Lotus123 (*WK1) file format and import it in Stock items (Default ribbon).

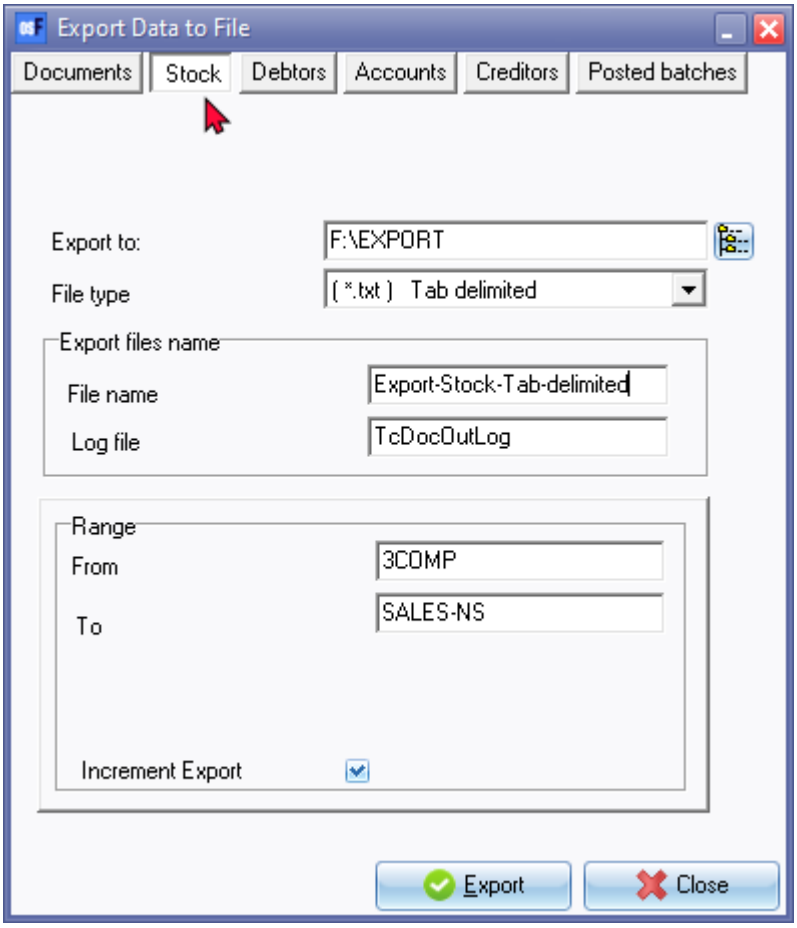
All the information regarding each stock item as entered in the Stock items (Default ribbon) (Stock code, Barcode, Description, Re-order levels, Apply invoice discount, Selling prices, Unit Description, Cost of sales account, Sales account, Input Tax and Output Tax accounts) will be displayed. In the same export file, the latest updated information regarding any adjustments and transactions (Quantity on hand and Average cost) would also be included into the selected export file format.

You may edit the data for your Stock items in a Lotus123 (*WK1) file format and import it in the Stock items (Default ribbon).

To export Stock items:

1. On the Setup ribbon, select Export.

2. Click on the Stock button, if not selected.



3. Select and/or enter the following:

a) Export to - The installation directory in which osFinancials5/TurboCASH5 is installed, will be displayed. You may click on the Browse icon to select a folder on the "*Browse for Folder*" screen. You may then select any available folder, or drive, on your system into which you wish to export the data.

b) File type - Select to export the file as "*Tab delimited*" (*.txt) file format (recommended).

"Import file format not implemented!" information message is displayed for the following file types:

- *TXF TurboCASH Exchange File*
- *SXC OpenOffice Spreadsheet*

*The XML Database (*XML) file format export can only be imported in Import (Setup ribbon). It cannot be imported in Stock items (Default ribbon).*

c) Export files name - Enter the File name. You need to select this file at a later stage when you wish to import the file, or analyse the data in a spreadsheet.

d) Log file - Enter the Log file name.

e) Range - From / To - Select the stock items to include in the export file.

f) Increment Export - Leave this option blank.

4. Click on the Export button to create the export file, and save it in the specified directory.

The information for the Stock items, which will be exported, is:

- *Stock code*
- *Stock item type*
- *Barcode*
- *Description*
- *Quantity on hand*
- *Reorder quantity*
- *Apply invoice discount*
- *Selling price 1 amount*
- *Selling price 2 amount*
- *Selling price 3 amount*
- *Unit average cost amount*
- *Unit cost amount*
- *Unit description*
- *Stock group 1*
- *Stock group 2*
- *Cost of sales account*
- *Sales account code*
- *Stock account*

- *Input Tax account*
- *Output Tax account*

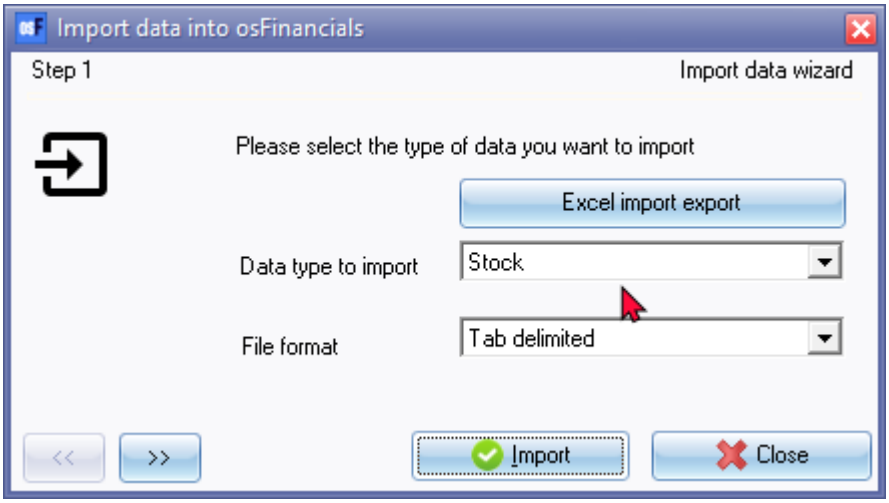
Import - Stock items (Setup ribbon)

This option will allow you to import data for Stock items from a valid file format into an existing Set of Books. To be able to import the data for Stock items, you need to have created a valid XML Database File format or a valid Lotus Spreadsheet file format on your system in Export (Setup ribbon).

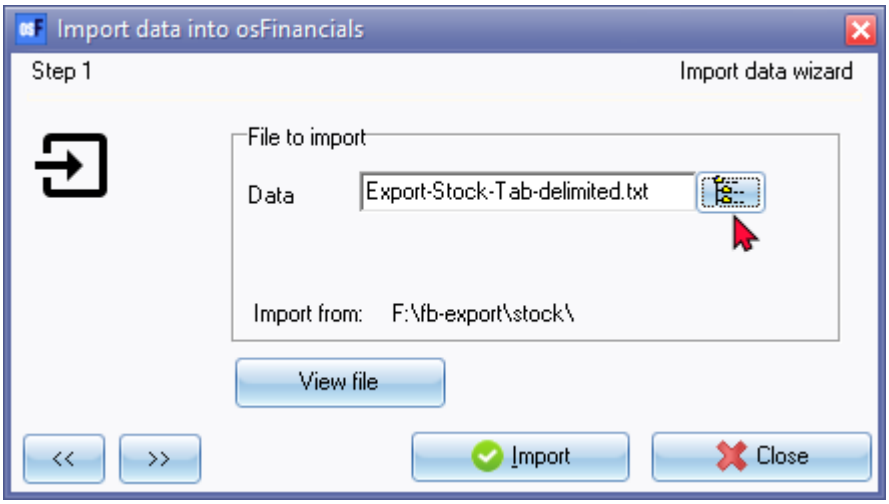
To import Stock items:

1. On the Setup ribbon, select Import. The "*Import Data into osFinancials"* screen is displayed:



2. Select Stock as the "*Data type to import*".
3. Select one of the following file types in which the data to import, is saved on your system:
    a) Tab delimited (recommended)
    b) Comma Separated Values (*.CSV)
    c) Tab Delimited (*.TXT)
    d) XML Database File (*.XML)
    e) Lotus Spreadsheet File (*.WK1)

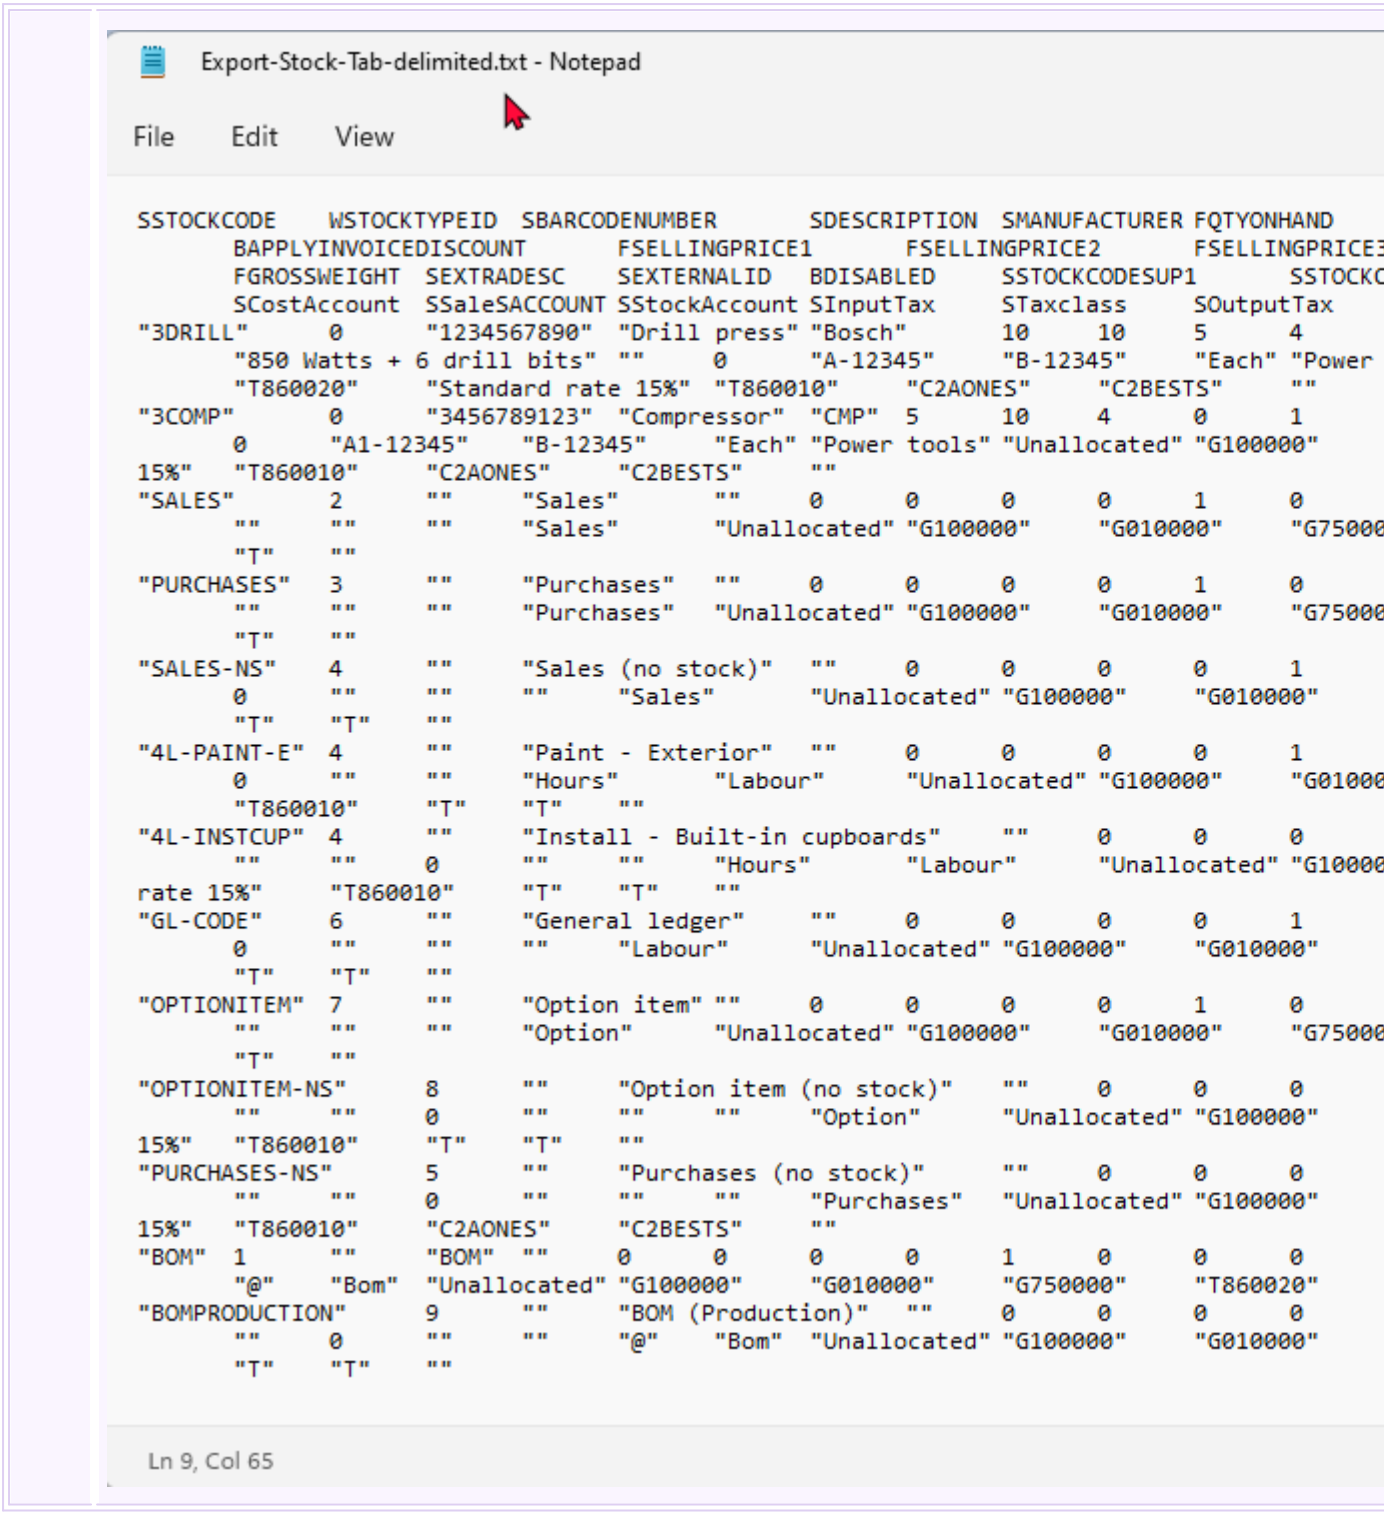
4. Click on the >> button to locate the data file. The following screen is displayed:



5. Click on the button to locate the data file.

Optional - You may click on the View file button to view the file in your system's default app (program) associated with th

An example of the exported Tab Delimited text file is as follows:



Export-Stock-Tab-delimited.txt - Notepad

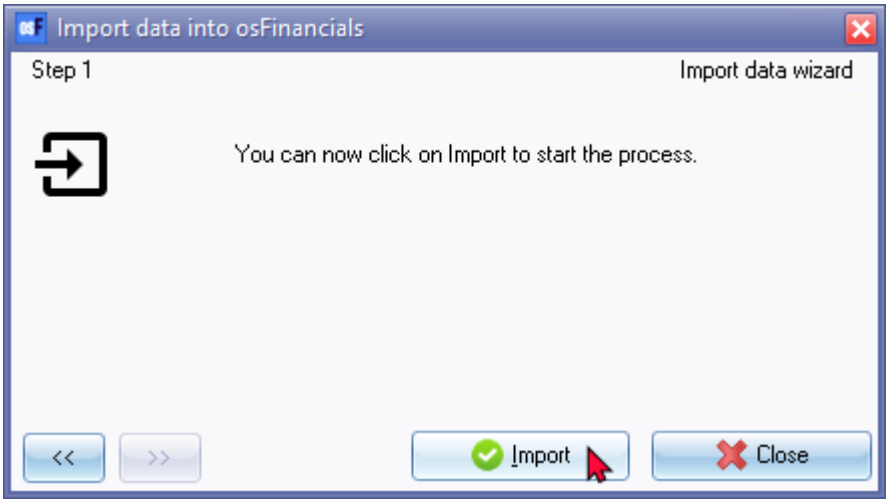
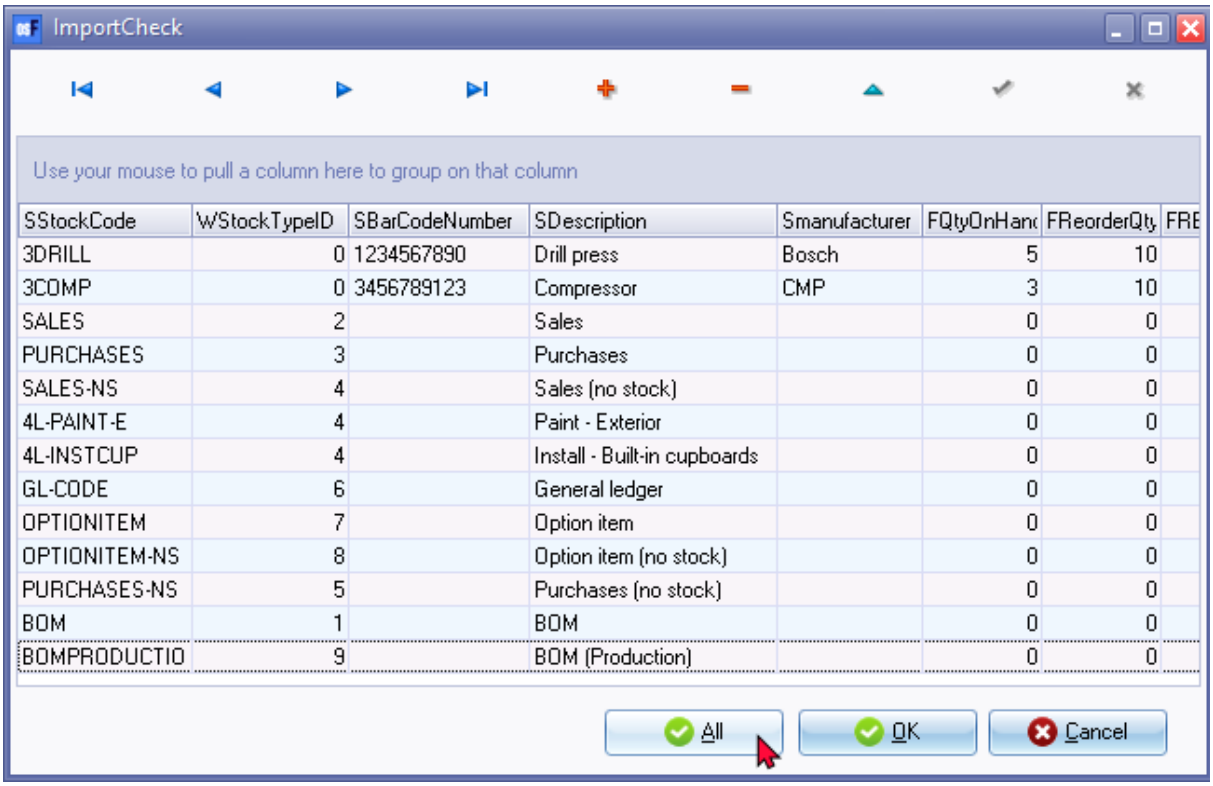
Ln 9, Col 65

6. Click on the >> button. The following screen is displayed:



7. Click on the Import button. The "*ImportCheck*" screen is displayed:



8. You may use the record buttons to add, delete or change the stock records on the "*ImportCheck*" screen. You may then click on the All or OK buttons to import the stock file.

9. Once the import process is finished an information message is displayed:

   "Data file import completed!"

10. Click on the OK button.

11. Go to the Reports ribbon and select Reports → Stock items → Stock item listing to check the stock items.

12. Go to the Default ribbon and select Stock items to edit the stock items, if necessary.

Important notes - After import

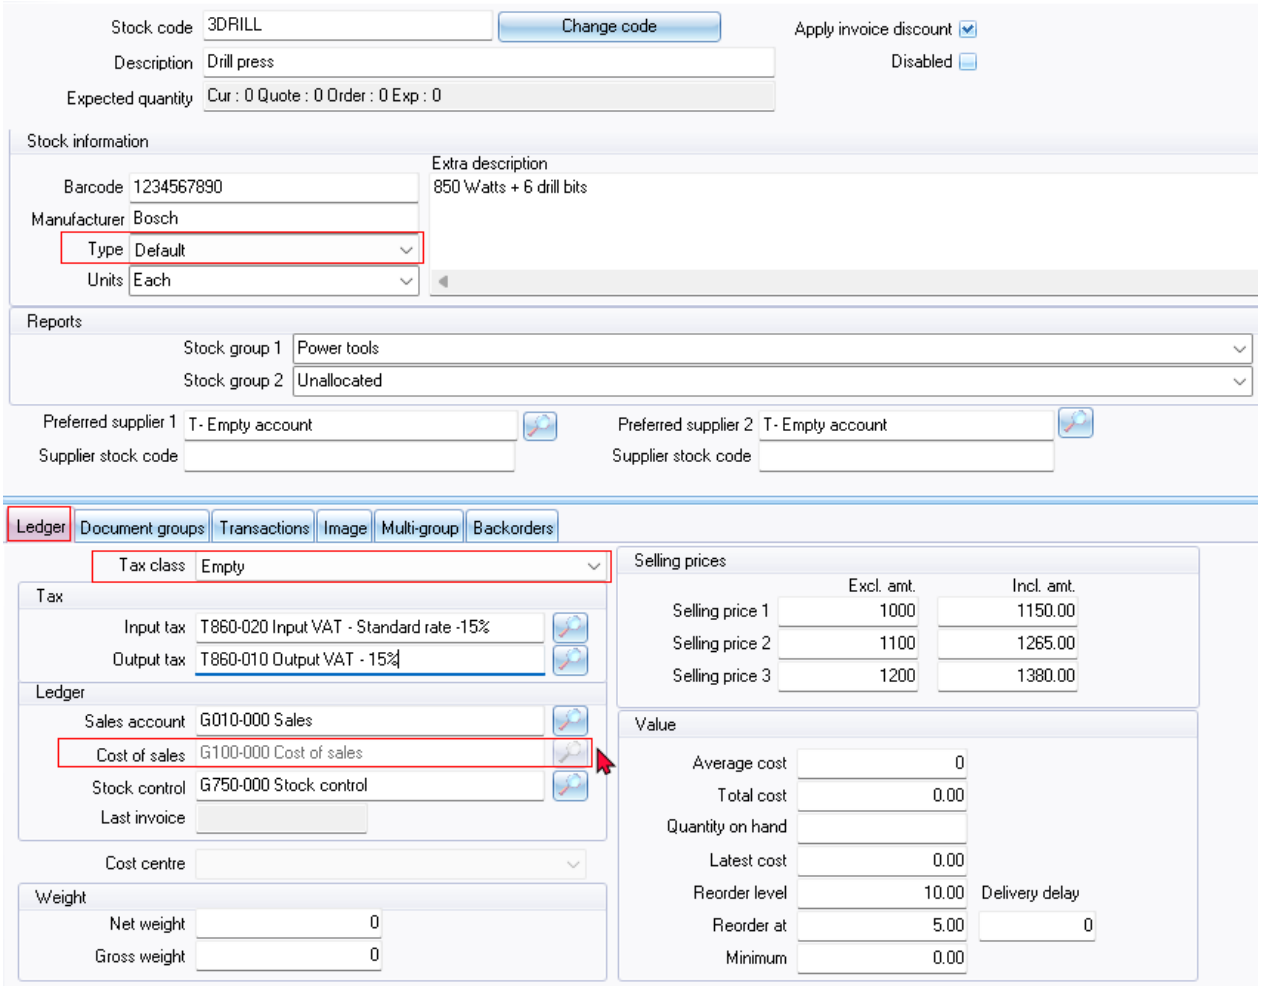
Stock colours

If stock items were linked to Stock group 1 and or Stock group 2 and it is included in the exported file, the stock items will be linked to reporting groups for Stock group 1 and / or Stock group 2.

The colours will not be imported in the Stock grid. You need to set the reporting group colours for Stock group 1 and or Stock group 2 in Setup → Groups - Stock group 1 and / or Stock group 2.

Cost of sales settings

If cost of sales is not activated before you import stock items, the Cost of Sales account will be inactive when you edit stock items.



This reason for this is that Cost of sales is not activated in your Set of Books.

To activate Cost of sales:

1. Create a batch type (journal type) for Cost of sales in Setup → Batch types and set the contra account to the "*Cost of Sales*" account.
2. Activate Cost of sales in Setup → Stock information - Default tab

This is applicable to the "Default" (trading stock) and some other stock item types only.

3. Select the following:
   - Create cost of sales – To activate cost of sales, select (tick) the "*Create cost of sales*" tick box.
   - Cost of sales batch – Select the "*Cost of sales*" batch (journal) in which the cost of sales transactions will be posted.
   - Use "*Average cost*" or "*Latest cost*" option.

The method you use to calculate the value of your stock is crucial for determining its impact on your profit and loss figures. It is important to consider whether to use the "average cost" or the"latest cost" method.

If you are unsure which method to use, it is recommended that you seek guidance from your accountant.

4. Click OK.
5. For these settings to take effect, you may need to go to Tools → Close active forms (Setup ribbon) or reopen the Set of Books. The Cost of sales lookup field will be active (for the "*Default*" stock item type or other stock item types which supports Cost of sales) on the Ledger tab of Stock items.

Tax classes

After Stock items is imported the Tax Classes will be empty.

The Tax Classes tab in the Stock information section enables you to create and manage account classes/tax classes. Tax classes consist of five (5) accounts that are associated with the Ledger tab of stock items on the Default ribbon.

You may add Tax Classes stock item type for each of the Tax (VAT/GST/Sales tax) items for example, standard rate, capital goods, zero rated, exempt goods, etc.) which is prescribed by your tax authority.

You may also use Tax Classes to assign various stock items to various Sales accounts, Cost of Sales accounts and Stock control accounts.

When you link a stock item to a tax class, it automatically populates the Input Tax, Output Tax, Sales, Cost of Sales, and Stock control account fields on the Ledger tab for that specific stock item. This eliminates the

need to manually select these accounts for each individual stock item.

By utilising tax classes, the Lookup button on the Ledger tab of stock items is disabled, as the tax class already defines the appropriate accounts for taxation and accounting purposes. This simplifies the process of assigning accounts to stock items, ensuring consistency and accuracy in tax calculations and financial reporting.

Exported stock items - Open text file in spreadsheet

If you need to import stock items it is recommended that you first create an export file of the data for your stock items in the Export option on the Setup ribbon.

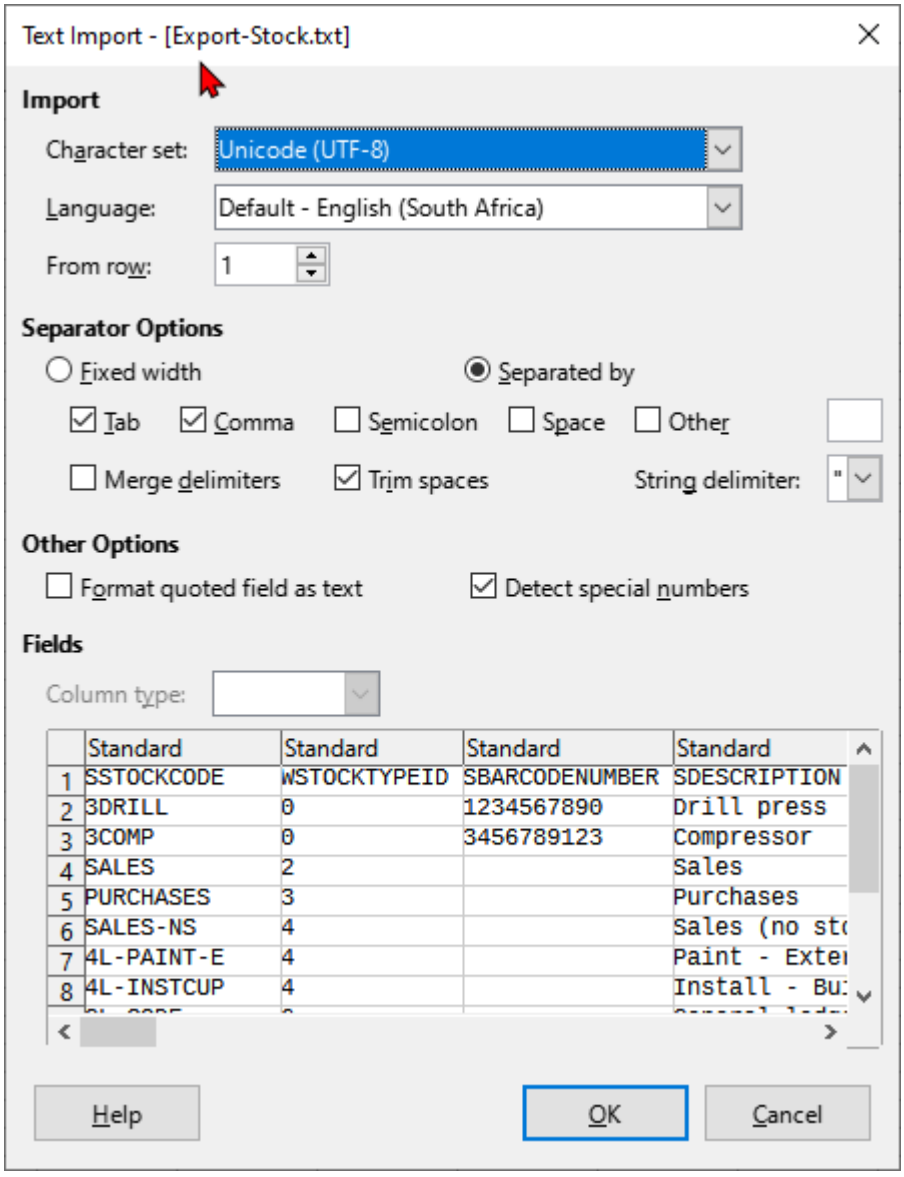
You may then import the data of your stock items in the Import option on the Setup ribbon.

You may also export or import stock items as a tab delimited text file from the following options:

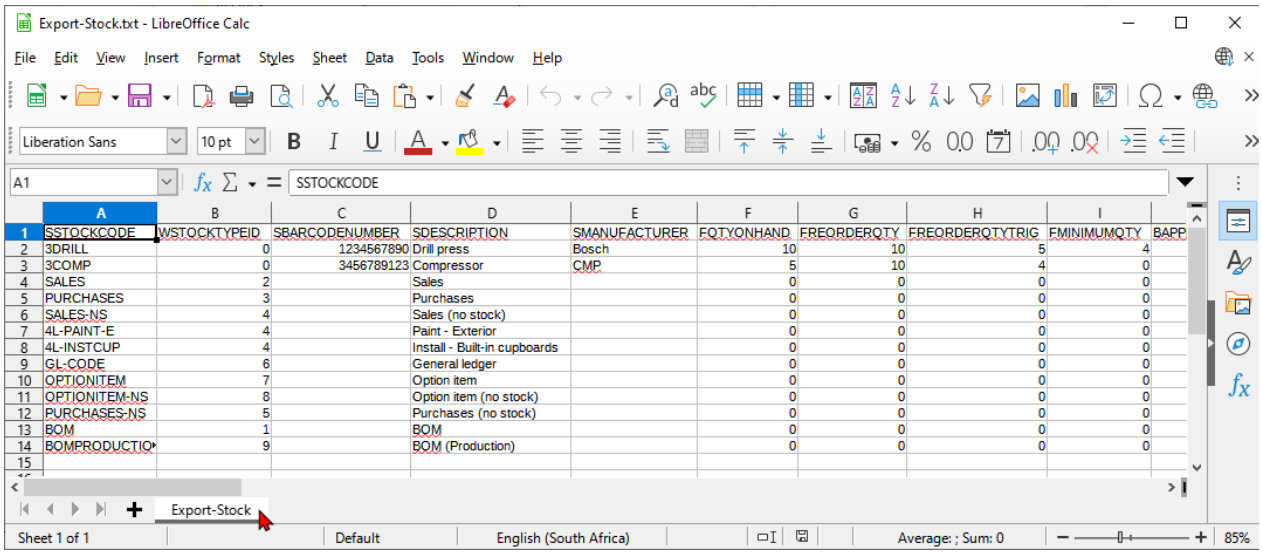
Once the text file is saved, you need to launch your spreadsheet application i.e Excel, OpenOffice, LibreOffice, Ultra Office, etc.

To open the exported stock items text file in a spreadsheet:

On your spreadsheet application, open the saved stock items text (*.txt) file and confirm your tab delimited settings.



This will open your stock items in a spreadsheet. An example of the exported file opened in "*LibreOffice Calc*" spreadsheet, is as follows:



The exported data will be exported in 38 columns:

Column	*Column heading*	*Source / fields*	
A	*SSTOCKCODE*	*Stock item code*	*String (15)*

Spreadsheet Export / Import - Stock items

osFinancials5/TurboCASH5 supports the "*Excel Workbook (*.xlsx) file type* Spreadsheet import and export

feature.

- Spreadsheet export - You may export stock items and save it as a "*Excel Workbook (*.xlsx) file type.*
- Spreadsheet import - You may import stock items from a saved "*Excel Workbook (*.xlsx) file type.*

This feature may be used to import stock items into:

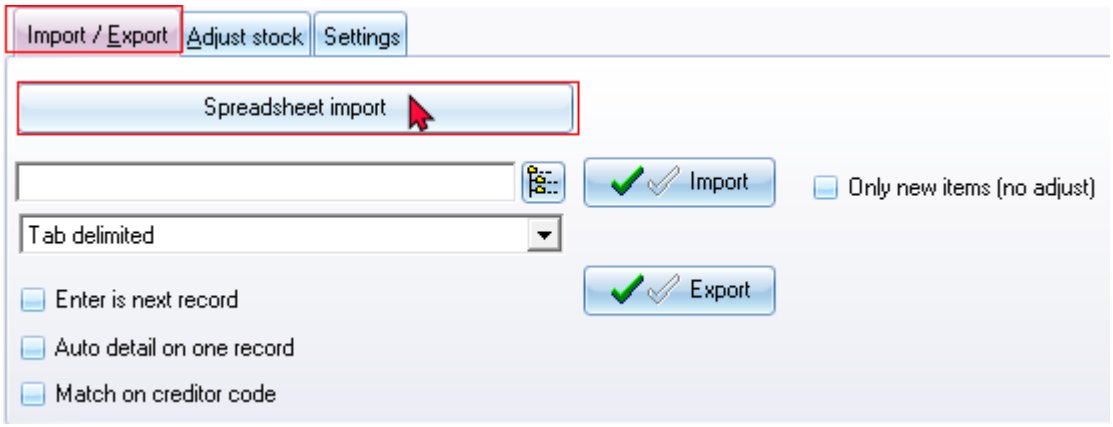
- Into the same Set of Books.
- Into a different Set of Books.
- Into a new Set of Books -Created from scratch - Create your own Set of Books (Advanced)? option for Firebird database types.
- Into a new Set of Books - Created from scratch - Create your own Set of Books (Advanced)? option for Microsoft SQL sever (MSSQL) database types.

> *Before you may import stock items in a new Set of Books, you need to do the necessary setup and configuration for stock.*
>
> *Once this is done, you may start to import stock items from a saved "Excel Workbook (*.xlsx) file type.*

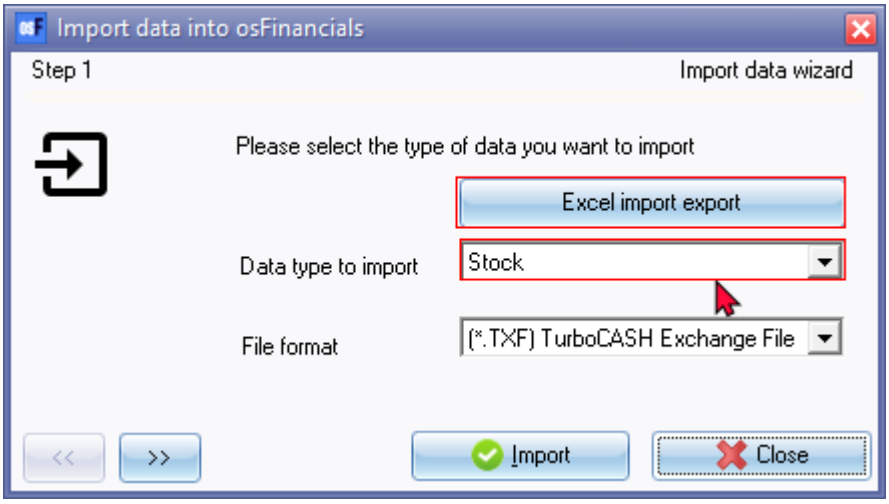
This option will allow you to Export your stock item file into an Excel spreadsheet. You may then add new stock items, edit existing stock items and import it back into your stock code file.

You may access the "*Data Import Export*" feature from the following options:

- Import / Export tab of the Stock items (Advanced mode) on the Default ribbon.



- Import option on the Setup ribbon.



Select Stock as the "*Data type to import*". Click on the Excel import export button. The "*Data Import Export*" spreadsheet will displayed column headings for the Stock items (without any data).

Created with the Standard Edition of HelpNDoc: Make Documentation Review a Breeze with HelpNDoc's Advanced Project Analyzer

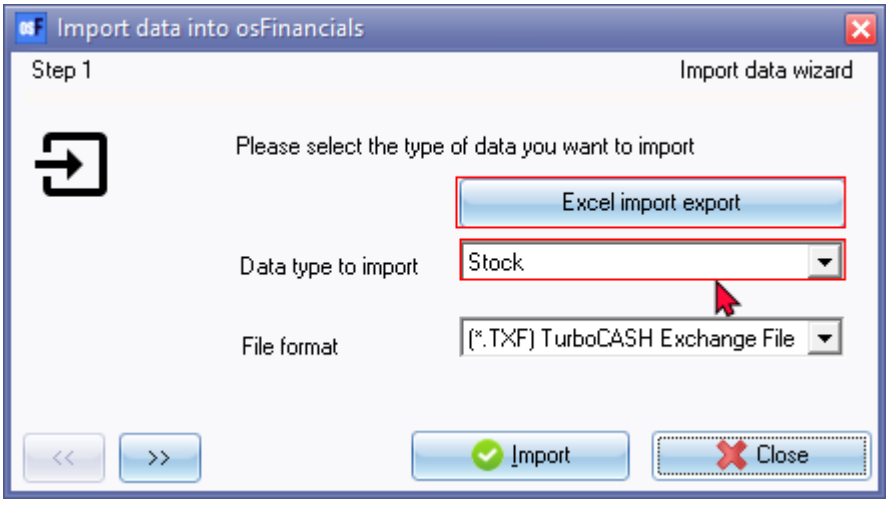
Spreadsheet - Export - Stock items

This option will allow you to Export your stock code file into an Excel spreadsheet. You may then add new stock items, edit existing stock items and import it back into your stock code file.

To export and stock items to a Excel Workbook (xlsx) file:

1. Open the Set of Books from which, you wish to create a spreadsheet export file.

2. On the Setup ribbon, select Import. The "*Import Data into osFinanacials*" screen is displayed:



3. Select Stock as the "*Data type to import*".

4. Click on the Excel import export button. The Excel spreadsheet will be displayed with the column headings for the Stock items (without any data).

5. Click on the Export icon. The data from your stock code file will be imported (populated) into the spreadsheet.

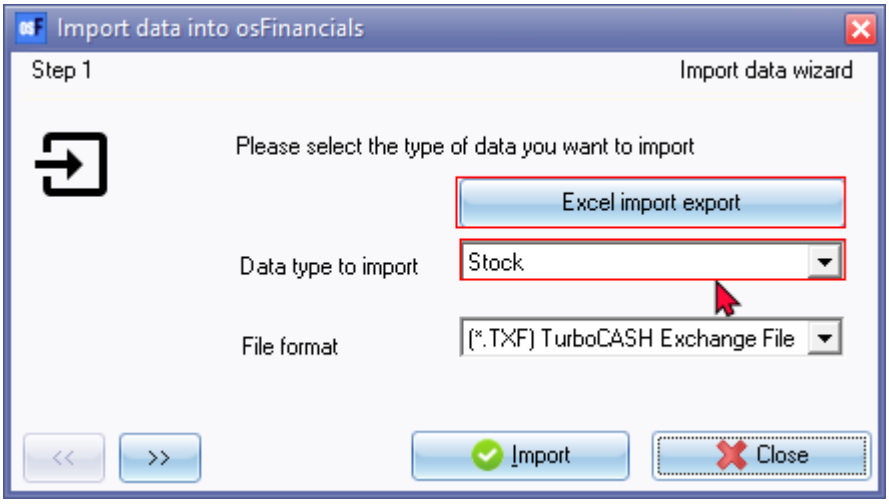
Spreadsheet - Import - Stock items

This option will allow you to import your stock code file from a valid an Excel spreadsheet in the Excel Workbook (xlsx) file format. You may then add new stock items, edit existing stock items and import it back into your stock code file.

To import stock items from a Excel Workbook (xlsx) file:

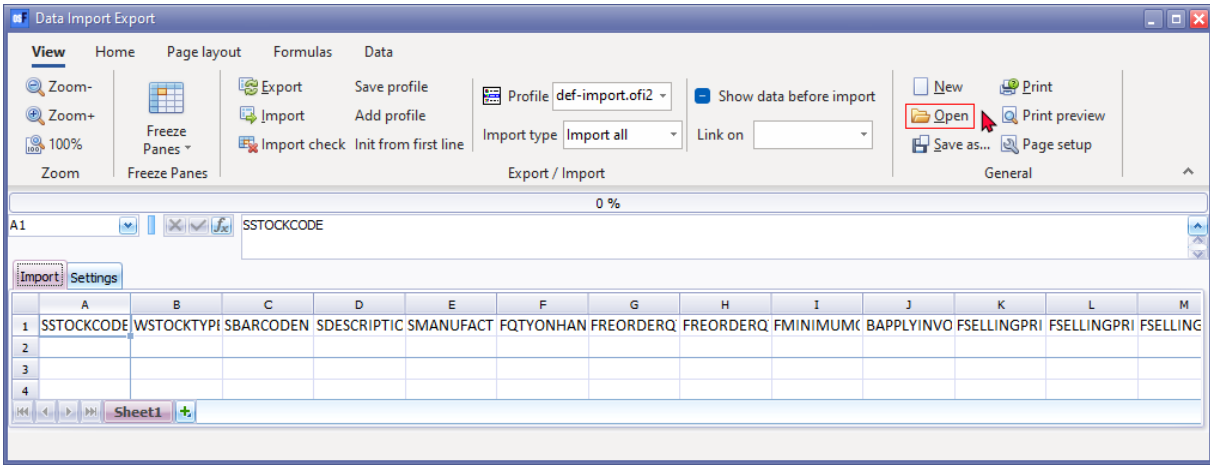
1. Open the Set of Books in which, you wish to import stock items from a valid a spreadsheet export file.

2. On the Setup ribbon, select Import. The "*Import Data into osFinanacials*" screen is displayed:

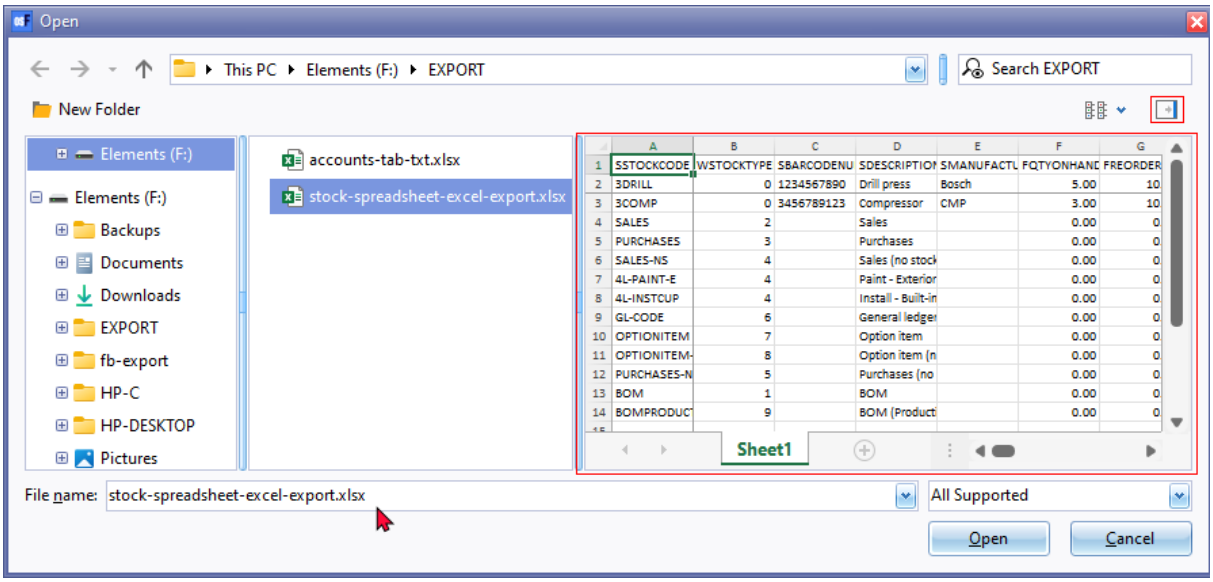


3. Select Stock as the "*Data type to import*".

4. Click on the Excel import export button. The "*Data Import Export*" screen will be displayed with the column headings for the Stock items (without any data).

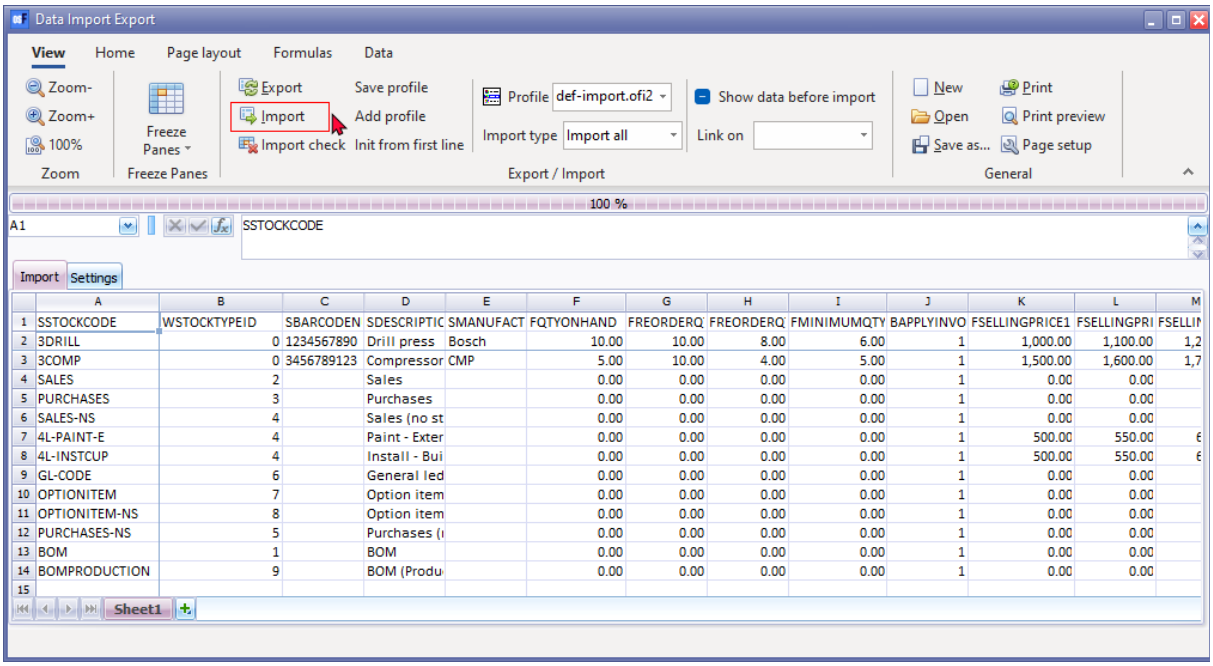


5. On the "*Data Import Export*" screen, click on the Open icon to select a valid Excel Workbook (*.xlsx) file.

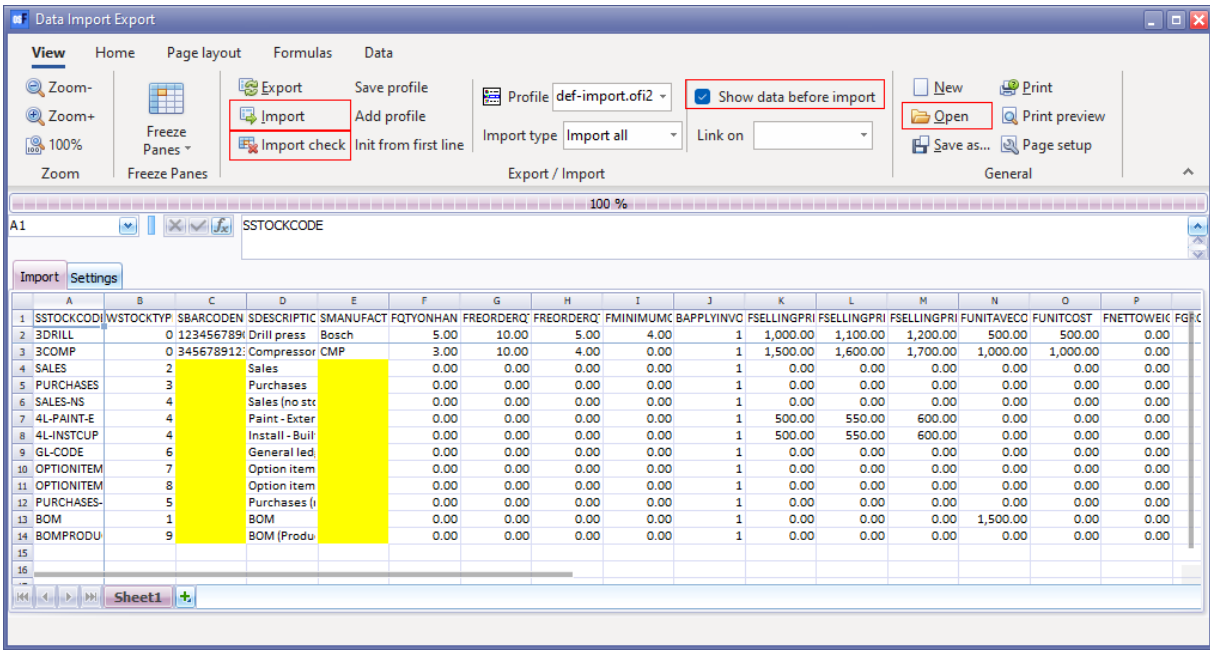


You may click on the "Show preview pane" icon on the "Open" screen to display a preview of the selected file to open (import) in the "Data Import Export" screen..

6. The data of the Stock items included in the valid Excel Workbook (xlsx) file, will be imported (populated) into the spreadsheet ("*Data Import Export*" screen).



7. Click on the Import icon.



8. You may add new stock items, edit the stock items, change the quantities, selling prices, whatever field, is necessary.

9. Once you are done, check the following options:

    a) Import check

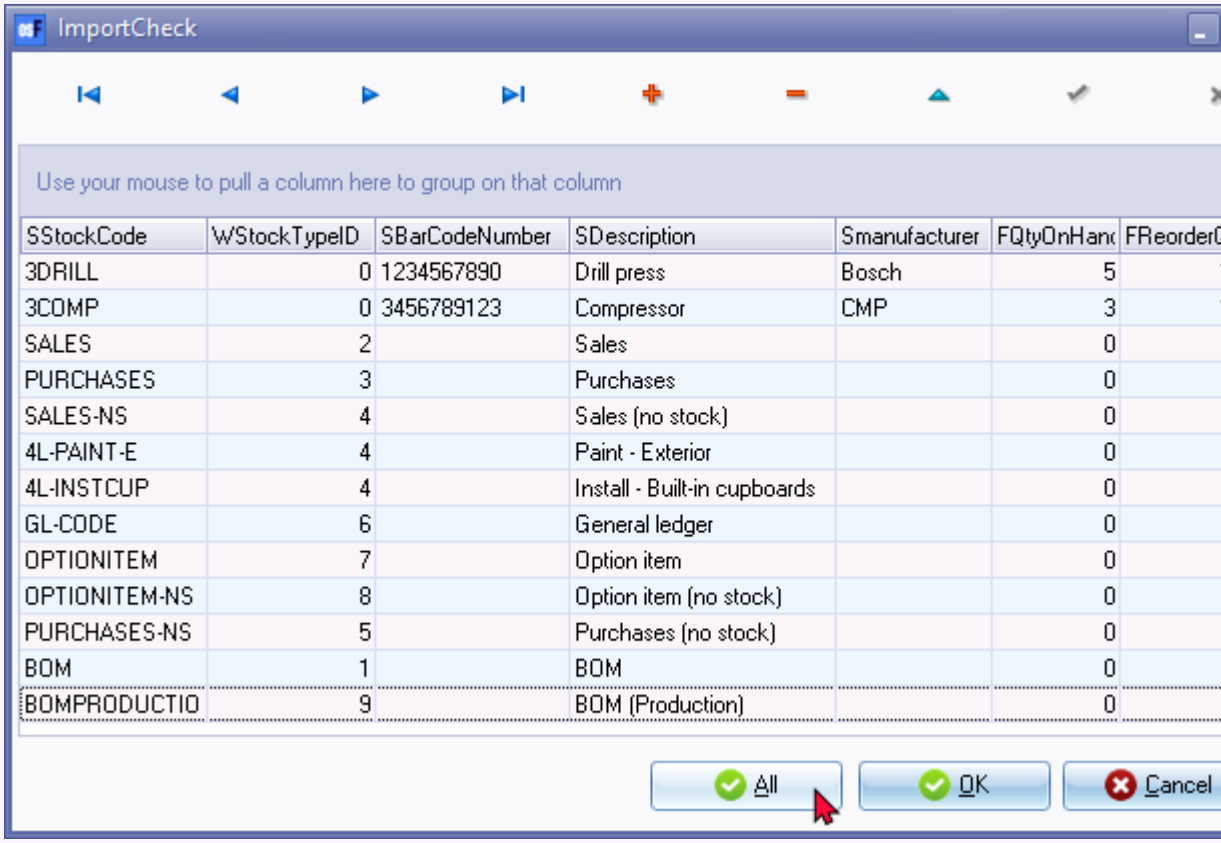
    b) Profile

    c) Import type -

7. Click on the Import icon.

Optional - Show data before import setting

The "ImportCheck" screen (if the Import the "Show data before import" option was selected (ticked) on the "Data Import Exp spreadsheet screen) is displayed:



Click on the All or OK buttons to start the import process.

Creation Features

Change stock code

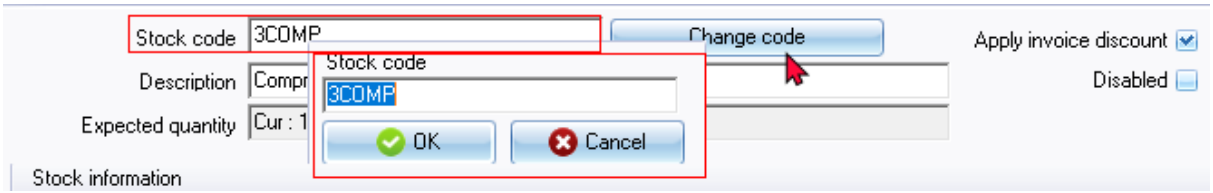
To change the stock code:

1. Click on the Change stock code button (next to the "*Stock code*" field).
2. A confirmation message will be displayed.

> "Changing the stock code will result in all reports to use this code! Are you sure you want to change the code?"

> *Make absolutely sure that the correct stock item is selected.*

3. If you click Yes, the following screen is displayed:



4. Enter a new code for the Stock item.
5. Click OK.

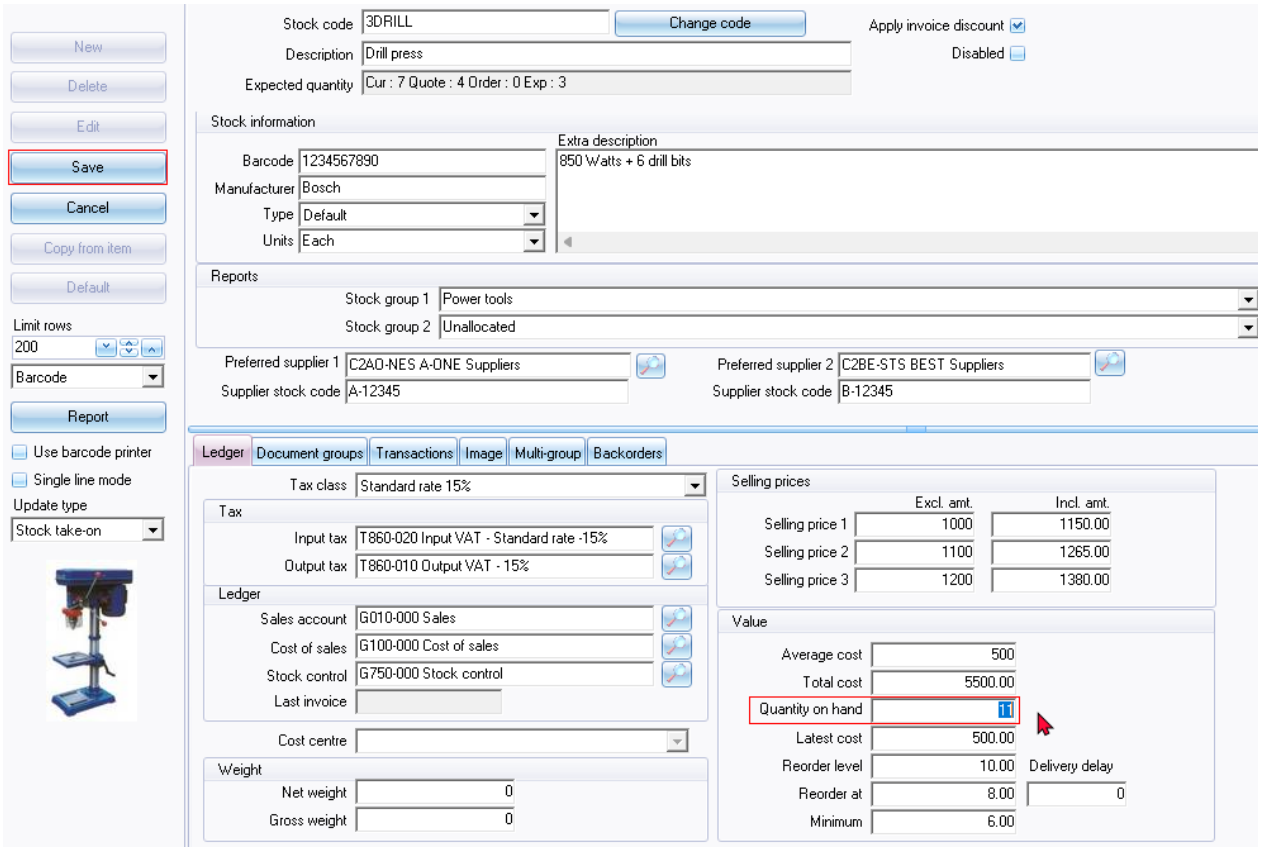
Created with the Standard Edition of HelpNDoc: Achieve Professional Documentation Results with a Help Authoring Tool

Change stock quantites

Quantities on hand may be changed on the Stock edit form; or on the Stock item list screen. You will be prompted to enter a remark (reason / note) for changing the stock quantity on hand.

Change Quantity on hand - Stock edit form

Select the stock item and click on the Ledger tab.



If you change the "Quantity on hand" field on the Ledger tab, and you click on the Save button, a confirmation message is displayed:

> "Stock quantity has been changed! Do you want to retain the current database data?"

If you click on the Yes button, the Stock quantity on hand value will not be changed. It will revert to the old values.

To change the value with the new one entered in the "*Quantity on hand*" field, you need to click on the No button. The "*Change remark*" screen is displayed:

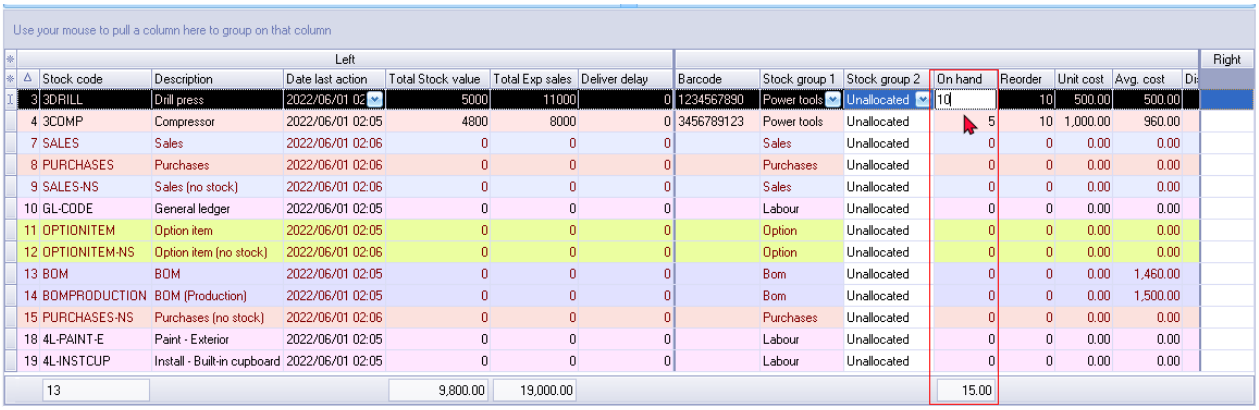
Enter a remark (comment) and click on the OK button.

Change quantity on hand - Stock item grid

To be able to edit the values of the number of inventory items "On hand" column, you must select the Advanced mode, so that you can edit the data as in a spreadsheet.

If you change the values of the stock quantity on hand in the quantity on hand column of the "*Stock item list*" screen, the confirmation message will not be displayed:

"Stock quantity has been changed! Do you want to retain the current database data?"



Once you have entered (changed) the quantity in the "*Quantity on hand*" column , the "*Change remark"* screen is displayed:

Enter a remark (comment) and click on the OK button.

View - Change remarks on Stock item tabs

The remark as entered on the "*Change remark*" screen will be displayed in the Document groups and Transactions tabs of the stock item.

The Document no. for a remark is automatically generated as a seven-digit number (consisting of a prefix ST followed by 5 numerical digits).

The Document type is "Stock-"

Backorders

What is backorders?

Backorders refer to customer orders that cannot be fulfilled immediately due to a lack of available inventory or stock. When a customer places an order for a product or service that is currently out of stock or unavailable, the business may choose to accept the order and create a backorder. This allows the customer to secure their place in line and receive the product or service once it becomes available again.

Here are some key points about backorders:

1. Customer order fulfilment: Backorders are used as a mechanism to manage customer orders when the requested products or services are temporarily unavailable.
2. Reservation of Stock: When a backorder is created, the business reserves the requested quantity of items for the customer. This ensures that the stock is set aside for that specific order, and the

customer will receive it once it becomes available again.

3. Communication with customers: It is crucial for businesses to communicate with customers regarding their backorders. Customers should be informed about the estimated availability date, any potential delays, and alternative options if applicable.

4. Inventory management: Backorders provide valuable insights into demand for products or services. They help businesses track and anticipate customer needs, allowing for better inventory management and planning.

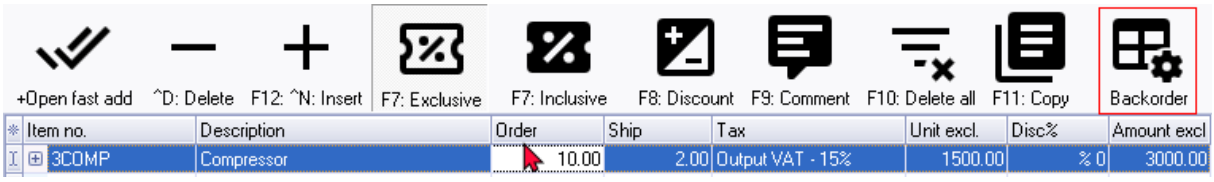
5. Order prioritization: Backorders are typically fulfilled on a first-come, first-served basis. However, businesses may have internal policies or priority systems to determine the order in which backorders are fulfilled, especially if there are limited quantities available.

6. Impact on financials: Backorders may have implications for revenue recognition and financial reporting. Depending on the accounting principles or standards applied, revenue from backordered items may be recognized at the time of shipment or when the customer is invoiced.

By managing backorders effectively, businesses can maintain customer satisfaction, optimize inventory management, and meet customer demands even when immediate fulfilment is not possible.

Backorders when processing invoices and quotes

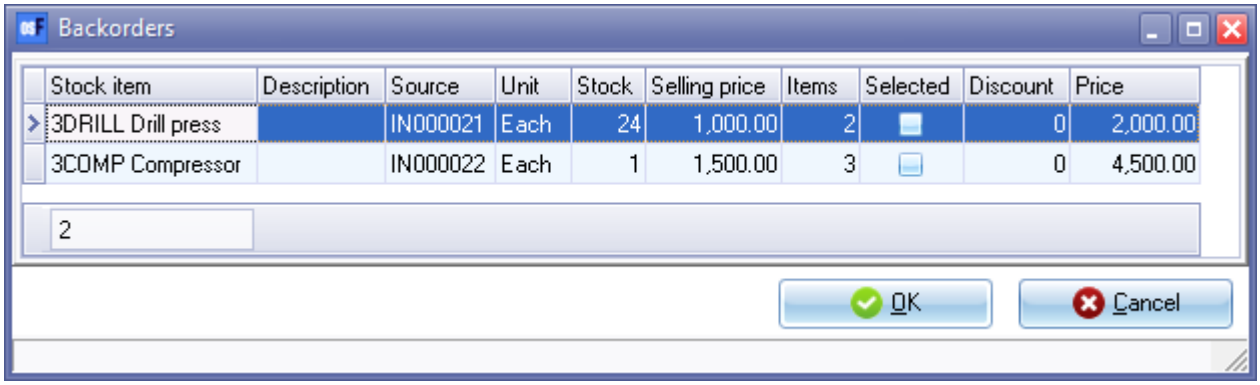
If there are insufficient quantities of an item in stock to fulfil an order, the system will automatically calculate the shortage quantity (e.g., 10 - 2 = 8, as per this example) and add it to the backorder feature.



When processing invoices and quotes in osFinancials5/TurboCASH5, you have the option to click on the Backorder icon.

This allows you to edit backorders associated with the transaction being processed.

When processing a new invoice for a debtor (customer/client) account that has outstanding backorders, the "*Backorders*" screen will be automatically displayed. In this screen, you can review and manage the backordered items associated with the customer.



If you select an item by ticking the "*Selected*" field, the system will update the transferred document line accordingly. The selected item will be removed from the backorder records and reports, indicating that it has been successfully transferred to the document line for invoicing or quoting purposes.

This functionality allows for efficient management of backorders during the invoice and quote processing workflow in osFinancials5/TurboCASH5. By selecting and transferring items from the backorder records to the relevant document lines, you can ensure accurate and up-to-date tracking of inventory and timely fulfilment of customer orders.

Option to manage backorders

In osFinancials5/TurboCASH5, the management of backorders is facilitated through various options and screens. Here is a breakdown of how backorders can be added, edited, and accessed from the Default ribbon within osFinancials:

1. Edit → Backorders menu - You can edit, or delete backorders associated with specific stock items and debtor (customer/client) accounts. When adding new backorders, you may select the stock items and debtor (customer/client) accounts.

2. Stock items (Backorders tab) - This tab allows you to manage backorders for individual stock items. You can edit, or delete backorders associated with specific stock items and debtor (customer/client) accounts. When adding new backorders, you may select the debtor (customer/client) accounts.

3. Debtors (Backorders tab - This tab enables you to manage and track backorders for specific debtor accounts. You can edit, or delete backorders associated with specific stock items and debtor (customer/client) accounts. When adding new backorders, you may select the stock items.

These functionalities within osFinancials5/TurboCASH5 provide tools for managing backorders, allowing you to track, modify, and remove backorder items as needed. The backorder records and reports assist in monitoring outstanding orders and ensuring proper fulfilment when stock becomes available.

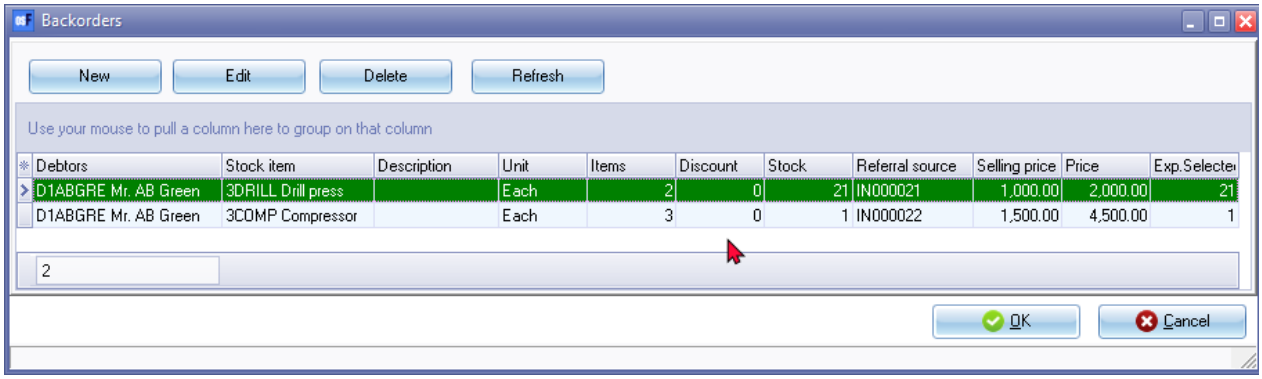
Backorder reports

Backorder reports may be printed on the Reports → Stock→ Backorder menu on the Reports ribbon. This Backorder report provides a detailed overview of the items on backorder, their associated customer accounts, quantities, pricing information, and any applicable discounts. It allows businesses to track and manage their backorder items effectively, aiding in inventory management and order fulfilment.

By utilising the Backorder report in osFinancials5/TurboCASH5, businesses can stay informed about the status of backorder items, make informed decisions, and take necessary actions to fulfil customer orders promptly.

Edit → Backorders menu (Default ribbon)

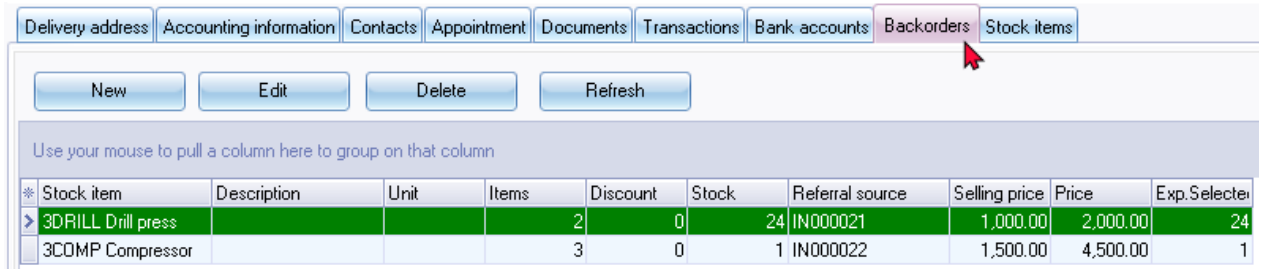
This Backorders option on the Edit menu enables you to manage manage and track backorders for specific debtor accounts. You can edit, or delete backorders associated with specific stock items and debtor (customer/client) accounts. When adding new backorders, you may select the stock items and debtor (customer/client) accounts.



Debtors - Backorders tab (Default ribbon)

This tab enables you to manage manage and track backorders for specific debtor accounts. You can edit, or delete backorders associated with specific stock items and debtor (customer/client) accounts. When adding new backorders, you may select the stock items.

You can add, edit, and delete backorders, as well as adjust quantities, prices, and discounts as necessary. This helps ensure accurate tracking and fulfilment of customer orders.

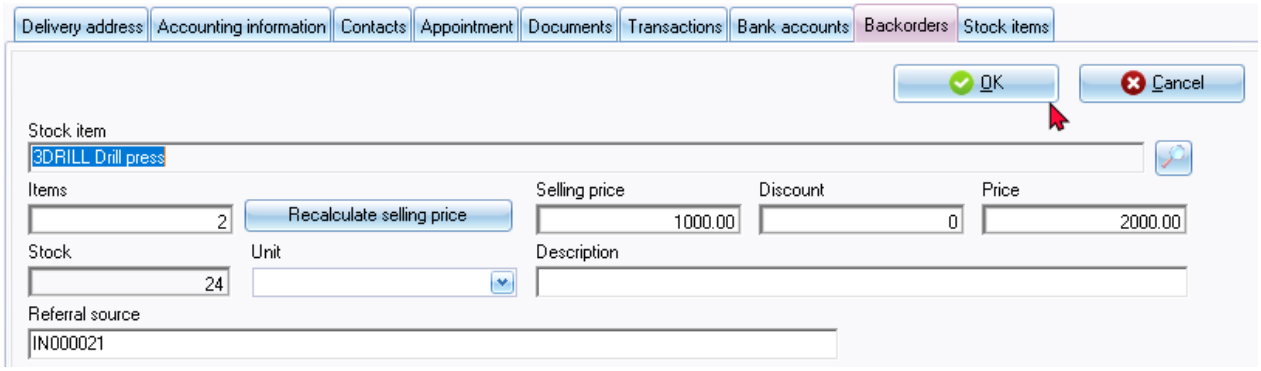


Sorting and Rearranging Columns:

- *You can click on the column headings (such as Stock item, Description, Unit, Items, Discount, Stock, Referral source, Selling price, Price, and Exp. Selected) to change the sort sequence from ascending to descending order.*
- *To rearrange the sequence in which the columns are displayed, you can click and drag any of the column headings to the left or right.*

Adding, Editing, and Deleting Backorders:

- Within the Debtors - Backorders tab, you have the ability to add new backorders, edit existing backorders, or delete backorders as needed.
- Clicking the New button allows you to add a new backorder item, while the Edit button enables you to modify a selected backorder.



If the Backorders screen is launched from Input → Documents → Backorders, both the Debtor as well as the Stock item will be displayed. You may select them, if necessary.

Click on the New button to add a new backorder item or on the Edit button to edit a selected backorder. The fields are as follows:

- Stock item – For existing backorders, the stock item code and description will be displayed. For new backorders, you can select the stock item.
- Items – The quantity field is automatically populated as the difference between the quantity entered in the "*Order*" field and the quantity entered in the "*Ship*" field of documents. For new backorders, you can enter the quantity.
- Recalculate selling price – Clicking this button will clear the discount percentage and recalculate the selling price to the original selling price (Price).

- Selling price and Price – These fields represent the price per item. The Selling price reflects the amount after the discount percentage, while the Price excludes any discount.

> *The Selling price and Price displayed is the prices for a single item.*

- Discount – The discount will be displayed if a percentage is entered in the "*Customer discount*" field on the Accounting information tab of the debtor account and the "*Apply invoice discount*" field is selected on the Stock Items (Default ribbon).

- Stock – This field displays the quantity of stock items on hand. This is the quantity of the "*Exp. Selected*" column on the Backorders tab - List view) displays the quantity of stock items on hand. The quantities in this field are updated when documents are posted to the ledger (e.g., credit notes, purchases, and supplier returns) or when stock item adjustments are made.

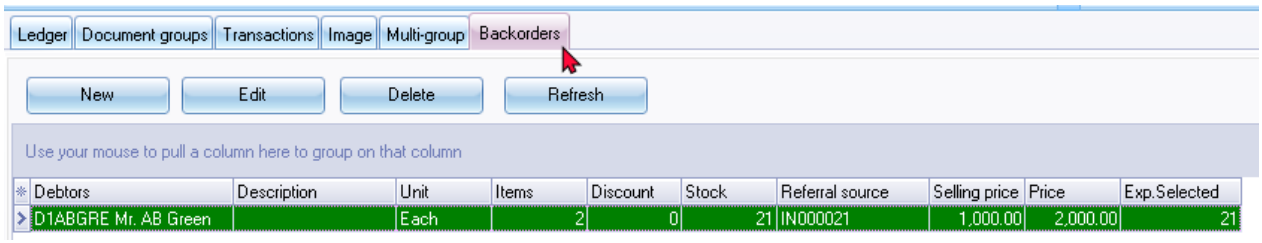
- Unit - The Unit description of the stock item.

- Description - To be advised.

- Referral Source – The Referral Source field will automatically be updated with the invoice number if the quantity entered in the "*Order*" field exceeds the quantity entered in the "*Ship*" field.

Stock items - Backorders tab (Default ribbon)

This tab allows you to manage backorders for individual stock items. You can edit, or delete backorders associated with specific stock items and debtor (customer/client) accounts. When adding new backorders, you may select the debtor (customer/client) accounts.



Adding, Editing, and Deleting Backorders:

Batches (Journals)

What are Journals (Batches) and the Role of Source Documents?

Journals, also known as batches, are a fundamental concept in accounting. They refer to a chronological record of financial transactions that are systematically recorded in the accounting system. Journals serve as the initial entry point for capturing and documenting the details of each transaction before they are posted to the general ledger.

One crucial aspect of maintaining accurate journals is the use of source documents. Source documents are original records or paperwork that provide concrete evidence of a financial transaction. These documents play a pivotal role in the accounting process, as they support and validate the entries made in journals. Here's how source documents fit into the journaling process:

1. Source Documents: Whenever a financial transaction occurs, it generates a source document. These documents can take various forms, such as invoices, receipts, purchase orders, contracts, bank statements, and more. Source documents contain essential information about the transaction, including the parties involved, the date, the nature of the transaction, and the monetary amount.

2. Recording in Journals: Accountants use these source documents as the basis for creating journal entries. Each transaction is meticulously recorded in the appropriate journal, ensuring that all relevant details from the source document are accurately transcribed. The columns in the journal capture key information, such as the date of the transaction, the accounts involved (debit and credit), a description of the transaction, and the monetary amount.

Types of Journals:

> *Various types of journals exist, each designed for specific transaction types. Common examples include the Sales Journal, Purchases Journal, Cash Receipts Journal, Cash Payments Journal, and General Journal. Specialised journals may also be used for specific transactions, such as the Payroll journal or Inventory journal.*

3. Batch Processing: Entries within a journal are often processed and posted collectively as a batch. This batch processing approach helps streamline the accounting process and ensures that transactions are recorded accurately and efficiently. Batch processing is especially useful when dealing with a high volume of transactions.
4. Posting to the General Ledger: After recording transactions in the appropriate journals, the entries, along with their supporting source documents, are transferred or posted to the general ledger. This step summarizes the journal entries and updates the account balances in the general ledger accounts.
5. Audit Trail: Source documents, along with the journal entries they support, provide an essential audit trail. This audit trail allows accountants and auditors to trace and verify the accuracy and completeness of transactions recorded in the accounting system. It serves as supporting documentation for financial statements and facilitates reconciliation and analysis.

By incorporating source documents into the accounting process and maintaining organized and accurate journals, businesses can effectively track and analyse their financial transactions, ensure compliance with accounting principles, and generate reliable financial statements.

What is the purpose of source documents and journals?

The purpose of source documents and journals in accounting is to maintain an accurate and systematic record of financial transactions and events in a business. Here is a more detailed explanation of the purpose of these elements in the accounting process:

1. Origin of Transactions: Source documents, such as invoices, receipts, bank statements and contracts, serve as the original information indicating when a financial transaction took place. These documents help to maintain a transparent trail of all financial activities.
2. Proof of Transactions: Source documents serve as proof of the actual transactions that have taken place in a business. This is important for proving income, expenses and other financial events, especially for tax purposes and financial reporting.
3. Ledger Entries: Journals are where financial information from source documents is entered into the ledger of a business. These entries are essential to maintaining an organized and structured accounting system, such as osFinancials5/TurboCASH5.
4. Preparation of Financial Statements: Source documents and journals serve as the basis for the

preparation of financial statements, such as the balance sheet, income statement and cash flow statement. These financial statements provide an overview of the financial health and performance of a business.

5. Tax compliance: Source documents are essential to comply with tax obligations. This includes the proof of income, expenses, and deductions required by the tax authorities to process tax applications.
6. Decision Making and Analysis: Financial information provided by source documents and journals helps managers make decisions about the financial strategy of an enterprise. This enables them to evaluate the financial performance and determine future goals.

In a nutshell, the purpose of source documents and journals is to maintain an orderly and faithful record of financial activities, which is essential for management, financial reporting and compliance with legal requirements. These elements form the backbone of an efficient accounting process and contribute to the transparency and credibility of a company's financial information.

What is the importance of source documents and journals?

Source documents and journals play a critical role in the field of accounting, and their importance cannot be underestimated. Here are some reasons why source documents and journals are so important in accounting:

1. Compliance with Financial Rules and Regulations: Accounting source documents, such as invoices, receipts and bank statements, serve as proof of financial transactions. These documents are essential to ensure that a business complies with the financial rules and regulations.
2. Accurate Financial Reports: Source documents are the basis on which financial reports, such as a balance sheet and an income statement, are drawn up. Journals are used to record the information from these documents in the ledger of the business. This ensures an accurate registration of financial events.
3. Tax returns: Income tax returns, Tax (VAT/GST/Sales tax) returns and other tax obligations require a careful record of income, expenses and deductions. Source documents are essential to substantiate the fidelity of this information.
4. Financial Analysis: Financial analysts and managers use source documents and journals to evaluate the financial health of a business. These documents provide a clear picture of the company's performance and financial position.
5. Decision Making: Managers use financial information provided by source documents and journals to make decisions about the future of a business. This information can help determine strategies and set financial goals.

6. Forensic Investigation: In cases of financial malpractice, fraud or corruption, source documents can play a critical role in forensic investigations. These documents serve as evidence to prove irregularities.

In short, source documents and journals are indispensable in the world of accounting to maintain an accurate and reliable record of financial transactions. These documents not only ensure that a business meets legal requirements, but also play a central role in the management and analysis of accurate financial information.

Journal (Batch) Feature in osFinancials

The Batch Entry / Journal Entry feature in osFinancials5/TurboCASH5 provides versatile functionality for creating customized batch or journal types tailored to your specific requirements. These batch types enable structured transaction organization, ensuring precise allocation to the appropriate ledger and debtor accounts. Here's an overview of this feature:

1. Batch Types Customization: In osFinancials5/TurboCASH5, you can define various batch types to match your unique needs. While many Sets of Books and templates include standard basic batches like sales journal, purchase journal, payments journal, receipts journal, and general journals (accessible through the "*Let osFinancials help you to create a Set of Books?*" option), osFinancials5/TurboCASH5 allows unlimited specific batch types. Examples of specialise journals, include Payroll journals, Depreciation journals, Fixed assets journals, Accrual journals, or any custom type necessary. Each batch type is designed for specific transaction categories or sets of related transactions, granting precise control over your accounting processes.
2. Batch / Journal Configuration: The Batch Entry / Journal Entry feature offers options to configure settings, reducing errors during batch transaction entry and processing: Journal configuration: The Standard tab and Advanced tab in the "*Options for this batch*" offer several options to configure default settings such as the default Contra account, Tax (VAT/GST/Sales tax) settings and other parameters for each type of journal. Configuring these settings, which reduce errors when processing transactions in journals:
    - Contra Account: Assign each batch (journal) to a specific contra account for easy identification and assignment of transactions to the corresponding contra account. This account will be the balancing account. When you balance the batch, the contra transactions will be generated to this contra account in the journal.
    - Lookup Accounts Configuration: You can set a journal so that you can select all accounts for the general ledger, debtors, creditors or only accounts for the general ledger or only debtors or only creditors in the journal. So for example, in the Sales journal you can choose to list only the debtor accounts in the Lookup and can choose when you enter invoices in the Sales

journal. This speeds up the allocation of transactions so that only the relevant account type can be listed and selected.

3. Open Item Transactions: This is particularly useful for matching receipts or payments transactions with outstanding amounts. When you allocate transactions against open item accounts, you can choose to link the transactions against outstanding transactions. Link specific transactions to open item accounts for extra accuracy. This is especially useful for linking receipts or payment transactions with outstanding amounts. For example, when a payment is received from a debtor, you can assign the payment to a specific outstanding invoice.

4. Repeating Transactions: The Repeating transactions feature allows you to enter transactions occurring on a periodic basis (weekly, monthly, quarterly, annually, etc.). Enter transactions once in the Edit → Repeating transactions menu and, when due, process them into the standard batch, edit (if amounts have changed), delete, or add an entry. This time-saving feature simplifies recurring transaction handling.

5. Export and Import Feature: Export posted or unposted batches using delimited file options. osFinancials5/TurboCASH5 also supports Spreadsheet export and Spreadsheet Import options for batch transactions:

    - Posted Batches: Use the "Import a posted batch" option (F9:Process) of the "*Batch entry*" screen to select a posted batch on the Posted batches tab for import.

    - Spreadsheet Import/Export: osFinancials5/TurboCASH5 supports Excel Workbook (*.xlsx) file type Spreadsheet import and export features. You can export unposted batch transactions and save them as Excel Workbook files, or import batch transactions from saved Excel Workbook files.

    - Unposted Batches: Export batch transactions using the "Write delimited file" option (F9:Process) to create a Comma Separated Value (.csv) file. Import batch transactions via the "Delimited file import" option (F9:Process) by selecting the Comma Separated file (.csv) file.

6. Ledger Updates: You don't need to post or update transactions in batches every time. Close a batch and reopen it as needed to add or edit transactions. When finalizing batch processing and posting to the ledger, osFinancials5/TurboCASH5 automatically updates ledger accounts, including debtor and creditor accounts where applicable. This ensures financial statements, such as the trial balance, balance sheet and the income statement including relevant reports accurately include and reflect these transactions.

By utilizing the Batch Entry / Journal Entry feature in osFinancials5/TurboCASH5, you can efficiently manage and allocate transactions across various batch types, maintaining accurate and up-to-date accounting records with precision.

Which journals (batches) is included in osFinancials5/TurboCASH5 template Sets of Books?

In osFinancials5/TurboCASH5, the template Sets of Books include various subsidiary journals or books of prime entry (also known as batches) to facilitate the recording and summarization of transaction details. These journals help ensure accurate and organized financial data. Here are the subsidiary journals typically included in osFinancials5/TurboCASH5 template Sets of Books:

1. Sales Journal: Used for recording and processing of sales invoices and credit notes generated internally within the business. The Sales Journal is typically used to record and process invoices and credit notes for customers.
2. Purchases Journal: Used for recording supplier invoices and credit notes received from external suppliers.
3. General Journal: Used for recording miscellaneous non-routine or unusual transactions that do not fit into the other subsidiary journals. This journal provides flexibility for recording various types of transactions, including corrections of errors. If there is no specific journal available for a particular type of transaction, using the general journal is a suitable option.
4. Bank accounts:- By default if the "*Default bank reconciliation*" option is selected (on the Setup → System parameters menu on the Setup ribbon), osFinancials5/TurboCASH5 will create two journals for each Bank account.
    - Receipts Journal: Used for recording deposit slips, receipts, or copies of incoming payments received internally.
    - Payments Journal: Used for recording cheque counterfoils or copies of outgoing payments made internally.
5. Petty Cash Journal: Used for recording petty cash vouchers and associated expenses incurred internally.

In many Sets of Books available as a free download, the following batch types or journal types is also included:

By default if the "Default bank reconciliation" option is selected (on the Setup → System parameters menu on the Setup ribbon), osFinancials5/TurboCASH5 will create two journals for each Bank account.

- *Receipts Journal: Used for recording deposit slips, receipts, or copies of incoming payments received internally.*
- *Payments Journal: Used for recording cheque counterfoils or copies of outgoing payments*

made internally.

However, whenever there is a specialized journal available for a specific type of transaction, it is recommended to use that journal to ensure accuracy and efficiency in record-keeping. This helps maintain consistency and allows for easier analysis and reporting of transactions within their relevant categories.

In many Sets of Books available as a free download, the following batch types or journal types is also included:

- *Cost of Sales journal: Used for recording the costs directly associated with the production or acquisition of goods sold by a business. It is an important journal in the accounting process, specifically for businesses that deal with stock items or inventory or the sale of physical products.*
- *POS journal: Used in osFinancials5/TurboCASH5 to integrate with the point-of-sale (POS) systems. It is designed to record sales transactions that occur directly at the point of sale, typically in retail or hospitality businesses where goods or services are sold to customers in-person.*

Each subsidiary journal is designed for specific transaction types, and they are utilised to record the relevant source document information accurately. By debiting specific accounts and crediting specific accounts applicable to each subsidiary journal, errors can be minimized or eliminated during the recording and summarisation of transactions before they are posted to the ledger.

These subsidiary journals in osFinancials5/TurboCASH5 assist in organising and categorizing transaction data, providing an efficient workflow for entering and summarising transactions before they are integrated into the general ledger and further financial reporting processes.

Adding specialized customized journals

In osFinancials5/TurboCASH5, you have the option to add specialized customized journals to record and process transactions that are distinct from the general journal. This provides flexibility and allows for better organization and visibility of specific types of transactions. Here is how you can utilize customized journals in osFinancials5/TurboCASH5:

1. Default journals: osFinancials5/TurboCASH5 comes with a range of default journal types, including the sales journal, purchase journal, general journal, payments journals, and receipt journals. These default journals are, making it convenient to record and process transactions related to sales, purchases, and general entries. Each Payments journal, and Receipt journal is automatically linked to bank accounts or petty cash accounts.
2. Custom journal types: In addition to the default journals, osFinancials provides you with the flexibility to add custom journal types that align with your specific requirements. By accessing the Setup → Batch types menu on the Setup ribbon, you can define and configure custom journal types to create

dedicated journals for various specialized transactions or categories relevant to your business. Here are some examples of additional custom journal types you can create:

- Payroll journal: This journal type can be used specifically for recording payroll entries, including salary expenses, tax withholdings, benefits, and other related transactions. It allows for accurate tracking and reporting of payroll-related costs.
- Fixed assets journal: By creating a custom journal type for fixed assets, you can record transactions related to asset acquisition, depreciation, disposals, and any other changes in the fixed asset register. This ensures proper tracking of asset values and facilitates compliance with accounting standards and regulatory requirements.
- Accruals journal: An accruals journal can be used to record accrual-based adjustments, such as recognizing revenue or expenses that have been incurred but not yet recorded in the general ledger. This journal type helps ensure accurate matching of revenues and expenses in the appropriate accounting periods.
- Inventory adjustment journal: This journal type allows for the recording of inventory adjustments, such as write-offs, write-downs, and any changes in the quantity or value of inventory items. It helps maintain accurate inventory records and supports proper valuation of inventory on the financial statements.
- Inter-company transactions journal: If your business has multiple entities or subsidiaries, you can create a custom journal type for inter-company transactions. This journal would be dedicated to recording transactions between different entities within your organization, ensuring proper consolidation and elimination of inter-company balances.

These are just a few examples, and you can create custom journal types for any other specialized transactions that are specific to your business needs. By utilizing custom journal types, you can accurately record and track various transactions, maintain better control and organization, and generate meaningful financial reports for decision-making and compliance purposes.

3. Configuration Options: Each custom journal type can be customized with various configuration options. This includes defining contra accounts, specifying account and tax lookup settings, and utilising the standard and advanced options. These configurations ensure accuracy in recording specific transactions and provide consistency in the accounting treatment across your Set of Books.
4. Access Control: If you have multiple users working in a Set of Books on osFinancials5/TurboCASH5, you can control their access to process transactions in specific journals. The Setup → Access control menu, specifically the Batches access tab, allows you to grant or restrict access to users for processing transactions in specific journals. This helps enforce segregation of duties and maintain data integrity within your accounting system.

By leveraging customized journals, you can tailor your journaling process to match your specific business needs. This level of customization enhances accuracy in recording transactions, improves organization, and provides better visibility of different transaction types. It allows for a more efficient and controlled accounting system, ensuring compliance and facilitating effective financial management.

===

Before you can enter your transactions in a batch (journal), you need to sort your source documents according to the type or nature of the transactions. You then need to select the correct batch or journal to capture the transactions of a similar nature. You may select a batch type from the available batch types (journals) in which you enter your transactions from source documents.

Any business issues source documents and hands the original documents to its customers or debtors or other parties with whom a transaction is concluded. These source documents are generated internally and the copies of such source documents are used to enter the transactions in the journals or batch types.

On the other hand a business receives original source documents from its suppliers or creditors or any other party with whom a transaction is concluded. These source documents are generated externally and the business would usually receive the original source documents, which are then used to enter the transactions in the journals or batches.

Batch types (journals) are used to enter the details of the transactions and to summarise the details into.

===

In any business the transaction data on source documents are entered in the following subsidiary journals or books of first entry:

In accounting, a journal is a record of financial transactions that have been entered in chronological order. It is used as a book of original entry, meaning it is the first place transactions are recorded before being posted to the general ledger.

Journals are important because they provide a complete record of all financial transactions and help ensure accuracy in financial reporting. They can also be used for auditing purposes and for generating financial statements.

There are many different types of journals, including the general journal, sales journal, purchase journal, and cash receipts journal. Each journal is used to record specific types of transactions, and the information recorded in each journal is then posted (updated) to the appropriate accounts in the general ledger.

Before you can record your transactions in a batch, you'll need to organise your source documents by transaction type. Once you've done that, you can select the appropriate batch type or journal to enter transactions of a similar nature. You can only choose from the batch types available to you when entering your transactions from source documents.

Every business generates internal source documents and provides the original documents to customers, debtors, or other parties involved in the transaction. Copies of these source documents are used to record transactions in the journals or batch types.

Likewise, a business receives external source documents from suppliers, creditors, or other parties involved in the transaction. The original source documents are typically received by the business and used to record transactions in the journals or batch types.

Batch types (journals) are used to enter transaction details and summarise them. In any business, the transaction data on source documents is entered in subsidiary journals or books of first entry or original entry any business the transaction data on source documents are entered in the following subsidiary journals:

Source document	*Internal / External*	*Subsidiary Journal / Books of first entry*
Sales invoices (copies)	*Internal*	*Sales journal*
Credit notes (copies)	*Internal*	*Sales journal or Sales returns journal*
Supplier invoices (originals)	*External*	*Purchases journal*
Credit notes (originals)	*External*	*Purchases journal or Purchase returns journal*
Deposit slips or Receipts (copies)	*Internal*	*Receipts Journal*
Cheque counterfoils /	*Internal*	*Payments Journal*
Petty cash vouchers	*Internal*	*Petty Cash Journal*
Miscellaneous	*Internal*	*General Journal*

For each of these subsidiary journals or books of prime entry, you would debit specific accounts and credit specific accounts applicable to the specific subsidiary journal. This will definitely help to eliminate or significantly reduce the errors that may occur when recording and summarising the transactions or when transactions are posted to the ledger.

The entries for each of these subsidiary journals or books of prime entry are as follows:

Subsidiary journal	*Account(s) Debited*	*Account(s) Credited*
Sales journal	*Debtor's control*	*Sales*

Sales returns journal	*Sales*	*Debtor's control*
Purchase journal	*Stock control or sundry account.*	*Creditor's control*
Purchase returns journal	*Creditor's control*	*Stock control or selected account.*
Receipts journal	*Bank*	*Receipts journal*
Payments journal	*Creditor's control or sundry account.*	*Bank*
Petty cash journal	*Expense account*	*Petty cash payments journal*
General journal	*Selected accounts*	*Selected accounts*

The General Journal is used for other transactions which cannot be classified into any of the transactions that are entered into the subsidiary journals listed above.

===

What is the general journal used for?

The general journal is a book or computer program used in accounting to record all transactions in chronological order. It is also known as the "journal" or "journal entry book".

Each transaction recorded in the general journal includes a date, a brief description of the transaction, the accounts involved, and the amounts debited or credited. These transactions are then later transferred to the appropriate ledgers for posting and summarization.

The general journal is used to record a wide range of transactions, such as sales, purchases, expenses, and other financial transactions. It is also used to record adjusting entries and closing entries at the end of an accounting period.

By recording all transactions in the general journal, a business can keep a complete and accurate record of its financial activities. This information is then used to prepare financial statements and to analyze the financial performance of the business. The general journal is an essential tool for any business that wants to maintain accurate financial records and make informed decisions about its financial activities.

The document types is already linked to the batch types in Setup → Document setup (Setup ribbon). The batch types linked to the documents, is as follows:

Invoices - Sales journal

Credit notes - Sales journal

Purchases - Purchase journal

Supplier returns - Purchase journal

When should a general journal not be used?

A general journal should not be used in certain situations where there are specific journals designed for recording transactions. For example:

- Sales: For recording sales, specialised journals like the sales journal should be used. To record sales transactions in osFinancials5/TurboCASH5, you can use the sales journal available in the Batch entry section of the Default ribbon. The sales journal allows you to enter and manage sales-related transactions effectively.

  In addition to the sales journal, you can process invoices and credit notes using the Documents section on the Default ribbon. Invoices and credit notes can be linked to the sales journal in Setup → Documents setup (Setup ribbon). When you process invoices and credit notes, the source documents will be automatically generated, allowing you to have physical or digital copies of these documents for record-keeping purposes. These documents can be printed and reprinted as needed, enabling you to send them to your debtors (customers/clients) as required.

  Once the invoices and credit notes are updated and posted to the ledger, the corresponding transactions will be automatically processed in the sales journal. Each item included in the invoice or credit note will be recorded in the sales journal, ensuring accurate tracking of your sales transactions.

  By utilising the sales journal and linking invoices and credit notes, you can efficiently manage and maintain a comprehensive record of your sales activities in osFinancials5/TurboCASH5.

- Purchases: For recording purchases, specialised journals like the purchase journal should be used. To record purchase transactions in osFinancials5/TurboCASH5, you can use the purchase journal available in the Batch entry section of the Default ribbon. The purchase journal allows you to enter and manage purchase-related transactions effectively.

  In addition to the purchase journal, you can process purchase and supplier return documents using the Documents section on the Default ribbon. Purchases and supplier return documents can be linked to the purchase journal in Setup → Documents setup (Setup ribbon). When you process purchase and supplier return documents, the source documents will be automatically generated, allowing you to have physical or digital copies of these documents for record-keeping purposes. These documents can be printed and reprinted as needed, enabling you to send them to your creditors (suppliers/vendors) as required.

  Once the purchase and supplier return documents are updated and posted to the ledger, the corresponding transactions will be automatically processed in the purchase journal. Each item included in the purchase and supplier return documents will be recorded in the purchase journal, ensuring

accurate tracking of your purchase transactions.

By utilising the purchase journal and linking purchase and supplier return documents, you can efficiently manage and maintain a comprehensive record of your purchase activities in osFinancials5/TurboCASH5.

- Cash transactions: To record cash transactions in osFinancials5/TurboCASH5, specialised journals such as the cash receipts journal and cash disbursements journal are used. In osFinancials5/TurboCASH5, when setting up bank accounts and petty cash accounts in the Setup → Accounts menu of the Setup ribbon, each account will be associated with its own unique payments journal and receipts journal.

  If the Bank import plugin is not activated in osFinancials, you can manually process cash transactions in the respective payments journal and receipts journal associated with the bank account or petty cash account. To access these journals, you can go to the Batch entry option on the Default ribbon.

  If the Bank import plugin is activated, you have the option to process and import transactions directly into the payments journal and receipts journal associated with the bank account or petty cash account. This can be done through the Cash/Bank entry option on the Default ribbon.

  By using the appropriate journals for cash transactions, you can effectively record and manage your cash receipts and disbursements. The journals allow for accurate tracking of cash flows, providing a clear overview of your financial activities.

  Please note that the availability and functionality of specific features may depend on the configuration and settings of your Set of Books in osFinancials5/TurboCASH5.

Bank import plugin - Bank Reconciliations Plugin Manual - BankImport Plugin Manual - Shop - The Bank import plugin is included in the osFinancials5/TurboCASH5 subscription.

The Bank import plugin is included with the osFinancials5/TurboCASH5 Business Class license, meaning you have access to it without any additional cost or separate license requirement.

With the plugin, you can download bank statement files from your online banking app or portal provided by your bank or financial institution. These files can be imported into the appropriate bank accounts (cash books) in osFinancials5/TurboCASH5.

You can download statements for multiple bank accounts and credit cards, as long as you have them linked to your online banking. Each bank account or credit card should have its corresponding Payments and Receipts journals set up in osFinancials5/TurboCASH5.

Importing the bank statements automatically populates the transactions into the Payments and Receipts columns, saving you time and reducing the risk of errors associated with manual entry.

The plugin offers a user-friendly interface with context menus that make it easy to locate, select, and

search for specific transactions, debtors, creditors, or general ledger accounts. This simplifies the navigation and management of your bank transactions.

You can link debit transactions to credit transactions and vice versa, allowing for accurate tracking of outstanding balances and efficient management of payments and receipts. You can also link a portion of a payment or receipt to multiple outstanding transactions if needed.

Additionally, the plugin allows you to link accounts to specific debtors, creditors, or general ledger accounts. This ensures that subsequent bank statement imports automatically allocate transactions correctly based on the predefined account linkages, improving accuracy and saving time.

The plugin utilizes bank references to automatically allocate or link various transactions to the correct accounts in your Set of Books. It supports automatic receipts for debit orders from your debtors and automatic payments for managing supplier payments.

In summary, the Bank import plugin in osFinancials5/TurboCASH5 simplifies the import of bank statements, automates transaction allocation, and efficiently manages and reconciles your bank accounts. It reduces manual data entry, improves accuracy, and streamlines your financial management processes.

- Payroll: To record payroll transactions in osFinancials5/TurboCASH5, a specialised journal such as the payroll journal can be used. If you need to add the payroll journal, you can do so in the Setup → Batch types menu on the Setup ribbon.

  By processing payroll transactions in the payroll journal, you can effectively track your salary and wage expenses and payments. This allows you to have a dedicated journal specifically for recording payroll-related transactions, providing specific configuration of the payroll journal and better organisation and analysis of your payroll data.

  In addition to the payroll journal, osFinancials also provides the option to process repeating transactions. Repeating transactions can be accessed in the Edit → Repeating transactions menu on the Default ribbon. This feature allows you to set up and manage transactions that occur on a regular basis, such as recurring payroll entries. You can edit the repeating transactions as needed and import them into the normal payroll journal, ensuring consistency and efficiency in recording your payroll transactions.

  Using a payroll journal and taking advantage of the repeating transactions feature in osFinancials can streamline your payroll processing and help maintain accurate records of your payroll expenses and payments.

- Fixed assets: To record fixed asset transactions in osFinancials5/TurboCASH5, a specialized journal such as the fixed asset journal can be used. If the fixed asset journal is not already added, you can do so in the Setup → Batch types menu on the Setup ribbon.

By processing transactions for fixed assets in the fixed asset journal, you can effectively track your fixed asset-related transactions. This includes recording acquisitions, disposals, multi-year depreciation, and any transactions related to losses or profits on the disposal of fixed assets. Having a dedicated journal specifically for fixed asset transactions allows for better organization and analysis of your fixed asset data.

In addition to the fixed asset journal, osFinancials also provides the option to process repeating transactions. The repeating transactions feature can be accessed in the Edit → Repeating transactions menu on the Default ribbon. This feature is useful for setting up and managing transactions that occur on a regular basis, such as recurring depreciation entries for fixed assets. You can edit the repeating transactions as needed and import them into the normal fixed asset journal, ensuring consistency and efficiency in recording your fixed asset transactions.

Using the fixed asset journal and leveraging the repeating transactions feature in osFinancials5/TurboCASH5 streamline your fixed asset processing and help maintain accurate records of your fixed asset-related transactions. This allows for better tracking and management of your fixed assets throughout their life-cycle.

It's important to note that the availability and functionality of specific features may vary depending on the configuration and settings of your Set of Books in osFinancials5/TurboCASH5.

Activa plugin - Manual - Shop - Licence : Once-off -

The Activa plugin automates the management and processes of fixed assets and the depreciation of fixed assets in your accounts over the lifespan of the fixed assets. Periodically you will receive a notification screen, which the depreciation shown. From this screen, the depreciation(s) can directly take place.

The Activa plugin in osFinancials5/TurboCASH5 allows you to register fixed assets that need to be written off. The write-off process occurs over the lifespan of the asset and can be spread across multiple financial years.

By adding the Activa Fixed asset accounts in the plugin setup, you will receive reminders when new transactions are posted to the ledger or when Activa transactions require processing. This automation streamlines the management of depreciation allowances for fixed assets (tangible assets) in your Set of Books over the asset's lifespan.

As you record the depreciation expenses for each financial year, they will be reported in the income statement and reduce your net profit. Additionally, the plugin will provide you with the net value of your fixed assets, which is calculated as the fixed assets' cost minus the accumulated depreciation, and this information will be reflected in the balance sheet.

In summary, the Activa plugin helps automate the depreciation management process, ensures accurate reporting of depreciation expenses, and provides visibility into the net value of fixed assets over their lifespan in both the income statement and the balance sheet.

When a fixed asset reached the end of life end process that will clear of the total write-off from the balance write-off account and the initial asset account. This will display only the remaining total on the asset account and the contra account the will be cleared of this total.

By allowing the write-off process to occur over the lifespan of the asset and providing reminders for transaction processing, the plugin further streamlines the management of depreciation allowances for fixed assets.

The accurate reporting of depreciation expenses in the income statement and the reflection of the net value of fixed assets (cost minus accumulated depreciation) in the balance sheet remain essential features of the plugin.

Furthermore, the ability to clear the total write-off from the balance write-off account and the initial asset account when a fixed asset reaches the end of its life adds to the efficiency of the process.

The Activa plugin's powerful grid, custom filtering options, and integrated pivot tables enhance the search and analysis capabilities for active fixed assets, assets requiring processing, and transaction details. The Ledger analyser allows for the printing and exporting of the trial balance, income statement, and balance sheet, while the T-Account viewer facilitates the export of transactions to spreadsheets.

The Central search feature in osFinancials5/TurboCASH5 further aids in searching for transactions related to fixed assets, providing comprehensive functionality for managing and analysing fixed asset data.

- Accrual-based adjustments: To record transactions for accrual-based accounting adjustments, you can add an "*Adjustments*" journal type in the Setup → Batch types menu on the Setup ribbon. By creating an adjustments journal, you can specifically configure the options for recording month-end or year-end adjustments and easily track these adjustments within your Set of Books.

  Using a dedicated adjustments journal allows you to separate these specific transactions from other routine transactions and provides better organization and visibility for accrual-based adjustments. This ensures that these adjustments are properly captured and reflected in your financial statements.

Steps when entering and processing transactions in journals

When entering and processing transactions in journals or batches, there are typically seven steps involved. These steps ensure accurate data entry, balancing, and posting to the ledger. Here is a breakdown of each step:

1. Set the options or defaults for the batch: Before entering transactions, you may need to configure certain options or defaults for the batch. This could include setting the default currency, account codes, or any other relevant parameters. This step is typically done once, unless there are changes in your requirements.

2. Enter the alias (name for the batch): Assign a name or alias to the batch to help identify it later when generating reports or exporting/importing data. This allows for easy reference and organisation of your batches.
3. Select VAT/GST/Sales Tax treatment: If your transactions are subject to VAT/GST/Sales Tax, specify whether they are inclusive or exclusive of these taxes. This ensures accurate tax calculations and reporting. If no tax is applicable to the transactions, this option can be skipped.
4. Enter the transactions in the batch: Input the transaction details into the batch. This involves capturing the relevant information from source documents, such as invoices or receipts, and entering it into the appropriate fields in the batch. Ensure accuracy and completeness during data entry.
5. Balance the batch: Once all transactions are entered, ensure that the batch is balanced. This means the total debits and credits in the batch should match. Balancing the batch is crucial to maintaining accurate financial records and identifying any data entry errors.
6. List the batch and retain the batch listing: Generate a listing of the transactions within the batch and retain it along with the source documents. This serves as a record of the transactions entered and aids in reconciling the data at a later stage.
7. Post the batch to the ledger: The final step is to post the batch to the appropriate ledger accounts. This action updates the accounts with the transaction data and ensures the financial records are accurate and up to date. Posting transfers the information from the batch to the general ledger for proper accounting.

In osFinancials5/TurboCASH5*, you have the flexibility to enter and capture transactions without immediately posting the batch to the ledger. This allows you to capture transactions on a daily basis and exit the batch screen, proceeding to steps 5 and 7 at a later time. The data will be saved within the batch, ensuring it is not lost and can be balanced and posted at a more convenient time.*

Created with the Standard Edition of HelpNDoc: HelpNDoc's Project Analyzer: Incredible documentation assistant

Batch types (setup)

This option allows you to create a batch (journal) to capture and enter your transactions. The Sales, Purchases, Receipts, Payments and General journal are standard defaults.

You can create any additional batches by adding them to this list. If you have more than one Bank account, you need to create a payments and receipts batch for each one. If you were initially short of batch types, you may enter additional batch types to accommodate your reporting requirements. These will not be

retroactive, so *thorough setting up* is preferable.

BATCH TYPES	*Lookup Type*	*Contra account lookup type*	*DEBIT / CREDIT*
Sales journal	*Debtors*	*General ledger*	*Debit*
Sales returns	*General ledger*	*Debtors*	*Credit*
Purchases	*General ledger*	*Creditors*	*Credit*
Purchase returns	*Creditors*	*General ledger*	*Debit*
Payments	*All*	*All*	*Debit*
Receipts	*All*	*All*	*Credit*
General journal	*All*	*All*	*Allow both (Debit / Credit)*

In the Sets of Books available as a free download, includes a Sales journal, Purchases journal, General journal, Bank account (linked to a Receipts and a Payments batch) and a Petty cash account (linked to a Receipts and a Payments batch).

When documents is updated to the ledger it will generate the transactions in the batches.

The document types is already linked to the batch types in Setup → Document setup (Setup ribbon). The batch types linked to the documents, is as follows:

- *Invoices - Sales journal*
- *Credit notes - Sales journal*
- *Purchases - Purchase journal*
- *Supplier returns - Purchase journal*

You can also set the batch defaults to reduce incorrect capturing of transactions. For example, in a Sales journal, only debit entries may be entered. Batch defaults such as “*contra accounts*”, “*contra account per*

line", "*inclusive*" (of VAT/GST/Sales Tax) or "*exclusive*" capture and increment reference numbers, and can only be set from within the batch.

The setting of the defaults will be discussed in later topics. The new features, which have been added to configure batches or journals, may be taken into account when you need to create or add your batch or journal types. This will enable faster and more accurate processing of transactions.

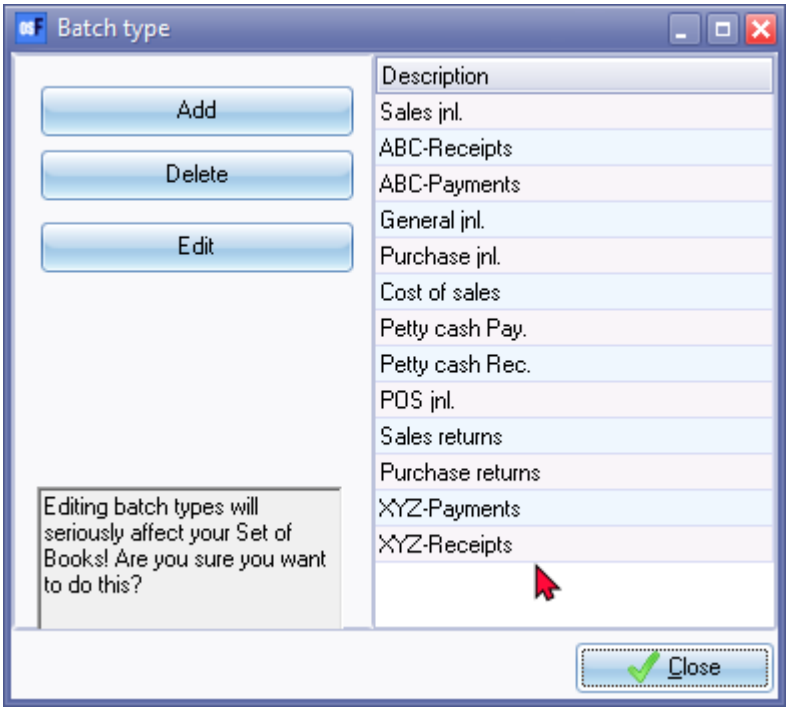
Some of these features are:

- No Tax - You may now hide the tax column and the Tax Code lookup facility if you are not registered for VAT/GST/Sales Tax or if VAT/GST/Sales Tax is not applicable to all transactions in the batch or journal.
- Lookup filters - You may now select to show all Accounts or only General ledger, Debtor or Creditor accounts.
- Contra account per line - easier processing of transactions with this setting. Contra accounts are now visible in the Contra account column.

Batch types are the journals in which you will enter (capture) the source documents of your transactions. You may enter all your invoices in the sales journal, deposits or receipts in the receipts journal, cheques or payments in the payments journal, etc. After you have entered, your transactions from the source documents, you need to check them and post or update these batches to the ledger.

To add a Batch type:

1. On the Setup ribbon, select Setup → Batch types.



2. Select a Batch type on the Description list. A blank line will be inserted above the selected Batch type.

3. Enter the name for the new batch type.

4. Click on the Close button.

You may select any batch and click on the Edit button to do the Batch setup; or press F10 or click on the F10:Setup icon on the Batch entry screen.

Sales journal / Sales returns journal

Sales Journal: Used for recording invoices and credit notes issued yo customers.

Sales journal for Credit notes

When processing credit notes for customers in the Sales Journal, the opposite entry is required to offset the original transaction. In 3. osFinancials5/TurboCASH5, specifically in the Batch entry mode, you would enter the amount preceded by a negative sign (minus sign) to transfer the amount to the credit column of the sales journal.

By using a negative sign before the amount, the credit note amount is treated as a deduction or reduction from the customer's account receivable. This helps offset the original sale or invoice and reflects the appropriate adjustment in the financial records.

Entering the credit note amount in the credit column of the sales journal ensures accurate recording and reporting of the transaction. It helps maintain proper documentation and provides a clear audit trail of the credit note issued to the customer.

Remember to apply the necessary adjustments in the sales journal to accurately reflect the credit note transaction and its impact on the customer's account and overall financial records.

In the Document entry mode, when you select the Sales journal, for the Credit notes document type, it will automatically debit the sales account and credit the customer account opposite of when you process and post Invoices.

When documents is updated to the ledger it will generate the transactions in the batches (journals).

The document types is already linked to the batch types in Setup → Document setup (Setup ribbon). The batch types linked to the documents, is as follows:

- *Invoices - Sales journal*
- *Credit notes - Sales journal*

- *Purchases - Purchase journal*
- *Supplier returns - Purchase journal*

In osFinancials5/TurboCASH5 you may add or create a batch type or journal type for credit notes such as sales returns journal to accurately handle credit notes for customers, you may add an additional journal type or utilize an existing journal type specifically designed for credit notes. This allows for proper segregation and categorization of credit note transactions, ensuring accurate recording and reporting. Depending on the accounting software or system being used, you may have the flexibility to customize and configure journal types to suit your specific requirements.

By incorporating a separate journal type for credit notes, you can maintain proper documentation, track customer returns or adjustments, and ensure that financial records accurately reflect the impact of these credit note transactions. This enhances the accuracy and integrity of financial reporting and facilitates proper analysis and reconciliation of customer accounts.

The opposite entry, with the amount entered in the credit column, helps offset the original transaction.

Additionally, in osFinancials5/TurboCASH5, you have the flexibility to add or create a batch type or journal type specifically for credit notes, such as a Sales Returns Journal. This allows for proper segregation and categorization of credit note transactions, ensuring accurate recording and reporting. You may configure the Sales Returns Journal to process credit notes to suit your specific requirements.

By incorporating a separate journal type for credit notes, you can maintain proper documentation, track customer returns or adjustments, and ensure that financial records accurately reflect the impact of these credit note transactions. This enhances the accuracy and integrity of financial reporting and facilitates proper analysis and reconciliation of customer accounts.

Customer Returns and Credit notes

When a customer returns goods and a credit note is issued, the accounting treatment typically depends on the reason for the return and the specific accounting policies of the company. Credit notes can be offset against different accounts, and the choice often depends on the nature of the return and the impact on the company's financial statements. Two common approaches are:

1. Offset Against Sales Revenue (Sales Account): If the returned goods are being credited back to the customer, and the company is reducing its reported sales revenue, the credit note can be offset against the sales account. This is often the case when the returned goods are being deducted from the total sales revenue because they were sold in error, were damaged, or for some other reason that requires a reduction in sales.

   For example, if a customer returns $100 worth of goods, the company could reduce its sales revenue

by $100 by offsetting it against the sales account.

2. Offset Against Sales Allowances: If the credit note represents a concession or allowance given to the customer (e.g., for damaged goods or a pricing dispute), it is commonly offset against the "Sales Allowances" account. This reduces the net sales revenue reported in the financial statements.

   For example, if a customer is granted a $20 allowance for damaged goods, the $20 credit note would be offset against the "Sales Allowances" account to reflect the reduction in sales revenue.

The choice between these two options depends on the company's accounting policies, the specific circumstances of the return, and how the company wants to present its financial statements. Both approaches are acceptable and can be used depending on what makes the most sense for accurate financial reporting.

It's important for a company to have clear and consistent accounting policies in place for handling returns and credit notes to ensure accurate and transparent financial reporting. These policies should be in line with generally accepted accounting principles (GAAP) or International Financial Reporting Standards (IFRS) if applicable in the company's jurisdiction.

Set default contra account for Credit notes

In osFinancials5/TurboCASH5, the default configuration for handling invoices and credit notes involves utilizing the Sales Journal. Consequently, by default, credit notes are set to offset against the Sales Account.

However, should you wish to utilize a different account, like the Sales Allowances account, to offset credit notes instead of the Sales Account, you will need to follow these steps within osFinancials:

1. Navigate to the Setup menu and select Batch types from the options provided on the Setup ribbon. Here, you can create a specific journal, such as the Sales Returns journal.
2. Within the "*Options for this batch*," you can specify the contra account as "Sales Allowances" or any other specific account distinct from the Sales Account.
3. Access the Setup menu again, this time selecting Document setup from the options on the Setup ribbon. On the Credit notes tab, you can designate the Sales Returns journal as the desired journal for credit note transactions.

This approach aligns with established accounting practices where businesses often employ separate journals or accounts to meticulously track returns, allowances, and discounts, ensuring the precision of financial reporting and facilitating thorough analysis.

It remains essential to tailor osFinancials5/TurboCASH5 to conform to your company's unique accounting policies and reporting criteria. This flexibility to configure contra accounts for various transaction types,

such as sales returns and allowances, empowers businesses to uphold the accuracy and transparency of their financial records.

Purchase journal / Purchase returns journal

Purchases Journal: Used for recording supplier invoices and credit notes received from external suppliers.

Purchase journal for Credit notes received from external suppliers

When processing credit notes received from external suppliers in the Purchase Journal, the opposite entry is required to offset the original transaction. In osFinancials5/TurboCASH5, specifically in the Batch entry mode, you would enter the amount preceded by a negative sign (minus sign) to transfer the amount to the debit column of the purchase journal.

By using a negative sign before the amount, the credit note received from external suppliers is treated as a deduction or reduction from the creditor or supplier's account payable. This helps offset the original purchase or invoice and reflects the appropriate adjustment in the financial records.

Entering the credit note amount in the debit column of the purchase journal ensures accurate recording and reporting of the transaction. It helps maintain proper documentation and provides a clear audit trail of the credit note received from external suppliers.

Remember to apply the necessary adjustments in the purchase journal to accurately reflect the credit note transaction and its impact on the creditor or supplier's account and overall financial records. This ensures consistency and accuracy in financial reporting and facilitates proper analysis and reconciliation of supplier accounts.

When documents is updated to the ledger it will generate the transactions in the batches.

The document types is already linked to the batch types in Setup → Document setup (Setup ribbon). The batch types linked to the documents, is as follows:

- *Invoices - Sales journal*
- *Credit notes - Sales journal*
- *Purchases - Purchase journal*
- *Supplier returns - Purchase journal*

Purchase Returns Journal: Used for recording returns of purchased goods or services and associated credit notes received from external suppliers.

Receipts / Payments journals

Payments and Receipt Journals

Payments and Receipt batches (journals) in accounting are indeed linked to bank accounts and petty cash accounts, and they play a crucial role in recording the physical inflow and outflow of cash in a business. Here's a more detailed explanation:

1. Payments Journal (Cash Disbursements Journal): This journal is used to record all outgoing payments or disbursements made by the business. It includes payments made by check, electronic transfer, or in cash. These payments could be for various purposes, such as paying suppliers, employees, utilities, rent, or any other expenses incurred by the business. The Payments journal helps in tracking cash outflows and ensures that all expenditures are properly documented.
2. Receipts Journal (Cash Receipts Journal): The Receipts Journal, on the other hand, is used to record all incoming cash receipts. This includes payments received from customers, clients, or any other sources of income. Like the Payments journal, it helps in tracking cash inflows and ensures that all revenue is accurately recorded.

Both of these journals are linked to bank accounts and petty cash accounts in the following ways:

- Bank Accounts: Transactions recorded in the Payments and Receipts Journals are closely related to the business's bank accounts. When a payment is made (recorded in the Payments Journal), it usually results in a decrease in the bank balance, and when a receipt is recorded (in the Receipts Journal), it leads to an increase in the bank balance. These journals serve as a bridge between the physical cash transactions and the entries made in the bank statement, ensuring that the bank accounts are accurately reconciled.
- Petty Cash Accounts: Petty cash is a small amount of cash that a business keeps on hand for minor expenses. Transactions involving petty cash, such as replenishing the petty cash fund or recording expenses paid using petty cash, are also recorded in these journals. This helps in maintaining a clear record of petty cash transactions and ensures that the petty cash account is balanced.

While the Payments and Receipts Journals focus on cash transactions, other journals like the Sales Journal

and Purchase journal primarily deal with credit transactions. Sales Journal records credit sales to customers, while the Purchase journal records credit purchases from suppliers. These journals help in tracking accounts receivable (amounts owed to the business by customers) and accounts payable (amounts owed by the business to suppliers) but do not directly involve physical cash flow in and out of the business.

In summary, Payments and Receipts Journals are essential tools for accurately tracking and managing the physical flow of cash in a business, while other journals like the Sales and Purchase journals are more concerned with credit transactions and accounts receivable/payable. Properly maintaining these journals is crucial for effective cash flow management and financial record-keeping.

Cost of Sales journal

What is the Cost of Sales journal?

The Cost of Sales journal, also known as the Cost of Goods Sold (COGS) journal, is used to record the costs directly associated with the production or acquisition of goods sold by a business. It is an important journal in the accounting process, specifically for businesses that deal with inventory or the sale of physical products.

Here are some key points about the Cost of Sales journal:

1. Purpose: The Cost of Sales journal is used to track and record the costs directly attributable to the production or acquisition of goods that are subsequently sold to customers.
2. Cost Components: The journal captures various cost components, including the cost of raw materials, direct labor, manufacturing overhead, freight or shipping costs, and any other direct costs associated with the production or acquisition of inventory.
3. Calculation of Cost of Sales: The Cost of Sales journal helps calculate the Cost of Goods Sold (COGS), which represents the cost incurred by a business to produce or acquire the goods that are sold during a particular accounting period.
4. Inventory Valuation: The Cost of Sales journal plays a crucial role in the valuation of inventory. By recording the cost of inventory sold, it helps determine the value of the remaining inventory on hand, following the principles of inventory valuation methods such as First-In, First-Out (FIFO), Last-In, First-Out (LIFO), or Weighted Average Cost.
5. Impact on Financial Statements: The entries in the Cost of Sales journal affect the income statement

by reducing the revenue with the corresponding cost of goods sold, ultimately determining the gross profit or gross margin of the business.

6. Integration with Other Journals: The Cost of Sales journal is closely linked with other journals, such as the Sales Journal and the Purchases Journal. It incorporates the relevant information from these journals to calculate the cost of goods sold accurately.
7. Periodic or Perpetual Inventory Systems: The recording and calculation of cost of sales can vary depending on the inventory system employed by the business, such as periodic or perpetual inventory systems.

By maintaining a Cost of Sales journal, businesses can track and analyse the direct costs associated with the production or acquisition of goods sold, enabling them to determine profitability, evaluate pricing strategies, and make informed decisions regarding inventory management and cost control.

Inventory Adjustments Journal

Inventory journal can indeed be used to record adjustments to the purchase cost of stock items, such as correcting errors or adding additional costs like freight or import duties. Using an Inventory journal can provide more specificity and transparency in your accounting records, particularly when these adjustments are related to inventory values. Here's how it might work:

Adjustments to Inventory Cost: Inventory Journal: If you need to make adjustments to the cost of specific items within your inventory, an Inventory journal is a suitable choice. This journal allows you to specify the inventory item, the quantity, and the cost adjustment for each item. For example, if you discover an error in the initial cost recorded or need to add additional costs to specific items (e.g., freight charges), you can use the Inventory journal entries to adjust the cost of those specific items. Each entry in the Inventory journal would involve debiting or crediting the appropriate inventory item and reflecting the cost adjustment.

Using an Inventory journal for these adjustments provides a clear audit trail and ensures that changes to inventory costs are accurately recorded for each item. It allows for more precise tracking of inventory-related expenses and helps maintain the integrity of your inventory valuation.

In summary, while the General Journal can be used for various adjustments, including those related to inventory, using an Inventory journal for specific adjustments to the cost of stock items is a good practice. It offers better visibility and control over inventory-related transactions and helps ensure accurate inventory valuation on your financial statements.

General journal

General journal - Key points

The General journal is a fundamental component of the accounting system used for recording miscellaneous transactions that do not fit into the other specialized subsidiary journals. It provides flexibility for recording various types of transactions that are not covered by the specific journals, such as the Sales journal, Purchase journal, or Payments and Receipts journals (linked to specific bank accounts).

Here are some key points about the General journal:

1. Miscellaneous Transactions: The General Journal is used to record transactions that are unique or do not have a designated journal for their specific type. It includes transactions such as corrections of errors, adjusting entries, accruals, deferrals, depreciation entries, and other non-routine transactions.
2. Flexibility: The General Journal allows for the recording of diverse transactions, making it a versatile tool in the accounting process. It accommodates transactions that do not fit into predefined categories or require special treatment.
3. Manual Entries: Unlike other subsidiary journals that may have automated or system-generated entries, the General Journal typically involves manual entries made by accountants or bookkeepers. These entries require careful consideration and proper documentation.
4. Debits and Credits: The General journal follows the fundamental principles of double-entry bookkeeping, where each transaction is recorded with equal debits and credits to maintain the balance of the accounting equation.
5. Ledger posting: After entries are recorded in the General Journal, they are posted to the respective accounts in the General ledger. This ensures that the impact of the transactions is reflected accurately in the overall accounting records.
6. Financial reporting: The transactions recorded in the General Journal are ultimately reflected in the financial statements. They contribute to the preparation of the trial balance, income statement, balance sheet, and other financial reports.
7. Audit trail: The General Journal provides an audit trail for miscellaneous transactions, allowing for proper documentation and tracking of entries. This helps in ensuring transparency, accountability, and accuracy in financial reporting.
8. Internal controls: The General Journal, like other accounting journals, plays a role in maintaining internal controls within an organization. It allows for proper authorization, review, and approval processes for miscellaneous transactions, minimizing the risk of errors or fraudulent activities.

Overall, the General journal serves as a crucial tool in accounting, providing flexibility for recording various types of transactions that do not fit into other specialized journals. It ensures that all transactions are properly documented, recorded, and reported, maintaining the integrity of the financial records and supporting accurate financial analysis and decision-making.

When should a general journal be used?

The general journal, on the other hand, is typically used for recording non-routine or unusual transactions that do not fit into other specialized journals. It is a versatile journal that can be used for various purposes, including corrections of errors. If there is no specific journal available for a particular type of transaction, using the general journal is a suitable option.

However, whenever there is a specialized journal available for a specific type of transaction, it is recommended to use that journal to ensure accuracy and efficiency in record-keeping. This helps maintain consistency and allows for easier analysis and reporting of transactions within their relevant categories.

In general, a general journal is used to record non-routine or unusual transactions that do not fit into the other specialized journals. However, if there is a specific journal available for a particular type of transaction, it is best to use that journal to ensure accuracy and efficiency in record-keeping

When should a general journal NOT be used?

A general journal should not be used in certain situations where there are specific journals designed for recording transactions. For example:

- Sales: For recording sales, specialised journals like the sales journal should be used. To record sales transactions in osFinancials5/TurboCASH5, you can use the sales journal available in the Batch entry section of the Default ribbon. The sales journal allows you to enter and manage sales-related transactions effectively.

  In addition to the sales journal, you can process invoices and credit notes using the Documents section on the Default ribbon. Invoices and credit notes can be linked to the sales journal in Setup → Documents setup (Setup ribbon). When you process invoices and credit notes, the source documents will be automatically generated, allowing you to have physical or digital copies of these documents for record-keeping purposes. These documents can be printed and reprinted as needed, enabling you to send them to your debtors (customers/clients) as required.

  Once the invoices and credit notes are updated and posted to the ledger, the corresponding transactions will be automatically processed in the sales journal. Each item included in the invoice or credit note will be recorded in the sales journal, ensuring accurate tracking of your sales transactions.

  By utilising the sales journal and linking invoices and credit notes, you can efficiently manage and

maintain a comprehensive record of your sales activities in osFinancials5/TurboCASH5.

- Purchases: For recording purchases, specialised journals like the purchase journal should be used. To record purchase transactions in osFinancials5/TurboCASH5, you can use the purchase journal available in the Batch entry section of the Default ribbon. The purchase journal allows you to enter and manage purchase-related transactions effectively.
