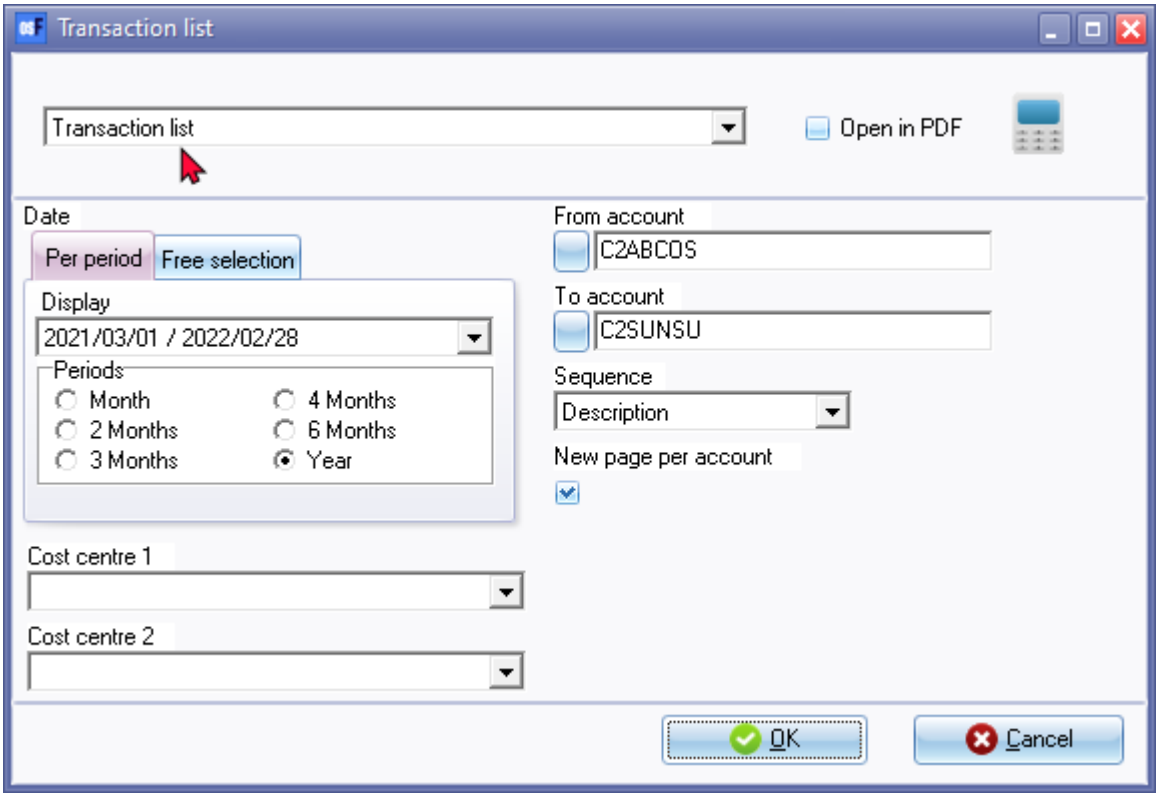
To print Creditor transactions List reports:

1. On the Reports ribbon, select Reports → Creditors → Transactions.
2. Select "*Transaction List*" or "*Transaction List - Open item*".



3. Select the following options:

    a) Period - Select a period on the Per period tab. You may click on the Free selection tab to select a specific date or a range of dates to include transactions in the report.

    b) From account / To account - Select a creditor (supplier / vendor) account or a range of creditor (supplier / vendor) accounts, to include in the report.

    c) Sequence - Select "*Creditor code*" to print the report by account code or "*Description*" to print the report by account description (name).

    f) New page per account - If this option is selected (ticked), it will print the transactions for each account on a new page.

    > *The Company details will not be printed as in the Page header. The company name is displayed in the Page footer.*

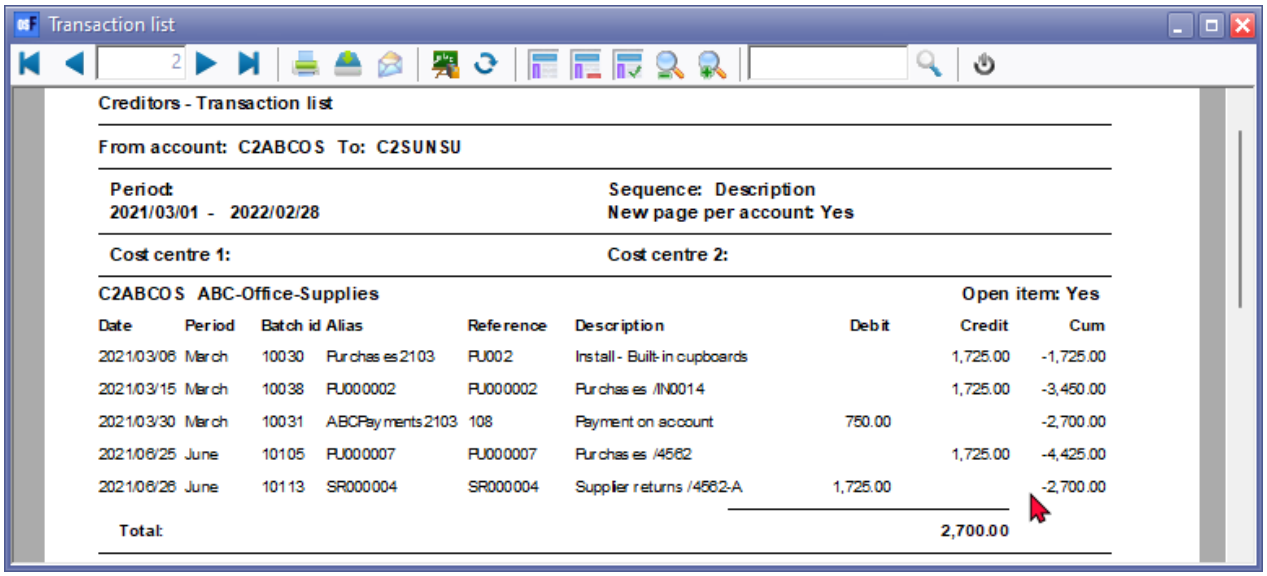
    g) Cost centre 1 / 2 - If you have activated Cost centres, you may select the Cost centres.

4. Click on the OK button.

Printed : Creditors - Transaction list report

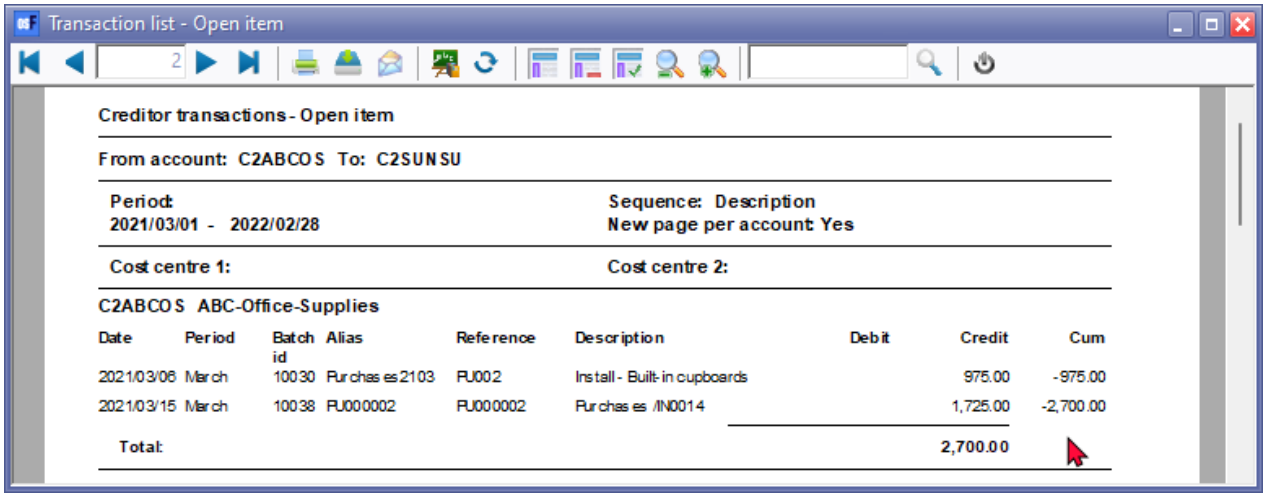
The "*Creditors - Transaction list" report*" will list all the transactions, whether debit batch transactions or

supplier return documents is linked to credit batch transactions and purchase documents, or not.

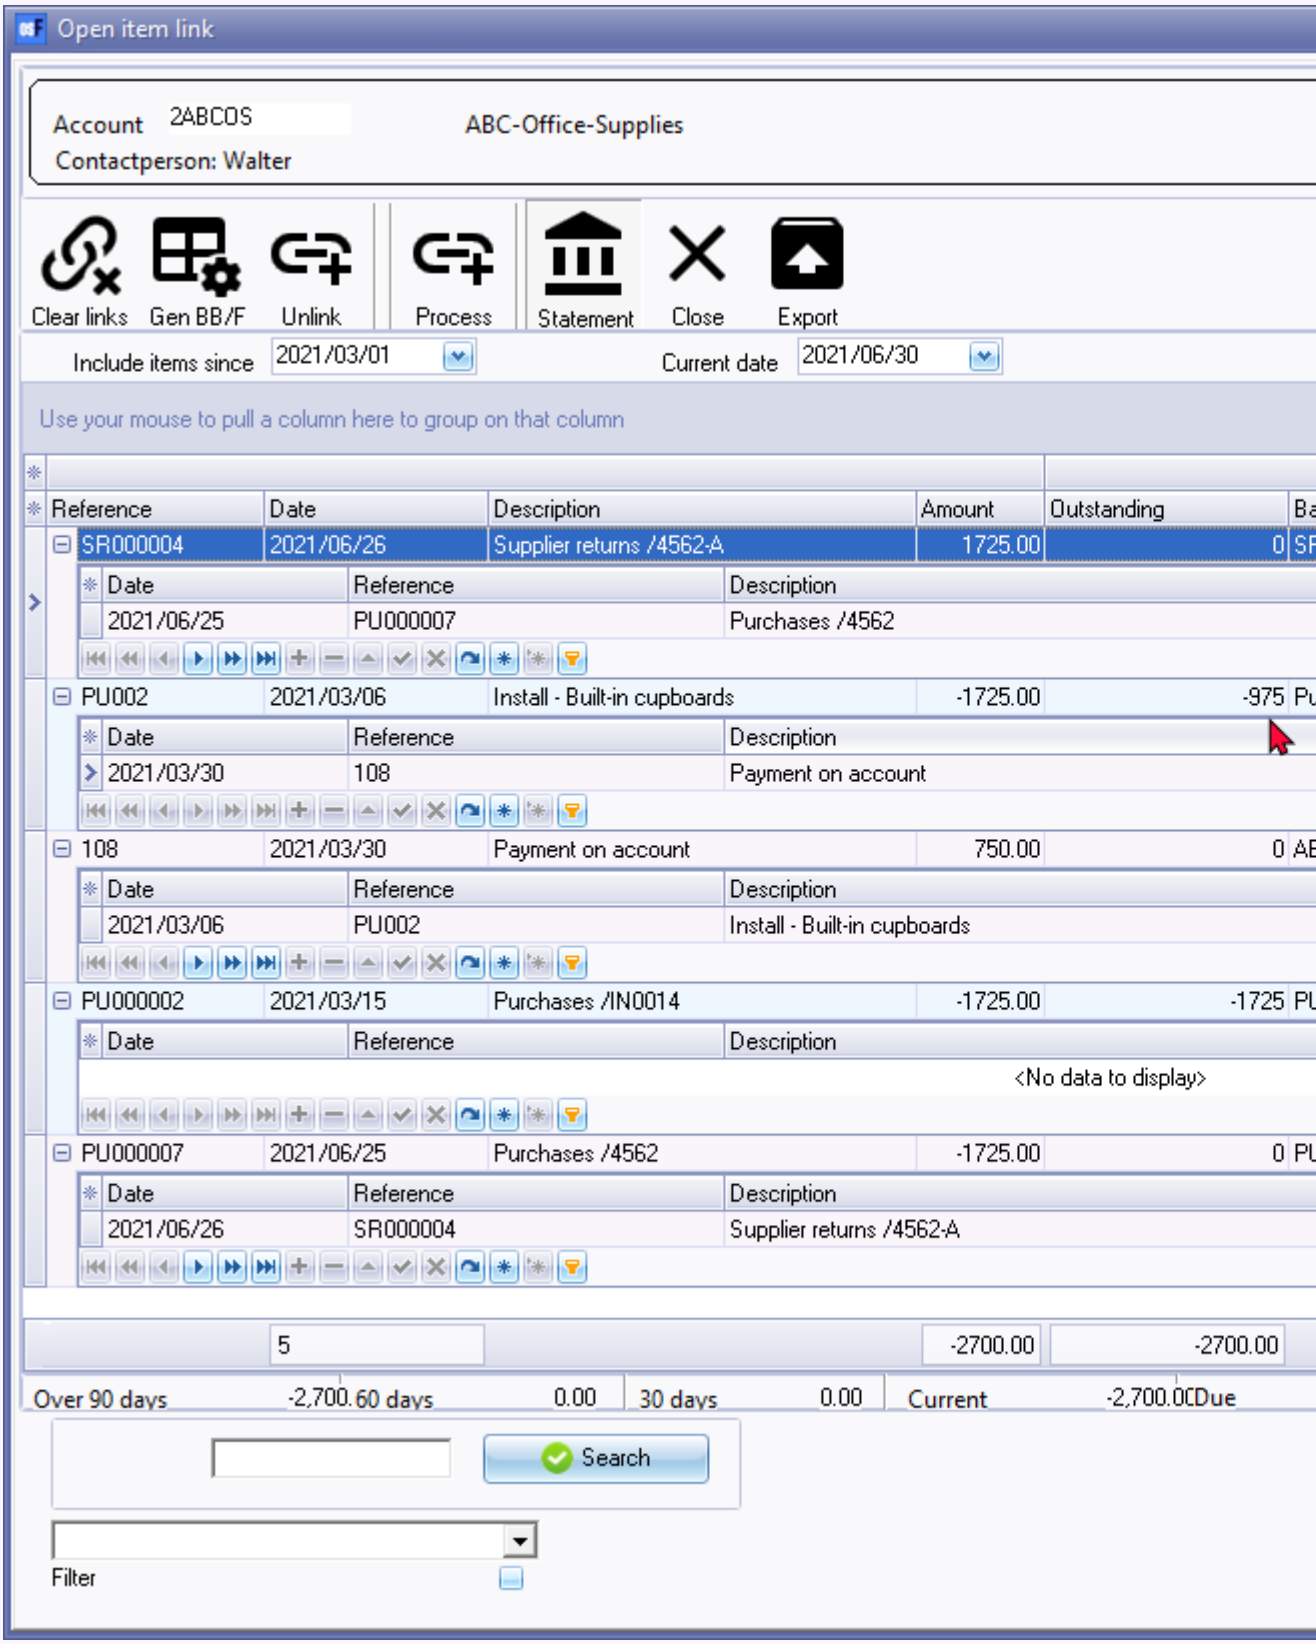


Printed : Creditor - transactions - Open item report

The "*Creditors - Transaction list - Open item*" report will list only the outstanding amounts and all transactions for which batch transactions or supplier return documents is not linked to credit batch transactions and purchase documents.



The debit transactions which are linked to specific credit transactions of the same value, will not be displayed. If a transaction amount (difference) will be listed.

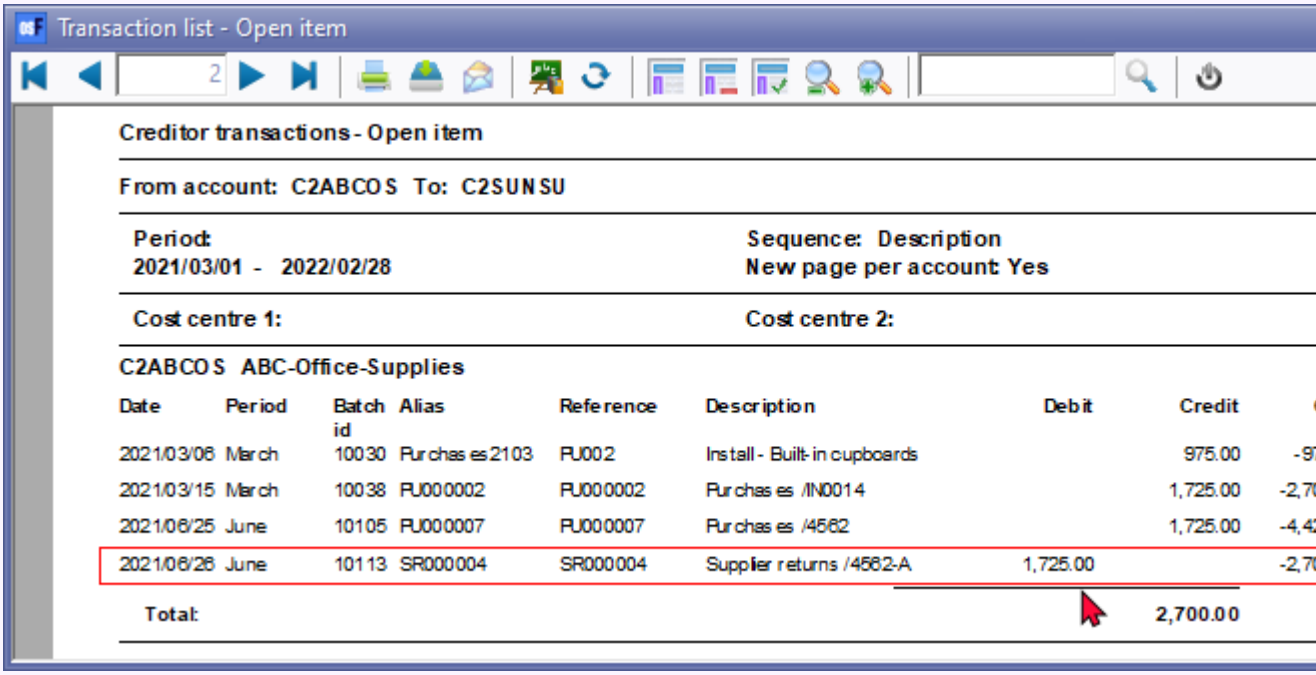


For example:

- *Payment - 108 - 2021/03/30 - 750.00 - Debit transaction in the Payments journal is linked to the supplier invoice PU002 - 2*

The outstanding amount for this transaction is 975.00 still due to the creditor (supplier / vendor). (1725.00 minus 750.00). Only

If the transaction for Supplier return SR000004 is not linked to Purchase PU000007, both Supplier return SR000004 and Purchas
listed on the "Transaction list - Open item" report as well as the "Creditor remittance advise - Outstanding".



You may need to process the links on the Open item link (Default ribbon).

The details on the report, is as follows:

1. Page header 1 - Company details - This will only print on the fist page.

   If the "New page per account" option on the report parameters is selected (ticked), the Company details will not be printed in the Page header of the first page. The company name is displayed in the Page footer of all pages.

2. Page header 2 - Report name and Parameters as selected on the Report options will display below the Company details on the first page and at the top of each subsequent page.

3. Header group - The Account code and Name (description). It also displays if the creditor (supplier / vendor) account is an open item account.

4. Detail - List the transaction details for each account.

   a) Reference - The reference number of the document (i.e. Purchases and Supplier returns) or the reference number entered in the reference column on the Batch entry screen.

   b) Date - The date of the transaction or document.

c) Description - The stock item code or the account description (if the Financial entry stock item type was selected on a document) of the document (i.e. Purchases and Supplier returns) or the description entered in the description column on the Batch entry screen.

d) Debit - The debit transaction amount.

e) Credit - The credit transaction amount.

f) Cum - The accumulative total of the transactions included in the account.

5. Footer - Groups - Total / Balance - Displays the total of the transactions and the closing balance for each account.

6. Page Footer - List the following:

a) Data - Name of the Set of Books and the full path of the Set of Books (e.g. ... \books\BOOKSNAME\Books.fdb)

b) System user and osFinancials user (Setup → Access control).

c) Printed: The date and time of the system (computer) on which the report is printed.

d) Page: Page number and the last page number of the report.

Contacts (Reports menu)

This report lists all contacts linked to debtor (customer/client) accounts as well as creditor (supplier/vendor) accounts.

To list only the contacts for debtor (customer / client) accounts, you need to print it in Reports → Debtors → Listing - Contacts menu (Reports ribbon). This report specifically focuses on contacts related to debtors (customers/clients). It provides a listing of contacts associated with your debtor accounts.

To list only the contacts for creditor (supplier / vendor) accounts, you need to print it in Reports → Creditors → Listing - Contacts menu (Reports ribbon). This report specifically lists contacts related to creditors (suppliers/vendors). It presents a comprehensive view of contacts associated with your creditor accounts.

To add new contacts, edit or delete contacts, you may use the following options on the Default ribbon.

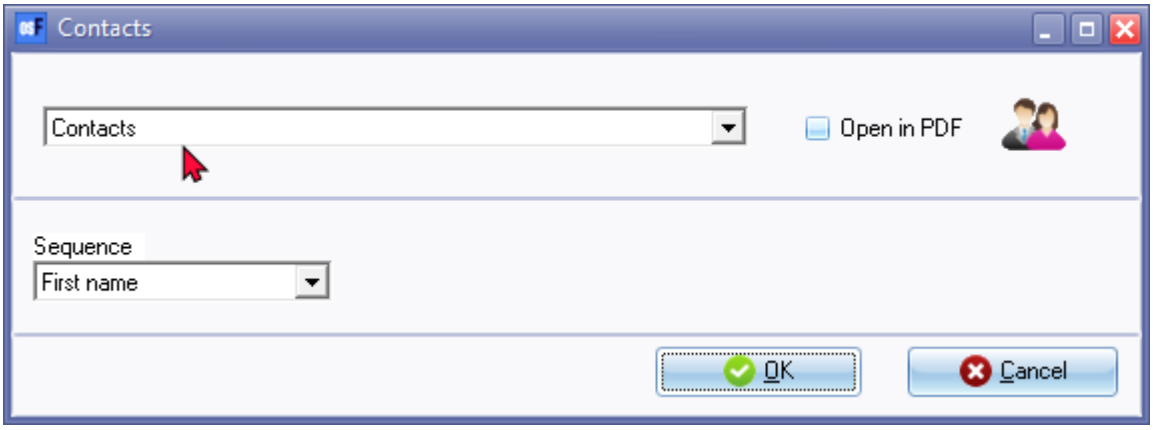
1. Contacts: This option will list all the contacts, where you can manage and maintain contact information for debtors (customers/clients) and creditors (suppliers/vendors). You may add new contacts, update contact details, delete contacts and print a list of all the contacts in your Set of Books.
2. Debtors - Contacts tab: This tab specifically focuses on managing contacts associated with debtor accounts. You can add, edit, or delete contacts linked to debtor accounts, ensuring that the contact details are up to date.
3. Creditors - Contacts tab: Similar to the Debtors - Contacts tab, this tab is dedicated to managing contacts associated with creditor accounts. You can modify the contact information for your suppliers/vendors to maintain accurate records.
4. Calendar - Contacts feature: provides the ability to manage contacts, ensuring that any changes made to contact information are reflected across the system. The following options on the Default ribbon allow you to create, edit, or delete contacts, with all updates being synchronized with the Contacts in the Calendar.

By utilising these options, you can conveniently manage contacts within osFinancials5/TurboCASH5, ensuring that all contact information remains consistent and accessible across different sections in a Set of Books.

Contacts report options

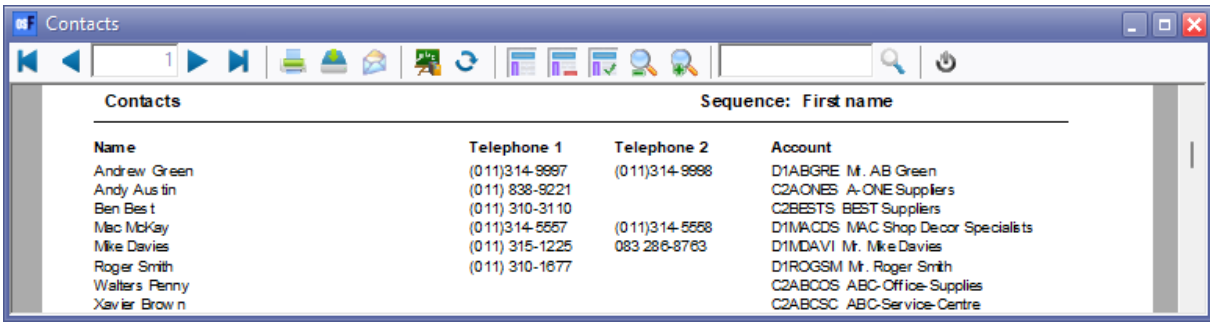
To print a list of all contacts:

1. On the Reports ribbon, select Reports → Contacts.



2. Sequence - Select "*First name, Name, Account"* or *"Description*".
3. Click on OK.

Printed : Contacts report



This contacts report may also be printed from the Print button on Contacts (Default ribbon).

Tax (Reports menu)

Before you print tax reports to submit your Tax (VAT/GST/Sales tax) returns, you need to post (update) all batch transactions and documents (i.e. invoices, credit notes, purchase and supplier return documents) for the tax period.

The following tax reports are available:

1. Tax per period report – This report is used to complete the Tax (VAT/GST/Sales tax) returns. It will list a summary or the detail of the *Output tax* minus the *Input tax* and the *total tax payable / refundable*.
2. Tax report - Transactions - This report is similar to the "*Tax report - Reference / Document no.*" report. It will list the details of accounts and transactions of all posted (updated) batch and document transactions, on which Tax (VAT/GST/Sales tax is applicable. It will display the Tax code and description as well as the contra accounts for each transaction.
3. Tax report - Reference / Document no. - This report will list the details of accounts and transactions of all posted (updated) batch and document transactions, on which Tax (VAT/GST/Sales tax is applicable. It will display the Tax code and description as well as the contra accounts for each transaction.

The Tax excluded and Tax amount in the Report total of the Tax report - Reference / Document no. report, should balance with the Total - Output tax – Input tax of the Tax per period report, if the same periods are selected.

4. Tax list debtor with taxid - This report will list a total exclusive of tax, tax amount and inclusive amount of tax) for the Invoices *minus* Credit notes for debtor (customer / client) accounts for selected

period(s) or date(s). It will also display the Company and Tax registration numbers for each for debtor (customer / client) accounts.

5. Tax list creditor with tax id - This report will list a total exclusive of tax, tax amount and inclusive amount of tax) for the Purchase documents *minus* Supplier returns for creditor (supplier / vendor) accounts for selected period(s) or date(s). It will also display the Company and Tax registration numbers for each for creditor (supplier / vendor) accounts.

Tax per period (Reports menu)

Consolidate balancing - Standard tab - F10:Setup

The Tax report (Reports → Tax) does not include the Sales journal. It only includes Sales documents (i.e. Invoices an Credit notes). Transactions on other Batch types may cause similar errors.

The reason for this, is the Consolidate balancing option on the Standard tab - F10:Setup on the Options for this batch screen. When setting up the batch, an information message will be displayed.

> "Consolidating lines and using tax will mess up your tax report! Please make sure you do not use tax or do not consolidate lines!"

Click on the OK button and click on the F10:Setup icon and deselect (remove the tick) from the Consolidate balancing field on the Standard tab of the "Options for this batch" screen.

Balance the batch again.

You may print the "*Tax per period*" to check your tax transactions of posted batch transactions and posted documents (i.e. invoices, credit notes, purchase and supplier return documents).

This report only includes batch and document transactions which are posted. Unposted batches and documents will be NOT be included in this report.

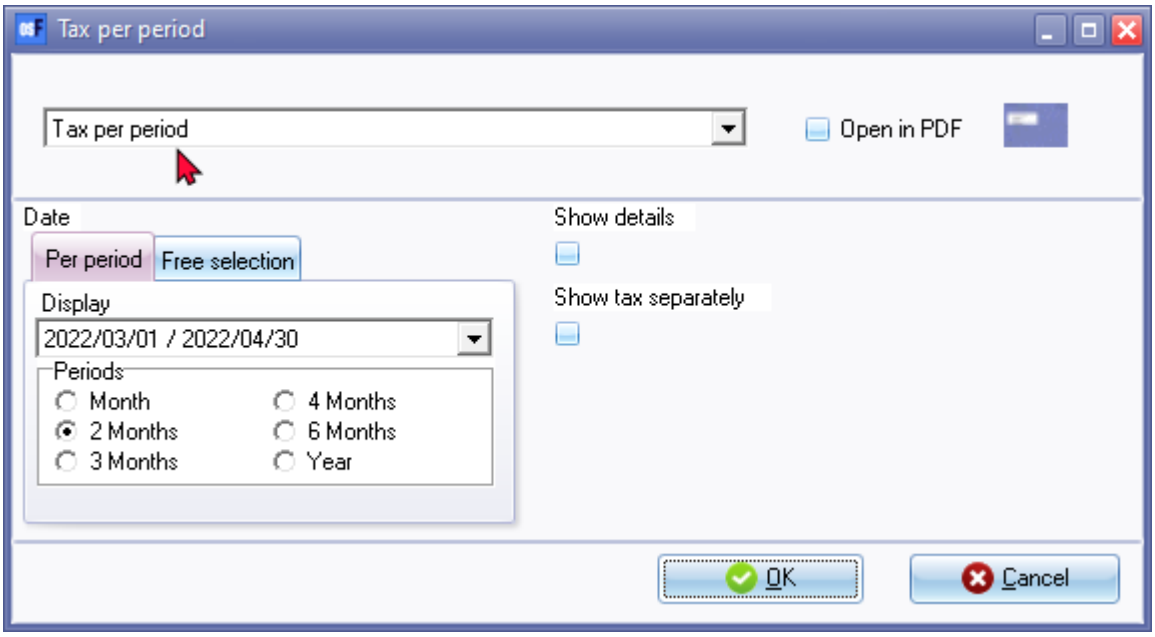
To view a list of unposted batches and documents, which is not updated to the ledger, go to Input → Checking unposted items (Default ribbon).

Tax per period report options

To print Tax per period reports:

1. On the Reports ribbon, select Reports → Tax.

2. Select "*Tax per period*" report, if not already selected.



3. Select the following:

   a) Period - Select the period on the Per period tab. You may click on the Free selection tab to select a specific date or a range of dates.

   > *For tax returns the period selected, should match the tax return date. In this example, the Tax (VAT) vendor needs to submit tax returns every second month (e.g., the period March and April).*

   b) Show details - By default, this option is not selected. It will only list the totals exclusive of Tax (VAT/GST/Sales Tax) for each tax code. If this option is selected, it will list all transactions and documents including the account code, account description, country and tax reference of the debtor or creditor account (if applicable).

   c) Show tax separately - Select this option to print each tax code on a new page.

   > *It is recommended that this option is only selected if the "Show details" option is selected.*

4. Click on the OK button.

Total	14	21,000.00

The document numbers for Invoices, Credit notes, Quotes, Purchases, Supplier returns and Orders, as prefixed in the Documents setup (Setup ribbon), makes it easy to identify the document type.

In addition to these standard document numbers, the following documents may be included:

- *Stock adjustments - Document numbers prefixed with "ST" is a 7-digit document number. These are automatically generated when doing stock adjustments (changes in the quantities on hand). These stock adjustments does not show any transactions and it prints a blank Posted batch type reports.*
- *BOM (Production) stock type - Assemble / Disassemble context menu options - Document numbers prefixed with"SA" will be a 7-digit number.*
- *Project Quote - Document numbers prefixed with"D" will be a 7-digit number.*

Stock - In / Out (Reports menu)

Stock In / Out - Displays a list of the stock items and the quantities in and out as well as the total prices. The details option will list and display the document dates and document numbers for each stock item.

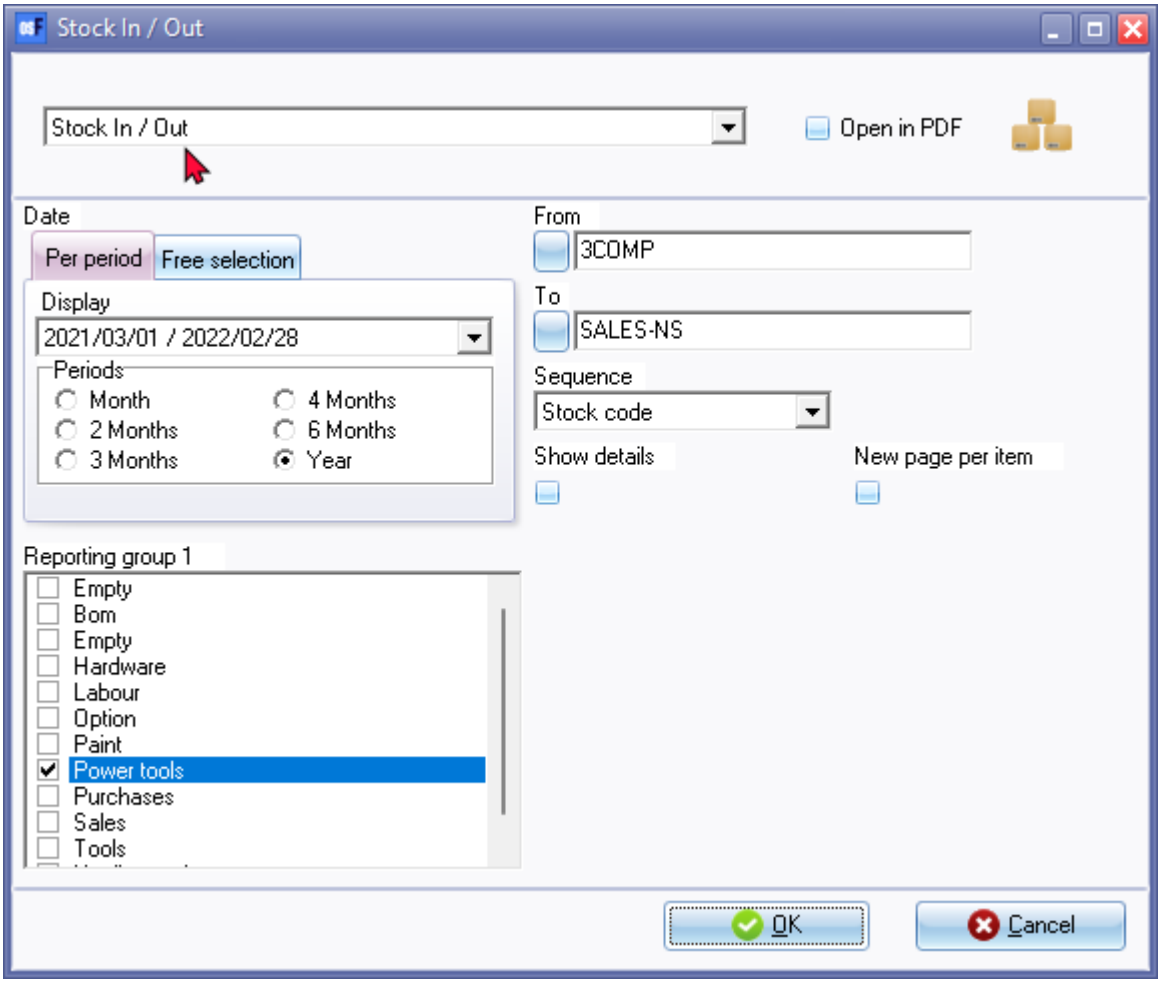
This report only includes document transactions which are posted. Unposted documents will be NOT be included in this report.

To view a list of unposted documents, which is not updated to the ledger, go to Input → Checking unposted items (Default ribbon).

Stock In / Out report options

To print Stock In / Out reports:

1. On the Reports ribbon, select Reports → Stock → Stock In / Out.
2. Select "*Stock In / Out*" report, if not already selected.



3. Select the following:

    a) Period - Select the period on the Per period tab. You may click on the Free selection tab to select a specific date or a range of dates.

    b) From... To... - Select the stock code(s) to include in the report.

    c) Reporting group 1 - This is optional and by default not selected (not ticked). You may select (tick) the reporting group(s) to include in the report.

    d) Show details - By default, this option is not selected. If this option is selected, it will display the details for each stock item.

    e) New Page per Item - If this option is selected (ticked), it will print the transactions for each stock item on a new page.

    > *The Company details will not be printed as in the Page header. The company name is displayed in the Page footer.*

4. Click on the OK button.

Sales per product (Reports menu)

You may print the following two (2) reports to analyse your invoices and credit notes.

1. Sales per product - Stock group 1
2. Sales per product - Stock group 2

This report only includes Invoices and Credit notes which are posted. Unposted Invoices and Credit notes will be NOT be included in this report.

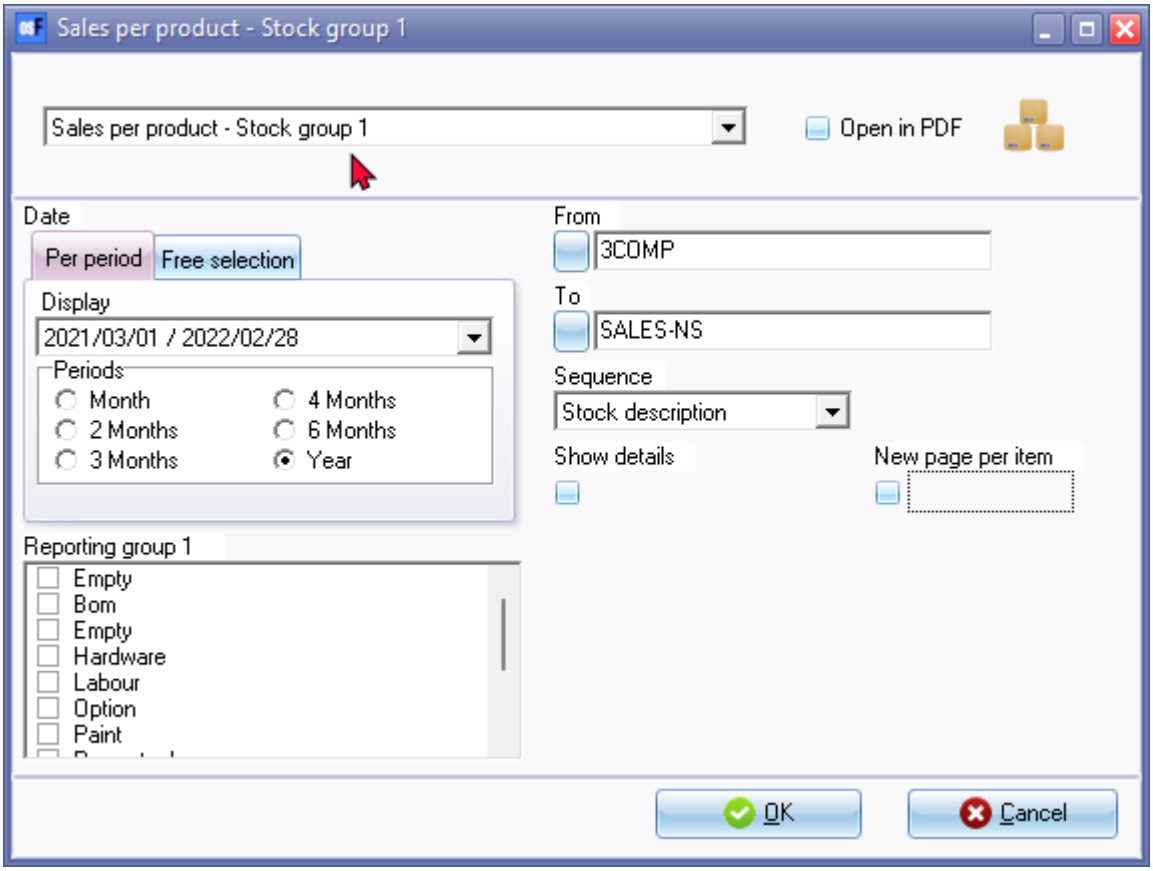
To view a list of unposted documents, which is not updated to the ledger, go to Input → Checking unposted items (Default ribbon).

This report only includes the "Default" stock item type. It does not include any other stock item types (e.g. ten (10) stock item types i.e. Sales, Sales (no stock), Purchases, Purchases (no stock), Financial entry, Option item, Option item (no stock), BOM (Bills of Materials), BOM (Production), Linked Sale).

Sales analysis - Sales per product report options

To print Product by Stock group reports:

1. On the Reports ribbon, select Reports → Sales analysis → Sales per product.



2. Select the following:

   a) Report - Select the Sales per product - Stock group 1 (default) or Sales per product - Stock group 2 report.

   b) Period - Select the period on the Per period tab. You may click on the Free selection tab to select a specific date or a range of dates.

   c) From... To... - Select the stock code(s) to include in the report.

   d) Reporting group 1 - This is optional and by default not selected (not ticked). You may select (tick) the reporting group(s) to include in the report.

   e) Sequence - Select "*Stock code* or *Stock description*" to sort the order in which you need to print the data.

   f) Show details - By default, this option is not selected. It will display the total quantities, selling

prices, cost prices, profit / loss and profit loss percentage of each stock item in posted invoices and credit notes. If this option is selected, it will display a list of document numbers, account code and description and the quantities, selling prices and cost prices for each document.

g) New page per account - If this option is selected (ticked), it will print the transactions for each account on a new page.

> *The Company details will not be printed as in the Page header. The company name is displayed in the Page footer.*

> *It is recommended that this option is only selected if the Show details option is selected.*

3. Click on the OK button.

To view a list of unposted documents, which is not updated to the ledger, go to Input → Checking unposted items (Default ribbon).

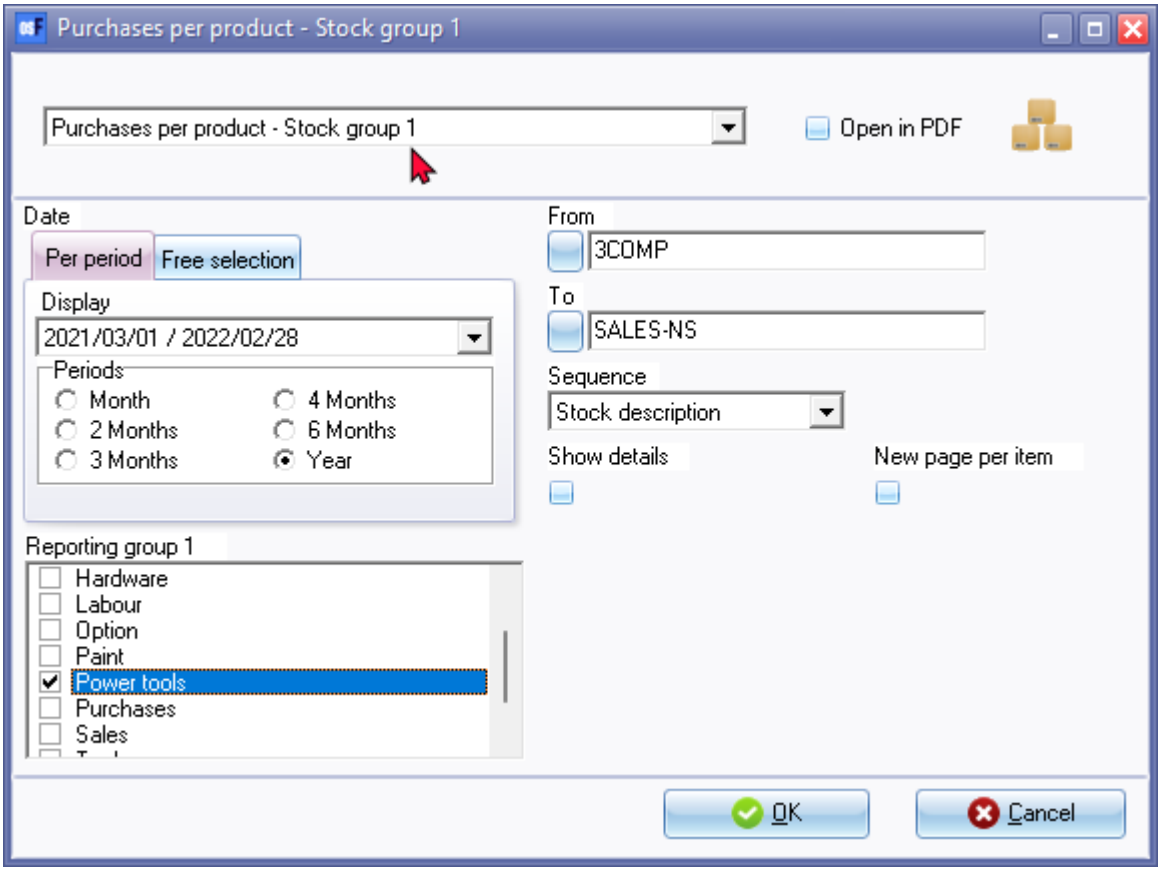
This report only includes the "Default" stock item type. It does not include any other stock item types (e.g. ten (10) stock item types i.e. Sales, Sales (no stock), Purchases, Purchases (no stock), Financial entry, Option item, Option item (no stock), BOM (Bills of Materials), BOM (Production), Linked Sale).

Purchase analysis - Purchases per product - Stock group 1 report options

To print Product by Stock group reports:

1. On the Reports ribbon, select Reports → Purchase analysis → Purchases per product .



2. Select the following:

   a) Report - Select the Purchases per product - Stock group 1 (default) or Purchases per product - Stock group 2 report.

   b) Period - Select the period on the Per period tab. You may click on the Free selection tab to select a specific date or a range of dates.

   c) From... To... - Select the stock code(s) to include in the report.

   d) Reporting group 1 - This is optional and by default not selected (not ticked). You may select (tick) the reporting group(s) to include in the report.

   e) Sequence - Select "*Stock code* or *Stock description*" to sort the order in which you need to print the data.

   f) Show details - By default, this option is not selected. It will display the total quantities and cost prices of each stock item in posted purchase and supplier return documents. If this option is selected, it will display a list of document numbers, account code and description and the quantities and cost prices for each document.

   g) New page per account - If this option is selected (ticked), it will print the transactions for each account on a new page.

The Company details will not be printed as in the Page header. The company name is displayed in the Page footer.

It is recommended that this option is only selected if the Show details option is selected.

3. Click on the OK button.

Created with the Standard Edition of HelpNDoc: Enhance Your Documentation with HelpNDoc's Advanced Project Analyzer

Calendar (Reports menu)

The "*Calendar - Hours*" report allows you to print the categories of events (i.e. Appointments (General), Debtor appointments (up to six categories), Creditor appointments and Hours) scheduled in the Calendar.

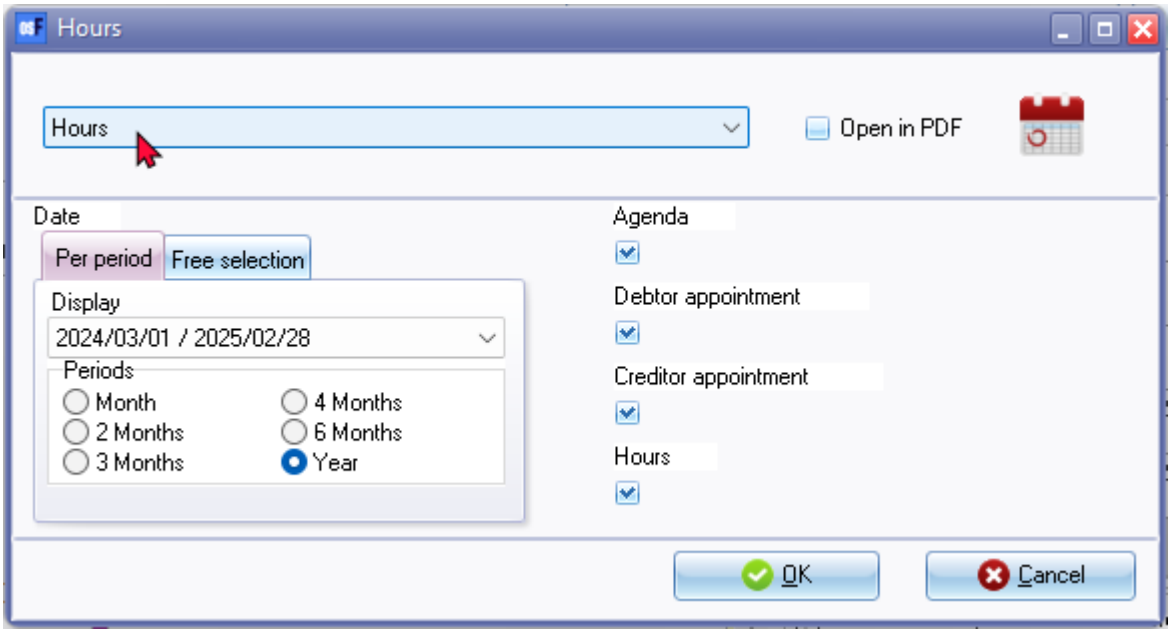
Multi-User calendar (agenda) - Manual - Shop - Licence : Once-off -

This plugin adds the multi-user agenda (multiple agendas) to the Calendar (Planner). You can add agendas and link them as default to the current user. For every agenda a tab will appear in the agenda Calendar so you can see what the appointments, etc. are on other agendas. You can have a agenda for each employee, salesperson, user, etc. and create invoices directly from his / her agenda with a simple click. Each agenda has it's own calendar and task list.

Calendar - Hours report options

To print Calendar - Hours reports:

1. On the Reports ribbon, select Reports → Calendar.



2. Select the period on the Per period tab. You may click on the Free selection tab to select a specific date or a range of dates.

3. By choosing the desired categories, you can generate a printed report that encompasses the selected events from the calendar. This provides a comprehensive overview of the scheduled activities, appointments, and invoicing details associated with debtors, creditors, and general events. Select the following options:

    a) Agenda - Selecting this option will include general events such as meetings, appointments, and other scheduled activities.

    b) Debtor appointment - By selecting this option, you can include the appointments (all six debtor appointment categories) specifically related to debtor (customer/client) accounts. These appointments are also listed in the Appointment tab of the respective debtor accounts.

    c) Creditor appointment - By selecting this option, allows you to include the appointments associated with creditor (supplier/vendor) accounts. Similarly, these appointments can be found in the Appointment tab of the corresponding creditor accounts.

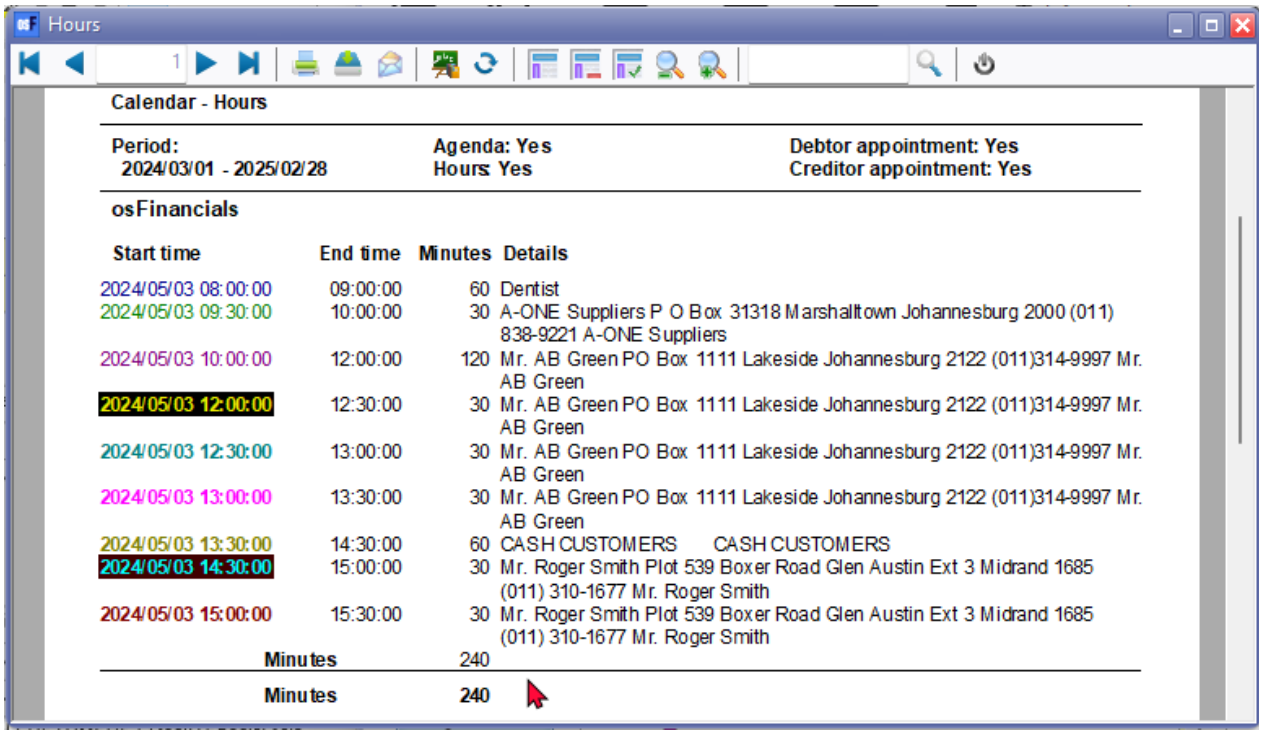
    d) Hours - This option will list appointments for the "*Hours*" event category. The are scheduled appointments for which quotes are generated and confirmed to invoices. When selecting this

option, appointments scheduled for the "*Hours*" event category will be included in the report. These appointments typically represent scheduled hours for which quotes have been generated.

4. Click on the OK button.

Printed : Calendar - Hours report

An example of the "*Calendar - Hours*" (all events) report, is as follows:



The colours for the events in the following categories:

- Agenda / Appointment (General): This category lists scheduled general appointments, such as meetings with a bank manager or lunches with clients or colleagues.
- Repeating invoices: The repeating or recurring invoices will not be included in this report.
- Hours: This category lists scheduled services rendered on an hourly basis. Once the hours are scheduled, you have the option to generate Quotes based on the scheduled hours. These Quotes can be edited if necessary to ensure accuracy. After finalizing the Quotes, you can convert them into Invoices.
- Debtors appointment: This category lists up to six different categories of appointments with debtors

(customers/clients).

- Creditors appointment: This category lists scheduled appointments with creditors (suppliers/vendors).

Bulk time entries - Bulk time entries added for selected debtors (customers / clients) will be printed on this report as hours.

When you use the Bulk time entry feature to add time entries for a selected debtor account, those entries are initially recorded but not directly listed on the "Debtor accounts - Appointment" tab. However, once you proceed to generate quotes for the hours using the "Create invoices for hours" button on the Calendar, the bulk time entries will be transformed into quotes.

Therefore, to see the bulk time entries reflected on the "Debtor accounts - Appointment" tab, it is necessary to generate quotes for those hours using the "Create invoices for hours" button in osFinancials5/TurboCASH5.

At this point, the quotes created from the bulk time entries will be listed on the "Debtor accounts - Appointment" tab.

See video on Bulk time entries

Repeating invoices events are not included in this report.

Company info (reports menu)

The following two (2) reports are available to print information for the Set of Books:

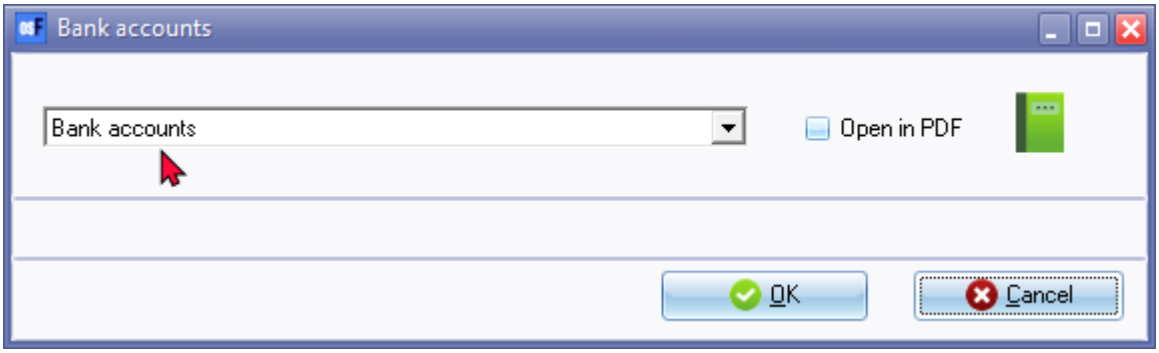
- Company info – Bank accounts - Lists the details of the company bank accounts details as entered in Setup → Company info.

- Company info - Information - Lists the document headings and messages for each document type as well as statement message as specified or entered in Setup → Documents setup. It also lists the Selling price descriptions and Cost of sales settings as entered and set on the Setup → Stock information.

Company info report options

To print Company info reports:

1. On the Reports ribbon, select Reports → Company info.

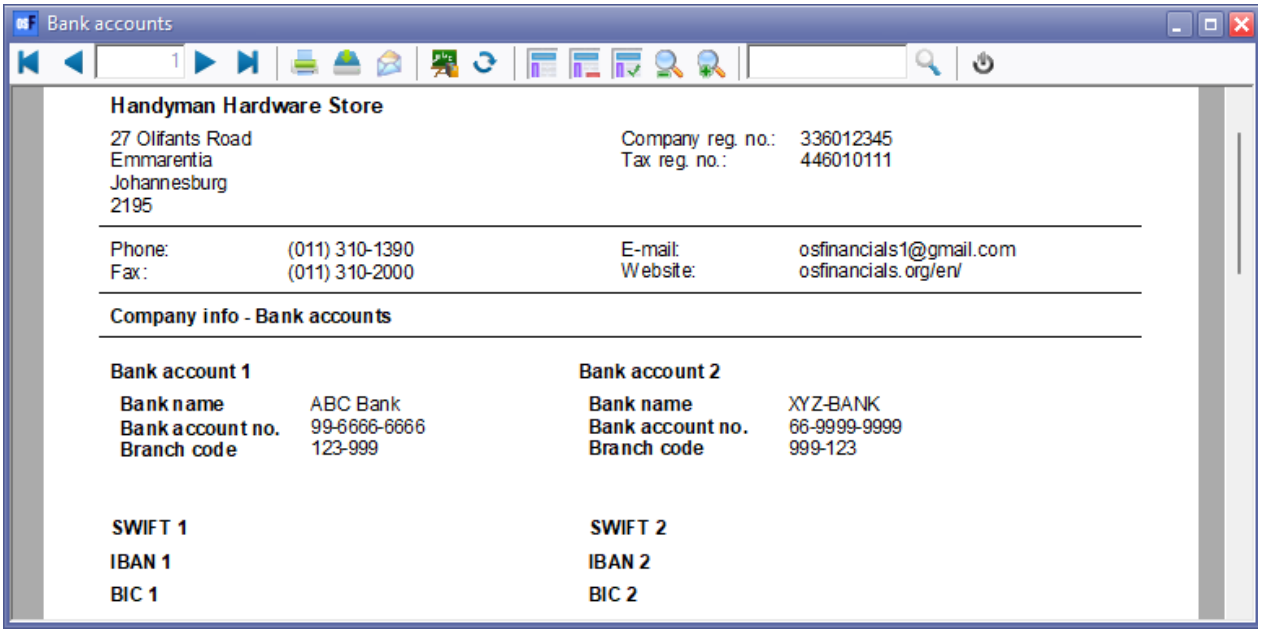


2. "*Bank accounts*" is the default report. You may select the "*Information*" report.

3. Click OK.

Printed : Company info - Bank accounts report

An example of the "*Bank accounts*" report, is as follows:



The details (Bank name, Bank account number and the Branch code) for Bank account 1 and/or Bank account 2 as entered in Setup → Company info (Setup ribbon).

You may also enter the following, if required:

SWIFT - (Society for Worldwide Interbank Financial Telecommunication) See
http://en.wikipedia.org/wiki/SWIFT / http://www.theswiftcodes.com/

IBAN - (International Bank Account Number) See
http://en.wikipedia.org/wiki/International_Bank_Account_Number

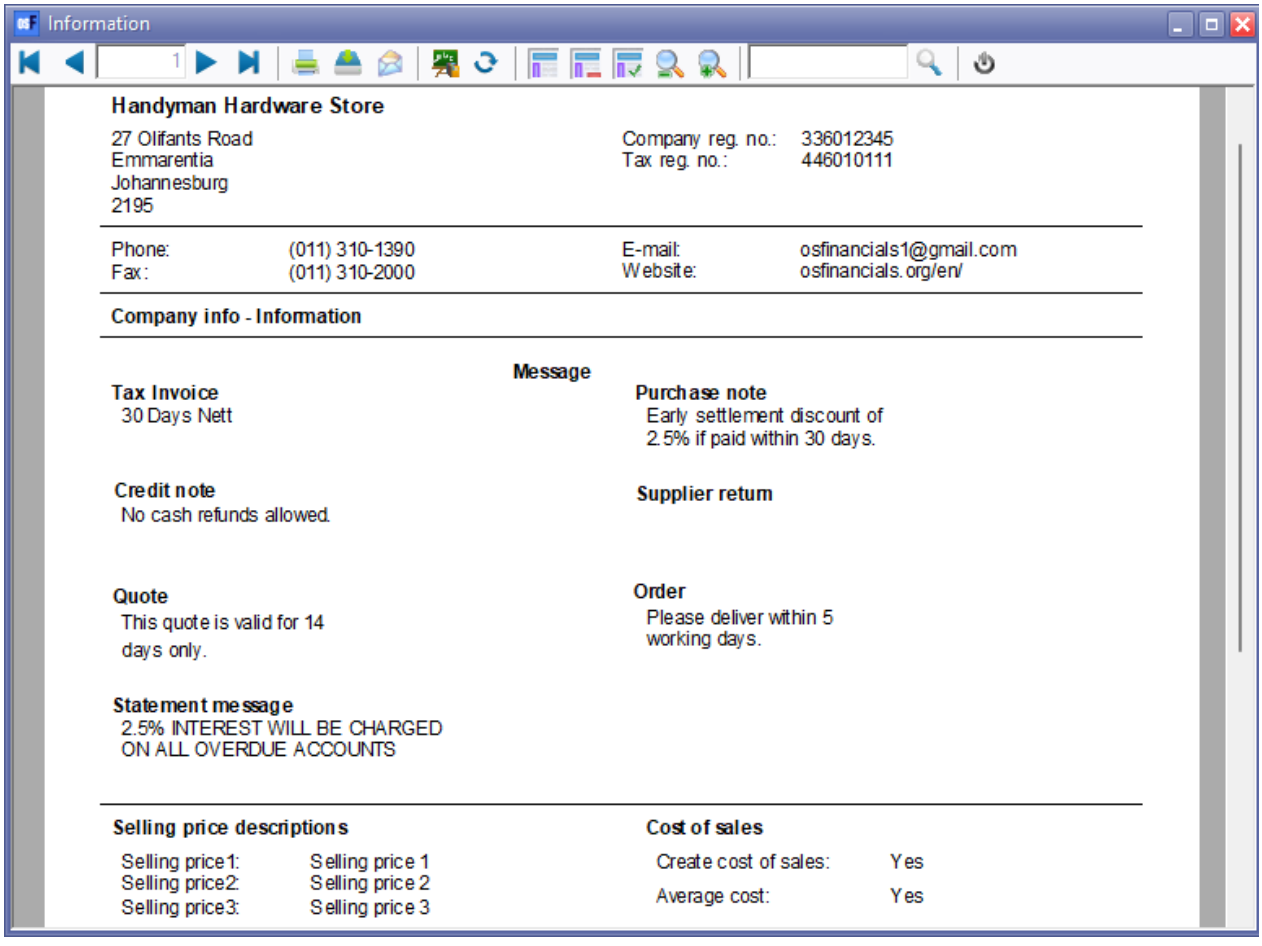
BIC - (Bank Identifier Code)

The information of your bank account 1 will print on Invoices (Invoice Bank details if selected when printing invoices) and on Debtor statements.

The banking details may be added to your specific layout files or custom reports.

Printed : Company info - Information

An example of the "*Information*" report, is as follows:



Lists the details of the following:

- Information - Document heading and messages (up to 3 lines) as entered in the Documents setup

(Setup ribbon) for each of the Sales documents (i.e. Invoices, Credit notes and Quotes tabs) as well as Purchase documents (i.e. Purchases, Supplier returns and Orders tabs). This information is standard and will be printed on all documents.

- Global statement message (up to 3 lines) as entered on the Statement setup tab on Documents setup (Setup ribbon). This information will print standard on all Statements (Reports → Debtors – Outstanding (Reports ribbon)). This is in addition to the specific messages (up to 4 lines) that can be entered in the Delivery address tab individual debtor accounts (Debtors - Default ribbon).
- Selling price descriptions – The descriptions of Selling price 1, Selling price 2 and Selling price 3 as entered in the Selling price descriptions fields (Stock information - Setup ribbon).
- Cost of Sales –
    - Create Cost of Sales - Yes - Cost of Sales is activated.

      - No - Cost of Sales is not activated.
    - Average cost - Yes - Average Cost of Sales is activated.

      - No - Latest Cost of Sales is activated.

Created with the Standard Edition of HelpNDoc: Maximize Your PDF Protection with These Simple Steps

Currencies (Reports menu)

The "*Currencies - Listing*" report will list the currencies (added / edited in the Setup → Currencies menu on the Setup ribbon).

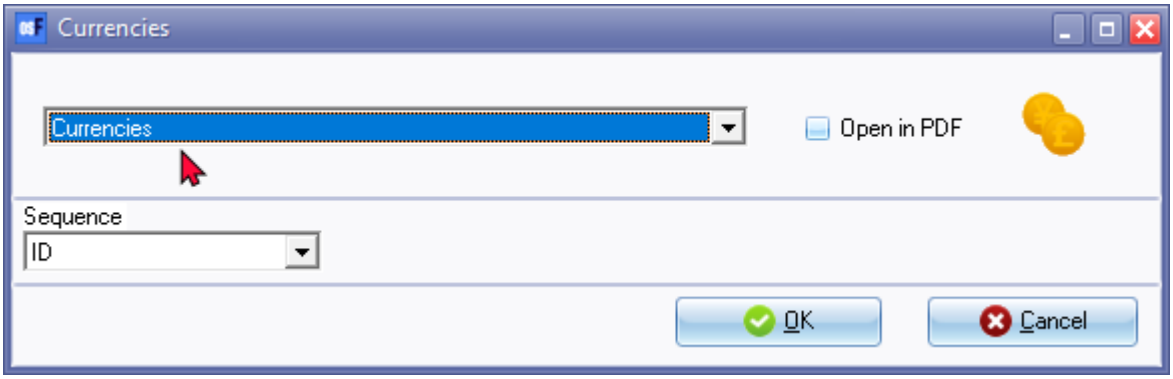
You may process Multi-currency documents (i.e. invoices, credit notes and quotes for debtors (customers / clients) or purchases, supplier returns and orders for creditors (suppliers). The selected currency will be printed in the document layout files.

osFinancials5/TurboCASH5 supports a wide range of currencies, with a total of 180 available currency rates. As these currency rates can fluctuate daily, and sometimes even hourly, users must ensure they regularly update and maintain their currency list before processing any documents. This ensures that accurate exchange rates are used when dealing with foreign currencies on sales documents (invoices, credit notes, and quotes) or purchase documents (purchases, supplier returns, and orders).

Currencies - Listing report options

To print Currencies listing reports:

1. On the Reports ribbon, select Reports → Currencies.

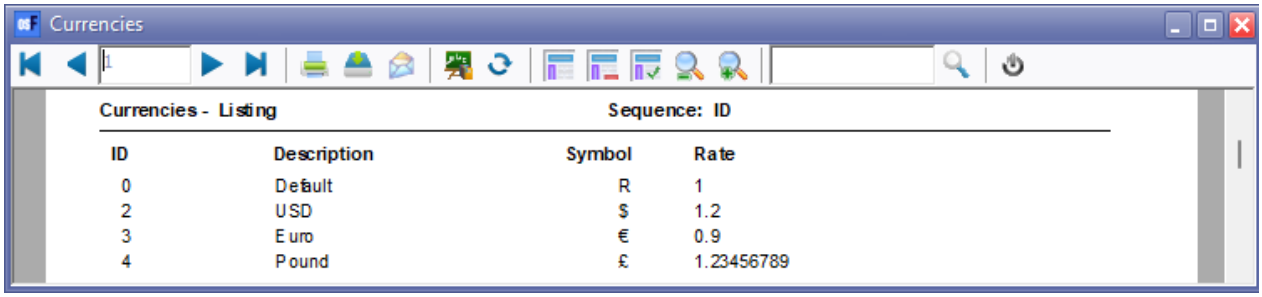


2. Select the Sequence (i.e. ID (record number), Description or Rate).

3. Click on the OK button.

Printed : Currencies - Listing report

An example of the "*Currencies - Listing*" report, is as follows:



Created with the Standard Edition of HelpNDoc: Revolutionize Your CHM Help File Output with HelpNDoc

Plugins (Reports menu)

Reports for the following two (2) plugins are available:

Price agreement plugin - Manual - Shop

With this plugin you can have quantity and discount for up to four (4) levels. These prices will overrule the

default selling price 1 till 3 and can be set per debtor (customer / client) and/or creditor (supplier / vendor).

You can also set a special price for specific debtor (customer / client) and/or creditor (supplier / vendor) per product, which overrule the default product price.

These also a special field available in which you can add the suppliers product number. Also possible for multiple suppliers.

This field can also be used for information text why this debtor (customer / client) and/or creditor (supplier / vendor) has a special price.

This option allows you to print the Price agreements for debtor (customer / client) and creditor (supplier / vendor) accounts.

Serials / location / batch - Manual - Shop

With this plugin, you can track your stock items in locations, bins and serial numbers or codes where the stock items are kept. Some stock items may also have expiry dates, etc.

Spreadsheet reports

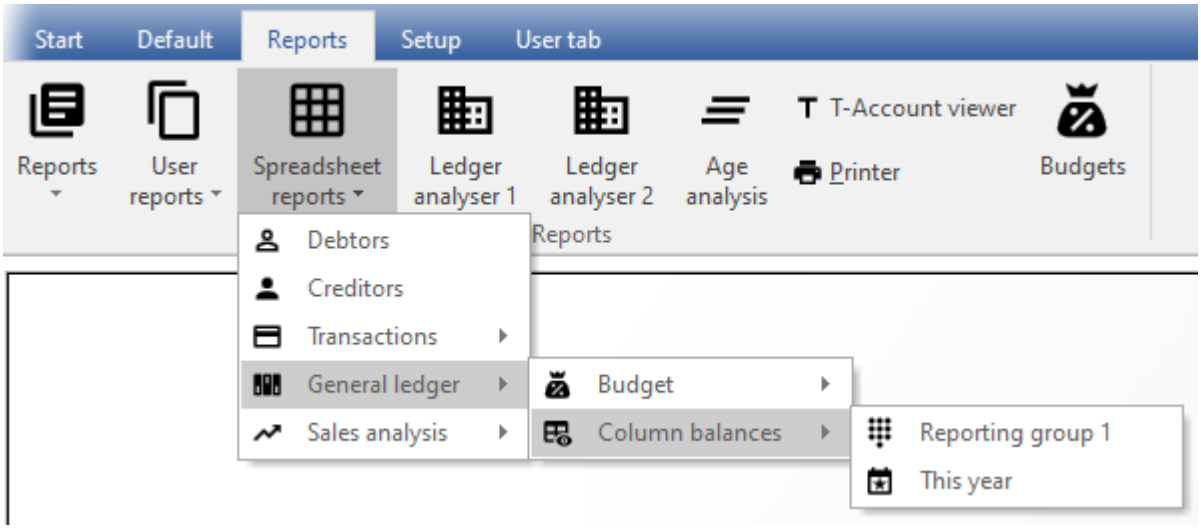
Spreadsheet reports osFinancialsTurboCASH and the power of Spreadsheets

- Spreadsheet sales (Default ribbon).

- Spreadsheet reports (Reports ribbon).

See Video on Spreadsheet reports.

Spreadsheet reports - Reports in a Excel spreadsheet. These spreadsheet reports are stored in the ... \plug_ins\reports\excelreports folder.



The following reports will be opened in the powerful spreadsheet feature in osFinancials5/TurboCASH5:

1. Creditors - The Creditors → Listing - List postal addresses report will be imported into the spreadsheet.
2. Debtors - The Debtors → Listing - List postal addresses report will be imported into the spreadsheet.
3. Transactions per period - List the transactions in posted batches and documents (i.e. sales documents (Invoices and Credit notes) and Purchase documents (Purchases and Supplier returns)) for a selected period in a spreadsheet.
4. General ledger - Budget
    a) Column balances this year - Reporting group 1
    b) Column balances this year - This year
5. General ledger (Transaction totals)
    a) Column balances this year - Reporting group 1
    b) Column balances this year - This year Column balances will import the transaction totals in two (2) tabs:
        i) Column balances - The totals for each period in separate columns
        ii) Settings - The totals for each period in rows per period.
6. Sales analysis
    a) Stock movement
    b) Sales per period

F9 to recalculate the spreadsheet

Created with the Standard Edition of HelpNDoc: HelpNDoc's Project Analyzer: Incredible documentation assistant

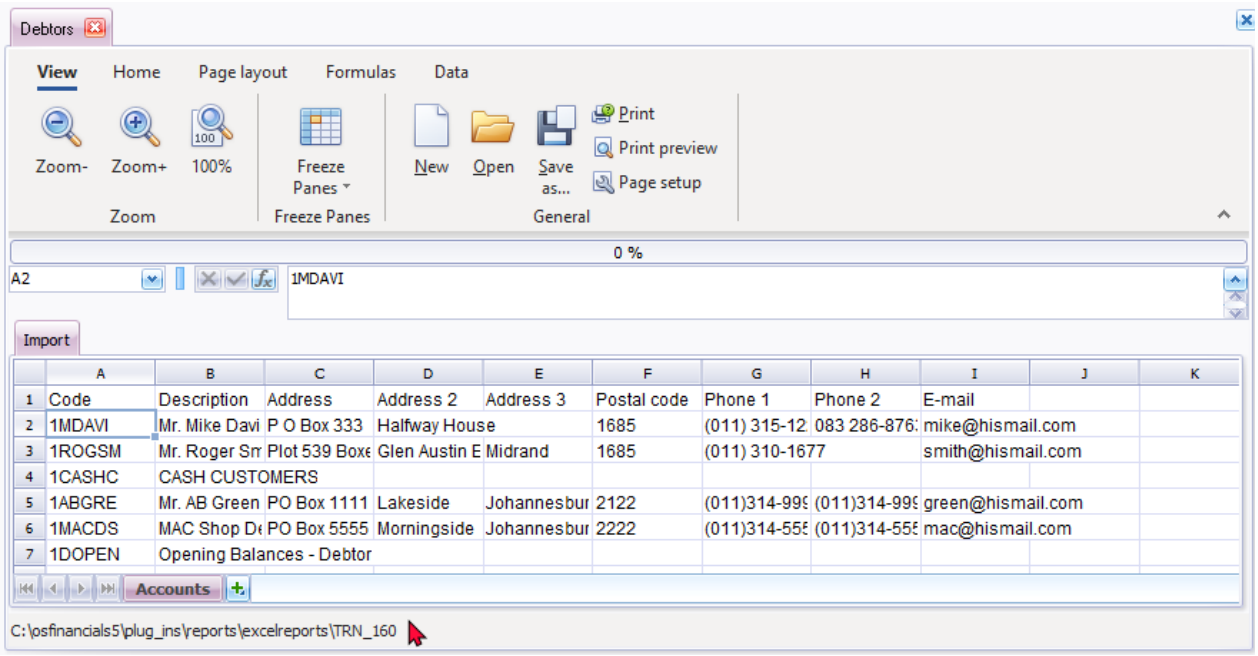
Spreadsheet - Debtors

The Spreadsheet report - Debtors will list all the debtor (customer / client) accounts in a spreadsheet.

The data in this spreadsheet is the same as the Debtor listing - "*List postal addresses*" report (Reports → Debtors → Listing (Reports ribbon)).

To import the debtor (customer / client) accounts:

On the Reports ribbon, select Spreadsheet reports → Debtors.



Disabled (inactive) debtor (customer / client) accounts will be included in this spreadsheet report.

Created with the Standard Edition of HelpNDoc: Streamline your documentation process with HelpNDoc's WinHelp HLP to CHM conversion feature

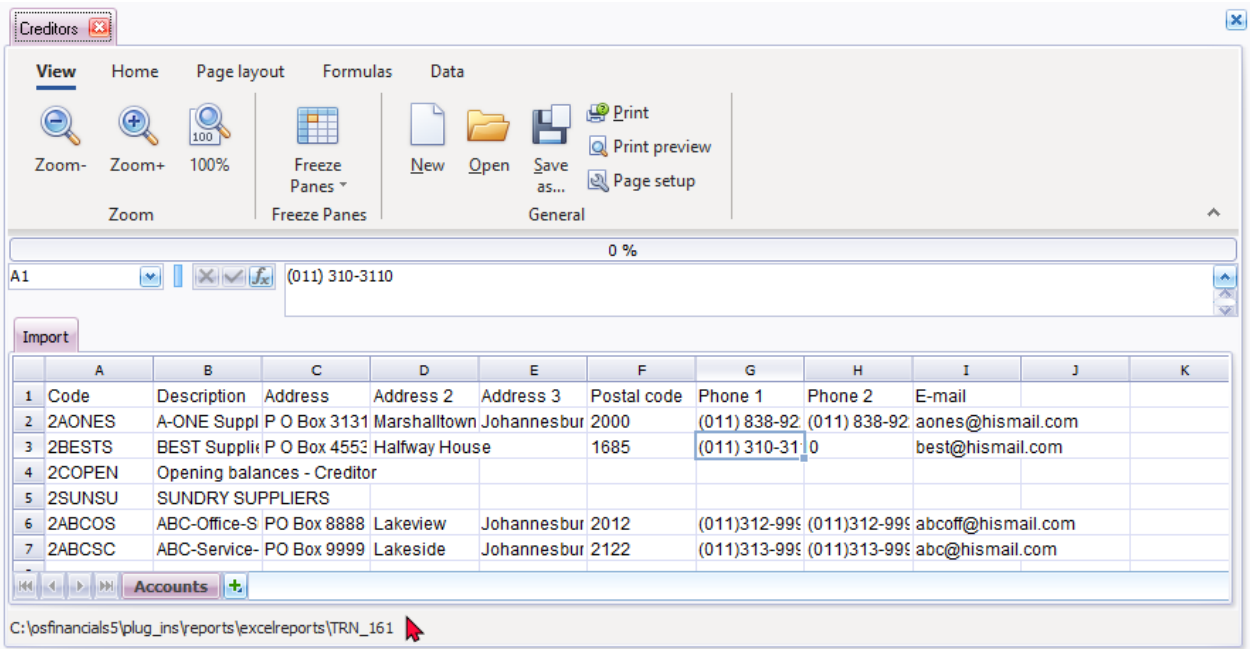
Spreadsheet - Creditors

The Spreadsheet report - Creditors will list all the creditor (supplier / vendor) accounts in a spreadsheet.

The data in this spreadsheet is the same as the Creditor listing - "*List postal addresses*" report (Reports → Creditors → Listing (Reports ribbon)).

To import the creditor (supplier / vendor) accounts:

On the Reports ribbon, select Spreadsheet reports → Creditors.



Disabled (inactive) creditor (supplier / vendor) accounts will be included in this spreadsheet report.

Created with the Standard Edition of HelpNDoc: Effortlessly Spot and Fix Problems in Your Documentation with HelpNDoc's Project Analyzer

Spreadsheet - Transactions per period

You may import the transactions in batches and documents (i.e. sales documents (Invoices and Credit notes) and Purchase documents (Purchases and Supplier returns)), which have been posted (updated) to the ledger, for a selected period.

This report only includes batch and document transactions which are posted. Unposted batches and documents will be NOT be included in this report.

To view a list of unposted batches and documents, which is not updated to the ledger, go to Input → Checking unposted items (Default ribbon).

To import posted transactions into a spreadsheet:

1. On the Reports ribbon, select Spreadsheet reports → Transactions → Per period.

2. On the parameters ("*params*")" screen, Select the period or date(s) and click OK. The transactions for the selected period or dates will will be listed in the spreadsheet:

This spreadsheet will list the transaction details in the following columns:

1. A - Transaction id - The ID of the transaction which was automatically created when the batch or the document was posted (updated) to the ledger.

2. B - Batch id - The ID of the batch which was automatically created when the batch or the document was posted (updated) to the ledger.

3. C - Line - The line number for each transaction in a batch or transaction generated in documents.

4. D - Reference - In the case of batch transactions, the reference as entered for each transaction in the "*Reference*" column in "*Batch entry*" screens will be displayed. Balancing transactions in batches will be displayed with eight (8) asterisks (e.g. "********").

   In the case of documents, the document number for Invoices, Credit notes, Purchases and Supplier returns will be listed.

5. E - Date - The date of the transaction. The date as entered in the "*Date*" column of "*Batch entry*" screens. In the case of documents, it will display the date on which a document was generated.

6. F - Batch type - In the case of batch transactions, the name of the Batch type will be displayed.

No aliases will be displayed as entered on each "*Batch entry*" screen.

In the case of documents, it will display the name of the Batch type as linked to each document type in the Setup → Documents setup screen for each document type.

7. G - Transaction details - The description of the transaction as entered in the "Description" column of batches. In the case of documents, it is the document type description (i.e. Invoice, Credit note, Purchase or Supplier returns) and the reference number (as entered in the "*Your reference*" field of documents.
8. H - ID - The ID of the account applicable to each transaction.
9. I - Account - The Account code or number applicable to each transaction.

Prefixed character in the account code indicates the account type:

G = General ledger

B = Bank account

C= Creditor

D = Debtor

T = Tax

10. J - Account information - The name (description) of the account applicable to the transaction.
11. K - Amount - The amount of the transaction. If Tax (VAT/GST/Sales tax) is applicable to a transaction, three (3) transactions should be listed:
    - Tax inclusive – The full amount of the transaction, including Tax.
    - Tax exclusive – The amount of the transaction, excluding Tax.
    - Tax amount – Only the tax amount applicable to the transaction.
12. L - The cumulative amounts for each transaction. After taking the contra accounts into consideration, the cumulative total for each transaction, should reflect zero.

Created with the Standard Edition of HelpNDoc: Free help authoring tool

Spreadsheet - General ledger - Budget - Column Balances

Created with the Standard Edition of HelpNDoc: Bring your WinHelp HLP help files into the present with HelpNDoc's easy CHM conversion

Spreadsheet - General ledger - Budget - Column balances - Reporting group 1

You may import the budget totals (for accounts linked to the Reporting group 1), which have been added or edited on the Budget tab for selected accounts in Setup → Accounts (Setup ribbon) or on the Budgets icon (Reports ribbon), into a spreadsheet.

To import budget totals for reporting group 1 into a spreadsheet:

1. On the Reports ribbon, select Spreadsheet reports → General ledger → Budget → Column balances → Reporting group 1. The budget totals linked to the Reporting group 1 will be listed in the spreadsheet:

	ID	Description	Name	PERIOD0	PERIOD1	PERIOD2	PERIOD3	PERIOD4	PERIOD5	PERIOD6	PERIOD7	PERIOD8	PERIOD9	PERIOD10	PERIOD11	PERIOD12	Total
2	7	Capital	Capital	-	-	-	-	-	-	-	-	-	-	-	-	-	-
3	2	Current assets	Current assets	-	-	-	-	-	-	-	-	-	-	-	-	-	-
4	3	Current liabilities	Current liabilities	-	-	-	-	-	-	-	-	-	-	-	-	-	-
5	5	Expenses	Expenses	-	1,600.00	1,600.00	1,600.00	1,600.00	1,600.00	1,600.00	1,600.00	1,600.00	1,600.00	1,600.00	1,600.00	1,600.00	19,200.00
6	6	Fixed assets	Fixed assets	-	-	-	-	-	-	-	-	-	-	-	-	-	-
7	4	Income	Income	-	- 6,000.00	- 6,000.00	- 11,000.0	- 6,000.00	- 6,000.0	- 6,000.0	- 6,000.0	- 6,000.00	- 6,000.00	- 6,000.00	- 6,000.00	- 6,000.00	- 77,000.00
8	11	Longterm liabilities	Longterm liabilities	-	-	-	-	-	-	-	-	-	-	-	-	-	-

This spreadsheet will summarise the total of the budget figures for each Account group 1 (Reporting group 1) in the following columns:

- Period 0 (Opening Last Year) - The totals of the opening budget totals for the previous year.
- Periods 1 to 12 - The totals of budget figures entered in the respective periods for this year.
- Total - Total for each period (Period 1 -12) plus Period 0.

In this example, budget totals for Income and Expense account groups, is included in this Spreadsheet report. The Budget figures were only processed for Income and Expense accounts linked to Income and Expense Reporting group 1, in this documentation.

Spreadsheet - General ledger - Budget - Column balances - This year

---

You may import the budget totals, which have been added or edited on the Budget tab for selected accounts in Setup → Accounts (Setup ribbon) or on the Budgets icon (Reports ribbon), into a spreadsheet.

Reports for Budgets may also be printed on the Reports → Ledger → Budget menu; or on the Budget listing reports on Ledger analyser 1 or Ledger analyser 2 selecting the "*Budget*" option.

To import a budget for This year into a spreadsheet:

1. On the Reports ribbon, select Spreadsheet reports → General ledger → Budget → Column balances → This year. The budget totals for each of this year periods will be listed in the "*Settings*" sheet of the spreadsheet:

	A	B	C	D
1	Period	From reporting date	To date	Net Profit/Loss
2	1	01-03-2022	31-03-2022	-4400
3	2	01-04-2022	30-04-2022	-4400
4	3	01-05-2022	31-05-2022	-9400
5	4	01-06-2022	30-06-2022	-4400
6	5	01-07-2022	31-07-2022	-4400
7	6	01-08-2022	31-08-2022	-4400
8	7	01-09-2022	30-09-2022	-4400
9	8	01-10-2022	31-10-2022	-4400
10	9	01-11-2022	30-11-2022	-4400
11	10	01-12-2022	31-12-2022	-4400
12	11	01-01-2023	31-01-2023	-4400
13	12	01-02-2023	28-02-2023	-4400

2. To view the budget figures for each account, click on the "*Column balances*" sheet of the spreadsheet:

	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q
1	ID	Code	Description	PERIOD0	PERIOD1	PERIOD2	PERIOD3	PERIOD4	PERIOD5	PERIOD6	PERIOD7	PERIOD8	PERIOD9	PERIOD10	PERIOD11	PERIOD12	Total

7	6	210010	Fuel and oil	-	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00	1,200.00
8	7	210020	Maintenance	-	150.00	150.00	150.00	150.00	150.00	150.00	150.00	150.00	150.00	150.00	150.00	150.00	1,800.00
9	57	210030	Repairs	-	200.00	200.00	200.00	200.00	200.00	200.00	200.00	200.00	200.00	200.00	200.00	200.00	2,400.00
10	38	215000	Maintenance of tools	-	-	-	-	-	-	-	-	-	-	-	-	-	-
11	9	220000	Rent	-	550.00	550.00	550.00	550.00	550.00	550.00	550.00	550.00	550.00	550.00	550.00	550.00	6,600.00
12	10	225000	Salaries and wages	-	500.00	500.00	500.00	500.00	500.00	500.00	500.00	500.00	500.00	500.00	500.00	500.00	6,000.00
13	11	230000	Stationery	-	10.00	10.00	10.00	10.00	10.00	10.00	10.00	10.00	10.00	10.00	10.00	10.00	120.00

This spreadsheet lists the totals for the main account as well as sub-accounts. In this example, note the following:

210000 - Motor vehicle - main account = 450.00 - The total of the following sub-accounts:

210010 - Fuel and oil - sub account = 100.00

210020 - Maintenance - sub account = 150.00

210030 - Repairs - sub account = 200.00

The "*Column balances*" sheet of the spreadsheet will summarise the total of the budget figures for each general ledger account in the following columns:

- Period 0 (Opening Last Year) - The totals of the opening budget totals for the previous year.
- Periods 1 to 12 - The totals of budget figures entered in the respective periods for this year.
- Total - Total for each period (Period 1 -12) plus Period 0.

Spreadsheet - Sales analysis

Created with the Standard Edition of HelpNDoc: Revolutionize Your Documentation Output with HelpNDoc's Stunning User Interface

Spreadsheet - Sales analysis - Stock movement

The Spreadsheet report - Stock movement will list the total stock quantities for each stock item in and out for the selected period.

The data in this spreadsheet is similar to the "*Stock In / Out*" report (Reports → Stock items → Stock In / Out - (Reports ribbon)).

The following will be included in the spreadsheet:

- *Only documents (i.e. invoices, credit notes, purchase and supplier return documents) which is posted*

(updated to the ledger) will be included.

- *Only the default stock type (trading stock items (Stock item type = 0)) will be included.*

The following will be excluded from the spreadsheet:

- *All the other ten (10) stock types (e.g. Sales, Sales (no stock), Purchases, Purchases (no stock), Financial entry, Option item, Option item (no stock), BOM, BOM (Production) and Linked item) will be excluded in the spreadsheet import.*

This report only includes document transactions which are posted. Unposted documents will be NOT be included in this report.

To view a list of unposted documents, which is not updated to the ledger, go to Input → Checking unposted items (Default ribbon).

To import Stock movements (Stock In / Out) into a spreadsheet:

1. On the Reports ribbon, select Spreadsheet reports → Sales analysis → Stock movement .
2. On the parameters ("*Params*") screen, select the period and click OK. The total quantities for each stock item will be listed in the spreadsheet:

	A	B	C	D	E
1	ID	Code	Description	Total	Document type
2	4	3COMP	Compressor	3	11
3	4	3COMP	Compressor	4	12
4	4	3COMP	Compressor	9	16
5	4	3COMP	Compressor	-13	10
6	4	3COMP	Compressor	-2	13
7	3	3DRILL	Drill press	5	11
8	3	3DRILL	Drill press	9	12
9	3	3DRILL	Drill press	10	16
10	3	3DRILL	Drill press	-15	10
11	3	3DRILL	Drill press	-9	13
12					

The Document type in column, E is as follows:

10 - Invoice

11 - Credit note

12 - Purchase

13 - Supplier return

14 - Quote

15 - Order

16 - Adjustment

Quotes and Orders will be excluded in the spreadsheet import.

Created with the Standard Edition of HelpNDoc: Generate EPub eBooks with ease

Spreadsheet - Sales analysis - Sales per period

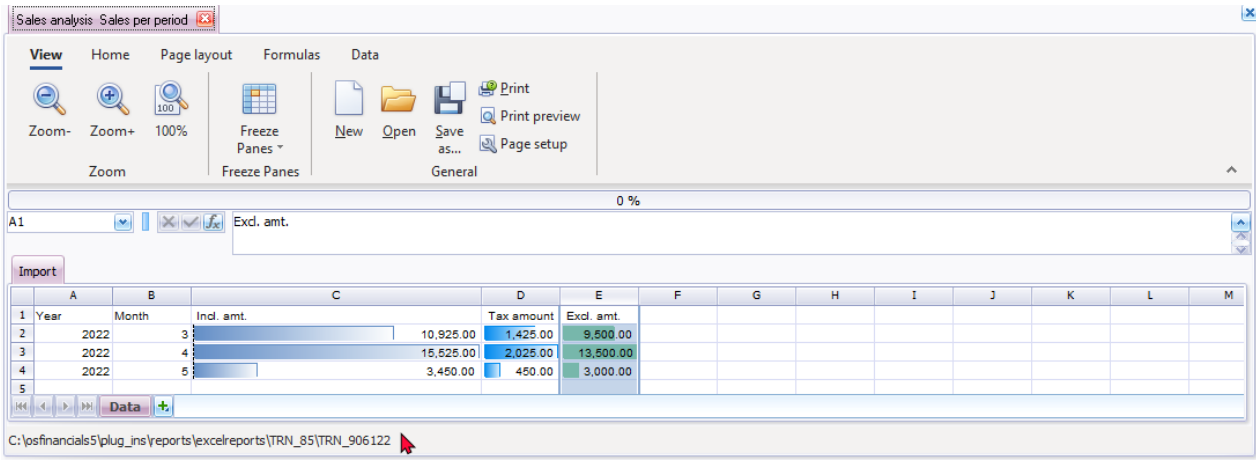
The Spreadsheet report - Stock - Sales per period will list the total sales amount excluding as well as including tax (VAT/GST/ Sales tax) for each of the selected periods.

This report only includes document transactions which are posted. Unposted documents will be NOT be included in this report.

To view a list of unposted documents, which is not updated to the ledger, go to Input → Checking unposted items (Default ribbon).

To import Sales per period into a spreadsheet:

1. On the Reports ribbon, select Spreadsheet reports → Sales analysis → Sales per period.
2. On the parameters ("*Params*") screen, select the period and click OK. The total sales amount, excluding as well as including tax (VAT/GST/ Sales tax), for each period will be listed in the spreadsheet:



Month (Column B)

This is the number of the month in the Calendar year, e.g.:

3 = March

4 = April

5 = May, etc.

Spreadsheet sales

Spreadsheet reports osFinancials5/TurboCASH5 and the power of Spreadsheets

- Spreadsheet sales (Default ribbon)

- Spreadsheet reports (Reports ribbon)

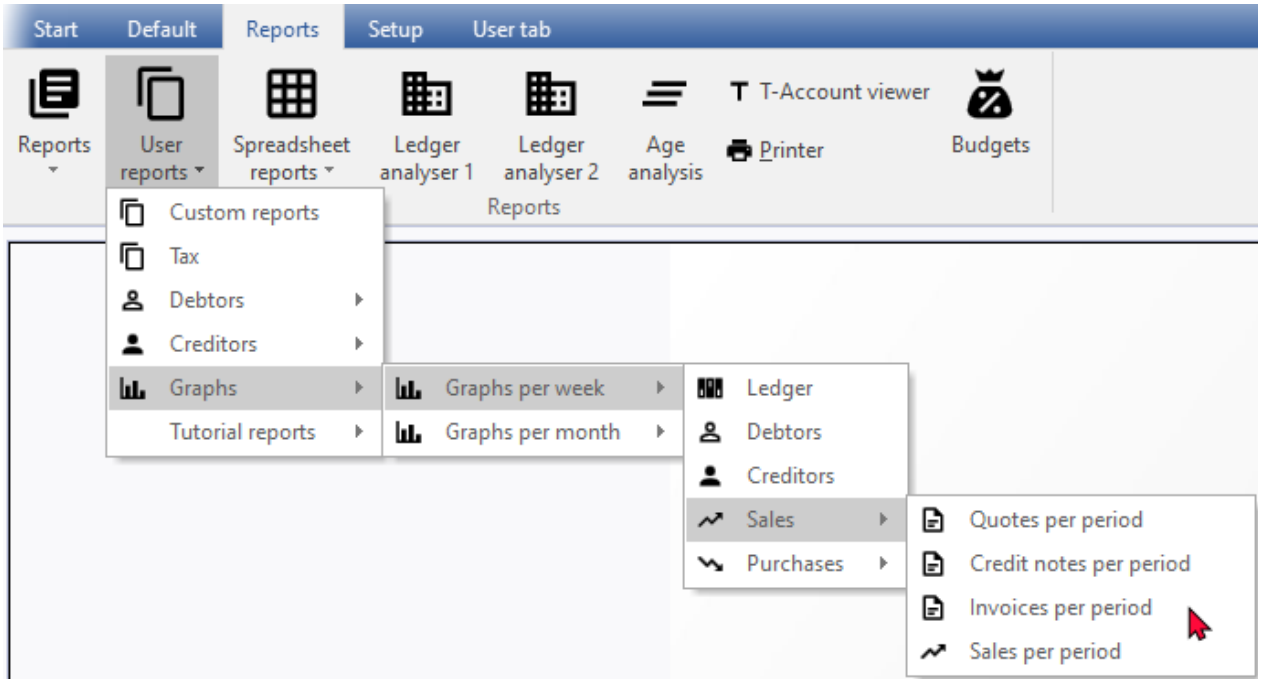
See Video on Spreadsheet reports.

Created with the Standard Edition of HelpNDoc: Create HTML Help, DOC, PDF and print manuals from 1 single source

User reports (Reports ribbon)

The reports on the User reports menu is included in osFinancials5/TurboCASH5.

Users may add their own reports in the *...\plug_ins\reports\userreports* folder.



The following user reports is included in osFinancials5/TurboCASH5:

1. Custom reports – This is custom sales and purchase reports.

    a) 2cred-sku-det - Lists the Purchase and Supplier return documents for a selected creditor (supplier / vendor).

    b) 2deb-sku-det - Lists the Invoice and Credit note documents for a selected debtor (customer / client).

2. Tax - List the Tax type account codes and the tax rates which is added / edited in Setup → Accounts (Setup ribbon). This report is useful to check your tax percentages after import of ledger accounts or if you customise your in Set of Books.

3. Debtors - Outstanding - "*Due date*" and "*Debtors outstanding at date*" reports. These reports will list all the transactions before and on a selected period (date). It will list the details for each transaction (i.e. Reference No., Date, Due date, Debit, Credit and the accumulative balance for each of the debtor (customer / client) account.

4. Creditors - Outstanding - "*Due date*" and "*Creditors outstanding at date*" reports. These reports will list all the transactions before and on a selected period (date). It will list the details for each transaction (i.e. Reference No., Date, Due date, Debit, Credit and the accumulative balance for each of the creditor (supplier) account.

5. Graphs -

    a) Graphs per week -

        i) Ledger - The "*Graph - Profit / Loss per week*" displays the Net Profit / Loss per week in

a bar chart.

ii) Debtors - The "*Graph - Debtors per week*" displays the debit and credit transaction totals of all debtor (customer / client) accounts per week in a bar chart.

iii) Creditors - The "*Graph - Creditors per week*" displays the debit and credit transaction totals of all creditor (supplier) accounts per week in a bar chart.

iv) Sales -

- Quotes per week - Quantities and Quotes per week - Amount
- Credit notes per week - Quantities and Credit notes per week - Amount
- Invoices per week - Quantities and Invoices per week - Amount
- Sales per week - Invoices minus Credit notes - Quantities and Invoices minus Credit notes - Amount

v) Purchases -

- Orders per week - Quantities and Orders per week – Amount
- Purchases per week – Purchases minus Supplier returns - Quantities and Purchases minus Supplier returns per week - Amount
- Supplier returns per week - Quantities and Supplier returns per week – Amount
- Purchases per week - Quantities and Purchases per week - Amount

b) Graphs per month -

i) Ledger - The "*Graph - Profit / Loss per month*" displays the Net Profit / Loss per week in a bar chart.

ii) Debtors - The "*Graph - Debtors per month*" displays the debit and credit transaction totals of all debtor (customer / client) accounts per week in a bar chart.

iii) Creditors - The "*Graph - Creditors per month*" displays the debit and credit transaction totals of all creditor (supplier) accounts per week in a bar chart.

iv) Sales -

- Quotes per month - Quantities and Quotes per month - Amount
- Credit notes per month - Quantities and Credit notes per month - Amount

- Invoices per month - Quantities and Invoices per month - Amount
- Sales per month - Invoices minus Credit notes - Quantities and Invoices minus Credit notes - Amount

v) Purchases -

- Orders per month - Quantities and Orders per month – Amount
- Purchases per month - Quantities and Purchases per month - Amount
- Supplier returns per month - Quantities and Supplier returns per month – Amount
- Purchases per month – Purchases minus Supplier returns - Quantities and Purchases minus Supplier returns per month - Amount

6. Tutorial reports - These are basic guidelines to create and edit reports with Reportman. This is some basics to create debtor listing and creditor listing reports with the Report designer (Reportman).

Created with the Standard Edition of HelpNDoc: Free PDF documentation generator

Custom reports

The Custom reports is an example of reports designed in Report designer. The following two (2) reports is available:

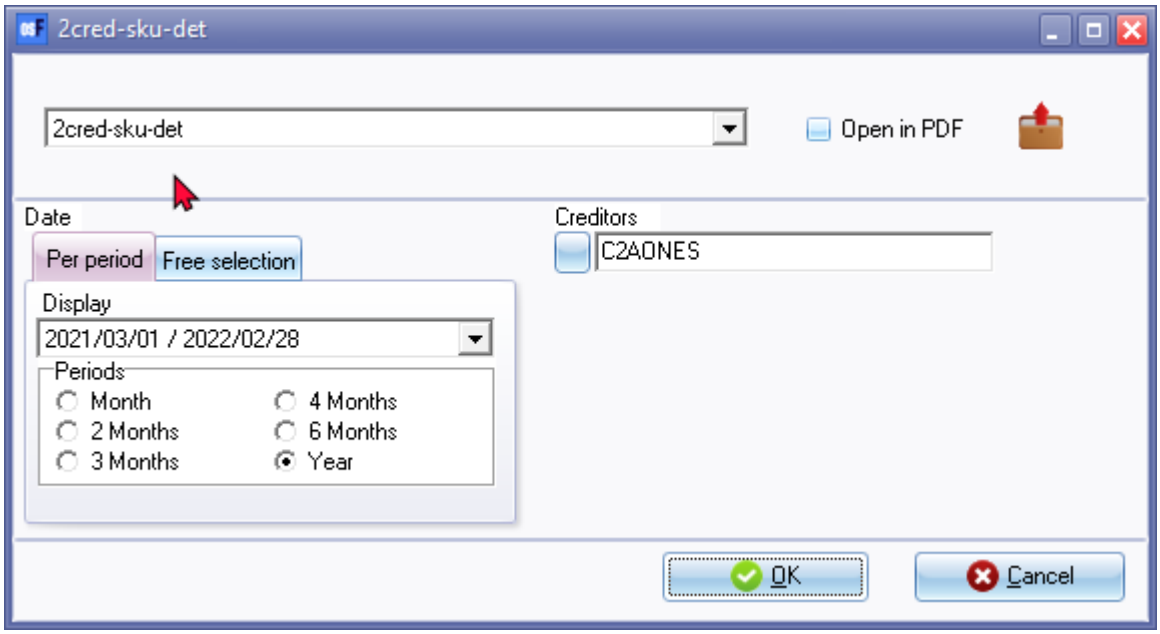
- **2cred-sku-det** - **Creditors - Purchases per period - Custom** report will list all posted Purchase documents (Purchases and Supplier returns) as well Orders for a selected Creditor (supplier / vendor) account for a selected period or dates.
- **2deb-sku-det** - **Debtors - Sales per period - Custom** report will list all posted Sales documents (Invoices and Credit notes) as well Quotes for a selected Debtor (customer / client) account for a selected period or dates.

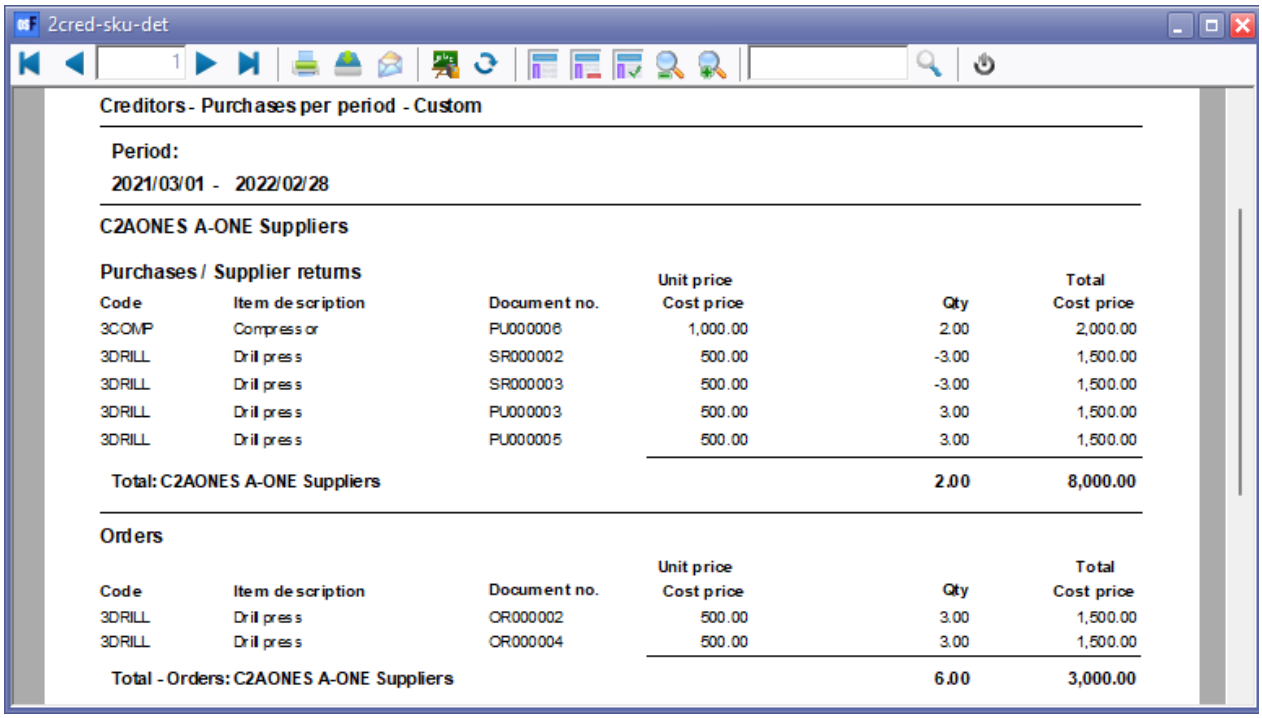
This report only includes batch and document transactions which are posted. Unposted batches and documents will be NOT be included in this report.

To view a list of unposted batches and documents, which is not updated to the ledger, go to Input → Checking unposted items (Default ribbon).

Purchases per period - Custom report

An example of the "*Creditors - Purchases per period - Custom*" report, is as follows:





2cred-sku-det

Creditors - Purchases per period - Custom

Period:
2021/03/01 - 2022/02/28

C2AONES A-ONE Suppliers

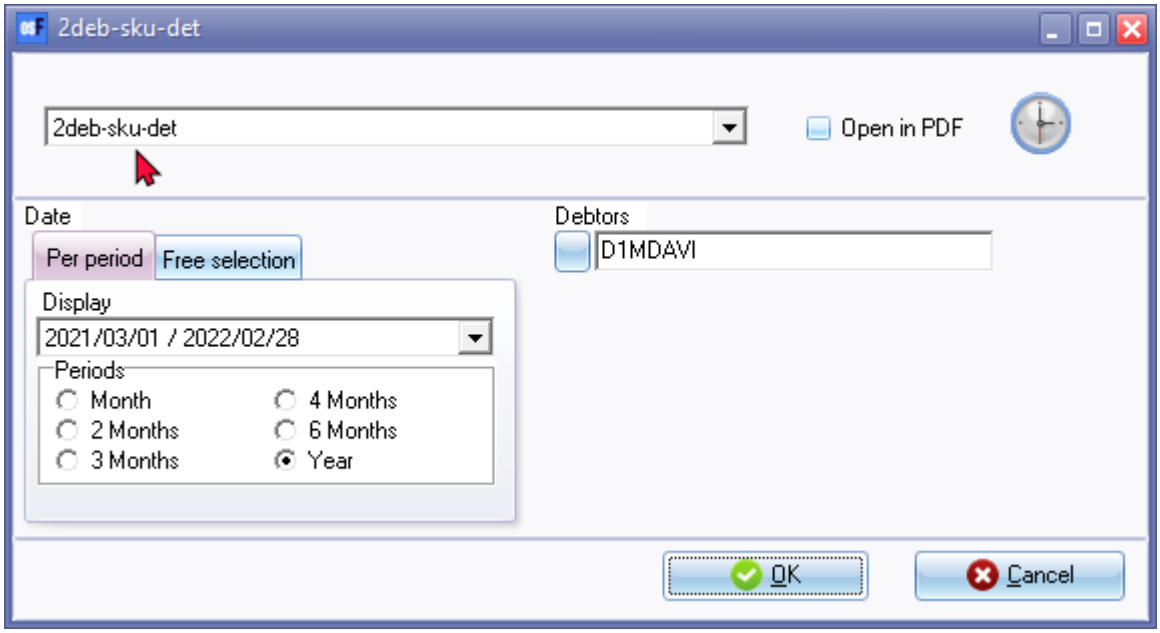
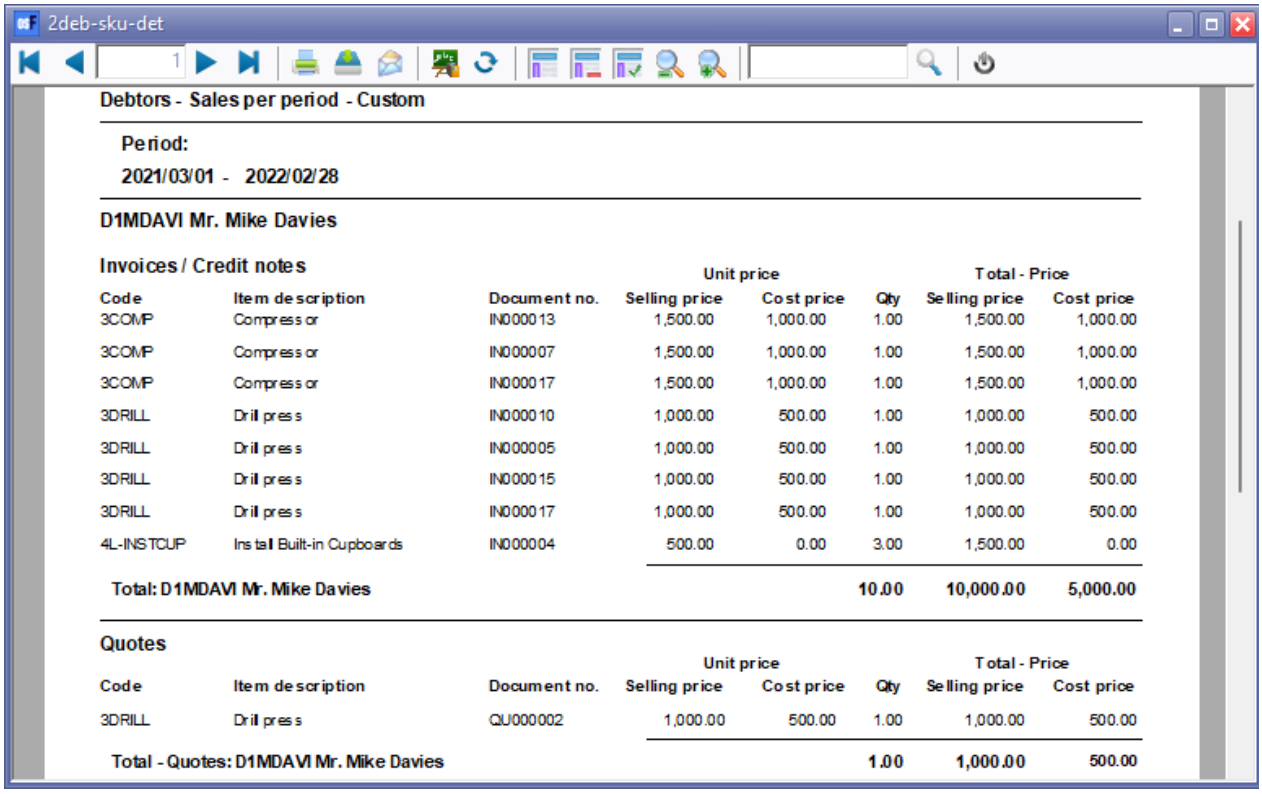
Sales per period - Custom report

An example of the "*Debtors - Sales per period - Custom*" report, is as follows:





Created with the Standard Edition of HelpNDoc: Effortlessly create a professional-quality documentation website with HelpNDoc

Tax (Tax codes - Tax rates)

The Tax report is added to the User reports menu to check the Tax percentages and Tax code status (Active (Enabled) or Inactive (Disabled)).

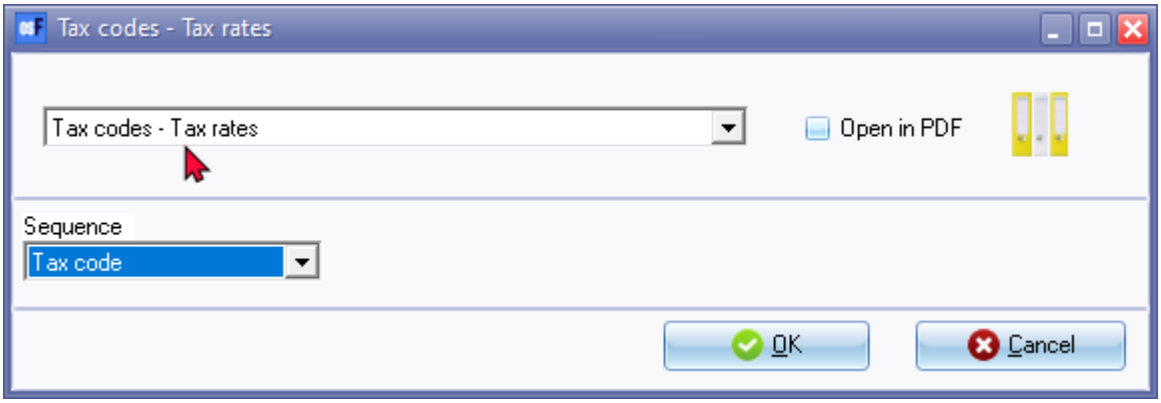
You may print this report to check your tax rates or tax percentages for Tax (VAT/GST/Sales tax) codes :

- Download a Firebird database type Set of Books (template) on the Downloads screen in the - "*Let osFinancials help you to create a Set of Books?*" option on the Creation wizard. - You may need to change the descriptions, tax rates, etc. in Setup → Accounts.
- Create a new blank database for Firebird or Microsoft SQL Server database types using the "Create a Set of Books (Advanced)?" option on the Creation wizard. Should you import the Accounts (e.g. from an exported Tab Delimited text file exported from another Set of Books), this report may reveal some issues, for example Zero-rated tax (VAT/GST/Sales tax) may be displayed as a blank tax percentage, etc.

Tax codes - Tax rates report options

To print Tax list report:

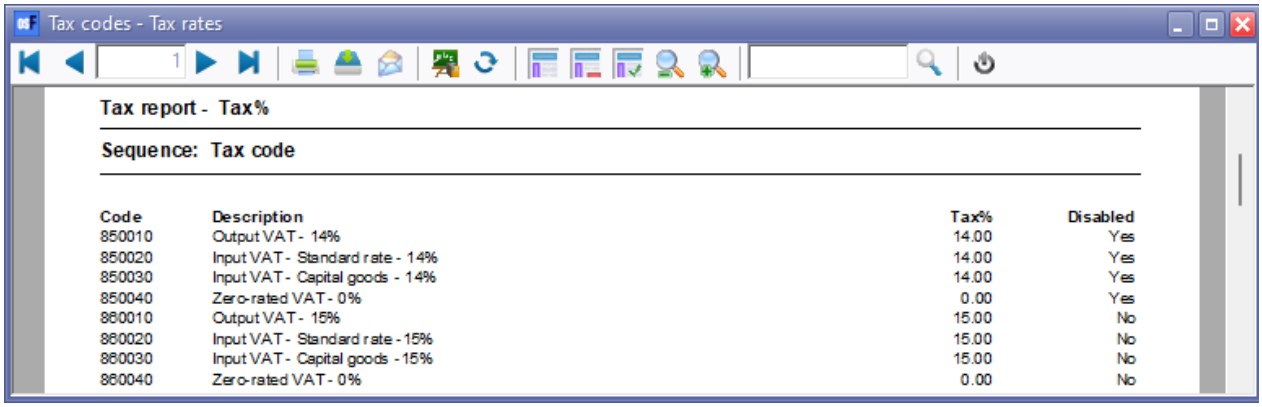
1. On the Reports ribbon, select User reports → Tax.



2. Select the sequence (order) to list the "*Tax codes*" by Tax code (account code) or "*Description*".
3. Click OK.

Printed : Tax codes - Tax rates report

An example of the "*Tax codes - Tax rates*" report, is as follows:



Should you need to change tax rates and/or Tax accounts/Tax codes go to Setup → Accounts.

After Accounts import

Disabled (Inactive) Accounts

If the status of Accounts were set as Disabled in the source Set of Books from which the Export file was exported, the Disabled accounts will be imported as "*Enabled*". You may need to:

- Delete the "*Disabled*" accounts, if you do not wish to keep these accounts; or
- Keep the Status of these Accounts as "Enabled" (active); or set the Status of these Accounts as "*Disabled*" (inactive).

Tax (VAT/GST/Sales tax) Accounts / Codes

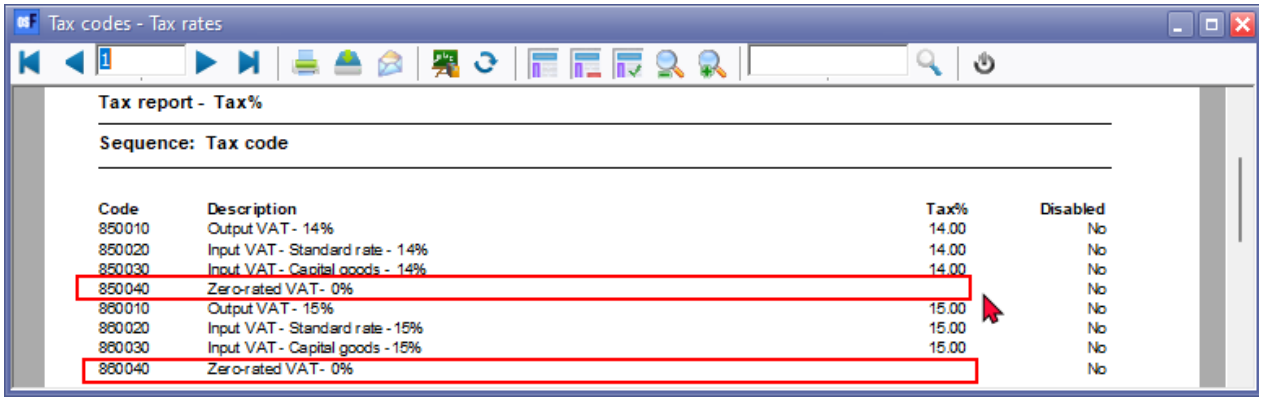
It is important to check the Tax (VAT/GST/Sales tax accounts and Tax percentages, before you process any transactions in batches and/or documents.

Zero -rated Tax (VAT/GST/Sales tax) accounts - Confirm Zero percentage

Zero- rated Tax (VAT/GST/Sales tax) with a Tax percentage of "*0%*" may be blank.

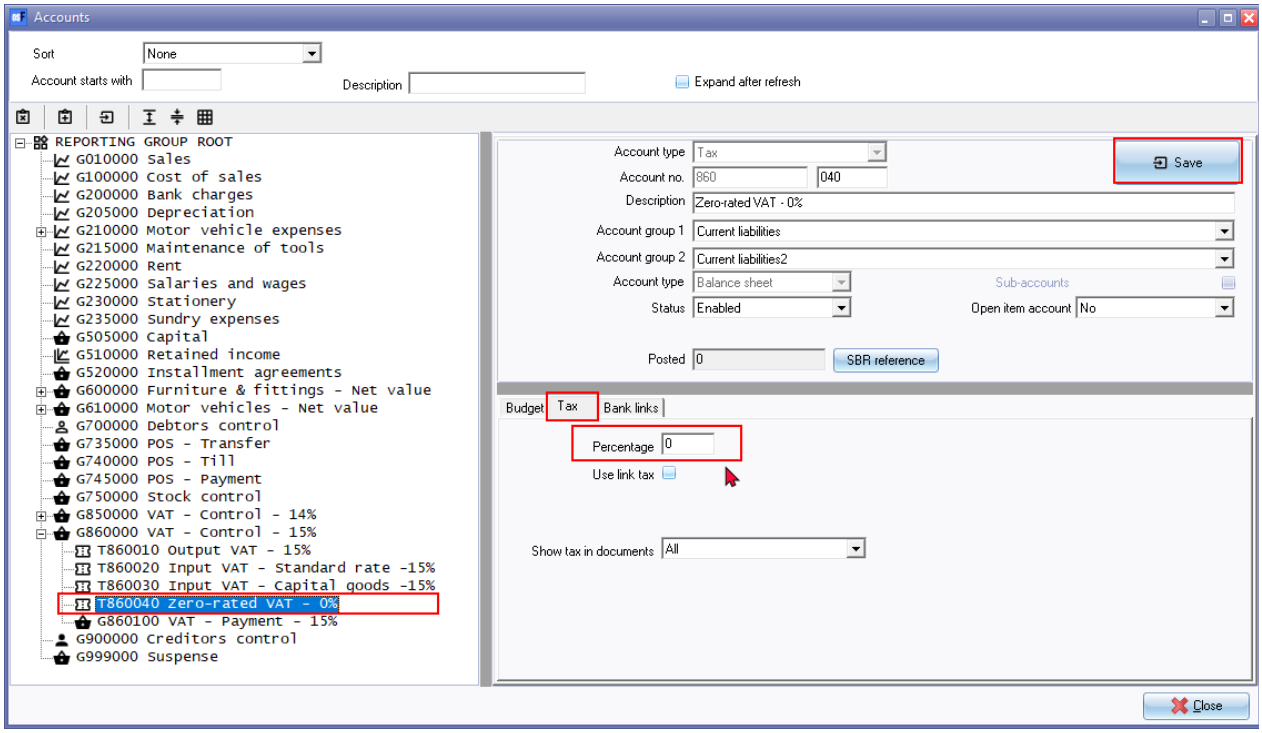
On the Tax codes - Tax rates report (User reports → Tax on the Reports ribbon), Tax percentages with a zero-rate will be Imported as a blank percentage.

This may cause the Zero rated Tax (VAT/GST/Sales tax) selected in processing transactions in Batches and/or Documents not to display correctly on Tax reports.

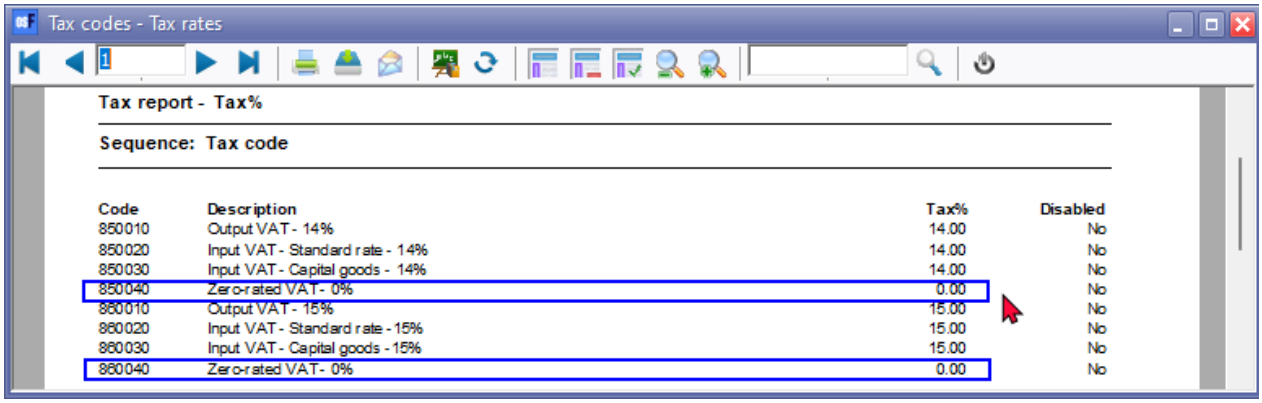


To fix this; select the Zero-rated Tax (VAT/GST/Sales tax) account.

Overtype the Tax percentage with "*0*"

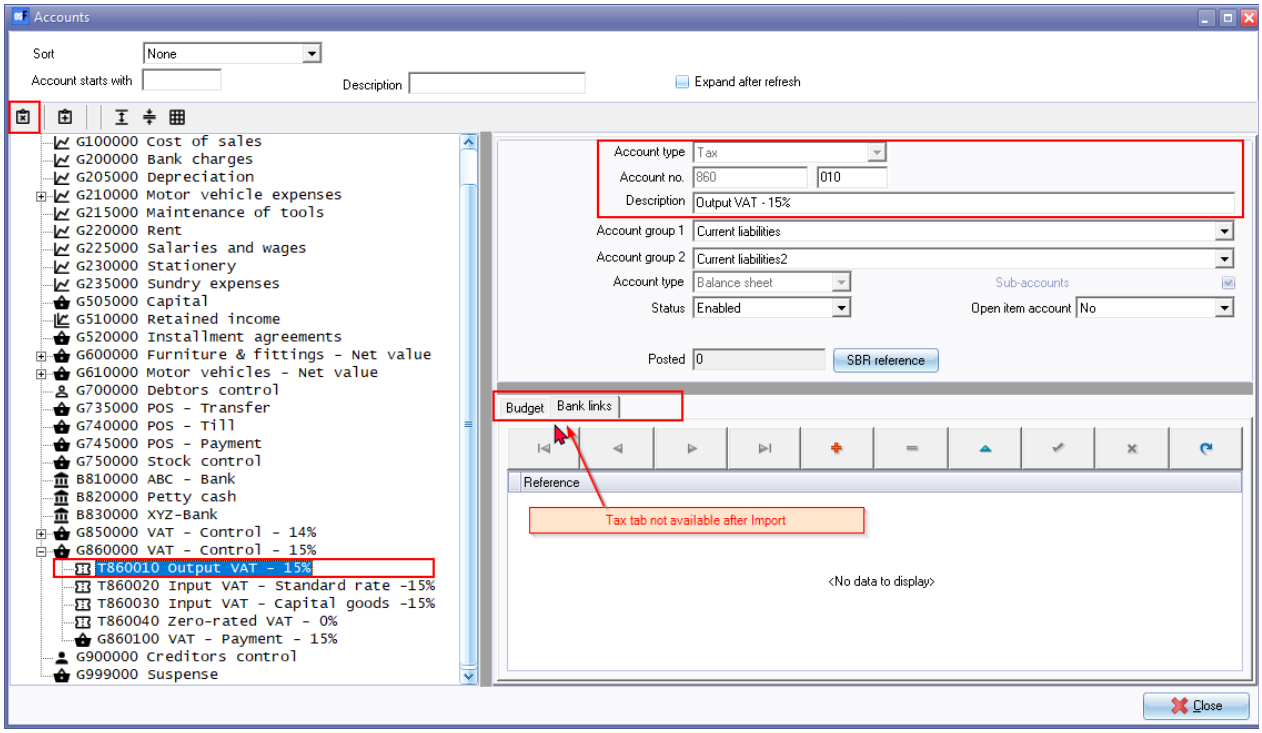


After confirming Zero-rated "0" tax percentages (tax rates) the Tax rates should be correctly listed as "*0*" percentage.



Recreate Tax (VAT/GST/Sales tax codes with missing Tax tab

The Tax tab on the first Tax code (e.g. Output VAT - 14% (T850010) and Output VAT - 15% (T850010) is missing after Import.

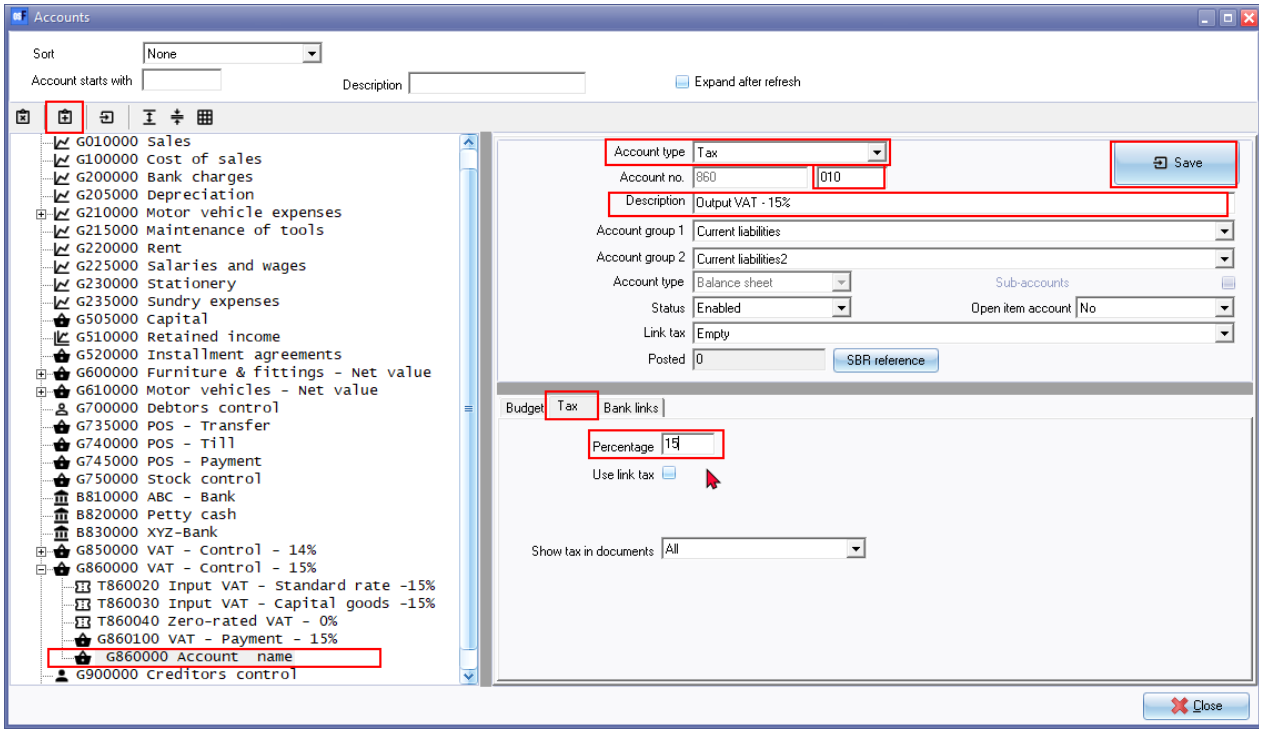


Select the Tax code (e.g. T860010) and Copy the Description (e.g. Output VAT - 15%) to your clipboard.

Click on the Delete icon.

Select the Tax control account (e.g. VAT - Control - Output VAT - 15%) (main account).

Click on the Add icon.



A new Ledger account will be added. Select the following:

- Account type - Select Tax.
- Account number - Change the "*000*" in the Sub-account section with "*010*". You may use the same sub account code as the deleted Tax account.
- Description - Enter the name of your Output tax account (or paste from your clipboard).
- On the Tax tab, enter the Tax percentage (e.g. 15) and click on the Save button.

Created with the Standard Edition of HelpNDoc: Bring your WinHelp HLP help files into the present with HelpNDoc's easy CHM conversion

Debtors

Created with the Standard Edition of HelpNDoc: Leave the tedious WinHelp HLP to CHM conversion process behind with HelpNDoc

Debtors - Outstanding

The Debtors outstanding allows you to print the following reports:

- Due date - This report will list all the transactions before and on a selected period (date). It will list the details for each transaction (i.e. Reference No., Date, Due date, Debit, Credit and the accumulative balance for each of the debtor (customer / client) accounts.
- Debtors Outstanding at date - This report is similar than the Due date report. It will not list the Due date column in the transactions details column.

Created with the Standard Edition of HelpNDoc: Enhance Your Documentation with HelpNDoc's Advanced Project Analyzer

Debtors - Outstanding - Due date

Due date - This report will list all the transactions before and on a selected period (date). It will list the details for each transaction (i.e. Reference No., Date, Due date, Debit, Credit and the accumulative balance for each of the debtor (customer / client) accounts.

If a debtor (customer / client) account is set as Open item account on the Accounting information tab, it will list only those transactions with outstanding amounts. Any credit amounts, which are not linked to debit transactions, should be processed in the Open item link (Default ribbon).

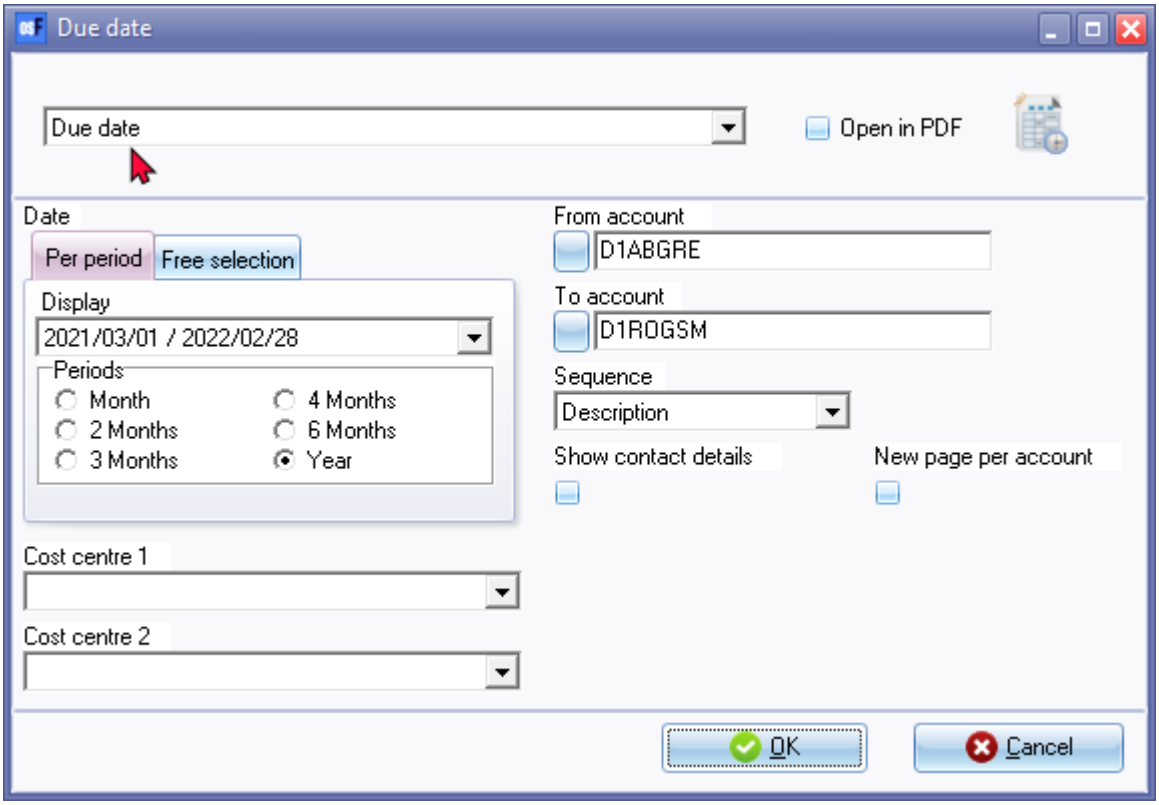
This report only includes batch and document transactions which are posted. Unposted batches and documents will be NOT be included in this report.

To view a list of unposted batches and documents, which is not updated to the ledger, go to Input → Checking unposted items (Default ribbon).

Debtors - Due date report options

To print Debtor - Due date reports:

1. On the Reports ribbon, select User reports → Debtors → Outstanding.
2. Select "*Due date*" report.



3. Select the following options:

   a) Report type - Select the Due date or the Debtors Outstanding at date report.

   b) Period - Select a period on the Per period tab. You may click on the Free selection tab to select a specific date or a range of dates to include transactions in the report. All the transactions which are outstanding on or before the end date of the periods will be listed.

   c) From account ...To account - Select a debtor (customer / client) account or a range of debtor (customer / client) accounts, to include in the report.

   d) Sequence - Select "*Debtor code*" to print the report by account code or "*Description*" to print the report by account description (name).

   e) Show contact details - If this option is not selected (not ticked), it will list only the transactions. Tick this option to include the details (i.e. postal address, delivery address, and contact details).

   f) New page per account - If this option is selected (ticked), it will print the transactions for each account on a new page.

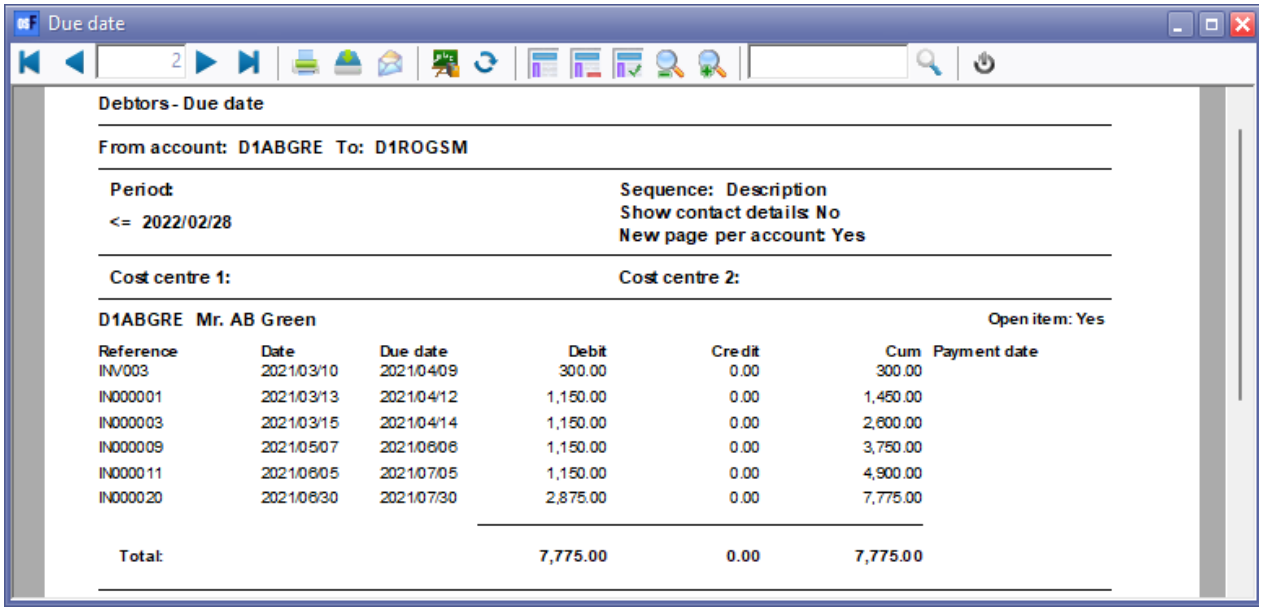
> *The Company details will not be printed as in the Page header. The company name is displayed in the Page footer.*

g) Cost centre 1 / 2 - If you have activated Cost centres, you may select the Cost centres.

3. Click on the OK button.

Printed : Debtors - Due date report

View the "*Debtors - Due date*" report:



Printed : Debtors - Due date (Show contact details) report

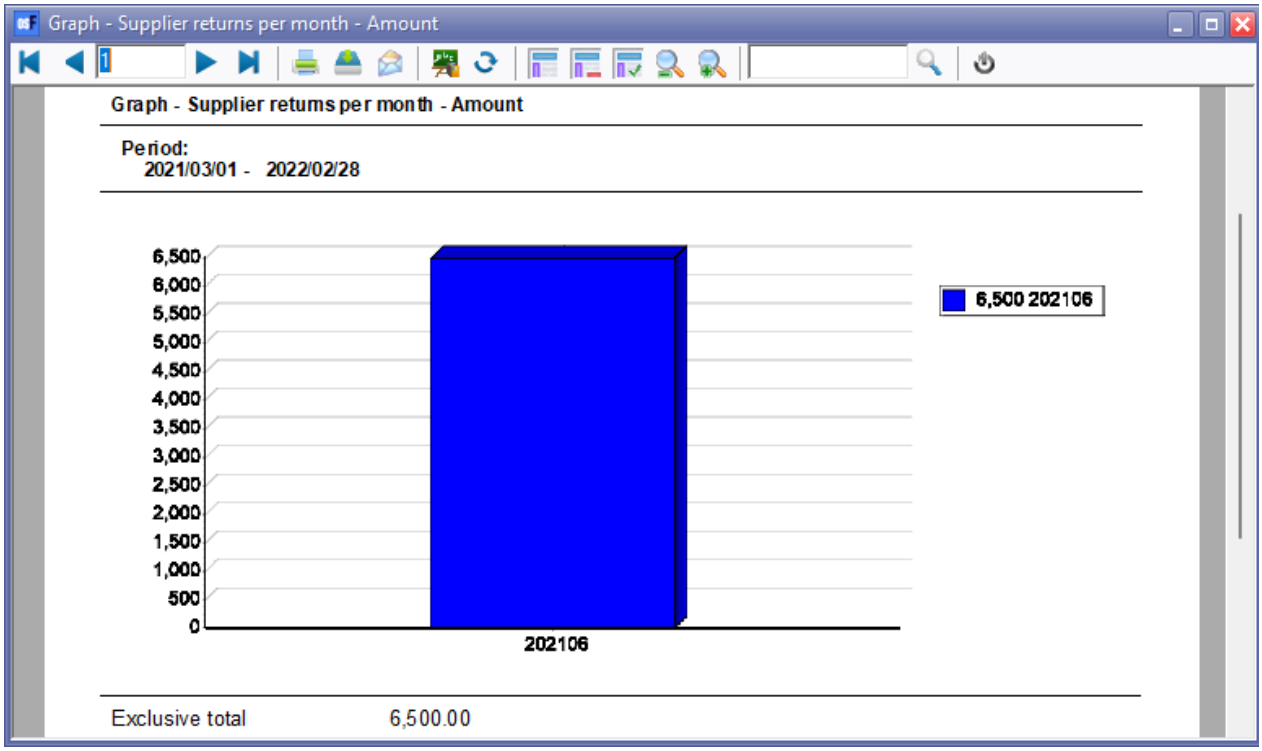
An example of the "*Graph - Supplier returns per month - Amount*", is as follows:



The details is as follows:

1. Vertical Axis - The total amount for Supplier return documents per month.
2. Horizontal Axis - This is the Year and Month ("*YYYYMM*" format) in the calendar year.
3. Exclusive total - The total amount (exclusive of tax (VAT/GST/Sales tax)) of all Supplier return documents for the selected period.

Created with the Standard Edition of HelpNDoc: Experience the Power and Simplicity of HelpNDoc's User Interface

Graph - Orders per month

The Graph feature for each document type (i.e Orders) in Documents on the Default ribbon, allows you to filter, analyse and view your Orders in a graph using various options to include or exclude in the graph, i.e.:

- *Document types - Select the Orders document type.*
- *Document status - Select All, Posted, Unposted (Open), Confirmed Orders.*
- *Filter options - Select the various options to include or exclude data to be included in the graph, etc.*

The following two (2) graph reports to analyse Orders, which are posted and/or confirmed, for a specific period, may be printed:

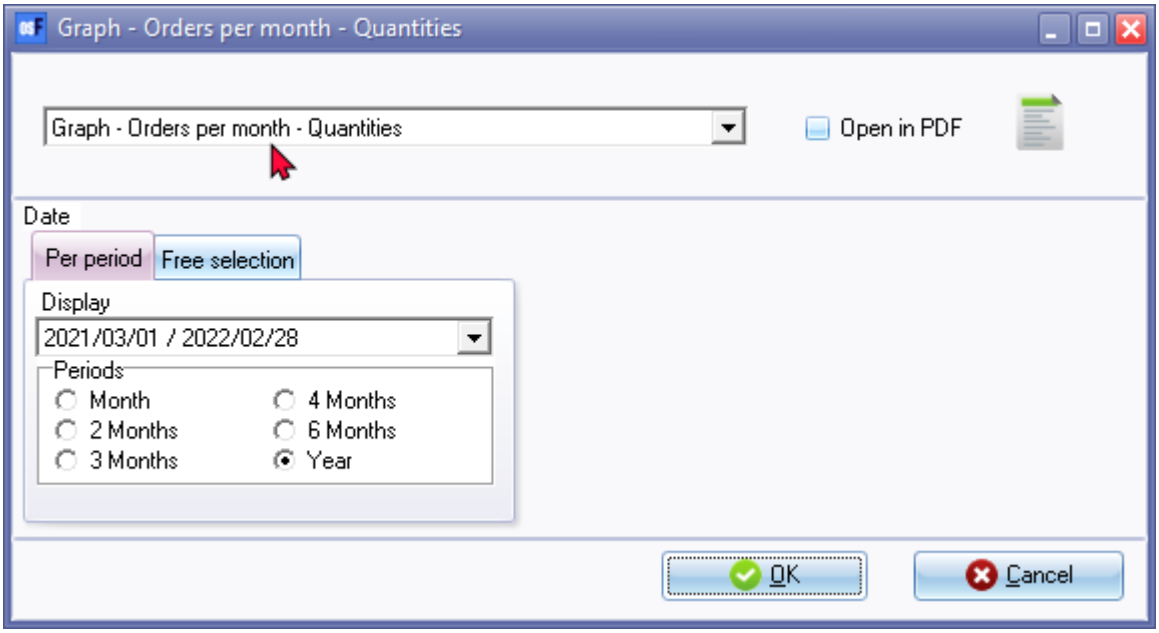
- Graph - Orders per month - Quantities - displays the total quantities of items on the Quantity Shipped field of Orders per month in a bar chart.
- Graph - Orders per month - Amount - displays the total cost price amount (exclusive of tax (VAT/GST/Sales tax)) of Orders per month in a bar chart.

This graph only includes Orders which are posted and/or confirmed. Unconfirmed or open Orders will be NOT be included in this graph.

Graph - Orders per month options

To print a Graph - Orders per month:

1. On the Reports ribbon, select User reports → Graphs → Graphs per month → Purchases → Orders per period.



2. Select the following:

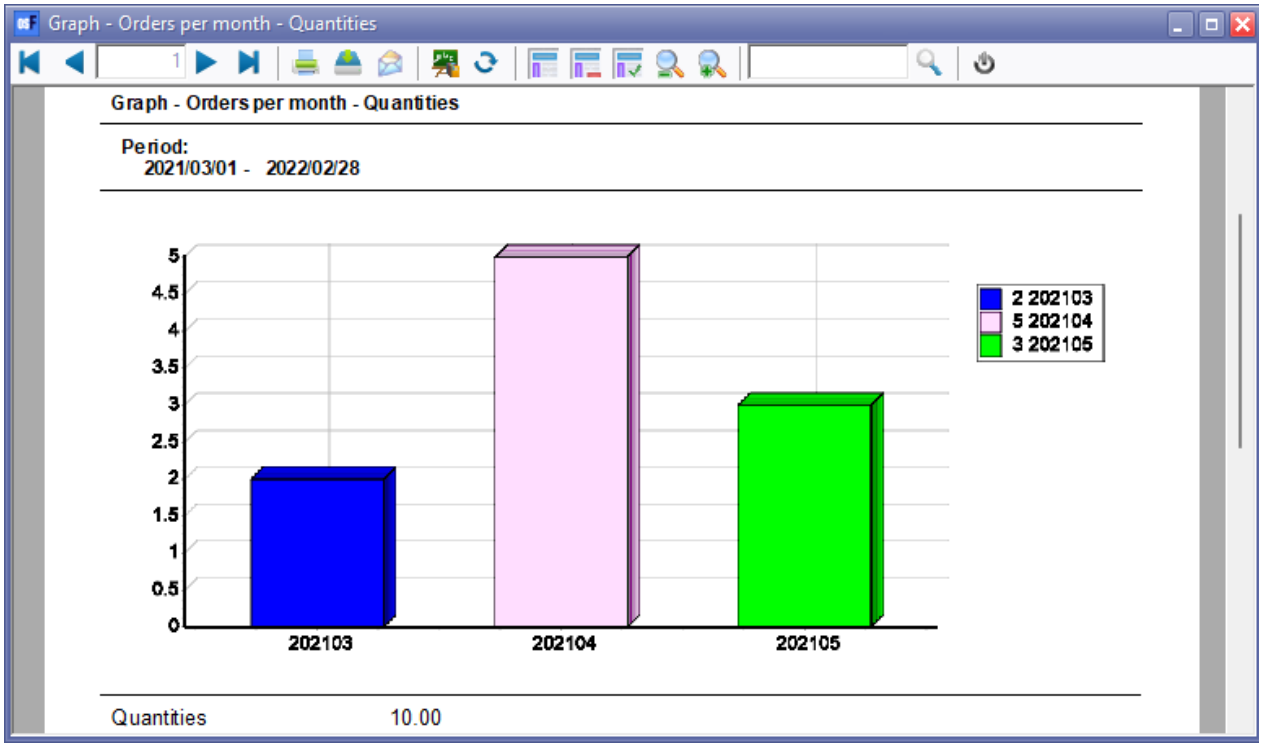
    a) Report - Select the Graph - Orders per month - Quantities or Graph - Orders per month - Amount report.

    b) Period - Select a period on the Per period tab. You may click on the Free selection tab to select a specific date or a range of dates to include in the graph.

3. Click on the OK button.

Printed : Graph - Orders per month - Quantities

An example of the "*Graph - Orders per month - Quantities*", is as follows:



The details is as follows:

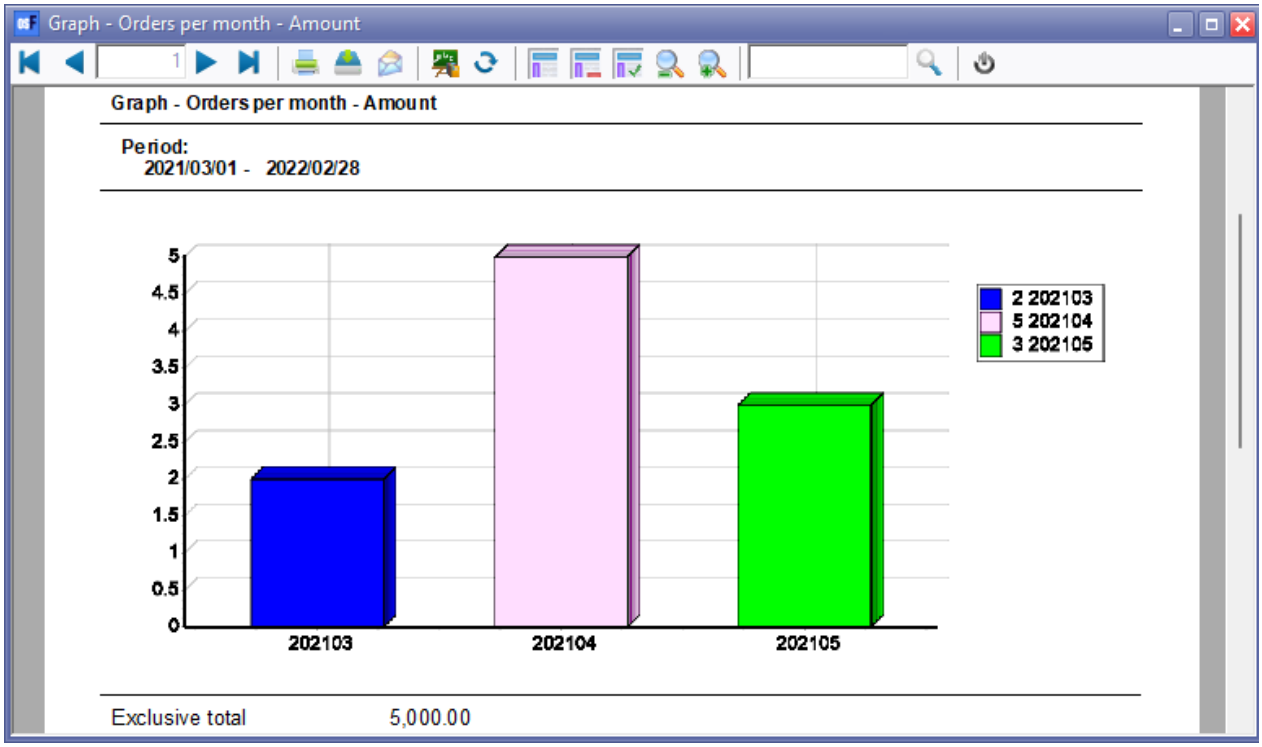
1. Vertical Axis - The total quantities on Orders per month.

2. Horizontal Axis - This is the Year and Month ("*YYYYMM*" format) in the calendar year.

3. Totals - Quantities - The total quantities of all Orders for the selected period.

Printed : Graph - Orders per month - Amount

An example of the "*Graph - Orders per month - Amount*", is as follows:



The details is as follows:

1. Vertical Axis - The total amount for Orders per month.
2. Horizontal Axis - This is the Year and Month ("*YYYYMM*" format) in the calendar year.
3. Exclusive total - The total amount (exclusive of tax (VAT/GST/Sales tax)) of all Orders for the selected period.

Report designer (Reportman)

The Report designer in osFinancials5/TurboCASH5 provides a powerful tool for creating and customising reports according to your specific needs. It is integrated and customised within osFinancials5, utilising the Reportman reporting engine. The Report designer offers a wide range of components, functions, and features to design and modify reports and document layout files. You can add your own reports in the User Reports menu and print these reports.

Report designer report types

All reports and document layout files included in your osFinancials5/TurboCASH5 installation are created

using the Report manager designer. These reports and layout files are built on the Firebird database type and should also support other database types such as MSSQL.

The reports and document layout files are organized in a file structure in various folders within the following directory of your osFinancials5/TurboCASH5 installation:

```
"... \plug_ins\reports"
```

Here are the commonly used report categories:

1. Document layout files: The document layout files in osFinancials5/TurboCASH5 are stored in the following folder.

   ```
   "...\plug_ins\reports\DOCUMENTS\DOCUMENTS"
   ```

   Among the shipped document layout files are the "*Layout file, Document layout, Document layout (15-code)*" and "*Delivery note*" layout files. These layout files can be translated using language files.

   The "*Layout file, Document layout, Document layout (15-code)*" files are designed to support various types of sales documents and purchase documents, such as invoices, credit notes, quotes, delivery notes, purchases, supplier returns, and orders. When you open your Set of Books, the layout files will be printed in the language associated with that Set of Books. If you choose to change the language in osFinancials5/TurboCASH5, the layout files will be printed in the selected language.

   Furthermore, you have the flexibility to select from different layout files for printing or reprinting your sales documents and purchase documents. You can even create copies of existing layout files and customize their appearance and format to align with your business branding or meet specific requirements. This allows you to tailor the document layout files according to your preferences and ensure they reflect your desired visual style.

2. Reports menu: The Reports menu in osFinancials5 provides access to a comprehensive range of standard reports that are essential for managing various aspects of your business. These reports cover areas such as the ledger, debtors, creditors, stock items, documents, sales, sales analysis, purchases, purchase analysis, and more.

   All of these standard reports are stored in the following folder:

   ```
   " ...\plug_ins\reports\systemreports"
   ```

   The reports are organized into folders and subfolders within this directory to facilitate easy navigation and retrieval.

   To access these reports, you can simply go to the Reports menu on the Reports ribbon. From there, you can explore the different menu options and sub-menu options to locate the specific report you need. The Reports menu provides a convenient and centralised hub for accessing the wide range of

reports available in osFinancials5/TurboCASH5, making it easier for you to generate the necessary financial and operational insights for your business.

3. User reports menu: The User reports menu in osFinancials5 provides a dedicated space for storing and accessing custom reports that you create or customize according to your specific needs. These User reports are stored in the following folder:

   "...\plug_ins\reports\userreports" ,

   The User reports is separate from the standard reports folder.

   To add your own custom reports, you should place them in the "*userreports*" folder. This folder serves as a repository for your personalised reports, allowing you to organize and manage them effectively.

   Once your custom reports are added to the "*userreports*" folder, you can access them from the User reports menu on the Reports ribbon. This menu provides a convenient structure for accessing and printing your custom reports.

   The User reports menu includes a range of pre-defined reports such, as Graphs per week or month for Custom reports, Debtors, Creditors, Tax listing, etc. Additionally, there are basic sample reports like Debtor listing and Creditor listing, which serve as tutorials to guide you in creating new reports using the Report designer in the osFinancials5/TurboCASH5 environment. These sample reports demonstrate various features, including parameters, lookups, and more.

   The User reports menu empowers you to tailor your reporting capabilities to suit your unique business requirements, allowing you to create, access, and print custom reports seamlessly within the osFinancials5/TurboCASH5 system.

4. Ledger analyser: On the Reports ribbon in osFinancials5/TurboCASH5, you will find the Ledger analyser options, namely Ledger analyser 1, Ledger analyser 2, and T-Account viewer. These options provide a range of report types for generating and printing various financial statements and analyses.

   The available reports include the Trial balance, Income statement, Balance sheet, Standard column balances, This year vs last year, Budget vs actual, Budget listing and the transactions in the T-Account viewer. These reports offer valuable insights into your financial data and help you analyse the performance and financial position of your business.

   The reports within the Ledger analyser options are stored in the following folder:

   "...\plug_ins\reports\GENERAL\ledgerview"

   It's important to note that these reports are preset and should not be customised. They are designed to provide standard financial analyses and should be used as intended.

Additionally, the reports generated through the Ledger analyser options can be exported and opened in spreadsheet applications, allowing for further analysis and customisation of the data.

By utilising the Ledger analyser options, you can easily generate and access a variety of essential financial reports and analyses within osFinancials5/TurboCASH5, providing valuable insights into your company's financial performance.

5. Spreadsheet reports menu: The Spreadsheet reports menu on the Reports ribbon in osFinancials5/TurboCASH5 provides access to reports that open in the integrated spreadsheet component. These reports are stored and organized in the following folder:

   "...\plug_ins\reports\excelreports" .

   Each report consists of a base.xlsx file, SQL files, and possibly parameter files. It's important to note that these spreadsheet reports cannot be edited using the Report designer tool. The available shipped spreadsheet reports include Creditors listing, Debtors listing, Transactions per period, General ledger - Budget, General ledger (Transaction totals), Sales analysis, and Stock movement.

The Report designer utilises different tables in osFinancials5/TurboCASH5 to generate reports. The document outlines the commonly used tables and their relationships to help you build reports effectively.

Overall, the Report designer in osFinancials5/TurboCASH5 provides a flexible and comprehensive solution for creating, customising, and managing reports to meet your specific reporting requirements.

Report Designer Help

To customize or create your own document layout files and reports using the Report designer within the Setup ribbon, you can follow these steps:

1. Refer to Documentation: To get started, you can refer to the "*Report designer*" section within the osFinancials5/TurboCASH5 help file. Additionally, you can access online documentation related to the Report designer on the osFinancials5/TurboCASH5 website.

2. Utilize Offline Documentation: Apart from the topics covered in this documentation, there is a comprehensive offline set of resources available in the "*.../plug_ins/reportman/doc*" folder of your osFinancials5 installation directory. You can access this offline documentation by opening the "*index.html*" file located at "*.../plug_ins/reportman/doc/index.html*" in your web browser.

3. Visit Online Resources: For further insights, the official online documentation for the "*Report Manager*" can be found at https://reportman.sourceforge.io/. This online documentation offers additional resources and information specifically about the Report Manager, providing valuable guidance as you work on your customization and design endeavours.

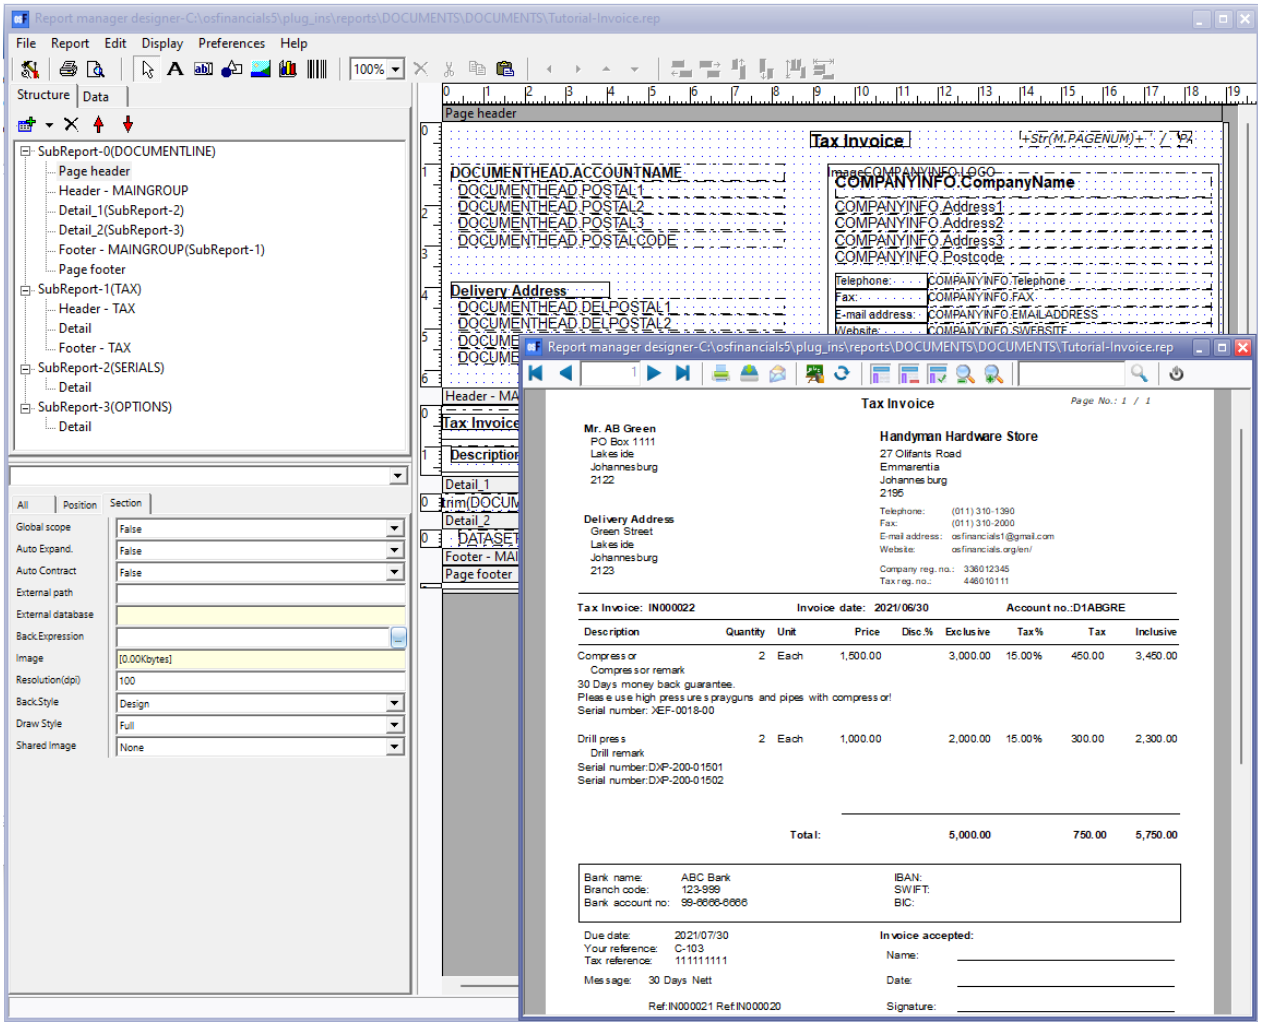
By following these steps and utilizing the available resources, you can effectively navigate the Report

designer in osFinancials5/TurboCASH5 and create customized document layout files and reports to meet your specific requirements.

Connections

The connections, interactions, and relationships between datasets and database connections have been enhanced in osFinancials5/TurboCASH5 to integrate seamlessly with Reportman. The Zeos Database Objects connection is used, which ensures smooth communication with the database and confirms successful connection.

Overall, the Report designer in osFinancials5/TurboCASH5 provides a flexible and comprehensive solution for creating, customizing, and managing reports to meet your specific reporting requirements.



If you encounter connection issues and are unable to establish a successful connection in osFinancials5/TurboCASH5, it could indicate that certain aspects require attention. Here are some potential factors to consider:

1. Installation of osFinancials5: It's possible that the Firebird database engine was not installed during the osFinancials5/TurboCASH5 installation process. Make sure you have installed the necessary

components, including the database engine, and ensure they are properly configured.

After installing osFinancials5, you will find optional additional components included in the "installs" folder within the root installation directory. These components include:

- *Firebird Version 2.1: This is an optional component primarily intended for advanced users. Installing Firebird Version 2.1 allows for further functionality and customization within osFinancials5/TurboCASH5.*

  It's important to note that later releases of Firebird, such as Versions 3 and 4, are currently not supported in osFinancials5/TurboCASH5 databases (Sets of Books).

- *FlameRobin Version 0.9.3: FlameRobin is a Database Admin software that provides tools to manage and explore your osFinancials5 databases (Sets of Books). To utilize FlameRobin, you will need to install Firebird Version 2.1 as well. FlameRobin offers additional functionalities for database management and administration purposes.*

2. Reportman (.rep) files: If there are multiple aliases or poorly designed reports or document layout files in the reportman (.rep) files, it may lead to connection problems. Review and adjust the aliases and ensure the reports and document layout files are correctly structured.
3. Corrupted data: Corruption within the database can also cause connection issues. Check for any signs of data corruption and take appropriate measures to address it, such as restoring from a backup.
4. Data compatibility: The data within the database, including date formats, currencies, and time, is influenced by the system's locale or regional and language settings. Ensure that the database settings align with the desired system locale to avoid conflicts and compatibility issues.

By addressing these potential issues, you can troubleshoot and resolve connection problems in osFinancials5/TurboCASH5 effectively.

If osFinancials5 have been installed on a Windows machine, the Language and Regional settings may be changed if you click on the Set the Windows date/format/style button located in Setup → Company info - Options or on the DateTime settings button located on the Setup → System parameters (Setup ribbon). In Windows operating you may change this in the Control Panel (Regional and Language settings). This will for example display the correct date format as per your countries' regional settings on all reports output and screens in osFinancials5/TurboCASH5.

See - Settings for reports - Number-format.

To develop or edit reports in osFinancials5, you need to use the built in Reportman in osFinancials5/TurboCASH5. Some extra functions have been added to Reportman in osFinancials5. Some of these extra functions are; 'GETTEXTLANG' , 'RETURNSQL' , 'NUMBERTOWORDS' , 'GETPRICE', etc. Another important feature is Data access configuration.

In osFinancials5, all reports, including document layout files designed in Reportman, are fully translatable using the '*GETTEXTLANG*' function. This means that they can be displayed in any language by changing the language setting in the Switch language option (Start ribbon).

To customize the language files, you can access the Tools menu and select Customise language in the Setup ribbon. The language files are stored in the "*.../bin/languages*" folder.

When designing reports in Reportman, all objects are added to a selected page structure. For example, in the "*Tutorial-Invoice.rep*" report, the Page header contains expressions from the '*COMPANYINFO*' and *'DOCUMENTHEAD'* datasets, an image (company logo) from the COMPANYINFO dataset, and static text labels such as Telephone, Fax, and E-mail address.

To edit the objects in the report, you can click on a selected object in the list, and it will be displayed on the grid. From there, you can easily edit, move, resize, or set properties for the object.

If you encounter an error while printing or previewing the report, make note of the name and number of the object (expression, etc.). This information will be helpful in locating the specific object in the Report designer and resolving the error.

By utilizing the Report designer and following these steps, you can effectively customize and troubleshoot reports in osFinancials5/TurboCASH5.

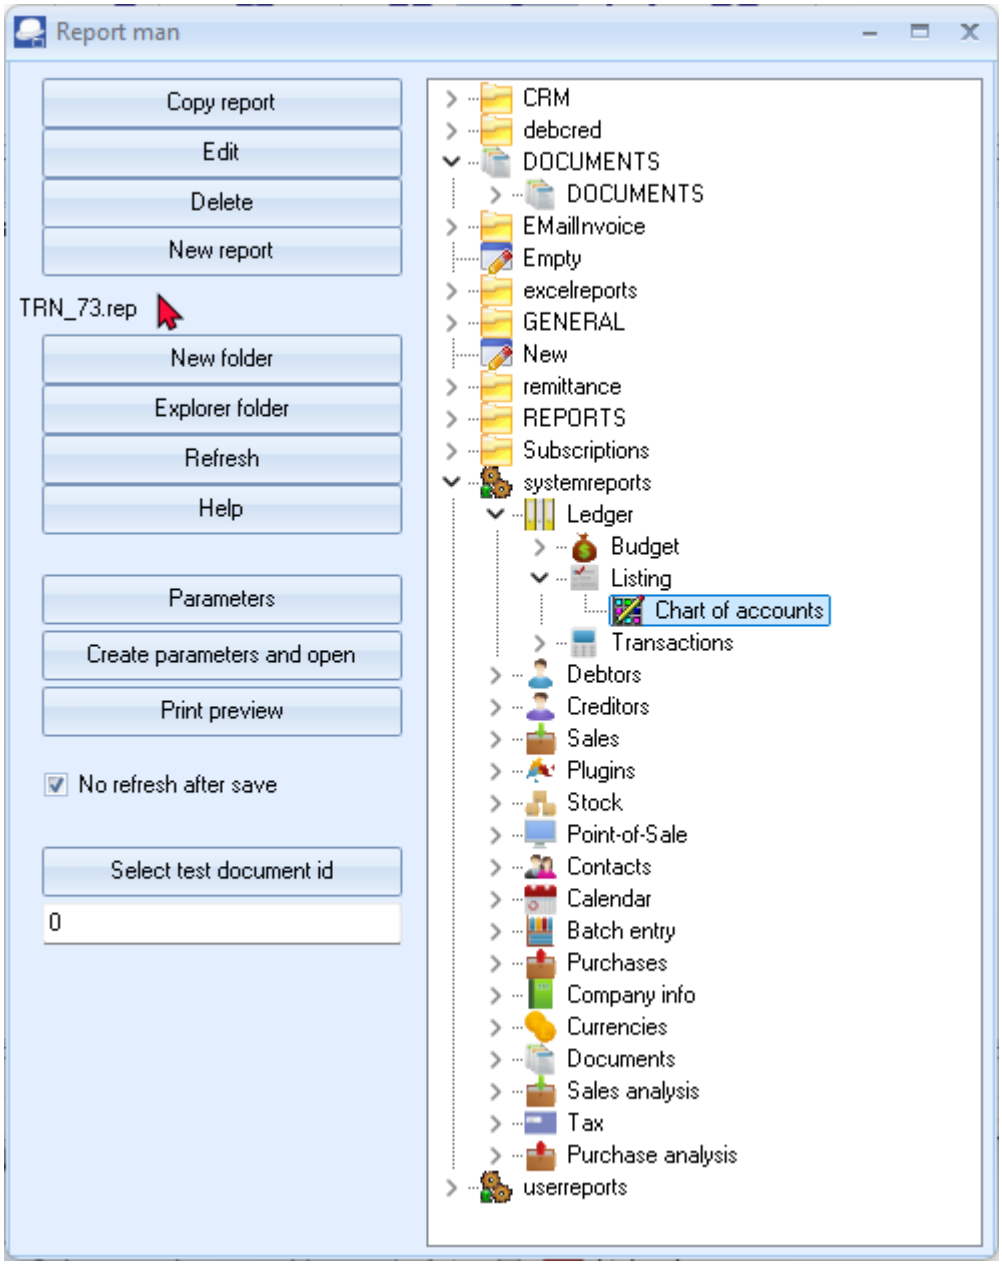
Report man interface options

All document layout files and reports are installed and stored in the *...\plug_ins\reports* folder of your osFinancials5/TurboCASH5 installation directory.

To access the Report designer:

On the Setup ribbon, select Report designer. The Report designer will list all layout files and report folders as follows:



The buttons and options is as follows:

1. Copy report - If you need to edit a layout file or report, you need to select a file. If you click on a report or layout file, and you click on the Copy report button, it will create an exact copy (e.g. Copy of Reportname) of the report *.rep and the parameters *.dfm (if the report has parameters) file(s).

> *It is recommended that you do not edit an existing layout file or report, but create a copy and edit the copy until you get the required results.*

> *You may then rename the report. If you have any customised reports, you may create folders in the ...\plug_ins\reports\userreports\ folder and copy your reports to your folder. These reports may then be accessed from the Reports → User reports.*

Document layout files cannot be printed from any other folder than the ... \plug_ins\reports\DOCUMENTS\DOCUMENTS folder.

2. Edit - Launches the Report manager designer screen, where you may edit an existing report or layout file or create or edit a new report or layout file.
3. Delete - This will delete a selected layout file or report (*.rep) file (and the parameter (*.dfm) file, if applicable).

Please make sure that the correct report is selected. Deleting the incorrect report, it will be permanently lost.

4. New report – This will launch a blank report with no datasets using the ...\plug_ins\reports\New.rep template file. When you save the New.rep file, it will save it as New.rep in the folder in which the New report button was clicked on.

You may click on the New.rep and click again to rename the report.

If the New.rep is in the Reportman designer screen, you may use the File → Save as menu to save the report with your own name.

5. New folder – This will create a New folder in the selected folder. You need to double-click to rename the New folder.
6. Explorer folder - If a report is selected it and you click on this button, the folder containing that report will be launched in Windows Explorer or your system's default file browser.
7. Refresh - This will refresh the display (list of folders and files) in the Report man screen.

The No refresh after save option is by default selected (ticked). If this ticked is removed, it will automatically refresh the Report man screen when a report or layout file is selected. This may slow down your system.

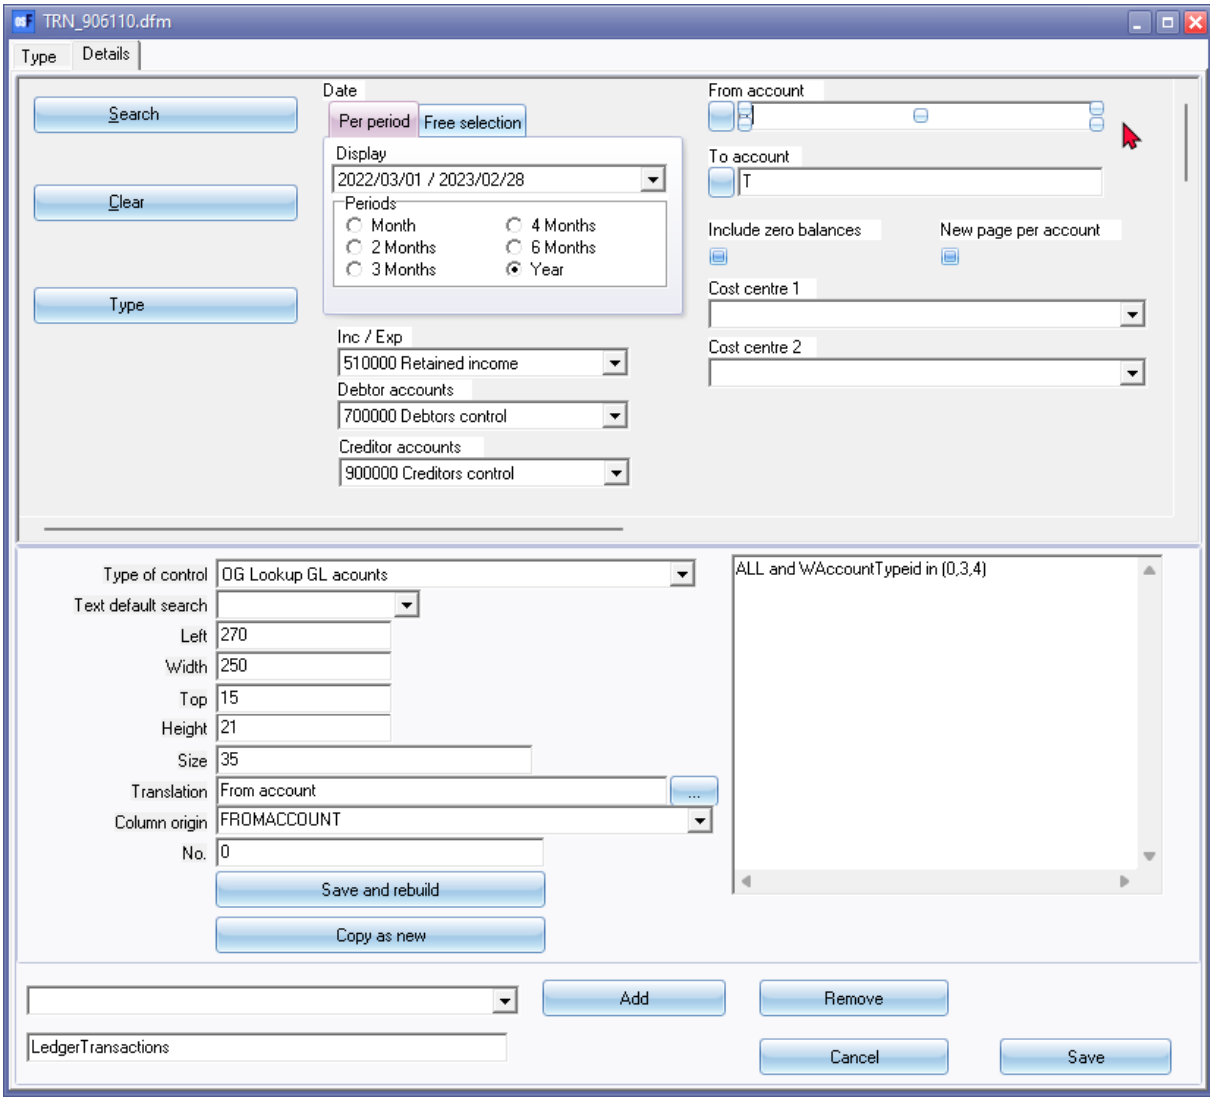
8. Help - This button is inactive. The offline Reportman help can be accessed from the .../plug_ins/reportman/doc/indexes.html file in the osFinancials5/TurboCASH5 installation directory.

You may access the online help at http://reportman.sourceforge.net/

If you focus on a specific area of the Reportman designer screen, a ? will be added to the cursor, it will launch the specific topic at sourceforge (e.g. http://reportman.sourceforge.net/doc/refcommon.html).

9. Parameters - If a report has parameters, and you click on the Parameters button, the Parameters

screen for the selected report will be launched. An example of the Ledger Transactions report, is as follows:



10. Create parameters and open - This will launch the Report manager designer screen on which you may edit the Parameters (Report → Parameter definition menu) and Datasets (Report → Data access configuration menu).

> *If a report has no parameters and you click on this button, it will display an error message, e.g.*
>
> "No params found. create one first C:
> \osFinancials5\plug_ins\reports\userreports\Custom Reports\New.dfm"
>
> *You then need to close this message and click on the Parameters button to create parameters.*
>
> *If you find another report with similar parameters, you may copy the parameter *.dfm file to the folder of your report and rename it to the name of your report.*
>
> *You then need to edit the parameters and report.*

11. Preview - Click to preview a document layout file or a report. If a report has parameters, it will launch

the report parameters screen on which you may select the options to preview the data in the report.

Spreadsheet reports - stored in the "... \plug_ins\reports\excelreports" folder.

These reports will open in the integrated spreadsheet component in osFinancials5/TurboCASH5.

You cannot open, edit or preview these Spreadsheet reports in "Report man".

While editing a document layout file or a report, you may click on the Preview icon of the Report manager designer screen.

12. Select test document id button - If you click on the Preview button if document layout files (in the ... \plug_ins\reports\DOCUMENTS\DOCUMENTS folder) are selected the last document processed or printed will be previewed. If you click on this button you may select any other posted or unposted document to preview.

Created with the Standard Edition of HelpNDoc: Make CHM Help File Creation a Breeze with HelpNDoc

Reports - File structure

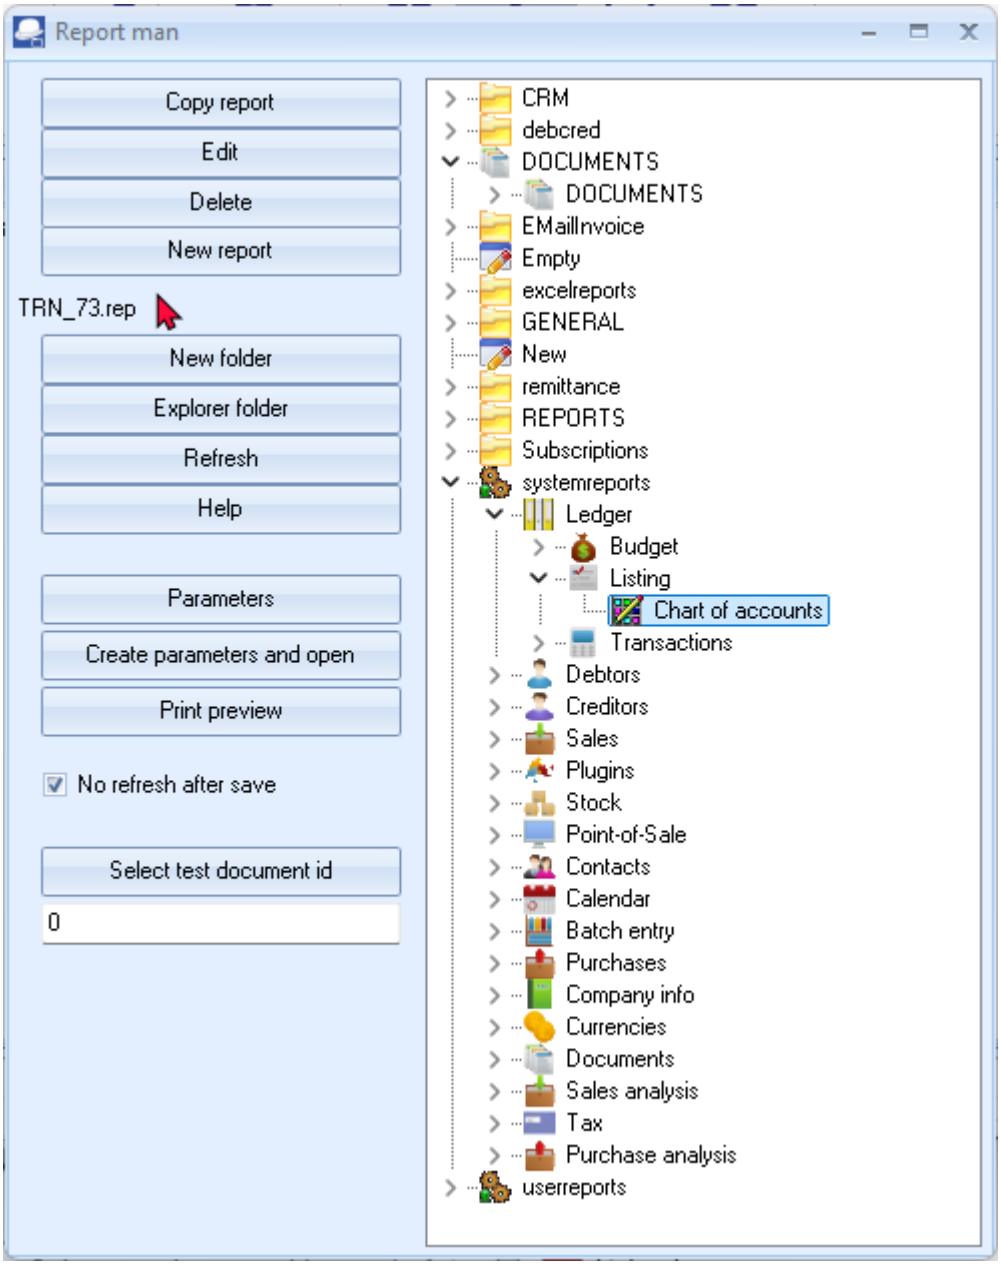
The Report designer folder / file structure

All document layout files and reports are installed and stored in the ...\plug_ins\reports folder of your installation directory.

Access select Report designer:

On the Setup ribbon, select Report designer. The Report designer will list all layout files and report

folders as follows:



1. Document printing - All the layout files for printing documents are stored in the ... *\plug_ins\reports\DOCUMENTS\DOCUMENTS* folder.
2. Reports menu (Reports ribbon) - These reports are stored in the ... *\plug_ins\reports\systemreports* folder.
3. User reports menu (Reports ribbon) - These reports are stored in the "*userreports*" folder. Users are encouraged to create and/or edit existing reports, but it is recommended that these be copied and stored in the ... *\plug_ins\reports\userreports* folder.
4. Spreadsheet reports menu (Reports ribbon) - These reports are stored in the ... *\plug_ins\reports\excelreports* folder.
5. Ledger analyser and Reports - T-Account viewer (Reports ribbon) - Seven (7) reports are stored in the ...*\plug_ins\reports\GENERAL\ledgerview* folder. These are:
    a) budgetvsactsimple - Budget vs actual and This year vs last year report types.
    b) colbal - Not used.

c) colbalopen - Not used.

d) colbalopenonly - Not used.

e) colbalsimple - Standard column balances report type.

f) detail - Trial balance, Income statement and the Balance sheet report types.

g) ledgerdetail - Print button on the T-Account viewer.

h) openitemdays - Print Age analysis reports for current date or a selected date of ageing from Open item link - Due tab or Age analysis icon on the Reports ribbon.

6. Reports generated from inside the osFinancials5/TurboCASH5 on various screens are stored in the *...\plug_ins\reports\GENERAL\documents* folder. These are:

a) Batch Processing - Batch entry (F2) on the Default ribbon):

i) abbreviations - Abbreviation Definitions as set in the Batch entry – F9:Process option. If you click on the Print button of the Abbreviation screen, a list of Abbreviation definitions will be printed. The abbreviations listed on this report, may be used to automatically fill the description column in the document lines when processing documents (invoices, credit notes, quotes, purchases, supplier returns and orders).

ii) batch - Batch Listing on the Batch entry - F8:List - This will print a list of all transactions in an unposted batch.

iii) postedbatch - Batch Listing on the Batch entry - Posted batches - Details tab - Print button - This will print a list of all transactions in a posted batch.

iv) paycreditor - Prints the "*Automatic payments*" report when clicking on the Print button in the Payments Debtors / Creditors option (Batch entry - F9:Process).

v) paydebtor - Prints the "*Automatic receipts*" report Debtor payments report when clicking on the Print button in the Receive Payments / Creditors option (Batch entry – F9:Process).

vi) receipt - Prints a receipt if the "*Create receipts*" option is selected for Receipt batches in the Batch entry - F9:Process (and if the Print option is ticked).

vii) recon - Prints the Bank reconciliation report when clicking on the Report icon of the "*Reconcile Bank account*" screen (Cash/Bank entry on the Default ribbon).

b) Documents - Documents (F6)) menu (Default ribbon):

i) barcodes - context menu - Quick link to print the barcodes of the stock items selected on documents.

ii) labels - context menu - Quick link to print the postal address labels (and Contact name) of the debtors (customers / clients) selected on sales documents or creditors (suppliers) selected on purchase documents.

iii) labelsdelivery - Not implemented yet. This is similar than the labels report, but should print delivery addresses in stead of postal addresses.

c) Point-of-Sales (Standard) - Input - POS Invoice (Ctrl + F6) menu (Default tab):

i) oldpossales - This report prints from the Process - Reports or Cashup option on the POS Invoicing screen.

ii) oldposcashup - This report prints from the Process - Reports or Cashup option on the Input → POS Invoicing screen (Default ribbon).

d) Others:

i) datacheck - Prints the Data integrity check report from Tools - Data integrity check (Setup ribbon).

ii) groups - Prints the list of the Account group 1 / 2, Debtor group 1 / 2, Creditor group 1 / 2, Stock group 1 / 2, Document group 1 / 2, etc. when clicking on the Print button of a selected group on Setup → Groups (Setup ribbon).

iii) payments - Prints a Receipts / Payments advise when the "*Receive payment*" context menu option is selected (and the Print option is ticked) on the Open item link menu Transactions tab or on the Open item link screen (Default ribbon) for a debtor (customer / client) or creditor (supplier / vendor) account.

iv) Userlog - Prints the "*Userlog report*" when clicking on the Log report button on Setup → Access control (Setup ribbon).

7. REPORTS:

a) CREDITOR - (Creditors (F5) on the Default ribbon) – Selected Creditor Label (Postal address) and Selected Creditor Delivery Label (Delivery address). Print when you right-click on a selected creditor (supplier / vendor) account from the list.

b) DEBTOR - (Debtors (F4) on the Default ribbon) – Selected Debtor Label (Postal address) and Selected Debtor Delivery Label (Delivery address). Print when you right-click on a selected debtor (customer / client) account from the list.

c) STOCK - (Stock items (F12) on the Default ribbon) – Barcode and Yagoda barcode. Print when you right-click on a selected stock item or stock items from the list.

d) PROJECTS - If projects have been activated, and transactions have been entered in batches and documents, you may print five (5) reports (i.e. Transactions, Hours, Stock items,

Statements and the Total report). Budgets can also be entered for Projects, but it needs to be added to these reports.

e) HORECAPOS - This folder contains the reports for the HORECAPOS and RETAILPOS Plugins.

f) SUBSCRIPT - This folder contains the Subscriptions report. (See the Subscriptions folder – This folder contains the report, emailtemplates, layouts and Sql for the Subscriptions Plugin).

g) REPORTS FOLDER (Discontinued Reports) - The BATCHREPORT, CONTACTS, COSTCENTER, GL and TAX folders contains old reports not used in odFinancials5.

8. Folders and reports for Plugins:

a) EmailInvoice and debcred folders are used for the E-MailPro plugin.

b) parcel - This is not used at this stage – It is reserved for a Send Parcel plugin.

c) remittance - This contains the list report, emailtemplates and layouts for the Reminders plugin.

d) Subscriptions - This folder contains the report, emailtemplates, layouts and Sql for the Subscriptions Plugin.

Created with the Standard Edition of HelpNDoc: Step-by-Step Guide: How to Turn Your Word Document into an eBook

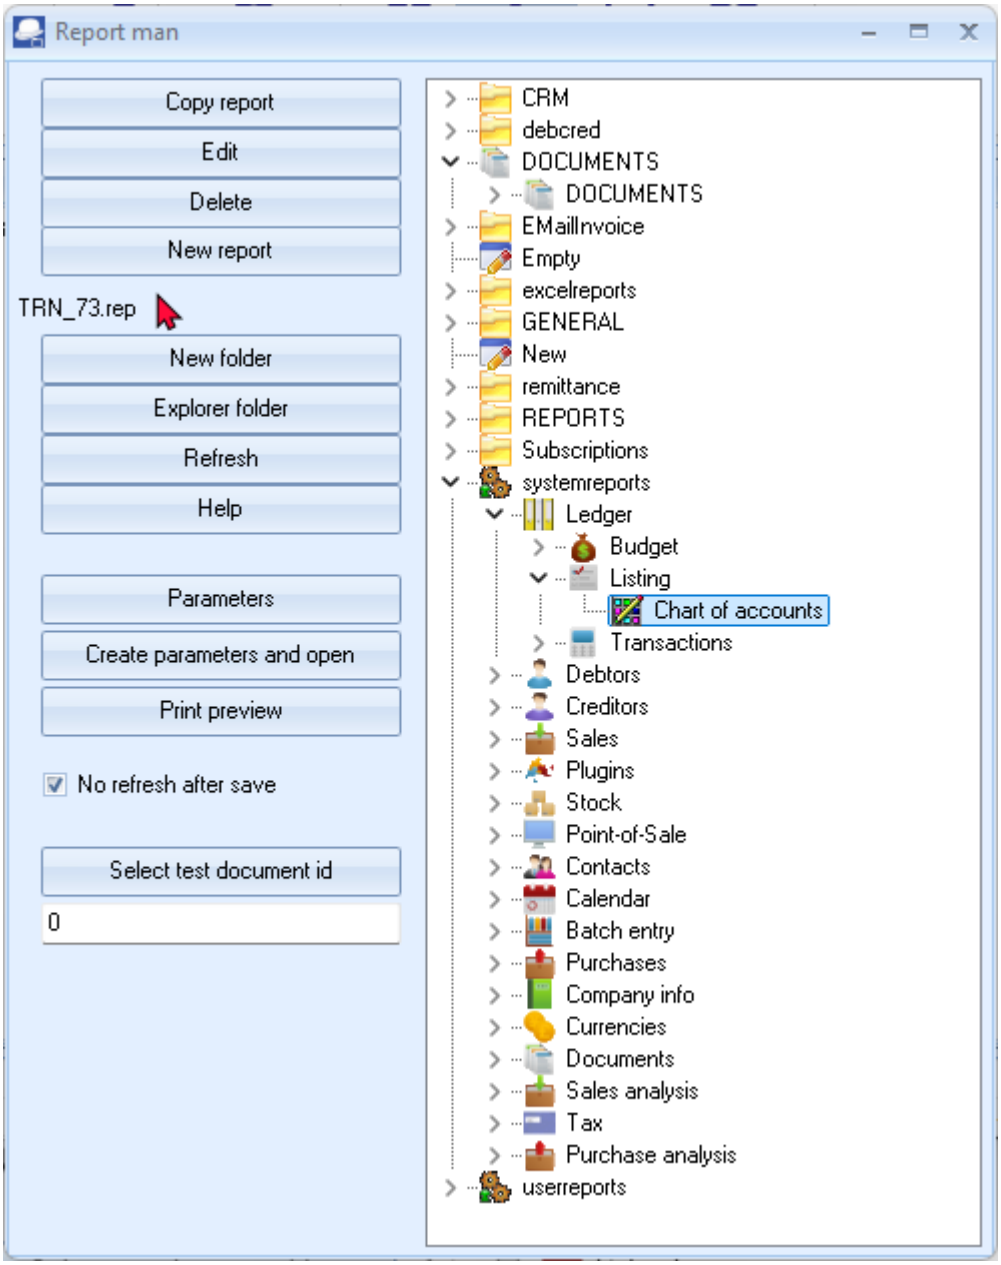
Reports - systemreports - Reports menu file names

The standard reports on the Reports menu is stored in the "*...\plug_ins\reports\systemreports*" folder of your installation directory.

When printing reports using the "*Material*" theme, the icons in the "*Material*" theme folder will be displayed in menus and the icons in the "*Classic*" theme folder will be displayed on the report parameters screens and in Report man.

To access the Report designer:

1. On the Setup ribbon, select Report designer. The Report designer will list all "*systemreports*" files and report folders as follows:



Reports menu - File structure and file names

When printing reports using the "*Material*" theme, the icons in the "*Material*" theme folder will be displayed in menus and the icons in the "*Classic*" theme folder will be displayed on the report parameters screens and in "*Report man*".

For your convenience, a list of the file names and structure of the reports in the Reports menu (Reports ribbon) is as follows:

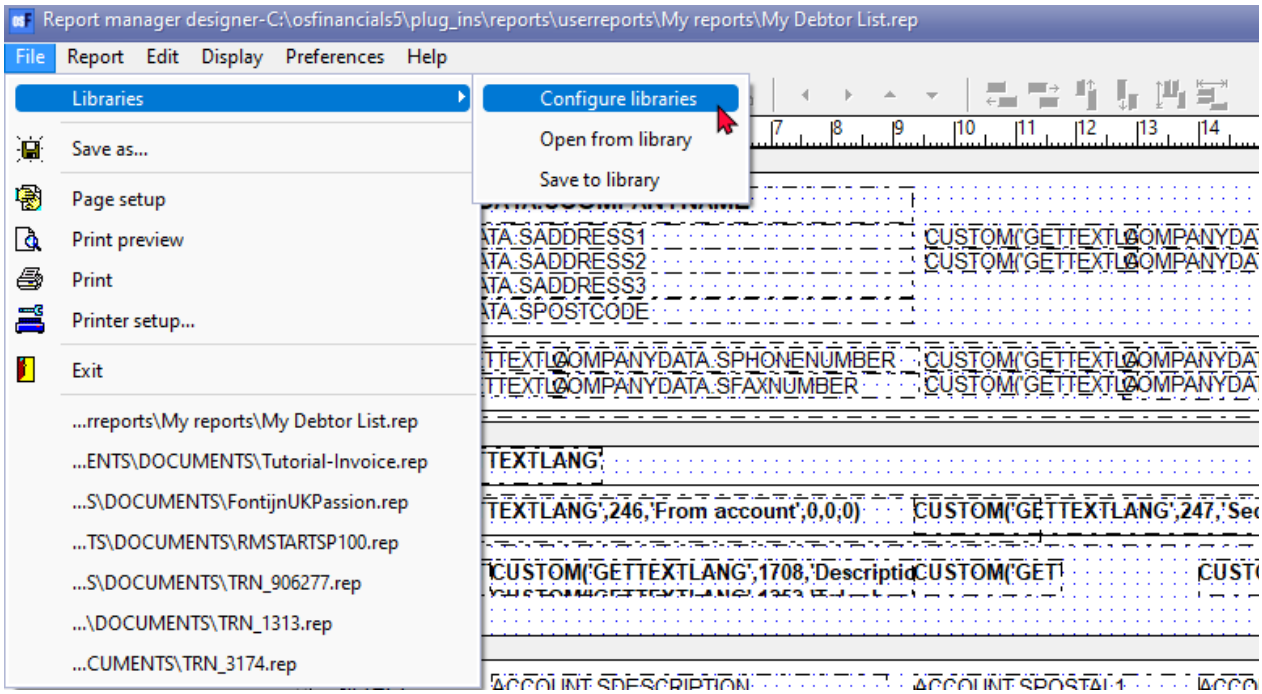
Report designer menu structure

The "*Report manager designer*" is launched from the "*Report man*" screen.

The "*Report manager designer*" interface an menu structure provides all the options and tools to create and edit reports document layout files as well as reports and templates used for Plugins.

File menu



The options is as follows:

1. Libraries - Configure libraries - On the "*Edit connections*" screen, you may add new connections, manage connections and delete connections. In the osFinancials5/TurboCASH5 setup this is not used, since the reports and database connections is already configured and available.

2. Save as... - This will launch the Save as screen where you may save the active report.

> *It will only save the *.rep file of the active report. If a report contains parameters, the parameters *.dfm file will not be saved. To Save a report (*.rep), as well as the parameters (*.dfm) files, Use the Copy report option on the "Report man" screen and rename the report.*

3. Page setup -

4. Print preview -

5. Print -

6. Printer setup... -

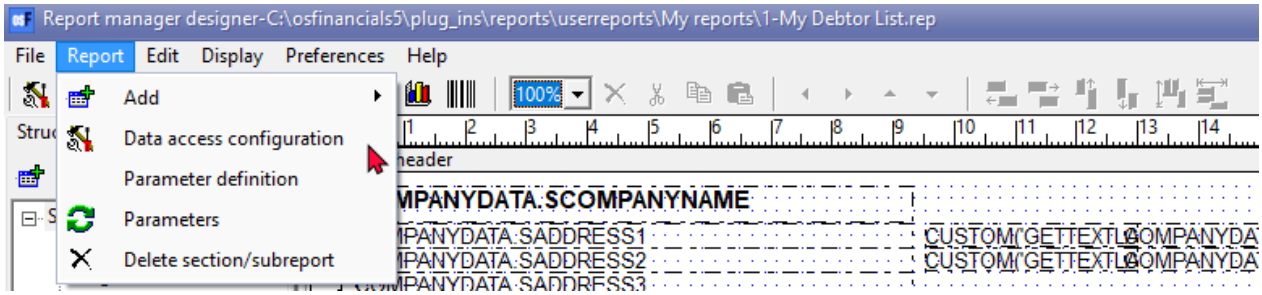
7. Exit - This will close the "Report manager designer" screen.

> *Whenever you close the "Report manager designer" screen, after editing your report, remember save the report. If you click on No, on the "Save report?" confirmation message, your changes will*

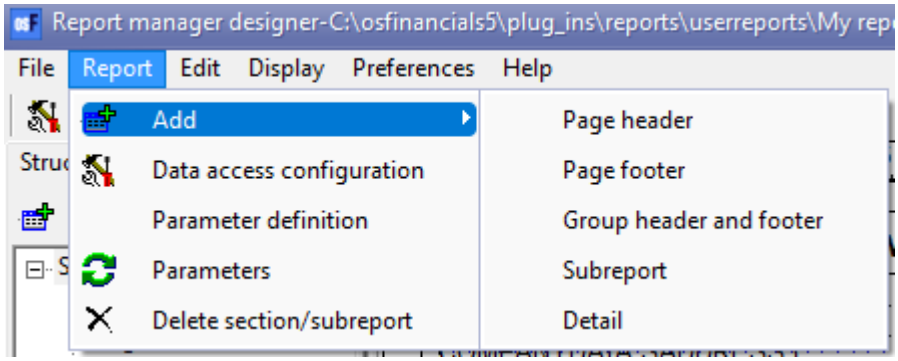
	be discarded (lost).

8. Recent reports opened -

Report menu

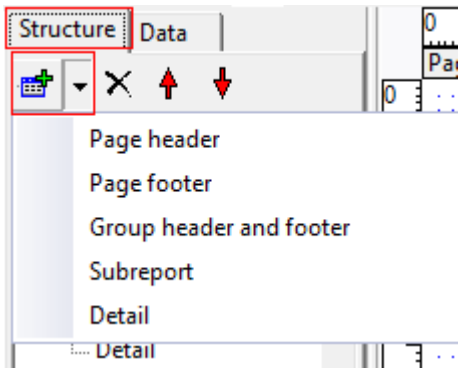


Report → Add

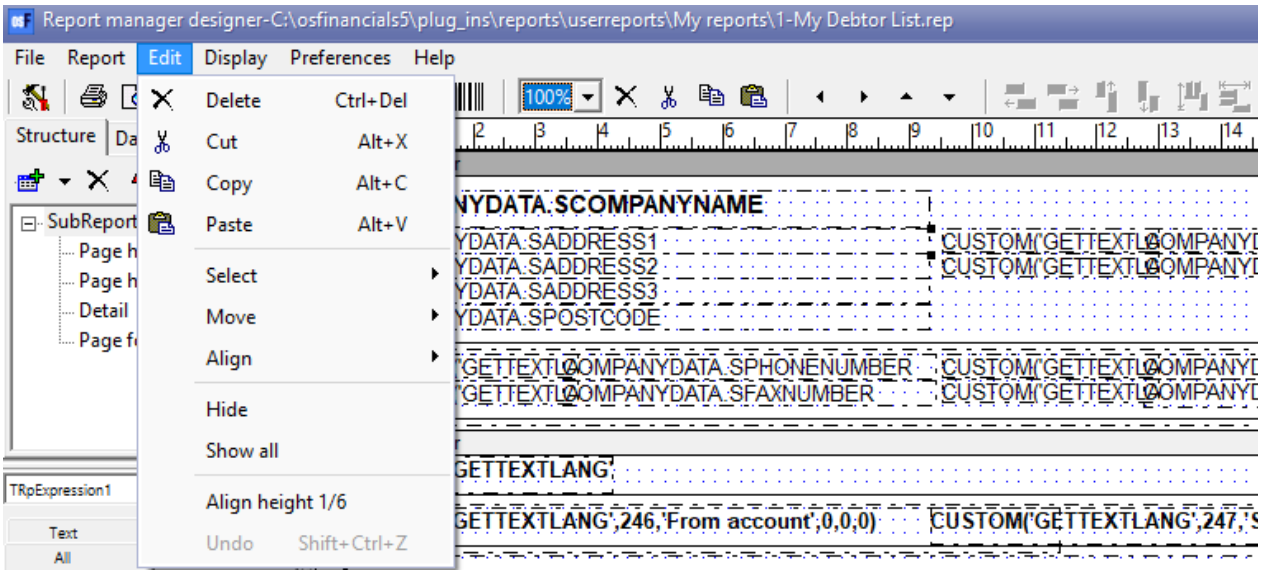


Add - You may select to add a Page header, Page footer, Group header and footer, Subreport or Detail to the structure of the report.

You may also click on the icon on the Structure tab.

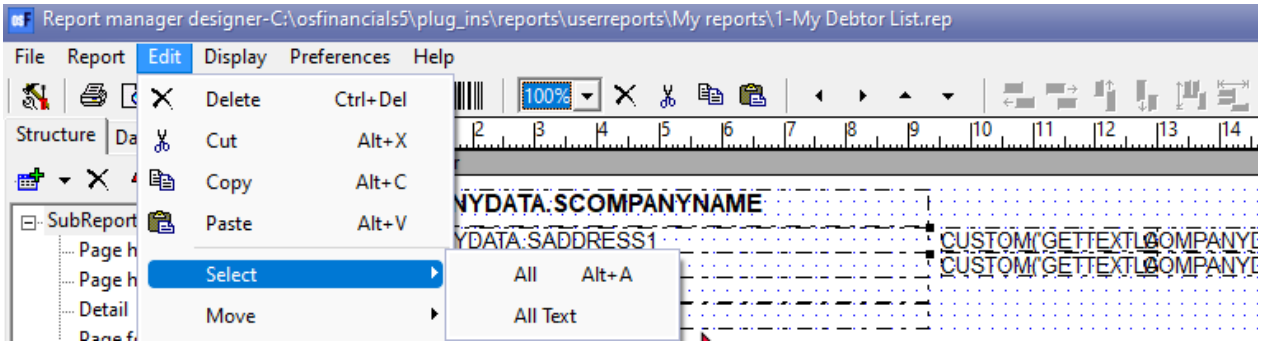


Edit menu



To Delete or Cut more than one object, select more than one (1) object (using the Shift + mouse click).

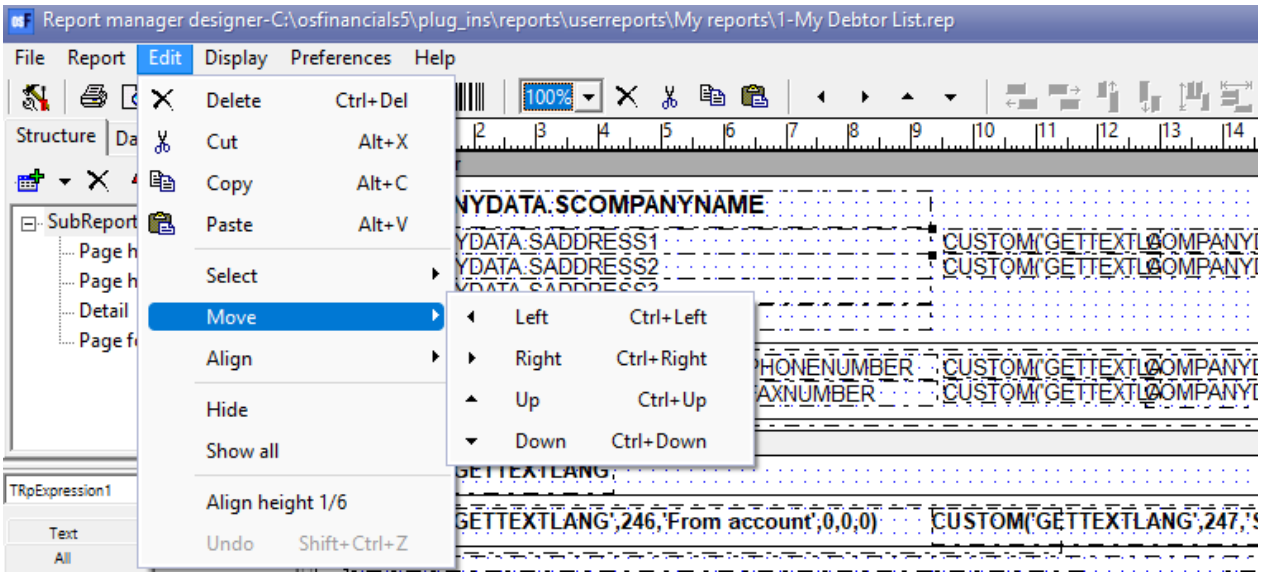
Edit → Select menu



All - This will select all objects on the report.

All text - This will select only the text objects and expressions, excluding simple drawings, shapes and images.

Edit → Move menu



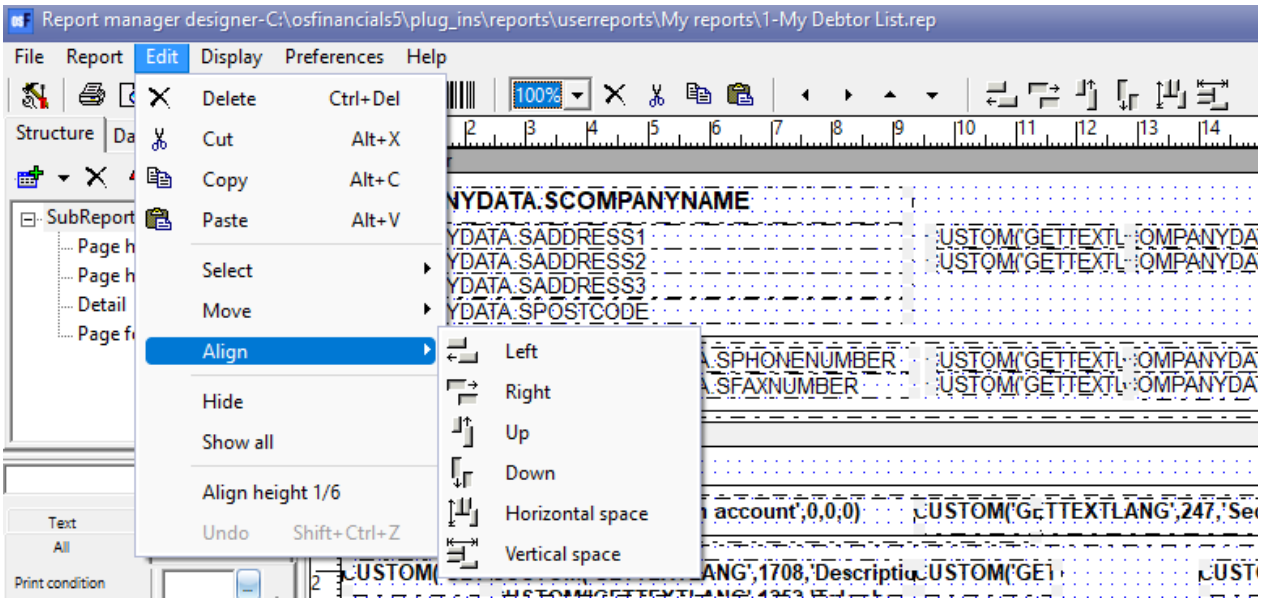
This will move a selected object one space to the left, right, up or down.

To move more than one object, select more than one (1) object (using the Shift + mouse click).

To move all, first select Edit → Select → All option.

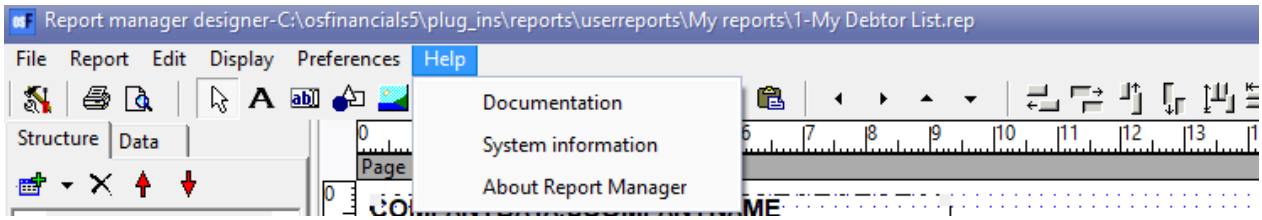
To move all the text objects and expressions, excluding simple drawings, shapes and images., first select Edit → Select → All text option.

Edit → Align menu



To activate the align objects, you must select more than one (1) object (using the Shift + mouse click) or Edit → Select → All / All Text menu options.

Help menu



Documentation

In addition to the Reportman topics, in this documentation, a set of offline documentation is stored in the " ... \plug_ins\reportman\doc " folder of your osFinancials5/TurboCASH5 installation directory.

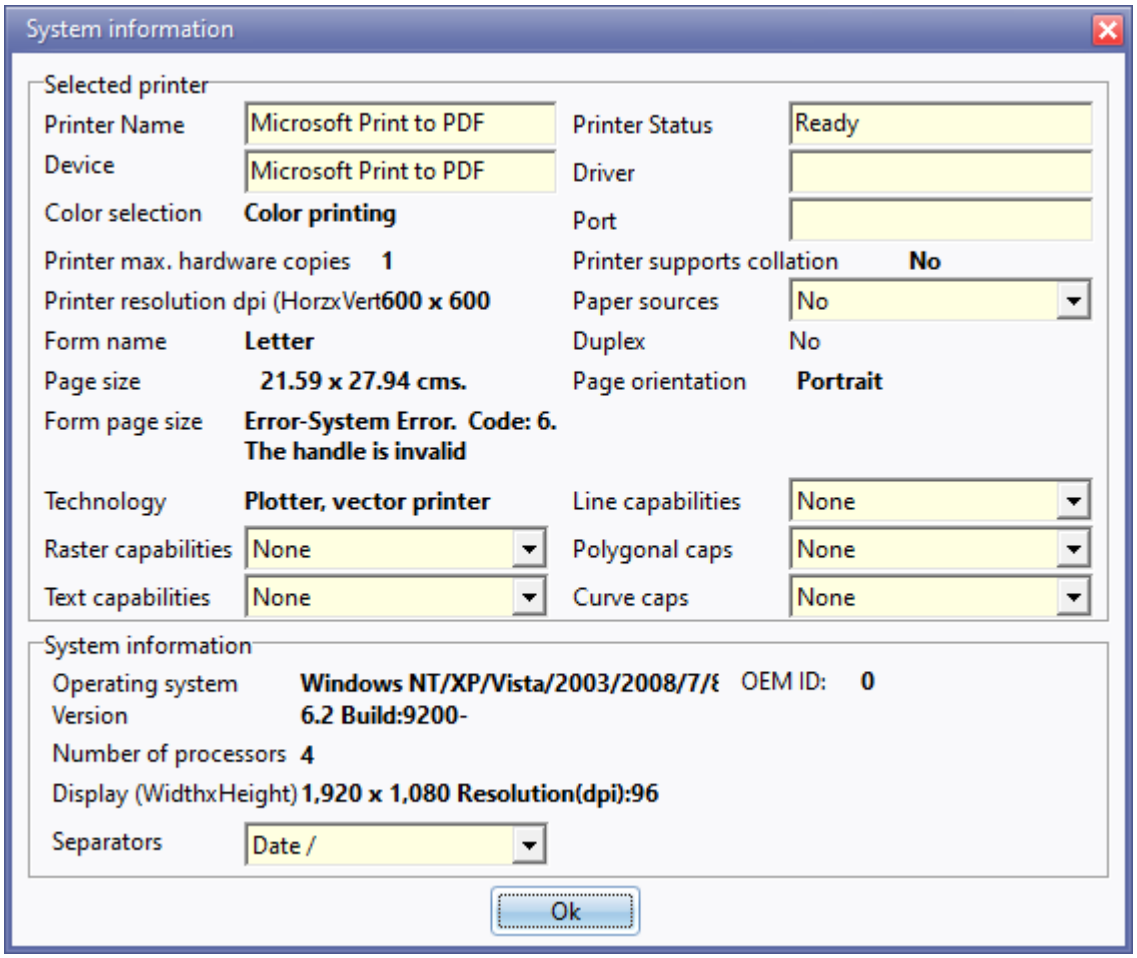
You may launch the index.html file (... / plug_ins/reportman/doc/index.html) in your web browser.

The official online documentation of the Report Manager is available at https://reportman.sourceforge.io/ .

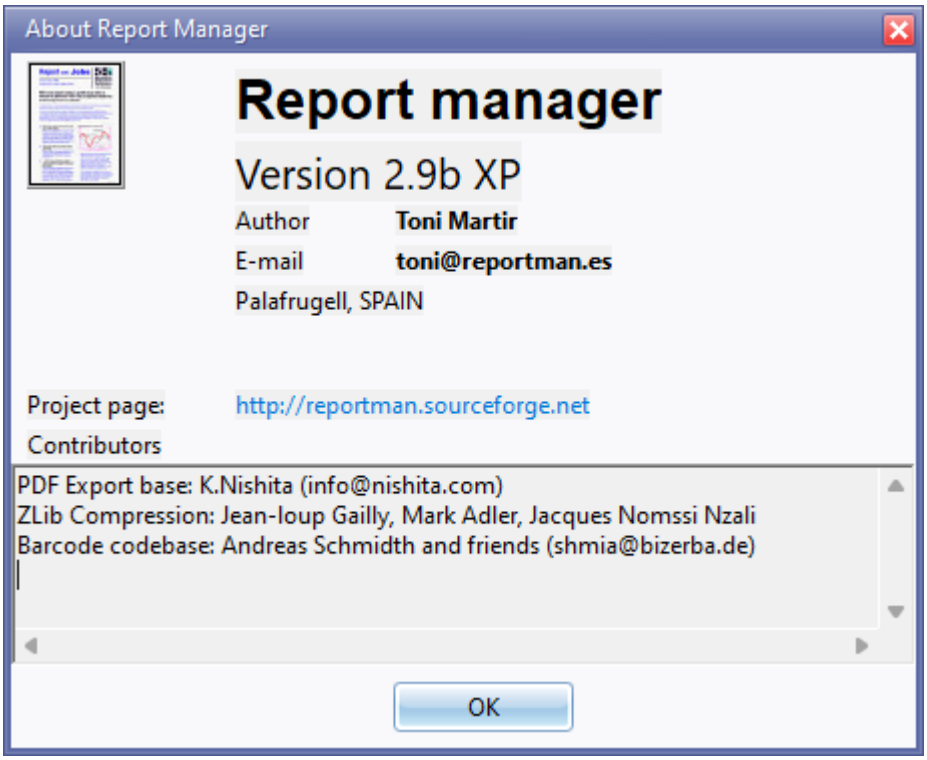
If you focus on a specific area of the fields on the "Report manager designer" screen, a question mark ? will appear attached to the mouse pointer ("cursor").

This will launch and display the specific topic (for example, https://reportman.sourceforge.io/doc/refexpression.html) in your system's default internet browser.

System information



About Report manager



Created with the Standard Edition of HelpNDoc: What is a Help Authoring tool?

Report designer - Add / Insert objects

For your convenience, the properties of the objects as at the back of this book.

1. Objects – The following most commonly used objects are added to a section of the report structure:

   a) TRpImage – This is used to display your company logo on the reports and document layout files. The Company Logo dataset is COMPANYINFO.LOGO (or COMPANYDATA.LOGO). The logo is stored in the database as a BLOB (Binary Large Object) and will be displayed if loaded in Setup → Company info - Options screen (Setup ribbon).

   b) TRpShape – Inserts a shape (i.e. rectangle, square, rounded rectangle, rounded square, ellipse, circle, horizontal line, vertical line, oblique 1 and oblique 2). These may be configured (formatted) using Pen Style, Pen Color, Pen Width, Brush Style and Brush Color. In most of the document layout files (excluding the Plain range), the rounded rectangle shape with a clear

brush, is used to group blocks of data.

c) TRpLabel – Add static text object to the report. Examples on the above picture are, Tax Invoice, Delivery address, Telephone, Fax, E-mail Address, etc.

d) TRpExpression – This will add an expression object to the report. If you click on the Data tab (on the left pane), Select a dataset (e.g. COMPANYINFO) and the datafield (e.g. COMPANYINFO.COMANYNAME) and simply drag it to the section of the report where you need to display it.

2. Other objects which may be added to reports are as follows:

a) TRpBarcode – This will add a barcode object to the report.

b) TRpChart – This add a chart object to the report. The Graphs per week en Graphs per month repost is examples where this object is used.

Created with the Standard Edition of HelpNDoc: Maximize Your PDF Protection with These Simple Steps

Report designer - Edit / Move / Align objects

Objects may be selected and edited or moved. These icons will only be active when an object is selected.

1. Editing Icons (also available on the Edit menu)

a) Select - Select an object on the report.

b) Delete - This icon will delete a selected object. (Keyboard: Ctrl + Del).

c) Cut - This will cut a selected object. (Keyboard: Alt + X).

d) Copy - This will place a copy of the selected object on the clipboard. (Keyboard: Alt + C).

e) Paste - This will paste (insert) the object from the clipboard. (Keyboard: Alt + X).

2. Moving Object Icons (also available on the Edit → Move menu)

a) Move left - Each click moves the selected object one space to the left. (Keyboard: Ctrl + Left).

b) Move right - Each click moves the selected object one space to the right. (Keyboard: Ctrl + Right).

c) Move up - Each click moves the selected object one space to the up. (Keyboard: Ctrl + Up).

d) Move down - Each click moves the selected object one space to the down. (Keyboard: Ctrl + Down).

3. Aligning Object icons (also available on the Edit → Align menu) - To activate the align objects, you must select more than one (1) object (using the Shift + mouse click) or Edit → Select → All / All Text menu options.

a) Align left - Aligns selection to the left.

b) Align right - Aligns selection to the right.

c) Align top - Aligns selection to the top.

d) Align bottom - Aligns selection to the bottom.

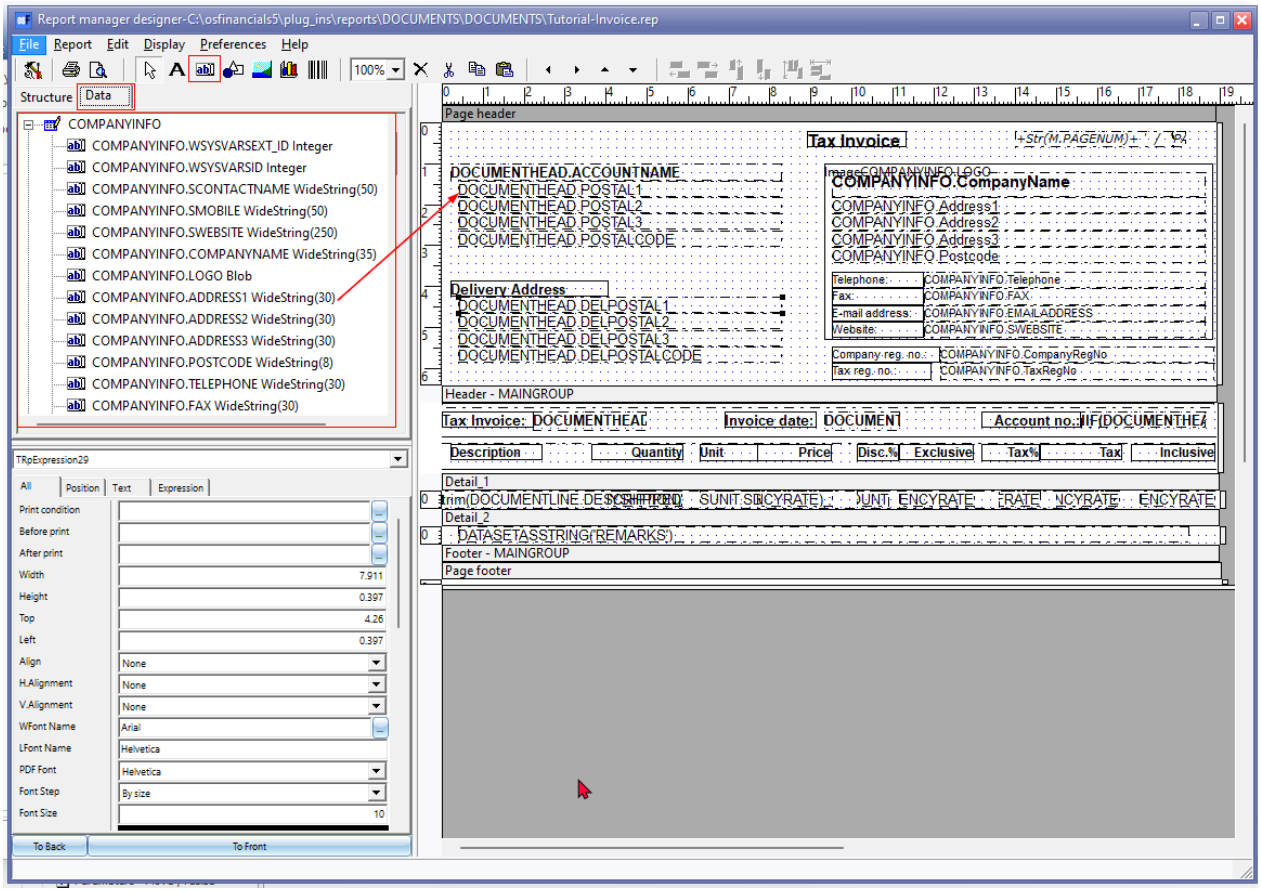
e) Align horizontal space - Aligns selection distributing horizontal space.

f) Align vertical space - Aligns selection distributing vertical space.

Created with the Standard Edition of HelpNDoc: Easily create PDF Help documents

Report designer - Add / Insert expressions

Once you have selected a section of the report, where you need to add data, click on the Data tab. It will list all your datasets and variables. Select a dataset (in this example the DOCUMENTHEAD dataset is selected). The dataset consists of various datafields or columns. After each database field, the properties (i.e. Data type and Database field length) is displayed.



There are two (2) basic steps to add database fields or expression objects to the report (i.e. drag and drop or manually adding expression objects). These are:

1. Draging and Dropping fields – After testing datasets and connections, you can select a database field, drag and drop it easily to report sections. This will add an expression object to the report.

2. Manually Adding Expressions – Should you need to build an expression consisting of more than one database field, and need one condition, for example (IIF(condition,Value is true,Value is false), etc., you need to click on the icon on the icon toolbar.

This will launch the Dialog screen, with a basic default expression (i.e. 2+2). When you click on the Show data button it will return a result of 4.

On this Dialog screen, you may add values (Operation) for the various Categories (i.e. Database fields, Functions, Variables, Constants and Operators) to define an expression object.

Created with the Standard Edition of HelpNDoc: Don't be left in the past: convert your WinHelp HLP help files to CHM with HelpNDoc

Report designer - Report Structure and Data

The left pane consists of the following two (2) tabs:

1. Structure – On this tab you need to select the report section (i.e. subreport, headers, footers, detail, etc.) to which you may add / edit objects (i.e. images, shapes, labels, expressions, barcodes, charts and variables).

2. Data – On this tab you need to select the dataset. You may easily add / edit objects (i.e. images, shapes, labels, expressions, barcodes, charts and variables) to include in your report or document layout file.

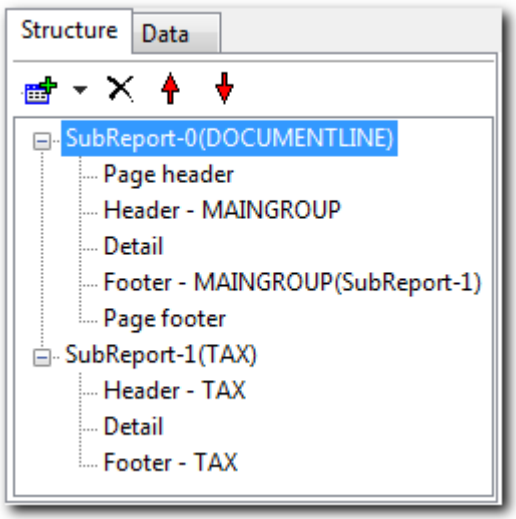
The right pane consists of the report document in the designer mode.

Created with the Standard Edition of HelpNDoc: Full-featured Documentation generator

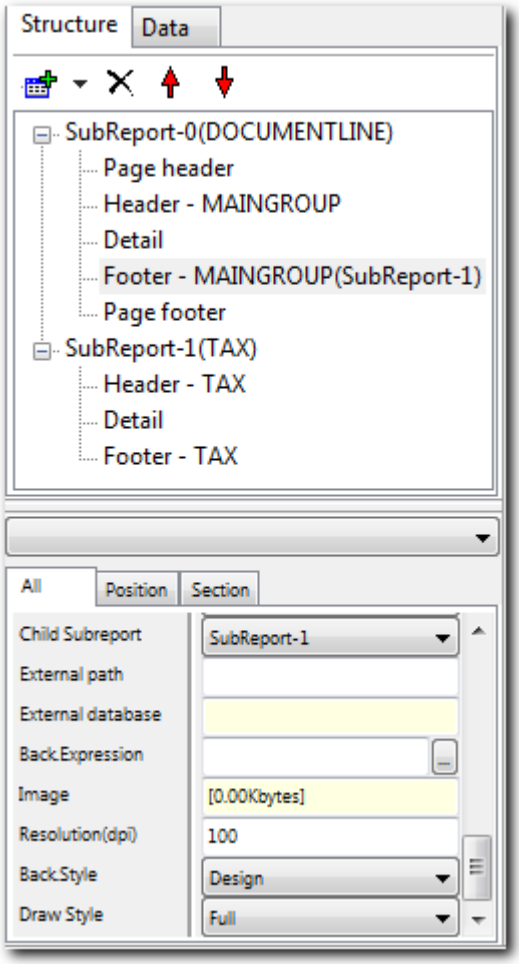
Report designer - Structure tab

If you click on Subreport-0. The setting for the object is linked to the DOCUMENTLINE dataset. This means that for each record, the column detail is printed.

If you define a new group, it will when the groups field, the group footer will be printed followed by the new group header.



In this report, the report footer is linked to Subreport-1



If you select the footer, you may view the properties of the link to the Subreport-0(DOCUMENTLINE).

The Footer – MAINGROUP(Subreport-1) is a Child Subreport of the Subreport-0(DOCUMENTLINE).

You may also link a detail row to a subreport. In combination with the masterdataset, you may link the masterdetail.

In the object inspector you may define settings and formats for the different objects. These object properties will be discussed briefly later in this document.

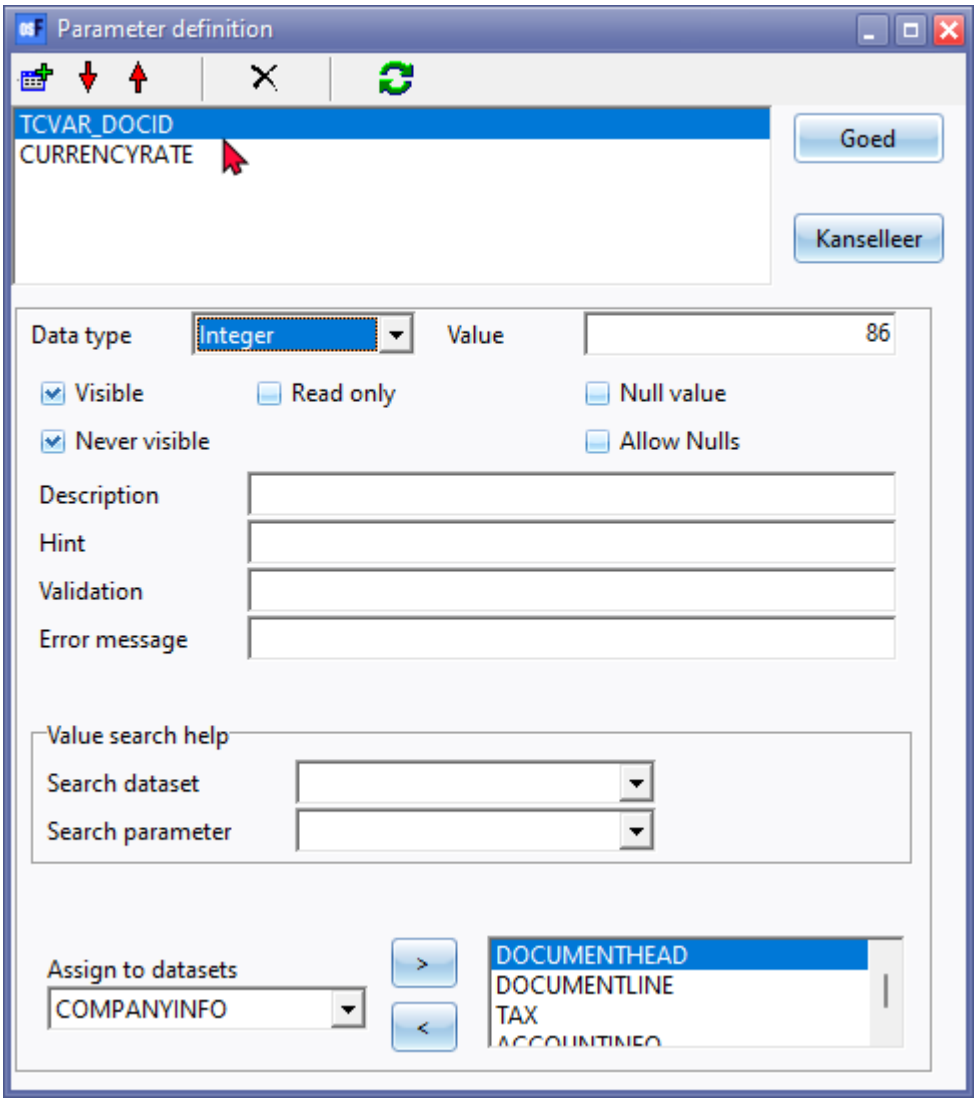
Report designer - Data access configuration

The Database connections and datasets is the heart of the Report manager. Parameters needs to be passed from osFinancials5/TurboCASH5 to Reportman for the various reports.

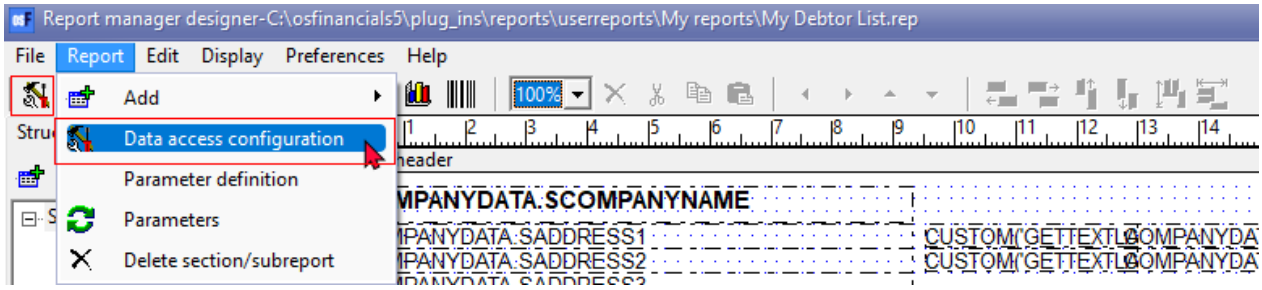
For documents, the *TCVAR_DOCID* parameter is used. This parameter contains the document number in the Dochead table.

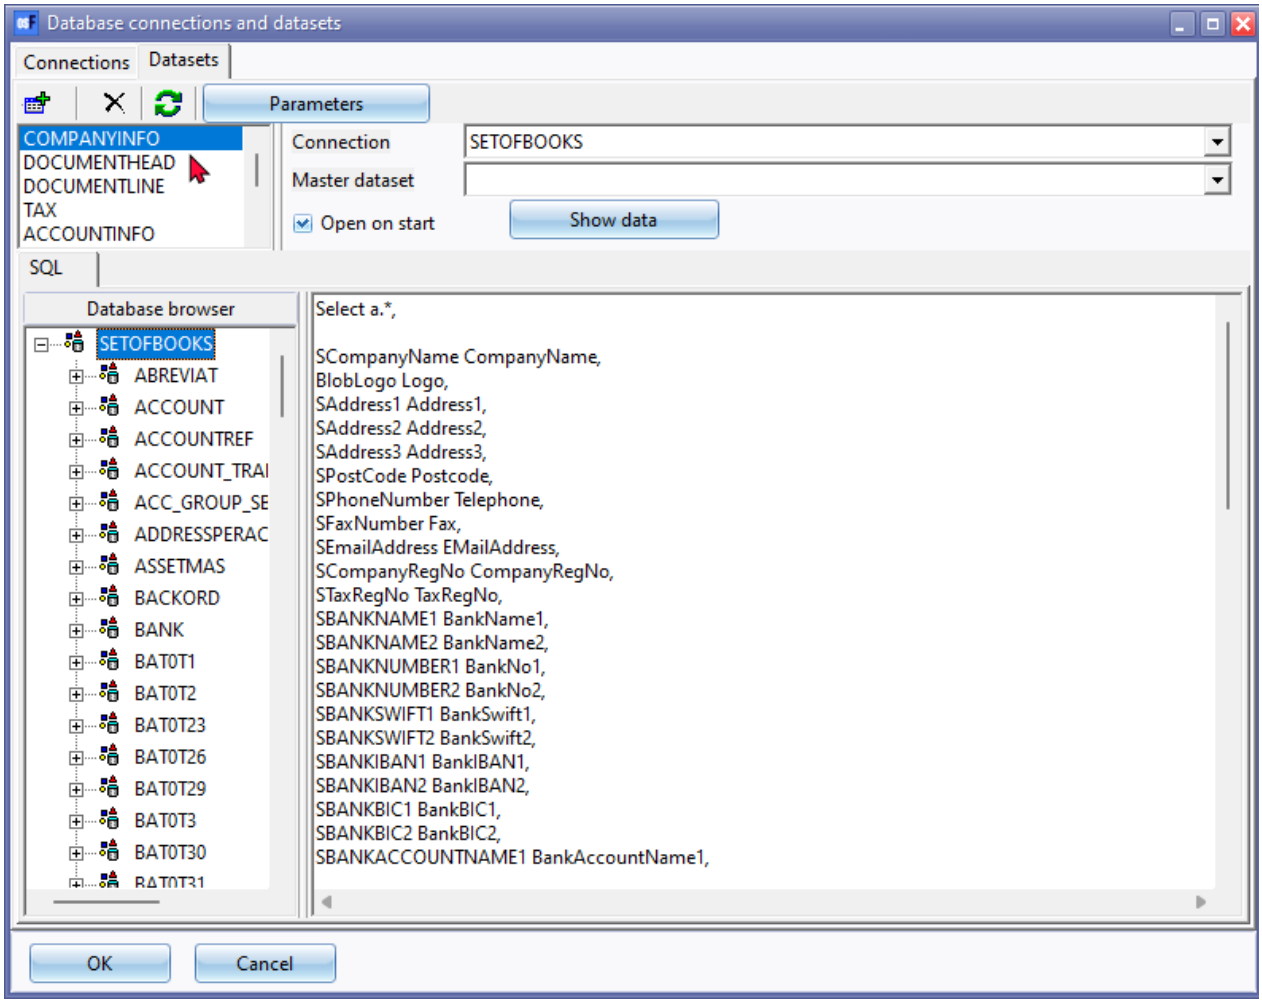


For example, in the case of Stock reports, you may need to use the SQL parameter for the data in Stock items (Default ribbon) to activate your search action. This will enable you to define and add various

criteria to be used in a report.

To access this you may click on the icon on icon toolbar or go to the Report → Data access configuration menu.





Here you may define your SQL, relationships and parameters to be used for the report.

Here you may define your SQL, relationships and parameters to be used for the report.

Created with the Standard Edition of HelpNDoc: Free CHM Help documentation generator

Report designer - Writing SQL

To write SQL is actually very simple, for example, “select data from table”, where data is a valid field name (e.g. ScompanyName Company Name) in the table and table is a valid table name (e.g. Sysvars).

To call the company name and Fax number (as entered in the Company info (Setup ribbon) screen (it is stored in the sysvars table)), you may simply write *select SCompanyName CompanyName, SFaxNumber Fax from Sysvars*.

Select YOUR DATA FIELDS from sysvars

An example of the SQL for the COMPANYINFO dataset is as follows:

SQL Text	*Data on Screens*
select *SCompanyName CompanyName,* *BlobLogo Logo,* *SAddress1 Address1,* *SAddress2 Address2,* *SAddress3 Address3,* *SPostCode Postcode,* *SPhoneNumber Telephone,* *SFaxNumber Fax,* *SEmailAddress EMailAddress,* *SCompanyRegNo CompanyRegNo,* *STaxRegNo TaxRegNo,* *SBANKNAME1 BankName1,* *SBANKNAME2 BankName2,* *SBANKNUMBER1 BankNo1,* *SBANKNUMBER2 BankNo2,* *SBANKSWIFT1 BankSwift1,*	*Setup Company info*

SQL Text	Data on Screens
SBANKSWIFT2 BankSwift2, SBANKIBAN1 BankIBAN1, SBANKIBAN2 BankIBAN2, SBANKACCOUNTNAME1 BankAccountName1, SBANKACCOUNTNAME2 BankAccountName2, SInvoiceHeading InvoceHead, SInvoicesMessage1 InvoiceMessage1, SInvoicesMessage2 InvoiceMessage2, SInvoicesMessage3 InvoiceMessage3,	Setup Documents (Invoices)
SCreditNoteHeading CreditNoteHead, SCreditNoteMessage1 CreditNoteMessage1, SCreditNoteMessage2 CreditNoteMessage2, SCreditNoteMessage3 CreditNoteMessage3,	Setup Documents (Credit notes)
SQuoteHeading QuoteHead, SQuoteMessage1 QuoteMessage1, SQuoteMessage2 QuoteMessage2, SQuoteMessage3 QuoteMessage3,	Setup Documents (Quotes)
SPurchaseHeading PurchaseHead, SPurchasesMessage1 PurchaseMessage1, SPurchasesMessage2 PurchaseMessage2, SPurchasesMessage3 PurchaseMessage3,	Setup Documents (Purchases)
SGoodsReturnedHeading SupplierReturnHead, SGoodsReturnedMessage1 SupplierReturnMessage1, SGoodsReturnedMessage2 SupplierReturnMessage2, SGoodsReturnedMessage3 SupplierReturnMessage3,	Setup Documents (Supplier returns)
SOrderHeading OrderHead, SOrderMessage1 OrderMessage1,	Setup Documents (Orders)

SQL Text	Data on Screens
SOrderMessage2 OrderMessage2, SOrderMessage3 OrderMessage3, SStatementMessage1 StatementMessage1, SStatementMessage2 StatementMessage2, SStatementMessage3 StatementMessage3,	Setup Statements
SSellingPriceName1 SellingPrice1, SSellingPriceName2 SellingPrice2, SSellingPriceName3 SellingPrice3,	Setup Stock information (selling prices)
SAccountReportName1 LedgerRepGroup1, SAccountReportName1 LedgerRepGroup2,	Setup Account groups
SDebtorReportName1 DebtorRepGroup1, SDebtorReportName2 DebtorRepGroup2,	Setup Debtor groups
SCreditorReportName1 CreditorRepGroup1, SCreditorReportName2 CreditorRepGroup2,	Setup Creditor groups
SStockReportName1 StockRepGroup1, SStockReportName1 StockRepGroup2,	Setup Stock groups
WRetainedIncomeID RetainedIncomeAccId, WDebtorsControlID DebtorsControlAccId, WCreditorsControlID CreditorControlAccId	Control accounts linked to the books (default per Set of Books template selected or specified in the Create Set of Books (Advanced) option on the creation wizard.
from sysvars

Report designer - Add a Dataset

Additional fields any be added using the FreeFields Plugin / Extension. The SYSVARSEXT table is already present in all Sets of Books.

To add your data to the report, simply do the following:

1. Enter your data in the Setup → Company info - Additional Data - (Setup ribbon) section, if these fields are blank.

2. Launch the Report designer from the Setup ribbon.
3. Select MyInvoice.rep and double-click on it (or click on the Edit button of the Report man screen).
4. On the Report manager designer screen, go to Report → Data access configuration menu and add the Dataset *SYSVARSEXT* as a new Dataset.
5. Copy the following SQL text to the text box:

```
Select
SCONTACTNAME  ContactName,
SMOBILE  MobileNo
from Sysvarsext
```

6. Click on the Show data button. Your data (as entered in the Setup → Company info - Additional data section (Setup ribbon) will now be displayed.
7. Close the "*Data* preview" screen. Click on the OK button of the" *Data access configuration"* screen to save the changes.
8. In the Structure tab of the Report manager designer screen, select the section of the Report where you wish to add this data.
9. Click on the Data tab.
10. Select the "*SYSVARSEXT"* Dataset and expand the tree. Select the "*SContactName*" field and drag it to the section of the report. Also drag the "*Smobile*" Data field and drag it to the report section.

11. Click on the Preview button of the Report manager designer screen to view your data.

12. You may wish to add Labels (Static Text) objects to the labels. This newly added data will be displayed on the new layout file.

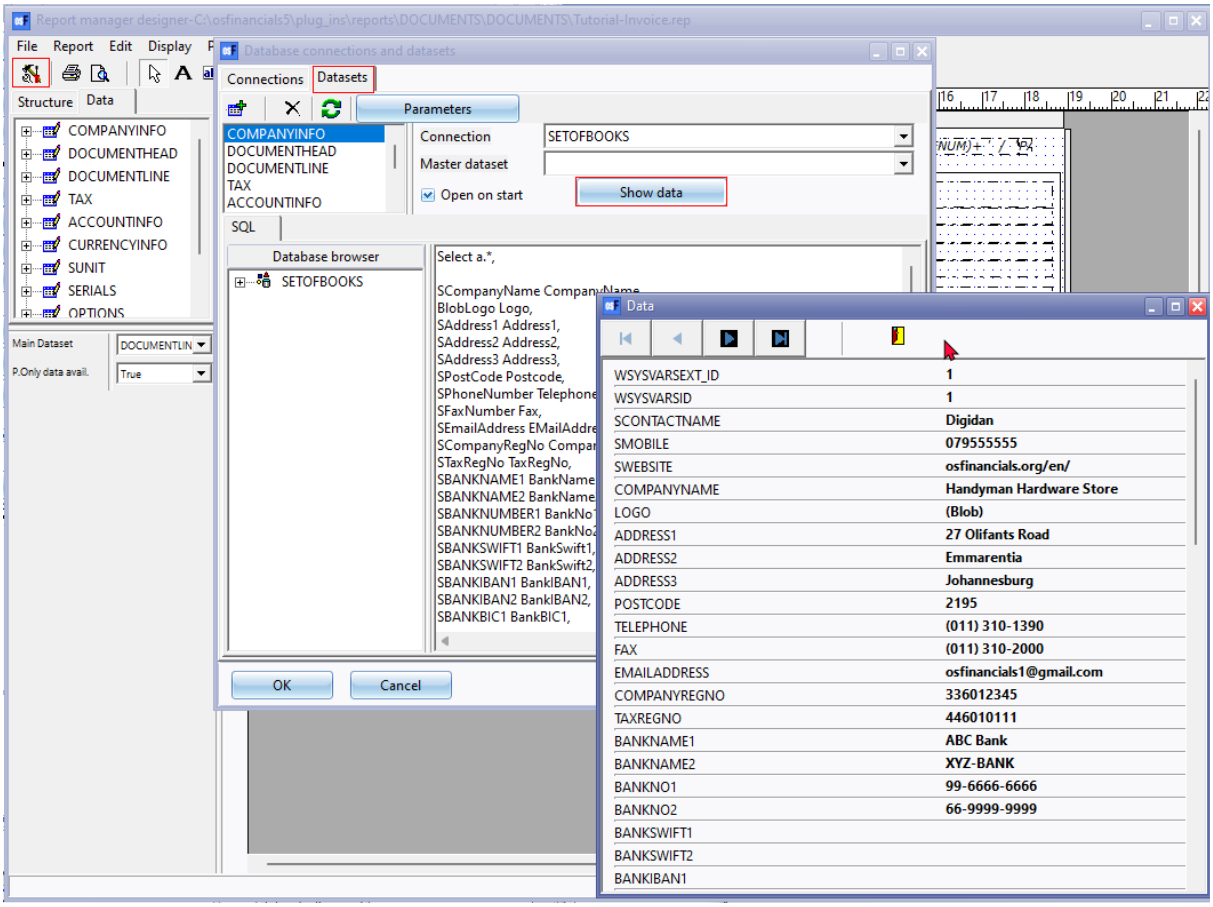
Created with the Standard Edition of HelpNDoc: Enhance Your Documentation with HelpNDoc's Advanced Project Analyzer

Report designer - View Dataset

To view the datasets:

1. On the "*Report manager designer*" screen, click on the Data access configuration icon

2. Select the Dataset from the list and click on the Show data button.



3. In this example, the Data (for the "*COMPANYINFO*" Dataset) is as follows:

If you click on the Exit button, you will return to the "*Database connections and datasets"* screen.

You may view other Datasets.

4. For example, if you view the "*DOCUMENTLINE*" Dataset, and you have more than one line in the document (transactions and/or comments), you may click on the Next and First record buttons to view the transactions / and or comments.

5. Click on the OK button of the "*Database connections and datasets"* screen.

Report man interface

To make it easier to introduce Reportman and to get started with editing customising document layout files, we start with a practice task. The Data structures and complex stuff will be added at the end of this Document for reference purposes.

It is not necessary to use parameters for reports, but it is useful in the case of document layout files.

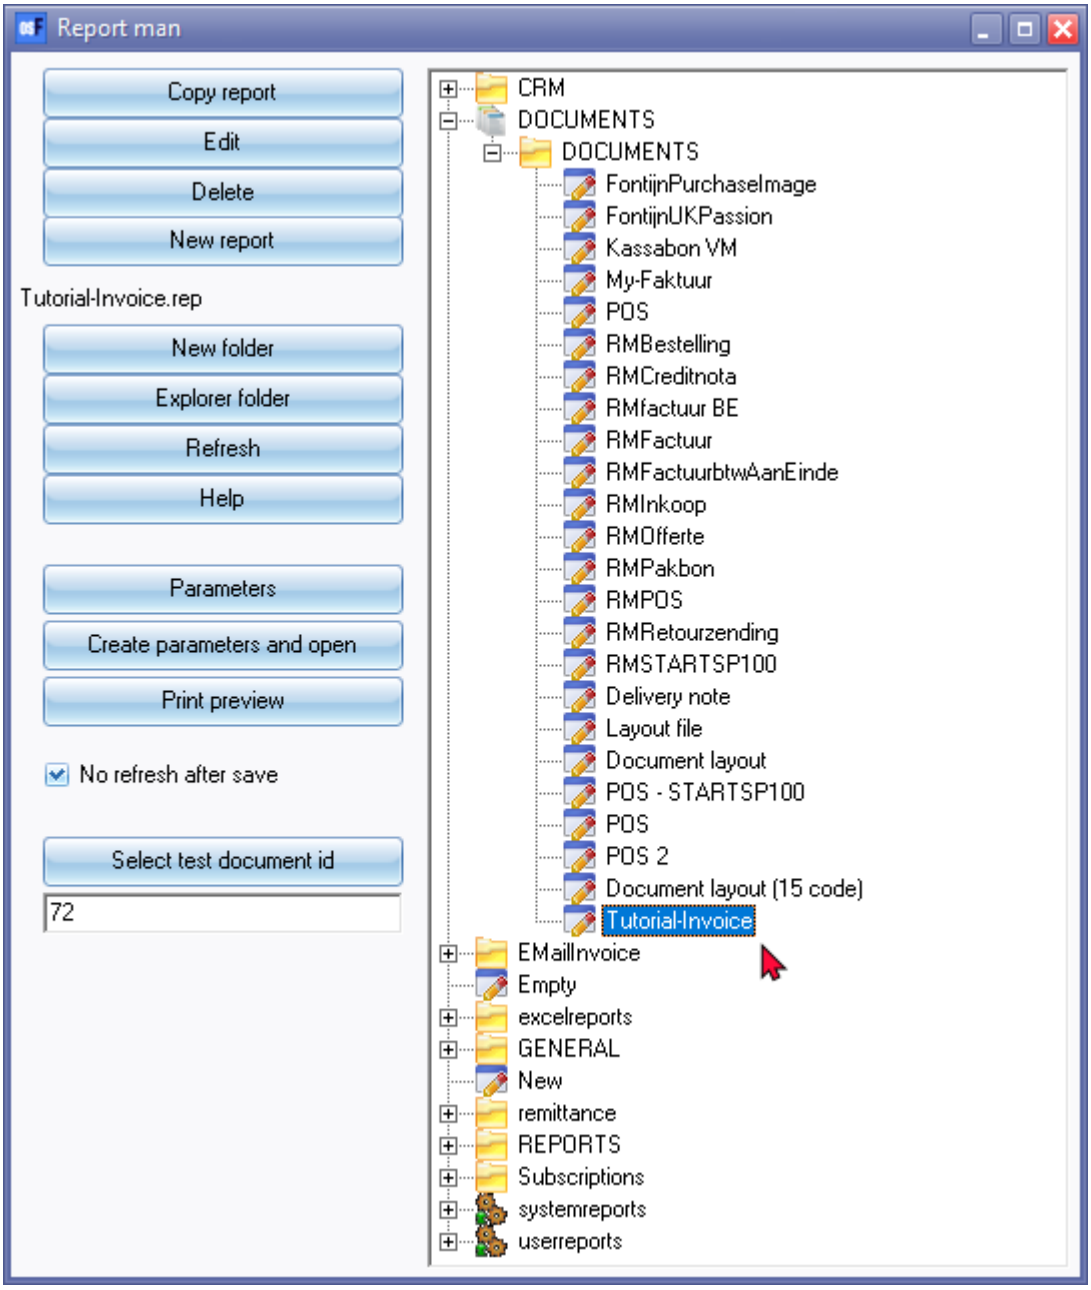
The first step is to understand the ease of use of the Reportman interface and configuring Reportman. To do this, we have created a TestInvoice.rep in the latest update.

Follow these easy steps to explore and see the Reportman:

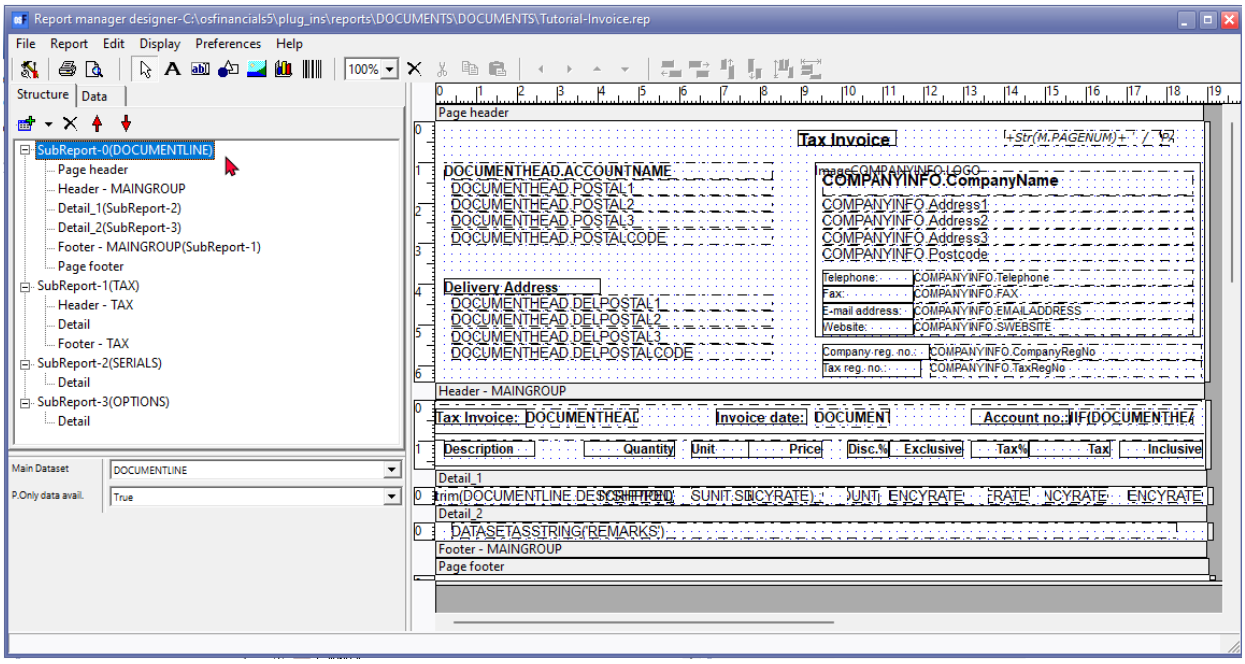
1. Once the Report man screen is opened (default DOCUMENTS/DOCUMENTS), select the TestInvoice.rep in the list of Documents.

2. Click on the Explorer folder button.

3. Copy the TestInvoice.rep (in the File Explorer folder) and rename it to MyInvoice.rep.



4. Click on the Refresh button and select the MyInvoice.rep. You may double-click (or click on the Edit button) to open the Invoice in the Report manager designer screen.



Document layout file - Structure

SubReport-0(DOCUMENTLINE)

These are the fields that print at the top of the document layout file as well as the document headings that appear for the item(s) in the document lines.

SubReport-1(TAX)

These are the Totals and the fields that print at the bottom of the document layout file.

SubReport-2(SERIALS)

It lists the series and serial numbers as well as location selected with the Place Series Batch plugin on the document lines.

SubReport-3(OPTIONS)

It lists the options selected for the option items and option items (no stock) stock item types selected on the document lines.

Created with the Standard Edition of HelpNDoc: Easy EBook and documentation generator

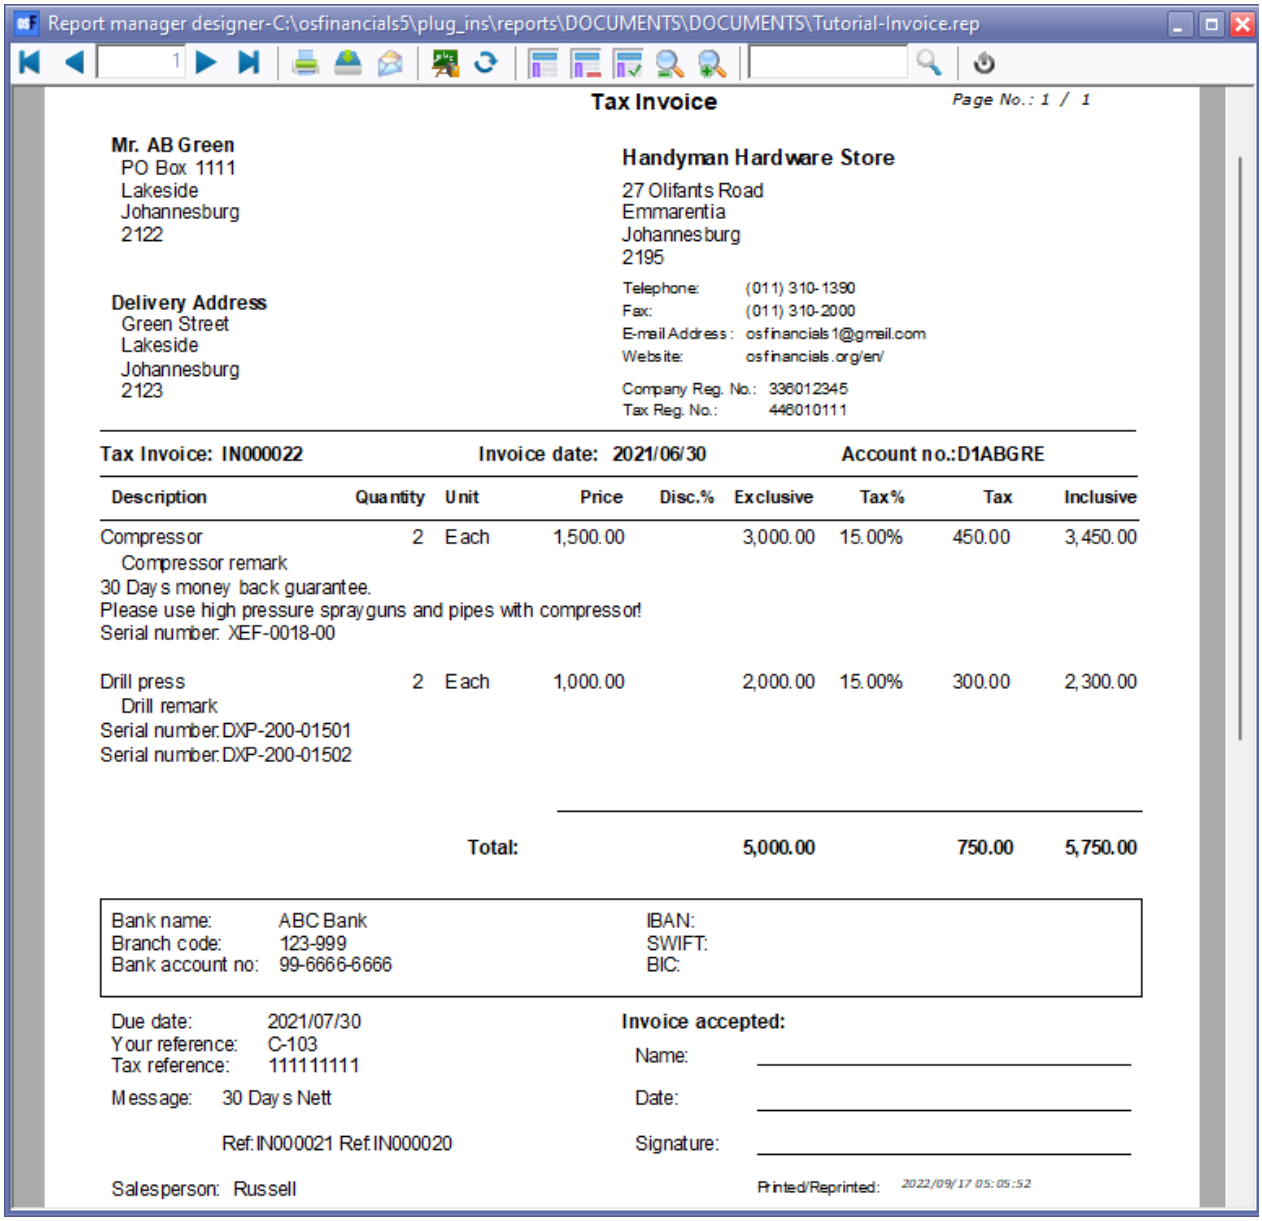
Reportman output

Output Icons – See Data access configuration. If you cannot establish a database connection, you will not be able to preview or print the report.

- Preview – View the report on the screen.
- Print – Opens the Print dialog on which you may select a printer, printer properties, select pages (if required).

Preview

Once you can view data (using the Show data button), you may click on the Preview icon on the icon toolbar of the "*Report manager designer*" screen to preview the report or document layout file.



Preview in PDF format

It may be important to check your document layout file in PDF format, as PDF format for document layout files, may in most cases, be sent to debtors (customers / clients) and to creditors (suppliers / vendors).

If there are any adjustments, you can edit the document.

The data displayed in the preview of the invoice, should be your own data as entered in the Company info (Setup ribbon) and Debtors (Default ribbon), and in your document header and document lines file.

Created with the Standard Edition of HelpNDoc: Make Help Documentation a Breeze with a Help Authoring Tool

Reportman - Select test document id

You can regularly preview your document layout file on screen. This will point out possible errors as well as where you can make the document layout file neater by moving fields, enlarging, setting the font properties, etc.

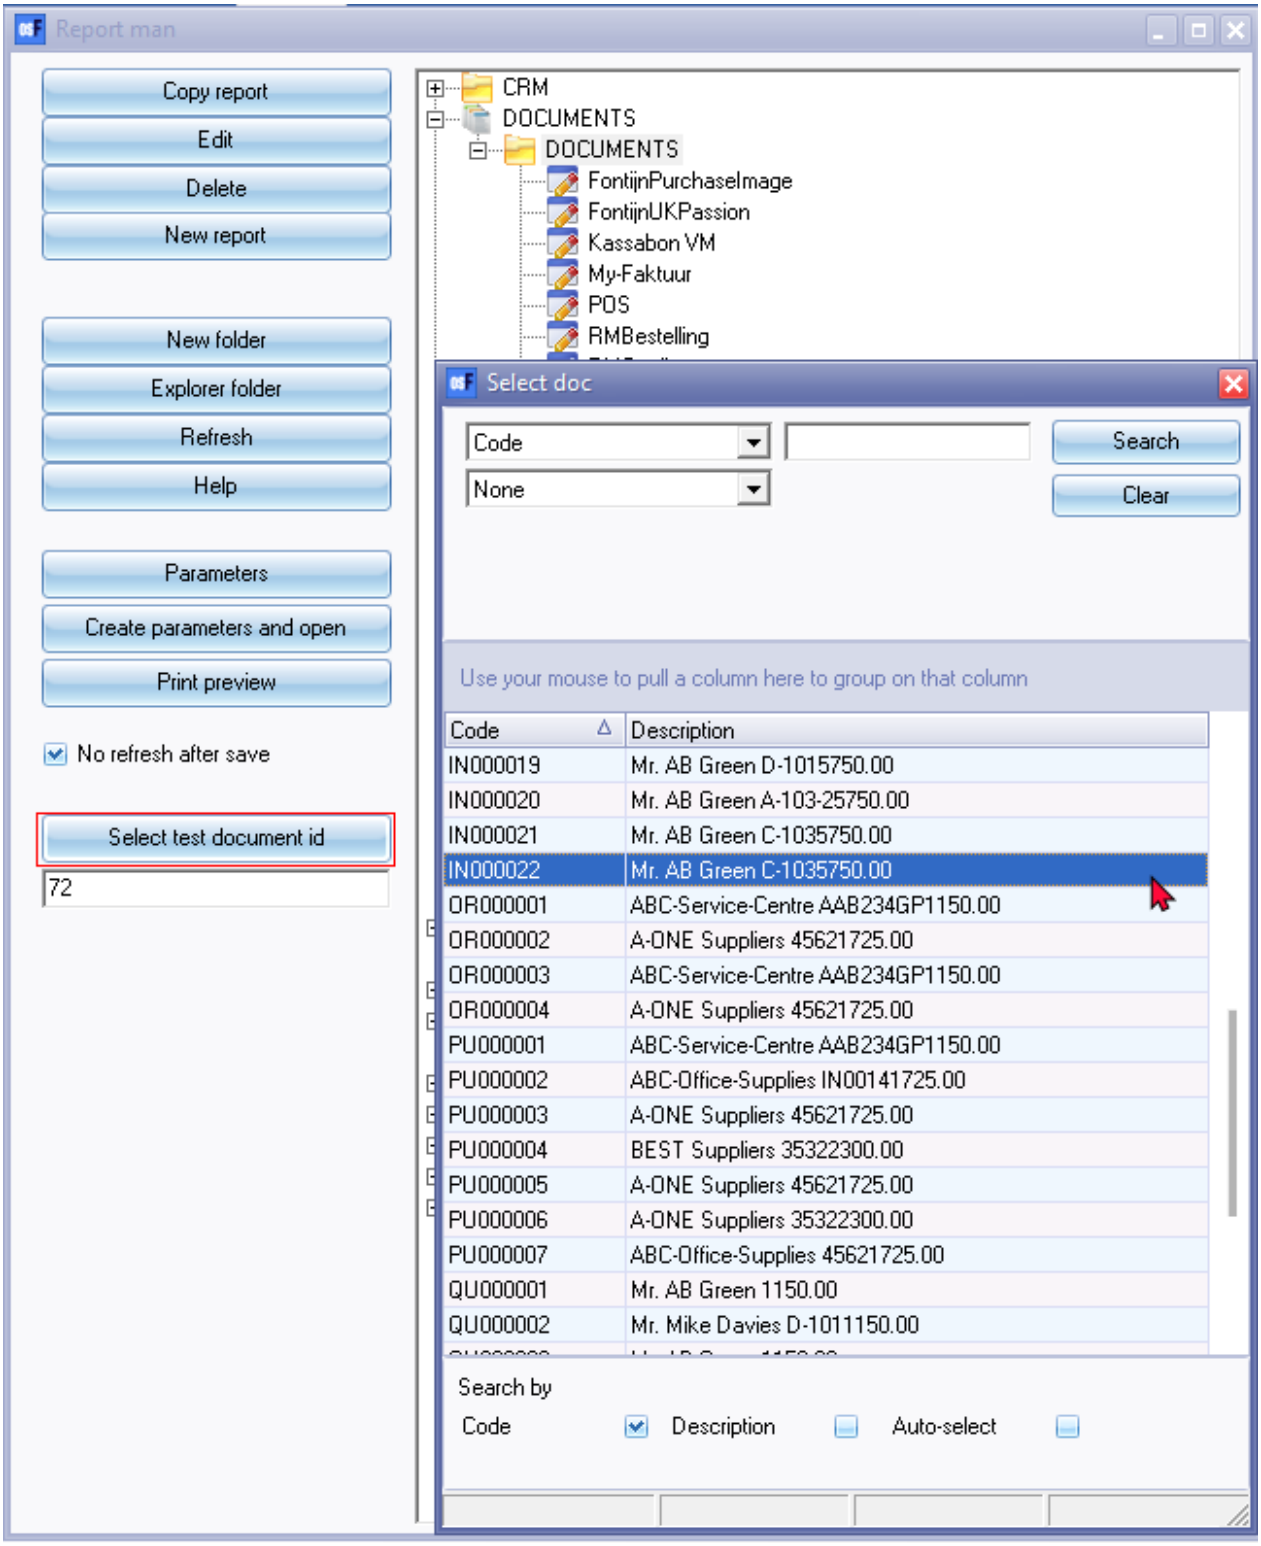
When you want to preview a document layout file, the last or most recently processed document will be available for you to view or when you:

- click on the Print preview button from the "*Report man*" screen, or
- click the Preview report on screen icon) from the "*Report manager designer*" screen.

When you are editing a document layout file and you want to preview the document layout file, you can click on the Select test document id button to select a specific document layout file.

You can select any sales documents (i.e. Quotes, Invoices and Credit notes) or purchase documents (i.e. Orders, Purchases and Supplier returns) document type.

These document types may be posted or unposted, confirmed or unconfirmed.



In the case of sales documents (i.e. Quotes, Invoices and Credit notes), the document number, debtor (customer / client) account and total will list the document.

In the case of purchase documents (i.e. Orders, Purchases and Supplier returns), the document number, creditor (supplier / vendor) account and total will list the document.

The selected document id (which was automatically generated when documents were created, copied or imported) will be displayed, for example 72 - IN000022.

Created with the Standard Edition of HelpNDoc: Easily create Web Help sites

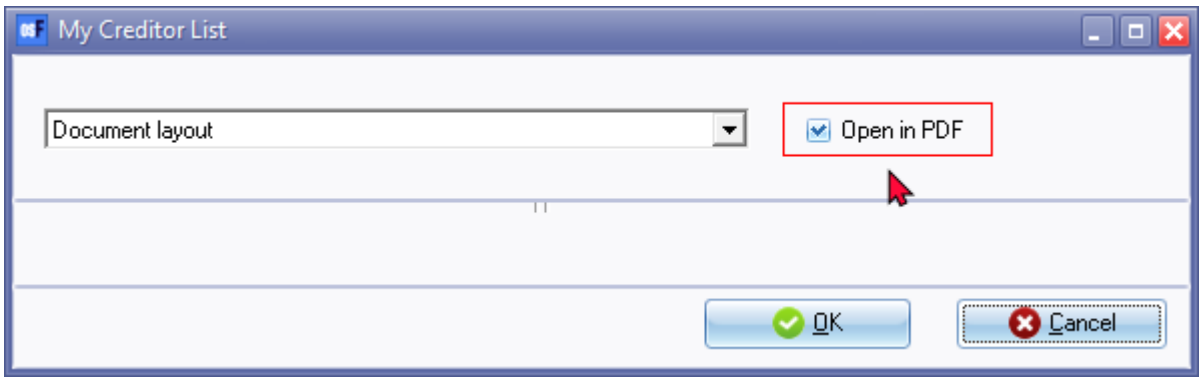
Reportman output - Transparent setting

Preview document layout file in PDF-format

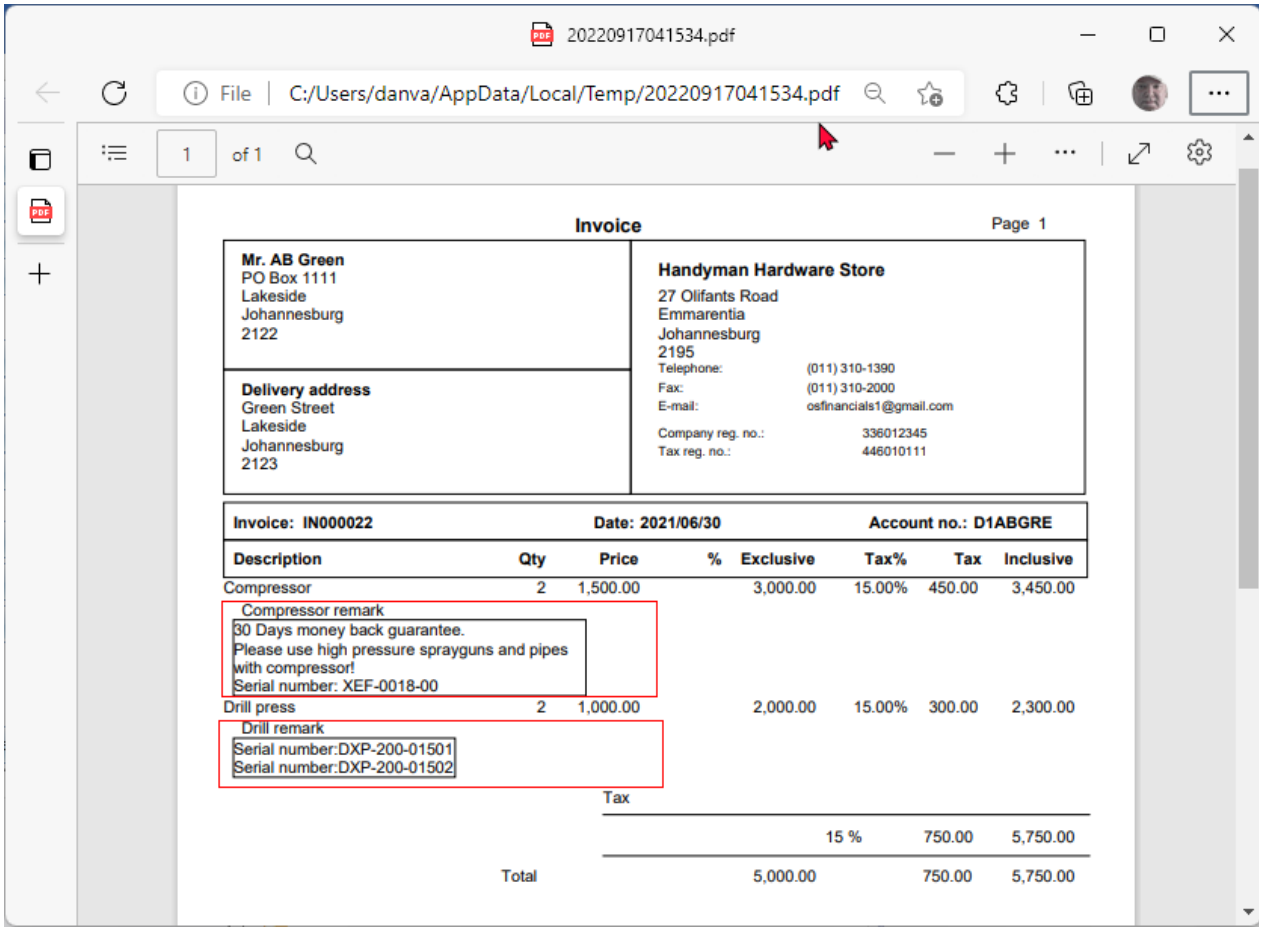
If there are any adjustments, you can edit the document, as PDF format for document layout files may in most cases be sent to debtors (customers / clients) and to creditors (suppliers / vendors).

To preview the document layout file in the PDF format:

When you click on the Print preview button from the "*Report man*" screen, select the "*Open in PDF*"-option and click OK.



An example of the document layout file opened in the PDF format of your system's default PDF application (in this example, "*Microsoft Edge*"):



Transparent setting

The Transparent setting if set to "*False*" for an object (e.g. Static text, Expression, etc.) will print and display correctly when you click on the Print preview button from the "*Report man*" screen, or on the the Preview report on screen icon) from the "*Report manager designer*" screen.

Should you Print the document layout file, in the PDF format the "Transparent" setting, if set to "False", will display a rectangular lines around the object (e.g. Expression, Static text, etc.).

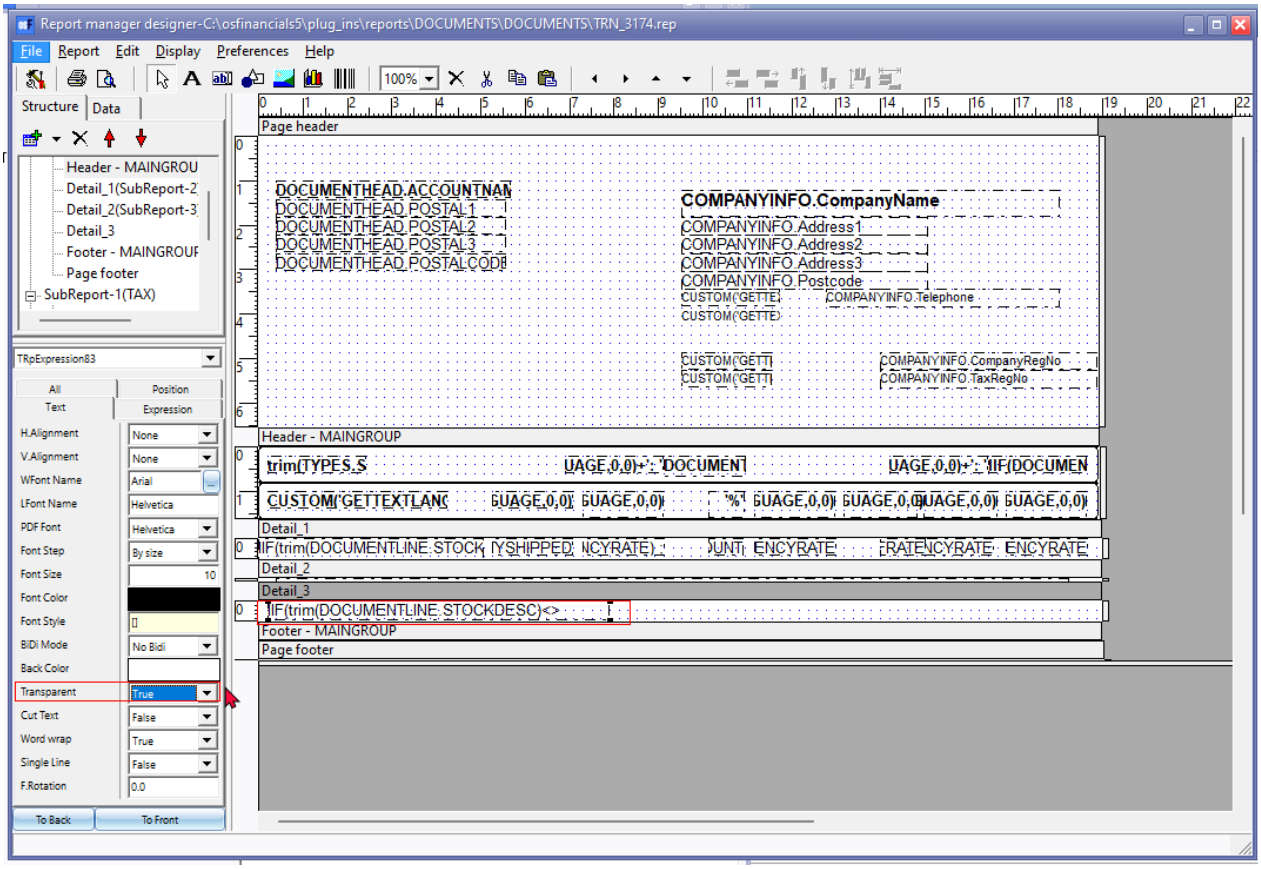
To change the transparent setting:

Select the document layout file end click on Edit button of the "*Report man*" screen.

Select the Expression. In this example, it is the Comments displaying a rectangular border.

On the Text tab, Transparent is set to "*False*".

Change the Transparent to "*True*".



Close the "Report manager designer" screen, and save the report.

Click on the Print preview button from the "*Report man*" screen, select the "*Open in PDF*"-option and click OK.

An example of the document layout file (with the Transparent setting set to " *True*") opened in the PDF format of your system's default PDF application (in this example, "*Microsoft Edge*"):

Report designer - Customise layout files

Report designer - Customise layout files

In osFinancials5/TurboCASH5, you have the option to further customise document layout files using the Report designer feature available on the Setup ribbon. This functionality provides users with additional flexibility and control over the appearance and content of their financial documents.

Here's how you can customise document layout files using the Report designer:

1. Select Existing Layout or Your Own Layout File: In osFinancials5/TurboCASH5, the Report designer allows you to choose from existing layout files or create your own layout from scratch. You can select a pre-defined layout file that closely matches your requirements and then make modifications as needed. Alternatively, you have the freedom to start with a blank layout file and build it according to

your specific preferences.

2. Customize Layout Elements: Using the Report designer, you can customize various elements of the document layout. This includes adjusting the placement and formatting of fields, headers, footers, company logo, transaction details, and any other relevant content.
3. Add or Remove Fields: You can add or remove fields as necessary to display the information you want on the document. This allows you to include or exclude specific details that are relevant to your business and industry.
4. Formatting and Styling: The Report designer provides options to format and style the document layout. You can choose font styles, colors, borders, and other visual elements to match your branding and create a professional look.
5. Preview and Test: As you make changes in the Report designer, you can preview how the document will look before finalizing the layout. This allows you to test the design and ensure that it meets your expectations.
6. Save and Apply Layout: Once you are satisfied with the customizations, you can save the layout and apply it to the respective document type. The modified layout will then be used when generating documents of that type in osFinancials5/TurboCASH5.

By providing the option to customize document layout files using the Report designer, osFinancials5/TurboCASH5 empowers businesses to create personalized and professional financial documents that align with their unique needs and preferences. This feature adds another layer of adaptability and customization to the accounting software, enhancing the user experience and ensuring that documents reflect the company's branding and style.

Designing custom layout files for documents

When designing custom layout files for documents such as invoices or any other types of documents in osFinancials5/TurboCASH5 Report designer (Setup ribbon), it's crucial to consider the requirements of your tax jurisdiction. This includes not only the content of the document but also its appearance and formatting.

Here are a few points to keep in mind when designing custom layout files for documents, especially invoices, while considering tax jurisdiction requirements:

1. Document Name: The name of the document may need to include specific terms like "*Invoice*","*Tax Invoice*" or "*VAT Invoice*," based on the requirements of your tax jurisdiction. Ensure that the document name aligns with the regulations.
2. Mandatory Information: Different tax jurisdictions may require specific information to be present on invoices, such as your business details, customer details, itemised list of products or services, quantities, prices, applicable taxes, and total amount. Make sure all the necessary information is included and properly formatted.
3. Tax Details: Invoices should clearly display tax-related details, including the tax rate, tax amount, and any tax identification numbers required by your tax authority.
4. Currency: If you conduct transactions in multiple currencies, consider including the currency in which the transaction is conducted.
5. Formatting: Ensure that the layout is clear, well-organized, and easy to read. Follow any specific formatting guidelines prescribed by your tax jurisdiction.
6. Localisation: If your business operates in multiple countries or regions with different tax regulations, consider creating different layouts or templates tailored to each jurisdiction's requirements.
7. Logo and Branding: Your company logo and branding should still be prominently displayed on the layout, maintaining your professional identity.
8. Language: If required, provide translations or multilingual options to accommodate different languages spoken in your region.
9. Accessibility: Ensure that the layout is accessible to people with disabilities, complying with accessibility standards if applicable.
10. Testing and Adjusting: Ensure to thoroughly test the document layout file by printing it and generating it in PDF format. This helps to verify the alignment and presentation of the content. If needed, make adjustments to ensure the layout appears as intended and meets the necessary requirements.

By carefully considering the tax jurisdiction requirements and integrating them into your document layout design, you can help ensure that your invoices and other documents meet legal and regulatory standards while maintaining a professional and consistent appearance for your business communications.

Created with the Standard Edition of HelpNDoc: Free Web Help generator

Report designer - Company logo

The Company logo image "*TRpImage*" is included in all on Document layout files and Debtor statements as well as on Creditor remittance advises. It is basically a place holder over the Company contact information on the Page headers.

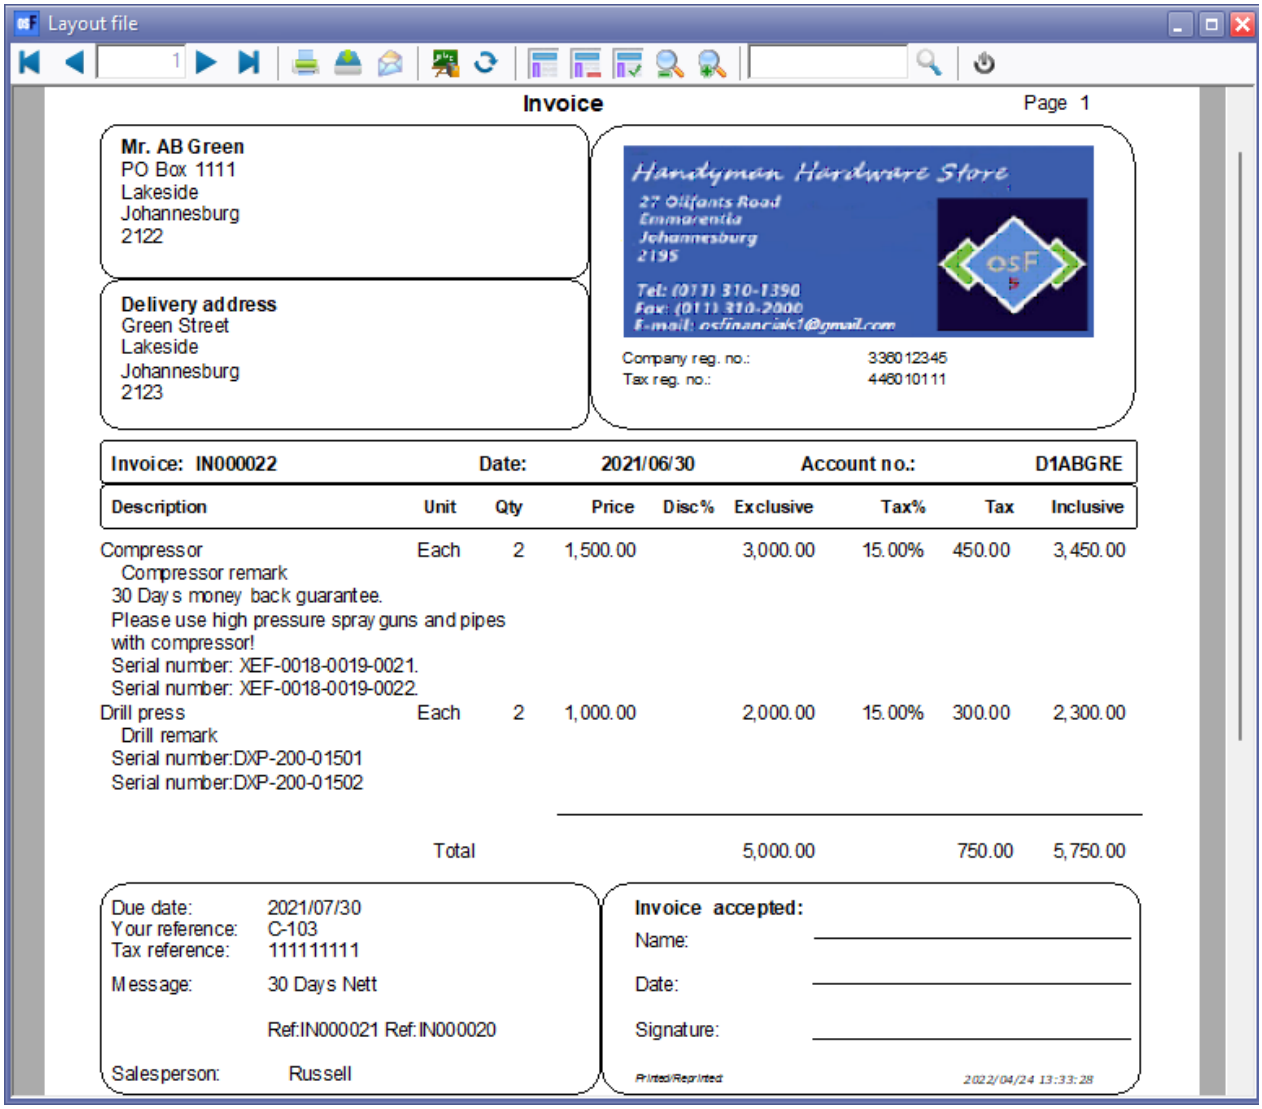
Example : Company logo as Image

In this example a company logo may also be added as an image in the layout file. In this example, you do not need to load the

Company info (Setup ribbon).

You need to load your Company logo on the Options screen of Setup → Company info (Setup ribbon). The selected Company logo will print on Document layout files and Debtor statements as well as on Creditor remittance advises.

The company logo, should include the address, telephone number, fax number and e-mail address, since it will replace the text in the Page headers of Document layout files and Debtor statements as well as on Creditor remittance advises.



Company logo - Image sizes

The Image size for the Company logo included on the or TRpImage on most Document layout files (COMPANYDATA.LOGO) and Debtor statements as well as on Creditor remittance advises (COMPANYDATA.BLOBLOGO), is as follows:

		Measurement in Sample logo used in documentation - Draw Style = Stretch		
Size	*Unit*	*Pixels (px)*	*Centimetres (cm)*	*Inches*
Height	*9.5 Twips*	*318 pixels*	*8.41cm*	*3.31 inches*
Width	*4.3 Twips*	*138 pixels*	*3.65 cm*	*1.44 inches*

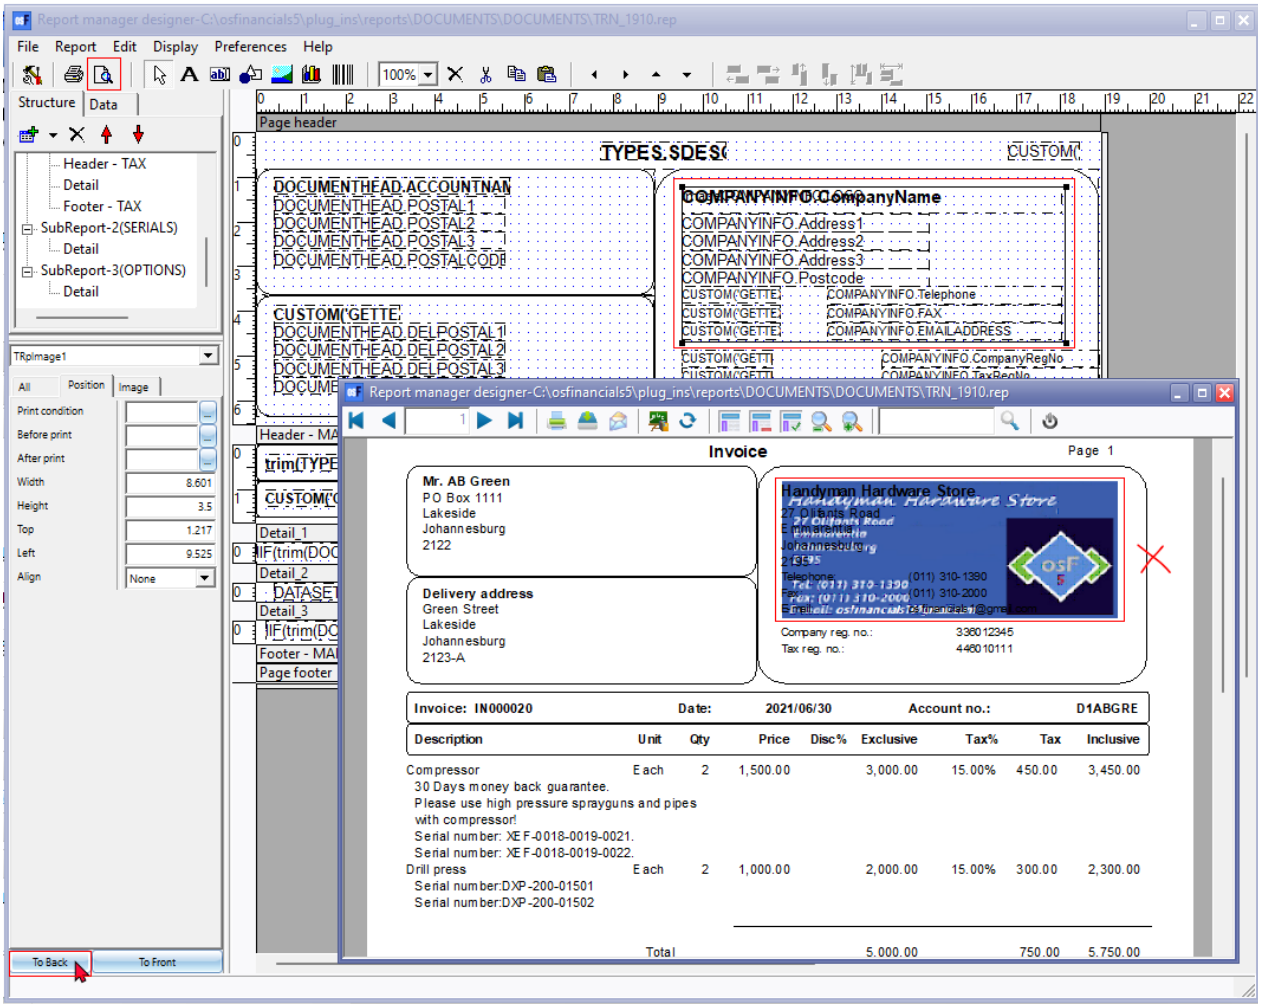
The following document layout files are set at a different size:

- POSSTARTSP100 (TRN_906183) = 6.906 x 2.434
- Layout file (TRN_1910) = 8.601 x 3.5 = x 0.5734

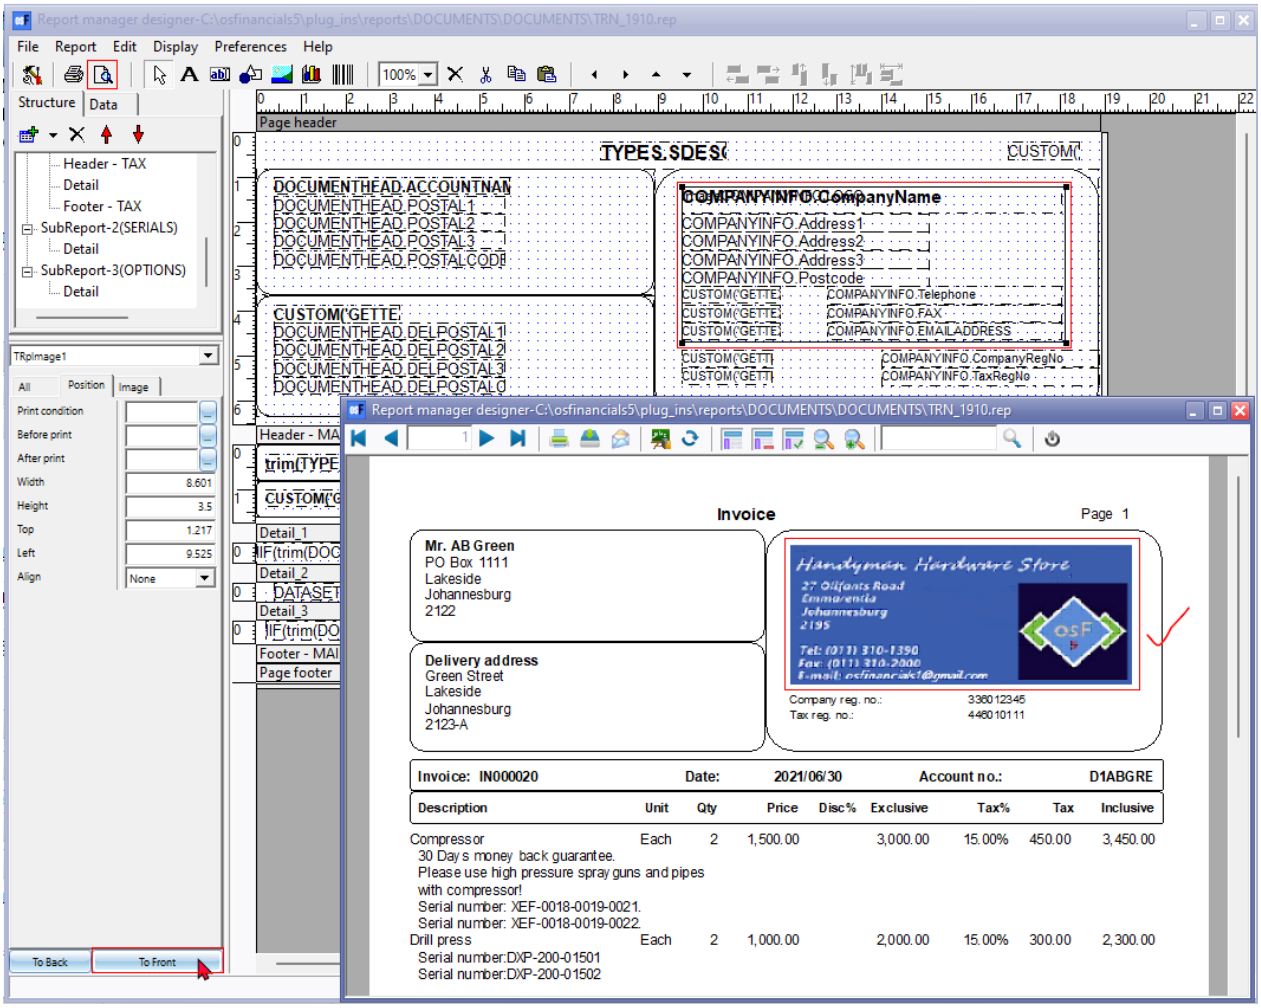
A twip (abbreviating "twentieth of a point", "twentieth of an inch point", [*Twip - Wikipedia*]

To Front setting

The "*To Front*" setting is a commonly missed setting when new to report manager designer. The details of the Company data (Company name, address, telephone number, fax number and e-mail address) is printed on top of the Company logo. - https://sourceforge.net/p/turbocash/discussion/294751/thread/c51abbe9/?limit=25#aa28 -



Select the image and click To Front



Created with the Standard Edition of HelpNDoc: Revolutionize Your CHM Help File Output with HelpNDoc

Report designer - Add unit descriptions to layout files

The Unit description can be added to document layout files.

Before changing a layout file, it is recommended that you select your report, and click on the Copy report button (on the "Report man" screen). It will create a Copy of your layout file. If you have customised a layout file, save it with a different name. This will prevent loosing your layout file, being over-written by reinstalling or installing osFinancials5/TurboCASH5.

To add the Stock unit description to layout files:

1. Click on the Setup ribbon, select Report designer.

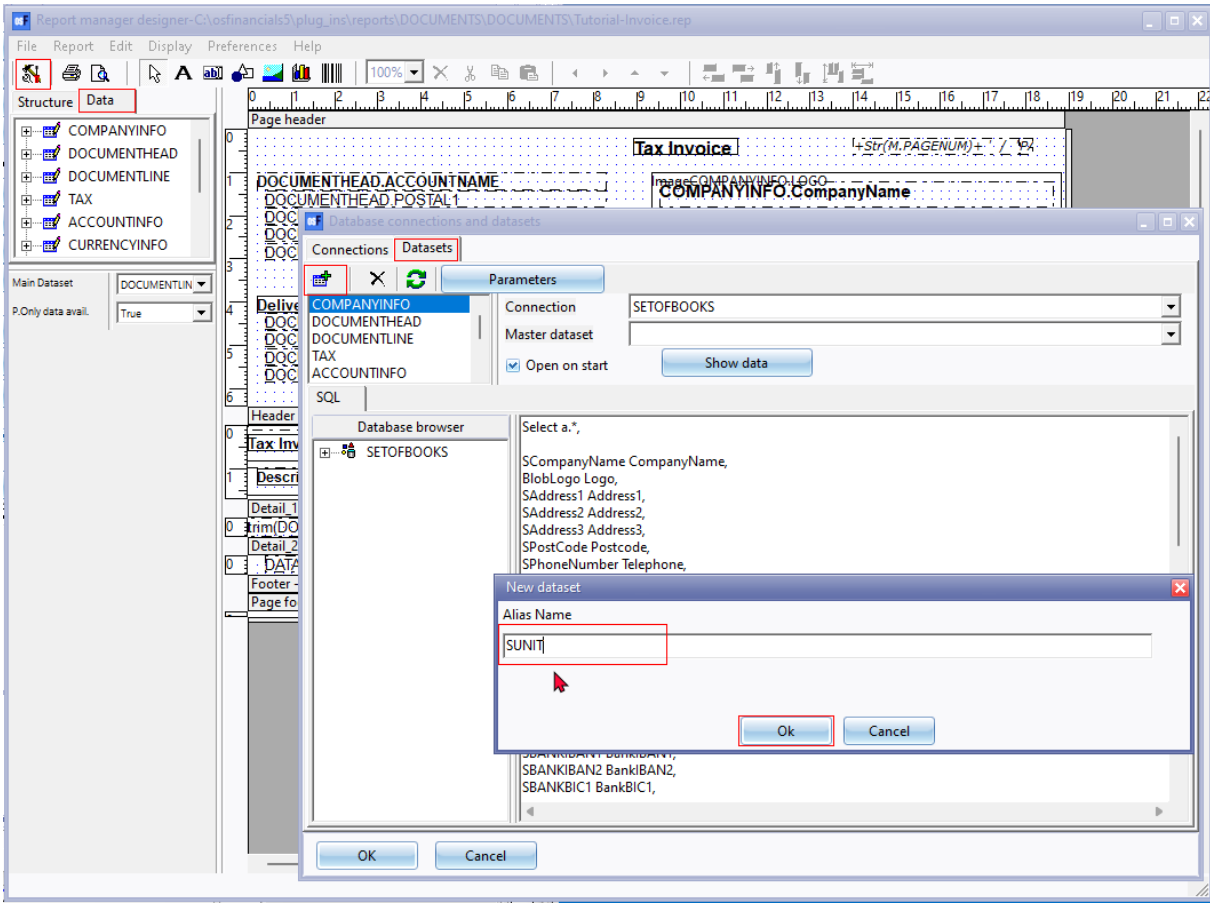
2. Select the document layout file (it is recommended that you edit a copy of the document layout file).

3. Click on the Report menu and select Database connections and datasets.

4. On the Database connections and datasets, click on the Add icon.

5. On the new Dataset screen, enter SUNIT in the Alias Name field.

6. Click on the OK button. The SUNIT data set will be added to the Datasets tab.

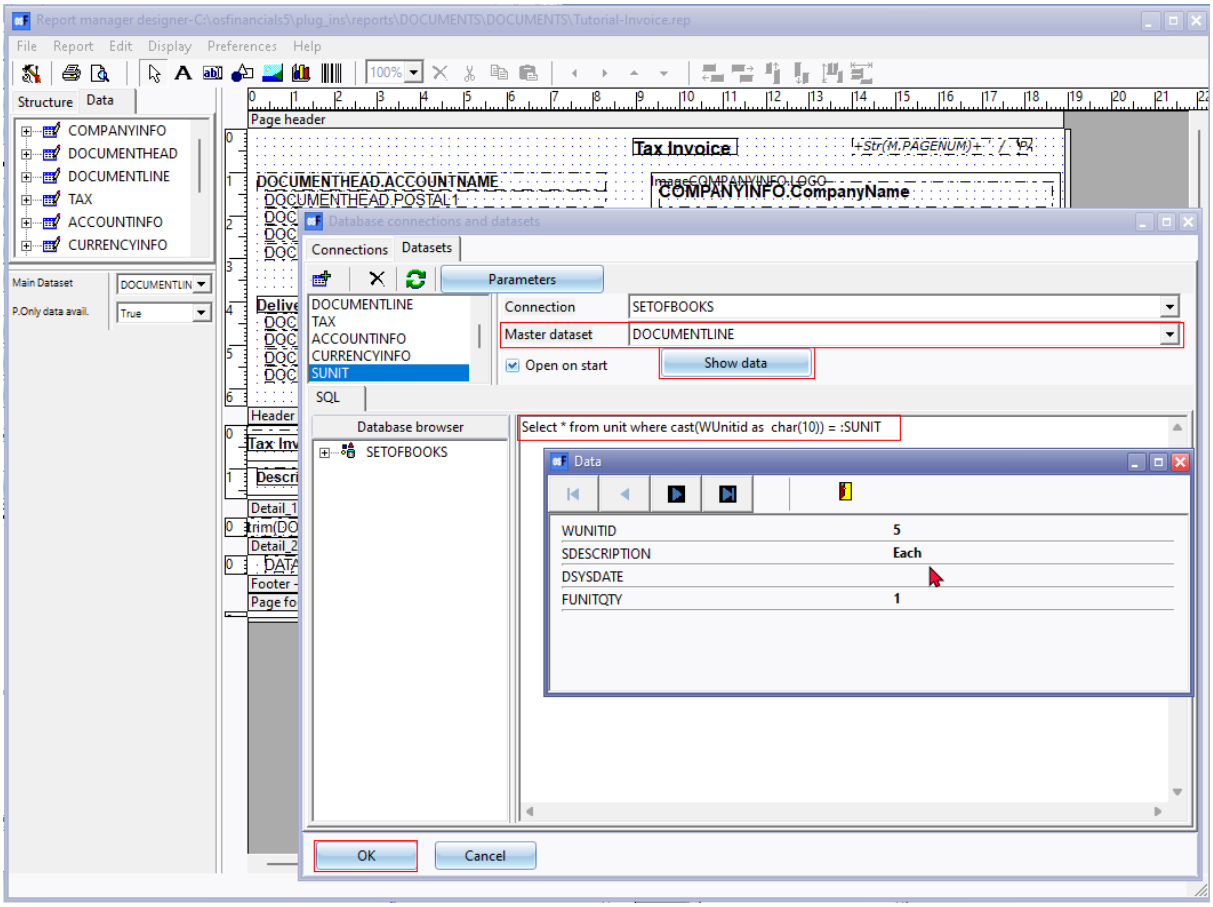


7. Select the SUNIT dataset and link it to the DOCUMENTLINE on the Master dataset field.

8. Paste the following sql in the SUNIT sql box:

```
Select * from unit where cast(WUnitid as varchar(10)) = :SUNIT
```

9. Click on the Show data button to test the data. The data as entered in the Stock information - Units tab (Setup ribbon) will be displayed (if the Units is linked to a stock item included in the Preview document).

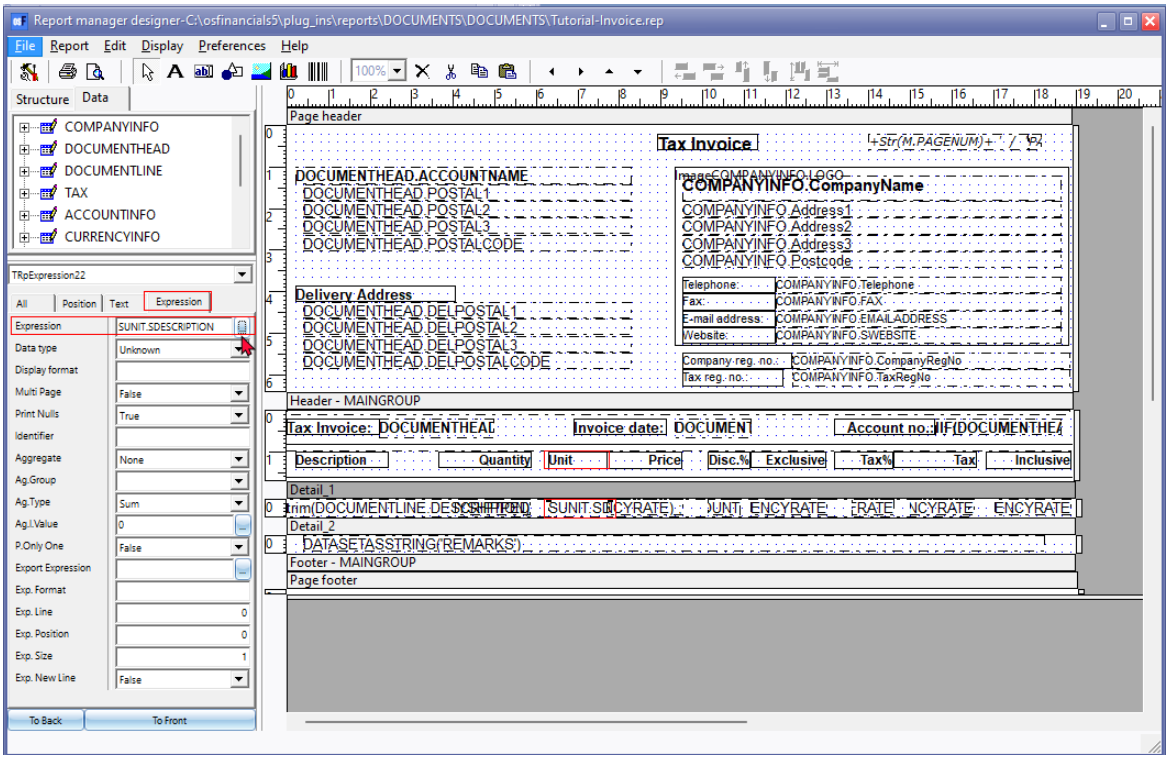


10. Click on the Close button to exit the Data screen.

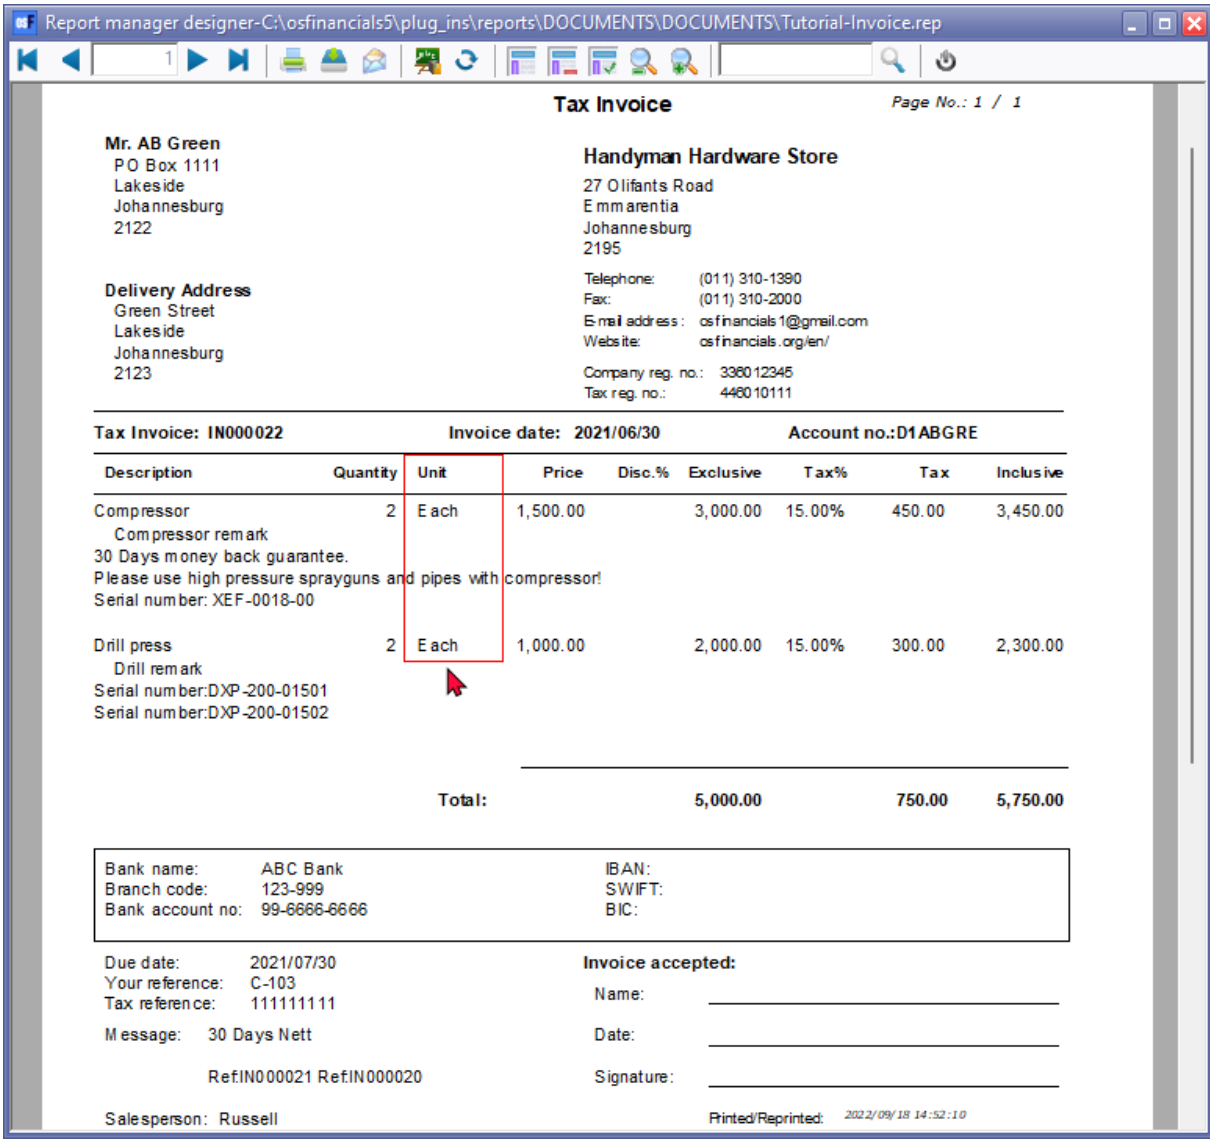
11. Click on the OK button of the "*Database connections and datasets*" screen to save the SQL.

12. Select the Detail section of the document lines. To insert the expression, simply drag the "*SUNIT.SDESCRIPTION*" field to the place to be displayed on the layout file.

13. Add the text Unit to the heading for the added expression.



14. Click on the Preview icon to preview the document. The Unit descriptions should be displayed.



15. Close the "Preview" screen and close "*Report man*" screen.

Whenever you close the "Report manager designer" screen, after editing your report, remember save the report. If you click on No, on the "Save report?" confirmation message, your changes will be discarded (lost).

Created with the Standard Edition of HelpNDoc: Streamline Your Documentation Creation with a Help Authoring Tool

Reportman - Create new empty reports from Empty report

Create new reports

All reports consists of the three (3) basic sections in the report structure, i.e. Page header, Detail and Page

footer.

You have two (2) options to create a new report, i.e.:

1. Empty report - This is the basic report, with the company dataset included in the Page header and the basic expressions in the Page footer.
2. New report - This is an empty blank report without any datasets. You need to add the COMPANYDATA dataset in the Page header and add the details in the Page footer.

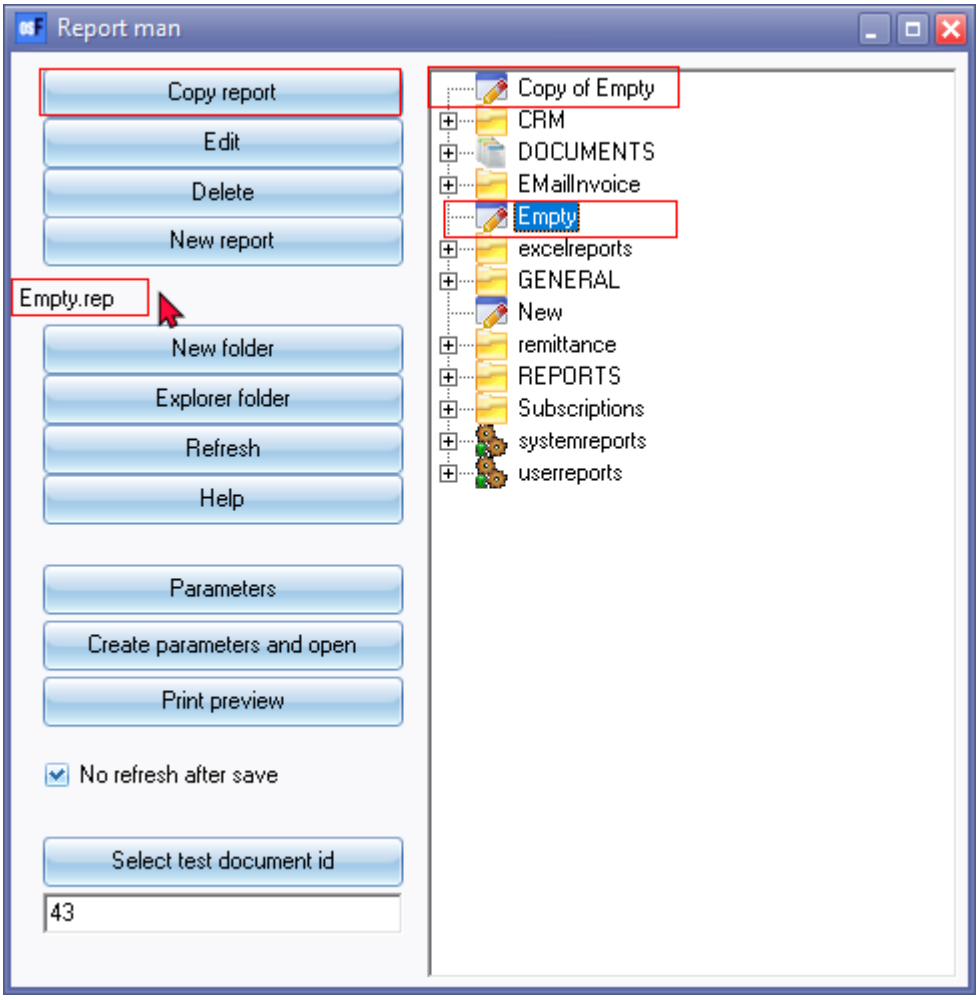
Edit a copy of an existing report - Select a report which is close to your requirements and create a copy of the report. You may then edit the copy of the report.

Create a new empty report

Once you have created a "Copy of Empty.rep", it is recommended that you use the "Copy of Empty.rep" report to add or build your own report or layout files. Do not use the "Empty.rep".

To create a new Empty report:

1. On the Setup ribbon, select Report designer.

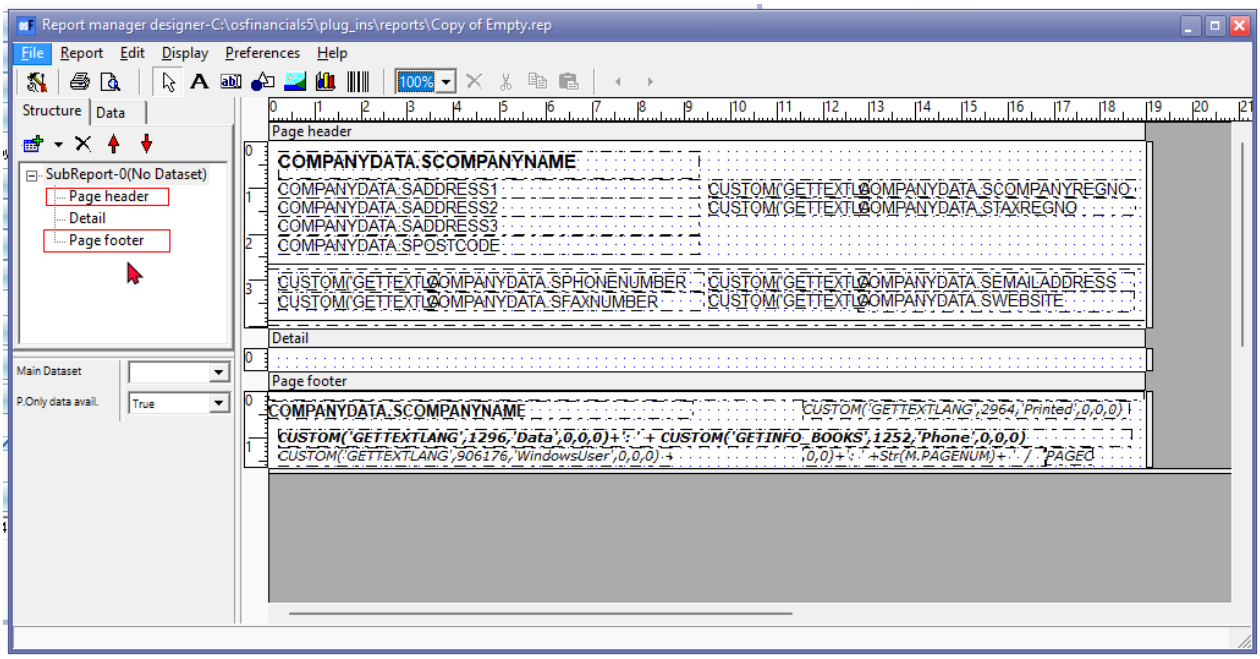


2. On the "*Report man*" screen, select the Empty report.
3. Click on the Copy report button.
4. Select Copy of Empty report and click Edit (You may also double-click).

Empty report

The Empty.rep already includes the following:

- Page header - COMPANYDATA Dataset as used in all reports in the "*systemreports*" folder (accessed from the Reports menu).
- Detail - Empty. You need to add a "Main Dataset" define tables and insert the data fields onto the Detail section of the Report Structure.
- Page footer - Company name, Date and timestamp, Path of the Set of Books and user names as well as page numbers.



The COMPANYDATA dataset includes

- Fields
- Dynamic text labels (translatable text via the language files). These translatable labels, are:

Field	*Translatable dynamic text label expression*
Company registration no.	*CUSTOM('GETTEXTLANG',316,'COMPANY REG nr',0,0,0)+': '*
Tax registration number	*CUSTOM('GETTEXTLANG',317,'TAX nr',0,0,0)+': '*
Telephone 1 number	*CUSTOM('GETTEXTLANG',974,'Phone',0,0,0)*
Fax number	*CUSTOM('GETTEXTLANG',189,'Fax',0,0,0)+': '*
Email address	*CUSTOM('GETTEXTLANG',191,'Email',0,0,0)+': '*
Website	*CUSTOM('GETTEXTLANG',3212,'Website',0,0,0)+': '*

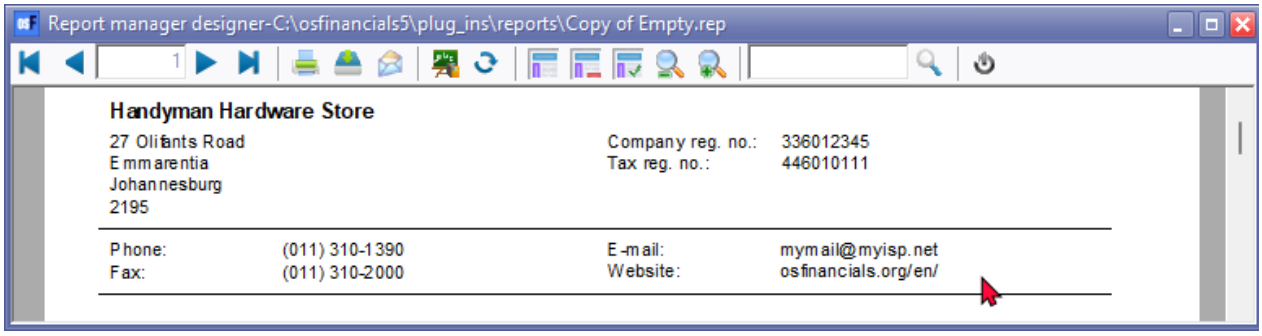
You may delete the dynamic text labels (translatable via the language files) and use static text (not translatable via the language files).

For example, if you do not use Fax, Email or a Website, you may simply select and delete that labels and delete them as well as the Company data fields.

Created with the Standard Edition of HelpNDoc: Easily create CHM Help documents

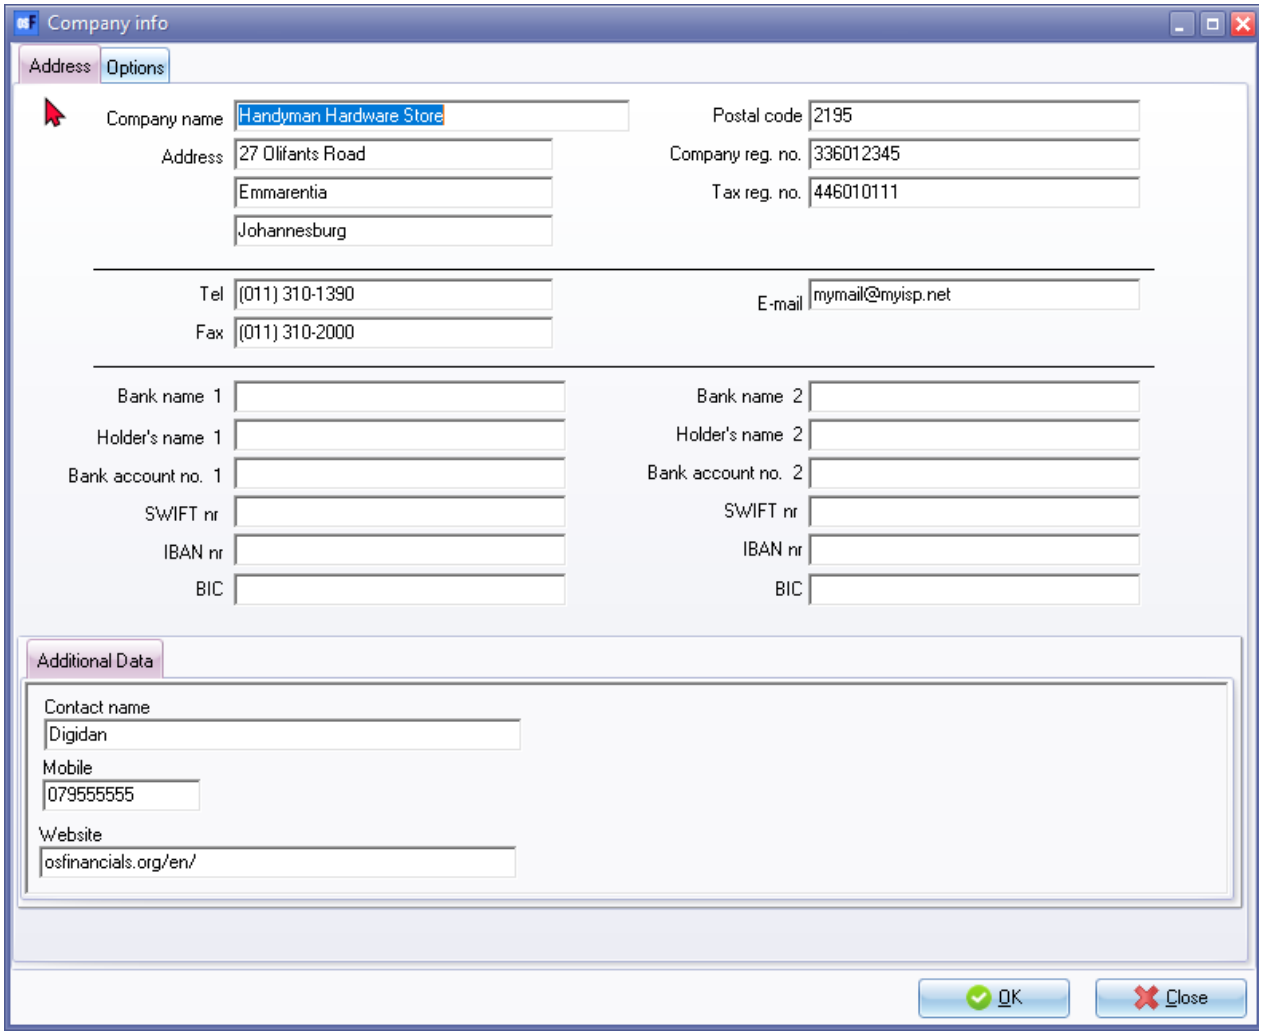
Page header - COMPANYDATA

The Data in the Page headers on the "*Empty.rep*" as well as all reports on the Reports menu and User reports menu; except on Document layout files and Debtor statements as well as on Creditor remittance advises, is as follows:



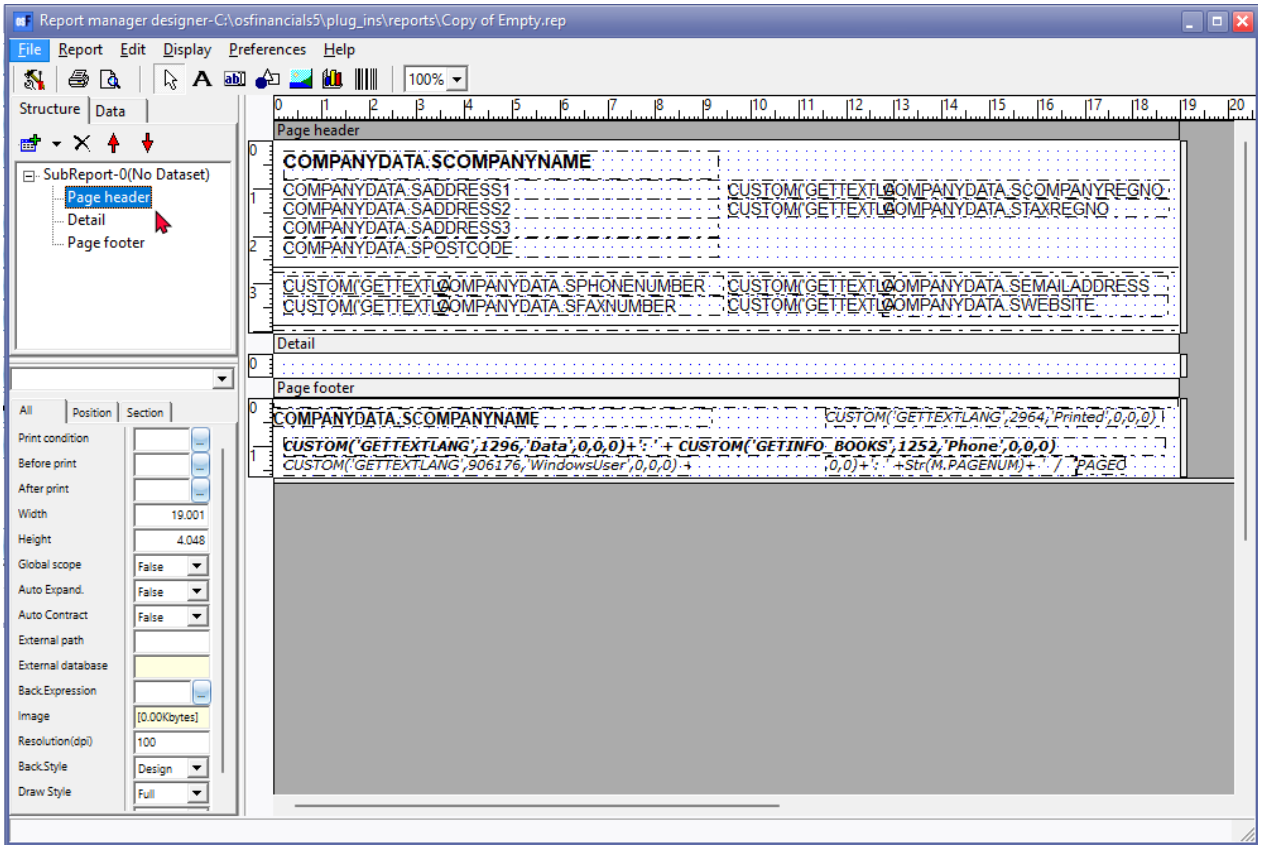
The Company dataset is included the "*Empty.rep*" report. It contains the data entered in the Setup → Company info menu on the Setup ribbon.

If you are choosing the "*New.rep*" report, and need to include some details of your company, you need to add the Company dataset to include the details already included Setup → Company info menu on the Setup ribbon.



Page header Company Data

The Company dataset is included the "*Empty.rep*" report. It contains the data entered in the Setup → Company info option on the Setup ribbon.



The Page header (as on the "*Empty.rep*" consists of the following expressions:

Expression	*SQL*	*Description*
TRpShape0	*Horizontal line*	*Horizontal line*
TRpShape1	*Horizontal line*	*Horizontal line*
TRpExpression0	*COMPANYDATA.SCOMPANYNAME*	
TRpExpression1	*COMPANYDATA.SADDRESS1*	
TRpExpression2	*COMPANYDATA.SADDRESS2*	
TrpExpression3	*COMPANYDATA.SADDRESS3*	
TRpExpression4	*COMPANYDATA.SPOSTCODE*	

TRpExpression5	*CUSTOM('GETTEXTLANG',316,'COMPANY REG nr',0,0,0)+': '*
TRpExpression6	*CUSTOM('GETTEXTLANG',317,'TAX nr',0,0,0)+': '*
TRpExpression7	*COMPANYDATA.SCOMPANYREGNO*
TRpExpression8	*COMPANYDATA.STAXREGNO*
TRpExpression9	*COMPANYDATA.SPHONENUMBER*
TRpExpression10	*CUSTOM('GETTEXTLANG',974,'Phone',0,0,0)*
TRpExpression11	*CUSTOM('GETTEXTLANG',189,'Fax',0,0,0)+': '*
TRpExpression12	*CUSTOM('GETTEXTLANG',191,'Email',0,0,0)+': '*
TRpExpression13	*CUSTOM('GETTEXTLANG',3212,'Website',0,0,0)+': '*
TRpExpression14	*COMPANYDATA.SWEBSITE*
TRpExpression15	*COMPANYDATA.SEMAILADDRESS*
TRpExpression16	*COMPANYDATA.SFAXNUMBER*

COMPANYDATA SQL

The company data SQL consists of two (2) tables (i.e. SYSVARS and SYSVARSEXT) tables in the Database.

To write SQL is actually very simple, for example, "*select data from table*", where data is a valid field name (e.g. ScompanyName Company name) in the table and table is a valid table name (e.g. Sysvars). To call the company name and Fax number (as entered in the Company info (Setup ribbon) screen (it is stored in the sysvars table)), you may simply write:

```
select SCompanyName CompanyName, SFaxNumber Fax from Sysvars
```

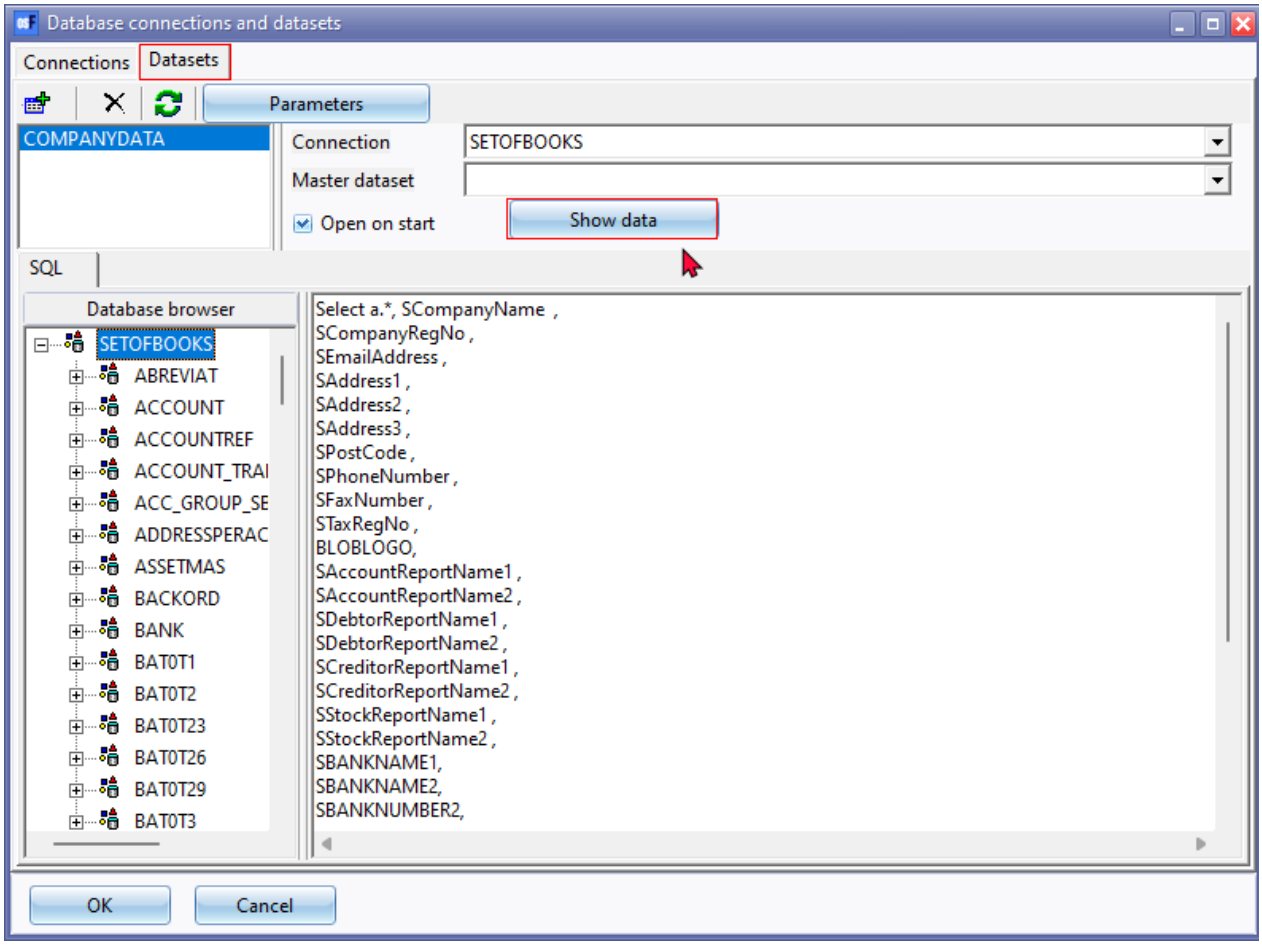
The SQL for the COMPANYDATA dataset included in the "*Empty.rep*" is as follows:

SQL Text	*Data on Company info*	
Select a.,*	*Company name*	
SCompanyName ,	*Company registration number*	
SCompanyRegNo ,		
SEmailAddress ,	*E-mail*	
SAddress1 ,	*Address line 1*	
SAddress2 ,	*Address line 2*	
SAddress3 ,	*Address line 3*	
SPostCode ,	*Postal code*	
SPhoneNumber ,	*Telephone number*	
SFaxNumber ,	*Fax number*	
STaxRegNo ,	*Tax registration number*	
BLOBLOGO,	*Company logo (Options tab)*	
SAccountReportName1 ,	*Account group 1*	
SAccountReportName2 ,	*Account group 2*	
SDebtorReportName1 ,	*Debtor group 1*	
SDebtorReportName2 ,	*Debtor group 2*	
SCreditorReportName1 ,	*Creditor group 1*	
SCreditorReportNa	*Creditor group 2*	
	Stock group 1	
	Stock group 2	
	Bank name 1	

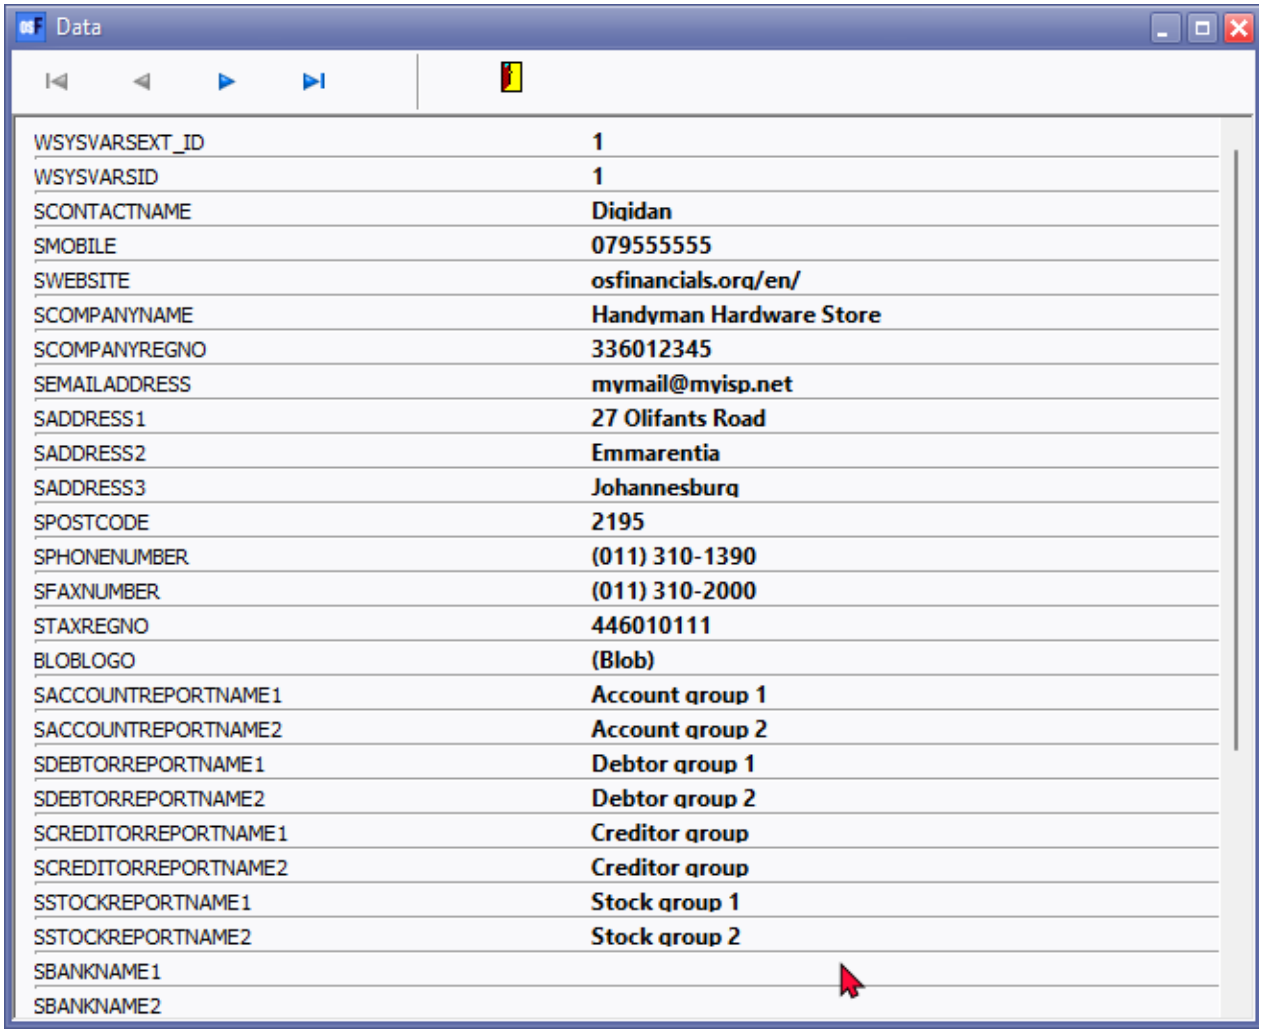
SQL Text	Data on Company info	
me2 , SStockReportName 1 , SStockReportName 2 , SBANKNAME1, SBANKNAME2, SBANKNUMBER2, SBANKNUMBER1, SBANKSWIFT1, SBANKIBAN1, SBANKSWIFT2, SBANKIBAN2, SBANKACCOUNT NAME1, SBANKACCOUNT NAME2, SBANKBIC1, SBANKBIC2 from Sysvars , sysvarsext a	Bank name 2 Bank account number 1 Bank account number 2 SWIFT 1 IBAN 1 SWIFT 2 IBAN 2 Bank account name 1 Bank account name 2 BIC 1 BIC 2	SWIFT - (Society for Worldwide Interbank Financial Telecommunication) IBAN - (International Bank Account Number) BIC - (Bank Identifier Code)

The *SYSVARSEXT* table is joined to the SYSVARS table in the COMPANYDATA Dataset.

```
SCONTACTNAME  ContactName,
SMOBILE  MobileNo
from Sysvarsext
```



Click on the Show data button.



Click on the Close icon.

Created with the Standard Edition of HelpNDoc: Transform Your Help Documentation Process with a Help Authoring Tool

Page footer - Information

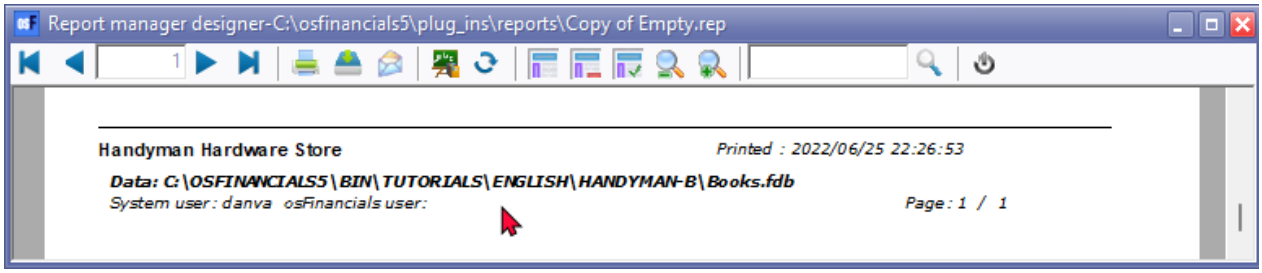
The Data in the Page footers on the "*Empty.rep*" as well as all reports on the Reports menu and User reports menu; except on Document layout files and Debtor statements as well as on Creditor remittance advises, is as follows:

1. Company name – In the case of multi page reports, where the company details (on Page header) is only printed on the first page of a report.
2. The data path – The full path (location and folders) in which the Set of Books is stored on your system

or network.

3. System user of your Operating system and the osFinancials user / TurboCASH user set in Setup → Access control (Setup ribbon) who printed the report.
4. Date stamp – System date and time the report is printed.
5. Page number and last page number to indicate the expected number of pages.

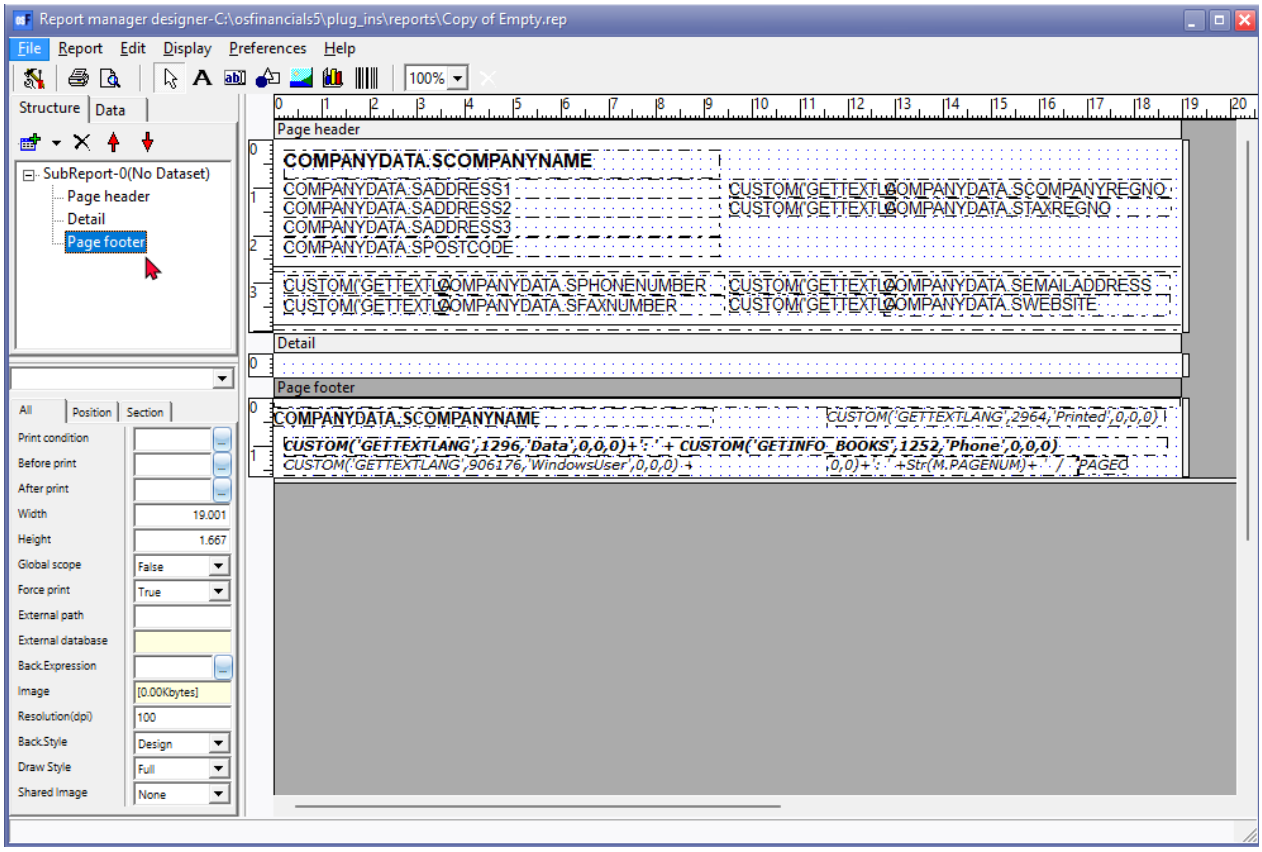
An example of the page footer, included in the "*Empty.rep*" is as follows:



Add data to Page footers

Select any other report and in the Page footer section of the report, select all the fields (including the Horizontal line).

Select the horizontal line and press the Shift key and while keeping the Shift key down, click on all fields.



The Page footer (as on the "*Empty.rep*" consists of the following expressions:

Expression	*SQL*	*Description*
TRpShape2	*Horizontal line*	*Horizontal line*
TRpExpression17	*COMPANYDATA.SCOMPANYNAME*	*Company name - In the case of multi page reports, where the company details (on Page header) is only printed on the first page of a report.*
TRpExpression19	*CUSTOM('GETTEXTLANG',1296,'Data',0,0,0)+': ' + CUSTOM('GETINFO_BOOKS',1252,'Phone',0,0,0)*	*The data path - The full path (location and folders) in which the Set of Books is stored on your system or network.*
TRpExpression20	*CUSTOM('GETTEXTLANG',906176,'WindowsUser',0,0,0) + ': ' + CUSTOM('GETINFO_WINUSER',2964,'User',0,0,0) +' '+CUSTOM('GETTEXTLANG',906177,'ProgramUser',0,0,0) + ': ' + CUSTOM('GETINFO_USER',2964,'Printed',0,0,0)*	*System user of your Operating system and the osFinancials user / TurboCASH user set in Setup → Access control) who printed the report.*

TrpExpression18	*CUSTOM('GETTEXTLANG',2964,'Printed',0,0,0) +' : ' + FORMATSTR('',now)*	*Date stamp - System date and time when the report is printed.*
TRpExpression21	*+' '+CUSTOM('GETTEXTLANG',1024,'Page',0,0,0)+': ' +Str(M.PAGENUM)+ ' / '*	*Page number and last page number to indicate the expected number of pages.*

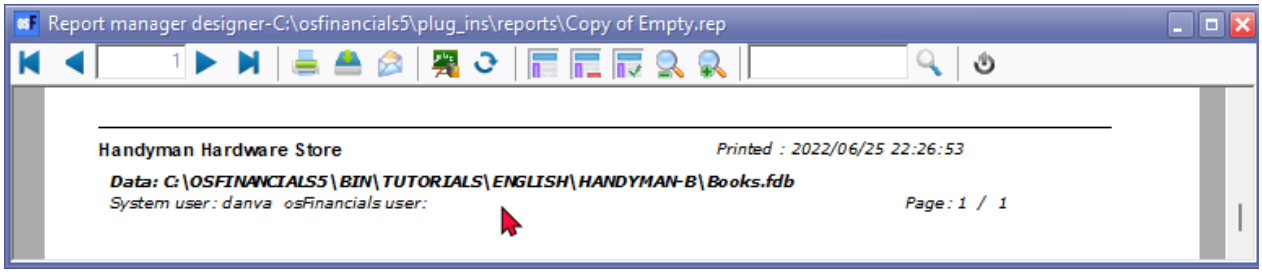
You may select the "*Empty.rep*" and copy all the expressions in the Page footer section and paste it in the footer section of your new report.

To copy the expressions to another report:

1. Press the Shift key and use your mouse to click on the Expressions (including the Horizontal line)
2. Select Edit → Copy (Alt+C) or press the (Alt+C) keys.
3. Close the selected report to copy from. Do not save the report.
4. Open the report on which you need to copy (add) the Page footer.
5. Select the Page footer section of your report.
6. Select Edit → Paste (Alt+V) or press the (Alt+V) keys.

You may need to resize the page footer vertically.

Click on the Preview icon to check your report.



Take note of the following important settings relating to page footers and multiple page reports:

Force print setting - The Page footer may print on the first page only. It may not print on the last page or on consecutive pages, if it is a multi-page report.

Two pass report setting - This setting must be selected (ticked) for both, PAGECOUNT and/or SkipToPage settings.

Created with the Standard Edition of HelpNDoc: Streamline your documentation process with HelpNDoc's WinHelp HLP to CHM conversion feature

Reportman - Save reports

Whenever you exit or close a report or a document layout file in the "*Report manager designer*" screen, a confirmation message will be displayed:

"Save report?"

Click on the Yes button.

If you click on No, your changes will be discarded (lost).

Created with the Standard Edition of HelpNDoc: Free Web Help generator

Reportman - Create new blank reports from New report

Create a new blank report

All reports consists of the three (3) basic sections in the report structure, i.e. Page header, Detail and Page footer.

You have two (2) options to create a new report, i.e.:

1. Empty report - This is the basic report, with the company dataset included in the Page header and the basic expressions in the Page footer.
2. New report - This is an empty blank report without any datasets. You need to add the COMPANYDATA dataset in the Page header and add the details in the Page footer.

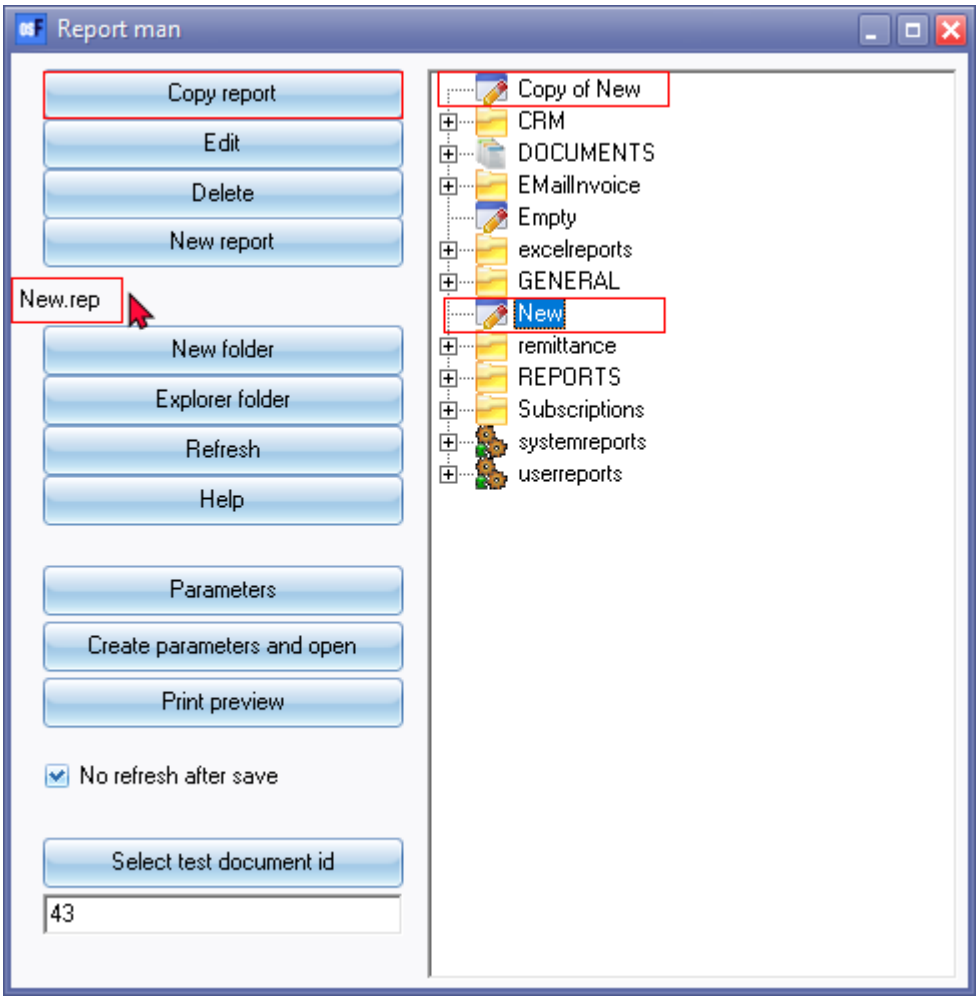
Edit a copy of an existing report - Select a report which is close to your requirements and create a copy of the report. You may then edit the copy of the report.

Create a new blank report

Once you have created a "Copy of New.rep", it is recommended that you use the "Copy of New.rep" report to add or build your own report or layout files. Do not use the "New.rep".

To create a New blank report:

1. On the Setup ribbon, select Report designer.

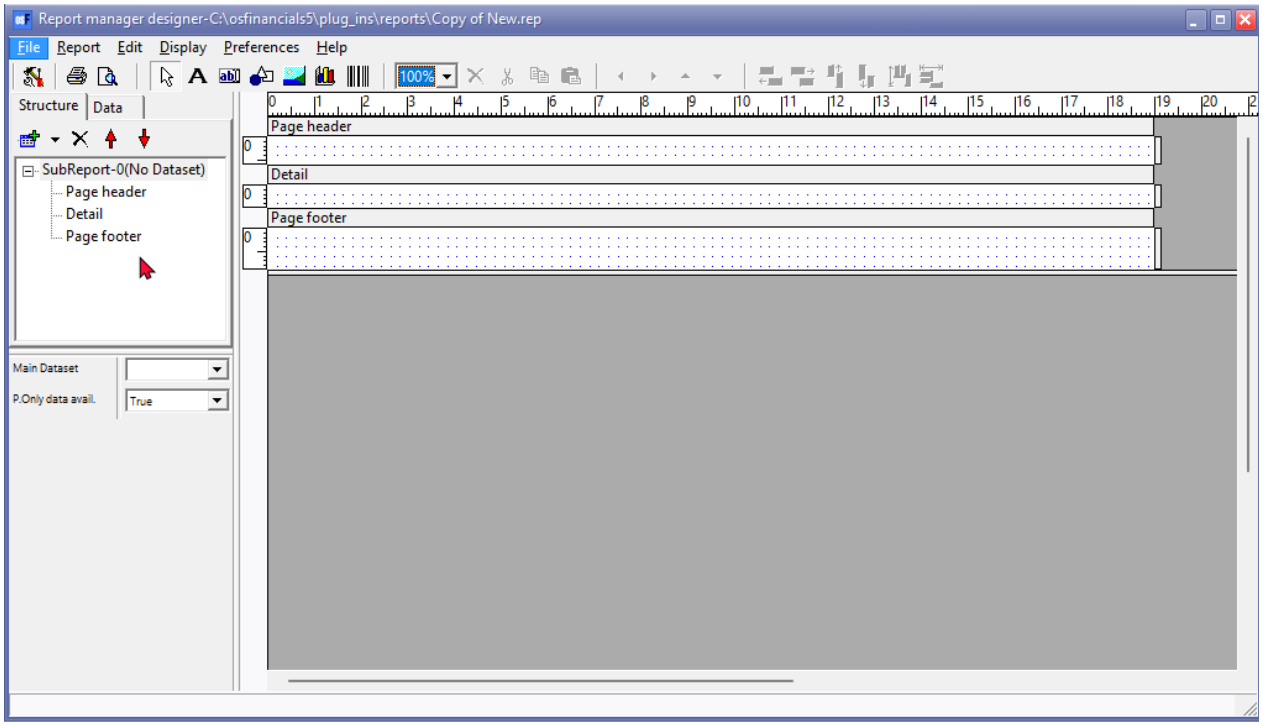


2. On the "*Report man*" screen, select the New report.
3. Click on the Copy report button.
4. Select Copy of New report and click Edit (You may also double-click).

New report

The new report does not contain the COMPANYDATA dataset. It also contains no data in the Page footer.

It only contains the blank Page header, Detail and Page footer sections of the report structure.



If you intend to use the New report and need to add details of your company, you need to add a new dataset (i.e. COMPANYDATA).

Or you could use the Empty report. The Empty report contains the COMPANYDATA dataset with dynamic text labels (translatable text via the language files).

Created with the Standard Edition of HelpNDoc: Easily create iPhone documentation

Reportman - Add COMANYDATA Dataset

The process to add the Company dataset and to add the references data fields from the tables to the report, is basically as follows:

1. Add the COMANYDATA Dataset
2. Add the SQL for the Company information to be available in the dataset.
3. Add or drag the fields (columns) from the COMPANY Dataset onto the report.
4. Add labels describing data fields (Expressions) on the report.

In this topic of the documentation, the **A** *Static text - is dealt with to add plain text labels.*

You may add [ab] *Expressions which is translatable labels to reference the language id. This will use the language files to translate the labels the languages are changed (Switch language on the Start ribbon).*

5. Tidy the report - Format expressions and labels, insert a horizontal lines, etc.

Add COMANYDATA Dataset

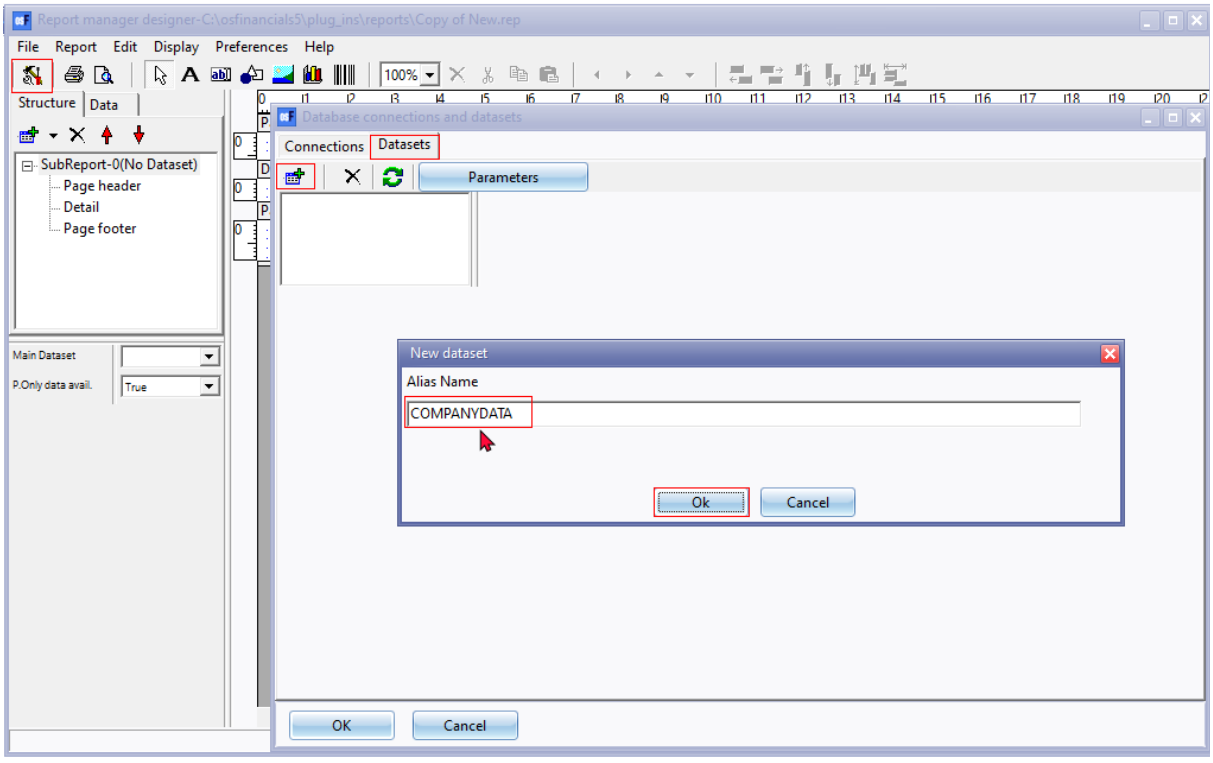
The company data SQL consists of two (2) tables (i.e. SYSVARS and SYSVARSEXT) tables in the Database.

To write SQL is actually very simple, for example, "*select data from table*", where data is a valid field name (e.g. ScompanyName Company name) in the table and table is a valid table name (e.g. Sysvars). To call the company name and Fax number (as entered in the Setup → Company info (Setup ribbon) screen (it is stored in the sysvars table)), you may simply write:

```
select SCompanyName CompanyName, SFaxNumber Fax from Sysvars.
```

To add the Company Dataset:

1. On the "Report man" screen, select a report. In this example, the "*Copy of New.rep*" is selected.
2. On the "*Report manager designer*" screen for the selected report, click on the Database connections and datasets icon.
3. On the "*Database connections and datasets*" screen, select Datasets tab and click on the Add icon.



4. On the "*New dataset*" screen, Enter "*COMPANYDATA*" as the Alias Name and click Ok.

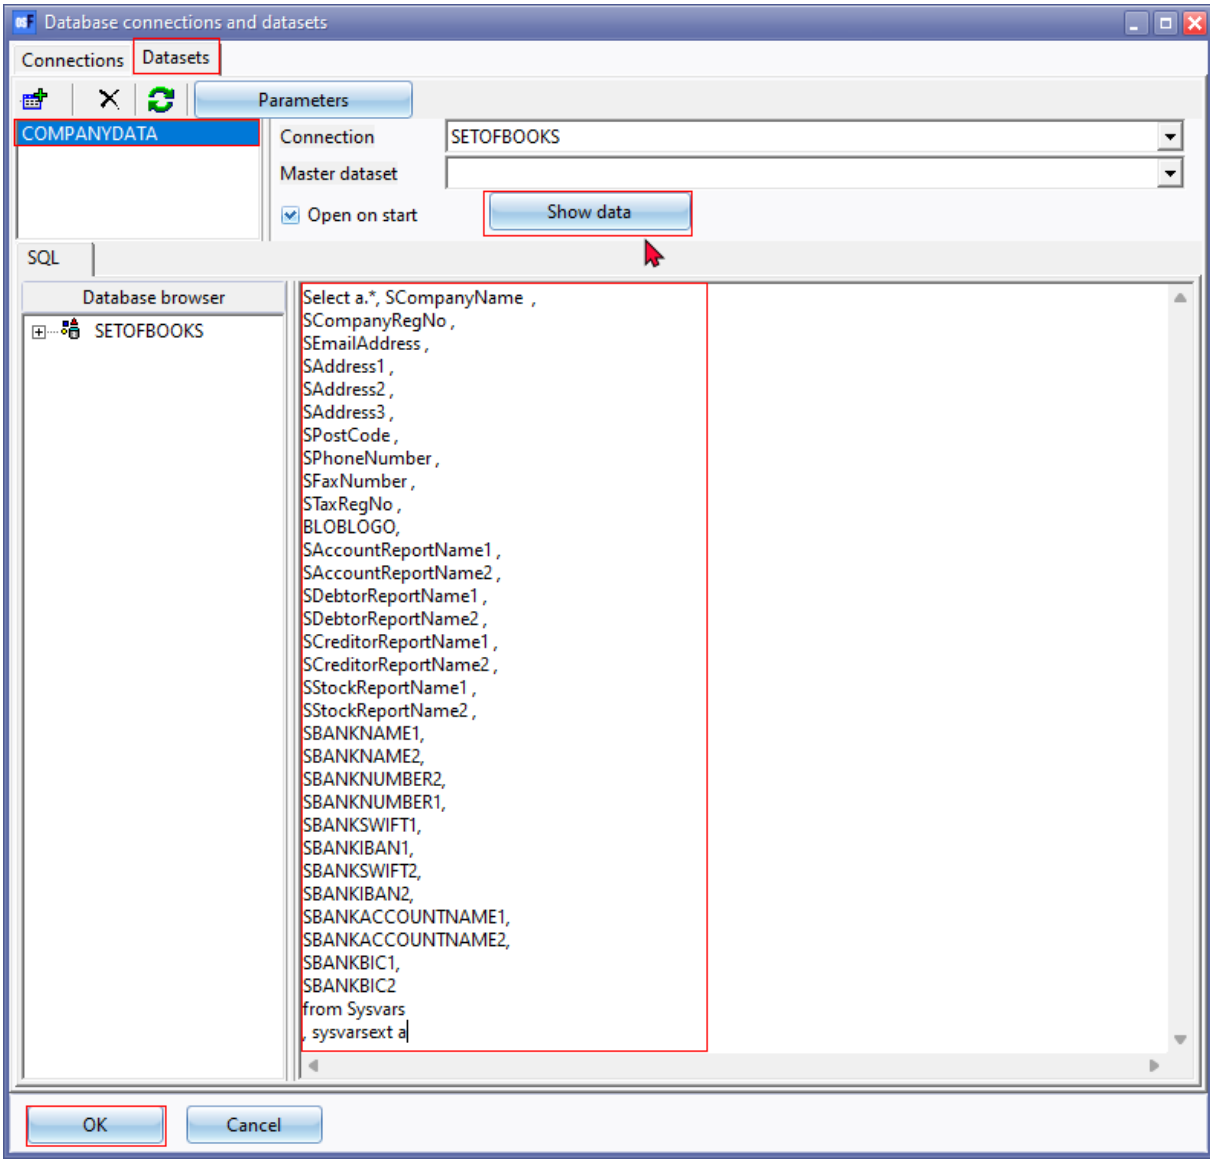
The next step is to add the SQL for the data in the SYSVARS and the SYSVARSEXT tables.

ADD COMPANYDATA SQL

The next step is to add the SQL for the data in the SYSVARS and the SYSVARSEXT tables. The data as stored in these two tables is mainly added in the Company info (Setup ribbon) and the Reporting groups names as set in the Groups (Setup ribbon).

To add SQL for the Company Dataset:

1. On the Datasets tab select the "*COMPANYDATA*" dataset. The "*COMPANYDATA*" dataset is empty at this stage. You need to copy or add the SQL from the "*SYSVARS*" and "*SYSVARSEXT*" tables.

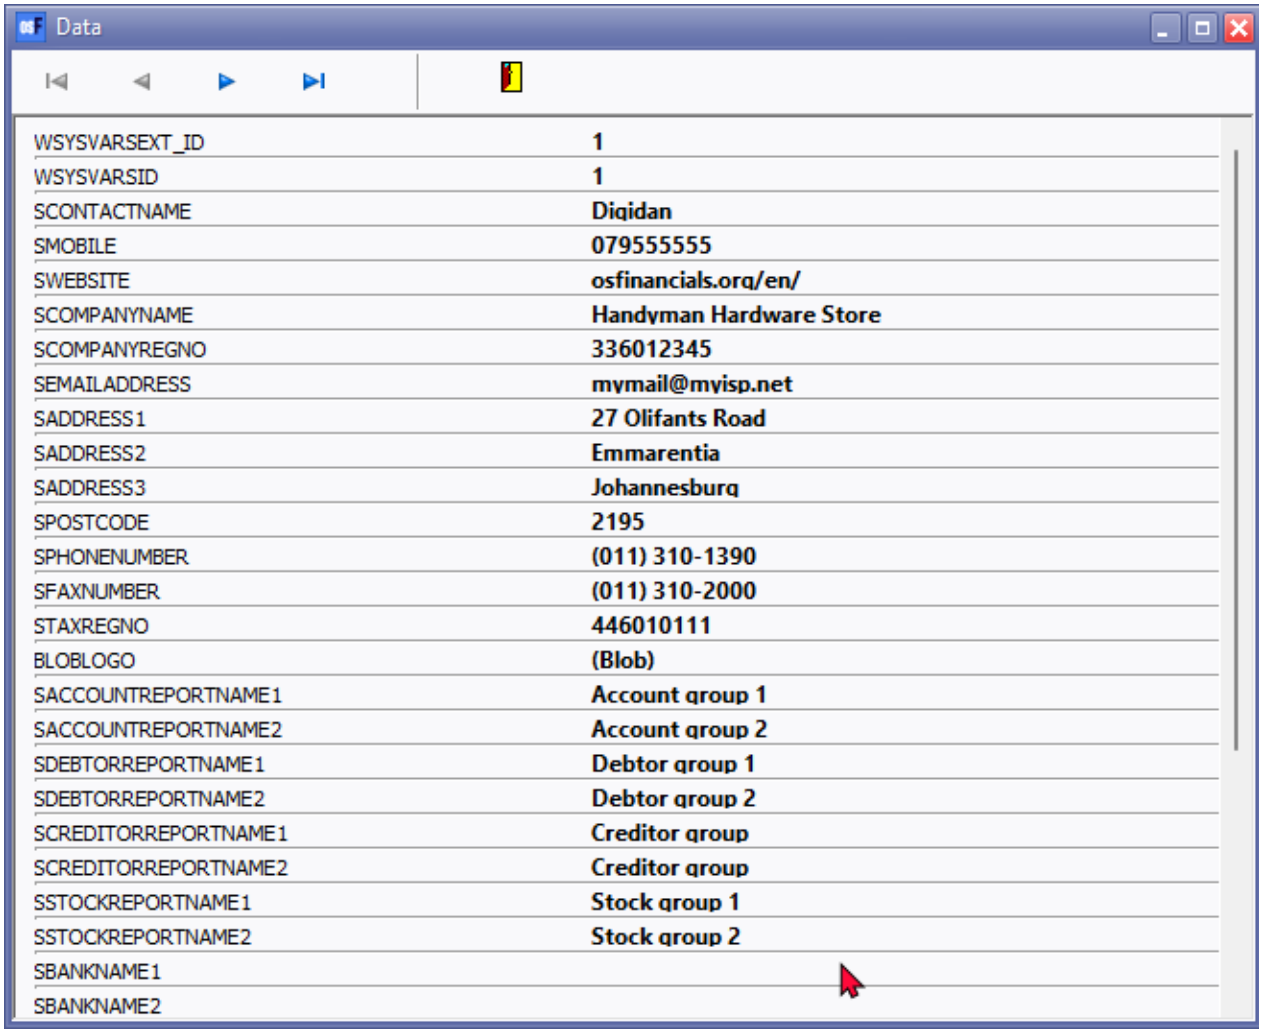


2. To add the tables, copy or enter the following SQL in the SQL box:

```
Select a.*, SCompanyName ,
SCompanyRegNo ,
SEmailAddress ,
SAddress1 ,
SAddress2 ,
SAddress3 ,
SPostCode ,
SPhoneNumber ,
SFaxNumber ,
STaxRegNo ,
BLOBLOGO,
SAccountReportName1 ,
SAccountReportName2 ,
SDebtorReportName1 ,
```

```
SDebtorReportName2 ,
SCreditorReportName1 ,
SCreditorReportName2 ,
SStockReportName1 ,
SStockReportName2 ,
SBANKNAME1,
SBANKNAME2,
SBANKNUMBER2,
SBANKNUMBER1,
SBANKSWIFT1,
SBANKIBAN1,
SBANKSWIFT2,
SBANKIBAN2,
SBANKACCOUNTNAME1,
SBANKACCOUNTNAME2,
SBANKBIC1,
SBANKBIC2
from Sysvars
, sysvarsext a
```

3. Click on the Show data button. The data should be displayed correctly.



4. Click on the Close icon to close the "*Data*" screen.

5. Click OK on the "*Database connections and datasets*" screen.

> *The next step is to add or drag the data from the SYSVARS and the SYSVARSEXT tables onto the report (Page header as in this example.*

6. If you close the "*Report manager designer*" screen, remember to Save the report.

> *Whenever you close the "Report manager designer" screen, after editing your report, remember save the report. If you click on No, on the "Save report?" confirmation message, your changes will be discarded (lost).*

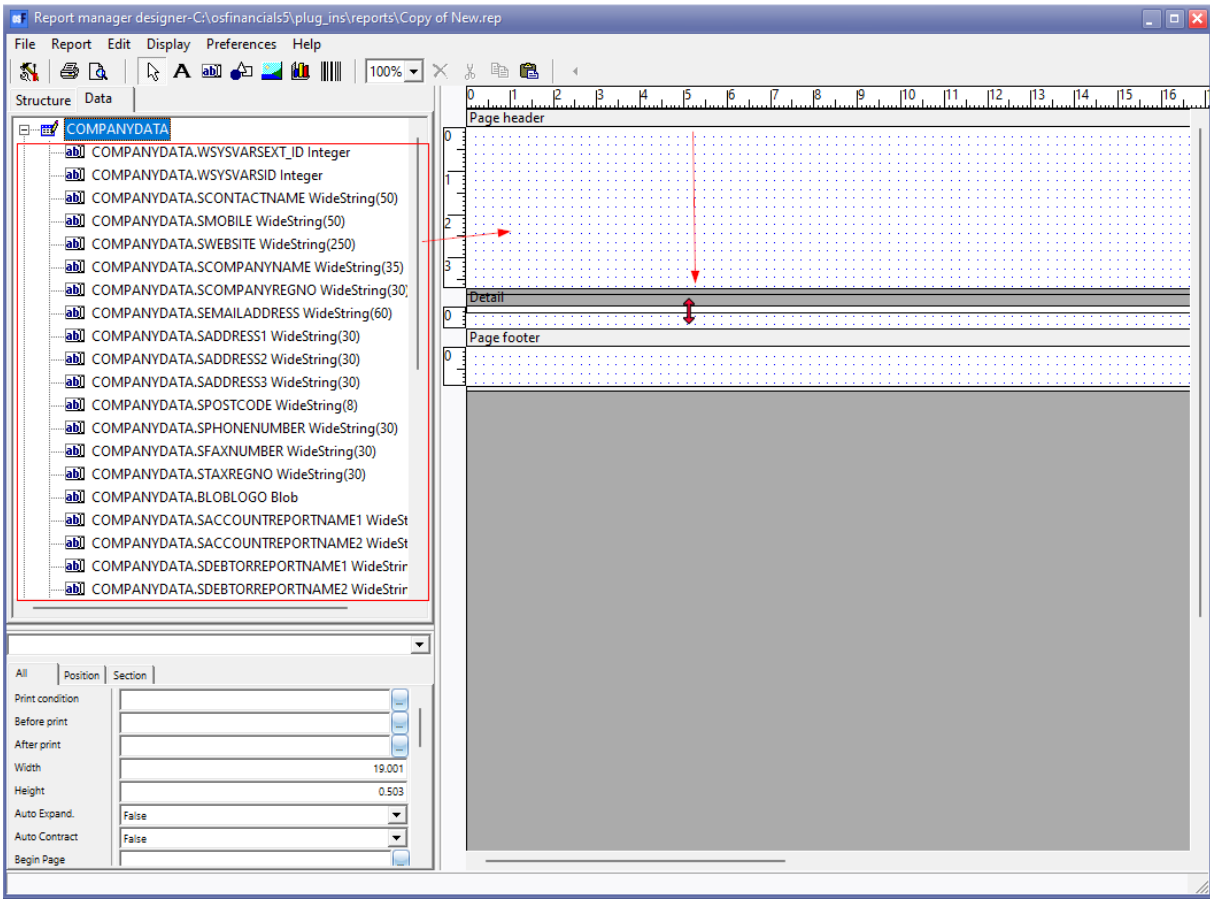
Add Expressions (fields from tables)

Once you have added the Company data dataset, the tables of the SYSVARS and SYSVARSEXT will be available.

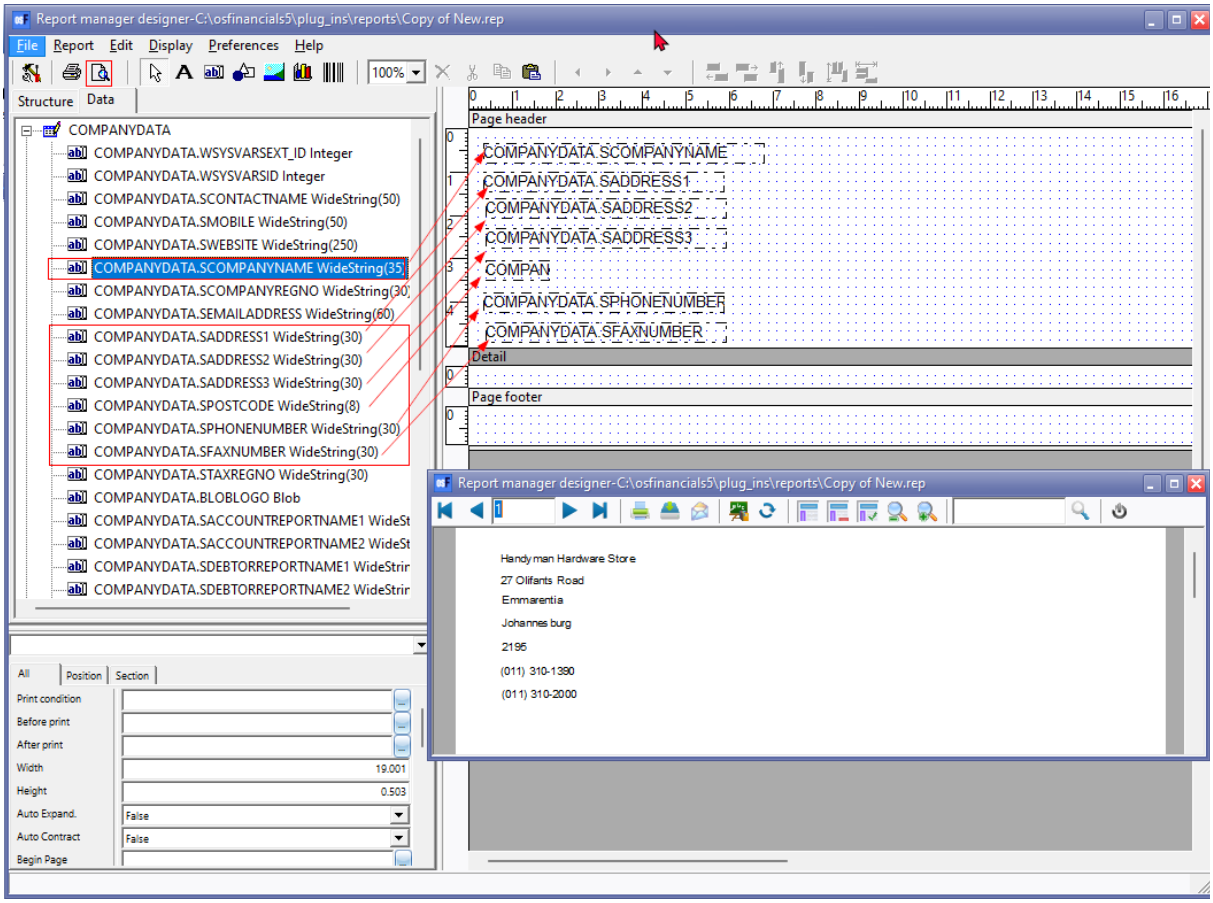
To print the data from these tables, you need to drag these to the Page header.

To add Expressions from the COMPANYDATA Dataset to the Page header:

1. Click on the Data tab and select the COMPANYDATA Dataset.
2. Click on the "*Detail*" section of the report structure and drag it downwards to add space for the Page header.



3. Select and drag (drag and drop) the data Expressions you wish to display (print) on the Page header section of the report.



When selecting the String Data type the default number of characters (including spaces and Special characters (e.g. the Ampersand & , The Underscore _ , etc. will be counted for a character). This is the field length and the size is indicated with a numeric value in brackets (e.g. (30), etc.). This will by default determine the width of the field when data is dragged and dropped on the section of the report.

4. Drag all the fields from the Company dataset, you need to print on the Report header.

5. Once all required data expressions is added, you may click on the Print preview icon.

On the report there are a lot of different numbers displayed (e.g. Telephone and Fax number as well as the Company registration number).

This may be confusing to the end-user of the report. You may need to add some labels to explain what these numbers mean.

6. Take note of the labels you wish to add to describe the data on the printed report, where necessary.

7. Close the "*Print preview*" screen.

The next step is to add labels, describing the data, to print on the report where necessary.

Add labels to the report

The labels will add a description to the fields (data) printed in the Page header.

There are 2 methods of adding labels to a report:

- Static text - Add plain text labels.
- Expressions - Add translatable expression labels to reference the language id. This will use the language files to translate the labels the languages are changed (Switch language on the Start ribbon).

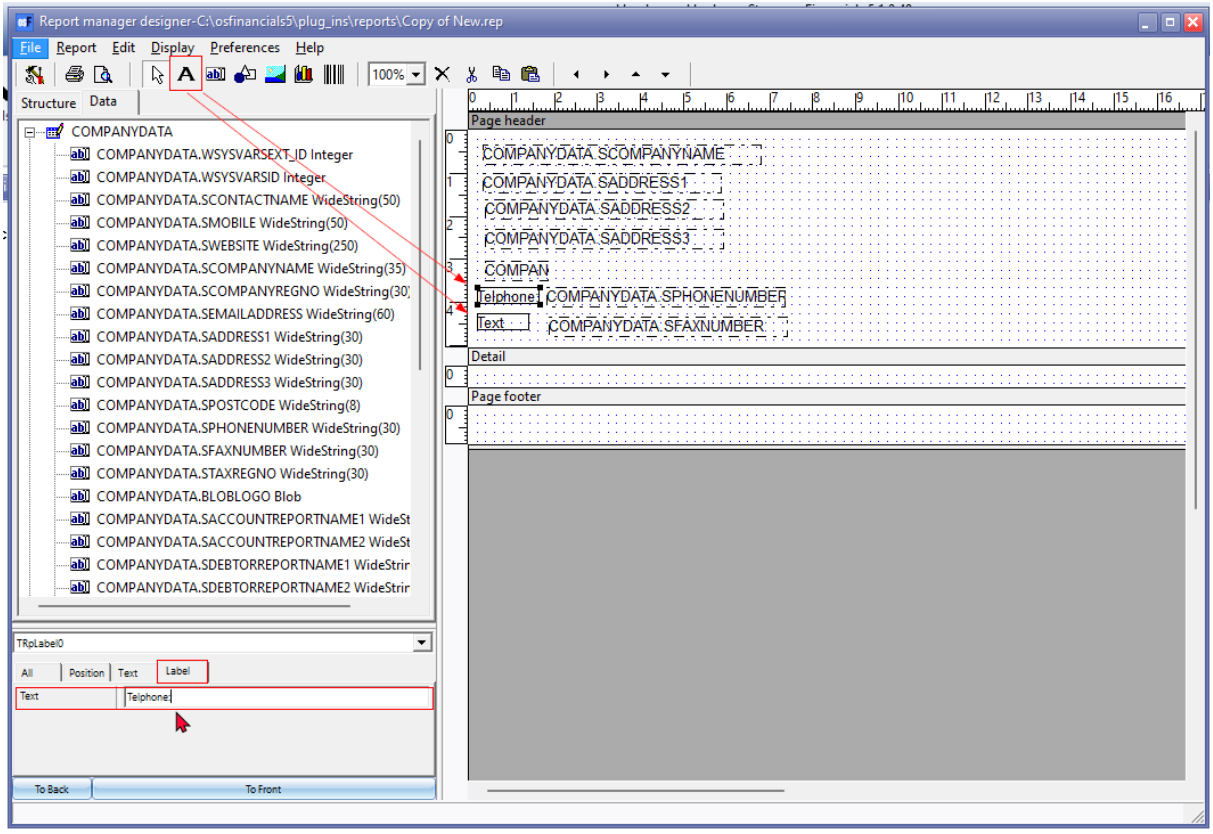
Add COMPANYDATA Static text labels

All reports and most of the document layout files is translatable via the language files.

The static text labels is used in the "*Tutorial-Invoice*" layout file.

To add static labels to the report:

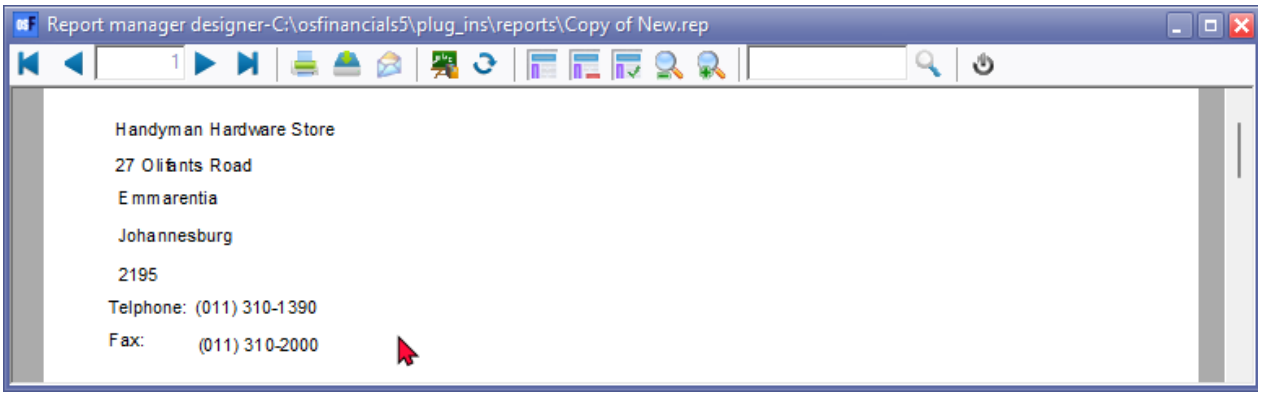
1. Move and drag the data fields to create some space for the text labels.
2. Select the Text icon to insert static text.
3. Click and drag it to the required size and space on the report (e.g. Page header).



4. On the Label tab, enter the Text you need to display for the field (e.g. Telephone).

5. Repeat the process for all labels.

6. Click on the Print preview icon to view if the labels do not overlap, etc.



7. Take note of the layout and presentation on the "*Print preview*" screen.

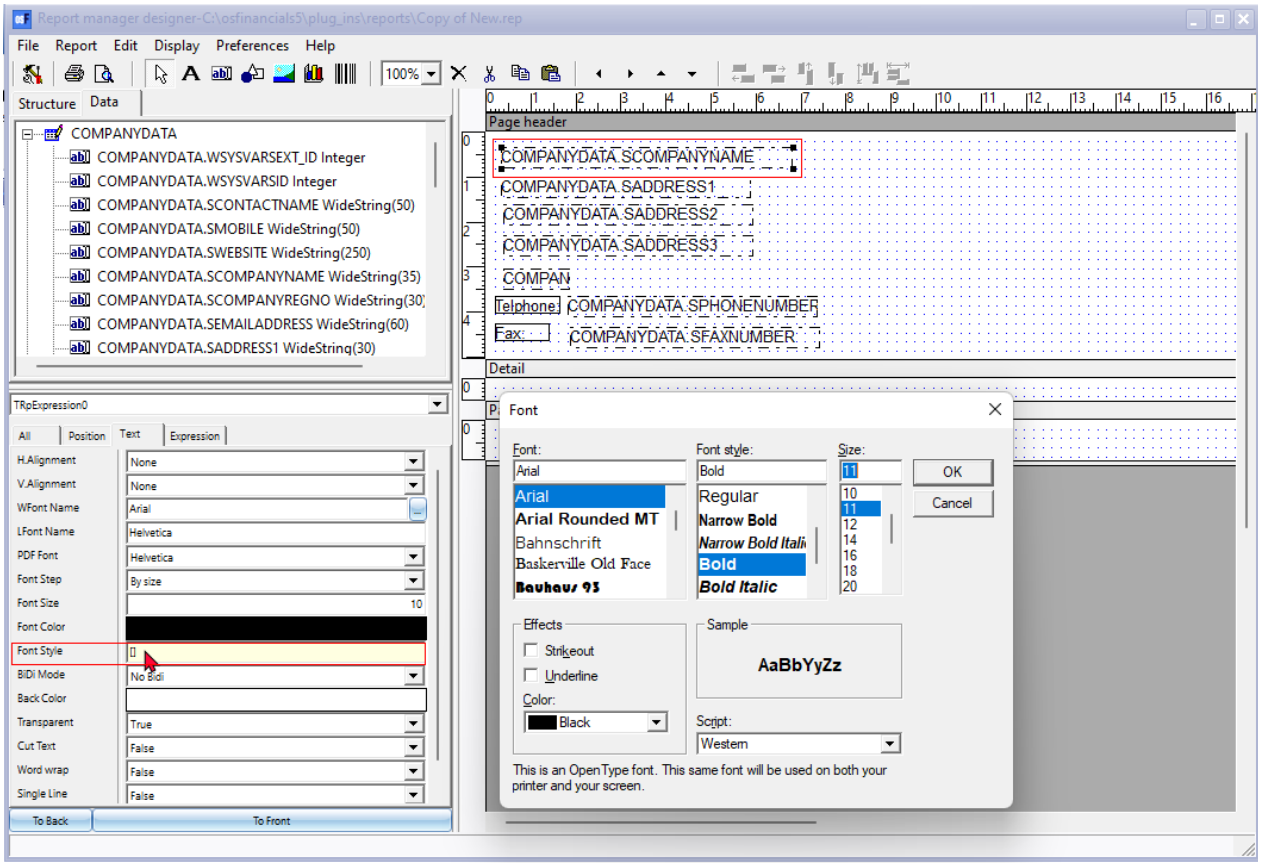
8. Close the "*Print preview*" screen and do the necessary changes, if required.

Format text

You may wish to set the Text properties (e.g. Font, font size, bold, italic, etc.) for specific expressions

(fields).

On the Text tab, you may set the alignment, fonts, etc. You may click on the " *WFont Name*" or "*Font Style*" field to set the font properties.

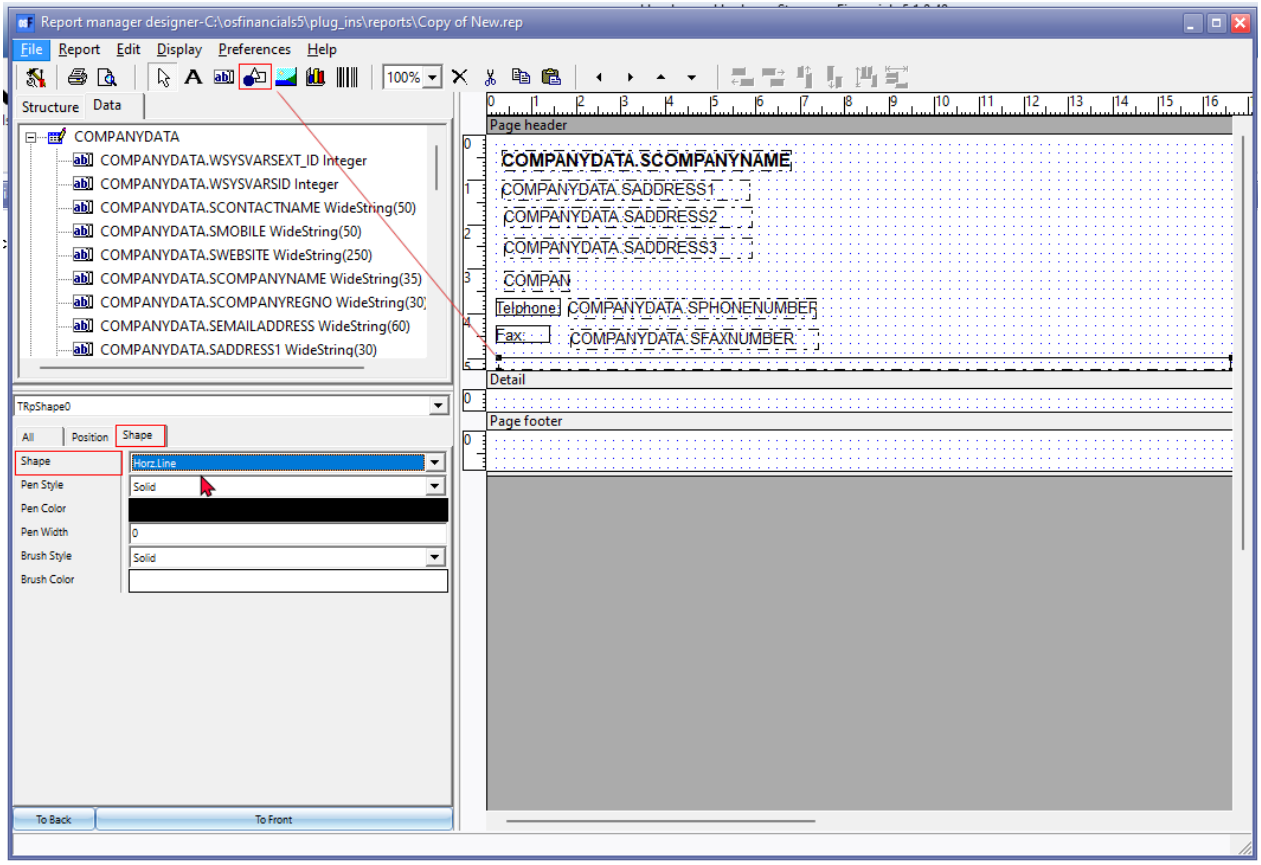


Insert a Simple drawing Horizontal line

To insert a Simple drawing (horizontal line), select the Simple drawing icon.

On the required section, click and draw the length of the shape. By default rectangle shape will be inserted.

On the Shape field, select Horizontal line.



Tidy the Page header - You may need to stretch and move the expressions and labels around, until you are happy with the layout.

You may click on the *Print preview icon and save your report in the available output formats (select Save (Ctrl+S)* *- "Save metafile as" screen). You may open the saved report in your systems default associated program (app) to check how the report will be displayed in the selected file format. For example, if you wish to use the report in a the Html format to display in web browsers, some expressions and labels may not be displayed correctly. You then may need to move or stretch the objects (labels, expressions).*

Transparent setting

If you print the PDF format of your report, the "Transparent" setting, if set to "False", will display a rectangular border around the object (eg Static text, Expression, etc.). You can fix this by setting the "Transparent" setting to "True".

Whenever you close the "Report manager designer" screen, after editing your report, remember save the report. If you click on No, on the "Save report?" confirmation message, your changes will be discarded (lost).

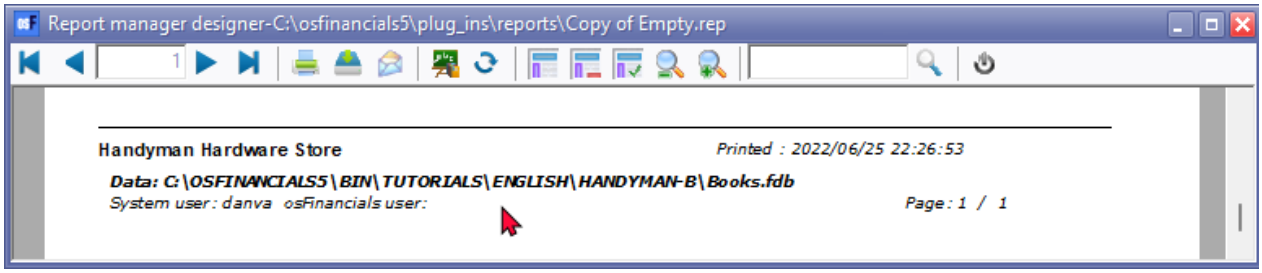
Created with the Standard Edition of HelpNDoc: News and information about help authoring tools and software

Reportman - Add footer data

The Data in the Page footers on the "*Empty.rep*" as well as all reports on the Reports menu and User reports menu; except on Document layout files and Debtor statements as well as on Creditor remittance advises, is as follows:

1. Company name – In the case of multi page reports, where the company details (on Page header) is only printed on the first page of a report.
2. Data – The full path (location and folders) in which the Set of Books is stored on your system or network.
3. System user of your Operating system and the osFinancials user / TurboCASH user set in Setup → Access control (Setup ribbon) who printed the report.
4. Date stamp – System date and time the report is printed.
5. Page number and last page number to indicate the expected number of pages.

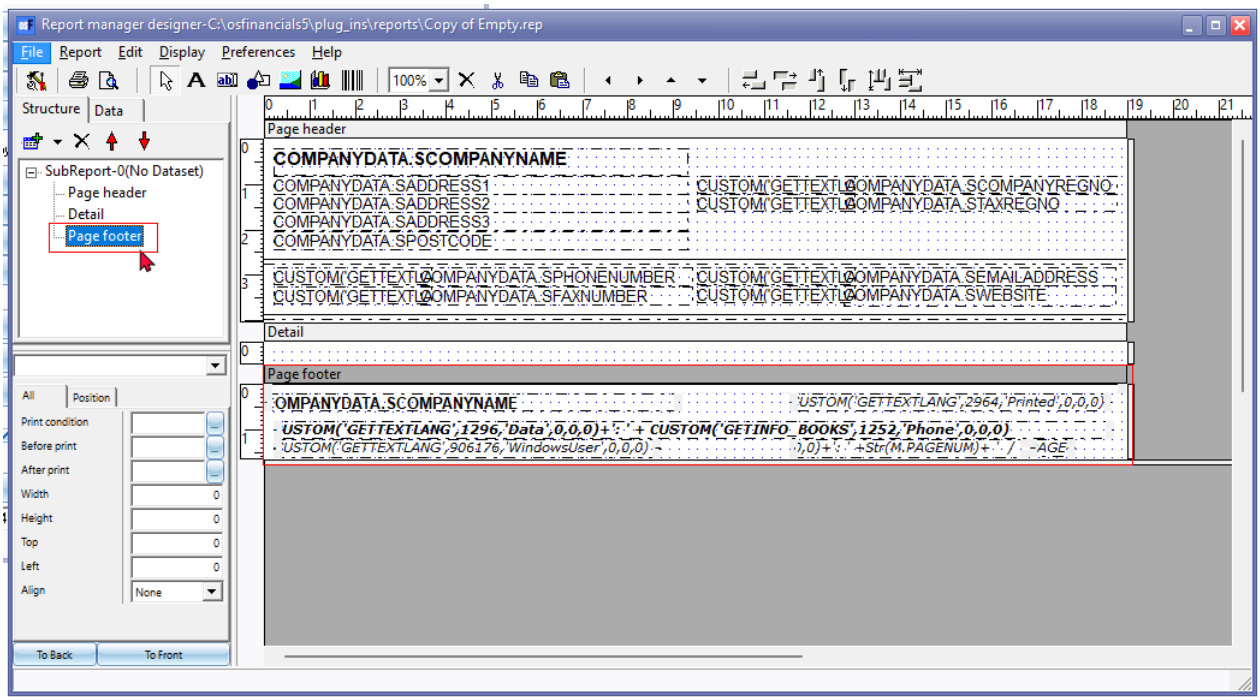
An example of the page footer, included in the "*Empty.rep*" is as follows:



Add data to Page footers

Select the "*Empty.rep*" or any other report and in the Page footer section of the report, select all the fields (including the Horizontal line).

Select the horizontal line and press the Shift key and while keeping the Shift key down, click on all fields.



The Page footer (as on the "*Empty.rep*" consists of the following expressions:

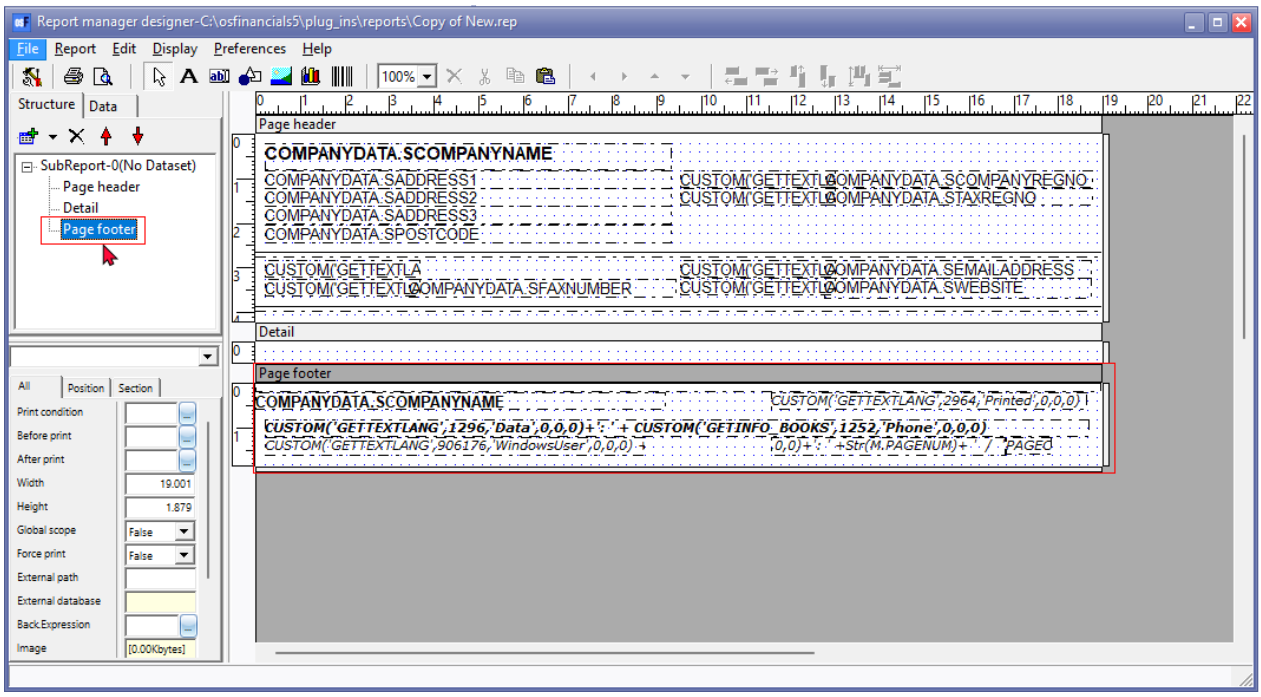
Expression	*SQL*	*Description*
TRpShape2	*Horizontal line*	*Horizontal line*
TRpExpression17	*COMPANYDATA.SCOMPANYNAME*	*Company name – In the case of multi page reports, where the company details (on Page header) is only printed on the first page of a report.*
TRpExpression19	*CUSTOM('GETTEXTLANG',1296,'Data',0,0,0)+': ' + CUSTOM('GETINFO_BOOKS',1252,'Phone',0,0,0)*	*The data path – The full path (location and folders) in which the Set of Books is stored on your system or network.*
TRpExpression20	*CUSTOM('GETTEXTLANG',906176,'WindowsUser',0,0,0) + ': ' + CUSTOM('GETINFO_WINUSER',2964,'User',0,0,0) +' '+CUSTOM('GETTEXTLANG',906177,'ProgramUser',0,0,0) + ': ' + CUSTOM('GETINFO_USER',2964,'Printed',0,0,0)*	*System user of your Operating system and the osFinancials user / TurboCASH user set in Access control) who printed the report.*
TrpExpression18	*CUSTOM('GETTEXTLANG',2964,'Printed',0,0,0) +' : ' + FORMATSTR('',now)*	*Date stamp – System date and time the report is printed.*
TRpExpres	*+' '+CUSTOM('GETTEXTLANG',1024,'Page',0,0,0)+': '*	*Page number and last page number to*

sion21	*+Str(M.PAGENUM)+ ' / '*	*indicate the expected number of pages.*

You may select the "*Empty.rep*" and copy all the expressions in the Page footer section and paste it in the footer section of your new report.

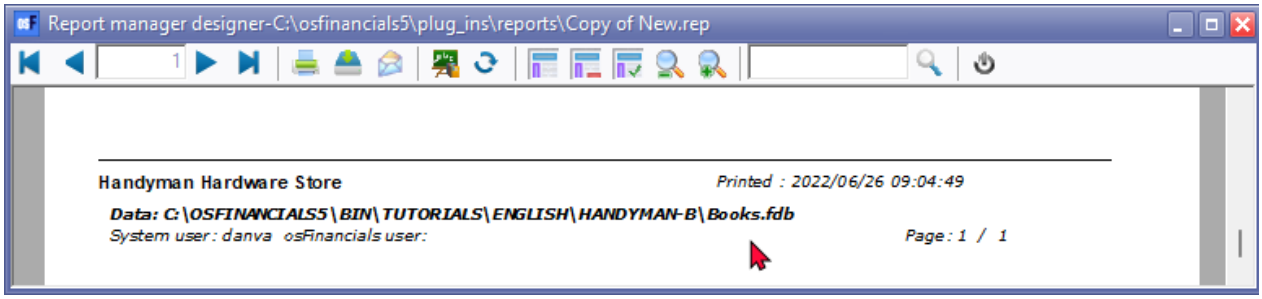
To copy the expressions to another report:

1. Press the Shift key and use your mouse to click on the Expressions (including the Horizontal line)
2. Select Edit → Copy (Alt+C) or press the (Alt+C) keys.
3. Close the selected report to copy from. Do not save the report.
4. Open the report on which you need to copy (add) the Page footer.
5. Select the Page footer section of your report.
6. Select Edit → Paste (Alt+V) or press the (Alt+V) keys.



You may need to resize the page footer vertically.

Click on the Preview icon to check your report.



Take note of the following important settings relating to page footers and multiple page reports:

Force print setting - The Page footer may print on the first page only. It may not print on the last page or on consecutive pages, if it is a multi-page report. You need to set "Force print" to True

Two pass report setting - This setting must be selected (ticked) for both, PAGECOUNT and/or SkipToPage settings.

Created with the Standard Edition of HelpNDoc: Generate EPub eBooks with ease

Reportman - Print settings

Created with the Standard Edition of HelpNDoc: Experience a User-Friendly Interface with HelpNDoc's Documentation Tool

Reportman - Two pass report setting

The Two pass report setting allows you to preview the first page before all the pages are calculated (e.g. page 1/2, etc.). This is the default setting implemented in reports and document layout files which supports multi-page and subreports in reports and document layout files. This controls the print speed and memory usage (when printing, pages printed are released from memory).

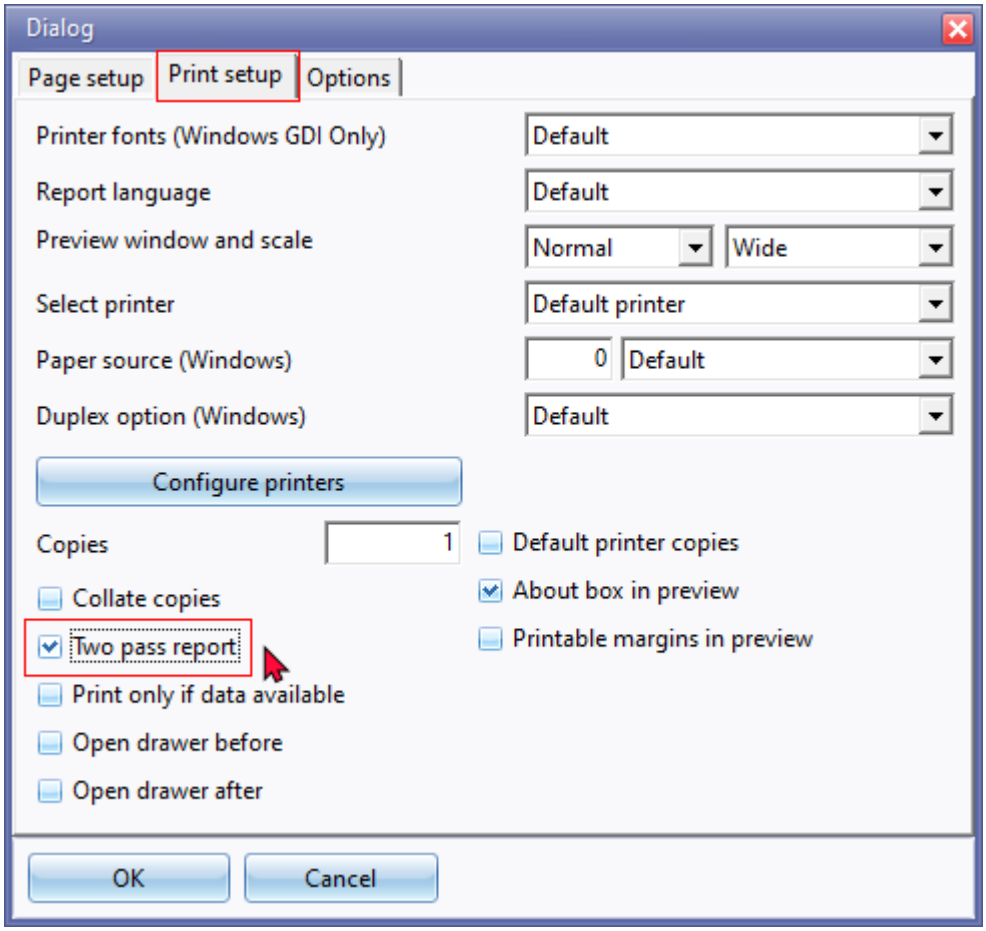
This two pass report setting must be selected (ticked) for both, PAGECOUNT and/or SkipToPage settings.

Your report or document layout file will produce the following message:

> “Two pass report needed-Page setup”

Click OK.

If this error is encountered in the "*Report manager designer*" screen, go to File → Page setup menu and on the Print setup tab, tick the "*Two pass*" report field.



Click OK.

If this error is encountered when printing the report on screen, click on the *"Show report page setup" icon or press the F11 key.*

On the Print setup tab, tick the "Two pass report" field.

Click OK.

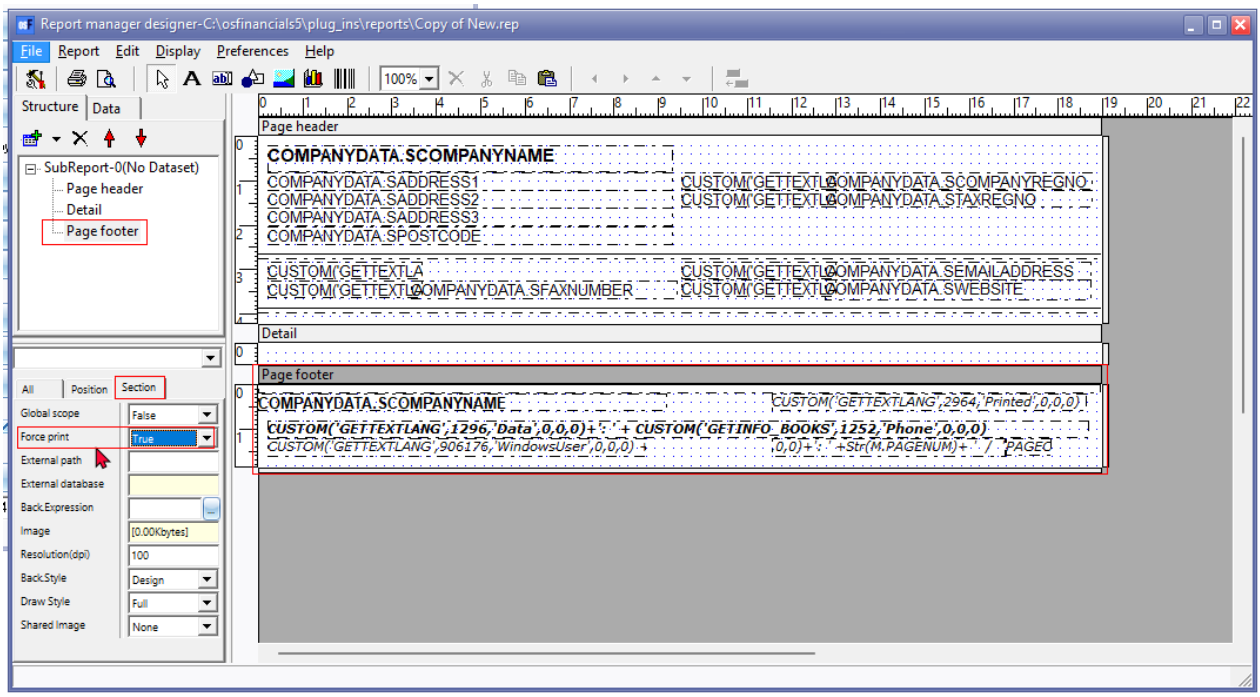
Created with the Standard Edition of HelpNDoc: Enhance Your Documentation with HelpNDoc's Advanced Project Analyzer

Reportman - Force print setting

The Page footer may print on the first page only. It may not print on the last page or on consecutive pages, if it is a multi-page report.

If this is the case, the default Force print setting for the Page footer is set to False.

You need to set the Force print setting to True.



Created with the Standard Edition of HelpNDoc: Converting Word Documents to eBooks: A Step-by-Step Guide with HelpNDoc

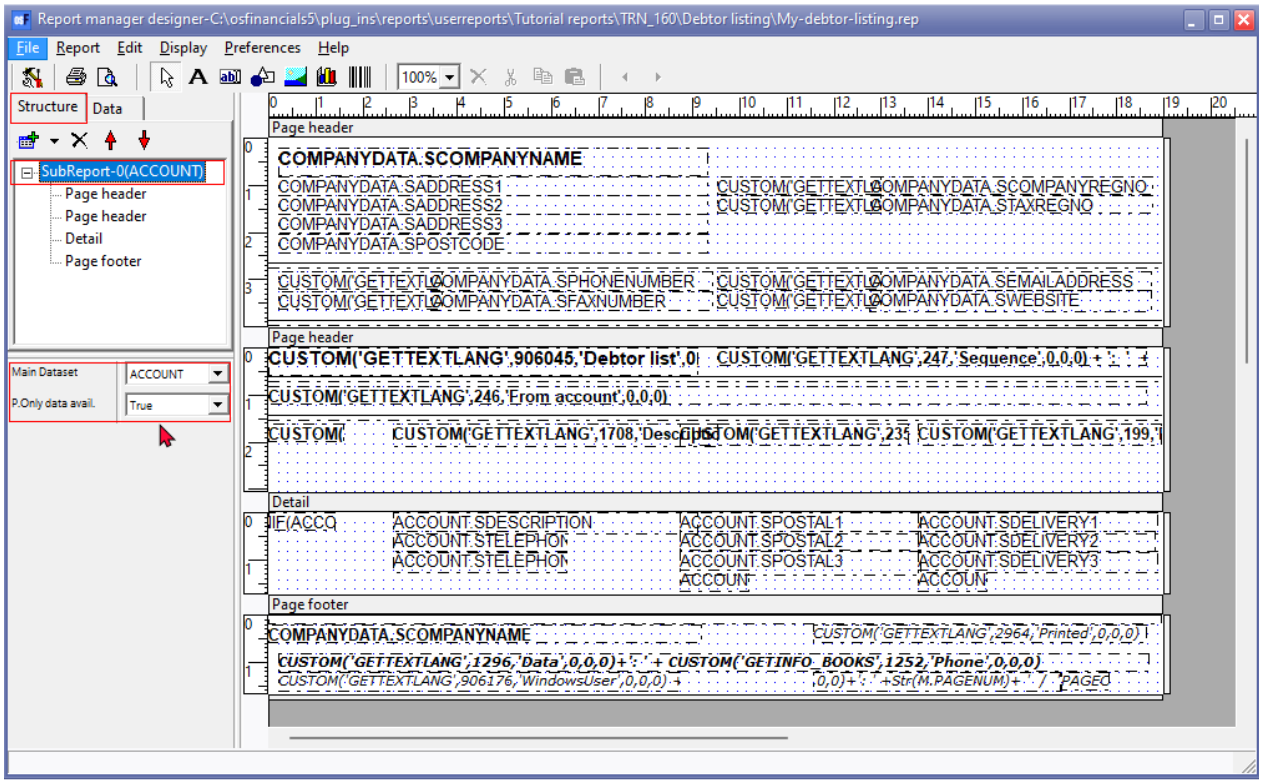
Reportman - Print-only if data is available

To prevent printing empty reports, you need to set the Report main structure to print the report only when data is available in the "*Report manager designer*" when you edit the report.

If this setting is not set, it will print blank reports.

If there is no data to print, only the Company info in the page header and the data in the Page footer will be printed in most reports.

The "*Main Dataset*" linked to the SubReport in the report "Structure" is by default set to "*False*" when designing reports.



"*P.Only data avail.*" (Print only data available) set to "*True*". If an invalid selection is made on the parameters; or if there is no data in the "*ACCOUNT*" dataset to print, the following error message will be produced:

> "No data available to print!"

If the "*P.Only data avail.*" (Print only data available) set to "*False*", the report will print only the Page headers and Page footers if no data is available on the "*Main Dataset*".

Created with the Standard Edition of HelpNDoc: Free iPhone documentation generator

Reportman - Add content - Detail

If you have created your own reports, from the following templates:

- Empty.rep - This report includes a standardised Page header (COMPANYDATA dataset) and a standardised Page footer. The Detail section of the Report Structure is blank.
- New.rep - This report includes a blank Page header, Detail section and Page footer. The entire report is blank. Need to add the COMPANYDATA dataset in the Page header and add the details in the Page footer.

Whichever template your own new report is based on, the report will not print any data from the active Sets of Books.

You need to add the details (content of the report), which must include a "*Main Dataset*" containing SQL to reference the tables and the fields to be available for the report.

Thereafter, you may select the data fields from the table(s) and drag it onto the report.

REPORT DETAIL

To create a new report from scratch, the debtor listing report will be used to illustrate the basics based on the "*Empty.rep*". This example will also illustrate to add parameters to the report.

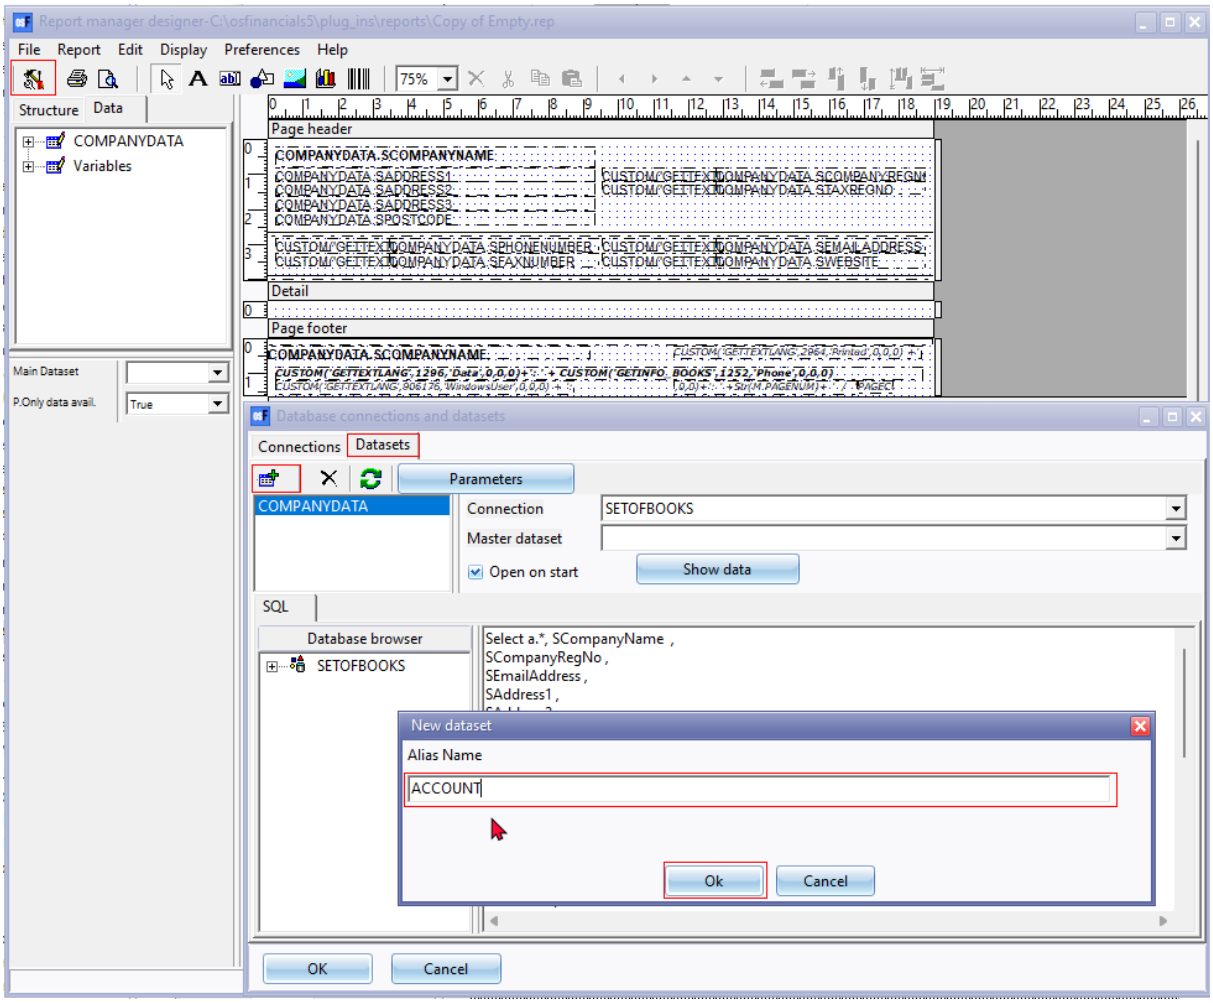
To create a new report based on and existing report, the debtor listing report, is used as basis to create a creditor listing report.

Add a New dataset

You need to add the details (content of the report), which must include a "*Main Dataset*" containing SQL to reference the tables and the fields to be available for the report.

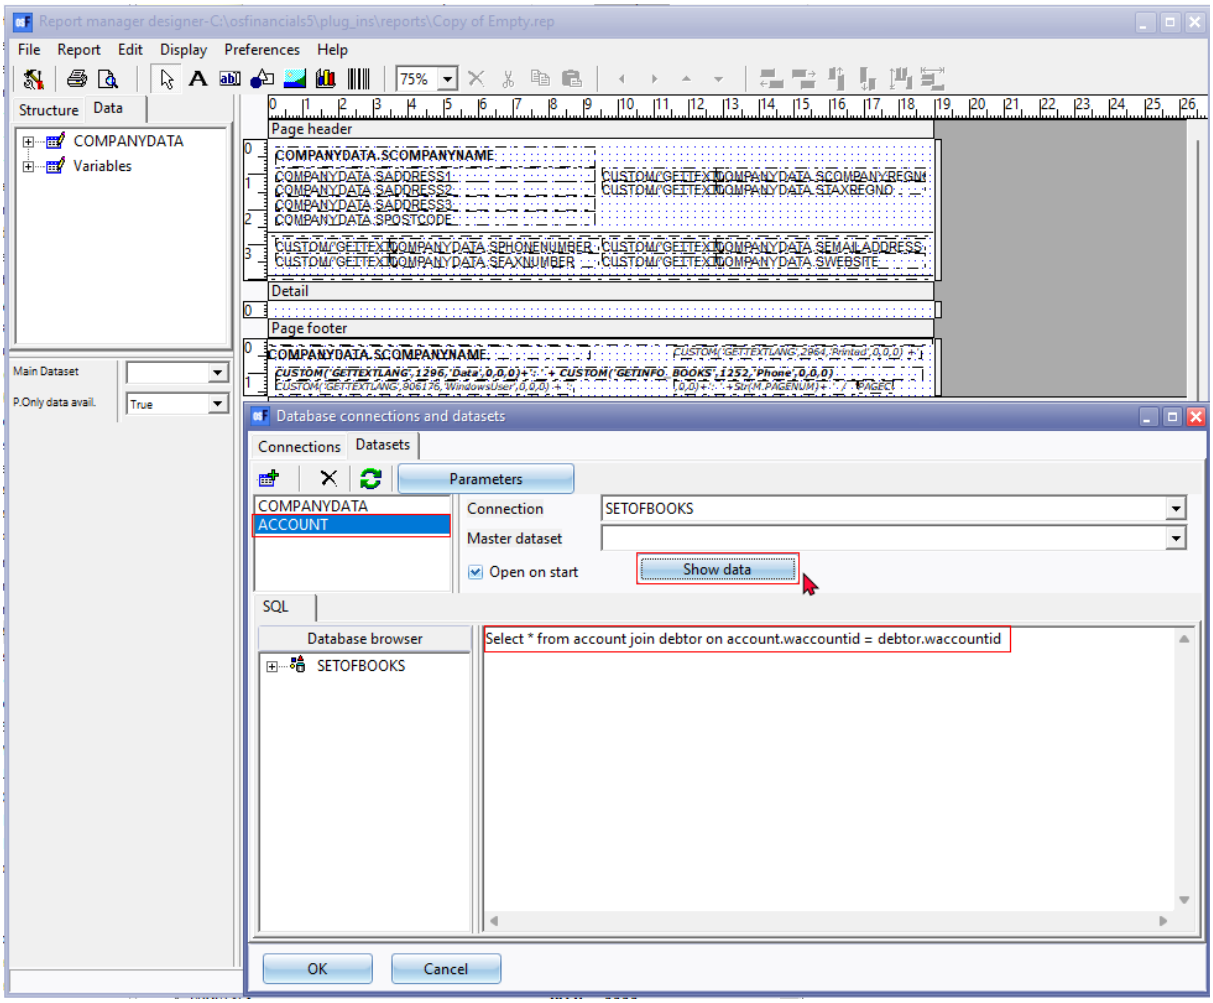
To add a new Main Dataset:

1. On the "*Report manager designer*" screen, launch the "*Database and connections datasets*" screen (accessed from the first icon or from the Report → Data access configuration menu).



2. On the "*Database connections and datasets*" screen, click on the Add+ icon to add a New dataset.

3. Enter i.e. "*ACCOUNT*" and click Ok.



On Datasets tab, you may use the Database browser to view the tables. (The ACCOUNT and DEBTOR tables).

4. On the new Dataset "*ACCOUNT*" type the following Sql:

   "Select * from account"

   This will add all fields (*) in the ACCOUNT table.

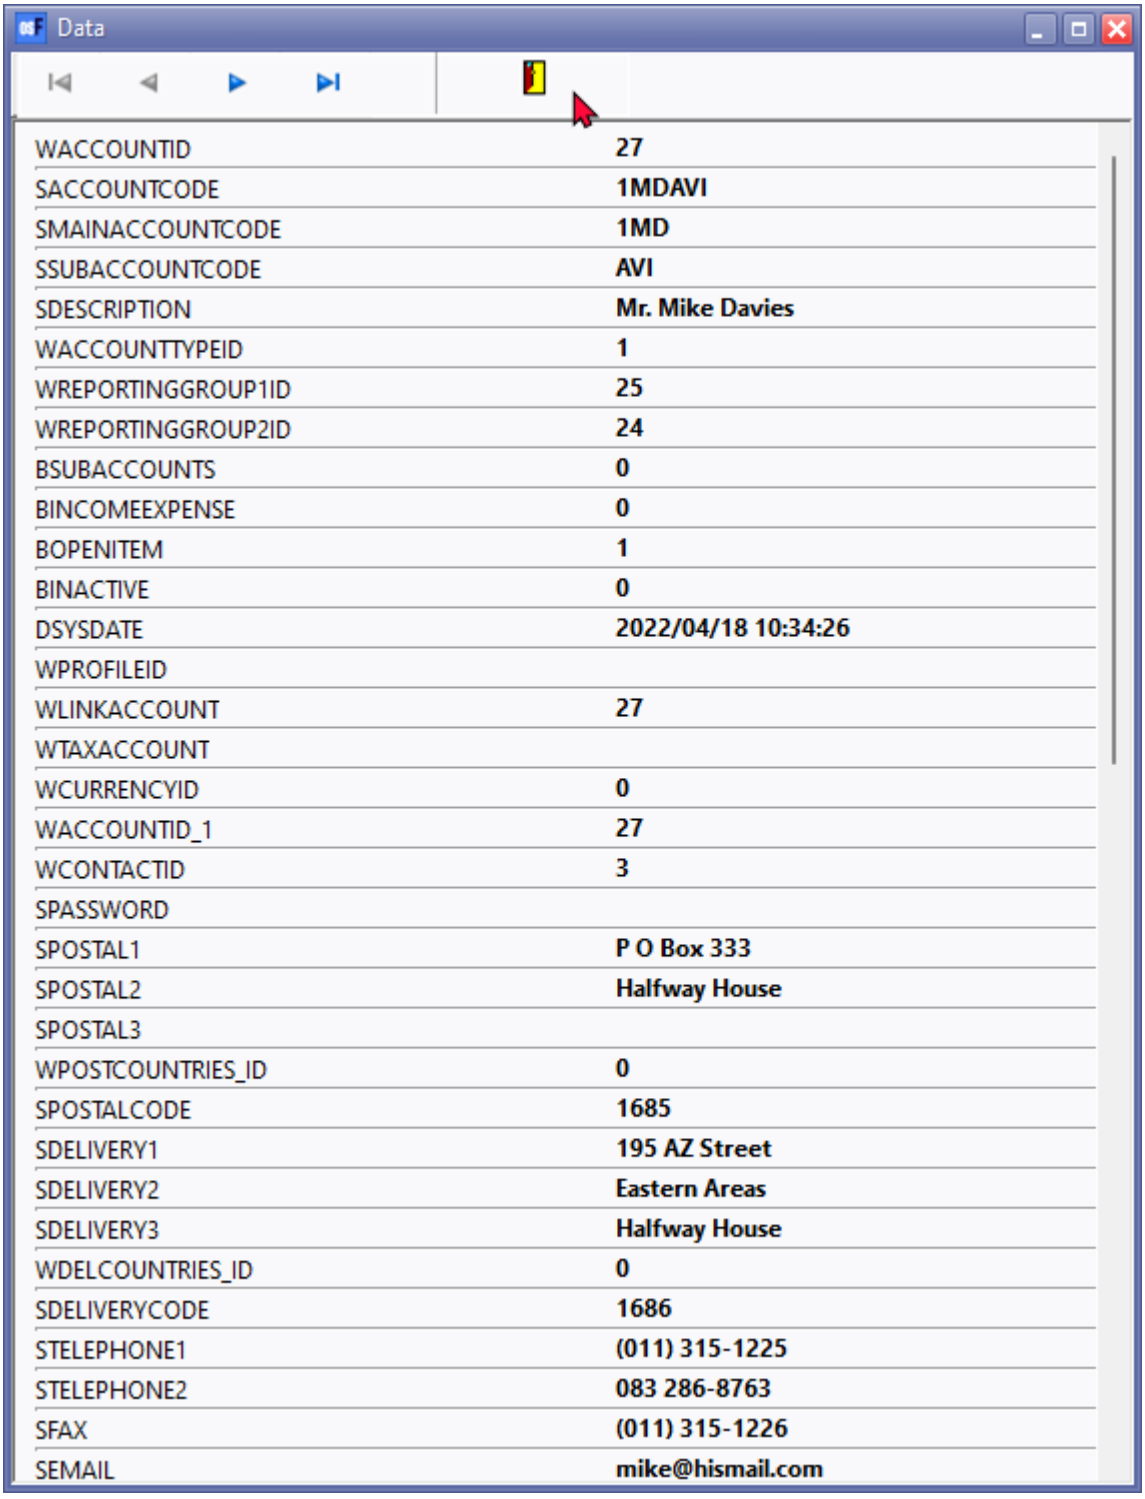
   Then add the join from the DEBTOR table.

   "join debtor on account.waccountid = debtor.waccountid"

   The Sql should as follows:

   "Select * from account join debtor on account.waccountid = debtor.waccountid"

5. Click on the Show data button to preview the data tables (Dataset).



Each time you click on the Next and Previous buttons the accounts will be listed from the account id (WACCOUNTID) field.

6. Close the "*Data*" screen.

7. Click OK on the "*Database connections and datasets*" screen.

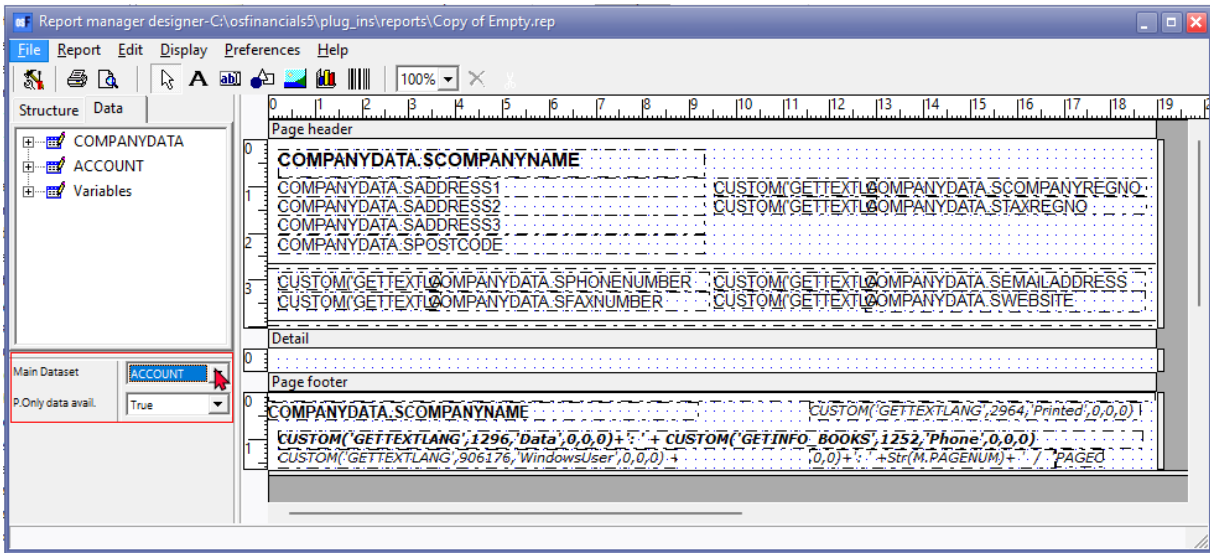
The next step is to link the ACCOUNT dataset as the Main Dataset to the report.

Link the ACCOUNT Dataset to the SubReport-0

Once you have added the dataset, e.g. ACCOUNT as in this example, you need to link the Dataset to the Main Dataset. You may need to set the dataset to print only if data is available. This will prevent printing blank reports, which may only print the Page header and Page footer.

To link the Dataset to the SubReport:

1. On the report Structure tab, select the SubReport-0.
2. Link the SubReport-0(No Dataset) to the Main Dataset (i.e. "*ACCOUNT*").



3. "*P.Only data avail.*" (Print only data available) set to "*True*".

If an invalid selection is made on the parameters; or if there is no data in the "ACCOUNT" dataset to print, the following error message will be produced:

> "No data available to print!"

If the "P.Only data avail." (Print only data available) set to "False", the report will print only the Page headers and Page footers if no data is available on the "Main Dataset".

The next step is to add the data in the ACCOUNT table to the Detail section of the report.

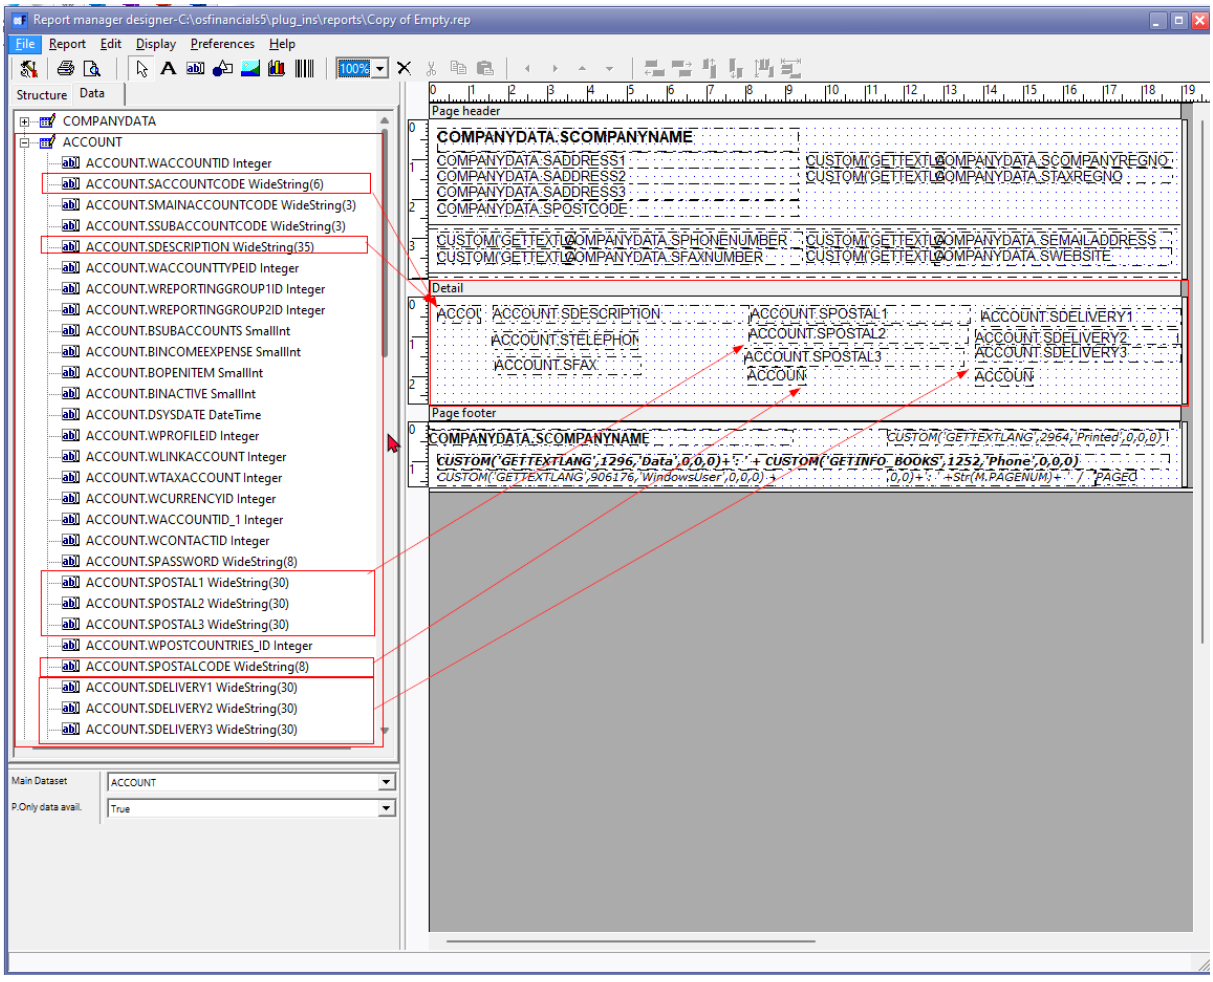
Add data to the Detail section of the report

Once the Dataset is set and the tables are defined, you may proceed to select the data from the tables you need to print on the report.

To add data from the Main Dataset to the report detail:

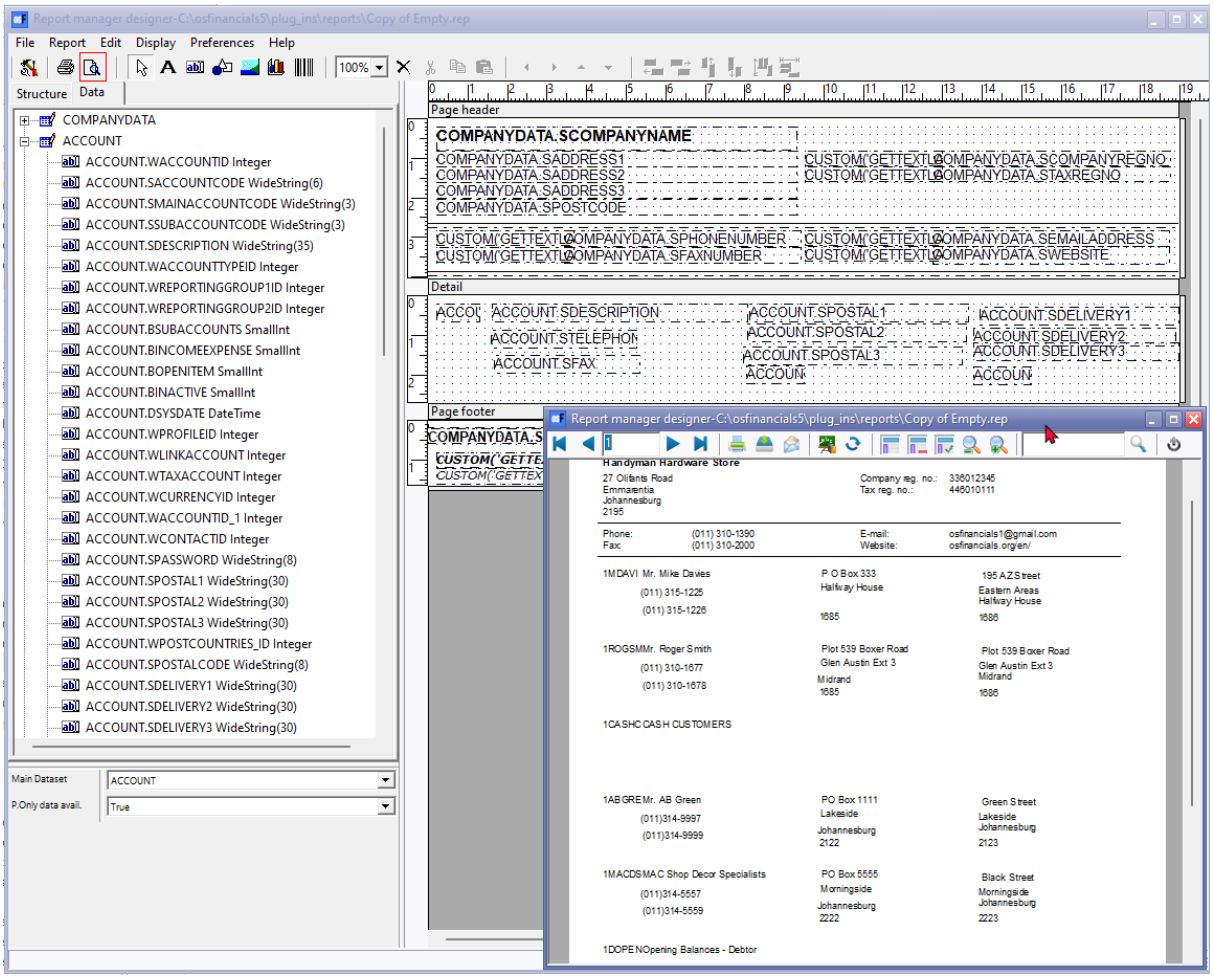
1. On the Data tab, expand the ACCOUNT table. Add the data you wish to print.

> *You could drag and drop the fields from the ACCOUNT table onto the Detail section of the report.*



2. Add (drag) all the data fields (expressions), as required onto ("*Detail*" section of the Report structure) the report.

3. Click on the Print preview icon.



4. If data is entered on the relevant fields of the forms (screens), as per this example, the Account code, Account name (description), Telephone 1, Telephone 2, Postal address and Delivery address will be displayed in the Detail section of this report.

> *The sequence, in which the debtor (customer / client) accounts is listed, does not really makes sense on the printed report.*
>
> *The reason for this, is that the accounts is by default sorted according to the record number (id) on the ACCOUNT table.*

> *The next step is to change the default sort order (sequence) to account code or description in which the data in the ACCOUNT table should be listed in the Detail section of the report.*

Set the sequence (order) of the data in the report

By default, the report, will list the data according to the sequence (order) of the account id (WACCOUNTID) as in this example.

To change this, for example, to debtor code or debtor description, you may set the SQL to change the

sequence (order) of the report.

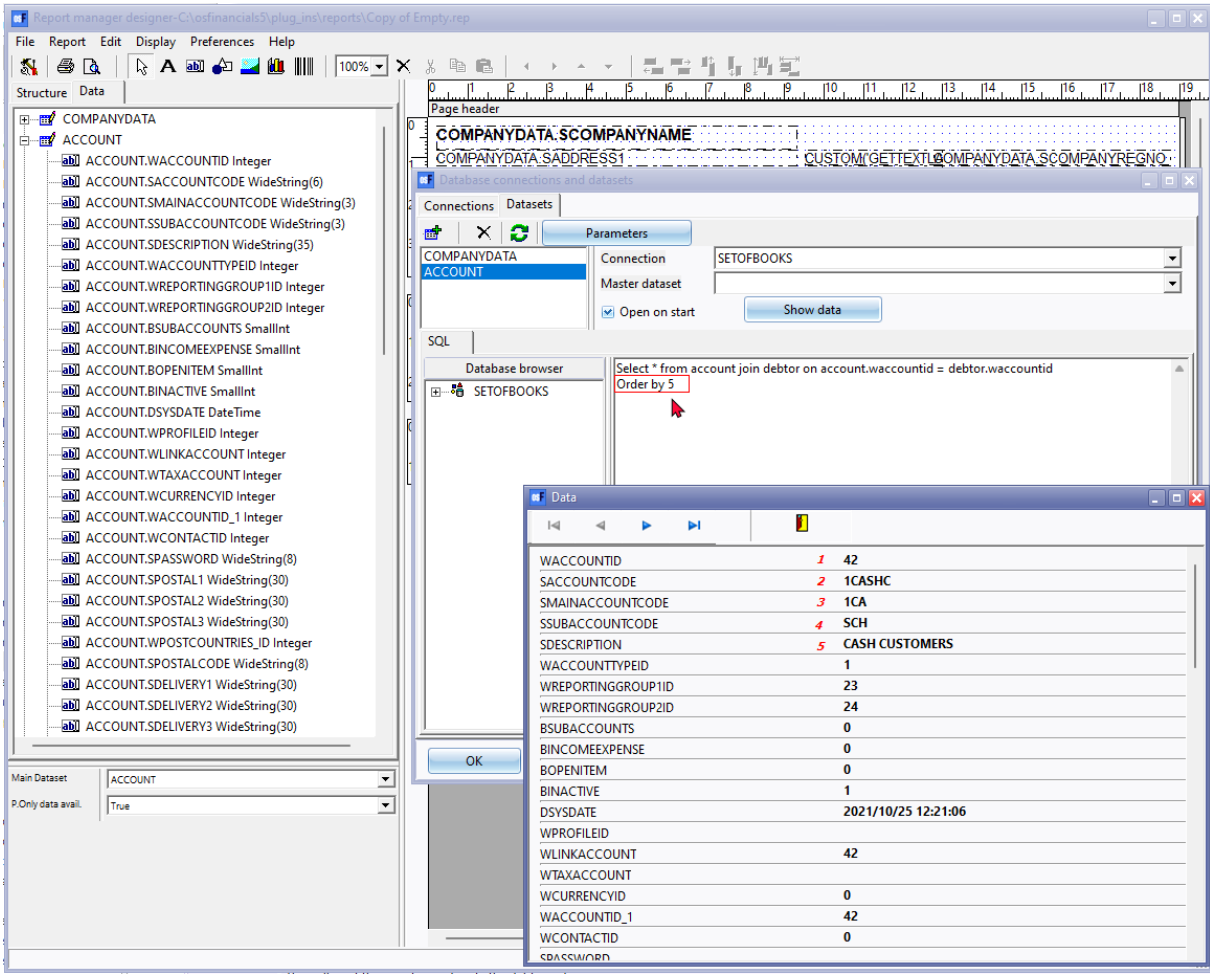
The sequence, in which the debtor (customer / client) accounts is listed, does not really makes sense on the printed report.

At this stage, in the (report design stage), you can set a specific sequence in which the data is displayed, for example account code or description.

You may add the sequence parameter which will add an option to the report options screen. The sequence in which the data on the report is listed can be selected when the report is printed or reprinted.

To set the default Account sequence for the report:

1. On the "*Report manager designer*" screen, launch the "*Database and connections datasets*" screen (accessed from the first icon or from the Report → Data access configuration menu).
2. On the Datasets tab, select the ACCOUNT dataset.
3. Click the Show data button.



4. Note the Data's number (e.g. WACCOUNTID = 1; SACCOUNTCODE = 2; SMAINACCOUNTCODE =3; SSUBACCOUNTCODE = 4; SDESCRIPTION = 5; etc.).

5. To list the accounts, according to the account name or description, you need to enter the following SQL"

   “Order by 5”

   This will print the report according to the debtor (customer / client) account description.

   To print the report according to the debtor code, you may set the Sql to change the sequence (order) of the report.

   Change the number 5 to 2 in the Sql

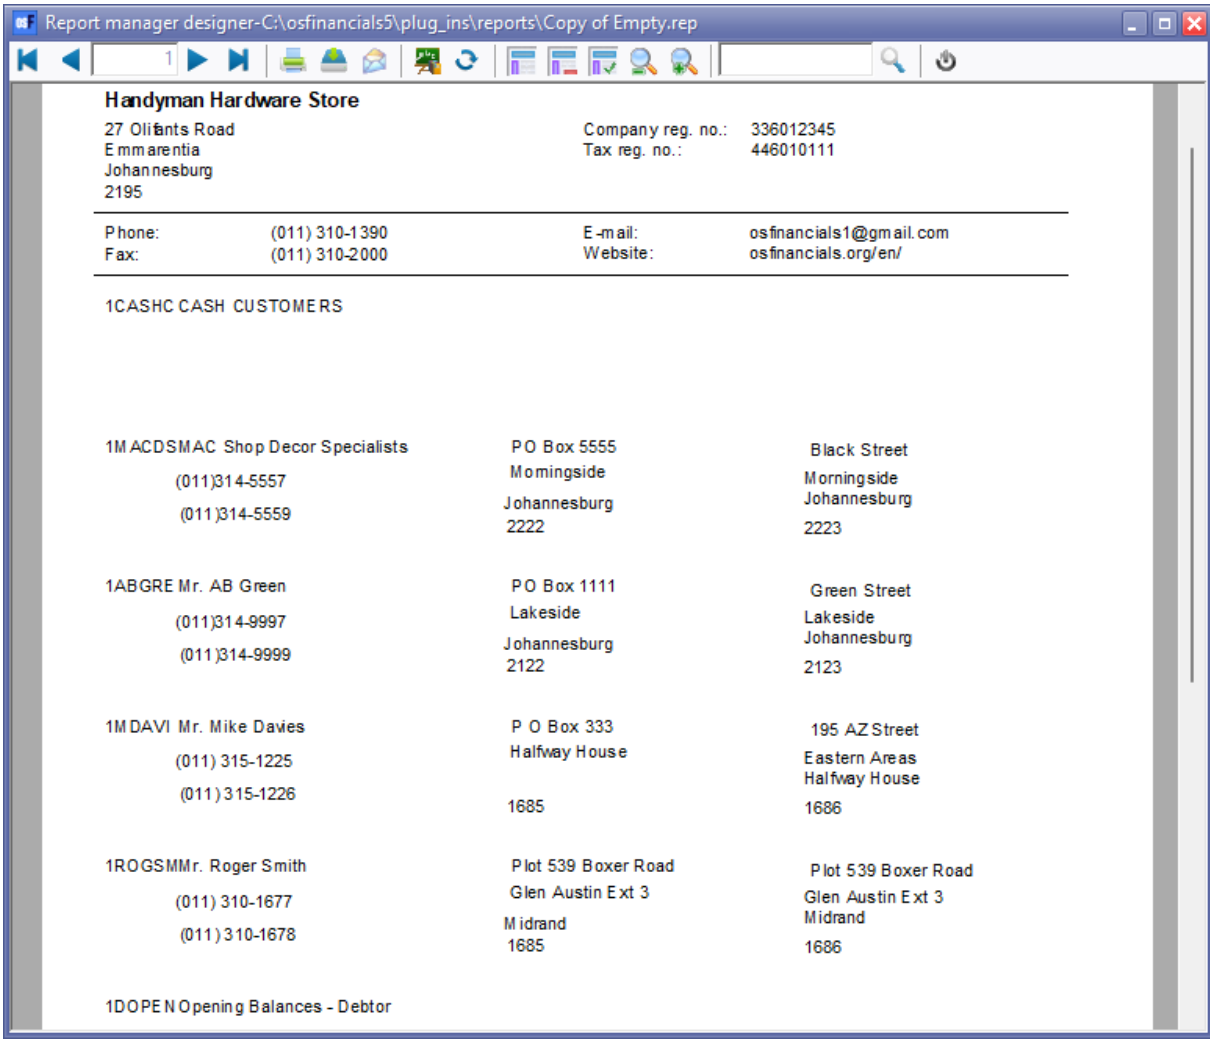
   “Order by 2”

   This will print the report according to the debtor code.

5. Close the "*Data*" screen.

6. Click on the OK button of the "*Database connections and datasets*" screen.

7. Click on the Print preview icon. An example of the printed report according to the account description (Order by 5), is as follows:



8. Close the "Print preview" screen.

The next step is to add descriptive headings for the data in the Detail section of the report.

Add headings to the Data on the Details section of the report

From a user's point of view, the data on the report would not make sense.

As per this example, the Account code, Account name (description), Telephone 1, Fax, Postal address and Delivery address will be displayed in the Detail section of this report.

There are 2 methods of adding labels to a report:

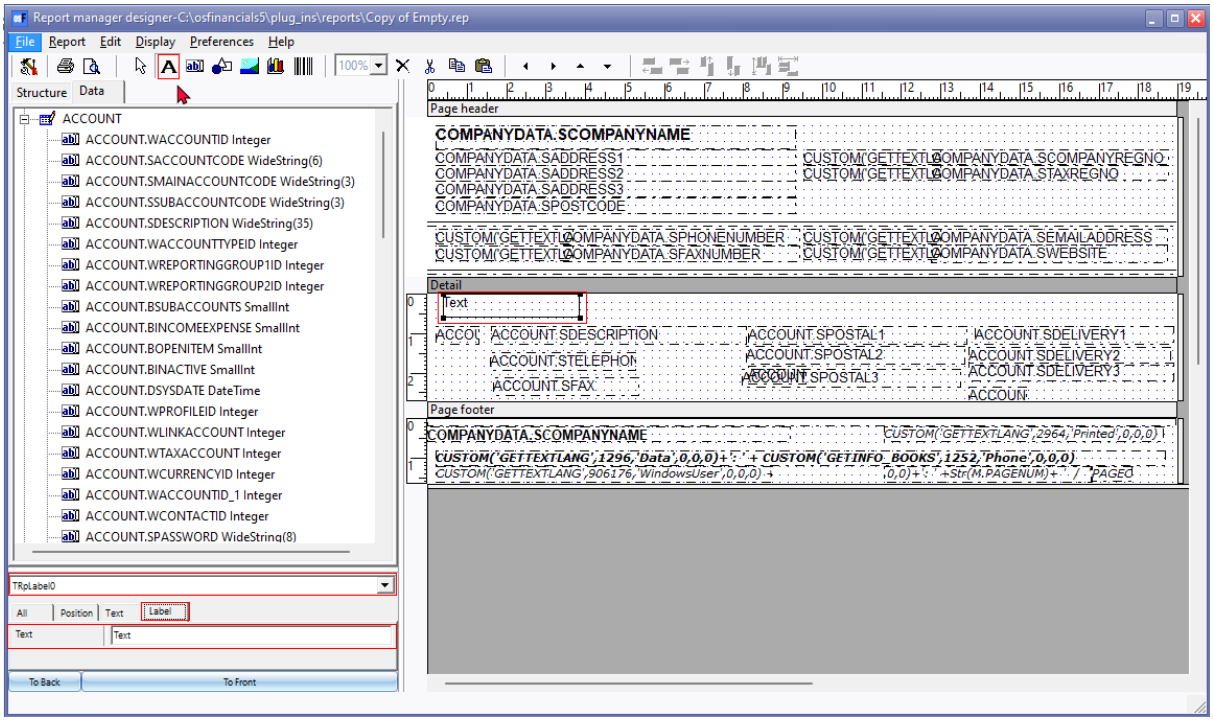
- Static text - Add plain text labels.
- Expressions - Add translatable expression labels to reference the language id. This will use the language files to translate the labels the languages are changed (Switch language on the Start

ribbon).

To add static text (labels):

1. Select the "*Detail*" section of the report structure.

2. Select the Text icon to insert static text and drag it to the required space on the report. It will add the "*TrpLabel0*", etc. for each static text field.

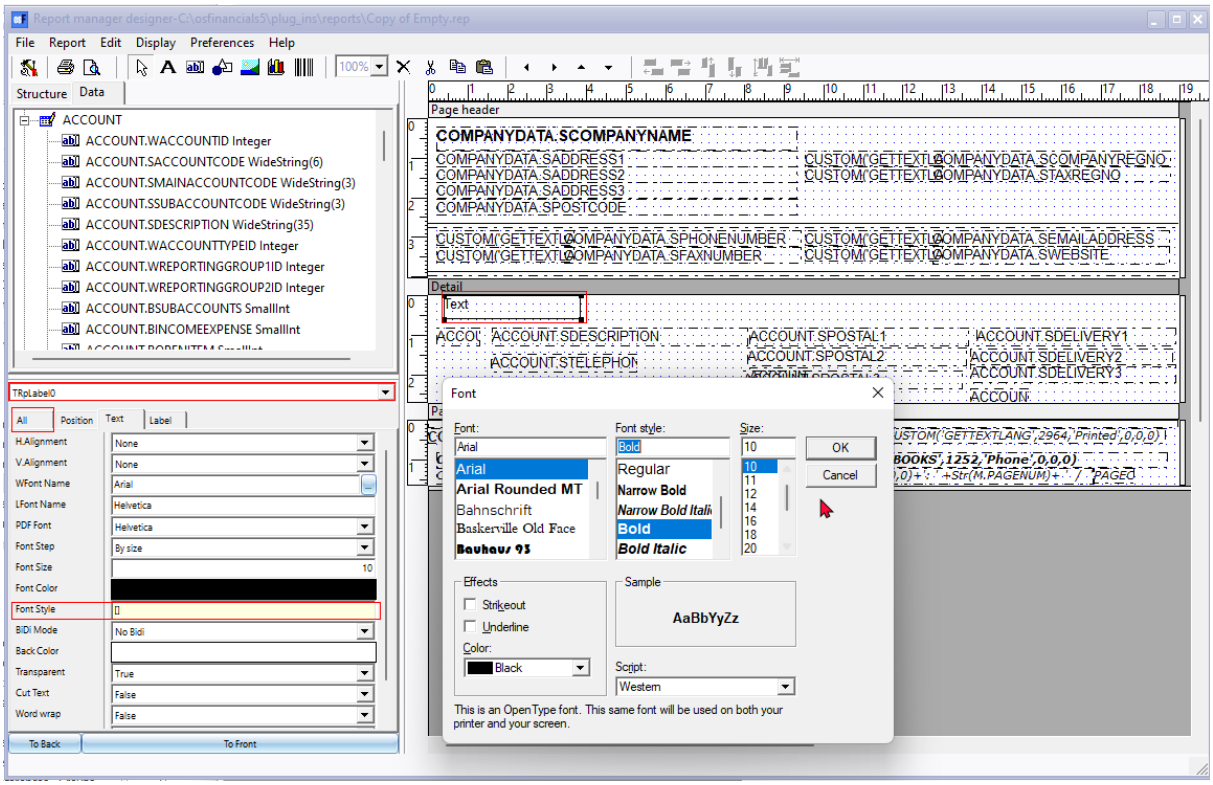


3. On the Label tab, replace the "*Text*" with your own, e.g. "*Account code*".

4. Repeat the process for all labels. Once all the static text labels are added, you may need to change the font.

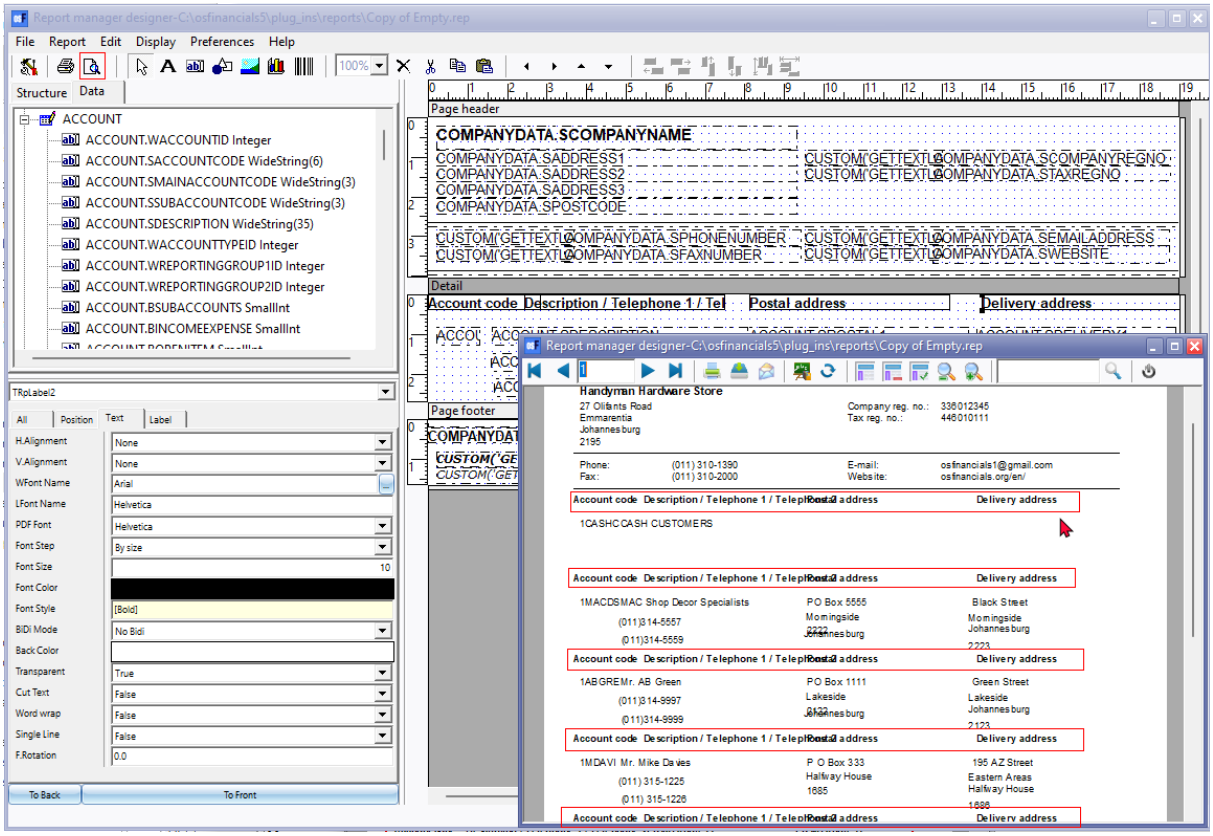
> *To select all the labels you need to format, select a label (e.g. Code); and while keeping the Shift key in; use the mouse to select the rest of the labels for which you wish to change the font properties.*

5. Click on the Text tab or All tab.



6. Select your options to change or set the properties, and click OK on the "*Font*" screen.

7. Click the Preview icon.



8. In the example of this Preview, 2 issues need some attention:

- There is no space between the "*Description / Telephone 1 / Telephone 2*" label and the "*Postal address*" label. The Postal address label and expressions may be moved to the right; or line breaks could be added in the Text label.
- The static text headings is repeated for each account. To solve this by printing these Heading labels on each page once only, you may need to add another Page header and set a Print condition.

PAGE HEADERS

To print the headings only once on the page, you may:

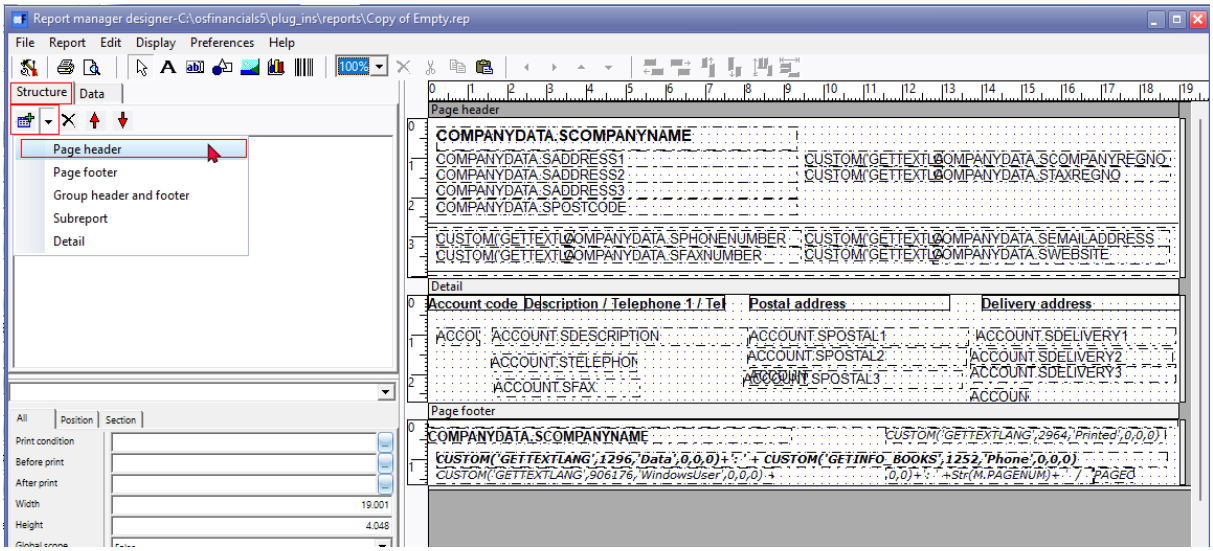
- Stretch the Page header and cut the headings from the Detail section of the report and Paste it on the Page header, or;
- You may add (insert) another Page header and cut the headings from the Detail section of the report and Paste it on the Page header.

For longer reports (multi-page reports), where the Company data only needs to print on the first page and the headings on each page, a new Page header is recommended for the headings.

Add (insert) Page header

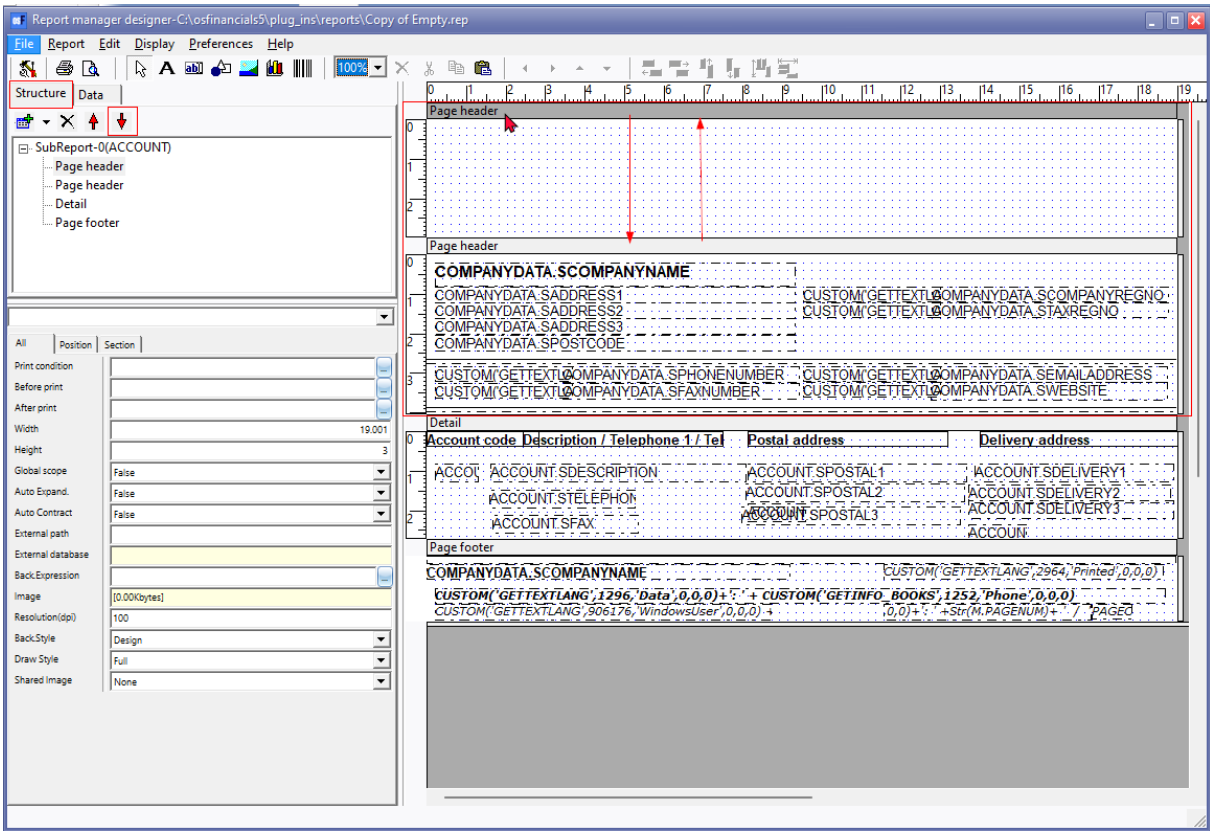
To insert another Page header:

1. Select Page header and on the Structure tab, click on the Add icon and select Page header from the list.

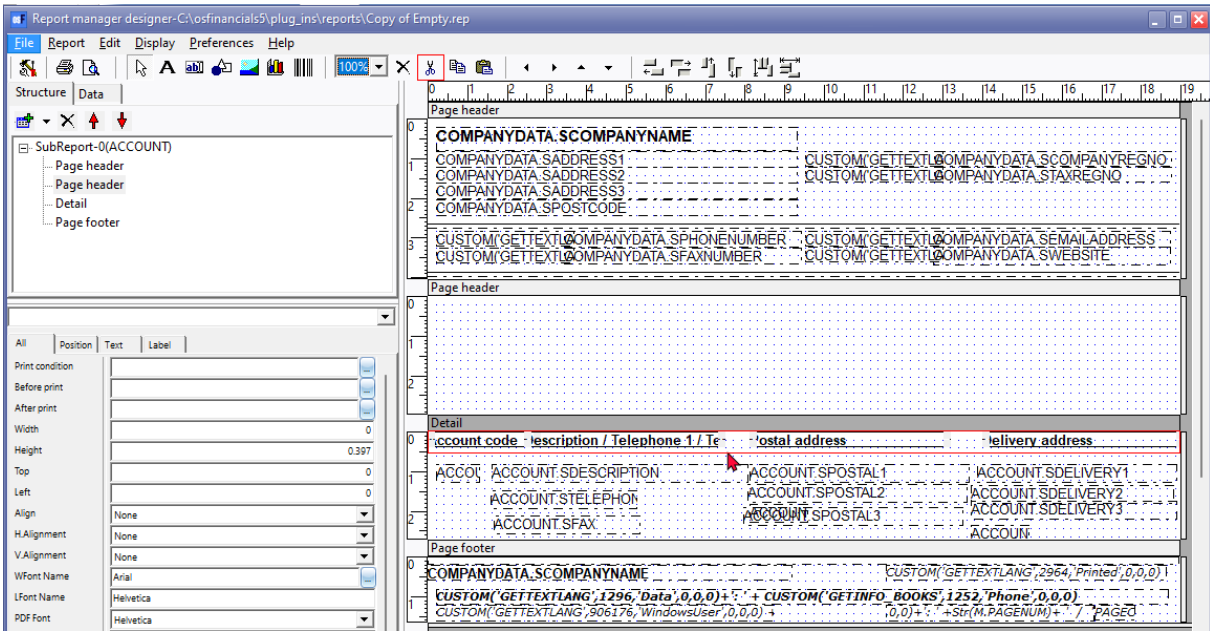


2. This will insert a new Page header to the top of the existing Page header (before the Page header containing the information from the COMPANYDATA Data set.

3. On the Structure tab, select the new (blank) Page header and click on the Down arrow to move the section down.



4. Once the blank inserted Page header is moved, you may add the Headings from the Detail section to the new page header.



Add Heading Detail to Page header

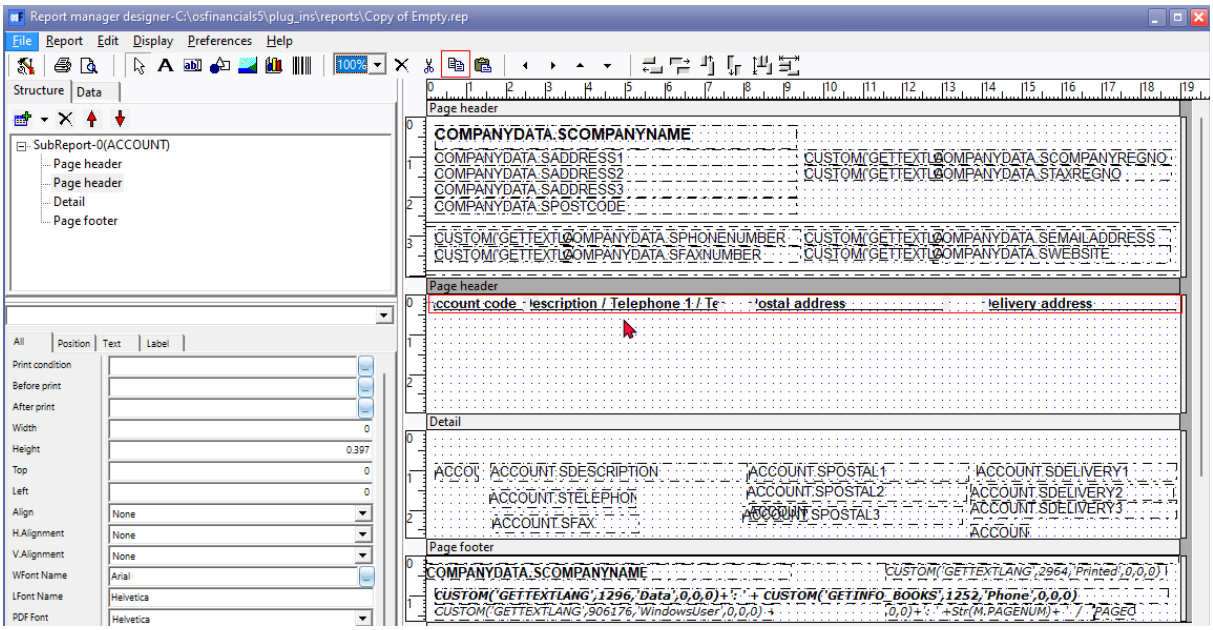
If you need to add headings to the Page header section, you may add them manually.

Refer to Add headings to the Data on the Details section of the report in this document.

If you have already added detail in another report section (e.g. Detail section), you may cut and paste the detail (e.g. heading labels) to the new Page header.

To move the Heading Expressions to the Page header:

1. Select the Detail section of the report structure.
2. Select the label e.g. "*Account code*"; and while keeping the Shift key in; use the mouse to select the rest of the labels.



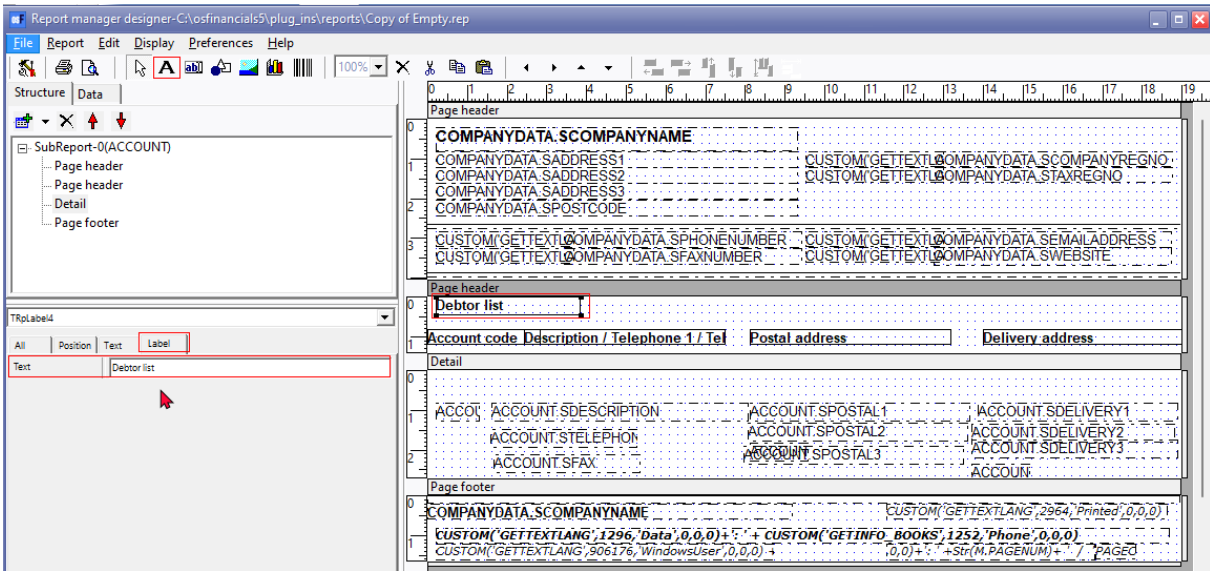
3. Select Edit → Cut (Alt+X) or press the (Alt+X) keys.
4. Select the new Page header section of the report.
5. Select Edit → Paste (Alt+V) or press the (Alt+V) keys.

Add a name for the report

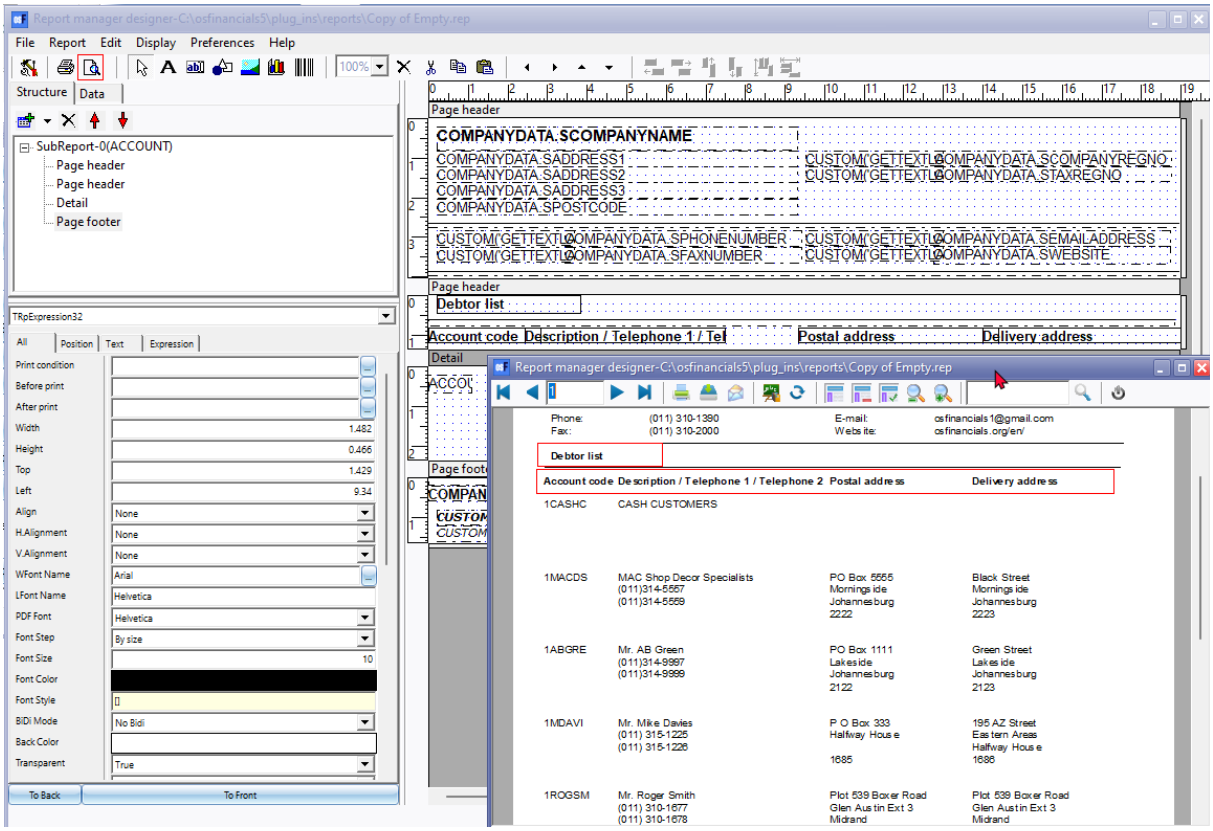
It is recommended to add a name or description to the report.

To add a name for the report:

1. Move the pasted fields a bit down to add a name of your report in the Page header section.
2. Select the Text icon to insert static text and drag it to the required space on the Page header section of the report.
3. On the Label tab, enter "*Debtor list*" in the "*Text*" field.



4. Resize the Page header.
5. You may wish to add (insert) a Simple drawing (horizontal line).
6. Tidy the Detail section
7. Move the fields as required.
8. Resize the Detail section.
9. Click on the Print preview button to check the layout.



10. The layout of the report seems to be fine on a one page report. To test the "*Print preview*" on more than one page, the Company detail on the First header will be printed on each consecutive page.

> *If you do not have enough data to test the multi-page report headers, you may stretch the second Page header or the Detail sections of the report. If it works remember to resize the report sections back.*

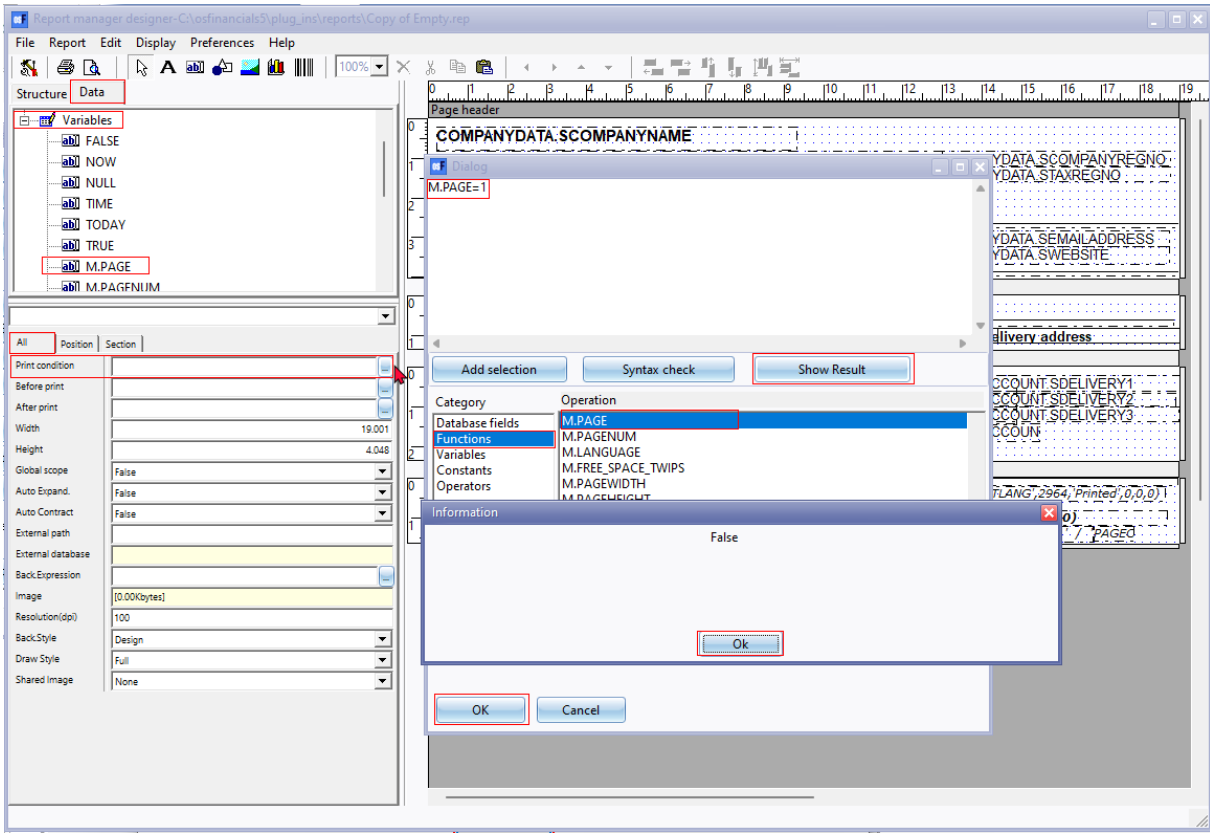
Page header - Print company details only on the first page

If the report is printed on more pages than 1 page, the Page headers, will by default be printed on the next pages of the report.

You may set it to print only on the fist page.

To set a print condition for the Page header:

1. Select the Page header (with Company details).
2. On the Data tab, select the Variables Dataset.
3. Check for the M.PAGE setting.



4. On the All tab, select the Print condition and click on the ... icon.
5. On the "*Dialog*" screen, select the "*Category*" - "*Functions*" and select "*M.PAGE*".
6. Click on the Add selection button (or double-click) and type "= *1*" after the "*M.PAGE*" operation. The SQL on the "*Dialog*" should read as follows:

   "M.PAGE=1"

7. If you click on the Show details button, the result should be "*False*".
8. Click Ok on the "*Information*" screen.
9. Click on the Print preview button.
10. The first Page header (Company data) will print on Page 1 only. The second page header will print on page 1 as well as any consecutive pages.

If you do not have enough data to test the multi-page report headers, you may stretch the second Page header or the Detail sections of the report. If it works remember to resize the report sections back.

Whenever you close the "Report manager designer" screen, after editing your report, remember save the report. If you click on No, on the "Save report?" confirmation message, your changes will be discarded (lost).

Created with the Standard Edition of HelpNDoc: Easy CHM and documentation editor

Reportman - Translatable label expressions

TRANSLATIONS OF LABELS VIA THE LANGUAGE FILES

Expressions for translation of text and labels

By default, on the "*Empty.rep*" report, the labels on already automatically translated via the language files.

1. Page header - COMPANYDATA - It contains the data for the Company details, that will print on the Page header of each report (except document layout files. debtor statements and creditor remittance advises).
2. Page footer - Company name, Path of the Set of Books, User names, page numbers and date time stamp.

If you have copied the Page footer from another report, the labels are also automatically translated via the language files.

Labels for reports are added as follows:

1. - This icon will insert a static text label "TRpLabels", which is not translatable via the language files. In the Text tab you need to enter the text to print on the report. The static text labels added in the Detail section of the report structure is not translatable via the language files.
2. - This icon will insert a blank expression "TRpExpression", which by default is "*2+2*". To add a translatable label, you need to add (replace) the basic SQL with the standard SQL as follows:

```
CUSTOM('GETTEXTLANG',1252,'Telephone  1',0,0,0)
```

In this example, to make Telephone 1 translatable, is as follows:

- *1252 = The language id as in the language files.*
- *Telephone 1 = Language description. This description will by default be displayed on the report, if the translation id is invalid.*

You may copy the expression and paste it on your report. You only need to change the language id (number) and description for new labels.

Identify the required labels

You may identify the labels needed from the printed report, or when the report is designed or edited.

On your report, you need to make a list of all the expressions, for which you need to add translatable labels. Most of the required labels can be easily identified in the Expression names (database field names).

As per this example, the labels (static text) needed to translate.

Expression (TRpExpressions) (database fields added)	*Untranslatable labels (Static TRpLabel expressions)*	*Language id*
	Debtor list (report name)	*906045*
ACCOUNT.SACCOUNTCODE	*Code*	*605*
ACCOUNT.SDESCRIPTION	*Description*	*1708*
ACCOUNT.STELEPHONE1	*Telephone 1*	*1252*
ACCOUNT.STELEPHONE2	*Telephone 2*	*1253*
ACCOUNT.SPOSTAL1 *ACCOUNT.SPOSTAL2* *ACCOUNT.SPOSTAL3* *ACCOUNT.SPOSTALCODE*	*Postal address*	*235*
ACCOUNT.SDELIVERY1 *ACCOUNT.SDELIVERY2* *ACCOUNT.SDELIVERY3* *ACCOUNT.SDELIVERYCODE*	*Delivery address*	*199*

Before you start adding translatable expressions using the language files, you need to save your report.

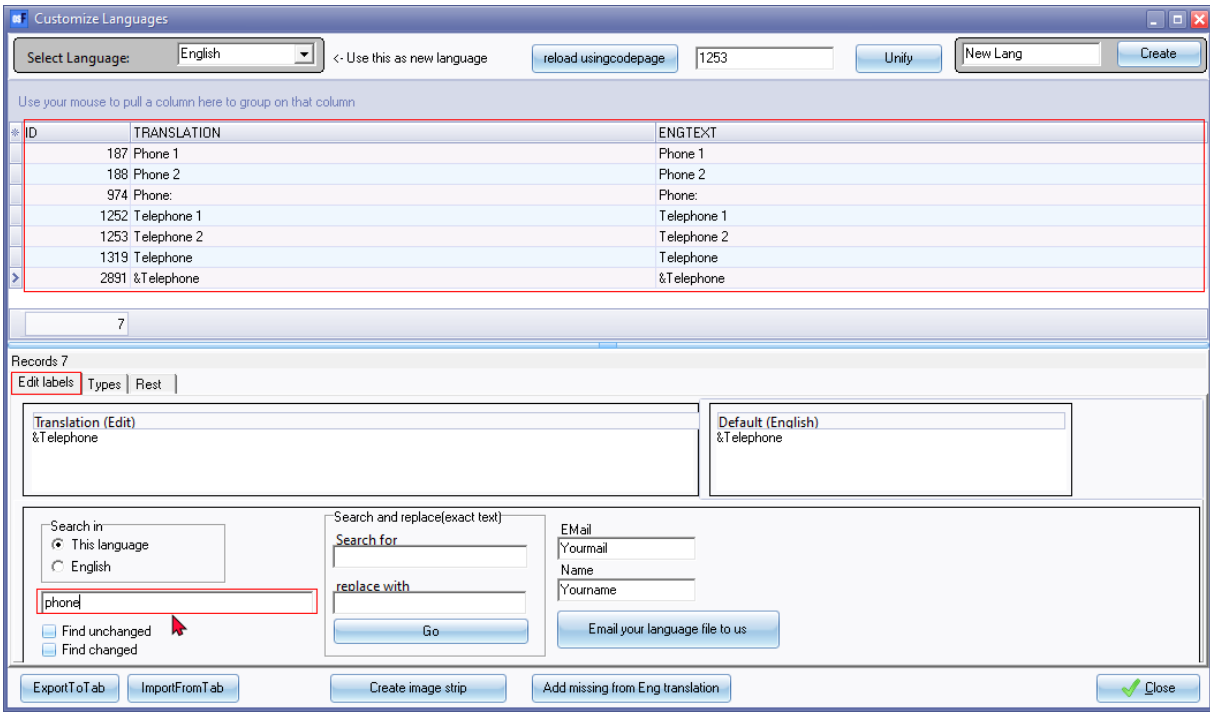
If you are busy to design or edit the report, close the "*Report manager designer*" screen. Remember to Save the report.

Whenever you close the "Report manager designer" screen, after editing your report, remember save the report. If you click on No, on the "Save report?" confirmation message, your changes will be discarded (lost).

Find labels in the language file

To find labels in the language file:

1. On the Setup ribbon, select Tools → Customise language.



If you type phone the label ID 974 - Phone: includes a colon - This colon is not needed in the label. In this case you may select Telephone or Telephone 1.

2. Search for labels and note the Language id's. As per this example, the labels (static text) needed to translate is noted:

Expression	*Untranslatable labels*	*Language id*
	Debtor list (report name)	*906045*
ACCOUNT.SACCOUNTCODE	*Code*	*605*
ACCOUNT.SDESCRIPTION	*Description*	*1708*
ACCOUNT.STELEPHONE1	*Telephone1*	*1252*

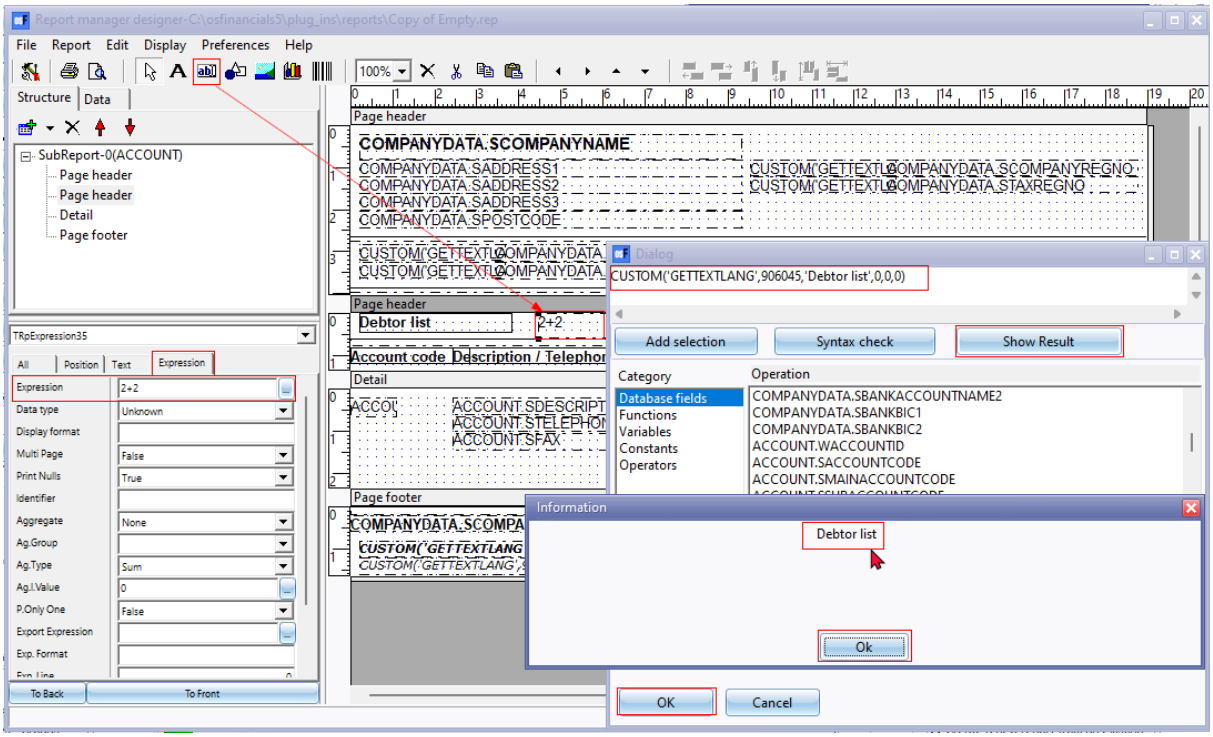
ACCOUNT.STELEPHONE2	*Telephone2*	*1253*
ACCOUNT.SPOSTAL1 *ACCOUNT.SPOSTAL2* *ACCOUNT.SPOSTAL3* *ACCOUNT.SPOSTALCODE*	*Postal address*	*235*
ACCOUNT.SDELIVERY1 *ACCOUNT.SDELIVERY2* *ACCOUNT.SDELIVERY3* *ACCOUNT.SDELIVERYCODE*	*Delivery address*	*199*

3. Close the "*Customise language*" screen.

Add translation expressions to the report

To add the translatable label expressions to the report:

1. On the "*Report man*" screen, select your report.
2. Select the Expression icon to insert a basic expression. The default is "*2+2*"
3. Select the Expression and click on the ... icon of the Expression tab.



4. Add the language SQL to the report, referencing the language id and description.

You may copy the Phone on the Page header expression and its contents "CUSTOM('GETTEXTLANG',974,'Phone',0,0,0)" in the SQL area of the "Dialog" screen.

Simply reference the language id 974 to the new language id and type in the description. For Debtor list (as per this example), the SQL should be;

```
CUSTOM('GETTEXTLANG',906045,'Debtor list',0,0,0)
```

5. Click on the Show Result button.
6. Click Ok on the "*Information*" screen.
7. Click OK on the "*Dialog*" screen.
8. Repeat the process for all labels.
9. Once finished, click on the Print preview icon to check the report.
10. Close the "*Print preview*" screen.
11. Close the "*Report manager designer*" screen. Remember to Save the report.

Whenever you close the "Report manager designer" screen, after editing your report, remember save the report. If you click on No, on the "Save report?" confirmation message, your changes will be discarded (lost).

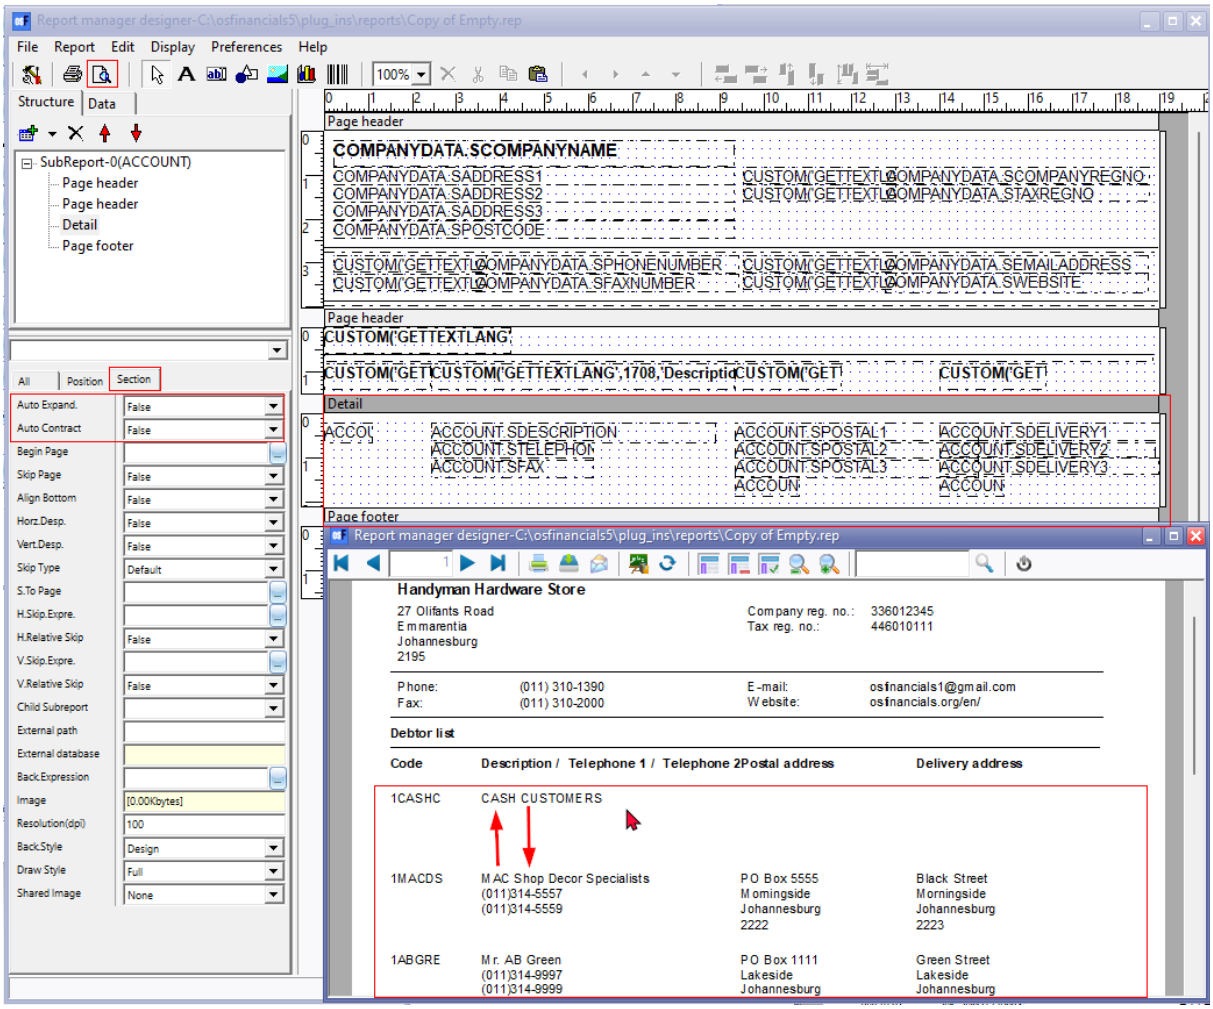
Created with the Standard Edition of HelpNDoc: Revolutionize Your Documentation Output with HelpNDoc's Stunning User Interface

Reportman - Auto Expand / Auto Contract setting

If an account is listed, as in this example, and have no data to print (such as telephone numbers, postal address and delivery address details as in this example), it will print blank spaces.

To set the Auto Expand / Auto Contract options for a report:

1. On the "*Report manager designer*" screen, click on the Print preview icon.
2. In this example, identify the section in the Report Structure where the blank spaces is printed.

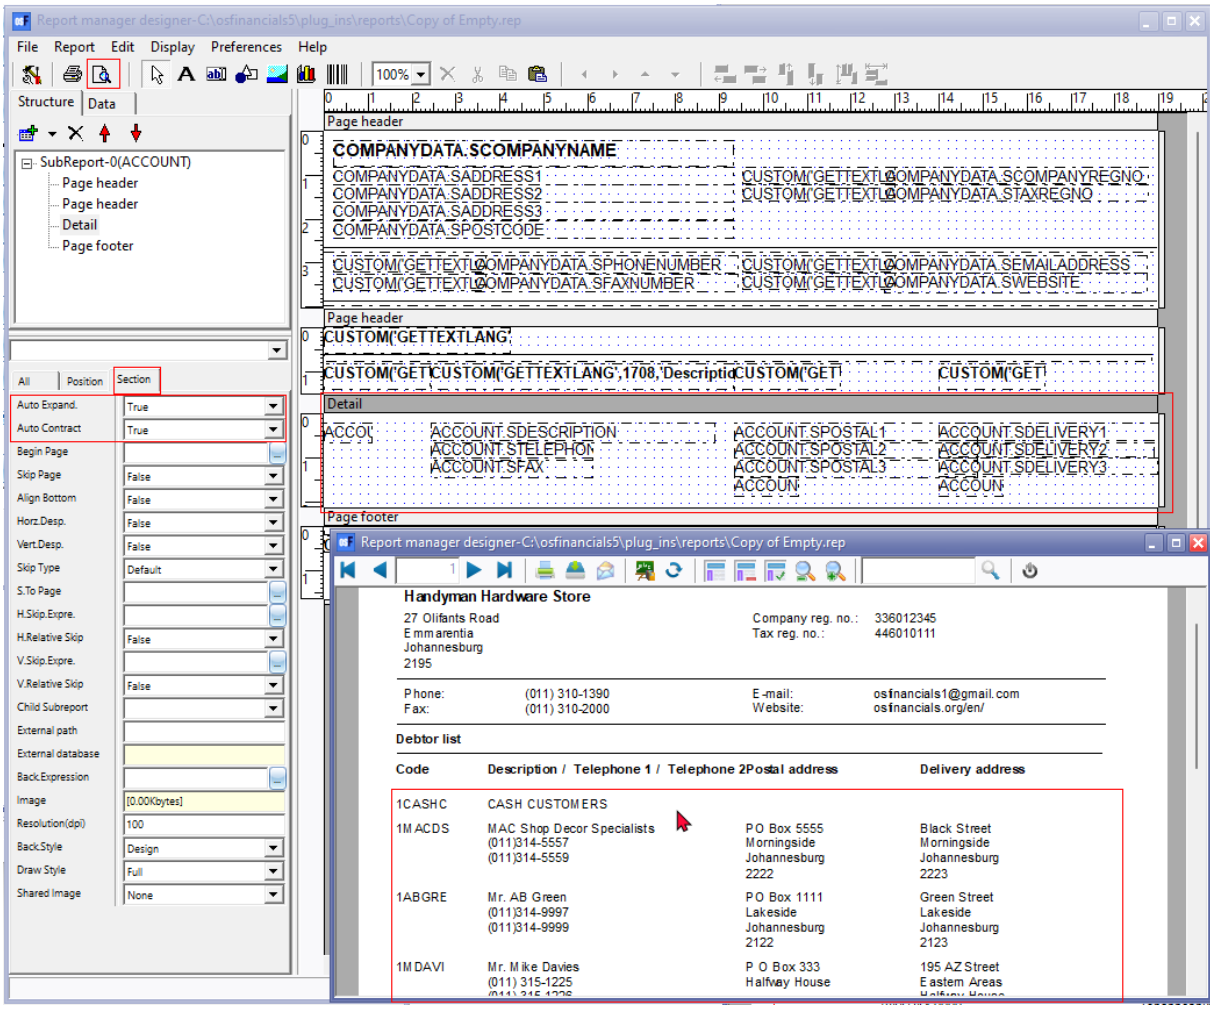


3. Close the "*Print preview*" screen.

4. Select the Detail section of the Report Structure.

5. Set the "*Auto Expand*" and "*Auto Contract*" to "*True*" (default is "*False*"). This will rid the printed report of the extra unnecessary spaces (lines).

6. Click on the Print preview icon to check if the report prints correctly.



7. Close the "*Print preview*" screen.

8. Close the "*Report manager designer*" screen. Remember to Save the report.

Whenever you close the "Report manager designer" screen, after editing your report, remember save the report. If you click on No, on the "Save report?" confirmation message, your changes will be discarded (lost).

Created with the Standard Edition of HelpNDoc: Maximize Your Documentation Capabilities with HelpNDoc's Project Analyzer

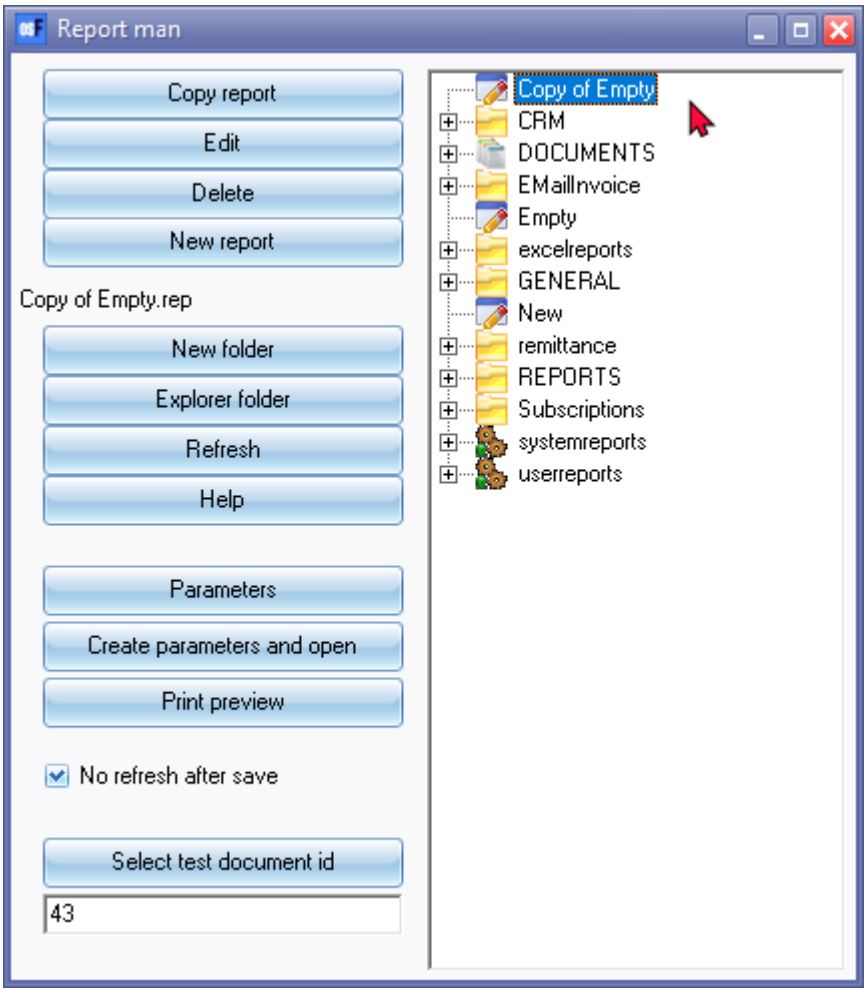
Parameters (Report options)

Parameters allows specific selections (choices) in how the data is printed and the data that need to be included or excluded from the report.

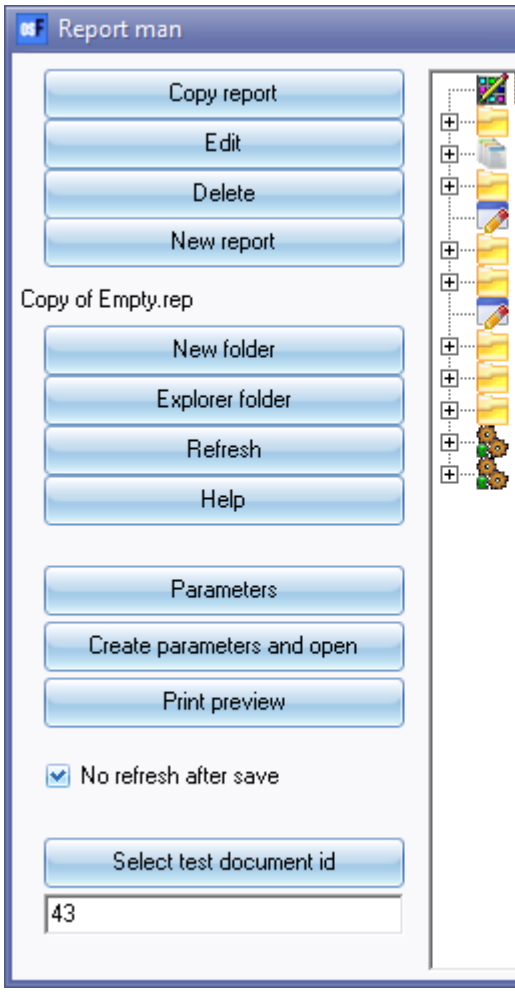
When creating a parameter, a *Delphi Form* *.dfm parameter file will be created with the same name as your report.

In the Report man screen, the default report icon will change once a parameter is added:

Icon - Before parameters is added



Icon - After parameters is added



Once parameters is added, the report will consist of two (2) files (the report file (*.rep) and the parameter file (*.dfm). If you need to copy a report you need to copy both files.

When you click on the Refresh button, the icon will change in the Report man screen. This indicates that the report consists of two (2) files (for example if parameters is added to the "*Copy of Empty.rep*" report):

- Copy of Empty.rep
- Copy of Empty.dfm

When copy the report to a folder in the File explorer, you need to copy both these files.

When renaming the report in the File explorer, you need to rename both these files with the same name.

In this example, the following parameters is documented:

1. Sort sequences parameters - Allows to change the sequence in which the data is displayed on a report.
2. Lookup parameters - Allows to lookup a specific account or a range of accounts to include in the report.
3. Groups parameters - Allows a list box in to select a group or groups to include in the report.

Created with the Standard Edition of HelpNDoc: Streamline Your Documentation Creation with a Help Authoring Tool

Parameters - Sort sequences

The report only lists the data according to the Debtor account name (Description).

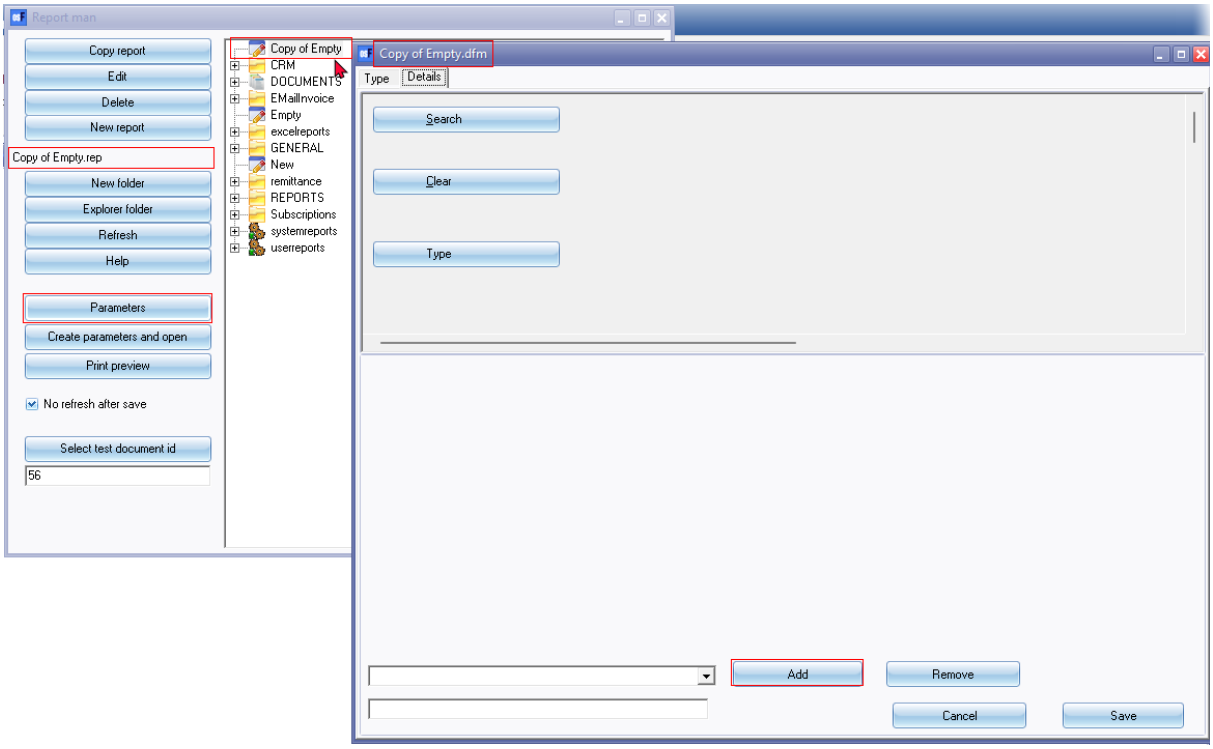
You may create or add parameters to select the sequence (order) in which the debtor accounts are listed on a printed report.

Currently the new report only consists of a single file (e.g. Copy of Empty.rep) which is a report file.

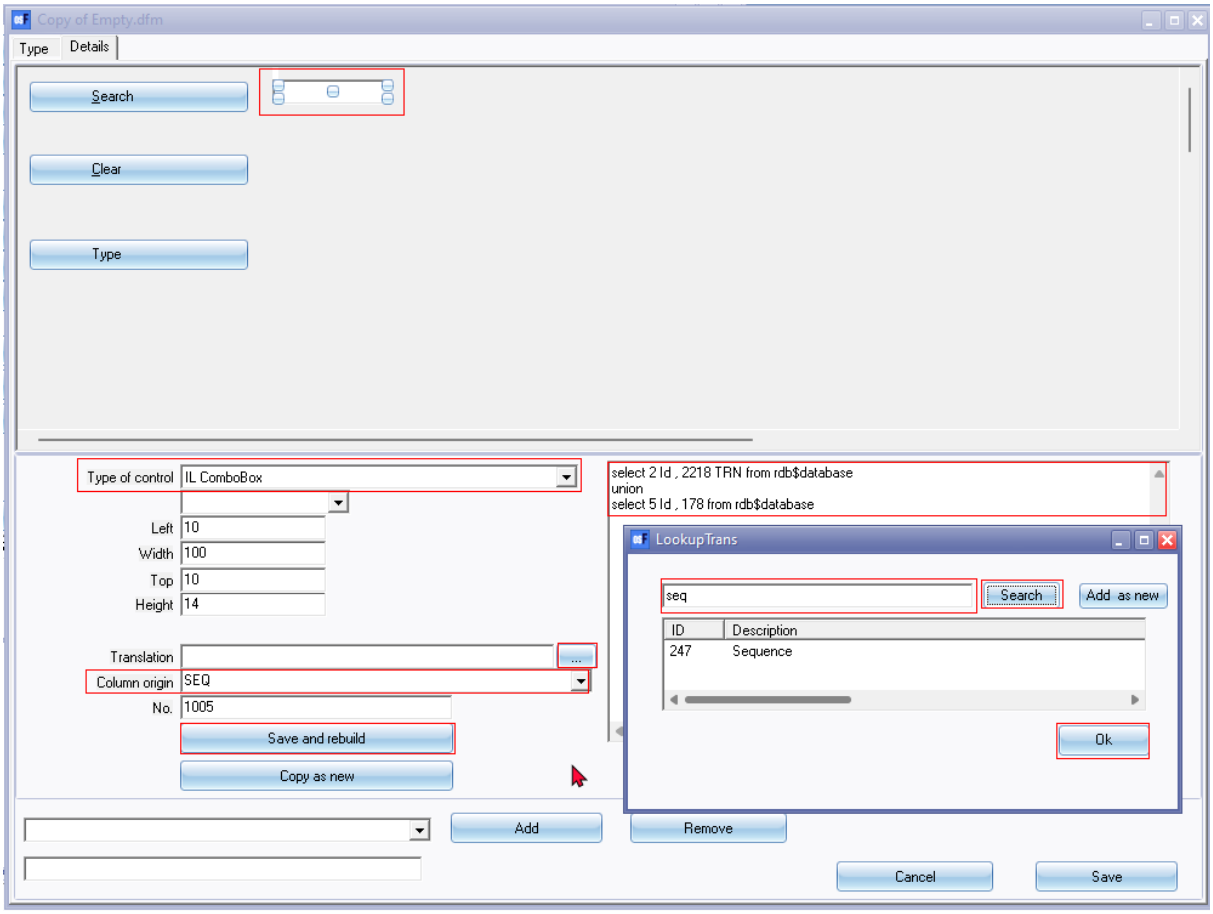
Remember to make a copy of your report in case something goes wrong.

To add the sequence (sort) parameter:

1. On the "*Report man*" screen, select your report and click on the Parameters button. It will automatically create a *.dfm (Delphi form parameter screen file) (e.g. "*Copy of Empty.dfm*").



2. On the parameters screen for your report, click on the Add button.



3. Select the options as follows:

   a) Type of control - Select IL ComboBox.

b) Size and position - Enter the values for the Left, Width, Top and Height properties to position your parameter.

c) Translation - Click on the ... icon and search for the language label. Select your label (in this example, "*Sequence*" is selected) and click Ok.

d) Column origin – Enter "*SEQ*".

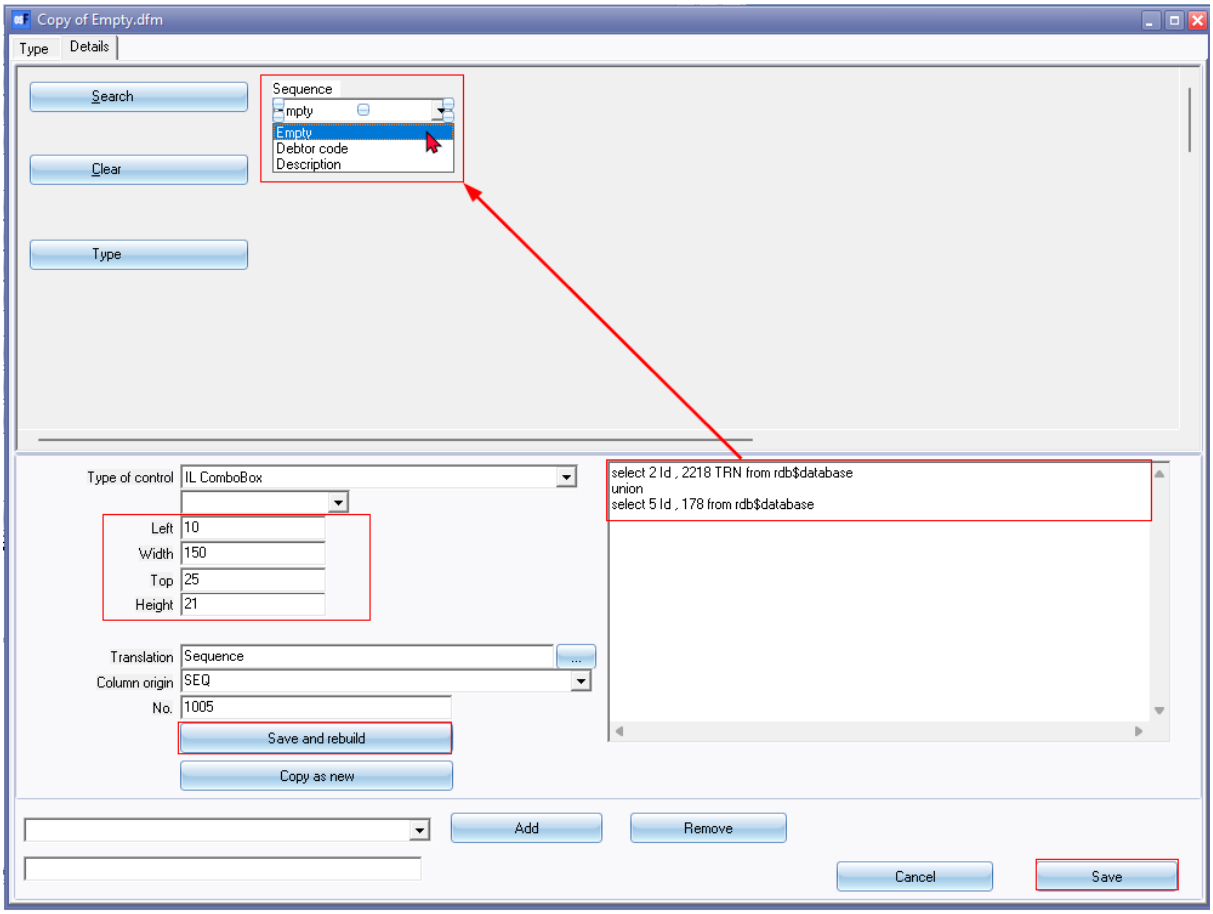
e) SQL section – Enter or copy the following Sql:

```
select 2 Id , 2218 TRN from rdb$database
union
select 5 Id , 178 from rdb$database
```

Select 2 Id is the Account code and 2218 is the language id for Debtor code.

Select 5 Id is the Debtor description and 178 is the language id for Description.

4. Click on the Save and rebuild button. This will position and populate the Sequence ComboBox on the Parameter screen with valid SQL.



5. Click on the Save button to save your parameter and to close exit the parameters screen.

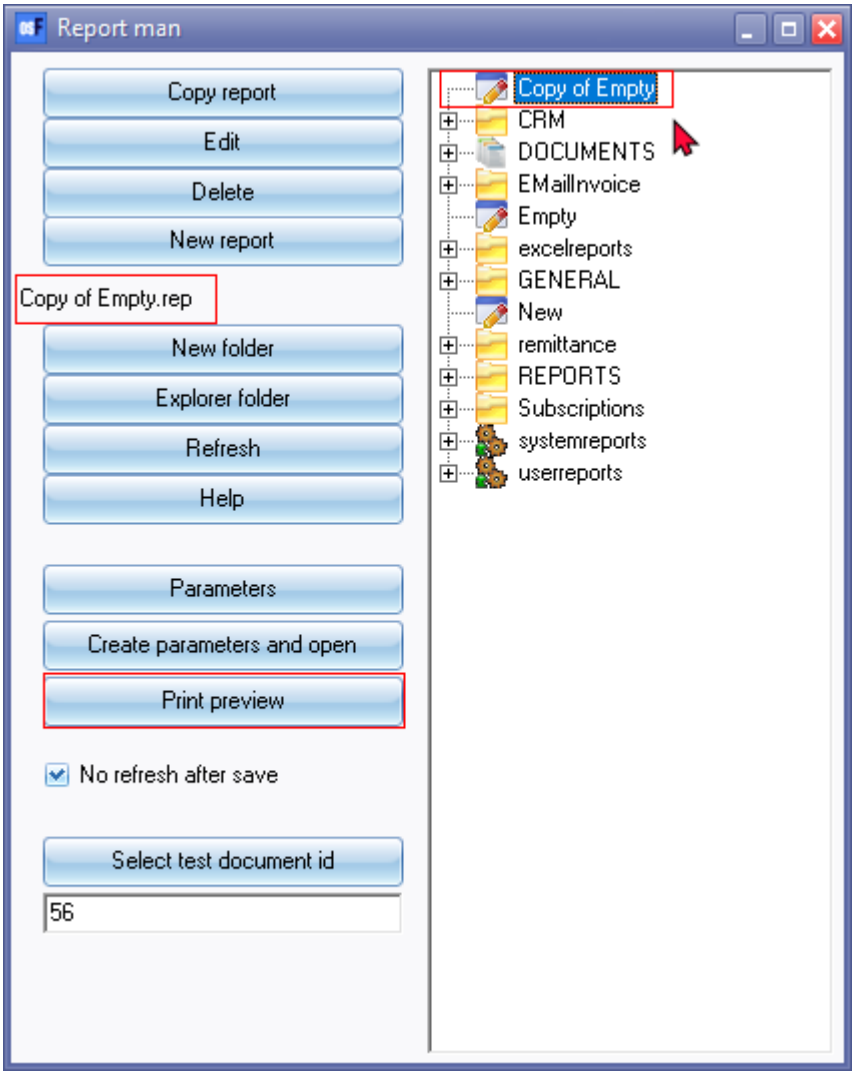
If you do not click on the Save button, your parameter or any changes to the parameter will be discarded (lost).

Preview the parameter

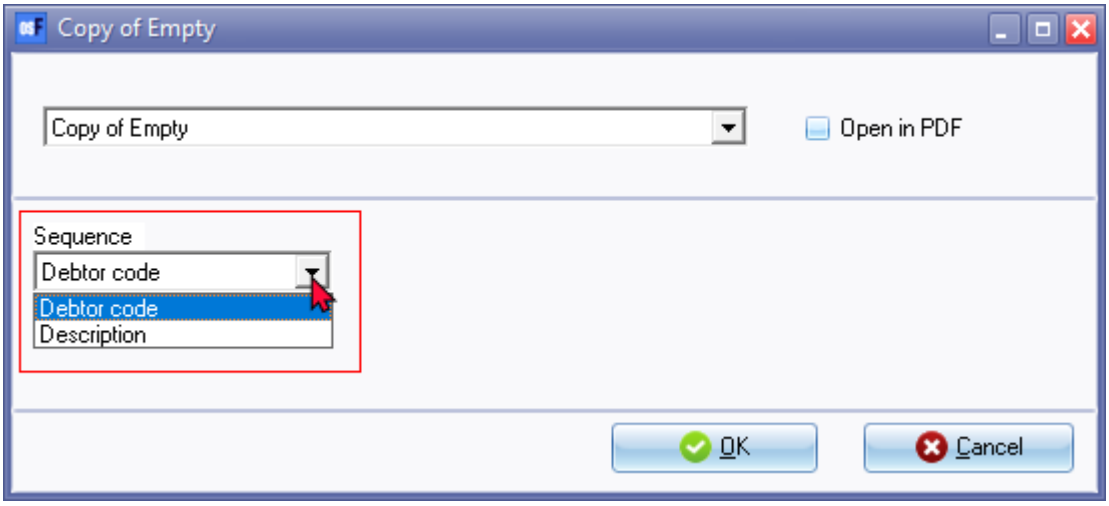
Once the report parameter is added, you may check the layout of the parameter.

To check the Sequence parameter:

1. On the "*Report man*" screen, select your report.



2. Click on the Print preview button. The "*Sequence*" will be listed on the report parameters.



3. The "*Sequence*" parameter will not work at this stage. You need to add and reference the parameter in the report.

Add the Sequence (Order) Parameter to the report

You need to add the following three (3) Sequence parameters

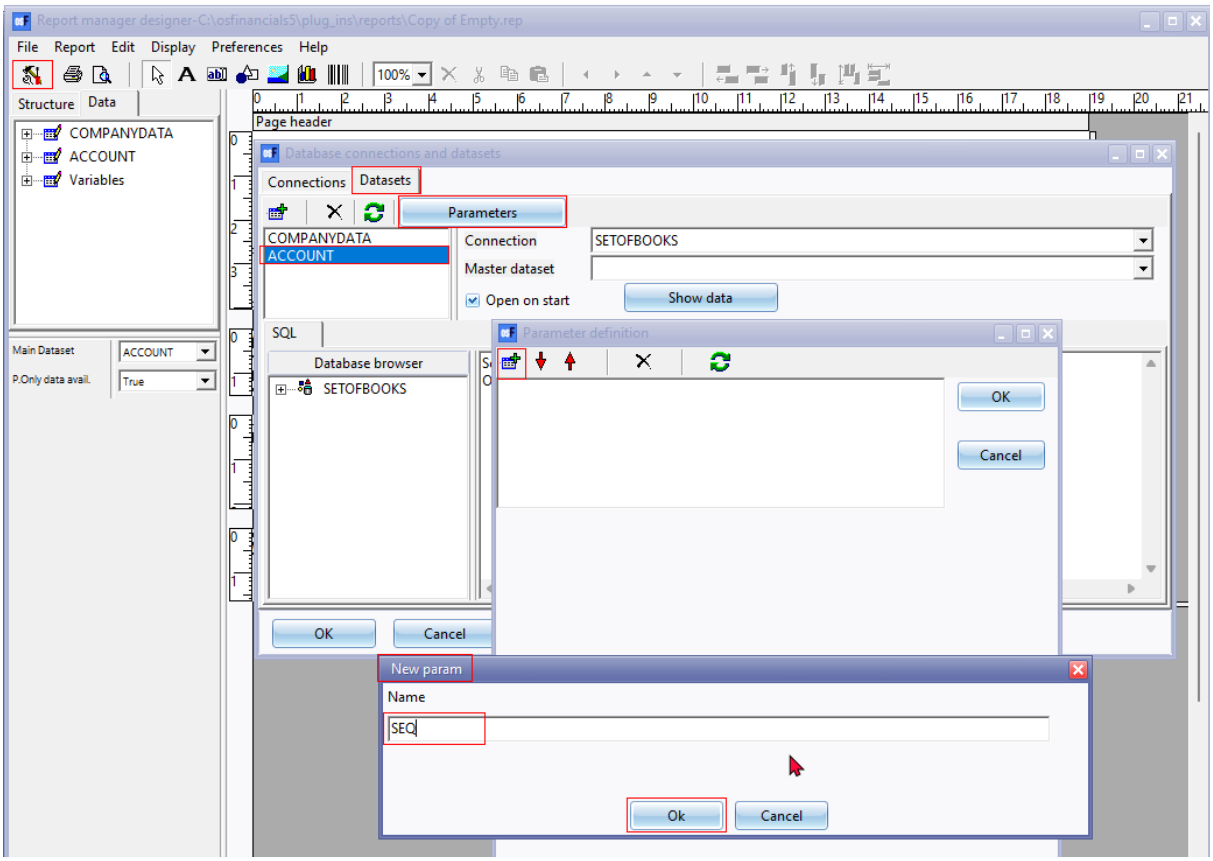
Parameter	*Data type*	*Sets this parameter to*	*Data*	*Description*
SEQ	*String*		*Order id*	*Order id*
SEQTX	*String*		*Order code*	*Debtor code / Description*
SEQTX2	*String Substitute*	*@ORDER*	*Order id*	*Order id*

Add SEQ String parameter

To add the Sequence string parameter to the report:

1. On the "*Report man*" screen, select your report and click on the Edit button. (You may also double-click on your report).

2. On the "*Database and connections datasets*" screen (accessed from the first icon or from the Report → Data access configuration menu), click the Parameters button.



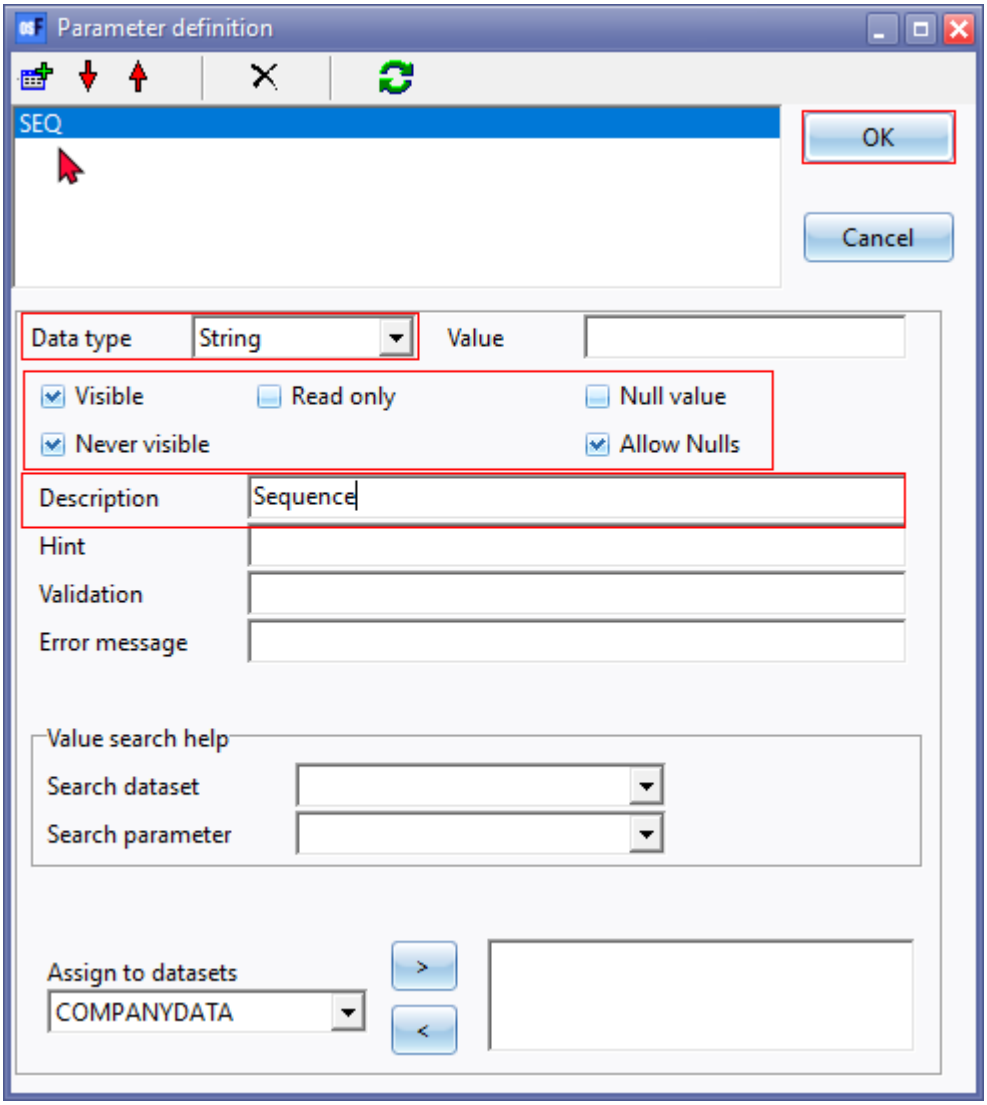
3. On the "*Parameter definition*" screen, select the "*ACCOUNT*" dataset and click on the Add icon.

4. On the "*New param*" screen, enter "*SEQ*".

> *The name if this parameter must be entered exactly as entered in the "Column origin" field for the "Sequence" parameter (i.e. "SEQ") on the parameter design screen.*

5. Click Ok. This will add the parameter.

6. Select the "*SEQ*" parameter.



8. On the "*SEQ*" parameter select and configure the options as follows:

    a) Data type - Select "*String*".

    b) Properties - "*Visible*" and "*Never visible*" as well as "*Allow Nulls*" fields may be ticked. The other options may be left blank.

    c) Description - Enter a description ("*Sequence*" as per this example).

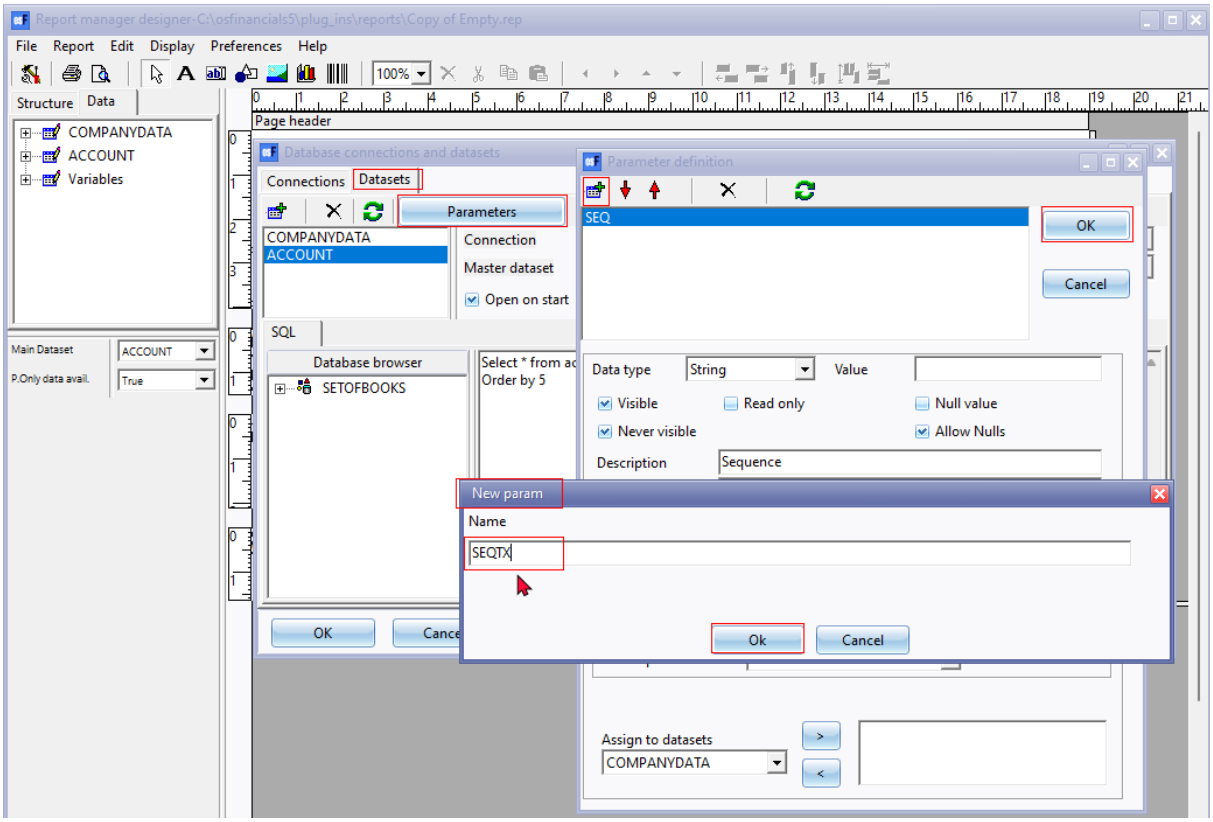
9. You may proceed to add the "SEQ2TX"parameter.

Should you wish to add the next parameter at a later stage, you need to click OK on both the "Parameter definition" as well as the "Database connections and datasets" screens. If you do not click on the OK button of the "Database connections and datasets" screen, your parameter or any changes to the parameter will be discarded (lost).

Add SEQTX String parameter

To add the Sequence string parameter to the report:

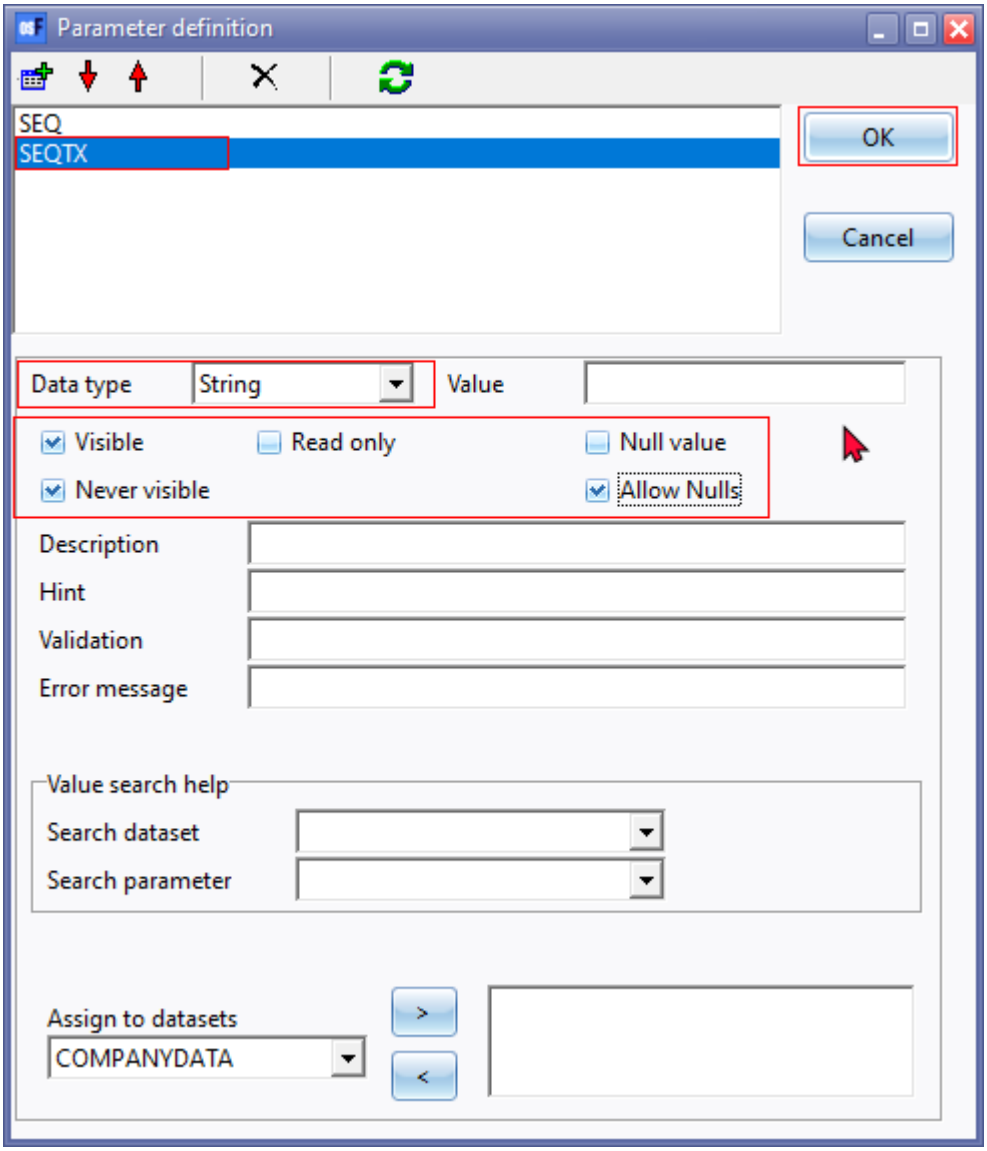
1. On the "*Report man*" screen, select your report and click on the Edit button. (You may also double-click on your report).
2. On the "*Database and connections datasets*" screen (accessed from the first icon or from the Report → Data access configuration menu), click the Parameters button.



3. On the "*Parameter definition*" screen, select the "*ACCOUNT*" dataset and click on the Add icon.
4. On the "*New param*" screen, enter "*SEQTX*".

> *The name if this parameter must be entered exactly as entered in the "Column origin" field for the "Sequence" parameter, followed by TX (i.e. "SEQTX") on the parameter design screen.*

5. Click Ok. This will add the parameter.
6. Select the "*SEQTX*" parameter.



8. On the "*SEQTX*" parameter, select and configure the options as follows:

    a) Data type - Select "*String*".

    b) Properties - "*Visible*" and "*Never visible*" as well as "*Allow Nulls*" fields may be ticked. The other options may be left blank.

    c) Description - Enter a description ("*To account*" as per this example).

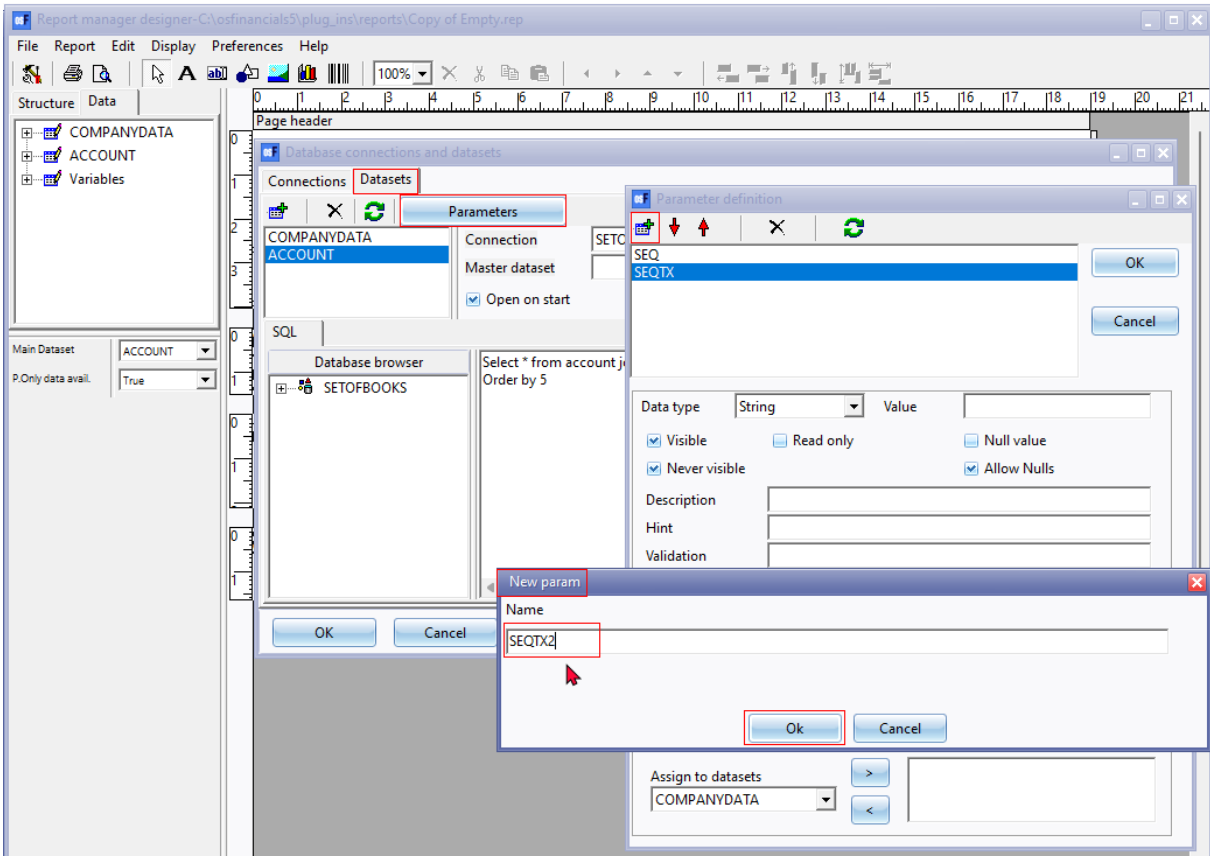
9. You may proceed to add the next of "*Sequence*" parameters.

Should you wish to add the next parameter at a later stage, you need to click OK on both the "Parameter definition" as well as the "Database connections and datasets" screens. If you do not click on the OK button of the "Database connections and datasets" screen, your parameter or any changes to the parameter will be discarded (lost).

Add SEQTX2 String Substitute parameter

To add the Sequence string substitute parameter to the report:

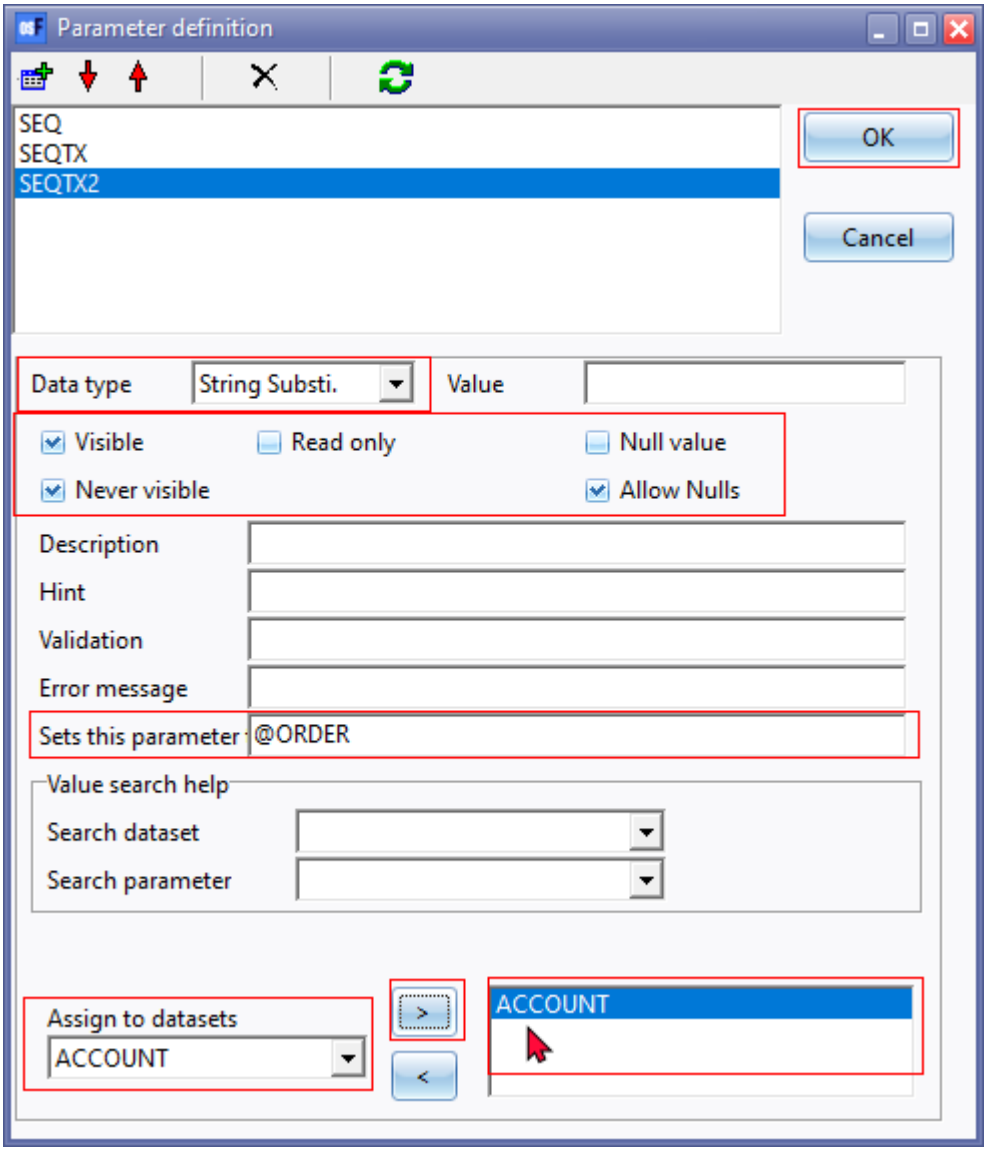
1. On the "*Report man*" screen, select your report and click on the Edit button. (You may also double-click on your report).
2. On the "*Database and connections datasets*" screen (accessed from the first icon or from the Report → Data access configuration menu), click the Parameters button.



3. On the "*Parameter definition*" screen, select the "*ACCOUNT*" dataset and click on the Add icon.
4. On the "*New param*" screen, enter "*SEQTX2*".

> *The name if this parameter must be entered exactly as entered in the "Column origin" field for the "Sequence" parameter, followed by TX (i.e. "SEQTX") on the parameter design screen.*

5. Click Ok. This will add the parameter.
6. Select the "*SEQTX2*" parameter.



8. On the "*SEQTX2*" parameter, select and configure the options as follows:

   a) Data type - Select "*String Substi*" (String substitute).

   b) Properties - "*Visible*" and "*Never visible*" as well as "*Allow Nulls*" fields may be ticked. The other options may be left blank.

   > *The Null value field must not be selected (ticked). If selected (ticked), the following error will be produced:*
   >
   > "ACCOUNT:Could not convert variant of type (Null) into type (OleStr)"

   c) Description - Enter a description ("*Sequence*" as per this example).

   d) Sets this parameter to - Enter "*@ORDER*".

   e) Assign to datasets – Select the "*ACCOUNT*" dataset and click on the > icon.

9. Click OK on the "*Parameter definition*" screen.

Should you wish to add the next parameter at a later stage, you need to click OK on both the "Parameter definition" as well as the "Database connections and datasets" screens. If you do not click on the OK button of the "Database connections and datasets" screen, your parameter or any changes to the parameter will be discarded (lost).

Add @ORDER Sequence parameter to the Dataset Sql

Refer to the section - Set the sequence (order) of the data in the report – in this document.

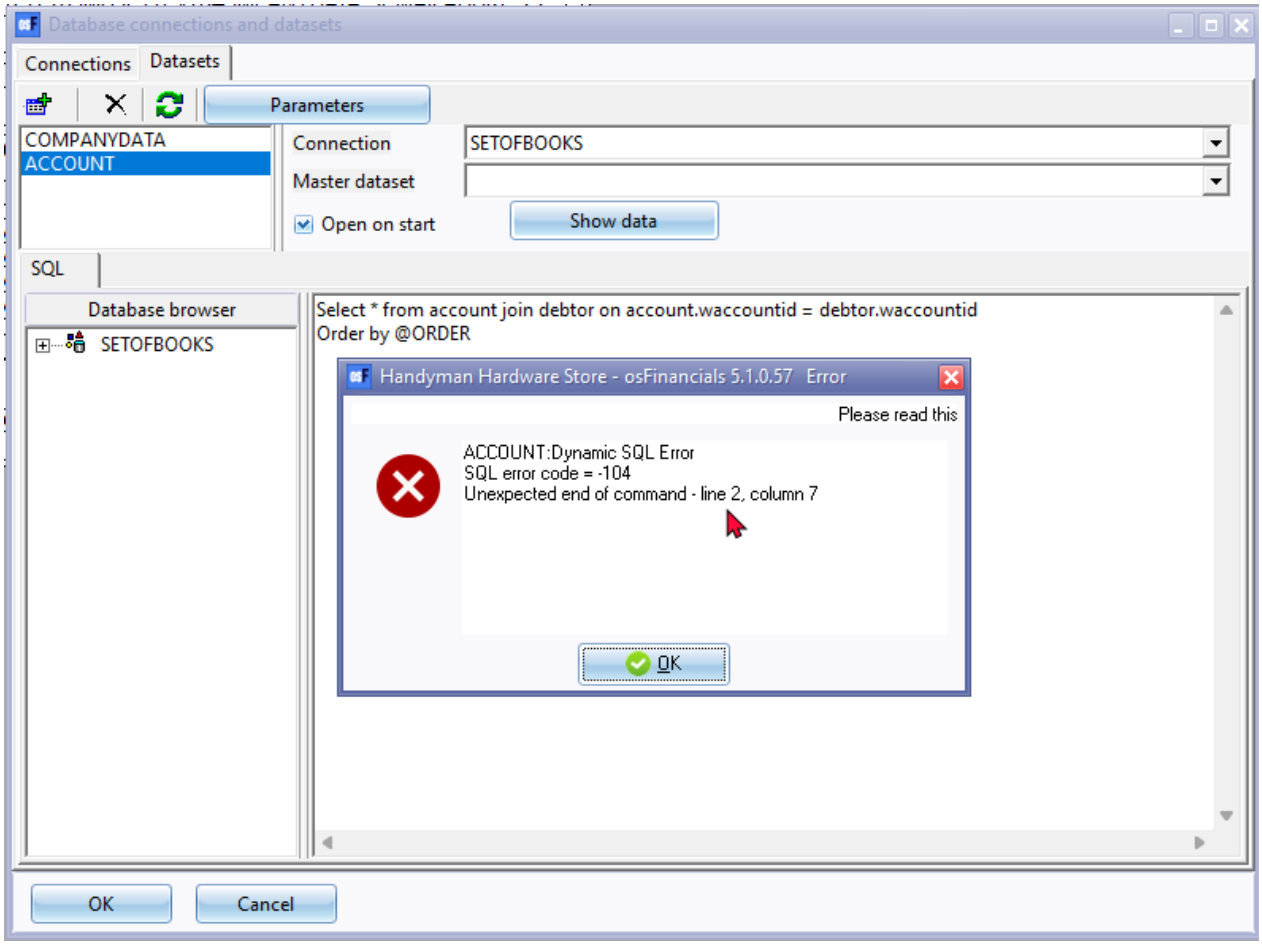
On the "*Database and connections datasets*" screen, select the ACCOUNT Dataset and change the

“Order by 5”

to

“Order by @ORDER”

If you click on the Show data button to view the data or on the Print preview icon, at this stage the following error message may be produced:



If the SEQTX2 parameter is not assigned (linked) to the "ACCOUNT" dataset, a similar error message will be displayed:

ACCOUNT:Dynamic SQL Error
SQL error code = -104
Token unknown - line 2, column 1
@

Click OK and check the SEQTX2 parameter and assign (link) to the "ACCOUNT" dataset

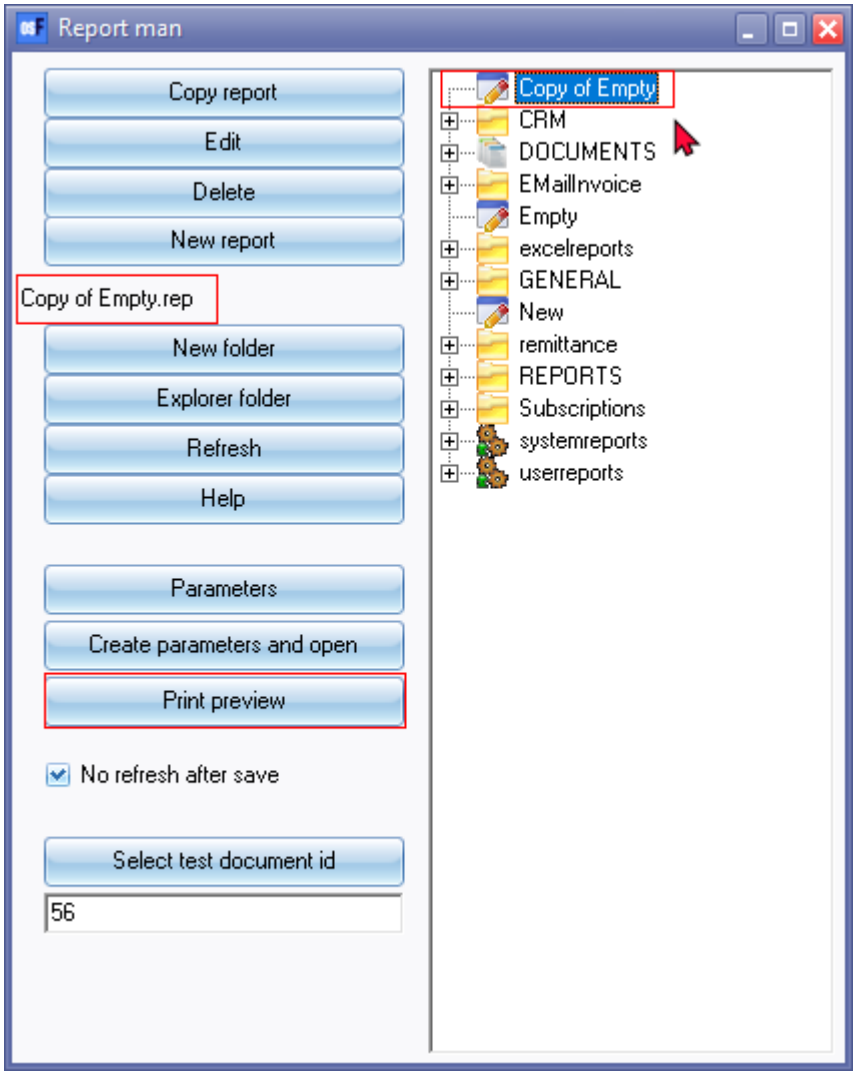
The reason for this, is that the Sequence parameter need to be selected on the Report parameter screen.

Click OK and Save the report on exit.

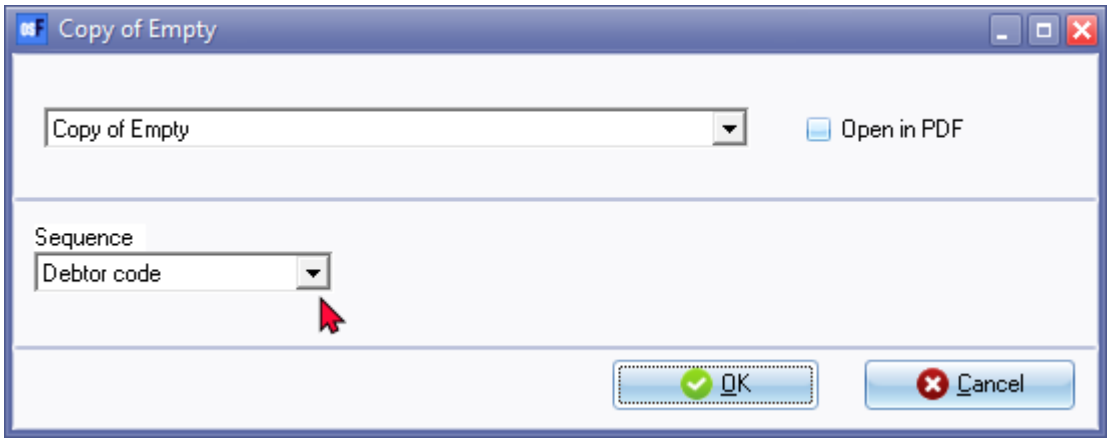
Test the Sequence parameter on the report

Once this is completed, you may need to test if the Sequence parameter works on the report.

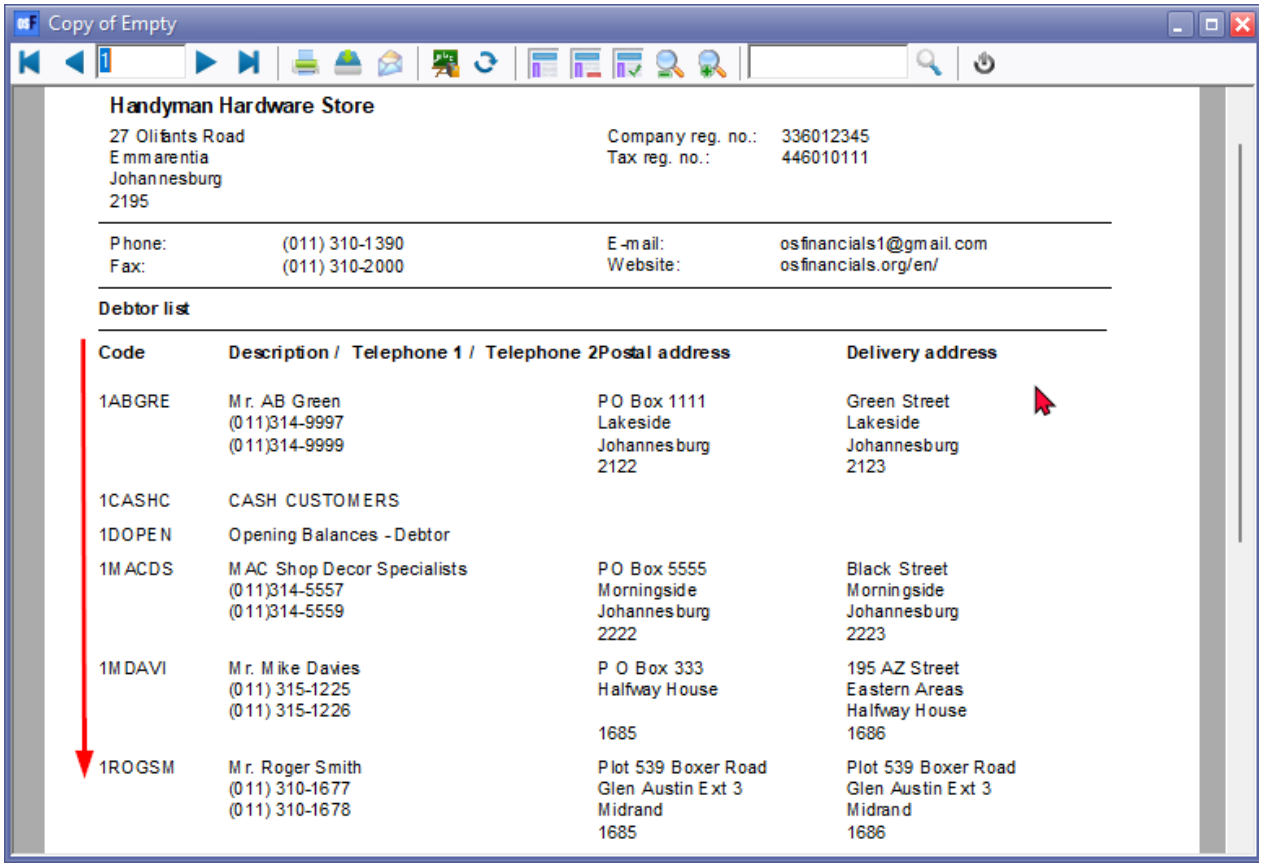
On the "*Report man*" screen, select the report and click on the Print preview button.



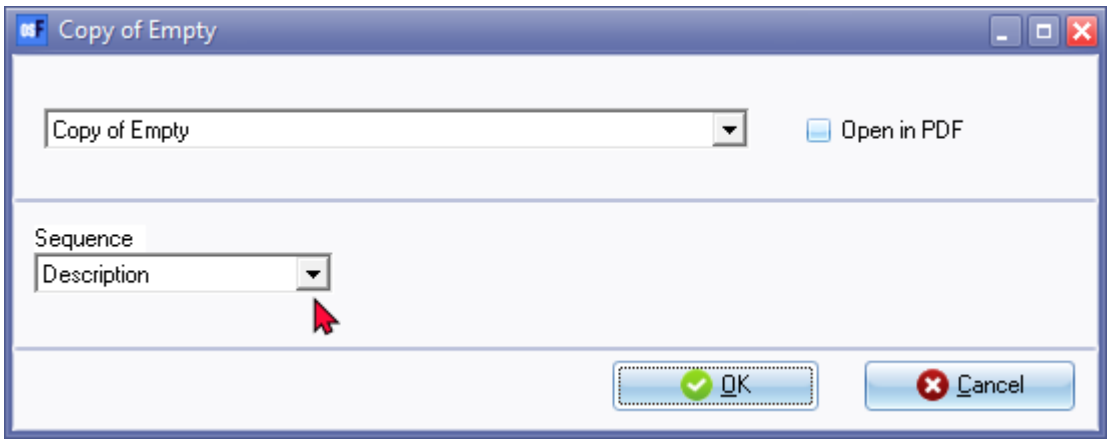
Report listed by code

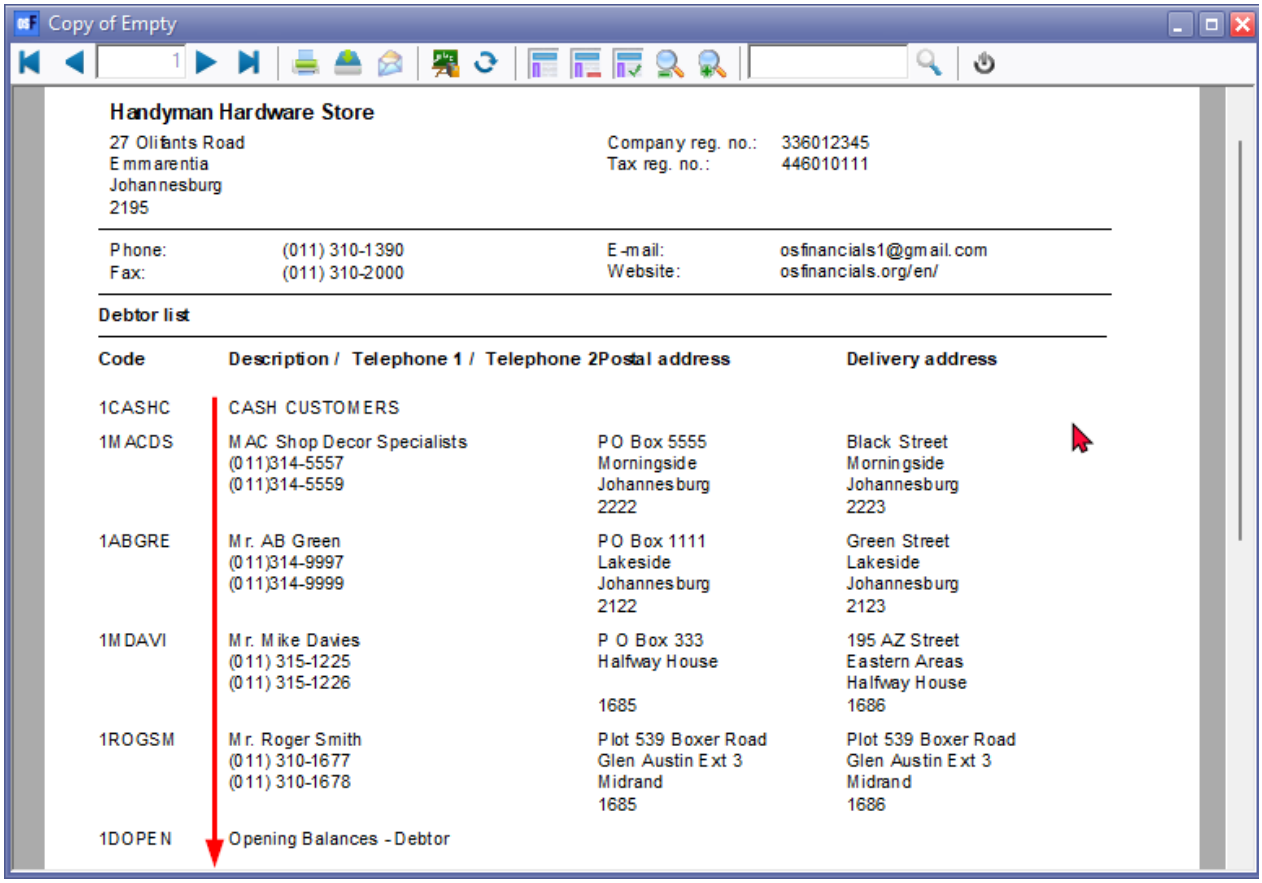


On this parameter screen, you may select the sequence (i.e. Debtor code or Description) and click OK. If this parameter works, your data (Debtors) should be listed in different sequences (order).



Report listed by description





Add the Sequence parameter to the report printout

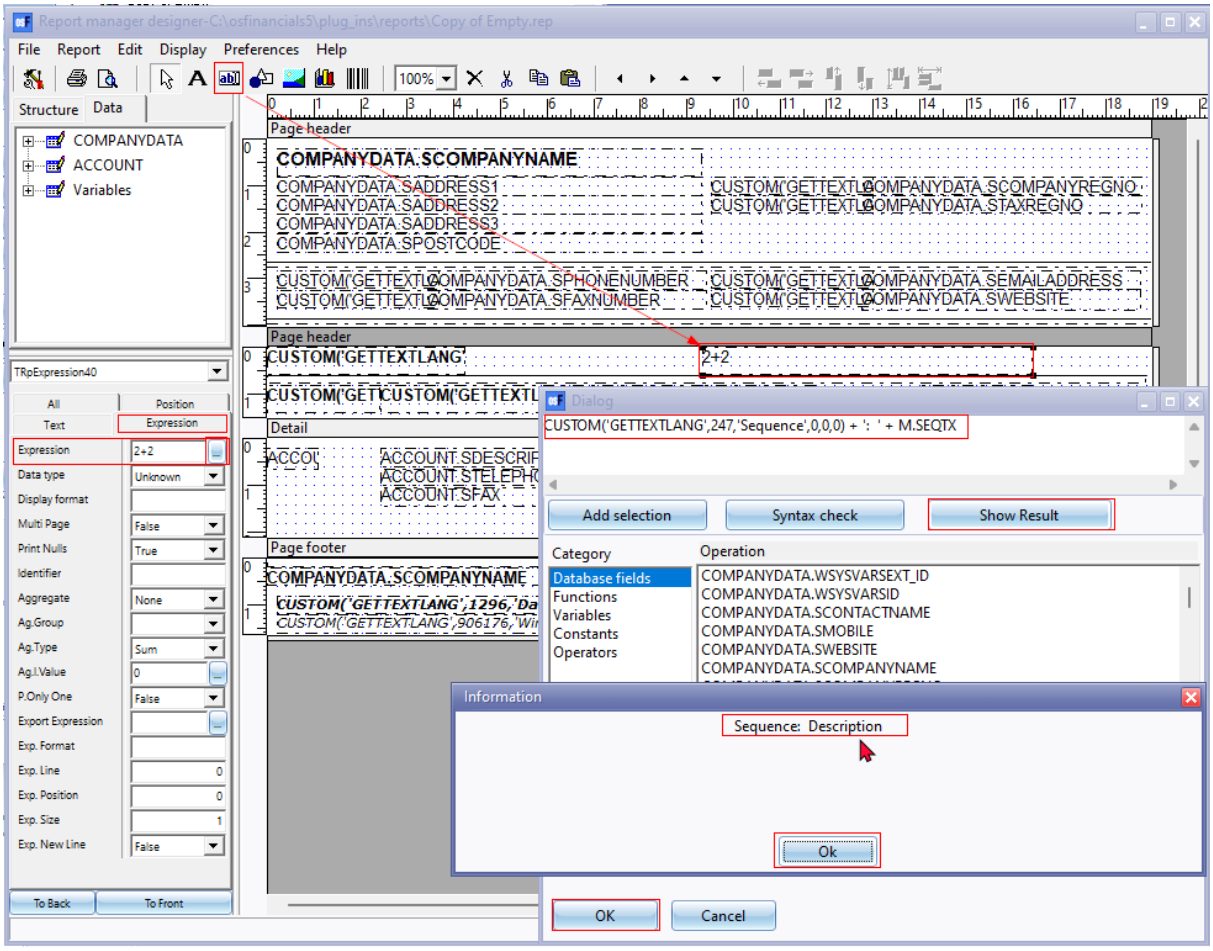
The sequence changes as per your selection on the report parameter. It is a good idea to add the parameter selection on the report printout.

A user will exactly read on the report page headers in which sequence (order) the data is displayed (listed).

Refer to the section - Reportman - Translatable label expressions in this document.

To add the Sequence (Sort) parameter to the report:

1. On the "*Report man*" screen, select your report.
2. Select the Expression icon to insert a basic expression. The default is “2+2”.



3. Replace the Expression “2+2” with a label Description - Sequence: (translatable language id and description).

```
CUSTOM('GETTEXTLANG',247,'Sequence',0,0,0) + ':  '
```

Then add the Variable

```
+ M.SEQTX
```

> *You may type a + and then select the M.SEQTX from the Variables section by clicking on the Add selection button.*

> *NOTE - The M.SEQ, M.SEQTX and M.SEQTX2 variables is automatically added to the Variables category or Dataset when adding parameters.*

The Expression's Sql should then be as follows:

```
CUSTOM('GETTEXTLANG',247,'Sequence',0,0,0) + ':  ' + M.SEQTX
```

Refer to the section - Reportman - Translatable label expressions in this document.

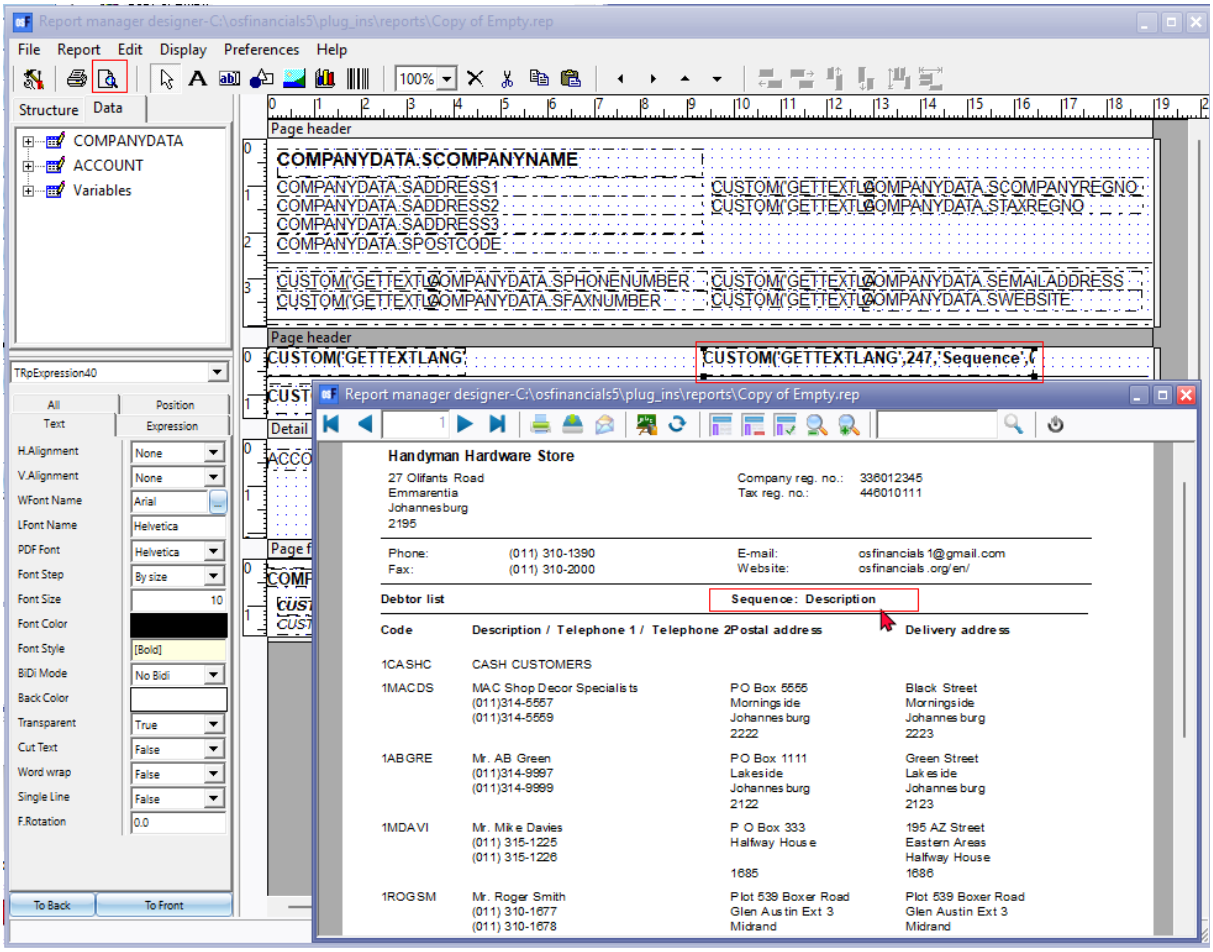
4. Click on the Show Result button. The information should read "*Sequence: Description*".

If the report was printed before using the Debtor code, the information should read "Sequence: Debtor code".

5. Click Ok on the "*Information*" and OK on the "*Dialog*" screens.

6. You may set font properties (e.g. Bold, size, etc.).

7. Click on the Print preview button to preview the report.



8. Exit the report and Save the report.

If you do not click on the Save button, any changes to the report will be discarded (lost).

Created with the Standard Edition of HelpNDoc: Streamline your documentation process with HelpNDoc's

HTML5 template

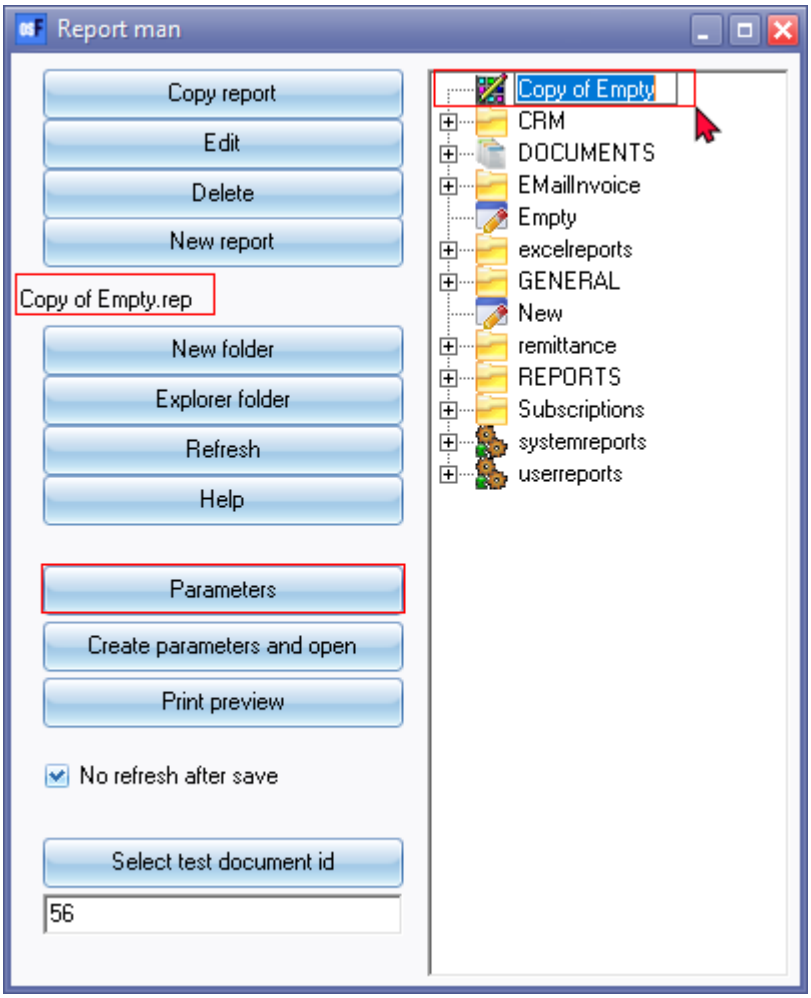
Parameters - Move / resize

If you already added a parameter or wish to resize parameters, to align them with other reports, you may wish to resize the layout of the parameter selection fields.

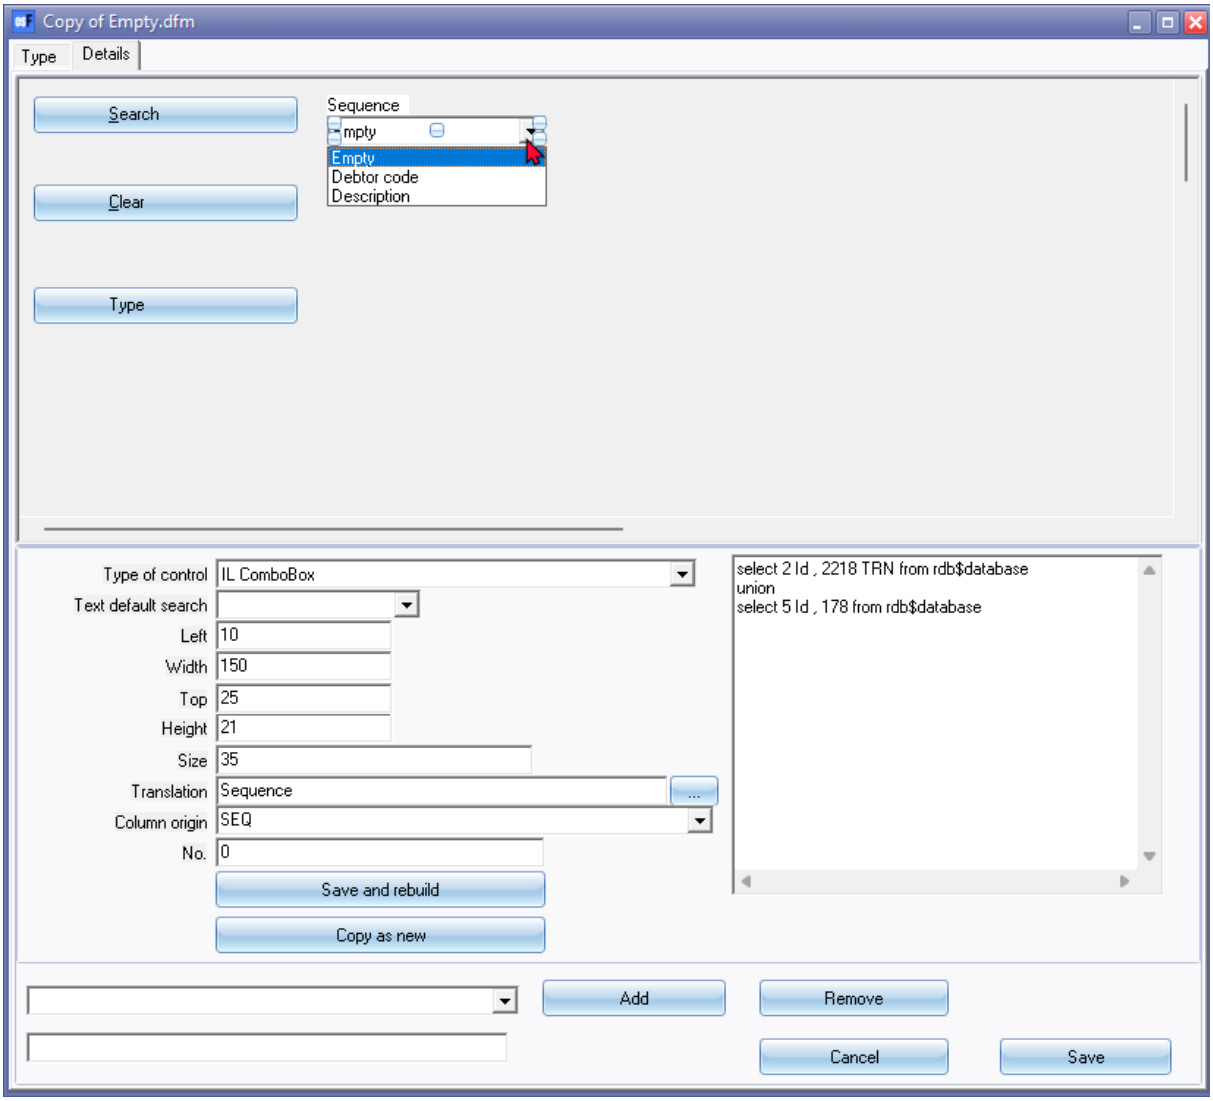
It is a good idea to note the position (i.e. Left and Top), and the size properties (i.e. Length, Width, Height and size) of other report parameters.

To size and position the sequence parameter:

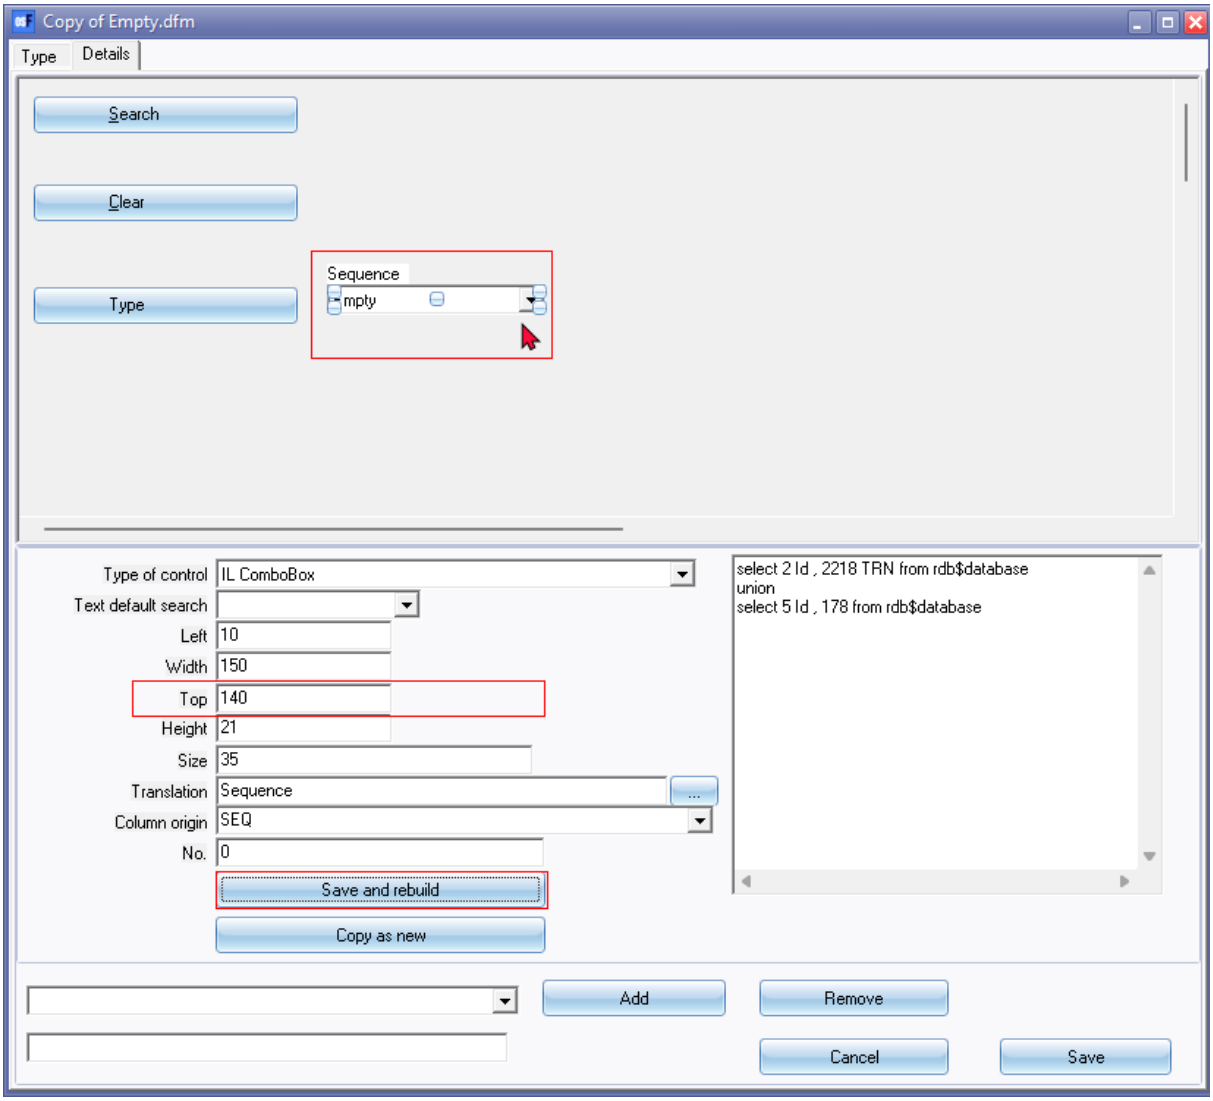
1. On the "*Report man*" screen, select your report and click on the Parameters button.



2. On the parameters screen for your report, click on the "*Sequence*" parameter.



3. Edit the values of the position (i.e. Left and Top), and the size properties (i.e. Length, Width, Height and Size).



4. Click on the Save and rebuild button. This will position and populate the Sequence ComboBox on the Parameter screen with valid SQL.

5. Once you are happy with the new layout, you may proceed to add other new parameters.

Before you exit or close the parameters screen, remember to click on theSave button. If you do not click on the Save button, your parameter or any changes to the parameter will be discarded (lost).

Created with the Standard Edition of HelpNDoc: Easily create CHM Help documents

Parameters - Lookup

Lookup Parameters - FROM ACCOUNT ... TO ACCOUNT

It s recommended that you create a copy of the existing report before adding parameters. If something goes wrong you can revert back to your original report.

In the Report man screen, select your report and click on the Copy report button.

If you already added a parameter or wish to move or resize parameters, to align them with other reports, you may wish to resize the layout of the parameter selection fields.

It is a good idea to note the position (i.e. Left and Top), and the size properties (i.e. Length, Width, Height and size) of other report parameters.

Add lookup parameters

On the copy of your report, click on the Print preview button to print some data on screen.

Click on the Parameters button.

The Lookup parameters will launch the lookup for the selected account type. On the lookup you may select a specific account or a range of accounts to be included in your report.

To do this, you need to create (add) two (2) parameters.

1. From account
2. To account

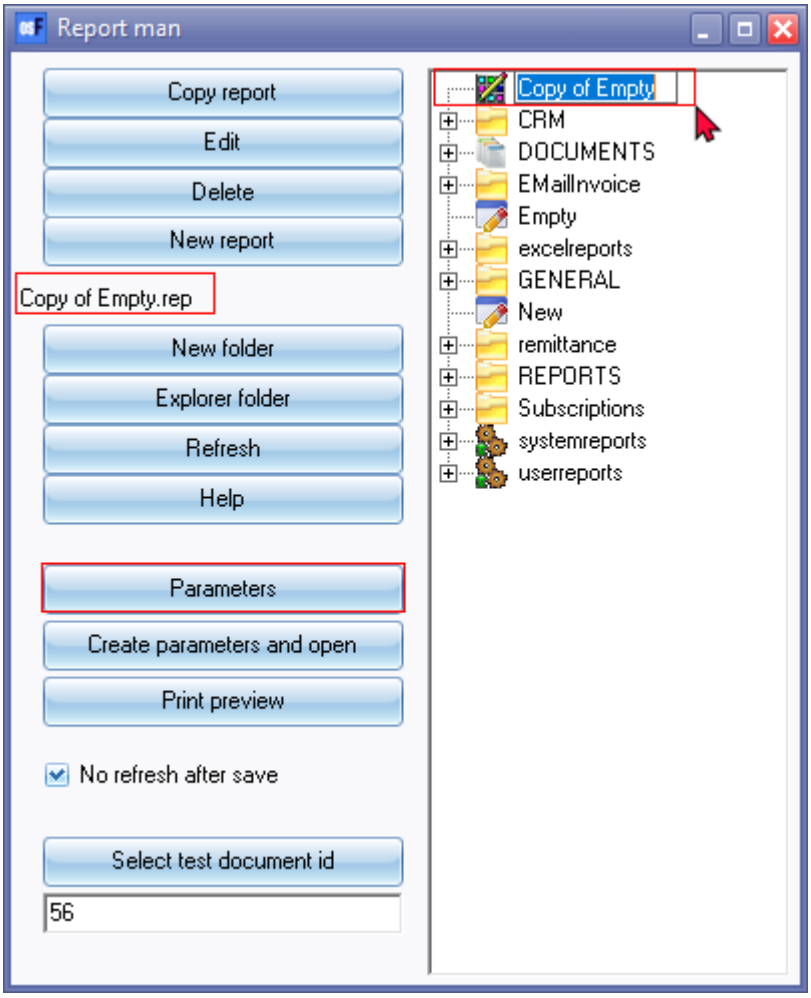
Once the Lookup parameter is added, you need to add some basic SQL to the report to add the functionality to the report.

In this example, the Debtors lookup will be added.

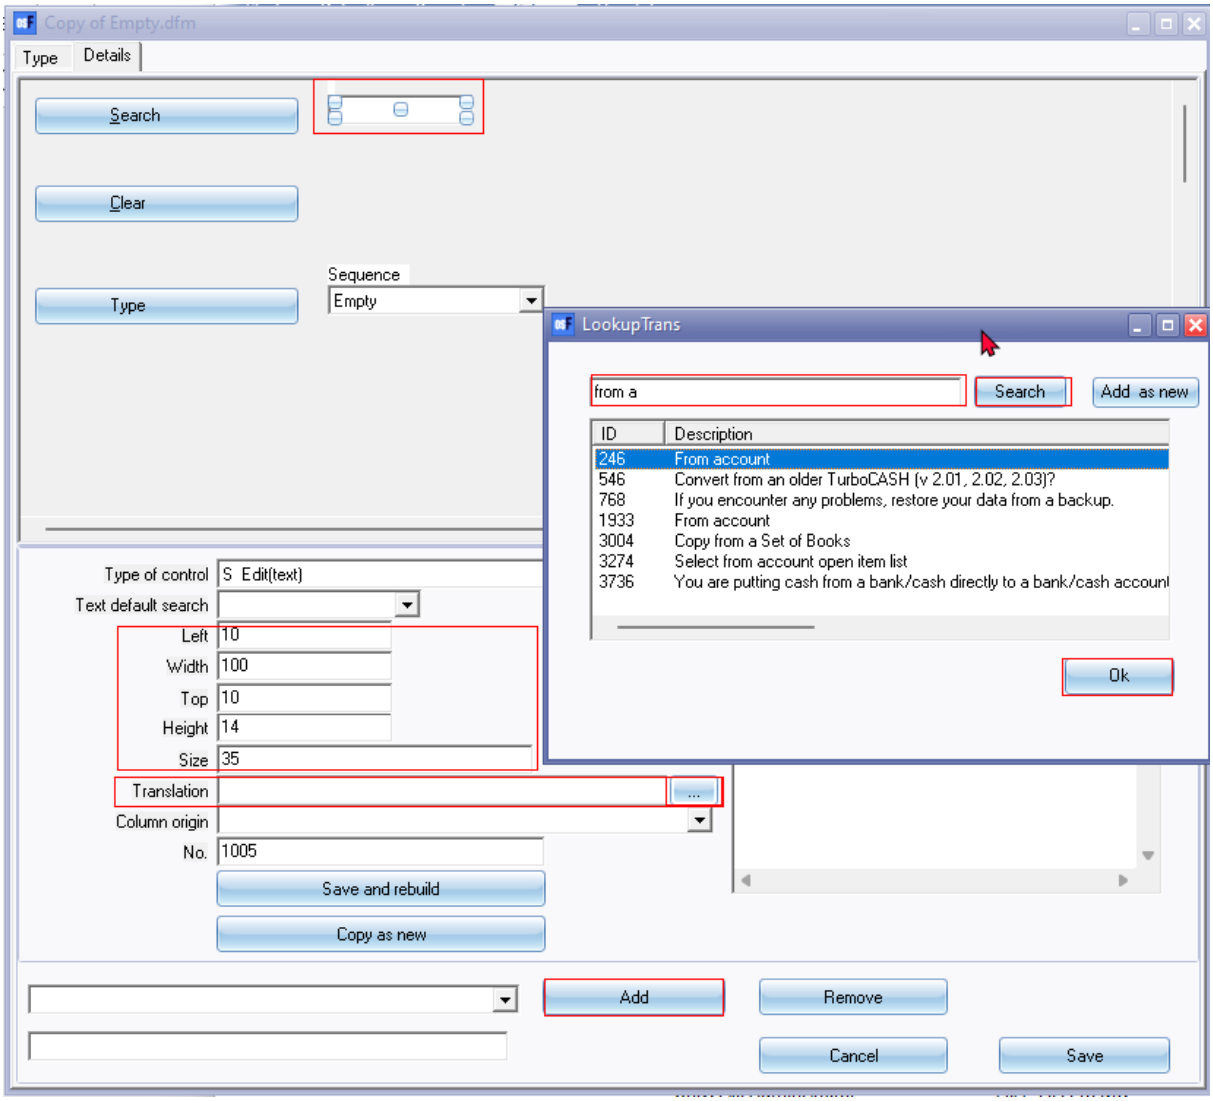
Add From account parameter

To add the lookup parameters:

1. On the "*Report man*" screen, select your report and click on the Parameters button.



2. On the parameters screen for your report, click on the Add button.

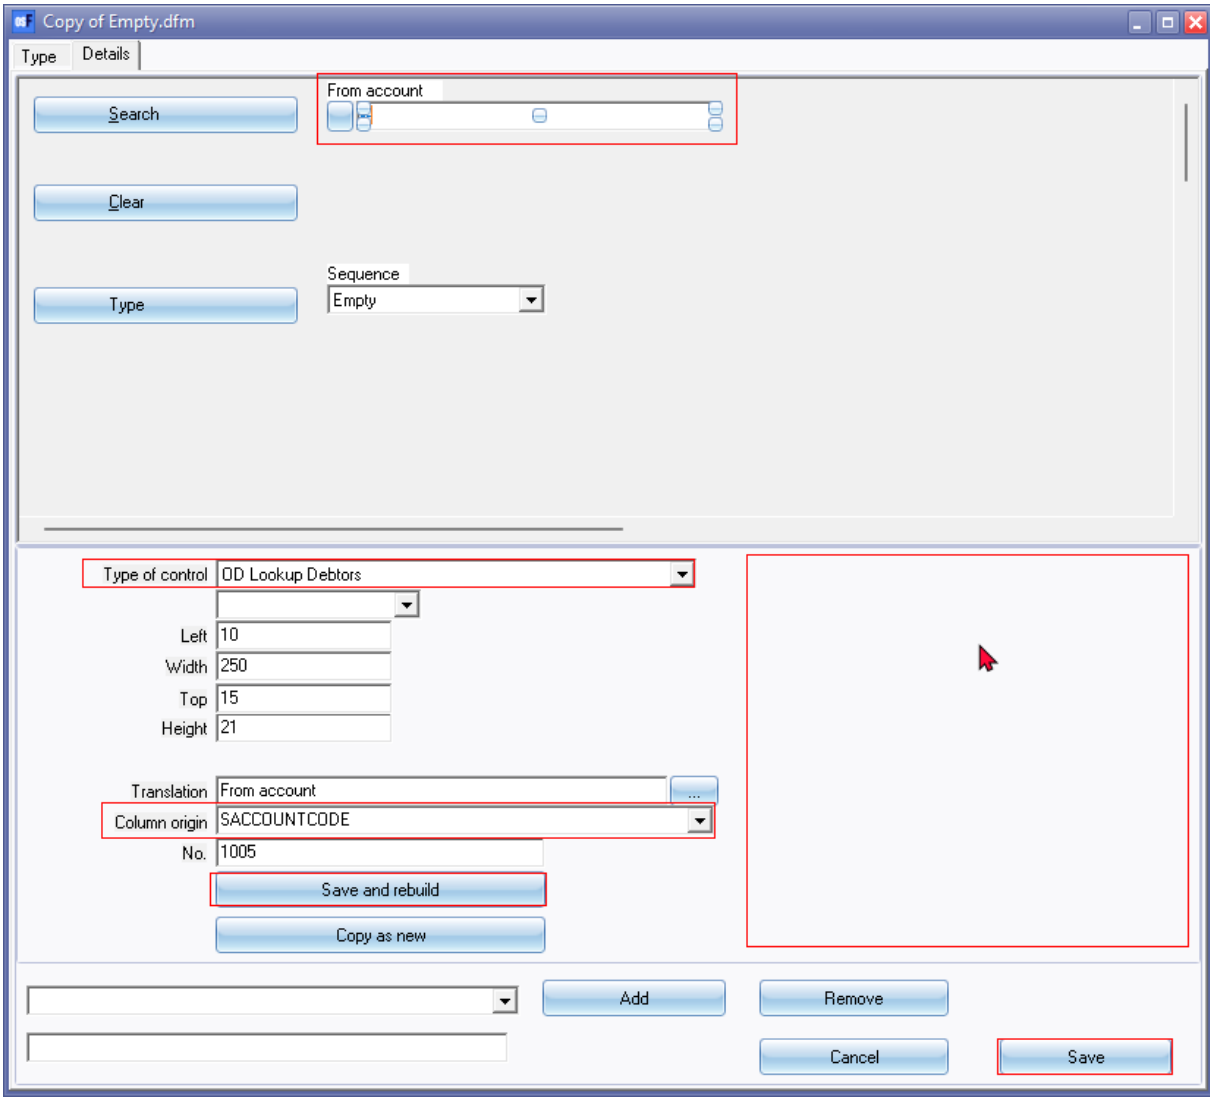


3. Select the options as follows:

    a) Size and position - Enter the values for the Left, Width, Top and Height properties to position your parameter.

    b) Translation - Click on the ... icon and search for the language label. Select your label (in this example, "*From account*" is selected) and click Ok.

4. Click on the Save and rebuild button. This will position the new parameter and add the translation on the Parameter screen.



5. Enter the following options:

   a) Type of control - Select "*OD Lookup Debtors*".

   b) Size and position - Check and edit the values for the Left, Width, Top and Height properties to position your parameter, if necessary.

   c) Column origin - To link the account code, you need to assign a valid column (database field) SACCOUNTCODE.

> *Note the SQL field is not available at this stage.*

6. Click on the Save and rebuild button.

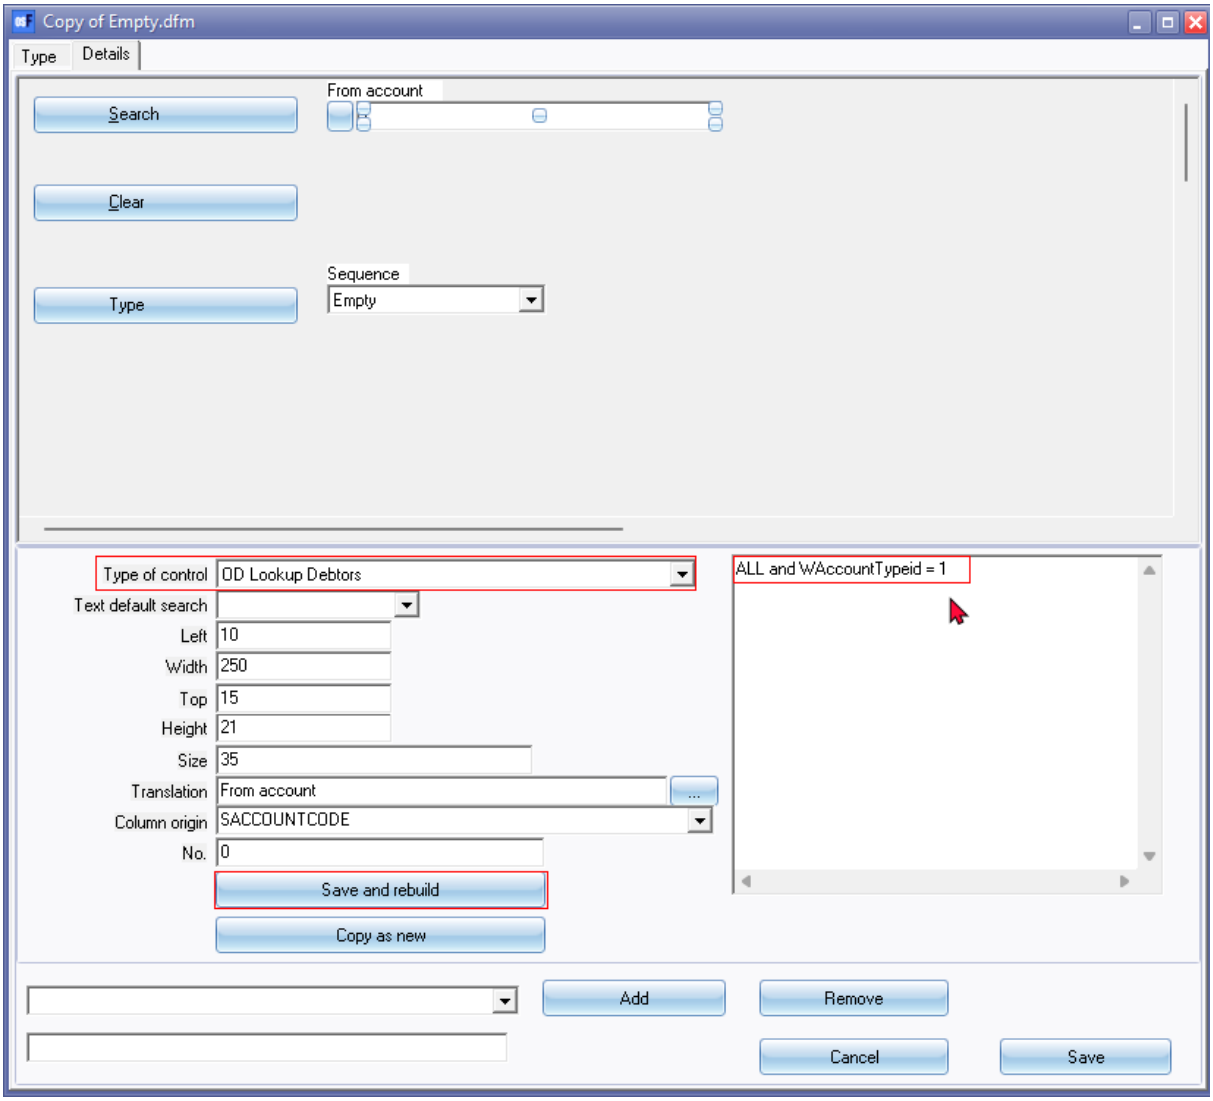
7. Click on the Save button to save your parameter and to close exit the parameters screen.

> *If you do not click on the Save button, your parameter or any changes to the parameter will be*

discarded (lost).

8. Reopen the parameters screen.

9. Click on the "*From account*" parameter. The SQL area will be added to the parameters.



10. Enter the following SQL:

```
“ALL and WAccountTypeid = 1”
```

All needs to be in the UPPERCASE (i.e. “ALL and WAccountTypeid = 1”).

If "All" is in the lower case (i.e. “All and WAccountTypeid = 1”), the lookup will produce the following error:

```
"Dynamic SQL Error
SQL error code = -104
Token unknown - line 3, column 1
```

All"

11. Click on the Save and rebuild button.

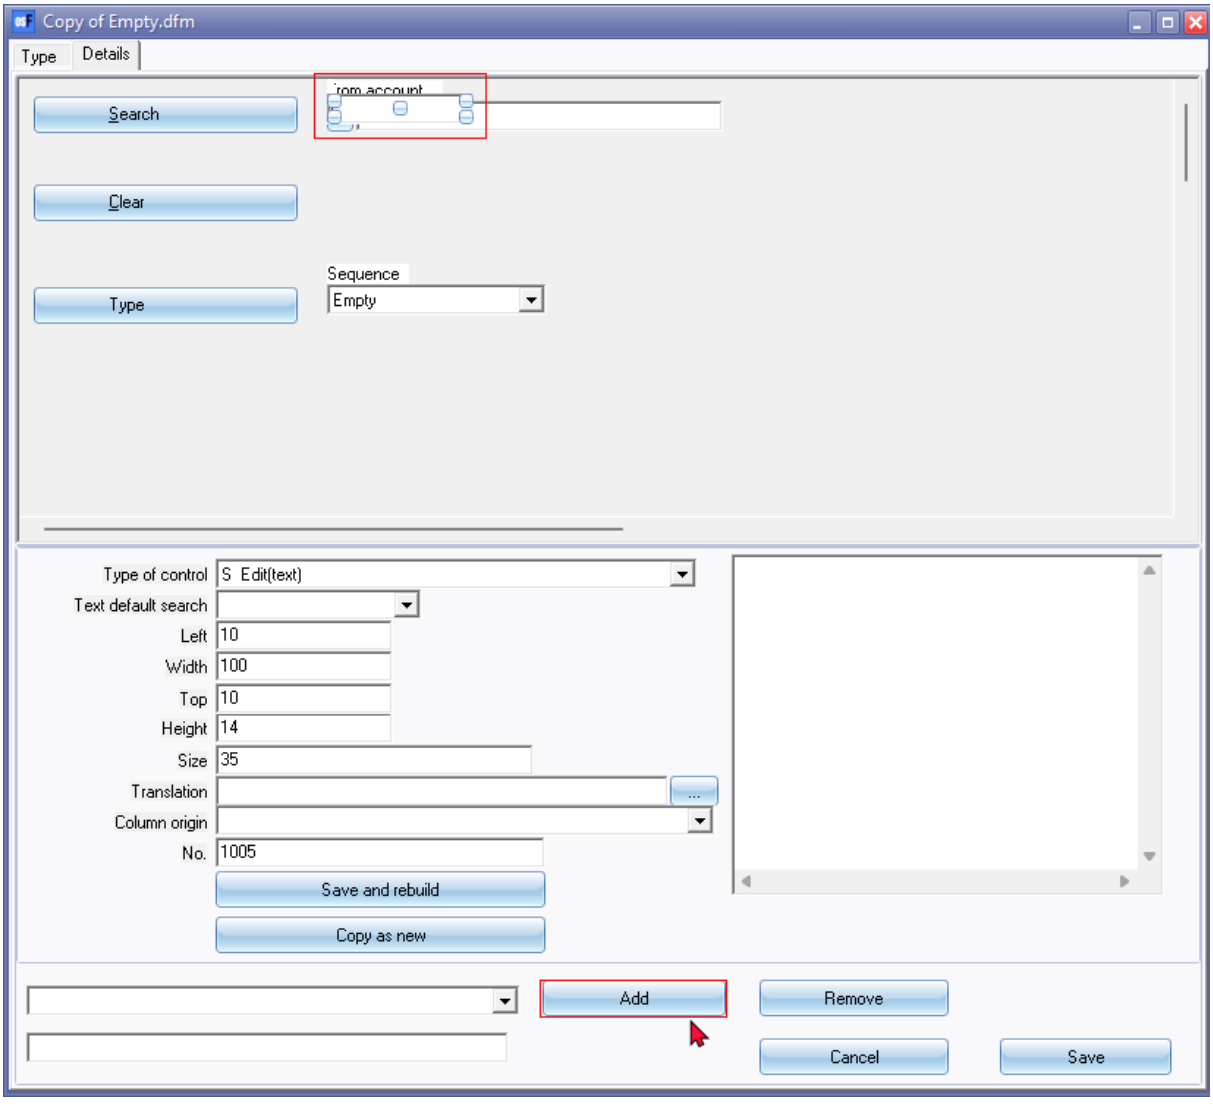
12. You may proceed to add the "*To account*" parameter.

If you need to exit the parameters screen at this stage, click on the Save button. If you do not click on the Save button, your parameter or any changes to the parameter will be discarded (lost).

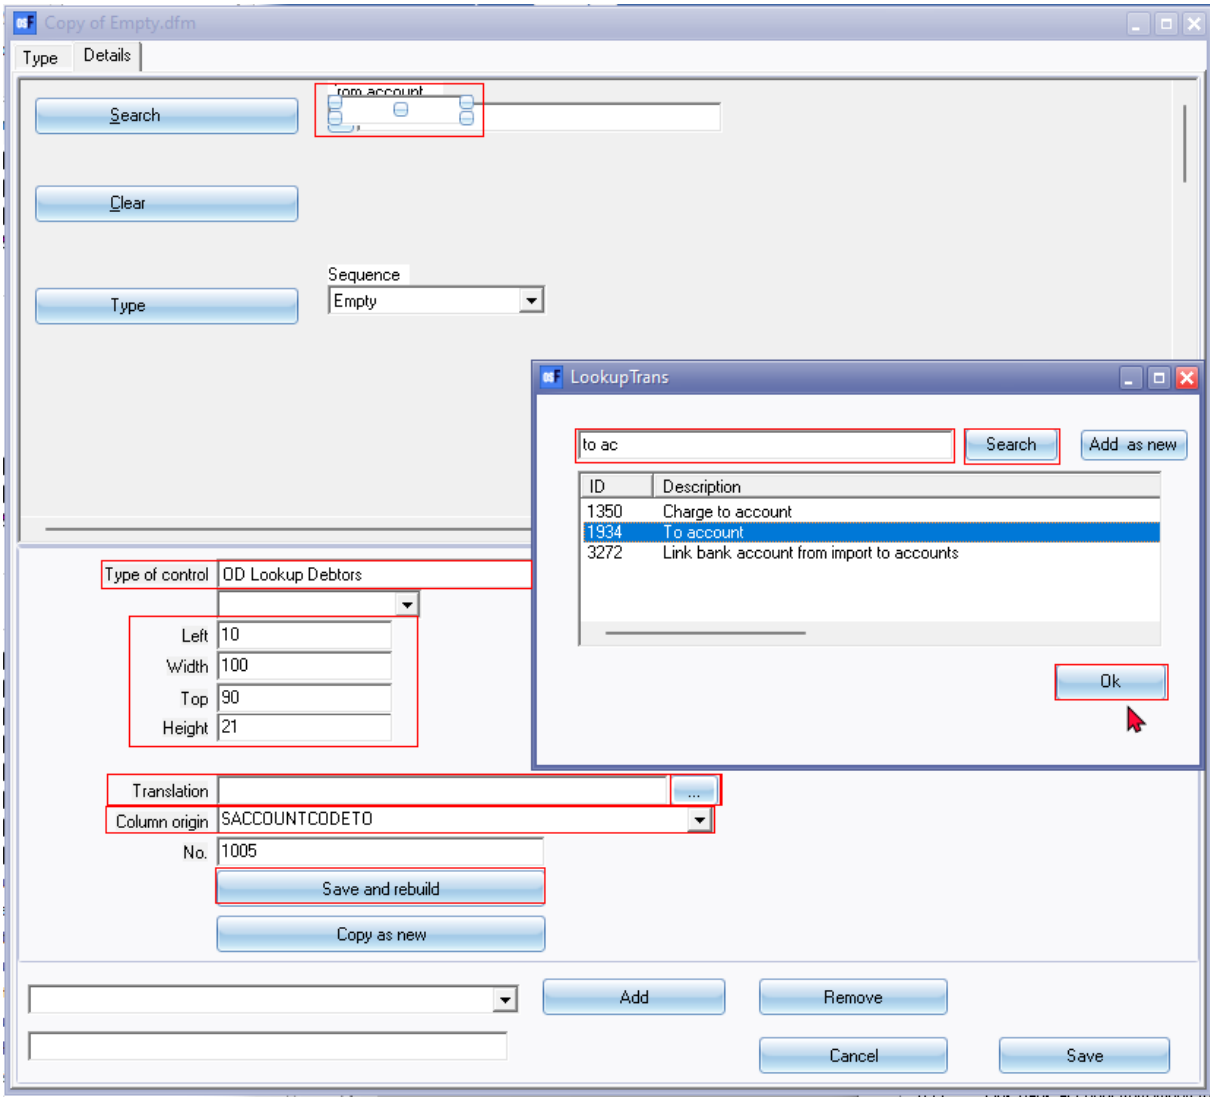
Add To account parameter

To add the lookup parameters:

1. On the parameters screen for your report, click on the Add button.



2. Select and or enter the options for the "*To account*" parameter.



3. Select the options as follows:

   a) Type of control - Select "*OD Lookup Debtors*".

   b) Size and position - Enter the values for the Left, Width, Top and Height and Size properties to position your parameter.

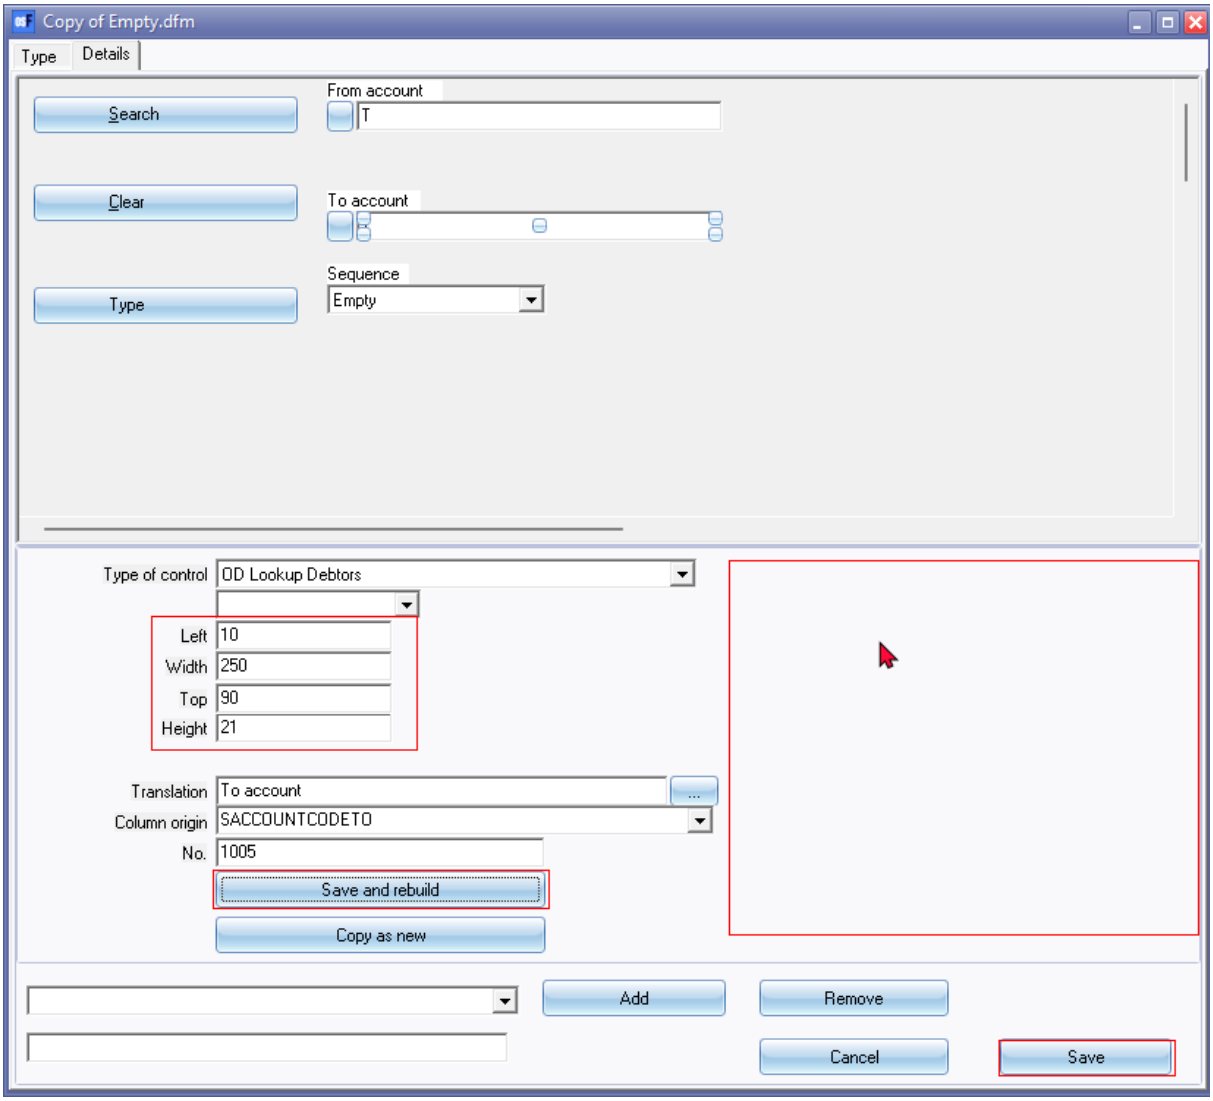
   c) Translation - Click on the ... icon and search for the language label. Select your label (in this example, "*To account*" is selected) and click Ok.

   d) Column origin - To link the account code, you need to assign a valid column (database field) SACCOUNTCODETO.

> *Note the SQL field is not available at this stage.*

4. Click on the Save and rebuild button. This will position the new parameter and add the translation on

the parameter screen.

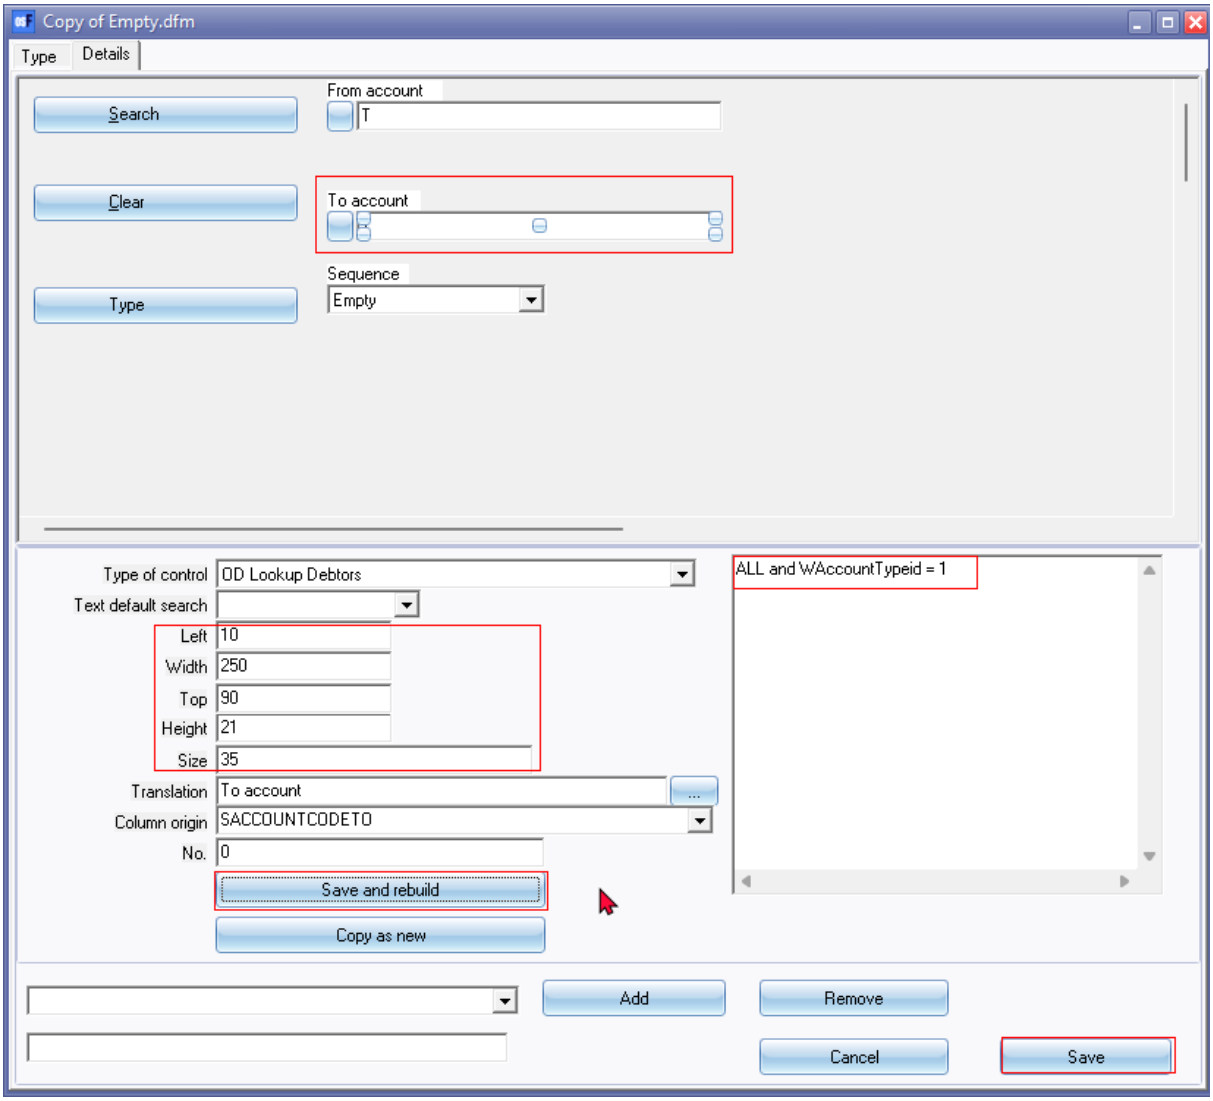


5. Click on the Save button to save your parameter and to close exit the parameters screen.

> *If you do not click on the Save button, your parameter or any changes to the parameter will be discarded (lost).*

6. Reopen the parameters screen.

7. Click on the "*To account*" parameter. The SQL area will be added to the parameters.



8. Enter the following SQL:

```
“ALL and WAccountTypeid = 1”
```

> *All needs to be in the UPPERCASE (i.e. “ALL and WAccountTypeid = 1”).*
>
> *If "All" is in the lower case (i.e. “All and WAccountTypeid = 1”), the lookup will produce the following error:*
>
> ```
> "Dynamic SQL Error
> SQL error code = -104
> Token unknown - line 3, column 1
> All"
> ```

9. Click on the Save and rebuild button.

10. Click the Save button. This will save and close the report parameter design screen.

If you do not click on the Save button, your parameter or any changes to the parameter will be discarded (lost).

The Parameters are available on the Parameters screen but will not work at this stage.

You need to add the parameters and some SQL to the report.

You will still be able to preview the report at this stage without using the lookup parameters.

Add lookup parameters to reports

Add lookup (From account and To account) parameters to report

You basically need tot add the following parameters to the report parameters:

From account parameters

Parameter	*Data type*	*Sets this parameter to*	*Data*
SACCOUNTCODE	*String*		*Account id*
SACCOUNTCODETX	*String Substitute*	*@SACCOUNTCODETX*	*Account code*

To account parameters

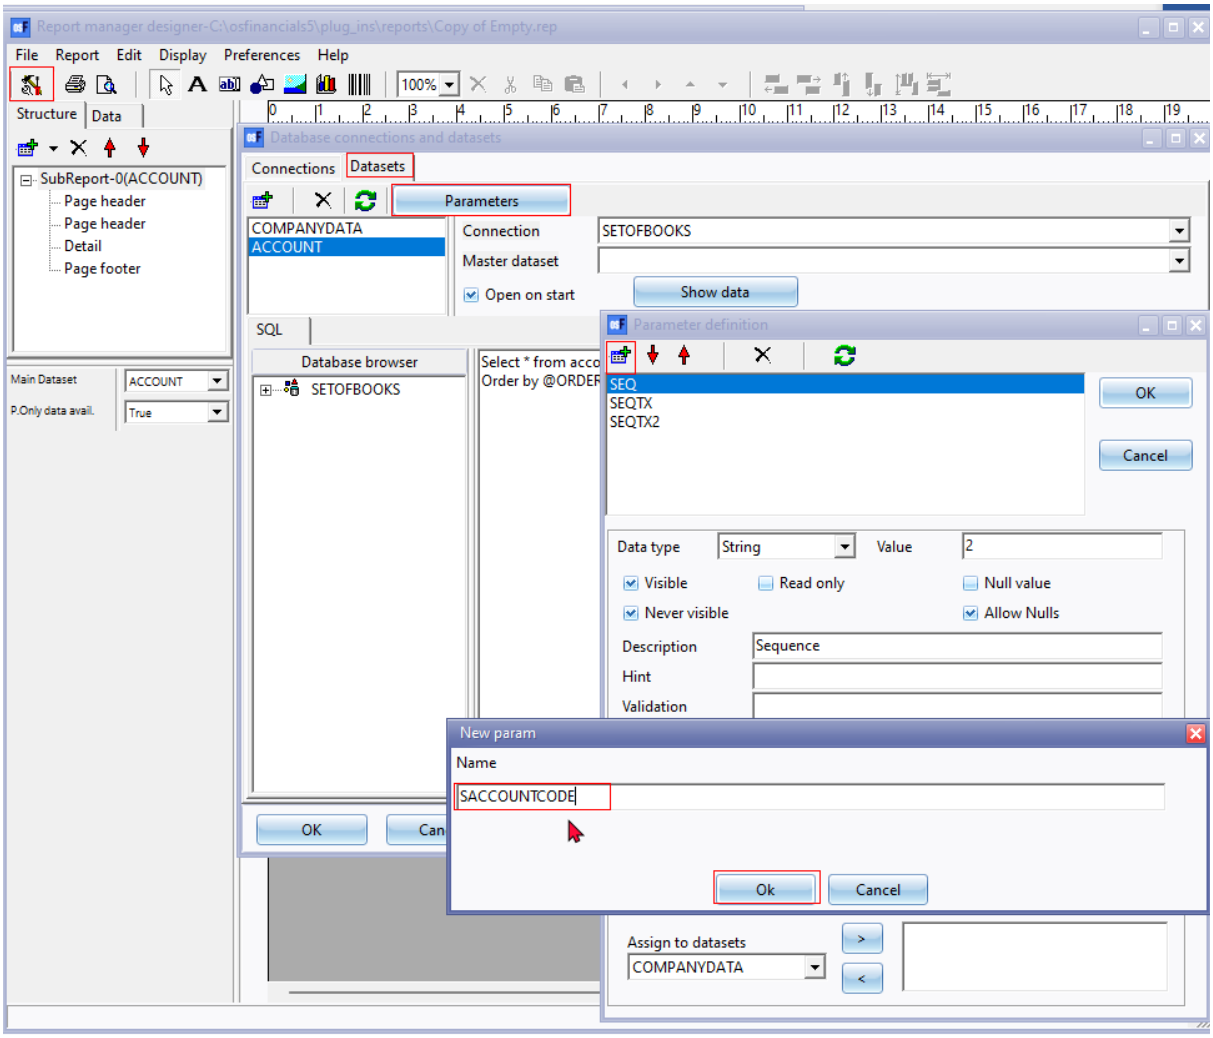
Parameter	*Data type*	*Sets this parameter to*	*Data*
SACCOUNTCODETO	*String*		*Account id*
SACCOUNTCODETOTX	*String Substitute*	*@SACCOUNTCODETOTX*	*Account code*

Add From account (SACCOUNTCODE) String parameter

To add the From account string parameter to the report:

1. On the "*Report man*" screen, select your report and click on the Edit button. (You may also double-click on your report).

2. On the "*Database and connections datasets*" screen (accessed from the first icon or from the Report → Data access configuration menu), click the Parameters button.



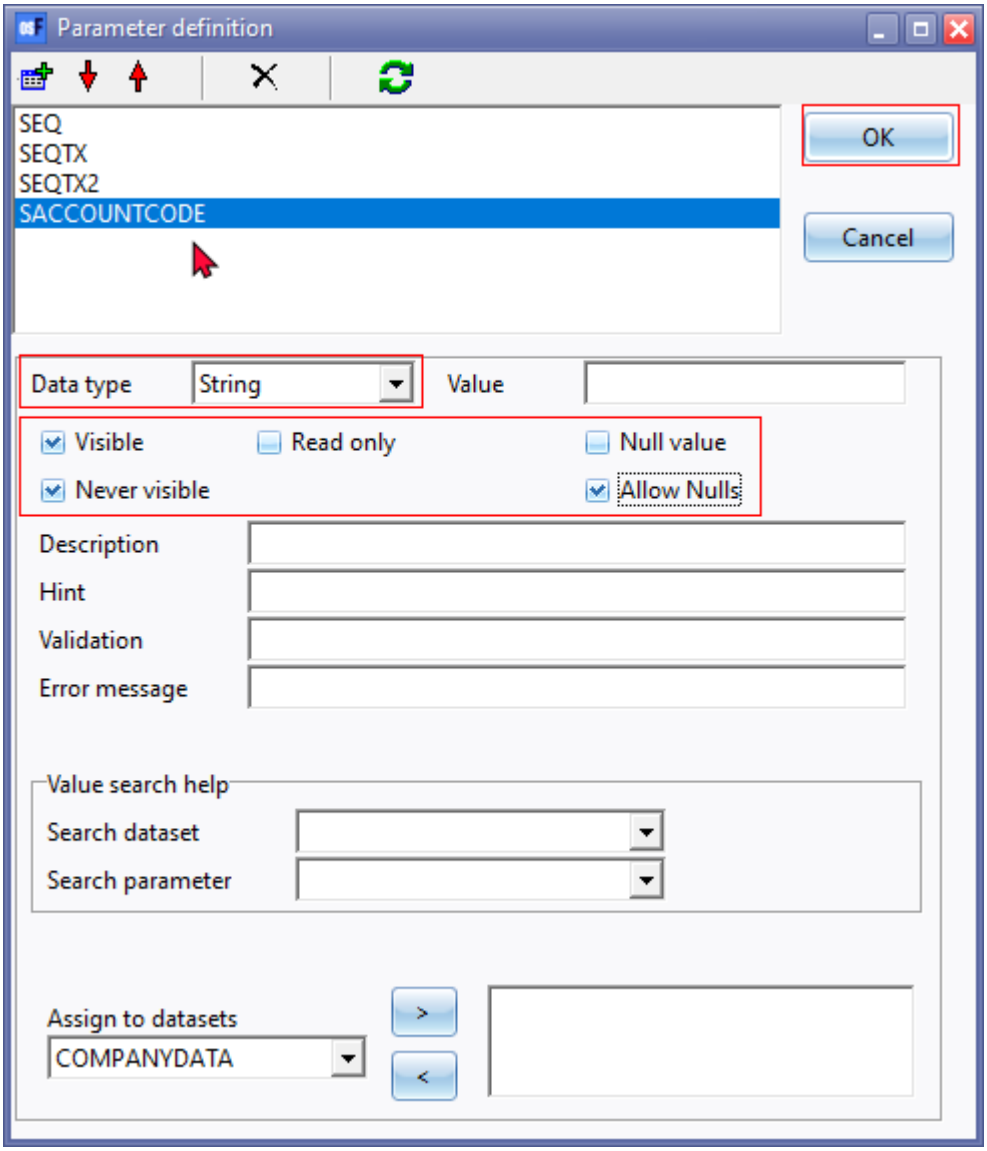
3. On the "*Parameter definition*" screen, select the "*ACCOUNT*" dataset and click on the Add icon.

4. On the "*New param*" screen, enter "*SACCOUNTCODE*".

> *The name if this parameter must be entered exactly as entered in the "Column origin" field for the "From account" parameter (i.e. "SACCOUNTCODE") on the parameter design screen.*

5. Click Ok. This will add the parameter.

6. Select the "*SACCOUNTCODE*" parameter.



8. On the "*SACCOUNTCODE*" parameter, select and configure the options as follows:

    a) Data type - Select "*String*".

    b) Properties - "*Visible*" and "*Never visible*" as well as "*Allow Nulls*" fields may be ticked. The other options may be left blank.

    c) Description - Enter a description ("*From account*" as per this example).

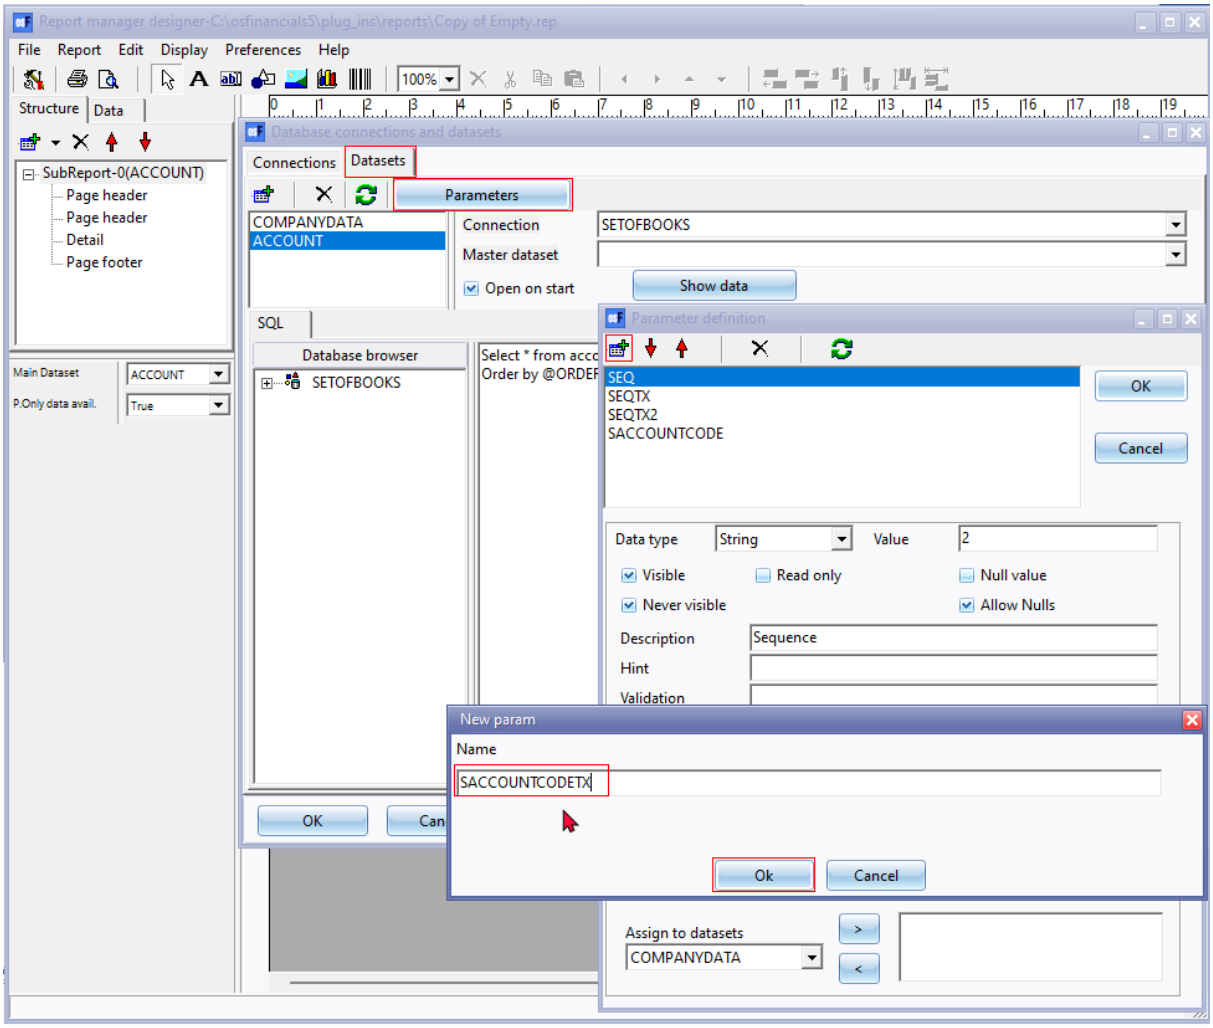
9. You may proceed to add the String substitute parameter ("*SACCOUNTCODETX*") for the "*From account*" lookup parameter.

Should you wish to add the next parameter at a later stage, you need to click OK on both the "Parameter definition" as well as the "Database connections and datasets" screens. If you do not click on the OK button of the "Database connections and datasets" screen, your parameter or any changes to the parameter will be discarded (lost).

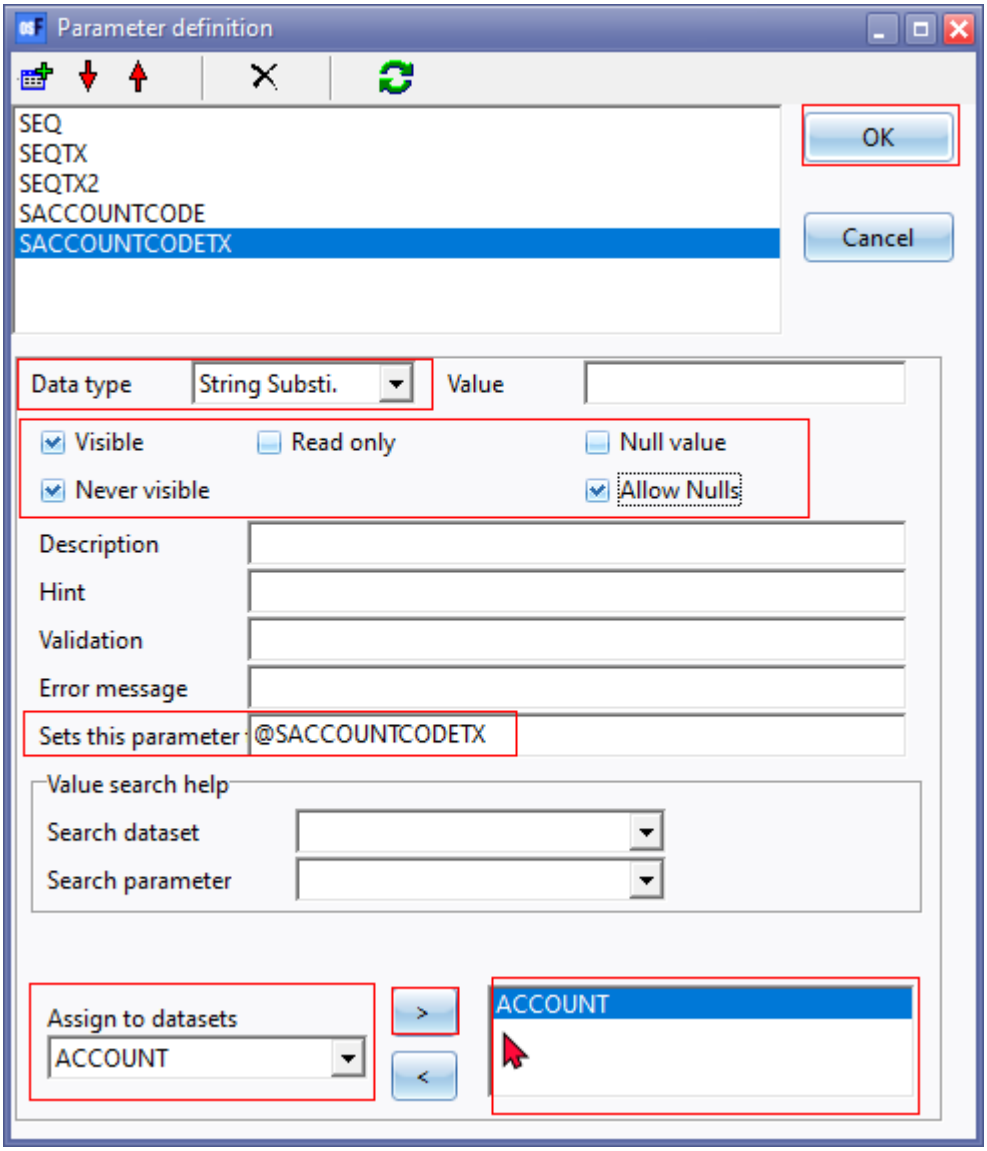
Add From account (SACCOUNTCODETX) String Substitute parameter

To add the From account string parameter to the report:

1. On the "*Report man*" screen, select your report and click on the Edit button. (You may also double-click on your report).
2. On the "*Database and connections datasets*" screen (accessed from the first icon or from the Report → Data access configuration menu), click the Parameters button.



3. On the "*Parameter definition*" screen, select the "*ACCOUNT*" dataset and click on the Add icon.
4. On the "*New param*" screen, enter "*SACCOUNTCODETX*".
5. Click Ok. This will add the parameter.
6. Select the "*SACCOUNTCODETX*" parameter.



8. On the "*SACCOUNTCODETX*" parameter, select and configure the options as follows:

    a) Data type - Select "*String Substi*" (String substitute).

    b) Properties - "*Visible*" and "*Never visible*" as well as "*Allow Nulls*" fields may be ticked. The other options may be left blank.

    c) Description - Enter a description ("*From account*" as per this example).

    d) Sets this parameter to - Enter "*@SACCOUNTCODETX*".

    e) Assign to datasets – Select the ACCOUNT dataset and click on the > icon.

9. You may proceed to add the "*To account*" lookup parameters.

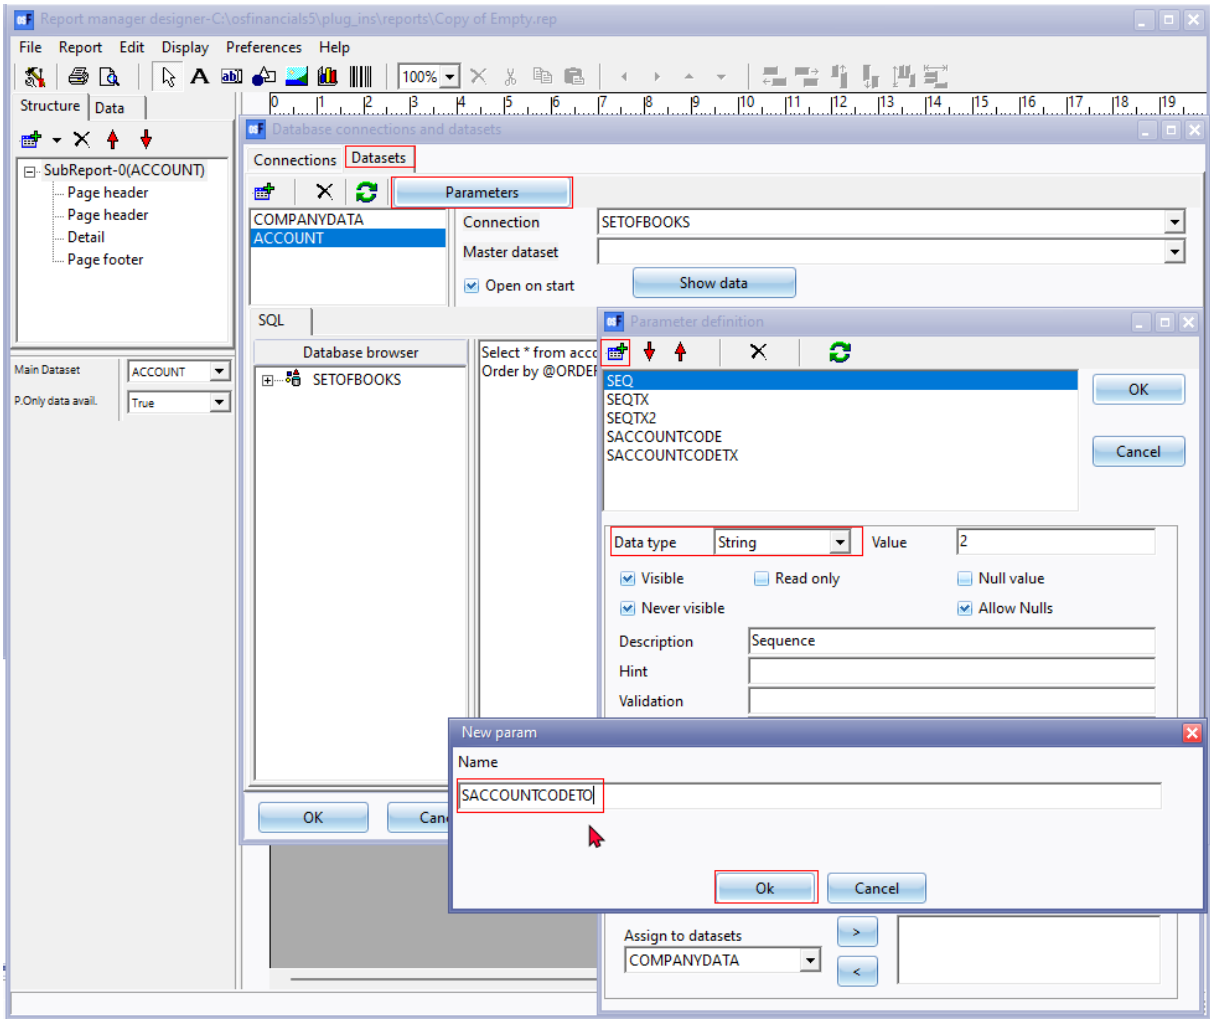
Should you wish to add the next parameter at a later stage, you need to click OK on both the "Parameter definition" as well as the "Database connections and datasets" screens. If you do not click on the OK button of the "Database connections and datasets" screen, your parameter or any changes to the parameter will be

discarded (lost).

Add To Account (SACCOUNTCODETO) String parameter

To add the To account string parameter to the report:

1. On the "*Report man*" screen, select your report and click on the Edit button. (You may also double-click on your report).
2. On the "*Database and connections datasets*" screen (accessed from the first icon or from the Report → Data access configuration menu), click the Parameters button.

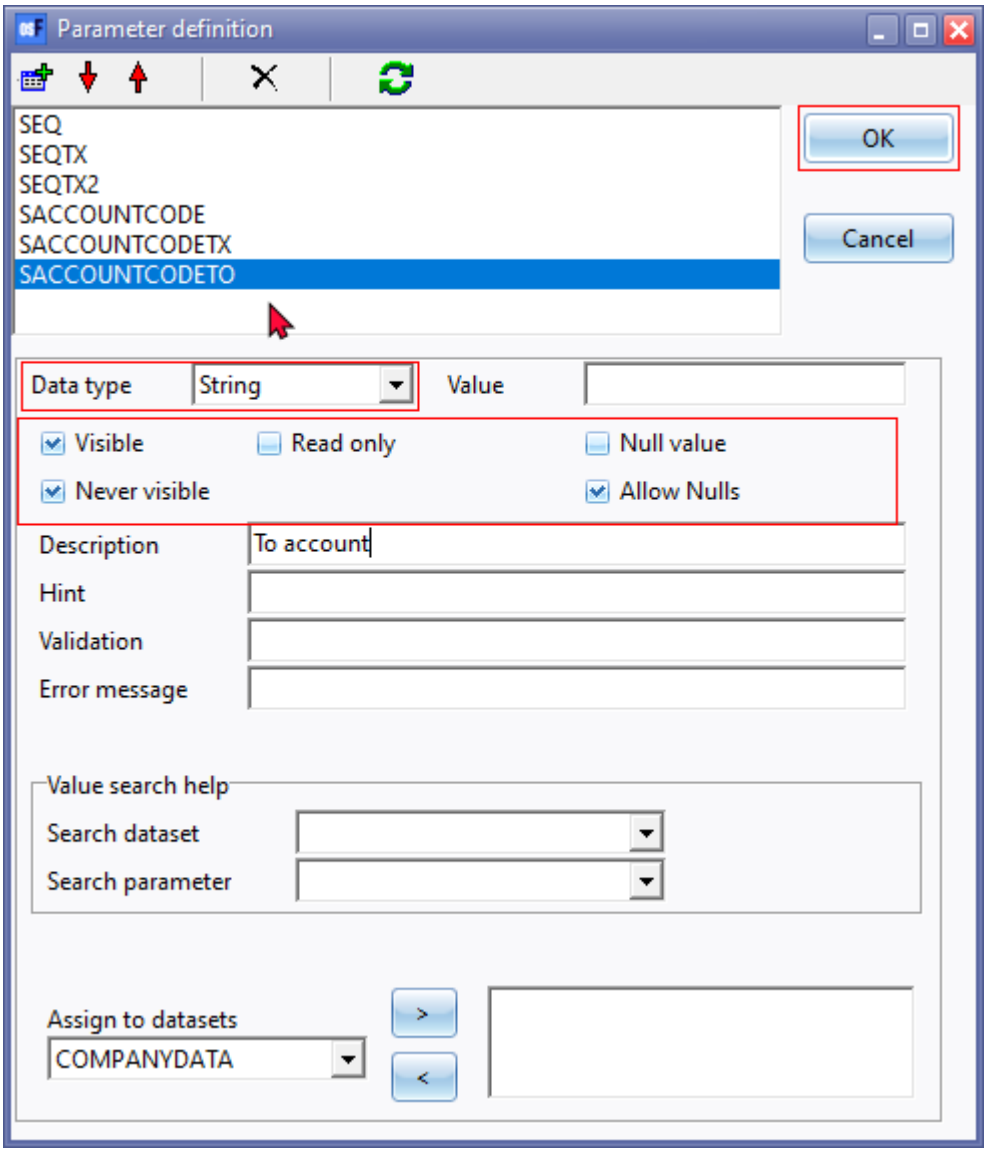


3. On the "*Parameter definition*" screen, select the "*ACCOUNT*" dataset and click on the Add icon.
4. On the "*New param*" screen, enter "*SACCOUNTCODETO*".

> *The name if this parameter must be entered exactly as entered in the "Column origin" field for the "To account" parameter (i.e. "SACCOUNTCODETO") on the parameter design screen.*

5. Click Ok. This will add the parameter.

6. Select the "*SACCOUNTCODETO*" parameter.



8. On the "*SACCOUNTCODETO*" parameter, select and configure the options as follows:

    a) Data type - Select "*String*".

    b) Properties - "*Visible*" and "*Never visible*" as well as "*Allow Nulls*" fields may be ticked. The other options may be left blank.

    c) Description - Enter a description ("*To account*" as per this example).

9. You may proceed to add the String substitute parameter ("*SACCOUNTCODETOTX*") for the "*From account*" lookup parameter.

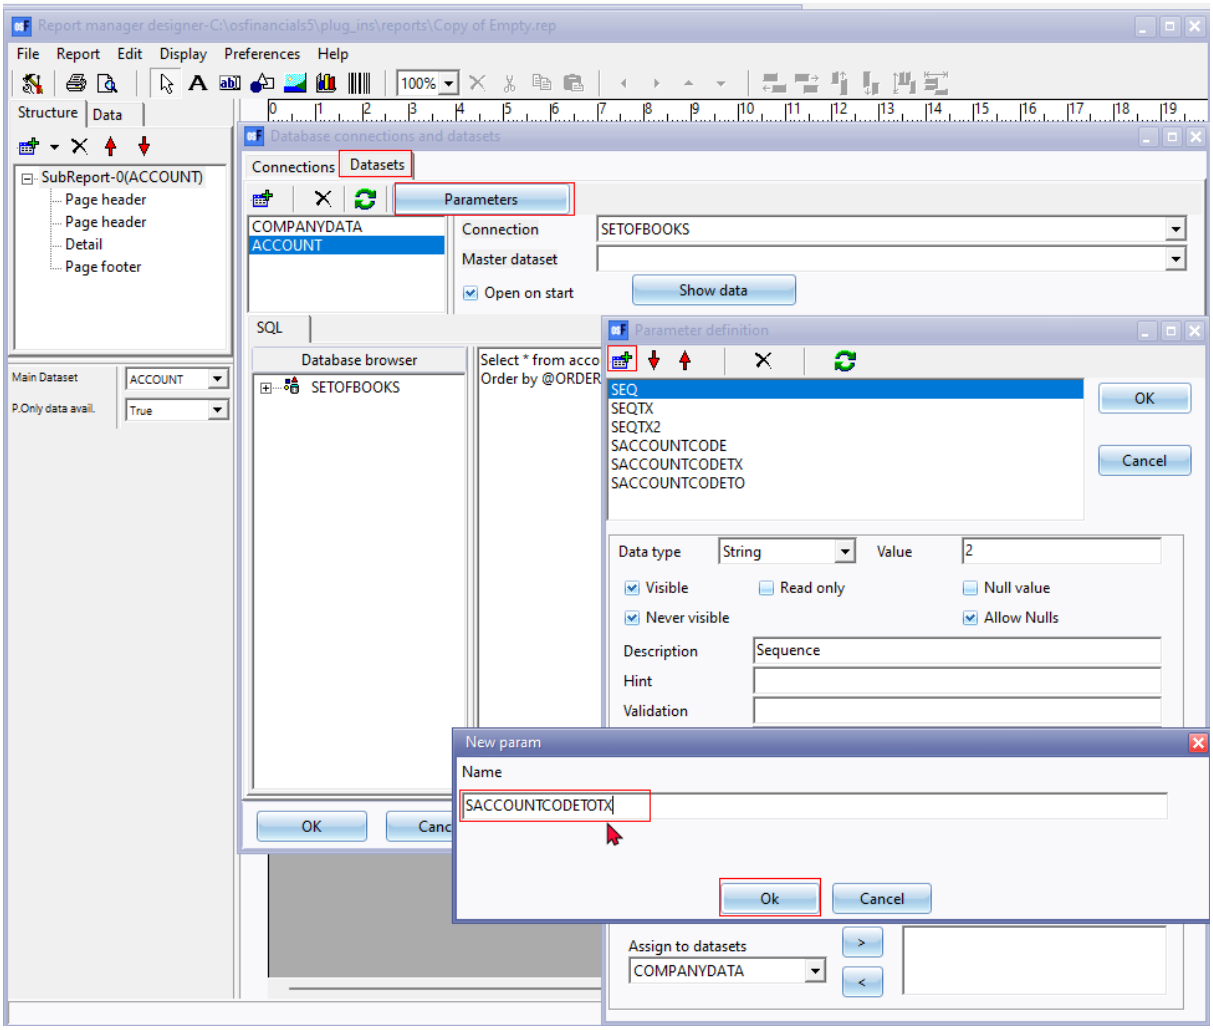
Should you wish to add the next parameter at a later stage, you need to click OK on both the "Parameter definition" as well as the "Database connections and datasets" screens. If you do not click on the OK button

of the "Database connections and datasets" screen, your parameter or any changes to the parameter will be discarded (lost).

Add To account (SACCOUNTCODETX) String Substitute parameter

To add the To account string parameter to the report:

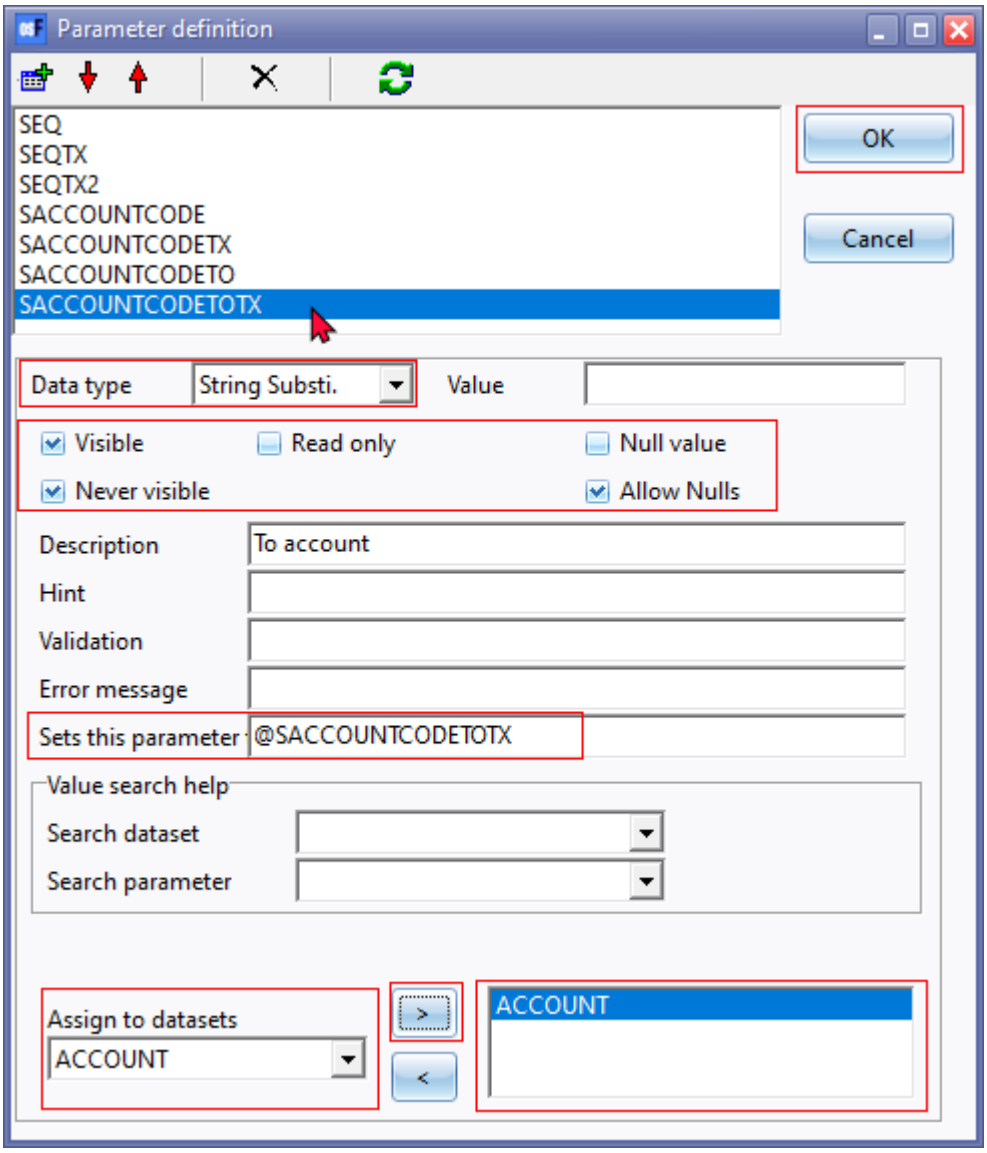
1. On the "*Report man*" screen, select your report and click on the Edit button. (You may also double-click on your report).
2. On the "*Database and connections datasets*" screen (accessed from the first icon or from the Report → Data access configuration menu), click the Parameters button.



3. On the "*Parameter definition*" screen, select the "*ACCOUNT*" dataset and click on the Add icon.
4. On the "*New param*" screen, enter "*SACCOUNTCODETOTX*".

5. Click Ok. This will add the parameter.

6. Select the "*SACCOUNTCODETOTX*" parameter.



8. On the "*SACCOUNTCODETOTX*" parameter, select and configure the options as follows:

    a) Data type - Select "*String Substi*" (String substitute).

    b) Properties - "*Visible*" and "*Never visible*" as well as "*Allow Nulls*" fields may be ticked. The other options may be left blank.

    c) Description - Enter a description ("*To account*" as per this example).

    d) Sets this parameter to - Enter "*@SACCOUNTCODETOTX*".

    e) Assign to datasets – Select the "*ACCOUNT*" dataset and click on the > icon.

9. You may proceed to add the "*To account*" lookup parameters to the report.

Should you wish to add the next parameter at a later stage, you need to click OK on both the "Parameter definition" as well as the "Database connections and datasets" screens. If you do not click on the OK button of the "Database connections and datasets" screen, your parameter or any changes to the parameter will be discarded (lost).

Add From ... To account lookup parameters SQL to the report

After adding the parameters to the report dataset, you need to add the SQL to the dataset (e.g. "*ACCOUNT*").

1. On the "*Database and connections datasets*" screen (accessed from the first icon or from the Report → Data access configuration menu), click the Parameters button.
2. On the Database connections and datasets screen, select the "*ACCOUNT*" dataset and add the SQL for the Account lookup.

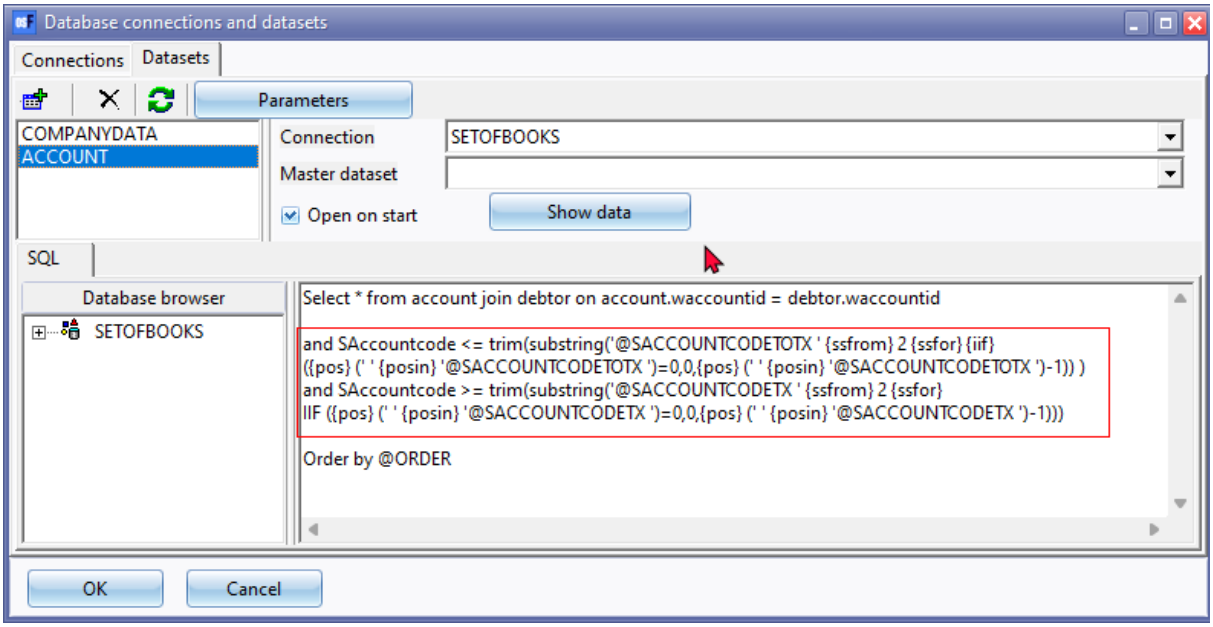
   MSSQL - SQL not supported in Previous documentation before osFinancials5/TurboCASH5

   ```
   “and SAccountcode <= trim(substring('@SACCOUNTCODETOTX ' from 2 for {if mysql}
   if{else}IIF{endif}(position (' ' in '@SACCOUNTCODETOTX ')=0,0,position (' ' in
   '@SACCOUNTCODETOTX ')-1)) )
   and SAccountcode >= trim(substring('@SACCOUNTCODETX ' from 2 for {if mysql}
   if{else}IIF{endif}(position (' ' in '@SACCOUNTCODETX ')=0,0,position (' ' in
   '@SACCOUNTCODETX ')-1)))”
   ```

   To include support for MSSQL Server for the lookup feature, it is recommended that the following SQL is added to the "ACCOUNT" dataset:

   ```
   and SAccountcode <= trim(substring('@SACCOUNTCODETOTX ' {ssfrom} 2 {ssfor} {iif}
   ({pos} (' ' {posin} '@SACCOUNTCODETOTX ')=0,0,{pos} (' ' {posin} '@SACCOUNTCODETOTX ')-1)) )
   and SAccountcode >= trim(substring('@SACCOUNTCODETX ' {ssfrom} 2 {ssfor}
   IIF ({pos} (' ' {posin} '@SACCOUNTCODETX ')=0,0,{pos} (' ' {posin} '@SACCOUNTCODETX ')-1)))
   ```

3. On the Database connections and datasets screen, select the "*ACCOUNT*" dataset and add the above SQL:



This must be added before the Order by SQL.

"Order by @ORDER"

NOTE - The Show data button will not display any data at this stage. You need to click on the OK button and close (exit) the report.

If you click on the Print preview icon on the Report manager designer screen, the data will also not be available to print. An error message will be displayed:

"No data available to print!"

You need to click on the Print preview button and select the From account ... To Account lookups from the parameter screen and click OK.

4. Click on the OK button of the "*Database connections and datasets*" screen.

If you do not click on the OK button of the "Database connections and datasets" screen, your parameter or any changes to the parameter will be discarded (lost).

5. Close the report and Save the report.

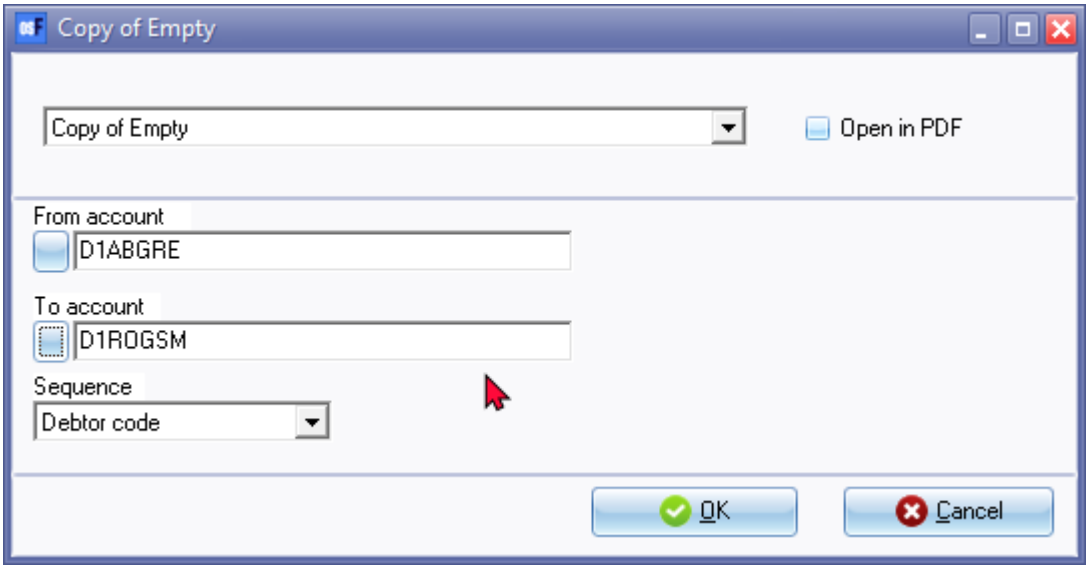
If you do not click on the Save button, your parameter or any changes to the parameter will be discarded (lost).

Test / Print the new report with the From account and To account parameter

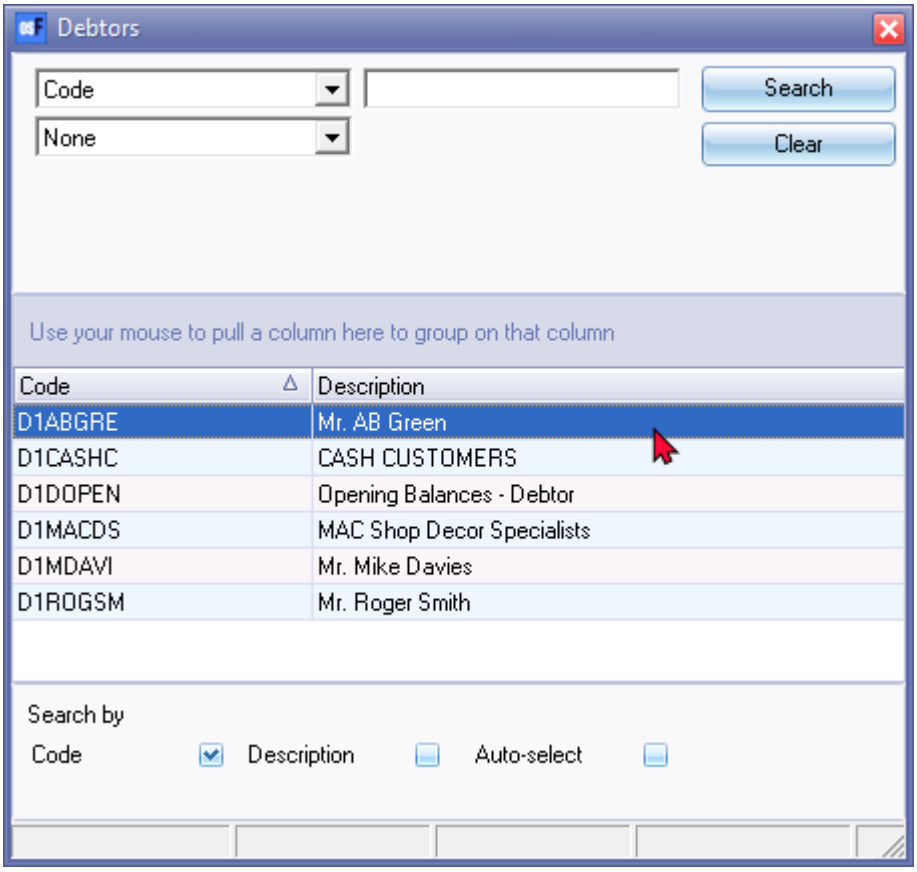
The report should print all accounts From account ... To account (according to your selection on the Parameter screen). If you have selected the same Debtor account in the From account and the same Debtor account in the To account lookup, only the data of the selected Debtor account should be included in the report.

To test and preview the lookup parameters:

1. On the "*Report man*" screen, select your report, and click the Print preview button.

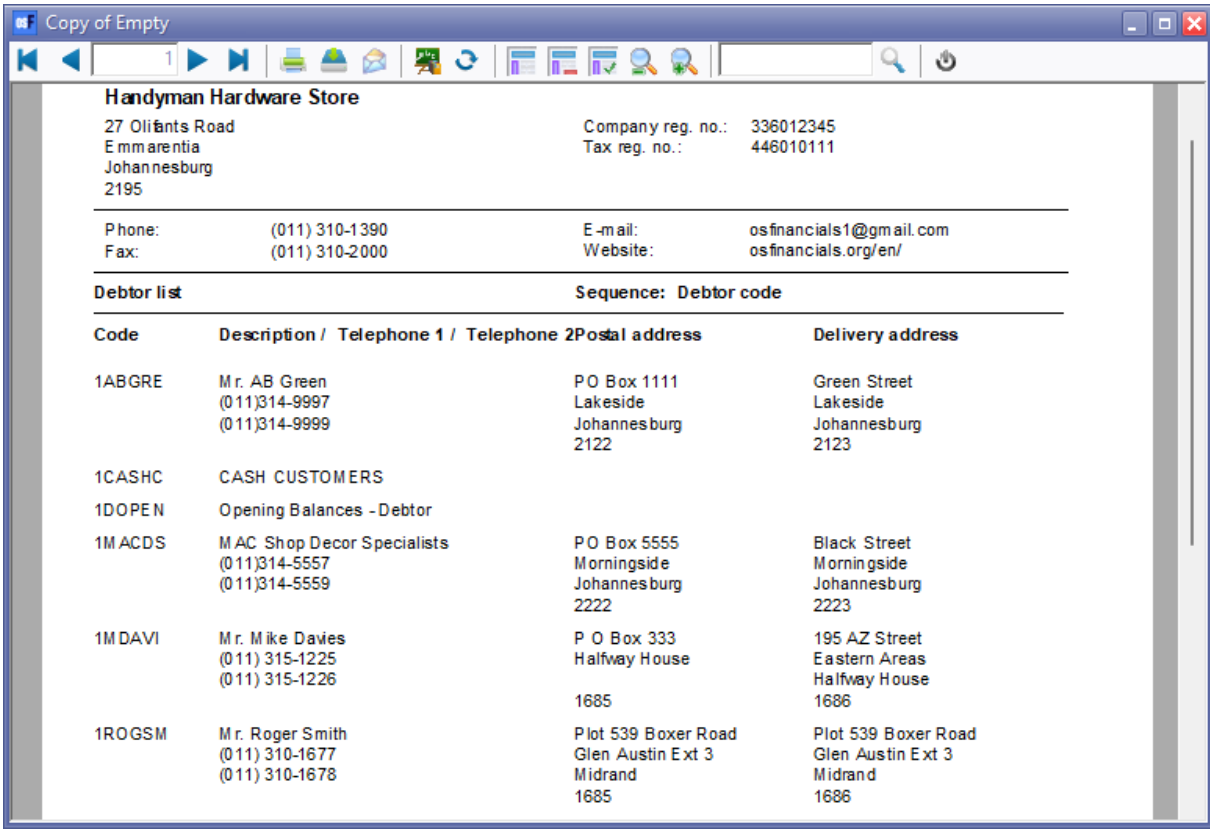


2. Select the accounts to include in the report the From account ... To Account lookup screens.



3. Select the "*Sequence*" (i.e. Debtor code or Description) if not correct.

4. Click on the OK button of the "*Report options*" screen. An example of the printed report, is as follows:



Copy of Empty

Handyman Hardware Store

27 Olifants Road
Emmarentia
Johannesburg
2195

Company reg. no.: 336012345
Tax reg. no.: 446010111

Phone: (011) 310-1390
Fax: (011) 310-2000

E-mail: osfinancials1@gmail.com
Website: osfinancials.org/en/

Debtor list **Sequence: Debtor code**

Code	Description / Telephone 1 / Telephone 2	Postal address	Delivery address
1ABGRE	Mr. AB Green (011)314-9997 (011)314-9999	PO Box 1111 Lakeside Johannesburg 2122	Green Street Lakeside Johannesburg 2123

1MDAVI	Mr. Mike Davies (011) 315-1225 (011) 315-1226	P O Box 333 Halfway House 1685	195 AZ Street Eastern Areas Halfway House 1686
1ROGSM	Mr. Roger Smith (011) 310-1677 (011) 310-1678	Plot 539 Boxer Road Glen Austin Ext 3 Midrand 1685	Plot 539 Boxer Road Glen Austin Ext 3 Midrand 1686

You may wish to add the "From account … To account" selection to print on the report (similar to the "Sequence" parameter option).

Add From account … To Account parameters to the printout

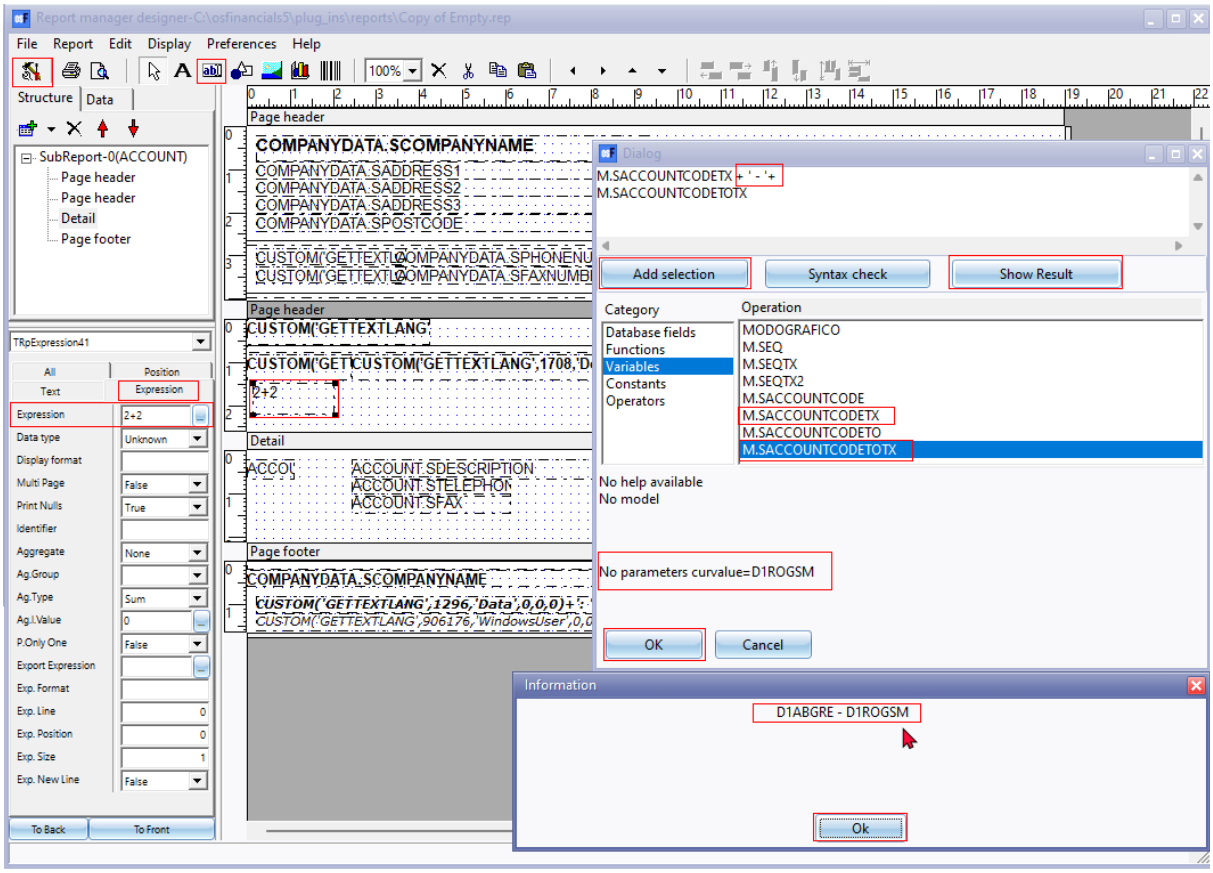
The From account and To account parameters allow you to print the report for all debtor accounts, a selected range of Debtor accounts or a specific debtor account as per your selection on the report parameter. It is a good idea to add the parameter selection on the report printout.

A user will exactly read on the report page headers in which which account or accounts are included in the report.

Refer to the section - Reportman - Translatable label expressions in this document.

To add the lookup parameters to the report print:

1. On the "*Report man*" screen, select your report, and click the Edit button (You may also double-click on the selected report).
2. Select the second Page header in the report structure.
3. Select the Expression icon to insert a basic expression. The default expression is "*2+2*".



4. On the Expression tab, click on the … icon to edit the expression.

5. Select the "*Variables*" in the "*Category*" section.

> *These Variables is automatically added when adding parameters Datasets.*
>
> - *From account - M.SACCOUNTCODE and M.SACCOUNTCODETX,*
> - *To account - M.SACCOUNTCODETO and M.SACCOUNTCODETOTX*
> - *Sequence - M.SEQ, M.SEQTX and M.SEQTX2*

6. Remove the default "*2+2*" SQL in the expression.

7. Select the *M.SACCOUNTCODETX* string substitute ("*From account*") parameter and click on the Add selection button (or double-click on the selected operator) to add the operator to the SQL section.

8. Select the *M.SACCOUNTCODETOTX* string substitute ("*To account*") parameter and click on the Add selection button (or double-click on the selected operator) to add the operator to the SQL section.

9. Join these two variables by typing the + ' - '+ after the first variable (This will insert a space and a hyphen followed by a space). The expression should be as follows:

```
M.SACCOUNTCODETX + ' -  '+
M.SACCOUNTCODETOTX
```

10. Click on the Show Result button to check if it is displayed correctly. The "*From account*" and the "*To account*" to will display correctly on the "*Information*" screen according to your previous selection on the Report options.

11. Click Ok on the "*Information*" screen and OK on the "*Dialog*" screen to save the expression.

Add labels for From account ... To Account parameters to the printout

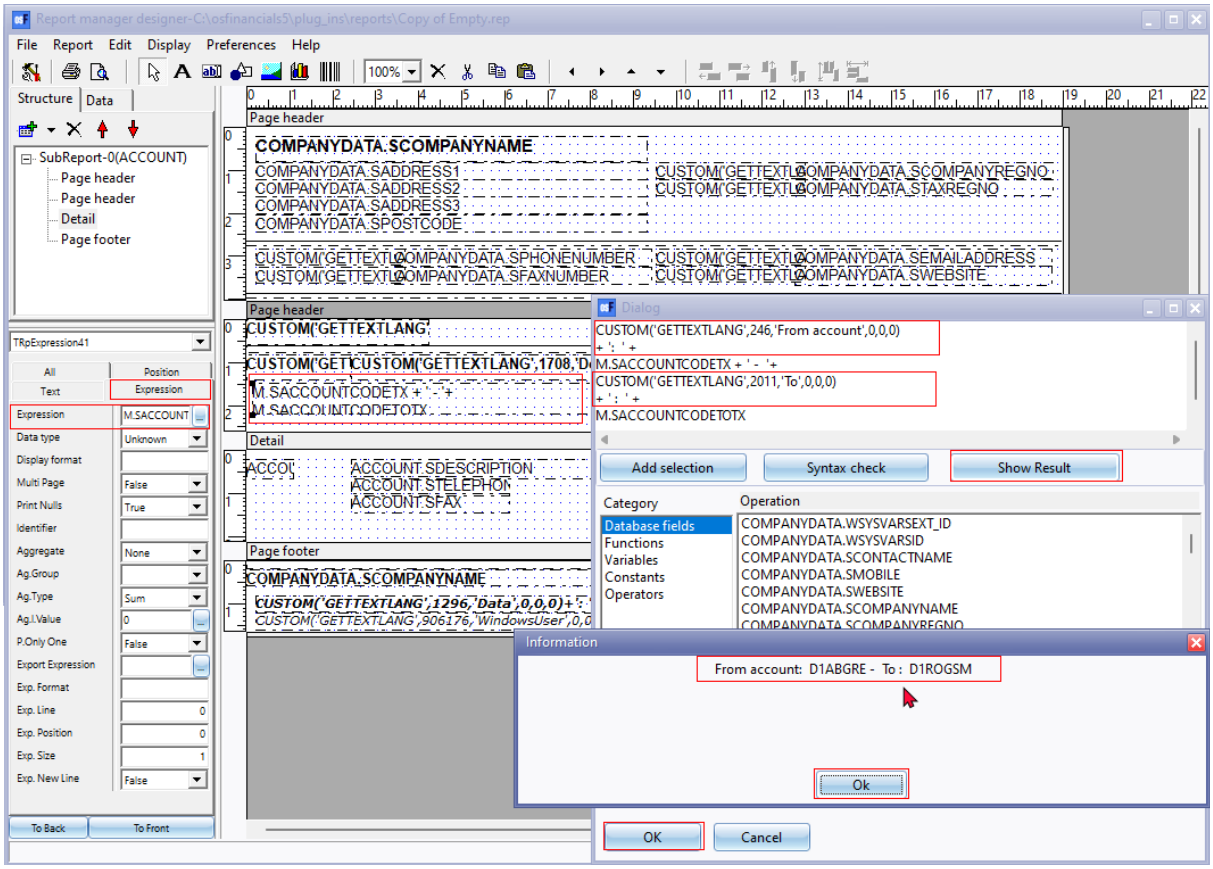
At this stage, only the Account codes will be printed on the report. To describe these codes on the printed report, you need to add labels.

Add labels to the From account and To account expressions:

1. On the "*Report man*" screen, select your report, and click the Edit button (You may also double-click on the selected report).

2. Select the "*M.SACCOUNTCODETX*" expression and click on the Expression tab to edit the expression.

3. On the Expression tab, click on the ... icon to edit the expression.



The required label id's from the Language files were already selected (in the "Translation" field) when the Parameters were designed:

- *From account - SACCOUNTCODE - (translatable language id 246).*
- *To account - SACCOUNTCODETO - (translatable language id 2011).*

4. Add a label From account : (translatable language id 246 and description).
5. Add a label To account : (translatable language id 2011 and description). The completed Sql for the From and To account is as follows:

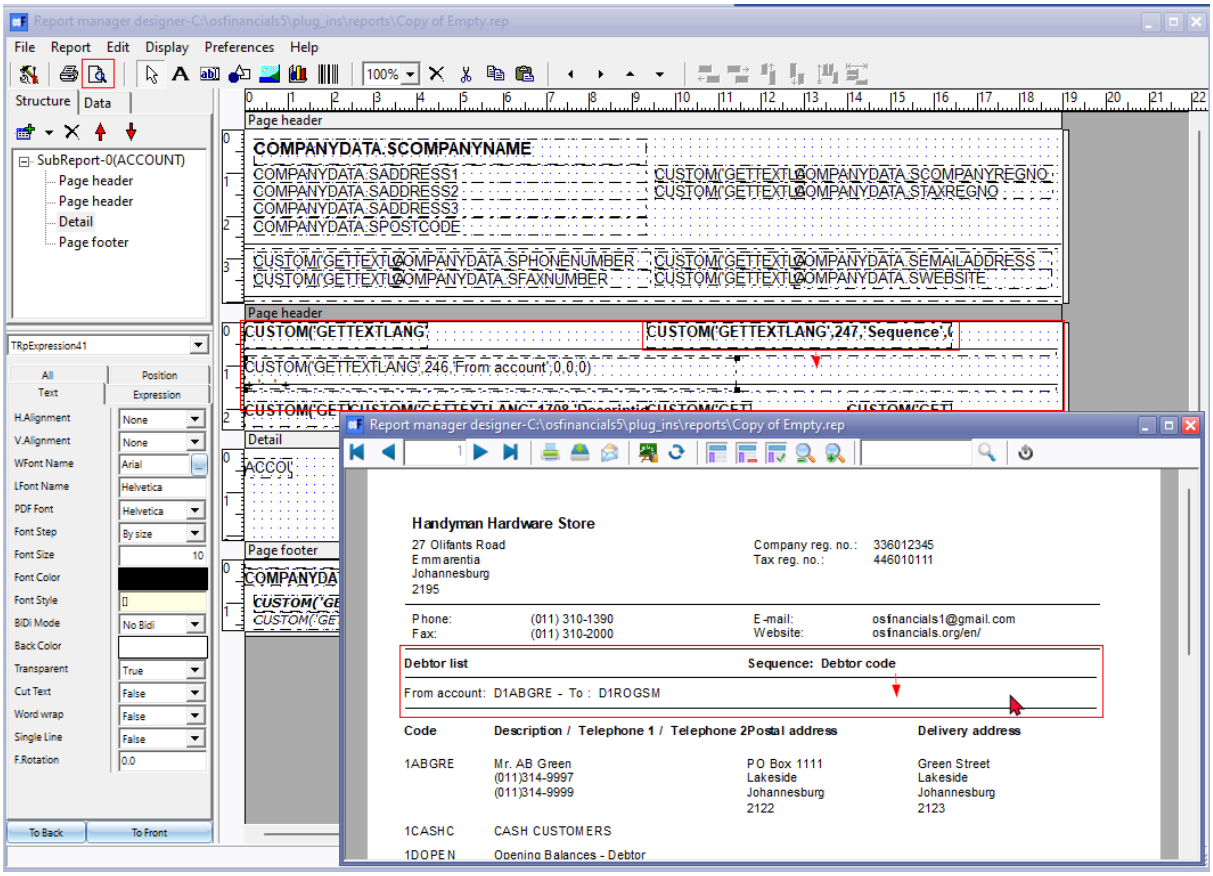
```
CUSTOM('GETTEXTLANG',246,'From  account',0,0,0)
+ ':  ' +
M.SACCOUNTCODETX + ' -  '+
CUSTOM('GETTEXTLANG',2011,'To',0,0,0)
+ ' :  ' +
M.SACCOUNTCODETOTX
```

6. Click on the Show Result button.

Take note the spaces of the colon on the "Information" screen. From account: (no space) and To : includes a space.

You may decide to add a space after From account : or to remove the space after To :

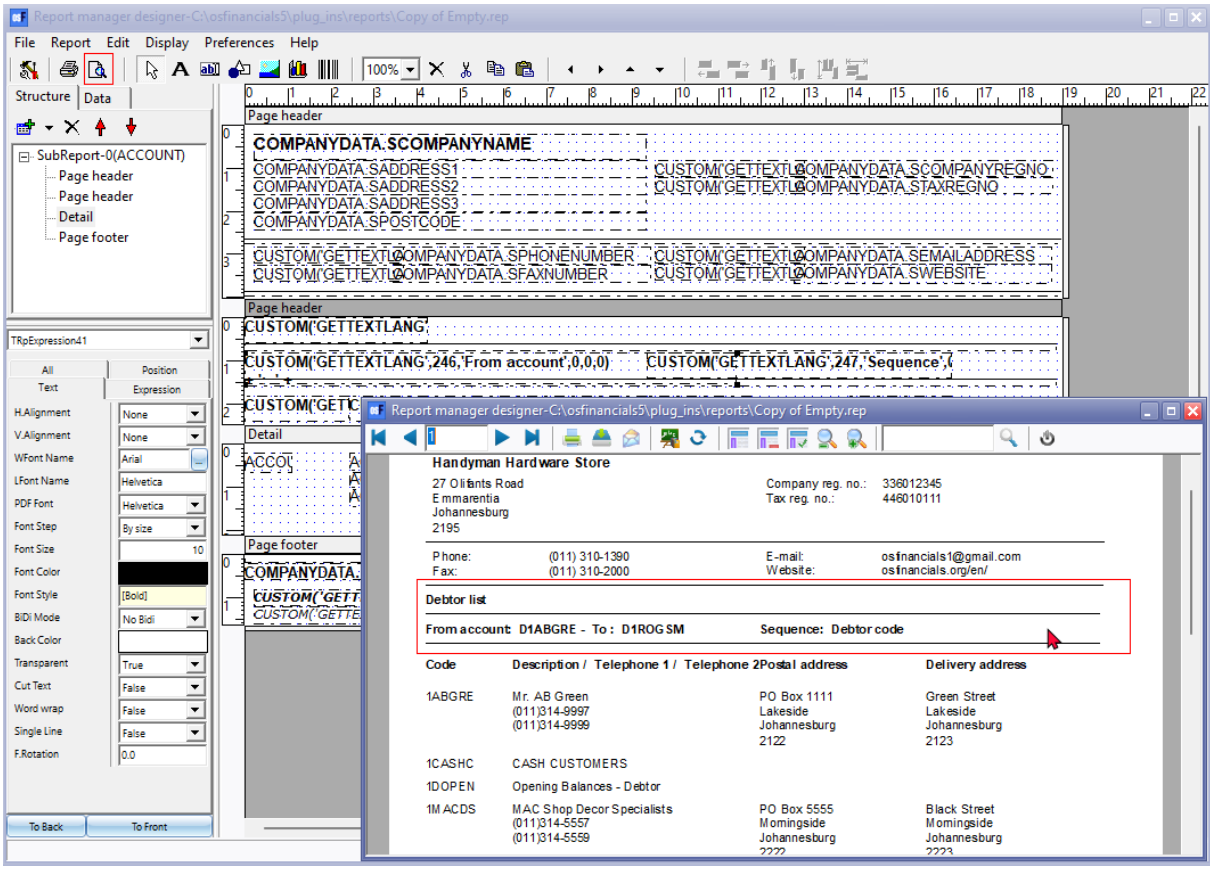
7. Click OK on the "*Information*" and the "*Dialog*" screens.
8. Click on the Print preview icon to preview the report. The Debtor accounts selected in the report parameters will display your selection on the report printout.



You may wish to :

- *Set font properties (e.g. Bold, size, etc.).*
- *Insert a Horizontal line*
- *Move the Sequence parameter down.*

9. Close the "*Print preview*" screen.
10. Add the necessary touches to tidy the report layout.
11. Click on the Print preview icon to preview the report.



12. Close the "*Print preview*" screen.

13. Close the "*Report manager designer*" screen. Remember to Save the report.

> *Whenever you close the "Report manager designer" screen, after editing your report, remember save the report. If you click on No, on the "Save report?" confirmation message, your changes will be discarded (lost).*

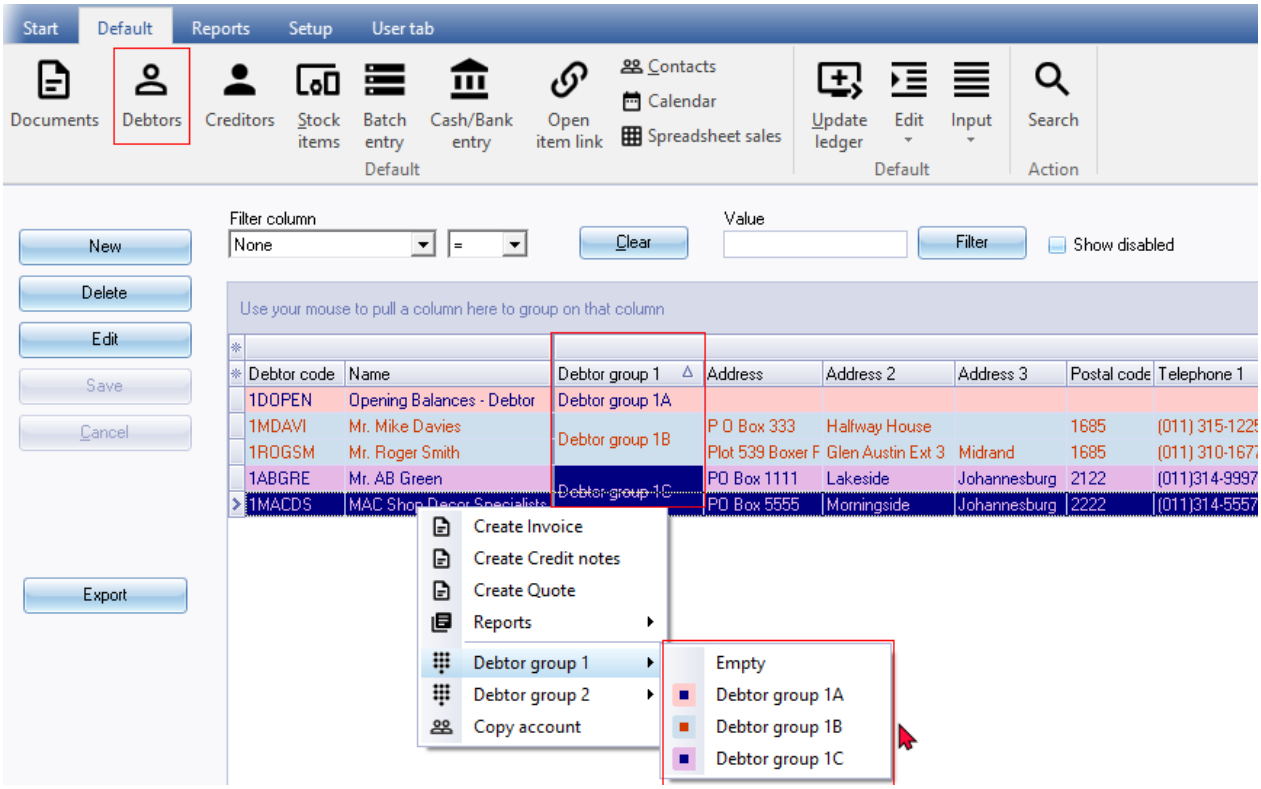
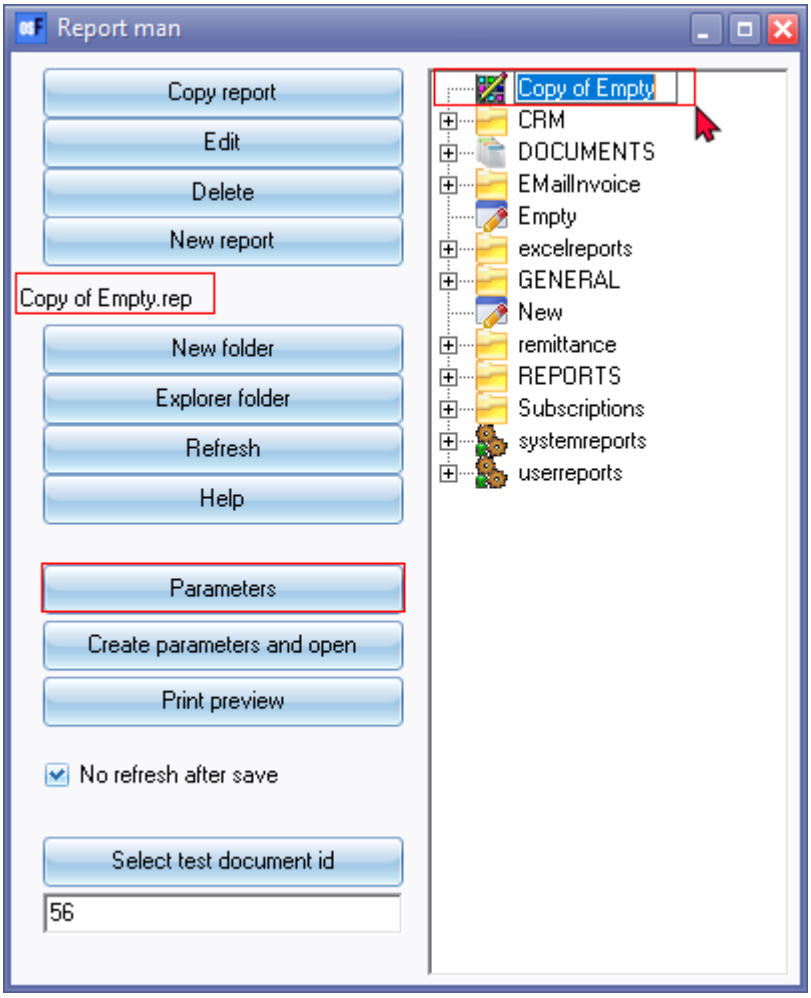
Parameters - Groups

You may add a parameter to select and print a list of the debtor (customer / client) accounts which are linked to specific reporting groups only.

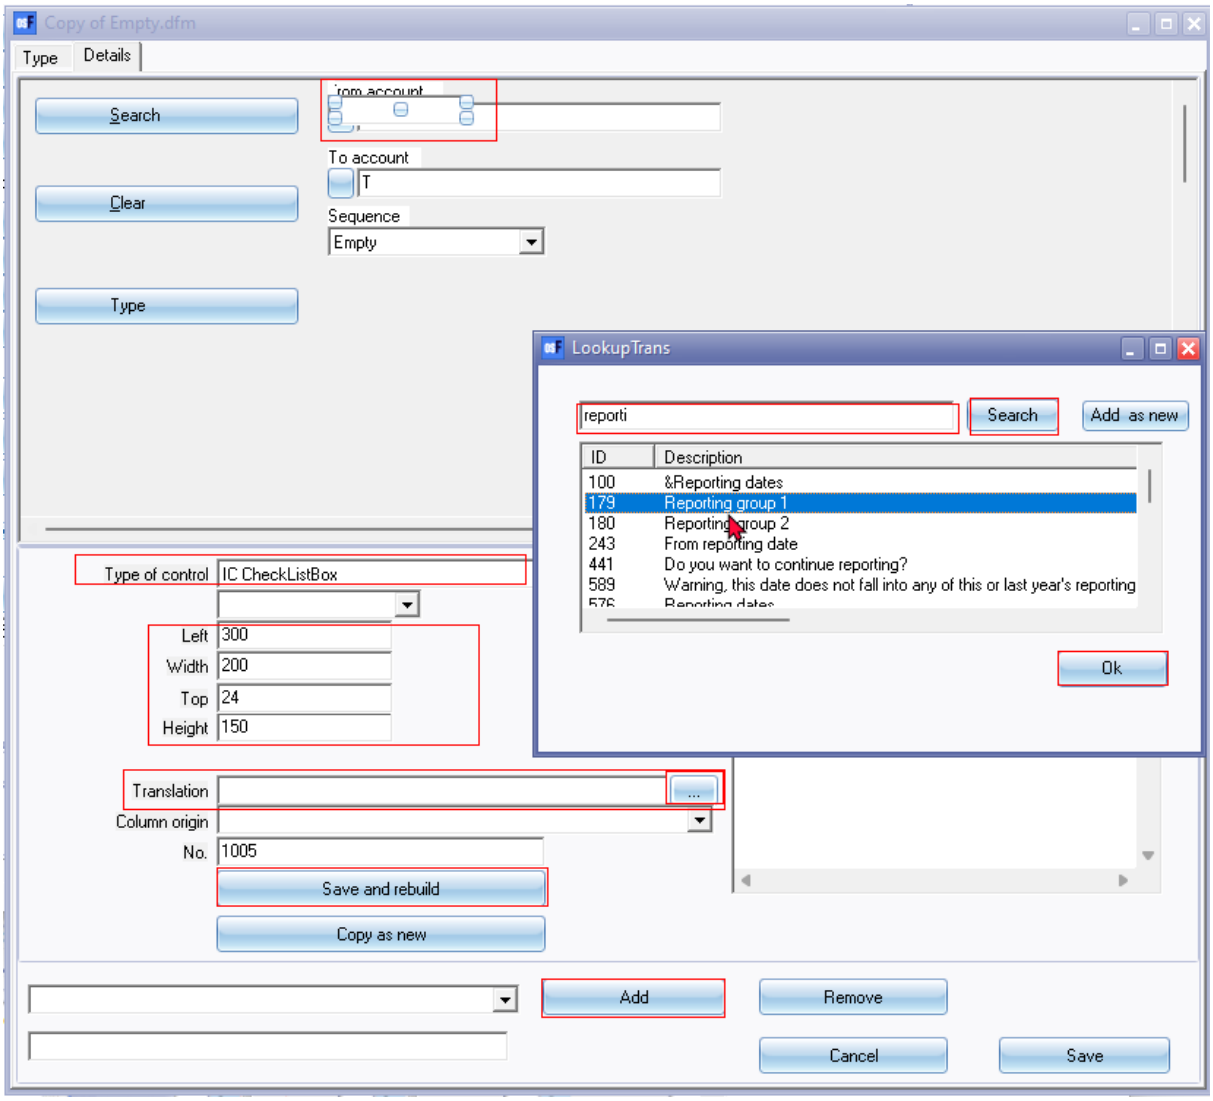


To add the Check list box parameter for Reporting group 1:

1. On the "*Report man*" screen, select your report and click on the Parameters button.



2. On the parameters screen for your report, click on the Add button.



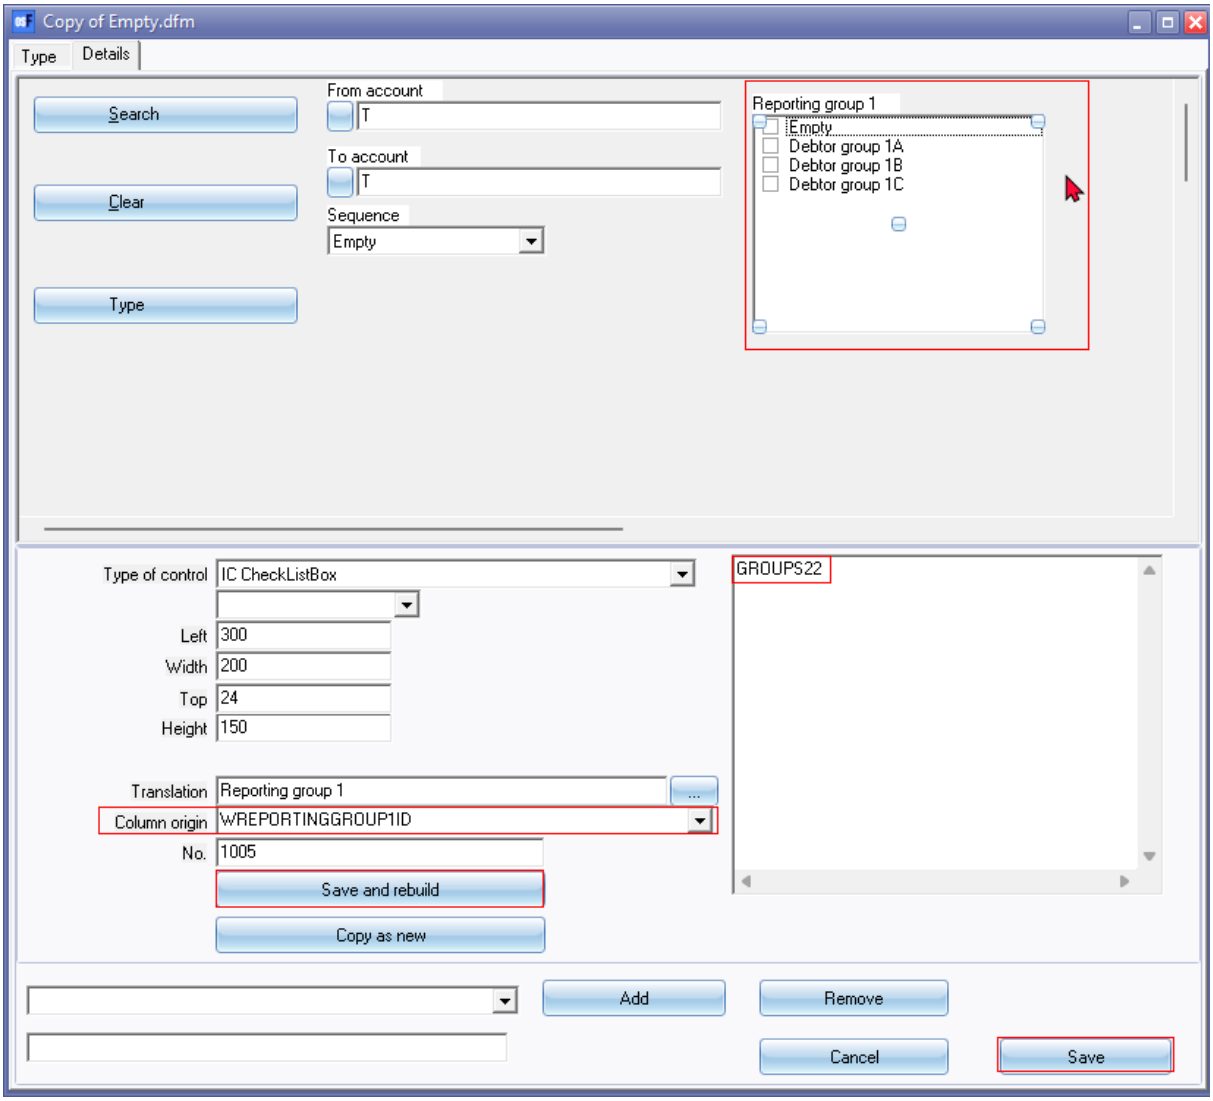
3. Select the options as follows:

    a) Type of control - Select "*IC CheckListBox*".

    b) Size and position - Enter the values for the Left, Width, Top and Height properties to position your parameter.

    c) Translation - Click on the ... icon and search for the language label. Select your label (in this example, "*Reporting group 1*" is selected) and click Ok.

4. Click on the Save and rebuild button. This will position an empty CheckListBox on the Parameter screen.



5. Enter the following options:

   a) Column origin - To link the groups, you need to assign a valid column (database field) WREPORTINGGROUP1ID

   b) SQL - Enter "*GROUPS22*". This is the "WTYPEID" for "*Debtor group 1*" in the "*V_TYPES*" table.

> *Note the SQL must be entered in the Plural followed by 22 and entered in UPPERCASE i.e. GROUPS22. If this is not entered correctly, it will not list the "Debtor groups 1", but display "SQL error".*

> *See - Reportman - References - Groups for a list of all Reporting groups in the V_TYPES table.*

6. Click on the Save and rebuild button. This will populate the Reporting group 1 for debtor (customer / client) accounts, if the SQL and the reporting group ID is assigned correctly.

7. Click on the Save button to save your parameter and to close exit the parameters screen.

> *If you do not click on the Save button, your parameter or any changes to the parameter will be discarded (lost).*

Add Groups parameter to the report

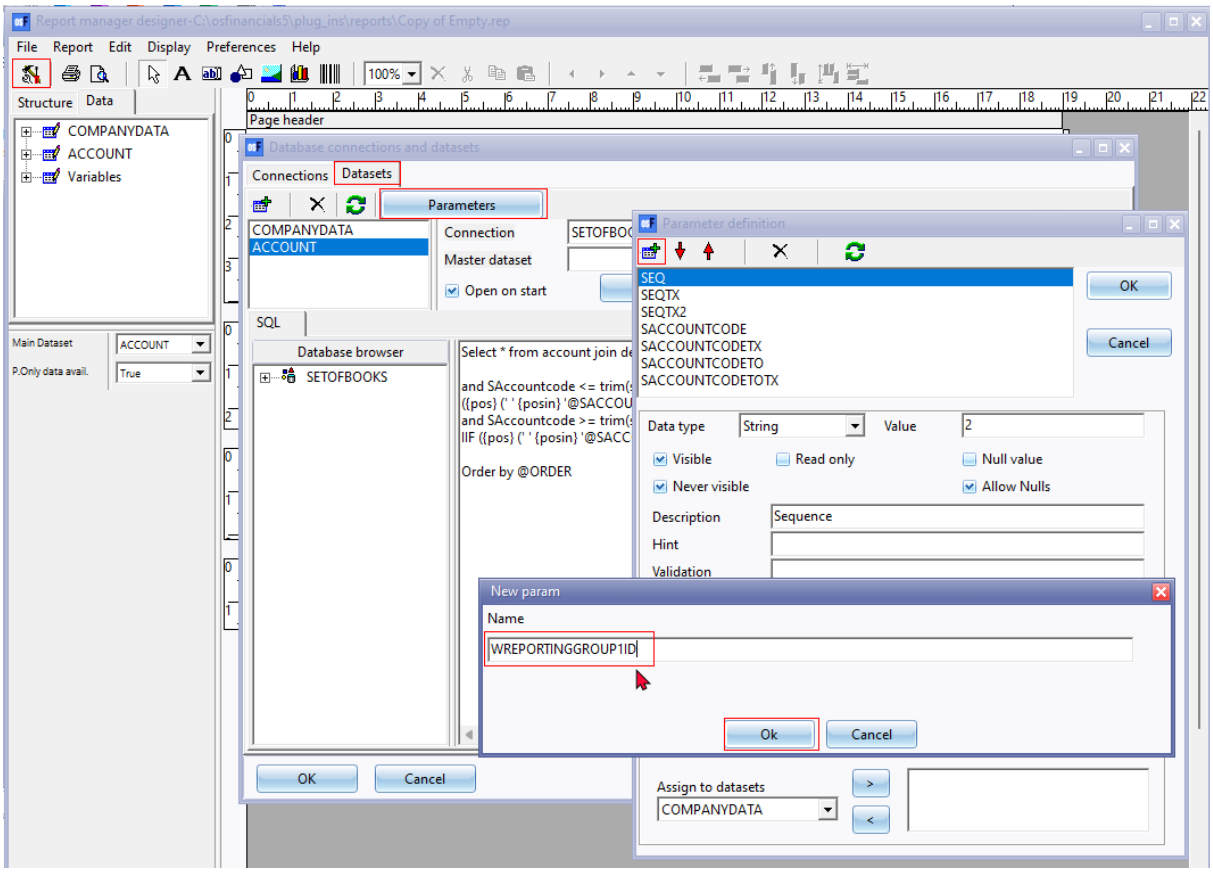
Once the Parameter is set on the report options screen, you need to add and define the parameter in the report.

The basic process is as follows:

1. Add a String substitute parameter and assign the parameter to a dataset.
2. On the dataset, you need to add SQL ("*@REPOGROUP1@*") to reference Report group 1.

To add the Check list box parameter for Reporting group 1 to the report:

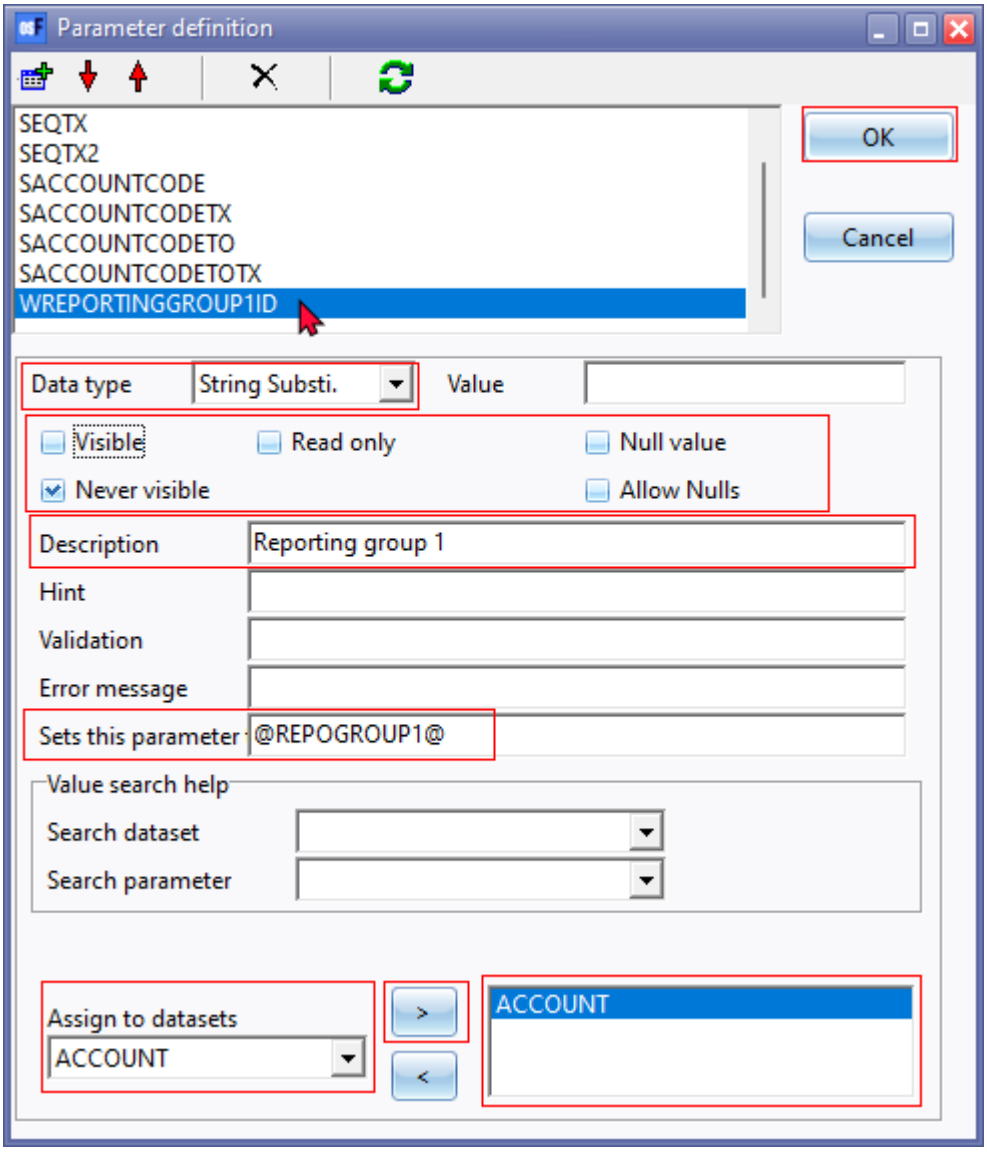
1. On the "*Report man*" screen, select your report and click on the Edit button. (You may also double-click on your report).



2. Click on the Database connections and datasets icon.
3. Click in the Parameters button.
4. On the "*Parameter definition*" screen, select the "*ACCOUNT*" dataset and click on the Add icon.
5. On the "*New param*" screen, enter "WREPORTINGGROUP1ID".

> *This is the ID to Reporting group 1 as set in the Column origin field of the Parameters. This needs to be entered in the UPPERCASE without any spaces (i.e. WREPORTINGGROUP1ID). If this is not entered correctly, it will display "SQL errors".*

6. Click Ok. This will add the parameter.
7. Select the "WREPORTINGGROUP1ID" parameter.



8. On the "WREPORTINGGROUP1ID" parameter select and configure the options as follows:
    a) Data type - Select "*String Substi.*" (String substitute).

b) Properties - Select (tick) the "*Never visible*" option. The other options may be left blank.

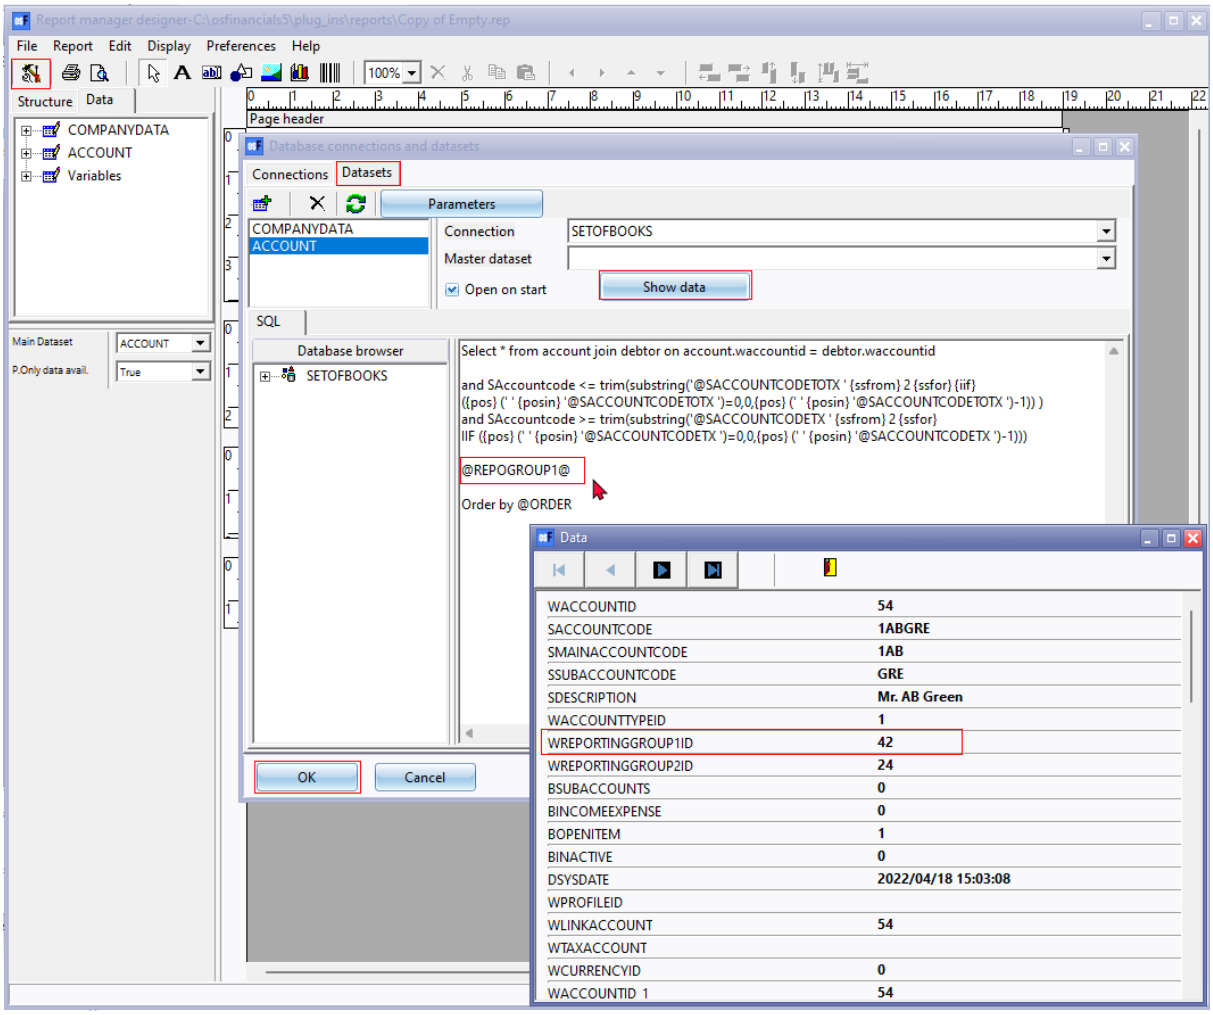
c) Description - Enter a description ("*Reporting group 1*" as per this example).

d) Sets this parameter to - Enter "*@REPOGROUP1@*".

e) Assign to datasets - Assign to the ACCOUNT dataset.

9. Click OK on the "*Parameter definition*" screen.

10. On the "*ACCOUNT*" dataset, enter "*@REPOGROUP1@"* as defined in the "*Sets this parameter to*" field of the "*Parameter definition*" screen.



The "@REPOGROUP1@" in the "ACCOUNTS" must be entered BEFORE the "Order by @ORDER" sort sequence SQL. If entered AFTER the "Order by @ORDER" sort sequence SQL, it will produce a similar SQL error:

"ACCOUNT :Dynamic SQL Error
SQL error code = -104
Token unknown - line 8, column 2
and

11. To verify that this parameter SQL is entered correctly and on the right place, you may click on the Show data button of the "*Database connections and datasets*" screen.

12. Click OK on the "*Database connections and datasets*" screen.

> *If you do not click on the OK button of the "Database connections and datasets" screen, your parameter or any changes to the parameter will be discarded (lost).*

13. Close the "*Report manager designer*" screen. Remember to Save the report.

> *Whenever you close the "Report manager designer" screen, after editing your report, remember save the report. If you click on No, on the "Save report?" confirmation message, your changes will be discarded (lost).*

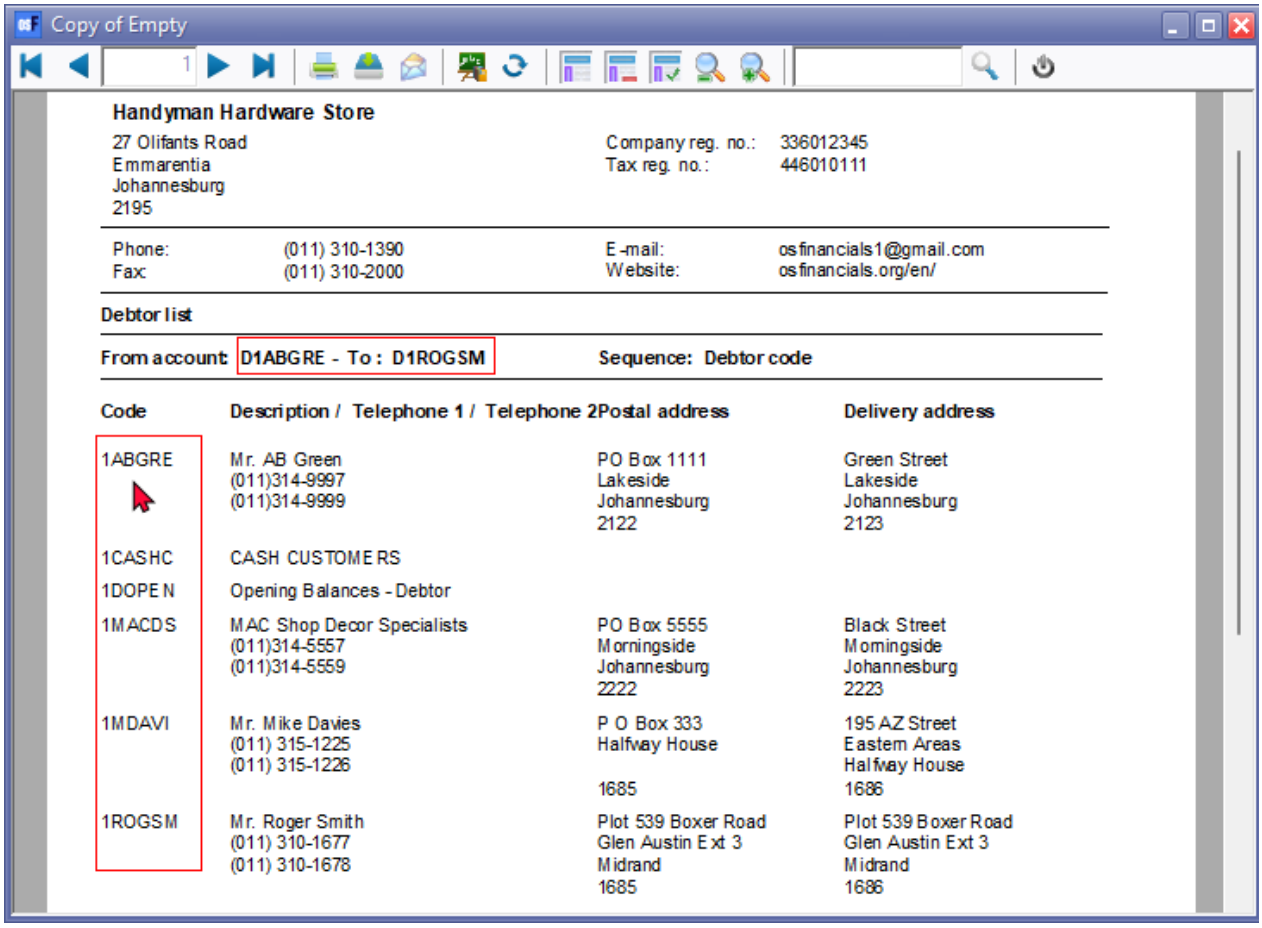
Expressions - Add Account type

The Account type prefix is already implemented on most reports. This will indicate whether it is a debtor, or creditor, or other account types.

The Account type is automatically displayed in the "*From account*" and "*To*" in the report parameters; but it is not displayed in the "*Detail*" section of the report structure for the "*ACCOUNT.SACCOUNTCODE*" expression.

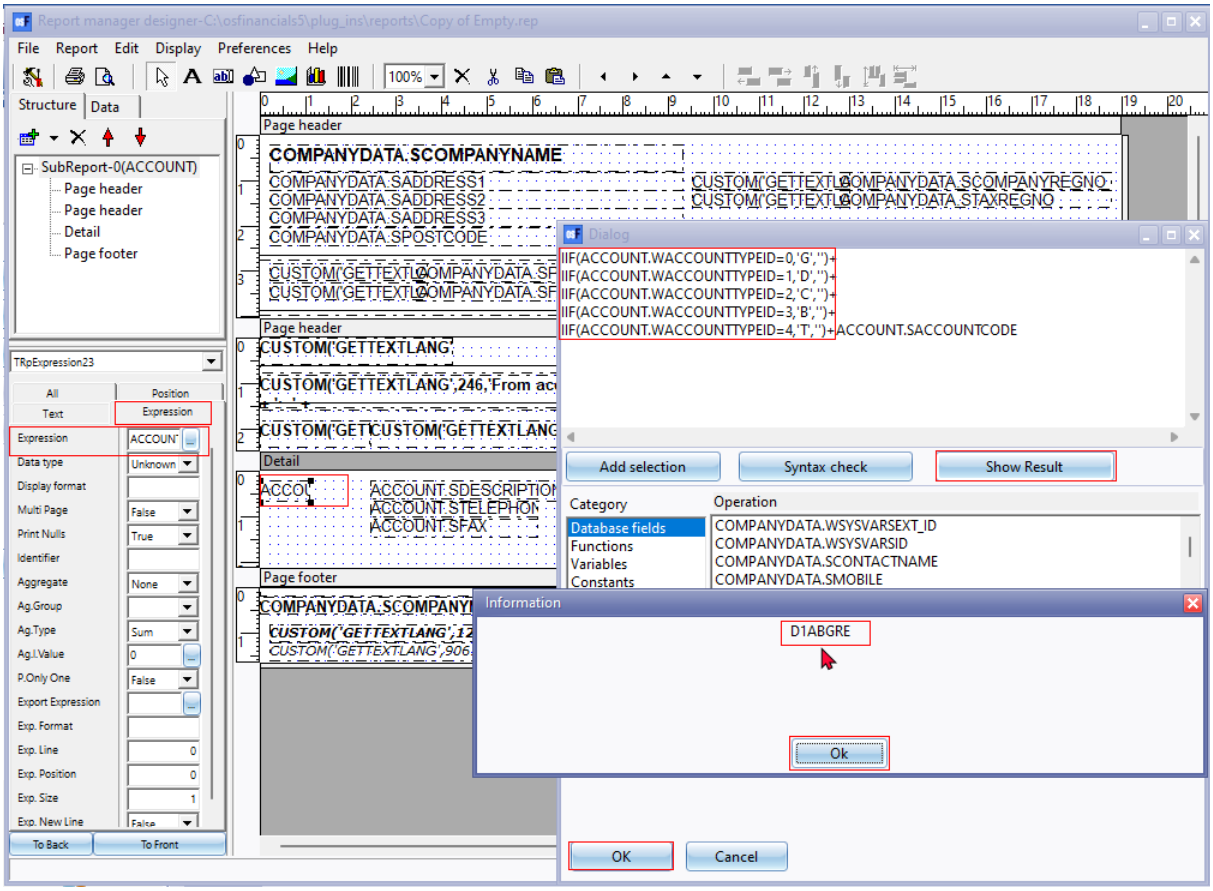
Account type id	*Account type prefix*	*Description*
0	*G*	*General ledger (Balance sheet and Income / Expense accounts)*
1	*D*	*Debtor accounts*
2	*C*	*Creditor accounts*
3	*B*	*Bank accounts*
4	*T*	*Tax accounts*

In the account code field the code expression "*ACCOUNT.SACCOUNTCODE*" excludes the Account type id.



To add the Account type prefix to an Expression:

1. On the "*Report manager designer*" screen, select the Expression and click on the ... icon.



2. On the "*Dialog*" screen, the Database fields for the ACCOUNT contains the ACCOUNT.WACCOUNTTYPEID field. Add the following SQL before the Expression – "*ACCOUNT.SACCOUNTCODE*":

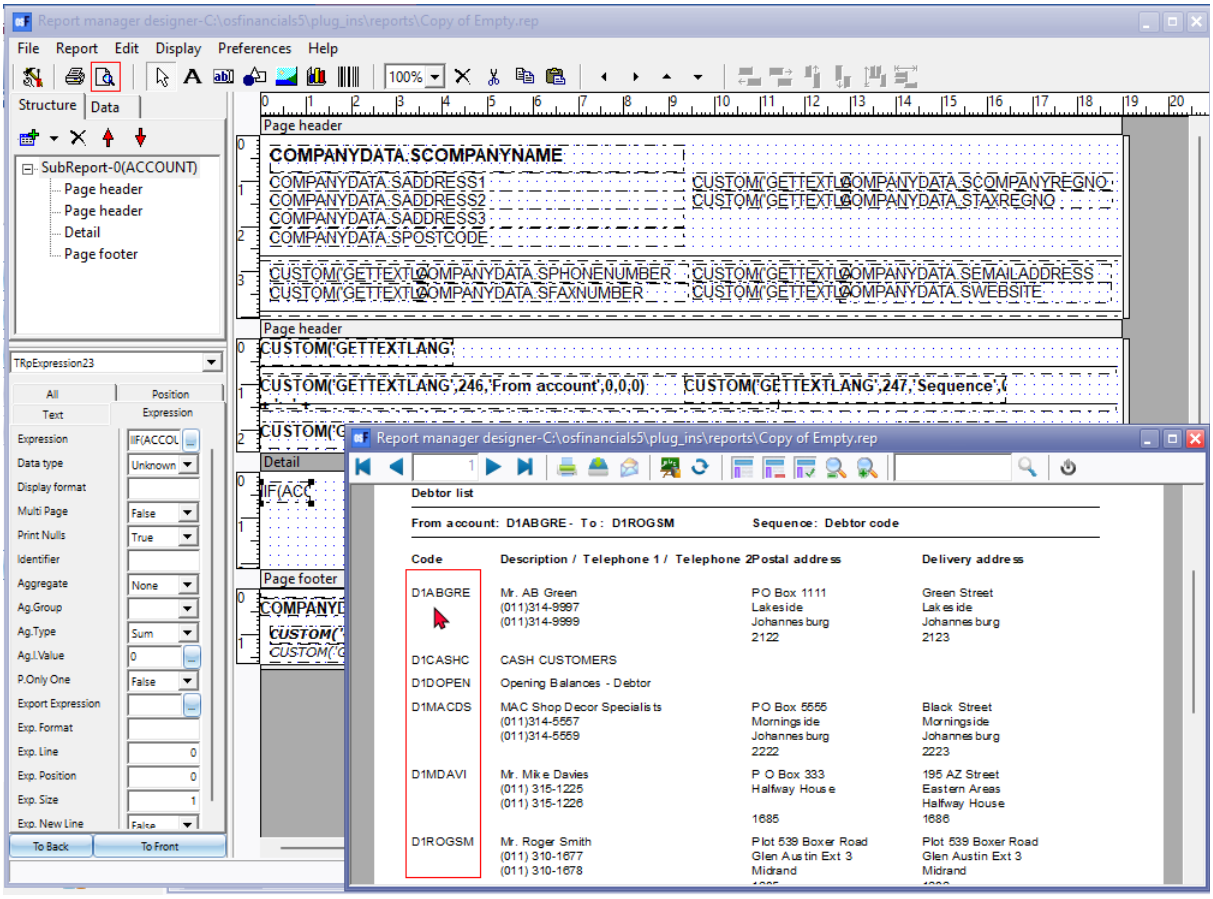
```
IIF(ACCOUNT.WACCOUNTTYPEID=0,'G','')+
IIF(ACCOUNT.WACCOUNTTYPEID=1,'D','')+
IIF(ACCOUNT.WACCOUNTTYPEID=2,'C','')+
IIF(ACCOUNT.WACCOUNTTYPEID=3,'B','')+
IIF(ACCOUNT.WACCOUNTTYPEID=4,'T','')+
```

3. Click on the Show Result button. The Account prefix or account type id is added to the Account code on the "*Information*" screen.

4. Click Ok to exit (close) the "*Information*" screen and OK to save the updated SQL for the Expression.

> *NOTE – ACCOUNT is the Dataset and refers to this report. If you use this SQL on other reports, you may need to check that the correct Dataset is referenced. If the dataset is not correctly referenced, SQL errors will be produced.*

5. Click on the Print preview icon to check the report.



The account type prefix (WACCOUNTTYPEID) is correctly defined and printed in the "Detail" section of the report. It is consistent with the data in From account ... To expression on the Page header section of the report.

6. Close the "*Print preview*" screen.

7. Close the "*Report manager designer*" screen. Remember to Save the report.

Whenever you close the "Report manager designer" screen, after editing your report, remember save the report. If you click on No, on the "Save report?" confirmation message, your changes will be discarded (lost).

Created with the Standard Edition of HelpNDoc: Revolutionize Your Documentation Output with HelpNDoc's Stunning User Interface

Expressions - Add line break / new line

If you wish to display each label in a single line, two options is available:

1. Create 3 expressions for each label and add these expressions underneath each other.

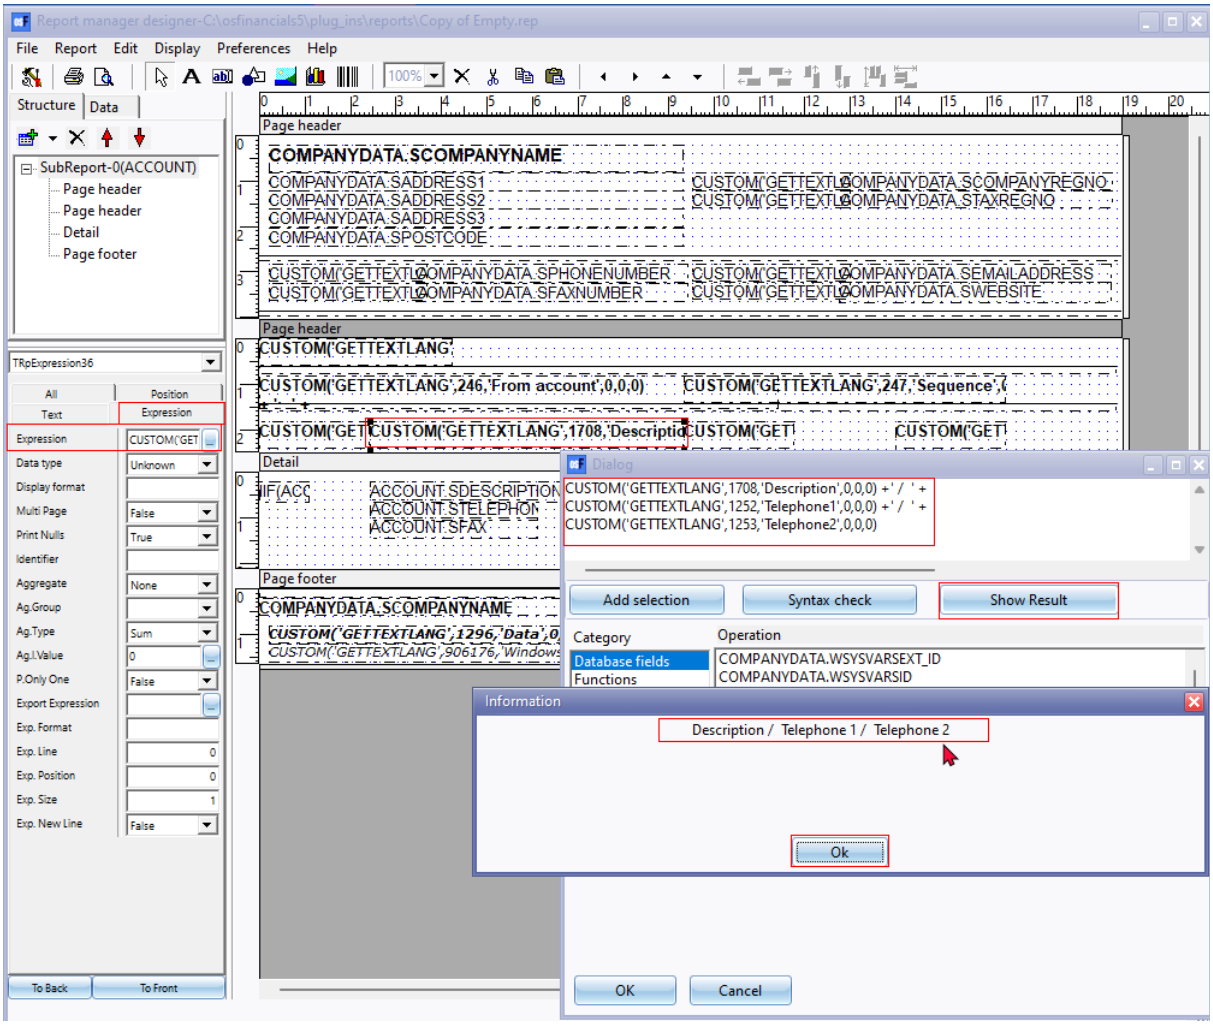
2. Add a line break "+#10+#13+" after the first label. The second part of the expression (label) will print on a new line.

For example, Description / Telephone1 / Telephone 2 expression is joined by the +' / ' +

```
CUSTOM('GETTEXTLANG',1708,'Description',0,0,0)+' /  ' + CUSTOM('GETTEXTLANG',1252,'Telephone1',0,0,0)
+' /  ' + CUSTOM('GETTEXTLANG',1253,'Telephone2',0,0,0)
```

To insert a line break in an Expression:

1. On the "*Report manager designer*" screen, identify the Expression for which you need to insert a line break.



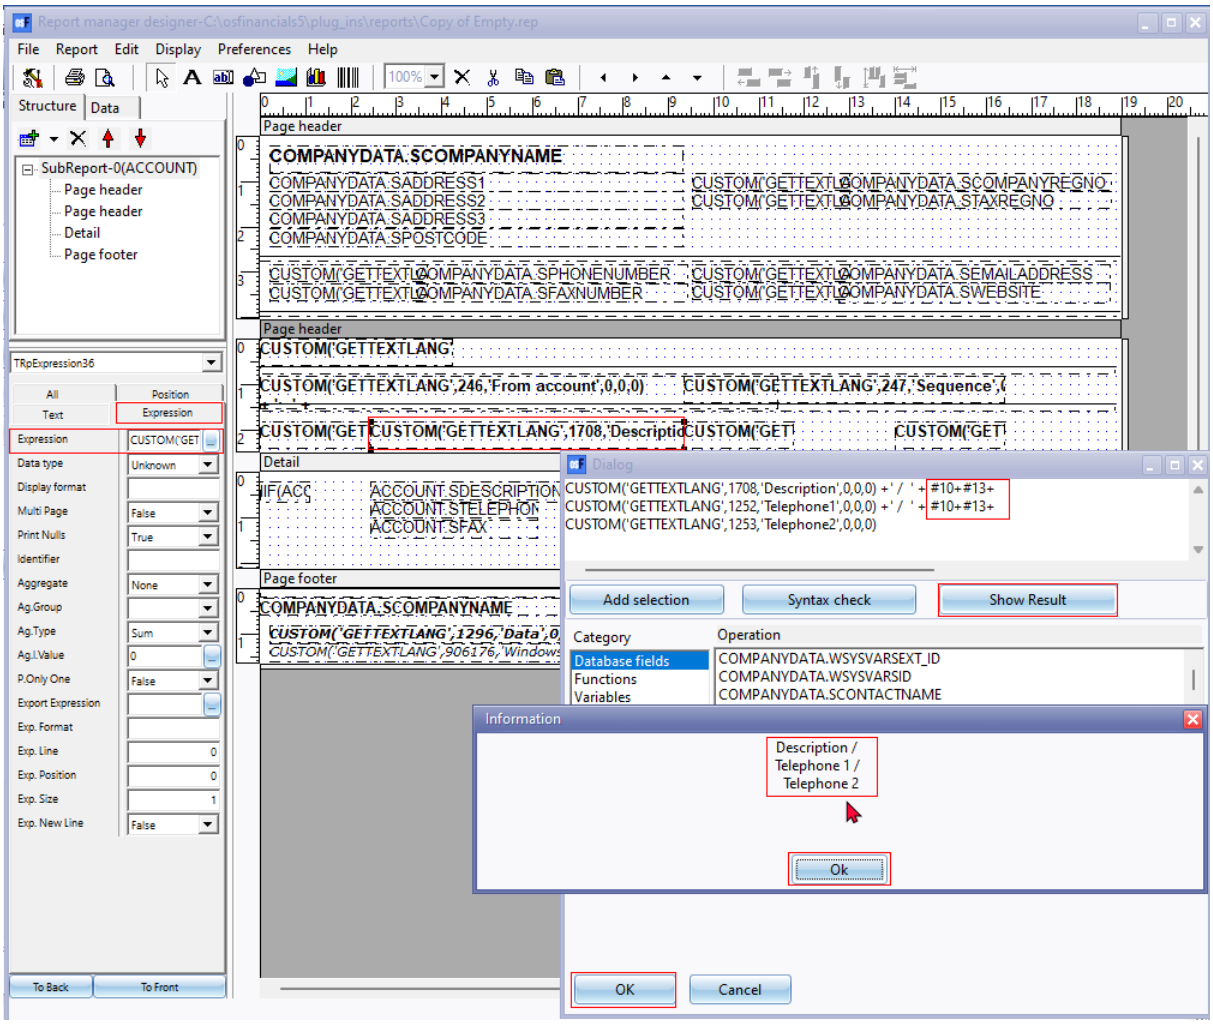
2. Select the Expression. On the "*Dialog*" screen, you may click on the Show Result button to view how the data should display on printed reports.

3. The SQL on the "*Dialog*" screen, prints the expression in a single line, e.g.

```
CUSTOM('GETTEXTLANG',1708,'Description',0,0,0)+' /  ' +
CUSTOM('GETTEXTLANG',1252,'Telephone1',0,0,0)+' /  ' +
CUSTOM('GETTEXTLANG',1253,'Telephone2',0,0,0)
```

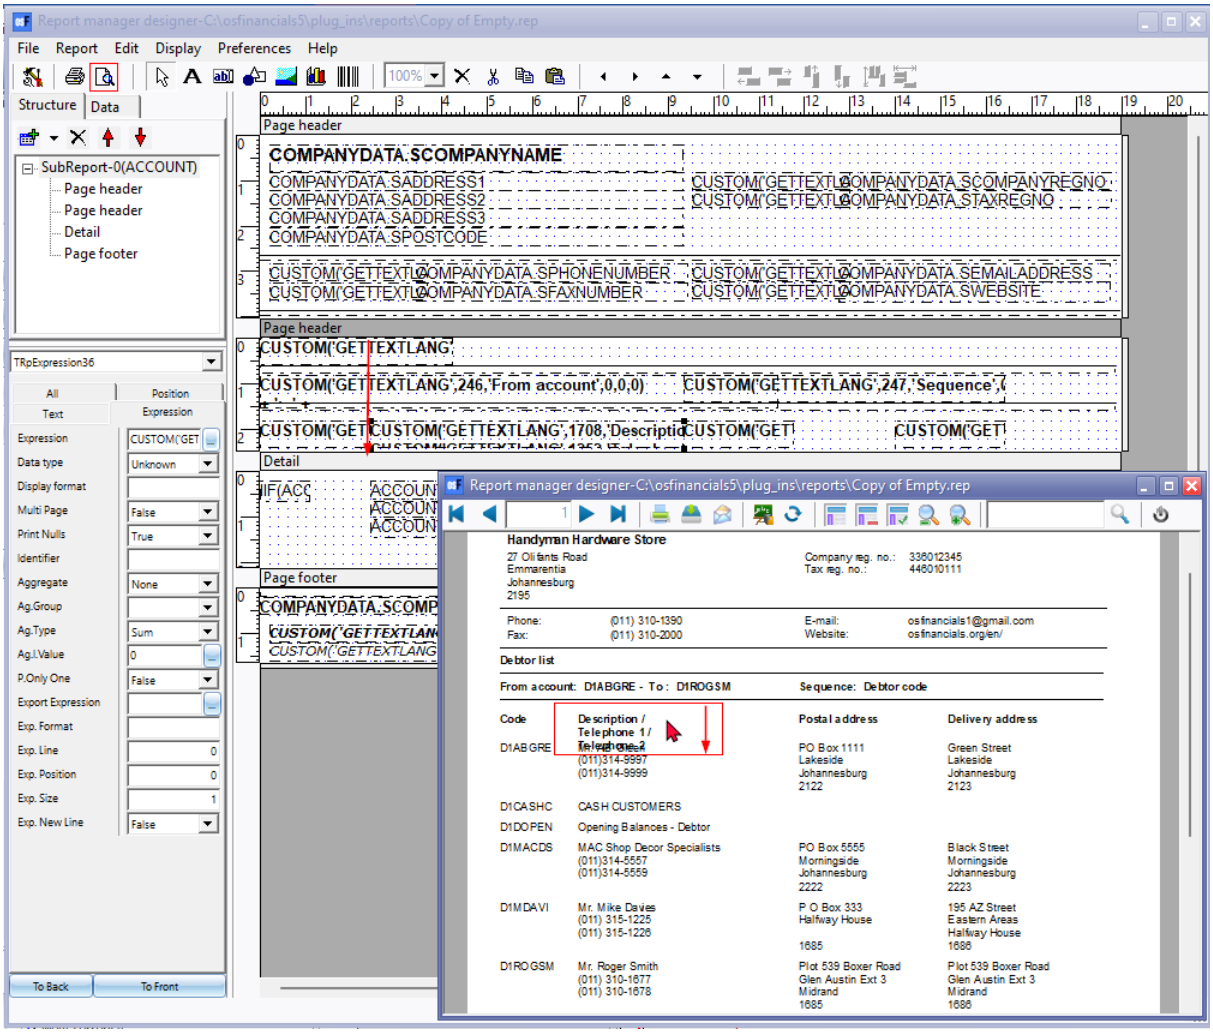
4. To print each label in the expression on a new line, insert the SQL "*#10+#13+*", after each part of the Expression, to force a line break:

```
CUSTOM('GETTEXTLANG',1708,'Description',0,0,0)+' / ' + #10+#13+
CUSTOM('GETTEXTLANG',1252,'Telephone1',0,0,0)+' / ' + #10+#13+
CUSTOM('GETTEXTLANG',1253,'Telephone2',0,0,0)
```

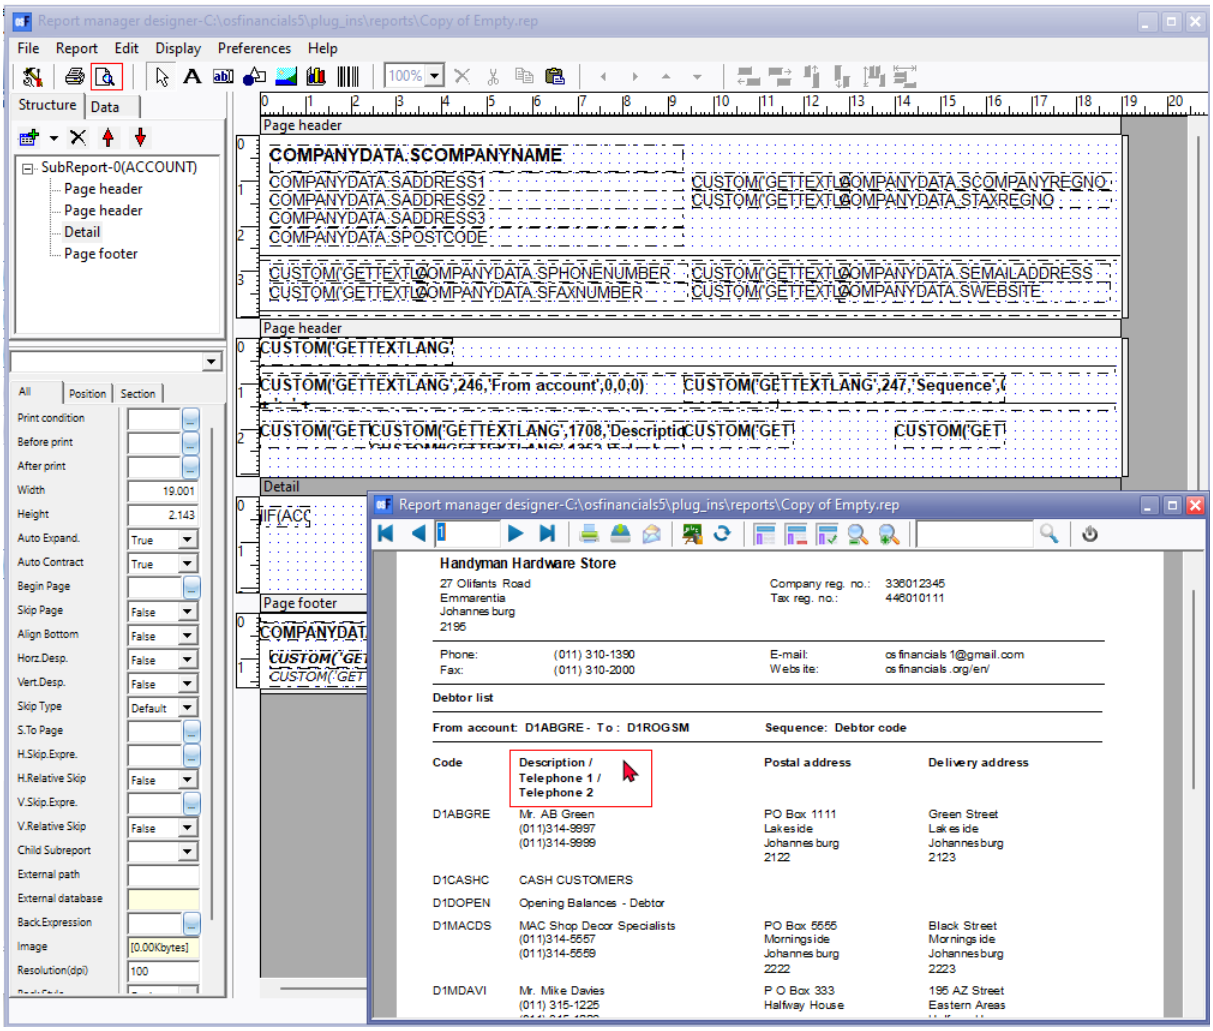


5. On the "*Dialog*" screen, you may click on the Show Result button to view how the data should display on printed reports.

6. Click on the Print preview icon to check the report. If there are not enough space, the label may overlap with the data or other labels in the report.



7. Close the "*Print preview*" screen. To fix this, you may drag the section of the report for example, the "*Detail*" section down to allow the label to print properly.



8. Click on the Print preview icon to check the report.

9. Close the "*Print preview*" screen.

10. Close the "*Report manager designer*" screen. Remember to Save the report.

Whenever you close the "Report manager designer" screen, after editing your report, remember save the report. If you click on No, on the "Save report?" confirmation message, your changes will be discarded (lost).

Created with the Standard Edition of HelpNDoc: Make Documentation a Breeze with a Help Authoring Tool

Add new report to User reports menu

Whenever you close the "Report manager designer" screen, after editing your report, remember save the report. If you click on No, on the "Save report?" confirmation message, your changes will be discarded (lost).

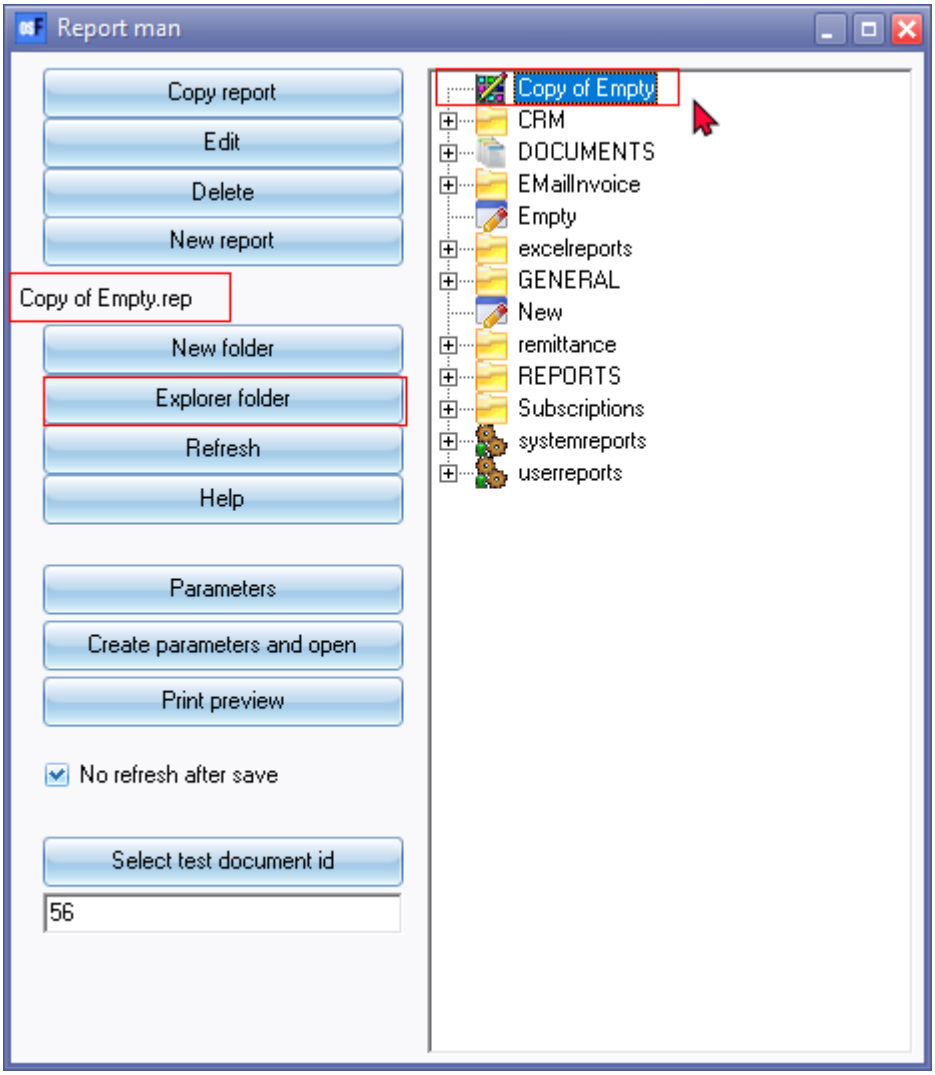
Once the report is saved, it is recommended that you check the report.

To do this you may use the Print preview button on the Report man screen.

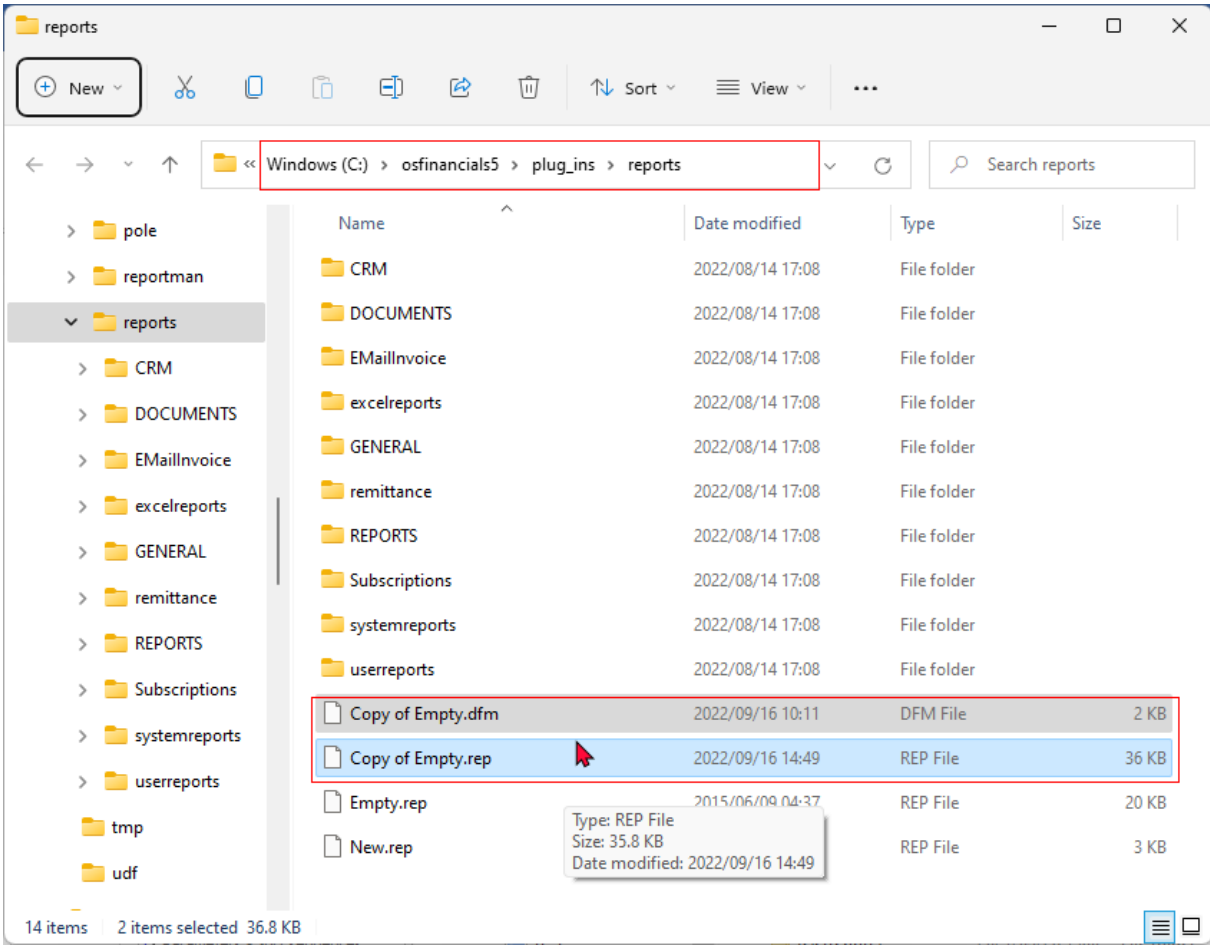
You may add your own reports to the User reports menu. You may then proceed to print your report(s) from the User reports menu (Reports ribbon).

To add the report to the User reports menu:

1. On the "*Report man*" screen, select your report.



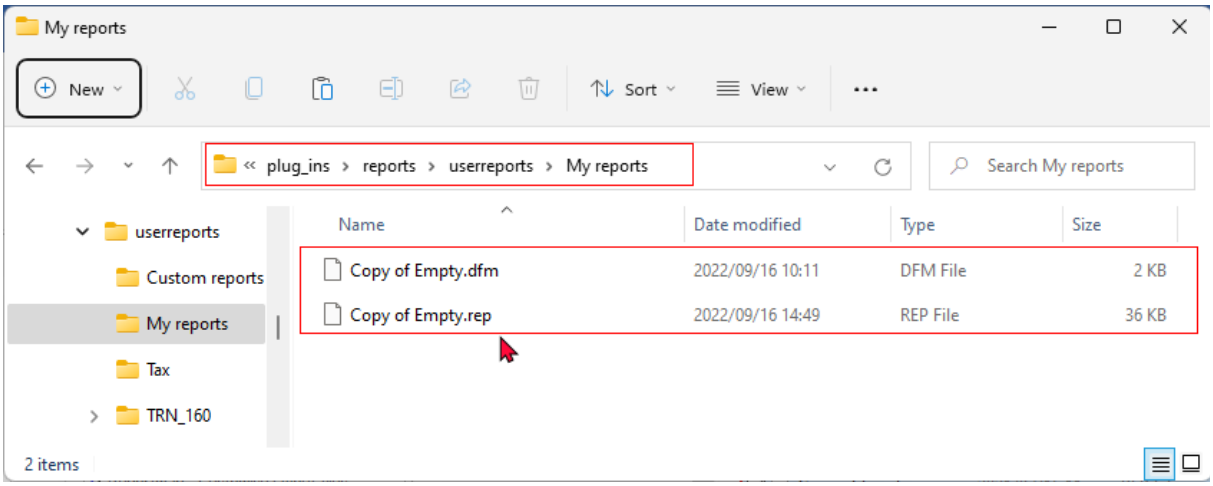
2. Click on the Explorer folder button.



3. In the Explorer folder where your reports are located, select and copy both files (e.g. "*Copy of report.dfm*" and "*Copy of report.rep*") (if parameters were created for the report as in this example).

4. Navigate to the userreports folder in the Explorer folder and create a new folder (e.g. "*My reports*") to add a menu item to User reports menu.

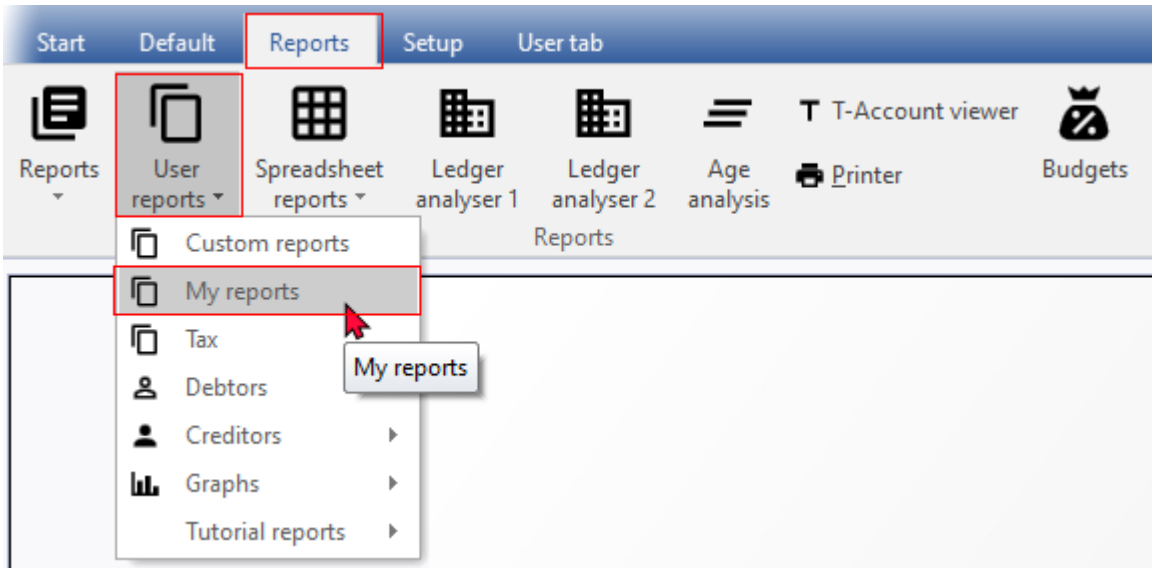
5. Paste the selected files inside your folder (e.g. "*My reports*") inside the .../plugins/reports/userreports folder.



6. Close and restart osFinancials5/TurboCASH5. Open a Set of Books and click on the Reports ribbon.

This will reload the reports.

7. Click on User reports. Your new report will be available and ready to print.



Created with the Standard Edition of HelpNDoc: Streamline your documentation process with HelpNDoc's HTML5 template

Rename reports

You may rename a report from the user reports menu, or your own reports.

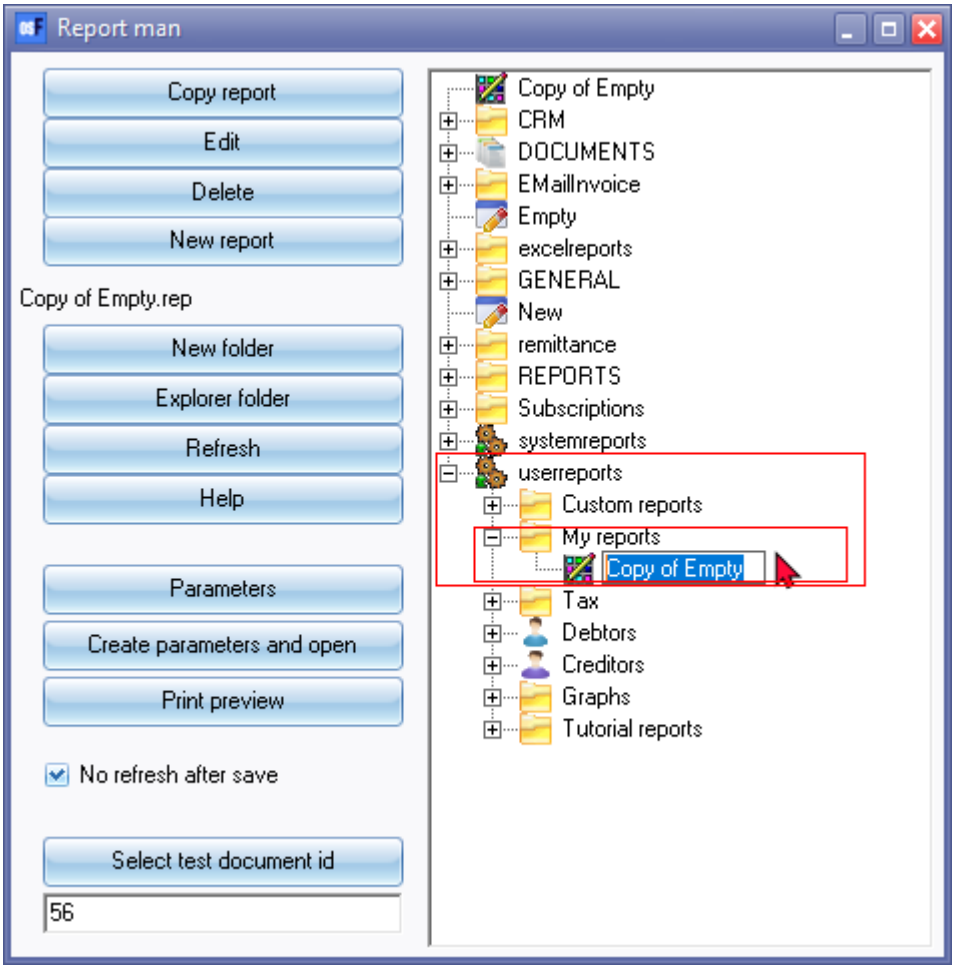
If a report, which contains parameters, is renamed both the report (*.rep) and parameter (*.dfm) files will be renamed.

All reports which are required to manage the reporting is listed Reports - File structure and should not be deleted or changed.

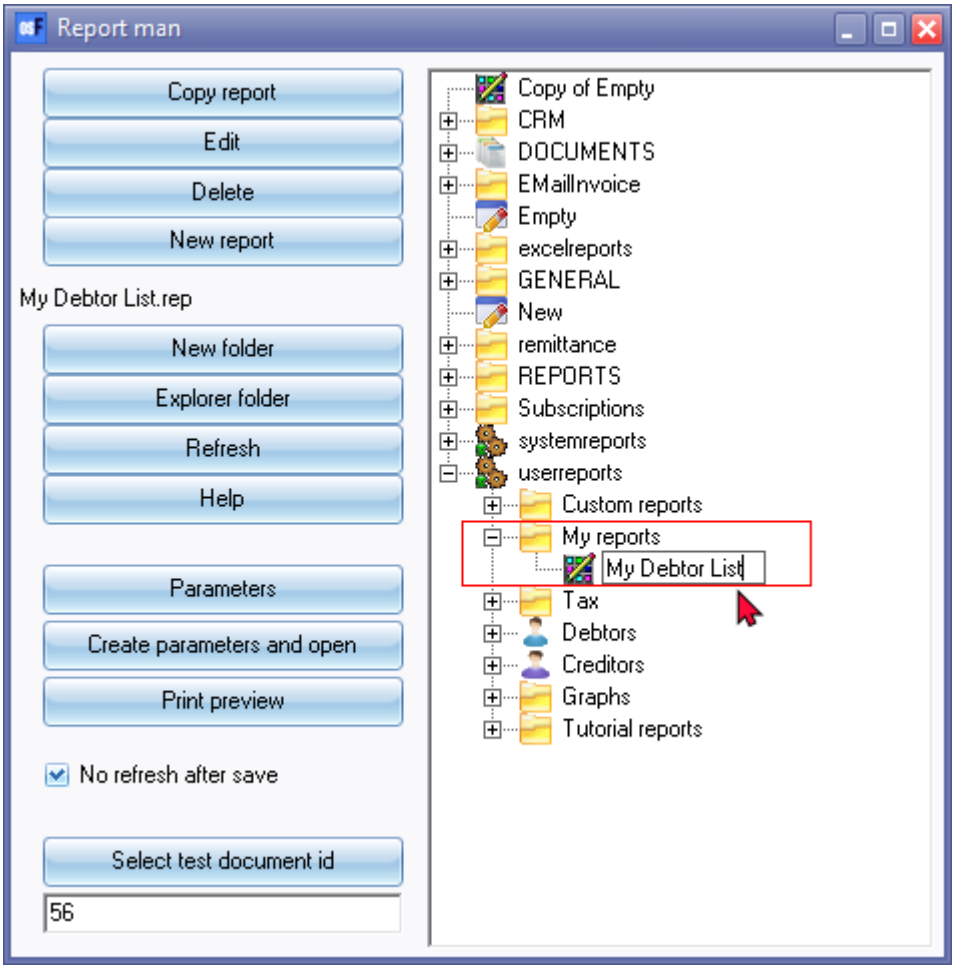
Do not select any of the standard reports in the Reports menu (stored in the .../plug_ins\reports\systemreports folder). See Reports - System reports - File names should not be deleted or renamed.

To rename a report:

1. On the "*Report man*" screen, select the report you wish to rename.



2. Click twice (2x) on the report. The name of the report is editable. Overtype the report name with your own.

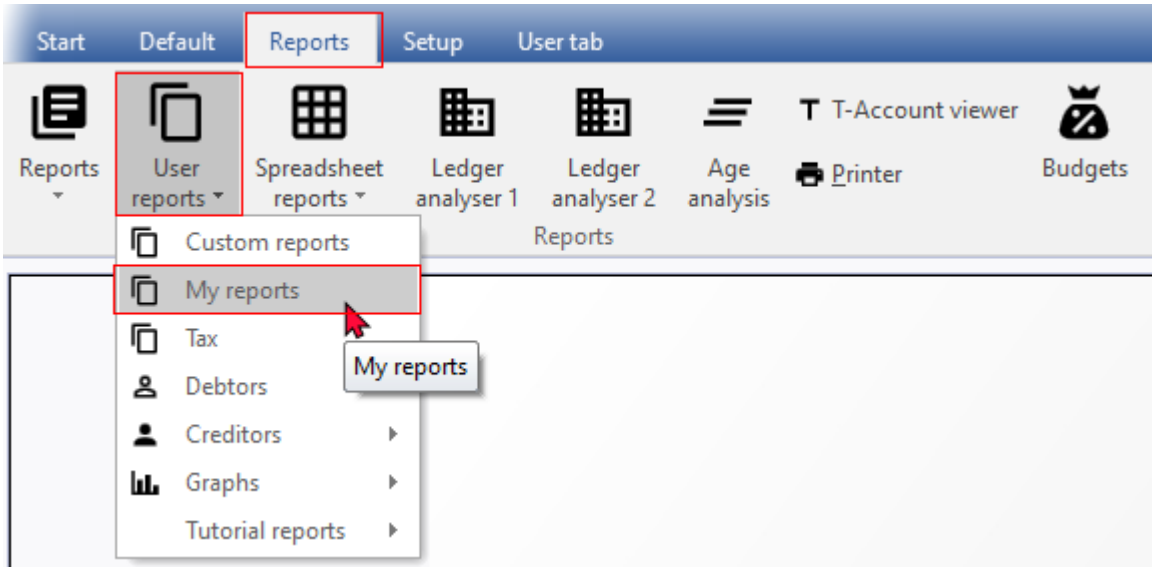


3. Click on the Refresh button.

> *You may rename a report in the Explorer folder.*
>
> *To do this:*
>
> - *Select your report and right-click. On the Explorer folder's context menu, select Rename. You may press the F2 key to rename the report).*
> - *Enter the name of your report.*
>
> *If the report includes a parameter, you may select both report (*.rep) and the parameter (*.dfm) file to rename both files at once.*
>
> *The names for the report and parameter file should be exactly the same.*

> *You may select your new report and click on the Print preview button to check and test your report.*

4. You may exit the report man screen and access your new renamed report from the User reports menu (Reports ribbon).



You may make the report directories and reports translatable via the language files.

See Reports - System reports - File names for a structured list of the file names for folders and reports available in the Reports menu.

To rename folders:

Find translatable language id's in the Tools → Customise language menu (Setup ribbon).

In the Explorer folder rename the Folders with a language file id as TRN_160 for Debtors, TRN_161 for Creditors, etc.

To rename reports:

Select the report you wish to be translatable. Rename both the report (.rep) as well as the parameter (*.dfm) (if parameters is applicable) with the id number prefixed with TRN_ (underscore).*

For example, TRN_906045 for Debtor list, TRN_906046 for Creditor list, etc.

Once you have renamed your folders and/or reports; restart osFinancials5/TurboCASH5 and Open a Set of Books. When you click on the Reports ribbon, the reports menus will be refreshed.

Created with the Standard Edition of HelpNDoc: Add an Extra Layer of Security to Your PDFs with Encryption

Delete reports

You may delete a report from the User reports menu, or your own reports.

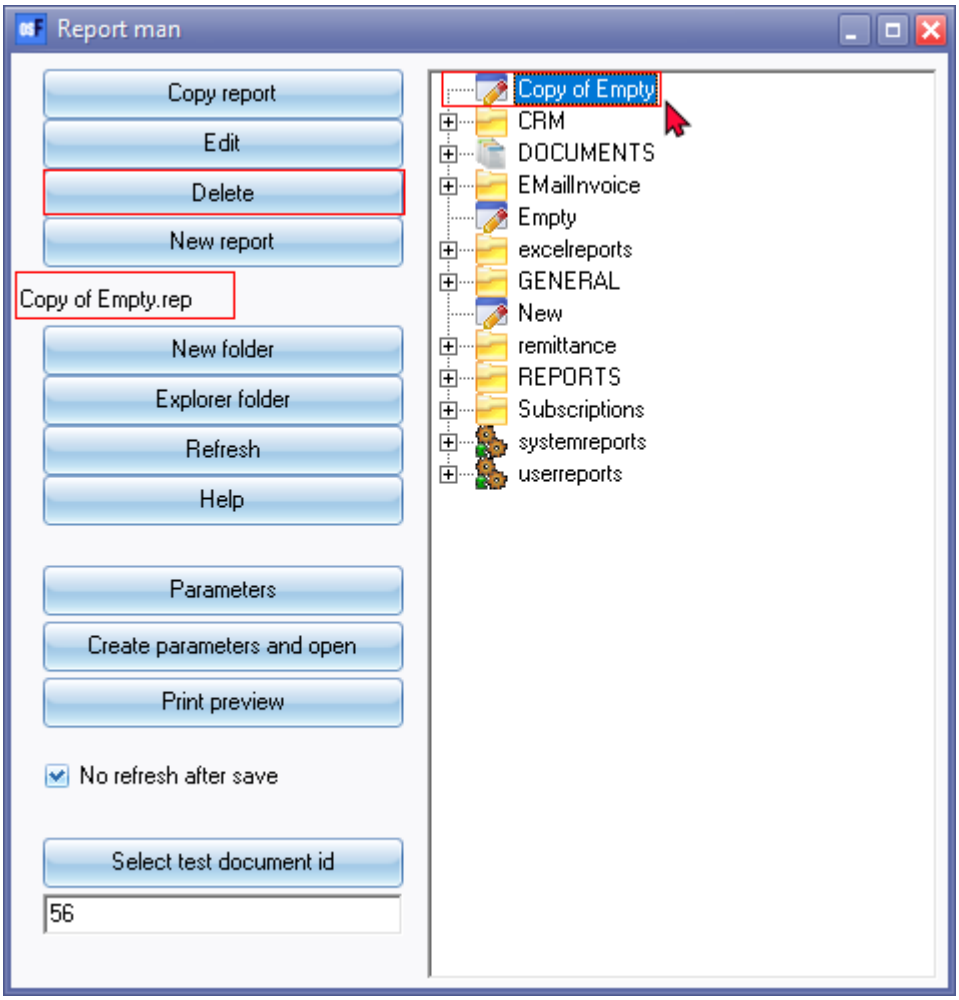
If a report, which contains parameters, is deleted both the report (*.rep) and parameter (*.dfm) files will be deleted.

All reports which are required to manage the reporting is listed Reports - File structure and should not be deleted or changed.

Do not select any of the standard reports in the Reports menu (stored in the .../plug_ins\reports\systemreports folder). See Reports - System reports - File names should not be deleted or renamed.

To delete a report:

1. On the "*Report man*" screen, select the report you wish to delete.



2. Click on the Delete button. A confirmation message will be displayed.

"Are you sure?"

3. Only if you are absolutely sure, click Yes to delete the selected report.

Once a report is deleted, the report is lost.

Created with the Standard Edition of HelpNDoc: Make CHM Help File Creation a Breeze with HelpNDoc

Create a new report from an existing report

Create a copy of a report

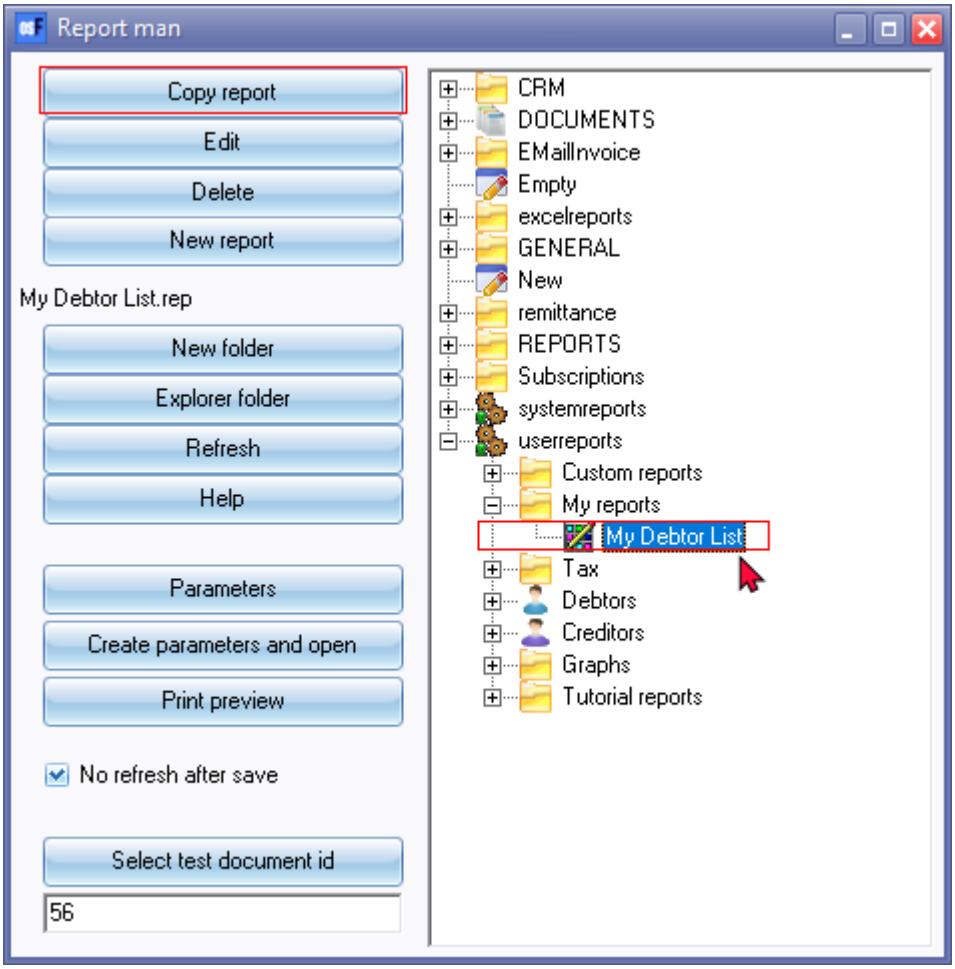
If you have a report, or find a report that is close to your needs, you may copy the report. You may then use the new copy of the report and change or edit it.

If the selected report includes parameters (report options), you may need to edit the parameters as well.

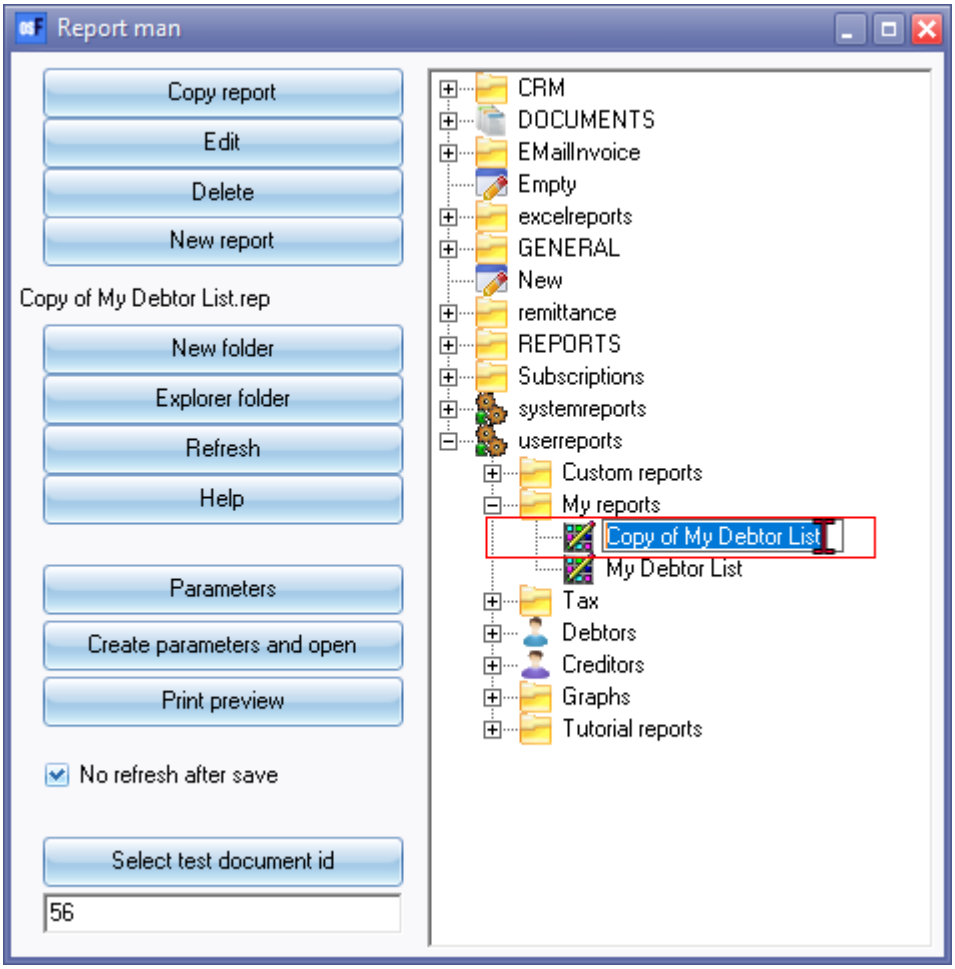
In this example, the new report "*My Debtor List*" will be used to create the same report for Creditors.

To create a copy of a report:

1. On the "*Report man*" screen, select the report you wish to copy.



2. Click on the Copy report button. An exact copy of the selected report, e.g. "*Copy of My Debtor List*", will be created.



3. Click twice on the "*Copy of My Debtor List*" report and rename the report, e.g. "*My Creditor List*".

> *You may select your new report and click on the Print preview button to check and test your report. It should work exactly as the source report from which it is copied.*

> *You may proceed to edit your copied report.*

Edit the report and parameters

There are two options to edit the copied report:

1. Edit the parameters first and edit the report after the parameters; or
2. First edit the report and then the parameters

In this example the parameters will be edited first and the report last.

The parameters need to be changed from debtors to creditors.

In this example, the report will be printed for debtor (customer / client) accounts. The basic layout and parameters needs to be edited to print the details for creditor (supplier / vendor) accounts. To do this some SQL needs to be changed on some Datasets in the report and on the parameters.

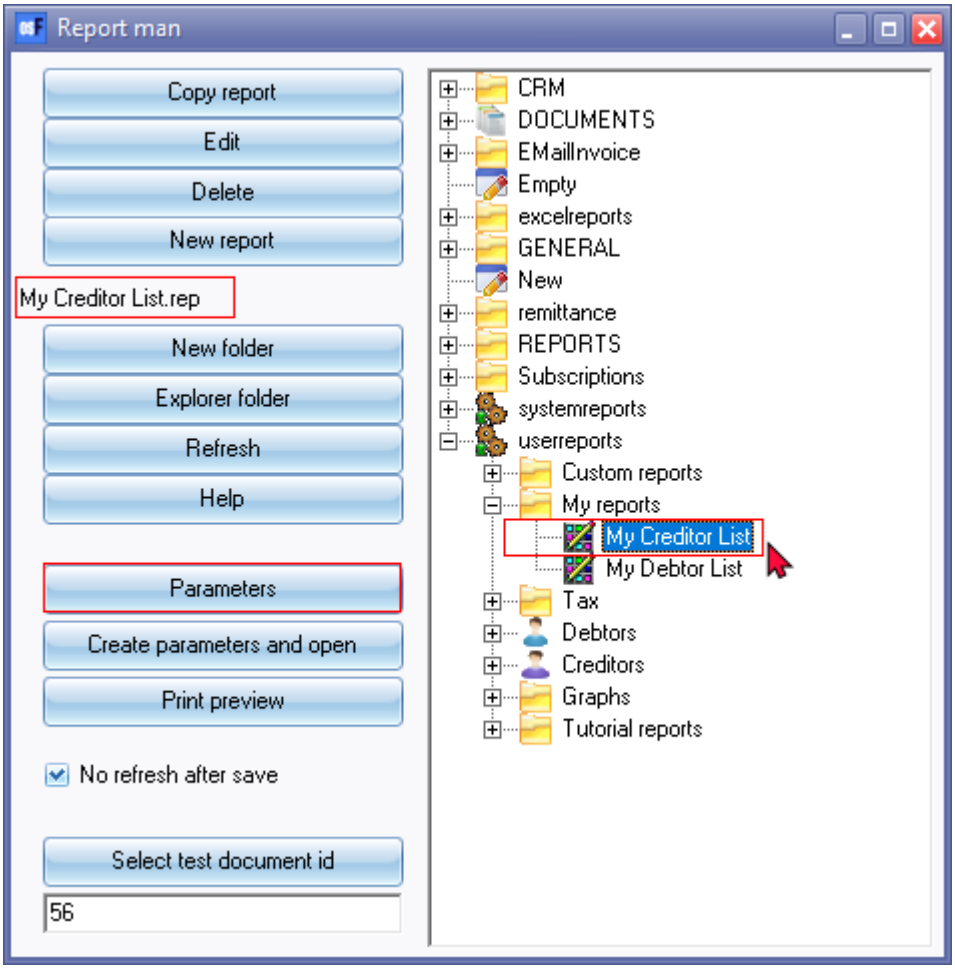
Edit the parameters

In this example, the following parameters needs to edited (changed):

1. Sequence - Edit the list combo box parameter from "*Debtor code*" to "*Creditor code*".
2. Groups - Replace "*Reporting group 1*" list combo box parameter "*Debtor groups 1*" with "*Creditor groups 1*".
3. From account ... To - Change the Account lookups from "*OD Lookup Debtors*" to "*OC lookup creditors*".

To edit the parameters:

1. On the "*Report man*" screen, select the report from which you need to edit the parameters.



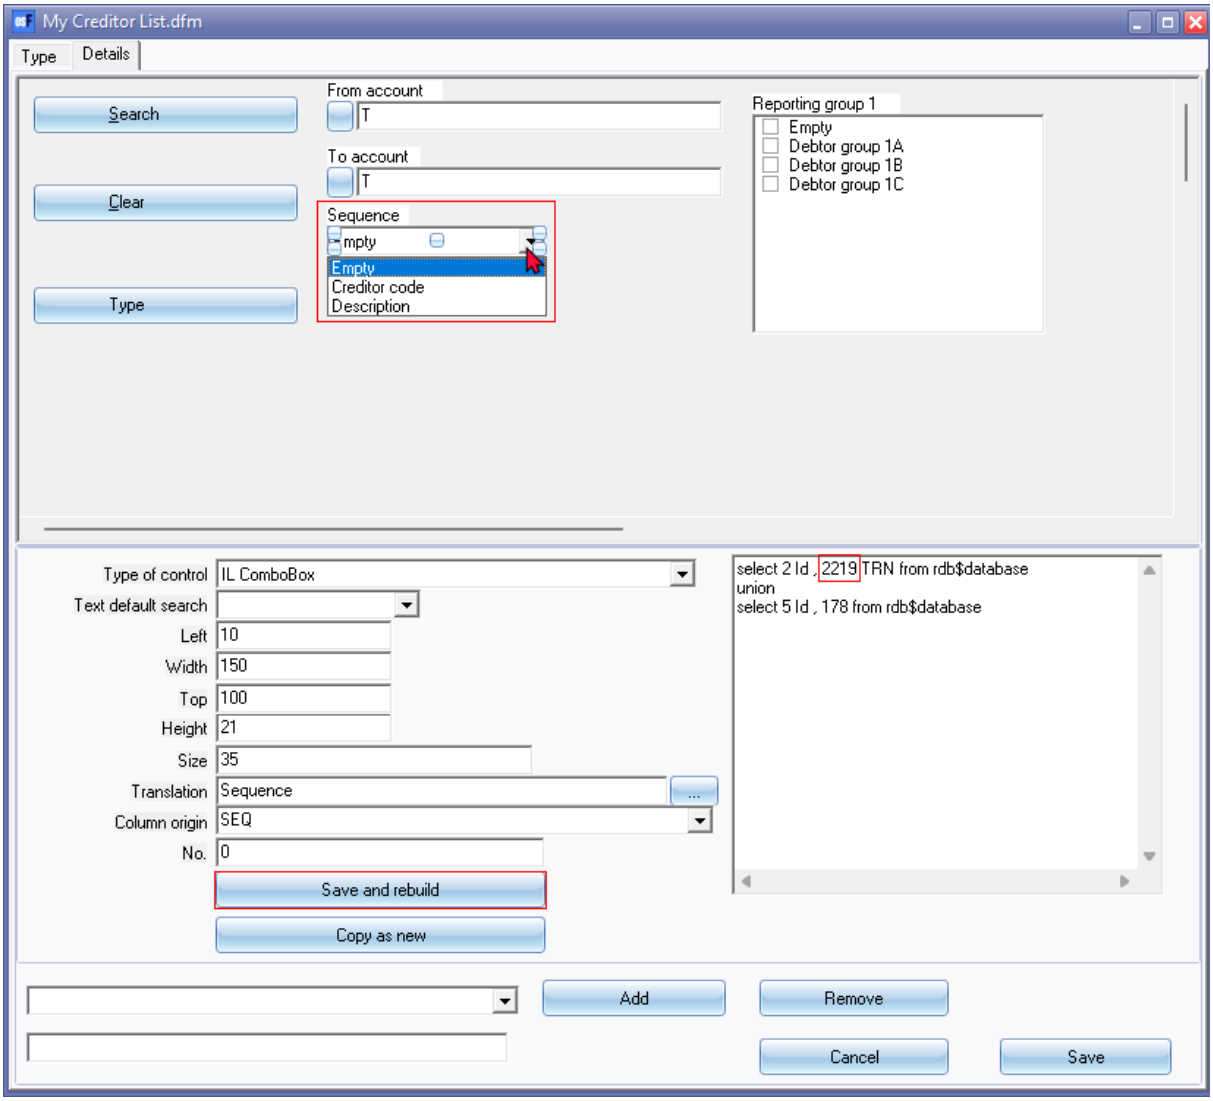
2. Click on the Parameters button. This will launch the "*Report options*" parameter screen for the selected report.

Edit the Sequence parameter

Edit the list combo box parameter from "*Debtor code*" to "*Creditor code*".

To edit the Sequence parameter:

1. On the "*Report options*" parameter screen, select the "*Sequence*" parameter.



2. In the Sql section – Change the language id "*Debtor code*" "*2218*" to "*Creditor code*" language id "*2219*". After changing the SQL, the SQL should read as follows:

```
"select 2 Id , 2219  TRN from rdb$database
union
select 5 Id , 178 from rdb$database"
```

3. Click on the Save and rebuild button. This will replace "*Debtor code*" with "*Creditor code*".

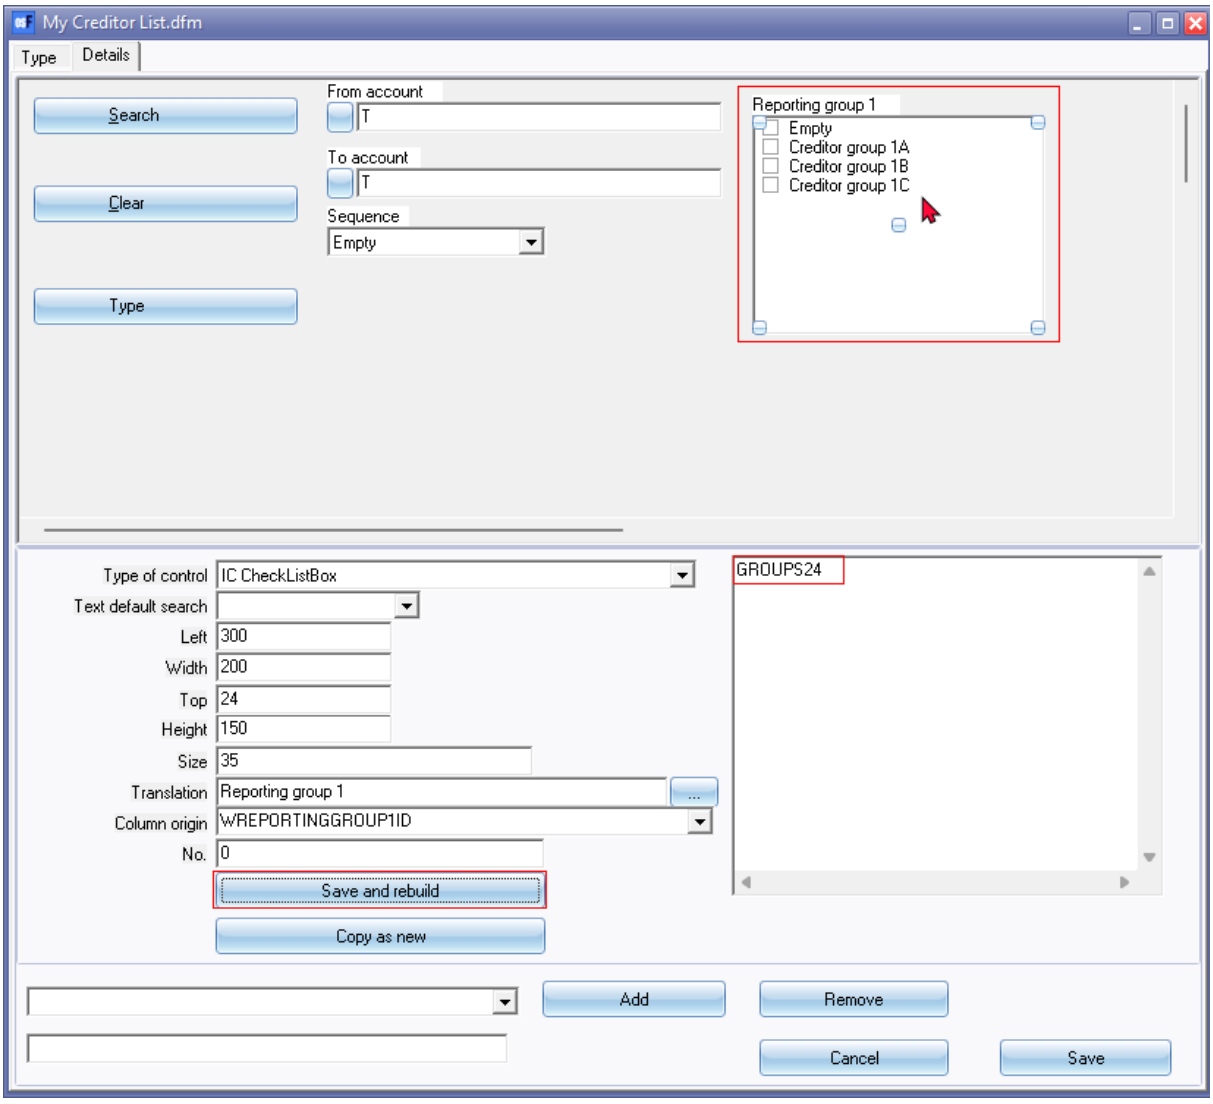
4. You could proceed to edit (change) the Reporting group 1 parameters or click Save and reopen the Parameter screen.

Edit the Groups parameter

In this example, the "*Reporting group 1*" parameter needs to be changed from "*Debtor groups 1*" to "*Creditor groups 1*".

To edit the Reporting group 1 parameter:

1. On the "*Report options*" parameter screen, select the "*Reporting group 1*" parameter.



2. In the Sql section – Change the GROUPS22 ("*Debtor group 1*") to GROUPS24 ("*Creditor group 1*"). After changing the SQL, the SQL should read as follows:

```
"GROUPS24"
```

> *22 after GROUPS is the WTYPEID = 22 for Debtor group 1 (SDESCRIPTION). These WTYPEID's is located in the V_TYPES table.*
>
> *Changing this to GROUPS24 will replace and list Creditor group 1.*

> *See - Reportman - References - Groups for a list of all Reporting groups in the V_TYPES table.*

3. Click on the Save and rebuild button. This will replace list of the "*Debtor groups 1*" with "*Creditor groups 1*".
4. You could proceed to edit (change) the Lookup parameters or click Save and reopen the Parameter screen.

Edit the Lookup parameters

In this example, the Account lookups from " *OD Lookup Debtors*" to "*OC lookup creditors*" and Account types in the SQL needs to be changed.

To edit the From account ... To parameters:

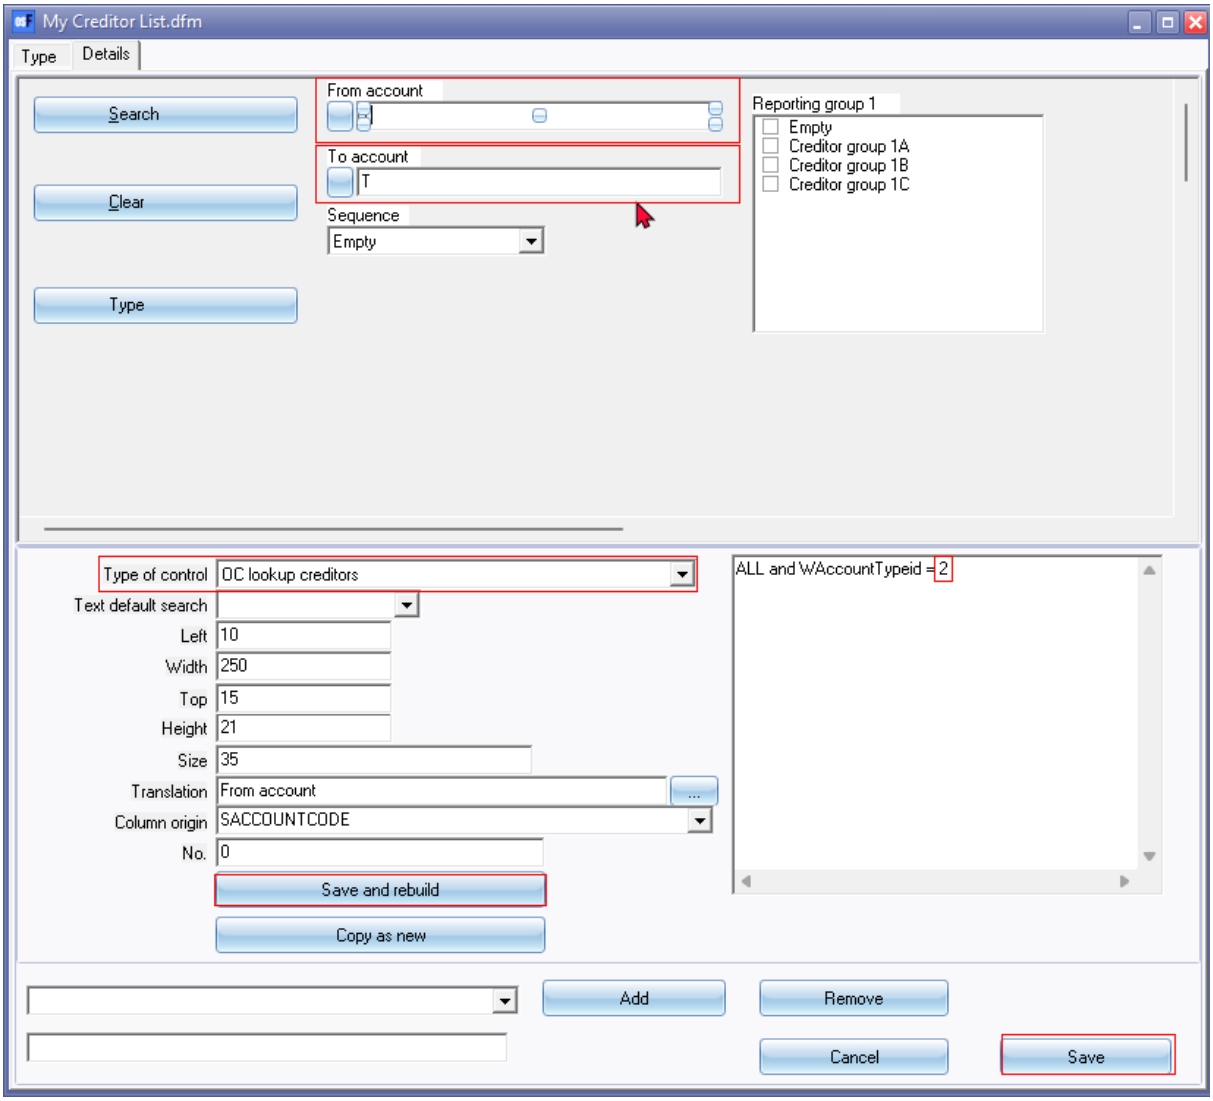
1. On the "*Report options*" parameter screen, select the "*From account*" parameter.
2. SQL section – Change the account type id in the SQL from

   "ALL and WAccountTypeid = 1"

   to

   ALL and WAccountTypeid = 2"

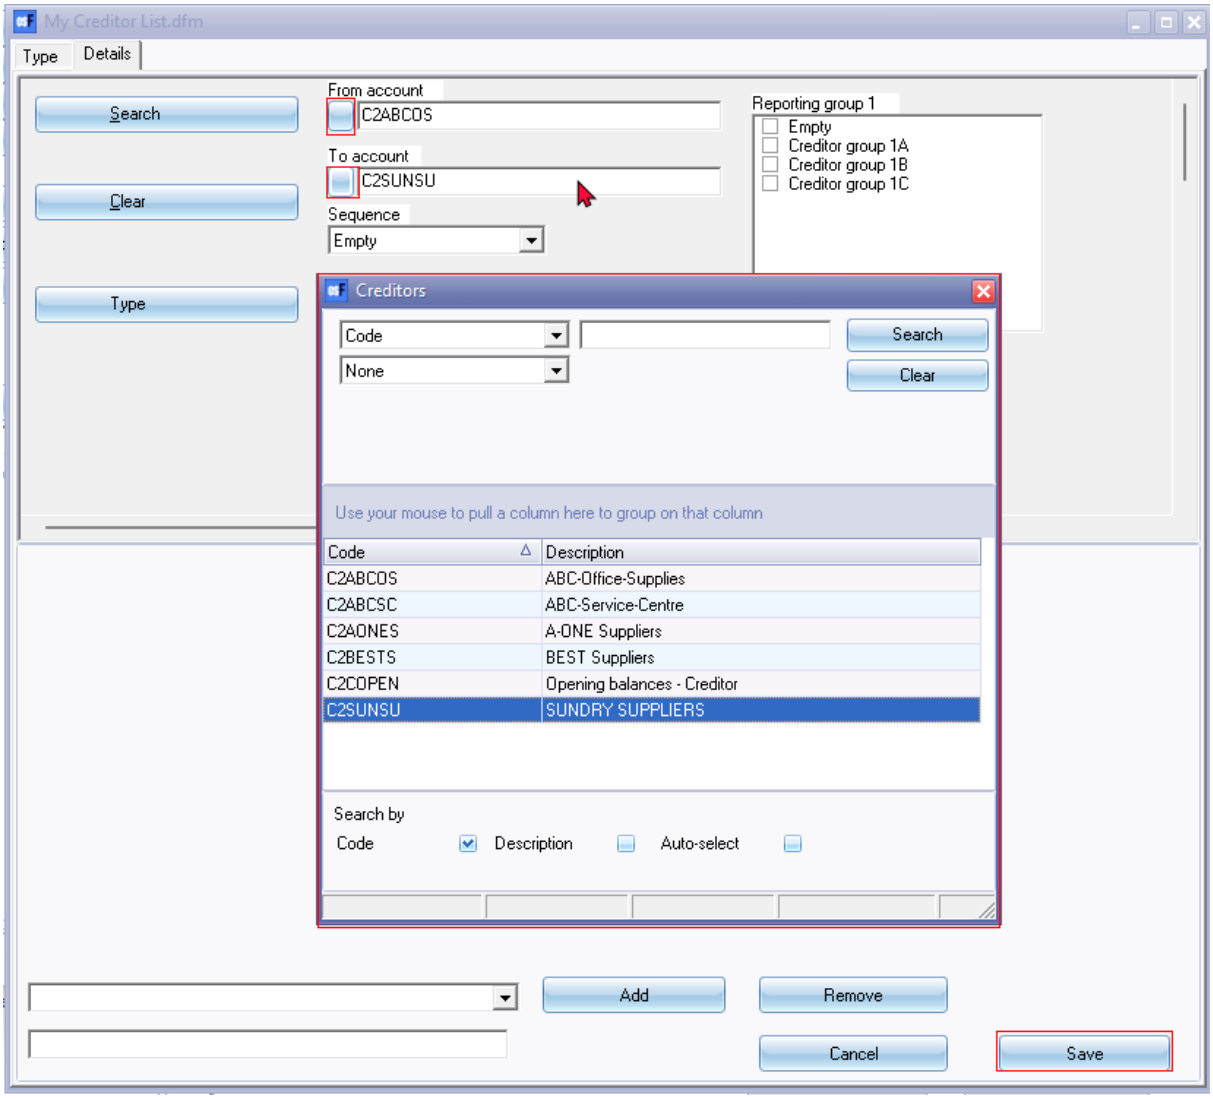
   This will only list all the Creditor accounts Account type 2.
3. Select the To account parameter and set the Account type to 2.
4. Type of control – Change the "*OD Lookup Debtors*" to "*OC lookup creditors*" in the To account parameter. Change the Type of control in the From account parameter.



5. Click on the Save and rebuild button.

> *If you have selected the Type of control and click on the Save and rebuild button, before changing the Account types in the SQL section, for both the From account and To account parameters, the SQL section will not be available.*
>
> *You need to click on the Save button.*
>
> *Then you need to click on the Parameters button of the "Report man" screen to set the Account type from 1 to 2.*

6. You should be able to click on the lookup buttons to check if the "Creditors" lookup is launched.



7. Click on the Save button.

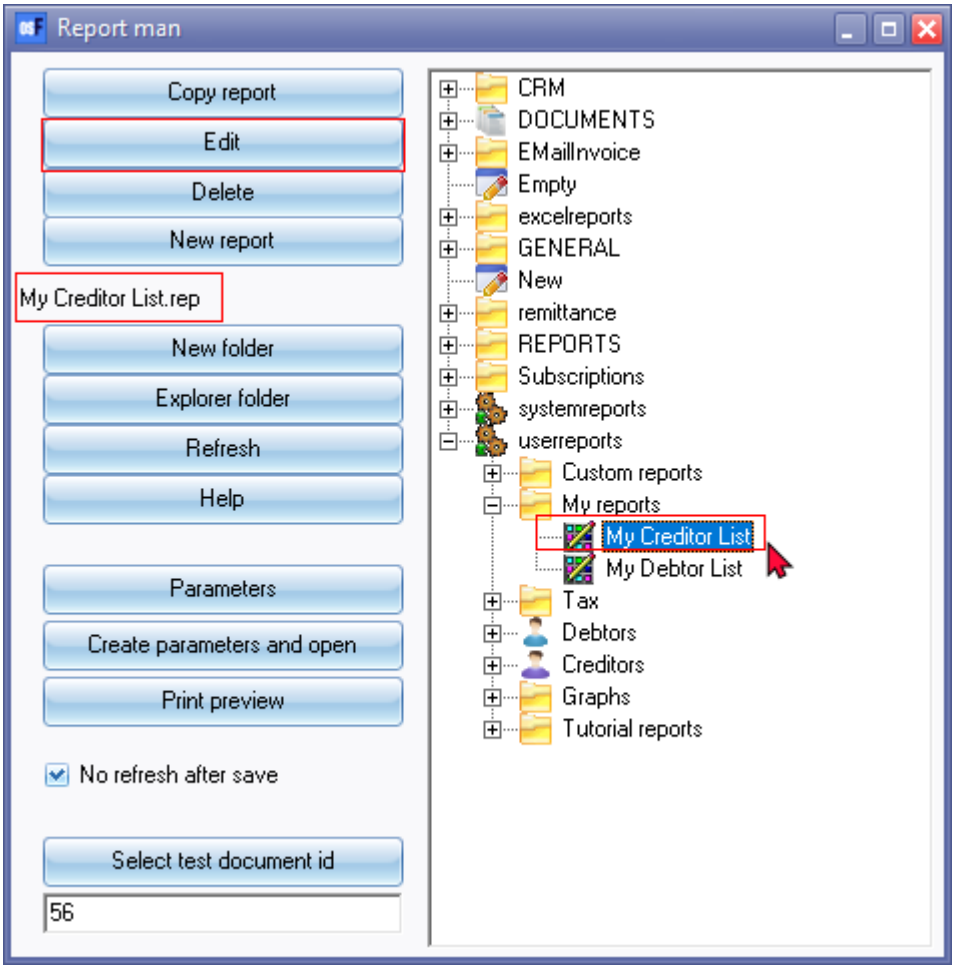
You may proceed to edit your copied report.

Edit the report

In this example, the report will be printed for debtor (customer / client) accounts. The basic layout and parameters needs to be edited to print the details for creditor (supplier / vendor) accounts. Once the parameters (report options) is saved, some SQL needs to be changed on some Datasets in the report.

To edit the copy of a report:

1. On the "*Report man*" screen, select the report you wish to edit.



2. Click Edit button. (You may double-click on the selected report (e.g. "*My Creditor List*") report).

3. This will launch the "*Report manager designer*" screen for the selected report.

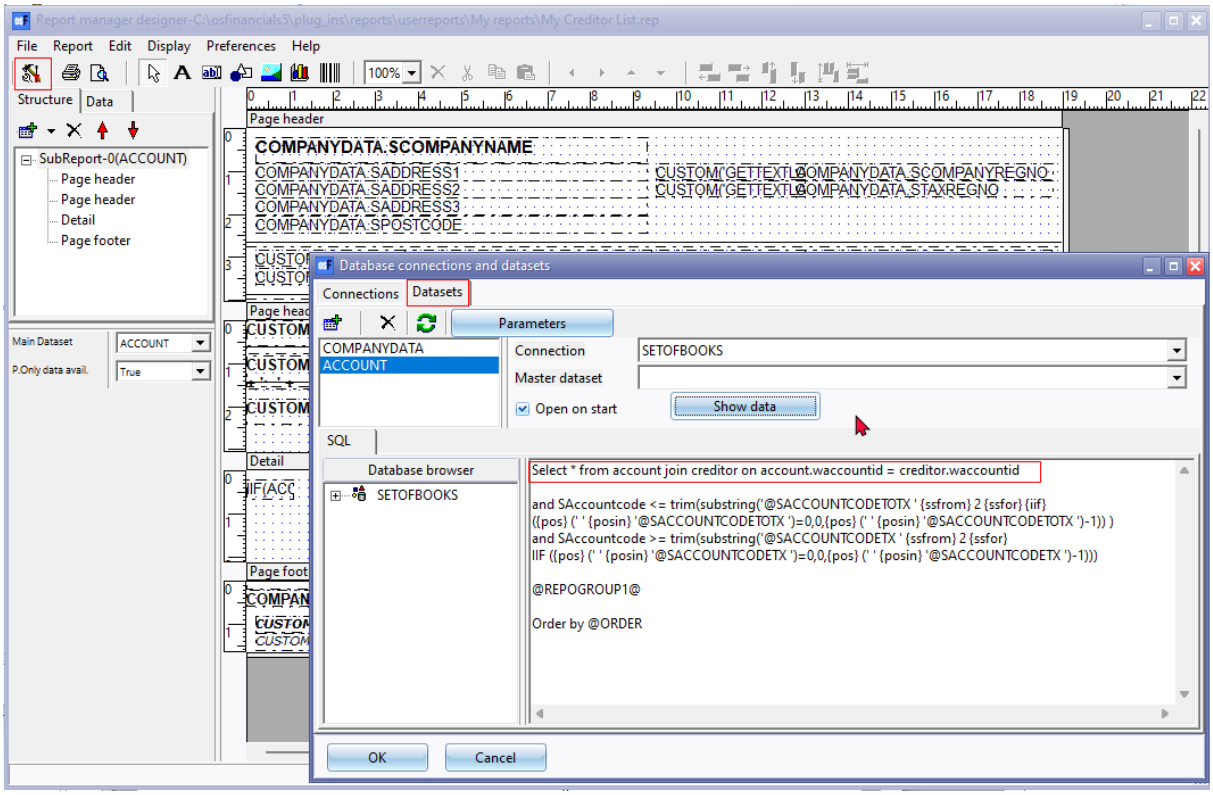
Edit ACCOUNT Dataset

On the "*ACCOUNT*" Dataset need to replace the debtor table with the creditor table.

To edit the ACCOUNT dataset:

1. On the "*Report manager designer*" screen for the selected report, click on the Database connections and datasets icon.

2. Select the "*ACCOUNT*" dataset.



3. On the Dataset "*ACCOUNT*" you need to replace the debtor table with the creditor table.

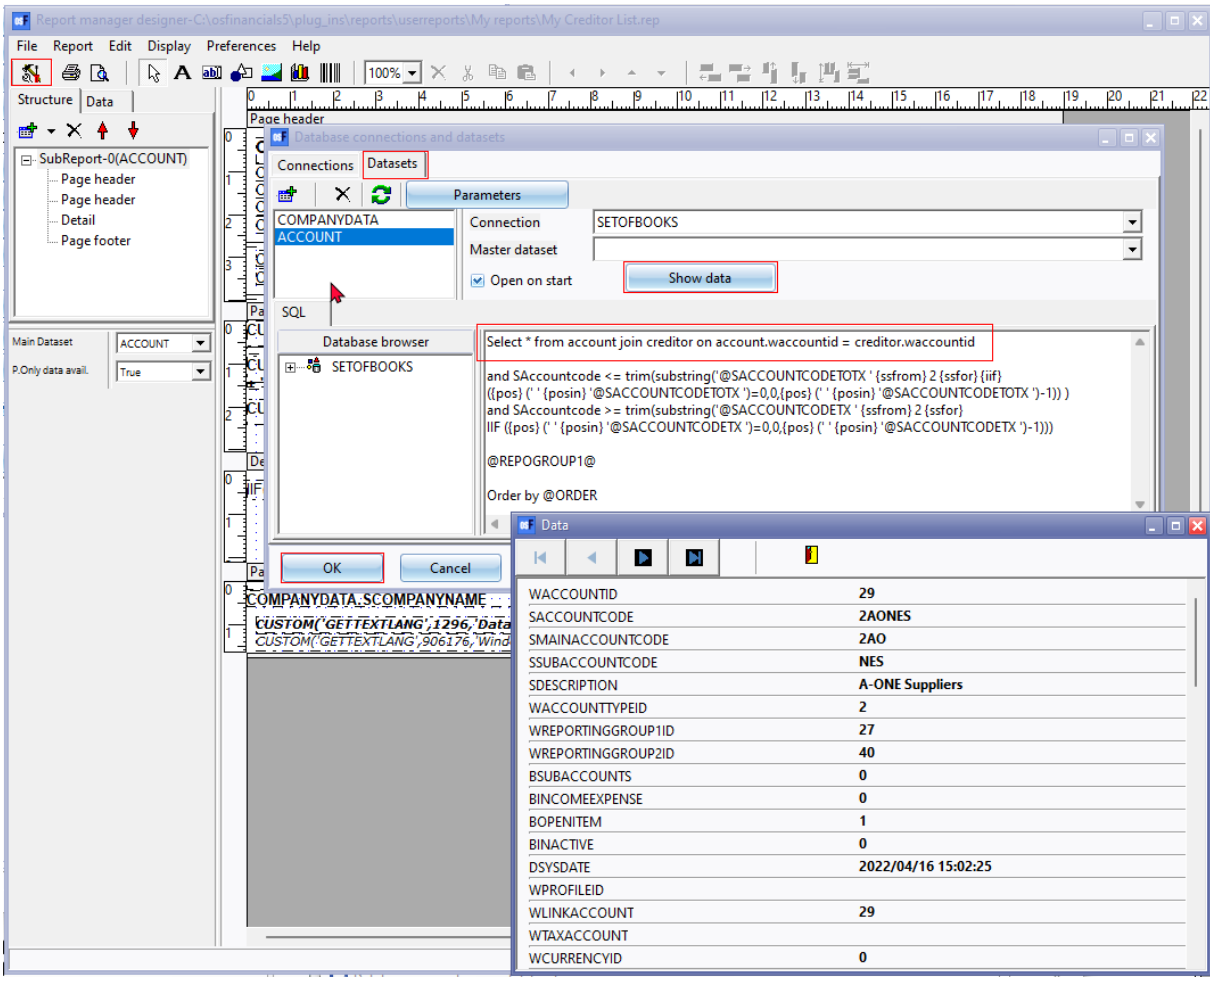
   The existing SQL is as follows:

   > "Select * from account join debtor on account.waccountid = debtor.waccountid"

   The changed SQL should be as follows:

   > "Select * from account join creditor on account.waccountid = creditor.waccountid"

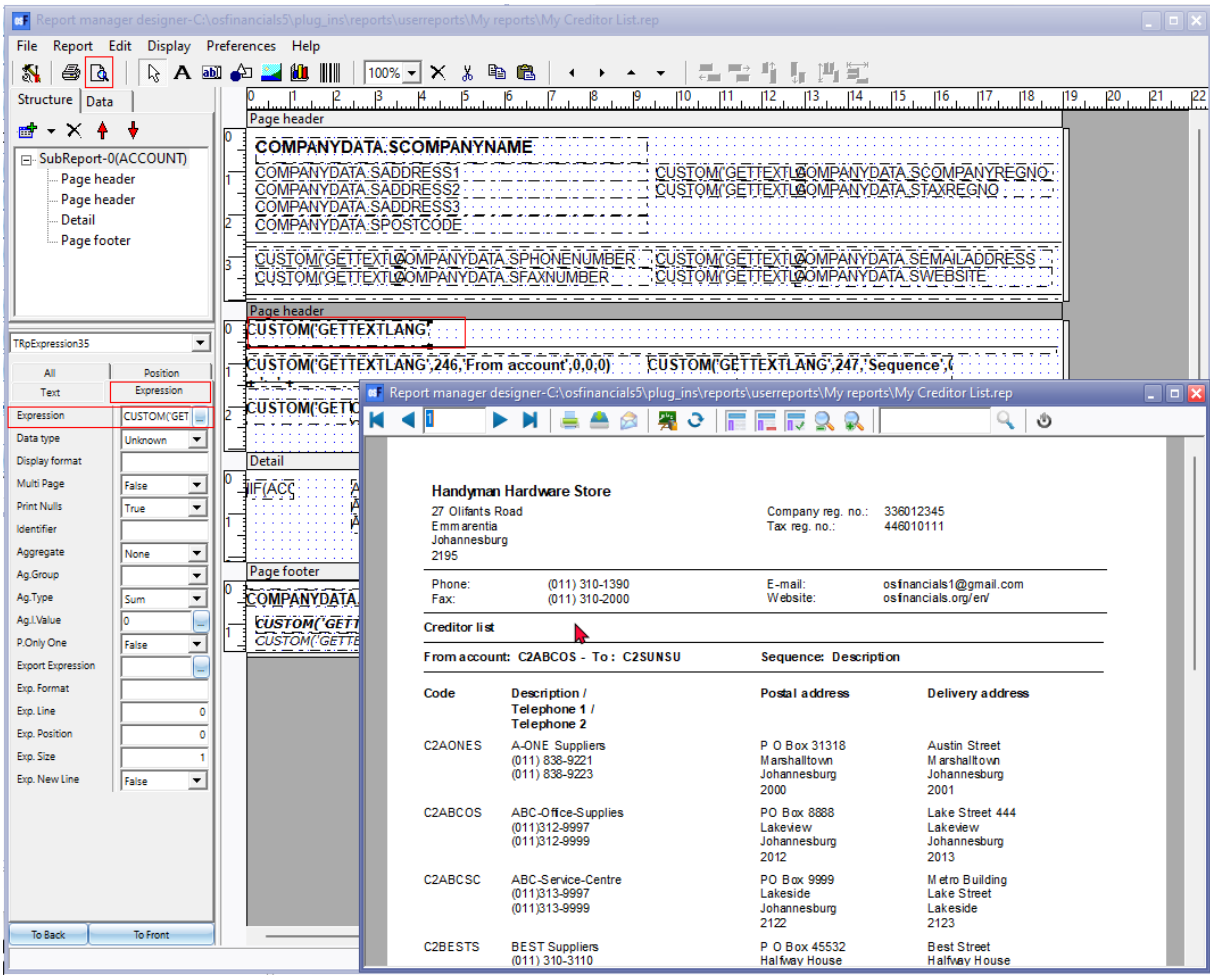
4. If you click on the Show data button, the data from the creditor table will be listed.



5. Close the "*Data*" screen.

6. Click OK on the "*Database connections and datasets*" screen.

7. Click on the Print preview icon. The Creditor data is displayed on the report.



If no selection was made, and the Show data button does not show any data, and you click on the Print preview icon (on the "Report manager designer" screen, the following error message will be displayed:

"No data available to print!"

Click OK on the message screen. Exit the report and remember to Save the report.

On the "Report man" screen select your report and click on the Print preview button. Select the options on the parameters screen.

On the "Report man" screen select your report and click on the Edit button. The data should be available to preview.

8. The data of the creditor (supplier / vendor) accounts is displayed on the report. The only change that is required on this report is the report name in the second Page header.

9. To change the Expression for the report name, select the expression and edit the SQL:

   Report name – Debtor list – Expression:

   CUSTOM('GETTEXTLANG',906045,'Debtor list',0,0,0)

Change to – Creditor list – Expression:

```
CUSTOM('GETTEXTLANG',906046,'Creditor list',0,0,0)
```

10. Close the report preview screen.

11. Close the report. Remember to Save the report.

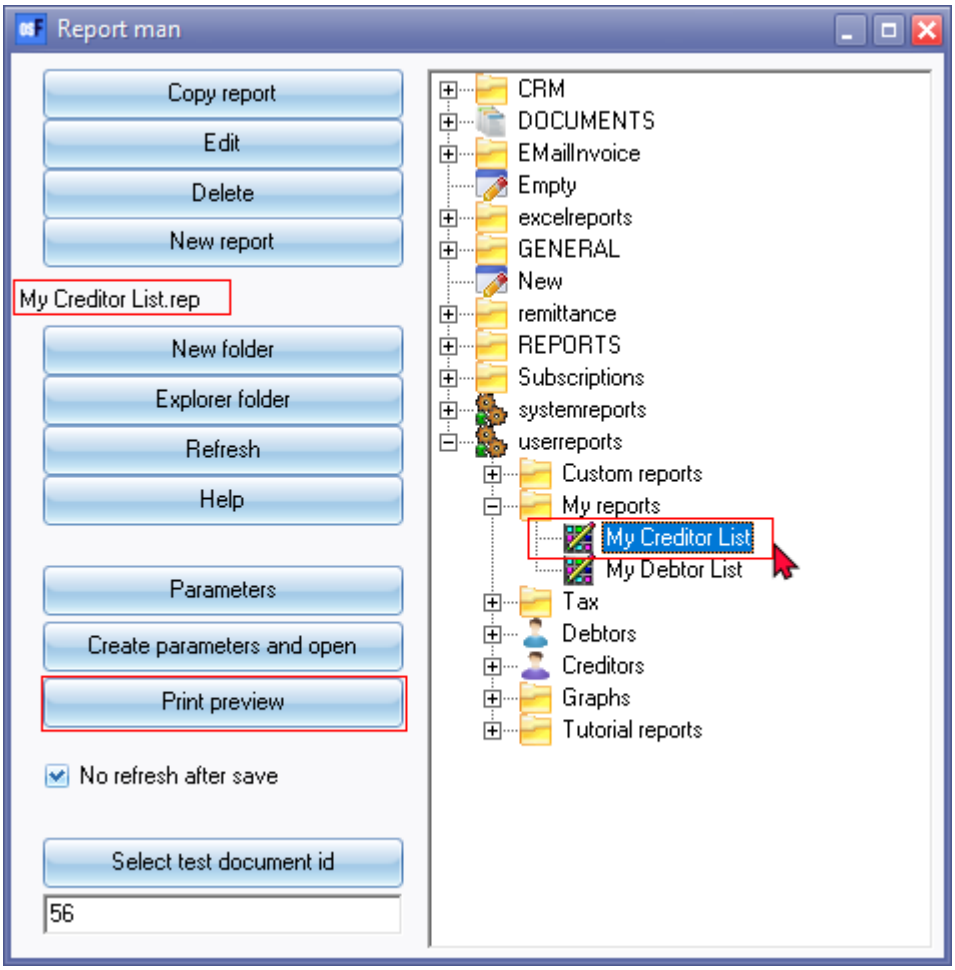
> *Whenever you close the "Report manager designer" screen, after editing your report, remember save the report. If you click on No, on the "Save report?" confirmation message, your changes will be discarded (lost).*

Test the report and parameters

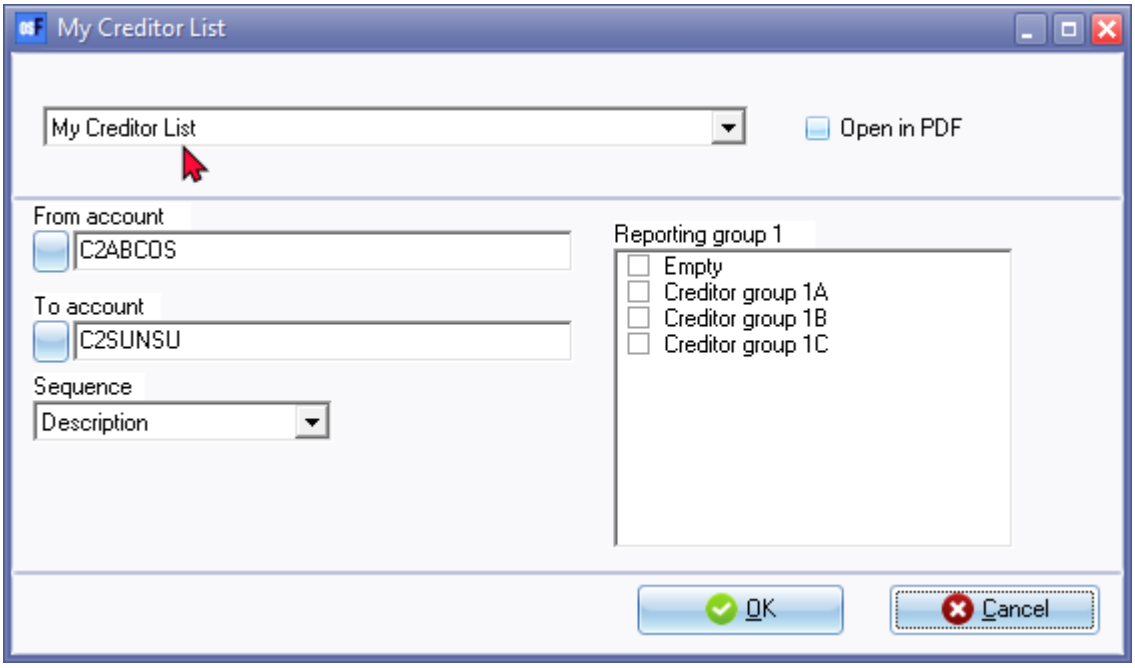
The final stage is to test the parameters to check if it works correctly and to check the general layout of the printed report.

To test the print preview of the report:

1. On the "*Report man*" screen, select the report you wish to test.



2. Click on the Print preview button. The report options (parameters) is displayed:



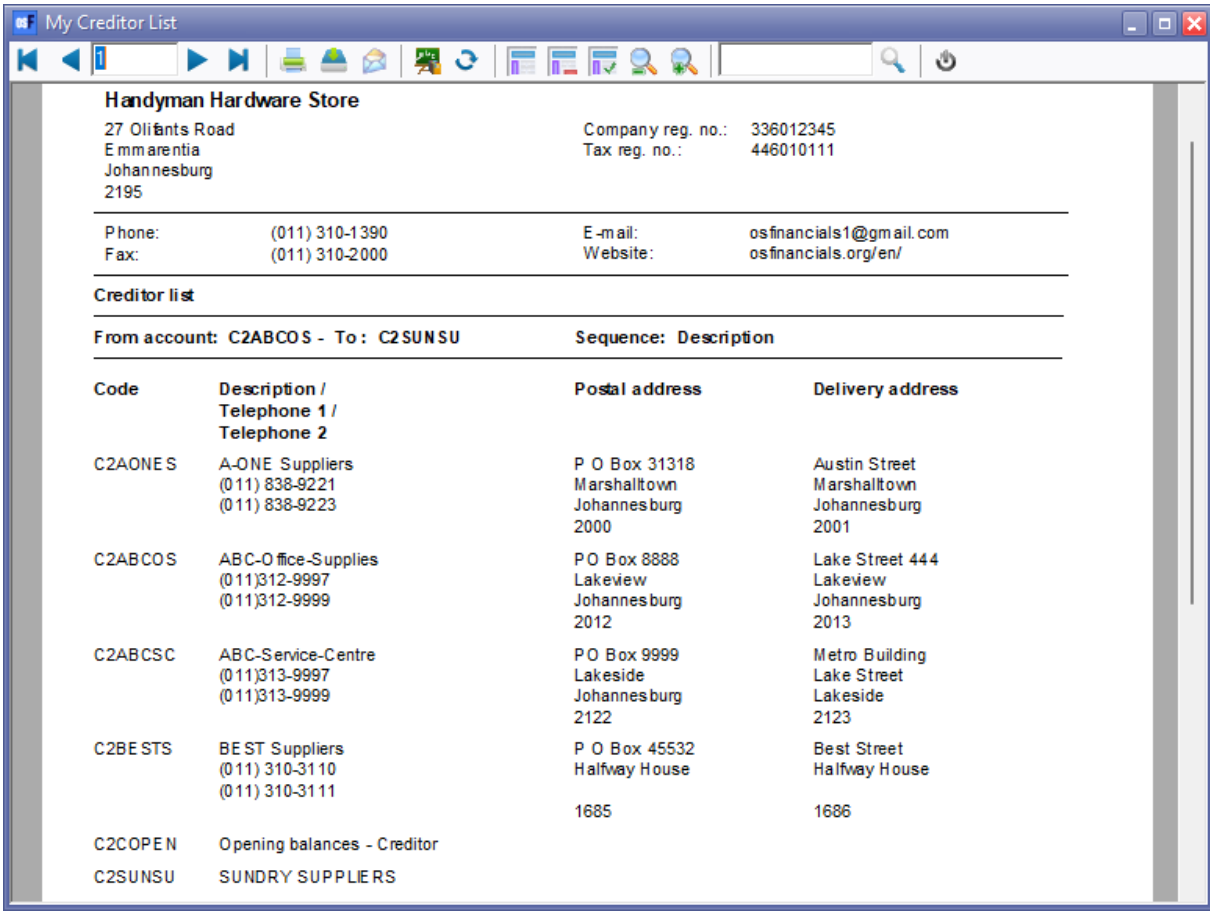
3. Select the options:

   a) From account … To account - This will launch the Creditors lookup. Select the creditor customer (supplier / vendor) (account(s) to include in the report.

   b) Sequence - Select "*Creditor code*" or "*Description*".

c) Reporting group 1 - Leave blank to list all accounts. You may tick a specific group or groups on the list in Reporting group 1 list box to print only those accounts linked to the specific reporting group.

4. Click OK. An example of the printed report is as follows:



My Creditor List

Handyman Hardware Store

27 Olifants Road
Emmarentia
Johannesburg
2195

Company reg. no.: 336012345
Tax reg. no.: 446010111

Phone: (011) 310-1390
Fax: (011) 310-2000

E-mail: osfinancials1@gmail.com
Website: osfinancials.org/en/

Creditor list

From account: C2ABCOS - To: C2SUNSU **Sequence: Description**

Code	Description / Telephone 1 / Telephone 2	Postal address	Delivery address
C2AONES	A-ONE Suppliers (011) 838-9221 (011) 838-9223	P O Box 31318 Marshalltown Johannesburg 2000	Austin Street Marshalltown Johannesburg 2001
C2ABCOS	ABC-Office-Supplies (011)312-9997 (011)312-9999	PO Box 8888 Lakeview Johannesburg 2012	Lake Street 444 Lakeview Johannesburg 2013
C2ABCSC	ABC-Service-Centre (011)313-9997 (011)313-9999	PO Box 9999 Lakeside Johannesburg 2122	Metro Building Lake Street Lakeside 2123
C2BESTS	BEST Suppliers (011) 310-3110 (011) 310-3111	P O Box 45532 Halfway House 1685	Best Street Halfway House 1686
C2COPEN	Opening balances - Creditor		
C2SUNSU	SUNDRY SUPPLIERS		

5. Close the "*Print preview*" of the report and close the report options screen.

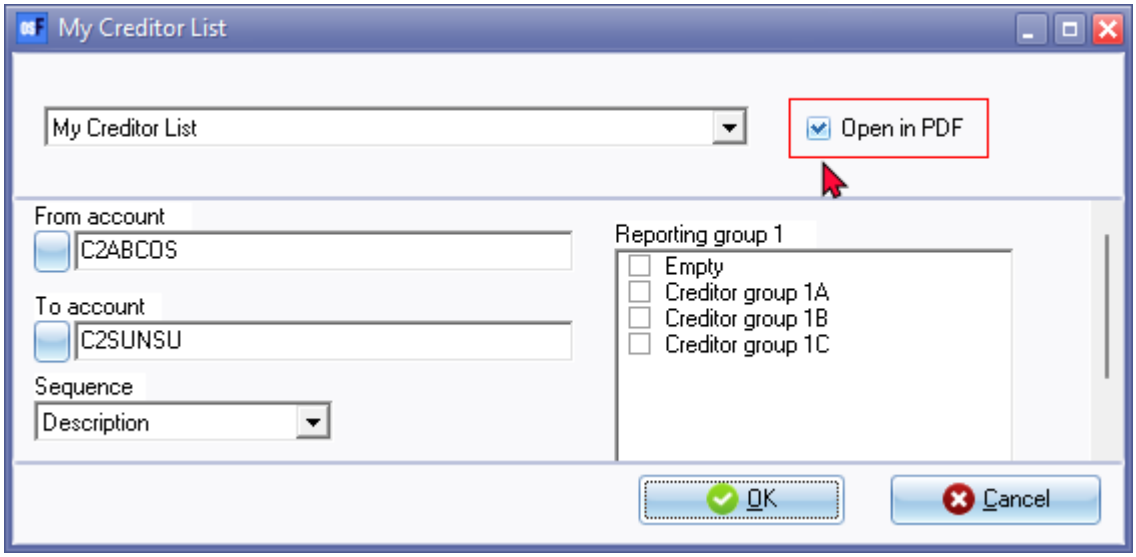
You may proceed to print the report from the User reports menu (Reports ribbon).

Check the report in PDF format

Once you are satisfied that your report is displayed correctly in the printed format, you may check the layout and presentation in PDF format. Should you wish to make any changes, you may edit the report.

To check the report in PDF format:

On the Report options screen, select the "*Open in PDF*" option.



Select the options to include in the report and click OK. The report will be opened in your system's default PDF-program (In this example, it is "*Microsoft Edge*"):

Reportman - References - Data structure

Visual Query Editor

Good SQL queries can be much easier with a visual editor. You may download the FlySpeed Query

software (free version (supports only a single database) or purchase a version which supports multiple databases) from:

http://www.activedbsoft.com/overview-querytool.html

With this tool you may connect to the database of a Set of Books. To do this, select the Firebird or Interbase driver and then select the books.fdb database file.

Once you connect to the database, all tables for the selected Set of Books will be listed – i.e. Queries, Tables, System Tables and Views.

Access Error: – "The process cannot access the file because it is being used by another process." This usually means that you are accessing or connecting a Set of Books that is already opened.

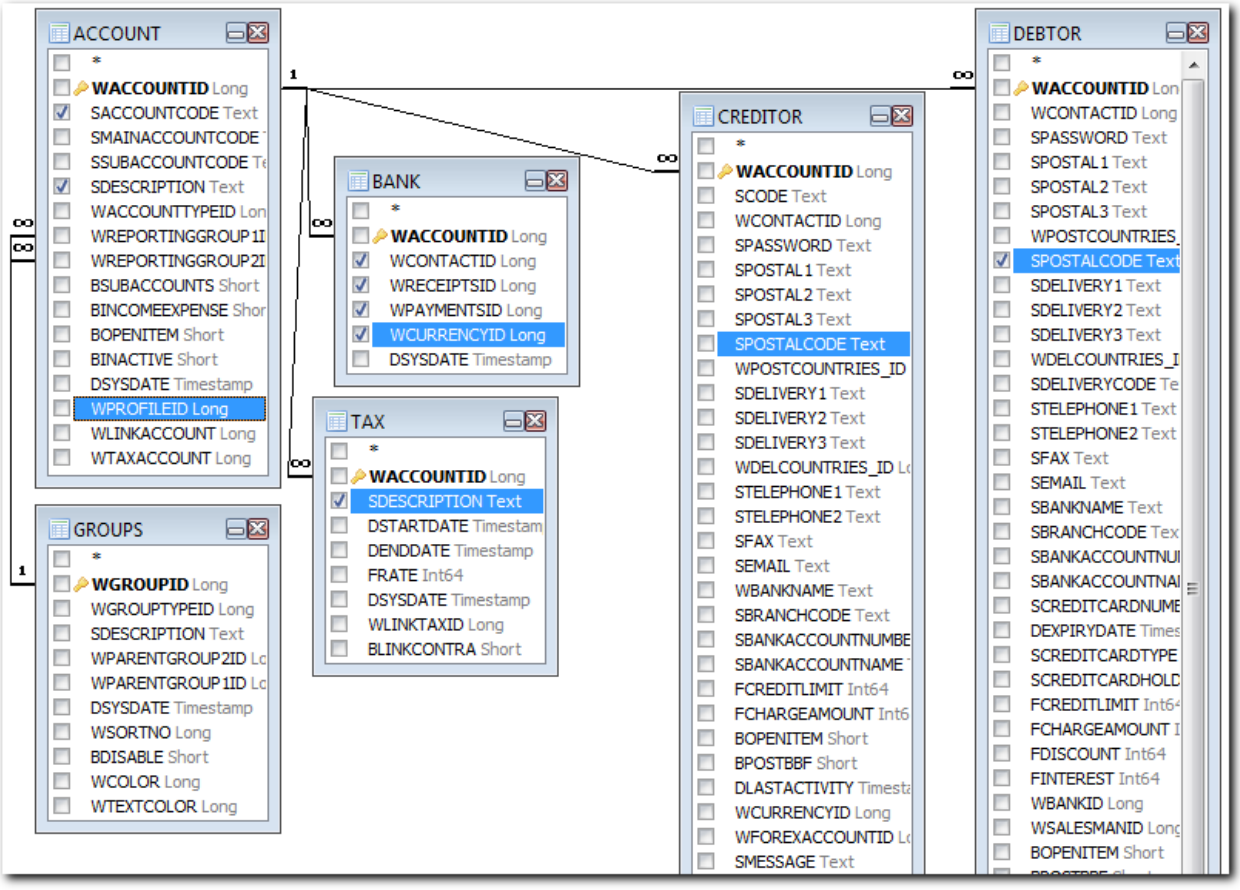
To resolve this – close the Set of Books in osFinancials5/TurboCASH5.

Data structure - Accounts

The definitions of a ledger, debtor of creditor accounts are contained in the Account table. The links to other tables are outlined briefly as follows:

Table	*Key*	*Keys to other tables*	*Remarks*
ACCOUNT	*WACCOUNTID*	*WREPORTINGGROUP1ID = GROUPS.WGROUPID WREPORTINGGROUP2ID = GROUPS.WGROUPID*	*All accounts (i.e. Debtors=1, Creditors=2, Tax=4, Bank=3 and Ledger=0)*
DEBTOR	*WACCOUNTID*	*WACCOUNTID = ACCOUNT.WACCOUNTID*	*The information and settings of debtors.*
CREDITOR	*WACCOUNTID*	*WACCOUNTID = ACCOUNT.WACCOUNTID*	*The information and settings of creditors.*
TAX	*WACCOUNTID*	*WACCOUNTID = ACCOUNT.WACCOUNTID*	*Tax percentage and info of linked Tax accounts (VAT/GST/Sales Tax).*
BANK	*WACCOUNTID*	*WACCOUNTID = ACCOUNT.WACCOUNTID*	*The Payments and Receipt batch id linked to the Bank accounts.* *Should you set the bank reconciliation method to activate*

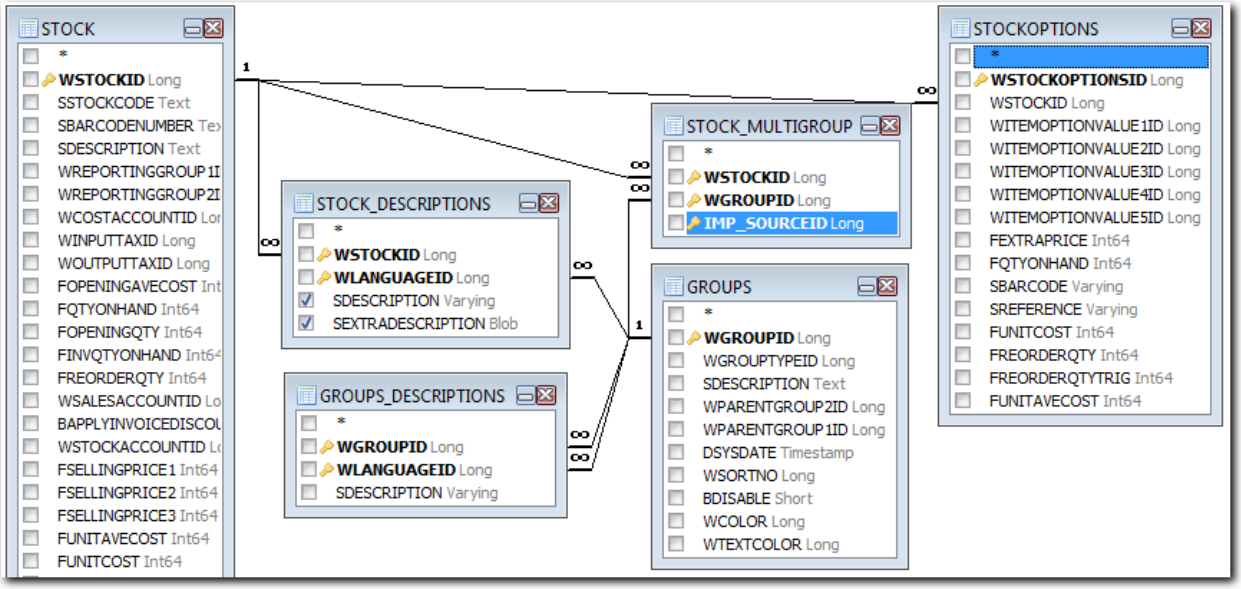
		WRECEIPTSID = BATTYPES.WBATCHTYPEID *WPAYMENTSID = BATTYPES.WBATCHTYPEID*	*the Dutch Bank method, then the BANK.WRECEIPTSID is the same as the BANK. WPAYMENTSID.*
GROUPS	*WGROUPID*		*Groups are used to link accounts and to structure the reports. Accounts must be lined to Account Group1 and/or Account group2. These Account groups are then linked to Financial categories. This will enable you to create and print reports using groups.* *See - Reportman - References - Groups for a list of all Reporting groups in the V_TYPES table.*
BATTYPES	*WBATCHTYPEID*		*This table contains the values for the settings of each batch.*



Data structure - Stock (Inventory)

The Stock data contains links to the Account table. This links the Sales, Cost of Sales, Stock Control, Input Tax, Output Tax, default Supplier1 and default Supplier2 AccountID to the stock items.

Table	*Key*	*Keys to other tables*	*Remarks*
STOCK	*WSTOCKID*	*WREPORTINGGROUP1ID = GROUPS.WGROUPID* *WREPORTINGGROUP2ID = GROUPS.WGROUPID* *WUNITID = UNIIT.WUNITID* *WCOSTACCOUNTID = ACCOUNT.WACCOUNTID* *WSALESACCOUNTID = ACCOUNT.WACCOUNTID* *WSTOCKACCOUNTID = ACCOUNT.WACCOUNTID* *WINPUTTAXID = ACCOUNT.WACCOUNTID* *WSUPPLIER1ID = ACCOUNT.WACCOUNTID* *WSUPPLIER2ID = ACCOUNT.WACCOUNTID*	*The Stock table are used to select the stock items (products or services) when creating or editing documents.*
STOCK_DESCRIPTIONS	*WSTOCKID, WLANGUAGEID*	*WSTOCKID =STOCK.WSTOCKID* *WLANGUAGEID = GROUPS.WGROUPID*	*Different languages for one stock item (product).*



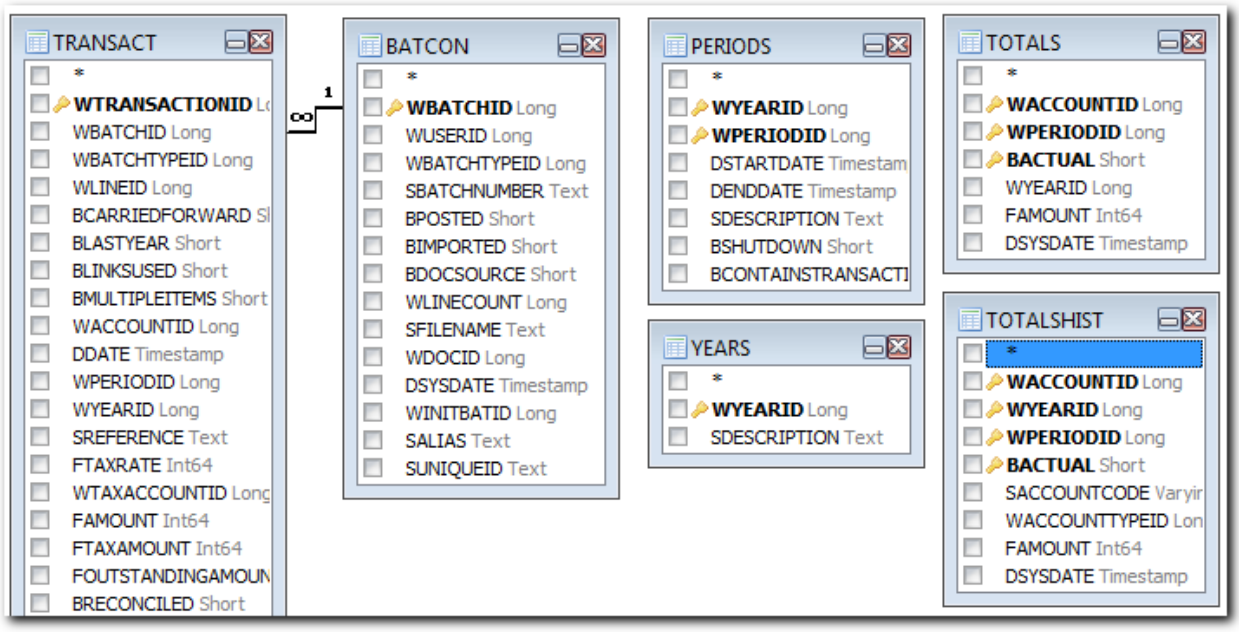
Data structure - Financial

All transactions are recorded on accounts. These updated data are contained in 2 tables (i.e. 1 for all details and 1 for all totals).

The budget figures for ledger accounts are also contained in the Totals table.

Table	*Key*	*Keys to other tables*	*Remarks*
TOTALS	*WACCOUNTID, WPERIODID, BACTUAL*	*WACCOUNTID = ACCOUNT.WACCOUNTID WPERIODID = PERIODS.WPERIODID*	*All totals of accounts per period. Also contains Budget figures (BACTUAL = 0)*
PERIODS	*WYEARID, WPERIODID*	*WYEARID = YEARS.WYEARID*	*Information for the periods. Year 1 period -1 = Opening Balances previous year. Year 1 period 1 until and including 13 = Period balances previous year. Year 2 period 0 = Opening balances this year (current year). Year 2 period 14 until and including 26 - Period balances this year (current year)*

TRANSACT	*WTRANSACTIONID*	*WBATCHID = BATCON.WBATCHID* *WBATCHTYPEID = BATTYPES.WBATCHTYPEID* *WACCOUNTID = ACCOUNT.WACCOUNTID* *WPERIODID =PERIODS.WPERIODID* *WYEARID = YEARS.WYEARID* *WTAXACCOUNTID = ACCOUNT.WACCOUNTID* *WDESCRIPTIONID = MESSAGES.WMESSAGEID* *WREPORTINGGROUP1ID = GROUPS.WGROUPID* *WREPORTINGGROUP2ID = GROUPS.WGROUPID* *WDOCID =DOCHEAD.WDOCID*	*Transactions at detail level. In this table, all individual transactions booking is listed.* *It will display the debit as well as the credit bookings.*
YEARS	*WYEARID*		*Different years in osFinancials*
BATCON	*WBATCHID*	*WBATCHTYPEID = BATTYPES.WBATCHTYPEID*	*For each processing of a transactions (in a journal or a document) an unique number (processing number) is generated. This number is used in the Transaction table to record and group the balances of the processed transactions.*



Data structure - Text

The text in the transaction and in the documents tables (dochead en docline) are contained in one table.

This allows you to reuse the text in the text fields. This reduces the number of similar text to be repeated in the database. It also reduces the size of the database.

The disadvantage of this is that you first need to identify the message id (number) before you can see the actual description or message. For example, if you view the Transact table, you will notice a number in the WDESCRIPTIONID column which refers to the Messages table. In the Message table, you will find the text displayed in the fields of the interface screens or fields on the reports.

The same linking is used in the DOCHEAD and DOCLINE tables.

Table	*Key*	*Keys to other tables*	*Remarks*
MESSAGES	*WMESSAGEID*		*Text of transaction descriptions in the dochead and docline tables.*

Data structure - Documents

The data structure of documents (invoices, credit notes, quotes, purchases, supplier returns and orders) are located in the DOCHEAD table. The DOCLINE table contains the transaction or comment detail in lines of stock items as selected or as comments added to documents. The details of the Stock Items are located in the STOCK table.

Table	*Key*	*Keys to other tables*	*Remarks*
DOCHEAD	*WDOCID*	*WTYPEID = TYPES.WTYPEID* *WACCOUNTID = ACCOUNT.WACCOUNTID* *WPOSTAL1ID = MESSAGES.WMESSAGEID* *WPOSTAL2ID = MESSAGES.WMESSAGEID* *WPOSTAL3ID = MESSAGES.WMESSAGEID* *WPOSCOUNTRIES_ID = COUNTRIES.COUNTRIES_ID* *WPOSTALCODEID = MESSAGES.WMESSAGEID* *WMESSAGE1ID = MESSAGES.WMESSAGEID* *WMESSAGE2ID = MESSAGES.WMESSAGEID*	*The dochead table contains the information of the document header fields / lines. Most of this text is located in the messages table. The values of the WTYPEID are as follows:* *10 = Invoice* *11 = Credit note* *12 = Purchase* *13 = Supplier return* *14 = Quote*

		WMESSAGE3ID = MESSAGES.WMESSAGEID *WSALESMANID = GROUPS.WGROUPID* *WDELADDRESS1ID = MESSAGES.WMESSAGEID* *WDELADDRESS2ID = MESSAGES.WMESSAGEID* *WDELADDRESS3ID = MESSAGES.WMESSAGEID* *WDELCOUNTRIES_ID = COUNTRIES.COUNTRIES_ID* *WDELCODEID = MESSAGES.WMESSAGEID* *WREPORTINGGROUP1ID = GROUPS.WGROUPID* *WREPORTINGGROUP2ID = GROUPS.WGROUPID* *WUSERID = USERS.WUSERID*	*15 = Order* *16 = Manual - Adjustments (via Stock)*
DOCLINE	*WDOCID,* *WDOCLINEID*	*WDOCID = DOCHEAD.WDOCID* *WSTOCKID =STOCK.WSTOCKID* *WLINETYPEID = TYPES.WTYPEID* *WDESCRIPTIONID = MESSAGES.WMESSAGEID* *WTAXID = ACCOUNT.WACCOUNTID* *WACCOUNTID = ACCOUNT.WACCOUNTID*	*The docline table contains the transaction details (document lines / rows). These may include comment lines.* *Wlinetypeid may include the following values:* *90 = Stock item - Excl.* *91 = Comments* *93 = Payment* *94 = Stock item - Incl.* *If the Waccountid contains values, these accounts were selected using the Accounts lookup for the Financial entry (Stock item type). Updating the ledger for this stock item type will not the standard contra account of the document.*
DOCLINEOPTIONS	*WDOCLINEOPTIONSID*	*WDOCID = DOCLINE.WDOCID* *WLINEID = DOCLINE.WDOCLINEID* *WITEMOPTIONVALUE1ID = ITEMOPTIONSVALUES.WITEMOPTIONVALUEID* *WITEMOPTIONVALUE2ID = ITEMOPTIONSVALUES.WITEMOPTIONVALUEID* *WITEMOPTIONVALUE3ID =*	*The details of Options (Stock item type) is located in this table.*

		ITEMOPTIONSVALUES.WITEMOPTIONVALUEID *WITEMOPTIONVALUE4ID = ITEMOPTIONSVALUES.WITEMOPTIONVALUEID* *WITEMOPTIONVALUE5ID = ITEMOPTIONSVALUES.WITEMOPTIONVALUEID* *WDESCRIPTIONID = MESSAGES.WMESSAGEID*	
STOCK	*WSTOCKID*	*STOCK.WREPORTINGGROUP1ID = GROUPS.WGROUPID* *STOCK.WREPORTINGGROUP2ID = GROUPS.WGROUPID* *WCOSTACCOUNTID = ACCOUNT.WACCOUNTID* *WSALESACCOUNTID = ACCOUNT.WACCOUNTID* *WSTOCKACCOUNTID = ACCOUNT.WACCOUNTID* *WINPUTTAXID = ACCOUNT.WACCOUNTID* *WSUPPLIER1ID = ACCOUNT.WACCOUNTID* *WSUPPLIER2ID = ACCOUNT.WACCOUNTID*	*Stock group 1* *Stock group 2* *Cost of sales account* *Sales account* *Stock control account* *Default Tax account* *Default Supplier account 1* *Default Supplier account 2*

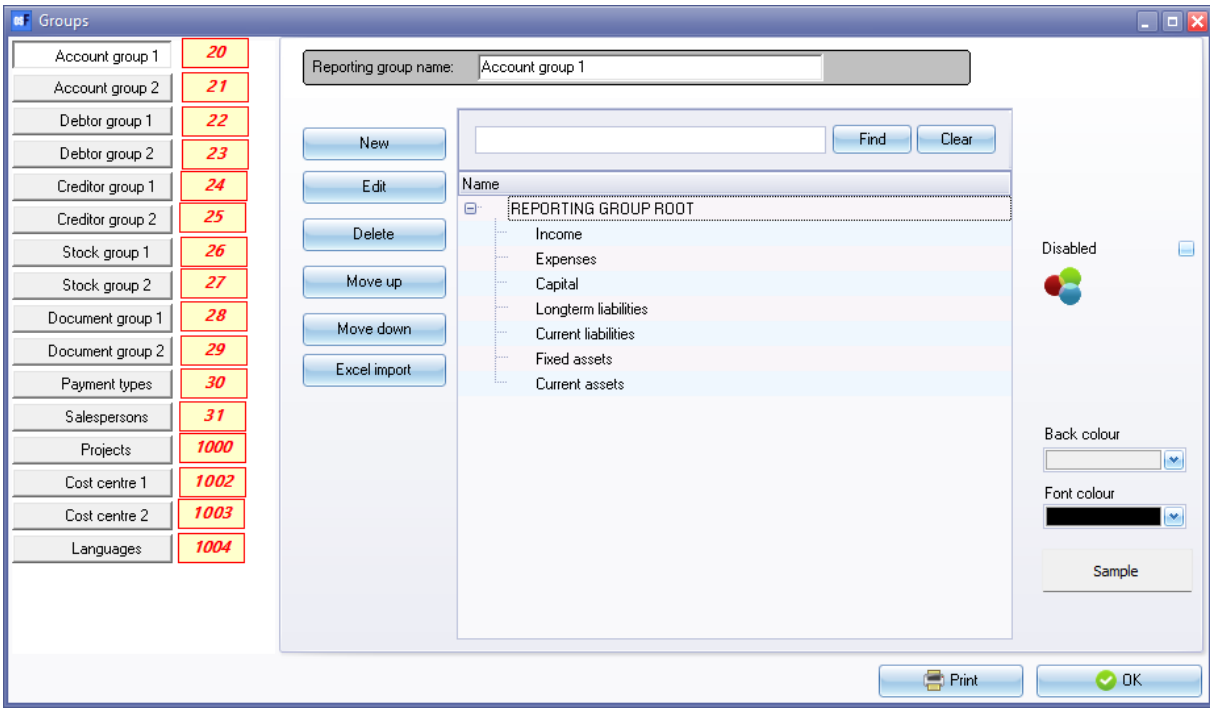
Reportman - References - Groups

Reporting groups 1 and Reporting groups 2 (for Accounts, Debtors, Creditors, Stock, Documents and Cost centres) is added in Groups on the Setup ribbon. Salespersons, payment types, Projects and Languages is also added in Groups on the Setup ribbon.



Each of these groups contains a WTYPEID and a SDESCRIPTION in the V_TYPES table.

These WTYPEID in the V_TYPES table were used to add Reporting group 1 to the Parameters (Report options).

WTYPEID (V_TYPES table)	*Description*
20	*Account group 1*
21	*Account group 2*
22	*Debtor group 1*
23	*Debtor group 2*
24	*Creditor group 1*

25	*Creditor group 2*
26	*Stock group 1*
27	*Stock group 2*
28	*Document group 1*
29	*Document group 2*
30	*Payment types*
31	*Salesperson*
1000	*Projects*
1002	*Cost centre 1*
1003	*Cost centre 2*
1004	*Language*

For example, to reference these Groups in the V_TYPES table, you need to add "GROUPS22"

Note this must be Entered in the Plural followed by 22 and entered in UPPERCASE i.e. GROUPS22. If this is not entered correctly, it will not list the Debtor groups, but display "SQL error".

In the SQL Browser, you may view the Groups in the TYPES table. Groups are set as 2 in the WTYPEPARENT column

Reportman - SQL Changelog for MSSQL

From ... To account lookup parameters SQL to Dataset

MSSQL - SQL not supported in Previous documentation before osFinancials5/TurboCASH5

```
“and SAccountcode <= trim(substring('@SACCOUNTCODETOTX ' from 2 for {if mysql}if{else}
IIF{endif}(position (' ' in '@SACCOUNTCODETOTX ')=0,0,position (' ' in '@SACCOUNTCODETOTX
')-1)) )
and SAccountcode >= trim(substring('@SACCOUNTCODETX ' from 2 for  {if mysql}if{else}
IIF{endif}(position (' ' in '@SACCOUNTCODETX ')=0,0,position (' ' in '@SACCOUNTCODETX ')-
1)))”
```

To include support for MSSQL Server for the lookup feature, it is recommended that the following SQL is added to the "*ACCOUNT*" dataset:

```
and SAccountcode <= trim(substring('@SACCOUNTCODETOTX ' {ssfrom} 2 {ssfor} {iif}
({pos} (' ' {posin} '@SACCOUNTCODETOTX ')=0,0,{pos} (' ' {posin} '@SACCOUNTCODETOTX ')-1)) )
and SAccountcode >= trim(substring('@SACCOUNTCODETX ' {ssfrom} 2 {ssfor}
IIF ({pos} (' ' {posin} '@SACCOUNTCODETX ')=0,0,{pos} (' ' {posin} '@SACCOUNTCODETX ')-1)))
```

Multi-currency

In osFinancials5/TurboCASH5, users have the capability to engage in international transactions, purchasing goods from foreign suppliers and selling goods to customers in foreign countries. osFinancials5/TurboCASH5 allows users to process and print documents in foreign currencies. However, before they can do so, it is necessary to add and/or update the currencies in the Set of Books.

The Currencies feature in osFinancials5/TurboCASH5 is particularly beneficial for businesses dealing with international transactions, streamlining financial processes for processing and printing sales documents and purchase documents in various currencies.

Currencies functionality overview

Here's a breakdown of the functionalities:

1. Add / Edit / Delete Currencies: osFinancials5/TurboCASH5 allows users to manage a list of currencies. You may add new currencies, edit existing ones (e.g., update exchange rates), and also remove currencies that are no longer needed.
2. Processing Multi-currency Documents: Once the currencies is added and or updated, users can select the currency applicable to their debtors (customers/clients) when processing sales documents such as invoices, credit notes, and quotes. When processing purchase documents such as purchases, supplier returns, and orders, users can select or specify the currency applicable to their for creditors (suppliers / vendors).
3. Printing Currency in Document Layouts: Once a currency is selected for a specific document, osFinancials5/TurboCASH5 incorporates this information into the document layout files. This means that the selected currency will be visibly printed on the documents, ensuring clarity and transparency in financial transactions.
4. Printing a List of Currencies in Reports: You may print a "*Currencies - Listing*" report in the Reports → Currencies menu.

Overall, this currency management and multi-currency document handling feature set are valuable for businesses and organizations that deal with international transactions and need to manage financial records in different currencies. It streamlines the process, ensures accuracy, and facilitates transparency in financial dealings.

osFinancials supports a wide range of currencies, with a total of 180 available currency rates. As these currency rates can fluctuate daily, and sometimes even hourly, users must ensure they regularly update and maintain their currency list before processing any documents. This ensures that accurate exchange rates are used when dealing with foreign currencies on sales documents (invoices, credit notes, and quotes) or purchase documents (purchases, supplier returns, and orders).

To account for gains and losses that may arise due to currency rate fluctuations, users are advised to create a specific account called "Currencies - Gains / Loss account" in the Chart of Accounts (Setup → Accounts menu on the Setup ribbon). This account will be used to record the financial transactions related to currency rate fluctuations.

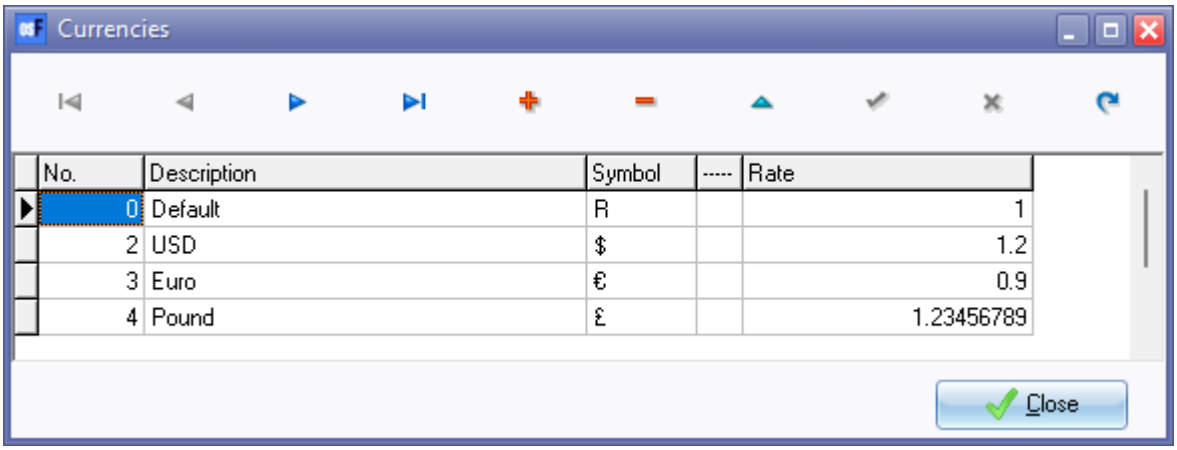
However, it's essential for users to consult their country's tax legislation and any other relevant regulations before engaging in international transactions and handling foreign currencies. This is to ensure compliance with all legal requirements and to understand any specific rules or guidelines that may apply to their particular business and location.

Overall, osFinancials5/TurboCASH5 offers a comprehensive solution for businesses involved in international trade, allowing them to seamlessly process transactions in foreign currencies, keep track of currency rate fluctuations, and accurately record gains and losses through the designated account. It's crucial for users to stay updated on currency rates and comply with applicable regulations to manage their international financial activities effectively.

Add multi-currencies

To add currencies:

1. On the Setup ribbon, select Setup → Currencies.



2. Click on the add icon to create a new record.

3. Enter the description, currency symbol and currency rate.

> *Alt Code Shortcuts for Currency Symbols - Example Works if the Alt+0165 for the Japanese Yen, etc.*

4. Click on the save icon.

> *A currency rate larger than the base currency rate = 1, should translate to a gain on foreign currency.*
>
> *A currency rate smaller than the base currency rate = 1, should translate to a loss on foreign currency.*
>
> *Currency rates supports all the necessary number of decimal digits.*
>
> *In this example, only 1 decimal symbol is used for illustrative purposes.*

> *You may print a report for the currencies on the Reports → Currencies menu (Reports ribbon)*

Delete currencies

To delete the currencies, select the currency and click on the *icon. A confirmation message will be displayed:*

> Delete record?

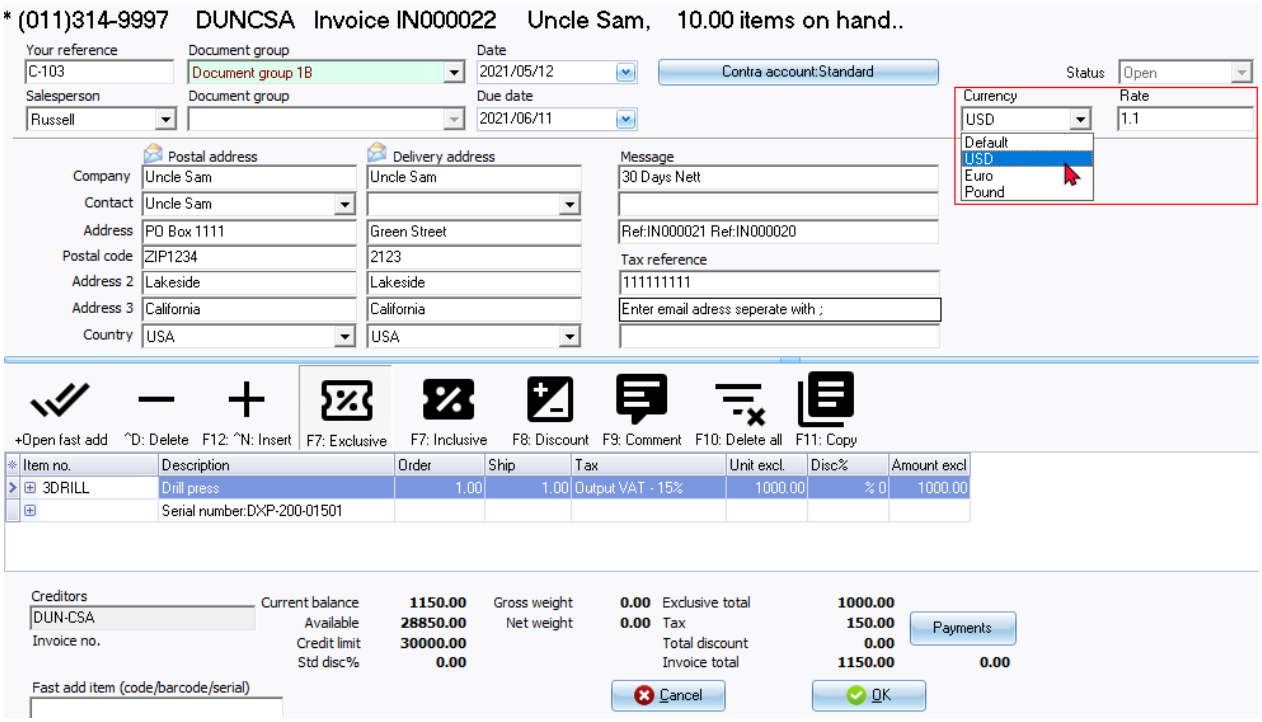
Click on OK to remove the selected currency.

The base currency "No. 0 - Default " cannot be deleted.

Process multi-currency documents

1. Create an Invoice as usual.

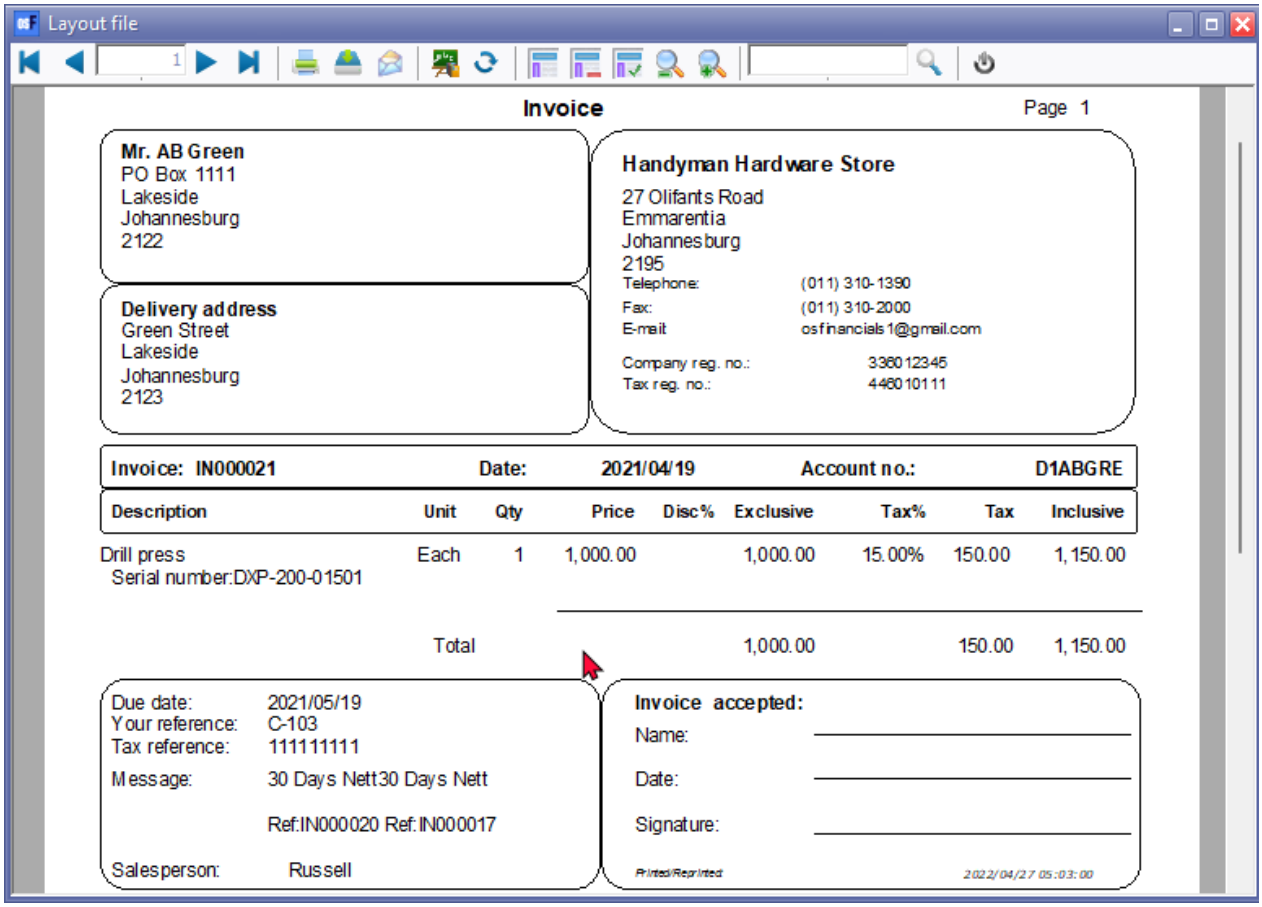
2. Select the Currency.



Once documents (e.g. Invoices are updated (posted to the ledger), you cannot change the currency rate.

You need to make sure that the documents are printed at the correct currency rate before you post (update) the documents to the ledger.

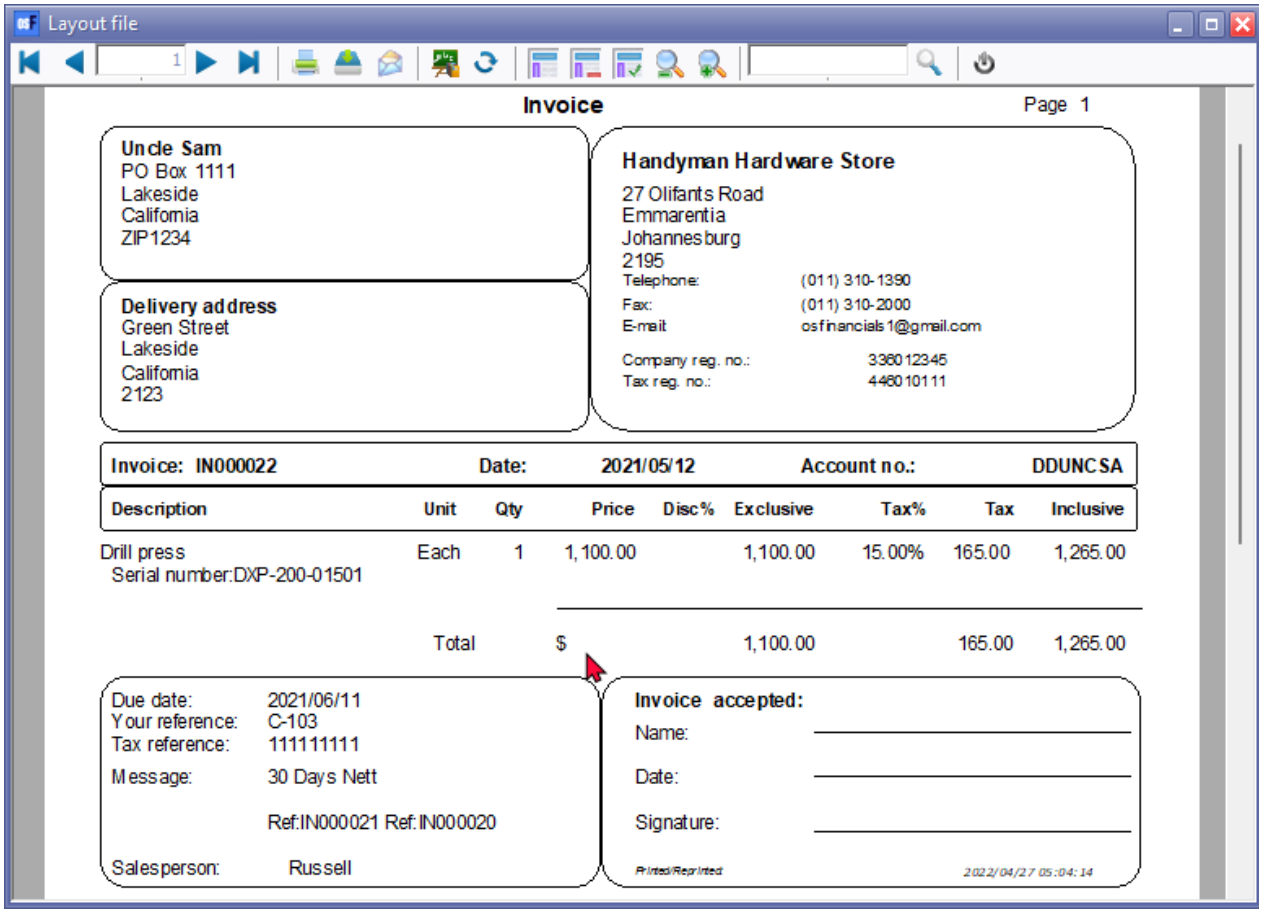
An example, where the Invoice document layout file is printed in the default base currency e.g. ZAR = 1, the amounts will be displayed similar to a normal invoice printed with the base currency or in Set of Books with no currency:



At the bottom of the document layout files,a time stamp (Date and time) indicates when the document is printed or reprinted.

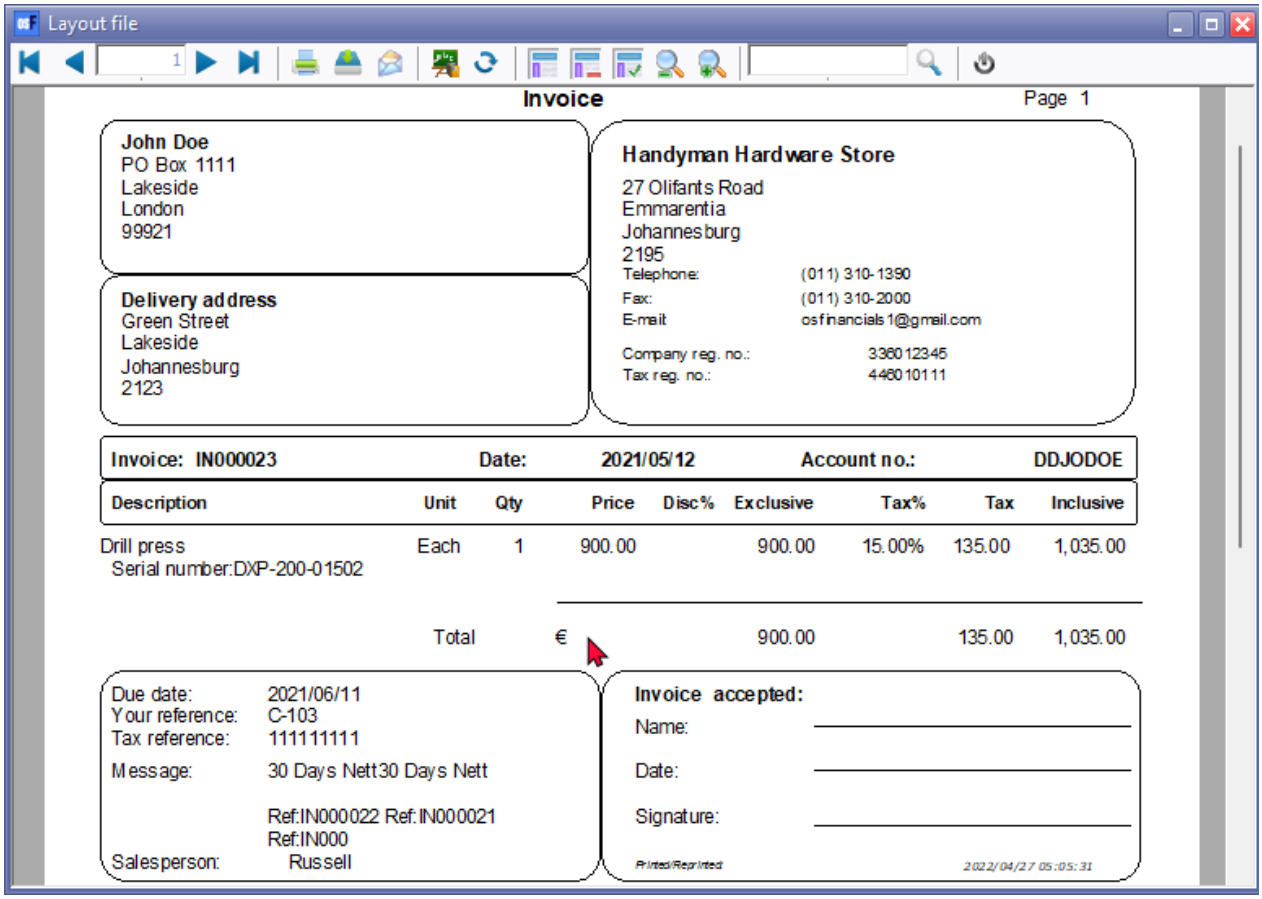
Invoice example printed in USD $

An example, where the Invoice document layout file is printed in the USD currency which is higher than the base currency e.g. ZAR = 1 and USD = 11 for illustration purposes, the amounts and $ currency symbol will be displayed. The normal selling price is calculated with the currency rate as entered (or edited) in the Setup → Currencies (Setup ribbon):



Invoice example printed in Euro €

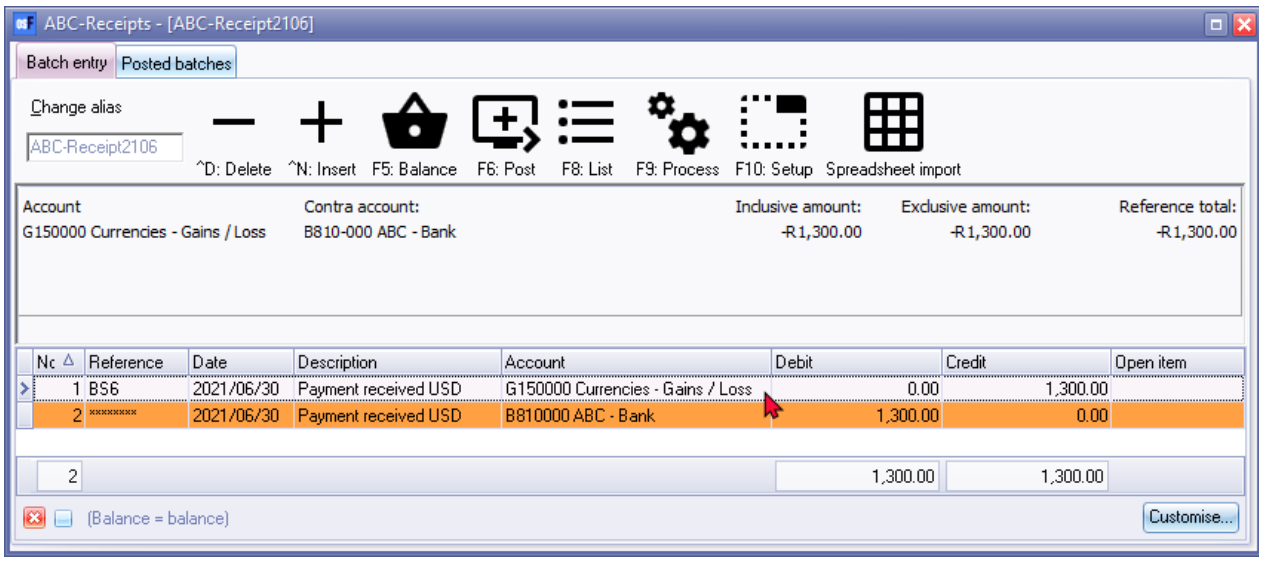
An example, where the Invoice document layout file is printed in the USD currency which is higher than the base currency e.g. ZAR = 1 and Euro = 0.9, for illustration purposes, the amounts and € currency symbol will be displayed. The normal selling price is calculated with the currency rate as entered (or edited) in the Setup → Currencies (Setup ribbon):

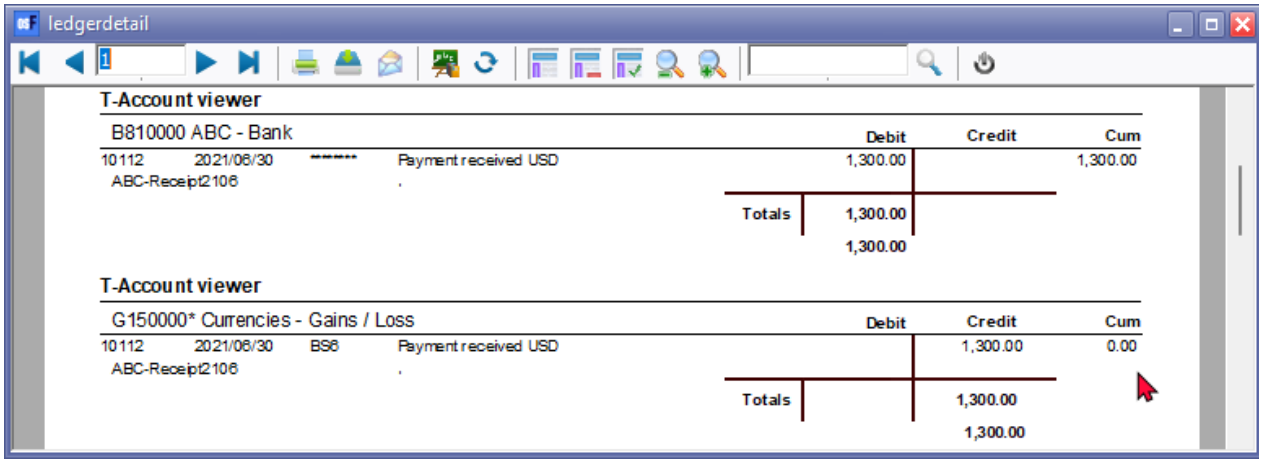


Receiving payment

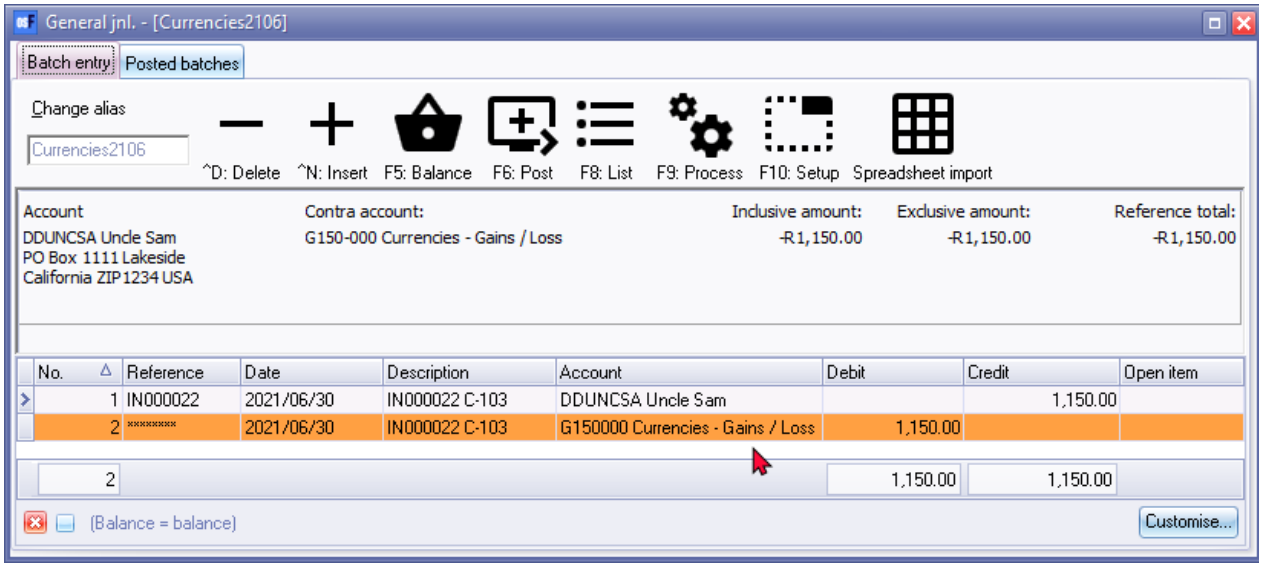
The payment from a different country may differ from the original invoice (e.g. Invoice 1265.00 and payment received 1300.00) due to currency fluctuations.

In this example, the transaction for the payment received is recorded to the Currencies - Gains / Loss account.

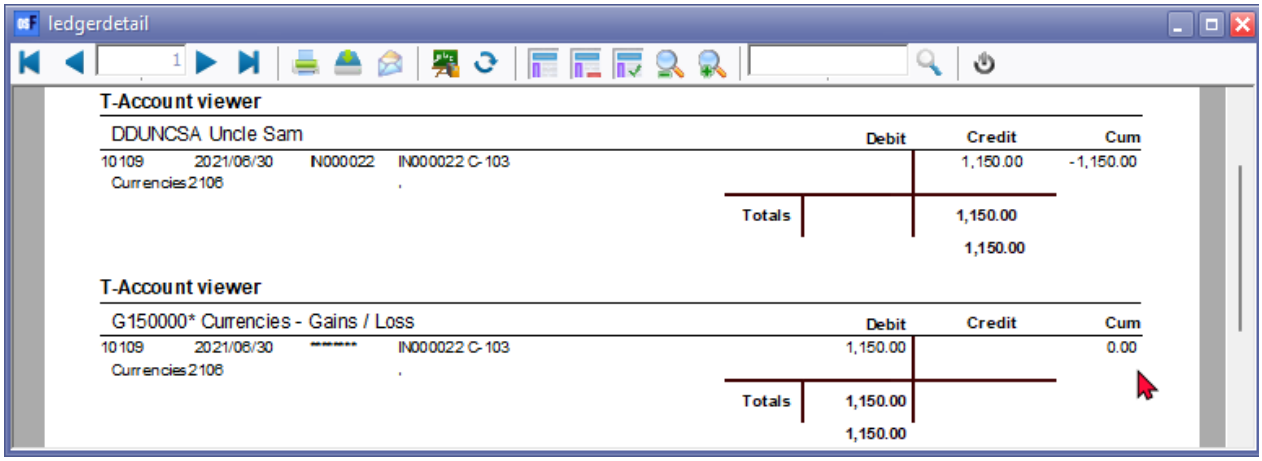




Allocate payment received to the debtor (customer / client) account



The amount received in the bank account, is 1300.00 and the debtor invoice is 1150.00. The outstanding debtors amount for the receipt need to be transferred (allocated) to the debtor (customer / client) account.



Transactions in Currencies - Gains / Loss account

Cost centres

Introduction to Cost Centres

osFinancials5/TurboCASH5 provides support for up to two cost centre groups, allowing you to effectively organize and analyse your financial data based on cost centres within your organization.

With the capability to define and assign cost centre groups in osFinancials5/TurboCASH5, you can categorize your expenses, revenues, and other financial transactions according to different cost centres. This enables you to track and analyse the financial performance of specific departments, projects, locations, or any other divisions within your organization.

By assigning transactions to appropriate cost centres, you can generate reports and statements that provide detailed insights into the financial activities and performance of each cost centre group. This information can be valuable for budgeting, decision-making, and evaluating the profitability or efficiency of different areas within your organization.

Whether you need to allocate costs, track expenses, or analyse financial data across multiple cost centres, osFinancials' support for up to two cost centre groups provides you with the flexibility and capability to effectively manage and analyse your organization's financial information.

The use of Cost centres is optional. By default cost centres are not activated.

Budget and Transactions in this Example

To check and illustrate the use of Cost centres in osFinancials5/TurboCASH5, the budget figures and transactions are based on the following Sets of Books "bin/Tutorials/COST-CENTRES:

1. COST-CENTRES-A - Unposted transactions in batches and documents.
2. COST-CENTRES-B - Posted transactions in batches and documents.

For your convenience, the budget figures, transactions in batches, purchase documents and sales documents are listed.

Budget figures

In this example, the entire budget is allocated split and allocated into the 2 Cost centres (added in "*Cost centre 1*" group), e.g. "*Cost centre A1*" and "*Cost centre B1*".

Total Budget				*Cost centre A1*		*Cost centre B1*	
Account Allocation	*Description*	*Annual*	*Monthly*	*Annual*	*Monthly*	*Annual*	*Monthly*
010-000	*Sales*	*-180 000*	*-15 000*	*-120 000*	*-10 000*	*-60 000*	*-5 000*
100-000	*Cost of sales*	*60 000*	*5 000*	*60 000*	*5 000*

Configuring Cost centres

Before you may use this option in osFinancials5/TurboCASH5, you first need to create cost codes (cost groups, or cost centres).

Once this is done; you may activate these in specific batches (journals) and documents. Processing transactions in batches and/or documents, allows you to select specific cost centres for each transaction.

You may then print various reports for these cost centres (Cost centre 1 and/or Cost centre 2).

Create Groups for Cost centres

You may create up to two Reporting groups for Cost centres. These Cost centres may be activated in batches (journals) and/or documents. If you create only 1 Reporting group for Cost centres, only one (1) Cost centre group will be available in batches and/or documents.

Once the batches and/or documents are posted (updated to the ledger), you may print reports for each Cost centre from the Reports ribbon.

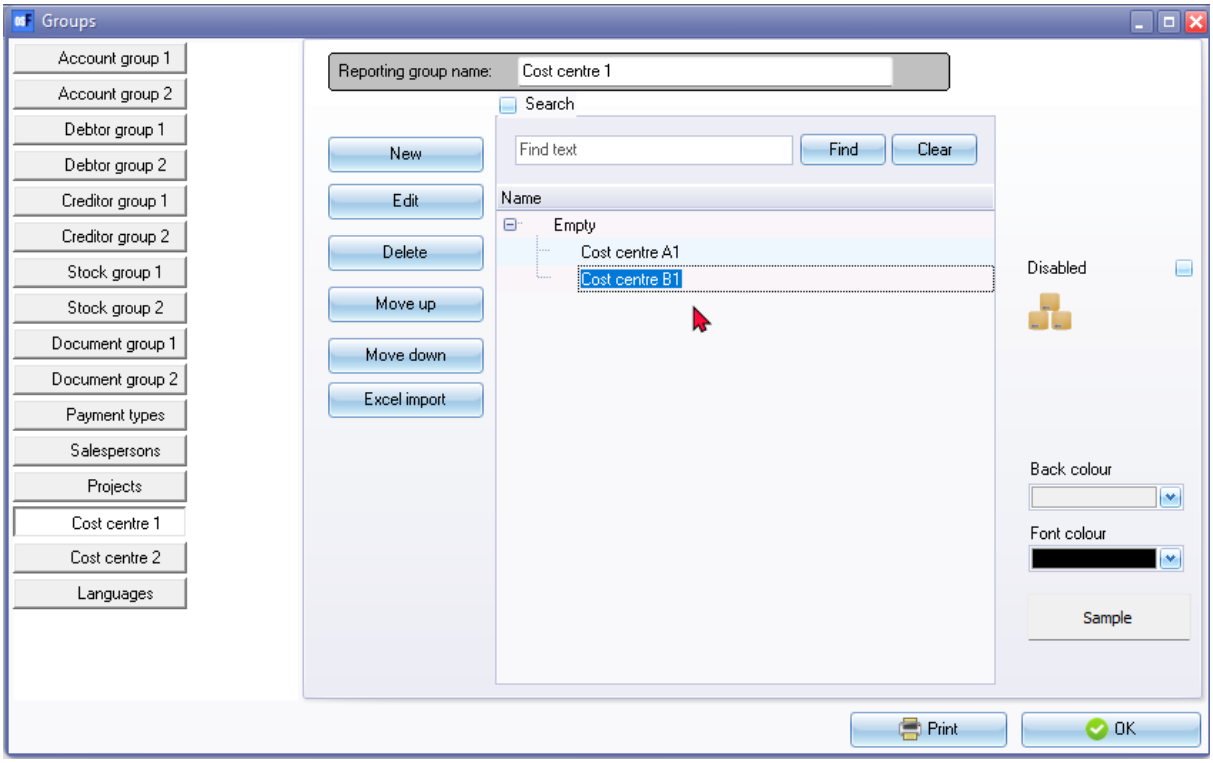
Some examples of reporting groups for cost centres:

1. Departments: You can create reporting groups based on different departments within your organization. For example, you can have reporting groups for Sales, Marketing, Finance, Human Resources, or Operations. This allows you to track and analyse expenses and performance for each department separately.
2. Projects: If your organization undertakes various projects, you can create reporting groups based on different project names or codes. This helps in monitoring the expenses, progress, and profitability of each project individually.
3. Locations: If your organization operates in multiple locations or branches, you can create reporting groups based on different locations. For example, you can have reporting groups for Head Office, Branch A, Branch B, or Regional Offices. This enables you to analyse the expenses and performance of each location separately.
4. Cost types: You can create reporting groups based on different types of costs incurred by the organization. For example, you can have reporting groups for Direct Costs, Indirect Costs, Fixed Costs, Variable Costs, or Overhead Costs. This allows you to analyse the cost structure and identify areas where cost savings can be made.
5. Profit centres: If you use profit centres to evaluate the profitability of different business segments, you can assign cost centres to reporting groups based on the relevant profit centres. This helps in monitoring the expenses and profitability of each profit centre individually.

These examples demonstrate how reporting groups for cost centres in osFinancials5/TurboCASH5 can be used to categorize and analyse cost data. By assigning cost centres to appropriate groups, you can track expenses, monitor performance, and make informed decisions regarding resource allocation and cost management within your organization.

To create groups for cost centres:

1. Click on Setup → Groups (Setup ribbon).
2. Click on the Cost centre 1.
3. Select the "*REPORTING GROUP ROOT*" and click on the New button.
4. Enter the name of your Cost centre (e.g. Cost centre A, Job cost name, etc., according to your requirements).



If you have created a Set of Books from scratch (using the "Create Set of Books (Advanced)" option for Firebird database types or the "Create Set of Books (Advanced)" option for MSSQL database types), the Cost centre 1 and Cost centre 2 groups will not be available.

You need to manually add the Project group to the TYPES table

See topics in this Help file : -

- *Steps after creating the Set of Books (Advanced) - Add missing Groups and Paper types in the Types table.*
- *Reportman - References - Groups.*

5. Repeat the process until you have entered all your Cost centres for "*Cost centre 1*".
6. You may also repeat the process to add Cost centres for "*Cost centre 2*", if applicable.
7. Click on OK to save your changes.

You may click on the Print button to print a list of your Cost centres.

Activate Cost centres

After creating Cost centres, the Cost centres need to activated in batches (journals) and/or documents.

Activate Cost centres in Batches (Journals)

Once you have created the "*Cost centre 1*" and/or "*Cost centre 2*", Cost centres needs to be activated in each batch type (required to process transactions). If activated for a specific Batch type, the "*Cost centre 1*" and/or "*Cost centre 2*" column will be displayed after the "*Account*" column; and (before the "*Tax*" column, if the "*No tax*" option, is not selected on the Standard tab of the "*Options for this batch*" screen) before the "*Debit*" column.

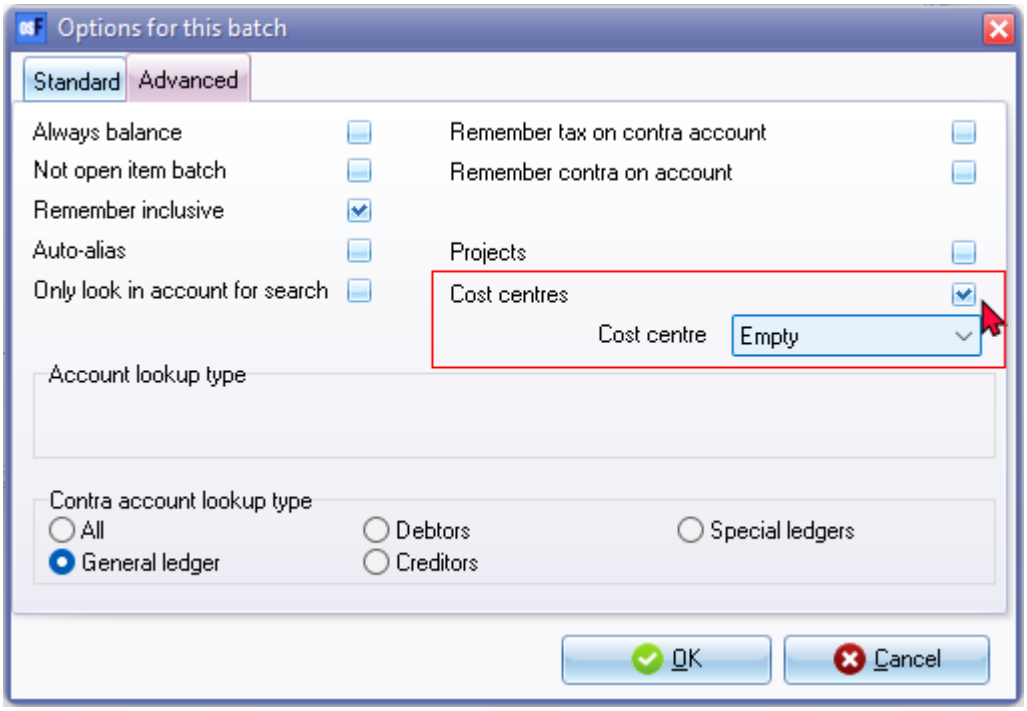
To activate cost centres for a specific batch:

1. Press F2, or click on Batch entry on the Default ribbon.
2. Select the specific Batch type, in which you need to activate Cost centres.
3. Click on the F10: Setup icon to set the Options for the selected batch.

You may also:-

- *Click on the Batch types on the Setup ribbon.*
- *Select the Batch type and click on the Edit button to access the "Options for this batch" screen.*

4. Click on the Advanced tab.

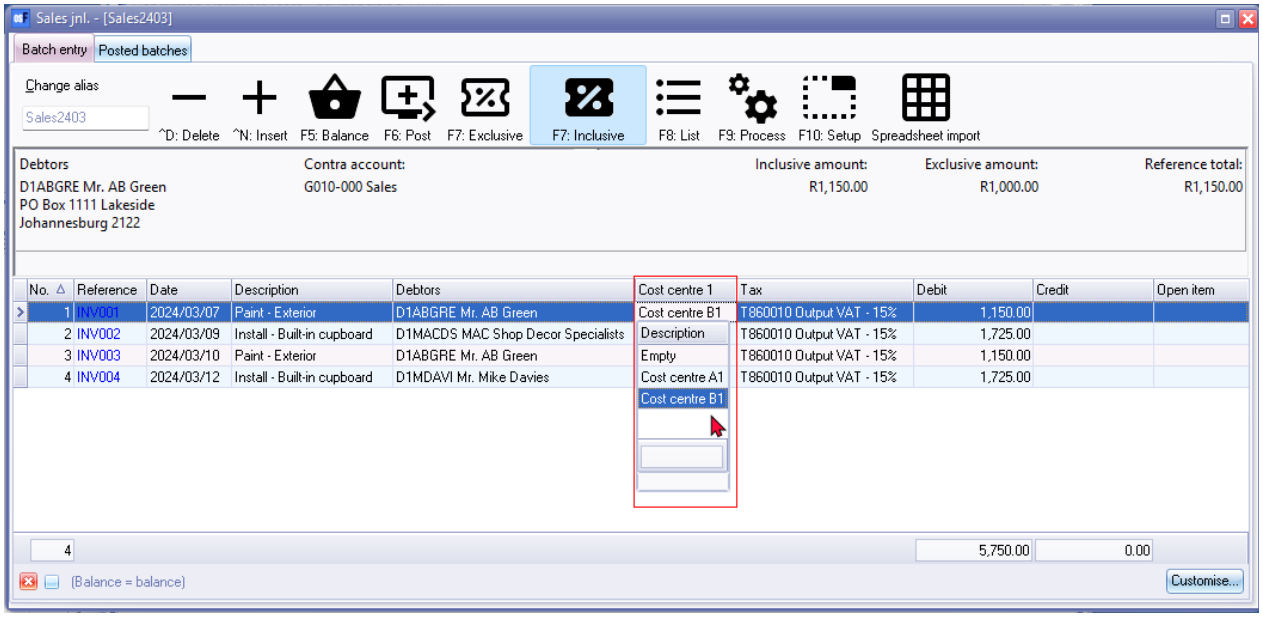


5. To activate the cost centres, tick the "*Cost centres*" tick box.
6. In the "*Cost centre*" field, you may select the default Cost centre. This will auto-complete (auto-select) the cost centre column with the default cost centre for this batch. When processing transactions, you

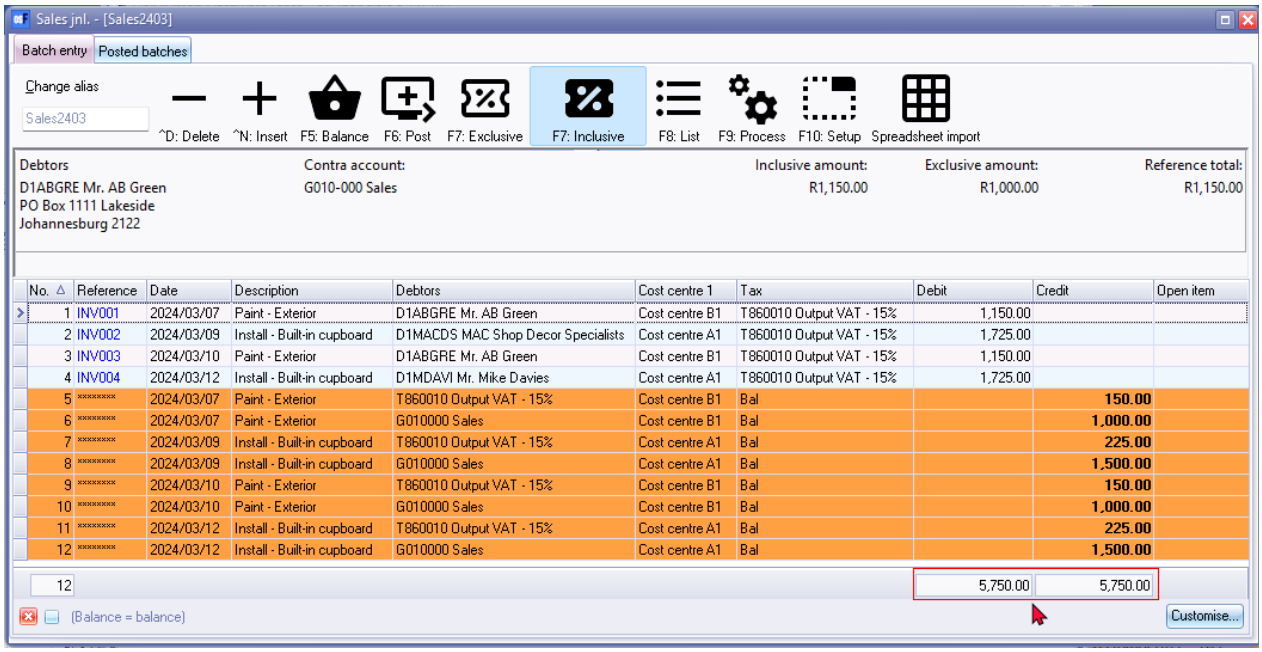
may select a different cost centre, if necessary.

7. Click on the OK button. The selected batch entry screen will be opened and the "*Cost centre 1*" and/or "*Cost centre 2*" column will be inserted in the batch.

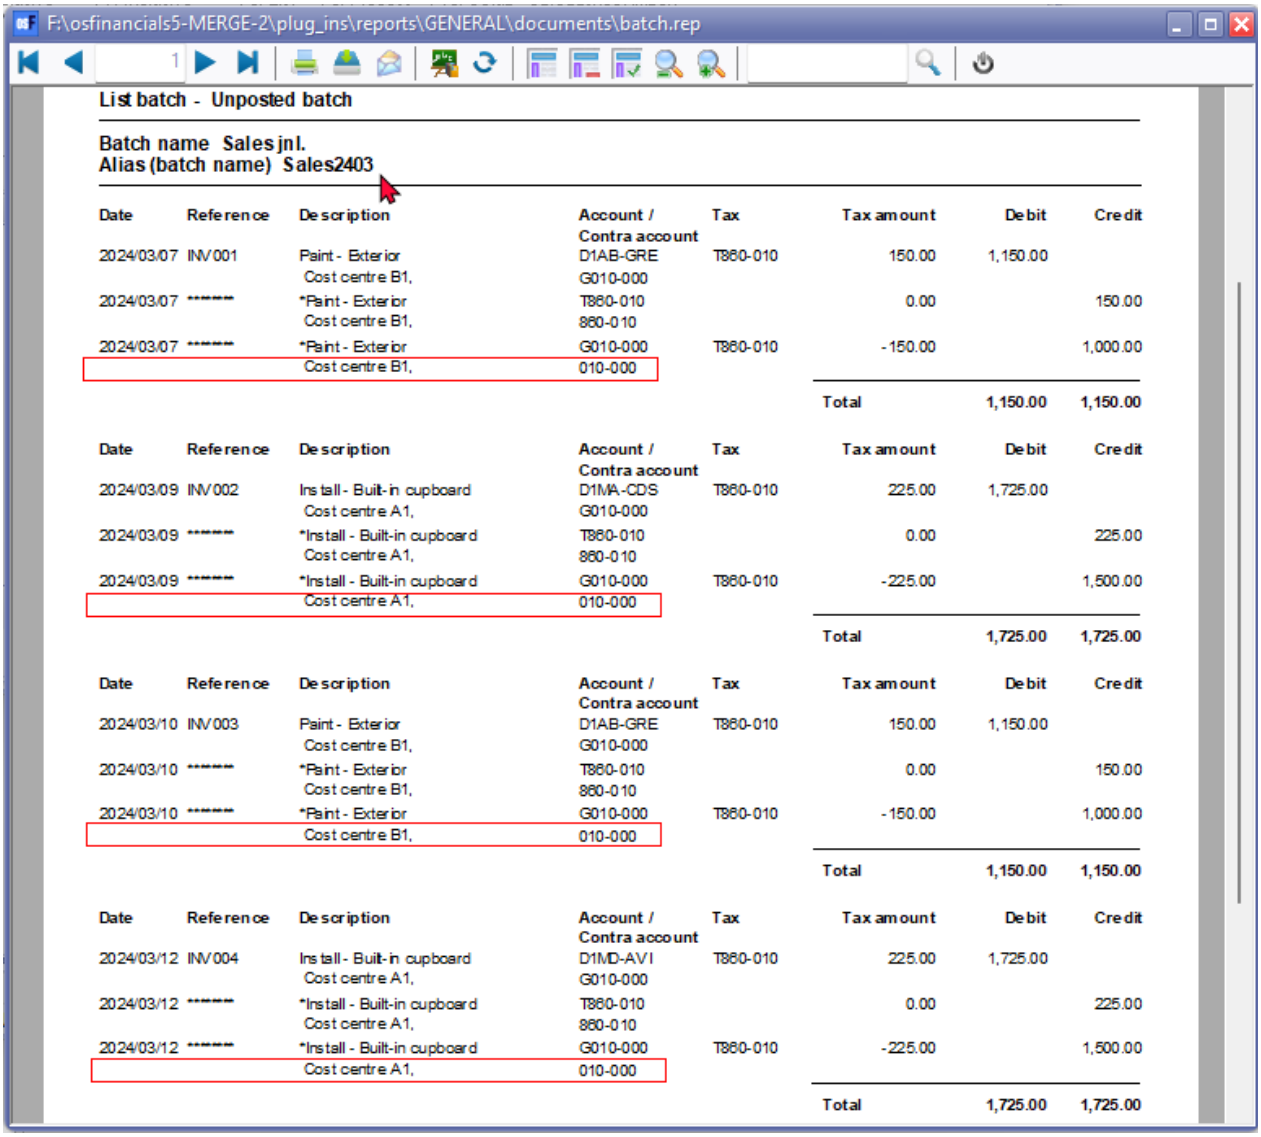
> *To deactivate Cost centres in a specific batch, simply repeat this process and remove the tick in the "Cost centres" tick box.*



If cost centres have been selected, in "*Cost centre 1*" column, balancing entries will be created for "*Cost centre 1*", as per this example.



Click on F8:List to print a list of the transactions.



The selected cost centre, is listed underneath the "*Description*" of each transaction entered. It is also displayed underneath the balancing entry (indicated by 8 asterisks ********) for each transaction.

Activate Cost centres in Documents

Once you have created "*Cost centre 1*" and/or "*Cost centre 2*", Cost centres needs to be activated in Documents (to process documents for Cost centres). If activated, the "*Cost centre 1*" and/or "*Cost centre 2*" column will be displayed after the "*Account*" column; and (before the "*Tax*" column).

> *Cost centres are globally activated for all document types (i.e. purchase documents (purchases, supplier returns and orders) and sales documents (invoices, credit notes and quotes)).*

This will insert an additional lookup list when selecting the stock items for transactions.

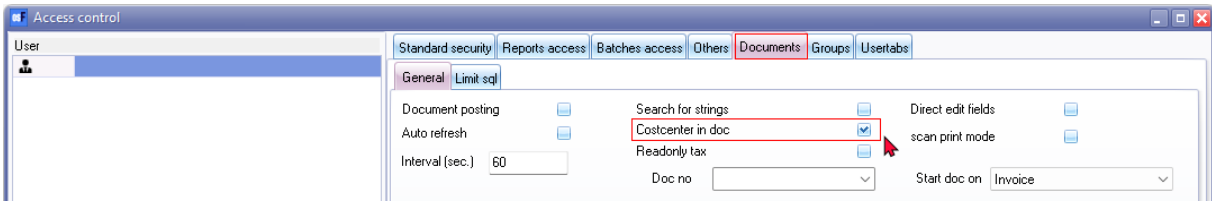
To activate Cost centres for documents:

1. Click on Setup → Access Control (Setup ribbon).

2. Click on the Documents tab.

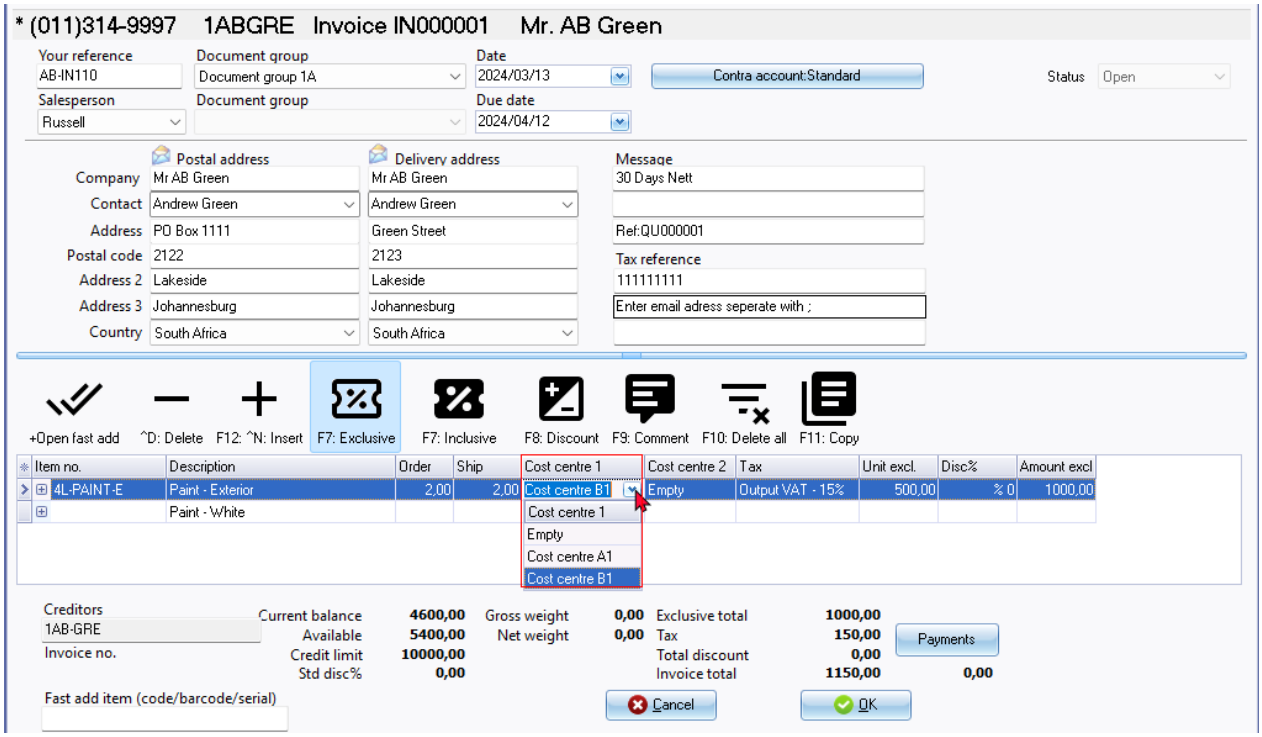
3. Select (tick) the Cost centre in documents ("*Costcenter in doc*") field.

4. Click on the Apply button.



5. Click on the Close button. "*Cost centre 1*" column, will be added globally to all documents.

This will add the Cost centre column in the document lines.



> *To deactivate Cost centres for all document types, simply repeat this process and remove the tick in the Cost centre in documents ("Costcenter in doc") tick box.*

Default Cost Centre Setting for Stock Items

If "*Cost centre 1*" and/or "*Cost centre 2*", have been created, you may set the default "*Cost centre*" each of your stock items.

This will auto-complete (auto-select) the "*Cost centre 1*" column with the default cost centre, when selecting

the stock item, while processing documents. You may select a different cost centre, if necessary.

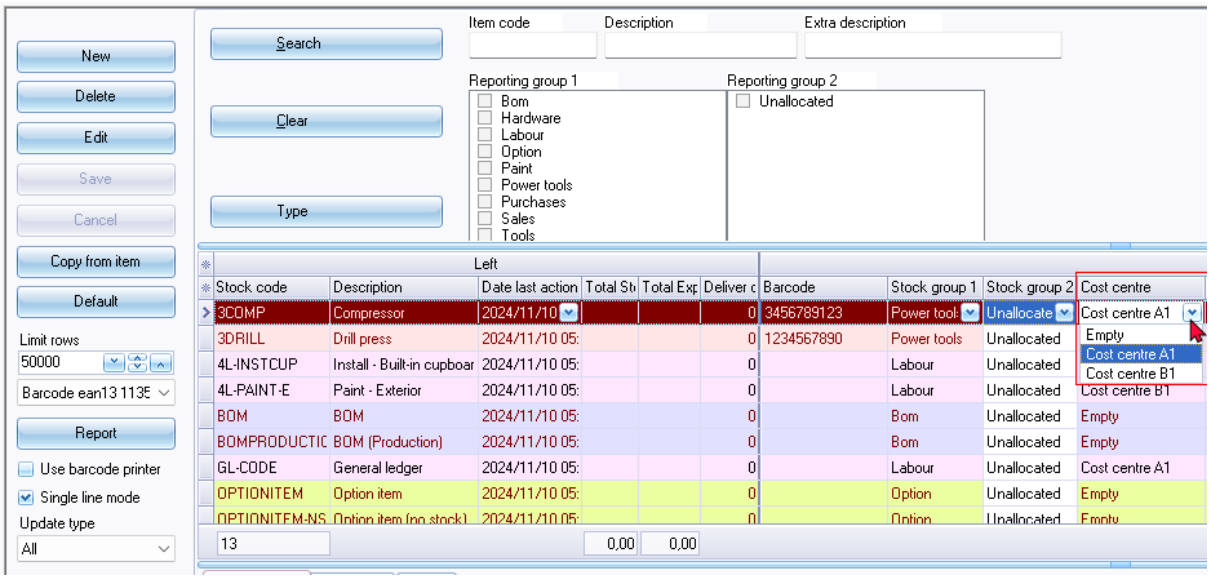
Link default Cost centre to Stock items on the Stock item list screen

A "*Cost centre*" column, will automatically be inserted (the very last column) in the Stock items list screen. Drag the "*Cost centre*" column to the position, where it is comfortable for you to work with.

In this example, the "*Cost centre*" column is dragged to the left of "*Stock group 1*" column.

To set default Cost centres for Stock items:

1. Click on Stock items (**Default** ribbon).
2. Select a Stock item.
3. Click on the "*Cost centre*" column.



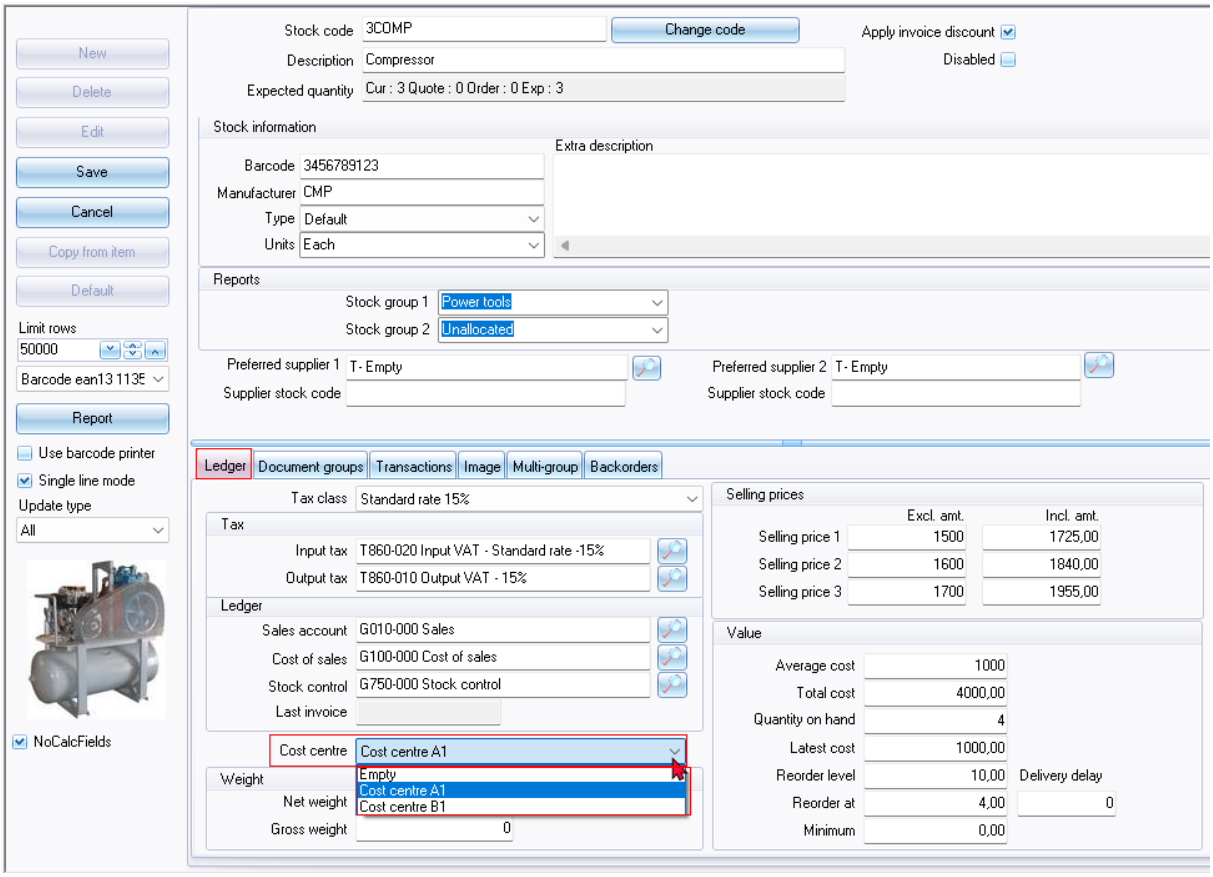
4. In the "*Cost centre*" column, select the default Cost centre from the list.
5. Click on the Save button to save the changes to the stock item.
6. Repeat the process until you have linked all your stock items to Cost centres.

Link default Cost centre to Stock items on the Ledger tab

The linking of stock items to Cost centres, may also be set on the "*Ledger*" tab.

To set default Cost centres for Stock items:

1. Click on Stock items (**Default** ribbon).
2. Select a Stock item.
3. Click on the Ledger tab.



4. In the "*Cost centre*" field, you may select the default Cost centre from the list.

5. Click on the Save button.

Add / Edit Budgets for Cost centres

Once the Cost centres are activated, you may add (enter / edit) your budget figures for Cost centres.

For the purpose of this example, enter the following budget:In this example, the entire budget is allocated split and allocated into the 2 Cost centres (added in "*Cost centre 1*" group), e.g. "*Cost centre A1*" and "*Cost centre B1*".

Total Budget				*Cost centre A1*		*Cost centre B1*	
Account Allocation	*Description*	*Annual*	*Monthly*	*Annual*	*Monthly*	*Annual*	*Monthly*
010-000	*Sales*	*-180 000*	*-15 000*	*-120 000*	*-10 000*	*-60 000*	*-5 000*
100-000	*Cost of sales*	*60 000*	*5 000*	*60 000*	*5 000*		
GROSS PROFIT		*120 000*	*10 000*	*-60 000*	*-5 000*	*-60 000*	*-5 000*

200-000	*Bank charges*	*600*	*50*	*600*	*50*		
210-010	*Fuel & oil*	*1 200*	*100*	*1 200*	*100*		
210-020	*Maintenance*	*2 400*	*200*	*2 400*	*200*		
210-030	*Repairs*	*1 200*	*100*	*1 200*	*100*		
220-000	*Rent*	*6 000*	*500*	*2 400*	*200*	*3 600*	*300*
225-000	*Salaries and wages*	*7 200*	*600*	*3 600*	*300*	*3 600*	*300*
TOTAL EXPENSES		*18 600*	*1 550*	*11 400*	*950*	*7 200*	*500*
NET PROFIT		*-101 400*	*-8 450*	*-48 600*	*-4 050*	*-52 800*	*-4 400*

The entire budget is allocated split and allocated into the 2 Cost centres (added in "*Cost centre 1*" group), e.g. "*Cost centre A1*" and "*Cost centre B1*".

Enter Budget figures for Cost centres

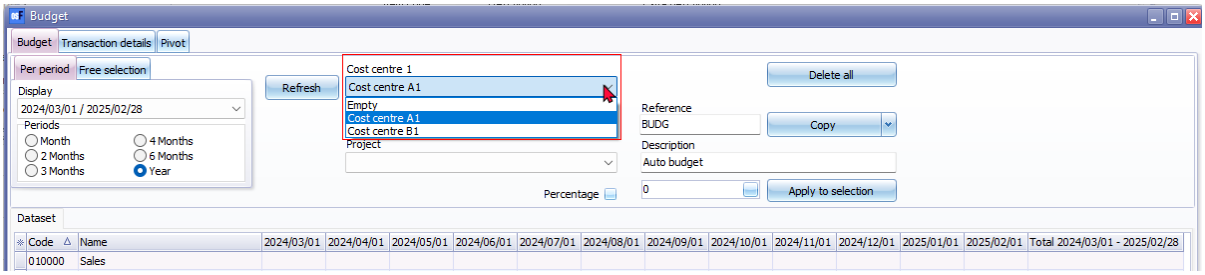
Budgets for Cost centres may also be added / edited and deleted on the on Setup → Accounts (Setup ribbon).

To Add / Edit Budgets for Cost centres:

1. On the Reports ribbon, select Budgets.
2. Select the period for which you need to enter the budget figures.
3. Select "*Cost centre A1*" or "*Cost centre B1*" in "*Cost centre 1*" column.
4. Click on the Refresh button to populate any budget figures for the selected period.

   If you wish to delete any existing budget figures for a selected cost centre for the selected period, click on the Delete all button.

5. The "*Reference*" field is by default set to "*BUDG*". Add your own reference to suit your requirements.
6. The "*Description*" field is by default set to "*Auto-budget*". Add your own description to suit your requirements.



7. Select the Account (or sub-account) and a periods to enter the budget figures.

> *To add a budget figure to more than one period (e.g. month):*
>
> - *Enter the amount.*
> - *Select the account and period in a row.*
> - *Press the Shift key and use your mouse to select multiple columns.*
> - *Click the Apply to selection button.*

8. Enter the amount for the budget (in this example the monthly amount is entered).

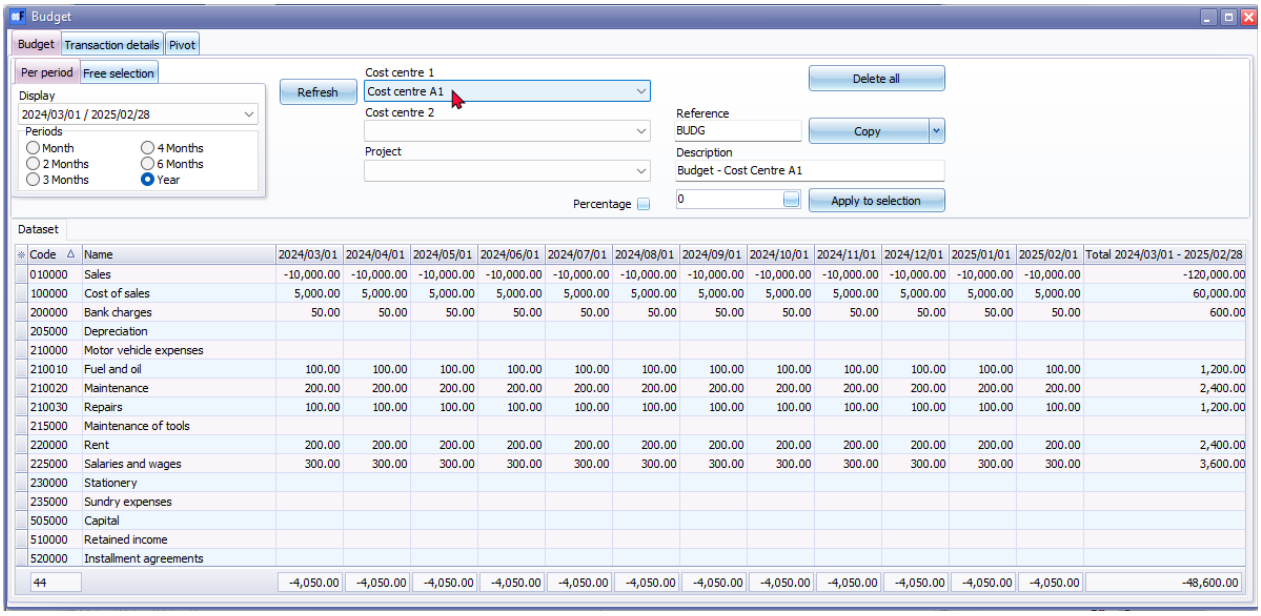
> *For credit budget figures (e.g. Sales) you need to prefix the amount with a negative "-" sign.*

9. Click on the Apply to selection button. A confirmation message is displayed:

> "Add amount to selection?"

10. Click the Yes button to add the amounts to the selected periods.
11. Repeat the process to add all the budget figures for the selected "*Cost centre A1*".
12. Select "*Cost centre A2*" to enter the budget figures.

After all the budget figures for "*Cost centre A1*" for the financial year, the budget should display as follows:



Code	Name	2024/03/01	2024/04/01	2024/05/01	2024/06/01	2024/07/01	2024/08/01	2024/09/01	2024/10/01	2024/11/01	2024/12/01	2025/01/01	2025/02/01	Total 2024/03/01 - 2025/02/28

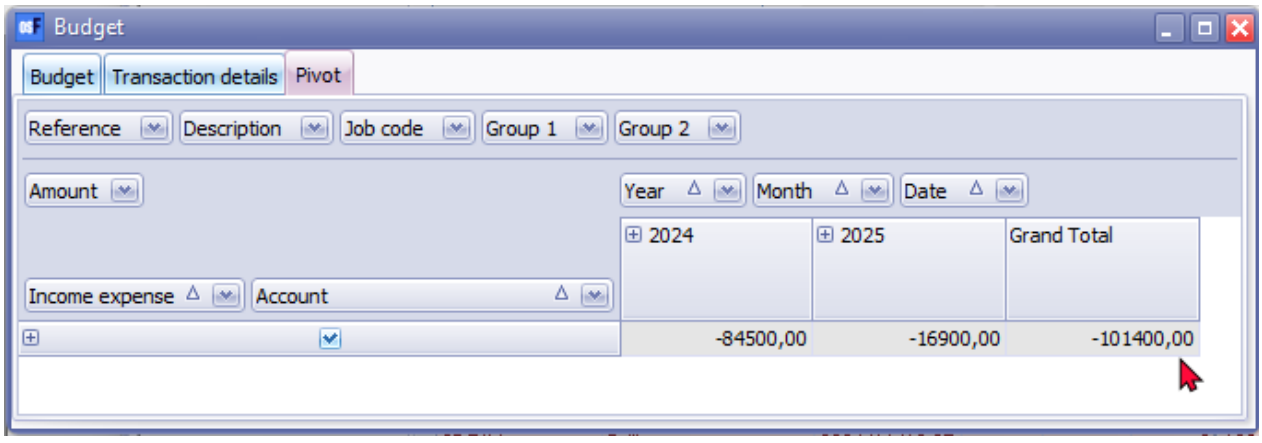
The Reference ("*BUDG*") and Description ("*Auto budget*") columns displays your own description as entered before Apply to selection button.

You may click on the headings to sort the columns in an ascending or descending sequence.

Pivot table view of the budget figures

The Pivot tab, by default, summarises the budget totals for the Income and Expense (Income statement) accounts and Capital, Assets and Liabilities (Balance sheet) accounts for which budget figures were entered for the selected period or dates.

In this example, the budget figures were only captured for Income and Expense accounts.

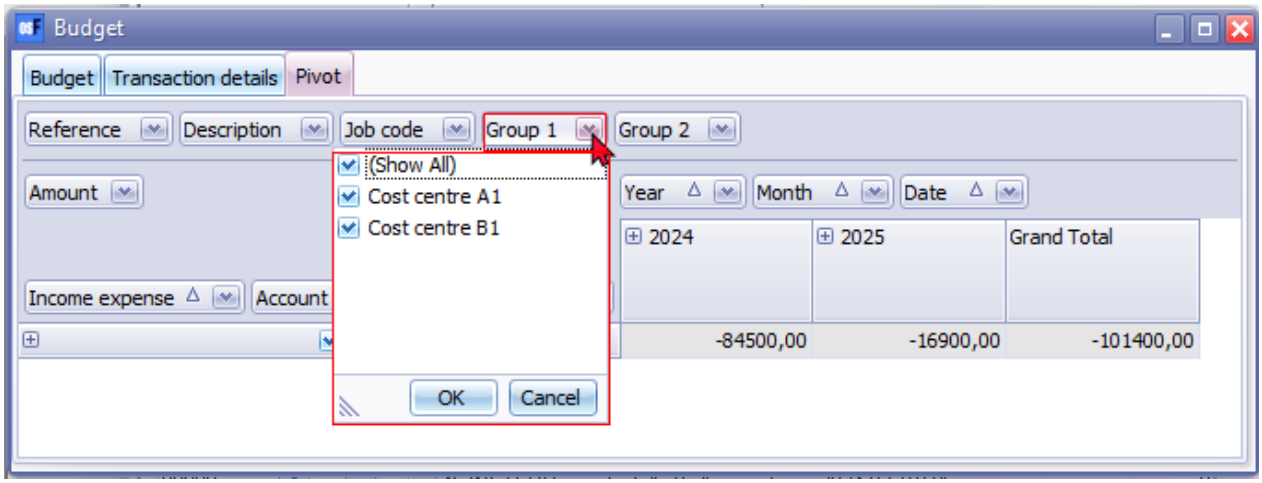


In this example, the financial year starts on 1 March 2024 and ends on 28 February 2025. The financial year is, by default, split into to calendar years, e.g.:

2024 – 1 March 2024 to 31 December 2024 (Months 3 to 12 for the 2024 calendar year)

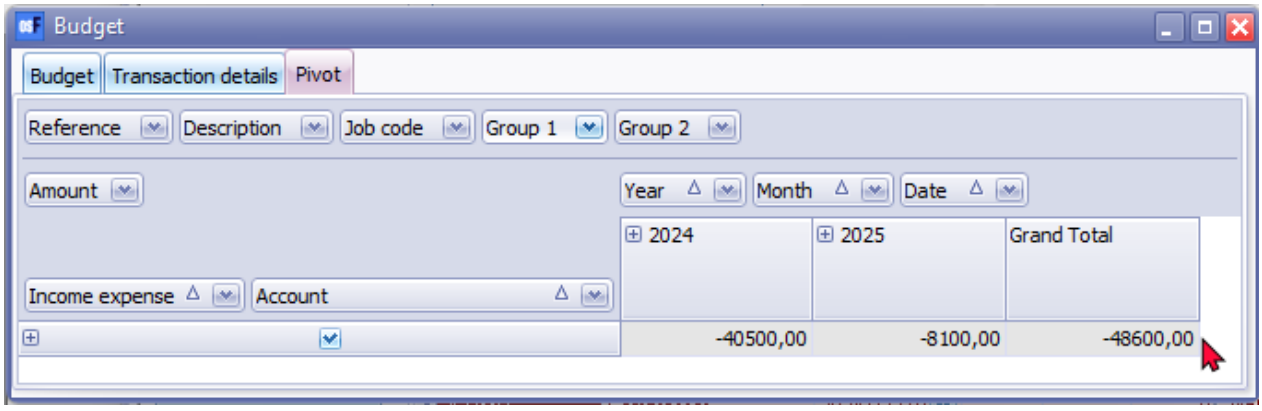
2025 – 1 January 2025 to 28 February 2025 (Months 1 to 2 for the 2025 calendar year)

This includes the entire budget figures which includes all cost centres. To view the Budget figures for a specific cost centre only, you may click on the filter icon on "*Group 1*" field list to select a cost centre.

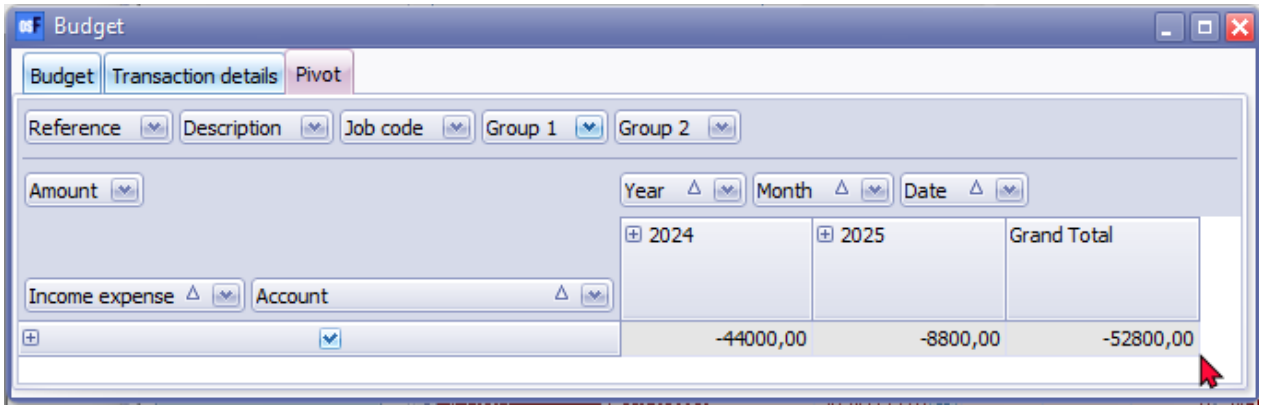


If you have more than two cost centres, you may select more than one cost centres to be included and which to exclude.

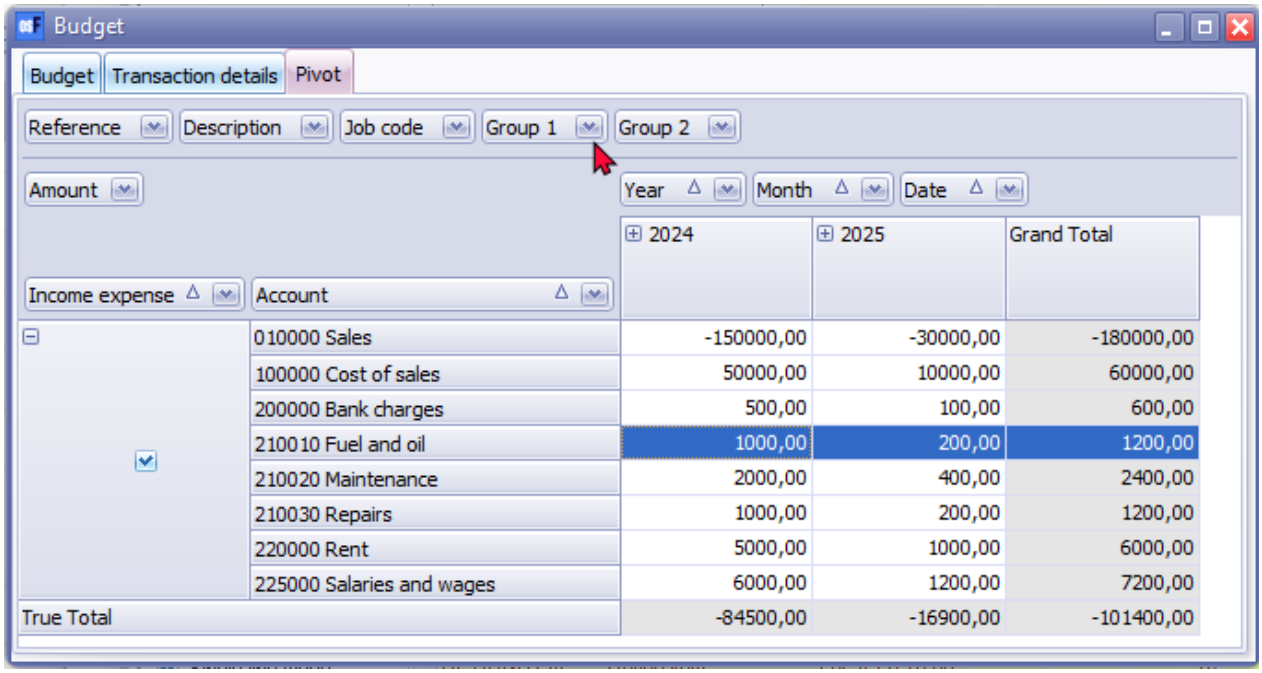
After all the budget figures for "*Cost centre A1*" for the financial year, the budgeted net profit, should display as follows:



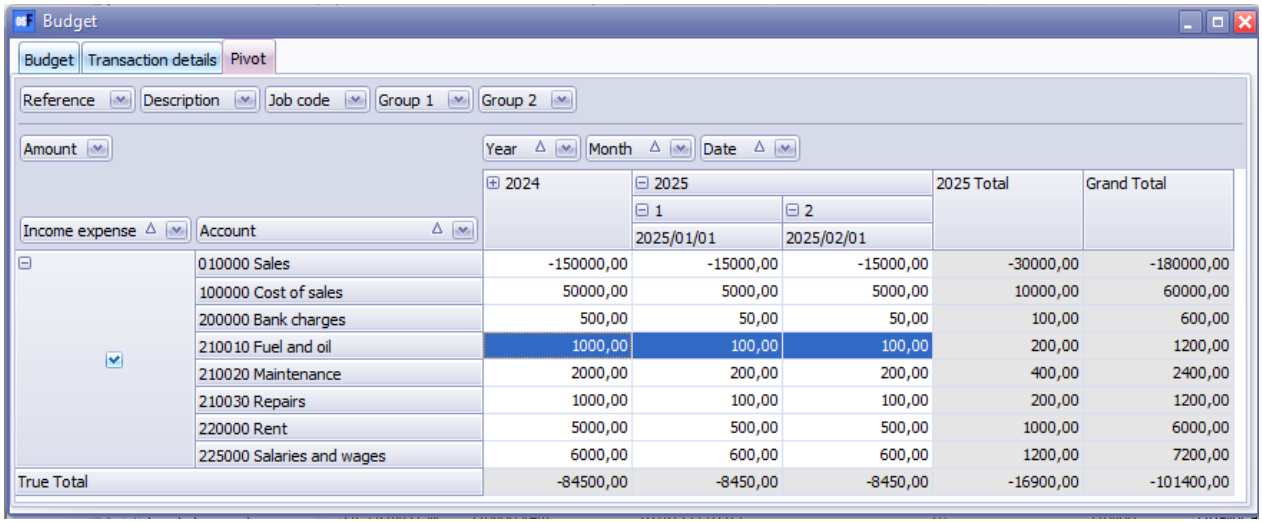
After all the budget figures for "*Cost centre B1*" for the financial year, the budgeted net profit, should display as follows:



Click on the ⊞ icon to list the budget totals for the accounts. The icon will change ⊟ to list totals for each account for which budget figures are entered.



Budget with 2025 calendar year expanded for all cost centres



The filter options is as follows:

Filter Area:

1. Reference - The default Reference "*BUDG*" or your reference as entered on the options section of the Budget tab. Select the available reference(s) on the list as filter options, as required.
2. Description - The default Description "*Auto budget*" or your description as entered on the options section of the Budget tab. Select the available description(s) on the list as filter options, as required.
3. Job code - (Projects) - If budgets were entered or processed for Projects, the project code(s) may be selected as filter options.
4. Group 1 – All cost centres will by default be selected. Since budgets were entered entered for Cost centres (Cost centre 1), the Cost centres for Cost centre 1 may be selected as filter options.
5. Group 2 - If budgets were entered entered for Cost centres (Cost centre 2), the Cost centres for Cost centre 2 may be selected as filter options.

Data Area:

6. Amount - The total debit amounts a credit amounts (prefixed by a - (minus sign)) will be listed. Select the available amount(s) on the list as filter options, as required.

Row Area:

7. Income expense - The options is as follows:
    - True = Income and Expense (Income statement) accounts. The totals of the Income and Expense (Income statement) accounts will be displayed as True Total.
    - False = Capital, Assets and Liabilities (Balance sheet) accounts. The totals of the Capital, Assets and Liabilities (Balance sheet) accounts will be displayed as False Total.
8. Account - All accounts will be listed by Account code and description. Select the available account(s) on the list as filter options, as required.

Column Area:

9. Year - The budget totals will be listed for each calendar year. For example, if your financial year starts on 1 January 2022 and ends on 31 December 2022, only one (1) financial year will be listed, i.e. 2022. In this example the financial year starts on 1 March 2022 and ends on 28 February 2023, the totals will be listed for 2022 and 2023. Select the year on the list as filter options, as required.
10. Month - Period 0 to 12 will be listed if your Reporting dates are set for a 12 periods (Setup → Reporting dates (Setup ribbon), the period numbers will be listed. Select the period (month) on the list as filter options, as required.
11. Date - All the dated for the selected period or dates selected on the options section of the Budget

tab, will be listed. Select the available date(s) on the list as filter options, as required.

Printing Budget listing figures for Cost centres

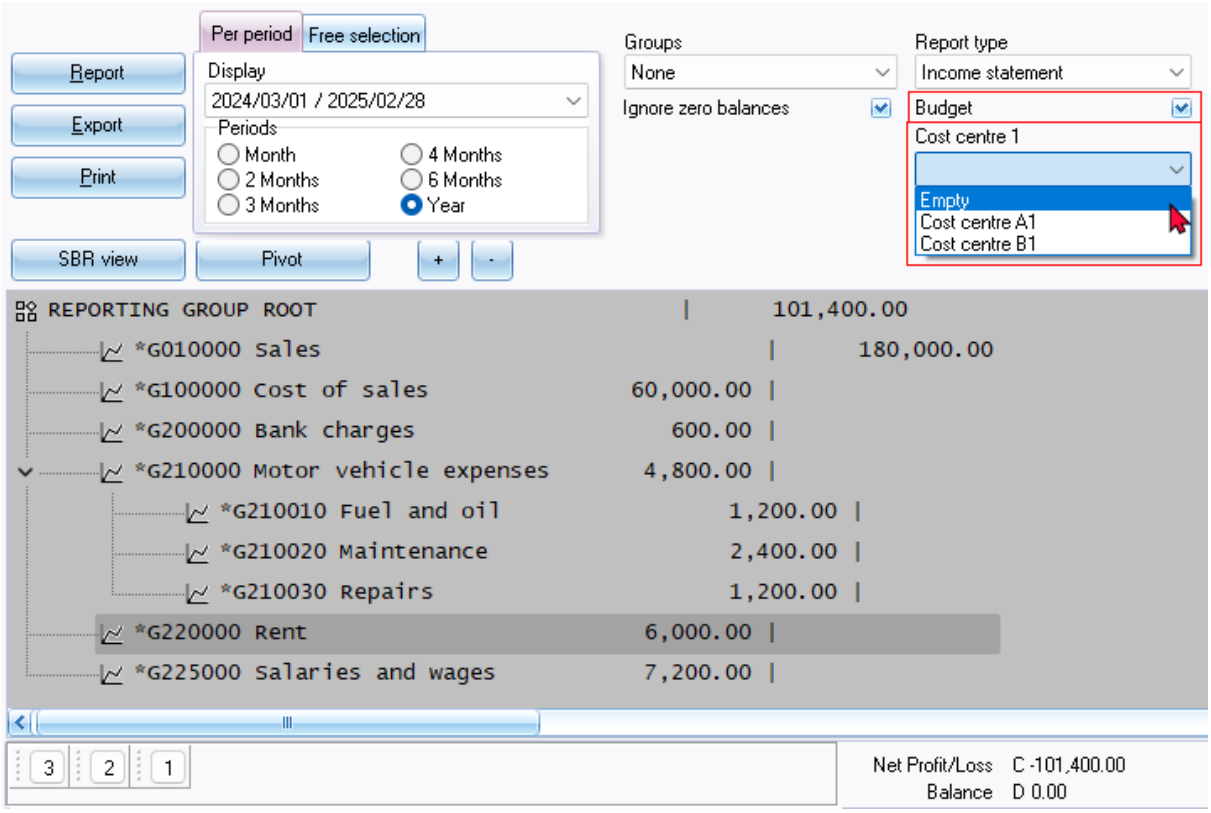
Once the budget figures is entered in Budgets (Reports ribbon) or Setup → Accounts (Setup ribbon), the budget figures (Budget listing) may be printed in the Trial balance, Income statement, Balance sheet and Standard column balances report types.

The "*Empty*" option, will print the full budget for the entire Set of Books (this includes the budget for both "*Cost centre A1*" and "*Cost centre B1*", if Cost centres were selected, when entering Budgets).

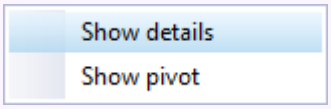
You may select to list only the budget for "*Cost centre A1"* or "*Cost centre B1*".

To view, print and analyse budget listing:

1. On the Reports ribbon, select Ledger analyser 1.



The buttons 1, 2, etc. is added when you launch the T-Account viewer or the Pivot table double-click or right-click on an account in the Ledger analyser 1 / 2.



2. Select the "*Budget*" option (tick).

> *This option is available for the Income statement, Trial balance and Balance sheet report type.*

3. Select the period from 2024/03/01 to 2025/02/28 to view the annual budget figures.

> *Select the period from 2024/03/01 to 2024/03/31 to view the budget figures for a specific period, e.g. "March 2024".*

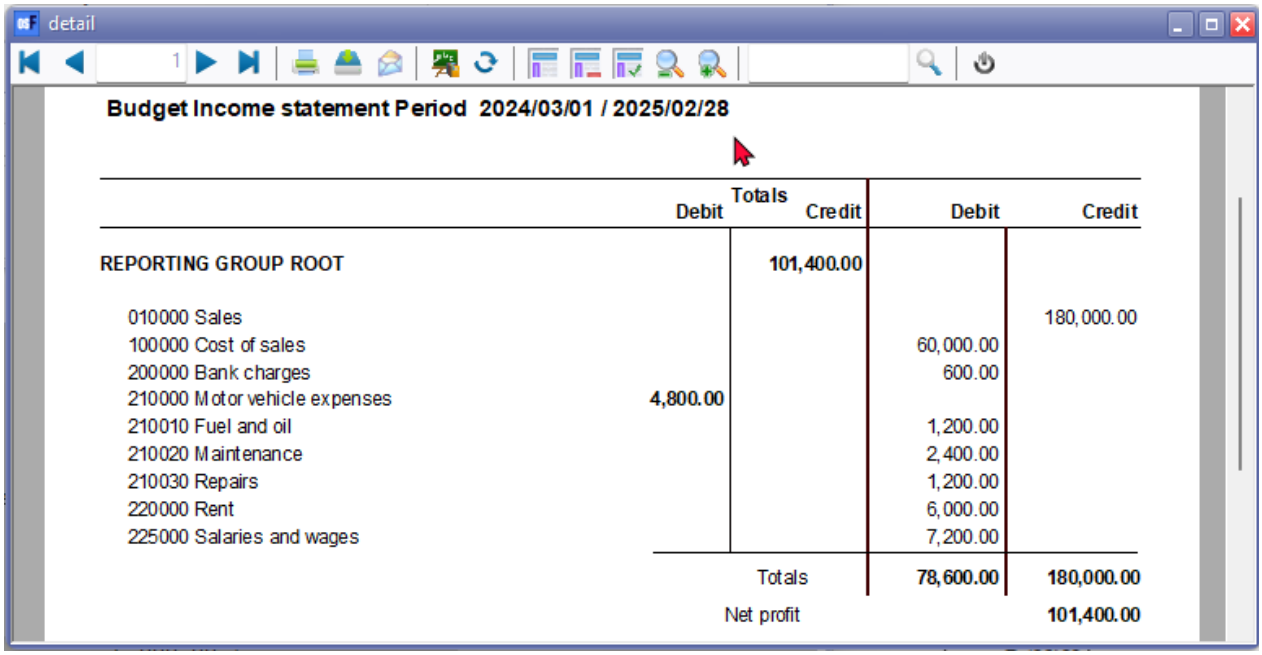
4. Click on the Report button to refresh and generate the budget figures.

> *To view the budget figures for sub-accounts, e.g. click on the ⊞ icon next to G210-000 Motor vehicle expenses. This will display the figures for each sub-account.*

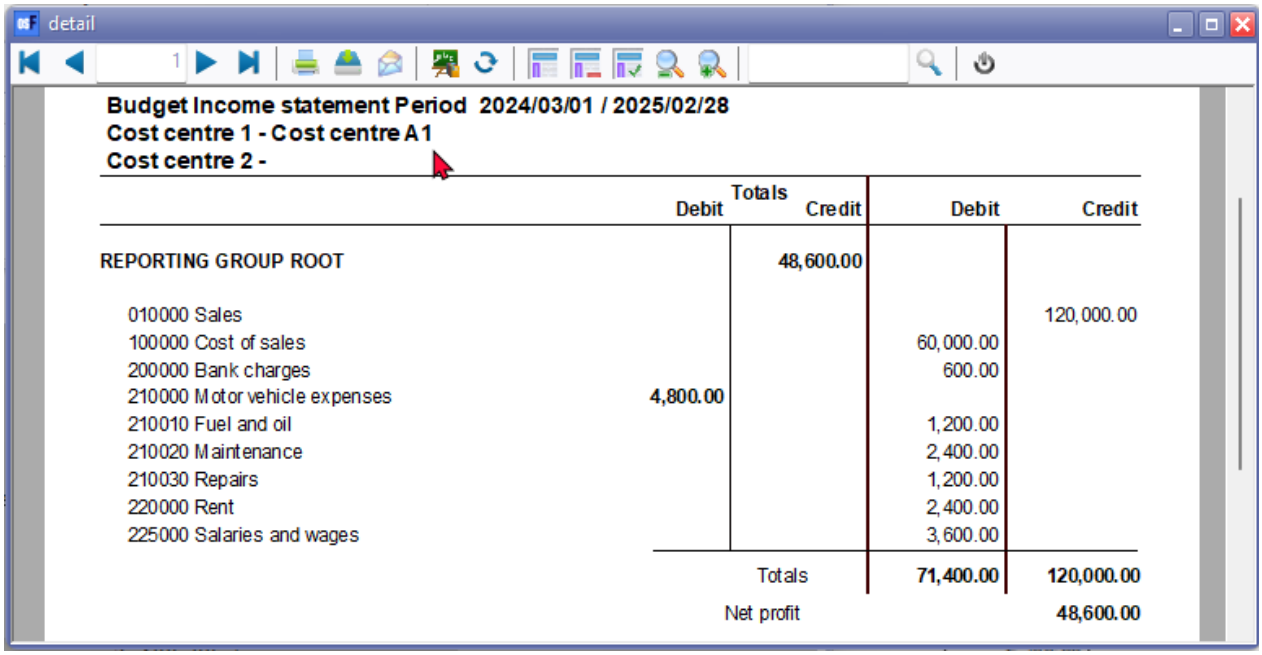
5. If any of these budget figures need some adjustment, click on Budgets (Reports ribbon) or on (Setup → Accounts (Setup ribbon); and select the applicable accounts and edit or enter the necessary figures.

6. Click on the Print button.

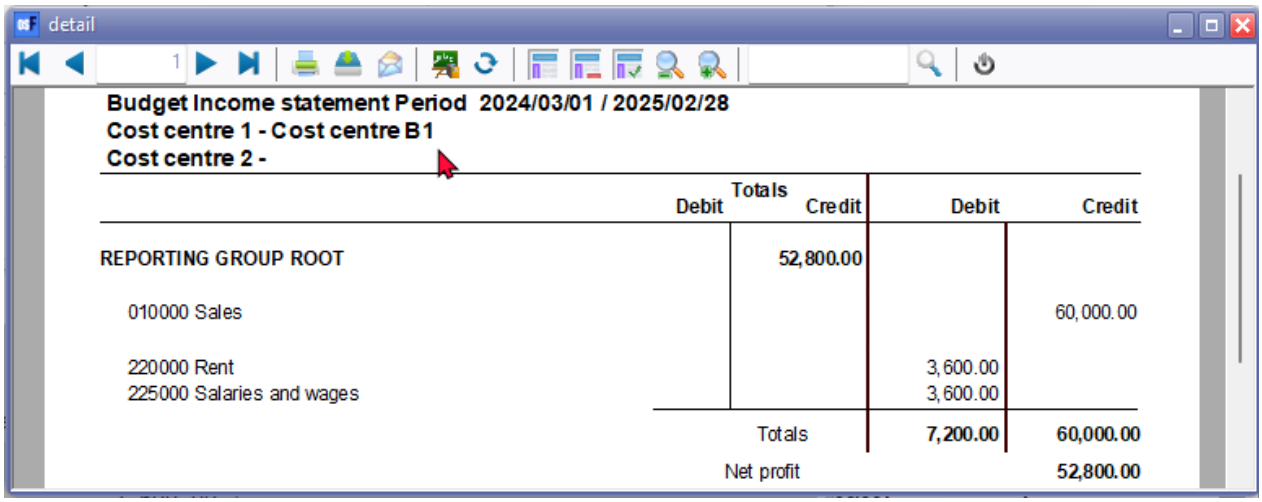
An example of the "*Income statement*", listing the total budget (including "*Cost centre A1*" and "*Cost centre B1*") for the financial year, is as follows:



An example, of the "*Income statement*", listing "*Cost centre A1*" budget for the financial year, is as follows:



An example, of the "*Income statement*", listing "*Cost centre B1*" budget for the financial year, is as follows:



The "Net profit" for the monthly budget figures; for the financial year, is as follows:

Total Budget (including "Cost centre A1" and "Cost centre B1") *101 400*

Only "Cost centre A1" *48 600*

Only "Cost centre B1" *52 800*

Processing Transactions

Processing Transactions for Cost Centres in Batches

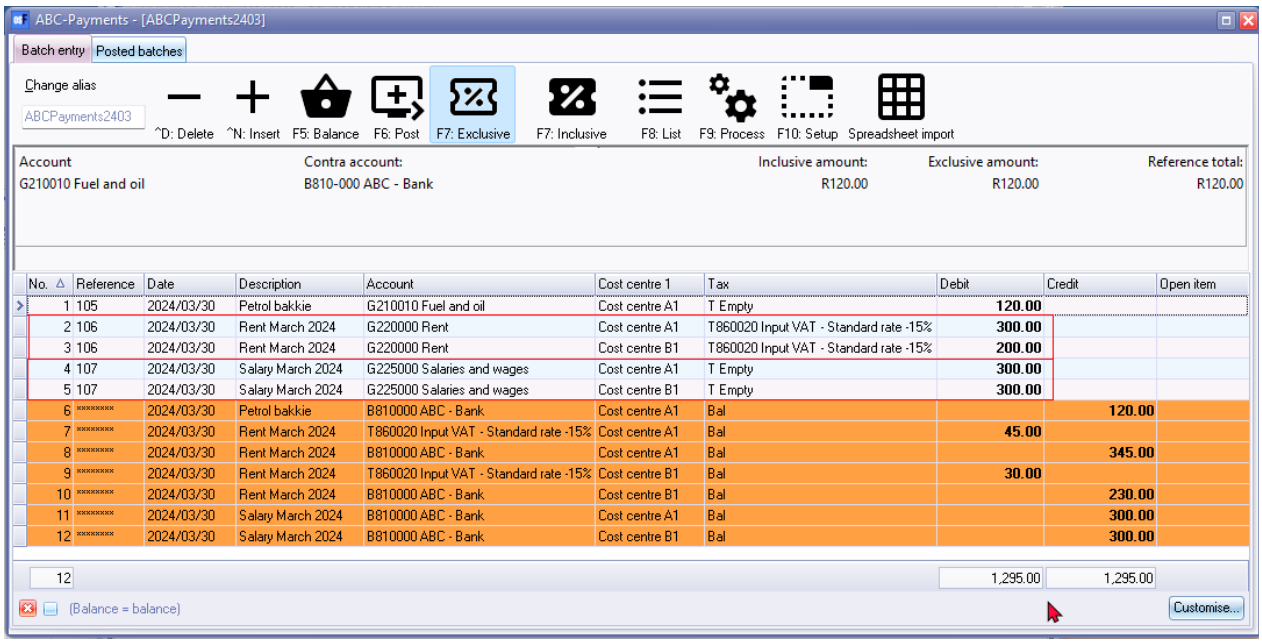
Once the Cost centres are activated for a specific batch type, you may select the cost centre, after selecting the account.

For the purposes of this illustration, the following 3 payments were made, and allocated to cost centres (in the ABC-Payments batch) as follows:

Ref. no.	Date	Description	Account	Cost centre 1	Tax	Dr
105	2024/03/30	Petrol - Bakkie	Fuel & Oil	Cost centre A1	No tax	120,00
106	2024/03/30	Rent March 2024	Rent	Cost centre A1	Input Tax- 15%	345,00
106	2024/03/30	Rent March 2024	Rent	Cost centre B1	Input Tax- 15%	230,00
107	2024/03/30	Salary March 2024	Salaries and wages	Cost centre A1	No tax	300,00
107	2024/03/30	Salary March 2024	Salaries and wages	Cost centre B1	No tax	300,00

Note payment reference 106 and 107 were apportioned and allocated to different cost centres.

- *106 Rent March 2024 paid 500,00 (Exclusive of Input Tax at 15%)*
- *107 Salaries March 2024 paid 600,00 (No tax).*



In this example, the monthly payments in the Payments batch is allocated to different cost centres, is as follows:

- *220-000 Rent 500*

- Cost centre A1 300
- Cost centre B1 200

· 225-000 Salaries and wages 600

- Cost centre A1 300
- Cost centre B1 300

Processing Transactions for Cost Centres in Documents

Once you have created "*Cost centre 1*" and/or "*Cost centre 2*", Cost centres needs to be activated in Documents (to process documents for Cost centres). If activated, the "*Cost centre 1*" and/or "*Cost centre 2*" column will be displayed after the "*Account*" column; and (before the "*Tax*" column).

Cost centres are globally activated for all document types (i.e. purchase documents (purchases, supplier returns and orders) and sales documents (invoices, credit notes and quotes)).

Purchase documents

For the purposes of this illustration, the following Purchase documents were processed, allocated to "*Cost centre A1*" cost centres, and posted (updated) to the ledger:

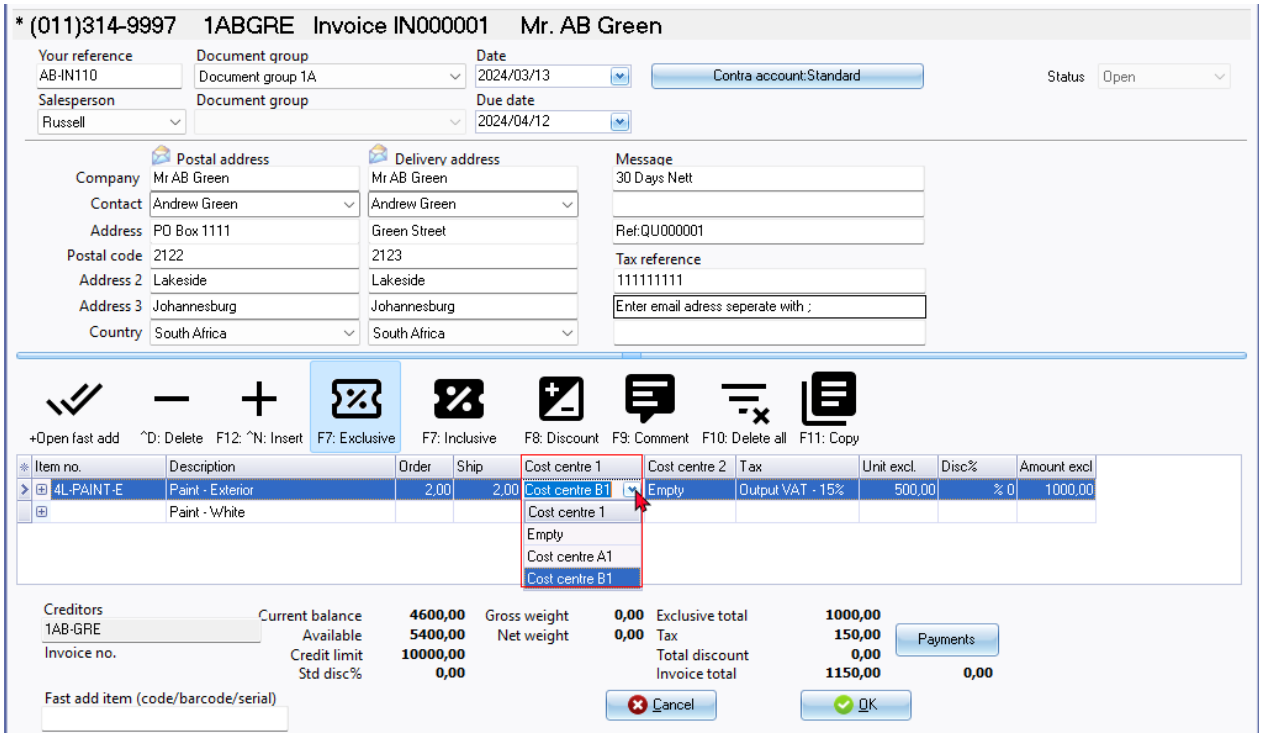
Invoices for cost centres may also be processed for Hours and Debtor appointments in the Calendar (Default ribbon).



Reports for Cost centres

In addition to the Budget listing in the Trial balance, Income statement, Balance sheet and Standard column balances in the Ledger Analyser, other reports may also be printed for cost centres.

The following financial reports is available to print and export for the entire Set of Books or for selected cost centres:

1. Budget vs actual (Realisation 3 Periods)
2. Ledger analyser
    a) Trial balance
    b) Income statement
    c) Balance sheet
    d) Standard column balances
    e) Budget vs actual
    f) This year vs last year

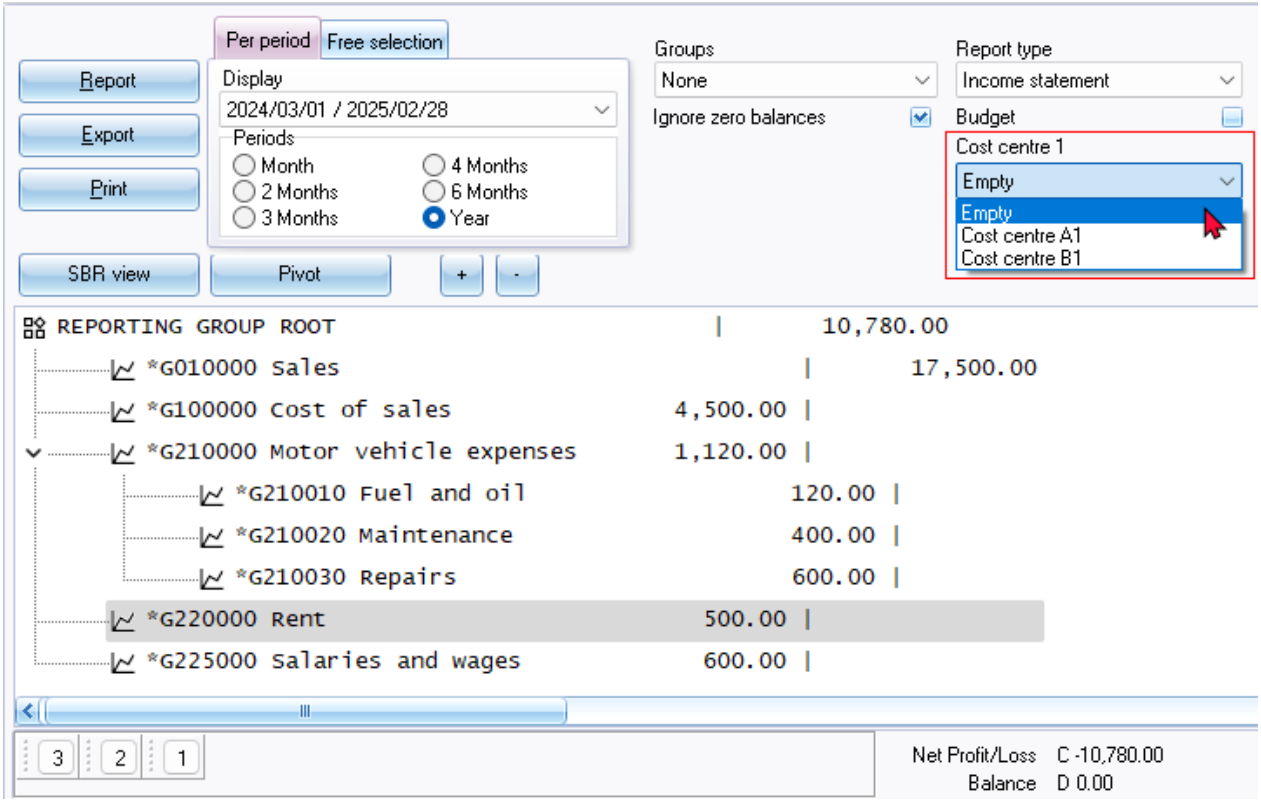
Pivot feature is also available for all of the report types in the Ledger analyser.

Pivots, by default, summarises the totals for the Income and Expense (Income statement) accounts and Capital, Assets and Liabilities (Balance sheet) accounts for which budget figures were entered, and/or transactions in batches and documents were processed, for the selected report type and period or dates.

The pivots allows you to sort, group, filter and drill down the data of your report.

Income statement

The "*Income statement*" displays the account debit and credit balances for Income statement type accounts linked to Income and Expenses financial categories.



The buttons 1, 2, 3, etc. is added when you launch the T-Account viewer or the Pivot table double-click or right-click on an account in the Ledger analyser 1 / 2.

An example of the "*Income statement*", listing the totals of all posted transactions in batches and documents (including "*Cost centre A1*" and "*Cost centre B1*") for the financial year, is as follows:

Balances – Budget

The "Net profit" for the monthly budget figures; for the selected period "2024/03/01" to "2025/03/31" is as follows:

Total Budget (including "Cost centre A1" and "Cost centre B1") 8 450

Only "Cost centre A1" *4 050*

Only "Cost centre B1" *4 400*

Balances – Transactions

The "Net profit" for the actual posted (updated to the ledger) transactions (in Batches and Documents); for the selected period "2024/03/01" to "2024/03/31", is as follows:

Total Income and Expenses (including "Cost centre A1" and "Cost centre B1") 10 780

Only "Cost centre A1" *4 280*

Only "Cost centre B1" *6 500*

Budget vs actual (3 Periods) report

The Budget vs Actual (realisation - 3 periods) report lists the Income and Expense account balances and budget figures for three (3) periods as comparative figures.

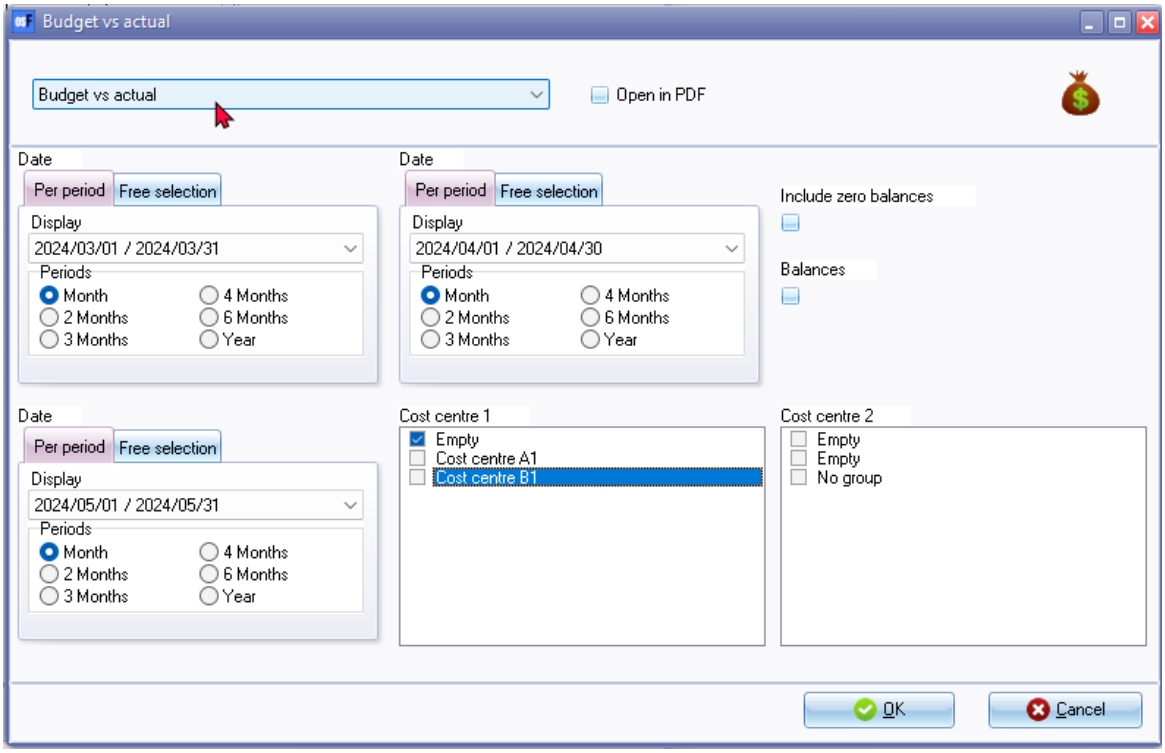
Only the transactions in documents and batches which are posted (updated) to the ledger will be included in this report.

Budget figures are entered and edited in Budgets (Reports ribbon) or Setup → Accounts (Setup ribbon).

If you have activated Cost centres and have entered the budget figures; and processed transactions in batches and documents for Cost centres, you may select (tick) the Cost centres to print this report for your specific Cost centres.

To print a Budget vs actual (3 periods) report:

1. On the Reports ribbon, select Reports → Ledger → Budget.



2. Select the following options:

   a) Period - Select up to three (3) periods on the Per period tabs. You may click on the Free selection tab to select a specific date or a range of dates to include balances and budget figures in the report.

   b) Include zero balances - If this option is not selected (not ticked), it will list only the expense and income accounts which has balances and/or budget figures. Tick this option to include all accounts including those with no actual transactions and/or budget figures).

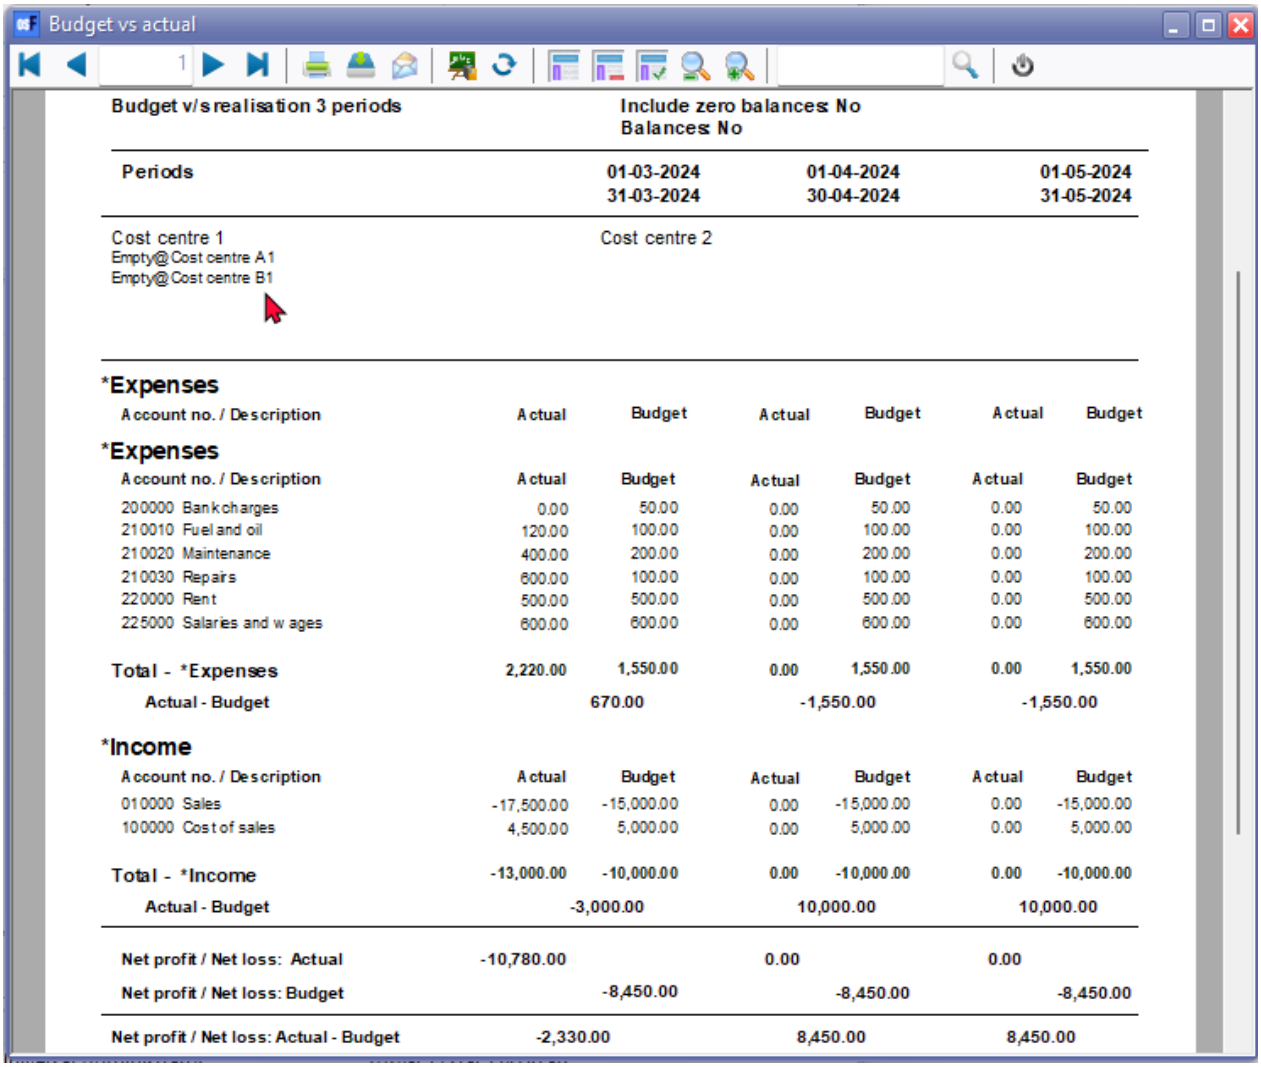
   c) Balances - If this option is not selected (not ticked), it will list the expense and income accounts which has balances and/or budget figures. Tick this option to show only the actual transactions totals and/or budget totals of expense and income accounts for the selected period or dates.

   d) Cost centre 1 - Will be listed, as Cost centres have been added to "*Cost centre 1*" (Setup → Groups (Setup ribbon)). You may select these Cost centres, to include in the report.

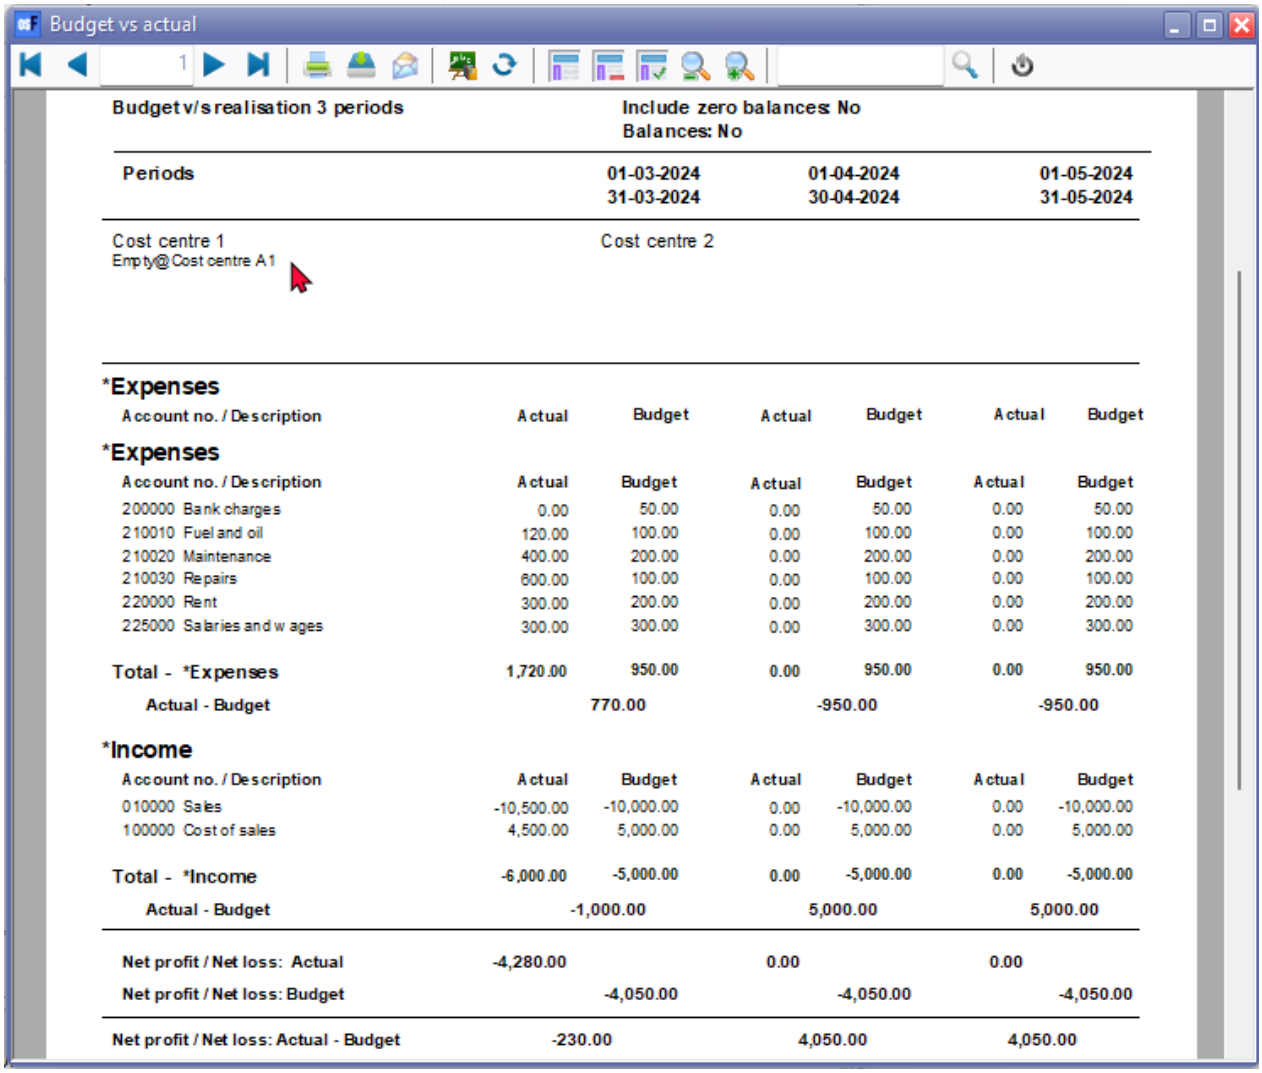
e) Cost centre 2 – The “Empty” tick box and no cost centres will be listed, since no Cost centres were added in ”*Cost centre 2*” (Setup → Groups (Setup ribbon)).

3. Click on the OK button.

The printed “*Budget vs actual (realisation - 3 periods)*” report (no Cost centres selected), should be displayed as follows:



The “*Budget vs actual (realisation - 3 periods)*” report, for “*Cost centre A1*” selected, should be displayed as follows:



The printed "*Budget vs actual (realisation - 3 periods)*" report, for "*Cost centre B1*" selected, should be displayed as follows:

*The selected cost centre, is listed underneath the "Description" of each transaction entered. It is also displayed underneath the balancing entry (indicated by 8 asterisks ********) for each transaction.*

Note payment reference 106 and 107 were apportioned and allocated to different cost centres.

- *106 Rent March 2024 paid 500,00 (Exclusive of Input Tax at 15%)*
- *107 Salaries March 2024 paid 600,00 (No tax).*

Batch – Posted Batches

Once transactions have been entered in batches (Batch entry (Default ribbon); and/or documents (Documents (Default ribbon); and the transactions have been posted (updated) to the ledger; you may print the list of the transactions in the posted batches.

On the Reports → Batch entry menu (Reports ribbon), cost centres are not included in the "Batch transactions per period" and "Documents" reports.

Cost centres are included in the posted batch reports and may be printed for selected batches and/or documents (on the Default ribbon) from the following options:

- *Batch entry - Posted batches tab.*
- *Debtor / Creditor from Documents and Transaction tabs.*

Print a Posted Batch report from the Batch entry screens

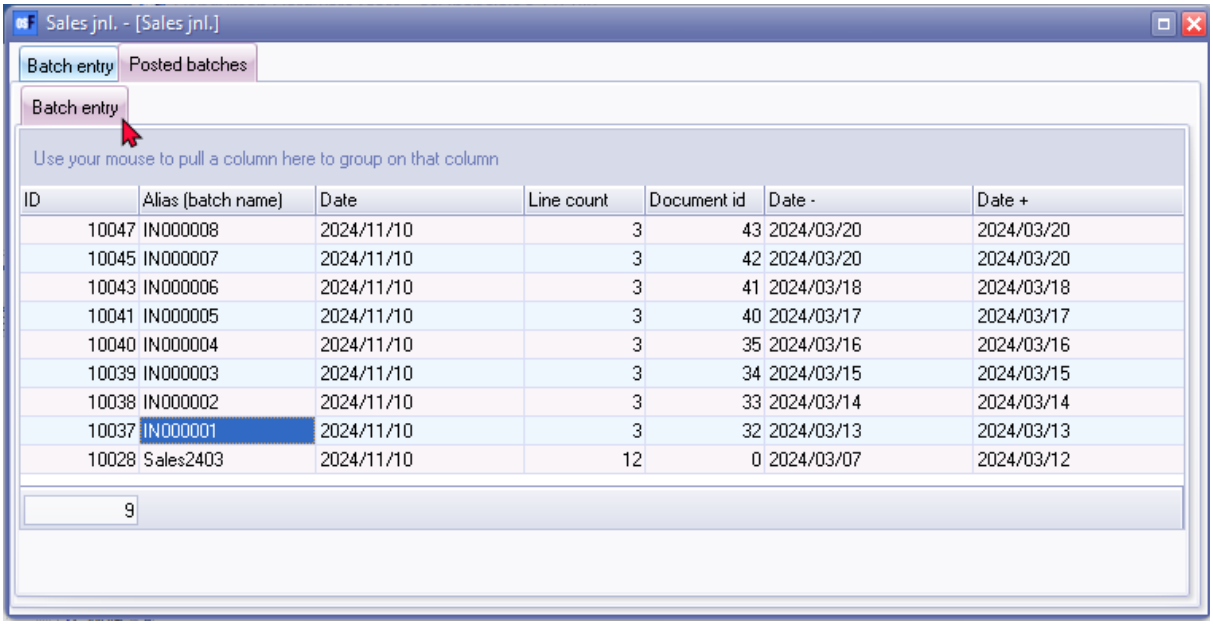
The batch type for documents are set in the Documents setup (Setup ribbon).

Invoices and Credit notes will be listed in the Sales batch .

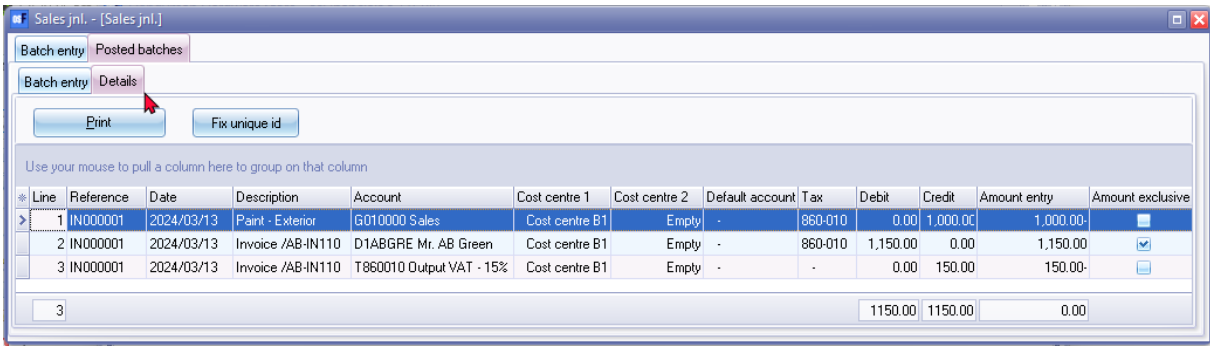
Purchases and Supplier returns will be listed in the Purchase batch.

To print a posted batch list report:

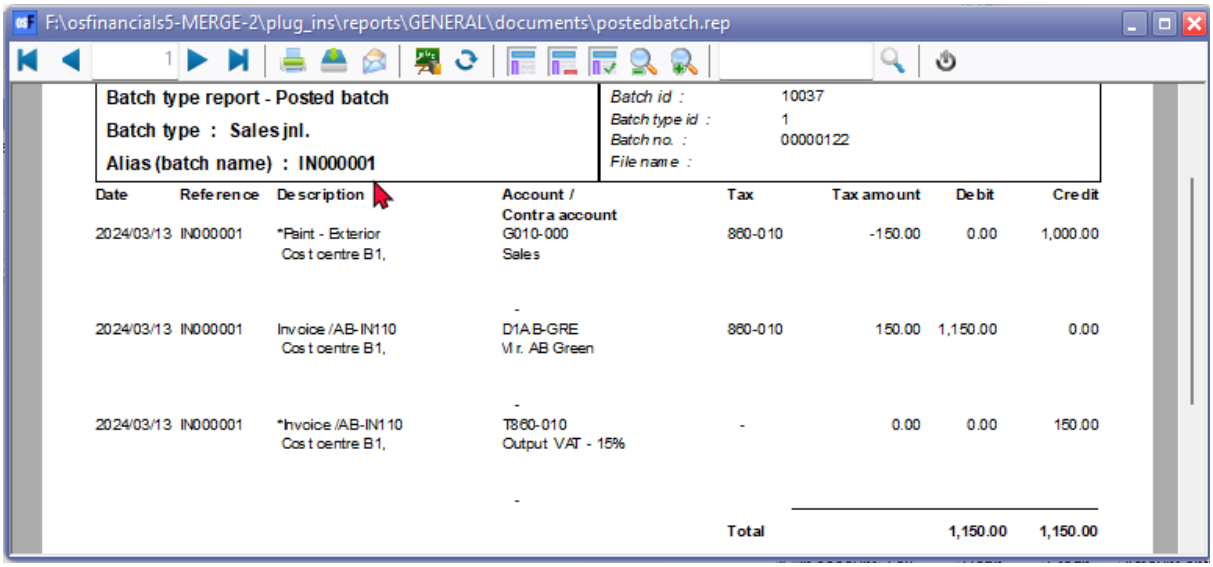
1. Click on the Batch entry (Default ribbon).
2. Select a batch type on the "*Batch type*" screen.
3. Click on the Posted batches tab.



4. On the Batch entry tab, (list of posted batches and documents), select a batch; or a document; and double-click to display the Details tab.



5. Click on the Print button.



Transaction reports

The following transaction reports, may be printed for Cost centres:

1. Ledger - Transactions - Standard
2. Ledger - Transactions - Extra details
3. Debtor - Transactions - Standard
4. Debtor - Transactions - Extra details
5. Creditor - Transactions - Standard
6. Creditor - Transactions - Extra details

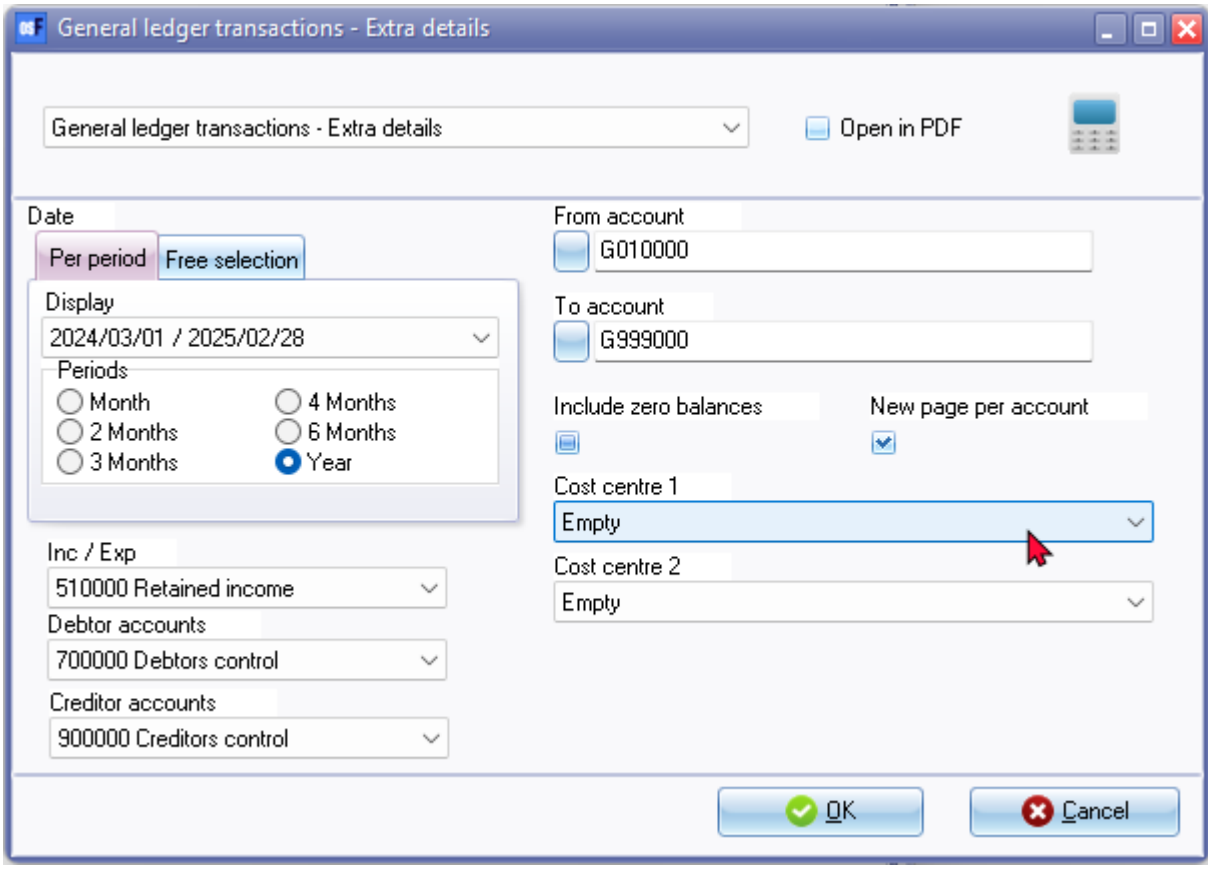
Ledger - Transactions - Standard / Extra details

The "*General ledger transactions - Extra details*" report is similar to the "*General ledger transactions - Standard*" report, but displays extra details of the Contra accounts (i.e. Account code, Account description, Contra account code and Description as well as the Tax account code and Description). For example,

> "D1ABGRE Mr. AB. Green,T860010, Output Tax - 15%", etc.

To print General ledger transactions - Standard / Extra details reports:

1. On the Reports ribbon, select Reports → Ledger → Transactions.
2. Select the "*General ledger transactions - Standard*" or "*General ledger transactions - Extra details*" report.



3. Select the following options:

   a) Period - Select a period on the Per period tab. You may click on the Free selection tab to select a specific date or a range of dates to include transactions in the report.

   b) From account / To account - Select a general ledger account or a range of general ledger accounts, to include in the report.

   c) Sequence - Select "*Account*" to print the report by account code or "*Description*" to print the report by account description (name). You may also select "*Reporting group 1*" or "*Reporting group 2*" to print the accounts according to the "*Account group 1*" or "*Account group 2*" as added in Setup → Groups (Setup ribbon) and linked to the Setup → Accounts (Setup ribbon).

   d) Include zero balances - If this option is not selected (not ticked), it will list only the transactions for accounts which has transactions and/or balances. Tick this option to include opening balances (closing balances before the selected periods / dates).

      Opening and Closing balances will not be displayed for Income and Expense account types. It will only be displayed for Balance sheet accounts.

   e) New page per account - If this option is selected (ticked), it will print the transactions for each account on a new page.

f) Cost centre 1 - Will be listed, as Cost centres have been added to "*Cost centre 1*" (Setup → Groups (Setup ribbon)). You may select these Cost centres, to include in the report.

g) Cost centre 2 – The "Empty" tick box and no cost centres will be listed, since no Cost centres were added in "*Cost centre 2*" (Setup → Groups (Setup ribbon)).

4. Click on the OK button.

View the "*General ledger transactions – Extra details*" (no Cost centres selected) for the "*Sales*" account:

Balances – Ledger Transactions - Sales account

The "Sales" account balance for the actual posted (updated to the ledger) transactions (in Batches and Documents); is as follows:

Total Sales (including "Cost centre A1" and "Cost centre B1") *17 500*

Only "Cost centre A1" *10 500*

Only "Cost centre B1"	*7 000*

The Cost of Sales account has transactions of 4 500 for "Cost centre A1", as no trading stock items were sold by "Cost centre B1"

Debtors / Creditors → Transactions

The following transaction reports for Debtors may be printed for Cost centres:

1. Debtor - Transactions
2. Debtor - Transactions - Standard
3. Debtor - Transactions - Extra details
4. Debtor - Transaction list
5. Debtor - Transaction list - Open item

Creditor reports will not be discussed in this document, since creditor reports are similar to debtor reports.

The following transaction reports for Creditors, may be printed for Cost centres:

1. *Creditor - Transactions*
2. *Creditor - Transactions - Standard*
3. *Creditor - Transactions - Extra details*
4. *Creditor - Transaction list*
5. *Creditor - Transaction list - Open item*

Balances – Debtor Transactions

The "Debtor's control" account balance for the actual posted (updated to the ledger) transactions (in batches and documents); is as follows:

Total Debtor's control (including "Cost centre A1" and "Cost centre B1")	*20 125*
Only "Cost centre A1"	*12 075*
Only "Cost centre B1"	*8 050*

Debtor – Transactions report

The "*Debtor transactions*" report lists all the transactions in documents and batches which are posted (updated) to the ledger for any specific period(s).

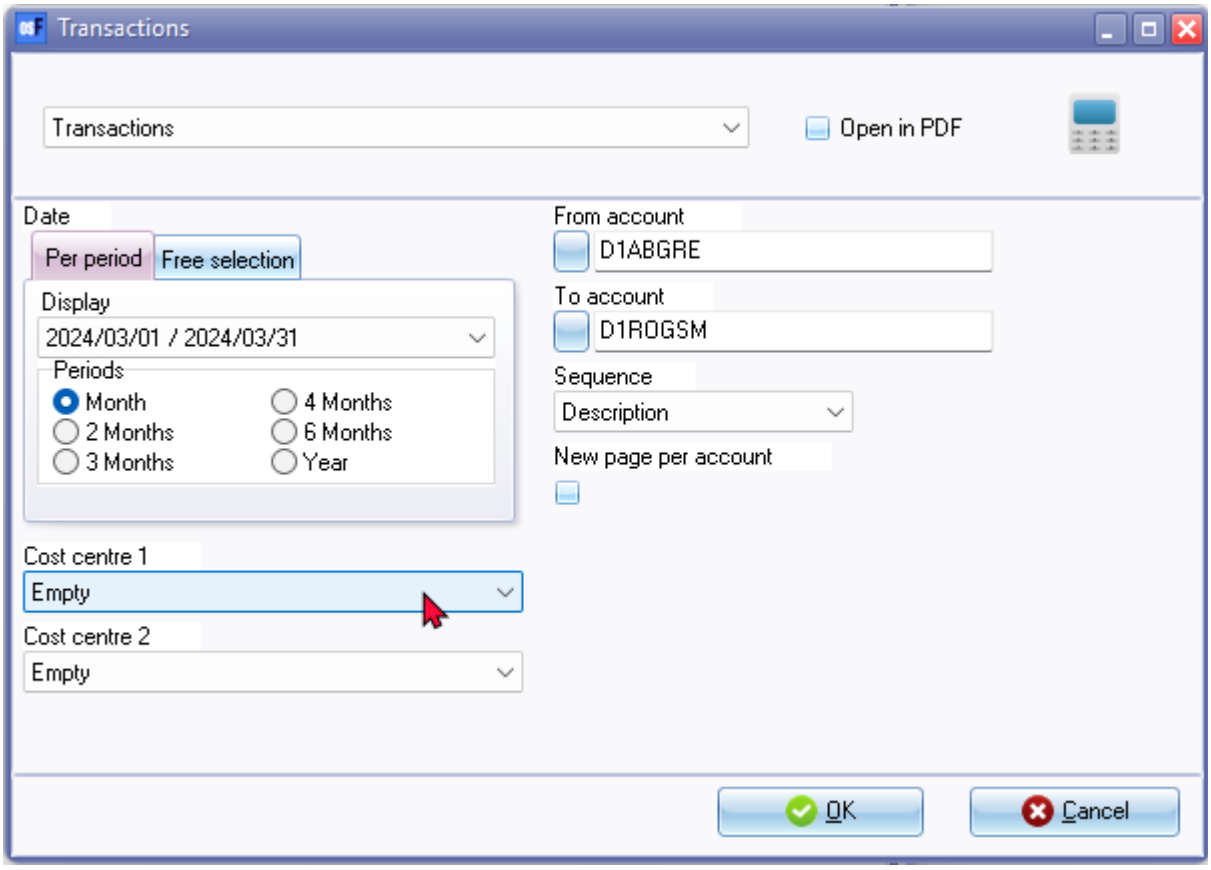
This report will include opening balances (closing balances before the selected periods / dates).

In addition to this, the following two (2) reports may be printed:

- Debtor transaction list - This report lists all the transactions in documents and batches which are posted (updated) to the ledger. All transactions will be listed irrespective of open item links.
- Debtor transaction list - Open item - This report lists only those outstanding transactions in documents and batches which are posted (updated) to the ledger. If a debtor (customer / client) account is set as Open item account (Debtor - Accounting information tab on the Default ribbon), it will list only those transactions with outstanding amounts. Any credit amounts, which are not linked to debit transactions, should be processed in "*Open item link*" (Default ribbon).

To print Debtor transaction reports:

1. On the Reports ribbon, select Reports → Debtors → Transactions.
2. Select the "*Debtor transactions*" report.



3. Select the following options:
    a) Period - Select a period on the Per period tab. You may click on the Free selection tab to select a specific date or a range of dates to include transactions in the report.

b) From account / To - Select a debtor account or a range of debtor accounts, to include in the report.

c) Sequence - Select "*Debtor*" to print the report by account code or "*Description*" to print the report by account description (name). You may also select "*Reporting group 1*" or "*Reporting group 2*" to print the accounts according to the "*Debtor group 1*" or " *Debtor group 2*" as added in Setup → Groups (Setup ribbon) and linked to the Debtor (Default ribbon).

d) New page per account - If this option is selected (ticked), it will print the transactions for each account on a new page.

e) Cost centre 1 - Will be listed, as Cost centres have been added to "*Cost centre* 1" (Setup → Groups (Setup ribbon)). You may select these Cost centres, to include in the report.

f) Cost centre 2 – The "Empty" tick box and no cost centres will be listed, since no Cost centres were added in "*Cost centre 2*" (Setup → Groups (Setup ribbon)).

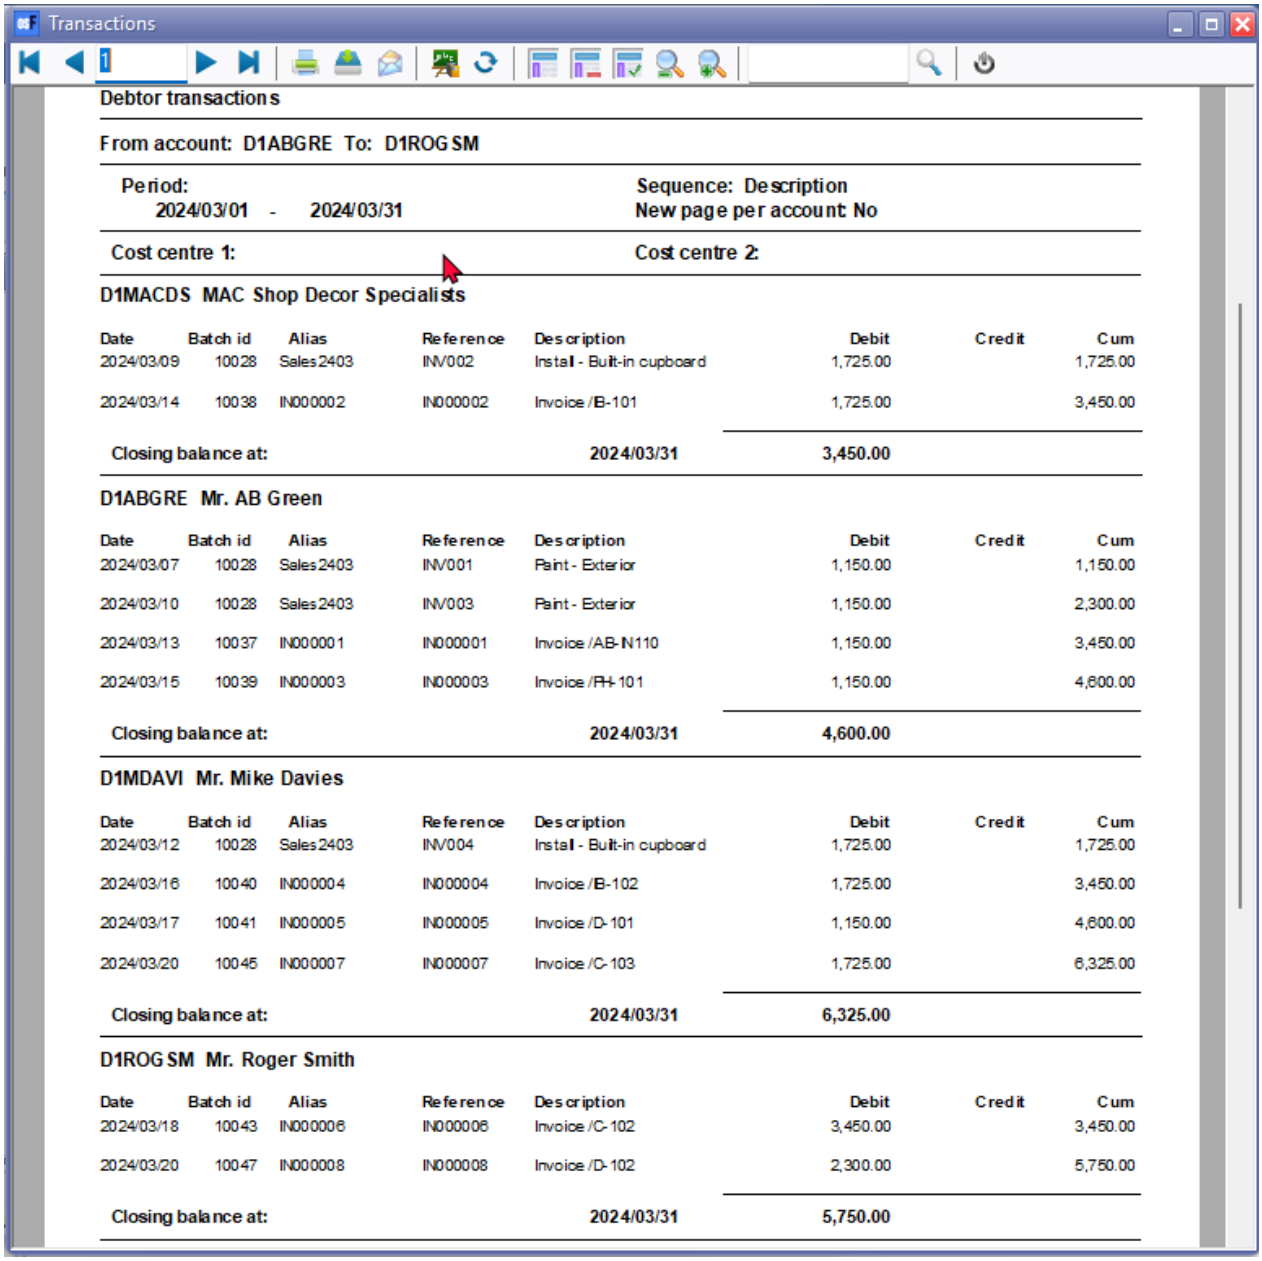
4. Click on the OK button.

Balances – Debtor Transactions

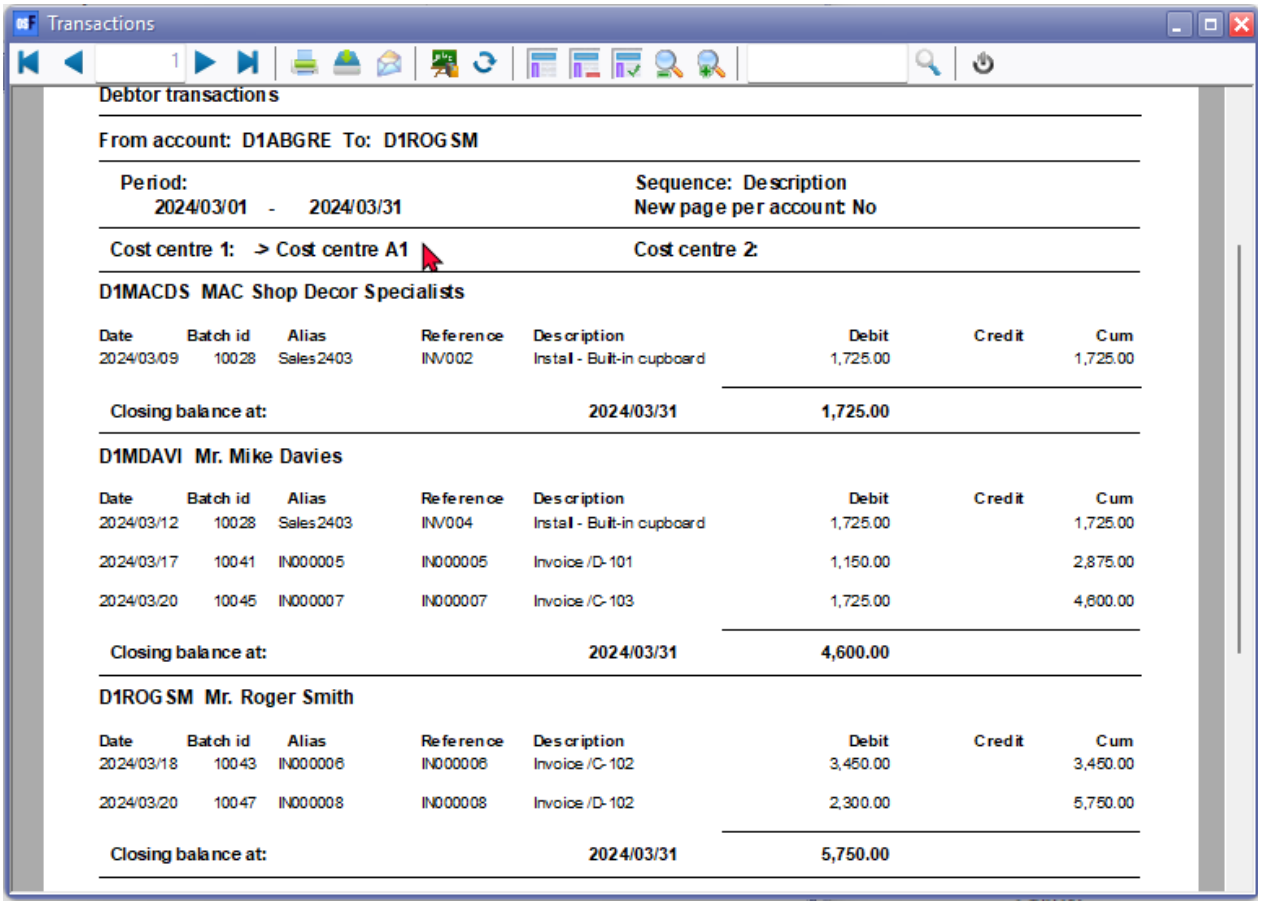
The "Debtor's control" account balance for the actual posted (updated to the ledger) transactions (in batches and documents); is as follows:

Total Debtor's control (including "Cost centre A1" and "Cost centre B1")	*20 125*
Only "Cost centre A1"	*12 075*
Only "Cost centre B1"	*8 050*

The "*Debtor transactions*" report, no Cost centres selected, should be displayed as follows:



The "*Debtor transactions*" report, "*Cost centre A1*" selected, should be displayed as follows:

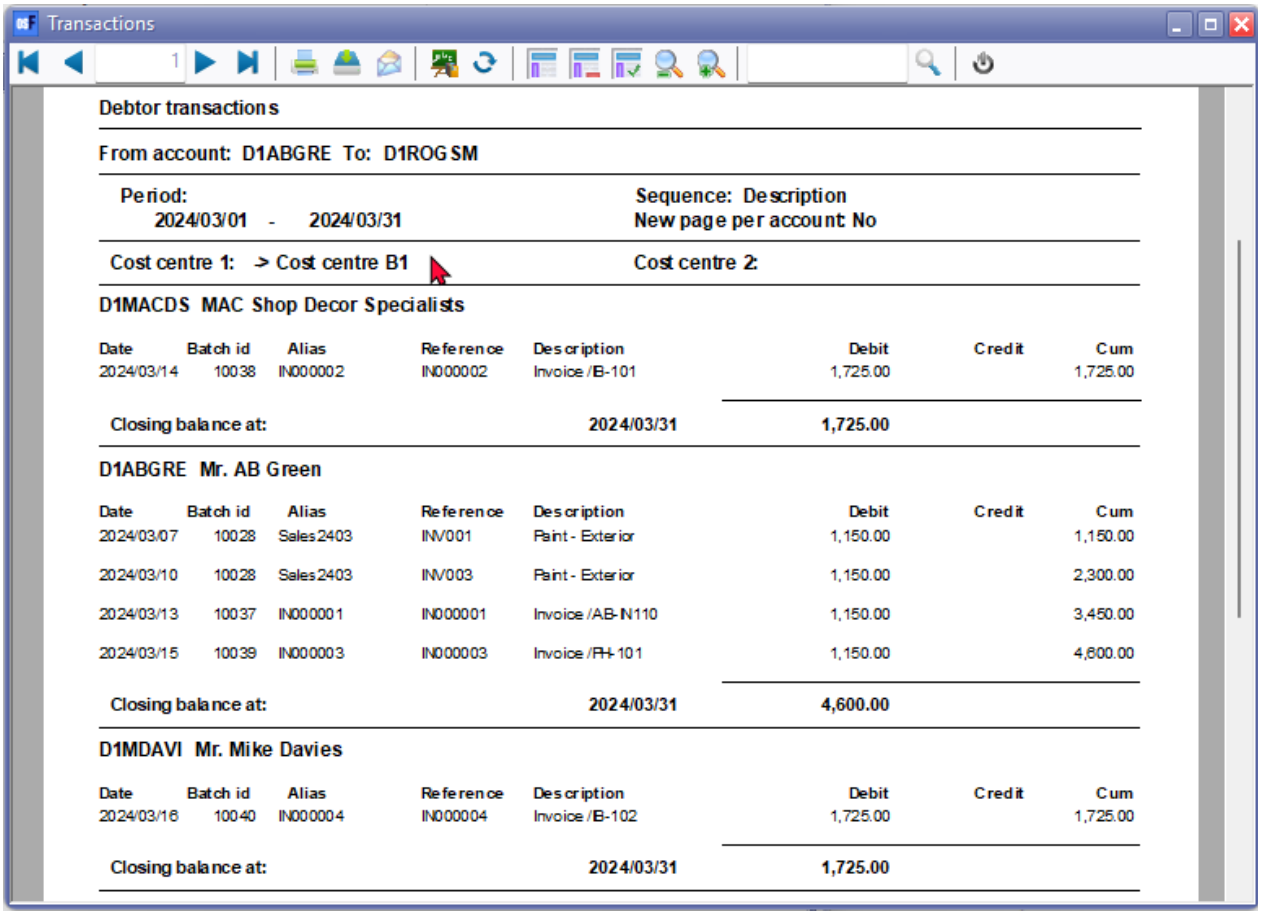


Balances – Debtor Transactions – "Cost centre A1"

The account balances for the actual posted (updated to the ledger) transactions (in Batches and Documents); is as follows:

Total Debtor's transactions for "Cost centre A1"	*12 075*
"MAC Decor Specialists"	*1 725*
"Mike Davies"	*4 600*
"Roger Smith"	*5 750*

The "*Debtor transactions*" report, "*Cost centre B1*" selected, should be displayed as follows:



Balances – Debtor Transactions – "Cost centre B1"

The account balances for the actual posted (updated to the ledger) transactions (in Batches and Documents); is as follows:

Total Debtor's transactions for "Cost centre B1" *8 050*

"MAC Decor Specialists" *1 725*

"AB Green" *4 600*

"Mike Davies" *1 725*

Debtor - Transactions - Standard / Extra Details

The "*Debtor transactions - Extra details*" report is similar to the "*Debtor transactions - Standard*" report, but displays extra details of the Contra accounts (i.e. Account code, Account description, Contra account code and Description as well as the Tax account code and Description). For example,

" G010000 Sales,T860010, Output Tax" - 15%", etc.

Balances – Debtor Transactions

The "Debtor's control" account balance for the actual posted (updated to the ledger) transactions (in batches

and documents); is as follows:

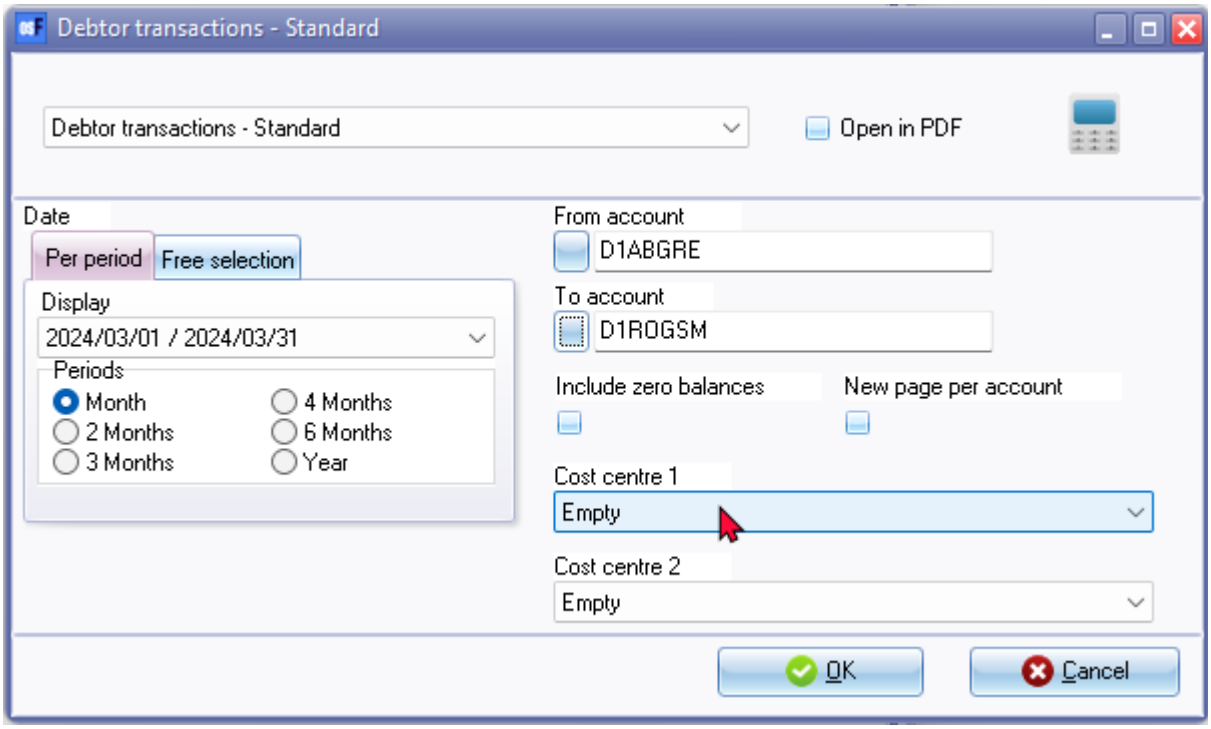
Total Debtor's control (including "Cost centre A1" and "Cost centre B1") 20 125

Only "Cost centre A1" 12 075

Only "Cost centre B1" 8 050

To print Debtor transactions - Standard or Extra details reports:

1. On the Reports ribbon, select Reports → Debtors → Transactions.
2. Select the "*Debtor transactions - Standard*" or "*Debtor transactions - Extra details*" report.



3. Select the following options:

   a) Period - Select a period on the Per period tab. You may click on the Free selection tab to select a specific date or a range of dates to include transactions in the report.

   b) From account / To account - Select a debtor (customer / client) account or a range of debtor (customer / client) accounts, to include in the report.

   c) Sequence - Select "*Debtor*" to print the report by account code or "*Description*" to print the report by account description (name). You may also select "*Reporting group 1*" or "*Reporting group 2*" to print the accounts according to the "*Debtor group 1*" or " *Debtor group 2*" as added in Setup → Groups (Setup ribbon) and linked to the Debtor (Default ribbon).

   d) Include zero balances - If this option is not selected (not ticked), it will list only the transactions for accounts which has transactions and/or balances. Tick this option to include

opening balances (closing balances before the selected periods / dates).

e) New page per account - If this option is selected (ticked), it will print the transactions for each account on a new page.

f) Cost centre 1 - Will be listed, as Cost centres have been added to "*Cost centre* 1" (Setup → Groups (Setup ribbon)). You may select these Cost centres, to include in the report.

g) Cost centre 2 – The "Empty" tick box and no cost centres will be listed, since no Cost centres were added in "*Cost centre 2*" (Setup → Groups (Setup ribbon)).

4. Click on the OK button.

Balances – Debtor Transactions

The "Debtor's control" account balance for the actual posted (updated to the ledger) transactions (in batches and documents); is as follows:

Balances – Debtor Transactions – Standard / Extra details - "Cost centre B1"

The account balances for the actual posted (updated to the ledger) transactions (in Batches and Documents); is as follows:

Total Debtor's transactions for "Cost centre B1" 8 050

"AB Green" 4 600

"MAC Decor Specialists" 1 725

"Mike Davies" 1 725

T-Account viewer

Accessing and viewing transactions in the T-Account viewer

Cost centres are included in the posted batch reports and may be printed for selected batches and/or documents (on the Default ribbon) from the following options:

- *Batch entry - Posted batches tab.*
- *Debtor / Creditor from Documents and Transaction tabs.*

Re-allocating Cost centre budgets and transactions

In this example, the "*Rent*" was budgeted and paid for the cost centres as follows:

Cost centre	*Rent - Budget*	*Rent - Expense paid*
Cost centre - A1	*200*	*300*
Cost centre - B1	*300*	*200*

This could possibly indicate the following:

- Budget figures entered incorrectly.
- Expense paid allocated incorrectly.

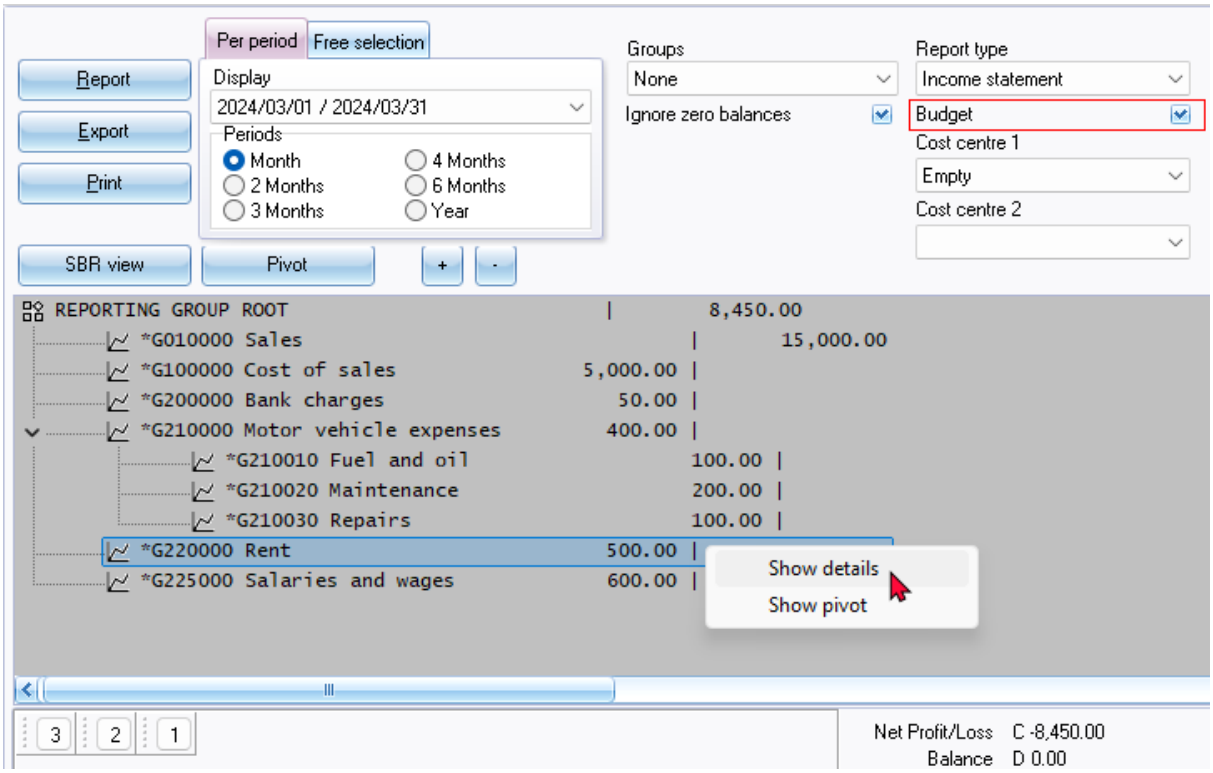
Editing / changing Cost centre budgets

Budget figures are entered and edited in Budgets (Reports ribbon) or Setup → Accounts (Setup ribbon). In addition to editing / changing budget figures, in these options, you may also change or re-allocate the budget figures in the "*T-Account viewer*".

See - "Enter Budget figures for Cost Centres"

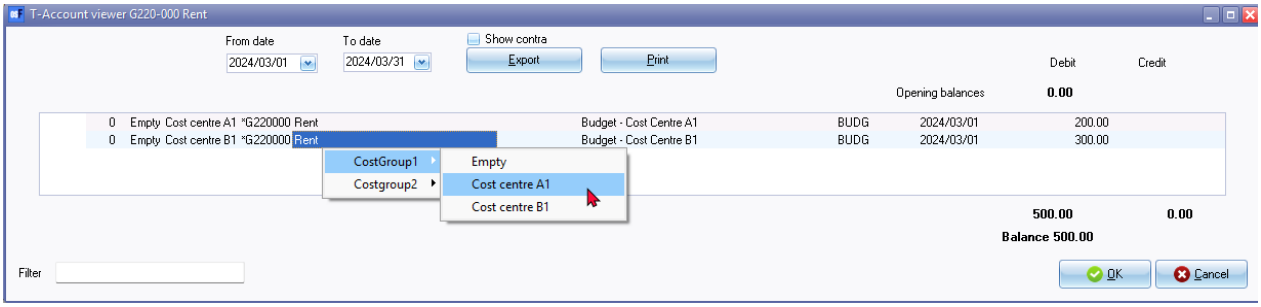
To change / reallocate budget figures for cost centres in the T-account viewer:

1. On the Reports ribbon, select "*Ledger analyser 1*" or "*T- Ledger analyser 2.*
2. Select the *"Trial balance, Income statement, Balance sheet"* or *"Standard column balances"* report type.
3. Tick the "*Budget*" option.
4. Click on the Report button.



5. Select the account and right-click on the selected account (e.g. “*Rent*”).

6. Click on the “*Show details*” context menu.



You may click on the Print button to print the budget figures in the T-Account viewer.

The Batch number is displayed as 0 if the “Budget” option is selected.

The "Show contra" option on the T-Account viewer is not applicable to budget figures.

7. In the “*T-account viewer*” for the selected transaction, right-click on “*CostGroup1*” and select “*Cost centre A1*”.

8. The following confirmation message is displayed:

> “Set reporting group 1”

9. Click on the Yes button to proceed.

10. The budget will be changed from “*Cost centre B1*” to “*Cost centre A1*”.

11. Click on the OK button. The budget, for the selected periods in the "*T-Account-viewer*" for the Fuel and oil expense account for "*Cost centre B1*", will be cleared.
12. Repeat the process for "*Cost centre A1*" for the amount of 200 and allocate to "*Cost centre B1*" .
13. Click Cancel to close "*T-Account-viewer*" screen.

In this example, the budgeted profit will change as this is an Expense account, the net profit for both the cost centres will be changed, e.g.:

- *"Cost centre A1" - Budgeted net profit from 4 050,00 to 3 950,00 (Decrease of 100,00)*
- *"Cost centre B1" - Budgeted net profit from 4 400,00 to 4 500,00 (Increase of 100,00)*

Editing / changing Cost centre transactions

Once transactions have been posted, and an incorrect cost centre has been selected, you may change the cost centre.

It is not necessary to reverse or cancel a posted batch to change the cost centre, if:

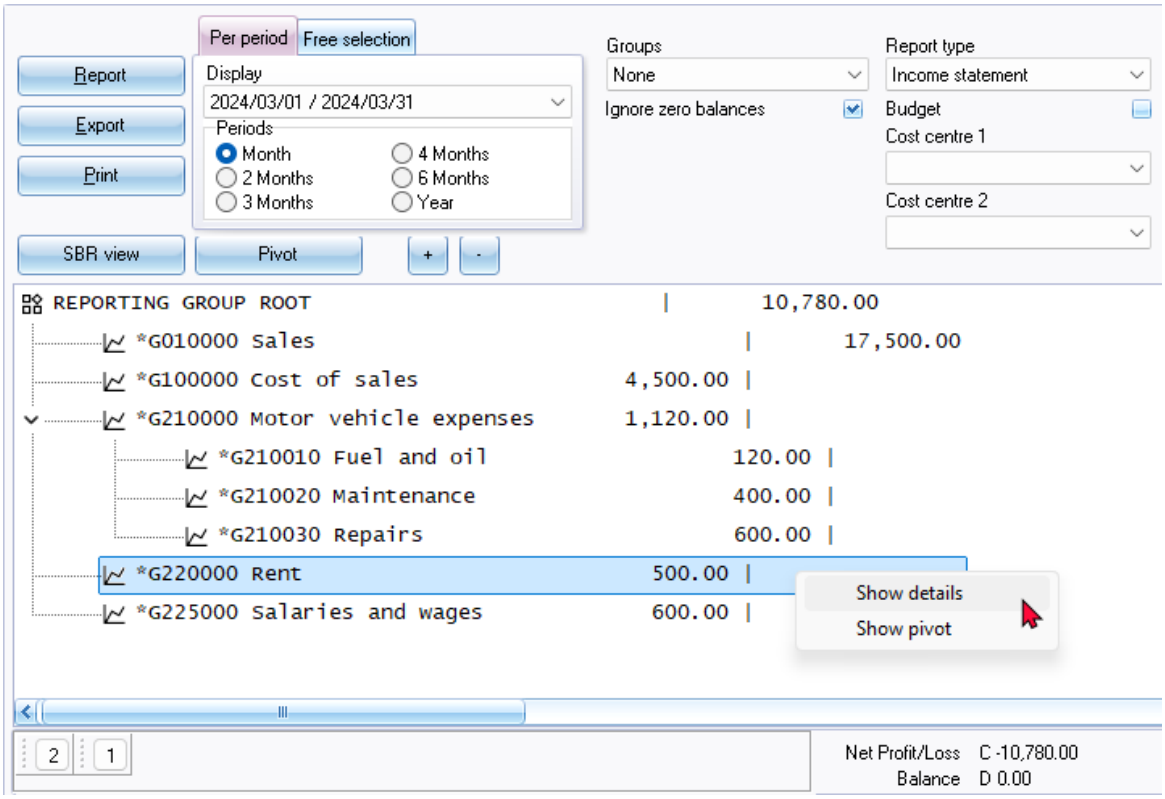
- Transaction(s) is not allocated to a cost centre.
- Transaction(s) is allocated to an incorrect cost centre.

For example, a payment of 300,00 for Rent is allocated to the "*Rent*" expense account "*G220-000*" and allocated to "*Cost centre A1*". The 300,00 expense for "*Rent*" is included in all the reports for "*Cost centre A1*".

The allocation to the "*Cost centre A1*" is incorrect and need to be re-allocated to "*Cost centre B1*".

To change transactions for cost centres:

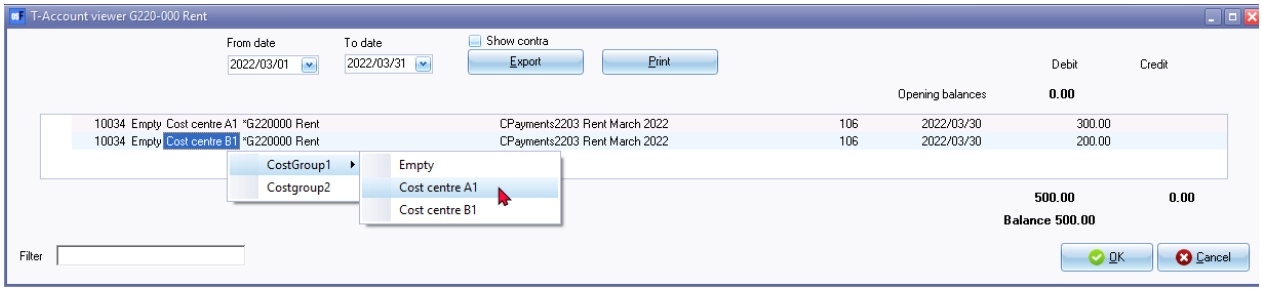
1. On the Reports ribbon, select "*Ledger analyser 1*" or "*Ledger analyser 2.*



2. Select the account and right-click on the selected account (e.g. "*Rent*").

3. Click on the "*Show details*" context menu.

4. In the "*T-account viewer*" for the selected transaction, right-click on "*CostGroup1*" and select "*Cost centre A1*".



You may click on the Print button to print the transactions in the T-Account viewer.

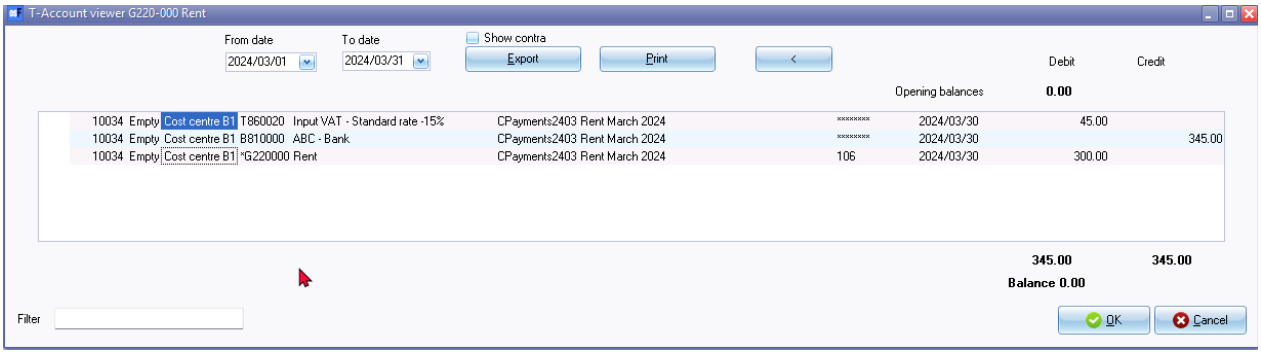
The Batch number is automatically generated (e.g. 10034 for the Rent transactions), when transactions in batches and documents is posted (updated) to the ledger.

You may select the "Show contra" option on the T-account viewer to view the transactions to contra accounts.

These contra accounts will not be printed in the T-account viewer report, but will be included when you export (Export button) these transactions to a spreadsheet.

If the "Budget" option is selected, the Batch number will be displayed as "0".

If you select a cost centre to change, the associated contra accounts and balancing entries, for the selected transaction will be listed in the T-Account viewer.



5. The following confirmation message is displayed:

> "Set reporting group 1"

6. Click on the Yes button to proceed.

7. The balancing entries (indicated by 8 asterisks (********) in the case of posted batches) for the selected transaction will be listed. Both the transaction as well as the balancing entry will be changed from "*Cost centre B1*" to "*Cost centre A1*".

8. Click on the OK button. The transactions in the "*T-Account-viewer*" for the "*Rent*" expense account for "*Cost centre B1*", will be cleared.

9. Click Cancel to close "*T-Account-viewer*" screen.

In this example, as this is an Expense account, the net profit for both the cost centres will be changed, e.g.:

- *"Cost centre A1" - Net profit from 4 080,00 to 4 180,00 (Increase of 100,00)*
- *"Cost centre B1" - Net profit from 6 500,00 to 6 400,00 (Decrease of 100,00)*

Projects

Introduction to Projects

osFinancials5/TurboCASH5 provides support for projects, allowing you to effectively track and manage

financial activities and expenses associated with specific projects within your organization.

With osFinancials' project functionality, you can create and define individual projects, assign relevant financial transactions and expenses to each project, and track the financial performance and progress of each one.

This feature enables you to accurately allocate costs, track project-related expenses, and monitor the profitability of each project or job. You can easily generate reports and statements that provide detailed insights into the financial status, budget utilization, and overall performance of your projects or jobs.

By utilizing osFinancials' project capabilities, you can make informed decisions, effectively manage resources, and ensure that your projects are on track financially. This functionality is particularly beneficial for organizations that engage in project-based work, such as construction companies, consulting firms, or any business that needs to track and manage financial activities at a project level.

With osFinancials' support for projects or job costing, you can enhance your financial management processes and gain better visibility into the financial aspects of your organization's projects.

Key features:

- You may create Reporting groups for Projects. These Projects may be activated in batches and documents.
- You may select to process batch transactions and generate sales documents (i.e. Quotes, Invoices and Credit notes) as well as purchase documents (i.e. Orders, Purchases and Supplier returns) for projects.
- You may use the Calendar / Planner to schedule events (appointments) create quotes for hours and convert them to invoices. You may schedule events (appointments) for creditors (suppliers / vendors) as well as up to six (6) categories of appointments with your debtors (customers / clients).

The Bulk time entries feature in the Calendar may be used to schedule and process documents for a selected Project

To check and illustrate the use of Projects in osFinancials5/TurboCASH5, the figures and transactions are based on the following Sets of Books ".../bin/Tutorials/PROJECTS:

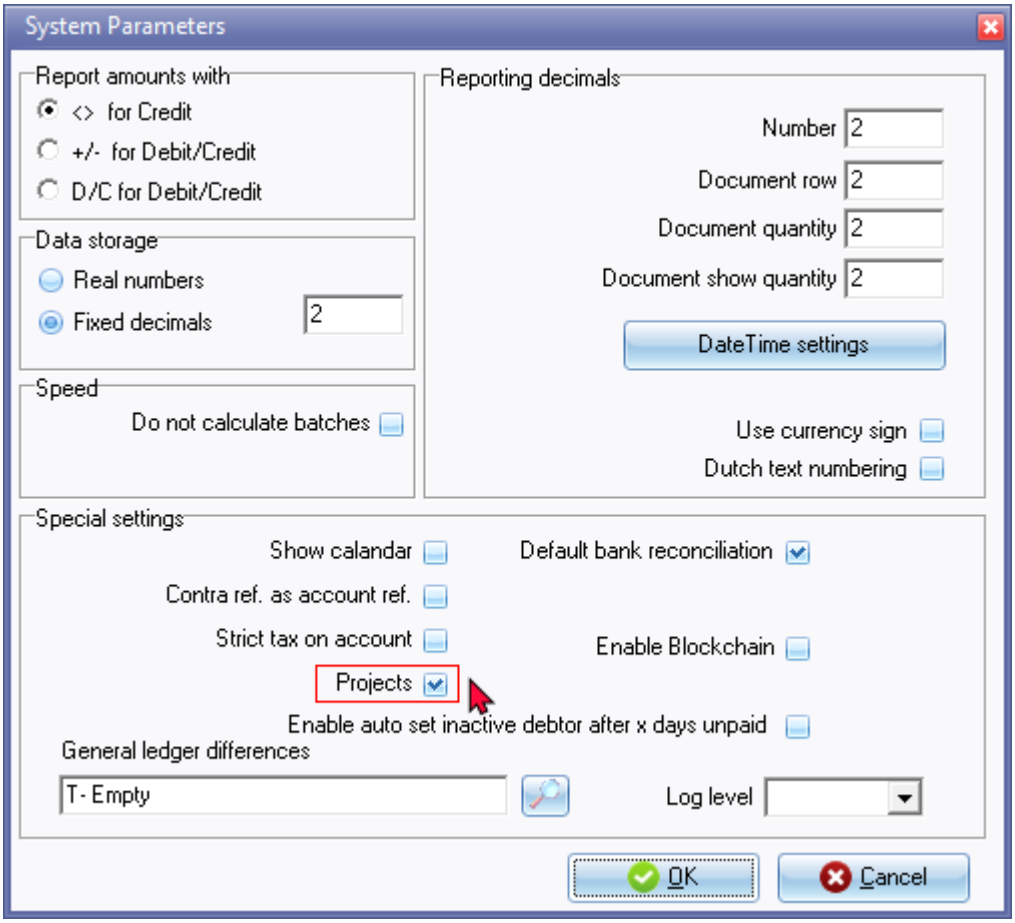
1. *PROJECTS-A - Unposted transactions in batches and documents.*
2. *PROJECTS-B - Posted transactions in batches and documents.*

Activate Projects

You need to activate the projects in the Setup → System parameters menu (Setup ribbon).

To activate projects:

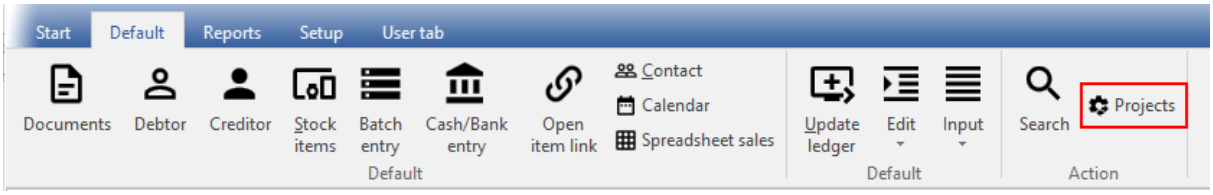
1. Click on the Setup → System parameters (Setup ribbon).



2. Select (tick) the "*Projects*" option in the "*Special settings*" section of the screen.

3. Click OK to save your changes.

4. Close the Set of Books and re-open the Set of Books (Start ribbon) again. Projects (Default ribbon) will be activated.



5. The next step is to add your projects to the Project group.

Create Projects

You need to create Reporting groups for Projects. These Projects may be activated in documents and/or specific batches and documents.

Examples of Project Groups

Some examples of reporting groups for projects:

1. Project types: You can create reporting groups based on different types of projects your organization undertakes. For example, you can have reporting groups for Research and Development (R&D) projects, Marketing campaigns, Infrastructure projects, or Client-specific projects. This allows you to track and analyse expenses, revenue, and performance for each project type separately.
2. Project phases: If your projects go through different phases, you can create reporting groups based on these phases. For example, you can have reporting groups for Project Planning, Design, Implementation, Testing, and Completion. This helps in monitoring the progress and expenses incurred during each phase of the project.
3. Project locations: If your projects are carried out in different geographical locations, you can create reporting groups based on these locations. For example, you can have reporting groups for Local projects, National projects, or International projects. This enables you to analyse the performance and expenses associated with projects in each location.
4. Key clients: If you have significant clients or customers for whom you undertake projects, you can create reporting groups based on these key clients. This allows you to track the performance and profitability of projects associated with each client separately.
5. Project managers: If you have multiple project managers overseeing different projects, you can create reporting groups based on these project managers. This helps in monitoring the performance, resource allocation, and profitability of projects managed by each individual.

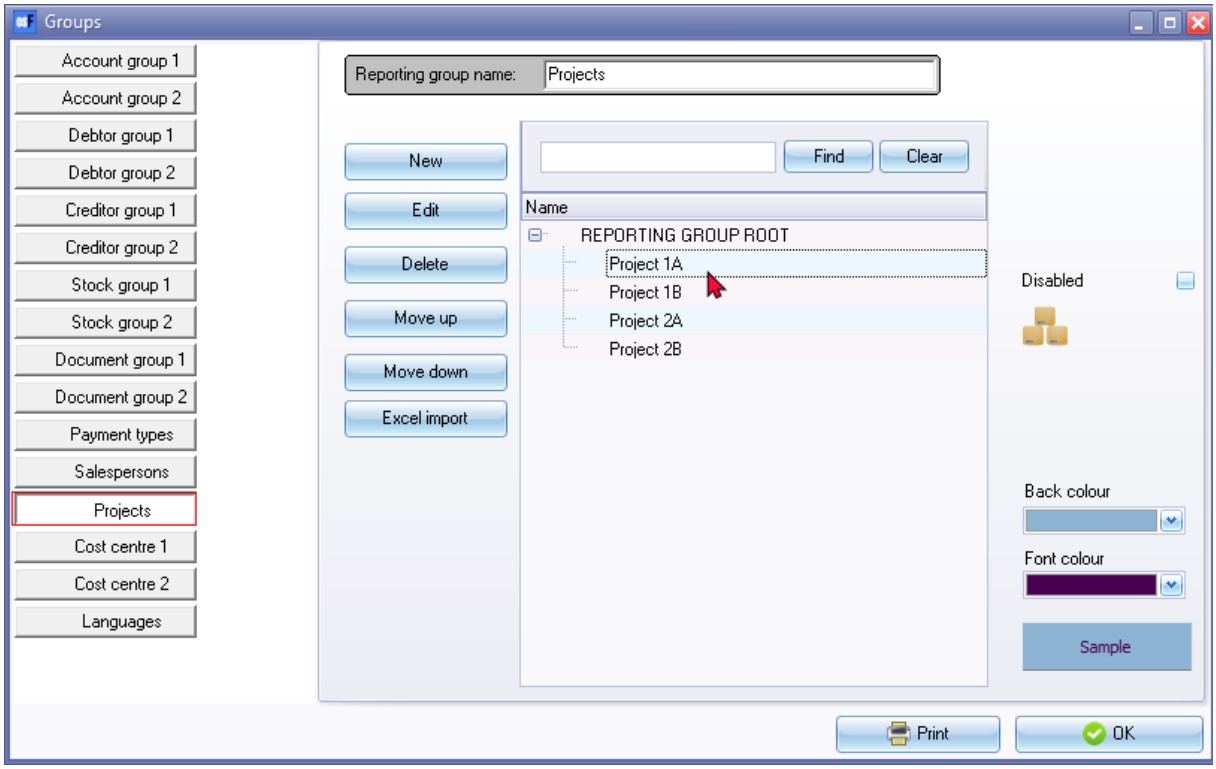
These examples illustrate how reporting groups for projects in osFinancials5/TurboCASH5 can be used to categorize and analyse project-related data. By assigning projects to appropriate groups, you can track expenses, revenue, resource utilization, and profitability for each project category. This information can assist in project management, decision-making, and resource allocation within your organization.

Create Project Groups

Once the batches and/or documents are posted (updated to the ledger), you may generate various reports for each Project on the "*Sidebar*" of Projects (Default ribbon).

To create Project groups:

1. Click on Setup → Groups (Setup ribbon).
2. Click Projects.



If you have created a Set of Books from scratch (using the "Create Set of Books (Advanced)" option for Firebird database types or the "Create Set of Books (Advanced)" option for MSSQL database types), the Project group will not be available.

You need to manually add the Project group to the TYPES table

See topics in this Help file : -

- *Steps after creating the Set of Books (Advanced) - Add missing Groups and Paper types in the Types table.*
- *Reportman - References - Groups.*

3. To add a new Project to the root directory or list, select the "*REPORTING GROUP ROOT*" on the list and click on the New button.
4. Enter the name of your Project (e.g. "*Project 1A*") and click on "*REPORTING GROUP ROOT*" again.
5. Repeat the process until you have entered all the Projects.
6. Click on the OK button to save your changes and close the "*Groups*" screen.

You may click on the Print button to print a list of your Projects.

You may set the background and font colours for your projects, if necessary.

In addition to this, you may create and set colours for up to 2 reporting groups for "Stock group 1", "Stock group 2" and/or "Document group 1", " Document group 2".

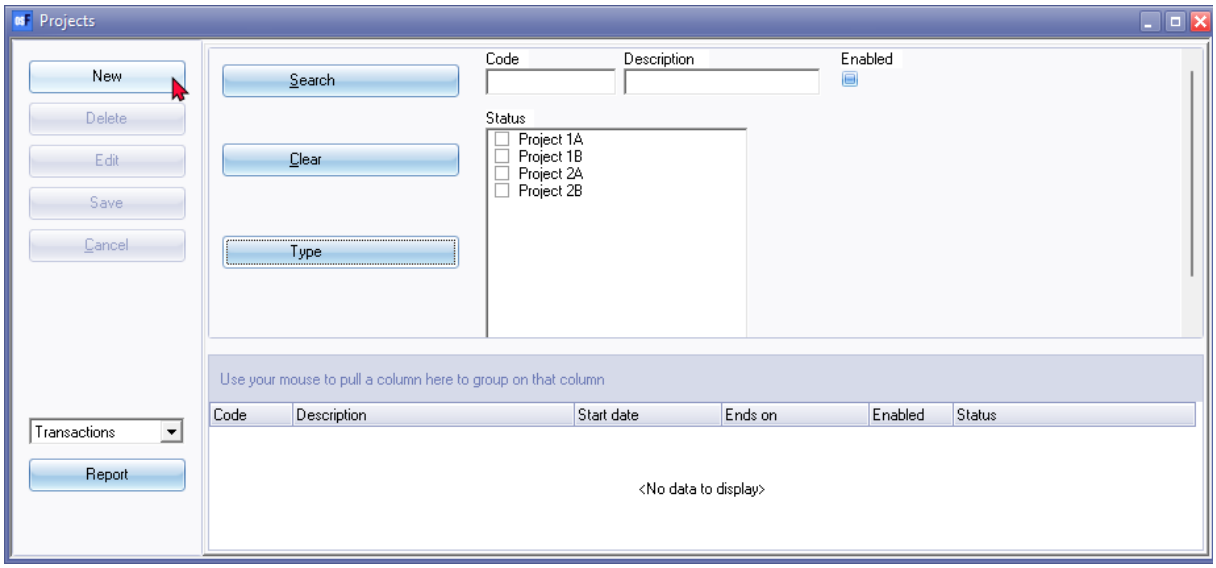
The next step is to create your projects and link the projects to the Project groups.

Create / Add New Projects

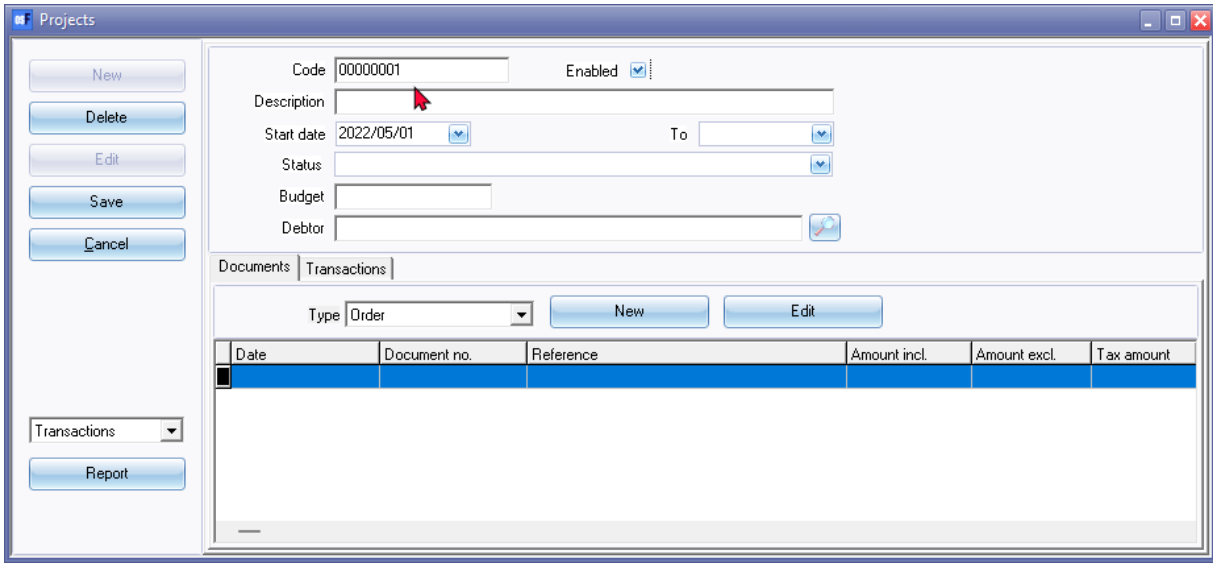
Add new projects

To create a project:

1. Click on Projects (Default ribbon). The "*Projects*" screen (list view) is displayed:



2. Click on the New button. A new "*Project code*" 8-digit numerical code, e.g. ("*00000001*") will automatically generated. The "*Projects*" screen will change as follows:



3. Enter or select the following:

a) Code – This code is automatically generated. When clicking on the New button, it will automatically generate the next Project code.

> *You may overtype the Project code with your own code. This code may be alpha numerical. Up to 8 characters is recommended.*

b) Enabled – This is by default selected (ticked).

> *You will not be allowed to close a project (remove the tick in the "Enabled" field) and click on the Save button, if there are any unposted documents.*

c) Description – Enter the name or a description for the Project.

d) Start date – Enter or select a date on which the Project commences.

e) To – Enter or select a date on which the Project ends (should be completed).

f) Status – Select a Project from the list (added / created in Projects (Groups on the Setup ribbon).

g) Budget – Enter the budget (estimated project cost) for the Project.

> *Budget figures for projects may also be added for selected accounts in Accounts (Setup ribbon).*

h) Debtor – Select a default debtor (customer / client) account.

> *If the default debtor (customer / client) account is selected, the Project Quote tab will be added.*

You may need to add a default debtor (customer / client) account in Debtor (Default ribbon).

4. Click on the Save button to save the record (Project). The Project will be added to the list.

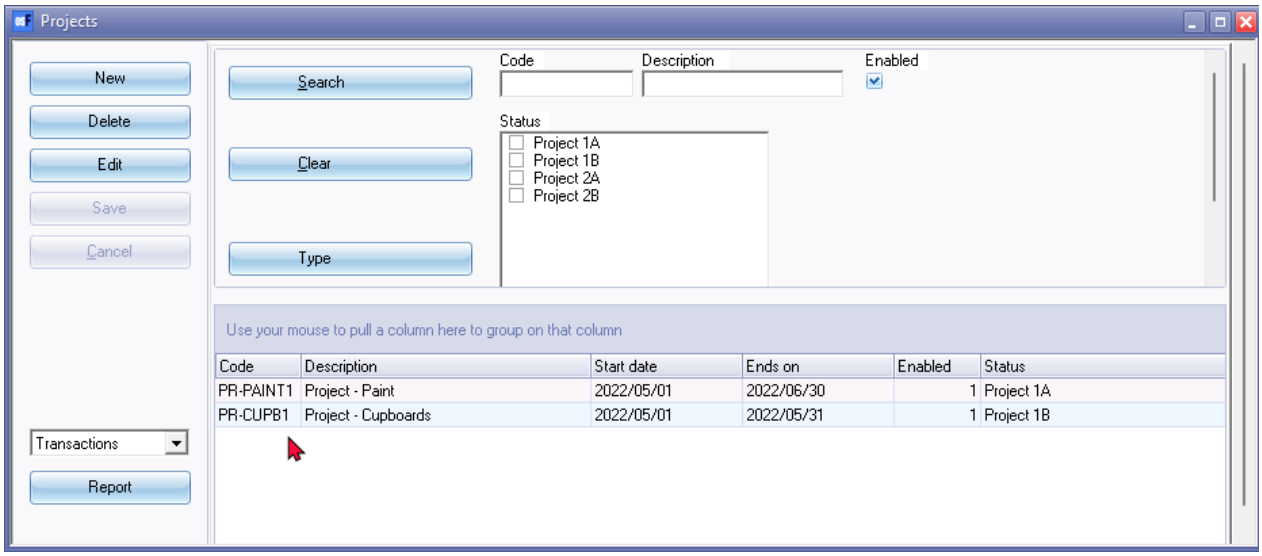
If the default debtor (customer / client) account is selected, purchase documents (Purchases, Supplier returns and Orders) and sales documents (Invoices, Credit notes and Quotes) for the Project can only be processed for the default debtor (customer / client) account.

To remove a selected default debtor (customer / client) account, click on the Lookup icon on the "Debtor" field and enter a space and close the Lookup screen. The default debtor (customer / client) account as well as the Project Quote tab will be removed.

Project Screens Overview

Project list screen

This screen will list all projects created with the New button and as edited with the Edit button will be listed.



The details of this screen, is as follows:

1. Sidebar

    a) New – Add or create a new project.

    b) Delete – Delete a selected project.

    c) Edit – Edit a selected project.

d) Save – Save changes to selected project.

e) Cancel – Aborts any changes without saving any edited / changed details of a selected project

2. Reports – Select and print the following reports:

a) Transactions – Prints the transactions of documents and batches which is posted (updated) to the ledger.

b) Hours – Prints the Hours report for documents created / edited for the Hours event and Invoices created for debtor (customer / client) appointments.

c) Stock items – Prints the details of each stock item

d) Statements – Prints the statement of the project.

e) Totals – Prints the summary of the project totals

3. Search / Filter – Search for a project by project code or project description. You may also filter by selecting specific project groups.

4. Columns – List the projects.

a) Code – Project code

b) Description – Project description

c) Start date – The date entered or selected on which the project commenced.

d) Ends on – The end date entered or selected on which the project will / should be completed.

e) Enabled – "*1*" = Enabled and "*0*" = Disabled.

f) Status – This is the selected group as added on the "*Projects*" option (Groups on the Setup ribbon).

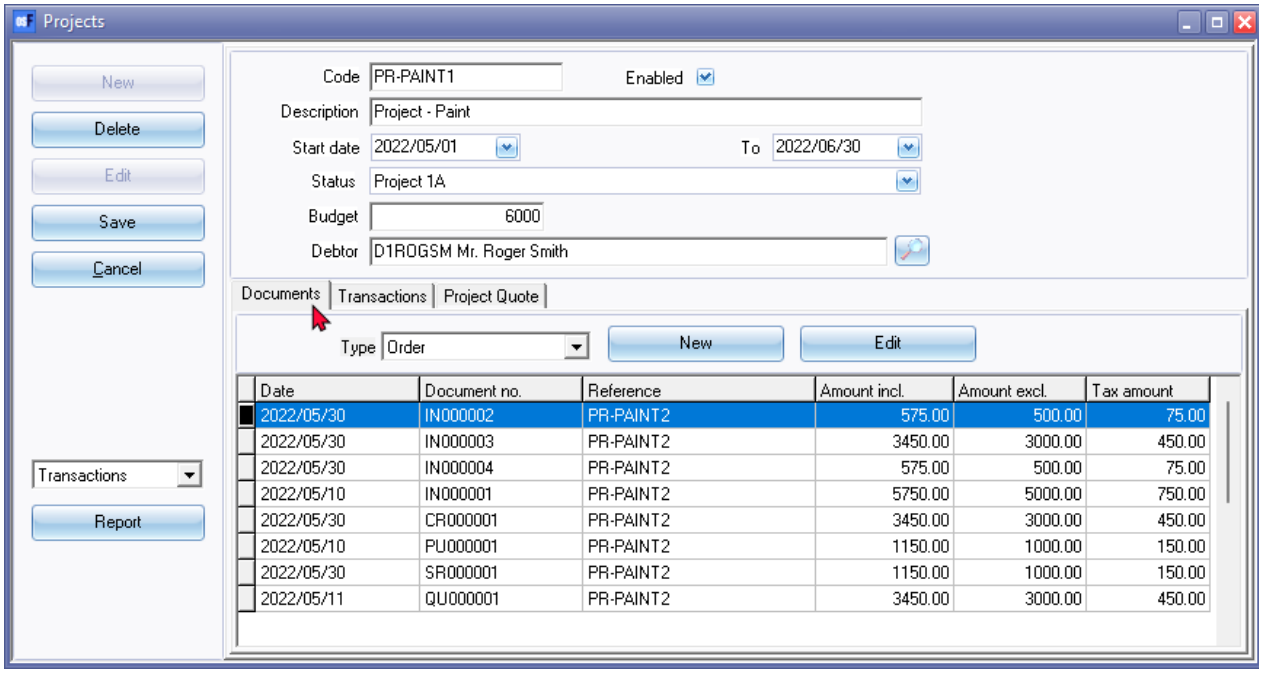
Selected Project screen

The selected project screen allows you to edit a project details and to manage a selected project on the Documents, Transactions and Project Quotes tabs.

Documents tab

The Documents tab, lists all the document types; i.e. purchase documents (Purchases, Supplier returns and Orders) as well as sales documents (Invoices, Credit notes and Quotes) which are processed for the selected Project.

The documents on this list include posted as well as unposted documents.



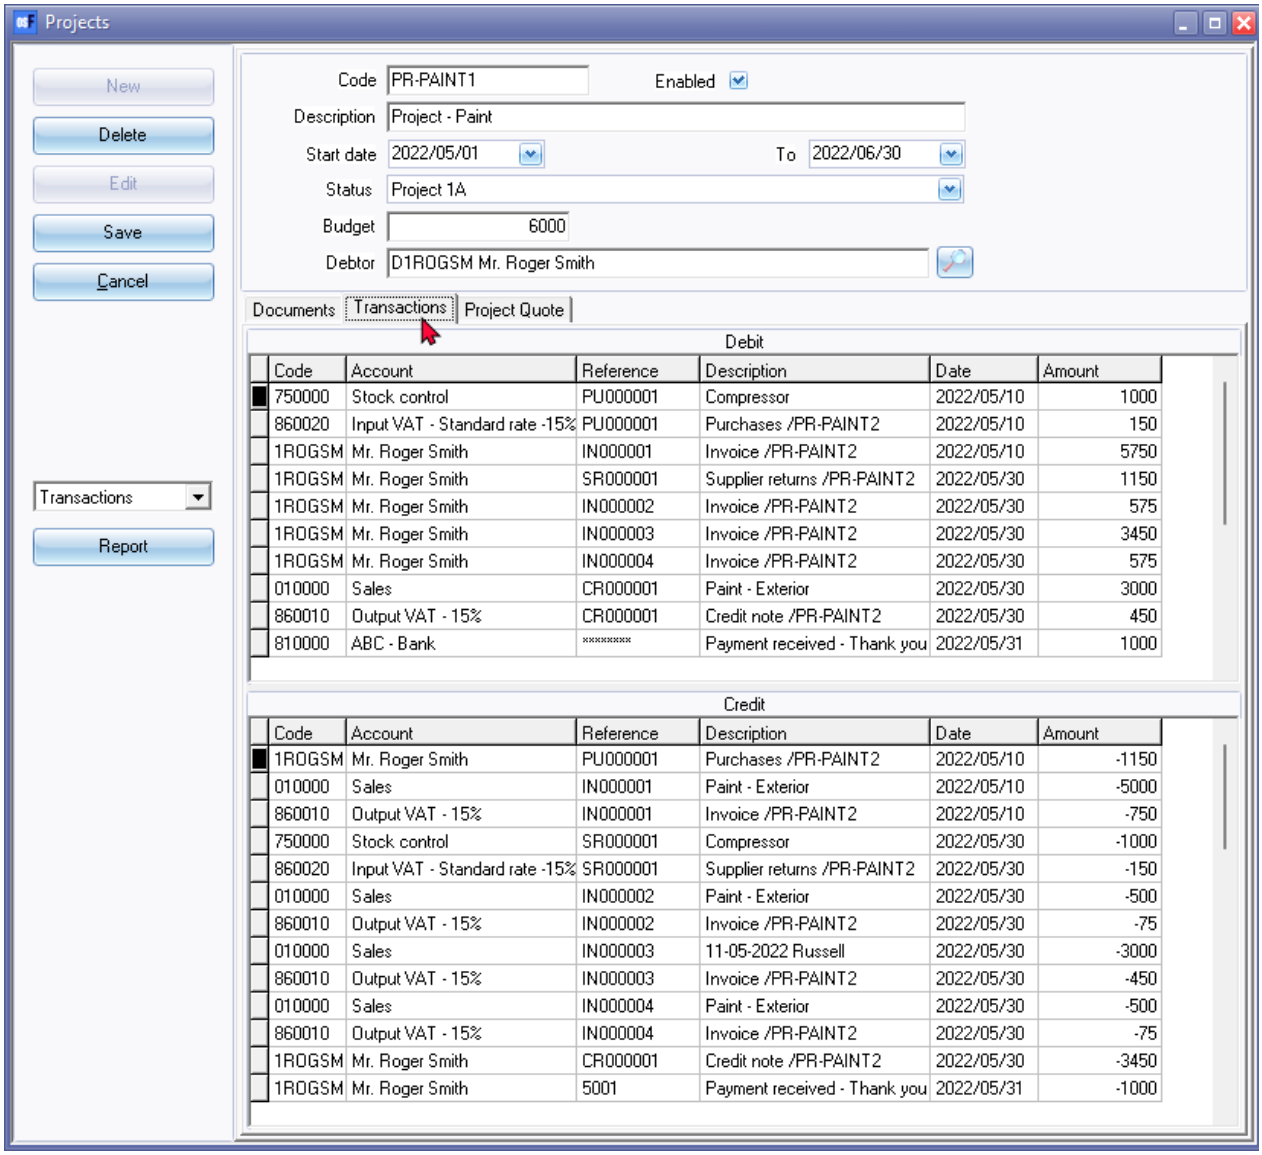
The options, is as follows:

1. Type – Select a purchase document (Purchase, Supplier return or Order) or a sales document (Invoice, Credit note or Quote).
2. New – Create a new document for the selected document type.
3. Edit – Opens the selected document on the list in the "*Document entry*" screen.
    a) Unposted document – You may edit the document, if necessary.
    b) Posted document – This document cannot be edited.

The "Reference" column displays the reference as added in the "Your reference" field in the Document header.

Transactions tab

Only the transactions in documents and/or batches, which are posted (updated) to the ledger, will be listed.



These posted (updated) transactions will be included in the "Transactions" report.

The transactions will be listed in the "*Debit*" or "*Credit*" sections. A brief summary of the transactions in the "*Debit*" or "*Credit*" sections, is as follows:

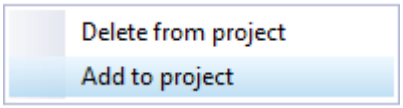
1. Debit – Invoices and Supplier return documents will be listed for the Debtor or Creditor account. The contra accounts (e.g. Sales and Stock control and Tax accounts) will be listed in the "*Credit*" credit section.

2. Credit – Credit notes and Purchase documents will be listed for the Debtor or Creditor account. The contra accounts (e.g. Sales and Stock control and Tax accounts) will be listed in the "*Debit*" credit section.

*Balancing entries for posted (updated) transactions in batches, is displayed as 8 asterisks (e.g. "********").*

Context menu

Right-click on selected transactions to access the context menu.



- Delete selected transaction(s) from a project.

- Add selected transaction(s) to a project.

SEE - REMOVE / ADD PROJECT TRANSACTIONS

Note if a document, e.g. "D000001" is processed in the Project Quote tab of the selected project, it is included in the "All" document types selection on the "Update ledger" screen.

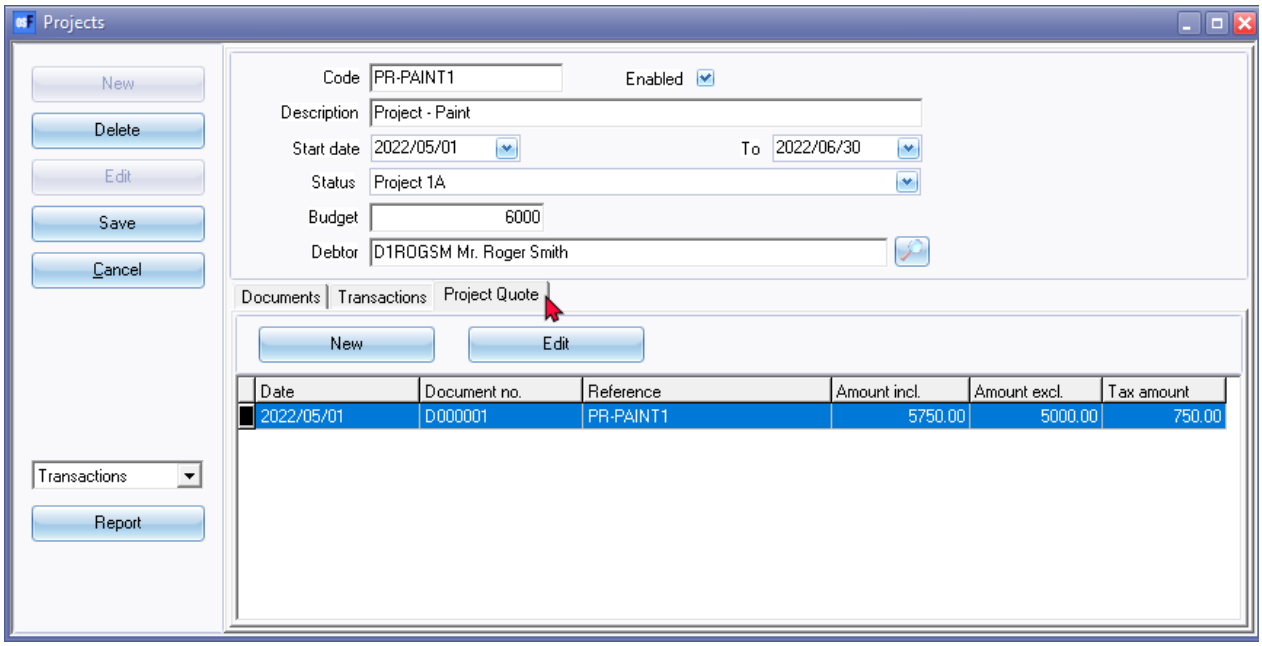
If you have posted (updated) the ledger using the "All" document types selection on the "Update ledger" screen, these Project Quotes may post incorrect transactions to the ledger.

These "Project Quotes" will then be listed in the Transactions tab.

Project Quote tab

SEE - PROJECT QUOTES – KNOWN ISSUES

The Project Quote tab will only be activated, if a Debtor account is selected.



The options, is as follows:

1. New – Create a new "*Project Quote*" for the selected document type.
2. Edit – Opens the selected "*Project Quote*" on the list in the "*Document entry*" screen.
    a) Unposted document – You may edit the document, if necessary.
    b) Posted document – This document cannot be edited.

Note if a document, e.g. "D000001" is processed in the Project Quote tab of the selected project, it is included in the "All" document types selection on the "Update ledger" screen.

If you have posted (updated) the ledger using the "All" document types selection on the "Update ledger" screen, these Project Quotes may post incorrect transactions to the ledger.

The "Reference" column displays the reference as added in the "Your reference" field in the Document header.

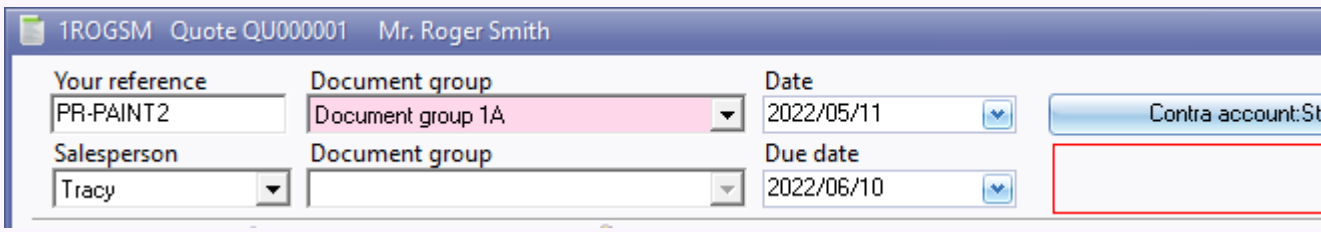
DOCUMENT PROCESSING FOR PROJECTS

The following options are available to process transactions in purchase documents (Purchases, Supplier returns and Orders) and sales documents (Invoices, Credit notes and Quotes) for Projects:

1. Projects (Documents tab)
2. Document entry
3. Calendar:
    - Hours event
    - Create Invoices for debtor (customer / client) appointments.

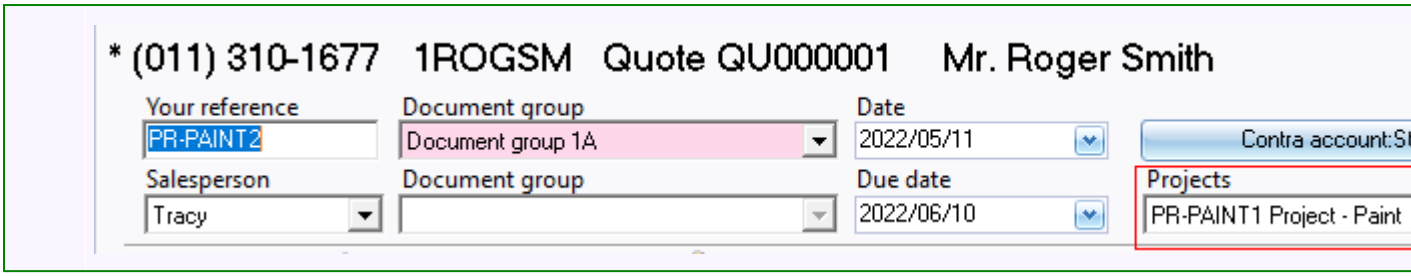
Selecting Project for Documents:

When processing documents from the Documents tab of a selected Project, the option to select a Project in the Document head available. The project code is automatically linked to the selected Project.



When processing documents, launched from Documents (Default ribbon), you may select a project in the Document header se

If any project is already associated with a selected document, the Project will be automatically displayed.



Create Project Quotes

You may create a quote or quotes for a project.

The Project Quote tab will only be activated, if a Debtor account is selected for the project.

Quotes may be processed on the Documents tab of a selected project.

Quotes may also be processed from Documents (Default ribbon).

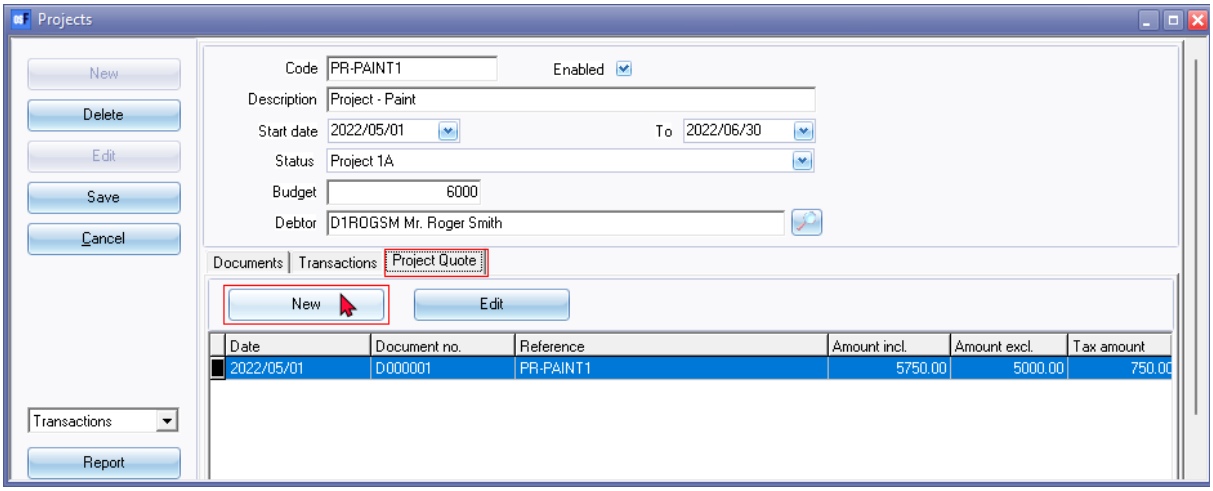
The "Quotes" on the Project Quote tab will not be included on the Documents tab of the selected project.

The "Quotes" on the Project Quote tab will be included as Projects on the "Stock items" and "Statements" reports.

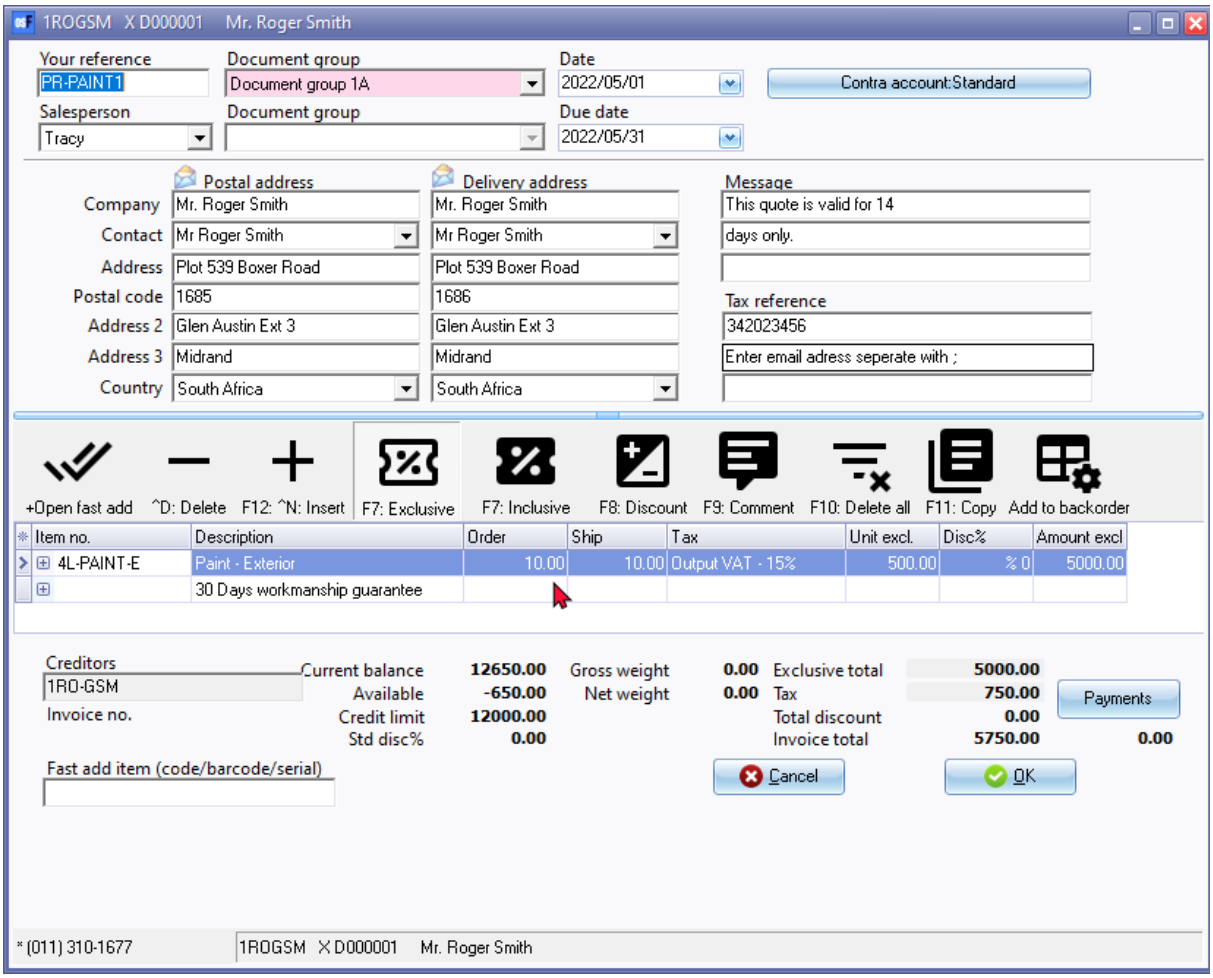
To create a project quote:

1. On the Default ribbon, select Projects.
2. Select a project from the list.
3. Click on the Project Quote tab.

The Project Quote tab will only be activated, if a Debtor account is selected.



4. Click on the New button.



5. Enter a reference in the "*Your reference*" field.

> *The reference number is added to projects and is useful when searching for a specific document or a project.*

6. Check and edit the messages in the "*Message*" field, if necessary.

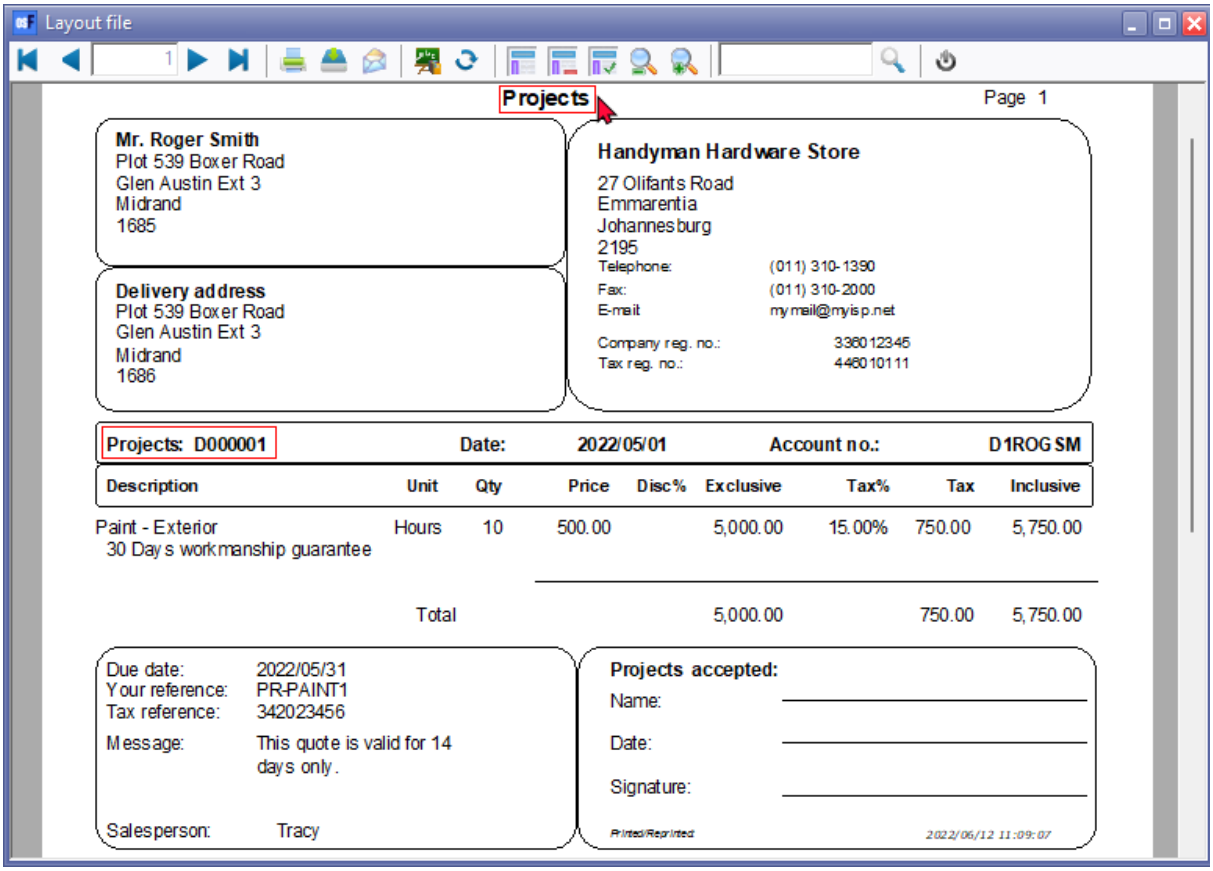
7. Select the "*Stock item*" and check the rest of the fields.

Additional information may be added to stock items on documents:

- *Remarks – Add remarks on the + icon before the stock item.*
- *Comments – F9:Comment to add comments to a stock item.*

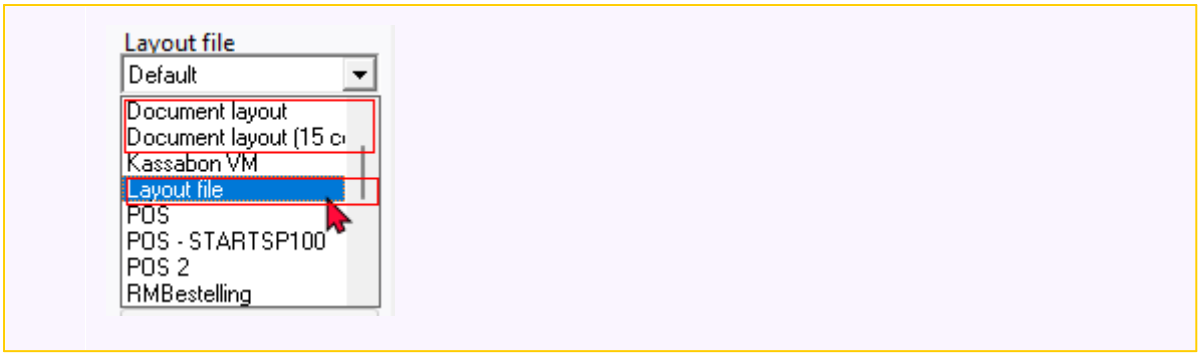
8. Click OK to close and save the Quote. The Quote will be added to the Project Quote tab of the selected project.

9. Click on the Yes button to print the quote.

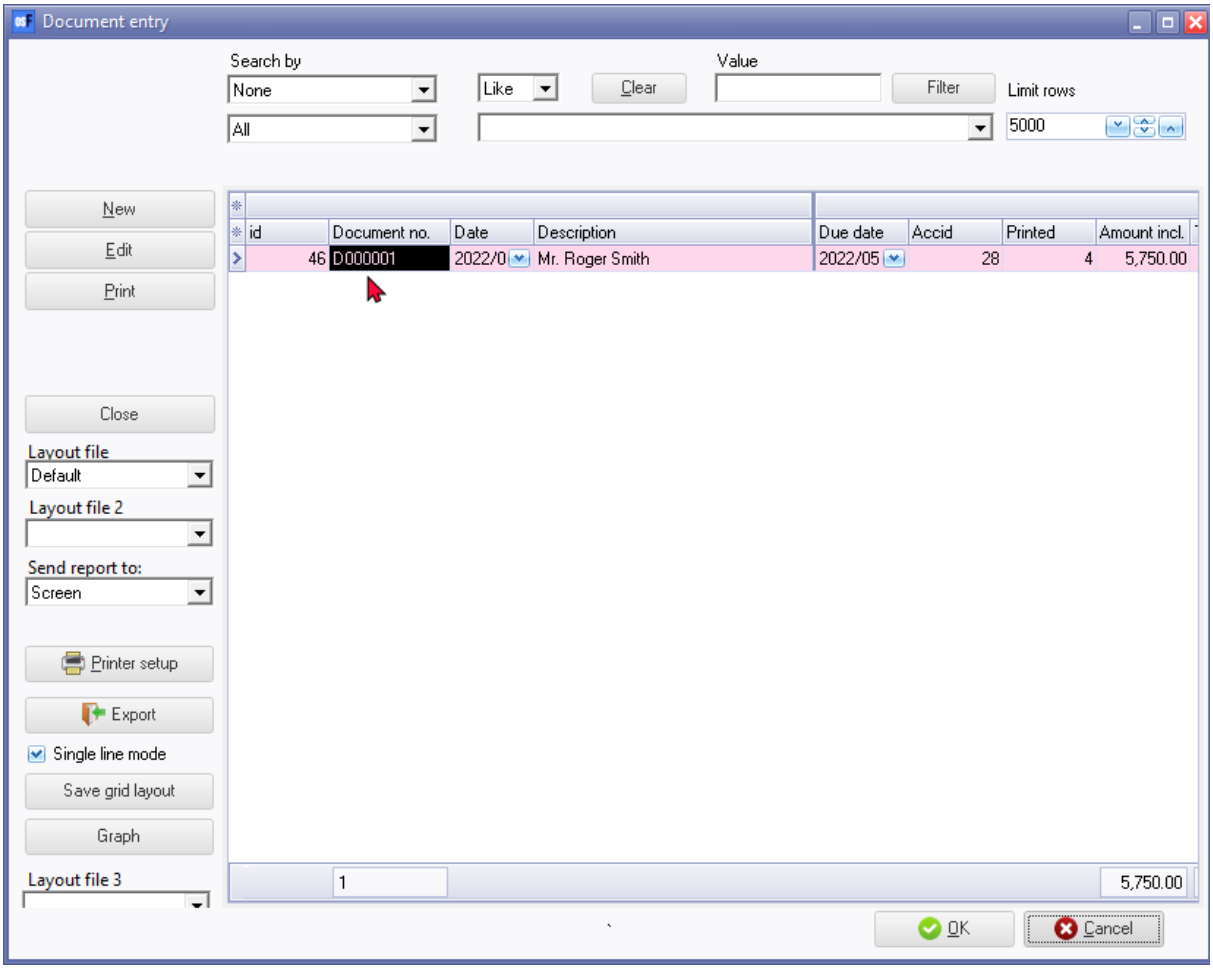


If the Project Quote is printed on the Universal layout files, for all document types, it will display "Projects" as the document name instead of "Quote".

"Projects" as the Document type will be displayed, if the Layout file on Setup → Documents setup on the (Setup ribbon) or on the "Layout file 3" field on the Delivery address tab of Debtor accounts (Default ribbon) is selected, as "Layout file", or the following "Document layout" files is selected:



10. After checking or editing the project quote, the "*Document entry*" screen will be displayed, listing the "*Project Quote*".



11. Click on the Close button or the Cancel button to close and exit the "*Document entry*" screen.

These project quotes will not be listed, if the "Document entry" screen is accessed from Documents on the Default ribbon.

The default document number for is prefixed with a "D" followed by a 6-digit numerical number; e.g. ("D000001"). The "Project Quote" document number cannot be changed.

The default document numbers is set to begin with 000001 (prefixed by 2 alphabetical characters IN for Invoices, CR for Credit notes, PU for Purchase documents, SR for Supplier returns documents, OR for Orders and QU for Quotes).

These document number pre-fixes will automatically be used in Projects if documents are processed from the Documents tab or on the Documents (Default ribbon).

Create Documents for a Project

Once a Projects is activated and Project codes are created, all purchase documents (Purchases, Supplier returns and Orders) and sales documents (Invoices, Credit notes and Quotes) could be processed as follows:

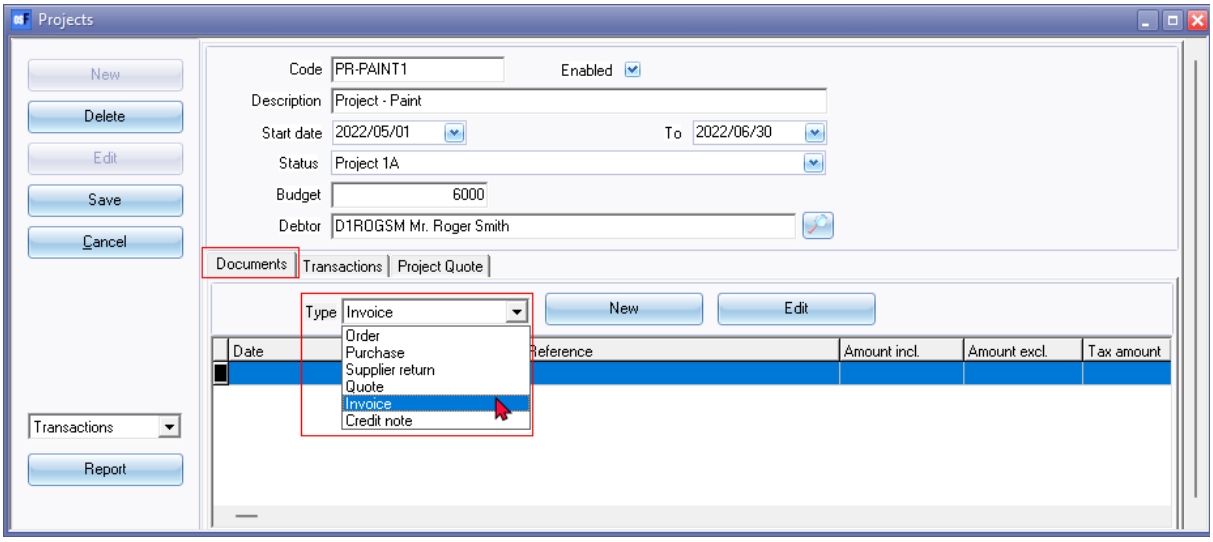
- For a selected Project in Projects (Default ribbon)
- Any new documents may also be created (generated) in the Documents (Default ribbon). You may then select the Project code.
- If any documents have not yet been posted, you may select and process them in the normal Documents option Documents (Default ribbon). You may then edit them and select a different project.

If the default debtor (customer / client) account is selected for the Project, purchase documents (Purchases, Supplier returns and Orders) and sales documents (Invoices, Credit notes and Quotes) for the Project can only be processed for the default debtor (customer / client) account. The Debtor accounts or Creditor accounts screens will not be displayed.

If the "No print confirmation" setting in the Stock information (Setup ribbon) is not selected (not ticked), the confirmation message "Do you wish to Print the Invoice now?" will be displayed. Click on the Yes button to print the Invoice (or on the No button not to Print the Invoice at this stage).

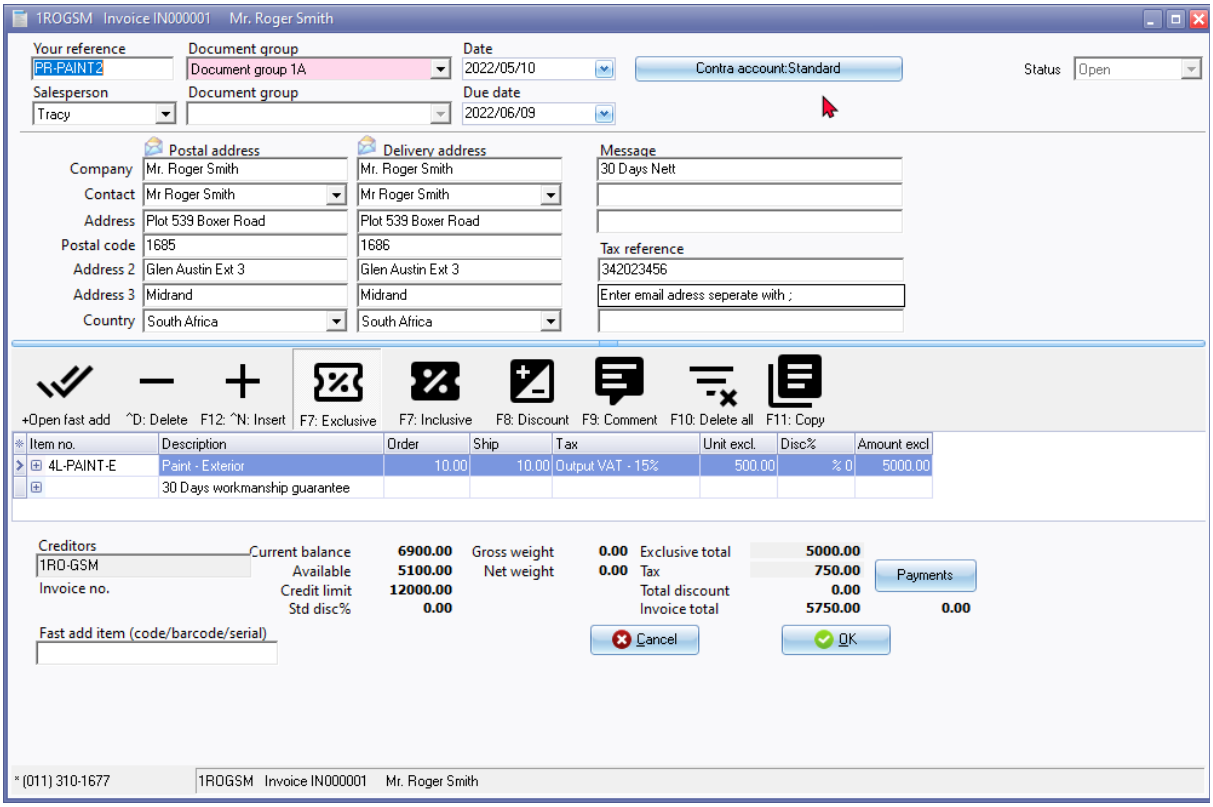
To create documents for a selected project:

1. On the Default ribbon, select Projects.
2. Select a project from the list.
3. Click on the Documents tab.



4. On the "*Type*" field, select a purchase document (Purchase, Supplier return or Order) or sales documents (Invoice, Credit note or Quote).

5. Click on the New button.



6. Enter a reference in the "*Your reference*" field.

> *The reference number is added to projects and is useful when searching for a specific document or a project.*

7. Check and edit the messages in the "*Message*" field, if necessary.

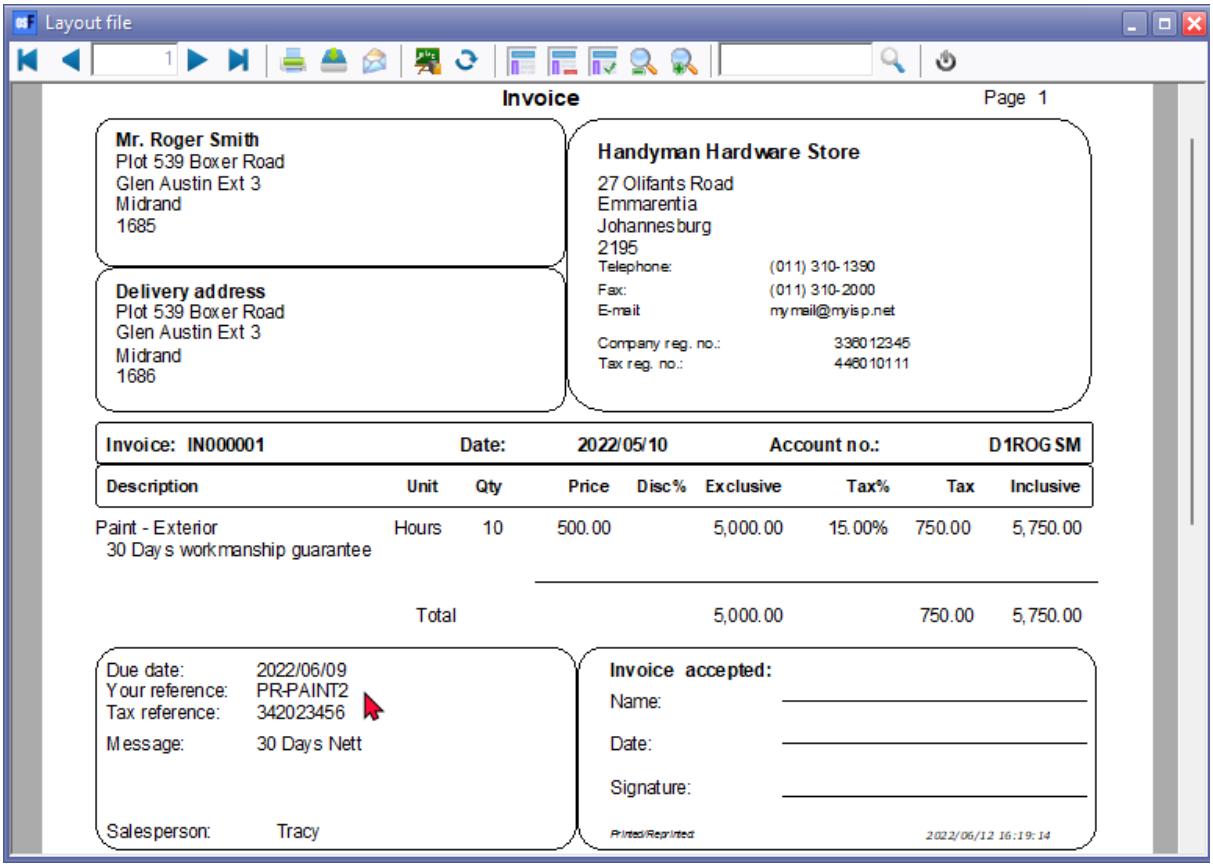
8. Select the "*Stock item*" and check the rest of the fields.

Additional information may be added to stock items on documents:

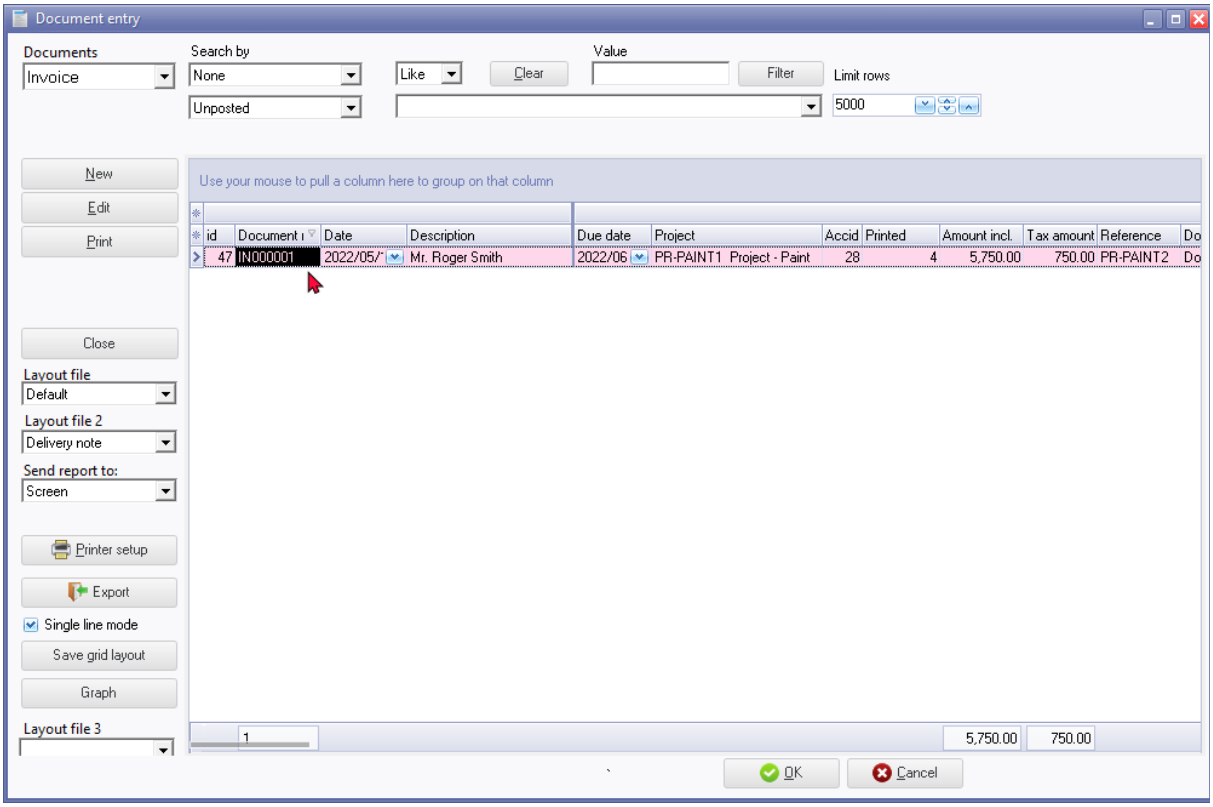
- *Remarks – Add remarks on the + icon before the stock item.*
- *Comments – F9:Comment to add comments to a stock item.*

9. Click OK to close and save the Invoice. The Invoice will be added to the Documents tab of the selected project.

10. Click on the Yes button to print the Invoice.



11. After checking or editing the project quote, the "*Document entry*" screen will be displayed, listing the "*Project Invoice*".



12. Click on the Close button or the Cancel button to close and exit the "*Document entry*" screen.

Create Invoices in the Calendar for Projects

The Calendar / Planner allows you to create invoices for Projects. The following options are available:

1. Hours – Create quotes for a selected debtor (customer / client) account. The quote will be added to the Documents tab of a selected Project. The quotes may be edited and converted to an Invoice.
2. Create invoices for scheduled debtor (customer / client) appointments. You may create up to 6 categories of debtor (customer / client) appointments.

Once the quotes or invoices are generated, and the project is selected, these documents will be added to the Documents tab of a selected Project.

Create Invoices for Hours

Should you need to invoice a debtor (customer / client) for services rendered on an hourly basis (e.g. consulting, etc.), you may use the "*Hours*" category to schedule and process quotes (invoices) with a few mouse-clicks. The Calendar (Planner) is the electronic diary, time sheet, which integrates the billing of your debtors (customers / clients).

This option generates Quotes and not Invoices. The reason for this, is:

- *Quotes are used to schedule the hourly services in the future.*

- *Once the service is rendered, the Quotes are edited and confirmed (converted to Invoices).*

You may also view and print the Invoice on the Documents tab of the Debtor account (Debtors on the Default ribbon). Once the Invoice is posted (updated to the ledger), it will be listed as a debit transaction on the Transactions tab of the Debtor account.

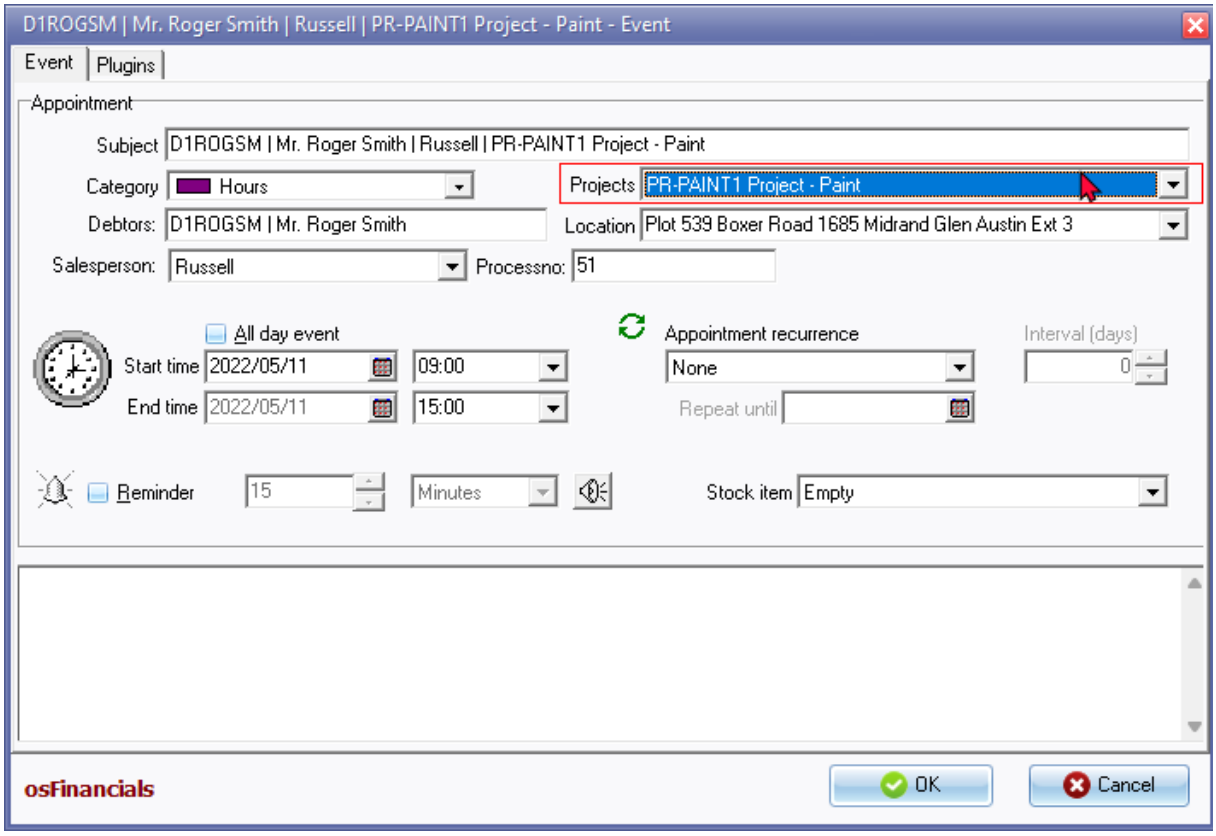
You may also select a specific person (salesperson) which will render these services.

Processing Invoices for Hours

If you use the "*Hours*" category to schedule and process quotes, for your debtors (customers / clients), it will create quotes when you create invoices for hours. These quotes need to be confirmed and converted to an invoice.

To process invoices for hours:

1. If the Calendar is not automatically displayed, click on the Calendar (Default ribbon).
2. Select the day and a time slot to schedule the hours and right-click on a time slot.
3. On the context menu, select the "*Add Event...*" option. The "*Untitled – Event*" screen will be displayed.



4. On the "*Untitled Event*" screen, enter and/or select the following:

    a) Subject - Leave blank. This will automatically be filled in with the debtor (customer / client) account code, description and Salesperson when selecting it.

b) Category - Select "*Hours*" (Magenta colour).

c) Hours - Click on the Hours field. Select a debtor customer account.

d) Projects - Empty is the default project. Select a project from the list.

e) Salesperson- Select a salesperson.

f) All day event - Leave blank.

g) Start time - This is the date and time as selected on the Calendar from where the "*Untitled - Event*" screen was launched. If this date is not correct, you may select the correct date. Enter or select the time slot, if not correct.

h) End time - Enter the time expected to finish the project.

i) Appointment recurrence - The default is "*None*". Cannot be selected for Hours.

j) Repeat until - Field disabled. Cannot be selected for Hours.

k) Reminder - You may activate it and set the "*Minutes*", "*Hours*" or "*Days*" to remind you in advance to process invoices for hours.

> *The Subject in the Titlebar will display the debtor (customer / client) account code and name, the name of the salesperson as well as the Project code and description.*

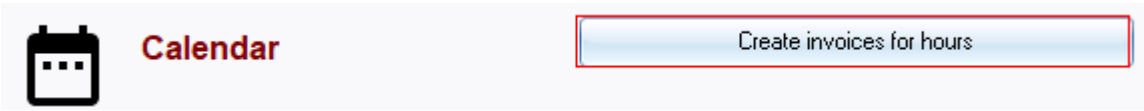
l) Notes - You may enter notes below the "*Reminder*" section of the "*Event*" screen (e.g. "*Paint – white exterior – 6 hours*"), etc.

> This additional information will be displayed in the "Notes" column on the Appointment tab for the debtor (customer / client) account (Debtor on the *Default ribbon*).

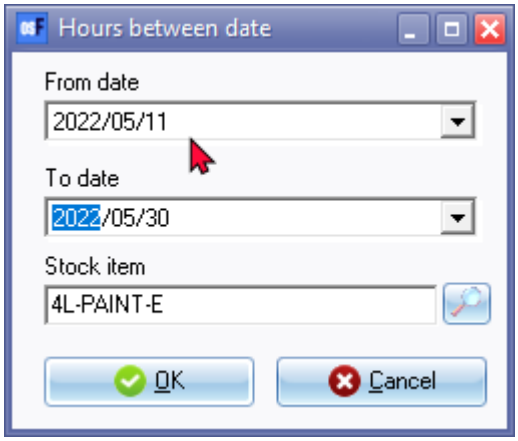
5. Click on the OK button to register and save the "*Hours*" event.

> *The Subject in the Titlebar will display the debtor (customer / client) account code and name, the name of the salesperson as well as the Project code and description.*

6. On the Calendar topbar, click on the Create invoices for hours button.



The following options screen is displayed:



7. Select the date from and date to in which the hourly rate is to be charged (e.g. 2022/05/11).
8. Click on the Lookup icon and select the stock item.
9. Click on the OK button to create the quote. The information screen "*Quote(s) generated*" will be displayed.
10. Click on the OK button.

This Quote may be viewed on the following options:

Document Entry screen as Unposted (i.e. Not converted to an Invoice).

- *Projects (Default ribbon) on the list of a selected Project.*
- *Documents tab of the Debtor account (Default ribbon). Once the Quote is confirmed (converted to an invoice and the Invoice is posted (updated to the ledger), it will be listed as a debit transaction on the Transactions tab of the Debtor account.*

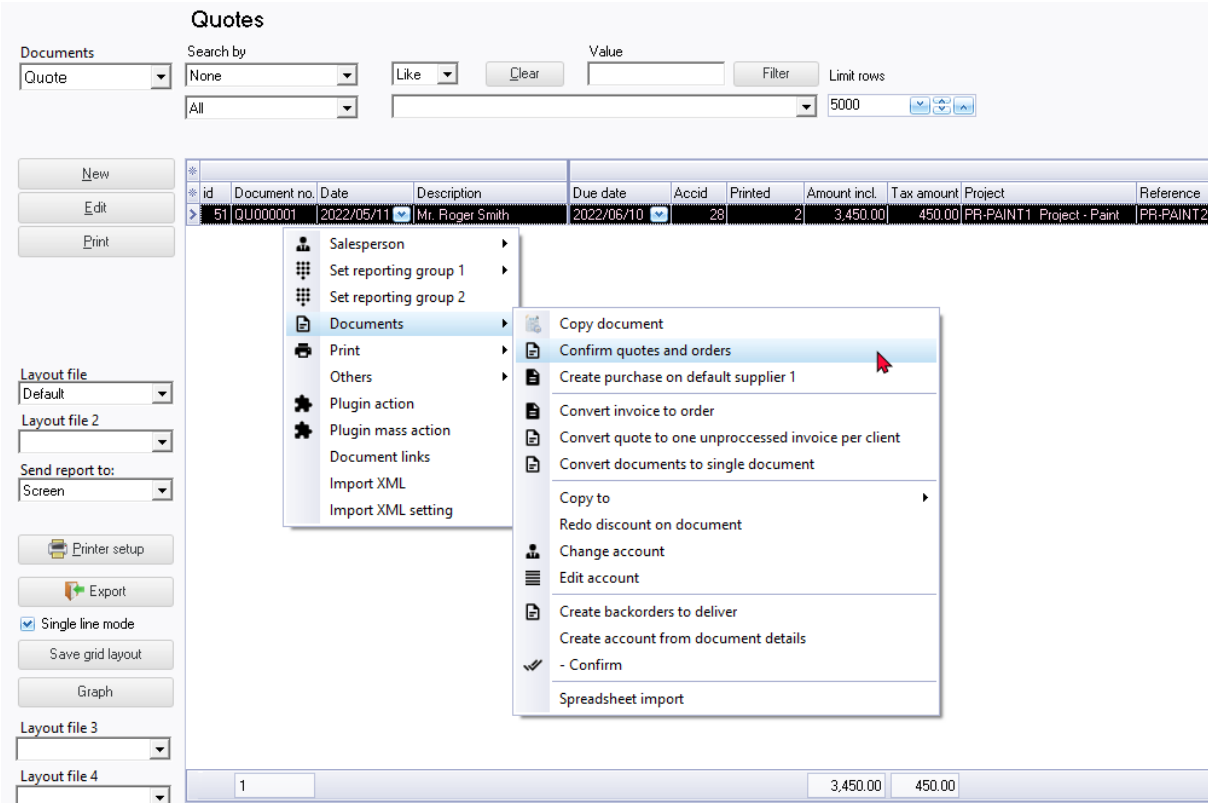
You may need to edit the quote, e.g. add comments, change the hours, etc. change the Project code, before converting it to an Invoice.

Edit / Convert Quotes to Invoices

Once quotes are generated for the "*Hours*" events n the "Calendar" for debtor (customer / client) accounts, you may convert these quotes to invoices.

To convert the quote for hours to invoices:

1. Exit or close the Projects (if active).
2. On the Default ribbon, select Documents.
3. Select "*Quote*".



4. Select the specific "*Quote*" and right-click. On the context menu, select Documents → Confirm quotes and orders.

5. A confirmation message is displayed:

> "Do you wish to: (1) Quote Confirmation"

6. Click Yes. Another confirmation message "Do you wish to delete this Quote?"

7. Click No.

> *If you click on Yes, the Quote will be removed from the "Document entry" screen as well as the Documents tab on the selected Project.*

8. Another confirmation message is displayed:

> "Document(s) created! IN000003 PR-PAINT2 1ROGSM Mr. Roger Smith"

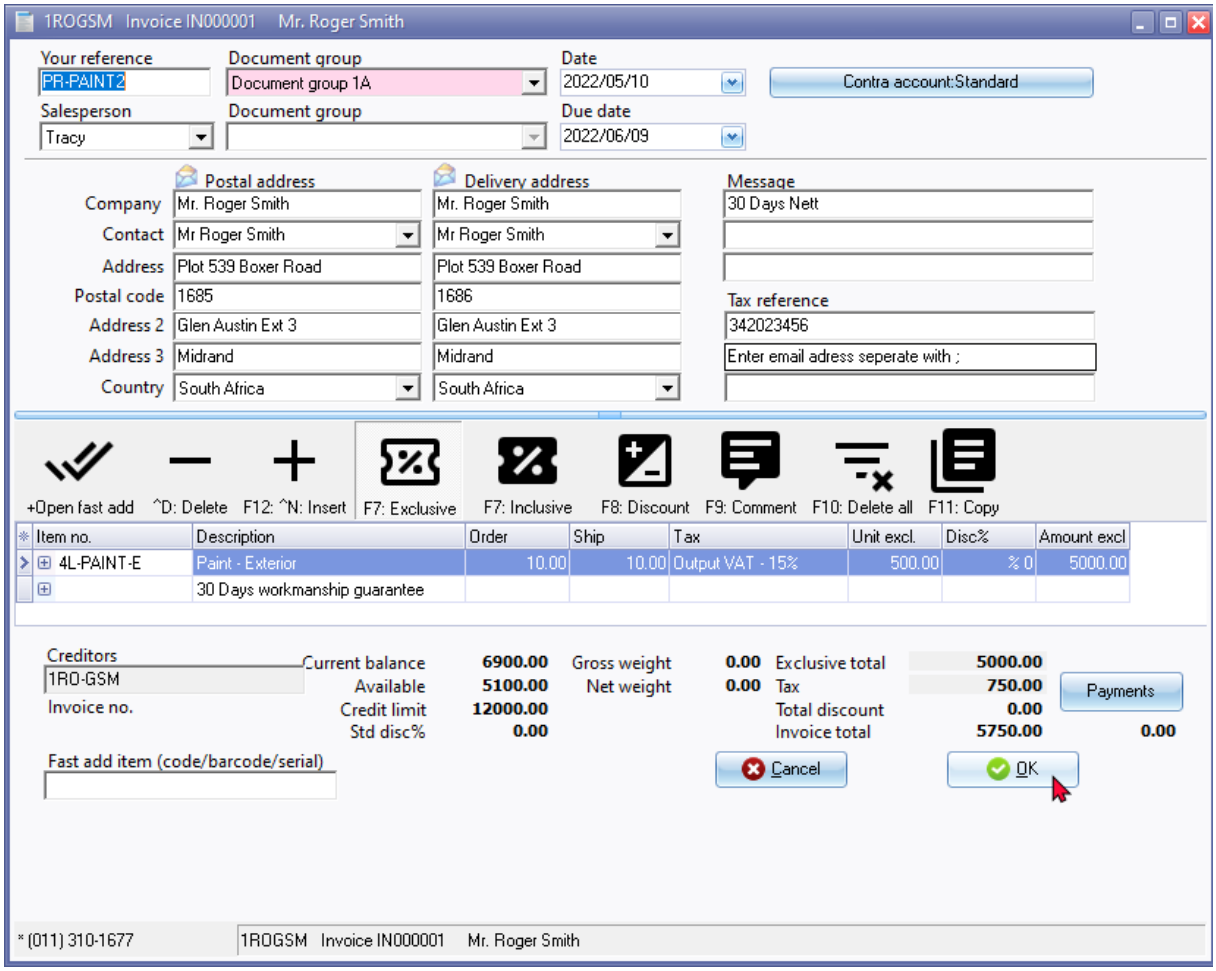
9. Click OK.

To edit the converted invoice for hours:

1. Exit or close the Projects (if active).

2. On the Default ribbon, select Projects or Documents.

3. Select the "*Invoice*".



> *This Invoice is selected from the Documents tab on the selected Project.*
>
> *If the Invoice was selected from the Document entry" screen, the Project may be changed.*

4. Enter a reference in the "*Your reference*" field.

> *The reference number is added to projects and is useful when searching for a specific document or a project.*

5. Check and edit the messages in the "*Message*" field, if necessary.
6. Edit the rest of the fields as necessary, if required.
7. Click OK to close the Invoice.

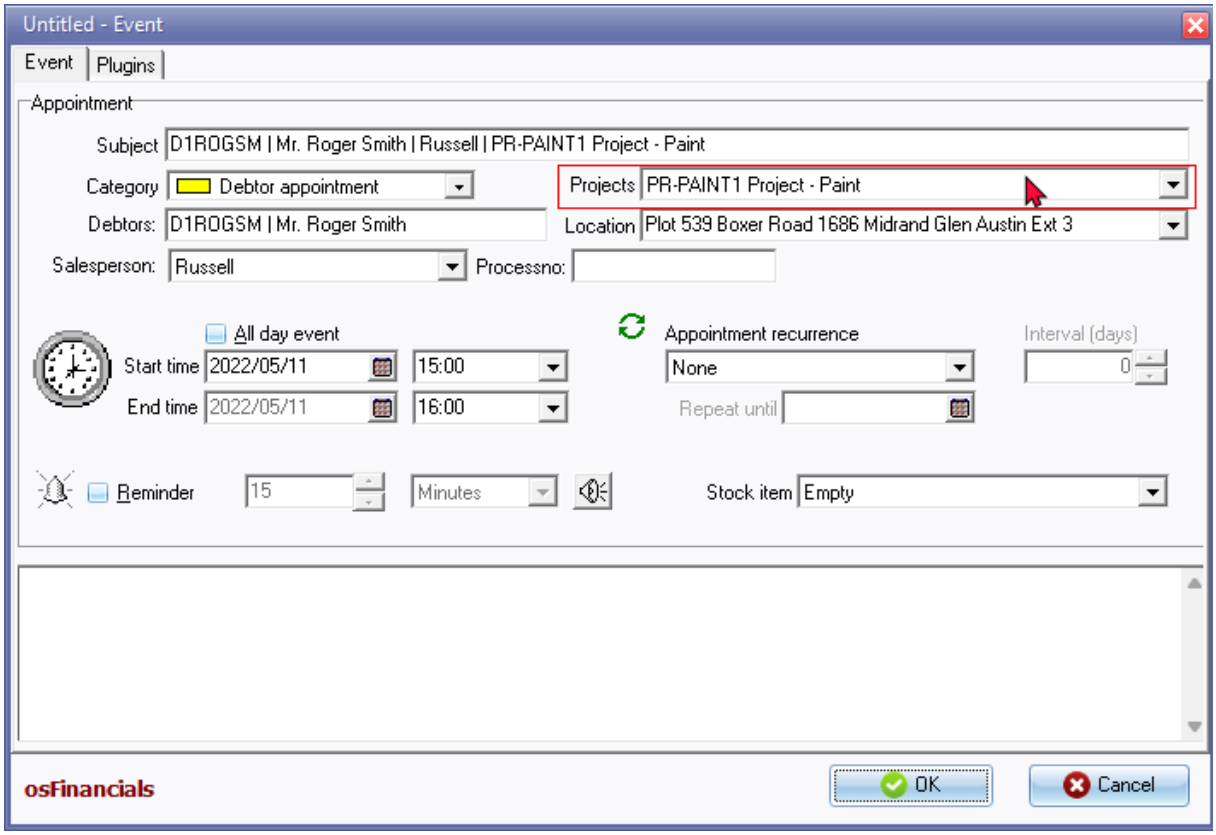
Creating Invoices for Debtor Appointments

Once up to 6 categories of debtor (customer / client) appointments have been scheduled, you may create invoices.

Schedule Debtor Appointments

To schedule debtor appointments:

1. If the Calendar is not automatically displayed, click on the Calendar (Default ribbon).
2. Select the day and a time slot to schedule the debtor (customer / client) appointment and right-click on a time slot.
3. On the context menu, select the "*Add Event...*" option. The "*Untitled – Event*" screen will be displayed.



4. On the "*Untitled Event*" screen, enter and/or select the following:
5. Subject - Leave blank. This will automatically be filled in with the debtor (customer / client) account code, description and salesperson when selecting it.
6. Category – Select any of the 6 categories of Debtor appointments.
7. Hours - Click on the Hours field. Select a debtor customer account.

8. Projects - Empty is the default project. Select a Project from the list.
9. Salesperson- Select a salesperson.
10. All day event - Leave blank.
11. Start time - This is the date and time as selected on the Calendar from where the "*Untitled - Event*" screen was launched. If this date is not correct, you may select the correct date. Enter or select the time slot, if not correct.
12. End time - Enter the time expected to finish the project.
13. Appointment recurrence - The default is "*None*".
14. Repeat until - Field disabled. If any other option than "*None*" on the "*Appointment recurrence*" field is selected, you may select or enter a date.
15. Reminder - You may activate it and set the "*Minutes*", "*Hours*" or "*Days*" to remind you in advance to process invoices for hours.
16. Notes - You may enter notes below the "*Reminder*" section of the "*Event*" screen.

> *This additional information will be displayed in the "Notes" column on the Appointment tab for the debtor (customer / client) account (Debtor on the Default ribbon).*

17. Click on the OK button.

> *The Subject in the Titlebar will display the debtor (customer / client) account code and name, the name of the salesperson as well as the Project code and description.*

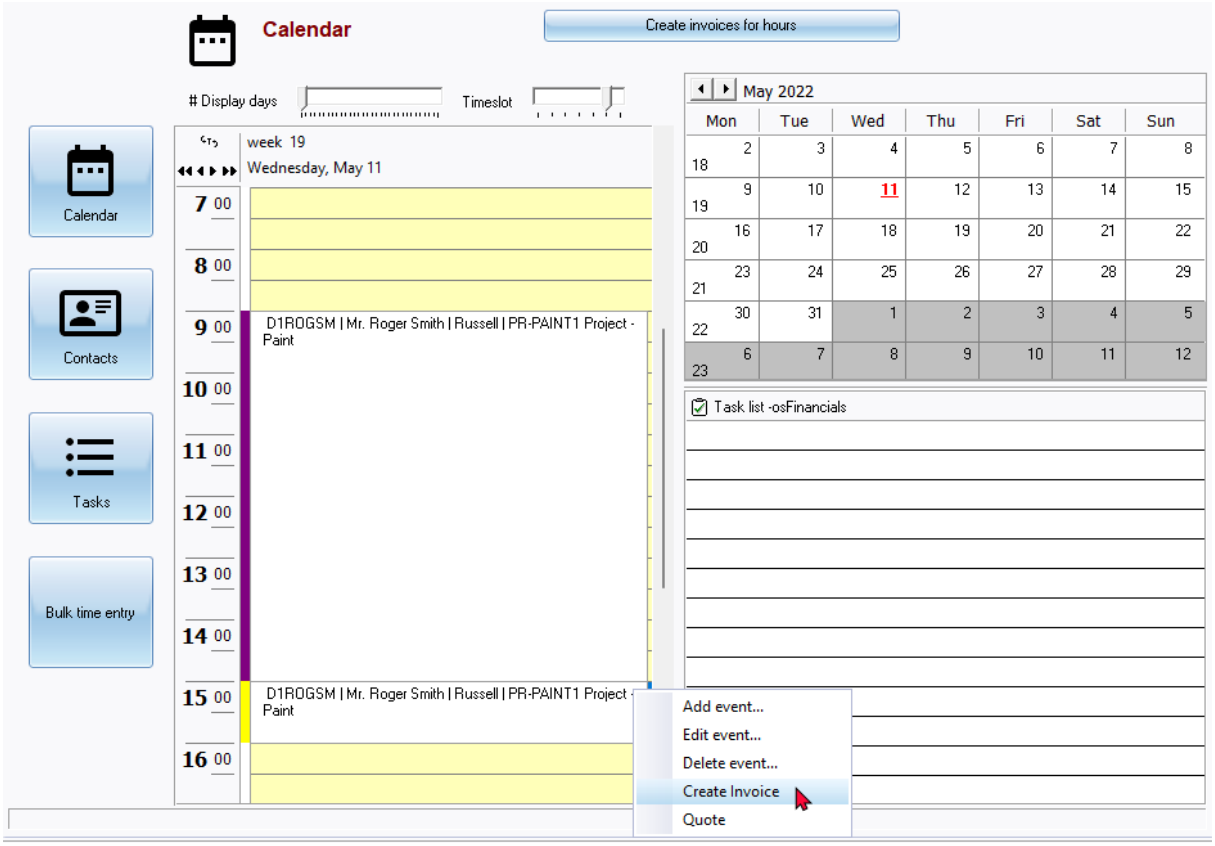
18. Click on the OK button to register and save the "*Debtor appointment*" event.

Create Invoices for Debtor appointments

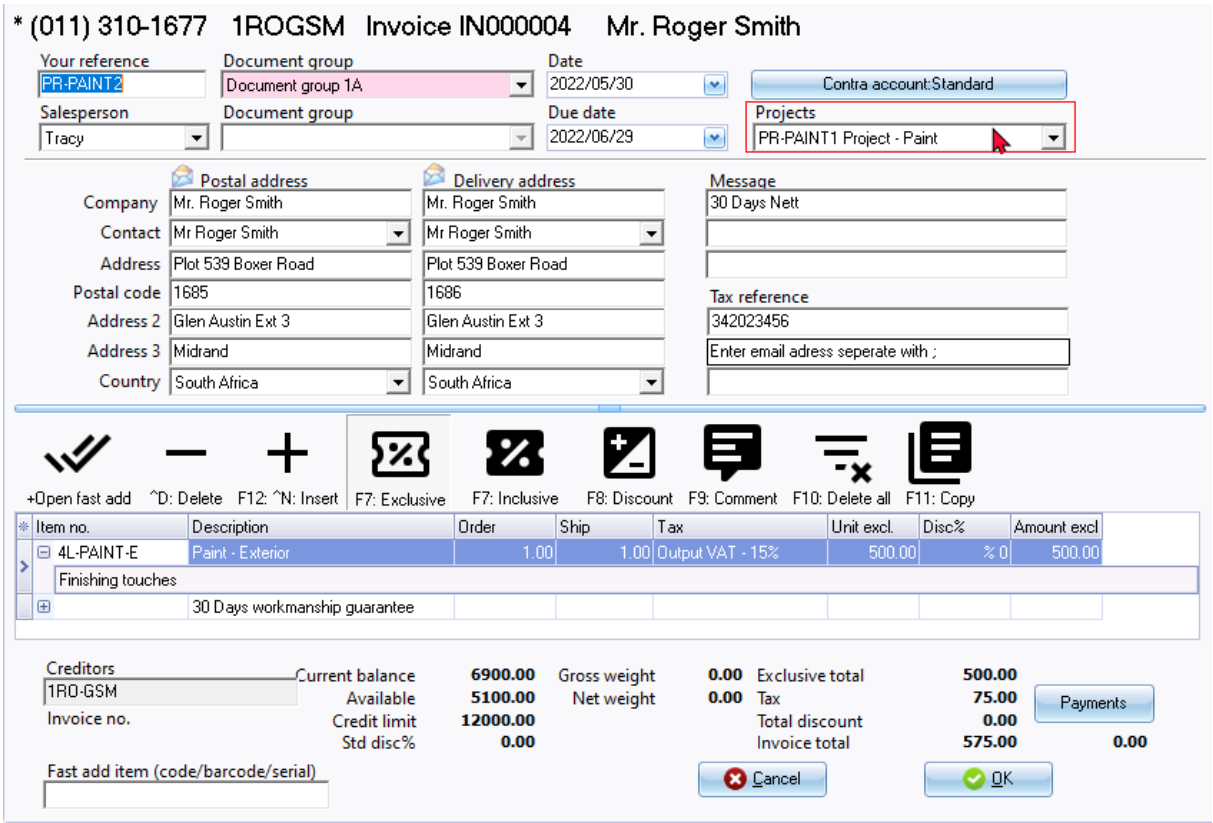
Once the Debtor appointment is scheduled, you may create an invoice.

To process invoices for debtor appointments:

1. If the Calendar is not automatically displayed, click on the Calendar (Default ribbon).
2. Select the day and a time slot in which any of the 6 categories for debtor (customer / client) appointments is scheduled, and right-click.



3. On the context menu, select the "*Create Invoice*" option. A new "*Invoice*" screen for the selected debtor (customer / client) will be displayed.



4. Select the Project from the list in the "*Projects*" field.

5. Enter a reference in the "*Your reference*" field.

> *The reference number is added to projects and is useful when searching for a specific document or a project.*

6. Check and edit the messages in the "*Message*" field, if necessary.

7. Edit the rest of the fields as necessary, if required.

8. Select the "*Stock item*" and check the rest of the fields.

> *Additional information may be added to stock items on documents:*
>
> - *Remarks – Add remarks on the + icon before the stock item.*
> - *Comments – F9:Comment to add comments to a stock item.*

9. Click OK to close and save the Invoice. The Invoice will be added to the Documents tab of the "*Project*" screen.

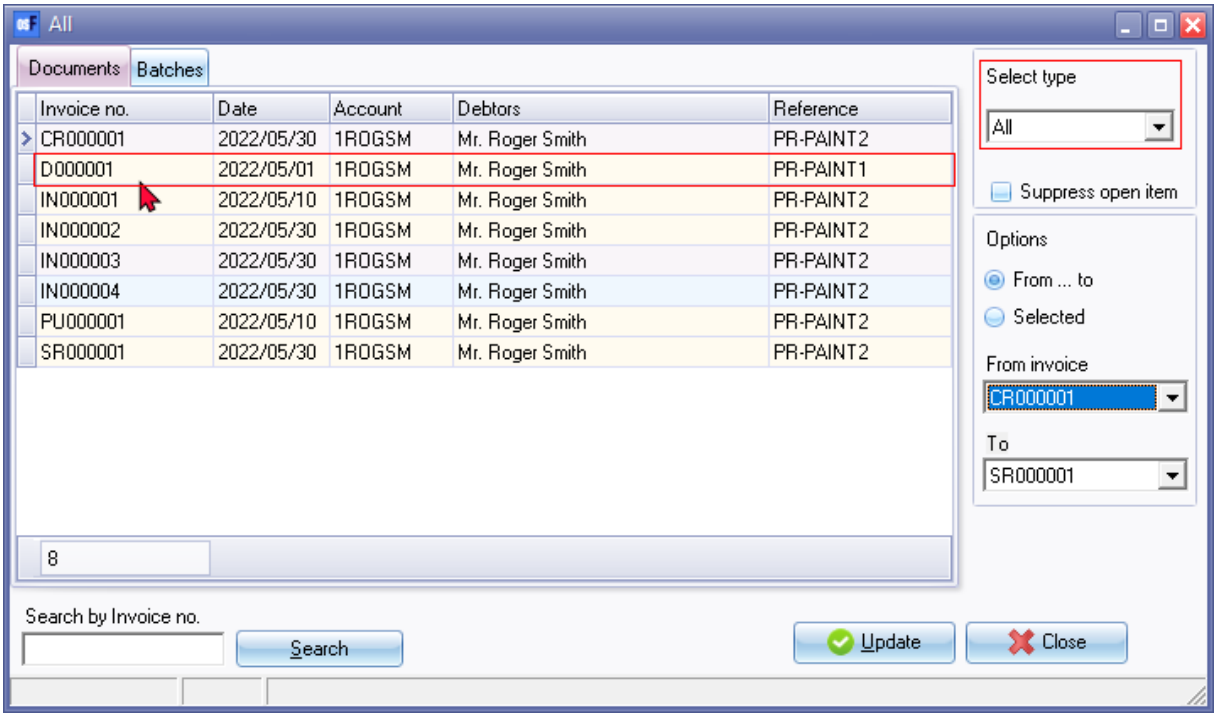
Update (Post) Documents to the Ledger

Once the documents for the project is processed, you may update (post) the documents to the ledger.

Once the documents are updated (posted) to the ledger, these documents will be added to the Transactions tab of the project(s).

To post or update your documents:

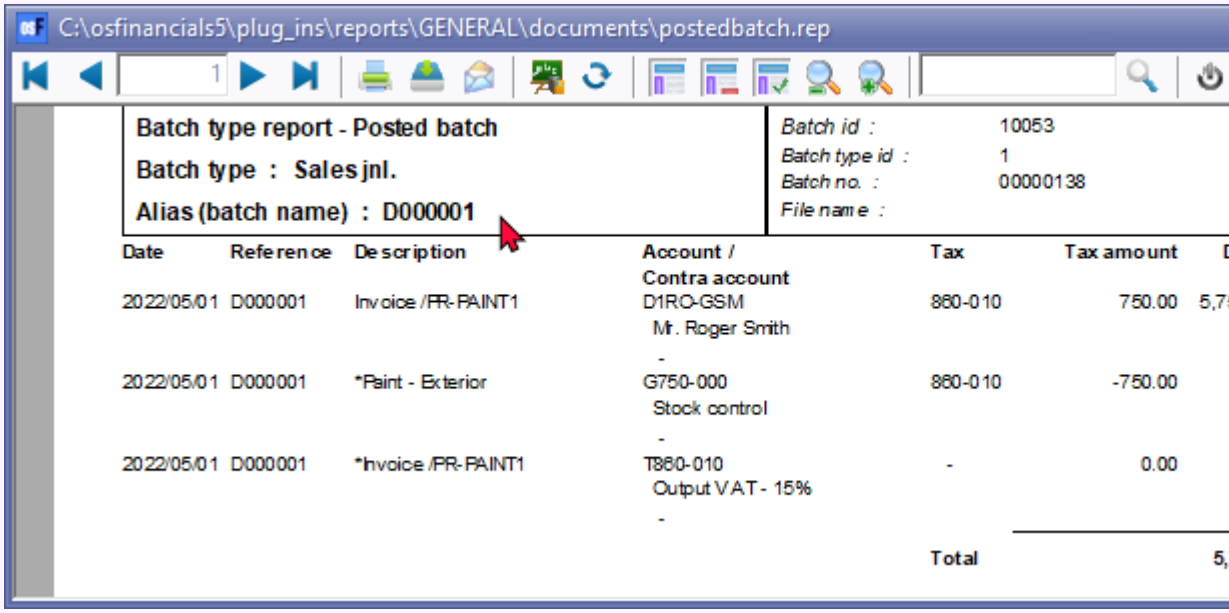
1. On the Default ribbon, select Update ledger (F3). The "*Update Invoice"* screen will be displayed.



2. Select each document type *(i.e. "Purchase, Supplier return, Invoice" and "Credit note").*

DO NOT SELECT the "All" option. If the "All" option is selected, the Project Quote will also be posted (updated) to the ledge

It will incorrectly post (update) transactions as follows:



Note document "D000001" is processed in the Project Quote tab of the selected project, and only included in the "All" document types selection on the "Update ledger" screen.

SEE - PROJECT QUOTES – KNOWN ISSUES

3. Click on the Update button for each document type *(i.e. "Purchase, Supplier return, Invoice" and "Credit note")*.

Note if a document, e.g. "D000001" is processed in the Project Quote tab of the selected project, it is included in the "All" document types selection on the "Update ledger" screen.

If you have posted (updated) the ledger using the "All" document types selection on the "Update ledger" screen, these Project Quotes may post incorrect transactions to the ledger.

BATCH (JOURNAL) PROCESSING FOR PROJECTS

By default, projects are not activated in Batches. Projects needs to be activated for each batch, in which you need to process transactions for specific projects.

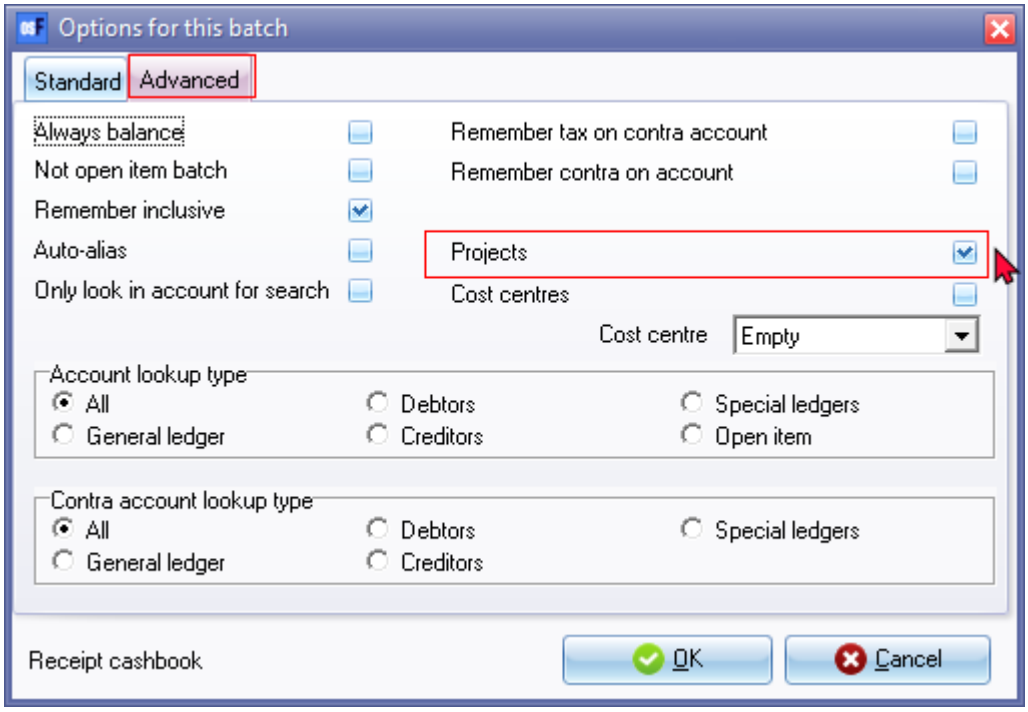
Activate Projects in Batches (Journals)

Once you have activated Projects in a specific batch, the "*Project*" column will be displayed after the "*Account*" column; and (before the "*Tax*" column, if the "*No tax*" option is not selected on the Advanced tab of the "*Options for this batch*" screen) before the "*Debit*" column.

When processing transactions, you may select the "*Projects*" from the "*Projects*" lookup.

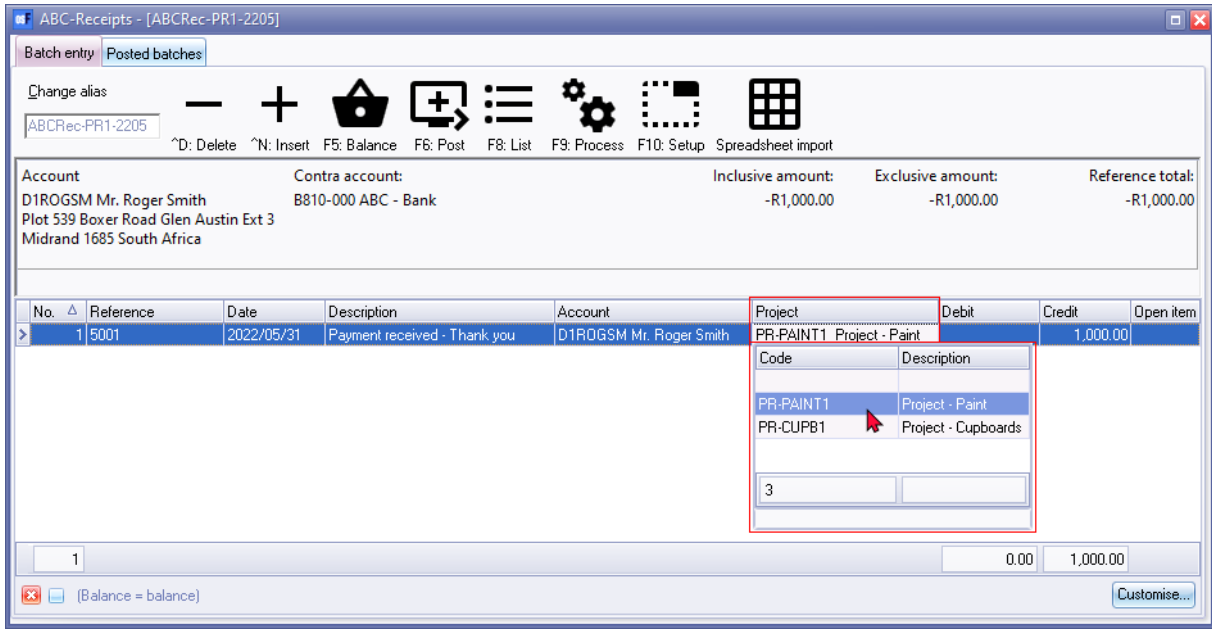
To activate projects in batches:

1. On the Default ribbon, select Batch entry.
2. Select the specific "*Batch type*" in which you need to activate Projects.
3. Click on the F10: Setup icon to set the Options for the selected batch.
4. Click on the Advanced tab.



5. To activate "*Projects*", select (tick) Projects.

6. Click on the OK button. The selected batch entry screen will be opened and the "*Projects*" column will be inserted in the batch.



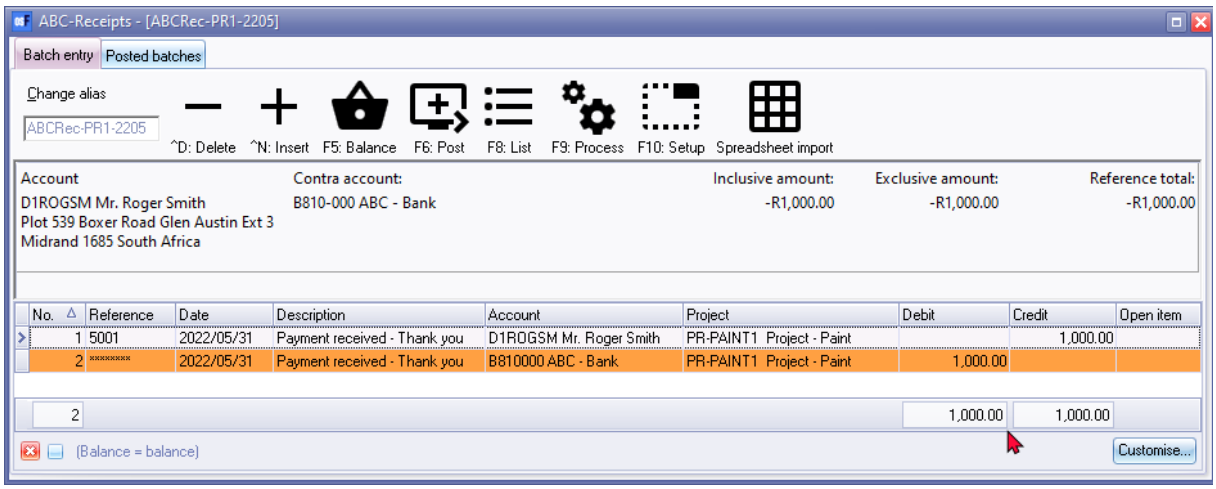
To deactivate "Projects" in a specific batch, simply repeat this process and remove the tick in the "Projects" tick box.

Process Transactions for Projects in Batches

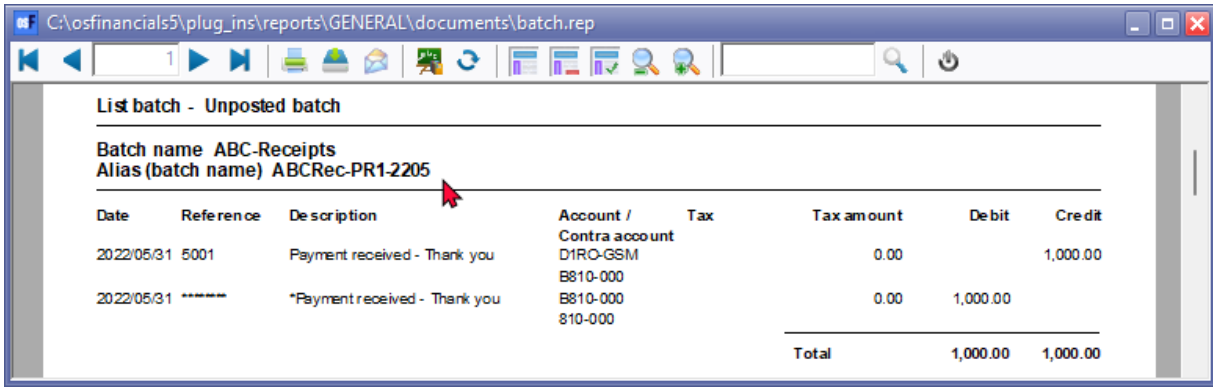
When processing transactions, you may select the "*Projects*" from the "*Projects*" lookup.

To process transactions in batches:

1. Click on Batch entry (Default ribbon).
2. Select the specific "*Batch type*" in which you need to process transactions for Projects.
3. Enter the transactions and select the Project from the Project lookup.



4. Balance the batch.
5. Click on F8:List to print a list of the unposted transactions in the batch.



6. Click on F6:Post to update the transactions to the ledger.
7. Once the batch transactions are updated (posted) to the ledger, these batch transactions will be added to the Transactions tab of the project(s).

Project Reports

There are five (5) reports available for Projects. These reports are created and maintained in "*Reportman*" accessed in Report designer on the Reports or Setup ribbon.

These reports are stored in the "*...\plug_ins\reports\REPORTS\PROJECTS*" directory, and is follows:

Label ID Description (Report name)

1. TRN_27 Stock Item
2. TRN_354 Statement
3. TRN_960 Total
4. TRN_2330 Hours
5. TRN_20069 Transactions

This will translate depending on your Language selection when launchingosFinancials5/TurboCASH5 for the first time (after installation); or the language selected in the Switch language (Start ribbon).

For example; English (default), en-South Africa, en-UK will refer to "*Stock items*" and if you select the en-American language, it will display as "*Inventory items*" on the list of reports.

To print reports for projects:

1. Click on Projects (Default ribbon). The "*Projects*" screen (list view) is displayed:
2. The "*Projects*" screen (list view) will be displayed.
3. Select a Project.
4. Select a report on the list, and click on the Report button.

The "Stock items" and the "Statements" reports includes documents and/or transactions which are not posted (updated to the ledger).

If a project is not setup / configured correctly, you may encounter the following error messages, when printing reports:

Error - No data to print

"D:\osfinancials5\plug_ins\reports\REPORTS\documents\..\PROJECTS\TRN_20069.rep

has errors No data available to print!"

Errors - No project / Project not setup / configured correctly

"D:\osfinancials5\plug_ins\reports\REPORTS\documents\..\PROJECTS\TRN_27.rep

has errors PROJECT:"" is not a valid integer value"

Project - Transactions

This report will list all transactions in posted batches and/or posted documents. These transactions are listed in the selected project's Transactions tab.

The "Transactions" report does not include documents and/or transactions which are not posted (updated to the ledger).

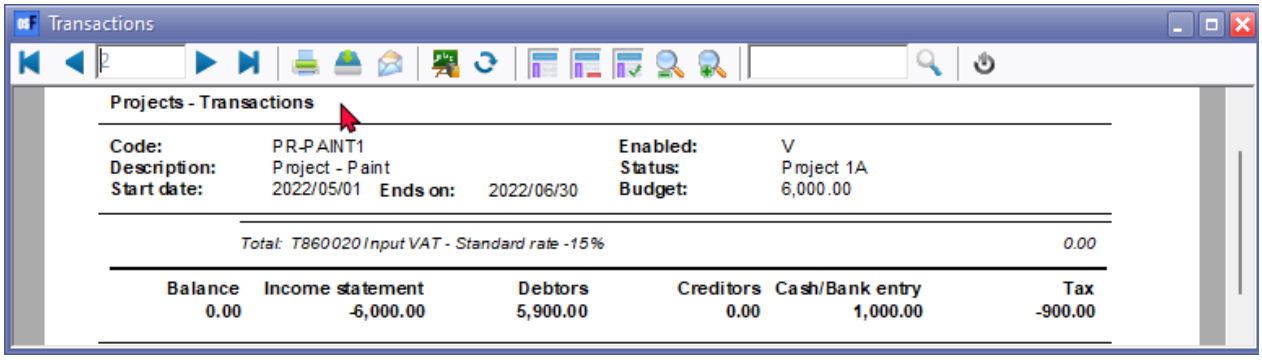
Page 2 -



SEE - PROJECT QUOTES – KNOWN ISSUES

Note if a document, e.g. "D000001" is processed in the Project Quote tab of the selected project, it is included in the "All" document types selection on the "Update ledger" screen.

If you have posted (updated) the ledger using the "All" document types selection on the "Update ledger" screen, these Project Quotes may post incorrect transactions to the ledger.

The "*Projects - Transactions*" report will list the details of each transaction for each account.

Finally, the totals of the accounts are summarised for each account type, as follows:

1. Balance - The total of the transactions allocated to balance sheet type accounts.
2. Income statement – The total of the transactions for income received and expenses paid allocated to income statement type accounts.
3. Debtor - The total of all transactions for debtor (customer / client) accounts.
4. Creditor – The total of all transactions for creditor (supplier / vendor) accounts.
5. Cash/Bank entry – The total of the receipt transactions minus payment transactions into and out of Bank accounts and Petty cash accounts.
6. Tax – The total of the Output TAX (VAT/GST/Sales tax) accounts minus the total of the Input TAX (VAT/GST/Sales tax) accounts.

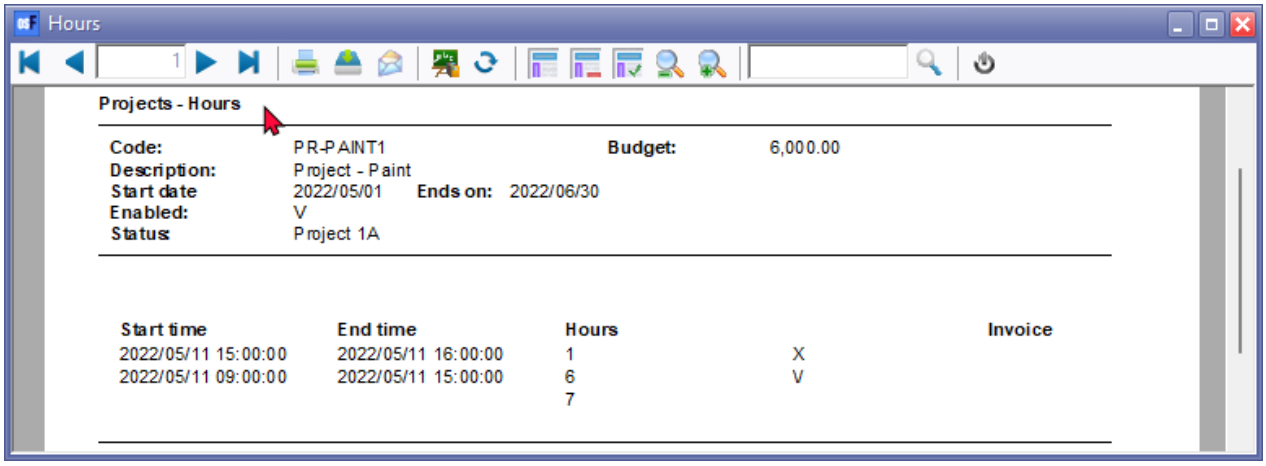
Project – Hours

This report will list the following documents, which have been processed in the Calendar:

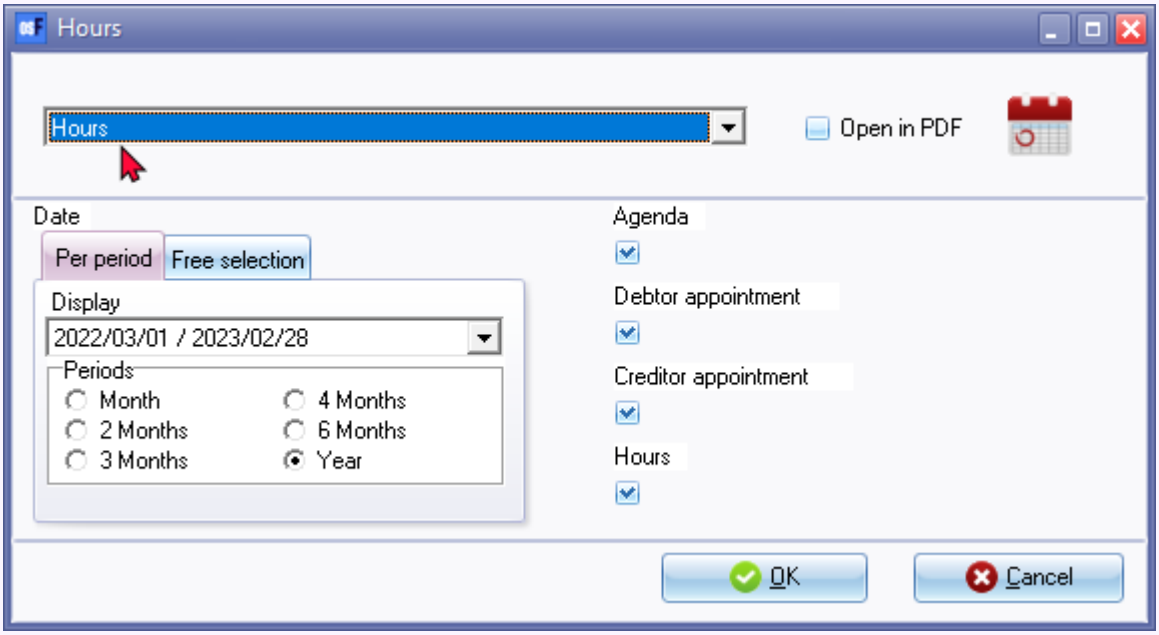
- Hours – Create quotes for a selected debtor (customer / client) account. The quote will be added to the Documents tab of a selected Project. The quotes may be edited and converted to an Invoice.
- Create invoices for scheduled debtor (customer / client) appointments. You may create up to 6 categories of debtor (customer / client) appointments.

The report will list the date, start and end time as well as the number of hours spent on a project.

The "Hours" report includes documents and/or transactions which are posted (updated to the ledger).

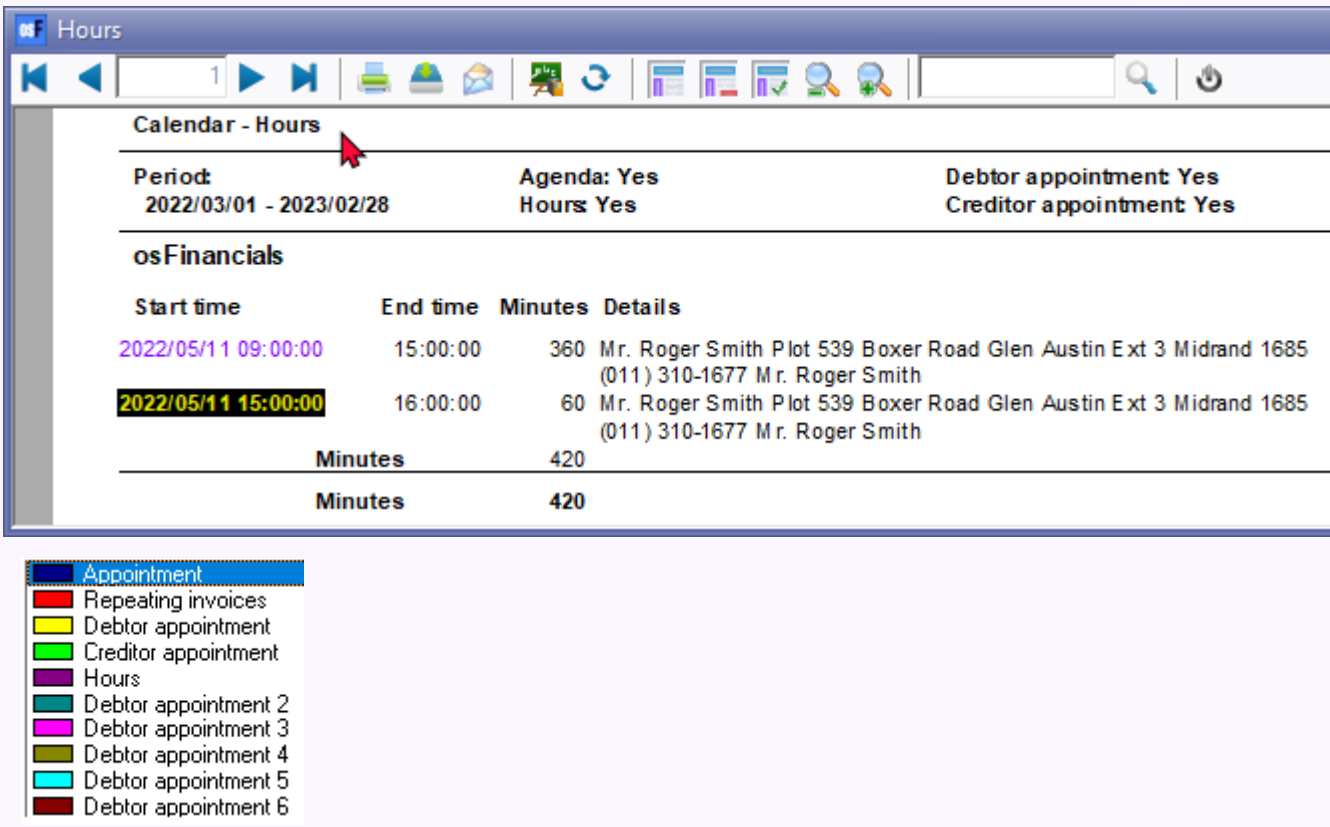


A similar report may also be printed from the Reports → Calendar menu on the Reports ribbon.



This report will not display the project information.

It will display the minutes instead of hours.



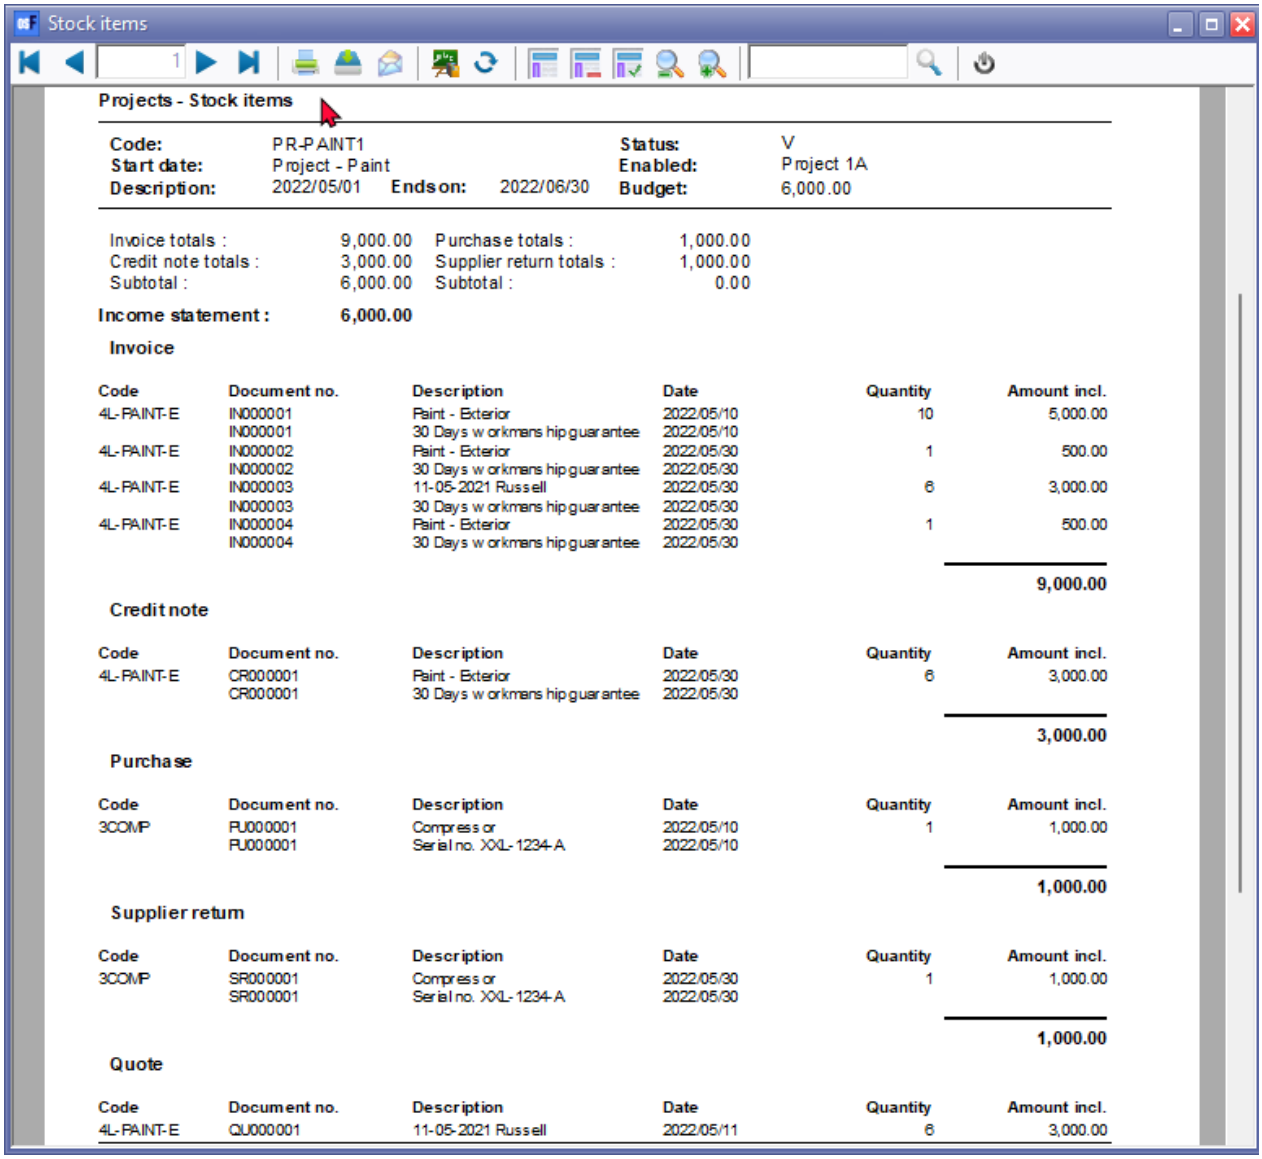
Project - Stock items

This will list the details of the stock items and hours (created via the Calendar).

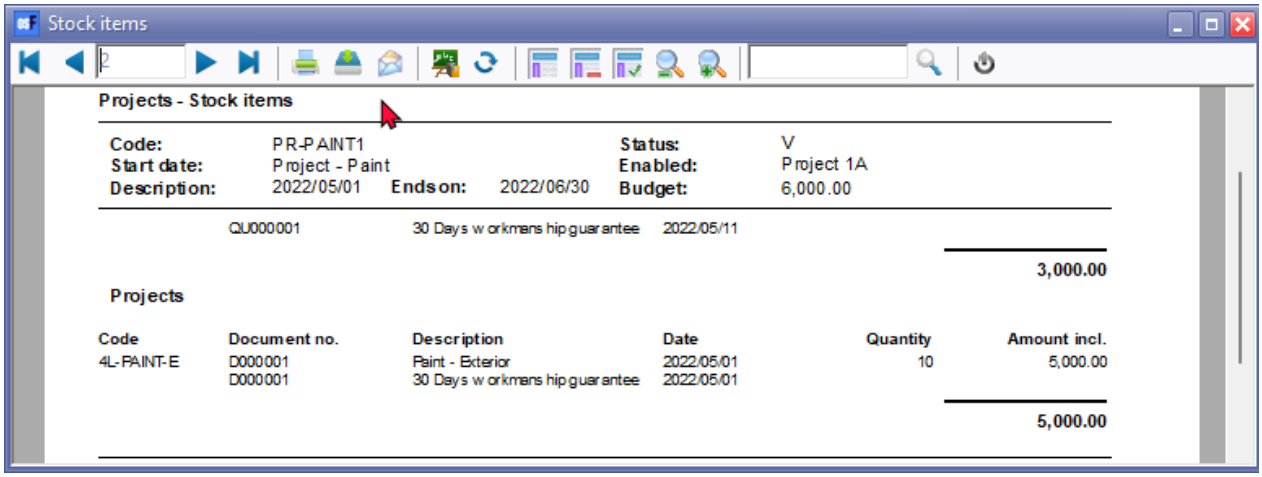
This will list the totals of all Invoices, Credit notes, Purchases and Supplier returns as well as a list of each of these documents. It will also list the Stock code, Document number, Stock description, Date and Exclusive amount for each stock item selected on a document.

The “Stock items” report includes documents and/or transactions which are posted (updated to the ledger).

Page 1 -



Page 2 -



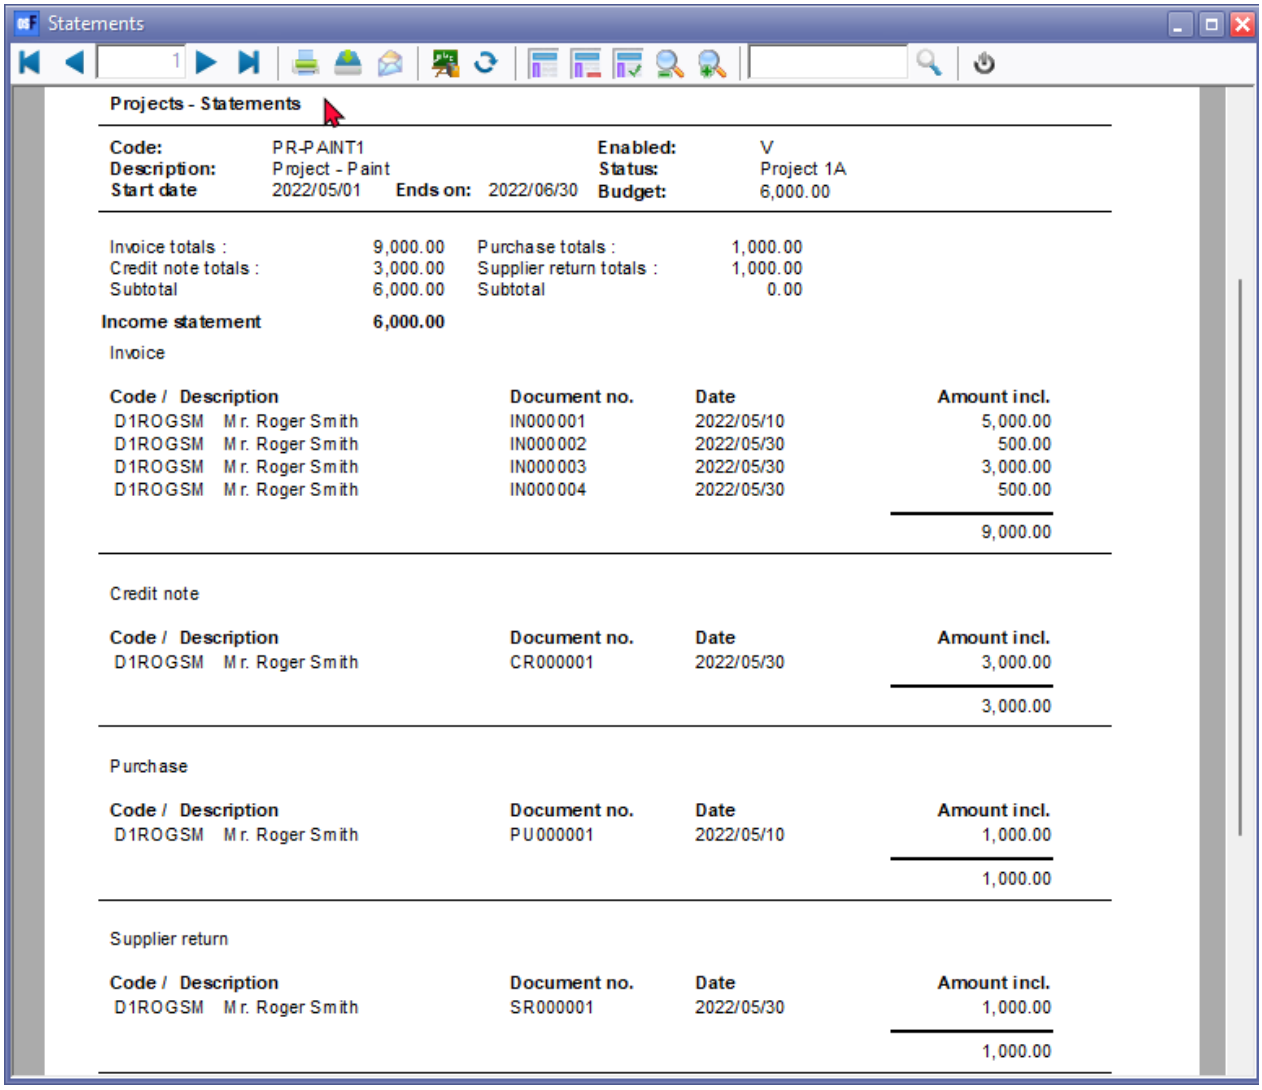
Projects at the end of this report will list all "Project Quotes" for the selected debtor (customer / client) account, added on the Project Quote tab.

Project – Statements

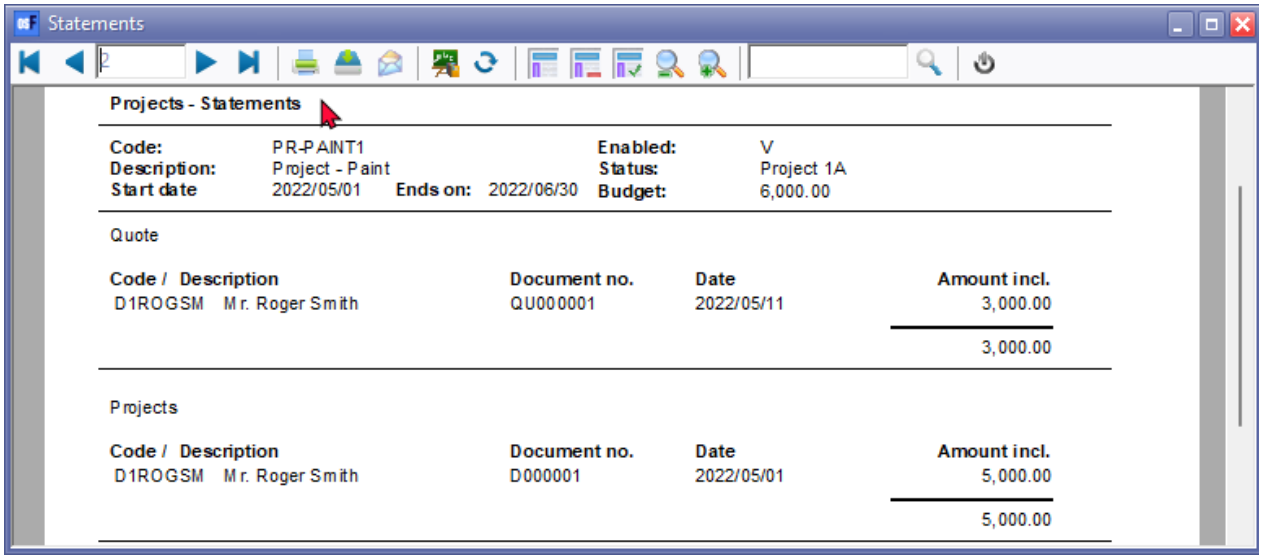
This will list the totals of all Invoices, Credit notes, Purchases and Supplier returns as well as a list of each of these documents. It will also list all Quotes and/or Orders.

The "Statements" report includes documents and/or transactions which are posted (updated to the ledger).

Page 1 -



Page 2 -

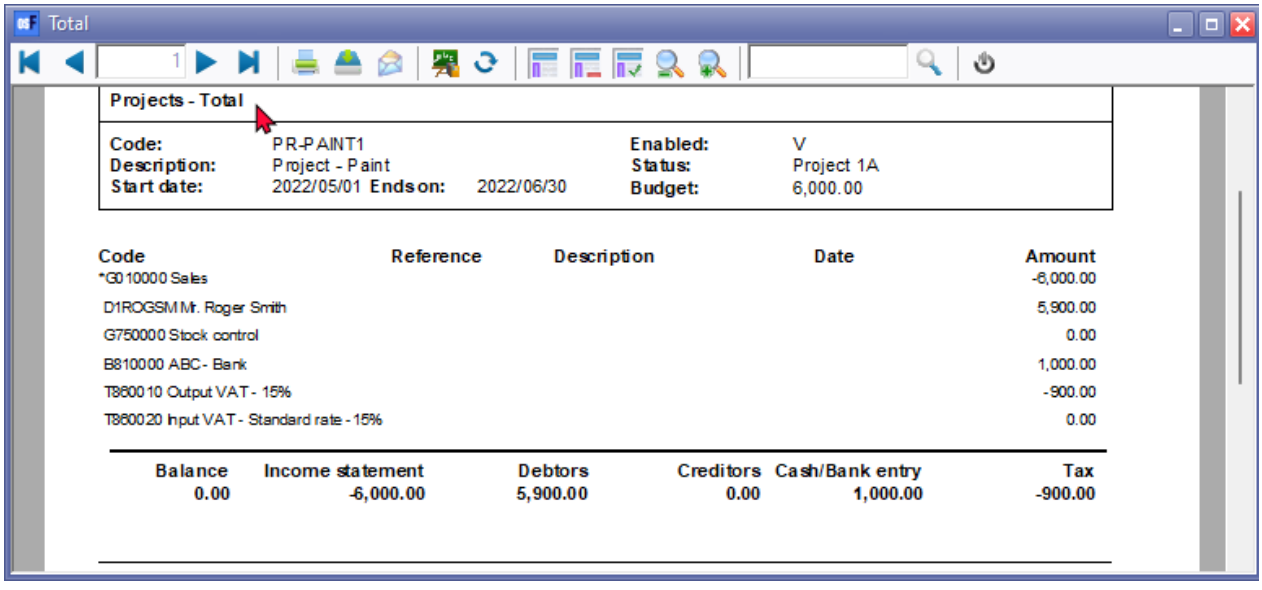


Projects at the end of this report will list all "Project Quotes" for the selected debtor (customer / client) account, added on the Project Quote tab.

Project – Totals

This report will list the totals of transactions (debit and credit) for all accounts selected in posted batches and/or posted documents.

The "Totals" report does not include documents and/or transactions which are not posted (updated to the ledger).



The "*Projects - Total*" report will list the details of each transaction for each account.

Finally, the totals of the accounts are summarised for each account type, as follows:

1. Balance - The total of the transactions allocated to balance sheet type accounts.

2. Income statement – The total of the transactions for income received and expenses paid allocated to income statement type accounts.
3. Debtor - The total of all transactions for debtor (customer / client) accounts.
4. Creditor – The total of all transactions for creditor (supplier / vendor) accounts.
5. Cash/Bank entry – The total of the receipt transactions minus payment transactions into and out of Bank accounts and Petty cash accounts.
6. Tax – The total of the Output TAX (VAT/GST/Sales tax) accounts minus the total of the Input TAX (VAT/GST/Sales tax) accounts.

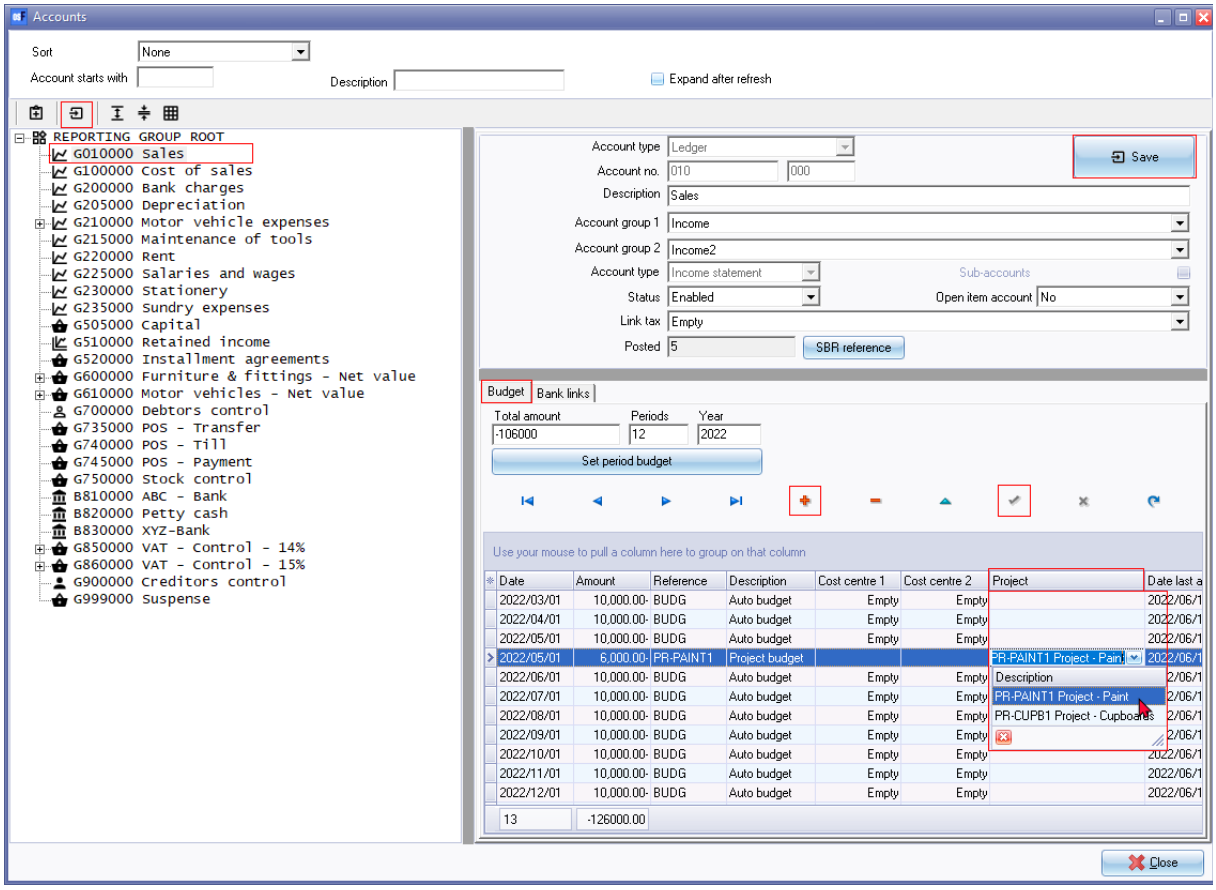
PROJECT BUDGET

In addition to the Project budget (estimated project cost) for the Project, entered in the "*Budget*" field when a selected project is created and/or edited, budget figures may also be added for selected accounts (Accounts on the Setup ribbon).

Add / Edit Budget for selected accounts

To add / edit budget figures for projects:

1. Click on Accounts (Setup ribbon).
2. Select the Account (or sub-account).
3. Click on the Budget tab (if not displayed by default).



4. Select the period and enter or edit the existing budget figure, if necessary.

5. Click on the button to create a new record.

6. Enter the date and amount.

> *Enter a reference and description. This will print on reports.*

7. Select the project in the "*Project*" column.

8. Click on the button to save the budget record.

9. Repeat the process for each month.

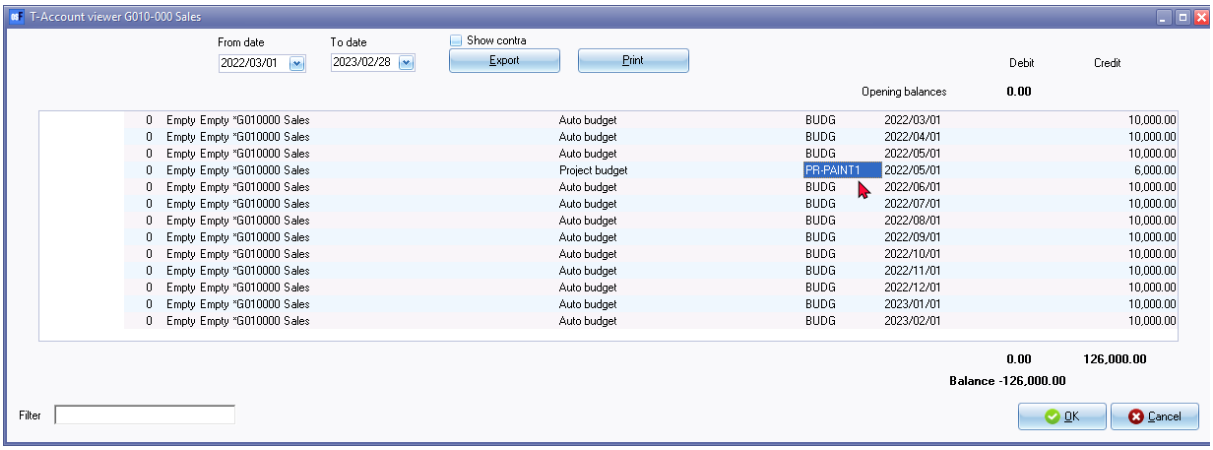
10. Click on the Save (record button).

11. Click on the Save button.

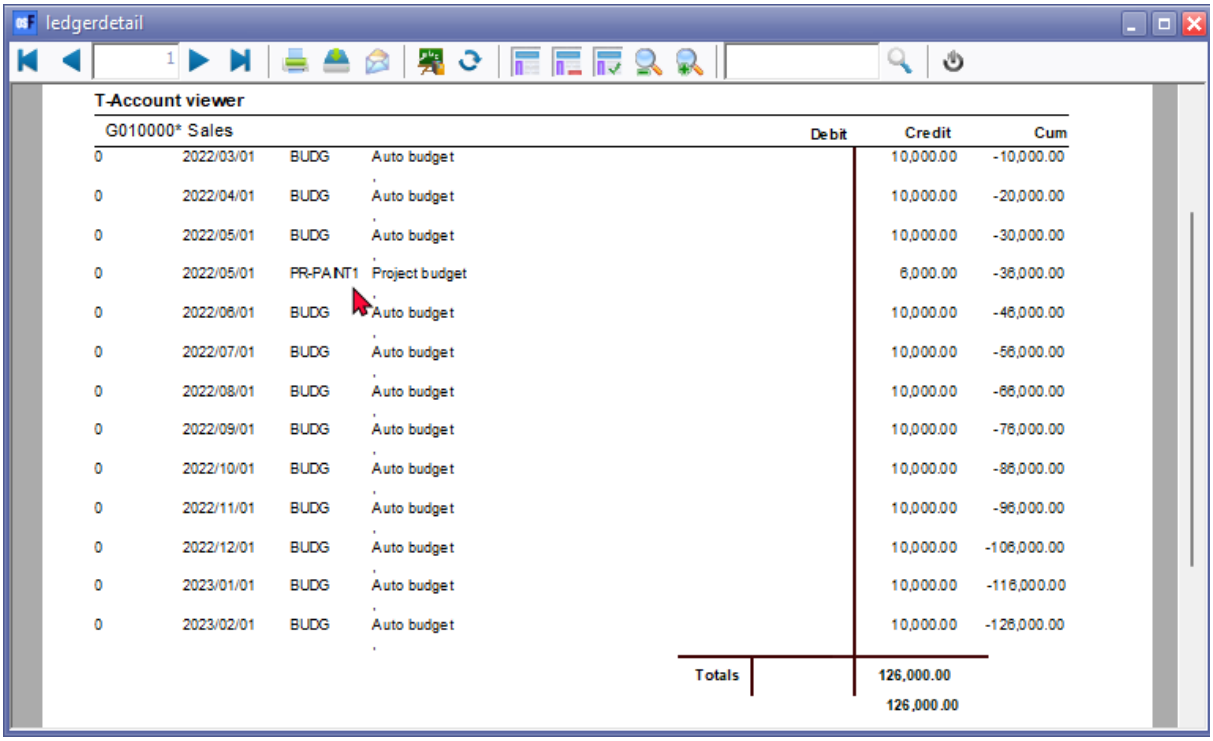
12. Repeat the process for all accounts for which you need to enter budgets for projects.

Print budget figures in the T-Account viewer

1. On the Reports ribbon, select T-Account analyser 1 or T-Account analyser 2.
2. Select the Trial balance, Income statement, or Standard column balances report type.
3. Select (tick) the Budget option.
4. Click on the Report button.
5. Select an account, e.g. "*Sales*", and right-click. On the context menu, click the "*Show details*" option.



6. Click on the Print button.



Search / Find / Print Documents and Transactions for Projects

Debtor accounts

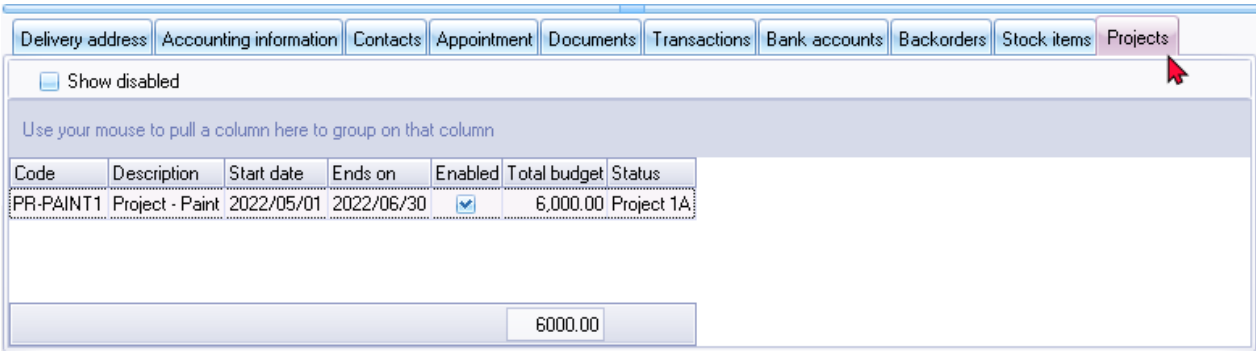
Once documents and/or batch transactions are processed, you may view, analyse, and print transactions and/or documents for a selected debtor (customer / client) account.

The tabs on which documents and/or batch transactions ("*Appointment, Documents, Transactions*" and "*Stock items*") are listed, is briefly discussed.

Similar tabs as for Debtor accounts is also available for Creditor accounts.

Projects tab

By default, any active projects allocated to a debtor (customer / client) account will be listed.



To include inactive (completed) projects, you may select (tick) the "*Show disabled*" field.

The "*Total budget*" displays the amount entered on the "*Budget*" field for a selected project.

Budget figures may also be entered for selected accounts in the Setup → Accounts (Setup ribbon).

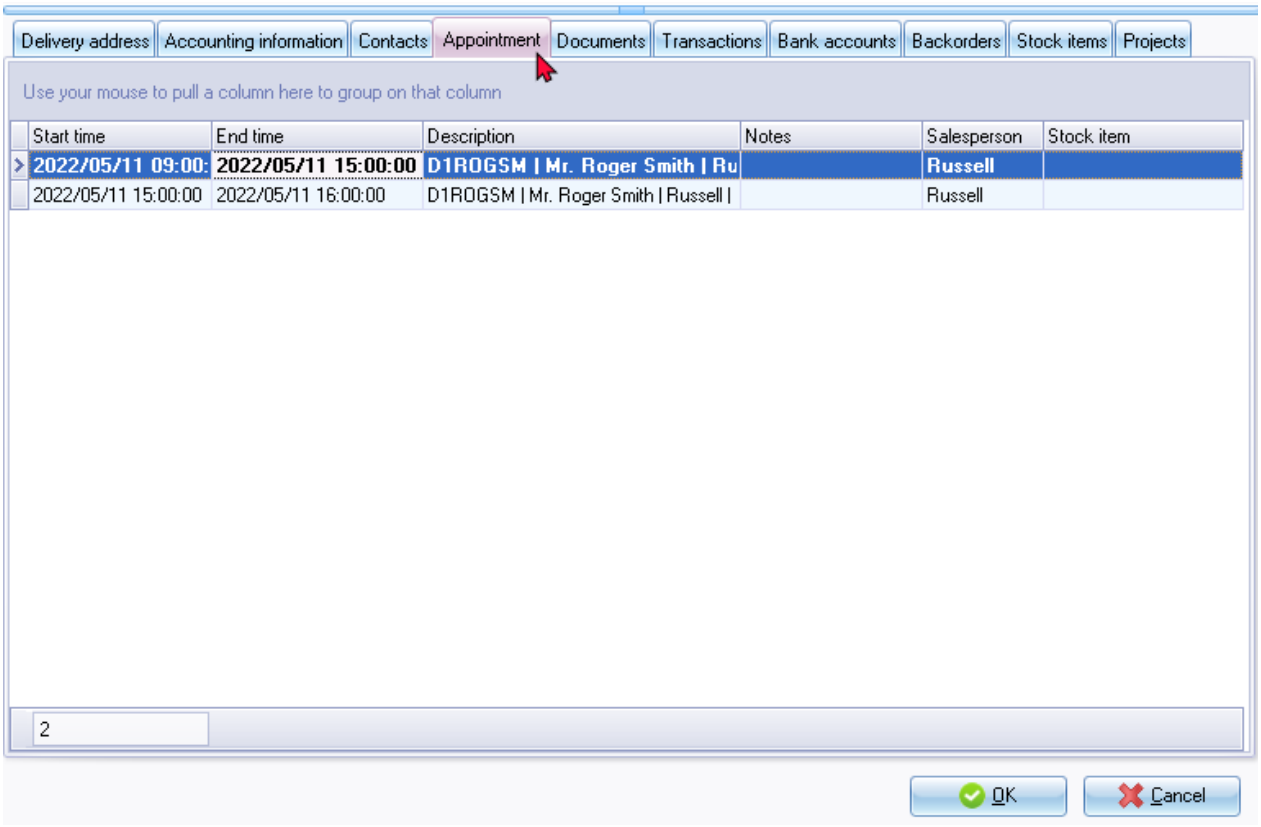
The "*Status*" column displays the name of the Project as set in the "Projects" option on Setup → Groups (Setup ribbon).

Appointment tab

The following events added in the Calendar (Setup ribbon), for the selected debtor (customer / client) account, is listed on the Appointment tab:

- Hours – Create quotes for a selected debtor (customer / client) account. The quote will be added to the Documents tab of a selected Project. The quotes may be edited and converted to an Invoice.

- Create invoices for scheduled debtor (customer / client) appointments. You may create up to 6 categories of debtor (customer / client) appointments.

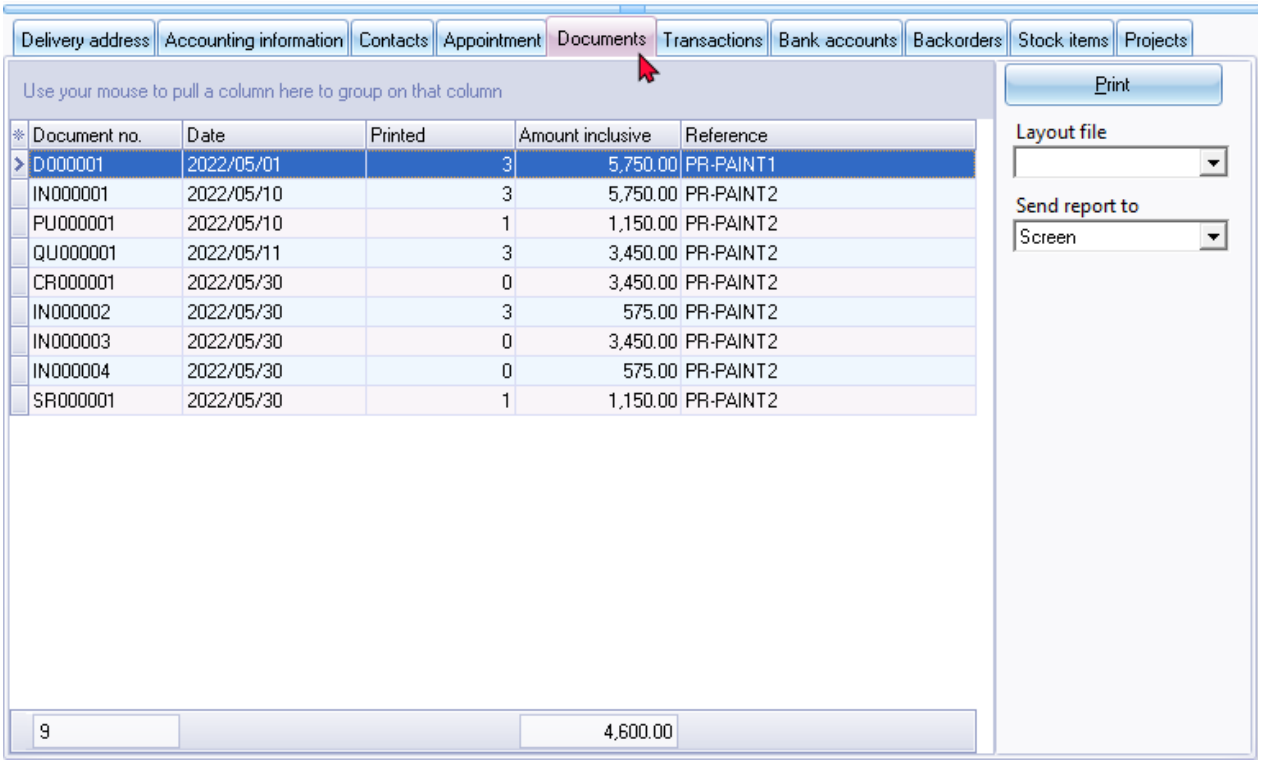


The project code and description will be displayed after the salesperson, e.g. "Russell".

This detail will be included the Hours report, printed in Projects (Default ribbon) and Reports → Calendar (Reports ribbon).

Documents tab

All documents processed for the selected debtor (customer / client) account will be listed. This includes quotes and orders as well as unposted documents.



SEE - PROJECT QUOTES – KNOWN ISSUES

The quote ("D000001"), which was created (processed) in the Project Quote tab (Projects on the Default ribbon), will also be listed.

The "Project Quote" is linked to the "Layout file point-of-sale" on Documents setup (Setup ribbon).

You may select a Quote layout file to print "Project Quote" in the correct layout file.

Note if a document, e.g. "D000001" is processed in the Project Quote tab of the selected project, it is included in the "All" document types selection on the "Update ledger" screen.

The "Show transactions" context menu should not list any transactions on the "Transactions" screen.

If you have posted (updated) the ledger using the "All" document types selection on the "Update ledger" screen, these Project Quotes may post incorrect transactions to the ledger.

Print documents

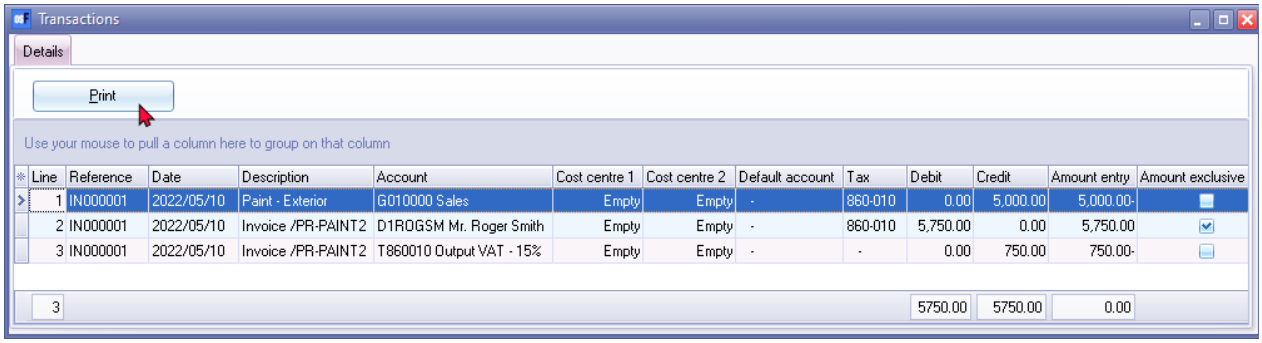
You may click on the Print (button or double-click) on a selected document to print the document.

Documents will be printed in the default global layout file as set in Documents setup (Setup ribbon), unless it is set on the Delivery address tab of the debtor (customer / client) account (Debtor on the Default ribbon).

You may select a different layout file, if necessary.

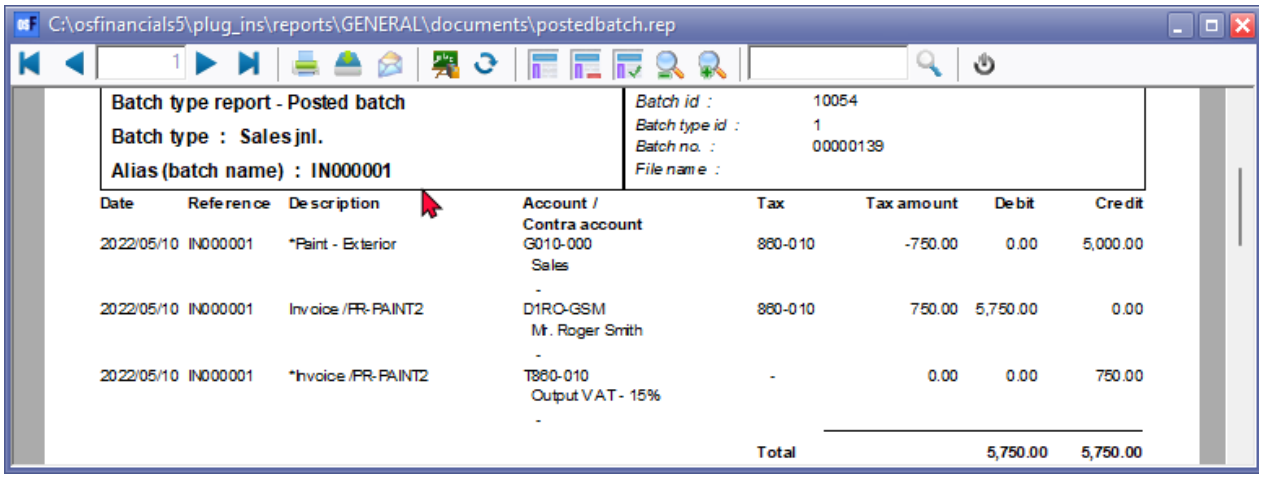
Show transactions context menu

Select a posted document on the list, and right-click. The "*Show transactions*" on the context menu, will list the "*Transactions*" screen (e.g. Invoice "*IN000001*")



If a quote or an order as well as a unposted document, is selected, the "Transactions" screen will be blank.

Click on the Print button to view a list of transactions in the "*Batch type report – Posted batch*".



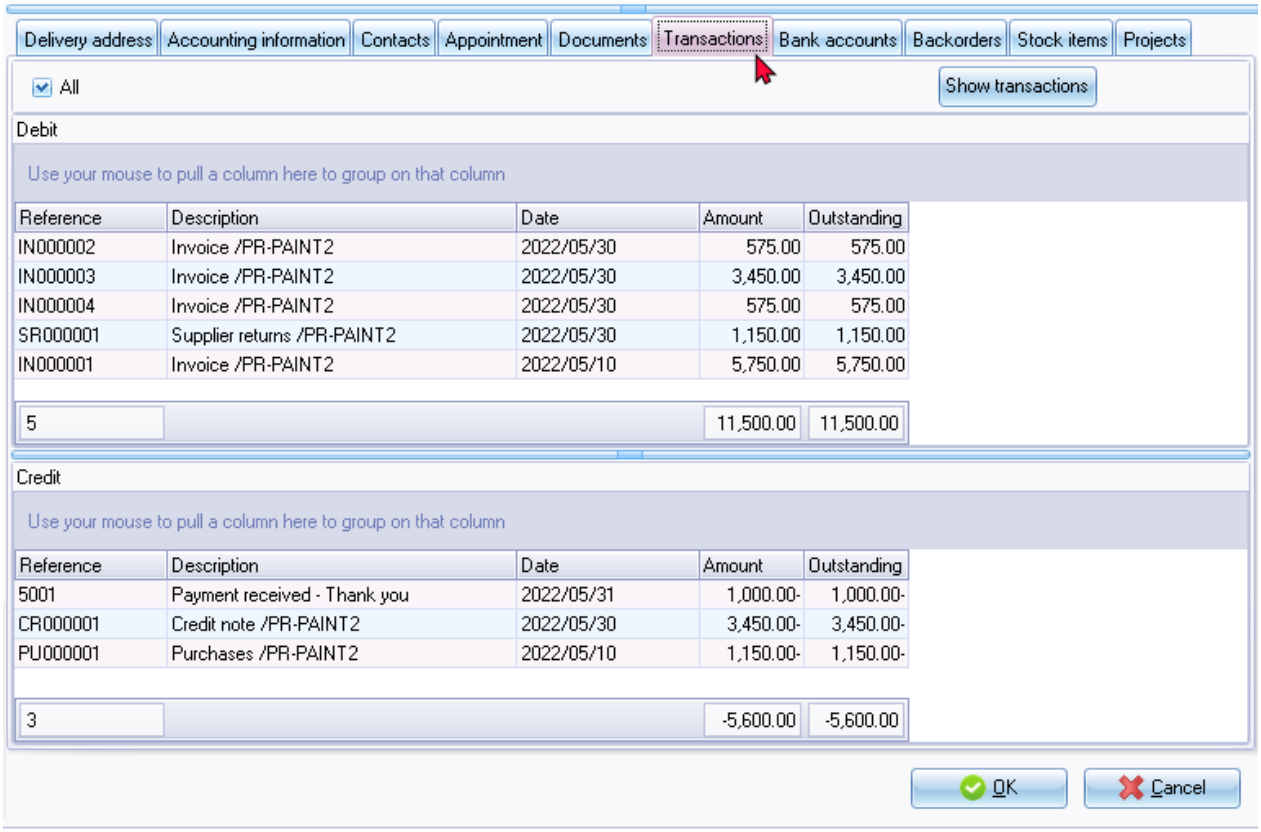
Transactions tab

All transactions which have been processed (posted documents and posted batches) for the selected debtor (customer / client) account will be listed.

It will list transactions as follows:

1. Debit - Documents (i.e. Invoices and POS Invoices), Sales journal, Generate multiple transactions (Interest on overdue debtors, Debtors with charge amount, Fixed amount to all debtors), Opening Balances take-on, etc. It will list any transactions, for which amounts are entered in the "*Debit*" column of batches.

2. Credit - Documents (i.e. Credit notes), Sales returns journal, Receipts journal, Generate multiple transactions (Balance debtors with amount), etc. It will list any transactions, for which amounts are entered in the "*Credit*" column of batches.



See - Open item processing :

By default, the "All" option (tick box) is not selected. If any payment received and credit note transactions were fully linked to invoices, etc. those transactions will not be listed. Only those transactions with outstanding amounts will be listed.

SEE - PROJECT QUOTES – KNOWN ISSUES

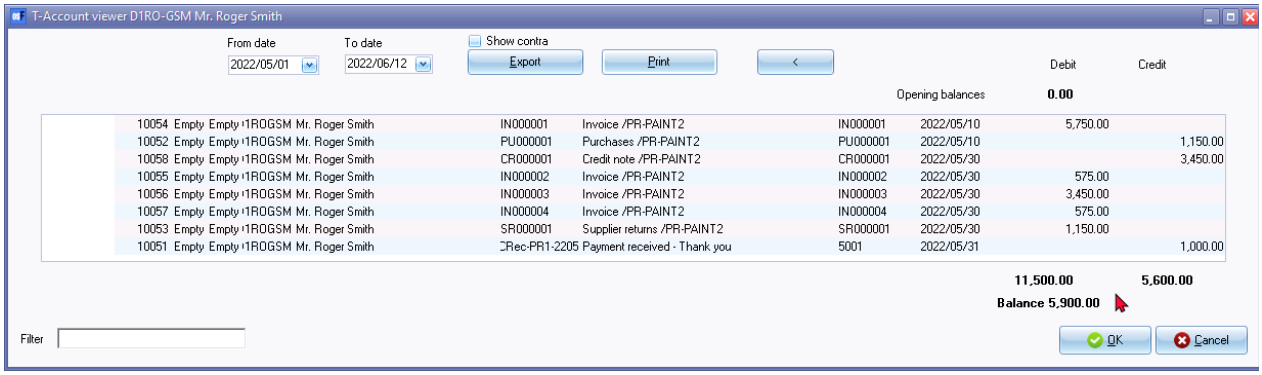
Note if a document, e.g. "D000001" is processed in the Project Quote tab of the selected project, it is included in the "All" document types selection on the "Update ledger" screen.

If you have posted (updated) the ledger using the "All" document types selection on the "Update ledger" screen, these Project Quotes may post incorrect transactions to the ledger.

Show transactions button

Click on the "*Show transactions*" button.

You may enter or select a start date and an end date, if necessary.



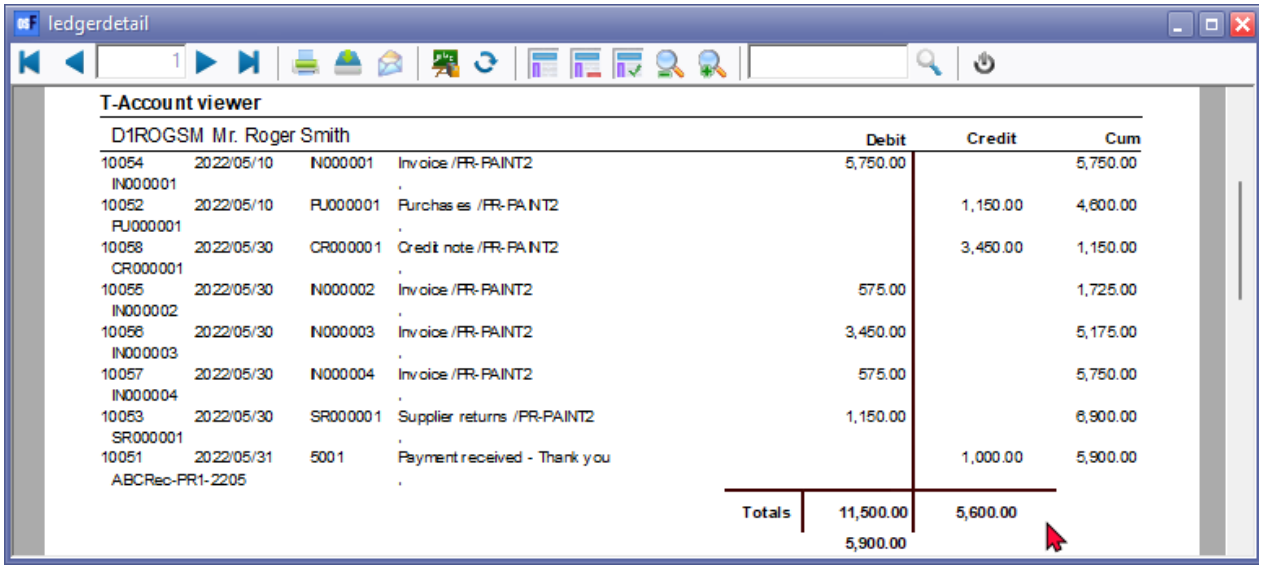
You may click on the Print button to print the transactions in the T-Account viewer.

The Batch number is automatically generated (e.g. 10054 for the IN00001 transactions), when transactions in batches and documents is posted (updated) to the ledger.

You may select the "Show contra" option on the T-account viewer to view the transactions to contra accounts.

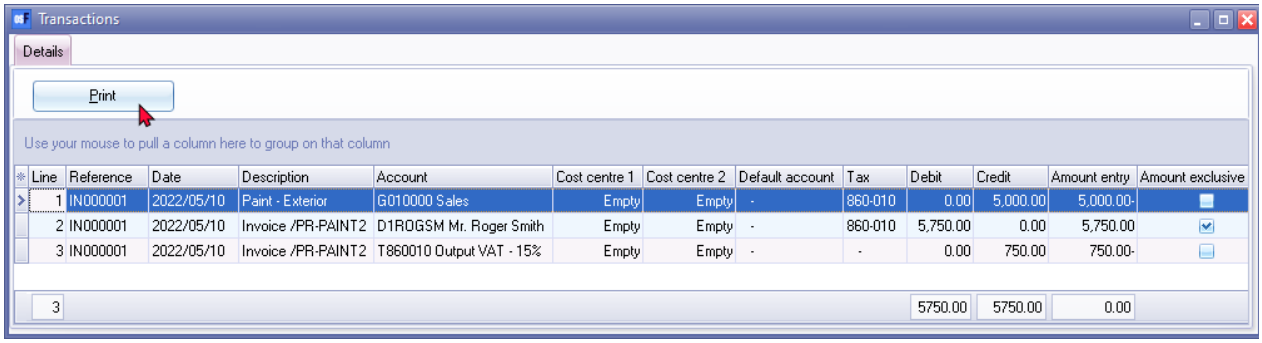
These contra accounts will not be printed in the T-account viewer report, but will be included when you export (Export button) these transactions to a spreadsheet.

Click on the Print button to print the transactions.

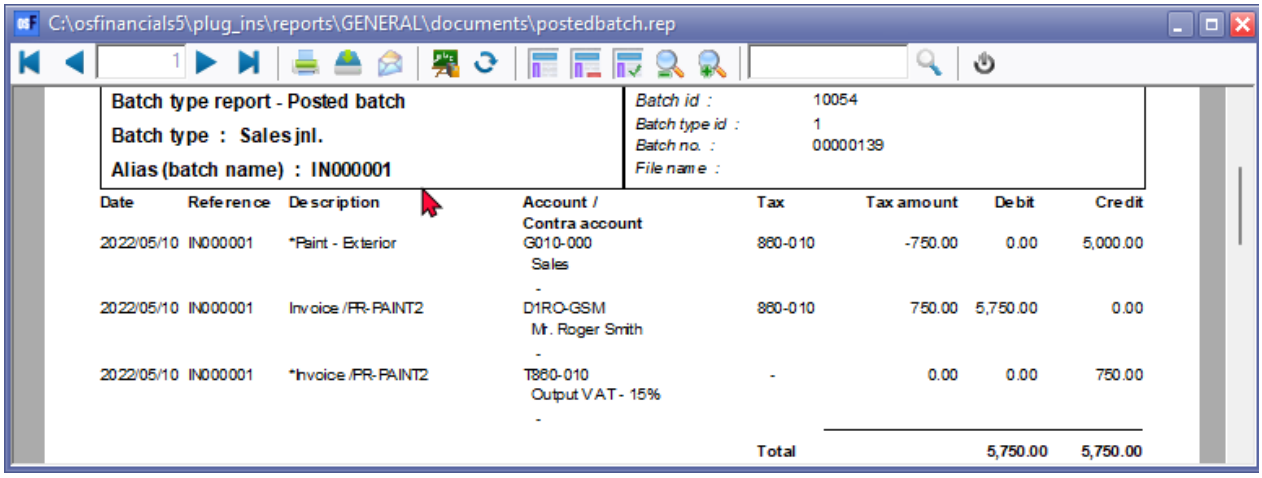


Show transactions context menu

Select a document or a batch transaction on the list ("*Debit*" or "*Credit*" section) and right-click. The "*Show transactions*" on the context menu, will list the "*Transactions*" screen (e.g. Invoice "*IN000001*")

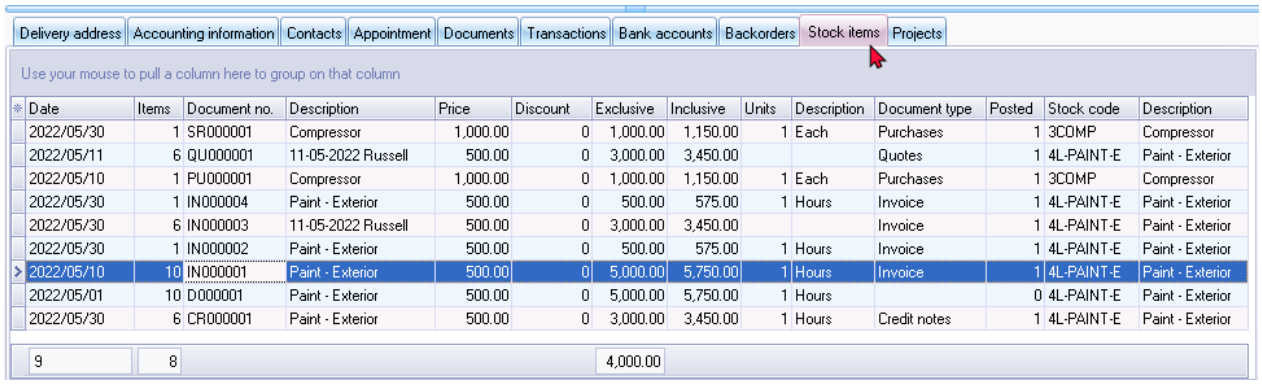


Click on the Print button to view a list of transactions in the "*Batch type report – Posted batch*".



Stock items tab

This tab will list all the posted as well as unposted sales documents (i.e. invoices, credit notes and quotes) and purchase documents (i.e. purchases, supplier returns and orders) for the selected debtor (customer / client) account.



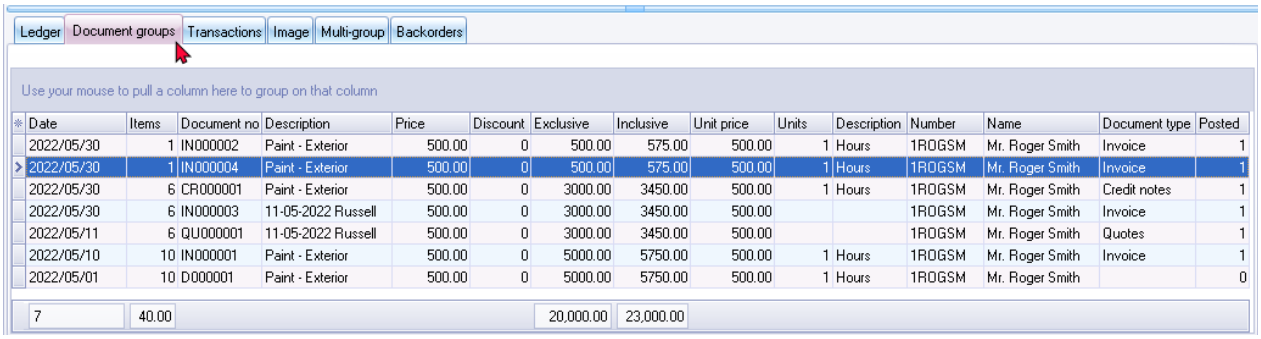
The quote ("D000001"), which was created (processed) in the Project Quote tab (Projects on the Default ribbon), will also be listed.

Stock items – Document groups tab

Once documents and/or batch transactions are processed, you may view, analyse, and print documents for

a selected stock item.

This tab will list all the posted as well as unposted sales documents (i.e. invoices, credit notes and quotes) and purchase documents (i.e. purchases, supplier returns and orders) for a selected stock item.



Date	Items	Document no	Description	Price	Discount	Exclusive	Inclusive	Unit price	Units	Description	Number	Name	Document type	Posted

7	40.00					20,000.00	23,000.00							

The quote ("D000001"), which was created (processed) in the Project Quote tab (Projects on the Default ribbon), will also be listed.

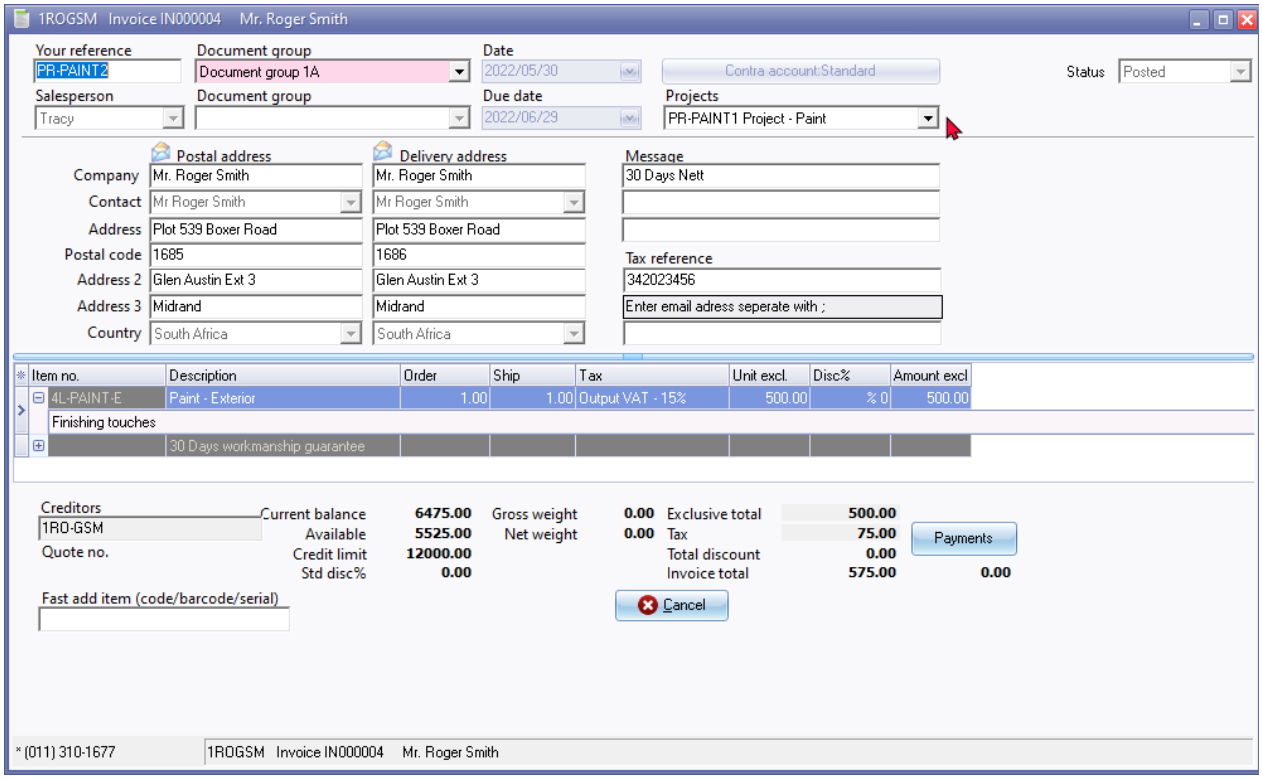
You may double-click on a selected document, to print the document.

If the document is printed in the incorrect layout file, for example, a credit note is printed in the invoice layout file, open the selected document from the list.

When the document is closed it will print in the correct layout file for the document type.

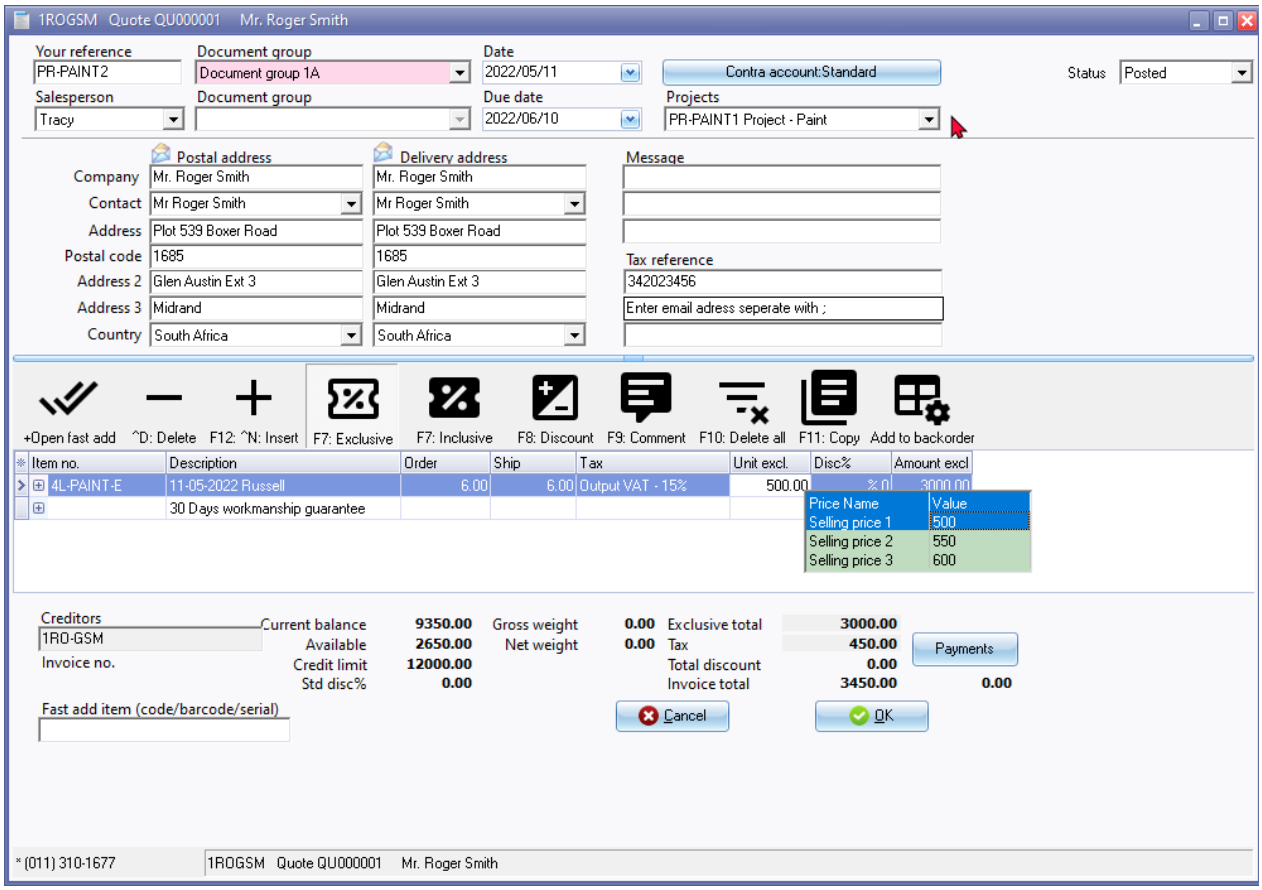
Open a posted document

Right-click on a selected document, and on the context menu, select the " *Open document*" option. The selected document entry screen will be displayed.



In the posted document entry screen, the OK button and the processing icons is not displayed.

Open an unposted document



Search - Investigator

The Investigator allows you to search for data in an open Set of Books. To search or locate data, you may enter a valid word or phrase to search for an item. This feature also allows you to define, or refine, or filter the search criteria, and select to view the details for a selected search result.

SERIAL TRACKING - If you have entered a serial number of a product (stock item) as a comment on your sales documents (Invoices, Credit notes and/or Quotes) and/or on purchase documents (Purchases, Supplier returns and/or Orders), you may enter the serial number in the "Search For:" field.

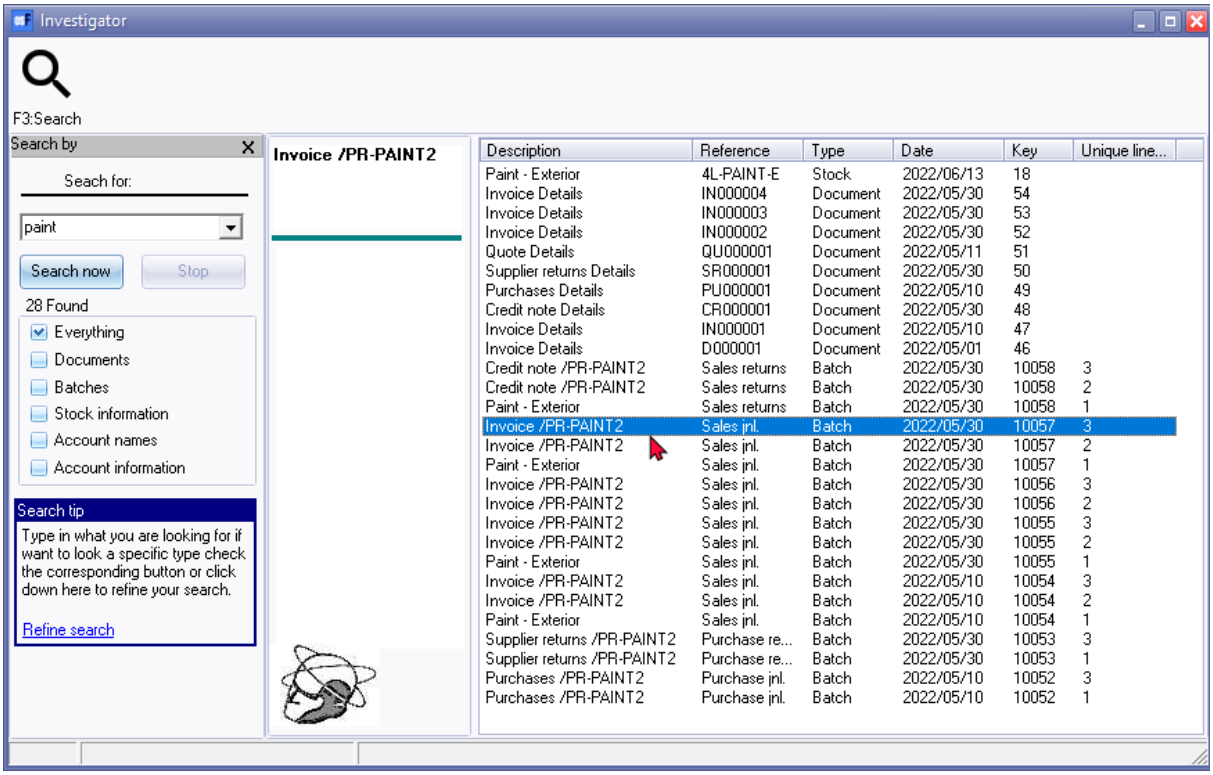
If you click on the Search now button, the Documents will be listed. You may then double-click on the selected document to preview the document.

Comments entered in document lines are searchable.

Remarks is not searchable, but prints on invoices and other documents.

To search for data using the Investigator:

1. On the Default ribbon, select Search.



2. Enter a word or phrase to search for specific data. To filter the data, you may also select to include everything or documents, batches, stock information, account names and/or account information.

3. Click on the Search now button or on the F3:Search icon. The number of items found (which matches the search criteria) will be displayed, and each of the items found will be listed.

4. Select an item type from the search results list and right-click - select "*Show detail*" option on the context menu (or double-click) to launch the options. The types is as follows:

    a) Account - Launch the "*T-Account viewer*" - You may enter the dates from and dates to, as well as any filters (if necessary) to view and filter the transactions. Transactions may be printed and exported to a spreadsheet file.

    b) Debtor / Creditor - Launch the "*Debtor*" accounts screen to edit or check specific details for the debtor (customer / client). If a "*Creditor*" is indicated, it will launch the specific creditor (supplier / vendor) account.

    c) Stock - Launch the "*Stock item*" screen to edit or check specific details for the stock item.

    d) Document - The selected document will be printed.

> *The quote ("D000001"), which was created (processed) in the Project Quote tab (Projects on the Default ribbon), will also be listed.*
>
> *The "Project Quote" is linked to the "Layout file point-of-sale" on Documents setup (Setup*

ribbon).

You may select a Quote layout file to print "Project Quote" in the correct layout file.

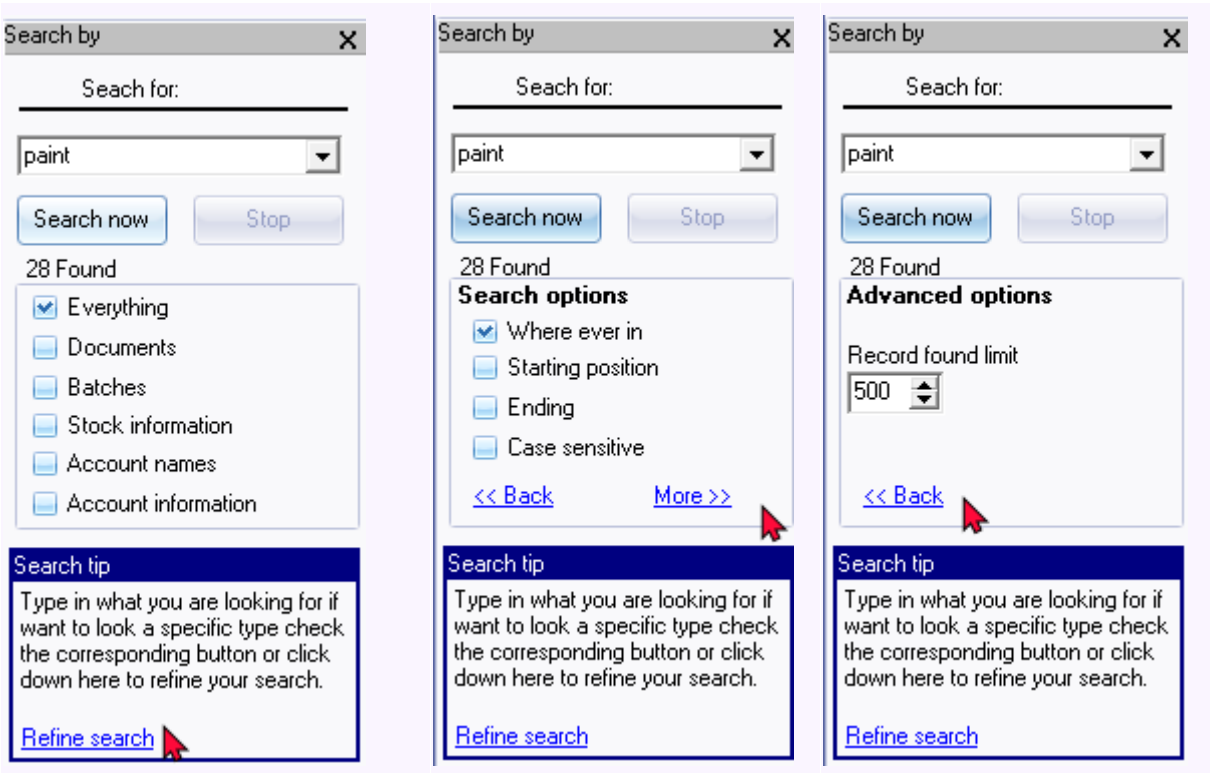
e) Batch - Launch the "*T-Account viewer*" - You may enter the dates from and dates to, as well as any filters (if necessary) to view and filter the transactions. Transactions may be printed and exported to a spreadsheet file.

For certain types (e.g. "Account"), the F4:Details icon will be available. If you click on this icon, the balances for general ledger accounts will be displayed.

5. To close or exit this screen, click on the Close button on the title bar.

Further "*Search*" options are available to select from. If you click on the More >> link, the "*Advanced*" options will be available in which the limit for the number of records found may be set.

To refine or filter the search criteria, you may click on the Refine search link.

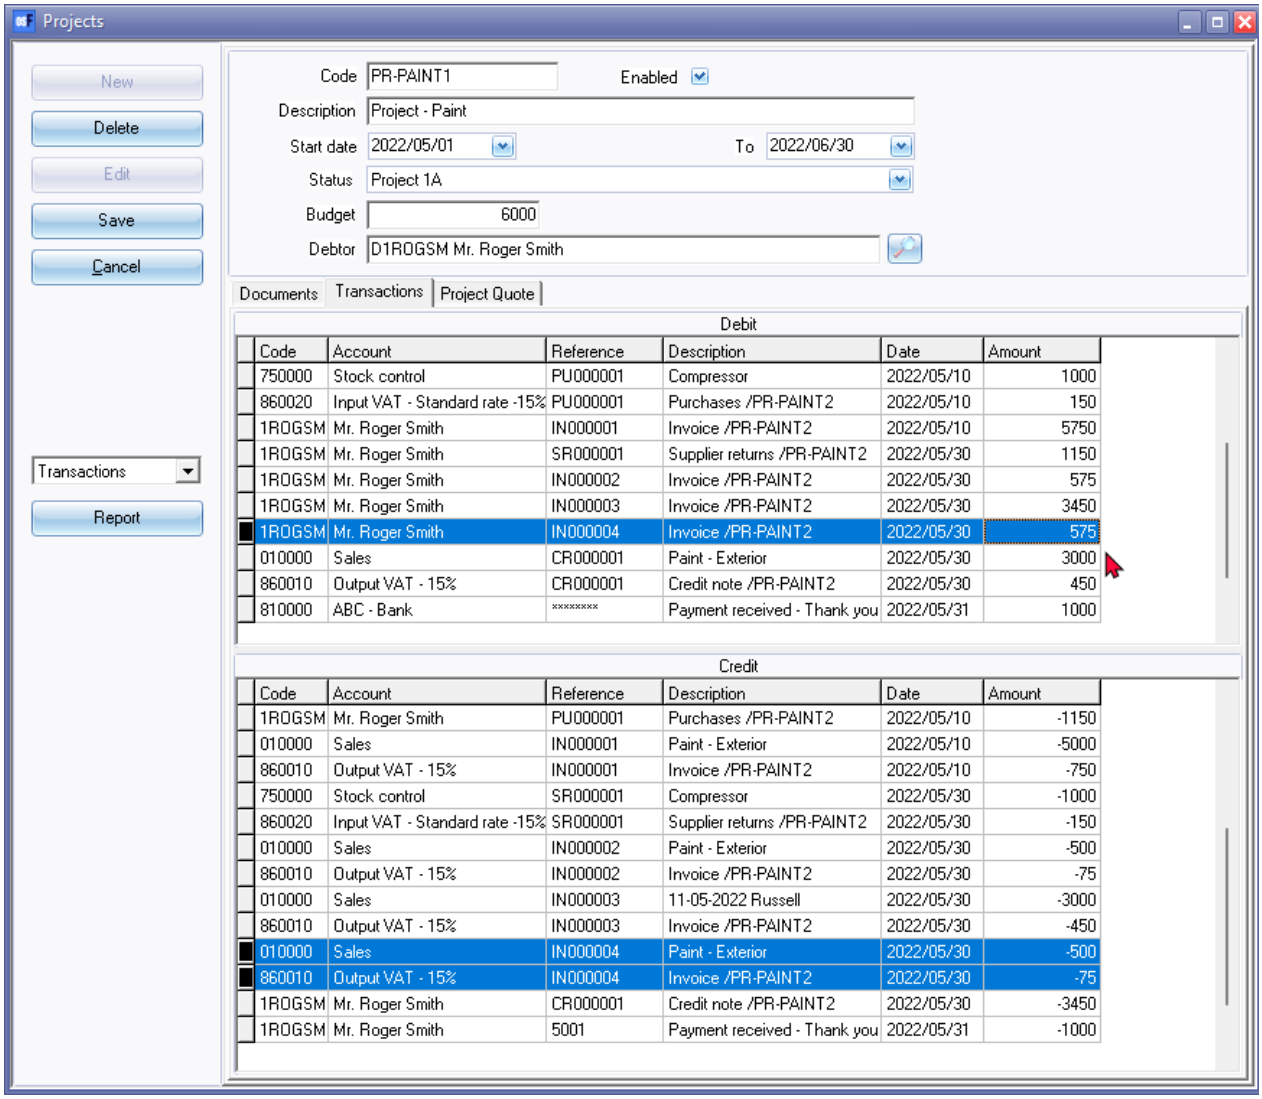


Remove / Add Project Transactions

Remove Transactions from a Project

The Transactions tab lists all posted (updated) transactions to the ledger.

In this example, Invoice IN000004, needs to be deleted from the project.



To delete a transaction from the project:

1. Select the transaction, in the "*Debit*" section.

> *You may use the Ctrl button and a mouse-click to select more than 1 transaction to remove from the project.*

2. Right-click. On the context menu, select the Delete from project option.

3. A confirmation message is displayed:

> "Do you wish to continue?"

4. Click on the Yes button. The transaction will be removed from the project.

5. In the "*Credit*" section, select the Contra-accounts and repeat the process for the contra-accounts.

This will remove the transactions and the contra-accounts' transactions from the following reports:

1. Transactions

2. Totals

The deleted documents will not be removed, and still be included in the following reports:

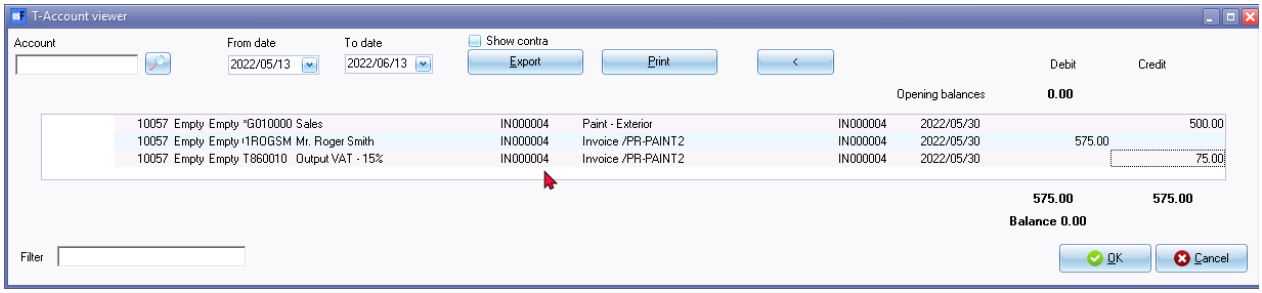
1. Stock items

2. Statements

Add Removed Transactions to a Project

Right-click and select the Add to project option on the context menu.

The "*T-account viewer*" screen will be displayed. It will list the transactions which was removed from the project.



Select the transaction(s).

> *You may use the Ctrl button and a mouse-click to select more than 1 transaction to add to the project.*

DELETE PROJECTS

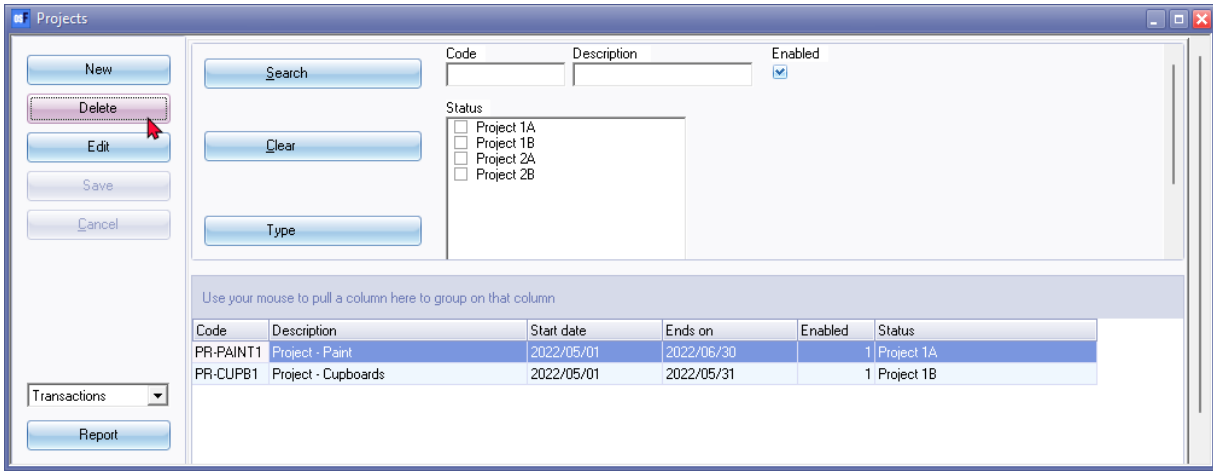
You may delete a project. This will not have any effect on the transactions and/or documents, for the Set of Books.

> *Deleting Projects from your Set of Books cannot be undone.*
>
> *You need to make absolutely sure that the correct Project is selected.*

Delete a Project

To delete a Project:

1. Click on Projects (Default ribbon). The "*Projects*" screen (list view) is displayed:



2. Select the project and click on the Delete button. A confirmation message is displayed:

> "There is document(s) associated with this project! Do you wish to continue ? All project data will be lost!"

3. Click on the Yes button.

4. Another confirmation message is displayed:

> "There is transaction(s) associated with this project! Do you wish to continue ? All project data will be lost!"

5. Click on the Yes button.

6. A final confirmation message is displayed:

> "Do you wish to continue?"

7. If you are absolutely sure, click on the Yes button.

Delete Project Quotes

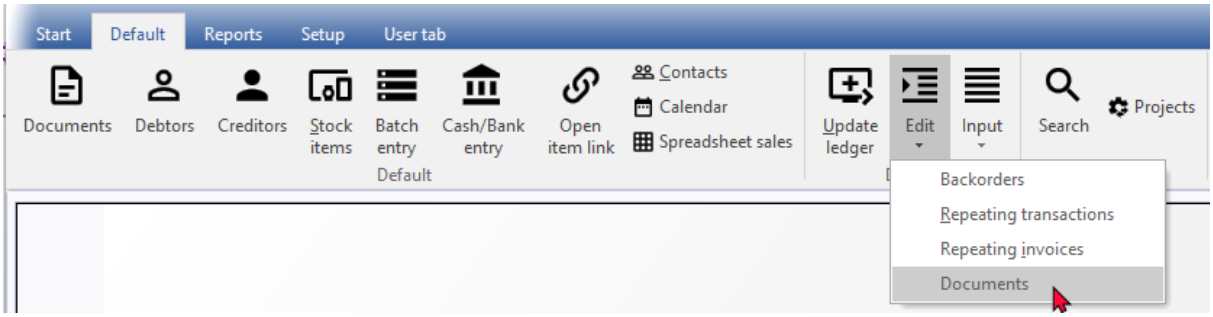
Once a project is deleted, there may be some Project Quotes which is not deleted.

SEE - PROJECT QUOTES – KNOWN ISSUES

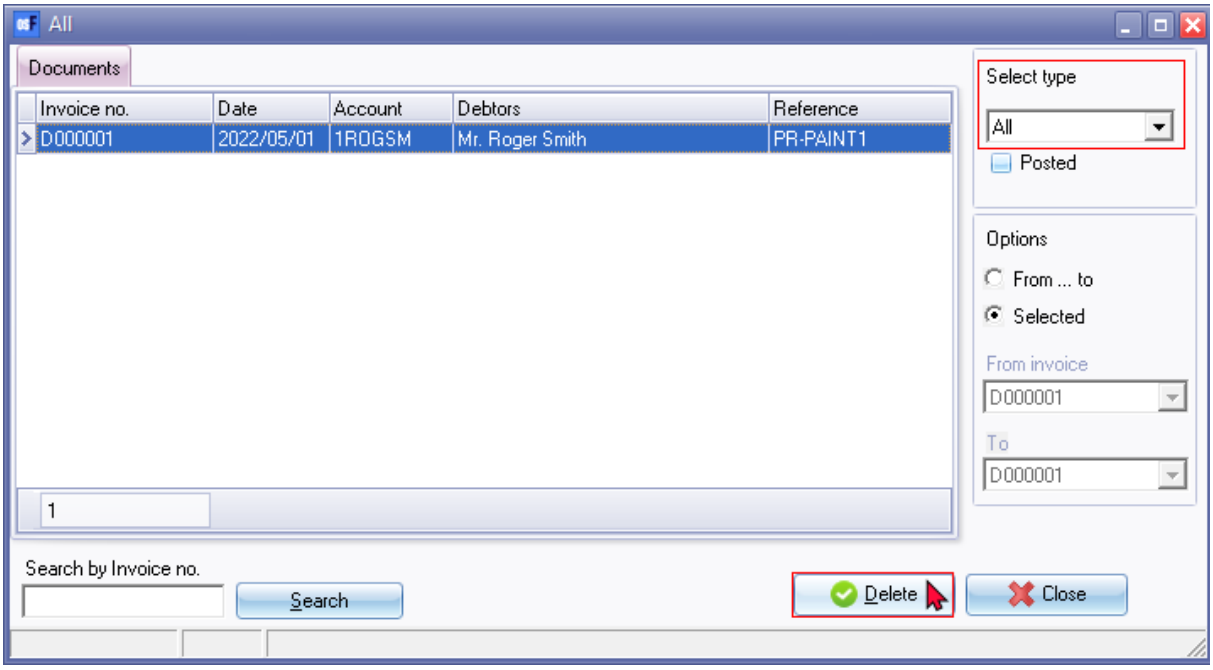
To delete the "Project Quote" documents:

1. On the Default ribbon, select Edit → Delete.

2. Select Documents.



3. Select the document type "*All*".



4. Click the Delete button. A confirmation message,is displayed:

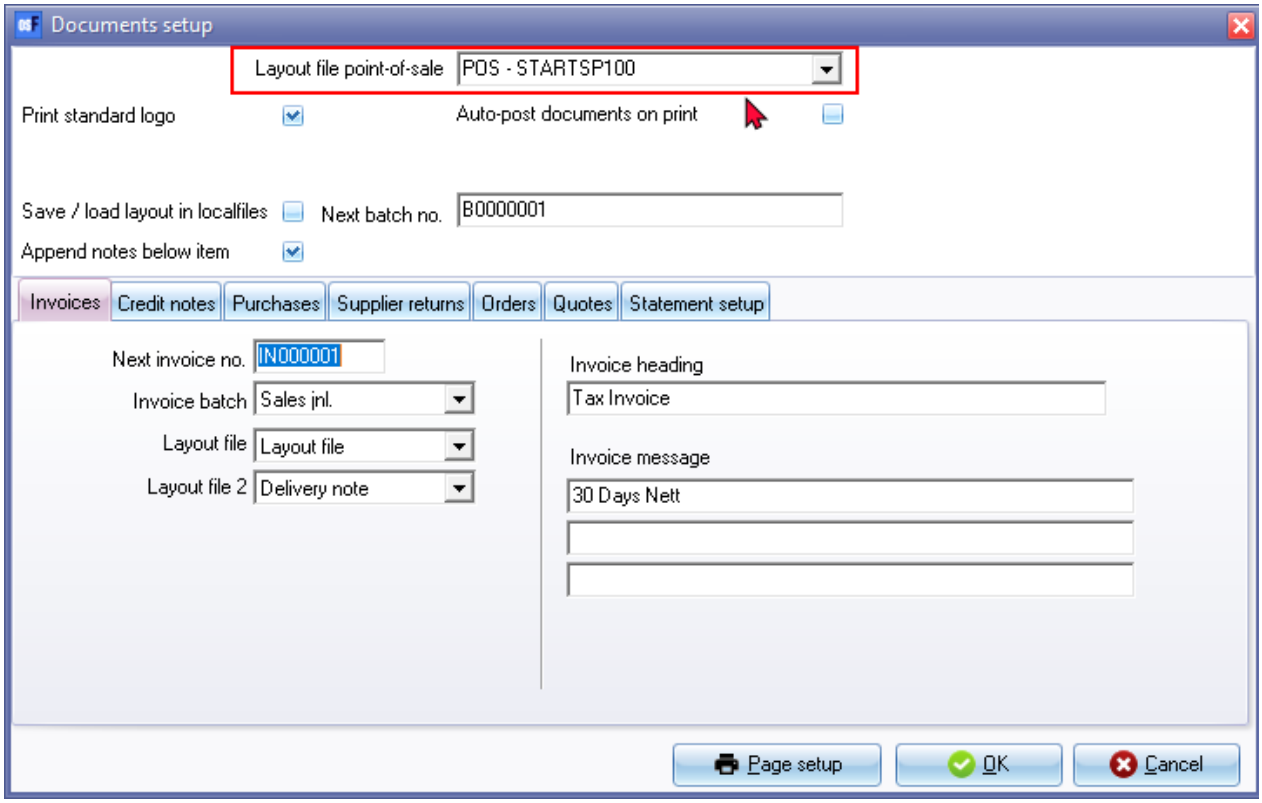
> "Do you want to delete?"

5. Click on the Yes button.

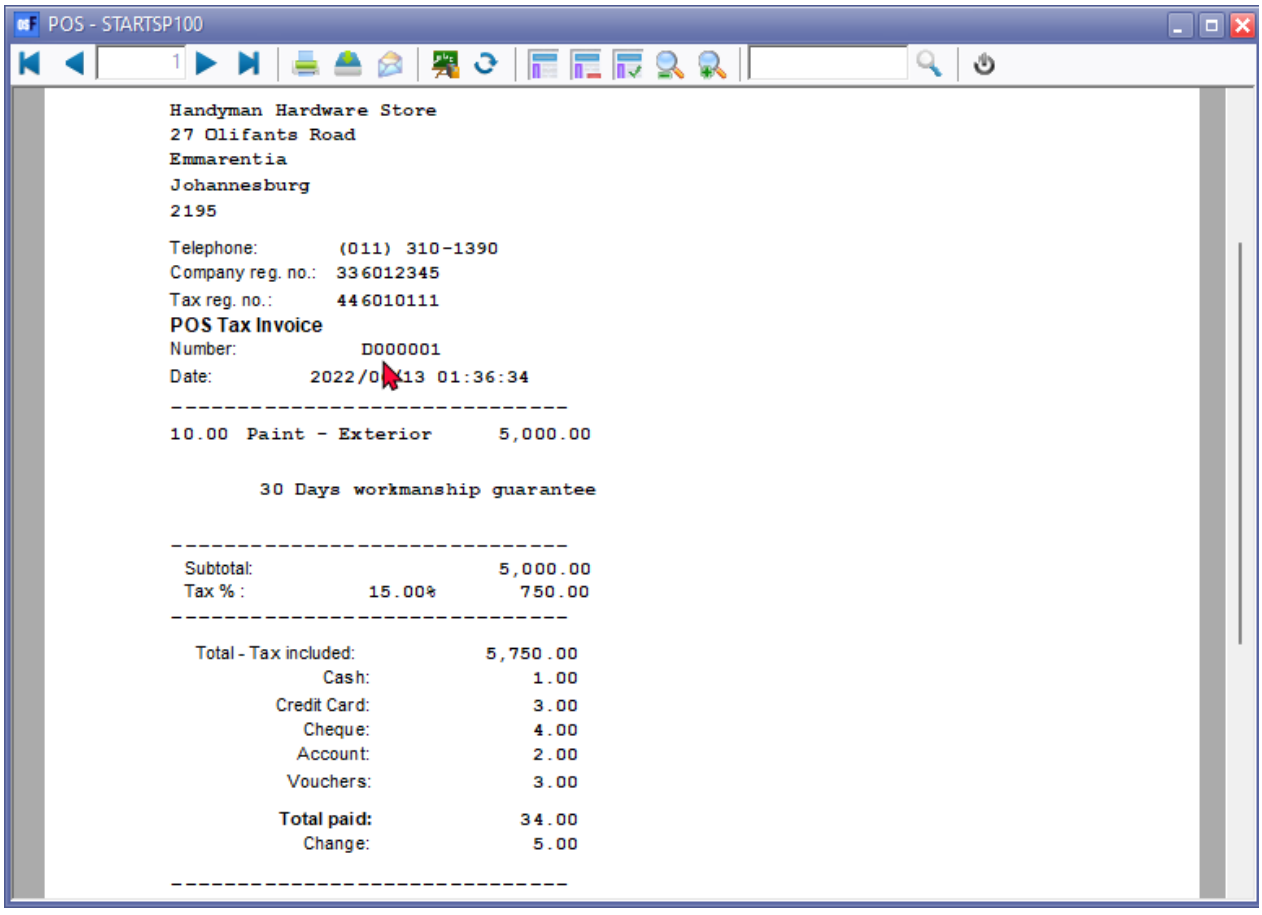
Project Quotes – Known Issues

Print documents in the POS Layout file

The "*Project Quote*" is linked to the "*Layout file point-of-sale*" on Documents setup (Setup ribbon).



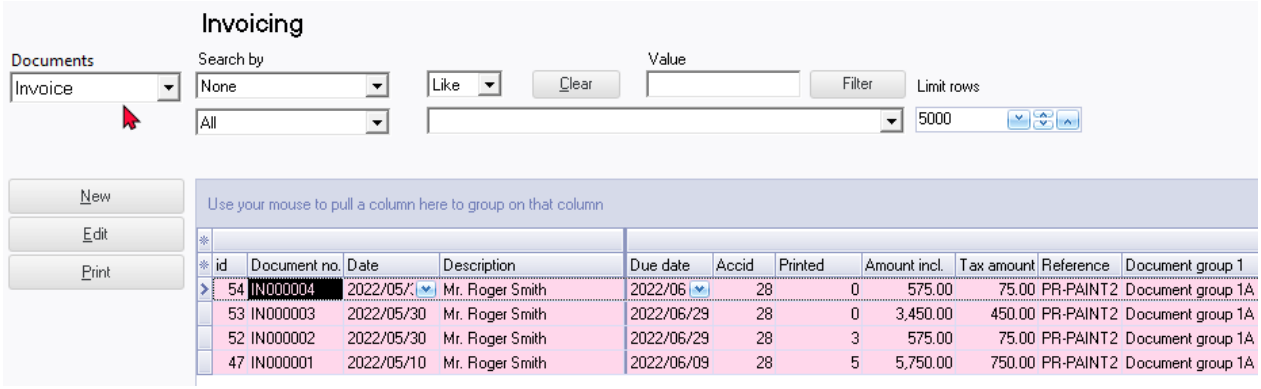
Printing the "*Project Quote*" will print by default to the "*POS-STARTSP100*" layout file.



Delete / Remove Transactions Incorrectly Updated in Project Quotes

The "Project Quote - D000001" on the Project Quote tab is posted as an invoice when selecting the "All" option on the Update ledger (Default ribbon).

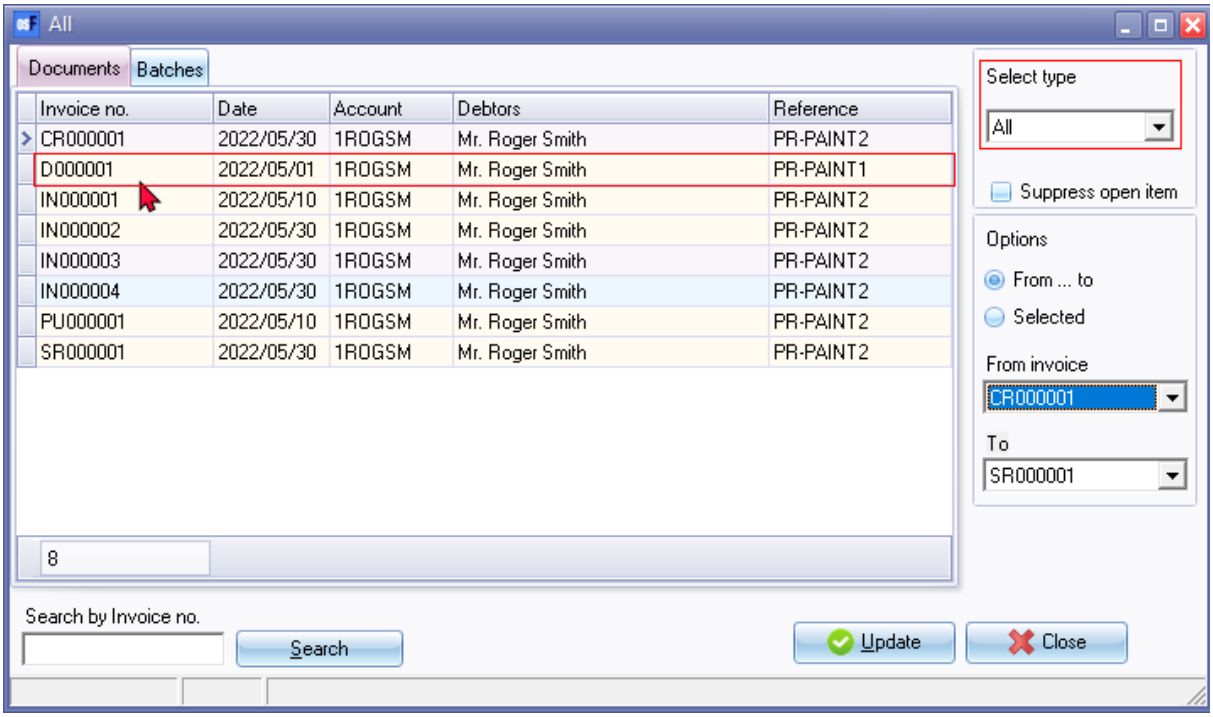
It is not listed in the Documents – Invoicing (or any other document types, i.e. Quote, Credit note, Purchase or Supplier return):



Identify the posted transactions incorrectly affecting the Set of Books

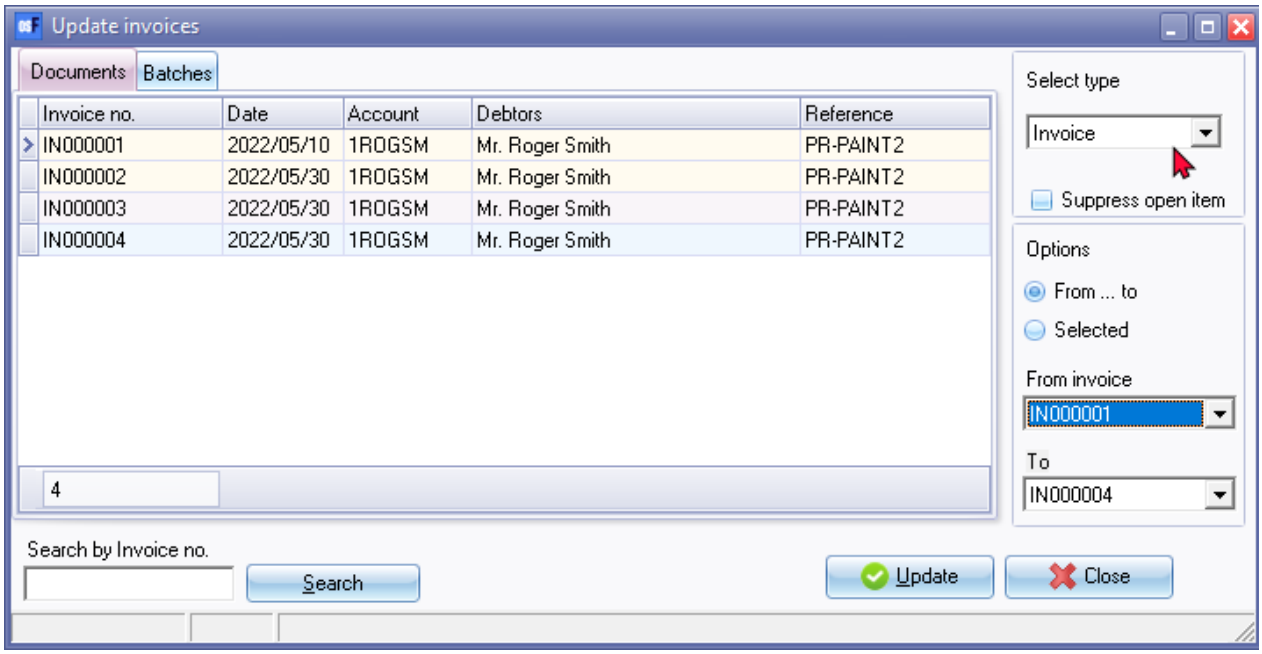
SEE - Update (Post) Documents to the Ledger

The "*Project Quote - D000001*" on the Project Quote tab is included in the "*All*" option, when documents were posted (updated) to the ledger.



The "*Project Quote - D000001*" on the Project Quote tab is not included in the "*Invoice*," (or other

document types, i.e. "*Credit note*", "*Purchase*" or "*Supplier return*") option, when documents were posted (updated) to the ledger.

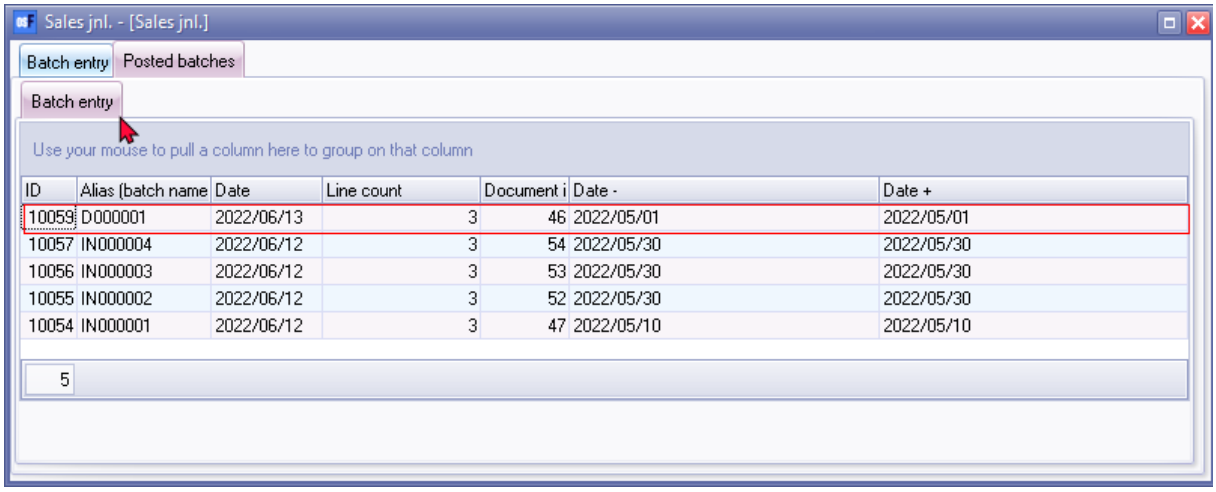


The "*Project Quote - D000001*" on the Project Quote tab is posted as an invoice when selecting the "*All*" option on the Update ledger (Default ribbon).

The transactions can be viewed and printed in the "Sales jnl." batch on the "Batch entry" screen – Posted batches tab. The "Sales jnl." is linked to the Invoice document type (Documents setup (Setup ribbon).

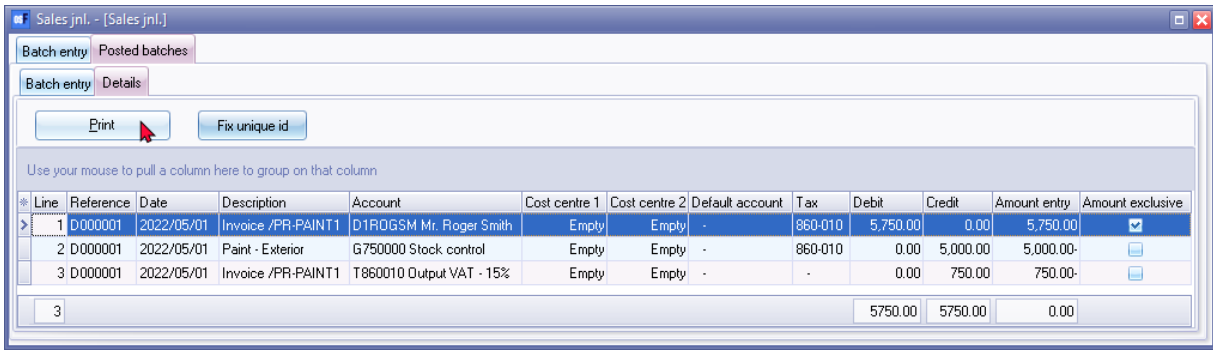
To view and print the transactions for the project quote in the sales journal (batch):

1. Click on Batch entry (Default ribbon).
2. Select the specific "*Sales jnl.*"
3. Click on the Posted batches tab. All the posted batches will be listed.

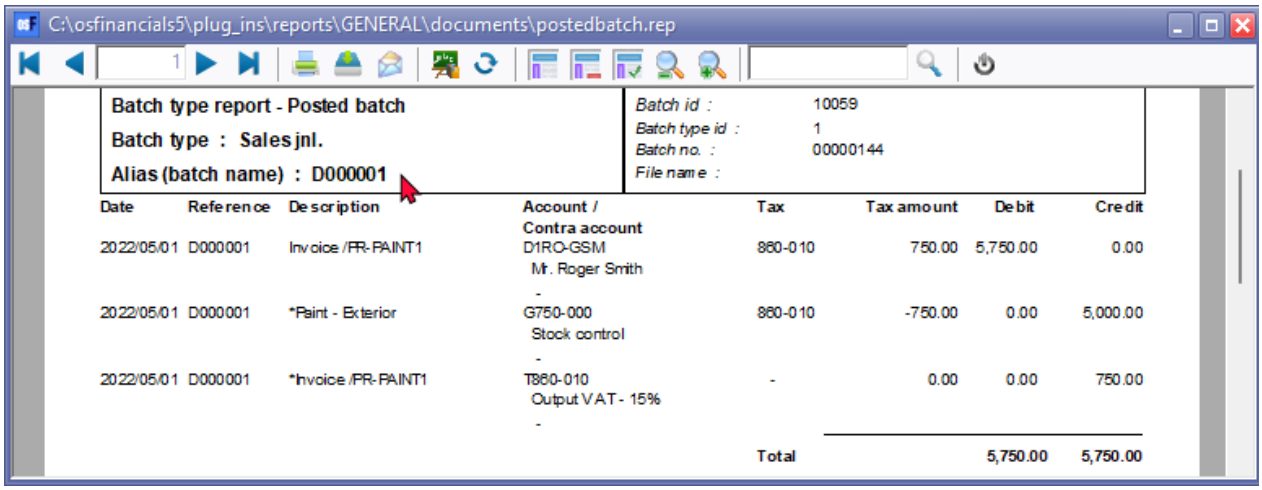


4. Identify and select the batch (e.g. "*10059*" - "*Alias batch name*" (Document number "*D000001*").

5. Double-click on the selected batch. The Details tab will list all the transactions posted (updated) to the ledger.

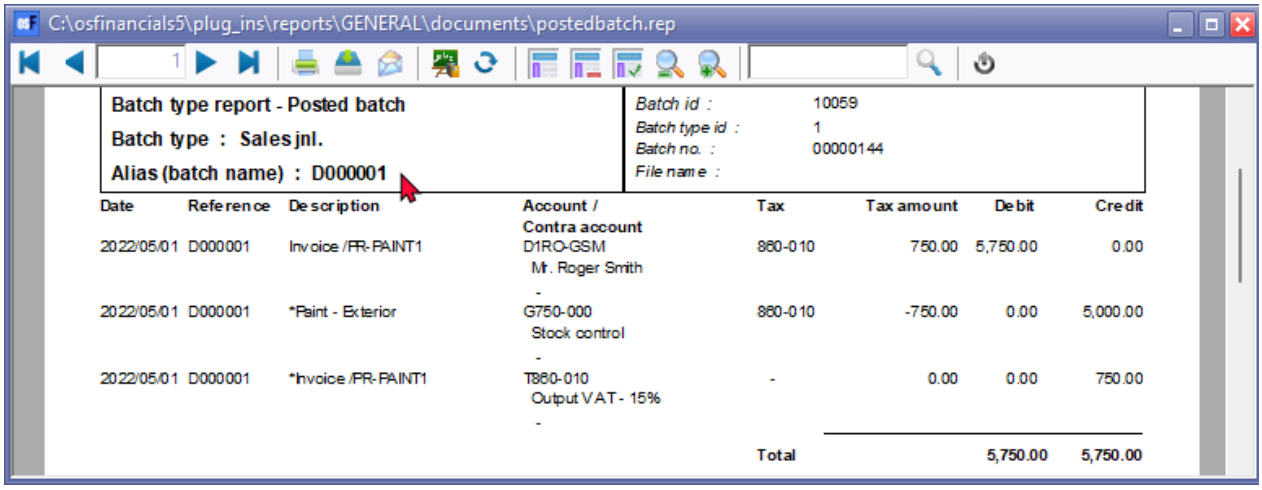


6. Click on the Print button.



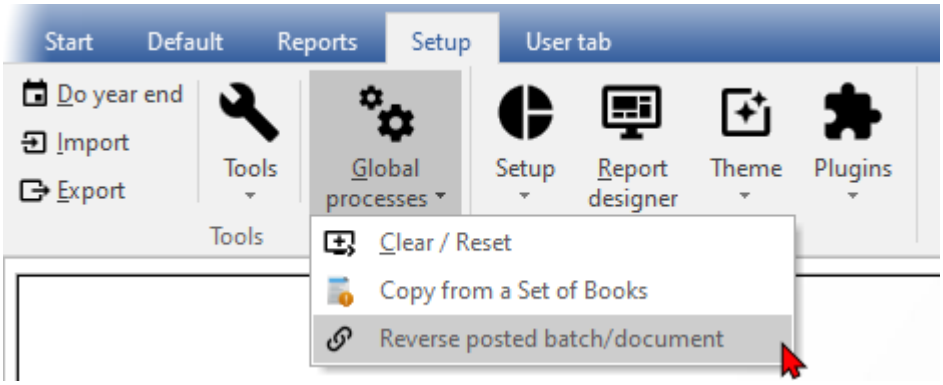
Fix the incorrect posted transactions for the Set of Books

The transactions for the Project Quote, affect the global balances in the Set of Books. These transactions need to be cancelled.

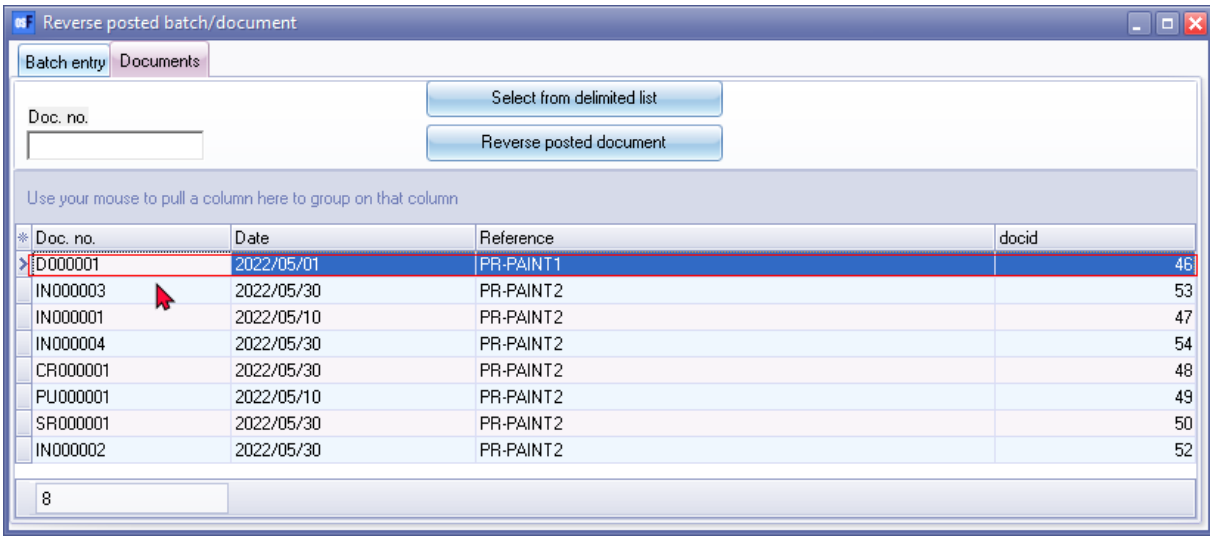


To cancel / reverse the incorrect posted transactions:

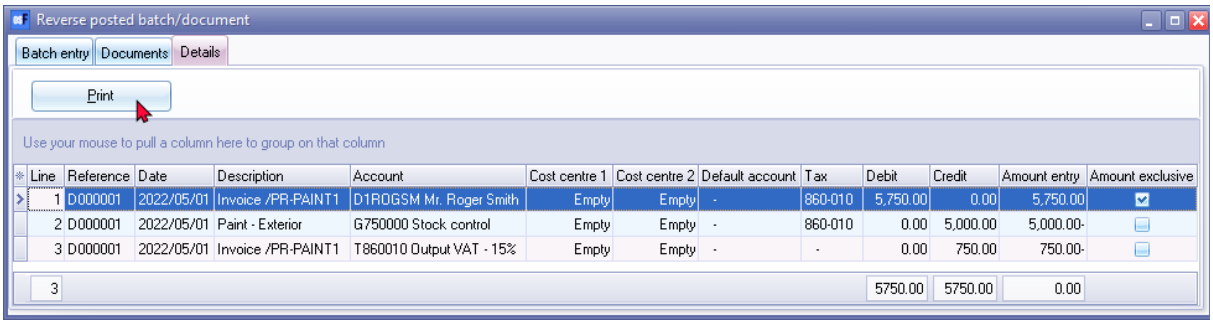
1. On the Setup ribbon, select Tools → Global processes → Reverse posted batch/document .



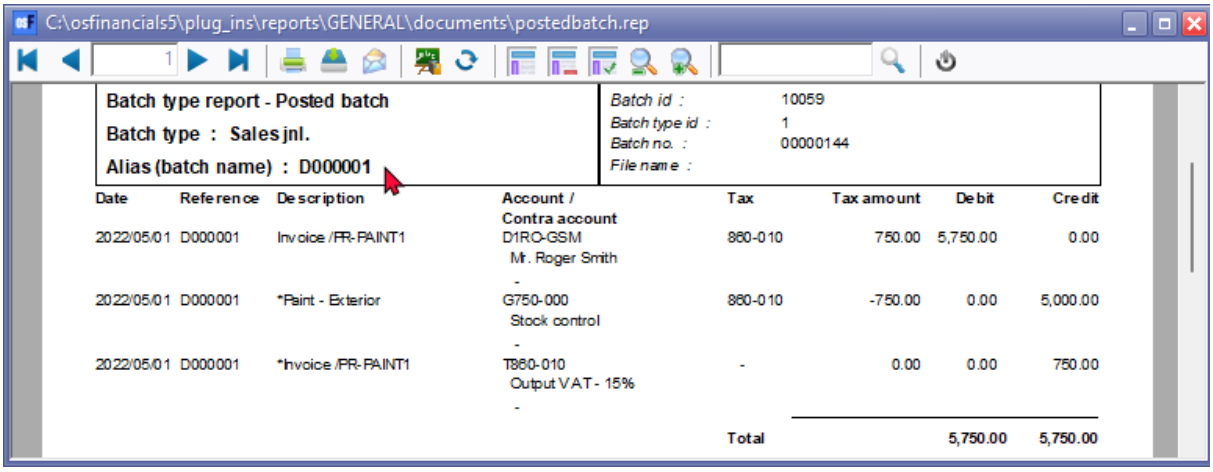
2. On the "*Reverse posted batch/document*" screen, click on the Documents tab.



3. Select the incorrect transaction, i.e. "*Project Quote – D000001*"; and double-click on the selected document. The "Details" tab will list all the posted transactions.



4. Click on the Print button.



5. Click on the Reverse posted document button.

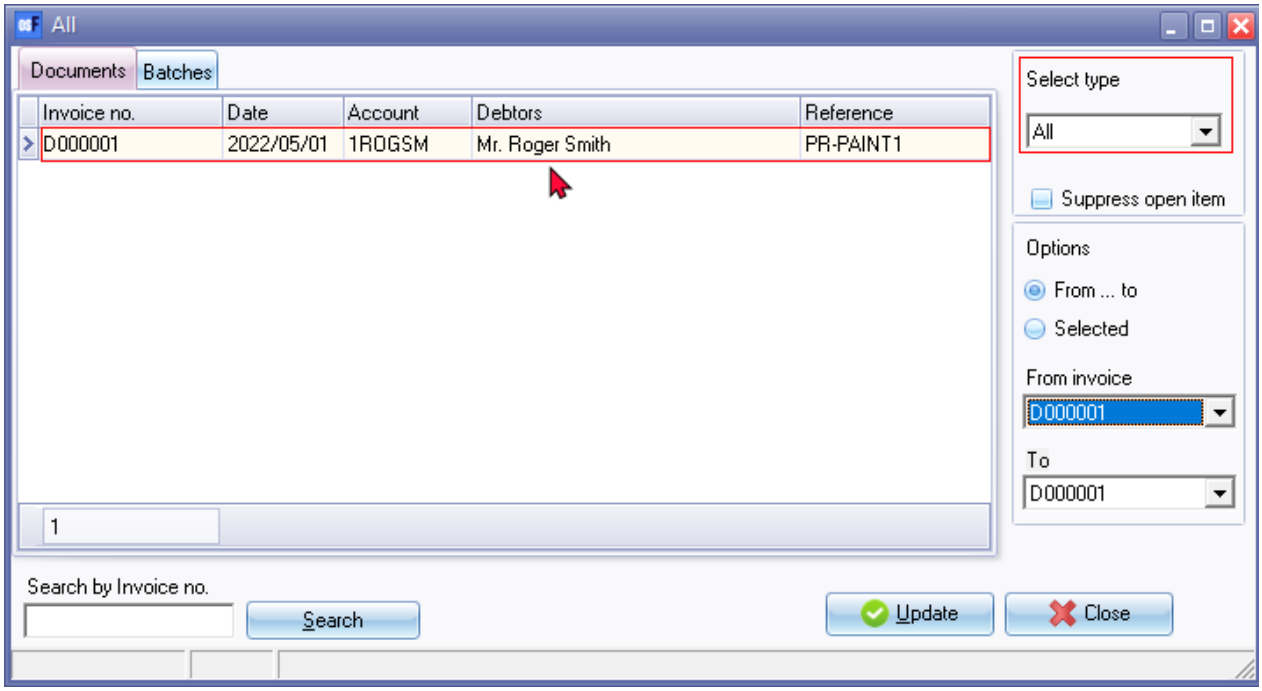
> *A Warning message is displayed:*
>
> "This will radically alter your data! We recommend that you stop and make a backup!"
>
> *Before you click on the Yes button, you need to make absolutely sure that the correct transactions is selected.*

6. Once ready, click Yes. The document will be removed, but not deleted.

7. Close the "*Reverse posted batch/document*" screen.

The document is not available to edit, as is the case with all other documents.

It is available for reposting.

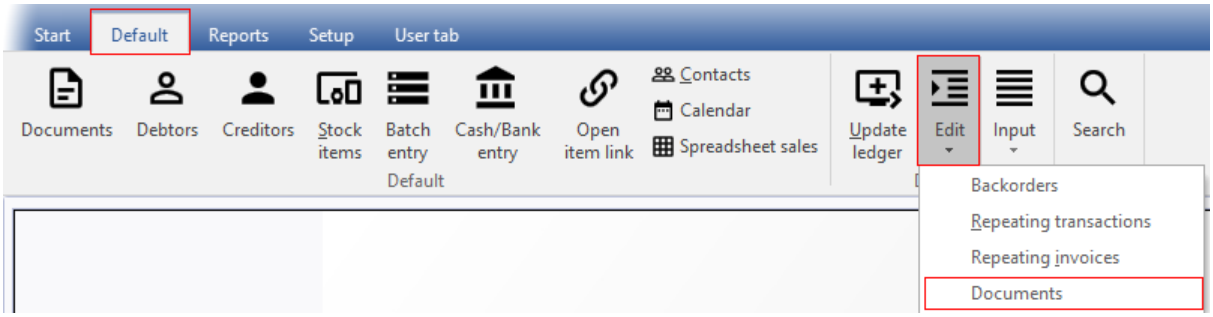


Delete the Project Quote document

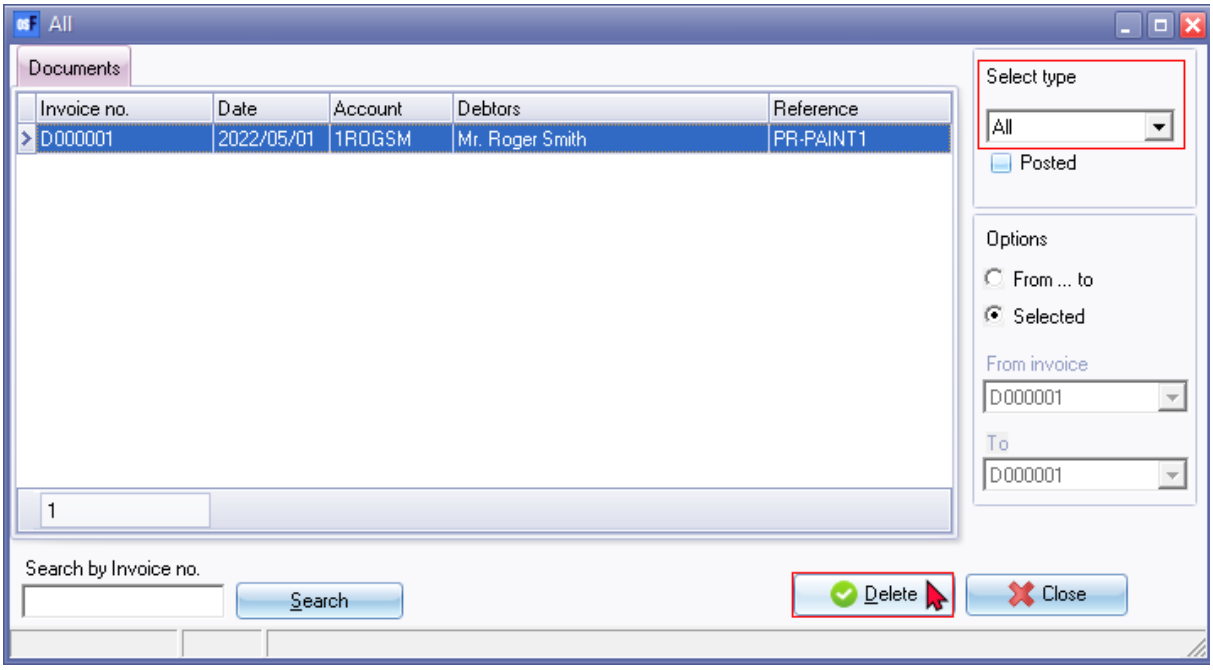
To totally remove the “Project Quote” document, you need to delete the document.

To totally delete the “Project Quote” document:

1. On the Default ribbon, select Edit → Delete.
2. Select Documents.



3. Select the document type “*All*”.



4. Click the Delete button. A confirmation message, is displayed:

   "Do you want to delete?"

5. Click on the Yes button.

Blockchain

What is blockchain?

Blockchain is a decentralized digital ledger technology that allows for secure and transparent record-keeping of data across a network of computers. It was originally developed for the cryptocurrency Bitcoin, but has since been adapted for use in many other applications.

In a blockchain network, transactions are recorded in blocks and each block is linked to the previous block in a chain, forming a chronological and immutable record of all transactions that have taken place. This makes it very difficult for any one party to modify or tamper with the data, ensuring that the system is secure and reliable.

Blockchains are typically maintained by a network of nodes, which can be run by anyone with the appropriate hardware and software. Transactions are validated and added to the blockchain by nodes using complex algorithms, and nodes are incentivized to maintain the system through rewards such as

cryptocurrency.

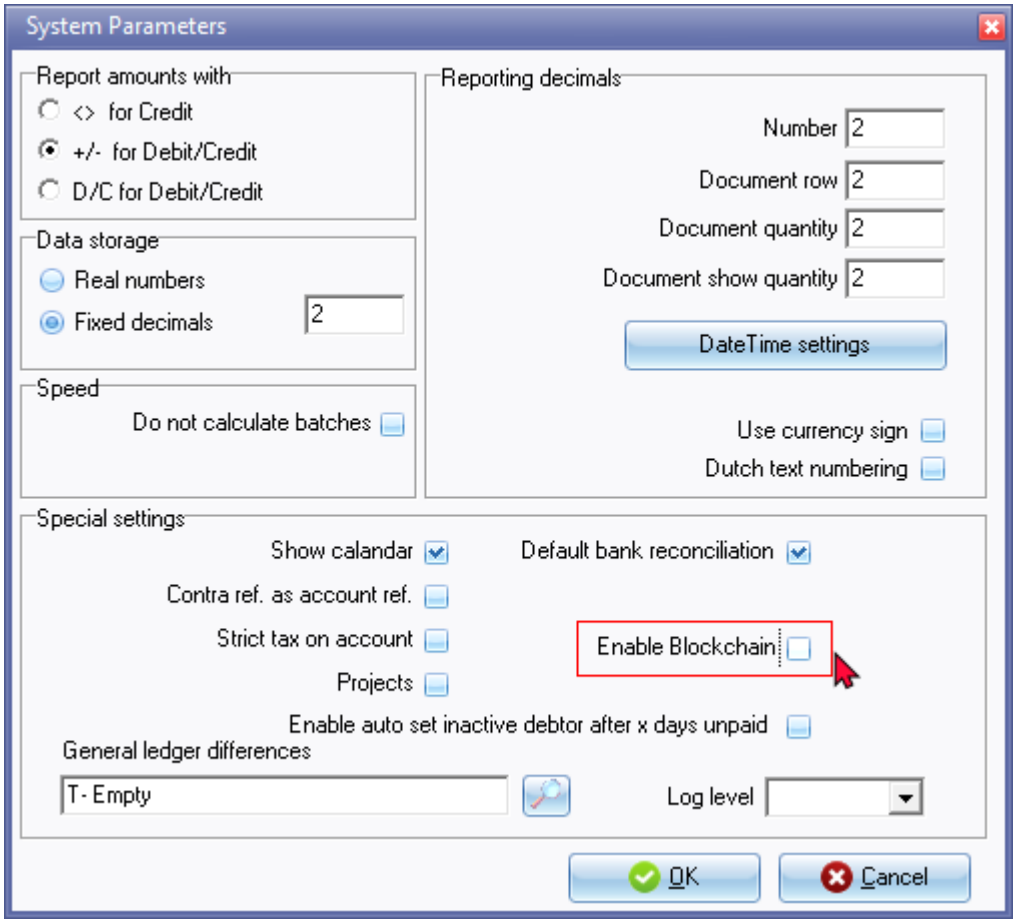
Blockchains have a wide range of potential applications beyond cryptocurrency, including in supply chain management, voting systems, identity verification, and more. They offer a way to securely and transparently store and transmit data without the need for intermediaries, and could have a significant impact on many industries in the coming years.

See video on osFinancials and Blockchain.

Activate Blockchain in osFinancials

Blockchain - By default, Blockchain is not activated. Blockchain needs to be activated in the Setup → System parameters on the Setup ribbon.

On the Setup ribbon, go to Setup → System parameters.



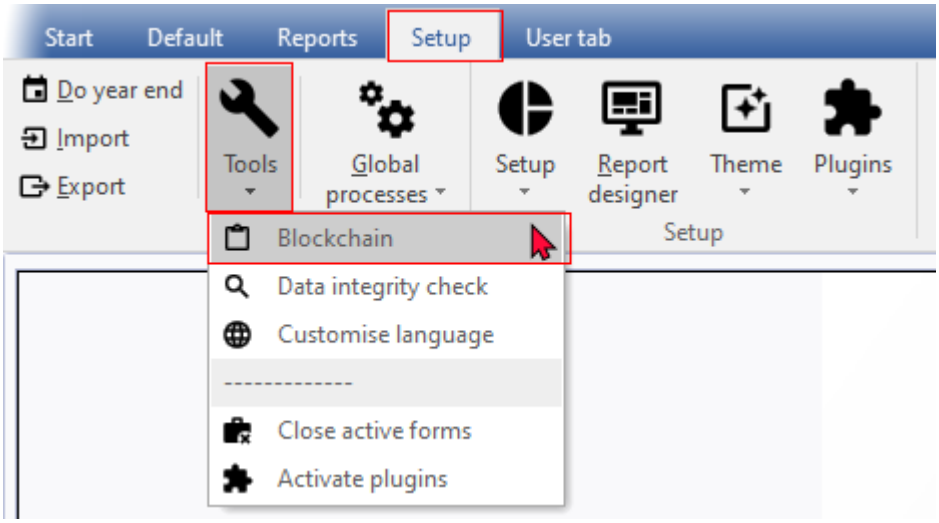
Select (tick) "*Enable Blockchain*".

Click OK.

Reopen the Set of Books to activate Blockchain.

Access Blockchain

Once Blockchain is activated, you may access Blockchain from the Tools → Blockchain menu on the Setup ribbon.



Setting options to launch Blockchain:

Close Set of Books or Exit osFinancials5/TurboCASH5 will automatically launch if the "Check on close books for Admins" setting is selected (ticked).

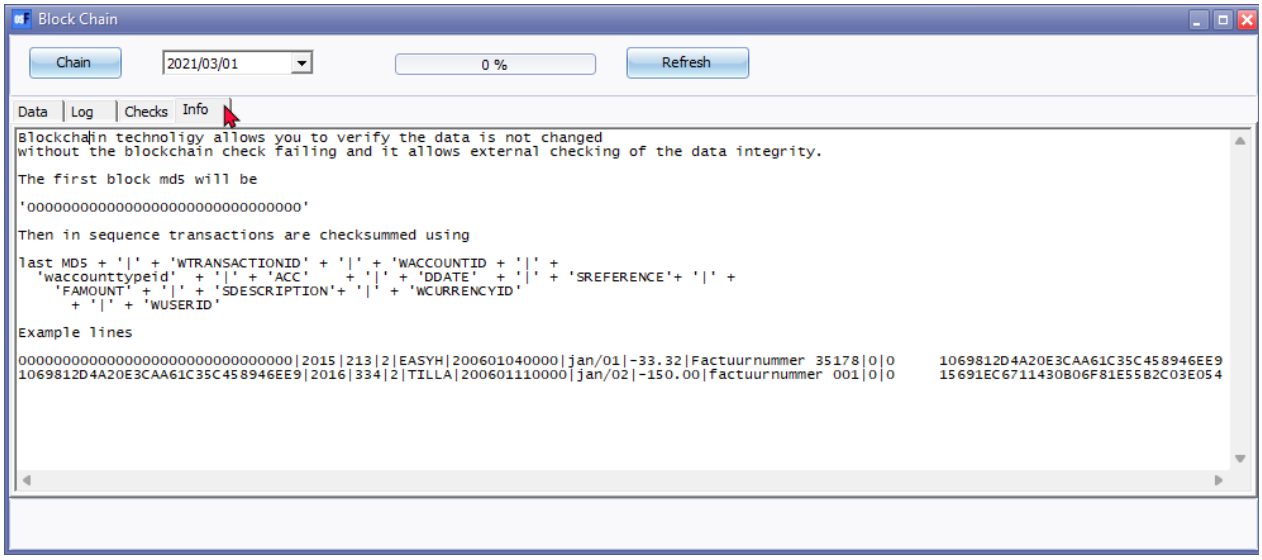
Blockchain - Info tab

Blockchain technology allows you to verify the data is not changed

without the blockchain check failing and it allows external checking of the data integrity.



The first block md5 will be

'00000000000000000000000000000000'

Then in sequence transactions are checksummed using

```
last MD5 + '|' + 'WTRANSACTIONID' + '|' + 'WACCOUNTID + '|' +
 'waccounttypeid'  + '|' + 'ACC'    + '|' + 'DDATE'  + '|' + 'SREFERENCE'+ '|' +
   'FAMOUNT' + '|' + 'SDESCRIPTION'+ '|' + 'WCURRENCYID'
     + '|' + 'WUSERID'
```

Example lines

```
00000000000000000000000000000000|2015|213|2|EASYH|200601040000|jan/01|-33.32|Factuurnummer 35178|0|0
      1069812D4A20E3CAA61C35C458946EE9
1069812D4A20E3CAA61C35C458946EE9|2016|334|2|TILLA|200601110000|jan/02|-150.00|factuurnummer 001|0|0
      15691EC6711430B06F81E55B2C03E054
```

The MD5 hash function was originally designed for use as a secure cryptographic hash algorithm for authenticating digital signatures. But MD5 has been deprecated for uses other than as a noncryptographic checksum to verify data integrity and detect unintentional data corruption.

The MD5 hash function was originally designed for use as a secure cryptographic hash algorithm for authenticating digital signatures. But MD5 has been deprecated for uses other than as a noncryptographic checksum to verify data integrity and detect unintentional data corruption.

Blockchain - Export for audit

Blockchain data can be exported for audit purposes.

One example of this is the use of blockchain explorers, which are web-based tools that allow users to view the data stored on a blockchain in a user-friendly format. These explorers can be used to export transaction data and other information from the blockchain, which can then be analysed and audited by third parties.

For example, a company using a blockchain-based supply chain management system might use a blockchain explorer to export data on all of the transactions that have taken place on the network. This data could then be analysed by auditors to ensure that all of the transactions are accurate and that there are no discrepancies or irregularities.

Another approach to exporting blockchain data for audit purposes is to use specialized audit tools and software that are designed to work with specific blockchain networks. These tools can provide detailed analytics and reporting on blockchain activity, making it easier for auditors to identify potential issues or areas of concern.

Overall, exporting blockchain data for audit purposes requires specialised tools and expertise, but it can be an effective way to ensure the security and reliability of blockchain-based systems.

Plugins

---

osFinancials5/TurboCASH5 Plugins and Products

osFinancials5/TurboCASH5, is a comprehensive accounting software designed to meet your specific business needs. The osFinancials5/TurboCASH5 Subscription already includes three plugins. (ie; Bank Import, Document Email Pro and Budgets).

Enhance your experience with our suite of products and plug-ins, which can be seamlessly integrated into osFinancials to extend its functionality beyond core features.

Our plugins are categorized into seven main groups: Document plugins, External system links, Financial tools, Generic plugins, Point-of-Sale, Stock plugins, and Tools.

Whether you need enhanced reporting, task automation, industry-specific solutions or integration with other software, our plug-in programs offer flexibility and customization options to tailor osFinancials5/TurboCASH5 to your unique requirements.

Visit our webshop to explore our products, including multi-user options, support, other products and more, and to optimize your osFinancials5/TurboCASH5 experience.

Included in the registered version of osFinancials5/TurboCASH5 - Business Class

osFinancials5 Subscription /TurboCASH Subscription

Process unlimited (more than 500) transactions and documents.

Every time an unregistered version osFinancials5/TurboCASH5 is started, the following confirmation message will be displayed:

> This software is limited to 500 transactions or 500 documents. Please register and buy a licence for osFinancials
> This copy of osFinancials is not registered! Do you wish to register it now?

Unregistered versions will allow you to process up to 500 transactions and /or documents. Once this limit is reached, osFinancials5/TurboCASH5 will not allow any processing of transactions, in batches and/or documents.

Once you have registered osFinancials5/TurboCASH5, you will receive an unlocking code and will be able to process further transactions and or documents.

Bank import

Bank Import Plugin Licence

The Bank Import Plugin is included with the osFinancials5/TurboCASH5 Business class subscription. With a registered osFinancials5/TurboCASH5 Business class subscription, you gain access to import and process unlimited statements for each of your bank accounts.

Upon purchasing the osFinancials5/TurboCASH5 Business class subscription, you will receive an email containing registration (activation) codes and detailed instructions.

For unregistered versions of osFinancials5, a message may appear:

> *"This demo plugin allows %s records to be entered. If you need more, please buy the product at https://www.osfinancials.org/en/webshop".*

We encourage users to support osFinancials by purchasing the osFinancials5/TurboCASH5 Business class subscription. This not only unlocks the full functionality of the Bank Import Plugin but also supports ongoing development and improvements.

For users of osFinancials4, TurboCASH4, the Bank Import Licence is available for purchase from our osFinancials webshop.

Documentation : osFinancials website - Bank import plugin -
Documentation : osFinancials website - Bank Reconciliations Plugin

The Bank Import plugin included with the osFinancials5/TurboCASH5 Subscription is a handy tool for managing and processing the transactions in your bank and credit card accounts. You can download electronic bank statement files directly from your online banking services at your bank or financial institution. After that, you can use the Bank Import plugin to import these bank statements into your bank accounts. This process saves you a lot of time and effort as you do not have to manually enter and process the transactions of your bank accounts and credit card accounts in separate Payment journals and Receipt Jjurnals.

Additionally, the Bank Import Plugin has the ability to use bank references to automatically assign transactions to the appropriate accounts, This automation not only saves time, but also reduces the risk of human error associated with manual data entry. Overall, using this Bank Import plugin is a smart choice for businesses or individuals who want to optimize their financial workflow within osFinancials5/TurboCASH5.

Document E-mail Pro

Document E-mail Pro Plugin - Shop - Licence : Included in osFinancials5 Subscription.

Budget Plugin

Budget Plugin - Manual - Shop - Licence : Included in osFinancials5/TurboCASH5 Subscription.

Documentation : Help topic.

Effortlessly manage budgets for accounts, cost centres, and projects with the Budget Plugin, now included as a standard feature in the osFinancials5/TurboCASH5 Subscription. Access the Budgets option on the Reports ribbon for seamless integration.

Key Features:

- Flexible Budget Entry: Easily input budgets for accounts, cost centres, and projects directly within the osFinancials5 interface. Copy budget figures from the previous year of actual account balances.
- Comprehensive Budgeting: Cover all aspects of financial planning by setting budgets for various entities, including accounts, cost centres, and projects.
- Integrated Solution: Seamlessly integrate budget management into your overall financial workflow within osFinancials5/TurboCASH5.
- Advanced Filtering and Pivot Options: Utilize advanced filtering and pivot functionalities to analyse budget data effectively and gain deeper insights into your financial performance.

- Streamlined Processes: Simplify budgeting tasks and ensure accuracy by leveraging the intuitive interface and advanced features of the Budget Plugin.
- Comprehensive Reporting: Generate budget listing reports (Trial balance, Income statement, Balance sheet, or Standard column balances report types) and budget performance reports (Budget vs Actual to compare the budget figures versus the actual posted transactions). Export reports to spreadsheets and utilize powerful pivot features for in-depth analysis. Print and export budgets in the T-Account viewer.

Enhance your financial planning capabilities and streamline your budgeting processes with the Budget Plugin, empowering you to make informed decisions and drive financial success within your organisation.

Plugin activation and Plugins menu

1. Activate plugins - Allows you to manage plugins listed in the Plugins menu on the Setup ribbon. Clicking on the Activate plugins button in the Setup ribbon allows you to add plugins to the Plugins menu. To remove a plugin from the menu, click on the Deactivate plugin button.
2. Plugins menu - This menu displays only the activated plugins.
3. Register plugins - Upon purchasing plugin licences, you will receive the licence codes via email along with instructions for activation. Simply add the licence codes provided to access the licenced version of the plugin.

Activate plugins

Plugin activation

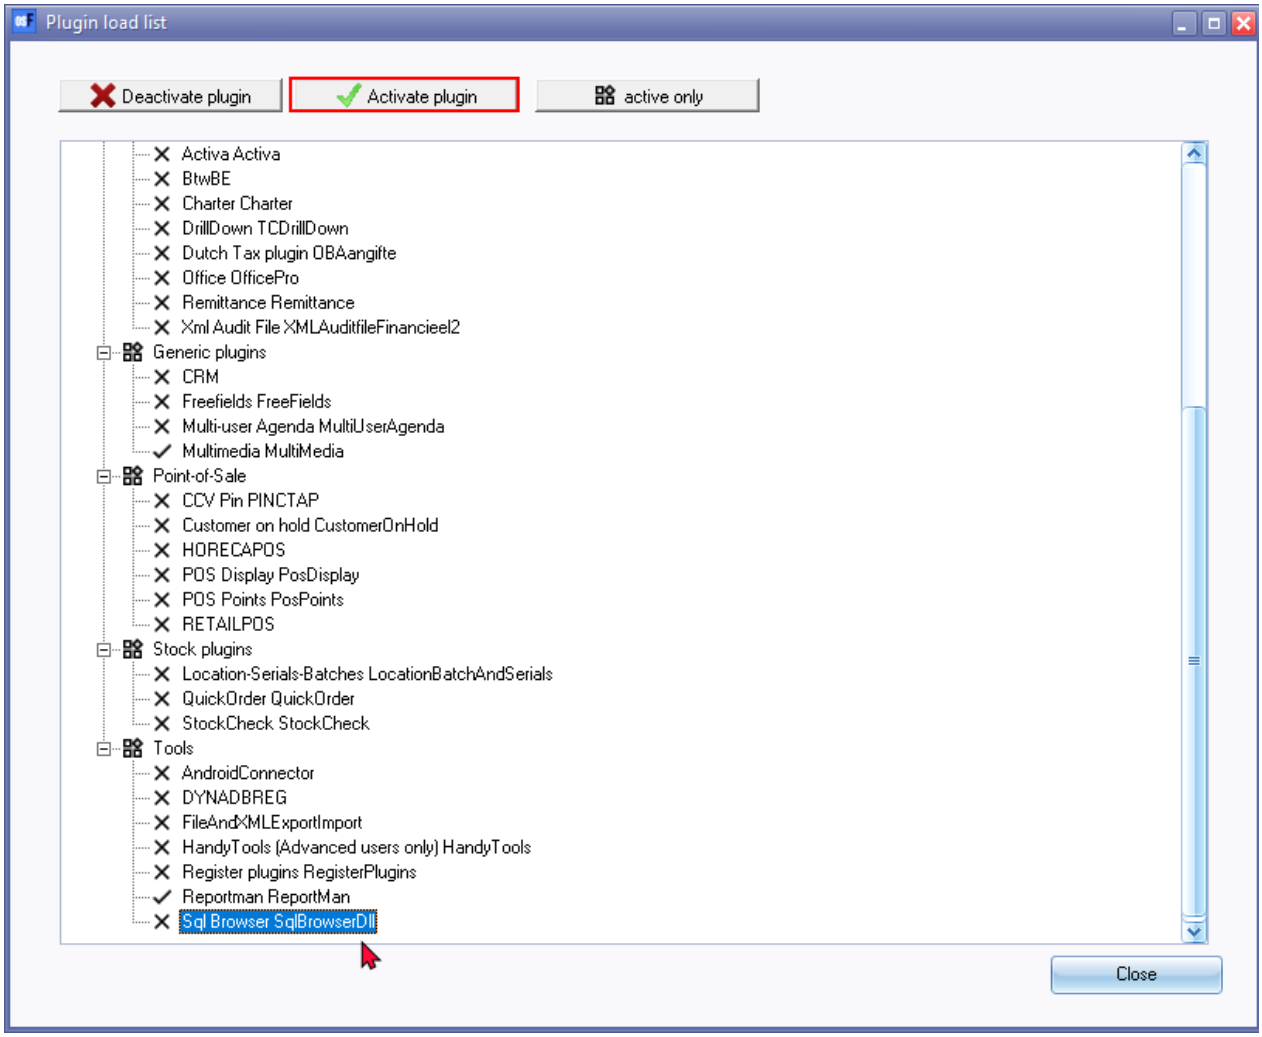
Plugins are included in the osFinancials5/TurboCASH5 installation. By default, some Plugins are not available from the Plugins menu on the Setup ribbon.

To add plugins to the Plugins menu, you need to activate the plugins, you require. This will update the "*Plugins load list*". Activated Plugins will be available on the Plugins menu.

To activate plugins:

1. On the Setup ribbon, select Tools → Activate plugins.

2. On the "*Plugin load list*" screen, you may select to activate / deactivate, the plugins you have purchased on the list.



3. Click on the Close button.

4. The selected plugins will be added to the Plugins menu on the Setup ribbon.

5. Plugins needs a licence before these can be activated. Some plugins, if not registered (purchased on the Webshop), can be used for a number of transactions or records only.

Using plugins

Once the plug-ins are activated, you must enable (enable) the plug-ins you purchased in the Plugins menu (Setup ribbon).

Some plug-ins must be activated for each Set of Books in osFinancials5/TurboCASH5.

All plug-ins are enabled in the Tools → Activate plugins (Setup ribbon) and will be available in the Plug-ins menu. However, there are two exceptions:

1. Bank Import Plugin - This plugin must be enabled in the Setup → System parameters (Setup ribbon).

2. Payroll Import Plugin - This plugin is accessed in the Process batch option (F9:Process), provided you have a valid, and you have a valid input file from a supported payroll software.

Start osFinancials5/TurboCASH5 again to fully activate the enabled plugins.

Retrieving plugin licences

To retrieve plugin licences:

1. Go to the Start ribbon (tab). Then click on Online registration.

2. On the "*Register your osFinancials / Register your TurboCASH*" screen, click on the Get it online button.

3. On the next screen, enter your username and password for this website.

4. Then click Send (bottom of screen) and your plugin codes are retrieved from our servers.

5. You will see all the plugins you purchased or plugins you have asked for a trial.

At the bottom of the "Your registration is successful!" with your registration codes section of the "Register your osFinancials / Register your TurboCASH" screen, your purchased plugin(s) will show the name of the plug-in(s) well as the maximum number of times you can retrieve the plug-in(s) and the end date on which the licence expires (in the case of time licence plug-ins) are displayed.

If the counter of the number of remaining times to renew the licence is at 0, then the plugin is blocked. To reset the counter, you can send us an email with the request to reactivate the plugins.

If the plugins are about to expire, you will be notified. osFinancials5/TurboCASH5 will automatically send a quotation for extending the usage period.

This will happen before the actual expiry date.

So if the quotation is paid, the plugin(s) are extended in period after the original expired date.

So you won't need to see the notice messages until the expiry date.

6. Click on the Close button.

You only can use plugins with the serial number/account of the osFinancials account that you purchased the plugins with.

The plugins can not be combined with other plugins purchased using a different account.

This could happen if you have registered multiple-times.

Plugins menu (Setup ribbon)

Plugins menu structure

Plugins are included in the osFinancials5/TurboCASH5 installation. By default, some Plugins are not

available from the Plugins menu on the Setup ribbon.

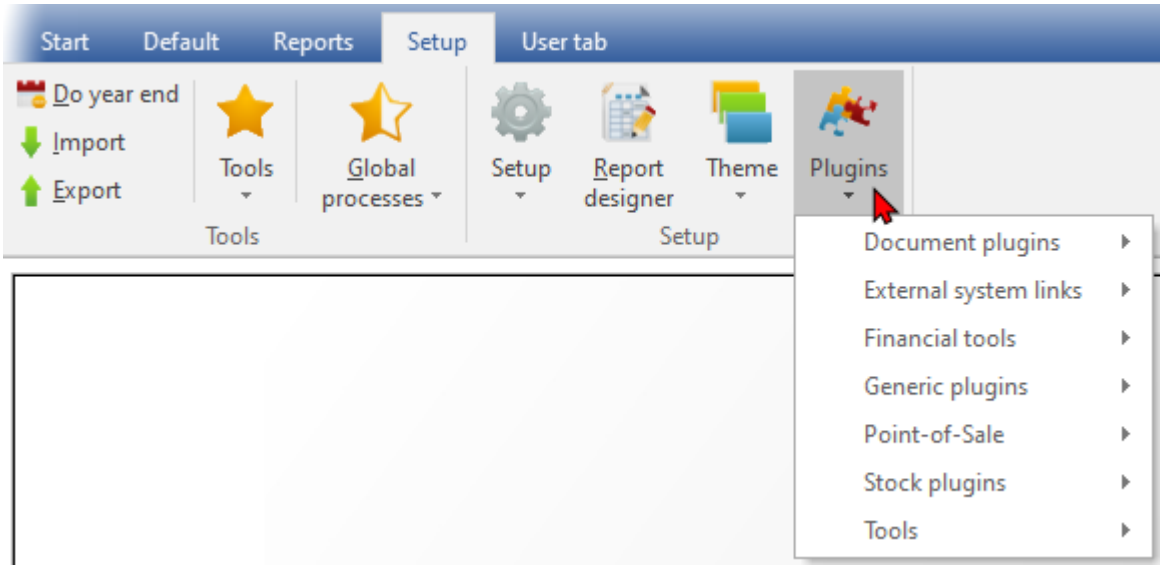
The following plugins in the osFinancials5/TurboCASH5 subscription, are activated (updated in the "*Plugins load list*") and will be available on the Plugins menu on the Setup ribbon:

1. Document plugins → Document E-mail Pro

2. Generic plugins → Multimedia

Access to the Plugins menu

On the Setup ribbon, select Plugins.



If the plugins menu is not listing the plugins in your selected language or the language associated with your Set of Books, you can simply open and close the the Activate plugins screen (on the Setup ribbon, select Tools → Activate plugins).

When all Plugins are activated from the Tools → Activate plugins option on the Setup ribbon, the Plugins menu is structured and grouped into seven categories: Document plugins, External system links, Financial tools, Generic plugins, Point-of-Sale, Stock plugins, and Tools.

Any other Plugins, except the Bank import plugin, needs to be activated to be listed on Tools → Activate plugins menu on the Setup ribbon. This will update the "*Plugins load list*".

Some of the Plugins has a nag screen, some plugins are limited to a number of records, etc. Plugins need to purchased from the osFinancials online shop and need to be registered (on the Setup ribbon, select Tools → Activate plugins), before you can use them.

Some plugins need to be activated for each Set of Books. If you have purchased a plugin, you may use it in any Set of Books.

Bank import plugin - Bank Reconciliations Plugin Manual - *BankImport Plugin Manual* - Shop - *Tutorial* - *Licence : Once-off*

- Bundled with theosFinancials5/TurboCASH5 subscription.

The Bankimport plugin will import bank transactions and save you hours of data entry. You can simply link transactions to your debtors, creditors or other accounts. And with a simple mouse click link the payments to the right invoices.

Needs to be activated on the Setup ribbon, select Setup → System Parameters.

Document e-mail pro plugin

Document E-mail Pro plugin - Manual - Shop - Licence : Once-off -

This plugin is included in the osFinancials5/TurboCASH5 Business class subscription or can be purchased separately with a once-off licence.

The Document E-mail Pro plugin in osFinancials5/TurboCASH5 allows you to send documents by email directly from the program. With the Document E-mail Pro plugin, you can easily send documents such as invoices, quotes, credit notes, and order lists to customers or wholesalers. Different email templates can be created to match the specific document being sent. For example, the email text sent to a customer with an invoice will differ from the text sent to a wholesaler with an order list.

The Document E-mail Pro plugin can also be used in conjunction with other plugins like remittance, subscriptions and newsletter.

Email Pro Plugin - File Formats

When sending documents as email attachments, you have the option to choose different file formats, including PDF and UBL 2.1. Here's an explanation of each format:

1. PDF (Portable Document Format): PDF is a widely used file format that preserves the formatting, fonts, and layout of a document. It ensures that the recipient sees the document exactly as intended, regardless of their software or operating system. PDF files are typically read-only, allowing recipients to view and print the document but not easily edit its content. Sending documents as PDF attachments guarantees compatibility and easy viewing for recipients.
2. UBL 2.1 (Universal Business Language): UBL is an XML-based standard for exchanging business documents electronically. UBL 2.1 is a specific version of the UBL standard. UBL files follow a predefined structure and contain structured information about various business documents such as invoices, purchase orders, and payment instructions. UBL files are commonly used in business-to-business (B2B) transactions to facilitate automated processing and interoperability between different software systems. By sending documents as UBL 2.1 attachments, you provide recipients with machine-readable data that can be easily processed by their business systems.

When emailing documents, you can attach both a PDF file for human-readable viewing and a UBL 2.1 file for machine-readable data. This offers flexibility to the recipient in interacting with the information based on their specific needs and systems.

Email Pro Plugin - Send Email Options

You can send email(s) in osFinancials from the following options:

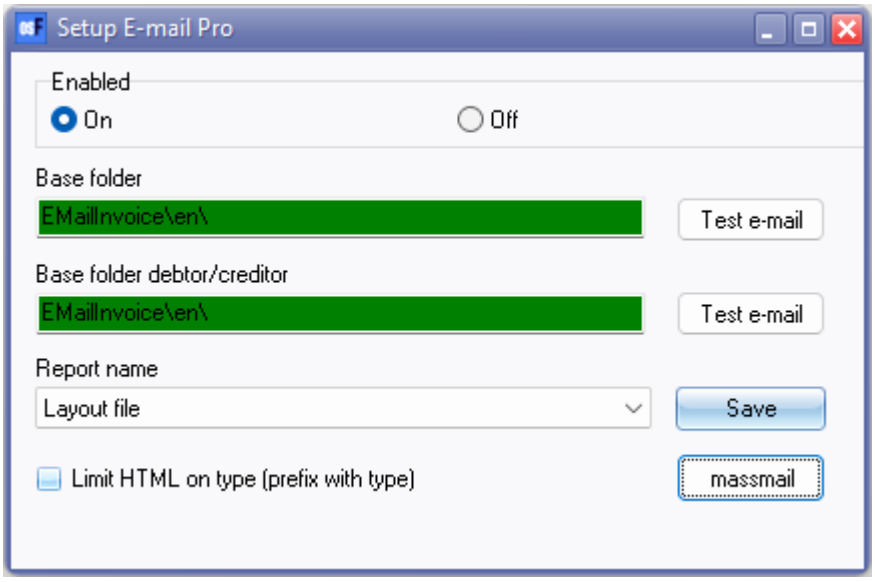
- Setup Email Pro - (Setup ribbon) Send a Test Document to test your email settings and configuration.
- Documents grid
    - Send emails with the Email Pro context menu to selected debtor (client/customer).
    - Send mass emails with the Email Pro 2 context menu to multiple debtors (clients/customers).
- Debtors grid
    - Send emails with the Email Pro context menu to selected debtor (client/customer).
    - Send mass emails with the Email Pro context menu to multiple debtors (clients/customers).
- Debtor account - Email Pro tab
- Creditor account - Email Pro tab

Activate the Document E-mail Pro Plugin in a Set Of Books

The Document E-mail Pro needs to be activated in each set of Books, you require to use this plugin.

To activate the Document E-mail Pro plugin:

1. On the Setup ribbon, select Plugins → Document plugins → Document E-mail Pro. If this plugin is not listed under Plugins → Document plugins, activate it via Tools → Activate plugins.
2. The "*Setup E-mail Pro*" screen is displayed:



3. Click the On option to enable it.

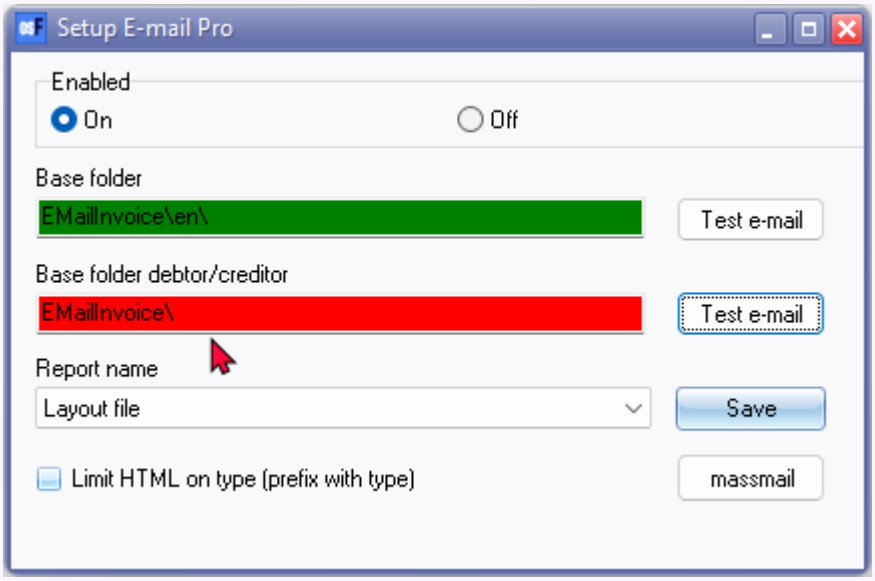
   a) Base folder – Enter "*EmailInvoice/en*". This is the "*Base folder*" in which the default files are stored. It contains the test.html and test.txt files. These files are located in the "*EMailInvoice/en*" folder in the "*…\plug_ins\reports*" directory.

   b) Base folder debtor/creditor - Enter "*EmailInvoice/en*". This is the "*Base folder debtor/creditor*" in which the default files are stored. It contains the test.html and test.txt files. These files are located in the "*EMailInvoice/en*" folder in the "*…\plug_ins\reports*" directory.

   c) Report name – Select a document layout file, e.g. "*Layout*" file. This file changes to each document type (i.e. for sales documents (Quotes / Invoices / Credit notes) or for purchase documents (Orders / Purchases / Supplier returns)).

If the "Base folder" or the "Base folder debtor/creditor" is entered correctly, the background for these fields will be displayed in a GREEN background colour.

If the Base folder or the "Base folder debtor/creditor" is not entered correctly, the background for these fields will be displayed in a RED background colour.



In this example, the "Base folder debtor/creditor" is entered as "EMailInvoice". Since the folder does not contain valid files in the "…\plug_ins\reports" folder, it is displayed in a RED background colour.

If you enter "EMailInvoice/en" as the folder, which contains the English templates, the background for these fields will change to the a GREEN background colour.

Massmail button – This button will launch the following message:

" This feature needs a separate serial please request your trail at

https://www.osfinancials.org/en/webshop/ "

4. Limit HTML on type (prefix with type) - By default this option is not selected. This will list all the available templates in the EmailInvoice/en (or /af for Afrikaans, etc.).
5. If you select (tick) this option, only the "*Default*" option will be available.
6. You may click on the Save button to store you base folders and close this screen.

> *To configure your e-mail settings, you may click on the Test e-mail buttons next to the "Base folder" and/or the "Base folder debtor/creditor" fields.*

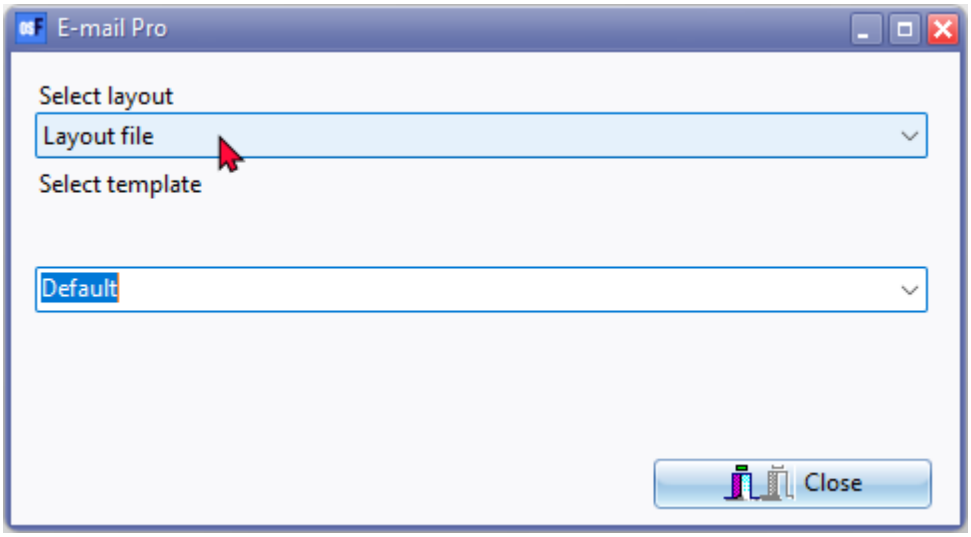
Testing and Configuration the E-Mail Settings

To configure your e-mail settings, you may click on the Test e-mail buttons next to

Once the valid folder names are entered for "*Base folder*" and the "*Base folder debtor/creditor*" fields, you may test and configure your e-mail settings.

To do this:

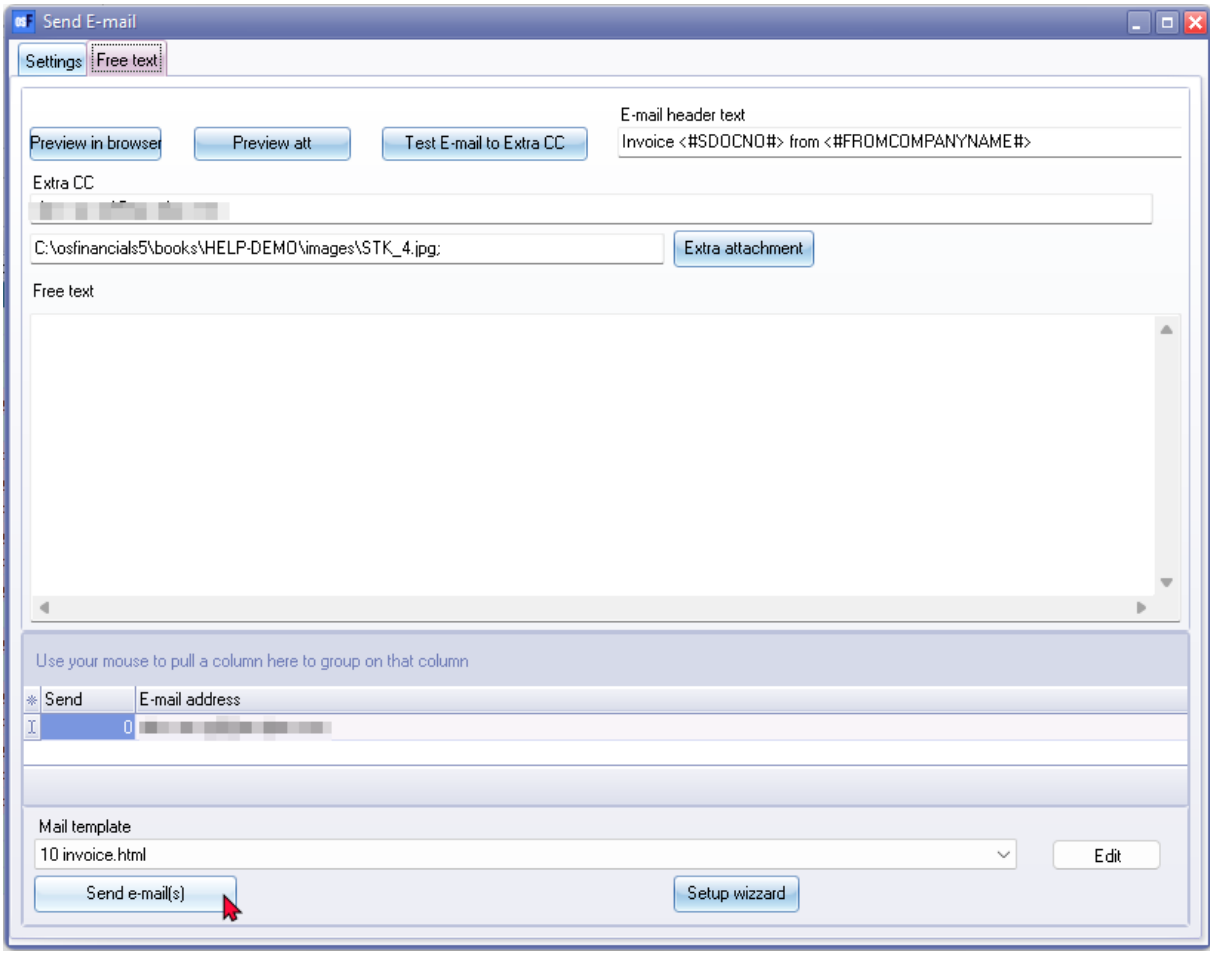
1. Launch the "*Setup E-mail Pro*" (On the Setup ribbon, select Plugins → Document plugins → Document E-mail Pro).
2. Click on the Test E-mail button (next to the "*Base folder*" field). The following screen is displayed:



3. Select the document layout file to send sales documents (i.e. quotes, invoices and credit notes) or to send purchase documents (i.e. orders, purchases or supplier returns).
4. Select a template from the list, if the "*Limit HTML on type (prefix with type)*" option on the "*Setup E-Mail Pro*" screen, is not selected.

You may add your own templates or modify the existing ones according to your own requirements.

5. Click on the Close button. The "*Send E-mail*" screen (Free text tab) is displayed:



6. Click on the Settings tab. This will allow you to setup and configure your E-mail account with your Internet Service Provider (ISP).

See the next section to configure and setup your email account.

7. Click on the Send E-mail(s) button to send the test to your own e-mail address. If your settings are correct, the Send E-mail screen will automatically close.

If it does not close, click on the Settings tab of the Send E-mail screen, and check your settings. You may then retry to send your e-mail.

8. Once you have received the e-mail (test), your settings and configuration should be completed.

9. Click on the Save button of the Setup E-mail Pro screen. The basic E-mail Pro setup should be configured and ready to use.

Configuring and Setup E-mail

The Send E-mail - Settings and Free Text tabs (screens) will be displayed, when:

- Launch the Setup E-mail Pro screen and you click on the Test E-mail button and thereafter on the Close button after selecting the Select Layout and Select Template fields.
- Documents – Listing screen context menu (right-click) Plugin action → E-mailPro menu.

> *The Send E-mail - Settings and Free Text tabs (screens) will NOT be displayed, when launched from the context menu (right-click) Plugin mass action → E-mailPro 2 menu.*

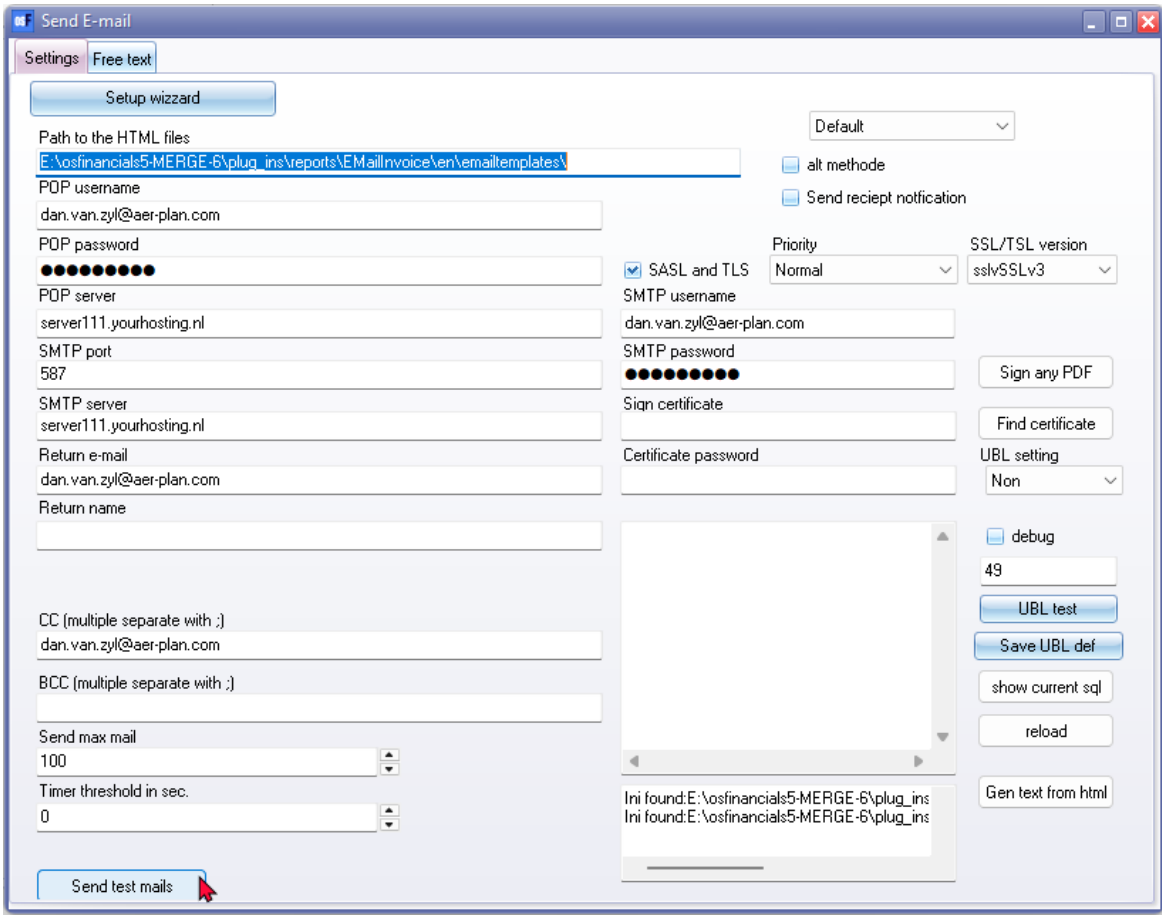
Settings tab

Once your e-mail is setup properly, you may test the e-mails, customise or add your own e-mail templates.

This screen consists of two different tabs; "*Settings*" and "*Free text*". In the Settings tab, a number of settings must be entered once.

To Configure and Setup E-mail Pro:

1. On the "*Send E-mail*" screen, click the Settings tab:



2. Enter or select the following, if necessary:

Field	*Description*
Path to the HTML Files:	*The default path is displayed as:* "D:\osFinancials5\plug_ins\reports\EMailInvoice\en\emailtemplates\" *If you have installed osFinancials5/TurboCASH5 into a different folder, you may need to overtype this.* *Here you specify the path where the files for the document email pro plugin are located, you can change this path to your own liking to have a personal set of files.*
POP username:	*Enter the POP username as registered with your ISP (Internet Service Provider) for your e-mail account settings.*
POP password:	*Enter the POP Password as registered with your ISP (Internet Service Provider) for your e-mail account settings.*
POP server:	*Enter the POP server as registered with your ISP (Internet Service Provider) for your e-mail account settings.*

SMTP port:	*The default port is "25". This is determined by the default configuration of your operating system.*
SMTP server:	*Enter a valid SMTP as registered with your ISP (Internet Service Provider) for your e-mail account settings.* *Note with POP before SMTP (usually if you do not send e-mails via your provider) it is best to create an e-mail box that no one else will read.* *This is because if mail is read with multiple Internet Service Providers (IPS) on the mailbox, the POP for SMTP will not work properly.* *It is best to use an account that is not used by anyone else.*
SMTP username:	*Enter the SMTP username as registered with your ISP (Internet Service Provider) for your e-mail account settings.*
SMTP password:	*Enter the SMTP password as registered with your ISP (Internet Service Provider) for your e-mail account settings.*
Return e-mail:	*Here you can enter your own email address to which the recipient can mail back, if desired.*
Return name:	*Here you can enter your own name that will allow the recipient to see who you are.*
CC: (multiple separate with ;)	*This abbreviation CC "Carbon Copy" indicates secondary recipients of a message. Those recipients who are to receive a copy of a message directed to another. The list of recipients in the CC field is visible to all other recipients of the message.* *Enter a valid e-mail address, if necessary.*
BCC: (multiple separate with ;)	*This abbreviation BCC "Blind Carbon Copy" allows you to send a copy of your correspondence to a third party when you do not want to let the recipient know that you are doing this (or when you do not want the recipient to know the third party's e-mail address). You may also wish to enter this filed, when sending an e-mail to multiple recipients, you can hide their e-mail addresses from each other.* *Enter a valid e-mail address, if necessary.*
Send max mail:	*The default is "100". You may use the scroll buttons or enter the number of the maximum emails required to send in a batch. This will limit the number of email messages.*

Timer threshold in sec:	*The default is "10" seconds. This is determined by the default configuration of your operating system. It is not recommend ed to change this, but you could experiment by changing the values.*
Default:	*Select "Default" or "HTML only".*
alt methode:	*Alternative mode*
Send receipt notification:	*Tick if you need a confirmation notification when the email has arrived (no read confirmation!).*
SASL and TLS:	*Simple Authentication and Security Layer (SASL) and Transport Layer Security (TLS) https://en.wikipedia.org/wiki/Simple_Authentication_and_Security_Layer.* *SASL typically also support Transport Layer Security (TLS) to complement the services offered by SASL.*
Priority:	*The default option is "Normal". You may increase the priority to "High" and "Highest". You may decrease the priority to "Low" and "Belowlow"*
SSL/TSL version:	*Select the version for the Simple Authentication and Security Layer (SASL) Transport Layer Security (TLS) from the list.*
Sign any PDF:	*Optional. You can sign any pdf with this button (also the ones send to you). This will allows you to select a pdf file.*
Find certificate:	*If you have a certificate, click in this button. You can browse for your security certificate so that it will be used for the security of the sent PDF files.* *You may use add Digital signatures to the PDF (portable document format) files (e.g. OpenSSL pkcs12.pxf) to your e-mail received by your recipients (e.g. debtors (customers) or creditors (suppliers)). Find certificate: With this button* *See:* • *http://www.openssl.org/* • *PKCS #12: Personal Information Exchange Syntax Standard*
Certificate password:	*If you have selected a certificate, you need to enter a valid password for that certificate.*
UBL:	*From osFinancials version 4.0.0.1102 and TurboCASH5.2 (365) it is possible to send UBL2.0 files with the document.* *The option can be enabled on the settings tab and has 3 settings*

	• *None (default) This option will not send UBL* • *Always send a UBL* • *Based on a UBL field in the dataset that contains the value T.* *The output can be checked for validity via this website* *https://peppol.helger.com/public/locale-en_US/menuitem-validation-bis2* *By default, EUR is used for currency exports.* *For item unit standard SK is used or the first 2 letters of the item unit.*
UBL test:	*This button will generate a UBL file in the *.xml format.*
Save UBL def:	*This button will save a UBL definition file in the *.xml format.*
Show current sql:	*This button displays the current SQL in the memo used for the query. The sql which will be displayed, is the email.txt in the sql folder.*
Reload:	*This button will reload the sql from the memo (to test what an adjustment would do).*
Gen text from HTML:	*This button will generate text from HTML.*

3. Once the E-mail Pro is properly configured and set, you may click on the Send test mails button.

Some messages, e.g. may be displayed in the text area (on the lower right-hand side) of the "Settings" screen. An example may be "your e-mail address Login failed". This may indicate that something is not correctly entered on the settings.

If the email has been sent successfully, the message should display as follows:

```
Sending email using SMTP...
IdSMTP1-ST2-Connected.
IdSMTP1-ST5-Encoding text
IdSMTP1-ST5-Encoding text
IdSMTP1-ST5-Encoding attachment

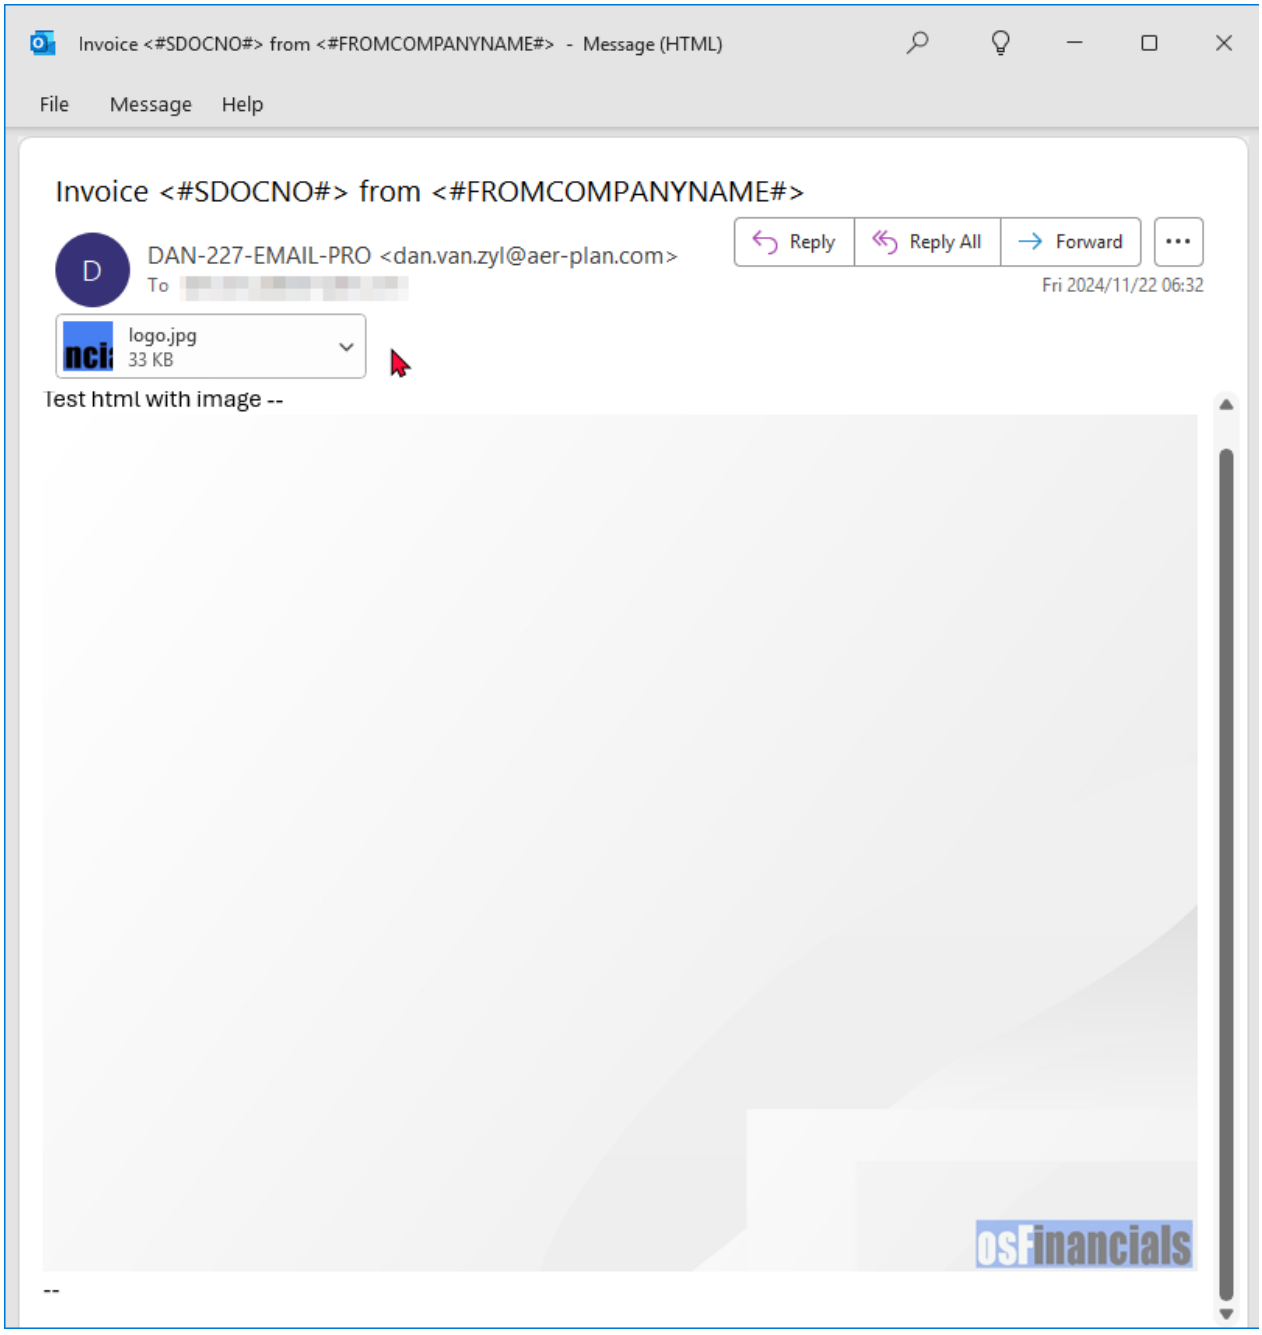
Sending Test E-mails

Preview the Test mail message

The test mails sent from the Send test mails button on the Settings tab – confirms that the mail is properly configured and you can proceed to mail your debtors (customers/clients) and/or creditors (suppliers/vendors).



The Subject of the email message is the *.ini file for the document type.

Email header text= “Invoice <#SDOCNO#> from <#FROMCOMPANYNAME#> ”

This is for the test mail purposes only. The correct document number and your company's name will only be displayed when sending documents via e-mail.

Two images will be attached:

- Background1.Jpg - Located in the) folder:

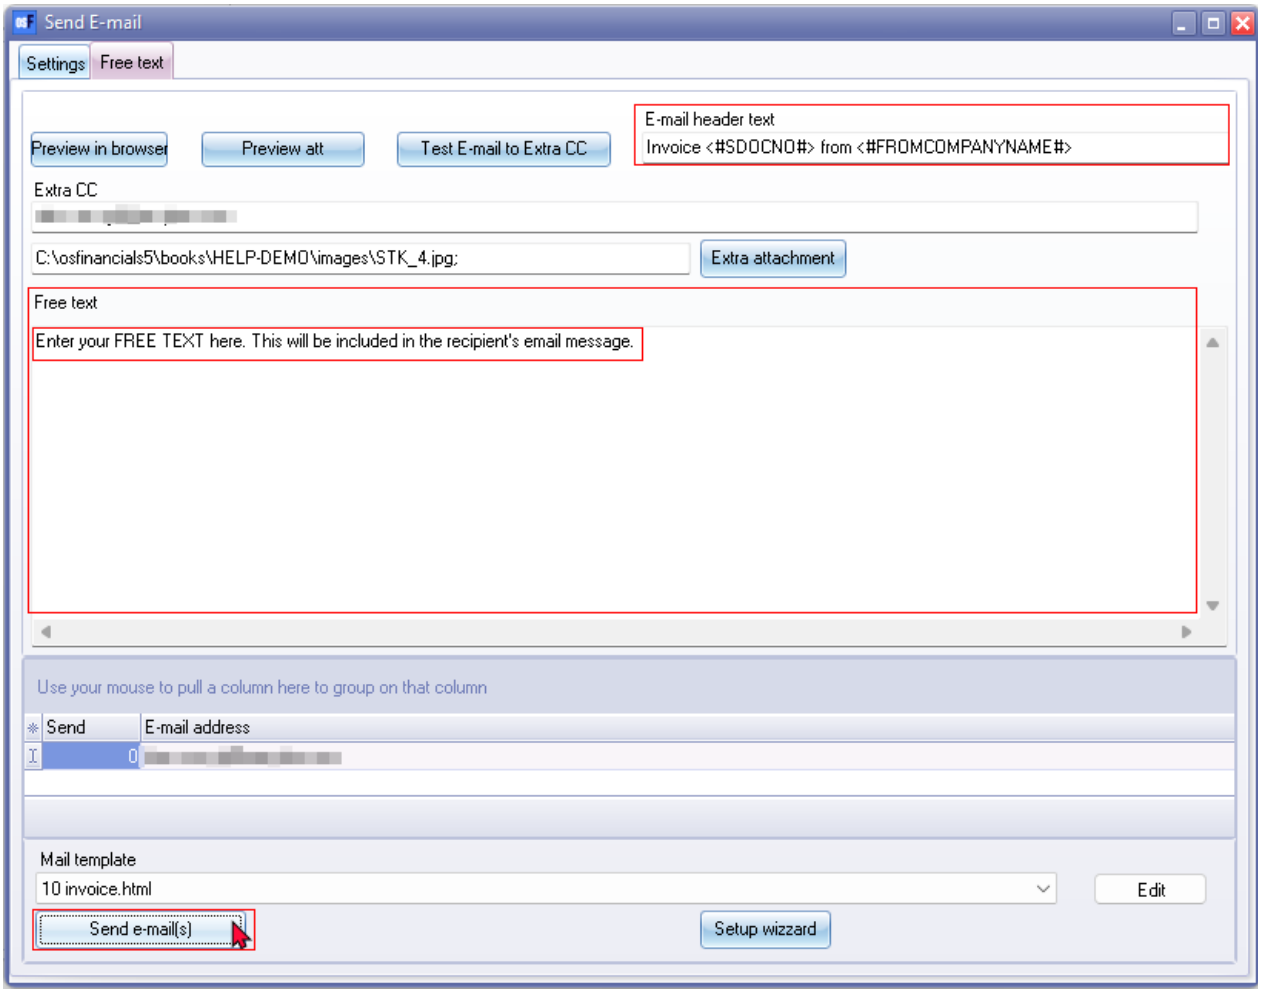
  " ... / bin / themes / (selected theme "

- logo.jpg – Located in the root directory of your osFinancials5/TurboCASH5 installation.

Free text tab (Testing – Sending E-mail)

Once everything has been entered correctly, a (test) e-mail can be sent. To do this, go to the Free text tab. The e-mail is actually sent from here.

As explained earlier in the manual, a corresponding message is sent in addition to the document. There are a number of sample messages that can be used. These messages are set in the selected in "*Mail template*".



E-mail header text – The content of the *.ini file for the selected template is displayed.

Free text – In addition to the standard messages included in the selected template, you may enter any additional text in the Free text area to be included in the email message in.

E-mail address – To send a test e-mail, enter a test e-mail address (own e-mail address) in the heading "*E-mail address*" (see red mouse cursor).

Now the test e-mail can be sent by clicking the Send e-mail(s) button.

The options, is as follows:

Field	*Description*
Show in browser:	*This button will allow you to preview the message of the email in your web browser.*
Preview att:	*This button will allow you to preview the file (e.g. invoice.pdf) which will be sent with the email.*
Test E-mail to Extra CC:	*This button will allow you to test the email to be sent with file by sending it to the specified email address (your own email address)*
Extra CC:	*Here you enter your own email address to send the email to yourself as a test, or as an extra recipient of the email to be sent.*
Extra attachment:	*This button will allow you to add an extra file from your system to be attached to the mail.*
E-mail header:	*The text for the subject (header) of your mail. This E-mail header text is contained in the *.ini file of the e-mail header's last line.* EHeaderText=Invoice <#SDOCNO#> from <#FROMCOMPANYNAME#> *Each email template has its own *.ini file and depending on the template you choose, the document type (that is; Invoice, Quote, Credit note, Purchase, Order or Supplier Return) will be automatically displayed.*
Free text:	*Here you can enter additional text (in html), which are not in the template text, for example, this can be an extra text for this recipient only. This free text will be included in the message section of the mail message.*
Mail template:	*A list of the available templates available in the "... \plug_ins\reports\EMailInvoice\en\emailtemplates\" folder of osFinancials5/TurboCASH5 is as follows:* *10 Invoice.html* *11 Credit note.html*

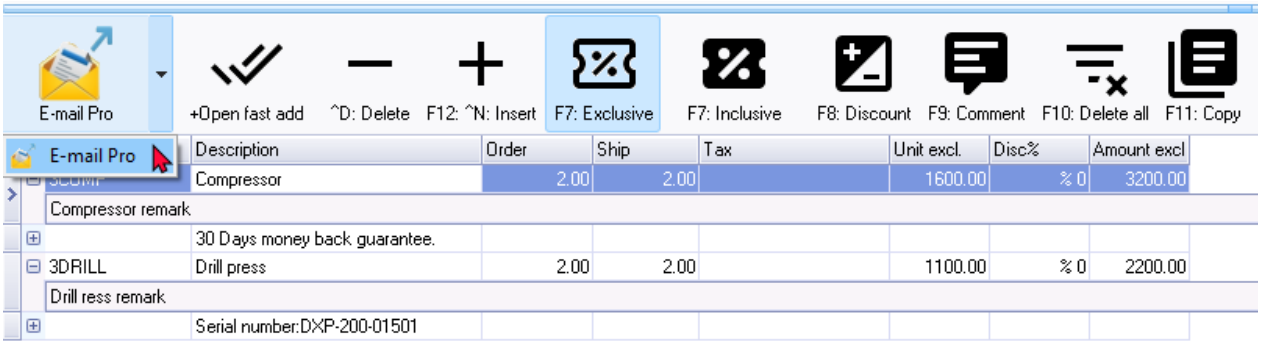
	12 Purchase.html *13 Supplier return.html* *14 Quote.html* *15 Order.html* *Each template consists of a *.html, *.txt and *.ini file. The prefixes 10 to 15 indicate the document type in section 'TYPES' table.* *Choose a different template for the message, if necessary.* *You can create your own custom templates and place them in the following folder:* "...\plug_ins\reports\EMailInvoice\en\emailtemplates\"
Edit:	*This button allows you to open the folder containing the selected template. You may then edit it, if necessary.*
Send e-mail(s):	*This button will send the email(s).*

Send mail columns: This contains information about the recipient and is as follows:

- Send: At 0, the email has not yet been sent. The email has been sent at 1. If -1 is displayed, there is an error with sending mail. You need to go back to the "*Settings*" tab to reconfigure your mail settings.
- E-mail address: The e-mail address of the recipient, which can be adjusted on the spot for the e-mail that is being sent at that time.
- No.: The Account id, for the debtor or creditor account.

Sending E-mail(S)

In the document form, the E-mail Pro icon is available.



When you click on the Email Pro icon and select the " *E-mail Pro*" option will display the following information message:

" Email can be sent via the context menu in the Document list."

Click OK and navigate to the document grid to send the document by email.

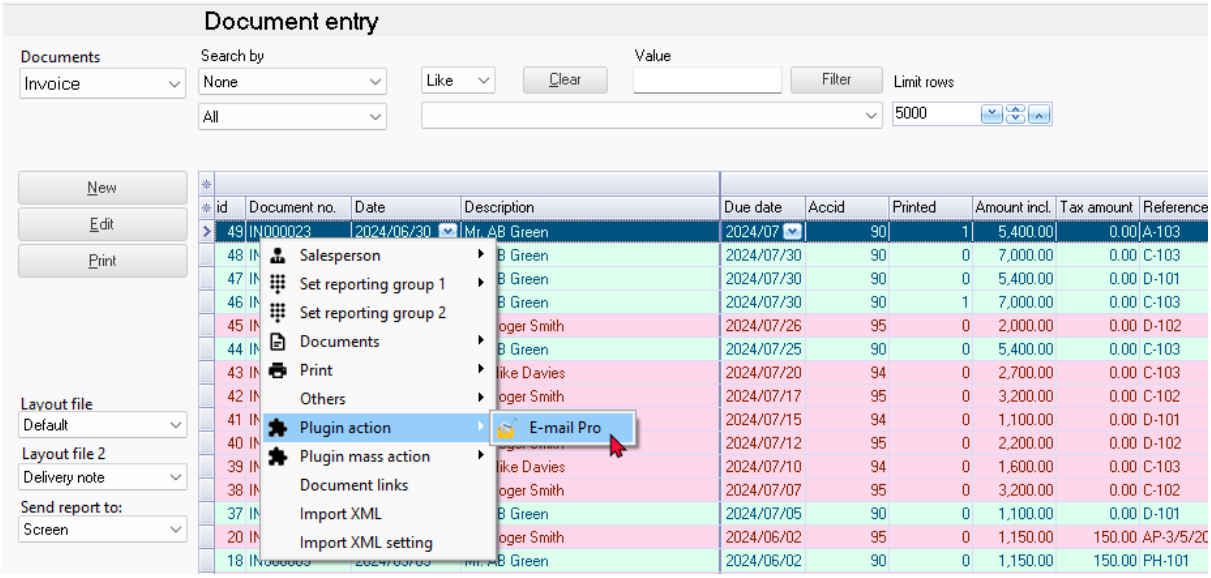
Once your Document e-mail Pro is correctly configured, you may send e-mail or e-mails from documents.

Sending E-mails from Document entry

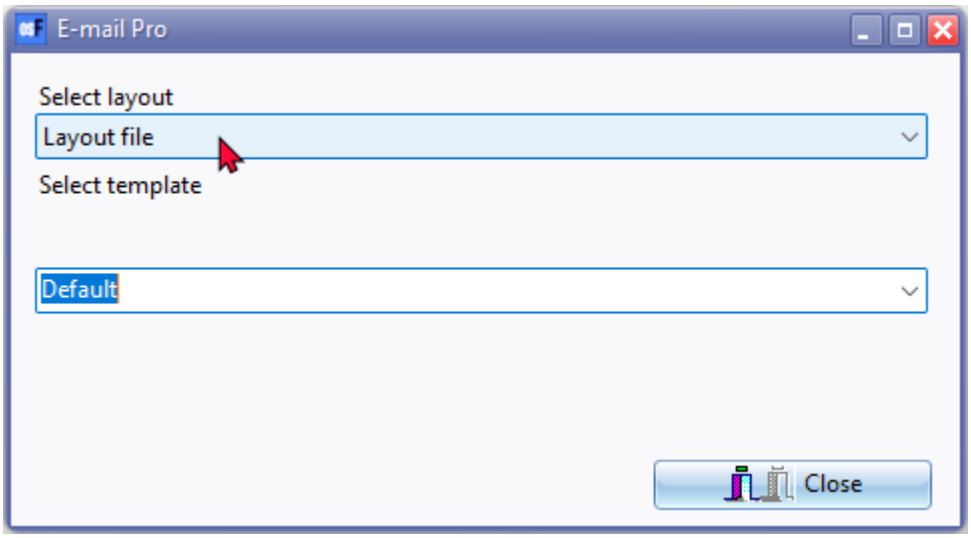
To send e-mail for documents:

1. On the Default ribbon, select Documents. The Document entry screen, listing your Invoices, will be displayed.

2. Select a document or documents, and right-click on it. On the context menu, select “Plugin action → E-mail Pro”.



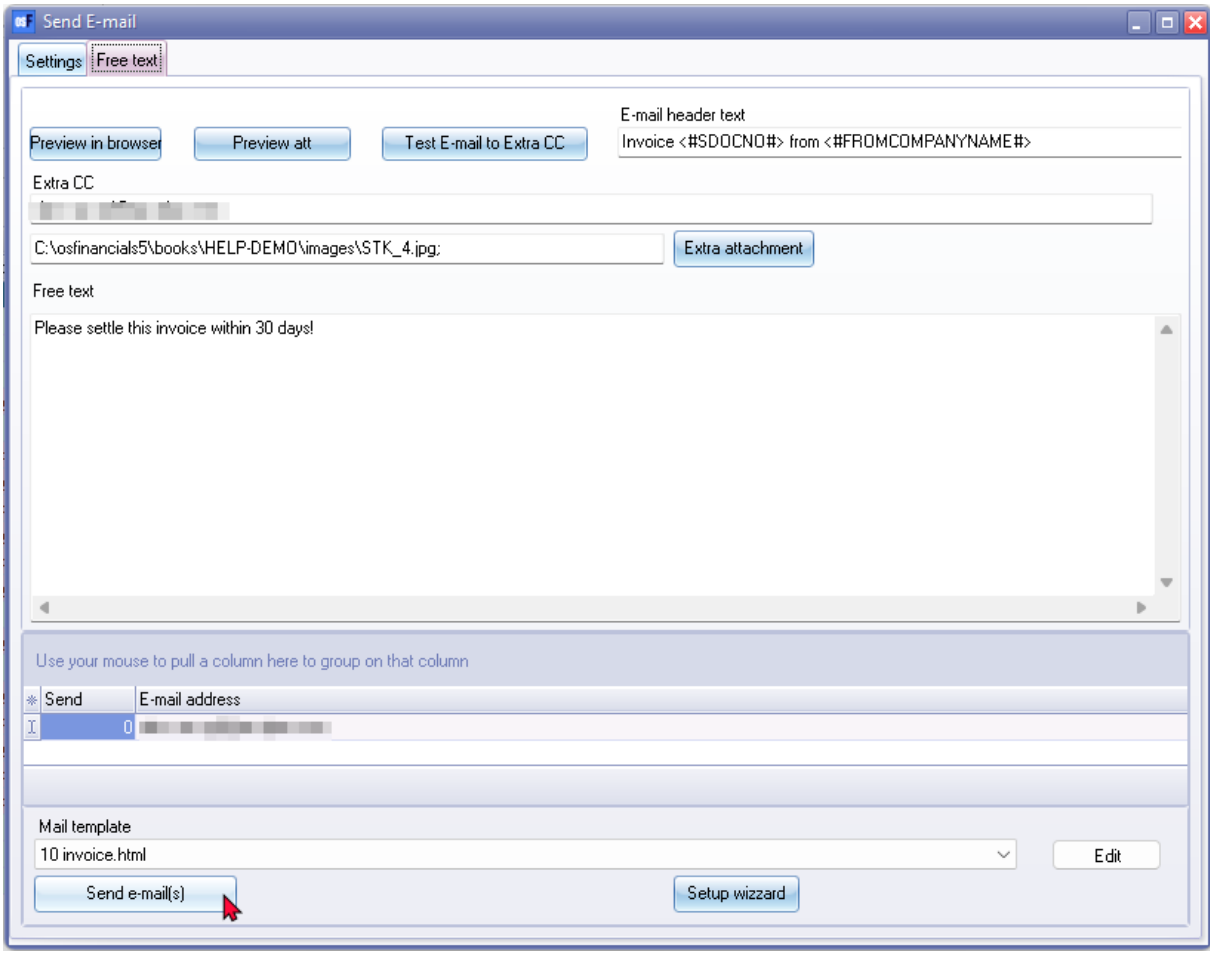
3. The “*E-mail Pro*” screen, will open again.



4. The options is as follows:

- Select layout - Choose the Layout file. The following document layout files can be used for all document types for sales documents (Quotes, Invoices and Credit notes) or for purchase documents (Order, Purchase and Supplier returns). Universal document layout files (such as," *Layout file, Document layout, Document layout (15 code)*', etc.), supports all document types and translations via the language files.
- Select template - Depending on the document type, you have selected on the Documents grid, the available templates for the selected document type, will be available to choose from.

5. Then click Close. The "*Send E-mail*" screen will open.



6. E-mail header text – The content of the *.ini file for the selected template is displayed.
7. Free text – In addition to the standard messages included in the selected template, you may enter any additional text in the Free text area to be included in the email message in.
8. E-mail address – This e-mail address is the e-mail address as entered on your debtor / creditor account and included or entered in the document entry screen, will be displayed here.
9. Then click on Send e-mail(s) to send the email. The selected invoice(s) will be sent as an attachment to the recipient(s). The "*Document E-mail Pro*" screen will automatically be closed.

Once again, the options, is as follows:

Field	*Description*
Show in browser:	*This button will allow you to preview the message of the email in your web browser.*
Preview att:	*This button will allow you to preview the file (e.g. invoice.pdf) which will be sent with the email.*
Test E-mail to Extra CC:	*This button will allow you to test the email to be sent with file by sending it to the specified email address (your own email address)*
Extra CC:	*Here you enter your own email address to send the email to yourself, or as an extra recipient of the email to be sent.*
Extra attachment:	*This button will allow you to add an extra file from your system to be attached to the e-mail.*
E-mail header:	*Here you enter text for the subject (header) of your mail.*
Free text:	*Here you can enter additional text (in html), which are not in the template text, for example, this can be an extra text for this recipient only. This free text will be included in the message section of the mail message.*
Mail template:	*A list of the available templates. Select another template for the message, if required.*
Edit:	*This button allows you to open the folder containing the selected template. You may then edit it, if necessary.*
Send e-mail(s):	*This button will send the email.*

Send mail columns: This contains information about the recipient and is as follows:

- Send: At 0, the email has not yet been sent. The email has been sent at 1. If -1 is displayed, there is an error with sending mail. You need to go back to the "*Settings*" tab to reconfigure your mail settings.
- E-mail address: The e-mail address of the recipient, which can be adjusted on the spot for the e-mail that is being sent at that time.
- No.: The Account id, for the debtor or creditor account.

Sending mass e-mails

To send mass e-mails for documents:

1. On the Default ribbon, select Documents. The Document entry screen, listing your Invoices, will be displayed.
2. Select the documents, and right-click on it. On the context menu, select "Plugin mass action → E-mail Pro".
3. A confirmation message will be displayed.

   "Do you wish to continue?"

4. Click Yes to continue.

Sending E-mails from E-Mail Pro tab - Debtor / Creditor accounts

View Mail Messages

Document attachment

The selected documents will automatically be attached as a Portable Document Format (*.pdf) file.

UBL attachment

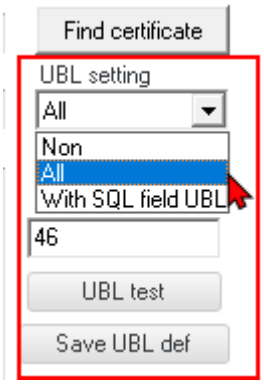
If the UBL setting is selected, the xml file will be generated and sent to the recipient as an attachment to the e-mail message.

When a business generates an invoice using UBL, the invoice data is structured in an XML format that adheres to the UBL schema. This XML file can then be electronically transmitted to the recipient, who can process it using compatible software. The recipient's system can automatically extract and process the invoice data, ensuring a smooth and efficient transaction.

In summary, UBL files, such as those for invoices, are electronic documents designed to transmit business data in a standardised and efficient manner, facilitating seamless communication between different systems and organisations.

Settings tab

On the settings tab, the UBL setting is by default set to none. You may select the "*All*" option or "*With SQL field UBL*".



UBL test button – Save a testUBL.xml file to a selected folder on your system.

Save UBL def button – Save the UBL definition.

UBL Attachment

When the UBL setting is selected, an XML file is generated and attached to the email sent to the recipient.

Settings Tab

On the Settings tab, the UBL setting defaults to "*None*." You can choose either the "All" option or "*With SQL field UBL*".

What is the difference "With SQL field UBL or Normal UBL?

The difference between "*normal UBL*" and "*With SQL field UBL*" typically relates to how the UBL (Universal Business Language) data is generated and structured within the XML file. Here's a breakdown of the differences:

- Normal UBL
  - Standard Generation: The UBL XML file is generated based on standard business data fields.
  - Predefined Structure: The structure of the XML follows the standard UBL schema, which is predefined and widely accepted in business transactions.
  - General Use: Suitable for most standard business transactions where the data fields are straightforward and well-defined.
- With SQL field UBL
  - Custom Data Fields: The UBL XML file includes additional data fields that are retrieved from a SQL database.
  - Dynamic Content: The content of the XML can be dynamically populated based on the data stored in the SQL database, allowing for more customized and specific information.
  - Advanced Use: Ideal for scenarios where the business data is complex and requires specific, non-standard fields that are not covered by the standard UBL schema.

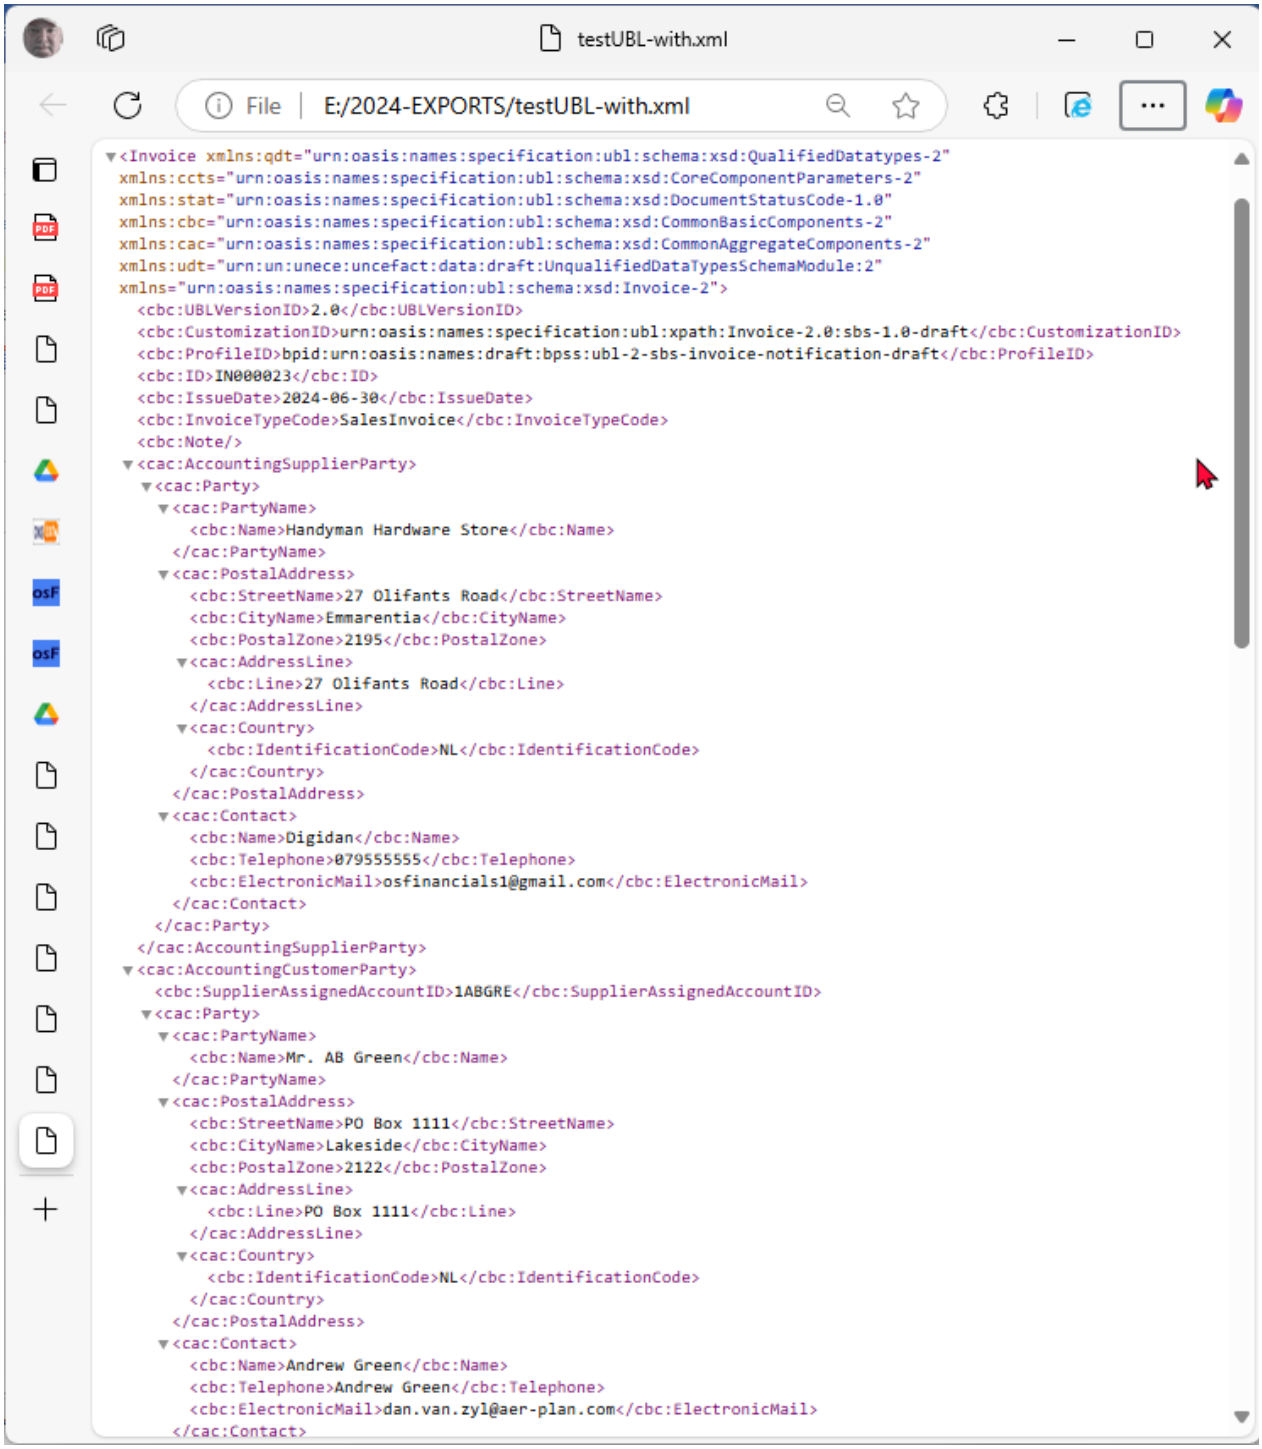
Summary

- Normal UBL: Standard, predefined structure suitable for general business transactions.
- With SQL field UBL: Includes custom data fields retrieved from a SQL database, suitable for more complex and specific business needs.

By selecting "*With SQL field UBL*," you can tailor the XML content to include detailed, database-specific information, whereas "normal UBL" provides a more standardized and straightforward representation of business data.

Example : UBL2 file

A section of the UBL file (*.xml) is as follows:



E-Mail Pro Folders in the Set of Books Directory

files folder

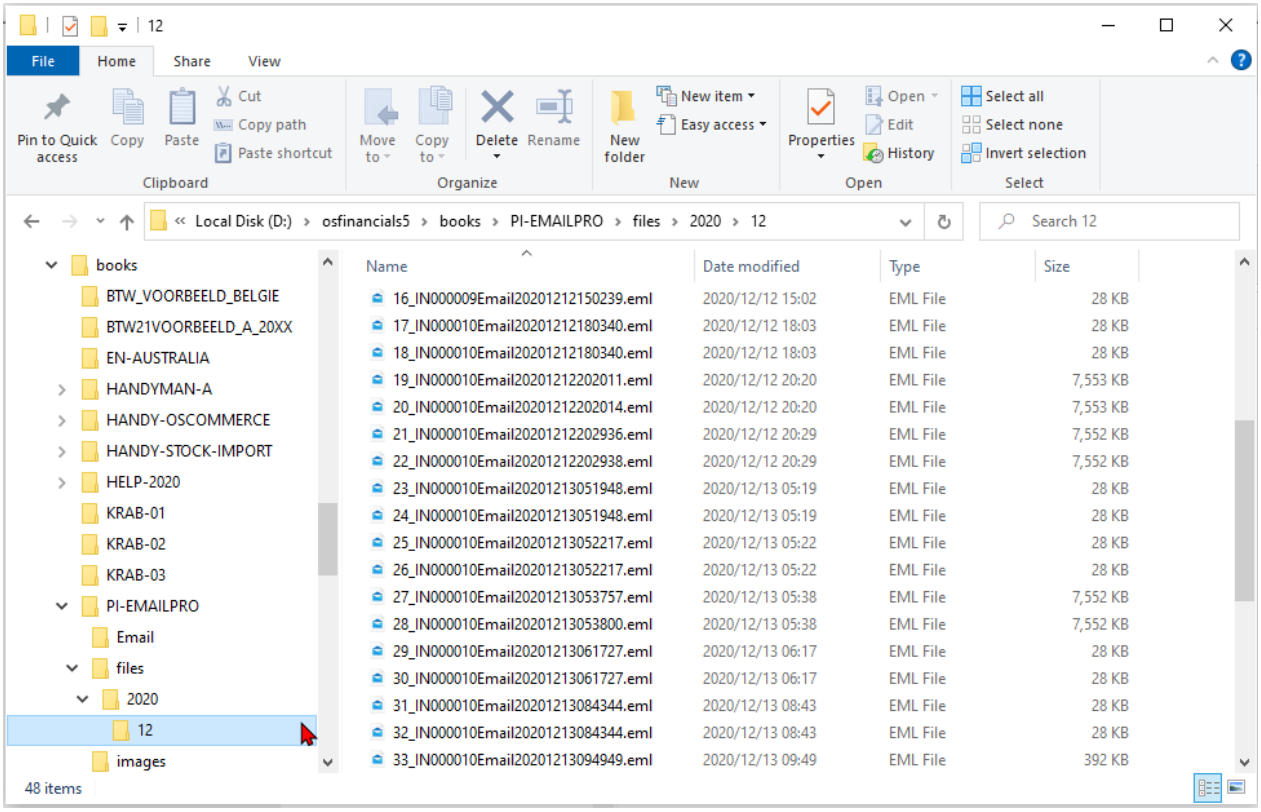
All email messages are stored in the files folder for the Set of Books. The emails are stored in sub folders for each period e.g. "*YYYY/MM*".

In this example, these emails were sent in "*December 2020*" ("*2020/12*"), etc.

Email message File names

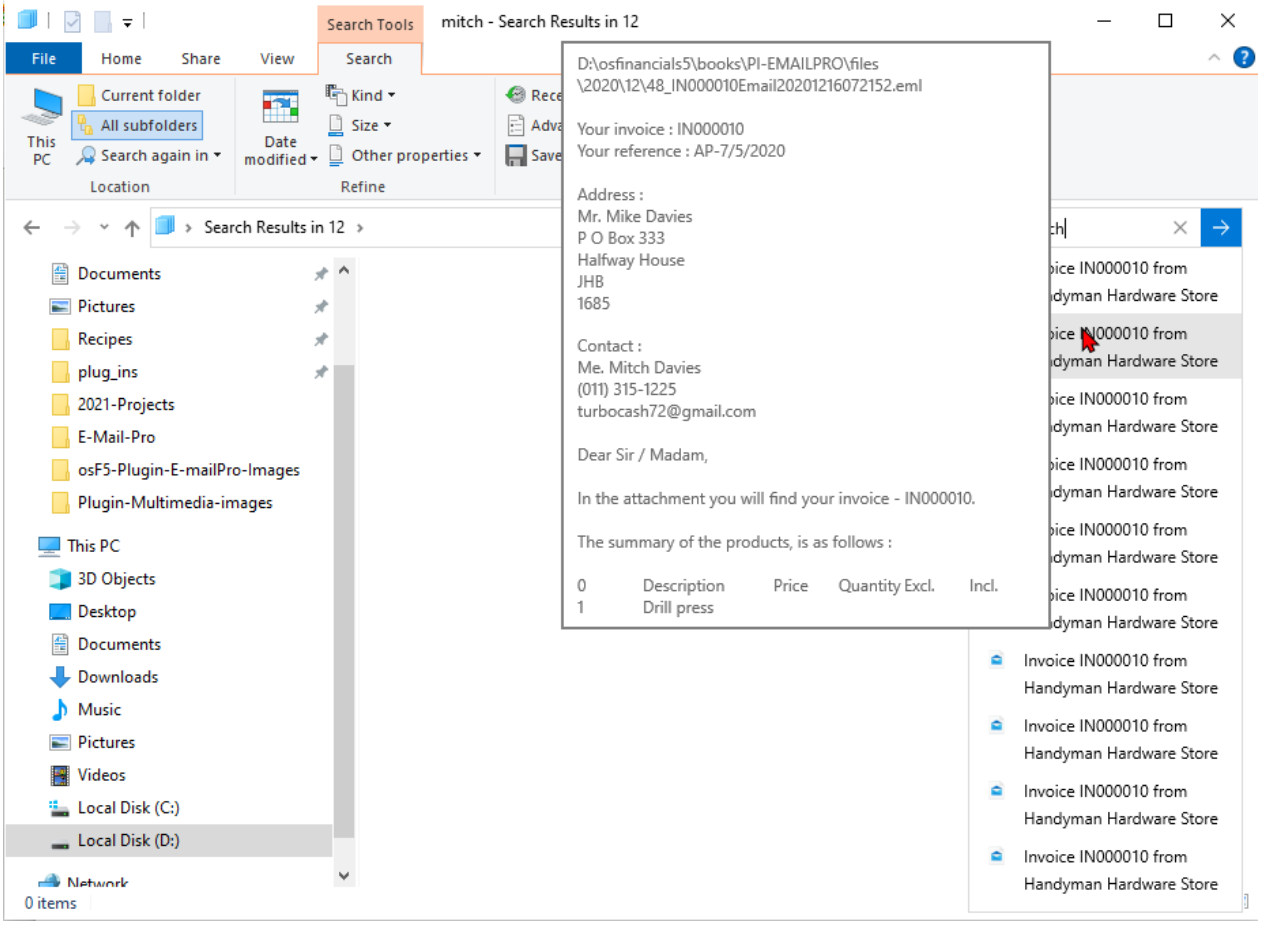
The file name of the email messages is stored as follows:

- 1_ incremented number for each email sent
- Document number – The document number for which the email is sent.
- Email timestamp YYYY/MM/DD followed by Hour minute and second on which the email was sent.
- File extension (file type) *.eml



Searching for email messages in the File explorer

In the search box in your system's file explorer, enter a name, contact any part of an address, postal code, contact, any text entered on the < #FREETEXT# > section of your message, etc. and hover your mouse over the list.



The details of your template used to sent the message will be displayed.

Once you have found what you are looking for, double-click and the message will be opened in your system's default e-mail program.

You may also right-click on a selected e-mail message and select the available options to open the mail message with.

Templates

The templates in osFinancials5/TurboCASH5 consists for the following language folders:

- nl – Netherlands (only in osFinancials)
- en – English
- en-us – English – United States of America
- af – Afrikaans

Templates for each language, are structured in two (2) folders:

1. emailtemplates – Contains three template files for each document type (i.e. sales documents (quotes, invoices, and credit notes) and purchase documents (orders, purchases and supplier returns)). The

template files for each document type consists of the following files:

a) *.ini file – This contains the content for the "*E-mail header text*" which will display as the Subject in the e-mail message of the recipient. In addition to this, it can also contains specific settings to override the configuration and

b) *.txt file – This is the plain text version of the messages in the body of the e-mail message.

c) *.html file – This should have the exact same content as the plain text version of the messages in the body of the email message, but with the hypertext markup language (html) commands and tags to render properly in webpages or html format output.

Besides the .html version of the e-mail template, you also need a "plain text" variant.

The reason for this, is that the e-mail program that the recipient of your email uses, can choose which of the 2 emails is actually used. This is dependent on the e-mail configuration and settings.

In addition, the recipient may also have chosen to have his program work with only 1 variant.

One program can "handle" both variants, other programs only one.

The difference between the "plain text" and the "html" variant is the use of the html commands and tags.

These should all be removed for the "plain text" variant.

2. Sql – The sql folder contains various corresponding sql files to load and render your selection and processes from the Set of Books (database) to the Document E-mail Pro plugin in the *.txt and *.html files.

For the purpose of this documentation, the English templates will be discussed.

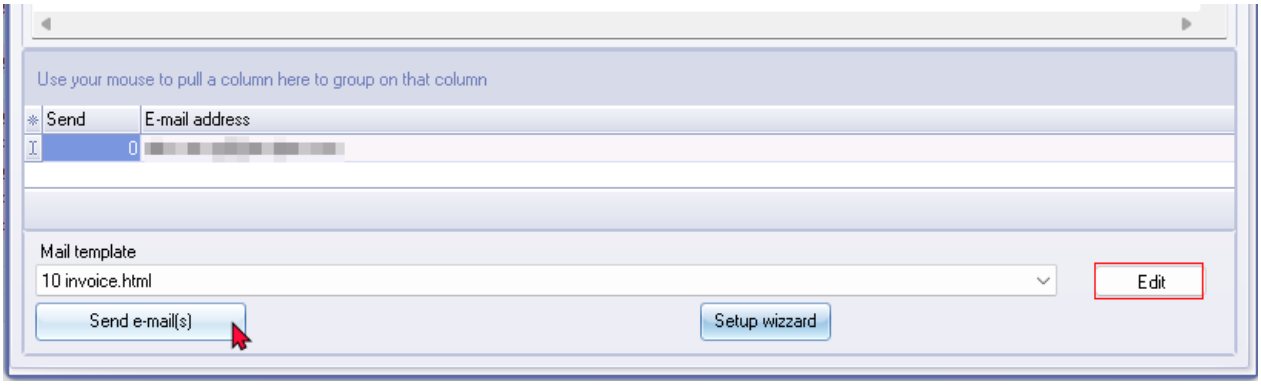
Template names and storage

The templates for the e-mail pro plugin, is stored in the following folder:

" ...\plug_ins\reports \EMailInvoice\en\emailtemplates\ "

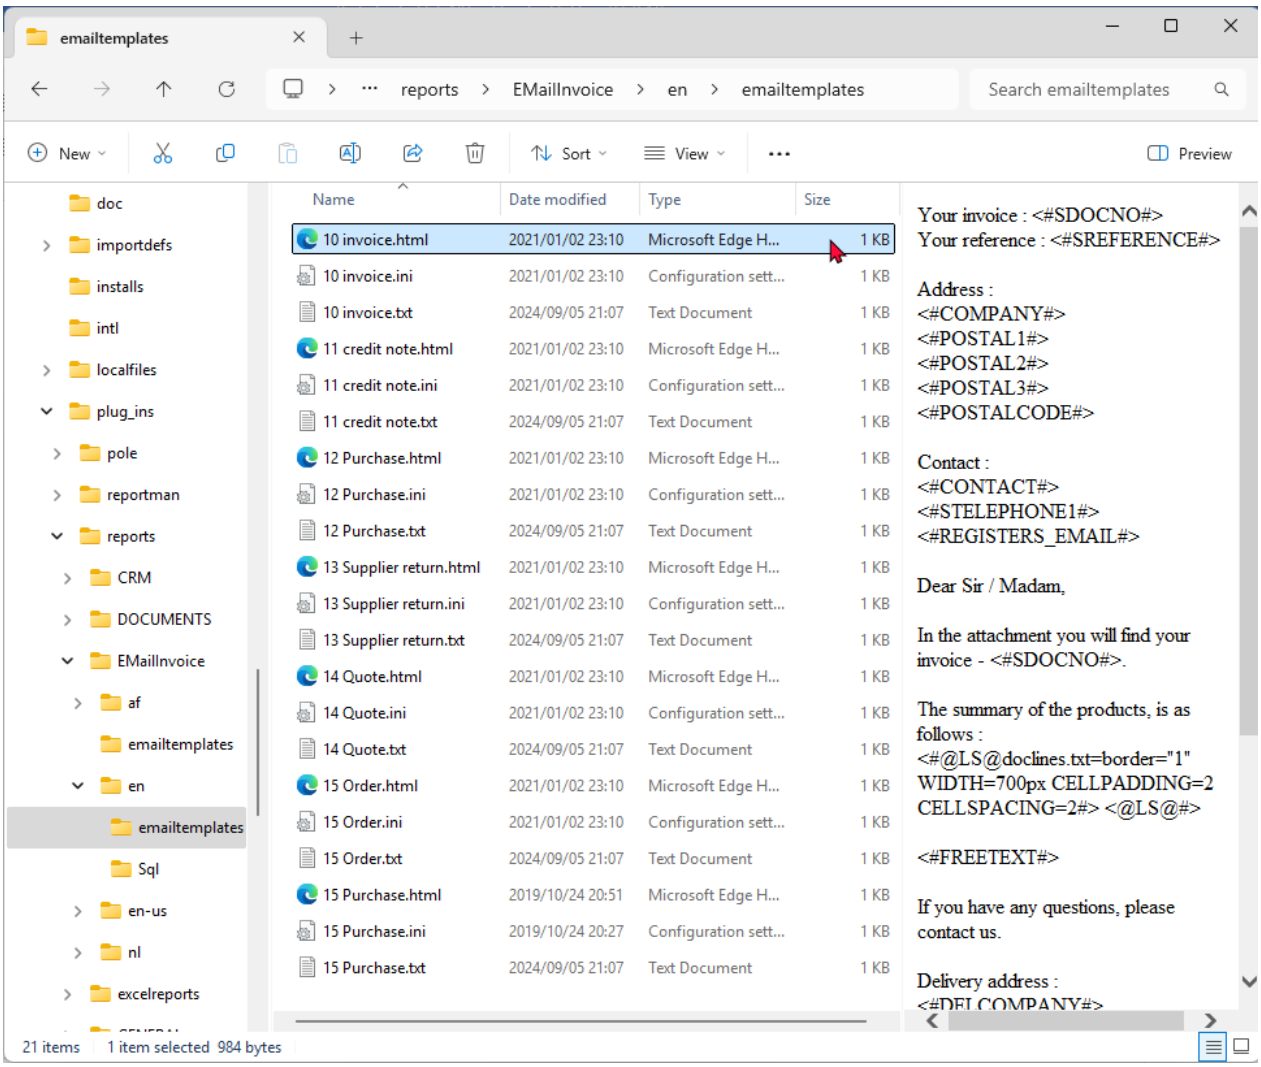
To open the template folder:

On the Free text tab, click the Edit button.



The folder for the files entered in the Setup E-Mail Pro screen (Plugins → Email Pro on the Setup ribbon) will be opened.

Three (3) files for each document type is included in the folder for each document type:



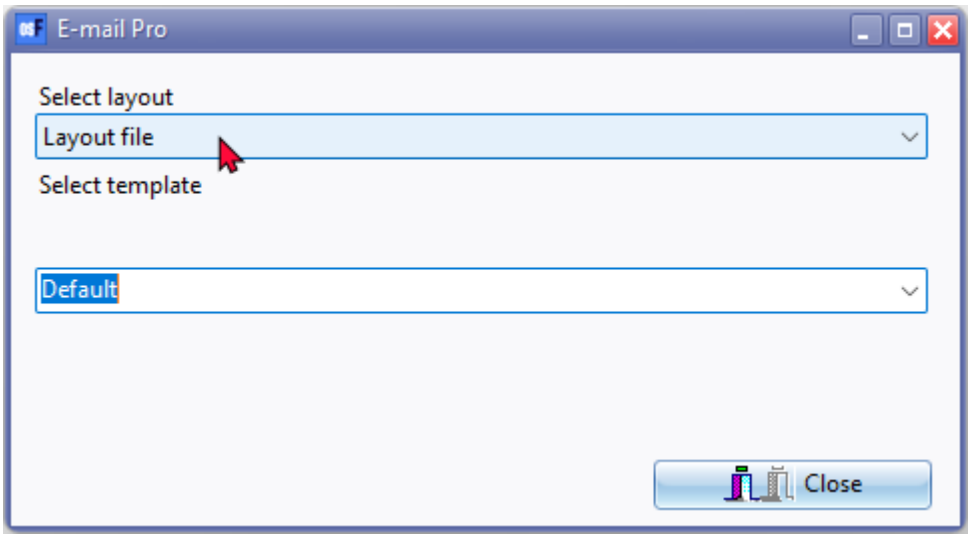
A preview0.html file will be generated if you click on the Preview in browser button on the Free text tab. This preview0.html file is a temporary file and will be refreshed with content in your browser each time you click on the Preview in browser button. This file be opened in your system's default web browser.

It is a good idea to always create 3 files for each template:

1. ini - template name.ini – This will fill the recipients e-mail Subject with the document number and company name (e.g. “Invoice <#SDOCNO#> from <#FROMCOMPANYNAME#>” In the .ini file you can enter the settings that have priority over the settings in the plugin itself.
2. html - template name.html – In the html version you can put the html texts for your template.
3. txt - template name.txt – In the txt version you can put the plain text (no html tags).

> *The “preview0.html file is not included in the install. It will be automatically added if you click on the Preview in browser button.*

After launching, the “*Document E-mail pro*”, the following screen is displayed:



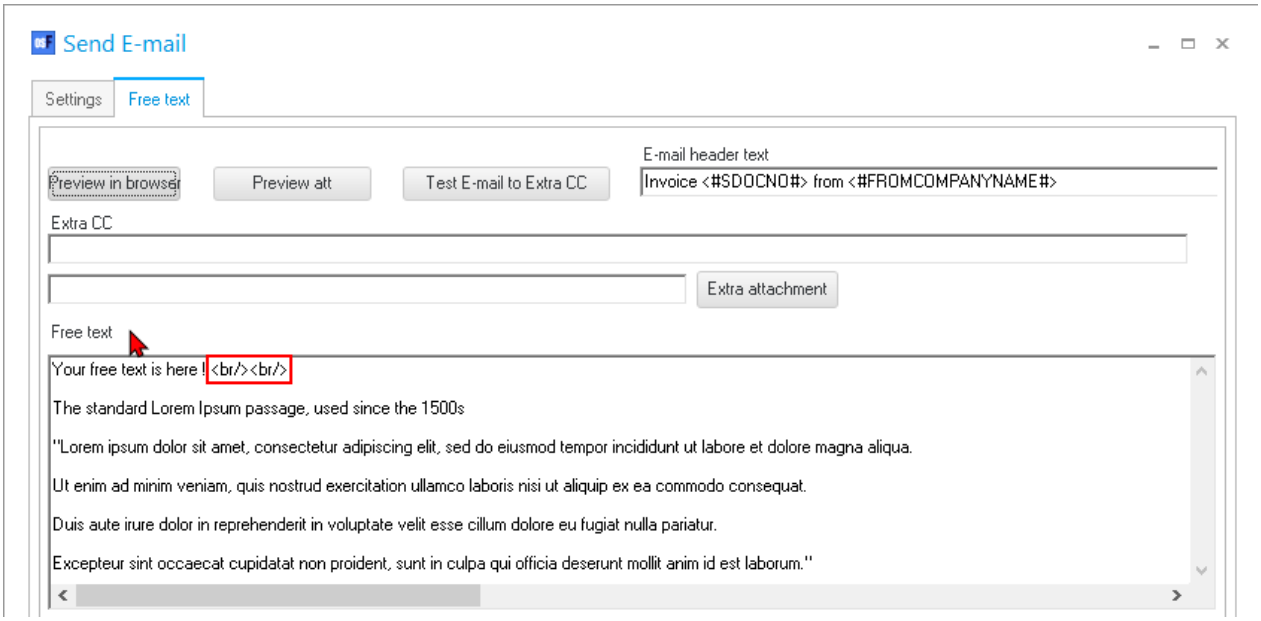
The options, is as follows:

- Select layout - Choose the Layout file. The following document layout files can be used for all document types for sales documents (Quotes, Invoices and Credit notes) or for purchase documents (Order, Purchase and Supplier returns). Universal document layout files (such as," Layout file, Document layout, Document layout (15 code)", etc.), supports all document types and translations via the language files.
- Select template - Depending on the document type, you have selected on the Documents grid, the available templates for the selected document type, will be available to choose from. The number prefix for each document type, is the number type in the database for each document type.

Adding Free text

All templates consists of a <#FREETEXT#> field tag.

The text is optional and you may add additional text to the selected template. This free text will be added to the message section of the recipient’s e-mail message.



To add a line break enter the html tag <br/> next to the sentence entered. If you need an extra space enter the

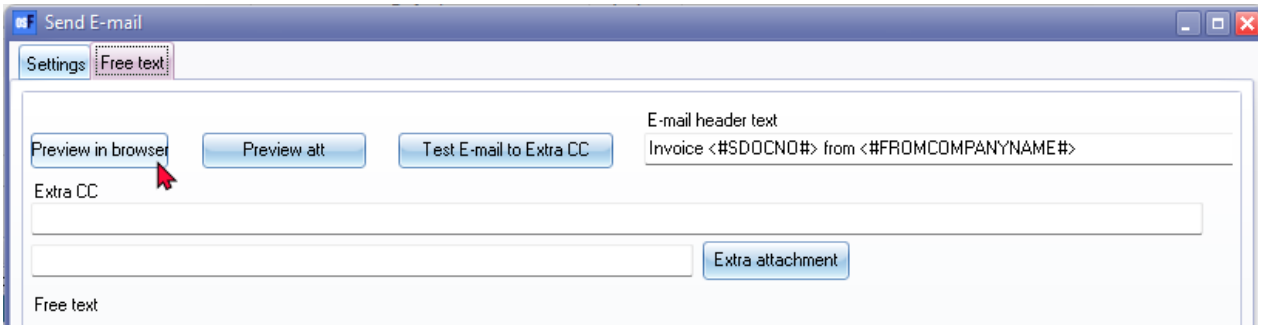
*

 tag twice (2X) for a blank line.*

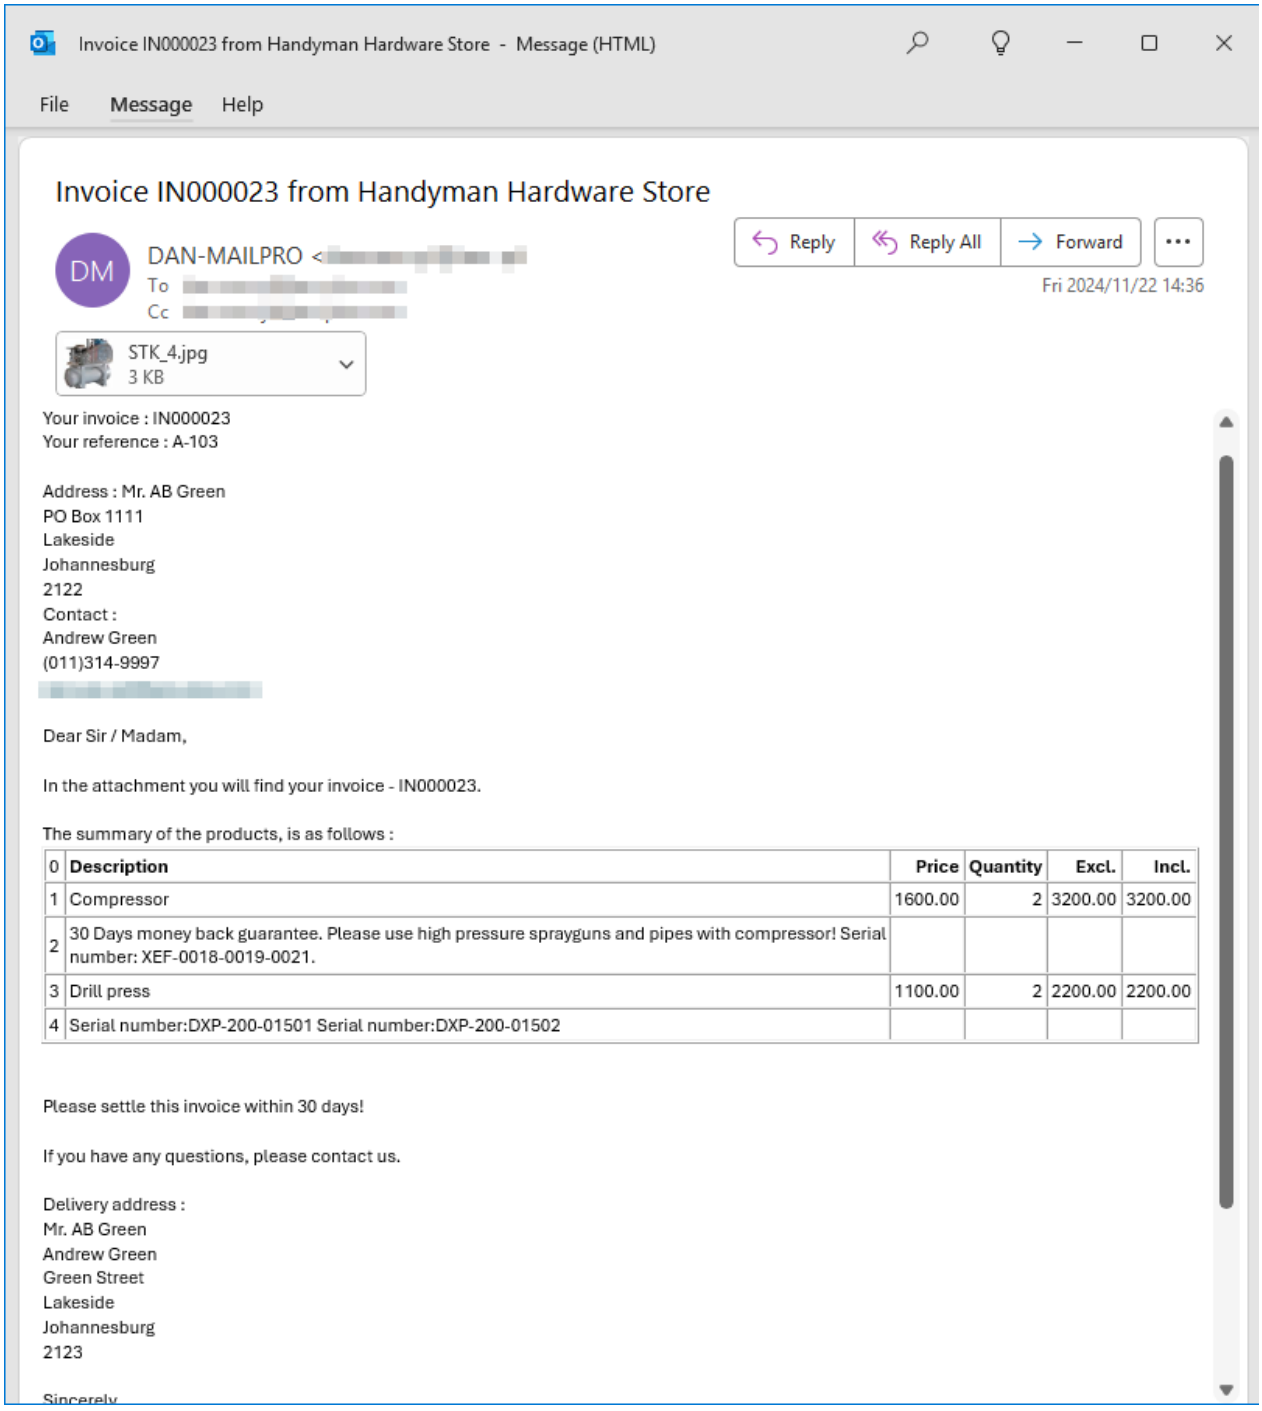
If you double click on the Free text box

Preview of Invoice template (HTML version)

To pre-check your mail message, click on the Preview in browser button.



This will open a preview of your template in your system's default web browser. The preview of the "*10 Invoice.html*" template, is as follows:



Comments and Remarks in documents:

- *Comments is included.*
- *Remarks is excluded.*

SQL files need no translation, except for the Description, Price, Quantity, Excl. and Incl., if required.

These sql files are:

- *doclines.txt - select 0 id, 'Description','Price','Quantity','Excl.','Incl.'*
- *HTMdoclines.txt - select 0 id, '<B>Description</B>','<P ALIGN=RIGHT><B>Price</B></P>','<P ALIGN=RIGHT><B>Quantity</B></P>','<P ALIGN=RIGHT><B>Excl.</B></P>','<P ALIGN=RIGHT><B>Incl.</B></P>'*

Section	*Description*	*Field tags <#XXXX#> (no Spaces and UPPERCASE only)*
Your invoice :	*The document number of the selected document (i.e. Invoice)*	*< #SDOCNO# >*

The INI Template

The "*10 Invoice.ini*", is as follows:

The settings entered in the .ini file will have a priority over the setting you entered the Settings tab in the plugin itself.

The standard template .ini files contains the following lines:

EPopUsername=

EPopPassword=

EPopMailserver=

Esmtport=

ESMTPServer=

EReturnAdres=

EReturnName=

ECC=

EBcc=

EHeaderText=Invoice <#SDOCNO#> from <#FROMCOMPANYNAME#>

These .ini files contain the following lines:

EPopUsername=	*The username you use to sign up for your (incoming) email*
EPopPassword=	*The associated password*
EPopMailserver=	*The mail server from where you receive the email*
Esmtport=	*25 (only adjust if your provider uses something else)*
ESMTPUsername=	*The SMTP username (outgoing email)*
ESMTPPassword=	*The associated password*
ESMTPServer=	*smtp.uwprovider.nl*
EReturnAdres=	*youremailaddress@yourdomainname.com*
EReturnName=	*Your name*

ECertPassword =	*The password for your certificate with which you can certify the PDF*
ESignCertificate =	*The location of the certificate*
ECC=	*Your email address if you want to receive a copy of the email yourself and the customer is allowed to see it.*
EBcc=	*Your email address if you want to receive a copy of the email yourself and the customer is not allowed to see it.*
cbPRiority=	*2 (specifies the priority of the email 2 = default)* *cbRecieptActnow = 0 (A 1 indicates that you want to receive a read receipt, if the recipient allows it)*
EHeaderText=	*Invoice <#SDOCNO#> from <#FROMCOMPANYNAME#>*

Again, not all fields need to be filled.

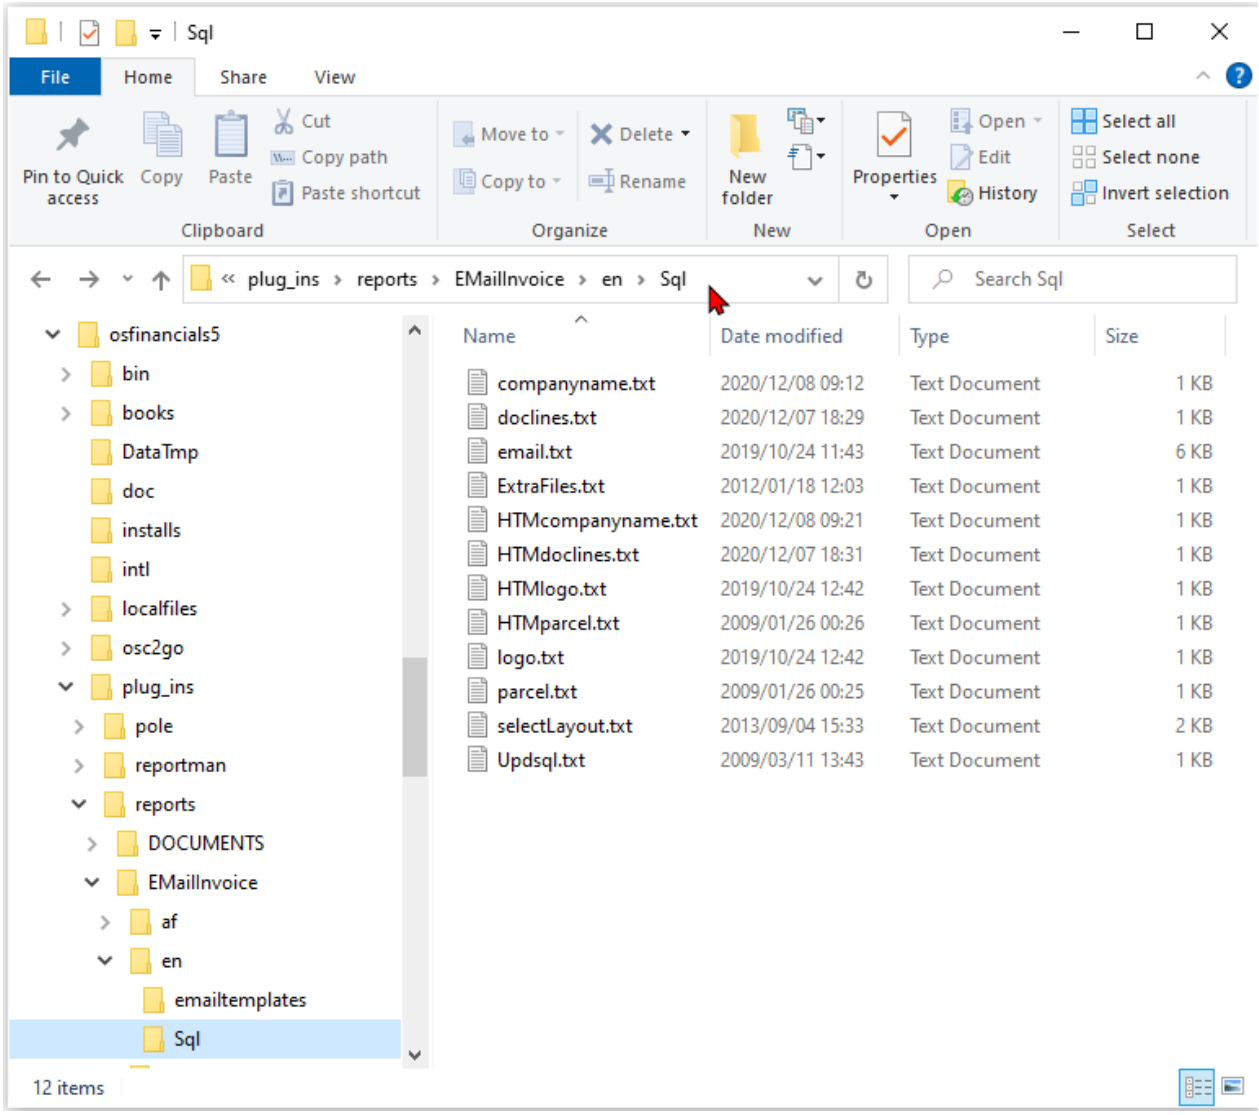
The fields with a value are the minimum settings.

You may need to enter more as provided by your service provider.

Reference – SQL English templates

In the sql folder you will find the corresponding SQL files with which you can retrieve more or different information from the database to use in your e-mails. The following sql folder is included in your osFinancials5/TurboCASH5 installation:

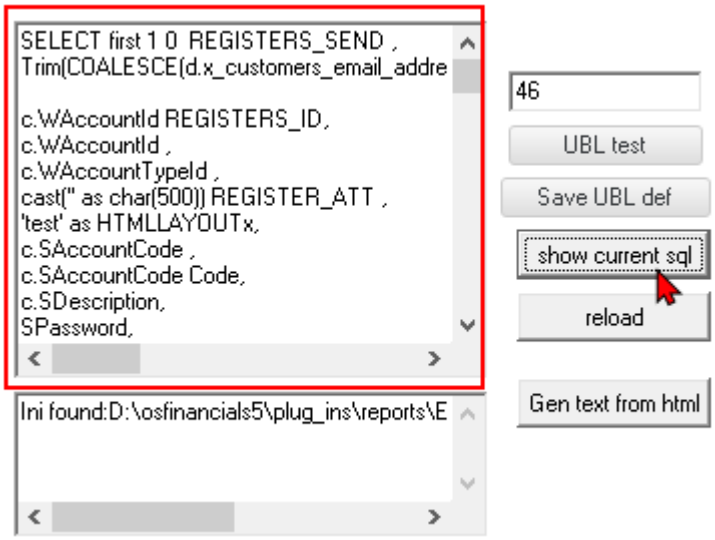
" … \ plug_ins \ reports \ EMailInvoice \en \ sql \ "



Some of the sql file sets consists of sql files in both, the plain text and the HTM version which includes Hypertext markup language commands and tags.

SQL file – email.txt

If you click on the show current sql button of the Settings tab on the E-mail Pro screen, the SQL – email.txt



sql file will be listed.

The document id for the selected document will also be displayed (e.g. 46).

Document Export / Import plugin

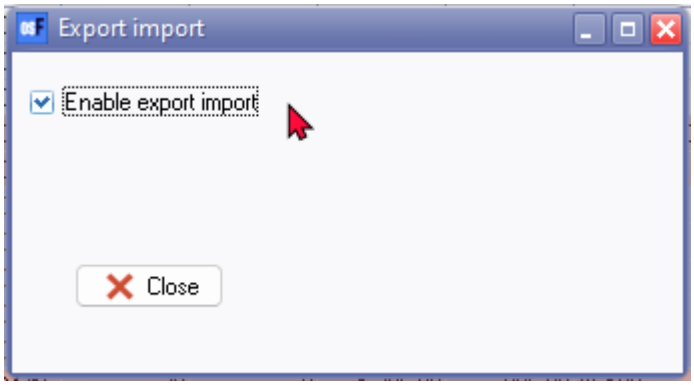
Document Export / Import plugin - Manual - Shop - Licence: Once-off

The Document Export/Import plugin offers a convenient method for exporting and importing documents in osFinancials5/TurboCASH5. It enhances the functionality by adding an additional context menu item under Other options → Export to facilitate the export of selected documents or multiple documents from the Documents grid.

Activation

To activate the Document Export / Import plugin:

1. Navigate to Plugins → Document plugins → Document Export / Import (Setup ribbon). If this plugin is not listed under Plugins → Document plugins, activate it via Tools → Activate plugins.



2. Select "Enable export import"

3. Click the Close button

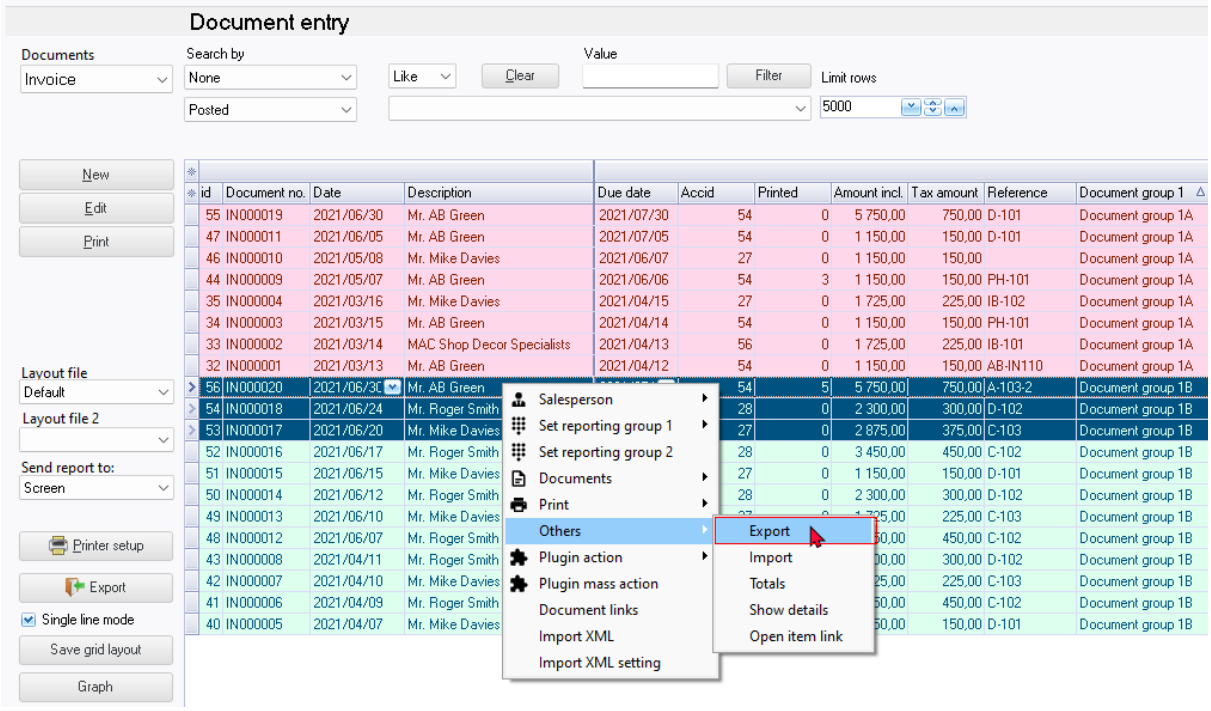
Exporting documents

To Export documents:

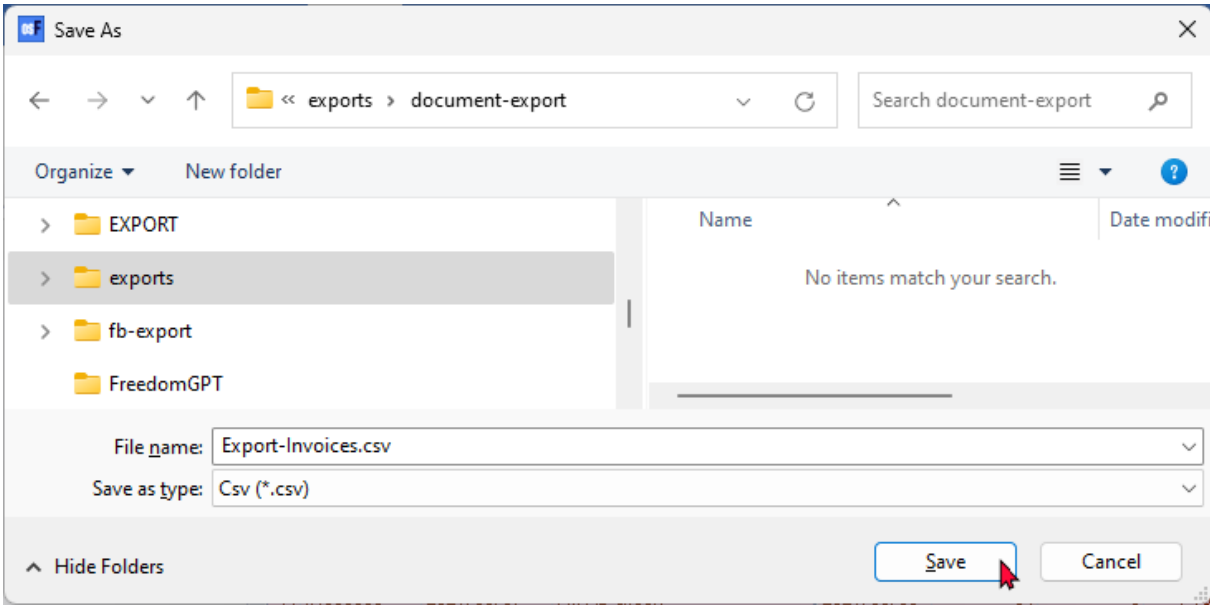
1. Select the document type (e.g., invoices, credit notes, quotes, purchases, supplier returns, orders) on the documents grid. Utilize the filter and search options to narrow down documents based on specific criteria.

2. Choose the document(s) you wish to include in the export file.

3. Access the additional context menu item under Other options → Export to initiate the export process.



4. On the "*Save as*" screen, the default option is the Comma Separated Value (CSV) file format. Alternatively, you can select the TurboCASH exchange file (TXF) format.



5. The default file name is "*Export.csv*" or "*Export.txf*" depending on your choice of file format. Key in name for your export file.

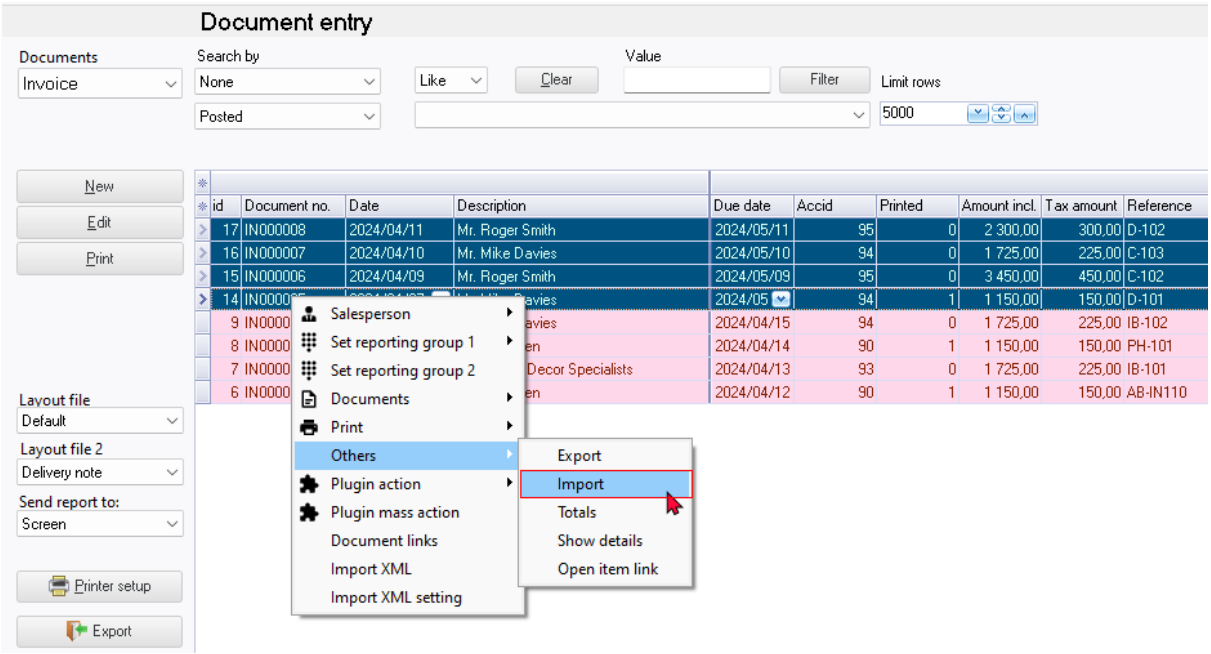
6. Click the Save button.

Importing documents

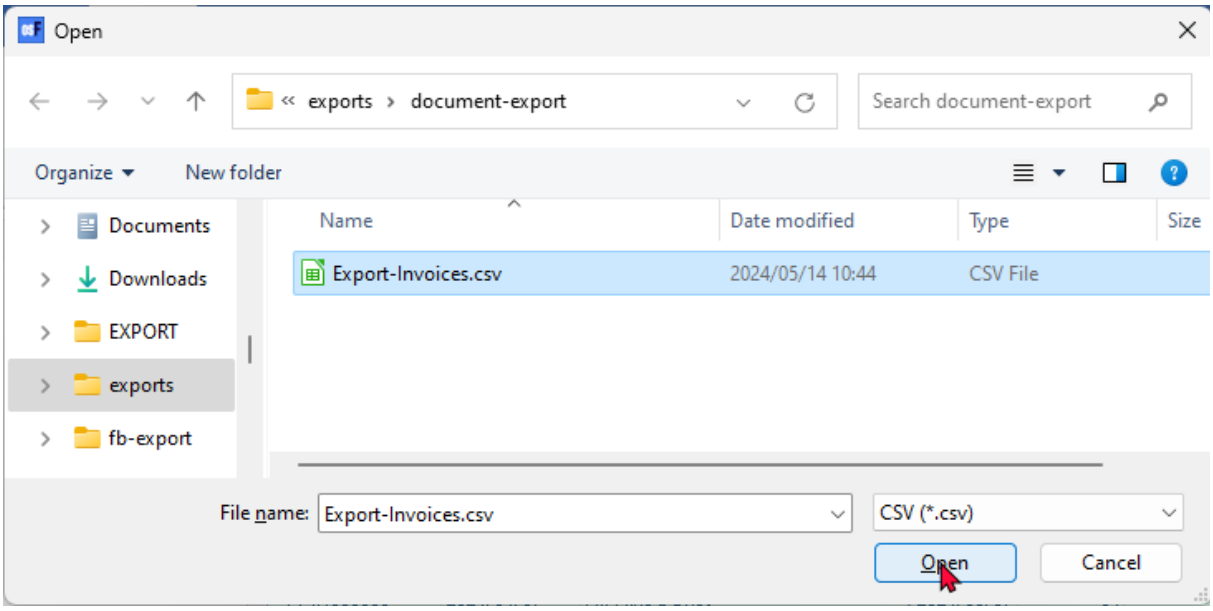
To importing documents:

1. Select the appropriate document type (e.g., invoices, credit notes, quotes, purchases, supplier returns, orders) on the documents grid.

2. Navigate to the context menu item under Other options → Import to choose the export file.



3. On the "*Open*" screen, locate the exported document file. If necessary, select the CSV or TXF file format.



4. Click the Open button. The imported document(s) will be available as unposted documents.

5. If a sales document type is selected, you'll be directed to the "*Debtor accounts*" screen to choose a debtor account. For purchase document types, the "*Creditor accounts*" screen will appear for selecting a creditor account.

After import

After importing documents, you may need to make edits before updating (posting) them to the ledger. Depending on the source of the exported documents and/or the file format (CSV or TXF), pay special

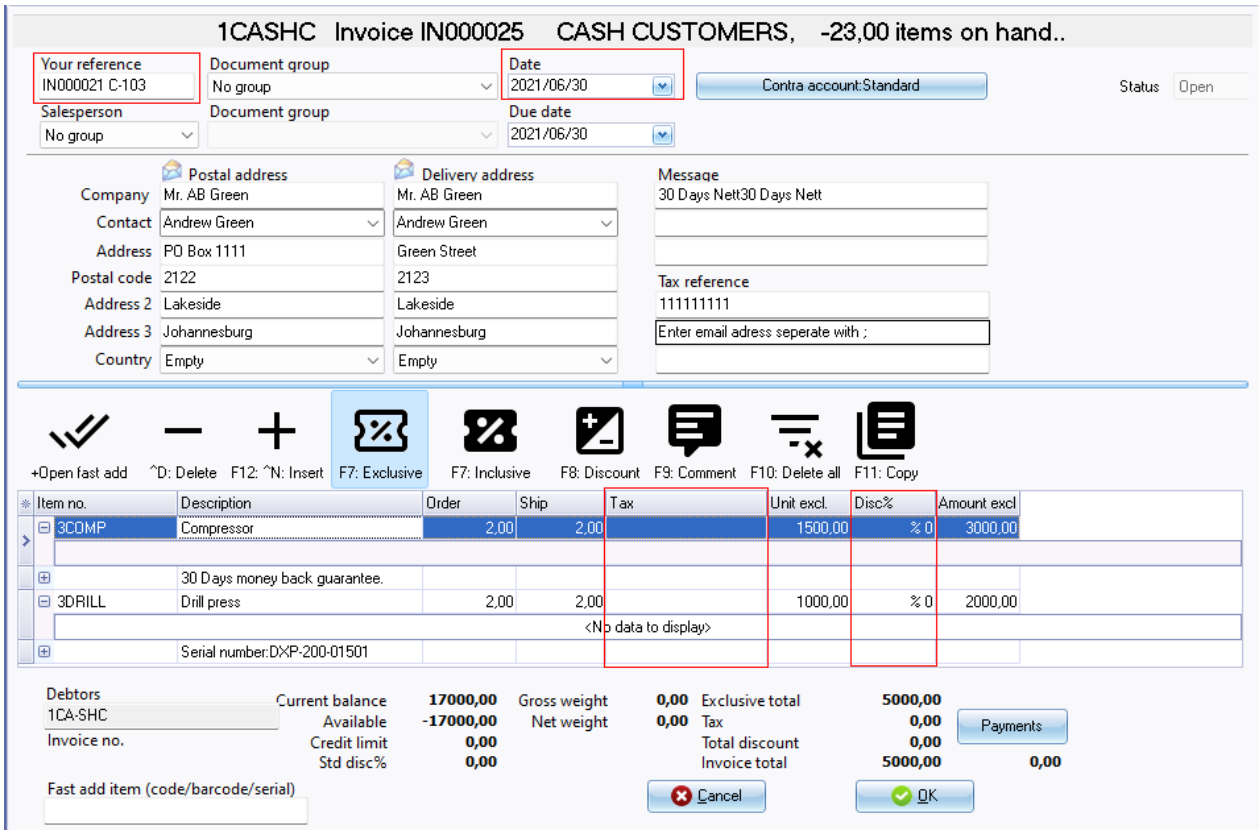
attention to the following:

- Changing Debtor or Creditor Accounts: The first document, if multiple documents are imported, may be assigned to the selected account. Subsequent documents included in the exported file may be imported to existing accounts. If an incorrect debtor or creditor account was selected and included in the exported file, you can select the document and choose another debtor or creditor account from the Documents → Change account context menu.
- Adjusting Salesperson, Document Groups, and Messages: You have the flexibility to modify the salesperson, document groups, and messages in the document header as needed.
- Date: The date of the imported documents may reflect the date of the source document included in the exported file. You may need to change this to the system date or a date according to your requirements.
- References:
    - In the case of importing an exported file from the TXF file format, the source document number from the exported file may be appended to the "Your reference" field before existing references.
    - In the case of an exported file from the CSV file format, the source document number from the exported file will not be appended to the "Your reference" field.
- Selling Prices, Purchase Prices, and Quantities: These can be adjusted as necessary. Additional items can be added or existing ones removed from the imported document.
- Discount Percentage:
    - In the case of importing an exported file from the TXF file format, no discount percentage will be included.
    - In the case of importing an exported file from the CSV file format, a discount percentage (e.g., 2%) may be included. If no discount applies, set this to 0 or add a specific percentage according to your requirements.
- Tax (VAT/GST/Sales Tax): Confirm and select the correct output tax or input tax applicable to the imported items.
- Comments and Remarks: Comments will be imported, but remarks will not. Add remarks if necessary, especially for special references like serial numbers, guarantees, or warranties.

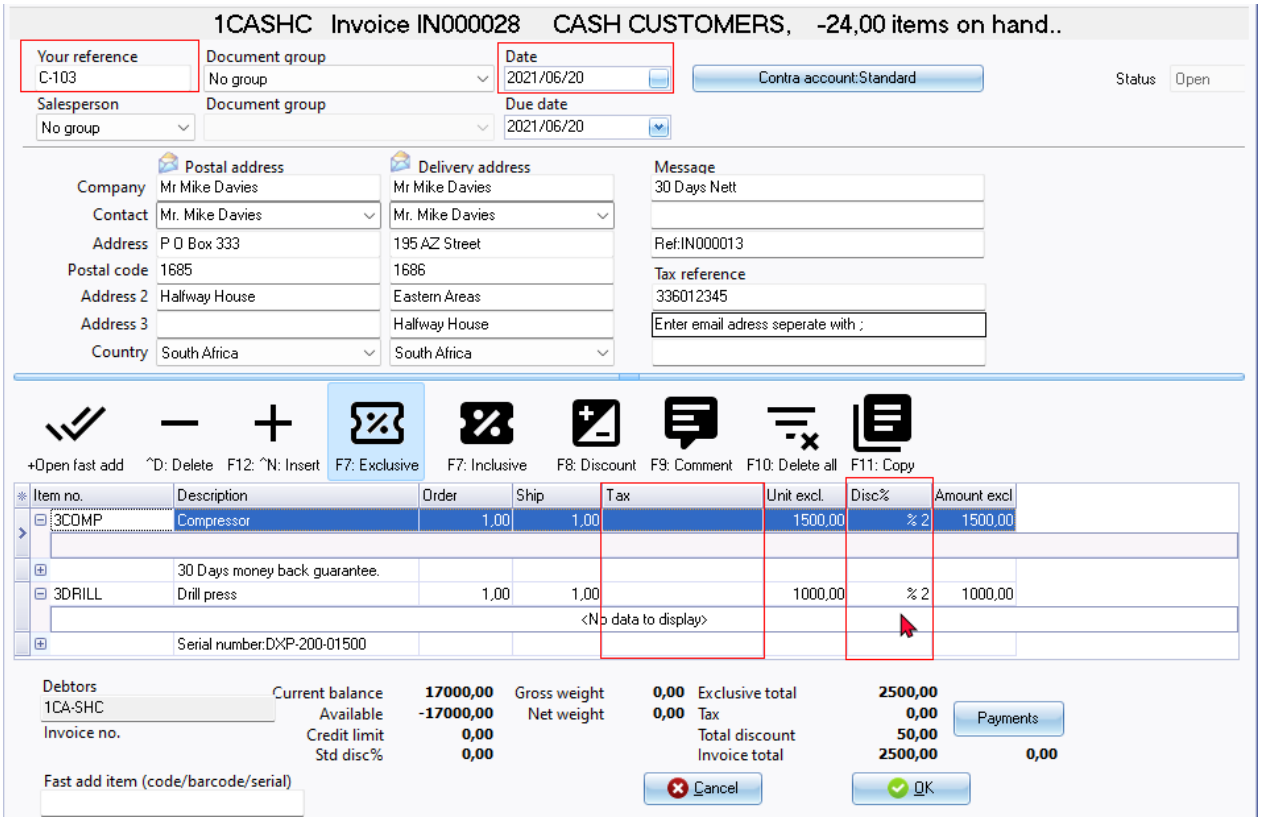
Examples of Imported Documents in the TXF and CSV File Formats

To better understand how imported documents appear in different file formats, view the examples below:

Example: Imported Invoice in TXF File Format:



Example: Imported Invoice in CSV File Format:



These examples provide visual representations of how invoices look when imported from different file formats. Understanding these differences can aid in effectively managing imported documents within your Set of Books.

Price agreement plugin

Price agreement plugin - Manual - Shop - Licence : Once-off -

The Price agreement plugin is a useful tool for managing quantity discounts and special pricing for customers and suppliers. It allows you to set up to five (5) levels of quantity discounts that can be applied to specific debtors or groups of debtors. Additionally, you can set a special price for individual debtors per product. These prices will overrule the default Selling price 1 / 2 / 3 and can be set per debtor (customer / client).

The plugin also includes a field for adding the supplier's product number, making it easy to manage multiple suppliers. You can also add information text explaining why a debtor has a special price.

Discount percentages are used to show customers the discount they are getting, based on the default

price you have set for the debtor. The plugin also allows you to link prices from stock group to debtor group, making it easy to maintain price agreements for larger groups.

You can set up price agreements in a variety of ways, including discount on the default sales price, percentage of the average cost price, percentage of the latest cost price, and amount per item. The Price agreement plugin also allows you to set start and end dates for the agreement.

Once the plugin is activated, it creates a Price agreement tab for each of your stock items, debtor accounts, and creditor accounts (if the creditors module is activated). This makes it easy to manage price agreements across your entire business.

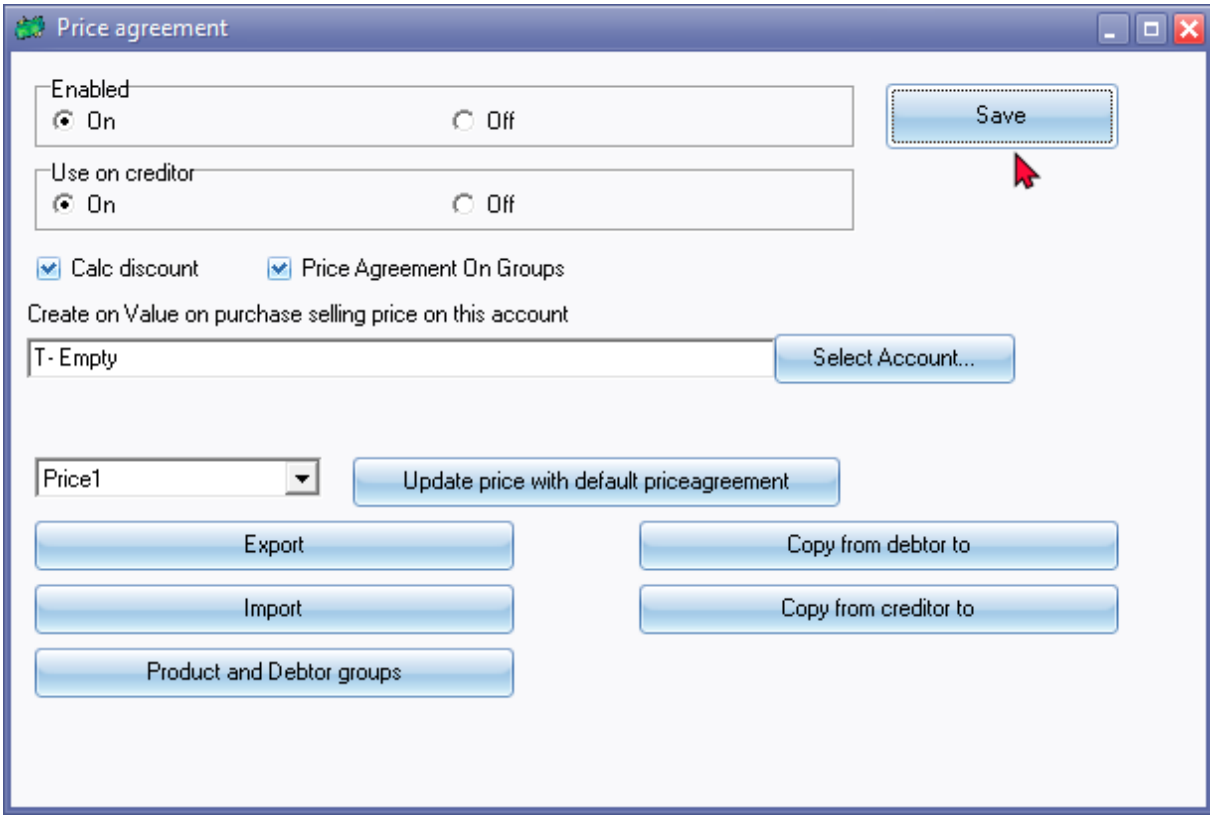
Setup of Price agreements

Activate Price agreement

Once activated, you can access the Price agreement tab for stock items, debtor accounts, and creditor accounts to set up quantity discounts and special pricing. You can define price agreements in various ways, including discount on the default sales price, percentage of the average cost price, percentage of the latest cost price, and amount per item. You can also set start and end dates for the agreement and link prices from stock group to debtor group.

To set up price agreements and activate the Price agreement plugin, follow these steps:

1. Click on the Setup ribbon and select Plugins → Document plugins → Price agreement. If this plugin is not listed under Plugins → Document plugins, activate it via Tools → Activate plugins.



2. Select the On option to activate the plugin. This will create a Price agreement tab for stock items, debtor accounts, and creditor accounts (if applicable).
3. If necessary, select the following options:

    a) Calc discount - If selected, the plugin will calculate the discount for stock items and display the percentage discount on document layout files.

    > *If this option is not selected, no discount will be calculated on documents and layout files. The unit price will be displayed as set for the quantities.*

    b) Price Agreement on On Groups - This option applies price agreements to debtor groups.

    c) Price - Select one of the three (3) prices on the list.

    d) Create on Value on purchase selling price on this account - Select a General ledger account, if applicable. Create on Value on purchase selling price on this account: Select a General ledger account, if applicable.

    e) Export - This option creates a tab-delimited text file that can be opened in a text editor or spreadsheet program.

    f) Import - This option imports a valid tab-delimited text file created using the Export option.

    g) Copy from debtor to - Select a stock item from the list. Copy from debtor to: Select a stock

item from the list to copy price agreements from a debtor to a stock item.

h) Copy from creditor to - Select a stock item from the list. Copy from creditor to: Select a stock item from the list to copy price agreements from a creditor to a stock item.

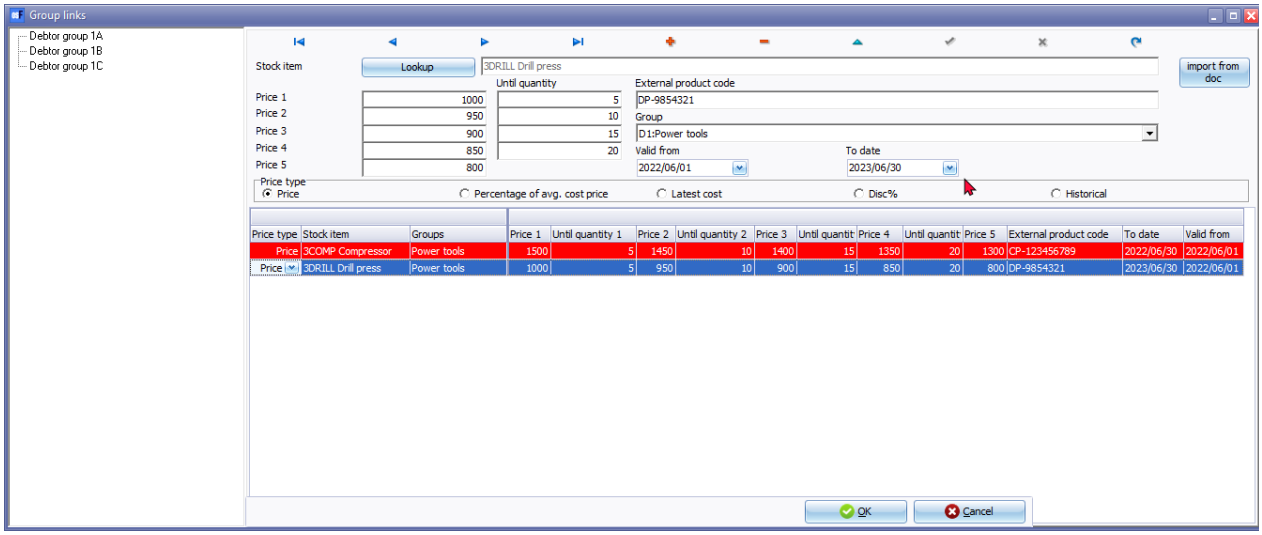
i) Product and Debtor groups - This option may be used to assign selected products (stock items) to debtor (customer / client) accounts linked to selected debtor / customer / client groups. Product and Debtor groups: Use this option to assign selected products (stock items) to debtor accounts linked to selected debtor groups.

4. Click on the Save button to activate the Price agreement plugin.

Product and Debtor groups

To manage stock groups and debtor groups for price agreements, you may click on the Product and Debtor groups button of the "*Price agreement*" setup screen.

Before you can use the "Group links" Product and debtor groups option, the "Product and Debtor groups" option must be selected (marked) to set the price agreements on debtor groups.



Red - Font / Column colours

If the date in the "To date" field and the "To date" column is expired (earlier than today's system date, the record will be displayed in a Red - Font / Column colour.

Setup Groups

You can create up to two (2) Report groups for inventory items (products), debtors (customers / clients) and creditors (suppliers / vendors). These debtor (customer / client) and creditor (supplier / vendor) groups can be selected when selecting on the Price agreement tab of a selected stock item (product).

The use of these groups is optional, but it will provide the facility to view the price agreements, discount,

etc. set and analyse per group.

Before report groups can be linked, the following report groups must already exist:

- Debtor group - Manage groups for debtors (customers / clients).
- Creditor group - Manage groups for creditors (suppliers / vendors).
- Stock group - Manage groups for stock items (products).

Price agreement tabs

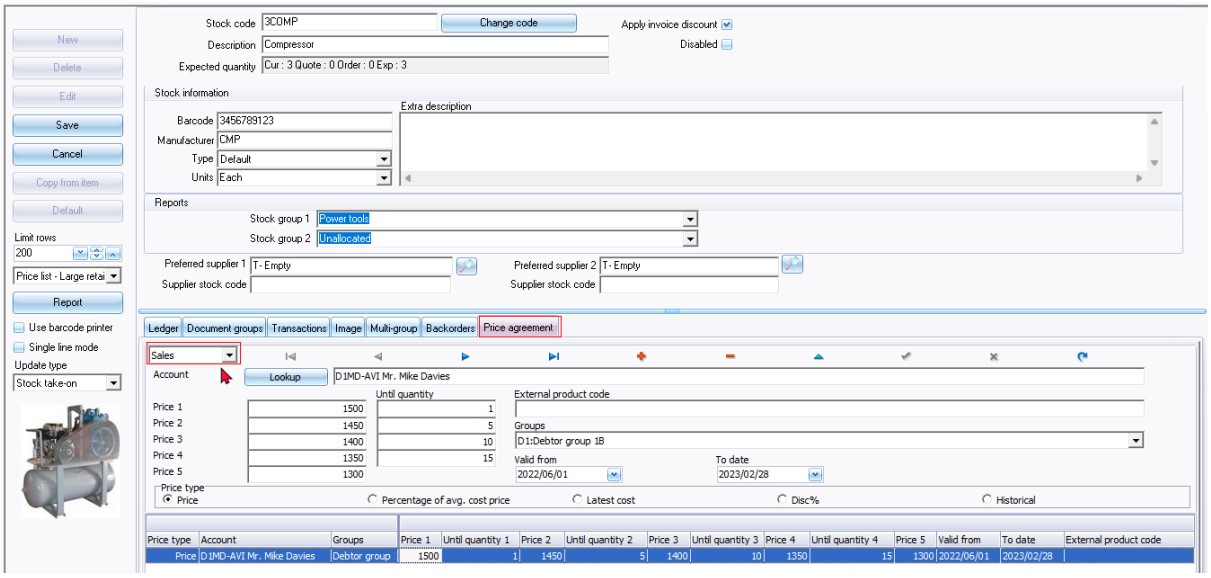
Price agreement tab Stock items

Price agreement tab Stock items - Sales

You may manage price agreements from the Price agreement tab of the Stock items screen. Price agreements may be added, edited or deleted for debtors (customer / client) accounts and for creditor (supplier / vendor) accounts.

To set Price agreements for Stock items:

1. On the Default ribbon, select Stock items.
2. Select a specific Stock item (product).
3. Click on the Edit button. (Alternatively, you may double-click on the selected stock item).
4. Click on the Price agreement tab.
5. Select Sales (default) for debtor (customer / client) accounts.



6. Click on the Lookup button to select the debtor (customer / client) account(s).

7. To manage the Price agreements, you first need to decide what Price type you need to select. This will change the descriptions for Price 1, Price 2, Price 3, Price 4 and Price 5. This will then determine the values you need to enter for each of the price types. Select one of the following Price types and enter the values and until quantities as follows:

    a) Price: Debtor - Enter the actual selling prices (usually lower than the default selling price of the debtor (customer / client)) and quantities.

    b) Percentage of avg. cost price - Enter the percentages of the average cost price.

    c) Latest cost - Enter the actual cost prices

    d) Disc % - Enter the percentage of the discount quantities.

    e) Historical - Enter the prices based on historical value and the quantities.

8. External product code - Enter the product code for the debtor (customer / client), if available.

9. Groups - You may select a debtor (customer / client) group).

10. Valid from ... To date - Select the date of when the price agreement is valid. If the Price Agreement is only valid for a specific period, select the date on which the price agreement will expire.

11. Click on the Post edit record button to save the changes.

12. Click on the Save button of the stock item screen.

Price agreement tab Stock items - Purchases

You may manage price agreements from the Price agreements tab of the Stock items screen. Price agreements may be added, edited or deleted for debtors (customer / client) accounts and for creditor (supplier / vendor) accounts.

To set Price agreements for Stock items:

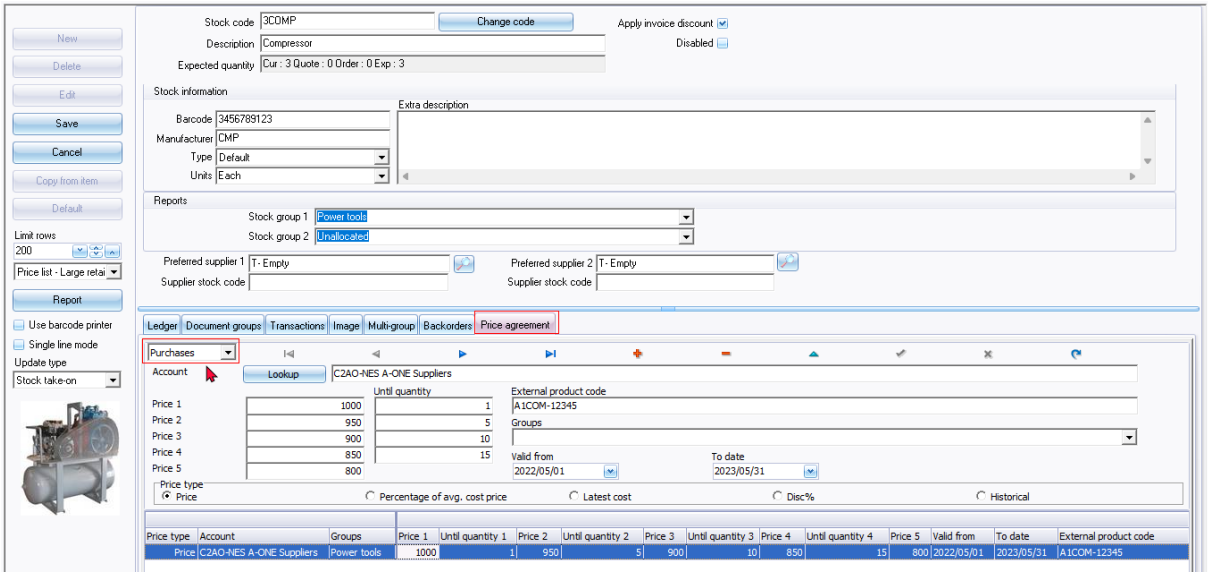
1. On the Default ribbon, select Stock items.

2. Select a specific Stock item (product).

3. Click on the Edit button. (Alternatively, you may double-click on the selected stock item).

4. Click on the Price agreement tab.

5. Select Purchases for creditor (supplier / vendor) account(s).



6. Click on the Lookup button to select the creditor (supplier / vendor) account(s).

7. To manage the Price agreements, you first need to decide what Price type you need to select. This will change the descriptions for Price 1, Price 2, Price 3, Price 4 and Price 5. This will then determine the values you need to enter for each of the price types. Select one of the following Price types and enter the values and until quantities as follows:

    a) Price: - Creditor – Enter the actual cost prices (usually lower than the cost price of the creditor (supplier / vendor)) and quantities.

    b) Percentage of avg. cost price - Enter the percentages of the average cost price.

    c) Latest cost - Enter the actual cost prices.

    d) Disc % - Enter the percentage of the discount quantities.

    e) Historical - Enter the prices based on historical value and the quantities.

8. External product code - Enter the product code for the creditor (supplier / vendor), if available.

9. Groups - You may select a creditor (supplier / vendor) group (if Purchases is selected).

10. Valid from ... To date - Select the date of when the price agreement is valid. If the Price Agreement is only valid for a specific period, select the date on which the price agreement will expire.

11. Click on the Post edit ✔ record button to save the changes.

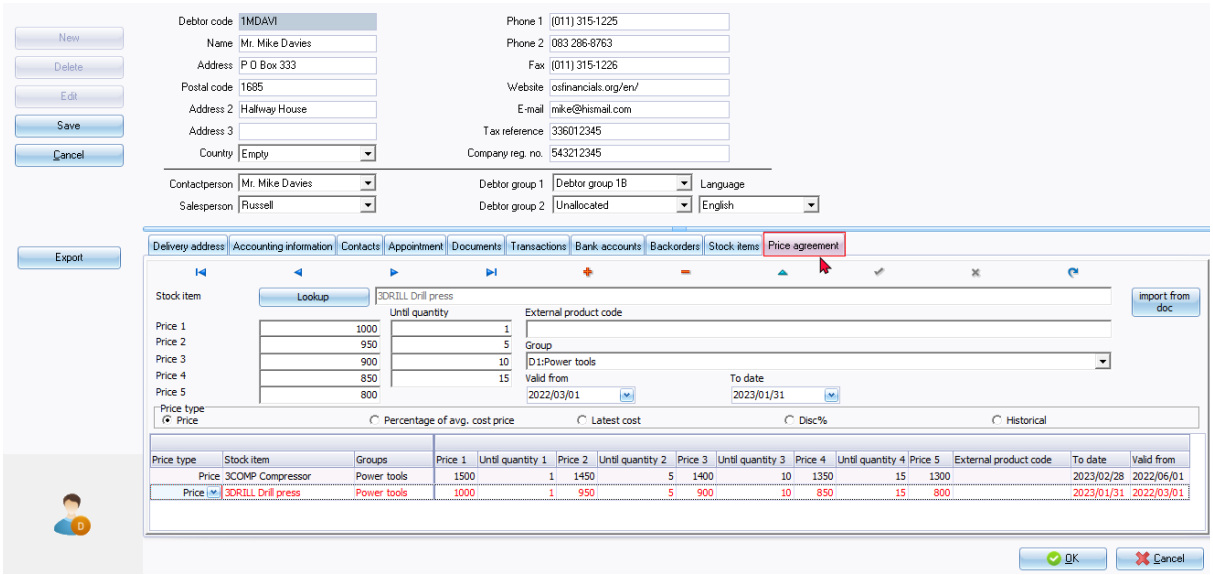
12. Click on the Save button of the stock item screen.

Price agreement tab - Debtors (Customers / Clients)

You may manage price agreements from the Price agreements tab of the debtor (customer / client) screen. Price agreements may be added, edited or deleted for stock items.

To set Price agreements for Debtors (Customers / Clients):

1. On the Default ribbon, select Debtor.
2. Select a debtor (customer / client) account on the list.
3. Click on the Edit button. (Alternatively, you may double-click on the selected debtor (customer / client) account).
4. Click on the Price agreement tab.



> *Red - Font / Column colours*
>
> *If the date in the "To date" field and the "To date" column is expired (earlier than today's system date, the record will be displayed in a Red - Font / Column colour.*

5. Click on the Lookup button to select the stock item.
6. To manage the Price agreements, you first need to decide what Price type you need to select. This will change the descriptions for Price 1, Price 2, Price 3, Price 4 and Price 5. This will then determine the values you need to enter for each of the price types. Select one of the following Price types and enter the values and until quantities as follows:
    a) Price - Enter the actual selling prices (usually lower than the default selling price of the debtor (customer / client)) and quantities.
    b) Percentage of avg. cost price - Enter the percentages of the average cost price.
    c) Latest cost - Enter the actual cost prices.
    d) Disc % - Enter the percentage of the discount quantities.
    e) Historical - Enter the prices based on historical value and the quantities.
7. External product code - Enter the product code for the debtor (customer / client), if available.

8. Groups - You may select a stock group from the list.

9. Valid from ... To date - Select the date of when the price agreement is valid. If the Price Agreement is only valid for a specific period, select the date on which the price agreement will expire.

10. Click on the Post edit record button to save the changes.

11. Click on the Save button of the debtor (customer / client) account screen.

Price agreement tab - Creditors (Suppliers)

You may manage price agreements from the Price agreements tab of the creditor (supplier / vendor) screen. Price agreements may be added, edited or deleted for stock items.

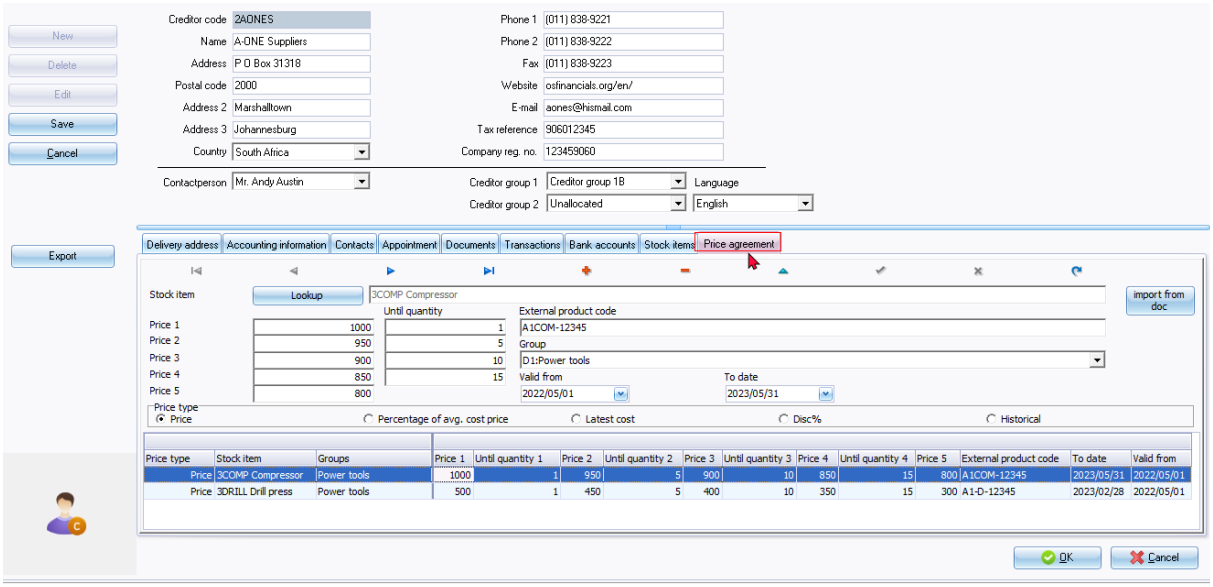
To set Price agreements for Creditors (Suppliers):

1. On the Default ribbon, select Creditor.

2. Select a creditor (supplier / vendor) account on the list.

3. Click on the Edit button. (Alternatively, you may double-click on the selected creditor (supplier / vendor) account).

4. Click on the Price agreement tab.



Red - Font / Column colours

If the date in the "To date" field and the "To date" column is expired (earlier than today's system date, the record will be displayed in a Red - Font / Column colour.

5. Click on the Lookup button to select the stock item.

6. To manage the Price agreements, you first need to decide what Price type you need to select. This will change the descriptions for Price 1, Price 2, Price 3, Price 4 and Price 5. This will then determine the

values you need to enter for each of the price types. Select one of the following Price types and enter the values and until quantities as follows:

a) Price - Enter the actual cost prices (usually lower than the cost price of the creditor (supplier / vendor)) and quantities.

b) Percentage of avg. cost price - Enter the percentages of the average cost price.

c) Latest cost - Enter the actual cost prices.

d) Disc % - Enter the percentage of the discount quantities.

e) Historical - Enter the prices based on historical value and the quantities.

7. External product code - Enter the product code for the or creditor (supplier / vendor), if available.
8. Groups - You may select a stock group from the list.
9. Valid from ... To date - Select the date of when the price agreement is valid. If the Price Agreement is only valid for a specific period, select the date on which the price agreement will expire.
10. Click on the Post edit record button to save the changes.
11. Click on the Save button of the creditor (supplier / vendor) screen.

Processing Documents for Price agreements

Price agreements may be used when processing documents:

- Normal document processing
- Standard POS
- RetailPOS plugin
- HorecaPOS plugin

When processing sales documents (i.e. invoices, credit notes and quotes) and quantities are entered which match your price agreement settings, it will automatically calculate the discount.

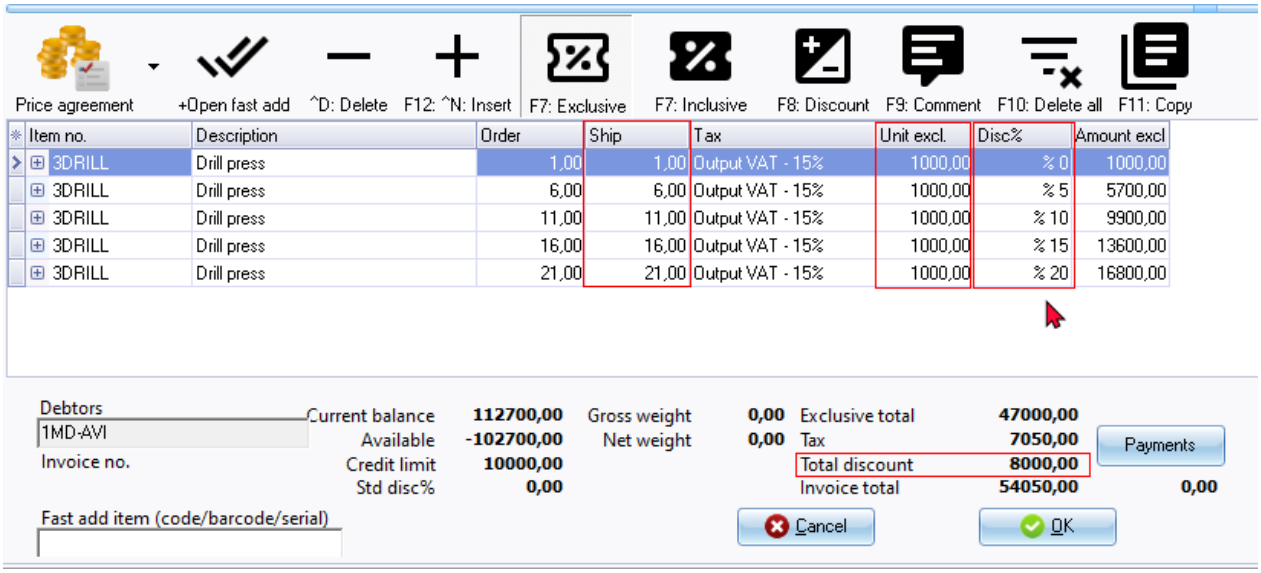
Calc discount setting

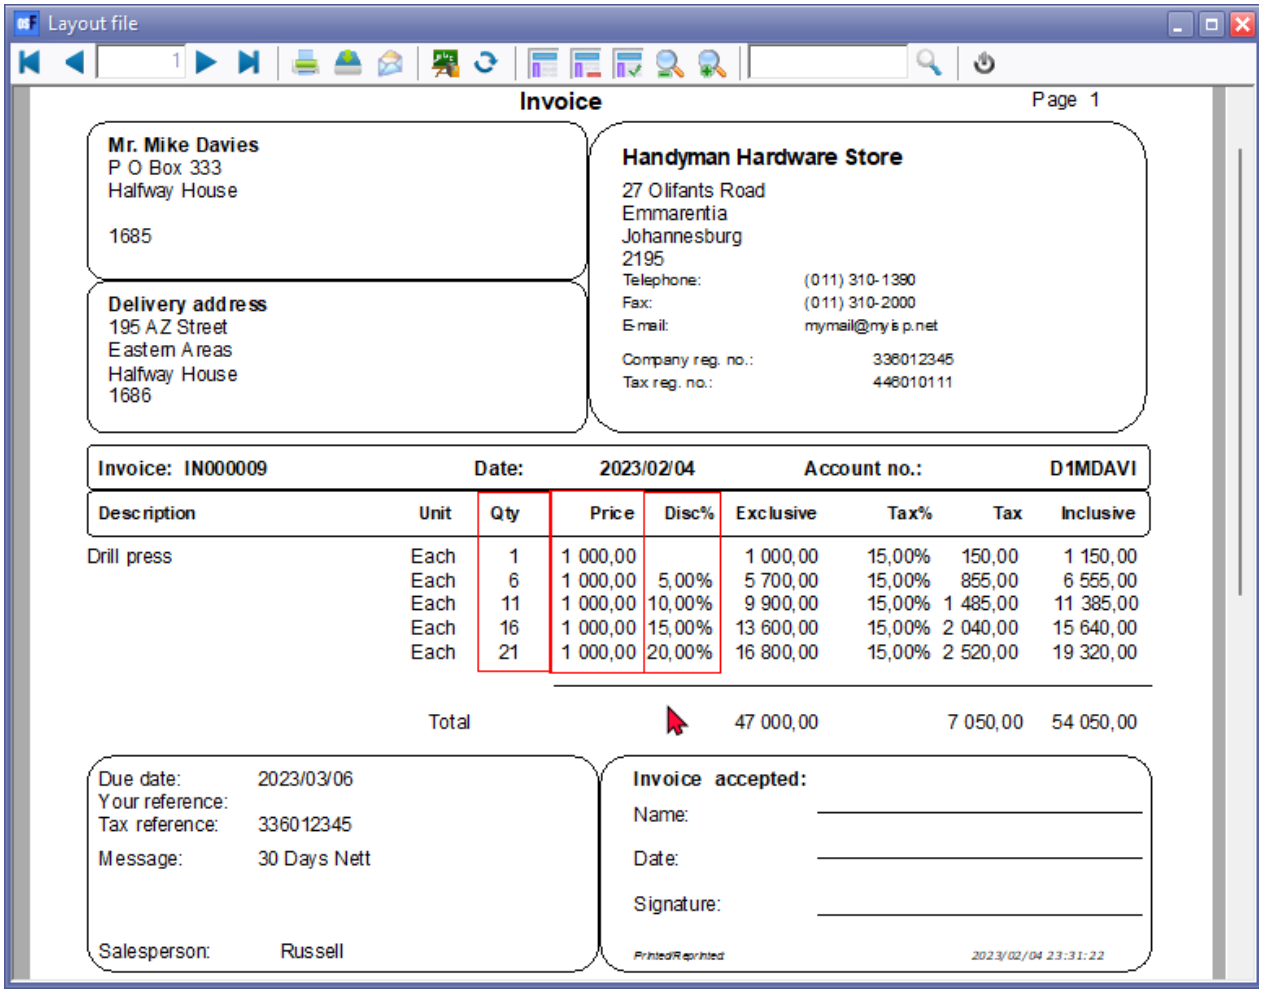
Depending on the "*Calc discount*" setting (on Plugins → Document plugins → Price agreement (Setup ribbon)), the processing and printing of layout files will be displayed as follows:

Calc discount setting on

The Unit price is always displayed as the actual unit price for 1 unit. The percentage discount is automatically calculated on the number of quantities specified in the " *Ship*" field and the total net price, after discount is taken into account, is listed in the "*Amount exclusive*" or "*Amount inclusive*" column. The

discount amount is displayed in the "*Total discount*" field of the document footer.

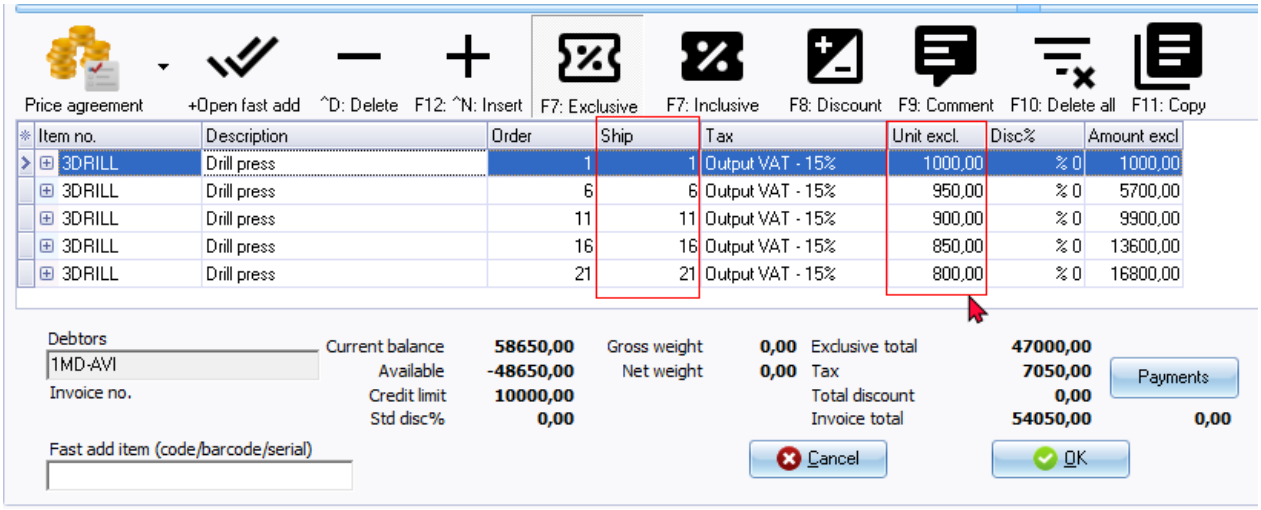


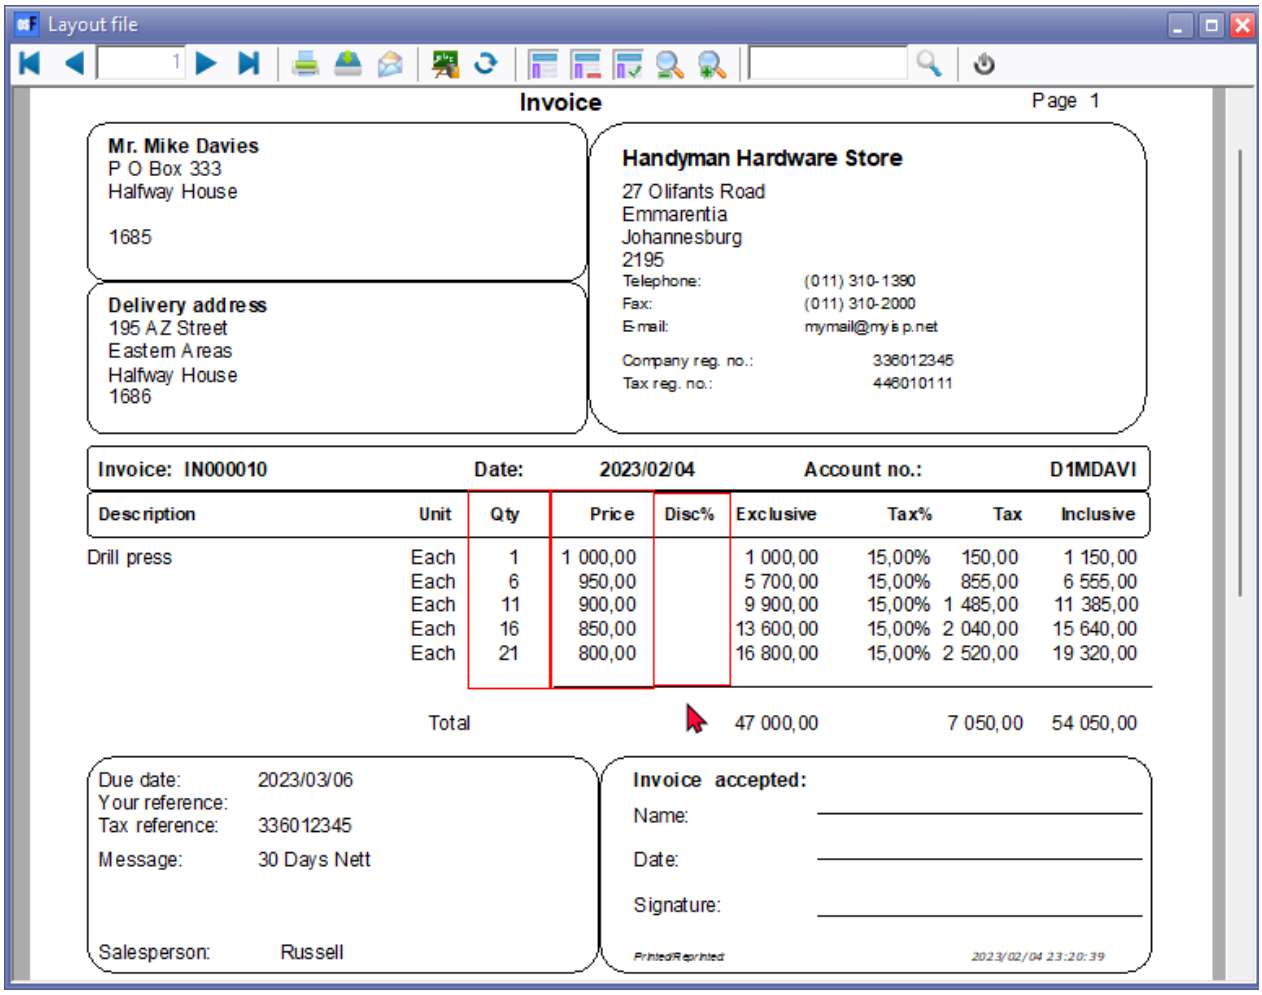


Calc discount setting off

The Unit price is displayed as the actual price for the unit quantities specified in the "*Ship*" field. No

discount amount is displayed in the "Total discount" field of the document footer.





When processing purchase documents (i.e. purchases, supplier returns and orders) and quantities are entered which match your price agreement settings, it will automatically calculate the discount.

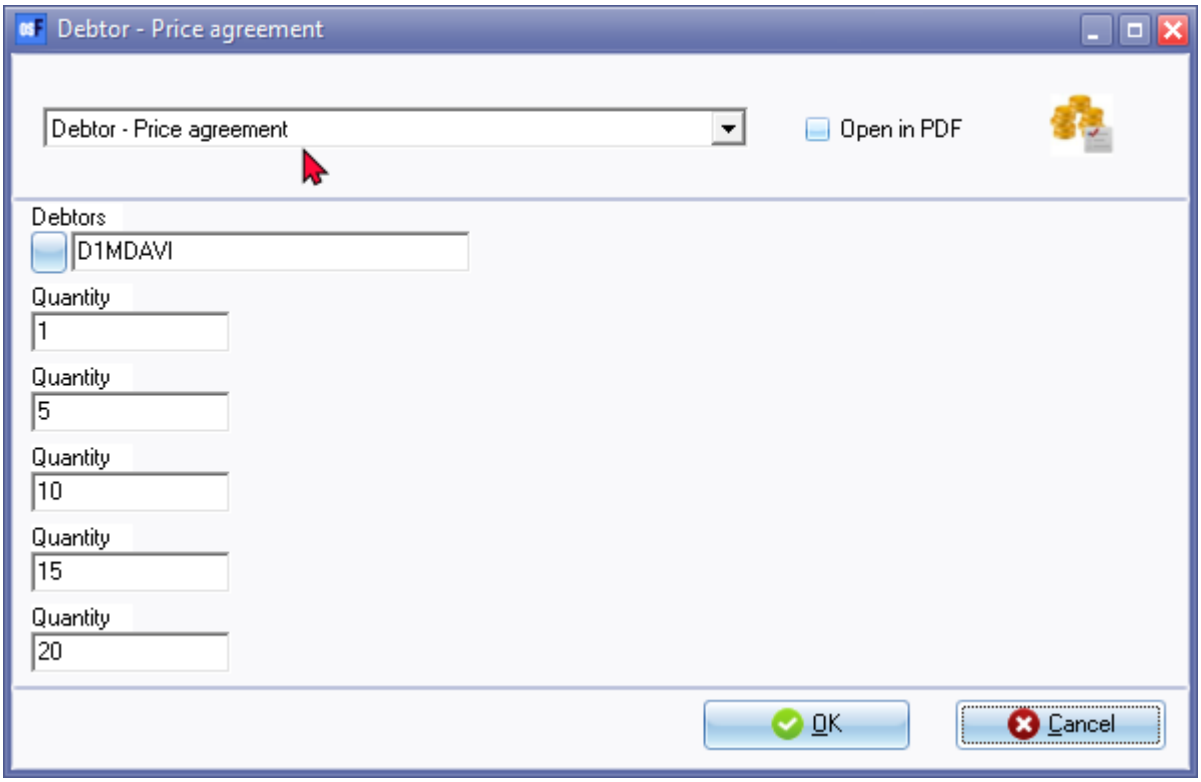
Price agreement reports

You may print lists of the price agreements.

Print Price agreements for Debtors (Customers / Clients)

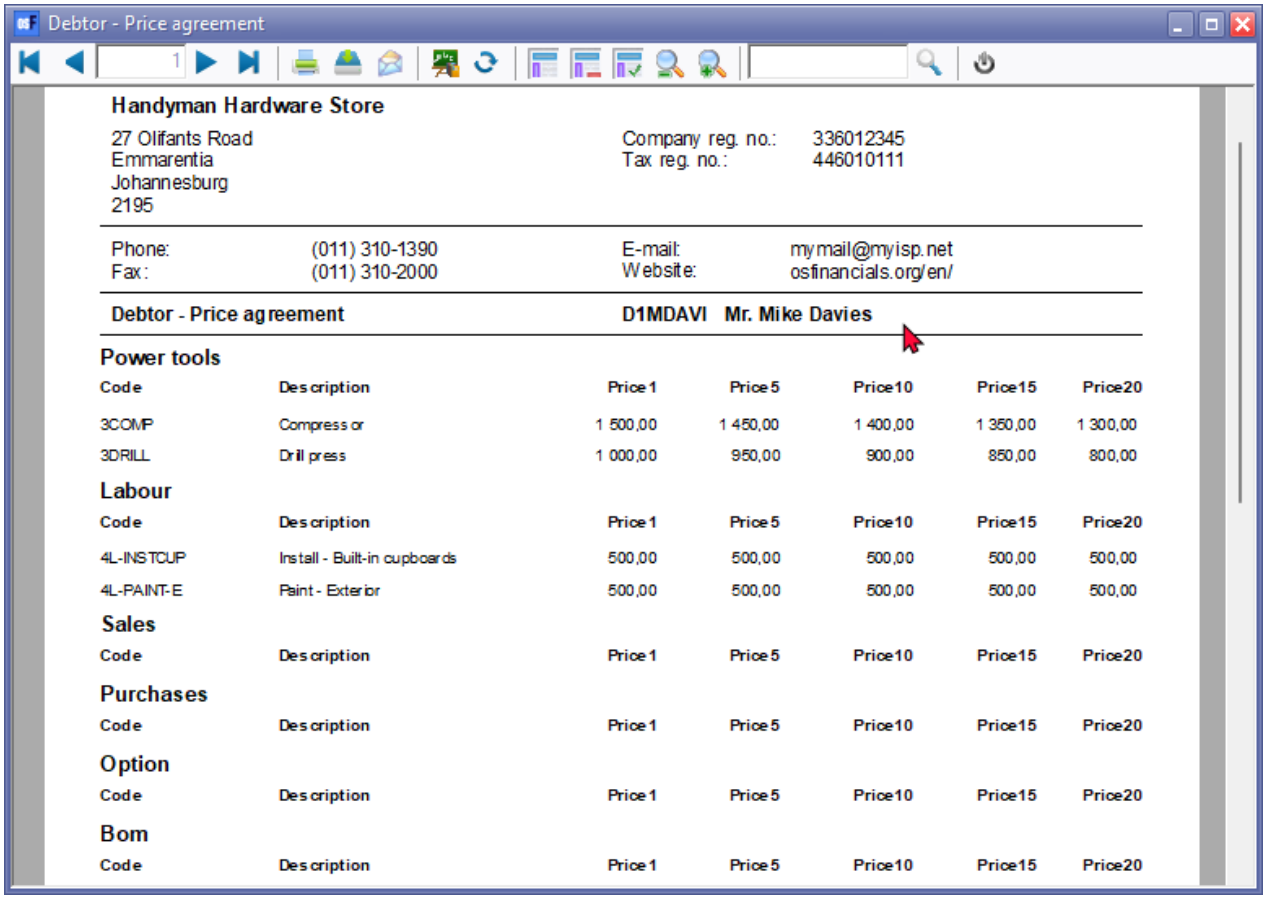
To print Price agreement reports for debtors (customers / clients):

1. On the Reports ribbon, select Reports → Plugins → Price agreement.
2. Select the "*Debtor - Price agreement*" report (default option).



3. Select the debtor (customer / client) account or creditor (supplier / vendor) account.
4. Enter up to 5 quantities.
5. Click on the OK button.

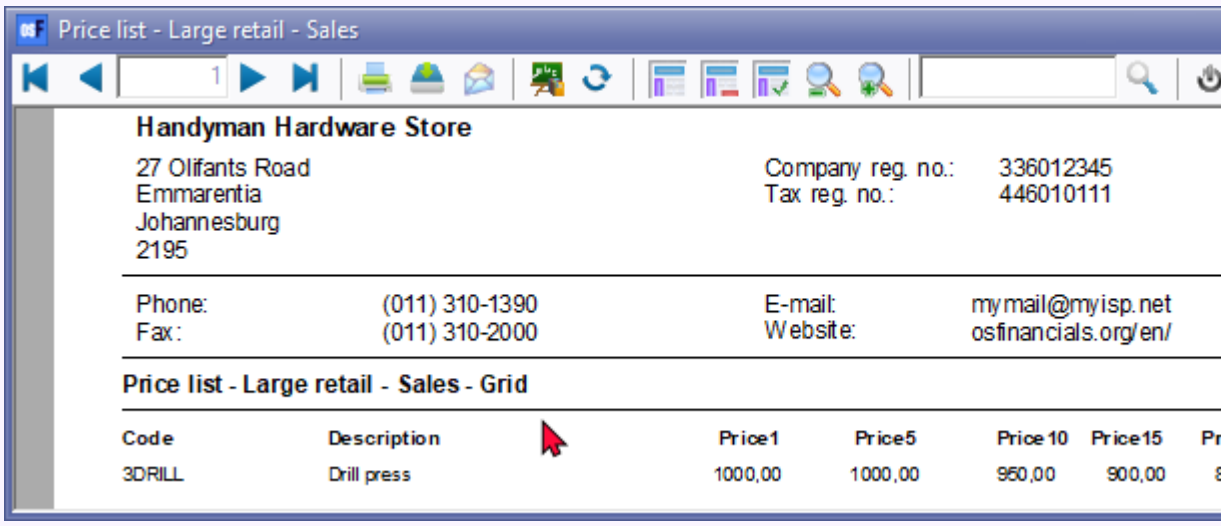
An example of the "*Debtor Price agreement*" report, is as follows:



Print single item context menu option on Stock items (Default tab)

Select the "Price list - Large retail - Sales" report option.

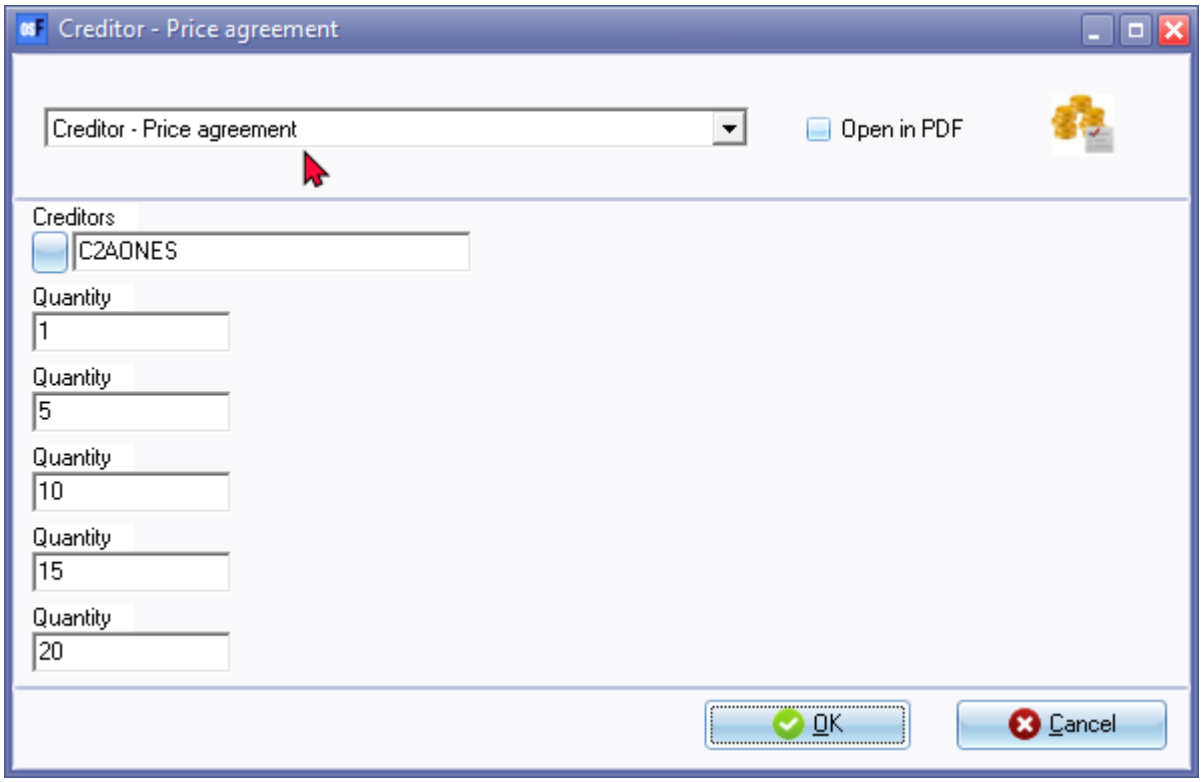
Select the Stock item (product) and right-click - select Print single item option on the context menu.



Print Price agreements for Creditors (Suppliers / Vendors)

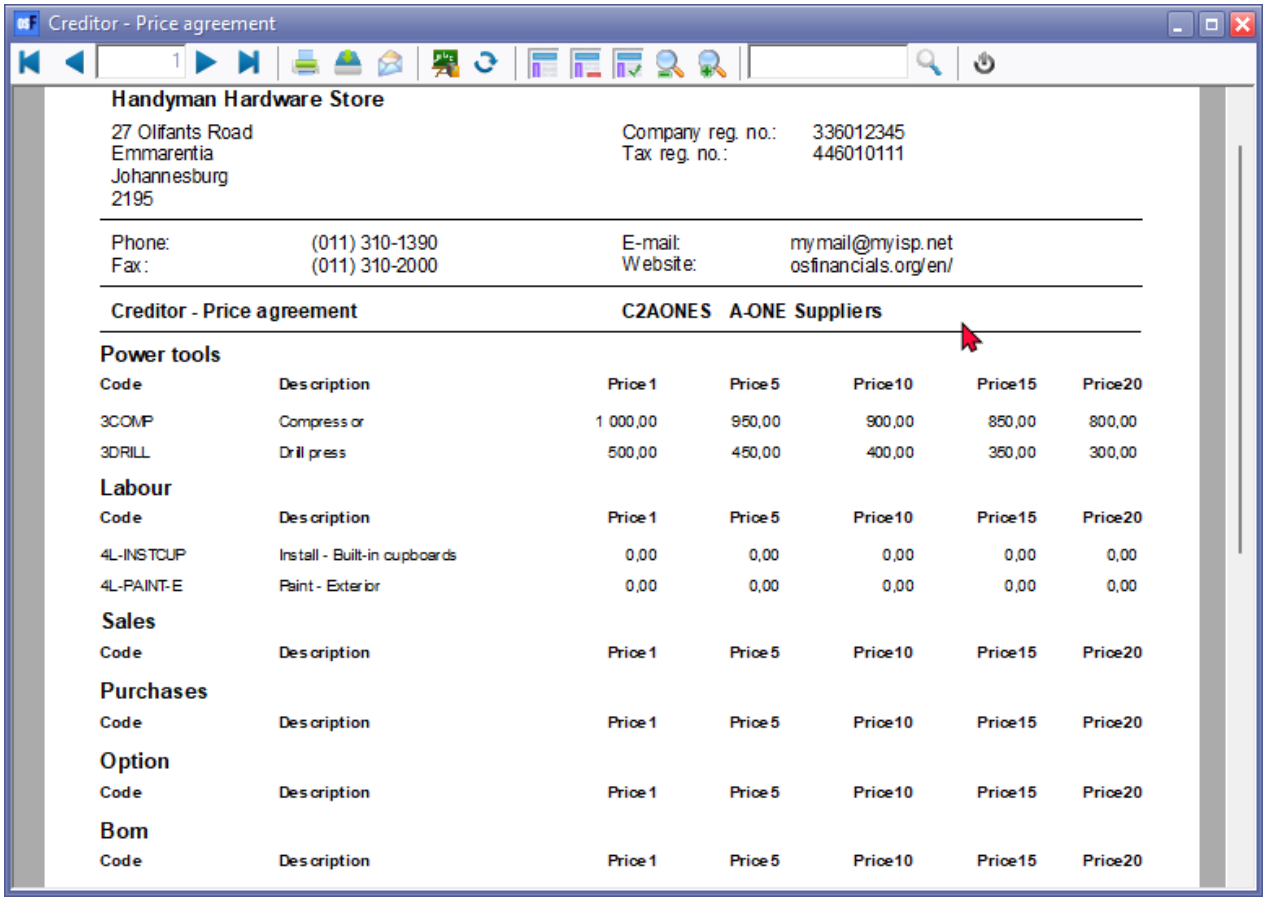
To print Price agreement reports for creditors (suppliers / vendors):

1. On the Reports ribbon, select Reports → Plugins → Price agreement.
2. The "*Debtor - Price agreement*" is the default option. Select the "*Creditor - Price agreement*" report.



3. Select the creditor (supplier / vendor) account.
4. Enter up to 5 quantities.
5. Click on the OK button.

An example of the "*Creditor Price agreement*" report, is as follows:



Print single item context menu option on Stock items (Default tab)

Select the "Price list - Large retail - Purchases" report option.

Select the Stock item (product) and right-click - select Print single item option on the context menu.

Authoring Tool

Subscriptions plugin

Subscriptions plugin - Manual - Shop - Licence : Annual fee

Introduction to the Subscriptions plugin

Subscriptions plugin is developed for those businesses which sell subscriptions, e.g. magazines, newspapers, membership fees, gymnasiums, etc. This Subscriptions plugin could also be used for rental industries, renting items to their customers on for example a monthly basis.

With this plugin you'll never forget to charge your members for a subscription.

You can define for each member:

- Which product or service they bought.
- The repeating frequency (x times per day, week, month, etc.).
- A warning period in which you get automatically reminded to send the customer a notice for continuing using your services (i.e. 31 days before the invoicing date).
  So you'll always get reminded to remind your customer to renew his/her subscriptions.
- The quantity of days before or after the renewal date, allows you to create the invoice(s) by a click on a button.
- A different contract period (i.e. 1 year) with the invoicing period (i.e. per month).

You also can:

- See when the next renewal date will be.
- See when the last invoiced date was.
- Send an automated invoice by email.
- Search through the subscriptions for a specific product/service and see who has a subscription to it.

The number of days before or after the renewal date osFinancials5/TurboCASH5 let you create the invoice with the click on a button. A different contract period (i.e. 1 year) with the invoicing period (i.e. per month).

  - Duplicate subscriptions from one debtor account to another.
- Subscriptions - Search options: You may filter and search for specific documents (invoices an quotes) related to subscriptions.

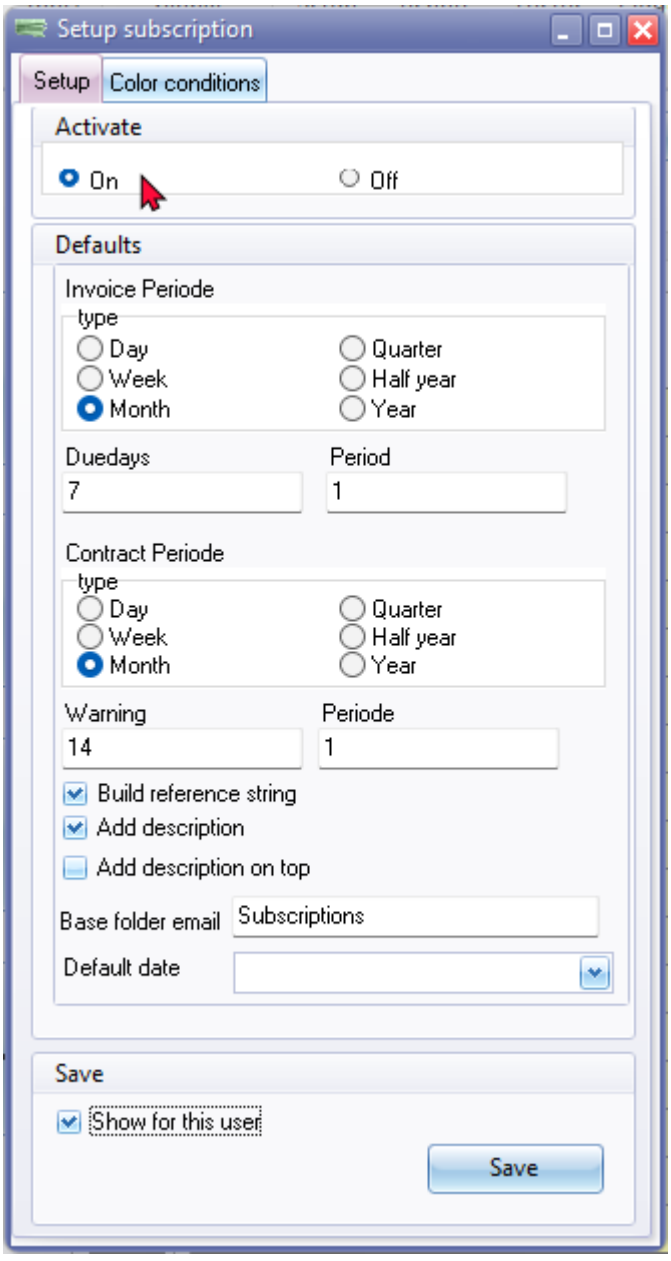
Created with the Standard Edition of HelpNDoc: Upgrade Your Documentation Process with a Help Authoring Tool

Activate subscriptions

Activate subscriptions

On the Setup ribbon, click on Document plugins → Plugins → Subscriptions. If this plugin is not listed under Plugins → Document plugins, activate it via Tools → Activate plugins.

Setup subscription - Setup tab



The options is as follows:

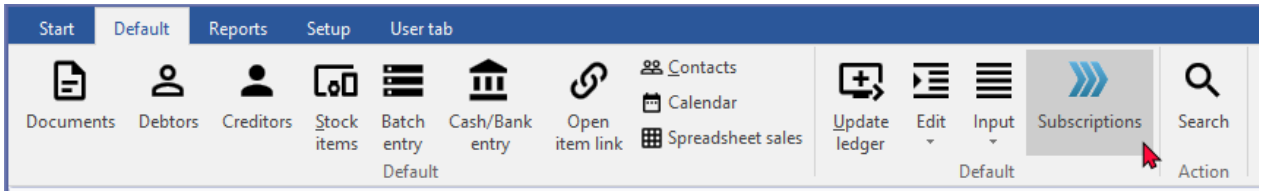
- Activate - turn the plugin on or off.
- Defaults - You may set the default global settings for all subscriptions. You may adjust it when creating a new subscription.
- The upper part Invoice period is about the contract period, the lower part is about the billing period. So you can for example, specify that the contract period is 1 year, which you filled in the days when "*Duedays*" for (a positive number) or after (a negative number) the contract date will receive a billing notice.
- There beside specify e.g. the billing period Contract period is 1 time per month, and that you know the number of days filled with "*Warning*" for (a positive number) or after (a negative number) the billing date, a warning message will be displayed. You may also use other periods.
- Build reference string - Uncheck "*Build reference string*" ensures that you record, which is used as reference for the bill to make. A "*reference*" to the created subscriptions. You fill in the subscription end the "Reference" field. If you have multiple subscriptions on the same invoice, fill in only one.
- Add description - This option will include or exclude any comments generated when processing documents (Invoices and Quotes).
    - Not selected - If this option is not selected, only the Stock item code and description for each item will be included in Invoices and Quotes and printed on document layout files. No comments will be generated and print on document layout files.
    - Selected - You need to select this option to print the subscription details such as the Period and last run to next run, for example, "*Period 2023/05/01/2023/05/31*" generated. This would be included as Comments when processing Documents for the subscriptions plugin and will print on document layout files.
- Add description on top - This option determines the placement of comments. This is similar to the "*Append notes after item*" on Documents setup. The options is as follows:
    - Not Selected - This will print any comments after the stock code and stock description.
    - Selected - This will print any comments before the stock code and stock description.
- Base folder - Subscriptions is the folder for the e-mail templates, layout files, etc. The Subscriptions folder consists of the following language options:
    - English - " ...\plug_ins\reports\Subscriptions\en "

- Afrikaans - " ...\plug_ins\reports\Subscriptions\af "
- Netherlands - " ...\plug_ins\reports\Subscriptions\nl "

You may need to specify your option. for example, if you choose English, you need to add the language prefix folder as " *en* \ " Subscriptions\en\.

- Default date - You may specify the default date. When adding a subscription, this date will be used to set the start of a subscription, You may need to change this as necessary.
- Show for this user -
  - Not selected - If the "*Show for this user*" field is not selected, you may launch the Subscriptions plugin from the Subscriptions icon on the Default ribbon.
  - Selected - If the "*Show for this user*" field on Plugin → Document plugins → Subscriptions (Setup ribbon), is selected, the Subscriptions plugin will automatically be launched if you open the Set of Books and any subscriptions need processing.

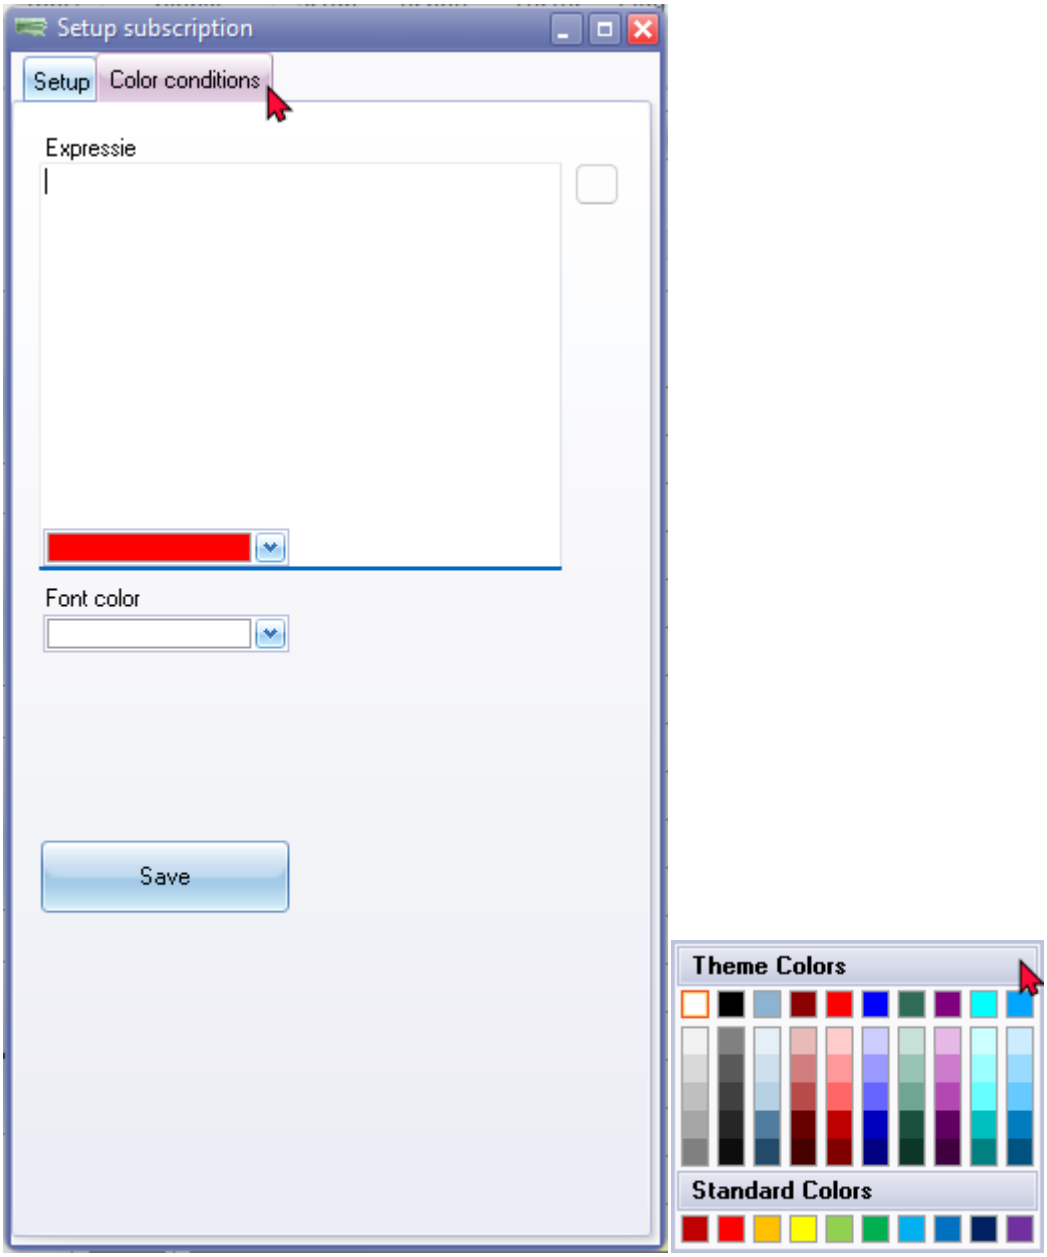
Click on the Save button. You may need to reopen your Set of Books. This will add a Subscriptions icon to the Default ribbon to allow easy access to the Subscriptions plugin.



Colour conditions

You may set any colour conditions for valid expressions to display in the lines field.

To be advised.



Created with the Standard Edition of HelpNDoc: Save time and frustration with HelpNDoc's WinHelp HLP to CHM conversion feature

Setup subscriptions

Once Subscriptions have been activated, the Subscriptions screen will be displayed when you open the Set of Books, if any subscriptions need processing.

To add the subscriptions, you need to do the following:

- Create Stock items for Subscriptions (if these do not already exist).
- Add subscriptions to Debtors (customer) accounts.

Once this is done, you may proceed to process subscriptions.

Add Stock items for subscriptions

You may need to add groups for your subscriptions. This will allow you to assign your stock items (products) to specific stock groups.

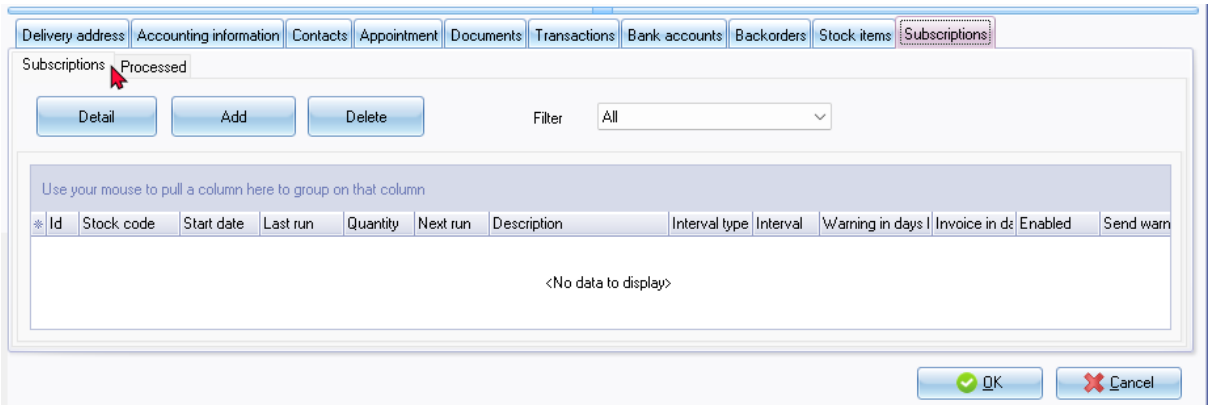
To add Subscriptions for Stock items (products):

1. On the Default ribbon, select Stock items.
2. Select a specific Stock item (product) account on the list. You may click on the New button to create a new item or copy an existing stock item.
3. Click on the Edit button. (Alternatively, you may double-click on the selected stock item (product).

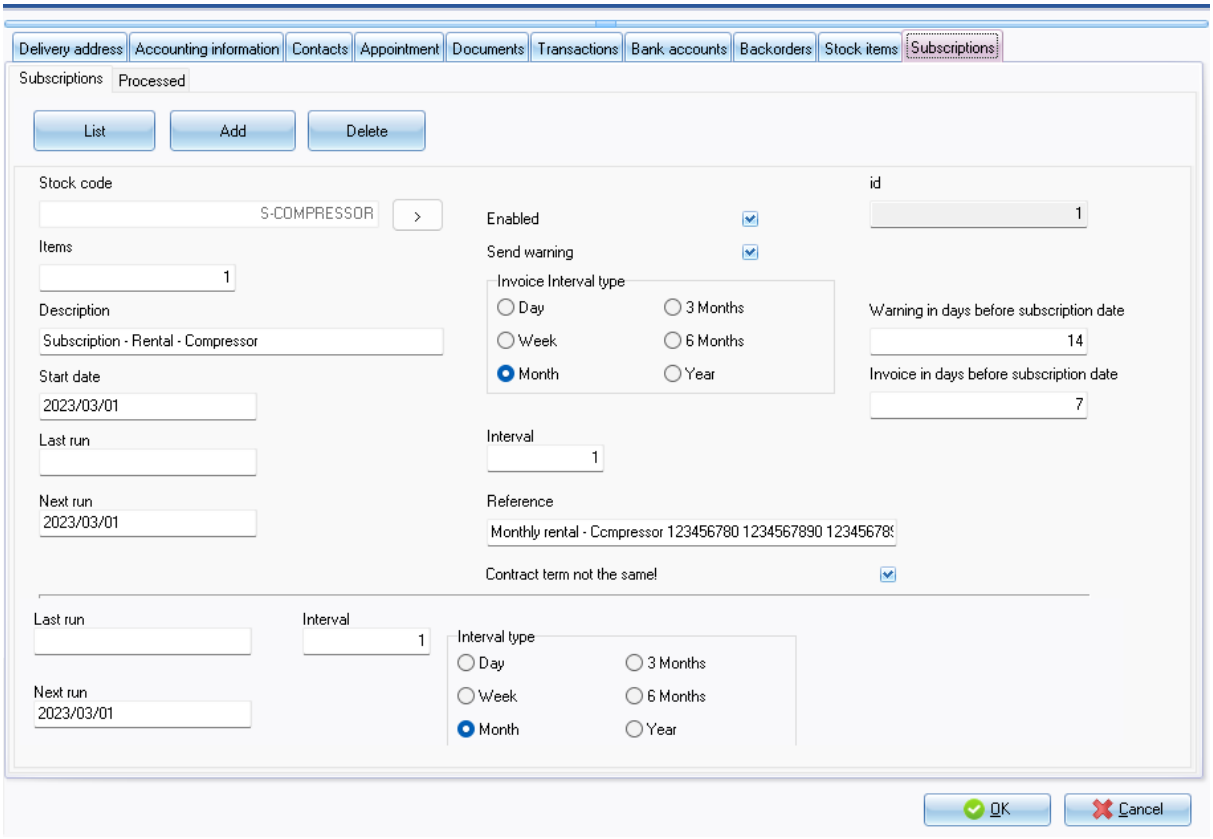
Add subscriptions to debtors (customers)

To add Subscriptions for debtors (customers):

1. On the Default ribbon, select Debtor.
2. Select a specific Debtor (customer) account on the list.
3. Click on the Edit button. (Alternatively, you may double-click on the selected debtor (customer / client) account).
4. Click on the Subscriptions tab. Initially the Subscriptions tab will be empty for a debtor account, if no subscriptions were added.



5. Click on the Add button.



The default term as set when activating the Subscriptions plugin will be displayed. You may change this for each subscription.

6. Select and or enter the following options:

   a) Stock code - Click on the lookup > button and select the stock item (product).

   b) Enabled - This will activate or deactivate the Subscription of this product for this debtor. If the tick is removed from this field, no further subscriptions will be processed.

   c) Send warning - Uncheck "Warning send" ensures that you check .....

   d) Status - This will indicate the status of the plugin (i.e. None, running or E-mailed).

   e) id - The id is the subscription record id. It will automatically be generated when the added subscription is saved.

   f) Interval - The "interval" field determines how often subscriptions should be processed. During the chosen period invoiced The "Warning in days for subscription"

   g) Warning in days before subscription date - Enter the number of days before or after the "next process" in which the first warning message is shown in the popup plugins.

   h) Invoice in days before subscription date - Enter the number of days before or after the

"next process" in which the billing message is shown in the popup plugins.

i) Interval type – Select the frequency when the subscription is due (i.e. Day, Week, Month, 3 Months, 6 Months or Year).

j) Description – The description of the selected stock item will be displayed. You may add to the existing stock description or overtype the description, if necessary. This will be displayed in the invoices / quotes.

k) Start date - The default date is today, but can be adjusted if desired. This is the date from which the subscription or contract starts. The Last run and Next run fields will automatically be updated. This is the date from the start date plus the number of days entered in the Invoice in days before subscription date field. If the subscription has already been billed, you will see the last billing date in the Next run field. With the "*number*" field.

The Period indicating the last run to next run, for example, "Period 2023/05/01/2023/05/31" would be generated as comments when processing documents for the subscriptions plugin and will print on document layout files.

l) Items – The number of stock items for the debtor that is included and processed for this subscription. You may enter the number (quantity) subscription products.

m) Reference – Enter the reference text which is used on the invoice / quote. In this field, we can also use data fields. This reference will be displayed on the "*Your reference*" field on invoices / quotes.

n) Contract term not the same – This field allows you to set the 2nd set of settings for a period contracts. If selected (ticked), it will add the Interval and Interval type options (fields) at the bottom (underneath the "*Reference*" field) of the Subscriptions tab. You may set the options if the field differs from the main subscription.

7. Click on the List button to save the subscription.

8. Click on the Save button on the Edit Debtor screen to save your changes.

9. Select the next debtor (customer / client) account, if necessary.

Delete subscriptions

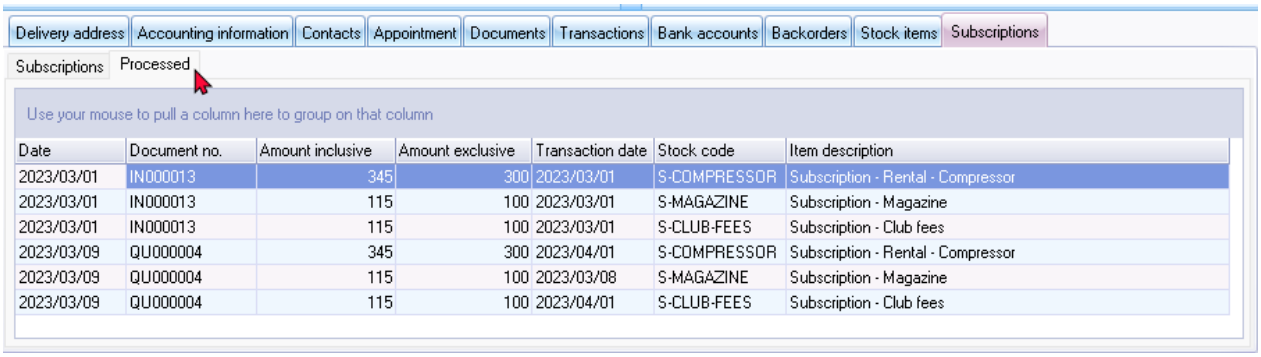
To permanently remove an existing subscription, you may click on the Delete button.

It is important to ensure that you can set a subscription to disabled by removing the tick in the Enabled field.

If the subscription needs to be activated at a later point in time be enabled again, you may tick the Enabled field.

View processed transactions

Once subscriptions have been processed, an extra Processed tab will be added. If you click on the Processed tab, the quotes and invoices will be listed.



You may double-click on a quote or an invoice to print the document.

Process subscriptions

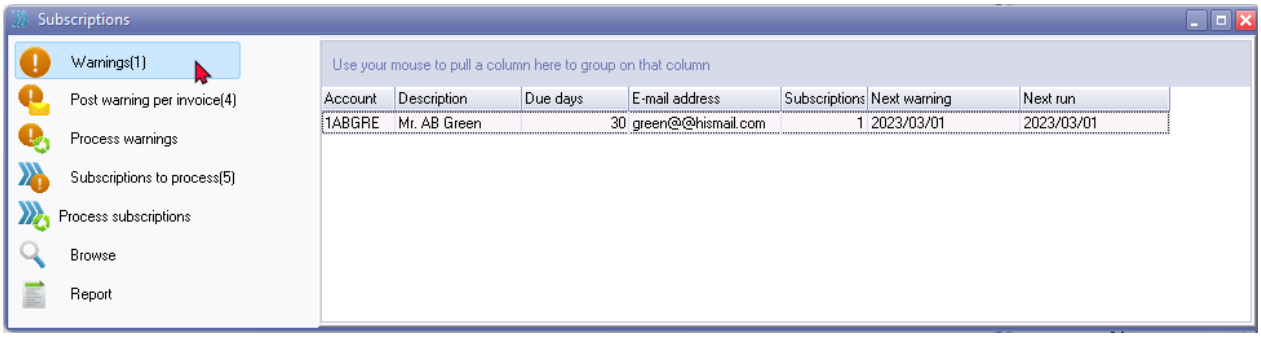
Process subscriptions

If the "*Show for this user*" field on Plugin → Document plugins → Subscriptions (Setup ribbon), is selected, the Subscriptions plugin will automatically be launched if you open the Set of Books and any subscriptions need processing.

If the "*Show for this user*" field is not selected, you may launch the Subscriptions plugin from the Subscriptions icon on the Default ribbon.

To manage subscriptions:

If the Subscriptions plugin is not automatically launched, click on the Subscriptions icon on the Default ribbon. The Subscriptions (Warnings) plugin screen is displayed:

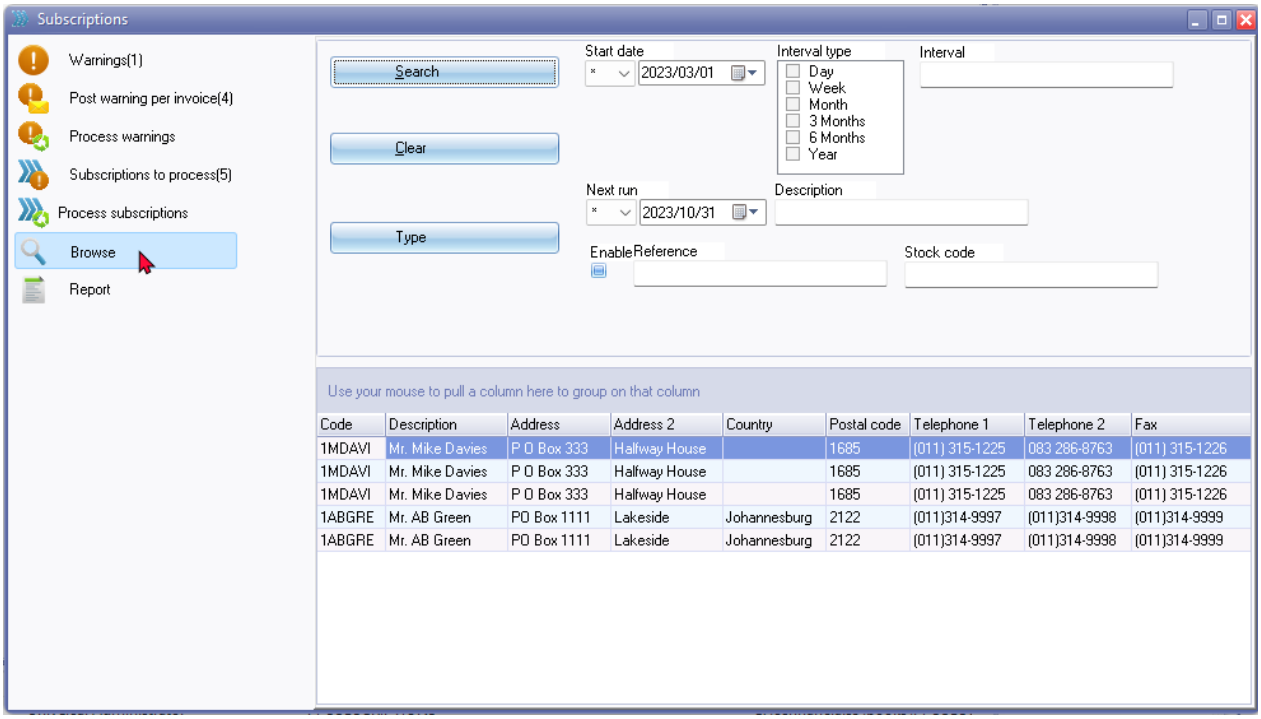


The Warnings option for subscriptions will list the warnings of subscriptions.

Only those debtor accounts for which the "*Send warnings*" field is selected on the Detail form, will be included on this list.

Filter / Search for Subscriptions

Click on the Browse button.

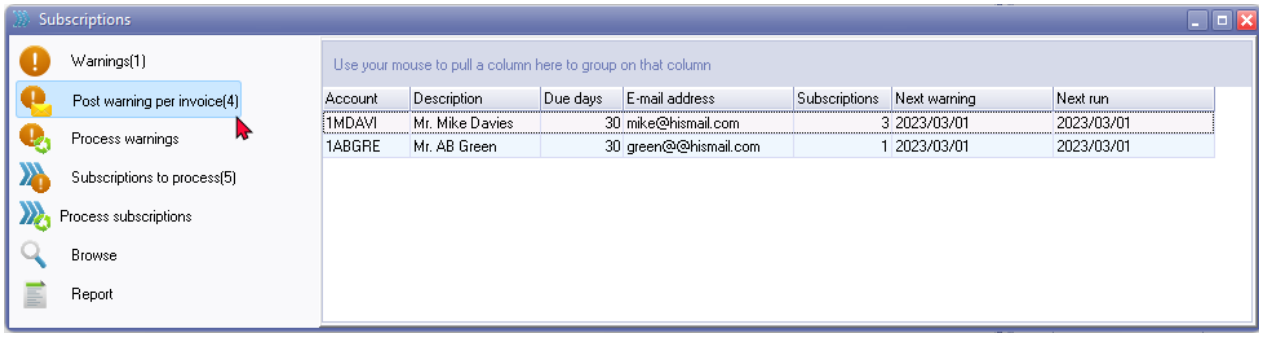


Click on the Search button. By default, no options should be selected, but you may select the criteria to filter or locate specific subscriptions.

Post warnings per invoice

The Process warning per invoice option for subscriptions will list the warnings of subscriptions.

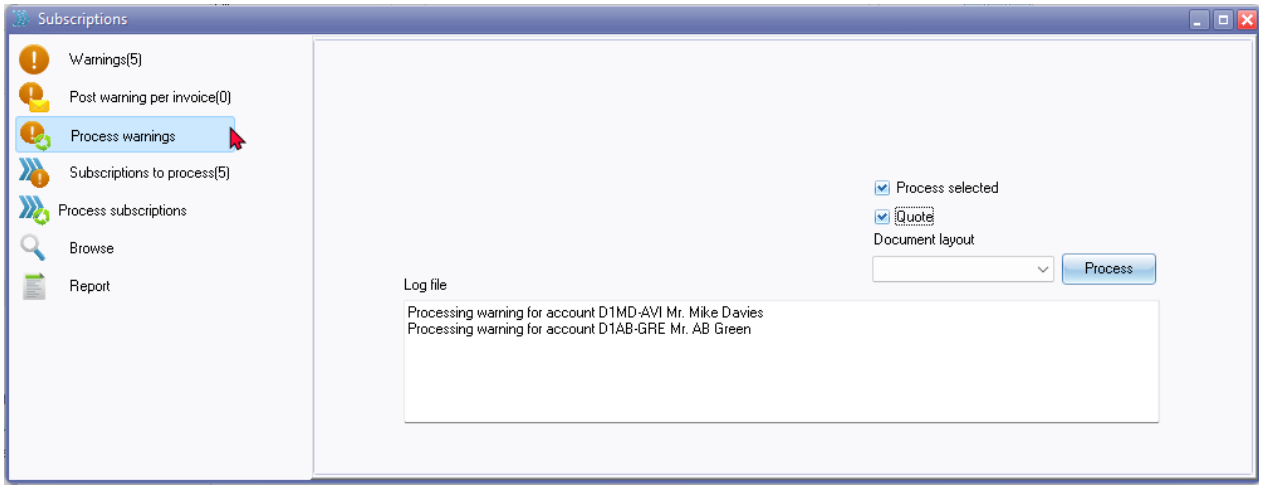
Only those debtor accounts for which the "*Send warnings*" field is selected on the Detail form, will be included on this list.



Process warnings

The Process warnings option for subscriptions will process the warnings of subscriptions.

Only those debtor accounts for which the "*Send warnings*" field is selected on the Detail form, will be processed.



Process selected - Tick this option to process selected subscriptions. If this option is not selected, all subscriptions will be listed.

Quote - Tick this option to process warnings as a Quote. If this field is not selected, Invoices will be generated.

Document layout - The default layout file is stored in the following folder:

" ...\plug_ins\reports\Subscriptions\en\layouts "

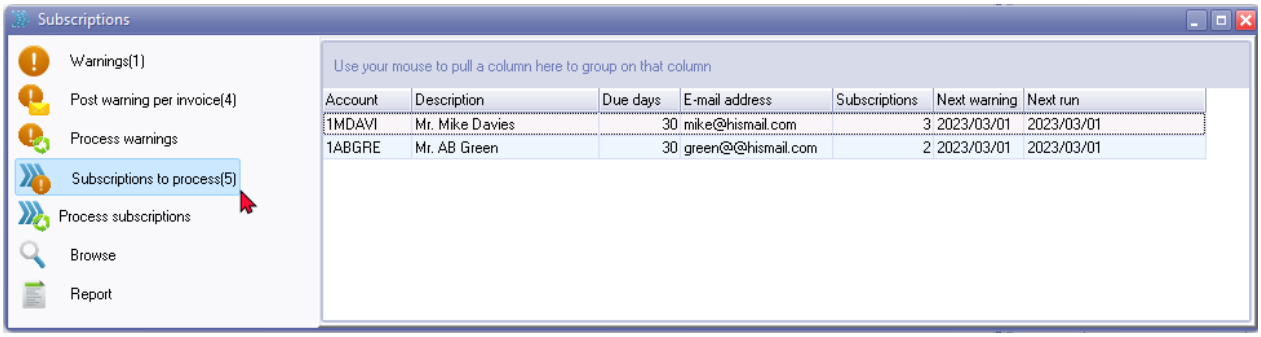
Log file – The details of the debtor account(s) and subscription(s) will be displayed. An example, is as follows:

Processing warning for account D1MD-AVI Mr. Mike Davies
Processing warning for account D1AB-GRE Mr. AB Green

Subscriptions to process

The Subscriptions to process option for subscriptions will list the debtor accounts which subscriptions need processing.

The number of subscriptions, in this example is (5). In this example, this means that one debtor account has 2 subscriptions and the other debtor account has 3 subscriptions.

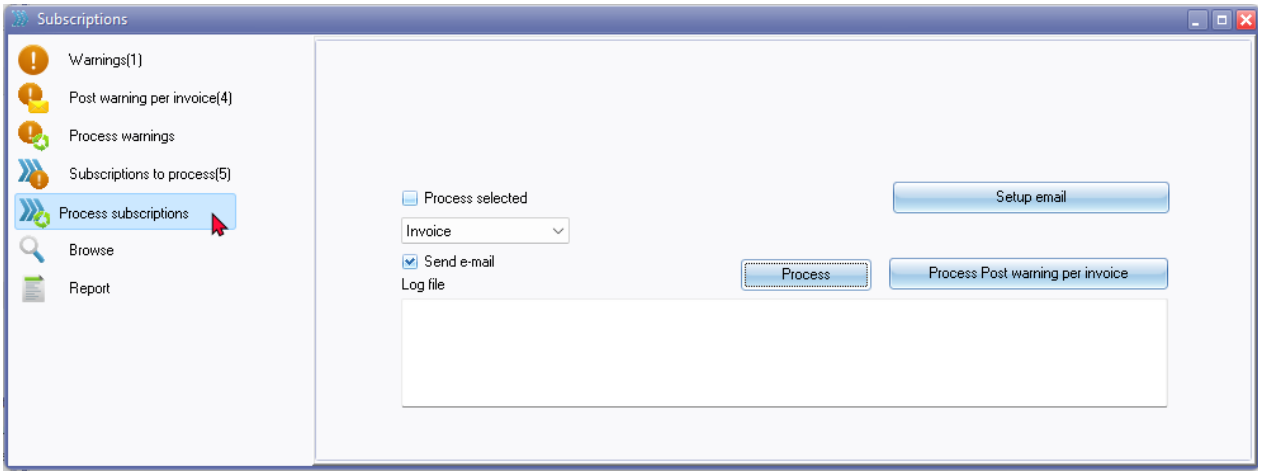


You may double-click on a selected debtor account to view a list of the subscriptions. The Subscriptions form consists of two tabs and is as follows:

- Subscriptions tab - You may view the details of the selected subscription, you may click on the Detail button to view and or edit, if necessary.
- Processed tab - You may view a list of the processed transactions and double-click to print a selected invoice or quote.

Process subscriptions

The Process subscriptions option allows you to process Invoices or Quotes or No document (already invoiced) for subscriptions. You have the option to process subscriptions via e-mail manually (snail-mail via postal services or courier).



Process selected - Tick this option to process selected subscriptions. If this option is not selected, all subscriptions will be listed.

Invoices - Invoices is the default option. You may select to process Quotes or No document (already invoiced) options.

Send e-mail - If this option is not ticked, you may add print the documents manually. If this option is selected (ticked), the e-mail documents (invoices or quotes) will be attached as an attachment to the e-mail message to the respectable debtor accounts.

You may add or customize the email templates to be displayed in the e-mail message.

Process – This button will process the subscriptions.

Process Post warnings per invoice – This button will process and post the warnings per invoice.

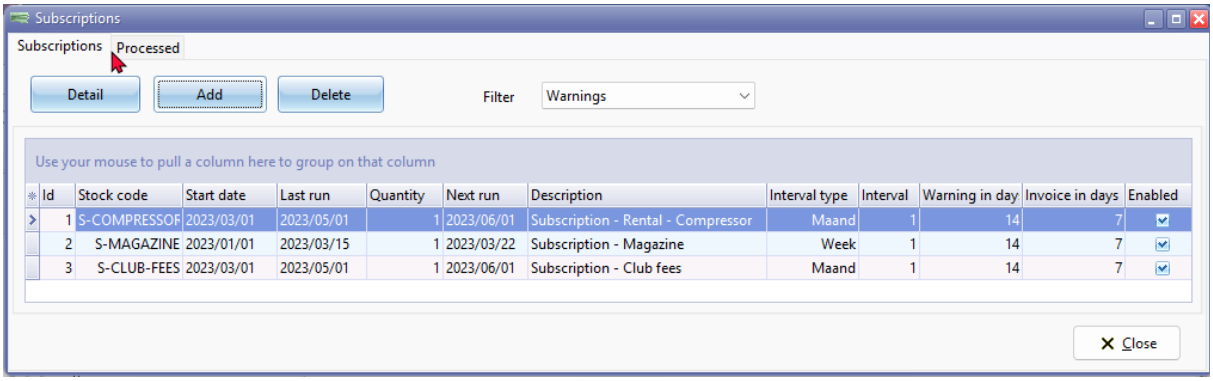
Log file – The details of the debtor account(s) and subscription(s) will be displayed. An example, is as follows:

```
Processing warning for account D1MD-AVI Mr. Mike Davies
Processing warning for account D1AB-GRE Mr. AB Green
```

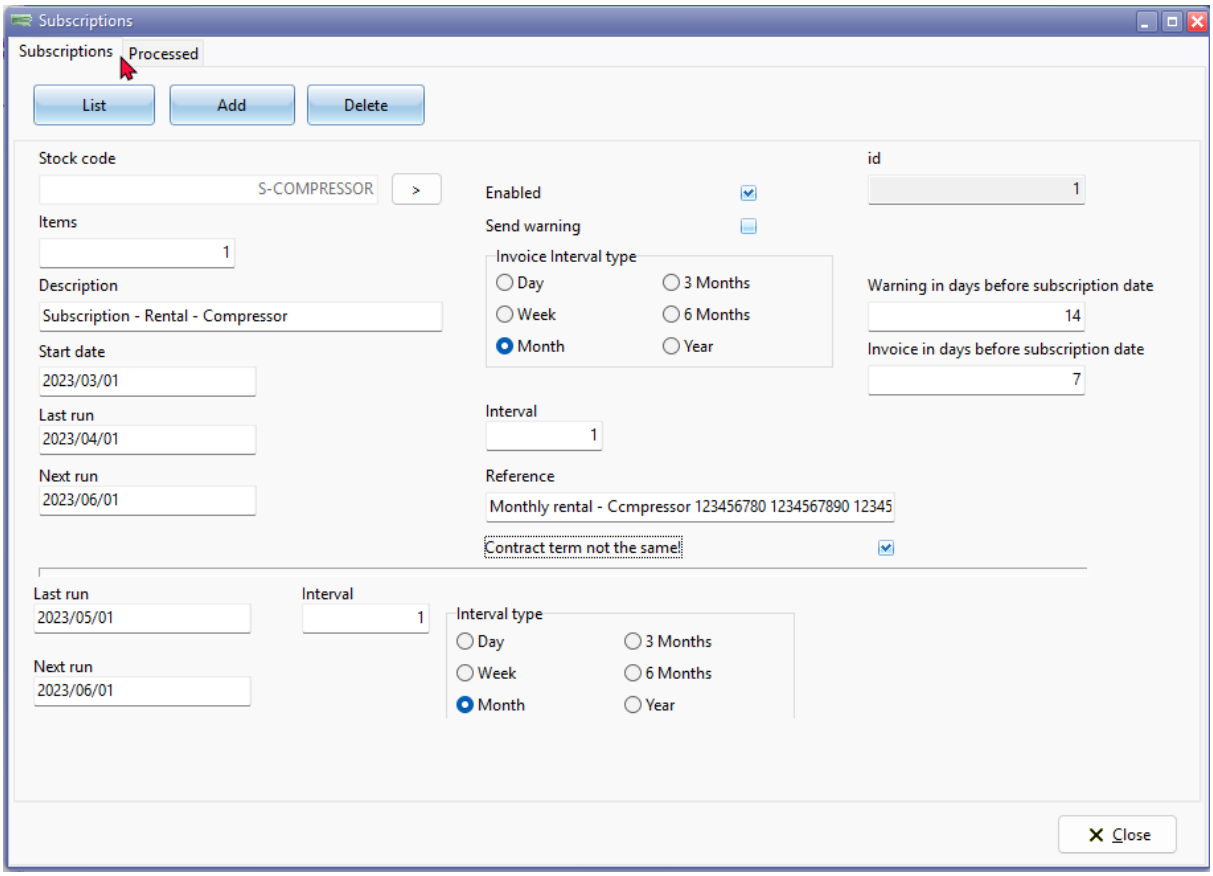
Details and Processed subscriptions

You may click double-click on a subscription on the list in the Warnings, Post warning per invoice, Subscriptions to process and Browse screens, to edit a subscription or to view and print quotes and invoices for processed subscriptions.

Subscriptions - List



Subscriptions - Detail



Subscriptions - Processed

View processed subscriptions. The documents on this list will list all subscriptions processed with the Subscriptions plugin as Unposted Invoices or Quotes. Each document will list the each subscription included in the document.

The documents will be processed as an unposted Invoice or Quote, which have not been updated (posted) to the ledger.

Process subscriptions - E-mail setup - configuration

Process Subscriptions via E-mail

Process subscriptions - E-mail subscriptions

If you have selected the "*Send e-mail*" option on the Process subscriptions screen, the e-mail option will be launched.

The e-mail documents (invoices or quotes) will be attached as an attachment to the e-mail message to the respectable debtor accounts. If the "*No document (already invoiced)*" option is selected on the Process subscriptions screen, no document will be attached to the e-mail message.

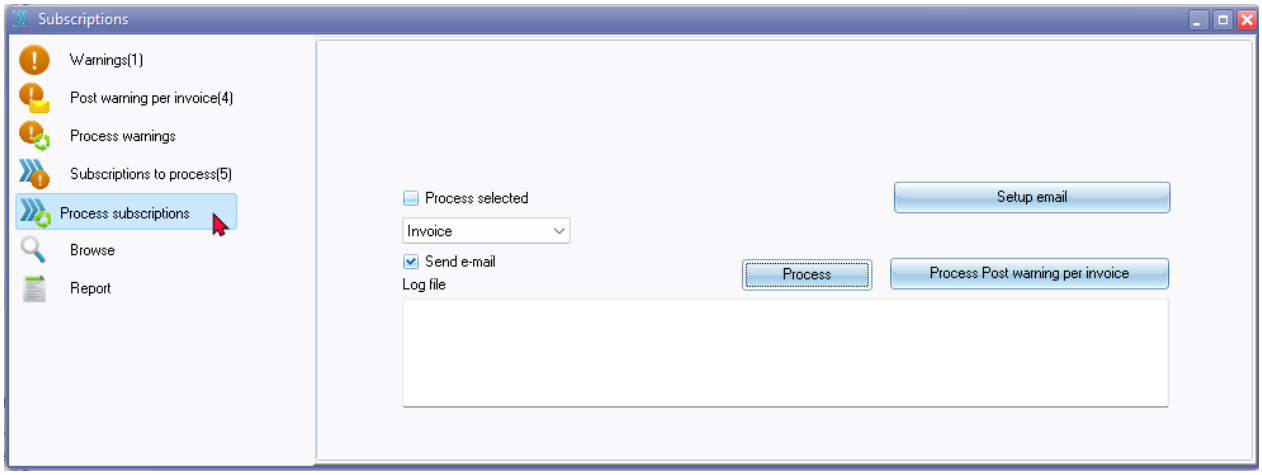
You may add or customise the email templates to be displayed in the e-mail message.

Process Subscriptions - Configure E-mail

Before you can Process subscriptions, you have the following options:

Process selected: This option will help you to choose whether to process all subscriptions or specific selected subscriptions. The options is as follows:

- Not selected - If this field is not selected (not ticked), all subscriptions on the Subscriptions to process list will be processed.
- Selected - If this field is selected (ticked), you may select specific subscriptions on the Subscriptions to process list. Only the selected subscriptions on the Subscriptions to process will be processed.

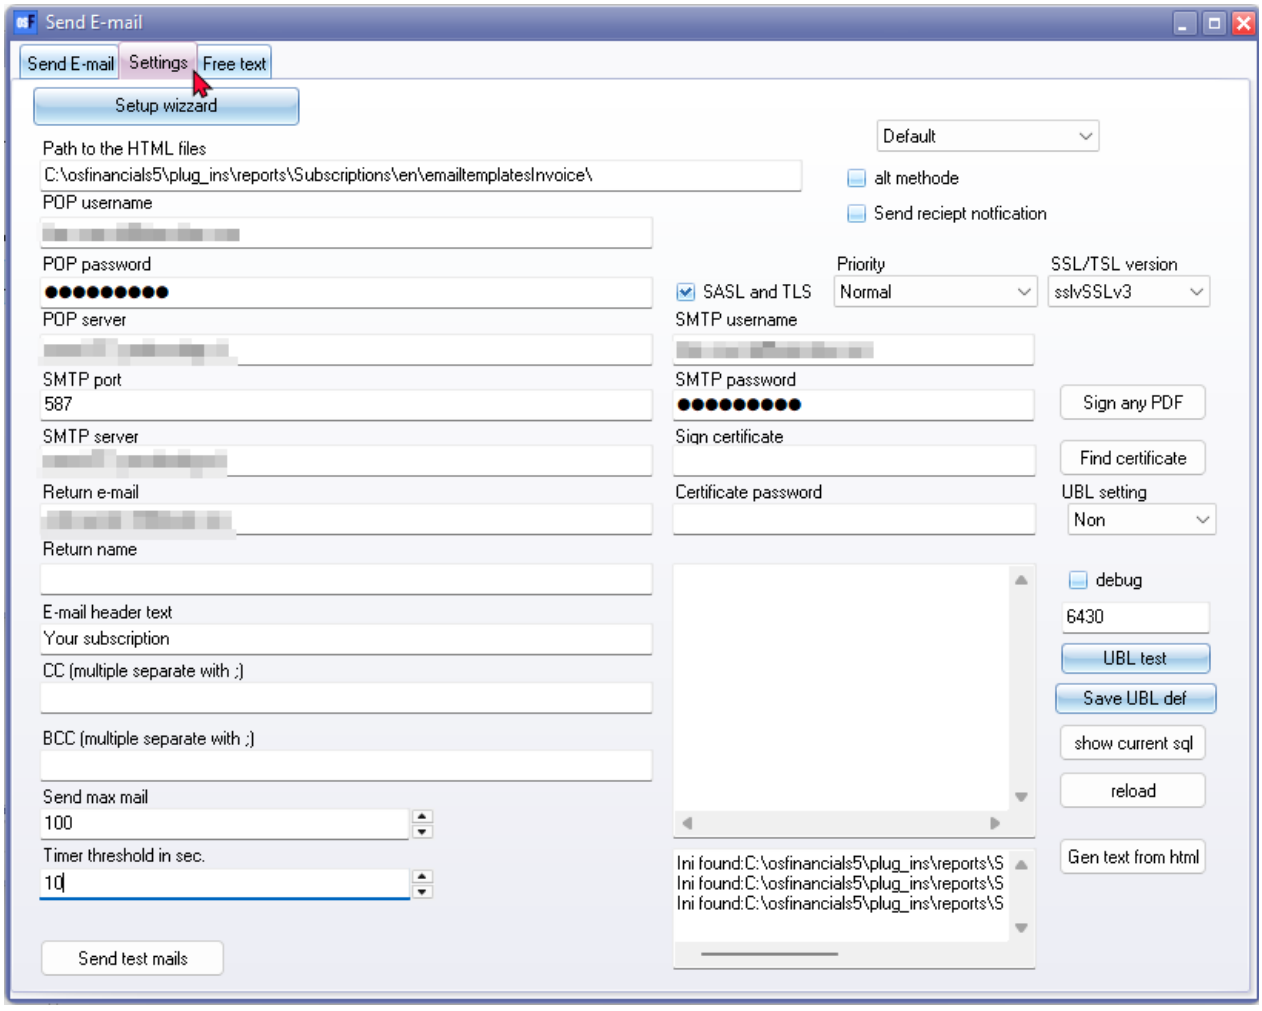


Process Subscriptions - E-mail account setup

Before you can send e-mails, you need to configure your e-mail account in the Set of Books. This is only a once off configuration. Unless your requirements change.

To do this, you need to click on the E-mail or E-mail selected button.

Then click on the Settings tab.



Select or enter the following, where applicable:

Field	*Description*
Path to the HTML file:	*The default path is displayed as:* "C:\osfinancials5\plug_ins\reports\Subscriptions\en\emailtemplatesInvoice" *If you have installed osFinancials5/TurboCASH5 into a different folder, you may need to overtype this. Specifies the path where the files for the Subscriptions plugin is located. This path may be edited for your own requirements if you have a personal set of files.*
POP username:	*Enter the POP username as registered with your ISP (Internet Service Provider) for your e-mail account settings, if required.*
POP password:	*Enter the POP Password as registered with your ISP (Internet Service Provider) for your e-mail account settings, if required.*
POP server:	*Enter the POP server as registered with your ISP (Internet Service Provider) for your e-mail account settings, if required.*
SMTP port:	*The default is "25" seconds. This is determined by the default configuration of your operating system.*
SMTP server:	*Enter a valid SMTP as registered with your ISP (Internet Service Provider) for your e-mail account settings.* *Note when POP before SMTP (usually when you are not using your provider sent emails) you can create an e-mail box which nobody reads. This is because if there are multiple ISP's on the mail box mail is read, the POP for SMTP is not working properly.* *It is best to use an account that is further used by anyone.*
SMTP username:	*Enter the SMTP username as registered with your ISP (Internet Service Provider) for your e-mail account settings.*
SMTP password:	*Enter the SMTP password as registered with your ISP (Internet Service Provider) for your e-mail account settings.*
Return e-mail:	*This field is optional. You may enter your own e-mail address.*
Return name:	*This field is optional. You may enter your own name to be displayed on the message to be displayed on the email field of the recipients e-mail or if the message is returned by your ISP in the case of an invalid e-mail address.*

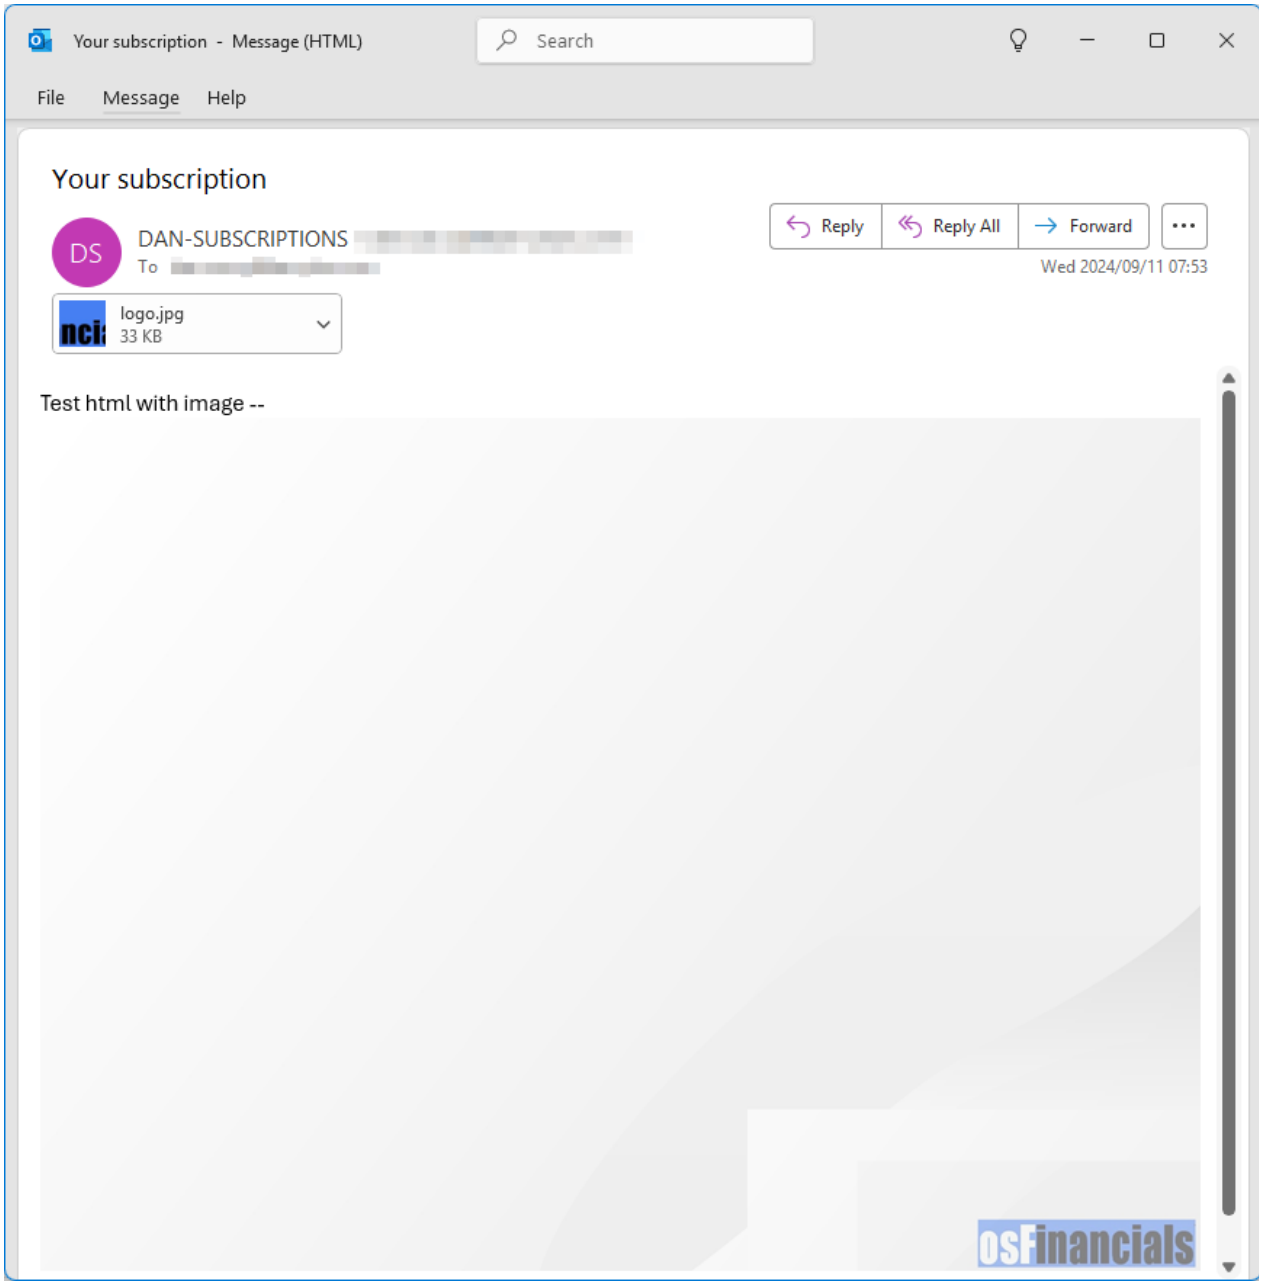
Field	Description
CC: (multiple separate with ;)	This abbreviation CC “Carbon Copy” indicates secondary recipients of a message. Those recipients who are to receive a copy of a message directed to another. The list of recipients in the CC field is visible to all other recipients of the message. Enter a valid e-mail address, if necessary. Note you need to add a space before and after the semi-colon. If you do not add spaces, the first digit of the second and subsequent e-mail addresses may cut off. This could result in an undelivered mail error.
BCC: (multiple separate with ;)	This abbreviation BCC “Blind Carbon Copy” allows you to send a copy of your correspondence to a third party when you do not want to let the recipient know that you are doing this (or when you do not want the recipient to know the third party's e-mail address). You may also wish to enter this filed, when sending an e-mail to multiple recipients, you can hide their e-mail addresses from each other. Enter a valid e-mail address, if necessary. Note you need to add a space before and after the semi-colon. If you do not add spaces, the first digit of the second and subsequent e-mail addresses may cut off. This could result in an undelivered mail error.
Send max mail:	The default is “100”. You may use the scroll buttons or enter the number of the maximum emails required to send in a batch. This will limit the number of email messages.
Timer threshold in sec:	The default is “10” seconds. This is determined by the default configuration of your operating system. It is not recommended to change this, but you could experiment by changing the values.
Default:	Default is the standard option. You may select the html only option.
Alt methode:	Tick to select the alternative mode.
Send receipt notification:	If this field is selected (ticked), a read receipt will be requested by the recipient.
Priority:	Normal is the default priority. You may select Highest, High, Low or Below low option. This is the priority in which e-mails will be sent.
Sign any PDF:	Optional should be you can sign any pdf with this button (also the ones send to you).
Find certificate:	If you have a certificate, click in this button to locate it and add it to this plugin. You may use add Digital signatures to the PDF (portable document format) files (e.g. OpenSSL pkcs12.pxf) to your e-mail received by your recipients (e.g. debtors (customers). See:

Field	*Description*
	· *http://www.openssl.org/* · *PKCS #12: Personal Information Exchange Syntax Standard*
Certificate password:	*If you have selected a certificate, you need to enter a valid password for that certificate.*
Send test mails:	*You may click on the Send test mails button to check that the configuration is correct.*

- The box (on the lower right-hand side) - Some messages, e.g. may be displayed in the text area of the Settings screen. An example may be “your e-mail address *Login failed”*. This may indicate that something is not correctly entered on the settings.
- Show current sql – The sql, is used to add the debtors, etc. for the Subscriptions plugin.

Send test mails

You may click on the Send test mails button to check that the configuration is correct.



The Subject of the email message is the *.ini file:

```
EHeaderText=Your subscription
```

This will print in the Subject field for the test mail purposes. The correct document number and your company's name will only be displayed when sending documents via e-mail.

Two images will be attached:

- Background1.Jpg - Located in the .../ bin / themes / (selected theme) folder.
- logo.jpg - Located in the root directory of your osFinancials5/TurboCASH5 installation.

Created with the Standard Edition of HelpNDoc: Easily create EPub books

Process subscriptions warnings - E-mail

Process Subscriptions via E-mail

Process subscriptions - E-mail subscriptions

If you have selected the "*Send e-mail*" option on the Process subscriptions screen, the e-mail option will be launched.

The e-mail documents (invoices or quotes) will be attached as an attachment to the e-mail message to the respectable debtor accounts. If the "*No document (already invoiced)*" option is selected on the Process subscriptions screen, no document will be attached to the e-mail message.

You may add or customise the email templates to be displayed in the e-mail message.

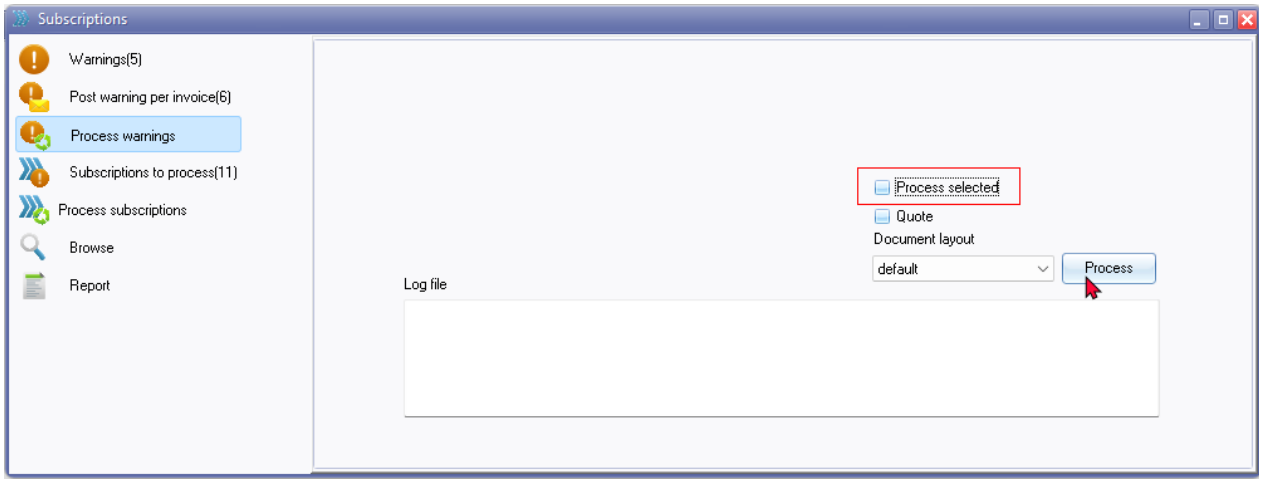
Process Subscriptions warnings - Select accounts

By default, all warnings for subscriptions for all debtor (customer/client) will be sent.

Before you can Process warnings for subscriptions, you have the following options:

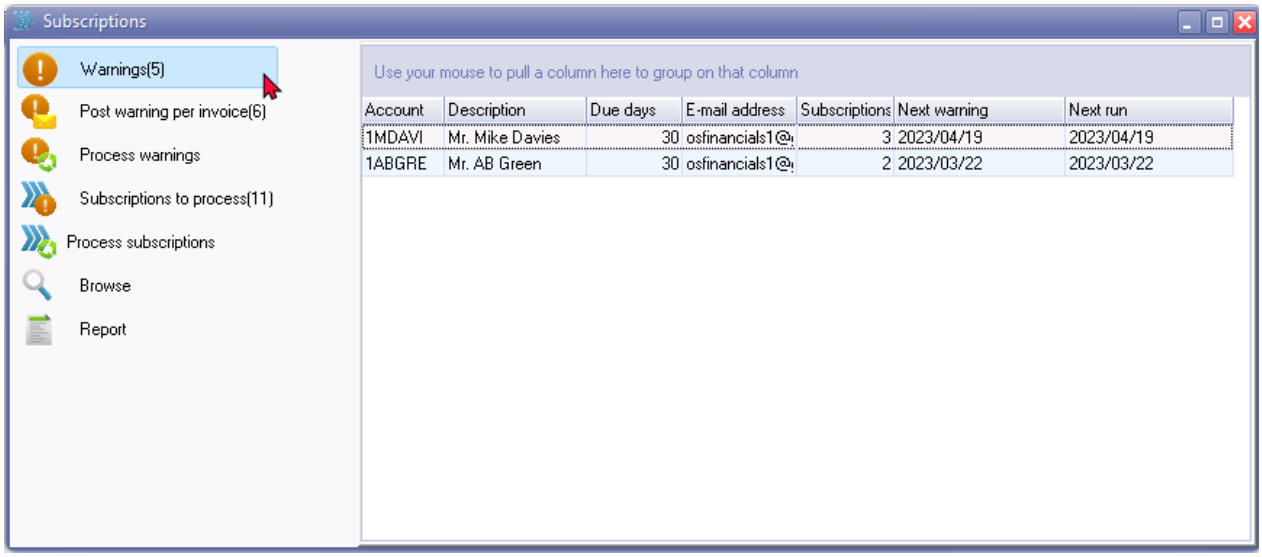
Process selected: This option will help you to choose whether to process all subscriptions or specific selected subscriptions. The options is as follows:

- Not selected - If this field is not selected (not ticked), all subscriptions on the Warnings option will be processed when you Process warnings for subscriptions:
- Selected - If this field is selected (ticked), you may select specific subscriptions on the Warnings list. Only the selected subscriptions on the Process warnings will be processed.



To send warnings for selected debtor (customer/client) account(s), the "*Process selected*"-field is selected

(ticked) on the Process warnings option. You may select specific subscriptions on the Warnings list. Only the selected subscriptions on the Process warnings will be processed.



You may press the Ctrl key and use your mouse to select specific debtor (customer/client) accounts.

Navigate to the Process warnings option to process warnings for subscriptions of selected debtor (customer/client) accounts.

When processing warnings for subscriptions the log file, is as follows:

```
Skip processing for accountD1MD-AVI Mr. Mike Davies
Skip processing for accountD1RO-GSM Mr. Roger Smith
Skip processing for accountD1AB-GRE Mr. AB Green
Skip processing for account D1MD-AVI Mr. Mike Davies
Processing warning for account D1RO-GSM Mr. Roger Smith
Skip processing for account D1AB-GRE Mr. AB Green
```

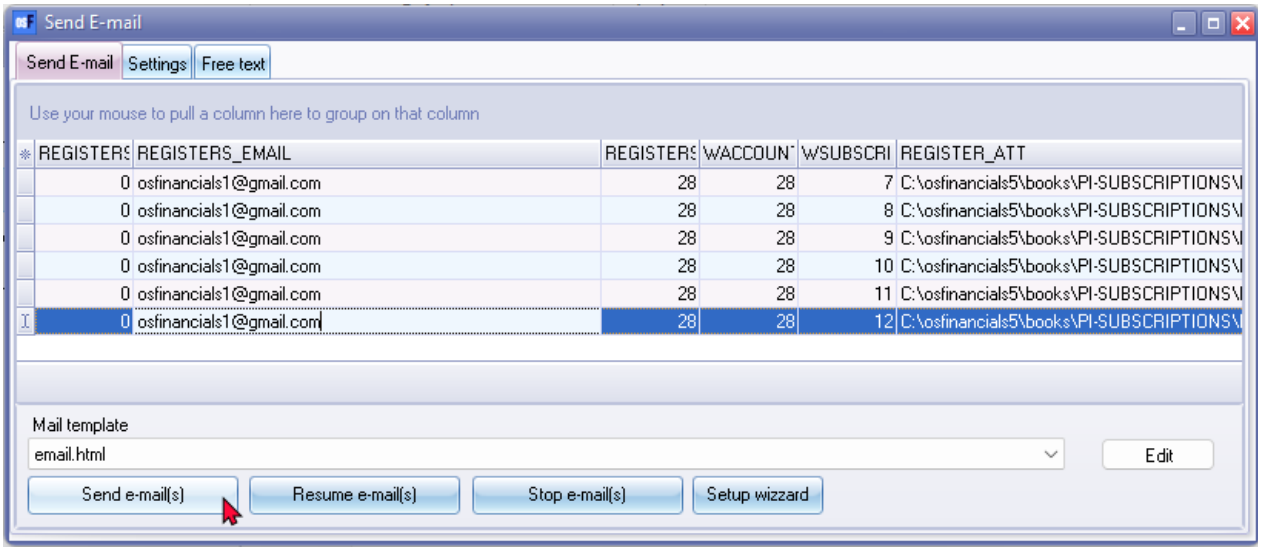
The processing of warnings for subscriptions, will list only the selected debtor (customer/client) account(s) as "*Processing*".

All other selected debtor (customer/client) account(s) which was not selected, will be included in the log file as "*Skip*".

Subscriptions - Warnings - Send E-mail

Once your e-mail is properly setup and configured, you may proceed to send warnings via e-mail.

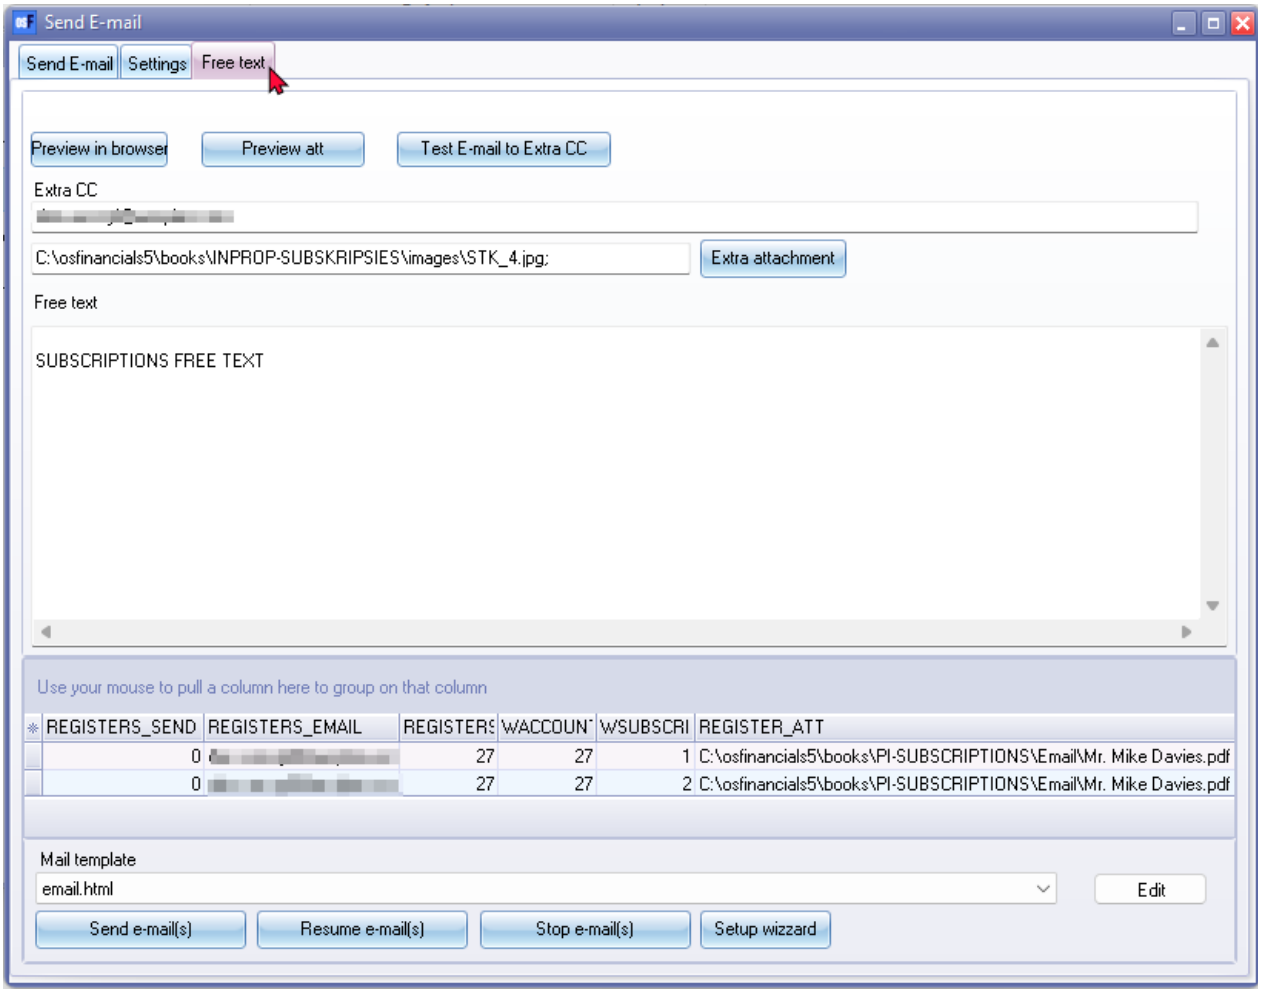
The "*Send e-mail*" option needs to be selected on the Process subscriptions option. This will launch the Send E-mail screen with the default - Send E-mail tab to process warnings.



Each subscription for a debtor (customer/client) account will be listed and emails will be sent separately.

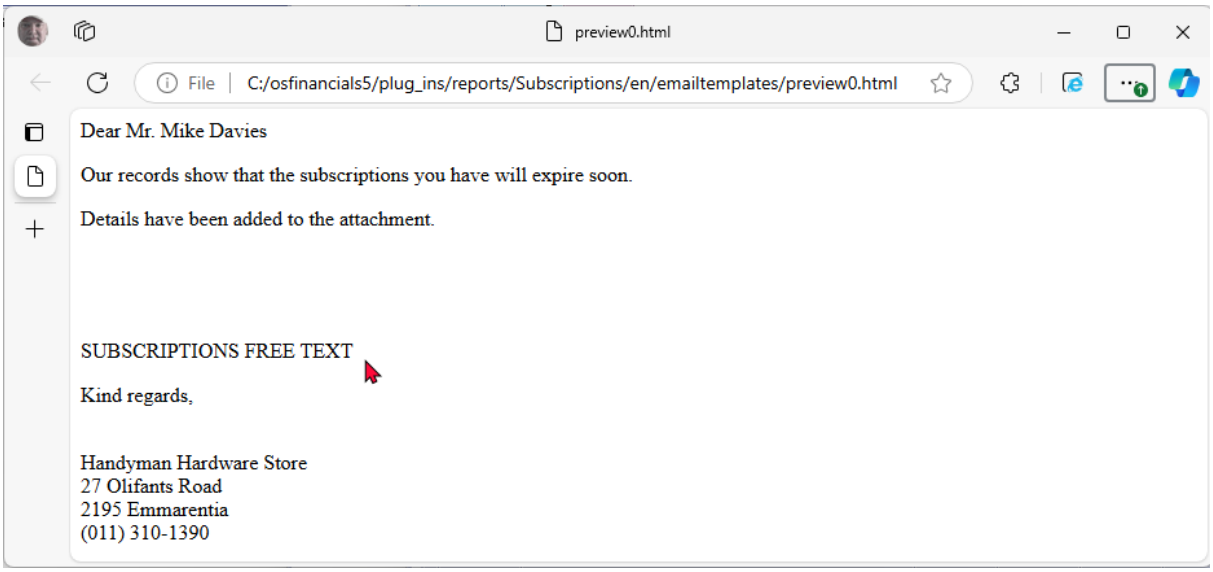
Subscriptions - Warnings - Send E-mail - Free text tab

Click on the Free text tab to enter Free text to be included in your e-mail message and explore more options.

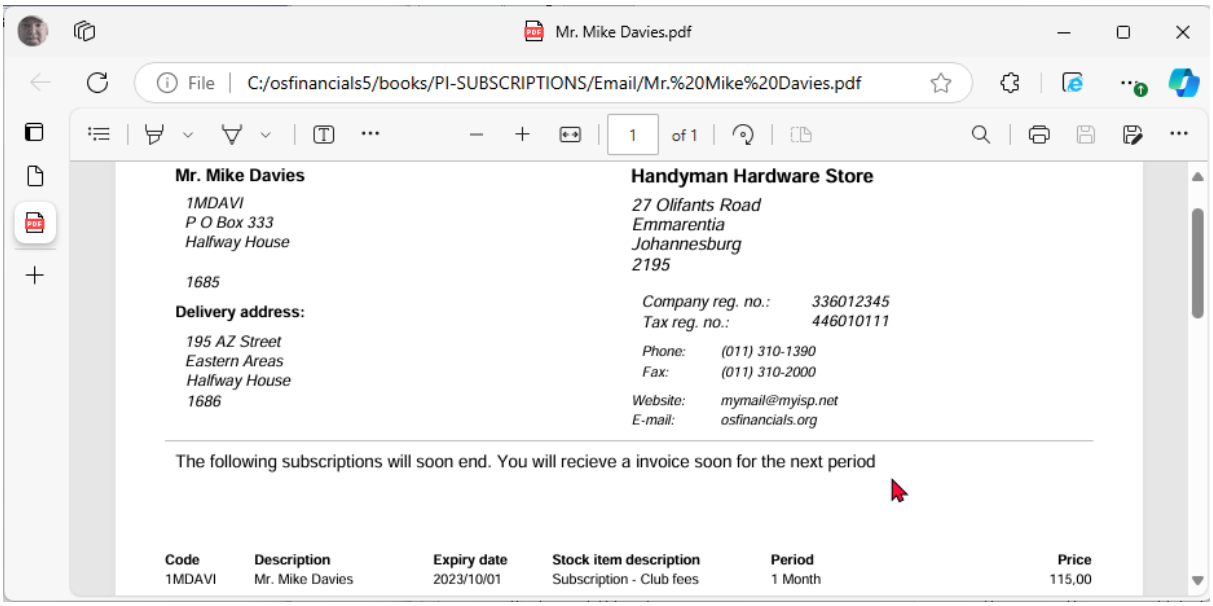


On the Free text tab, you may have the following options:

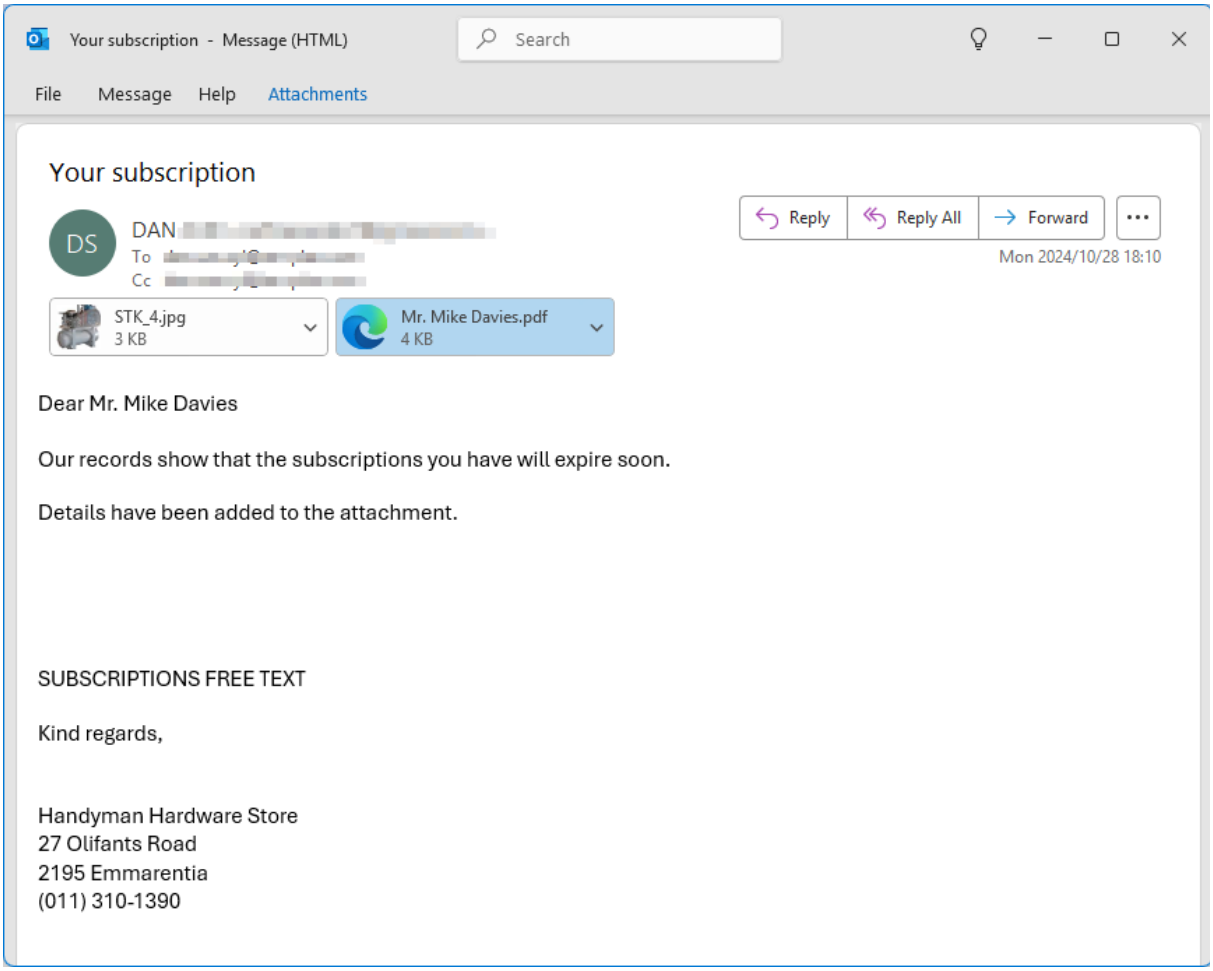
- Free text - Add any additional information to be included in the message to your debtors customers/clients).
- Preview in browser - Click on this button. This will add a temporary "*preview0.html*" file and will be opened in your system's default web browser.



- Preview att - Click on this button to preview the warning message included in the email message before you send e-mail(s).



- Test E-mail to Extra CC - Before you click on this button, you need to add a valid e-mail address in the "*Extra CC*" field. This will send an e-mail to the recipients in the "*Extra CC*" field. If you send it to yourself, you may preview the email message including free text entered and attachments.

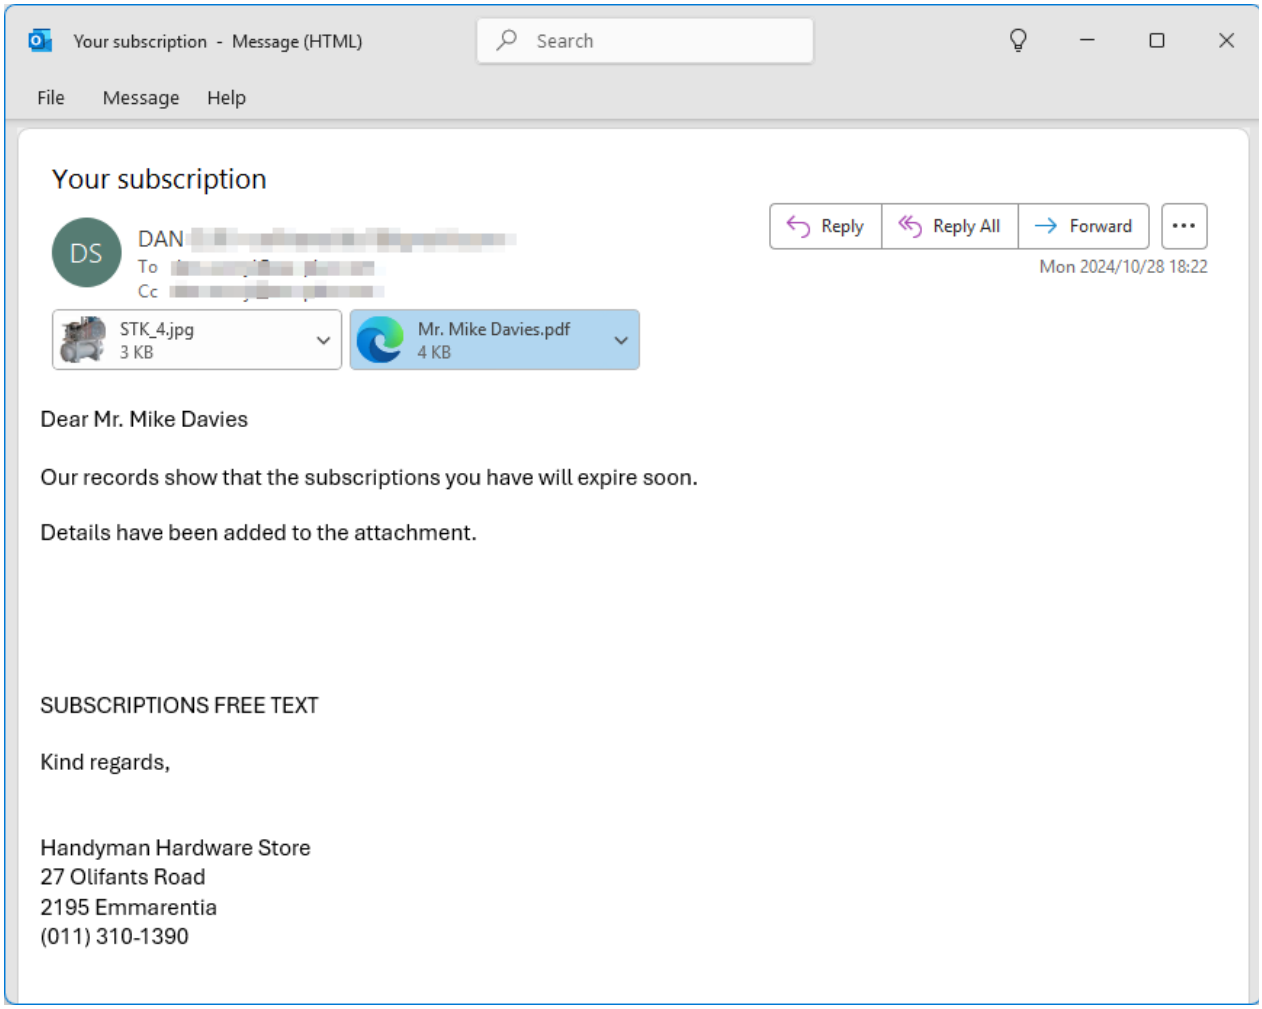


- Extra attachment - Click on this button to include extra files to include in the e-mail(s) send to the recipients.

Once you are satisfied with your selection, you may click on the Send E-mail(s) button to send the warnings to your debtors (customers/clients).

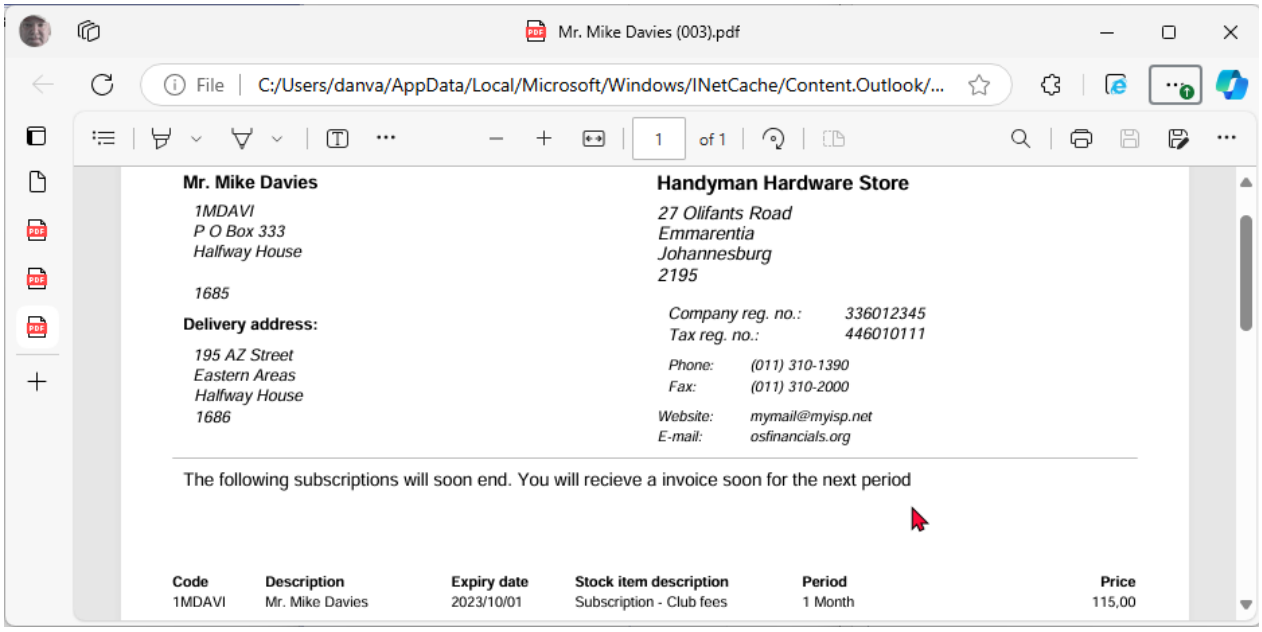
Email messages in Recipients Email Inbox

The e-mail for processed warnings of subscriptions will land in the Inbox of the Recipient's (debtor (customer/client) account.



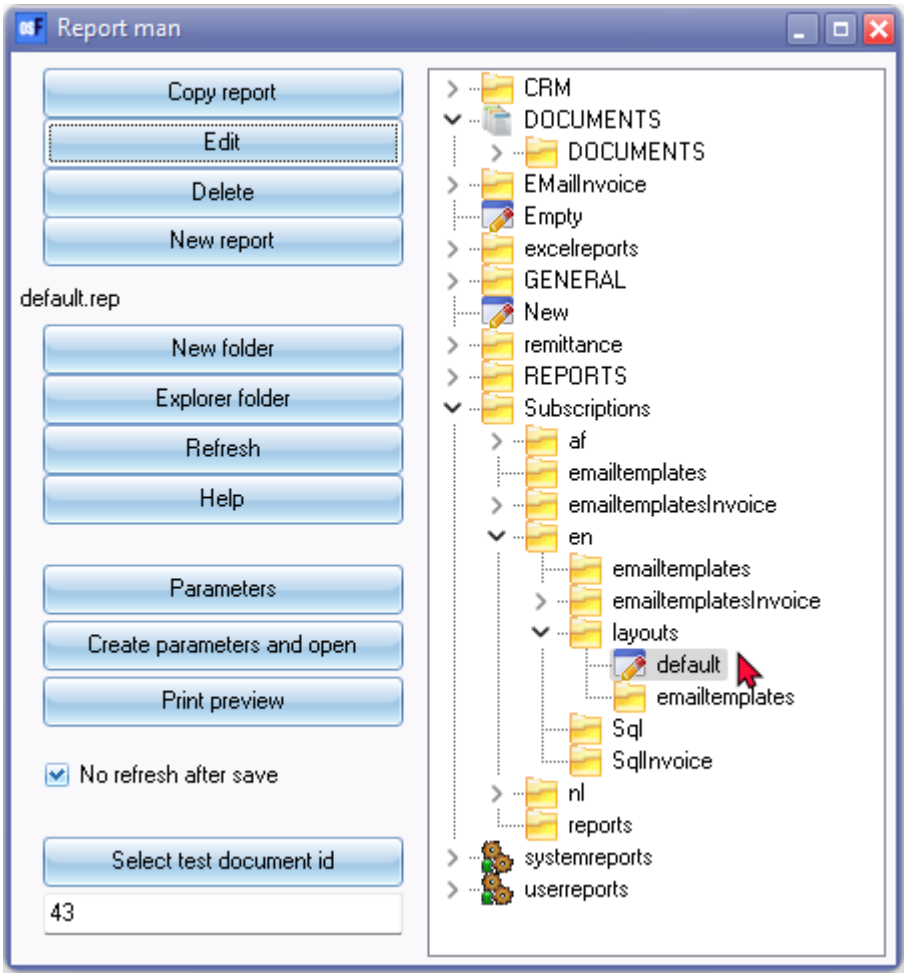
Open Attachments

The layout files for warnings if subscriptions, will be attached as a pdf file and the recipient can open these files in their system's default pdf-application or program.



Edit the layout files

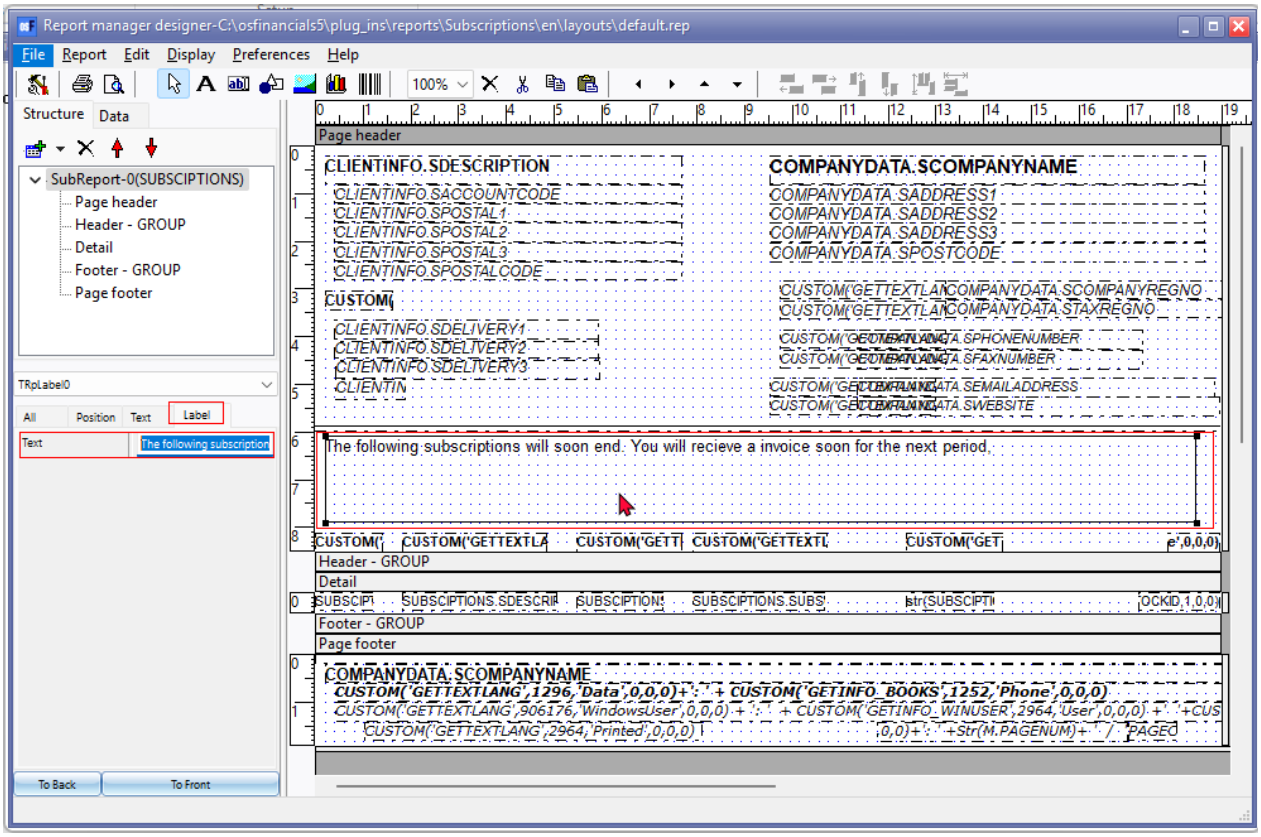
You may edit the layout files in the Report designer (Setup ribbon).



The layout files for warnings of subscriptions is located in the following folder:

" ...\plug_ins\reports\Subscriptions\en\layouts "

Click on the Edit button. (Alternatively, you may double-click on the report).



Select the message and edit it as necessary. To do this, click on the 'TRpLabel0' and on the Label tab type your own text. The default Label text is as follows:

> The following subscriptions will soon end. You will receive a invoice soon for the next period.

For a next sentence you may copy the expression to type another message. Repeat as necessary

Some features you may need to explore:

Move text:

- Drag it to the desired place.

Delete text or expressions:

- Select the object and go to Edit - Delete

Add static text:

- TRpLabel – Add static text object to the report.
- Add the messages or text to display on the report.

Add company logo:

- TRpImage: Click on this icon and click on the space and drag to insert a blank image object.
    - Enter “COMPANYDATA.BLOBLOGO” in the Expression field.

- This is used to display your company logo on the reports and document layout files. The Company Logo dataset is COMPANYDATA.BLOBLOGO. The logo is stored in the database as a BLOB (Binary Large Object) and will be displayed printed on remittance layout files if loaded in Company info - Options screen (Default ribbon).

- Add a static picture:
  - TRpImage – Click on this icon and click on the space and drag to insert a blank image object.
  - Right-click on the image object and select the Open option on the context menu.

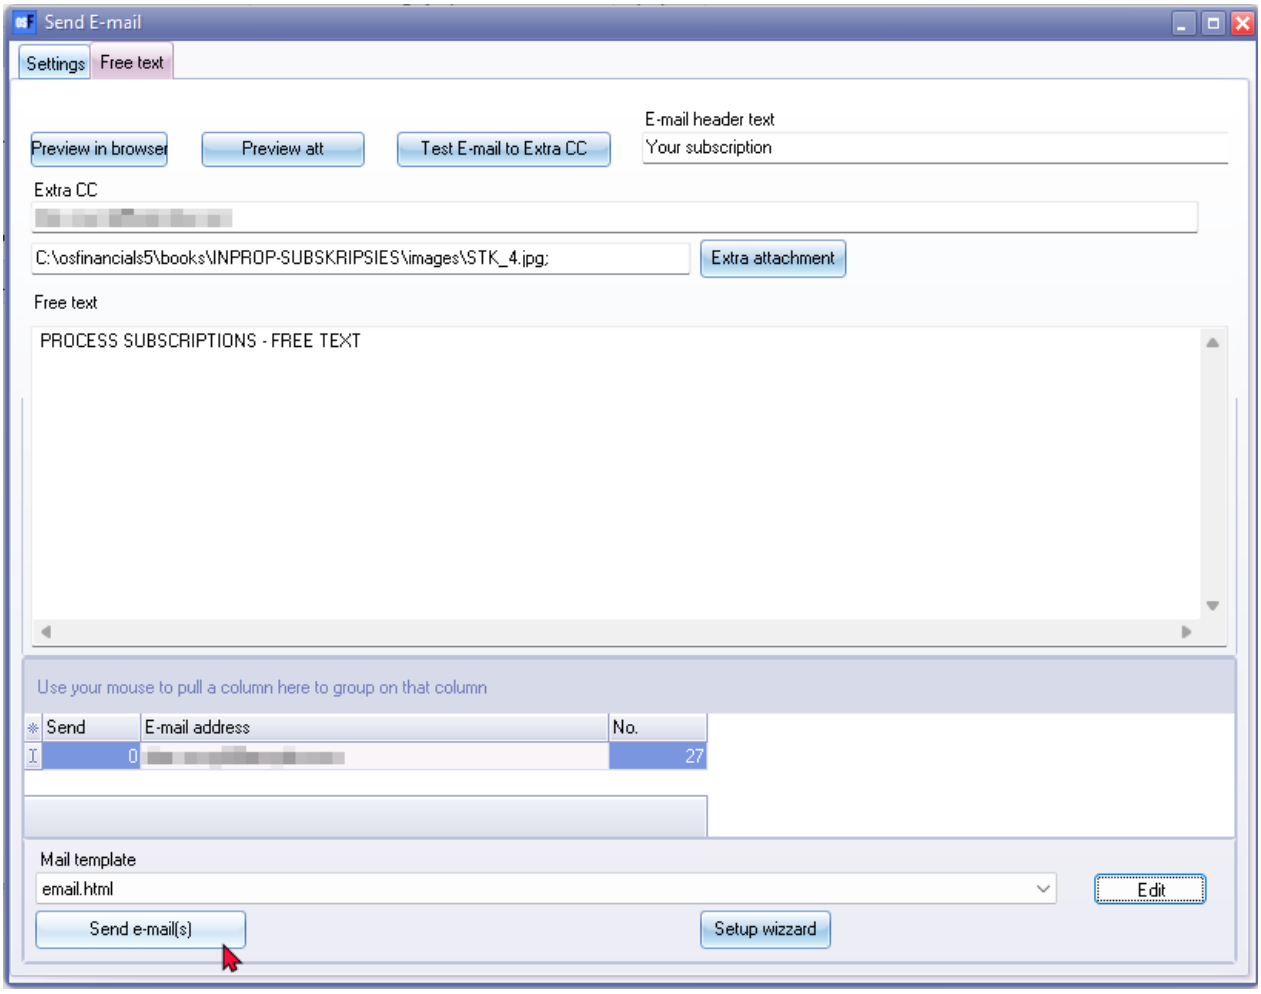
Send e-mail(s) button – This will start to send e-mails and the attachments to the debtor accounts on the list.

Process Subscriptions - Customise E-mail templates

Preview in browser button – This will display the mail template in your system's default. This is the e-mail template which will be displayed as the e-mail message. You may create and customise e-mail templates and select a email template. The e-mail templates are stored in the following folder:

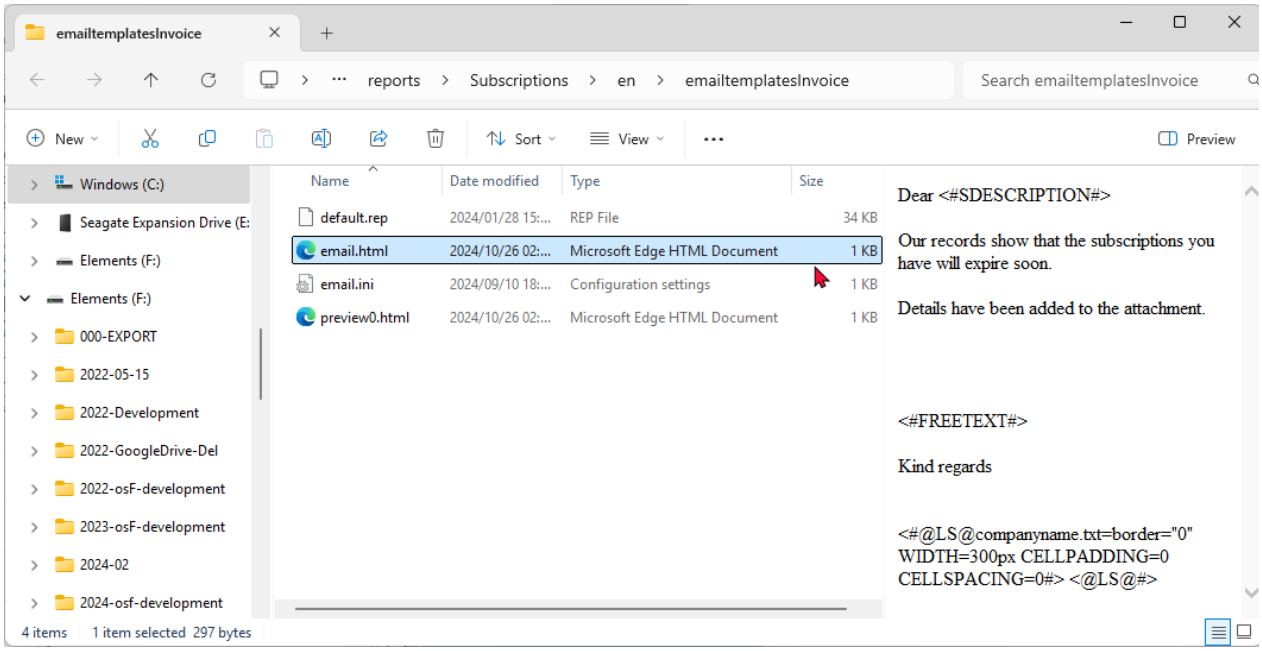
"...\plug_ins\reports\Subscriptions\en\emailtemplatesInvoice "



Customise Templates

If you click on the Edit button, the following folder will be opened:

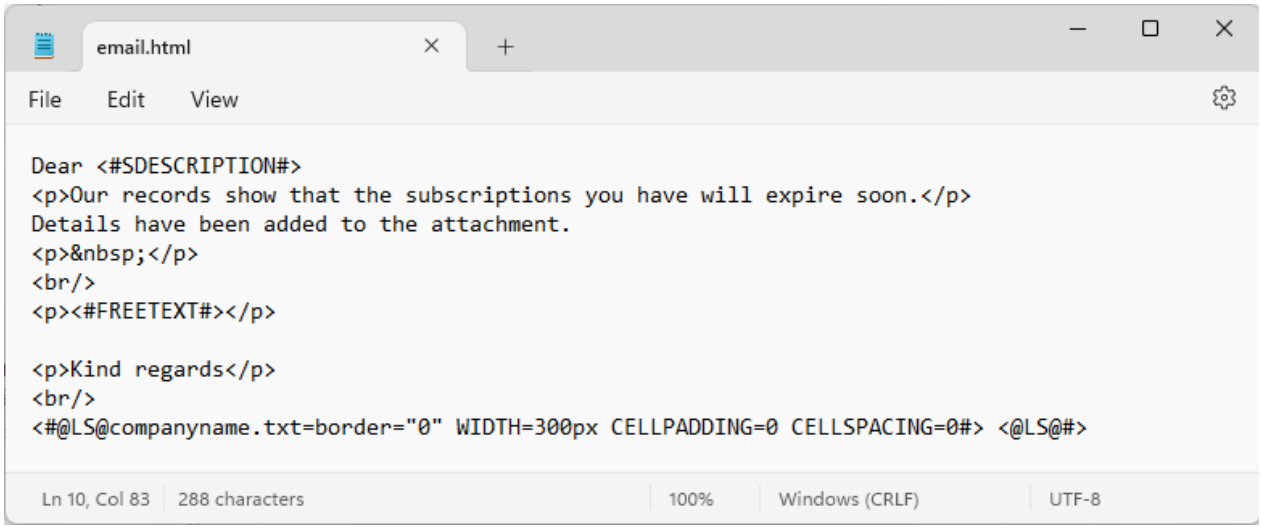
" ...\plug_ins\reports\Subscriptions\en\emailtemplatesInvoice "



To create your own template it is easy and you may create as many templates, as required.

It is recommended that you copy the test.html file and rename it to your own needs.

The basic email.html template is as follows:



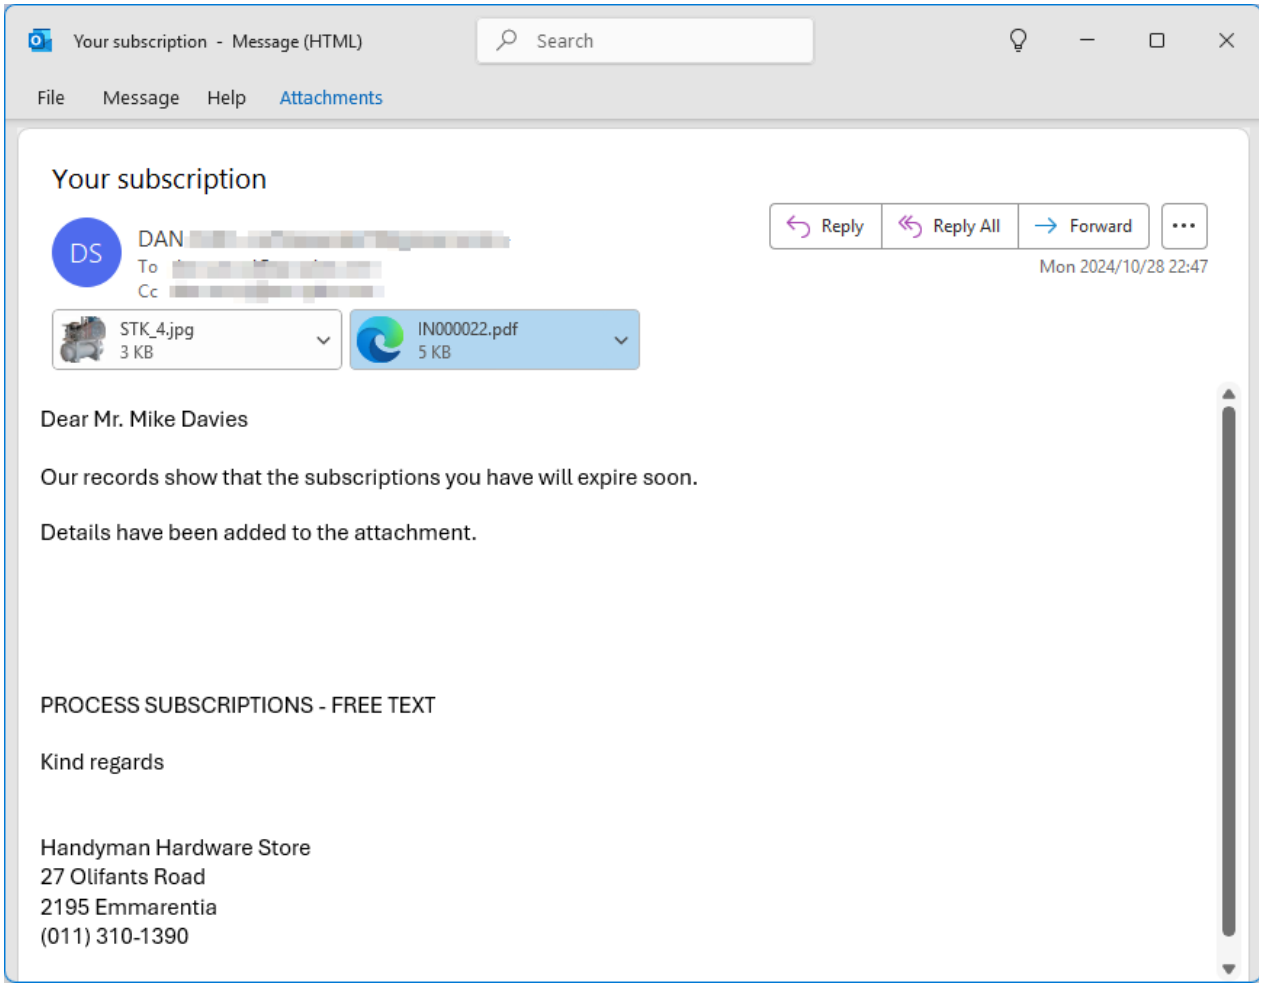
You may change all text as necessary. Please take note of the following two (2) fields:

- <#SDESCRIPTION#> - This will add the name for the respective debtor accounts to the e-mail message.
- <#FREETEXT#> - This will add the text as entered for the e-mail messages, as entered on the Free text field on the Free text tab.

You may preview the template when you click on the Preview in browser button on the Free text tab.

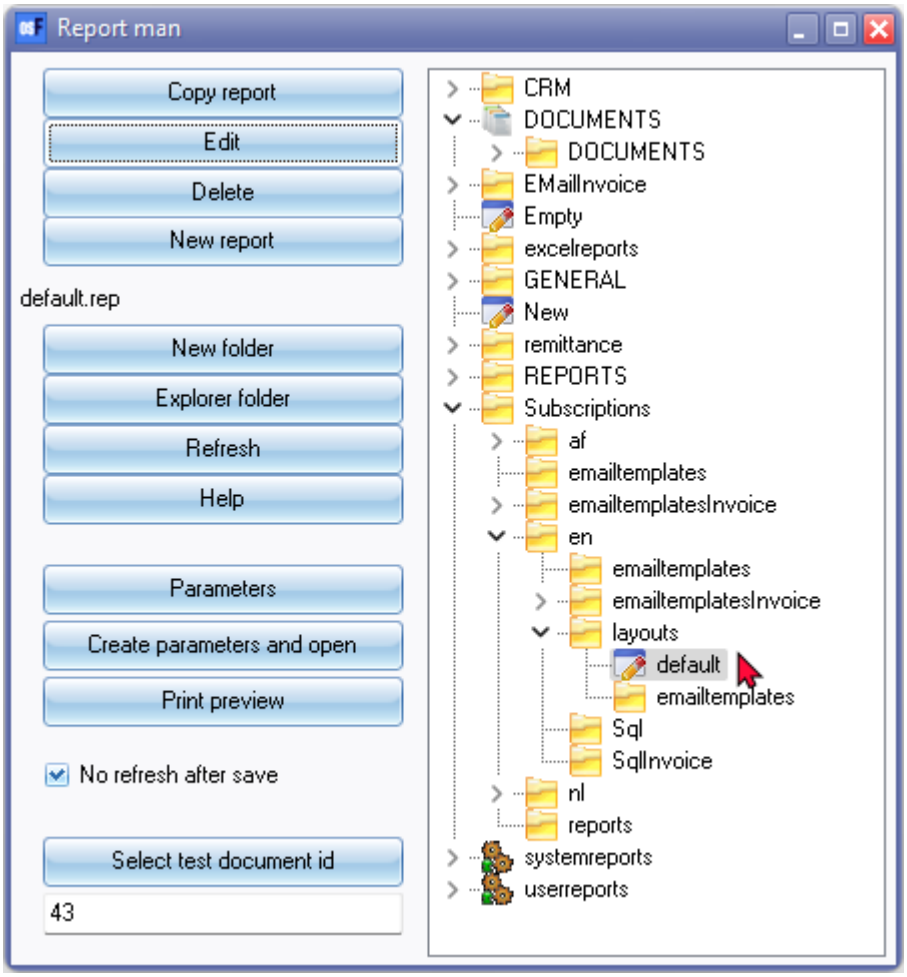
Process Subscriptions - Recipient's E-Mail Message

All debtor (customer / client) accounts (which have a valid e-mail address) will receive an e-mail message (based on the e-mail template and the free text) with the Invoice or quote as a Potable Document Format (pdf file) as an attachment. An example of the e-mail message received by the recipient(s), is as follows:



Customise / Edit the layout files

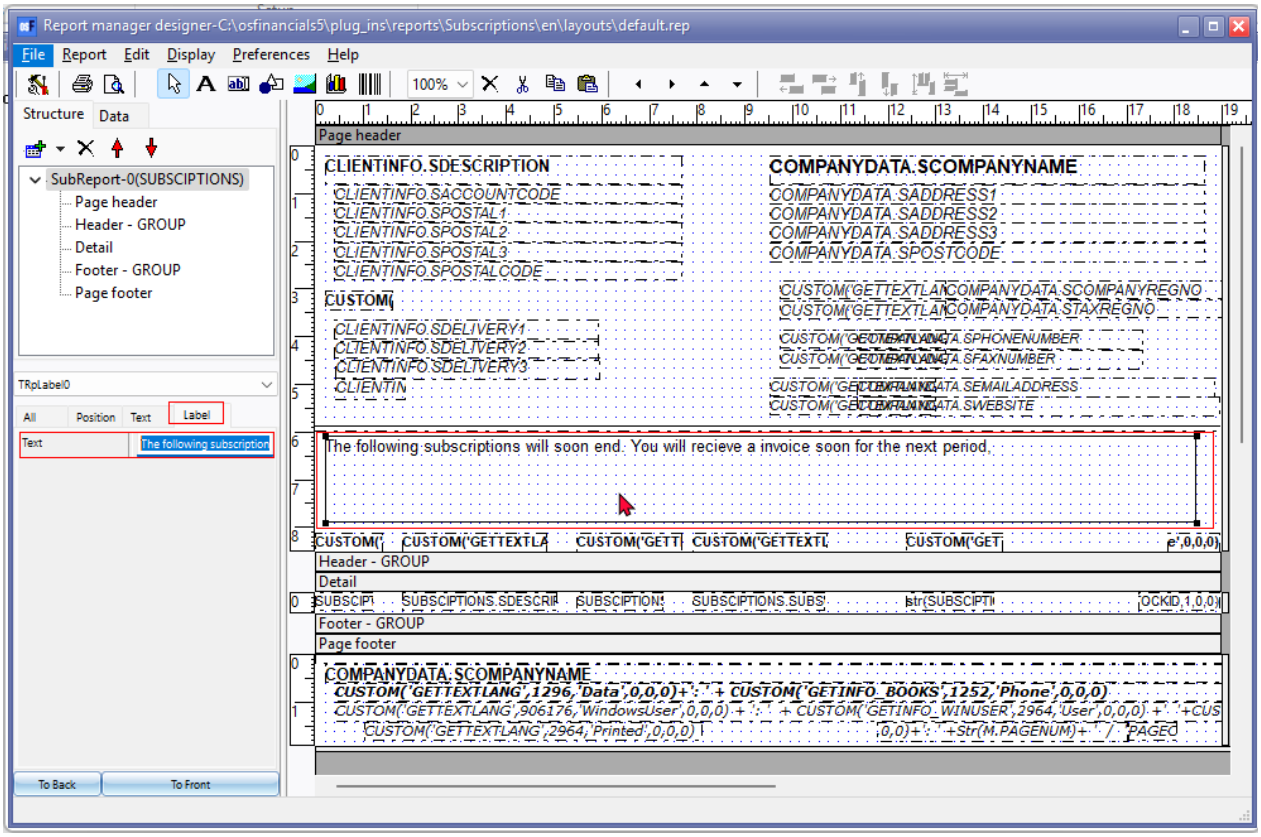
You may edit the layout files in the Report designer (Setup ribbon).



The layout files for processing of subscriptions is located in the following folder:

" ...\plug_ins\reports\Subscriptions\en\layouts "

Click on the Edit button. (Alternatively, you may double-click on the report).



Select the message and edit it as necessary. To do this, click on the '*TRpLabel0*' and on the Label tab type your own text. The default Label text is as follows:

> The following subscriptions will soon end. You will receive a invoice soon for the next period.

For a next sentence you may copy the expression to type another message. Repeat as necessary

Some features you may need to explore:

Move text:

- Drag it to the desired place.

Delete text or expressions:

- Select the object and go to Edit - Delete

Add static text:

- TRpLabel – Add static text object to the report.
- Add the messages or text to display on the report.

Add company logo:

- TRpImage: Click on this icon and click on the space and drag to insert a blank image object.
    - Enter “COMPANYDATA.BLOBLOGO” in the Expression field.

- This is used to display your company logo on the reports and document layout files. The Company Logo dataset is COMPANYDATA.BLOBLOGO. The logo is stored in the database as a BLOB (Binary Large Object) and will be displayed printed on remittance layout files if loaded in Company info - Options screen (Default ribbon).

- Add a static picture:
  - TRpImage - Click on this icon and click on the space and drag to insert a blank image object.
  - Right-click on the image object and select the Open option on the context menu.

Created with the Standard Edition of HelpNDoc: Streamline Your CHM Help File Creation with HelpNDoc

Processed subscriptions - Invoices and Quotes

All invoices and quotes processed using the Process subscriptions option, will be generated as unposted documents.

Invoices - These Invoices is not updated (posted) to the ledger.

Quotes - The quotes is not yet confirmed (converted to an invoice).

Invoices

These Invoices is not updated (posted) to the ledger. Before you update (post) these invoices generated by the process subscriptions to the ledger, you may need to edit these Invoices.

Once you are satisfied, you may proceed to update (post) these invoices to the ledger.

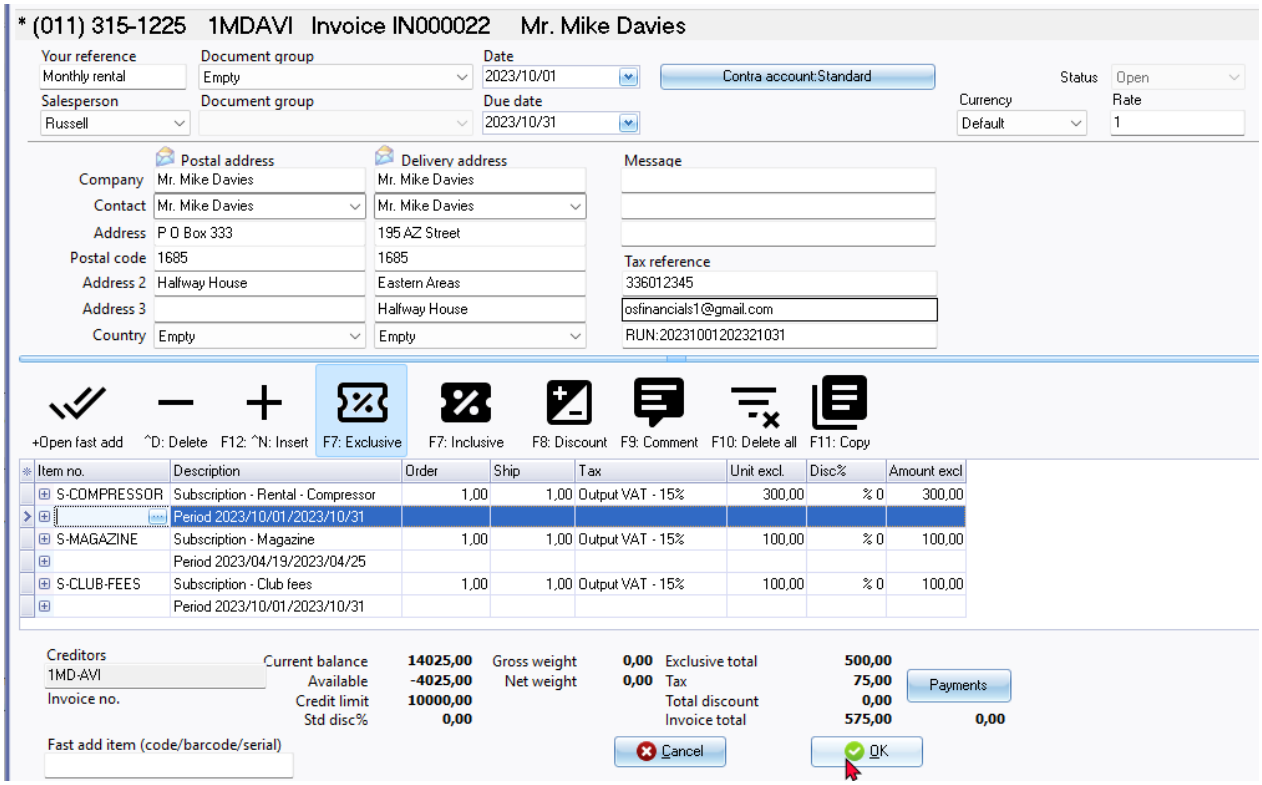
Invoice form

To select an Invoice:

On the Documents (Default ribbon), select Invoices.

You may need to select the document status as "*Unposted*" and use the filtering and sort options on the documents grid to search and filter for specific documents.

Click on Edit button to open the invoice form. (Alternatively, you may double-click on the invoice).



You may need to focus on the following:

- Document header
  - Your reference - The first line of the "*Reference*" field will be included for example "Monthly rental" of the first subscription on the list. You may change this, as necessary.
  - RUN - Underneath the email address of the debtor form's document header will be generated, for example, *'RUN:20231001202321031'*.
  - Messages - The default message lines as selected for the Invoices on Documents setup (Setup ribbon) , is not included in the Document header. You may add up to 3 lines of your own messages.
  - Salesperson - The default salesperson as set in the debtor (customer (client) account, will be displayed. You may change this, if needed.
  - Document group 1 / Document group 2 - If no document groups is selected, you may select the appropriate groups.
- Document lines
  - Comments - Comments is automatically generated if the "*Add description*" on the Setup subscriptions is selected. If not selected, no comments will be inserted.

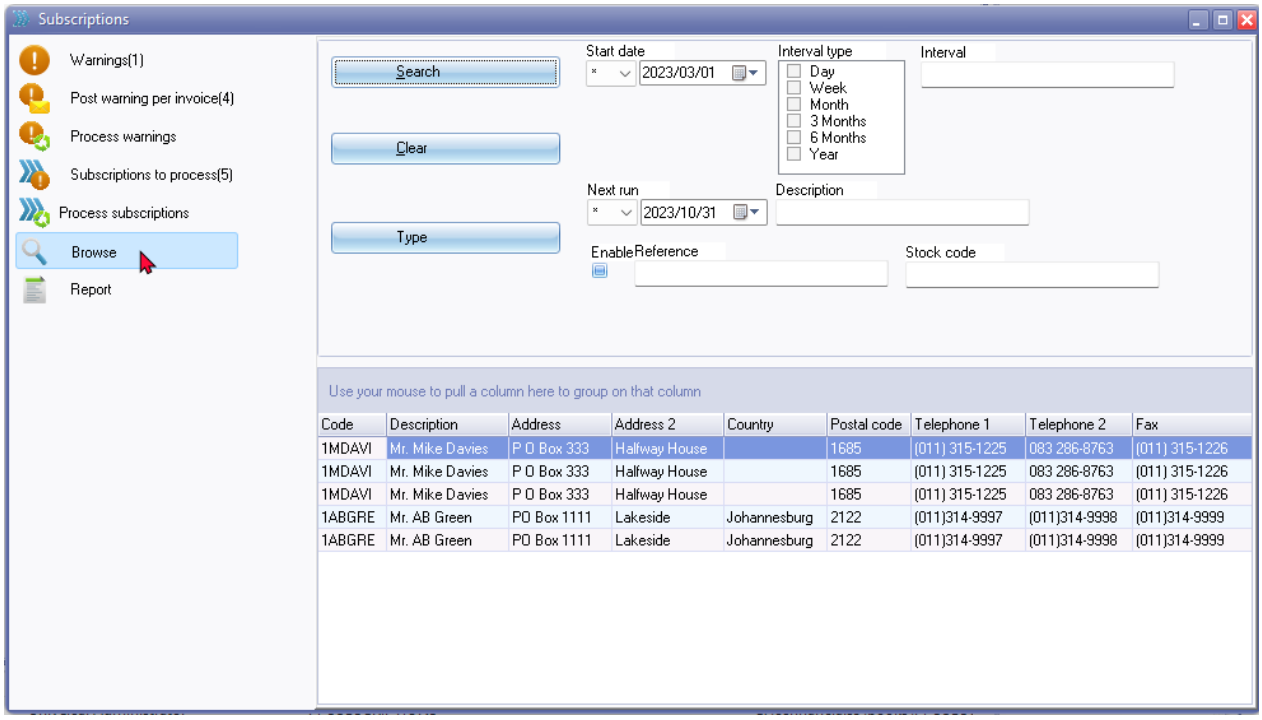
Subscriptions - Search options

Subscriptions - Browse options

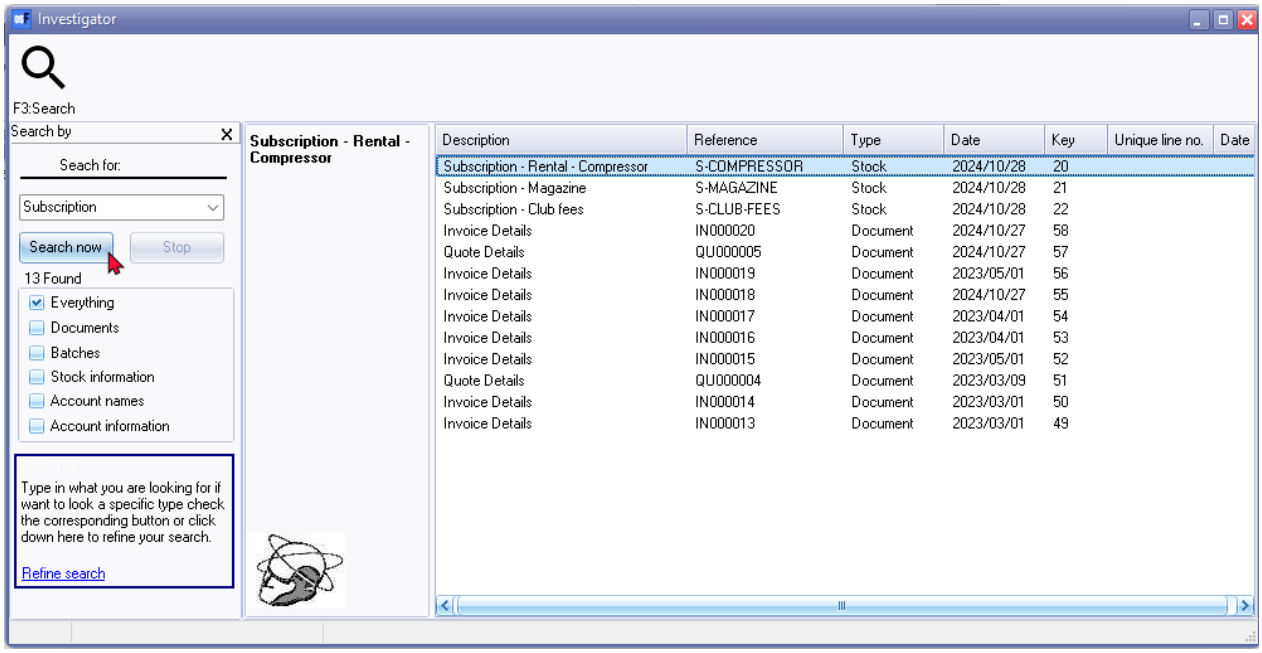
Click on the Browse button.



Click on the Search button. By default, no options should be selected, but you may select the criteria to filter or locate specific subscriptions.

Subscriptions - Central search

On the central search Search (Default ribbon) option you may search for subscriptions meeting your search criteria.



The Subscriptions plugin in osFinancials5/TurboCASH5 is a powerful tool that allows you to manage and search for subscription-based products and related documents. Here's a breakdown of how the central

search feature works:

Central Search Options

- Stock:
  - Function: This option allows you to search for stock items (products) that meet your specified criteria.
  - Action: When you double-click on a specific stock item from the search results, it will open the Stock item (product) edit form.
  - Additional Functionality: Within the edit form, you can navigate to the Document groups tab to print both unposted and posted documents related to that stock item.
- Document:
  - Function: This option lists documents (such as invoices or quotes) that include subscription-based stock items.
  - Action: Double-clicking on a document from the search results will allow you to print the selected document.
- Comments Search:
  - Function: You can search for documents based on specific comments, such as "Period 2023/05".
  - Result: This will list only the documents that are associated with the specified period, in this case, May 2023.
- Practical Examples
  - Stock Search Example:
    - Search Criteria: "Monthly Subscription"
    - Result: The search will list all stock items that match "Monthly Subscription".
    - Action: Double-clicking on one of the listed items will open the edit form, where you can manage the product details and print related documents.
  - Document Search Example:
    - Search Criteria: "Subscription Invoice"
    - Result: The search will list all documents that include subscription stock items.
    - Action: Double-clicking on a document will allow you to print it directly.

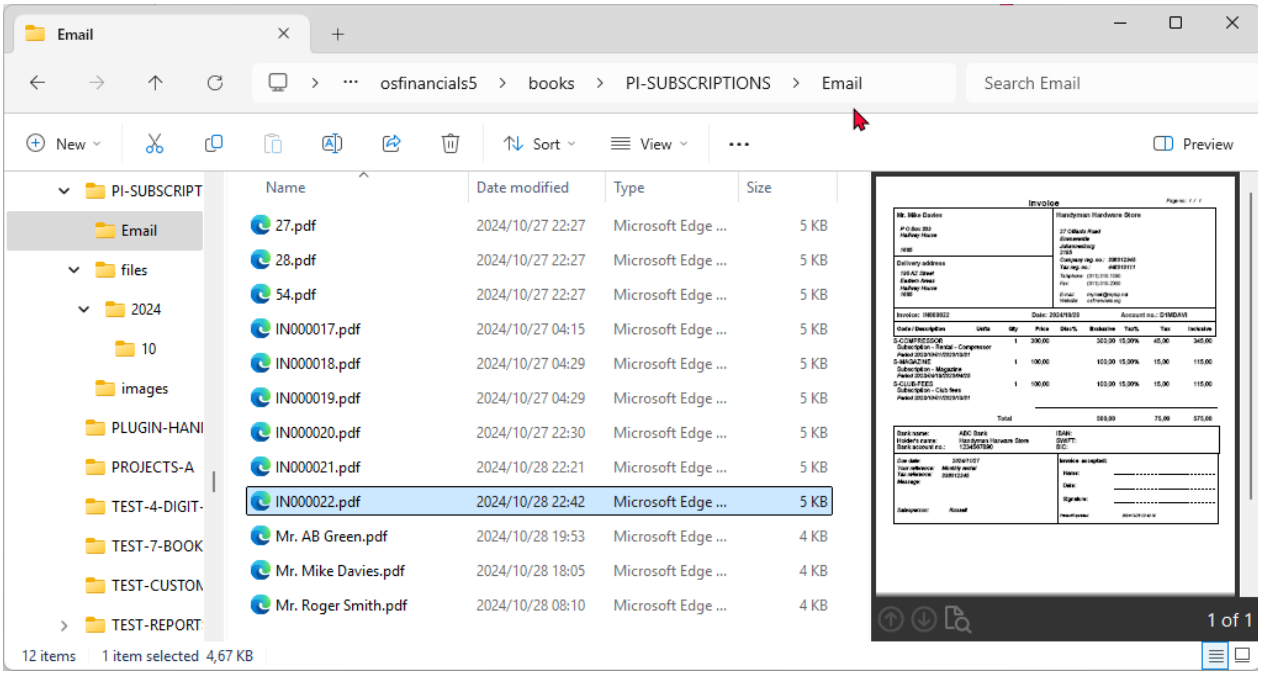
- Comments Search Example:
    - § Search Criteria: "Period 2023/05"
    - § Result: The search will list all documents specifically for the period of May 2023.
    - § Action: You can review and print these documents as needed.

The Subscriptions plugin in osFinancials5/TurboCASH5 provides a comprehensive way to manage subscription-based products and related documents. The central search feature allows you to efficiently find and manage stock items, documents, and specific periods, streamlining your workflow and ensuring that you can easily access the information you need.

Subscriptions - Set of Books - Subscription Files

Email Folder

The processed subscriptions, including processed warnings, are stored in your system's default file explorer within two folders: the *'Email folder'* and the *'Files folder*'.

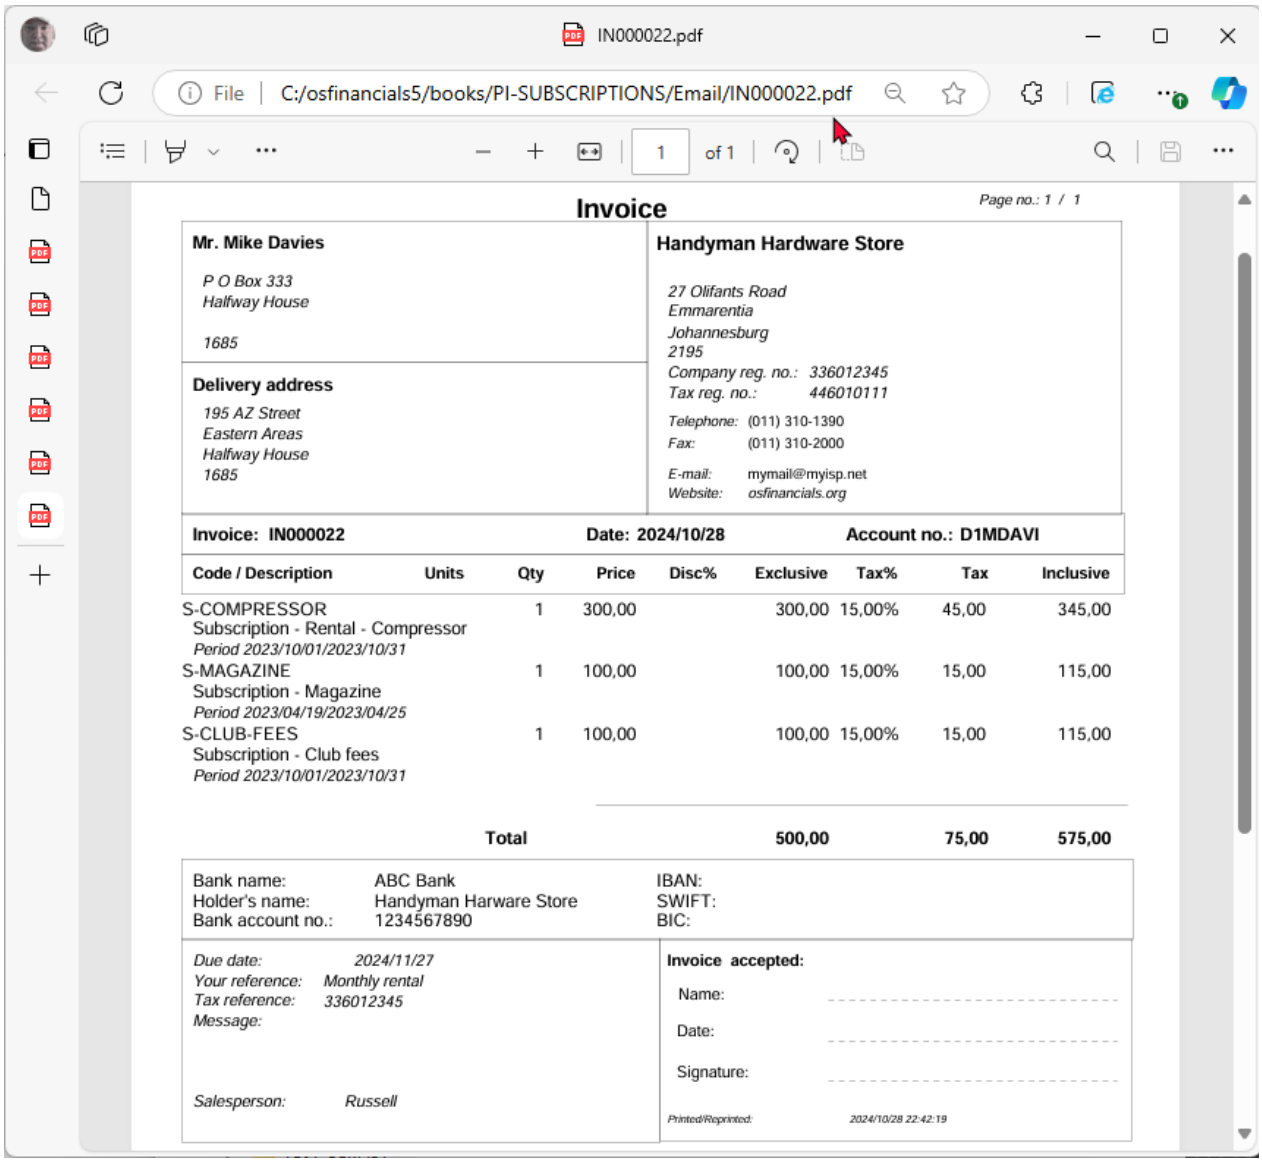


- Email Folder: The *'Email folder'* is located within the Set of Books folder. It contains:
    - o Processed Invoices and Quotes: These files are named after the document number.
    - o Processed Warnings: These files are named after the debtor account name.

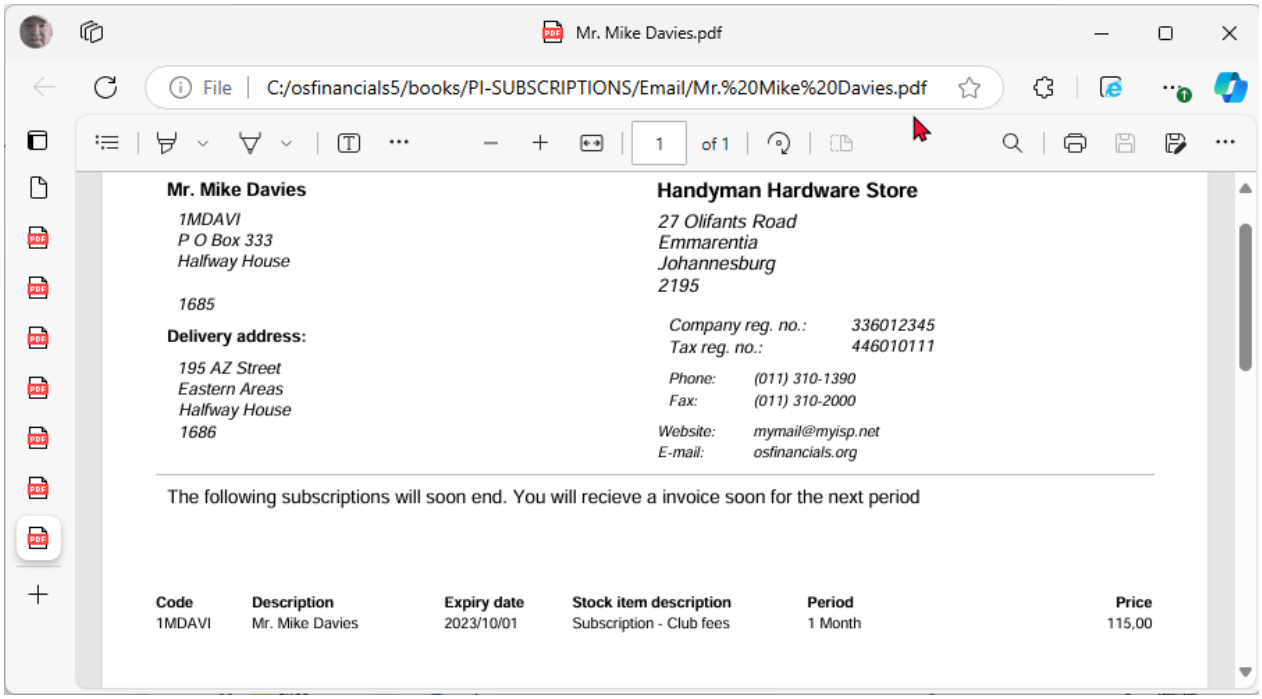
Both types of files are generated as PDF documents and can be printed using your system's default PDF application or any program associated with PDF files.

- Printing and Previewing
  - Select an Invoice or Quote: Double-click to print the selected document.
  - Preview: If the Preview feature is enabled in your file explorer, you can preview the document before printing.

Example : Printed invoice

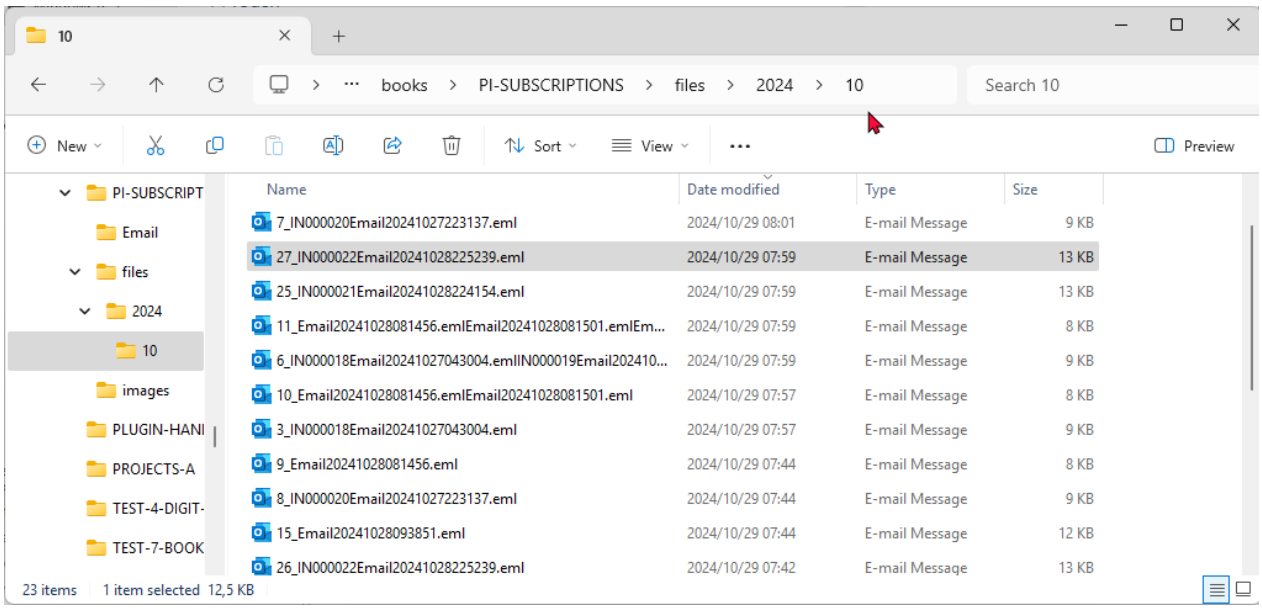


Example : Printed Warning layout



Files Folder

The Files folder stores your email messages in sub-directories organised by the year and month in which the emails were sent.



Some key features is:

- Document Files (Invoices or Quotes): These files are named to include the document number.
- Warning Files: These files are named with a date-time stamp and do not include a document number.

- Accessing and Searching
  - Opening an Email: Double-click on a selected item to open the email message using your system's default application or program associated with the *.eml file type.
  - Searching: Use the search box in your file explorer to find specific email messages. For example, you can search by:
    - Document number
    - Debtor's name
    - Month, etc.

The file explorer will display only the email messages that match your search criteria.

Activa plugin

Activa plugin - Manual - Shop - Licence : Once-off -

The Activa plugin automates the management and processes of fixed assets and the depreciation of fixed assets in your accounts over the lifespan of the fixed assets. Periodically you will receive a notification screen, which the depreciation shown. From this screen, the depreciation(s) can directly take place.

Translations : Outstanding

Introduction to Activa plugin

The Activa plugin in osFinancials5/TurboCASH5 allows you to register fixed assets that need to be written off. The write-off process occurs over the lifespan of the asset and can be spread across multiple financial years.

By adding the Activa Fixed asset accounts in the plugin setup, you will receive reminders when new transactions are posted to the ledger or when Activa transactions require processing. This automation streamlines the management of depreciation allowances for fixed assets (tangible assets) in your Set of Books over the asset's lifespan.

As you record the depreciation expenses for each financial year, they will be reported in the income statement and reduce your net profit. Additionally, the plugin will provide you with the net value of your fixed assets, which is calculated as the fixed assets' cost minus the accumulated depreciation, and this information will be reflected in the balance sheet.

In summary, the Activa plugin helps automate the depreciation management process, ensures accurate reporting of depreciation expenses, and provides visibility into the net value of fixed assets over their lifespan in both the income statement and the balance sheet.

When a fixed asset reached the end of life end process that will clear of the total write-off from the balance write-off account and the initial asset account. This will display only the remaining total on the asset account and the contra account the will be cleared of this total.

By allowing the write-off process to occur over the lifespan of the asset and providing reminders for transaction processing, the plugin further streamlines the management of depreciation allowances for fixed assets.

The accurate reporting of depreciation expenses in the income statement and the reflection of the net value of fixed assets (cost minus accumulated depreciation) in the balance sheet remain essential features

of the plugin.

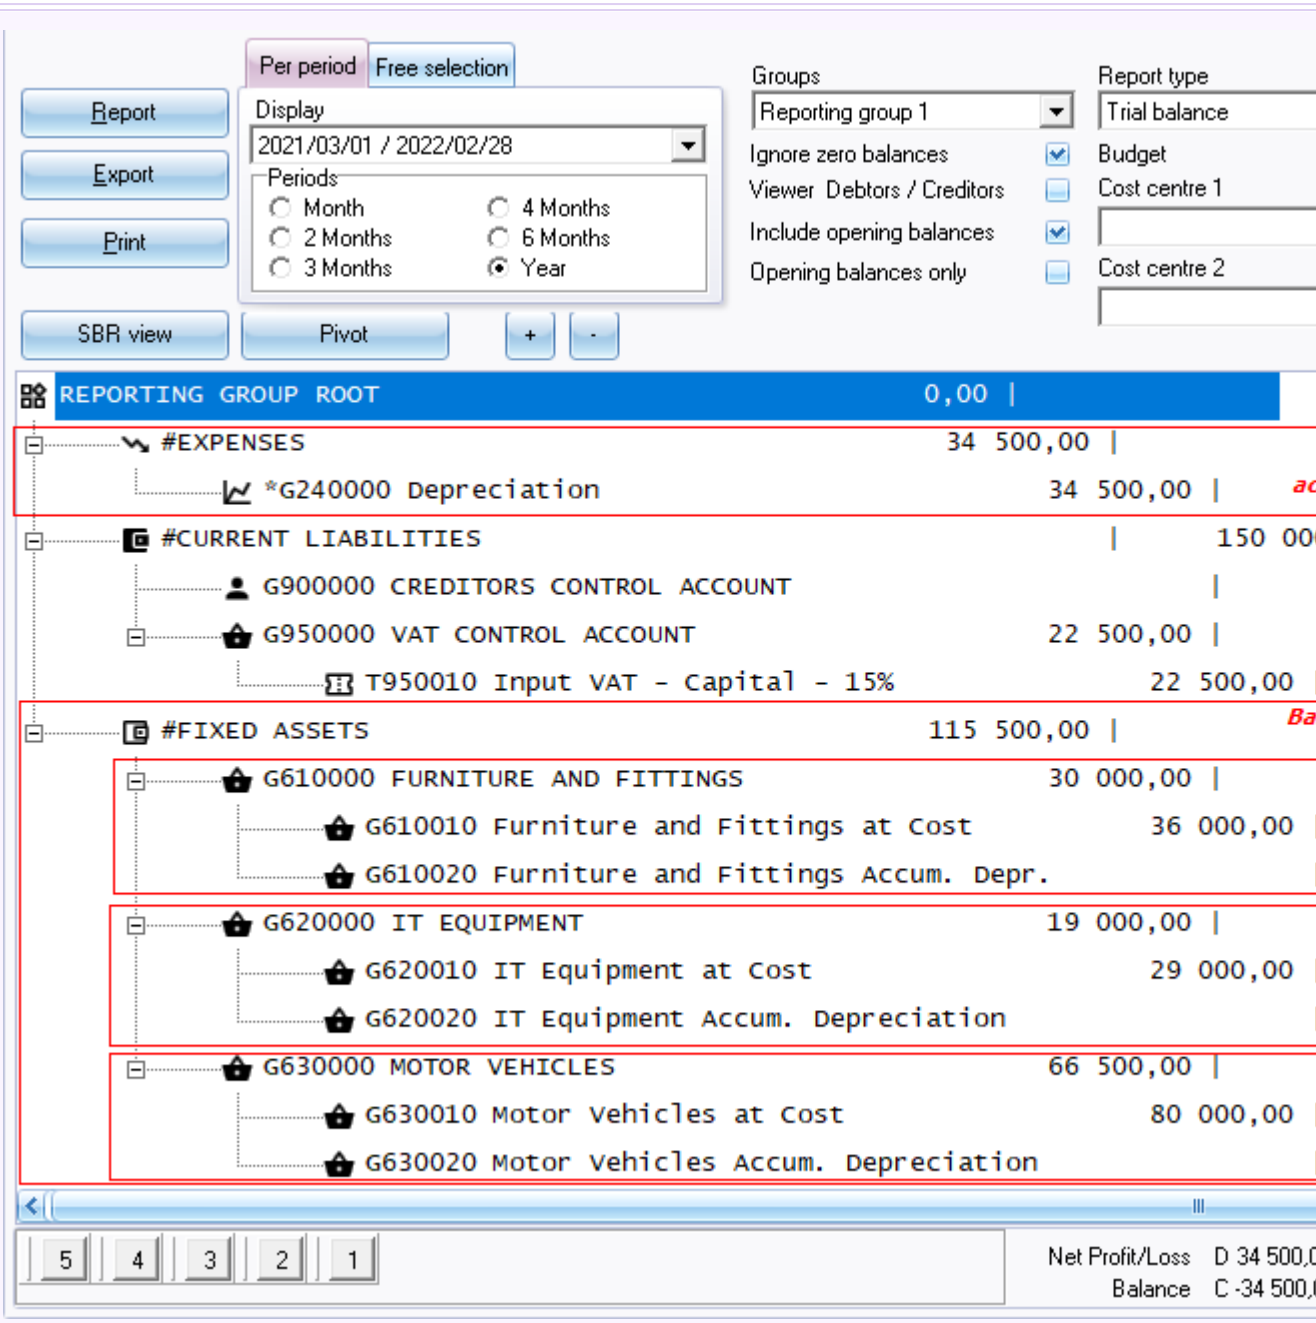
Furthermore, the ability to clear the total write-off from the balance write-off account and the initial asset account when a fixed asset reaches the end of its life adds to the efficiency of the process.

The Activa plugin's powerful grid, custom filtering options, and integrated pivot tables enhance the search and analysis capabilities for active fixed assets, assets requiring processing, and transaction details. The Ledger analyser allows for the printing and exporting of the trial balance, income statement, and balance sheet, while the T-Account viewer facilitates the export of transactions to spreadsheets.

The Central search feature in osFinancials5/TurboCASH5 further aids in searching for transactions related to fixed assets, providing comprehensive functionality for managing and analysing fixed asset data.

If you have created new accounts for your assets in the, select Setup → Accounts (Setup ribbon), you need to launch the Activ
new asset accounts.

Fixed assets is usually recorded as follows in the Trial balance as follows:



Depreciation expense account (Income statement)

The total expense of depreciation transactions written-off in the selected financial period.

Fixed assets accounts (Balance sheet)

The Main account of the asset displays the net value of the asset. This is the cost price minus the accumulated depreciation o span of the asset. Thus is the NETT VALUE of the asset class.

The Asset at cost price displays the purchase price and may include any additional cost incurred to make the asset useful for costs).

The Asset accumulated depreciation account displays the total amount written-off over the lifespan of the asset as at the sp the depreciation transactions over the lifespan of the asset (which includes previous financial years.

When a fixed asset reached the end of life end process that will clear of the total write-off from the balance write-off account and the initial asset account. This will display only the remaining total on the asset account and the contra account the will be cleared of this total.

Activa - Reports tab - Pivots tab Activa - Reports tab and Data tab allows you to filter and analyse your purchase, write-off and end of life transactions during the life span of fixed assets.

Processing Activa transactions

The process for the management of Activa transactions, is as follows:

1. Activate the Activa plugin and setup.
    - Link the Fixed asset accounts for each fixed asset.
    - Add and link a Batch to process the write-off transactions.
2. Add Activa transactions
    - New transactions - All new transactions which is allocated to the Transactions - Fixed assets at cost account will be listed when purchase transactions in batches and purchase documents is posted (updated) to the ledger. You need to add the new transactions to the Activa - List tab.
    - Add manual - You may also add Fixed assets manually.

Each time you Open the Set of Books, the Activa plugin will be launched, when:

1. *Transactions need processing - If there is any depreciation allowances to write-off. If you have already processed the transactions, it will be launched at the next processing date.*
2. *New transactions - All new transactions in posted batches (e.g. Purchase journal, Purchase returns journal, Payments journal, etc.) and purchase documents (e.g. Purchase and Supplier returns) (using the Financial Stock item type) is posted (updated) to the ledger.*

3. Specify the details of a fixed asset on the Activa - Details tab the write-off details. This is basically a once-off process for each fixed asset in which you need to specify the write-off method (percentage or amount) which will determine the number of years and calculations for the life span of the Fixed asset. This will schedule the next write-off date when transactions need processing.
4. Process the depreciation transactions - On the Activa - List tab, you need to process the write-off transactions. This will calculate and update the depreciation, book value, and write-off amounts, etc., for the fixed asset.

5. Activa - Reports tab - Pivots tab Activa - Reports tab and Data tab allows you to filter, view, sort and analyse your purchase, write-off and end of life transactions during the life span of fixed assets.

Created with the Standard Edition of HelpNDoc: Experience a User-Friendly Interface with HelpNDoc's Documentation Tool

Activate the Activa plugin and setup

Activa setup

Before you start with the Activa Setup, it is recommended that you:

1. Create (add) a batch type for the Activa transactions (e.g. Activa journal).
2. Check your Assets for any combined transactions (e.g. opening balances) and split them to the correct asset items. You may have purchased for example 2 or more motor vehicles but have entered them as a combined balance. You may need to correct this as separate entries (e.g. using the General journal or Activa journal). Obtain the following details (in the Asset register) for each of these assets:
    - Description
    - Purchase date
    - Purchase amount
    - Write-off type (Percentage or amount per period)
    - Write-off period (per month, quarter, 6 months or per annum)
    - Rest amount (Salvage value, scrap value or trade-in value, etc.).
    - Current Amount - the book value of the asset as per last write-off)
    - Any extra information (you may add these extra text).
    - Life span of the asset and method of depreciation.

Activate the Activa plugin

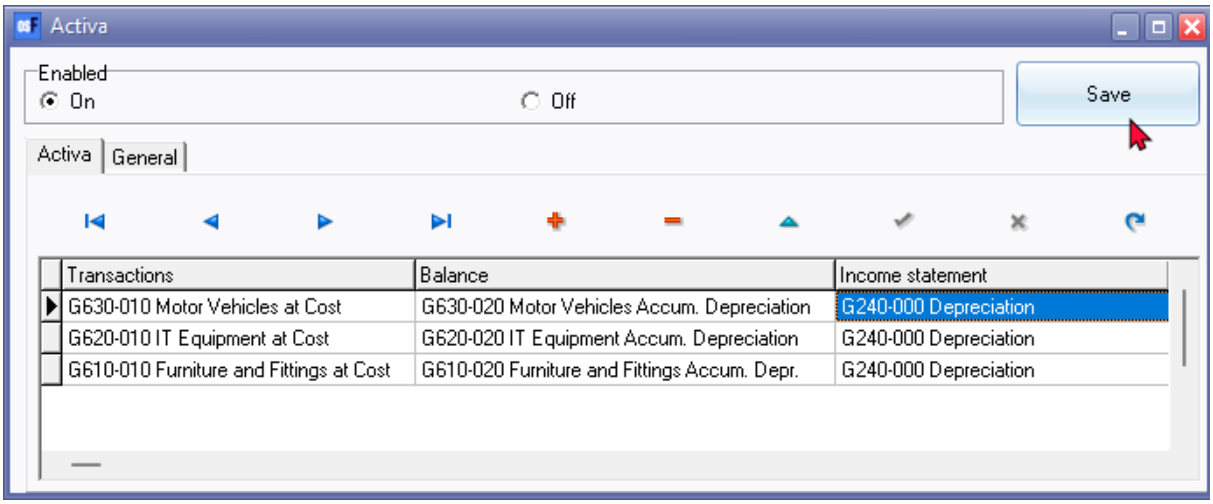
This Plugin will need to be activated for each Set of Books, if you need to use this plugin in other Sets of Books.

To activate the Activa plugin:

1. On the Setup ribbon, select Plugins → Financial tools → Activa. If this plugin is not listed under Plugins → Financial tools, activate it via Tools → Activate plugins.

2. Click on the On radio button and click on the Save button. The Activa screen will be closed.

3. Relaunch the Activa plugin (from the Plugins → Financial tools → Activa menu (see step 1). The Activa tab and the General tab will be displayed.



You may use the record buttons to save and manage records.

You may click on any of the column headings (i.e. Transactions, Balance or Income statement) and drag it to the left or right to change the sequence in which to display the columns.

4. You need to select the following 3 accounts for each of your assets:

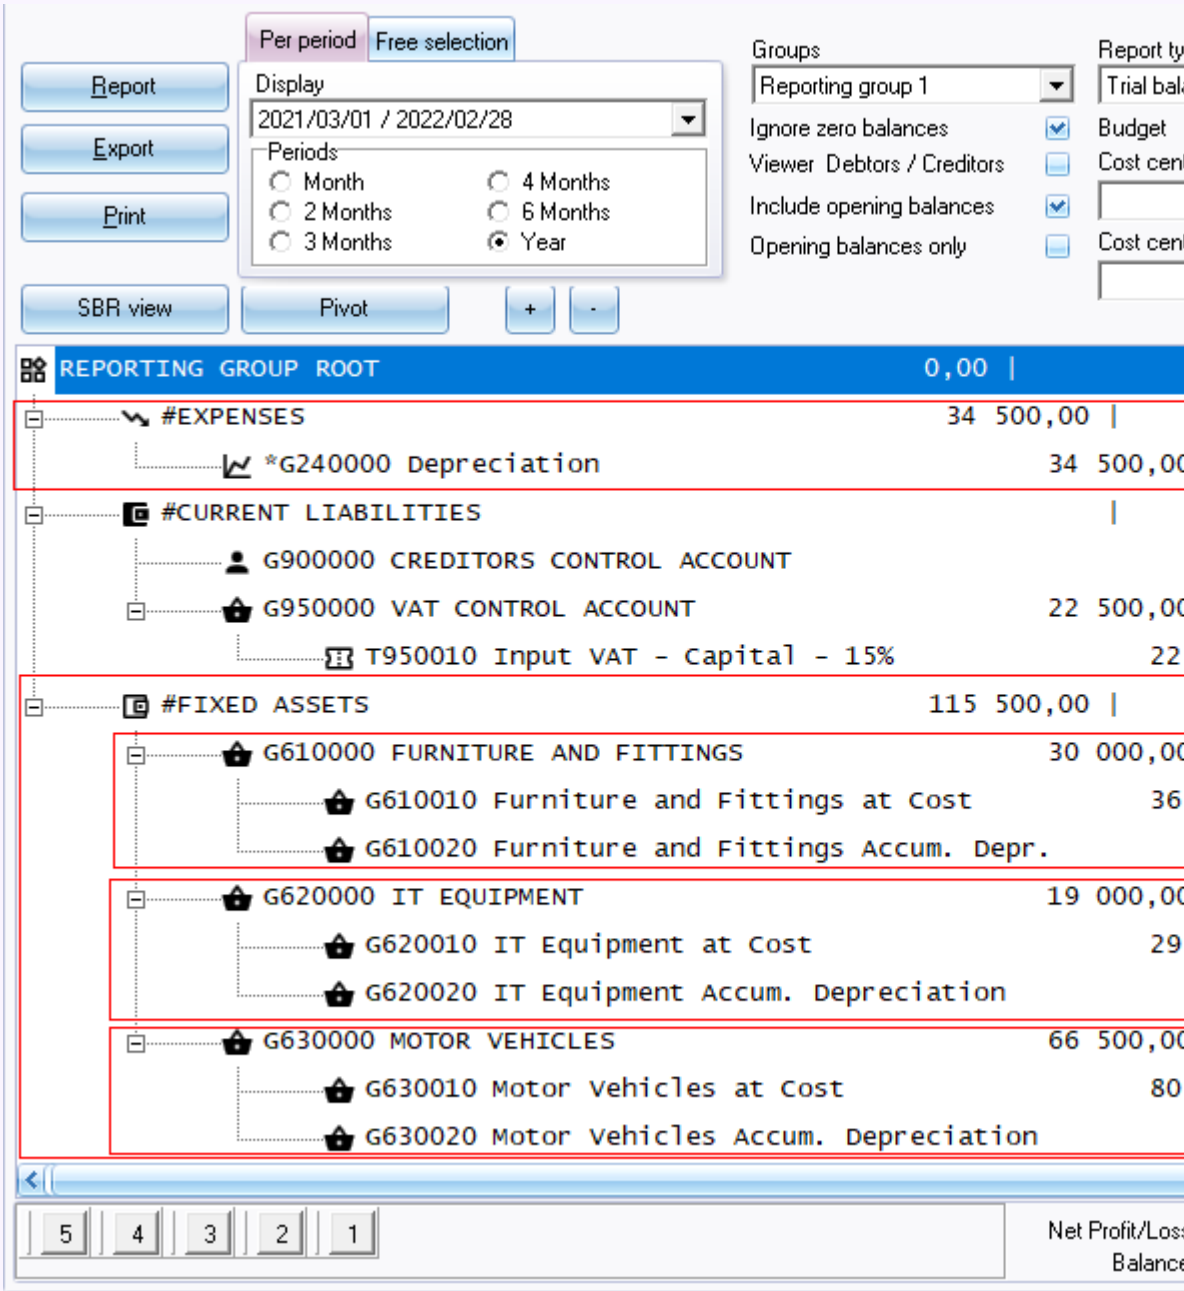
   a) Transactions - Select the Asset account (the account on which all assets are purchased). This should be reported in the Balance sheet.

   b) Balance - Select the Asset's Accumulated depreciation account (the contra account on which the asset's depreciation are recorded). This should be reported in the Balance sheet.

   c) Income statement - Select the account for the expenses to write-off (e.g. Depreciation account). This should be reported in the Income statement.

If you have created new accounts for your assets in the Setup ribbon, select Setup → Accounts menu, you need to the new asset accounts.

Fixed assets is usually recorded as follows in the Trial balance as follows:



Depreciation expense account (Income statement)

The total expense of depreciation transactions written-off in the selected financial period.

Fixed assets accounts (Balance sheet)

The Main account of the asset displays the net value of the asset. This is the cost price minus the accumulated d span of the asset. Thus is the NETT VALUE of the asset class.

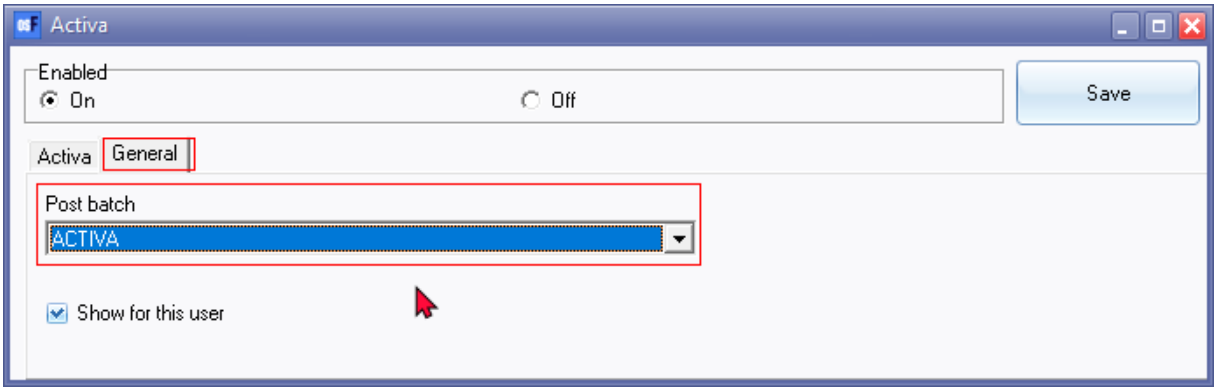
The Asset at cost price displays the purchase price and may include any additional cost incurred to make the ass

costs).

The Asset accumulated depreciation account displays the total amount written-off over the lifespan of the asse

the depreciation transactions over the lifespan of the asset (which includes previous financial years.

5. Click on the General tab.



6. Select a batch (journal) (e.g. General journal, Activa journal) for your depreciation transactions.

If you did not select a batch and you are trying to add an Activa assets or manually add an Asset an error message will be displayed.

"No batch selected please select batch in setup!"

You then need to click on the OK button and select a batch to process activa transactions.

If you wish to use a specific batch type (not available on this list), e.g. Depreciation journal (or any other batch type) you may add it in the Setup → Batch types (Setup ribbon). To do this you need to click on the Save button and add the batch type.

Should there be any transactions in the batch type (selected from this list), e.g. General journal, an error message will be displayed.

"Batch is not empty!"

You then need to click on the OK button and process the transactions in the selected batch. To avoid this, it is recommended that you create (add) a separate batch for the Activa plugin transactions.

7. Select the Show for this user option. The Activa plugin may be deactivated for other users in a multi-user environment.
8. Click on the Save button.
9. Reopen the Set of Books to add the Activa icon on the Default ribbon.

Add Fixed assets to the Activa plugin

New transactions tab

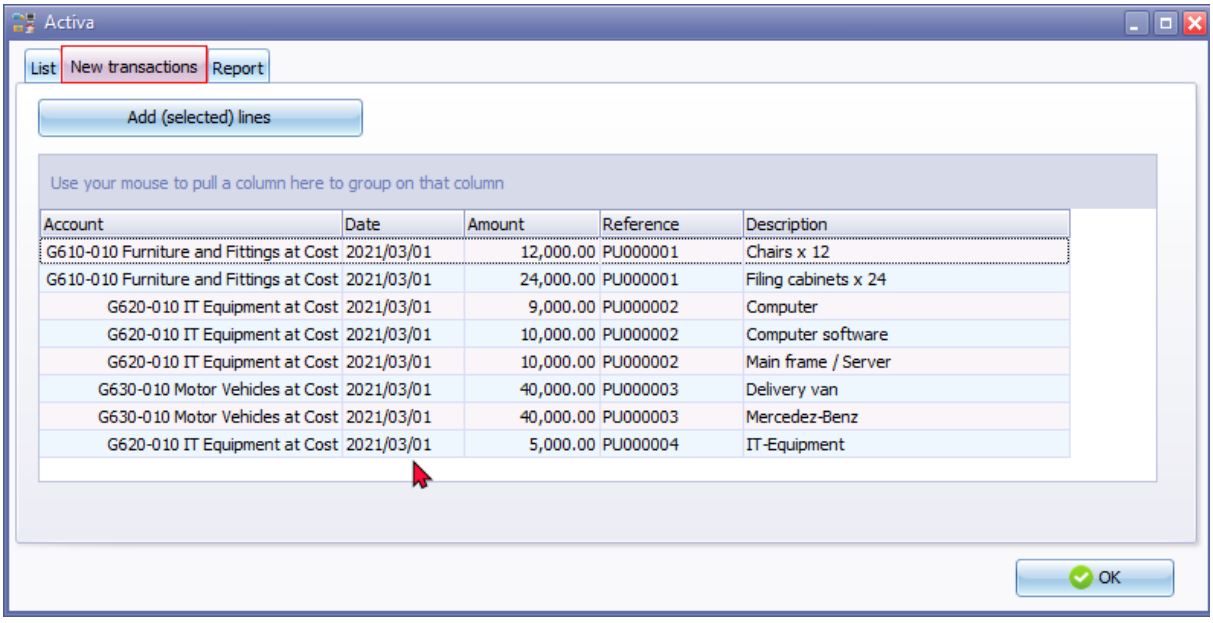
The New transactions tab within the Activa-plugin is designed to display new transactions associated with specific accounts, particularly fixed asset accounts. It's activated under two conditions:

1. New Fixed Asset Accounts: If you add new fixed asset accounts to the Activa Setup Aciva tab, the New transactions tab will automatically appear. This ensures that you can immediately track any transactions related to these newly added assets.
2. New Transactions in Existing Accounts: If any of your existing fixed asset accounts, receive new transactions, the New transactions tab will also become visible. This allows you to promptly review and process these incoming transactions.

Additional Features:

- Automatic Updates: The New transactions tab updates automatically as new transactions are recorded in the Set of Books. This means you don't have to manually launch the tab to see the latest information.
- Filtering Options: The tab may provide filtering options to help you narrow down the displayed transactions based on specific criteria, such as date range, accounts, amounts, reference and decription of the transaction.
- Transaction Details: Clicking on a transaction listed in the tab typically provides detailed information about that transaction, including its date, amount, description, and associated account.

Overall, the New transactions tab is a valuable tool for effectively managing and monitoring transactions related to fixed assets and other accounts within the Activa-plugin.



Context menu - Add consolidated:

If you wish to consolidate (merge) more than one transaction to one (1) record, you may right-click and select the Add consolidated option. This will add the selected transactions as one (1) transaction on the Activa - List tab.

This would normally be the case where a specific asset consists of more than one transaction (e.g. Purchase transaction of the asset and any other transactions, for example to install that asset and make it usable and operational).

Once transactions in batches and documents is posted (updated) to the ledger, the transactions will be added to the Activa - New transactions tab.

You need to add these new transactions to the Activa - List tab by clicking on the Add (selected) lines button.

Activa - List tab

Once the Fixed assets is added from the the Activa - New transactions tab (Add (selected) lines button) add these new transactions is added to the Activa - List tab.

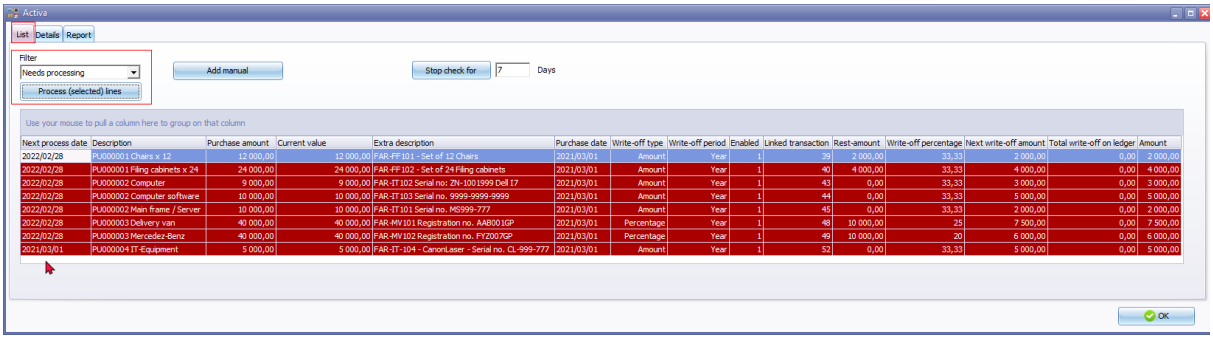
Add manual button - You may also Add manual transactions and set up and configure these transactions manually on the blank Activa - Details tab.

Stop check for 7 Days button - The default value is 7 days. The Fixed assets which need processing (on the "*Next process date*") will automatically launch after 7 days from that date. You may set the number of days according to your specific needs.

Before you start to process any Activa lines, you need to make absolutely sure that each of your Fixed

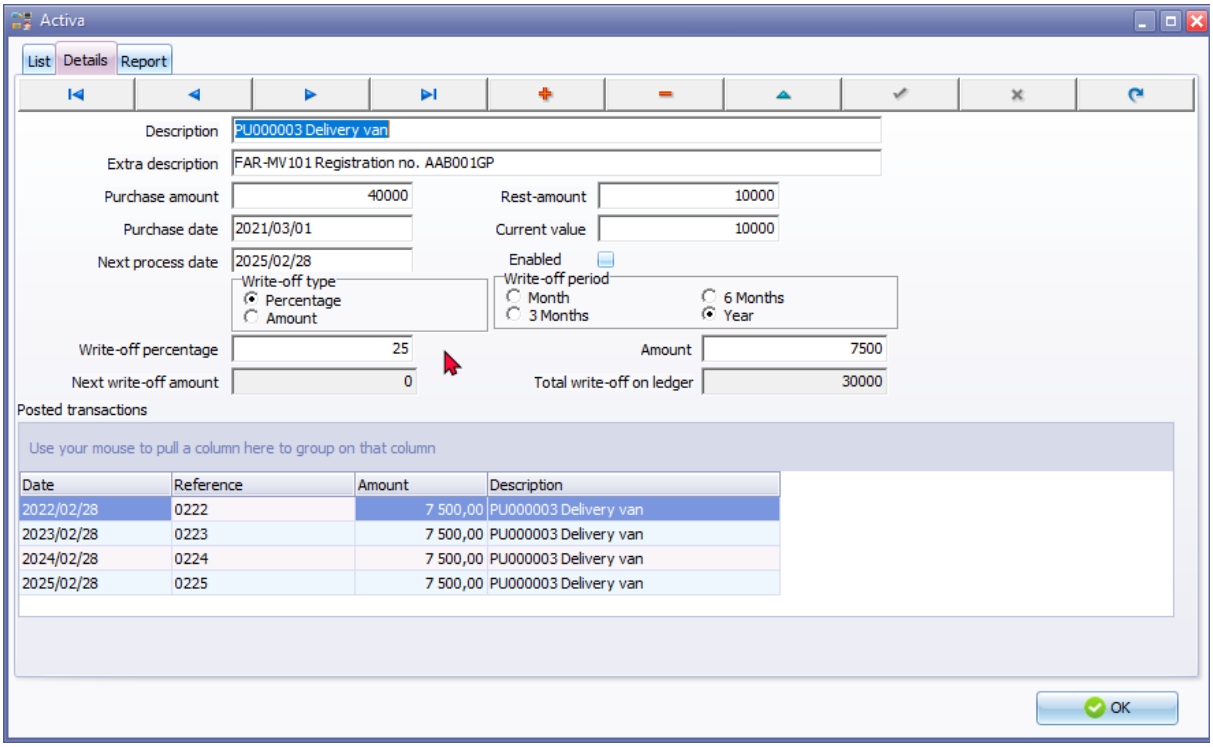
assets is correctly set and configured. If any information is incorrect, or you need to change the information listed in the columns of the Activa - List tab, click on the Activa - Details tab of the selected Fixed asset.

Once you click on the on the Process (selected) lines button, this will process the Activa write-off transactions and automatically post (update) these transactions to the ledger.



Activa - Details tab

Once the new transactions is added to the Activa - List tab, you need to specify the settings and options for each fixed asset type on the Activa - Details tab. This is a once-off process for each fixed asset during the life span of the Fixed asset.



Tax Legislation, Companies Act and accounting standards in some countries may prescribe different methods to write off depreciation (wear and tear allowances) over the life span for the types of fixed assets.

When you add Fixed assets, you need to decide the method on which depreciation is calculated for the assets. These values only needs to be set once for a Fixed asset on the Details tab of the Activa plugin. The depreciation will be written-off each period over the life span of the fixed asset.

Some of these methods to calculate depreciation is:

1. *Straight-line method (fixed instalment method)*
2. *Declining balance method (Reducing-value method)*
3. *Double-declining balance*
4. *Production method*
5. *Sum-of-years digits*

In addition to these methods, items (assets purchased for less than a prescribed amount) may be written-off in full.

The on the Activa - Details tab need to check and include the following for the fixed asset depreciation transactions:

1. Description - The description of the transaction consists of the Purchase document number and item description.
2. Extra description - Add additional text (up to 50 characters) for the fixed asset depreciation transactions.
3. Purchase amount - The purchase amount (cost amount), excluding Tax (VAT/GST/Sales tax) of the fixed asset will automatically be displayed. Check the Purchase amount. If you have entered any opening balances, please make sure that you enter the correct value of the asset here.

If you wish to consolidate (merge) more than one transaction to one (1) record, you may right-click and select the Add consolidated option on the Activa - New transactions tab. This will add the selected transactions as one (1) transaction on the Activa - List tab.

This would normally be the case where a specific asset consists of more than one transaction (e.g. Purchase transaction of the asset and any other transactions, for example to install that asset and make it usable and operational).

4. Purchase date - The date of the purchase transaction in batches or purchase documents.
5. Next process date - This date will be automatically calculated as determined by the Write-off period (e.g Months, 3 Months, 6 Months or Year).
6. Rest amount - The Rest amount, is by default zero "0". Enter the salvage value amount, scrap value, trade-in value) at the end of the fixed asset's life span (after all depreciation amounts is written-off) if

applicable.

7. Current value - The Current value is the Purchase amount minus any Rest value, if applicable to the Fixed asset. In subsequent periods (years as in this example) after depreciation transactions is processed, the value would reduce by the write-off transactions. Once the last depreciation transactions is processed at the end of the fixed assets life span, the current value should be the dame as the "Rest amount". If no "Rest amount" is specified, the current value would be zero.
8. Enabled - By default all Fixed assets are active, if there is any write-off transactions. Once you have done the final write-off, the Fixed asset will be set to inactive.

Once the final depreciation or write-off amount is reached, the following confirmation message will be displayed:

"Write off for Asset description ended do you want to clear the activa accounts?"

If select Yes to you clear the Activa account, the "End of life" entry will be displayed.

9. Write-off type - Select Percentage or Amount.
10. Percentage / Amount - Enter the percentage or the amount (depending on the selection in the "*Write-off type*" options).
11. Write-off period - Select Month, 3 Months, 6 Months or Year.
12. Next write-off amount -

Once finished, click on the Save record button to refresh the calculations and save your changes.

You may click on the Activa - List tab to select a another Fixed asset to configure the Fixed asset.

Once finished you may click on the OK button to exit the Activa screen.

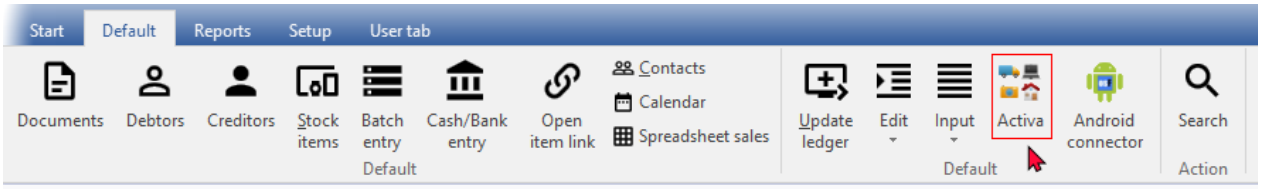
Process Fixed assets in the Activa plugin

Activa processing

Once the Activa plugin is activated, you may access the Activa plugin manually on the Default ribbon.



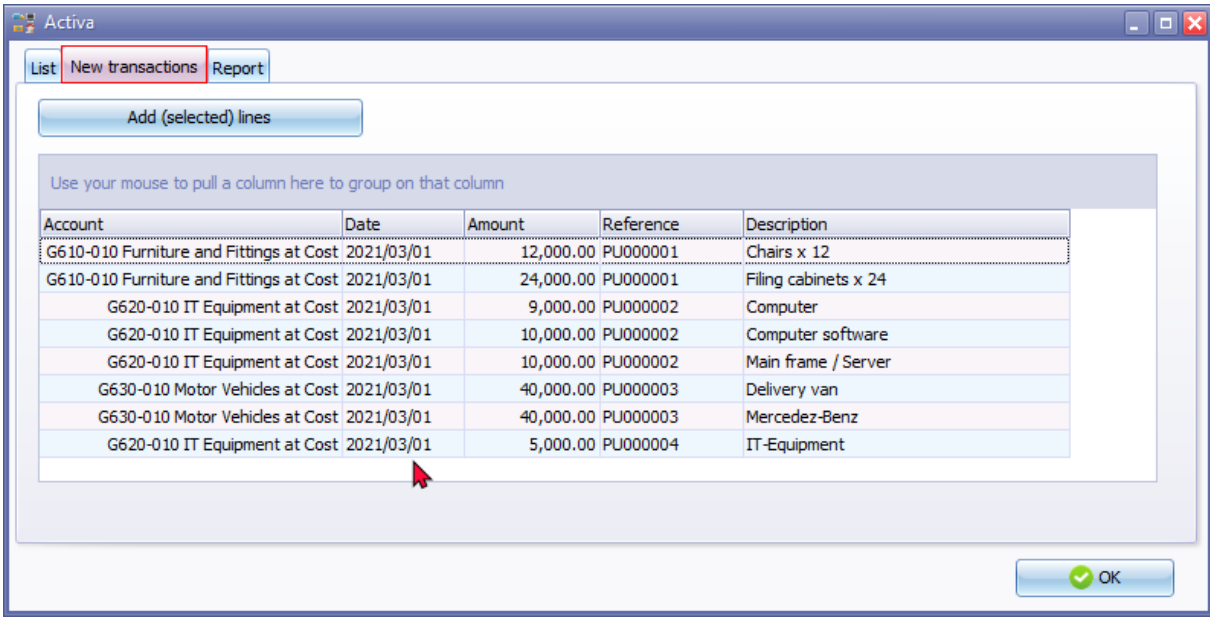
The Activa plugin will launch automatically when:

New transactions tab - Purchase or any transaction is allocated and posted top the ledger to the Asset at cost account.

Next process date - If an asset needs processing and the processing date is due to write off depreciation.

Once the Activa plugin is activated, and you launch it for the first time, you need to add the new transactions.

The Activa - New transactions tab will list all existing transactions in posted batches and documents allocated to the accounts as selected on the Activa setup.



Select the transaction and click in the Add (selected) lines button. The transactions will be removed from the New transactions tab added to the List tab.

Multi-select records:

Press the Ctrl key and click on the transactions.

Context menu - Add consolidated:

If you wish to consolidate (merge) more than one transaction to one (1) record, you may right-click and select the Add consolidated option. This will add the selected transactions as one (1) transaction on the Activa -

List tab.

This would normally be the case where a specific asset consists of more than one transaction (e.g. Purchase transaction of the asset and any other transactions, for example to install that asset and make it usable and operational).

Once finished, adding the transactions, you need to select the items from the list and check and change the details as necessary on the Activa - Details tab.

If there are no new posted transactions in batches and or documents the New transactions tab will not be displayed.

When any further transactions in batches and documents are posted (updated) to the ledger, it will automatically be added to the New transactions tab.

When opening the Set of Books and any new transactions are added (posted or updated to the ledger), the Activa plugin New transactions tab will automatically be launched.

Activa - List and Details

Once the Fixed assets is added from the the Activa - New transactions tab (Add (selected) lines button) add these new transactions is added to the Activa - List tab.

Add manual button - You may also Add manual transactions and set up and configure these transactions manually on the blank Activa - Details tab.

Stop check for 7 Days button - The default value is 7 days. The Fixed assets which need processing (on the "*Next process date*") will automatically launch after 7 days from that date. You may set the number of days according to your specific needs.

Before you start to process any Activa lines, you need to make absolutely sure that each of your Fixed assets is correctly set and configured. If any information is incorrect, or you need to change the information listed in the columns of the Activa - List tab, click on the Activa - Details tab of the selected Fixed asset.

Once you click on the on the Process (selected) lines button, this will process the Activa write-off transactions and automatically post (update) these transactions to the ledger.

Once new purchase transactions is allocated to the "*Transactions*" account (Asset at cost account) and the transactions is posted in batch transactions (e.g. Purchase journal) or Items selected in documents updated to the ledger, the transactions will be listed on the New transactions tab of the Activa plugin.

Once the selected lines is added to the List tab, you need to specify the necessary information and values

of each asset.

Tax Legislation, Companies Act and accounting standards in some countries may prescribe different methods to write off depreciation (wear and tear allowances) over the life span for the types of fixed assets.

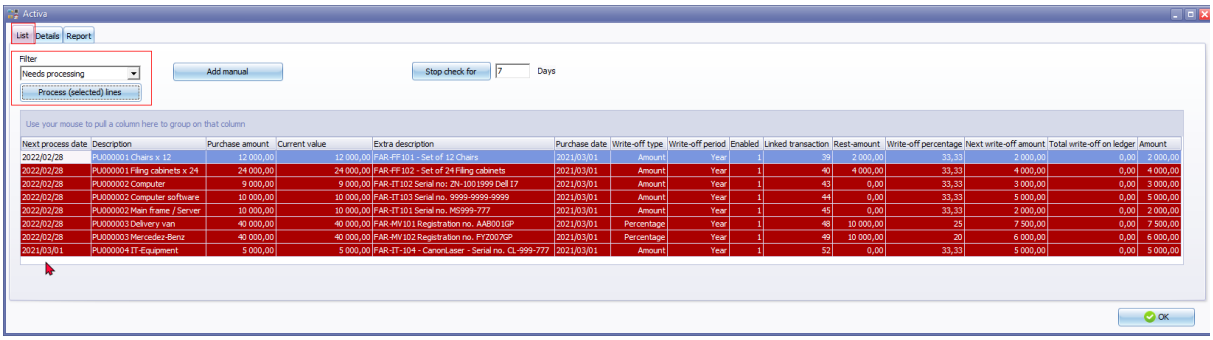
When you add Fixed assets, you need to decide the method on which depreciation is calculated for the assets. These values only needs to be set once for a Fixed asset on the Details tab of the Activa plugin. The depreciation will be written-off each period over the life span of the fixed asset.

Some of these methods is:

1. *Straight-line method (fixed instalment method)*
2. *Declining balance method (Reducing-value method)*
3. *Double-declining balance*
4. *Production method*
5. *Sum-of-years digits*

In addition to these methods, items (assets purchased for less than a prescribed amount) may be written-off in full.

1. Once you have activated the Activa plugin, you may click on the Activa icon on the Default ribbon. The Activa - List screen is displayed:



All transactions (including opening balances) will automatically be imported in this list. All unprocessed transactions will be indicated in red row.

Once these have been processed, these will be indicated in a white background.

Filter - Use the following Filter options to locate an asset record:

- *All is the default option. It will list all records.*
- *Need processing - This option will list only the assets that need processing (automatic journals).*
- *Active - This option will list all the active records only. If asset records are inactive (Active field not*

selected (not ticked) on the Activa - Details screen, it will not be listed.

2. The details for each of these asset transactions, will be displayed in the following columns:

   a) Next process date - By default this will be the system date. Later when processing the transactions, it will be the date as set in the write-off period.

   b) Description - The transaction reference and description as entered in batches which are updated (posted) to the ledger. In the case of documents, this will be the document number and the item description.

   c) Purchase amount - The purchase amount of the posted transaction in batches and documents. Note this should be exclusive of VAT/GST/Sales Tax).

   d) Current value - This is calculated as the current value minus any transactions processed in the Activa journals.

   e) Extra description - The extra text or descriptions entered on the Activa - Detail tab. The extra descriptions can contain up to 50 characters.

   For example, asset number on your asset register (Asset inventory), the method for calculation of Depreciation, reference to the Management's write-off authorisation (decision), reference to the section of the Tax Act of Tax Practice Note, etc.

   f) Purchase date - The date of the purchase transaction is the document date or the date in journals to updated (posted) the ledger.

   g) Write-off type - The values are as follows:

      § Amount per Period

      § Percentage per Period.

   h) Write-off period - The values are as follows:

      § 1 Month

      § Quarter (3 Months)

      § Half year (6 Months)

      § Year (12 Months)

   i) Enabled - The values are as follows:

      § 1 = Enabled (active)

      § 0 = Inactive (Enabled) not selected on the Activa - Details tab).

Once the final depreciation or write-off amount is reached, the following confirmation message will be displayed:

"Write off for Asset description ended do you want to clear the activa accounts?"

If select Yes to you clear the Activa account, the "End of life" entry will be displayed.

j) Linked transaction - The transaction id number as automatically generated.

k) Rest amount - This is the nominal value, scrap value, trade-in value, etc. of the assets at the end of its life span, that needs to be reflected in the balance sheet.

Tax Legislation and accounting standards in some countries may require a nominal value (e.g. 1.00) to be displayed. This simply means that the Asset is completely written-off, still on the business books or in use. Once that asset is disposed of, the nominal value will be written-off when determining the profit or loss with the sale of the fixed asset.

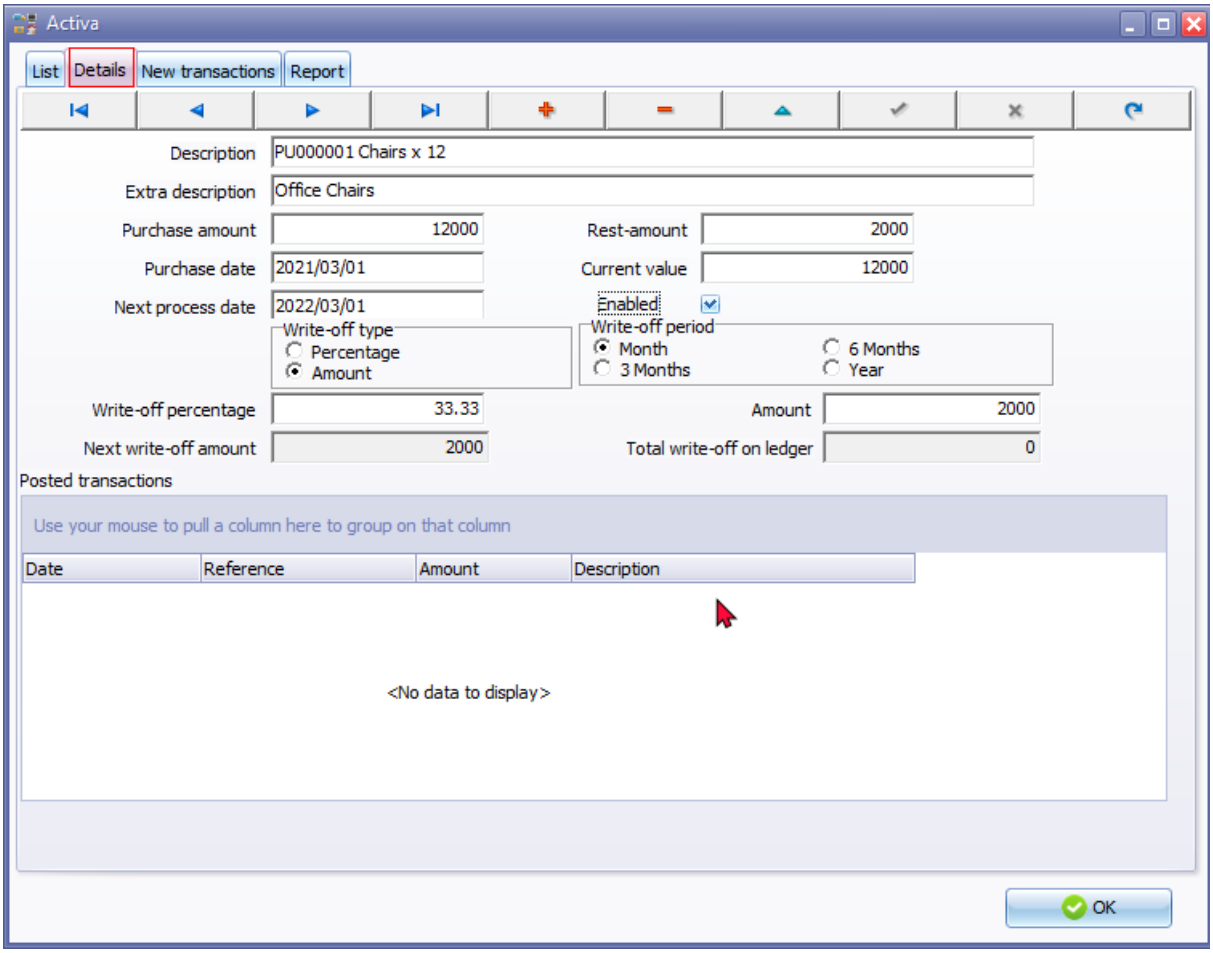
l) Write-off percentage – If the write-off type is set to Write-off percentage, the Write-off percentage (e.g. per month, quarter (3 months), 6 months (half-year) or year (12 months)) will be displayed.

m) Write-off amount – If the write-off type is set to Write-off amount, the write-off amount (e.g. per month, quarter (3 months), 6 months (half-year) or year (12 months)) will be displayed.

n) Next Write-off amount - This will automatically be calculated.

o) Total Write-off on ledger - This amount will automatically be calculated. It accumulates the total of all transactions posted to the write-off account.

3. Once you have located an entry on the Activa - List tab, click on the Details tab. The following screen is displayed:



You may use the record buttons to save and manage records.

4. Enter and/or select the following options:

   a) Description - This is the description of the transaction.

   b) Extra description - Add additional text for the depreciation transactions.

   c) Purchase amount - The purchase amount (cost amount), excluding Tax (VAT/GST/Sales tax) of the fixed asset will automatically be displayed. Check the Purchase amount. If you have entered any opening balances, please make sure that you enter the correct value of the asset here.

   d) Purchase date - The date of the purchase transaction is the document date or as entered in batches which are updated (posted) to the ledger The date of the purchase transaction is the document date or as entered in batches which are updated (posted) to the ledger

   e) Next process date - The date on which the next depreciation is scheduled for processing.

   f) Rest amount - The Rest amount, is by default 0. Enter the rest amount, scrap value (trade-in value) of the asset, if applicable.

g) Current value - The current book value or holding value.

h) Write-off type - Select Percentage or Amount.

i) Percentage / Amount - Enter the percentage or the amount (depending on the selection in the "*Write-off type*" options).

j) Write-off period - Select month, 3 months, 6 months or year.

k) Next write-off amount - The next amount of depreciation that will be processed.

5. Once finished, click on the OK button.

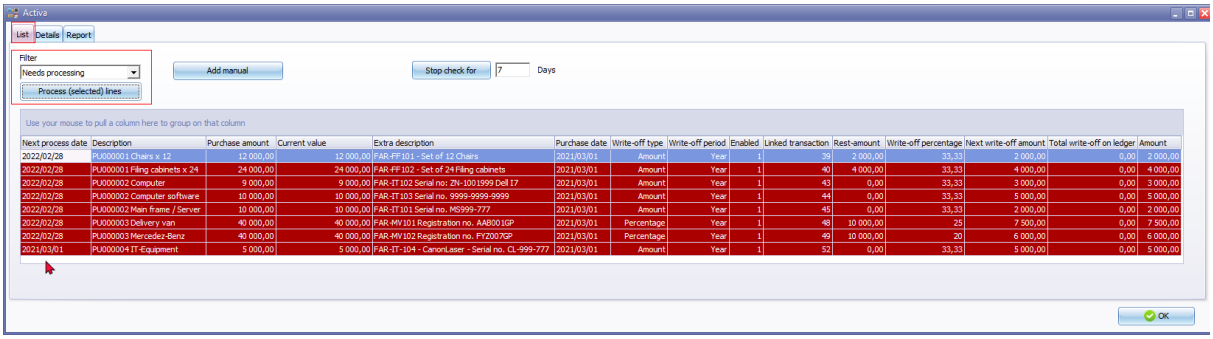
Process Activa records

Before you need to process depreciation (wear and tear allowances) make absolutely sure that the correct settings and details is listed for each asset class. You may need to consult the tax guidelines and practice notes issued by your tax authorities or other legislation applicable to your specific country.

If this is not correct at this stage, select the asset and click on the Details tab to edit the necessary fields.

To process transactions for depreciation (wear and tear allowances):

1. On the Activa - List screen, use the Filter options to list the asset records the need processing.



2. Select an asset record and make absolutely sure that the asset's details is correct.

Multi-select records:

Press the Ctrl key and click on the transactions.

3. Click on the Process (selected) lines button. The Activa plugin will generate the necessary transactions in the selected batch (e.g. Activa journal) and update (post) these transactions to the ledger.

Once the final depreciation or write-off amount is reached, the following confirmation message will be displayed:

"Write off for Asset description ended do you want to clear the activa accounts?"

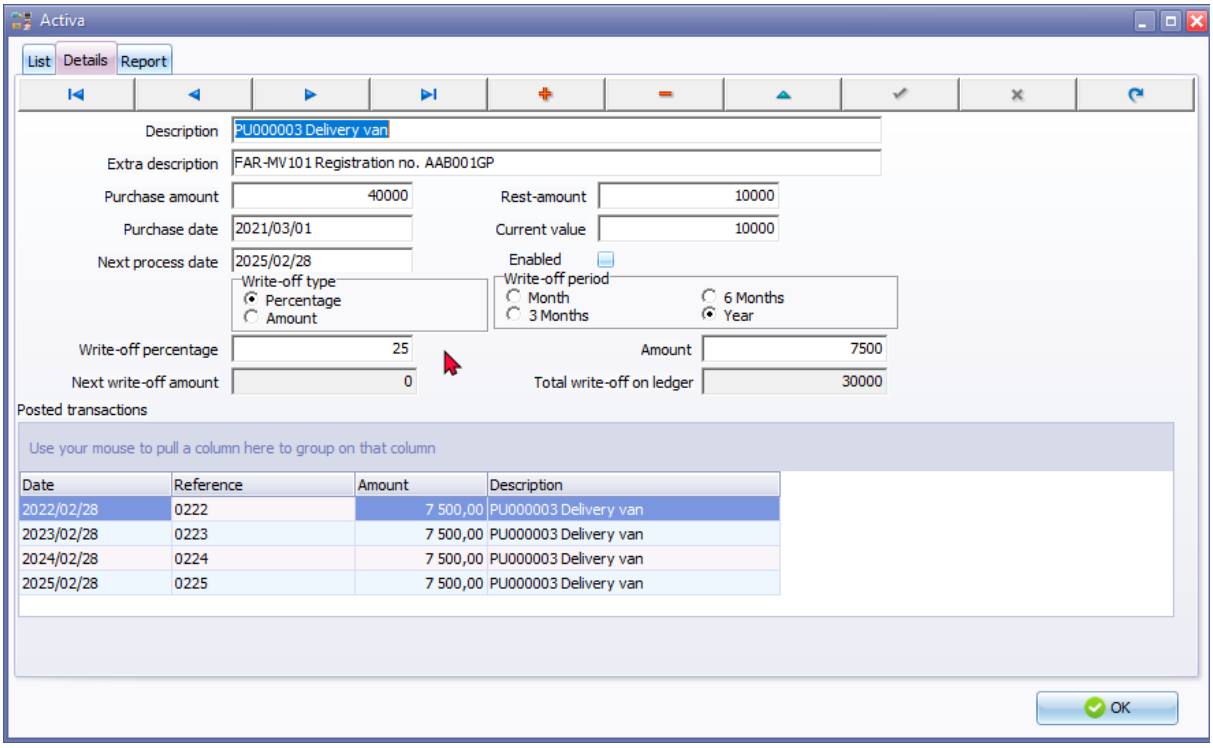
If select Yes to you clear the Activa account, the "End of life" entry will be displayed.

If the "Next process date" is scheduled and the New Financial year is not opened for the scheduled process date, an error message will be displayed:

"Process failed please check batch!"

Click OK. When the Year-end process is finalised, you may proceed to process the selected Fixed assets.

4. Select the next Activa record, and repeat his process. Each of the processed lines for a selected asset in the Activa plugin will list the transactions in the "*Posted transactions*" section of the Activa - Details tab. This will keep track of all transactions and amounts written-off over the life span of the asset.



5. Once this is done, click on the OK button to exit close the Activa plugin.

Created with the Standard Edition of HelpNDoc: Create HTML Help, DOC, PDF and print manuals from 1 single source

Activa reports

Activa Transactions and Reports

Activa transactions

The transactions generated by the Activa plugin are as follows:

- Purchase - The purchase transactions can be processed in journals and documents. You must update (post) these transactions in documents to the general ledger. After that, you need to set up each asset's details correctly.
- Depreciation - The transactions for writing off transactions for depreciation (value reduction) are entered in the Activa journal or other unique journal that you have selected for the Activa plugin in the setup. These transactions are automatically calculated according to the details and percentages or amounts you specified for each asset. When these transactions are processed in the Activa plugin, this journal will automatically update to the ledger.

All updated transactions will be included in all reports for the specific fixed asset accounts, depreciation (reduction in value) accounts, creditors' (supplier's) accounts as well as Tax (VAT/GST/Sales tax) accounts.

Other Report options

The Activa - Report - Pivot tab allows you to group, sort, filter the totals and fixed asset transactions generated with the Activa plugin according to your specific requirements.. You can also analyse your transactions in the Pivot functionality on the Ledger analyser 1 or Ledger analyser 2 to analyse your data and build advanced filters.

In addition to the reports on the Reports menu and User reports menu (Reports ribbon), documents and reports can also be found and printed on other functionalities in osFinancials5/TurboCASH5. Some of these options include:

- Ledger analyser 1 or Ledger analyser 2 - Trial Balance, Balance Sheet and Income Statement, etc. You can also use the Pivot functionality on theLedger analyser 1 or Ledger analyser 2 to analyse your transactions and data You may build advanced custom filters.
- Search (Investigator) -
    - Document type - Print a document for purchase transactions.
    - Batch type Initiate the T-Accounts. You can print your transactions for depreciation in the T-Accounts. You can even print the transactions for a specific asset's accumulated depreciation

(depreciation) or the creditors' (suppliers') accounts and even VAT accounts. In addition, you can filter the transactions per account over the period of the life of the assets and export them to a spreadsheet.

- Creditor (Supplier) accounts -
  - Documents tab - You can print specific documents for the purchase transactions.
  - Transactions tab - For specific transactions, you can right-click to select the Show transactions context-menu option. This will display the selected transactions on the Transactions screen. You can then print the Posted journal transactions.
  - Stock item tab - This will list all the assets that have been purchased.
- Stock items - You can select a document on the Document groups tab and print the document.
- Spreadsheet reports - You can display the Transactions per period or even for a period spanning the life of the assets and use the Save as options to open the transactions in your favourite spreadsheet program.
- T-Accounts - You can print your transactions for depreciation in the T-Accounts. You can even print the transactions for a specific asset's accumulated depreciation (depreciation) or the creditors' (suppliers') accounts and even Tax (VAT/GST/Sales tax) accounts. In addition, you can filter the transactions per account over the period of the life of the assets and export them to a spreadsheet.

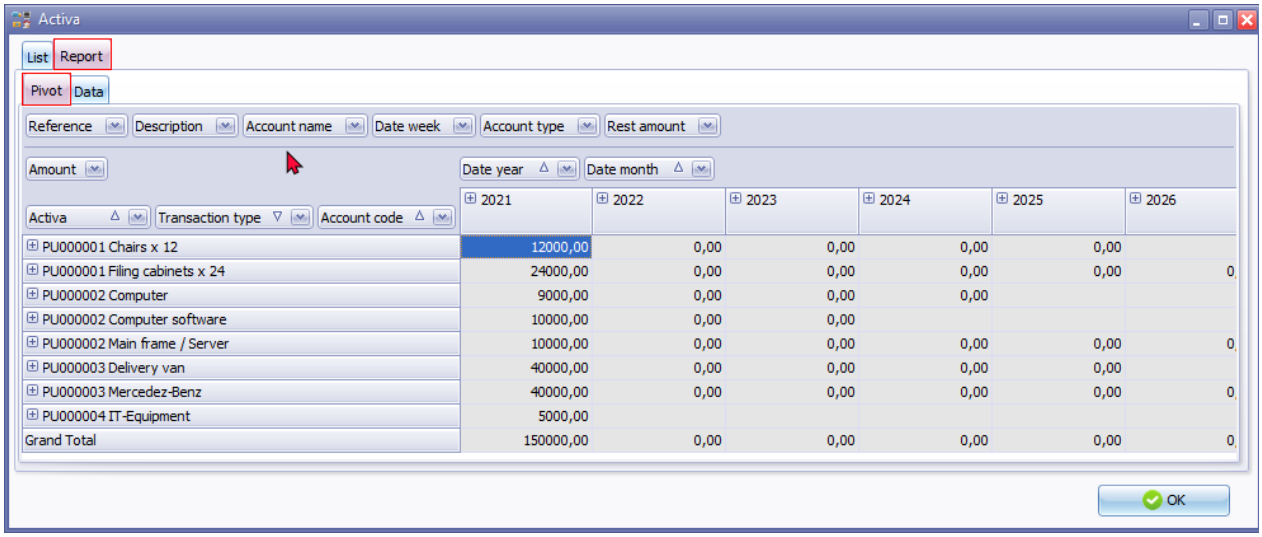
Activa transactions - Reports tab

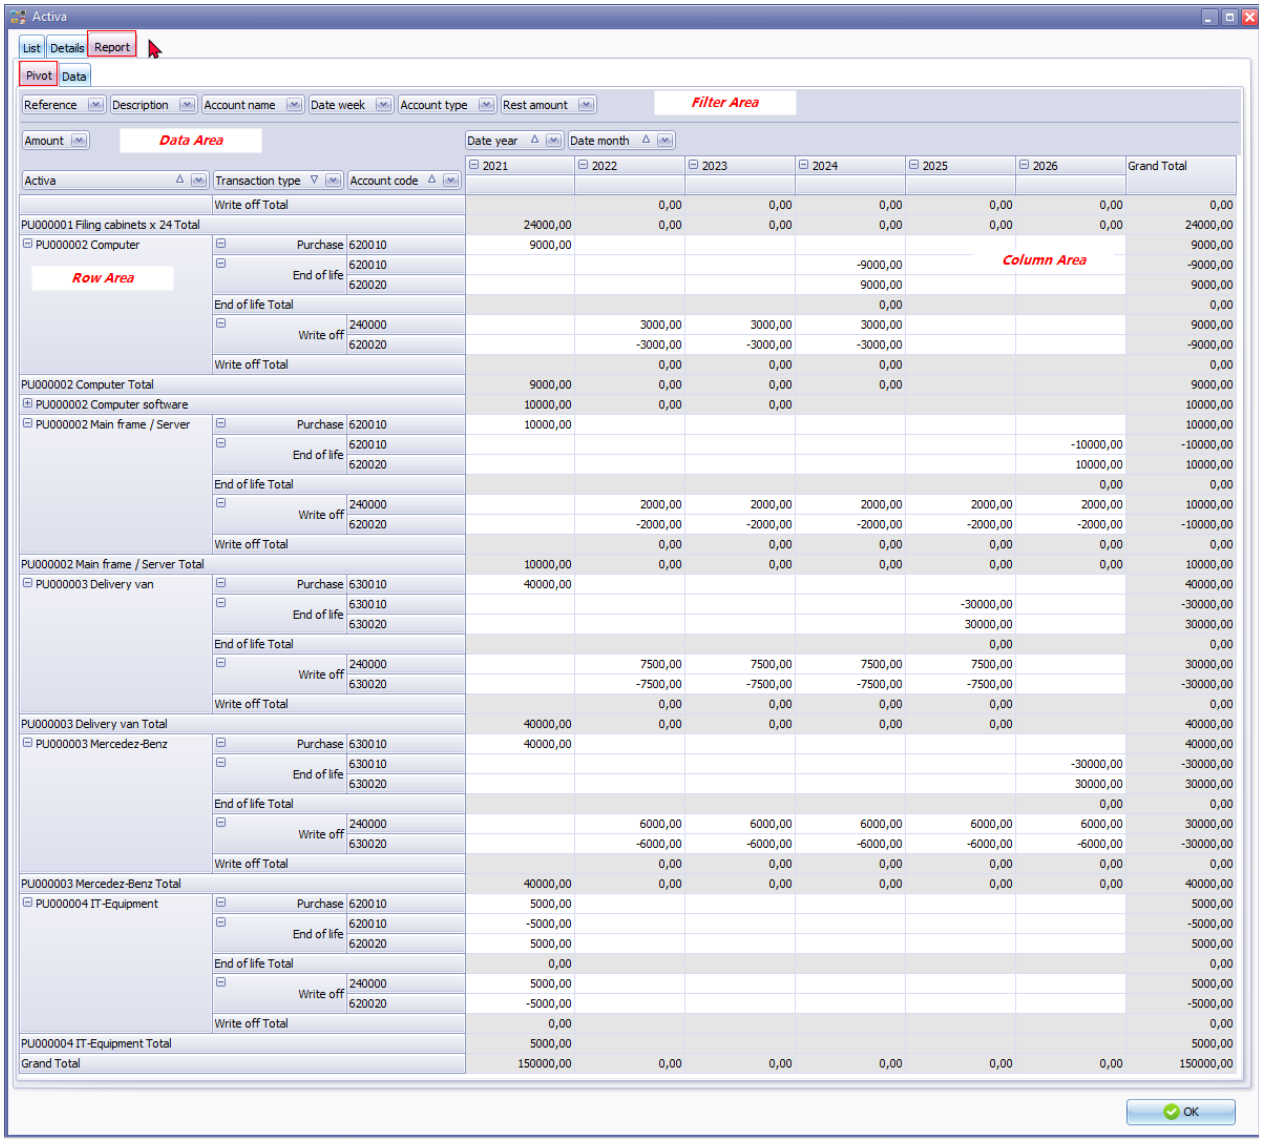
Activa - Reports - Pivot tab - Processed transactions

The Activa - Reports - Pivot tab allows you to group, sort, filter Activa totals and transactions, according to your specific requirements. The Activa - Reports - Pivot tab is a powerful tool for analysing and summarizing your fixed asset transactions. It allows you to group, sort, and filter data to meet your specific needs.

If a new asset is purchased, it will only list the purchase transactions type. Once the depreciation transactions is processed, the Write-off transactions for the asset will be listed.

To view the details of an asset, expand a transaction, click on the icon and to collapse (hide) click on the icon.





The default view of the Pivot for the Activa plugin, is grouped in four sections (i.e. Filter Area, Data Area, Row Area and Column Area) and is as follows:

Filter Area:

1. Reference - The “*Reference*” is as follows:
    - Documents - Document number as generated when creating documents.
    - Batches - The "*Reference*" - as generated when the transactions (lines) on the Activa - List tab were processed ("*Write off*" or "*End of life*") transactions is generated. If Purchase transactions of Assets is processed on different dates, it will create new "*Reference*" for each asset.

*If asset purchases is processed in "Batch entry" screens, the reference as entered the “Reference” column of "Batch entry" screens will be listed. The reference of Balancing entries in batches is indicated with eight (8) asterisks “********”.*

2. Description - Transaction description
    - Documents - The document type (i.e. Purchase and Supplier returns) and the description of the Asset item or description of the asset as entered in the "*Description*" column of the document lines.
    - Batches - The description of the transaction entered in the “*Description*” column of "*Batch entry*" screens. The reference of Balancing entries in batches is indicated with eight (8) asterisks “********”.

*If asset purchases is processed in "Batch entry" screens, the reference as entered the “Description” column of "Batch entry" screens will be listed. The reference of Balancing entries in batches is indicated with eight (8) asterisks “********” and is added to the "Description".*

3. Account name - The account name or account description of the Asset account at cost and Asset accumulated depreciation account (Balance sheet) or Depreciation (Income Statement) account.
4. Date week - The number of the week (from 1 to 53) for a calendar year.
5. Account type - Balance sheet or Income statement.
6. Rest amount - The amounts entered for the scrap value (trade-in value) of the asset at the end of the asset's life cycle (in the "*Rest value*" field of the Asset's detail form.

Data Area:

7. Amount - The debit amounts will be listed. Credit amounts (prefixed by a - (minus sign)) will be listed.

Row Area:

8. Activa - The Purchase document number and the description of the Asset item or description of the asset as entered in the "*Description*" column of the document lines.

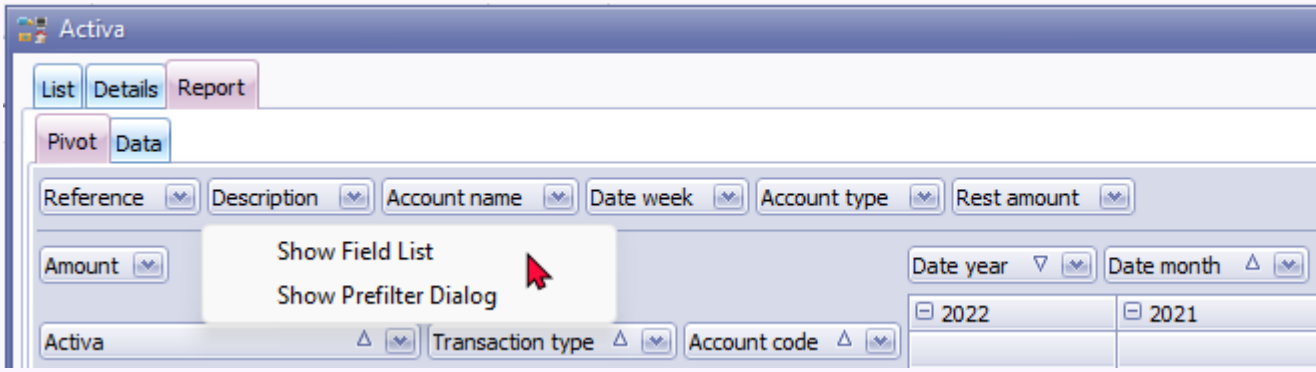
9. Transaction type - "*Purchase, Write-off*" or "*End of life*".
10. Account code - The account code of the Asset account at cost (Balance sheet) or Depreciation (Income Statement) account.

Column Area:

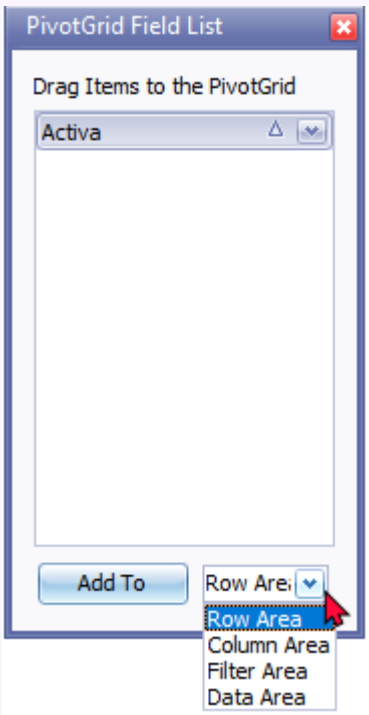
11. Date year - The transaction totals will be displayed only for the year which on which purchase and write off transactions were processed. In this example 2021 will be listed for transactions processed for March 2021 and transactions were processed in February 2022.
12. Date month - The transaction totals will be displayed only for the months in which transactions were processed.

PivotGrid Field List

You may right-click on any of the three sections (i.e. Filter Area, Data Area and Column Area) to launch the context menu.



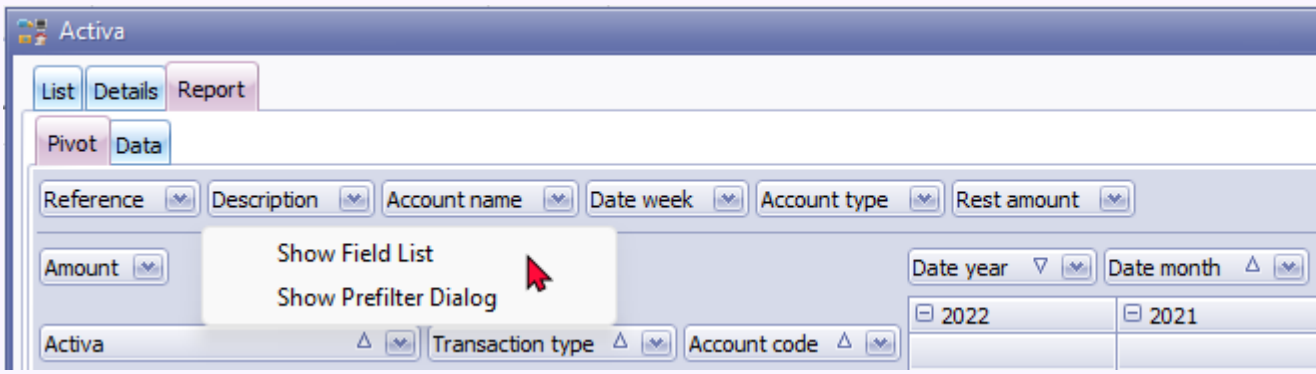
By default, all data fields is listed on the Pivot table. The "Show Filed List" context menu option, will list the empty "PivotGrid Fi fields onto the "PivotGrid Filed List" screen. The selected data field will removed from the Pivot and listed in the be listed "PivotG



You may add it to the "Row Area, Column Area, Filter Area" and "Data Area".

PivotGrid Field List

You may rignt-click on any of the three sections (i.e. Filter Area, Data Area and Column Area) to launch the context menu.

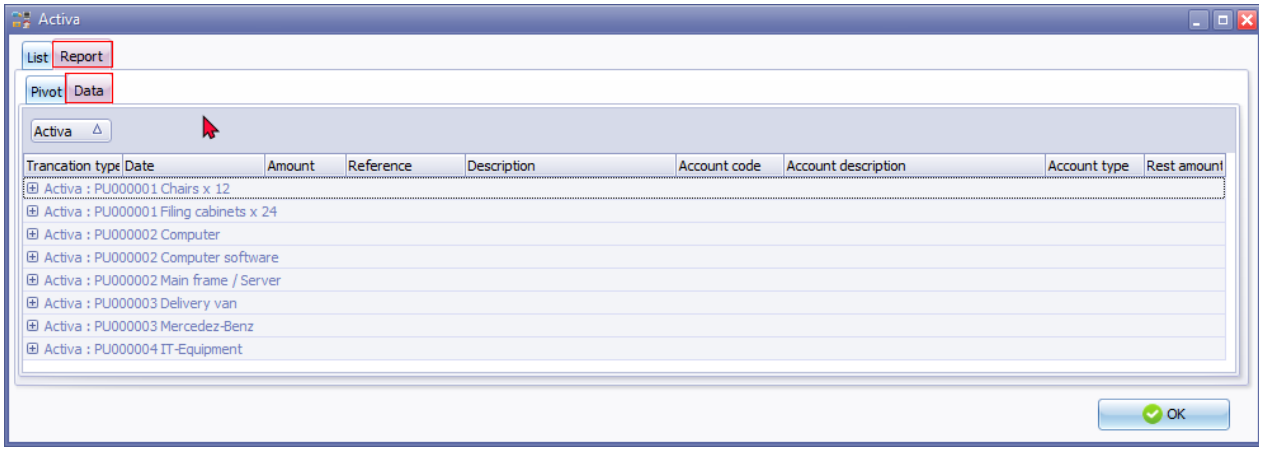


By default, all data filelds is listed on the Pivot table. The "Show Filed List" context menu option, will list the empty "PivotGrid Fi fileds onto the "PivotGrid Filed List" screen. The selected data field will removed from the Pivot and listed in the be listed "PivotG

You may add it to the "Row Area, Column Area, Filter Area" and "Data Area".

Activa - Reports - Data tab - Processed transactions

The Activa - Reports - Data tab lists all purchase transactions of the Fixed assets added and processed as well as the write off transactions over the life span of Fixed assets.



To view the details of an asset, expand a transaction, click on the ⊞ icon and to collapse (hide) click on the ⊟ icon.

The columns is as follows:

1. Transaction type - "*Purchase, Write off*" or "*End of life*". Purchase transactions is the assets at cost price. Write off transactions will be posted to the Accumulated depreciation (Balance sheet) account as a credit amount and to the Depreciation (Income statement) account type as a debit amount.

2. Date - The transaction date for the Purchase transaction. When write off transactions is processed it will be the date when the transactions on scheduled write off date is processed.

3. Amount - Purchases of Fixed assets Purchase transactions is the assets at cost price is a debit amount. Write off transactions will be posted to the Accumulated depreciation (Balance sheet) account as a credit amount and to the Depreciation (Income statement) account type as a debit amount. Credit

amounts (prefixed by a - (minus sign)).

4. Reference - Documents - The document number on which the asset was purchased. When write off transactions is processed it will be the "*Reference*" automatically generated for the write off transactions. If more than one date is applicable to the transactions on scheduled write off date, it will generate the same reference number for all transactions with the same processing date and another reference number for another scheduled write off date.
5. Description - Transaction description Documents - The document number for the document type (i.e. Purchase and Supplier returns) and the description of the Asset item or description of the asset as entered in the "*Description*" column of the document lines.
6. Account code - The account code of the Asset account at cost for purchases of fixed assets and Asset accumulated depreciation account (Balance sheet) for write off transactions or Depreciation (Income Statement) account.
7. Account description - The account name or account description of the Asset account at cost for purchases of fixed assets and Asset accumulated depreciation account (Balance sheet) for write off transactions or Depreciation (Income Statement) account.
8. Account type - Balance sheet or Income statement.
9. Rest amount - The amounts entered for the scrap value (trade-in value) of the asset at the end of the asset's life cycle (in the "*Rest value*" field of the Asset's detail form.

Activa - Reports - Custom filters

You can use advanced filters to view and filter, sort, group and analyse the transactions in respect of your fixed assets.

In addition to the Pivot tab and Data tab of the Activa plugin, you can also use the Pivot functionality on the Trial Balance, Balance Sheet and Income Statement in the Ledger analyser 1 or Ledger analyser 2 to analyse your data and build advanced filters of your transactions.

Types of fixed assets

Fixed assets

Fixed assets or tangible assets is a long-term asset which is used in a business to generate income over the life span of the fixed asset.

Fixed Asset Register

The fixed asset register (FAR) (Inventory of fixed assets) is supplementary accounting records and the accounting method used to record and keep track of the assets of a business. The fixed asset registers is used or the to keep record and track the fixed assets used in the the process of the business activities production of goods or rendering services. These assets are not sold as trading stock in the normal course of the business activities.

For example, a hardware store may sell tools to its customers but may also purchase tools to produce goods for customer requirements. For example, if it sells boards and circular saws to its customers, it may need a circular saw to cut these boards to size according to the customer's specific requirements. The circular saw it uses to cut the boards are fixed assets and needs to be recorded in the fixed asset register. The boards which is sold to customers, are trading stock and needs to be recorded in the stock (inventory) records.

The fixed asset register needs to record the following for each fixed asset for each accounting period:

- The value of assets – The value (opening balance) as at the start of the financial (tax) year. It should also include the depreciation written-off as well as the value of the assets as at the end of the financial (tax) year (closing balance).
- Date of acquisition – The date on which the asset is procured (purchased).
- Period - The acceptable period over which the write-off of depreciation is prescribed.
- Other details necessary to calculate depreciation and tax allowances.

Some reasons to keep accurate records of the fixed assets (non-current assets) of the business are;

- Fixed asset management and preventative maintenance.
- Tracking and deterring theft of fixed assets.
- Tax purposes – The Depreciation (Wear and Tear Allowances) which the tax authorities allow you to claim as a business expense.
- Insurance – Accurate records and valuations to assist with insuring the assets. These records may help to prevent the asses from being over-insured or under-insured. This may result in disputes if penalties

being imposed by the insurance company when a claim is processed.

There are two groups of Fixed assets; i.e.;

1. Tangible assets (which can be physically touched). In these cases you may write-off depreciation or wear and tear over the lifespan of the Fixed assets. Some examples, are;
    - Land and buildings (This asset type usually appreciates in value over the years).
    - Furniture and fittings
    - Office equipment
    - IT equipment (computers, etc.)
    - Motor vehicles
    - Plant and machinery
    - Tools
2. Intangible assets (which cannot be physically touched). The allowances and depreciation is referred to as amortization for intangible assets. Some examples, are;
    - Goodwill
    - Intellectual capital
    - Intellectual property
    - Brand
    - Copyright
    - Patent
    - Patent valuation
    - Trademark
3. Capital Gains Tax (CGT)
4. Accelerated Depreciation may apply to businesses, for example, Urban Development Zones (UDZ).

The statutory requirements, prescriptions and guidelines, etc. may differ from country to country. The format and the requirements, for fixed assets must be followed as prescribed by the various tax authorities, accounting standards, (e.g. Generally Accepted Accounting Principles (GAAP,), International Accounting Standards (IAS), etc.) and various acts relating the the type of ownership (e.g. Companies act, etc.).

Methods to calculate depreciation

Calculate Depreciation

There are various methods according to which depreciation can be calculated. The most commonly used methods are the fixed instalment and the diminishing amount methods.

Tax Legislation, Companies Act and accounting standards in some countries may prescribe different methods to write off depreciation (wear and tear allowances) over the life span for the types of fixed assets.

When you add Fixed assets, you need to decide the method on which depreciation is calculated for the assets. These values only needs to be set once for a Fixed asset on the Details tab of the Activa plugin. The depreciation will be written-off each period over the life span of the fixed asset.

Some of these methods is:

1. *Straight-line method (fixed instalment method)*
2. *Declining balance method (Reducing-value method)*
3. *Double-declining balance*
4. *Production method*
5. *Sum-of-years digits*

In addition to these methods, items (assets purchased for less than a prescribed amount) may be written-off in full.

Straight-line method

According to the fixed instalment method, or cost price method, a fixed amount of depreciation is written-off annually.

The amount of depreciation will be same every year. It is calculated according to the life span of a fixed asset.

For example, as prescribed by the South African Revenue Services (SARS) a delivery vehicle's life span is four (4) years. The cost price of the asset will be written off over a period of four (4) years. The depreciation can be calculated by dividing the cost price by 4 years, or 25% per annum.

For example, as prescribed by the South African Revenue Services (SARS) a passenger car's life span is five

(5) years. The cost price of the asset will be written off over a period of five years. The depreciation can be calculated by dividing the cost price by 5 years, or 20% per annum.

The following worksheet is used to illustrate how to calculate the depreciation on a delivery van over 4 years:

Depreciation – Straight-line method

Date of Purchase:	*1 March 2021*	*Delivery van (Cost Price):*	*40,000*		
Write-off period :	*4 Years*	*Less : Trade-in (Scrap value) :*	*10,000*		
Depreciation Percentage:	*25%*	*Depreciation calculated on:*	*30,000*		
Year	*Year ended*	*Calculate depreciation on Amount*	*Depreciation Amount*	*Accumulated Depreciation*	*Book Value*
1	*28 February 2022*	*30,000*	*7,500*	*7,500*	*32,500*
2	*28 February 2023*	*30,000*	*7,500*	*15,000*	*25,000*
3	*28 February 2024*	*30,000*	*7,500*	*22,500*	*17,500*
4	*28 February 2025*	*30,000*	*7,500*	*30,000*	*10,000*

The depreciation is calculated on the cost price, less the trade in or scrap value at the end of the life span of the delivery van.

For the first year, calculate the depreciation on the cost price of 40,000 less the trade in or scrap value of 10,000. The depreciation will therefore be calculated as 25% of 30,000, which is 7,500 per annum.

This amount of 7,500 will be depreciated in four equal instalments for the years during the life span of the delivery van.

After the end of the fourth year, the book value will be 10,000, which is the trade-in or scrap value of the vehicle. Over the life span of the vehicle, the depreciation will total to 30,000.

The following worksheet is used to illustrate how to calculate the depreciation on a Passenger vehicle over 5 years:

Depreciation – Straight-line method

Date of Purchase:	*1 March 2021*	*Mercedez-Benz (Cost Price):*	*40,000*		
Write-off period :	*5 Years*	*Less : Trade-in (Scrap value) :*	*10,000*		
Depreciation Percentage:	*20%*	*Depreciation calculated on:*	*30,000*		
Year	*Year ended*	*Calculate depreciation on Amount*	*Depreciation Amount*	*Accumulated Depreciation*	*Book Value*
1	*28 February 2022*	*30,000*	*6,000*	*6,000*	*34,000*
2	*28 February 2023*	*30,000*	*6,000*	*12,000*	*28,000*
3	*28 February 2024*	*30,000*	*6,000*	*18,000*	*22,000*
4	*28 February 2025*	*30,000*	*6,000*	*24,000*	*16,000*
5	*28 February 2026*	*30,000*	*6,000*	*30,000*	*10,000*

The depreciation is calculated on the cost price, less the trade in or scrap value at the end of the life span of the passenger vehicle.

For the first year, calculate the depreciation on the cost price of 40,000 less the trade in or scrap value of 10,000. The depreciation will therefore be calculated as 20% of 30,000, which is 6,000 per annum.

This amount of 6,000 will be depreciated in five equal instalments for the years during the life span of the passenger vehicle.

After the end of the fifth year, the book value will be 10,000, which is the trade-in or scrap value of the vehicle. Over the life span of the vehicle, the depreciation will total to 30,000.

Diminishing-value method

If compared to the straight-line (fixed instalment) method, where a fixed amount is written-off over the life span of the fixed asset per year; the diminishing-value method amount of depreciation will differ from year to year and will decrease from year to year.

According to the diminishing-value method, most of the fixed asset's value will diminish, or be written-off in the first year, and a lesser amount in the second year, and even lesser amounts in the successive years.

Using the diminishing-value method, depreciation is calculated on the book value (tax value) of the asset at the end of each year. Depreciation is calculated on the purchase (cost) price, less any depreciation already claimed in previous years (accumulated depreciation).

The book value reduces or diminishes rapidly up to 40% in the first year and a lesser percentage in the second and successive years. This is why it is also referred to as the accelerated method.

There are two basic formulas that may be used to calculate depreciation when the diminishing balance method is used. These methods are: -

1. Fixed percentage on the diminishing (reducing) balance method.
2. The Sum-of-the-digits method.

Fixed percentage on the diminishing (reducing) - value method

A fixed percentage of the book value is used to calculate the depreciation, which must be written off each year.

If the life span of an asset is for instance, five years, and is normally calculated as 20%, the percentage needs to be doubled to 40% in this case. The fixed percentage must be used to calculate the percentage on the reduced (diminished) balance at the beginning of the applicable year.

According to the straight-line method, the annual depreciation rate over 5 years, is 20% per year.

Using the double-declining-balance method, double the annual depreciation rate, from 20% to 40%. The 40% depreciation rate is used to calculate the depreciation for each year on the purchase (cost) price less the accumulated depreciation.

For example, a Passenger vehicle purchased at 40,000 with a life span of 5 years, is as follows:

Depreciation – Fixed Percentage on Diminishing Balance method

Date of Purchase:	*1 March 2021*	*Passenger vehicle (Cost Price):*	*40,000*
Write-off period :	*5 Years*	*Less : Trade-in (Scrap value) :*	*10,000*
Depreciation Percentage:	*20%*	*Depreciation calculated on:*	*30,000*

Year	*Year ended*	*Calculation*	*Depreciation Amount*	*Accumulated Depreciation*	*Book Value*
1	*28 February 2022*	*40% of 40,000*	*16,000.00*	*16,000.00*	*24,000.00*
2	*28 February 2023*	*40% of 24,000*	*9,600.00*	*25,600.00*	*14,400.00*
3	*28 February 2024*	*40% of 14,400*	*5.760.00*	*31,360.00*	*8,640.00*
4	*28 February 2025*	*40% of 8,640*	*3,456.00*	*34,816.00*	*5,184.00*
5	*28 February 2026*	*40% of 5,184*	*2,076.60*	*36,889.60*	*3,110.40*

The depreciation is calculated on the full cost price. The trade in value or scrap value at the end of the life span of the delivery van is not taken into account for calculating depreciation according to this method.

According to the Diminishing-value method, the book value at the end of the fixed asset's life span can never be zero. The remaining balance at the end of the fixed asset's life span (last year of depreciation) is the scrap value.

This remaining balance, at the end of the fixed asset's life span, needs to be taken into account when an asset is disposed of (calculate the profit / loss on the sale of the fixed asset).

Sum-of-the-years-digits method

Sum-of-the-Years-Digits Method of Depreciation

The sum-of-the-years-digits (SYD) method is an accelerated depreciation technique that allocates a larger depreciation expense in the earlier years of an asset's useful life and less in the later years. This method is useful for assets that lose value more quickly in their initial years.

Steps to Calculate Depreciation Using SYD

1. Determine the Lifespan of the Asset: Identify the total number of years the asset will be depreciated.
2. Calculate the Sum of the Digits: For an asset with a lifespan of n years, the sum of the digits is calculated as follows:

   Sum=1+2+3+…+n=n(n+1)2Sum=1+2+3+…+n=2n(n+1)

Sum=1+2+3+…+n=2n(n+1)

   For a 5-year lifespan:

   Sum=1+2+3+4+5=15Sum=1+2+3+4+5=15

3. Calculate the Depreciation Factor : This is done by taking the cost of the asset minus the salvage value and dividing it by the sum of the digits:

   Depreciation Factor=Cost Price−Salvage

Depreciation Factor=1550,000−10,000=1540,000≈2,666.67

   ValueSum of the Years DigitsDepreciation Factor=Sum of the Years DigitsCost Price−Salvage Value

   For a delivery van purchased at $50,000 with a salvage value of $10,000:

   Depreciation Factor=50,000−10,00015=40,00015≈2,666.67Depreciation Factor=1550,000−10,000 =1540,000≈2,666.67

4. Calculate Annual Depreciation: Multiply the depreciation factor by the remaining years of the asset's life:
   - Year 1: 2,666.67×4=10,666.682,666.67×4=10,666.68
   - Year 2: 2,666.67×3=8,000.012,666.67×3=8,000.01
   - Year 3: 2,666.67×2=5,333.342,666.67×2=5,333.34
   - Year 4: 2,666.67×1=2,666.672,666.67×1=2,666.67

Example Calculation

5. Let's apply this to your example using a delivery van purchased for $50,000, with a life span of 4 years and a salvage value of $10,000.
6. Lifespan: 4 years
7. Sum of the Years: 1+2+3+4=101+2+3+4=10
8. Depreciation Factor: 50,000−10,00010=40,00010=4,0001050,000−10,000=1040,000=4,000
9. Annual Depreciation Calculations:
   - Year 1: 4,000×4=16,0004,000×4=16,000
   - Year 2: 4,000×3=12,0004,000×3=12,000
   - Year 3: 4,000×2=8,0004,000×2=8,000

- Year 4: 4,000×1=4,0004,000×1=4,000

Summary Table

Year	*Year Ended*	*Calculation*	*Depreciation Amount*	*Accumulated Depreciation*	*Book Value*
1	*28 February 2022*	*4,000×44,000×4*	*$16,000*	*$16,000*	*$34,000*
2	*28 February 2023*	*4,000×34,000×3*	*$12,000*	*$28,000*	*$22,000*
3	*28 February 2024*	*4,000×24,000×2*	*$8,000*	*$36,000*	*$14,000*
4	*28 February 2025*	*4,000×14,000×1*	*$4,000*	*$40,000*	*$10,000*

At the end of the asset's life, the book value should match the salvage value, which is $10,000 in this case. This final balance is important for calculating any profit or loss when the asset is disposed of.

If this method is used, the total of the number of years of the life span of the fixed asset is divided by the cost price less, the expected salvage value (trade-in or scrap value) of the fixed asset.

In the first year, the amount is then multiplied by the highest number of years (last year) of the life span of the fixed asset.

For the second year, the second last year number of the life span of the asset is used, and so on.

In the last year, the first year's number is used.

The sum of the years must be added up.

For example if the fixed asset is depreciated over a life span of five years, the digits for each of the number of years must be added up.

For five years we will add up 1+2+3+4 = 10.

The number 10 is then divided into the cost price of the fixed asset.

The annual depreciation is calculated on the Purchase (cost) price less the salvage value (trade-in or scrap value) of 10,000, i.e. 40,000 divided by 10 = 4,000. This is the factor, which we will use through the entire life span of the passenger vehicle.

1. In year 1 - Use 4,000 x 4. This is the very first year in the delivery van's life span.
2. In year 2 - Use 4,000 x 3. This is the second year in the delivery van's life span.
3. In year 3 - Use 4,000 x 2. This is the third year in the delivery van's life span.
4. In year 4 - Use 4,000 x 1. This is the last year in the delivery van's life span.

For example, a Delivery van purchased at 40,000 with a life span of 4 years, is as follows:

For example, a Delivery van, purchased at 50,000 with a life span of 4 years; and a trade-in (scrap value) of 10,000; is as follows:

Depreciation – Fixed Percentage on Diminishing Balance Method

The diminishing balance method (also known as the declining balance method) is an accelerated depreciation method where a fixed percentage is applied to the book value of the asset each year. This results in a higher depreciation expense in the earlier years and progressively smaller expenses in later years.

Calculation Steps

1. Determine the Depreciation Rate: In this case, the depreciation rate is 40%.
2. Calculate Depreciation for Each Year: The depreciation for each year is computed as:
   Depreciation Amount=Book Value at Beginning of Year×Depreciation RateDepreciation Amount=Book Value at Beginning of Year×Depreciation Rate
3. Update the Book Value: After calculating the depreciation expense for the year, subtract it from the book value to get the new book value for the next year:
   New Book Value=Previous Book Value−Depreciation AmountNew Book Value=Previous Book Value−Depreciation Amount

Example Calculation

Let's break down the depreciation calculation for a delivery van using the diminishing balance method.
Initial Cost: $50,000
Salvage Value: $10,000
Depreciation Rate: 40%

Summary Table

Year	*Year Ended*	*Calculation*	*Depreciation Amount*	*Accumulated Depreciation*	*Book Value*
1	*28 February 2022*	*40%×50,000*	*$20,000*	*$20,000*	*$30,000*
2	*28 February 2023*	*40%×30,000*	*$12,000*	*$32,000*	*$18,000*
3	*28 February 2024*	*40%×18,000*	*$7,200*	*$39,200*	*$10,800*
4	*28 February 2025*	*40%×10,800*	*$4,320*	*$43,520*	*$6,480*

Explanation of Each Year

1. Year 1:
   - Calculation: 40%×50,000=20,00040%×50,000=20,000
   - Book Value at End of Year: 50,000−20,000=30,00050,000−20,000=30,000
2. Year 2:
   - Calculation: 40%×30,000=12,00040%×30,000=12,000
   - Book Value at End of Year: 30,000−12,000=18,00030,000−12,000=18,000
3. Year 3:
   - Calculation: 40%×18,000=7,20040%×18,000=7,200
   - Book Value at End of Year: 18,000−7,200=10,80018,000−7,200=10,800
4. Year 4:
   - Calculation: 40%×10,800=4,32040%×10,800=4,320
   - Book Value at End of Year: 10,800−4,320=6,48010,800−4,320=6,480

Final Considerations

At the end of the asset's life, the book value should ideally approach the salvage value. In this case, further depreciation in Year 4 results in a book value of $6,480, which is below the salvage value of $10,000. This scenario emphasizes the importance of considering the salvage value when determining depreciation, as well as the need to adjust calculations if the book value falls below the salvage value. When an asset is disposed of, any remaining book value compared to the sale price will help determine if there is a profit or loss on the sale, which is essential for accurate financial reporting.

Year	*Year ended*	*Calculation*	*Depreciation Amount*	*Accumulated Depreciation*	*Book Value*
1	*28 February 2022*	*40% x 30,000*	*12,000.00*	*16,000.00*	*34,000.00*
2	*28 February 2023*	*3 x 4,000*	*12,000.00*	*28,000.00*	*22,000.00*
3	*28 February 2024*	*2 x 4,000*	*8,000.00*	*36,000.00*	*14,000.00*
4	*28 February 2025*	*1 x 4,000*	*4,000.00*	*40,000.00*	*10,000.00*

The depreciation is calculated on the full cost price less trade in value or scrap value, i.e. 40,000. At the end of the life span of the delivery van, the book value should be the trade-in (scrap value), i.e. 10,000.

This remaining balance, at the end of the fixed asset's life span, needs to be taken into account when an asset is disposed of (calculate the profit / loss on the sale of the fixed asset).

sum-of-the-years-digit method

- https://www.calculatorsoup.com/calculators/financial/depreciation-sum-of-years.php -

The following formula may also be used to find the sum-of-the-years-digit:

The formulae

$$\frac{J = N\,(1 + N)}{2}$$

J = The estimated life span of the asset
N = The total of the series

Some calculations based on the formulae:

If the life span is 5 years

$$\frac{J = N\,(1 + N)}{2}$$

$$= 5\ \frac{(1+5)}{2}$$

$$= 5 \times 3$$

$$\therefore J = 15$$

If the life span is 3 years

$$\frac{J = N\,(1 + N)}{2}$$

$$= 3\ \frac{(1+3)}{2}$$

$$= 3 \times 2$$

$$\therefore J = 6$$

Production method

The Units of Production Method is a depreciation approach that allocates the cost of a fixed asset based on its actual usage rather than the passage of time. This method is particularly useful for assets whose wear and tear is more closely related to their output or production levels, making it a popular choice in manufacturing and similar industries.

Key Features

- Usage-Based Depreciation: Unlike other methods that spread depreciation evenly over time, the Units of Production Method ties the depreciation expense directly to the asset's output. This means that the more an asset is used, the higher the depreciation expense for that period.
- Calculation: To calculate depreciation using this method, you first determine the asset's depreciable cost (the initial cost minus its salvage value) and then divide it by the total expected production over the asset's useful life. The formula can be expressed as:

```
Depreciation Expense = (Depreciable Cost / Total Estimated Production) × Actual Production for the Period
```

This formula ensures that the depreciation expense reflects the actual usage of the asset.

Applications

The Units of Production Method is particularly effective for assets like machinery, vehicles, or equipment that have a direct correlation between their usage and wear. For example, if a piece of machinery is expected to produce 100,000 units over its lifetime and costs $50,000 with a salvage value of $5,000, the

depreciation per unit would be calculated as follows:

1. Depreciable Cost: $50,000 - $5,000 = $45,000
2. Depreciation per Unit: $45,000 / 100,000 units = $0.45 per unit

If the machinery produces 10,000 units in a year, the depreciation expense for that year would be:

```
Depreciation Expense = $0.45 × 10,000 = $4,500
```

This method allows businesses to match their expenses with the revenues generated from the asset, providing a more accurate financial picture.

Conclusion

In summary, the Units of Production Method is a valuable tool for businesses that want to align their asset depreciation with actual usage. By focusing on output rather than time, this method provides a more precise reflection of an asset's value over its useful life.

Fixed Assets (Small items) Purchased for Less than a Prescribed Amount

Writing Off Small Fixed Assets

When it comes to small fixed assets purchased for less than a specified prescribed amount, businesses may have the option to write off these assets in full. This means that instead of depreciating the asset over its useful life, the entire cost can be expensed in the year of purchase. The specific threshold for this write-off is determined by legislation and can vary based on updates from tax authorities.

Depreciation Legislation

The depreciation amount for fixed assets is often prescribed by tax legislation, which can change over time. Therefore, businesses must stay informed about any new legislation or practice notes issued by tax authorities that may affect how they account for these assets. In summary, small fixed assets can be fully written off if they fall below a certain cost threshold, and businesses should regularly check for updates in tax regulations that might influence their accounting practices.

Activa transactions

Posted batches

Once the depreciation transactions in the Activa plugin have been processed it will automatically post or

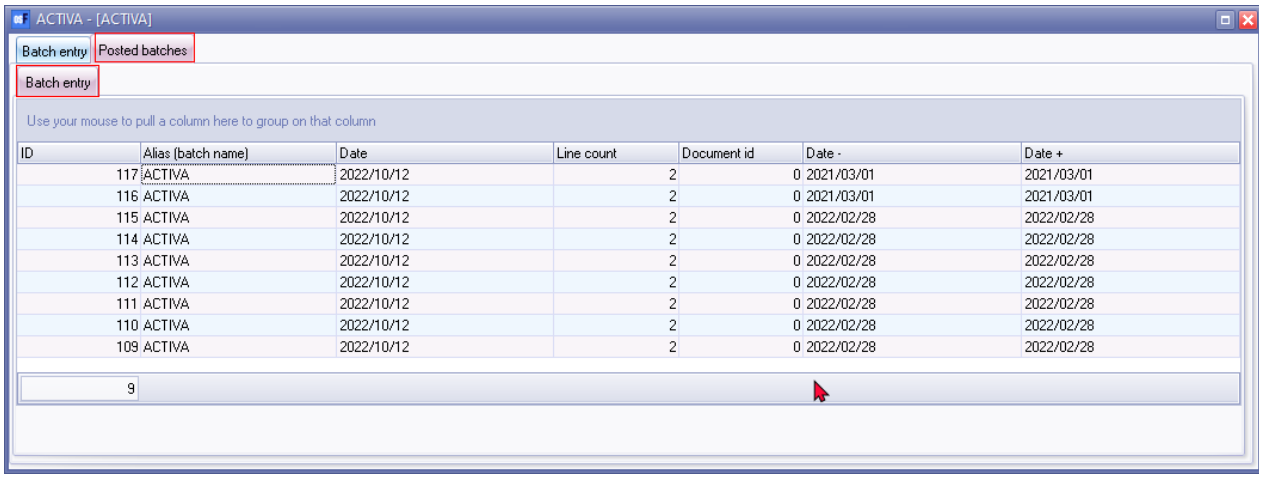
update the transactions to the ledger, as well as update all reports.

Each process line (Asset on the Activa - List tab) will be processed in its own batch. The batch numbers (Batch ID) is automatically generated.

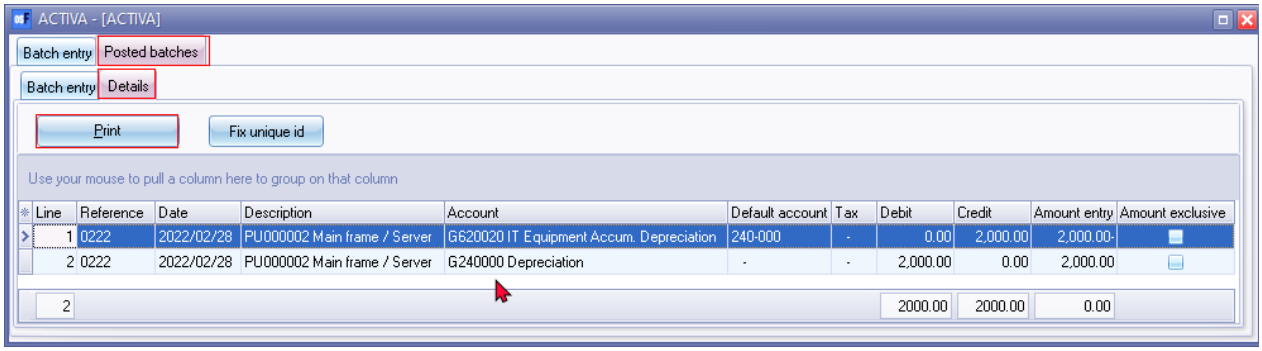
To view and print a posted batch report:

Select the Activa or Depreciation batch type.

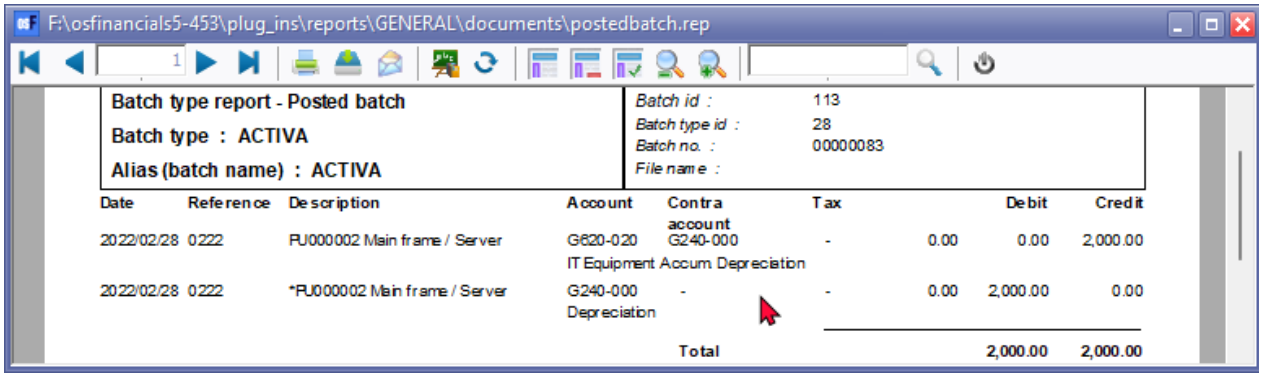
Click on the Posted batches tab. The Batch entry tab on the Posted batches tab, will list all processed Activa transactions posted to the ledger.



Select a batch and double-click. On the Details tab, the Debit and Credit transaction details will be listed.



Click on the Print button. An example of the "*Batch type report - Posted batch*", is as follows:



Central Search

The Investigator allows you to search for data in an open Set of Books. To search or locate data, you may enter a valid word or phrase to search for an item. This facility also allows you to define, or refine, or filter the search criteria, and select to view the details for a selected search result.

SERIAL TRACKING - If you have entered a serial number of a product (stock item) as a comment on your sales documents (Invoices, Credit notes and/or Quotes) and/or on Purchase documents (Purchases and Supplier returns and/or Orders), you may enter the serial number in the "Search for": field.

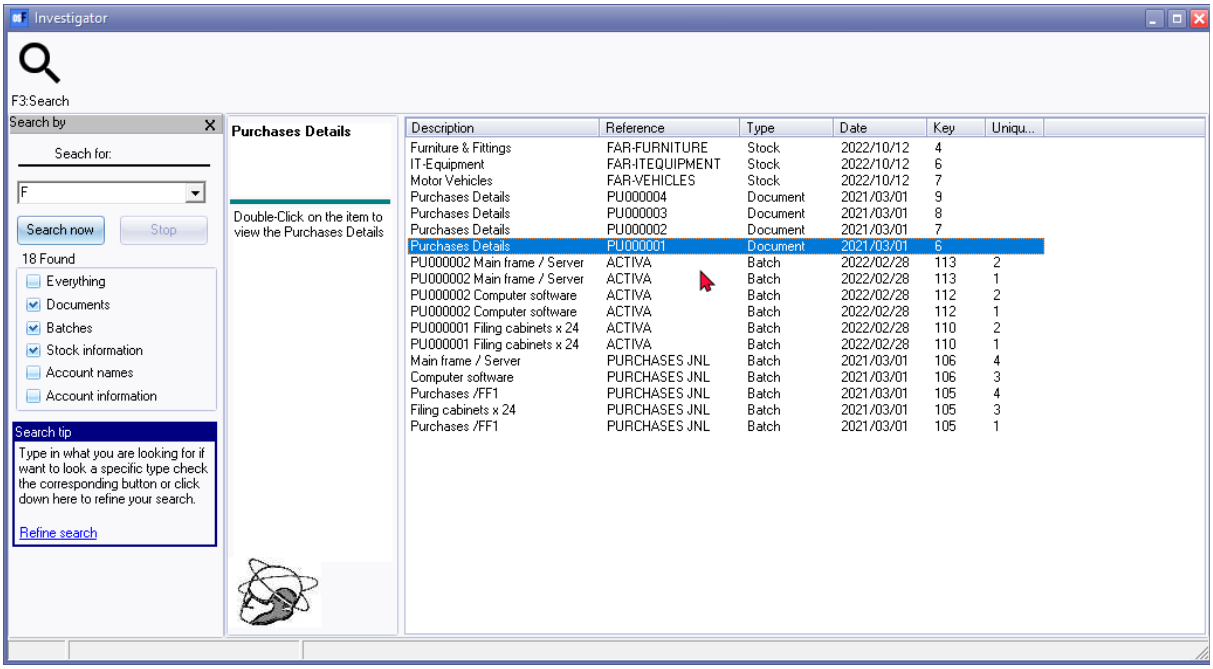
If you click on the Search now button, the Documents will be listed. You may then double-click on the selected document to preview the document.

Comments entered in document lines are searchable.

Remarks is not searchable.

To search for data using the Investigator:

1. On the Default ribbon, select Search. The "*Investigator*" screen is displayed:



2. Enter a word or phrase to search for specific data. To filter the data, you may also select to include everything or documents, batches, stock information, account names and/or account information.

3. Click on the Search now button or on the F3:Search icon. The number of items found (which matches the search criteria) will be displayed, and each of the items found will be listed.

4. Select an item type from the search results list and right-click - select "*Show detail*" option on the context menu (or double-click) to launch the options. The types is as follows:

    a) Account - Launch the T-Account viewer - You may select or enter the dates from and dates to, as well as any filters (if necessary) to view and filter the transactions. Transactions may be printed and exported to a spreadsheet file.

    b) Debtor / Creditor - Launch the Debtor accounts screen to edit or check specific details for the debtor (customer / client). If a Creditor is indicated, it will launch the specific creditor (supplier / vendor) account.

    c) Stock - Launch the Stock items screen to edit or check specific details for the stock item.

    d) Document - The selected document will be printed.

    e) Batch - Launch the T-Account viewer - You may select or enter the dates from and dates to, as well as any filters (if necessary) to view and filter the transactions. Transactions may be printed and exported to a spreadsheet file.

    For certain types (e.g. Account), the F4:Details icon will be available. If you click on this icon, the balances for general ledger accounts will be displayed for each period.

5. To close or exit this screen, click on the Close button on the title bar.

Further Search options are available to select from. If you click on the More >> link, the Advanced options will be available in which the limit for the number of records found may be set.

To refine or filter the search criteria, you may click on the Refine search link.

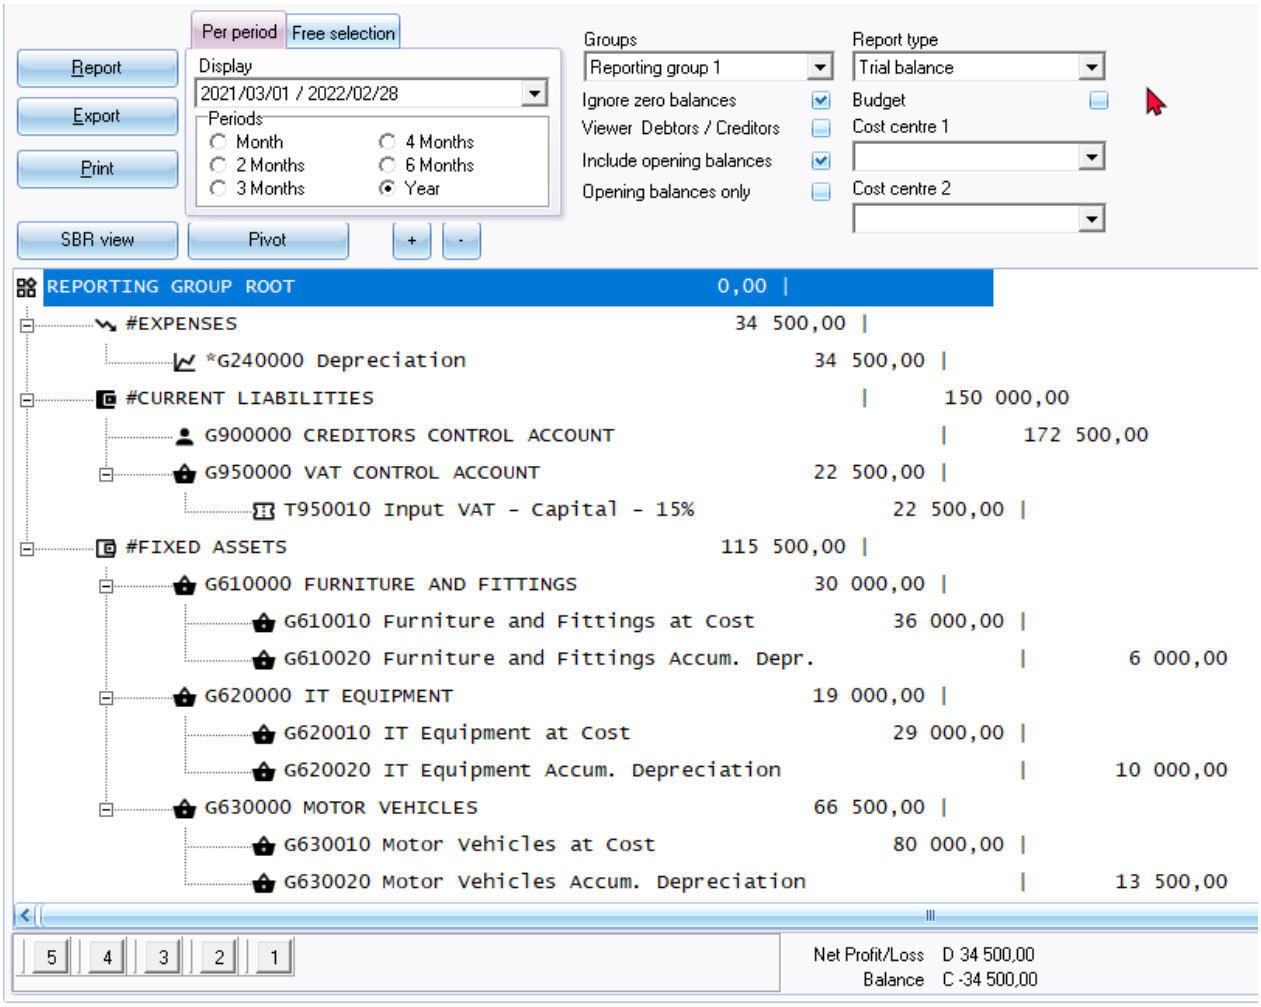
Activa transactions in Ledger analyser

Trial balance

Once the depreciation transactions in the Activa plugin have been processed it will automatically post or update the transactions to the ledger.

To Print a trial balance:



Pivot view of Activa transactions

You may use the Pivot feature Ledger analyser, to filter for Fixed assets and Depreciation transactions on the following report types.

- Trail balance - Fixed assets main accounts (Fixed assets at cost and/or Fixed assets accumulated depreciation sub- accounts} and the Depreciation - Income expense account type.
- Balance sheet - Fixed assets main accounts (Fixed assets at cost and/or Fixed assets accumulated depreciation sub- accounts).

- Income statement - Depreciation - Income expense account type.
- Standard column balances - Fixed assets main accounts (Fixed assets at cost and/or Fixed assets accumulated depreciation sub- accounts} and the Depreciation - Income expense account type.
- This year vs last year - Fixed assets main accounts (Fixed assets at cost and/or Fixed assets accumulated depreciation sub- accounts} and the Depreciation - Income expense account type.
- Budget vs actual - Fixed assets main accounts (Fixed assets at cost and/or Fixed assets accumulated depreciation sub- accounts} and the Depreciation - Income expense account type.

Activa transactions in the T-Account viewer

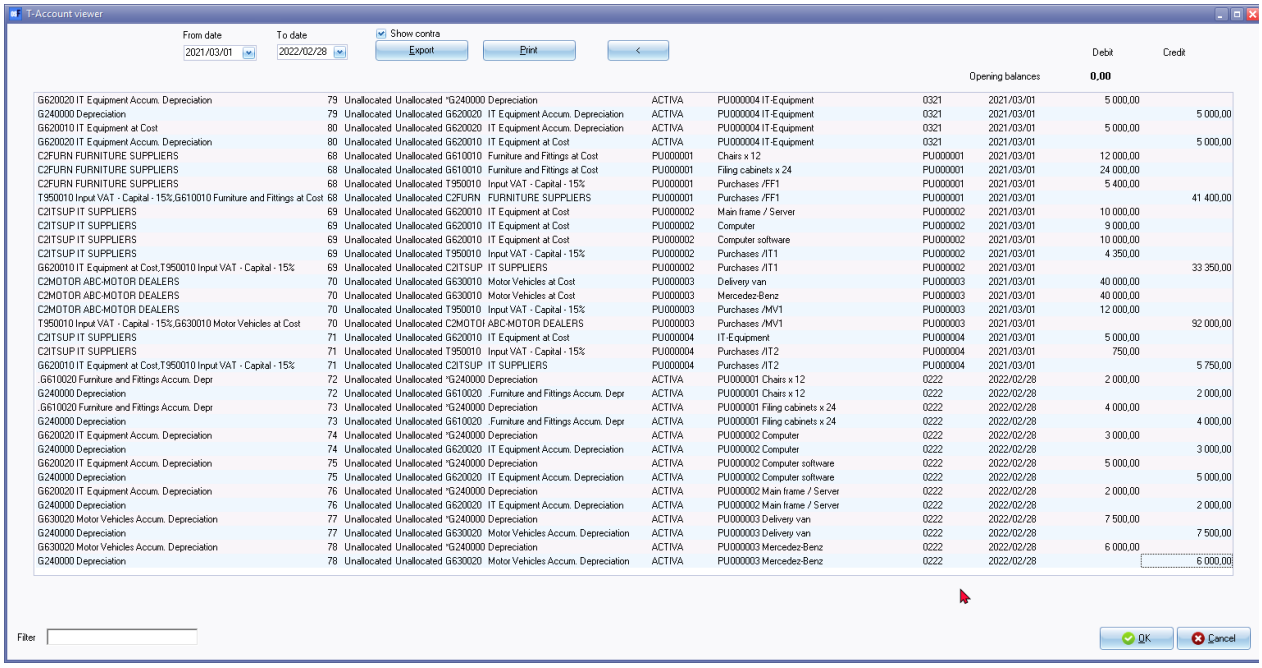
T-Account view of Activa transactions

You may use the T-Account viewer feature Ledger analyser, to filter for Fixed assets and Depreciation transactions, print the transactions and or export the transactions to a spreadsheet on the following report types.

- Trail balance - Fixed assets main accounts (Fixed assets at cost and/or Fixed assets accumulated depreciation sub-accounts} and the Depreciation - Income expense account type.
- Balance sheet - Fixed assets main accounts (Fixed assets at cost and/or Fixed assets accumulated depreciation sub- accounts).
- Income statement - Depreciation account - Income expense account type.
- Standard column balances - Fixed assets main accounts (Fixed assets at cost and/or Fixed assets accumulated depreciation sub- accounts} and the Depreciation - Income expense account type.
- This year vs last year - Fixed assets main accounts (Fixed assets at cost and/or Fixed assets accumulated depreciation sub- accounts} and the Depreciation - Income expense account type.
- Budget vs actual - Fixed assets main accounts (Fixed assets at cost and/or Fixed assets accumulated depreciation sub- accounts} and the Depreciation - Income expense account type.

In addition to these report types, you may also print and export transactions in the T-Account viewer to a spreadsheet for Fixed assets main accounts (Fixed assets at cost and/or Fixed assets accumulated depreciation sub- accounts} and the Depreciation - Income expense account type form the Column balances and Column balances D/C report types.

An example of the purchases transactions for and write-off transactions processed with the Activa plugin, is for all periods during the life span of assets, as follows:



From date ... To date

The default view of the Dates is automatically displayed for the selected period from which you launch the T-account viewer in the Ledger analyser. To view the Activa transactions over the life span of the Fixed assets or Depreciation account, you may select the dates. For example, the dates may be selected from date 2021/03/01 to 2027/02/28 to list all transactions for a specific fixed assets or depreciation accounts.

Show contra - By default this option is not selected.

If the Show contra is selected, it will insert (add) the Account code and Description before the batch id (batch number).

The Contra accounts will not print on the T-Account viewer ("ledgerdetail") report; but will be included in the Export file when you click on the Export button of the T-Account viewer.

Options to filter transactions

1. *From date ... To date - Select the dates to filter transactions for a specific date or period.*
2. *In addition to this, you may double-click on the following details on the list of transactions to print specific transactions:*
    - *Batch id - (e.g. 68 to 78 as in this example)*
    - *Account code - To list only transactions for a specific account.*
    - *Date - To list only transactions for a specific date.*

You may click on the Print button to print the transactions:

Charter plugin

Charter Plugin - Manual - Shop - Licence : Once-off

Documentation : Help documentation

Unlock powerful visualization capabilities with our Charter plugin. Seamlessly generate insightful charts and graphs directly from your Set of Books data, empowering you to make informed decisions and communicate key insights effectively. Save charts as image files for integration into documents, presentations, spreadsheets, and more.

The Charter Plugin enhances your experience by adding a Charter tab on the Debtor accounts, Creditor accounts, and Stock items. This allows you to build and customise charts effortlessly. Within the Debtors grid, Creditors grid, and Stock item grid, simply right-click to launch the "*Charter*" screen from the Plugin action → Charter context menu.

In the Documents grid, you can also access the "*Charter*" screen by right-clicking and selecting the Plugin action → Charter context menu. This feature enables you to launch the " *Doc value*" or "*Debtors*" charts. Additionally, in document entry screens for both posted and unposted sales documents such as invoices, credit notes, quotes, purchases, supplier returns, and orders, an icon will be available to launch the "*Charter*" screen.

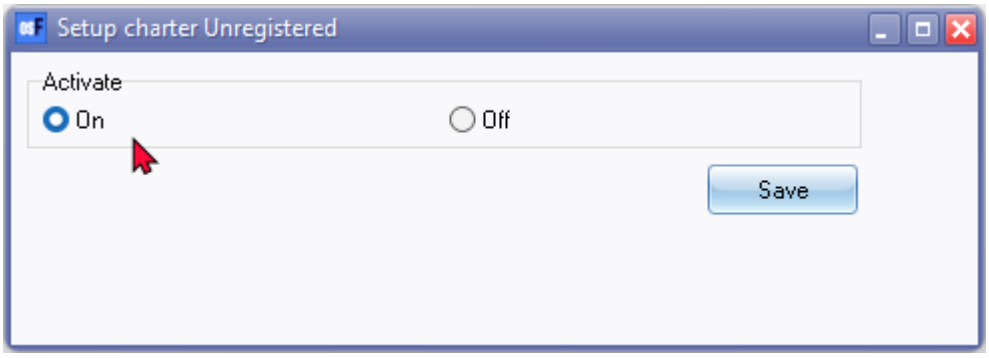
Furthermore, the "*Charter*" plugin seamlessly integrates with other plugins supporting the "*Charter*" functionality.

Activate the Charter plugin

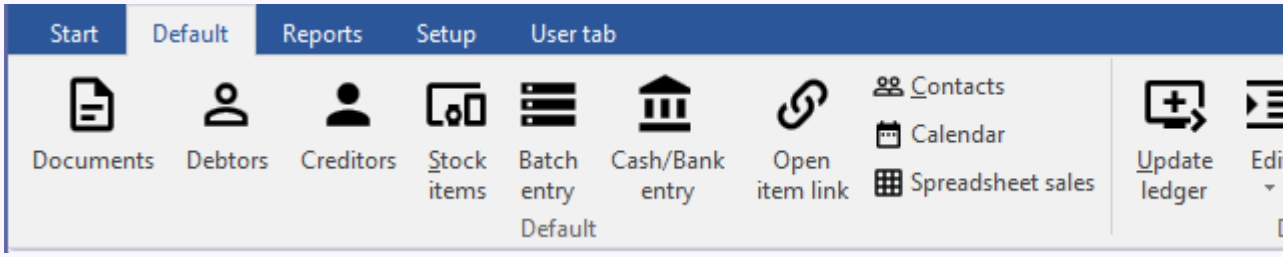
To launch the Charter:

1. On the Setup ribbon, select Plugins → Financial tools → Charter. If this plugin is not listed under Plugins → Financial tools, activate it via Tools → Activate plugins.

If the Charter plugin is not available from the Plug-ins → Financial tools → Charter menu, you need to Activate the Charter plugin. To do this go to the Tools → Activate plugins on the Setup ribbon.



When you reopen the Set of Books, the Charter icon will be added to the Default ribbon. This will only be added for the act

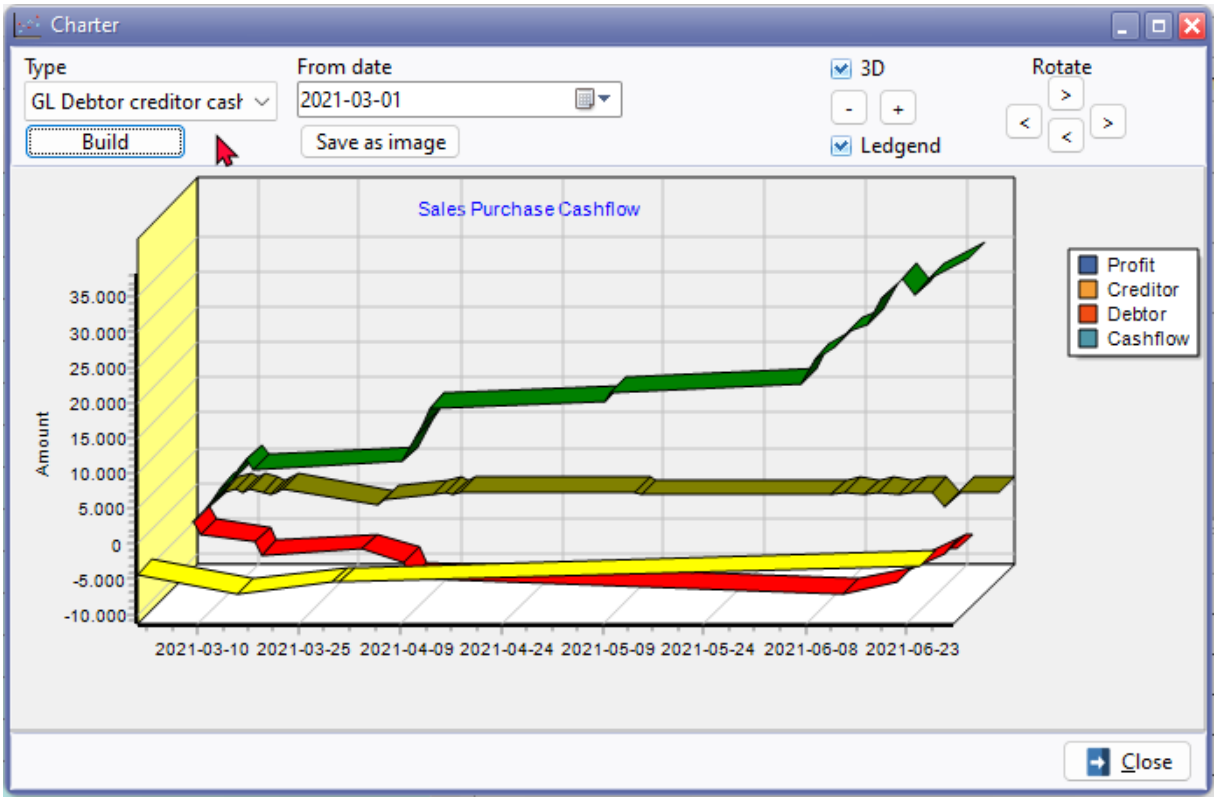


2. When you reopen the Set of Books, the "*Charter*" plugin can be accessed on the Default ribbon.

Launch the Charter plugin (Default ribbon)

To launch the Charter:

1. On the Default ribbon, select the Charter icon.

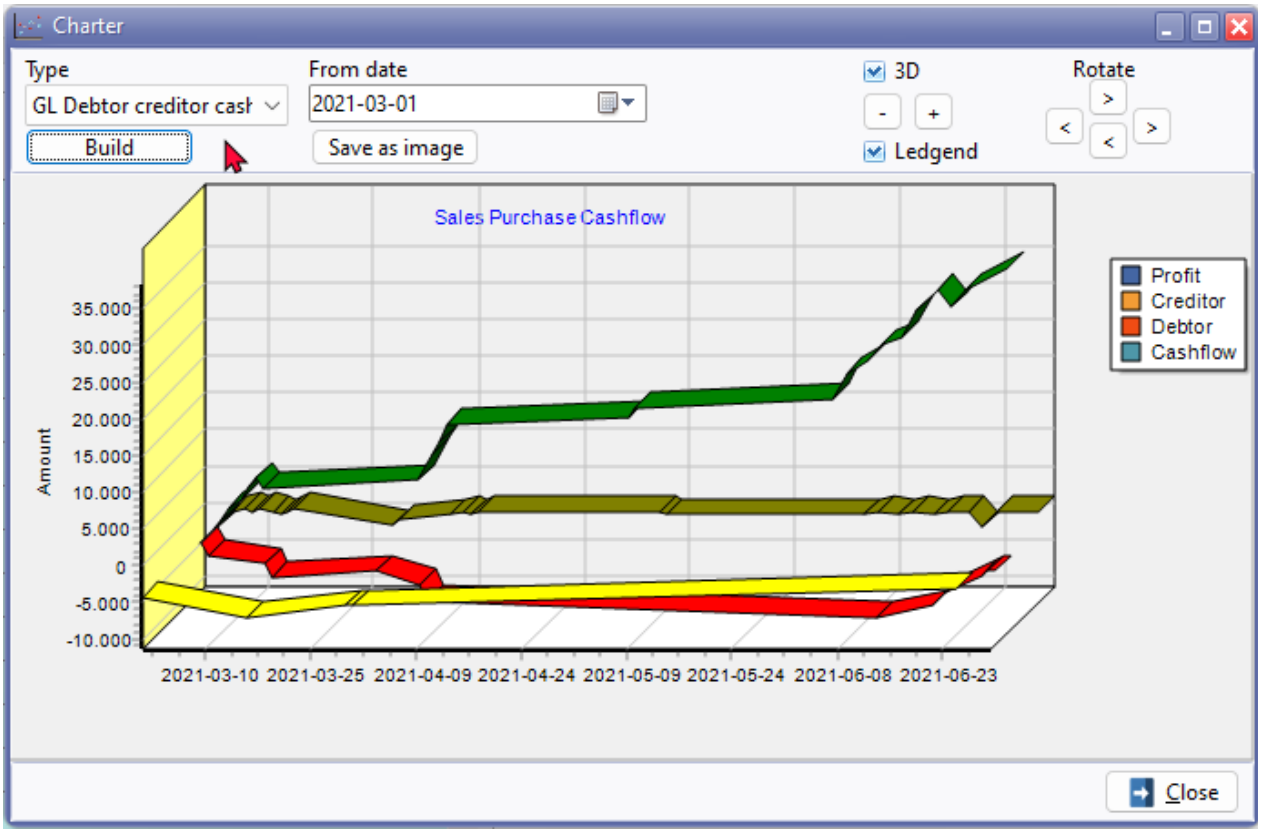


2. Type - Select the following report types:
    a) GL Debtor creditor cashflow
    b) Account main digit
3. Date from - Select the date from.
4. Click on the Build button. The chart will be generated. You may adjust the looks and layout of the chart using the following options:
    a) 3D - Selected (ticked) it will display the chart in a 3 dimensional view. If not selected (not ticked), it will display the Chart in a 2D (2 dimensional) view.
    b) Size - Decrease the size by clicking on the minus button or increase the size by clicking on the plus button.
    c) Legend - The legend is by default displayed. You may deselect it (remove the tick) to hide the legend.
    d) Rotate - There are four buttons, which may be used to change or set the angles of the chart.
5. Once you are happy with your layout, you may click on the Save as image button. This will save the chart as an image in the following two (2) file types:
    a) Bitmap file (*.bmp)
    b) Paintbrush Picture (*.wmf).
6. Click on the Close button to exit (close) the Charter screen.

GL Debtor creditor cashflow

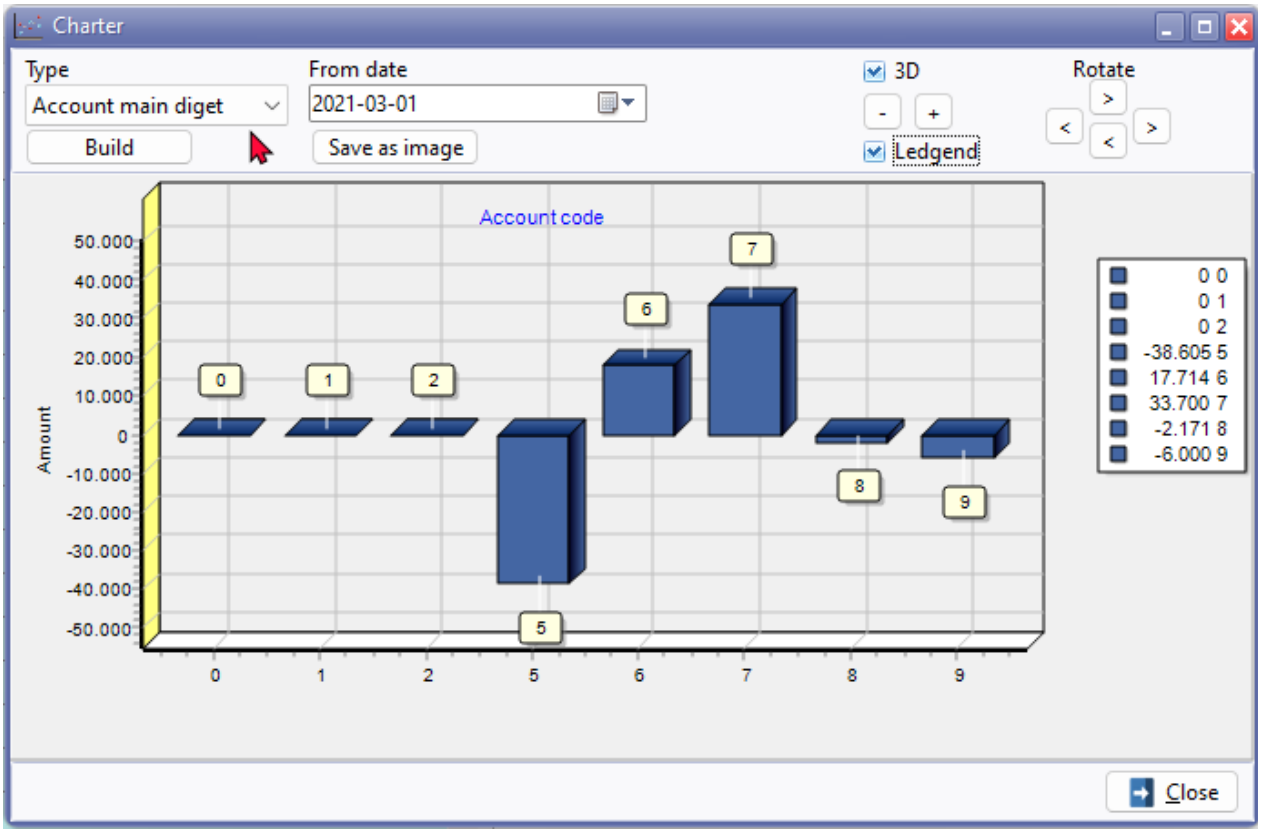
This chart type will display the totals of your sales and purchases.

Sales / Purchase cash flow: Profit , debtor (sales) and creditor (purchases) and cash flow in one graph.



Account main digit

Main accounts: Totals per account



Launch the Charter plugin (Charter tabs)

In addition to the Chart icon on the Default ribbon, the Charter plugin, will add a Charter tab on the Debtor accounts, Creditor accounts and Stock items from where you may build and customise charts.

Within the Debtors grid, Creditors grid and Stock item grid, you may right-click to launch the "*Charter*" screen from the on the Plugin action → Charter context menu.

Within the Documents grid - You may right-click to launch the "*Charter*" screen from the on the Plugin action → Charter context menu to launch the "*Doc value*" or "*Debtors*" chart. In the document entry screen for posted and unposted sales documents such as invoices, credit notes and quotes as well as purchase documents such as purchases, supplier returns and orders, an icon will be available to launch the "*Charter*" screen.

Charter Plugin integration

The "*Charter*" plugin is also available in other plugins in supporting the "*Charter*" plugin.

Debtors - Charter tab

Debtors

Context menu access: From the Debtors item grid, similar charts may be generated on the Plugin action → Charter context menu for a selected debtor (customer / client) account.

Creditors - Charter tab

Debtor (Note on Sales documents such as Invoices, credit notes and quotes this is option displays charts. On purchase documents such as purchases, supplier returns and orders the charts does not display any detail in charts.

Charter Plugin integration

The "*Charter*" plugin is also available in other plugins in supporting the "*Charter*" plugin.

Other Graph features in osFinancials5/TurboCASH5

In addition to the charts generated by the Charter plugin, you have the flexibility to produce your own graphs using various tools within osFinancials:

- Ledger analyser - Export data to Comma Separated Value files (*.csv) and build your own charts (graphs) from exported data in your favourite spreadsheet program.
- Documents - Graphs - Search filter, and customise your views for each document type according to your needs, and use the Graphs option to visualise your sales documents (Invoices, ,Point-of-Sales invoices, Credit notes and Quotes) and your purchase documents (Purchases, Supplier returns and Orders).
- Drill Down plugin - Charts of your Sales per day and Quantities per day. You may also filter and export other data and build your own charts (graphs) in spreadsheets.
- Reports - Graphs - Graphs per week and Graphs per month.

Created with the Standard Edition of HelpNDoc: Full-featured multi-format Help generator

Introduction to the DrillDown plugin

DrillDown plugin - Manual - Shop - Licence : Once-off -

This TC Drill Down plugin enables you to review all your filtered data and export it to i.e. MS Excel.

The "*TC Drill Down*" plugin for osFinancials5/TurboCASH5 offers a robust solution for delving into your data and creating customised reports quickly and efficiently. Whether you're looking to analyse transactions, track customer invoices, or monitor stock item sales, the DrillDown plugin provides powerful features to streamline your processes. Here's an introduction to its key functionalities:

Transactions

All the transactions in the Set of Books will be populated in the transactions view. You may filter and sort the views in the powerful grid to build your own custom views of the transactions.

Customers → Invoices

Here you can locate your customer and see his invoices. The invoices show the items the items that where both. It has a good a quick navigation interface the helps you hunt down any invoice. The key element here is that you know what client has this invoice. You may print specific invoices directly from the interface by double-clicking on them.

Invoices → Stock item

Here you can find all you invoices and the stock items that were sold on the invoice. It is a fast way of just finding that invoice if the invoice number is what you got. You may print specific invoices directly from the interface by double-clicking on them.

Stock item → Invoice

See what invoices where used to sell this stock item. Giving you the ability to find an invoice if you now the stock item. Just find that item and if it was sold you will find the invoice with that.

Charts

The Charts view of your sales documents, during the selected dates will visually display the sales data in the following graphs:

- Total sales:
  - Total sales : Your total sales per day are displayed in a pie chart. Your inventory items or products are displayed as parts in different colors per day. It will visually display at a glance the day or days in which the most sales occurred.
  - Total sales per day : Your total amount of sales per day is indicated in a bar graph. It will visually display as amounts the day or days in which the most sales occurred at a glance.
- Total quantities:

- Total sales quantities : Displays the total quantities of your inventory items or products sold during the selected dates in a pie chart. The total quantities of your inventory items or products sold will be displayed as parts in different colors per day. It will visually display at a glance the inventory items or products that are the top sellers during the selected dates.
- Total sales quantities per day: The total quantities of your stock items or products sold during the selected dates are visually represented in a bar graph. It will visually display at a glance the number of inventory items or products that are the top sellers during the selected dates. It will graphically display how certain days affect the quantities of inventory items or products.

Export data

You may export data from all views (except the Charts-option) to XML, HTML, Excel, or Text files, facilitating further analysis or integration with other tools.

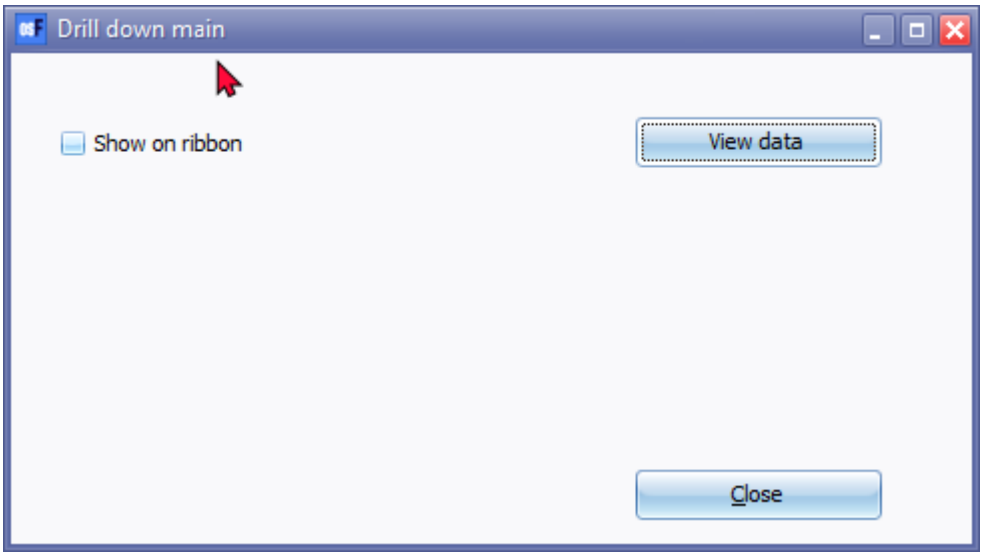
Using the DrillDown

To use this option, you need to open a Set of Books. When the DrillDown is launched, it will by default list all the transactions in the database of the active (opened) Set of Books.

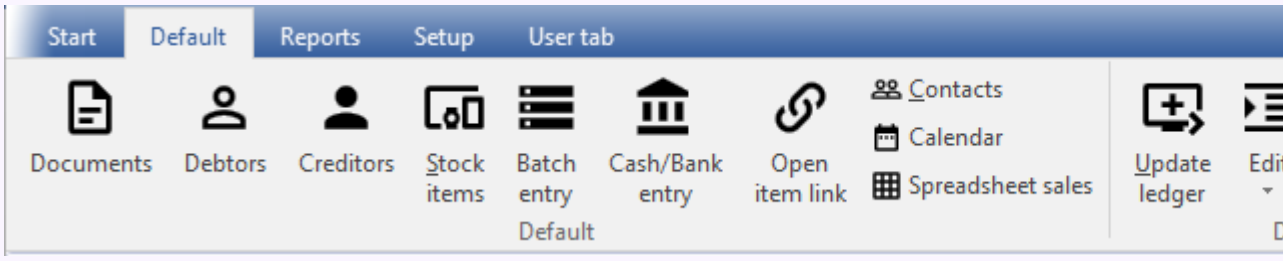
To launch the TC Drill Down:

1. On the Setup ribbon, select Plugins → Financial tools → DrillDown. If this plugin is not listed under Plugins → Financial tools, activate it via Tools → Activate plugins.

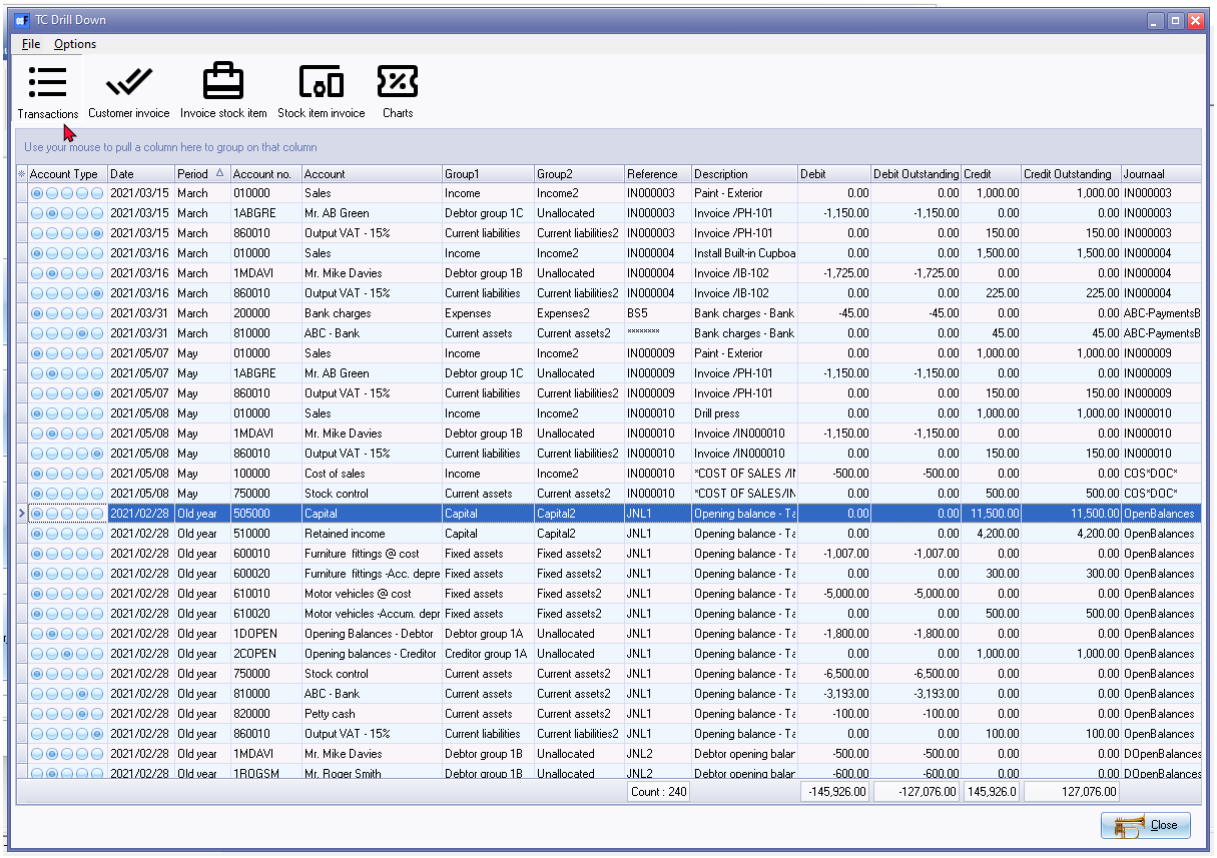
> *If the DrillDown plugin is not available from the Plug-ins → Financial tools → DrillDown menu, you need to Activate the Drill down plugin. To do this go to the Tools → Activate plugins on the Setup ribbon.*



Optional - You may select to "Show on ribbon" option to add the TC Drill Down icon to theDefault ribbon. This will only be



2. Click on the View data button to launch the "*TC Drill Down*" plugin (Transactions).



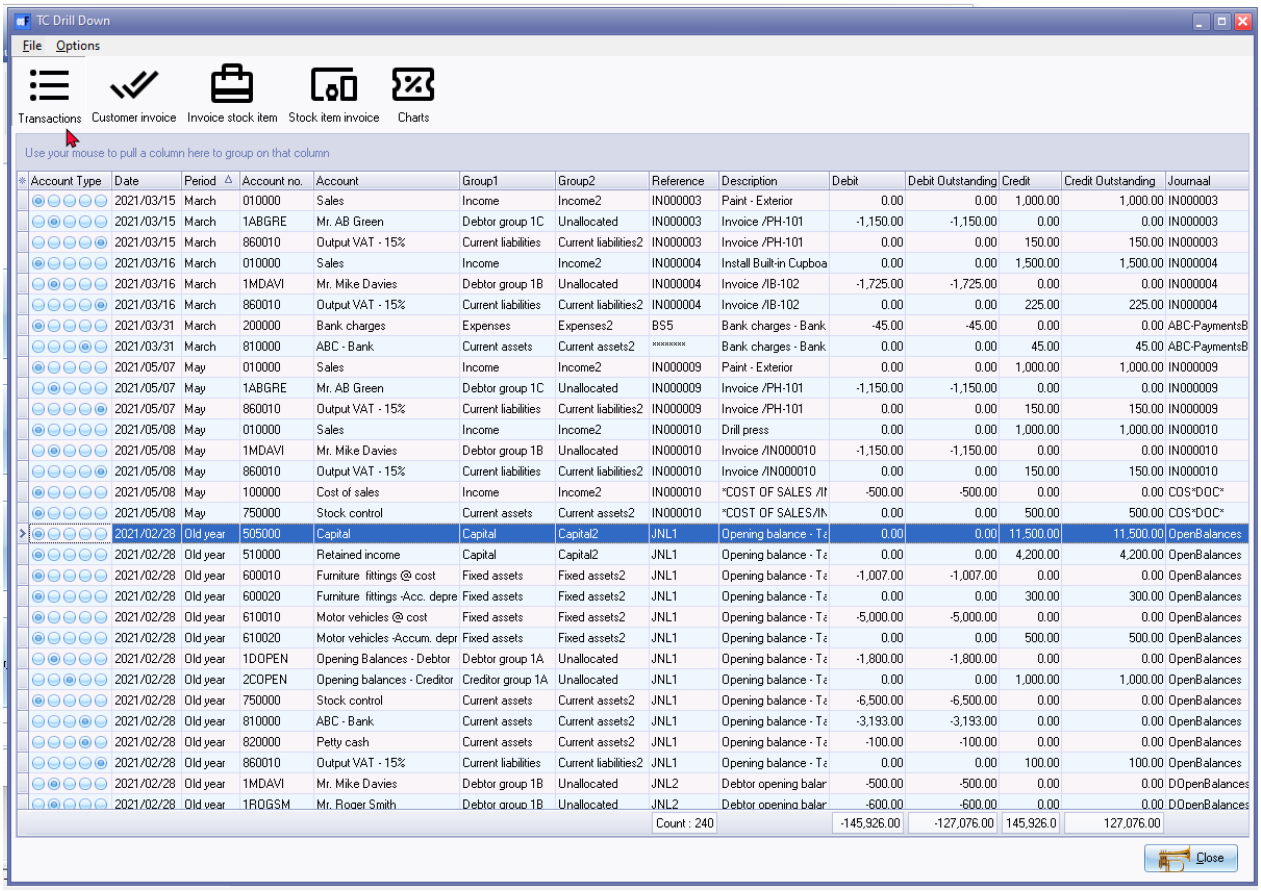
3. You may use various options to sort and/or filter your data.

4. For example, if you need to check your sales for a specific date, select the date in the date column, and the sales in the account column.

Transactions

The default view when TC Drill Down is launched, is Transactions.

When you launch the "*TC Drill Down*" plugin, the default view is the Transactions view. This view provides an overview of all transactions within your Set of Books.



Here's how you can customize and utilize filter options within the Transactions view to meet your specific requirements:

1. Customize Data Columns:
    - You can customize the data columns displayed in the Transactions view according to your preferences.
    - Choose which columns to display based on the information relevant to your analysis.
2. Utilize Filter Options:
    - The plugin offers various filter options to refine the displayed data according to specific criteria.
    - Filters allow you to focus on transactions that meet certain conditions, such as date range, account type, transaction type, etc.
3. Export Data:
    - Once you've customized the view and applied filters to display the desired subset of transactions, you can export this data.
    - Only the data visible in the customized view, along with the selected sequence of data columns and applied filters, will be included in the exported files.
4. Further Analysis and Actions:
    - After exporting the data, you can perform further analysis using external tools such as Microsoft Excel or LibreOffice Calc.

- Identify trends, anomalies, or specific transaction details to inform decision-making or address any issues within your financial records.

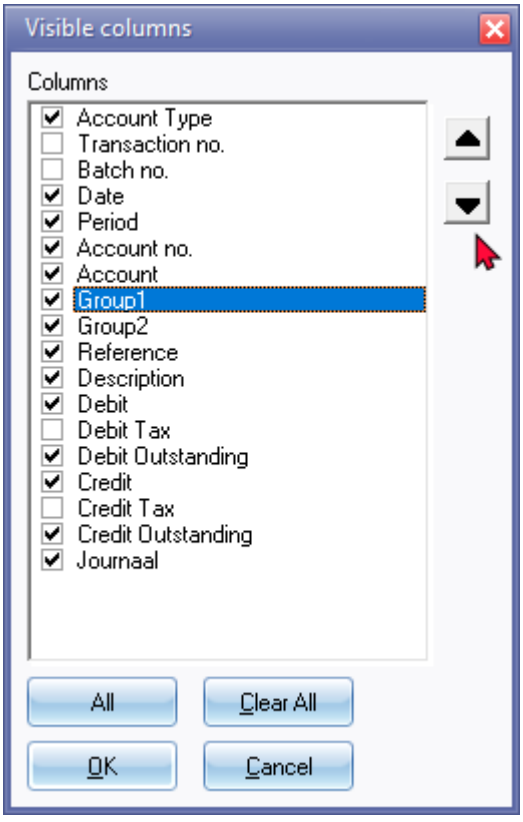
By leveraging the customization and filter options within the Transactions view of the " *TC Drill Down*" plugin, you can tailor your analysis to focus on the specific data elements and criteria relevant to your needs. This flexibility allows for efficient data exploration and analysis within your osFinancials5/TurboCASH5 Set of Books.

Show / hide / move columns

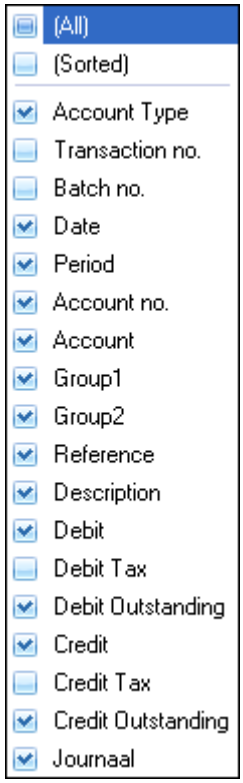
By default, all columns, except the "*Transaction no., Batch no., Debit tax*" and "*Credit tax*" columns) is not available.

You may add these manually by selecting those columns. You may select only those columns you need to see.

Visible columns (Options → Columns menu)



*Default * Click here to show/hide/move columns*



Sorted (selected) - Alphabetical list

Hidden columns will not be included in an export files.

In the Transactions option of the "*TC Drill Down*" plugin, you have the ability to show, hide, or move columns according to your preferences. By default, only certain columns are visible, but you can manually

add or remove columns as needed.

Here's an overview of the available columns and their descriptions:

1. Account Type - There are five (5) account types (i.e. Bank, Creditor, Debtor, General ledger and Tax).
2. Transaction no. - The number of the Transaction in the Transaction table of the database.
3. Batch no. - This is the number of the batch (journal) as allocated by osFinancials5/TurboCASH5. The last column (i.e. "*Journaal*") displays a more friendly version of the Batch no.
4. Date - The date of the transaction.
5. Period - The accounting period (e.g. Month) of the transaction. "*Last year*" is the previous financial year.
6. Account no. - The account code for Bank, Creditor, Debtor, General Ledger and Tax accounts.
7. Account - The description or account name.
8. Group1 - Account group 1 for Bank, General Ledger and Tax accounts. Creditor Group 1 for Creditor accounts and Debtor Group 1 for Debtor accounts.
9. Group2 - Account group 1 for Bank, General Ledger and Tax accounts. Creditor group 1 for Creditor accounts and Debtor group 1 for Debtor accounts.
10. Reference - The reference as entered in the Reference column of batches and in the case of sales documents (i.e. Invoices, Point-of-Sales Invoices and Credit notes) and purchase documents (i.e. Purchases and Supplier returns), the document number will be displayed.
11. Description - The description as entered in the Description column of batches. In the case of documents, the description is as follows:
    a) Sales account - Stock Item's description.
    b) Cost of Sales and Stock Control account - COST OF SALES/Document number.
    c) Creditor account - Document type/Document number.
    d) Debtor account - Document type/Document number.
    e) Tax (Input and Output Tax) - Document Type/Document number.
12. Debit - Amounts entered or generated as balancing entries in the Debit column of batches. In the case of documents, the description is as follows:
    a) Debit tax - Amounts entered or generated as balancing entries in the Debit column of batches. In the case of documents, the description is as follows:
    b) Debit Outstanding - Outstanding amounts in the Debit column. This is usually the same, as

the Debit amount, unless a credit transaction have been linked to the debit transaction to an Open Item account.

13. Credit - Amounts entered or generated as balancing entries in the Credit column of batches. In the case of documents, the description is as follows:

    a) Credit tax - Amounts entered or generated as balancing entries in the Debit column of batches. In the case of documents, the description is as follows:

    b) Credit Outstanding - Outstanding amounts in the Credit column. This is usually the same, as the Credit amount, unless a debit transaction have been linked to the credit transaction to an Open item account.

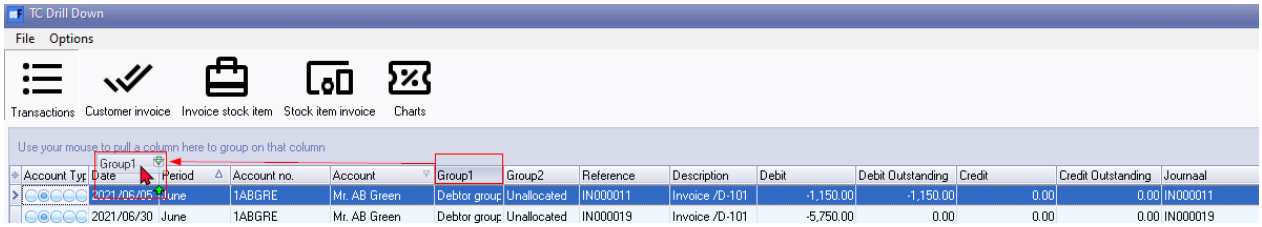
14. Journaal - This is the Alias (Batch name). If the "*Change alias*" option on batches were used before posting batches, the Alias will be displayed. Should the aliases of batches not be used, more than one batch (with the same name) will be listed. You may then need to use the Batch no. to filter for a specific batch. In the case of documents, the Document no. will be displayed.

You can customise the visibility and order of these columns using the "*Visible columns*" option in the menu. Hidden columns will not be included in export files, ensuring that only relevant data is exported. This flexibility allows you to tailor the view to your specific needs, facilitating efficient analysis and reporting within the Transactions option of the "*TC Drill Down*" plugin.

Move column sequence

In the Transactions option of the "*TC Drill Down*" plugin, you have the ability to change the sequence in which the data in the columns is displayed. This feature allows you to customize the layout of your data according to your preferences.

In addition to the option in the "*Visible columns*" screen (Options → Columns menu) you can change the order (sequence) in which the data is displayed in the columns, by simply clicking on a selected column and drag it to the desired position (left or right.



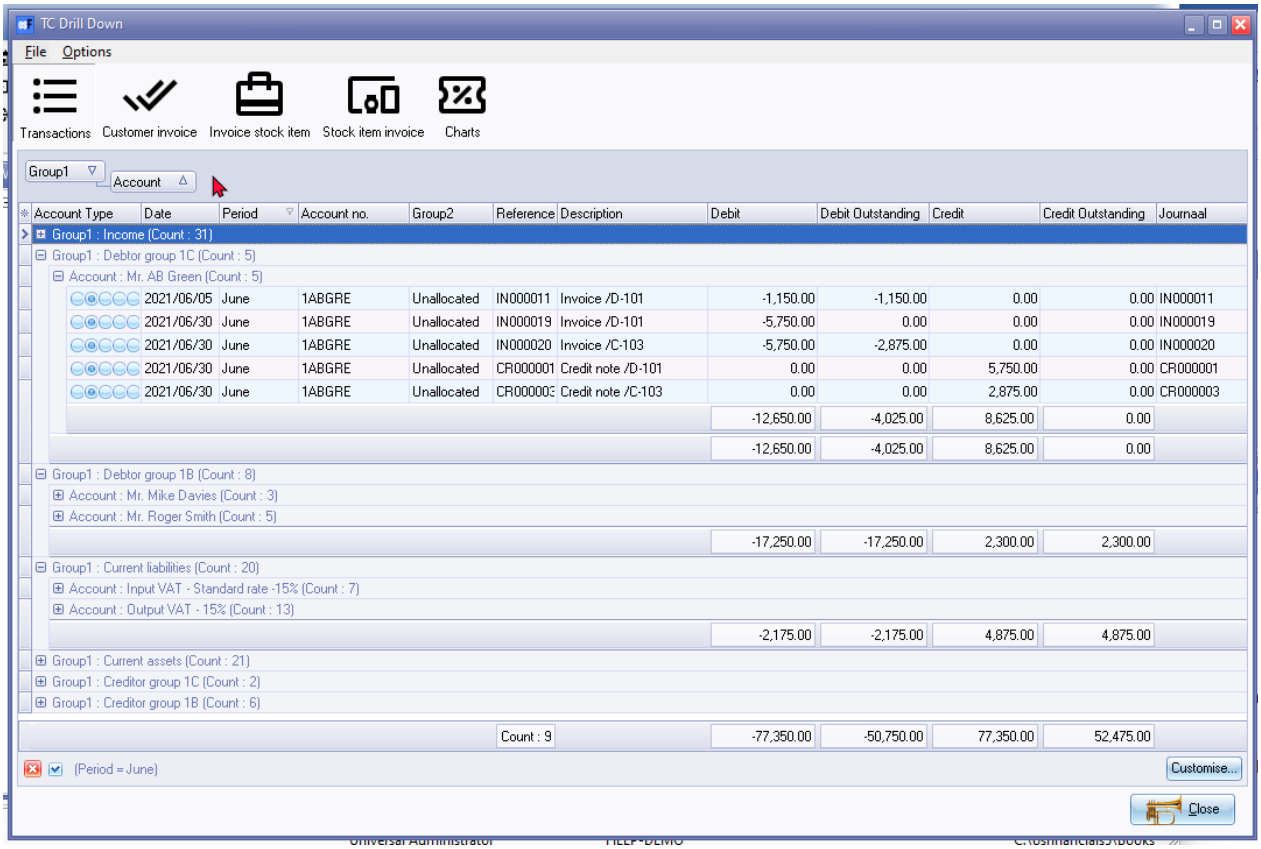
By moving column headings in the Transactions option, you can organize your data in a way that makes it easier to analyse and interpret. This customisation feature allows you to prioritise the display of information based on its relevance to your analysis, enhancing your workflow efficiency within the "*TC Drill Down*" plugin.

Group / Ungroup columns

Select a column and click on it. While holding the mouse button down, drag it to the column header bar "*Use your mouse to pull a column here to group on that column*". Select any other column to drag and drop it on column header bar. You may select as many columns, as necessary, to group your data.

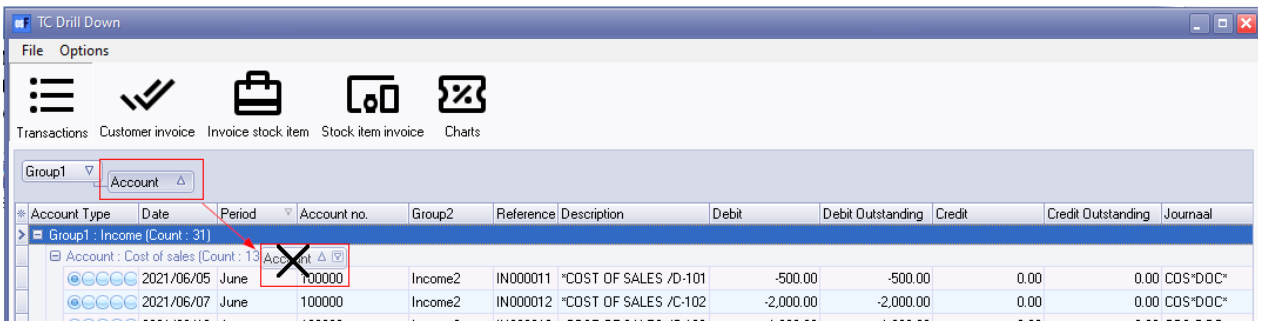
You may also drag and drop these columns to the right or left to change the grouping of these columns.

In the Transactions option of the "*TC Drill Down*" plugin, you have the ability to group and ungroup columns to organize your data according to specific criteria.



Remove grouped columns

To remove a column from column header bar "*Use your mouse to pull a column here to group on that column*", you may use the following two (2) options:



1. Select the column heading (e.g., “*Account*”) on column header bar "*Use your mouse to pull a column here to group on that column*", and drag it to the first line (above the column headings). When the mouse pointer change to a big X, drop it. The column will automatically be placed in the correct default sequence (or the place of the previous grid layout).
2. If you wish to change the column to a specific place, select the column heading (e.g., “*Account*”) on column header bar "*Use your mouse to pull a column here to group on that column*", and drag it to the first line (column headings). When you drop it, the column will be added to the selected position or sequence of the columns.

By utilising the group and ungroup column features, you can organize your data effectively within the Transactions option of the "*TC Drill Down*" plugin. This allows for better analysis and visualization of your financial information based on specific criteria and groupings.

Sort sequences

All the data is, by default, displayed ascending; from the smallest to the highest value (e.g. a-z or 0-9) according to the Period (e.g. April, February, March, etc.).

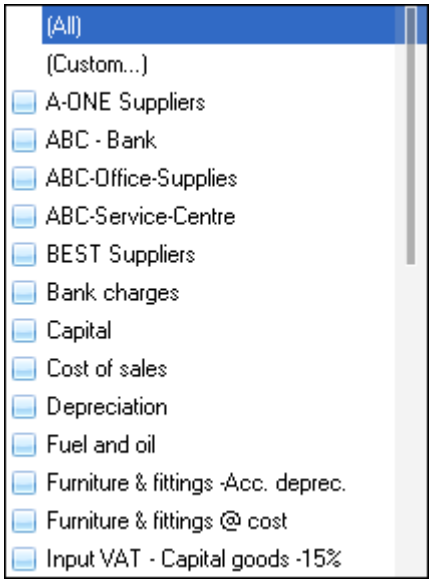
To change the sort order from ascending (e.g. a-z or 0-9) to descending (e.g. z-a or 9-0) select a column which you need to sort) and click on it. If you click on the same column again, it will change back to ascending sequence.

In the Transactions option of the "*TC Drill Down*" plugin, you have the ability to sort data sequences to facilitate easier analysis and interpretation. By default, data is displayed in ascending order, but you can change the sort order to descending if needed.

By adjusting the sort sequence in the Transactions option of the "*TC Drill Down*" plugin, you can organise your data according to your preferences, making it easier to analyse and interpret information effectively. This feature enhances the usability of the plugin, allowing for more efficient data exploration and analysis within osFinancials5/TurboCASH5.

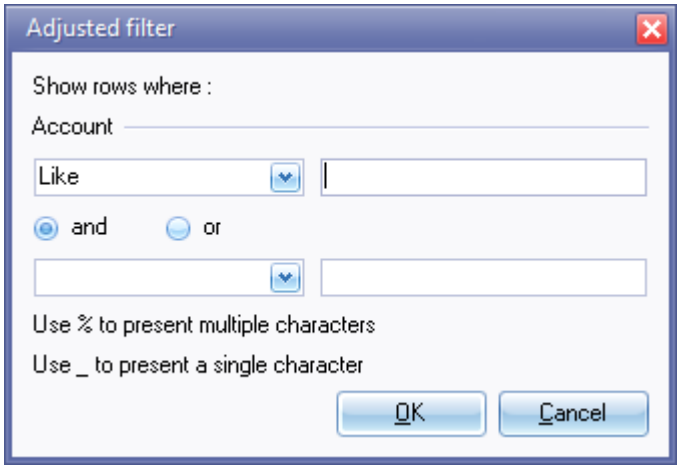
Filter options in column headings

While viewing and analysing the data you may sort and filter the data, in each column of the active or loaded table. To do this, select the column and click on the filter icon. A list displaying the data, as well as an "*All*" option and a "*(Custom...)*" option in the selected column will be displayed.
For example, the "*Account*" column, is selected, a list of all "*Accounts*" will be displayed.



You may select those account you wish to list. Only the transactions for the selected account(s) will be listed.

To adjust a filter in a column, select the "*(Custom...)*" option in the selected column. The "*Adjust filter*" will be displayed:



In the Transactions option of the "*TC Drill Down*" plugin, you have the capability to apply filters to column headings, allowing you to refine and focus your data analysis.

The type of filter options/conditions available for data manipulation can vary depending on the nature of the data contained within the column. Some common Filter options is as follows:

a) Equal to - Lists or displays all values that are exactly the same as the specified value.

b) Not equal to - Lists or displays all values that are not exactly the same as the specified value.

c) Less than - Lists or displays all values smaller than the specified value.

d) Less than or equal to - Lists or displays all values smaller than or equal to the specified value.

e) Greater than - Lists or displays all values greater than the specified value.

f) Greater than or equal to - Lists or displays all values greater than or equal to the specified value.

g) Like - Lists all values in the table similar to the specified value using pattern matching (often with wildcard characters).

h) Not like - Lists all values in the table not similar to the specified value using pattern matching.

i) Is null - Excludes any rows where the value is missing (NULL), meaning they will not be listed or displayed.

j) Is not null - Lists or displays any rows where the value is not missing (NULL).

k) Start with - Lists or displays values where the text starts with the specified string.

l) End with - Lists or displays values where the text ends with the specified string.

m) Include - Lists or displays all values that match any of the specified values. This option is useful when you want to filter for multiple specific values.

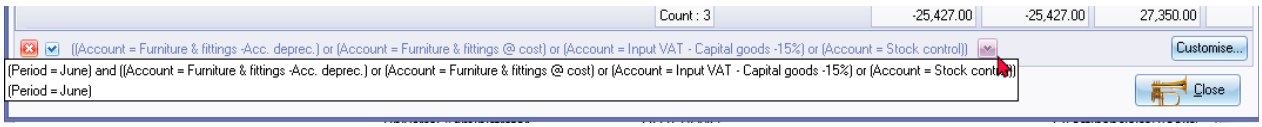
n) Not include - Lists or displays all values that do not match any of the specified values. This option is useful when you want to exclude specific values from the result set.

By utilising the filter options in column headings, you can refine your data analysis within the Transactions option of the"*TC Drill Down*" plugin, allowing for more focused and insightful examination of your financial data.

Adjusting filter options based on the data type ensures that you have access to the most relevant and effective tools for manipulating and analysing your data. This flexibility enhances usability and allows for more efficient data exploration and decision-making.

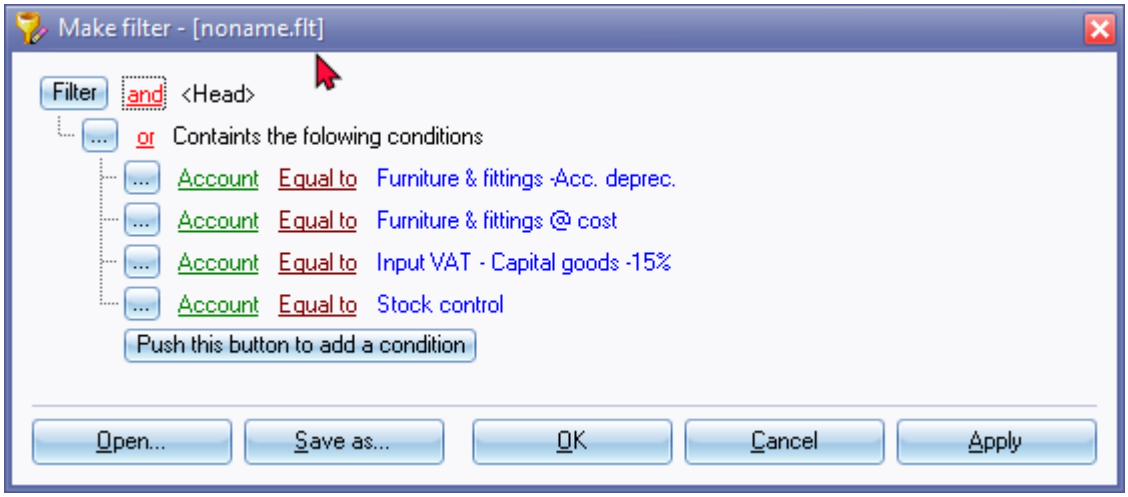
Working with custom filters

Once you have selected an option on a list, the your selection will be displayed at the bottom section of the"*TC Drill Down*" screen as follows:



The selected filters will be listed. You may select any filters for quick access to previous filter options. You may click on the Customise button to:

- Make a filter (add or delete conditions and groups).
- Save a filter.
- Open a filter.



To make a filter:

1. Select a column and click on the Filter button (or on the ... button) and select one of the following options on the context menu:
    a) New condition
    b) New group
2. Delete row (If you click on the Filter button, you may delete the rows (conditions and groups).
3. Select the or option to set a filter value. The following options are available:
    a) New condition
    b) New group
4. Once you have created your conditions or groups, click on the Apply button.
5. Click on the OK button to close and exit this "*Make filter*" screen.

To save a custom filter file:

1. Once you have sorted or filtered your data with the "*Make filter*" screen, click on the Save as.. button. The "*Save active filter*" screen will be displayed.
2. Select a directory in which you wish to save the custom filter file.
3. Enter a file name.
4. Click on the Save button to save the Filter in a (*.flt) Filter file format. You may then at any later stage open the saved *.flt file.

To open a saved a custom filter file:

1. Once you have sorted or filtered your data with the "*Make filter*" screen, click on the Open... button. The "*Open a saved filter*" screen will be displayed.

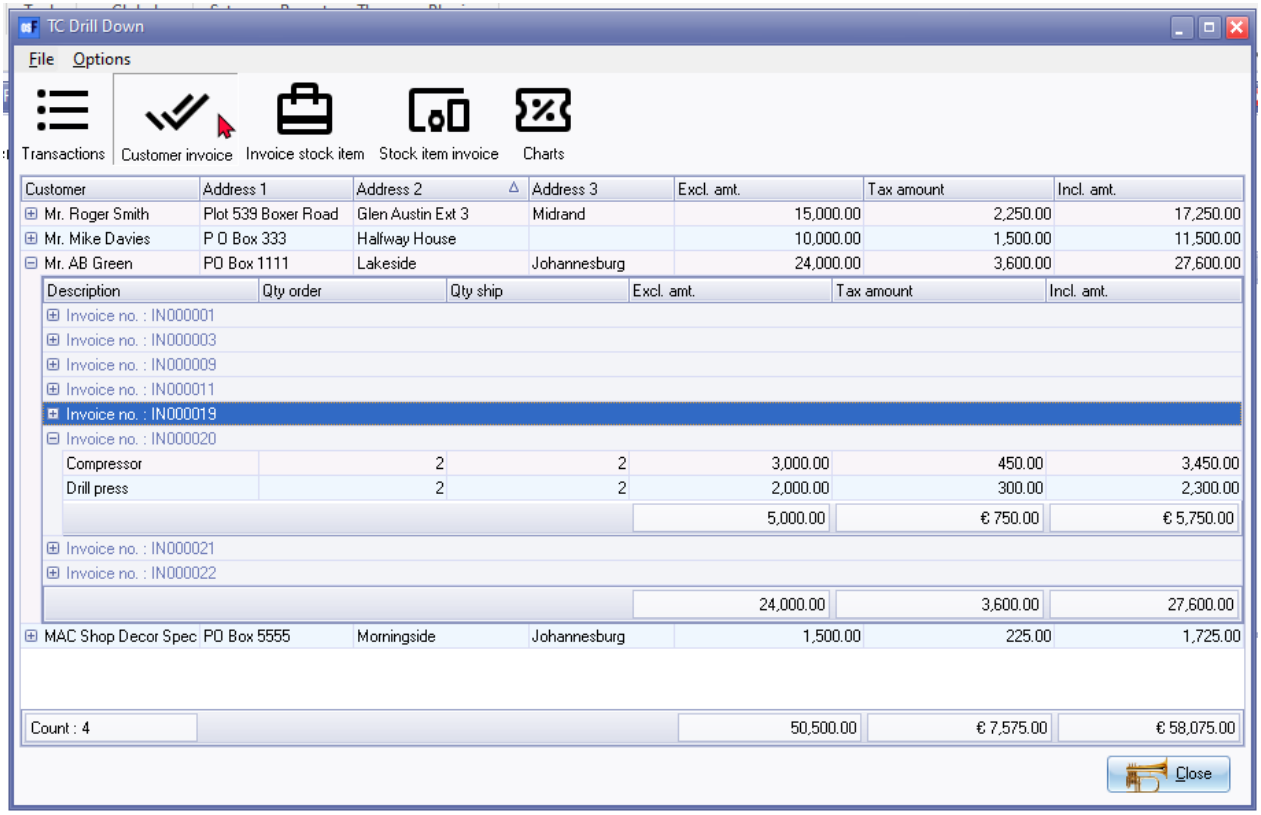
2. Select a directory in which you have saved the custom filter file.
3. Select a valid filter file.
4. Click on the Open button. The selected filter file's name will be displayed in the titlebar of the "*Make filter*" screen.

Working with custom filters in the "*TC Drill Down*" plugin allows you to refine and save filter settings for quick access to specific data views.

By utilizing custom filters, you can save time and effort by quickly accessing predefined filter settings for your data analysis needs. Whether you're refining data views for specific criteria or reusing previously defined filters, the "*TC Drill Down*" plugin offers flexibility and efficiency in managing your data within osFinancials5/TurboCASH5.

Customer invoice

The "Customer → Invoice" option in the "*TC Drill Down*" plugin lists all customers and their respective invoices, allowing you to sort, filter and view quantities of ordered and shipped stock items along with total invoice amounts, and to print invoices directly from the interface.



The Customer invoice option lists all your customers (debtors or clients). For each customer account, it displays up to three address lines and the total of all invoices (excluding tax, tax amount, and including tax). You can sort columns or use custom filters to search for a specific customer.

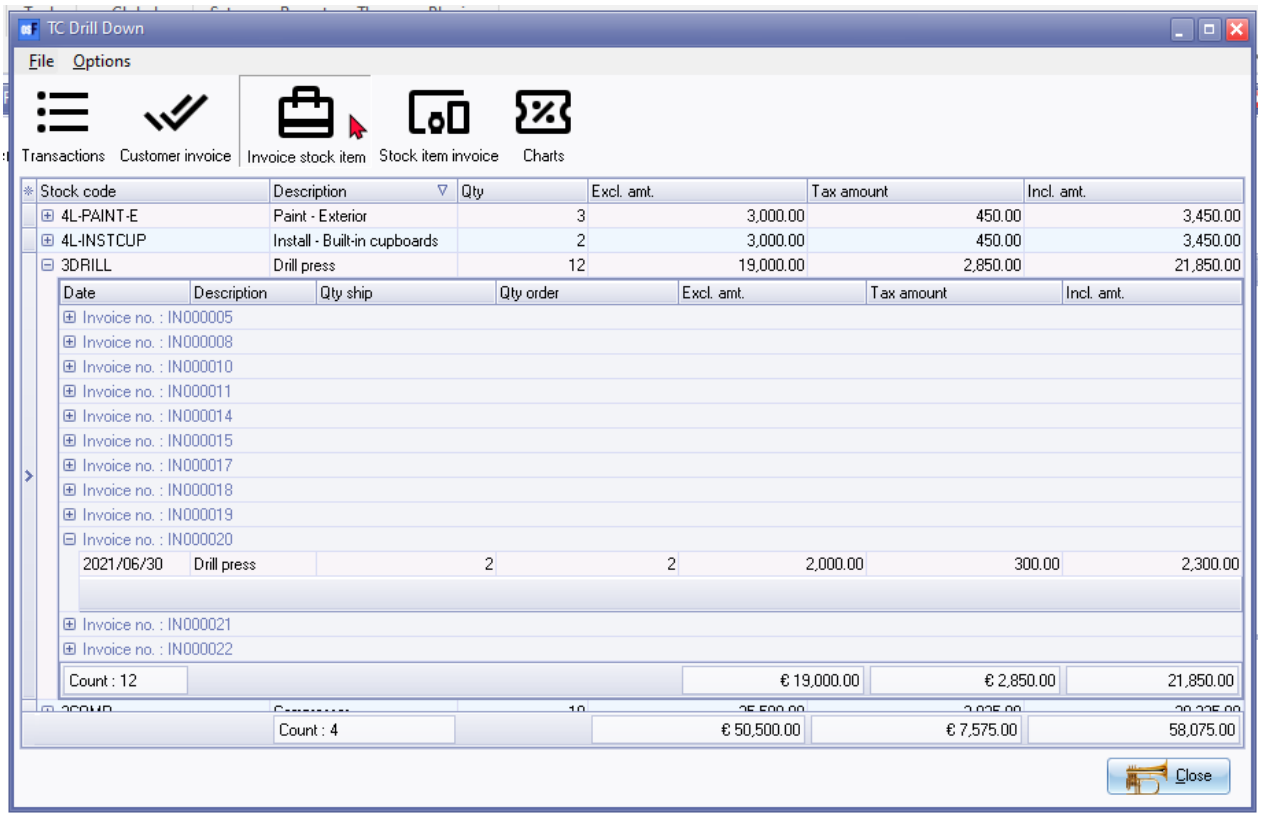
Expanding a specific customer account reveals all posted and unposted invoices. Each invoice displays quantities of ordered and shipped stock items, along with the total amount (excluding tax, tax amount, and including tax) in columns. You can also sort columns or use custom filters to search for an inventory item or product.

Additionally, you can print specific invoices directly from the interface by double-clicking on them.

By leveraging the Customer invoice option of the "*TC Drill Down*" plugin, you can efficiently manage customer transactions, track sales, and maintain clear communication with customers regarding their invoices. This feature enhances your ability to provide excellent customer service and ensures accuracy in your financial records within osFinancials5/TurboCASH5.

Invoice stock Item

In the Invoice stock item option of the "*TC Drill Down*" plugin, you can quickly find invoices and the stock items that were sold on each invoice. This functionality allows for efficient tracking of invoices based on invoice numbers and provides insight into the items sold within each invoice.



The Invoice stock item option displays all inventory items or products, showing which items were sold in each invoice. It includes details such as stock code, description, quantities, and total invoice amounts, allowing sorting and custom filtering for specific items.

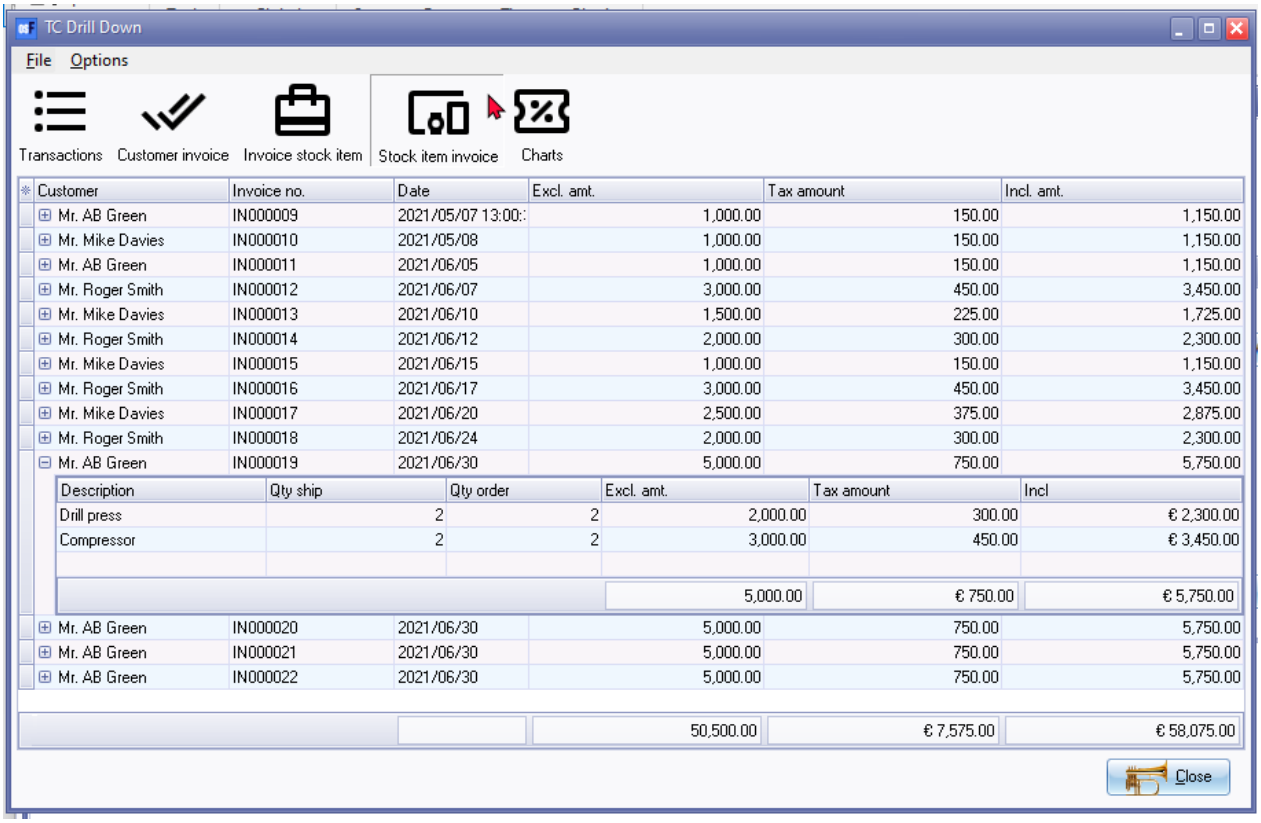
Expanding a specific item reveals all invoices, posted and unposted, with quantities and total amounts displayed for each invoice, and provides options for sorting and custom filtering.

Additionally, you can print specific invoices directly from the interface by double-clicking on them.

By utilizing the Invoices stock item option of the "*TC Drill Down*" plugin, you can efficiently find invoices based on invoice numbers and gain insight into the stock items sold within each invoice. This feature enhances your ability to manage sales transactions, track inventory, and analyse sales performance within osFinancials5/TurboCASH5.

Stock item invoice

In the Stock item invoice section of the "*TC Drill Down*" plugin, allows you to quickly locate invoices associated with the sale of a particular item. In this option of the "*TC Drill Down*" plugin, you can track which invoices issued to which debtors (customers / clients) and were used to sell specific stock items, facilitating quick access to associated sales records.



Customer	Invoice no.	Date	Excl. amt.	Tax amount	Incl. amt.

Compressor	2	2	3,000.00	450.00	€ 3,450.00
			5,000.00	€ 750.00	€ 5,750.00

In the Stock item invoice option of the "*TC Drill Down*" plugin, you can track which invoices were used to sell specific stock items, facilitating quick access to associated sales records. This feature lists all customer accounts with both posted and unposted invoices, detailing items sold in each invoice. It provides invoice numbers, dates, and total amounts, and enables sorting and filtering for efficient invoice management.

Expanding invoices reveals listed stock items with quantities and total amounts, allowing further sorting and filtering for inventory items. This functionality enhances tracking of customer invoices and stock item movements, facilitating effective sales analysis within osFinancials5/TurboCASH5.

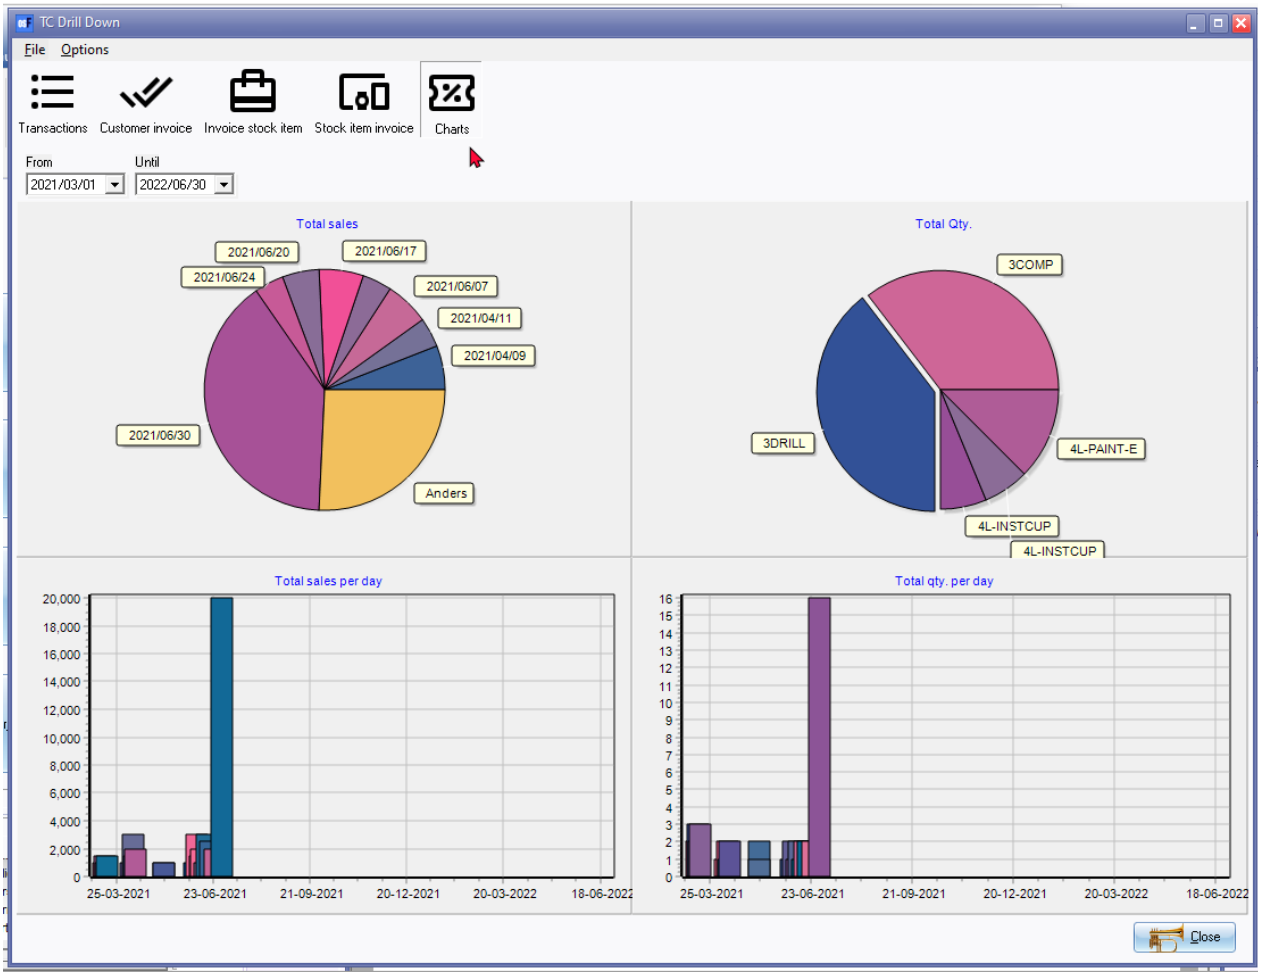
By leveraging the Stock item invoice option of the "*TC Drill Down*" plugin, you can efficiently track sales of

individual invoices stock items, identify associated customer (debtor or client) accounts, and gain insights into your stock management and sales processes within osFinancials5/TurboCASH5.

Charts

In the Charts option of the "*TC Drill Down*" plugin, you can visualise your sales data in various formats to gain insights into your business performance. The graphs are as follows:

- Total sales:
  - Total sales : Your total sales per day are displayed in a pie chart. Your inventory items or products are displayed as parts in different colors per day. It will visually display at a glance the day or days in which the most sales occurred.
  - Total sales per day : Your total amount of sales per day is indicated in a bar graph. It will visually display as amounts the day or days in which the most sales occurred at a glance.
- Total quantities:
  - Total sales quantities : Displays the total quantities of your inventory items or products sold during the selected dates in a pie chart. The total quantities of your inventory items or products sold will be displayed as parts in different colors per day. It will visually display at a glance the inventory items or products that are the top sellers during the selected dates.
  - Total sales quantities per day: The total quantities of your stock items or products sold during the selected dates are visually represented in a bar graph. It will visually display at a glance the number of inventory items or products that are the top sellers during the selected dates. It will graphically display how certain days affect the quantities of inventory items or products.



By using the Charts section of the "*TC Drill Down*" plugin and exporting the data, you can effectively analyse your sales performance, identify trends and make informed business decisions based on the insights gained by visualizing your data.

Export the Data

Except the Charts option of the "*TC Drill Down*" plugin, all other options (i.e Transactions, Customer invoice, Invoice stock item, Stock item invoice) in the "*TC Drill Down*" plugin can be exported to a spreadsheet.

Once you have sorted and filtered your criteria, you can export the data in exactly the same order as displayed in the "*TC Drill Down*" screen.

1. Once you have sorted or filtered your data, click on the File → Export menu.
2. The "*Save as*" screen will be displayed.
3. Select a directory in which you wish to export the selected data.
4. Enter a file name.
5. Select one of the following file formats:
    a) XML - Extensible Mark-up Language

b) HTML - HyperText Mark-up Language

c) Excel - Microsoft Excel Spreadsheet

d) Text - Text file

6. Click on the Save button.

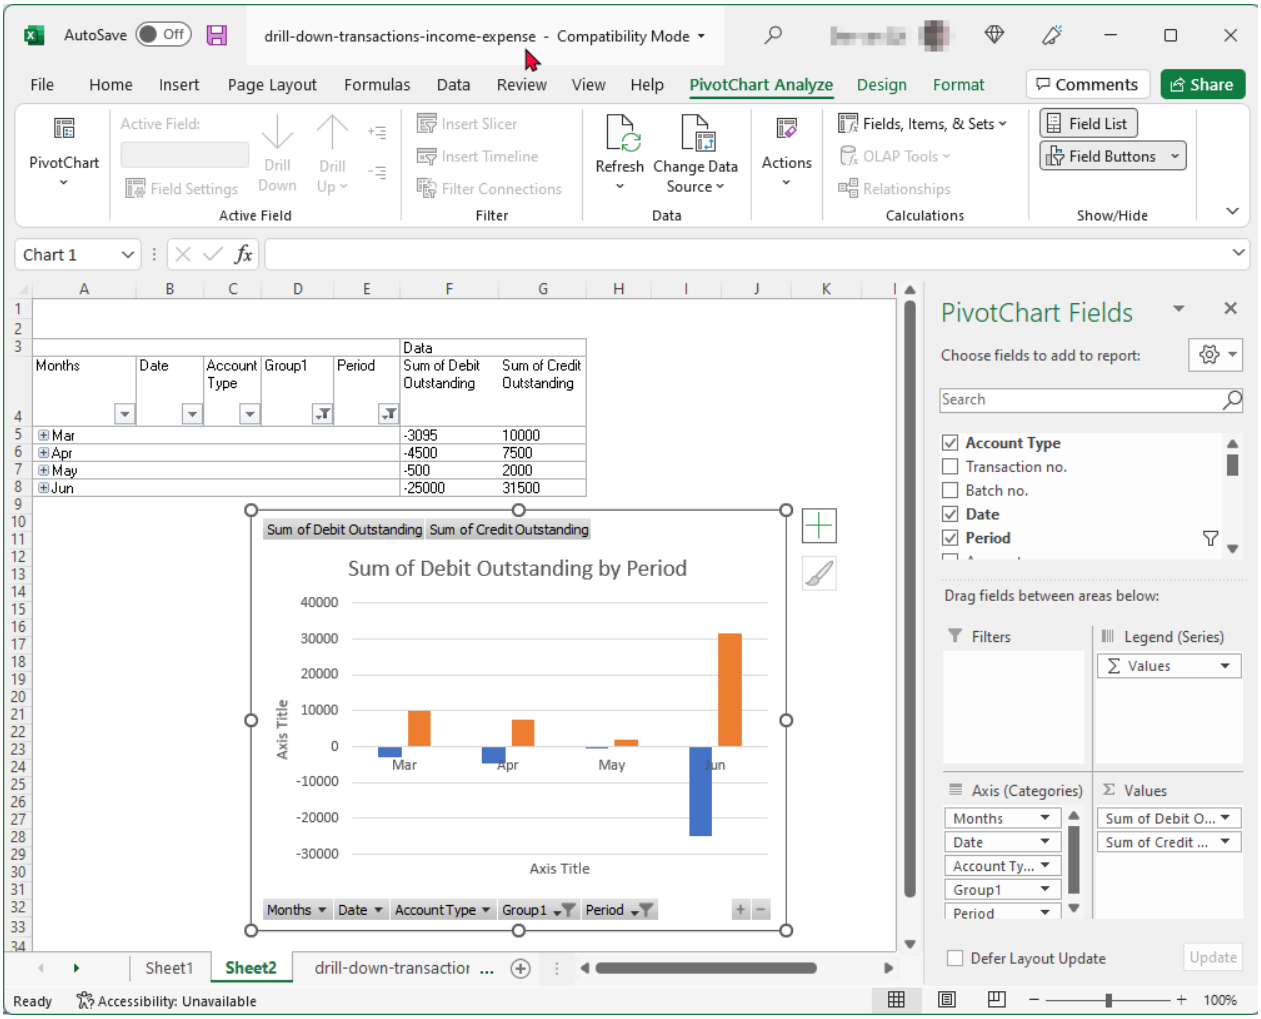
Once exported, you can locate the file and open it in your preferred software, such as Microsoft Excel or LibreOffice Calc, to further analyse and visualize the data.

For example, you may use it to build graphs in or Microsoft Excel, LibreOffice Calc spreadsheets, and make powerful presentations of your data in or Microsoft PowerPoint or LibreOffice Impress.

By utilising the Charts section of the"*TC Drill Down*" plugin and exporting the data, you can effectively analyse your sales performance, identify trends, and make informed business decisions based on the insights gained from visualising your data.

Spreadsheets

The exported data can be easily used to build custom pivot tables and charts in spreadsheets. The following is an example of exported data in Microsoft Excel spreadsheet with charts for income and expenses exported using the "*TC Drill Down*":



By using pivot tables and charts in Excel, you can analyse and visualise your expenses data exported from the "*TC Drill Down*" plugin effectively. These tools allow you to gain insights into your spending patterns, identify areas for cost optimization, and make informed financial decisions for your business.

Remittance plugin

Remittance plugin - Manual - Shop - License : Once-off -

Translations : Outstanding

With the remittance plugin allows you to easily manage your outstanding items. You may send an e-mail to all debtors to remind them their outstanding amounts and totals.

You may also print outstanding (arrears) accounts and send them by post.

By also purchasing the Multimedia plugin, you can immediately see which e-mails and reminders you have sent.

The setup and configuration process is briefly as follows:

1. Activate – Enable the Remittance plugin in a Set of Books.
2. Configure the e-mail with the settings and details from your Internet Service Provider (ISP).
3. Creating e-mail templates to be displayed in your system's default e-mail program. You may create any number of email templates for your requirements.
4. Customise the remittance / reminder layout files for your specific needs. These layout files will automatically generate the list of outstanding transactions and the total for each debtor account. The remittance / reminder layout files will be attached to each debtor e-mail.

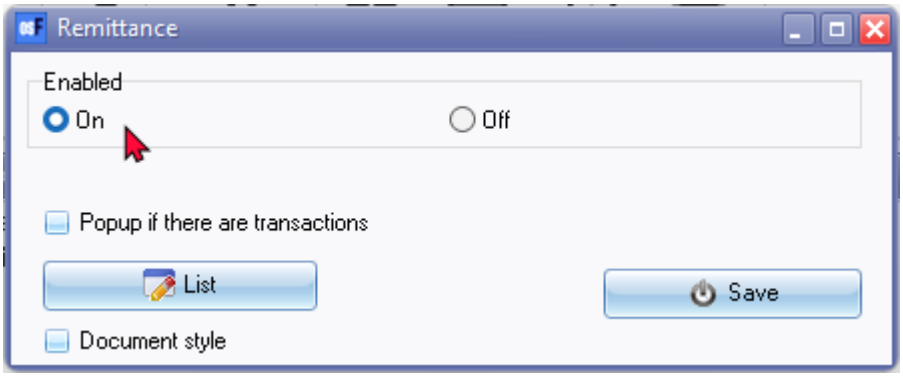
After the setup and configuration process, using the Remittance plugin is briefly as follows:

1. Access the Remittance plugin. (An option is available to automatically launch this plugin if transactions are outstanding).
2. Check the selection criteria on the Remittance plugin. (You may select and preview remittance layout files).
3. Print selected or all debtors.
4. To send e-mails:
    - Emails may be sent from the Documents grid on the E-mail Pro tab on Debtors accounts (Default ribbon).
    - Enter the e-mail text header (topic / subject)
    - Select an e-mail template. (You may preview the template or the remittance layout file)
    - Enter additional text (free text) to be added to the e-mail template. (An extra file can be attached – in addition to the Remittance layout file).
    - Click on the Send button to fire off the e-mails.

Activation

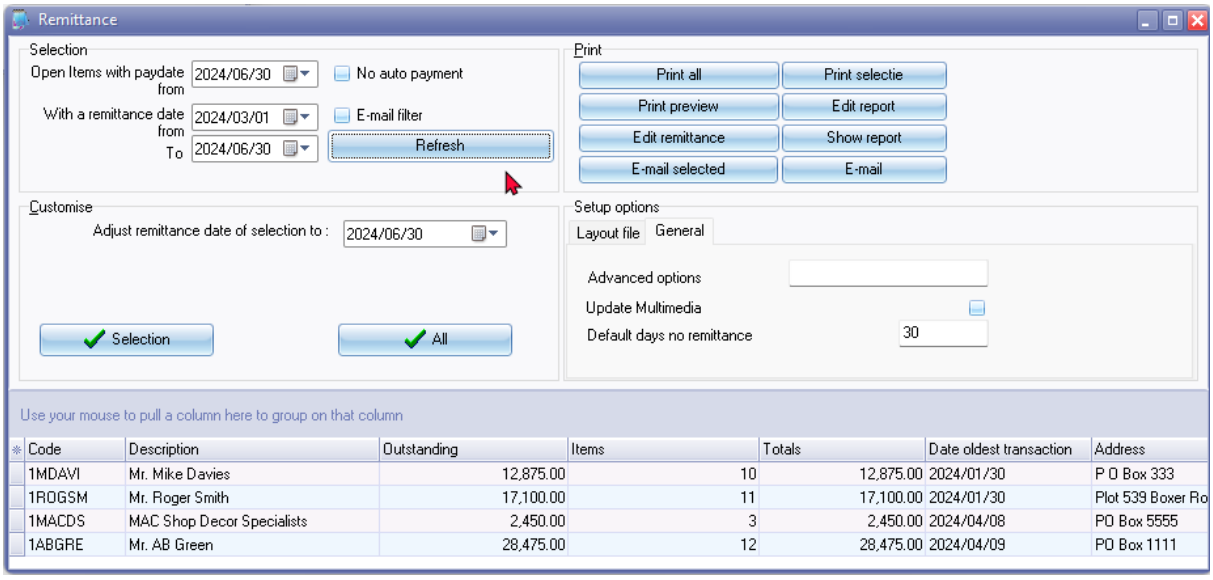
On the Setup ribbon, select Plugins → Financial tools → Remittance. If this plugin is not listed under Plugins → Financial tools, activate it via Tools → Activate plugins.

The activation screen for the Remittance plugin is launched.



The options are as follows:

1. Enabled: Select the On radio button option to enable the Remittance plugin.
2. Popup if there are transactions (check box): By default, this field is not checked. When you reopen the Set of Books, the Remittance icon (additional icon) will be available on the Default ribbon from where you can manually launch the Remittance plugin. If you select (check) the "*Popup if there are transactions*" checkbox, the Remittance plugin will be launched automatically to remind you when reminders are due.
3. Document style - This option provides 2 interfaces for the Remittance plugin. By default, this option is not checked. If you check or uncheck, the "*Document style*" option, and reopen the Set of Books, the Remittance screen will be initiated from the Remittance icon on the Default ribbon:
4. List button: This will launch the following Remittance screen:



If you do not check the "*Document style*" option, and reopen the Set of Books, the Reminders screen will be initiated from the Remittance icon on the Default ribbon, similar to how the List button is initiated.

5. Save button: If you have clicked on the List button, you need to click on the Close (X) icon on the title bar of the above Remittance screen (this screen will be discussed in the next sections).

6. Reopen the Set of Books. Alternatively, you may close active forms (Tools → Close active forms (Setup ribbon)) and relaunch the Remittance plugin from the Default ribbon to switch between the "*Document style*" option, not selected or selected in Remittance setup.

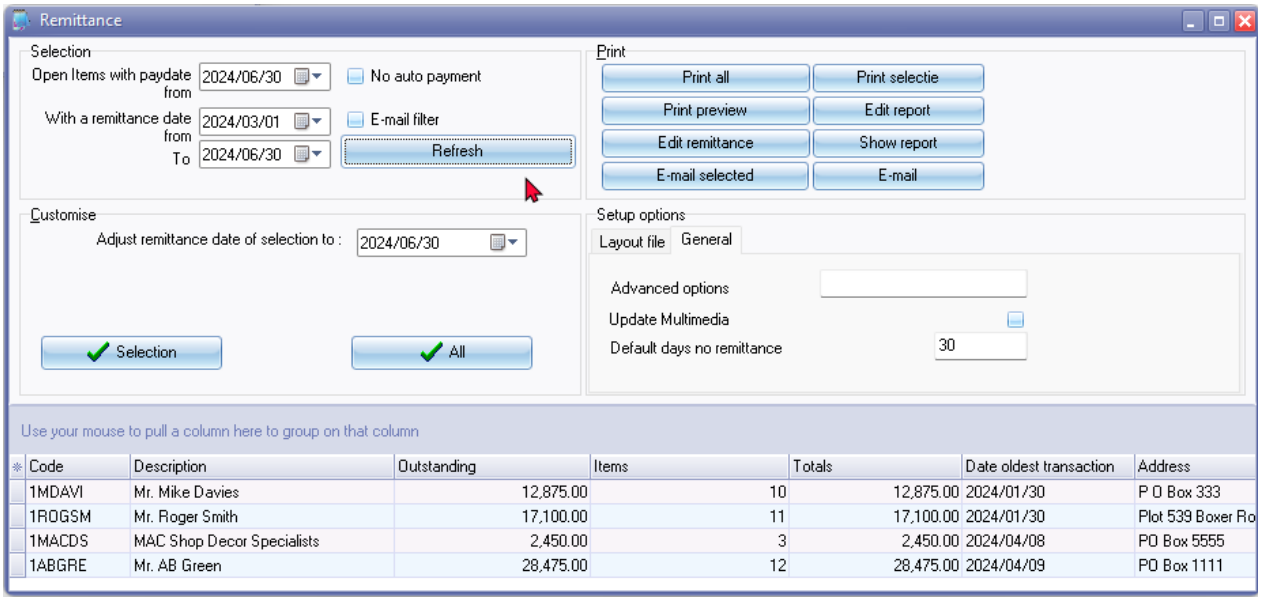
Document style modes

You may switch to the different modes for processing transactions in the Remittance plugin in Plugins → Financial tools → Remittance (Setup ribbon} . After changing the "*Document style*" option, you may need to:

- Reopen the Set of Books.
- Alternatively, you may close active forms (Tools → Close active forms (Setup ribbon)) and relaunch the Remittance plugin from the Default ribbon to switch between the "*Document style*" option, not selected or selected in Remittance setup.

Document style option - Not selected

If you do not select the "*Document style*" option in Plugins → Financial tools → Remittance (Setup ribbon}, the Remittance screen will display as follows:



The screen consists of four (4) sections as well as the data (columns section):

Selection

1. Open item since pay date from - Enter or select the date.
2. With a remittance date from and to - Enter or select the date.
3. No auto payment - Hide the debtors for which automatic payments have been scheduled.

4. E-mail filter – If this field is not selected, all debtor accounts (including those without e-mail addresses will be listed. Select (tick) this option to hide debtors without e-mail addresses. If selected, only those Debtors with e-mail addresses entered in the E-mail field of the Debtor accounts screen will be listed.

5. Refresh button – After selecting these dates, you may click on this button to list only those transactions matching your selection criteria.

Customise -

1. Adjust remittance date of selection to - Enter or select the date. This will set the date "last reminder" for the selected debtor (or all debtors) to the date selected.

2. Selection button - If you click on this button, the following confirmation message will be displayed:

   "This action will adjust the last date remittance at the "selected" debtors! Do you wish to continue?"

3. All button – If you click on this button, the following confirmation message will be displayed:

   "This action will adjust the last date remittance at the "ALL VISIBLE" debtors! Do you wish to continue?"

Print -

1. Print all button – This will print the Remittance (reminder) layout file for all debtor accounts in the list to the default system printer. These layout files are stored in the following folder:

   " ...\plug_ins\reports\remittance\layouts "

2. Print selected button – This will print the Remittance (reminder) layout file for a selected debtor account in the list to the default system printer. These layout files are stored in the following folder:

   " ...\plug_ins\reports\remittance\layouts "

3. Print preview button - This will print the Remittance (reminder) layout file for a selected debtor account in the list in the Reportman preview screen.

   " ....\plug_ins\reports\remittance\layouts "

4. Edit remittance button - This will open the Remittance (reminder) layout file in the Report designer. You may then edit the Remittance layout files. These layout files are stored in the following folder:

   " ...\plug_ins\reports\remittance\layouts "

5. Edit report - This will open the Remittance (listing all debtor accounts) report in the Report designer. You may then edit the report. These reports are stored in the following folder:

   " ...\plug_ins\reports\remittance\layouts\list.rep "

6. Show report - This will print the Remittance (listing all debtor accounts) report for a selected debtor account in the list in the Reportman preview screen located in the following directory:

   " ...\plug_ins\reports\remittance\list.rep "

7. E-mail selected – This will send the Remittance report as an e-mail attachment for a selected debtor account. To use the E-mail functionality, you need to setup and configure your email settings.

8. E-mail - This will send the Remittance report as an e-mail attachment for all debtor accounts in the list.

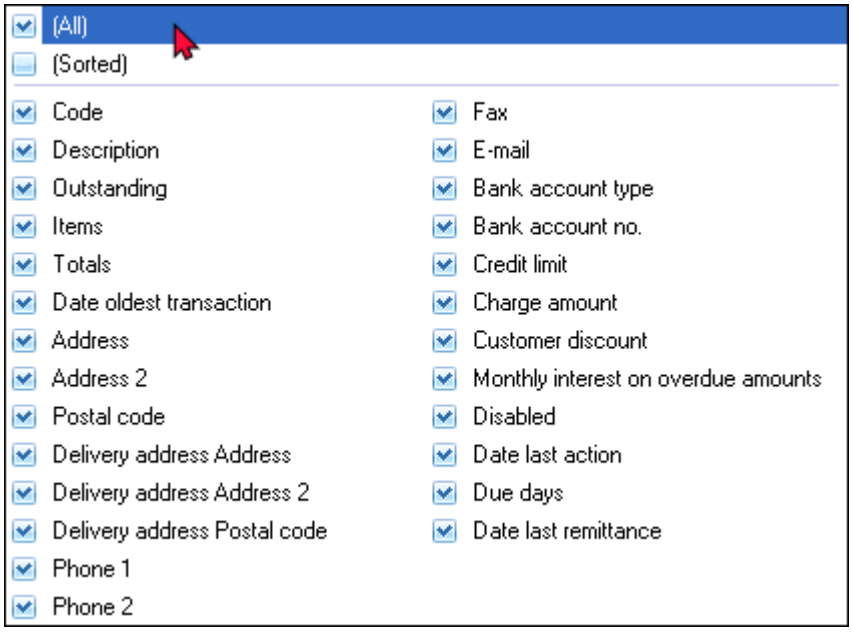
Setup options – This section consists of two (2) tabs (i.e. Layout file and General tabs).

- Layout file tab
  - Document layout files – You may select up to 4 remittance (reminder) reports.These reports are stored in the following directory:

    " ...\plug_ins\reports\remittance\layouts "

    You may add your own remittance, reminder reports and edit these reports using the Report designer to suit your specific requirements.
  - You may also specify (enter) the number of days for which the reports must be printed.
- General tab -
  - Advanced options – This is an advanced search filter in which you may enter extra text to filter the debtors on the list. For example, to list only debtor accounts for a specific postal code, enter " *and SPostalCode = '2222' ".* Then click on the Refresh button. This will only list those debtors with postal code *"2222"* on the list.
  - Update in Multimedia - By default all e-mail will be updated in the Multimedia feature of this plugin. Should you wish to send the reminders via the Print selected or the Print all button, you need to select this option, if you need to archive these documents in the Multimedia component of this Plugin.
  - Default days no remittance - Enter the number of days for processing reminders.

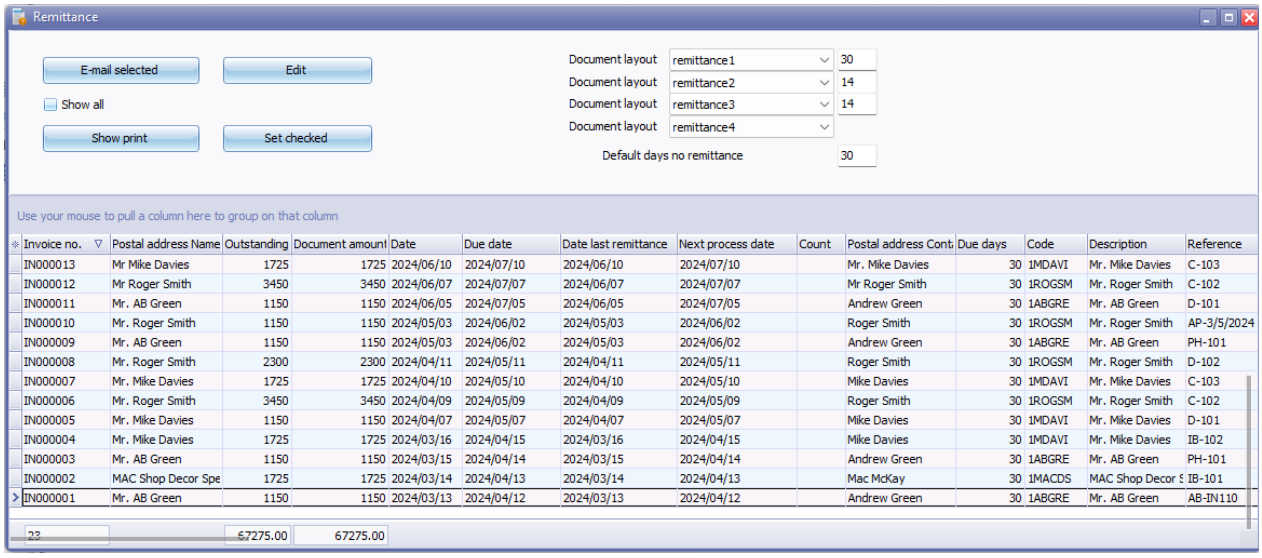
Columns - You may click on the * before the column headings. The columns is as follows:



You may click on the (Sorted) option to list and view the columns alphabetically.

Document style option - Selected

If you select the "*Document style*" option in Plugins → Financial tools → Remittance (Setup ribbon}, the Remittance screen will display as follows:



The screen consists of the main section as well as the data (columns section):

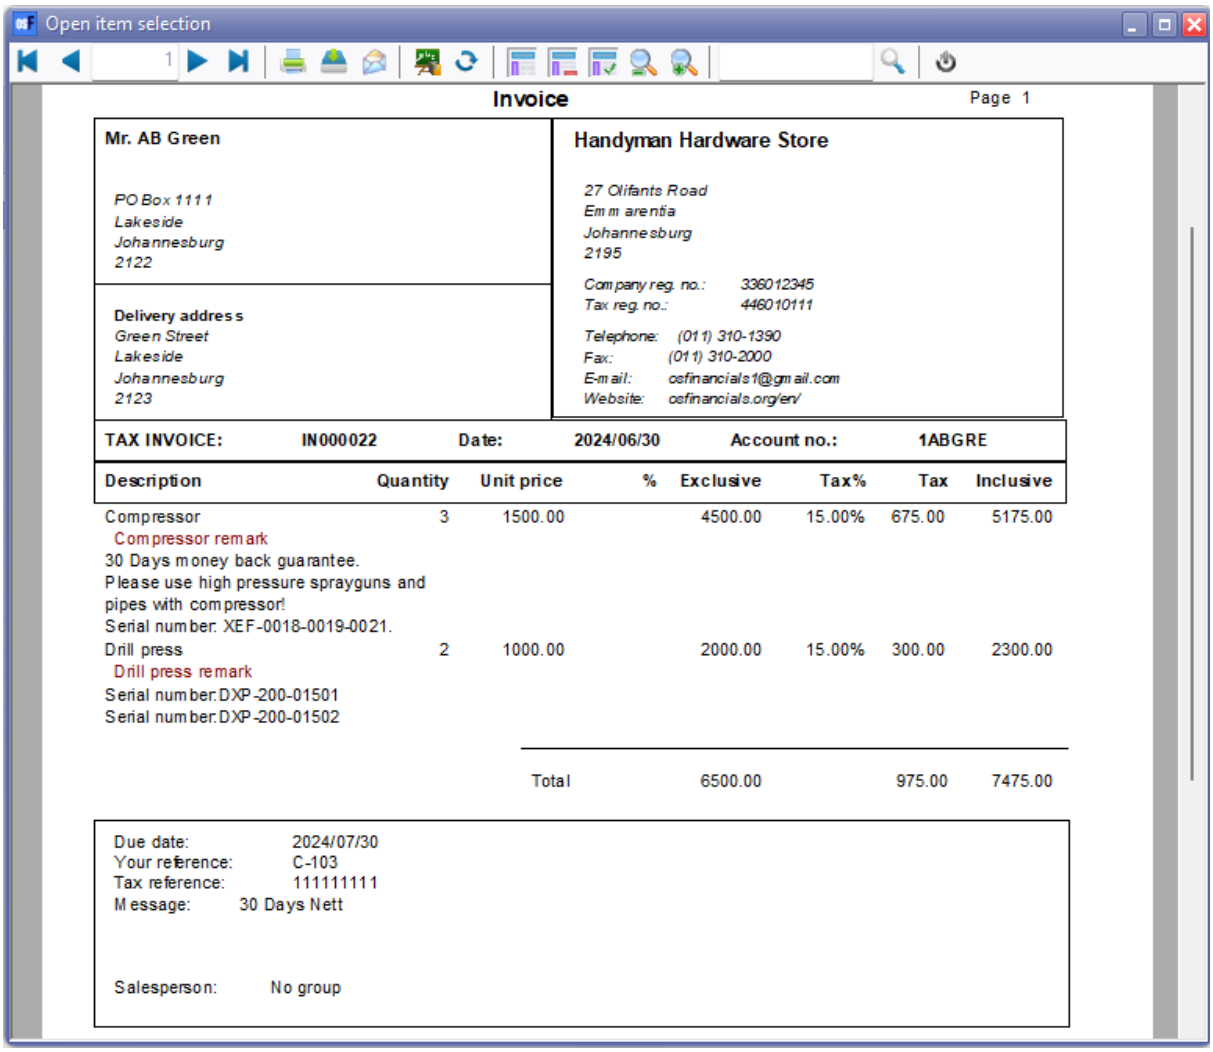
Main section

- Email selected button - Once you have selected a debtor account, and you click on this button, it will launch the "*Send Email*" screen. The "*Send Email*" screen, will launch the Free text tab. Before you can send emails for the first time, you need to configure your email settings on the Settings tab from your Internet Service Provider (ISP). The Email settings for the Remittance plugin, only needs to be done

once, unless your requirements changes.

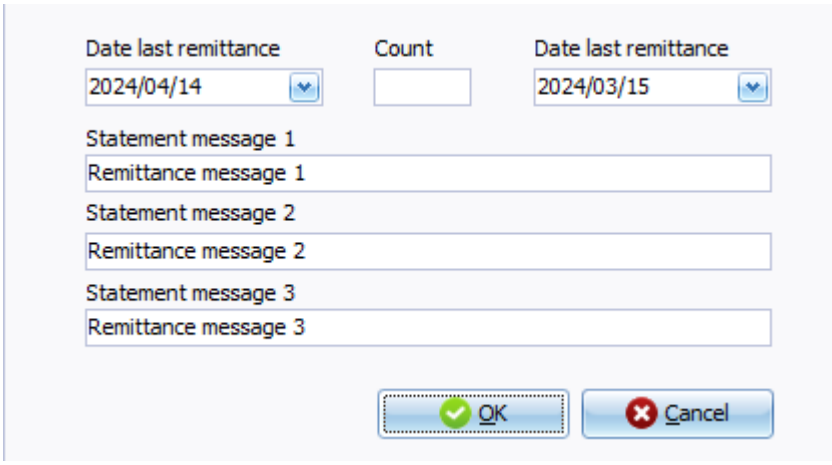
- Show all tick-box -

- Show print button - Once you have selected a debtor account, and you click on this button, This will print the "*Open Item selection*" document layout file. An example of the printed "*Open Item selection*" document layout file,is as follows:



These document layout files are stored in the following folder:

- Edit button - You may edit the statement messages on the following screen:

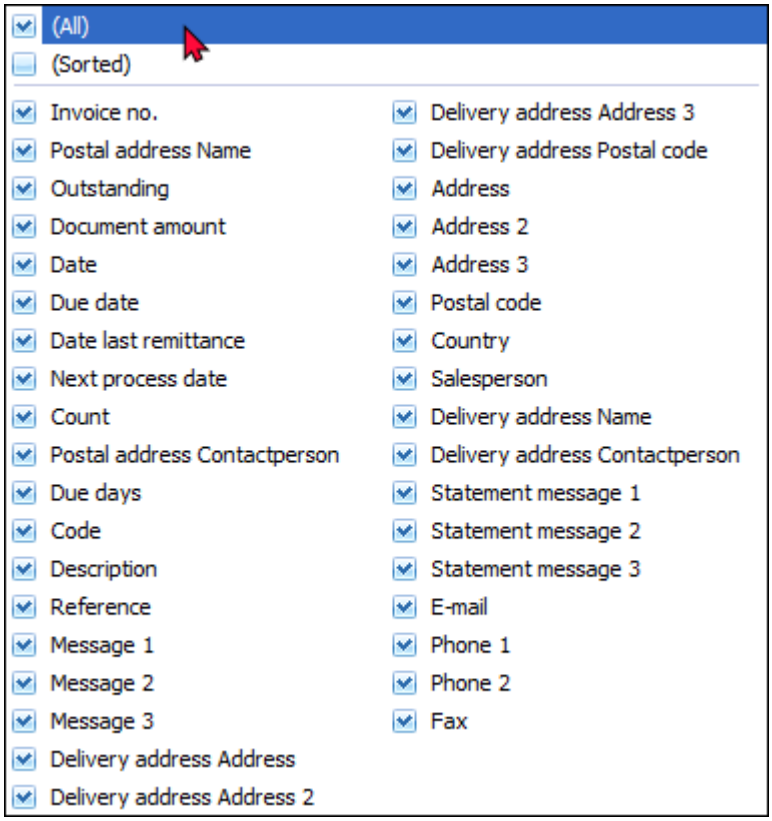


- Set checked button -
- Document layout - You may select up to four Document layout files for the Remittance plugin. These document layout files are stored in the following folder:

  " \plug_ins\reports\remittance\doctype\layouts "

- Default days no remittance - Enter the default number of days. By default, the number of days entered in the "*Due days*" field on the Accounting informationtab of the Debtors form (Default ribbon), will be displayed.

Columns - You may click on the * before the column headings. The columns is as follows:



You may click on the (Sorted) option to list and view the columns alphabetically.

Important notes to optimise the Remittance plugin

To use this plugin, the exact same principles (good accounting practice) as applicable to all reports should be applied.

You need to check that all transactions for the debtors are posted (updated to the ledger) and check that the correct debit transactions are linked to the correct credit transactions.

If you do not see a list of debtors, the incorrect date is probably selected.

To get back the original list, you can perform this operation:

- The date of the field "*Not since reminded*" puts you on a date, for example, two years later than the date on which it now stands.
- And the field "Customizing the date selection to for example, 2 years back in time.

Unposted batches and documents

Make sure that all:

- Unposted transactions in documents are updated (posted) to the ledger.
- All unposted transactions in batches are updated (posted) to the ledger.
- All unposted transactions in bank accounts (receipts and payments batches) are updated (posted) to the ledger. In the case of using the Bank import plugin – make sure that your bank statements are correctly imported and processed (including updated (posted) to the ledger).
- If you use repeating transactions in batches make sure that these are processed (Repeating transactions) are imported and processed in a normal batch and posted (updated) to the ledger.
- If you are using the Calendar (Planner) make sure that Repeating invoices, Invoices for hours, bulk time entries, etc. are processed (including updated (posted) to the ledger).
- If you need to generate multiple transactions in batches (i.e. Interest on overdue debtor accounts, Balances with outstanding amount less than a specified amount, Fixed amount to all debtors, Charge amounts for debtor accounts (you need to process and post (update) to the ledger.

Open item / Balance brought forward processing

Basic principles:

- Open item processing for debtor accounts will list only those transactions in journals (batches) and documents which is outstanding. Transactions / Invoices which are fully settled (paid) and/or credited

with a credit note (or other batch transactions) will not be listed.

- Balance brought forward processing for debtor accounts will list all the transactions / documents which is recorded (posted (updated) to the ledger). Transactions / Invoices irrespective whether these are fully settled (paid) and/or credited with a credit note (or other batch transactions) will be listed.

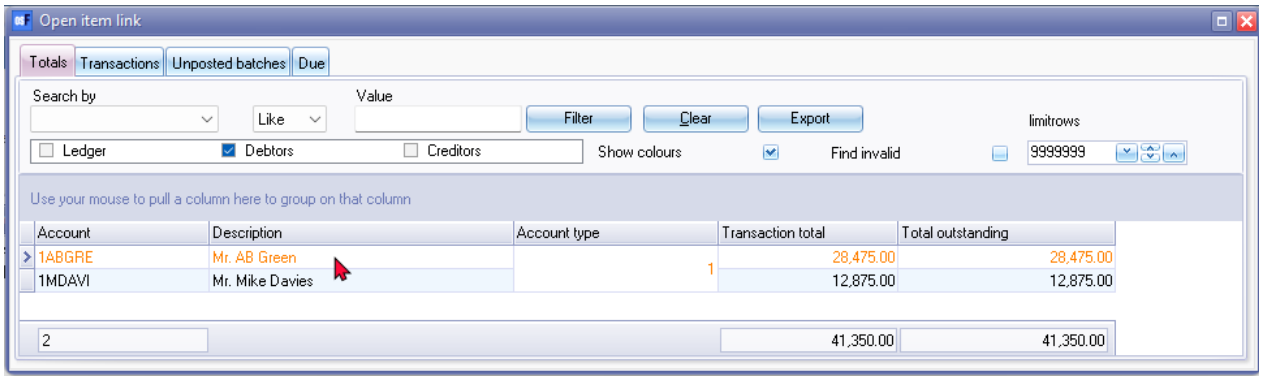
Open item processing (recommended)

To check the outstanding items on debtor accounts:

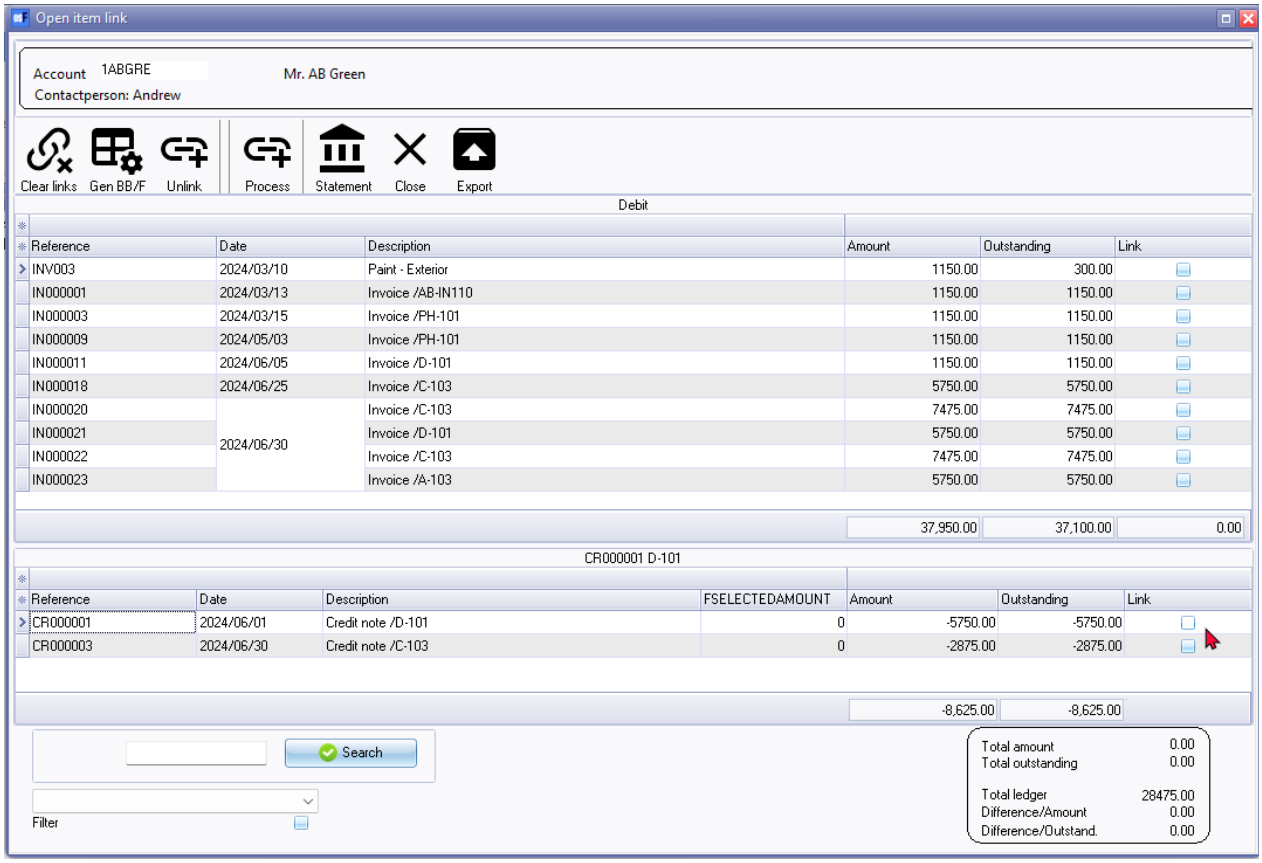
On the Default ribbon, click on the Open item link icon.

On the Totals tab, select Debtors and click on the Filter button. All debtor accounts (set as an open item account on the Accounting information tab), should be linked.

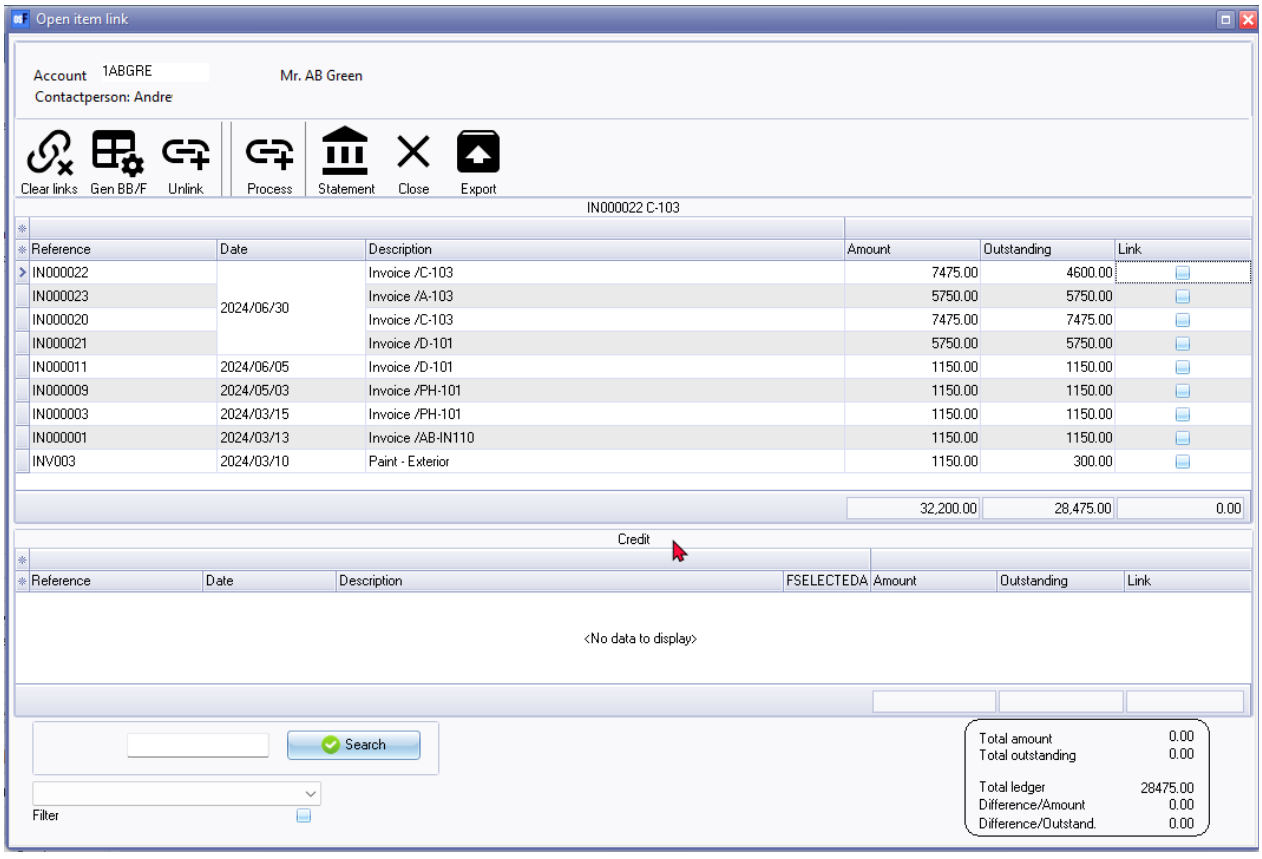
Note - If there are any outstanding items (debit transaction(s) which are not linked to a credit transaction(s)), the line colour will display in an orange colour.



For example, Mr. AB Green, is displayed in an orange font colour. Double-click on that account, it will list the debit as well as credit transactions separately.



If the payment (receipt) and credit notes are linked to the correct transactions, the credit transactions will be cleared and only those invoices with outstanding amounts, will be listed.



In this example, invoice IN000018 will not be listed, as IN000018 is cancelled with credit note CR000001. Invoice IN000022 has a an outstanding amount of 4600,00 as credit note CR000003 of 2875,00 is linked a part of IN000022 to the amount of 7475,00.

Open item reports

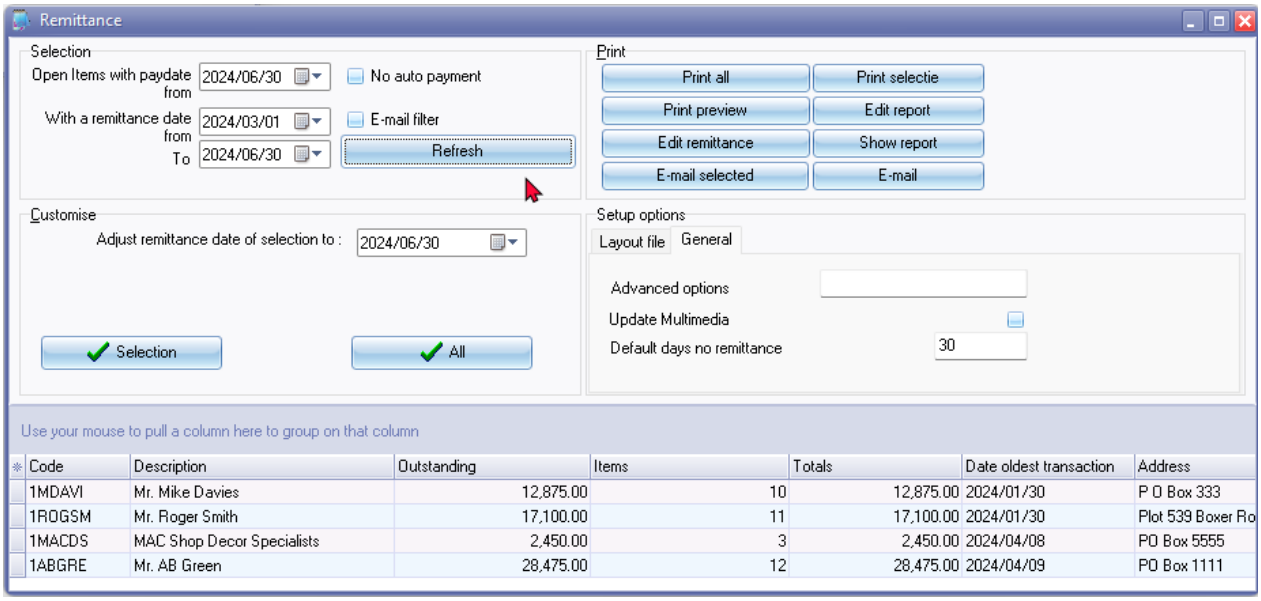
In addition to the Open item reports available on the Due tab of the Open item link functionality (Default ribbon), you can also use the following reports to manage open item transactions:

1. Reports menu
    - Transaction reports -
        - Transaction list - Open item - This report lists only those outstanding transactions in documents and batches which are posted (updated) to the ledger. It will list only those transactions with outstanding amounts. Any debit amounts, which are not linked to credit transactions, should be processed in Open item link (Default ribbon).
        - Transaction list - This report lists all the transactions in documents and batches which are posted (updated) to the ledger. All transactions will be listed irrespective of open item links.
    - Debtor statements -
        - Debtor statements - The statement will print all transactions. It does not use the "*Open item*" feature.
        - Debtor statements - Outstanding The statement will print only the transactions with outstanding amounts.
    - Age analysis reports -
        - Age analysis - Balances detail - Displays the reference, date, amount and description for each transaction. The Total outstanding as at the Date of ageing is split to the number of days specified in up to 3 periods.
        - Age analysis - Balances detail history (open item) - This is similar to the "*Balances detail*" report, but it displays the outstanding amount and TransactionID.
        - Age analysis - Balances - This is a similar report as the "*Balances detail*" report. It will only list the balances for each ageing period.

Configuration and setup

If the Remittance plugin is not already configured or automatically launched, you may click on the,

Remittance icon (additional icon) on the Default ribbon.



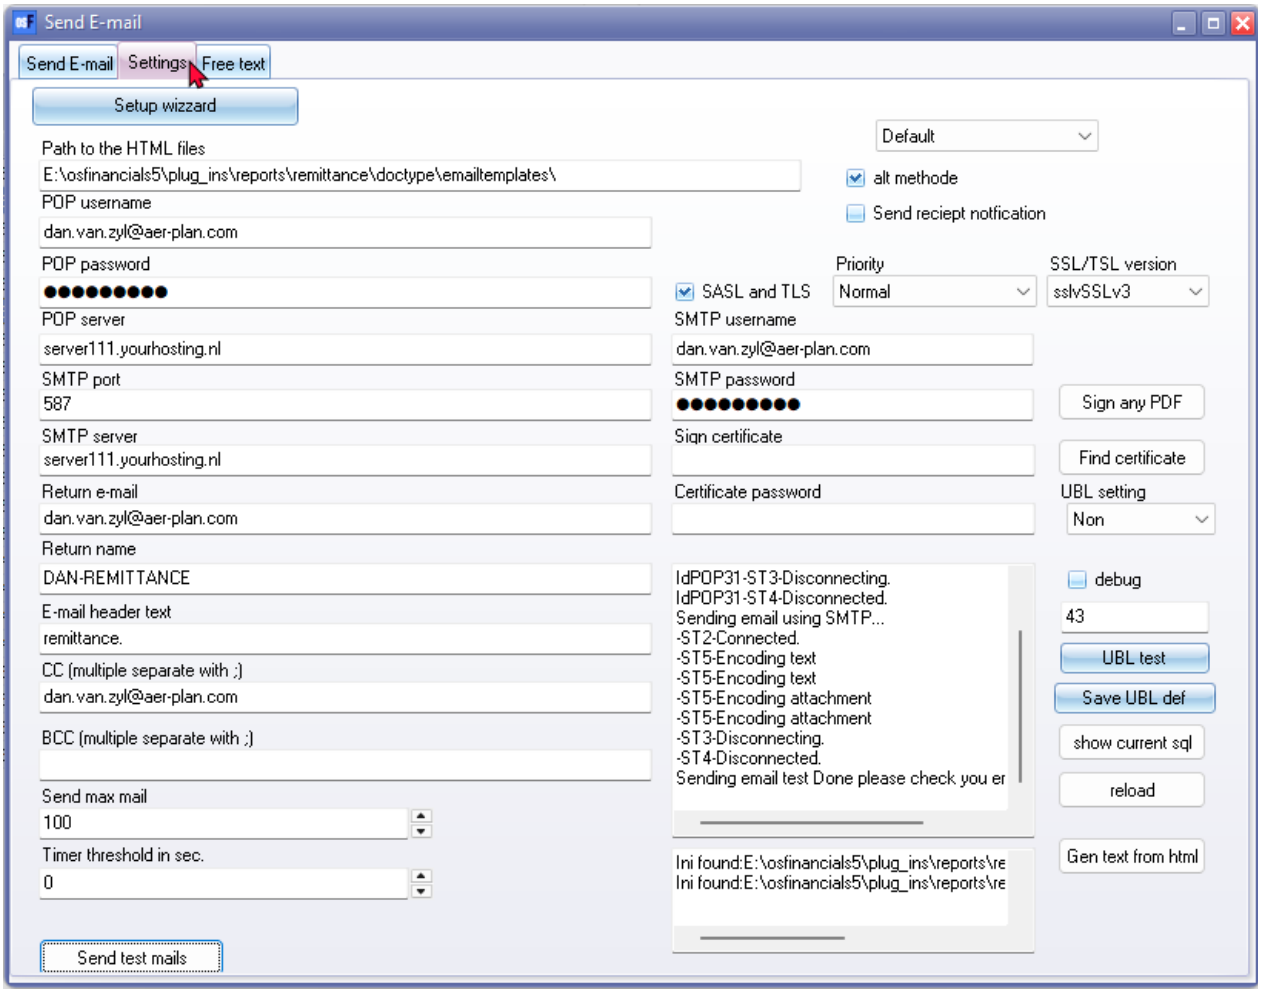
E-mail account setup

Before you can send e-mails, you need to configure your e-mail account in the Set of Books. This is only a once off configuration. Unless your requirements change.

To do this, you need to click on the E-mail or E-mail selected button.

Settings tab

Then click on the Settings tab.



Select or enter the following, where applicable:

Field	*Description*
Path to the HTML file:	*The default path is displayed as"* "C:\osFinancials5\plug_ins\reports\remittance\emailtemplates\" *If you have installed osFinancials5/TurboCASH5 into a different folder, you may need to overtype this. Specifies the path where the files for the Reminders plugin is located. This path may be edited for your own requirements if you have a personal set of files.*
POP username:	*Enter the POP username as registered with your ISP (Internet Service Provider) for your e-mail account settings.*
POP password:	*Enter the POP Password as registered with your ISP (Internet Service Provider) for your e-mail account settings.*
POP server:	*Enter the POP server as registered with your ISP (Internet Service Provider) for your e-mail account settings.*

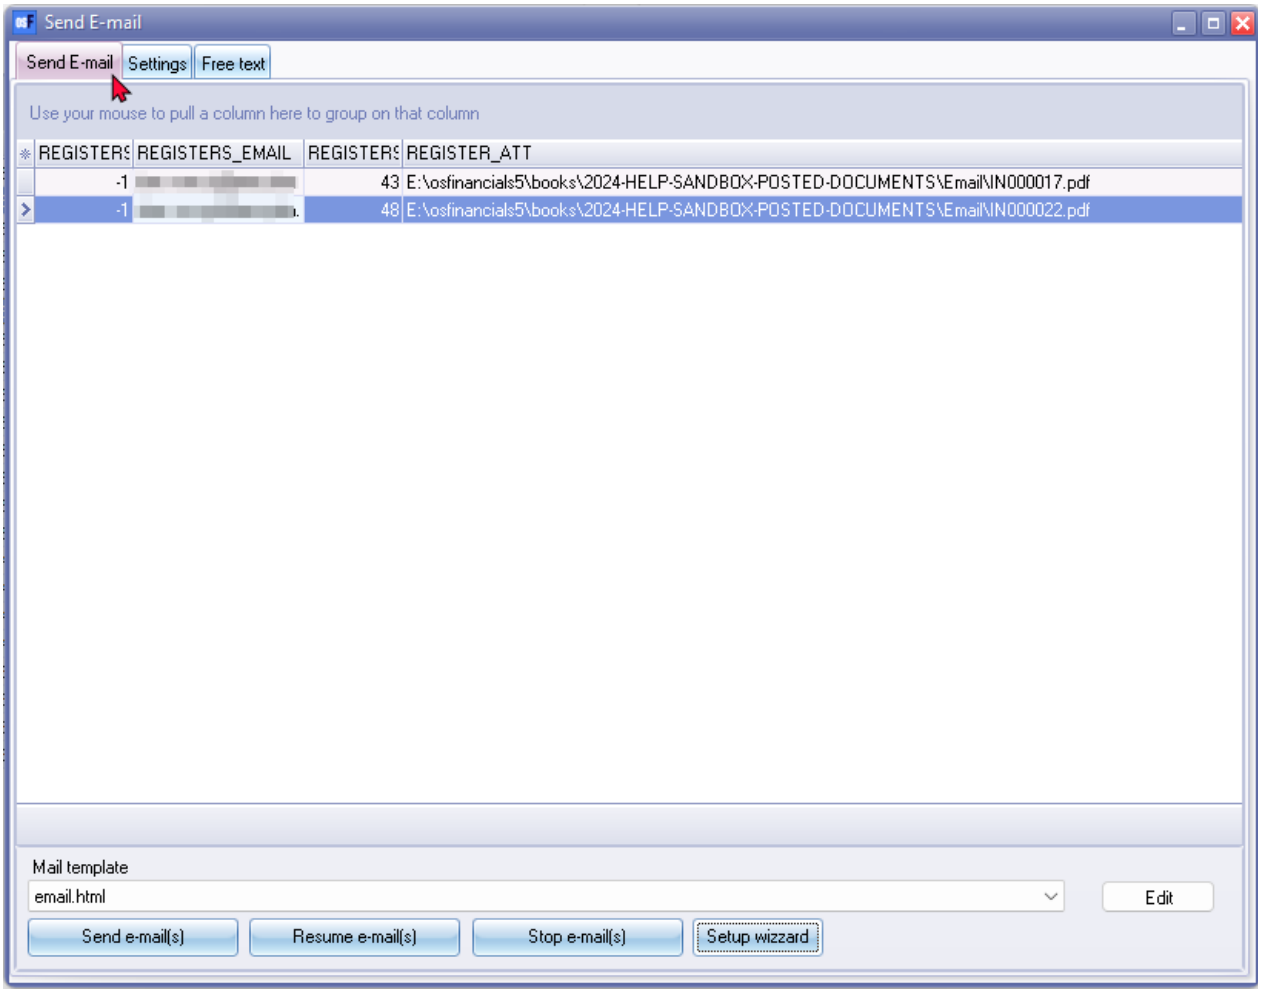
Field	Description
SMTP port:	The default port is “25”. This is determined by the default configuration of your operating system and as provided by your ISP (Internet Service Provider) for your e-mail account settings.
SMTP server:	Enter a valid SMTP as registered with your ISP (Internet Service Provider) for your e-mail account settings. Note when POP before SMTP (usually when you are not using your provider sent emails) you can create an e-mail box which nobody reads. This is because if there are multiple ISP's on the mail box mail is read, the POP for SMTP is not working properly. It is best to use an account that is further used by anyone.
SMTP username:	Enter the SMTP username as registered with your ISP (Internet Service Provider) for your e-mail account settings.
SMTP password:	Enter the SMTP password as registered with your ISP (Internet Service Provider) for your e-mail account settings.
Return e-mail:	This field is optional. You may enter your own e-mail address.
Return name:	This field is optional. You may enter your own name ro be displayed on the message to be displayed on the email field of the recipients e-mail or if the message is returned by your ISP in the case of an invalid e-mail address.
E-mail header text:	Type the text to be displayed as the Subject field of your operating system's default e-mail program.
CC: (multiple separate with ;)	This abbreviation CC “Carbon Copy” indicates secondary recipients of a message. Those recipients who are to receive a copy of a message directed to another. The list of recipients in the CC field is visible to all other recipients of the message. Enter a valid e-mail address, if necessary. Note you need to add a space before and after the semi-colon. If you do not add spaces, the first digit of the second and subsequent e-mail addresses may cut off. This could result in an undelivered mail error.
BCC: (multiple separate with ;)	This abbreviation BCC “Blind Carbon Copy” allows you to send a copy of your correspondence to a third party when you do not want to let the recipient know that you are doing this (or when you do not want the recipient to know the third party's e-mail address). You may also wish to enter this filed, when sending an e-mail to multiple recipients, you can hide their e-mail addresses from each other. Enter a valid e-mail address, if necessary. Note you need to add a space before and after the semi-colon. If you do not add spaces, the first digit of the second and subsequent e-mail

Field	*Description*
	addresses may cut off. This could result in an undelivered mail error.
Send max mail:	*The default is "100". You may use the scroll buttons or enter the number of the maximum emails required to send in a batch. This will limit the number of email messages.*
Timer threshold in sec:	*The default is "10" seconds. This is determined by the default configuration of your operating system. It is not recommend ed to change this, but you could experiment by changing the values.*
Default:	*Default is the standard option. You may select the html only option.*
Alt methode:	*Tick to select the alternative mode.*
Send receipt notification:	*If this field is selected (ticked), a read receipt will be requested by the recipient.*
Priority:	*Normal is the default priority. You may select Highest, High, Low or Below low option. This is the priority in which e-mails will be sent.*
Sign any PDF:	*Optional should be you can sign any pdf with this button (also the ones send to you).*
Find certificate:	*If you have a certificate, click in this button to locate it and add it to this plugin.* *You may use add Digital signatures to the PDF (portable document format) files (e.g. OpenSSL pkcs12.pxf) to your e-mail received by your recipients (e.g. debtors (customers).* *See:* · *http://www.openssl.org/* · *PKCS #12: Personal Information Exchange Syntax Standard*
Certificate password:	*If you have selected a certificate, you need to enter a valid password for that certificate.*
Send test mails button:	*You may send test e-mails to check that the configuration is correct.*

- The box (on the lower right-hand side) - Some messages, e.g. may be displayed in the text area of the Settings screen. An example may be "your e-mail address *Login failed"*. This may indicate that something is not correctly entered on the settings.
- Show current sql button - The sql, is used to add the debtors, etc. for the Remittance plugin.

Send E-mail tab

A list of all the debtor accounts matching your criteria for which you will send e-mails will be listed.



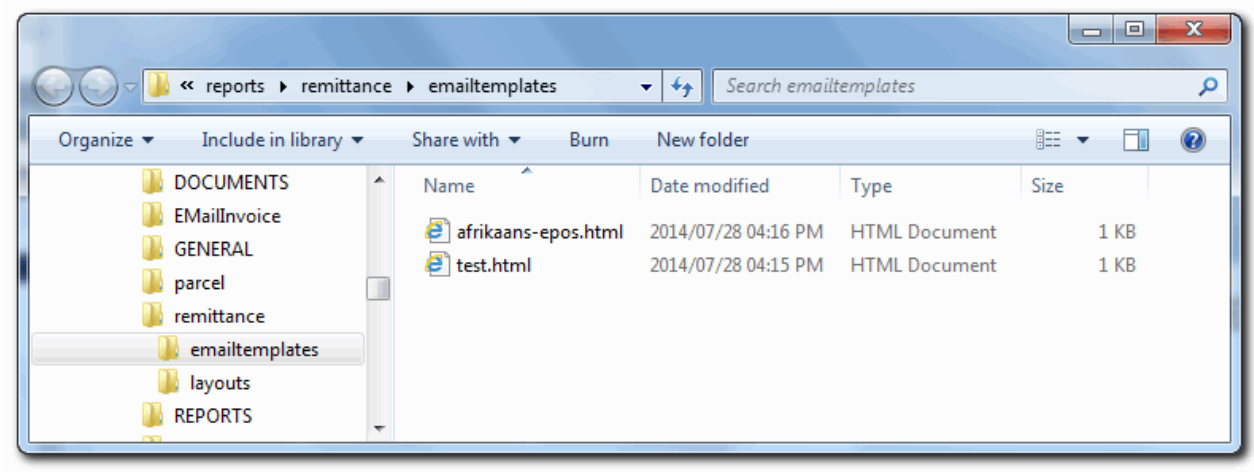
Mail template – This is the text which will be displayed in the e-mail message sent to the debtor account(s). At current only one (1) mail template (test.html) is shipped for the English language. You may add your own mail templates as necessary.

The mail template are stored in the following folder

" ...\plug_ins\reports\remittance\emailtemplates "

Once you have created or added your templates, you may select the template.

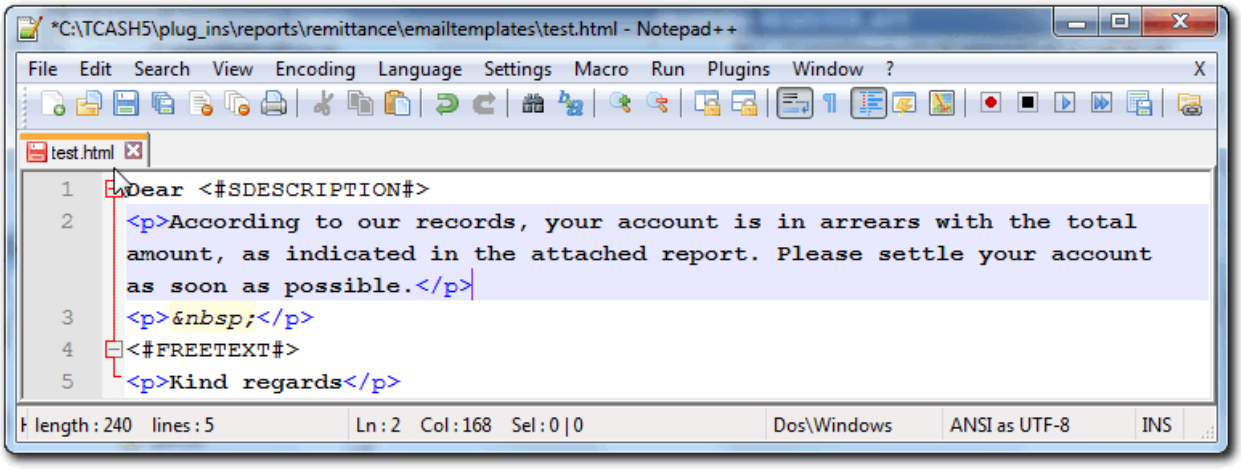
Edit button – If you click on this button, the ...\plug_ins\reports\remittance\emailtemplates folder will be opened in Windows explorer or your system's default file browser.



To create your own template it is easy and you may create as many templates, as required.

It is recommended that you copy the test.html file and rename it to your own needs.

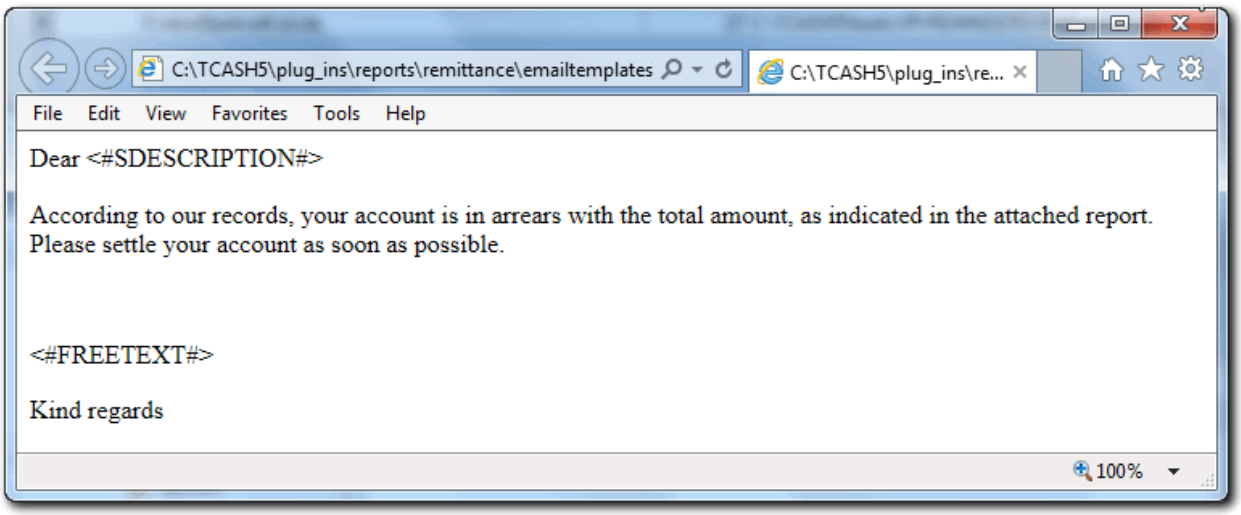
The basic test.html template is as follows:



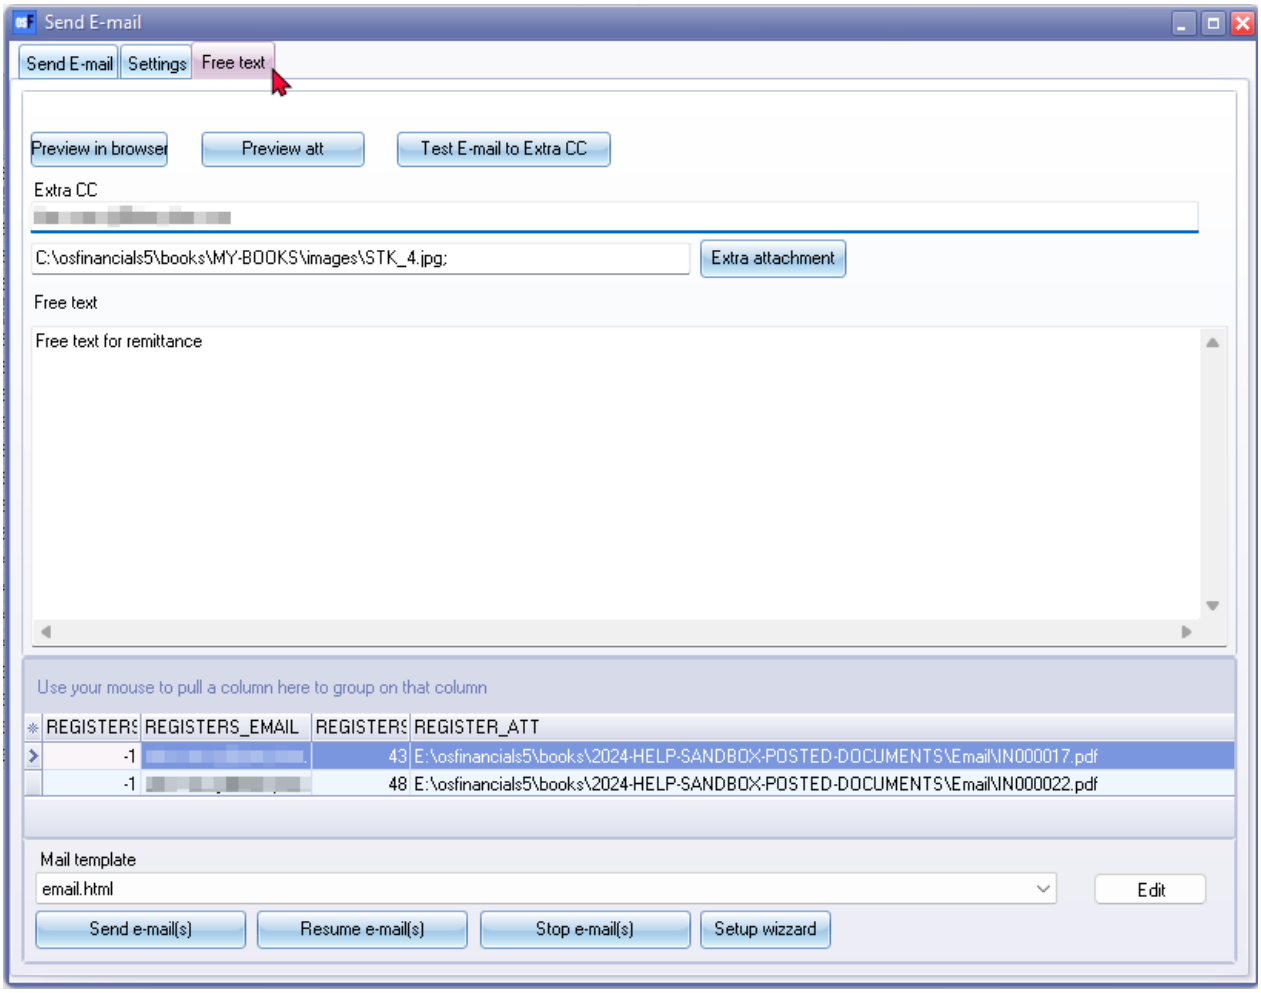
You may change all text as necessary. Please take note of the following two (2) fields:

- <#SDESCRIPTION#> - This will add the name for the respective debtor accounts to the e-mail message.
- <#FREETEXT#> - This will add the text as entered for the e-mail messages, as entered on the Free text field on the Free text tab.

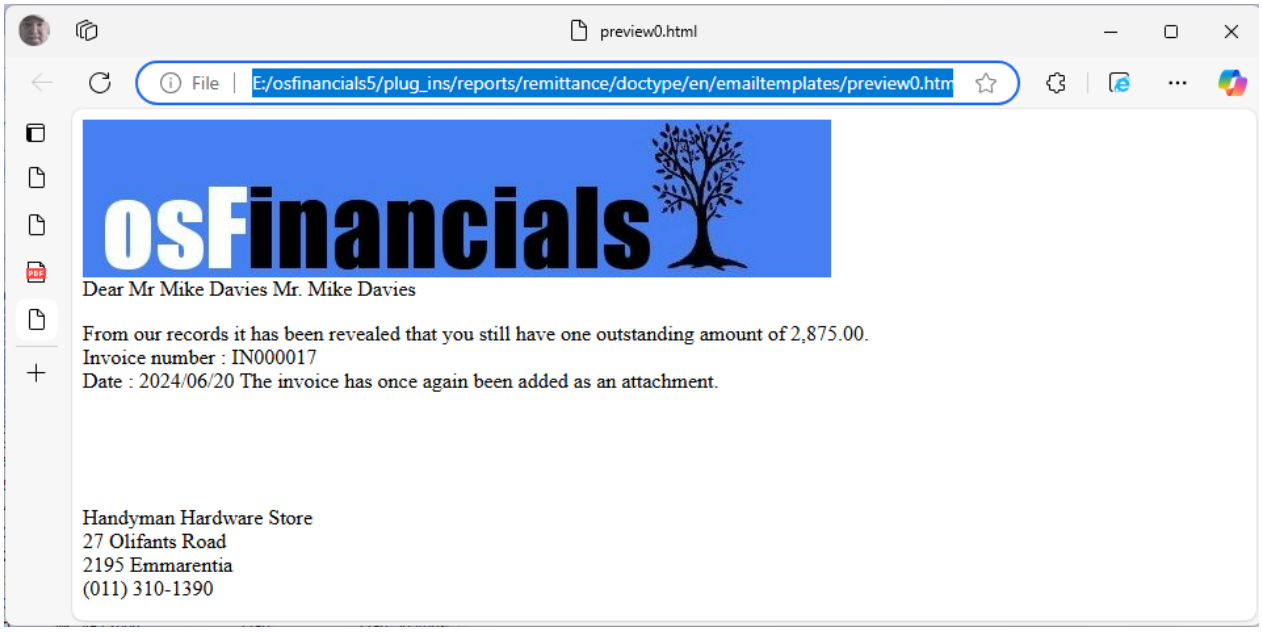
You may preview the template when you click on the Preview in browser button on the Free text tab.



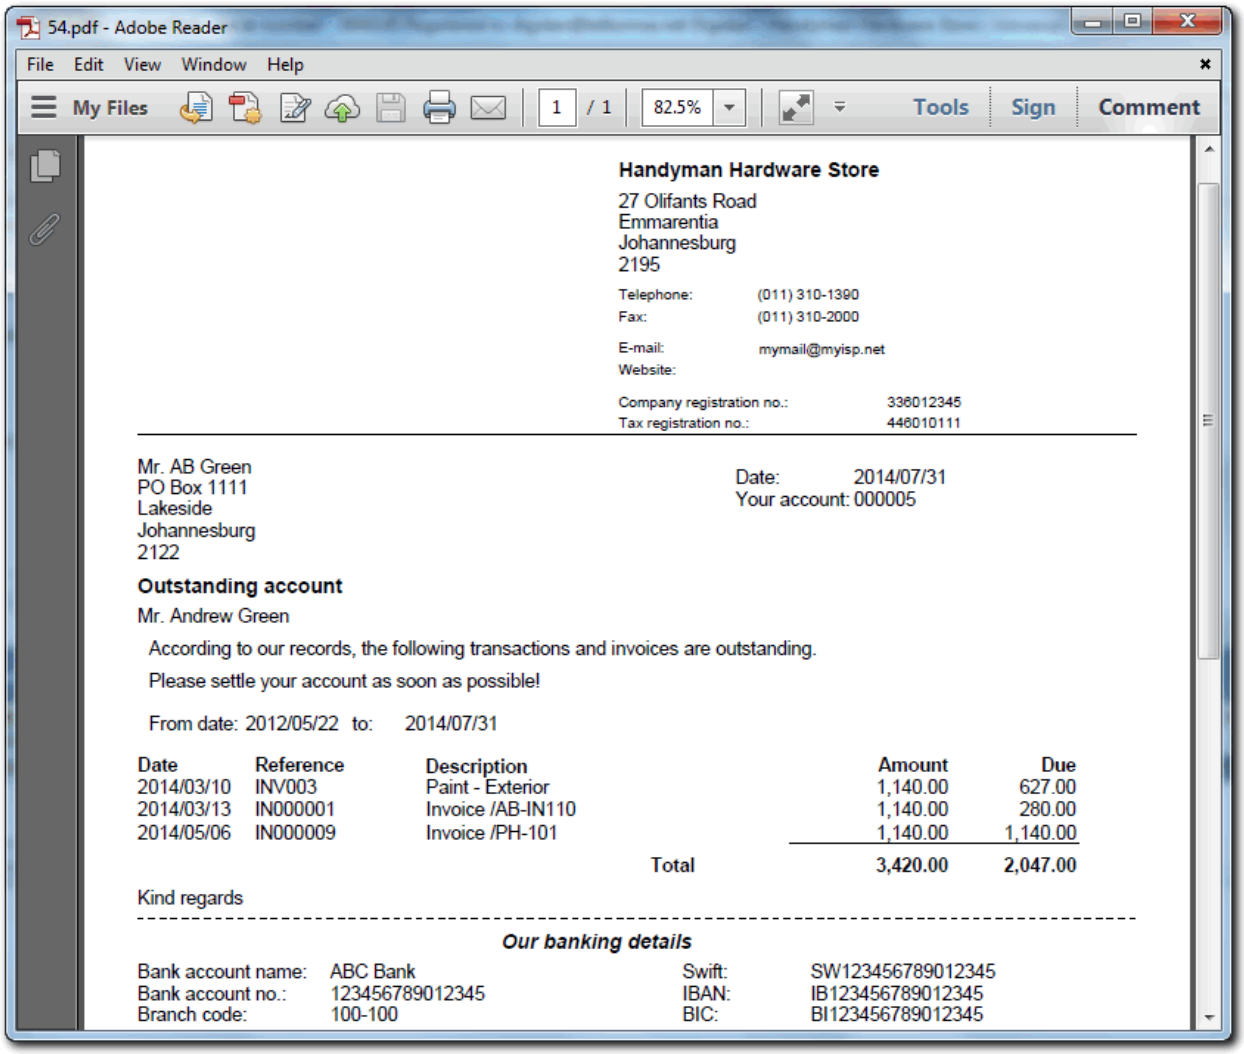
Free text tab



Preview in browser button – This will display the mail template in your system's default.



Preview att button – This will display the remittance (reminder) layout file (...\plug_ins\reports\remittance\layouts) in your system's default pdf reader.



Test E-mail to extra CC – Test the mail to the extra e-mail address entered in the Extra CC field. Note if

the remittance (reminder) layout file is opened using the Preview att button an error “Error sending e-mail” message may be displayed.

Extra attachment button – In addition to the remittance (reminder) layout file (... \plug_ins\reports\remittance\layouts) which will be automatically be attached to the e-mail, you may attach another file as an extra attachment. Please note that this attachment will be sent to all debtor accounts on your list.

Send e-mail(s) button – This will start to send e-mails and the attachments to the debtor accounts on the list.

Resume e-mail(s) button - If you have clicked on the Stop e-mail(s) button, this button will start sending the rest of the e-mails.

Stop e-mail(s) button – This will stop the e-mails from sending. You may click on the Resume e-mail(s) button to start sending the rest of the e-mails.

E-mail reminders

Once you have selected your criteria, you may e-mail the reminders to your debtors (customers). To do this, you may click on the following two (2) buttons:

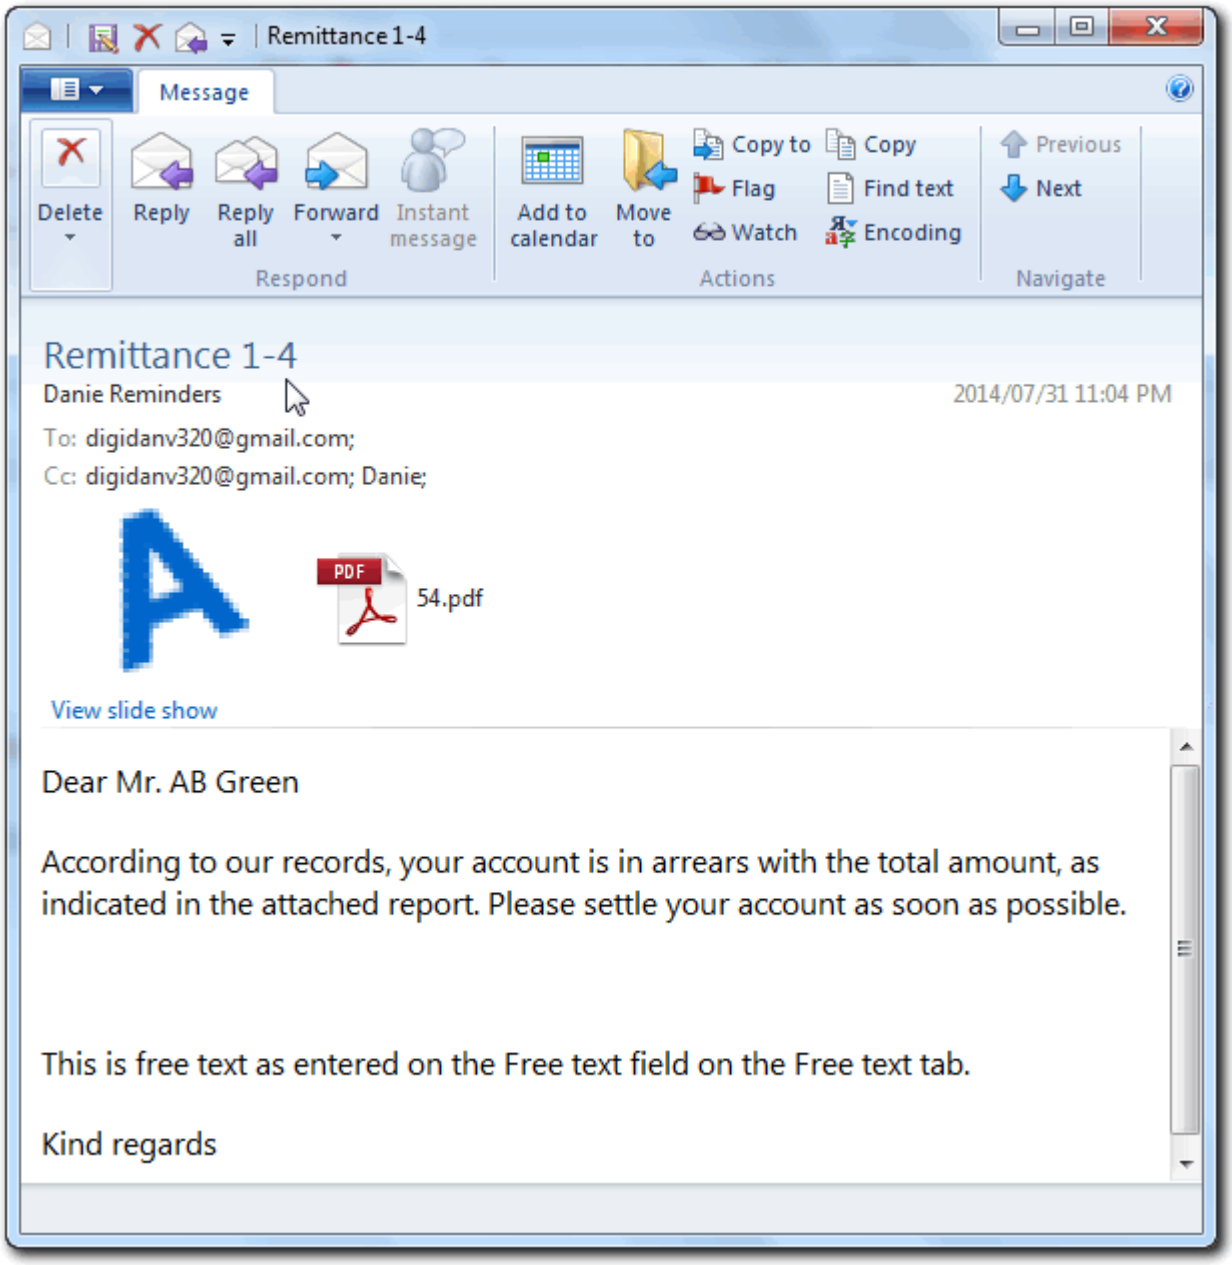
- E-mail selected - click to send e-mail to a selected debtor (customer / client).

Tip : To select more than one debtor (customer / client) on the list, press the Ctrl key on your keyboard and select other debtors (customers) on the list and click on the E-mail selected button.

- Email - click to send e-mails to all the debtors (customers) in the list. This will not send e-mails to all the other debtors (customers) which are excluded from your search and filter criteria.

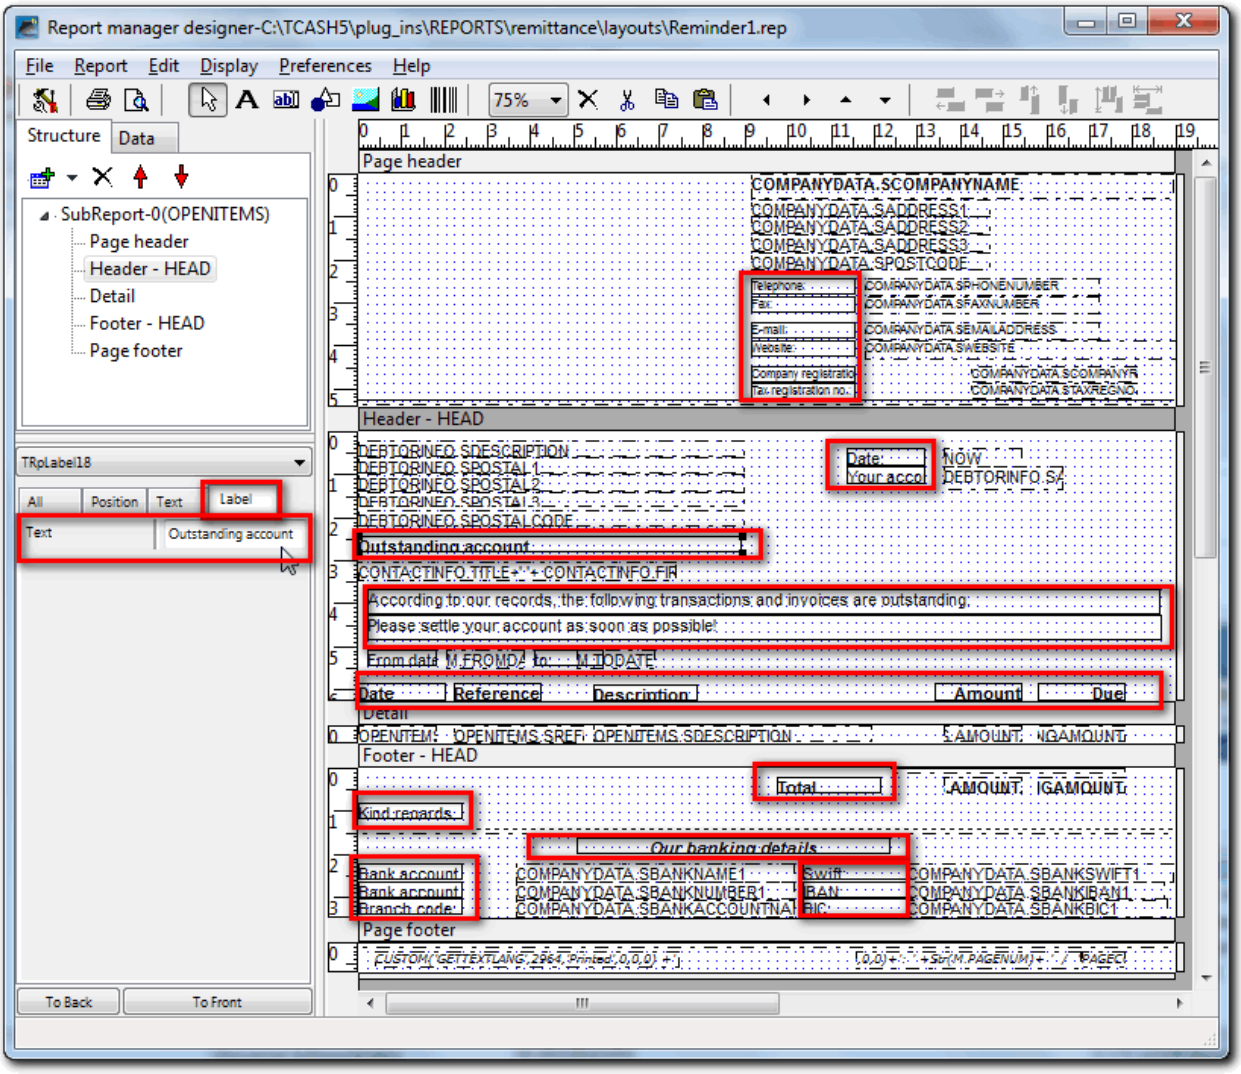
Recipient's E-Mail message

All debtor (customer / client) accounts (which have a valid e-mail address) will receive an email message with the reminder as a Potable Document Format (pdf file) as an attachment. An example of the e-mail message received by the recipient(s), is as follows:



Note : Remember to check and enter the subject (topic) in the E-mail header text field on the Settings tab. Type the text to be displayed as the Subject field of your operating system's default e-mail program. (In this example, "*Remittance 1-4*" was entered.

Customise remittance layout files



Change the text on the file:

Click on a text object (field) (red rectangles as per this example) and select the Label tab. Overtype the text as necessary.

Move text – drag it to the desired place.

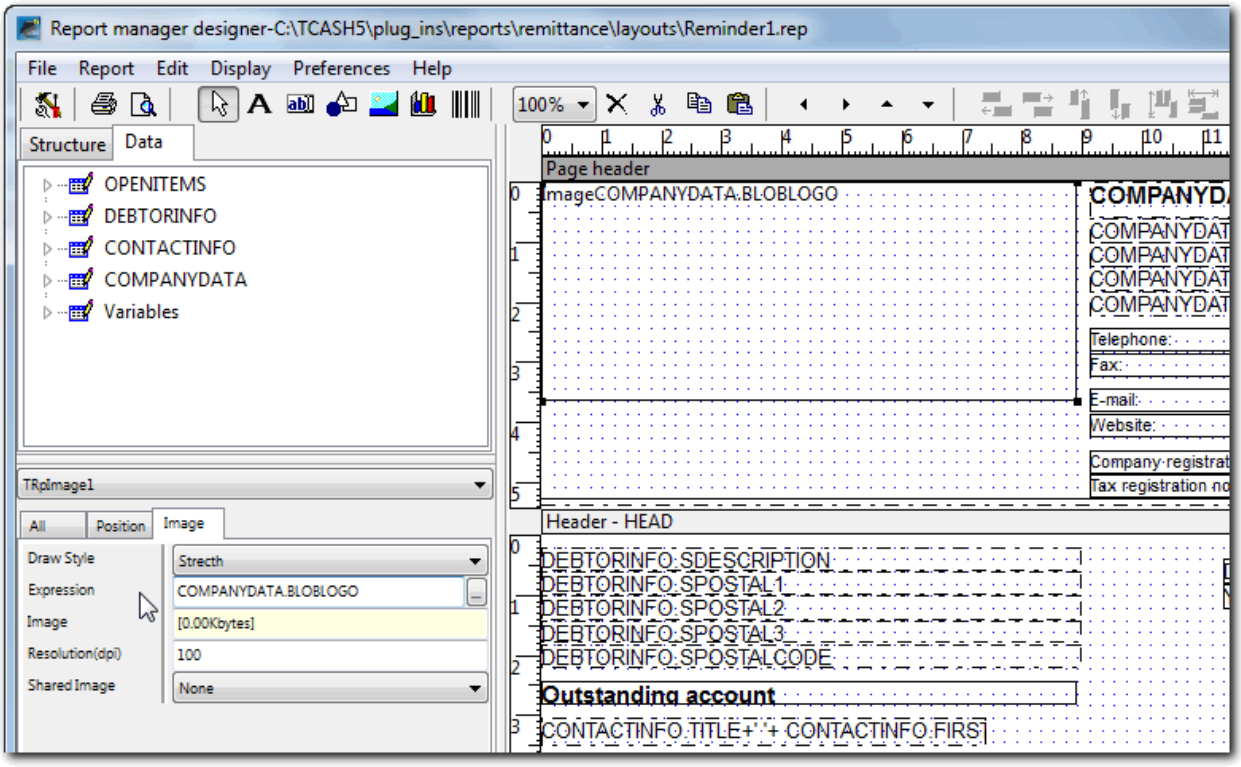
Delete text or expressions.

Adding text

- TRpLabel – Add static text object to the report. Examples on the above picture are, , Telephone:, Fax:, E-mail:, Website:, Company registration no.:, Tax registration no.: address, etc.
- Add the messages or text to display on the report.

Add company logo

TRpImage – Click on this icon and click on the space and drag to insert a blank image object.



Enter “COMPANYDATA.BLOBLOGO” in the Expression field.

This is used to display your company logo on the reports and document layout files. The Company Logo dataset is COMPANYDATA.BLOBLOGO. The logo is stored in the database as a BLOB (Binary Large Object) and will be displayed printed on remittance layout files if loaded in Company info - Options screen (Default ribbon).

Add a static picture

TRpImage – Click on this icon and click on the space and drag to insert a blank image object.

Right-click on the image object and select the Open option on the context menu.

Multi-user Agenda plugin

Multi-user Agenda plugin - Manual - Shop - Licence : Commercial : Once-off payment -

With this plugin you have the possibility the run multiple agenda in osFinancials5/TurboCASH5.

You can have a agenda for each employee and create invoices directly from out his/hers agenda with a simple click.

Each agenda has it's own calendar and task list.

Introduction to Multi-user Agenda plugin

This plugin enhances multi-user agenda (multiple agendas) on the Calendar. You can add agendas and link them as default to the current user. For every agenda a tab will appear in the agenda in osFinancials so you can see what the other agenda's have for appointments. You may also create invoices for each of these all agendas.

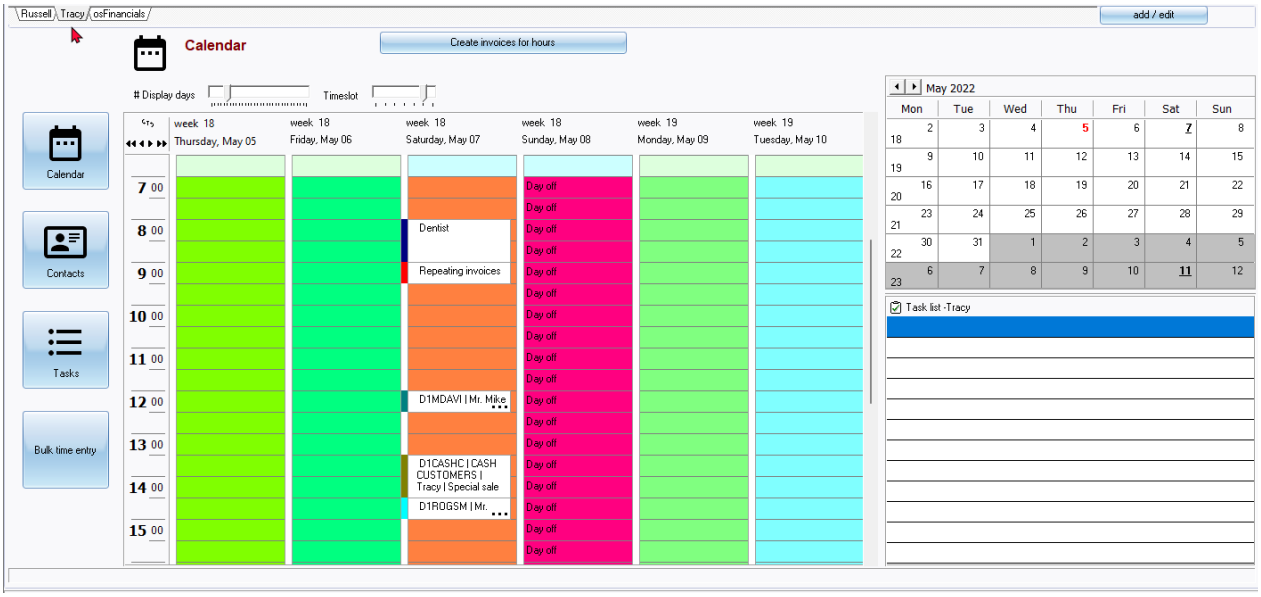
You can have a agenda for each employee, salesperson, user, etc. and create invoices directly from his / her agenda with a simple click. Each agenda has it's own calendar and task list.

If you create users in the Setup → Access control menu, you may link each of these users to their own Agenda on the *Access Control - Others* tab.

There are ten (10) main categories of events which you can manage (add, edit, delete or change dates of events) for each users agenda. These are:

- Appointment (general - i.e. with bank manager, lunches, etc.)
- Repeating invoices - schedule when you need to copy / process repeating invoices.
- Debtors appointment - schedule any of the six (6) categories of appointments with debtors / customers for specials, accounts, etc.
- Creditors appointment - schedule appointments with creditors / suppliers for orders, accounts, etc.
- Hours - schedule the hours (time) to invoice debtors / customers. Once these are set you may generate Quotes for the hours. Once these Quotes are generated, you may edit them (if necessary) and convert them to Invoices.

An example of the Multi-user Agenda screen is as follows:

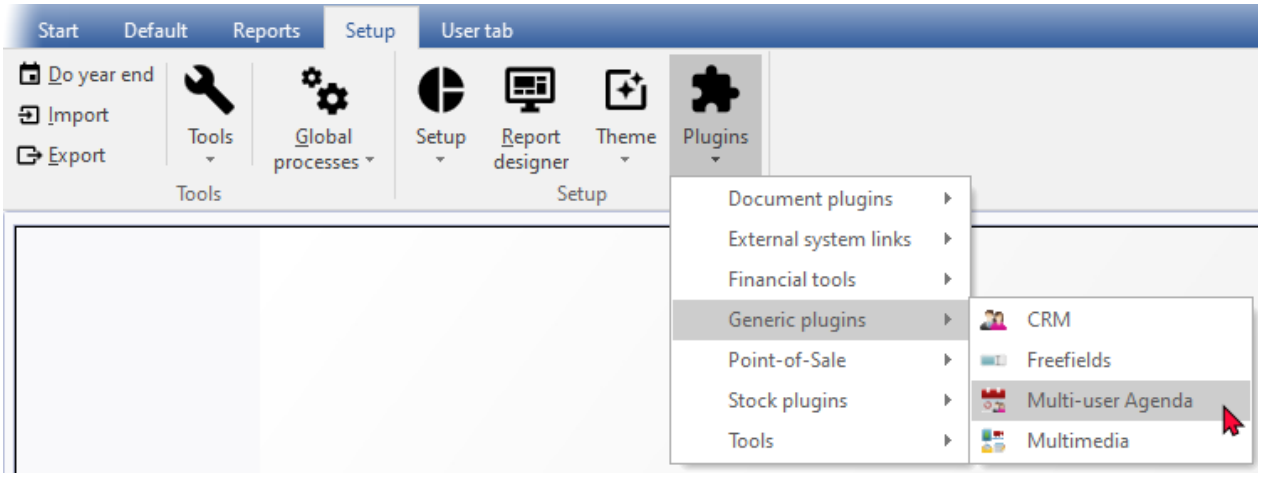


- User dates - Displays only for the selected user.
- General dates - Displays for all users.
- Appointments- Appointments (events) scheduled for this day
- Flexi-time - Time may be set different for each working day. You may also use colours to display the working hours for each different working day. For example, on Tuesdays, the user may work longer hours e.g. from 6:00 - 17:00 while working from 08:00 - 16:00 on other days.
- Tasks - Each user has its own task list. Once a task is completed, the user may tick the task as completed. The task will be displayed with a line through the text. Overdue (unattended) tasks will be indicated in a red font colour.

Activate the Multi-user Agenda plugin

To Activate the Multi-user calendar plugin:

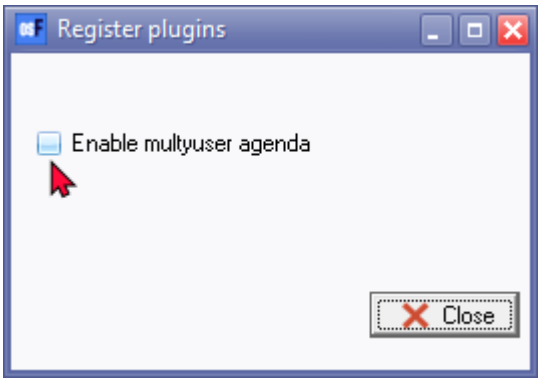
1. On the Setup ribbon, select Plugins → Generic → Multi-user Agenda. If this plugin is not listed under Plugins → Generic, activate it via Tools → Activate plugins.



If you have not purchased and registered this Plugin, and launch this plugin from the Tools → Activate plugins menu Setup ribbon), following message is displayed:

> You will need to purchase this plugin to enable it.

2. On the "*Register plugins*" screen, select (tick) the "*Enable multyuser agenda'* option to activate it.

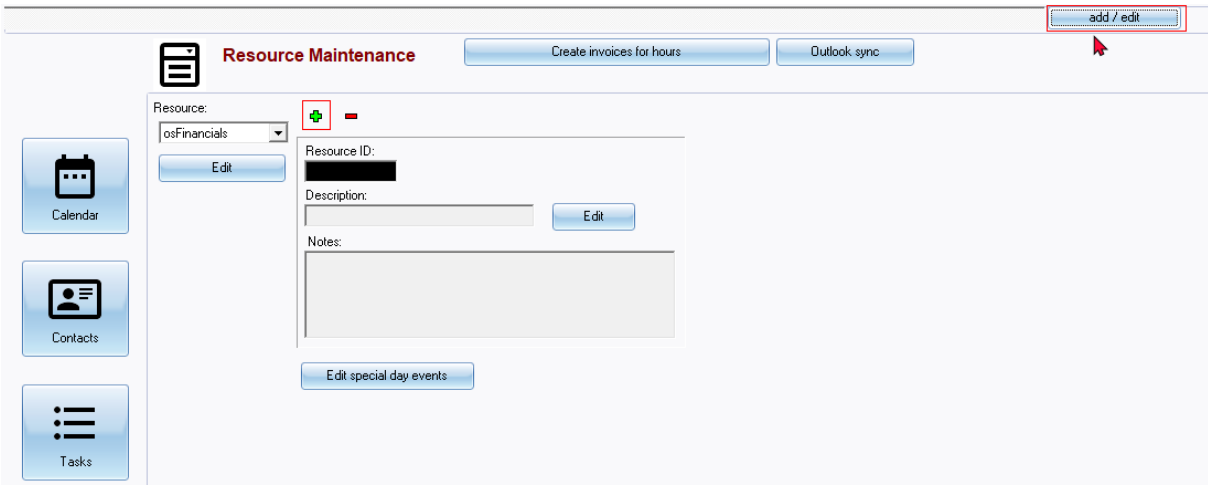


3. Click on the Close button. At first only the osFinancials tab / TurboCASH tab is added to the Calendar.

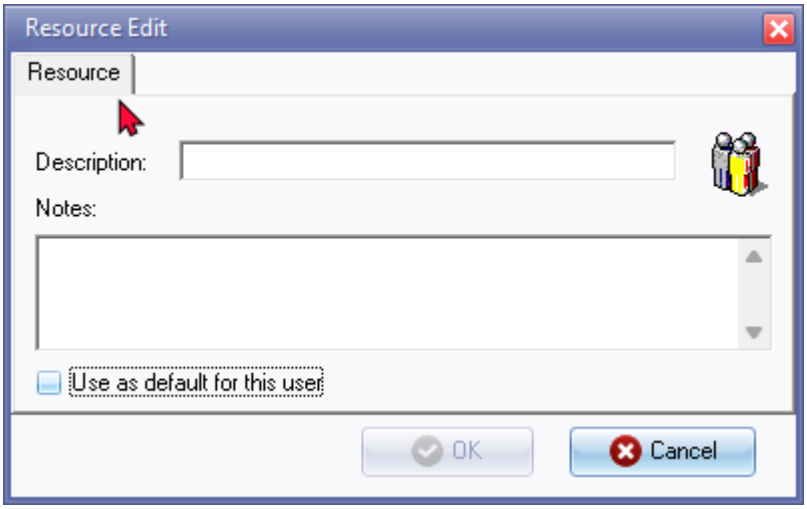
Adding users to the Multi-user Agenda plugin

To add users to the Multi-user Agenda plugin:

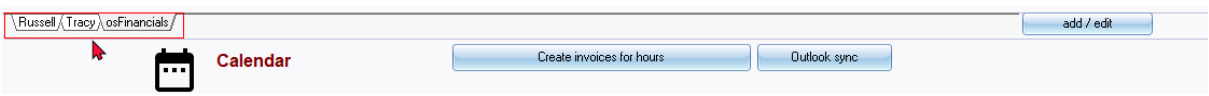
1. On the Calendar, click on the add / edit button. The Resource Maintenance screen is displayed:



2. Click on the ✚ button to add a user.



3. Enter the name for the User. You may also add additional text for the user, if necessary.
4. Select (tick) the "*Use as default for this user*" option to load the user when launching the calandar.
5. Click on the OK button to save this resource.
6. If you need to set colours or add / edit delete special day events for the user, click on the Edit special day events button.
7. Click on the Agenda button.
8. Click on the Tasks button or on the osFinancials tab / TurboCASH tab (or any of the User tabs, if already created). This will add the new user's tab for each resource added..



9. Click on the New User's tab to view his / her agenda. An example of the Multi-user Agenda (after a users have been added), is displayed as follows:

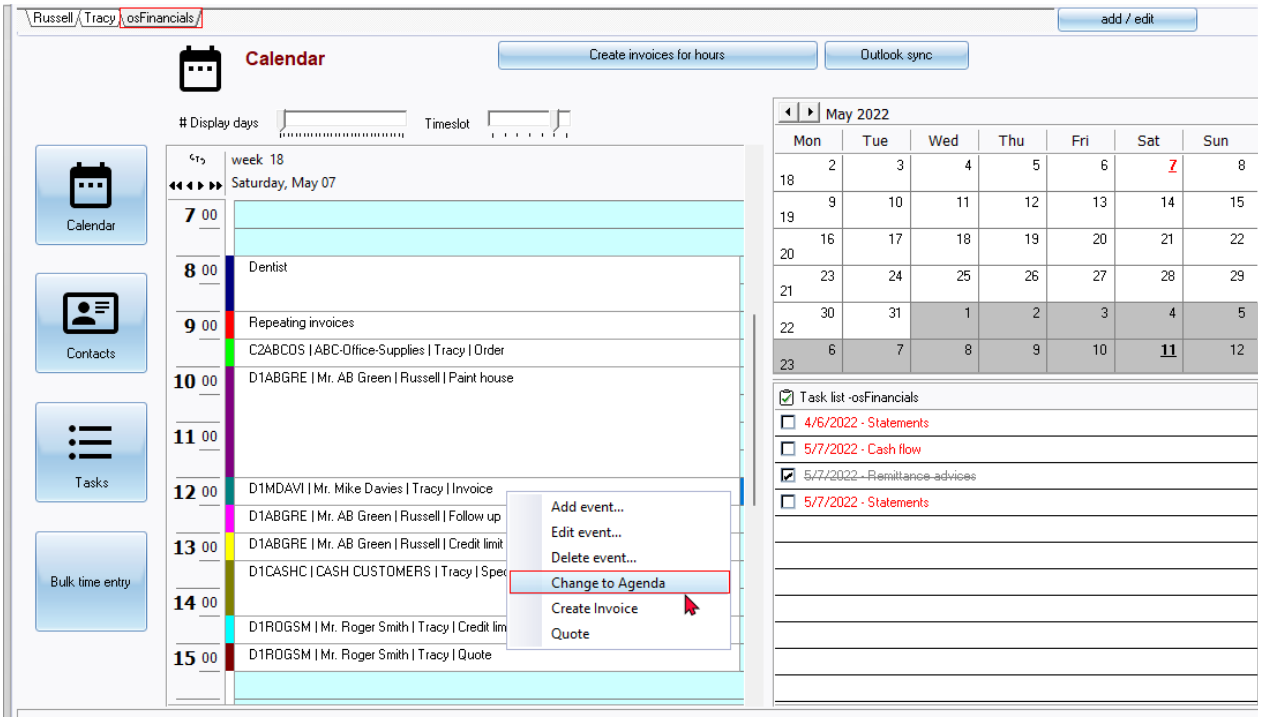
Change events to another user

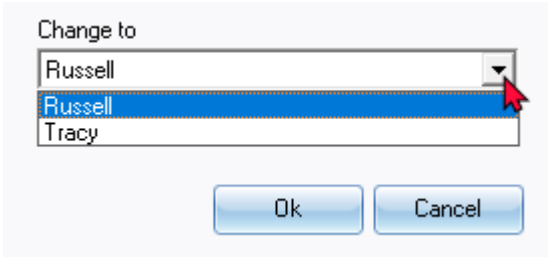
By default, all existing events scheduled before adding users to the Multi-user agenda plugin, will be available under the main resource, i.e. osFinancials5/TurboCASH5. You may need to select these and assign or change these to specific users.

You may assign an event / appointment from a user to another user.

To do this, select an event / appointment and right-click.

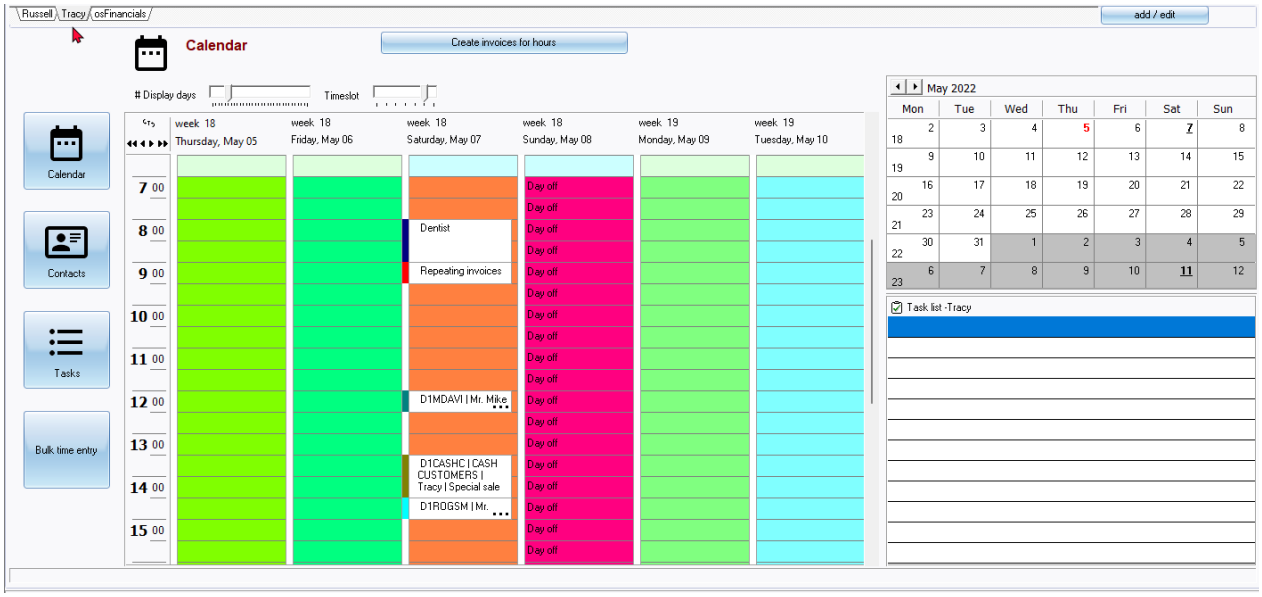
On the context menu, select the Change to option.





Select an user and click on OK.

The selected event will be removed from the existing user and added to the selected user.

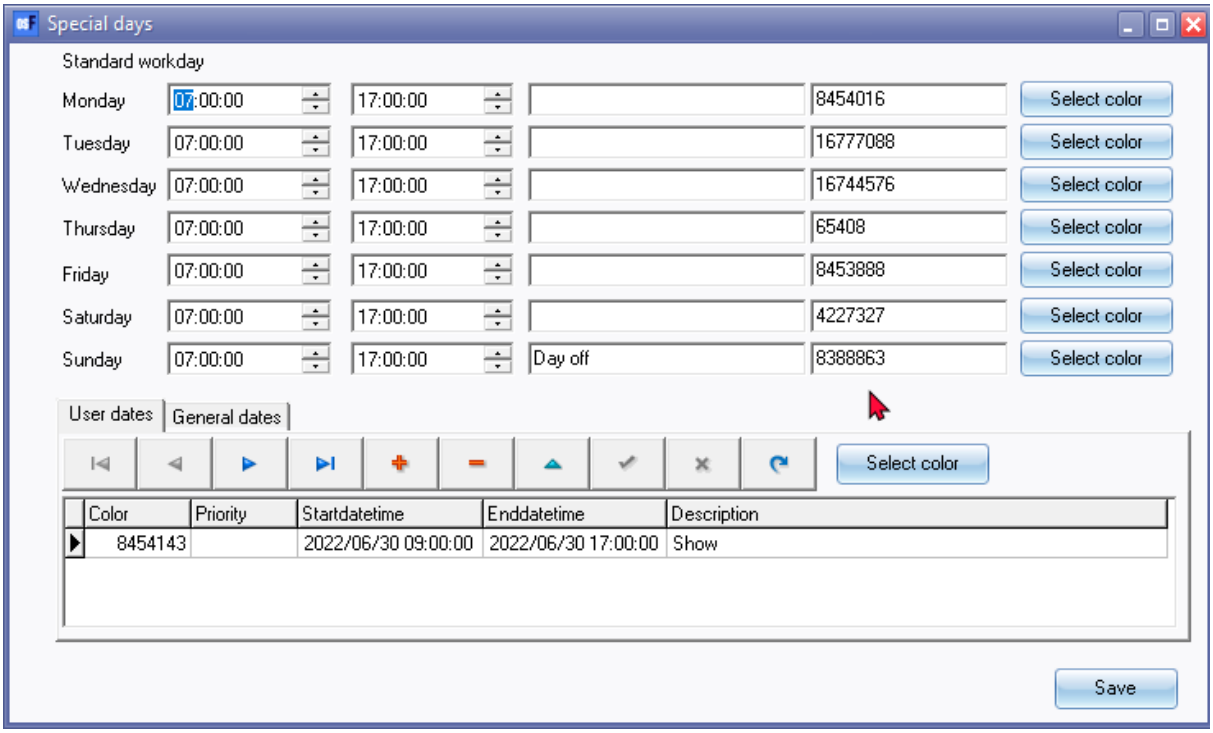


Colour coding also makes it easier to identify the category of the event, when displayed in the Calendar.

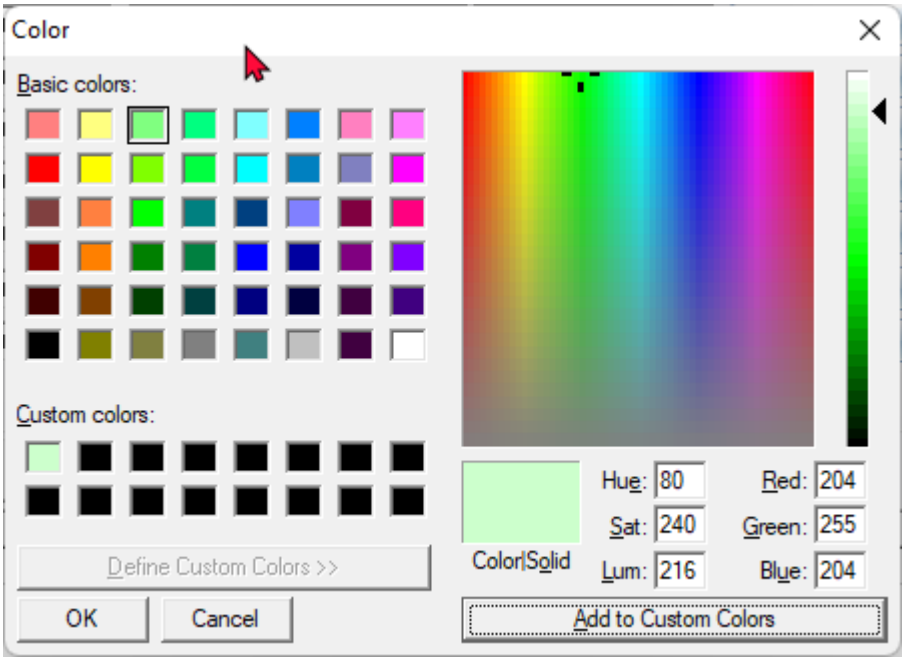
Editing General and Special dates

To edit General and Special dates:

1. On the the Calendar, select a User on the tabs.
2. Click on the Edit special days button to change the colors and to add, edit or delete user dates for the selected user. You may also change the colors and to add, edit or delete days applicable to all users on the General dates tab.



3. To select the colours, click on the Select color button.



4. Once finished, click on the Save button.

5. Click on the Tasks or Agenda button. The resources will be changed for the selected user.

The standard colours will be displayed. To select different shades or customise your colours, click on the Define Custom Colors button. You may drag the slider up or down, etc. to select your own color. Once you have decided upon a color, click on the Add Custom Colors button and on the OK button. This will

generate and insert the color code into the Special days screen.

Delete a user

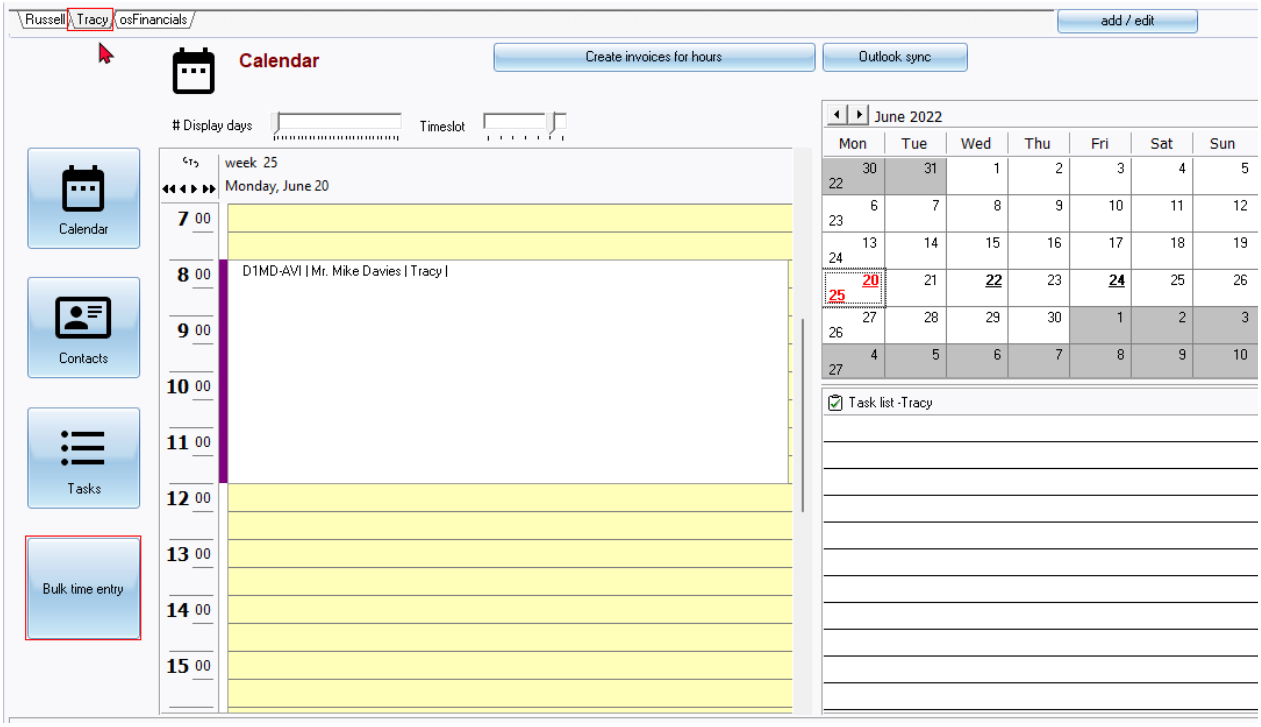
This operation cannot be undone. Make absolutely sure that this is the correct user, before deleting. Should you delete the incorrect user, you need to recreate the user that was erroneously deleted.

To delete a user from the Multi-user Agenda

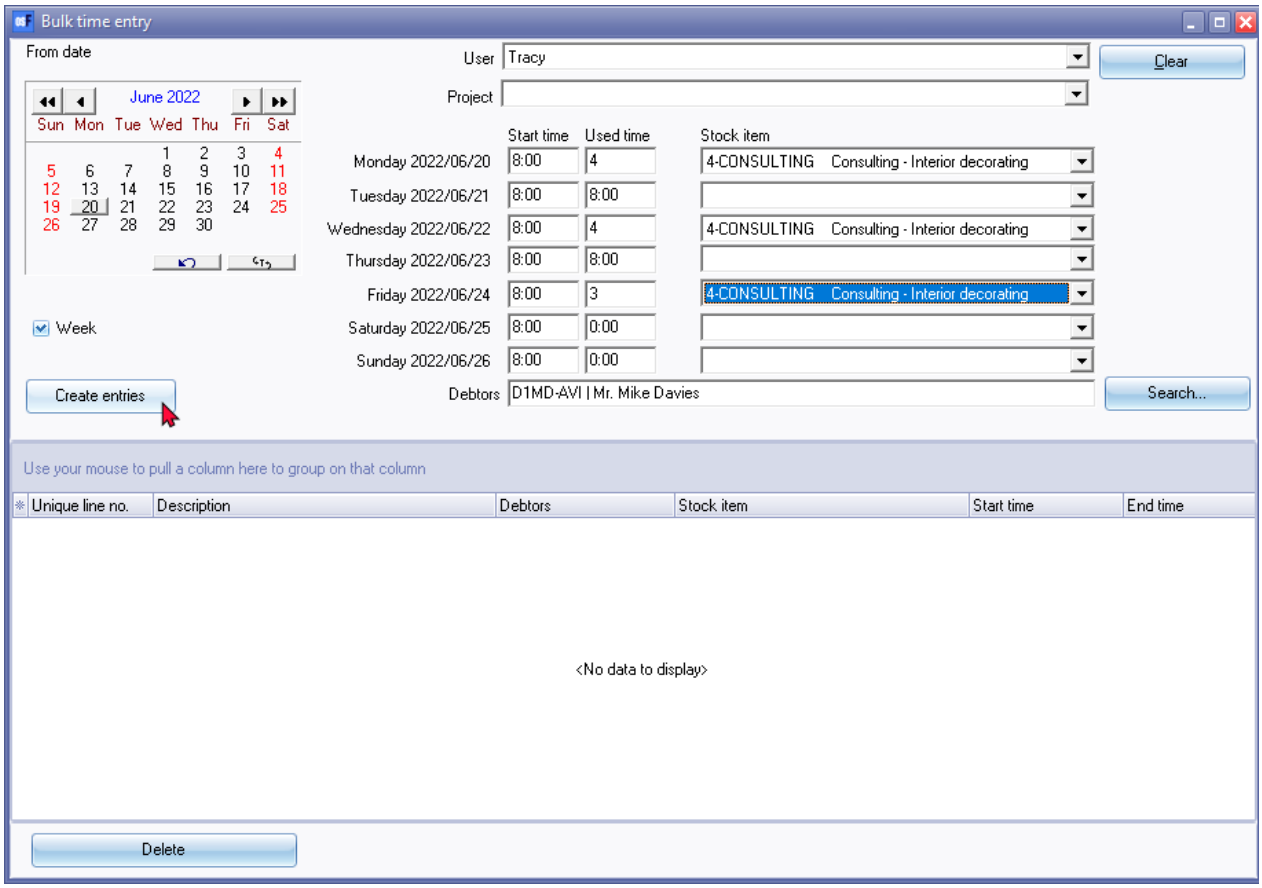
1. Launch the *Calendar*, if not already displayed.
2. Select the correct User on the tabs, if the correct user is not already selected.
3. Click on the add / edit button. The *Resource Maintenance* screen will be displayed.
4. Make absolutely sure that this is the correct user. If not, select a user from the *Resource* list or click on the correct User tab.
5. Click on the button to delete a user. The User will be removed from the list and the User tabs.

Bulk time entries

Users may create hours events for a selected debtor (customer / client). To do this, click on the Bulk time entry.



On the Bulk time entry screen, The User will be displayed.



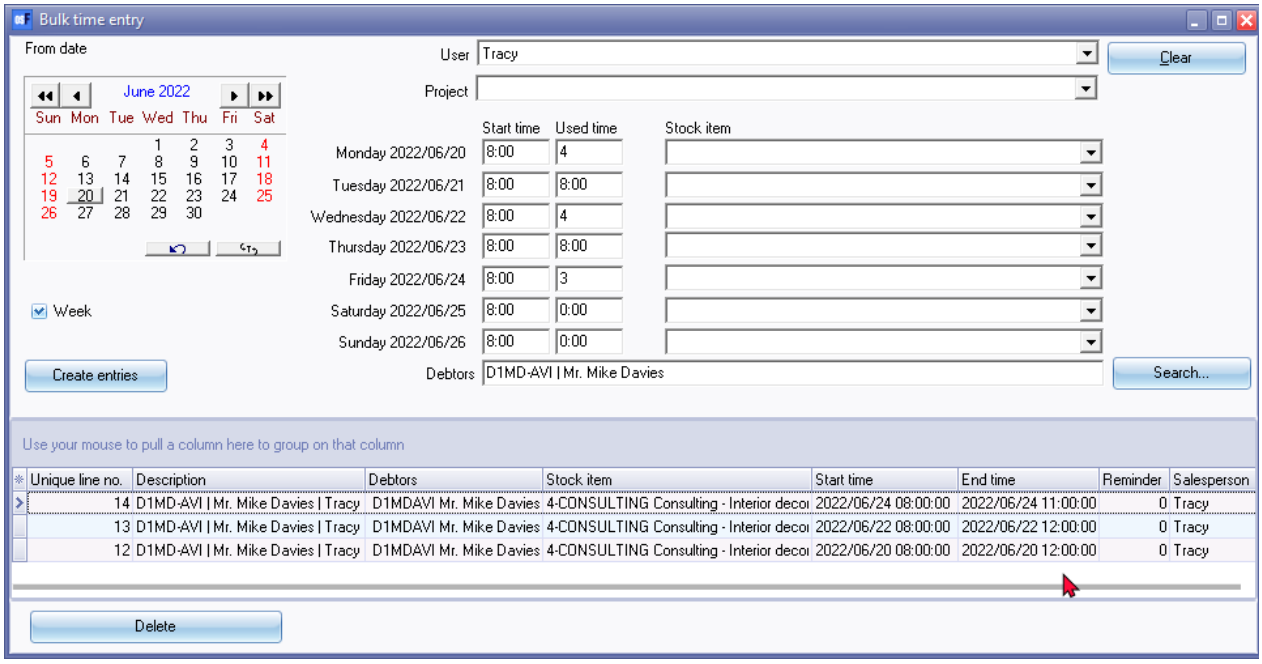
Select and enter the start dates and number of hours.

Select a stock item (usually sales no stock type)

Select the debtor (customer / client) account.

Click on the Create entries button. A confirmation message will be displayed.

"Entries created!"



Once the entries are created, these entries will be listed in the calendar.

You may then edit the Hours event, if necessary. You need to click on the Create invoices for hours button on top of the Calendar to generate invoices.

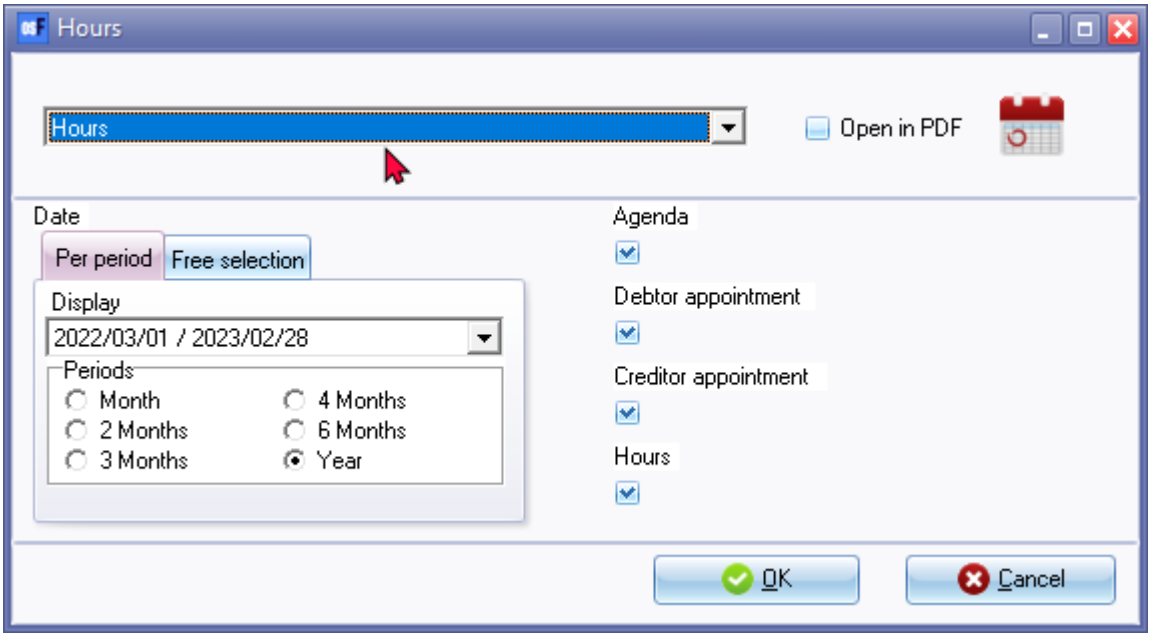
These Bulk time entries will be listed on the Appointment tab of the selected debtor (customer / client) account.

Reports for the Calendar

The Calendar report allows you to print the categories of events (i.e. Appointments, Debtor appointments, Creditor appointments and Hours) scheduled in the Calendar (Planner).

To print Calendar - Hours report:

1. On the Reports ribbon, select Reports → Calendar.



2. Select the period on the Per period tab. You may click on the Per date(s) tab to select a specific date or a range of dates.

3. Select the the following options:

    a) Agenda - Select to include the general events (e.g. meetings, appointments, etc.).

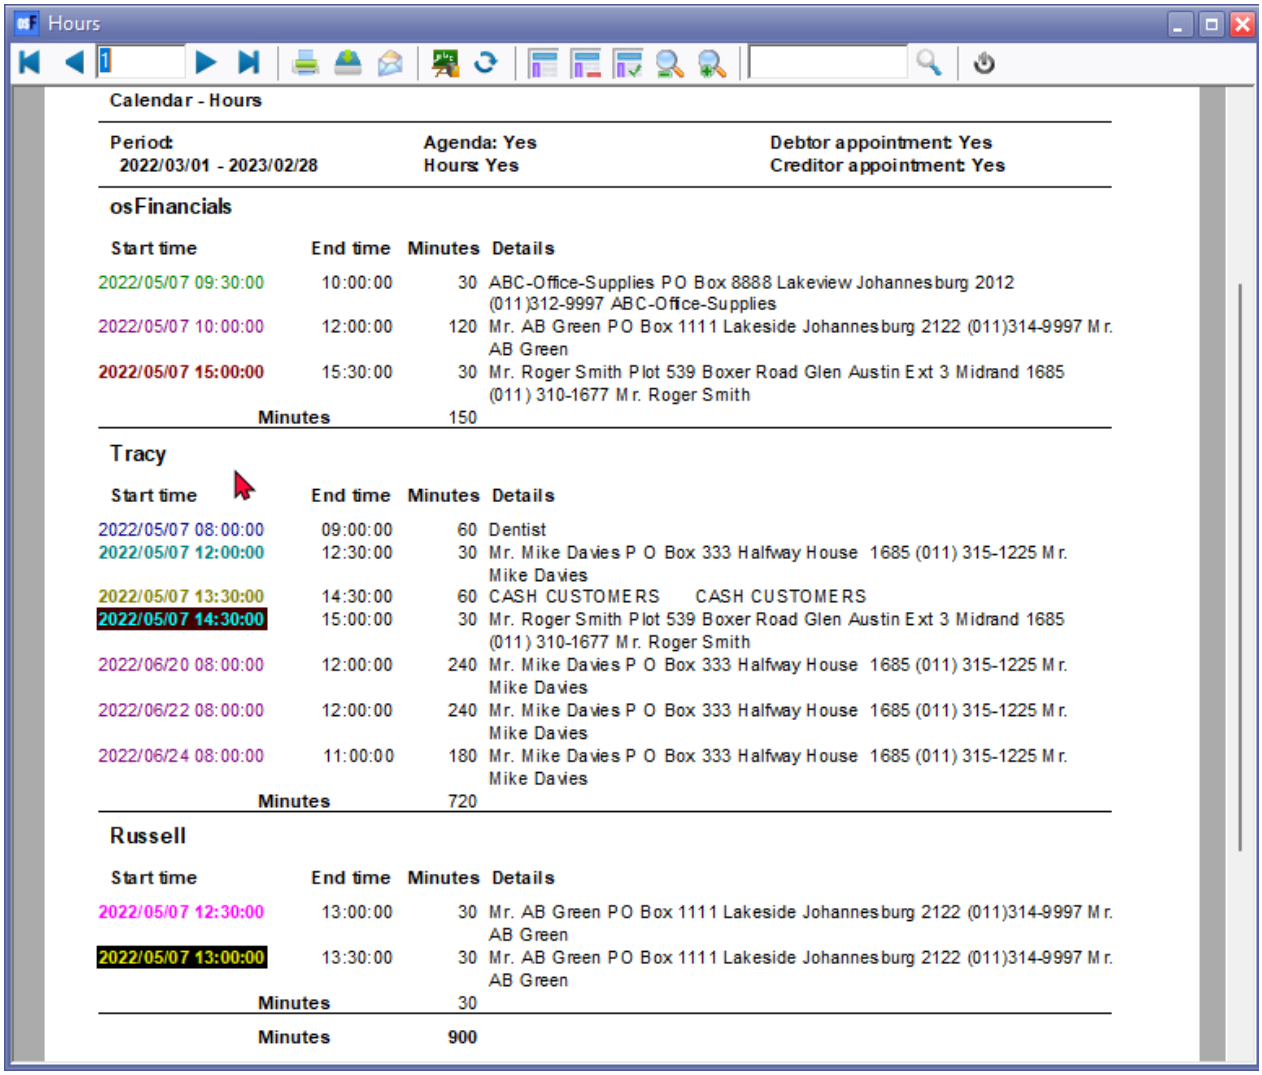
    b) Debtor appointment - Select to include the appointments for debtor (customer / client) accounts. All appointments are also listed in the Appointment tab of the Debtors (Default ribbon).

    c) Creditor appointment - Select to include the appointments for creditor (supplier / vendor) accounts. All appointments are also listed in the Appointment tab of the Creditors (Default ribbon).

    d) Hours - Select to include the appointments for the hours event category. The are scheduled appointments for which quotes are generated and confirmed to invoices.

4. Click on the OK button.

An example of the "*Calendar - Hours*" (all events) report, is as follows:



The colours for the events are as follows:

Repeating invoices are not included in this report.

In addition to osFinancials5/TurboCASH5 resource, will be replaced when using the Multi-user Agenda plugin with the name of the Resource (User). This report will be printed for each user.

The resource can also be linked to an user in the Others tab of the Setup → Access control menu.

Settings for the Calendar

Set the Calendar as default

By default, the Welcome screen will be launched when opening a Set of Books. You may activate the Calendar to be displayed when opening a Set of Books.

When launching osFinancials5/TurboCASH5 and you open the Set of Books, the Welcome screen will be displayed. When opening the Set of Books again, the Calendar will automatically be displayed.

To set the calendar as the default option when opening the Set of Books:

1. On the Setup ribbon, select Setup → System parameters.
2. Select (tick) the "*Show calendar*" field.
3. Click on the OK button.

Access control settings

To add users and settings for the Multi-user Agenda:

1. On the Setup ribbon, select Access control.
2. Add users, if necessary.
3. Click on the Others tab.
    - Link to calendar - The resource can also be linked to an user in the Others tab of the Setup → Access control menu.
    - Edit calendar - Allow or block user to add evens, tasks, contacts, etc. to the calendar.
4. Click on the OK button.

*Freefields plugin

Freefields plugin - Manual - Shop - Licence : Once-off -

Translations : Outstanding

Unlock endless customization possibilities with our Freefields Plugin. With a one-time licence, effortlessly add custom fields to stock items, creditors, debtors, and documents, tailoring your data management to your specific needs.

Key Features:

- Add custom fields to stock items, creditors, debtors, and documents.
- Enter data into custom fields for use in reports and layout files.
- Ideal for product name translation and multi-language invoices.
- Create personalised customer fields without the need for a full CRM application.
- Share custom fields with other Freefields Plugin users.
- Add the Freefields data in reports and layout files with the Report designer.

Enhance your data management and reporting capabilities with the Freefields Plugin, empowering you to create a customised financial environment tailored to your business requirements.

Using the Free Fields Plugin

Usage:

In the plugin you can define fields which can than be used to be filled with data.

In reports you can get the information of these fields.

Tips:

You can use it for productname translation, for multi-user language invoices.

Not up to a full CRM application yet? Create your own customer fields in osFinancials5/TurboCASH5.

Share your free fields with other osF free field users.

The free fields plugin allows you to create custom fields for basically any form (screen) in osFinancials5/TurboCASH5. The intention is that data will have their own table. This optimization is possible through the use of indexes. Referential integrity is also applied so that the data is and stays consistent. All benefits of a database is preserved and can be optimized locally. Using reportman you may add the data in a reports. These are fairly technical matters but you can try it before hiring our help.

Important:

Please make a backup of your Set of Books before using the Freefields pluin.

The possibilities in the Freefields plugin is endless. The data can be exported and imported. This can also be used for external data (from the other systems).

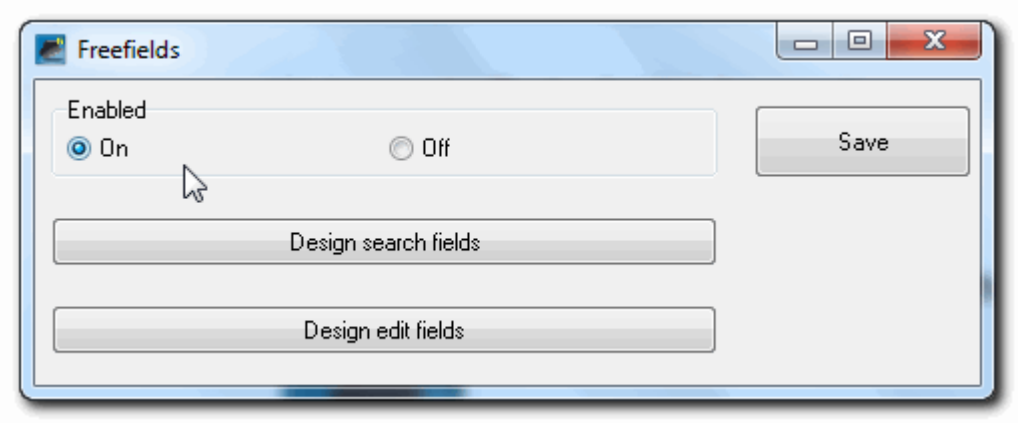
For example, using the Freefields plugin in osFinancials5/TurboCASH5, you could Add the make, model, year, of a motor vehicle, lessons a student can follow, credit details of a debtor (customer / client), etc.

The user of the system just enjoy updates to the core and Freefields and needs for standard frameworks which only some attributes are different or extra.

Special custom fields and powerful solutions can be added to the database at a fraction of normal development costs.

Activation

On the Setup ribbon, select Plugins → Generic → Freefields. If this plugin is not listed under Plugins → Financial tools, activate it via Tools → Activate plugins.

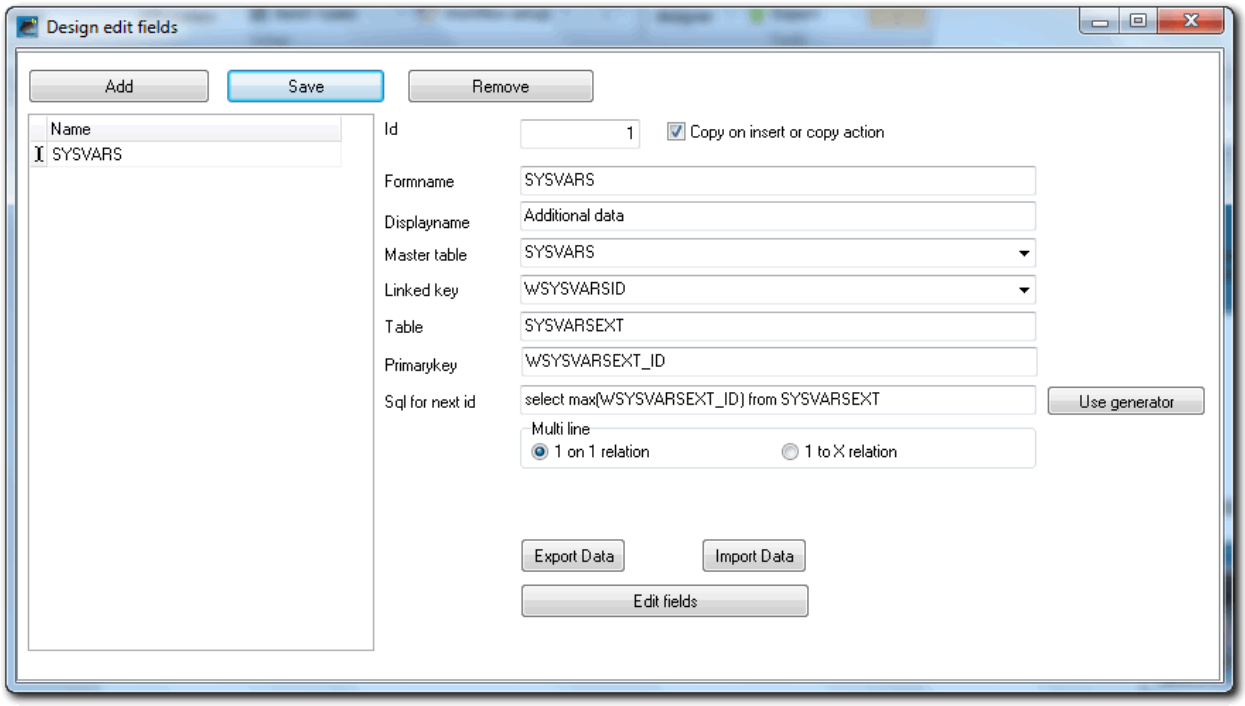


Select On to activate the Freefields plugin. You can activate Freefields and maintenance of search screens (Design search fields) and dialog (Design edit fields).

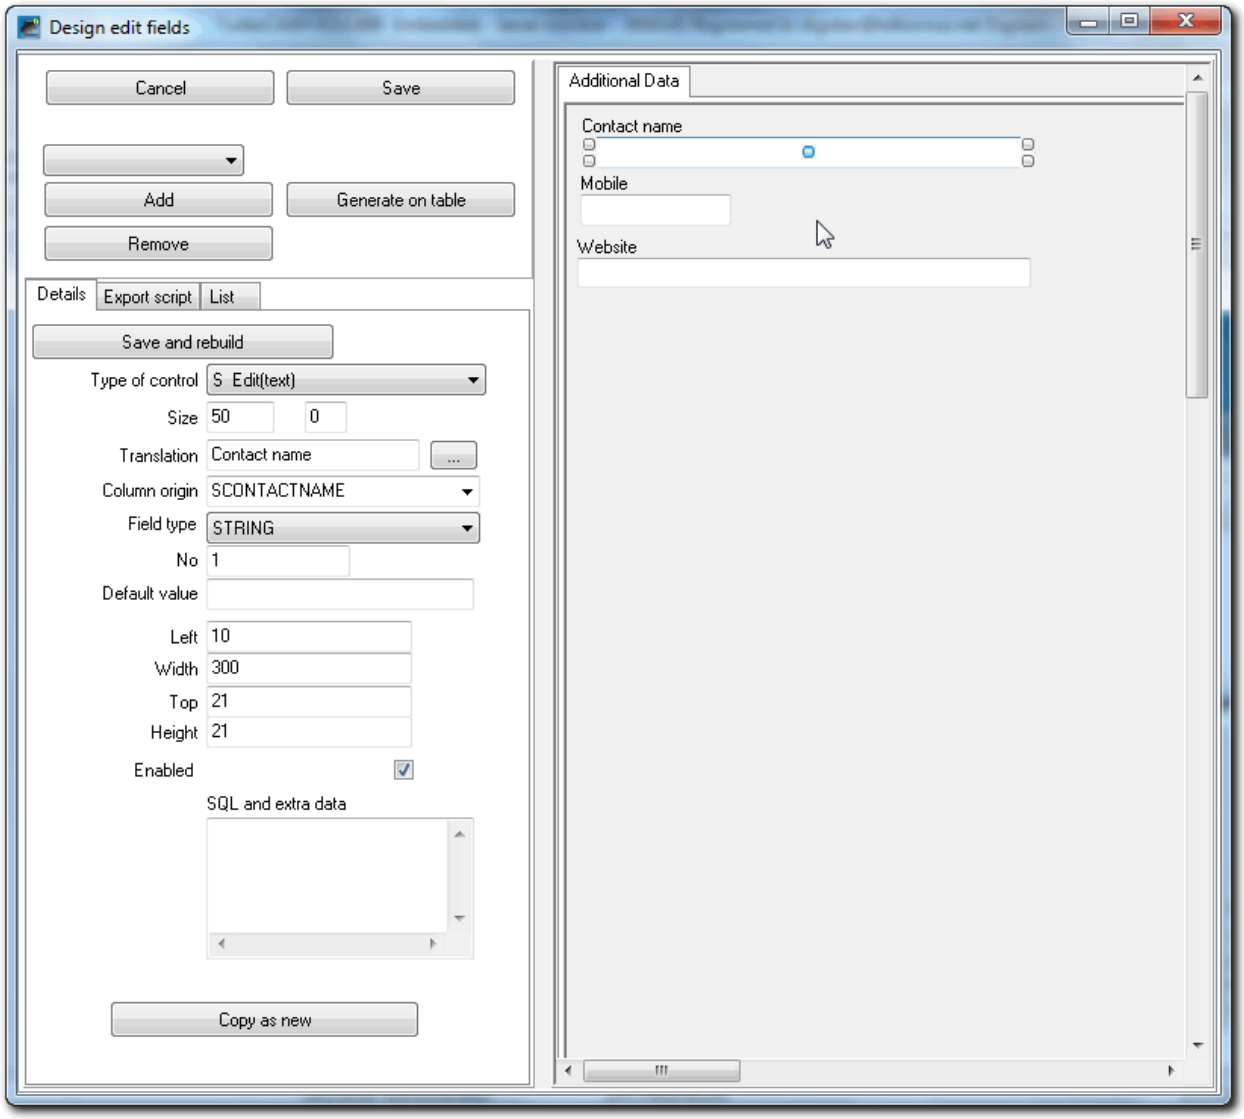
Design edit fields

If you click on the *Design edit fields* button you will see the following screen.

You probably have less free field definitions, but you can add more.



If you double-click on "*SYSVARS*" or click on the Edit fields button, you may add extra field. For example, if you click on the "*Contact name*" field, the options and settings for that field is displayed.



The options is as follows:

- Cancel: Cancel and go to the list.
- Save: Saves the layout in the database. If new fields are created, this process can not be undone. Pay close attention to the type and length of the field. These can not be readily modified once the field is created.
- Add: Adds a new control to these field and you can then edit.
- Remove: Delete active control.
- Save and rebuild: Save Input settings below so that you see it. When creating a new field (Colomn origin that does not exist), a field of type in Field type created. This is not just to remove this editor. We refer you to a database management tool like FlameRobin. FlameRobin allows you drop the fields. Alternatively, you may execute this by using SQL by example the command alter table mytable to enter the correct value. drop out mycolumn

- Type of control: You can choose from different types of controls so that interaction with that space is affected. Types are explained in the appendix at the back of this document. Choose the type of control for the correct data type. For example, A checkbox is a SMALLINT, a numeric value with decimal places a FLOAT, etc.
- Size: Set the size (width) adjusting this field is great for a text or numeric field (like big) once the field is defined in the database has no effect You will then have to build the large field in the database itself.

- Translation: Choose an existing translation or add one to the current database and use it. When you change the Language, the translated text or label will be displayed on the form.
- Column origin: Enter your new field name when creating a new control or choose from an existing list columns. For example, if you have a table designed, you can choose from this list the fields you want to edit.
- Field type: A new field (not existing name in Column origin) is used as this type is created. Depending on the type is then also taken along the Size.
- Default value: Default value may be a set. (For example, "select current_timestamp from rdb $ database" creates a date field – today as the default value for this field. This is usually combined with the head type a to-many relationship.
- Left, Width, Top, Height: Controls to set the width increases etc., Some controls do not have all the values. For example, you may set a memo type to enter multiple lines. When doing an edit, the height has no effect.
- Enabled: Set the field (temporarily). This usually comes at a migration in which old data e x a time are still visible.
- Sql and extra data: For some field types, this field is used, for example to build. The sql of a list with This is a dropdown filled with the correct value. For example, dressings can be used to build up a choice list. Think of a list box in a document that knows which debtor has been chosen and therefore can be used to limit. The list of possible choices the free fields of debtor.

The input fields for "*Sysvars*" is found in Setup → Company info.

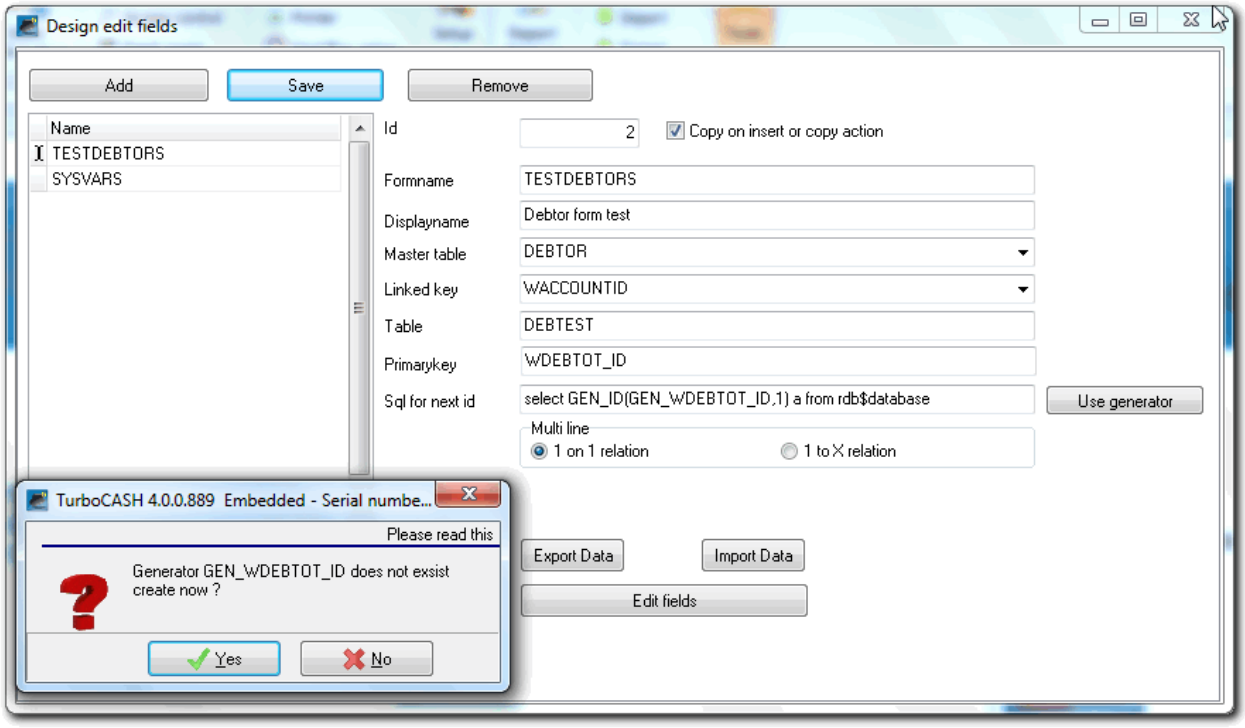
Create freefields a more complex example



We will now take a more complex example. A new one to many relationship for a debtor. Here we create fields for the date and a memo field for the call.

Click the Add button and enter the following information.

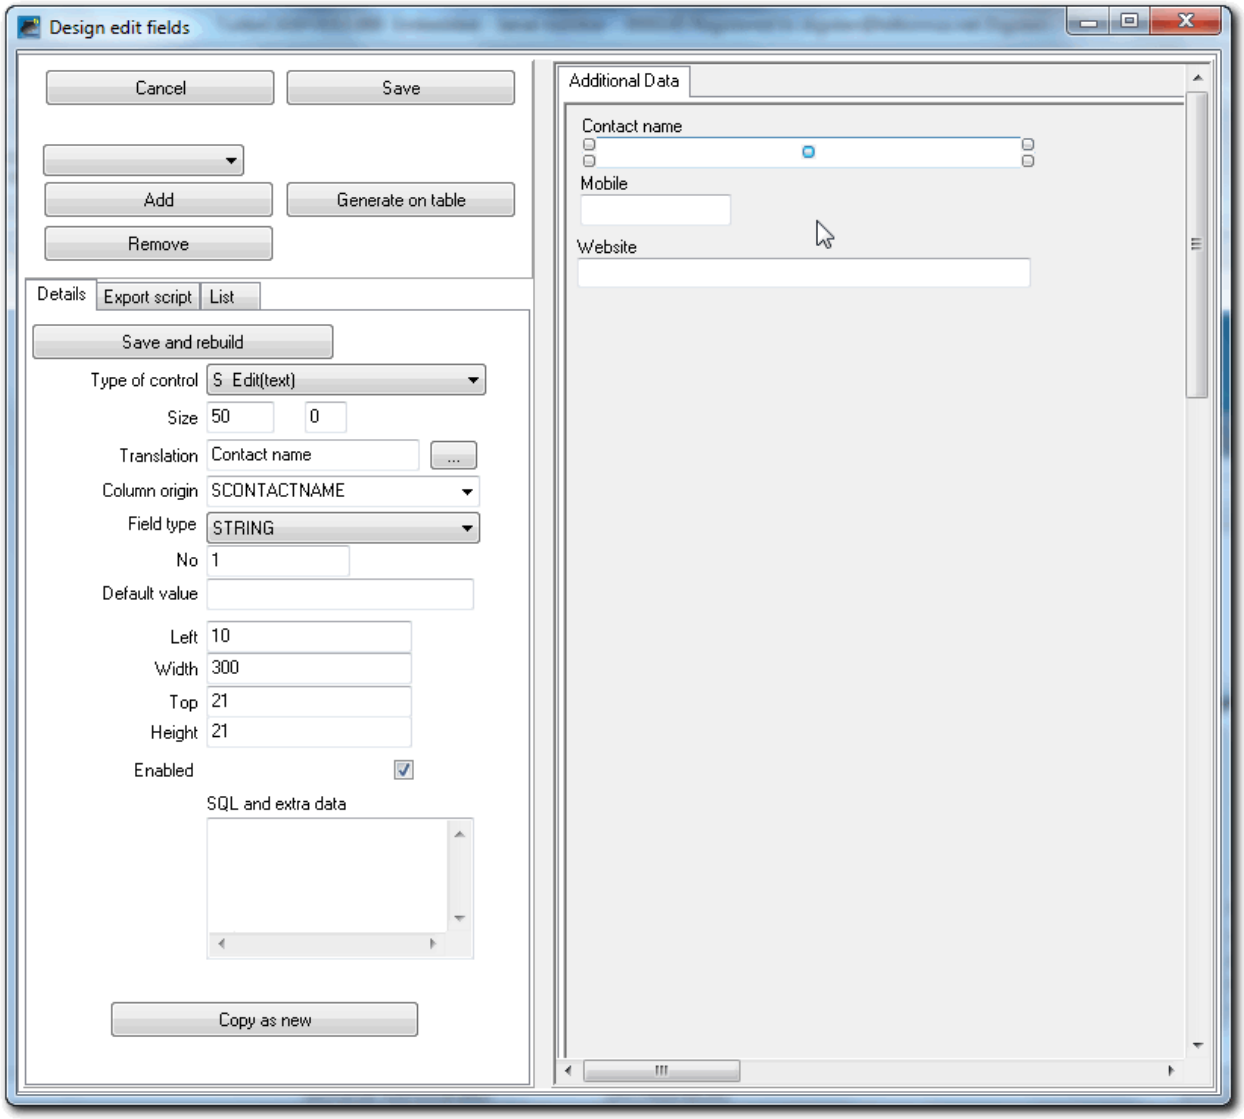
- Formname: An internal name must be unique.
- Displayname: The name used for this tab. You can have multiple tabs with a single entity. this may then also contain a variety of relationships.
- Master table: The table to which this free fields are linked. When creating it is also used for reference integrity.
- Linked key: The key used in that table (primary key)
- Table: If this does not exist it will be created.
- PrimaryKey: The Primary key for a one to many relationship like this can be linked to the key for a one many will own generator should be used.
- Sql for next id: For one to many using the text "select GEN_ID (GEN_TESTID 1) from RDB $ DATABASE" as in the picture above.

If it's a one on one relationship space (dummy value) can be used to observe the linked key. Primary key equal.

If you have done this, press Save. A confirmation message to create the new table will be displayed.

You get that whether you want to create this table. Press Yes to add the table. The new fields this You can also select No hence, your input is not lost and you will be given the choice to create the table next time.

If the table is created, we can continue to add new fields by clicking the Edit fields button or double-clicking the name in the list.



To add the next control and enter the following:

- Type of control: D TDateTimepicker
- Size: Does not matter in this type
- Translation: Open the screen and looking to date.
- Column origin: ddate this is the name of the new field in the database.
- Field type: Date Time

- Default value: select current_timestamp from rdb $ database

Now press Save above the type of control. You will then whether the field can be created. Press Yes and move the control down slightly. Then press again Add new control to a second control to add.

- Type of control: M Memo Field
- Size: to 0 = infinite
- Translation: Look for Remark
- Column origin: SMEMO this is the name of the new field in the database.
- Field Type: Blob
- Default value: blank
- Left top width and height 120, 300, 18, 300, we want the input level increases.

Even with this, you answer Yes. Then press Save at the top and your work is saved.

Close active windows

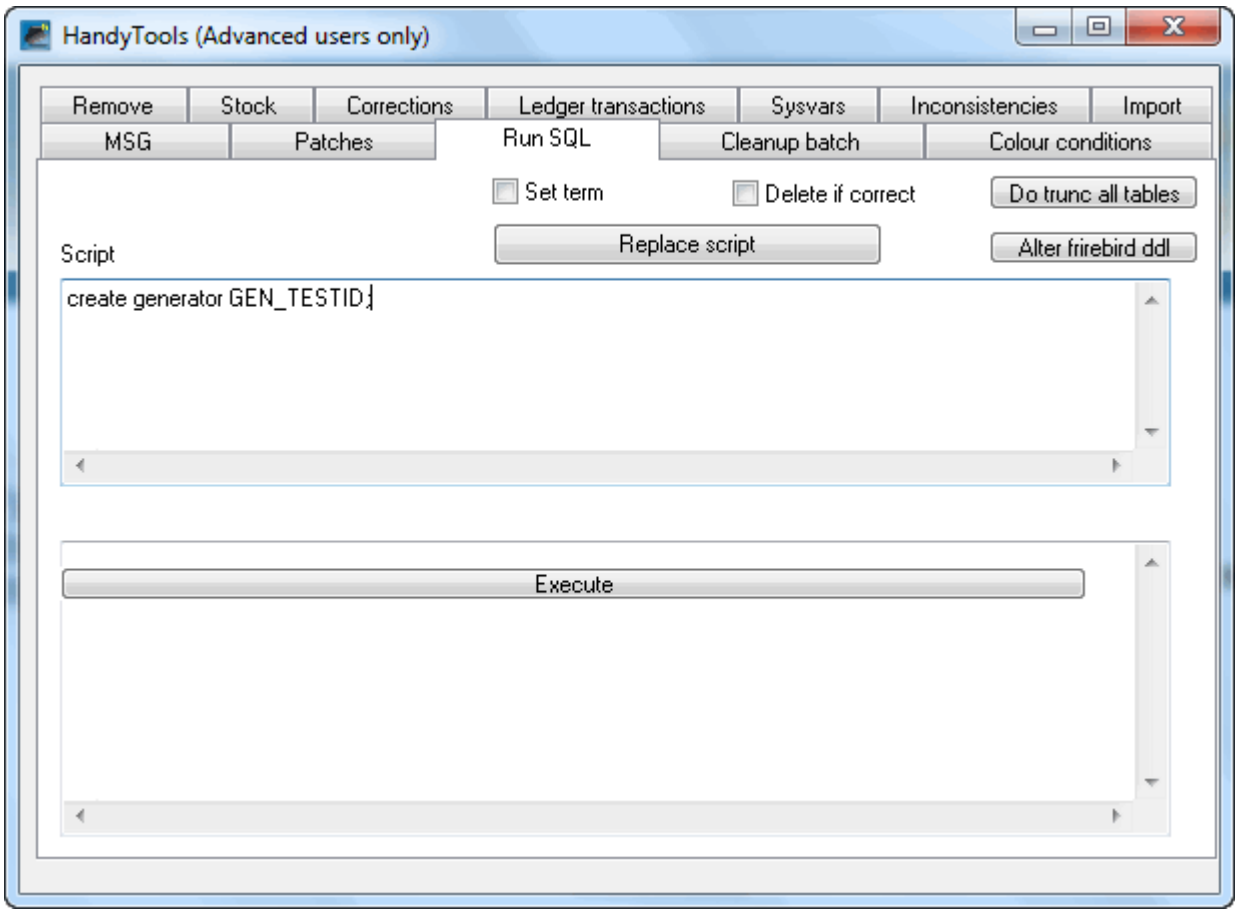
Now close all windows of the free fields plugin. To do this, on the Setup ribbon, go to Tools → Close active forms.

Creating generator

You must now create the generator for generating a unique number for the table.

Open the Handy tools via Plugins → Generic → Handy tools, choose the "*Run SQL*" tab and enter it in the text

create generator GEN_TESTID;

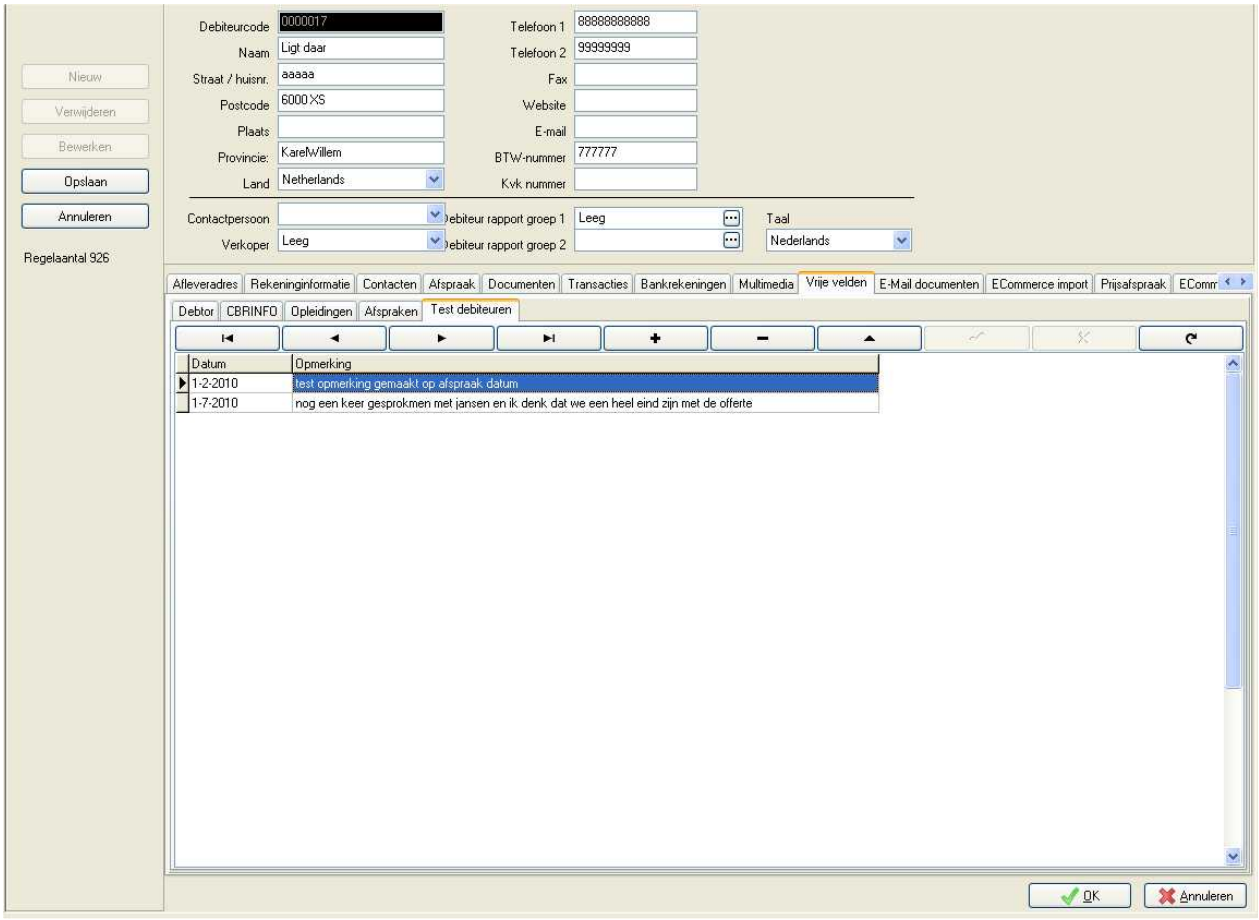


Sql create generator GEN_TESTID processed!

If you press the Execute button, you have the generator created.

See the results

Open new window and select the debtors a debtor in the list. Press Edit to edit the Freefields tab in the tabs at the bottom of the debtor.



You should now see where you can enter multiple records. Extra tab there If you press the + sign, go to the detail screen.

Here you can contact moments capture and directly enter a new record or the current store.

Freefields Entities

With free fields can now associate the following entities to a free field layout.

- STOCK: Stock chart
- STOCK_DESCRIPTIONS: Inventory Description Table
- DEBTOR: Accounts Receivable
- CREDITOR: Creditors
- JOBCOST: Projects
- GROUPS: Groups
- GROUPS_DESCRIPTIONS: Group descriptions.
- EVENTS: Agenda appointments
- SYSVARS: Your company data or fixed dates.

There you can use different field types with different controls.

Special types are:

- STOCK_DESCRIPTIONS: a language is to define a layout. This so that a dropdown in a screen the English translations can pick up and the Dutch of the Dutch translation.
- GROUPS: For each group type is to define a layout. Group 1 in stock so other data can only be introduced by a group of debtors. This is mainly used to capture additional data for a webshop with product groups to think here at Search words etc.
- For these types, the language (STOCK_DESCRIPTIONS) id from GROUPS and GROUPS the WGROUPTYPEID of the specific group should be placed after the creation of the screen.

Freefields Controls

There are several controls available below the declarations and the use of it.

- M Memo - This control allows you to enter large blocks of text. Whether this is a STRING type and size length or a BLOB type with an endless length. With this control, it is possible to give up. An altitude

Field Type: STRING, BLOB

- B CheckBox - With this control you can make a checkbox function. This is the best type smallint but an integer or nummeric may also.

  Field Type: Narrow Ribbon, Integer, Numeric

- IC CheckListBox - This control, you can create a checklist feature. The list is stored as a string, so you need to reserve enough space for the list.

  Field Type: String

- IL ComboBox - Allows you to produce a dropdown list. This control can use different types of fields to write the data. Way in Usually, this lookup and so it is the type field is equal to that of the key from the lookup field and that is usually, but integer string may be:

  Field Type: Integer, Narrow Ribbon, Float, String

- D TdateTimePicker - Date Control field type datetime, timestamp

  Field type datetime, timestamp, String, float

- T Time - Time control field type datetime, timestamp

  Field type datetime, timestamp, String, float

- Edit (text) - Text control for text input

  Field Type String

- N Number - Enter numerical values (with a limit on the number of decimal places)

  Field Type: Float

- F Float (numeric) - Enter numerical values with a number of decimal places

  Field Type: Float

- OC lookup creditors - Special lookup for osFinancials5/TurboCASH5 to link creditors. This is a quick search screen that are always stored in numeric fields.

  Field Type: Integer

- OD Lookup Debtors - Special lookup for osFinancials5/TurboCASH5 to link debtors. This is a quick search screen that are always stored in numeric fields.

  Field Type: Integer

- OG Lookup GL accounts - Special lookup for osFinancials5/TurboCASH5 to link general ledger

accounts. This is a quick search screen that are always stored in numeric fields.

Field Type: Integer

- IP Lookup tax account - Special lookup for osFinancials5/TurboCASH5 to link Tax (VAT/GST/Sales tax) accounts.

  Field Type: Integer

- DB Lookup Bank Account - Special lookup for osFinancials5/TurboCASH5 to link Bank accounts. This is a quick search screen that are always stored in numeric fields.

  Field Type: Integer

- OS Lookup Stock accounts - Special lookup for osFinancials5/TurboCASH5 to link stock items. This is a quick search screen that are always stored in numeric fields.

  Field type: Integer

- OA Lookup all GL accounts - Special lookup for osFinancials5/TurboCASH5 to link all accounts This is a quick search screen that are always stored in numeric fields.

  Field Type: Integer

Multimedia plugin

Multimedia plugin - Manual - Shop - Licence : Once-off -

Introducing the Multimedia Plugin for osFinancials5/TurboCASH5

The Multimedia plugin empowers you to seamlessly integrate various file types (e.g., Word, PDF, images, videos, emails) into your Set of Books in osFinancials5/TurboCASH5 data. These multimedia files can be associated with:

- Stock Items: Enrich product information with brochures, images, tutorials, and more.
- Creditors: Store scanned invoices, contracts, and other relevant documents.

- Debtors: Attach credit agreements, photos, and other customer-related files.
- Sales and Purchase Documents: Add supporting files to specific transactions.
- Batch Entries: Add multimedia to journal entries.
- Groups: Add multimedia files based on reporting groups.

How to Add Multimedia: You can add files to the database using various methods:

- To Database: Directly upload the file.
- Link File: Create a link to an existing file.
- Copy File: Create a copy of the file in the database.
- URL: Link to a file on the internet.
- Paste from Clipboard: Paste a copied file directly.

Benefits of the Multimedia Plugin:

- Centralized Storage: Keep all relevant documents in one place.
- Easy Access: Quickly view, edit, and print files as needed.
- Enhanced Record-Keeping: Improve organization and traceability.
- Enriched Information: Provide more context and detail for better decision-making.

By leveraging the Multimedia plugin, you can streamline your workflows, improve data accuracy, and enhance overall business efficiency.

License

The multimedia plug-in is a versatile product. You can link files in divergent forms of osFinancials5/TurboCASH5.

Examples are debtor, creditor, stock items, batches (journals), documents and groups. You can link a image to stock items or debtors but also link signed and scanned documents to debtors.

If you also have the email pro email send will also be linked to the document that was send and the debtor. This makes finding that email to the client with great ease. The outlook link plugin can scan true your outlook in and out box to see if there is email that uses the clients email address. If so it copies the email to the multimedia of that debtor / creditor.

If you have a TWAIN device then you can directly scan from the device to the multimedia.

TWAIN is supported by Web cams, scanners and other image devices.

Other plugins can be used with the Multimedia plugin

Plugins that make use of the multimedia

E-Mail Invoice Pro plugin

The E-mailPro plugin is bundled with the Multimedia plugin only for use with the E-mailPro plugin. To enable and use the Multimedia plugin for all other features, you need to purchase and activate it separately.

If you also have the E-mailPro plugin, it will also be linked to the document that was sent to the debtor (customer / client) / creditor (supplier / vendor). This makes finding that email to the client with great ease. The outlook link plugin can scan through your outlook in and out box to see if there is e-mail that uses the clients e-mail address. If so it copies the e-mail to the multimedia of that debtor (customer / client) / creditor (supplier / vendor).

Reminders / Remittance plugin

The Reminders plugin is bundled with the Multimedia plugin only for use with the Reminders plugin. To enable and use the Multimedia plugin for all other features, you need to purchase and activate it separately.

More Plugins that make use of the multimedia

- E-commerce: Add product images, specifications, and user manuals to online listings.
- Outlook sync: Synchronize emails from Outlook with osFinancials5/TurboCASH5 records and attach them to the Multimedia plugin.
- CRM: Customer Relationship Management: Add files, such as, customer-related documents, such as contracts, proposals, and correspondence.

Note: The E-mail Invoice Pro and Remittance plugins are bundled with the Multimedia plugin for specific functionalities.

To enable and use the Multimedia plugin for its full range of features, you may need to purchase and activate it separately. To find the perfect plugin combination for your specific needs, please visit our webshop.

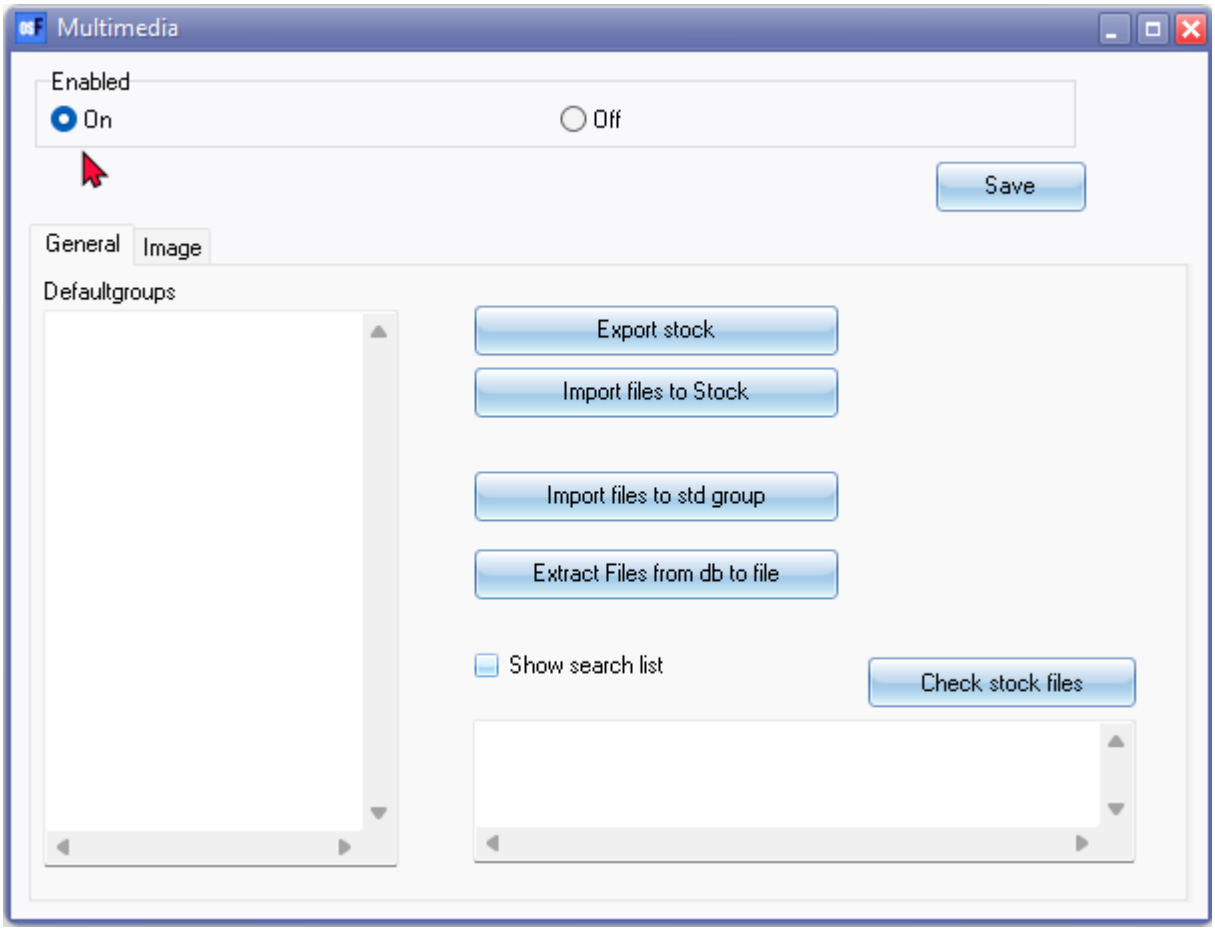
Activate the Multimedia plugin

The Multimedia plugin needs to be activated in each Set of Books.

To activate the multimedia plugin:

1. On the Setup ribbon, select Plugins → Generic → Multimedia. If this plugin is not listed under Plugins → Generic, activate it via Tools → Activate plugins (Setup ribbon).

2. The Multimedia - General tab screen is displayed:



3. Click On option to enable it.

4. The General options is as follows:

   a) Defaultgroups – Links the input to default extensions to group types. Add default groups for file types. Enter a line like this .jpg=testgroup 1 and on the next line *.bmp=testgroup 2*".

If you double-click in the Defaultgroups box it will be populated with the following:

```
.jpg=products_image
.gif=products_image
.png=products_image
STOCKGROUPNEXT.JPG=1
STOCKGROUPNEXT.GIF=1
STOCKGROUPNEXT.PNG=1
```

> *All files with the extension .jpg will be placed in the first group of the list (products_image for default stock images) the line 'STOCKGROUPNEXT.JPG' makes sure the next unique value will be automatic selected from the list of groups. You add groups by simply typing in your group name.*

b) Export stock – This button will launch the "*Save As*" screen. With the function export files to stock you can add images quickly with a file that contains a stock code and a full image path.

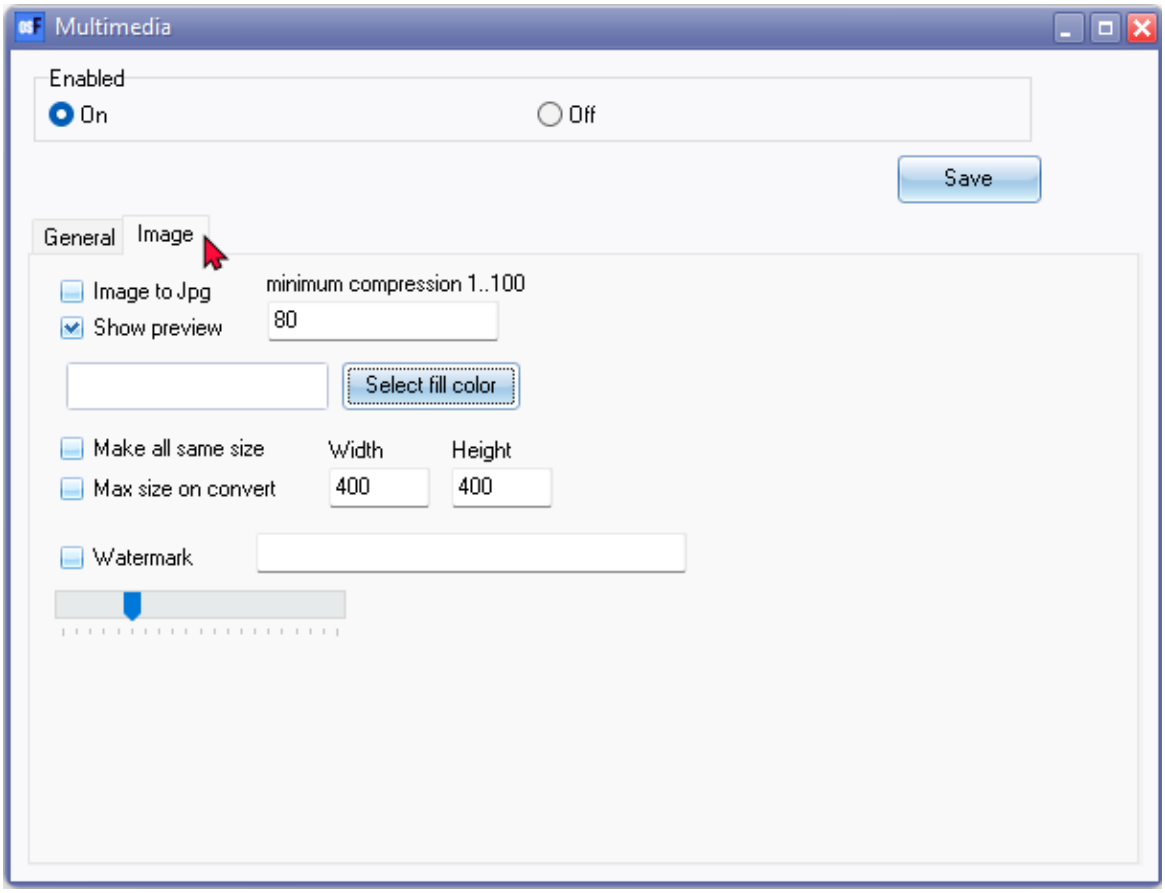
c) Import files to Stock – This button will launch the "*Open*" screen. This file must be a "*tab delimited*" file format. You may import files.

d) Import files to std group – This button will launch the "*Open*" screen. You may import files.

e) Extract Files from db to file - This button extracts the files from the active Set of Books to the database and creates a file .creates a file.

f) Show search list – By default this option is not selected. Select this option to add the Multimedia icon to the Default ribbon. This will allow you to filter and search for multimedia files.

5. Click on the Image tab.



6. The options is as follows:

a) Image to Jpg – Tick this option to convert a "*GIF / PNG / BMP / WMF / EMF*" image to the Jpg file format. You may specify the minimum compression ratio from 1 ... 100.

> *Before selecting the Image to Jpg conversion, it is recommended that you have a copy your images somewhere on your system. If it happens, that the conversion and compression does not work properly, you are covered.*

b) Show preview – Tick this option if you have an image file.

c) Select fill color – The default color is "*White*". This button launches the "*Color*" screen, on which you may pick from the standard colors or define your own custom colors. This will allow you to convert images to the same size filling up the spaces with a predefined color. It also allows you to see an example adjust and then preview the result until you are satisfied.

d) Make all same size – Tick this option, if you wish to convert all images to the same size.

e) Max size on convert – You may tick this option to convert all images to a specific size. The default size is 400 x 400. You may enter your preferred size.

f) Watermark – If you wish to add a watermark to your images, you may enter text. You may also specify the shading of the watermark from light to dark.

7. Click on the Save button. This will add the "*Multimedia"* tab to the following screens (i.e. Stock items (Products), Creditors (suppliers/vendors) and Debtors (customers/clients)). On the screens for Document grid (i.e. Invoices, Credit notes, Quotes, Purchases, Supplier returns and Orders) you have the option to add and manage multimedia files. The Multimedia icon will be added to the Documents form which you can add and manage and edit the multimedia files in unposted documents.

Managing Multimedia Files

If you have ticked the "*Show search list*" tick box in the Plugins → Generic → Multimedia (Setup ribbon). the Multimedia icon will be added to the Default ribbon. This will allow you to filter and search for multimedia files.

The "*Show search list*" field is by default not selected, or if you deselect the "*Show search list*" field at the later stage the Multimedia icon will be removed from the Default ribbon. Whatever option you have selected in the "*Show search list*" field, you may access the Multimedia plugin from the following options:

1. Multimedia tab on the following screens:

a) Creditors (suppliers/vendors).

b) Debtors (customers/clients).

c) Stock items (Inventory items/products).

2. Multimedia icon from which you may manage and edit the multimedia files on the following screens for Documents:

   a) Debtor (customer/client) documents (i.e. Invoices, Credit notes, Quotes).

   b) Creditor (supplier/vendor) documents (i.e. Purchases, Supplier returns and Orders).

3. Multimedia in Batches (Journals) - Context menu on Batch entry screens.

4. Multimedia in Groups - Context menu on Reporting group 1 or Reporting group 2 for all available reporting groups.

Multimedia Basics

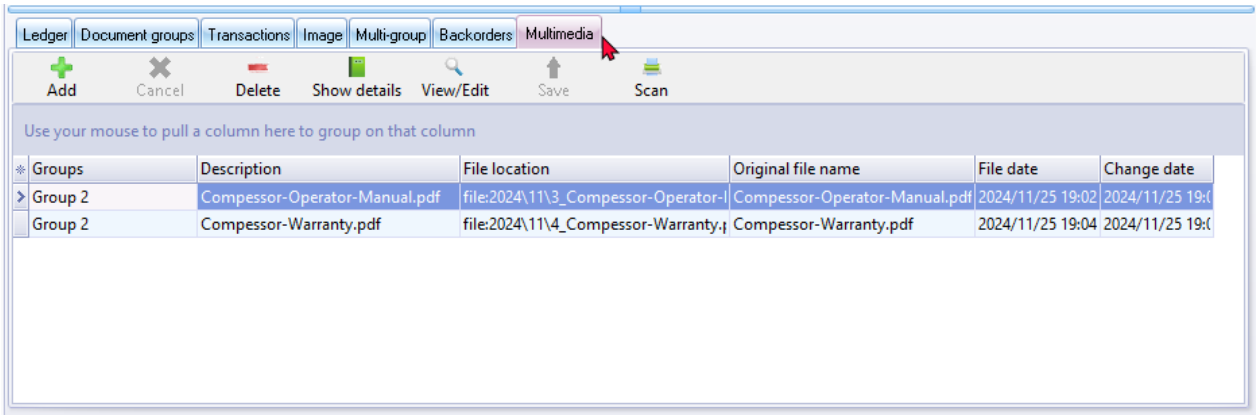
In this example, the Multimedia tab for Stock items is used to illustrate the options for working with Multimedia files. The basics are similar to those Multimedia tabs and screens launched from other forms.

Adding Multimedia files

Go to the Multimedia tab of your stock item, debtors, creditors, documents.

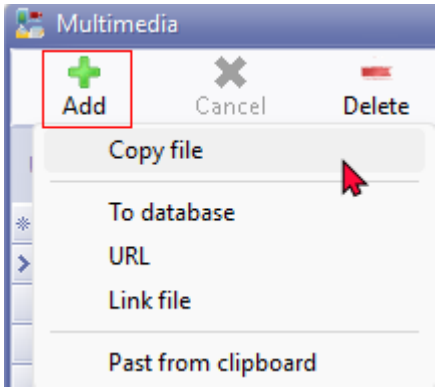
The default view is the "*List*" view.

In this example, Multimedia plugin for Stock items is shown. Similar features is available for debtors, creditors, documents, etc.



You may click on the column headings (i.e. Groups, Description, File location and original file name to change the sequence of the multimedia files on the list.

To add a multimedia file, click on the Add icon.



This will list five options in which you can add Multimedia files in your Set of Books:

1. Copy file file - These files are stored in the files folder in sub folders for the year and month. You want to ensure that the file is always available, even without an internet connection.
2. To database - This option embeds the file directly into the Set of Books database for seamless integration with other data. The file is stored in the database of the Set of Books.
3. URL - This option to provide the direct link to the file. Only the Hyperlink or other URL link is stored. This option will reference a file hosted on a website or cloud storage service. This saves storage space and allows for easy access from different devices. This option requires an internet connection to access the file. You may experience potential for broken links, if the file is moved or deleted online, the link becomes invalid.
4. Link file - Use this option to reference the file's location. The full path where the selected file is stored on your system.
5. Paste from clipboard - The file name of the file pasted from your systems clipboard. The file is copied from your clipboard and pasted directly into your Set of Books.

Select one of the above options. The "*Open"* screen will be displayed for the "*To database*", "*Link file*", "*Copy file*", "*URL*" and "*Paste from clipboard*" options. Select a valid file format and click on the Open button. The file will be added to the list. You may then enter or edit the Groups and Descriptions on the list, as necessary.

> *If you select the Add – URL option, the Show details option will be displayed. You then need to enter the Groups, Description, File Location (i.e. ftp or web address of the file) and the original name of the file.*

View/Edit Multimedia files

To view or edit the details, click on the Show details button.

1. Cancel icon - The Cancel icon is by default inactive. If this icon is activated during a process, you may abort the process.

2. Delete icon - Select a file and click on the Delete icon. The file will be removed from the list.

> *Make absolutely sure that the correct entry is selected. This delete cannot be undone.*

3. Show details icon - To view or edit the details of a selected item on the list, click on the Show details button.

   - Groups – Select a group from the list, if necessary. You may also enter (type) a group name, if not on the list. Once this is done, you need to click on the Save icon. The newly entered group, will only be added to the list, once you click on the Save button of the form.
   - Description – You may change it if necessary.
   - File location – If the "*File location*" displays the file name preceded by type e.g. link for a linked file; and file for a copied file, you may click on the > ("*Open folder*") button to open the file location folder for the selected file.
   - Original file name - The name of the original file as added to the multimedia plugin.
   - File date – Your operating system's date and time will automatically be added for the "*To database*", "*Link file*", "*Copy file*", "*URL*" and "*Paste from clipboard*" options.

4. View/Edit icon - Click on the View/Edit button to open a file and view it in the default program associated with the file type on your operating system.

   - You may print and/or edit the file.
   - Once you have viewed and or edited the file; and the file is closed, a confirmation message, will be displayed.

> "Press OK when you are done editing the file to save it to the database!"

- Click on the OK button to save the file to the database.
- Click on the Save button.

5. Navigation
   - < Previous icon - Click to navigate to the previous record.
   - Next icon > - Click to navigate to the next record.
6. Save icon - Once you have changed (edited) any of the available fields, this Save button will be activated. Click to save your changes.

> *You still need to click the Save button of the form, e.g. Stock items, Debtor / Creditor, etc.*
>
> *If you do not save the form, your added files, or any changes may be lost.*

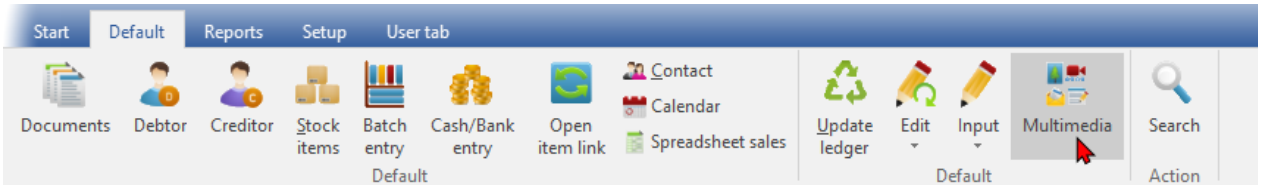
7. Scan icon - If you have a TWAIN device configured and setup on your system, then you can directly scan from the device to the Multimedia plugin. TWAIN is Technology for an Accessible Imaging Interchange Standard. It's a standard protocol for image scanning and transfer between applications.

   TWAIN is supported by Web cams, scanners and other image devices. ("Technology Without An Interesting Name" humorous).

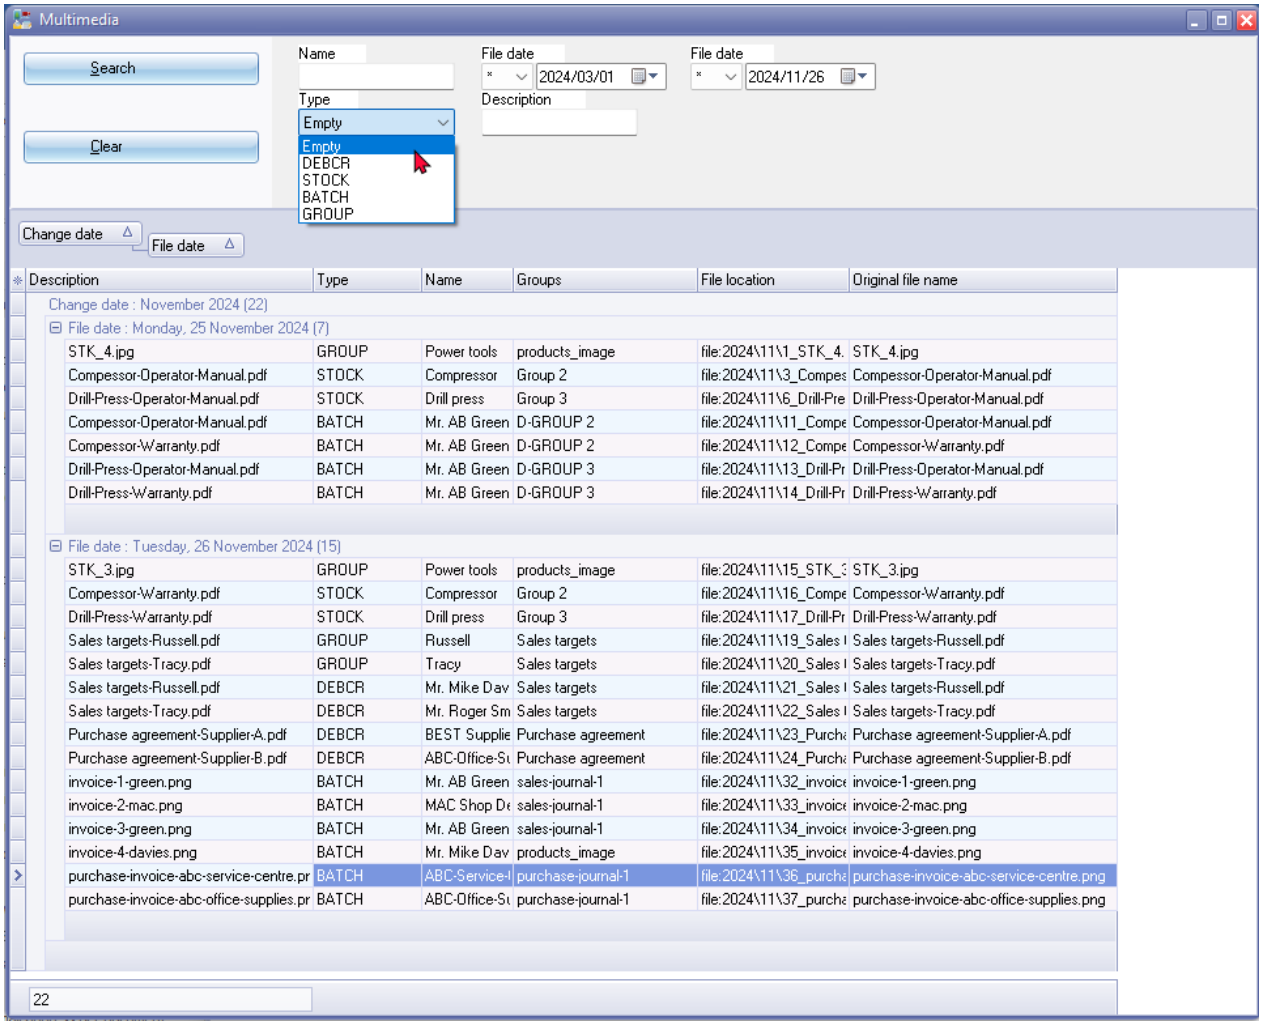
   The "*Select Source*" screen will be displayed on which you may select a device.

Multimedia Search List

The Multimedia search list is by default this option is not selected. To add the Multimedia icon to the Default ribbon, you need to select (tick) the "*Show search list*" option on the General tab when activating the Multimedia plugin (Plugins → Generic → Multimedia on the Setup ribbon). This will allow you to filter and search for multimedia files.



On the Default ribbon, select Multimedia.



Multimedia Search – Types

The "*Types*" of Multimedia files are grouped in four (4) basic types:

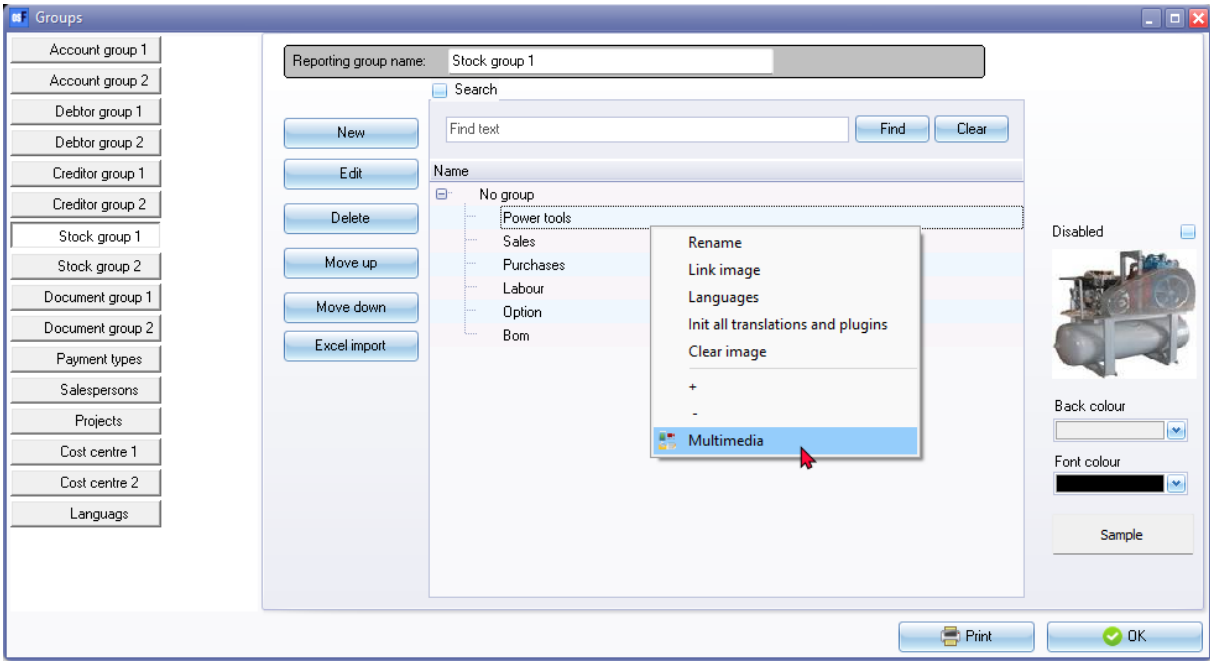
1. DEBCR – Multimedia files added on the Multimedia tab of Debtor / Creditor accounts.
2. STOCK – Multimedia files added on the Multimedia tab of Stock items.
3. BATCH – Multimedia files added to Batch entry and Document entry screens. The multimedia files added in Batch entry and Document entry screens will only be updated (added) to the Search list, once Batches and Documents are posted (updated) to the ledger.
4. GROUP – Multimedia files added for Reporting groups 1 and/or Reporting groups 2 in Setup → Groups (Setup ribbon)).

Multimedia – Groups

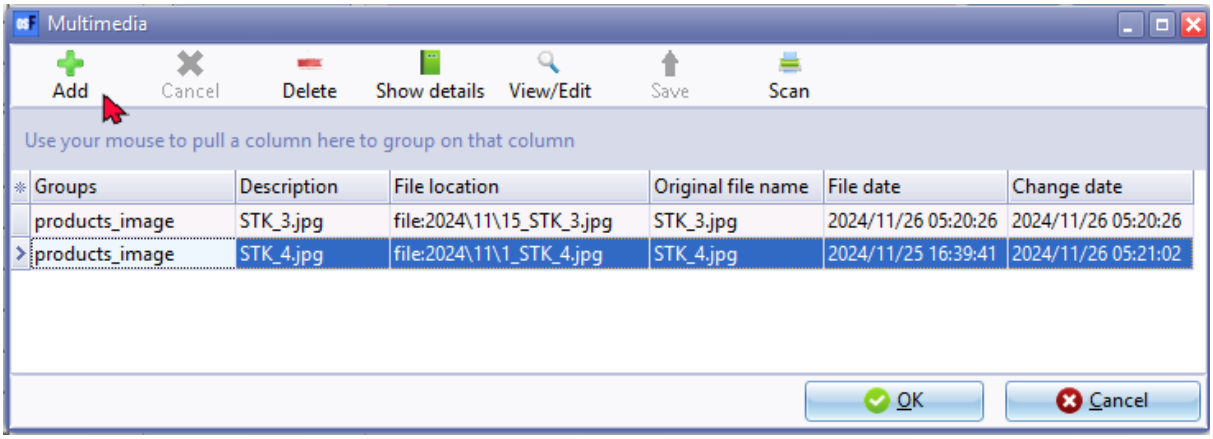
In addition to the "*Link image*" option on the Reporting groups (for example Stock group1 or Stock group2) you may add files ("*To database*", "*Link file*" and "*Copy file*" or "*URL*" options), using the Multimedia plugin for your Reporting groups.

To add Multimedia files to Reporting groups:

1. On the Setup ribbon; select Setup → Groups.
2. Select the Reporting group.
3. Select the group in the list of groups.
4. Right-click and select "*Multimedia*" from the context menu.



5. The "*List view*" of the "*Multimedia*" screen will be displayed.



6. Click on the Add button and select the "*To database*", "*Link file*", "*Copy file*", "*URL*" and "*Paste from clipboard*" options.
7. Click on the OK button to save the multimedia files to the selected group.

GROUP - Multimedia search list

If you have added multimedia files for your reporting groups, such as Stock groups, Salespersons), it will

be available under GROUP type on the "*Multimedia search list*" (Multimedia icon on Default ribbon).

Add and Manage Multimedia files for Debtors (customers/clients)

In addition to the "*Link image*" option on the Reporting groups (for example Debtor group1 or Debtor group2) you may add files ("*To database*", "*Link file*", "*Copy file*", "*URL*" and "*Paste from clipboard*" options), using the Multimedia plugin for your Reporting groups.

Some examples of multimedia files for debtors

Some types of documents that could be added to the multimedia plugin for debtors (customers/clients):

Customer Information:

- Customer Profiles: Detailed information about each customer, including contact information, purchase history, and preferences.
- Customer Agreements: Contracts or agreements outlining the terms and conditions of business relationships with customers.
- Sales targets: You can empower your sales teams to achieve their goals, improve performance, and drive revenue growth.

Sales and Invoicing Documents:

- Invoices: Detailed invoices for products or services sold to customers.
- Sales Orders: Documents confirming the purchase of products or services by customers.
- Credit Notes: Documents issued to customers for refunds or credits.

Marketing Materials:

- Customer Newsletters: Regular newsletters with company news, product updates, and promotional offers.
- Marketing Brochures: Marketing materials promoting products or services to customers.

Other Relevant Documents:

- Delivery Notes: Documents confirming the delivery of products to customers.
- Return Authorizations: Authorizations for customers to return products.

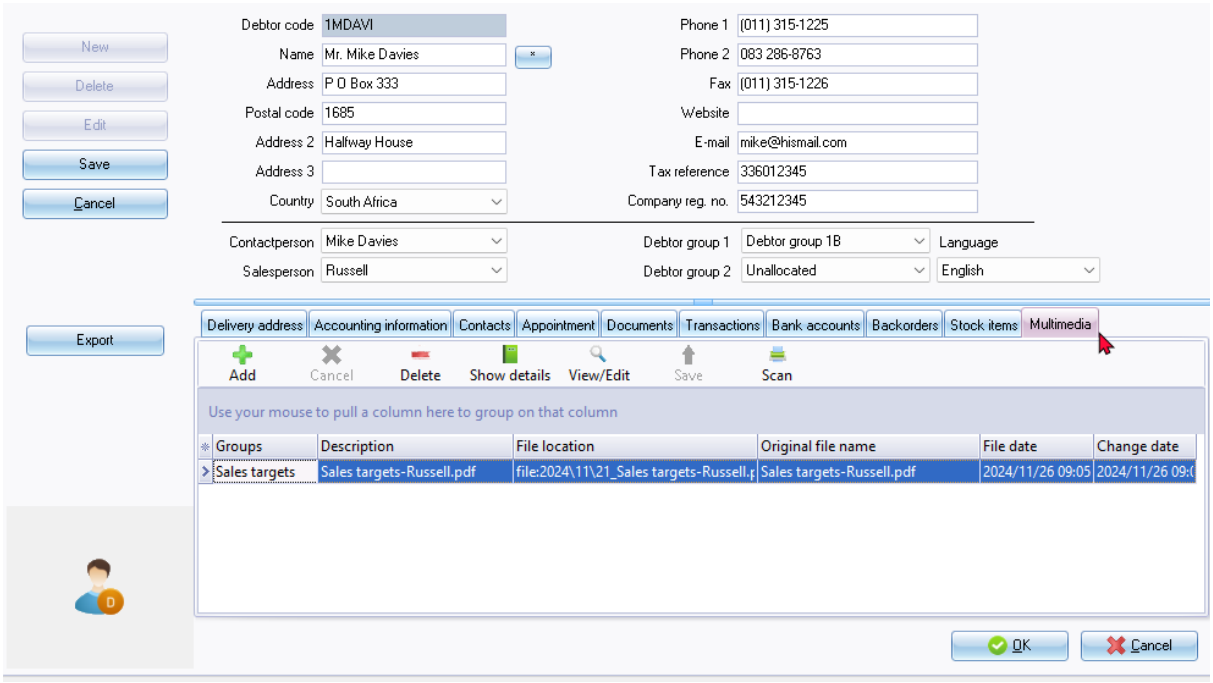
By including these types of documents, businesses can improve customer service, streamline operations, and enhance the overall customer experience.

Add Multimedia files for Debtors (customers/clients)

The Multimedia plugin will add a Multimedia tab to all Debtor (customer / client) accounts.

To add multimedia files to debtors (customers):

1. On the Default ribbon, select Debtors.
2. Select a specific Debtor (customer / client) account and click Edit button. Alternatively, you may double-click on the account.
3. Click on the Multimedia tab. The "*List view*" of the "*Multimedia*" screen will be displayed.



4. Click on the Add button and select the "*To database*", "*Link file*", "*Copy file*", "*URL*" and "*Paste from clipboard*" options.

DEBCR - Multimedia search list

If you have added multimedia files for debtors (customers/clients), it will be available under DEBCR type on the "*Multimedia search list*" (Multimedia icon on Default ribbon).

Add and Manage Multimedia files for Creditors (suppliers/vendors)

In addition to the "*Link image*" option on the Reporting groups (for example Creditor group1 or Creditor group2) you may add files ("*To database*", "*Link file*", "*Copy file*", "*URL*" and "*Paste from clipboard*" options), using the Multimedia plugin for your Reporting groups.

The Multimedia plugin will add a Multimedia tab to all Creditor (supplier / vendor) accounts.

Some examples of multimedia files for creditors

Here are some types of documents that could be added to the multimedia plugin for creditors (suppliers/vendors):

Supplier Information:

- Supplier Profiles: Detailed information about each supplier, including contact information, product offerings, and performance metrics.
- Supplier Agreements: Contracts or agreements outlining the terms and conditions of business relationships with suppliers.

Purchasing and Invoicing Documents:

- Purchase Orders: Documents confirming the purchase of products or services from suppliers.
- Supplier Invoices: Invoices received from suppliers for products or services purchased.
- Credit Notes: Documents issued to suppliers for refunds or credits.

Payment and Reconciliation Documents:

- Payment Remittance Advice: Documents confirming the payment of supplier invoices.
- Bank Statements: Bank statements showing payments made to suppliers.
- Supplier Reconciliations: Documents reconciling supplier accounts and identifying any discrepancies.

Other Relevant Documents:

- Delivery Notes: Documents confirming the delivery of products from suppliers.
- Quality Control Reports: Reports on the quality of products or services received from suppliers.

By including these types of documents, businesses can improve supplier relationships, streamline procurement processes, and optimize cash flow.

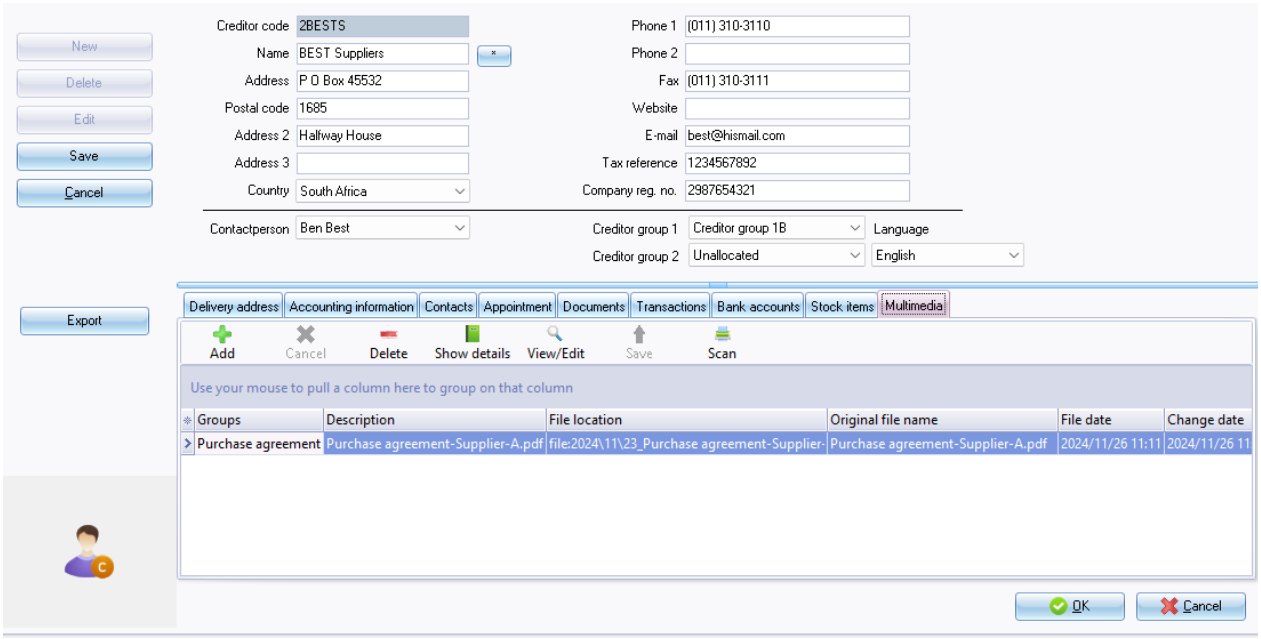
Add Multimedia files for Creditors (suppliers/vendors)

To add multimedia files to creditors (suppliers/vendors):

1. On the Default ribbon, select Creditors.
2. Select a specific Creditor (supplier / vendor) account and click Edit button. Alternatively, you may

double-click on the account.

3. Click on the Multimedia tab. The "*List view*" of the "*Multimedia*" screen will be displayed.



4. Click on the Add button and select the "*To database*", "*Link file*", "*Copy file*", "*URL*" and "*Paste from clipboard*" options.

DEBCR - Multimedia search list

If you have added multimedia files for creditors (suppliers/vendors), it will be available under DEBCR type on the "*Multimedia search list*" (Multimedia icon on Default ribbon).

Multimedia – Stock items (Inventory items/Products)

The Multimedia plugin supports various file formats such as documents, images, videos and more.

Some examples of multimedia files for stock items (Inventory items/Products)

Some types of documents that could be added to the multimedia plugin for stock items/inventory items/products:

Product Information:

- Product Specifications: Detailed information about the product's features, dimensions, materials, etc.
- Product Datasheets: Comprehensive technical information, including performance data, maintenance instructions, and troubleshooting guides.
- Product Catalogs: Digital catalogs showcasing a range of products, including images, descriptions,

and pricing information.

Guarantees and Warranties:

- Warranty Certificates: Official documents outlining the terms and conditions of the warranty, including coverage, duration, and claims procedures.
- Guarantee Letters: Letters from the manufacturer or supplier assuring the quality and performance of the product.

Operator's Manuals:

- User Manuals: Step-by-step instructions on how to use and operate the product.
- Installation Guides: Detailed instructions for assembling and installing the product.
- Maintenance Manuals: Guidelines for regular maintenance and troubleshooting.

Safety Data Sheets (SDS):

- SDS Documents: Information on the potential hazards associated with the product, including safety precautions, handling instructions, and first aid measures.

Marketing Materials:

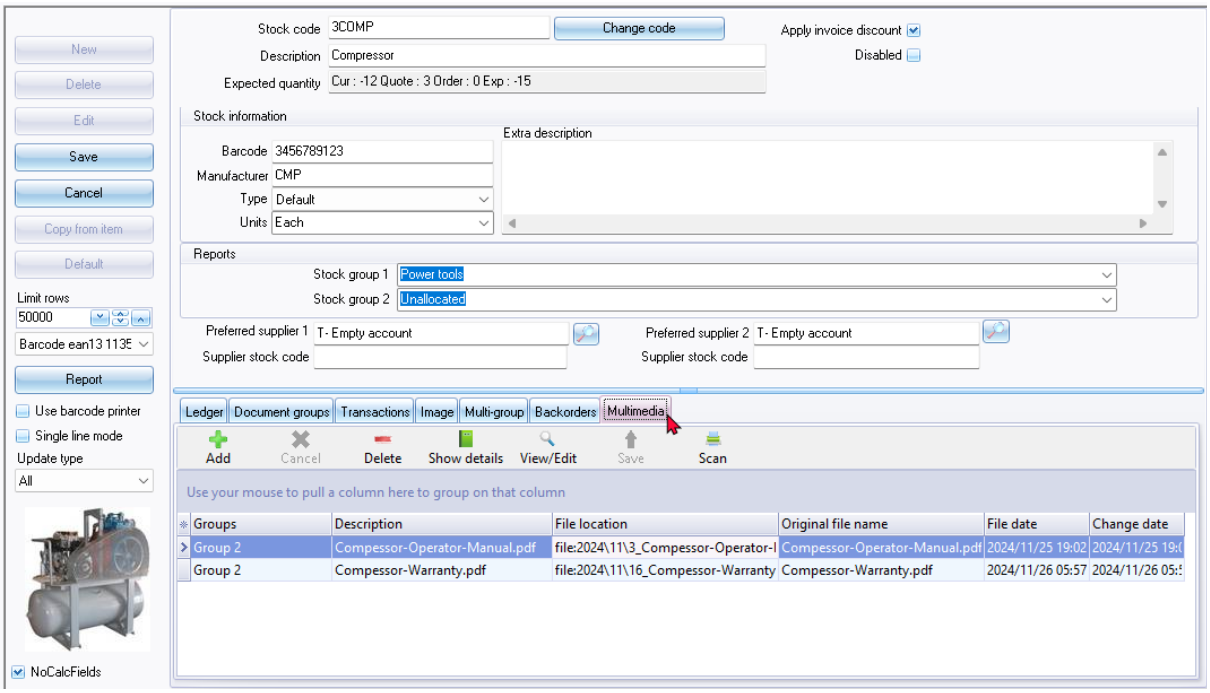
- Product Brochures: Marketing materials promoting the product, including key features, benefits, and pricing information.
- Product Videos: Demonstrations, tutorials, or unboxing videos to showcase the product's features and benefits.

By including these types of documents, businesses can provide customers with comprehensive information about their products, enhancing their understanding and confidence in making purchasing decisions.

Add Multimedia – Stock items (Inventory items/Products)

To add multimedia files to stock items (products):

1. On the Default ribbon, select Stock items.
2. Select the stock item (inventory item/product).
3. Click on the Multimedia tab. The "*List view*" of the "*Multimedia*" will be displayed.



4. Click on the Add button and select the "*To database*", "*Link file*", "*Copy file*", "*URL*" and "*Paste from clipboard*" options.

View/Edit - Multimedia – Stock items (Inventory items/Products)

Once your multimedia files have been added, you may view these multimedia files.

To view and edit the Multimedia files:

Select a stock item (inventory item/product) on the list and click on the Edit button. Alternatively, you may double-click on a selected stock item (inventory item/product).

All the multimedia files will be listed for a selected stock item (product).

Click on the View/Edit button. On the Multimedia screen you may use the filter and grouping options, to locate a specific item.

To view a specific multimedia file, you may click on the View/Edit button. The file will be opened in your system's default application program associated with the file type extension (for example *.pdf).

Multimedia – Transactions

Multimedia – Documents

The multimedia files added in Document forms will only be updated (added) to the Multimedia search list, if the Documents are not yet updated (unposted) to the ledger.

Added multimedia files will only be available in the Multimedia search list if the Documents are updated

(posted) to the ledger.

Added multimedia files will not be saved in posted documents.

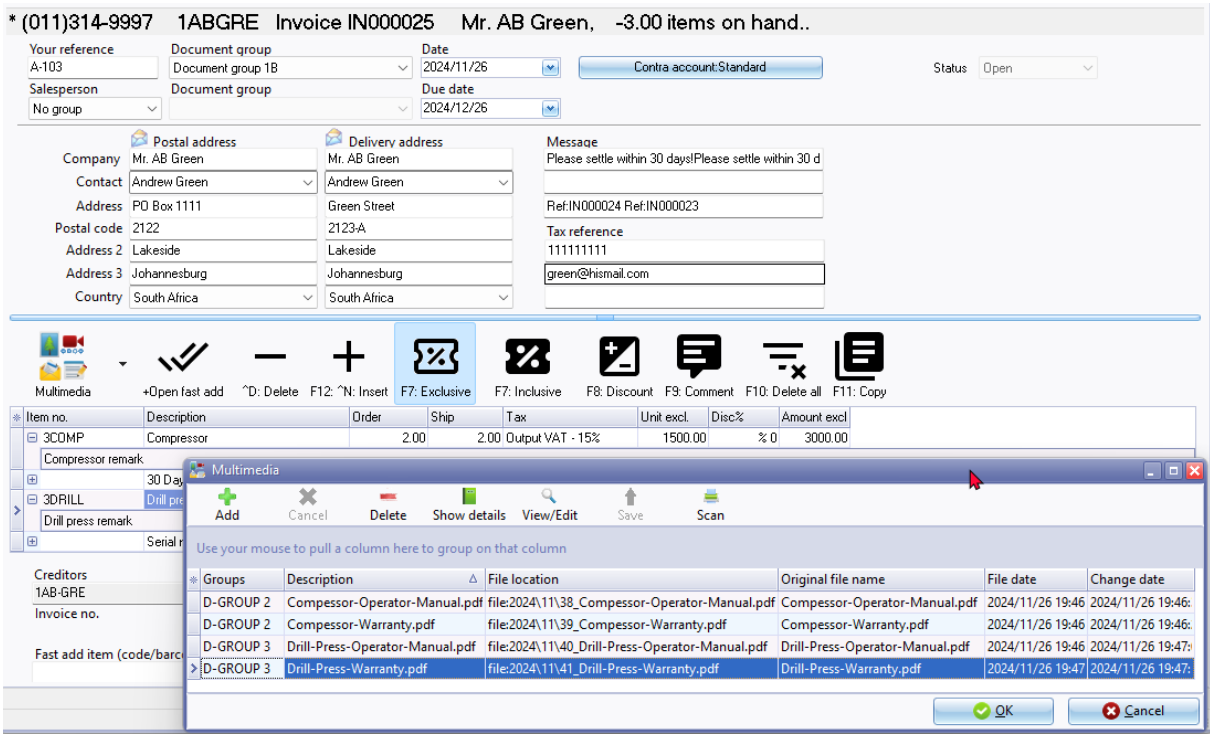
This plugin may be used to manage multimedia files on the following documents:

- Sales documents (i.e. Invoices, Credit notes and Quotes).
- Purchase documents (i.e. Purchases, Supplier returns and Orders).

Multimedia – Unposted Documents

To add Multimedia files on Documents:

1. On the Default ribbon, select Documents. The "*Document entry*" listing "*Invoices*" will be displayed. If necessary, select the document type you wish to process.
2. To edit a selected document click Edit / or New to create a new document.
3. Click on the Multimedia icon. The "*List view*" of the "*Multimedia*" screen will be displayed.



4. Click on the Add button and select the "*To database*", "*Link file*" and "*Copy file*" or "*URL*" options..

> *If you need to add multimedia files for more than one stock item (product), you need them all on the document.*

5. Click OK on "Multimedia screen.
6. Click OK on the Document form.

BATCH - Multimedia search list

If you have added multimedia files in unposted documents, it will only be available under BATCH type on the "*Multimedia search list*" (Multimedia icon on Default ribbon) once the document(s) have been updated (posted) to the ledger.

To view the Multimedia files added to stock item:

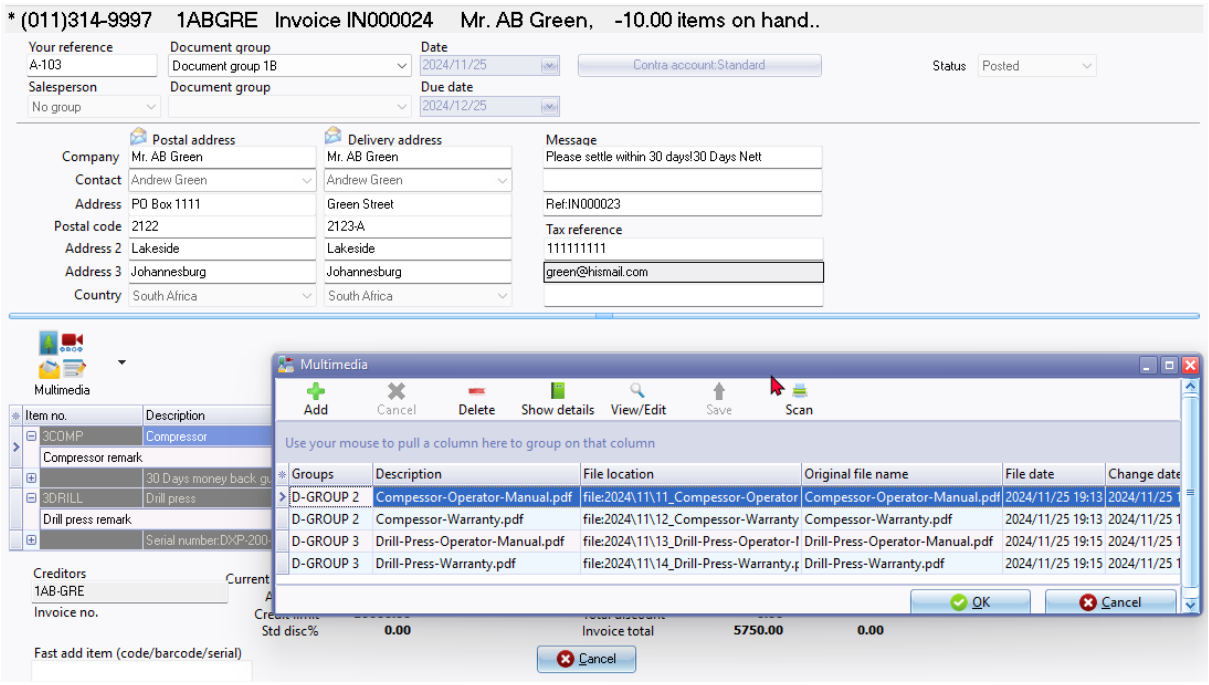
Select the stock item (product) and click on the Multimedia icon. The Multimedia list view screen will list the multimedia files for the stock item (inventory item/product).

Multimedia - Posted documents

Multimedia files attached to a posted document, may be viewed.

To do this;

1. Select a posted document and double click.
2. Click on the Multimedia icon. The "*List view*" of the "*Multimedia*" screen will be displayed.



3. Show details this will display the details for the multimedia file. If you click on the > Open folder button (on the right side of the If the "File location" displays the file name preceded by type e.g. link for a linked file; and file for a copied file, you may click on the > ("*Open folder*") button to open the file location folder for the selected file.
4. Click on the View/Edit button to open a file and view it in the default program associated with the file type on your operating system.

5. You may print and/or view the file.
6. Click on the OK button to close the Multimedia screen.
7. Click on the Cancel button of the Document form.

> *If you add a multimedia file or delete the multimedia file on a Posted document, your changes will not be saved. The reason for this, is that you cannot edit a posted document.*

Copy documents

If you copy a selected document, the Multimedia files will not be copied. You need to decide whether to include these multimedia files, or select other multimedia files, if required.

Cancel / Reverse posted documents

Multimedia files will be removed when you cancel or reverse a sales document (Invoices and Credit notes) or a purchase document (Purchases or Supplier returns)), in the Global processes → Reverse posted batch/document menu on the Setup ribbon. Once a document is reversed you may access the document as an unposted document in Documents on the Default ribbon.

On the Document form, you may edit the document. When editing the document, you may add the Multimedia files for the stock items/inventory items/products), as necessary.

Multimedia – Batches

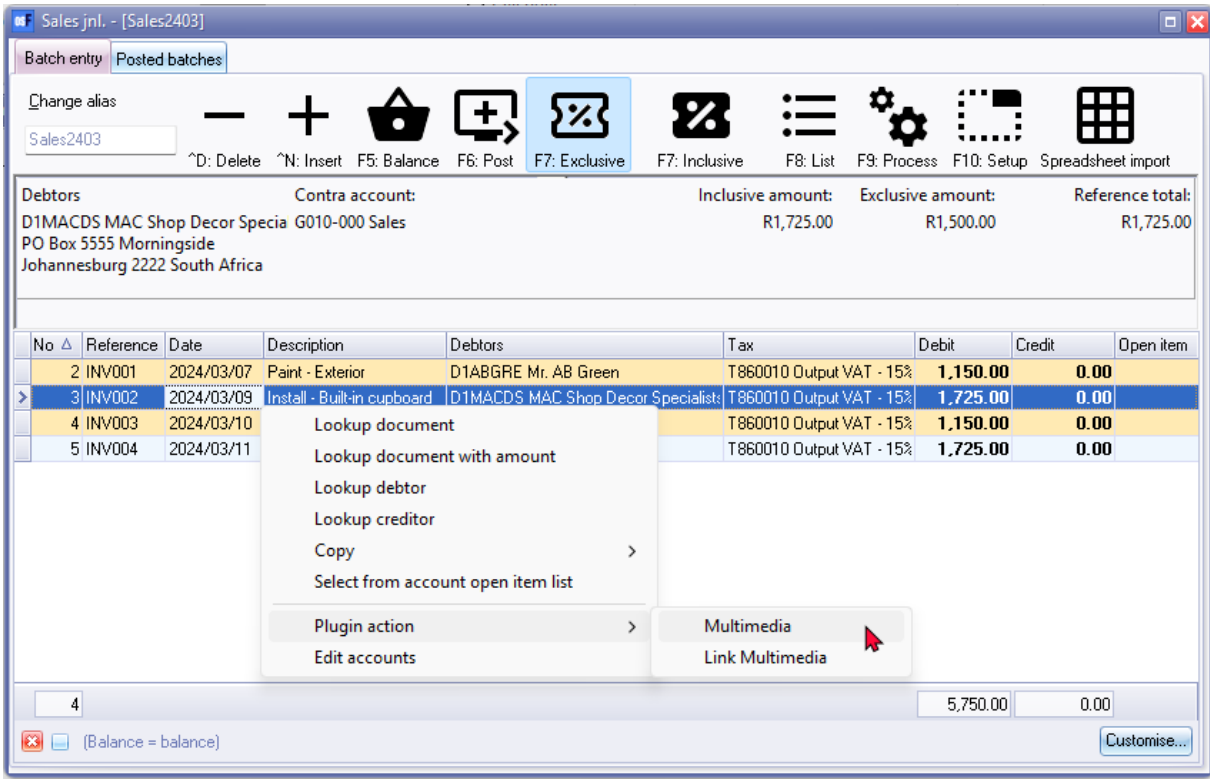
If the multimedia files added to transactions in Batch entry screens, it will only be updated (added) to the "*Multimedia search list*", once the batches are posted (updated) to the ledger.

Unposted journals (batches) will not be available in the Multimedia Search feature.

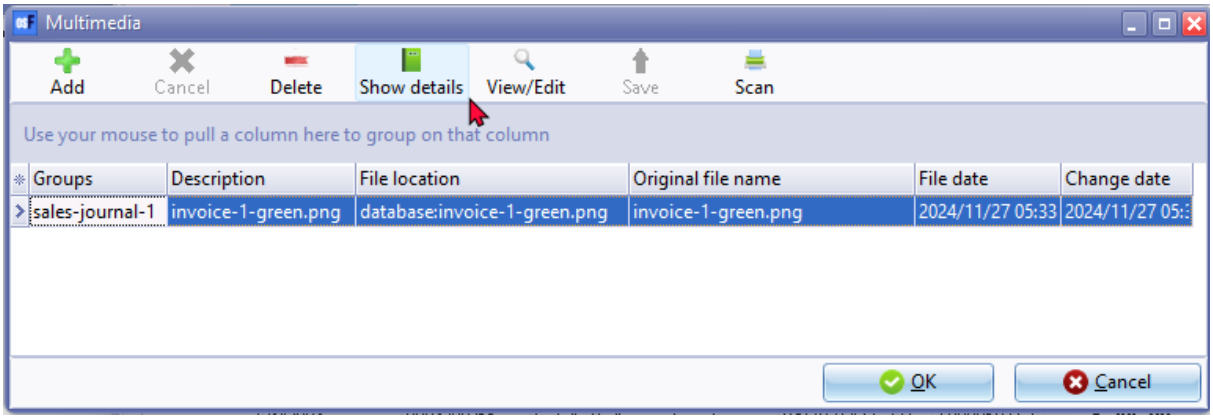
Add Multimedia files to a Batch (Journal)

To add Multimedia files to Batch transactions:

1. Select the batch type. Once you have entered a transaction, you may add Multimedia files.
2. On a selected transaction in the Batch entry screen, right-click on a transaction.
3. On the context menu, select the "*Plugin action → Multimedia*" option.



4. The "*List view*" of the "*Multimedia*" screen will be displayed.

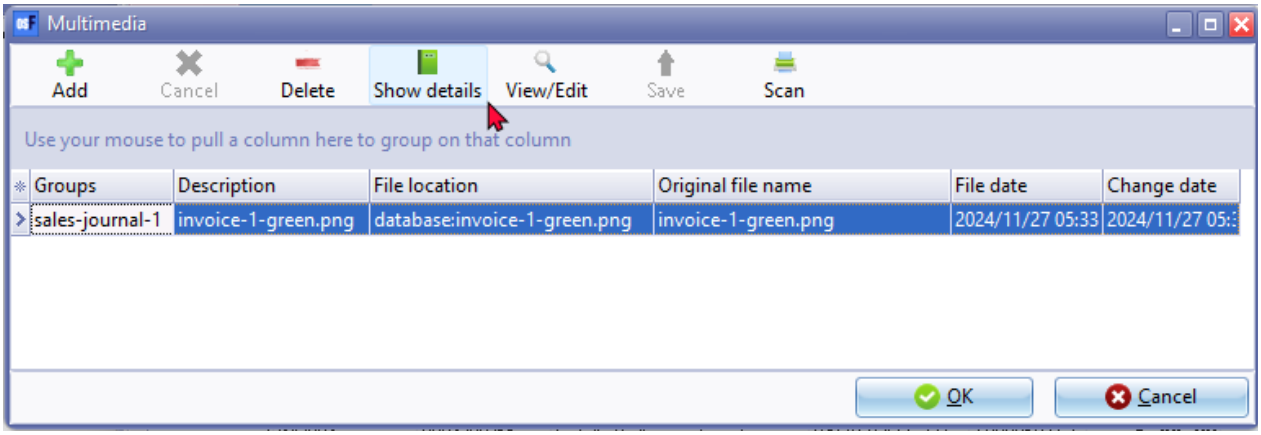


5. On the Multimedia screen, click on the Add button and select the "*To database*", "*Link file*", "*Copy file*", "*URL*" and "*Paste from clipboard*" options.

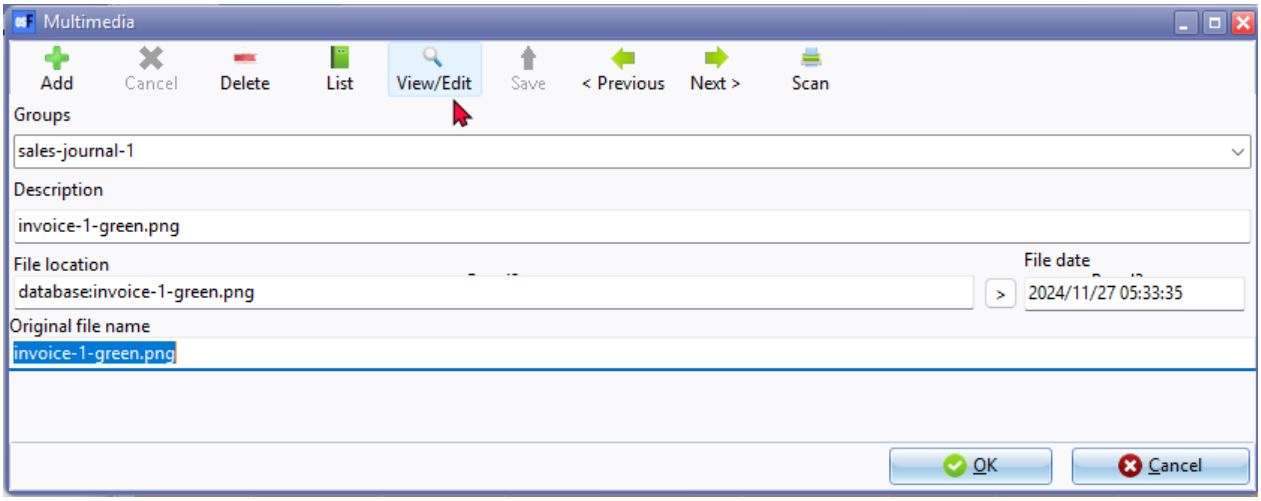
6. Click OK on the multimedia screen.

To view the Multimedia files added to transactions in an unposted batch

Select the transaction and double-click on it. The Multimedia list view screen will list the multimedia files for the transaction.



Show details button. This will show the detail such as the Group, Description, File location, original file name and File date.



View/List button - This will launch the selected multimedia file in your system's default application or program associated with the file type.

BATCH - Multimedia Search Type

If you have added multimedia files in unposted batches (journals), it will only be available under BATCH type on the "*Multimedia search list*" (Multimedia icon on Default ribbon) once the batches (journals) have been updated (posted) to the ledger.

Cancel / Reverse posted batches (journals)

Multimedia files will be removed when you cancel or reverse a posted batch (journal). in the Global processes → Reverse posted batch/document menu on the Setup ribbon. Once a batch (journal) is reversed you may access the batch (journal) as an unposted batch (journal) in Batch entry on the Default ribbon.

On the Batch entry form, you may edit the batch (journal). When editing the batch (journal), you may add the Multimedia files for the transactions, as necessary.

Multimedia - Calendar (Planner)

Currently the Multimedia is not supported in the Calendar (Default ribbon). Once you have created documents from the Calendar, these documents will be generated as an unposted document. You may add Multimedia files for your stock items (inventory items/products) in these unposted documents

Multimedia – Projects

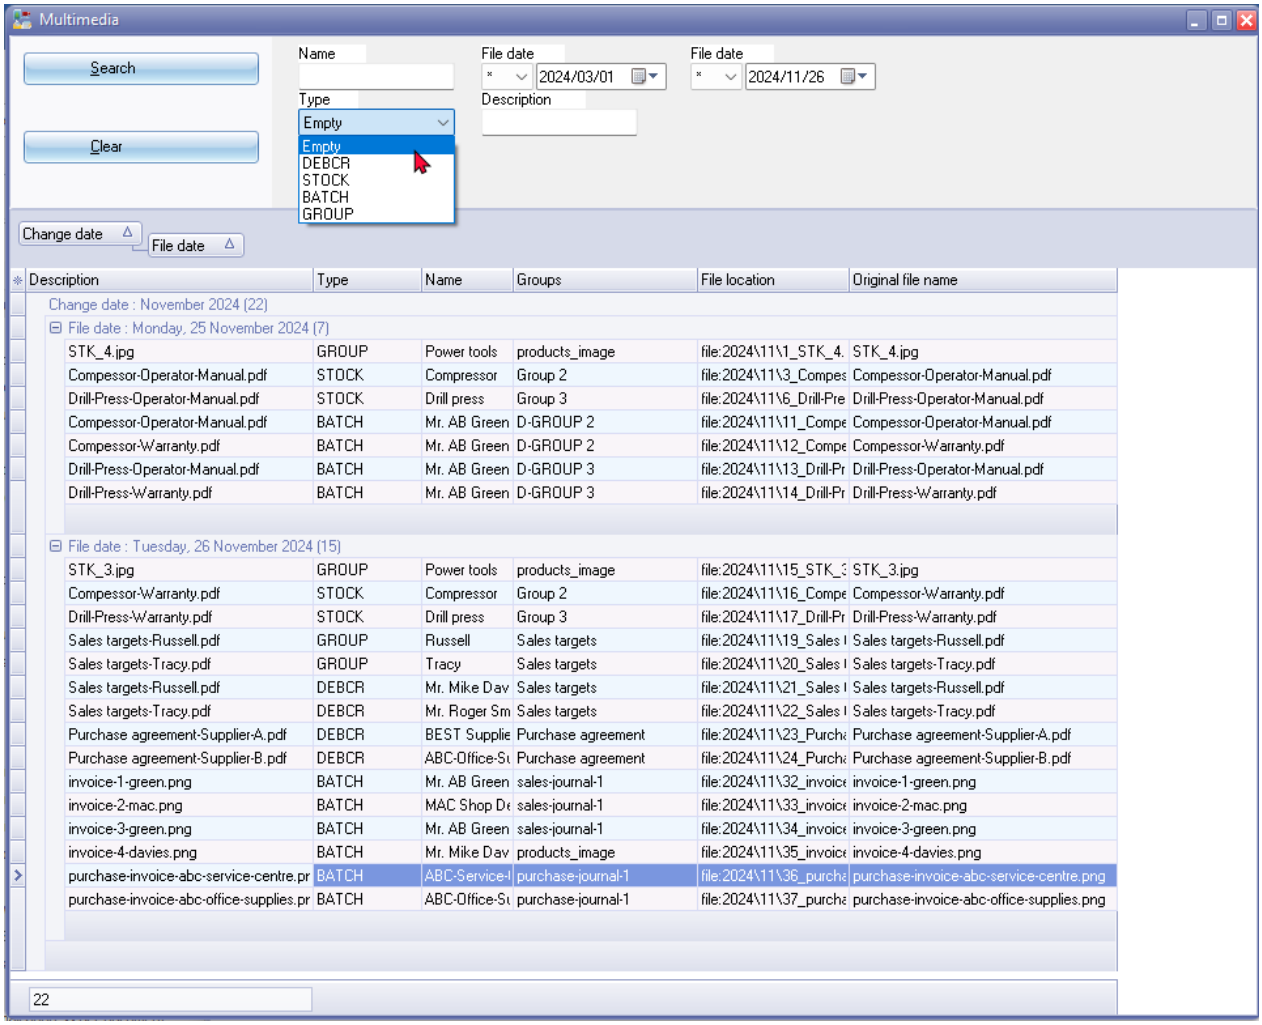
If you have activated Projects (on Setup → System parameters (Setup ribbon)), and created Projects on the Input → Projects menu, the Multimedia plugin will add a tab to the Projects.

Search Multimedia files

To add the Multimedia icon to the Default ribbon, you need to select (tick) the "*Show search list*" option on the General tab when activating the Multimedia plugin (Plugins → Generic → Multimedia on the Setup ribbon).

Multimedia Search - Types

You may search an filter Multimedia files in the STOCK, DEBTORS, CREDITORS, BATCH and GROUP categories on the "*Multimedia search list*" (Multimedia icon on Default ribbon).



Added Multimedia files can be searched, filtered and sorted by "*Type*" to manage your multimedia files in the following categories:

- STOCK - Multimedia files added in the Multimedia tab of Stock items (Default ribbon).
- DEBCR - Multimedia files added in the Multimedia tab of each debtor (customer/client) account in the Debtors / Creditors (Default ribbon).
    - Debtors (Default ribbon) - Multimedia files added in the Multimedia tab of each debtor (customer/client) account.
    - Creditors (Default ribbon) - Multimedia files added in the Multimedia tab of each creditor (supplier/vendor) account.
- BATCH - Multimedia files added in the following options:
    - Batches (Journals) (Default ribbon) - You may add multimedia files for the transactions, according to your specific needs. Only the batch (journal) transactions linked to multimedia files will be listed, if the batch (journal) is posted (updated) to the ledger.
    - Documents - You may add multimedia files for the Stock items (Inventory items/Products)

according to your specific needs. All document types for sales documents (Quotes, Invoices and Credit notes) and purchase documents (Orders, Purchases and Supplier returns) and support multimedia files. Only the documents linked to multimedia files will be listed, if the document is posted (updated) to the ledger.

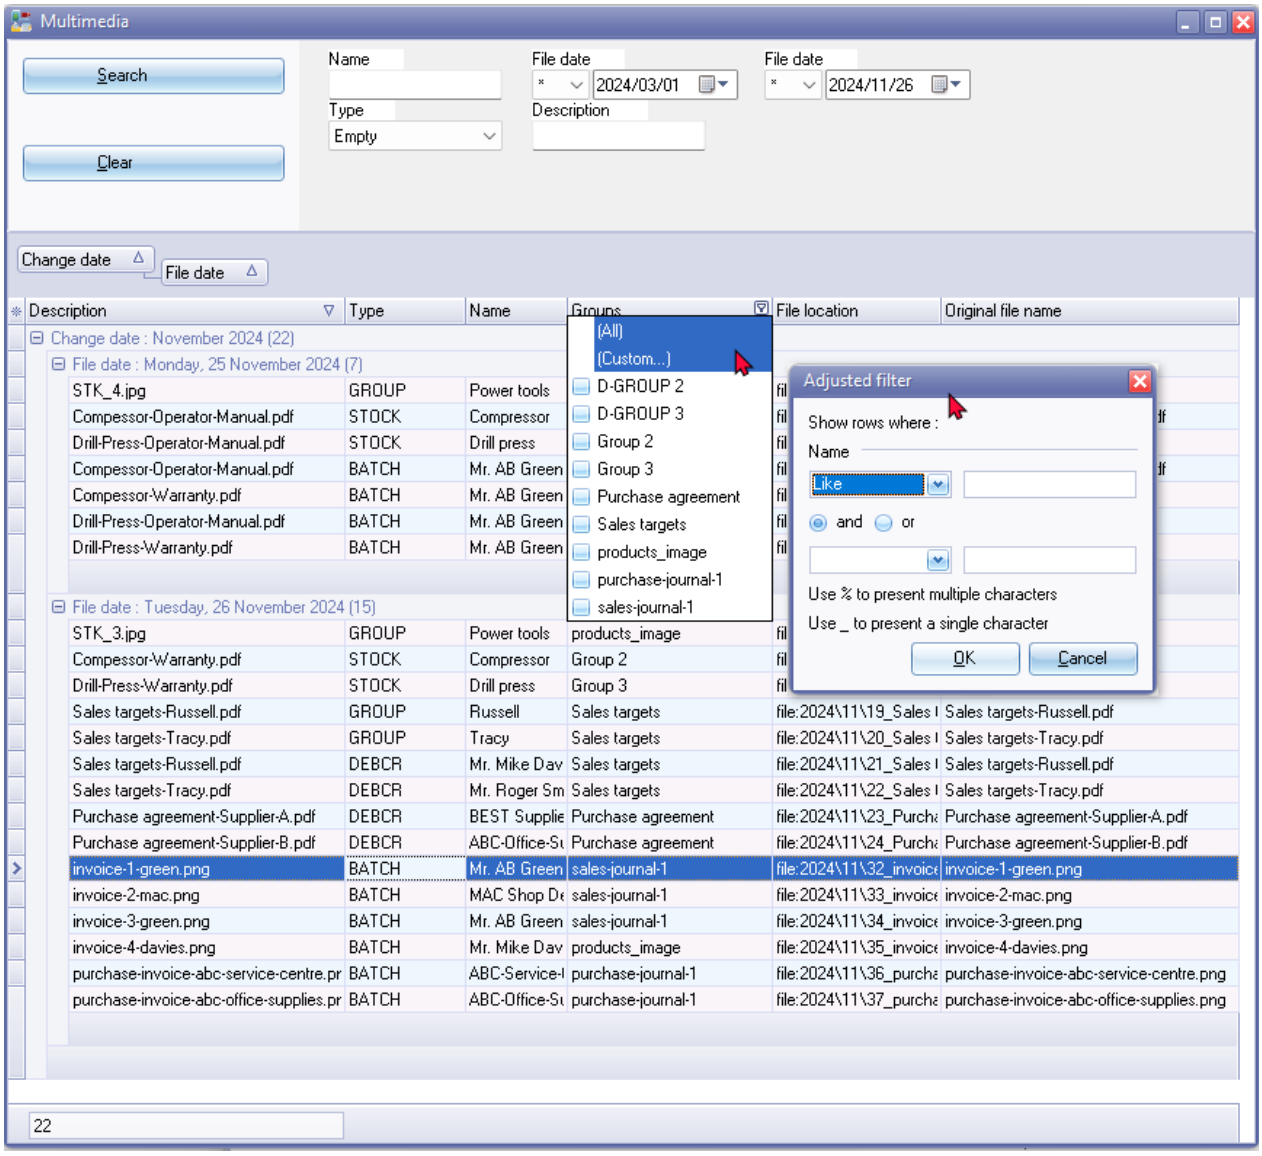
- GROUPS - Multimedia files added in the Setup → Groups menu (Setup ribbon) for your reporting groups.

Multimedia Search – Filter options

In addition to the standard filters ("*Type*" and "*File date*") you may enter a name or a description to search for.

You may drag a column next to the Change date and File date to group the multimedia files for the selected column.

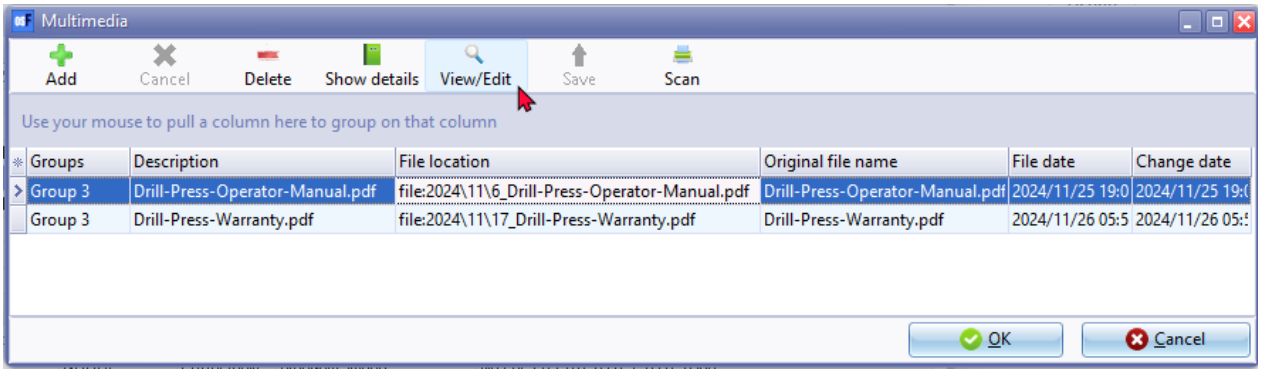
You may also build custom filters (adjusted filters).



Multimedia Search – View files

To view and edit the Multimedia files:

Select an item on the list and double-click on it. The Multimedia screen, listing all the available files of your selection, will be launched.



On the Multimedia screen you may use the filter and grouping options, to locate a specific item.

To view a specific multimedia file, you may click on the View/Edit button. The file will be opened in your system's default application program associated with the file extension (for example *.pdf,).

Multimedia Files Storage

Multimedia files are stored in the files folder within the Set of Books directory, for example:

```
E:\osfinancials5\books\MY-BOOKS\files\2024\11
```

Within the files folder, the Multimedia files are stored in the Year/Month folders. In this example, the files are included in the Year *'2024'* and the month '11' which is November.

Each file will be prefixed with a numeric number for example, *'1_Filename'* and file type extension.

Multimedia files added with the following options is not stored in this folder:

- To Database -The file is embedded and sored in the database of the Set of Books.
- Link file - The file is linked to location, elswere on your system or network.
- URL - The path or webaddress is set to a link on the internet where the files are stored.

Understanding the Multimedia File Storage Structure

Key Points:

- Year and Month Organization: Files are categorized by year and month for easy retrieval.
- Numeric Prefix: This ensures files are sorted in a specific order, which can be useful for various purposes (e.g., chronological order, importance).
- File Extension: The file extension indicates the file type, allowing for proper handling and display.

Potential Use Cases:

- Document Management: Storing and organizing various document types like PDFs, Word documents, and presentations.
- Image and Video Storage: Centralizing images and videos for easy access and reference.
- Backup and Recovery: Implementing a backup strategy to safeguard important multimedia files.

By understanding this structure, you can effectively manage and access your multimedia files within the specified directory.

HorecaPOS addition quantity on hand adjustment

HorecaPOS addition quantity on hand adjustment - Manual - Shop - Licence : Annual subscription -

The HorecaPOS Addition Quantity on Hand Adjustment Plugin, available through an annual subscription, empowers employees to conveniently update the quantity on hand for specific items within the HorecaPOS system. This functionality enables seamless management of inventory levels, allowing employees to accurately track stock movements in real-time. For instance, employees can input the quantity of pies retrieved from the freezer or steaks prepared for baking, ensuring that inventory records remain up-to-date and reflective of actual stock levels.

POSDisplay Plugin

POSDisplay Plugin - Manual - Shop - Licence : Once-off -

Documentation : Help topic

The POS Display plugin enhances the customer experience during checkout by utilizing a second monitor

(minimum 600x800 resolution) to display detailed invoices. Customers can easily view their purchases and the corresponding prices per item, as well as the total amount due.

Additionally, the plugin enables you to showcase product images on the second monitor while customers wait to check out. These images can be set to rotate at specified intervals, attracting attention to special offers or promotions. Rotation options include displaying images at the top, left, or right side of the invoices.

POS Points

POS Points - Customer loyalty points - Manual - Shop - Licence: Once-off

Boost customer loyalty with our POS Points Plugin. With a one-time licence, easily set up a customer loyalty program where a percentage of each sale is converted into points. Customers accumulate points with each purchase, which can then be redeemed for discounts on future purchases.

Key Features:

- Set percentage of sales to be converted into points
- Accumulate points with each purchase
- Redeem points for discounts on future purchases
- Enhance customer loyalty and satisfaction

With the POS Points Plugin, you can incentivize repeat purchases and foster long-term relationships with your customers, ultimately driving business growth and success.

RetailPOS

RetailPOS - Manual - Shop - Licence: Annual subscription

Transform your retail operations with our RetailPOS Plugin, designed specifically for the retail industry. With an annual subscription, enjoy comprehensive Point-of-Sales functionality, including support for touch screen monitors, barcode scanners, and wireless access control via RF-ID.

Key Features:

- Point-of-Sales functionality tailored for retail and rental industries

- Support for touch screen monitors and barcode scanners
- Restrict login access controlled by RF-ID
- Sell directly from the shop floor with handheld computers (PDAs)
- Compatibility with other plugins, including Price Agreements, Serial/Batches/Locations

Elevate your retail experience with the RetailPOS Plugin, offering seamless integration of essential features to streamline operations and enhance customer service.

RetailPOS plugin

RetailPOS plugin - Licence : Manual - Shop - Annual subscription -

The rules with a green color are already available.
The rules with a black color are development requests.
The rules with a blue color are being developed.

The Retail POS plugin is designed to enhance the functionality of osFinancials specifically for retail businesses. It provides features tailored to meet the needs of the retail industry. Here are the functional requirements and features of the Retail POS plugin:

1. Quantity Totalization: When multiple quantities of the same item are purchased, the plugin totalizes them on a single line, simplifying the presentation of the receipt.
2. Product Options: The plugin supports the use of product options, allowing for customization or selection of different variations or features of a product.
3. Additional Options: The plugin provides the capability to handle additional options such as money handling or waste disposal stations, enabling seamless integration with specific retail requirements.
4. Rental Functionality: The plugin includes functionality for handling rental items, allowing businesses to manage rentals and associated transactions within the point-of-sale system.
5. Orders on Hold: The plugin supports placing orders on hold, allowing users to save incomplete orders and retrieve them later for further processing.
6. Order Splitting: Users can split orders into separate transactions, which is useful for customers making partial payments or dividing the purchase between different payment methods.
7. Flexible Payment Methods: The plugin enables the configuration of specific payment methods to be used at the point of sale, providing flexibility to accommodate various payment options accepted by the retail business.
8. Price Agreements: Retail businesses can utilize price agreements within the Retail POS system to offer special pricing or discounts to specific customers or customer groups.
9. Real-Time Sales Reporting: The plugin provides real-time sales results in the form of charts or graphs, allowing businesses to monitor and analyze sales performance.
10. Touchscreen Support: The Retail POS plugin is designed to work seamlessly with touchscreen monitors, providing an intuitive and user-friendly interface for sales transactions.
11. Groups and Color Schemes: Users can organize products into groups and utilize color schemes for efficient categorization and visual differentiation.
12. Comments in Sales: The plugin allows users to add comments or notes to sales transactions, providing additional information or instructions.

13. Serial Numbers/Batch/Locations: The Retail POS system supports the use of serial numbers, batch numbers, and location tracking for inventory management and tracking purposes.
14. Real-Time Salesman Switching: Users can switch between salesmen in real-time within the Retail POS system, facilitating seamless transition and continuity during sales transactions.
15. RF-ID Login Control: The plugin offers login restriction and control using RF-ID (Wireless Access) technology, enhancing security and access control.
16. Customer Selection: Users can choose an existing customer with each sale, allowing for personalized service and tracking of customer transactions.
17. Prepayment Capability: The plugin supports prepayment functionality, allowing customers to make payments in advance and providing proof of payment at the checkout.
18. Handheld Computer (PDA) Support: The Retail POS system is compatible with handheld computers (PDAs), enabling sales transactions directly from the shop floor, enhancing mobility and customer service.
19. Customer Creation: The plugin allows for customer creation directly within the POS system, facilitating efficient customer onboarding and data management.
20. Customer Search by Postal Code: The POS system provides a search function to find customers based on their postal code and home number, streamlining customer identification.
21. Previous Sales/Product Search: Users can search for previous sales or products that were already purchased within the POS system, enabling quick access to customer history and previous transactions.
22. Barcode Selection: When multiple barcodes match a scan, the system presents a selection screen with additional product information, assisting in accurate product identification.
23. Change Display: The plugin continues to display the change amount even when the cash drawer is opened, ensuring visibility and transparency during cash transactions.

Please note that the mentioned features are specific to the Retail POS plugin within osFinancials. The plugin provides a comprehensive set of functionalities to meet the specific requirements of retail businesses, streamline sales processes, and enhance customer service.

HorecaPOS

HorecaPOS plugin - Video of the latest version(Dutch) Video of an older version(Dutch) - Shop -Licence : Annual subscription -

The Horeca POS plugin is a specialized checkout system designed specifically for catering establishments, such as restaurants, cafes, and bars. This plugin enhances the functionality of osFinancials by providing features tailored to the needs of the hospitality industry.

Here are some key features and functionalities of the Horeca POS plugin:

1. Handheld Computer Support: The plugin supports the use of handheld computers, which can speed up the process of serving customers and provide better control over the ordered products. Staff can take orders directly at the table using handheld devices.
2. Ticket Printing: After an order is recorded at a table, the plugin enables the printing of order tickets specific to the kitchen, bar, or the main point of sale (POS) computer. The printer specified for each product type will be used to print the order details.
3. Product Options: The plugin allows for the use of product options, such as specifying additional items like butter, mustard, or bread, to customize orders based on customer preferences or requirements.
4. Quick Search Function: Products can be easily selected through a quick search function based on the starting letter of the product name, making it efficient to locate and add items to the order.
5. Visual Product Selection: The plugin offers an icon-based interface that allows users to navigate through product groups and select products using visual representations. This can be particularly useful for quick and intuitive selection, especially in high-pressure environments.
6. Floor Plan Management: With the floor plan feature, the plugin enables the management of tables and seating arrangements. Users can indicate which tables are in use and how many place settings are occupied. Tables can be split or merged as needed, and the total order can be split into separate bills with the press of a button.
7. Hold Orders: After closing the active screen, orders can be placed on hold, allowing flexibility and the ability to manage multiple orders simultaneously.

The Horeca POS plugin is available for purchase with a support contract, and the multi-user plugin is provided for free. Upon payment, users will receive an unlocking code via email to activate the purchased plugin.

HorecaPOS addition quantity on hand adjustment

- *Manual* - *Shop* - Annual subscription - This plugin is available as part of an annual subscription plan, providing continuous access to the quantity on hand adjustment functionality.

This plugin provides functionality for employees to manually adjust the quantity on hand for specific items in the HorecaPOS system. This plugin is designed to streamline inventory management processes in the hospitality industry, allowing for accurate tracking of stock levels.

Here are the key features and details of the HorecaPOS addition quantity on hand adjustment plugin:

1. Manual Quantity Adjustment: The plugin enables employees to manually adjust the quantity on hand for specific items within the HorecaPOS system. This adjustment can be made based on actual stock counts or inventory movements.
2. Shop-Level Functionality: The plugin operates at the shop or location level, allowing adjustments to be made specifically for the inventory of that particular shop or location.
3. Use Cases: The plugin is particularly useful for situations where employees need to update the quantity on hand for specific items. For example, it can be used when items are taken out of the freezer, prepared for cooking, or made available for immediate use.

By utilising the HorecaPOS addition quantity on hand adjustment plugin, businesses in the hospitality industry can ensure accurate inventory management, avoid stockouts or overstocking, and maintain control over their stock levels. The plugin enhances the functionality of the HorecaPOS system by providing a streamlined process for manual adjustments to the quantity on hand for specific items.

Localisation-Batches-Serials

Localisation-Batches-Serials - Manual - Shop - Licence: Once-off

Documentation : Help documentation

Translations : Outstanding

Efficiently manage your product inventory with our Localisation-Batches-Serials Plugin. With a one-time licence, this plugin enables you to track the location, batches, or serial numbers of your stock items when processing documents such as purchases and invoices.

Key Features:

- Track product location, batches, or serial numbers

- Enhance inventory management during document processing
- Ideal for maintaining accurate records of stock items

Reports: Access several reports under Reports → Plugins → Locations-Batches-Serials, including:

- On hand: Lists serials or batches available for sale to customers.
- Stock movement: Lists serials or batches purchased from suppliers and sold to customers.
- Bought from supplier: Lists serials or batches purchased from suppliers.
- Sold to customer: Lists serials or batches sold to customers.
- Outdated batch: Lists serials or batches that are still on hand but past the maximum sales date.

This plugin provides comprehensive inventory tracking and management capabilities within the osFinancials5/TurboCASH5 software, ensuring efficient control over your stock items.

Quick Order

Quick Order - Manual - Shop - Licence: Once-off

Translations : Translations outstanding

Documentation : Help documentation

Translations : Outstanding

Simplify your product ordering process with our "*Quick Order*" plugin. This plugin offers a quick and convenient method for ordering products from your PC or using a handheld PC or smart phone (through Remote Desktop / Terminal Services or RDP).

- You walk with a handheld through your warehouse, and scan or selected the product to order while standing next to the shelf.
- You see immediately actual stock numbers so that a good decision of the quantity to order can be made.
- After pressing a button it creates an order with the specified numbers.
- After which only a few clicks of the mouse will break down the order by vendor.

Optimize your ordering workflow with the "*Quick Order*" plugin, providing you with a seamless and efficient solution for managing your product orders.

Stock check / Stock correction plugin

Stock check / Stock correction - Manual - Shop - Licence: Once-off

Translations : Translations outstanding

Documentation : Help documentation

Translations : Outstanding

This "*Stock correction*" plugin allows users to perform inventory counts conveniently from various devices such as PCs, handheld PCs, or smartphones. This can be done either through Remote Desktop (RDP) or Terminal Services.

Upon pressing a Generate document button, the plugin automatically generates a credit note with the incorrect numbers. This feature helps in documenting discrepancies in stock counts. After the credit note is generated, the plugin proceeds to correct the stock numbers based on the inventory count performed. This ensures that the inventory records are accurate and up to date.

New Android Stock Count.

The "*New Android Stock Count*" at an extra cost of 200,00 euros, excluding tax, allows users to connect to the plugin via their local network using an Android device. The Android version of the plugin supports barcode scanning functionality. Users can use a Bluetooth-enabled barcode scanner to scan barcodes of the stock items, which facilitates faster and more accurate stock counting.

Serials-Batches-Location plugin

Serials-Batches-Location plugin - Manual - Shop - Licence : Once-off -

Added the Serials and Batches to document layout files and 2 reports (i.e. On hand and Stock movement report).

Translations : Translations outstanding

The "*Serials-Batches-Location*" plugin in osFinancials5/TurboCASH5 appears to be a tool designed to manage and track inventory, specifically serial numbers, batches, and locations. *Here's a summary of the key features and steps to activate and use this plugin:*

Features:

1. Serial : Allows for tracking individual serial numbers, suitable for items like phones or computers. You can track manufacturing dates or production dates and sell by dates or expiry dates.
2. Batch/Location : Enter batch numbers and quantities and have the possibility to move between locations. You can track manufacturing dates or production dates and sell by dates or expiry dates.
3. Location : Just location management. Focuses on managing item locations in your shop, store, or warehouse. You can add locations (e.g., bin, aisle number, row) where you store stock items if needed.

Activate in Stock Items:

- In the Stock items section, a new tab called "*Location-Serials-Batches*" is added for each stock item.
- By default, this feature is set to "Off" for all stock items.
- You can activate it for specific items and choose one of the three tracking types: Serial, Batch/Location, or Location.

Processing Documents:

- For purchases, you can enter new batches or serials after selecting the product. The system automatically updates the quantities when you enter serial numbers. Similar functionality is available for supplier returns.
- For sales invoices, you can select from the list of locations, serials, and batches of the selected product. Similar functionality is available for credit notes.

Printing Documents:

- Serial numbers or batch numbers will appear on delivery notes, invoices, credit notes, delivery notes, purchases, and supplier returns.

Search for Serial Numbers:

- You can search for serial numbers using the Search function on the Default ribbon.
- Enter the serial number or other criteria in the "*Search for*" field.
- You can search for documents or stock items matching your criteria.

Reports:

- There are several reports available under Reports → Plugins → Locations-Batches-Serials, including:
    - On hand: Lists serials or batches available to sell to customers.
    - Stock movement: Lists serials or batches purchased from suppliers and sold to customers.

- Bought from supplier: Lists serials or batches purchased from suppliers.
- Sold to customer: Lists serials or batches sold to customers.
- Outdated batch: Lists serials or batches that are still on hand but past the maximum sales date.

This plugin seems to provide comprehensive inventory tracking and management capabilities within the osFinancials or TurboCASH software.

Introduction

The "*Serials-Batches-Location*" plugin allows you to purchase and sell products (stock items) and keep track of serial numbers, batches and locations.

In addition to serials, batches and locations, you may keep track of a manufacturing and sell by date.

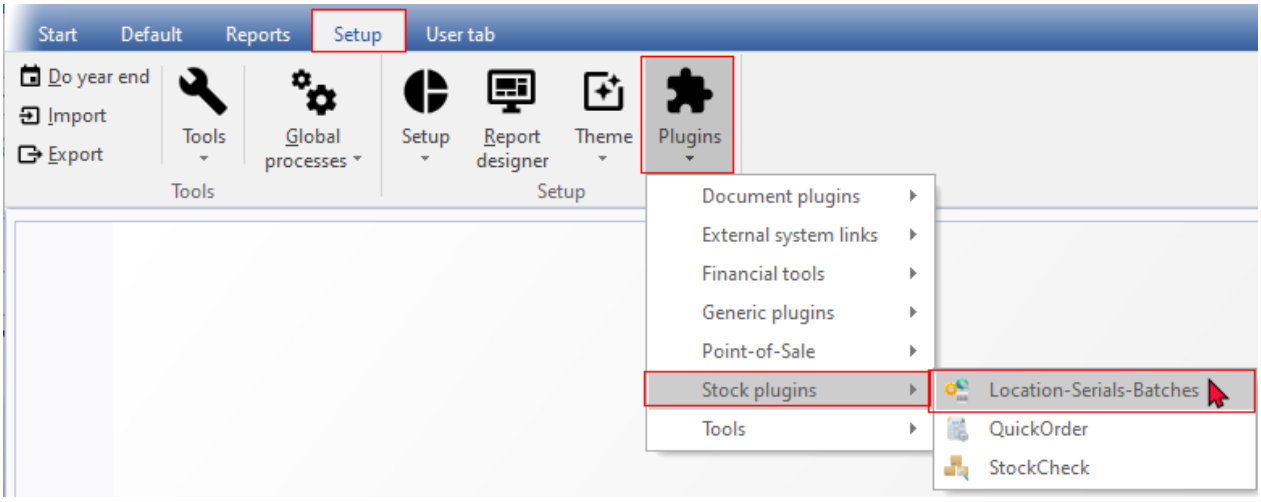
You can select 3 different types of tracking.

1. Serial : Allows for tracking individual serial numbers, suitable for items like phones or computers. You can track manufacturing dates or production dates and sell by dates or expiry dates.
2. Batch/Location : Enter batch numbers and quantities and have the possibility to move between locations. You can track manufacturing dates or production dates and sell by dates or expiry dates.
3. Location : Just location management. Focuses on managing item locations in your shop, store, or warehouse. You can add locations (e.g., bin, aisle number, row) where you store stock items if needed.

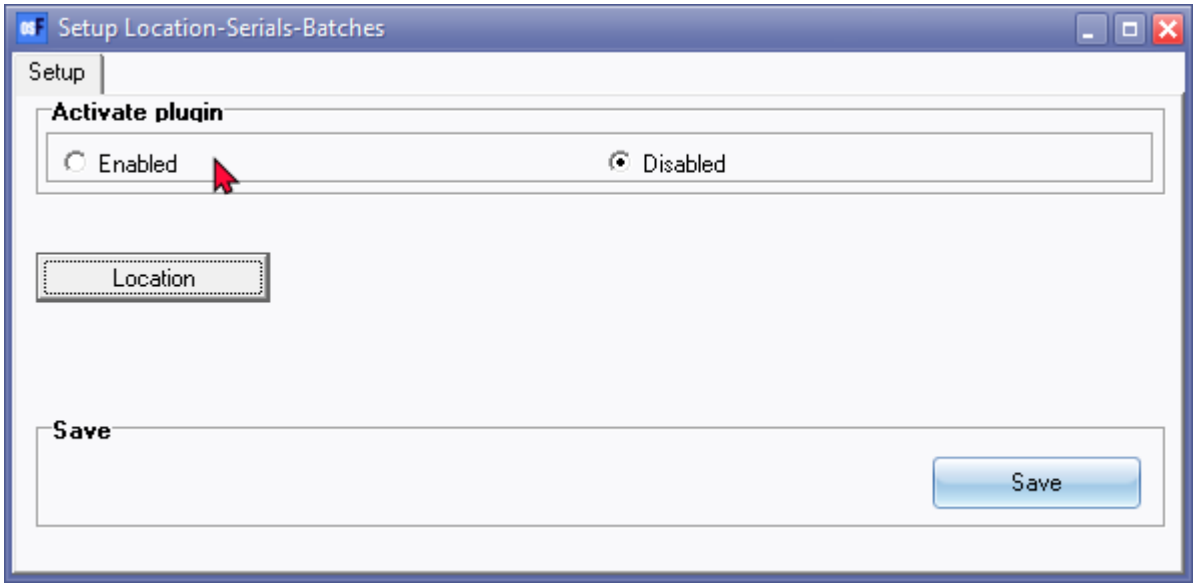
Activation

In osFinancials5/TurboCASH5:

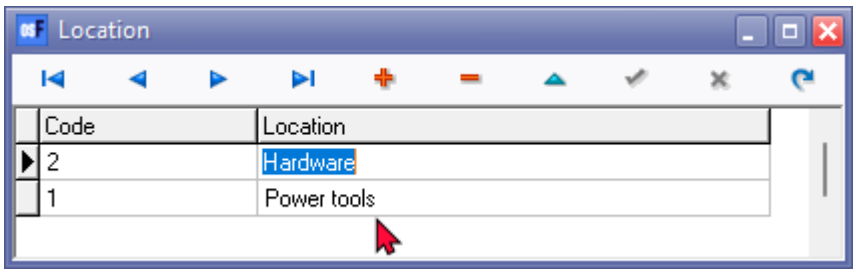
Go to the Setup ribbon tab, select Plugins → Stock plugins → Location-Serials-Batches . If this plugin is not listed under Plugins → Stock plugins, activate it via Tools → Activate plugins.



You will see the setup screen for the plugin : Set Activate to on and press Save.



You may add Locations (Bin, Isle number row) as the place where you keep the stock items in your shop, store, warehouse, if necessary.

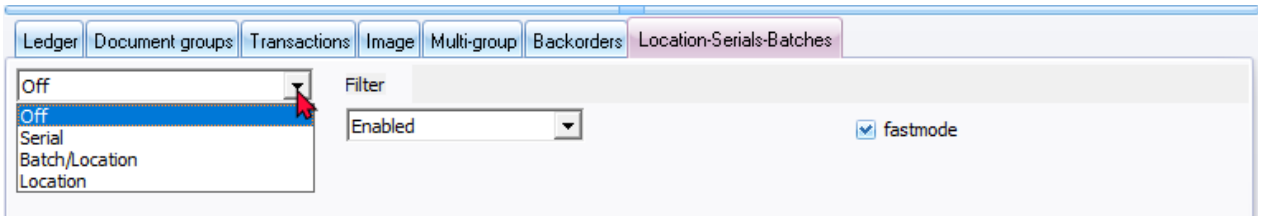


If locations were added, remember to click on the Save button.

Close the Set of Books or restart osFinancials or TurboCASH!

Activate in Stock items - Location-Batches-Serial tab

Go to Stock items (on the Default ribbon tab). If you select any stock item, a new tab "*Location-Serials-Batches*" is added.



By default, the "*Location-Serials-Batches*" is set to Off (not activated) for all stock items.

You can select 3 different types of tracking.

1. Serial : Allows for tracking individual serial numbers, suitable for items like phones or computers. You can track manufacturing dates or production dates and sell by dates or expiry dates.

2. Batch/Location : Enter batch numbers and quantities and have the possibility to move between

locations. You can track manufacturing dates or production dates and sell by dates or expiry dates.

3. Location : Just location management. Focuses on managing item locations in your shop, store, or warehouse. You can add locations (e.g., bin, aisle number, row) where you store stock items if needed.

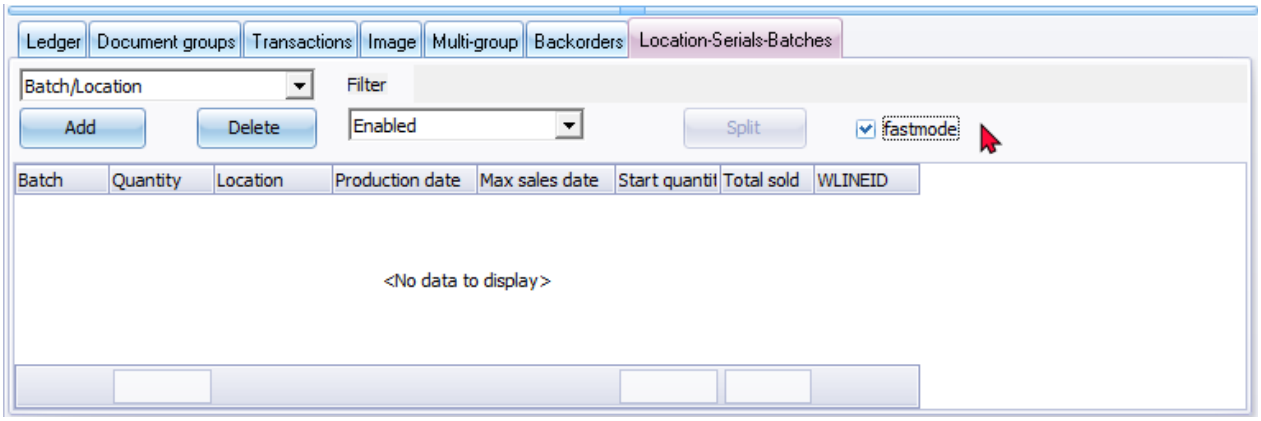
Press Add to add a new record to enter products you already have like a start position. Do not enter products you still are going to purchase and enter in documents.

Filter - Once purchase documents and sales documents have been processed, the options is as follows:

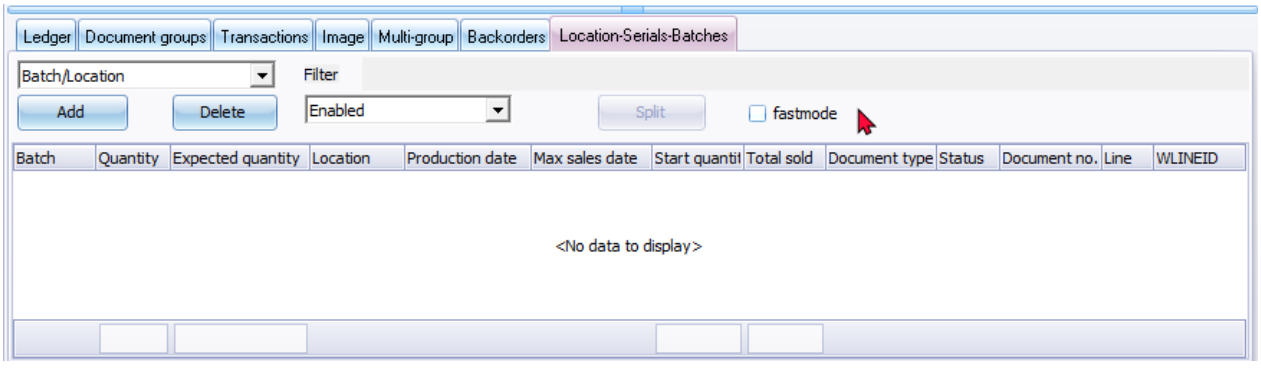
- All: This will list all the available Serials, Batches/Locations or Locations which is Enabled (available for selling) as well as Disabled (already sold).
- Enabled: This will list the available Serials, Batches/Locations or Locations which is available for selling.This would usually be the processed purchase documents.
- Disabled: This will list the Serials, Batches/Locations or Locations which is already sold. This would usually be the processed sales documents. This would be listed in a RED font or row background colour.

Serial

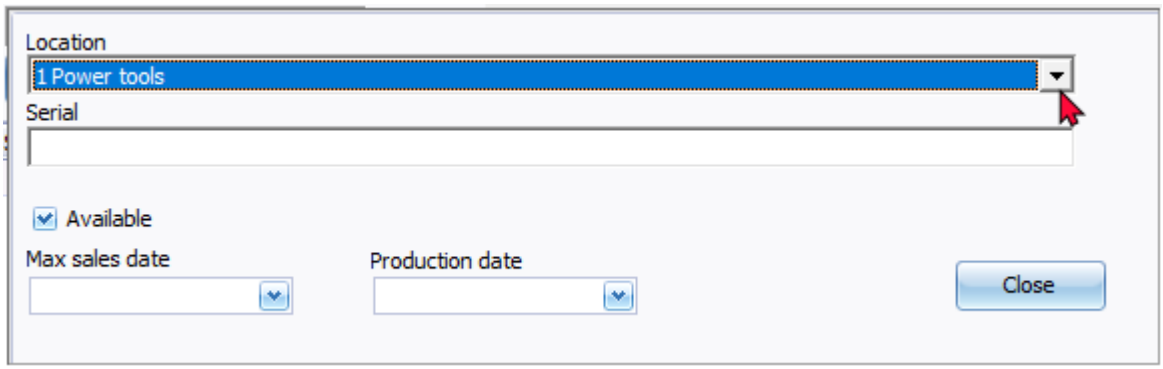
Serial option - Fast mode on (default view)



Serial option - Fast mode off



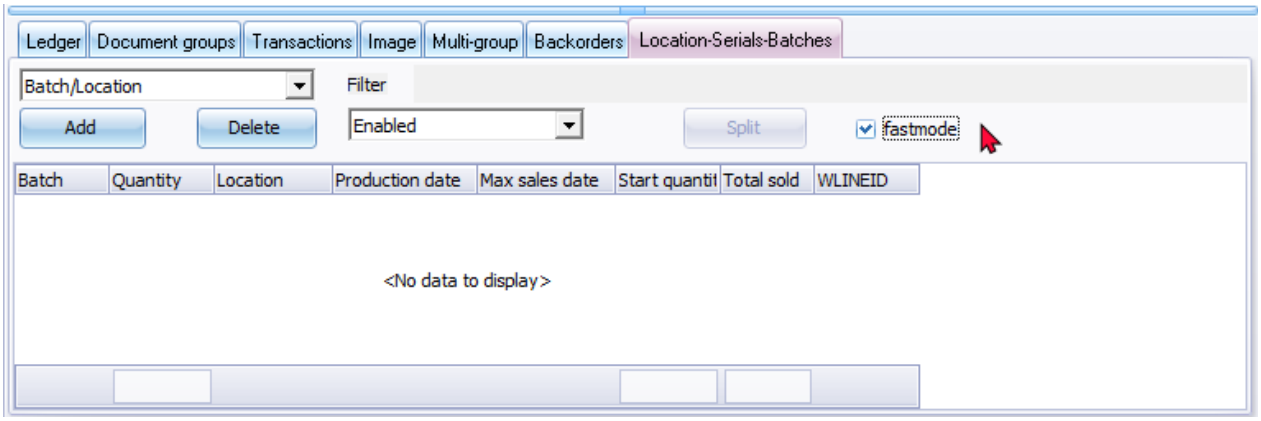
Serial option - Add



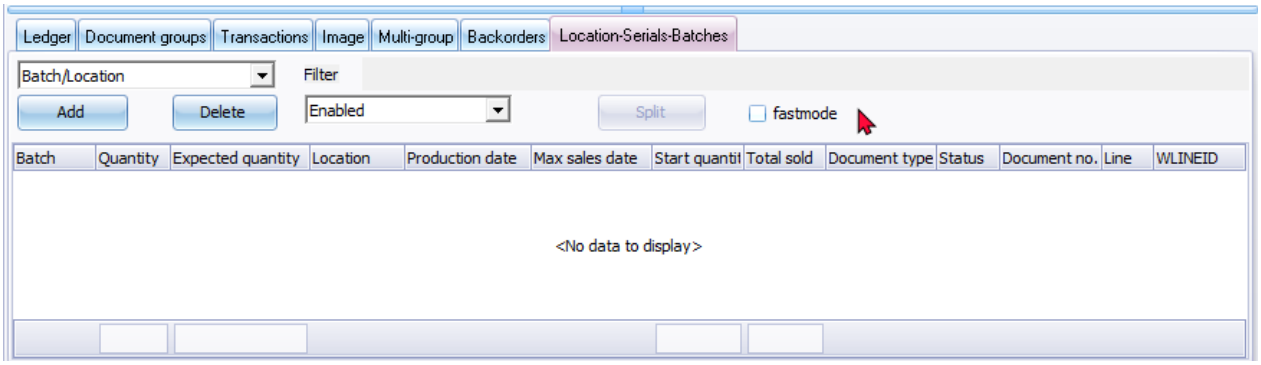
Batch / location

Also you can move and correct quantities here, if the need arises.

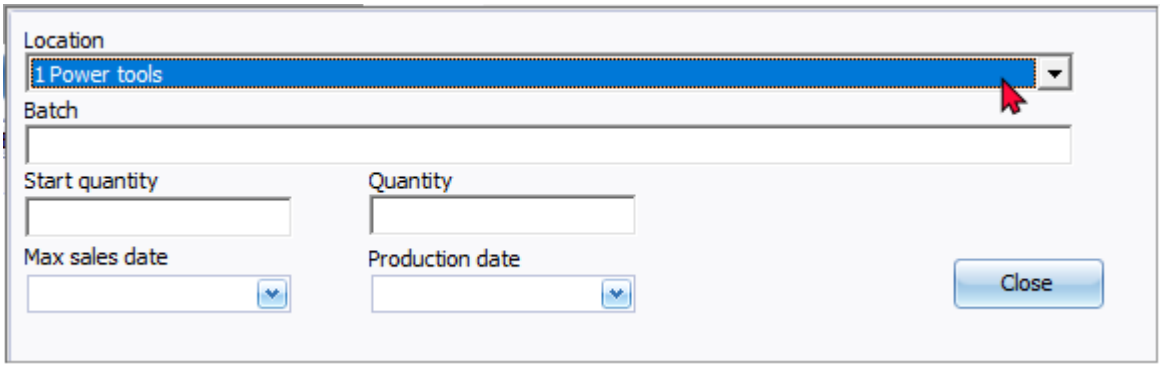
Batch / location option - Fast mode on (default view)



Batch / location - Fast mode off



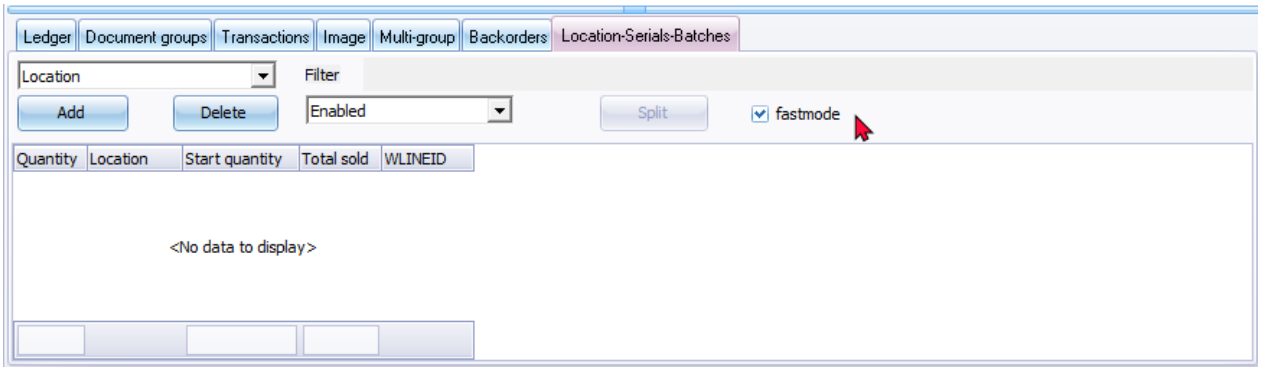
Batch / location - Add



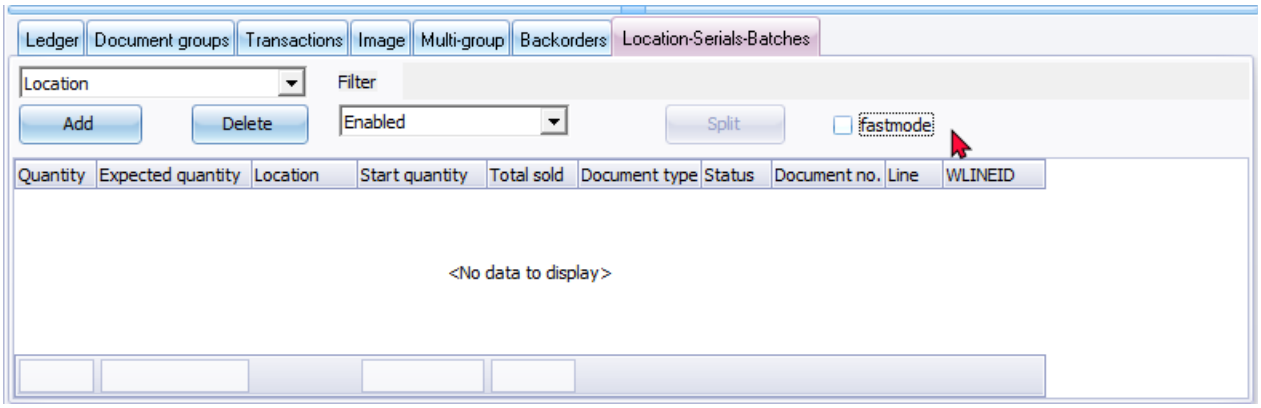
The quantities adjusted will reflect on then quantity on hand for the stock item after saving the stock item.

Location

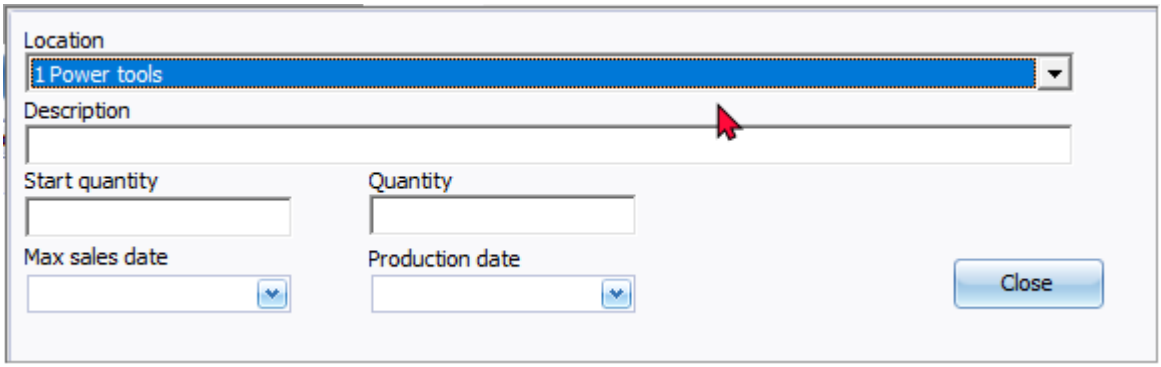
Location option - Fast mode on (default view)



Location - Fast mode off



Location - Add

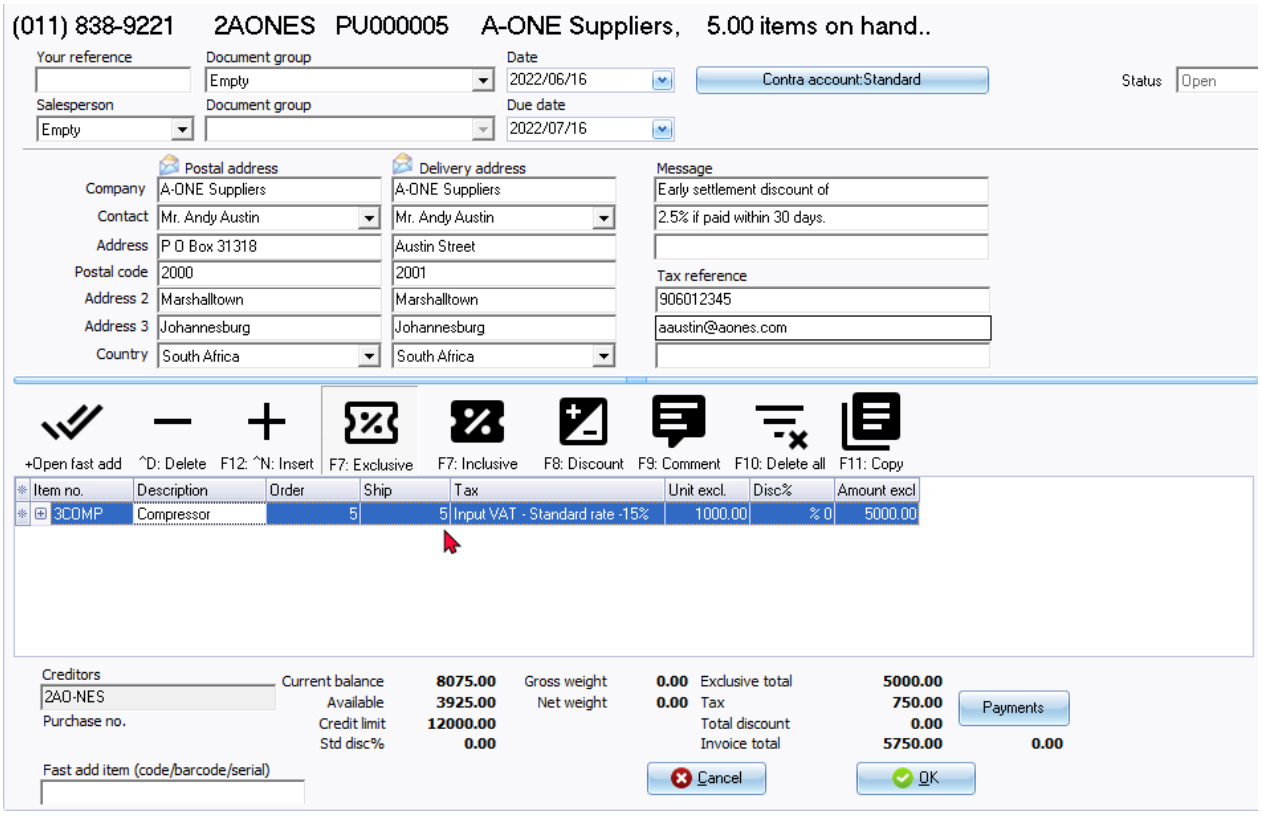


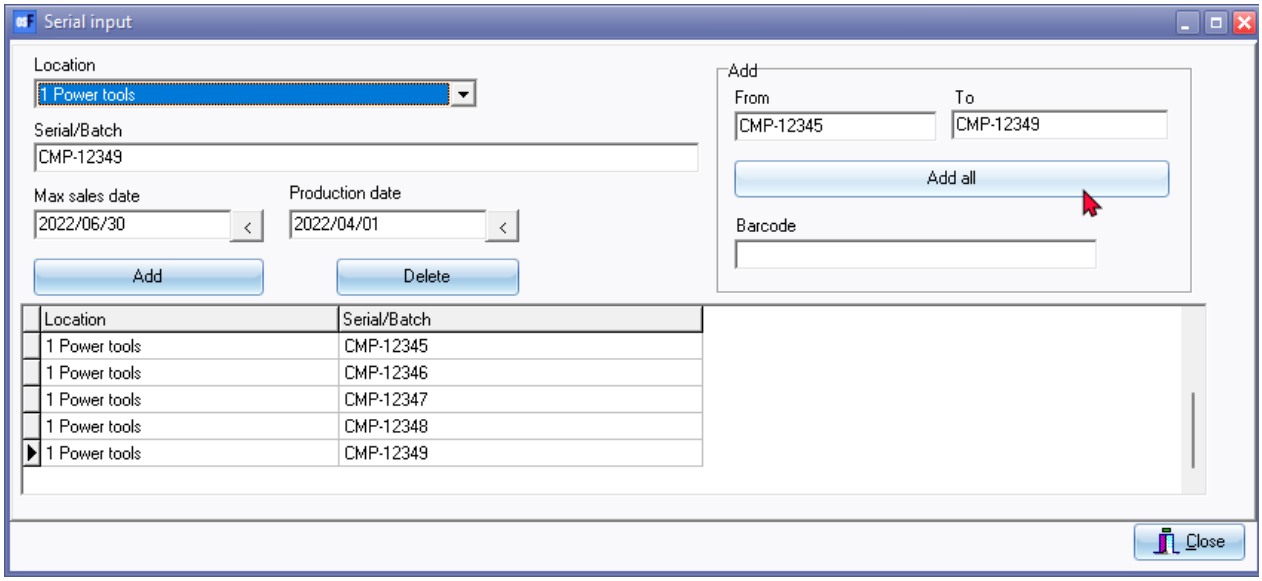
Processing documents

Purchases

If you do a purchase you can enter new batches or serials after selecting the product.

The number of items (products) with serial numbers will automatically update the quantities in the document lines field.





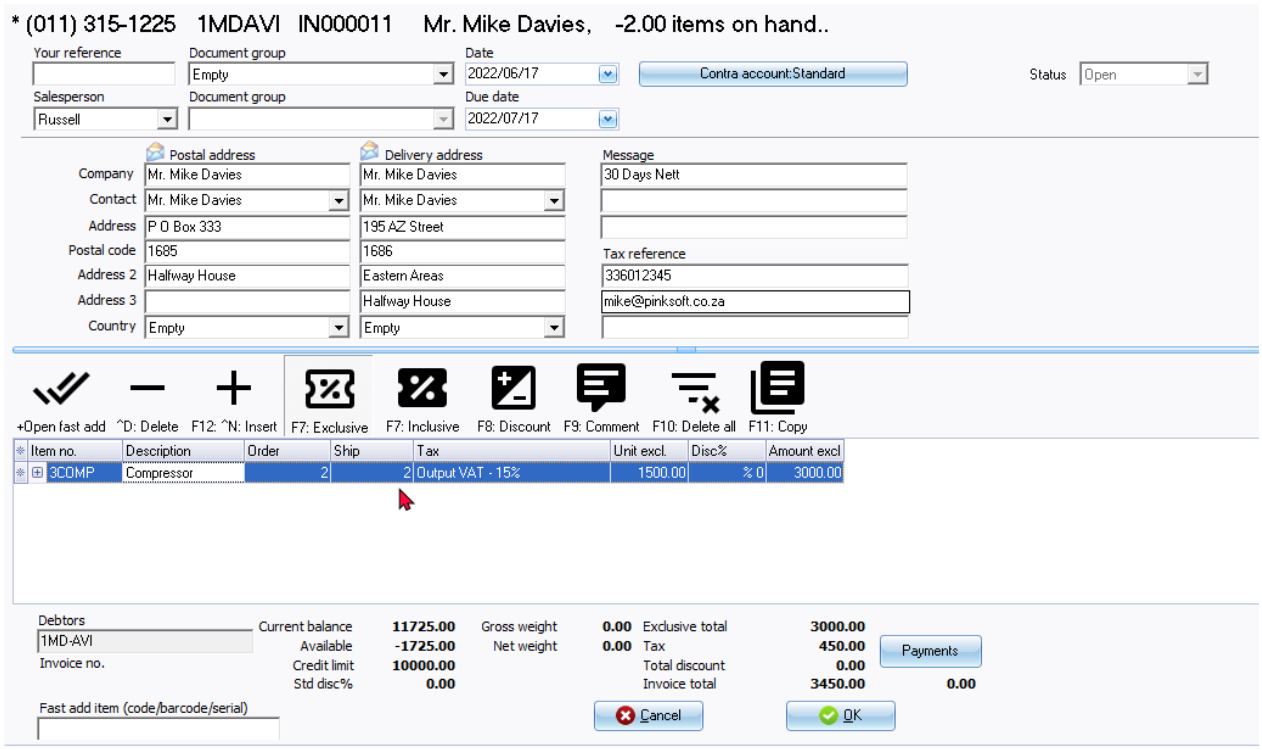
If you enter serial numbers in the From and To fields, and you click on the Add all button, a similar confirmation message will be displayed.

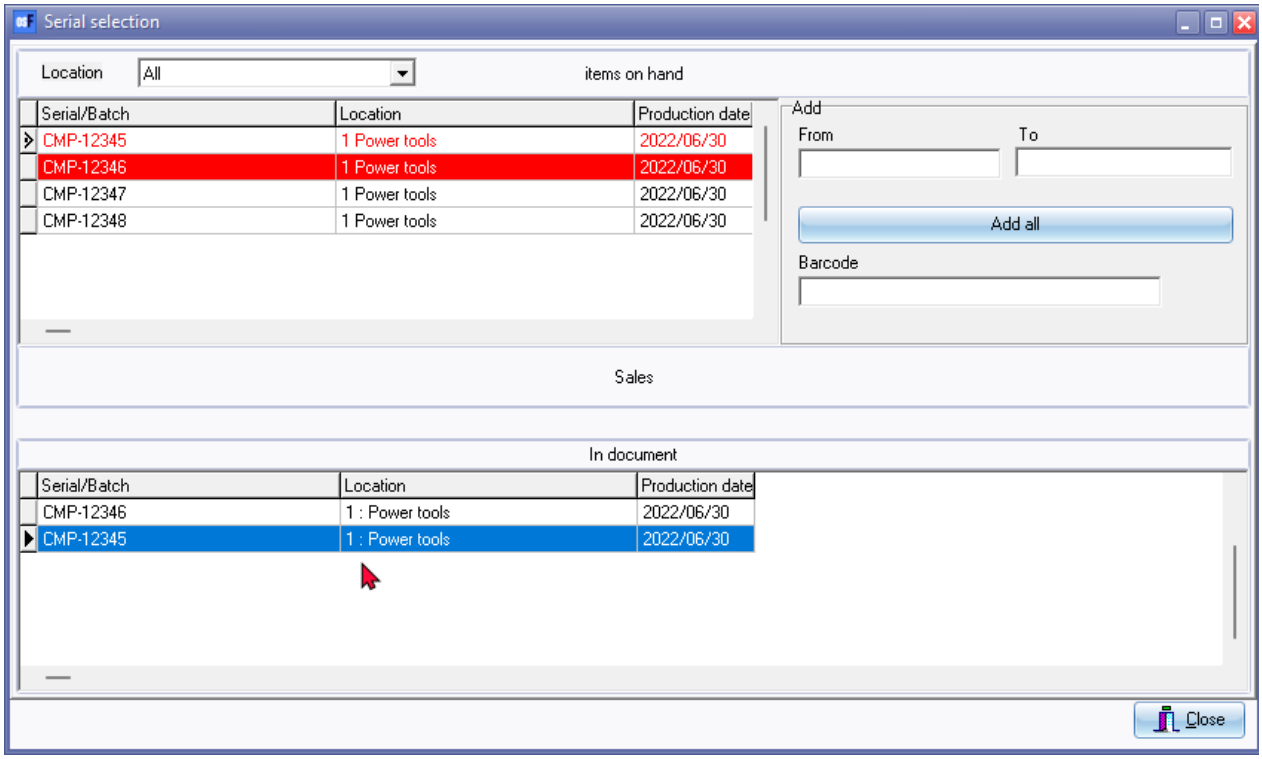
> "Continue action Add 5 Serial ?"

A similar lookup screen will be displayed for serial input when processing supplier returns.

Sales

At sales you can select from the list of locations serials and batches of the product selected.

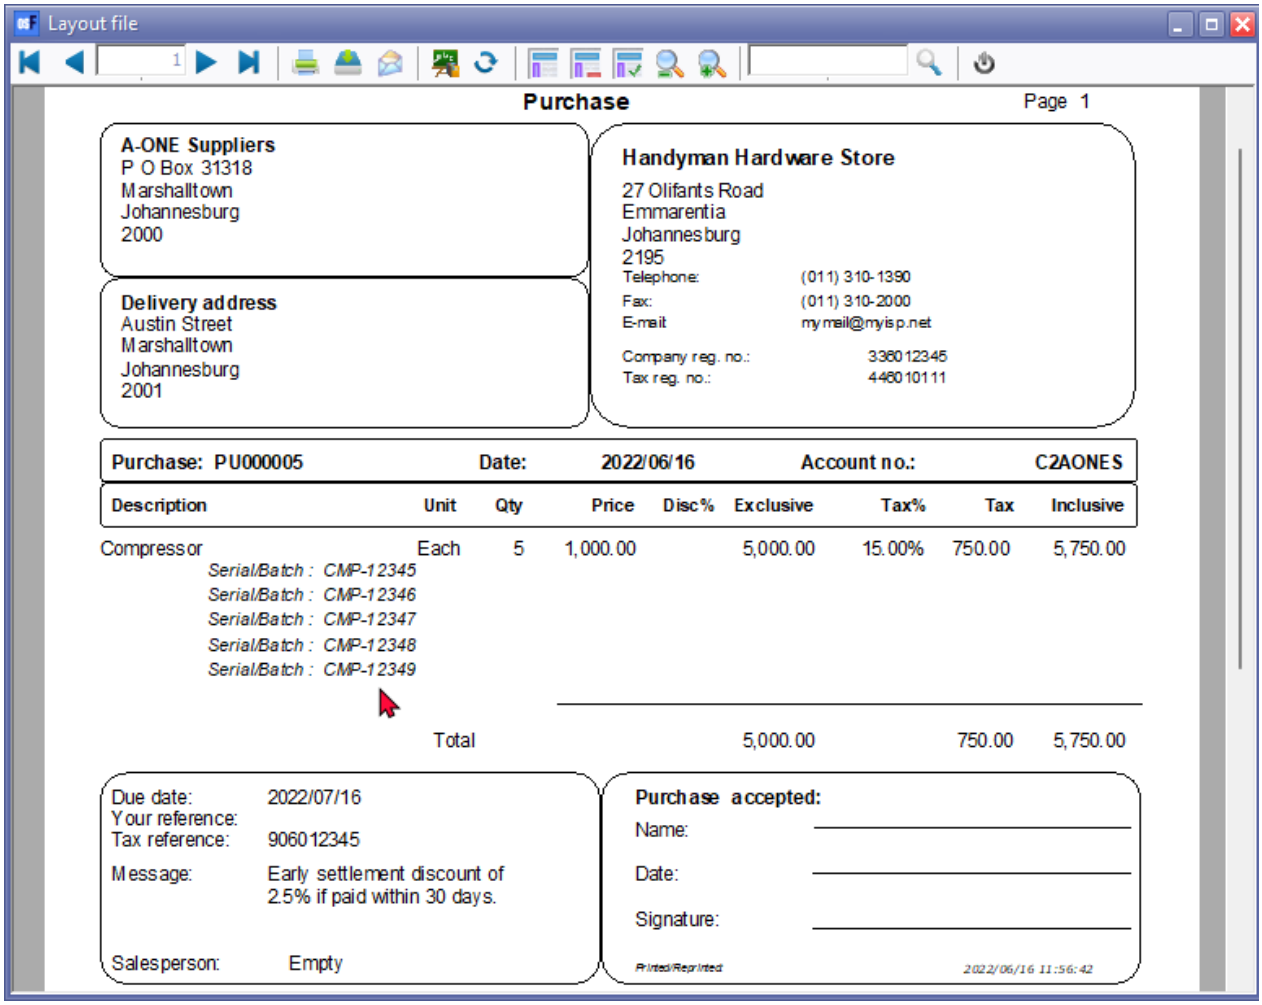




A similar lookup screen will be displayed for serial input when processing credit notes.

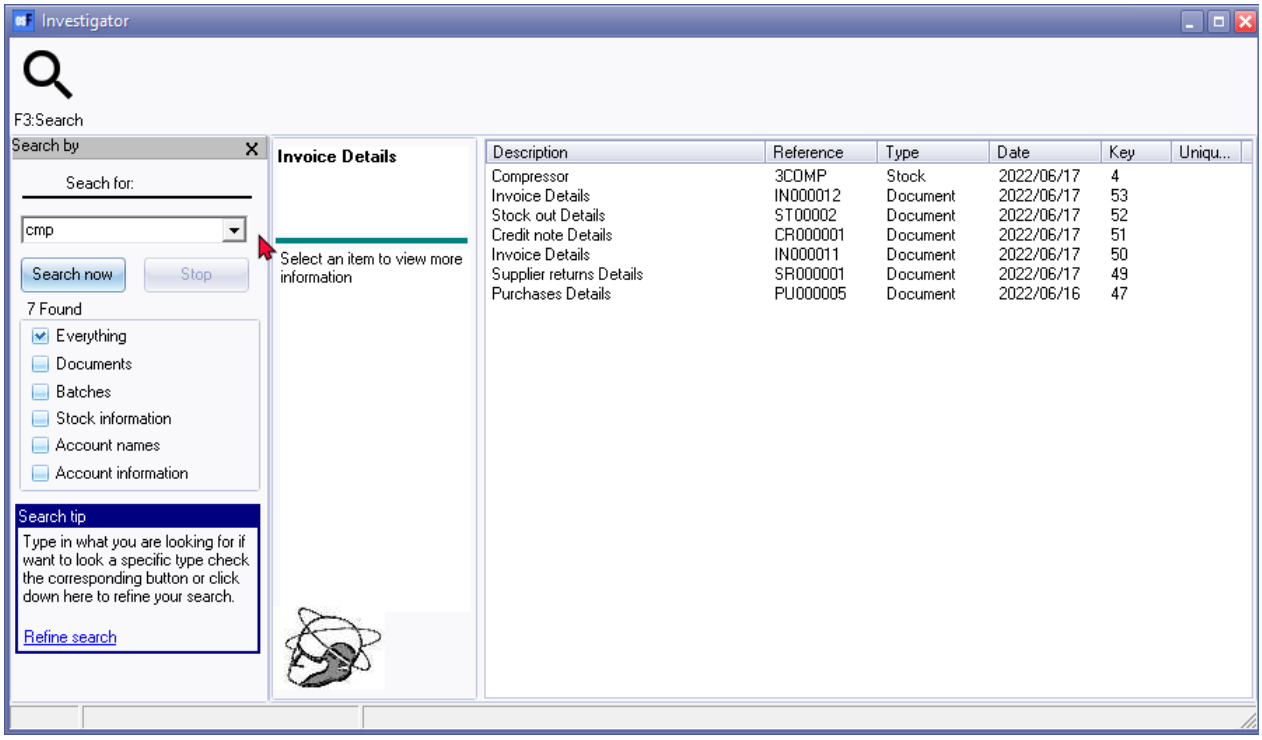
Printing documents

The serial numbers will print on Delivery notes, Invoices, Credit notes, Delivery notes, Purchases and Supplier returns.



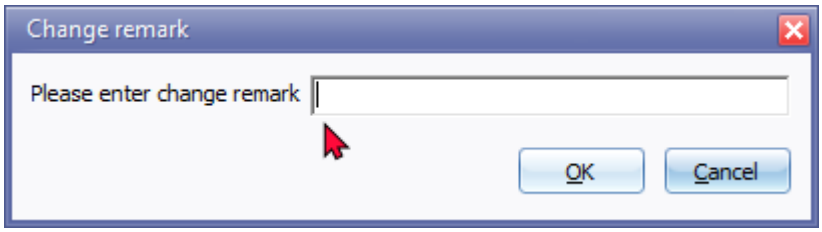
Search for Serial numbers

On the Default ribbon, select Search.



Enter the serial number, etc. in the Search for field. In this example, only the first (prefix) of the serial numbers, is entered in the "*Search for:*" field.

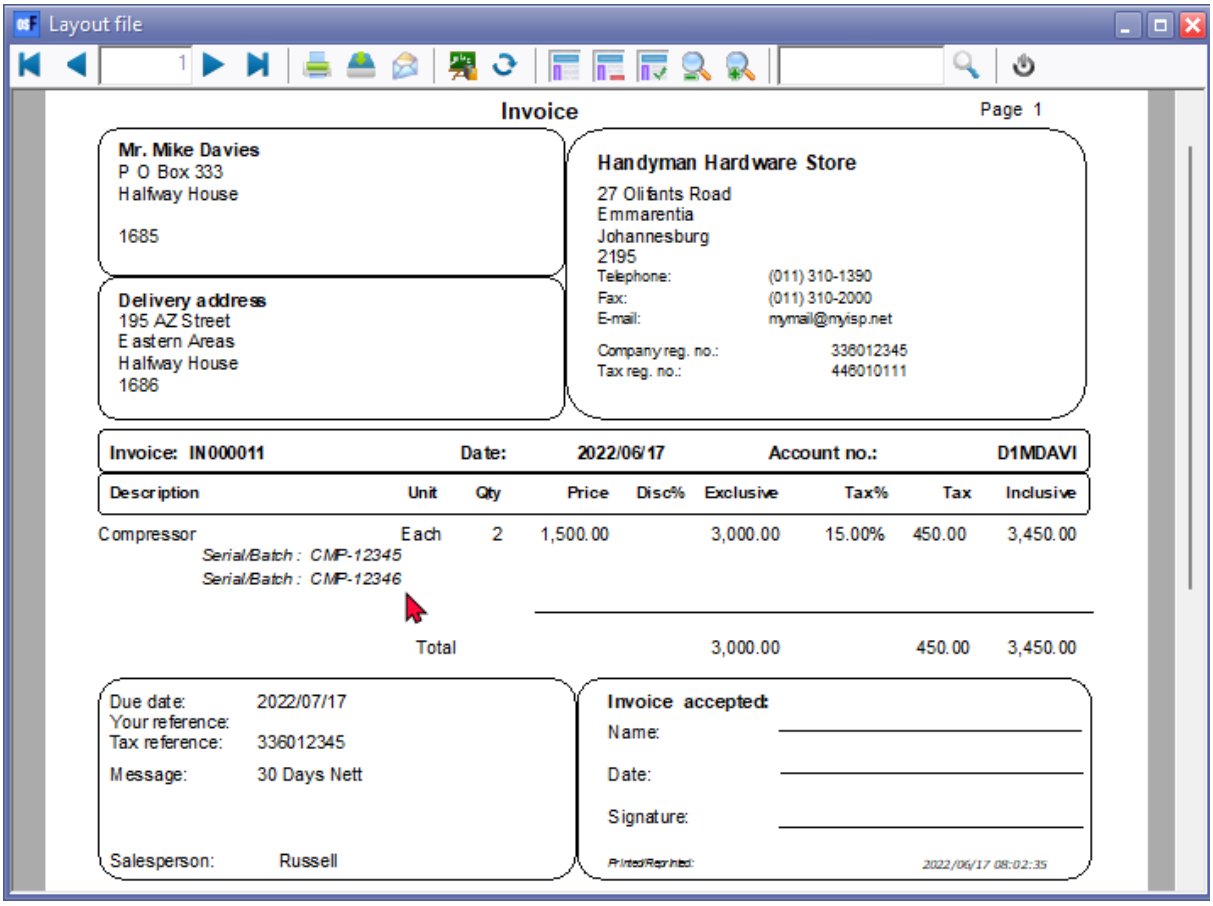
If a document number is prefixed with "*ST*" followed by 5 numeric digits, as in this example, "*ST00002*", it is a posted document ("*Stock*" document type) generated when you save a stock item as an "*Adjustment*" after a serial, batch or location quantities is changed.



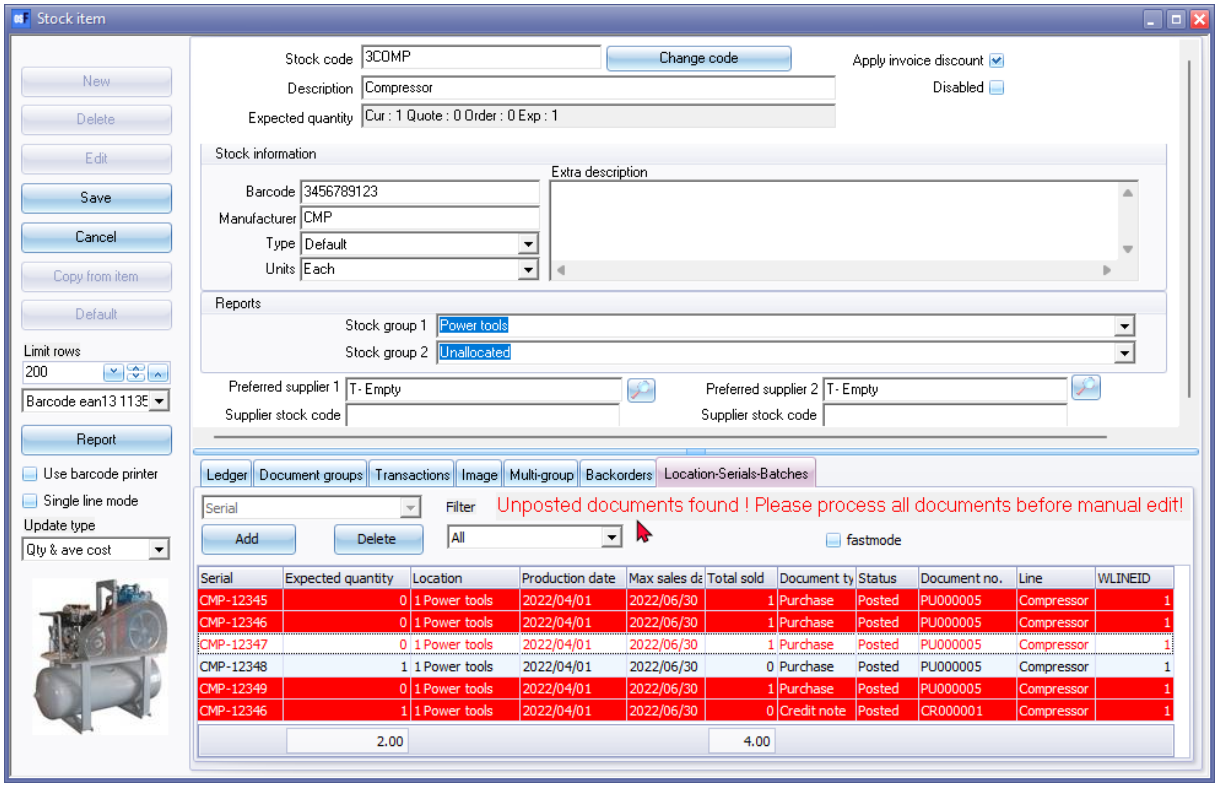
The description you have entered in the "*Change remark*" screen will be displayed in the "*Description*" column of the Document groups tab and in the "*Reference*" column of the Transactions tab.

Type

- Document - The document details will list all documents matching your search criteria. If you double-click on it (or right-click and select Show details option on the context menu), you may print the selected document.



- Stock - The Stock items matching your search criteria will be listed. If you double-click on it (or right-click and select Show details option on the context menu), the selected Stock item form will be opened.



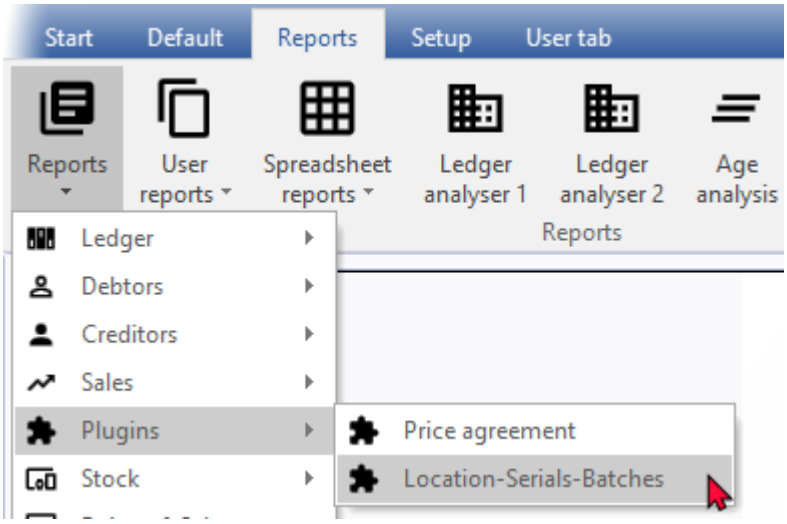
By default, only the "*Enabled*" items will be listed on the "*Location-Serials-Batches*" tab. You may click on the "*All*" filter option to view all items.

By default, only the "*fastmode*" is selected. To view more details, remove the tick in the "*fastmode*" tick box.

If any documents is not posted, these will be listed in the "*Search - Investigator*" search results.

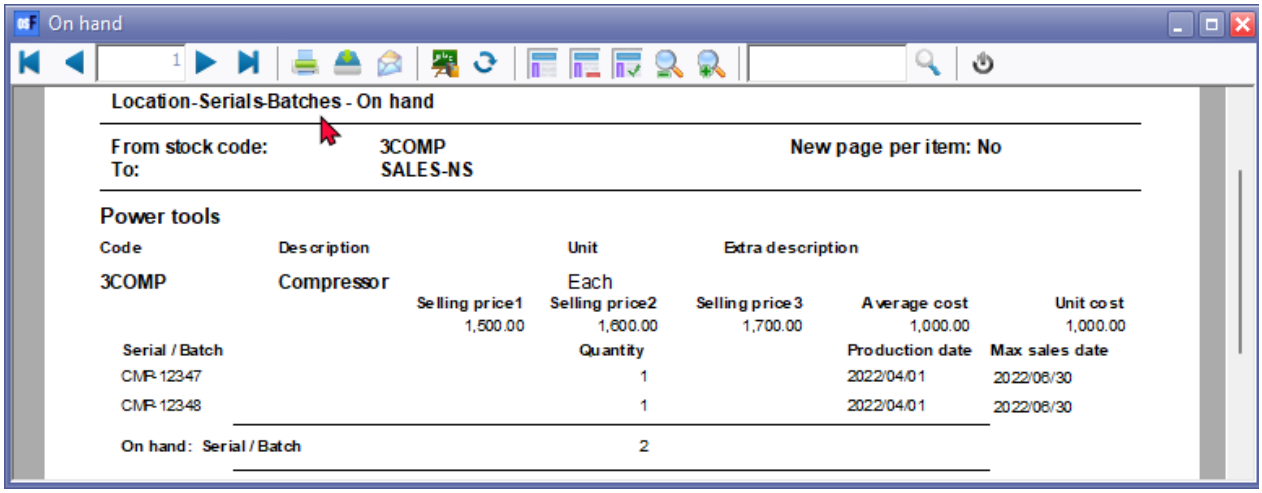
Reports

On the Reports ribbon, select Reports → Plugins → Locations-Batches-Serials.



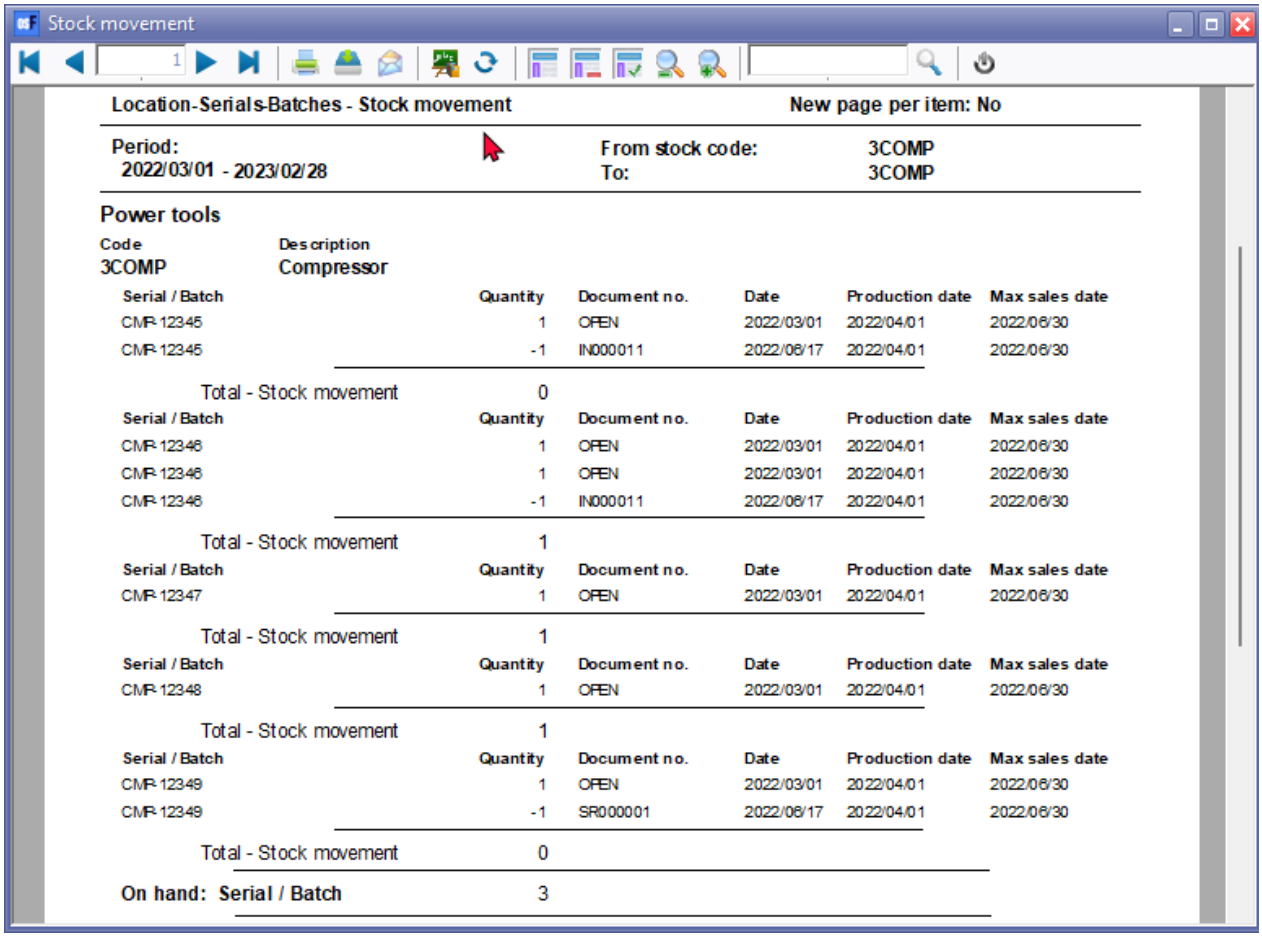
On hand report

The "*Location-Serials-Batches - On hand*" report lists those serials or batches which is still available to sell to debtors (customers / clients)..



Stock movement report

The "*Location-Serials-Batches - Stock Movement*" report is a valuable tool for tracking the movement of serials or batches of products in your inventory.



Specifically, this report lists the serials or batches that have been purchased from creditors (suppliers or vendors) and subsequently sold to debtors (customers or clients). Here's how this report can be helpful:

1. Inventory Tracking: The report provides a comprehensive overview of the movement of specific products, including their serials or batches. It allows you to see which items have been acquired from suppliers and then sold to customers.
2. Transaction History: You can view the complete transaction history for each product, including purchase dates, supplier information, sale dates, and customer details.
3. Stock Accuracy: By tracking the flow of products from suppliers to customers, you can ensure the accuracy of your inventory records. This helps prevent overstocking or under-stocking of items.
4. Quality Control: The report helps in quality control by allowing you to trace products back to their source. If there are issues with product quality or recalls, you can quickly identify affected items.
5. Order Fulfilment: It aids in order fulfilment by verifying that you have the necessary stock on hand to

meet customer demands.

6. Supplier Performance: You can assess the performance of your suppliers by tracking the movement of their products. This information can be useful for supplier evaluations and negotiations.
7. Customer Service: When customers inquire about specific products or orders, you can use the report to provide accurate and detailed information about the products they purchased.
8. Returns and Exchanges: If customers need to return or exchange products, you can use the report to identify the exact serials or batches that were sold to them, making the process more efficient.
9. Accounting and Financial Reporting: The report provides data that can be useful for accounting purposes, including tracking the cost of goods sold (COGS) and calculating profit margins.

Overall, the "*Location-Serials-Batches - Stock Movement*" report enhances your ability to manage inventory, track product history, and provide better customer service by offering detailed insights into the movement of products from suppliers to customers.

Warranty and Guarantee Management

the "*Serial Tracking*" feature is essential for keeping track of individual serial numbers for items like phones or computers. Here's why it's important and how it can support warranty and guarantee management:

Purchase and Supplier Returns:

- When you purchase products from suppliers, each item can have a unique serial number associated with it.
- Serial tracking allows you to record which specific items you received from suppliers and when.
- If you need to return products to the supplier for any reason, you can accurately identify and track the items using their serial numbers.

Sales and Customer Returns:

- When selling products to customers, you can associate a serial number with each item sold.
- This helps you keep a record of which product was sold to which customer and when.
- If customers need to return items due to warranty claims or defects, you can easily identify the specific product using its serial number.

Warranty and Guarantee Management:

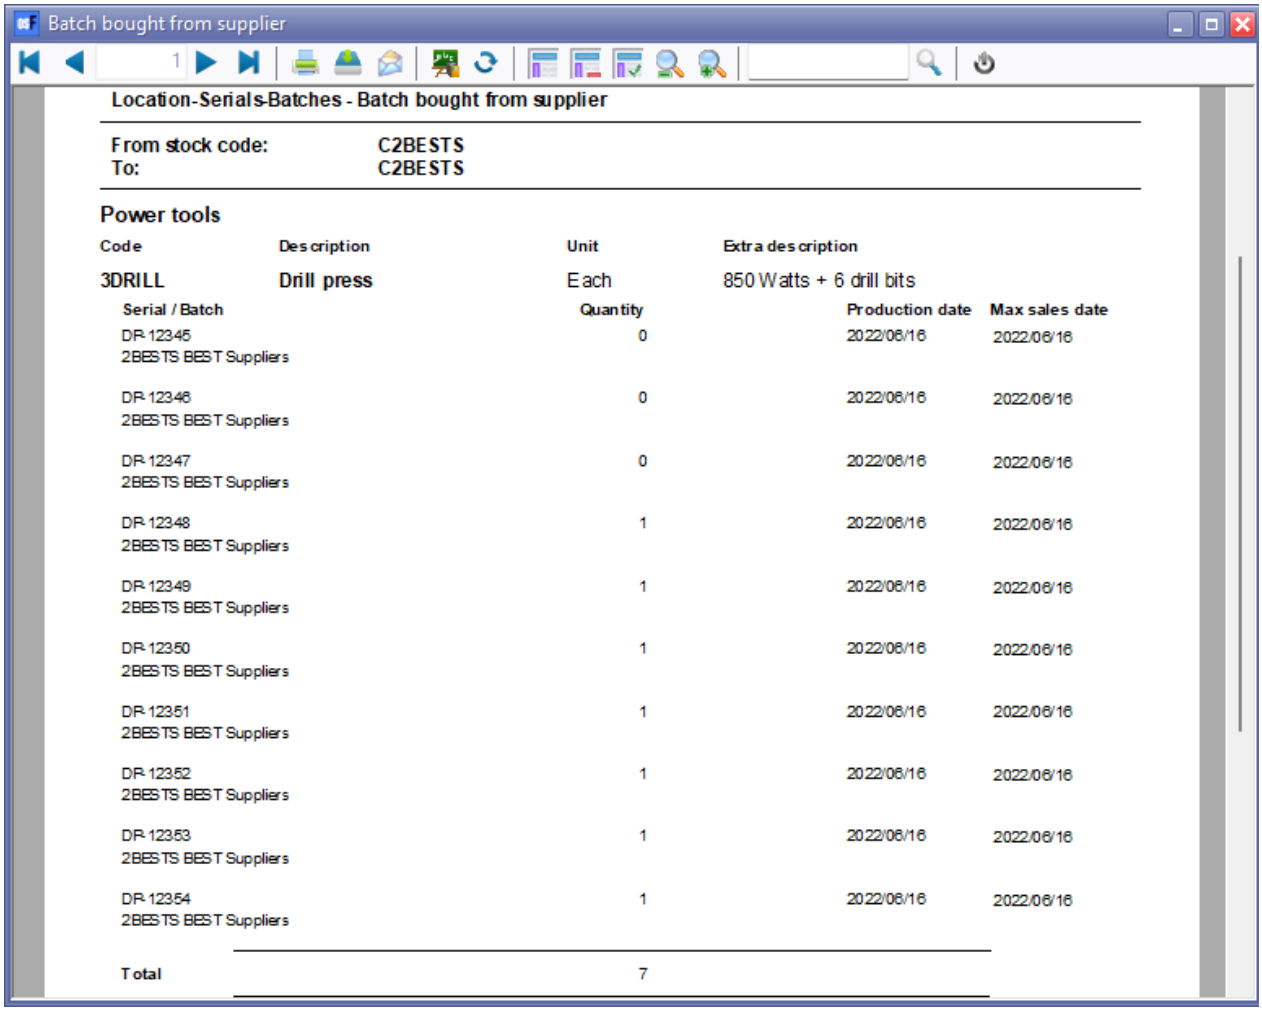
- Serial tracking is instrumental in managing warranties and guarantees effectively.
- You can associate warranty or guarantee information with each product based on its serial number.

- This includes details such as the warranty period, terms and conditions, and contact information for warranty support.
- When customers request warranty service or have issues with a product, you can quickly access the warranty details associated with the serial number and provide the necessary support.

By using the "Serial Tracking" feature, businesses can maintain a detailed and organized record of individual products throughout their life-cycle, from purchase to sale and potential returns. This not only enhances inventory management but also streamlines warranty and guarantee processes, improving customer satisfaction and operational efficiency.

Bought from supplier

The "*Location-Serials-Batches - Batch bought from supplier*" report lists those serials or batches which is purchased from creditors (suppliers / vendors).



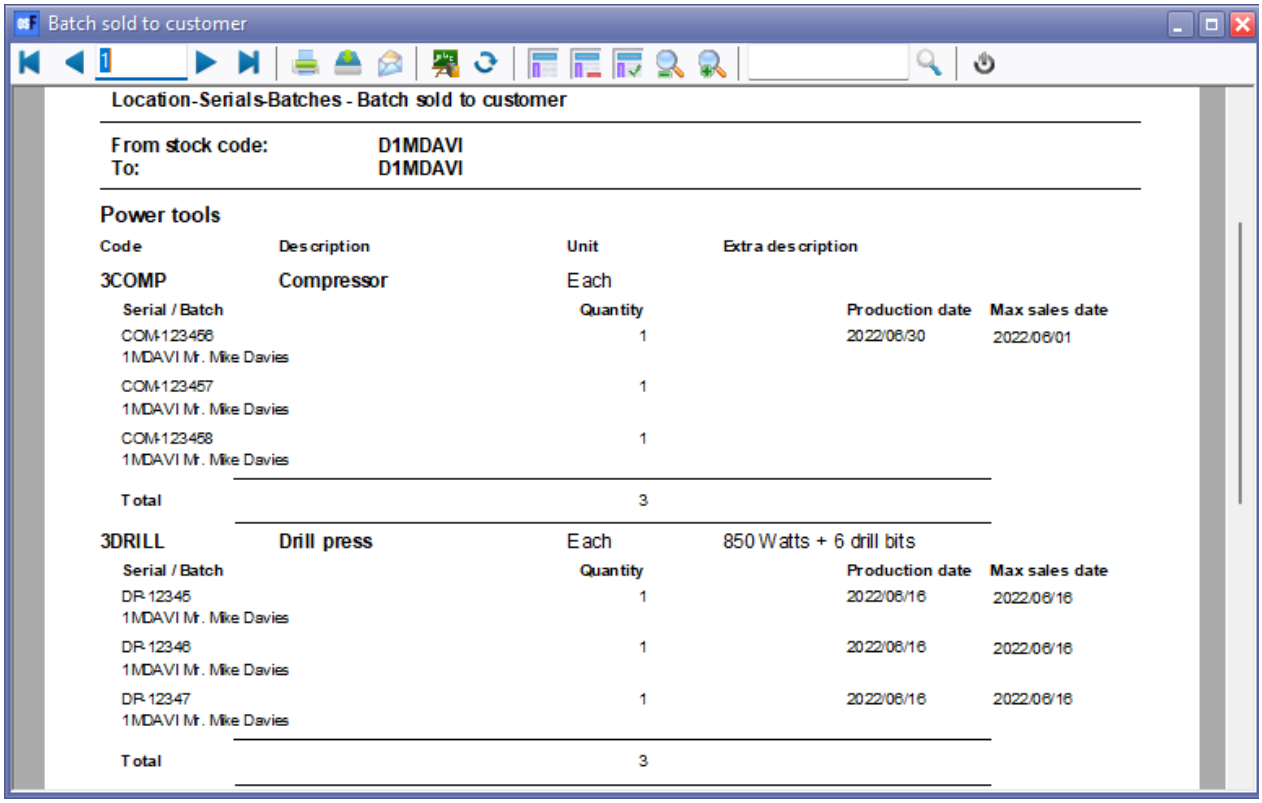
The "*Location-Serials-Batches - Batch Bought from Supplier*" report is a specific type of inventory report that lists the serials or batches of products that have been purchased from creditors (suppliers or vendors). This report serves several important purposes:

1. Purchase Tracking: It provides a detailed record of the batches or serials acquired from suppliers. This information helps in tracking the products you have received from different suppliers.
2. Supplier Relations: By maintaining a record of batches bought from suppliers, you can assess the performance and reliability of your suppliers. This data can be useful in supplier negotiations and evaluations.
3. Quality Control: The report helps in monitoring the quality of products received from suppliers. If there are issues with a specific batch or serial, you can identify it through this report.
4. Inventory Accuracy: It contributes to the accuracy of your inventory records. By knowing which batches were received from suppliers, you can manage your stock levels effectively.
5. Accounting and Cost Analysis: The report assists in cost analysis and financial reporting. You can calculate the cost of goods sold (COGS) by referencing the batches bought from suppliers, which is essential for accurate financial statements.
6. Product Traceability: If there are recalls or safety concerns related to specific batches of products, you can use this report to trace back to the source and identify affected items.
7. Reorder Management: It helps in identifying when specific batches need to be reordered from suppliers based on sales trends and inventory levels.
8. Documentation: When dealing with regulatory requirements or audits, having a clear record of batches bought from suppliers is essential for compliance and documentation purposes.

In summary, the "Location-Serials-Batches - Batch Bought from Supplier" report is a valuable tool for businesses that rely on batch or serial tracking to manage their inventory effectively, assess supplier performance, and maintain accurate financial records. It provides transparency and traceability in your supply chain processes.

Sold to customer

The "*Location-Serials-Batches - Batch sold to customer*" report lists those serials or batches which is sold to debtors (customers / clients).



The "*Location-Serials-Batches - Batch Sold to Customer*" report is a valuable inventory management tool that lists the serials or batches of products that have been sold to debtors, including customers or clients. This report offers several important benefits:

1. Sales Tracking: The report provides a comprehensive record of the batches or serials that have been sold to customers. This information helps you track the sales history of specific products.
2. Customer Service: When customers have inquiries about their purchased items, returns, or warranty claims, this report enables you to quickly and accurately identify the exact serials or batches associated with their transactions. It enhances customer service by providing detailed information.
3. Inventory Accuracy: It contributes to maintaining accurate inventory records. By knowing which batches have been sold, you can keep track of your remaining stock and plan for restocking when necessary.
4. Quality Control: The report helps in quality control by allowing you to trace products back to specific batches. If there are quality issues or recalls, you can identify affected items through this report.
5. Returns and Exchanges: When customers need to return or exchange products, you can use the report to verify which serials or batches were sold to them, streamlining the return process.
6. Warranty and Support: For products with warranties or guarantees, you can use the report to confirm warranty coverage for specific items based on their serials or batches.
7. Accounting and Financial Reporting : The report is useful for accounting purposes, including tracking

the revenue generated from the sale of specific batches and calculating profit margins.

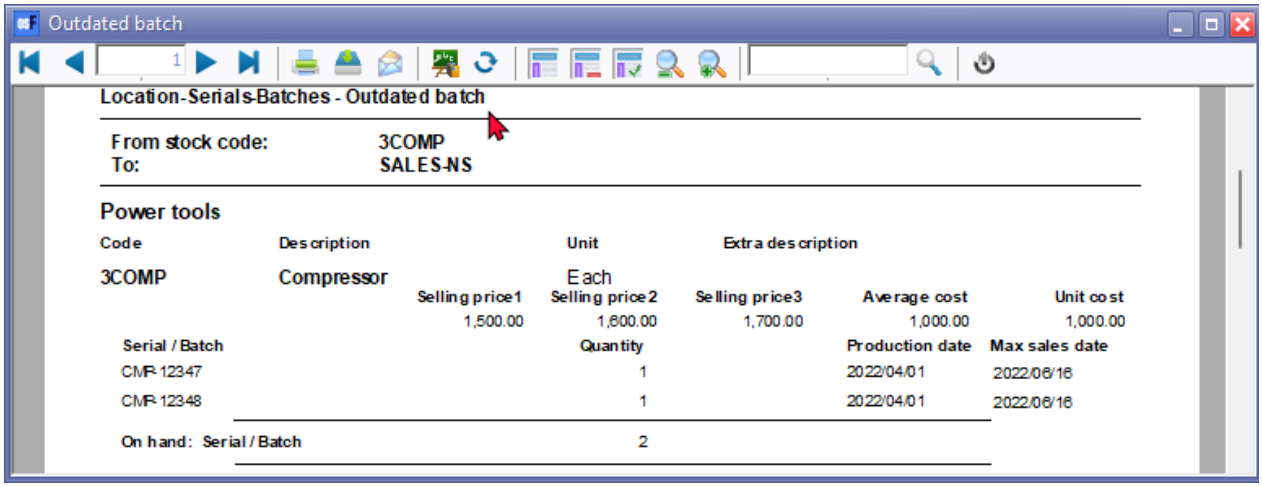
8. Product Traceability: If there are regulatory compliance requirements or safety concerns related to specific batches, this report helps you trace the products back to their source and identify affected items.

9. Marketing and Sales Analysis: By understanding which batches or serials are selling well, you can make informed decisions regarding marketing strategies and product promotions.

Overall, the "Location-Serials-Batches - Batch Sold to Customer" report enhances your ability to manage inventory, provide excellent customer service, ensure product quality, and meet regulatory requirements. It offers transparency and traceability in your sales processes and supports various aspects of your business operations.

Outdated batch

The "*Location-Serials-Batches - Outdated batch*" report lists only those serials or batches which is still on hand, but which is past the maximum sales date.



The "*Location-Serials-Batches - Outdated Batch*" report plays a crucial role in helping businesses manage expired items effectively. Here's how this report can be beneficial in managing expired items:

1. Identifying Expired Items:
    - The report identifies and lists all serials or batches that have passed their maximum sales date.
    - It provides a clear and concise overview of which products are no longer fit for sale due to expiration.
2. Preventing Sale of Expired Items:
    - By having a list of expired items at hand, businesses can prevent the accidental sale of

products that are past their sell-by or expiry dates.

- This helps maintain product quality and ensures that customers receive fresh and safe products.

3. Reducing Wastage:
   - Businesses can take proactive measures to address expired items, such as removing them from shelves or disposing of them appropriately.
   - This reduces the risk of keeping expired products in inventory, which can lead to financial losses.
4. Inventory Management:
   - The report aids in efficient inventory management by highlighting items that need attention.
   - It allows businesses to make informed decisions regarding restocking, discounts, or disposal of expired items.
5. Compliance and Liability:
   - For items with legal or regulatory requirements, like food or pharmaceuticals, tracking expiration dates is essential to comply with safety standards.
   - Having an accurate record of expired items can also protect businesses from liability issues.
6. Customer Satisfaction:
   - Avoiding the sale of expired items enhances customer satisfaction and trust in your business.
   - It demonstrates your commitment to providing fresh and safe products to customers.
7. Cost Savings:
   - Efficiently managing expired items reduces financial losses associated with wastage.
   - Businesses can potentially plan better for purchasing and stocking items to minimize overstocking of perishable goods.

In summary, the "*Location-Serials-Batches - Outdated Batch*" report is a valuable tool for businesses to proactively manage and mitigate the risks associated with expired products. It supports compliance, reduces wastage, and ensures that customers receive quality goods, ultimately contributing to the overall success of the business.

Common practice - Specific steps to dispose of these items and to returns to suppliers

The specific steps for disposing of or returning expired items identified on the "*Location-Serials-Batches -*

Outdated Batch" report may vary depending on your business processes, the type of products involved, and any applicable regulations or agreements with suppliers. However, here are some common practices that you can consider when dealing with expired items:

For Disposal:

1. Separation: Physically separate expired items from non-expired inventory to avoid accidental sale.
2. Record: Document the details of the expired items, including their serial or batch numbers and quantities.
3. Dispose Properly: Dispose of the expired items according to local regulations and environmental guidelines. This may involve recycling, donating non-perishable items if possible, or disposing of perishables in an environmentally responsible manner.
4. Adjust Inventory: Update your inventory management system to reflect the disposal of expired items. This ensures accurate tracking of your remaining stock.
5. Review and Adjust: Analyse why these items expired. Adjust your inventory management practices or purchasing strategies to minimize future wastage.

For Returns to Suppliers:

1. Verification: Ensure that the items marked as expired are indeed within the warranty or return period specified by the supplier. Check your purchase records and supplier agreements.
2. Contact Supplier: Reach out to the supplier or vendor from whom you purchased the items. Inform them of the expired items and request return instructions.
3. Return Authorization: Obtain a return authorization or an RMA (Return Merchandise Authorization) from the supplier if required.
4. Packaging: Properly package the expired items for return. Include any required documentation, such as the RMA, along with a clear explanation of why the items are being returned.
5. Shipping: Arrange for the return shipment, following the supplier's preferred shipping method or instructions.
6. Tracking: Keep a record of the return shipment's tracking information for reference.
7. Credit or Replacement: Once the supplier receives and processes the returned items, they may offer a credit or replacement, depending on their policies and the condition of the items.
8. Inventory Update: Update your inventory management system to reflect the returned items and any credit received.

It's essential to have clear internal procedures for handling expired items and returns to suppliers.

Communication with suppliers is key, as their specific return policies and procedures may vary. Additionally, maintaining accurate records of these transactions is crucial for accountability and compliance.

Importance to check the expiry dates

Checking the expiry dates of products when receiving them from suppliers is a crucial part of effective inventory management, especially if your business deals with perishable goods or products with limited shelf life. Here are some key reasons why it's essential:

1. Quality Assurance: Verifying expiry dates ensures that the products you receive are fresh and safe for your customers. It helps maintain the quality and safety of the items you sell.
2. Minimize Waste: By being aware of expiry dates, you can avoid receiving products that are close to or have already passed their expiration date. This reduces the risk of inventory becoming obsolete or being wasted.
3. Compliance: Depending on your industry, there may be regulatory requirements related to handling and selling products within their specified shelf life. Compliance with these regulations is critical to avoid legal issues.
4. Customer Satisfaction: Customers expect to purchase products with reasonable shelf life. Selling expired items can lead to dissatisfied customers, returns, and damage to your business's reputation.
5. Inventory Turnover: Understanding expiry dates helps you manage your inventory turnover effectively. You can prioritize the sale of items that are closer to expiration to minimize the risk of unsold stock.

Managing Expiry Dates

To effectively manage expiry dates when receiving products from suppliers, consider the following practices:

1. Inspect Shipments: Inspect incoming shipments carefully and check the expiry dates on each product. Ensure that the products received have sufficient shelf life for your expected sales.
2. First-In-First-Out (FIFO): Implement a FIFO inventory system, where you sell the oldest items first. This ensures that products with shorter shelf lives are sold before newer ones.
3. Communication with Suppliers: Maintain open communication with your suppliers. Make them aware of your requirements regarding product shelf life and expectations for fresh inventory.
4. Storage Practices: Store products with shorter shelf lives in a way that ensures they are used or sold before items with longer shelf lives.

5. Inventory Tracking: Use an inventory management system that tracks expiry dates and provides alerts or reports on items approaching their expiry.
6. Regular Audits: Conduct regular audits of your inventory to identify and address any items nearing expiration.
7. Training: Train your staff to be vigilant about checking expiry dates during the receiving process and when restocking shelves.

By incorporating these practices into your inventory management processes, you can minimize waste, provide high-quality products to your customers, and maintain efficient inventory turnover. This, in turn, contributes to the success and reputation of your business.

Stock check

Stock check / Stock correction plugin

Stock check / Stock correction - Manual - Shop - Licence: Once-off -

Translations : Translations outstanding

This "*Stock correction*" plugin allows users to perform inventory counts conveniently from various devices such as PCs, handheld PCs, or smartphones. This can be done either through Remote Desktop (RDP) or Terminal Services.

Upon pressing a Generate document button, the plugin automatically generates a credit note with the incorrect numbers. This feature helps in documenting discrepancies in stock counts. After the credit note is generated, the plugin proceeds to correct the stock numbers based on the inventory count performed. This ensures that the inventory records are accurate and up to date.

New Android Stock Count.

Android Stock Count - Manual - Shop - Licence: Once-off -

The "*New Android Stock Count*" at an extra cost of 200,00 euros, excluding tax, allows users to connect to

the plugin via their local network using an Android device. The Android version of the plugin supports barcode scanning functionality. Users can use a Bluetooth-enabled barcode scanner to scan barcodes of the stock items, which facilitates faster and more accurate stock counting.

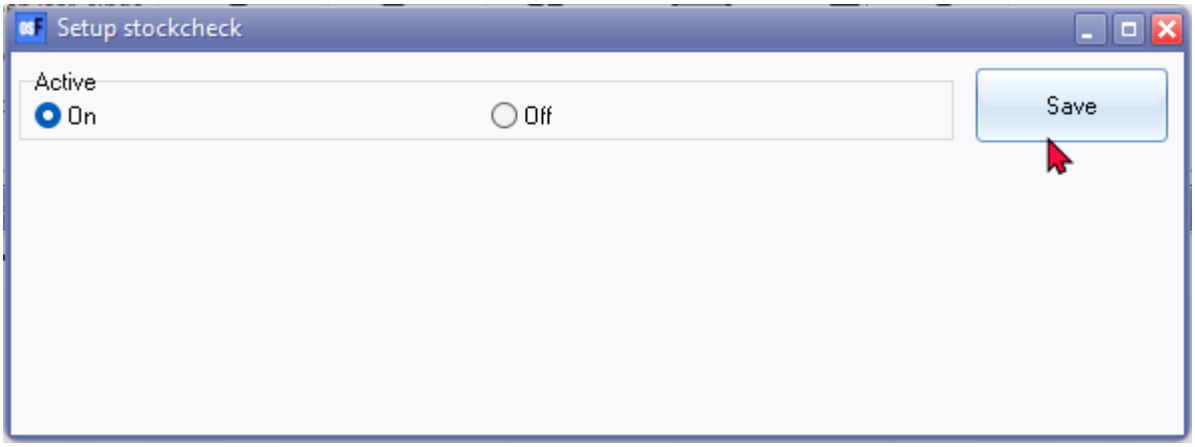
Activation

To activate the StockCheck plugin:

1. On the Setup ribbon, go to Plugins → Stock plugins → StockCheck. If this plugin is not listed under Plugins → Stock plugins, activate it via Tools → Activate plugins.



2. In the Setup StockCheck, select On and click Save. Reopen the "*Setup stockcheck*" screen to change additional settings.

3. If "*Activate for this user*" is selected,the StockCheck plugin will automatically launch when you reopen the Set of Books. To disable this and manually launch the StckCheck plugin, uncheck the "*Activate for this user*" field. You can then manually launch the StockCheck plugin from the StockCheck icon on the Default ribbon.

4. Click Save. Reopen your Set of Books for these settings to take effect.

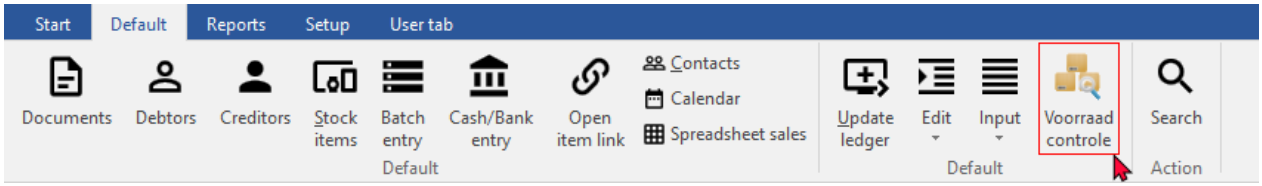
Default ribbon icon

Once you have reopened your Set of Books, the "*Voorraad controle*" StockCheck icon will be available on the Default ribbon.

- If "Activate for this user" is selected in the Setup StockCheck, the StockCheck plugin will

automatically launch when you open your Set of Books.

- If "Activate for this user" is not selected, or if you have closed the StockCheck plugin, you can manually launch it from the "*Voorraad controle*" StockCheck icon on the Default ribbon.



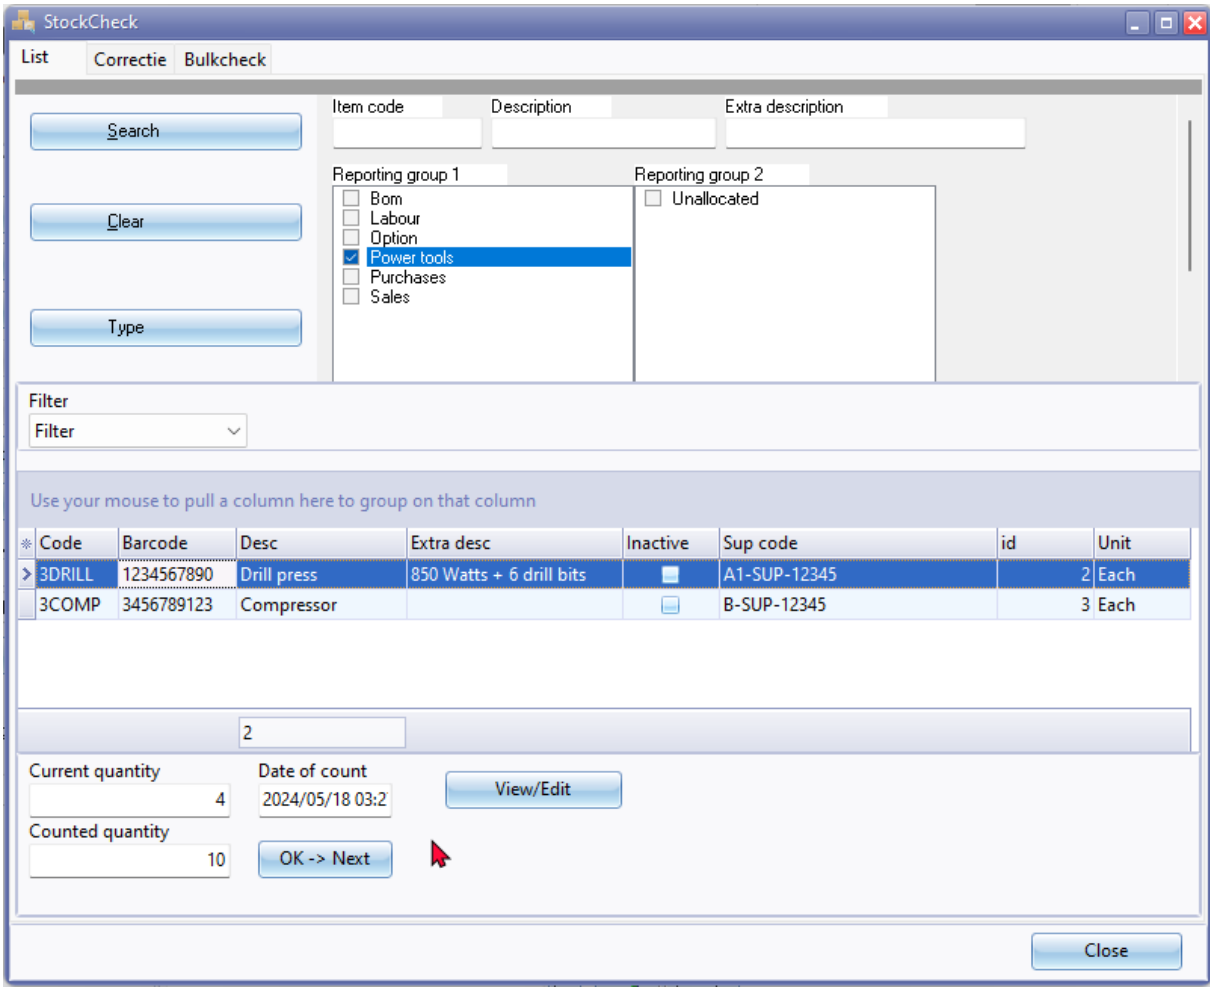
Stock check

List tab

Once you have accessed the StockCheck plugin, the List tab will be displayed.

-

· Click the Search button to list all your stock items (products). You may filter and search by options such as Reporting Group 1 (Stock Group 1) or Reporting Group 2 (Stock Group 2). For example, if you select "Powertools" as Reporting Group 1, the list will focus specifically on items linked to "Powertools."



- Once your stock items are listed, you may use the following columns to sort and filter your list of stock items:
  - Code: Stock code
  - Barcode: Barcode of the stock item
  - Description: Stock item description
  - Extra Description: Additional description of the stock item
  - Inactive: Status of the stock item (active or inactive)
  - Supplier Code: Supplier's stock code (if set for the default supplier)
  - ID: Stock item ID (record number)
  - Unit: Unit description for purchase and sale
- Filter: You may choose to filter your items by Uncounted or Counted.
- For the selected stock item, the current quantity is displayed. In the Counted Quantity field, enter the quantity of the physical stock count. Click OK → Next to move to the next stock item.
- For each counted stock item, the Date of Count will include the timestamp of when the stock count was done.

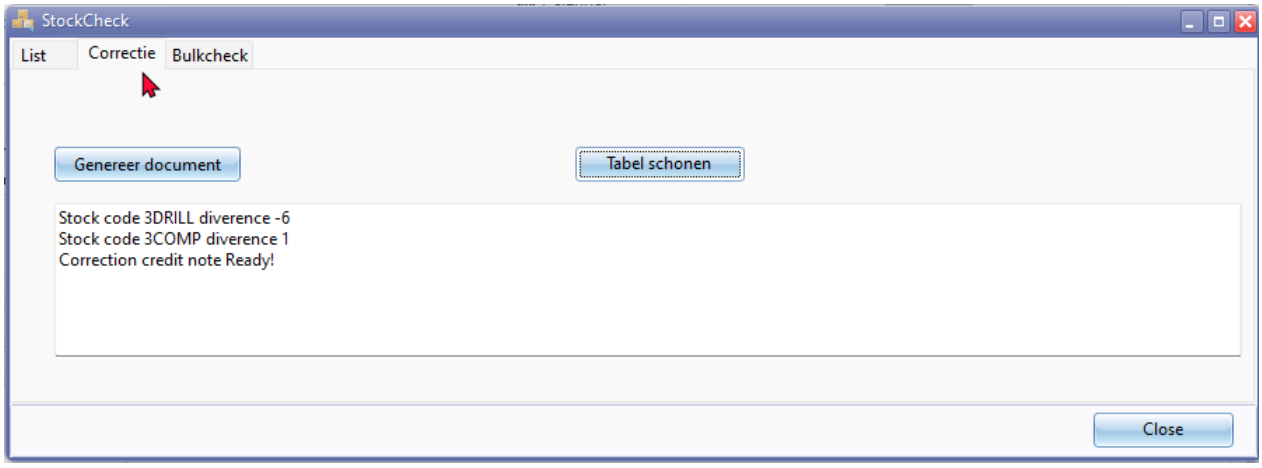
- View/Edit button: To view a stock item, click the View/Edit button. This will open the Stock Item form with the Ledger tab in a separate window, allowing you to view and edit details if necessary.

Finally, once you have finished your stock count, you may proceed to process the corrections on the Correctie (Corrections) tab.

Correctie (Corrections) tab

Once you have finished your stock count on the List tab, you may proceed to process the corrections on the Correctie (Corrections) tab.

- To generate credit notes for your stock count, click the Genereer document (Generate document) button.
- The "*Debtor accounts*" screen will appear, allowing you to choose an account. If no account exists, you may create a new account, for example, a Stock Count account.
- The Debtor Accounts screen will appear
- A log will display the list of stock item codes and quantities ordered, followed by the message "*Correction credit note Ready!*"



Example text for generated document:

```
Stock code 3DRILL diverence -6
Stock code 3COMP diverence 1
Correction credit note Ready!
```

Delete Stock Checks

- To clear the stock check table, click the Tabel schonen (Clear table) button.

- The following confirmation message will be displayed:

  "Delete all stock checks? Warning this cannot be reversed!"

- If you are sure, click Yes.

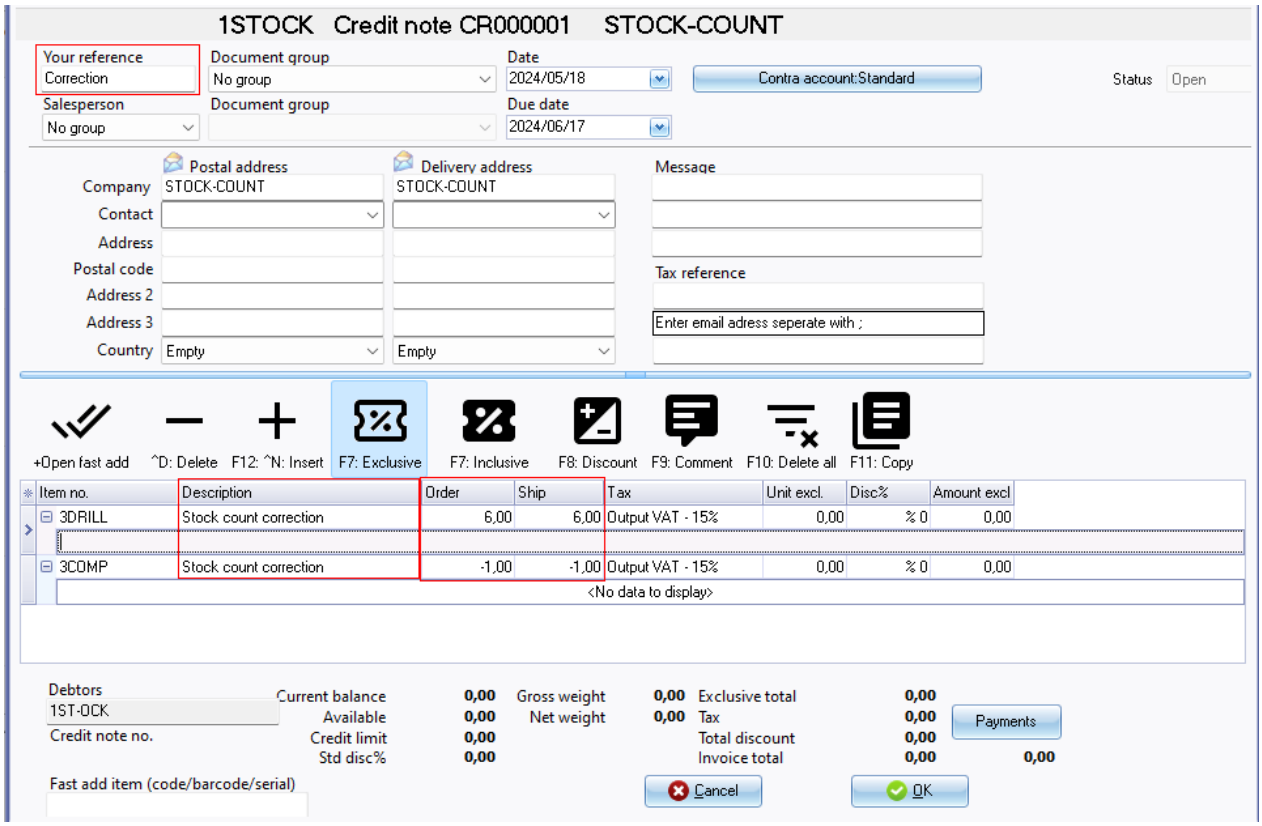
Accessing generated Credit notes

Once the credit notes are generated:

- Navigate to Documents on the Default ribbon.
- Select "*Credit note*" as the document type. The generated credit notes will be listed as "*Unposted*" in the Documents grid.

Editing credit notes

You may need to edit the credit notes and change the details where necessary. Pay special attention to the following:



Document Header:

- Your Reference: "*Correction*" will be displayed.

- Document Group 1 / Document Group 2: Select the appropriate document groups.
- Salesperson: Select the salesperson or the person who handled the stock count.
- Date: The system date on which the credit note was generated.
- Message: Enter up to 3 lines if necessary.

Tip: If you need to change the Document Group 1 / Document Group 2, or the Salesperson, you may use the context menu on the Documents grid for the "*Credit note*" document type.

Document Lines:

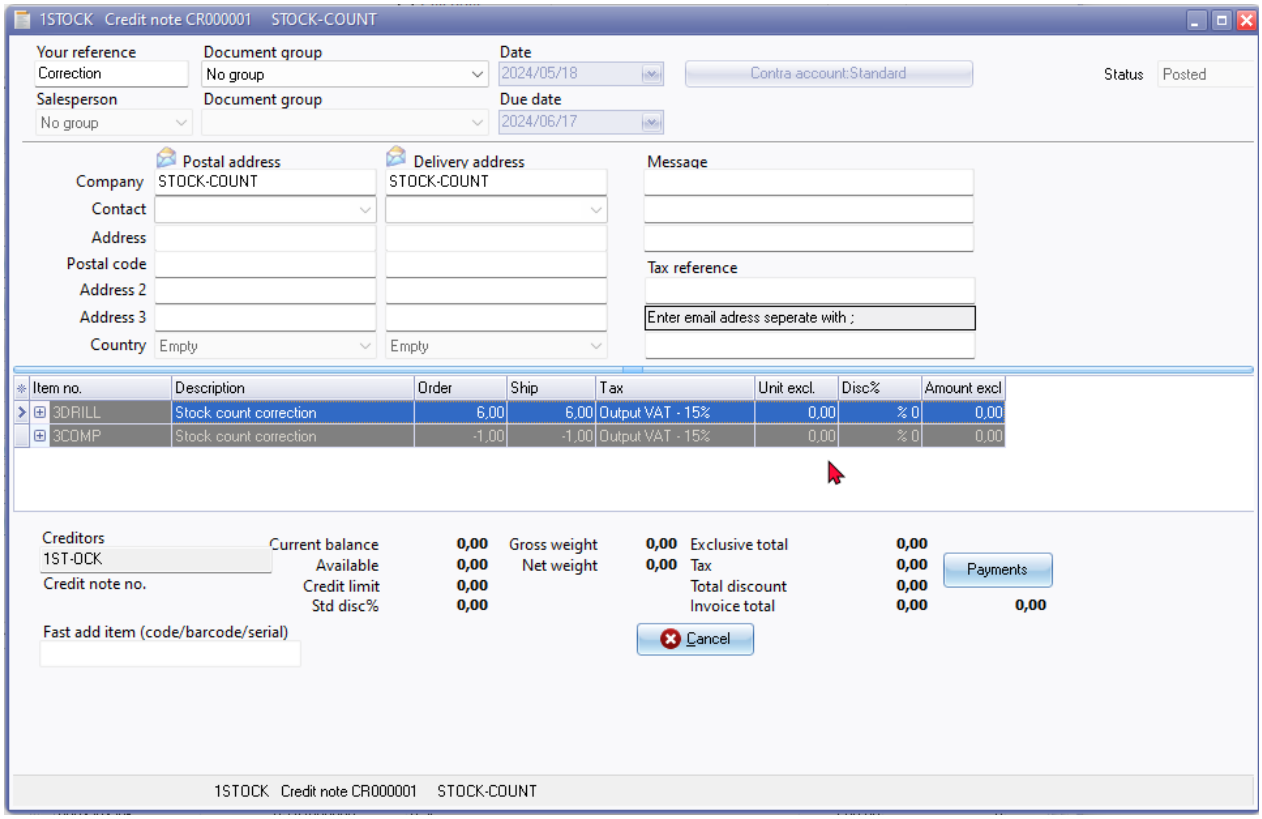
- Stock Item: The stock code and stock item description will be displayed as "*Stock count correction*".
- Order / Ship: The quantity is the difference between the current quantity and the counted quantity. If the counted quantity is lower than the current quantity, the quantity will be negative (prefixed by a minus sign).
- Remarks and Comments: Add any remarks and comments if necessary.
- Discount: Add any discount if necessary.

Once you are satisfied with your generated credit notes, you may post or update these credit notes to the ledger.

Note: If the "*Auto-post document on print*" setting on the Documents setup in the Setup menu (accessible via the Setup ribbon) is not activated, or if you have not yet printed the document, you will need to manually post the Stock in and Stock out documents.

To Access the StockCheck Correction Documents

In addition to the filter and search options on the Documents grid for the credit note document type, you can also locate these credit note documents using the following options:



- Stock item form → Document groups tab: Use the context menu "*Open document*".
- Stock item form → Transactions tab: Use the context menu "*Open document*".

Printing options

Printing Options

In addition to the print options on the Documents grid for the credit note document type, you can also print documents using the following options:

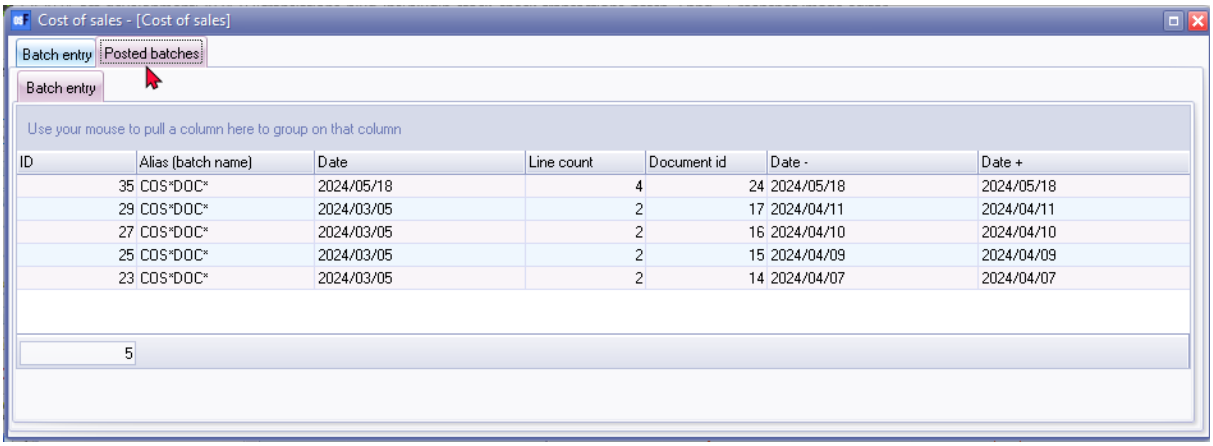
- Debtor Form: Documents tab. Double-click. You may select a layout file. Note : If the document layout file "*Layout file*" is selected, it may will print the Stock code but the stock description as "*Stock count correction*". To include the Stock code, select the "*Document layout (15 code)*" layout file.
- Stock Item Form:
  - Document Groups tab: Double-click the document.
  - Transactions tab: Double-click the document.
- Search (Default ribbon): Use the central search to find the reference ("*Correction*") or description (e.g., "*Stock count correction*"). If you use prefixes for documents, such as "CR" for credit notes, it will be easier to locate these credit notes. Double-click on the document. The document type will be indicated as "*Credit note Details*".

StockCheck - Credit note transactions

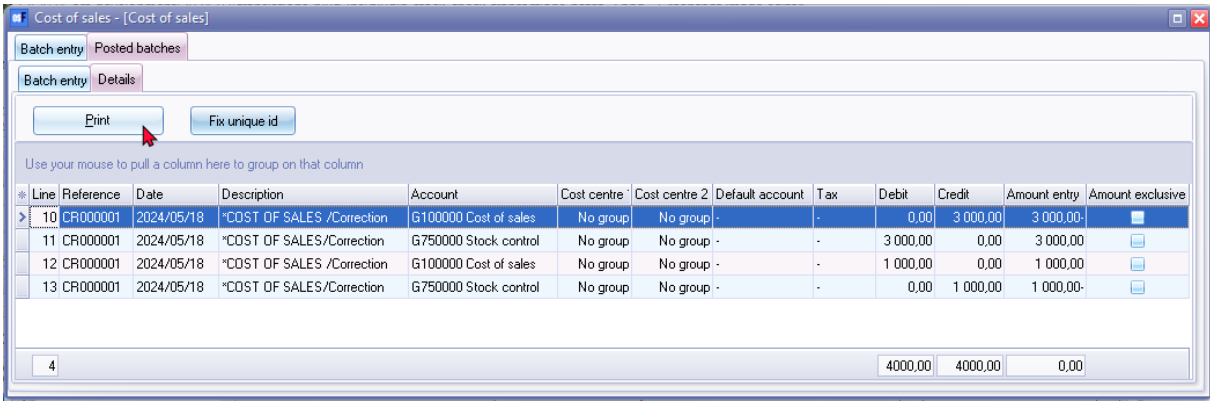
When credit notes are generated using the *StockCount / Stock correction* plugin, an unposted credit note is created. When these credit notes are posted or updated to the ledger, the cost of sales journal will generate transactions. You have the following options to view these transactions:

Batch entry (Default ribbon)

1. On the Default ribbon, select Batch Entry or press F2.
2. Open the Cost of Sales journal and click on the Posted Batches tab.

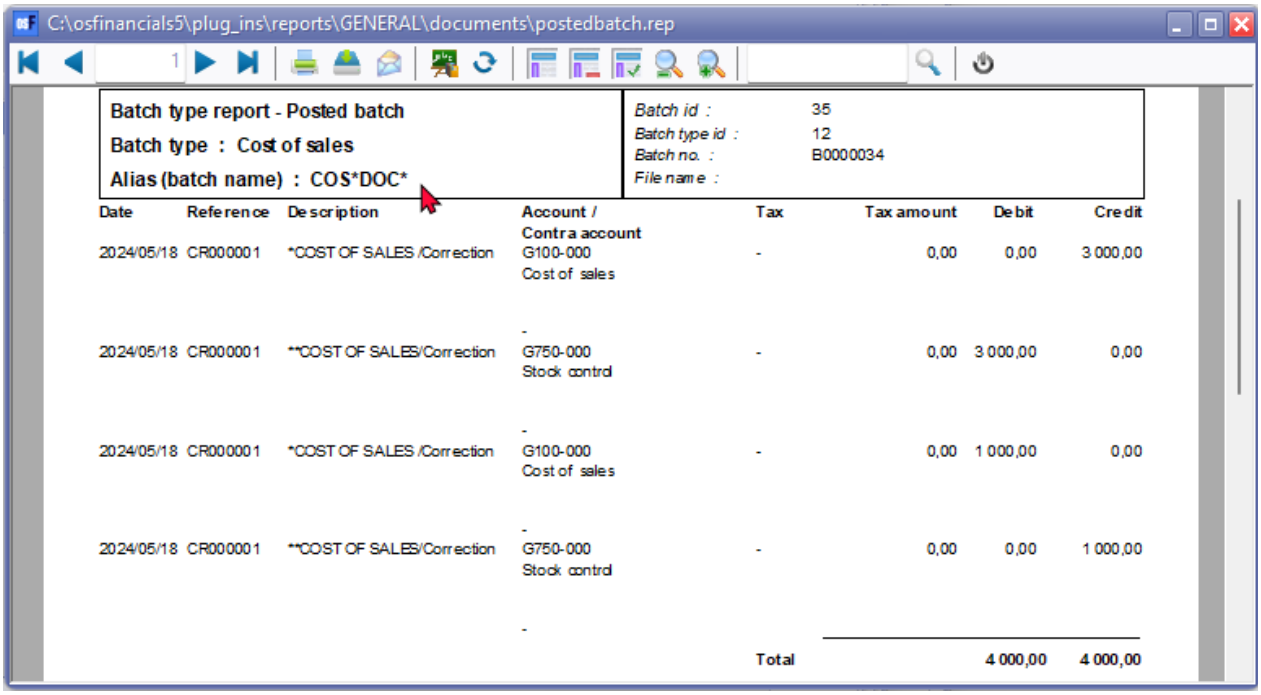


3. In the Posted Batches - Batch entry tab, select the batch and double-click it. Note: The default alias batch name is "COS*DOC*". The list of transactions is displayed in the Details tab.



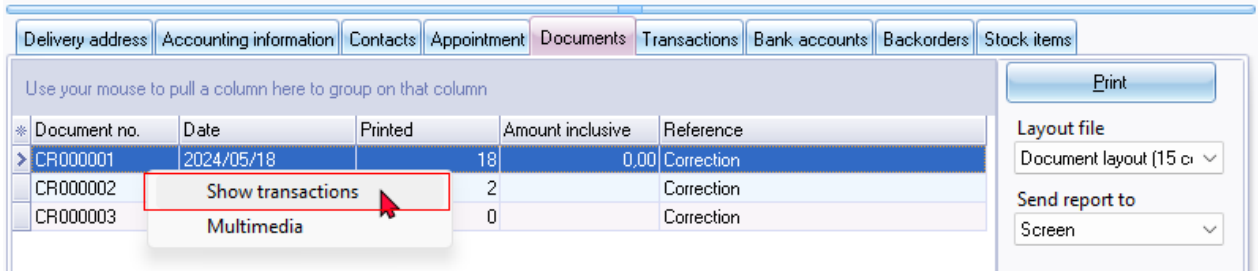
4. On the Details tab, the reference will list the document number of the credit note, and the description of the transaction will be "**COST OF SALES / Correction*".
5. To print the "Batch Type - Posted Batch" report for the credit note transactions, click the Print button.

Example of the "Batch type - Posted batch" Report for Credit Note Transactions:

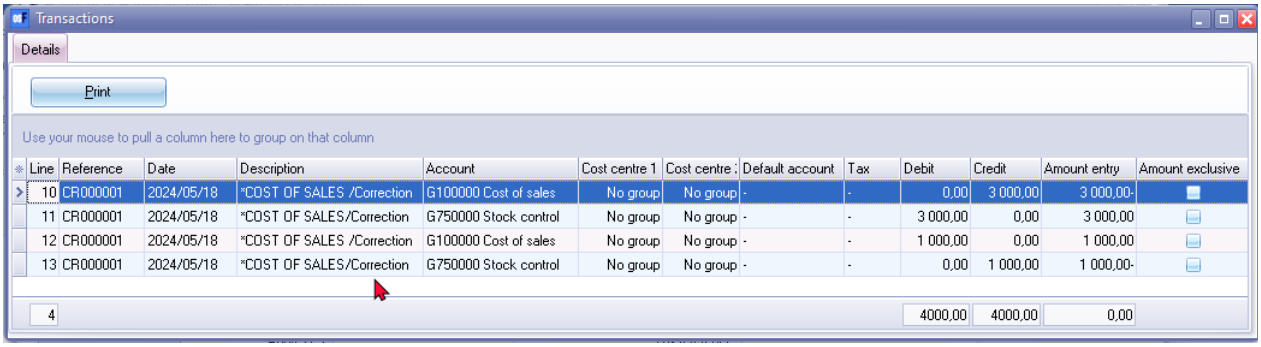


Debtor account - Documents tab

On the Documents tab of the debtor account, select the credit note and right-click to select "*Show transactions*" from the context menu.



The transactions will be listed in the "*Transactions*" screen, which is similar to the Posted batches - Batch entry tab form the Batch entry option.



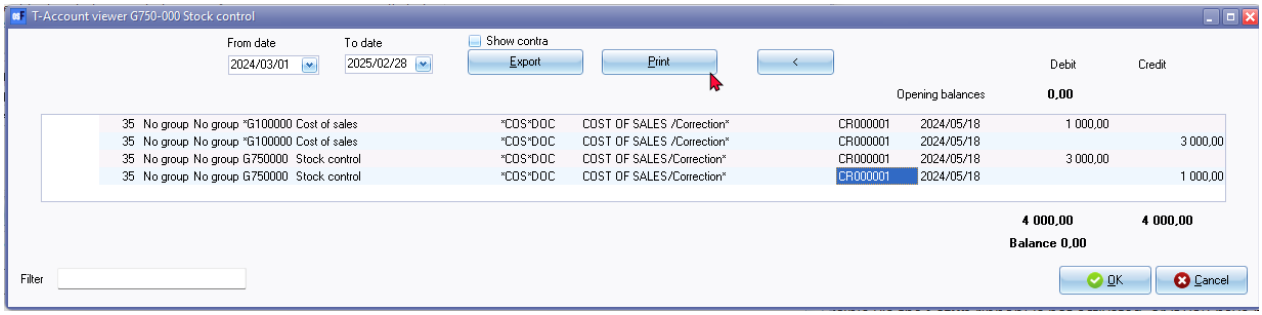
Note : Print button will produce a *"No data to print!"* error. To print the "*Batch type - Posted batch*" report for these credit note transactions, navigate to the Batch Entry or press F2. and open the Cost of Sales

journal and click on the Posted Batches tab.

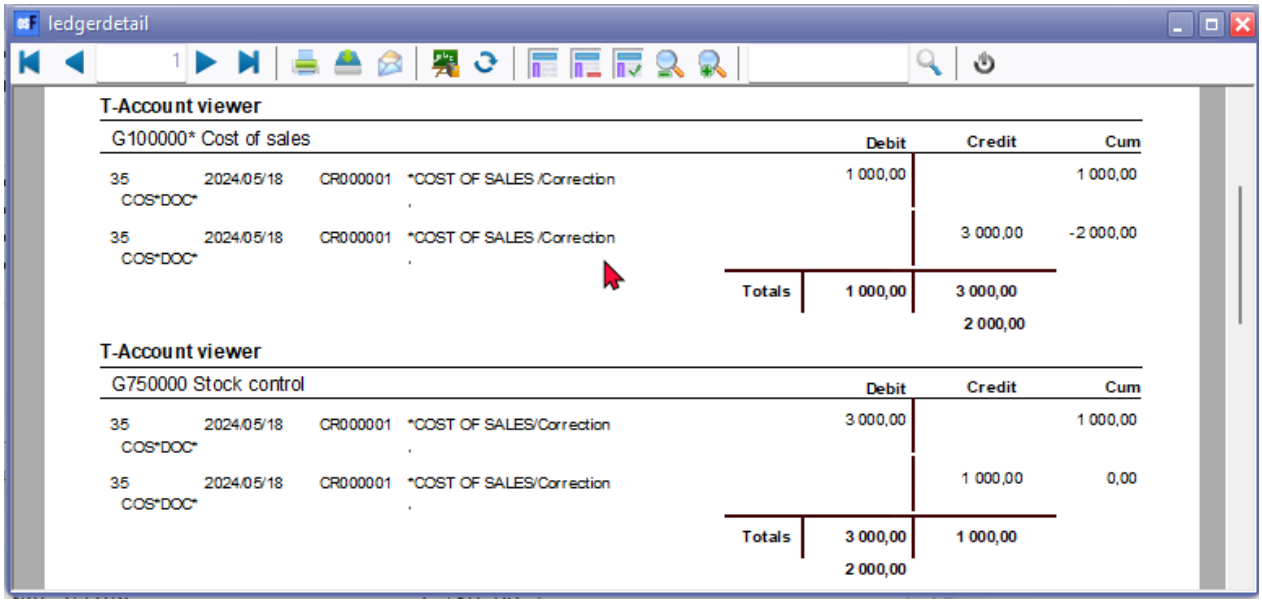
T-Account viewer

On the Reports ribbon, select Ledger analyser 1 or Ledger analyser 1 / 2. Generate a Trial balance or an Income statement. Select the Cost of sales account or the Stock control account and right-click to select "*Show details*" from the context menu. The T-account viewer will list all posted transactions for the selected account.

Select the credit note with a description "*COST OF SALES / Correction*" and double click on the Batch id generated by osFinancials5/TurboCASH5.



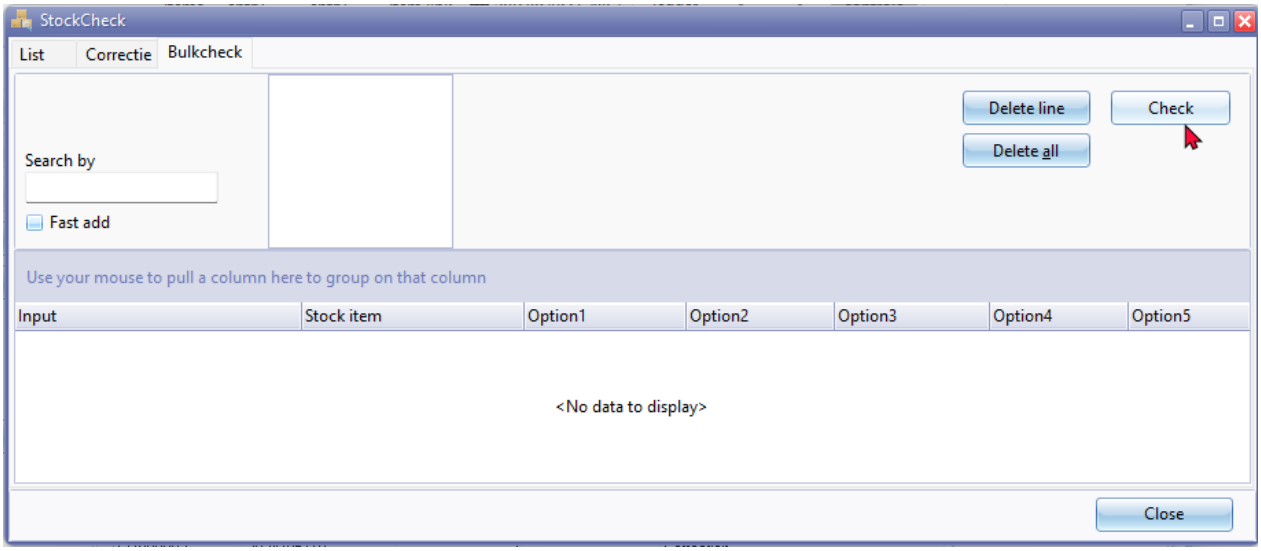
Click the Print button to print the transactions in the T-Account viewer.



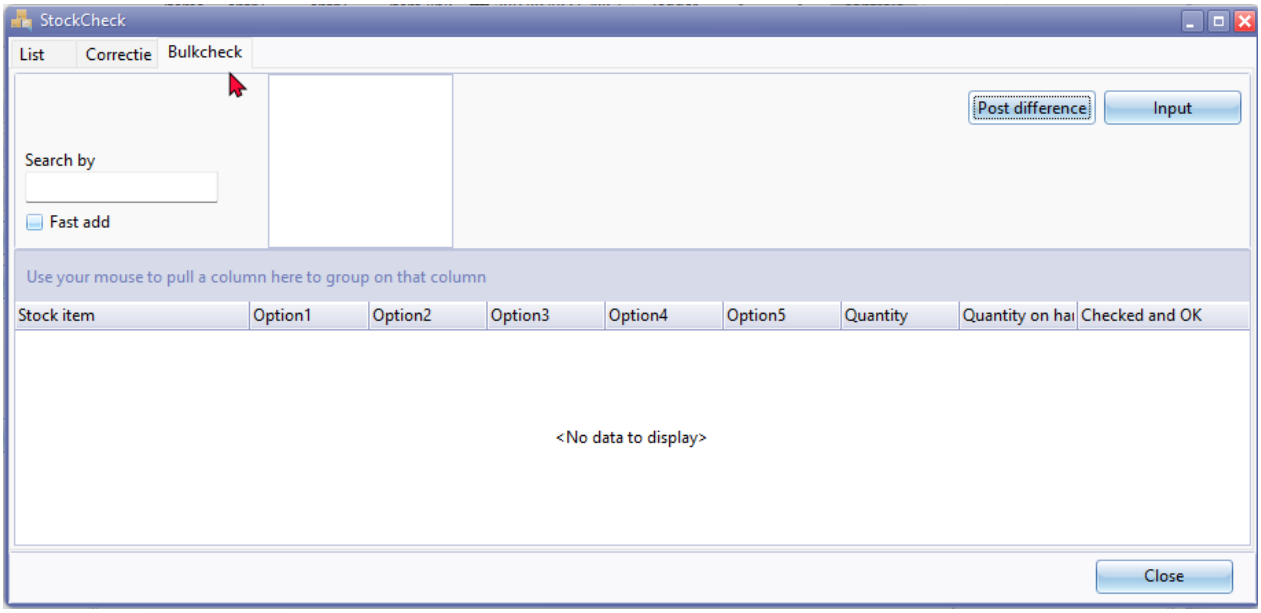
Bulkcheck tab

To be advised.

The Post difference button, generate blank credit notes with no adjustments or corrections on the unposted credit notes.



Delete line - No Confirmation message



Confirmation message

> There ao check active do you want to see this? No wil make a new check and all current check data will be lost!

Post difference log entry on Correctie tab

> Correction credit note Done!

Confirmation message Post difference button.

> Are you sure you want to post the new inventory data?

Post difference button - Access violation error on Bulk check tab

This is replicated by typing text, e.g. "*Drill*" and enter. The when click in the Check button or the Post

difference button the Access violation error occurs.

> violation of FOREIGN KEY constraint "FK_DOCLINE_STOCK" on table "DOCLINE"
> Foreign key reference target does not exist

The Post difference button, generate blank credit notes with no adjustments or corrections on the unposted credit notes.

QuickOrder

Quick Order - Manual - Shop - Licence: Once-off -

Translations : Translations outstanding

Simplify your product ordering process with our "*Quick Order*" plugin. This plugin offers a quick and convenient method for ordering products from your PC or using a handheld PC or smart phone (through Remote Desktop / Terminal Services or RDP).

- You walk with a handheld through your warehouse, and scan or selected the product to order while standing next to the shelf.

- You see immediately actual stock numbers so that a good decision of the quantity to order can be made.
- After pressing a button it creates an order with the specified numbers.
- After which only a few clicks of the mouse will break down the order by vendor.

Optimize your ordering workflow with the "*Quick Order*" plugin, providing you with a seamless and efficient solution for managing your product orders.

Activation

To activate the QuickOrder plugin:

1. On the Setup ribbon, select Plugins → Stock plugins → QuickOrder. If this plugin is not listed under Plugins → Stock plugins, activate it via Tools → Activate plugins.

2. On the Setup OuickOrder select On and click Save. Reopen the "*Setup QuickOrder*" screen to change additional settings.

3. The configure options, is as follows:

   a) Auto popup: By default, the QuickOrder screen launches when you reopen the Set of Books. To disable this and manually launch the QuickOrder screen, uncheck the "*Auto popup*" field. You

can then manually launch the QuickOrder plugin from the Quick order icon on the Default ribbon.

b) Just quickorder: If this option is not selected, the entire QuickOrder module (comprising three tabs: List, Generate documents, and Orders) will launch. If selected, only the Orders option will launch.

4. Click Save. Reopen your Set of Books for these settings to take effect.

Drop data

If there are no items ordered in the List tab, you have the option to drop the data in the "*QUICKORDER*" table.

To drop data:

1. On the Setup ribbon, select Plugins → Stock plugins → QuickOrder. On the "*Setup QuickOrder*" screen, click the Drop data button. A confirmation message will be displayed:

   "Are you sure you want to delete all data ?"

2. If you are absolutely sure, click Yes. Another confirmation message will be displayed:

   "Warning you are about to delete table QUICKORDER with 1 records realy continue? "

3. If you are still sure, click Yes.

NOTE: If the message indicates there are records (e.g., "1 record" as in the example), you may encounter an error message like:

"Unsuccessful metadata update.
Object QUICKORDER is in use."

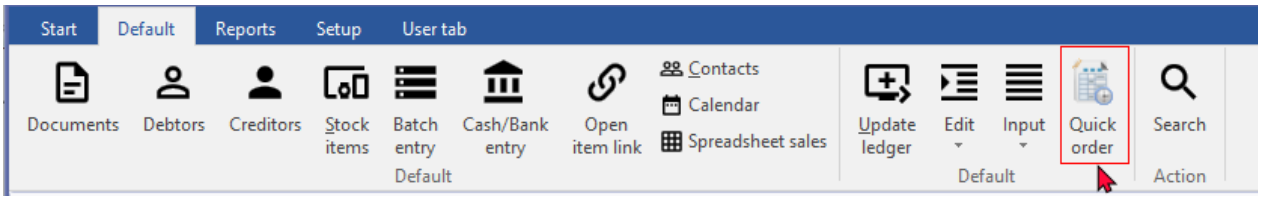
To resolve this:

- First, delete the records in the List tab.
- Reopen your Set of Books.
- Once the Set of Books is reopened, you can proceed to drop the data (delete the "*QUICKORDER*" table).

Default ribbon icon

Once you have reopened your Set of Books, the Quick order icon will be available on the Default ribbon.

- If "*Auto popup*" is selected in the Setup QuickOrder, the QuickOrder will automatically launch when you open your Set of Books.
- If "*Auto popup*" is not selected, or if you have closed the QuickOrder plugin, you can manually launch it from the Quick order icon on the Default ribbon.

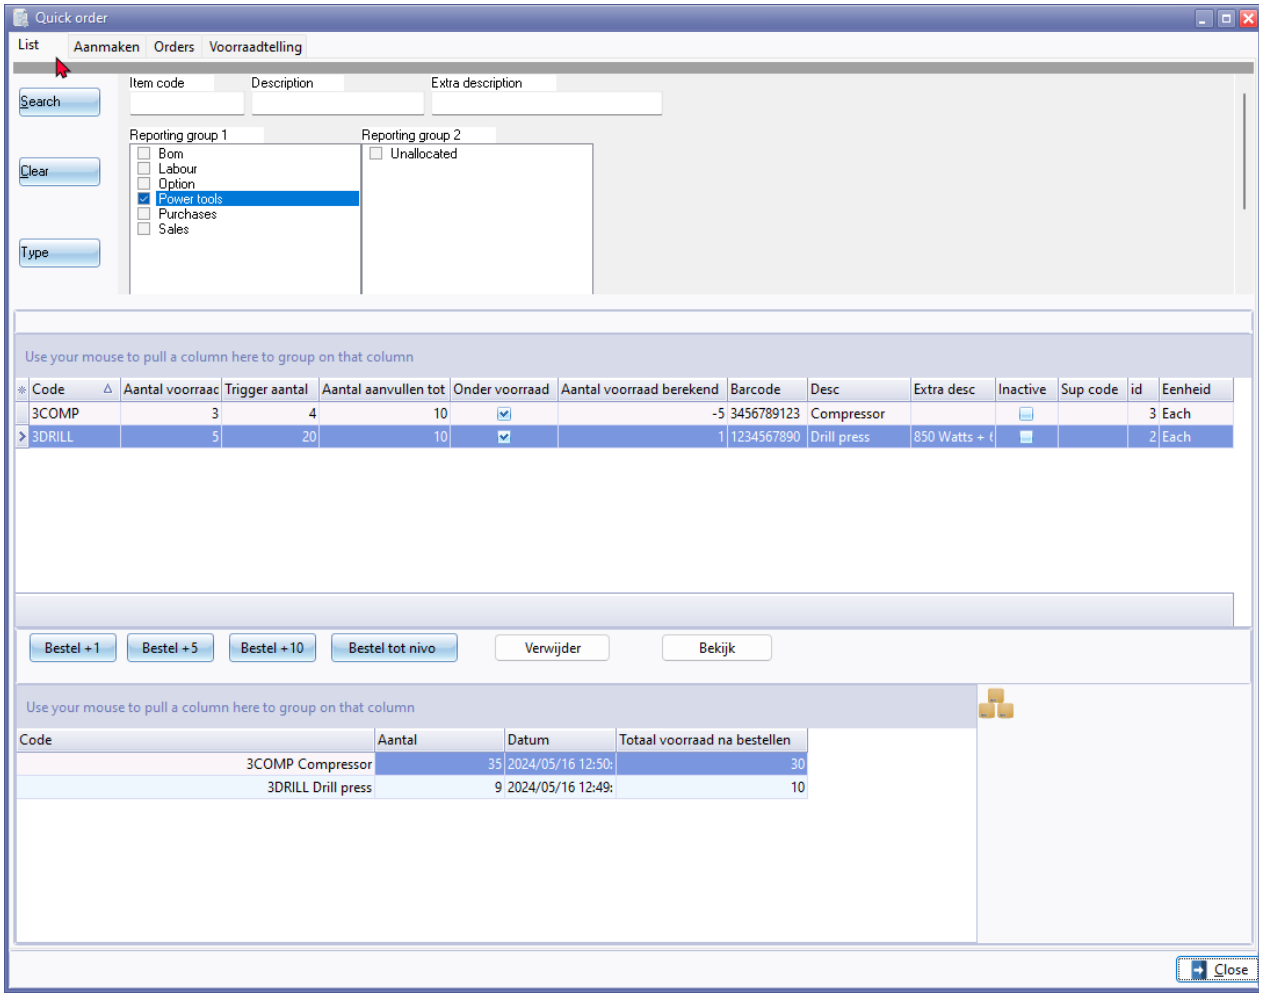


QuickOrder

When the Quick order plugin is initiated, and the "*Just quickorder*" option on the "*Setup QuickOrder*" screen is not selected, the entire QuickOrder module (comprising three tabs: List, Generate documents, and Orders) will be available.

List tab

- *Click the Search button to list all your stock items (products). You may filter and search by options such as Reporting Group 1 (Stock Group 1) or Reporting Group 2 (Stock Group 2). For example, if you select "Powertools" as Reporting Group 1, the list will focus specifically on items linked to "Powertools."*



- The details for each stock item will be listed in the following columns:
  - Code - Stock code
  - Quantity on hand (Aantal voorraad) - The current quantity of stock items available
  - Reorder at (Trigger aantal) - The quantity at which the item should be reordered
  - Reorder level (Aantal aanvullen tot) - The replenish quantity
  - Under stock (Onder voorraad)
  - Quantity of stock calculated (Aantal voorraad berekend) -

- Barcode - Barcode of the stock item
- Description - Stock item description
- Extra description - Additional description of the stock item
- Inactive - Status of the stock item (active or inactive)
- Supplier code - Supplier's stock code (if set for the default supplier). Note: If no supplier code exists in this column, it may generate the order to an "Empty account". You may click on the Bekijk (View) button to add the preferred supplier and the supplier's stock code on the Stock form.
- id - Stock item ID (record number)
- Unit - Unit description for purchase and sale

- To order the reorder quantity to the "*Reorder level*", select an item from the list and click the Bestel tot nivo (Order to level) button.
- To increment the order quantity, use the Bestel +1 (Order +1), Bestel +5 (Order +5), or Bestel +10 (Order +10) buttons.
- Clicking on the order buttons will add the stock items to the bottom half of the QuickOrder screen, with details in the following columns:
  - Code - Stock code
  - Quantity (Aantal) - Quantity of stock calculated, updated by ordered quantities
  - Date (Datum) - System date and time stamp
  - Total stock after ordering (Totaal voorraad na bestellen) - Quantities on order

Adding QuickOrder items and quantities on the QuickOrder - List tab will add a Voorraadtelling (StockCount) tab as a fourth tab to the QuickOrder plugin.

Delete an item from the list

Click the Verwijder (Delete) button. A confirmation message will be displayed:

> "Weet u het zeker? "

If you are sure, click Yes.

View Stock Item form

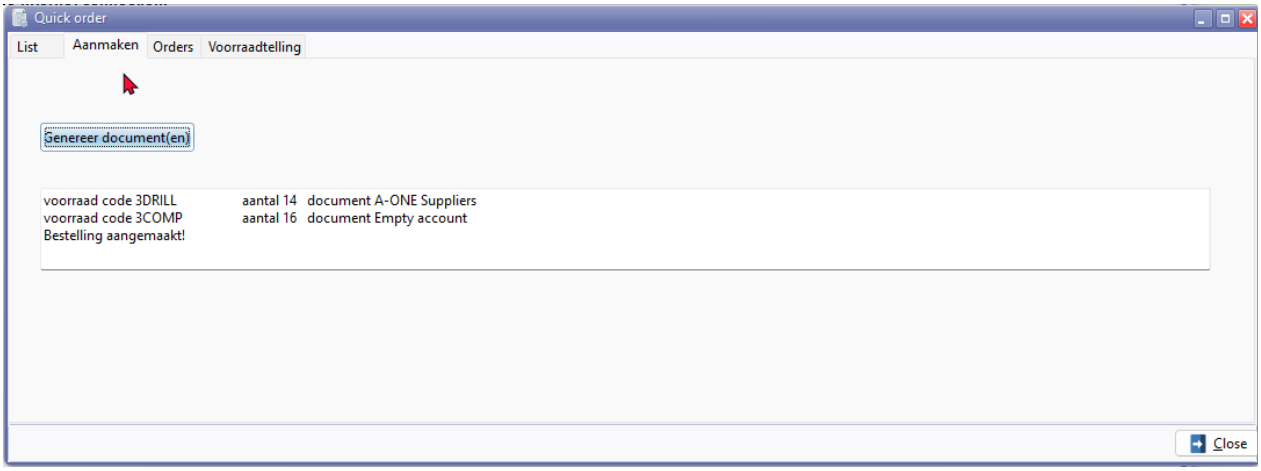
To view a stock item, click the Bekijk (View) button. This will open the Stock Item form with the Ledger tab

in a separate window, allowing you to view and edit details if necessary.

Generate tab (Aanmaken tab)

Once you are satisfied with the quantities to order on the List tab, navigate to the Generate (Aanmaken) tab.

Click the Genereer dokument(en) (Generate document(s)) button. A log will display the list of stock item codes and quantities ordered, followed by "*Orders generated!*"



Example text for generated document:

voorraad code 3DRILL	aantal 14 document A-ONE Suppliers
voorraad code 3COMP	aantal 16 document Empty account
Bestelling aangemaakt!	

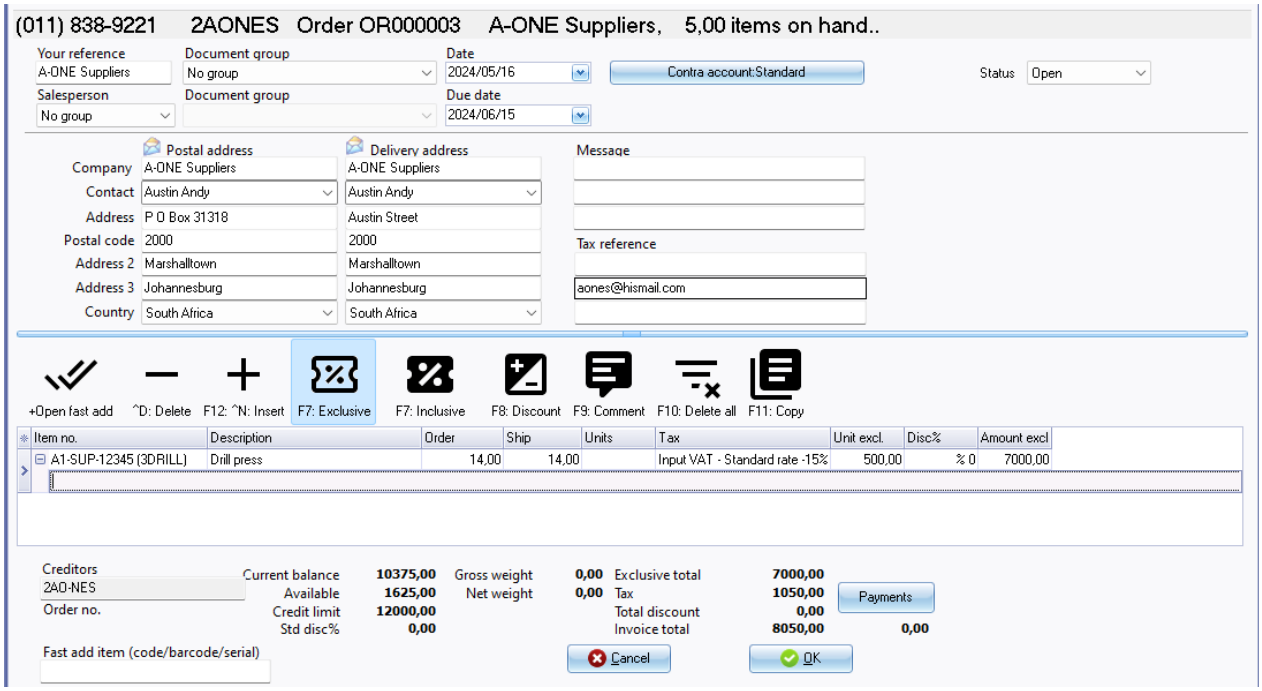
Orders will be generated for the default supplier as set in the "*Preferred supplier1*" field of the Stock item form. Note: If no "*Preferred supplier1*" is set, the order will be generated to an "*Empty account*".

Accessing generated orders

Once the orders are generated, navigate to Documents on the Default ribbon and select "*Order*" as the document type. These generated orders will be listed as "*Unposted*" in the Documents grid.

Editing orders

You may need to edit the orders and change the details where necessary.



Special attention may be needed for the following:

Document Header:

- Your reference: The supplier's account name will be displayed.
- Document group 1 / Document group 2: Select the appropriate document groups.
- Salesperson: Select the salesperson or the person who handles the orders.
- Date: The system date on which the order was generated.
- Message: Enter up to 3 lines if necessary.

Tip: If you need to change the Document Group 1 / Document Group 2 , or the Salesperson, you may use the context menu on the Documents grid for the "*Ordeer*" document type.

Document Lines:

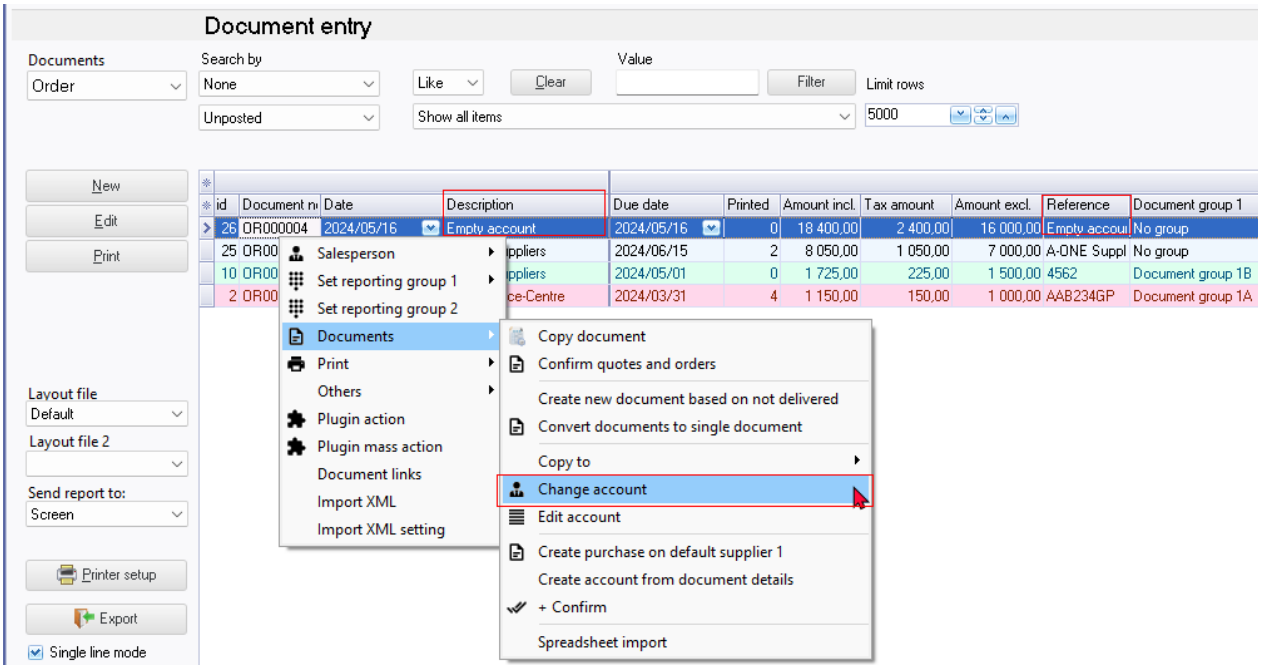
- The supplier's stock code will precede the stock code (in brackets), and the quantities and tax will already be calculated based on the quantities ordered on the QuickOrder List tab. You may edit these quantities if necessary or add additional items.
- Remarks and Comments: Add any remarks and comments if necessary.
- Discount: Add any discount if necessary.

Once you are satisfied with your generated orders, you may print and send these orders to your suppliers. When the supplier delivers these items, you can confirm these orders and convert them to a purchase.

Changing account

If an order is generated to an "*Empty account*":

- Go to Documents → Change account in the context menu and select the appropriate supplier account.
- To prevent future occurrences of orders being generated to Empty accounts, navigate to the Stock item form, choose a default supplier in the "*Preferred supplier1*" field, and add a supplier stock code.

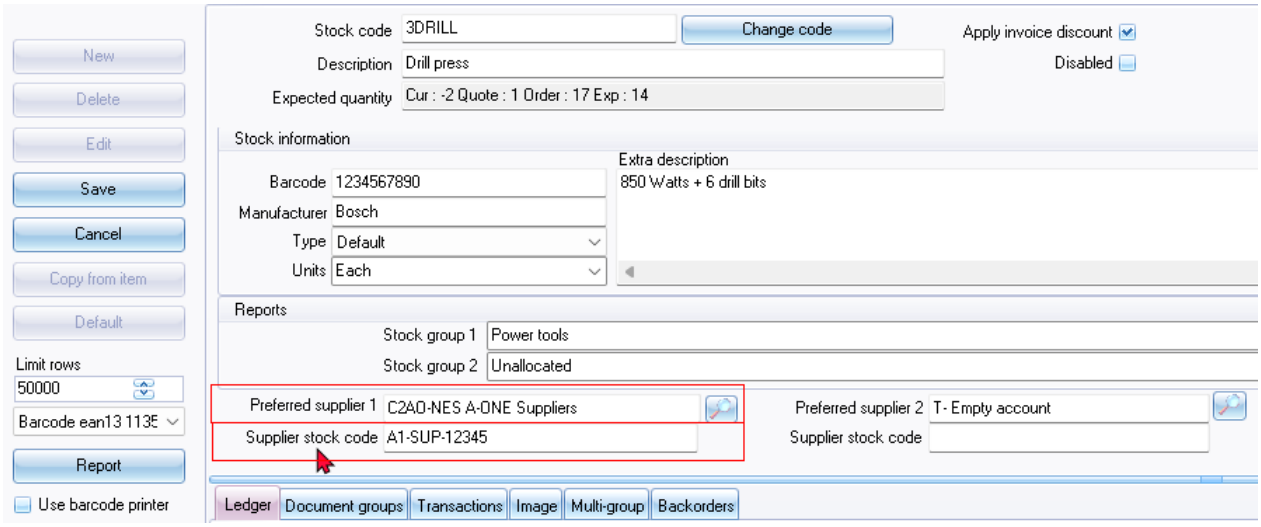


The "*Reference*" column for these orders, which did not contain a default supplier ("*Preferred supplier1*") generated by the QuickOrder plugin, will be indicated as "*Empty account*." To change this "*Empty account*" reference, edit the "*Your reference*" field on the order document entry screen.

If the "*Your reference*" field is left as "*Empty account*", it will reflect in all relevant reports, such as Reports → Stock → Stock in/out - Documents, in the Documents reference as "*Empty account*".

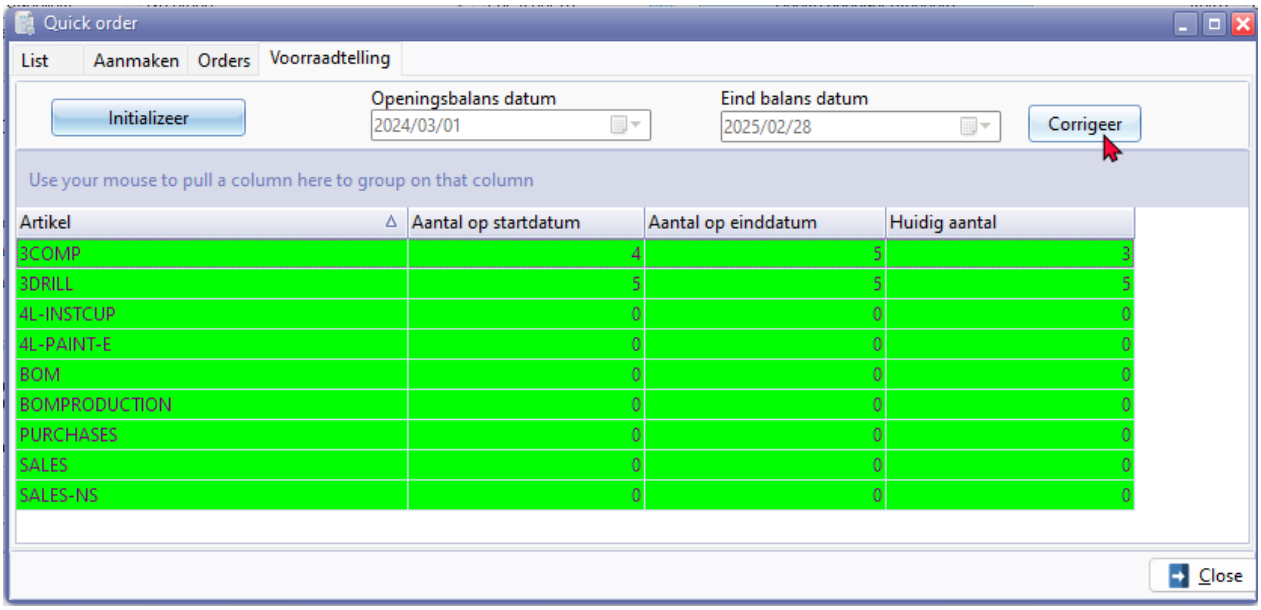
Preferred supplier 1 (Default supplier 1) setting

To prevent future occurrences of orders being generated to Empty accounts, navigate to the Stock item form, choose a default supplier in the "*Preferred supplier1*" field, and add a supplier stock code.



Voorraadtelling (StockCount) tab

Adding QuickOrder items and quantities on the QuickOrder - List tab will add a Voorraadtelling (StockCount) tab as a fourth tab to the QuickOrder plugin.



The Voorraadtelling (StockCount) tab will list the stock items with opening balances and closing balances between two dates. These dates correspond to the start and end dates of your financial year:

- Openingbalans datum (Opening balance date)
- Eind balans datum (Closing balance date)

The tab also includes the following two buttons:

- Initializeer (Initialize)
- Corrigeer (Correction)

The Voorraadtelling (StockCount) tab will list the stock items in the following columns:

- Artikel (Item)
- Aantal op startdatum (Quantity on start date)
- Aantal op einddatum (Quantity on end date)
- Huidig aantal (Current quantity)

Changing the stock quantity in the Aantal op einddatum (Quantity on end date) column and clicking the Corrigeer (Correct) button updates the quantity in the Aantal op einddatum (Quantity on end date) column.

This action will create a posted document with "*Actief-Q-cor*" in the "*Your reference*" field in the document entry screen. The description in the document lines will automatically be generated as "*Actief-Q-cor*" for the stock item for which the quantity was changed.

The account will be an "*Empty account*" as this document correction is only meant to change the stock quantities and is not associated with a specific supplier or creditor account.

The document number will automatically be generated and consists of 7 digits, for example, "ST00001" the first two digits prefixed by "ST" and the document type will be "Stock-"

These stock correction documents will reflect in all relevant reports, such as Reports → Stock → Stock In/Out. in the Documents *generated with the QuickOeder Stock coumt tab will list te document number and the reference as* generated as "*Actief-Q-cor*".

To access the posted stock correction document:

- Stock item form - Document groups tab (context menu "Open document")
- Stock item form - Transactions tab (context menu "Open document")

To access print stock correction document:

- Stock item form - Document groups tab (double-click)
- Stock item form - Transactions tab (double-click)
- Search - Central search on Default ribbon. Find the reference, document number or prefix and double-click on the document (Document type) The document type will be indicated as " *Sock out Details*".

Voorraadtelling (StockCount) tab - Corrections tab

Changing the stock quantity in the Aantal op einddatum (Quantity on end date) column and clicking the Corrigeer (Correct) button updates the quantity in the Aantal op einddatum (Quantity on end date) column.

This action will create a posted document with "*Actief-Q-cor*" in the "*Your reference*" field in the document entry screen. The description in the document lines will automatically be generated as "*Actief-Q-cor*" for the stock item for which the quantity was changed. The account will be an " *Empty account*" as this document correction is only meant to change the stock quantities and is not associated with a specific supplier or creditor account.

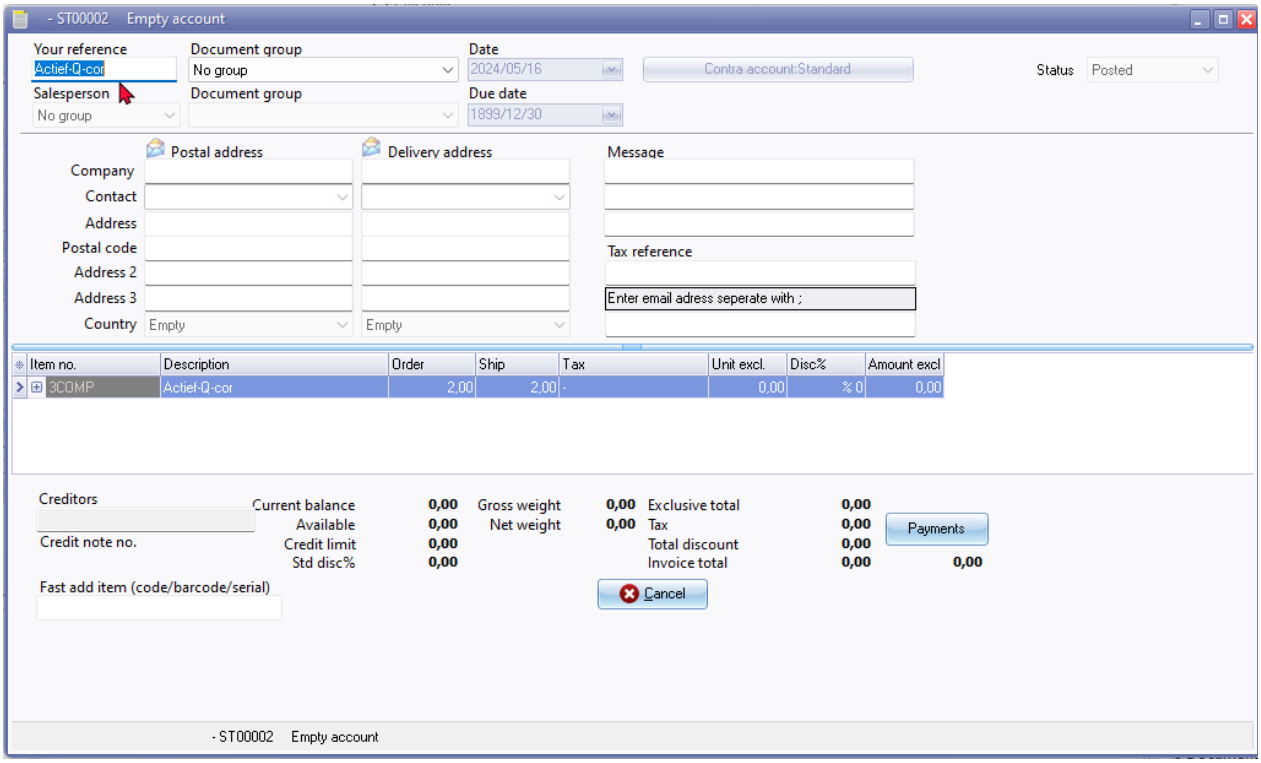
The document number will be automatically generated and consists of 7 digits, prefixed with "*ST*" (e.g., "*ST00001*"), and the document type will be "*Stock-*".

These stock correction documents will reflect in all relevant reports, such as Reports → Stock → Stock In/Out. Documents generated with the QuickOrder StockCount tab will list the document number and the reference as "*Actief-Q-cor*".

The "*Actief-Q-cor*" reference or stock description in document entry screens, specific columns in certain tabs of the stock item, document layout files, and reports indicates that this is generated by the QuickOrder plugin for corrections of stock quantities.

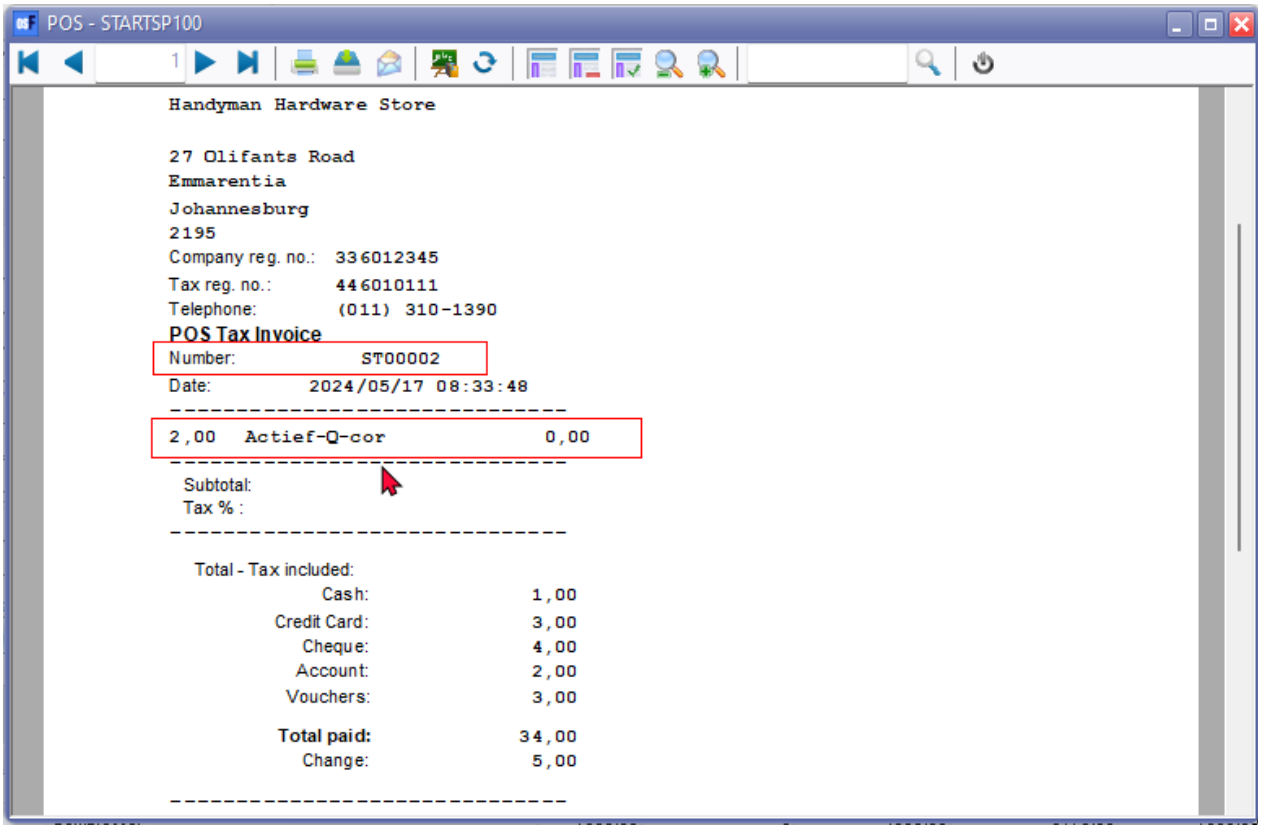
To Access the Posted Stock Correction Document:

- Stock item form → Document groups tab: Use the context menu "*Open document*".
- Stock item form → Transactions tab: Use the context menu "*Open document*".



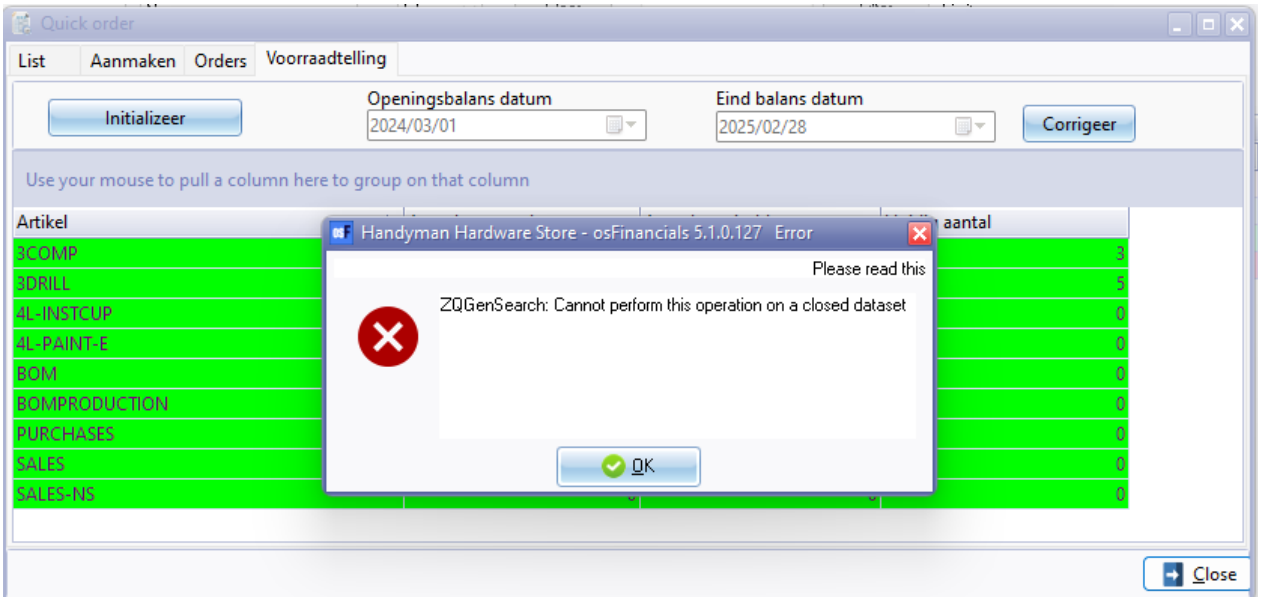
To Print the Stock Correction Document:

- Stock item form → Document groups tab: Double-click the document.
- Stock item form → Transactions tab: Double-click the document.
- Search (Default ribbon): On the central search, find the reference ("*Actief-Q-cor*"), document number, or prefix ("*ST*"), and double-click on the document. The document type will be indicated as "*Stock out Details*".



Error - Closed Dataset

ZQGenSearch: Cannot perform this operation on a closed dataset error is replicated when clicking on the Voorraadtelling tab.



Orders tab

When the Quick order plugin is initiated, and the "*Just quickorder*" option on the "*Setup QuickOrder*" screen is not selected, the entire QuickOrder module (comprising three tabs: List, Generate documents, and Orders) will be available. You may click on the Orders tab.

When the Quick order plugin is initiated, and the "*Just quickorder*" option on the "*Setup QuickOrder*" screen is selected, only the Orders component of the entire QuickOrder plugin module will be available.

AndroidConnector

AndroidConnector - Install manual - App manual - Shop - Licence: Once-off -

Connect your Android device seamlessly with your osFinancials5/TurboCASH5 Set of Books using our AndroidConnector. With a one-time licence, this adaptor facilitates a smooth connection between our Android software and your financial records.

Key Features:

- Enable connection between Android devices and osFinancials5/TurboCASH5
- Streamline data exchange between platforms

Simplify your data management and enhance connectivity across your devices with AndroidConnector.

DYNADBREG

This DYNADBREG consists of several Plug-in programs that are purchased and activated individually from our Webshop.

FileANDXMLExportImport

FileandXML Export Import - Manual - Shop - Licence: Once-off -

Effortlessly manage file and XML imports with our FileandXML Export Import Plugin. With a one-time licence, this plugin provides an editor mode where you can create custom file and XML imports tailored to your specific needs.

Key Features:

- Create custom file and XML imports
- Ideal for managing price lists with suppliers and other data imports
- Option for personalized import creation services by our team

Streamline your import processes and customise data imports according to your requirements with FileandXML Export Import Plugin.

Export / Import

Export / Import - Manual - Shop - Licence: Once-off -

Efficiently manage your data transfers with our Export/Import Plugin. With a one-time licence, this plugin enables seamless export and import operations to platforms like Vtiger and others.

Key Features:

- Export data to platforms like Vtiger
- Import data from various sources
- Streamline data transfer processes

Simplify your data management and ensure smooth integration with external platforms using the Export/Import Plugin.

HandyTools

HandyTools - Licence : Free.

Caution: Make backups of your Set of Books before use

Translations : Outstanding

Unlock advanced functionality with our HandyTools Plugin, available for free. Designed for advanced users, this plugin provides additional tools for enhanced functionality within your osFinancials5/TurboCASH5 software.

Key Features:

- Advanced tools for specialized tasks
- Free of charge
- Recommended for advanced users
- Caution: Make backups of your Set of Books before use

Advanced software capabilities with the HandyTools Plugin, but remember to proceed with caution and make backups to safeguard your data.

Register plugins

Register plugins - When you have purchased a plugin and you have received the registration code, you need to enter and add the codes to "*Register the plugins*"-screen.

Report designer

Reportman - Manual - Licence : Free.

Accessible from the Report designer icon on the Setup ribbon

Translations : Translations outstanding

Unlock the power of report generation and customization with our Report designer plugin, provided free of charge. Accessible from the Report designer icon on the Setup ribbon, this plugin empowers users to design and print reports and document layout files effortlessly. All reports and document layout files included in the osFinancials5/TurboCASH5 installation are designed with the powerful Report designer plugin.

Compatibility with Database Types:

The Report designer plugin seamlessly integrates with osFinancials5/TurboCASH5, allowing users to edit and write reports and document layout files across different database types. Whether your Set of Books in osFinancials5/TurboCASH5 relies on Firebird or MSSQL database types, the Reportman plugin ensures smooth functionality and compatibility.

Key Features:

- Powerful report generator and designer
- Customize existing reports or create your own
- Design document layout files for various sales and purchase documents
- Includes default layout files and reports in the osFinancials5/TurboCASH5 installation

Best Practices:

- Always make a copy of a report or layout file before editing. You can always fall back on the original report or layout if things go wrong.
- Rename your layouts or reports to prevent overwriting during reinstallation or during installation of osFinancials5/TurboCASH5 updates.

- Add your customised reports to the User reports menu

Documentation and Resources:

- osFinancials Help and Online documentation: Comprehensive detailed information provided in the "*Working with Reportman*" section of the osFinancials5/TurboCASH5 Help file and on the osFinancials website in English and Afrikaans.
- Official offline documentation: Navigate to the "...\plug_ins\reportman\doc" folder within your osFinancials5/TurboCASH5 installation directory. Open the index.html file located at ".../plug_ins/reportman/doc/index.html" in your web browser to access this resource.
- Official online documentation: For additional resources and information regarding the Report Manager, refer to the official online documentation available at https://reportman.sourceforge.io/. This online documentation offers comprehensive guidance and support for maximizing the functionality of the Report Manager.

Harness the capabilities of the Reportman Plugin to create tailored reports and document layouts while maintaining flexibility and control over your printing needs.

SQLBrowser

SQLBrowser - Manual - Shop - Licence : Once-off -

Documentation : Help documentation

Translations : Outstanding

The SQL Browser plugin in osFinancials empowers users with a robust tool for interacting with their data using Structured Query Language (SQL). Tailored for users familiar with SQL, this feature enables the execution of custom queries, effortless grouping, filtering, and sorting of results.
You can save their SQL Script files for future use and export data to various formats including XML (Extensible Markup Language), HTML (Hypertext Markup Language), Microsoft Excel, and Text File formats. Additionally, users can seamlessly export data to "*JSON*"-files and create a new table from a "*JSON*"-file, expanding the flexibility and capabilities of data management within osFinancials5/TurboCASH5.

Compatibility with Database Types

The SQL Browser plugin seamlessly integrates with any Set of Books utilizing either Firebird or MSSQL database types. Whether your organisation relies on Firebird or MSSQL for database management, the SQL Browser provides a unified platform for accessing and manipulating data.

This flexibility allows users to leverage the SQL Browser's powerful features across different database environments, ensuring consistent functionality and ease of use regardless of the underlying database technology.

Created with the Standard Edition of HelpNDoc: Elevate Your Documentation Process with HelpNDoc's Advanced Features

SQL Browser plugin

SQL Browser - Manual - Shop - Licence : Once-off - This program is licenced under a commercial licence. A nag screen will be displayed when this plugin is launched and will pop up with regular intervals.

SQL Browser is used to add cost and project groups and paper types after creating a new blank Set of Books from scratch:

- *Create Set of Books (Advanced) option for Firebird Database types*
- *Create Set of Books (Advanced) option for MSSQL Database types*

Introduction to the SQL Browser

The SQL Browser plugin in osFinancials5/TurboCASH5 provides users with a powerful tool to interact with their data using Structured Query Language (SQL). This feature is especially beneficial for users familiar with SQL and enables them to run custom queries, group, filter, and sort results effortlessly. Additionally, users can export data to "*JASON*"- files for further analysis or documentation purposes.

Compatibility with Database Types

The SQL Browser plugin is designed to seamlessly integrate with any Set of Books utilizing either Firebird or MSSQL database types. Whether your organization relies on Firebird or MSSQL for database management, the SQL Browser provides a unified platform for accessing and manipulating data.

This flexibility allows users to leverage the SQL Browser's powerful features across different database environments, ensuring consistent functionality and ease of use regardless of the underlying database technology.

Overview : Step-by-step guide on how to use the SQL Browser in osFinancials:

1. Accessing SQL Browser:
    - Navigate to the Setup ribbon and click on Plug-ins → Tools → SQLBrowser.
2. Selecting a Table:
    - Once in the SQL Browser, a list of tables in the active Set of Books will be displayed.
    - Select a table from the list.

3. Viewing Table Data:
    - Right-click on the selected table and choose the "Open" option. This action loads the data from the table into the bottom half of the SQL Browser screen.
4. Working with Data:
    - Utilize context menus to perform various actions such as opening, dropping, or emptying tables.
    - Use the Script Editor to write or edit SQL scripts.
    - Navigate and manipulate records using the Records section.
    - Apply filters, groups, and configure columns as needed.
5. Exporting Data:
    - Export data to XML, HTML, Excel, or Text formats (File menu).
    - Export data to JSON files Create tables from JSON files (Export import menu).
    - Save SQL queries for future use.
6. Exiting SQL Browser:
    - To exit the SQL Browser, click on the File → Exit menu or close the window.

Additionally, the SQL Browser menu system provides options for managing queries efficiently, customizing font settings, and handling records effectively. Users can write SQL scripts to filter and search data based on various criteria such as date, reference number, document number, or amount.

Furthermore, users can customize the display of columns, sort data in ascending or descending order, and apply filters to refine search results. Options for custom filtering allow users to specify conditions such as equal to, not equal to, less than, greater than, like, and more.

Overall, the SQL Browser in osFinancials5/TurboCASH5 empowers users to interact with their data in a flexible and efficient manner, making it a valuable tool for both novice and expert users alike.

Backup Recommendation

Before utilizing advanced features within the SQL Browser, such as dropping tables, executing or running scripts, creating a new table from a "JSON"-file, or any other advanced options, it is highly recommended to create a backup copy of your Set of Books. This precautionary measure helps safeguard against accidental data loss or unintended modifications.

If you are more than expert than the average user and you know how to write SQL (Structured Query Language) then you will love the SQL Browser. Make any valid SQL query and run it.

The return or result of your SQL rows can be grouped, filtered and sorted with just a few mouse clicks. This SQL browser also allows drag and drop features, which make it easy to work with.

Anything can be exported to the XML (Extensible Mark-up Language), HTML (Hypertext Mark-up

Language), Microsoft Excel, or Text File formats. This powerful tool will empower you to produce your own custom view of your data in TurboCASH5 and osFinancials5.

Anything can be exported to JSON-file format. This powerful tool will empower you to produce your own custom view of your data in osFinancials and TurboCASH.

Even if you are not an expert in the details or file structure of osFinancials5/TurboCASH5, you can also use this SQL Browser to filter and sort to see what you need to see. You may also use the SQL Browser to filter, sort and analyse your data.

This option allows you to generate queries and connect to the Database of a selected Set of Books using the Structured Query Language (SQL) standard. This Browse will list all the Firebird Database Files (*.fdb File extension) for the Set of Books.

Using the SQLBrowser

To use this option, you need to open a Set of Books. The SQL Browser will list all the tables in the database of the active (opened) Set of Books.

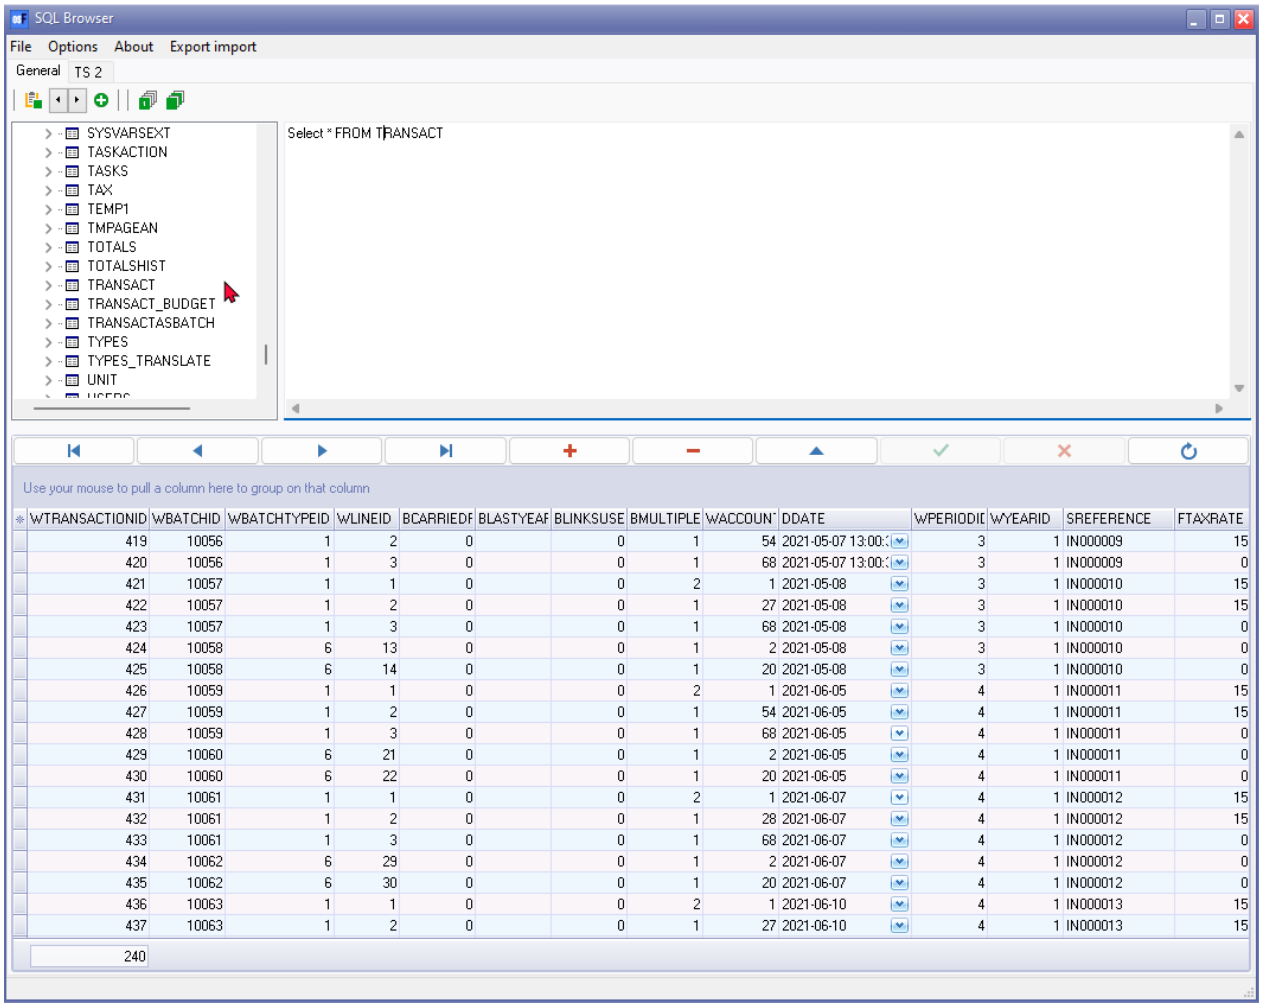
To Access and Use the SQLBrowser:

1. On the Setup ribbon, click on the Plug-ins → Tools → SQLBrowser. The "*SQL Browser*" screen will list all the tables of the active Set of Books.

   If the SQL Browser is not available from the Plug-ins → Tools → SQLBrowser menu, you need to Activate the SQL Browser plugin. To do this go to the Tools → Activate plugins on the Setup ribbon.

2. Select a table from the list.

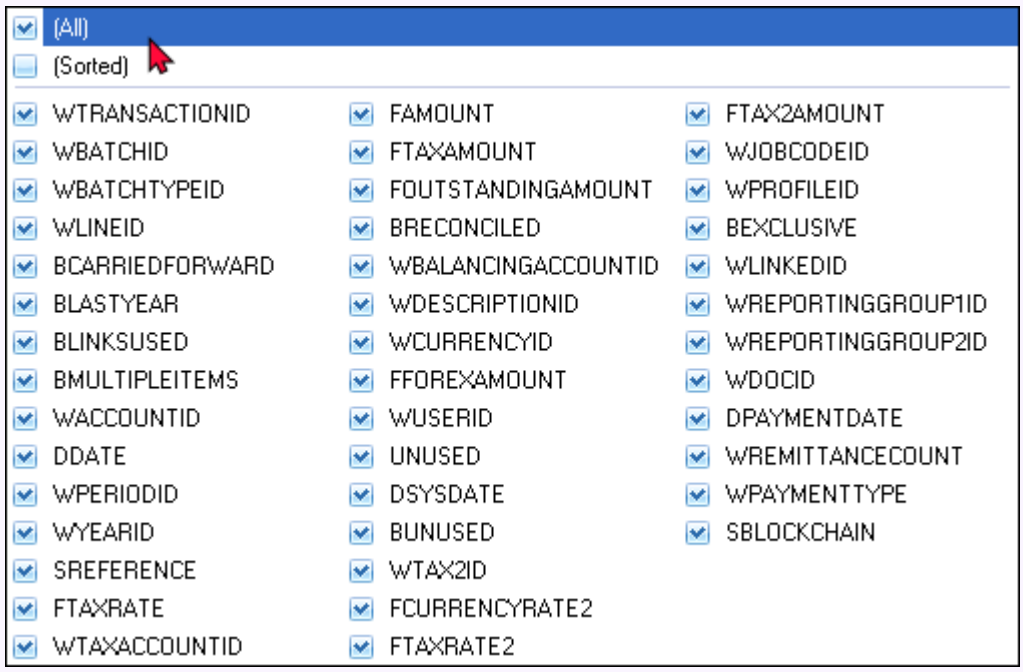
3. Right-click on the selected table and select the Open option from the context menu. The data for the selected table will be loaded in the bottom half of the "*SQL Browser*" screen. In this documentation, the "*TRANSACT*" table is opened. The transactions will be displayed as follows:



You may click on the > icon on the list to expand and view the list of columns on the selected table (e.g. TRANSACT as in this example).

** Click here to show/hide/move columns*

Click on the asterisk of the column headings to view a list of the column names.



If you tick "(Sorted)" option, the columns on this list will listed alphabetically in the ascending sequence.

4. You may use the context menu's on each of the sections to work with your data, if necessary:

    a) Tables – Open, Drop or Empty a selected table. You may also extract data (i.e. all Table names or the entire table including the properties (i.e. datatype and width) in the wiki format to the Script Editor all the Table names in a Set of Books. This can be copied and used in documentation and for development.

    b) Script Editor – You may write or edit SQL script in this section. If the entire table or a selected record is exported as SQL script in the Records section, it will also be displayed in this section. You may also configure the editor font.

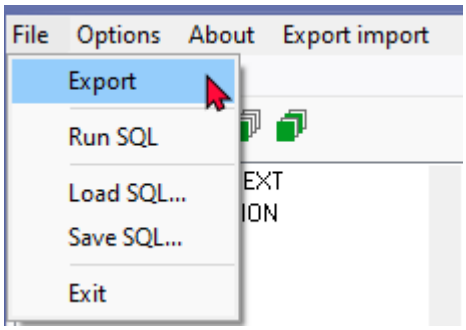
    c) Records – This is the records in a table. For example, each line in a posted batch will shows a record in the TRANSACT (Transaction) table. In this section, you may configure columns, filters, groups to view the data in a table. You may also export the entire table or a selected record as SQL script to the SQL Editor.

5. Once you are done, you may Export, Save SQL and Load SQL.

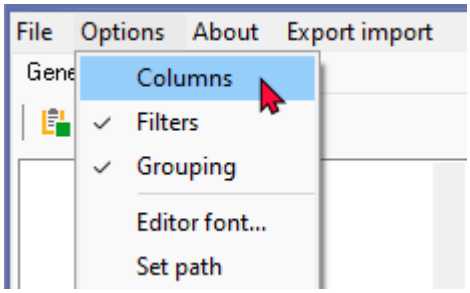
6. To exit the SQLBrowser, click on the File → Exit menu; or click on the Close button on the titlebar.

SQL Browser Menu System

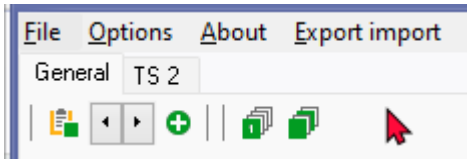
File menu



Options menu



Speedbar



The buttons on the speedbar, is as follows:

- Run SQL
- Browse older executed SQL (previous)
- Browse older executed SQL (next)
- Insert a new tab (i.e. TS2, TS3, etc.)
- Run script
- Run script set term

SQL Script Editor

Writing SQL Script

1. On the top half of the SQL Browser screen, the following SQL script is displayed:

   Select * FROM followed by the name of the selected (active / opened) table. In this example,

   Select * FROM TRANSACT represents the TRANSACT (Transaction) table.

2. After the name of the table, leave a space, type where and leave a space and type the name of the column, (e.g. to list only those transactions for a specific date, type DDATE).

3. Leave a space and type an Operator symbol (e.g. to list all transactions equal to the value that needs to be entered, type =)

4. Leave a space and type a valid value (e.g. for the date, type '2021/03/16') This value must start and end with an apostrophe.

5. Click on the Run icon (or press the Enter key on your keyboard) to run the script.

Here is an example SQL script to select the date from the Transaction table ("*TRANSACT*"):

`sql`

```sql
SELECT * FROM TRANSACT
WHERE DDATE = '2021/03/16';
```

In this example:

- `SELECT *` retrieves all columns from the table TRANSACT.
- `FROM TRANSACT` specifies the table named TRANSACT from which to retrieve the data.
- `WHERE DDATE = '2021/03/16'` filters the results to only include rows where the value in the column DDATE is equal to `'2021/03/16'`.

You can replace `'2021/03/16'` with any valid value depending on your data. Remember to follow the formatting conventions, such as surrounding date values with apostrophes.

Similarly you can replace DDATE column name with any valid column name, for example "SREFERENCE" to specify a reference number in journals, or a document number.

5. When finished writing your SQL script, click on the Run icon (or press the Enter key on your keyboard) to run the script.

Font Editor

You may also customise the font in which the query data is to be displayed on the SQL Script Editor.

To Edit the Font:

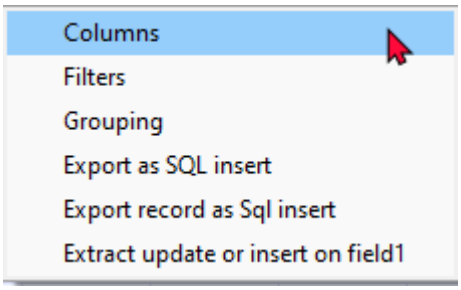
1. Right-click on the "*SQL Script Editor*" section of this screen and select the Editor Font ... option. Alternatively, click on the Options → Editor Font menu.
2. Change the font, font style, size, effects and colour as necessary.
3. Click on the OK button. The text in the "*SQL Script Editor*" will be displayed in the selected font settings.

Tables - Records

The data for the selected table will be loaded in the bottom half of the SQL Browser screen.

Data records context menu

If you right-click on the records (table data) the following context menu is displayed:



Columns - Configure (Show / hide) columns / change sequence of columns.

Filters - This will add a filter icon to hide or show the data and filter data.

Grouping - Apply grouping to the data.

Export as SQL insert - This will run and export the entire selected table to SQL script.

Export record as SQL insert - This will run and export the selected record(s) to SQL script.

Extract update or insert on field1- This will extract the update or insert SQL script.

Buttons to manage records

The following buttons may be used to navigate and manage the records:

- First - Go to the first record.
- Previous - Go to the previous record.
- Next - Go to the next record.

- Last - Go to the last record.

- Add - Add a new record.

- Delete - Delete a record. Once you click on this button, a confirmation message is displayed:

Make absolutely sure that the correct record before you click on the OK button. If it is not the correct record, click on the No button and select the correct record.

- Action - This will activate the Save or Delete buttons.

- Save - Save the changes to the record.

- Cancel - Cancel changes to the record.

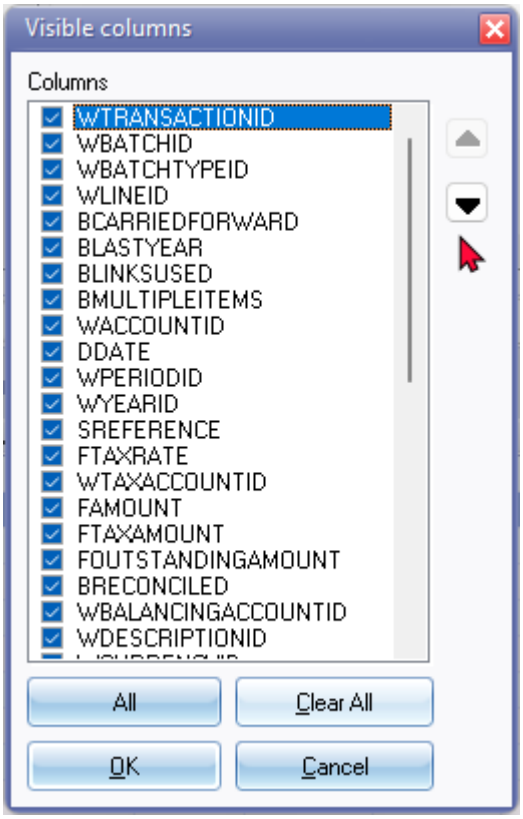
- Undo - Undo the latest changes.

Show / hide Columns

The SQLBrowser displays all the columns for the selected table by default. You may filter (hide) or show

only those columns you need to see.

To configure columns:



1. The SQL Browser displays all the columns for the selected table by default. Should you wish to hide any of these columns, you may click on the Options → Columns menu of the SQL Browser.
2. Select the following options, if necessary:
    a) Show / Hide Columns – You may de-select (remove the tick) the columns which you do not wish to view by simply removing the tick from the selected column.
    b) Sequence – Should you wish to change the sequence in which the columns are displayed, you may click on Down or Up buttons.

You may click on the All button to select all columns.

To clear all remove all the columns, click on the Clear button.

You may then select (place a tick) only in those columns to be displayed in the SQL Browser. To select (tick) or de-select (remove the tick), you may use the Spacebar and use the Down and or Up keys to select a column.

3. Once your selection is finished click on the OK button to apply these changes to the data in the SQL Browser.

Move Columns using the mouse:

You may also click on a column and drag it to the right (or to the left) to change the sequence in which you prefer the columns to be displayed.

Remove Columns using the mouse:

If you wish to delete or remove a column, simply click on the column and drag it down and leave the mouse button.

Sequence of Data in Rows

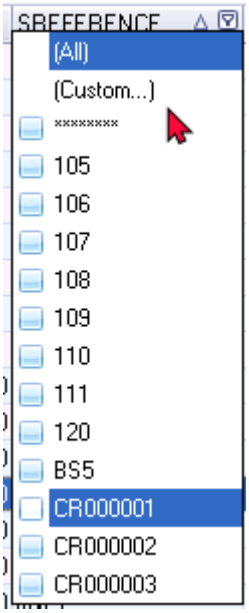
All the data is by default displayed ascending; from the smallest to the highest value (e.g. a-z or 0-9) according to the record number or record ID (e.g. Accounts.DB table it would be the AccountID, in the TRANSACT table, it would be the TRANSACTIONID, etc.)

To change the sort order from ascending (e.g. a-z or 0-9) to descending (e.g. z-a or 9-0) select a column and click on it. If you click on it again it will change back to ascending sequence.

Filter Options in Column Headings

While viewing and analysing the data you may sort and filter the data, in each column of the active or loaded table. To do this, select the column and click on the drop-down arrow. A list displaying the data as well as an All option and a customise option in the selected column will be displayed.

For example, the Reference column (i.e. SREFERENCE) of the Transaction table (i.e. TRANSACT) will display as follows:



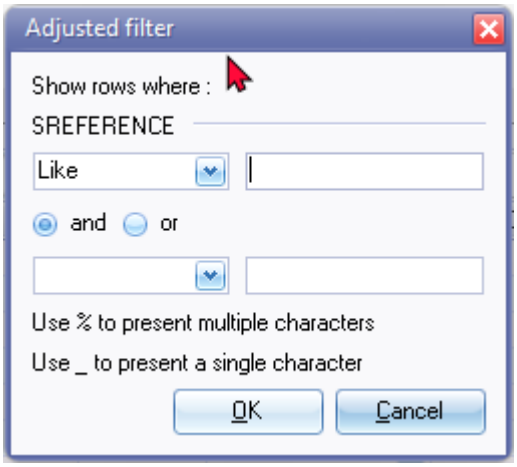
The filter for this column (as per example) will list all reference numbers as entered in batches (journals) example, the reference for balancing entries (i,e, 8 asterisks ********) Reference column (i.e. SReference) of the Transaction Database table (i.e. TransAct.DB).

Custom Filter

You have the following options to sort or filter the data:

1. Select a specific entry from the list - only those entries which match the selection in the table, will be listed, e.g. with the same reference number.
2. All - Select to display all the entries in the selected table.

3. Custom - This will launch a screen on which you may set further criteria to filter the data.



The type of filter options/conditions available for data manipulation can vary depending on the nature of the data contained within the column. Some common Filter options is as follows:

a) Equal to - Lists or displays all values that are exactly the same as the specified value.

b) Not equal to - Lists or displays all values that are not exactly the same as the specified value.

c) Less than - Lists or displays all values smaller than the specified value.

d) Less than or equal to - Lists or displays all values smaller than or equal to the specified value.

e) Greater than - Lists or displays all values greater than the specified value.

f) Greater than or equal to - Lists or displays all values greater than or equal to the specified value.

g) Like - Lists all values in the table similar to the specified value using pattern matching (often with wildcard characters).

h) Not like - Lists all values in the table not similar to the specified value using pattern matching.

i) Is null - Excludes any rows where the value is missing (NULL), meaning they will not be listed or displayed.

j) Is not null - Lists or displays any rows where the value is not missing (NULL).

k) Start with - Lists or displays values where the text starts with the specified string.

l) End with - Lists or displays values where the text ends with the specified string.

m) Include - Lists or displays all values that match any of the specified values. This option is useful when you want to filter for multiple specific values.

n) Not include - Lists or displays all values that do not match any of the specified values. This option is useful when you want to exclude specific values from the result set.

These options provide a comprehensive set of conditions for filtering data in columns, allowing for precise control over the displayed dataset.

Adjusting filter options based on the data type ensures that you have access to the most relevant and effective tools for manipulating and analysing your data. This flexibility enhances usability and allows for more efficient data exploration and decision-making.

Date Filter

In date columns, a date picker or date selection screen will be available for ease of selection.

Export data

Export to files

On the File menu, you may select the Export option to export your saved data data to XML, HTML, Excel, or Texts formats.

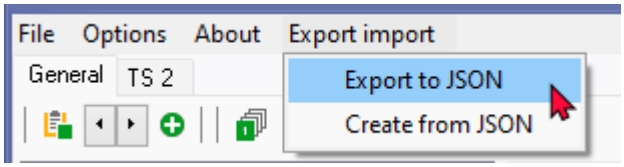
Once you have sorted and filtered your criteria, you may:

1. Export the data in exactly the same sequence as displayed in the bottom half of the "*SQLBrowser*" screen to any of the following file formats:
    a) XML - Extensible Mark-up Language
    b) HTML - HyperText Mark-up Language
    c) Excel - Microsoft Excel Spreadsheet
    d) Text - Text file
2. Save the SQL in a (*.sql) SQL file format. You may then at any later stage open the saved *.sql file in the SQL Browser.

Export to JSON file / Create from JSON file

A JSON (JavaScript Object Notation) file is a lightweight data interchange format that is easy for humans to read and write and easy for machines to parse and generate. It is often used for transmitting data between a server and a web application as an alternative to XML.
JSON files are commonly used in various applications and scenarios such as web APIs, configuration files, and data storage. They are flexible and easy to work with, making them a popular choice for data interchange.

On the Export import menu, you may export data from a selected table and export it to a "*JASON*"-file.



You may also Create a new table from a "*JASON*"-file.

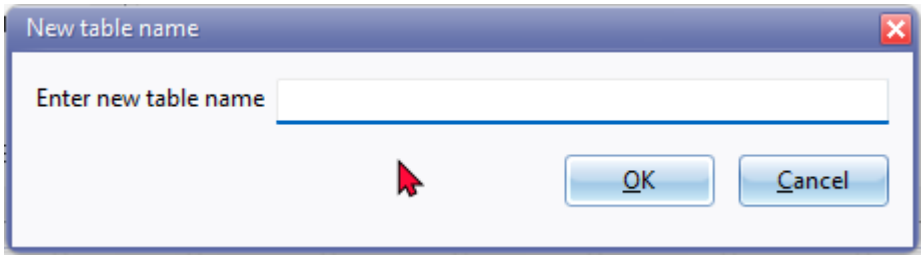


Table names in a Set of Books

All tables in the Set of Books may be extracted form the "*Extract all table names*" in the context menu (right-click on "*Tables*") option.

Books / Manuals

osFinancials Manual (Netherlands)

osFinancials manual - Shop - Licence - Once-off -

The osFinancials manual provides comprehensive guidance on using the osFinancials software, offering step-by-step instructions in Dutch. This manual covers various aspects, including setting up accounting processes, implementing daily tasks, and navigating the features of osFinancials. Whether you're new to the software or seeking to enhance your proficiency, the osFinancials manual equips users with the knowledge needed to effectively utilize the platform for financial management purposes.

Documentation -

English and Afrikaans Online Help

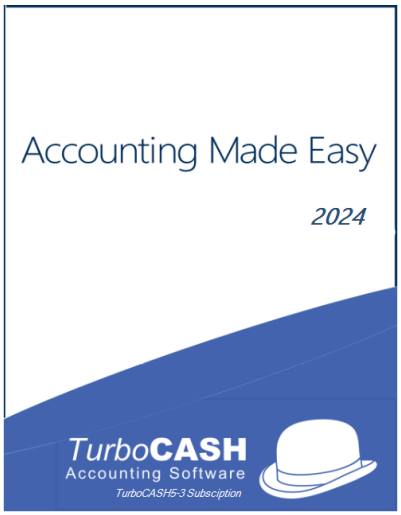
osFinancials5/TurboCASH5 accounting software provides a comprehensive online help system in both English and Afrikaans. This help system is designed to assist users in understanding and navigating the osFinancials5/TurboCASH5 accounting software, as well as to provide guidance on accounting principles and practices. Whether you are new to accounting or an experienced professional, the help system offers a wealth of information to help you get the most out of osFinancials5/TurboCASH5. With easy-to-follow instructions and detailed explanations, the help system is an invaluable resource for anyone using osFinancials5/TurboCASH5 for their accounting needs.

Hands-on Tutorials

osFinancials5/TurboCASH5 installation provides tutorial Sets of Books in both English and Afrikaans. These tutorial books allow users to explore different settings, transactions, and reports within the software. Here are the available tutorial sets:

Accounting Made Easy

English tutorials (using separate receipt and payments journals for banking / cash transactions)



The following Set of Books based on this tutorial, is installed in the "…\bin\Tutorials\ENGLISH\" folder:

- *HANDYMAN (No transactions)*
- *HANDYMAN-A (Unposted transactions)*
- *HANDYMAN-B (Posted transactions)*

Accounting Made Easy - Bank Import

English tutorials (using the BankImport plugin for banking / cash transactions)

The following Set of Books based on this tutorial, is installed in the "…\bin\Tutorials\BANK-IMPORT\" folder:

- *HANDY-BANK (No transactions).*
- *HANDY-BANK-A (Unposted transactions)*
- *HANDY-BANK-B (Posted transactions).*
- *HANDY-BANK-UNPOSTED-BANK-STATEMENT – Posted transactions, excluding bank / cash transactions. Bank statement needs to be imported from the "…\bin\Tutorials\BANK-IMPORT\BANK-STATEMENTS" folder.*

Rekeningkunde Met Gemak (Afrikaans)

Afrikaanse handleidings (gebruik aparte ontvangste- en betalingsjoernale vir bank- / kontanttransaksies)

Die volgende Stel Boeke gebaseer op die Afrikaanse handleidings, is in die "…\bin\Tutorials\AFRIKAANS\"-lêergids geïnstalleer:

- *NUTSMAN (Geen transaksies).*
- *NUTSMAN-A (Ongeposteerde transaksies)*
- *NUTSMAN-B (Geposteerde transaksies).*

To open the tutorial Sets of Books, installed in the "*bin / Tutorials*" directory, you need to click on the Open icon on the Start ribbon. On the "*Set of Books*" screen, click on the Browse icon and select the desired tutorial Set of Books that you wish to follow.

Project Hours Registration Plugin

Project Hours Registration - Shop - Licence: Once-off -

This plugin allows you to register hours for projects and generate quotes and/or invoices if you have activated Projects.

Efficiently track project hours and streamline invoicing with our Project Hours Registration Plugin. Available for a one-time license fee, this plugin seamlessly integrates with the Projects feature in osFinancials5/TurboCASH5, enhancing its functionality with multi-user agenda and hour registration capabilities.

Key Features:

- Hour Tracking: Easily register and monitor hours spent on various projects directly within the osFinancials5/TurboCASH5 interface.
- Quote and Invoice Generation: Generate quotes and invoices based on recorded project hours, facilitating accurate billing and client communication.
- Enhanced Projects Functionality: Complement the existing Projects feature in osFinancials5/TurboCASH5 with additional options for multi-user agenda management and hour registration.
- Improved Collaboration: Enable multiple users to collaborate on projects by tracking their respective hours and contributions.
- Streamlined Workflow: Simplify project management processes by centralizing hour registration and invoicing within the osFinancials5/TurboCASH5 platform.

Maximise productivity, improve project tracking, and enhance invoicing accuracy with the Project Hours Registration Plugin for osFinancials5/TurboCASH5.

Small adjustments

Quantities based on dates 1 and 2 plugin

Quantities based on dates 1 and 2 Plugin - Shop - Licence: Once-off -

Quantities based on dates 1 and 2 plugin

Multiplies the item total amount based on the quantity and period between date field 1 and date field 2.

The "Quantities based on dates 1 and 2" plugin in osFinancials calculates quantities based on two dates and then multiplies the item total amount by the quantity and the period between those dates. This could be useful for scenarios like calculating expenses over a specific time period or determining the quantity of items needed for a project based on the duration.

This plugin would likely need inputs for the item total amount, the quantity, date field 1, and date field 2. Then, it would calculate the period between the two dates, multiply it by the quantity, and finally, multiply the result by the item total amount to give the final amount.

Netherlands text

"*Aantallen op basis van datum 1 en 2*
Vermenigvuldigd het artikel totaal bedrag op basis van het aantal en de periode tussen datum veld 1 en datumveld 2".

Unit Sales and Purchases Plugins

Unit Sales Plugin

Unit Sales Plugin - Shop - Licence: Once-off -

The Unit Sales Plugin streamlines the process of selling units to your customers, such as packs of items. Easily manage unit quantities and sales within osFinancials with this intuitive plugin.

Key Features:

- Bulk Sales: Simplify the selling of items in predetermined units, such as packs or bundles, to customers.
- Unit Management: Add units and their quantities directly within osFinancials to facilitate sales

of packaged items like 6-packs or other bundled units.

- Efficient Sales Process: Simplify the sales process by seamlessly integrating unit sales management into your osFinancials workflow.
- Improved Inventory Control: Maintain better control over inventory levels by accurately tracking unit quantities and sales transactions.
- Enhanced Customer Experience: Provide customers with the convenience of purchasing packaged units, improving satisfaction and loyalty.

With the Unit Sales Plugin, optimize your sales operations and offer customers the flexibility to purchase units tailored to their needs.

Unit Purchase Plugin

Unit Purchase Plugin - Shop - Licence: Once-off -

The Unit Purchase Plugin facilitates the procurement of units from suppliers, streamlining processes such as bulk purchasing, package deals, or bundled acquisitions, akin to buying items in specific quantities such as six-packs. With this plugin, users can effortlessly manage unit-based purchases within osFinancials5/TurboCASH5.

Key Features:

- Bulk Procurement: Simplify the procurement of items in predetermined units, such as packs or bundles, from suppliers.
- Quantity Management: Easily add units and specify their quantities within osFinancials5/TurboCASH5, ensuring accurate inventory tracking and purchasing.
- Supplier Integration: Seamlessly integrate unit purchases with supplier transactions, enhancing procurement efficiency and supplier relationship management.
- Inventory Optimization: Streamline inventory management by aligning purchasing activities with predefined units, optimizing stock levels and reducing procurement complexities.
- Customization Options: Tailor the plugin settings to accommodate specific unit-based purchasing requirements, offering flexibility and adaptability to diverse procurement needs.

By leveraging the Unit Purchase Plugin, organizations can enhance their procurement processes, improve inventory management, and optimize purchasing efficiency within osFinancials5/TurboCASH5.

Payroll plugin

Empower your wood wholesale trading with our Woodsales/Volume Sales Plugin. Tailored specifically for the timber industry, this plugin revolutionizes invoice processing by enabling you to specify measurements such as meters length, height, width, and cubic meters effortlessly.

With a simple one-time license, unlock the ability to manage wood sales with precision and efficiency. Say goodbye to manual calculations and hello to streamlined invoicing processes with the Woodsales/Volume Sales Plugin.

osFinancials PAB 2.0 Plugin

osFinancials PAB 2.0 Plugin - Shop - Licence: Annual subscription

The osFinancials PAB 2.0 Plugin is a powerful addition to your osFinancials software, designed to enhance productivity and streamline your financial management processes. PAB stands for "*Payment Authorization Bureau*", and this plugin offers comprehensive features to facilitate secure and efficient payment authorisation workflows.

The Payment Authorization Bureau (PAB) plugin is designed to facilitate payment authorization workflows within osFinancials software. As such, its applicability is not limited to specific countries but rather extends to any organization or business entity that utilizes osFinancials for financial management purposes.

While osFinancials itself is a versatile accounting and financial management platform that can be used by organizations worldwide, the PAB plugin's effectiveness may vary depending on local regulations, banking systems, and business practices in different countries.

Therefore, the PAB plugin can be adapted and configured to meet the specific payment authorization requirements of various countries and regions, providing flexibility and customization options to accommodate diverse organizational needs. However, organizations should ensure compliance with relevant legal and regulatory frameworks governing payment authorization processes in their respective jurisdictions.

Key Features:

- Secure Payment Authorization: Ensure the security of your payment authorisation process with robust encryption and authentication mechanisms.
- Streamlined Workflow: Simplify and expedite payment authorisation workflows with intuitive tools and user-friendly interfaces.
- Multi-level Approval: Enable multi-level approval processes for payment authorisation,

allowing for hierarchical review and authorisation by designated personnel.

- Audit Trail: Maintain a detailed audit trail of all payment authorization activities, including approvals, rejections, and modifications, for comprehensive record-keeping and compliance purposes.
- Integration Capabilities: Seamlessly integrate the PAB 2.0 Plugin with other osFinancials modules and external systems to streamline data exchange and enhance interoperability.
- Customizable Configuration: Tailor the configuration of the plugin to align with your organisation's specific payment authorization policies, rules, and requirements.
- Reporting and Analytics: Access insightful reports and analytics to gain visibility into payment authorisation trends, performance metrics, and compliance adherence.
- User Permissions: Assign granular user permissions to control access to sensitive payment authorisation functionalities and data, ensuring data security and compliance with regulatory requirements.

The osFinancials PAB 2.0 Plugin empowers your organisation with robust tools and capabilities to optimize payment authorisation processes, mitigate risks, and drive operational efficiency in your financial management operations.

Driving School Plugin

Driving School Plugin - Shop - Licence :

Driving School Plugin This a comprehensive plugin for a driving school management system. This Plugin includes the FreeFieds Plugin and Multimedia Plugin.

Key Features:

- Multimedia Plugin for Candidate Photos: This feature allows candidates to capture their photos via webcam for identification purposes. It ensures that each candidate has a personalized photo associated with their profile.
- Multimedia Plugin for ID Scan: Candidates can scan or upload images of their identification documents, such as driver's licenses or IDs, to verify their identity and eligibility for the program.
- Multimedia Plugin for Theory Lists: Candidates can upload or scan documents related to

their theoretical knowledge, such as study materials or test results. This helps instructors track each student's progress in theoretical learning.

- Free Fields for Importing CBR Files: This feature enables the import of CBR (Candidate Booking Request) files, allowing for easy integration of candidate data into the system. It streamlines the process of adding new candidates to the database.
- Integration with osF Agenda for Examination Dates: The plugin integrates with the osF agenda to schedule and manage examination dates for students. Instructors can easily view and update examination schedules within the driving school system.
- Integration with osF Agenda for Lesson Dates and Times: Similarly, the plugin integrates with the osFinancials agenda to schedule and manage lesson dates and times for students. Instructors can efficiently plan and track the progress of each student's driving lessons.

These features collectively enhance the functionality of the driving school management system, providing instructors with tools to efficiently manage candidate data, schedule appointments, and monitor student progress.

Accountancy plugins

Spreadsheet Plugin

Spreadsheet Plugin - Shop - Licence : Once-off -

The osFinancials Spreadsheet plugin is a powerful tool for integrating financial data directly into Excel spreadsheets, streamlining the process of analysing and reporting financial information. By enabling users to leverage functions ranging from simple totals to more complex SQL queries, it offers flexibility in how data is presented and analysed within the familiar Excel environment.

The ability to add multiple aliases for different Sets of Books and consolidate the results in Excel is particularly useful for organizations managing multiple accounting entities or subsidiaries.

The osFinancials Spreadsheet plugin is already included in osFinancials5/TurboCASH5, eliminating the need for separate downloads. Upon payment, you'll receive an unlocking code via email for seamless activation.

osFinancials Workshop Basic - Shop - Payment per hour -

This workshop is a one on one, remote workshop. With a software program your desktop will be shared with us. That way you can see the movements we make or perform the actions yourself while we watch during the workshop.

At start you submit the items you want to have support on or you can choose to have the step by step

explanation.

The step by stem explanation means:

- Starting your accounting.
- Creating a chart of accounts.
- Working with osFinancials.
- Any question that comes up during the workshop.

The workshop is based upon a hour price.

osFinancials Workshop Advanced

osFinancials Workshop Advanced - Shop - Payment per hour -

This workshop is meant for the trained osFinancials user, or accountant.

Online "*workshop*", with a shared desktop we interactive set up osFinancials or give explanation about the procedures.

This is a workshop based upon a hour price, so you need to buy as many as you think is needed, or what our consultants advise.

Conversion

If you need to convert your data from other accounting packages, the following options is available on the osFinancials Webshop:

Conversion Basic

Conversion Basic - Shop - Payment per hour -

With this product one of our technical consultants will convert the files of your present Set of Books to osFinancials with the maximum of time for 1 hour.

The files that will be converted are:

- Debtor file
- Creditor file
- Stock file

Please note: This conversion doesn't include the ledger accounts.

The submitted file must be in csv, xls, txt, or wk1 format.

If you want to submit an other format, please contact us.

Conversion Extensive

Conversion Extensive - Shop - Payment per request -

With this product one of our technical consultants will convert the files of your present Set of Books to osFinancials5/TurboCASH5.

Converting data from various other accounting software packages to osFinancials5/TurboCASH5. Here's a breakdown of the process and what's involved:

1. Conversion Service: The conversion service offered by osFinancials5/TurboCASH5 involves one of their technical consultants converting files from your current accounting software to osFinancials5/TurboCASH5. This service has a maximum time limit of 2 hours.
2. Supported Formats: Data from your existing accounting software can be converted if it can be provided in CSV, XLS, TXT, or WK1 format. These are common file formats for exporting data from accounting software.
3. Converted Files: The following types of files can be converted as part of the service:
    - Debtor file: Information about your customers or clients.
    - Creditor file: Information about your suppliers or vendors.
    - Stock file: Details about your inventory or stock items.
    - Ledger accounts: Your financial accounts, including income, expenses, assets, and liabilities.
    - Mutations: Changes or transactions recorded in your accounting system.
4. Supported Software Packages: The service supports conversion from several Dutch accounting software packages, including:
    - Accountview
    - ADBPlus

- Davilex
- Exact
- Muis
- Nedsof

5. Contact for Inquiry: If you're unsure whether your data can be converted or if you have any questions about the conversion process, you can contact osFinancials5/TurboCASH5 for clarification.

If you're considering migrating your accounting data to osFinancials5/TurboCASH5 and your current software is one of the supported packages, this conversion service could streamline the transition process for you. It's always a good idea to reach out to osFinancials directly for specific details about the conversion process and any requirements or considerations specific to your situation.

Field length

---

osFinancials5/TurboCASH5 Field length

osFinancials Field length - Shop - Payment per request -

With this tool you can change the field length of:

- Product code
- Product description
- Debtor name
- Creditor name

- In the documents, and batch entries but also with the import of osCommerce.

osFinancials offering field length customization as a paid service for osFinancials5/TurboCASH5. This is a valuable option for businesses that have very specific needs beyond the standard account structures. osFinancials goes even further by providing a dedicated "Field Length" where you can request and pay for specific field length adjustments.

What it implies:

- Flexibility for Unique Needs: Businesses often have unique chart of account structures, reporting requirements, or industry-specific categorizations that go beyond typical account numbering schemes. The Field Length Shop allows osFinancials to adapt to these non-standard needs, as well as other important fields.
- Control and Precision: Customization gives businesses greater control over their financial data. They can tailor the system to match their exact processes and ensure that the software accurately reflects their financial activities.
- Scalability: As a business grows or its needs evolve, the ability to adjust field lengths can be crucial for accommodating new data elements without requiring a complete system overhaul.
- Professional Service: Offering this as a paid service through the Field Length indicates that osFinancials provides professional support and expertise to ensure that the customization is done correctly and efficiently. This can be especially valuable for businesses that lack in-house technical expertise.
- Specific Customization Options: Through the Field Length Shop, osFinancials allows you to change the field length of key elements, including:
  - Product Code
  - Product Description
  - Debtor Name
  - Creditor Name
- Comprehensive Application: These field length changes apply not only to documents and batch entries within osFinancials but also extend to data imported from osCommerce. This is a significant advantage for businesses using both platforms.
- Potential Costs: While customization offers flexibility, it's important for businesses to understand the associated costs. They should get a clear understanding of the pricing structure and any potential ongoing maintenance fees *before* making a request through the Field Length Shop.

Key Considerations for Businesses:

- Clearly Define Requirements: Before requesting a field length change, businesses should clearly define their specific requirements. This includes identifying which fields need to be adjusted and the

desired length for each field. The more specific you are, the smoother the process will be.

- Evaluate Alternatives: Businesses should also consider whether there are alternative solutions, such as using prefixes, suffixes, or custom fields, that might achieve the desired result without requiring a formal request through the Field Length.
- Get a Quote: Contact osFinancials directly through the Field Length process to get a detailed quote for the customization service, including any potential costs for implementation, testing, and ongoing support.
- Document Changes: Ensure that all customizations are properly documented. This will be crucial for future upgrades, maintenance, and troubleshooting.

By offering this customization service, and especially by providing the Field Length , osFinancials demonstrates a commitment to meeting the diverse needs of its osFinancials5/TurboCASH5 customers. It empowers businesses to leverage the software effectively, even with non-standard data requirements or integrations with other platforms like osCommerce.

E-mail plugins

Document EMail Pro Plugin

Document EMail Pro Plugin - Manual - Shop - Licence : Once-off - This Plugin is included in the osFinancials5/TurboCASH5 subscription.

Streamline your document handling and communication processes with our Document Email Pro Plugin. With a one-time licence, you can effortlessly email invoices, quotes, and more directly from the program.

Customise email layouts to match the document type, ensuring a professional and tailored communication experience for your clients and suppliers. Send multiple documents simultaneously with ease, simplifying your workflow and saving valuable time.

Experience the convenience of sending digital sales and purchase documents in PDF format, enhancing efficiency and communication with customers and suppliers alike. Upgrade your document management with Document Email Pro Plugin.

Document email pro plugin Newsletter

Document email pro plugin Newsletter - Shop - Licence : Once-off -

The "*Document email pro plugin Newsletter*" plugin for osFinancials5/TurboCASH5 enhances your communication capabilities by allowing you to send documents via email seamlessly. This documentation specifically focuses on the newsletter functionality of the plugin, providing a detailed guide on its features and usage.

Key Features:

- Document Email Integration:
  - Send documents such as invoices or quotations directly via email.
  - Option to choose between HTML or plain text format.
  - Define unlimited email layouts tailored to your preferences.
  - Add custom text entries for individual customers or email recipients.
- Email Template Management:
  - Separate email template management for easy customization.
  - Configure email data sets independently for each template.
- SMTP Server Integration:
  - Support for SMTP server with password access for secure email delivery.
- Recipient Management:
  - Retrieve recipients from osFinancials5/TurboCASH5 database for newsletter distribution.
  - Integration with E-Commerce plugin allows inclusion of users from your shop or CRM system.
- Usage Method:
  - Document Email Creation:
    - Right-click on the document (e.g., invoice or quotation, which is sent as a pdf attachment) to initiate email creation.
    - In the second selection field of the email template that the email body text.
    - Optionally, in the shipping screen, where you also can add additional text not

included in the template condition.

- § Additional Text Entry:
  - Provide extra text during email composition, not included in the template.
  - Opportunity to include personalized messages for recipients.
- § Preview and Trial:
  - Preview email in the browser before sending.
  - Send a trial version to CC/BCC email addresses for review.
- § Finalizing and Sending:
  - Review the email content before sending.
  - After sending, display confirmation message for reference.

- o Installation:
  - § The plugin comes pre-installed with osFinancials5/TurboCASH5 and does not require separate downloads.
  - § Upon payment confirmation, receive the plugin code and unlocking instructions via email.
  - § Initiate plugin activation directly from osFinancials5/TurboCASH5 with a simple button push.
  - § Activation typically occurs within one working day after payment receipt.

The Email Pro plugin's newsletter functionality enhances your communication efficiency by integrating document emailing and newsletter distribution seamlessly within the osFinancials5/TurboCASH5 system. With its intuitive interface and versatile features, stay connected with your customers effortlessly.

Bank import plugin

Introduction to the Bank Import Plugin

Bank Import Plugin Licence

The Bank Import Plugin is included with the osFinancials5/TurboCASH5 Business class subscription. With a registered osFinancials5/TurboCASH5 Business class subscription, you gain access to import and process unlimited statements for each of your bank accounts.

Upon purchasing the osFinancials5/TurboCASH5 Business class subscription, you will receive an email containing registration (activation) codes and detailed instructions.

For unregistered versions of osFinancials5/TurboCASH5, a message may appear:

> *"This demo plugin allows %s records to be entered. If you need more, please buy the product at https://www.osfinancials.org/en/webshop".*

We encourage users to support osFinancials by purchasing the osFinancials5/TurboCASH5 Business class subscription. This not only unlocks the full functionality of the Bank Import Plugin but also supports ongoing development and improvements.

For users of osFinancials 4 / TurboCASH4, the Bank Import Licence is available for purchase from our osFinancials webshop.

The Bank Import Plugin in osFinancials5/TurboCASH5 empowers you to seamlessly download bank statement files from your online banking platform, provided by your bank or financial institution. These downloaded statements can then be effortlessly imported into the corresponding bank accounts, referred to as cash books within osFinancials5/TurboCASH5.

This plugin supports the download of statements for multiple bank accounts and credit cards, accommodating users with diverse banking needs. It's essential to have the corresponding Payments and Receipts journals set up for each bank or credit card account within osFinancials5/TurboCASH5.

By importing bank statements, transactions are automatically populated into the Payments and Receipts columns, eliminating the need for manual data entry. This automation not only saves time but also minimizes the risk of errors inherent in manual input.

The user-friendly interface of the Bank Import Plugin includes context menus that facilitate the location, selection, and search for specific transactions, debtors, creditors, or general ledger accounts. This enhances the navigation and management of bank transactions, contributing to efficient financial data handling.

Setting debtors, creditors, or general ledger accounts as open item accounts enables precise linking of debit and credit transactions, ensuring accurate tracking of outstanding balances and facilitating efficient payment and receipt management. The plugin allows flexibility in linking portions of payments or receipts to multiple outstanding transactions as needed.

Furthermore, the plugin enables the linking of accounts to specific debtors, creditors, or general ledger accounts, ensuring subsequent bank statement imports automatically allocate transactions correctly based on predefined account linkages. This feature streamlines transaction allocation, enhancing the accuracy of financial records and saving time.

Utilizing bank references, the plugin automatically allocates or links various transactions, such as payments,

deposits, receipts, and other debits/credits, to the correct accounts within your Set of Books. This automation simplifies processes and reduces the need for manual intervention.

In summary, the Bank Import Plugin in osFinancials5/TurboCASH5 offers a comprehensive solution for importing bank statements, automating transaction allocation, and efficiently managing and reconciling bank accounts within your accounting system. With its array of features and functionalities, it not only reduces manual data entry but also enhances the accuracy and effectiveness of financial management processes.

Managing Bank Statements

Download and Save your Bank Statement

Before you can use this Bank import plugin, you need to download your Bank Statement from your financial institution and save it in a valid file format.

When downloading a bank statement; from your bank or financial institution; you may need to:

- Sequence to list your transactions, e.g. Date, Amount or Description.
- Select the correct start and end dates, for your requirements.

You may download bank statements for more than one bank account; credit card statements; etc.; provided that:

- You are registered for online banking at your bank or financial institution.
- Have a created separate Bank, Credit card accounts, etc. which is linked to its own Payments and Receipt journals).

If you have created and use the Petty Cash account as a Bank Account, you may still enter the transactions manually, if required.

Different Methods for Tracking Bank Transactions

You can keep track of your bank bookings in different ways, in this manual we will discuss the 2 most common ones.

1. Statement method, where you make your bookings per statement from the bank.
    - Benefits :
        - You have a good check of the balances: the final amounts on the statement.
    - Cons :

- The bank balances are not "up to date", you always fall behind "today" depending on the shear frequency.
- It is possible that there are 2 statements with the same date
- In the download, you will always download all bookings from that date
- These "extra" bookings must be deleted either before importing, or immediately after the import in the screen for assigning the reference

2. Date method, in which you record the bookings by date.
   - Benefits :
     - The bank balances are "up to date", you are one day behind today.
     - No corrections on downloads, with bookings of the same date appearing on 2 statements.
   - Cons :
     - None as far as known.

Enter cash / bank details according to the "statement method"

You prepare statement no. 1 to verify the data.

You now have 2 options for entering the transactions:

1. You can download the statement and process it electronically via electronic banking.
2. You can enter the statement manually.

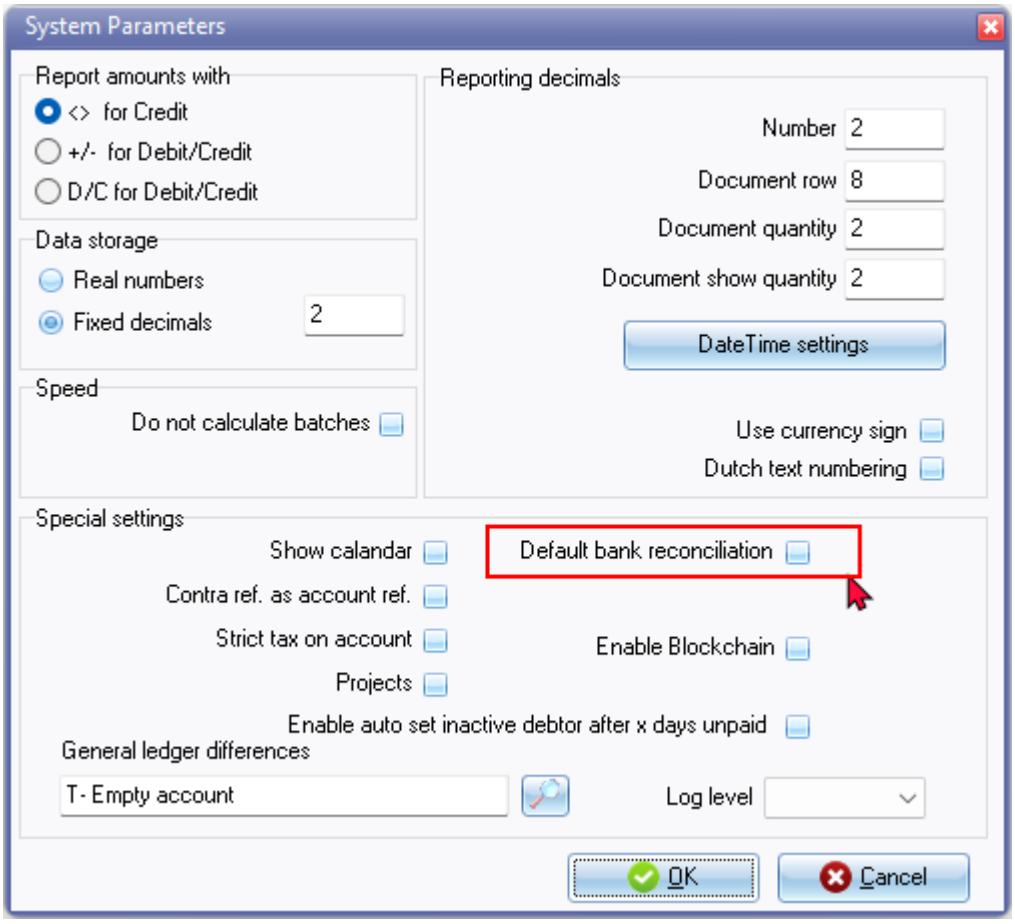
Configuring the Set of Books for the Bank Import plugin

Activating the Bank Import Plugin

To activate the Bank Import Plugin's features, you must first check or confirm the setting. The Bank Import plugin uses a combined payment and receipt journal into a single journal for each bank account.

To activate the Bank Import plugin:

1. Go to the Setup ribbon and select Setup → System parameters.
2. Deselect (remove the tick) on the “*Default bank reconciliation*” to activate this plugin.

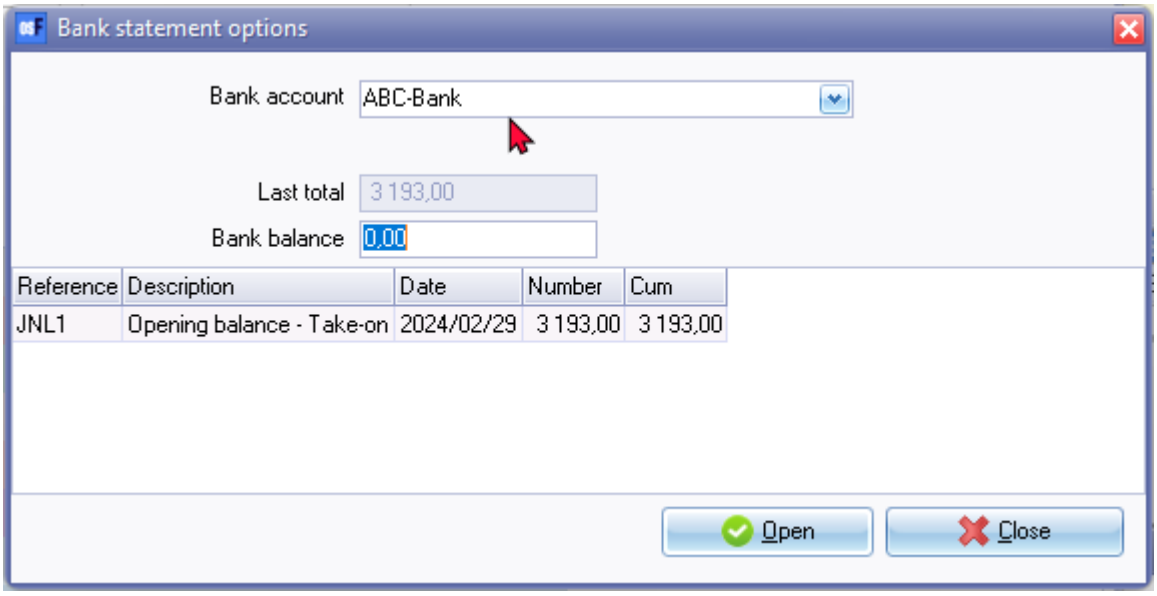


3. Click OK. This will save your setting.

Settings for the bank account batch

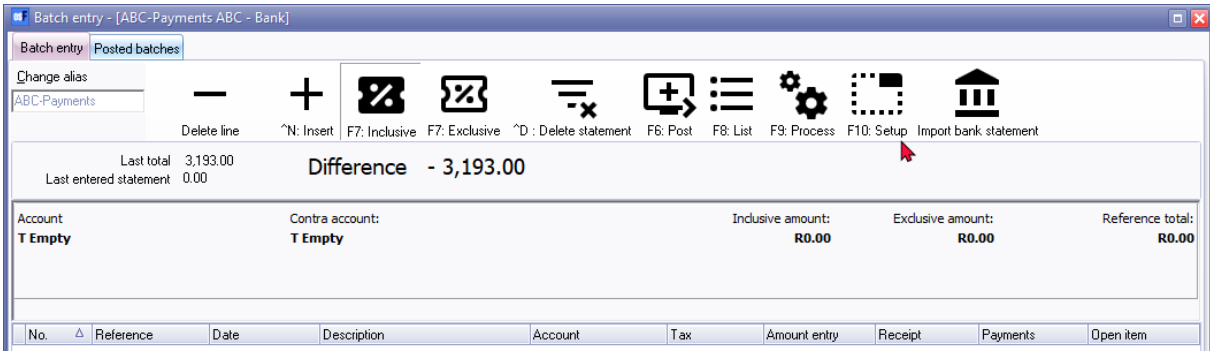
Firstly, you will need to check and confirm the settings of the Bank entry batch.

1. Go to the Default ribbon and select Cash/Bank entry . The "*Bank statement options*" screen is displayed:

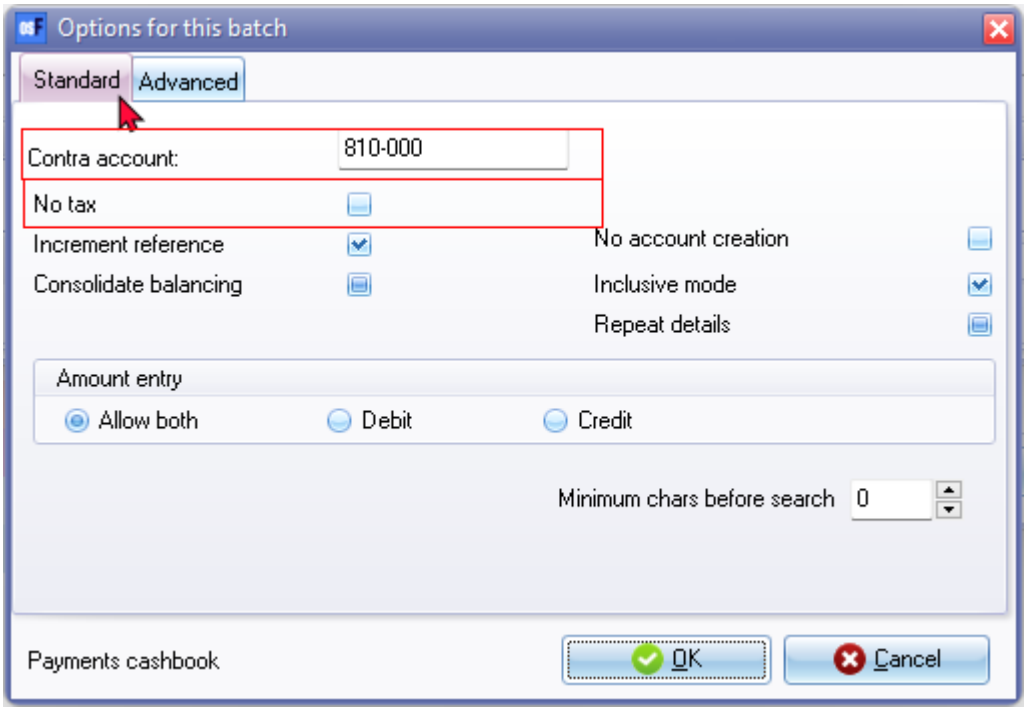


2. Select the "*Bank account*" into which you need to import your bank statement. In this example, " *ABC-Bank*" is selected.

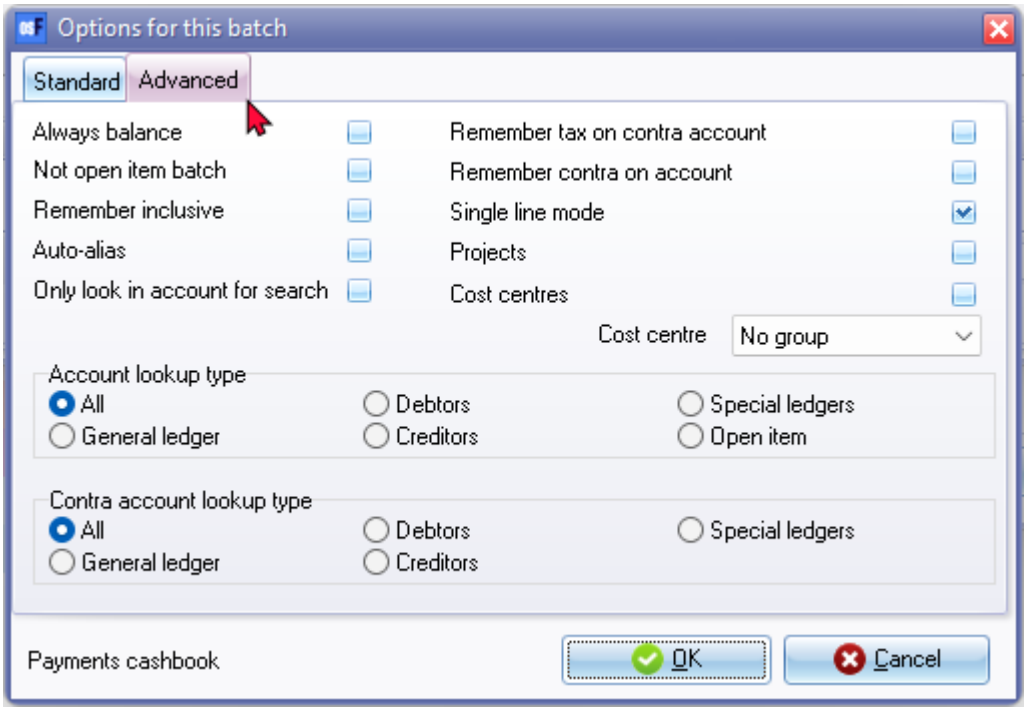
3. Click Open. The "*Batch entry*" screen, is displayed, as follows:



4. Click F10: Setup . The "*Options for this batch*" - "*Standard*" tab is displayed:



5. Check the following items:
   - The contra account is the Account code (number) of your bank account in your ledger.
   - The check mark "*No tax*" should be 'on'. If you are not registered as a VAT (GST/Sales tax vendor you may leave this option unticked.
6. Then click on the "*Advanced*" tab and accept the settings as below.



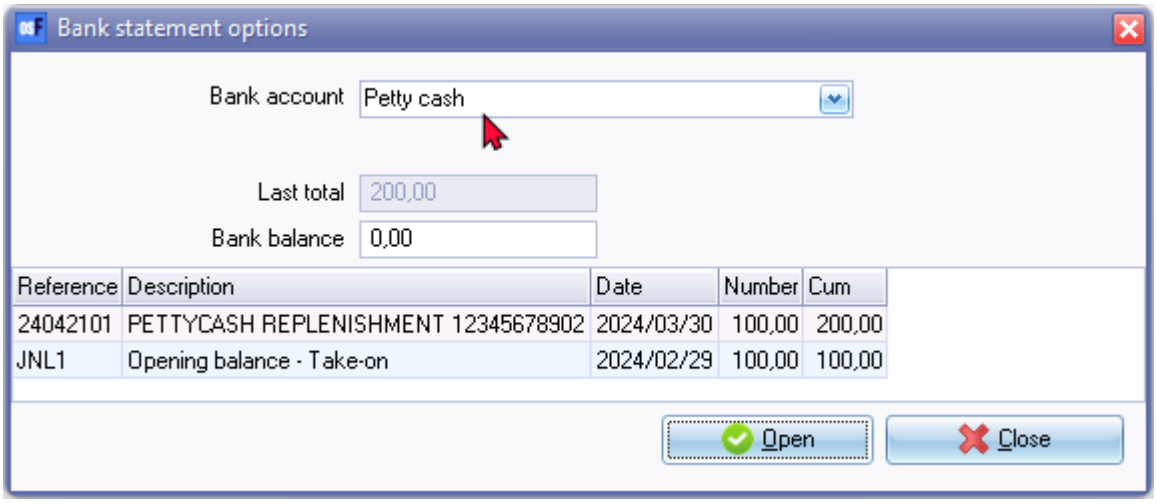
7. Click on OK. if the settings are selected correctly. This will save your options and close the "*Options for this batch*" screen.

Working with the bank import plugin

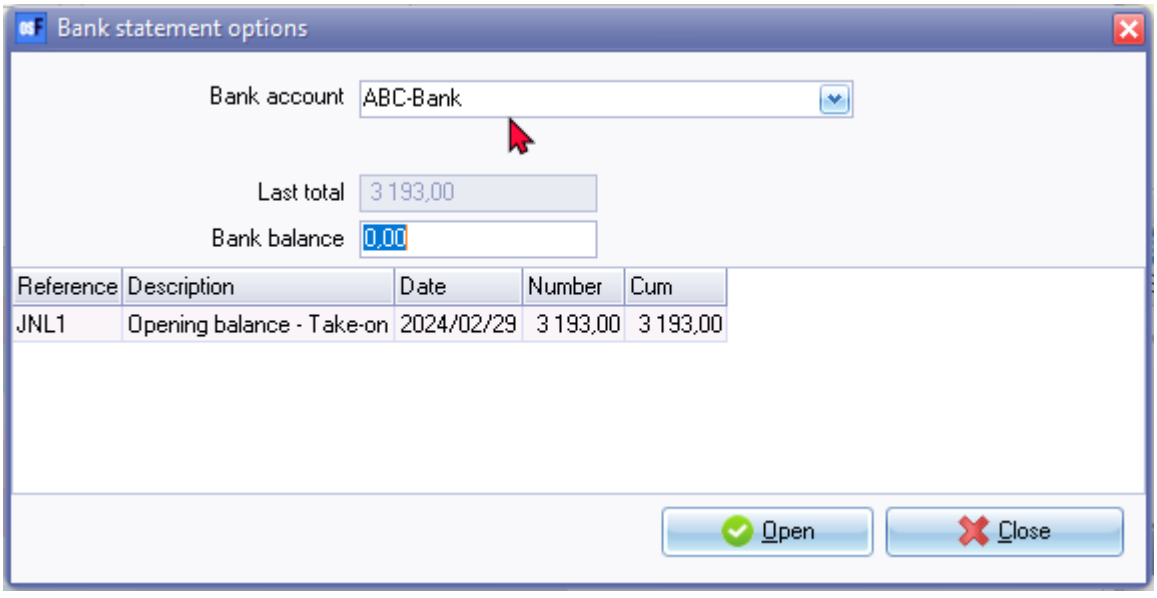
Now all settings are checked/set correctly, transactions can be imported with the bank import plug-in.

Import Bank statements

On the Default ribbon and select Cash/Bank entry . The "*Bank statements options*" screen will list your previous processed transactions.



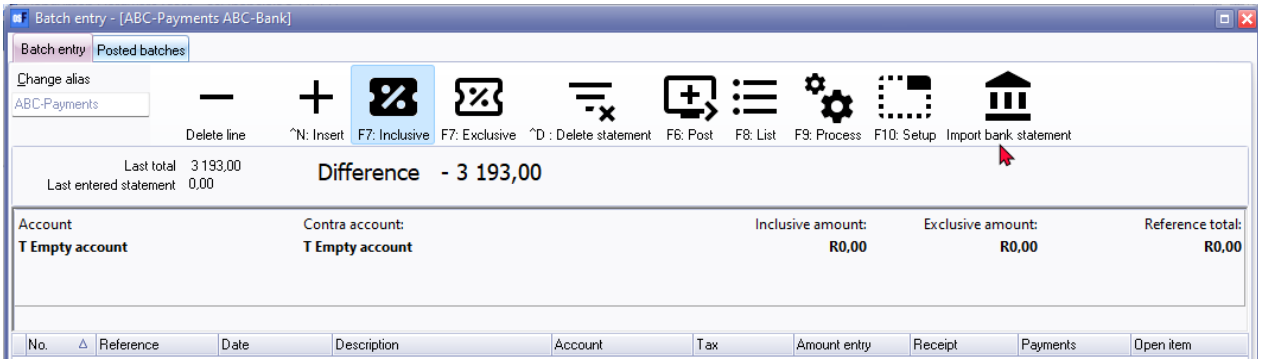
NOTE : The PETTYCASH REPLENISHMENT (first transaction on the Bank statement options screen, indicates the existing transaction posted to the Petty cash account.



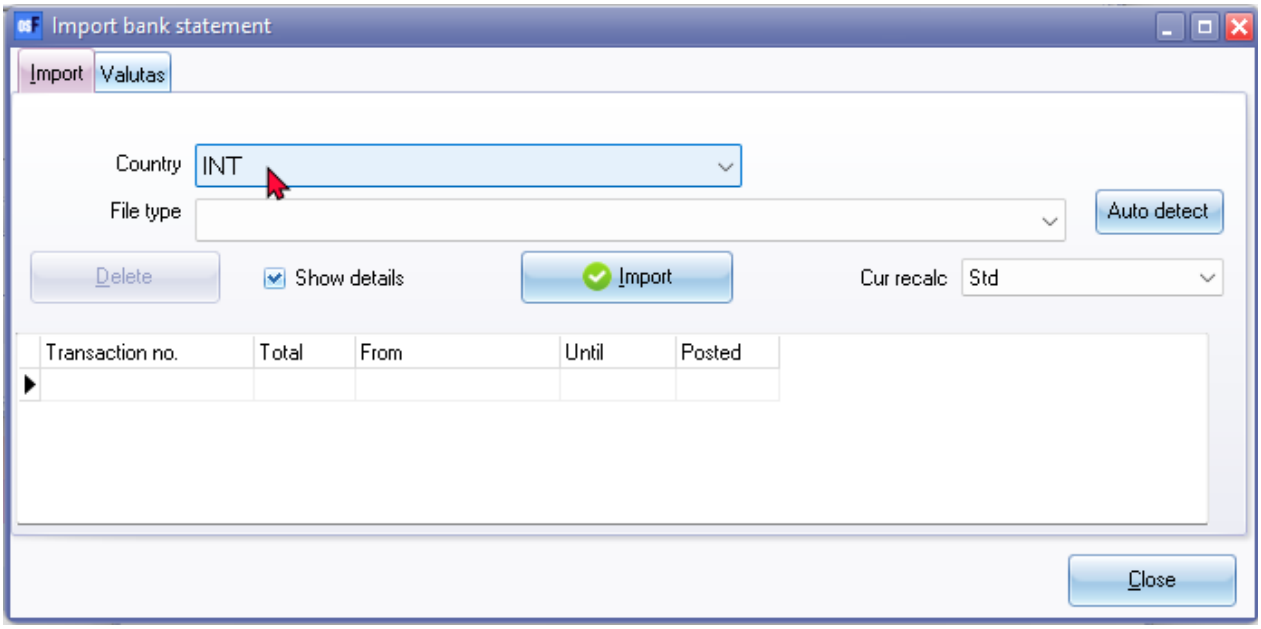
Select the "*Bank account*" into which you need to import your bank statement.

For the purposes of this tutorial, select "*ABC – Bank*".

Click Open. The "*Batch entry*" screen, is displayed, as follows:

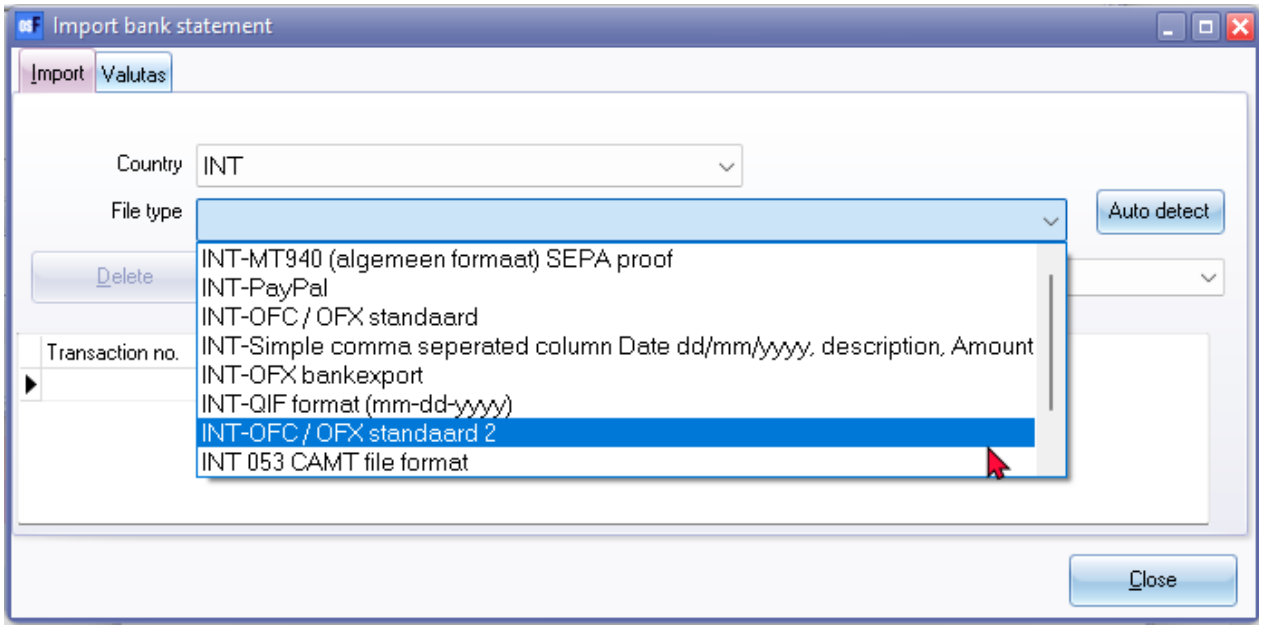


Click on the "*Import bank statement*" . The "*Import bank statement*" screen is displayed:

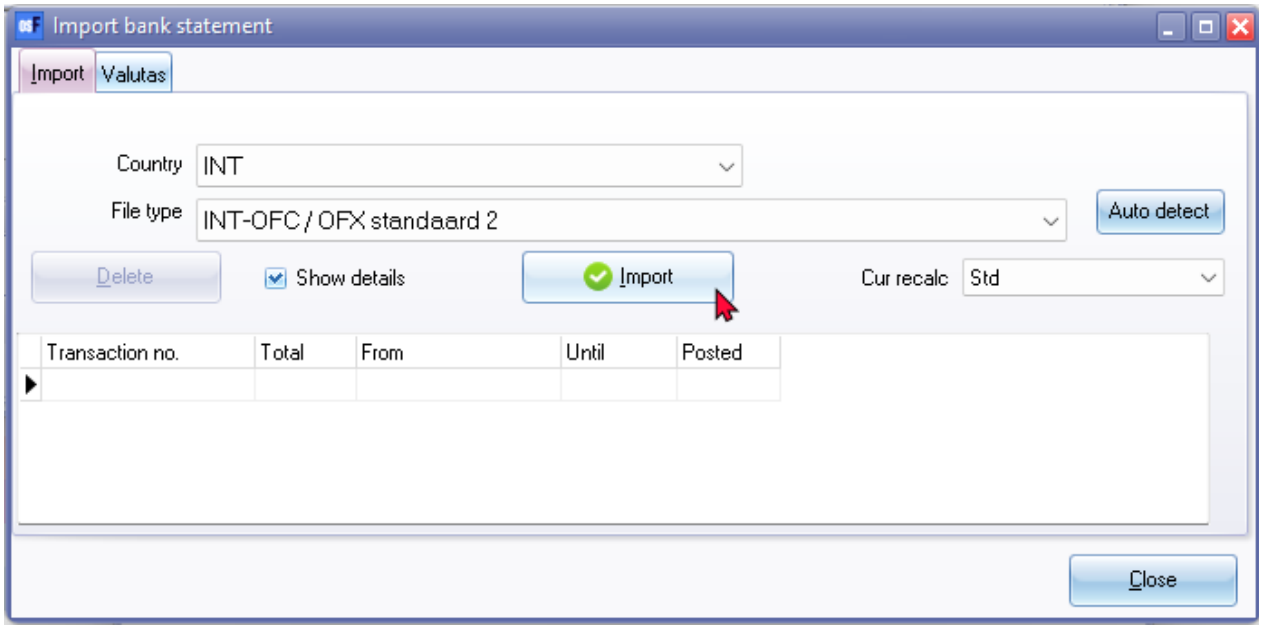


Select a file format. You may select a Country to list the available file formats supported for a specific country. See - Supported bank import file formats.

For the purposes of this tutorial, select the "*INT-OFC / OFX standaard 2*" file format.

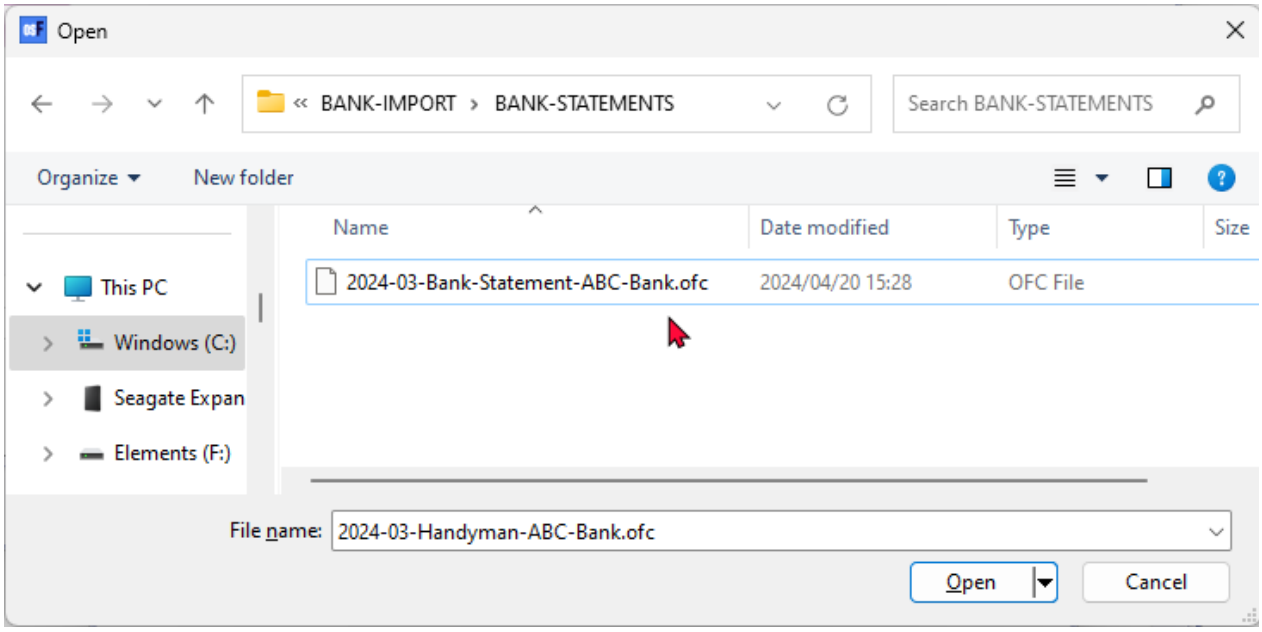


Then click on "*Import*".



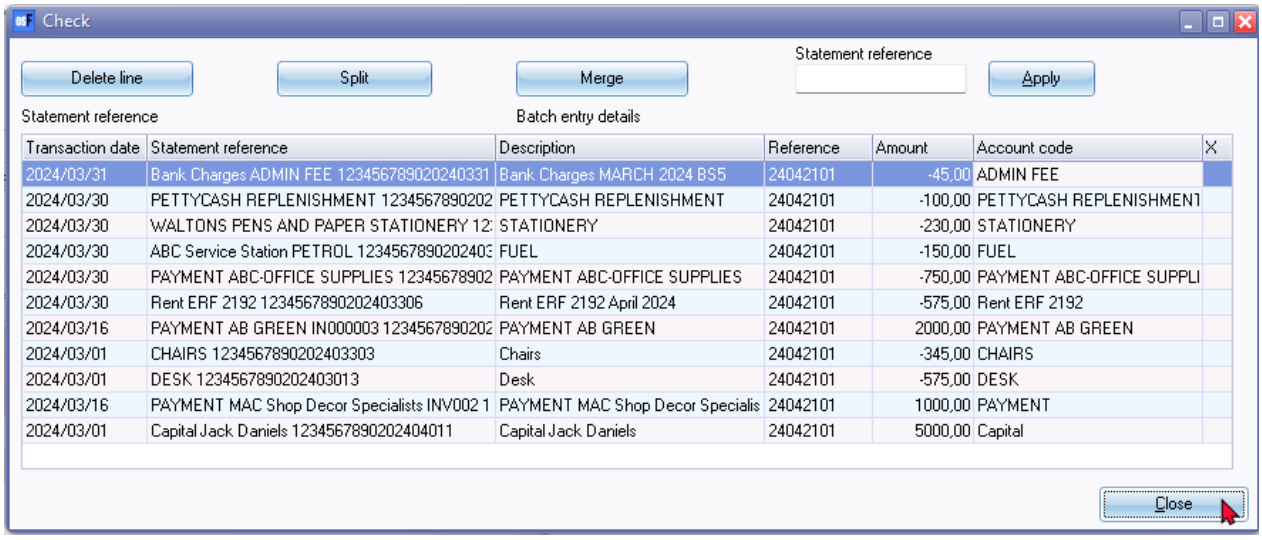
Select the "*Show details*" option. If the "*Show details*" is not selected (not ticked), the "*Check*" screen will not be launched.

The "Open" screen is displayed. Select the correct bank statement saved on your system.



Click on Open. The transactions included in the bank statement file will be imported.

If the "Show details" option is not selected (not ticked) on the "Import" tab of the "Import bank statement" screen, the "Check" screen will not be launched.



Check here if the transactions are correct. If a transaction is incorrect, this can be removed with the "*Delete line*" button. If a line is yellow, there is a change this transaction has already been imported into a previous import.

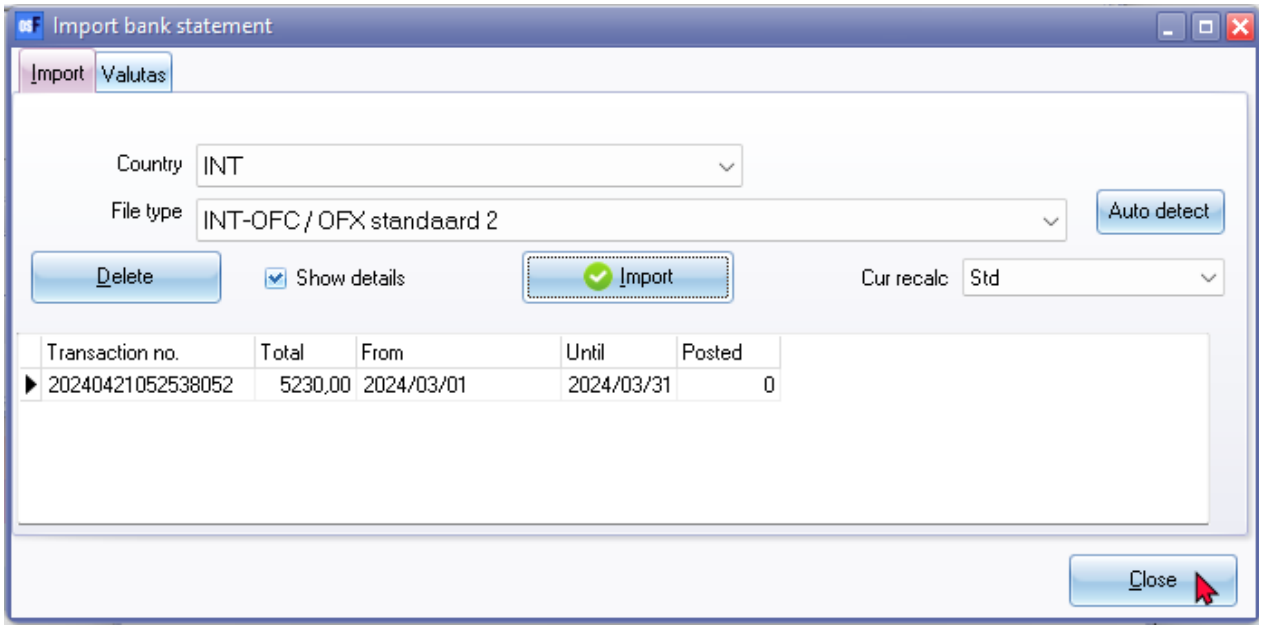
Check this transaction carefully!

Explanation of the "*Check*" screen:

Delete line	*This removes a selected line. For example, if it has been imported before.*

Split	*With this button, an amount can be split, for example, if one amount has been paid, but there are two VAT rates or one payment is made for more than one items, which need to be allocated to different accounts.*
Merge	*With this button amounts can be merged, for example if two payments are actually one invoice or need to be allocated to one account.*
Statement reference	*The reference is entered here, so that the payment can easily be retrieved later. Entering the statement reference it is not necessary, but you may need to enter for your specific requirements.*
Apply	*With the apply button, the reference is adjusted.*

If all statements are correct, click on Close. The screen below is displayed. In this screen, the imported bank statement(s), are listed.



The details displayed on the "Import Bank Statement" screen is as follows:

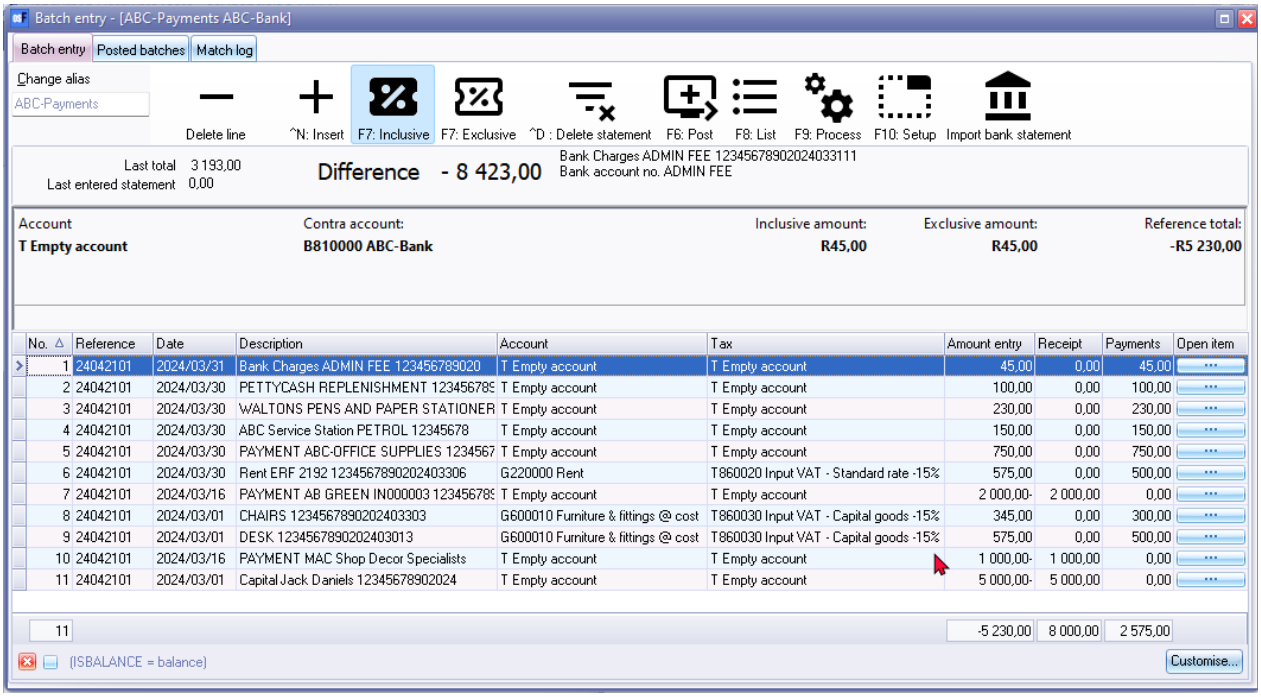
1. *Transaction no. - This will be the transaction number generated and would consist basically of the date yyyy/mm/dd format; followed a time stamp and a reference number. This may differ from your operating system's regional and date settings.*
2. *Total - This is the net value Credit (Deposits / Receipts) minus the Debit (Payments) amounts. If the Credit (Deposits / Receipts) is more than the Debit (Payments) this will display a positive amount. Should the Debit (Payments be more than the Credit (Deposits / Receipts) this amount should be displayed as a negative (" -") amount.*
3. *From - The start date as selected while downloading (exporting) the bank statement from your bank or financial institution.*

4. *Until - The end date until when transactions would be included in the downloaded (exported bank statement).*

5. *Posted - The default value is "0". This means that the transactions have not yet been posted (updated to the ledger). Once you have allocated (selected) Accounts and/or Tax accounts (where applicable) a value of "1" as posted (processed) will be displayed.*

If the bank import is done, the font colour will change to green. The colour of the font for this line will change from black to blue after the journal is updated or posted to the ledger. If the next bank statement is entered, the font colour will change to green.

Click Close again to import the transactions in the bank statement into the batch. This closes the "*Import bank statement*" screen. The bank statement transactions is imported into the "*Batch entry*" screen for the selected bank account:



If there is already a reference on the Bank links tab for ledger accounts and on the Bank accounts tab for debtor accounts and creditor accounts that exactly matches the reference field of the bank statement, the transactions from the imported bank statement will automatically be allocated against the correct accounts.

This information will be displayed on the Match log tab of the journal.

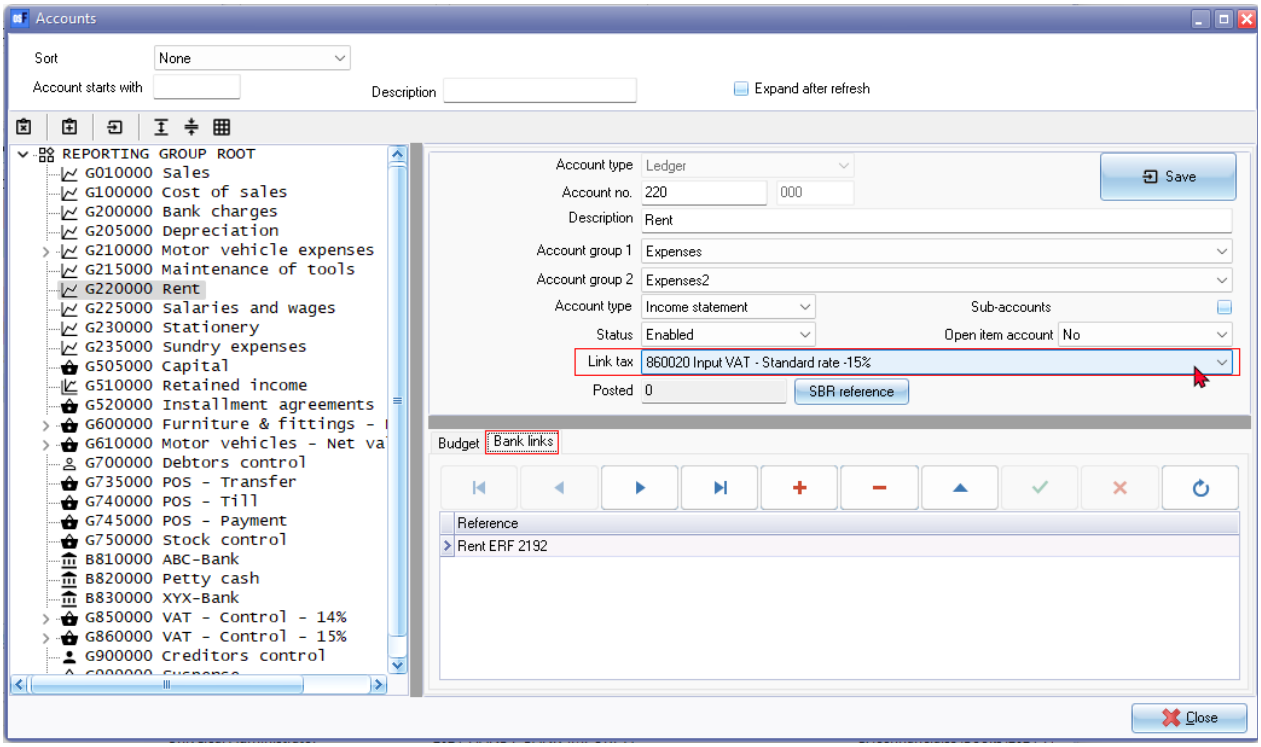
In this example, the transactions listed in the Match log tab, indicates that the imported transactions in lines 6, 8 and 9, is matched.

This means that the bank references in the the "*Account code*" column on the *"Import bank statement - Check"* screen, matches the existing references on the Bank links tab for these ledger accounts.

Managing bank references with VAT (GST/Sales tax)

If a matching "*References*" is entered in the Bank links tab of a ledger account, and there is an exact match on the bank reference on an imported bank statement, the account will be allocated to the correct account in the "*Account*"column of the "*Batch entry*" screen,

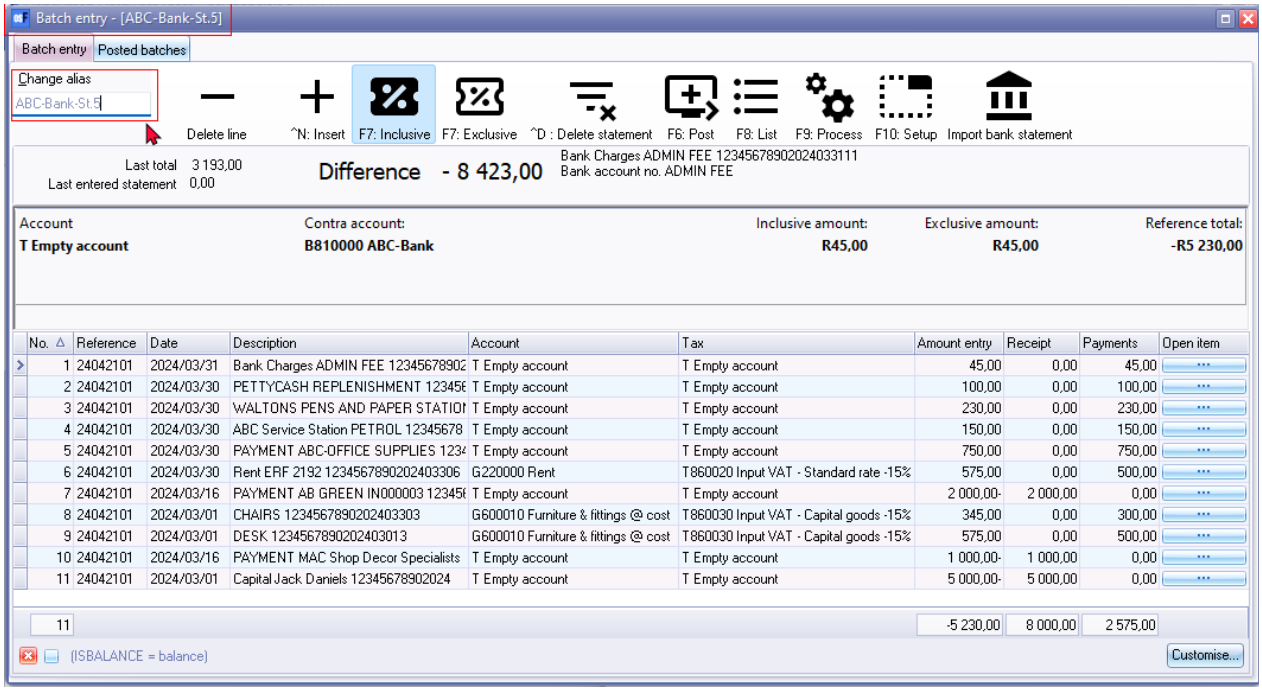
If VAT (GST/Sales tax) is applicable to transactions included in the import file of the bank statement, you need to link a Tax code from the "*Link tax*" list. This will ensure that the tax-code will be allocated to the correct account in the "*Tax*"column of the "*Batch entry*" screen.



This setup streamlines the process of reconciling bank transactions by automating the allocation of transactions based on predefined references and tax codes, reducing manual effort and potential errors. It's a helpful feature for businesses dealing with a large volume of transactions and complex tax requirements.

Change the name of the Batch entry

Change the name of the batch (alias) (i.e. “*ABC-Payments ABC-Bank*) of the Batch. In this example, "*ABC-Bank-St.5*" is entered in the “*Change alias*” field. This will identify the specific Bank statement for which bank is processed in the specific batch.



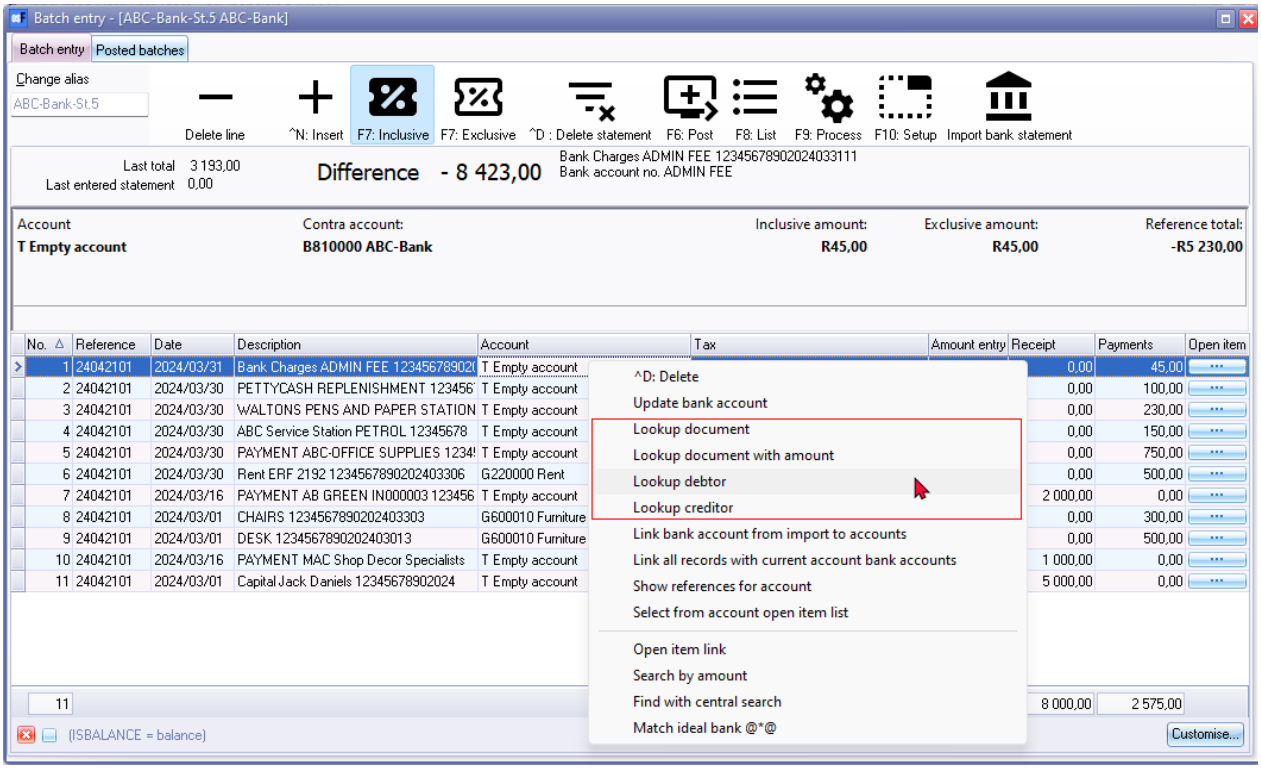
If you have imported an incorrect bank statement, you can click on the ^D: Delete statement icon. This will delete all imported transactions in the journal.

Allocating transactions to ledgers / debtors / creditors

In the next step each transaction must be specified with an account (debtor / creditor / ledger) which belongs to the transaction.

This account can be allocated in the account column. There are different ways to link a transaction to an account.

1. The account is looked up by account name.
2. The account is looked up by looking up the corresponding document.
3. The account is looked up by looking for a debtor or creditor account.
4. The account is entered automatically, because it is linked to the (bank) account number (i.e. the debtor is entered because the debtor himself and his / her bank account are linked).



Account looked up by account name

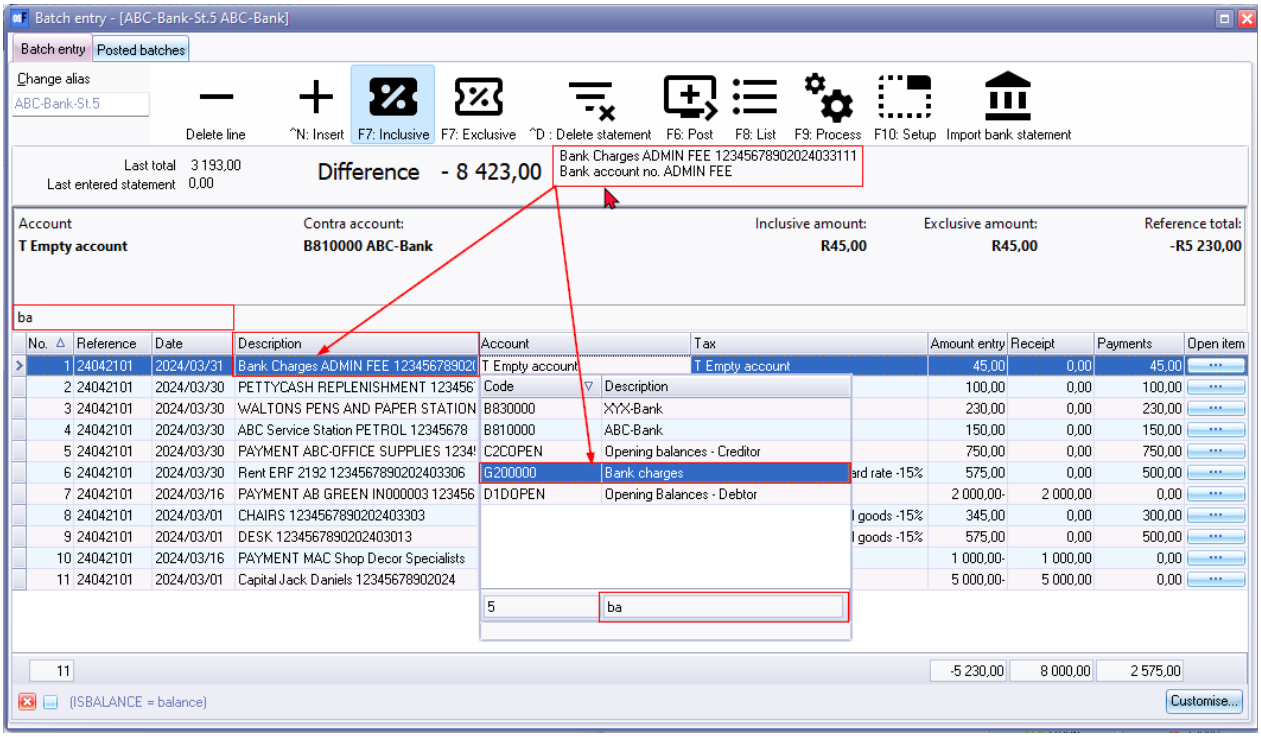
The details on a bank statement will be available in the batch entry screen for the bank account. These details will be displayed, for each selected transaction, in the following options of the batch entry screen:

1. Underneath the icons the descriptions as entered or processed by the bank.
2. Description column.

These descriptions or details provide an important guide to identify and select the correct applicable account.

To allocate an account to a transaction by name:

1. Select a transaction.
2. Click on the Account column and enter a few characters of the descriptions. In this example, "*ba*" is entered. All the accounts containing "*ba*" is listed.
3. Select "*Bank charges*".



The account looked up by searching for the corresponding document

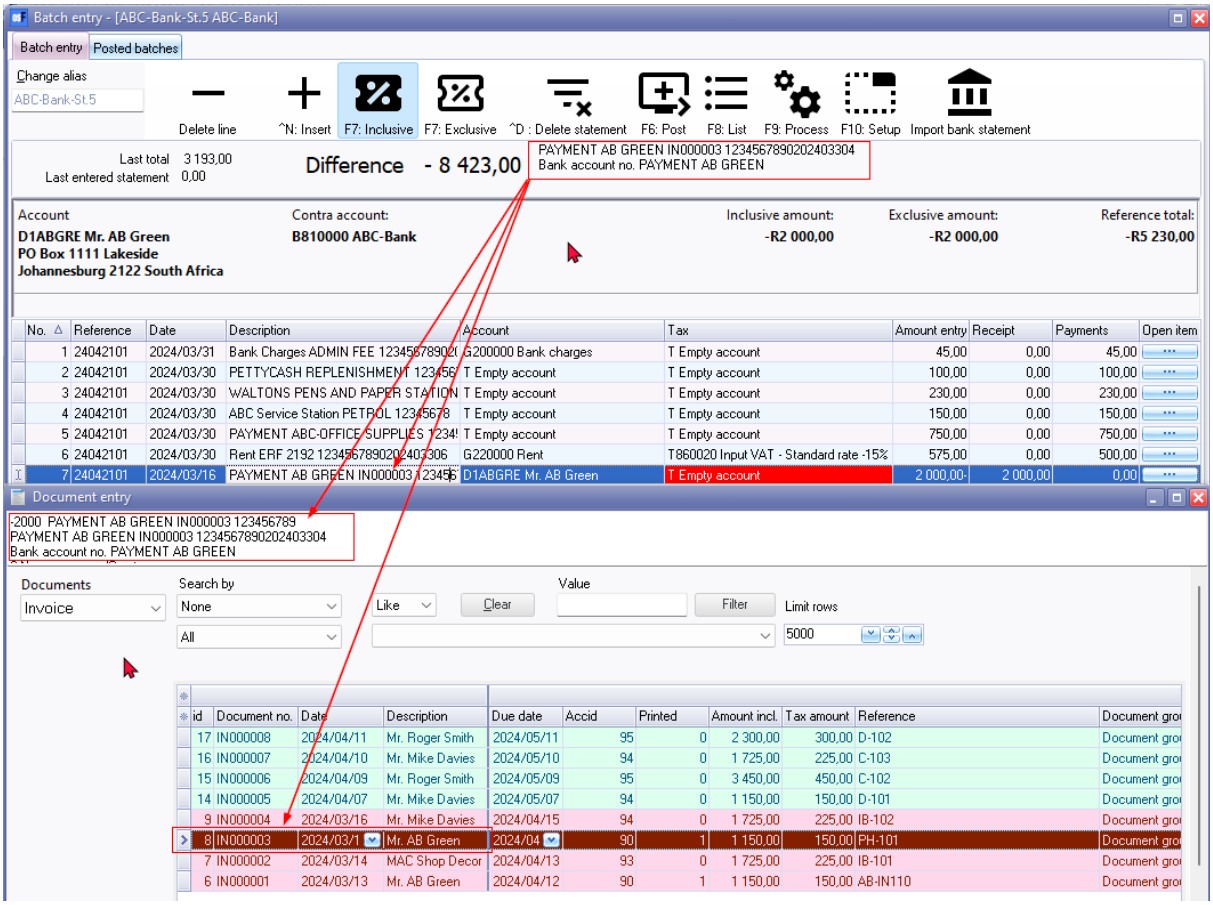
This way of allocating account to the transaction is only possible if there is a document (invoice / quote / credit note / purchase / purchase return / order).

If the transaction belongs to a journal entry, this option cannot be used.

To allocate an account to a transaction by document number:

1. Select a transaction. In this example, "*IN000003*" is selected. The details from the imported bank statement displays 2 key details. You can now choose to select either "*Document lookup*", "*Document lookup with amount*" or "L*ookup debtor*".

2. Right-click on the transaction line and select "*Document lookup*" or "*Lookup document with amount*" on the context menu. The document entry listing all invoices will be listed.



3. Select "*IN000003*" for "*Mr. AB Green*".

4. Double-click to transfer the selected "*Document*" to the "*Batch entry*" screen.

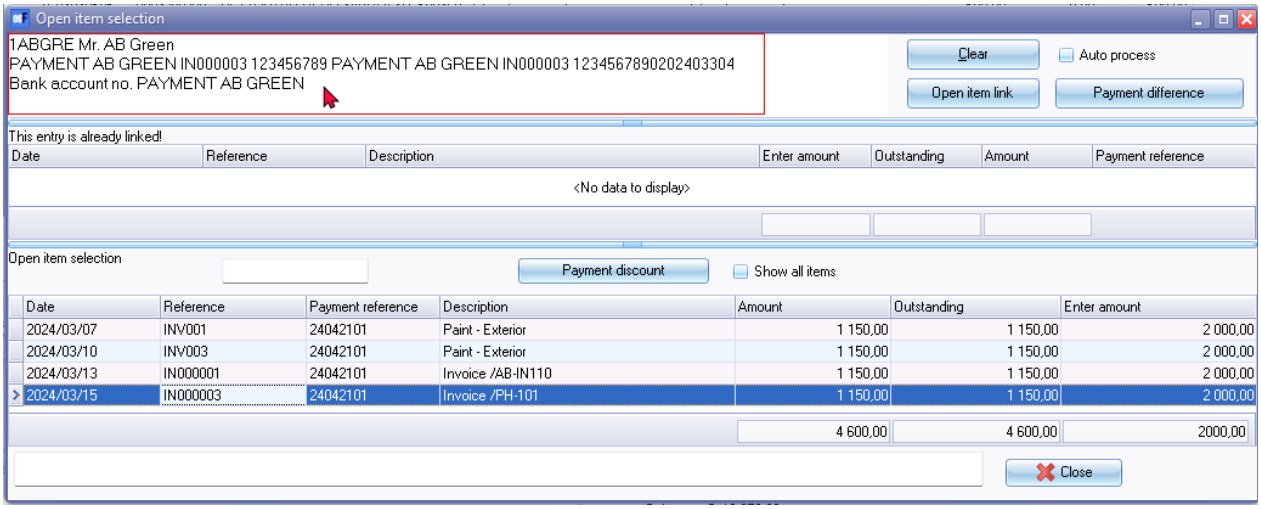
In the "*Lookup document*" or "*Lookup document with amount*":

- With the first option, the "*Document entry*" screen will be opened and the correct document can be searched for.

- With the second option, "*Lookup document with amount*", a document with a corresponding amount will be searched for.

You may use the filter options, to filter for a specific document. If the document you are searching for is still unposted, it will not be listed if "Posted" is selected. You may then select "All or "Unposted" options to list unposted documents.

With the double-click, the "*Open item selection*" screen will automatically be launched (if the Debtor account is set as an "*Open item*" account) . In the example of "*Mr. AB Green*", the transaction can be directly linked (matched) to the specific invoice.



The payment details and the invoice, (i.e. invoice "*IN000003*") is displayed. Since the 2,000.00 payment is more than the payment, you can select to link other outstanding invoices, e.g. "*INV001*" (Batch entry invoice) for the balance of the payment received.

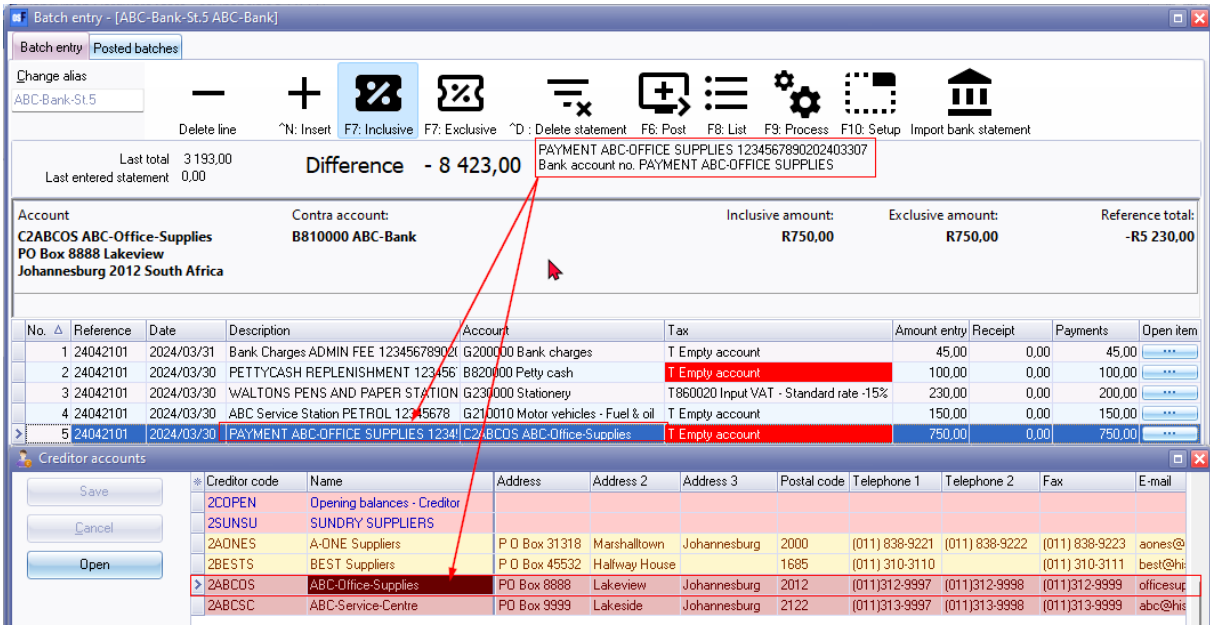
The account looked up by searching for the Debtors / Creditors account

If a debtor or creditor name is in the details of the batch entry screen, you may select from the context menu to lookup a debtor or creditor account.

To allocate an account to a transaction by creditor account:

1. Select a transaction. In this example, "*PAYMENT ABC-OFFICE SUPPLIES*" is selected.

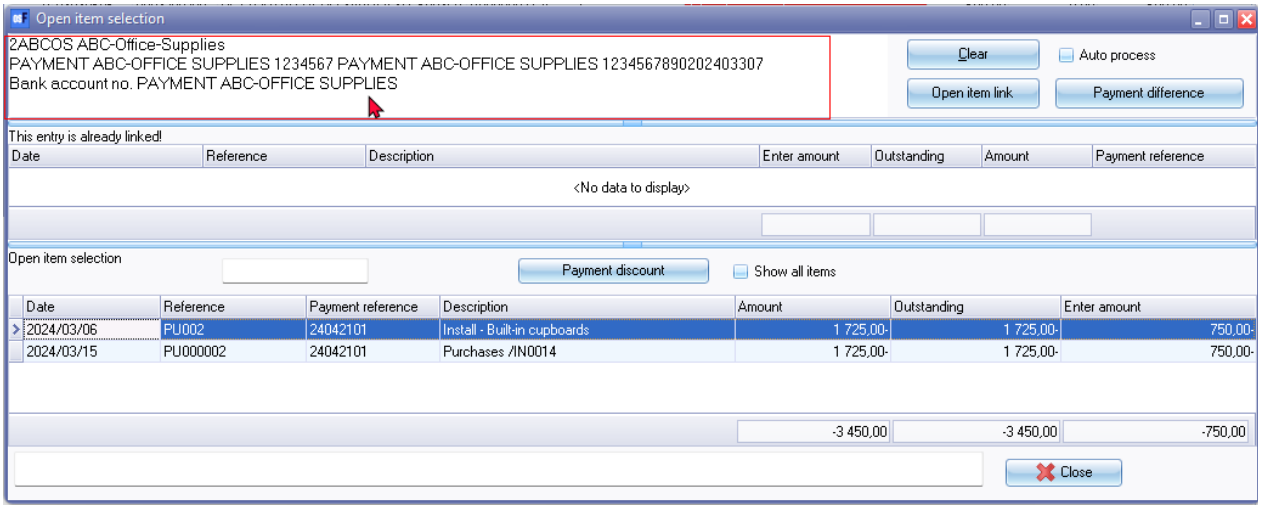
2. Right-click on the transaction line and select "*Lookup creditor*" on the context menu. The "*Creditor accounts*" listing all creditors (suppliers) will be listed.



3. Select "*ABC-Office supplies*".

4. Double-click to transfer the selected creditor account to the batch entry screen.

With the double-click, the "*Open item selection*" screen will automatically be opened (if the Creditor account is set as an "*Open item*" account. In the example of "*ABC-Office Supplies*", the payment transaction can be linked (matched) to the batch transactions or documents.



Select "*PU002*" (batch purchase) as the purchase transaction, for which this payment was made.

Press the Enter key and the linked transaction will updated in the "*Batch entry*" screen.

Account automatically selected as it is linked to the bank account number

It is also possible to link an account number to debtors/creditor/ledger account.
With this, transactions in the bank import are directly linked to the correct account. This linking can be done in several ways:

1. If the number of the bank account of a debtor or creditor is known, this can be entered into the details of the relevant debtor/ledger/creditor.
   The transactions with the same bank account number entered for the debtor / creditor will be linked to the correct account in the "*Account*" column.

2. It is also possible to link a bank account from a transaction. Stand on a transaction. The account (debtor, creditor or ledger) must be entered here for the first time.
   Then click the right mouse button and choose "*Link bank account*". With the next transaction from this account, the account will be filled in automatically.

Managing Bank Accounts and Account Bank References

When Bank statements are imported, it will automatically import all transactions into the Batch entry screen (combined Payments and Receipts journal). You need to allocate the transactions to the correct accounts, as the bank statement does not know which accounts in osFinancials5/TurboCASH5 is matched to items on

the bank statement.

osFinancials allows you to manage these references to specific accounts. When importing a bank statement, and the account links are correct, it will automatically allocate the bank statement transactions to the correct accounts.

When importing statements and these are not linked, e.g. new receipts, payments, etc., these will then be set to "*Empty*" in the Accounts column of the Bank accounts Batch entry screen.

To automate the process for allocating (selecting accounts) to an imported bank statement, please take not of the following settings:

General ledger accounts

- Bank References – This needs to be correctly entered on the Bank links tab. If this is correctly entered (edited), it will match the references as imported from bank statements.
- Tax (VAT / GST / Sales Tax) - If you are registered as a VAT / GST / Sales Tax Vendor, and VAT is applicable to the specific account, you need to link that account to the correct Input or Output Tax (VAT / GST / Sales Tax) account.

Debtor accounts

- Bank references - This needs to be correctly entered on the Bank accounts tab. If this is correctly entered (edited), it will match the references as imported from bank statements.
- Bank accounts – The Banking details for the Debtor (customer / client) account needs to be correctly maintained on the Accounting information tab of the Debtor account. This may be used to manage debit orders, refund debtors, etc. via the automated payments system. BIC (Bank Identifier Code) and IBAN (International Bank Account Number) accounts are also supported.

Creditor accounts

- Bank references - This needs to be correctly entered on the Bank accounts tab. If this is correctly entered (edited), it will match the references as imported from bank statements.
- Bank accounts – The Banking details of the creditor (supplier / vendor) account needs to be correctly maintained on the Accounting information tab. This may be used to pay creditors (suppliers) via the automated payments system. BIC (Bank Identifier Code) and IBAN (International Bank Account Number) accounts are also supported.

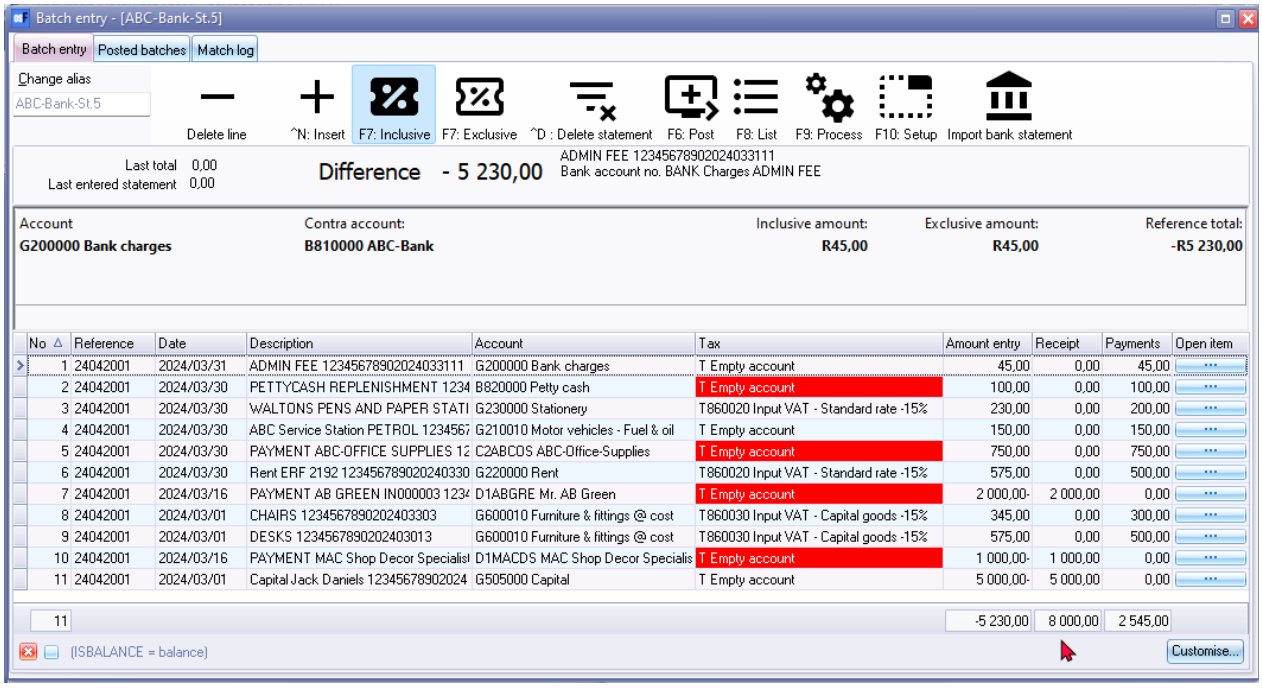
It is a good idea to list the batch, and check the entries on the batch thoroughly. If there are any errors, you may edit the batch, before posting the batch.

Post (Update) the transactions to the ledger

If all the transactions are correctly allocated to the correct accounts, the imported bank transactions can be posted (updated) to the ledger.

Click on the F6: Post icon.

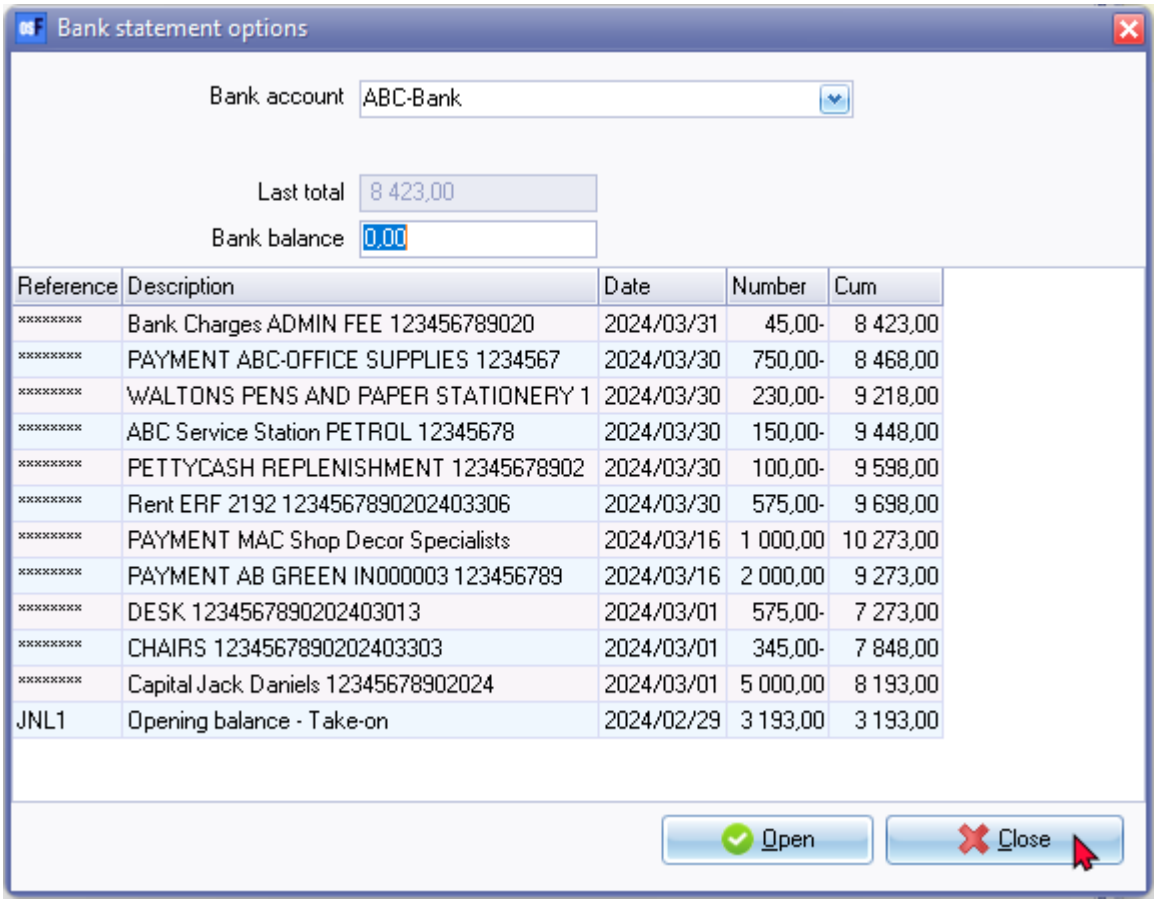


Since a transaction is posted from this bank account to another bank account (e.g. Petty cash) is posted, the following confirmation message, is displayed:

> You are putting cash from a bank/cash directly to a bank/cash account! Do you wish to continue?
> Line : 24042101 PETTYCASH REPLENISHMENT 12345678902 810000 ABC-Bank to 820000 Petty cash

Click OK on the confirmation message. The "*Batch entry*" screen will automatically be closed.

The "*Bank statement options*" screen is displayed:



All the imported and processed bank statement transactions, which are posted (updated) to the ledger, will be listed.

Bank Import Check screen options

Before you close the "*Import bank statement - Check*" screen, you may delete a line, merge or split transactions.

Splitting transactions

If there any transactions on the "*Import bank statement - Check*" screen, you may split the transaction into two (2) or more entries.

You may need to do this, if a payment or receipt needs to be allocated to different accounts.

To do this on the "*Import bank statement – Check*" screen:

1. Click on the transaction to split.
2. Click in the Split button. You may also right-click and select the "*Split*" option on the context menu. The "*Split*" amount screen will be displayed.
3. Enter the amount for the amount to split. It will insert another transaction with the same details as the

selected transaction with the remaining amount.

4. Click OK. Repeat the process, if necessary.

If this is not done at this stage (on the "*Import bank statement – Check*" screen), you may add it later on the Batch entry screen for the Bank account.

To do this on the "*Batch entry*" screen:

1. Select the transaction and click on the ^N:Insert icon. In the blank row, enter the transaction details and the new amount.
2. On the selected transaction to split, over type it with required amount. Repeat as necessary.

Merge transactions

If there are a few transactions on the "*Import bank statement – Check*" screen, you may merge (consolidate) it into one (1) entry.

To do this on the "*Import bank statement – Check*" screen:

1. Press the Ctrl key and while holding your mouse down, click on the transactions to merge (consolidate).
2. Click in the Merge button. You may also right-click and select the "*Merge*" option on the context menu.

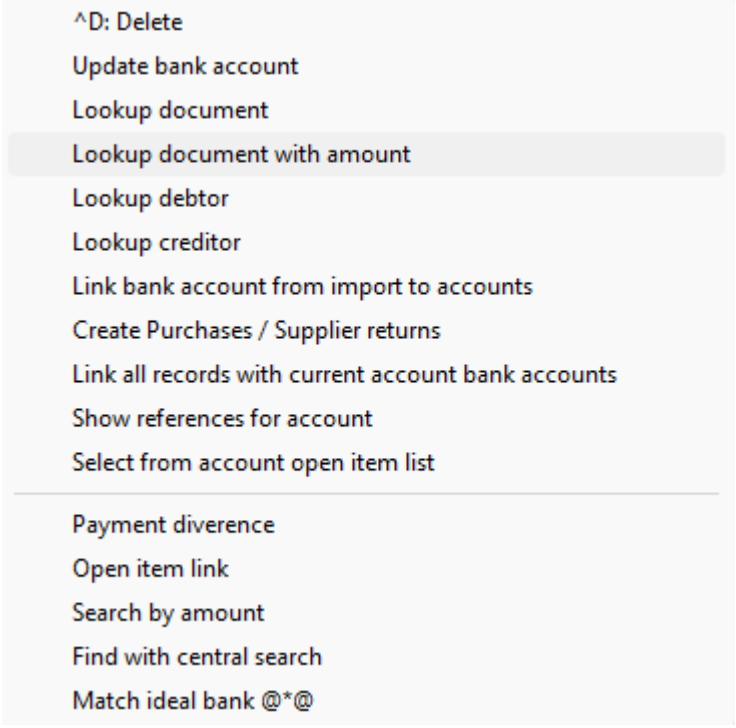
To do this on the Batch entry screen:

1. Select the transaction to be merged and over type the amount with the total of the transactions to be merged.
2. Select the transaction to be deleted and click on the ^D:Delete icon. Repeat, as necessary.

Batch entry – Context menu options

This context menu offers advanced options to facilitate the editing, assignment of transactions to accounts,

and management of imported transactions from bank statements within the "*Batch entry*" screen:



1. ^D:Delete: Remove selected transactions from the "*Batch entry*" screen.
2. Update bank account: Update references in the "*Reknr*" column to:
    - Bank links tab of Ledger accounts (Setup → Accounts).
    - Bank account references on the Bank accounts tab of debtor (customer/client) accounts (Debtors).
    - Bank account references on the Bank accounts tab of creditor (supplier/vendor) accounts (Creditors).
3. Lookup document: Locate a specific document using advanced search and filter options.
4. Lookup document with amount: Locate a specific document by amount using advanced search and filter options.
5. Lookup debtor: Find and locate existing debtor accounts. You may edit existing debtor accounts or create new ones if needed.
6. Lookup creditor: Find and locate existing creditor accounts. You may edit existing creditor accounts or create new ones if needed.
7. Link bank account from import to accounts: Update accounts with bank references from imported bank statements to ensure accurate transaction allocation.
8. Link all records with current account bank accounts : Update accounts with bank references from imported bank statements.
9. Show references for account: View, add, edit, or delete references for accounts, updating Bank links tab of ledger accounts and the Bank accounts tab of debtor and creditor accounts.
10. Select from account open item list: Display transactions on the "*Open item selection*" screen for the selected account to link transactions in the "*Batch entry*" screen.
11. Open item link: Launch the "*Open item*" screen for the selected account to select transactions or

manage links to transactions.

12. Search by amount: Search for transactions by amount.
13. Find with central search: Launch the Search (Investigator) feature on the Default ribbon, allowing efficient search for specific accounts, documents, transactions, and more within the Set of Books.
14. Match Ideal Bank @*@: A specific feature integrating iDEAL online payment method for payments or transactions within the Bank-import plugin.

Debtor account - Context menu options:

- Go to document: List the document grid with the selected document.
- Create Invoices / Credit notes: Create an invoice or a credit note for transactions imported from the bank statement if none is available.
- Payment divergence: Launch the Receive payment screen to process adjustments or receipt transactions if a payment recorded in the bank statement does not match any existing transaction in the accounts.

Creditor account - Context menu options:

- Create Purchases / Supplier returns: Create a purchase or a supplier return document for transactions imported from the bank statement if none is available.
- Payment divergence: Launch the Receive payment screen to process adjustments or receipt transactions if a payment recorded in the bank statement does not match any existing transaction in the accounts.

Supported bank import file formats

If your bank or financial institution's available file formats, is not currently supported (cannot be imported in this Bank import plugin), please send us one downloaded file, and we will implement support for your bank or financial institution's bank statement format.

T-Account View - Transactions Imported Bank Statement

All processed (posted) transactions will be accumulated in the Ledger analyser. There are various ways in which the transactions may be viewed, printed, exported and analysed.

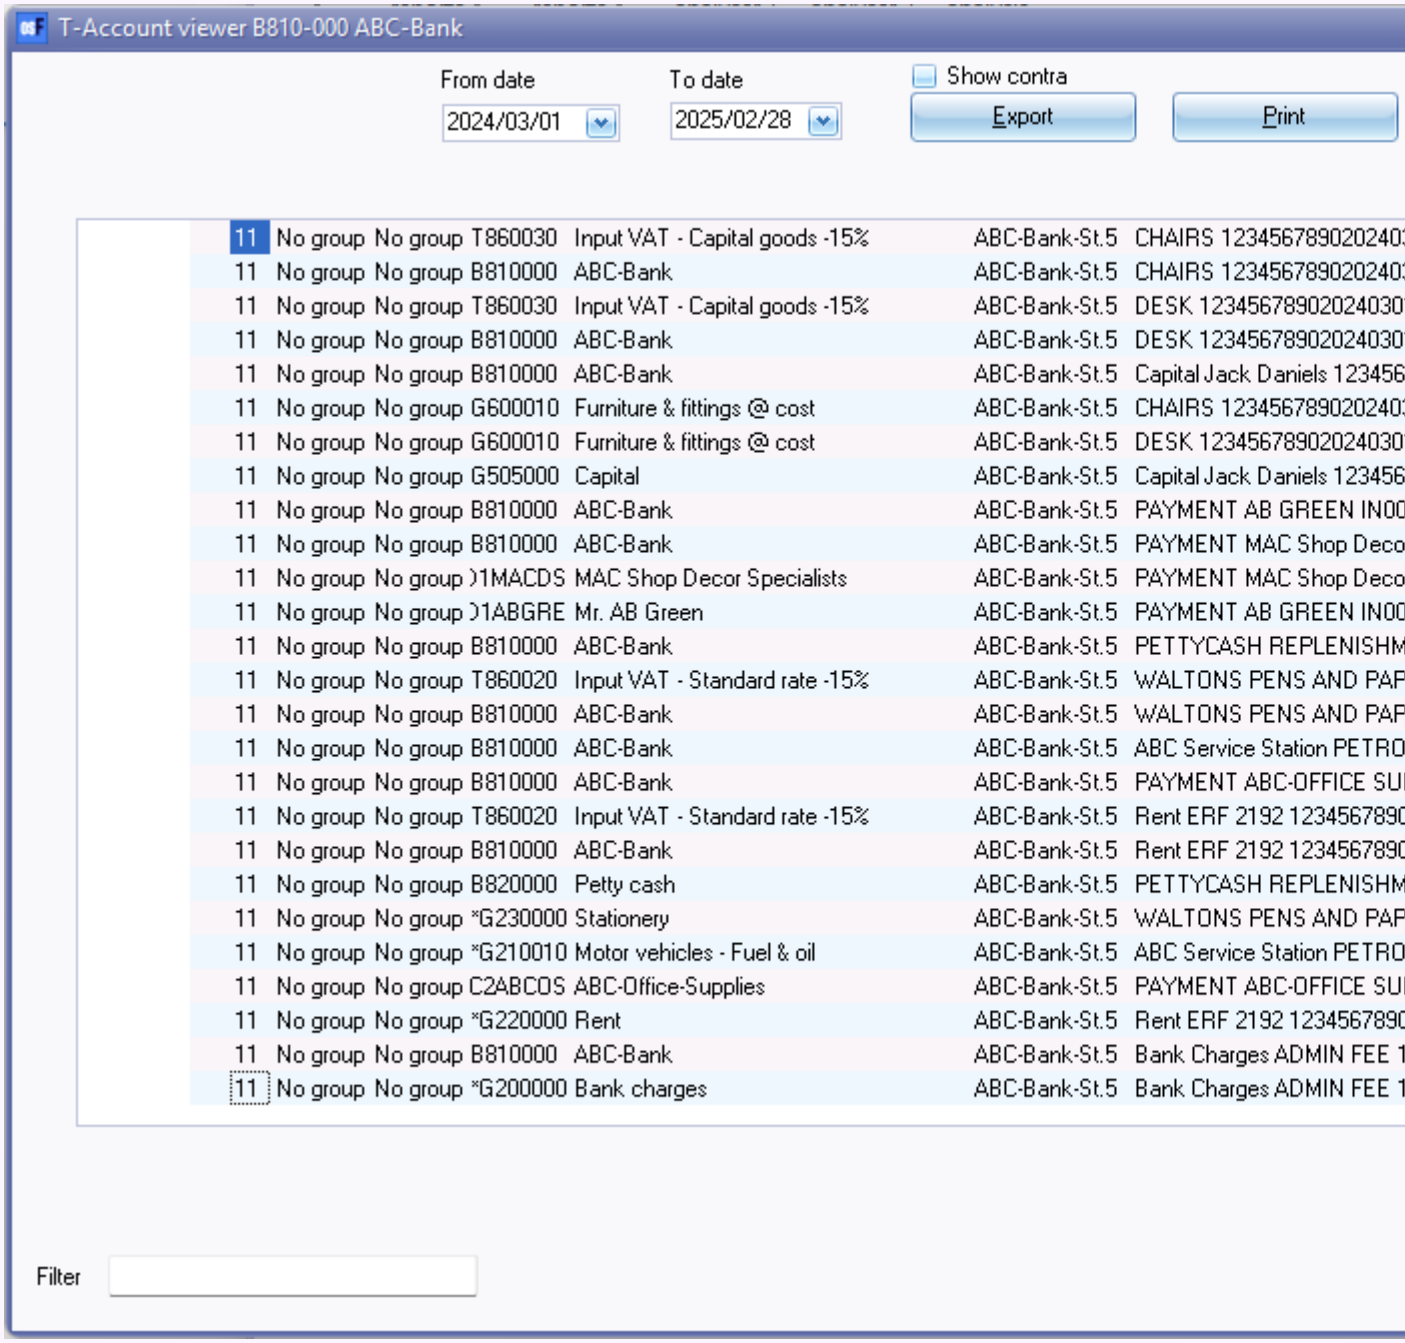
To access the T-Account view of the transactions:

1. On the Reports ribbon, select Ledger analyser 1 or Ledger analyser 2.
2. Select "*Trial balance*" report type and click on the Report button.
3. On the "*Trial balance*", select the "*B810-000 ABC – Bank*" account.
4. Double-click on the selected account; or right-click and select Show details on the context menu.
5. Click on the following to get specific views of transactions:
    - Batch id (e.g. 11 automatically generated). This will list only the transactions for a specific batch (journal).
    - Account code (e.g. G505-000 Capital account, B810-000 ABC - Bank, D1AB-GRE Mr. AB Green, D1MA-CDS MAC Shop Decor Specialists), etc. This will list the transactions for a specific account.
    - Date – This will list the transactions for a specific date. If you double-click on a date, the "*From date"* and "*To date*" will be changed to the selected date.

T-Account view of transactions in the Bank account

After posting the transactions in the Receipts journal, the transactions should display as follows in the T-Account viewer:

Batch view



Show contra – You may select (tick) this option to view the Contra account code and account description in the first two (2) columns of the T-Account viewer. This will not print on the T-account viewer report, but will be included in the Exported file (which you can open in a spreadsheet).

Bank import plugin - Petty cash transactions (Manual entry)

Bank Import plugin Petty Cash transactions

Since the Petty Cash account is included in the templates of osFinancials5/TurboCASH5 as a Bank account type. It is recommended that Petty Cash accounts should be added or created as a Bank account type. Once the BankImport plugin is activated, the Petty cash payments batch and receipts batch will be combined into one "*Batch entry*" screen.

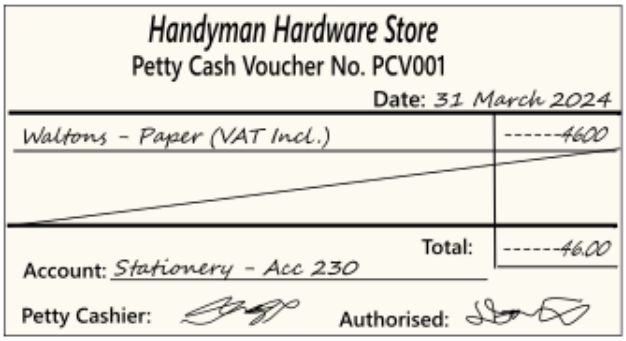
Petty cash payments should be used as a bank account. If it is used as a normal General ledger – Balance sheet account, it could cause problems on the Tax Reports (Input VAT/GST/Sales tax).

Entering your petty cash payments (Manual entry)

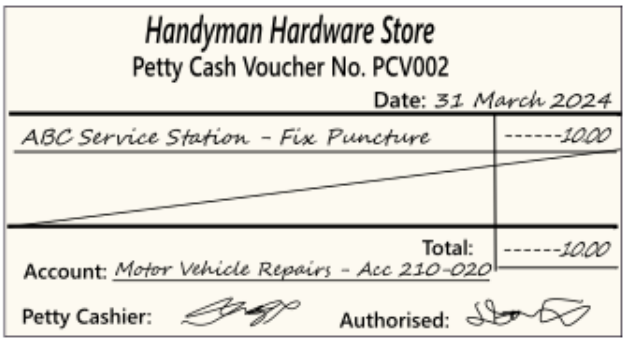
There are basically two (2) ways to capture the petty cash transactions:

- Enter the transactions manually from your petty cash slips or petty cash vouchers.
- Importing the transactions from a petty cash register as a Comma Separated Value (*.csv) file as a delimited file import.

For the purpose of this example, we assume that you have paid the following expenses from your petty cash:



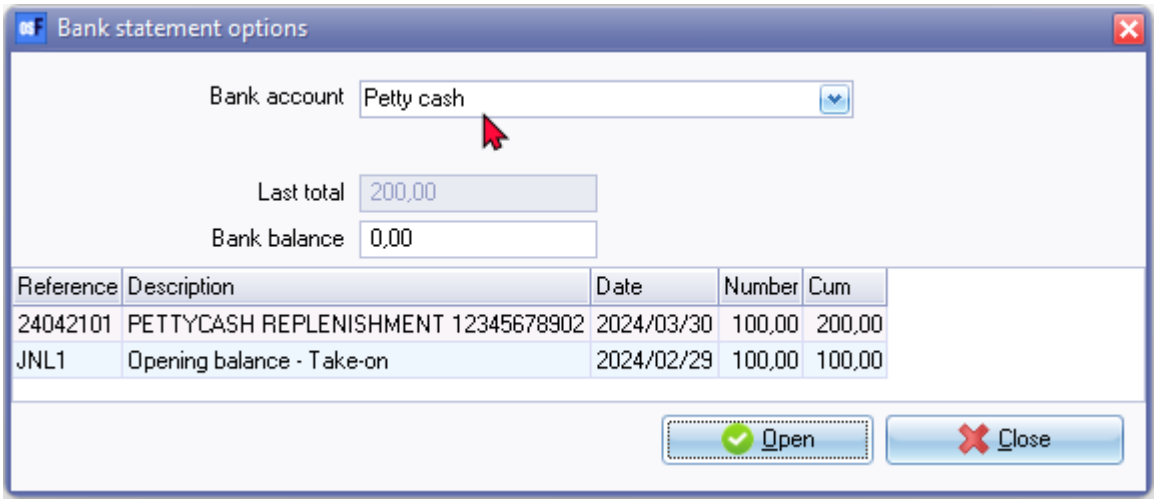
Handyman Hardware Store
Petty Cash Voucher No. PCV001
Date: 31 March 2024
Waltons - Paper (VAT Incl.) ------4600
Total: ------46.00
Account: Stationery - Acc 230
Petty Cashier: Authorised:



Handyman Hardware Store
Petty Cash Voucher No. PCV002
Date: 31 March 2024
ABC Service Station - Fix Puncture ------1000
Total: ------1000
Account: Motor Vehicle Repairs - Acc 210-020
Petty Cashier: Authorised:

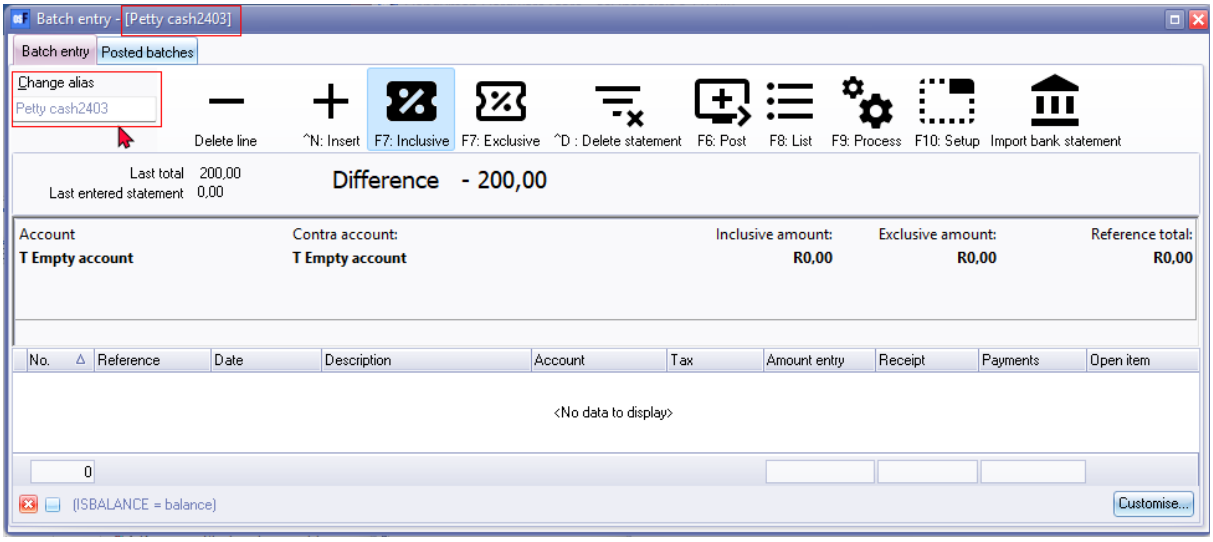
To enter your petty cash payment transactions:

1. Go to the Default ribbon and select Cash/Bank entry . The "*Bank statements options*" screen will list your previous processed transactions.

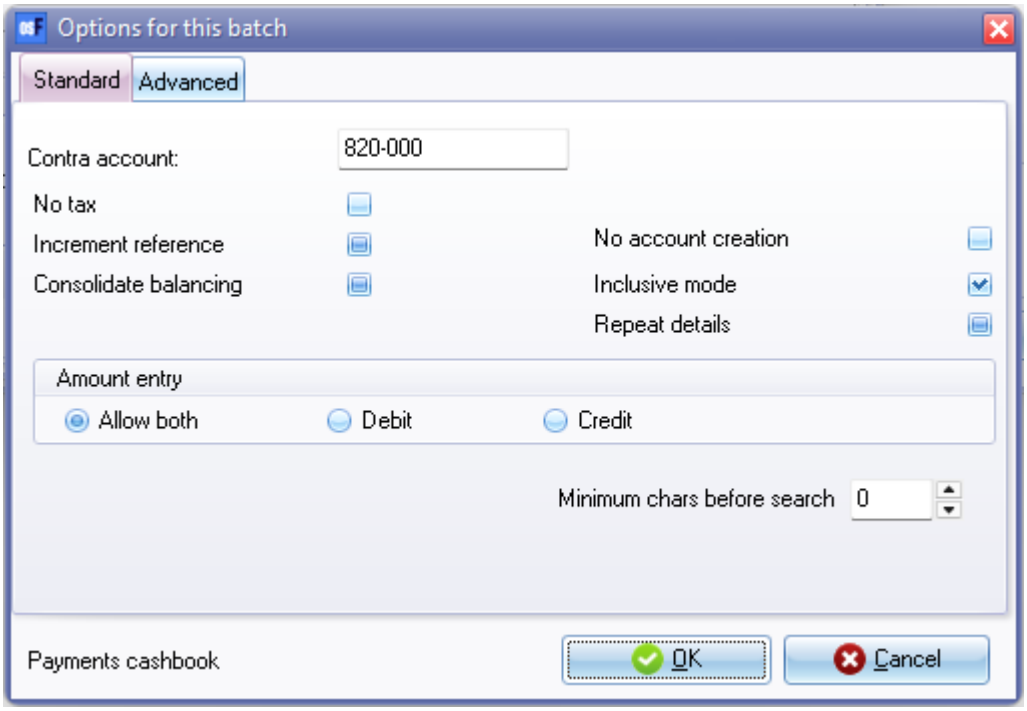


2. Select the Petty cash as the "*Bank account*" and click Open.
3. Enter the alias (batch name) in the "*Change alias"* field. In this example, enter *''PettyCash2403''* to indicate that the Petty cash of March 2024 was entered in this Petty cash payments batch.

The alias option allows you to identify a batch by a unique name. You will be able to select the batch by alias or batch name if you need to reverse the posted batch or import a posted batch.



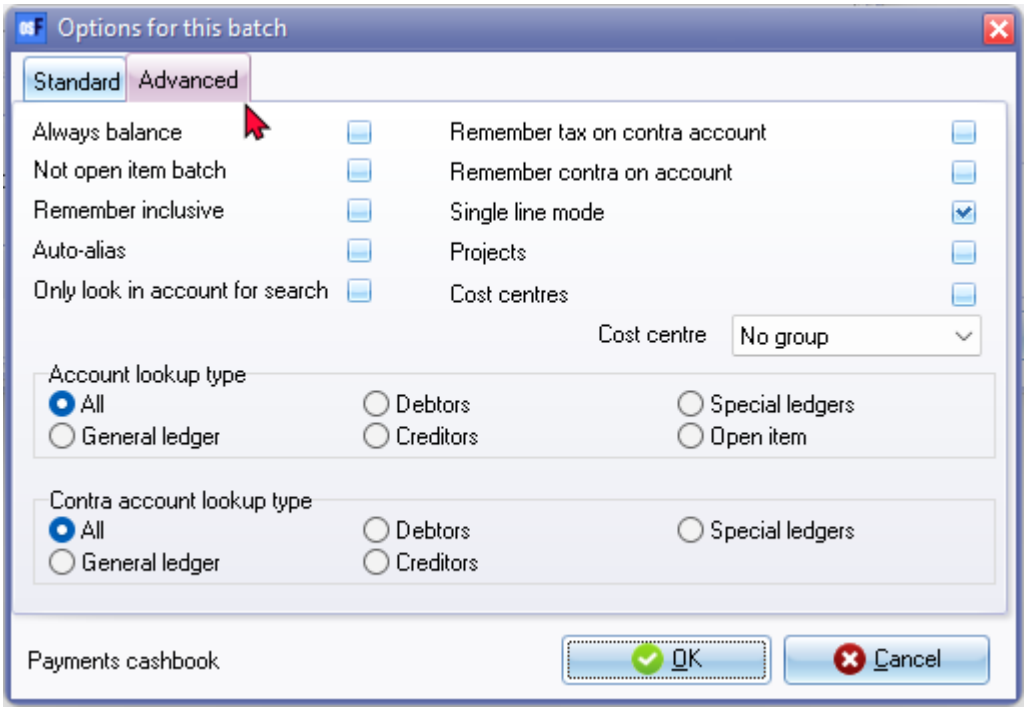
4. Click on the F10:Setup icon to set your batch up. This is a once-off action, unless your requirements change. The *"Options for this batch"* screen is displayed:



The contra account is by default set to the Bank account.

You cannot change this in the Payments journal or Petty cash Payments journal.

5. Once setup; click on the Advanced tab.



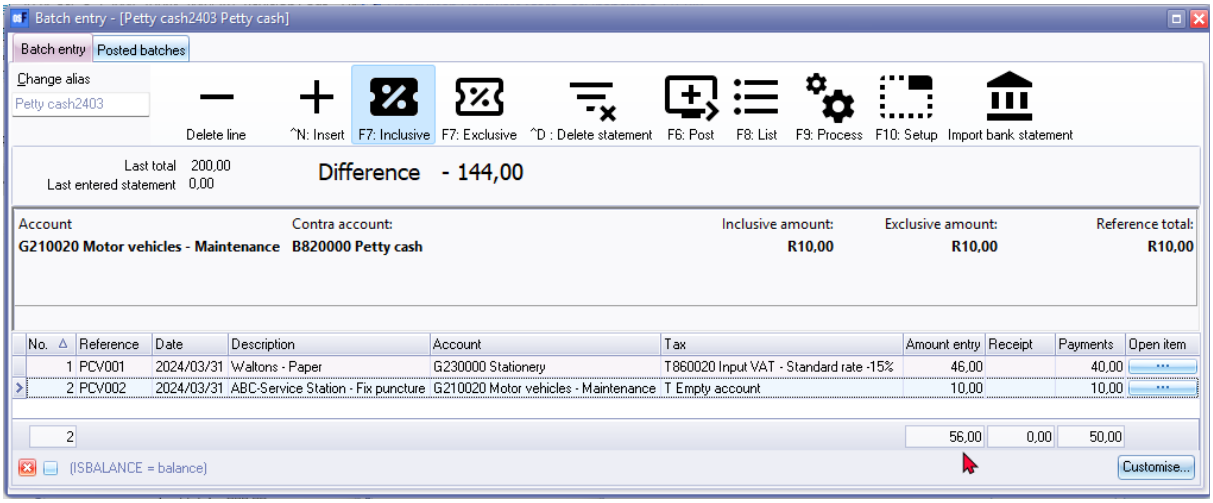
6. Leave all fields blank, and make sure that the default option, "*Account lookup type*", is set to "*All*" for this exercise.

7. Once setup; click OK. You are now ready to record your first petty cash payment.

8. Capture your petty cash vouchers from your petty cash voucher book or from your requisitions. Use your petty cash voucher number as the reference number.

Ref. no.	*Date*	*Description*	*Account*	*Tax*	*Amount*
PCV001	*2024/03/31*	*Paper - Waltons*	*Stationery*	*Input Tax - 15%*	*46.00*
PCV002	*2024/03/31*	*Fix puncture - ABC Service Station*	*Maintenance*	*No tax*	*10.00*

9. After capturing your first two petty cash payment vouchers, the Petty cash payments journal is displayed as follows:



The F5: Balance icon is not available on the "Batch entry" screen for the imported transactions form your bank statements.

Balancing entries will automatically be generated for the imported transactions form your bank statements when you post (update) the imported bank statement transactions to the ledger.

Posting the petty cash batch

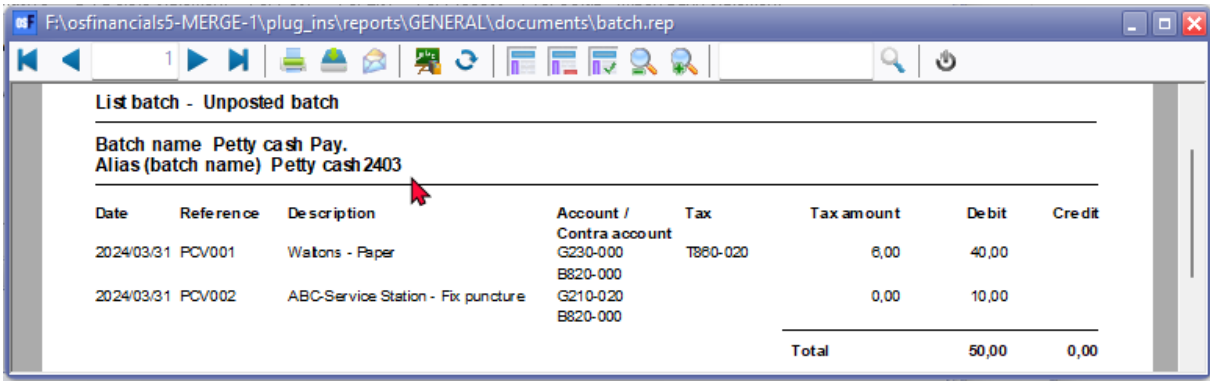
Once you have completed entering these petty cash payments, and you are sure they are correct, you may proceed to finalise the batch. The recommended process, is as follows:

1. Click on the F8:List icon to print a list of the transactions in the batch.

To include Tax (VAT/GST/Sales tax) amounts in the List batch - Unposted batch report,you need to balance the batch first.

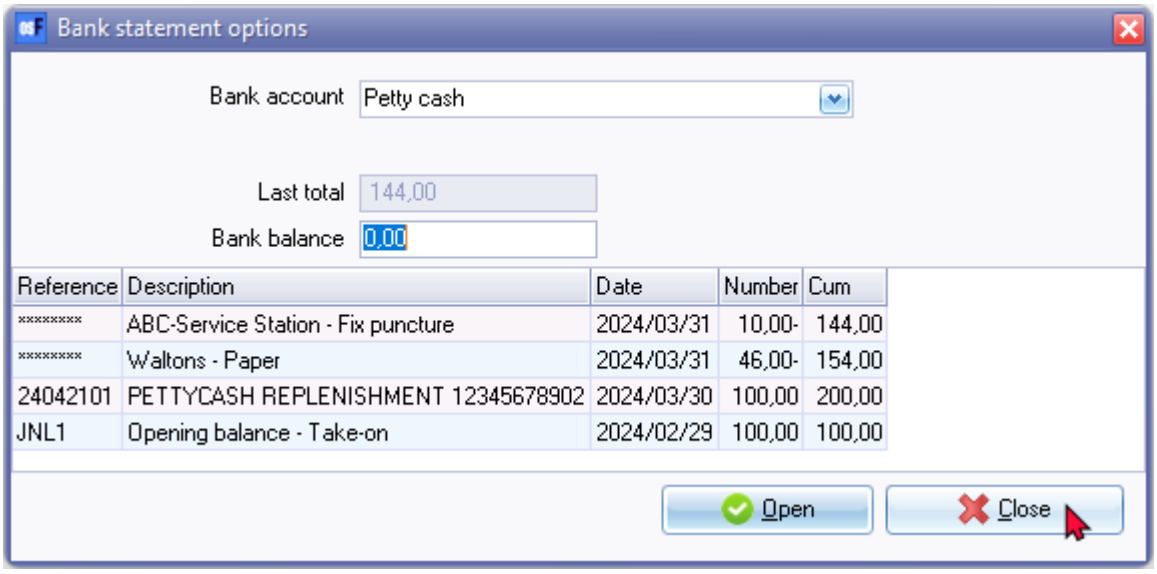
To do this, you need to go to F9:Process and choose the Balance batch.

It will generate balancing entries and include the Tax (VAT/GST/Sales tax) amounts on the List batch - Unposted batch report .



> *It is recommended that the source documents (e.g. petty cash vouchers and/or invoices, slips, etc. received from suppliers, etc.) be attached to this List of the transactions and that it be retained for record and audit purposes.*

2. Click on the F6:Post icon to post (update) the batch to the ledger. Posting the transactions will automatically generate the necessary balancing entries. The "*Batch entry*" screen will automatically be closed. The "*Bank statement options*" screen is displayed:



3. All the imported and processed petty cash transactions, which are posted (updated) to the ledger, will be listed.

4. Click Close.

T-Account view of transactions

All processed (posted) transactions will be accumulated in the Ledger analyser. There are various ways in which the transactions may be viewed, exported and analysed.

To access the T-Account view of the transactions:

1. On the Reports ribbon, select Ledger analyser 1 or Ledger analyser 2.

2. Select "*Trial balance*" report type and click on the Report button.

3. On the "*Trial balance*", select the "*B820-000 Petty cash*" account.

4. Double-click on the selected account; or right-click and select Show details on the context menu.

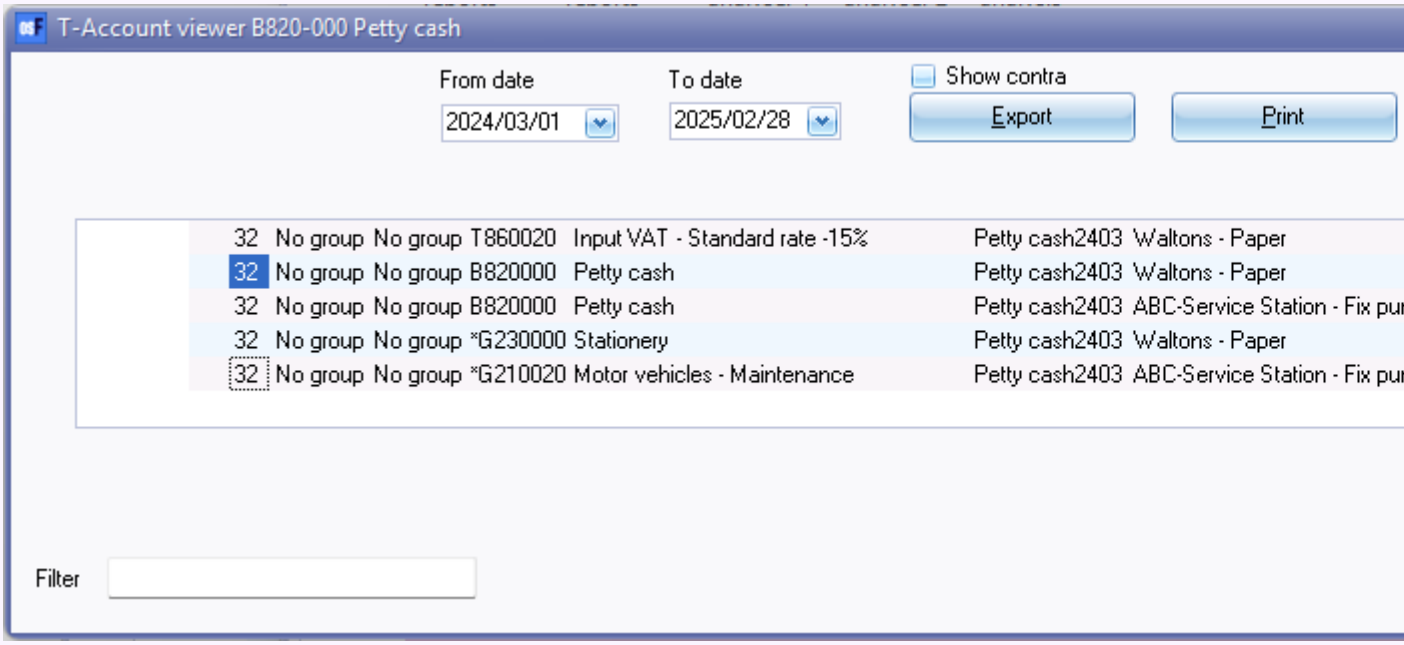
5. Click on the following to get specific views of transactions:

    - Batch id (e.g. 32 automatically generated). This will list only the transactions for a specific batch (journal).

- Account code (e.g. B820-000 Petty cash, G210-020 Motor vehicle - Maintenance G230-000 Stationery, T860-020 Input Tax Standard - 15%). This will list the transactions for a specific account.
- Date - This will list the transactions for a specific date. If you double-click on a date, the “From date” and “To date” will be changed to the selected date.

After posting the transactions in the Petty cash journal, the transactions should display as follows in the T-Account viewer:

Batch view



Show contra - You may select (tick) this option to view the Contra account code and account description in the first two (2) columns of the T-Account viewer. This will not print on the T-account viewer report, but will be included in the Exported file (which you can open in a spreadsheet).

Bank import plugin - Petty cash transactions (Import - CSV)

Introduction to Petty Cash

Receipt and Payment batch journal – Bank accounts

The use of cheques or electronic transfers (banking transactions) should be used for all transactions. The handling of cash should be limited as far as possible. Any amounts received from debtors (customers / clients) for cash sales or payments on accounts, should be banked as soon as possible.

These cash received by a business, should not be used for purchases, etc.

Cash, if not controlled and safeguarded properly, will create a climate for theft and fraud.

Any cash and payments received should be deposited in the bank account of the business. In osFinancials5/TurboCASH5 the receipts should be recorded in the Receipts batch (journal).

Any payments made should be paid out of the bank account of the business. In osFinancials5/TurboCASH5 the payments should be recorded in the Payments batch (journal).

Receipt and Payment batches - Petty Cash

A business may need to pay cash for smaller items and items needed urgently. For this reason, a business may need to keep a certain amount of cash (petty cash float) on hand to pay for these smaller necessary or urgent purchases.

Petty cash is a minimum amount of cash kept on hand for small purchases or reimbursements.

Petty cash money and payments or reimbursements must be safeguarded and properly documented to ensure that theft and fraud do not happen.

Petty cash payments (reimbursements) may be handled in the following:

- Employees may be required to fill in a form (e.g. Petty cash voucher) to receive the cash from the petty

cash. Directly after the purchase, the employee must submit a receipt or acceptable supporting documentation as proof of the purchase and return any change if applicable.

- Employees may be asked to make purchases themselves and then get reimbursed from the fund after submitting a receipts and/or acceptable supporting documentation as proof of the purchase.

The Petty cash receipts batch is hardly ever used. Any Petty cash float and/or replenishment is recorded in the Payment batch of the bank account from which the Petty cash float is recorded.

All petty cash payments or reimbursements is recorded in the Petty Cash Payments batch.

Petty cash guidelines

Some guidelines for using Petty cash, is as follows:

1. Appointing a Petty cashier – Only one person may have assess to the Petty cash. The petty cash cashier, must make sure that nobody else has access to the cash.
2. The petty cashier should be responsible for any cash shortages or a lack of receipts and/or acceptable supporting documentation as proof of the purchase.
3. Calculating the amount of float – The petty cash float should not have large amounts. It should be calculated for the average petty cash expenses for a period, monthly, fortnightly or weekly according to the needs of the business.
4. Another person needs to be appointed to check, on a regular basis, in the presence of the petty cashier, that the petty cash is correct.
5. Clear guidelines or policies and limits:
    a) Purchases or reimbursements from the Petty cash should only be allowed for valid business expenses (not anything else which are regarded as private expenses).
    b) Receipts and/or acceptable supporting documentation as proof of the purchase or reimbursement must be submitted.
    c) Restrict the Petty cash payments or reimbursements to specific employees.
    d) Implement a clear list of allowed purchases or reimbursements.
    e) Limit the amount for which purchases reimbursed.
    f) Make the petty cash guidelines and policies available to all employees.
6. If Tax (VAT/GST/Sales tax) is charged on a reimbursed purchase, the Tax should also be recorded as Input tax.

Petty cash can be recorded in in a pre-printed Petty cash register, or done in a spreadsheet. The spreadsheet can be used to record and control petty cash payments or reimbursements as well as to import the transactions as a Comma Separated Value (*.csv) – Tab delimited file into osFinancials5/TurboCASH5.

Recording Petty Cash transactions

The following options are available to record petty cash transactions:

1. Manually enter the transactions in a batch.
2. Petty Cash Register - Import the Petty cash transactions from Comma Separated Value (*.csv) – Tab delimited file into batches. This is very useful for bringing in external data without having to recapture it. This allows us to easily develop add on systems in Spreadsheet format and to synch them with osFinancials5/TurboCASH5.

Petty Cash Register

Depending on your requirements, the petty cash register may be designed for the necessary controls to keep accurate track cash in the petty cash and moneys paid for expenses / reimbursements.

The Petty Cash Register, in a spreadsheet format, can be used to implement the necessary controls and keep track of your expenses, payments and reimbursements. Transactions in the Petty Cash Register can be saved in a comma separated value (*.csv) -Tab delimited file format. These transactions can then be imported into a Petty Cash payments batch and updated to the ledger.

Delimited file import

The CSV format has been around for many years as a means of transferring data between datasets.

osFinancials5/TurboCASH5 can import CSV files into batches. This is very useful for bringing in external data without having to recapture it. This allows us to easily develop add on systems in Spreadsheet format and to synch them with osFinancials5/TurboCASH5.

OpenOffice 4 / LibreOffice 5

There are a number of contenders for the Office Software Market, Microsoft Office, OpenOffice LibreOffice. I have found OpenOffice to be the best at handling CSV files. You can use their packages, but I sincerely recommend you take advantage of the FREE Download of Open Office at *www.openoffice.org* and use OpenOffice for working with the data you are going to import into osFinancials5/TurboCASH5.

LibreOffice can be downloaded at *http://www.libreoffice.org/*

Get the Data Ready in OpenOffice / LibreOffice

osFinancials5/TurboCASH5 is particular about the CSV format that it will accept. osFinancials5/TurboCASH5 accepts the Tab delimited csv files.

If the CSV file is not EXACTLY the format that osFinancials accepts it will generate an error:

"List index out of bounds (3)".

If the Date is not entered as "31/03/2024", and is entered as "2024/03/31", depending on your system settings, and the delimited file import in osFinancials is imported, the dates may be imported as 1899/12/31. Irrespective of your operating system's date and regional settings, if the date is entered as "31/03/2024" the date should be, by default, be imported correctly according to the format of your operating system's date and regional settings.

Petty Cash Register Template

You may find these sample templates in " *...\bin\Tutorials\PETTY-CASH-TEMPALTES* " folder. These templates were created in the Open Document Spreadsheet format used in LibreOffice Calc. It consists of the following two folders:

- BATCHES - This contains the CSV file (PETTYCASH-2024-03.csv) generated by save the CVS tab of the Petty cash register in the TEMLATES folder. This CSV file is used to use the "*Import Delimited file*" option in the "*Process options for this batch*".
- TEMPLATES - This contains the sample Petty cash register file (PETTYCASH-TEMPLATE.ods). This sample file is used to generate transactions in the Petty cash register to save the CVS tab of the Fixed Asset register in the BATCHES folder.

This sample Template can be used in normal Petty cash batches (Batch entry) as well as in Petty cash bank accounts using the Bank Import plugin.

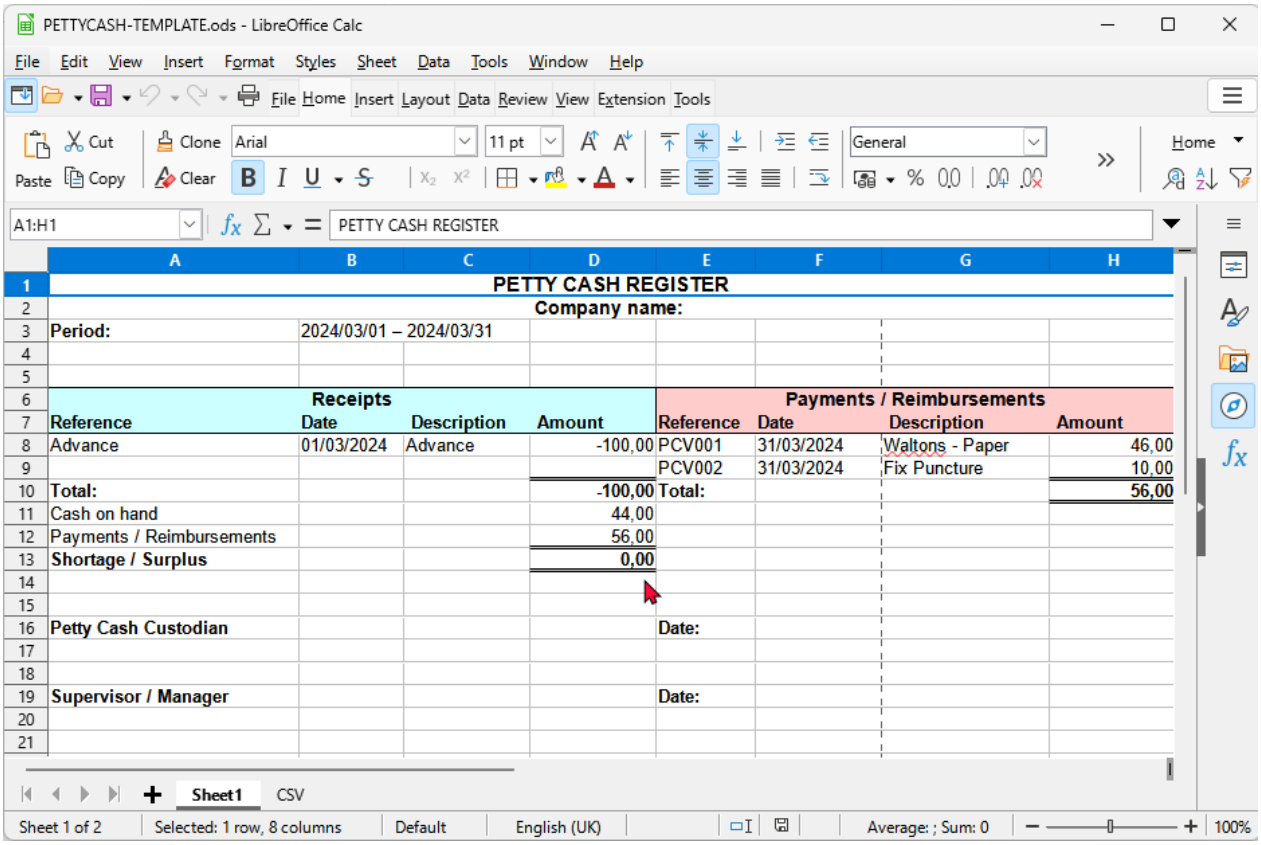
Open the PETTYCASH-TEMPLATE.ods

Open the PETTYCASHTEMPLATE.ods (Open Document Spreadsheet).

Petty Cash Register Template

Open the Petty Cash Register Template

Open the PETTYCASHTEMPLATE.ods (Open Document Spreadsheet).

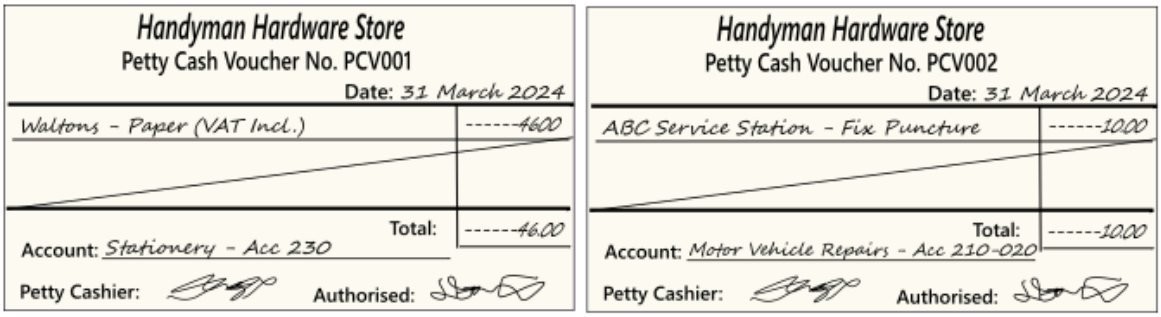


Enter the name of your business and the period.

The default sheet (Sheet1), consists of Receipts and Payments / Reimbursements:

1. Receipts – Column A – D - The Petty cash advances and replenishment as well as any shortages refunded should be entered in these columns. The transactions for the Petty Cash advances and replenishments, does not need to be recorded in TurboCASH, since these will be recorded in the Payments batch of the Bank account from which the petty cash float amount is paid.

2. Payments / Reimbursements – Column E – H – All payments or reimbursements must be entered in these columns. These transactions must be recorded in the Petty Cash batch (journal). These transactions will be updated in the CSV sheet. Once the transactions is added, the CSV sheet, may be saved as a comma separated value – Tab delimited file type. The transactions may then be imported into osFinancials5/TurboCASH5 as a delimited file import.



To add more transactions, you may select a row, e.g. Row 9, and insert the required rows.

Balancing the Petty Cash

Petty cash funds must be periodically checked to ensure that the balance of the petty cash fund is correct.

The petty cash float must always be in balance with the cash on hand plus the receipt or acceptable supporting documentation as proof of the purchase.

If it does not balance and you have checked that you have counted the cash at hand correctly, and that the petty cash payment transactions are entered correctly.

If it is correctly counted and entered, a difference indicates a surplus or a shortage:

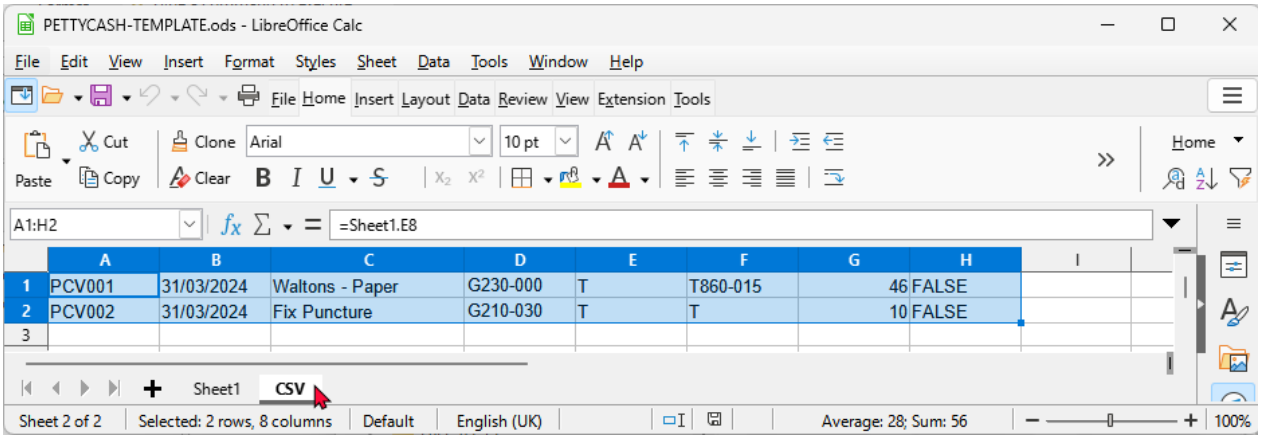
- *Surplus - This is where the amount in the petty cash, and the petty cash vouchers and/or slips exceeds the amount of the float.*
- *Shortage - This is where the amount in the petty cash, and the petty cash vouchers and/or slips is less than the amount of the float.*

Updating the CSV sheet to a Tab delimited file

Once the transactions is added in Sheet1, click on the CSV sheet.

To add more transactions in the CSV sheet, as added in Sheet1, copy the formulas in Columns A – H to the next rows.

This will update the CSV sheet with the transactions as entered in the Payments / Reimbursements – Column E – H of Sheet1.



The values of the columns is as follows:

1. Column A – Reference =Sheet1.E8 Reference as entered in column E Row 8 of Sheet1.

2. Column B – Date =Sheet1.F8 the Date as entered in column F Row 8 of Sheet1.

> *If the Date is not entered as "31/03/2024", and is entered as "2024/03/31", depending on your system settings, and the delimited file import in TurboCASH is imported, the dates may be imported as 1899/12/31. Irrespective of your operating system's date and regional settings, if the date is entered as "31/03/2024" the date should be, by default, be imported correctly according to the format of your operating system's date and regional settings.*

3. Column C – Description =Sheet1.G8 the Description as entered in column G Row 8 of Sheet1.

4. Column D – Account = The default expense / purchase account which will be imported into the batch.

> *You may enter an existing default account, e.g. "G999-000" – Suspense account or a "Petty cash control" account (added in Accounts (Default ribbon)). Once the csv file (Delimited file import) of the petty cash transactions in batch is imported, you need to select the correct account for each transaction.*

> *You need to type the account type prefix e.g. "G" followed by the main account code e.g. "230" and the sub-account, separated by a hyphen "-" for example, "G230-000" for the Stationery account.*
>
> *Income and expense accounts (starting with the "G" prefix for General ledger accounts) are prefixed with an "*" (asterisk). If the "*" asterisk is also entered in this column, the account will not be imported into the delimited file batch.*

> *You may type the correct account in this column from the printed Chart of accounts from Reports → Ledger → Listing (Reports ribbon), e.g. "G230-000" – Printing, Postage and Stationery account. Once the csv file (Delimited file import) of the petty cash transactions in batch is imported, you can check and confirm the correct account for each transaction.*

5. Column E – Contra account – The default value is "*T*". Do not delete this column and leave the value as "*T*".

6. Column F – Tax account – The default value is "*T*". Leave the value as "*T*", unless Tax (VAT/GST/Sales tax) is applicable to the transaction.

> *You may leave the default as "T".*
>
> *Once the csv file (Delimited file import) of the petty cash transactions in the petty cash batch is imported, you need to select the correct tax account for each transaction on which Tax (VAT/GST/Sales tax) is applicable.*

> *If Tax (VAT/GST/Sales tax) is applicable to the transaction, you may type the account type prefix e.g. "T" followed by the main account code e.g. "950" and the sub-account, separated by a hyphen "-" for example, "T860-015" for the Input VAT – Standard rate – 15% account.*

7. Column G – Amount – =VALUE(Sheet1.H8) – The amount of the transaction (expense / payment / reimbursement).

> *The amount should be a positive amount, since the transactions need to be imported as a debit transaction into the Petty cash batch (journal).*
>
> *If the amount is negative (prefixed by a minus "-" sign) amount, it will be imported as a credit amount into imported into the delimited file batch.*

8. Column H – The default value is "*FALSE*". Once the transactions is imported, and you select an account (i.e. Debtor (customer/client), Creditor (supplier/vendor) and/or a Ledger account), which is set as Open item account and the account has processed transactions to be linked, the "*Open item selection*" screen will be displayed.

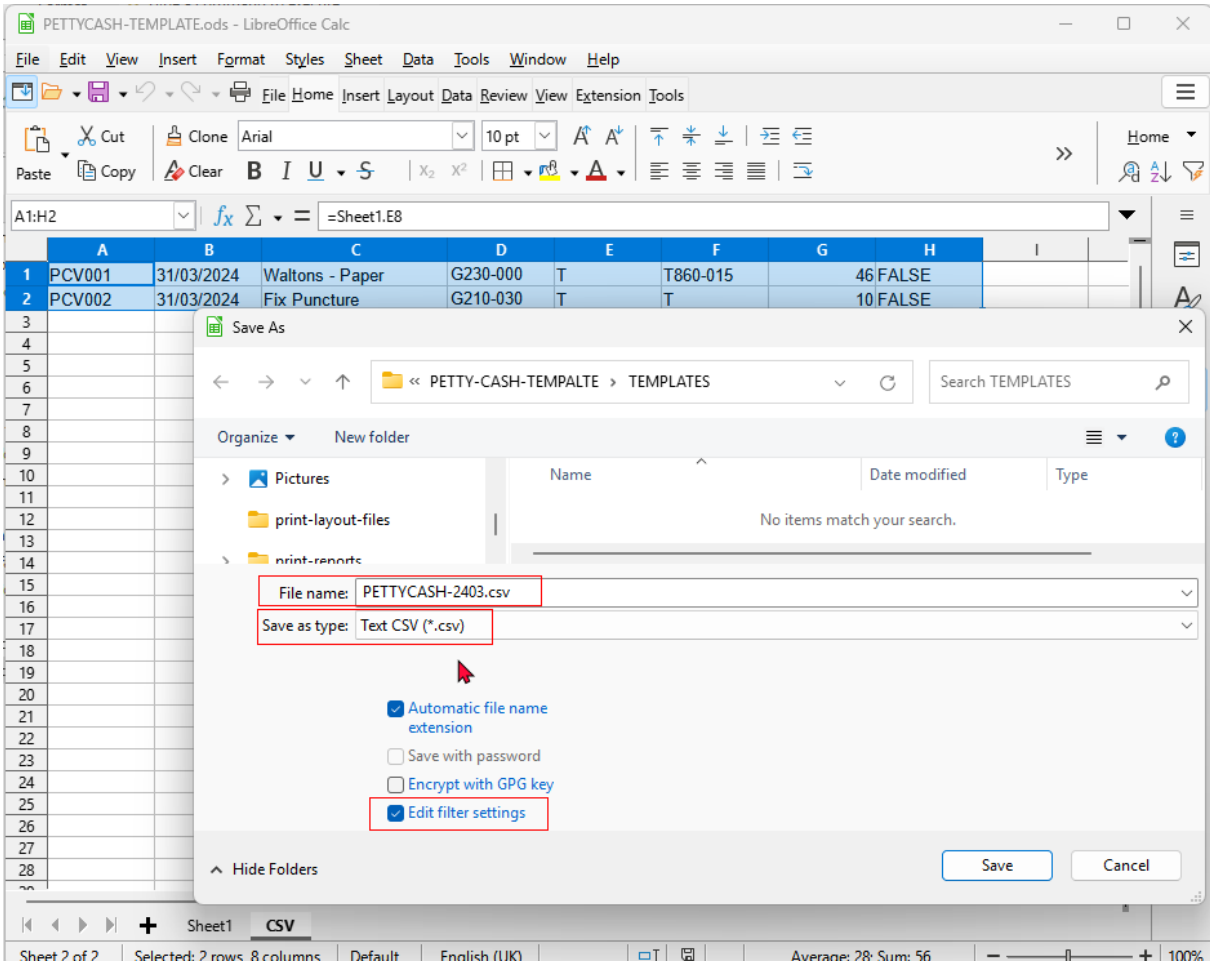
Save the CSV sheet to a Tab delimited file

Once the transactions is updated in the CSV sheet, the CSV sheet, need to be saved as a comma separated value – Tab delimited file type. The transactions may then be imported into osFinancials as a delimited file import.

> *Before proceeding with the next step, remember to SAVE the PETTYCASH-TEMPLATE.ods (Open Document Spreadsheet).*

To save the Transactions in the CSV tab to a Tab delimited file:

1. On the "*PETTYCASHTEMPLATE.ods*" (Open Document Spreadsheet), click on the CSV sheet, if not already selected.
2. Select the rows and columns on the CSV sheet.



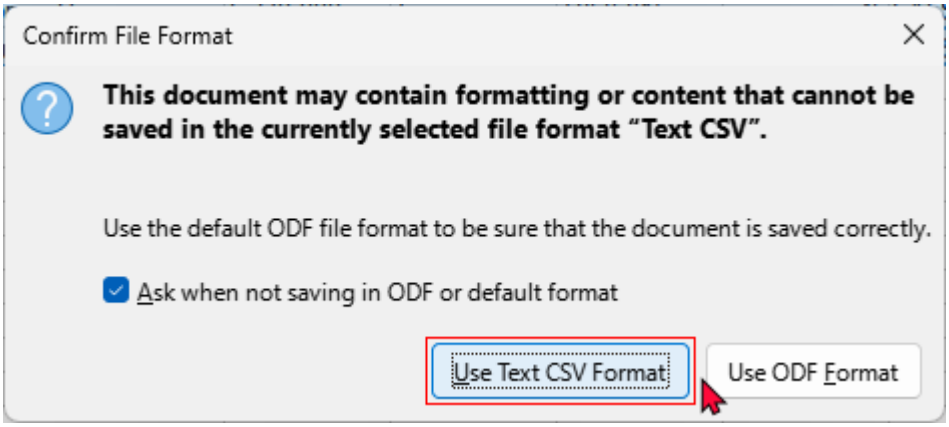
3. Enter the name for the Batch file, (e.g. "*PettyCASH-2024-03*". In this example, it will indicate the petty cash transactions for "*March 2016*".

4. Save as type: - Select the "*Text CSV (.csv) (*.csv)*" as the file type. The "*Edit filter settings*" field (tick box) will be activated for the "*Text CSV (.csv)*" file type.

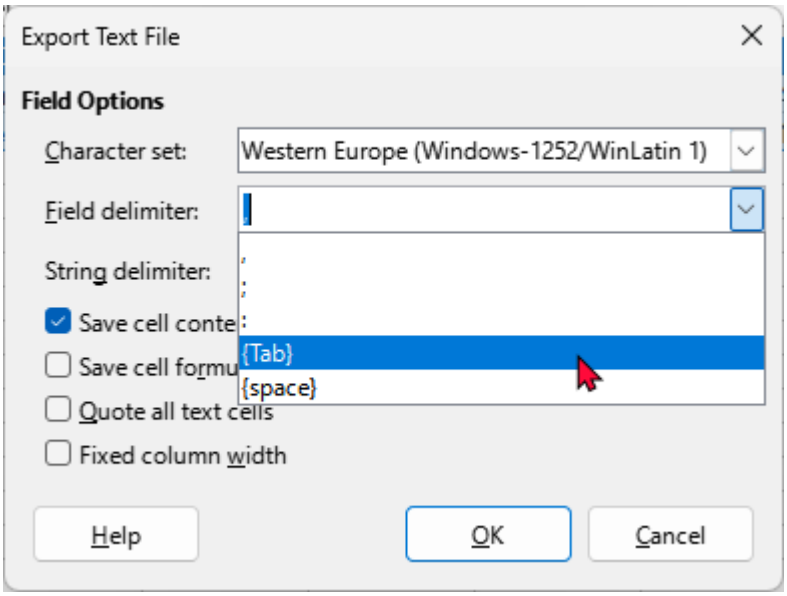
> *It is important to select (tick) the "Edit filter settings" field. This will launch the "Export Text file" screen on which the TAB field delimiter needs to be selected.*

5. Edit filter settings – Tick this option.

6. Click Save.



7. On the "*Confirm File Format*" screen, click Use Text CSV Format button. The "*Export Text File*" screen is displayed:



8. Select the following options:

   a) Field delimiter: - Select {TAB}.

   > *If this option is not selected, the delimited file import in osFinancials will fail. The Tab delimited CSV import file is required by osFinancials5/TurboCASH5.*

   b) Save cell content as shown – Select (tick) this option. If this option is not selected (not ticked), formula values will be imported and may produce REF (Reference) errors.

9. Click the OK button. LibreOffice will produce a Warning message that only the active sheet was saved (CSV sheet). A similar warning message is as follows:

   Warning saving the document PETTYCASH-2024-03:
   Only the active sheet was saved.

10. Click the OK button.

11. Close the "*PettyCASH-2024-03.csv*" file.

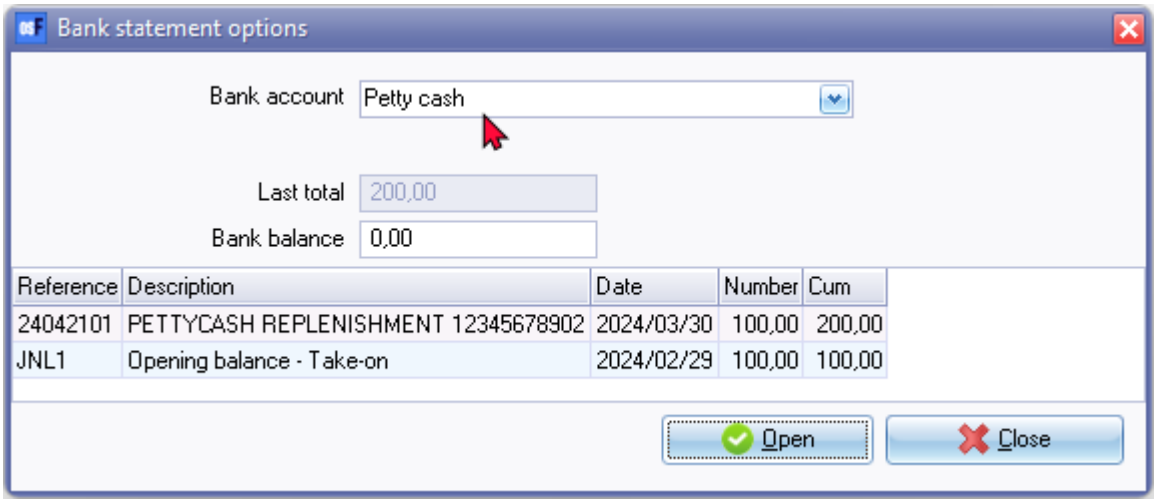
> *If the csv file is opened (active) on your system, the following error message will be displayed:*
>
> *"Cannot open file "...\Spreadsheets\PettyCASH\PettyCASH-2024-03.csv". The process cannot access the file because it is being used by another process.".*
>
> *Close the file in which it is open, e.g. Excel / OpenOffice / LibreOffice and import the file again.*

Delimited File Import - CSV file into osFinancials5/TurboCASH5

Once the transactions is saved as a comma separated value – Tab delimited file type, the petty cash transactions can be imported into osFinancials5/TurboCASH5 as a delimited file import.

To Import Petty Cash Transactions from the CSV - Tab delimited file:

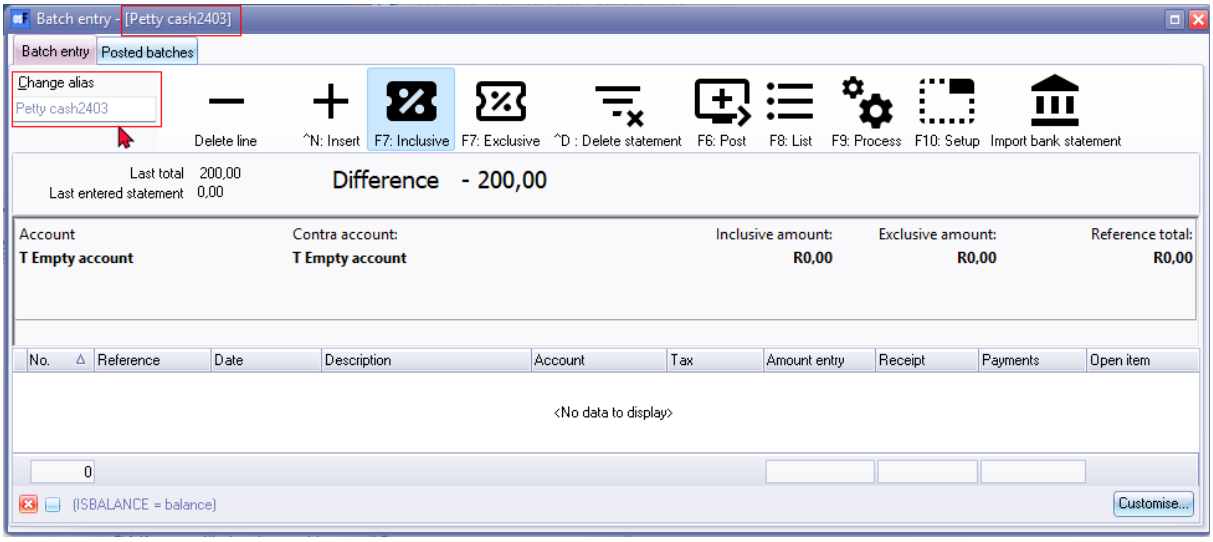
1. Go to the Default ribbon and select Cash/Bank entry .The "*Bank statements options*" screen will list your previous processed transactions.



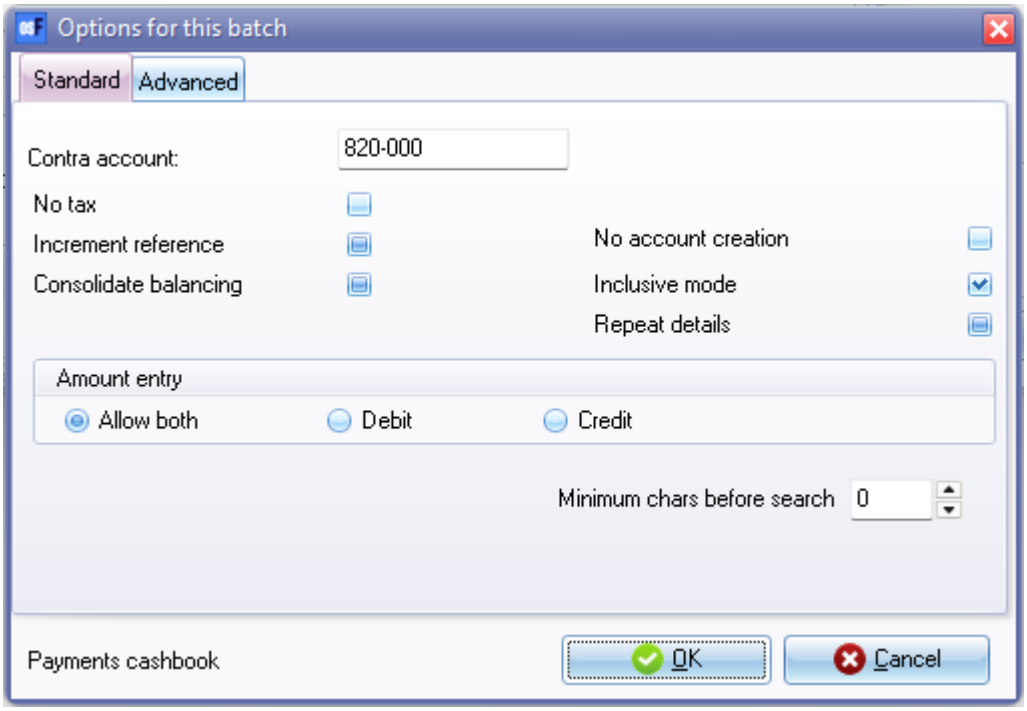
2. .Select the Petty cash as the "*Bank account*" and click Open.

3. Enter the alias (batch name) in the "*Change alias"* field. In this example, enter *''PettyCash2403''* to indicate that the Petty cash of March 2024 was entered in this Petty cash payments batch.

> *The alias option allows you to identify a batch by a unique name. You will be able to select the batch by alias or batch name if you need to reverse the posted batch or import a posted batch.*



4. Click on the F10:Setup icon to set your batch up. This is a once-off action, unless your requirements change. The *"Options for this batch"* screen is displayed:

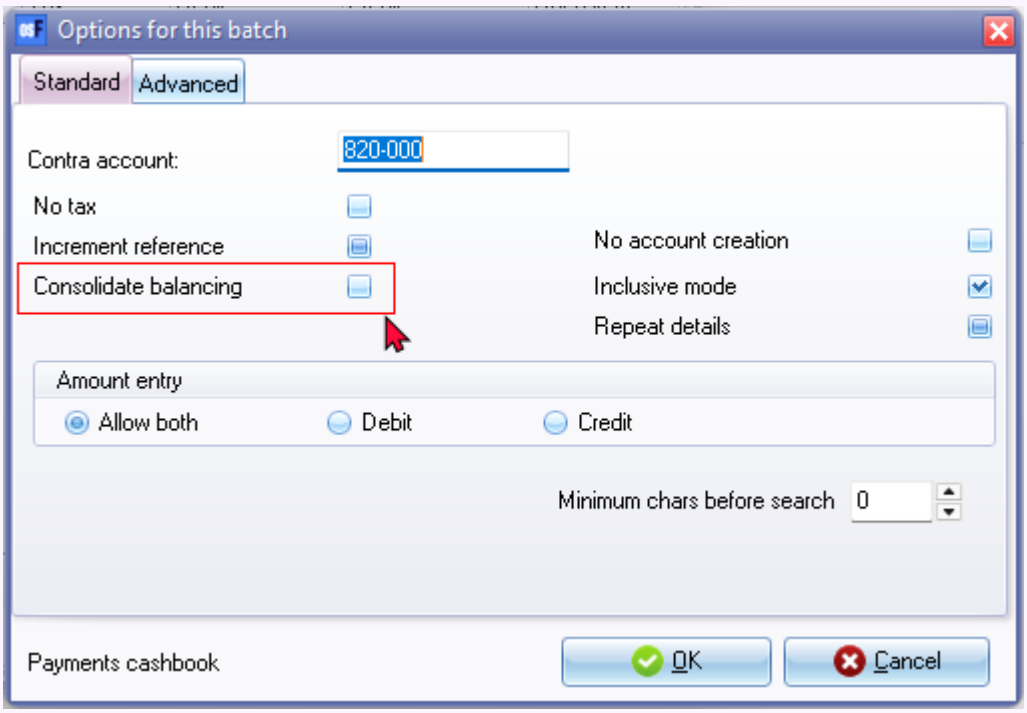


The contra account is by default set to the Bank account.

You cannot change this in the Payments journal or Petty cash Payments journal.

On the Standard tab, check that the "Consolidate balancing" option, is not selected.

If the "Consolidate balancing" option, is selected the following error message will be displayed:

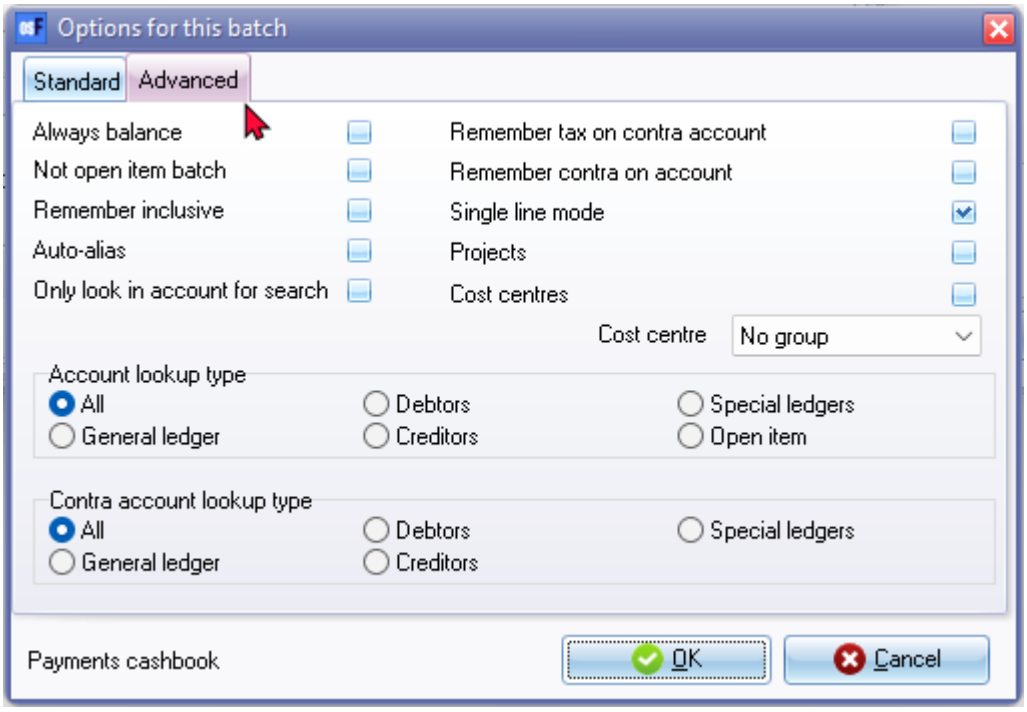


An information message will be displayed:

> Consolidating lines and using tax will mess up your tax report! Please make sure you do not use tax or do not consolidate lines!

Click OK and remove the tick from the "Consolidate balancing" field.

5. Once setup; click on the Advanced tab.

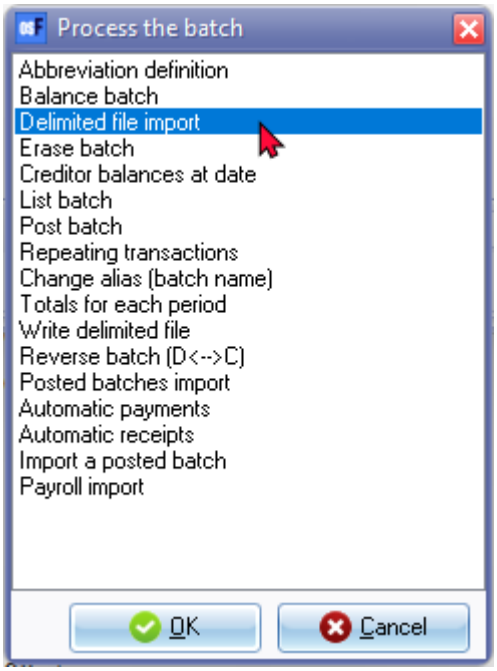


6. Leave all fields blank, and make sure that the default option, "*Account lookup type*", is set to "*All*" for

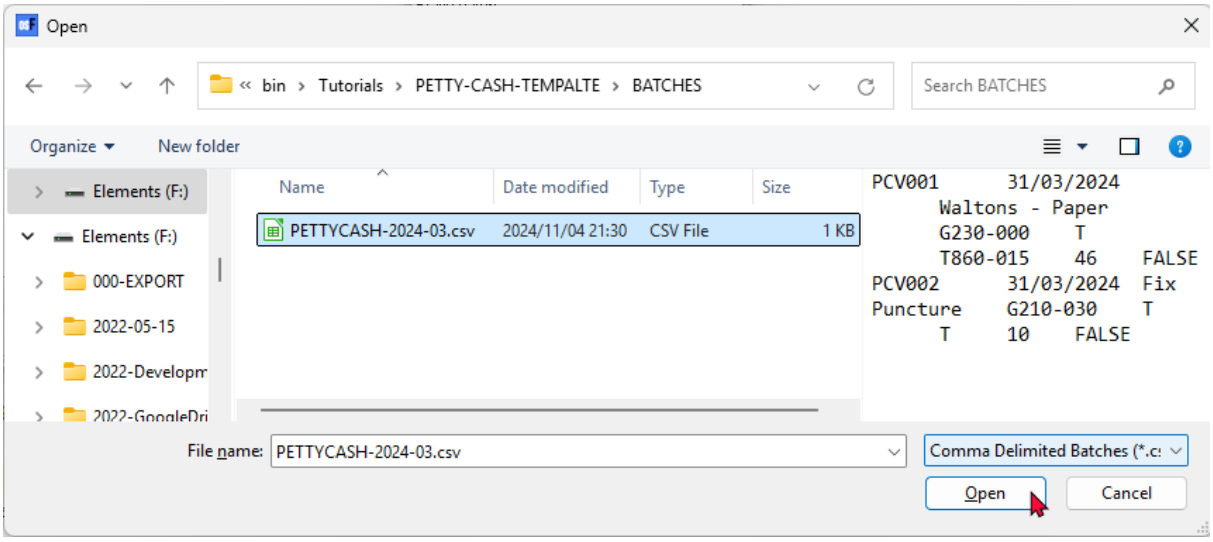
this exercise.

4. Click on the OK button.

5. Click on F9:Process icon and select the "*Delimited file import*" option and click OK.



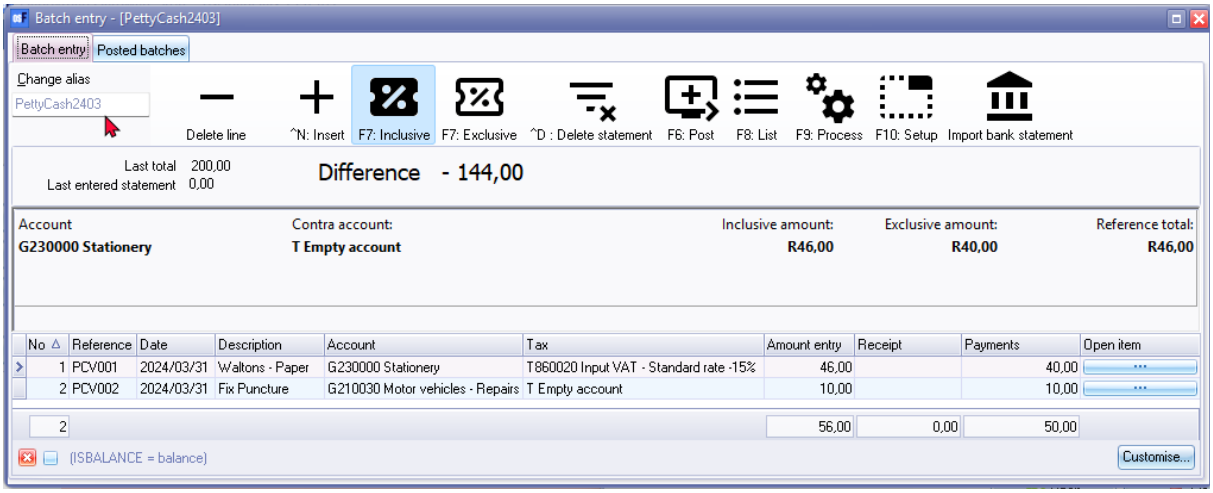
The "*Open*" screen will be displayed.



7. Navigate and select the Petty cash batch file (e.g. "*PETTYCASH-2024-03.csv*") to import and click Open.

Warning saving the document PETTYCASH-2024-03:

Only the active sheet was saved.



8. After importing the petty cash transactions, you may need to change / edit the imported petty cash transactions:

    a) Reference – The Petty cash voucher or reference number as entered in Column E of Sheet1 and updated in Column A of the CSV sheet in the Petty Cash Register.

    b) Date – The date as entered in Column F of Sheet1 and updated in Column B of the CSV sheet in the Petty Cash Register.

> *If the Date (in Sheet1 of the Petty Cash Register) is not entered as "31/03/2024", and is entered as "2024/03/31", depending on your system settings, and the delimited file import in TurboCASH is imported, the dates may be imported as 1899/12/31. Irrespective of your operating system's date and regional settings, if the date is entered as "31/03/2024" the date should be, by default, be imported correctly according to the format of your operating system's date and regional settings.*

    c) Description – The descriptions as entered in Column G of Sheet1 and updated in Column C of the CSV sheet in the Petty Cash Register.

    d) Account – The account code as entered in Column D of the CSV sheet in the Petty Cash Register. Each payment or reimbursement transaction needs to be linked (allocated) to the correct account.

> *If you have entered an existing default account, e.g. "G999-000" – Suspense account or a "Petty cash control" account (added in Accounts (Default ribbon)). Once the csv file (Delimited file import) of the petty cash transactions in batch is imported, you need to select the correct account for each transaction.*

> *You need to type the account type prefix e.g. "G" followed by the main account code e.g. "230" and the sub-account, separated by a hyphen "-" for example, "G230-000" for the*

Stationery account.

Income and expense accounts (starting with the "G" prefix for General ledger accounts) are prefixed with an "" (asterisk). If the "*" asterisk is also entered in this column, the account will not be imported into the delimited file batch.*

You may type the correct account in this column from the printed Chart of accounts from Reports → Ledger → Listing (Reports ribbon), e.g. "G230-000" – Stationery account. Once the csv file (Delimited file import) of the petty cash transactions in batch is imported, you can check and confirm the correct account for each transaction.

e) Tax account – The correct tax account (code) must be selected, if Tax (VAT / GST / Sales tax) is applicable to the transaction. The Tax account code as entered in Column F of the CSV sheet in the Petty Cash Register.

The tax column will only be displayed if the "No Tax" option is left blank (not ticked) in the F10:Setup option in the Batch entry screen.

If no Tax (VAT/GST/Sales Tax) is applicable to all the transactions in the Petty Cash Register; or if you are not registered for Tax (VAT/GST/Sales Tax) you may select to hide the tax column will only be displayed if the "No Tax" option is left blank (not ticked) in the F10:Setup option in the Batch entry screen.

f) Debit – Positive amounts – The amount of the transaction (expense / payment / reimbursement) as entered in Column H of Sheet1 and updated in Column G of the CSV sheet in the Petty Cash Register.

g) Credit – Negative amounts –

The amount should be a positive amount, since the transactions need to be imported as a debit transaction into the Petty cash batch (journal).

If the amount is negative (prefixed by a minus "-" sign) amount, it will be imported as a credit amount into imported into the delimited file batch.

h) Open item – If an account (i.e. Debtor (customer/client), Creditor (supplier/vendor) and/or a Ledger account), which is set as Open item account and the account has processed transactions to be linked, the "*Open item selection*" screen will be displayed. On this "*Open item selection*" screen, you may select to link a payment transaction to a credit transaction, ode a receipt (deposit) transaction to a debit transaction.

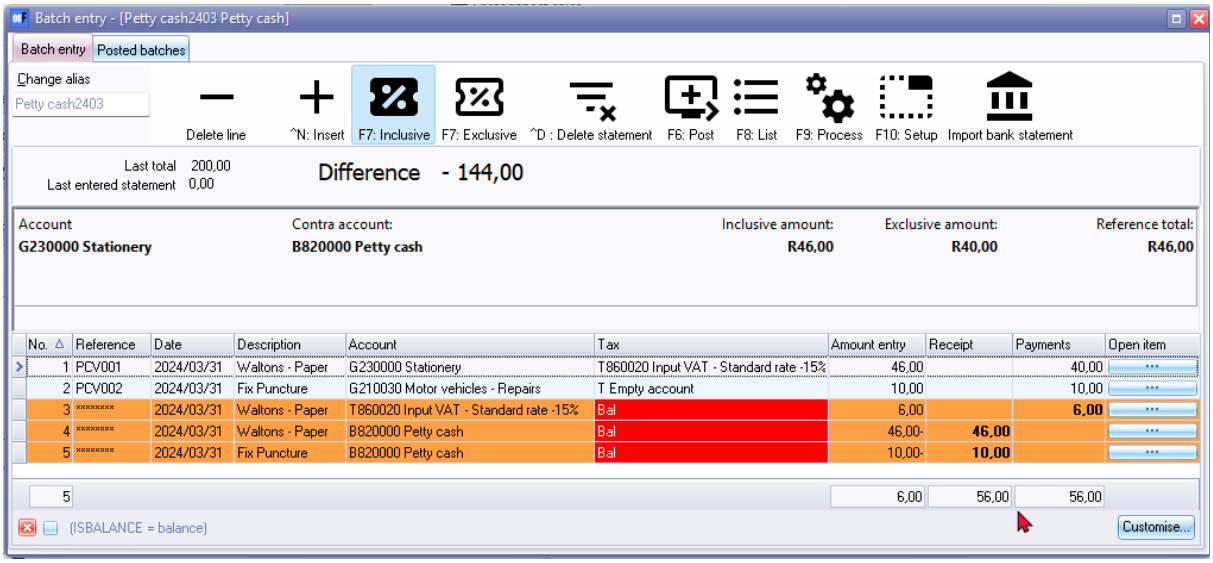
Posting the petty cash batch

Once you have completed entering these petty cash payments, and you are sure they are correct, you may proceed to finalise the batch. The recommended process, is as follows:

1. Click on the F8:List icon to print a list of the transactions in the batch.

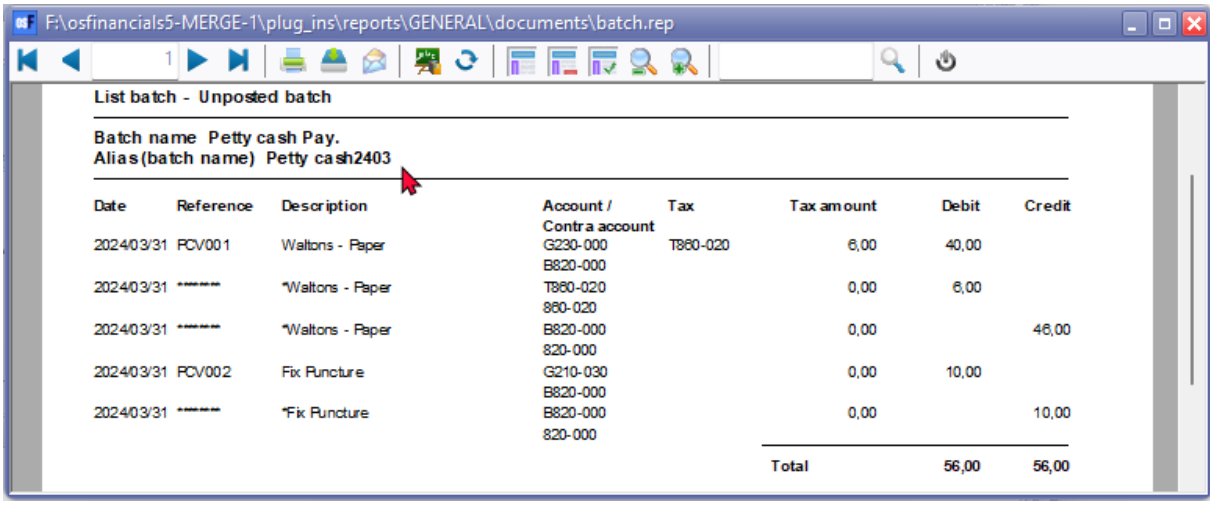
> ***To include Tax (VAT/GST/Sales tax) amounts in the List batch - Unposted batch report,you need to balance the batch first.***
>
> ***To do this, you need to go to F9:Process and choose the Balance batch.***
>
> ***It will generate balancing entries and include the Tax (VAT/GST/Sales tax) amounts on the List batch - Unposted batch report .***

2. Click on the F5:Balance icon. This will generate balancing transactions to the Petty cash bank account.



3. Click on the F8:List icon to print a list of the transactions in the unposted batch.

> ***To include Tax (VAT/GST/Sales tax) amounts in the List batch - Unposted batch report,you need to balance the batch first.***
>
> ***To do this, you need to go to F9:Process and choose the Balance batch.***
>
> ***It will generate balancing entries and include the Tax (VAT/GST/Sales tax) amounts on the List batch - Unposted batch report .***



4. Click on the F6:Post icon to update (post) the transactions to the ledger.

T-Account-view of Transactions

All processed (posted) transactions will be accumulated in the Ledger analyser. There are various ways in which the transactions may be viewed, exported and analysed.

To access the T-Account view of the transactions:

1. On the Reports ribbon, select Ledger analyser 1 or Ledger analyser 2.
2. Select "*Trial balance*" report type and click on the Report button.
3. On the "*Trial balance*", select the "*B820-000 Petty cash*" account.
4. Double-click on the selected account; or right-click and select Show details on the context menu.
5. Click on the following to get specific views of transactions:
    - Batch id (e.g. 38 automatically generated). This will list only the transactions for a specific batch (journal).
    - Account code (e.g. B820-000 Petty cash, G210-030 Repairs G230-000 Stationery, T860-020 Input Tax Standard - 15%). This will list the transactions for a specific account.
    - Date - This will list the transactions for a specific date. If you double-click on a date, the "From date" and "To date" will be changed to the selected date.

After posting the transactions in the Petty cash journal, the transactions should display as follows in the T-Account viewer:

T-Account view of transactions in the Petty cash account

All processed (posted) transactions will be accumulated in the Ledger analyser. There are various ways in

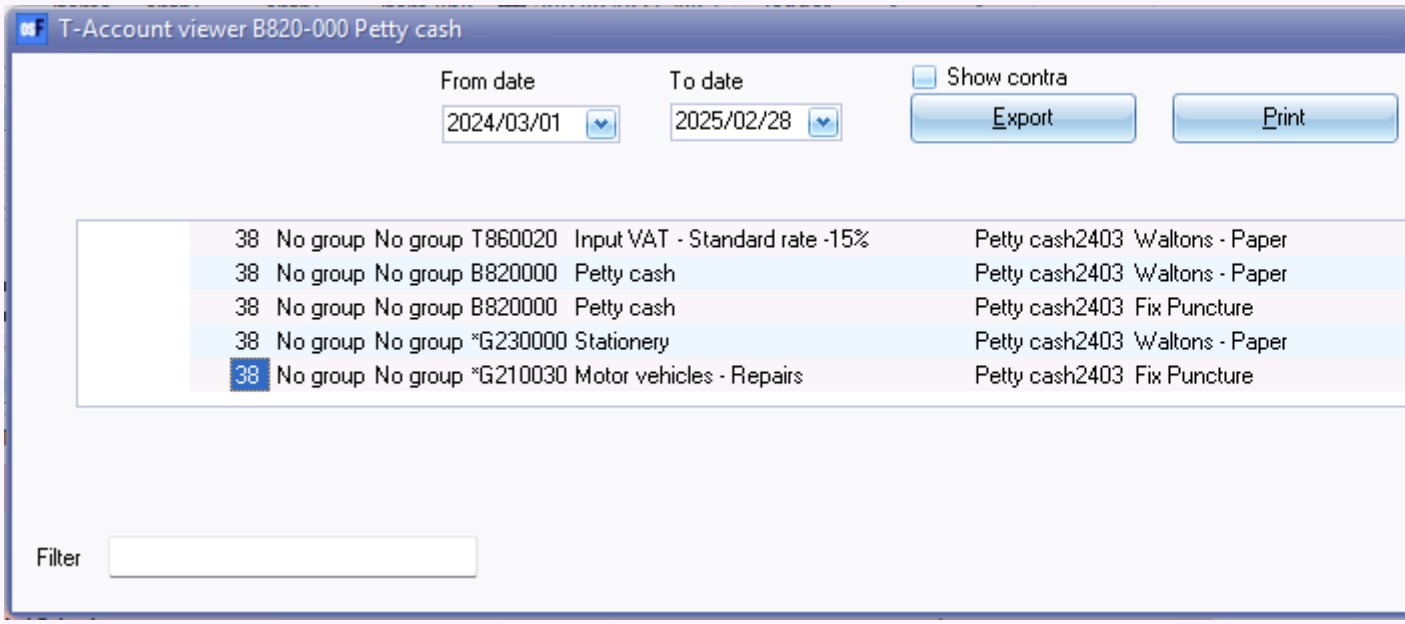
which the transactions may be viewed, exported and analysed.

To access the T-Account view of the transactions:

1. On the Reports ribbon, select Ledger analyser 1 or Ledger analyser 2.
2. Select "*Trial balance*" report type and click on the Report button.
3. On the "*Trial balance*", select the "*B820-000 Petty cash*" account.
4. Double-click on the selected account; or right-click and select Show details on the context menu.
5. Click on the following to get specific views of transactions:
    - Batch id (e.g. 38 automatically generated). This will list only the transactions for a specific batch (journal).
    - Account code (e.g. B820-000 Petty cash, G210-030 Motor vehicle - Repairs G230-000 Stationery, T860-020 Input Tax Standard - 15%). This will list the transactions for a specific account.
    - Date - This will list the transactions for a specific date. If you double-click on a date, the "From date" and "To date" will be changed to the selected date.

After posting the transactions in the Petty cash journal, the transactions should display as follows in the T-Account viewer:

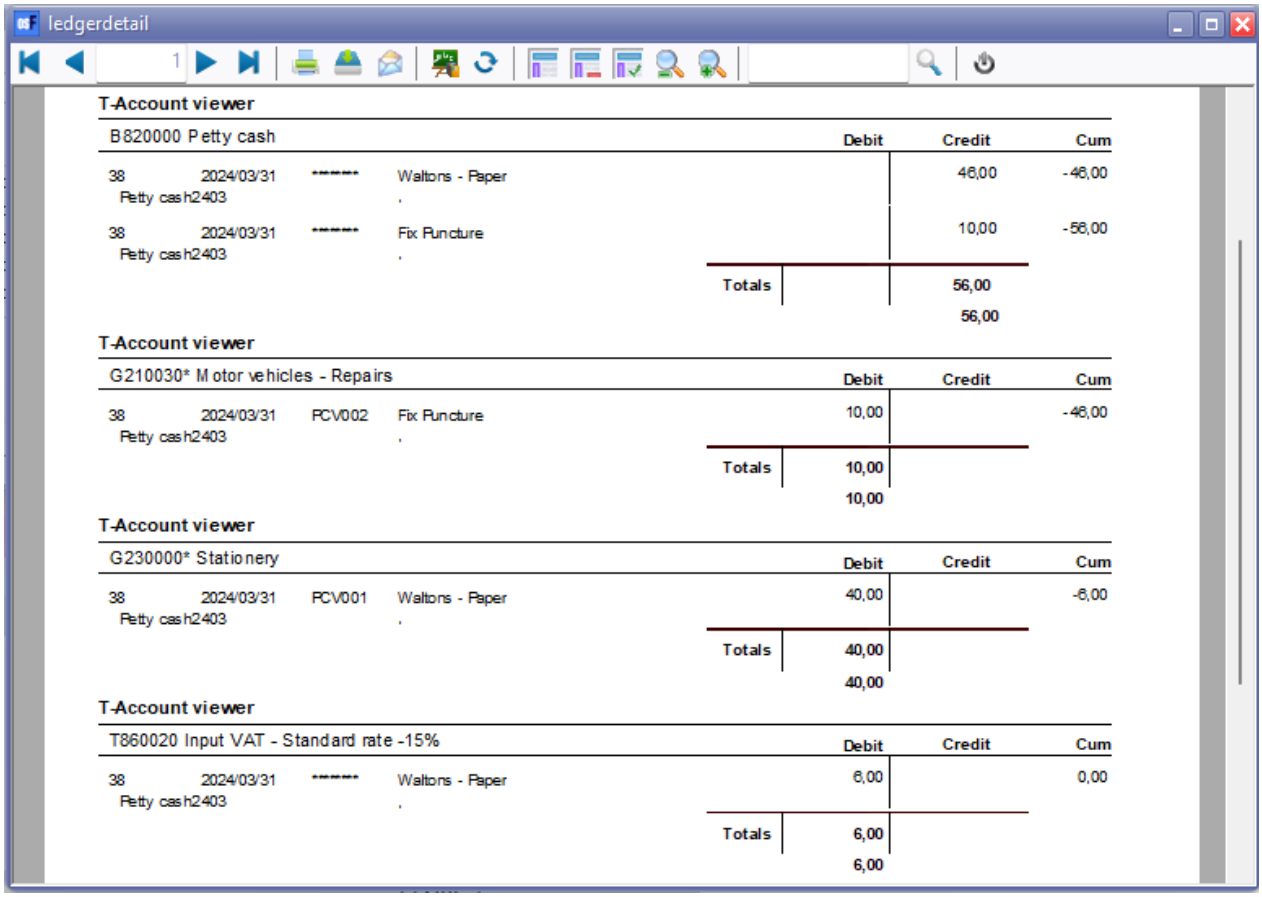
Batch view



Show contra – You may select (tick) this option to view the Contra account code and account description in the first two (2) columns of the T-Account viewer. This will not print on the T-account viewer report, but will be included in the Exported file (which you can open in a spreadsheet).

T-Account view of Receipt transactions in the Petty Cash - Bank account

The updated (posted) transactions for the "*Petty cash*" account, is as follows:



Accounting equation

Debits = Credits

Debit General ledger (i.e. Expenses + Input Tax)

=

Credit General ledger (i.e. payment transactions from the Petty cash (Bank account)) - (Inclusive of Input VAT/GST/Sales Tax).

Petty cash transactions (Import - CSV)

Introduction to Petty Cash

Receipt and Payment batch journal – Bank accounts

The use of cheques or electronic transfers (banking transactions) should be used for all transactions. The handling of cash should be limited as far as possible. Any amounts received from debtors (customers / clients) for cash sales or payments on accounts, should be banked as soon as possible.

These cash received by a business, should not be used for purchases, etc.

Cash, if not controlled and safeguarded properly, will create a climate for theft and fraud.

Any cash and payments received should be deposited in the bank account of the business. In osFinancials5/TurboCASH5 the receipts should be recorded in the Receipts batch (journal).

Any payments made should be paid out of the bank account of the business. In osFinancials5/TurboCASH5 the payments should be recorded in the Payments batch (journal).

Receipt and Payment batches - Petty Cash

A business may need to pay cash for smaller items and items needed urgently. For this reason, a business may need to keep a certain amount of cash (petty cash float) on hand to pay for these smaller necessary or urgent purchases.

Petty cash is a minimum amount of cash kept on hand for small purchases or reimbursements.

Petty cash money and payments or reimbursements must be safeguarded and properly documented to ensure that theft and fraud do not happen.

Petty cash payments (reimbursements) may be handled in the following:

- Employees may be required to fill in a form (e.g. Petty cash voucher) to receive the cash from the petty

cash. Directly after the purchase, the employee must submit a receipt or acceptable supporting documentation as proof of the purchase and return any change if applicable.

- Employees may be asked to make purchases themselves and then get reimbursed from the fund after submitting a receipts and/or acceptable supporting documentation as proof of the purchase.

The Petty cash receipts batch is hardly ever used. Any Petty cash float and/or replenishment is recorded in the Payment batch of the bank account from which the Petty cash float is recorded.

All petty cash payments or reimbursements is recorded in the Petty Cash Payments batch.

Petty cash guidelines

Some guidelines for using Petty cash, is as follows:

1. Appointing a Petty cashier – Only one person may have assess to the Petty cash. The petty cash cashier, must make sure that nobody else has access to the cash.
2. The petty cashier should be responsible for any cash shortages or a lack of receipts and/or acceptable supporting documentation as proof of the purchase.
3. Calculating the amount of float – The petty cash float should not have large amounts. It should be calculated for the average petty cash expenses for a period, monthly, fortnightly or weekly according to the needs of the business.
4. Another person needs to be appointed to check, on a regular basis, in the presence of the petty cashier, that the petty cash is correct.
5. Clear guidelines or policies and limits:
    a) Purchases or reimbursements from the Petty cash should only be allowed for valid business expenses (not anything else which are regarded as private expenses).
    b) Receipts and/or acceptable supporting documentation as proof of the purchase or reimbursement must be submitted.
    c) Restrict the Petty cash payments or reimbursements to specific employees.
    d) Implement a clear list of allowed purchases or reimbursements.
    e) Limit the amount for which purchases reimbursed.
    f) Make the petty cash guidelines and policies available to all employees.
6. If Tax (VAT/GST/Sales tax) is charged on a reimbursed purchase, the Tax should also be recorded as Input tax.

Petty cash can be recorded in in a pre-printed Petty cash register, or done in a spreadsheet. The spreadsheet can be used to record and control petty cash payments or reimbursements as well as to import the transactions as a Comma Separated Value (*.csv) – Tab delimited file into osFinancials5/TurboCASH5.

Recording Petty Cash transactions

The following options are available to record petty cash transactions:

1. Manually enter the transactions in a batch.
2. Petty Cash Register - Import the Petty cash transactions from Comma Separated Value (*.csv) – Tab delimited file into batches. This is very useful for bringing in external data without having to recapture it. This allows us to easily develop add on systems in Spreadsheet format and to synch them with osFinancials5/TurboCASH5.

Petty Cash Register

Depending on your requirements, the petty cash register may be designed for the necessary controls to keep accurate track cash in the petty cash and moneys paid for expenses / reimbursements.

The Petty Cash Register, in a spreadsheet format, can be used to implement the necessary controls and keep track of your expenses, payments and reimbursements. Transactions in the Petty Cash Register can be saved in a comma separated value (*.csv) -Tab delimited file format. These transactions can then be imported into a Petty Cash payments batch and updated to the ledger.

Delimited file import

The CSV format has been around for many years as a means of transferring data between datasets.

osFinancials5/TurboCASH5 can import CSV files into batches. This is very useful for bringing in external data without having to recapture it. This allows us to easily develop add on systems in Spreadsheet format and to synch them with osFinancials5/TurboCASH5.

OpenOffice 4 / LibreOffice 5

There are a number of contenders for the Office Software Market, Microsoft Office, OpenOffice LibreOffice. I have found OpenOffice to be the best at handling CSV files. You can use their packages, but I sincerely recommend you take advantage of the FREE Download of Open Office at *www.openoffice.org* and use OpenOffice for working with the data you are going to import into osFinancials5/TurboCASH5.

LibreOffice can be downloaded at *http://www.libreoffice.org/*

Get the Data Ready in OpenOffice / LibreOffice

osFinancials5/TurboCASH5 is particular about the CSV format that it will accept. osFinancials5/TurboCASH5 accepts the Tab delimited csv files.

If the CSV file is not EXACTLY the format that osFinancials accepts it will generate an error:

"List index out of bounds (3)".

If the Date is not entered as "31/03/2024", and is entered as "2024/03/31", depending on your system settings, and the delimited file import in • osFinancials5/TurboCASH5 is imported, the dates may be imported as 1899/12/31. Irrespective of your operating system's date and regional settings, if the date is entered as "31/03/2024" the date should be, by default, be imported correctly according to the format of your operating system's date and regional settings.

Petty Cash Register Template

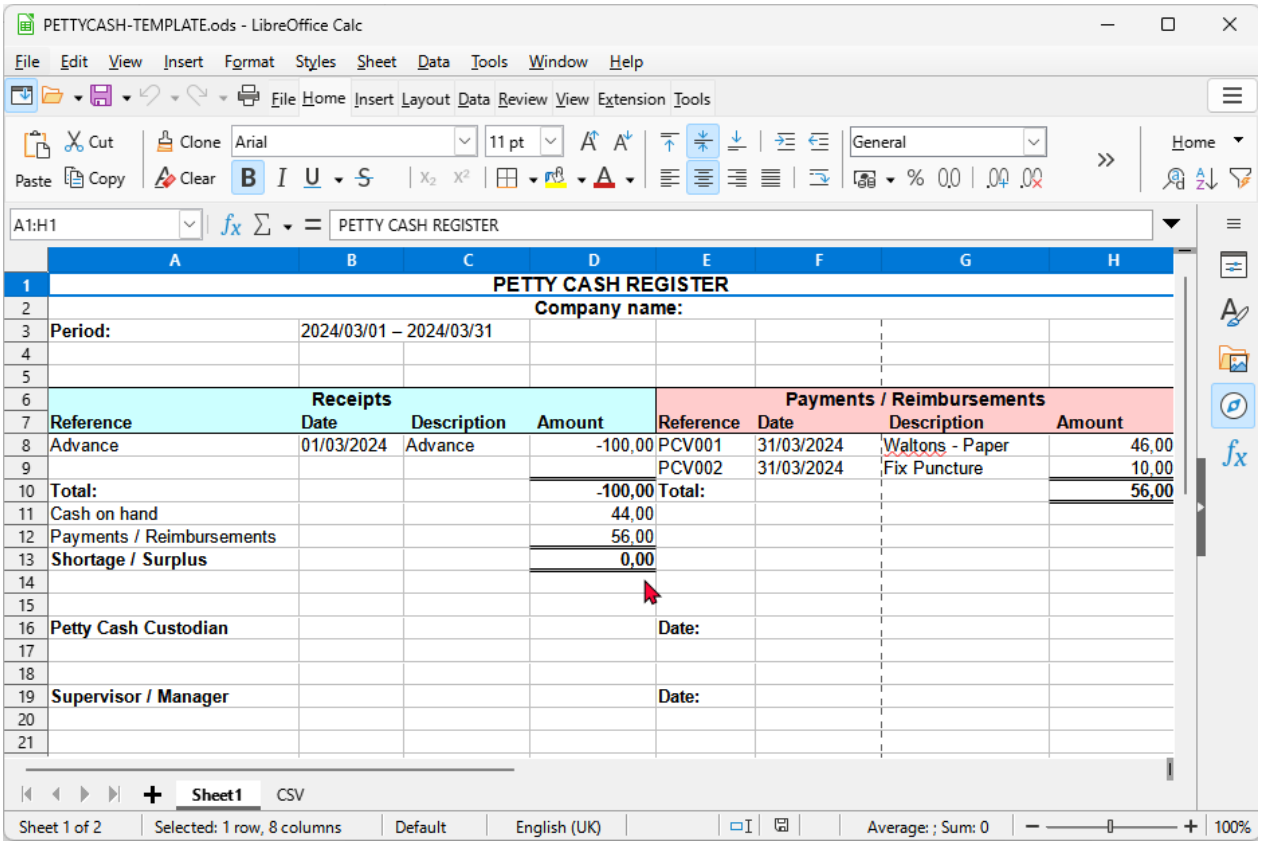
You may find these sample templates in " *...\bin\Tutorials\PETTY-CASH-TEMPALTES* " folder. These templates were created in the Open Document Spreadsheet format used in LibreOffice Calc. It consists of the following two folders:

- BATCHES - This contains the CSV file (PETTYCASH-2024-03.csv) generated by save the CVS tab of the Petty cash register in the TEMLATES folder. This CSV file is used to use the "*Import Delimited file*" option in the "*Process options for this batch*".
- TEMPLATES - This contains the sample Petty cash register file (PETTYCASH-TEMPLATE.ods). This sample file is used to generate transactions in the Petty cash register to save the CVS tab of the Fixed Asset register in the BATCHES folder.

This sample Template can be used in normal Petty cash batches (Batch entry) as well as in Petty cash bank accounts using the Bank Import plugin.

Open the PETTYCASH-TEMPLATE.ods

Open the PETTYCASHTEMPLATE.ods (Open Document Spreadsheet).

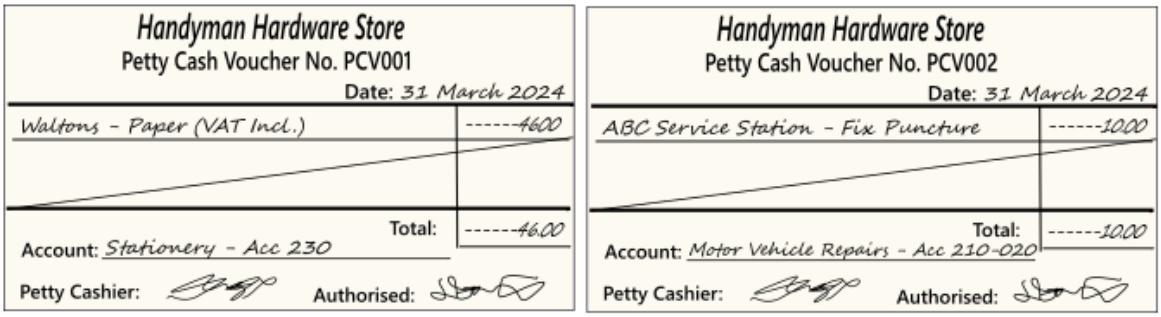


Enter the name of your business and the period.

The default sheet (Sheet1), consists of Receipts and Payments / Reimbursements:

1. Receipts – Column A – D - The Petty cash advances and replenishment as well as any shortages refunded should be entered in these columns. The transactions for the Petty Cash advances and replenishments, does not need to be recorded in TurboCASH, since these will be recorded in the Payments batch of the Bank account from which the petty cash float amount is paid.

2. Payments / Reimbursements – Column E – H – All payments or reimbursements must be entered in these columns. These transactions must be recorded in the Petty Cash batch (journal). These transactions will be updated in the CSV sheet. Once the transactions is added, the CSV sheet, may be saved as a comma separated value – Tab delimited file type. The transactions may then be imported into osFinancials5/TurboCASH5 as a delimited file import.



To add more transactions, you may select a row, e.g. Row 9, and insert the required rows.

Balancing the Petty Cash

Petty cash funds must be periodically checked to ensure that the balance of the petty cash fund is correct.

The petty cash float must always be in balance with the cash on hand plus the receipt or acceptable supporting documentation as proof of the purchase.

If it does not balance and you have checked that you have counted the cash at hand correctly, and that the petty cash payment transactions are entered correctly.

If it is correctly counted and entered, a difference indicates a surplus or a shortage:

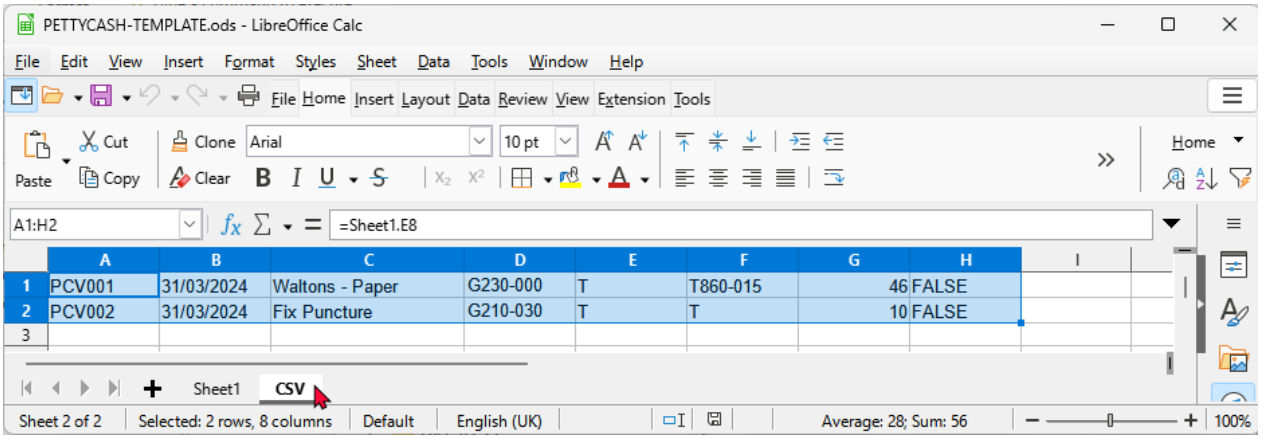
- *Surplus - This is where the amount in the petty cash, and the petty cash vouchers and/or slips exceeds the amount of the float.*
- *Shortage - This is where the amount in the petty cash, and the petty cash vouchers and/or slips is less than the amount of the float.*

Updating the CSV sheet to a Tab delimited file

Once the transactions is added in Sheet1, click on the CSV sheet.

To add more transactions in the CSV sheet, as added in Sheet1, copy the formulas in Columns A – H to the next rows.

This will update the CSV sheet with the transactions as entered in the Payments / Reimbursements – Column E – H of Sheet1.



The values of the columns is as follows:

1. Column A – Reference =Sheet1.E8 Reference as entered in column E Row 8 of Sheet1.

2. Column B – Date =Sheet1.F8 the Date as entered in column F Row 8 of Sheet1.

> *If the Date is not entered as "31/03/2024", and is entered as "2024/03/31", depending on your system settings, and the delimited file import in TurboCASH is imported, the dates may be imported as 1899/12/31. Irrespective of your operating system's date and regional settings, if the date is entered as "31/03/2024" the date should be, by default, be imported correctly according to the format of your operating system's date and regional settings.*

3. Column C – Description =Sheet1.G8 the Description as entered in column G Row 8 of Sheet1.

4. Column D – Account = The default expense / purchase account which will be imported into the batch.

> *You may enter an existing default account, e.g. "G999-000" – Suspense account or a "Petty cash control" account (added in Accounts (Default ribbon)). Once the csv file (Delimited file import) of the petty cash transactions in batch is imported, you need to select the correct account for each transaction.*

> *You need to type the account type prefix e.g. "G" followed by the main account code e.g. "230" and the sub-account, separated by a hyphen "-" for example, "G230-000" for the Stationery account.*
>
> *Income and expense accounts (starting with the "G" prefix for General ledger accounts) are prefixed with an "*" (asterisk). If the "*" asterisk is also entered in this column, the account will not be imported into the delimited file batch.*

> *You may type the correct account in this column from the printed Chart of accounts from Reports → Ledger → Listing (Reports ribbon), e.g. "G230-000" – Printing, Postage and Stationery account. Once the csv file (Delimited file import) of the petty cash transactions in batch is imported, you can check and confirm the correct account for each transaction.*

5. Column E – Contra account – The default value is "*T*". Do not delete this column and leave the value as "*T*".

6. Column F – Tax account – The default value is "*T*". Leave the value as "*T*", unless Tax (VAT/GST/Sales tax) is applicable to the transaction.

> *You may leave the default as "T".*
>
> *Once the csv file (Delimited file import) of the petty cash transactions in the petty cash batch is imported, you need to select the correct tax account for each transaction on which Tax (VAT/GST/Sales tax) is applicable.*

> *If Tax (VAT/GST/Sales tax) is applicable to the transaction, you may type the account type prefix e.g. "T" followed by the main account code e.g. "950" and the sub-account, separated by a hyphen "-" for example, "T860-015" for the Input VAT – Standard rate – 15% account.*

7. Column G – Amount – =VALUE(Sheet1.H8) – The amount of the transaction (expense / payment / reimbursement).

> *The amount should be a positive amount, since the transactions need to be imported as a debit transaction into the Petty cash batch (journal).*
>
> *If the amount is negative (prefixed by a minus "-" sign) amount, it will be imported as a credit amount into imported into the delimited file batch.*

8. Column H – The default value is "*FALSE*". Once the transactions is imported, and you select an account (i.e. Debtor (customer/client), Creditor (supplier/vendor) and/or a Ledger account), which is set as Open item account and the account has processed transactions to be linked, the "*Open item selection*" screen will be displayed.

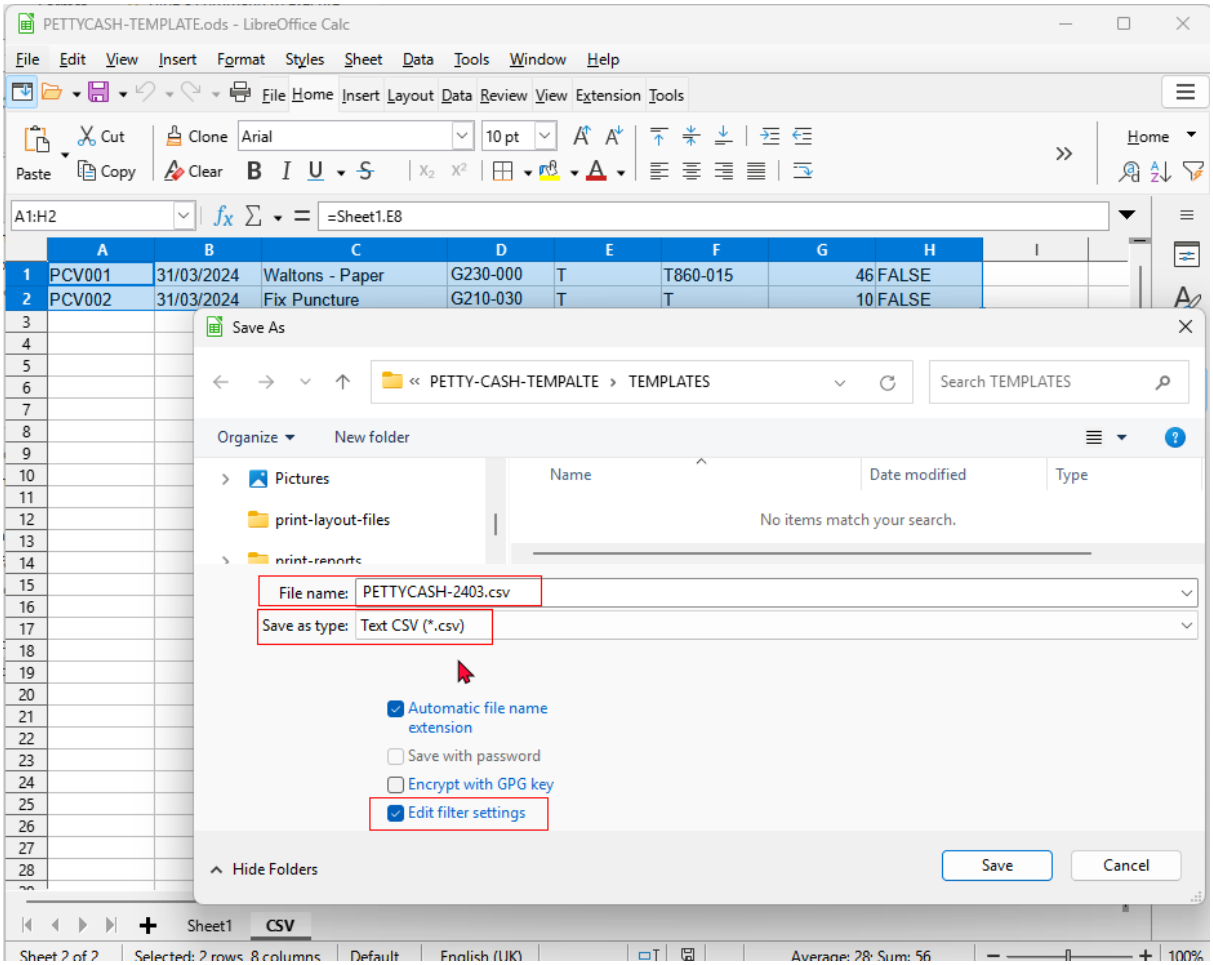
Save the CSV sheet to a Tab delimited file

Once the transactions is updated in the CSV sheet, the CSV sheet, need to be saved as a comma separated value – Tab delimited file type. The transactions may then be imported into osFinancials5/TurboCASH5 as a delimited file import.

> *Before proceeding with the next step, remember to SAVE the PETTYCASHTEMPLATE.ods (Open Document Spreadsheet).*

To save the Transactions in the CSV tab to a Tab delimited file:

1. On the "*PETTYCASHTEMPLATE.ods*" (Open Document Spreadsheet), click on the CSV sheet, if not already selected.
2. Select the rows and columns on the CSV sheet.



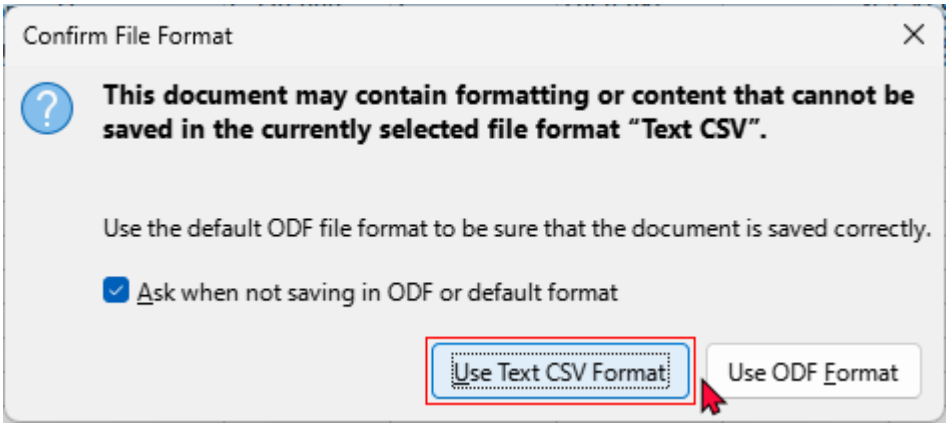
3. Enter the name for the Batch file, (e.g. "*PettyCASH-2024-03*". In this example, it will indicate the petty cash transactions for "*March 2016*".

4. Save as type: - Select the "*Text CSV (.csv) (*.csv)*" as the file type. The "*Edit filter settings*" field (tick box) will be activated for the "*Text CSV (.csv)*" file type.

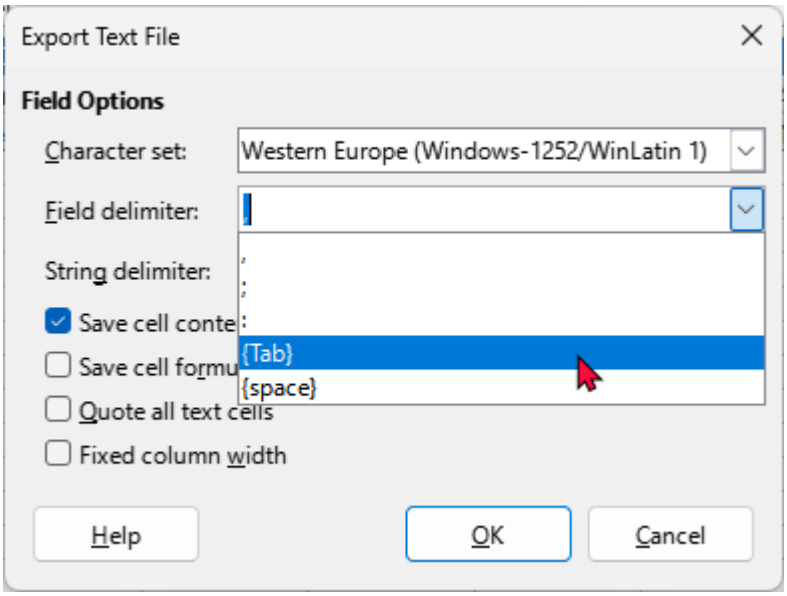
> *It is important to select (tick) the "Edit filter settings" field. This will launch the "Export Text file" screen on which the TAB field delimiter needs to be selected.*

5. Edit filter settings – Tick this option.

6. Click Save.



7. On the "*Confirm File Format*" screen, click Use Text CSV Format button. The "*Export Text File*" screen is displayed:



8. Select the following options:

   a) Field delimiter: - Select {TAB}.

   > *If this option is not selected, the delimited file import in osFinancials will fail. The Tab delimited CSV import file is required by • osFinancials5/TurboCASH5.*

   b) Save cell content as shown – Select (tick) this option. If this option is not selected (not ticked), formula values will be imported and may produce REF (Reference) errors.

9. Click the OK button. LibreOffice will produce a Warning message that only the active sheet was saved (CSV sheet). A similar warning message is as follows:

   > Warning saving the document PETTYCASH-2024-03:
   > Only the active sheet was saved.

10. Click the OK button.

11. Close the "*PettyCASH-2024-03.csv*" file.

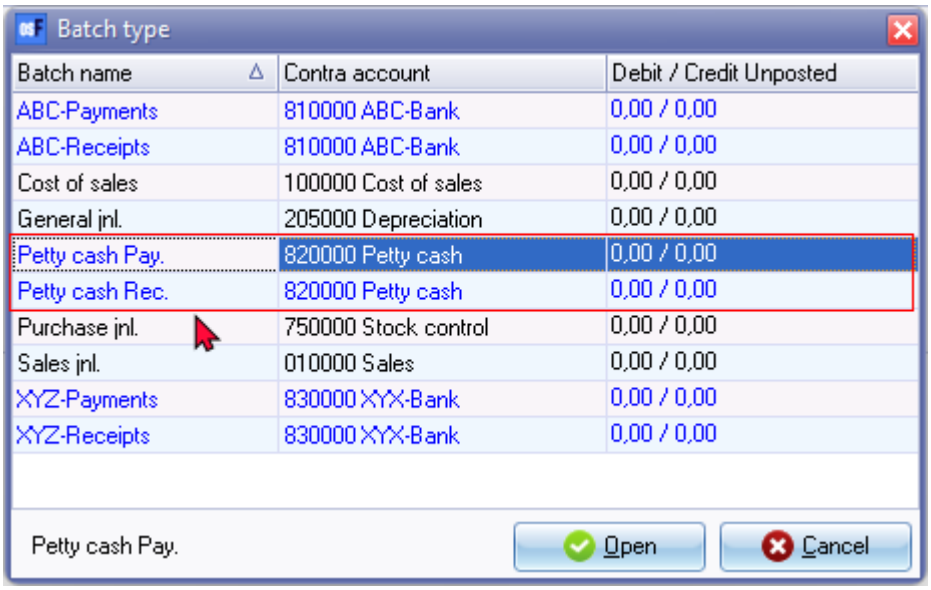
> *If the csv file is opened (active) on your system, the following error message will be displayed:*
>
> *"Cannot open file "...\Spreadsheets\PettyCASH\PettyCASH-2024-03.csv". The process cannot access the file because it is being used by another process.".*
>
> *Close the file in which it is open, e.g. Excel / OpenOffice / LibreOffice and import the file again.*

Delimited File Import - CSV file into osFinancials5/TurboCASH5

Once the transactions is saved as a comma separated value – Tab delimited file type, the petty cash transactions can be imported into osFinancials5/TurboCASH5 as a delimited file import.

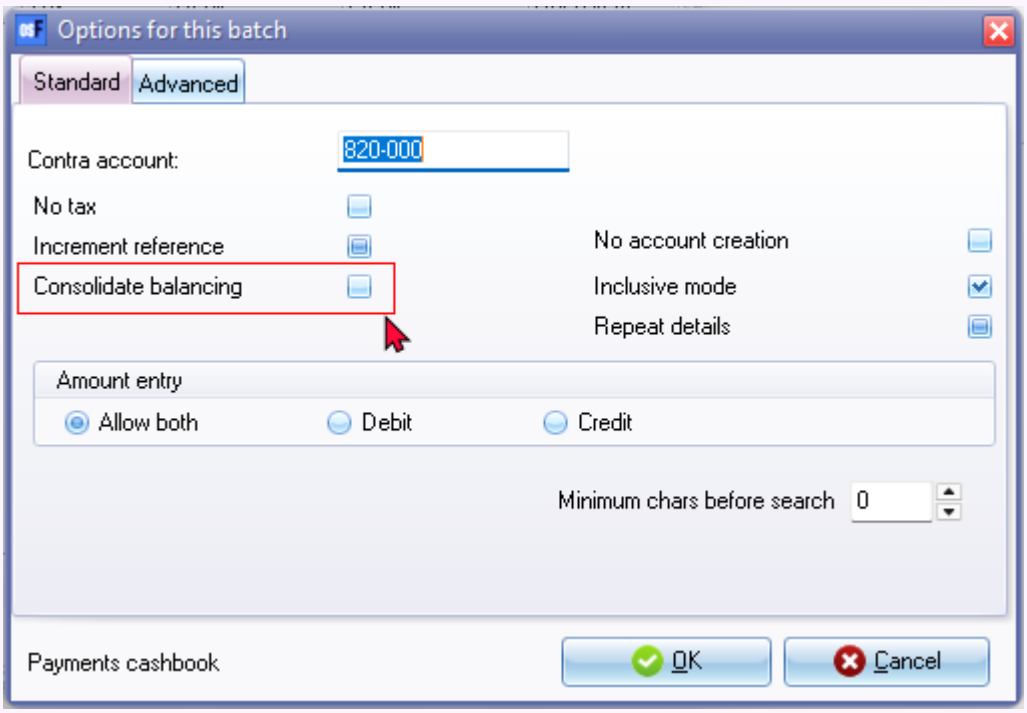
To Import Petty Cash Transactions from the CSV - Tab delimited file:

1. On the Default ribbon, select Batch entry (F2).
2. Select the Payments batch to which the Petty Cash account is linked.



3. Click on the Open button. The Batch entry transaction screen for the Payments batch to which the Petty Cash bank account is linked will be displayed.
4. On the F10:Setup icon to check the settings for the batch.

> *On the Standard tab, check that the "Consolidate balancing" option, is not selected.*
>
> *If the "Consolidate balancing" option, is selected the following error message will be displayed:*

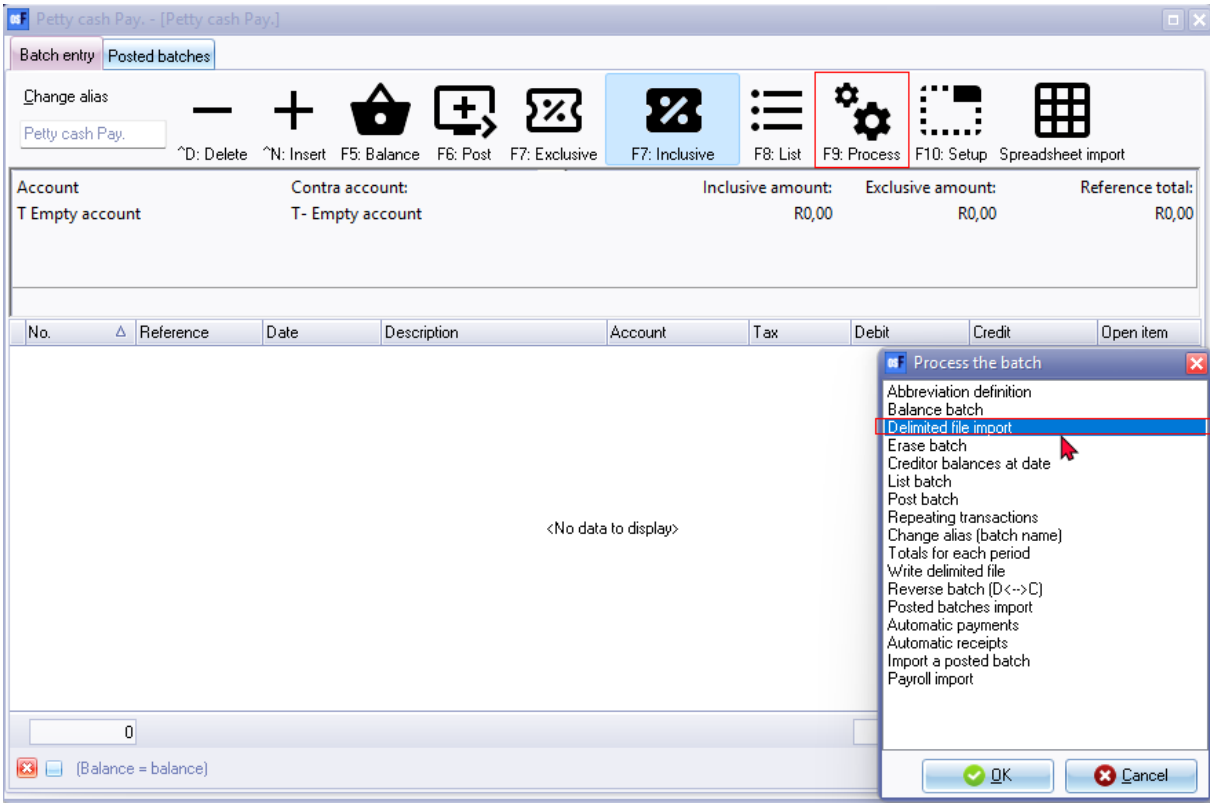


An information message will be displayed:

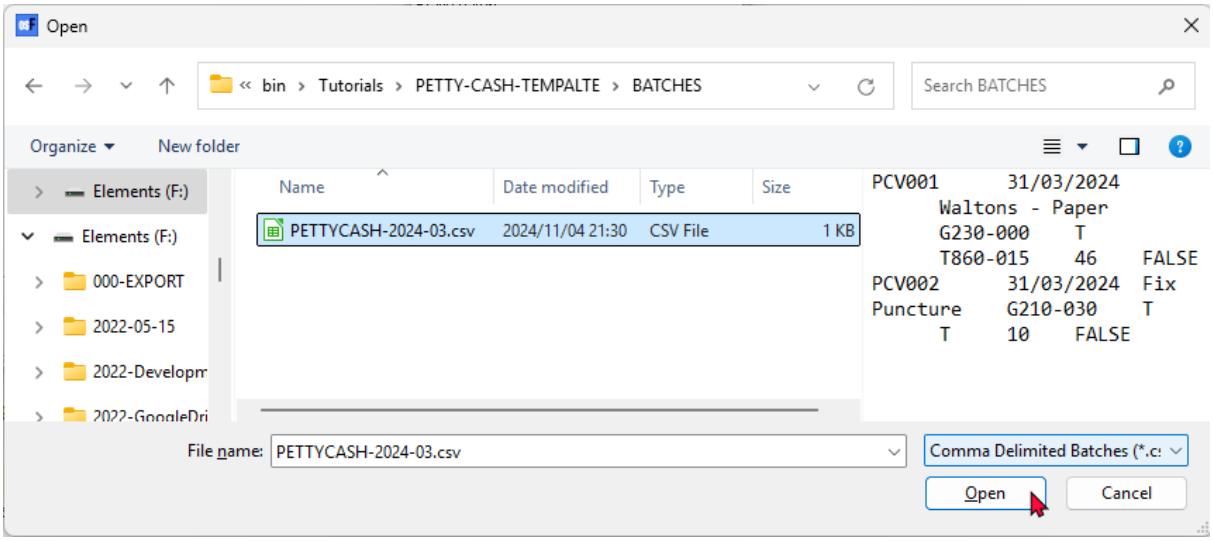
> Consolidating lines and using tax will mess up your tax report! Please make sure you do not use tax or do not consolidate lines!

Click OK and remove the tick from the "Consolidate balancing" field.

5. Click on F9:Process icon and select the "*Delimited file import*" option and click OK.

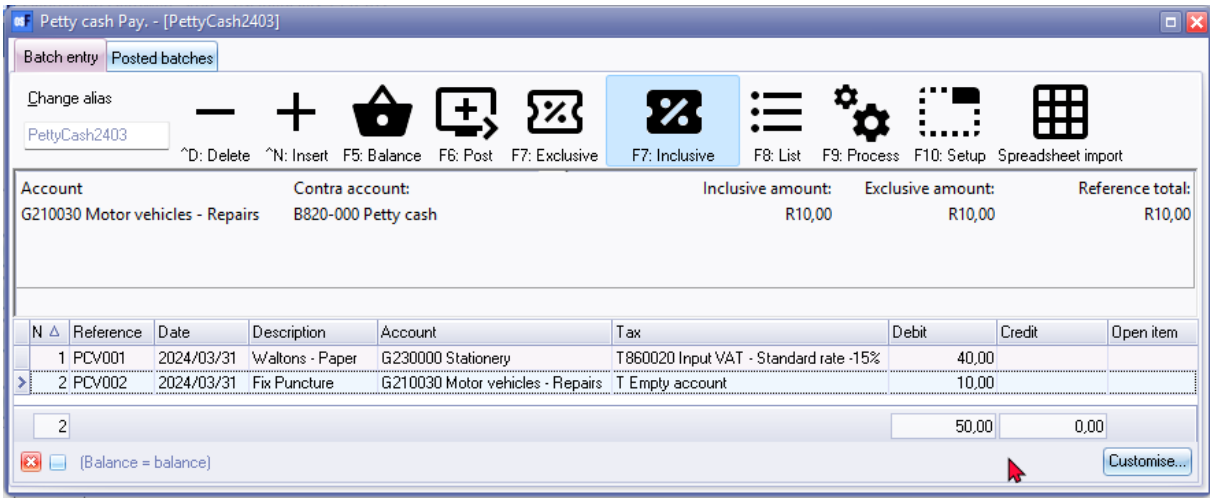


The "*Open*" screen will be displayed.



6. Navigate and select the Petty cash batch file (e.g. "*PETTYCASH-2024-03.csv*") to import and click Open.

Warning saving the document PETTYCASH-2024-03:
Only the active sheet was saved.



7. Enter the Alias (batch name) in the "*Change alias*" field.

8. After importing the petty cash transactions, you may need to change / edit the imported petty cash transactions:

   a) Reference – The Petty cash voucher or reference number as entered in Column E of Sheet1 and updated in Column A of the CSV sheet in the Petty Cash Register.

   b) Date – The date as entered in Column F of Sheet1 and updated in Column B of the CSV sheet in the Petty Cash Register.

> *If the Date (in Sheet1 of the Petty Cash Register) is not entered as "31/03/2024", and is entered as "2024/03/31", depending on your system settings, and the delimited file import*

in TurboCASH is imported, the dates may be imported as 1899/12/31. Irrespective of your operating system's date and regional settings, if the date is entered as "31/03/2024" the date should be, by default, be imported correctly according to the format of your operating system's date and regional settings.

c) Description – The descriptions as entered in Column G of Sheet1 and updated in Column C of the CSV sheet in the Petty Cash Register.

d) Account – The account code as entered in Column D of the CSV sheet in the Petty Cash Register. Each payment or reimbursement transaction needs to be linked (allocated) to the correct account.

If you have entered an existing default account, e.g. "G999-000" – Suspense account or a "Petty cash control" account (added in Accounts (Default ribbon)). Once the csv file (Delimited file import) of the petty cash transactions in batch is imported, you need to select the correct account for each transaction.

You need to type the account type prefix e.g. "G" followed by the main account code e.g. "230" and the sub-account, separated by a hyphen "-" for example, "G230-000" for the Stationery account.

Income and expense accounts (starting with the "G" prefix for General ledger accounts) are prefixed with an "" (asterisk). If the "*" asterisk is also entered in this column, the account will not be imported into the delimited file batch.*

You may type the correct account in this column from the printed Chart of accounts from Reports → Ledger → Listing (Reports ribbon), e.g. "G230-000" – Stationery account. Once the csv file (Delimited file import) of the petty cash transactions in batch is imported, you can check and confirm the correct account for each transaction.

e) Tax account – The correct tax account (code) must be selected, if Tax (VAT / GST / Sales tax) is applicable to the transaction. The Tax account code as entered in Column F of the CSV sheet in the Petty Cash Register.

The tax column will only be displayed if the "No Tax" option is left blank (not ticked) in the F10:Setup option in the Batch entry screen.

If no Tax (VAT/GST/Sales Tax) is applicable to all the transactions in the Petty Cash Register; or if you are not registered for Tax (VAT/GST/Sales Tax) you may select to hide the tax column will only be displayed if the "No Tax" option is left blank (not ticked) in the F10:Setup option in the Batch entry screen.

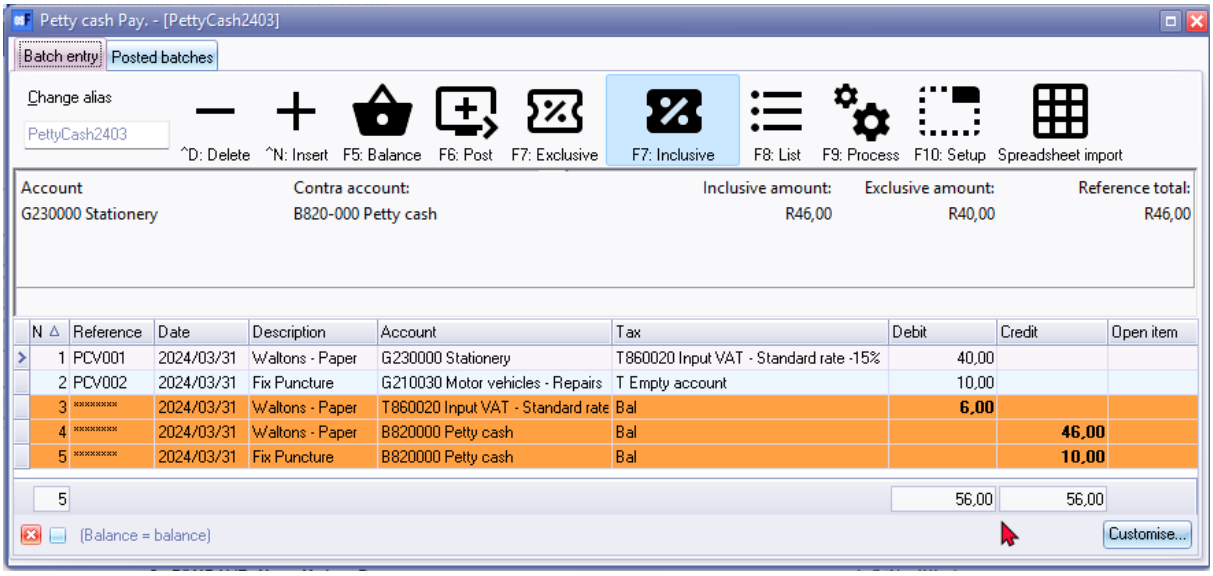
f) Debit – Positive amounts – The amount of the transaction (expense / payment / reimbursement) as entered in Column H of Sheet1 and updated in Column G of the CSV sheet in the Petty Cash Register.

g) Credit – Negative amounts –

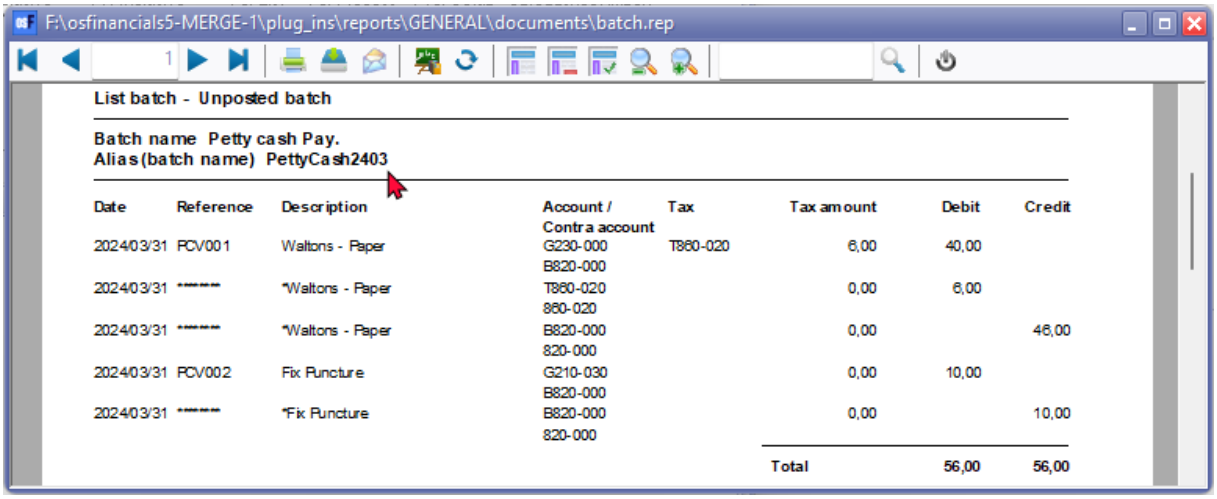
> *The amount should be a positive amount, since the transactions need to be imported as a debit transaction into the Petty cash batch (journal).*
>
> *If the amount is negative (prefixed by a minus "-" sign) amount, it will be imported as a credit amount into imported into the delimited file batch.*

h) Open item – If an account (i.e. Debtor (customer/client), Creditor (supplier/vendor) and/or a Ledger account), which is set as Open item account and the account has processed transactions to be linked, the "*Open item selection*" screen will be displayed. On this "*Open item selection*" screen, you may select to link a payment transaction to a credit transaction, ode a receipt (deposit) transaction to a debit transaction.

9. Click on the F5:Balance icon. This will generate balancing transactions to the Petty cash bank account.



10. Click on the F8:List icon to print a list of the transactions in the unposted batch.



11. Click on the F6:Post icon to update (post) the transactions to the ledger.

T-Account view of transactions in the Petty cash account

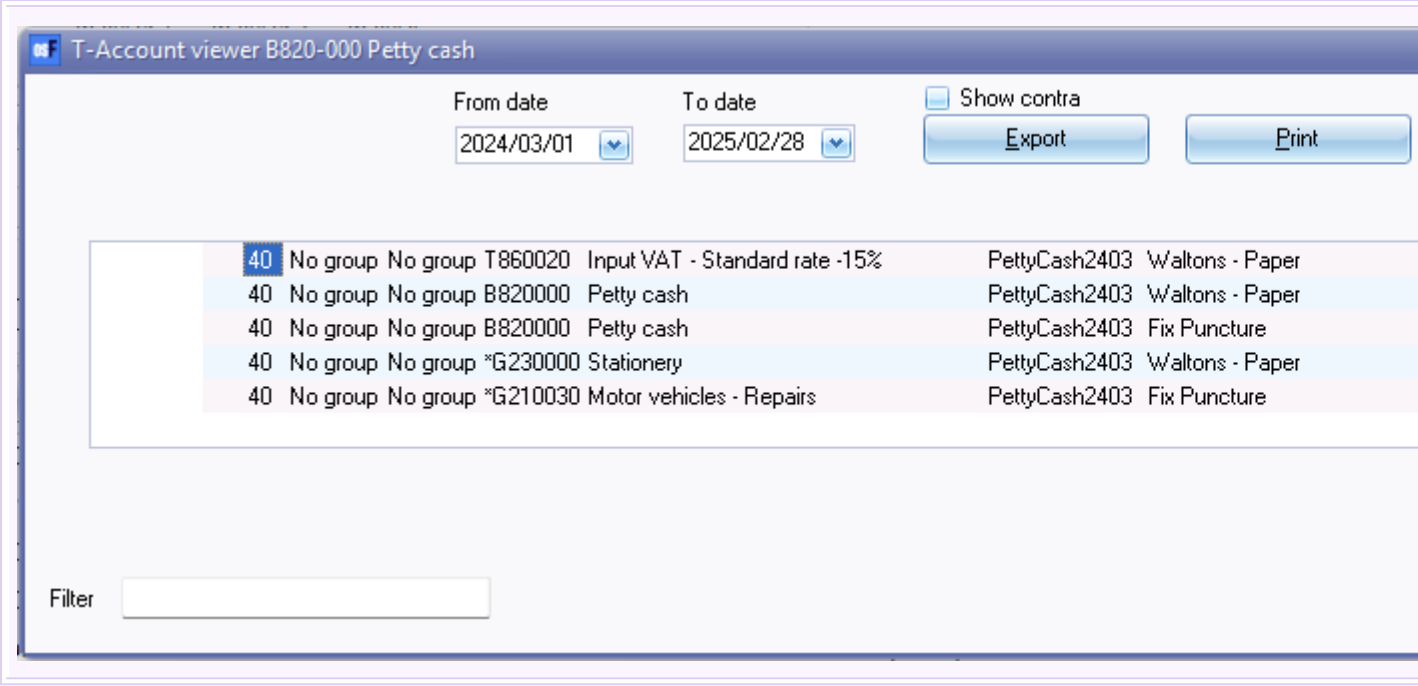
All processed (posted) transactions will be accumulated in the Ledger analyser. There are various ways in which the transactions may be viewed, exported and analysed.

To access the T-Account view of the transactions:

1. On the Reports ribbon, select Ledger analyser 1 or Ledger analyser 2.
2. Select "*Trial balance*" report type and click on the Report button.
3. On the "*Trial balance*", select the "*B820-000 Petty cash*" account.
4. Double-click on the selected account; or right-click and select Show details on the context menu.
5. Click on the following to get specific views of transactions:
    - Batch id (e.g. 40 automatically generated). This will list only the transactions for a specific batch (journal).
    - Account code (e.g. B820-000 Petty cash, G210-030 Motor vehicle - Repairs G230-000 Stationery, T860-020 Input Tax Standard - 15%). This will list the transactions for a specific account.
    - Date - This will list the transactions for a specific date. If you double-click on a date, the "From date" and "To date" will be changed to the selected date.

After posting the transactions in the Petty cash journal, the transactions should display as follows in the T-Account viewer:

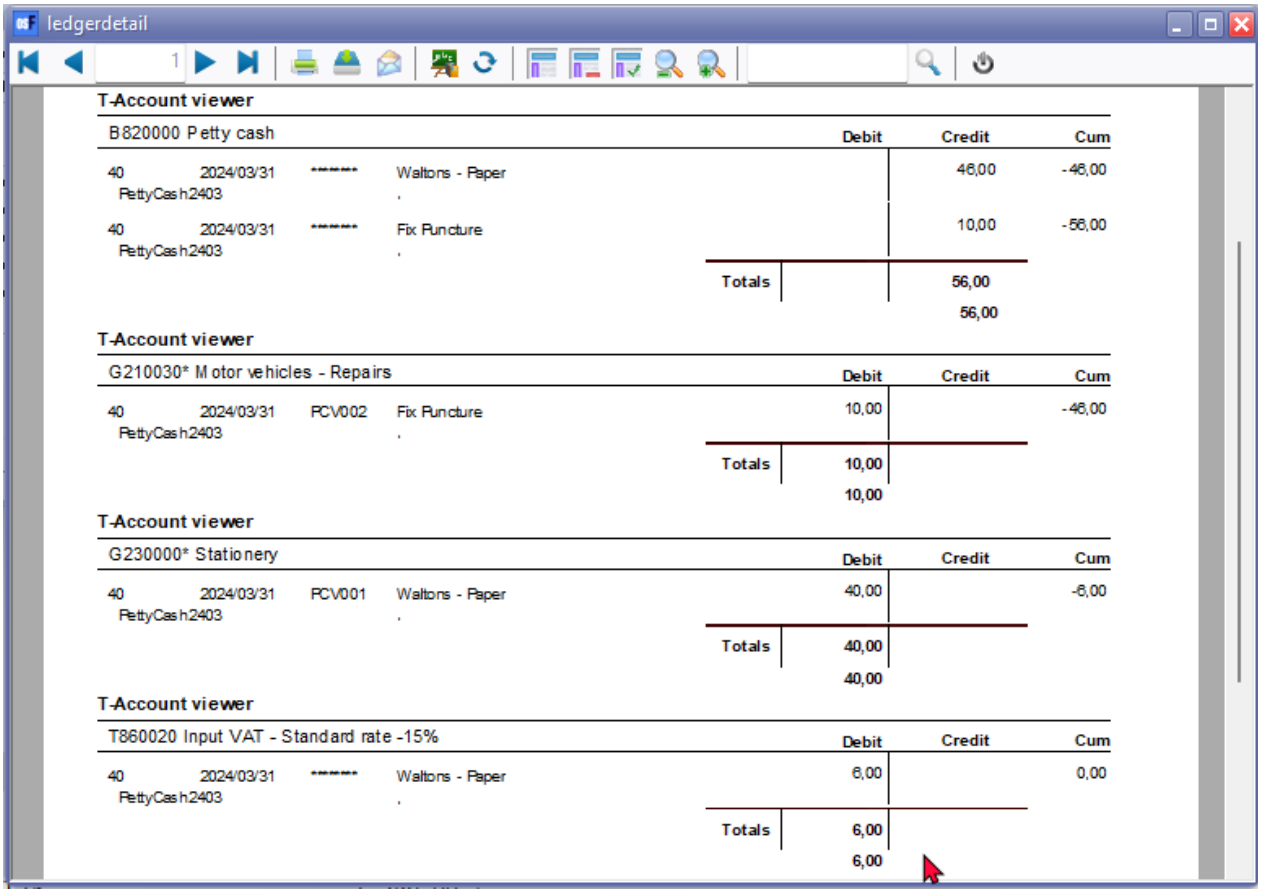
Batch view



Show contra – You may select (tick) this option to view the Contra account code and account description in the first two (2) columns of the T-Account viewer. This will not print on the T-account viewer report, but will be included in the Exported file (which you can open in a spreadsheet).

T-Account view of Receipt transactions in the Petty Cash - Bank account

The updated (posted) transactions for the "*Petty cash*" account, is as follows:



Accounting equation

Debits = Credits

Debit General ledger (i.e. Expenses + Input Tax)

=

Credit General ledger (i.e. payment transactions from the Petty cash (Bank account)) - (Inclusive of Input VAT/GST/Sales Tax).

Multi-user plugins

Multi-user plugins

Multi-workstation

Multi-workstation - Shop - Licence: Once-off -

Documentation : TurboCASH website - Multi User Installation -
Documentation : osFinancials website -osFinancials5/TurboCASH5 multi user setup - Windows server
Documentation : osFinancials website - Multi Werkplek (linux server) Plugin - Linux server (Dutch only)

Do you want to use osFinancials5 or TurboCASH5 with multiple users at the same time? That is possible with the Multi-workstation plugin. The number of users is unlimited, as long as the hardware sustains. To use the Multi-workstation a network with a shared folder is required.

The plugin doesn't need to be downloaded. It will be activated by a code.

You will receive the code(s) and instructions through mail within two workdays after payment.

Using osFinancials or TurboCASH with multiple users simultaneously via the Multi-workstation plugin sounds like a convenient solution for collaborative financial management.

Unlimited user capability, contingent on hardware capabilities, provides scalability. Activation via a code simplifies the process, and instructions delivered via mail streamline setup.

This approach ensures efficient utilization of resources while accommodating diverse user needs.

osFinancials5/TurboCASH5 Multi-User Plugin

osFinancials5/TurboCASH5 Multi-User Plugin - Shop - Licence: Annual licence

- *Documentation : TurboCASH website - Multi User Installation -*
- *Documentation : osFinancials website - osFinancials5/TurboCASH5 multi user setup - Windows server*
- *Documentation : osFinancials website - Multi Werkplek (linux server) Plugin - Linux server (Dutch only)*
- *Documentation : Help topic - Multi User Linux Server install - Linux server (English only)*
- *Documentation : Help topic - Multi User Windows Server install - Windows server*

Unlock the power of collaboration with our Multi-User Plugin! Whether you are running your server on Windows or Linux, our plugin seamlessly integrates into your network environment, allowing multiple concurrent osFinancials5/TurboCASH5 sessions.

No more limitations - choose any PC to serve as your network server, and experience the freedom of collaborative finance management. With an easy manual installation process and an annual license, elevate your teamwork and productivity to new heights. The number of users is unlimited, as long as the hardware sustains.

The Multi-User Plugin for osFinancials5/TurboCASH5 offers the capability to configure and set up a network server to accommodate multiple users. However, to unlock the full functionality for multi-user access, purchasing a multi-user licence and registering osFinancials5/TurboCASH5 as a multi-user product is necessary.

Documentation is provided for installing and configuring multi-user setups on both Windows and Linux servers, which can assist users in setting up their network environment effectively.

It's important to note that the multi-user functionality is limited in this edition, indicating that additional licensing is required to fully utilize it. Therefore, acquiring a multi-user licence is essential for organizations or teams requiring simultaneous access to osFinancials5/TurboCASH5.

osFinancials5/TurboCASH5 Online

osFinancials / TurboCASH Online

Experience ultimate convenience and flexibility with our • osFinancials5/TurboCASH5 Online offerings:

1. Online Account:- Manual - Shop - 14 Days trial, 6 months account or year account - Gain 24/7 access to your osFinancials5/TurboCASH5 Set of Books hosted on our servers. Whether you're at the office or at home, manage your administration effortlessly. Collaborate with your accountant or co-workers with ease, and utilize Open Office for added versatility. Plus, enjoy ample 1 GB of disk space with the option to expand as needed. With flexible subscription options and straightforward invoicing, it's never been easier to stay on top of your finances. It's only possible to access your set of books with one session at the time. If you want multi user access, than you can buy " *addition nodes*".

2. Online Extra Set of Books: Manual - Shop - Depending on the number of the Sets of Books ordered. Expand your online toolkit with additional Sets of Books tailored to your needs. Choose the number of sets required and enjoy seamless access to your finances anytime, anywhere.

3. Online Account with Plugin Bundle: Manual - Shop - 14 Days trial, 6 months account or year

account. Elevate your online experience with our Plugin Bundle, adding even more functionality to your osFinancials5/TurboCASH5 Set of Books. Enjoy all the benefits of our Online Account offering, plus access to a suite of plugins to enhance your financial management capabilities. Customize your subscription to fit your needs, with multi-user access options available for seamless collaboration.

Unlock the power of online finance management with osFinancials5/TurboCASH5 Online today.

osF Local Webserver

osF Local Webserver: - Manual - Shop -

Experience the convenience of accessing osFinancials5/TurboCASH5 through your web browser with our local web server solution. With a simplified interface, you can effortlessly manage your finances using just a tablet, no matter where you are.

Plus, all data entered through the web server is seamlessly integrated into the same database as your desktop version, ensuring consistency and accessibility across platforms. Enjoy the power of osFinancials5/TurboCASH5 in the palm of your hand with osF Local Webserver.

Multi-user Windows install

---

osFinancials5/TurboCASH5 Multi user Plugin

• *osFinancials5/TurboCASH5 Multi userPlugin - Shop - Licence : Annual licence*

Documentation : osFinancials website - Manual

Documentation : Help topic

1a Installation of osFinancials5/TurboCASH5 on the server:

If you wish to use osFinancials5/TurboCASH5 in a network environment, you will have to decide first which PC will be your server.

If you have determined witch PC to use you can do a full osFinancials5/TurboCASH5 installation.

Take care and install osFinancials5/TurboCASH5 in a separate folder so the root folder can be shared

between users.

```
c:\osf\osfinancials\
```

or

```
c:\tcash\turbocash\
```

Share the folder c:\osf (or c:\tcash) using windows folder sharing and give the correct user rights.

Open osFinancials5/TurboCASH5 so the set of books list will be filled.

Close osFinancials5/TurboCASH5.

Use the Windows explorer to open the folder c:\osf\osfinancials\books (or c:\tcash\turbocash\books) to serverbooks.

Important:

If you wish to use simultaneous users with osFinancials5/TurboCASH5 you MUST add users in Access control.

Create a user for everyone that will be using osFinancials5/TurboCASH5 in "*Access control*". The fist user will be the user that hands out numbering for invoices, etc. You can set one ore more users to user there own numbering.

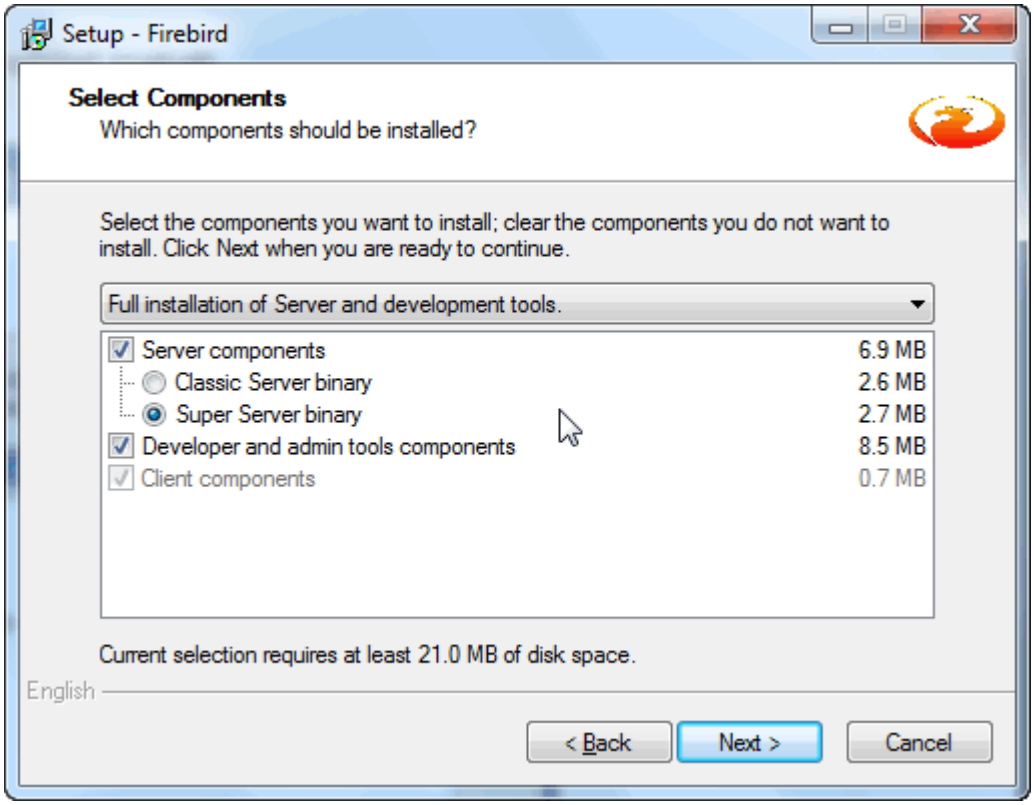
1b Firebird installation on the server

Install Firebird on the server:

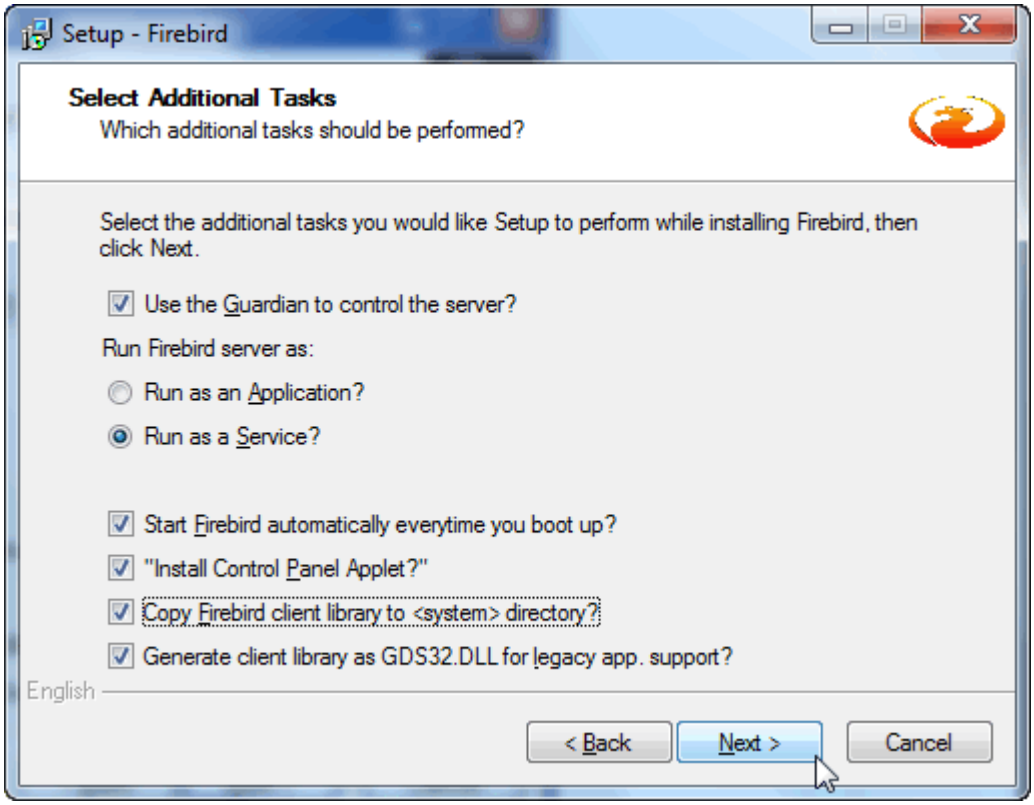
We use the Firebird version 2.1. The install file (firebird.exe) is included in the full installation of osFinancials5/TurboCASH5 installation folder.

This version of Firebird support recursive selects so you need this as a minimum.

Select full installation in the Firebird install.



Tick all ticks and make sure its running as a service.



!!! Firebird uses port 3050 make sure its open in your firewall. !!!

1c Correcting the set of books on the server:

If you reopen osFinancials5/TurboCASH5 and select the (red) set of books.

You need to press Properties to change the folder to the new serverbooks

```
c:\osf\osfinancials\serverbooks\youradmin\books.fdb
```

in the field Set of Books path

we also need the name or ip of this server PC

Start CMD prompt and type ipconfig /all

Try to find the hostname or, if that is not there the ip-address

Type this information into the field "Servername".

Adding additional databases / set of books on the server:

Use the Windows Explorer to find the serverbooks folder then copy an existing folder of a set of books and change the folder name.

Start up osFinancials5/TurboCASH5 and use the Search button. Search for your copied set of books and locate the books.fdb.

Now check all the properties as explained in section "Correcting the set of books on the server".

Set of books located on a other server then the server that was used for the installation of osFinancials5/TurboCASH5.

The remote access to a set of books database is always referenced from the severs point of view.

Client installation:

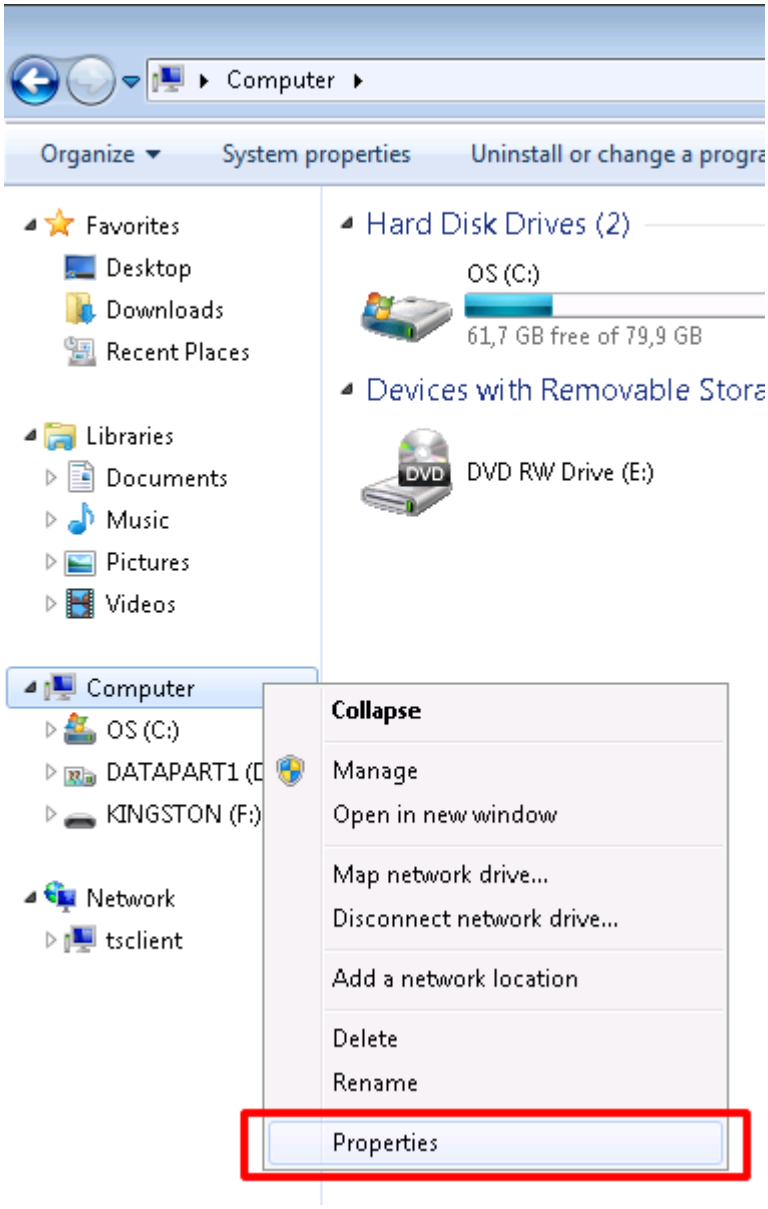
The easiest way is to make a share to the server on the client PC.

There is no need to install osFinancials / TurboCASH on the client PC. You can just start osFinancials5/TurboCASH5 by making a shortcut to the executable.

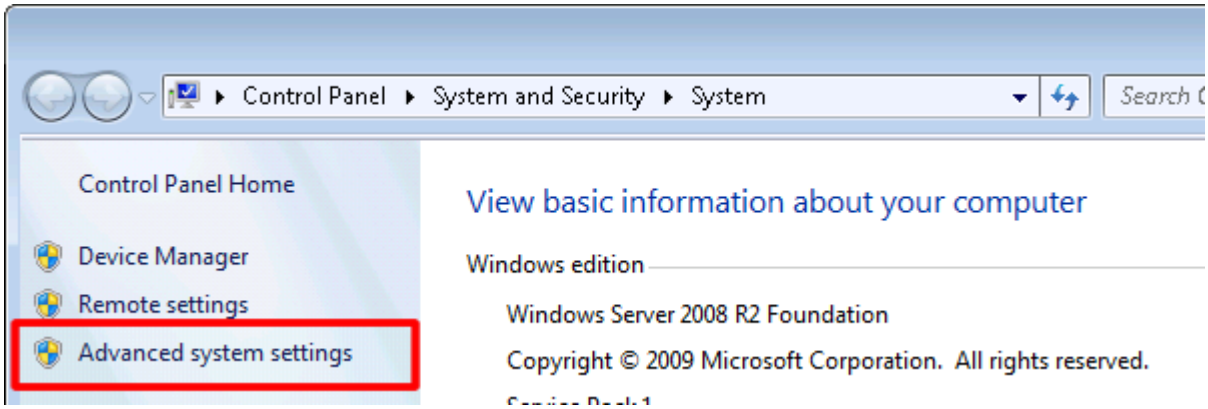
Note: If you have trouble connecting make sure the port 3050 is open on both the server and client.

osFinancials5/TurboCASH5 on a Microsoft Server 2008

If you use a server 2008 it can be you need to exclude osFinancials5/TurboCASH5 from DEP protection.

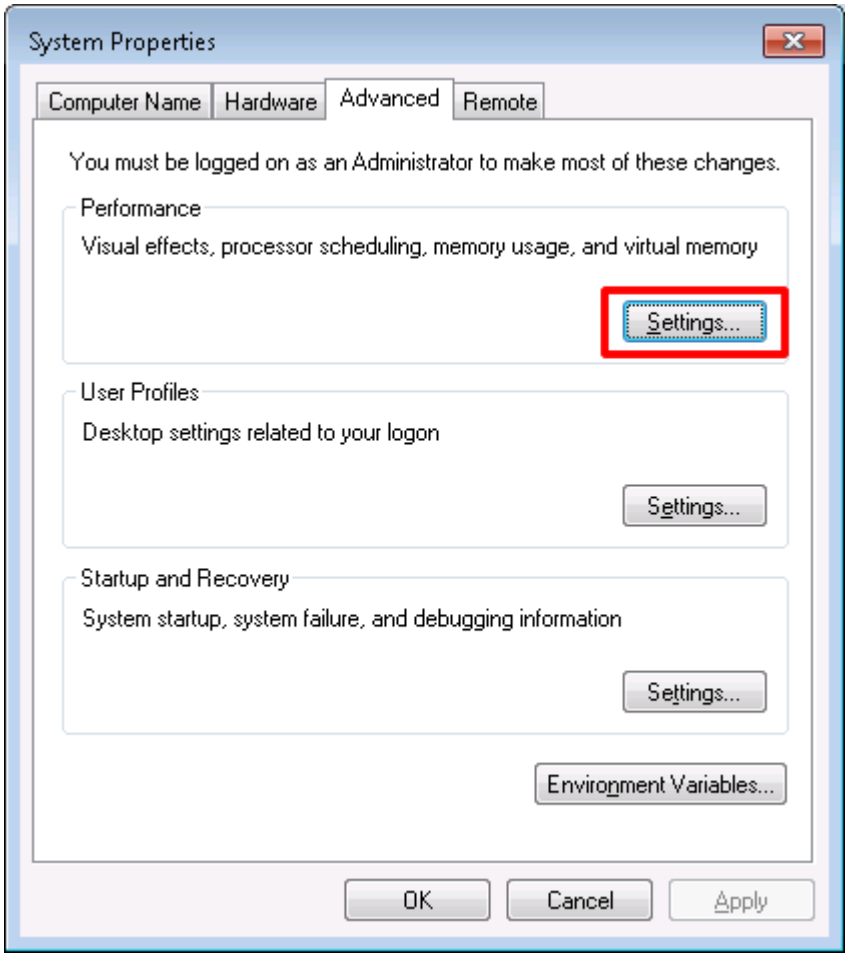


Select "Advanced system settings"

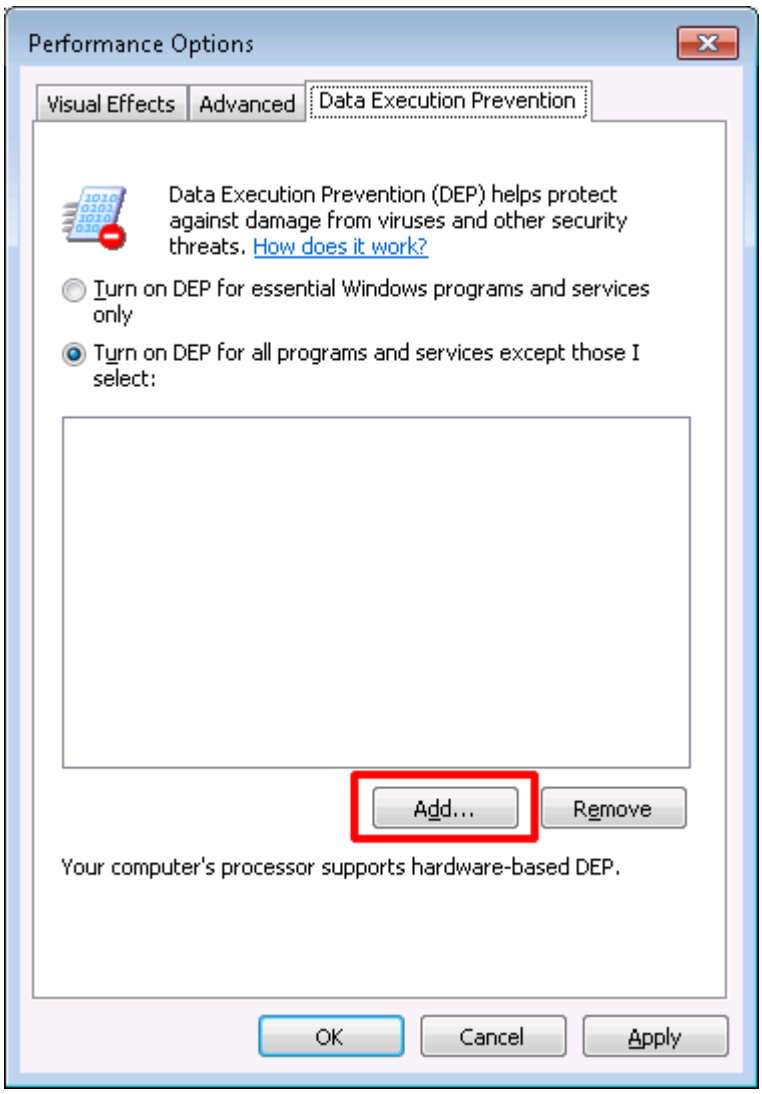


Select the tab "Advanced" tab.

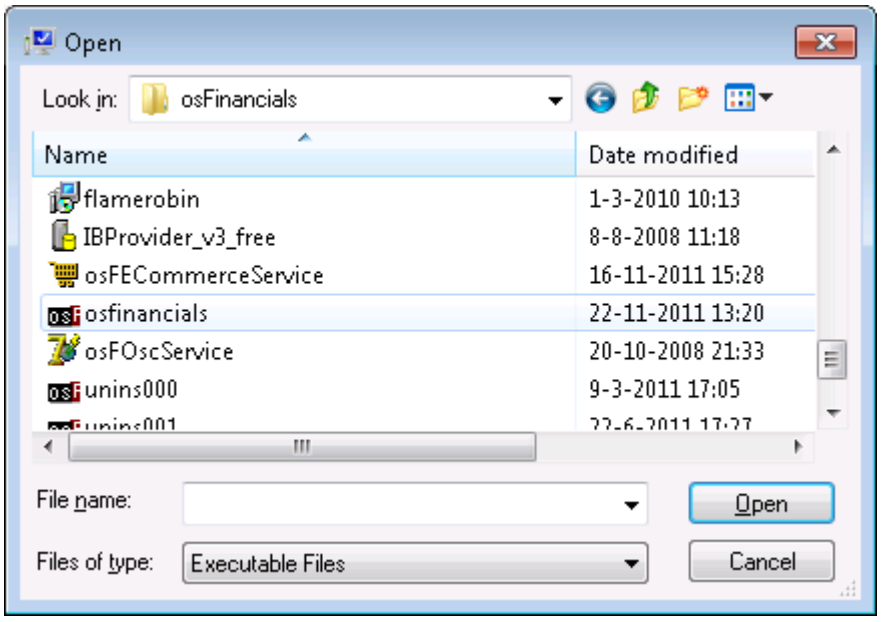
And click on the “Settings” button.



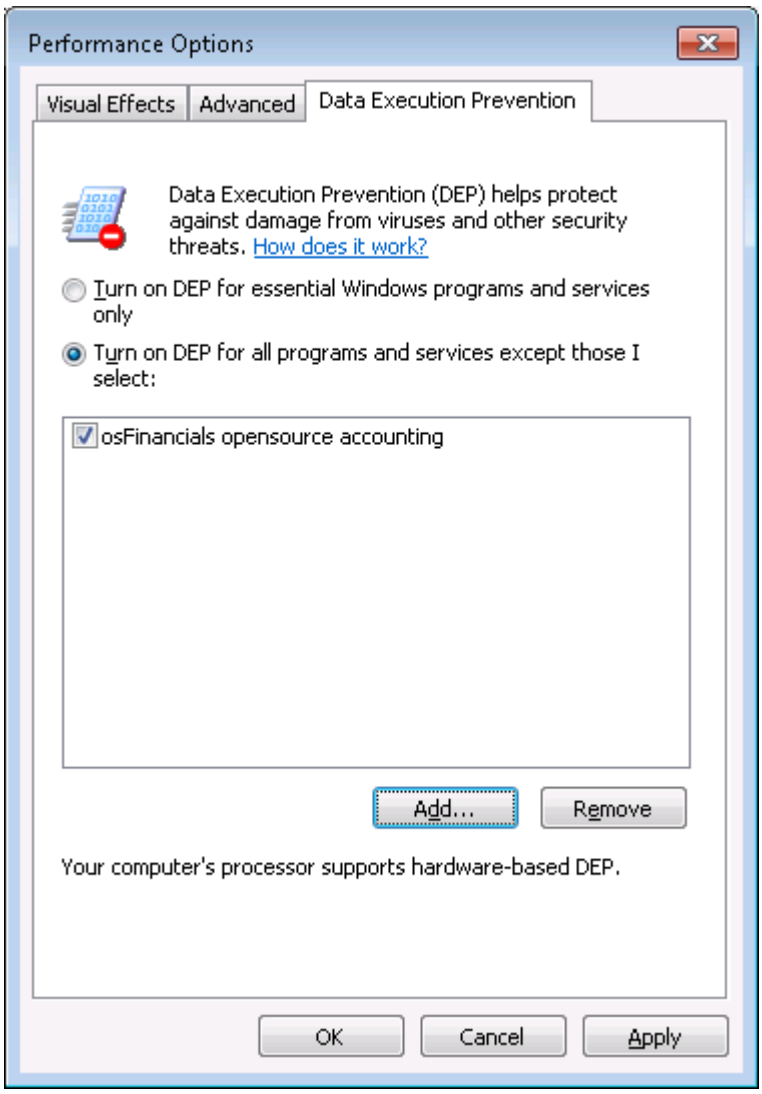
Check if the settings for DEP is either turned of or osFinancials5/TurboCASH5 is excluded from DEP.



Browse to where osFinancials / TurboCASH is installed.



And select osFinancials.exe / TCASH5.exe or Accounting.exe and press Open.



This will add osFinancials5/TurboCASH5 to the exclude list.

Testing of the connection with FlameRobin

This is a optional feature and is not needed for osFinancials5/TurboCASH5 to work correct.

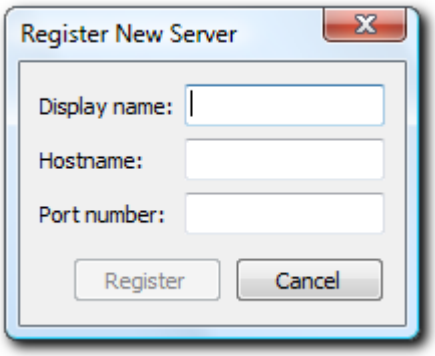
But it does serve as a good way to test connections with the database.

The installation file, flamerobin.exe, is also in the osFinancials5/TurboCASH5 installation folder.

Add a new server if you are on the client machine (you also need the client install of Firebird for this) of just use localhost if flame is running on the server.

1. Start FlameRobin and click on Home.

2. Using the right mouse button, select the Register server... option from the context menu.



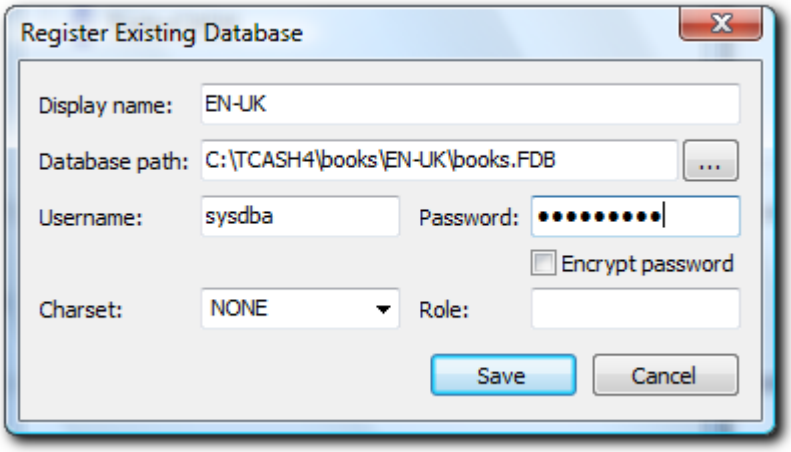
3. Enter the following:

    a) Display name: - Enter an arbitrary name to recognize the server with and in the “Hostname” the IP-address of the server.

    b) Hostname: - Enter the IP-address (as found in the previous step using ipconfig).

    c) Port number: - Leave this field empty (default).

4. Using the right mouse button, you can now select *Register existing database...* from the context menu on the newly added server. The next screen is displayed:



5. Enter the following:

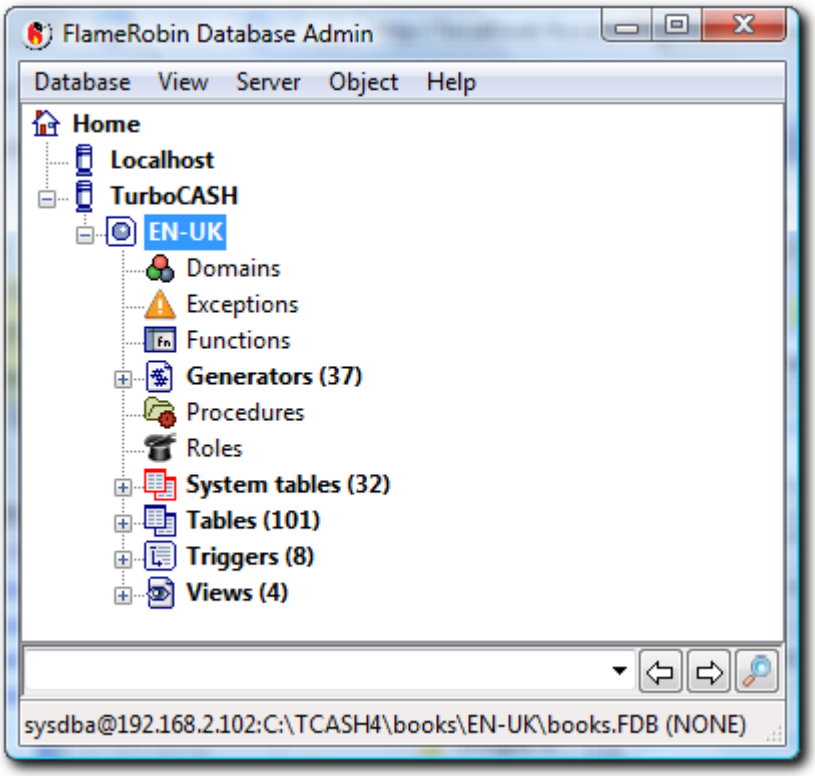
    a) Display name: - Enter the name you want to use for this particular set of books

    b) Database path: - Enter the full server path to the books.fdb

    c) Username: - Default username is sysdba

    d) Password: - Default password is masterkey.

6. Click on the Save button and double-click on the added database. The database tables should now be reflected.



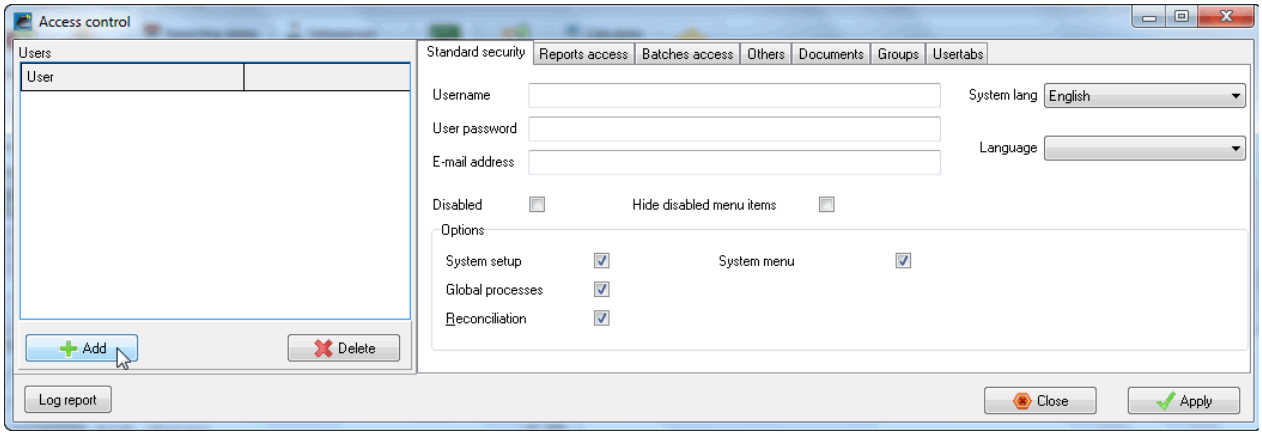
7. You may click on the tables in the list to see the data of your Set of Books.

8. If there is no connection problems you just successfully tested the database connection.

Creating users in Access control

If you database is set up properly there is still a need to create users in osFinancials5/TurboCASH5 to make sure there is no conflicts when entering data.

Create user on the Standard security tab in Access control



Use the Add button to add a new user.

Change the name of New user0 and enter a password for the new user.

Press Apply to save the changes.

You can limit rights for the new users in the tabs.

Adjusting the default password (Firebird)

This is for the experienced user that has knowledge of database management.

This will change the default password in Firebird and FlameRobin. This will not change the Password to Open a Set of Books in TurboCASH multi-user.

To change the standard (default) password of the standard username, i.e. sysdba on the database server, you need to use the gsec program of Firebird (located in C:\Program Files\Firebird\Firebird_2_1\bin folder).

Once you have completed the standard installation of osFinancials5/TurboCASH5 and the Firebird database server is completed, you may launch the gsec application (i.e. C:\Program Files\Firebird\Firebird_2_1\bin\gsec.exe).

You can control the users and their passwords. In the gsec application, you may access the security database, by executing the following task via Windows Menu Start->Run:

```
"C:\Program Files\Firebird\Firebird_2_1\bin\gsec.exe" -database "C:\Program Files\Firebird\Firebird_2_1\security.fdb" - user sysdba -password masterkey
```

Or for the remote database

```
"C:\Program Files\Firebird\Firebird_2_1\bin\gsec.exe" -database "192.168.2.21:C:\Program Files\Firebird\Firebird_2_1\security.fdb" -user sysdba -password masterkey
```

(Note you need to enter the correct IP-address of the remote database). If you need to change the standard (default) password (i.e. masterkey), you may enter the command as follows:

```
modify sysdba -pw mypassword
```

This will set or change the master password to mypassword (as in this example).

Firebird can accommodate case sensitive passwords to the maximum of up to 8 characters. The rest of the characters (more than 8) is ignored when enterted (e.g. 10 character password mypassword). As per this 10 character password, you may enter up 8 characters, e.g. mypasswo, the last 2 characters will be ignored.

You may also add other users, and manage the user-rights over the database tables in TurboCASH. This is not covered in this documentation. You may find comprehensive information on the various commands

and features at the Firebird website, i.e. http://www.firebirdsql.org/manual/.

Firebird tuning

The firebird.conf file can be edited manually to optimise the performance of the Firebird Database Server.

For example, if you have set that the application to run on two processors, or the initial allocated memory before the database is loaded, etc.

By default, it just uses 1 processor and the allocated memory is not much. These adjustments should make it faster if you have more data and can use the multiprocessor in the server to its full extend.

In the firebird.conf file you will find some basic guidelines (documentation) about the parameters working and settings. This section includes some tips to increase the performance.

1 - Number of cashed database pages

Number of cached database pages

#

This sets the number of pages from any one database that can be held

in cache at once. If you increase this value, the engine will

allocate more pages to the cache for every database. By default, the

SuperServer allocates 2048 pages for each database and the classic

allocates 75 pages per client connection per database.

#

Type: integer

#

#DefaultDbCachePages = 2048

To change the setting:

After the Type: integer line, you may add your name preceded by the comment # symbol and a description e.g. Adjusting Server Performance

|# Danie Adjusting Server Performance

Change the value if necessary, e.g. 2048

|DefaultDbCachePages = 8192

You may use the following KB to Bytes Conversion table (located at the end of the firebird.conf file) to select the correct values:

```
########################################
#
# KB to Bytes Conversion table
#
########################################
#
#    KB     Bytes        KB     Bytes
#  ----    ---------    ----    ---------
#     1    1024          32    32768
#     2    2048          64    65536
#     4    4096         128    131072
#     8    8192         256    262144
#    16    16384        512    524288
#
########################################
```

2 - Which CPUs should be used (Windows Only)

```
# In an SMP system, sets which processors can be used by the server.
# The value is taken from a bit map in which each bit represents a CPU.
# Thus, to use only the first processor, the value is 1. To use both
# CPU 1 and CPU 2, the value is 3. To use CPU 2 and CPU 3, the value
```

is 6. The default value is 1.

#

Type: integer

#

#CpuAffinityMask = 1

To change the setting:

After the Type: integer line, you may add your name preceded by the comment # symbol and a description e.g. Adjusting Server Performance

|# Danie Adjusting Server Performance

Change the value if necessary, e.g. 3

|CpuAffinityMask = 3

Multi-user Linux Server install

Introduction

Licence

Annual licence

Order: here

For the multi-user use of TurboCASH / osFinancials in combination with *nix (Linux, *BSD, etc.) server, there are several scenarios which may be configured.

Please read the advantages for and disadvantages of the several scenarios given for the installation and configuration.

Advantages and Disadvantages

Scenario 1: Only the databases on the server - client on separate Windows machine

Advantages:

- The Set of Books has been centrally stored on the server and walks along in the regular backups.
- Everyone uses the same dates which real-time to all client are offered.
- This situation is handy if one works with several Point-of-Sales (POS) on several locations.

Disadvantages:

- Reports, application configuration and application program installed on every PC.
- The management of configuration and upgrades very time consuming.

Scenario 2: Database on server and client on samba share of server

Advantages:

- The Set of Books has been centrally stored on the server and walks along in the regular backups.
- Everyone uses the dates which is real-time to all clients.
- Reports, application configuration and application program are stored on the server.
- The management of configuration and upgrades happens once-off on the server and not for every client.

Disadvantages:

- Start up of application takes sometimes longer, depending on the network speed.
- Network goes through load - application loads by means of network.

Installation and configuration

Scenario 1: Only the databases on the server - client on separate Windows machine

To use the database server, it is sufficient to place the database file on the server and to give the Firebird server full rights.

We assume that the Firebird Database is already installed and operational. For clarity, it is easiest to make a separate directory and save the Sets of Books in separate folders.

Keep in mind that all Unix variants are case-sensitive, so the file named test.txt is another file Test.txt.

Activities on the server

- Add a directory on the server for the Set of Books. For example /mnt/files/booksname.
- Set the full rights for the user on Firebird - with chown - R firebird /mnt/files/booksname.
- Copy the database file to the server and place it in the directory or subdirectory of the directories you just created. This file can be found in the Windows folder c: \ TCASH5 \ books \ booksname \ books.fdb. The copy can be done via FTP, FileShare, e-mail or removable media such as a floppy disk or USB stick. It is recommended to use a separate folder for each set of books.
- Check the permissions for security. The Firebird user should at least have read and write (rw) rights on the Set of Books file.

The configuration to the server should then be ready.

Activities on the client

- Install TurboCASH/osFinancials. At some point you will be prompted to install Firebird server. Choose to install client only. This will then not install the complete database.
- Start TurboCASH / osFinancials
- Click in the Open Set of Books window, select Add - Select Set of Books directory.
- In the first field Enter the name of the Set of Books, enter the name of for the Set of Books.
- In the Server field, enter the dns name or the ip-address of the server. This depends of the configuration of network.

- In the Enter the path where the books are stored field, enter the full path to the Set of Books, including the name of the database file. For example, /mnt/files/books/nameofbooks/books.FDB. Keep the uppercase and lowercase letters of the files and directories in mind.
- Enter the Username of the user who is in Firebird administrator. (The default username is SYSDBA).
- Enter the Password of the Firebird administrator. (Default password is masterkey).
- Click Change, and the Set of Books is added to the Open Set of Books window.

If all rights, file paths and login details are correctly entered, the Set of Books can simply open as an ordinary Set of Books.

The activities on the client machine will have to be performed for each workstation.

Scenario 2: Database on server and client on samba share of server

This scenario is in fact a continuation on the first scenario with only the databases on the server. The advantage is that the updates, reports, layouts and institutions centrally are stored. This makes it easier for an administrator for everything to be updated.

Working method

After completion of the first scenario and testing it, you should perform the following operations:

- On the server, if necessary, add file share and give users of TurboCASH / osFinancials read, write and execute permissions.
- If necessary your production network disk for the work stations by means of the login script. As TurboCASH / osFinancials in an existing share installed, check the rights for this share. In our example everything will be stored in a network disk F:
- If necessary, create a network for the workstations using the login script. If TurboCASH / osFinancials is installed in an existing share, check the permissions for this share. For example, everything will be saved to a network drive F:
- Install TurboCASH / osFinancials normally on a workstation without the Firebird server.
- Open Windows Explorer and copy the entire folder C: \ TCASH5 or C: \ osFinancials to the network drive F: \.
- Open the folder F: \ TCASH5 \ Books or F: \ osFinancials \ Books

- Remove all matters in the Books folder on the server and close the Windows Explorer.
- Find the shortcut that is created for starting TurboCASH / osFinancials and right-click with the mouse. Set the following options:
    - In the Target field, the path will have to be adjusted from C: \ TCASH5 \ TCASH5.exe to F: \ TCASH5 \ TCASH5.exe or C: \ osFinancials \ osFinancials.exe to F: \ osFinancials \ osFinancials.exe
    - In the Run field, the drive letter needs to be changed from C: \ osFinancials to F: \ osFinancials or C: \ osFinancials to F: \ osFinancials
- Click OK and test or start TurboCASH / osFinancials with the shortcut.
- If everything works, copy the shortcut also to the network.
- Set the access to the Set of Books as described in scenario 1.
- Tests if everything works well. If it does not work well, it is possible that there are a problem with the rights. Test that everything is working properly. If things are not working properly, it is possible that there are a problem with the rights.

Continuation on the remaining client

- Install TurboCASH / osFinancials to all client machines, but put the shortcuts and save the installation of the Firebird server.
- Copy the saved shortcut TurboCASH / osFinancials from the server to the desktop of the client.
- Verify if the logged in user have the network disk and if the rights are set.
- Start TurboCASH / osFinancials from the client. If it's correct, you can log on to the Set of Books that you previously added in the list.
- If everything works well, set the access control that will be appropriate for each user in TurboCASH/osFinancials. (multi-user).

The installation is now ready.

"b*ank import*

Match ideal on omschrywing

Kan de ideal betalingen die op een bank gebeuren matchen op document nummer."

Translation

Bank import

Match ideal on description

Can match the ideal payments made at a bank by document number.

Shop description

Bank and Ideal payments match

With this addition to the bank import plugin , payment on your bank account can automatically been matched. The matching is done by text description/document number. The matching is not only available for ' normal' bank payment, but also for Ideal payments. Matching Ideal payments is only possible when there are individual payment lines on your bank account instead of batch payments.

The plugin doesn't has to be downloaded. It will be activated by a code. You will receive the code(s) and instructions through mail within two workdays after payment.

NOTE : Match Ideal Bank @*@: A specific feature integrating iDEAL online payment method for payments or transactions within the Bank-import plugin. This context menu item is already available in Batch entry screens within the Bank-import plugin whether this Dynareg "*bank import - Match ideal on omschrywing"* is enabled or disabled.

Dynareg plugins

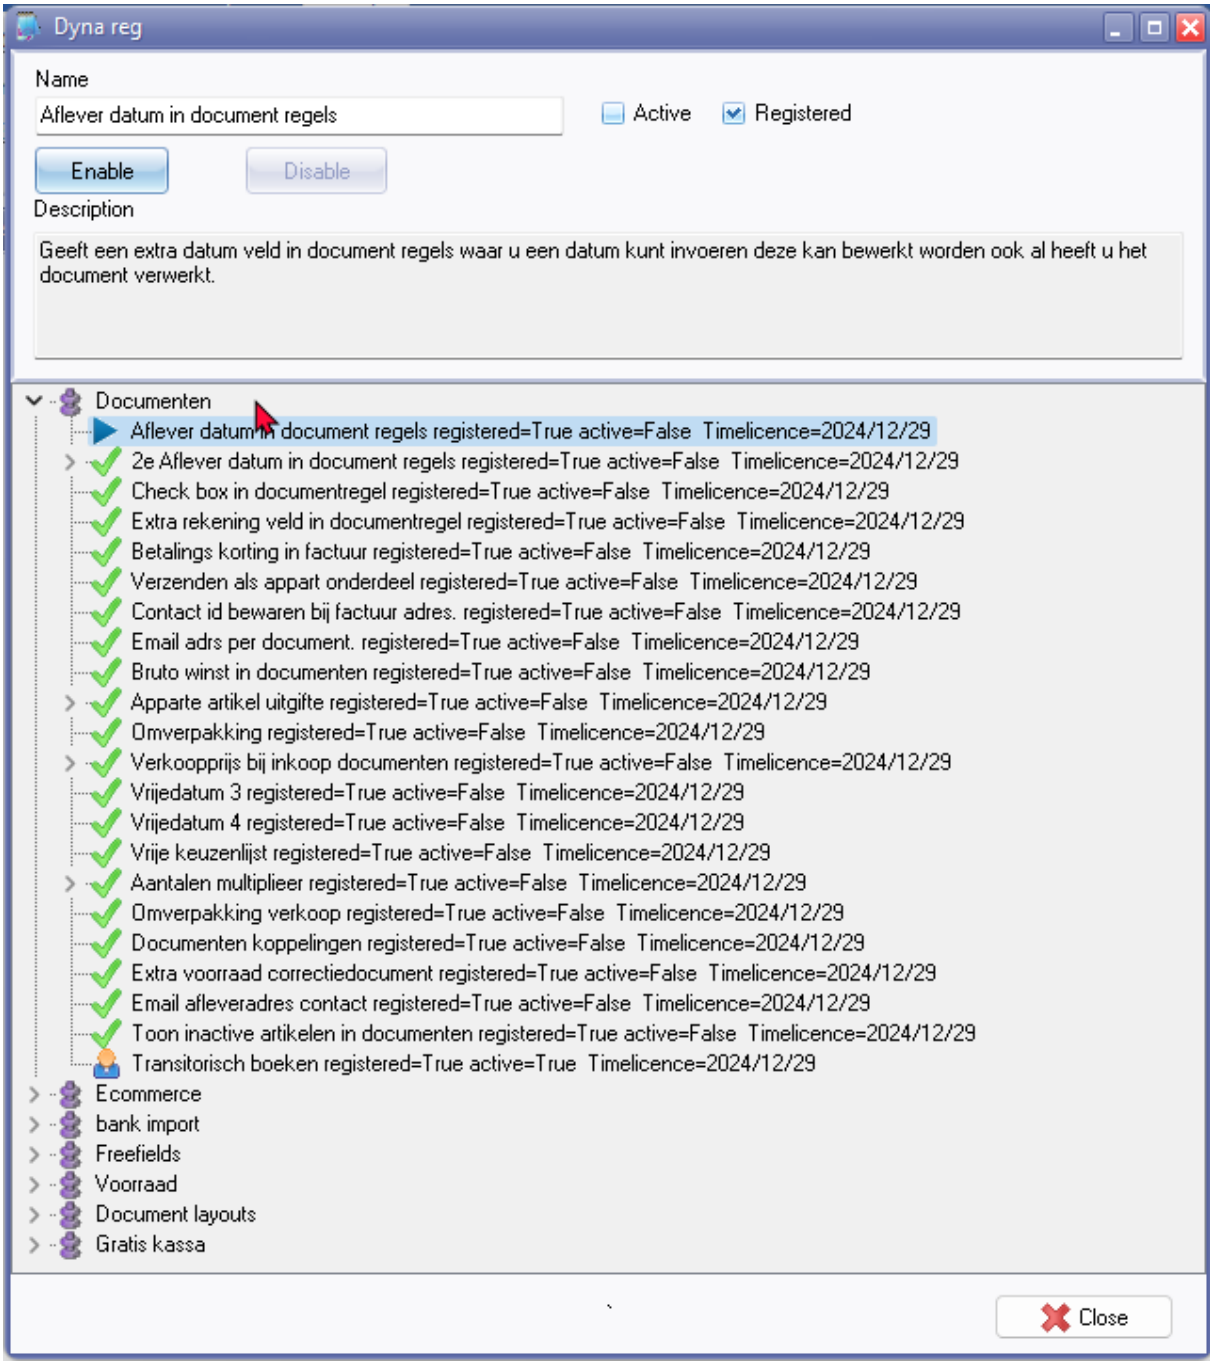
The DYNADBREG Plugin cannot be removed from the Plugins → Tools menu, as it is necessary for the functioning of certain features in osFinancials5 and TurboCASH5.

The Dyna reg Plugins can be accessed from the Plugins menu under the Setup ribbon, provided they are activated in the Tools → Activate plugins menu. This collection comprises additional plugins for documents, e-commerce, bank import, free fields stock, document layouts, and Free POS (Standard POS). These plugins are available for purchase from our online shop and can be enabled accordingly.

Activation of Dynareg Plugins

Once you have purchased plugins from our shop, follow these steps to enable them:

1. Navigate to Plugins → Tools → DYNADBREG.



2. Select the desired option and click the Enable button. A confirmation message will appear.

   "Add new item?"

3. Click OK. Another confirmation message will appear.

   "Script executed!"

4. Click OK.

5. Click Close and reopen the Set of Books for this plugin to take effect.

For more information and to purchase plugins, visit: [osFinancials Webshop - Small Adjustments](#).

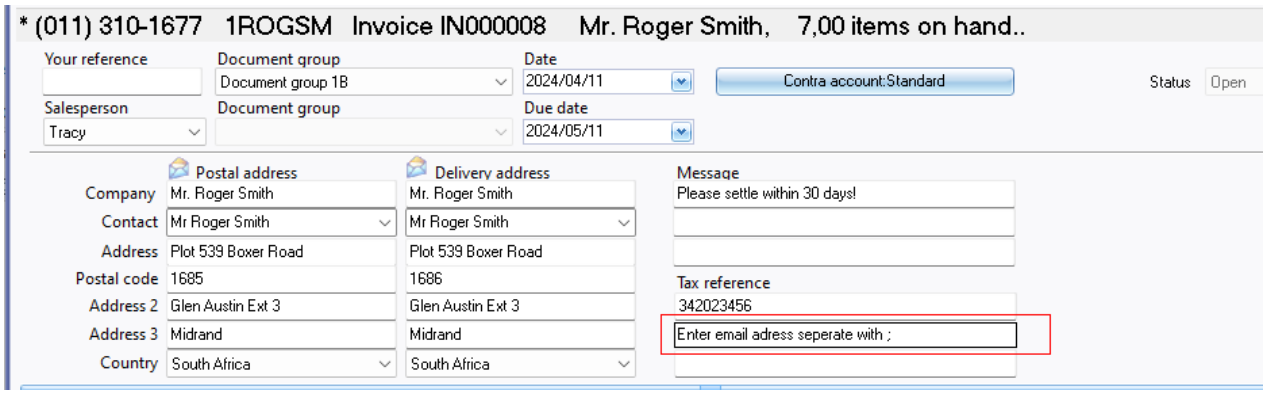
Dynareg - Email address per document

The "*E-mail address per document"* plugin is by default activated and enabled. The functionality of the "*E-mail address per document"* plugin available on the header document entry screens of all unposted sales documents such as invoices, credit notes, and quotes, as well as purchase documents such as purchases, supplier returns, and orders. This feature is already activated and enabled by default for all Sets of Books, including options for creating new Sets of Books for both Firebird and MSSQL database types. Users don't need to enable this plugin separately.

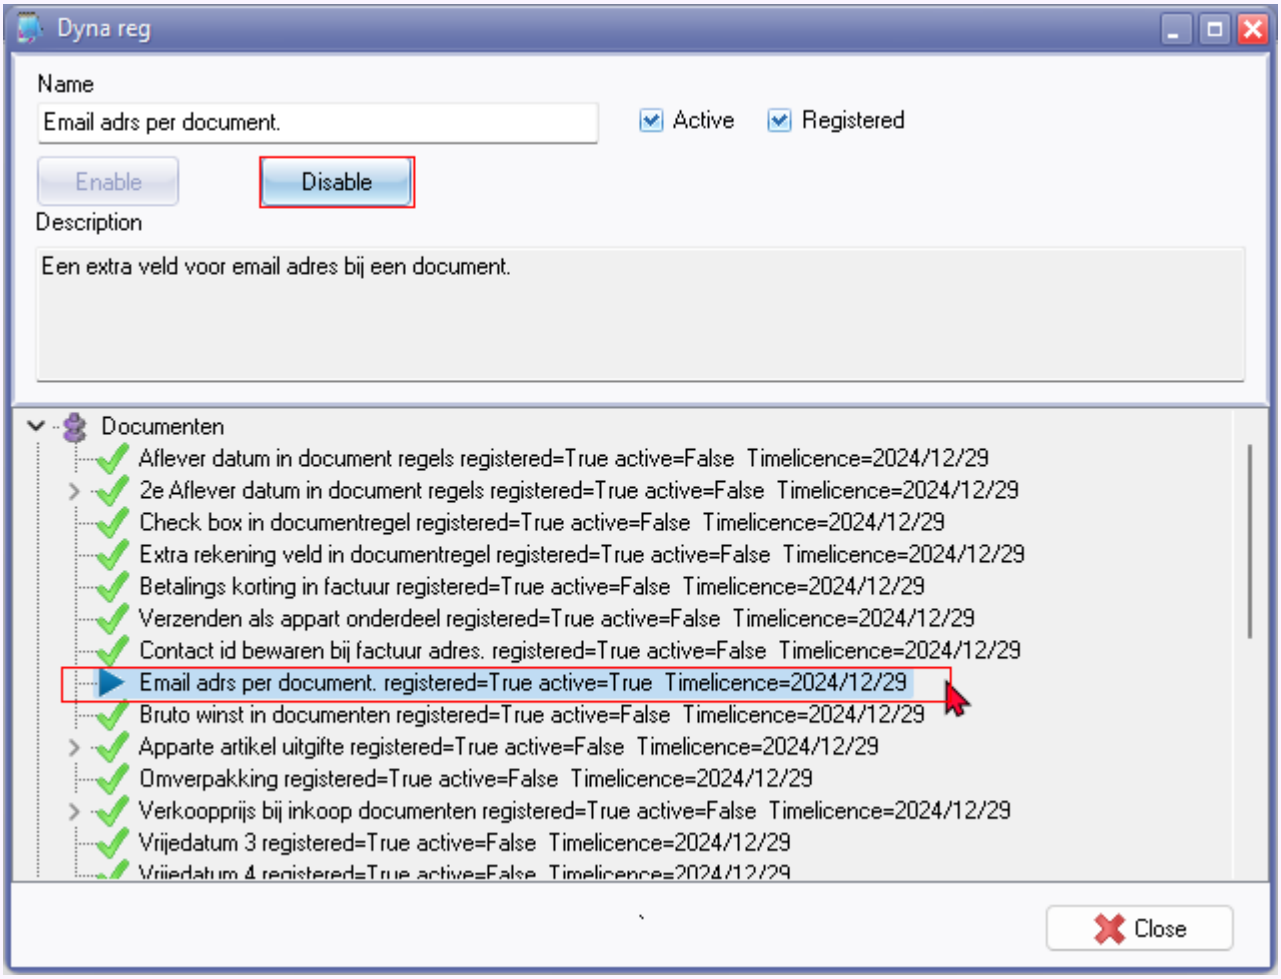


This functionality enhances document management by allowing users to enter multiple email addresses separated by semicolons in the email address field of the document header. In existing documents with one email address, users can simply add a semicolon after the existing address and input a valid second email address.

Disable confirmation message

> Dropping this will delete all data for this column continue?

Should you click Yes to disable this plugin, you may encounter errors.



WARNING: Disabling the "E-mail address per document" plugin may result in the following errors:

Error

> Dynamic SQL Error
> SQL error code = -206
> Column unknown
> DOCHEAD.X_CUSTOMERS_EMAIL_ADDRESS
> At line 68, column 13

Access violation

> Access violation at address 656F0082 in module 'rtl290.bpl'. Read of address 00000004.

Pointer operation error

> Invalid pointer operation.

If you accidentally disable this plugin and encounter these errors, follow these steps:

1. *Navigate to Plugins → Tools → DYNADBREG.*
2. *Enable the 'E-mail address per document' plugin again and reopen your Set of Books.*

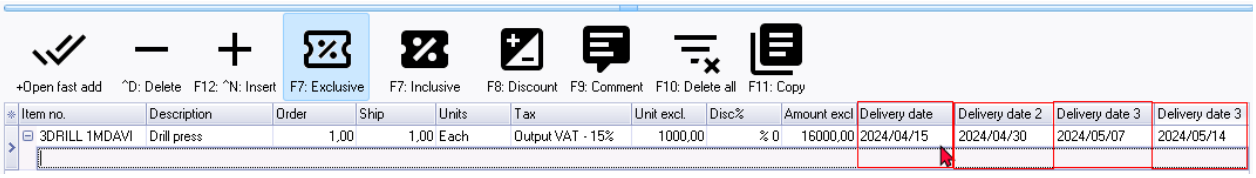
Dynareg - Delivery dates

Dynareg Delivery date plugins

Dynareg Delivery date plugins is a series of four plugins. Each successive plugin in the series, including Dynareg Delivery date 2, Dynareg Delivery date 3, and Dynareg Delivery date 4, offers the ability to add an additional delivery date field to document lines within osFinancials5/TurboCASH5.

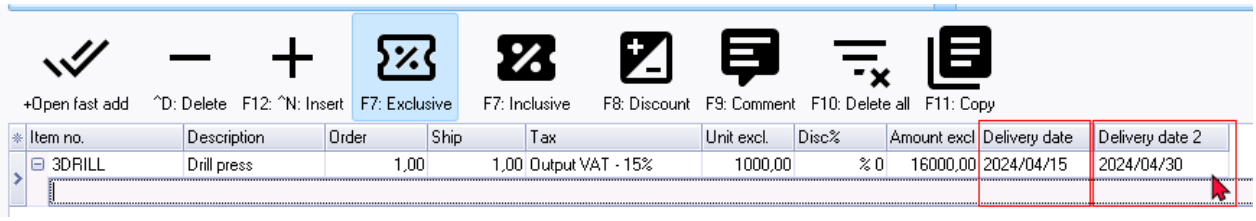
By providing the option to add up to four delivery dates on document lines, these plugins offer significant flexibility for businesses to track and manage multiple aspects of their delivery schedules. Users can customize each delivery date field according to their specific requirements, allowing for more granular control over delivery management processes.



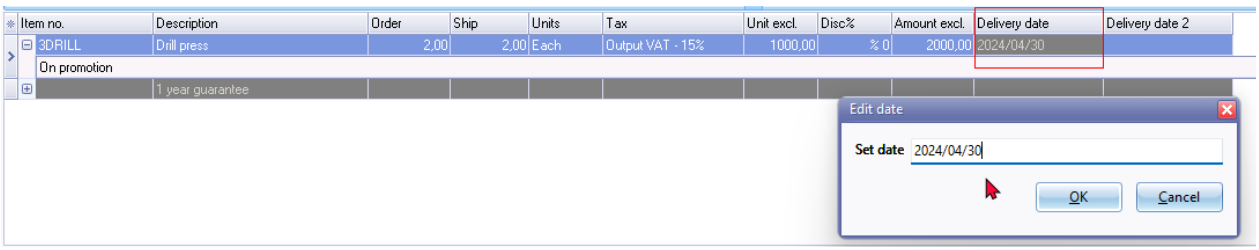
With this capability, users can handle complex scenarios such as staggered deliveries, partial shipments, or multiple stages in the delivery process more effectively. Additionally, it provides a comprehensive solution for businesses that require detailed tracking and reporting on various delivery dates associated with their sales and purchase transactions.

You may adjust or edit these date by selecting the dates in unposted documents.

In posted documents you need to enter a date on the "*Edit date*" screen.



In posted documents, cannot select a date, but you may enter or edit a date.



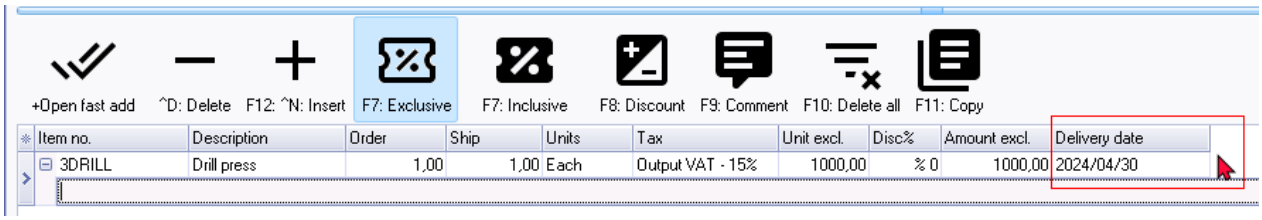
Dynareg Delivery date 1 plugin

Dynareg Delivery date 1 plugin - Shop - Licence : Once-off -

Enable : "Documenten - Aflever datum in dokument regels"

The "*Dynareg Delivery date 1"* plugin will add a "*Delivery date*" column in the document lines in sales documents, (invoices, credit notes and quotes).

The "*Delivery date*" column in the document lines is also available in purchase documents (purchases, supplier returns and orders).



Provides an additional date field in document lines where you can enter a delevery date that can be edited even after you have processed the document.

Overall, the "*Dynareg Delivery date 1*" plugin likely aims to improve order management and logistics within osFinancials5/TurboCASH5 by introducing features related to specifying, tracking, and managing delivery dates for orders and transactions.

The "*Dynareg Delivery date 1*" plugin is designed to enhance document management in sales and purchase processes. Specifically, it adds a "*Delivery date*" column to the document lines within sales documents such as invoices, credit notes, and quotes.

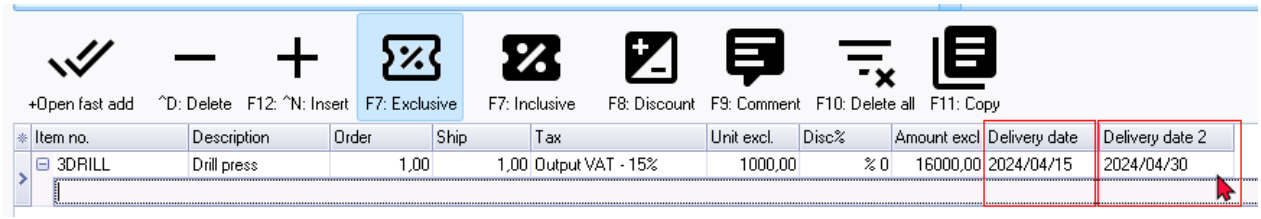
Additionally, this column is also made available in purchase documents like purchases, supplier returns, and orders. This functionality likely streamlines tracking and managing delivery dates for both outgoing and incoming goods or services.

Dynareg Delivery date 2 plugin

Dynareg Delivery date 2 plugin - Shop - Licence : Once-off -

Enable : "Documenten - 2e Aflever datum in dokument regels"

In your documents you now have a 2nd date field per line. In combination with the "*Delivery Date*" plugin, you can, for example, indicate a delivery period between date 1 and date 2 on your invoices.



The "*Dynareg Delivery date 2*" plugin builds upon the functionality of the first delivery date, "*Dynareg Delivery date 1*" plugin by providing an additional delivery date field in document lines. This new field allows users to enter and edit delivery dates even after the document has been processed. This enhancement likely offers more flexibility and control in managing delivery schedules for sales documents such as invoices, credit notes, and quotes, as well as in purchase documents like purchases, supplier returns, and orders.

The plugin extends its features to both sales and purchase processes, adding the "*Delivery date 2*" column to document lines in sales documents such as invoices, credit notes, and quotes, as well as in purchase documents like purchases, supplier returns, and orders. By offering an extra date column, it further streamlines the process of tracking and managing delivery dates for both outbound and inbound items or services.

Dynareg Delivery date 3 plugin

Dynareg Delivery date 3 plugin - Shop - Licence : Once-off -

Enable : "Documenten - Vrijedatum 3"

The "*Dynareg Delivery date 3*" plugin builds upon the functionality of the first two delivery dates, "*Dynareg Delivery date 1*" plugin and "*Dynareg Delivery date 2*" plugin by providing an additional delivery date field in document lines. This new field allows users to enter and edit delivery dates even after the document has been processed. This enhancement likely offers more flexibility and control in managing delivery schedules for sales documents such as invoices, credit notes, and quotes, as well as in purchase documents like purchases, supplier returns, and orders.

Dynareg Delivery date 4 plugin

Dynareg Delivery date 4 plugin - Shop - Licence : Once-off -

Enable : "Documenten - Vrijedatum 4"

The "*Dynareg Delivery date 4*" plugin builds upon the functionality of the first three delivery dates, "*Dynareg Delivery date 1*" plugin, "*Dynareg Delivery date 2*" plugin and "*Dynareg Delivery date 3*" plugin by providing an additional delivery date field in document lines. This new field allows users to enter and edit delivery

dates even after the document has been processed. This enhancement likely offers more flexibility and control in managing delivery schedules for sales documents such as invoices, credit notes, and quotes, as well as in purchase documents like purchases, supplier returns, and orders.

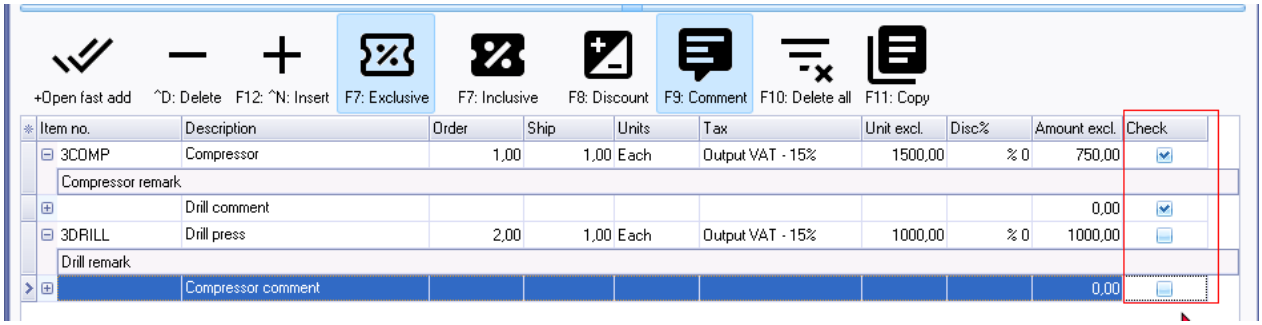
Dynareg - Checkbox in documents

Dynareg - Checkbox in document lines plugin

Dynareg Checkbox in document lines plugin - Shop - Licence : Once-off -

Enable : "Documenten - Check box in documentregel"

The "*Dynareg - Checkbox in document lines*" plugin adds a "*Check*" column to the lines in the document entry screen, allowing users to tick or untick checkboxes for selected items. These checkboxes are available for both sales and purchase documents (invoices, credit notes, quotes, purchases, supplier returns, and orders).



This plugin ensures that the selected checkboxes are saved and retained even after copying or converting documents. However, it's worth noting that checkboxes for comments will not be retained after copying or converting documents.

Advantages of checkboxes

Having a check column for items in the document entry screen offers several advantages:

1. Easier Control with Many Items: When dealing with documents containing numerous items, such as invoices with multiple line items, having a check column allows users to easily keep track of which items have been processed, verified, or attended to. This can streamline workflows and reduce the likelihood of overlooking items.

2. Improved Accuracy and Accountability: By providing a visual indicator (such as a checked box) next to each item, users can quickly verify that all necessary actions have been taken for each item. This can enhance accuracy in document processing and help ensure that no items are missed or duplicated.

3. Efficient Order Fulfillment: In scenarios like purchase orders or sales orders, the check column can be used to mark items as collected or fulfilled. This is particularly useful in retail or warehouse environments where goods need to be checked off as they are picked up or shipped out. It helps in ensuring that all items are accounted for before finalizing the transaction.

4. Enhanced User Experience: The check column provides a straightforward and intuitive interface for users to manage document entries. It reduces the cognitive load by offering a visual cue for item status, making the overall process more user-friendly.

5. Audit Trail and Documentation: The checkboxes serve as a form of documentation, indicating which actions have been completed or which items have been processed. This can be valuable for audit purposes or for tracing the history of document entries.

Overall, the check column in the document entry screen offers convenience, accuracy, and efficiency in managing documents with multiple items, contributing to smoother operations and improved user experience.

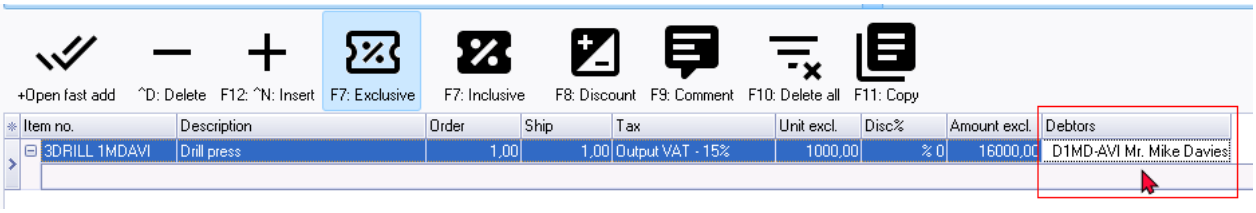
Dynareg - Additional field for an account in documents

Dynareg Additional field for an account in documents plugin - Shop - Licence : Once-off -

Enable : "Documenten - Extra rekening veld in documentregel"

The "*Dynareg Additional field for an account in documents*" plugin for osFinancials5/TurboCASH5 adds a debtor account in the last column of the lines in the document entry screen.

The debtor accounts can be selected in column for "*Debtors*" accounts in the last column of each line. The column for "*Debtors*" accounts is available in both sales documents, (invoices, credit notes and quotes) and purchase documents (purchases, supplier returns and orders).



To add a debtor account, you need to double-click on the "*Debtors*" column heading.

The item code (stock code) will add the account code of the selected debtor account in the "*Item no.*" column.

In posted documents, you cannot add or change the debtor account.

Overall, the "*Dynareg Additional field for an account in documents*" plugin enhances the functionality of osFinancials5/TurboCASH5 by providing a convenient way to input and track debtor account information within document entries, contributing to improved accuracy and efficiency in financial management processes.\

Dynareg - Payment discount invoice plugin

Dynareg Payment discount invoice plugin - Shop - Licence : Once-off -

Enable : "Betalings korting in factuur"

The "*Dynareg Payment discount invoice*" plugin is designed to facilitate and process upfront discount percentages for sales documents (invoices, credit notes) to customers.

This versatile plugin can also be configured and utilised for purchase discounts (purchases, supplier returns, and orders) to suppliers.

By providing the ability to apply discounts strategically in both sales and purchase transactions, businesses can enhance cash flow management and foster stronger relationships with both customers and suppliers.

Activation of the "*Dynareg Payment discount invoice*" plugin

To activate the "Dynareg Payment discount invoice" plugin follow these steps:

1.

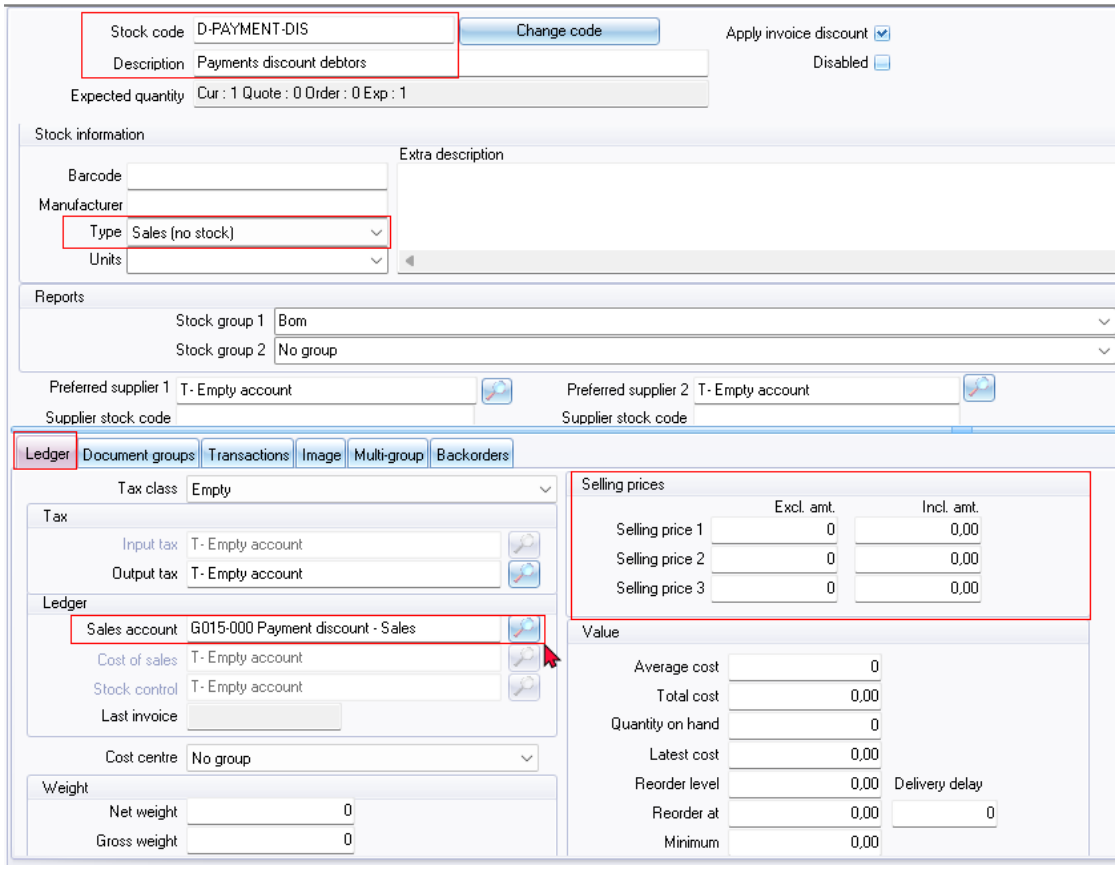
1. Access Plugins: Navigate to Plugins → Tools → DYNADBREG menu.
2. Enable the plugin: Select the "*Betalings korting in factuur*" option and click Enable.
3. Reopen Set of Books: Once you've enbaled the DYNADBREG, reopen your Set of Books. This step is essential for the changes to take effect.

Configuring your Set of Books for the "*Dynareg Payment discount invoice*" plugin

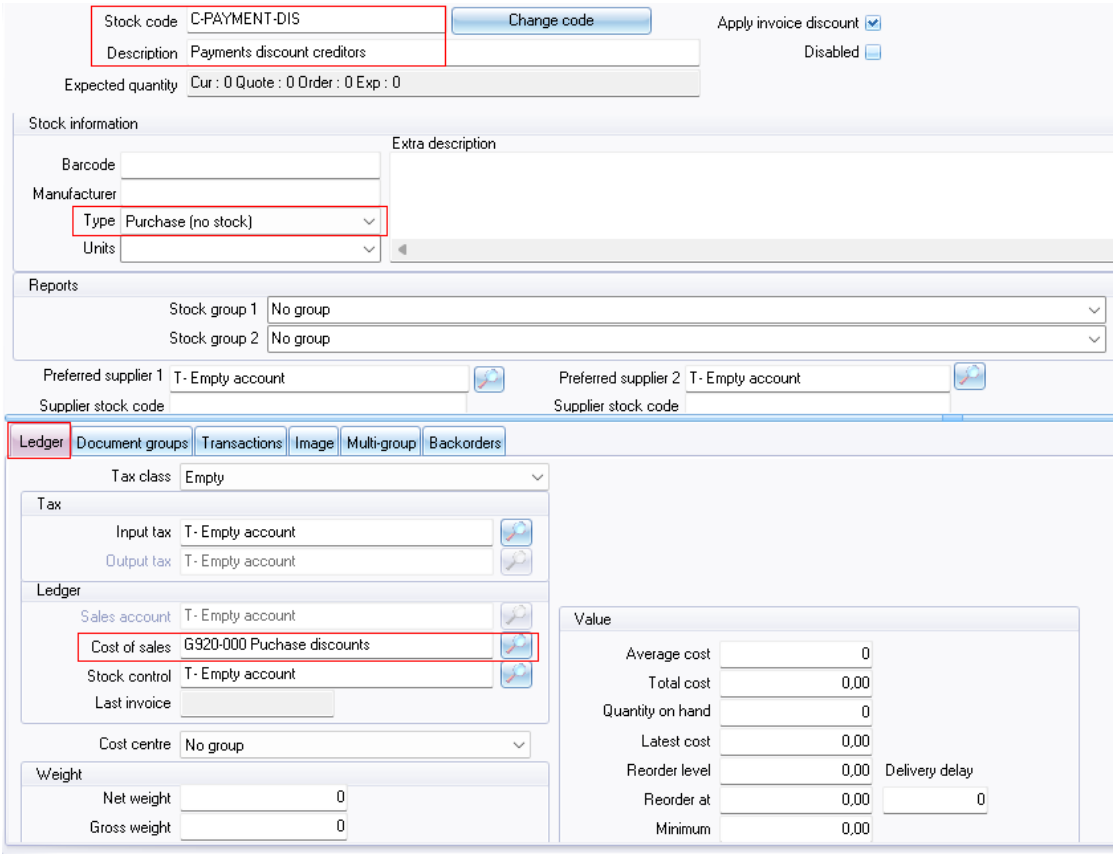
Before you can use this plugin, the need to enable the "Payment discount invoice" plugin in Plugins → Tools → DYNADBREG and reopen your Set of Books.
Once activated, you need to check and configure your Set of Books. The basic settings is as follows:

- Ledger accounts - Setup → Accounts (Setup ribbon).
  - Payment discount account for sales - Locate a Payment discount for sales in your chart of accounts. If no account is available, you need to add a new account.
  - Payment discount account for purchases - To use this plugin for Payment discounts for purchase documents (purchases, supplier returns and orders) you need to locate a Payment discount for purchases. If no account is available, you need to add a new account.
- Stock item - Stock items on Default ribbon).
  - Payment discount for sales documents - Add a "*Payment discount*" as a "*Sales (no stock)*" stock item type for sales documents, such as invoices, credit notes and quotes.
    - § You need to link the default ledger account to record the discount to the "Payment discount" account.
    - § Do not enter selling prices, as the specified discount percentage added in the "*Document entry*" screen will automatically calculate the discount amount on the total

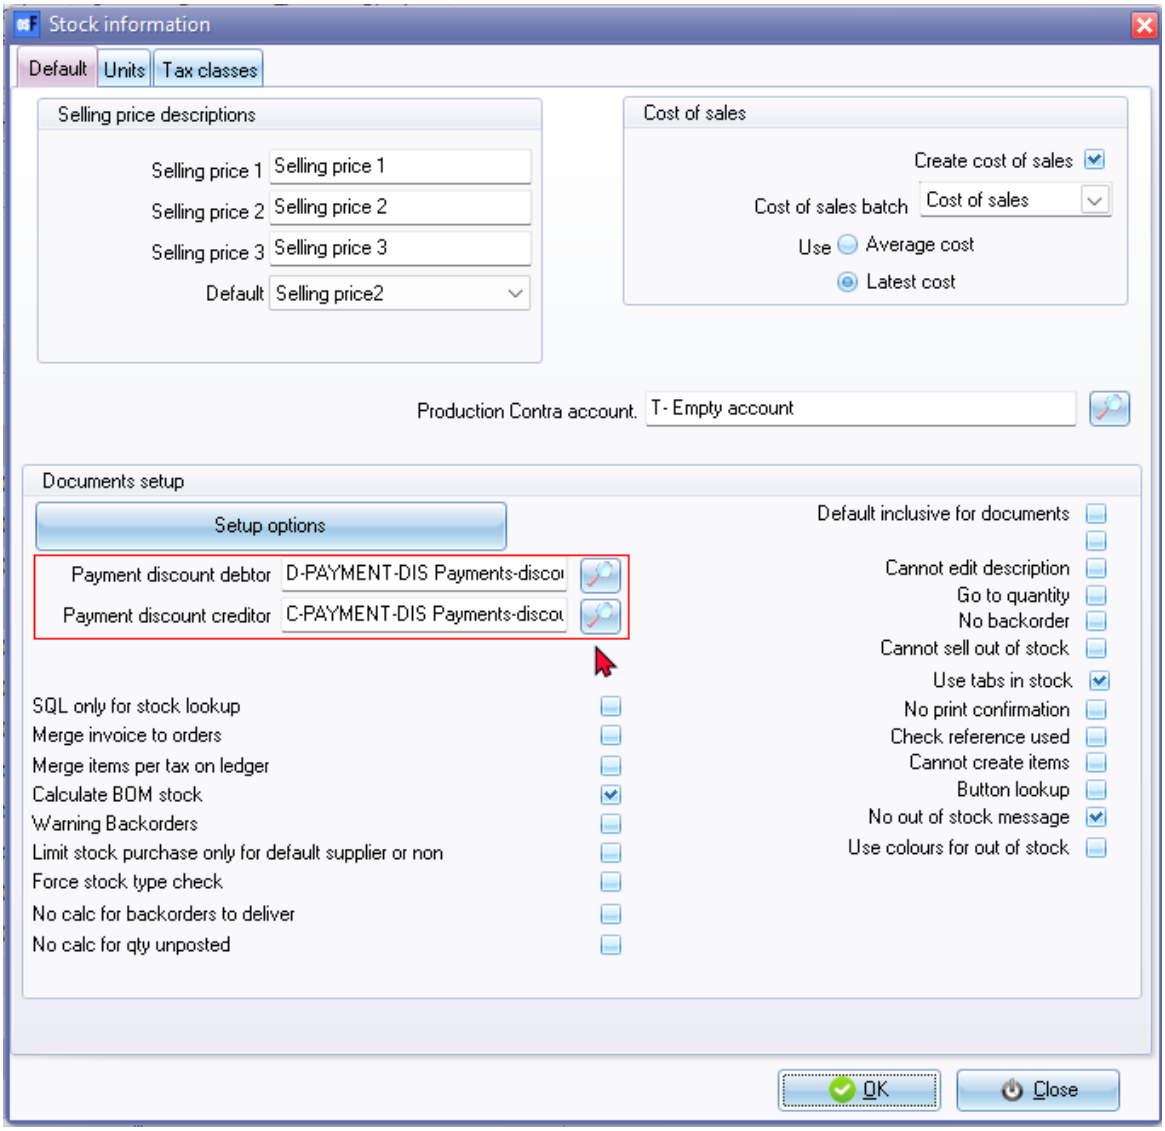
price of the other selected items included in the sales documents.



- Payment discount for purchase documents - Add a "*Payment discount*" as a Purchase (no stock) stock item type for purchase documents, such as purchases, supplier returns, and orders.
  - § You need to link the default ledger account to record the discount to the "Payment discount" account.
  - § No purchase prices or cost prices should be entered as the specified discount percentage added in the "Document entry" screen will automatically calculate the discount amount on the total price of the other selected items included in the purchase document.



- Link Payment Discounts Stock Items - Setup → Stock information (Setup ribbon).
  - Payment discount debtor - Link your Payment discounts stock items for sales documents in the "*Payment discount debtor*" field.
  - Payment discount creditor - Link your Payment discounts stock items for purchase documents in the "*Payment discount creditor*" field.



Once these configurations are completed, you are ready to utilise the "*Dynareg Payment discount invoice*" plugin for both sales documents, including invoices, credit notes and quotes; and purchase documents, including purchases, supplier returns, and orders. These settings ensure that the plugin functions correctly and records payment discounts accurately in your Set of Books.

Processing Sales documents - Payment discount

Once the "*Dynareg Payment discount invoice*" plugin is correctly configured, you can process sales documents such as invoices, credit notes, and quotes. In the Payment discount tab on the document header, enter the "*Payment discount percentage*".

When invoices and credit notes are posted or updated to the ledger, the payment discount transactions will be included in the "Payment discount" account. However, quotes cannot be posted or updated to the ledger and will not generate any transactions. Once a quote is accepted and confirmed, it will be converted to an invoice. These converted quotes can then be posted or updated to the ledger as invoices.

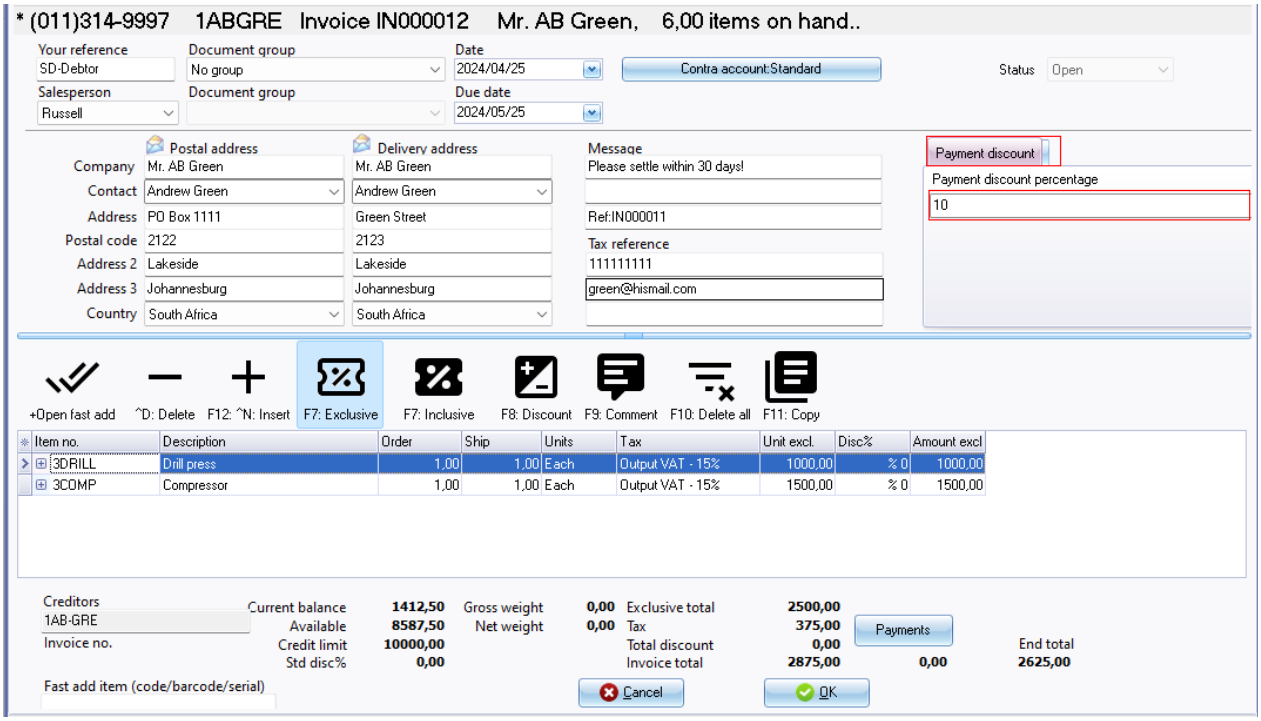
If you choose not to apply a payment discount to the invoice, simply leave the "*Payment discount percentage*" as "0". Please note that the invoices, credit notes, and quotes will not print the payment discount on the document layout file.

Examples Sales Document Processing Layout and Transaction Screenshots

Now, let's explore an example layout file for invoice, credit note, and quote processing, along with screenshots of the related transactions.

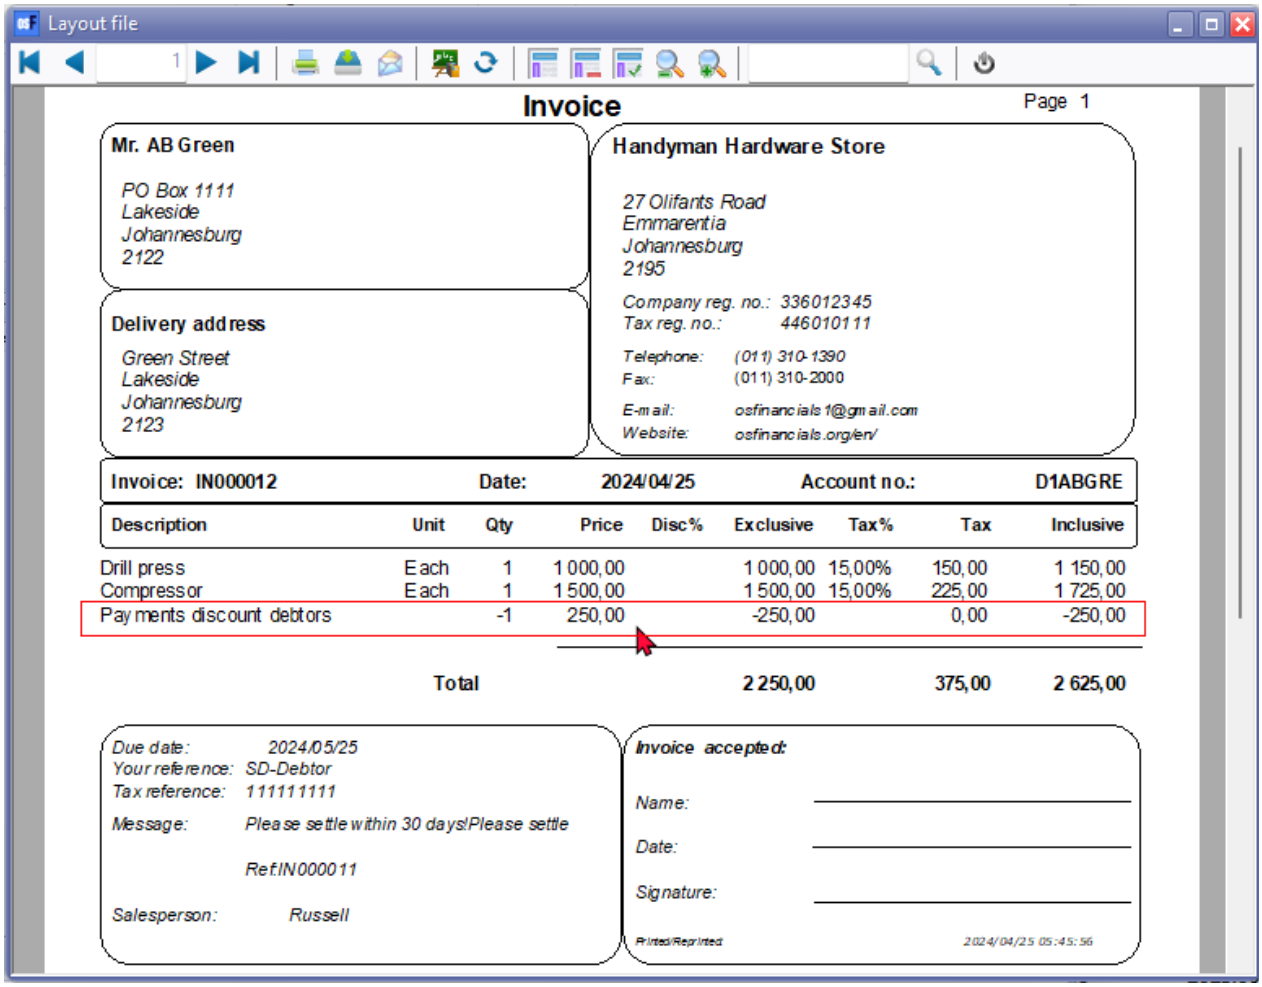
Processing Invoices - Payment discount debtors

When processing invoices, a Payment discount tab is included in the document header. Here, you can enter a percentage discount. This will incorporate the Payment discount into the printed invoice document layout file. The stock item "*Payment discount - debtor*" will be added, and the discount will be calculated based on the total of all items included in the invoice.

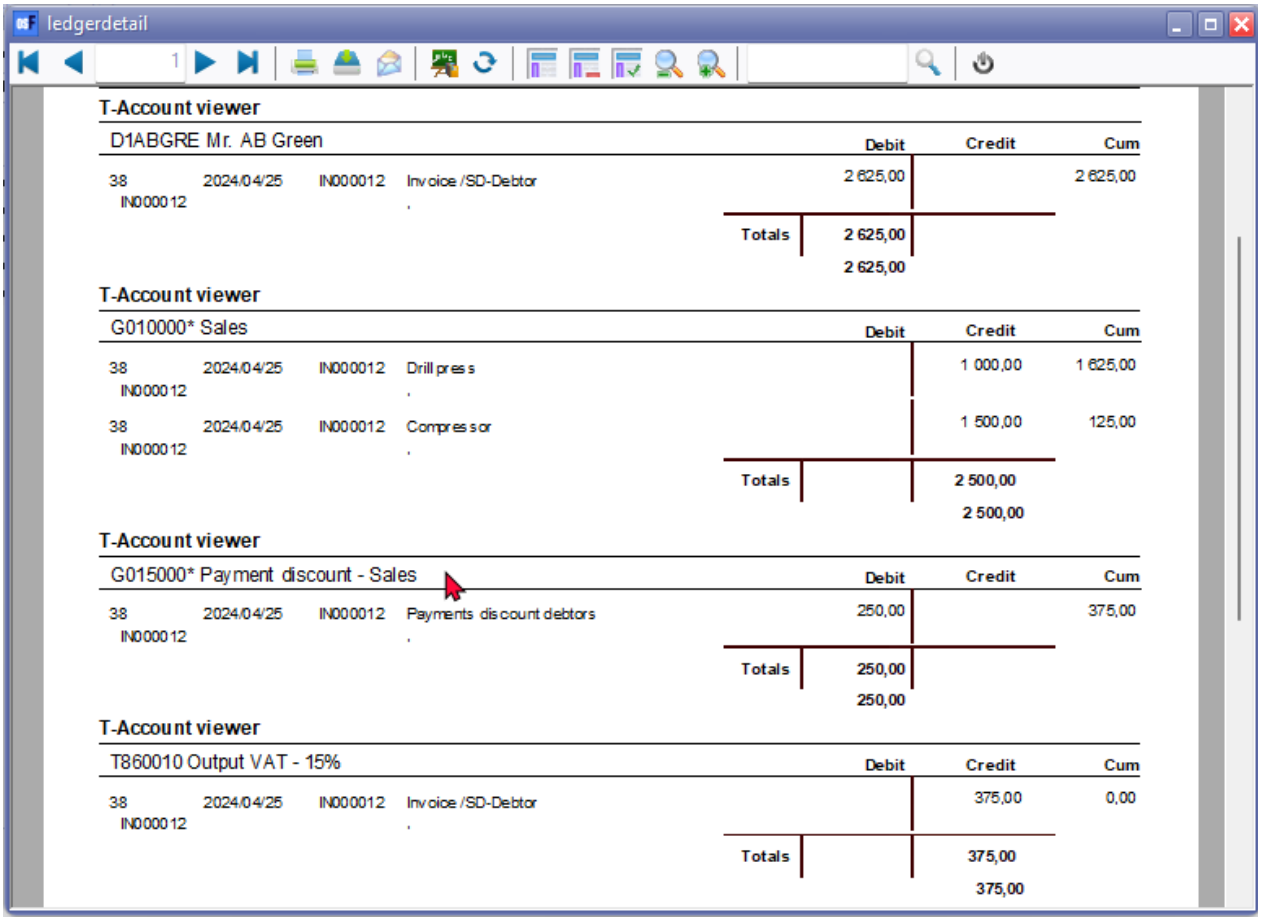


If the invoice has not been posted (updated to the ledger), you can simply edit the invoice without needing to process a credit note. In such cases, there's no necessity to issue a credit note. However, if you have edited an invoice, make sure that the edited or changed invoice is forwarded to the customer.

Example : Printed - Invoice with Payment discount applied

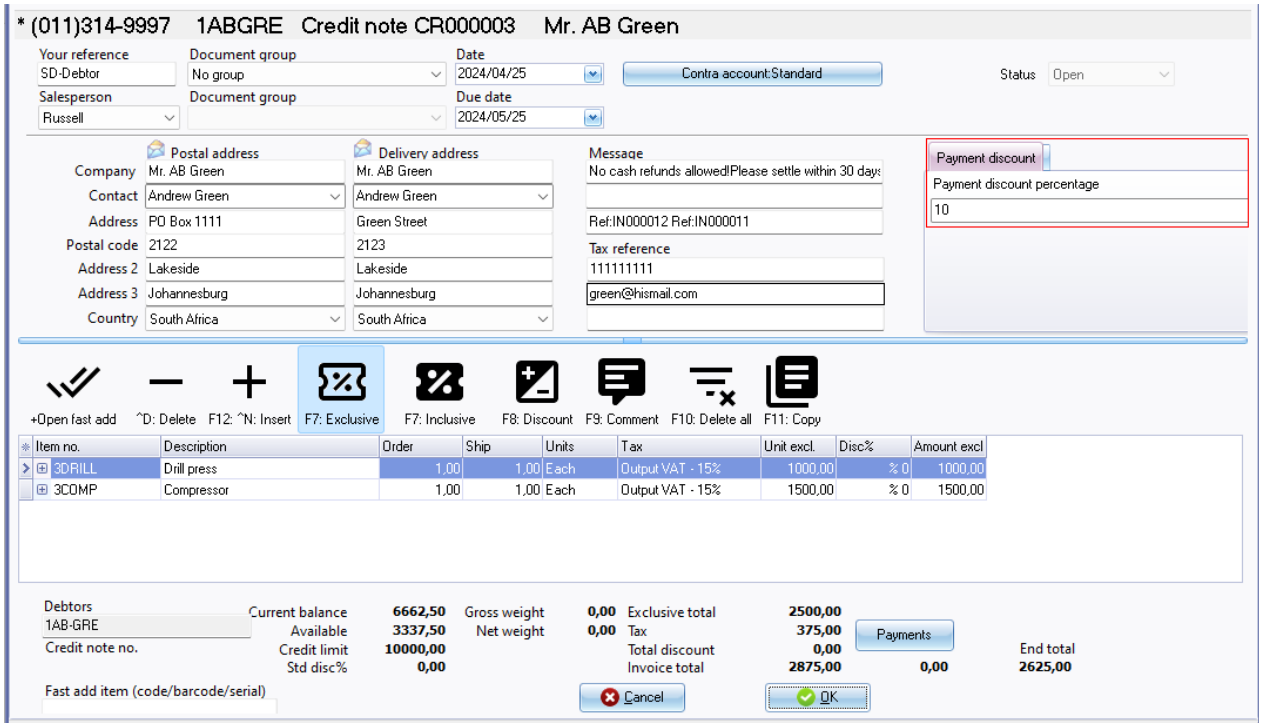


Example : Transactions - T-accounts - Posted Invoice with Payment discount applied

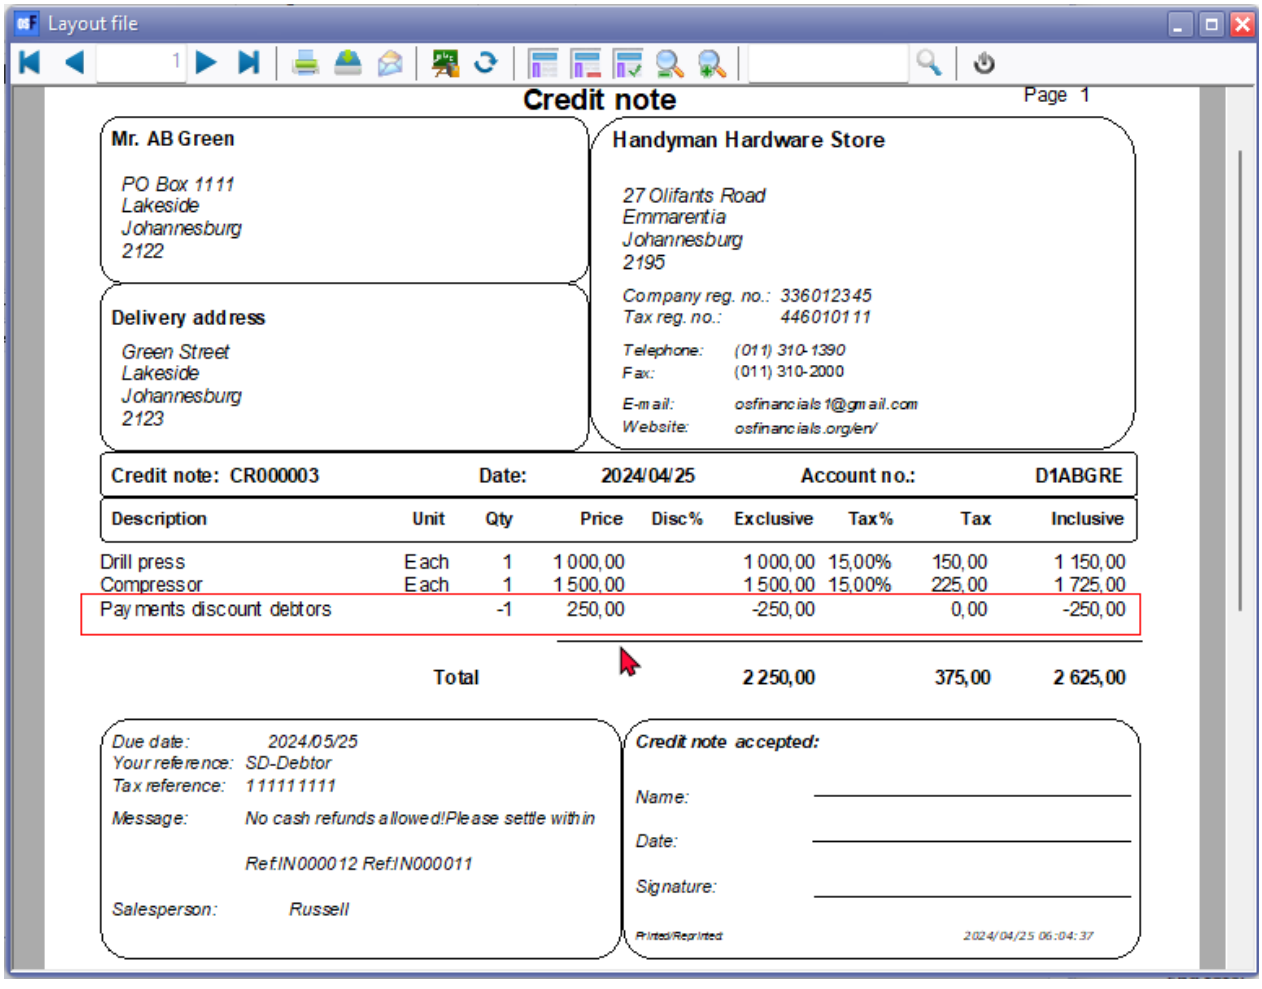


Processing Credit notes - Payment discount debtors

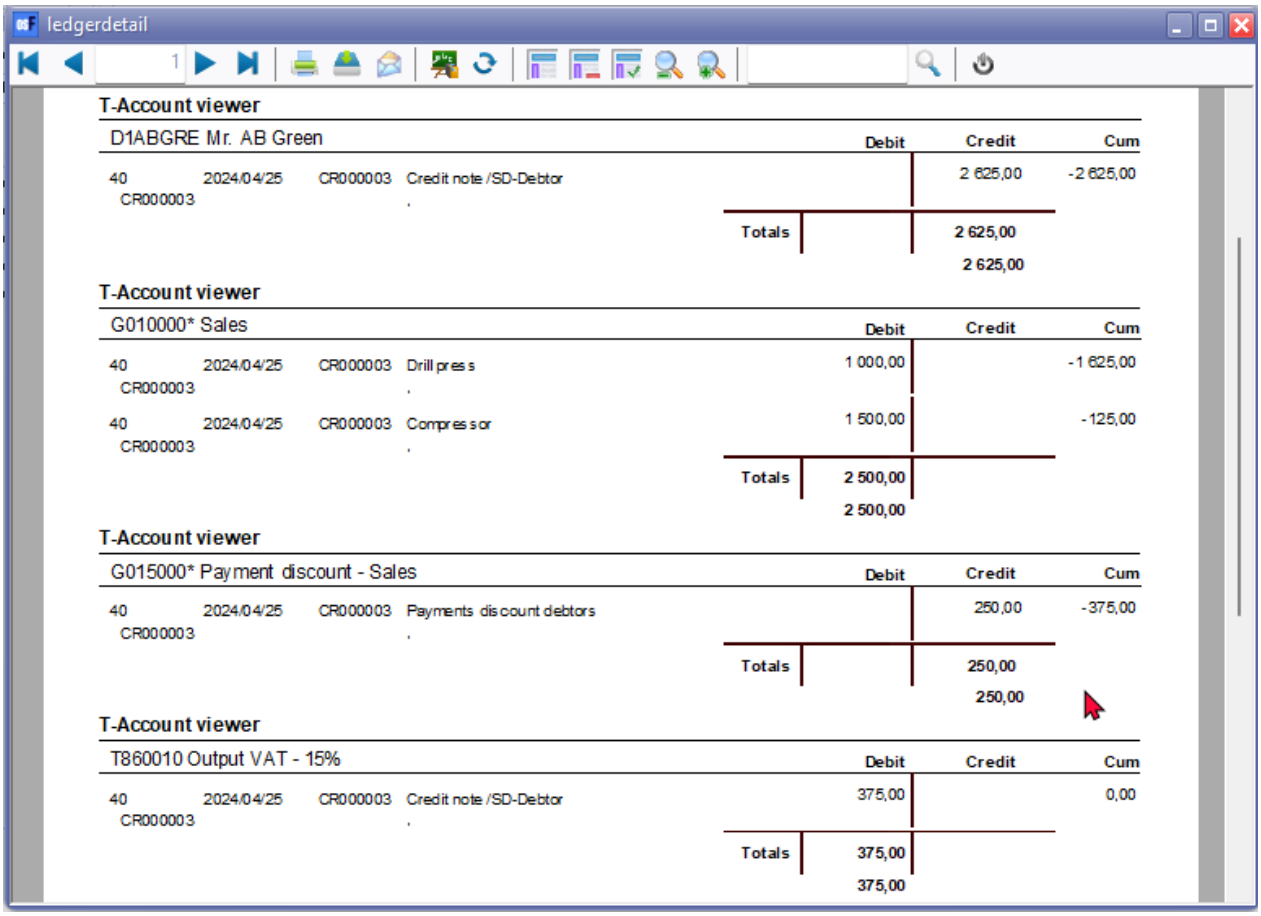
When processing credit notes to cancel an invoice, remove an item, or adjust the selling price, ensure that the correct payment discount percentage is included. If a payment discount was applied to the original invoice and it has already been posted to the ledger, it's important to reflect this accurately in the credit note.



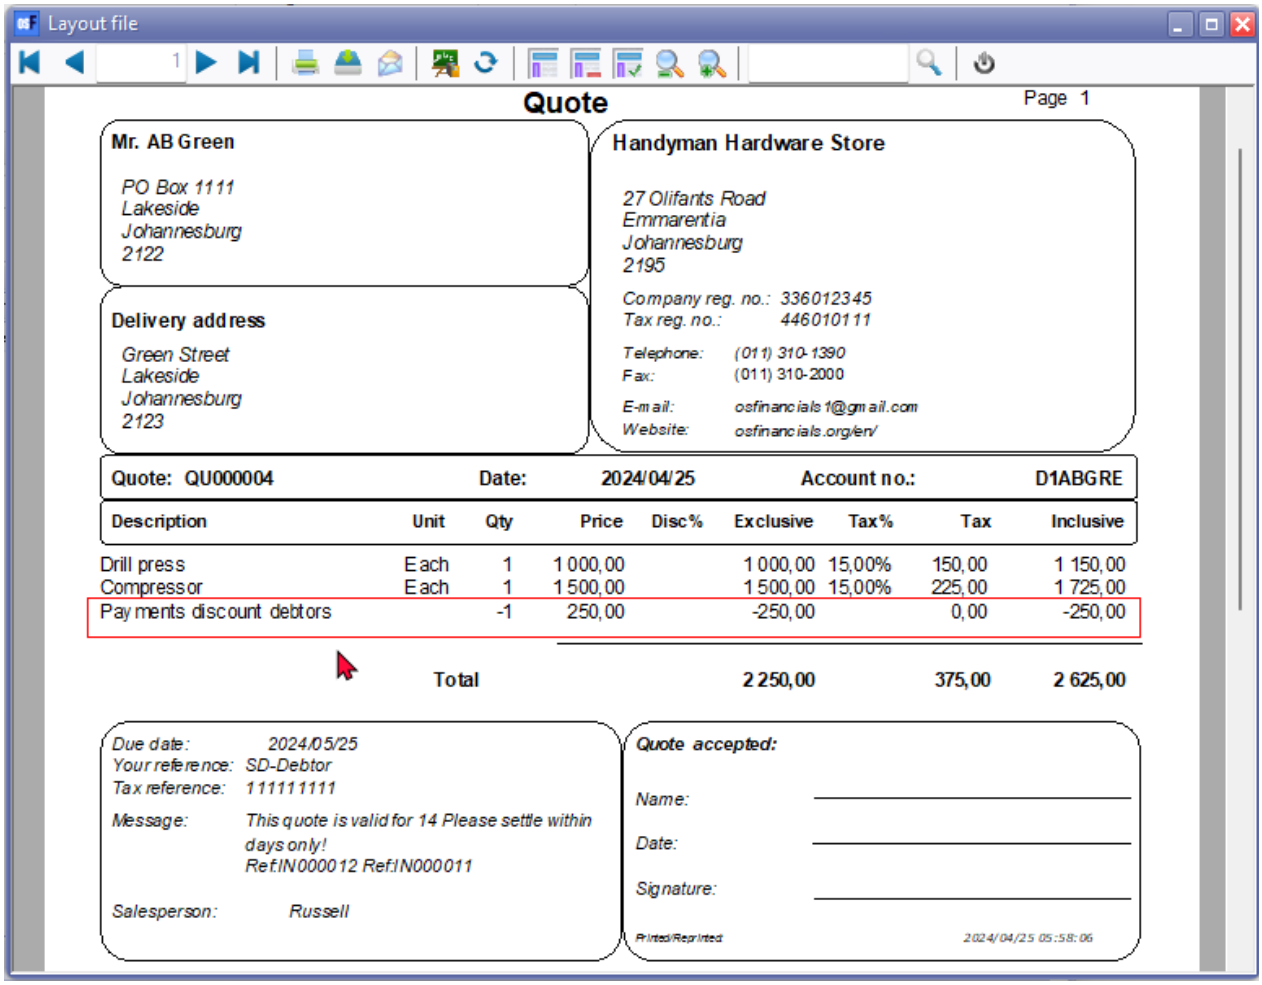
Example : Printed - Credit note with Payment discount applied



Example : Transactions - T-accounts - Posted Credit note with Payment discount applied



Example : Printed - Quote with Payment discount applied



Processing Purchase documents - Payment discount

Once the "*Dynareg Payment discount invoice*" plugin is correctly configured, you can process purchase documents such as purchases, supplier returns, and orders. In the Payment discount tab on the document header, enter the "*Payment discount percentage*".

When purchases and supplier returns are posted or updated to the ledger, the payment discount transactions will be included in the "*Payment discount*" account. However, orders cannot be posted or updated to the ledger and will not generate any transactions. Once an order is accepted and confirmed, it will be converted to a purchase. These converted orders can then be posted or updated to the ledger as purchases.

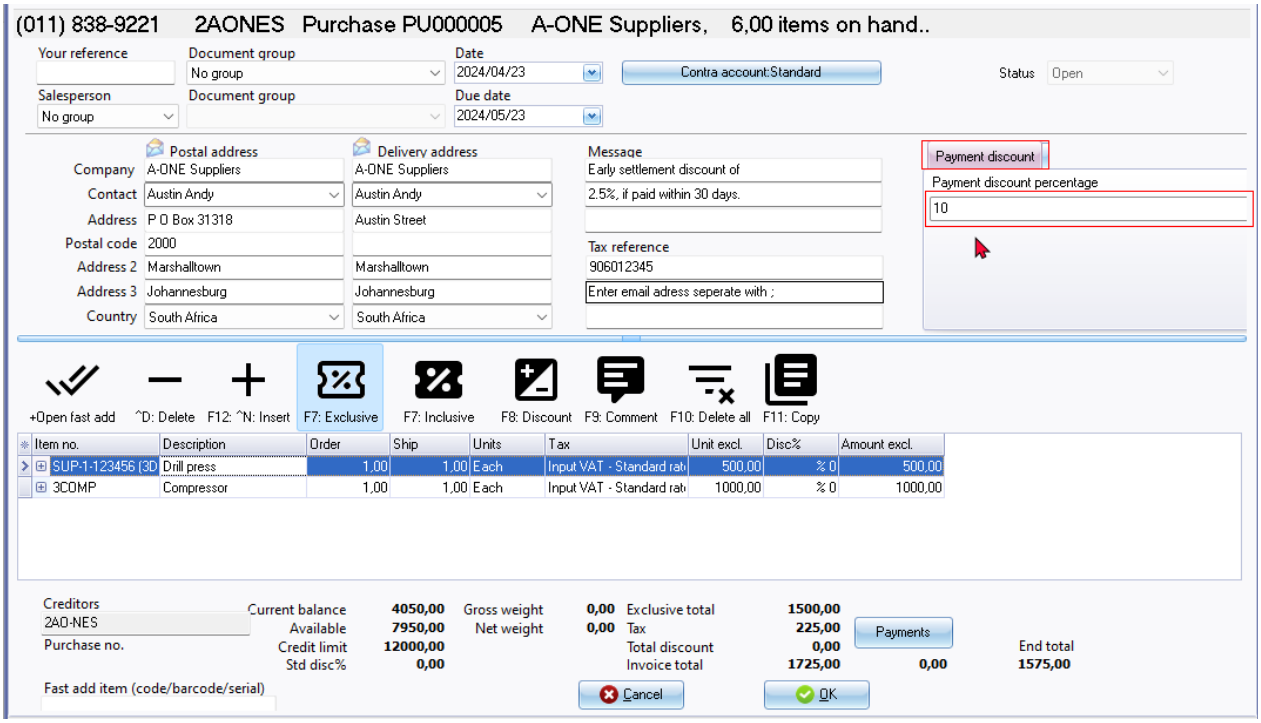
If you choose not to apply a payment discount to the purchases, supplier returns, and orders, simply leave the "*Payment discount percentage*" as "0". Please note that the purchases, supplier returns, and orders will not print the payment discount on the document layout file.

Example Purchase Document Processing Layout and Transaction Screenshots

Now, let's explore an example layout file for purchase, supplier return and order processing, along with screenshots of the related transactions.

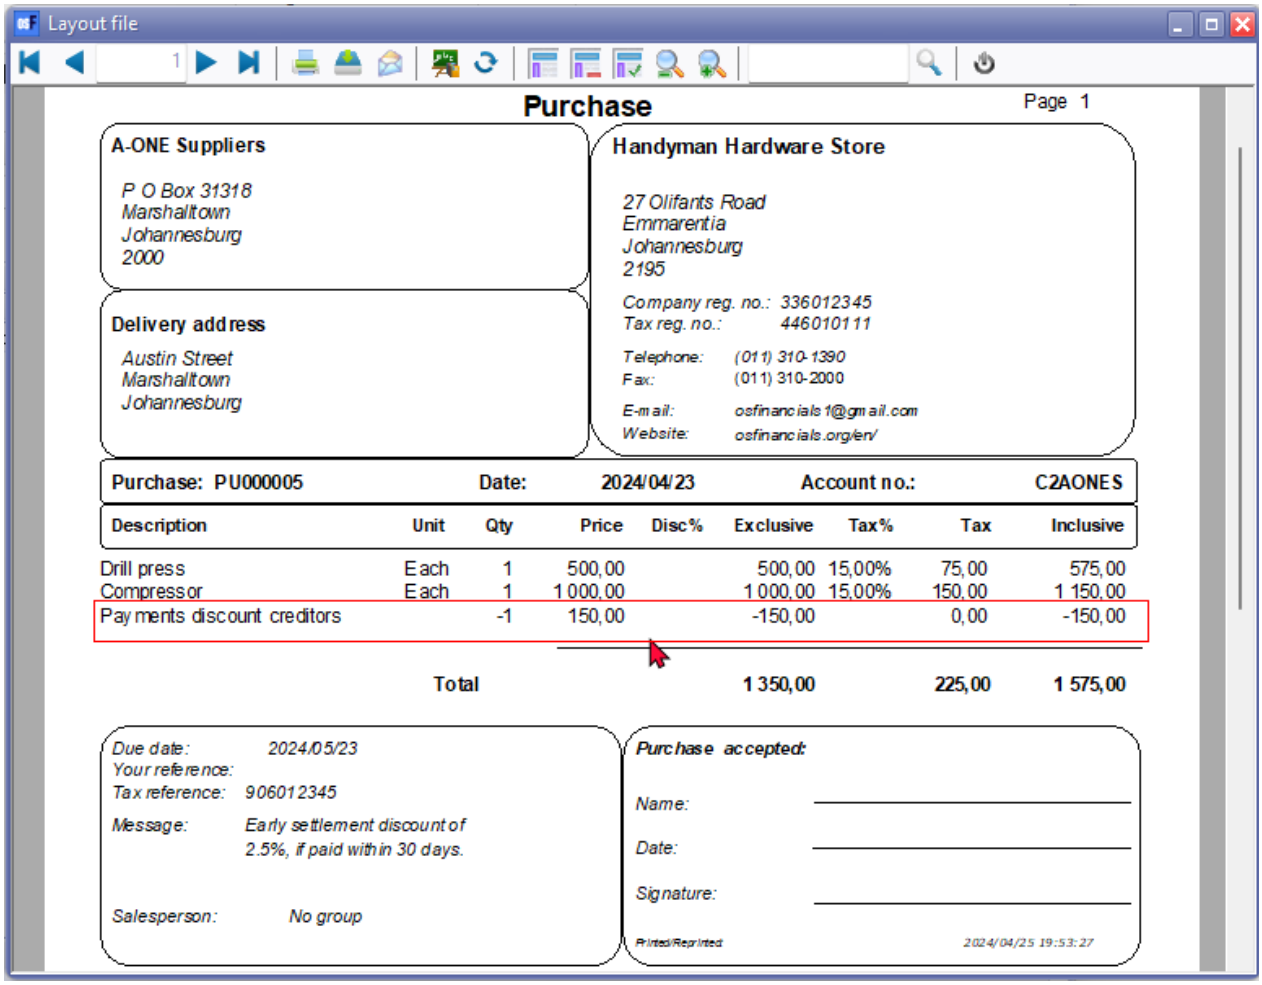
Processing Purchase - Payment discount creditors

When processing invoices, a Payment discount tab is included in the document header. Here, you can enter a percentage discount. This will incorporate the Payment discount into the printed purchase document layout file. The stock item "*Payment discount - creditor*" will be added, and the discount will be calculated based on the total of all items included in the purchase.

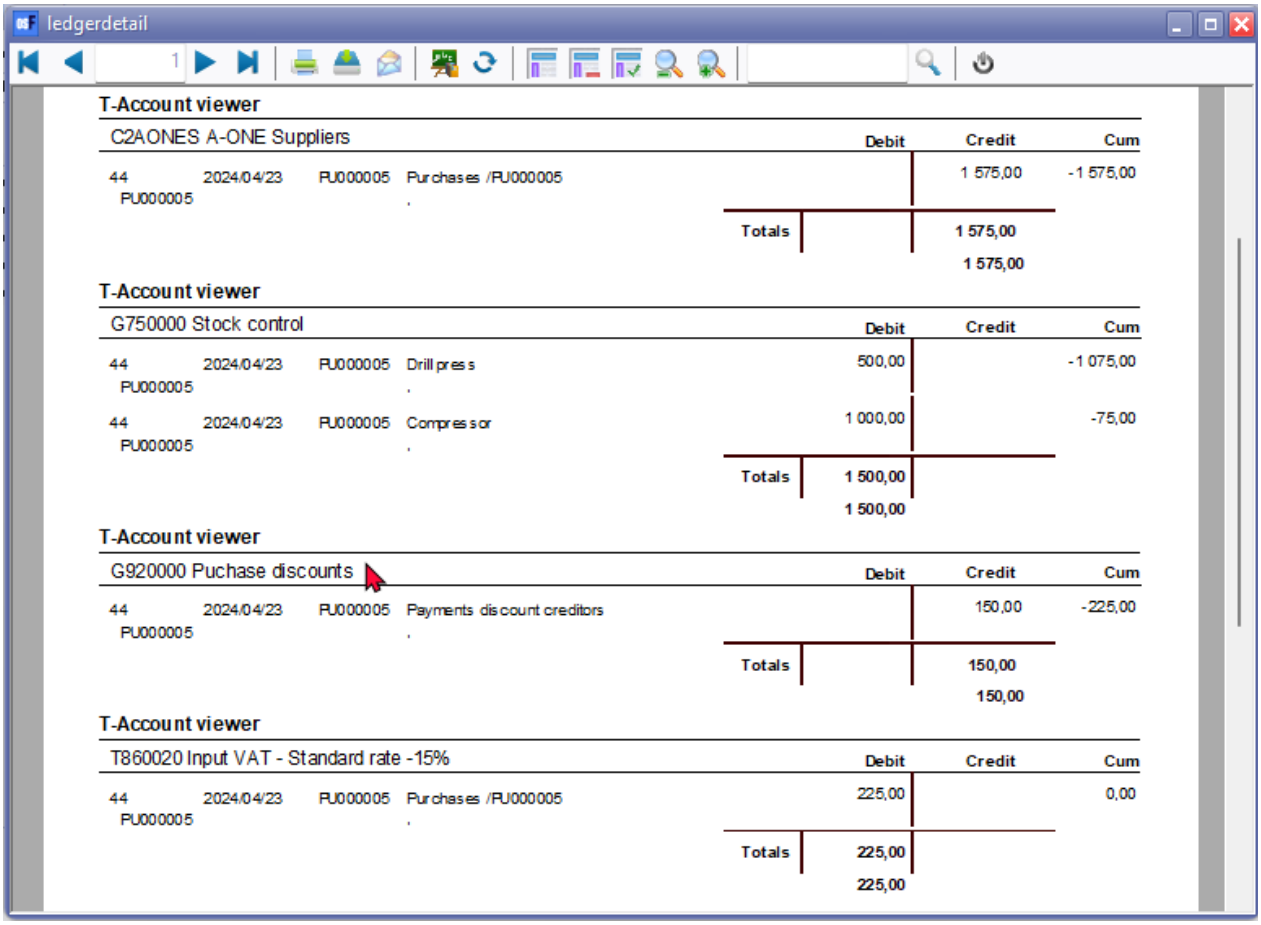


If the purchase has not been posted (updated to the ledger), you can simply edit the purchase without needing to process asupplier return. In such cases, there's no necessity to issue a supplier return. However, if you have edited an purchase, make sure that the edited or changed purchase is forwarded to the supplier.

Example : Printed - Purchase with Payment discount applied

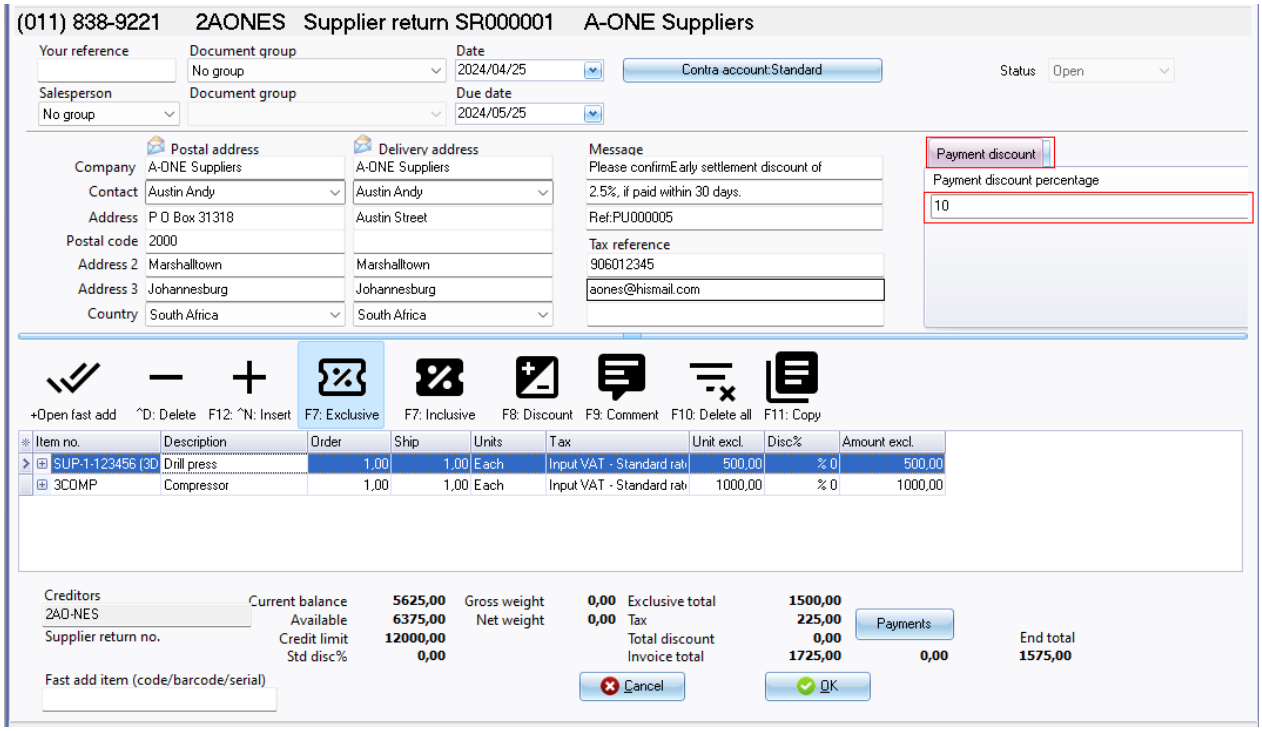


Example : Transactions - T-accounts - Posted Purchase with Payment discount applied

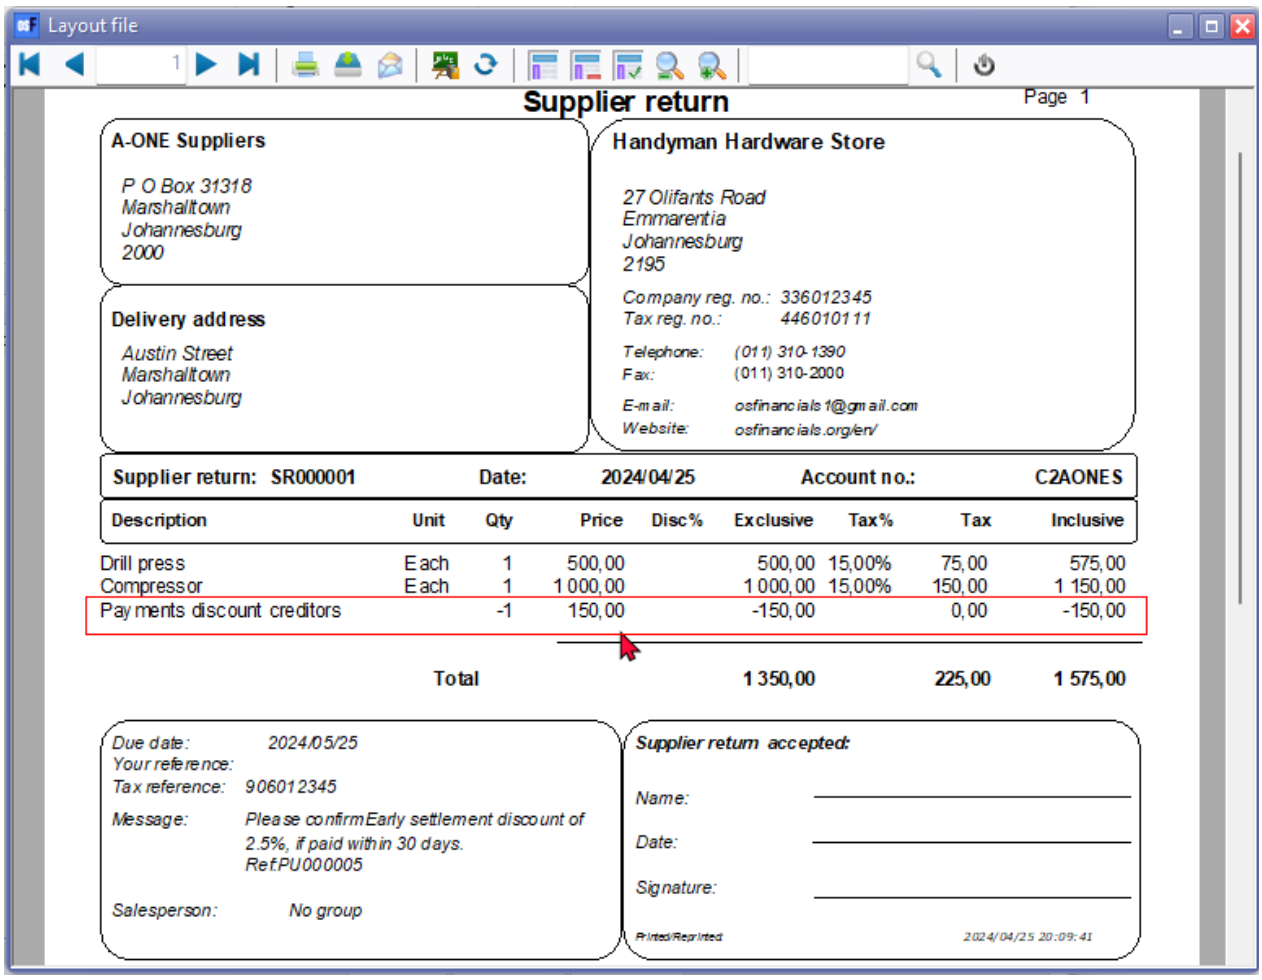


Processing Supplier returns - Payment discount creditors

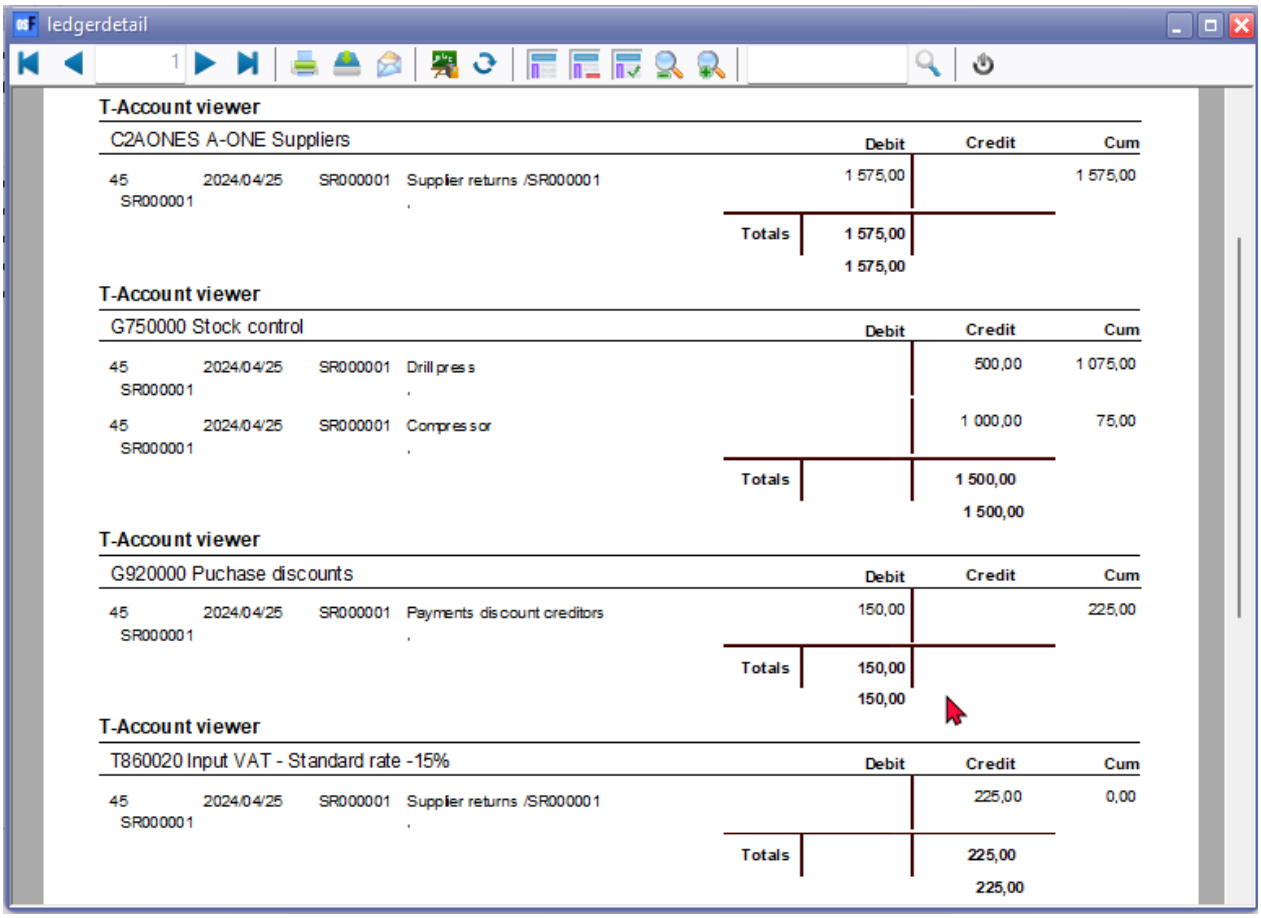
When processing a supplier return to cancel a purchase, remove an item, or adjust the purchase or cost price, ensure that the correct payment discount percentage is included. If a payment discount was applied to the original purchase and it has already been posted to the ledger, it's important to reflect this accurately in the a supplier return.



Example : Printed - Supplier return with Payment discount applied



Example : Transactions - T-accounts - Posted supplier return with Payment discount applied



Example : Printed - Order with Payment discount applied

Dynareg - Shipping costs separately on invoice plugin

Shipping costs separately on invoice plugin - Shop - Licence : Once-off -

Enable : "Verzenden als apart onderdeel"

After processing shipping costs on an invoice using the "Shipping costs separately on invoice" plugin, it's important to reopen your Set of Books after disabling the plugin. Failure to do so may result in encountering an error message when accessing any document type:

```
tblDocHeader: Field 'WSHIPSTOCKID' not found
```

This error indicates that the 'WSHIPSTOCKID' field is missing from the 'tblDocHeader' table.

To resolve this issue, simply reopen your Set of Books. Alternatively, if you intend to continue using this plugin, you may re-enable it.

The "*Dyna - Shipping costs separately on invoice*" plugin will add a "*Shipment*" option in the document header. Once you have added your stock items or products in your document, and you wish to add shipment cost to the document, simply select the shipment item from the drop-down list and enter the shipment amount.

The shipment item and shipment cost will be included when printing document layout file for sales documents (invoices, credit notes and quotes).

When the Invoices and Credit notes is posted (updated to the ledger), it will include the shipping cost transactions.

This option is available on both sales documents (invoices, credit notes, and quotes) as well as purchase documents (purchases, supplier returns and orders).

Activation of the "Dyna - Shipping costs separately on invoice" plugin

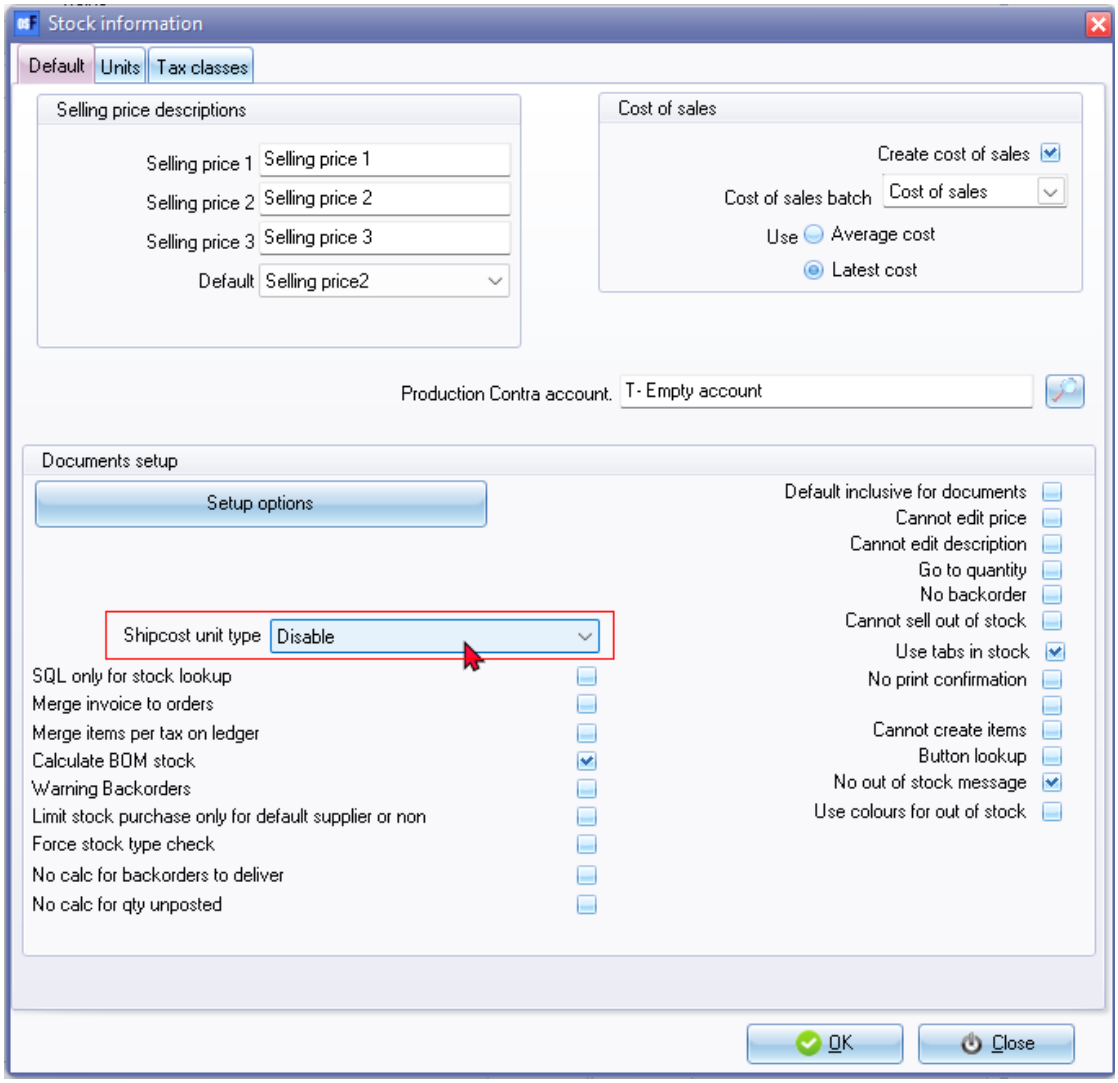
To activate the "Dyna - Shipping costs separately on invoice" plugin follow these steps:

1. Access Plugins: Navigate to Plugins → Tools → DYNADBREG menu.
2. Enable the plugin: Select the "*Verzenden als apart onderdeel*" option and click Enable.
3. Reopen Set of Books: Once you've enabled the DYNADBREG, reopen your Set of Books. This step is essential for the changes to take effect.

Configuration Set of Books for the "Dyna - Shipping costs separately on invoice" plugin

After activating the "*Dyna - Shipping costs separately on invoice" plugin*, you need to reopen your Set of Books for the plugin to take effect. Once you have reopened your Set of Books, follow these steps to set up your configuration:

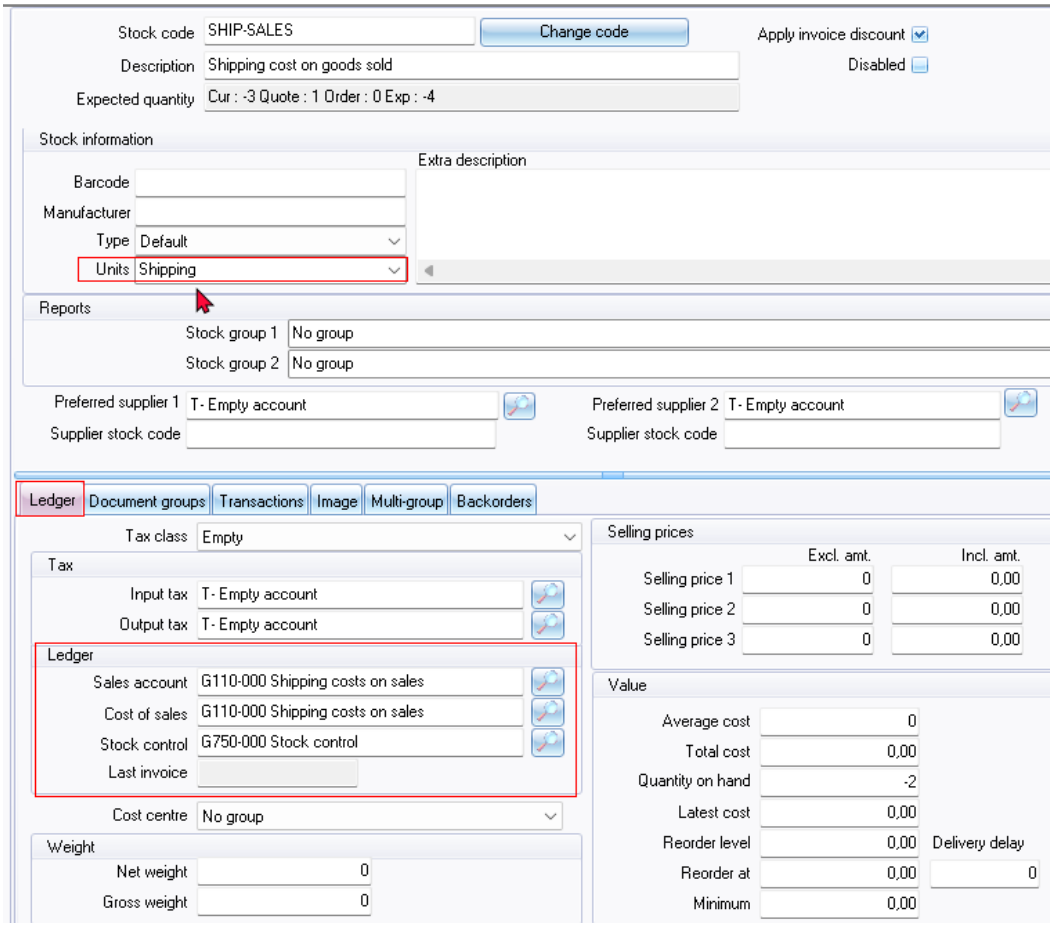
1. Setup Shipcost Unit Type:
    - After reopening your Set of Books, go to Setup → Stock Information (Setup ribbon).
    - You'll notice a new option labeled "*Shipcost unit type*" added to the Stock Information setup.



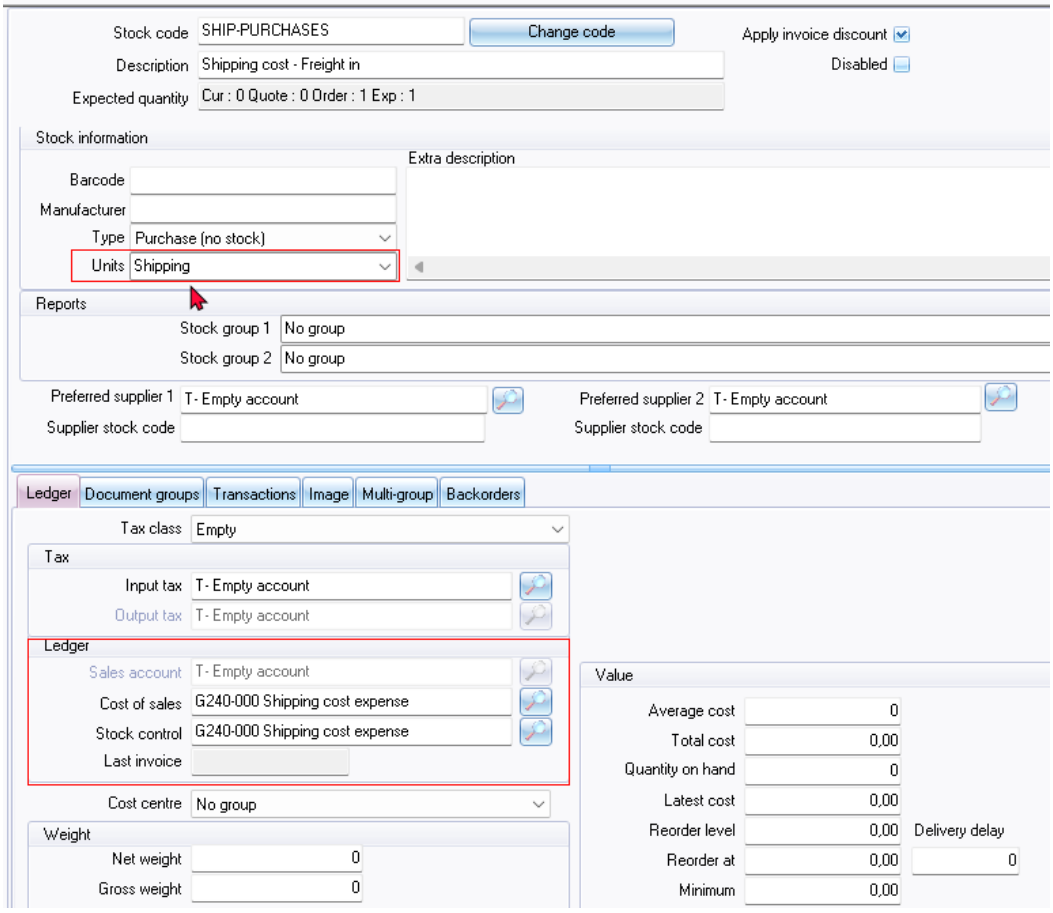
- Initially, the setting is likely to be "*Disabled*."
- To enable the plugin, select a unit description from the list. If there's no suitable unit available, you may need to add a new unit (Units tab on Stock Information screen). For example, you can add "*Shipping*" as a unit.

2. Setup Ledger Accounts:
   - Locate the appropriate ledger accounts for shipping costs associated with sales and purchases in your chart of accounts to record transactions related to shipping costs for both sales and purchases. You can locate the shipping cost accounts in your Trial Balance. If you cannot find the appropriate accounts for shipping costs, you may create or add them in Setup → Accounts on the Setup ribbon.
   - These accounts will be linked to a stock items for shipping costs in the next step.
3. Add Stock Items for Shipment:
   - Add stock items for shipment in the Stock items (Default ribbon).
   - Link these stock items to the "*Shipping*" unit that you've added or selected.
     - Shipping cost for sales - Select the appropriate ledger account to record the

transactions for sales related to shipping cost.



§ Shipping cost for purchases - Select the appropriate ledger account to record the transactions for purchases related to shipping cost.



- If Tax VAT/GST/Sales tax applies to shipping costs in your jurisdiction, it is important to select the correct tax code. For shipping costs on sales documents, Output Tax may be applicable. For shipping costs on purchase documents, Input Tax may be applicable.

  IMPORTANT: In these simplified examples, for processing shipping costs on sales documents and purchase documents, Tax is not included on shipping cost transactions.

Once these configurations are completed, you are ready to utilise the "*Dyna - Shipping costs separately on invoice*" plugin for both sales documents, including invoices, credit notes and quotes; and purchase documents, including purchases, supplier returns, and orders. These settings ensure that the plugin functions correctly and records shipping accurately in your Set of Books.

Processing Shipping Costs in Sales Documents

Once the "*Dyna - Shipping costs separately on invoice*" plugin is correctly configured, it will add a "*Shipment*" option in the document header, You can process sales documents such as invoices, credit notes, and quotes. In the Shipment section on the document header, select the relevant shipping cost stock item from the drop-down list and enter the "*Shipment amount*".

When invoices and credit notes are posted or updated to the ledger, the transactions shipment will be included in the "*Shipping cost*" account. However, quotes cannot be posted or updated to the ledger and will not generate any transactions. Once a quote is accepted and confirmed, it will be converted to an

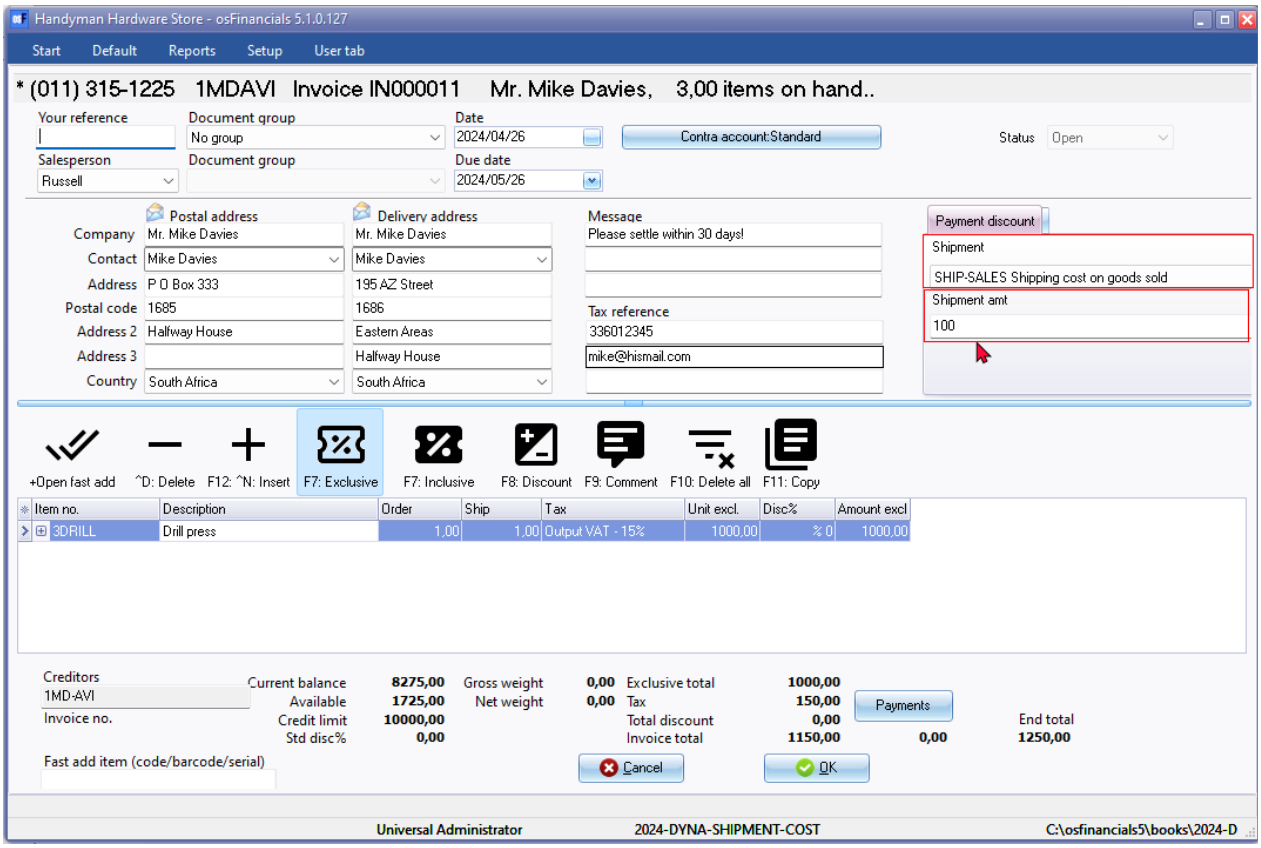
invoice. These converted quotes can then be posted or updated to the ledger as invoices.

If you choose not to apply a shipping cost to the invoice, simply leave the "*Shipment amount*" as "0". Please note that the invoices, credit notes, and quotes will not print the shipping cost on the document layout file.

Examples Sales Document Processing Layout and Transaction Screenshots

Now, let's explore an example layout file for invoice, credit note, and quote processing, along with screenshots of the related transactions.

Processing Shipping Costs in Invoices

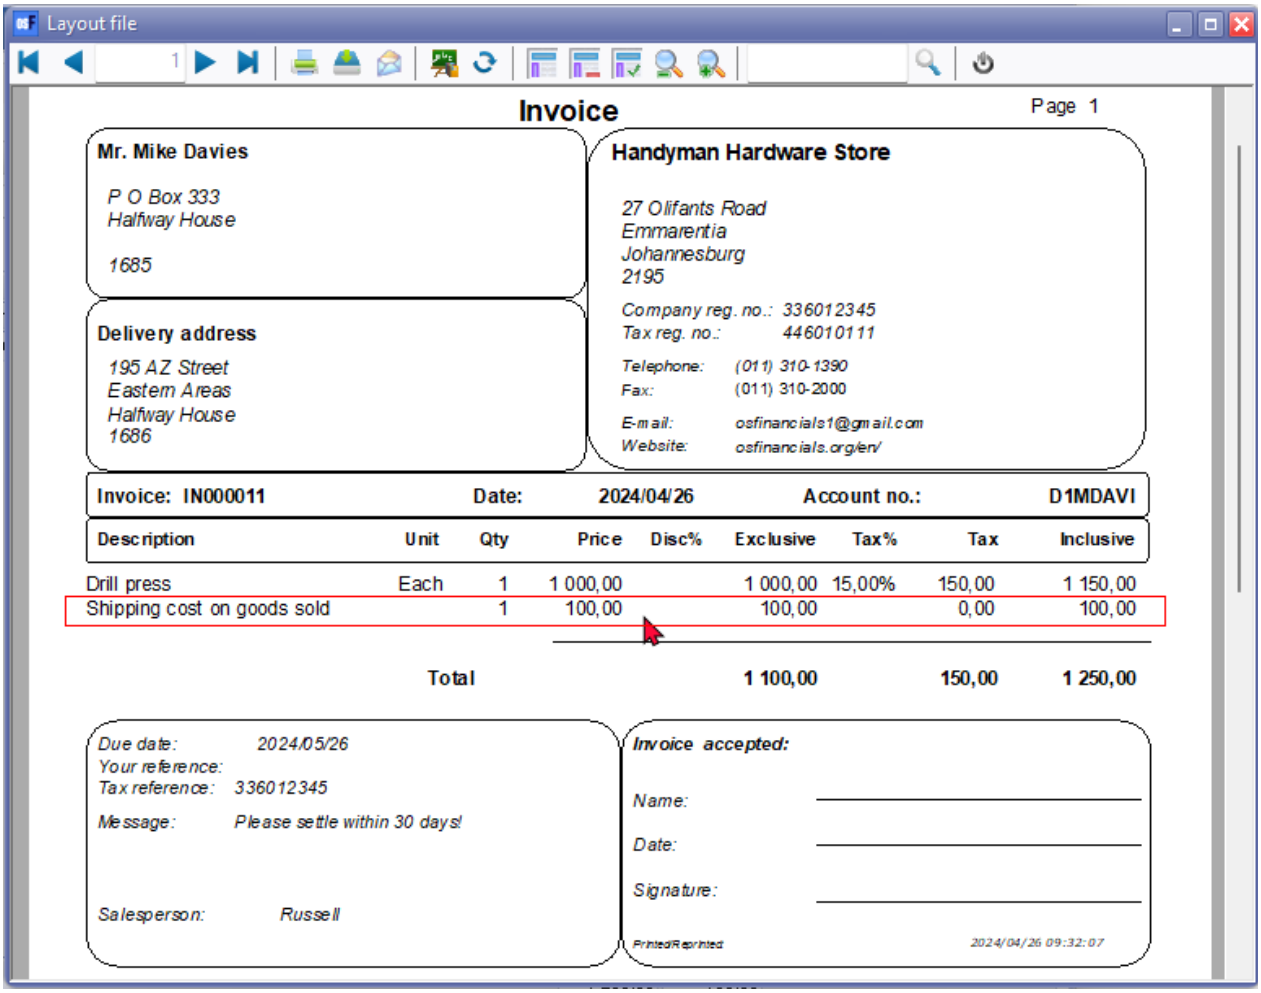


If the amount entered in the Shipment amount field of the document entry screen is 0, no shipping cost will be included in the invoice.

If the invoice has not been posted (updated to the ledger), you can simply edit the invoice without needing to process a credit note. In such cases, there's no necessity to issue a credit note. However, if you have edited an invoice, make sure that the edited or changed invoice is forwarded to the customer.

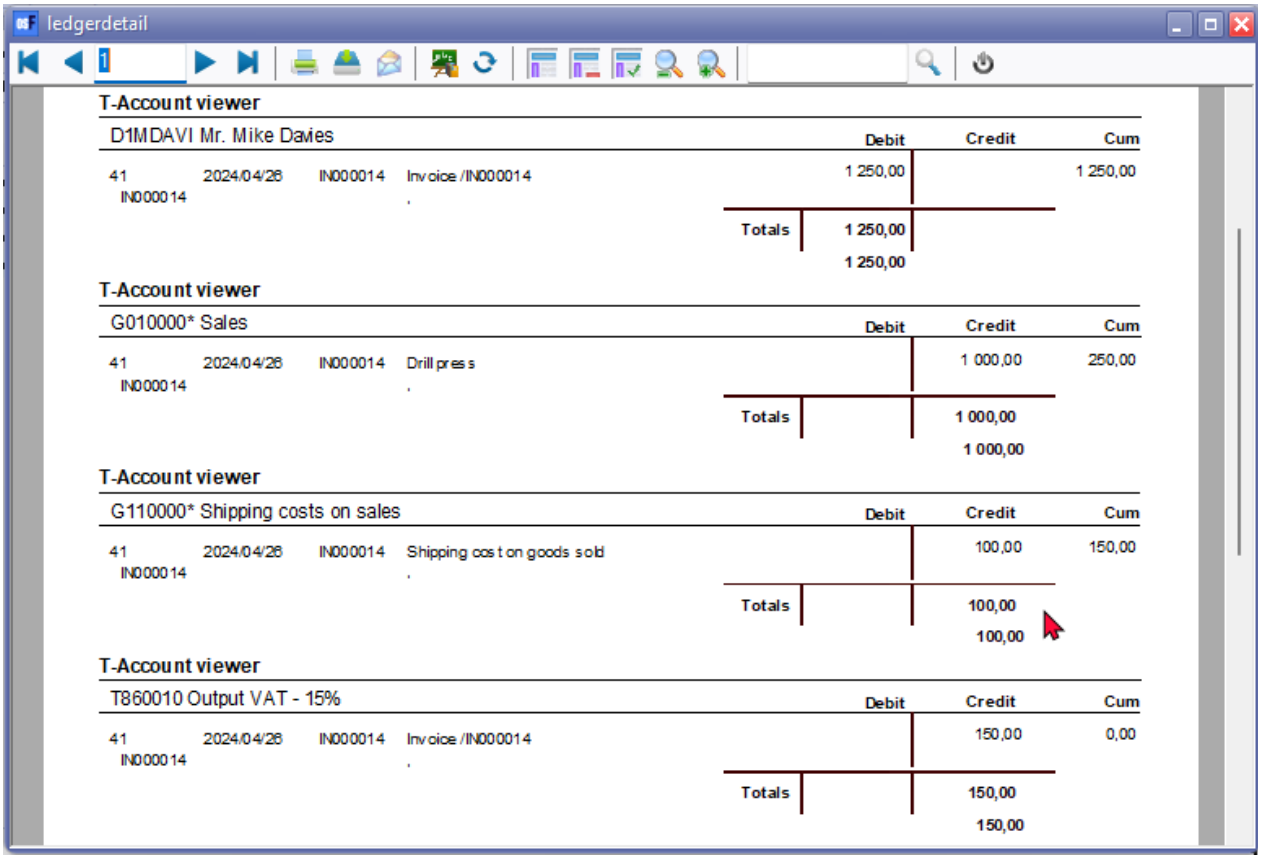
Example : Printed - Invoice with Shipping cost

If you have selected a product and a shipment stock item, and entered a shipment amount, the shipping stock item will be added to the document layout file. In the case of an invoice, the debtor (customer/client) will be invoiced to pay for the selected stock items (products) and the shipping costs.



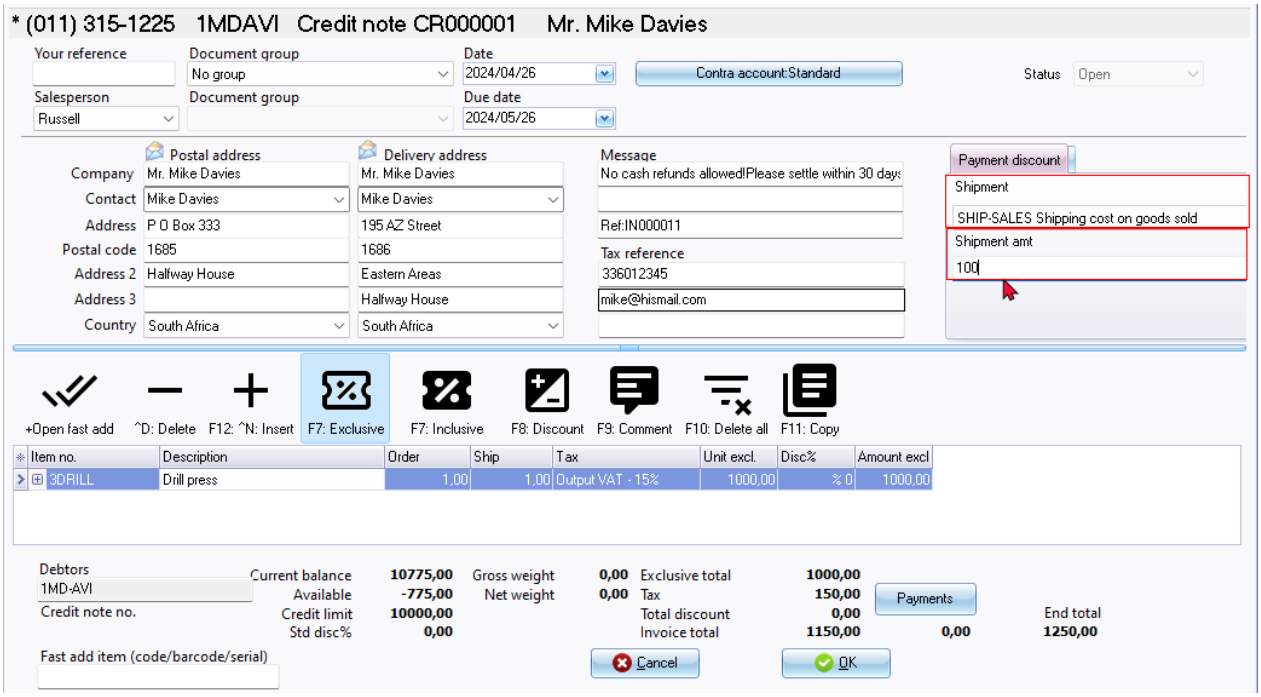
If the amount entered in the Shipping amount field of the document entry screen is 0, no shipping cost will be included in the invoice.

Example : Transactions - Invoice with Shipping cost

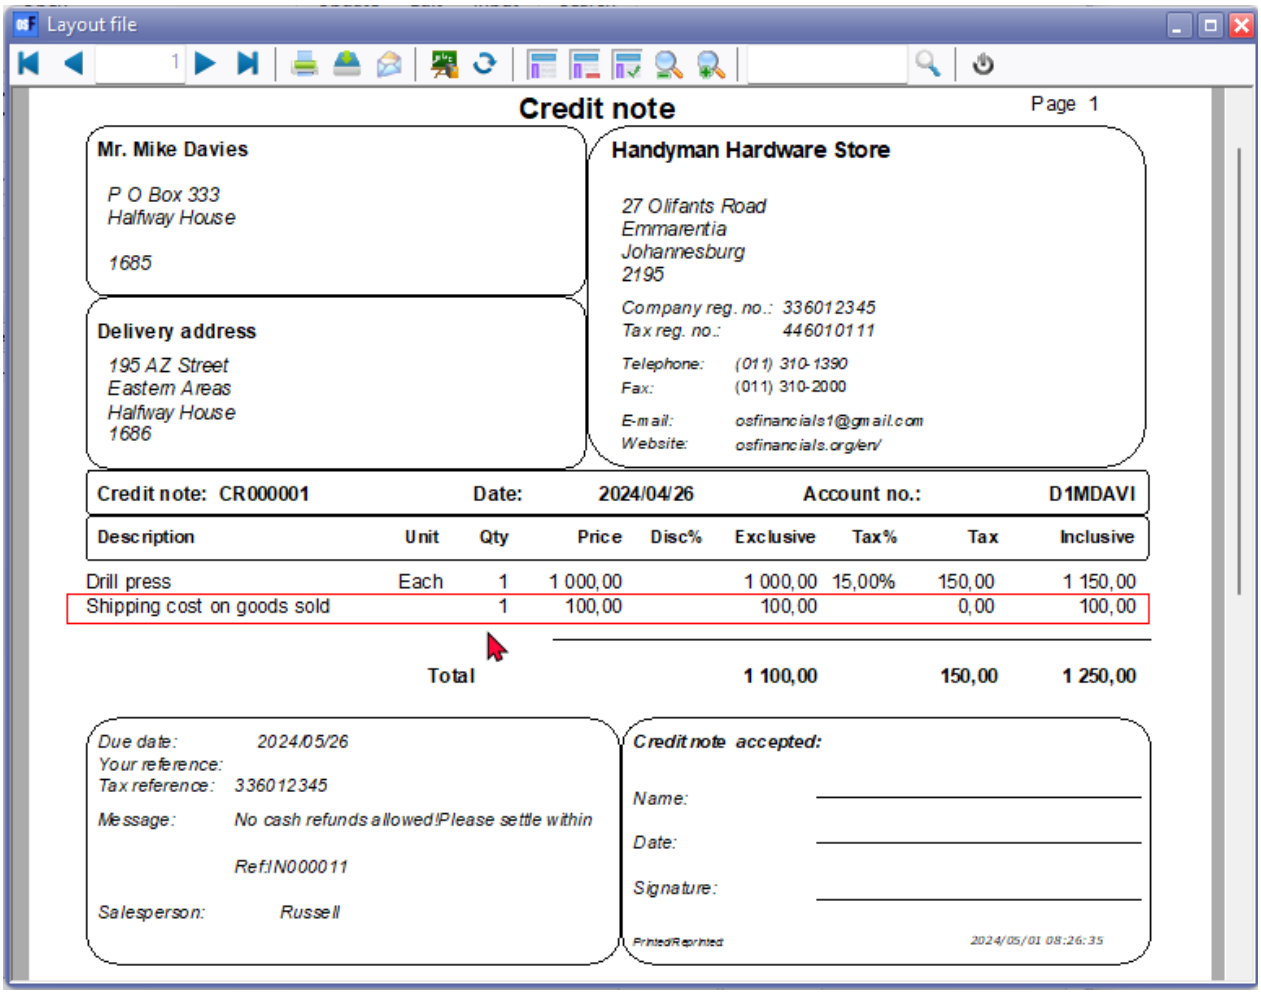


Processing Shipping Costs in Credit notes

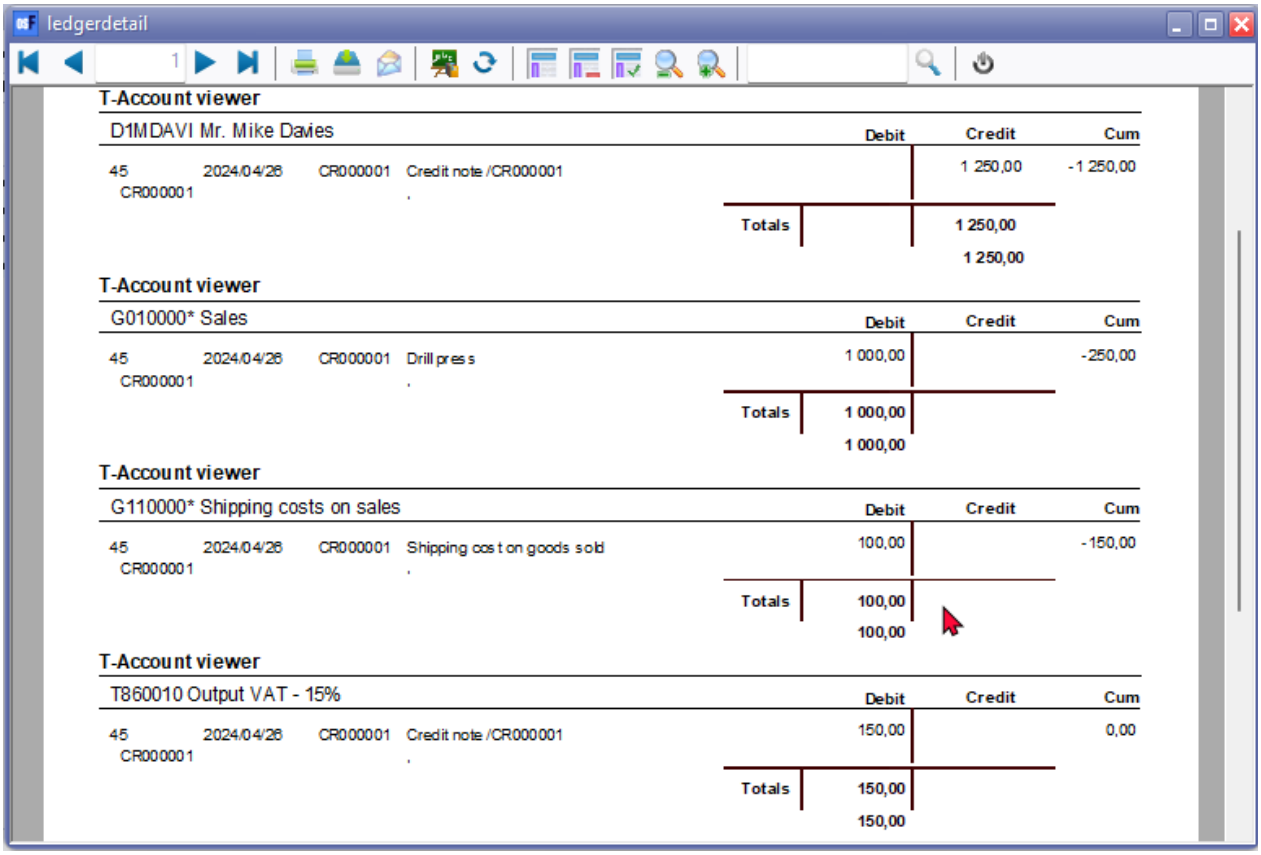
When processing credit notes to cancel an invoice, remove an item, or adjust the selling price, ensure that the correct shipping cost is included. If a shipment cost was applied to the original invoice and it has already been posted to the ledger, it's important to reflect this accurately in the credit note.



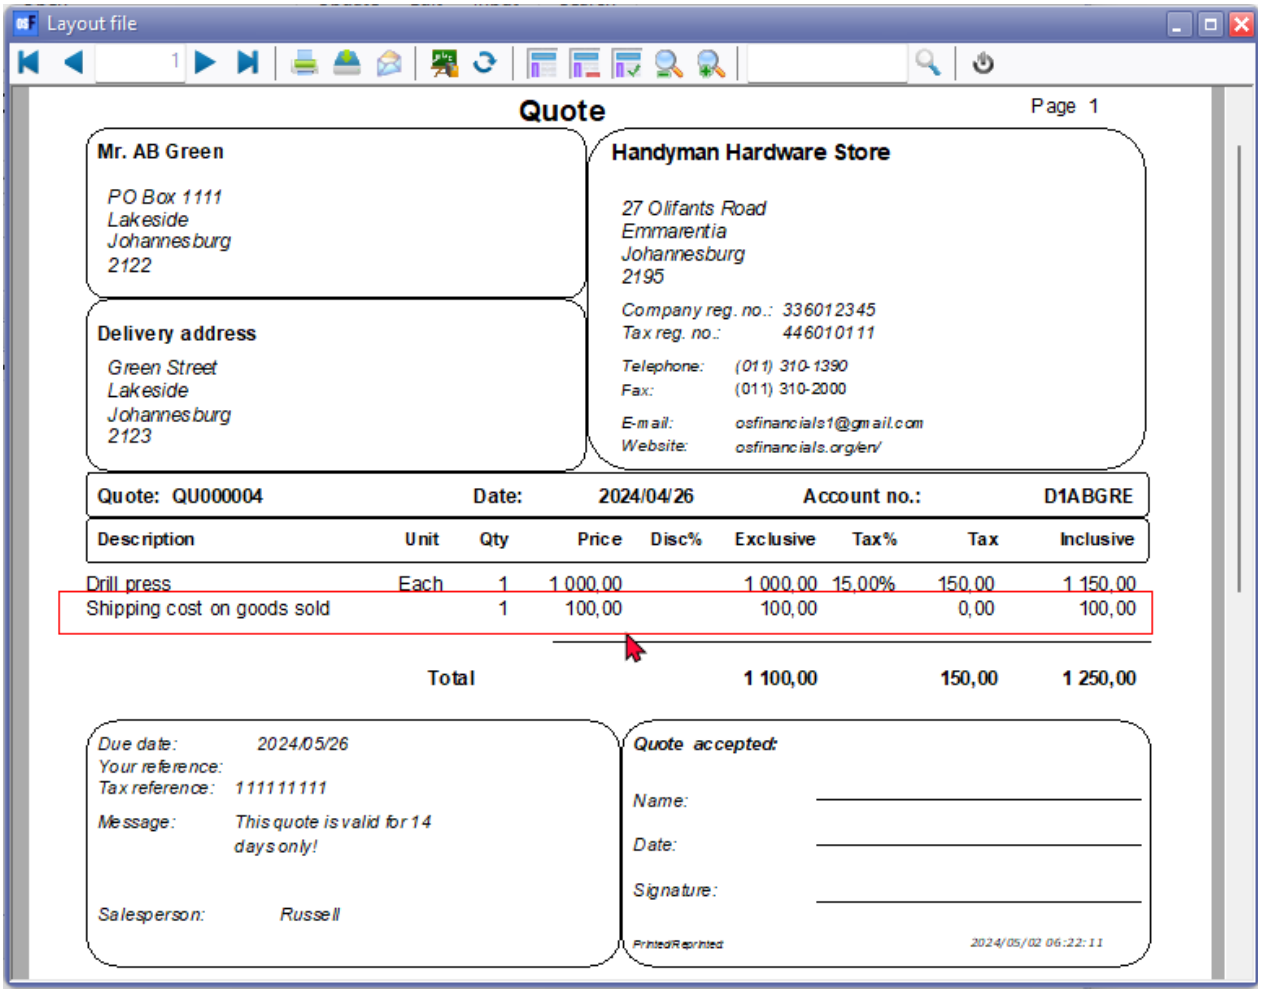
Example : Printed - Credit note with Shipping cost



Example : Transactions - Credit note with Shipping cost



Example : Printed - Quote with Shipping cost



Processing Purchase documents - Shipping cost

Once the "*Dyna - Shipping costs separately on invoice*" plugin is correctly configured, it will add a "*Shipment*" option in the document header, You can process purchase documents such as purchases, supplier returns, and orders. In the Shipment section on the document header, select the relevant shipping cost stock item from the drop-down list and enter the "*Shipment amount*".

When purchases and supplier returns are posted or updated to the ledger, the transactions shipment will be included in the "*Shipping cost*" account. However, orders cannot be posted or updated to the ledger and will not generate any transactions. Once an order is accepted and confirmed, it will be converted to a purchase. These converted orders can then be posted or updated to the ledger as purchases.

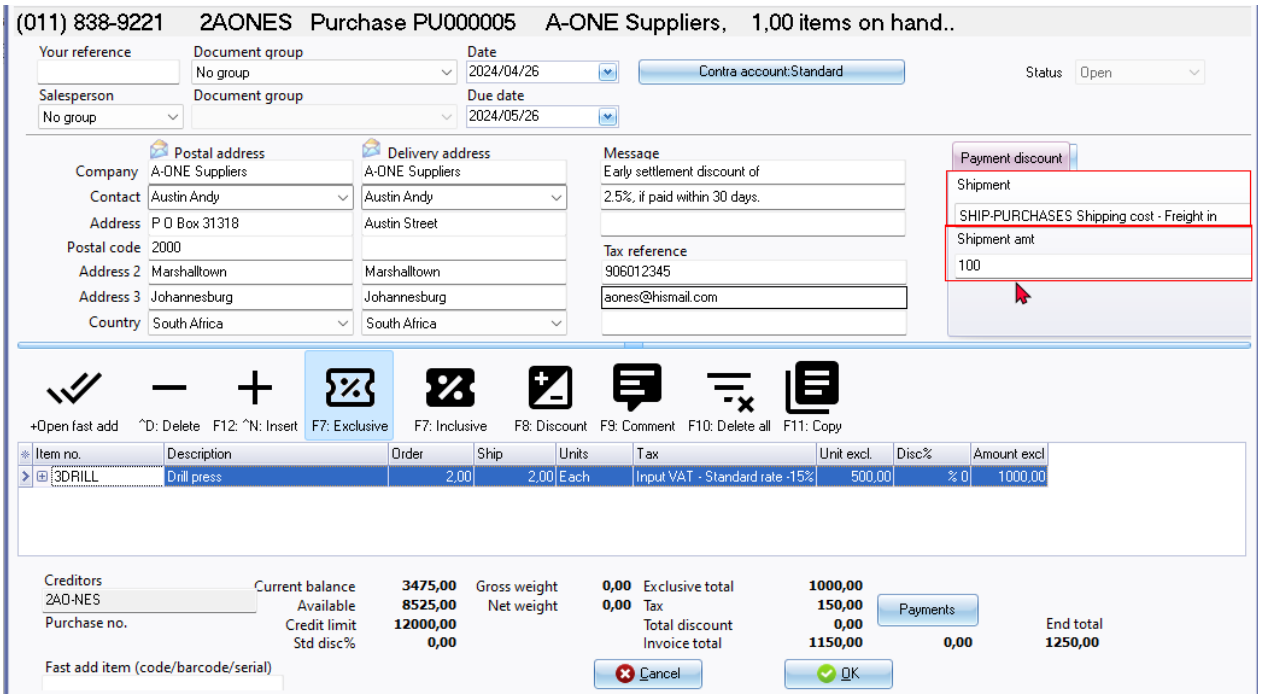
If you choose not to apply a shipping cost to purchases, supplier returns, and orders, simply leave the "*Shipment amount*" as "0". Please note that the purchases, supplier returns, and orders will not print the shipping cost on the document layout file.

Example Purchase Document Processing Layout and Transaction Screenshots

Now, let's explore an example layout file for purchase, supplier return and order processing, along with screenshots of the related transactions.

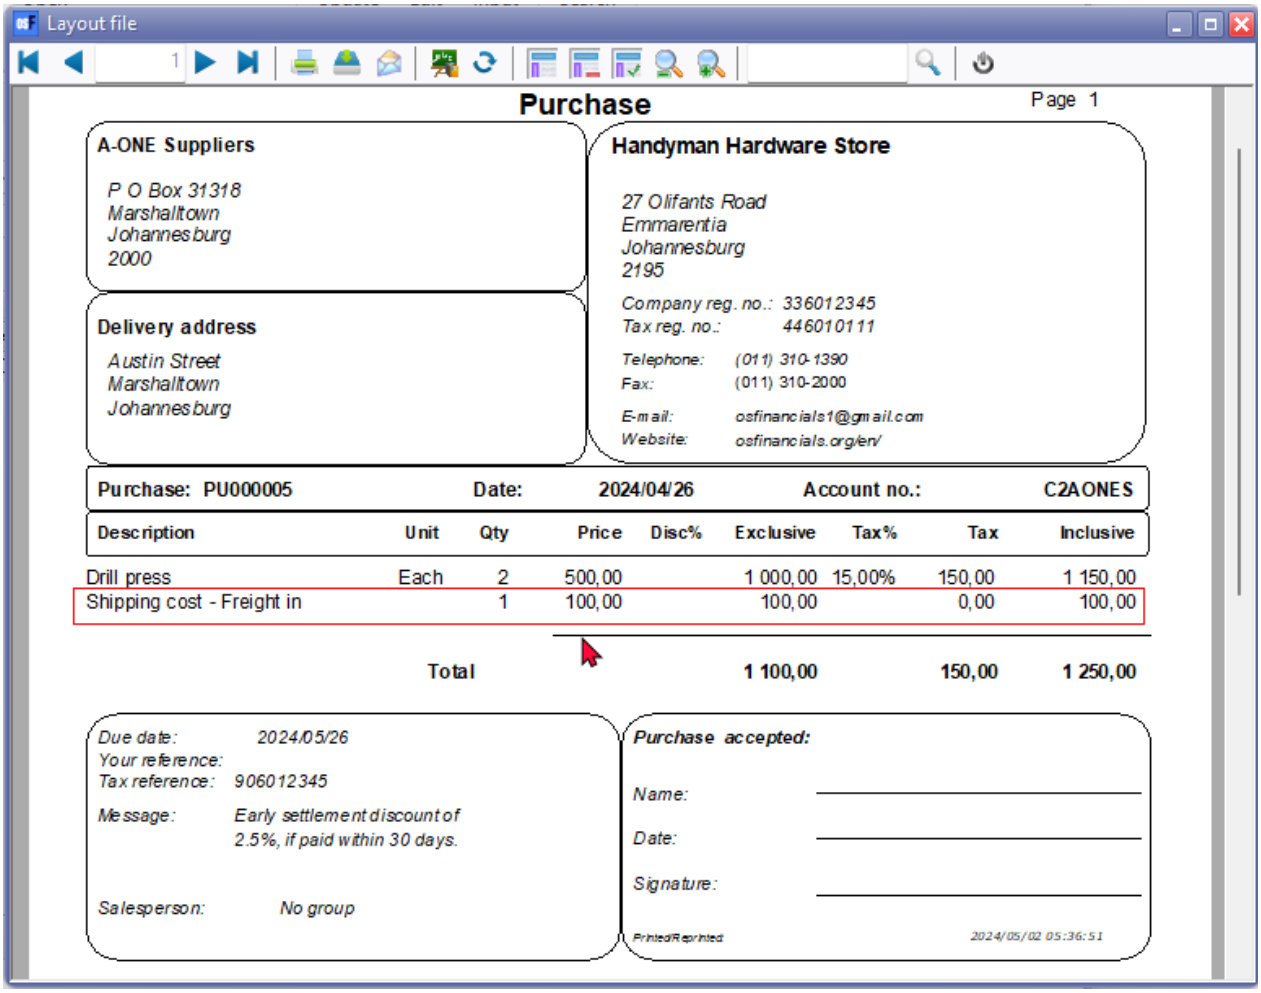
Processing Purchase with Shipping cost on purchases

When processing invoices, a Payment discount tab is included in the document header. Here, you can enter a percentage discount. This will incorporate the Payment discount into the printed purchase document layout file. The stock item "*Payment discount - creditor*" will be added, and the discount will be calculated based on the total of all items included in the purchase.

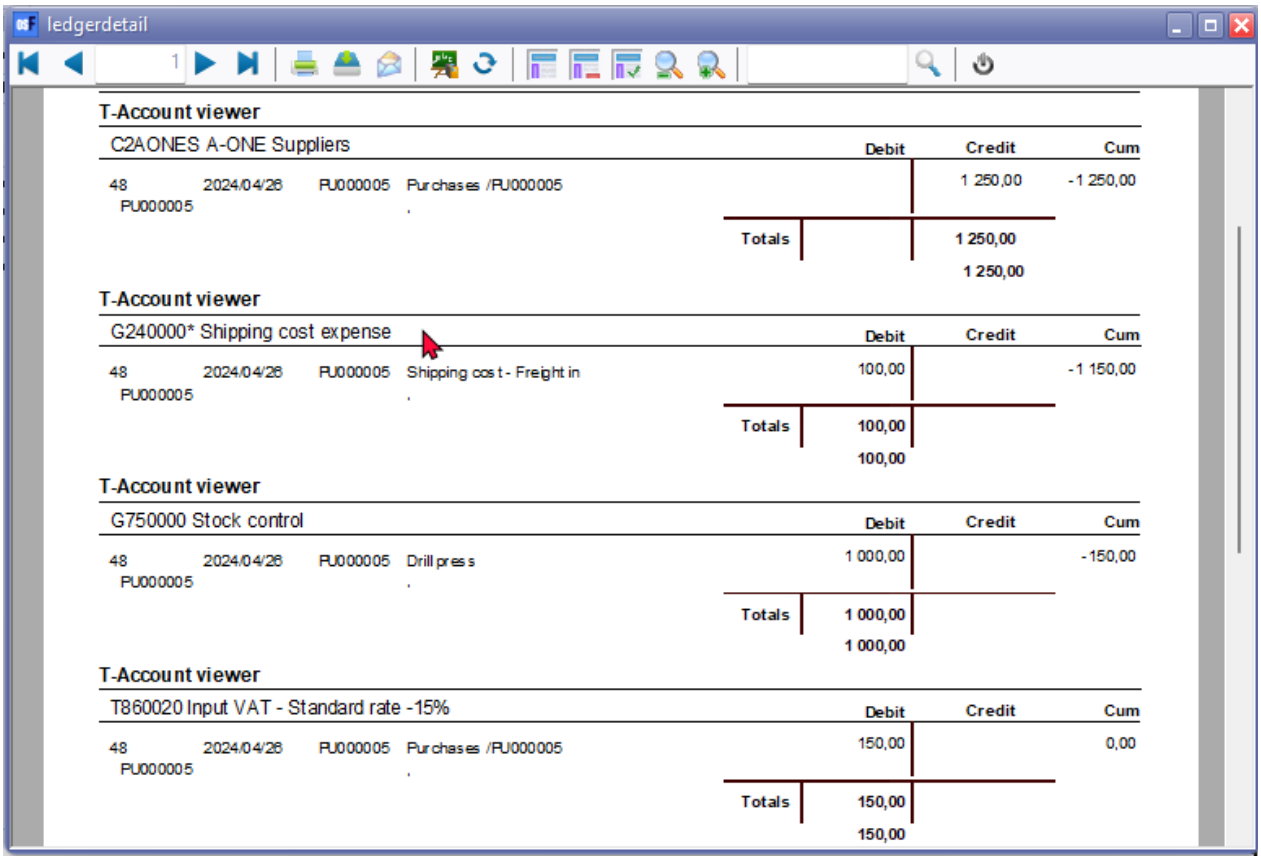


If the purchase has not been posted (updated to the ledger), you can simply edit the purchase without needing to process a supplier return. In such cases, there's no necessity to issue a supplier return. However, if you have edited an purchase, make sure that the edited or changed purchase is forwarded to the supplier.

Example : Printed - Purchase with Shipping cost on purchases

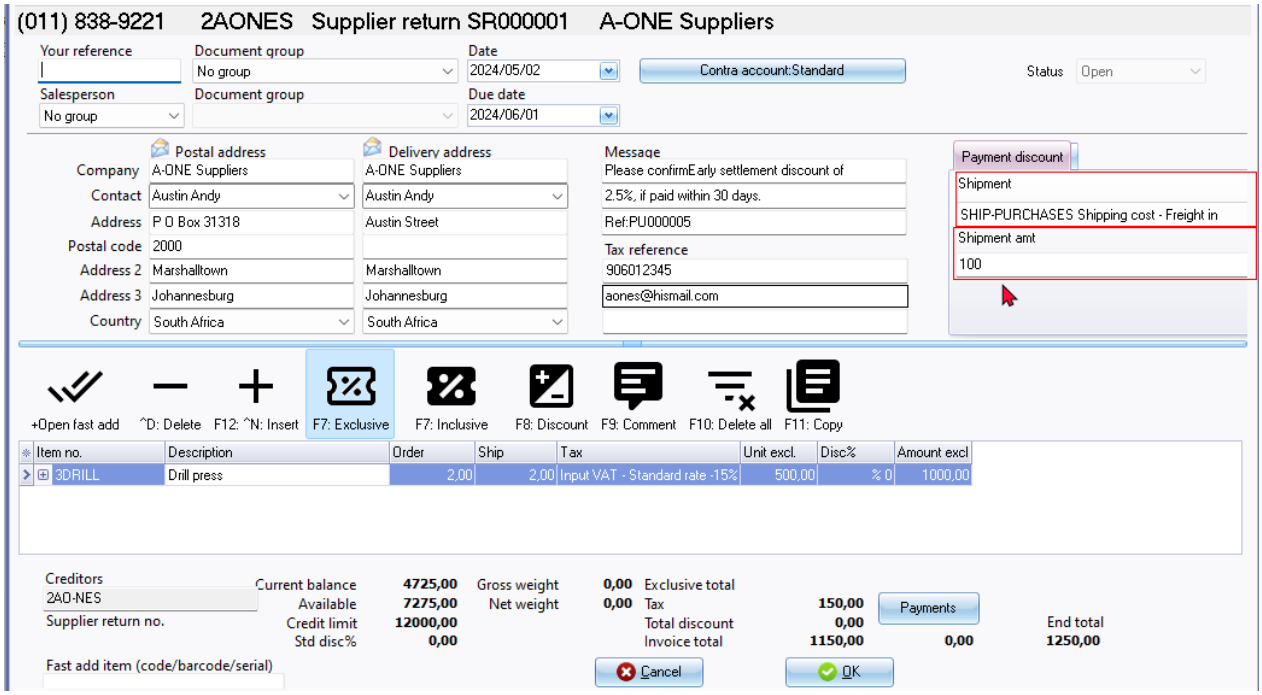


Example : Transactions - T-accounts - Posted Purchase with Shipping cost on purchases

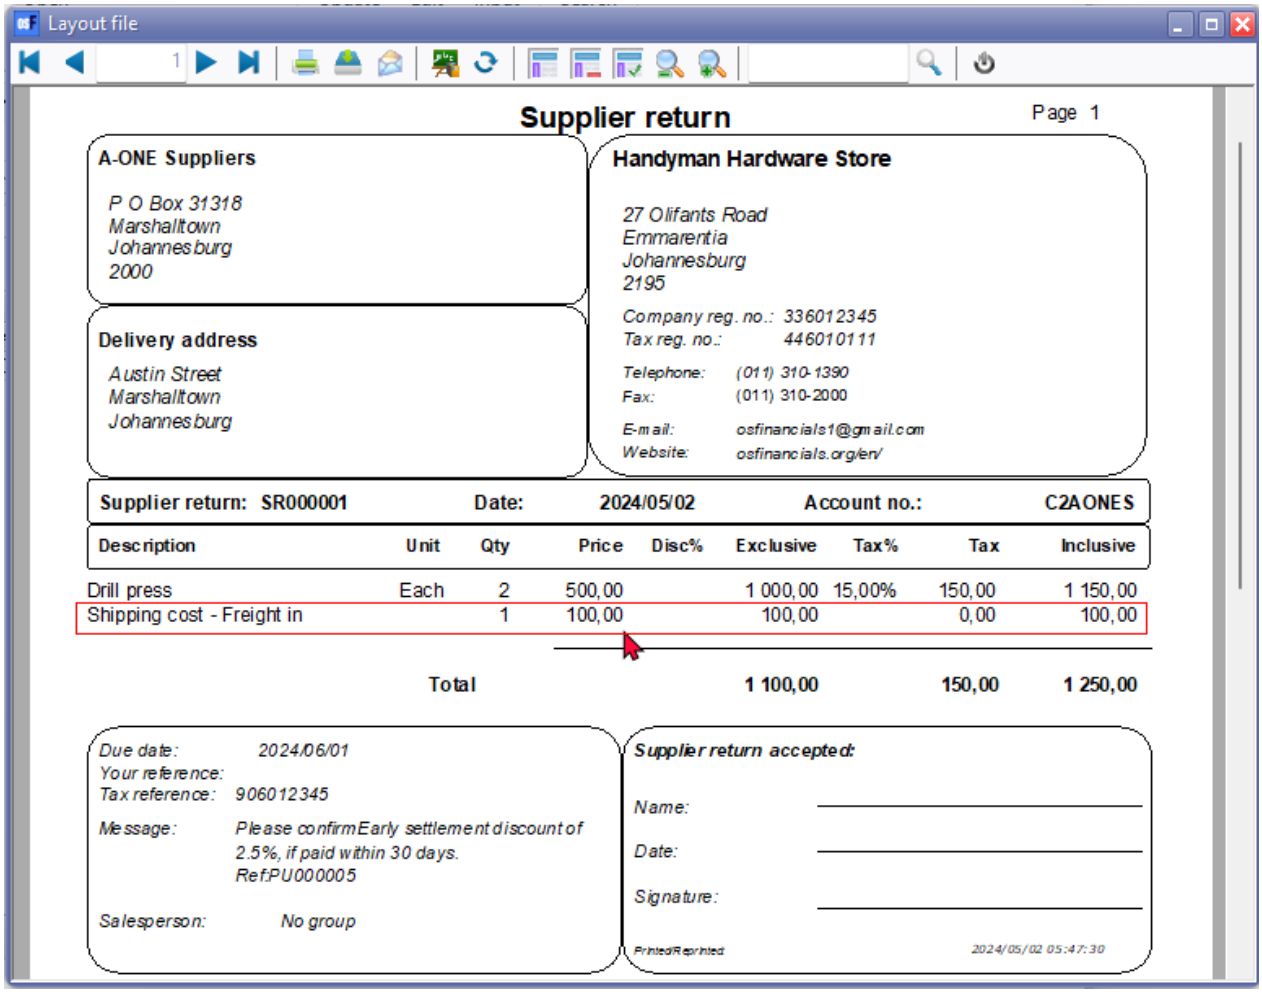


Processing Supplier returns with Shipping cost on purchases

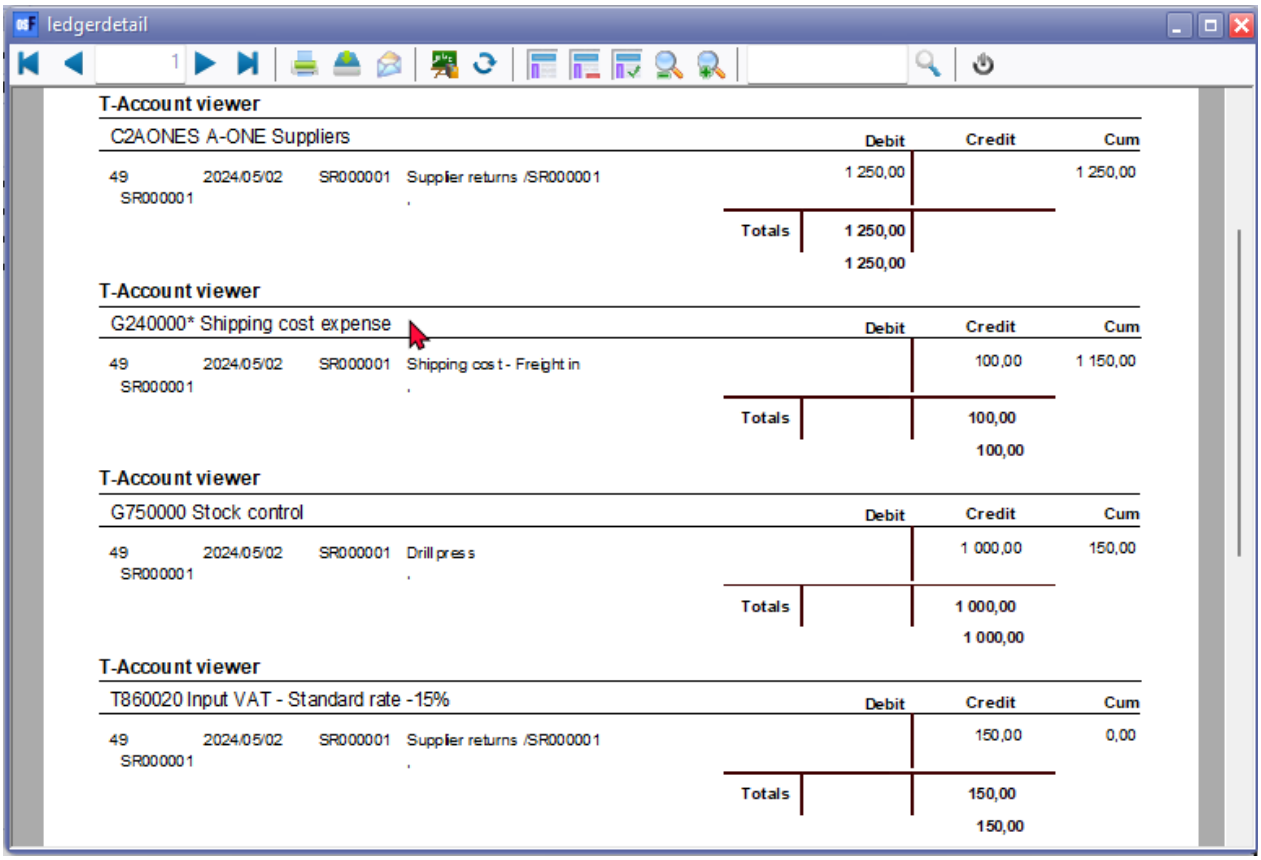
When processing a supplier return to cancel a purchase, remove an item, or adjust the purchase or cost price, ensure that the correct shipment cost is included. If a shipment cost was included to the original purchase and it has already been posted to the ledger, it's important to reflect this accurately in the a supplier return.



Example : Printed - Supplier return with Shipping cost on purchases



Example : Transactions - T-accounts - Posted supplier return with Shipping cost on purchases



Example : Printed - Order with Shipping cost on purchases

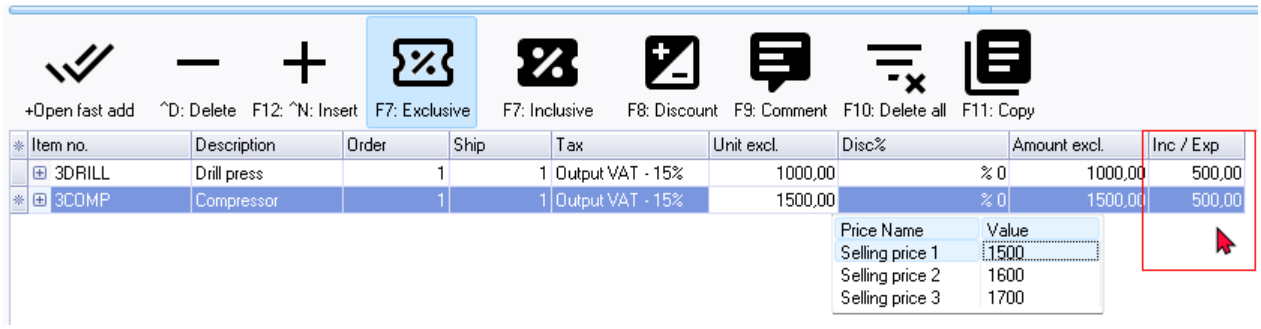
Dynareg - Bruto margin in documents plugin

Dynareg Bruto margin in documents plugin - Shop - Licence : Once-off -

Enable : "Bruto winst in documenten"

The "*Dynareg Bruto Margin in Documents*" plugin for osFinancials5/TurboCASH5 is a valuable tool for businesses looking to manage their margins more effectively. By providing an additional column in sales documents, (invoices, credit notes and quotes) that displays the average purchase price or latest cost price of a product. The gross margin is the difference between the selling price and the average purchase price

or latest cost price of a product, it offers users the ability to assess the impact of discounts or reductions on their overall margins.



This column will not be available on purchase documents (purchases, supplier returns and orders).

This real-time adjustment feature is particularly useful, as it enables businesses to instantly see how changes in margins per line affect the total margin of all products. This level of visibility can help businesses make more informed decisions about pricing strategies and discounting practices, ultimately leading to better financial performance.

Overall, it seems like a plugin that could greatly enhance the analytical capabilities of osFinancials5/TurboCASH5 users, providing them with valuable insights into their margins and helping them optimize their pricing strategies.

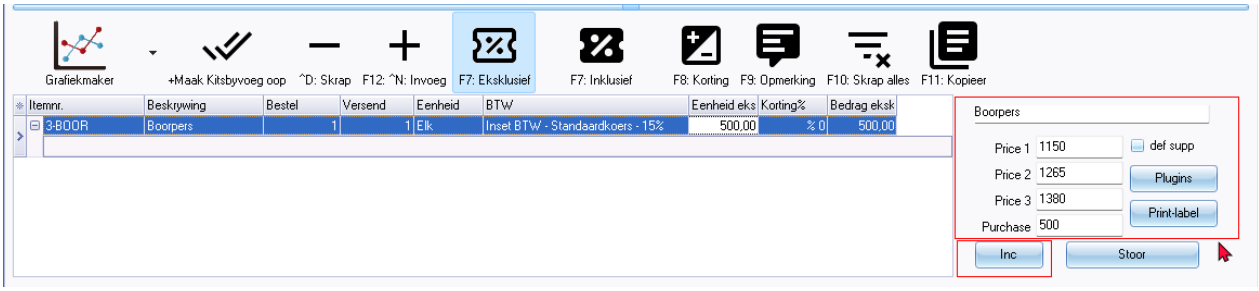
Dynareg - Selling prices in purchase documents plugin

Dynareg - Directly Edit Sales Prices in Purchase Documents Plugin - Shop - Licence : Once-off - Enable : "Verkoopprijs bij inkoop documenten"

This plugin allows you to edit the three sales prices within a purchase document (purchase, supplier return, and order) for a selected item. The updated selling prices will be reflected in the Ledger tab of the stock item.



You can edit the prices inclusive or exclusive of Tax (VAT/GST/Sales tax). Additionally:

- Default Supplier: You may choose to apply these changes for the default supplier, if one is set for the selected stock item.
- Plugins button: If any supported activated plugins are available for the selling price feature, such as the "*Charter plugin*", you may launch them from the Plugins button.

Please note that this option is not available for sales documents (invoices, credit notes, and quotes).

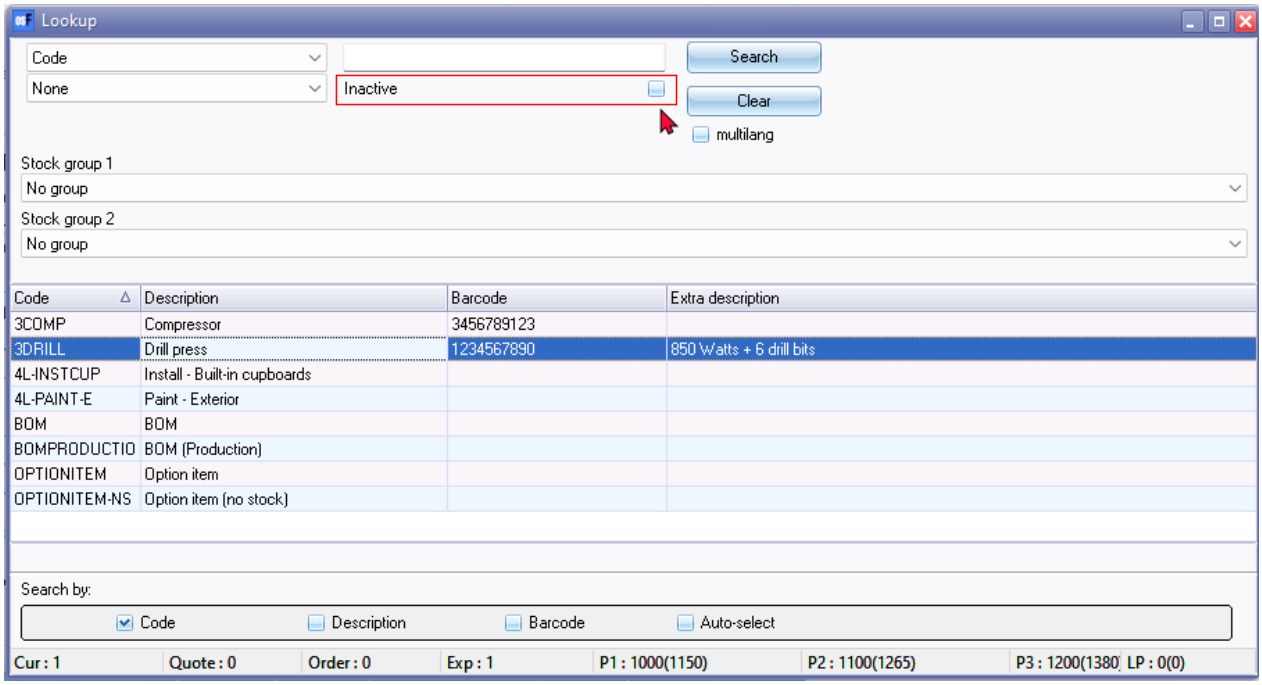
Dynareg - Inactive items

Dynareg - Show inactive items in documents plugin

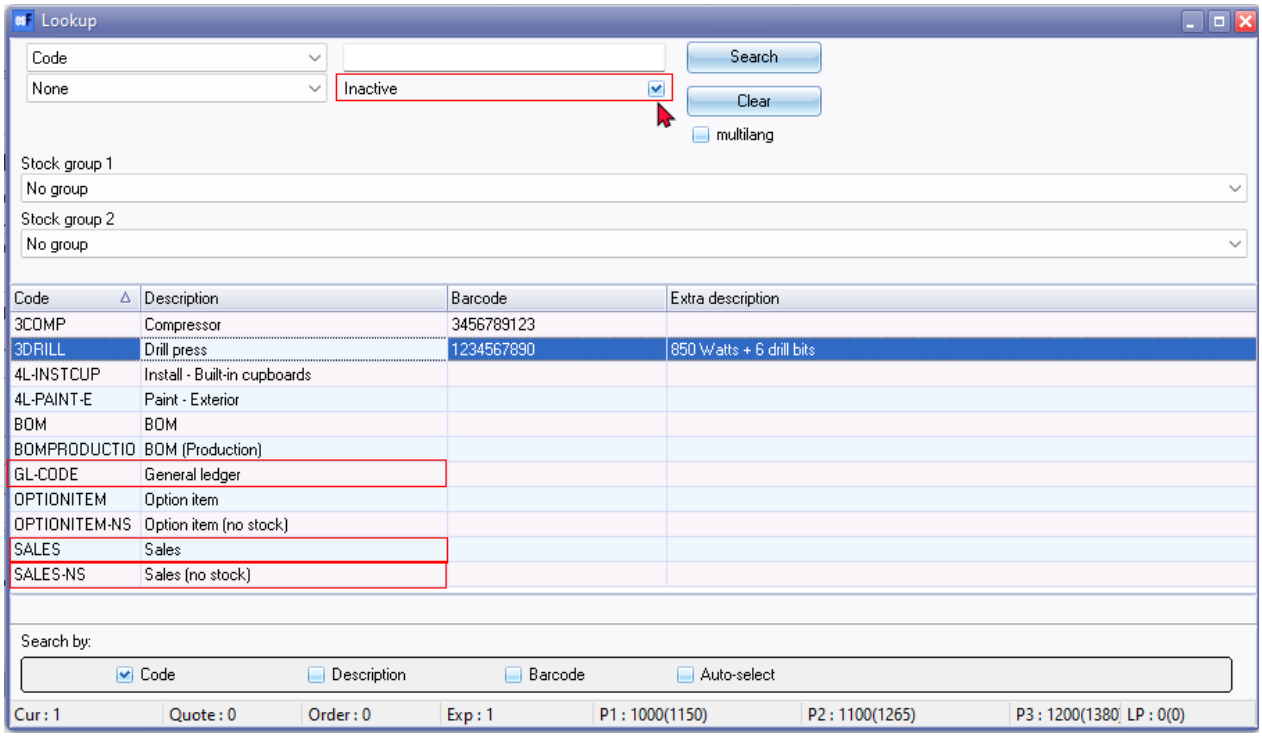
Dynareg Show inactive items in documents plugin - Shop - Licence : Once-off -

Enable : "Documenten - Toon inactive artikelen in documenten"

When processing documents, you're required to choose the stock item within the document lines section. By default, only the active stock items are displayed. If a stock item is marked as inactive (disabled) on the Stock form, it won't appear in the Stock lookup. This ensures that only active or enabled items are available for selection in the documents.



If you need to select disabled items in documents, simply check the "*Inactive*" box and click the Search button. This action will include inactive or disabled stock items in the lookup results.



If you've selected an inactive (disabled) item and included it in your sales or purchase documents, you'll still be able to update (post) the transactions involving inactive items that are part of the document.

Dynareg - Transitional data

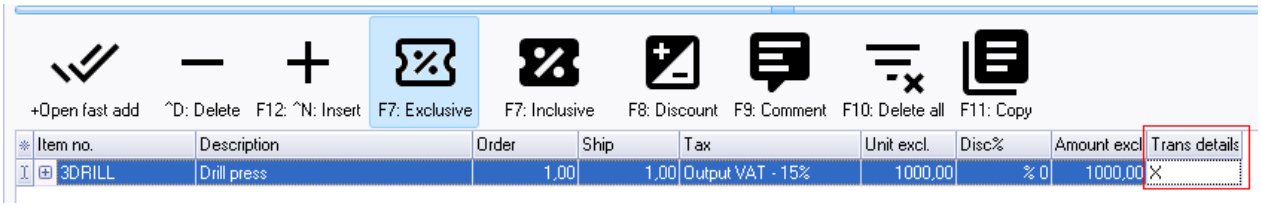
Dynareg - Transitional Posting in Documents Plugin

Dynareg - Transitional Posting in Documents plugin - Shop - Licence : Once-off -

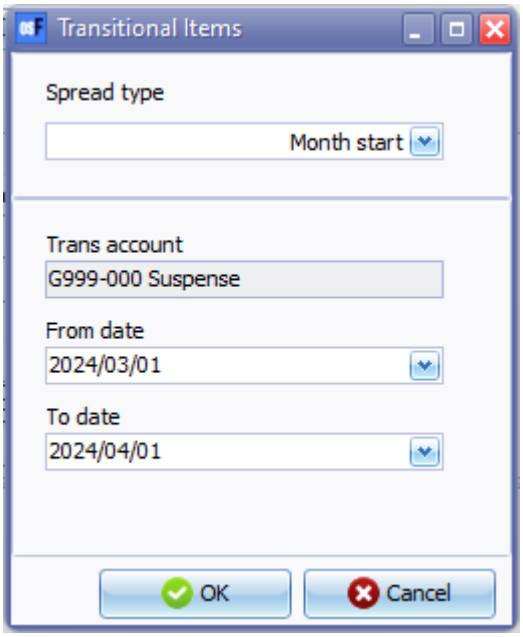
Enable : "Documenten - Transitorisch boeken"

The "*Dyna Transitional Posting in Documents*" plugin for osFinancials5/TurboCASH5 introduces an additional column with a sub-screen to input transitory data within documents. This feature streamlines the management of transitional or temporary information linked with each line item in the document.

Once this plugin is enabled and your Set of Books is reopened, it will incorporate the "*Trans details*" column in sales and purchase document entry screens.



Within each document line, you can select the stock item and double-click on the " *Trans details*" column. This action opens the "*Transitional items*" screen.



Here you can specify:

- Spread type: Choose between "*Month start*", "*Month end*", or "*Week*".
- Trans account: Select a transitional account. Note that only Balance sheet type ledger accounts

(excluding Bank accounts and Tax codes) will be available for selection.

- Dates: Confirm or choose the "*From date*" and "*To date*".

Clicking OK saves the transitional data. Upon moving to another line, an "*X*" appears in the "*Trans details*" column for the item, indicating the presence of transitional data.

If you need to edit the transitional data for the item, simply double-click on the "*Trans details*" column or click the "*Lookup*" icon at the end of the column.

Overall, the "*Dyna Transitional Posting in Documents*" plugin enhances osFinancials5/TurboCASH5 by offering a convenient method to manage and record transitory data within documents, contributing to improved organization and detail.

Transitory data refers to temporary or short-lived information not intended for permanent storage or retention. It is typically used for immediate processing or transmission purposes and is often discarded once its purpose is fulfilled.

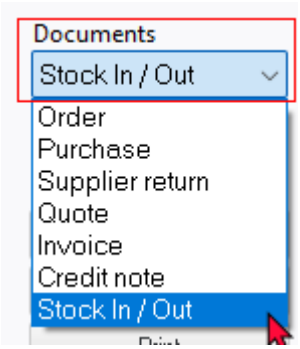
Stock in / Out report



Stock in / Out

Enable : "Documenten -> Extra voorraad correctiedocument" Cannot locate on shop.

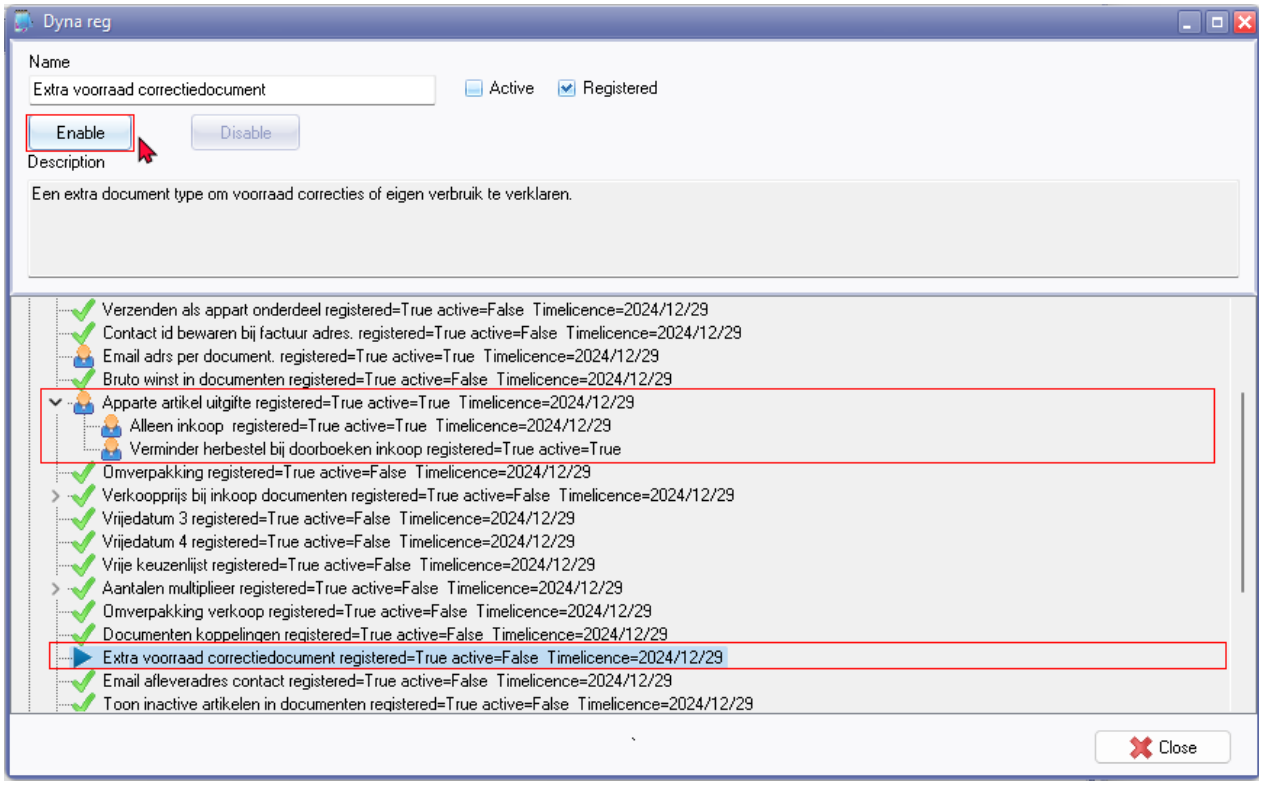
Documentation : Dynareg - Extra stock of correction document (Stock in / Stock out document type) -

STD0001 Stock In/Out Adjustment

u

t

Dynareg - Plugins - Extra document types - Activation options



Stock item screen after any of these plugins were enabled

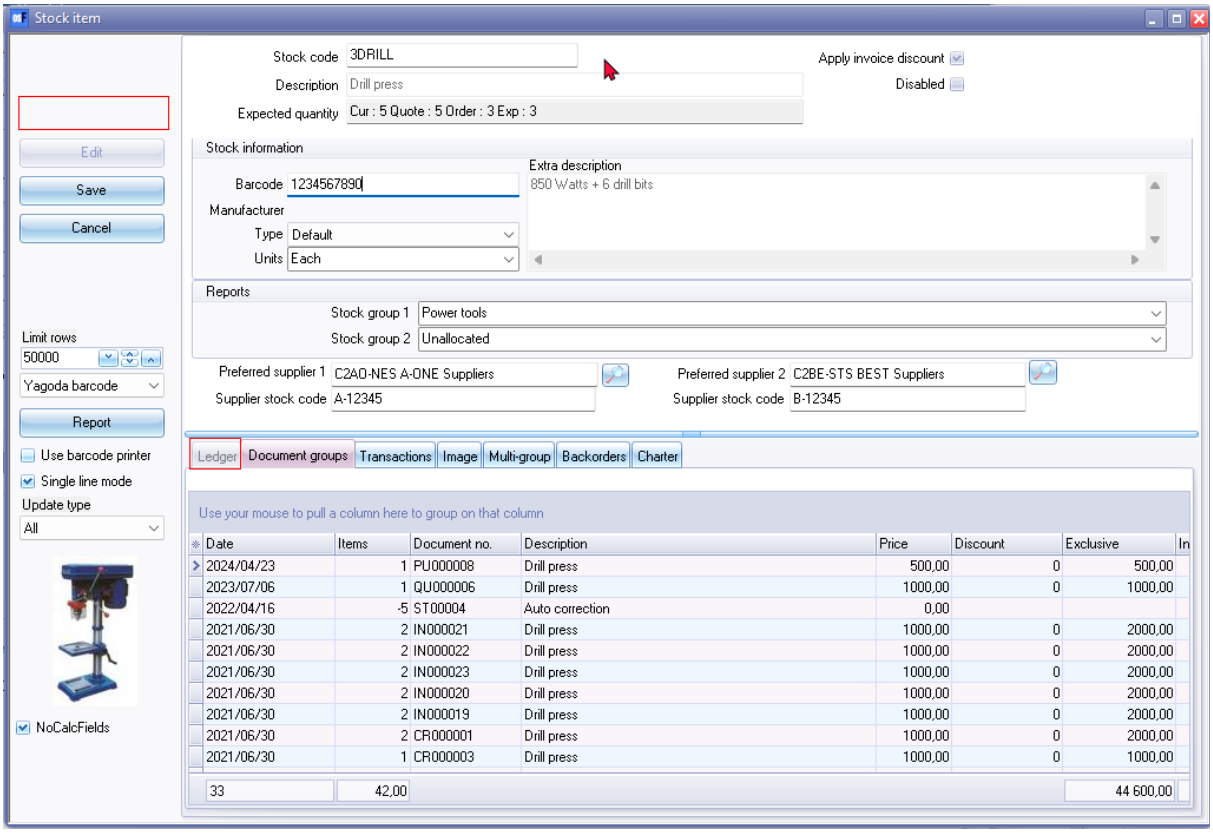
Previous stock adjustments - Before any of these plugins is enabled

- Any stock adjustments, including Auto correction, Surpluses, and Shortages, processed before activating these plugins, will be included on the document grid as an extra document type under the Stock out document type. The document numbers for these stock adjustments consist of 7 digits and include '*ST*' as the prefix.
- These adjustments would have been made using the Input → Adjust stock menu or by manually changing stock quantities on the stock item grid . These Stock adjustments made before enable these plugins does not affect the stock item functionality.

Stock item functionality - After any of these plugins is enabled

After these plugins is enabled, the following issues is replicated in the Stock item form:

- Ledger tab is disabled for all Stock items.
- New button - Not available - Cannot create a new Stock item.



- Copy from item - The only way to add a new stock item but with issues:
  - Main form - Stock code can enter a new Stock code and save the copied stock item. After saving most of the fields is not editable on the main form. You cannot change the stock item description, but you can change the Barcode, Stock type and Units.
  - Ledger tab cannot be edited such as selling prices, cost prices, etc.

Created with the Standard Edition of HelpNDoc: Easily create Help documents

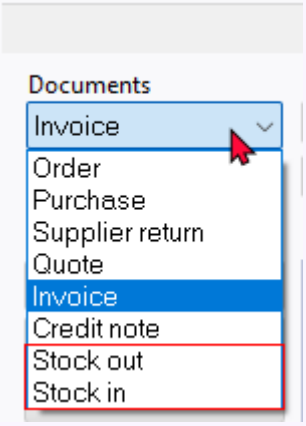
Dynareg - Stock in and Stock out document type

Separate item issue (Stock In + Stock Out)

Dynareg - Separate Item Issue Plugin - Shop - Licence : Once-off -

Enable : "Documenten -> Aparte artickel uitgifte"

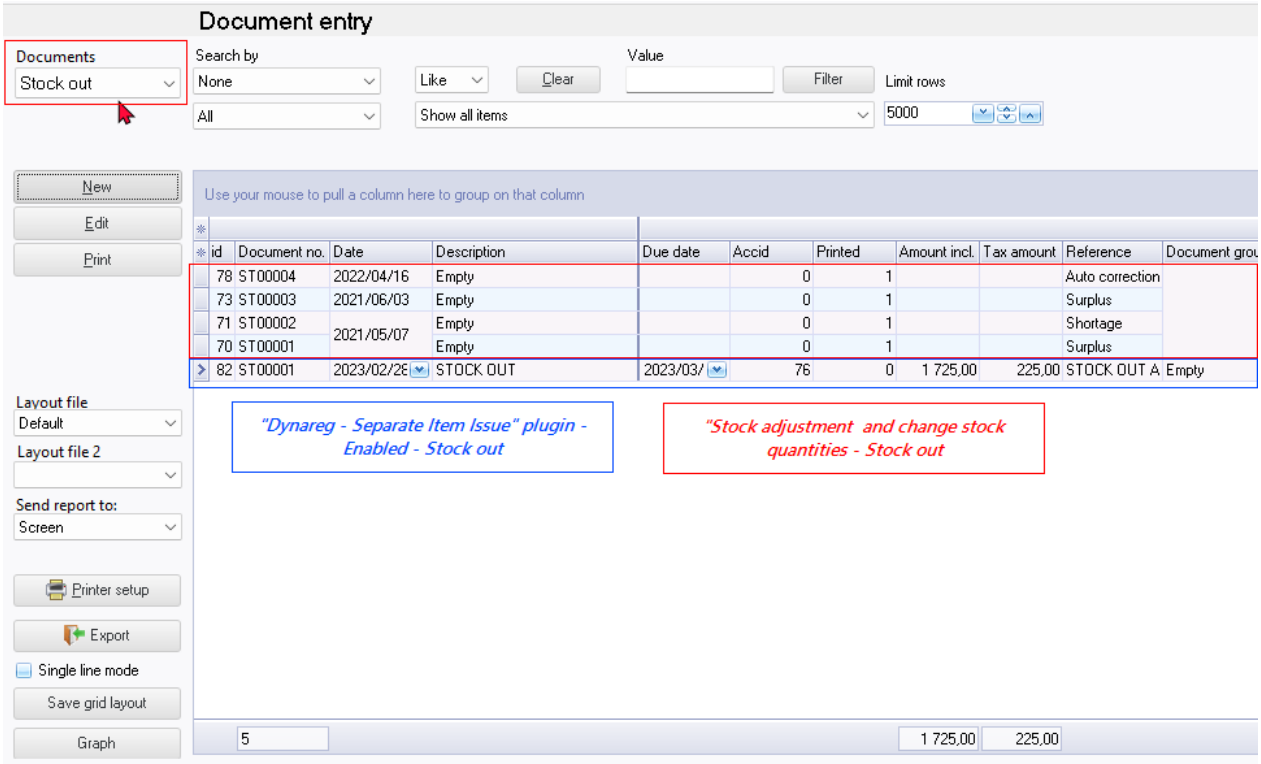
BUG - Disables the Ledger tab of all Stock items- See - Dynareg - Extra documnent types - BUG - Stock items -



Known issues

Previous stock adjustments - Stock out document type

- Any stock adjustments, including Auto correction, Surpluses, and Shortages, processed before activating this plugin, will be listed on the document grid under the Stock out document type.
- These adjustments would have been made using the Input → Adjust stock menu or by manually changing stock quantities on the stock item grid.
- The document numbers for these stock adjustments consist of 7 digits and include '*ST*' as the prefix.
- Duplicate document number - The first Stock out document created, also starts with "ST00001" which is a duplication of previous stock adjustments before activating Enable this plugin.



Input menu

Input → Stock in menu - launches Stock out can process debtors instead of creditors. On Documents grid document type Stock in launches creditors.

Input → Stock out menu- launches Stock in can process creditors instead of debtors. On Documents grid document type Stock out launches debtors.

Print posted transactions - Cannot print posted transactions for Stock in

- Debtors - Documents tab - "*Show transactions*" context menu. can view and print "*Transactions*" screen "*Batch type report - Posted batches*" report. Only prints the Cost of Sales transactions. When create Stock out Document - Output tax is included in the selected stock item.
- Creditors - Documents tab - "*Show transactions*" context menu. Cannot view and print "Transactions" screen "*Batch type report - Posted batches*" report. Transactions screen is empty and "*No data to print*!" error. When create Stock in Document - Output tax is included in the selected stock item and not Input tax. In Ledger analyser cannot trace and print the transactions for the Stock in document type.

Right-click and select "*Show transactions*" on the context menu. This lists the transactions on a "*Transactions*" screen for the selected document. Note: For the Stock out document type, the quantities will be adjusted, and the transactions for cost of sales will be adjusted in a journal. Additionally, for the Stock in document type, the "*Transactions*" screen may be empty, as it primarily adjusts quantities. For the Stock out document type, the cost of sales transactions, will be listed the "*Transactions*" screen.

Update ledger / Delete documents - Titlebar captions

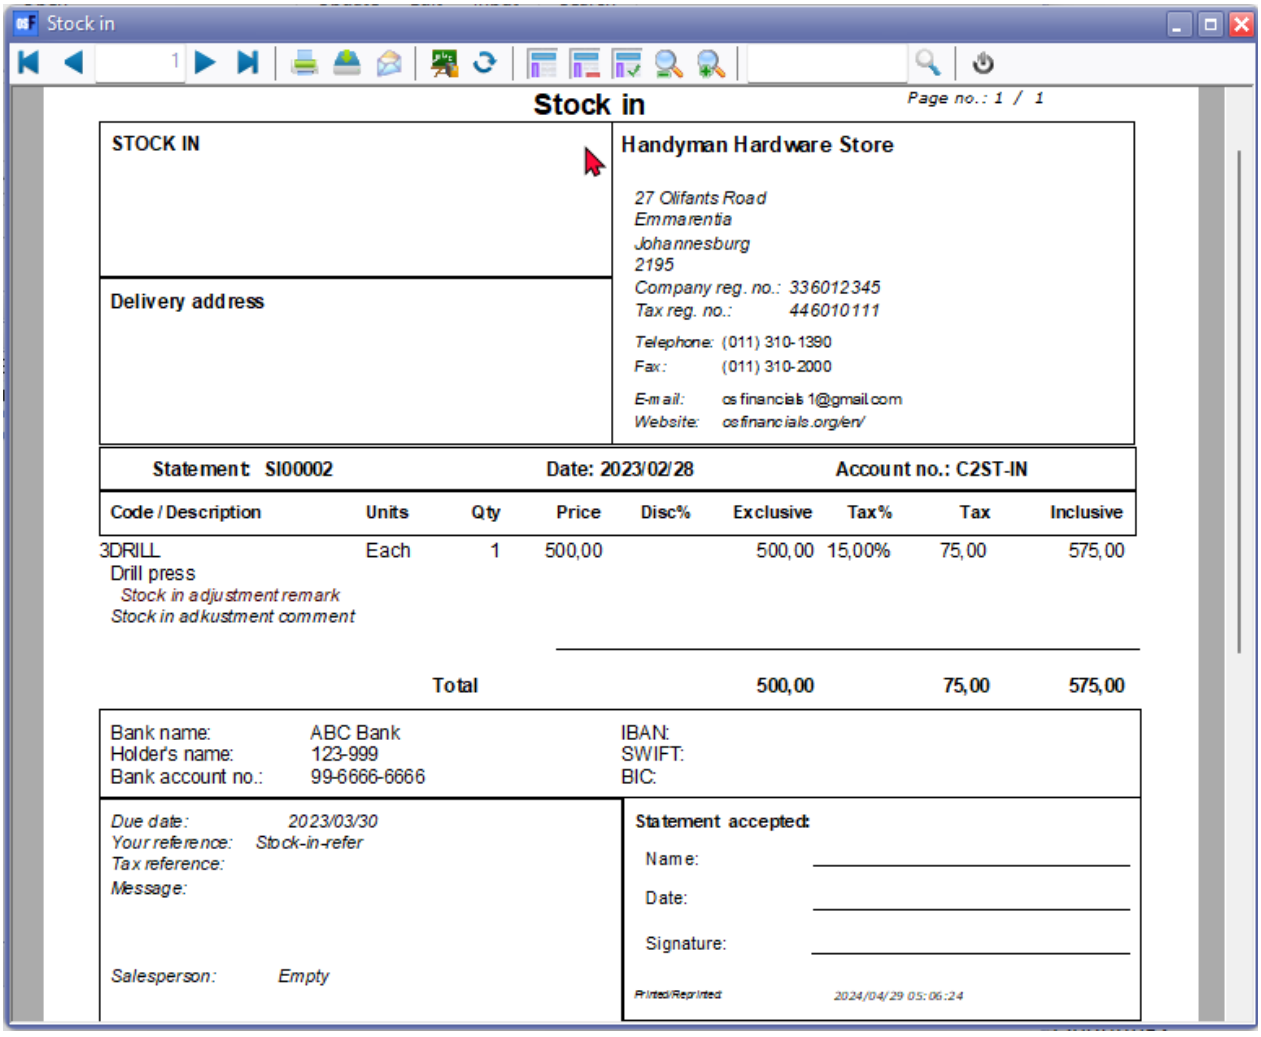
- Update documents - Stock in - Delete supplier returns
- Update documents - Stock out - Delete orders
- Delete documents - Stock in - Delete supplier returns
- Delete documents - Stock out - Delete orders

Print layout files

Layout files added for Stock in / Stock out document types

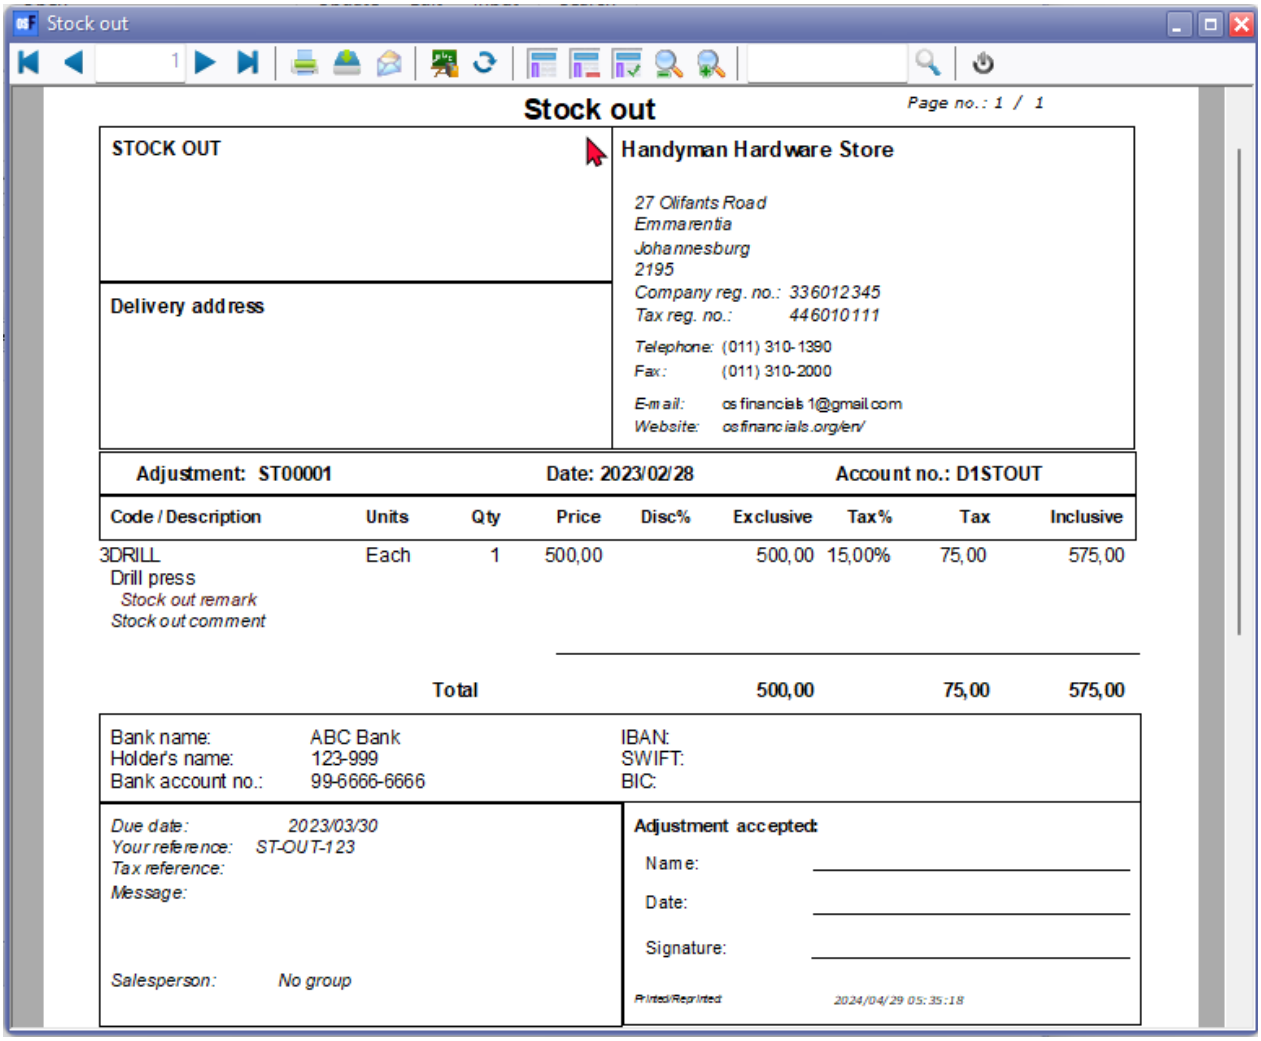
To fix this, added two translatable Document layout files from the Stock in / Stock out document types:

Stock in (TRN_906178) This layout file may be selected on the Documents grid or Creditors - Documents tab



Stock out (TRN_906179) This layout file may be selected on the Documents grid or Debtors - Documents

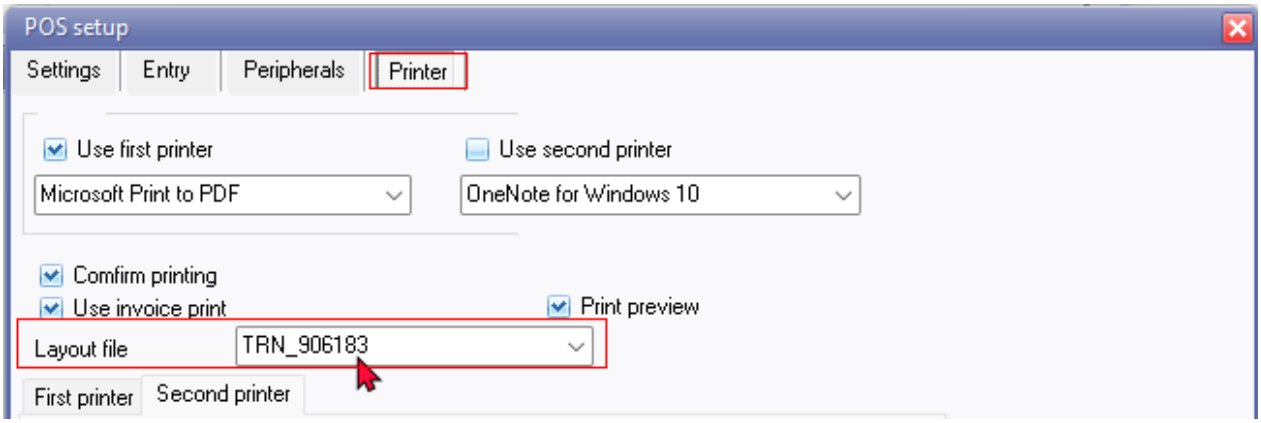
tab



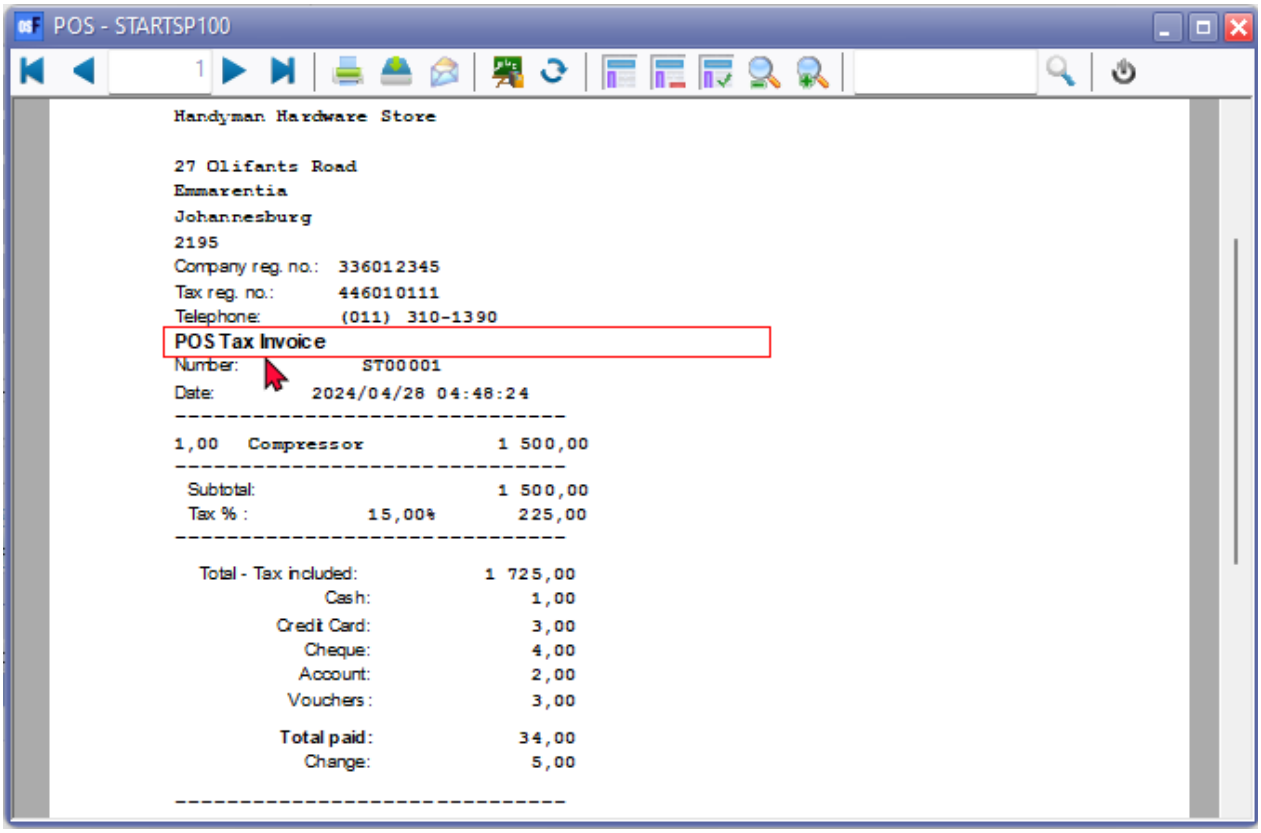
Layout file document names issues

The plugin prints the layout file selected in the "*Layout file point-of-sale*" field within Setup → Documents setup. This setting does not work for the "*Stock in*" or "*Stock out*" document types By default, the "*Stock in*" or "*Stock out*" will print the till slip layout file "*POS Tax invoice*".

In the central search (Search on the Default ribbon), it will print this POS - START-SP100 (TRN_906183). If any other layout file, is selected. the name of the report is not translated, but will display for example TRN_906183 in Setup → Point of-Sale - Printers tab



Changing the layout file in Setup → Documents setup will update the layout file in Setup → Point of-Sale - Printers tab but it still prints Stock in and Stock out using the POS - START-SP100 (TRN_906183)layout file.

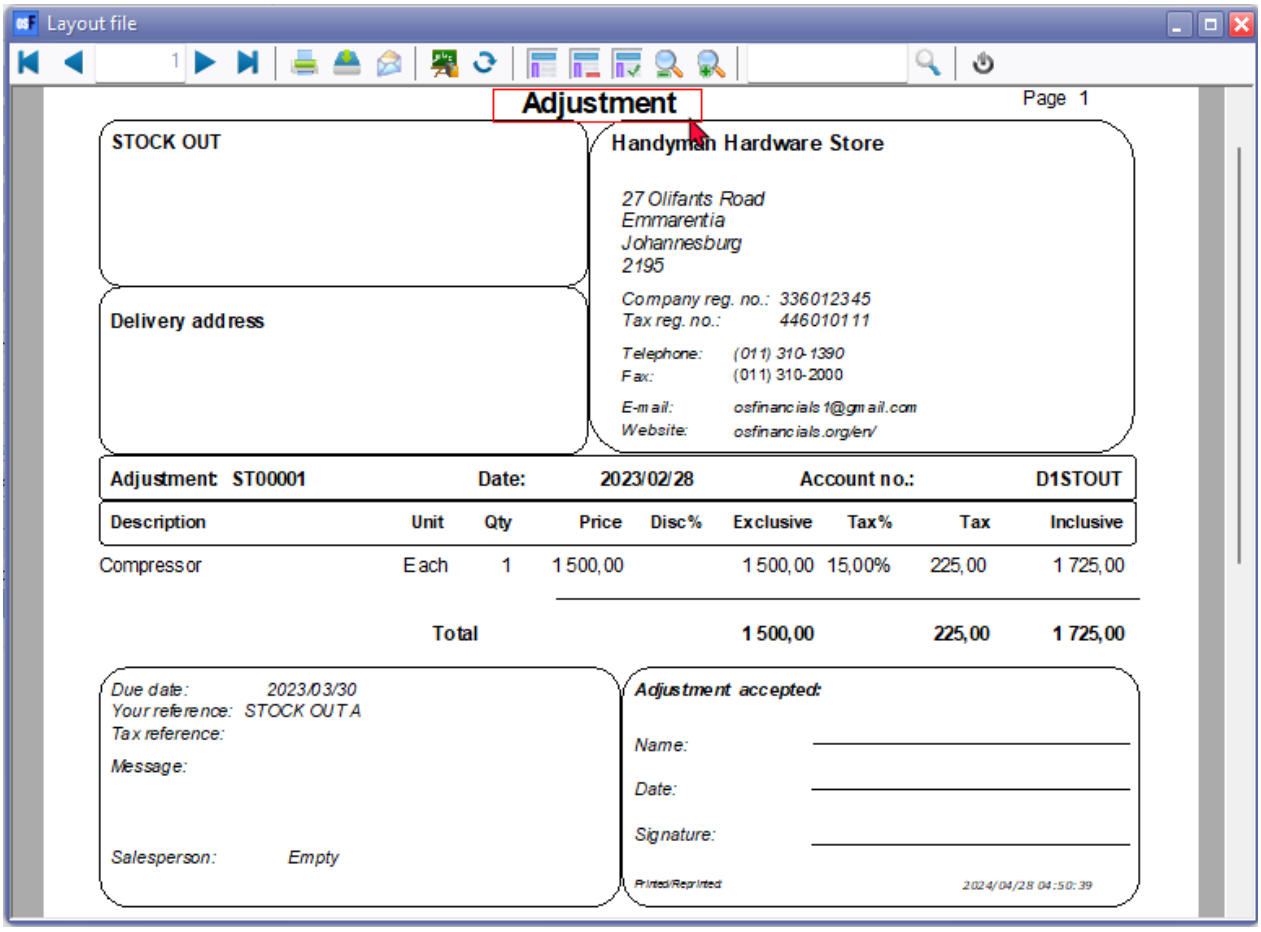


NOTE If "*Layout file*" is selected as the option within Documents setup for other document types, the "*Default*" option on Document grid does not work. You need to select the "*Layout file*" or other layout file.

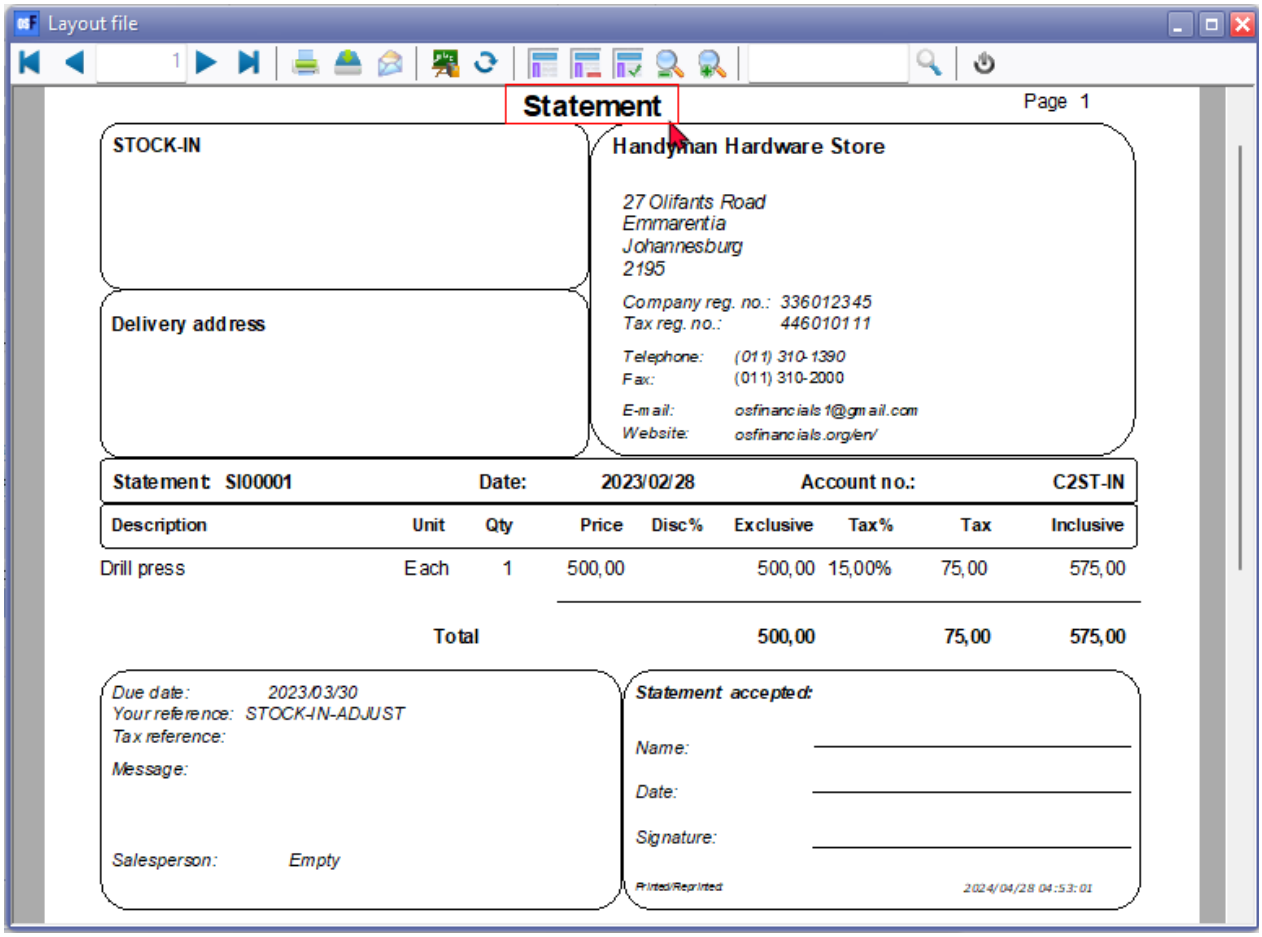
You have the option to choose a different layout file for "*Stock in*" or "*Stock out*" document types.

Layout file - The default "*Layout file*" for all document types, will print the headings in the Types on Tools → Customise language.

Stock out - Adjustment



Stock in - Statement



Separate Item Issue Plugin

Dynareg - Separate Item Issue Plugin - Shop - Licence : Once-off -

Enable : "Aparte artickel uitgifte"

BUG - Disables the Ledger tab of all Stock items- See - Dynareg - Extra documnent types - BUG - Stock items -

"Provides 2 additional document types i.e. Stock in for purchase documents and Stock out for Sales documents with which items can be entered and issued.

This then processes quantities and any costs of sales. With the other documents, only turnover and VAT items are recorded and no more quantities.

"*Dynareg - Separate Item Issue*" plugin enhances osFinancials by providing two additional document types: Stock in for purchase documents and Stock out for sales documents. With these document types, items

can be entered and issued, enabling precise tracking of quantities and associated costs of sales.

Enable the "*Dyna - Separate item issue*" plugin

To activate the "*Dyna - Separate item issue*" plugin follow these steps:

1.

1. Access Plugins: Navigate to Plugins → Tools → DYNADBREG menu.
2. Enable the plugin: Select the "*Aparte artickel uitgifte*" option and click Enable.
3. Reopen Set of Books: Once you've enabled this plugin, reopen your Set of Books. This step is essential for the changes to take effect.

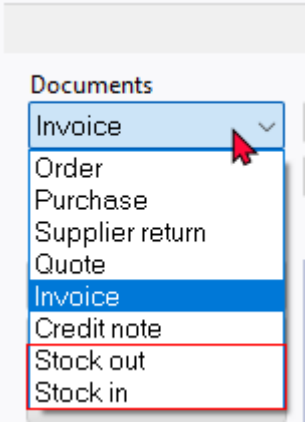
Access to Stock in and Stock out document types

In addition to the standard document types, this plugin adds Stock in and Stock out document types, each serving distinct purposes:

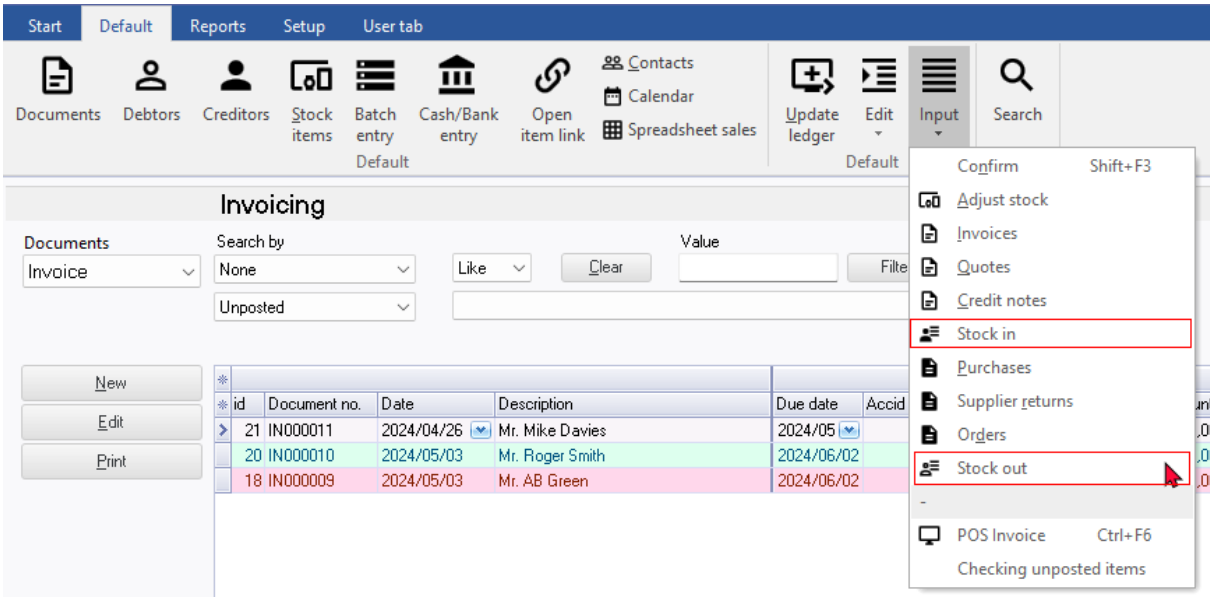
- Stock in is added alongside the existing purchase document types: purchases, supplier returns, and orders. Document numbers for Stock in start with SI00001.
- Stock out is added alongside the existing sales document types: invoices, credit notes, and quotes. Document numbers for Stock out start with ST00001.

Accessing the Additional Document Types: You may access these two additional document types via the following options:

1. Default ribbon: Navigate to Documents and select either the standard document types or the Stock in and Stock out document types. This launches the document entry screen as an integrated part of the document grid.



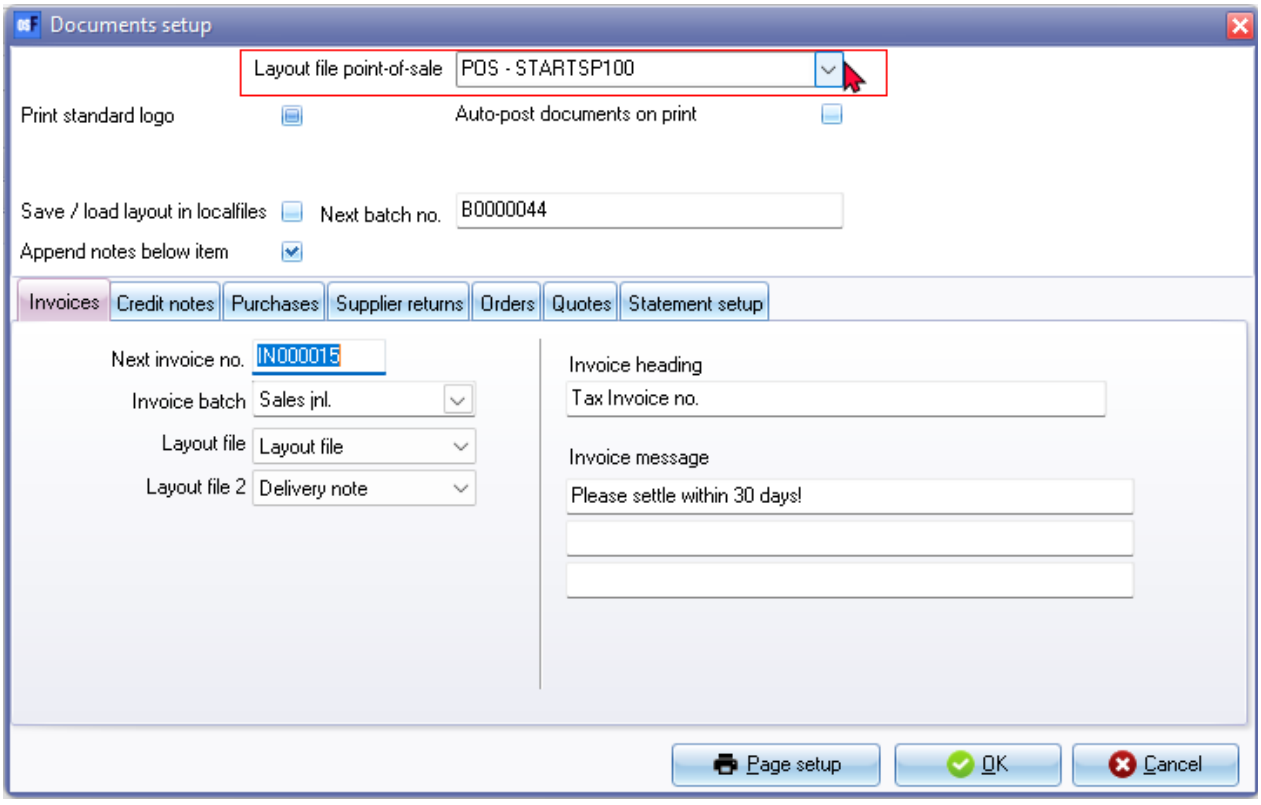
2. Input menu: Choose from the standard document types or the Stock in and Stock out document types from the Input menu. This launches the document entry screen as a separate screen.



Additionally, the "*Stock in*" and "*Stock out*" document types are available as options on the context menu of the document grid, accessible via Documents → Copy to → Stock in and Documents → Copy to → Stock out.

Layout file setting

The plugin prints the layout file selected in the "*Layout file point-of-sale*" field within Documents setup. By default, the "*Stock in*" or "*Stock out*" will print the till slip layout file "*POSTax invoice*". You have the option to choose a different layout file for "*Stock in*" or "*Stock out*" document types.



On the Documents screen, you can select "*Layout file*". The "*Layout File*" document layout supports all

document type descriptions, whether they are sales documents like invoices, credit notes, and quotes, or purchase documents like purchases, supplier returns, and orders. If documents for the "*Stock in*" or "*Stock out*" document type are printed, the heading will be displayed as "*Adjustment*" document type.

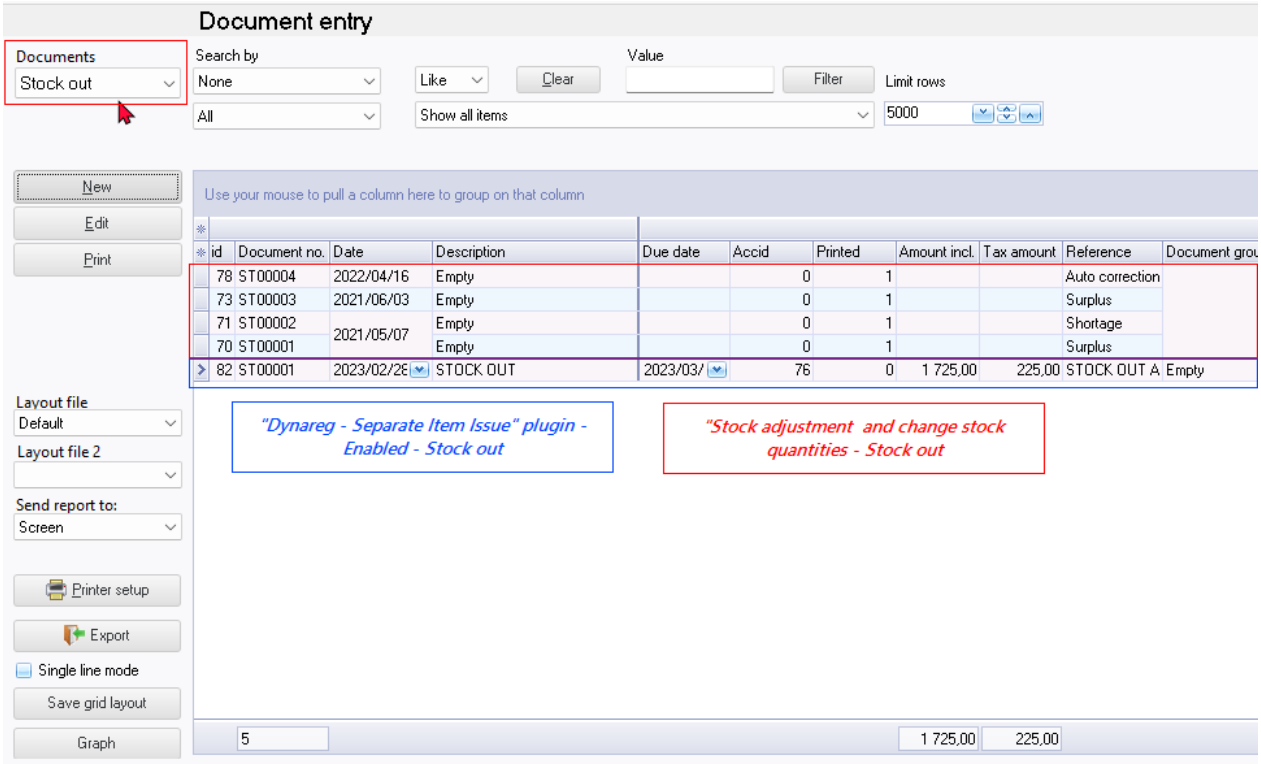
Document grid - Search and Filter options

Previous stock adjustments

Any stock adjustments, including Auto correction, Surpluses, and Shortages, processed before activating this plugin, will be listed on the document grid under the Stock out document type.

These adjustments would have been made using the Input → Adjust stock menu or by manually changing stock quantities on the stock item grid.

The document numbers for these stock adjustments consist of 7 digits and include '*ST*' as the prefix.



Filter and Search options

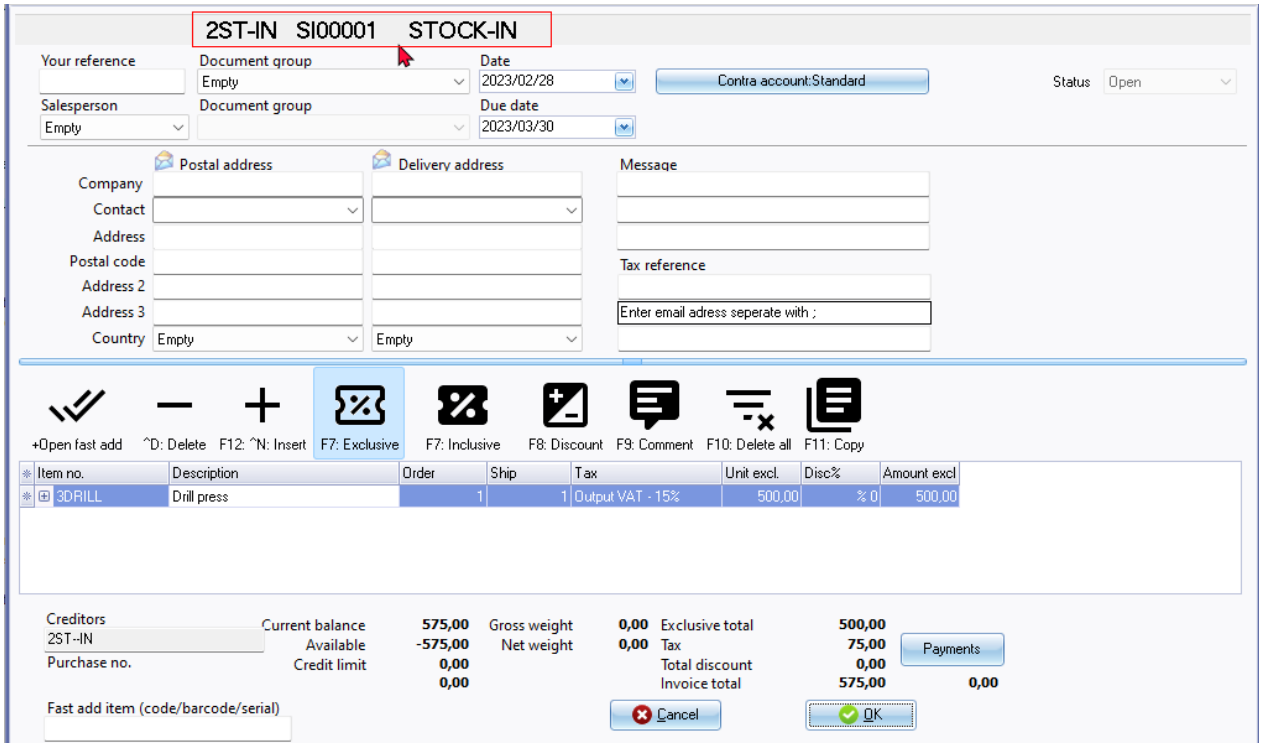
For the Stock in and Stock out document types, utilize the powerful grid for filtering and searching. Some of the available options include:

- Document status: Filter by Unposted, Posted, or view All documents.
- Groups: Filter for specific document groups.
- Document details: Access all available document details, including references, dates, and more.

Additionally, you can build custom filters tailored to your specific needs.

Stock in

The "*Stock in*" document type resembles the "*Purchase*" document type. To create a new document for the Stock in document type, click New. On the "*Creditor accounts*" screen, select a creditor (supplier/vendor) account and click Open. If no account exists, you may create a new creditor account.



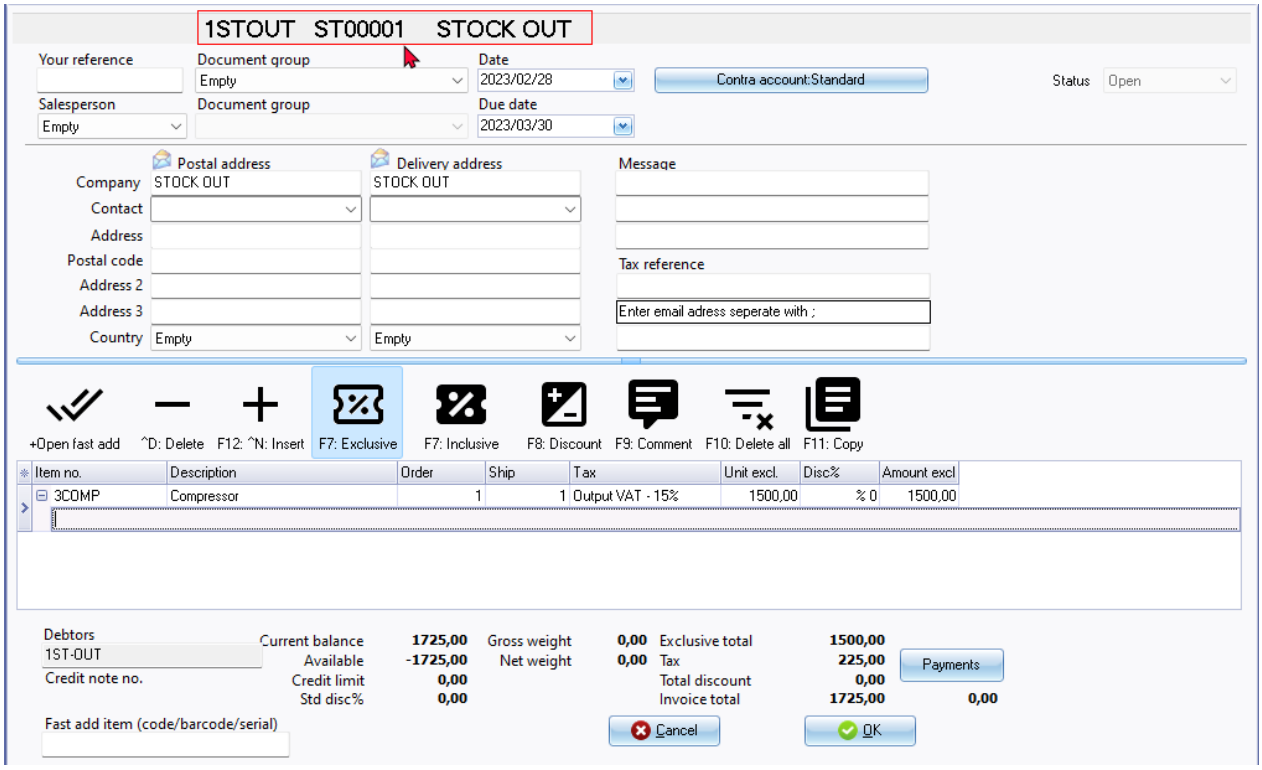
On the Stock in document entry screen, select the stock item. You may enter references in the "*Your reference*" field in the document header. Additionally, you can include remarks and comments:

- Remarks: Beneath each stock item, you can add remarks. These remarks will print in document layout files but are not searchable in the central search.
- Comments: Use the F9: Comment option to enter comments for each item.

The document references entered in the "*Your reference*" field in the document header, along with the comments, are searchable using the central search option (accessible via the Search on the Default ribbon).

Stock out

The "*Stock out*" document type resembles the "*Invoice*" document type. To create a new document for the Stock out document type, click New. On the "*Debtor accounts*" screen, select a debtor (customer/client) account and click Open. If no account exists, you may create a new debtor account.



On the Stock out document entry screen, select the stock item. You may enter references in the "*Your reference*" field in the document header. Additionally, you can include remarks and comments:

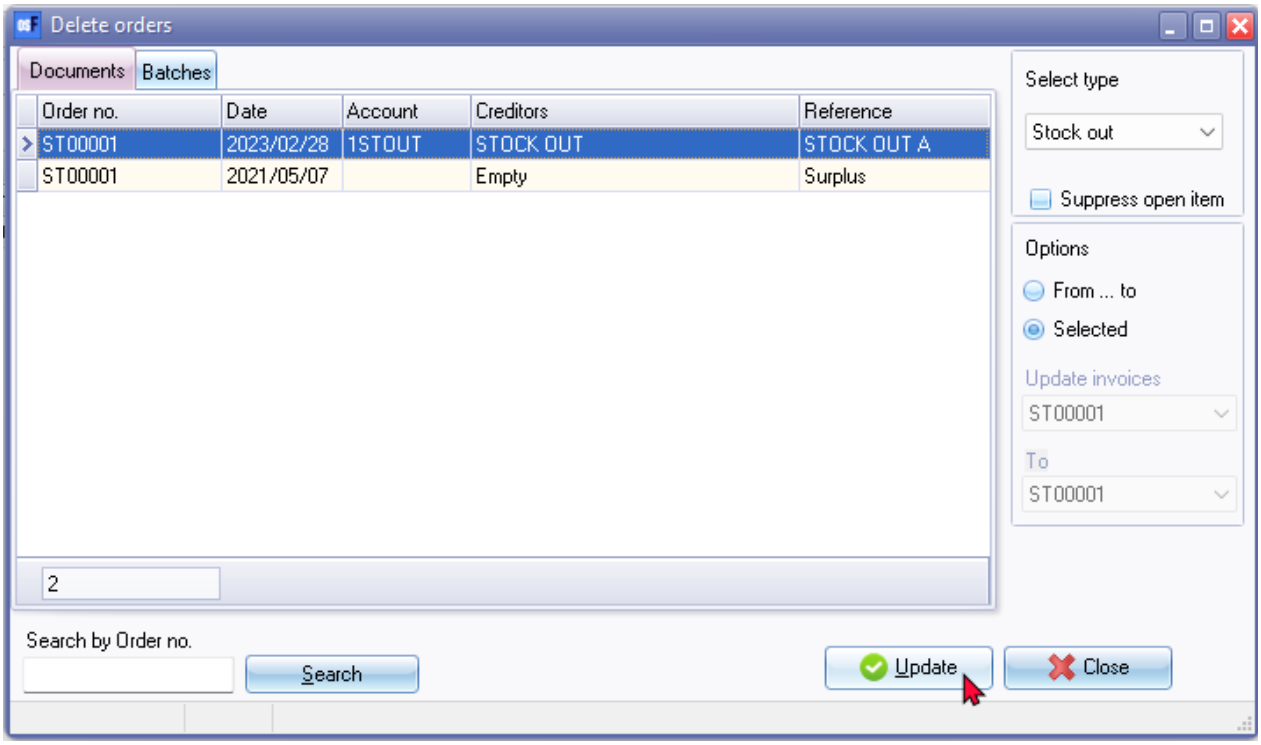
- Remarks: Beneath each stock item, you can add remarks. These remarks will print in document layout files but are not searchable in the central search.
- Comments: Use the F9: Comment option to enter comments for each item.

The document references entered in the "*Your reference*" field in the document header, along with the comments, are searchable using the central search option (accessible via the Search on the Default ribbon).

Update to ledger

If the "*Auto-post document on print*" setting on the Documents setup in the Setup menu (accessible via the Setup ribbon) is not activated, or if you have not yet printed the document, you will need to manually post the Stock in and Stock out documents.

To do this, press F3 or select Update Ledger on the Default ribbon. The "*Update Invoices*" screen is displayed:



- Select the Stock out document type and click Update.
- Repeat the process for the Stock in document type if necessary.

View the posted transactions

Once the Stock in and Stock out documents have been posted (updated to the ledger), you may view the transactions in the following options:

Stock items (Default ribbon)

Includes the Stock in and / or Stock out document types if processed for the selected stock item.

Document groups tab

This will include posted as well as unposted documents for the Stock in and Stock out document types.

- Double-click to print the selected document or choose a different layout file.
- Right-click to open the document entry screen in a separate window. Note that both posted and unposted documents cannot be edited.

Transactions tab

This will only include posted documents for the Stock in and Stock out document types.

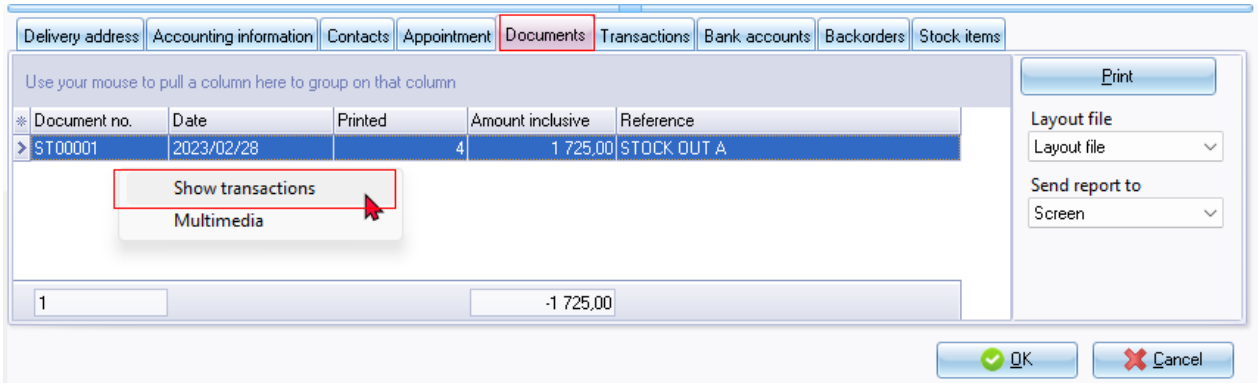
- Right-click and select "*Open document*" from the context menu. Note that posted documents cannot be

edited.

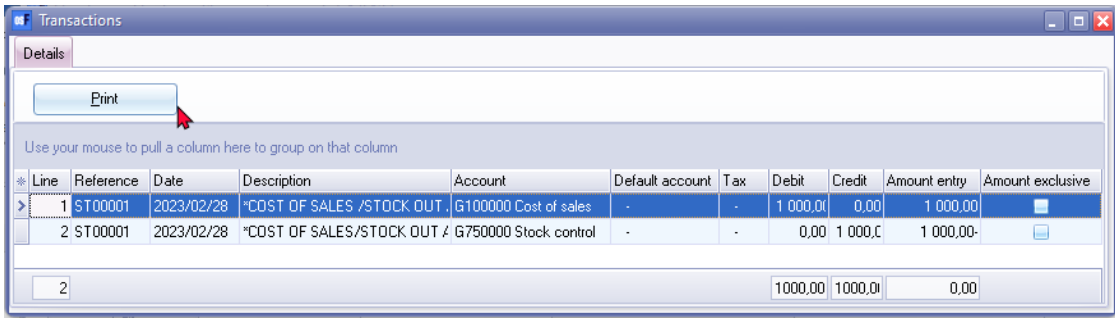
Debtors (Default Ribbon)

The Stock out document type should be listed since you can only select a debtor account.

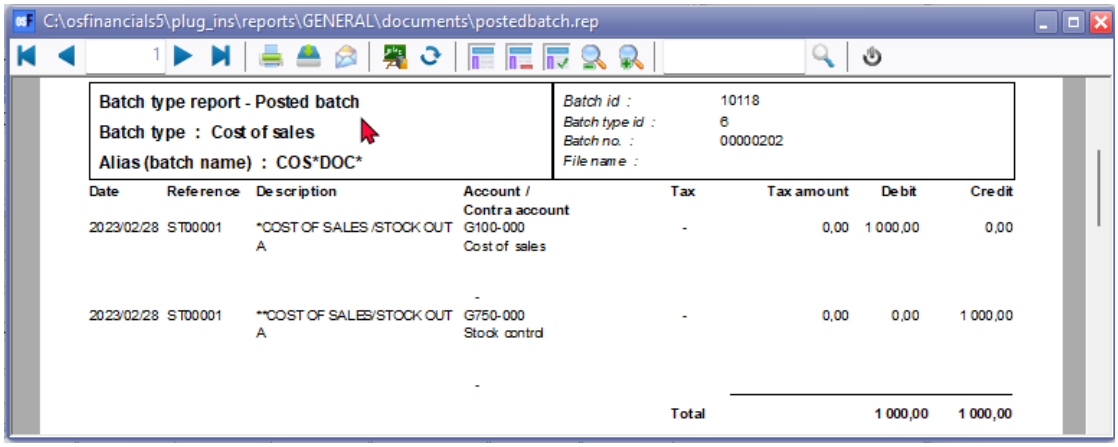
Documents tab



- Includes both posted and unposted documents for the Stock out document type.
- Here, you may:
  - Print the document layout file: Double-click to print the selected document or click the Print button. You may select a different layout file.
  - View and Print transactions: Right-click and select "*Show transactions*" on the context menu. This lists the transactions on a "*Transactions*" screen for the selected document. Note: For the Stock out document type, the quantities will be adjusted, and the transactions for cost of sales will be adjusted in a journal. Additionally, for the Stock in document type, the "*Transactions*" screen may be empty, as it primarily adjusts quantities. For the Stock out document type, the cost of sales transactions, will be listed the "*Transactions*" screen.



Clicking the Print button will print a "*Batch type report - Posted batches*". If an unposted batch is selected, the "*Transactions*" screen will be blank.



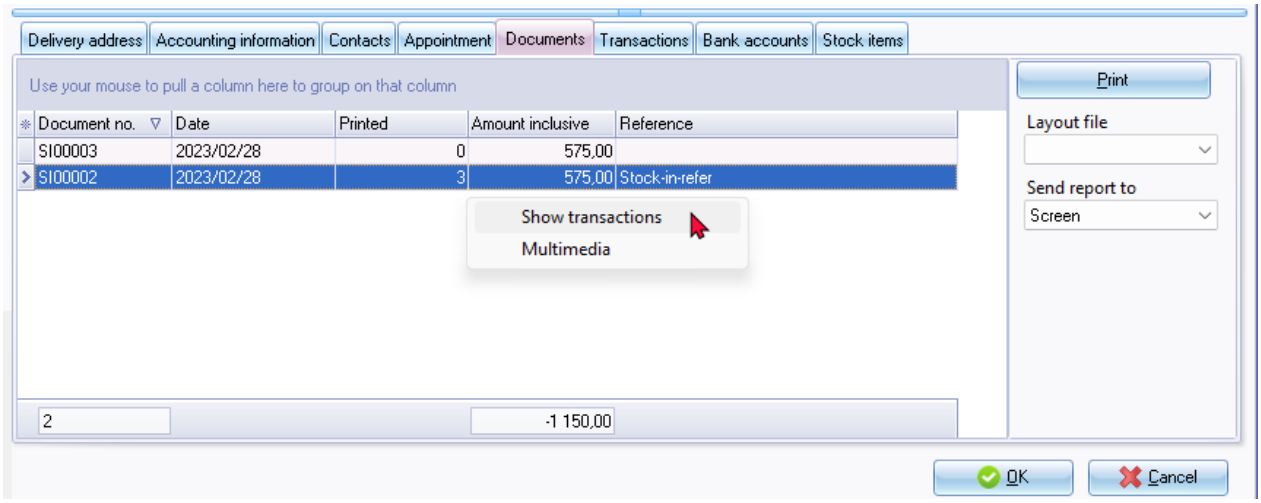
Stock item tab

- Includes both posted and unposted documents for the Stock out document type.
- The stock out document type numbers will consist of 7 digits of which the first two is prefixed with "ST" .The document type for the Stock out is indicated as "Stock+"

Creditors (Default Ribbon)

The Stock in document type should be listed since you can only select a creditor account.

Documents tab



- Includes both posted and unposted documents for the Stock in document type.
- Here, you may:
  - Print the document layout file: Double-click to print the selected document or click the Print button. You may select a different layout file.
  - View and Print transactions: Right-click and select "*Show transactions*" on the context menu.

This lists the transactions on a "*Transactions*" screen for the selected document. Note: for Stock In document type, the "*Transactions*" screen may be empty, as it primarily adjusts quantities.

Stock item tab

- Includes both posted and unposted documents for the Stock in document type.
- The stock in document type numbers will consist of 7 digits of which the first two is prefixed with "*SI*" .The document type for the Stock in is indicated as "*Stock-*"

Enable : "Aparte artickel uitgifte"

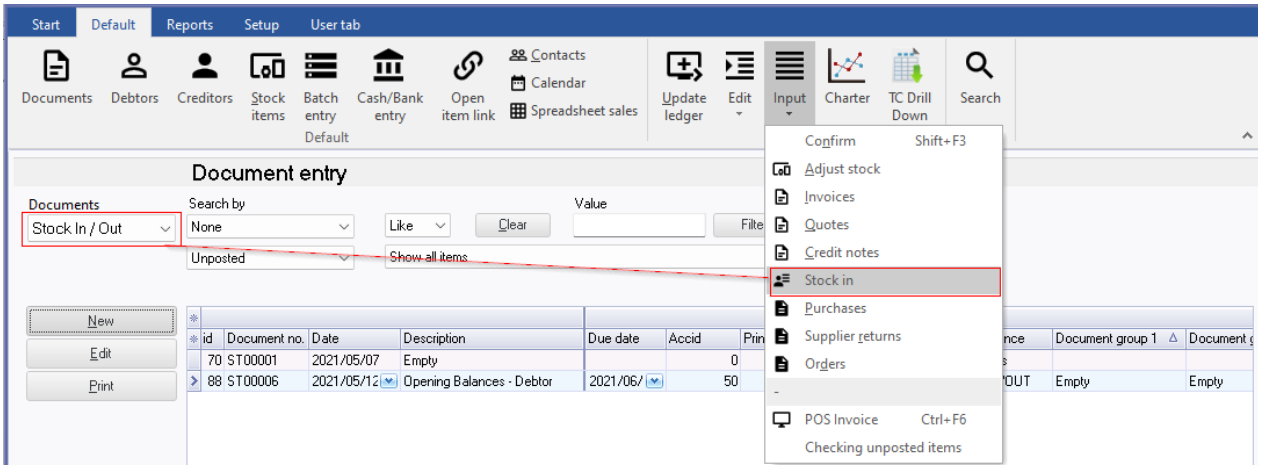
Document grid - Search and Filter options

Previous stock adjustments

Any stock adjustments, including Auto correction, Surpluses, and Shortages, processed before activating this plugin, will be listed on the document grid under the Stock In / Out document type.

These adjustments would have been made using the Input → Adjust stock menu or by manually changing stock quantities on the stock item grid.

The document numbers for these stock adjustments consist of 7 digits and include '*ST*' as the prefix.



Filter and Search options

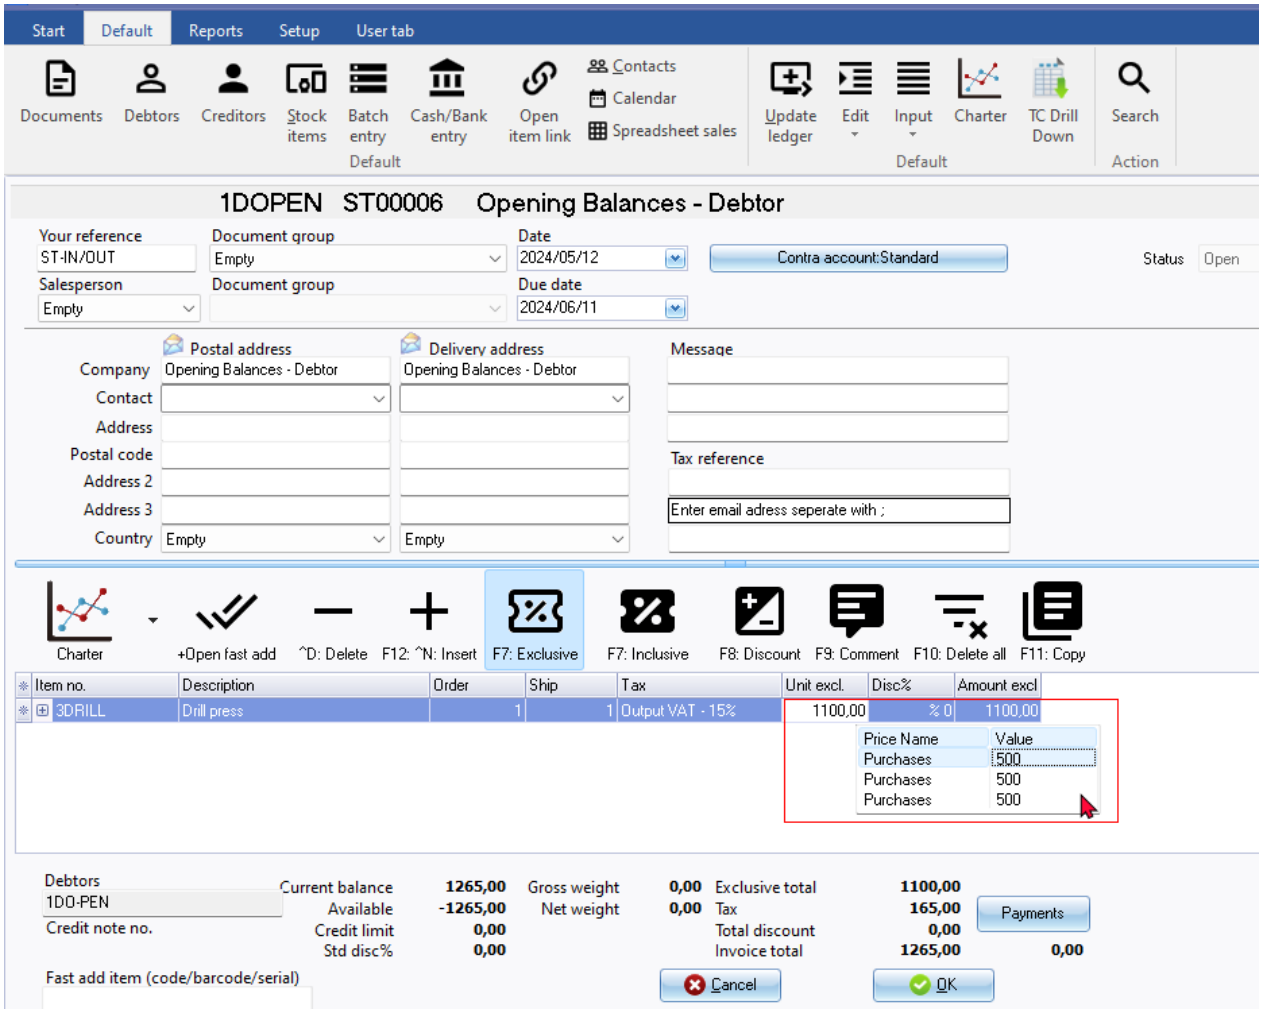
For the Stock in and Stock out document types, utilize the powerful grid for filtering and searching. Some of the available options include:

- Document status: Filter by Unposted, Posted, or view All documents.
- Groups: Filter for specific document groups.
- Document details: Access all available document details, including references, dates, and more.

Additionally, you can build custom filters tailored to your specific needs.

Stock In / Out document type

The "*Stock In / Out*" document type resembles the "*Invoice*" document type. To create a new document for the Stock In / Out document type, click New. On the "*Debtor accounts*" screen, select a debtor (customer/client) account and click Open. If no account exists, you may create a new debtor account.



NOTE : Selling price - No selling prices 1 / 2 / 3. Shows cost prices for Purchases.

On the Stock In / Out document entry screen, select the stock item. You may enter references in the "*Your reference*" field in the document header. Additionally, you can include remarks and comments:

- Remarks: Beneath each stock item, you can add remarks. These remarks will print in document layout files but are not searchable in the central search.
- Comments: Use the F9: Comment option to enter comments for each item.

The document references entered in the "*Your reference*" field in the document header, along with the comments, are searchable using the central search option (accessible via the Search on the Default ribbon).

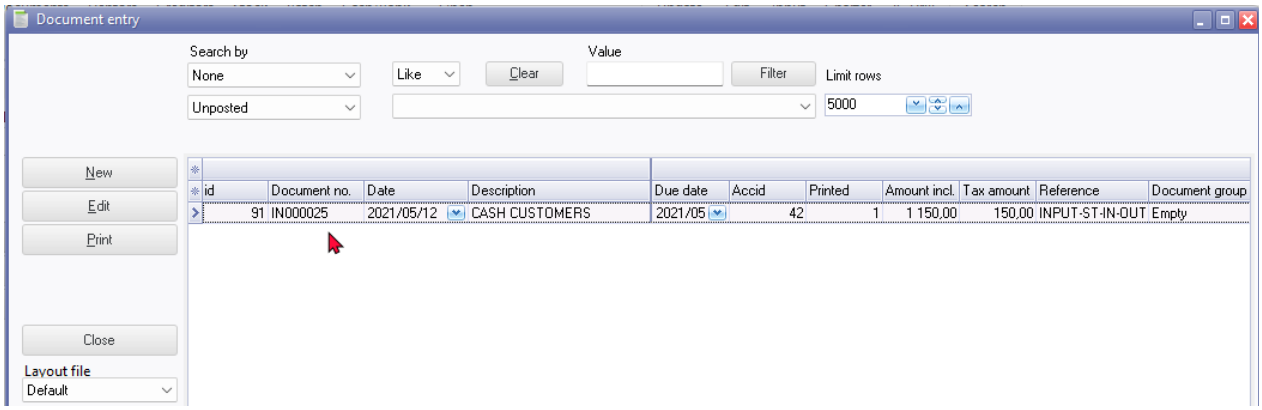
Input → Stock in menu (Stock in / Out document type)

Input → Stock in menu launches a stand-alone screen.

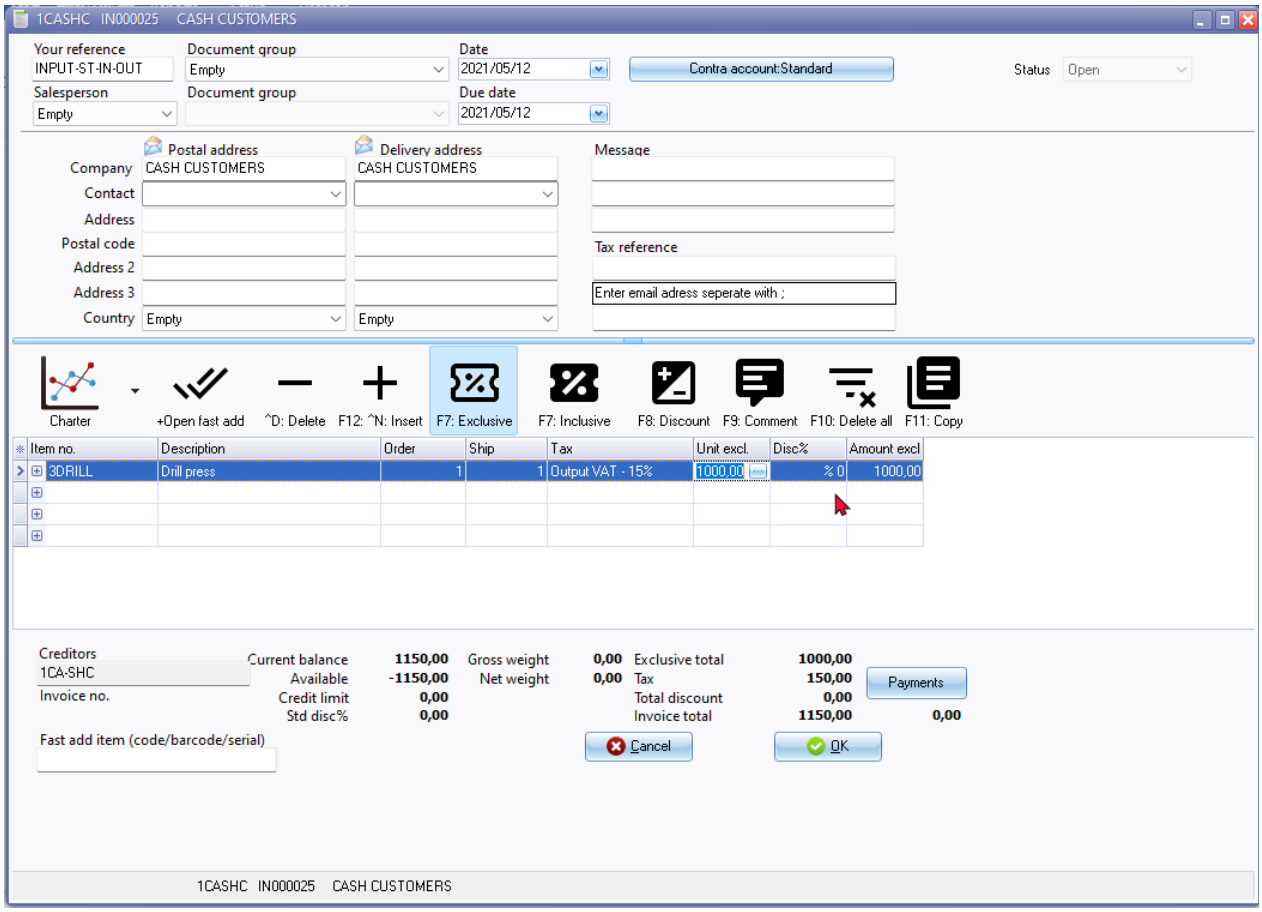
Document entry loose standing grid

NOTE :

- The existing documents created for the Stock In / Out document type using the Input → Stock in menu, within the Stock items grid is not listed.
- New document - Select the "Debtor accounts"
- Document number - Invoice document number is created for example "IN000025" (an 8 digit document number) and not for example "ST00001" (a 7 digit document number) as is created for the Stock In / Out document type within the Stock items grid.

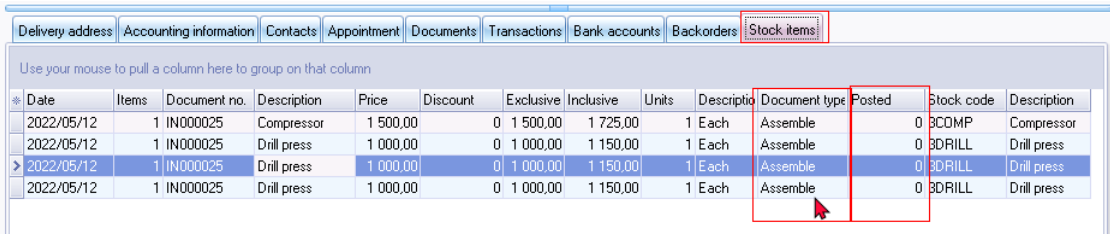


Document entry - New document

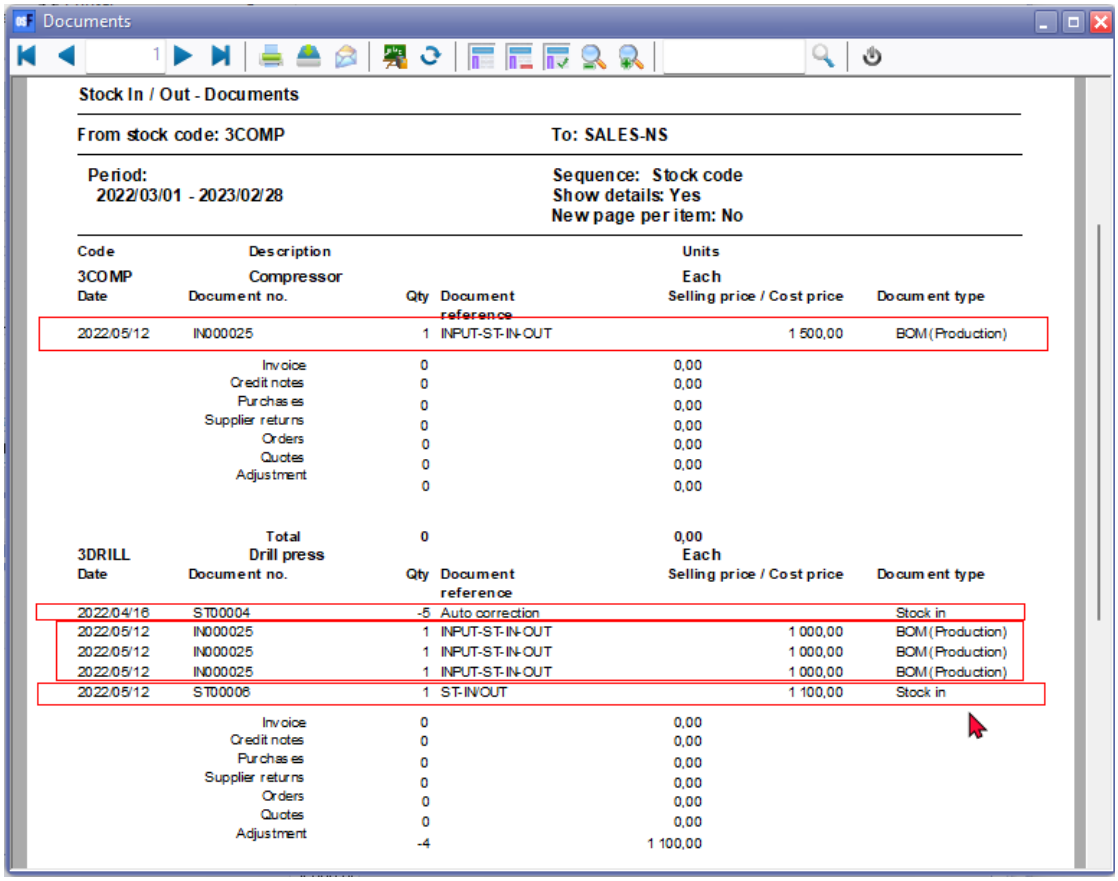


NOTE :

- Stock In document can be printed
- Stock In document entry lines - cannot select stock item sometimes a double click works but +Open fast add easy select and add an item.
- Selling price - No selling prices 1 / 2 / 3.
- Stock item - Unposted document number available - The Stock In / Out document created from the Input → Stock in menu cannot be posted, but is available as an unposted document in the Document groups tab of the Stock item. You may:
    - Print the document - Double-click to print the document.
    - Open document - Right-click to open the document. NOTE - The unposted document entry screen cannot be edited from this option.
- Debtors - Unposted document number available -
    - Stock items tab NOTE : Refers to Assemble in the "*Document type*" column. Should refer to Stock In / Out as the document type.

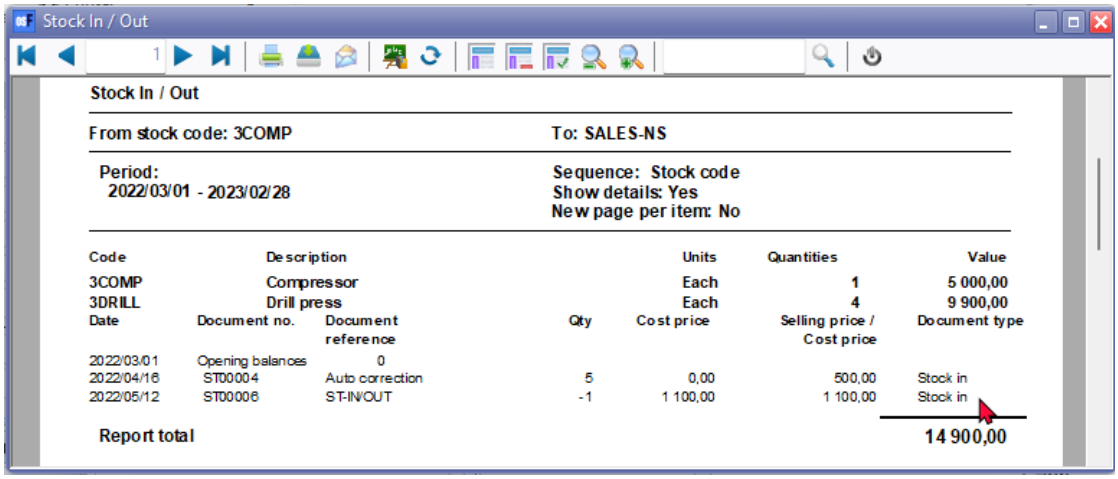


NOTE : This also reflect as the BOM (Production) stock item type in Reports → Stock → Stock In / Out - "*Documents*" report:



This report includes both posted and unposted documents processed with the Stock In / Stock out document type. Any stock adjustments, including Auto correction, Surpluses, and Shortages, processed before activating this plugin, will be listed on the document grid under the Stock In / Out document type. These adjustments would have been made using the Input → Adjust stock menu or by manually changing stock quantities on the stock item grid. The document numbers for these stock adjustments consist of 7 digits and include '*ST*' as the prefix.

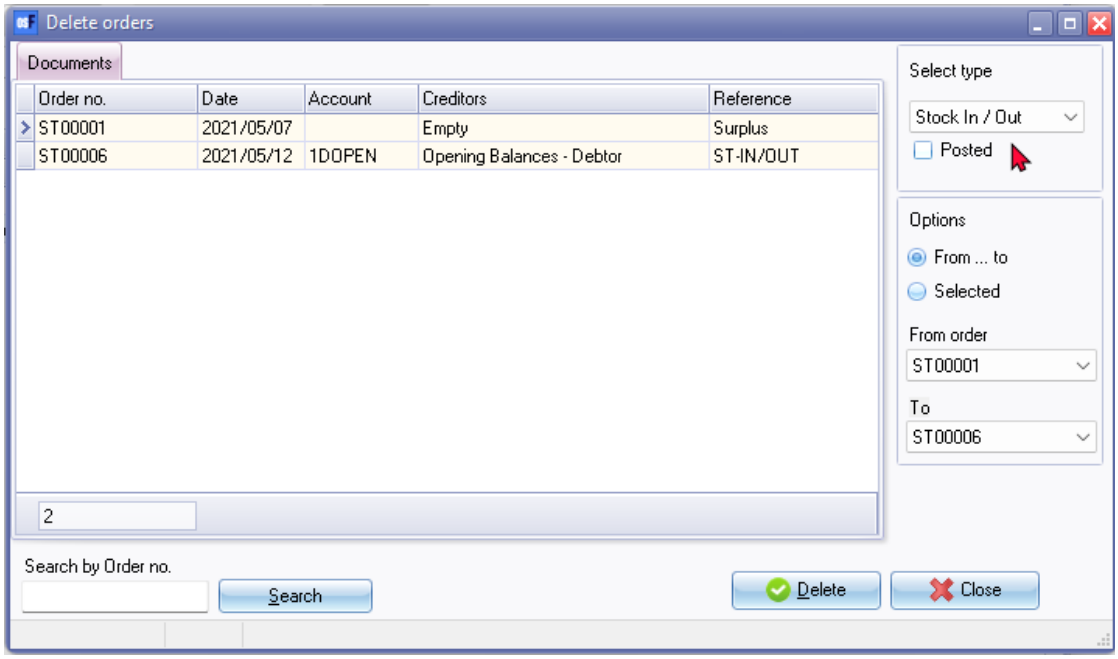
NOTE : The posted StockIn / Out Stock item type reflects the "Stock in" stock item type in Reports → Stock → Stock In / Out - "*Stock In / Out*" report:



- Documents tab

- Document number not available - The Stock In / Out document created from the Input → Stock in menu can not be found on the following:
  - Stock item grid - all document types, including the Stock In / Out document type.
  - Input → Update documents (F3) - Title bar caption refers to "*Delete orders*" Any stock adjustments, including Auto correction, Surpluses, and Shortages, processed before activating this plugin, will be listed on the document grid under the Stock In / Out document type. These adjustments would have been made using the Input → Adjust stock menu or by manually changing stock quantities on the stock item grid. The document numbers for these stock adjustments consist of 7 digits and include '*ST*' as the prefix.

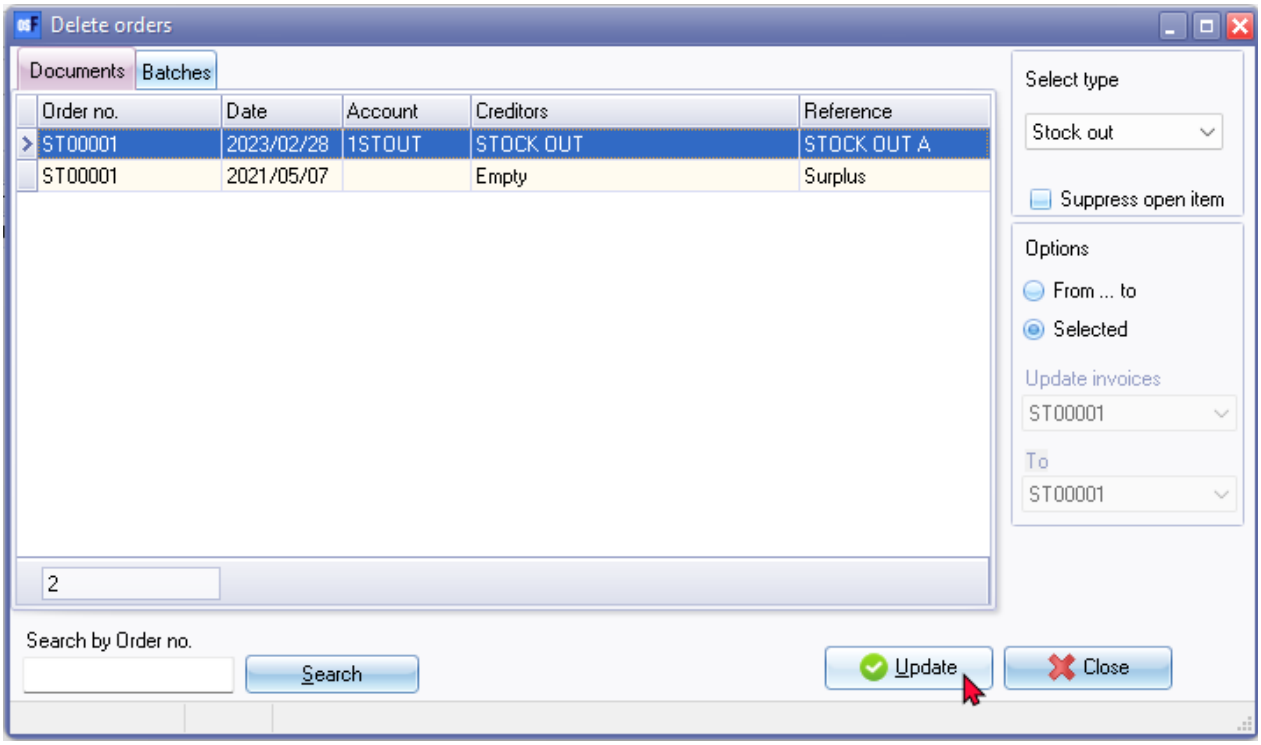
  - Edit → Delete documents - Title bar caption refers to "*Delete orders*". Any stock adjustments, including Auto correction, Surpluses, and Shortages, processed before activating this plugin, will be listed on the document grid under the Stock In / Out document type. These adjustments would have been made using the Input → Adjust stock menu or by manually changing stock quantities on the stock item grid. The document numbers for these stock adjustments consist of 7 digits and include '*ST*' as the prefix.



Update to ledger

If the "*Auto-post document on print*" setting on the Documents setup in the Setup menu (accessible via the Setup ribbon) is not activated, or if you have not yet printed the document, you will need to manually post the Stock In / Out documents.

To do this, press F3 or select Update Ledger on the Default ribbon. The "*Update Invoices*" screen is displayed:



Select the Stock In / Out document type and click Update.

View the posted transactions

Once the Stock in and Stock out documents have been posted (updated to the ledger), you may view the transactions in the following options:

Stock items (Default ribbon)

Includes the Stock in and / or Stock out document types if processed for the selected stock item.

Document groups tab

This will include posted as well as unposted documents for the Stock in and Stock out document types.

- Double-click to print the selected document or choose a different layout file.
- Right-click to open the document entry screen in a separate window. Note that both posted and unposted documents cannot be edited.

Transactions tab

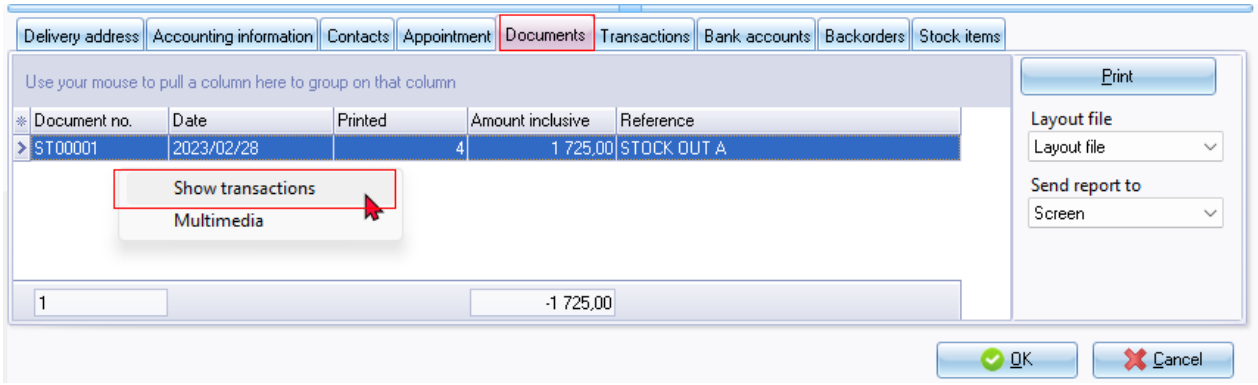
This will only include posted documents for the Stock in and Stock out document types.

- Right-click and select "*Open document*" from the context menu. Note that posted documents cannot be edited.

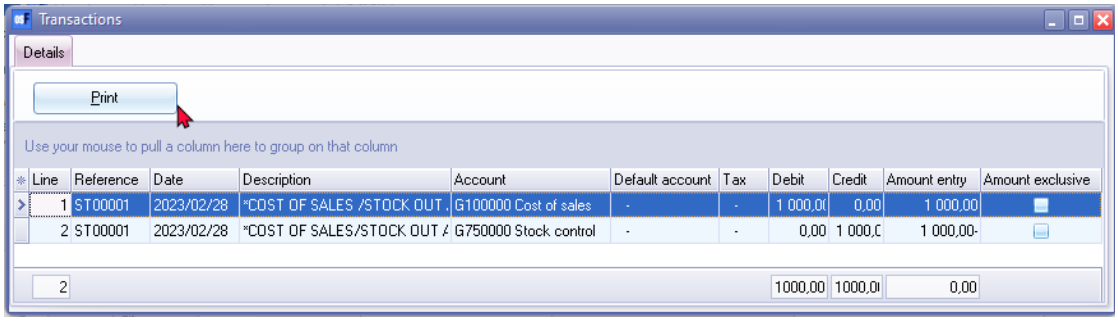
Debtors (Default Ribbon)

The Stock out document type should be listed since you can only select a debtor account.

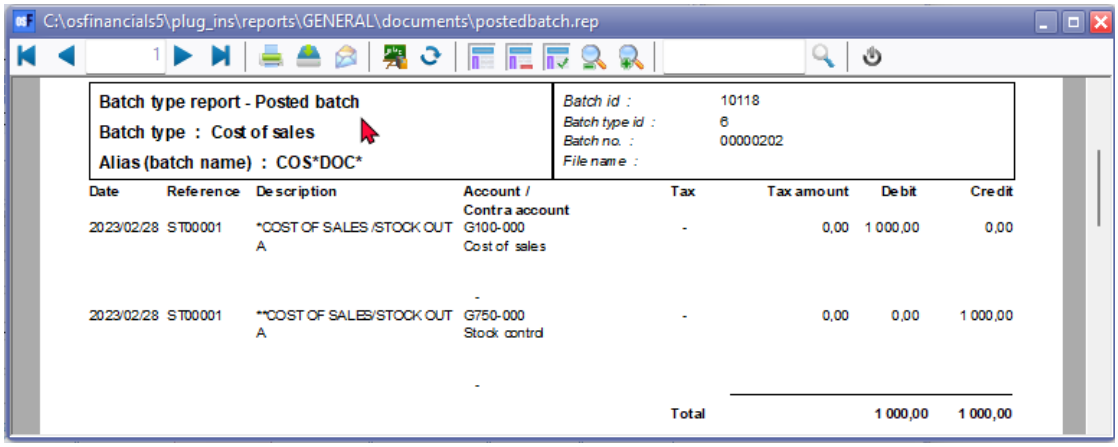
Documents tab



- Includes both posted and unposted documents for the Stock out document type.
- Here, you may:
  - Print the document layout file: Double-click to print the selected document or click the Print button. You may select a different layout file.
  - View and Print transactions: Right-click and select "*Show transactions*" on the context menu. This lists the transactions on a "*Transactions*" screen for the selected document. Note: For the Stock out document type, the quantities will be adjusted, and the transactions for cost of sales will be adjusted in a journal. Additionally, for the Stock in document type, the "*Transactions*" screen may be empty, as it primarily adjusts quantities. For the Stock out document type, the cost of sales transactions, will be listed the "*Transactions*" screen.



Clicking the Print button will print a "*Batch type report - Posted batches*". If an unposted batch is selected, the "*Transactions*" screen will be blank.



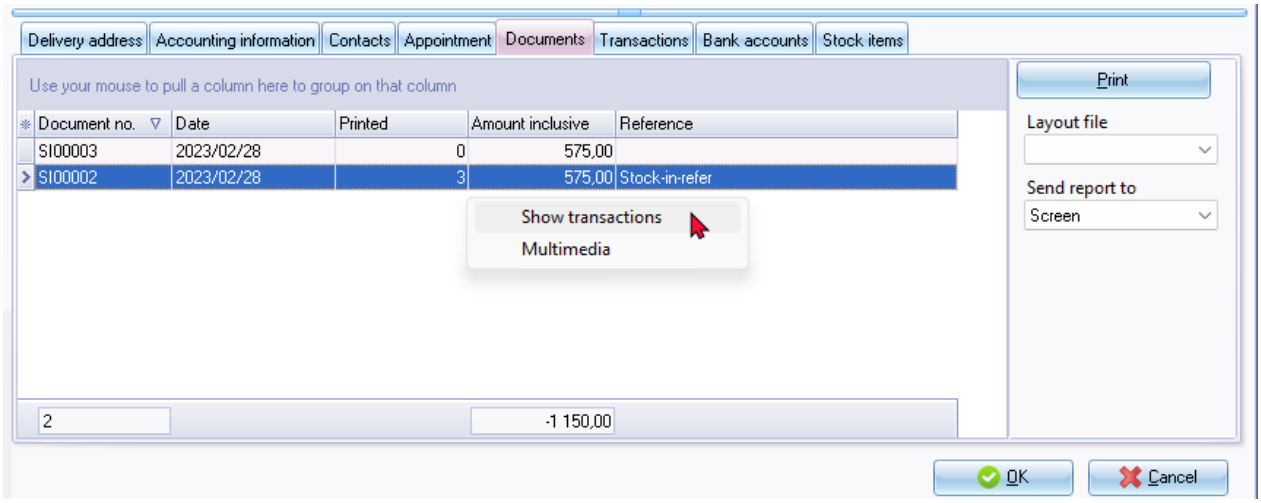
Stock item tab

- Includes both posted and unposted documents for the Stock out document type.
- The stock out document type numbers will consist of 7 digits of which the first two is prefixed with "ST" .The document type for the Stock out is indicated as "Stock+"

Creditors (Default Ribbon)

The Stock in document type should be listed since you can only select a creditor account.

Documents tab



- Includes both posted and unposted documents for the Stock in document type.
- Here, you may:
  - Print the document layout file: Double-click to print the selected document or click the Print button. You may select a different layout file.
  - View and Print transactions: Right-click and select "*Show transactions*" on the context menu.

This lists the transactions on a "*Transactions*" screen for the selected document. Note: for Stock In document type, the "*Transactions*" screen may be empty, as it primarily adjusts quantities.

Stock item tab

- Includes both posted and unposted documents for the Stock in document type.
- The stock in document type numbers will consist of 7 digits of which the first two is prefixed with "*SI*" .The document type for the Stock in is indicated as "*Stock-*"

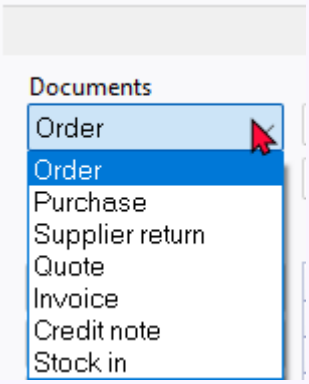
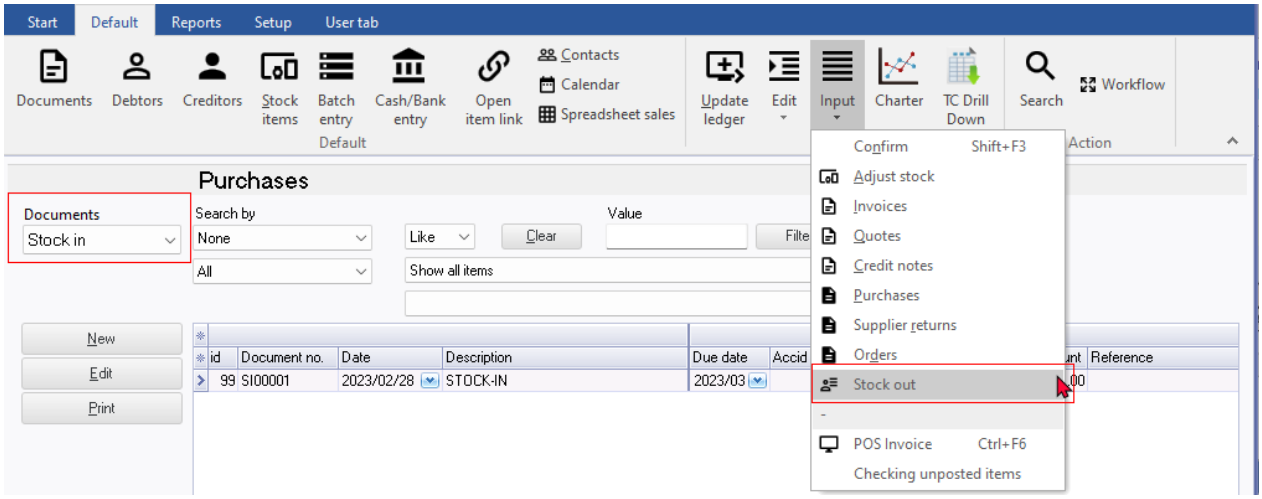
BUG - Disables the Ledger tab of all Stock items- See - Dynareg - Extra documnent types - BUG - Stock items -



Known issues

Input menu

Input menu - Stock out - launches Stock in can process creditors. On Documents grid document type Stock in launches creditors.



Print posted transactions - Cannot print posted transactions for Stock in

Creditors - Documents tab - "*Show transactions*" context menu. Cannot view and print "Transactions" screen "*Batch type report - Posted batches*" report. Transactions screen is empty and "*No data to print*!" error. When create Stock in Document - Output tax is included in the selected stock item and not Input tax. In Ledger analyser cannot trace and print the transactions for the Stock in document type.

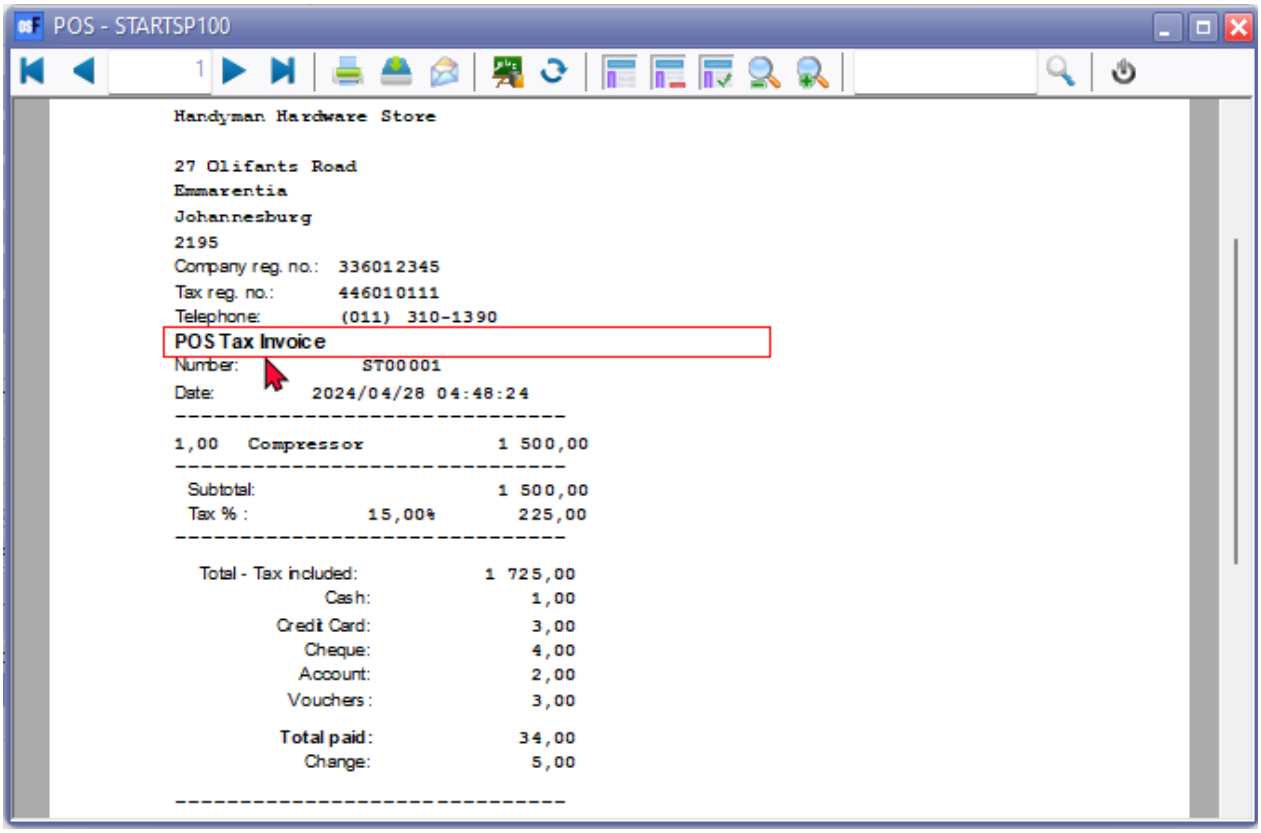
"Right-click and select "*Show transactions*" on the context menu. This lists the transactions on a "*Transactions*" screen for the selected document. Note: For the Stock out document type, the quantities will be adjusted, and the transactions for cost of sales will be adjusted in a journal. Additionally, for the Stock in document type, the "*Transactions*" screen may be empty, as it primarily adjusts quantities. For the Stock out document type, the cost of sales transactions, will be listed the "*Transactions*" screen."

Update ledger / Delete documents - Titlebar captions

- Update documents - Stock in - Delete supplier returns
- Delete documents - Stock in - Delete supplier returns

Print layout files

The plugin prints the layout file selected in the "*Layout file point-of-sale*" field within Documents setup. This setting does not work for the "*Stock in*" document type By default, the "*Stock in*" will print the till slip layout file "*POS Tax invoice*".

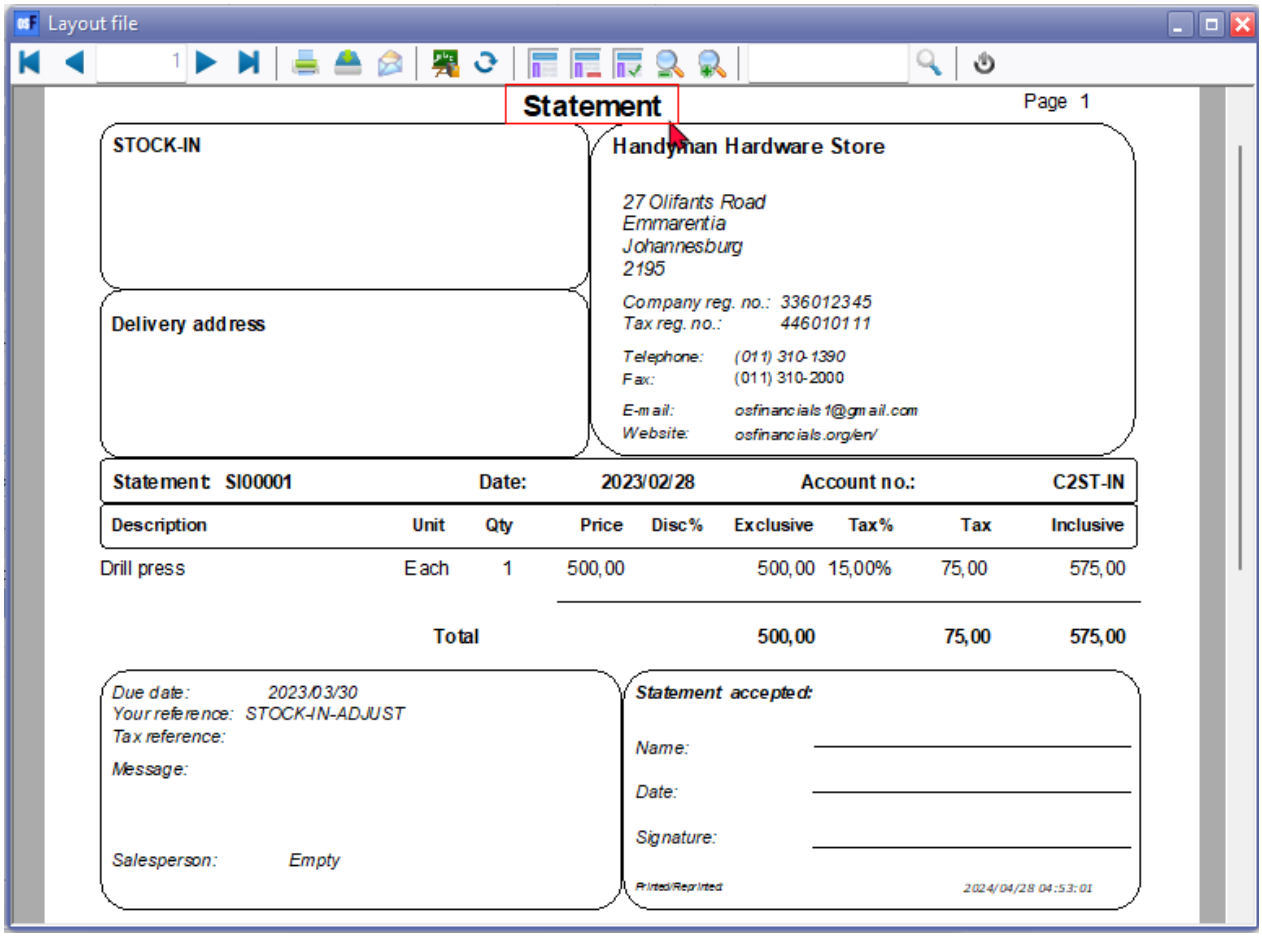


NOTE If "*Layout file*" is selected as the option within Documents setup for other document types, the "*Default*" option on Document grid does not work. You need to select the "*Layout file*" or other layout file.

You have the option to choose a different layout file for "*Stock in*" document types.

Layout file - The default "*Layout file*" for all document types, will print the headings in the Types on Tools → Customise language.

Stock in - Statement



Dynareg - Separate Item Issue Plugin - Shop - Licence : Once-off -

Enable : "Documenten - Aparte artickel uitgifte"

Enable : "Documenten -> Alleen inkoop"

Enable : "Documenten -> Verminder herbestel by doorboeken inkoop"

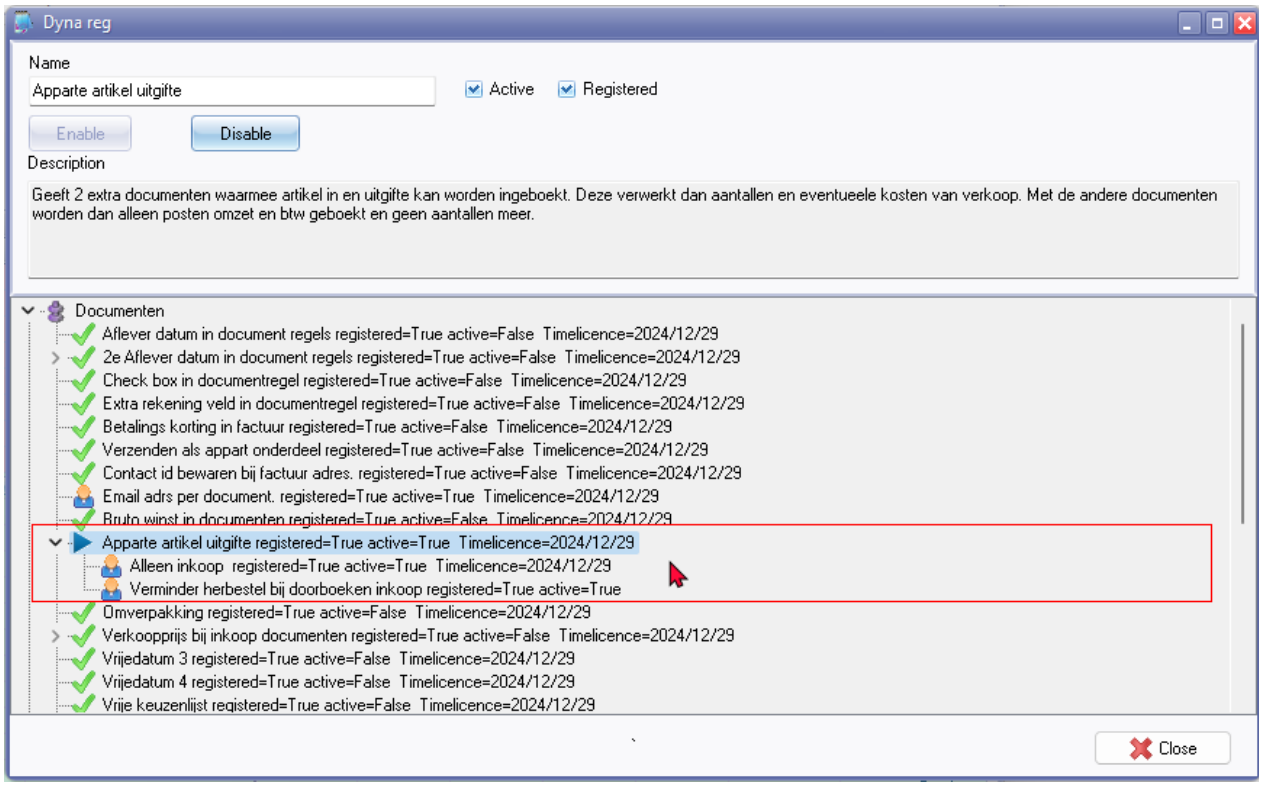
Activation of the "*Dynareg Only purchase via new type*" plugin

To activate the "*Dynareg Only purchase via new type*" plugin and enable the "*Stock in*" as an additional document type, you'll need to follow these steps:

1. Enable the "*Aparte artickel uitgifte*" plugin. This plugin adds the "*Stock in*" and "*Stock out*" document types.
2. Enable the "*Alleen inkoop"* plugin. This plugin also adds the "*Stock in*" and "*Stock out*" document types.
3. Enable the "*Verminder herbestel by doorboeken inkoop*" plugin. This plugin specifically adds the "*Stock*

in" document type. Note that the "Stock out" document type, which is added when you enable the previous two plugins, will be removed.

After enabling each of these plugins, be sure to reopen your Set of Books. This step is crucial to ensure that the changes take effect properly.



Dynareg - Separate Item Issue Plugin - Shop - Licence : Once-off -

Enable : "Documenten -> Aparte artickel uitgifte"

Enable : "Documenten -> Alleen inkoop"

Enable : "Documenten -> Verminder herbestel by doorboeken inkoop"

Reduce reorders when rebooking purchases

When transferring a purchase, reduce the reorder. (2nd hand store)

Access to Stock in document type

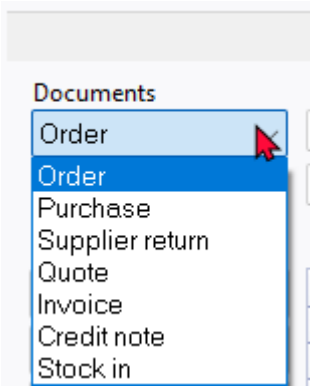
In addition to the standard document types, this plugin adds Stock in document type, serving distinct purpose.

The Stock in is added alongside the existing purchase document types: purchases, supplier returns, and orders. Document numbers for Stock in start with "*SI00001*".

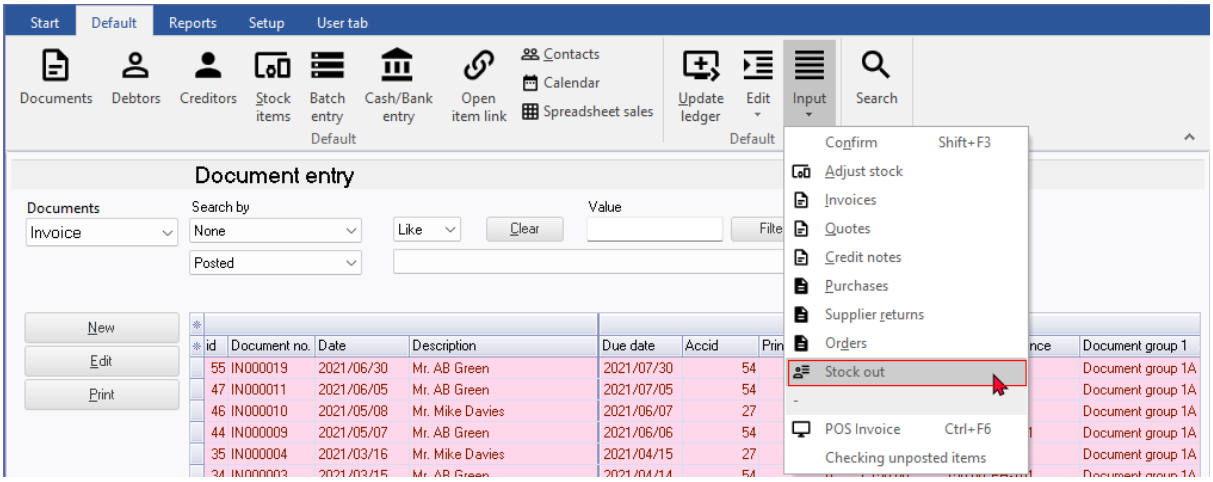
Accessing the Stock in additional document type:

You may access the Stock in additional document types via the following options:

1. Default ribbon: Navigate to Documents and select either the standard document types or the Stock in document type. This launches the document entry screen as an integrated part of the document grid.



2. Input menu: Choose from the standard document types or the Stock in document type from the Input menu. This launches the document entry screen as a separate screen.



Additionally, the "*Stock in*" document type is available as options on the context menu of the document grid, accessible via Documents → Copy to → Stock in.

Document grid - Search and Filter options

Filter and Search options

For the Stock in document type, utilize the powerful grid for filtering and searching. Some of the available options include:

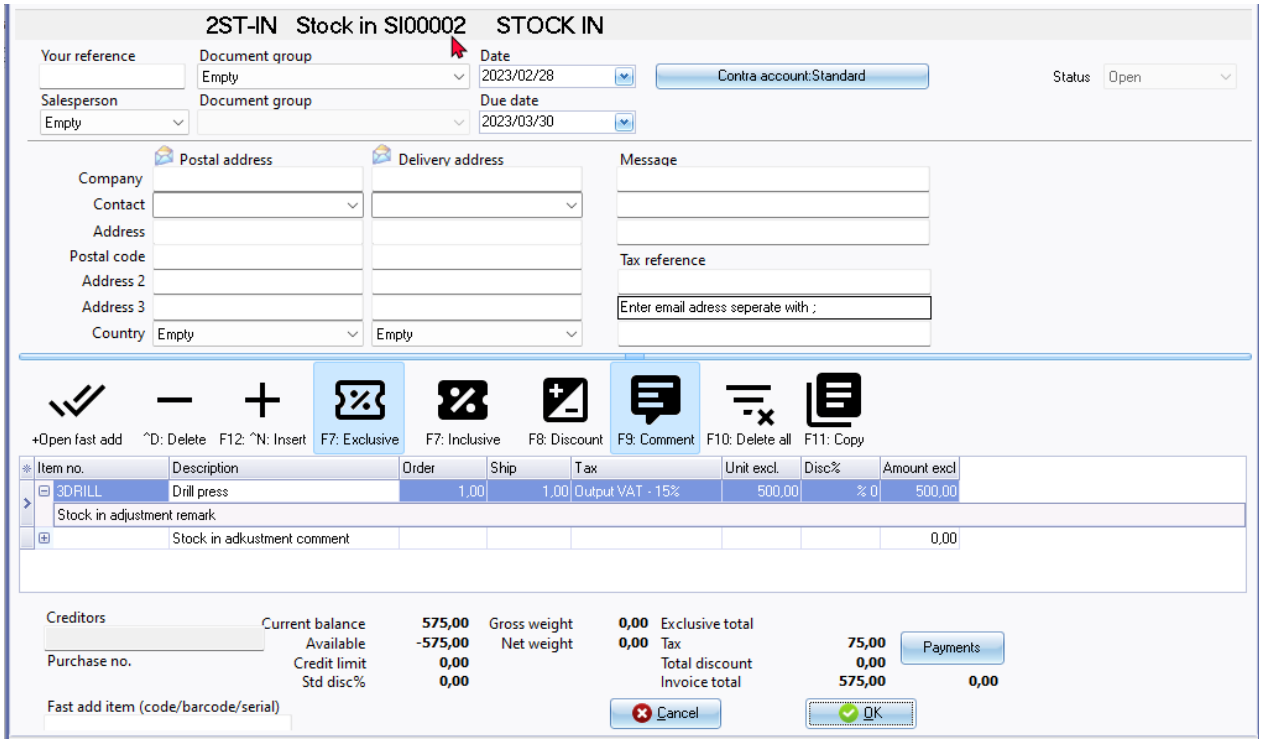
- Document status: Filter by Unposted, Posted, or view All documents.
- Groups: Filter for specific document groups.

- Document details: Access all available document details, including references, dates, and more.

Additionally, you can build custom filters tailored to your specific needs.

Stock in

The "*Stock in*" document type resembles the "*Purchase*" document type. To create a new document for the Stock in document type, click New. On the "*Creditor accounts*" screen, select a creditor (supplier/vendor) account and click Open. If no account exists, you may create a new creditor account.



On the Stock in document entry screen, select the stock item. You may enter references in the "*Your reference*" field in the document header. Additionally, you can include remarks and comments:

- Remarks: Beneath each stock item, you can add remarks. These remarks will print in document layout files but are not searchable in the central search.
- Comments: Use the F9: Comment option to enter comments for each item.

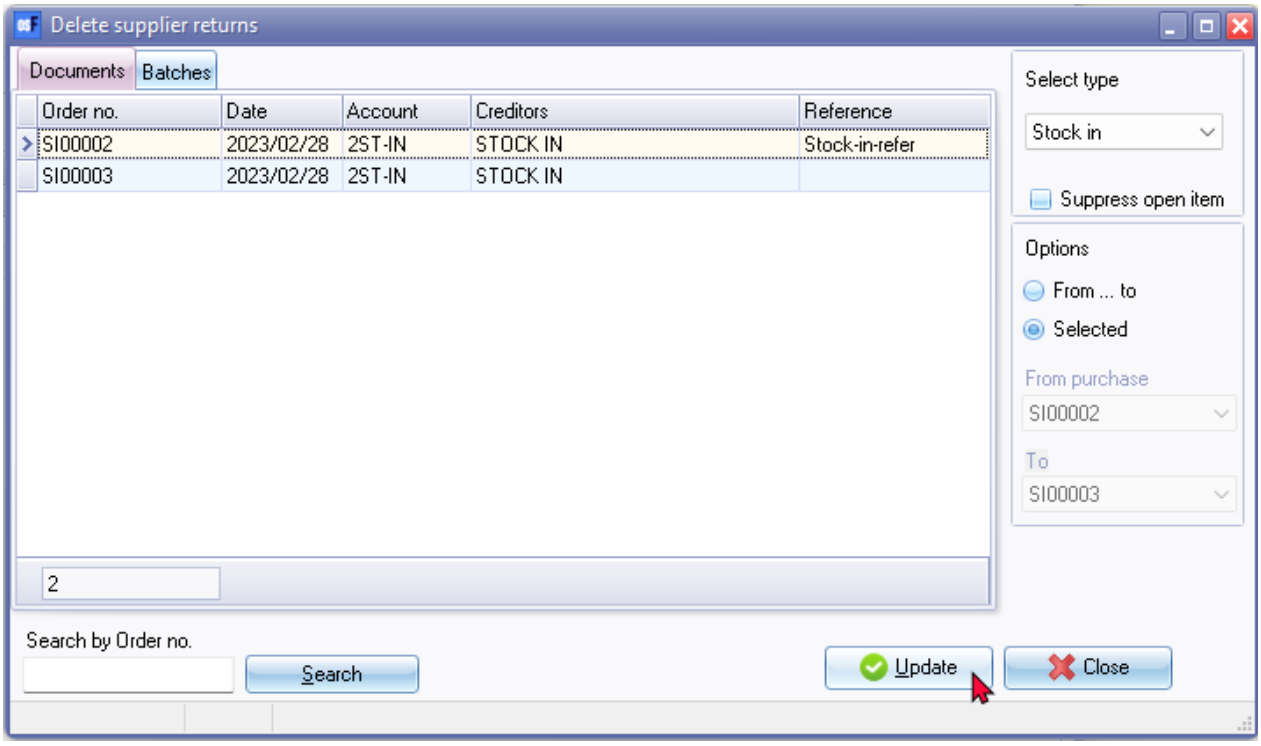
The document references entered in the "*Your reference*" field in the document header, along with the comments, are searchable using the central search option (accessible via the Search on the Default ribbon).

Update to ledger

If the "*Auto-post document on print*" setting on the Documents setup in the Setup menu (accessible via the

Setup ribbon) is not activated, or if you have not yet printed the document, you will need to manually post the Stock in documents.

To do this, press F3 or select Update Ledger on the Default ribbon. The "*Update Invoices*" screen is displayed:



- Select the Stock in document type and click Update.

View the posted transactions

Once the Stock in documents have been posted (updated to the ledger), you may view the transactions in the following options:

Stock items (Default ribbon)

Includes the Stock in document types if processed for the selected stock item.

Document groups tab

This tab will include posted as well as unposted documents for the Stock in document type.

- Double-click to print the selected document or choose a different layout file.
- Right-click to open the document entry screen in a separate window. Note that both posted and unposted documents cannot be edited.

Transactions tab

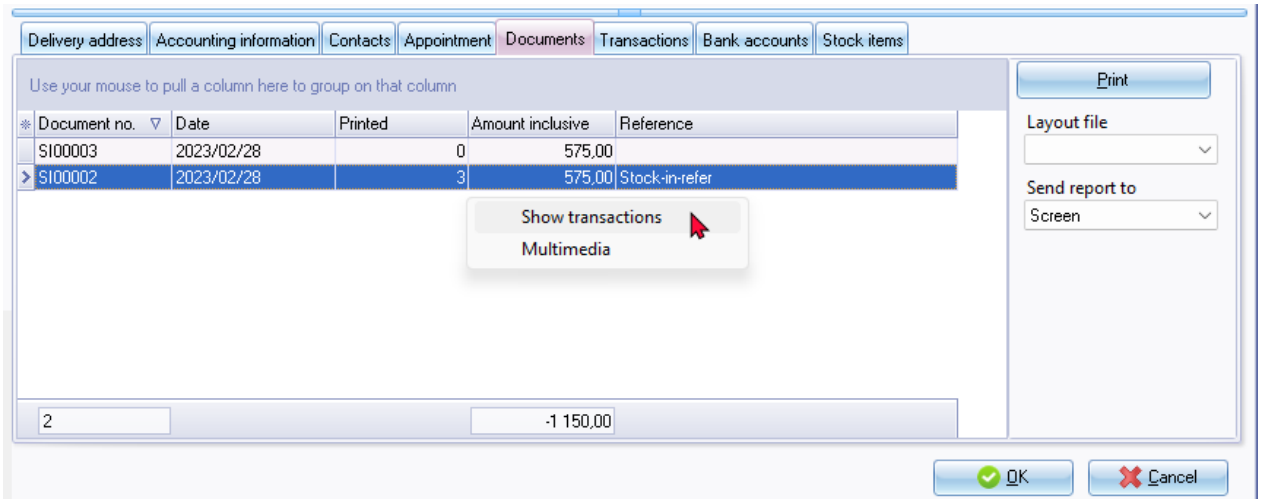
This tab will only include posted documents for the Stock in document types.

- Right-click and select "*Open document*" from the context menu. Note that posted documents cannot be edited.

Creditors (Default Ribbon)

The Stock in document type should be listed since you can only select a creditor account.

Documents tab



- Includes both posted and unposted documents for the Stock In document type.
- Here, you may:
  - Print the document layout file: Double-click to print the selected document or click the Print button. You may select a different layout file.
  - View and Print transactions: Right-click and select "*Show transactions*" on the context menu. This lists the transactions on a "*Transactions*" screen for the selected document. Note: for Stock In document type, the "*Transactions*" screen may be empty, as it primarily adjusts quantities.

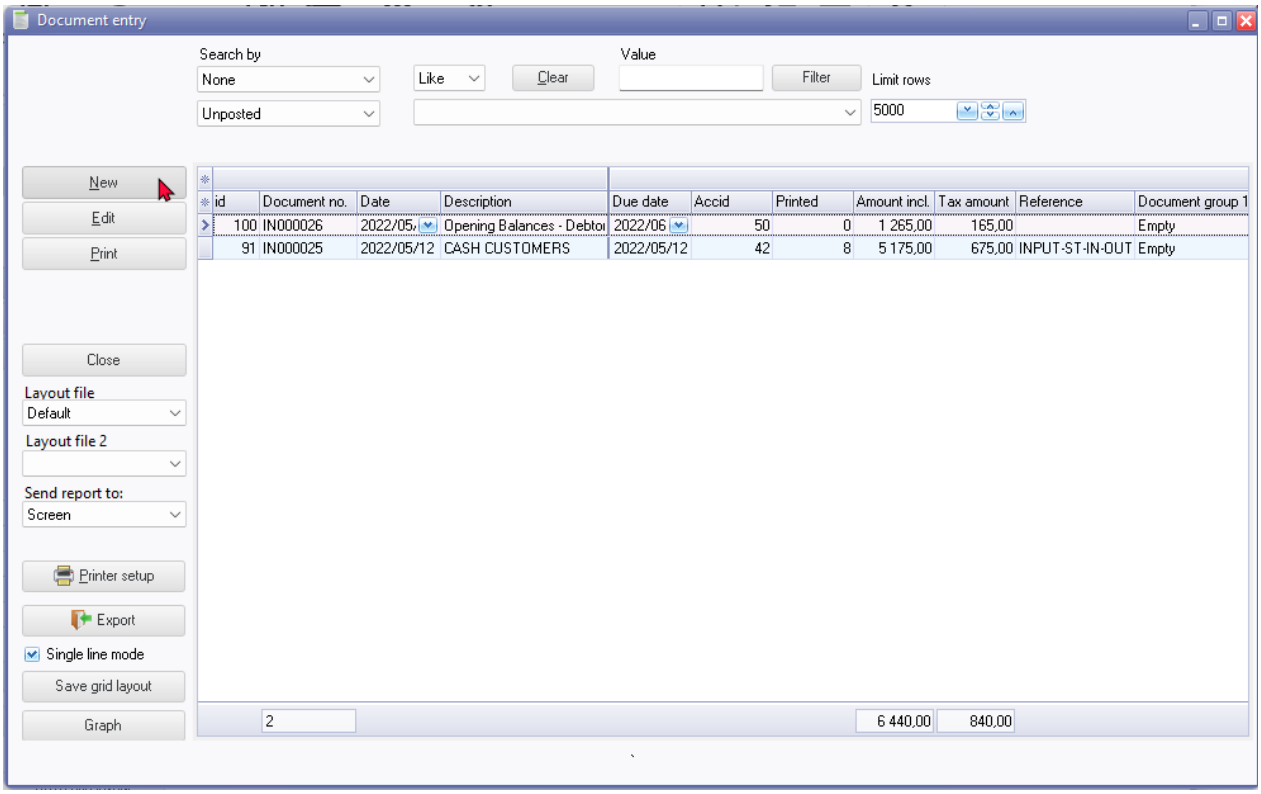
Stock item tab

- Includes both posted and unposted documents for the Stock in document type type.
- The stock in document type numbers will consist of 7 digits of which the first two is prefixed with "*SI*" .The document type for the Stock out is indicated as "*Stock-*"

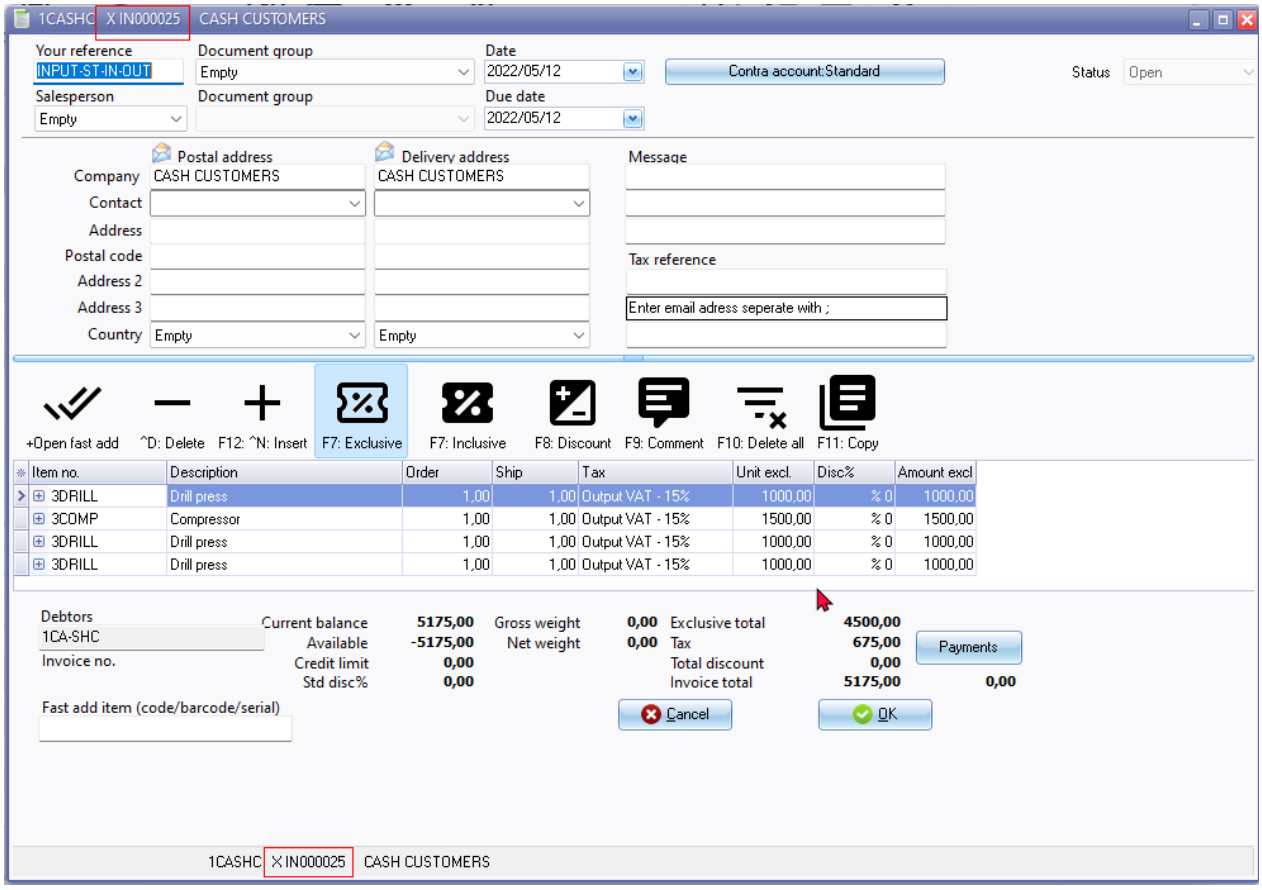
Input → Stock out menu

Input → Stock out menu should read Stock in - See document type on the Documents grid.

The Input → Stock out menu launches the Document entry in a separate window. New Invoice will create an Invoice "X IN000025, etc. instead of a Stock in document type with document number "SI00001"



The invoice on document entry



NOTE : This document "Invoice" only listed from the Input → Stock out menu and is not available on:

- Documents grid (both Invoices and Stock in document types)
- Update ledger (cannot post)
- Delete documents (cannot delete)
- Print uses the *"Layout file point-of-sale" field setting* within Setup → Documents setup.

Dynareg - Numbers based on multiplication factor

Dynareg - Numbers based on multiplication factor plugin - Shop - Licence : Once-off -

Enable : "Aantalen multiplieer"

Aantallen op basis van vermenigvuldigings factor

Vermenigvuldigd het artikel totaal bedrag opbasis van het aantal en een vrije vermenigvuldigings factor.

Quantities based on multiplication factor plugin

This "*Dynareg - Numbers based on multiplication factor*" plugin is available in sales documents (invoices, credit notes and quotes. as well as purchase documents (purchase, supplier return and orders).

Multiplies the item total amount based on the quantity and a specified free multiplication factor.

When the "*Dynareg - Quantities based on multiplication factor*" plugin, will when enabled, add an extra column "*X*" in the document lines,

The default value in the multiplication factor "X" column is always 1. This means that the quantity entered in the quantity ship column for an item, multiplied by the Unit price (exclusive or inclusive of Tax (VAT/GST/Sales tax)).

- Increase multiplication factor - This will increase the Total exclusive amount price by the number specified in the X column.
- Decrease multiplication factor - If you enter a number as a decimal, e,g, 0,5, it will reduce the Total exclusive amount price by the number specified price by the number specified in the X column.

The "*Dynareg - Numbers based on multiplication factor*" plugin provides functionality to automatically adjust the total amount of items in sales and purchase documents based on a multiplication factor specified in an extra column called "*X*".

Key features:

1.

- Availability: The plugin is available in various types of sales documents (invoices, credit notes, and quotes) as well as purchase documents (purchase, supplier return, and orders).
- Multiplication Factor: It multiplies the item total amount based on the quantity and a specified multiplication factor. The default value for the multiplication factor column "X" is always 1.

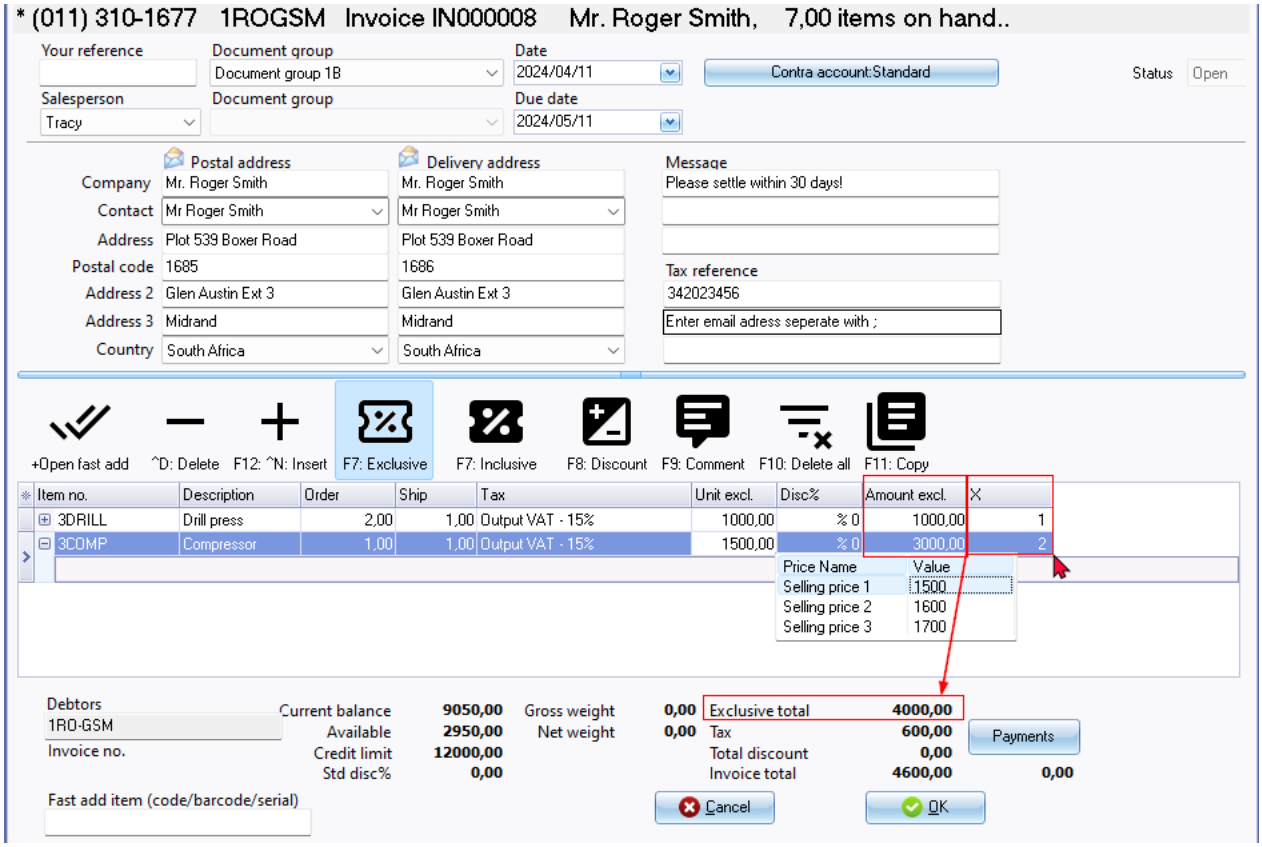
- Extra Column: When enabled, the plugin adds an extra column "X" in the document lines where users can input the multiplication factor.

- Adjustment: Users can increase or decrease the multiplication factor, which affects the total exclusive amount price accordingly. Increasing the multiplication factor increases the total exclusive amount price by the specified number in the "*X*" column, while decreasing it reduces the total exclusive amount price by the specified number if a decimal is used.

- Printing Layout Files: The layout files for sales and purchase documents is designed dynamically to incorporate the multiplication factor. This involves ensuring that the total amounts displayed on the printed documents are calculated based on the quantity, unit price, and multiplication factor entered in the document entry screens.

This functionality seems useful for scenarios where users need to apply a consistent multiplier to item prices in sales and purchase documents. It provides flexibility by allowing users to adjust the multiplier as needed, potentially saving time and reducing errors in manual calculations.

When you print layout files of sales and purchase documents any adjustments made using the multiplication factor in the document entry screens will be reflected in printed layout files. Additionally, the tax (VAT/GST/Sales tax) calculations would also be updated accordingly based on the modified total amounts.



Let's visualize this scenario with an example using a screenshot of an invoice:

Invoice Example:

1.

1. Drill Press:
    - Description: Drill press equipment.
    - Unit Price (Exclusive of Tax): $1000 per unit.
    - Quantity Shipped: 1 unit.
    - Multiplication Factor (X): 1 (default).
    - Amount (Exclusive of Tax): $1000 (1 unit * $1000/unit).

    In this case, the multiplication factor is 1, which means the total amount remains the same as the unit price multiplied by the quantity shipped. The total amount is $1000 exclusive of tax.

2. Compressor:
    - Description: Air compressor.
    - Unit Price (Exclusive of Tax): $1500 per unit.
    - Quantity Shipped: 1 unit.
    - Multiplication Factor (X): 2.
    - Amount (Exclusive of Tax): $3000 (1 unit * $1500/unit * 2).

    Here, the multiplication factor is set to 2. As a result, the total amount is adjusted to $3000, which is double the original amount. This reflects the applied multiplication factor, resulting in a higher total amount.

Summary:

- The invoice displays two items: Drill Press and Compressor.
- For Drill Press, the default multiplication factor (1) doesn't alter the total amount.
- For Compressor, the multiplication factor (2) doubles the total amount.

This example illustrates how the multiplication factor specified in the "X" column affects the total amount for each item on the invoice. It provides a clear demonstration of how adjustments made in the document entry screens are accurately reflected in the printed invoice.

Example printed invoice:

Dynareg - Numbers based on division factor

Dynareg - Numbers based on divide factor plugin - Shop - Licence : Once-off -

Enable : "Aantalen multiplieer" - Help documentation : Dynareg - Numbers based on multiplication factor plugin

Enable : "Gebruik veld als delen door" - Help documentation : Dynareg - Numbers based on divide factor plugin

Multiplies the item total amount based on the quantity and divides a free factor by factor.

The "*Dynareg - Nunbers based on divide factor*" plugin is based on the "*Dynareg - Numbers based on multiplication factor*" plugin provides functionality to automatically adjust the total amount of items in sales and purchase documents based on a division factor specified in an extra column called "*X*".

Key features:

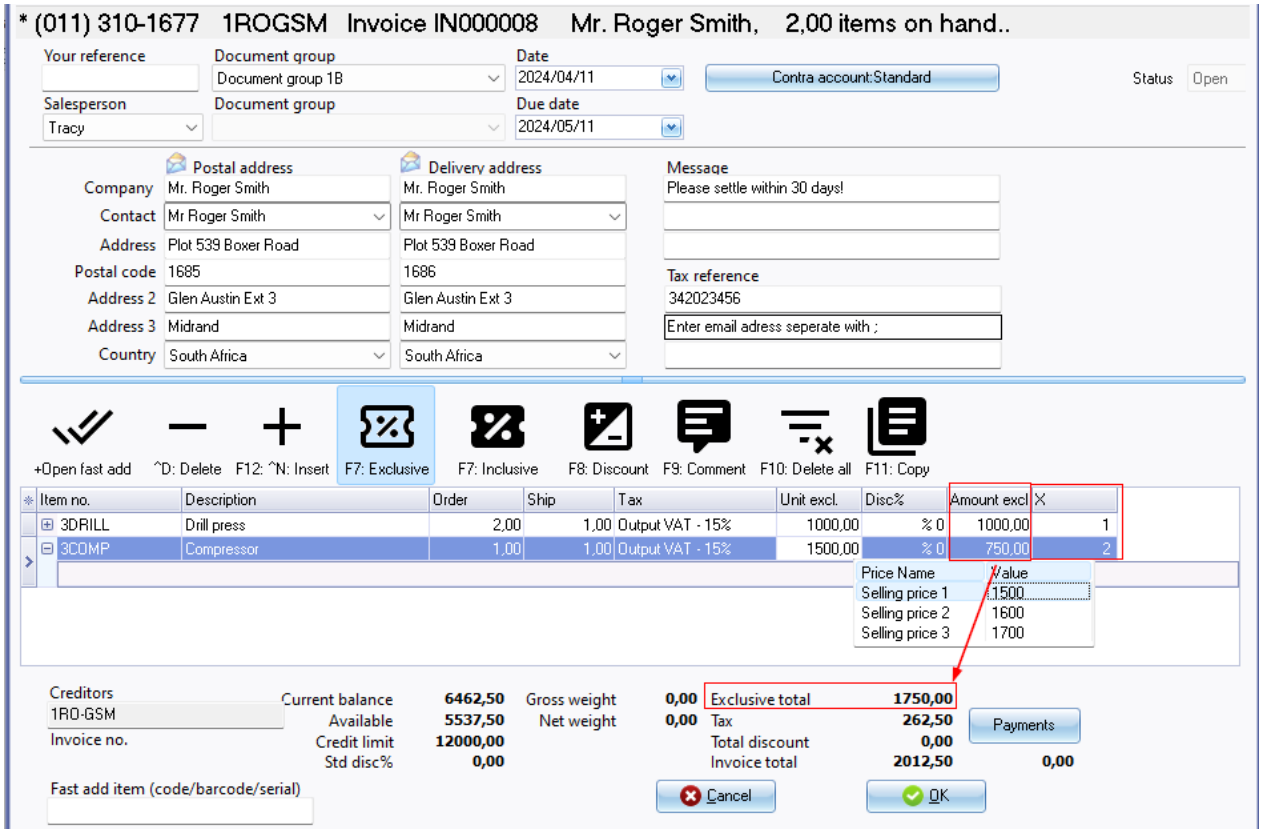
1.

- Availability: The plugin is available in various types of sales documents (invoices, credit notes, and quotes) as well as purchase documents (purchase, supplier return, and orders).
- Division Factor: It divides the item total amount based on the quantity and a specified division factor. The default value for the division factor column "X" is always 1.
- Extra Column: When enabled, the plugin adds an extra column "*X*" in the document lines where users can input the division factor.
- Adjustment: Users can decrease the division factor, which affects the total exclusive amount price accordingly. Increasing the division factor increases the total exclusive amount price by the specified number in the "*X*" column, while decreasing it reduces the total exclusive amount price by the specified number if a decimal is used.
- Printing Layout Files: The layout files for sales and purchase documents are dynamically designed to incorporate the division factor. This ensures that the total amounts displayed on the printed documents are calculated based on the quantity, unit price, and division factor entered in the document entry screens.

This functionality is useful for scenarios where users need to apply a consistent divider to item prices in sales and purchase documents. It provides flexibility by allowing users to adjust the divider as needed, potentially saving time and reducing errors in manual calculations.

This example illustrates how the division factor specified in the "*X*" column affects the total amount for each item on the invoice. It provides a clear demonstration of how adjustments made in the document entry screens are accurately reflected in the printed invoice.

When you print layout files of sales and purchase documents any adjustments made using the divider factor in the document entry screens will be reflected in printed layout files. Additionally, the tax (VAT/GST/Sales tax) calculations would also be updated accordingly based on the modified total amounts.



Let's visualize this scenario with an example using a screenshot of an invoice:

Invoice Example:

1.

1. Drill Press:
    - Description: Drill press equipment.
    - Unit Price (Exclusive of Tax): $1000 per unit.
    - Quantity Shipped: 1 unit.
    - Multiplication Factor (X): 1 (default).
    - Amount (Exclusive of Tax): $1000 (1 unit / $1000/unit).

    In this case, the multiplication factor is 1, which means the total amount remains the same as the unit price multiplied by the quantity shipped. The total amount is $1000 exclusive of tax.

2. Compressor:
    - Description: Air compressor.
    - Unit Price (Exclusive of Tax): $1500 per unit.
    - Quantity Shipped: 1 unit.
    - Division Factor (X): 2.
    - Amount (Exclusive of Tax): $750 (1 unit / $1500/unit / 2).

Here, the division factor is set to 2. As a result, the total amount is adjusted to $750, which is halves the original amount. This reflects the applied division factor, resulting in a reduced total amount.

Summary:

- The invoice displays two items: Drill Press and Compressor.
- For Drill Press, the default division factor (1) doesn't alter the total amount.
- For Compressor, the division factor (2) halves the total amount.

This example illustrates how the division factor specified in the "X" column affects the total amount for each item on the invoice. It provides a clear demonstration of how adjustments made in the document entry screens are accurately reflected in the printed invoice.

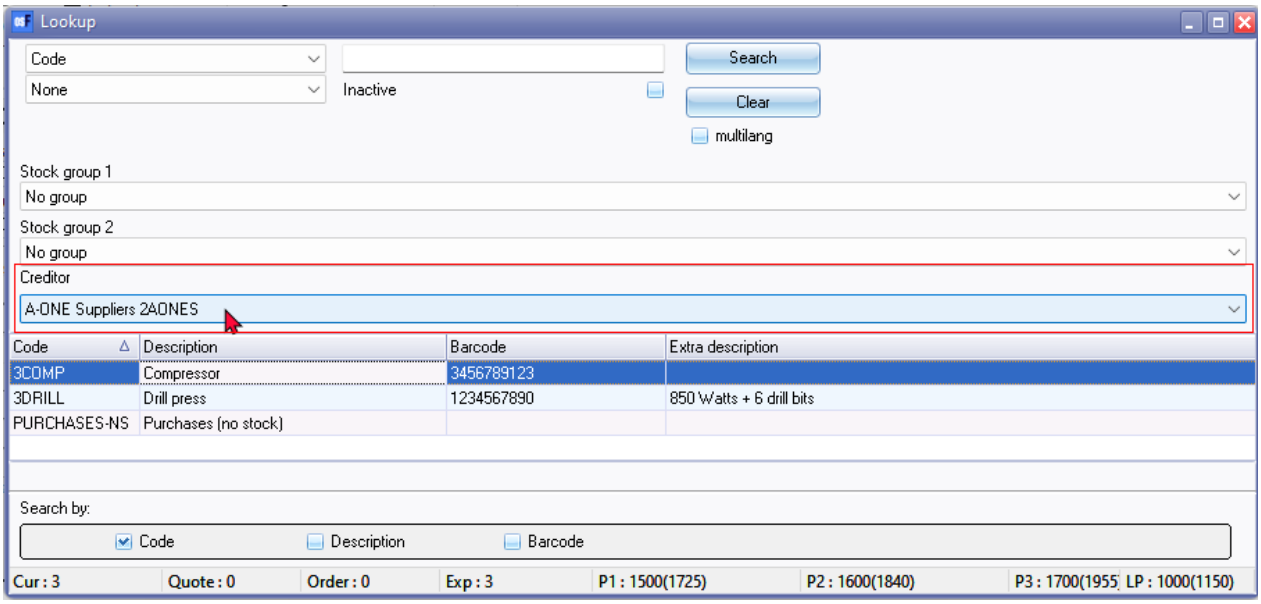
Dynareg - Limit by Creditor with selection list plugin

Dynareg Limit by Creditor with selection list plugin - Shop - Licence : Once-off -

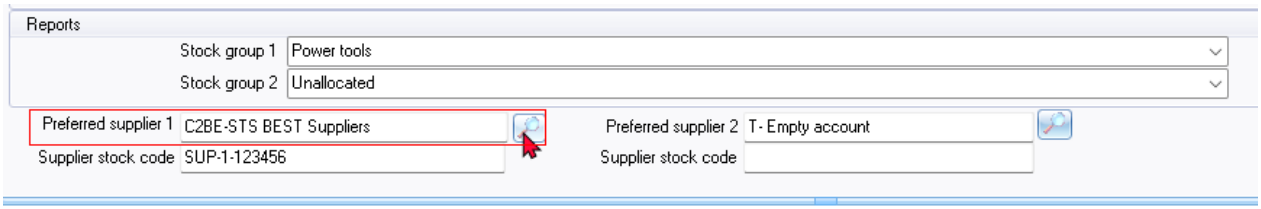
Enable : "Voorraad - Limiteer crediteur met keuze"

The "*Dynareg Limit by Creditor with selection list*" plugin for osFinancials5/TurboCASH5 offer an enhancement to the stock lookup screen by introducing an additional field for selecting a creditor (supplier) account.

When processing purchase documents (purchases, supplier returns and orders) and you select a stock item or product to include in a document, the stock lookup will, by default, list all of your stock items or products.



If you have linked stock items to supplier code, you may select the creditor account to list only those stock items linked to the supplier.



This feature can be particularly beneficial for businesses that deal with multiple suppliers and want to track their stock items based on the supplier from whom they were purchased.

By adding this extra field, users can easily filter and view stock items based on their respective suppliers, providing a more organised and efficient way to manage inventory. This capability can be especially useful for businesses that need to monitor stock levels, reorder products, or analyse purchasing patterns on a supplier-by-supplier basis.

Overall, the plugin seems is a practical addition to osFinancials5/TurboCASH5, enhancing its functionality and usability for businesses that rely on managing stock items from multiple creditors or suppliers.

Multi-language accounts

Multi-language Set of Books plugin

Multi-language Set of Books plugin - Manual - Shop - Licence : Once-off -

This plugin makes it possible to translate the ledger and group names in multiple languages. It is already possible to choose different languages for the interface (the buttons). But this plugin makes it possible to do the accounting in different languages. Per user you can select a language, so the user can account in his/her own language. The set of books can be viewed in different languages, therefore it is possible an employee enters information into an English Set of Books and a bookkeeper, auditor, etc. can see the set of books in a set language, e.g. Afrikaans, Dutch, etc.

The new multi-language ledgers, groups, types and batches is probably best feature implemented in osFinancials5/TurboCASH5.

This makes it possible for an international company to work in different languages on the same set of books.

This helps to show local investors in their language the balances and turnover of the company.

The multi-language feature allows different users to use the same set of books in the user language interface. The translation of ledger accounts need to be purchased from the shop.

By default, each Set of Books will run in the language associated with the Set of Books when opening a Set of Books. You may, if necessary (i.e. incorrect language is selected) or when you need to work in a different language, use Start → Switch language to change the language.

Any language may be customised / edited for your specific requirements on the Setup ribbon, select Tools → Customise language.

In addition to this, you may activate the Multi-Language feature (using any of the available languages in the Start → Switch language) in a Set of Books to:

· Create a Multi-Language User Interface. This makes it possible for a multi-lingual company to work in

different languages on the same set of books.

- Create a Multi-Language Accounts (Chart of accounts) - This helps to show local investors in their language the balances and turnover of the company.

This makes it possible for an international company to work in different languages on the same set of books.

This helps to show local investors in their language the balances and turnover of the company.

The multi-language feature allows different users to use the same set of books in the user language interface. The translation of ledger accounts need to be purchased from the shop.

By default, each Set of Books will run in the selected language when you Open a Set of Books.. You may, if necessary (i.e. incorrect language is selected) or when you need to work in a different language, use Start → Switch language to change the language.

System Language will list all the available languages in the Start → Switch Language menu.

Any language may be customised / edited for your specific requirements on the Setup → Tools → Customise Language menu.

The available languages is stored in the ... \ bin \ languages folder of your osFinancials5/TurboCASH5 installation directory. The default language is selected "System lang" field on the Standard tab of Setup → Access control . This is the language in which osFinacials5 will open the Set of Books.

Any language may be customised / edited for your specific requirements on Setup → Tools → Customise language.

In addition to this, you may activate the Multi-language feature (using any of the available languages in Start → Switch language) in a Set of Books to:

- Create a Multi-Language User Interface. This makes it possible for a multi-lingual company to work in different languages on the same set of books.
- Create a Multi-Language Accounts (Chart of Accounts) - This helps to show local investors in their language the balances and turnover of the company.

Multi-language setup

Add Multi-language groups

Add Multi-language users

Translate Multi-language groups

Translate Multi-language types

Translate Multi-language batch types

Translate Multi-language stock descriptions

Translate Multi-language chart of accounts

Once the Multi-language set of Books is configured and translated, the osFinancials user interface, reports, will be displayed in the system language and the Language set for the user.

Financial reports

The following financial statements may be printed and exported in the language set for a user using the Multi-language feature

1. *Trial balance* – *(Example of the Trial balance printed in 2 languages).*
2. *Income statement* -
3. *Balance sheet* –
4. *Standard column balances* –
5. *Budget vs actual* –
6. *This year vs last year* –

Print layout files in other languages

Languages may also be set for debtors and/or creditors to print layout files in their preferred language. Translatable document layout files, may be selected.

Print documents in debtor (customer / client) language

Print documents in creditor (supplier / vendor) language

Created with the Standard Edition of HelpNDoc: Transform Your Documentation Process with HelpNDoc's Project Analyzer

The Multi-Language Accounts Setup enables international companies to operate in different languages within a single set of books, facilitating communication with local investors and stakeholders. This feature allows users to customize the language interface and translate ledger accounts. Users can easily switch between languages or customize them according to their specific needs. Additionally, the plugin supports multi-language user interfaces and enables the presentation of financial data in local languages, enhancing accessibility and comprehension for diverse audiences.

===

The multi-language ledgers, groups, types and journals (batches) makes it possible for an international company to work in different languages on the same set of books.

This helps to show local investors in their language the balances and turnover of the company.

The multi-language feature allows different users to use the same set of books in the user language interface. The translation of ledger accounts need to be purchased from the shop.

By default, each Set of Books will run in the selected language when launching osFinancials for the first time (new installation). You may, if necessary (i.e. incorrect language is selected) or when you need to work in a different language, use Start → Switch language to change the language.

Any language may be customised / edited for your specific requirements on Setup → Tools → Customise language.

In addition to this, you may activate the Multi-Language feature (using any of the available languages in Start → Switch language) in a Set of Books to:

- Create a Multi-Language User Interface. This makes it possible for a multi-lingual company to work in different languages on the same set of books.
- Create a Multi-Language Accounts (Chart of Accounts) - This helps to show local investors in their language the balances and turnover of the company.

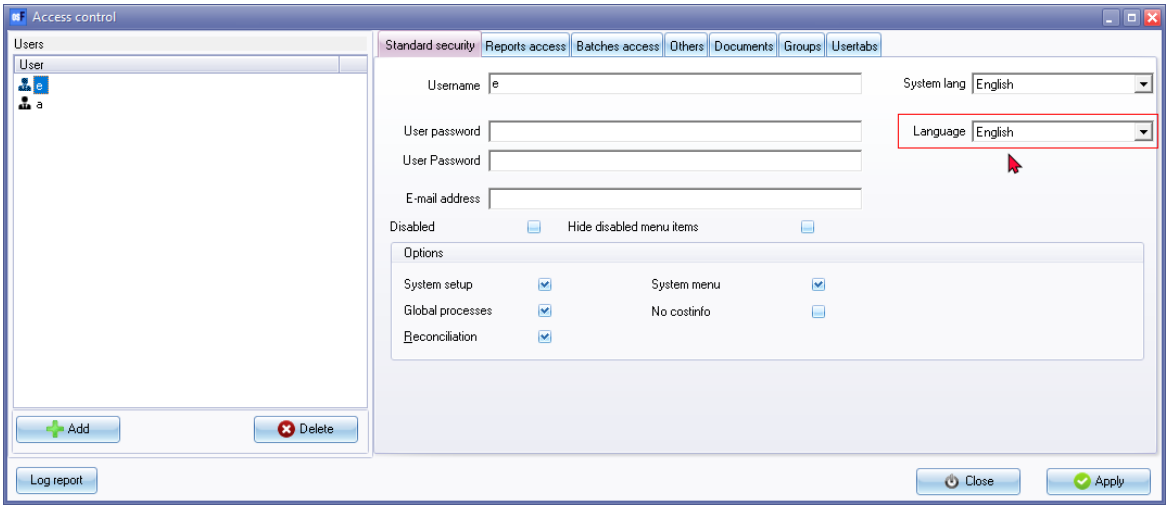
Add Multi-language users

By adding users and selecting different system language, and User language for each user, you may login to different languages.

The MULTI-LANG-DEMO Books is included in the ...\Bin\Tutorials\ folder. To use this login with e (Username and Password) for English and a (Username and Password) for Afrikaans.

To add Multi-language users:

1. Go to Setup → Access control menu.
2. Click on the Add button and rename the User.
3. Enter a Password for the User.
4. Click on the Others tab.



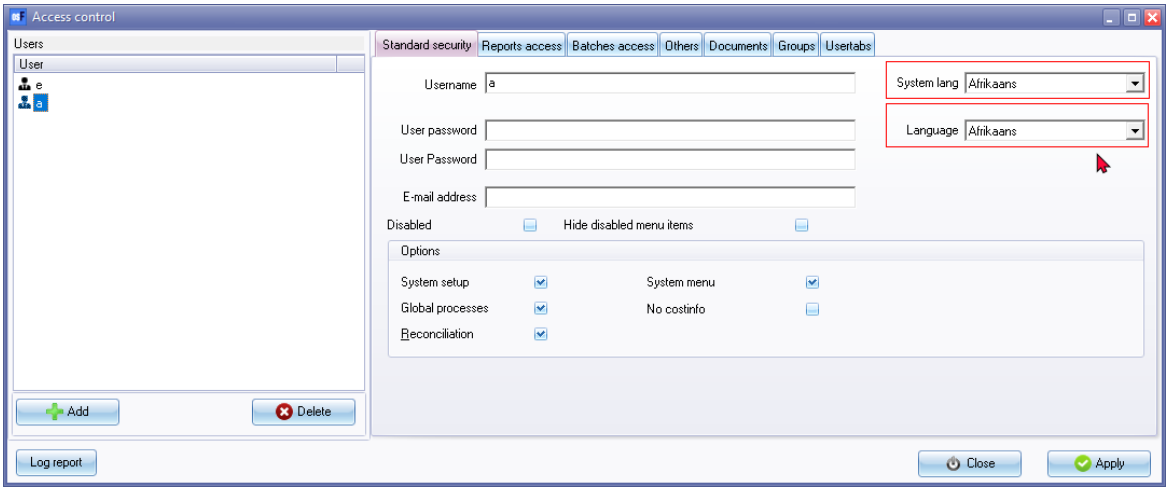
5. Select the System Language.

> *System Language will list all the available languages in the Start → Switch Language menu.*
>
> *Any language may be customised / edited for your specific requirements on the Setup → Tools → Customise Language menu.*
>
> *The available languages is stored in the ... \ bin \ languages folder of your osFinancials5/TurboCASH5 installation directory. The default language is selected "System lang" field. This is the language in which osFinacials5 will open the Set of Books.*

6. Select the User Language.

> *Language will list all languages created / added in Setup → Groups - Languages tab.*

7. Click on the Apply button.
8. Click on the Add button to add the next User and rename the User.
9. Enter a Password for the User.
10. Click on the Others tab.



11. Select the System Language for the user interface. The language set in the "*System lang*" field, will be displayed as the osFinancials in interface. In this example, the osFinancials user interface will be displayed in Afrikaans if User "a" opens the Set of Books.

12. Select the User Language.

13. Click on the Apply button.

14. Click on the Close button.

Access control - log report - It will list when the users logged in and out, on which device, etc.

Important functions executed from the Tools → Global processes menu (Setup ribbon), will also be listed to display the date and type as well as which user and on which computer these important actions were performed. The Type of actions is as follows:

1. *OPEN YEAR - Open new year (Do year end).*
2. *REVBATC - Reverse posted batch - Reverse batch! and the Batch ID.*
3. *REVDOC - Reverse posted document - Reverse doc! and the Batch ID.*

Created with the Standard Edition of HelpNDoc: Easily create EPub books

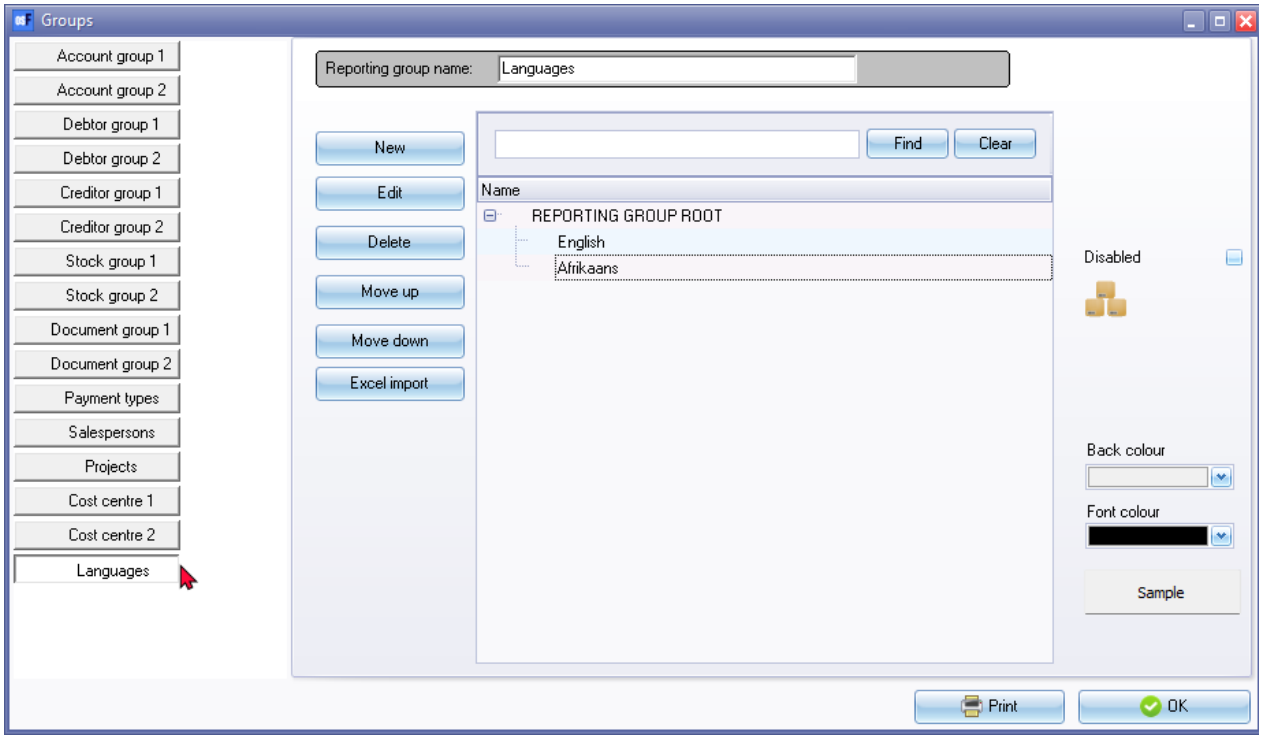
Add Multi-language groups

By creating / adding languages, languages may be translated on various screens.

To add / activate Multi-language feature:

1. Go to Setup → Groups.

2. Click on the Languages tab.

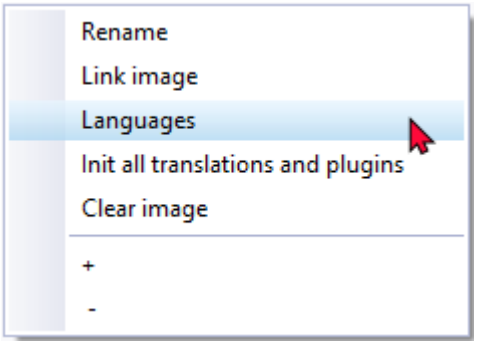


3. Click on the REPORTING GROUP ROOT and click on the New button.

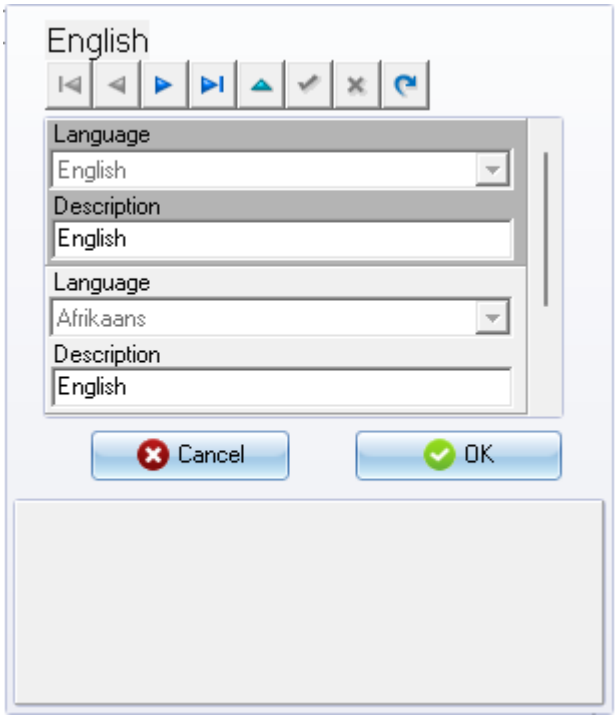
4. Enter the Name and Description for the Language (e.g. English, Afrikaans, etc.).

5. Repeat the process to add all required languages.

6. Select the Language and right-click and select the Languages on the context menu.



7. Enter the Name and Description for each language.



8. Click on the OK button.

9. Repeat the process for all Languages.

10. Click on the OK button of the Groups screen.

Created with the Standard Edition of HelpNDoc: Don't be left in the past: convert your WinHelp HLP help files to CHM with HelpNDoc

Translate Multi-language groups

The names or descriptions for Groups, as entered / edited in the Setup → Groups menu for all the Groups tabs, are by default displayed on screens, lookups, documents, reports, etc.

To use multi-language Groups, Language Groups need to be created / added in Setup → Groups - Languages tab.

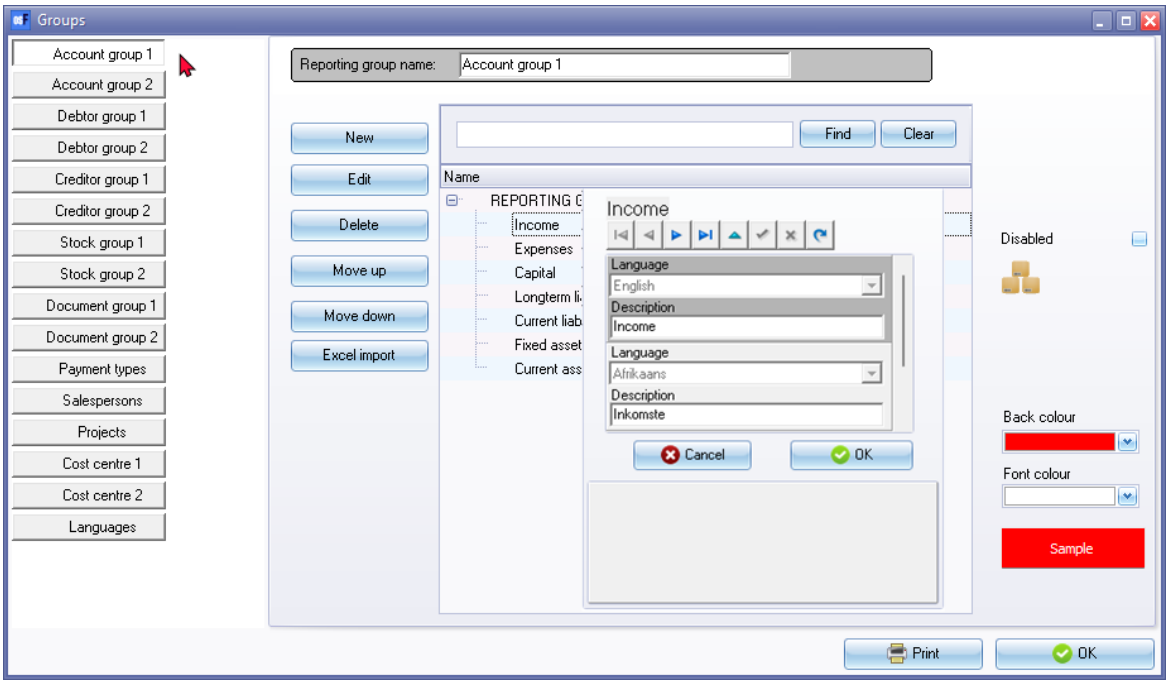
The following groups need to be translated, where necessary:

- Account group 1
- Account group 2
- Debtor group 1
- Debtor group 2
- Creditor group 1

- Creditor group 2
- Stock group 1
- Stock group 2
- Document group 1
- Document group 2
- Payment types
- Salesperson
- Projects
- Cost centre 1
- Cost centre 2

To translate groups:

1. Go to Setup → Groups menu.
2. Click on the Account Group 1 tab.

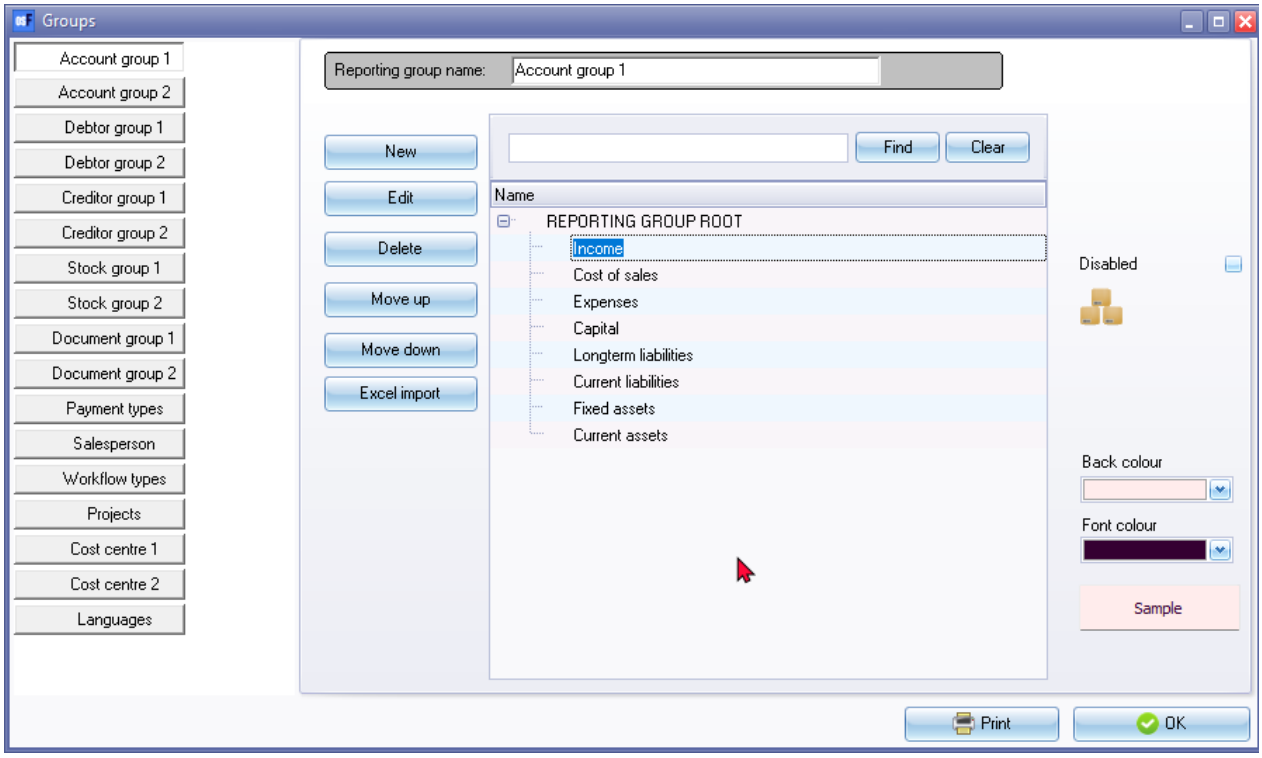


3. Select a Group (e.g. Income, etc.) on the list and right-click to select the Languages on the context menu.
4. Enter the Name and Description for the Account group 1 item.
5. Click on the OK button.
6. Repeat the process to add all required items on Account group 1.
7. Repeat the process for all other Groups (e.g. Account group 2, etc.) where required.
8. Click on the OK button to save your changes and to close the "*Groups*" screen.

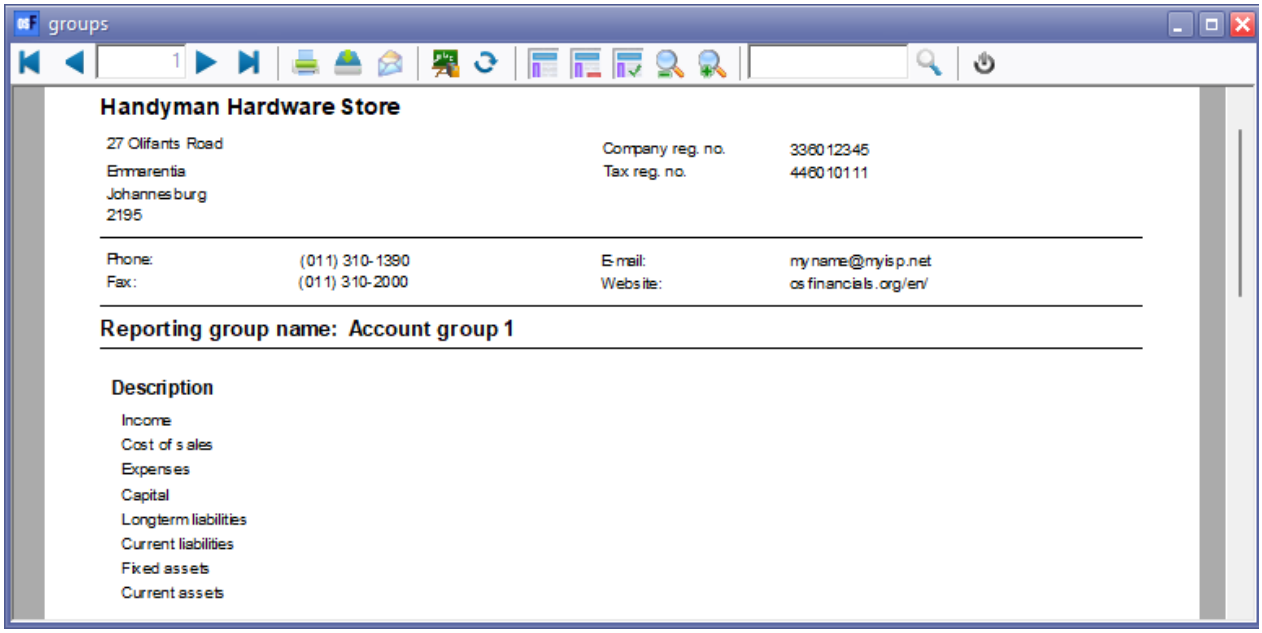
After translation

After translations added, the group names will be displayed in the Language set for the logged in user.

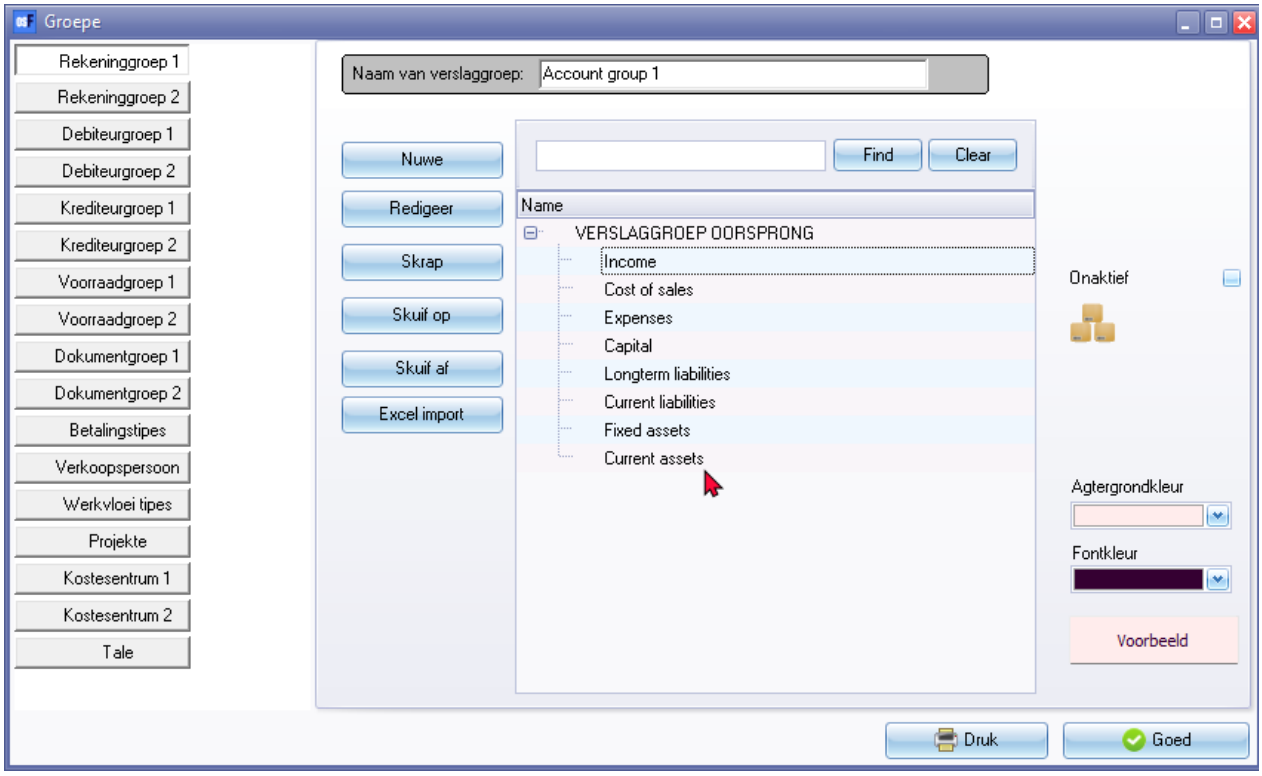
Logged in as English user



To print the groups, click on the Print button.

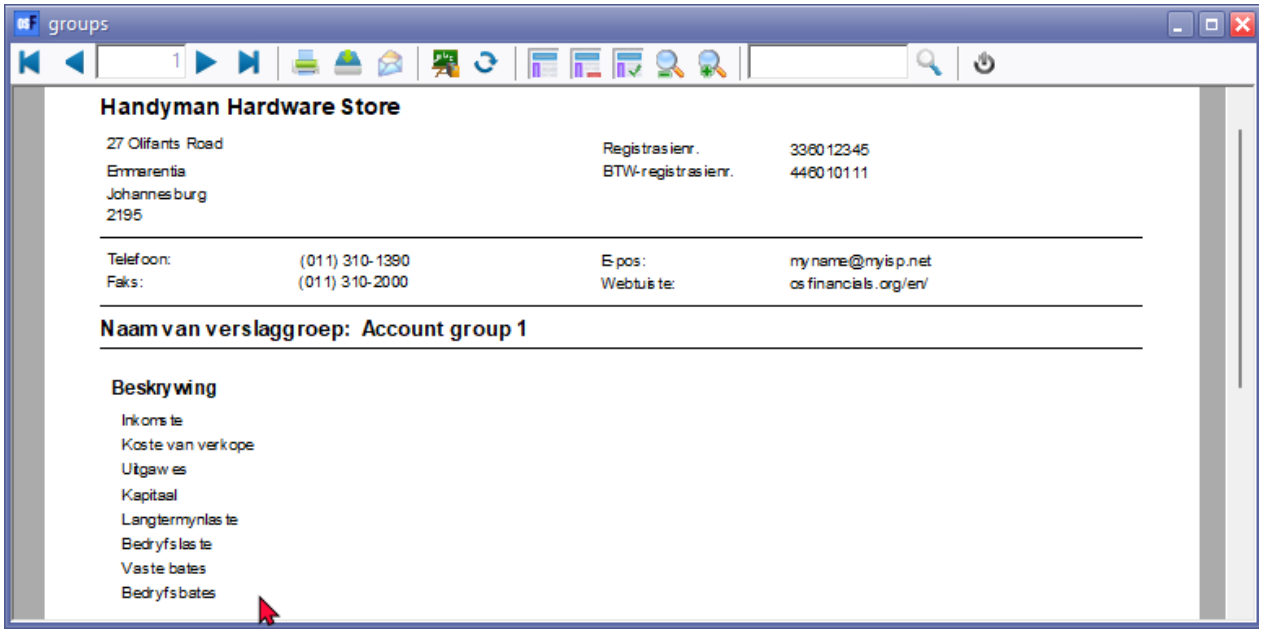


Logged in as Afrikaans user



The group items will be listed in the default language (as in this example, English).

To print a list of the groups, the groups, click on the Print button. The translated groups will be listed.



Created with the Standard Edition of HelpNDoc: Easily create HTML Help documents

Translate Multi-language types

The names or descriptions for Types, as entered / edited in the Tools → Customise language - Types tab (Setup ribbon), is by default displayed on screens, lookups, documents, reports, etc.

To use Multi-language Types, Language Groups need to be created / added in Setup → Groups - Languages tab.

1. Document types - Documents - Default ribbon).
    a) Invoice
    b) Credit note
    c) Quotes
    d) Purchase
    e) Supplier return
    f) Order

If you need to print the Universal Documentlayout files (One (1) Layout file for all document types), it is recommended that these Document type be edited and/or translated to the singular.

For example if you print an Invoice, it should display Invoice and not Invoices on the printed layout file.

2. Account types
    a) General ledger
    b) Debtor
    c) Creditor
    d) Bank
    e) Tax
3. Group types
    a) Account group 1
    b) Account group 2
    c) Debtor group 1
    d) Debtor group 2
    e) Creditor group 1
    f) Creditor group 2
    g) Stock group 1

h) Stock group 2

i) Document group 1

j) Document group 2

k) Payment types

l) Salesperson group

m) Status group (Used for Projects)

n) Cost group 1 (Used for Cost centres)

o) Cost Group 2 (Used for Cost Centres)

p) Languages

4. Paper types

a) Preprinted

b) Plain A4

c) Service

d) Plain Eyeline

e) Forty

f) Till Slip

5. Other / Miscellaneous

a) This Year

b) Last Year

c) Stock item

d) Comment

e) Serial number

f) Financial entry

6. User reports

Optional - The following items in the "Types" is not applicable to osFinancials5/TurboCASH5, and do not need to be translated:

a) *Account*

b) *Blank*

c) *Column Line 1*

d) *Group1*

e) *Group1 Detail*

f) *Group2*

g) *Group2 Detail*

h) *Single Line*

i) *Text*

j) *Budget*

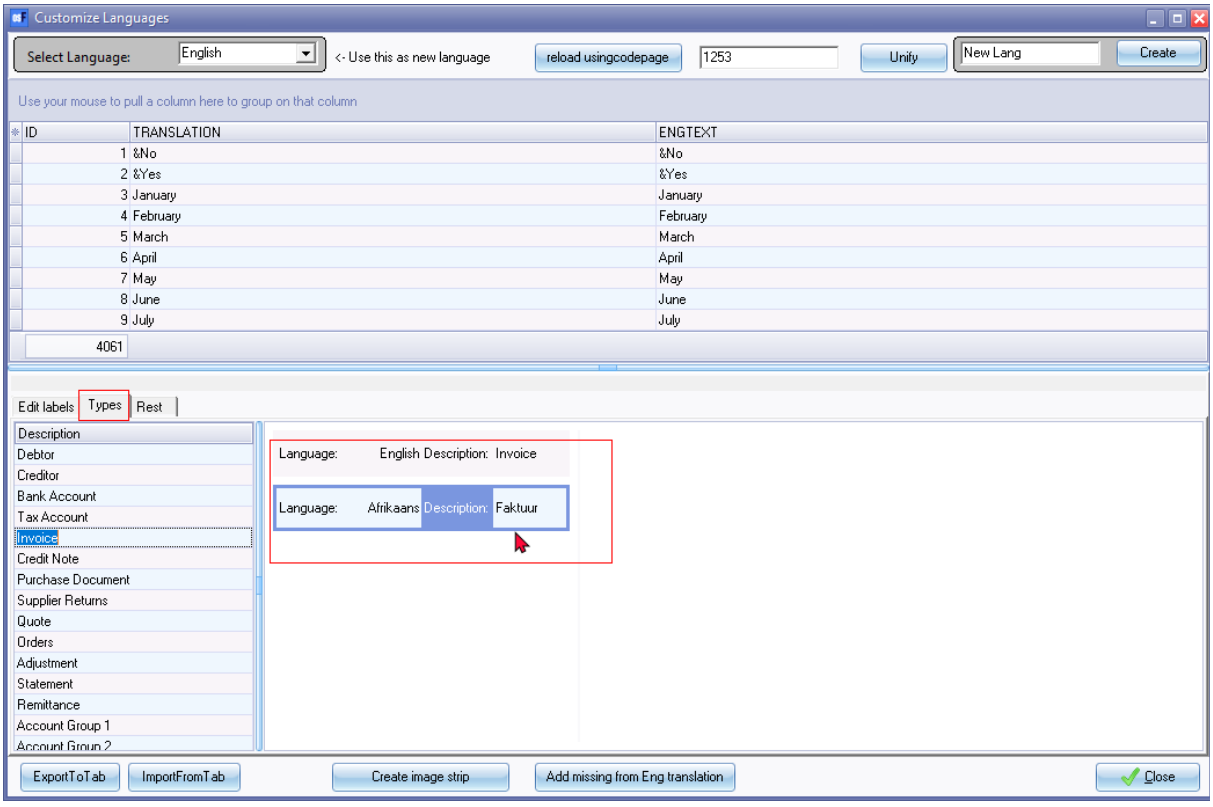
k) *Formula*

7. Colours / Theme Types

It is not necessary to translate the colours, (i.e. Classic, Pastel, Keywest, NewSA and Windows Default). These are not used in osFinancials5/TurboCASH5.

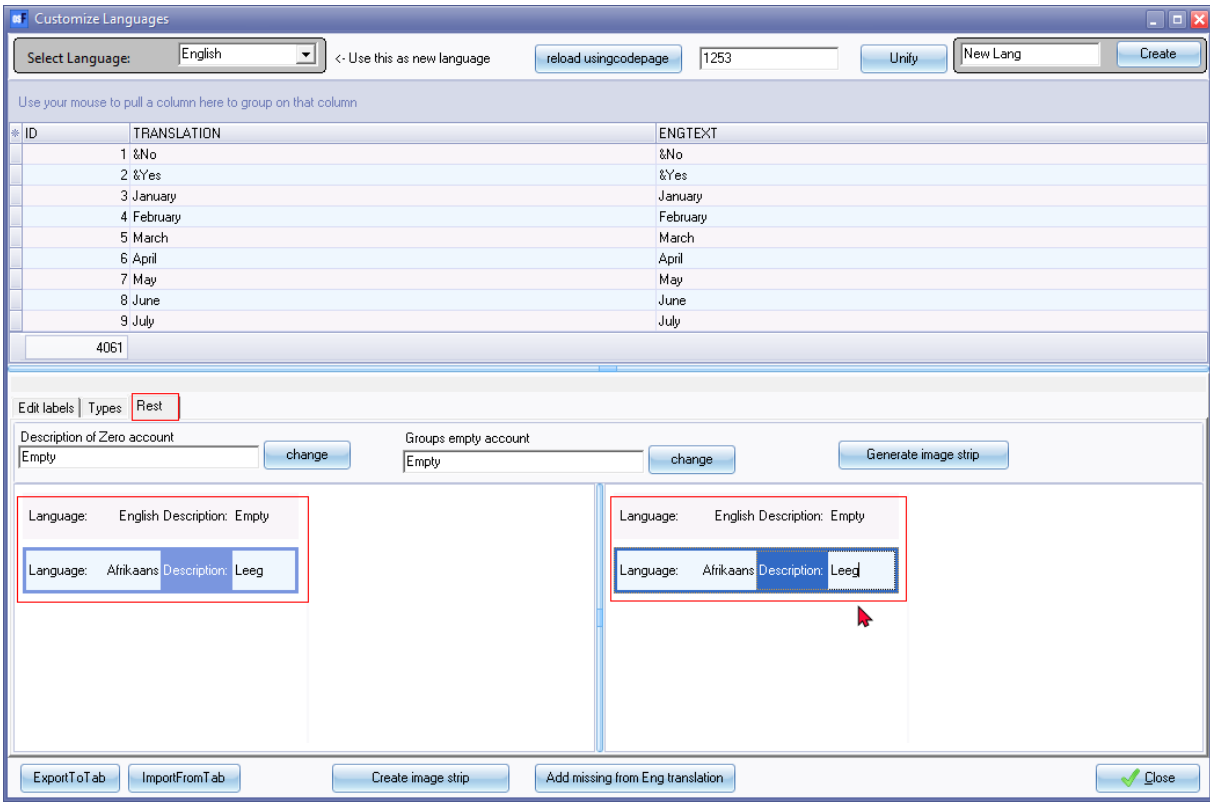
To add translations to types:

1. On the Setup ribbon, select Tools → Customise language.
2. Click on the Types tab.



3. Select the Language and enter the name and description for each language.
4. Repeat the process for all Types.

5. Click on the Rest tab.



6. For the "*Description of Zero account*", select the Language and enter the name (description) for each language.

7. For the "*Groups empty account*", select the Language and enter the name (description) for each language.

8. Repeat the process for all Types.

9. Click on the Close button.

After translation

After translations added, the document types will be displayed in the Language set for the logged in user.

Translate Multi-language batch types

The Batch type names or descriptions, as entered in the Setup → Batch Types menu, are by default displayed on the following options: launched from the Default ribbon:

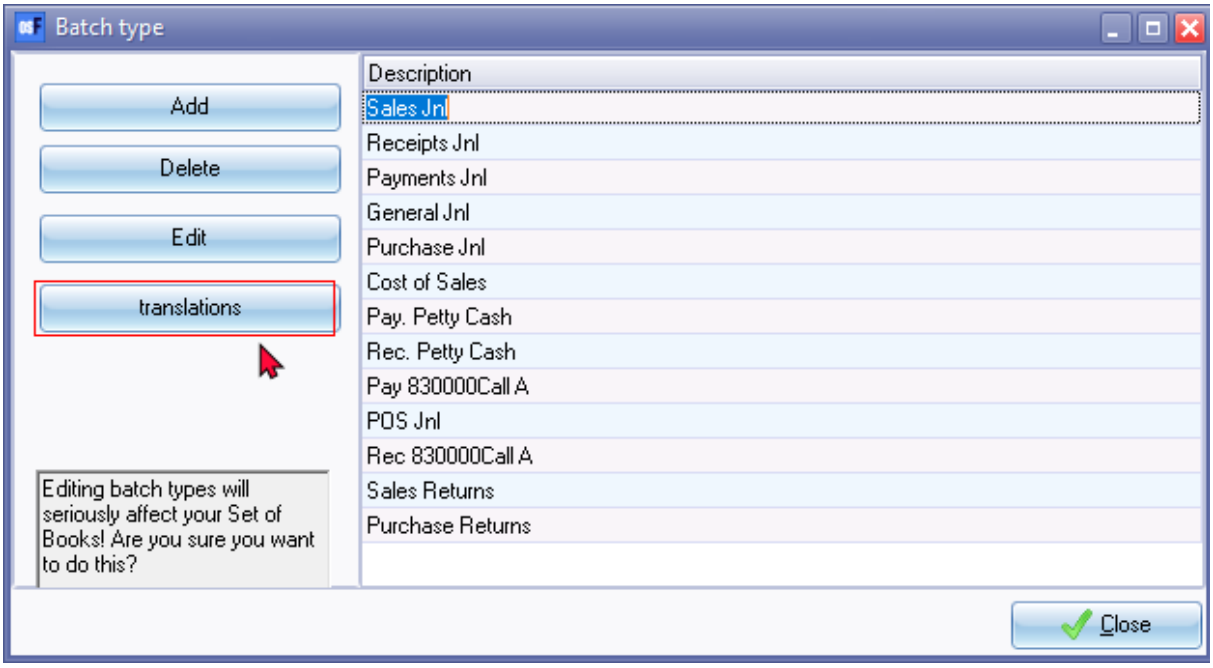
- Batch Entry menu.
- Edit → Repeating transactions.

It also displays on various reports, lookup and parameter screens.

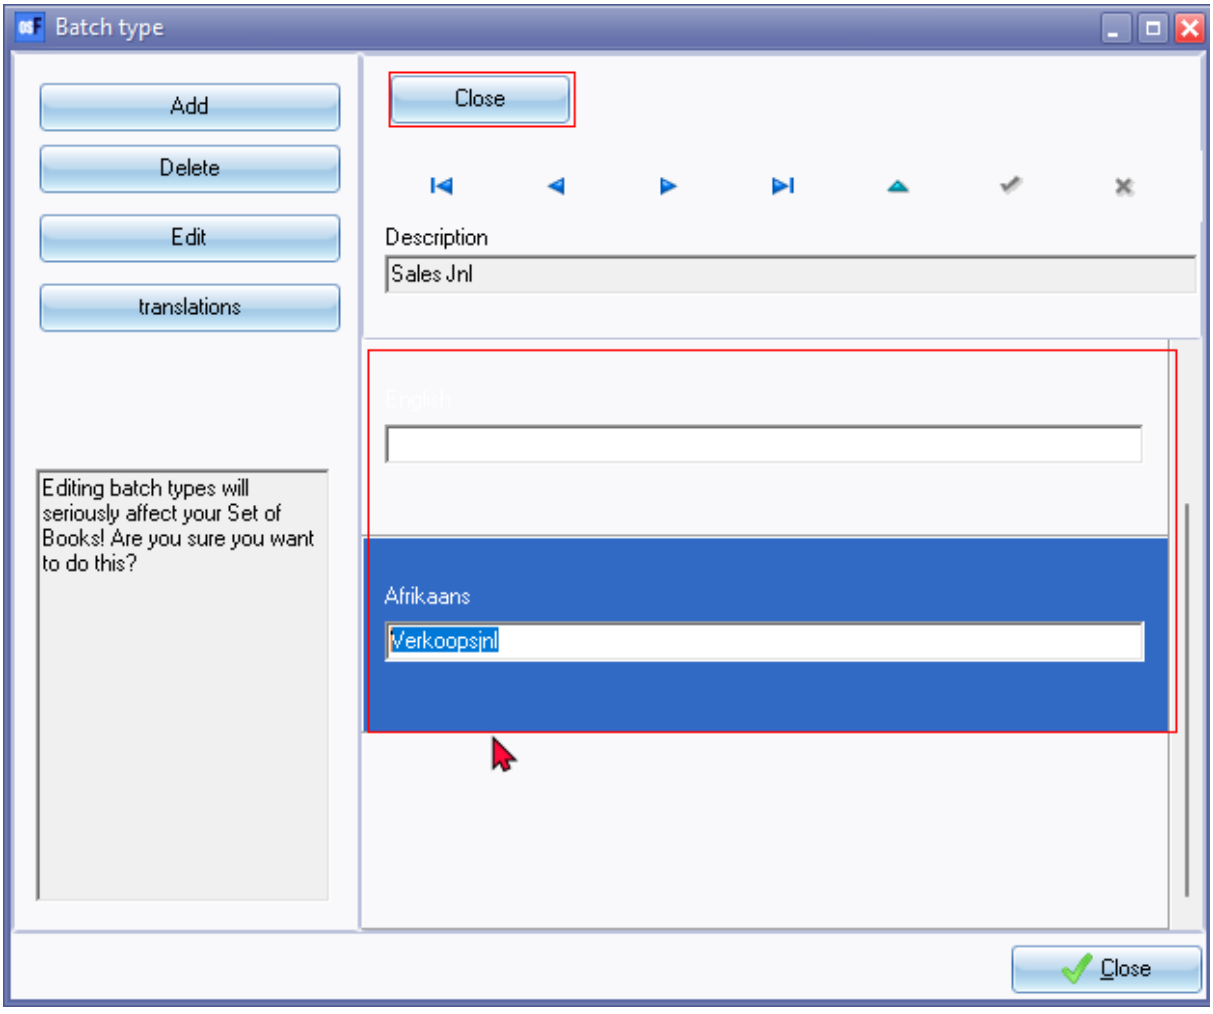
To use multi-language Batch types, Language groups need to be created / added in Setup → Groups - Languages tab.

To add translations to batch types:

1. On the Setup ribbon, select Setup → Batch types.
2. Select the Batch type.



3. Click on the translations button.



4. Select the Language and enter the name or description for each language.
5. Click on the save icon to save the record.
6. Click on the Close button (on the translations screen).
7. Repeat the process for all Batch types.
8. When the process is completed, click on the Close button on the "*Batch type*" screen.

Selecting batches

After translations added, the batch names will be displayed in the Language set for the logged in user.

Translate Multi-language chart of accounts

The names or descriptions for Groups, as entered / edited in Setup → Groups for Account Group 1 / 2 tabs, are by default displayed on screens, lookups, documents, reports, etc.

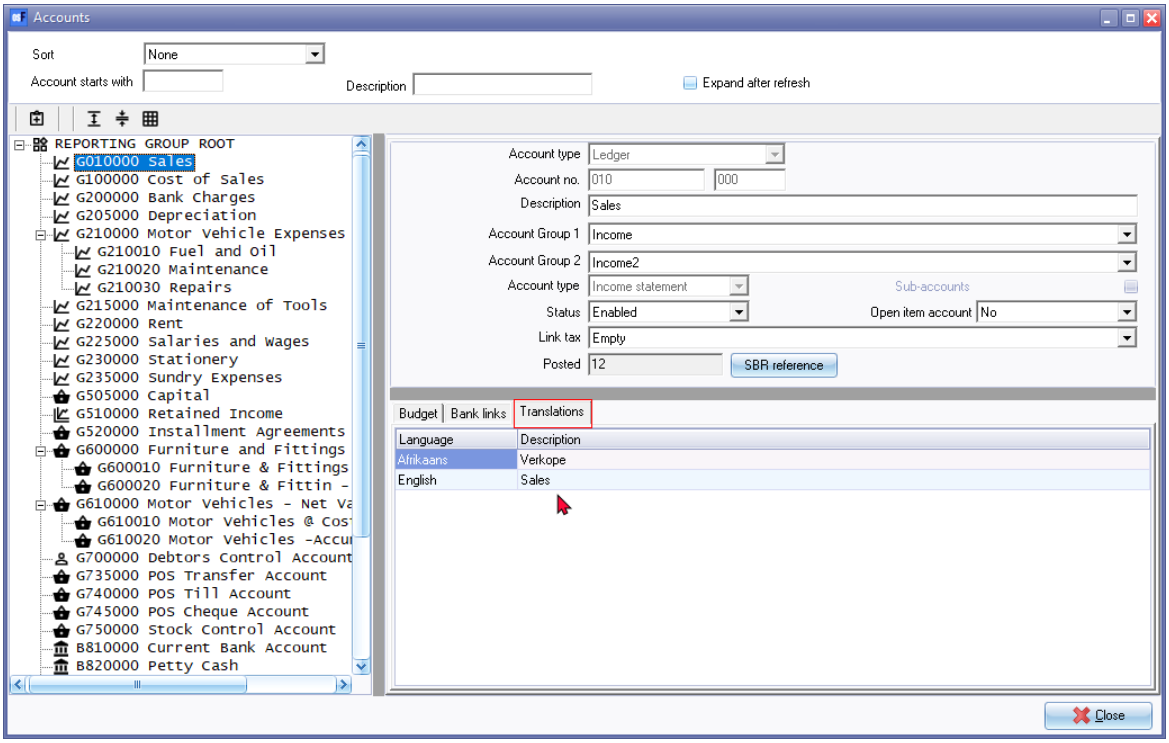
To use multi-language Chart of accounts, Language groups need to be created / added in Setup → Groups - Languages tab.

Once these Language groups is created, the Account group 1 (and / or Account group 2) needs to be translated.

Translate Chart of accounts

To translate the Chart of accounts into Multi-languages:

1. On the Setup ribbon, select Setup → Accounts.
2. Select an account (e.g. Sales, etc.) on the list and click on the Translations tab.



3. Enter the description (account name) of the account in the other language (e.g. Afrikaans).

> *If you select the next account, the changes to translated language(s) will not be saved.*
>
> *To activate the Save button, click on any field, e.g, "Description" and add a space and remove the space.*

4. Click on the Save button.
5. Repeat the process to translate all account descriptions.
6. Click on the Close button (on the titlebar).

> *Once the translations of the multi-language Chart of accounts and Account groups is finished you may print the Chart of accounts in the user to which a different language is assigned.*
>
> *See sample of the Chart of accounts printed in English and in Afrikaans for the same Set of Books.*

Created with the Standard Edition of HelpNDoc: Make your documentation accessible on any device with HelpNDoc

Translate Multi-language stock descriptions

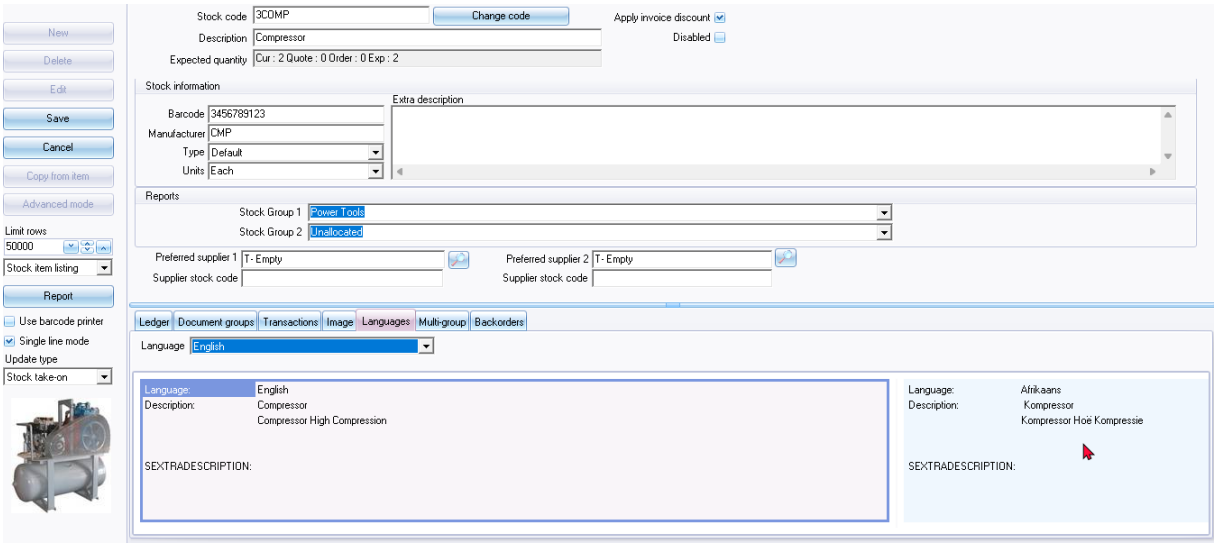
The Stock Item descriptions, as entered in the Description field of the Edit Stock Items screen, are by default displayed on document layout files.

To use multi-language Stock Descriptions, Language Groups need to be created / added in Setup → Groups - Languages tab.

The translated stock item descriptions should print on layout files.

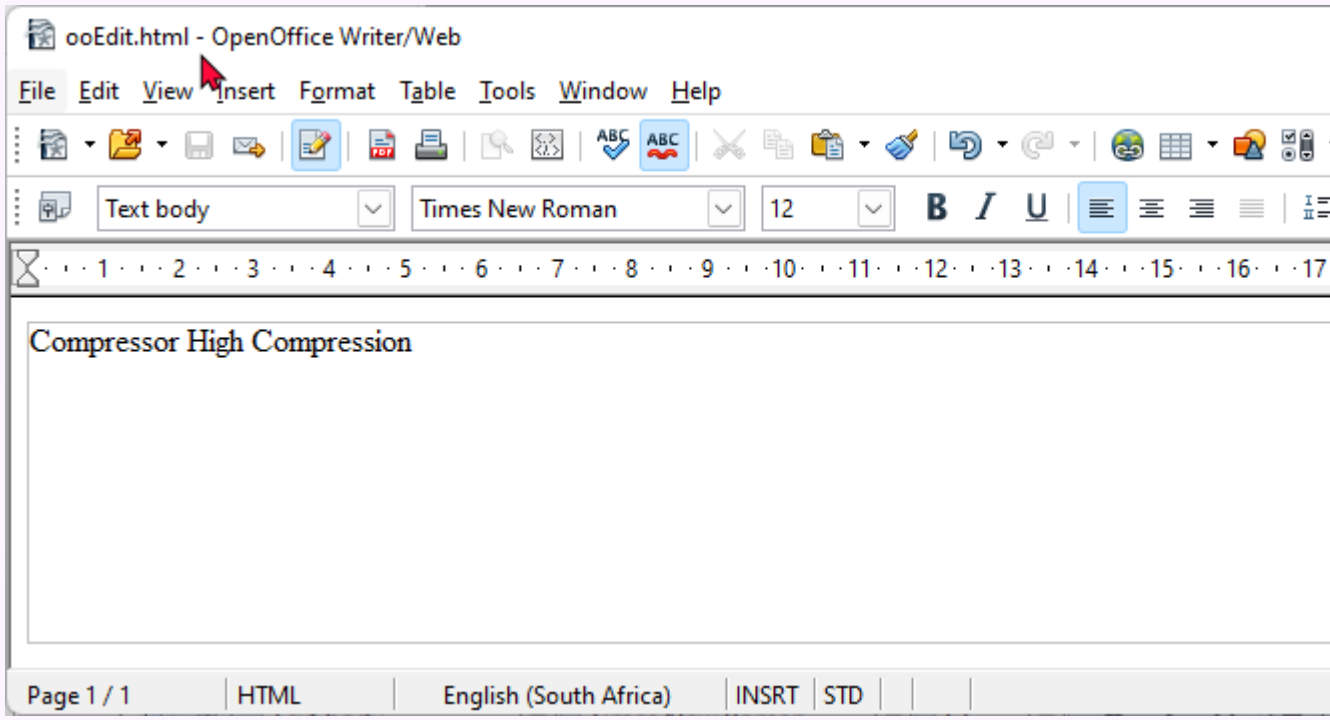
To Add Translations to Stock Items:

1. On the Default ribbon, select Stock items.
2. Select the Stock item.
3. Click on the Edit button (or double-click on the stock item).
4. Click on the Languages tab.



5. Select the Language and enter the name (description) for each language.
6. Click on the Save button.
7. Repeat the process for all stock items.

If you have OpenOffice installed on your system, you may double-click in the Description field of any language, to launch Open



Write your text and use OpenOffice to format your text, etc., if necessary. A message will be displayed:

"Press ok if you are done with the document to continue!

Once finished, click the OK button to transfer your text to the "Description" field.

Multi-Language reports

The Trial balance, Income statement, Balance sheet, Standard column balances, Budget vs actual, and This year vs last year report types in the Ledger analyser 1.

Financial statements

The following financial statements may be printed and exported in the language set for a user using the Multi-language feature

1. *Trial balance* – *(Example of the Trial balance printed in 2 languages).*
2. *Income statement* -
3. *Balance sheet* –
4. *Standard column balances* –

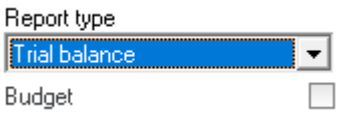
5. *Budget vs actual* –

6. *This year vs last year* –

Budget listing

This will list all accounts for which budget figures were entered (and / or edited) in Budgets (Reports ribbon) or the Setup → Accounts (Setup ribbon).

If you wish to print a list of the Budget figures, tick the "Budget option" on the following report types:



- Trial balance
- Income statement
- Balance sheet

Export column balances

The following report types in the Ledger analyser 1 or Ledger analyser 2 cannot be printed, but may be exported to a spreadsheet. The language of the logged in user will be exported.

The following six (6) column balances report types is available:

1. *Column balances* – *Lists all accounts in a spreadsheet view. These are the Accounts reported in the Trial balance (this includes both the accounts reported in the Trial balance, Income statement and Balance sheet).*

2. *Column balances debtors* – *Lists the balances of all accounts which is created and maintained in the Debtors (Default ribbon) in a spreadsheet view. The total of these accounts are reported in the Debtor's control account on the Trial balance and the Balance sheet.*

3. *Column balances creditors* – *Lists all accounts which is created and maintained in the Creditors (Default ribbon) in a spreadsheet view. The total of these accounts are reported in the Creditor's control account on the Trial balance and the Balance sheet.*

4. *Column balances D/C* – *Lists all debit and credit account balances in a spreadsheet view. These are the Accounts reported in the Trial balance (this includes both the accounts reported in the Trial balance, Income statement and Balance sheet).*

5. *Column balances debtors D/C* – *Lists the debit and credit account balances of all accounts which is created and maintained in the Debtors (Default ribbon) in a spreadsheet view. The total of these accounts are reported in the Debtor's control account on the Trial balance and the Balance sheet.*

6. *Column balances creditors D/C* – *Lists all debit and credit account balances which is created and maintained in the Creditors (Default ribbon) in a spreadsheet view. The total of these accounts are reported in the Creditor's control account on the Trial balance and the Balance sheet.*

Workflow plugin

Workflow - Manual - Shop - Licence: Once-off -

Workflow Bank Import Plugin - Shop - Licence: Once-off -

Workflow Editor Plugin - Shop - Licence: Once-off -

Unlock the power of streamlined task management with our Workflow plugin. Seamlessly record every step and process, whether it's inventory management, debtor/creditor tracking, or document handling, within osFinancials5/TurboCASH5. Visualize your workflow at a glance, gaining instant insights into each stage of progress.

Assign tasks or steps to specific users, track outstanding steps, and effortlessly manage transitions between stages. Our Workflow Plugin isn't just a tool - it's a knowledge system, empowering you to formalise and share business processes efficiently. Gain better control over your operations, with historical data readily available for informed decision-making. Say hello to optimized processes and enhanced productivity with the Workflow Plugin.

Workflow Bank Import Plugin

Workflow Bank Import Plugin - Shop - Licence : Once-off

The Workflow Bank Import plugin provides users with a guided step-by-step process for importing downloaded bank transactions and posting them to the appropriate journal or batch. This streamlined workflow ensures efficiency and accuracy in handling bank transactions within osFinancials5/TurboCASH5.

Workflow Editor Plugin

Workflow Editor Plugin - Shop - Licence : Once-off

Use workflow to create you own processes. With the Workflow Editor plugin, you can customize and create your own processes tailored to your specific needs. Whether it's automating tasks, managing approvals, or streamlining workflows, this tool empowers you to design efficient processes that align with your business requirements.

Older Workflow documentation

The workflow plugin allows you to record the steps or processes of a task.

You can also gain knowledge of a process through easier to go through the various tutorials and record the steps.

The different screens osFinancials5/TurboCASH5 can be created such as the stock screen or debtors / creditors and documents. But also websites, or for example, Excel documents appear in the active window with a description. This allows you to record almost every conceivable process, visualize and gain instant insight wherever you are in the process and what steps have been taken before.

A step can be assigned to a user and an administrator can see all workflow steps not done (outstanding steps) and possibly assign a task to a user. Outstanding transitions that are possible after showing the step. A transition is one step to another step. If there is only one valid transition, you will not have any choices.

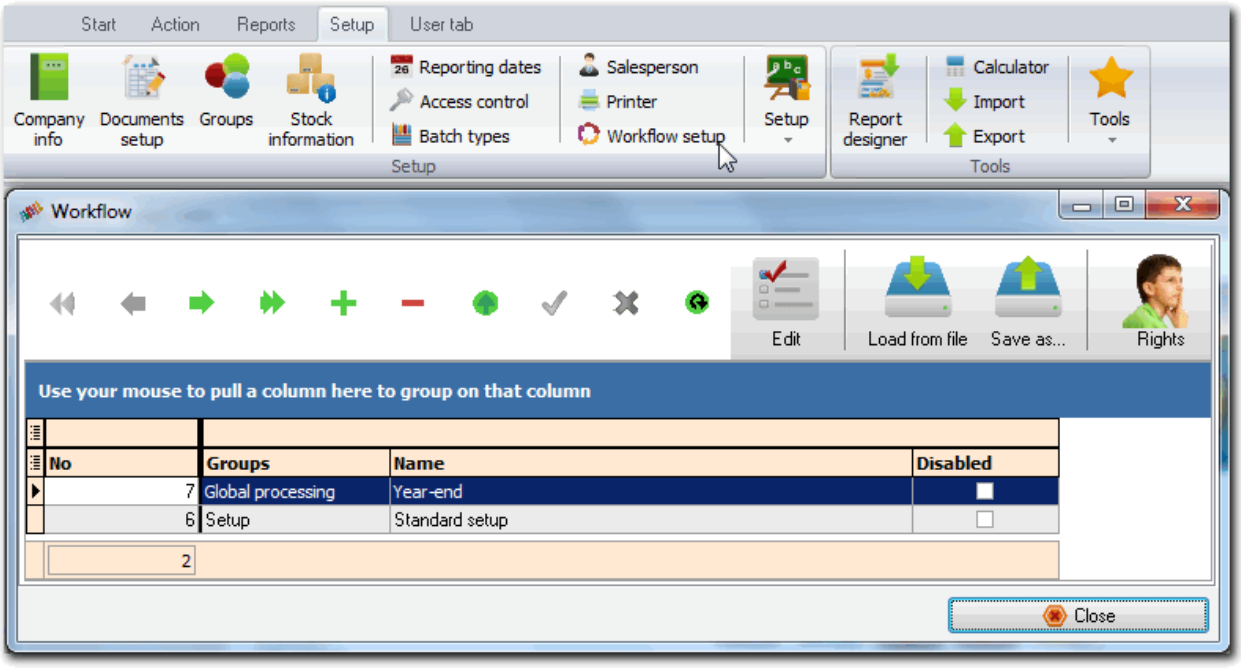
A transition may include a condition that must be met.

Workflow is a knowledge system that can gain your knowledge or just to share it with others. This allows you to formalize your business and capture the steps in an automated system.

Another advantage is that you retain a better overview of your running processes and you have historical data at hand.

Setup / Activate Workflow

In the standard Set of Books, there are already workflows but if you have an older database, you may import a workflow file from another database using the Workflow editor.



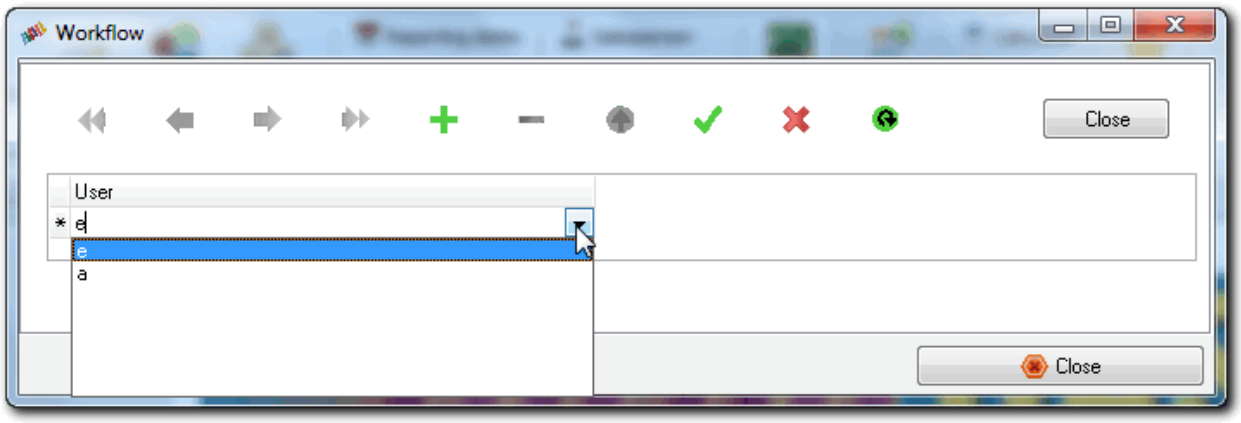
Editor

Workflow list

In the Workflow list, you can create workflow, edit save or load or assign rights.

Rights

Select users (added in Setup → Access control) who are allowed to start this workflow.



Save / load file

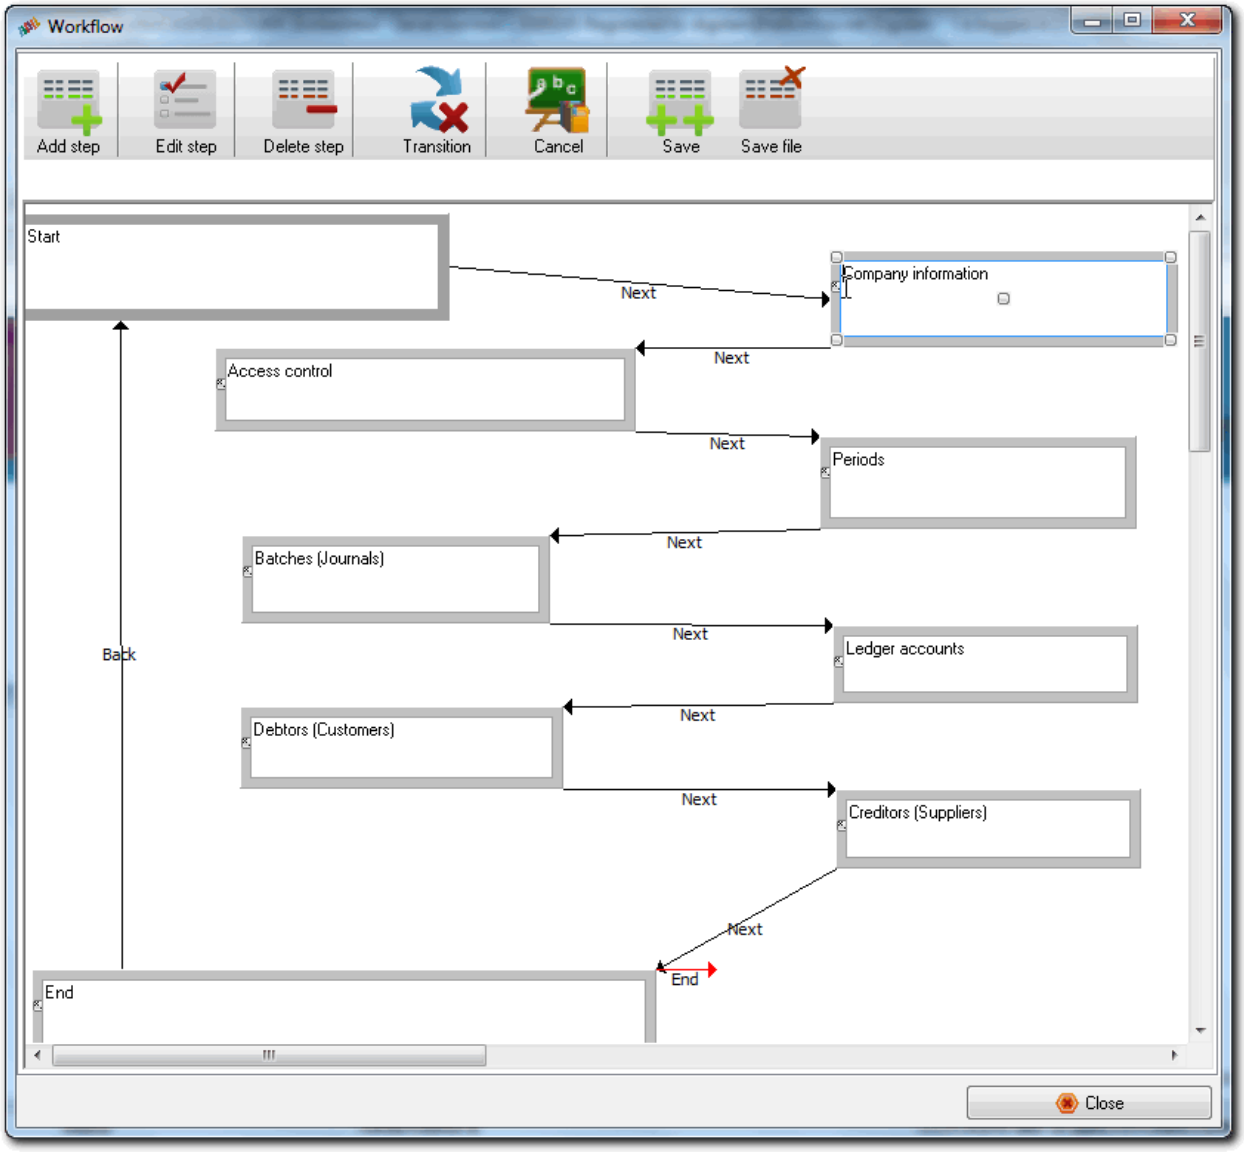
With these capabilities, you can easily copy workflow file (*.wfd file type) from one Set of Books to another.

Please note that some selected parameters are not the same in the records which reads your

workflow.

Use Workflow designer

With the designer, you can add steps and see the connections (transitions) visually.



Workflow Add / Edit Steps

Each step is identified by a step name which can be assigned to a screen type. The screen types may be assigned to specific users.

If you edit a step, you will see the following tabs.

1. Stepname: The name of the step.
2. Screen type: Various screens from which you can choose to see a step by step explanation types.

3. User: All users is the default. If you have added users (in Setup → Access control), you may assign this step to a specific to process this step. If a step is set (assigned) to a specific user, then this step will put someone else performing the transition to the user.

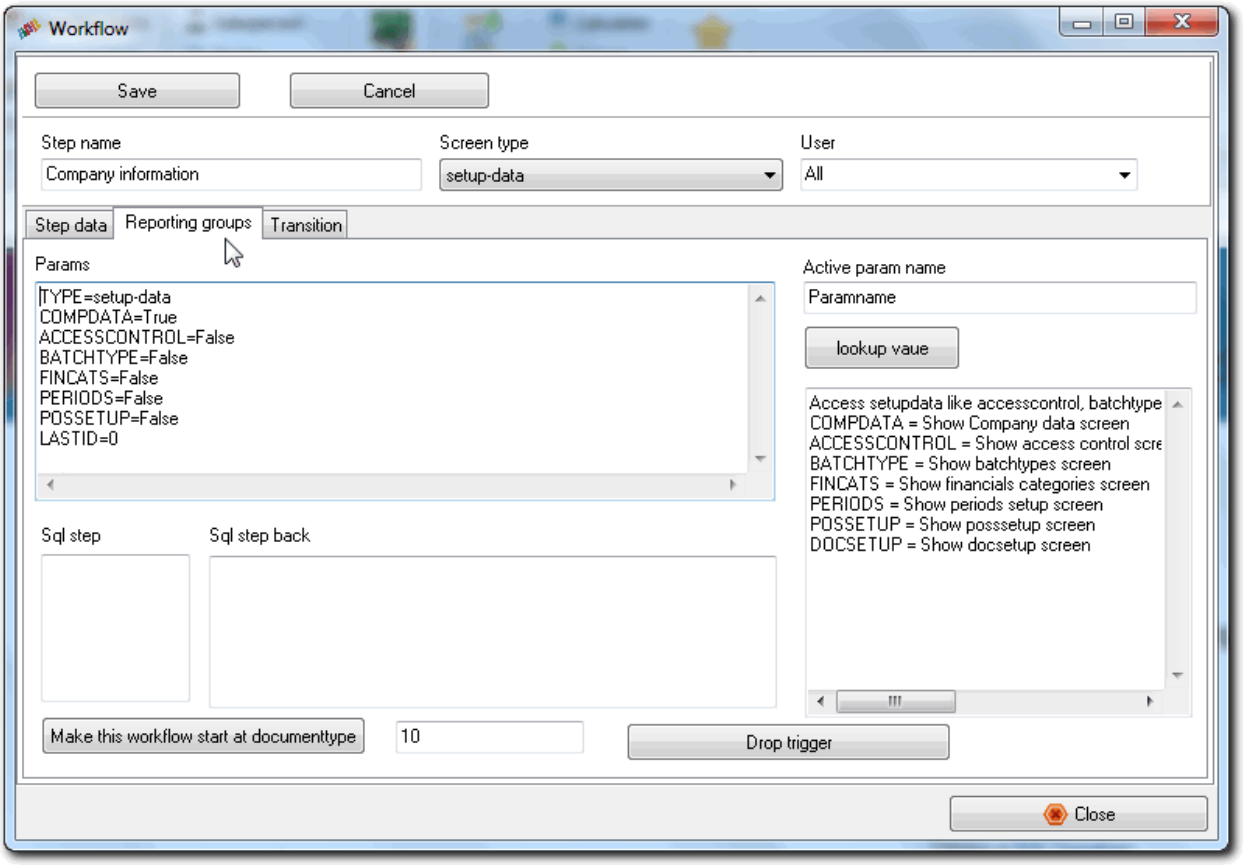
Screen type

If you select a screen type, is some documentation on the parameters in the Document groups (Extra) tab. The screen types are as follows:

- report-manager: show reportman reports.
- groups: Groups maintenance screen.
- groups-plugins: Plugins a group.
- stock: Stock screen.
- stock-plugins: Plugins for stock.
- debtor-creditor-plugins: Plugins for debtors creditors.
- debtor-creditor: Debtors or creditors screen.
- planner: Agenda.
- totalviewer: Totals list.
- batch-entry: Journal (batch) entry.
- documents: Documents.
- documents-plugins: Plugins for documents.
- openitem: Open item screen.
- projects: Projects screen.
- workflow-selecteddata: Show selected dates (confirm a selection).
- Workflow-dialog: Dialog (question text with possibly different answers).
- Workflow-webbrowser: Internet Explorer (IE) Web Browser imbedded with which you can go for example to a specific page.

- workflow-olecontainer: Ole container to open different mime types and edit as an Excel document, or displaying a PDF with Acrobad reader.
- workflow-mobilestep: not implemented yet reserved for taking steps via a mobile device.
- workflow-splittask: not implemented yet reserved for splitting a task to two tasks.
- workflow-selectiondata: Make a selection screen with free sql or use one of the standard options.
- main-plugins: Plugins for the main program.
- setup-data: Screens for settings.
- main: Main functions - currently only closes year / open new year.

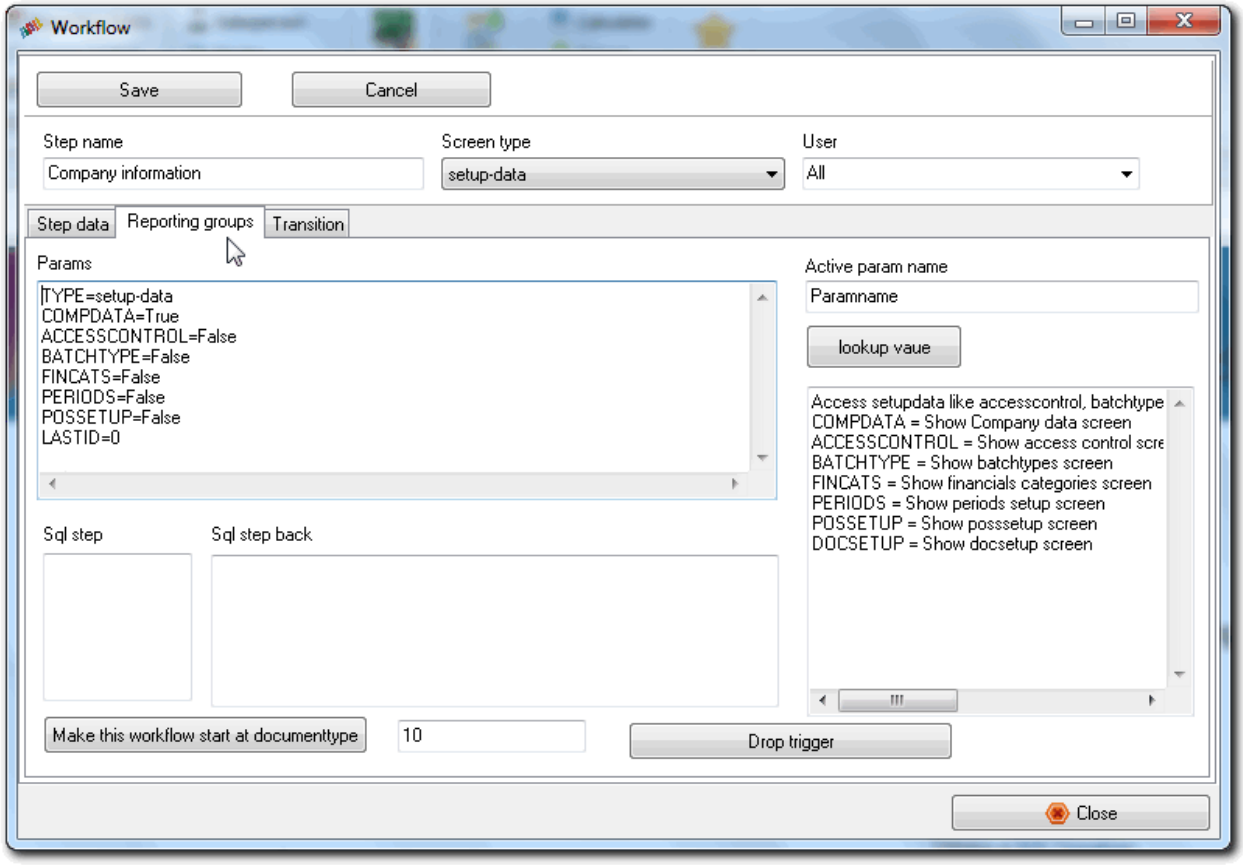
Step data tab



- Status: reserved
- Duration: The duration of the interval which should be completed within the task.

- Interval: The interval is the maximum duration for a task (step).
- Comments: The text to explain the task (step). This will float as a comment when the mouse is moved over or focus on a step in the Workflow designer. When the Workflow steps are performed, the comments entered here will be displayed when a step (screen) is launched.
- Memo underneath: The SQL to display the line in the workflow list.

Step Reporting groups (Extra) tab



The fields are as follows:

- Params: Parameters for the screen.
- Active param name: the name of the selected parameter.
- lookup value: for some parameters a selection screen is available to select the correct value for this screen.
- Sql step: sql start at step.

- Sql step back: reserved.

- Make this workflow start at documenttype: Fill in the edit box the document type id that you want to use as it is created to start this workflow automatically. If you enter document type 14, for quotes this will create a quote for this workflow. Thus, you can keep progress of the delivery (quote accepted) status process in the different stages and track that different people together can complete a job.

- The document types is as follows:

  10 – Invoice

  11 – Credit note

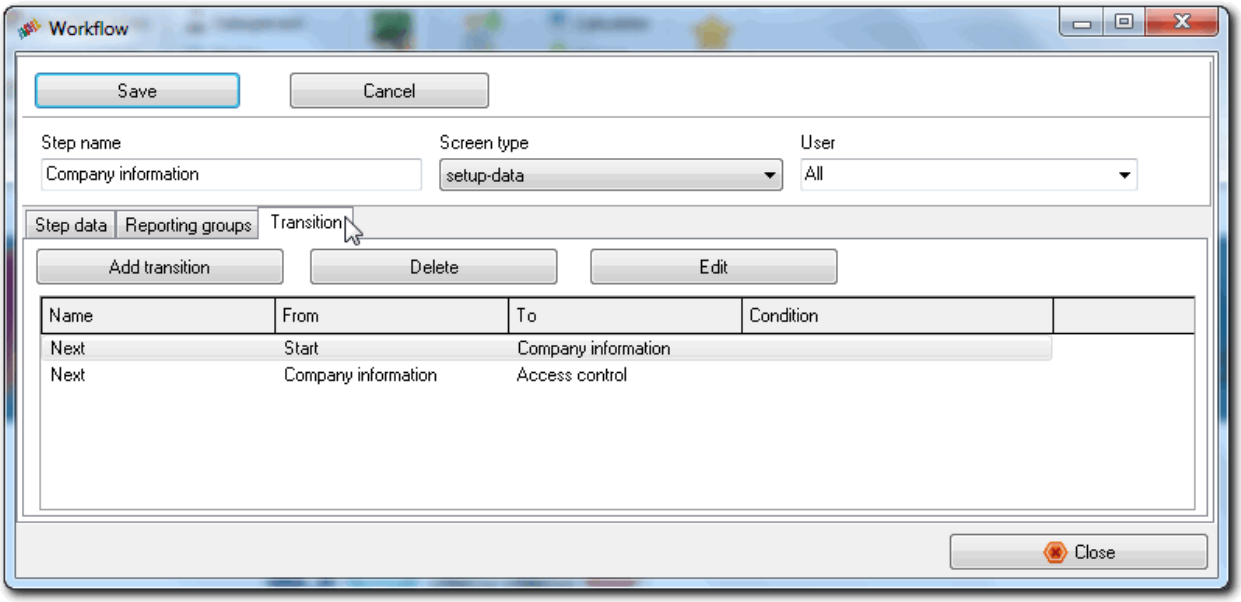
  12 – Purchase

  13 – Supplier return

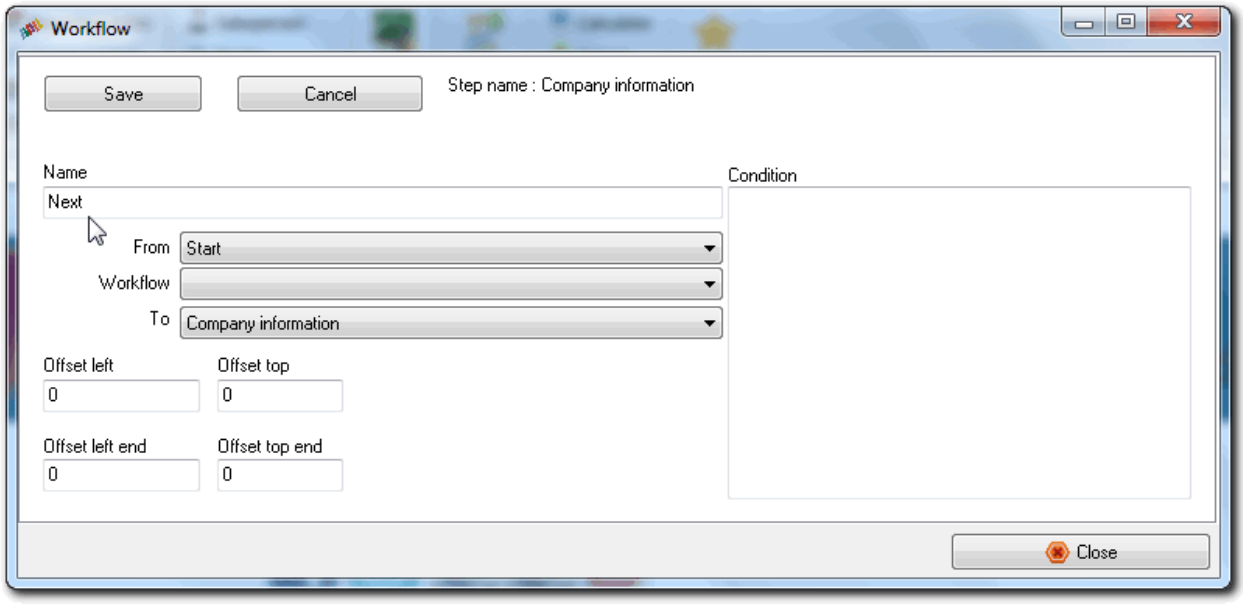
  14 – Quote

  15 - Order

Workflow Transition tab



Transitions are the flow to the next step. You may add, delete or edit transitions.



In a transition, you can still make various settings.

- Name: Name of the button in the selection of transitions.
- From: Select the step.
- Workflow: this field is set to empty = current.
- To step: Select the next step where is the transition to.
- Offset left: The left position of the transition to the step.
- Offset top: The upper position of the transition to the step.
- Offset left end: The left position of the transition to the step.
- Offset top end: The upper position of the transition to the step.
- Condition: sql condition, for example; “Select * from dochead where wdocid = <@KEY@>” it produces a record then the transition can proceed.

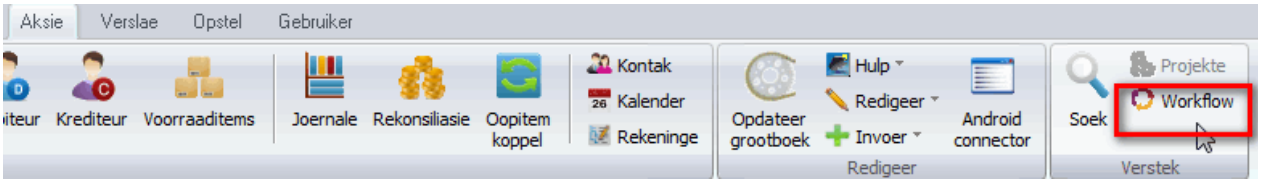
Workflow useage

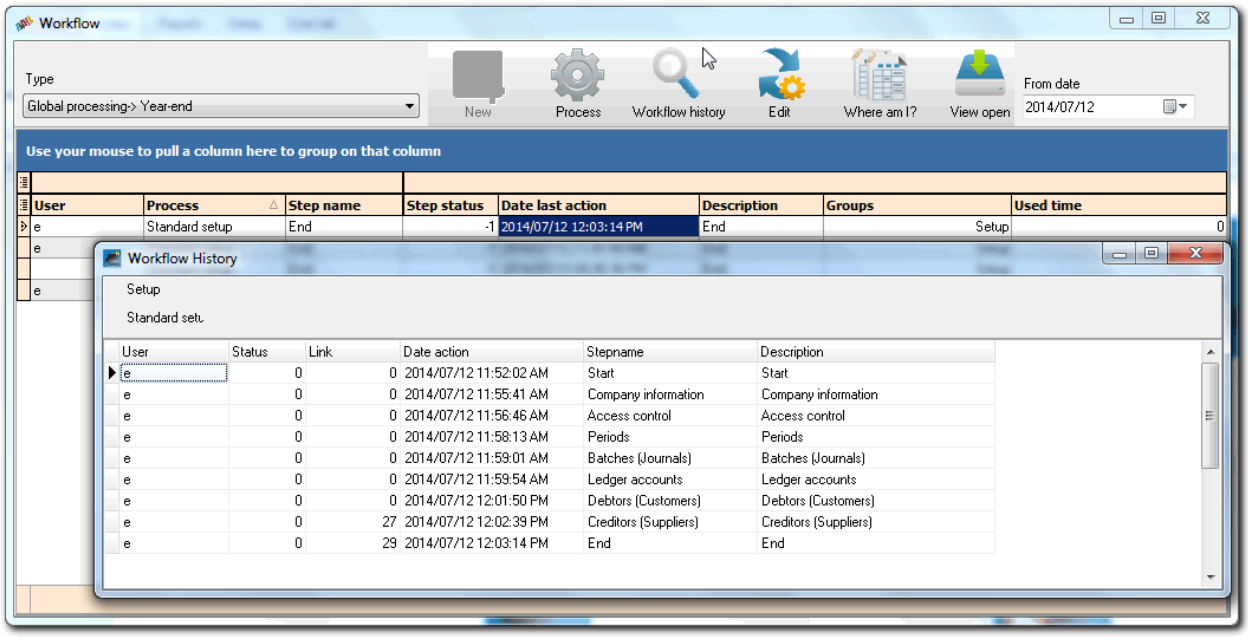
Workflow list

In this list you will see the active tasks that still need to be handled, or you can start a new task.

View historical data of a job and looking for completed tasks.

If you are an administrator, you can also edit same workflow.





With your right mouse button, you can also assign tasks to other users.

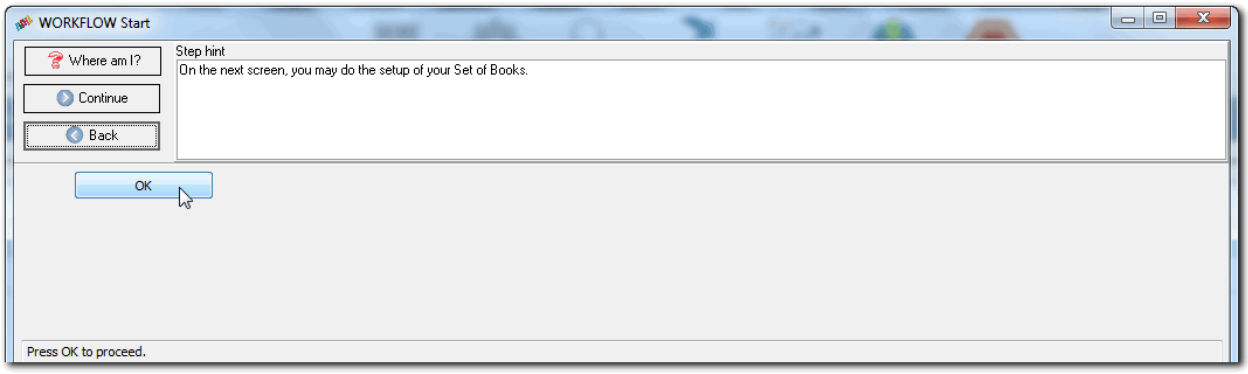
- Type: The type of workflow that you start when you press on the New icon.
- New: Create a new workflow.
- Process: Show execution screen. This will launch the screens in TurboCASH / osFinancials as assigned to each step.
- History: Shows the history of the task. You may right-click on a selected step to launch the “Where am I?” feature.
- Edit: If you are an administrator, you can quickly edit the workflow.
- Show closed: Shows finished or partially completed workflow steps for a task from date from date field. If you click on the View closed icon, the Open tasks will be listed.
- Where am I?: A screen that shows you where you are currently in the process.

Process workflow

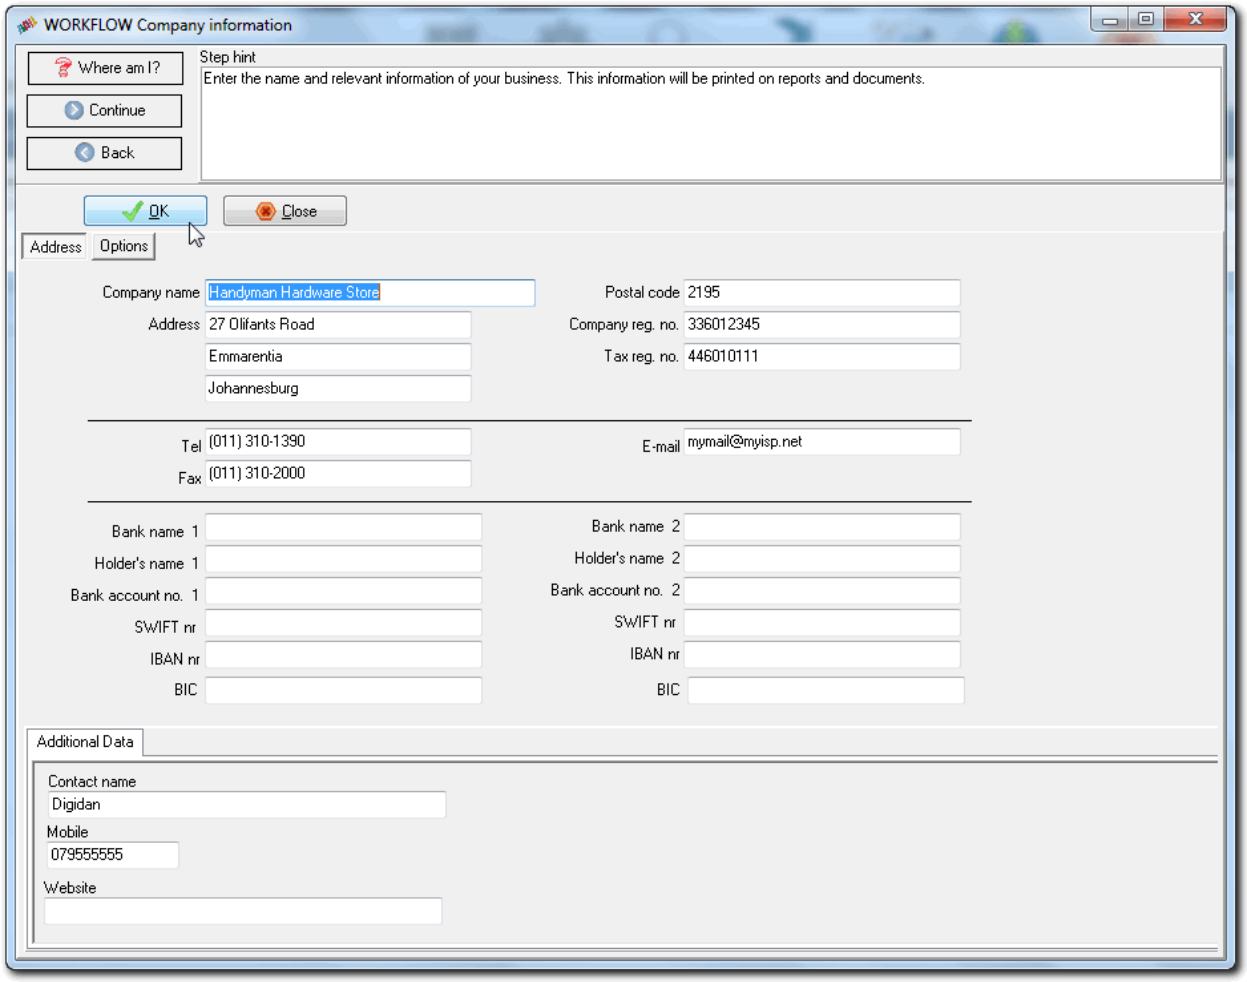
In the output screen shows the current screen or the choice of transitions. The upper part is always displayed and the set screen appears in the lower right by this step. If several transition opportunities as they are executed through selection buttons. You can then choose from the various transitions.

If you click on Continue button the next screen will be lauched.

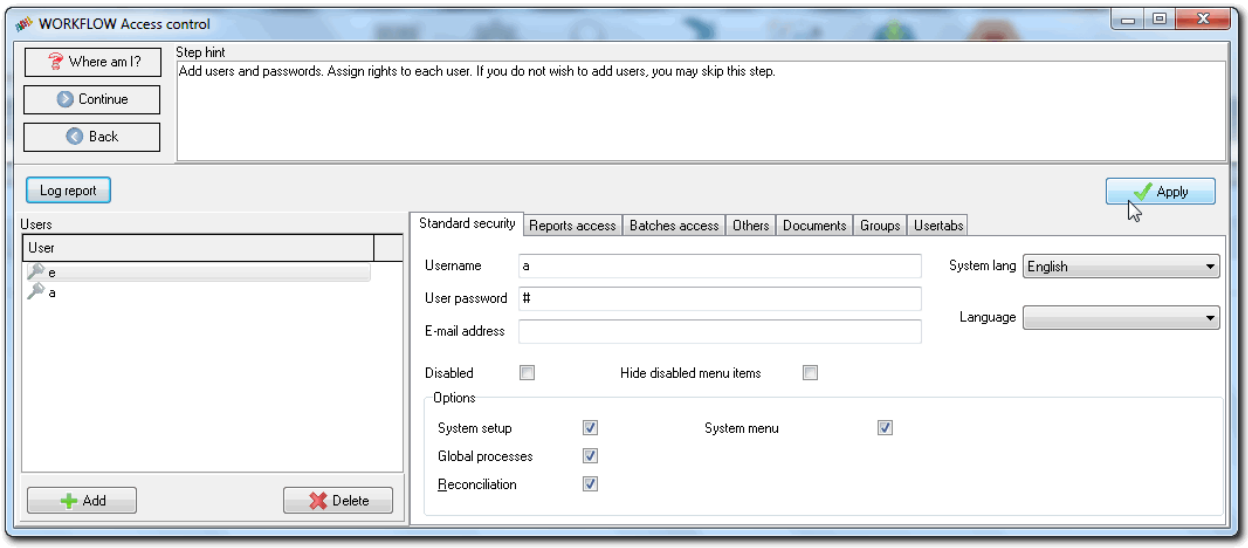
For example, the Setup workflow is as follows:



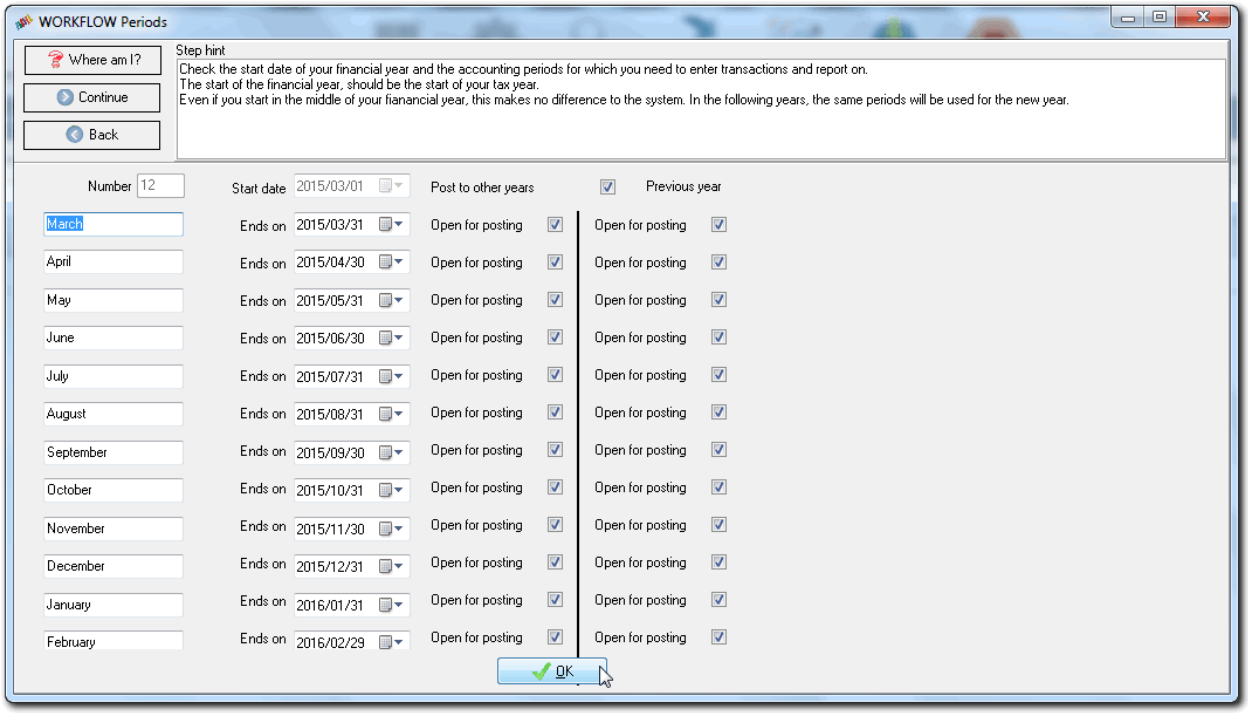
Click OK and the Setup company information screen is displayed.



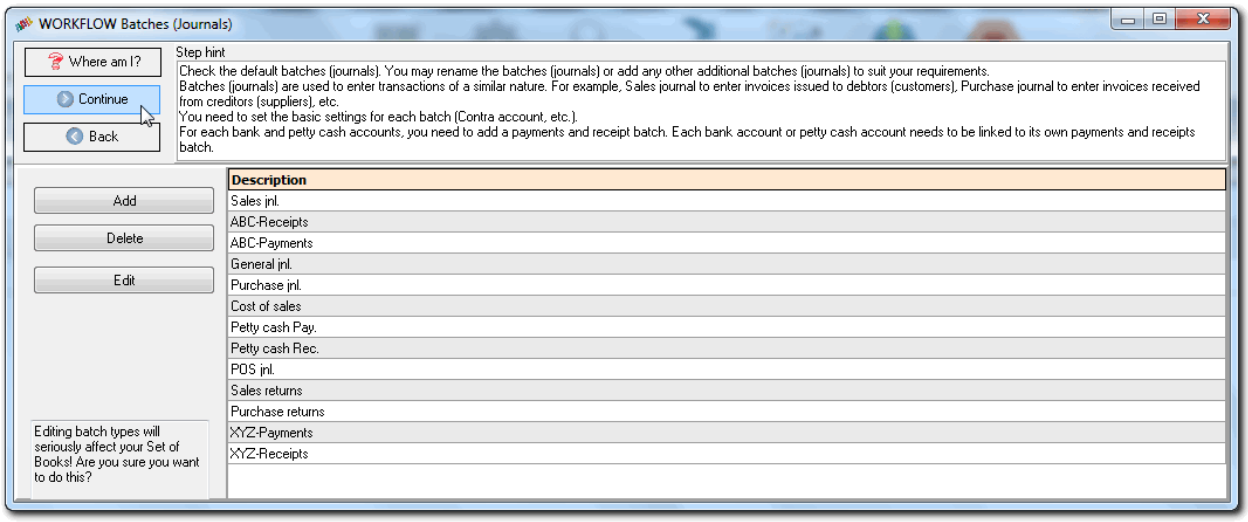
Enter / edit the necessary details, and click OK to save the changes. Click Continue to proceed to the next step.



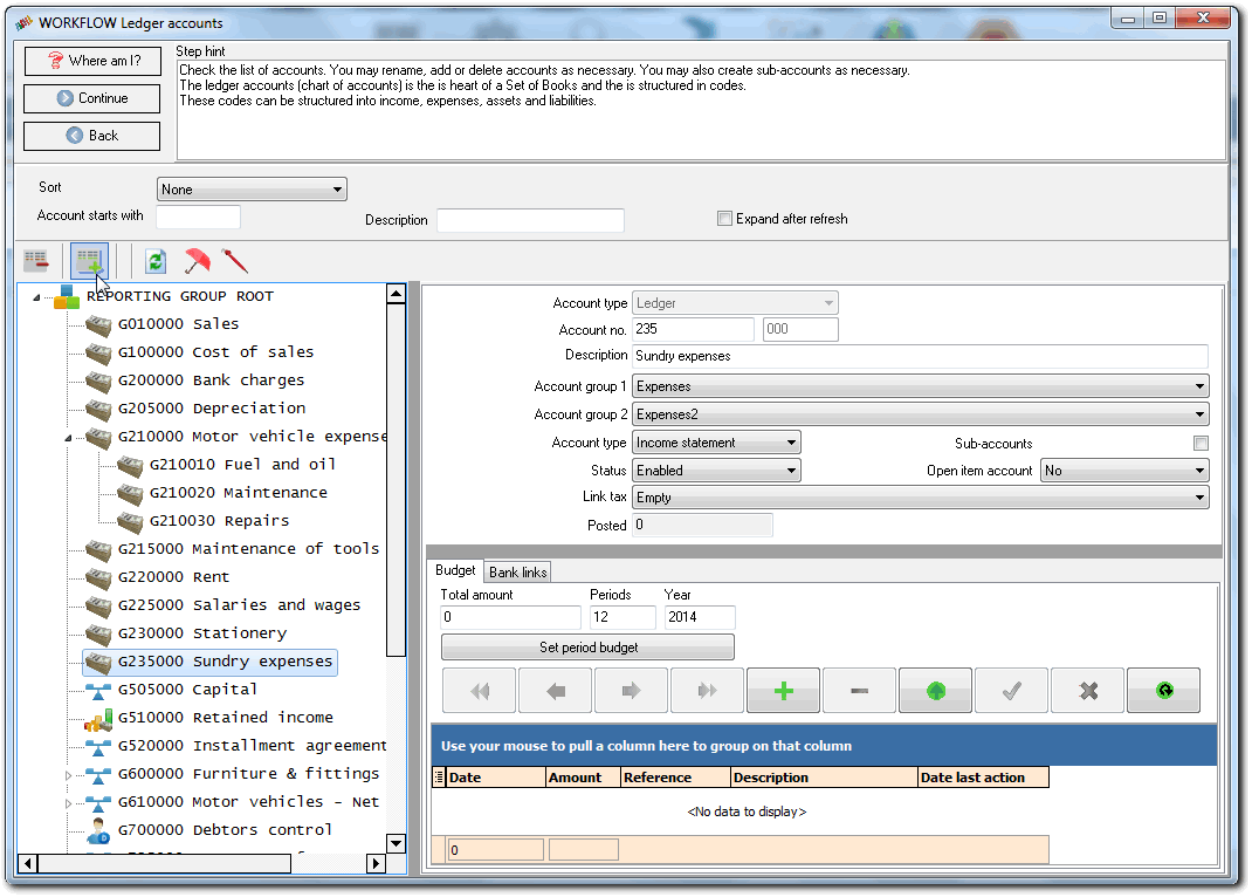
Add users and assign rights, if necessary, and click Apply to save the changes. Click Continue to proceed to the next step.



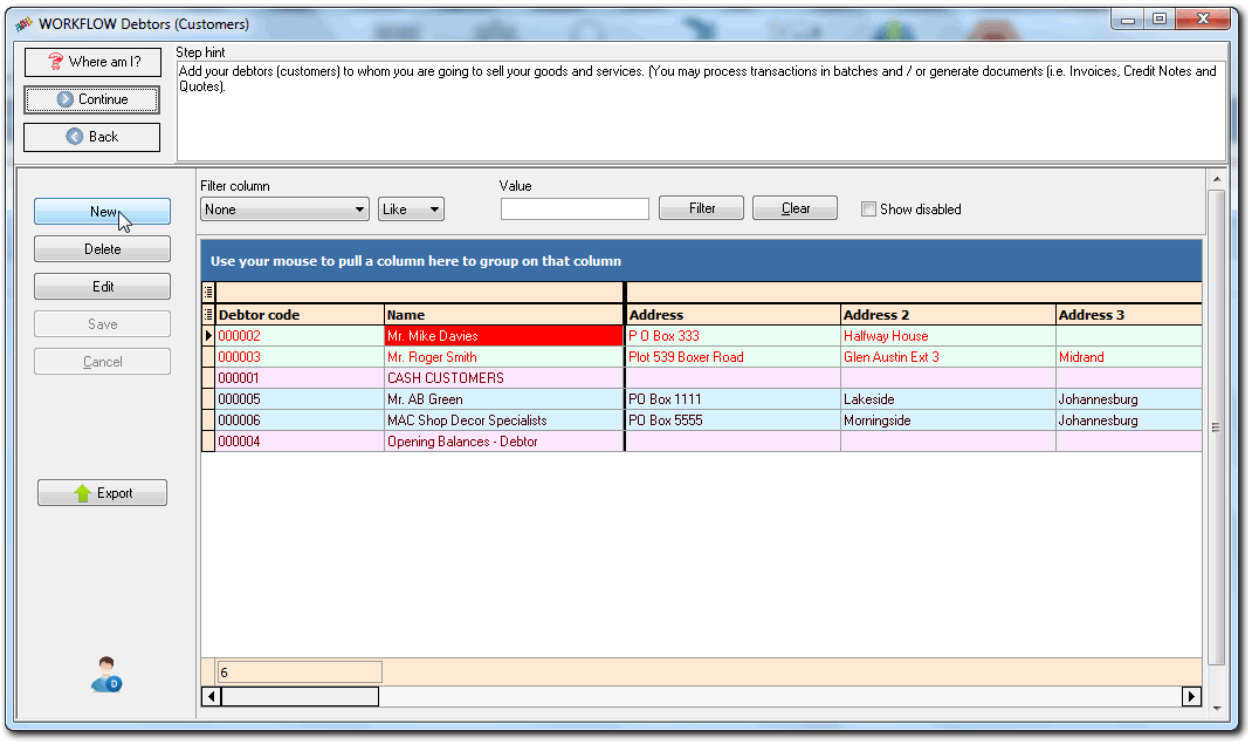
Check and set the periods (Start of financial year) and click OK to save the changes. Click Continue to proceed to the next step.



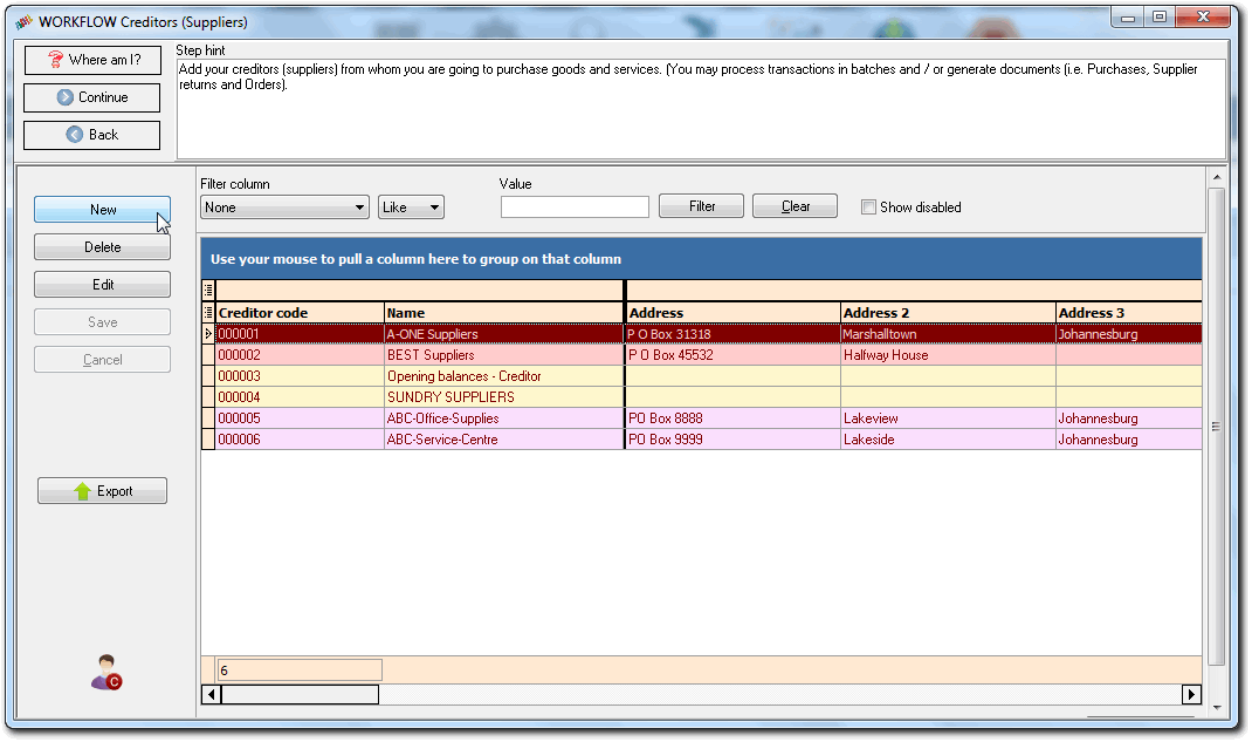
Add, delete or change the batch (journal) names as necessary. Click Continue to proceed to the next step.



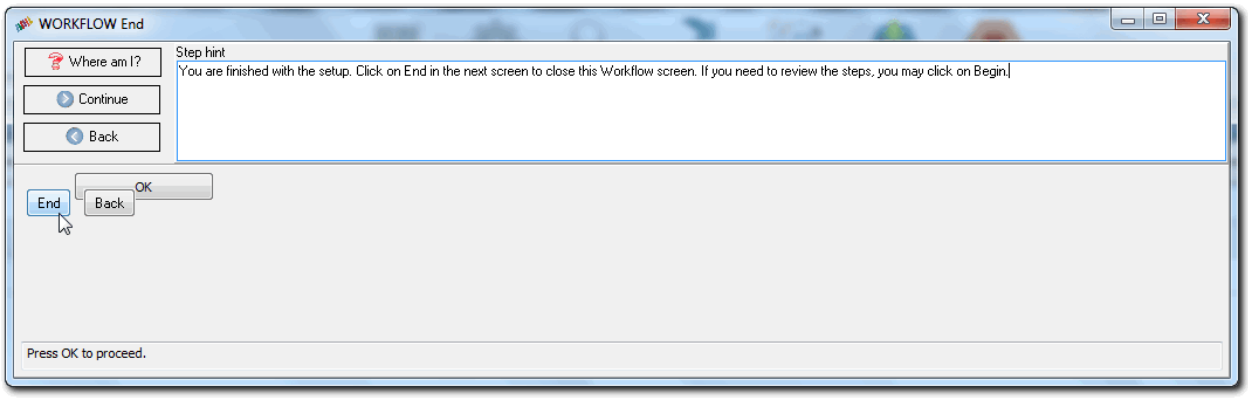
Add / edit / delete accounts as necessary. Remember to save the changes. Click Continue to proceed to the next step.



Add / edit / accounts for debtors (customers) as necessary. Click Continue to proceed to the next step.



Add / edit / accounts for creditors (suppliers) as necessary. Click Continue to proceed to the next step.



Where am I

In which I can see where you are in the process screen and what steps have been dealt with when and by whom.

Taxonomies and XBRL

What is Taxonomies and relationship to accounting?

In the context of accounting and financial reporting, a taxonomy refers to a standardized classification system or framework that defines the elements, relationships, and concepts used to organize and represent financial information. It provides a structured and consistent way to describe and categorize data elements in financial statements, making it easier to analyse and compare financial information across different companies and jurisdictions.

Taxonomies play a crucial role in the field of accounting as they provide a common language and framework for reporting financial data in a standardized manner. They define the specific elements or concepts that are relevant to financial reporting, such as assets, liabilities, equity, revenue, expenses, and other financial statement items.

The relationship between taxonomies and accounting lies in their ability to facilitate accurate and consistent financial reporting. Accounting standards, such as Generally Accepted Accounting Principles (GAAP) or International Financial Reporting Standards (IFRS), provide the foundation for preparing financial statements. Taxonomies are developed based on these accounting standards to provide a structured framework for reporting financial information in a machine-readable format.

By using a standardized taxonomy, companies can ensure that their financial statements adhere to the prescribed accounting principles and guidelines. It enables the consistent representation of financial data, making it easier for regulators, investors, analysts, and other stakeholders to interpret and compare financial information across different entities and periods.

Taxonomies are typically represented using the eXtensible Business Reporting Language (XBRL), which is an XML-based language designed for the electronic communication of business and financial data. XBRL taxonomies provide a standardized structure for tagging and exchanging financial information, allowing for efficient and accurate reporting, analysis, and regulatory compliance.

In summary, taxonomies provide the framework and structure for organizing, classifying, and reporting financial information in a standardized manner. They are essential in ensuring consistency, comparability, and transparency in financial reporting, and they facilitate the exchange and analysis of financial data across different systems and jurisdictions.

What is a Taxonomy?

In general, a taxonomy is a system for organizing and classifying things into categories based on shared

characteristics.

In the context of finance and accounting, a taxonomy refers to a standardized system of codes and labels used to classify financial and business data. Taxonomies are often used in financial reporting, such as when preparing financial statements, and they provide a common language for businesses, regulators, and investors to communicate financial information.

One example of a financial taxonomy is the eXtensible Business Reporting Language (XBRL), which is a global standard for exchanging business information electronically. XBRL uses a standardized taxonomy to classify financial data and make it easier to analyze and compare across different companies and industries

Which countries use Taxonomies?

Many countries around the world use a financial taxonomy, particularly for financial reporting purposes. The eXtensible Business Reporting Language (XBRL) is one example of a financial taxonomy that is used globally.

In the United States, the Securities and Exchange Commission (SEC) requires public companies to use XBRL when submitting financial statements. The U.S. GAAP Taxonomy is used to standardize financial reporting for companies operating in accordance with the Generally Accepted Accounting Principles (GAAP).

In Europe, the European Banking Authority (EBA) has implemented its own taxonomy, the European Banking Authority Reporting Framework (EBAF), which is used by banks across the European Union. This taxonomy helps harmonize financial reporting and facilitates the exchange of information among banks and regulatory authorities.

Other countries have also implemented their own taxonomies for financial reporting purposes. For example, in Australia, the Australian Securities and Investments Commission (ASIC) requires companies to submit financial reports in XBRL format using the Australian Reporting Taxonomy. In Japan, the Financial Services Agency (FSA) and Financial Accounting Standards Foundation (FASF) have developed the Japanese Taxonomy (J-GAAP) for financial reporting. In India, the Ministry of Corporate Affairs (MCA) has introduced the Indian Accounting Standards (Ind-AS) taxonomy for companies reporting under Indian accounting standards.

These are just a few examples of how taxonomies, particularly XBRL-based taxonomies, are used in various countries for financial reporting. They help standardize financial data, improve accuracy and comparability of financial statements, and facilitate regulatory compliance.

Which countries use Taxonomies?

Taxonomies are used in various countries as part of financial reporting and regulatory frameworks. While

the specific adoption and implementation of taxonomies may vary, here are some countries that use taxonomies:

1. United States: The United States Financial Accounting Standards Board (FASB) uses the US GAAP Taxonomy for reporting financial statements in XBRL format.
2. United Kingdom: The UK HM Revenue & Customs (HMRC) uses taxonomies for electronic filing of tax returns, such as the Corporation Tax and VAT taxonomies.
3. Australia: The Australian Taxation Office (ATO) uses taxonomies for electronic lodgment of tax returns, including the Business Activity Statement (BAS) and Tax File Number (TFN) taxonomies.
4. European Union: The European Banking Authority (EBA), European Insurance and Occupational Pensions Authority (EIOPA), and European Securities and Markets Authority (ESMA) use taxonomies for reporting financial information in the banking, insurance, and securities sectors, respectively.
5. Japan: The Financial Services Agency (FSA) and Financial Accounting Standards Foundation (FASF) in Japan use taxonomies for financial reporting by companies.
6. Netherlands: The Dutch Tax and Customs Administration uses taxonomies for electronic filing of tax returns, such as the Dutch Taxonomy (NT).
7. Singapore: The Inland Revenue Authority of Singapore (IRAS) uses taxonomies for filing tax returns, including the Singapore Financial Reporting Standard (FRS) taxonomies.

These are just a few examples, and taxonomies are utilized in various other countries globally for financial reporting, tax filing, and regulatory purposes. The specific taxonomies used and their application may vary depending on the country and the specific reporting requirements of regulatory bodies and tax authorities.

What is XBRL and relationship to accounting?

XBRL stands for eXtensible Business Reporting Language. It is a standardized, XML-based language that is used for the electronic communication of business and financial data. XBRL provides a structured format for representing and exchanging financial information in a machine-readable format.

The relationship between XBRL and accounting is closely intertwined. XBRL is specifically designed to enhance the efficiency, accuracy, and transparency of financial reporting and analysis. It allows for the standardized tagging and exchange of financial data, making it easier to understand, compare, and analyze financial information across different entities and periods.

XBRL facilitates the communication of financial information by assigning unique tags to individual data elements within financial statements. These tags identify the specific concepts or items being reported, such as assets, liabilities, revenue, expenses, and other financial statement elements. By using XBRL,

companies can provide structured and consistent data that can be easily interpreted and processed by various stakeholders, including regulators, investors, analysts, and software applications.

One of the key benefits of XBRL in accounting is the automation of data collection and analysis. By tagging financial data using XBRL, companies can streamline the process of preparing and submitting financial reports to regulatory authorities. It enables efficient and accurate extraction, aggregation, and analysis of financial information, reducing manual data entry errors and enhancing the speed and reliability of financial reporting.

XBRL also supports the standardization of accounting information across different jurisdictions and reporting frameworks. It provides a common language for reporting financial data, allowing for better comparability and consistency in financial reporting practices globally. XBRL taxonomies, which define the structure and meaning of the data elements, are developed based on accounting standards such as Generally Accepted Accounting Principles (GAAP) or International Financial Reporting Standards (IFRS).

Overall, XBRL plays a vital role in modernizing and improving the efficiency of accounting processes. It enhances the accuracy, transparency, and comparability of financial information, enabling stakeholders to make better-informed decisions based on standardized and machine-readable data.

Is XBRL and Taxonomies related in accounting ?

Yes, XBRL and taxonomies are closely related in accounting. XBRL provides a standardized language and framework for representing financial information, while taxonomies define the specific elements and relationships within that framework.

In XBRL, taxonomies serve as the foundation for tagging financial data. A taxonomy is a structured dictionary or classification system that defines the specific data elements, their meanings, and the relationships between them. It provides a standardized set of tags or codes that can be applied to individual data points in financial statements.

Taxonomies are developed based on accounting standards such as Generally Accepted Accounting Principles (GAAP) or International Financial Reporting Standards (IFRS). They define the specific elements and concepts used in financial reporting, such as assets, liabilities, revenue, expenses, and other financial statement items.

By using the appropriate taxonomy, companies can tag their financial data with the relevant codes, ensuring consistency and standardization in reporting. This allows for the seamless exchange and analysis of financial information across different entities, jurisdictions, and reporting frameworks.

Taxonomies also enable data consumers, such as regulators, investors, and analysts, to interpret and understand the financial data more effectively. They provide a common language and structure for financial reporting, facilitating the comparison and analysis of financial information from various sources.

In summary, taxonomies play a crucial role in XBRL-based financial reporting. They define the standardized elements and relationships within the XBRL framework, ensuring consistency, comparability, and interoperability of financial data across different accounting standards and reporting entities.

Which countries use XBRL?

XBRL (eXtensible Business Reporting Language) is used by numerous countries worldwide for financial reporting and regulatory purposes. Some of the countries that have adopted XBRL include:

1. United States: The Securities and Exchange Commission (SEC) requires public companies to submit their financial statements in XBRL format.
2. United Kingdom: XBRL is used for filing financial statements with Companies House and the Financial Conduct Authority (FCA).
3. Australia: The Australian Securities and Investments Commission (ASIC) mandates the use of XBRL for financial reporting by companies.
4. Japan: XBRL is widely used in Japan for financial reporting and disclosure purposes by companies listed on the Tokyo Stock Exchange.
5. European Union: The European Securities and Markets Authority (ESMA) requires XBRL-based reporting for listed companies in EU member states.
6. Singapore: XBRL is used by companies in Singapore for submitting financial statements to the Accounting and Corporate Regulatory Authority (ACRA).
7. China: XBRL is utilized by the China Securities Regulatory Commission (CSRC) for reporting financial information by listed companies.
8. South Korea: The Financial Supervisory Service (FSS) in South Korea requires companies to submit financial statements in XBRL format.
9. India: The Ministry of Corporate Affairs (MCA) in India has implemented XBRL for reporting by certain categories of companies.

These are just a few examples, and there are many other countries around the world that have adopted XBRL or are in the process of doing so. The adoption and usage of XBRL may vary in terms of the scope of reporting, regulatory requirements, and specific implementation details in each country.

Database types

In addition to the Firebird database type, osFinancials5/TurboCASH5 also supports MSSQL database type.

Created with the Standard Edition of HelpNDoc: Full-featured EPub generator

Firebird databases

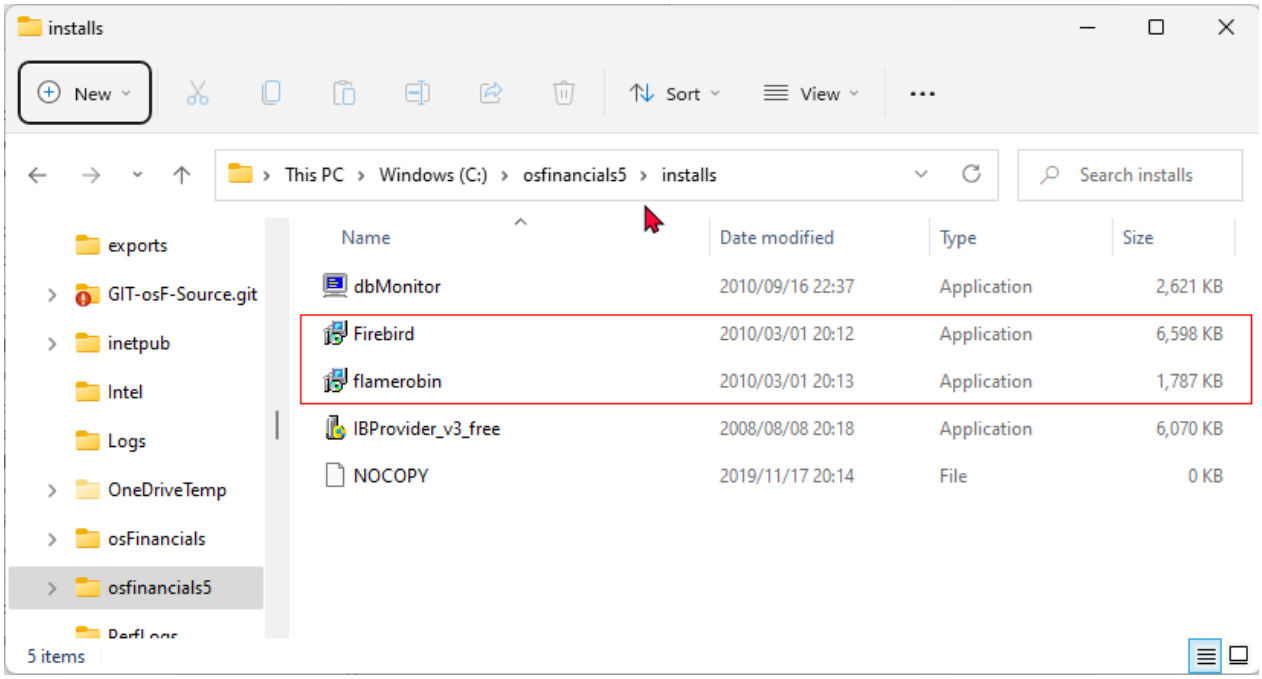
---

osFinancials5/TurboCASH5 supports 79 different languages and counties / tax regimes languages liked to 87 Sets of Books (firebird database-types) which may be downloaded and customised to meet your requirements.

If the set of books for your language and or country, is not available in the books directory, you may select any of the available Firebird Sets of Books and linked languages available as a free download.

All firebird database types available for download (Create a Set of Books -default option), is upgraded from Firebird version 1.5 (ODS version - 10.1) to Firebird version 2.1 - (ODS version - 11.1)

For those advanced users, which may wish to explore the database tables and version, etc., you may install Firebird and FlameRobin which is included in the installs folder of your osFiinancials 5 installation folder.



Created with the Standard Edition of HelpNDoc: From Word to ePub or Kindle eBook: A Comprehensive Guide

Firebird install

Copy Firebird client library to <system> directory = Tick

Firebird 1.5 creates databases with an ODS (On-Disk Structure) version of 10.1.

Firebird 2.1 creates databases with an ODS (On-Disk Structure) version of 11.1.

Select the "*Firebird.exe*" file in installs folder of the osFinancials5/TurboCASH5 installation directory.

Flame Robin - Firebird connection

FlameRobin and Firebird Databases

To use FlameRobin, you need to have Firebird installed. FlameRobin is a graphical database administration tool specifically designed to work with Firebird databases. It allows users to manage Firebird databases, execute SQL queries, and perform various administrative tasks such as creating and modifying database objects.

FlameRobin interacts with Firebird servers to perform these tasks. Therefore, you must have Firebird installed and running either locally or on a remote server that you can connect to with FlameRobin.

You can download and install Firebird separately from FlameRobin. Once Firebird is installed and configured, you can then install FlameRobin to manage your Firebird databases.

Firebird 2.1 and FlameRobin is included in the installs folder of your osFiinancials5/TurboCASH5 installation folder.

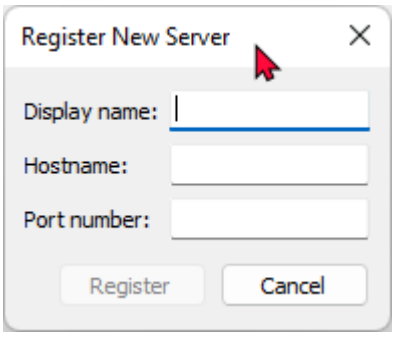
Testing the Connection with FlameRobin

If you experience connection issues with Firebird and FlameReobin, check and allow permissions for these apps in your Windows Firewall settings

While optional, testing the connection with FlameRobin can serve as a useful diagnostic tool. It's not necessary for osFinancials5/TurboCASH5 to function correctly, but it's handy for verifying database connectivity.

Add a new server if you are on the client machine (you also need the client install of Firebird for this) of just use localhost if flame is running on the server.

1. Launch FlameRobin and navigate to the "*Home*" tab.
2. Right-click and select "*Register server...*" from the context menu.

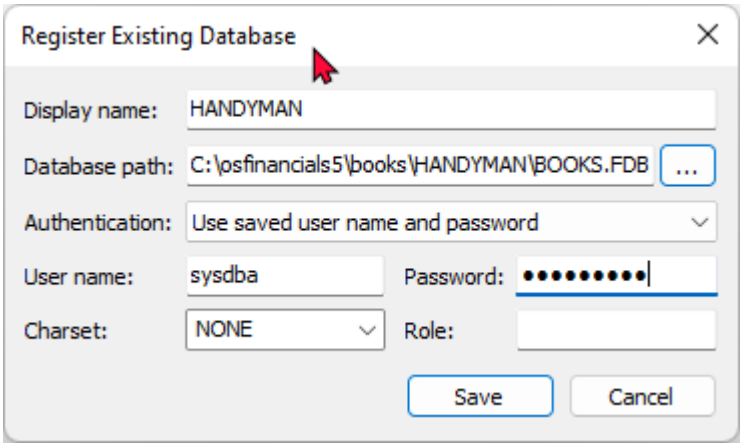


3. Enter the following:
    a) Display name: - Assign an arbitrary name to recognise the server.

b) Hostname: - Enter the IP address or hostname of the server (you can find this using '*ipconfig*' in the command prompt).

c) Port number: - Leave this field empty (default).

4. Right-click the newly added server and choose "*Register existing database...*" from the context menu.



5. Enter the following:

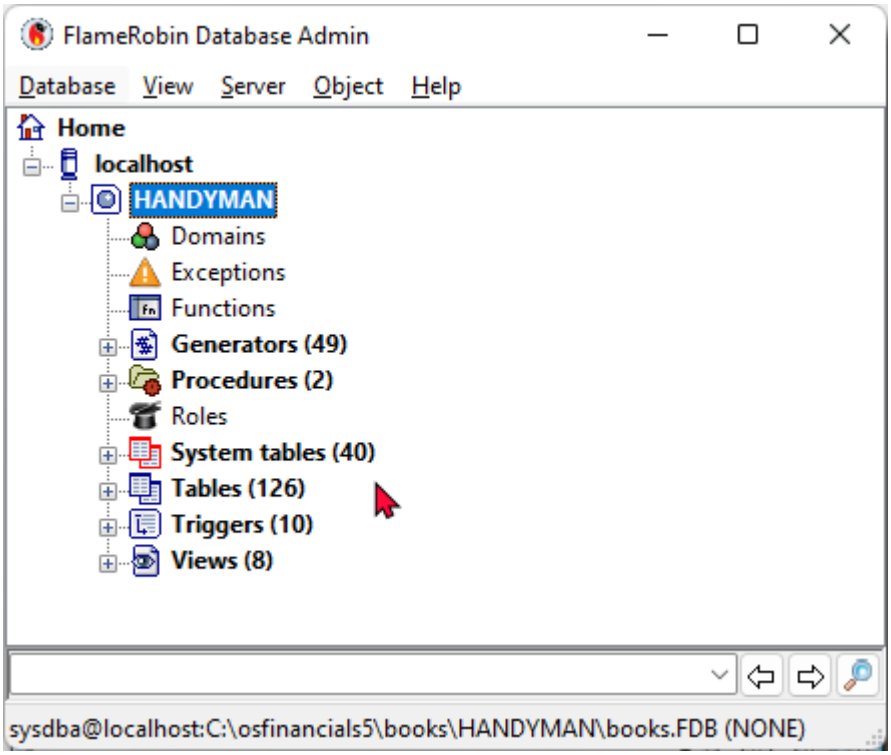
a) Display name: - Enter the name you want to use for this particular set of books.

b) Database path: - Enter the full server path to the books.fdb file or select a database file on your system.

c) Username: - Default is *sysdba*

d) Password: - Default is *masterkey*.

6. Click "*Save*" and double-click the added database. This will confirm if the database tables are visible.



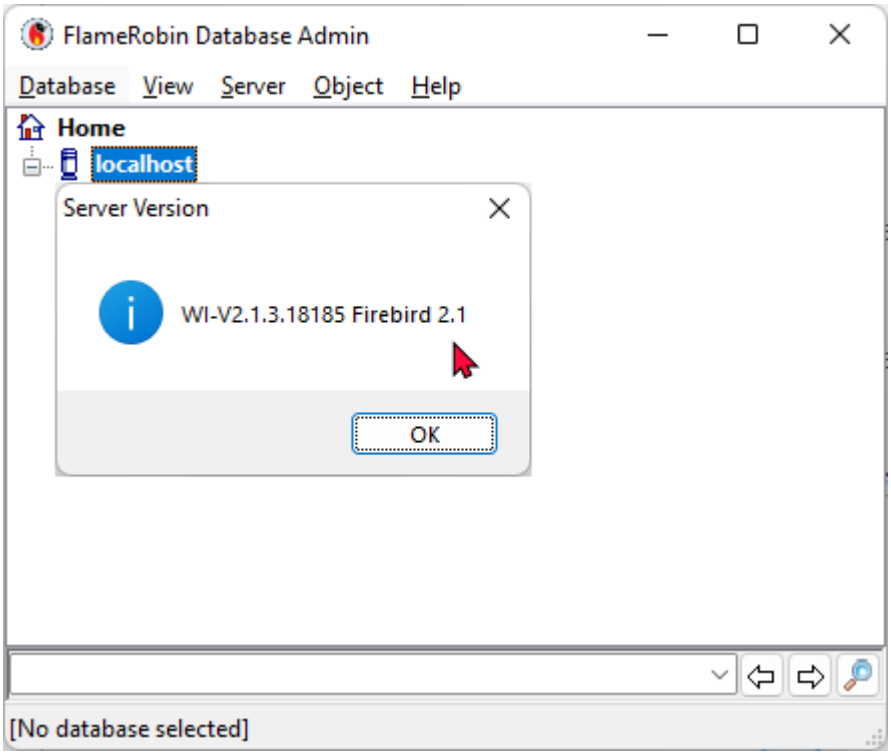
7. You can browse through the tables to view the data of your Set of Books. A successful connection indicates no issues.

Checking the Firebird version with FlameRobin

Firebird 1.5 databases have an ODS (On-Disk Structure) version of 10.1, while Firebird 2.1 databases have an ODS version of 11.1.

To check the Firebird version:

Right-click on the Server name (e.g. "*localhost*") and select "*Retrieve server version*" from the context menu or the Server menu.



This process confirms compatibility with Firebird 2.1, which is included in the installs folder of your osFinancials5/TurboCASH5 installation. The Firebird databases of the templates for Sets of Books and linked languages, available as a free download, are upgraded to Firebird 2.1 with ODS version 11.1.

NOTE: In TurboCASH5-2 and earlier versions, Sets of Books templates in the bin/Repository and bin/Tutorials folder are still Firebird databases from version 1.5 (ODS 10.1).

Created with the Standard Edition of HelpNDoc: Transform Your CHM Help File Creation Process with HelpNDoc

Firebird database upgrade

Before you upgrade please Backup the Database, use the make a copy or backup of the Set of Books to be Restored and upgraded.

Firebird Database Sets of Books in osFinancials5.1/TurboCASH5-3

All sets of books for use with osFinancials5.1 and TurboCASH5-3 have been updated from Firebird databases version 1.5 (ODS 10.1) to version 2.1 (ODS 11.1) and are available in the following options:

- osFinancials databases are available on the webserver. Download them via "Let osFinancials help you create a Set of Books?" or "Let TurboCASH5-3 help you create a Set of Books?" in Create Set of Books

on the Start ribbon (Press F10). For year-end tasks, set your financial year start in Setup → Reporting dates.

- TurboCASH5-3 Sets of Books templates are stored in the following folders:
    - bin/Repository: Various templates based on country and language choices during installation.
    - bin/4-DIGIT-BOOKS
    - bin/CHINESE
    - bin/CUSTOMISE-EMPTY-BOOKS
    - bin/Tutorials

NOTE: In TurboCASH5-2 and earlier versions, Sets of Books templates in the bin/Repository and bin/Tutorials folder are still Firebird databases from version 1.5 (ODS 10.1).

Is it optional for existing users of previous versions of osFinancials/TurboCASH databases version 1.5 (ODS 10.1) to upgrade your Firebird databases from version 1.5 (ODS 10.1) to version 2.1 (ODS 11.1)?

Existing users of previous versions of osFinancials/TurboCASH support Firebird databases version 1.5 (ODS 10.1). When Migrating their Set of Books to osFinancials5.1/TurboCASH5-3 their Set of Books may be using Firebird databases version 1.5 (ODS 10.1).

The decision to upgrade your Firebird databases from version 1.5 (ODS 10.1) to version 2.1 (ODS 11.1) depends on several factors, including your specific use case, the requirements of your software (osFinancials or TurboCASH), and your long-term goals. Here's a detailed breakdown to help you decide:

When Upgrading is Optional

Upgrading is optional if:

- Your Current Setup Works Fine:
    - If your existing Firebird 1.5 databases are functioning correctly with your current version of osFinancials or TurboCASH, and you have no immediate need for new features or improvements, you can continue using the older version.
- You Are Not Facing Performance or Security Issues:

- If your database performance is acceptable and you are not concerned about potential security vulnerabilities in Firebird 1.5, upgrading may not be urgent.

- You Are Not Planning to Upgrade Your Software:
  - If you do not plan to upgrade to osFinancials 5.1 or TurboCASH 5.3 (which are designed for Firebird 2.1), there is no immediate need to upgrade the database.

When Upgrading is Recommended or Required

Upgrading is recommended or required if:

- You Are Upgrading Your Software:
  - If you plan to upgrade to osFinancials 5.1 or TurboCASH 5.3, you must upgrade your Firebird databases to version 2.1 (ODS 11.1). These newer software versions are designed to work with Firebird 2.1 and may not be compatible with Firebird 1.5.

- You Need Better Performance:
  - Firebird 2.1 includes significant performance improvements over Firebird 1.5. If your database operations are slow or inefficient, upgrading can help.

- You Require Enhanced Security:
  - Firebird 2.1 includes security enhancements that are not available in Firebird 1.5. If your database contains sensitive information, upgrading is strongly recommended.

- You Want Access to New Features:
  - Firebird 2.1 introduces new features and capabilities that may be beneficial for your application or workflow.

- You Need Ongoing Support:
  - Firebird 1.5 is an outdated version and is no longer supported by the Firebird project. Upgrading to Firebird 2.1 ensures that you have access to support, bug fixes, and updates.

- You Are Migrating to a New Environment:
  - If you are moving your database to a new server or environment, it is a good opportunity to upgrade to the latest supported stable version of Firebird.

Risks of Not Upgrading

If you choose not to upgrade, be aware of the following risks:

- Compatibility Issues:
  - Future updates to osFinancials or TurboCASH may not support Firebird 1.5, leaving you unable to upgrade your software.
- Security Vulnerabilities:
  - Firebird 1.5 may have unpatched security vulnerabilities, putting your data at risk.
- Performance Limitations:
  - You may miss out on performance optimizations available in Firebird 2.1.
- Lack of Support:
  - If you encounter issues with Firebird 1.5, you may not be able to find support or solutions.

Conclusion

- Optional: If you are satisfied with your current setup and do not plan to upgrade your software, you can continue using Firebird 1.5 (ODS 10.1).
- Recommended/Required: If you are upgrading to osFinancials 5.1 or TurboCASH 5.3, or if you want better performance, security, and support, you should upgrade your Firebird databases to version 2.1 (ODS 11.1).

Before upgrading, always back up your databases and test the upgraded environment to ensure compatibility with your applications. If you are unsure, consult the documentation for osFinancials, TurboCASH, or Firebird, or seek assistance from a qualified database administrator.

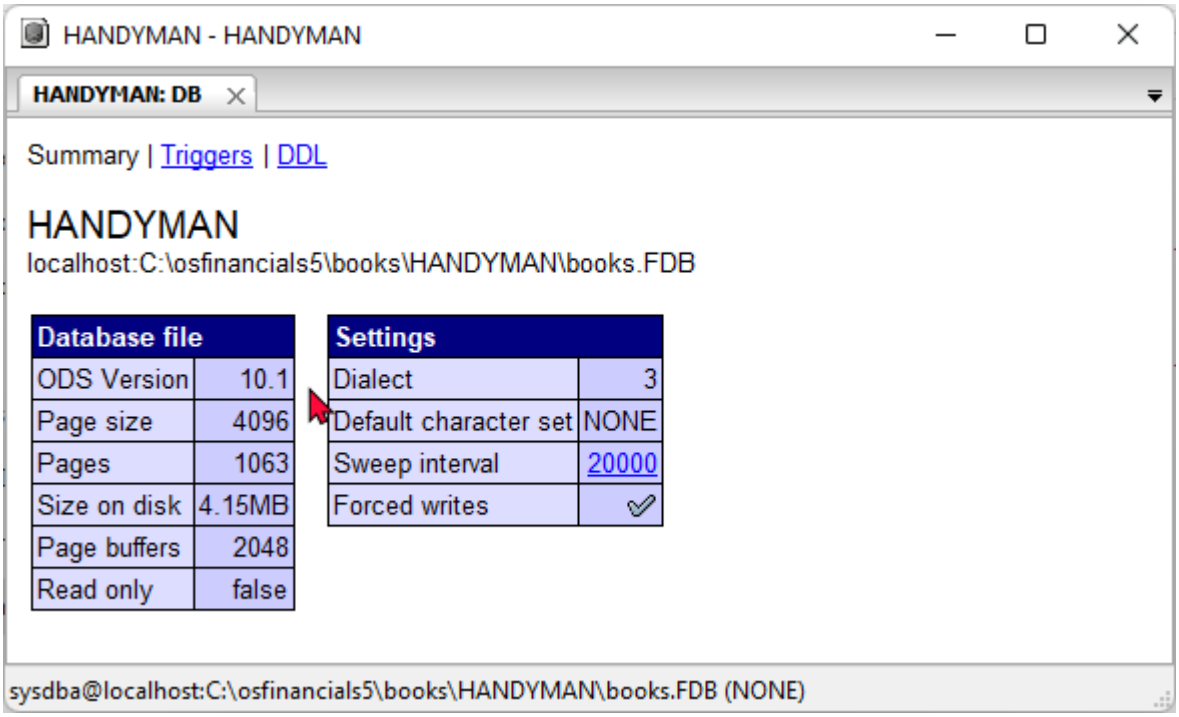
FlameRobin Process to Upgrade Firebird Databases

In FlameRobin, after registering an existing database using the Register existing database option, you can verify the Firebird version of the database.

To accomplish this, connect to the database and select Database Properties from the Database menu or from the context menu.

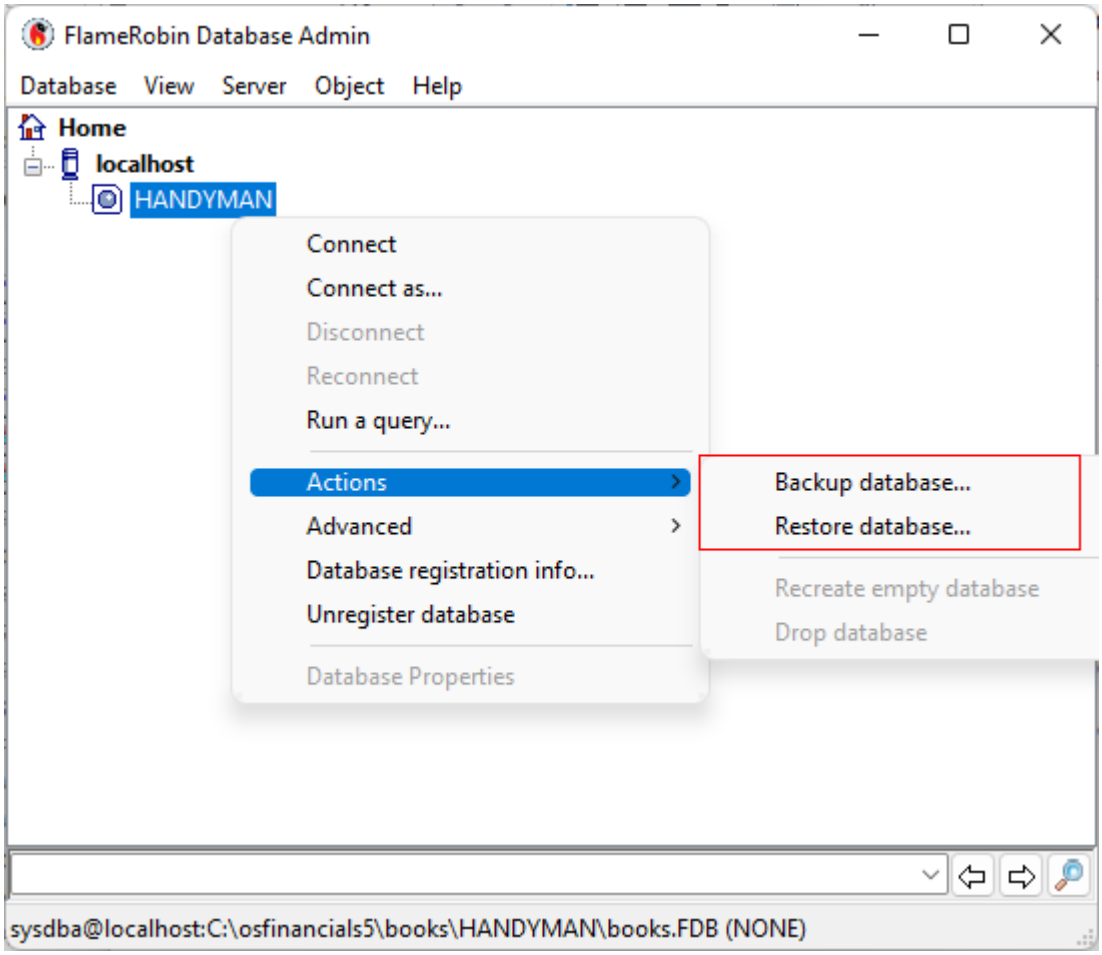
For reference:

- Firebird database ODS version 10.1 corresponds to Firebird version 1.5.



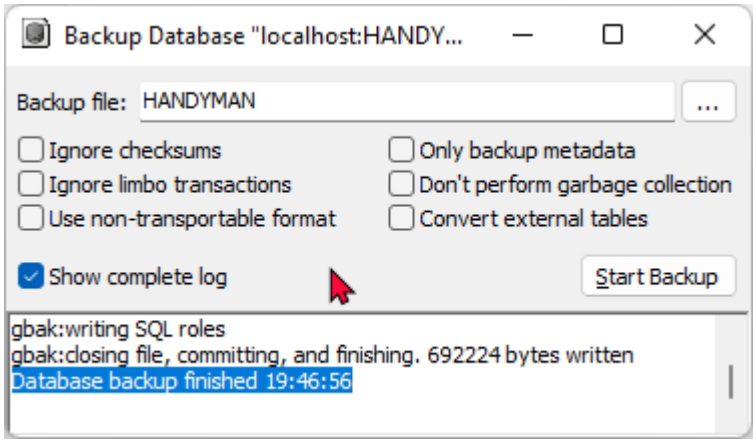
If you wish to upgrade the database (Set of Books) from Firebird1.5 (ODS Version 10.1) to Firebird2.1 (ODS Version 11.1), you need to do the following:

1. Disconnect the database in FlameRobin.
2. Right-click and select the Backup database...

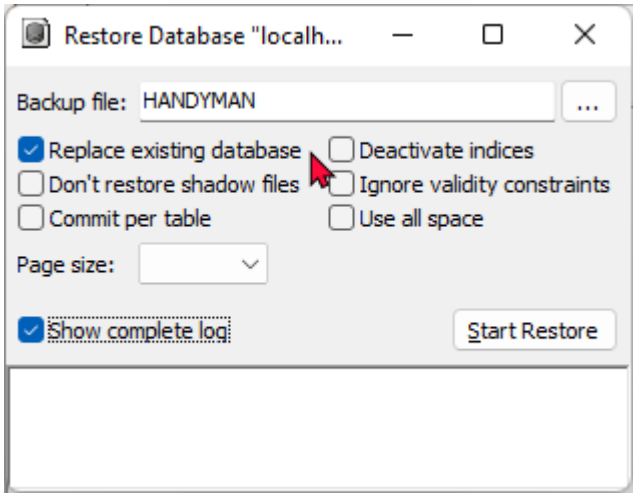


3. Backup the Database.

4. Enter a "*Backup file*" name to back up the database.



5. Restore the Database - Use the same "*Backup file*" name to restore the database.



6. Connect to the database and verify it's Firebird ODS version 11.1, corresponding to Firebird version 2.1.

Microsoft SQL Server (MSSQL) Databases

MSSQL Server configuration, settings and Firewall settings to open a Set of Books

When opening an MSSQL database type Set of Books in osFinancials5/TurboCASH5, there are certain server, account control, and firewall settings that need to be configured correctly. These settings ensure that osFinancials5/TurboCASH5 can establish a connection to the MSSQL Server and access the database.

Here are some considerations regarding the server, account control, and firewall settings:

1. MSSQL Server Configuration: The MSSQL Server needs to be properly installed and configured on the server machine. This includes ensuring that the server is running, the necessary services are active, and the database is accessible.
2. Server Name and Credentials: When opening an MSSQL database type Set of Books, you need to provide the correct server name or IP address along with the appropriate credentials (username and password) to establish a connection to the MSSQL Server. These details should be provided during the Set of Books setup process.
3. Account Control Settings: Depending on the security settings of your MSSQL Server, you may need to ensure that the user account used to access the database has the necessary permissions and privileges. This includes granting the account appropriate access rights to the database.
4. Firewall Settings: If your server machine has a firewall enabled, you may need to configure the firewall to allow incoming connections to the MSSQL Server. This involves opening the necessary ports (e.g., port 1433 for MSSQL) to allow communication between osFinancials5/TurboCASH5 and the database server.

It's important to consult with your IT administrator or database administrator to ensure that the server, account control, and firewall settings are properly configured to enable the opening of an MSSQL database type Set of Books in osFinancials5/TurboCASH5.

Create Set of Books (Advanced - MSSQL)

---

osFinancials5/TurboCASH5 Set of Books Microsoft SQL Server database type

Before creating an MSSQL database type (Set of Books), you must add an empty database in "*Microsoft SQL Server*".

This option allows you to create your own Set of Books for the MSSQL database type from scratch without using any of the Set of Books (templates) already available for osFinancials5/TurboCASH5 and customize them according to your needs.

When you create a Set of Books for the MSSQL database type consists of 2 parts:

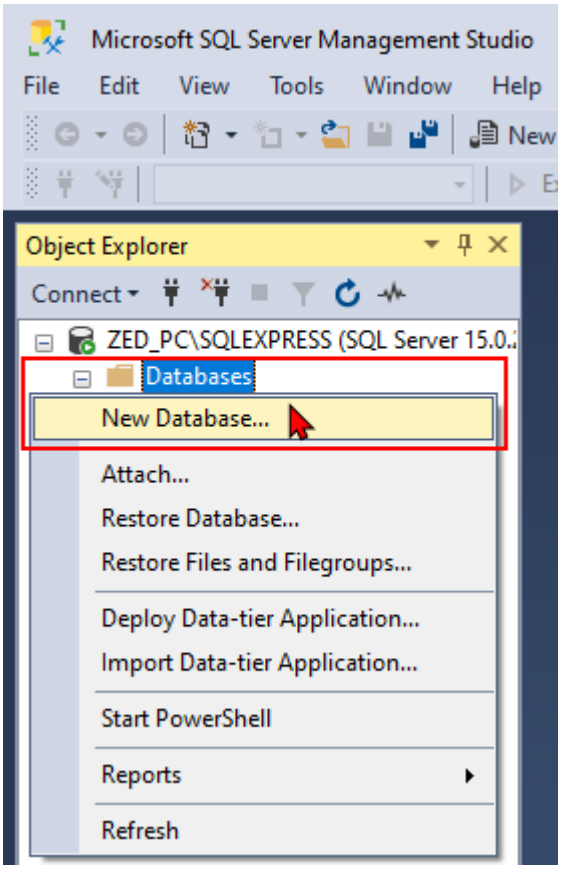
1. Create a new blank database for osFinancials5/TurboCASH5 on "*MSQL Server*"
2. Create a new Set of Books in osFinancials5/TurboCASH5 for the "*MSQL Server*" database type.

Create a new bank database in Microsoft SQL Server

Before creating a MSSQL Database type (Set of Books) in osFinancials5/TurboCASH5, it is necessary to add a blank database in Microsoft SQL Server. This database will serve as the foundation for your Set of Books and will store all the financial data and information.

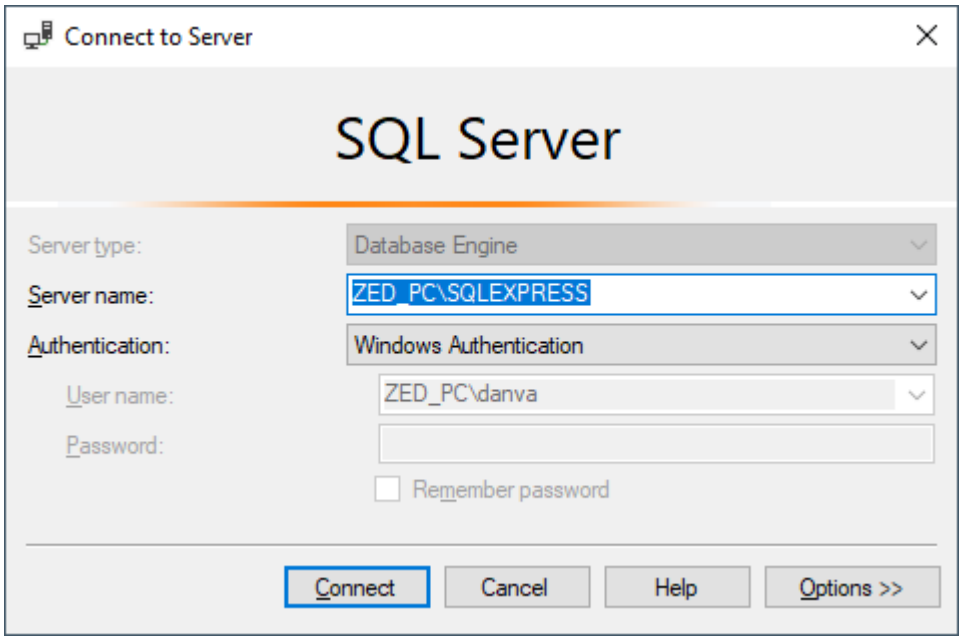
To add a blank database in Microsoft SQL Server, follow these steps:

1. Open Microsoft SQL Server Management Studio.
2. Connect to your SQL Server instance using the appropriate credentials.
3. In the Object Explorer, right-click on "*Databases*" and select "New Database..."



4. Provide a name for your new database and configure any additional settings, such as file locations and sizes.

5. Click "OK" to create the blank database.



Once you have successfully added the blank database, make note of the Server name (and instance if applicable) and the name of your newly created database. These details will be required during the process of creating a new Set of Books in osFinancials5/TurboCASH5 using the "*Customise your own Set of*

Books (Advanced)?" option.

By having a blank database in place, you can start building your Set of Books from scratch and tailor it to meet your specific needs and requirements within the MSSQL database type (Microsoft SQL Server).

Create a new Set of Books in osFinancials5/TurboCASH5 for the "*MSQL Server*" database type

In osFinancials5/TurboCASH5, when creating a Set of Books from scratch using the "*Customise your own Set of Books (Advanced)?*" option in the "*Creation wizard*", you have the flexibility to define your chart of accounts according to your specific needs and requirements.

When creating a Set of Books using the "*Customise your own Set of Books (Advanced)?*" option, you begin with a clean slate and have to build your chart of accounts from scratch. The initial setup process will only include three main control accounts: the Debtor's control account, Creditor's control account, and Retained earnings account.

As part of this customisation process, you will have the opportunity to set the number of main digits for your accounts, ranging from 3 to 8 digits. Additionally, you will specify the account numbers for three main control accounts: the Creditors control account, Debtors control account, and Retained earnings account.

1. *The Creditors control account is a general ledger account that represents the total amount owed to the company by its creditors or suppliers. It serves as a summary account for all individual creditor accounts and helps track the company's outstanding payables.*
2. *The Debtors control account, on the other hand, is a general ledger account that represents the total amount owed to the company by its debtors or customers. It acts as a summary account for all individual debtor accounts and aids in monitoring the company's receivables.*
3. *The Retained earnings account, reflects the cumulative net earnings or profits of the company that have been retained and reinvested in the business. It represents the portion of equity that is derived from the company's profitability and serves as a financial record of the accumulated profits over time.*

By defining these main control accounts during the Set of Books creation process, you can structure your chart of accounts and design the account numbering system that aligns with your specific accounting practices and reporting requirements.

To complete the setup and create a comprehensive chart of accounts, you will need to define and link all the necessary accounts in your organisation. This includes creating and setting up Ledger accounts, Bank accounts, Creditor accounts, Debtor accounts, and Tax accounts. You have the flexibility to customize the account structure and naming conventions based on your specific requirements.

Additionally, you will also need to create and configure other elements such as Batch types, Groups, and any other accounts or settings that are relevant to your business operations. This allows you to tailor the

Set of Books to suit your organisation's needs and ensure accurate financial management and reporting.

By going through the setup process and defining the necessary accounts, you establish the foundation for recording and managing financial transactions within osFinancials5/TurboCASH5, enabling you to effectively track and analyse your company's financial activities.

Choosing the number of digits for main accounts

See - Chart of Accounts - Optimising 4-,5-,6-,7- and 8-digit main accounts - Some recommendations and tips to plan your Chart of Accounts according to your selection on the number of Main account digits -

Choosing the appropriate number of digits for main accounts is an important consideration when setting up your Chart of Accounts in osFinancials5/TurboCASH5. The number of digits determines the level of detail and granularity in your account numbering system.

When creating your Set of Books, you will be prompted to select the number of main account digits. For example, if you choose a 4-digit main accounts Chart of Accounts, the and you have initially assigned the following account numbers: 1100 for the Debtor's control account, 2100 for the Creditor's control account, and 3100 for the Retained earnings account. These are default account codes that can be modified later if needed.

The selection of main account digits impacts the structure and organization of your Chart of Accounts. Here are some recommendations and tips to consider:

- 4-digit main accounts: This option provides a concise and compact Chart of Accounts, it can be suitable for small and medium enterprises as well as larger organizations that need to comply with various accounting frameworks and standards such as GAAP US, GAAP UK, SA GAAP, NZ GAAP, IFRS (full), IFRS for SMEs, and others based on their jurisdiction and accounting needs. However, it's important to note that this option may have limitations in accommodating detailed account classifications or sub-categories.
- 5 to 8-digit main accounts: These options offer greater offer greater flexibility and granularity in your Chart of Accounts. These options allow for more detailed account classifications and sub-categories, making them beneficial for larger organizations or those with complex accounting requirements. With these options, you can design a Chart of Accounts that aligns precisely with your financial reporting needs and internal management requirements.

It's crucial to consider your organization's size, complexity, and reporting needs when choosing the number of main account digits. By selecting the appropriate option, you can ensure that your Chart of Accounts supports accurate financial reporting, compliance with accounting standards, and effective management of your organization's financial data.

When creating a Set of Books with the option to choose the number of digits for main accounts, you have the flexibility to select a structure that suits your needs. Here are the available options and the corresponding number of digits for the general ledger main accounts:

4-Digit General ledger main accounts: Enter a 4-digit numeric code for each of the Creditor's control, Debtor's control, and Retained income/earnings accounts (e.g., 2100, 1100, and 3100). This option includes 3-digit sub-accounts as well as 7-Digit account codes for Debtor accounts in the debtors ledger and Creditor accounts in the creditors ledger.

5-Digit General ledger main accounts: Enter a 5-digit numeric code for each of the Creditor's control, Debtor's control, and Retained income/earnings accounts (e.g., 21000, 11000, and 31000). This option includes 3-digit sub-accounts as well as 8-Digit account codes for Debtor accounts in the debtors ledger and Creditor accounts in the creditors ledger

6-Digit General ledger main accounts: Enter a 6-digit numeric code for each of the Creditor's control, Debtor's control, and Retained income/earnings accounts (e.g., 210000, 110000, and 310000). This option includes 3-digit sub-accounts as well as 9-Digit account codes for Debtor accounts in the debtors ledger and Creditor accounts in the creditors ledger

7-Digit General ledger main accounts: Enter a 7-digit numeric code for each of the Creditor's control, Debtor's control, and Retained income/earnings accounts (e.g., 2100000, 1100000, and 3100000). This option includes 3-digit sub-accounts as well as 10-Digit account codes for Debtor accounts in the debtors ledger and Creditor accounts in the creditors ledger

8-Digit General ledger main accounts: Enter an 8-digit numeric code for each of the Creditor's control, Debtor's control, and Retained income/earnings accounts (e.g., 21000000, 11000000, and 31000000). This option includes 3-digit sub-accounts as well as 11-Digit account codes for Debtor accounts in the debtors ledger and Creditor accounts in the creditors ledger

When planning your Chart of Accounts, it's important to carefully consider and define the codes or numbers for these accounts based on the structure you have chosen. This will help ensure consistency and organization in your financial reporting and analysis.

After creating your Set of Books, you still have the flexibility to change the account codes or numbers in the Chart of Accounts. In the Setup → Accounts menu on the Setup ribbon, you can modify the account codes to align with your specific requirements, including the codes for the Creditor's control, Debtor's control, and Retained income/earnings accounts (e.g., 2100, 1100, and 3100 in the example of the 4-Digit General ledger main accounts). This initial stage allows you to plan and design your chart of accounts according to your needs.

However, it's important to note that once you start processing functions such as entering transactions or budgets, you may not be allowed to change the account codes or numbers. Therefore, careful consideration and planning during the initial setup stage is crucial to ensure accurate financial structure and reporting.

By carefully selecting the number of main account digits and customizing the account codes in the Chart of Accounts, you can optimize the organization and usability of your financial data within osFinancials5/TurboCASH5.

Defining Account groups and Financial categories

Before creating and setting up Ledger accounts, Bank accounts, Creditor accounts, Debtor accounts, and Tax accounts in osFinancials5/TurboCASH5, it is recommended to define the basic classification of accounts using Account Group 1 or Account Group 2. This helps organize and categorize your accounts based on their nature or function.

In the Setup → Groups menu on the Setup ribbon, you can add Account Group 1 or Account Group 2 and assign them meaningful names that represent different account classifications. For example, you can create groups for fixed assets, cash and receivables, current assets, current liabilities, equity, operating expenses, operating revenue, non-operating expenses, non-operating revenue, etc. These groups provide a structured framework for organising your accounts.

After creating the account groups, you can map or link them to the five financial categories: Assets, Liabilities, Equity, Income, and Expenses in the Setup → Financial categories menu on the Setup ribbon. This mapping ensures that the accounts are correctly classified within the financial framework of your organisation.

When you proceed to create and set up Ledger accounts, Bank accounts, and Tax accounts in the Setup → Accounts menu, you will have the option to select the appropriate Account Group 1 and/or Account Group 2 for each account. By associating the accounts with their respective account groups, you establish a hierarchical structure that allows for easier navigation and analysis of financial information.

By properly defining and linking account groups, you lay the foundation for accurate financial reporting and analysis within osFinancials5/TurboCASH5, enabling you to effectively track and manage your organisation's financial data.

Customize your own Set of Books (Advanced) option for MSSQL database type

The "*Customize your own Set of Books (Advanced)?*" option in osFinancials provides a powerful capability to create a customized Set of Books tailored to your specific requirements. In addition to the default Firebird database type, osFinancials5/TurboCASH5 also offers the option to create a Set of Books for the MSSQL database type.

By selecting the MSSQL database type, you can take advantage of the features and benefits offered by Microsoft SQL Server. This includes robust data management, scalability, and integration capabilities,

making it an ideal choice for organisations that prefer to utilize SQL Server as their database platform.

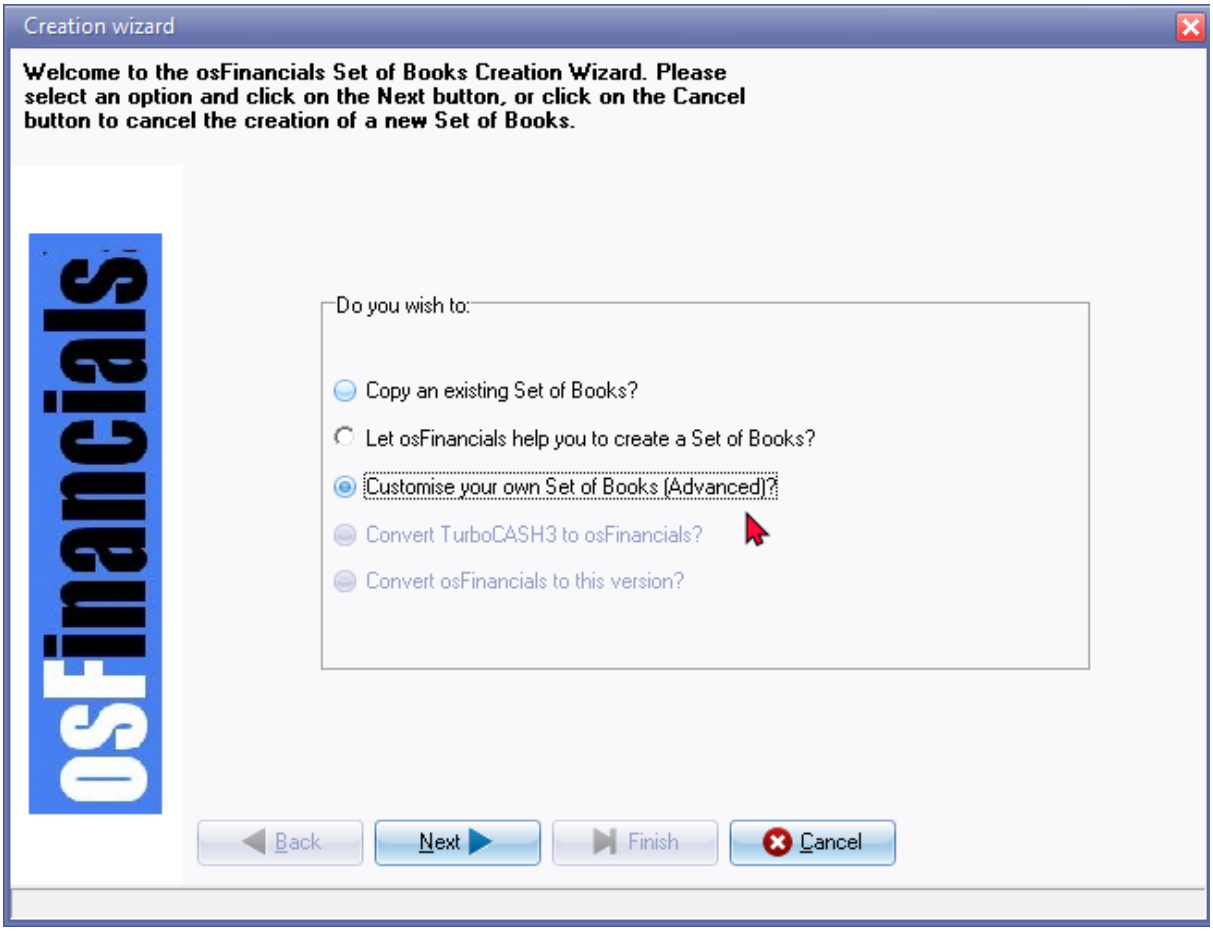
With the "*Customize your own Set of Books (Advanced)?*" option for MSSQL database type, you have the freedom to design and build your Set of Books from scratch, ensuring it aligns perfectly with your financial structure and reporting needs. This allows you to define your own chart of accounts, configure account settings, set up ledger accounts, bank accounts, tax accounts and establish various parameters according to your specific business requirements.

Let's explore the process of creating a Set of Books using the "Customize your own Set of Books (Advanced)" option for the MSSQL database type, empowering you to create a comprehensive financial management system tailored to your organization's needs.

Process to create a Set of Books using the Customize your own Set of Books (Advanced) option

To create a Set of Books using the Advanced option:

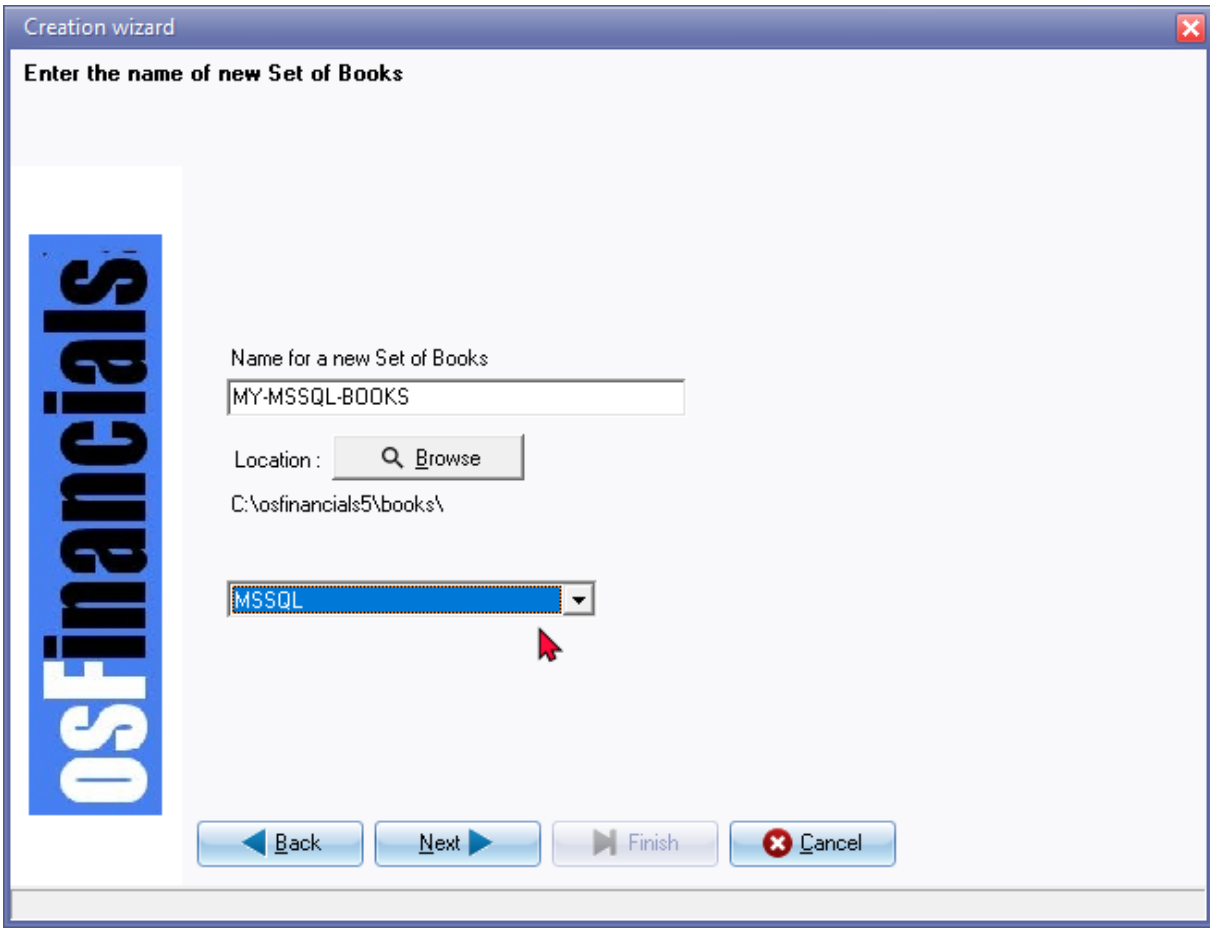
1. On the Start ribbon, you can select the Create Set of Books option or simply press the F10 key on your keyboard.



2. osFinancials5/TurboCASH5 automatically defaults to the option "*Let osFinancials help you to create a Set*

of Books?", as this is the recommended option for most users. Select the "*Create a Set of Books (Advanced)?*" option.

3. Click on the Next button.



4. Enter the name for your Set of Books for the blank database that you have created in the Microsoft SQL Server.

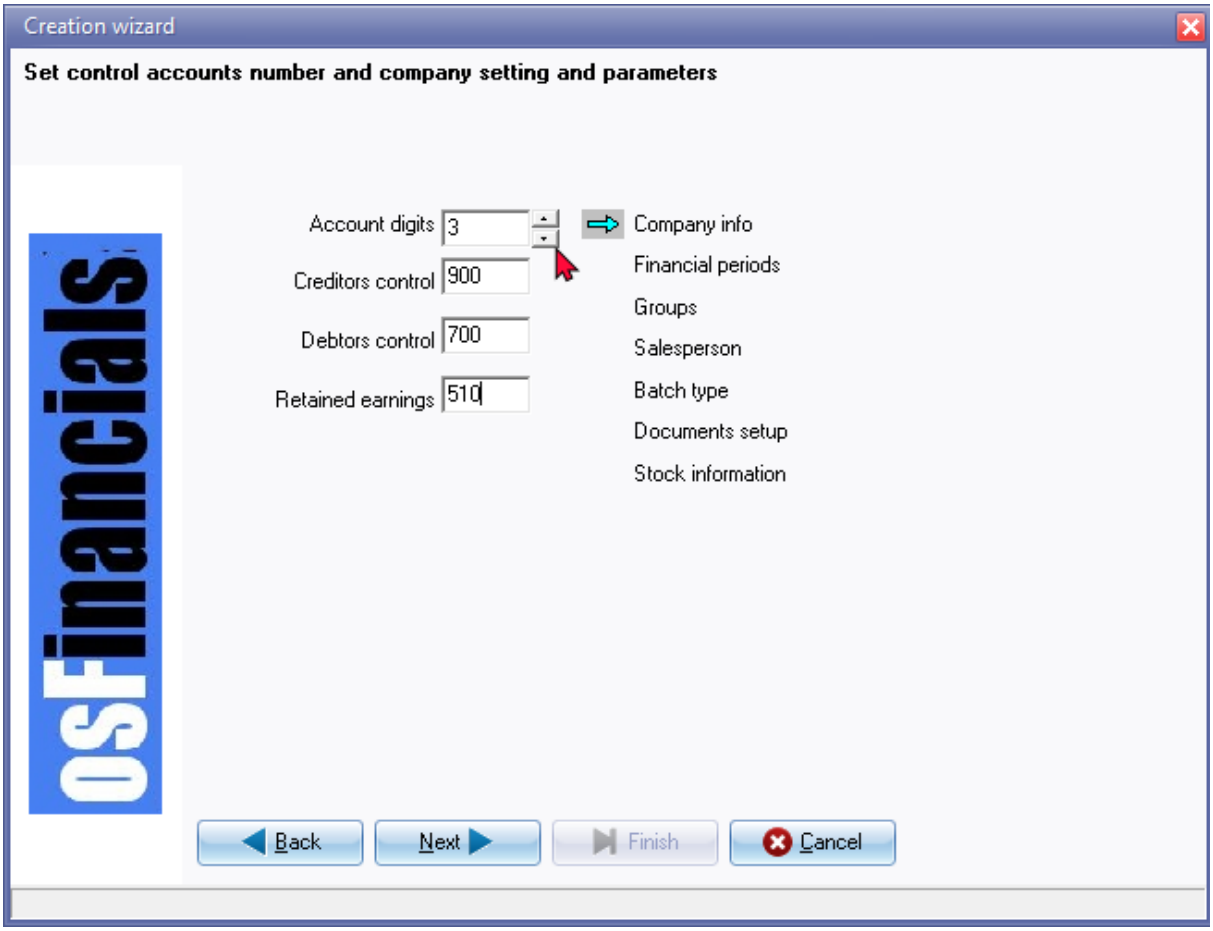
It's important to note that when selecting the "MSSQL" option, you should have already set up a blank database in Microsoft SQL Server, and have the necessary credentials and information to establish the connection with the SQL Server instance.

The Directory in which you create the Set of Books is displayed underneath the Location Browse button. It will usually be the default directory (e.g. "C: \ osfinancials5 \ books" folder in which osFinancials is installed or directory, which you have specified when you installed osFinancials5/TurboCASH5. If you wish to create your Set of Books in any other directory or location on your system, you may click on the Browse button, if desired, to select any folder or drive on the "Pick a directory" screen.

5. Database type: By default, osFinancials uses the "*Firebird (default)*" database type. However, if you prefer to create a Microsoft SQL Server database for your Set of Books, you can choose the "*MSSQL*"

option. Selecting the "*MSSQL*" option ensures that the database is specifically configured to work with Microsoft SQL Server. This allows you to take advantage of the features and capabilities provided by the SQL Server platform.

6. Check the database type is set to the "*MSSQL*" option, and click on the Next button.



7. Account digits: The default number of account Digits is 3. Select the desired number of digits for your general ledger main accounts. This will determine the structure and length of the account codes for the Creditor's control, Debtor's control, and Retained income/earnings accounts.

8. Account codes: Enter the numeric code for each of these accounts based on the chosen number of digits. For example, in a 4-digit structure, you would enter codes like 2100, 1100, and 3100.

When creating a Set of Books with the option to choose the number of digits for main accounts, you have the flexibility to select a structure that suits your needs. Here are the available options and the corresponding number of digits for the general ledger main accounts:

4-Digit General ledger main accounts: Enter a 4-digit numeric code for each of the Creditor's control, Debtor's control, and Retained income/earnings accounts (e.g., 2100, 1100, and 3100). This option includes 3-digit sub-accounts as well as 7-Digit account codes for Debtor accounts in the debtors ledger and Creditor accounts in the creditors ledger.

5-Digit General ledger main accounts: Enter a 5-digit numeric code for each of the Creditor's control, Debtor's control, and Retained income/earnings accounts (e.g., 21000, 11000, and 31000). This option includes 3-digit sub-accounts as well as 8-Digit account codes for Debtor accounts in the debtors ledger and Creditor accounts in the creditors ledger

6-Digit General ledger main accounts: Enter a 6-digit numeric code for each of the Creditor's control, Debtor's control, and Retained income/earnings accounts (e.g., 210000, 110000, and 310000). This option includes 3-digit sub-accounts as well as 9-Digit account codes for Debtor accounts in the debtors ledger and Creditor accounts in the creditors ledger

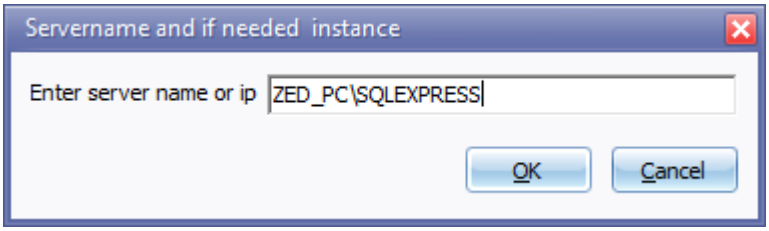
7-Digit General ledger main accounts: Enter a 7-digit numeric code for each of the Creditor's control, Debtor's control, and Retained income/earnings accounts (e.g., 2100000, 1100000, and 3100000). This option includes 3-digit sub-accounts as well as 10-Digit account codes for Debtor accounts in the debtors ledger and Creditor accounts in the creditors ledger

8-Digit General ledger main accounts: Enter an 8-digit numeric code for each of the Creditor's control, Debtor's control, and Retained income/earnings accounts (e.g., 21000000, 11000000, and 31000000). This option includes 3-digit sub-accounts as well as 11-Digit account codes for Debtor accounts in the debtors ledger and Creditor accounts in the creditors ledger

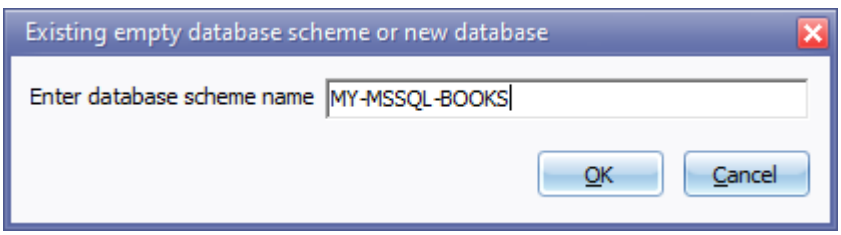
When planning your Chart of Accounts, it's important to carefully consider and define the codes or numbers for these accounts based on the structure you have chosen. This will help ensure consistency and organization in your financial reporting and analysis.

However, it's important to note that once you start processing functions such as entering transactions or budgets, you may not be allowed to change the account codes or numbers. Therefore, careful consideration and planning during the initial setup stage is crucial to ensure accurate financial structure and reporting.

9. Click on the Next button and Enter the name of the Server (and instance if required).



10. Click OK and enter the name of your Database (already added in MSSQL Server).



11. Click OK.

12. Click on the Next button to initiate each of the set up options listed on the right-hand side of the "Creation wizard" screen. Enter and select the necessary information and settings for the following screens:

    a) Company info - Enter all your business' details such as the address, e-mail address, contact numbers and Company and Tax Registration numbers, which you need to display on all documents, reports, and lists. You may also select the Tax method applicable to your VAT/GST/Sales Tax registration, whether your default output option for documents, reports and lists are on: screen, printer, file, e-mail or fax. You may also load a logo picture to be displayed on your reports or documents, and set your Windows operating system's default date and currency formats.

    b) Reporting dates - This option allows you to set up the number of reporting dates required, and the start date of your financial year period. The periods or dates will be displayed in the format in which you have set your Windows Operating System's default date on the previous screen.

    The start date of the financial year is the first day of the calendar month in which the Set of Books (Advanced option) is created.

    For example, it it is created on 20 August 2021, the Start date is 1 August 2021, etc.

    Before the "Reporting dates" screen is launched, a message will be displayed.

    Periods are not there

    Click on OK to launch the "Reporting dates" screen.

    c) Batch types - This option allows you to create, delete an existing batch type, or change the name of an existing batch type in which you wish to enter and update or post your transactions to the ledger.

    d) Groups - This option allows you to set two Reporting groups for your General ledger accounts, Debtors, Creditors, Stock and Document groups.

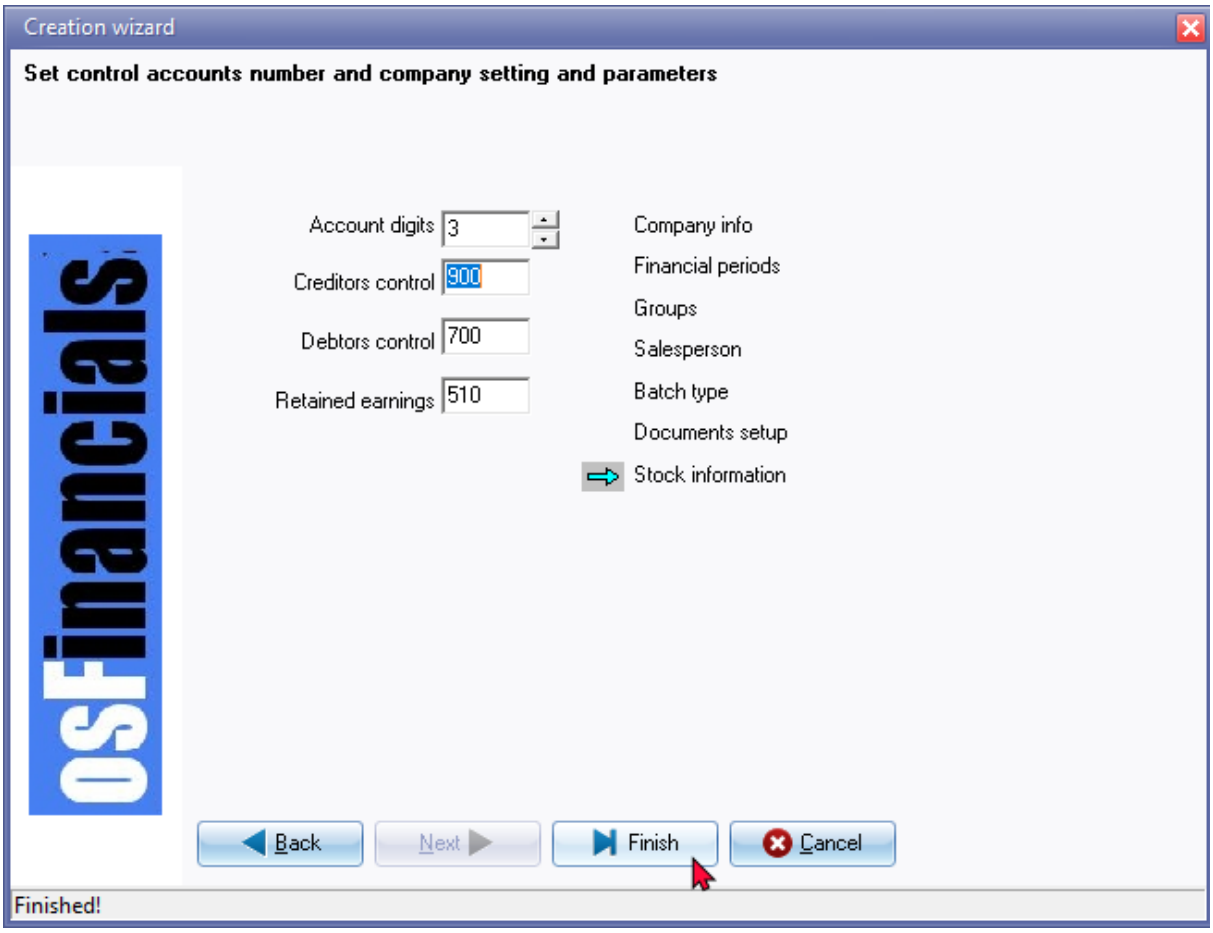
    e) Salesperson - This option allows you to enter the salespersons names who will be selling your stock items, or selling services.

    f) Documents setup - This option allows you to set up your documents Invoices, Credit notes, Quotes, Orders, Purchases and Supplier return documents, you wish to hand to customers

(debtors) or suppliers (creditors) when you sell, or quote, or order and purchase, physical stock items and services set up in your stock item code file.

g) Stock information - The option allows you to define the units of stock you sell and the selling price descriptions and to set the Cost of sales parameters. This option should only be used if you use stock and/or wish to generate documents (Invoices, Credit notes, Quotes, Orders, Purchases and Supplier returns).

13. After the last setup screen (i.e. Stock information) is closed, the Next button will change to the Finish button.



14. Click on the Finish button. The new Set of Books will automatically be opened automatically and now ready to work in.

Before you begin processing transactions, make sure to create your general ledger accounts, bank accounts, tax accounts, debtor accounts, creditor accounts, and review or modify your settings and parameters to ensure accuracy and efficiency.

Taking the time to properly set up your osFinancials5/TurboCASH5 program and customize your Chart of Accounts will contribute to the success of your financial processing and reporting.

Steps after creating the Set of Books (Advanced)

Deactivate / Activate the Bank import plugin

By default, the Bank import plugin setting is activated.

The "*Default bank reconciliation*"field in Setup → System parameters (Setup ribbon) is not selected.

Bank import plugin - Bank Reconciliations Plugin Manual - BankImport Plugin Manual - Shop - The Bank import plugin is included in the osFinancials5/TurboCASH5 subscription.

The Bankimport plugin will import bank transactions and save you hours of data entry. You can simply link transactions to your debtors, creditors or other accounts. And with a simple mouse click link the payments to the right invoices.

Needs to be activated on the Setup ribbon, select Setup → System parameters

If you do not intend to wish to use the Bank import plugin at this stage, you need to turn the Bank import plugin off (Tick (select) the "*Default bank reconciliation*" option on Setup → System parameters (Setup ribbon).

The Bank import plugin can be activated as the Bank import plugin is included in the osFinancials5/TurboCASH5 subscription.

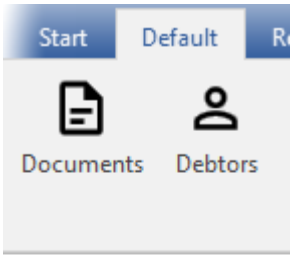
If bank Bank import plugin is not activated, separate Payments and Receipt batches will be created on the Bank tab when you create (add) Bank accounts in Setup → Accounts (Setup ribbon).

Customise labels for Document types

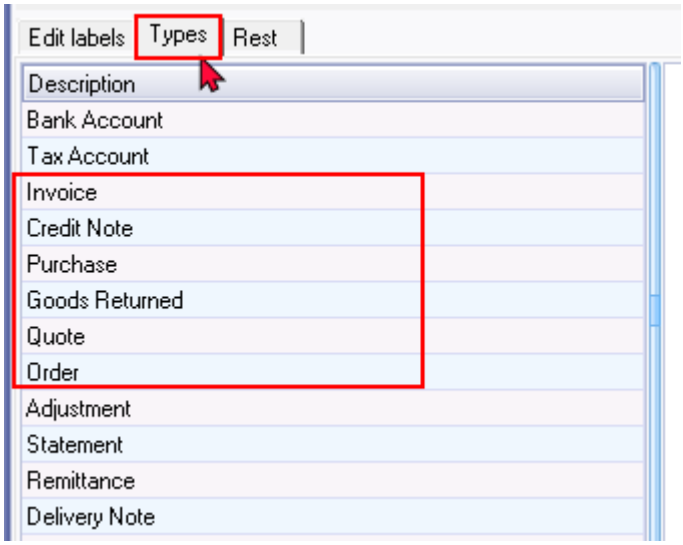
You may need to customise labels and fix records.

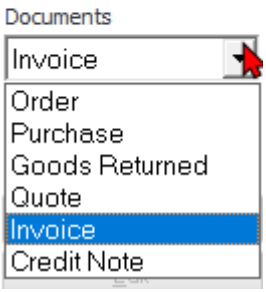
Change the descriptions on the Types tab on Tools → Customise languages (Setup ribbon). If you have a different language than English, you need to translate the descriptions for your language or specific requirements.

Document types5



"*Goods Returned*" - change to Supplier return to be consistent with the other labels in the language file.





The Document type (i.e. Invoice, Credit note, Quote, Purchase, Supplier return or Order) is stored and edited 1n the Tools → Customize language (Setup ribbon).

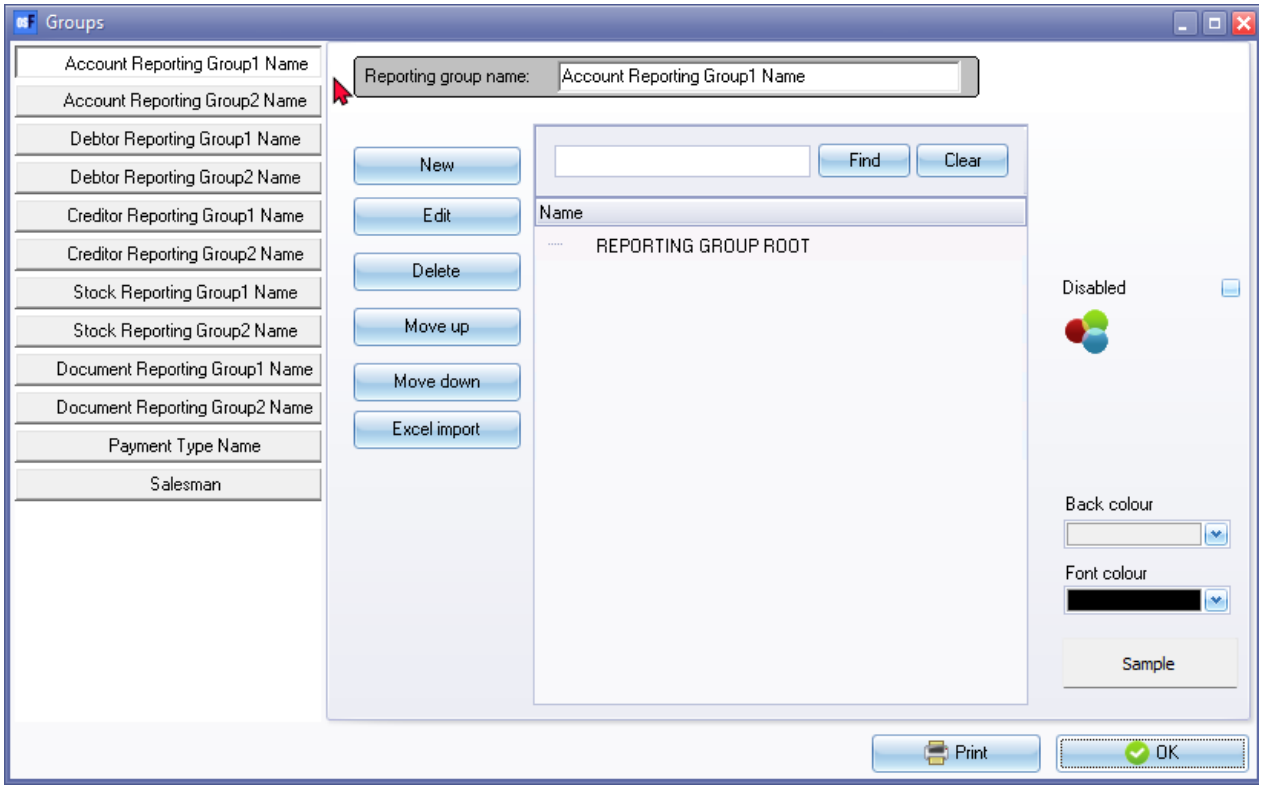
It should print the Document type (i.e. Invoice, Credit note, Quote, Purchase, Supplier return or Order) as this is more correct for the recipient of these documents.

If you need to print documents using the document layout files supporting one (1) Layout file for all document types), it is recommended that the Document types are edited and/or translated to the singular in the Types tab Tools → Customize language menu (Setup ribbon).

Change Edit Groups

Change the reporting group names (descriptions) of the Groups (Setup ribbon).

You may also add groups for reporting groups, if necessary.



The name must not already exist and may not be longer than 50 characters. This name will help you to identify the Set of Books on your system. You will need to select this name whenever you need to open the Set of Books or perform some other functions on the Set of Books.

The following groups are not included if the Set of Books was created using Create Set of Books (Advanced) option:

- Projects - You may create groups for Projects. These Projects may be activated in batches and documents. Once the batches and/or documents are posted (updated to the ledger), you may generate various reports for each Projects on the Sidebar of the Default menu.
- Cost centre 1 and/or Cost centre 2 -
- Languages - Multi-Language accounts -

Multi-Language accounts - Manual - Shop - Licence : Once-off -

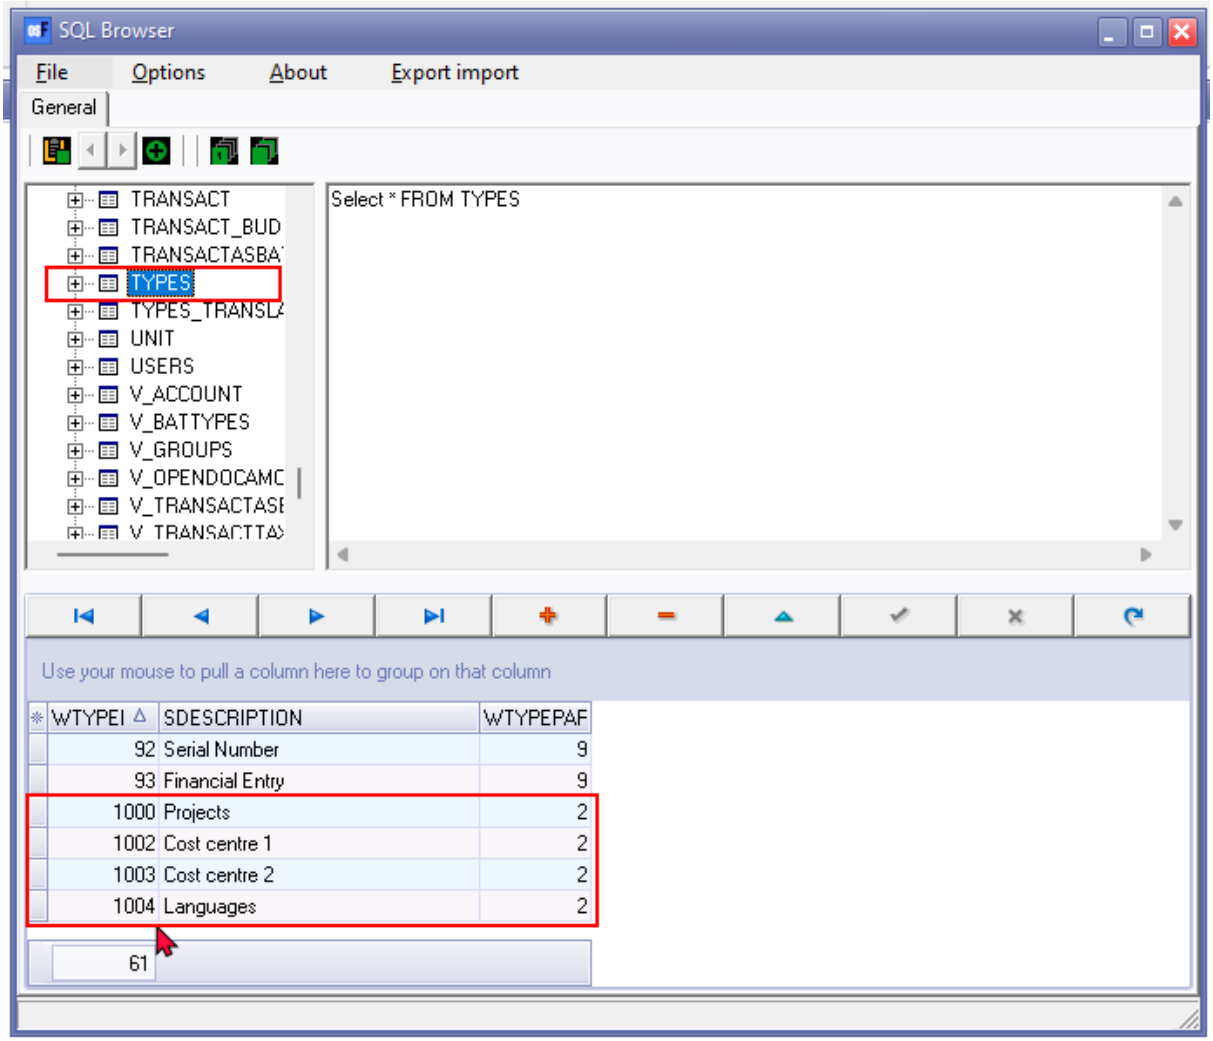
This plugin makes it possible to translate the ledger and group names in multiple languages. It is already possible to choose different languages for the interface (the buttons). But this plugin makes it possible to do the accounting in different languages. Per user you can select a language, so the user can account in his/her own language. The set of books can be viewed in different languages, therefore it is possible an employee enters information into an English Set of Books and a bookkeeper, auditor, etc. can see the set of books in a set language, e.g. Afrikaans, Dutch, etc.

Add missing Groups and Paper types in the Types table

To add missing groups:

If you intend to use Projects, Cost centres and/or Multi-language Set of Books, you need to add these Groups manually:

1. Activate the SQLBrowser plugin in Tools → Activate plugins (Setup ribbon)
2. Launch the SQLBrowser plug-in Plugins → Tools → SQLBrowser (Setup ribbon).
3. Select the "*TYPES*" table.
4. Right-click and select "*Open*" on the context menu.



5. Select the last record WTYPEID - 93 in the TYPES table. Insert or Add a new record (you may also use the down arrow on your keyboard).
6. Add Groups - Optional - If you are planning to use any of the following features in

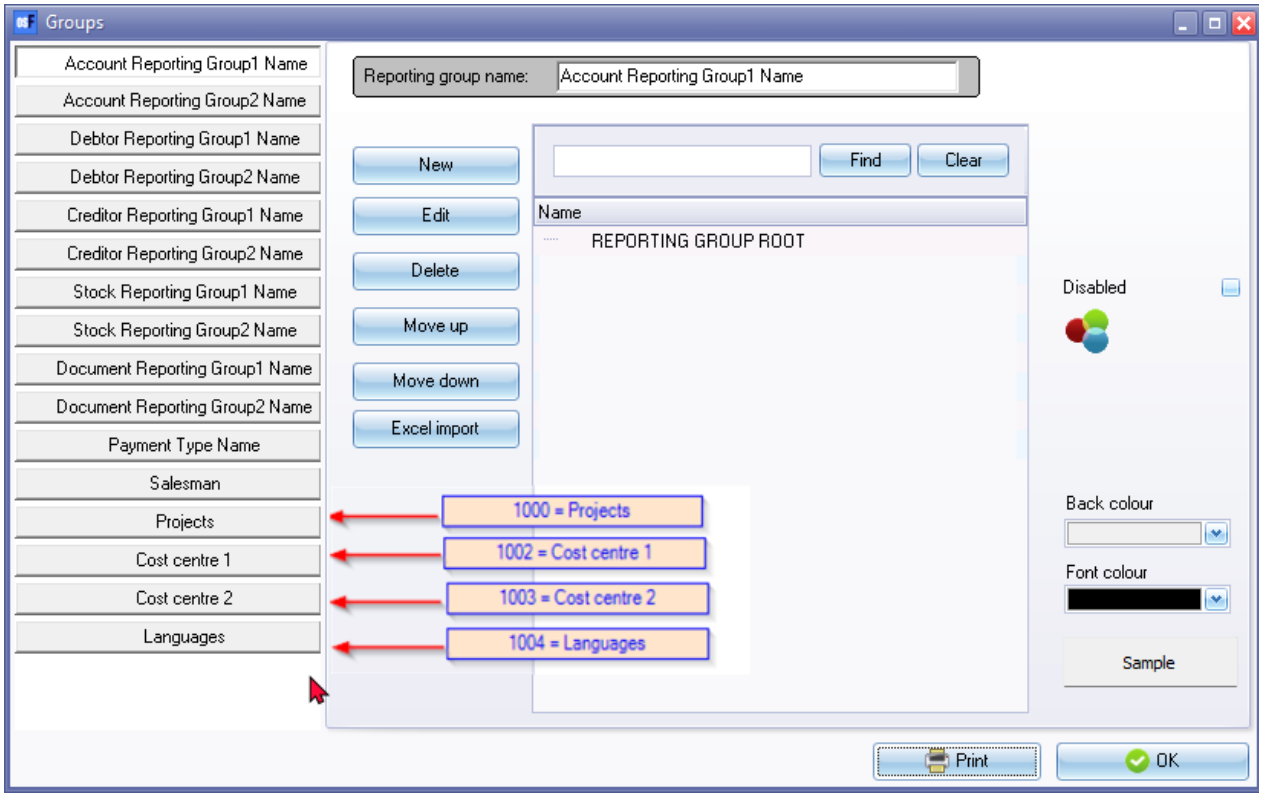
osFinancials5/TurboCASH5, you may add the groups, as required. To do this, type the following records and type 2 in the WTYPEPARENT column:

- 1000 - Projects
- 1002 - Cost centre 1
- 1003 - Cost centre 2
- 1004 - Languages

7. Add Paper types - Type the following records and type 5 in the WTYPEPARENT column:
   - 55 - Till slip
   - 56 - New plain
8. Close the SQLBrowser

> *SQLBrowser - Manual - Shop - Licence : Once-off -*
>
> *Activate the SQLBrowser plug-in Tools → Activate Plugins (select Tools → SQLBrowser and click Activate plugin) on the Setup ribbon.*

The groups will be added on Setup → Groups



Before you can start any processing, you need to set up your general ledger accounts, bank account, tax accounts, accounts receivable (debtor accounts), accounts payable (creditor accounts), etc. create and check or change your settings and parameters. This should not take much time, but can save you a lot of extra work and frustration, as the key to success in your processing and reports is in setting up the osFinancials5/TurboCASH5 program.

Customise your own Set of Books (Advanced)? - Set Books - Properties

Length of description fields and the basic control accounts

The basic features of your customized Set of Books with the "*Customise your own Set of Books (Advanced)?*" -option should be as follows:

1. Length of description fields - The default length of description fields for accounts is 64 characters and groups are up to 30 characters for group names. The group descriptions are more than 50 characters.
2. Account codes - Character length and the default control accounts. Depending on your choice of the number of digits for account codes, during the creation of your own Set of Books, the number of characters for the control accounts and the debtor accounts as well as the creditor accounts will be as follows:

Number of digits *Account code*	*Retained earnings*	*Debtors control*	*Creditors control*	*Number of account code digits - Debtor accounts*	*Number of account code digits - Creditor accounts*
3X3-DIGITS	*G510-000*	*G700-000*	*G900-000*	*D + 5-characters D00001*	*C + 5-characters C00000*
4X3-DIGITS	*G3100-000*	*G1100-000*	*G2000-000*	*D + 6-characters D000001*	*C + 6-characters C000000*
5X3-DIGITS	*G31000-000*	*G11000-000*	*G20000-000*	*D + 7-characters D0000001*	*C+ 7-characters C0000000*
6X3-DIGITS	*G310000-000*	*G110000-000*	*G200000-000*	*D + 8-characters D00000001*	*C + 8-characters C00000000*
7X3-DIGITS	*G3100000-*	*G1100000-*	*G2000000-000*	*D + 9-characters*	*C + 9-characters -*

	000	*000*		*D000000001*	*C000000000*
8X3-DIGITS	*G31000000-000*	*G11000000-000*	*G20000000-000*	*D + 10-characters - D0000000001*	*C + 10-characters - C0000000000*

Customise your own Set of Books - Configure Set of Books

Language settings

If you have created your custom Set of Books in "*English*" as the default language, the osFinancials5/TurboCASH5 interface will be displayed in "*English*". If the osFinancials interface is displayed in the language of your choice, you can select a different available language in the "*Switch language*" (Start ribbon).

Set the default language for your Set Books - You can choose your language and country in Setup → Access control. When you reopen your Set of Books, the language in the osFinancials5/TurboCASH5 interface, reports, etc. will be displayed in your selected language.

Customise your own language

If you want to customise your own language, you can select your language in Tools → Customise language (Setup ribbon).

It is strongly recommended that the label, which is edited or entered, is not longer than the default "English" labels' length. If your label is too long, it may cause some options in the program not to function or display properly. Do not use the Delete button to remove any of the existing edited labels.

Care must be taken to ensure that existing labels or descriptions in the main language, i.e. "English" not be modified. You must create a copy of the "English" or other selected language and rename it with a new name. You may use your own language file to edit.

If you decide to adapt a selected language file for your own specific industry or specific needs and want to modify these labels accordingly, it is important that you use a copy of the language file. This will prevent your language file from being overwritten when you reinstall osFinancials5/TurboCASH5, or install osFinancials update download files, or install osFinancials updates through the Help menu.

Customise the "TYPES"-tab

The entries on the "*Types*"-tab in Tools → Customise language (Setup ribbon) is database specific and will update the "*TYPES*" table in your Set of Books. You may edit, translate or change the descriptions as

necessary.

- Reporting groups - The default descriptions for the reporting groups is available in English as "*Account Reporting Group1 Name*", etc, , After adding the 4 reporting groups for Projects, Cost centre 1, Cost centre 2 and Languages, these 16 reporting groups, you may change, edit, translate these descriptions on the "*Types*"-tab in Tools → Customise language (Setup ribbon). These reporting group names may also be reviewed, changes, edited, translated in Setup → Groups according to your specific requirements for your country language or industry. The common reporting group names in most databases, is "Account group 1, Account group 2, Debtor group 1, Debtor group 2, Creditor group 1, Creditor group 2, Stock group 1, Stock group 2, Document group 1, Document group 2, Payment types, Salespersons, Projects, Cost centre 1, Cost centre 2 and Languages".

- Document types - The default descriptions for the standard 6 document types is "*Invoice", "Credit note", "Purchase", "Goods Returned*", "*Quote",* and "*Order*" . You may change, edit, translate the descriptions for the standard 6 document types for sales documents (Invoices, Credit notes and Quotes and for purchase documents (Purchases, Supplier returns and Orders) to match your specific requirements for your country language, tax regime or industry in the Types tab.

  In your language file, you may search and edit / translate the language labels for each of these document types. These matching descriptions are also displayed in the "*English*" language file. If you want to change or edit the labels according to your personal needs, you can make a copy of the "*English*" language file and feel free to translate the language labels for the document types according to your specific requirements, preferences and industry. You then also search for and modify and adapt the language labels for each of these document types in your own language file.

- Tax terminology - Tax account is the default description for VAT/GST/Sales tax/Consumption tax in the Types tab. You may change this description for your country language, tax regime or industry. In your language file, you may search and edit / translate the language labels for the for the tax terminology.

Customise the "Rest"-tab

The Customize language - Rest tab entries on this tab is database specific.

Change descriptions of the "*Description of Zero account*" and "*Group empty account*". The 2 change buttons only saves 1 description. Work around change both to "*Empty*".

General ledger accounts

Accounts Setup → Accounts - Only the 3 control accounts (i.e. Debtors control + Creditors control + Retained earnings) accounts in the Chart of Accounts is included in the Chart of Accounts.

You cannot delete these 3 control accounts. An error message will be displayed:

"You cannot delete a control account!"

You can edit the account code and description for each of these 3 control accounts, if necessary.

Depending on your choice of the number of digits for account codes, during the creation of your own Set of Books, the number of characters for the control accounts will be as follows:

Number of digits Account code	*Retained earnings*	*Debtors control*	*Creditors control*
3X3-DIGITS	*G510-000*	*G700-000*	*G900-000*
4X3-DIGITS	*G3100-000*	*G1100-000*	*G2000-000*
5X3-DIGITS	*G31000-000*	*G11000-000*	*G20000-000*
6X3-DIGITS	*G310000-000*	*G110000-000*	*G200000-000*
7X3-DIGITS	*G3100000-000*	*G1100000-000*	*G2000000-000*
8X3-DIGITS	*G31000000-000*	*G11000000-000*	*G20000000-000*

Control accounts - You can edit the account code and account description for each of these 3 control accounts.

It is important to note that you need to keep in mind that these control accounts need to be linked to account groups and financial categories:

Control account name	*Financial category*	*Account groups*
Retained earnings	*Capital*	*Equity / Capital*
Debtors control	*Assets*	*Current assets*
Creditors control	*Liabilities*	*Current liabilities*

If you import general ledger accounts from a Tab delimited file, you may:

- Change the account codes and descriptions to meet your specific requirements and needs. In the case of accounts, which contains sub-accounts, you cannot change the sub-accounts account codes. You first need to delete the sub-accounts and rename the account codes and account descriptions and recreate sub-accounts where necessary.
- Review your imported ledger accounts descriptions. You may use longer account descriptions (longer than the default 35-characters or 64-characters) , where necessary.
- Disabled (inactive) accounts imported - review and decide to keep these disabled (inactive) accounts or delete them if not required.
- Tax (VAT/GST/Sales tax) accounts - The first sub-account (tax code) may not include the Tax tab and Tax percentage - You need to delete and recreate the tax account (tax code) as a Tax account. Zero-rated Tax codes. You need to confirm the percentage.
- If Account groups 1 and / or Account group 2 is imported, these account groups may not be linked to the five financial categories. You may need to link these account groups to the 5 financial categories.

Imported or copied text in osFinancials screens from external files - Account / Group descriptions in Accounts description lines in batches

When importing or copying text for account. group descriptions or any other screens, or forms, the fields from external programs such as spreadsheet, word documents, etc. the hyphenation character "–" may be displayed as a pipe character " | " in lookups and some screens or as " " in some screens and in reports, document layout files, etc.

For example, Motor vehicles Net value if copied or imported into Setup - Accounts as Motor vehicles – Net value (with the hyphenation format) it will be displayed as Motor vehicles Net value on some screens and in reports and as Motor vehicles | Net value on lookup screens.

You need to use the dash sign "-" to be displayed correctly.

Solution:

To ensure hyphens display correctly in osFinancials5/TurboCASH5, use the standard dash character ("-") instead of the hyphenation character when copying or importing text from external files.

Debtor / Creditor accounts

Depending on your choice of the number of digits for account codes, during the creation of your own Set of Books, the number of digits for the account codes of debtor accounts and creditor accounts will be as follows:

Number of digits Account code	*Number of account code digits - Debtor accounts*	*Number of account code digits - Creditor accounts*
3X3-DIGITS	*D + 5-characters D00001*	*C + 5-characters C00000*
4X3-DIGITS	*D + 6-characters D000001*	*C + 6-characters C000000*
5X3-DIGITS	*D + 7-characters D0000001*	*C+ 7-characters C0000000*
6X3-DIGITS	*D + 8-characters D00000001*	*C + 8-characters C00000000*
7X3-DIGITS	*D + 9-characters D000000001*	*C + 9-characters - C000000000*
8X3-DIGITS	*D + 10-characters - D0000000001*	*C + 10-characters - C0000000000*

When creating or adding Debtor accounts and Creditor accounts, it is important that you use a different prefix for the account codes:

The first Debtor code (e.g. D00001, etc.), will automatically be generated. It is important to prefix Debtor codes with a unique prefix. In this documentation, the accounts is prefixed as follows:

- *Debtor code = 1*
- *Creditor code = 2*

The reason for this, is that the account prefix is not always available when selecting accounts on some screens and reports. For example, if a Debtor code is D00001 and a Creditor code is C00001, and you select the Debtor code, it may set the Creditor code when selecting the contra account in the "Options for this batch" (F10:Setup) on "Batch entry" screens on "Batch entry" screens.

Company information

Only "*osFinancials5.1.0.227 / TurboCASH5.1.0.227)* / (osFinancials5/TurboCASH5 and the version number) will be displayed in the title bar, unless you have already entered your company name in the Company info screen during the creation of the Set of Books. Review and enter the name and contact details as well as the relevant registration numbers of your business in the Setup → Company info (Setup ribbon).

Financial year and accounting periods

The default start of the financial year is on the first day of the month in which you created your set of books. For example, if you created your Set of Books on 20 March 2024, the start of the financial year will automatically be set as "*1 March 2024*". You can change this in Setup → Reporting dates for the beginning of your financial year and set the accounting periods.

If you selected a different language than the English languages, for example, "*Afrikaans*" as the language to create your Set of Books in, the months of the year should already be displayed in "*Afrikaans*". You may need to review and edit or translate the months of your financial year, if necessary.

Batches (Journals)

No batch types (journal types) are included in your customised Set Books. You will need to add your own batch types (journal types) in Setup → Batch types (Setup ribbon) to meet your specific needs and requirements. The basic journals, are the "*Sales journal*", "*Purchase journal*" and the "*General journal*".

> *Receipts journals and Payments journals for Bank accounts and Petty cash accounts*
>
> *When you add or create a Bank account and Petty cash account, the Receipts journals and Payments journals will be created and added and linked to each Bank account and Petty cash account.*

The "*Sales journal*", should be linked to the Invoices and Credit notes document types in Documents setup. This will update the transactions generated with the Invoices and Credit notes in the Sales journal to the ledger.
The "*Purchase journal*", should be linked to the Purchases and Supplier returns document types in the Documents setup. This will update the transactions generated with the Purchases and Supplier returns in the Purchase journal to the general ledger.
You can use any number of journal types as you deem necessary to group and process your transactions. In addition to the general journal, you may add specific journals for; cost of sales, adjustments, depreciation, payroll, etc. to accommodate your specific needs and requirements.

Documents setup

The defaults settings in the Setup → Documents setup is as follows:

1. Global settings - Documents setup
    - Layout file point-of-sale : "*DefaultA4*" is the default setting and is not available in the " ... *\plug_ins\reports\DOCUMENTS\DOCUMENTS*" folder. You may change the default layout file to "*POS - STARTSP100*".
    - Append notes below item: By default this option is selected. The default sequence in which the document lines will be displayed on document entry forms and printed in document layout files, is Item/Remark/Comment. If you deselect this option, the sequence in which the document lines will be displayed on document entry forms and printed in document layout files, will be Comment, Item, Remark.
    - Auto-post documents on print: By default this option is not selected. This means that you need to manually launch the Update ledger option to post or update documents to the

ledger.

2. Settings for specific document types. The basic configuration for each document type, is as follows:

Field	*Sales documents*			*Purchase documents*		
Document type	*Invoice*	*Credit note*	*Quote*	*Purchase*	*Purchase returns*	*Orders*
Next Document number	*I0N000001*	*C0000001*	*Q0000001*	*P0000001*	*R0000001*	*OR000001*
Batch type						
Layout file						
Layout file 2	-	-	-	-	-	-
Heading	*Tax Invoice no.*	*Credit note no.*	*Quote No*	*GRV No*	*Goods Returned No*	*Order No*
Message 1/2/3	-	-	-	-	-	-

Customise / translate notes:

You may need to customise, change and translate the following to suit your specific preferences and needs:

- Next Document number - This is an 8-character alphanumeric field. You may use prefixes for each document type. Prefixes will make it easier to identify the document type in searches and filters, on reports and on exported data in spreadsheets. The character prefixes for each document number are in English. You can change the document numbers for each type of document to suit your specific preferences and needs.

- Batch types - No batch types or journals are available at this stage. You will need to select the default journals in which the documents will be posted (updated) to the ledger. If you have already created journals earlier during the creation of your advanced Set of Books, you can select the "*Sales journal*" for Invoices and Credit notes and the "*Purchase journal*" for Purchases and Supplier returns. If not, you will first need to create the journal types in Setup → Batch types (Setup ribbon) such as "*Sales journal*" and "*Purchase journal*". Journals do not apply to Quotes and Orders.

- Layout file - You can select "*Layout file*" at this stage for all document types. The "Layout file" is one

standard generic layout file that applies to all document types (Invoices, Credit notes, Quotes, Purchases, Supplier returns and Orders) and is translated via the language files. The layout file selected is a global setting. You may also select custom or other layout files as defaults for specific debtor or creditor accounts.

- Layout file 2 - This option is not selected. You may select other layout files or the delivery note to print after the Layout file.
- Headings - You may change the headings of each document headings to match your country language, tax regime or industry.
- Messages - No messages is available at this stage. You may enter up to 3 lines as a global message (for each document type) that will be displayed on the "*Message*" fields of the document entry screens and printed on document layout files for each document type. Custom messages may be set as default for specific debtor or creditor accounts.
- Statement message - You can enter up to 3 lines of statement messages in the Statement setup tab. This is a global standard message that will appear on all debtor account statements.

Additional settings for documents

Post / Confirm and Delete buttons on Documents grid - By default, only the New, Edit and Print buttons are available on the Documents grid screen's sidebar. You may add the Posting and Delete buttons underneath the Print button. To add the Posting and Delete buttons to the Document grid screen, select (tick) the "*Document posting*" field on the Documents tab in Setup → Access control.

Stock items / Inventory items

Before you add or import your stock items / inventory items / products you may need to configure some important basic settings such as Cost of sales, Create tax classes / account classes and Selling prices.

At this point, your chart of accounts (general ledger accounts) should have already been finalised.

Activate Cost of Sales

By default cost of sales is not activated. You need to configure cost of sales as follows:

1. Cost of Sales journal - Create a cost of sales batch (journal) type (Setup → Batch types) to update the transactions for cost of sales to the ledger when you post documents.
2. Cost of sales settings (Setup → Stock information) - Select the following:
    - Create cost of sales - To activate cost of sales, select (tick) the "*Create cost of sales*" tick box.
    - Cost of sales batch - Select the Cost of sales batch (journal) in which the cost of sales transactions will be posted.

- Use “*Average cost*” or “*Latest cost*” option.

> *The method you use to calculate the value of your stock is crucial for determining its impact on your profit and loss figures. It is important to consider whether to use the “average cost” or the “latest cost” method.*
>
> *If you are unsure which method to use, it is recommended that you seek guidance from your accountant.*

Create tax classes / account classes

At this point, your chart of accounts (general ledger accounts) should have already been finalised.

You need to link each stock item / inventory item / product to the applicable ledger accounts (i.e. Input tax, Output tax, Sales account, Cost of sales account and Stock control account).

Tax classes may be set and linked to each category of tax and various tax rates such as Output tax, Input tax - Standard rate, Input tax - Capital goods, Zero rated goods, Exempt supplies applicable to the stock items / inventory items / products in your country and tax jurisdiction, etc.

Tax classes is defined and managed in the Tax classes tab in Setup → Stock information. When you create add or import your stock items / inventory items / products you may select a pre-configured Tax class to automatically link the five accounts (i.e. Input tax, Output tax, Sales account, Cost of sales account and Stock control account) applicable to the stock item / inventory item / product.

Selling prices

osFinancials supports up to 3 selling prices (i.e. Selling price 1, Selling price 2 and Selling price 3). You may change the descriptions of these selling prices on the "*Selling price descriptions*" section of the Default tab of Setup → Stock information to suit your specific requirements and set one of these Selling prices as the default Selling price (global setting) for your Set of Books.

In addition to this, you may set one of these Selling prices as the default Selling price on the Accounting information tab for specific debtor (customer / client) accounts.

> *Price agreement plugin - Manual - Shop - Licence : Once-off -*
>
> *In addition to the standard 3 selling prices in odFinancials, Price agreement plugin, allows you to set up to five (5) levels of quantity discounts that can be applied to specific debtors or groups of debtors. Additionally, you can set a special price for individual debtors per product. These prices will overrule the default Selling price 1 / 2 / 3 and can be set per debtor (customer / client). The price agreement may also be activated for creditor (supplier / vendor) accounts.*

Units of stock

Add and define the units such as each, hours, etc. for your stock items / inventory / products. You may add these descriptions on the Units tab in Setup → Stock information.

Reporting groups - Stock group 1 / Stock group 2

In osFinancials, you have the option to set up to 2 reporting groups for your stock items / inventory items / products, allowing you to categorise search, filter and report on your products more effectively. These reporting groups provide a way to organize and analyse your inventory based on specific criteria.

You may add these Stock groups in Setup → Groups can be linked to each stock item (inventory item / product).

Set the Calendar as default

You have the option to activate the Calendar to be launched instead of the Welcome screen whenever you open a Set of Books, This means that the Calendar will be automatically displayed as the default screen.

MSSQL Server's backup and restore options

If you are running a Set of Books as a Microsoft SQL Server (MSSQL) database type, MSSQL Server includes its own options to backup and restore the database.

MSSQL Server provides built-in features and tools to perform backups and restores, ensuring the reliability and integrity of your database. These features include:

1. SQL Server Management Studio (SSMS): SSMS is a graphical tool provided by Microsoft for managing MSSQL Server. It includes options to perform backups and restores through its user interface. You can access these options by connecting to your MSSQL Server instance using SSMS and navigating to the appropriate database.
2. Transact-SQL Commands: MSSQL Server supports Transact-SQL (T-SQL), a programming language used for managing and querying databases. T-SQL provides specific commands for performing backups and restores, such as BACKUP DATABASE and RESTORE DATABASE. These commands can be executed using an SQL client or through scripts.

By utilizing MSSQL Server's backup and restore options, you can create backups of your Set of Books

database at regular intervals and restore them when needed. Backups can be stored locally or on remote storage devices for added data protection.

It's important to understand the backup and restore process specific to MSSQL Server and follow best practices to ensure the integrity and availability of your database. Consulting the MSSQL Server documentation or seeking guidance from database administrators familiar with MSSQL Server will provide you with detailed instructions and considerations for performing backups and restores.

Banking abbreviations / acronyms in osFinancials

Banking

Bank account type

- 11-Proof - See http://nl.wikipedia.org/wiki/Elfproef - Proof, also known as the "11-test" or "Elfproef" in Dutch, is a mathematical test used in the Netherlands to validate the accuracy of bank account numbers. The test is based on the principle of modulo 11 arithmetic and is used to detect errors in bank account numbers, such as transpositions or missing digits.

  The Proof test involves multiplying each digit of the bank account number by a corresponding weight, then summing the products and calculating the remainder when divided by 11. If the remainder is zero,

the bank account number is considered valid. If the remainder is not zero, the bank account number is considered invalid and may contain an error that needs to be corrected.

The Proof test is commonly used in the Netherlands by banks, businesses, and government agencies to validate the accuracy of bank account numbers before processing transactions. The test helps to prevent errors and ensure that funds are transferred to the correct account. However, it should be noted that the Proof test is not foolproof and may not detect all errors in bank account numbers.

- Arbitrair - Random - not controlled Arbitrair refers to an arbitrary bank account number (such as one that is not validated), the selection of these options could have implications for how the bank treats the account.
    - Accounting information tab of Default → Debtor / Creditor accounts.

BIC - (Bank Identifier Code) - BIC stands for Bank Identifier Code, which is a unique identifier assigned to financial institutions, primarily for international money transfers. The BIC is also known as the SWIFT code, as it is assigned by the Society for Worldwide Interbank Financial Telecommunication (SWIFT).

The BIC consists of a series of eight or eleven alphanumeric characters that identify a specific financial institution. The first four characters of the BIC identify the bank or financial institution, while the next two characters identify the country code. The last two or five characters are optional and represent the branch code of the financial institution.

The BIC is used in conjunction with the International Bank Account Number (IBAN) to facilitate international money transfers. Together, the IBAN and BIC provide a standardized and secure means of identifying the correct recipient and financial institution for international transactions.

The BIC is widely used around the world and is recognized by most financial institutions and banks. It is an essential part of the global financial system and facilitates the efficient and secure transfer of funds across borders.

- Setup → Company info
- Accounting information tab of Default → Debtor / Creditor accounts

IBAN - (International Bank Account Number) See http://en.wikipedia.org/wiki/International_Bank_Account_Number IBAN stands for International Bank Account Number, which is a standardized international format for bank account numbers used for international money transfers. The IBAN was developed by the International Organization for Standardization (ISO) to facilitate cross-border transactions and to make international payments more efficient.

The IBAN is a unique identifier that includes the country code, check digits, and the account number. The

country code and check digits help to validate the accuracy of the account number and ensure that the money is transferred to the correct recipient. The IBAN is used in conjunction with the Bank Identifier Code (BIC) to facilitate international money transfers.

The IBAN is used in many countries around the world, particularly in Europe, but it is not used universally. Some countries, such as the United States, Canada, and Australia, do not use IBANs for their domestic banking transactions. However, when making international payments to countries that use IBANs, it is generally required to include the recipient's IBAN in order for the transaction to be processed successfully.

- Accounting information tab of Default → Debtor / Creditor accounts

SWIFT - (Society for Worldwide Interbank Financial Telecommunication) See http://en.wikipedia.org/wiki/SWIFT / http://www.theswiftcodes.com/ SWIFT (Society for Worldwide Interbank Financial Telecommunication) is a global network used by banks and other financial institutions to securely transmit financial messages and information. The SWIFT network provides a standardized and secure means for financial institutions to communicate with each other, enabling them to send and receive payments, foreign exchange trades, securities transactions, and other financial messages.

SWIFT operates a messaging platform that allows banks to exchange financial information with one another in a secure and standardized format. Each financial institution that participates in the SWIFT network has a unique Bank Identifier Code (BIC), which identifies the institution's name, location, and country code. The SWIFT network is used by over 11,000 financial institutions in more than 200 countries, making it the largest financial messaging network in the world.

SWIFT messages are sent through the network in a standardized format that includes information about the sender, the recipient, and the transaction. This information is transmitted securely and is only accessible to the authorized parties involved in the transaction. SWIFT messages can be used for a variety of financial transactions, including payments, foreign exchange trades, securities transactions, and other financial messages.

- Setup → Company info

SEPA - (Single Euro Payments Area) - See - http://en.wikipedia.org/wiki/Single_Euro_Payments_Area - SEPA stands for Single Euro Payments Area, which is a European Union initiative aimed at harmonizing electronic euro payments across participating countries. The SEPA initiative allows individuals and businesses to make payments in euros to any other bank account located in the SEPA area, regardless of whether the recipient's bank is located in their home country or in another SEPA country.

SEPA covers the 27 EU member states, as well as Iceland, Liechtenstein, Norway, Switzerland, Monaco, and

San Marino. SEPA has standardized the format of euro payments across participating countries, which has made cross-border transactions more efficient and cost-effective. SEPA payments are processed using the International Bank Account Number (IBAN) and the Bank Identifier Code (BIC).

- Signature and Signature date fields - Accounting information tab of Default → Debtor / Creditor accounts.

Other common banking abbreviations/acronyms

Here are some other common banking abbreviations/acronyms:

1. ATM: Automated Teller Machine - A machine that allows customers to perform various banking transactions, such as withdrawing cash, depositing money, transferring funds, and checking account balances, without the need for a bank teller.
2. ACH: Automated Clearing House - A payment system that allows electronic funds transfers between bank accounts in the United States.
3. BSB: Bank State Branch - A unique identifier used in Australia to specify both the bank and the branch where an account is held.
4. CC: Credit Card - A payment card issued by a bank or financial institution that allows users to make purchases and borrow money up to a certain credit limit.
5. CEO: Chief Executive Officer - The highest-ranking executive in a company or organization responsible for making major corporate decisions and managing overall operations.
6. CFPB: Consumer Financial Protection Bureau - An agency of the United States government responsible for protecting consumers in the financial sector by enforcing consumer protection laws and providing education and resources to consumers.
7. CTR: Currency Transaction Report - A report that financial institutions are required to file with the government for any cash transaction over $10,000 in the United States.
8. EFT: Electronic Funds Transfer - The electronic transfer of funds from one bank account to another, usually initiated through online banking or a mobile app.
9. FDIC: Federal Deposit Insurance Corporation - A United States government agency that provides insurance to depositors in case their bank fails, up to a certain amount.
10. KYC: Know Your Customer - The process banks and other financial institutions use to verify the identity of their customers and assess their potential risk for illegal activities such as money laundering and terrorism financing.
11. POS: Point of Sale - The location where a customer makes a payment for goods or services, typically

at a physical retail store or restaurant.

12. RTGS: Real-Time Gross Settlement - A payment system that allows for the real-time transfer of funds between bank accounts, typically used for high-value transactions.
13. PIN: Personal Identification Number - A numeric code used to verify the identity of a customer when making a transaction, typically associated with a debit or credit card.
14. OD: Overdraft - A financial arrangement where a bank allows a customer to withdraw more money than they have in their account, up to a certain limit, usually with associated fees and interest.
15. NEFT: National Electronic Funds Transfer - A payment system used in India that allows for the electronic transfer of funds between bank accounts.
16. MICR: Magnetic Ink Character Recognition - A technology used by banks to encode and process checks with a magnetic ink line at the bottom of the check.
17. IMPS: Immediate Payment Service - A payment system in India that allows for the instant transfer of funds between bank accounts, typically through a mobile app.
